The second-largest of the Windward Islands, St. Lucia has an area of approximately 620 sq km (239 sq mi), between three and four times the size of Washington, D.C. St. Lucia's geographical position between the former French colony of Martinique to the north and the former British colony of St. Vincent to the south parallels its dual historical exposure to the cultures of France and England.

The island is volcanically formed, and like neighboring St. Vincent, Martinique, and Dominica, it has a mountainous interior with lush rain forests. Its highest point, Mt. Gimie, in the southern half of the island, rises to 951 m (3,118 ft) above sea level, and the twin peaks of Gros Piton and Petit Piton on the southwest coast are prominent as well. Fertile plains that support the country's banana plantations are located at the base of the central mountains, and numerous rivers flow from the interior to the Caribbean.

St. Lucia's population estimated 172,000 people, almost evenly divided between urban and rural areas. The capital city of Castries had just under 52,000 people in 1991, and its current population is estimated at between 57,000 and 60,000. No Caribs remain on the island. The majority of the inhabitants of the island is of African or mixed descent. In addition, there is a small minority of mulattoes and other mixtures. The rest are whites, mostly European, or from East Indian extraction. Overcrowding on the island due to high fertility rates has resulted in migration to neighboring Caribbean countries, such as Trinidad and Guyana, or to the United States, Canada, and Britain.

St. Lucia is a constitutional monarchy. The British monarch, Queen Elizabeth II, is the head of state and is represented by

a governor-general. The bicameral parliament consists of the House of Assembly elected by universal adult suffrage.

## 3 LANGUAGE

Although the official language of St. Lucia is English, a majority of its people speak a patois (dialect) based on French and influenced by the grammar of West African languages, with a largely French vocabulary that includes words from English and Spanish. This language, which historically had no written form, was developed by French plantation owners and their African slaves before the British took final possession of the island in the 19th century and set about making English the national tongue. English, in its most proper British style, is the language of the schools, government, and media, but patois prevails at home, on the streets, and at informal occasions. More than half of St. Lucia's residents are more comfortable with patois than English, and as many as 20%, especially elderly rural dwellers, speak little English or none at all. Some court cases are even tried in patois.

In recent years, greater recognition has been accorded to patois as a symbol of St. Lucian cultural identity. Cultural groups on the island even offer instruction in it. A written form has been developed for teaching purposes, and patois primers are available, including *Mwen Vin Wakonte Sa Ba'w* ("I am going to explain it to you") and *Se'kon Sa I Fèt* ("Know how it is done"). The Folk Research Centre in Castries has published a patois handbook and dictionary and a collection of folk tales

and common expressions called *Annou Di-Y an Kweyol*. The name of St. Lucia in patois is “Sent Lisi.”

#### 4 FOLKLORE

The African-derived quasi-religious belief system called *obeah* is practiced in St. Lucia, although it has been outlawed since the 1950s. Many of its practices are meant to ward off harm at the hands of various spirits, devils, and human beings. It is thought to be capable of healing the sick, harming one’s enemies, and accomplishing more mundane goals such as “fixing” a court case. Its features include the preparation of herbal potions.

#### 5 RELIGION

According to the 2001 census, about 67.5% of the island’s population is Roman Catholic, with smaller groups belonging to the Seventh-Day Adventist (8.5%) and Pentecostal (5.7%). Other religious minorities are Rastafarian (2.1%), Anglican (2%), Evangelical (2%), and other Christian groups, such as Anglicans, Methodists, and Baptists (5.1 %). The island’s East Indians are either Hindu or Muslim. The Catholic population celebrates saints’ days.

#### 6 MAJOR HOLIDAYS

St. Lucia’s public holidays include New Year’s Day (January 1), Independence Day (February 22), Good Friday, Easter Monday, Labor Day (May 1), Queen of England’s Official Birthday (June 5), Corpus Christi (June 6), August Bank Holiday (first Monday in August), Thanksgiving Day (first Monday in October), St. Lucia Day (December 13), Christmas (December 25), and Boxing Day (December 26). The annual Carnival celebration, a focus of many of the island’s cultural activities, is held in Castries right before Shrove Tuesday and Ash Wednesday. The finals of the calypso competition and the naming of the Carnival King and Queen are held over the weekend, followed by the spirited street revels of J’Ouvert, which begin at 4:00 AM on Monday morning. The more orderly costumed bands parade on Monday and Tuesday.

A tradition unique to St. Lucia are its two competing flower festivals, which are held on the feast days of two saints and grew out of the historical rivalry between France and Britain for control of the island. La Rose, the Feast of St. Rose of Lima, is held on August 30. Its counterpart, La Marguerite (the Feast of St. Margaret Mary Alacoque) occurs on October 17. Each festival, planned and staged by a special society, includes costumed parades and a “royal court” of kings and queens. Special songs called *belairs* are composed for the festivals by society members, and the evening of each festival is spent feasting and dancing traditional dances. In addition, Saint Lucia holds a carnival in mid-July.

The National Day, St. Lucia Day on December 13, is an important occasion. St. Lucia (St. Lucy), who is associated with light, is the island’s patron saint; its motto is “the land, the people, the light.” St. Lucia Day is marked by nationwide cultural and sporting events.

#### 7 RITES OF PASSAGE

Major life transitions are marked by religious ceremonies appropriate to each St. Lucian’s particular faith community. For instance, Catholics hold funeral wakes on the first and eighth

nights after a person’s death. Mourners gather at the house of the deceased, providing coffee, sugar, and rum, and music is performed. The music played inside the house (generally hymns and gospel) is for the dead, while that played outside (drumming or unaccompanied songs) is meant to comfort the mourners.

#### 8 INTERPERSONAL RELATIONS

The distinction between English and patois has traditionally been linked to social standing. While English was historically the language of culture and education, patois implied a lack of status and sophistication, and it was once common for St. Lucians to hide their knowledge of it. Parents who harbored ambitions for their children would insist that they speak English, even at home. The 20% of the population who do not speak English are still excluded from full participation in the island’s social, economic, and political life. However, the government has initiated outreach measures designed to bring that group fully into the mainstream. At the same time, there has been a revival of respect for patois as a symbol of cultural pride among St. Lucians.

Social relations in St. Lucia are strongly influenced by the overwhelmingly Roman Catholic religious affiliation of the island’s inhabitants.

#### 9 LIVING CONDITIONS

Health conditions on St. Lucia improved substantially in the 1980s, with a decrease in infant mortality and an increase in average life expectancy, which stood at 72 years in the early 1990s and 74 years (estimate) in 2008. Total deaths were 3,837, and the crude death rate was 6.4 per 1,000 people during 1996–1999. Diseases of the circulatory system are the principal cause of death (38%), and tumors and external causes represent 16% and 9%, respectively. External causes of death are more than three times greater for males than females.

Free services provided by the health care system include both curative and preventive care, the latter including immunization, family planning, and nutrition programs. There are approximately 3,400 persons per physician, and most (70%) of the country’s urban dwellers had access to safe drinking water as of 1990. There are two major hospitals located near Castries and Vieux Fort. Other service providers include a network of clinics.

A 760-km (470-mi) road network links the island’s villages, towns, and major residential areas, with the major cross-island route running from Castries in the northwest to Vieux Fort in the south. Local mass transit is provided by vans and mini-buses, which are known as “transports.” Rural dwellers often reach the nearest town or main road by footpath. Castries and Vieux Fort are the country’s most important ports, with ferry links from Vieux Fort to St. Vincent and the Grenadines. Hewanorra International Airport accommodates jet aircraft, while the smaller Vigie Airport is used for flights to neighboring islands in the Caribbean.

An existing housing shortage due to overcrowding on the island—especially in urban areas—was worsened by damage from Tropical Storm Debbie in 1994.

Regarding media property, St Lucia’s newspapers and broadcasters are mainly privately owned and carry a range of views. The government operates a radio network. There are no daily newspapers.

## 10 FAMILY LIFE

Couples in St. Lucia, as in other parts of the West Indies, are united in three basic types of relationships: legal marriage, unmarried cohabitation, and “visiting unions,” where the man and woman live apart and the woman raises the children. Visiting unions are more likely to occur in early adulthood, while married relationships are more common later in life. The traditional nuclear family is mostly found among the upper classes, with female-headed families the norm at other levels of society. Many households are largely composed of different generations of women, and women have the major decision-making responsibilities. Children acquire a strong sense of responsibility toward their families from an early age and are expected to care for their parents as they age.

In rural areas, men and women do the same types of farm work, but women also take care of the majority of domestic chores and assume primary responsibility for child-rearing.

## 11 CLOTHING

St. Lucians wear modern Western-style clothing. Some older women may still be seen in the traditional national costume consisting of a madras head-tie and a skirt with lace petticoats draped at the sides. Costumes are also worn at the Flower Festivals and the Carnival celebration.

## 12 FOOD

Like its language, St. Lucia’s cuisine combines the island’s French and African heritages. It is based on the local produce and seafood catch, liberally spiced and prepared in clay pots heated by coals. The waters surrounding the island contain crab, tuna, dolphin fish, conch, flying fish, and snapper, while its tropical climate yields breadfruit, dasheen, green-skinned pumpkin and yam, avocado, coconut, guava, mango, and papaya. (Produce is generally available year-round). Favorite Caribbean dishes enjoyed on St. Lucia include fish soup, callaloo, and plantains prepared in many different ways. *Pouile Dudon* is a French-derived sweet-and-spicy chicken meal. The national dish is saltfish and green figs (a type of banana also known as “bluggoe”).

### Saltfish and Green Figs

- ¼ pound salted codfish
- 2 tablespoons vegetable oil
- water
- 3 medium-sized green figs (unripe bananas)
- 1 small onion, finely chopped

Place the salted codfish into a bowl, breaking it into large chunks. Add water to cover and let soak for 12 hours, adding fresh water at least twice.

Cut the bananas into 2.5-cm (1-in) pieces and boil in about 2 cups of water, simmering about 15 minutes.

Boil the salted fish in 3 cups of water for 15 minutes, or until tender. Drain thoroughly, remove any remaining skin or bones, and shred or flake.

In a large skillet, sauté the fish together with the onion for about 5 minutes. Stir in the drained bananas and cook for 2 more minutes.

Optional: garnish with tomato or avocado slices, or celery sticks.

St. Lucian-born poet Derek Walcott. Walcott won the Nobel Prize in 1992. (Horst Tappe/Hulton Archive/Getty Images)

## 13 EDUCATION

Education on St. Lucia is free and compulsory between the ages of 5 and 15. The literacy rate of the adult population has been estimated at about 90%, a figure related to the fact that some 15% of the populace speaks only the French-based Lucian dialect, or patois. There are 83 primary schools and 13 secondary schools. In the 1980s only 6 of the nation’s secondary schools offered schooling beyond the junior secondary level (equivalent to junior high school), sending many young people into the work force without having received a full education. Higher education is offered at Sir Arthur Lewis Community College and a branch of the University of the West Indies. There is also a technical college and a teacher-training college.

## 14 CULTURAL HERITAGE

Nobel Prize-winning poet and playwright Derek Wolcott was born in St. Lucia in 1930. Although he has long divided his time between Boston and Trinidad, where he founded a theater workshop, he has established an international writers’ retreat called the Rat Island Foundation off the coast of his native land. Wolcott’s works represent a fusion of the English language and literary tradition with Caribbean culture and folklore. Other St. Lucian writers include Walcott’s twin brother Roderick Walcott, novelist Garth St. Omer, and poet and short-story writer John Robert Lee.

In addition to Wolcott, St. Lucia has produced another Nobel Prize winner: economist Sir Arthur Lewis. The country’s visual artists include Dunstan St. Omer, known for his religious paintings, and Llewellyn Xavier, the St. Lucia-born creator of Mail Art who has become involved in environmental conservation on the island in recent years. Modern dance has thrived on St. Lucia, and two of its best-known performers are Michael Francis and Carlton Ishmael.

In addition to the calypso and reggae music that are universally popular in the Caribbean, two other musical styles, zouk and cadance, are heard on French-influenced islands like St. Lucia. The St. Lucia International Jazz Festival has been held annually since 1992, with the dual goals of bringing top international performers to the island and encouraging local musicians. Festival participants have included such acclaimed artists as Herbie Hancock, Nancy Wilson, and Ramsey Lewis. The 1993 festival was attended by 6,000 people.

### 15 WORK

The cooperative labor ethos of St. Lucians extends from the family to the neighborhood *cou-de-main* tradition, where villagers organize themselves into work parties to help their neighbors with such tasks as building a new house or organizing a major family event such as a wedding. The majority of the work force is engaged in agriculture, with light manufacturing and a growing tourist industry employing most of the rest.

### 16 SPORTS

As is the case in other British-influenced Caribbean islands, cricket is very popular on St. Lucia, whose team competes regularly against the British team (which itself has a number of West Indian players).

### 17 ENTERTAINMENT AND RECREATION

Dancing is extremely popular on St. Lucia, and dances are held regularly, even in the smallest towns. In the 1980s, up to one-third of a popular radio news program broadcast in patois was devoted to dance announcements. Other favorite forms of recreation include beach parties, full-moon parties, and simply gathering with friends at night to discuss the day's events. Popular music on the island includes the Caribbean calypso and reggae styles, as well as the French-influenced zouk and beguine. As on other islands in the West Indies, the rum shop is the traditional male after-hours gathering place.

### 18 FOLK ART, CRAFTS, AND HOBBIES

St. Lucia has a rich and varied folk music tradition, which can be heard on a CD collection compiled by the island's Folk Research Centre and recorded at the Smithsonian Institution in Washington, D.C. (*Musical Traditions of St. Lucia*). The island's traditional music includes work songs that originated during the days of slavery, as well as beach party and game songs, "play-song-dance" music, and Carnival music. Some of St. Lucia's folk instruments, including the violin, guitar, and mandolin, are of European origin. Instruments of African origin include the *bélé* (or *ka*) drum; a long, hollow tube called the *baha*; a rattle called the *chakchak*, the *zo* (bones); and the *gwaj* (scraper). Various types of banjos and a four-stringed instrument called the *cuatro* are also native to the island.

The music itself shows both French and African influences. The former is evident in the St. Lucian *kwadril*, derived from a French dance form, and the latter can be seen in the *koutoumba*, derived from African call-and-response forms. St. Lucian gospel songs are called *sankeys* (in honor of American singer and songwriter Ira D. Sankey). Each year the calypso tunes currently popular on the island appear in a recorded collection called *Lucian Kaiso*. The St. Lucian *kwadril*, like the French version, consists of five distinct parts with complicated steps

that must be carefully learned and memorized. The *kwadril* has enjoyed a revival since the mid-1980s, when it was recognized as a unique cultural expression rather than simply a vestige of European colonialism.

Traditional crafts on St. Lucia include pottery, woodcarving, and weaving. The Craft Centre at Choiseul was established by the St. Lucian government to preserve the island's folk art heritage and help support its craftspeople.

### 19 SOCIAL PROBLEMS

In recent years, low banana prices have affected St. Lucia's economy, and the situation has been exacerbated by farmers' strikes and the damage wrought by Tropical Storm Debbie in 1994. In that year, the St. Lucia Banana Growers' Association was forced into receivership and confronted a heavy debt load. Prime Minister John Compton estimated that it would take two years and cost US\$30 million to repair the damage from the storm. It was feared that up to one-fifth of the island's fertile farm lands might have been permanently ruined for crop production.

### 20 GENDER ISSUES

St. Lucia still has discriminatory laws against women. St. Lucian women who marry foreign men are not permitted to acquire citizenship for their husbands, but men who marry foreign women receive automatic citizenship for their wives. Women also must consult and receive permission from their husbands before basic procedures related to their reproductive health. On the other hand, men are not required to have the consent of their wives if they choose to have a vasectomy. Abortion was made legal in 2003, but only in limited circumstances, in cases of rape, incest, deformed fetus, and to protect the life of the mother.

Violence against women is a critical problem in St. Lucia and the government has enacted laws to deal with the problem. However, there is a low level of public awareness and sensitization. Many people still believe that domestic violence is a private affair. Law enforcement and the judicial system also pose major problems, as many cases of violence against women remain unsolved and those that do go before the court experience years of delays. In addition, there has been a growing trend in adolescent childbirths and girls from poor families are more prone to become pregnant due to sexual abuse, unlawful carnal knowledge, or the inability to gain access to contraceptives. Also, there is currently no recourse in the criminal code for women who are victims of rape within marital relationships.

Female participation in the labor force stands at 44.42% and there has been a steady increase in women occupying senior and middle management positions since 2002. However, women are still concentrated in elementary positions, including services and clerical work. Even though women have a greater level of education and skill attainment than men, more women are unemployed. Moreover, not only do women have more consistently higher rates of unemployment than men, they are also generally paid less than men for the same work.

Regarding politics, in St. Lucia there is no quota system that could create spaces for participation of women in parliament and in local government. In 1997 and 2001 there was an improvement in the participation of women in the parliamentary assembly, as two women were elected to office out of the 17 constituencies and seats in the lower house. There are

11 seats in the senate and women maintain a presence there, but the numbers have decreased. In addition, the speaker of the house has always been a male. Senior management posts in public service are still dominated by men although there have been some progress for women. There are many female attorneys and there are also female judges. Even though women are holding positions in most areas of the public service, including that of permanent secretary, the majority of top positions are still held by men.

# ST. VINCENTIANS

**LOCATION:** St. Vincent and the Grenadines

**POPULATION:** 118,432 (July 2008 est.)

**LANGUAGE:** English; local dialect with French, West African, Spanish, and English elements

**RELIGION:** Protestant sects (80–90%): Anglicans, Methodist, and Seventh-Day Adventists; Roman Catholicism; Hinduism; Islam

## <sup>1</sup> INTRODUCTION

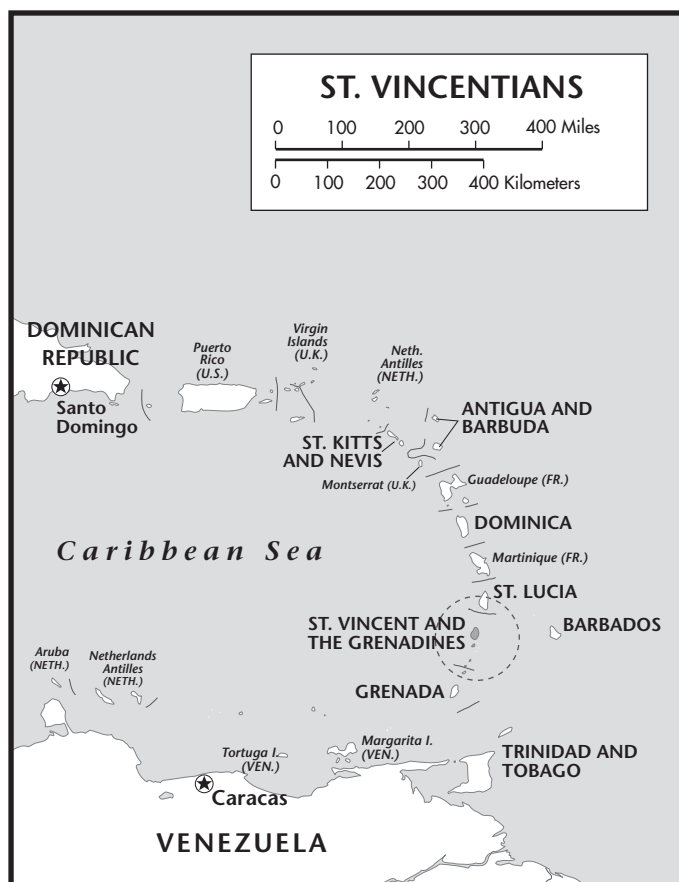

In spite of its small size, St. Vincent and the Grenadines has a tumultuous early history. Control of its constituent islands was vigorously contested by both Amerindian and European groups for nearly 300 years, and its heritage includes the unique mingling of Africans and Amerindians that produced the group known as the Black Caribs. The Amerindian population on the island of St. Vincent guarded their homeland so vigorously that it became the last major Caribbean island to be colonized.

Christopher Columbus's sighting of the island in 1498 is thought to have taken place on 22 January, the feast day of the saint for which it is named. Aggressively defended by its native Carib population, St. Vincent remained impervious to European settlement attempts until the 18th century. However, when a passing Dutch ship carrying settlers and slaves was shipwrecked off the coast of Bequia in 1675, the Caribs welcomed the Africans who were the sole survivors of the disaster. They were allowed to settle on the island and mix with its population. The resulting people, whose numbers were swelled by escaped slaves from the neighboring islands of Barbados and St. Lucia, became known as the Black Caribs. Ensuing tensions between this group and the "pure" or Yellow Caribs on the island led to hostilities and territorial division by 1700.

In the 18th century, the French, the British, and the Caribs fought for control of the island, which was ultimately ceded to Britain by the Treaty of Paris in 1763. However, the French retained control of some of the Grenadines for a number of years, establishing a strong cultural influence in the area. On St. Vincent, sugarcane plantations flourished under the British in the first part of the 19th century. East Indian and Portuguese indentured laborers were brought to the island to make up for the labor shortage that followed the abolition of slavery by Great Britain in 1834.

In the mid-1800s, sugar prices fell, and the islands sank into an economic depression that lasted for decades. The century ended with two natural disasters, a hurricane in 1898 and the most destructive eruption to date of La Soufrière, St. Vincent's active volcano. Clouds and gases from the eruption were recorded as far away as Barbados, and nearly 2,000 people lost their lives. La Soufrière's most recent major eruption in 1979 forced over 16,000 people to evacuate their homes and blanketed much of the island with ash, resulting in extensive crop damage. However, no lives were lost.

Long administered as a British crown colony, St. Vincent and the Grenadines moved gradually toward full independence following the breakup of the West Indies Federation (of which it had been a member) in 1962. Internal self-government was granted in 1969 and full independence came on 27 October

1979. The period of independent statehood has been marked by secessionist tendencies in the Grenadines, including a rebellion on Union Island immediately following independence and protests in the early 1980s.

The eruption of La Soufrière in 1979 was followed a year later by Hurricane Allen, which caused extensive crop damage. In 1987, Hurricane Emily destroyed an estimated 70% of the nation's banana crop. This lower-middle-income country still is highly vulnerable to natural disasters. Tropical storms wiped out substantial portions of crops in 1994, 1995, and 2002.

The economic growth was of 6.6% in 2006, which was considered low after a decade of sturdy growth of nearly 7%. However, it has been predicted that the economy will remain robust. Economic growth is heavily dependent on the seasonal variations that affect the agricultural and tourism sectors. In recent times, the increase in construction activity has become an important engine for the national economy, especially regarding job creation.

Bananas, coconuts, sweet potatoes, and spices, as well as a small number of cattle, sheep, pigs, goats, and fish, represented 10% of the economy in 2001. In industry, food products, cement, furniture, and clothing are the main commodities produced by the country, accounting for 26% of national production. The service industry represented 64% of the economy during the same period.

As in other Caribbean nations, tourism has been one of the sectors with spectacular growth. The filming of the *Pirates of the Caribbean* saga on the island also helped to increase tourism and expose the country to the wider world. During 2007,

the islands received more than 200,000 tourist arrivals. Saint Vincent is home to a small offshore banking sector and has moved to adopt international regulatory standards. The government's investment plans in social programs and its responses to natural and external shocks are strongly limited by its high debt burden.

Queen Elizabeth II, the British monarch, is the head of state and is represented on the island by an appointed governor-general. St. Vincent and the Grenadines have a unicameral legislature that is composed by the House of Assembly, an organism that is formed by representatives and senators appointed by the governor-general.

## 2 LOCATION AND HOMELAND

St. Vincent and the Grenadines is located among the Windward Islands in the southern portion of the Lesser Antilles. St. Vincent is 32 km (20 mi) south of St. Lucia, while the Grenadines stretch southward toward Grenada. Thirty-two of the Grenadines are part of St. Vincent and the Grenadines, while the rest belong to Grenada. Barbados lies 161 km (100 mi) to the east. St. Vincent itself has a total area of 345 sq km (133 sq mi), while the land area of the Grenadines totals 44 sq km (17 sq mi), bringing the country's total area to 389 sq km (150 sq mi).

St. Vincent is a volcanic island whose highest point—at 1,234 m (4,048 ft)—is La Soufrière, an active volcano whose last major eruption, in 1979, caused serious crop and property damage but no loss of life, thanks to modern warning systems. La Soufrière is the northern end of a mountain range that runs southward to Mt. St. Andrew, bisecting most of the island. The mountains are heavily forested, with numerous streams fed by heavy rainfall.

Of the Grenadines associated with St. Vincent, the largest are Bequia (pronounced Beck-way), Canouan, Mayreau, Mustique, Isle D'Quatre, and Union Island. Bequia, 14.5 km (9 mi) south of St. Vincent, is the largest of the Grenadines. It is also the last Caribbean island on which whaling is still practiced, with the approval of the International Whaling Commission, which has granted the island a special Aboriginal Whaling Status. The home of the country's prime minister, Sir James Mitchell, St. Vincent has only had electricity since the 1960s and was only accessible by boat until the construction of an airport in 1992.

Farm animals outnumber the human population on Mayreau, which had its first—and only—telephone installed in 1990. Union Island (with an area of 8 sq km or 3 sq mi), the country's southern port of entry, was also the site of a secessionist revolt by about 50 young men a few days after St. Vincent and the Grenadines was declared an independent nation in 1979. Perhaps the best-known of the Grenadines is Mustique, a tiny semi-privately owned island with homes belonging to such well-known public figures as Mick Jagger and England's Princess Margaret, as well as other wealthy but lesser-known owners.

St. Vincent and the Grenadines has an estimated population of 120,000 people, of whom some 100,000 live on St. Vincent and about 8,000 on the Grenadines. About 25% of the country's population lives in the capital of Kingstown or in one of its suburbs. Kingstown itself has an estimated population of 15,000–16,000 people, and the surrounding area has another 10,000 people.

The ethnic composition of the population is estimated as 65% Black, 20% of mixed Black and White ancestry, 5.5% East Indian, 3.5% White, and 2% descended from the island's native Carib population, with the remainder being immigrants from North America, Latin America, and Asia. There is a Carib reservation at Sandy Bay in the northern part of St. Vincent.

### **3 LANGUAGE**

English is the official language of St. Vincent and the Grenadines, but most people on the islands speak a local dialect, or Creole, that contains elements of both French and West African grammar and a vocabulary that is mostly French with some African, Spanish, and English words. It includes one of the most characteristic features of West Indian Creole languages, the use of object pronouns in the subject position, as in "Me going down town." There are many French place names in St. Vincent and the Grenadines, including Sans Souci, Petit Vincent, and Mayreau, as well as Carib names, which include Bequia (one of the Grenadines) and the Commantawana Bay on St. Vincent.

St. Vincentians have historically prided themselves on their ability to speak standard English correctly, while devaluing the use of the Creole that is for most the language of everyday life. In recent years, however, Creole has enjoyed an enhanced reputation as its use has become associated with cultural and national pride, especially among young people. Skits, speeches, and other activities in Creole have become popular in the schools, long the bastion of proper English.

### **4 FOLKLORE**

The folklore of St. Vincent and the Grenadines reflects its combined English, African, and French heritage, as well as Creole and West Indian influences. Like other West Africans, Vincentians tend toward the superstitious, and some still fear the African-influenced black magic called obeah that is common in the Caribbean region. The nation's best-known folk tradition is its annual summer carnival celebration.

### **5 RELIGION**

Between 80% and 90% of the populations is Protestant. Anglicans represent the greatest share with 47% of the population, followed by Methodists, who account for 28% and the Roman Catholic with 13%. Other minority groups in the island include Hindus, Seventh-day Adventists, and other Protestants, who in total account for around 12% of the inhabitants.

### **6 MAJOR HOLIDAYS**

Public holidays in St. Vincent and the Grenadines include New Year's Day (January 1), St. Vincent and the Grenadines Day (January 22), Good Friday, Easter Monday, Labor Day (May 1), Whit Monday, Carnival Tuesday, CARICOM Day (July 1), Emancipation Day (August 1), Independence Day (October 27), Christmas (December 25), and Boxing Day (December 26). The nation's Carnival celebration (Vincy Mas) is held in late June and early July and features costumed parades, calypso and steel drum bands, and "jump-up" (street dancing). The final two days are J'Ouvert (a Monday when revelers stream into the streets at dawn), and Mardi Gras, and there are boisterous street parties on both days. Preliminary rounds in preparation

for the Carnival calypso competitions can be heard throughout the island in the two months preceding the festivities.

Union Island holds sporting and cultural events, including a calypso competition, at Easter, and a Big Drum festival in May.

### **7 RITES OF PASSAGE**

Major life transitions, such as birth, marriage, and death, are marked by religious ceremonies appropriate to each St. Vincentian's faith community.

### **8 INTERPERSONAL RELATIONS**

"What di' man say?" is a typical greeting. Popular slang among young people on the islands includes "Irie" (an all-purpose phrase that is something like "stay cool" or "see you later") and "Sic too bad" (similar to "awesome").

### **9 LIVING CONDITIONS**

In 2007 the national economy experienced a growth of 6.6%, while GDP per capita was of \$9,800 dollars and the inflation reached 6.1%. It is common to see public spaces crowded with young men and women who are without jobs. High unemployment rates have prompted many inhabitants to leave the islands seeking a better quality of life.

St. Vincentians generally own their own homes, growing produce for their own consumption and selling the surplus at the market. Women are more likely to own homes through inheritance, while men typically build their own; it is not uncommon for a family to live in a house owned by the wife. Besides inheritance, another way that a woman commonly acquires a home is by having a son or daughter build it for her. A typical rural dwelling is a single-story wooden house with a tin roof, often painted red.

According to recent estimates, there is 1 physician per 3,800 people. Common health problems include parasitic diseases and circulatory disorders. Gastrointestinal diseases are also prevalent, although less so than before. Average life expectancy was 71 years as of 1992. Medical care is provided at the Central General Hospital in Kingstown, as well as at 35 clinics and dispensaries in various other locations.

Parts of St. Vincent are accessible only by foot or boat. The country's road area is divided nearly equally between all-weather and rough roads. Local transportation is provided by open-air buses and small minibus-taxis sporting colorful hand-painted names such as "Mad Dog II," "Stragglin' Man," and "Say Wha Yo Like." The E. T. Joshua Airport is located on the island's southern tip, near Kingstown, and there are smaller airports or airstrips on Bequia, Union, Canouan, and Mustique islands.

The Vincentian press is privately-owned. The constitution guarantees a free press and publications openly criticize government policies. There are several private radio stations and a national radio service, which is partly government-funded.

### **10 FAMILY LIFE**

Three types of family arrangement common throughout the much of the West Indies are found on St. Vincent and the Grenadines: legal marriage, unmarried cohabitation, and "visiting unions," where the man and woman live apart and the woman raises the children. Visiting unions are more likely to

*A Saint Vincentian woman wearing a traditional West Indian dress gives Taiwanese President Chen Shui-bian a basket with fruits while St. Vincent & the Grenadines' Prime Minister Ralph Gonsalves looks on. (AP Images/E. Glenford Prescott)*

occur in early adulthood, while married relationships are more common later in life. Even in visiting unions (also referred to as “friending”), strong links are maintained between father and child. There is equal recognition of kinship through legal and nonlegal unions.

Infants are highly valued and receive a large amount of attention and physical affection from all members of the household. Fathers, sons, grandparents, and daughters may actually provide the greatest amount of attention if the mother is too busy taking care of the family’s washing and cooking, as well as raising its produce and, in many cases, serving as the household’s water carrier.

Men are responsible only for those children they have actually fathered, whether through a present or previous relationship. Thus, they may have obligations toward children living in different households. The mother occupies a central position in the household as the only person with obligations toward all its members, including the children from both her present and previous relationships, as well as toward her husband and any grandparents, aunts, or uncles who may live with the family.

Although women accounted for 38% of the nation’s work force in the 1980s, traditional gender roles and expectations kept most women from receiving an education equal to that of men.

## 11 CLOTHING

People on St. Vincent and the Grenadines wear modern Western-style clothing. They favor light and brightly colored clothes and are interested in the latest fashions. Some young people enjoy dressing in attention-getting items, such as bright orange jeans, the latest in expensive footwear, or shirts with popular designer names. Children wear uniforms to school.

## 12 FOOD

Staple foods include rice, sweet potatoes, and fruits, especially those of the banana family, which includes plantains and bluggoe (green figs), in addition to ordinary bananas. Another widely eaten food, breadfruit, is associated with a famous historical incident, the mutiny on board the *Bounty* by the crew of Captain William Bligh in 1789. Bligh's men mutinied on a voyage to gather breadfruit and other items to be shipped to Jamaica and St. Vincent. Although he and 19 loyal sailors were cast adrift and compelled to sail 6,667 km (3,600 mi) in an open boat before reaching dry land, Bligh undertook a second voyage in 1793, gathering the breadfruit that ultimately found its way to St. Vincent and the rest of the Caribbean. Today, St. Vincent's local rum is called Captain Bligh in honor of the tenacious seaman, and its national dish is jackfish and breadfruit. Arrowroot, a major cash crop, is used in desserts, including arrowroot sponge and arrowroot custard. Popular fare includes dishes containing spicy Scotch Bonnet peppers.

## 13 EDUCATION

Primary education is free but not compulsory, and there are both government-operated secondary schools, which are free, and government-assisted private schools, which charge tuition. In 1994/95, about 76% of all children at the primary level were attending school, while only 24% of older students were enrolled in secondary school. At the post-secondary level, St. Vincent has a technical college and a teacher training college affiliated with the University of the West Indies. Most students seeking a higher education must leave the country, attending college at other campuses of the University of the West Indies or in the United States, Canada, or Great Britain. The adult literacy rate of St. Vincent and the Grenadines is estimated at 96%.

## 14 CULTURAL HERITAGE

The Big Drum music of the Windward Islands, to which St. Vincent and the Grenadines belongs, reflects the islands' African cultural roots, combining the African call-and-response tradition with features of calypso and reggae, but retaining an authentic African flavor. The Big Drum is actually a set of three drums, originally carved from trees and later made of rum kegs. The singers are usually women, and the lead singer is called a chantwell. The songs—in either English or patois (dialect)—resemble those of other Caribbean traditions, such as calypso, in their reliance on satire and social commentary. Dances are performed inside a ring of people by dancers wearing full skirts and headdresses who interact with the musicians.

## 15 WORK

Many St. Vincentians practice agriculture or fishing, either at a subsistence level or for profit. Those who farm small plots

bring their surplus fruits, vegetables, chickens, or fish to sell at the modern market in Kingstown on Saturdays. Bananas are St. Vincent's main commercial crop. Most banana growers cultivate only 0.8 to 2 hectares (2–5 acres) of land. Translucent blue plastic bags cover the "hands" (bunches of bananas) to protect them from the full heat of the sun, retain moisture, and prevent bruising. The sensitive bananas must be harvested at exactly the right time, and radio broadcasts keep farmers advised of the best harvesting time. The growers are paid for their harvest at the stations where bananas are boxed. Hundreds of thousands of dollars are counted into small envelopes every week and distributed to as many as 3,000 waiting St. Vincentians with receipts in their hands.

On the Grenadines, most men are fishermen or boat-builders. The island of Bequia has a tradition of whaling, a skill the islanders have been practicing since the 19th century. The International Whaling Commission has granted the Bequians Aboriginal Whaling Status, a classification reserved for people who hunt whales for local consumption rather than commercial use and who have a whaling tradition that is closely linked to their familial, cultural, and community ties. No more than three whales are caught in any one year. The whales are subdued with harpoons, which today are often shot from a whale gun rather than thrown by hand. They are then towed to the island of Petit Nevis to be processed and sold. A successful catch is considered an important event on Bequia, and much of the island's population flocks to Petit Nevis to see the whale.

St. Vincent and the Grenadines has a high rate of unemployment, estimated at about 25% in the early 1990s.

## 16 SPORTS

Cricket, the most popular sport, is played throughout the islands on any piece of flat ground and even on the beach. Other sports include football (soccer), netball, volleyball, and basketball.

## 17 ENTERTAINMENT AND RECREATION

Nighttime gatherings outdoors are a favorite form of recreation and may include singing, dancing, and the universally popular pastime of gossiping. With the recent growth of tourism on the islands, it has become common for locals to gather at hotel and restaurant entertainment facilities to eat, drink, dance, and socialize. Men on St. Vincent and the Grenadines, like those elsewhere in the Caribbean, are inveterate players of dominoes.

## 18 FOLK ART, CRAFTS, AND HOBBIES

Folk music is played on the four-stringed cuatro, as well as the guitar, fiddle, drums, and a variety of percussion instruments. Bequia is known for its skilled model-boat-builders, who fashion small-scale versions of yachts, whaleboats, and other vessels that are faithful in every detail. Even the island's children make model boats out of coconut shells with brightly colored sails.

## 19 SOCIAL PROBLEMS

The low percentage of young people who complete their secondary education has created a shortage of skilled workers on the islands, exacerbated by the fact that the better-educated

segments of the population often emigrate and live abroad until retirement.

There is a high level of concern about drug-related crime on the islands.

## **20 GENDER ISSUES**

Women in St. Vincent are expected to fill the traditional roles of caregiver and homemaker. Their male counterparts, on the other hand, are mostly considered to be breadwinners and the ones who discipline the children and provide a safe and comfortable environment in which the household can live. Even as women have been incorporated into the labor force, they are expected to be able to fill their traditional roles in the home. Male infidelity is often tolerated, though not accepted. Women enjoy the same legal rights as men, and they receive an equitable share of property following separation or divorce.

Adolescent pregnancy is one of several reproductive risks and constitutes a barrier that prevents women from developing capabilities to achieve the resources necessary for their well being. In 2004, 6% of adolescents 15 to 19 years old gave birth. Violence against women is also a serious problem. The law does not criminalize domestic violence or sexual harassment. Cases involving domestic violence have been normally charged under assault, battery, or other similar laws. Rape, including spousal rape, is illegal, and the government enforces the law. Depending on the magnitude of the offense and the age of the victim, sentences for rape could be 8 to 10 years. Although prostitution is illegal, it remains a problem among young women and teenagers.

The line separating what is a traditional occupation for each gender is increasingly disappearing. However, males still dominate the construction and manufacturing industry, with most females in these sectors are involved in clerical rather than manual work. The minimum wage law specifies that women should receive equal pay for equal work.

Even though there are female politicians in St. Vincent, they are significantly fewer than their male counterparts. In 2008, there were two women in parliament, three women in the cabinet (minister of education, minister of urban development, labor, culture, and electoral matters) and a female attorney general.

# SALVADORANS/ SALVADORIANS

**LOCATION:** El Salvador; United States

**POPULATION:** 7,006,403 million

**LANGUAGE:** Spanish

**RELIGION:** Roman Catholicism; Protestantism

## <sup>1</sup> INTRODUCTION

El Salvador is the smallest and most densely populated country in Central America. When the Spanish arrived in 1524, the Pipil, who spoke a language similar to that of the Aztecs, resided there. Atlatl, their leader, initially defeated the forces led by Pedro de Alvarado, and Atonatl, an archer, wounded Alvarado. Both are remembered as heroes, but the whole area fell under Spanish control by 1540. The Indians were put to work on plantations that produced tropical products like cacao and indigo.

El Salvador declared its independence from Spain in 1821 and belonged to a Central American Federation from 1823 to 1841. For the next century, the government was dominated by the coffee-growing industry. When, during the Depression, coffee prices dropped and wages were cut, peasants rose in revolt in 1932. The military crushed the revolt and then massacred about 15,000 to 30,000 people, mainly Amerindians. Military rulers governed the country until 1980.

During the 1980s, armed left- and right-wing groups fought for power. About 70,000 people were killed in the struggle. Many were victims of right-wing death squads, including Archbishop Oscar Romero, the country's highest-ranking Roman Catholic prelate, who was killed while saying Mass. About one-fourth of the 5 million or so people in El Salvador became refugees or displaced persons during the war, and more than 500,000 left the country. A peace agreement was reached in 1992 and, two years later, the conservative Armando Calderón was elected president. Calderón, a lawyer and businessman, restored the rule of law after the civil war and promoted the privatization of state-owned companies and pension funds to stimulate the economy. His major achievement was the peaceful incorporation of former guerrilla groups back into civilian life.

In 1999 Francisco Flores, representing the Nationalist Republican Alliance (ARENA), was elected president of El Salvador. During his tenure, Flores followed a close alignment with U.S. policies, authorizing the deployment of Salvadoran troops to Iraq and signing a free-trade agreement with the United States. In 2004, Elías Antonio Saca succeeded Flores as president. Saca embraced the free-market and offered a pro-U.S. standpoint.

El Salvador's economy is predominantly dependent on its agricultural sector, with sugar, cotton, corn, and coffee exports as its main cash crops. Cattle have also become a promising source of income. Other important commodities for the Salvadoran economy are shrimp, textiles, chemicals, and electricity. The principal buyers of Salvadoran goods are the United States, Germany, and Japan. Even though Salvadorians have focused on developing their agriculture sector, the country has had severe problems feeding its population, mainly because there is

an unequal distribution of land in favor of commercial corps. Many of the landless peasants, unable to sustain themselves and their families, have migrated to more developed countries, especially the United States and Mexico. Consequently, as of 2007 El Salvador leads the region in remittances per capita with inflows equivalent to nearly all export income.

Since the middle of the 20th century, El Salvador heavily increased its investment in industry, which boosted the banking system. As a consequence, manufactures of beverages, canned foods, organic fertilizers, cement, plastics, cigarettes, shoes, cotton textiles, leather goods, petroleum products, and machinery have also thrived.

## <sup>2</sup> LOCATION AND HOMELAND

El Salvador is slightly smaller than the U.S. state of Massachusetts. It is bounded on the north and east by Honduras, on the north and west by Guatemala, and on the south by the Pacific Ocean. The Gulf of Fonseca to the east separates it from Nicaragua. Two east-west mountain ranges cross El Salvador: the Sierra Madre along the border with Honduras, and a southern range that includes more than 20 volcanoes. The country also lies on an earthquake zone.

The climate is tropical, with the rainy season extending from May to October. Most of the people live in the fertile central zone or in the metropolitan area of San Salvador, the capital. About 90% of the people are Mestizo, of mixed European and Amerindian ancestry. Whites account for about 9% of the population and the remainder, almost all are Amerindians. Of the more than 1 million people displaced by the civil war, about 500,000 settled in other parts of El Salvador, 250,000 migrated to Mexico, and 150,000 moved to the United States. By 1990 there were believed to be 1 million Salvadorans in the United States.

## <sup>3</sup> LANGUAGE

Spanish is the official and universally spoken language. Very few people still speak an Amerindian language, mostly Nahua.

## <sup>4</sup> FOLKLORE

According to the Pipil creation myth, Teotl rubbed two branches together to produce the sparks that became the stars. Teopantlí, the reformer who rules the universe, then appeared in the heavens. A handful of fire that condensed down below into a ball of light became Tónal, the sun, and a tear from Teopantlí created Metzti, the moon. Metzti projected her light onto the earth, creating mountains, canyons, and wild beasts.

Ten-year-old Cipitín, a kind of Cupid, is the god of young love in national folklore. Always elusive, he hides behind the foliage. From high in the treetops he shakes flowers off the branches so they will fall on girls passing below. He has a sweetheart, Tenáncin, who lives with him in a cavern inside a volcano.

Folk medicine is not as prominent in El Salvador as it is in Mexico and Guatemala, where Indian heritage remains stronger. Witchcraft is sometimes blamed for illnesses and love problems. *Ojo* (eye) is the name given to infant illnesses attributed to the infant being seen by a strong person, who does not necessarily intend any ill will.

## 5 RELIGION

More than 80% of all Salvadorans are Roman Catholic. In the late 1960s, activist clergy began condemning the army's violence and human-rights abuses. Priests went into the countryside to educate peasants and organize them into cooperatives and unions. Right-wing groups killed dozens, and others joined the guerrillas. The Church continued to operate social programs in the 1990s, but most were less political than before.

About 10% of the population is Protestant. A number of groups, including the Baptists, Mormons, and Seventh-Day Adventists, have been active in missionary work developed and financed in the United States. Evangelists preach a message of personal salvation through belief in Jesus rather than through social action.

## 6 MAJOR HOLIDAYS

Many Salvadorans journey over the border to Esquipulas, Guatemala, each January to honor the "Black Christ," a mahogany image of Jesus placed in a basilica built to house it in 1758. San Vicente also holds elaborate festivities for this occasion, with processions on January 14 and 30. Indian men perform a dance in the local church to an accompaniment of fife and drums.

On January 20, Villa Delgado holds a fiesta for St. Sebastian, including a bullfight farce set to fife and drums. The Day of the Cross is held on May 3 nationwide. Homeowners set up a cross in the patio or garden, decorated with fruits and flowers. A folk belief is that if no cross is erected, the devil will come and dance until midnight. Between 1 and 6 August, San Salvador

holds a fiesta commemorating the Transfiguration of Christ with sports events, games, and parties. A float stops across from the cathedral, and from there a figure representing Jesus makes his way underground into the church, where he reappears in white robes. Pilgrims flock to San Antonio del Monte for a fiesta held between August 22 and 26; an image of the saint in the local church is credited with miraculous powers. Christmas is celebrated with nightly *posada* processions from December 16 to Christmas Eve (December 24). In Izalco, the period between Christmas and the Feast of the Epiphany (January 6) is celebrated with nightly processions and *Jeu Jeu*, an Indian rain dance. Izalco and Texistepeque have notable Holy Week (late March or early April) celebrations.

Among secular (nonreligious) holidays, November 5 commemorates the day in 1811 on which Father José Matías Delgado gave the first call for independence in all of Central America. Independence Day is September 15.

## 7 RITES OF PASSAGE

Baptism of infants and confirmation of children in church are common. Perhaps half of all couples, however, live together without formalizing their unions with a license or a church ceremony. A birthday may not necessarily be celebrated; the person's namesake saint's day is likely to be observed instead. A novena for the dead is usually held in the home of the deceased, with friends invited on the final night. Often a second novena is held later.

## 8 INTERPERSONAL RELATIONS

El Salvador shares the customs of other Latin American countries. A greater degree of formality is expected in relations with strangers than in the United States, but punctuality is rarely esteemed. People generally stand closer to one another and gesture more than in the United States when conversing. Unconventional behavior, including inappropriate dress, is frowned upon in this tradition-conscious society.

## 9 LIVING CONDITIONS

A sharp contrast between great wealth and extreme poverty has characterized Salvadoran society since colonial times. About 2% of the people own 60% of the nation's productive land and account for about 33% of the national income. In 2006, more than 30% of El Salvador's population lived under the poverty level.

The elite generally live in San Salvador, in houses typically surrounded by walls many meters high and topped with barbed wire. They travel periodically to their country estates and send their children to private schools. The middle class, about 8% of the population, includes professionals, government employees, teachers, and small business owners. Many army officers come from such a background. The vast majority of people are laborers or peasants who own or rent small plots of land.

In the early 1980s, the poor were taking in fewer calories than anywhere else in the Western Hemisphere. Their diet consists mainly of corn, beans, rice, and sorghum, with only about 1 kg (2 lbs) of meat a month for a family of six. Malnutrition is particularly common among children. The rural population rarely has access to sewage systems, and surface water is seriously polluted. In the countryside, peasants live in one-room, earthen-floor, thatched-roof huts made of adobe or wood frames with mud or rubble fill. The poorest such homes

Wedding dinner in Segundo Montes, El Salvador. Perhaps half of all Salvadoran couples, however, live together without regularizing their unions with a license or a church ceremony. (David Johnson)

are made of poles and straw. In the cities, a poor family may occupy a single room of a compound or establish a shanty in a squatter community on the edge of town.

## **10 FAMILY LIFE**

A provision in El Salvador's civil code requires a man to protect his wife and a wife to be obedient to her husband. Often, however, there is no man around, although Salvadoran women give birth to an average of more than five children. Many marriages have fallen apart as spouses travel in search of work, often outside the country. The dislocations caused by the civil war of the 1980s have had the same effect. About 60% of all births are out of wedlock. The institution of *compadrazgo* (godparenthood) provides aid to the family from outsiders but is not as common as it is in Mexico.

The constitution includes a provision guaranteeing equality for women, but girls are generally expected to be passive and submissive, while boys are taught to be the opposite. There is a history of sexual abuse in the countryside. However, the nation has more women professionals than ever before, including nearly 30% of its doctors and lawyers.

## **11 CLOTHING**

Because the 1932 massacres targeted people of Indian appearance, native El Salvadorans exchanged their dress for European clothes. Few Indians retain traditional dress today, which for men usually meant white cotton trousers and shirt,

sandals, and a large palm-leaf hat with a high crown. Women wore a *huipil* (blouse) with short puffed sleeves; a tightly wrapped skirt called a *refajo*; and a large, bright cotton cloth on the head. Festive dress for women now consists of a cotton skirt above a petticoat, trimmed with a few ruffles around the bottom and reaching to the ankles, and a blouse trimmed with lace and embroidery around the sleeves and neck.

## **12 FOOD**

The staple of the Salvadoran diet is corn. The *pupusa* is (like a tortilla) a cornmeal pancake, often fried. It is folded over and filled with soft, white cheese or some other stuffing such as chopped meat or fried pork rinds (*chicharrón*) or simply *frijoles* (red or black beans). *Gallo de chicha* is chicken marinated in a fermented cornmeal brew mixed with brown sugar. The *quesadilla* is a sweetish bread or cake served as a flat, thin square. El Salvador's markets abound with fruits, some of them unfamiliar to Americans.

## **13 EDUCATION**

Primary education is free and compulsory and since 1968 the school system has been composed of preschool, primary, and secondary education. In 2003, 80% of Salvadorans over the age of 15 were literate. About 70% of all children of primary-school age were enrolled, but only 15% of children old enough for secondary schooling were enrolled there. Although public education is free, many parents are unable to afford the school

*In Salvadoran families, there is often no man around as spouses travel in search of work, often outside the country. (PhotoEdit)*

materials their children need to attend. Thousands of schools closed during the civil war, when spending on education per pupil dropped by 67%. Half the work force has had no more than three years of schooling. The National University, which is in San Salvador, allows many poorly qualified students to attend but graduates few. The University of Central America, also in San Salvador, is a private institution run by Jesuits. There are also schools for technology, fine arts, agriculture, social services, and nursing.

#### 14 CULTURAL HERITAGE

Juan José Bernal, a priest, wrote poetry during the colonial period. Francisco Galindo was a 19th-century poet and dramatist. Salvador Salazar Arrué, writing under the pen name Salarué, was a prominent short-story writer. Claudia Lars was an outstanding poet. Manlio Argueta and Claribel Alegría are novelists and poets. Roque Dalton was a left-wing poet killed by his own guerrilla comrades. Other 20th-century writers include Francisco Gavidia, cofounder of the national theater; Alberto Masferrer, essayist and poet; and Juan Ramón Uriarte, essayist and educator.

Among artists, Juan Francisco Cisneros was a 19th-century painter. Arrué was known for his tapestries as well as his writings. José Mejía Vides created paintings and woodcuts.

The marimba, an instrument that resembles the xylophone, is popular throughout Central America. Before the arrival of the Spanish, music was based on a five-tone scale, and the marimba was a keyboard composed of long gourds. Drums and

flutes—also traditional Indian instruments—accompany over 30 types of dance performed as a ritual on the local saint's day. *La historia* is a dance that dramatizes the conflict between the Moors and Christians in Spain. A *gracejo* (jester) dressed in rags interrupts the narrative with bawdy exclamations. *Turco del monto* is a mountain-pig dance performed at several local festivals. Masks made of cloth, coconut fiber, wood, or gourds may be worn in Indian dances.

#### 15 WORK

The minimum wage in 1995 was only \$2 per day in agriculture and \$3.50 a day in industry and commerce. Half the work force was believed to be unemployed or underemployed. About 70% were unskilled laborers, and about 33% were engaged in agriculture. The average Salvadoran earned about \$1,400 a year, but peasants averaged less than half that much. By 1995 Salvadorans working in the United States were sending home nearly \$1 billion a year to their relatives, a greater inflow of cash than from all Salvadoran exports combined.

#### 16 SPORTS

Fútbol (soccer) is the national passion. The so-called 1969 Soccer War with Honduras followed two matches by the national teams of both countries and resulted in as many as 3,000 deaths, mainly civilians. Basketball is also popular. Other sports include horseback riding, bicycling, motorcycling, swimming, baseball, tennis, golf, and sports fishing.

#### 17 ENTERTAINMENT AND RECREATION

Popular music is dominated by the Mexican music industry. Nightlife is found in San Salvador, in the form of clubs, discos, and marimba street bands. The fiestas offer popular entertainment on a large scale and are accompanied by games like greased-pole climbing and the *carrera de cintas*, in which contestants on horseback must put a stick through a ribboned loop while riding at full gallop.

#### 18 FOLK ART, CRAFTS, AND HOBBIES

Weaving of textiles on pre-Conquest hand looms may still be done in Izalco, where belts are made, and Panchimalco, where women have a long history of weaving skirts and carrying cloths. Cotton is dyed, but not silk or wool. Foot-pedaled looms, introduced by the Spanish, are still used to produce hammocks and bedspreads in San Sebastián. Hats are woven from palm fibers, while hammocks, saddle and net bags, and *petates* (large woven mats) are made from henequen fiber. Baskets are made from palm leaves, rushes, reeds, or wicker. Wicker furniture is made in Nahuizalco.

Molded both by hand and the potter's wheel, ceramic pieces are decorated with red clay dissolved in water and applied with a corn husk. Izalco is the traditional center for gourds, made into bowls, jugs, and cups and often decorated and finished. Also handmade in El Salvador are dolls of wood or dried corn husks, tiny clay figurines for nativity scenes, wooden stirrups and small lacquered boxes, powder puffs made from goose feathers, and silk shawls.

#### 19 SOCIAL PROBLEMS

In the mid 1990s, about 270,000 children were working up to 12 hours a day, and 90% of the Indian population lived in ex-

treme poverty. El Salvador has the second-highest rate of deforestation in the world. Erosion depletes 20% of the topsoil each year, and 90% of the rivers are polluted. About 50% of the population, mostly in the countryside, does not have access to uncontaminated water. San Salvador is dirty, overcrowded, and crime-ridden.

## 20 GENDER ISSUES

The Salvadorian government introduced the principle of equality between men and women in the constitution and has modernized family legislation with the Family Code and Family Procedural Code (1994) and the Domestic Violence Law (1996, revised 2002) that protects, prevents, and penalizes domestic violence—of which women are victims in 91.6% of reported cases. However, sociocultural barriers, along with institutional and financial constraints, hinder progress in legal and policy frameworks for gender equality in El Salvador. Consequently, the political participation of women remains low and gender-based violence affects women in all social groups.

As in other Latin American countries, poverty has been feminized. In 2002 the percentage of poor women in urban areas was 17.7 points higher than that of poor men, and there were more poor urban households headed by women (33%) than by men (27%). In the rural sector, migration is changing the social landscape. It is estimated that one fifth of the Salvadoran population lives abroad, mainly in the United States. Immigrants are mainly men of the rural sector and, as a consequence, one third of the rural population subsists on family remittances, since the agricultural production is no longer profitable. This situation has led to an increase in the number of households headed by women from 26.4% in 1992 to 33.6% in 2002.

Despite the efforts to incorporate women into leadership posts, the presence of women in executive, administrative, professional and technical positions has decreased between 1999 and 2002, which indicates a higher gender inequity. As of 2008, there were 13 women deputies, who accounted for 15% of the country's single-chamber legislature, and 6 women ministers of a total of 17 members in the executive branch.

# SCOTTISH AND SCOTCH-IRISH AMERICANS

## OVERVIEW

Though their numbers have never been large, Scottish and Scotch-Irish Americans have contributed the qualities of pragmatism, utilitarianism, individualism, and self-reliance to the general “American” character. Throughout their early history, Scottish and Scotch-Irish Americans tended to be people of the frontier. They were used to dealing with difficult conditions in their homelands of Scotland and Northern Ireland, and they preferred to be far away from interfering neighbors and governments. Much of the early American frontier was settled by the Scots.

Scottish immigrants to America include three distinct groups: Highlanders, Lowlanders, and Scotch-Irish (Ulster Scots or Scots-Irish). Highlanders came from the north of Scotland, where the land is rugged and the people fierce. The clannish Highlanders wore kilts and spoke Gaelic. Lowlanders came from southern Scotland, which had been much more influenced by English language and culture. The Scotch-Irish were originally from the lowlands but had been sent to Northern Ireland (Ulster) by English rulers who hoped to establish a Protestant stronghold in that Catholic land. The Ulster Scots kept to themselves, mingling very little with their Catholic neighbors and preserving their Scottish identity.

The first Scottish immigrants to America were prisoners of war, sent to the colonies by English ruler Oliver Cromwell after he defeated Scotland in 1650. The Scottish prisoners of war served out their sentences by laboring in the English colonies of North America. Scots were legally barred from emigrating to America until England and Scotland were united in 1707. After the union, Scots were given the same freedoms as English citizens. In the early 18th century, a number of Scots were sent to America as political prisoners of England, much like the earlier prisoners of war. Another large group of nonvoluntary immigrants were Scottish soldiers who had been brought to America to fight in the Seven Years' War (1754–1761). At the end of the war, the soldiers were discharged and the majority elected to remain in America. Of the 12,000 Scottish soldiers discharged, only 76 returned to Scotland.

Voluntary Scottish emigration to America began after the union of England and Scotland in 1707. Conditions were already difficult for Scottish farmers with a cold, rainy climate, short growing season, and rocky ground. When the English began encouraging Scottish landlords to raise rents, seize grazing grounds, and evict tenants in order to squash Scottish uprisings, many Scots decided to look elsewhere for better opportunities. Wealthy landowners in America advertised for “indentured servants,” emigrants who would work for a period of years in exchange for passage to America and a number of Scots hired on. Others sold their farms and livestock to pay for their passage.

Whole communities packed up and moved to America, setting up Scottish towns in the English colonies. In 1738, 83

Two Scottish American men in kilts. (Alex McNeill)

families from a neighborhood in Argyllshire, Scotland, immigrated to the Lake George area of New York. Others settled throughout the 13 colonies, although North Carolina was a favorite destination, particularly for Highlanders. Pennsylvania was also popular, especially with the Scotch-Irish.

The Scotch-Irish began to leave Ireland en masse in the early 18th century, seeking self-government and religious freedom. They had become quite disillusioned with the English government, which was high-handed and oppressive. They were also tired of being persecuted by the Catholics for being Protestant and by the Anglicans (the official church of England, also Protestant) for being Presbyterian. Pennsylvania encouraged religious freedom for all and in the early 18th century it was still largely unsettled frontier, so it was very attractive to the Scotch-Irish. By 1749 about 25% of the total population of Pennsylvania was Scotch-Irish. The Scotch-Irish also moved into regions of Kentucky, Tennessee, and Ohio and became a dominant cultural group in the region known as Appalachia.

Scotch-Irish Americans, with their anti-English stance, were quite ready to join the rebel cause in the American Revolution. Scottish Americans from the Highlands and Lowlands, however, tended to side with the British crown. Fearing that the Scots would side with the rebels, the English prohibited Scottish emigration to America beginning in 1775. The dam-

age was already done, however, and the Scotch-Irish (and some Scottish) Americans contributed significantly to the downfall of the British. Scottish and Scotch-Irish American Revolutionary War leaders include Patrick Henry; John Stark and Henry Knox, who led the rebel troops at the Battle of Bunker Hill (1775); naval commander John Paul Jones, and General "Mad" Anthony Wayne. After the Revolution, many Scottish emigrants chose to go to British-friendly Canada, rather than to the United States, for the next several years.

Scots also played a great part in the opening of the American frontier. Scottish and Scotch-Irish Americans tended to be the first to clear an area, then they would sell it to other settlers who would improve it while the Scots moved on. The Scots were such fierce fighters and defenders of their territory that eventually the American government had to step in to protect friendly Native North American peoples from Scottish American attacks. Some of the best-known frontiersmen were of Scottish descent, including Daniel Boone, Christopher "Kit" Carson, and Davy Crockett. Somewhat later, Scottish American Sam Houston led the Texans to independence and became the first president of the Republic of Texas.

Other Scottish American contributions to America in the 19th century include the Whiskey Rebellion of 1792–94 and the Ku Klux Klan. Scotch-Irish farmers in the Pittsburgh area of Pennsylvania distilled whiskey from their surplus corn, both for their own consumption and for sale. They refused to pay required local and federal taxes, however. The federal government finally sent in troops to force payment. The farmers almost set fire to Pittsburgh in retaliation but were discouraged from doing so at the last minute by members of the clergy. The Ku Klux Klan, a secret society advocating white supremacy, was founded in the South after the Civil War (1861–65) by a group of Scotch-Irish Americans.

After its post-Revolutionary War decline, Scottish immigration to the United States picked up again in the 19th century and continued at a fairly steady pace into the early 20th century. Perhaps the largest wave occurred after World War I (1914–18), when Britain descended into an economic depression with high unemployment. Over 300,000 Scots emigrated to the United States between 1921 and 1930 in search of better opportunities. When the Great Depression hit America in 1929–30, however, conditions became just as bad there as in Scotland and Scottish immigration to the United States virtually ceased. Since then, negligible numbers of Scots have moved to America.

In the 1990 U.S. Census, 5,393,581 Americans claimed Scottish ancestry and 5,617,773 reported their ancestry as Scotch-Irish. At the 2000 U.S. Census there were 4,890,581 Americans listed as having Scottish ancestry and 4,319,232 listed as Scotch-Irish. That year Scottish was the eleventh largest ancestry group in the nation with Scotch-Irish ranked as the fourteenth largest group. States with the highest number of Scottish Americans included California (541,890), Florida (294,293), Texas (289,827), Michigan (224,803), and New York (212,275). For Scotch-Irish Americans, the top states included California (410,310), Texas (337,630), North Carolina (255,825), Florida (246,580), and Pennsylvania (218,173).

Although Scottish Highlanders spoke Gaelic when they first arrived in America, they quickly shifted to English to avoid harassment, and fluency in Gaelic was rapidly lost. Subsequent generations of Scottish Americans learned English as their first

language. Some learned no Gaelic at all. Today, few Scottish or Scotch-Irish Americans speak Gaelic.

In 1560 John Knox, a Catholic priest in Scotland, broke away from the Roman Catholic Church and formed a Protestant denomination that he called the Church of Scotland. Scottish immigrants brought their religion to America, where it came to be known as the Presbyterian Church. The Scots, particularly the Scotch-Irish, were fiercely religious and loyal to the Presbyterian Church. Though they were persecuted in many of the Anglican-dominated English colonies in early America, they held fast to their Presbyterian faith. In 1860 the Reformed Presbyterian Church, made up mostly of Scotch-Irish Americans, declared that it would not serve Holy Communion to slaveholders. It was the first church in America to take a stand against slavery.

Scottish and Scotch-Irish Americans have made significant contributions to all areas of American life. "Scotch broth," a soup made from lamb, barley, and vegetables, is well loved in America, as is Scotch whiskey. Plaid woolen clothing and tweed (a woolen cloth) are both worn by many Americans. Bagpipe music is familiar to all, and Scottish folksingers, such as Jean Redpath, have a wide following in the United States. Many colleges and universities were founded by Scottish and Scotch-Irish Americans, including the Universities of Virginia, North Carolina, Pittsburgh, and Pennsylvania; Allegheny College, Grove City, Waynesboro, and others in Pennsylvania; and perhaps best known of all, Princeton University, founded in 1746 as a Presbyterian seminary in New Jersey.

Writers from Washington Irving, Edgar Allan Poe, and Herman Melville to F. Scott Fitzgerald, Henry and William James, Mark Twain, John Kenneth Galbraith, James Reston, Norman Maclean, Margaret Mitchell, and poet Richard Hugo all claim Scottish or Scotch-Irish ancestry. The New York Library was begun with the collections of Scottish American James Lenox in the 1800s. The first newspaper printed in America was the *Boston Newsletter*, published by Scottish American John Campbell. Hugely successful newspaper publisher Horace Greeley was a Scottish American.

One of the earliest American-born actors of note was Edwin Forrest, a Scottish American. Famous Scotch-Irish actors include John Wayne, Robert Redford, Jimmy Stewart, and Ava Gardner. Modern dancer Isadora Duncan; artists Gilbert Stuart, George Innes, and Thomas Hart Benton, and composers Edward MacDowell and Stephen Foster were also of Scottish descent. A Scottish American who made many educational and artistic programs possible was steel magnate and philanthropist Andrew Carnegie. It is estimated that Carnegie gave over \$350 million in his lifetime to found schools, libraries, concert halls, museums, etc., and to fund art, research, and other projects. The Carnegie Foundation has continued his philanthropic work since his death.

The worlds of American science and industry owe a great deal to Scottish Americans. Alexander Graham Bell invented the telephone; Samuel F. B. Morse invented the telegraph; Peter Cooper built the first American locomotive; Robert Fulton developed the first steamboat; and Cyrus McCormick invented the wheat harvester. Naturalist John Muir helped found the U.S. national park system, Asa Gray was a well-known botanist; and William Maclure is sometimes called the "father of American geology."

Politics has always been a favorite pastime of the Scots as has going to battle. Many Scottish and Scotch-Irish Americans have played a part in both arenas in the United States, beginning with seven of the signers of the Declaration of Independence, including the first to sign, John Hancock. Scottish and Scotch-Irish American Revolutionary War leaders have already been mentioned. In later U.S. military engagements, Scottish and Scotch-Irish American leaders include Captain Oliver Hazard Perry (War of 1812); Union generals George B. McClellan and Ulysses S. Grant, and Confederate generals Thomas "Stonewall" Jackson, J. E. B. Stuart, and Robert E. Lee (Civil War); and General Douglas MacArthur (World War II). Commodore Matthew C. Perry established the first trade relations with Japan in modern times.

In politics Scottish and Scotch-Irish American figures abound, such as Andrew Mellon, U.S. Secretary of the Treasury from 1921 to 1931; Alexander Hamilton (who was also part-French); Philip Murray, who served as the president of the Congress of Industrial Organizations (CIO); and Adlai Stevenson and George McGovern, both of whom ran unsuccessfully for U.S. president. Scottish and Scotch-Irish Americans who ran successfully for U.S. president include James Monroe, Andrew Jackson, James K. Polk, James Buchanan, Andrew Johnson, Ulysses S. Grant, Chester A. Arthur, Grover Cleveland, Benjamin Harrison, William McKinley, Theodore Roosevelt, Woodrow Wilson, Harry S. Truman, Dwight D. Eisenhower, Lyndon Baines Johnson, Richard M. Nixon, Ronald Reagan, and Bill Clinton.

The greatest contribution Scots have made to American sports is the game of golf, which was invented in Scotland and brought to America by Scottish and Scotch-Irish immigrants. Scots also brought the sport of curling, known better to Canadians than Americans, though there are American teams. An individual sports figure of Scottish descent is baseball great Grover Cleveland Alexander.

For many generations, Scottish and Scotch-Irish Americans simply blended in with the rest of the population, becoming a fairly inconspicuous part of the general "American" backdrop. In recent years, however, there has been a resurgence of interest in Scottish and Scotch-Irish heritage among members of those groups in the U.S.. Highland Games (Scottish festivals that involve piping, dancing, track events, and sheepherding contests) have become popular again and Scottish American societies are popping up throughout the country. Both the U.S. Senate and House of Representatives have adopted resolutions (in 1998 and 2005 respectively) that designate April 6 as National Tartan Day. The date commemorates the signing of the Declaration of Arbroath, the Scottish declaration of independence, in 1320. National Tartan Day celebrates the accomplishments of Scottish Americans and their contributions to modern culture. Although clans quickly lost importance in early America, "clan" gatherings are once again being organized in the United States as glorified family reunions. Most Scottish and Scotch-Irish Americans are several generations removed from Scotland and Northern Ireland, so their ethnic identity is largely symbolic, yet nonetheless fiercely defended today.

The family dynamics of early Scottish American and Scotch-Irish immigrants reflected a basic male dominant pattern, with men serving as the heads of household while women primarily took care of the home and the children. However, women were

not generally regarded as fragile flowers of domestic life. Traditional roles also placed men as warriors and women as the workers left at home. Women typically worked right alongside the men on the family farms. This was especially true among the Scotch-Irish who moved into the region now referred to as Appalachia. As they began to migrate to the West, Scotch-Irish and Scottish American women showed just as much strength and courage as men in taming new lands and forging a life and home out of next to nothing. The same spirits of pride and adventure that have often been applied to the Scottish American and Scotch-Irish men have generally been attributed to women as well.

# SEMINOLES AND MICCOSUKEES

**LOCATION:** United States (Florida)

**POPULATION:** 6,000 (enrolled Seminole Nation of Oklahoma)  
600 Miccosukees

**LANGUAGE:** Muskogee; Creek; Miccosuki; English

**RELIGION:** Traditional religion; Christianity

**RELATED ARTICLES:** Vol. 2: Native North Americans

## 1 INTRODUCTION

Groups of tribal peoples who lived in southern Alabama and Georgia were called “Creeks” by the British. Around 1740 some of these people moved south to Spanish-held Florida. There in the northern part of the state, they established permanent settlements. These Creek people, once they moved to Florida, were called “Seminole.” The derivative of this name has been attributed both to the Creek *simanoli*, which means “runaway,” and to the Spanish *cimmaron*, or “wild,” like an animal. The first Seminole settlers in Florida were Oconee Creeks who spoke the language known by linguists as Hitchiti or Mikasuki (the people themselves call the language “i.laponki.”; they call themselves “i.laponathi.”). Other bands of Seminoles came into Florida: Yuchi, Ochise, and Tallahassee.

When the Creeks lost the Red Stick War against the Americans at Horseshoe Bend in 1813–14, there was a great influx of Red Stick Creek refugees who joined the Seminoles in Florida.

From the earliest Spanish records of exploration it is known that southeastern Indians kept slaves as part of their economic system. Slaves were taken as part of the spoils of war. When the British arrived, they wanted the Indians’ slaves to work on their plantations in the Carolinas and the West Indies. The Indians began to trade their slaves to the British for trade goods. It was a lucrative market. Soon they were making raids on other groups of Indians for that specific purpose, often wiping out entire Indian towns. The over-slaving of Native American populations in the southeast was one of the reasons that trade in African slavery escalated.

By the late 18th century, African slaves began to escape from the plantations in the American South. They fled to Spanish Florida where the Seminoles had settled. The Africans were welcomed by the Seminoles, who could no longer make slave raids due to European influences and had an economic need for slave workers. Slavery among the Seminoles was not harsh as it had been in the plantation system. The slaves were required to work and give tribute to their masters, but they were treated with respect.

The white masters wanted the runaway slaves back. There was something else that the Seminoles had that the southern plantation owners wanted. Cattle. By the early 19th-century, the Seminoles had massed sizable herds of cattle, based on feral cattle that strayed from the large Spanish haciendas. The Seminole settlements were situated on prime grazing lands near Tallahassee and Mikasuki and south on the Alachua (or Payne’s) Prairie near present day Gainesville. Their herds multiplied.

Cattle and slave raids by Georgians and Seminoles over the Georgia/Florida border and into Alachua created the catalyst

for war. It was, in fact, Seminole cattle and runaway slaves that provided the impetus for the First Seminole War in Florida in 1818. The War was little more than a series of raids to destroy the Seminole settlements and capture cattle and slaves. But politically it was very important. The unauthorized raid was made into Spanish Florida under the command of Andrew Jackson, who also captured the Spanish capital at Pensacola. Jackson was reprimanded by Washington for his rash actions attacking another country, but he had succeeded in demonstrating the weakness of Spain's hold on Florida. Ultimately, in 1821, Florida was ceded to the United States and Jackson, the greatest enemy of the Seminoles, was appointed Territorial Governor. The Treaty of Ft. Moultrie Creek in 1823 placed the Seminoles on a reservation in the middle of the state. They were not able to have contact with the coasts.

In 1830, under President Jackson, Congress passed the Indian Removal Act. This Act specified that all Indian tribes east of the Mississippi would be removed to the Indian Territory west of the Mississippi. This was considered to be for their own good as settlement was encroaching on them. This forced migration is the famous Trail of Tears. In Florida, the Treaty of Payne's Landing was made by the government in 1832. This treaty specified that seven Seminole chiefs would inspect the Indian Territory prior to their leaving Florida and give their consent to emigrate. When the delegation returned to Florida, however, they said that they had been forced into signing the treaty and that it was therefore not valid. The removal date was January 1, 1836. The Seminoles did not want to emigrate and began their patriotic resistance, the Second Seminole War, 1835 to 1842. Best known leaders from this war are Osceola, Alligator, Jumper, Micanopy, Coacoochee, and Sam Jones (Abiaki). Osceola was martyred by the whites, as he was captured in a truce situation and then died in prison. Many other Seminoles were captured and emigrated by ship from Florida to New Orleans. From there they journeyed overland to Indian Territory. From a pre-First Seminole War population of 6,000, only 300–400 remained in southern Florida.

The Third Seminole War was fought 1855–1858. By this time, settlers were moving south into the state. The state's cattle interests were politically important. The Seminoles again had accumulated cattle and were considered to be in the way of progress. Leader Billy Bowlegs was taken on a trip to Washington, Boston, and New York to show him the powerful United States and to persuade him to acquiesce to leave for Indian Territory. He would not. This war was fought mainly in the lower Florida Everglades.

The Third Seminole War ended, like the Second Seminole War, with the United States troops' withdrawal, not with a formal "peace treaty." Thus today's Florida Seminole Tribe and the Miccosukee Tribe of Indians of Florida consider themselves "unconquered," a fact that every tribal child knows.

## 2 LOCATION AND HOMELAND

About 200 Seminoles were left in Florida after the Third Seminole War. Today, these people constitute nearly 2,500 persons. Reservations were established for them relatively near their post-war centers of population. The reservations are located in Brighton, Big Cypress, Tampa, Ft. Pierce, Immokalee, Ft. Lauderdale, Ft. Myers, West Palm Beach, and Naples. The Seminole Tribal Headquarters is on the Hollywood Reservation in the city of Hollywood, Florida. This location was the site of the

old Florida Seminole Agency in the 1920s. In the 1950s, the newly chartered Seminole Tribe and the Bureau of Indian Affairs were housed in a single building. Recently, the Seminole Tribe of Florida has opened a four-story, modern office building. Tribal members live in subdivisions of modern houses on most reservations. At Brighton and Big Cypress some houses are scattered throughout the hammocks, where they have been built on the families' traditional camp sites. The Miccosukee Tribe (about 500 persons) is headquartered on the Tamiami Trail, 40 miles west of Miami and a large reservation is in the Big Cypress.

After the Third Seminole War, the Florida Seminoles resumed their hunting and trade economy, selling furs, hides, and bird plumes to trading posts located on the rivers that flowed out of the Everglades basin. Their travel was primarily by dugout sailing canoes made of cypress wood. Carts pulled by yokes of oxen were also used by those living in the Big Cypress and around Lake Okeechobee. The Everglades, rivers, coastal ridges, and beaches teemed with wildlife. Gathering activities provided vegetables, the starch "coontie," and medicinal plants.

The Oklahoma Seminoles were placed on a reservation in an environment very different from Florida. They were wards of the government and were no longer able to subsist off the land.

The Florida Seminoles retained their freedom and wanted no contact with the government. Early in the 20th century, the hide market declined, and programs to drain the Everglades for farming began. The Seminoles living around the city of Miami found a new economy in tourism. Over the decades of the 20th-century, these people founded a tourism economy that eventually spread to the whole population, creating the popular alligator wrestling show and an important crafts market. Tourism promoted the wearing of Seminole traditional patchwork clothing, their foremost art form. Cultural tourism continues to be very important to both tribes today, as the tribes explore European tourist markets.

## 3 LANGUAGE

The Seminoles speak languages from the Muskogean family of Native American languages. There are two unintelligible languages spoken within the Seminole Tribe. All of the Miccosukee Tribe of Indians of Florida and two-thirds of the Seminole Tribe of Florida speak Mikasuki (also called Hitchiti). Those people, however, call their language *i.laponki*. and themselves *i.laponathi*. The remaining one-third of the members of the Seminole Tribe of Florida speak Muskogee or Creek. Since today all tribal leaders and most of the population speak English, there is no problem with communication affecting tribal unity.

Many of Florida's place names are derived from Seminole words. For example, Tallahassee (the state's capital) comes from the Muskogee word for "old town," and Okeechobee means "big water" in Mikasuki.

## 4 FOLKLORE

The Seminoles' creation myth involves the Creator instilling powers to the clan animals, the Panther, and all other animals. When the earth was made, he put the animals in a large shell. When the time was right, the shell would open and they would come out. A tree root cracked the shell. The Wind helped make

the crack large enough for the Panther to come out first as the Creator had wished. After the Wind, the Bird came out next, then the Bear, Deer, Snake, Frog and Otter. These are the original Seminole clans. The Creator gave them all duties. The Panther, for instance, has the power to heal, so only people of the Panther clan are to make official medicine.

The Seminole clans are Panther, Bird, Otter, Wind, Bear, Deer, Frog and Snake. Big Towns was created long ago when two sisters of Spanish descent were adopted into the tribe.

The Green Corn Dance is a special ceremony for the Seminoles. It is attended by traditional people. Few Christians attend. It marks the ripening of the corn in late May or early June and is a new year's celebration. The four-day ceremony is a rite of purification, of starting anew. Rites of passage are conducted. Court is held and punishments are meted out. Fires are extinguished, the men take sweat baths and drink medicine, a tea made from native holly. The Black Drink causes them to vomit, cleansing their body. There is a day of fasting and one of feasting. There is dancing and stickball playing, men against women.

At the Corn Dance grounds a medicine man builds a fire out of four logs pointing in the four directions. An ear of ripe corn is placed on top of each log, and dried kindling is laid in the center of the logs. While praying to the Breathmaker (fisaki omici), the bundle carrier (the highest-ranking medicine man) creates a spark and lights the fire. From that fire, the symbol of the Breath Maker, all the other fires in the village are lit. When traveling, a Seminole woman always takes some ashes from her

last fire with her. In that way, the corn dance fire is always with her family.

The four directions (north, south, east, and west) and the number four are very important to the Seminoles and play a major part in their traditions and lives. The four medicine colors are white, black, yellow and red.

The Bundlecarrrier (the head religious leader), the medicine men and women, elders, and some of the tribal leadership are involved daily in traditional practices and are anxious to support and promote such awareness to the tribe at large.

## 5 RELIGION

Since the Seminoles began converting in the latter 1930s, Christian Seminole churches have scheduled revivals at the time of the Corn Dance. Attendance at the native gathering was chastised. In turn, the traditional people did not want the Christians to attend. These chasms have aided in curtailing many traditional ways.

## 6 MAJOR HOLIDAYS

The Green Corn Dance, which marks the beginning of the new year, is the most significant holiday for Traditional Seminoles and Miccosukees. Some families have a major get-together for the celebration of Thanksgiving. This holiday is at the same time of year as the Seminoles' former Hunting Dance, which has become obsolete. Thanksgiving continues the tradition of a fall get-together.

Both Tribes hold Christmas parties. This is especially true for the affluent Seminole Tribe of Florida, who host a huge party at the Broward Convention Center with a leading country and western singer for entertainment.

## 7 RITES OF PASSAGE

Traditionally, babies received a name four days after they were born. Modern legal requirements, however, have made the Seminoles conform to name-giving at birth. For the past 40 years or so, especially with many families receiving Christianity, children have been given first and last names at birth. When a baby is four months old, traditional families cut its hair and nails, which are hidden to keep bad luck from the child.

Young boys attend a "Boy's School" at the age of 12 to learn traditional ways in preparation for receiving their man's name at the next Green Corn Dance. They fast, take medicine, and attend school taught by a high-ranking medicine man or bundle carrier. At the four-day Corn Dance, little children are given their second names, marriages and divorces are ratified, widows and widowers are reinstated into the community. Young people, such as the graduates of the Boy's School, receive their adult names that are given by the medicine man. The names are usually those of deceased elders, who in turn had been given names of their deceased elders. These names are seldom used in public, but are used in the families by traditional speakers.

A death in the village was once a very serious stigma. The spirits of the dead were feared, as they might not wish to leave and might try to take one of the living with them. Very important rites followed a death of a clan member. If a person died in a village, the entire village had to be moved. As a result, if a person was known to be deathly ill, a structure was made outside the village area where they would be cared for till death.

For the same reason, the birthing house was also placed outside the village.

Marriage in 1900 took place in early to late teens. Divorces were simple in this matrilineal society (where the woman was in charge of the family). The wife or her relatives would place the husband's belongings outside the camp. Today, Seminole couples may or may not choose to marry, and teen pregnancies may or may not result in marriage. With the mother's clan being the most important thing to be passed on to a baby, the father is not as important an entity as he is in many other cultures.

## 8 INTERPERSONAL RELATIONS

Prior to the First Seminole War (1818) the Seminoles lived in large villages with huge fields, herds of cattle, droves of hogs, and horses. Each village had a *mico* (chief) and a council of warriors and elders. They elected war chiefs whenever one was necessary. There were medicine men. Because the Seminole make no distinction between the body, soul, and spirit, the medicine man worked to heal all three. He was highly respected in the society. This continues to be true today. Even some Christian burials have the medicine man (or medicine he has prepared) in attendance to assure this rite of passage.

It was common practice for Seminole men to practice polygyny (having two or more wives) in the 19th century. Women were the heads of the family and were responsible for large villages of their clan members. Polygyny was practiced with the consent of the first wife. Most often her sister was taken as the second wife. Doubtless this situation eased some of the burdens of the first wife's position. Polygyny was practiced by some in the Seminole communities well into the 20th century.

## 9 LIVING CONDITIONS

The Seminoles are very adaptable people. They have had to alter their housing and general way of life due to forced relocations. When they settled in northern Florida, their permanent villages were large and made up of many families, all with their own compounds—settlements called Tallahassee, Miccosukee, and Cuscowilla. Each family had two houses, a storehouse and a two-story cooking and sleeping house. The houses were built of logs.

After the Second Seminole War (1835–1842), the Seminole population was further south. They then utilized an open-sided house, thatched with palmetto fronds, with a dwelling platform three feet off the ground called a *chickee*. It appears most probable that the chickee was borrowed from the earlier Indians who lived in south Florida, the Calusa, as they had long utilized this type of structure. Chickees can last years in a sunny location. (Many families build the traditional chickee in their yard as an outside work area or as a garage for their car.) This type of home was well adapted to the Everglades where the climate is hot and humid with periods of heavy rain. They slept on blankets and bedding purchased at the trading post. They made cheesecloth mosquito nets. At night these were unrolled from the ceiling from which they were suspended and were tucked in around their beds. Furniture consisted of work platforms and tables in various locations around the camp. The chickee platforms provided seating during the day when the bedding had been put away.

The Seminoles again grouped in settlements, usually on large islands just within the Everglades interior, until 1900–1920s

when subsistence became difficult and whites encroached. The large settlements then broke up, and the families formed nuclear or extended family camps: a man, wife, children, her mother and father, and perhaps an unmarried brother or uncle. They moved to smaller islands deeper in the Everglades. These camps consisted of several chickees for sleeping and working and a central cooking chickee.

In the latter 1930s some Seminole children began to ask to be sent to school. Because there were no schools for Indian children in Florida, they were sent to Indian boarding schools such as the one at Cherokee, North Carolina. When these children returned to Florida, they had become accustomed to flush toilets, hot and cold running water, and showers. They had none of these in their chickees on the reservations where by the 1940s many of them were living. This was the impetus for standard housing. The first houses were small, wood frame houses that were donated to the Seminoles' cause and moved from the towns of Ft. Lauderdale and Pompano Beach to the reservation at Dania. The local women's clubs, chapters of the Daughters of the American Revolution, and the Friends of the Seminoles contributed time and ingenuity to see this project through. They also set up a revolving fund to loan money to Seminole families so that they could finance and build their first concrete block houses or refurbish the donated houses. Seminoles could not borrow money from a bank as they did not own their own property. It was a new experience for the Seminole women to use electric stoves rather than their open cooking fires. Various architectural designs for reservation housing were attempted over the years to make housing comfortable in the hot climate, but none were better than the chickee. There are modern subdivisions on the reservations today, and many families have air conditioning.

## 10 FAMILY LIFE

Traditional Seminole society is matrilineal. This means that kinship is carried through the mother. Her children inherit her clan and pass it on to their children. Anyone of that clan (on any reservation in Florida, whether Seminole or Miccosukee tribal members) is considered a "relative." One must never marry a clan member, since it would be considered incest. Thus, one must always know one's clan members. The traditional ways taught that a father has little to do with the upbringing of his own children. Instead, he had obligations to his sister's children, who were his own clan members. Thus, it was a child's maternal aunts and uncles who educated and disciplined. In the traditional camp, the extended family would have included aunts, uncles, maternal grandparents, and cousins, with the eldest woman as the head of the family. Matrilocal refers to residence. Seminole society has not been matrilocal since the 1960s when subdivision housing became available. Traditionally, married couples would reside with the wife's mother. Today, most communities are not organized around the clan system. Clan is still very important to the Seminole community, however, influencing tribal politics and many other relationships.

## 11 CLOTHING

As soon as European trade goods became available from colonists, the Indians of the southeast began to obtain them. These goods included items of wearing apparel. The Creeks had most of their trade relationship with the British, who had the fin-

*Adrienne Cypress takes care of a garden during a sixth grade culture class at the Ahfachkee school at the Big Cypress Seminole Indian Reservation. About 20 percent of the school's funding comes from the federal Bureau of Indian Education, with the rest coming from the Seminoles. (AP Images/Luis M. Alvarez)*

est trade goods. Fine paisley shawls, cotton goods, and wools in blue and red became highly prized and can be seen in engravings of southeastern Indians from the 18th century. From the first writings we find that Seminole clothing was of British cotton. A man's outfit consisted of a knee-length shirt with an open ruffled coat over it, woolen leggings, and one-piece leather moccasins. A turban made of a shawl blanket, trade silver, finger-woven yarn, and bead garters (perhaps a sash with long tassels), and a woolen shot bag woven with beaded designs completed his dress attire. Women wore a short, ruffled blouse and a long skirt. They, too, wore silver trade bracelets and earrings and long strands of necklace beads that were popular everyday attire well into the mid-20th century.

Women and young girls of the 19th and early 20th century were accustomed to wearing as many necklace beads as they could from chest to chin. It was a mark of wealth and popularity. Bead necklaces and bracelets were also birth gifts. Necklace beads were standard suitor and engagement gifts. Women were buried with all of their possessions, including necklace beads.

Seminole women acquired the hand-cranked sewing machine in the latter 1800s. In time, the machine technology changed their hand-sewn garments (described above) that had changed little since the 19th century. The man's main garment, the shirt, began to change around 1900. It became banded with inserted and appliquéd ornamentation forming horizontal stripes. A belt was inserted at the waist. The ruffled coat, how-

ever, retained its traditional design even till today. Leggings by this time were of smoked, tanned deer hide. Plaid wool shawls formed their turbans. Moccasins remained the same. The old-style yarn garters and belts were owned by only a few elders, as were the beaded bags. When those men died, the only examples of this work were to be seen in museum collections.

Women continued to wear the blouse and skirt, but by the 1920s the blouse ruffle had become longer, eventually forming a separate ornamental cape over a plain bodice.

Machine-sewn patchwork as it exists today is the Seminole and Miccosukee's premier art form and cultural identifier. It began being made around 1917 by the *i.laponathi*. This was also the time when these Mikasuki-speaking Seminoles began to reside in the tourist attractions in Miami. Leisure time and the tourist market cannot be overlooked for the blossoming and great evolution of this art form. Until the 1950s, traditional clothing was all that was worn by Seminole and Miccosukee women. The popular Seminole jacket evolved from the aforementioned man's shirt. Today, elders continue to wear their traditional dress, while most people have some patchwork clothing to wear for special occasions.

Seminole and Miccosukee youth dress in clothing bearing popular name brands and rarely wear Seminole attire. Clothing contests at annual festivals such as Seminole Fair promote 19th-century and modern patchwork clothing and offer cash prizes as incentives. Today, machine-sewn patchwork con-

tinues its evolution in intricate creations that command high prices.

Seminole men of the 18th and early 19th century wore their hair in bangs in front, shaved on the sides, with two long queues braided down the crown to the back of the head. Women wore their hair in bangs with their long tresses gathered up in a knot on top of the head. The men began to cut their hair in a “bowl-cut” in the last two decades of the 19th century. The women’s hairstyles began to change around the 1920s. The bun was loosened and worn under a hairnet held in place with hair pins. The hair then began to be pulled forward and rolled, forming a crown around the face. By the 1940s this style became highly accented by the addition of a “hairboard,” a crescent-shaped piece of cardboard over which the hair was fanned, held in place with a hairnet and pinned down. Styles of Seminole women’s hair can be seen in the dolls they made over the decades of the 20th century. Many dolls sold today continue to show the popular Seminole “hairboard” of the 1940s.

## 12 FOOD

The cook fire is one of the most important of all Seminole traditions. It was the hub of the camp. Children were taught to respect the fire, which was a focal point of the clan in each camp. Traditionally, Seminoles from different clans were not supposed to eat from foods prepared from the same fire. In a large gathering, separate cooking fires were made.

The Seminoles did not eat three prescribed meals as many Europeans do. Thus, food was kept hot and ready at all times. The staple was (and continues to be in many families) a type of soup called *sofki* (Creek) or *o’they* (Mikasuki). Sofki is a cooking term for any food put in water and cooked down so that it can be consumed as a liquid. While corn and grits are the common ingredients for sofki today, meats and even fruits such as guavas were traditionally made into sofki. Sofki was kept on the fire so that anyone who wanted food could stir the kettle with the large sofki spoon and sip about two cups of liquid from it at a time.

The entire family might sit on the eating platform together for an evening or special meal. However, when guests were present, the women and children waited to eat. There were many traditional customs concerning the serving of refreshments and food to guests.

### Pumpkin bread

2 cups self-rising flour  
 ½ to 1 cup of sugar (to taste)  
 Enough canned pumpkin to make a soft dough  
 Oil for frying

Blend ingredients lightly. Turn onto a floured surface. Knead. Pull off a large piece of dough and knead it with your fingers to form a cake 4 inches in diameter and ¼ to ½ inch wide. Fry in 1 to 2 inches of oil. Turn over when one side gets lightly browned. Lay on paper towels to soak up grease.

## 13 EDUCATION

In the latter 1930s there were no public schools open to Seminoles Indians in Florida, so the first Seminole students who requested a formal education attended Indian Boarding School at Cherokee, North Carolina. These students became the first

Seminole high school graduates. These early graduates held a number of the first official tribal positions after 1957 when the Seminole Tribe of Florida was formally organized.

Both tribes comply with state regulations concerning mandatory public school education. The Seminole Tribe and the Bureau of Indian Affairs operate Ah-Fach-Kee School on the isolated Big Cypress Reservation. Originally kindergarten through eighth grade, the school has recently added a high school program. The BIA provided the first educational endeavors on the Brighton Reservation (1938) and in Big Cypress (1943) and instituted the first Head Start programs. Since 1972, the Seminole Tribe has been contracting for the Tribe’s educational services. The Tribe’s Ah-Fach-Kee School on the Big Cypress Reservation offers programs in Seminole history, culture, and language as part of the curriculum. Other students on that isolated reservation and on the Brighton Reservation are bused to schools in distant towns. Children living on reservations that are near cities attend county public schools. The Tribe has an active high school equivalency program. Annually, more tribal members are seeking higher education and obtaining degrees.

The Miccosukee Tribe has been operating its own bi-lingual elementary school since the early 1960s.

## 14 CULTURAL HERITAGE

Traditional songs are in the form of lullabies, songs that are sung in the telling of stories, and medicine songs used when preparing medicine or doctoring. Other songs are sung for specific dances during the Green Corn Dance.

Of the modern-day music, the Seminoles and Miccosukees tend towards country and western music. The Seminole Tribe hosts bluegrass festivals and hires top country stars to perform at the annual Tribal Christmas party.

Traditional dancing takes place ceremonially at the Green Corn Dance. The dancers form a single line (some dances use couples) following a dance boss. The dance boss follows the lead of the medicine man who keeps time with a rattle while singing. The men in the line repeat his phrases. These dances are representational of an animal: Catfish, Lightning Bug, Black Bird, etc. Some of these dances can often be seen in performance at Seminole Fair in February.

Three publications have been written by members of the Seminole Tribe. Former chairwoman Betty Nae Jumper published *...And With the Wagon Came God* (1985), discussing early Christian contact with the Seminoles. Also from Jumper, *Legends of the Seminoles* (1994) is a collection of folktales with color illustrations. Moses Jumper, Sr. has published a book of poetry.

## 15 WORK

Following the Seminole Wars of the 19th century, the Seminoles resumed their trade in Everglades products—furs, hides, bird plumage, beeswax, honey, etc. They sold to trading posts set up by settlers on the rivers flowing out of the Everglades. This market began to decline early in the 20th century. They then developed a relationship with tourism through non-Indian operated tourist attractions, specifically in Miami and Silver Springs. By the 1930s this was the major economy. Families lived “on exhibition” during the months of the tourist season made and sold crafts to the tourists.

This economy continues to be lucrative for Seminole families. Today, “cultural tourism” is an industry that is being heavily promoted by both the Seminole and Miccosukee Tribes. The two major Seminole attractions are Kissimmee Billie Swamp Safari and the Ah-Tha-Thi-Ki Museum in Big Cypress. The museum also has branch facilities in Hollywood and Tampa. Okalee Indian Village is operated by the tribe in Hollywood. The Miccosukee Culture Center is operated by that tribe on the Tamiami Trail 40 miles west of Miami.

For decades, the Seminole Tribe struggled to create a notable cattle industry. They have succeeded and are known throughout the country as producers of fine calves. In the 1970s the Tribe pioneered the concept of tax-free cigarette shops on sovereign reservation land. High-stakes bingo followed. These enterprises have made the long impoverished Seminole Tribe wealthy. Much of the proceeds goes into better education and health care for tribal members. Importantly, with this new financial independence, the tribe has been able to take charge of its business interests. They are able to support political candidates who can offer them assistance and can hire lobbyists to protect their prized reservation lands from harm. Yet, the tribe does not view these lucrative enterprises as permanent situations. They know that a high court ruling could take them away. They would then fall back on revenues from cattle production (19th largest in the nation), citrus (the world’s number one producer of lemons), and tourism. Tribal members receive monthly dividends from gaming revenues.

## 16 SPORTS

Before the Second Seminole War (1835), “stick ball,” a game similar to lacrosse, was played by southeastern Indians as a man’s war game, town against town. Deaths were not uncommon. The post-war version of this game is played ceremonially at the annual Green Corn Dance, men against women. The men use two stick ball racquets, the women use only their hands. The object was to throw the ball and hit the ball pole above a mark and score.

Alligator wrestling for the enjoyment of spectators was created in the tourist attractions by a non-Indian, early in the 20th century and soon became popular with young Seminole men. For many decades, alligator wrestling has been a very respected occupation within the Seminole and Miccosukee tribal communities. It is considered a cultural activity. Alligator wrestling is performed at most tribal festivals and attractions and continues to be a crowd thriller.

The Seminole Tribe’s Recreation Department is very active in sponsoring team sports. There are full facility gyms on all major reservations. Members of the Seminole Tribe also belong to bowling, basketball and softball leagues. The Tribe sponsors national and circuit rodeos during the year and sends tribal members to compete in such competitions as the Indian National Finals Rodeo.

## 17 ENTERTAINMENT AND RECREATION

Like most families in the United States, the Seminoles and Miccosukees have the advantages of cable TV, computers, and the Internet. There is a great difference in the generational mindset.

## 18 FOLK ART, CRAFTS, AND HOBBIES

Many Seminole women (and a few men) make machine-sewn patchwork. Since the early 1900s, this form of artistic expression has identified these Native Americans. Patchwork was originally made in simple and large designs. Over the decades it was refined and is today made extremely complex. This colorful art form is used as decorative ornamentation in the women’s traditional skirts and men’s jackets. It is accented by rows of tiny rickrack to enhance the designs.

The oldest commercial craft is doll making. The women make dolls out of the fiber of the palmetto (also used in basket making). Dolls are dressed in traditional Seminole garb. Seminole and Miccosukee men carve souvenirs, miniature canoes, and Everglades animals, as well as popular tomahawks and lances for the tourist trade. The commercial sale of crafts has been a major household industry for most of the 20th century. Many Seminole and Miccosukee families sell crafts (they also buy from other Seminole and Miccosukee craftsmen and women) at seasonal and weekend fairs.

## 19 SOCIAL PROBLEMS

Generation gaps are problematic, but they are typical to all cultures. However, the Seminoles have had to learn elements of someone else’s culture. Problems arise in learning how to deal with situations outside one’s cultural upbringing. As an example, the traditional decision-making process should result in a total consensus of agreement, not just a majority. Christianity and other European-influenced ideals first replaced the traditional Seminole ideology at the tribal decision-making level.

Aggression is not a traditional attribute of Seminole culture; in fact, people who showed aggressive or ambitious tendencies would have been considered atypical and “crazy” to a traditional Seminole or Miccosukee. In the old days, such a person could have been ordered killed for “deviant” behavior. Today, tribal leaders must be able to function aggressively in order to uphold and protect tribal rights.

All tribal members are in some way participants in the non-traditional system today. Yet, traditional cultural patterns often remain. For instance, a parent may not demand that children study their lessons, or may not encourage them to excel in school, as involvement in others’ affairs and the stimulation of ambition is not traditional behavior.

Thus, there are inherent social conflicts continuing to plague tribal members as they move forward in the 21st century. However, both the Seminole and Miccosukee Tribes have been fortified by new economic windfalls such as gaming, that provide these formally impoverished tribes with the means to continue in their upward swing, paying for those services that will aid them in their future endeavors. In looking back over their tumultuous history, they celebrate the fact that they have survived and are prospering.

## 20 GENDER ISSUES

Traditional Seminole society was organized around principles of matrilineal descent and matrilocality. However, under the influences of state legal codes in Oklahoma and Florida, matrilineality and matrilocality have almost entirely disappeared. In spite of the importance of women in the reckoning of descent and in the establishment of residency after marriage, gender relations in traditional Seminole society were markedly asymmetrical.

Women were responsible for cultivating the fields and preparing the food that was harvested. Women did not hunt nor did they fish. Men were responsible for those subsistence activities.

Women were excluded from political activities in traditional Seminole society. Furthermore, women were not allowed to take active roles in public rituals, such as the Green Corn ceremony. Women were responsible for food preparations and other behind the scenes activities for public rituals.

Divorce in traditional Seminole society could be initiated by either a husband or a wife. If a man initiated a divorce, he became immediately free, while a woman had to remain married until the next Green Corn ceremony. Upon the death of her husband, a woman would enter into a period of mourning and seclusion that lasted for four years. During that time the woman was held to the strict adultery punishments of Seminole society. Those punishments for women included beatings, hair cropping, and cutting off of pieces of the ears and nose. Punishment for men who committed adultery was much less severe.

# SUDANESE AMERICANS

For more information on Sudanese history and culture, see **Vol. 1: Sudanese**.

## OVERVIEW

Decades of civil war, violent uprisings, famine, and disease in Sudan have killed millions of Sudanese and driven hundreds of thousands more from their homes. Some of these refugees have made their way to the United States over the years. The 2000 U.S. Census counted almost 20,000 Sudanese Americans, and the population increased to an estimated 35,000 by 2005. Of the 20,000 Sudanese Americans identified by the 2000 U.S. Census, three-fourths of them entered the United States after 1990. Men and boys outnumber women and girls by two to one.

By far the best known of the Sudanese American population are those known to Westerners as the "Lost Boys" (a name they themselves dislike as it infantilizes them), children who were separated from their families in the 1980s and walked for months across Africa to reach refugee camps. Most of the children were boys because they were away from home tending the family's cattle when their villages were attacked. Girls are traditionally kept at home, doing domestic work, so the majority of the girls were either killed or kidnapped by the attackers and few escaped. Of the approximately 3,800 refugees who were resettled in the United States in the early 2000s, only 89 were girls.

Sudanese boys are traditionally sent off in peer groups after initiation into manhood, either to tend cattle or go to nearby towns and cities to attend school or find other work. Banding together to survive the trek across the country to find safety in refugee camps was, therefore, a familiar response to unfamiliar circumstances. Sudanese culture also stresses the importance of cooperation and communal sharing, values which contributed greatly to the refugees' ability to survive the dangerous journey.

Upon entering the United States, the boys, or young men as many now were after years in the refugee camp, were randomly assigned locations by the resettlement agencies based largely on what city had the most resources available to handle their needs. The young men, however, found it very difficult to be separated from those they had lived with and depended on like family for so long, so eventually the agencies began to make more of an effort to keep those who were attached to each other together.

Sudanese Americans generally come from southern Sudan, where the majority practice traditional animistic religions. The number of Christians is growing, however, both in response to aid efforts by Christian groups as well as in reaction against the Muslim Arab rulers of northern Sudan. Once in the United States, refugees find themselves in the hands of Christian resettlement agencies, as well as church volunteers, and turn to Christianity as a way to connect with their new communities.

The most important celebrations in traditional southern Sudanese culture are weddings, births, and funerals. Marriage and having a family is considered the most important part of life, and most young people are married by the age of 18. Divorce is only allowed in cases where the woman is unable to

bear children. The question of marriage has become a difficult one for Sudanese Americans due to the scarcity of women in the population. Most young Sudanese American men would prefer to marry a Sudanese woman, partly because they hope to return to Sudan at some point, and fear that a non-Sudanese woman would not want to go with them, and partly because a Sudanese woman will share their cultural values. Some have even begun to request that resettlement agencies focus on bringing women to the United States so that they will have marriage prospects. The potential for marriage, however, is one of the reasons more young women have not been resettled outside of Sudan. Brides bring a large dowry, so Sudanese foster families choose to keep the girls with them in order to marry them off for the “bride price.”

Birthdays are not considered significant or even remembered, so the ages of many Sudanese Americans are approximate guesses by resettlement workers and recorded as January 1 of the appropriate year. This had a significant effect on refugees resettled in the United States: those deemed to be under 18 were eligible for immediate placement in high school and to be able then to go to junior college for free, while those over 18 were ineligible and had to take on menial jobs to support themselves. Education is highly valued by Sudanese American refugees as a way to succeed in their new world and then take their learning (and money) back to Sudan to improve life for all in their homeland. Many of those who were “too old” to enroll in school chose to work full-time and attend classes as well to earn their degrees.

Although southern Sudanese are farmers and cattle herders, nearly all Sudanese Americans live in cities where they were resettled and have had to adjust to urban life. Apartments, electricity, supermarkets, and other integral aspects of urban living were completely new to them when they arrived. Fortunately, most had become fairly proficient in English at the refugee camps, so they were able to communicate with other Americans well from the start. Those who were not immediately enrolled in school quickly found employment, mostly in unskilled labor or service jobs. Sudanese Americans place a high value on work and consider themselves the equal of everyone else as long as they are working.

The majority of Sudanese Americans send money back to family and friends in Sudan. Relatives who remain in Sudan, in fact, put a great deal of pressure on Sudanese Americans to share their newfound wealth, which is not as great as those in Sudan imagine. Some Sudanese Americans have even had to change their phone numbers after receiving so many calls for help.

Sudanese Americans have not resided in the United States long enough to have made a significant contribution to the larger society yet. Two well-known Sudanese Americans, however, are retired NBA star Manute Bol who came to the United States at age 18 in 1983, just before the Sudanese civil war started, to play college basketball; and Simon Deng, a former Sudanese slave who escaped to the United States and is now an activist on behalf of emancipation.

One of the difficulties Sudanese Americans face in the United States is how to integrate themselves into what is still a racially divided society. Southern Sudanese have very dark skin, much darker than many African Americans' skin tone, automatically relegating them to second-class status in American society. Recognizing this, most Sudanese Americans choose

to emphasize their African identity in an attempt to stay outside the limited boundaries of being black in America. Since many hope to return to the Sudan at some point, they are not interested in assimilating fully into American society anyway, so they retain their sense of being African rather than American. It remains to be seen how this dynamic will play out in the long run for those Sudanese Americans who decide to stay in the United States.

As stated above, a mere 89 of the 3,800 Sudanese refugees who were resettled in the United States in the early 2000s were girls. There are a number of reasons for this, including cultural restrictions on girls' travel and independence, the profit to be made in dowries, and lack of attention to girls by refugee camp and resettlement agencies. Many of the girls who made it to the refugee camps were placed in foster homes where they are exploited as domestic servants and “sold off” as brides. Those who made it to the United States were mostly relatives of boys who protected them and insisted that they be resettled as well.

Even those girls who have been resettled in the United States face the danger of exploitation. American foster parents have reported incidents where their foster daughter has traveled to meet with relatives only to discover that the relatives were merely interested in the dowry she could bring them. Although American foster parents want to encourage the girls to be connected with their families and traditional culture, they are wary of exposing the girls to disappointment at best, exploitation at worst.

Sudanese American women have begun to join together to help Sudanese women and girls both in the United States and in Sudan. Organizations such as the Southern Sudanese Women's Association, founded in 2000, provide counseling, education, and financial assistance to help Sudanese women and girls free themselves from exploitative expectations while still respecting Sudanese culture.

## SUMU

**LOCATION:** Nicaragua; Honduras (eastern coasts)

**POPULATION:** 13,000–16,000

**LANGUAGE:** Sumu; Spanish

**RELIGION:** Protestantism (Moravian); Catholicism

### <sup>1</sup> INTRODUCTION

The Sumu group has sometimes been called Ulwa and Twahka, which are actually two sub-tribes of the same family. As a general name, the Miskito designation Sumu or Smu is preferable. The Sumu are split in five different tribes: the Bawiha, the Twahka, the Panamaka, the Ulwa, and the Kukra.

The Sumu are an indigenous group living on the eastern coasts of Nicaragua and Honduras, in the area commonly known as the Atlantic or Miskito (also spelled Mosquito) Coast, a region that they share with their traditional adversaries, the Miskito. The Sumu are the second-most-populous native group in the region, after the Miskito. Historically, the Sumu were composed of at least 10 subgroups, and their territory stretched from the Rio Patuca in present-day Honduras to the Rio Escondido in Nicaragua.

In the 17th century, the Miskito (a mixed-race people resulting from intermarriage between escaped African slaves and other segments of the local population) were introduced to guns and ammunition by English traders and settlers in the area, who wanted help in their colonial rivalry with the Spanish. The Miskito used their newfound fire power to enhance their own position as well, expanding their territory northward, southward, and westward from its original location at the mouth of the Rio Coco. They demanded tribute from the Sumu or captured them, enslaving them or incorporating them into the Miskito population.

The beleaguered Sumu ultimately retreated into the interior of the region, living by the headwaters of the coastal rivers. The Miskito became the most important non-White population on the coast, living in peace with the British and serving as an intermediary between them and the Sumu, whose numbers declined sharply as a result of Spanish, British, and Miskito aggression and the spread of European diseases. From the mid-17th century to the late 19th century, the Miskito prospered, thanks to their trade with the British and the abundant natural resources of their territory, which at one time extended as far as the present-day nations of Belize and Panama. Moravian missionaries arrived in the region in the 1849. After converting large numbers of Miskito, they began directing their efforts at the Sumu at the beginning of the 20th century.

In the late 19th century, an ethnic shift occurred in the region when banana growers began bringing in Black English-speaking laborers from the West Indies to work on their plantations. They and their descendants, who became known as Creoles, took the place of the Miskito as the area's dominant non-White group, relegating both the Miskito and the Sumu to a lower social status. The Creoles settled mainly in the newly established port towns while the indigenous groups remained in rural villages, retaining their traditional languages and way of life. With Nicaraguan and Honduran independence from Britain in the 19th century, the United States began to play a greater role in the region, especially in the area of banana pro-

duction, and its corporate interests, particularly the United Fruit Company (now United Brands) remained influential well into the 20th century.

When the Sandinista government came to power in 1979 and moved to consolidate its control over the native peoples of the Atlantic coast, they met with widespread resistance from the Miskito, who formed their own Contra force, a supposed alliance between the native groups of the region called *Misura* (a combination of the groups' names: Miskito, Sumu, and Rama). However, most of the Sumu did not want to become involved in the hostilities between the Miskito and the government. They tried to stay out of the conflict, but the Miskito raided their settlements, drafting young men and torturing and murdering those who resisted (or were suspected of resisting). In 1982 the Miskito occupied Musawas, the largest Sumu settlement, conscripting, killing, or evacuating its residents. Throughout northern Nicaragua, innocent civilians were terrorized and murdered. Schools and clinics were destroyed, farms went untended, and livestock were killed.

Caught between pressure from *Misura* and from the Sandinistas themselves, between 2,000 and 3,000 Sumu fled to refugee camps in Honduras, while others hid in the mountains, were forced into military service, or relocated to the coast. Their persecutors even raided the refugee camps to draft Sumu men. By 1985 conditions in the camps had led the Sumu to begin returning to their homes, and by 1987 about half the refugees had returned to Nicaragua, where the worst of the fighting was over. Although Nicaragua nominally granted autonomy to the native groups of the Atlantic coast in 1987, the threat of either Sandinista or *Misura* violence remained ever-present.

President Violeta Barrios de Chamorro, whose 1990 election ended Sandinista rule, established a new ministry, the Nicaraguan Institute for the Development of the Atlantic Region (INDERA), to serve as a liaison with the peoples of the Atlantic coast. The Sumu have drawn international attention due to their political plight, as well as their role in conserving the natural resources of their homeland. There was a small community to begin with, and the continuing violence in their region has threatened them with virtual extinction through the reduction of their birth rate and the destruction of their settlements. As of the late 1980s, many were living in either Honduran refugee camps or resettlement camps in Nicaragua.

## 2 LOCATION AND HOMELAND

The large region on the Atlantic side of Nicaragua and Honduras, known as the Miskito Coast, is inhabited by four different Amerindian tribes: Miskito, Sumu, Paya, and Rama.

The Sumu live in isolated inland villages along the main rivers of what is known as the Atlantic or Miskito Coast, located in Nicaragua and Honduras. The Miskito Coast is extremely diverse geographically, with a large inland savanna, a tropical rain forest (home to most of the Sumu), coastal lowlands, and the most extensive continental shelf in the Caribbean. Its major rivers include the Patuca, Coco (also known as the Wangki), Prinsapolca, Awaltara (Rio Grande), and Kuringwas. There are three main subgroups among the Sumu, each living in a different region. In Nicaragua, the Sumu live along the Bocay, Umbra, and Waspuk tributaries of the Rio Coco River and near the headwaters of the Prinsapolca and Grande rivers. In Honduras, they live along the Patuca River.

Each of the Sumu subgroups speaks its own variant of a common language. The communities of the Panamaka, who account for 70% of the Sumu, center around the Bocay, Saslaya, and Waspuk rivers and the mining town of Bonanza. The Tawahka, who make up another 20%, live along the Rio Bambana in northern Nicaragua and far up the Rio Patuca in eastern Honduras. The Ulwa, who represent 10% of the Sumu, live along the Prinzapolca and Rio Grande de Matagalpa rivers at around the midpoint of the Nicaraguan coast. During the protracted warfare of the 1980s, the Sumu suffered persecution at the hands of both the Sandinista government and the Miskito resistance, which destroyed a great number of their settlements. Many Sumu fled to refugee camps in Honduras, but most have been repatriated in the years since 1985 and are attempting to rebuild their shattered communities. Altogether, there are thought to be between 13,000 and 15,000 Sumu in Nicaragua and 1,000 in Honduras.

The Miskito Coast is located in a tropical zone usually hit by natural forces. Hurricane Mitch in 1998 and Hurricane Felix in 2007 hit Miskito territory, provoking severe damages.

## 3 LANGUAGE

Sumu, like the language of the Miskito, is a Misumalpan tongue derived from the Chibchan family. Outside influences have produced loanwords from English, Spanish, and Miskito. There are three distinct Sumu dialects: Tawahka and Panamaka, which are very similar to each other, and Ulwa, which is more divergent. Most Sumu are multilingual, speaking Spanish in school and their native language at home. In addition, many learn to speak Miskito within their communities. Few Sumu know how to write in their own language, but its written form may enjoy resurgence with the growth of bilingual education that has accompanied the demands of indigenous groups, including the Sumu, for greater cultural autonomy. However, not all public policies during the last decades have been oriented to preserve the Sumu language. For instance, sociological studies have shown that until 1950, Ulwa, or southern Sumu, was the primary language of the eastern Nicaraguan town of Karawala, population of 935. In 1950, the Nolan Lumber Company came to Karawala, drastically changing the linguistic picture through the introduction of a sizable Miskito-speaking workforce. Since the people of Karawala were bilingual in Ulwa and Miskito, the shift to Miskito on the part of the whole town was not a hardship. But the shift had serious consequences for Ulwa. At this point, only 18% of the population under 20 years of age speaks Ulwa.

## 4 FOLKLORE

The Sumu traditionally believed in a sun god, called Mapapak, who lived in the heavens. Other forces of nature, including the moon and the wind, were also worshipped. A variety of spirits (*walasa*, *nawah*, and *dimalah*) was thought to have either harmful or beneficial influences on human beings and was even thought capable of causing death. Much Sumu folklore has been preserved by its shamans, or *sukia*, who also serve as priests, exorcists, herbalists, and spiritual advisors.

## 5 RELIGION

Sumu as well as Miskito people were originally animists, however, exposure to Christianity has influenced to a certain degree their religious practices through a slow process of syn-

cretism. In spite of this cultural influence, Sumus have been capable of maintaining important rites and beliefs. For instance, in Sumu and Miskito culture shamans still play an important and varied role serving as healers, diviners, and exorcists. For this Amerindian aborigines there are different kinds of supernatural beings. Although many of the animist traditions have been kept by a large number of Sumus and Miskito, the Catholic influence in the zone has resulted in a syncretistic Christ-animism. The Sumu in Nicaragua are mostly adherents of the Moravian Church, a Protestant sect. The Tawahka Sumu in Honduras are mostly Catholic. Although their traditional religion, which involved sun and moon worship and a belief in both benevolent and malevolent spirits, declined with the arrival of Moravian missionaries in the 19th century, some Sumu continue to hold beliefs associated with it. Its holy men, or shamans, were called *sukia*.

## 6 MAJOR HOLIDAYS

Holiday celebrations combine the major holy days of the Christian calendar, including Christmas (December 25) and Easter (late March or early April), with the traditional Sumu practices of singing, dancing, and drinking.

## 7 RITES OF PASSAGE

Festivities mark major events in the life-cycle, such as weddings and funerals. Special ceremonies, such as the *asang lawana*, formerly marked rites of passage for both men and women.

## 8 INTERPERSONAL RELATIONS

The Sumu family traditionally functioned as an independent economic unit. Men felled trees and hunted, while women performed agricultural work and household chores. Although there is still some division of labor according to gender, today both men and women participate in the cash economies of the countries in which they live. The Sumu formerly had a labor exchange system called *birbiri* for heavy physical work, but today it is more common to exchange commodities for cash.

Elders are honored and respected but have no formal evaluation in social status. Shamans have traditionally exercised some authority within Sumu society.

## 9 LIVING CONDITIONS

Sumu dwellings are typically wooden or post-and-pole structures, with thatch or tin roofs and floors made of board, split bamboo, or palm branches. They mostly consist of one room (although some have interior divisions) and generally have windows and doors. Instead of having a foundation, houses are usually raised several meters or feet off the ground on posts. Although modern medicine is replacing traditional Sumu folk remedies that use roots, leaves, bark, and seeds, herbal cures are still used for a variety of purposes, including the treatment of poisonous snake bites.

The Sumu generally live in remote areas that make for difficult travel conditions. The home of the Tawahka in Honduras is accessible only by plane and canoe. In Nicaragua, the Rio Bocay and Rio Coco are the only means of transportation to and from Sumu villages, and those making the journey run risks from white water, rocky shoals, and portages. Groups attempting to improve access to these areas have recently had

success with dugout canoes modified to accommodate an outboard motor. Rice, beans, yucca, bananas, and plantain are some of the main staples that are part of the Sumu and Miskito peoples.

## 10 FAMILY LIFE

Most Sumu live in extended families with two or three generations under one roof. Men formerly had more than one wife, but today monogamy is the rule. Courtship customs include the presentation of gifts, such as food and firewood, by the suitor to the young woman's parents. Once married, the couple generally lives with in-laws until their house is built. At one time, marriage with outsiders was strictly forbidden, but today it is common for the Sumu to marry Blacks, Mestizos, or members of other native groups, including their traditional enemies, the Miskito. In addition to their domestic responsibilities, women take part in farm work, including planting, weeding, and harvesting.

## 11 CLOTHING

Formerly, Sumu women made loincloths and skirts from pounded tuno tree bark and other clothing from cotton they spun, dyed, and wove by hand. Today, however, the Sumu, like other inhabitants of Nicaragua and Honduras, wear mass-produced Western-style clothing, mostly lightweight cotton.

## 12 FOOD

Dietary staples for the Sumu include root crops, such as sweet manioc (cassava) and yams, plantains and green bananas, which are boiled, or baked, rice and beans, and fish. Corn is pounded to make tortillas. Ripe plantains and bananas are mashed together with other ingredients, including maize and palm fruits, and mixed with water to produce a fermented beverage called *mishla* or *wasak*. The role that fish and wild game play in the Sumu diet varies depending on their availability. The Sumu also keep chickens, ducks, turkeys, pigs, and cows.

## 13 EDUCATION

Although Honduras and Nicaragua, where most Sumu live, both have free, compulsory primary education, the educational systems of both countries are inadequate, with low enrollment and graduation rates and high adult illiteracy. Estimates of the adult illiteracy rate in Honduras range from 27% to over 40% and as high as 80% in rural areas (where most Sumu live). Schools are understaffed and undersupplied, with as many as 80 pupils per classroom. Sumu children receive a practical education that prepares them for daily life by observing and helping their parents, an activity that breaks down along gender lines, establishing sharply differentiated future roles. While boys participate in farming, fishing, and hunting with their fathers, girls help their mothers with domestic chores.

## 14 CULTURAL HERITAGE

Many of the traditional Sumu flute melodies imitate bird calls, with accompaniment provided by rattles and drums.

## 15 WORK

The Sumu have traditionally lived by subsistence agriculture, raising root crops, maize, plantains, bananas, and other produce, both for food and cash. They use the same slash-and-

burn farming techniques as their ancestors to clear forest land for planting. However, today they mostly fish with hook and line rather than the spears of their ancestors, and hunt wild game with shotguns and .22-caliber rifles, which have replaced bows and arrows and blowguns. Sumu villagers traditionally helped each other with major tasks, such as house-building, through a traditional system of labor exchange called *birbiri* that usually involved kinship networks. Today, however, the exchange of labor has been replaced by payments of produce, supplies, or cash.

In addition to their traditional subsistence activities, the Sumu have been employed by Europeans since the 17th century for a variety of tasks, which have included tapping trees for saps, resins, and gums, catching shrimp, turtles, and lobsters, and panning for gold. Today, many own small stores or work as teachers, nurses, boatmen, or ministers.

## 16 SPORTS

Popular sports in the Nicaraguan and Honduran homelands of the Sumu include baseball, soccer, basketball, and volleyball. Cockfighting is a favorite spectator sport among the Sumu and other groups living along the Miskito Coast.

## 17 ENTERTAINMENT AND RECREATION

Holidays and other special occasions are marked with singing, dancing, and drinking alcoholic beverages, including *mishla*, a fermented beverage made from fruit and water.

## 18 FOLK ART, CRAFTS, AND HOBBIES

The traditional crafts of spinning, weaving, and dyeing cotton for clothes and household items such as sheets have been replaced by the production of more decorative items for marketing, such as carved tree gourds, tuno bark tapestries, and *majao* bags. Tuno bark is also used for making blankets and mosquito netting, and twine for weaving bags and hammocks is made from pounded *majao* bark.

## 19 SOCIAL PROBLEMS

The Sumu, like the Miskito and other native groups in eastern Nicaragua and Honduras, generally fare worse than the mixed-race (Mestizo) or black (Creole) populations in terms of income, education, and job opportunities. Many hold low-paying, dangerous mining jobs. The Sumu are additionally victimized by the historically disdainful attitude of the Miskito, who refer to them as “slaves” (*albatuina*) and “flatheads” (*Ialtanta*), ridiculing their language and customs.

In the 1980s, the Sumu suffered mistreatment at the hands of both the Sandinista government and Miskito resistance forces, who drove as many as 3,000 Sumu from their homelands by a campaign of terror that included forced conscription, mass kidnappings, rape, torture, and murder. Repatriation began in the mid-1980s, and the Sumu are now struggling to rebuild their homes and reestablish their culture in the wake of the devastation of the past 15 years. In 1987 the Tawahka Sumu in Honduras formed the Federación Indígena Tawahka de Honduras (FITH) to protect the group’s political, economic, territorial, and cultural rights. The comparable group in Nicaragua is Sumu Kalpapakna Wahaini Lani (SUKAWALA), also known as the Sumu Brotherhood.

## 20 GENDER ISSUES

The Sumu cosmology, like that of many indigenous peoples, describes an egalitarian duality between the masculine and feminine realms. Sumu men formerly had more than one wife, but today monogamy is the rule. Labor is divided along gender lines and tasks are complementary.

While indigenous communities themselves have limited access to higher education, indigenous women are generally relegated to home life. The percentage of girls going to secondary school is minimal. Children may attend primary school in their communities, but the secondary schools are in mestizo towns in the area. Life conditions, such as lack of food and housing, are hard for everybody in the mestizo town, boys and girls alike. Given the scarcity of resources, girls are more likely to stay back home, than boys are. Because Sumu women are in charge of preserving the traditions of the community, the Nicaraguan government has designed aid projects targeted at women. Sumu women are the direct beneficiaries of the natural medicine cultivation project and the family garden and community kitchen capacity building activities prompted by the state.

# SURINAMESE

**LOCATION:** Suriname

**POPULATION:** 475,996 in Suriname; 200,000 in Holland (the Netherlands)

**LANGUAGE:** Dutch (official); English; Spanish; Sranan; Hindi; Sranan Tongo (Taki-Taki)

**RELIGION:** Christianity; Hinduism; Islam

## <sup>1</sup> INTRODUCTION

Suriname became a British colony in 1650 and then a Dutch colony in 1667. The Dutch made what has been known in history as the worst land-swap deal ever—taking Suriname in exchange for New Amsterdam, or New York, as the new British owners called it. The Dutch planted sugarcane and coffee, importing West African slaves to work on the plantations. But, the brutality of the owners drove many slaves into the interior, where they successfully evaded capture. In 1863, slavery was abolished in Suriname and former slaves were placed under government supervision for a period of 10 years, in order to perform important tasks under contract. Indentured workers were then brought from Java, China, and India to work in the fields. It is this rich ethnic mixture that influences the modern Surinamese society.

In 1954, Suriname was granted autonomy in its internal affairs, receiving aid and resources from the Netherlands. Ten years later, in 1964, Suriname became an associated member of the European Economic Community (EEC) and started receiving aid from the EEC's development fund.

Suriname's journey from independence in 1975 has been marred by several military coups that led to the brutal repression of opposition and a rebellious uprising by the Maroon communities, evolved from Black African slaves, within the rainforest interior. The military, then under the leadership of Desi Bouterse, prosecuted citizens who were accused of plotting against the government. The National Army was accused of carrying out raids on their villages, killing and detaining large numbers of them, which resulted in the flight of 10,000 to 20,000 Maroons to French Guiana. During the military dictatorship, Suriname was cut off from aid by the Netherlands and America. The loss of \$800 million of aid badly damaged the economy.

In 1987, elections were held and a new constitution was adopted, returning the country to civilian rule. However, the political agreement allowed Bouterse to remain as the army commander. Bouterse's power began to wane after the 1991 elections. That year Ronald Venetiaan became president and, in 1992, a peace accord was signed with the two main guerrilla groups, the Surinamese Liberation Army and the Tucayana Amazonas. In 1996, Jules Albert Wijdenbosch was elected president of Suriname. His administration was marked by deep economic problems. The International Monetary Fund (IMF) declared the country virtually bankrupt. During his administration, Wijdenbosch also had to face the political instability generated when the Netherlands issued an arrest warrant against Bouterse on charges of drug smuggling. Even though Suriname failed to extradite Bouterse, the former dictator was sentenced to 16 years in prison in 1999.

In 2000, the mathematician Ronald Runaldo Venetiaan was elected president of Suriname. His first term as president was from 1991 to 1996, but he lost the reelection to Jules Wijdenbosch. In 2005, Venetiaan was reelected to serve a third term as president.

Suriname's economy has been dominated by the mining industry, accounting for 55% of the GDP. Aluminum, gold, and oil represent about 85% of the national exports and 25% of government revenues, making the national economy highly vulnerable to international mineral prices. Even though Suriname's economy has grown during recent years—in 2007 GDP growth was 5.1%—national wealth has remained highly concentrated. In 2002 more than 70% of the population was living under the poverty line. In 2004, the unemployment rate was 9.5%.

## <sup>2</sup> LOCATION AND HOMELAND

Formerly Dutch Guiana, Suriname is the smallest country in Latin America with the smallest population, estimated in 2008 at 475,996. Located on the north-central coast of South America, it has an area of 163,820 sq km (63,251 sq mi)—but 17,635 sq km (6,809 sq mi) remain as disputed territories with neighboring Guyana and French Guiana. Suriname has a narrow coastal plain near or below sea level, much of it swampy and requiring draining systems and dikes. A central massif of low, forested mountain ranges covers 80% of the entire country.

Suriname has a humid tropical climate throughout the year, tempered along the coast by the northeast trade winds. Rainfall is over 300 cm (118 in) annually in the rain forests and averages 193 cm (76 in) along the coast. The country is rich in wildlife, including monkeys, anteaters, armadillos, sloths, tapirs, deer, jaguars, pumas, and ocelots. There are also snakes, birds, and a wide variety of insects, and the rivers teem with fish.

The capital is Paramaribo, an Amerindian name. Many place names are taken from the Amerindians, as are the names of rivers, animals, plants, and common tools used by everyone.

The population is principally composed of Asian Indians, who make up 37% of the total, and Creoles (mixed African and European stock), who also make up 31%. The Javanese population represents 15%, Maroons (African ancestors brought in the 17th and 18th centuries as slaves) account for 10%, while Amerindians and Chinese represent just 2%. The white population account for 1%. It is also a youthful country, with about 75% of its people under 30 years old and 40% under 15 years of age.

## <sup>3</sup> LANGUAGE

The official language of Suriname is Dutch, but many people speak English. Other languages are Sranan, a Creole tongue; Hindi; and other Asian Indian, African, and Amerindian languages. Altogether, 22 languages are spoken. The most common language is Sranan Tongo, also called Taki-Taki, which combines elements of English, Dutch, and several African languages. The main working language is Spanish.

## <sup>4</sup> FOLKLORE

The African slaves who escaped into the wild forest recreated the myths and legends of the West African culture from which they had been torn. They reestablished the tribal hierarchies,

customs, and polytheistic beliefs that had governed their lives in Africa. The Maroons of Suriname, as the Black descendants are known, form the largest Maroon population in this part of the hemisphere, and their culture has influenced the thinking of many of the urban Creoles. There are six main Maroon tribes, each with their own chieftain or Granman.

Many Surinamese folk tales are based on Afro-centered traditions and emphasize the persistence of African belief, the organic unity between animals, and between humans and nature generally, as well as the continuing link between the living and the dead.

There is a particular folk tale about a cunning spider who outwits humans and animals. Many of the stories take place in Africa. In Creole folklore, riddles play an important part. The *lai tori* riddles, despite European influence, are overwhelmingly of African origin.

## 5 RELIGION

The main religion in Suriname is Christianity, followed by Hinduism and Islam. Some Christian groups also practice traditional African beliefs, such as Obeah and Winti (which means “wind”). Winti is a polytheistic and largely secret religion of West African origin. It recognizes that there are a multitude of gods and ghosts each having their own myths, rites, offerings, taboos, and magical forces. Obeah is a healer god, who can also be invoked to bring illness and other calamities to one’s enemy. The cult of Obeah exists not only in Suriname,

but also in neighboring Guyana, formerly a British colony, and in several Caribbean islands, such as Jamaica.

## 6 MAJOR HOLIDAYS

The Muslim holiday Id ul Fitr, or Lebaran or Bodo in Indonesian, celebrates the end of the fast of Ramadan. The Hindu festival of Holi Phagwa varies each year and is a lively event when water, paint, talc, and colored powder are liberally thrown into the streets at passersby. The Maroons celebrate with their “dance feasts” in the interior. These are competitions between men or women and are accompanied by songs and rhythmic clapping and chanting from the audience.

Another important holiday in Suriname is New Year’s Eve, called Oud jaar, which means old year. To celebrate this day, waves of Surinamese inhabitants go to the historical downtown to watch fireworks demonstrations. These celebrations start in the morning and finish the next day.

Independence Day, a major national holiday, is on November 25.

## 7 RITES OF PASSAGE

Naming ceremonies at birth are important in all the diverse religious cultures in Suriname. Wedding ceremonies are also considered to be major occasions and can be elaborate and colorful, with generous feasting. Circumcision is practiced by Muslims.

Among Hindus, the birth ceremony traditionally takes place before the umbilical cord is cut. This ceremony is called *jatakarma*. The naming ceremony occurs 10 days after the child is born. Among the Christians there are Catholics, Lutherans, and Moravians, who baptize their children according to their own religious traditions, as do those of the Reformed Church.

## 8 INTERPERSONAL RELATIONS

Generally, status is based not on race or creed but on a person’s education, profession, and economic position, as well as on how much political influence that person is able to wield.

The familiar Hindu caste system is a highly localized phenomenon in the villages of India. So when low-caste people and twice-born Brahmins were thrown together on board ship to become *jahagis* (shipmates) on the sailing boats from India to Suriname in the 19th century, that system soon became irrelevant. Today, there is more or less only one common caste for all Hindus in Suriname, although Brahmins do retain their special religious role in interpreting the sacred knowledge of the rituals and Sanskrit texts.

Anyone visiting a friend or acquaintance at their home address is expected to call upon everyone else that they know within that neighborhood. Not to do so is considered extremely rude.

## 9 LIVING CONDITIONS

The birth and death rates in Suriname are lower than the average for Latin America as a whole. Life expectancy is 70 years for men and 76 for women, one of the highest in Latin America.

The gross national product (GNP) suffered a sharp decline during the troubles of the 1980s because of political instability caused by military coups. It was the ensuing reign of terror against the Maroon uprising that led to Dutch and American

aid being withdrawn. The loss of one-fifth of its GNP caused havoc in the country's economy.

Since then, the GNP has nonetheless become one of the highest in South America. Health is generally good, although many doctors emigrated to the Netherlands after independence. The majority of the populations have health insurance. The state provides to the unemployed and workers in the informal sector with free medical care once they have obtained a "certificate of poverty" from the government.

There is a poor transport infrastructure, with only 25% of the roads paved and fewer than 160 km (100 mi) of railways. Navigable rivers and canals are important for freight and passenger transport.

### 10 FAMILY LIFE

The Maroon men are close to their children, passing on ritual knowledge to their sons and playing an active role in the raising of the family. Many of the men have more than one wife, though few have more than three wives at a time. Care of the children is entrusted to one parent rather than two, and children spend their first four to six years with the mother. Many are then given to the father of another relative, and there may be further shifts at later ages in order to accommodate the child's developing needs, or changes in the parents' marital status or residence patterns.

### 11 CLOTHING

Many of the Javanese women in Suriname still wear sarongs as they would in Indonesia, while the Creole women continue to wear the *kotomissie* traditional costume and the *angisa*, the handkerchief.

### 12 FOOD

The food of Suriname reflects the ethnic diversity of the country. There are the *warungs*—Javanese food stalls serving *bami goreng* (fried noodles) and *nasi goreng* (fried rice). Creole food uses tubers, such as cassava and sweet potatoes, and plantains with chicken and fish, including shrimp.

Rice is the staple diet for most people. There is also *pom*, which is a purée of the taro root, a relative of cassava, which is tastily spiced and served with *kip* (chicken). *Moksie alesie* is a rice dish with meat, chicken, white beans, tomatoes, peppers, and spices.

### 13 EDUCATION

Suriname's education system is modeled on that of the Netherlands, and Dutch is the language of instruction. Education is free and compulsory from the age of 6 years until 12 years. Most students leaving primary education continue on into secondary school, while higher education is provided by the government at the Anton de Kom University, which has schools of law, medicine, social sciences, economics, and engineering. Literacy rates are high, about 89% for both men and women.

### 14 CULTURAL HERITAGE

Among the Maroon tribes, children are expected to learn or participate in the world of artistic production, performance, and appreciation from a very early age. Many of the Maroons' huts display the fine woodcarvings for which they are famous and that adorn furniture, tools, and boots. They also carve

*Diners at a lodge on Kumalu Island, Suriname. Surinamese cuisine reflects the ethnic diversity of the population, which includes Javanese and Creole influences. (Anne Kalosh)*

their drums, which must never be touched by any female. These drums are used to accompany skillful and intense dancing during the dance feasts.

At night in the capital city, Paramaribo, one will hear in the distance the mellow sounds of metallic music. This is the famous traditional "gamelan" music played by the Javanese to accompany their dances.

Hindu weddings and religious plays are elaborately ceremonial and make use of exquisite costumes. The cosmopolitan mix of the country means that everyone, Hindus, Muslims, and Christians, frequently attends these ceremonies.

### 15 WORK

Much of the farmland has fallen fallow as a result of the civil war between the government and the Maroons during their uprising. Low wages and sharp price increases (tenfold for gasoline) set off a series of strikes in post offices, banks, and offices early in 1993. Many families depend on relatives in the Netherlands who send home money. The Asian Indians are mostly small farmers, while the Creoles are concentrated in retail, politics, and the professions in urban areas. The Javanese work mainly on Dutch-owned plantations.

In 1975 approximately 40,000 Surinamese fled to Amsterdam, expecting racial unrest with independence. That exodus continued throughout the 1980s as nepotism, corruption, and lack of central planning hindered economic development. To-

day there are some 200,000 Surinamese living in Holland—almost a third of Suriname's population.

The majority of Surinamese work for the government or in the service sector, such as banking, insurance, education, and medical institutions. Others supplement their incomes by working illegally in neighboring Guyana and French Guiana. There are no unemployment benefits or other social provisions, and the unemployed must obtain a "certificate of poverty" to receive free medical care.

## 16 SPORTS

Soccer is a popular game played in towns and villages everywhere, and a great hero of the game is Ruud Gullit, of Suriname descent, who went on to become the captain of the Dutch national team. Another popular sport is swimming, and the country took great pride when Anthony Nesty won a gold medal for Suriname in the 100-meter butterfly event at the 1988 Olympic Games.

## 17 ENTERTAINMENT AND RECREATION

A distinctive pastime practiced throughout Suriname are the birdsong competitions held in parks and public plazas on Sundays and holidays. People carrying their songbird (usually a small black tua-tua) in a cage are a frequent sight on the streets of Paramaribo as they set off for a training session or simply to take the bird for a stroll.

Young people enjoy outings, sporting events, and the cinema, as well as dancing.

## 18 FOLK ART, CRAFTS, AND HOBBIES

The Afro-centered culture of the Maroons makes a distinctive contribution to the arts and crafts of the country's museums and galleries in the form of woodcarvings and sculpture.

The Hindu and Javanese cultures are reflected in their religious festivals, dress, and ceremonies.

## 19 SOCIAL PROBLEMS

Certain parts of the interior are still off-limits to visitors as they are controlled by groups of armed rebels. The violent reprisals inflicted on the Maroon villages during the war drove many refugees across the border into French Guiana where they were put into camps. Since the signing of a peace treaty, the French authorities have been persuading or compelling the refugees to return to Suriname, increasing tension in some war-devastated areas.

Meanwhile, the government has been forced to take action to try to resolve its continuing economic crisis. Inflation was around 54% by mid 1993 and was heading towards 100%.

## 20 GENDER ISSUES

Although the country ratified the Convention on the Elimination of All Forms of Discrimination against Women in 1993, there are still discriminatory laws in effect. Although article eight of the constitution protects against sexual discrimination, daily realities show that women still have a long way to go before gender equality is achieved.

Gender policy is embodied in the 2006–2010 Integral Gender Action Plan. The main policy priorities include institutional arrangements for improved gender policy development, poverty reduction from a gender perspective, macroeconomic

planning to increase the participation of women in the labor market, equal participation in decision-making, and the development of legal and policy instruments that enhance human rights.

An increasing problem is the AIDS epidemic affecting the Surinamese. Poverty, especially among women, is one of the main driving forces behind the epidemic. Women comprise almost half of the total population with HIV and there has been a clear and alarming trend in greater numbers of young women becoming infected with HIV. Suriname is one of the Caribbean countries in which newly infected women are significantly outnumbering newly infected men. In 2000–2001, women account for 63% of the HIV positive in the age group of 15–19 years old, 81% in the age group 20–24 years old, and 62% in the age group 25–29 years old.

Regarding politics, the average participation of women in the various government bodies, from the national assembly to local councils, has gradually increased from 12% in 1988 to 18% in 1996. As of 2008, there are 13 women in the 51-seat national assembly, and the cabinet includes three female ministers. In 2001 the first female judge joined the Court of Justice and in 2006 a woman was appointed head clerk of parliament. However, senior positions in business, unions, and the media remain firmly in the hands of men.

## SWEDISH AMERICANS

For more information on Swedish history and culture, see **Vol. 4: Swedes**.

### OVERVIEW

In the 1600s, Sweden attempted to establish a colony called New Sweden in North America near today's Wilmington, Delaware. It was the first permanent settlement in the Delaware River Valley. New Sweden was never very successful, however, and it was soon abandoned. Some 200 years passed before Swedes began to immigrate to the United States on a large scale. Then, they came en masse. Between 1851 and 1929, 1.2 million Swedish immigrants entered the United States. Only Ireland and Norway (and perhaps Iceland) lost a higher percentage of their population to America.

Several factors in Sweden encouraged emigration. Political upheavals, a repressive government, religious oppression (it was illegal to belong to any but the official Lutheran Church), a rigid class system, and mandatory military service all drove Swedes to look elsewhere for more freedom. Above and beyond these concerns, however, were economic considerations. Sweden's population, largely rural, had expanded beyond available farmland. Industrialization had not yet taken hold, so there were few jobs to be had off the farm, even in Stockholm. A series of droughts and floods created years of famine, and a soaring inflation rate made what little cash people had worth less and less.

The first wave of Swedish immigration to the United States, beginning in 1851, consisted largely of entire farming families. They settled in the Midwest, where the terrain was much like what they had known in Sweden. At that time, the United States was expanding westward and promoted settlement by offering acreage at low prices. The Homestead Act of 1862, which offered free land to those willing to farm it for a certain number of years, drew huge numbers of Swedes to the United States. The descendants of some of the original Swedish American homesteaders continue to work those farms today.

A second major wave of Swedish immigrants to the United States from the late 1870s to early 1890s included many more urban Swedes who settled in cities and industrial areas of New York State and New England. Others joined earlier immigrants in Chicago. Swedish farmers continued to immigrate as well and began spreading westward, all the way to California. A number of Swedish Mormons, who had been converted in Sweden by Mormon missionaries, settled in Utah, the center of the Mormon community. Today, 6% of the Utah population is Swedish American, making it the third most Swedish state in the Union (after Minnesota and Nebraska).

The last major wave of Swedish American immigration began in the early 1900s and lasted until the stock market crash of 1929 (minus the World War I years [1914–18]). With the onset of the Great Depression, economic opportunities were no better in the United States than in Sweden, and many of Sweden's repressive government measures had been lifted. There was no longer any compelling reason to leave Sweden, therefore, and emigration virtually ceased. Since 1930, only a very small number of Swedes have immigrated to the United States.

The Swedish American population, according to the year 2000 U.S. Census, was 3,998,310, or about 1.4% of the total U.S. population. Swedish ancestry was fifteenth among the largest ancestry groups enumerated in the 2000 census. The highest density of Swedish Americans is in Minnesota, where almost 10% of the population declared themselves of Swedish ancestry on the 2000 U.S. Census. Over 40% of Swedish Americans live in the states of California (459,897), Minnesota (486,507), Illinois (303,044), Washington (213,013), and Michigan (161,301). The states with the highest percentages of Swedish Americans are Minnesota (10% Swedish), North Dakota (5%), Nebraska (5%), Utah (4.3%), South Dakota (3.9%), and Washington (3.6%). The populations of Wyoming, Montana, Iowa, and Oregon are all more than 3% Swedish American.

The rate of intermarriage with people of other ethnic backgrounds has been fairly low for Swedish Americans. In 1980, almost 30% of Swedish Americans claimed pure Swedish ancestry—a very high percentage considering how few new immigrants had arrived since 1930. Because of their relative isolation in Swedish American farming communities, and the low rate of ethnic intermarriage, Swedish Americans retained their ethnic language longer than many other American immigrant groups. However, Americanization eventually took its toll and fluency in Swedish was largely lost.

During the hyperpatriotic hysteria of the World War I years in the United States, many Swedish Americans chose to hide their ethnicity and become as “American” as possible. Parents spoke only English with their children at home. They Americanized their names: Svenson became Swanson, Nilsson became Nelson, and Bengtson became Benson. In 1925, the Augustana Synod (the largest Lutheran denomination, or any other denomination, among Swedish Americans) began conducting its church services in English, much to the chagrin of conservative Swedish Americans. By 1935, all Swedish American Lutheran church services were in English.

The majority of Swedish Americans are Lutheran, though a number are Baptist, Methodist, Congregationalist, and Episcopal. Many Janssonists, a revivalist Lutheran sect, immigrated to the United States in the 1800s, along with converted Mormons. The Augustana Synod, a conservative form of Lutheranism, claims the most Swedish American members. The second largest Swedish American denomination is the Swedish Evangelical Mission Covenant of America, formed in 1885 by the merger of the Evangelical Lutheran Mission Synod and the Asgar Synod. In 1960, the Augustana Synod united with the United Lutheran Synod (a German denomination) to form the Lutheran Church of America (LCA). In 1987, the LCA and the American Lutheran Church merged to form the Evangelical Lutheran Church in America.

Many Swedish Americans continue to celebrate the traditional Swedish Christmas, beginning on December 13 with St. Lucia's Day. On Christmas Eve, they serve the traditional foods of *lutefisk* (dried cod soaked in lye) and rice porridge. Another traditional Swedish food still enjoyed by Swedish Americans is *limpa*, a type of rye bread.

Swedish Americans have made countless contributions to American culture, beginning with the introduction of the log cabin in pioneer days. Early Swedish immigrants were mostly peasant farmers to whom higher education had been denied in the class-oriented system of Sweden. They were thrilled, therefore, to have access to education in America and took full ad-

vantage of it. The Swedish American Lutheran Church founded a number of colleges that continue to offer high-quality education today, including Augustana College and Theological Seminary, founded in 1860 in Rock Island, Illinois; Gustavus Adolphus College (1862, St. Peter, Minnesota); Bethel Institute (1871, St. Paul, Minnesota); Bethany College (1881, Lindsborg, Kansas); North Park College (1891, Chicago, Illinois); and Upsala College (1893, East Orange, New Jersey).

More than 300 Swedish American writers were publishing their works in the early 20th century, but few achieved national prominence. The best-known Swedish American writers are poet Carl Sandburg (1878–1967) and science fiction writer Ray Bradbury (b.1920). In visual arts, sculptor Carl Milles (1875–1955) designed a number of public fountains in both Sweden and the United States, including the huge *Meeting of the Waters* in St. Louis, Missouri, which celebrates the convergence of the Mississippi and Missouri Rivers. Successful Swedish American actors include Greta Garbo (born Greta Louisa Gustafson, 1905–1990), Ingrid Bergman (1915–1982), Ann-Margret (Olsson, b.1941), and Candice Bergen (b.1946) and her father, ventriloquist Edgar Bergen (1903–1978). Contemporary actors Melanie Griffith, Uma Thurman, Kirsten Dunst, Edie Falco, and Jake and Maggie Gyllenhaal all have at least one Swedish parent or grandparent. Swedish Americans who have been successful in the field of music include Kris Kristofferson and rapper MC Lars.

A number of Swedish Americans have also made great contributions in the areas of business, industry, science, and politics. Earl Warren (1891–1974), half-Swedish American and

half-Norwegian American, served as Chief Justice of the Supreme Court from 1953 to 1969, establishing himself early as a powerful liberal voice when he ruled against the racial segregation of schools. Another Chief Justice of the Supreme Court of Swedish American descent was William Rehnquist, a strong conservative, who took office in 1986 and served until his death in 2005. He is perhaps best known for presiding over the impeachment trial of President Bill Clinton and the *Bush v. Gore* decision in the 2000 U.S. presidential election. U.S. Representative John Anderson (b.1922) from Illinois ran unsuccessfully as a third-party candidate in the 1980 U.S. presidential election. Joe (Häglund) Hill (1879–1915) gained attention as a labor union activist in the early 1900s. Hill was convicted of murder and executed in 1915, although many believed he had been framed.

Swedish American John Ericsson (1803–1889) designed the Union Army ship *Monitor* that defeated the Confederate ship *Merrimack* in 1862 during the American Civil War. Pioneer aviator Charles Lindbergh (1902–1974), even before his child was kidnapped, was perhaps one of the most famous Swedish Americans. Scientist Gustavus August Eisen (1847–1940), who made numerous contributions in botany, zoology, and archaeology, is most remembered for founding the Sequoia National Park in California in 1890. Chester Carlson (1906–1968) invented xerography in 1938 and went on to found the Xerox Corporation. Glenn Seaborg (1912–1999) discovered plutonium and was awarded the Nobel Prize in Chemistry in 1951. Business entrepreneur Walter Hoving (1897–1989) served as chair of the board of Tiffany & Company and as president

of the Lord & Taylor clothing company; and Carl A. Swanson (d.1949), whose company C.A. Swanson & Sons invented TV dinners in 1952, immigrated to the United States from Sweden.

Swedish immigrants adapted quickly and well to life in the United States, lending their skills in farming, fishing, logging, mining, and construction to the building of America. In the 21st century, they are part of mainstream America and suffer few, if any, problems unique to their community. There was a great deal of difference between the experiences of single young men and women who emigrated from Sweden to the United States in the 19th and early 20th centuries. Immigrants typically came from rural farms in Sweden, and men continued to work as farmers in the United States. Single young women, however, were highly sought after by middle-class American families to work as domestic helpers. They lived in the homes of their employers and therefore had access to middle-class accoutrements and education. Their employers treated them with respect, their workload was much lighter than farm labor, and they were paid regularly and well. Swedish women, therefore, became “Americanized” much more quickly than their male counterparts. This caused some conflict between the young Swedish Americans, with women viewing the still-rural men as uncouth and men viewing the citified women as pretentious. But these men and women still tended to marry each other rather than those of other ethnicities and so created a blend of the women’s new American ways and the men’s more traditional Swedish family values. Within a short time, most Swedish Americans who returned to Sweden for a visit quickly came back to the United States, having grown accustomed to the more egalitarian culture of the United States.

# TENETEHARA

**ALTERNATE NAMES:** Guajajara and Temb 

**LOCATION:** Brazil

**POPULATION:** 13,000 (estimate)

**LANGUAGE:** Guajajara (Tup -Guaran  family)

## 1 INTRODUCTION

The Tenetehara, known also as Guajajara and Temb , are a numerous Brazilian indigenous peoples. Tenetehara lands are located at the eastern margin of the Amazon region, in Maranh o State. During the last 400 years, Tenetehara contact with another cultures, especially whites, has been marked by tragedy. In 1901 a revolt against Capuchin missionaries provoked the last war against Amerindians in Brazilian history.

The Tenetehara tribes seem to have inhabited the northeastern Brazilian region since pre-Columbian times. The first recorded encounter with the Christian world dates from the beginning of the 17th century, though it is possible they had contact with the Portuguese slave-traders who used to roam the region searching for Amerindians to capture. By the middle of the 17th century, three separate expeditions were organized by Jesuits to find Tenetehara and bring them to their missions. Various mission villages were established with some degree of success. The Colony of Janu rio, established in 1854, had a population of 120 Tenetehara 20 years later. At the same time, Neo-Brazilians started advancing into Tenetehara territory, a trend that has continued into the early 2000s.

Although the first 50 years of contact between the Tenetehara and Europeans were marked by slave raids, massacres, and epidemics, the Tenetehara made adjustments in their culture and society to changing external circumstances and survived. The story of the meeting between the Tenetehara and the Neo-Brazilians has been generally peaceful, except for several sporadic uprisings. The result of the contact between neighbors becomes evident when elements from one culture, such as clothes, tools, and myths, are found integrated into the other.

Agriculture is the principal subsistence activity of the Tenetehara. Among a wide range of crops, this Amerindian tribe grows manioc, rice, squash, watermelon, beans, sesame, and peanuts. The communities that dwell on the river coast commonly practice fishing. The most common catches are *car * (*Geophagus brasiliensis*), *casculo* (*Loricaridii* fam.), *lampreia* (*Petromyzon fluviatilis*), and *tra ra* (*Hoplias malabaricus*). Hunting has become a less producing activity because of competition with whites for hunting areas and the spatial limitations of indigenous lands. Collecting fruit and vegetables is still practiced by almost all Tenetehara.

## 2 LOCATION AND HOMELAND

The Tenetehara live in the north of Brazil, in the states of Par  and Maranh o, east of the Amazon River. They live close to rivers, surrounded by trees and palms in the dense tropical forest. The palms, especially the babass , are quite useful as their leaves and nuts provide shelter and nourishment. The nuts can also be sold to outsiders. From December through June, everything is wet: it is the rainy season. Then comes an equally long period that offers completely the opposite: the dry season. In

the past, the Tenetehara had sufficient territory to move their settlements when the gardens were used up, every five or six years. Early explorers noticed that Tenetehara villages tended to be large, with each house holding 10 or more related families, under a powerful chief, usually a shaman. There are indications that the villages' average size was approximately 200 people.

Tenetehara people, as well as other Amerindian cultures, have faced the requirements imposed by modernity. In this sense, Tenetehara have adapted their economic organization by exchanging different goods, such as manioc flour, fur skins, babassu nuts, and carnauba, with other people and organizations in order to maintain their economic stability without breaking up the community organization. However, this type of reaction and adaptation goes against cultural tradition. For instance, when groups collect rubber for commercial firms, the gathering of this material obliges the tribe to split into family units and to spread over vast areas, which carries the risk of rupturing tribal bonds.

### 3 LANGUAGE

The Guajajara language belongs to the Tupi-Guarani family and its most closely related languages are Asurini (of Tocantins), Avá (Canoeiro), Parakanã, Suruí (of Pará), Tapirapé, and Tembé. In the villages, Guajajara is spoken as the first language, while Portuguese, which is understood by the majority, functions as the lingua franca. The socio-linguistic situation of the Guajajara who live in towns and cities is unknown.

The language of the Tenetehara is considered by grammarians to be unique because of the characteristic way in which the words are formed and put together. Those traits make it difficult for the language to be learned as a second language by adults whose first language is English or Spanish. To say, for example, "The woman ate the mango," the Tenetehara would say, "Eat woman mango;" "John killed Peter" would be "Kill John Peter."

### 4 FOLKLORE

In one Tenetehara myth, Maira stole fire from the vultures and hid it in the urucú wood so the Tenetehara could use this wood to make fire. Maira also gave the yucca and maize (corn) to them and then abandoned his wife, who was pregnant with his son, Maira-üra (üra is "son"). While she was searching for her husband, Maira's wife stayed one night in the house of Mukwüra and conceived a second time. She gave birth to twins, and they continued searching for Maira.

The other main Tenetehara hero is Tupan, the creator and protector. He was later identified with the Christian God by the missionaries, who emphasized his influence. Among some groups, Tupan was the "demon of thunder."

The Tenetehara also tell many animal stories. One tells about the difficulties of the Gamba when he tries to arrange a good marriage for his daughter. On one occasion she marries a wood tick, and Gamba tries to imitate his son-in-law by floating to the ground on a leaf from a treetop, only to fall hard to the ground.

### 5 RELIGION

With the exception of cultural heroes, Tenetehara supernatural beings are dangerous: Maranäüwa, the owner of the forest and animals that inhabit it, for instance, punishes Amerindians who needlessly kill some species, like white-lipped peccaries. Zuruparí, the forest demon, causes hunters to get lost in the forest and then kills them. Uwan, known also as Upóre and Uzare, is the spirit of the rivers and river animals and plants. He is also malignant and causes illnesses. These spirits, though often known by different names, are also part of Neo-Brazilian folklore.

Apart from the spirits, the Tenetehara also have to deal with ghosts (*azang*). Ghosts are the souls of people who died in adverse circumstances, such as from sorcery or by slowly wasting away, and also the souls of those that broke incest taboos during their life. They wander through the forests and appear in the shape of animals to hunters. They also haunt cemeteries and abandoned houses, so the Tenetehara avoid such places at night.

Because the supernatural world is so menacing, the Tenetehara need their shamans to protect them. A shaman can invoke the spirit that caused the problem in the first place, be possessed by it, and have its powers to solve the crisis. Each shaman can only call a number of spirits with which he is familiar; therefore, the more spirits he knows how to call, the more powerful he is.

### 6 MAJOR HOLIDAYS

There are two major holidays celebrated by the Tenetehara: the Honey Festival and the Maize (Corn) Festival. The Honey Festival is held during the last days of the dry season, after months of collecting enough wild honey to last until the end of the

next season. During those collecting months, in the evenings, people gather to sing and bless the honey. As soon as the 20 to 30 gourd containers (each holding 1–2 liters or about 1–2 quarts) are filled, the leader sends out invitations to nearby villages. When the time comes, they sing the songs learned from the animals in mythical times and dance in circles while they drink honey mixed with water. The ceremony lasts as long as there is honey to drink.

Songs and dances are also the basic elements of the Maize Festival. It takes place during the rains of January through March, accompanying the growth of the maize. During the festival, the shamans conjure spirits that will protect the crop.

## 7 RITES OF PASSAGE

Through pregnancy and even after the birth of a child, a Tenetehara couple must observe a series of restrictions aimed at protecting the child. Most of these restrictions limit the variety of animals they are allowed to eat or hunt; the Tenetehara believe, for example, that killing a jaguar during pregnancy may cause the birth of an insane child. For the first 10 days after birth, the parents can only eat yucca flour, small fish, and roast maize (corn), drinking only water. And, they cannot have sexual relationships until the child is “hard,” at six months old.

Until the evening of the puberty ceremony, children are forbidden to eat some meats, like peccary, guariba monkey, wild goose, and various forest fowls. That night they are given official permission to eat such meats and have their first taste of them, as the men of the village would have been hunting during the previous days for the feast that follows the singing. Because of this, some outsiders called the Tenetehara puberty ceremony the Festival of Roasted Meat. In the past, adolescents of both sexes were isolated for 10 days, after which they would end the isolation by breaking the entrails of an agouti stretched across the door. The boy’s penis would have been then checked by the fathers in search of signs of masturbation and, if found, he would have been whipped. The girls were chased by the young men of the village from their doors to the stream or pool where they could have a bath.

Some of this has been lost. The boys are no longer isolated in most cases. The girls do spend some days lying in their hammocks or behind a palm-leaf screen and are still chased. For the ceremony, boys are painted red, and falcon feathers are glued on their chest and arms. The girls are painted black and, sometimes, white falcon feathers are glued to their hair. At dawn the ceremony begins, with songs and dances and shamans calling spirits.

After the puberty ceremony, the girl can consummate the marriage with her husband, who would have been living with her family since their marriage. There are no special wedding ceremonies: the young man simply moves into his father-in-law’s house. If the girl is not married yet, her father will find her a husband after the puberty ceremony. Monogamy is generally the rule.

The Tenetehara bury their dead in cemeteries outside the villages. The bodies are wrapped in mats made of babassú palm leaves or placed in boxes. It is reported that formerly they used to bury the first dead person in the house, and after the second death the house was destroyed.

## 8 INTERPERSONAL RELATIONS

Tenetehara culture and society has been modified through centuries of contact with the outside world. The result is a new culture and social system, a combination of aboriginal and borrowed elements. In 1855 a report from the Brazilian authorities described the inhabitants of some Tenetehara villages as “happily endowed for social life.” They were perceived as docile and industrious. The president of Maranhao then said that “these Indians like peace and work: they are docile, hospitable, and faithful.” Although they were deemed to be “almost white and intelligent,” the Tenetehara retained many aspects of their own culture, among them their sense of community. Their villages vary in size according to resources. If tensions arise between extended families, a group breaks off to form a new settlement where they carry out the cooperative economic and ceremonial activities of the society. Gardening and collecting are two of those cooperative activities that involve large extended families. Children often help when collecting babassú nuts. As for the children, they are loved passionately: corporal punishment or abuse of Tenetehara’s young is simply not tolerated.

## 9 LIVING CONDITIONS

The size of the villages varies enormously. Tenetehara villages can be composed by one family or can have as many as 400 inhabitants. The houses are occupied by nuclear families. Even though the communities use to maintain their independence, it is also common that the existence of various kinds of kinship among them originated by marriage and ritual. The most important unit is the extended family, which is composed by a number of nuclear families unified by kinship ties. These social units are basically composed by a group of women related by kinship and headed by a man. There are no clans or lineages. Heads of extended families try to keep as many women as possible with them, even by adopting daughters of deceased men. They try to arrange marriages for these girls and women with the aim to attract sons-in-law who should live for some time with their fathers-in-law, rendering various kinds of service.

A Tenetehara village can be as simple as two rows of houses with a wide street between them. Rows are added as the village grows. In the past, a large ceremonial house could be found situated at the end of the village street. Some of the ceremonial houses were erected just for the Honey Feast, during which the villagers danced inside, and then they were destroyed.

A typical Tenetehara house is rectangular in shape, with the walls and roofs covered with babassú palm leaves. There are no inner walls, even if more than one nuclear family lives in the house. Each family (husband, wife, and their children) has its own fire and hangs its hammocks around it, thus creating their own space within the house. Their belongings are hung on the upright supports against the walls, and sometimes there are shelves near the roof to store maize (corn), yucca, or farming instruments.

The traditional Tenetehara doctor is the shaman. Shamans can cure illness by invoking the powers of the spirits that caused the illness and then removing the cause by sucking or massaging the patient. The cure involves songs and dances, the shaman smokes large cigars, and when he is finally possessed by a spirit or a ghost, he shows by his actions which one it is.

## 10 FAMILY LIFE

The Tenetehara basic social groupings are extended families and widely extended bilateral kin groups. Families are the organizers of ceremonial and cooperative economic activities. Although there are indications of infanticide (only in the case of twins, as they are believed to be the children of dangerous supernatural beings) and knowledge of some formulas to produce abortion, the Tenetehara generally do not limit family size. During pregnancy, long taboos are imposed on the parents, but despite this discomfort, the Tenetehara like large families. Men are proud to father several children, and women are eager to bear children. According to the American anthropologist Charles Wagley, this desire for large families was one of the reasons for their survival. Many Tenetehara died from new diseases, war, and slavery when contact was first established with Europeans. But, new babies were born and replaced their population until they adjusted to the new circumstances.

## 11 CLOTHING

Covering the body is one of the habits the Tenetehara acquired through contact with other cultures, particularly Christians. Nudity was traditionally the rule. Then they adopted not just clothes from Neo-Brazilians but also the socially attributed values that accompany them: it is prestigious to have new or better clothes than other people. Women always wear skirts now, and men wear pants and shirts.

## 12 FOOD

The Tenetehara are tropical forest horticulturalists, who practice the slash-and-burn system. The staple food of the region is yucca or cassava, which is used to make bread and beverages. Maize (corn) and peanuts were already traditional crops by the time steel instruments were introduced, tools that made it easier to grow new plants, such as rice, bananas, and lemons. As their villages have traditionally been situated near rivers and streams, fishing adds protein to their diets. They also hunt tapir, deer, peccary, monkeys, and various forest fowls for their meat and collect forest fruits and nuts. The Tenetehara drink *chicha*, a fermented alcoholic drink made from various plants.

## 13 EDUCATION

Many Tenetehara are bilingual. They have learned Portuguese, and most of them still speak their own language as well. Being able to communicate clearly with the Brazilians is considered very important, not only to carry out trade, find work, and take part in the national life, but also to defend their rights when needed. As some have lost their own language, there are already projects to forward bilingual education in schools where Amerindian attendance is high. There are some primary schools provided by the government agency FUNAI, but secondary education is scarcer. Many schools are still run and funded by missionaries, as they were in the first stages of colonization. As to the level of education achieved, it is difficult to generalize, but as the Tenetehara are one of the tribes that adapted best to the change of circumstances brought about by European settlers, formal education is not alien and, when possible, is readily attained.

## 14 CULTURAL HERITAGE

Singing and dancing are not only the Tenetehara's most favorite pastimes, but they also play a central role in their ceremonial rites. The Tenetehara are very fond of music, and some of their songs are considered by many to be the most beautiful of the region. Each ceremony has its own particular songs, and they should not be sung out of season because it would upset the spirits. The songs of the Honey Festival are believed to have been brought to the tribe by a young Tenetehara shaman who visited the Village of the Jaguar during the festival of the animals when each animal sang a song.

To be a shaman, it is essential to have a good voice. At shamanistic sessions, the shaman sings the group of songs attributed to the spirit he is calling until the spirit itself enters his body and sings through him. When possessed, the shaman dances, imitating the animal of the spirit inside him; e.g., a toad spirit will make him hop. Meanwhile, men and women dance, usually stamping their feet on one spot. In some ceremonies, they form lines facing each other and approach and retreat. In the Maize (Corn) Festival dance, they make a large circle and move with a skipping step.

## 15 WORK

Agriculture is a central activity for the Tenetehara. The produce not only provides food for the families but also can be traded for manufactured articles. The task used to be divided between females and males according to the product. Women planted and harvested cotton and peanuts, while men cultivated yucca, maize (corn), and other plants. Nowadays, men do most of the planting and the women help when required. The land is cleared and the dry vegetation burned to create a garden, which is said to be owned by the head of the family but is cultivated and used by the entire extended family. The gardens are planted throughout December using metal tools, such as steel axes, hoes, and bush knives, obtained through trade with Neo-Brazilians.

As with agriculture, hunting and collecting wild foods have a dual purpose: complementing their own diets and being used for trade. Babassú nuts and copaiba oil are good products to sell in order to buy clothes, guns, fishhooks, and salt. Hunting is nowadays carried out with shotguns, when available, or with bows and arrows. The skins can be sold to Neo-Brazilians and the meat kept for consumption. The Tenetehara fish with hooks and lines, though poisoning drying pools with *timbó* is also known.

## 16 SPORTS

No specifically Tenetehara sports have been noted. However, having been close to European and Brazilian culture, popular sports have become familiar. Boys play tops and marbles in the same manner as the Neo-Brazilian children of the region. Many Brazilian Amerindians are very keen on soccer and play it frequently.

## 17 ENTERTAINMENT AND RECREATION

Singing and dancing are favorite pastimes among the Tenetehara. New tunes learned from their fellow country people are welcome. But, singing their own native songs is a pleasure in which the Tenetehara often indulge. Many evenings throughout the year, men and women gather for a *zingareté*, which

means “to sing much,” and enjoy their secular songs just for the fun of it. No native alcoholic beverages are known, but they do buy the usual from Neo-Brazilians. On the other hand, the smoke of native tobacco and hashish has lingered over many a zingareté, and other activities, since long ago.

The Tenetehara also hold parties in which some play bamboo flutes and skin drums, and couples dance to Neo-Brazilian rhythms, like the samba. Sometimes they hire Neo-Brazilian musicians to play their instruments.

## 18 FOLK ART, CRAFTS, AND HOBBIES

Apart from their leather headbands and wands made of wood with tail feathers of the red macaw, the rest of the Tenetehara crafts are basically necessary utensils made of available raw materials. This does not mean that they do not decorate what they make, for aesthetic reasons or to distinguish one object from the rest. Their baskets, for example, have woven geometric designs. They are made principally with a split flexible creeper, woven also into round sieves, for straining yucca flour, and flexible *tipitis*, which are used to squeeze the poisonous juice from the bitter manioc (cassava). The Tenetehara also weave native cotton to make hammocks.

Gourds are used to make eating utensils. The gourd is boiled and then allowed to dry. Then a single hole is cut to make a jug for drinking water or wild honey, or the gourd is cut in half and the interior mass scraped out to make a bowl. The inside of the bowl is stained black, and the outside is decorated with geometric incisions and black lines.

Pottery has been largely abandoned as the Tenetehara can now buy metal utensils. Pottery used to be simple, decorated only with incised designs. Their bows and arrows are made of pau d'arco wood, with bowstrings of twined tocum fibers. Both bow and arrows are 1 m (3 ft) long, and today the arrows have steel points.

## 19 SOCIAL PROBLEMS

The northeastern tribes of Brazil have seen their land swallowed up by colonizers in recent years. It is history repeating itself, only this time the many colonizers do not come from lands across the ocean but from Brazil itself. Although the Brazilian government has an organization that takes care of the Amerindian population (FUNAI), another body, the INCRA, has opened the region for settlement. Harried and hemmed in by settlers, the Tenetehara, along with other regional tribes, are running the risk of social breakdown once again.

## 20 GENDER ISSUES

The shift in emphasis in the economic life of the Tenetehara from the production of use-values to the production of exchange-values has been accompanied by a change in the division of labor, so that the basic economy based upon agriculture, while formerly controlled by the women, is now in the hands of the men. Males formerly planted the chief staple, manioc, leaving flour-preparation and supplementary horticulture to the women. Today, most of the trading and agriculture is man's work and individual gardens are developed as extra holdings. However, a family preference for girls, the addition of a male worker to the family at marriage, women's initiative in sexual affairs, and the earlier, pre-adolescent entrance into household duties emphasize the older patterns of life.

Although a revolution has occurred in the sexual division of labor, the Tenetehara women have preferential treatment within the tribe. Women are revered because they form the core of extended families and they are in charge of attracting wealth-creating males, who have to leave their own families to join that of their wives just at the beginning of their productive years. This marital rule makes boys a burden to the community in which they were born because they will not contribute to the group's economy. After looking at the diagrams of extended families and finding a preponderance of females over males in the contemporary generation, anthropologists have suggested that Tenetehara may engage in indirect male infanticide. In addition, women's powerful position within Tenetehara society makes them aggressive when it comes to sexual relations.

# TLINGIT

**LOCATION:** United States (Alaska)

**POPULATION:** 17,200 enrolled members

**LANGUAGE:** English; Tlingit

**RELIGION:** Christianity; native Tlingit

## 1 INTRODUCTION

Tlingit (meaning “the people”) is the name given to a native group of the Northwest Coast, whose original homeland was located in the Alaskan panhandle. With the exception of a part of the Prince of Wales Island, the thirteen tribes that make up the Tlingit group occupied the land of the panhandle south of Yakutat Bay. The Tlingit developed as a coastal culture, well adapted to the rugged, heavily forested coastal areas that they inhabited.

Beginning in the 18th century, the Tlingit tribes experienced frequent conflicts with the early Russian fur traders who first entered the area at that time. In 1799, Russian adventurers built a fort on one of the islands that makes up the southeastern archipelago. But three years later, in 1802, they were driven out by Tlingit warriors. Some time later, however, a Russian trader by the name of Aleksandr Andreyevich Baranov was successful in recapturing the fort. Baranov turned the fort into a trading post that, over time, grew into the present-day city of Sitka. By 1867 the United States had won control over Alaska and opened Tlingit lands to settlers and prospectors searching for gold.

In the 20th and 21st centuries, the Tlingit, like other Alaskan natives, have fought for their civil rights and for control over the natural resources of their ancestral lands. In 1971, the Alaska Native Claims Settlement Act transferred about 100 million acres of land back to native Alaskans, including the Tlingit, who were organized into a regional corporation called Sealaska, with the title to 330,000 acres of land and 660,000 acres of mineral rights. Today Tlingit work in industry, business, government, and the professions. In 1994 the Tlingit gained media attention when two Tlingit youths from Alaska who had attacked a pizza delivery man in Washington state were turned over to an ad hoc tribal court, which imposed a traditional punishment of banishment to an isolated island off the coast of Alaska.

## 2 LOCATION AND HOMELAND

In the 18th century, at the time of the initial European entry into the area, the total number of members of the thirteen Tlingit tribes was estimated to be about 10,000. Over the course of the next one hundred years, their numbers dwindled; at one time only about 4,500 remained. As of the 2000 U.S. Census, the number of tribally enrolled Tlingit in the United States was 17,200. Almost all contemporary Tlingit live in the state of Alaska. Many of their original villages on the southeastern Alaska coast between Ketchikan and Yakutat are still populated. This is an area of rugged mountains with snow-capped peaks, offshore islands, and plentiful streams.

## 3 LANGUAGE

The language of the Tlingit Indians belongs to the Dene linguistic family. Dene is the largest language family in North

America and includes Yak, Tlingit, and Athabaskan. Tlingit is a highly endangered language, meaning that younger people are no longer learning Tlingit as a mother tongue, or first language. The best estimates for number of speakers of Tlingit in Canada and the United States is between 300 and 500 (in 2008).

In 2008, a proposal to link the Yeniseian languages of central Siberia and the Na-Dene languages of northwestern North America into one large language family was presented by Edward Vajda of Western Washington University.

The Yeniseian language family, which only has a few remaining living languages, did not show any genetic relationship with any of the other language families of the Old World. The most well-known language of this family is Ket, which has only about 200 speakers. Many different attempts to link Ket to the languages of the Old World have been proposed during the latter half of the twentieth century. Vajda's proposal has been supported by many linguists who specialize in the Na-Dene languages as well as the Siberian languages.

## 4 FOLKLORE

The most important character in Tlingit mythology is the trickster figure Raven, who is also considered the ancestor of the Tlingit. The power of animal spirits in general and communication between the spirits of animals and humans are also themes in Tlingit myths, as is reincarnation. Traditional beliefs encompassed an afterlife spent in one of two domains, corresponding roughly to the Judeo-Christian Heaven and Hell: *Kiwa-a* was the heaven for the virtuous, while those who had been morally deficient went to a place of torment called *Ketl-kiwa*, or Dog Heaven.

A common Tlingit folk belief was that if a girl going through puberty looked at the sky, she would cause a storm. A special hood with tassels was worn by girls of this age to shroud their eyes.

## 5 RELIGION

Like the other native peoples of the Northwest Coast, many Tlingit belong to the Russian Orthodox Church. The Tlingit forebears were converted the Orthodox Church by the Russian missionaries who followed the traders that arrived in the area in the 18th century.

The traditional religion of the Tlingit, like that of most hunting and gathering cultures, was based on animism, the belief that spirits—which the Tlingit called *jek*—inhabit people, animals, and objects in the natural world. They believed that the environment can be influenced in magical ways, either for good or ill, by human intervention, a belief that led to the development of a whole constellation of customs and taboos intended to ensure prosperity and prevent disaster. Many such customs and taboos were designed to placate and mollify the souls of the animals that were the chief prey of the Tlingit. The Tlingit are also thought to have believed in a creator, called *Kah-shu-goon-yah*, who controlled both the heavens and the earth, and whose name—which means “divisible-rich-man”—was always whispered rather than uttered aloud. Each Tlingit clan had a totem animal with which it identified, and erected totem poles as tributes to their totem animals. The Tlingit also paid homage to their ancestors and included them as elements of totem pole designs.

The most important human figure in Tlingit religious belief was the shaman, who served many vital roles within Tlingit society. The Tlingit shaman could be either male or female and functioned as priest, doctor, and counselor to his or her people.

## 6 MAJOR HOLIDAYS

Today many Tlingit observe the holidays of the Russian Orthodox calendar. Within traditional Tlingit society, by far the single most important occasion was a gathering called a *potlatch*, a communal ceremony that centered on feasting and gift-giving and that accompanied almost every major event in Tlingit life. A *potlatch* might be given by a retiring chief in honor of the occasion of his role being taken over by a new leader. *Potlatches* were held to celebrate birthdays and to legitimize adoptions and marriages. Sometimes a *potlatch* would be held for no other reason than to demonstrate in no uncertain terms the wealth and status of the host or to make a good impression on guests or visiting dignitaries. At other times, a Tlingit might host a *potlatch* as a means of saving face and restoring dignity following an embarrassing public failure or a personal disappointment.

The *potlatch* is a form of redistributive exchange. Redistributive exchange involves a complex level of social organization within a society. Modern taxation is an example of redistributive exchange. In redistributive exchange, a centralized authority accumulates wealth and then through culturally defined rules, distributes that wealth to members of the society. These traditional *potlatches* were later replaced by “destructive *potlatches*” that developed after European colonization of the region. In particular, it was the availability of trade goods that were incorporated into the system of Tlingit wealth that changed the nature and structure of the *potlatch*. The destructive *potlatch* was an ostentatious display of wealth and prestige, which called for as much showing off as possible, the entire point of the ritual being to waste or destroy publicly as much of the host’s wealth as possible. The goal was to demonstrate that the host was so wealthy that even such large-scale waste could not damage his economic situation. The *potlatch* simply served to establish and reinforce his standing within the community. The host of a *potlatch* might throw precious oil on the fire until the flames leap out to singe the surrounding guests. A wealthy chief might kill a valuable slave with a special club known as a “slave killer” and then fling the slave’s scalp to his rival. Many beautiful things were made by Tlingit craftspeople simply in order that a chief or other notable person might give them away or destroy them at a destructive *potlatch*.

## 7 RITES OF PASSAGE

Major life events of the Tlingit were traditionally marked by the *potlatch* (also called a *koolex*). Such events included the transfer of ancestral names to children; the point at which a daughter became eligible for marriage; a son’s coming-of-age (also marked by the erection of a memorial totem-pole and the construction of a new house); a marriage; and funeral rites.

## 8 INTERPERSONAL RELATIONS

Unlike that of most other American Indian groups, Tlingit society evolved as an aristocracy. At the top of the Tlingit social ladder were the chiefs, who were considered to be of royal blood. Directly beneath the chiefs in rank and privilege were

members of the nobility, and beneath them were the working-class (or common) people, the majority of the population. At the bottom of Tlingit society was a slave class made up of members of other tribes who had been captured in war. Tlingit society equated wealth with the right to rule; chieftainship, along with the rights, advantages, and prerogatives that accompany it, was passed on from one generation to the next of the same wealthy family. Tlingit chiefs and nobles controlled all the tribe’s wealth, determined the social rank of the members of the tribe, laid claim to the best fishing and hunting areas, and maintained the exclusive right to practice certain highly esteemed crafts.

Even today, class and social status are important in Tlingit villages.

## 9 LIVING CONDITIONS

The Tlingit have three advocacy organizations that promote their culture, rights, and welfare. The Alaska Native Brotherhood is concerned with cultural preservation; the Tlingit-Haida Association (Haida are a neighboring tribe) address housing and other social welfare issues; and the corporation Sealaska lobbies for economic and political power. Some Tlingit villages have their own city officials, police forces, and school boards.

The Tlingit have access to, and use, modern medical services. Traditionally, they had a system of folk medicine that included principles of hygiene and a knowledge of herbs. When necessary, they consulted with a special healer who had more advanced knowledge of medical practices.

*Reggie Peterson, Ben Didrickson, and John Nielsen, wearing Tlingit clan hats, watch as ceremonial objects are presented during the Kaagwaantaan 100th Anniversary Commemoration of "The Last Potlatch" in Sitka, Alaska. The two-day gathering brought together Tlingits from the Southeast Alaskan towns and villages as well as objects on loan from as far away as the University of Pennsylvania Art Museum. ## <sup>10</sup> FAMILY LIFE

Arranged marriages were formerly the norm, but this practice continues to diminish during the early 21st century. Divorce was rare in traditional Tlingit culture, as it was considered an affront to the clans of both the husband and wife. The Tlingit had an elaborate system of kinship by which their society was divided into two halves, or moieties, called Raven-Crow and Eagle-Wolf. Although the various rules and prohibitions attached to this system are still upheld theoretically, in practice they are often broken, and its terminology has fallen into disuse among the younger Tlingit. A child's lineage is linked to the maternal rather than the paternal side of the family, so maternal relatives traditionally played an important role in a child's upbringing. Traditionally, sons learned how to hunt, fish, and fight from their maternal uncles; daughters learned domestic skills from their maternal grandmother and aunts, who also prepared them for childbearing and taught them the history of their clan. The family elders still hold a high level of respect and influence among the Tlingit, including those who are college educated.

## <sup>11</sup> CLOTHING

In the summer, Tlingit men traditionally wore no clothes, or only a breechcloth made of animal skin. In the winter, they

wore shirts with trousers or leggings made from deer, caribou, or other animal skins. These were decorated with fringes at the sides and bottom and with rows of porcupine quills. Women wore cedar-bark skirts and capes in the summer and skirts or tunics of buckskin during the cooler seasons. Both men and women went barefoot much of the time, even in snow during the winter. On especially rough terrain, they wore moccasins, or snow-shoes with webbing or spikes. Women wore their hair loose or in braids, with ornaments of wood or shells and beads, and both men and women wore feathers in their hair. People who became shamans were forbidden to cut or even comb their hair. A fur cap was a common form of winter headgear. Both men and women painted their faces, either the entire face or only the upper or lower part. Black and red were the colors most often used. Often, rings were painted around the eyes. Tattooing was also common. Mourners wore old clothes and cut their hair short.

The Tlingit of today wear modern, Western-style clothing appropriate to their northern climate. Traditional clothing, masks, and headdresses are still worn on ceremonial occasions, and by dancers and other performing groups. Traditional Tlingit garments are known for their intricate beadwork, typically in white on a red background. Chilkat blankets, with their abstract animal designs, are valued by collectors of folk art.

## 12 FOOD

The traditional Tlingit diet consisted of fish, meat, and wild plants. Given their resource-rich environment, they rarely experienced times of deprivation. The rivers of their Alaskan homeland abound with salmon, halibut, herring, candlefish, and other fish, which the Tlingit caught with nets and traps, speared, shot with bow and arrow, or sometimes simply stunned with a club. Skimming the open sea in their enormous dugout canoes, they hunted whales, seals, sea lion, and walrus. On land, they hunted deer, mountain goats, bear, and small animals and availed themselves of the bounty of bird's eggs, berries, and edible plants that were theirs for the taking.

Although today's Tlingit eat typical modern-day American fare (including packaged convenience foods), salmon, their traditional staple, still plays a prominent role in their diet, along with other fish, including halibut, herring, and cod, as well as crabs and other shellfish. Salmon is eaten both fresh and dried, and salmon grilled over a smoking fire is especially popular. Oil from the euchalon, or candlefish, is used as a dip with many foods.

## 13 EDUCATION

Modern Tlingit young people attend public schools, where, much like school-aged children everywhere in the United States, they are taught basic subjects like math, history, spelling, reading, science, social studies, and the use of computers. But Tlingit teachers are also concerned that their students learn something about their culture and old traditions before this knowledge is lost completely. The Tlingit place a high value on education, and many work in business, industry, government, and the professions.

## 14 CULTURAL HERITAGE

An elaborate woodcarving tradition can be seen in Tlingit homes and on their boats, and Tlingit ceremonial costumes are decorated with individualized crest designs. Characteristics of Tlingit art include stylized conventional forms and the practice of filling in any blank spaces. The most favored colors are red, black, and green. Perhaps the most famous form of Tlingit art is the elaborately patterned Chilkat blanket.

Although the dancing societies that were important to other tribes of the Northwest Coast did not hold a prominent place among the Tlingit, they did have a dance tradition. Special dance aprons that were like miniature Chilkat blankets were worn by shamans, chiefs, and other tribe members. Other elements of the traditional dance costume included belts made from ropes of shredded cedar bark, headbands also made from cedar bark, special collars or bibs, and headdresses with eagle feathers. Shamans in particular were known for their wild dancing, characterized by spirited gesticulation. Today, dancing groups still perform for local ceremonies and for visitors in several Tlingit villages.

## 15 WORK

Traditionally, the Tlingit worked at hunting and gathering the food they needed to survive. However, this way of life declined after 1880, and the Tlingit began to participate in the Western cash economy. World War II and the discovery of large oil reserves in Alaska created many opportunities for employment in construction and other jobs for the Tlingit and other native

groups in Alaska. Instead of engaging in traditional fishing practices, many of today's Tlingit drive diesel-powered boats with hydraulic hoists and industrial-size nets. Tlingit women often work in fish canneries or produce crafts for sale. Many Tlingit work in urban areas, some of them settling permanently in large towns and cities and working in government, business, and the professions.

## 16 SPORTS

Tlingit men enjoy engaging in contests of strength such as wrestling.

## 17 ENTERTAINMENT AND RECREATION

Traditional Tlingit feasts and dances usually took place in the winter. The frequent potlatches held in Tlingit villages provided the major source of entertainment. Today the Tlingit enjoy modern types of recreation, such as watching television or renting movies.

## 18 FOLK ART, CRAFTS, AND HOBBIES

The Tlingit are expert carvers and use the wood, especially red cedar, that is so plentiful in their native habitat extensively in their arts and crafts, especially for storage boxes, dishes, and ceremonial masks. They make excellent baskets, some of which are so tightly woven as to be waterproof, and also weave fine blankets of dog hair and mountain goat wool. They are experts at finishing their wooden artifacts with inlays of bone, copper, and shells, which are found in abundance everywhere at the water's edge. All Tlingit crafts are highly ornamented with elaborate and beautiful designs. Since the arrival of tourists by steamship, the Tlingit have maintained an active crafts industry.

## 19 SOCIAL PROBLEMS

Many Tlingit Indians today live in poverty in substandard housing. They face the imminent destruction of their culture and way of life and experience difficulty in adapting themselves to the ways of the prevalent society. As a result, many suffer from alcoholism, drug abuse, and other forms of social distress.

## 20 GENDER ISSUES

The Tlingit recognize two gender categories: *káh* (man) and *shawát* (woman). Gender and rank were the governing categories for behavior in precontact Tlingit society. Rank was indicated by differing styles of dress and bodily adornment. High-ranking senior women wore large labrets in their lower lips.

While rank could change during the course of a person's lifetime, gender was fixed during life but not after death in rebirth. Tlingit traditional belief holds that following death an individual is reborn into his/her clan. It was possible for a man to be reborn as a baby girl or for a woman to be reborn as a baby boy.

Females were important to the perpetuation of the Tlingit matrilineal clans. As such, the puberty rituals for girls were elaborate and lengthy. At the onset of a girl's first menstruation, she would enter seclusion at the rear of the family longhouse or in a small, separate structure built near the family house. She would be isolated from contact with outsiders except for young

girls and older women. The length of time spent in seclusion was dependent upon the rank of the girl through her family. Girls of high ranking families could remain secluded for as long as a year. Following the period of seclusion, the girl would emerge from this state as an adult woman who was now ready for marriage.

# TRINIDADIAN AND TOBAGONIAN

**LOCATION:** Trinidad and Tobago

**POPULATION:** 1,047,366 (July 2008 est.)

**LANGUAGE:** English; English-derived Creole with African and other elements; Hindi and Urdu; Spanish

**RELIGION:** Roman Catholicism; Church of England and Church of Scotland; Methodism, Seventh-Day Adventism, Pentecostalism, Baptist Church, and other churches; Hinduism; Islam; Christian-African sects

## 1 INTRODUCTION

The nation of Trinidad and Tobago consists of two Caribbean islands that have been united politically since 1962. The people of both islands are generally referred to as Trinidadians. The islands were inhabited by the Arawaks, Caribs, and other Amerindian groups when sighted by Christopher Columbus in 1498. The explorer is said to have named Trinidad, where he landed, either for three hills visible in the distance or in honor of the Holy Trinity. The name Tobago is thought to derive from the Carib word for tobacco. It took nearly 100 years for the Spanish to establish their first permanent settlement on Trinidad, and they regularly had to defend the island from attacks by the Dutch, French, and British. Eventually sugar plantations were established and slaves brought in from West Africa to work on them. A British expedition captured Trinidad in 1797, and the island was ceded to the British in 1802. By 1814, Tobago, which had changed hands several times, was also a British possession.

During the 19th century, the ethnic diversity of Trinidad's population expanded as the British brought in indentured servants from India to work on the sugar plantations following the freeing of the island's West African slaves by the British in 1834. A variety of Europeans fleeing religious persecution or seeking employment also settled there, and Chinese laborers arrived toward the end of the century. In 1888 Tobago was joined with Trinidad as a colonial territory under the name Trinidad and Tobago.

Following World War I, the people of Trinidad and Tobago, like those of other colonial territories, sought greater political representation with a view toward eventual independence. Their nationalistic aspirations came to be embodied in one revered leader, Eric Williams, who in 1955 founded the People's National Movement (PNM), which gained legislative control of the territory the following year. After a brief membership in the Federation of the West Indies, Trinidad and Tobago became an independent member of the British Commonwealth in 1962 and a republic in 1976. Throughout these changes, Williams remained the head of the government until his death in 1981.

The worldwide oil crisis of the 1970s gave newfound value to Trinidad and Tobago's offshore oil reserves, which were first discovered in 1910, and the nation enjoyed a period of great prosperity and development that ended after the Middle Eastern nations began releasing their stockpiled oil at the end of the decade. World oil prices declined, and Trinidad and Tobago suffered an economic recession. In the 1990s, the nation

faced the challenge of stabilizing its economy and reducing its dependence on world oil prices. In 1995, unemployment rates were at their lowest level in 10 years, inflation was down, and economic growth was predicted. In 2003, Trinidad and Tobago started a second oil boom, which the government used to begin turning the country's main export back to sugar and agriculture. Economic growth reached 12.6% in 2006 and 5.5% in 2007 as prices for oil, natural gas, and petrochemicals remained high.

Trinidad and Tobago has one of the highest growth rates and per capita incomes in Latin America (in 2007 its GDP per capita rose to \$18,300). Part of this robust figure finds its explanation in the fact that huge flows of capital have been invested in energy and mining projects to liquefy natural gas and produce steel. Additional petrochemicals, aluminum, and plastics projects are in various stages of planning.

Even though the islands are the leading Caribbean producer of oil and gas, accounting for about 40% of GDP and 80% of exports respectively, the national administration has implemented a steady process of diversification resulting in many manufactured goods in the food and beverages industry being produced in the country. Moreover, the country is also a regional financial center, and tourism is a growing sector.

## 2 LOCATION AND HOMELAND

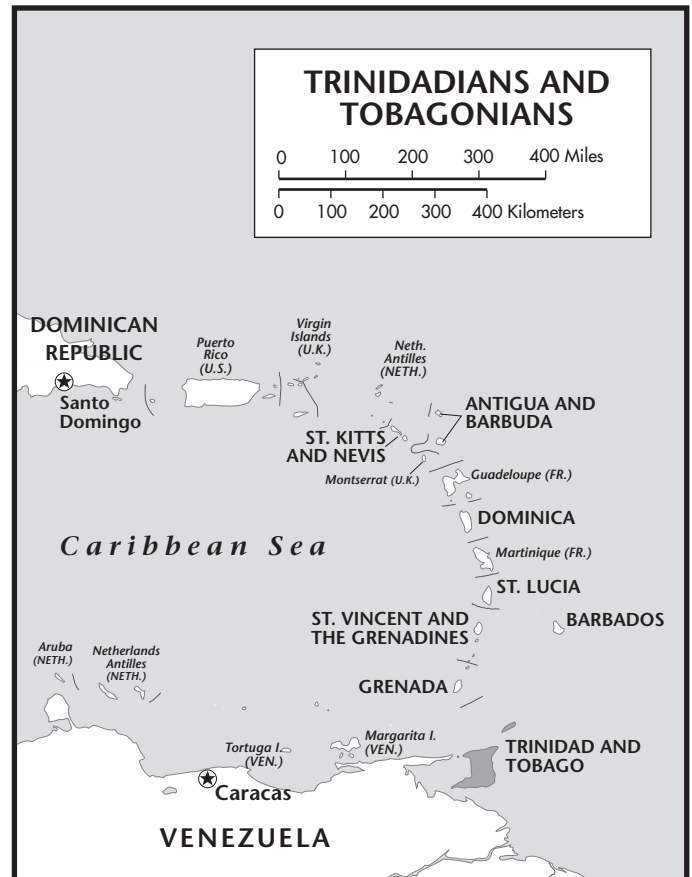

Trinidad and Tobago are the southernmost islands of the West Indies, with Trinidad located only 11 km (7 mi) from Venezuela on the South American continent. With an area of 4,828 sq km (1,864 sq mi), Trinidad is the largest island of the Lesser Antilles. Three mountain ranges stretch across the country from east to west: the Northern Range; the Montserrat Hills, which cut across the island's center; and the Southern Range, which runs along the southern coast. Tiny Tobago, located about 34 km (21 mi) northeast of Trinidad, is only about 42 km (26 mi) long and 11 km (7 mi) wide. It consists of lowlands dominated by a chain of volcanic hills that runs the length of the island.

The original inhabitants of Trinidad migrated from the Orinoco River delta region of northeastern South America. The ethnic structure of Trinidad is defined by blacks and Indo-Trinidadians, or East Indians. Black population, as in the majority of the Caribbean, descends from African slaves brought in to work on cotton and sugar plantations. Regarding the East Indian population, it is an ethnic group whose ancestors were primarily workers who freely immigrated from the Indian subcontinent to work as plantation workers after the abolition of slavery in the mid-19th century. Other migrants from Spain, Europe, Africa, Asia, and the Middle East have also contributed to the multicultural composition of the population.

While the different ethnic groups on Trinidad and Tobago have succeeded in living peacefully together, each has retained its cultural identity, lending richness and diversity to the nation's character and daily life. According to the 2000 census, an estimated 37.5% of Trinidad and Tobago's one million people were Black, 40% were of East Indian descent, 20% were of mixed descent, and smaller numbers were Chinese and European. The island of Tobago is predominantly Black.

## 3 LANGUAGE

The languages of Trinidad and Tobago reflect its diverse ethnic heritage. English is the nation's official language, while the

common language of the great majority of residents is an English-derived Creole that contains elements of African and other languages. Hindi and Urdu are spoken by segments of the Indian population, and Spanish, the language of the nation's first European conquerors, is spoken in some areas as well.

Creole is a type of hybrid language found throughout the Caribbean area, created by the blending of various European and African languages. The Trinidadian Creole blends English with the syntax and vocabulary of West African languages, including Twi and Yoruba. Plural pronouns differ from those of standard English: the plural form of "you" is *allyu*, and the French-English *ah wee* means "ours." French expressions, such as *il fait chaud* and *il y a*, are mirrored in the Trinidadian "it making hot" and "it have," which is used for "there is." French words also show up in the names for vegetation (*pomme* for apple) and mythological figures.

Crops grown by East Indian Trinidadians have come to be called by their Hindi names, such as *beigun* for eggplant. One of Trinidad and Tobago's most popular prepared foods, *roti*, also has a Hindi name, reflecting the culture from which it originates. Amerindian-derived words include the names of foods, including cassava, balata, and roocoo, as well as place names, including Tunapuna, Guayaguayare, and Carapichaima. The Creole that is spoken on Tobago, which differs slightly from that of Trinidad, has similarities to the Creole spoken in Jamaica, another country with a predominantly Black population.

#### 4 FOLKLORE

Trinidadian folklore, which is often reflected in Carnival themes and costumes, includes devils in disguise, a wolf man named Lagahoo, and a variety of other sinister figures. Folk tales are told about Papa Bois, the ruler of the forest, and his son, Callaloo, whose legendary battle with Mancrab supplied a memorable theme for well-known Carnival designer Peter Minshall. Other folklore figures include Diabliesse, a character comparable to Circe in Greek mythology that attracts men and then turns them into hogs, after which they fall down a precipice. The spirits of unbaptized children, called Douens, have their feet turned backwards and are said to raid people's gardens.

#### 5 RELIGION

Religion in Trinidad and Tobago is a clear radiography of its history as well as its multicultural reality inherited after years of colonization and migrations. Under the Spanish, Roman Catholicism was the official religion, and it was strengthened by French immigration during the French and Haitian revolutions. Anglicanism and Protestantism gained a foothold in various forms with the advent of the British. People from the Indian subcontinent brought with them their languages and their Hindu and Muslim religions. Both Sunni and Shi'ite Muslim groups are present.

According to the 2000 census, about 26% of Trinidad and Tobago's population is Roman Catholic. Besides Catholicism, Trinidadians of African descent belong to the Church of England (Anglican) and the Church of Scotland, as well as the Methodist, Seventh-day Adventist (4%), Pentecostal (6.8%), and other churches. The Baptist religion is especially popular in Tobago, representing 7.2% of the national population while Anglicanism accounts for 7.8%. Other Christians account for about 5.8% of the population. Trinidad's Indian community embraces the Hindu and Muslim religions: Hindus account for 22.5% of Trinidad and Tobago's population and Muslims for 5.8%. Some Africans are also turning to Islam, but in their own organizations (through the "Black Muslim" movement) rather than those of their East Indian neighbors.

There are also religious sects that combine Christianity with African religious beliefs and practices. The best known of these is Shango, based on a religion practiced by the Yoruba tribe in Africa, which embraces Shango, the god of thunder and lightning, and Christian saints. Through dance and drumming, its priests, called *mogbas*, summon spirits known as *orishas*.

#### 6 MAJOR HOLIDAYS

Because of the nation's religious diversity, Trinidad and Tobago has an abundance of public holidays. In addition to the major Christian holy days, recognition is accorded to the Hindu holidays of Divali (pronounced "Duwali") and Ramleema and the Muslim festival of Hosay, a religious rite that has grown into a four-day festival that includes a potpourri of Trinidadian cultural elements, such as *tassa* drumming, which is Hindu in origin. Other holidays, such as Emancipation Day (August 1) and Independence Day (August 31) commemorate important dates in the nation's history.

Trinidad and Tobago's most important festival, however, is its Carnival, recognized as one of the world's most extravagant and colorful pre-Lenten celebrations, equaling or topping New Orleans' Mardi Gras and Brazil's Carnival. The festivities are

held annually in the final two days preceding Lent. The entire nation participates in this 200-year-old tradition, which is thought to have started with the first influx of French settlers to the islands in 1783. The main activities take place in Port of Spain, although festivities are also held in San Fernando, Scarborough, and other locations. Preparations for Carnival begin months in advance, as the participating groups, called "bands," plan their "mas" (short for "masquerade") costumes. Each band chooses a historical, cultural, fantastic, or folkloric theme. Past themes include Bright Africa, Ye Saga of Merrie England, and Callaloo (a folk character as well as the name for a popular Trinidadian food). Hundreds of coordinated costumes are painstakingly debated, designed, and assembled to be paraded and judged.

Aside from the costumed bands, calypso and steel drum groups provide the other major focus of Carnival, and a series of musical competitions is held in the period leading up to the Carnival itself. On the night of Dimanche Gras, the Sunday before Ash Wednesday, the King and Queen of Carnival are chosen based on their costumes. The Carnival festivities officially begin at dawn on Monday morning, called Jour Ouvert, or Joovay, and include an "anything goes" parade, in which revelers wear a gamut of individually designed satirical and outrageous costumes. Next come massive parades by the organized bands, ranging from 500 to over 2,000 members, accompanied by flatbed trucks full of musicians and huge speakers. The climax of the celebration is the judging of the Carnival's best band, which takes place at the Queens Park Savannah, and awards are also given for the best calypso and steel drum groups.

#### 7 RITES OF PASSAGE

Major life transitions, such as birth, marriage, and death, are marked by religious ceremonies appropriate to each Trinidadian's faith community.

#### 8 INTERPERSONAL RELATIONS

The spirit of Trinidad and Tobago's famous Carnival carries over, in more modest forms, into everyday life on the islands: Trinidadians are known for their penchant for enjoying life, even in the face of adversity. When curfews were imposed during a period of civil unrest in 1970, they held "Curfew fêtes"; when the country's economy fell victim to plummeting oil prices in the 1980s, people threw "Recession fêtes." An important part of the Trinidadian calypso tradition is the refusal to take not only themselves but also others too seriously, and there is a special term, *picong*, for calypso's irreverent satirizing of people and institutions, both great and small.

Another aspect of this casual attitude can be seen in the practice called *liming*, which is the counterpart of "hanging out" in the United States. Trinidadian men have a long tradition of congregating at street corners, on front stoops, or near movie houses, chatting and whiling the time away as they take in the passing scene. Young limers are more apt to pick a single spot from which to survey the action, while for older men liming (or "taking a lime") may involve spending part of a day or evening at a series of places. Although it is frowned upon by some segments of society (signs proclaiming "No Limers" or "No Liming" signs can be seen in public places), this seemingly aimless activity can be an important way of maintaining social visibility while keeping up with what is going on in

the community. Long before it was heard in the United States, the phrase “Yo! Wha’ appenin” was a common working-class greeting in Port of Spain.

## 9 LIVING CONDITIONS

The traditional Trinidadian house, called an *ajoupa*, was built of thatch and mud. Today, most Trinidadians live in wooden houses with roofs of galvanized metal. There are generally three or four rooms; almost all houses have indoor plumbing, and most have electricity. Several houses often share one yard. There is a serious housing shortage in Trinidad and Tobago since the demand for housing in the urban areas is high, but construction has been hampered by population movement, high construction costs, shortage of land, and inadequate long-term financing. Even though the government has attempted to meet the needs of low-income families by erecting modern concrete dwellings throughout the country still many city dwellers live in slums and tenement buildings.

The state supplies social security consisting of noncontributory old-age pensions and workers’ compensation compulsorily paid by employers. Moreover, a national health insurance program has been established, as well as a spread network of public clinics and hospitals where treatments are free or at low-cost. Thanks to these governmental efforts to provide medical care, the incidence of traditional diseases, such as malaria, tuberculosis, typhoid, and syphilis, has been reduced. However, the average life expectancy in Trinidad and Tobago is estimated at just 67 years.

While roads are adequate in the nation’s more densely settled areas, rural roads often consist of single-lane dirt paths, and some areas of Tobago have virtually no usable roads. In the cities, minibuses called maxi-taxis are a popular form of public transportation. In the mid-1980s, there was about one car for every four people in Trinidad and Tobago.

## 10 FAMILY LIFE

Women wield considerable authority within African families in Trinidad and Tobago, and many are heads of households. Common-law marriages are widespread within the African community. Among the Indian population, large extended-family households are common, and even members of smaller households have a strong sense of obligation toward their relatives outside the nuclear family. Arranged marriages are common, and the man is always considered the head of the household. Marriage is regarded as a lifetime commitment; divorce, and even the remarriage of widows, is frowned upon.

## 11 CLOTHING

Most Trinidadians wear modern Western-style clothing. The Caribbean “shirt jac,” a belted jacket worn with a scarf and no shirt, is popular among men in Port of Spain. Traditional clothing, including men’s turbans and women’s saris, is worn by some members of the country’s Indian population. Every year special clubs spend months preparing extravagant “mas” (short for “masquerade”) costumes for Trinidad and Tobago’s famous Carnival celebration preceding Ash Wednesday. The brightly colored, eye-catching outfits, coordinated to be worn by hundreds or even thousands of people, may be made of either cotton or such dressy fabrics as velvet, satin, and lamé, as well as beads, feathers, sequins, shells, leaves, and straw.

They are often accompanied by a profusion of body paint and glitter.

## 12 FOOD

The rich and varied cuisine of Trinidad and Tobago combines African, East Indian, Amerindian, Chinese, Middle Eastern, and European influences. Breakfast is usually continental-style, consisting of coffee (or cocoa) and bread, while lunch and dinner (which is eaten at 8:00 or 9:00 PM) are both substantial meals, generally consisting of meat, rice, vegetables, and fruit. The most important meal of the week is Sunday dinner, and many women are at the market by dawn on Sunday morning to buy their provisions.

One of the country’s most popular foods is *roti*. Sold at restaurants, bars, and outdoor stands throughout the country, it consists of Indian flat bread with a variety of fillings, including curried beef, chicken, lamb, and beef, and cooked vegetables, to which curried potatoes and chickpeas are added. The type of bread most commonly used for *roti* is *dhalpourri*, which consists of two thin layers of dough with ground split peas in between. Another favorite dish is *sans coche*, a stew containing pork, salted beef, pig’s tails, onions, chives, and various other spices, served with dumplings. Other popular dishes include *callaloo*, a mixture of okra and puréed dasheen leaves (also called callaloo greens) with either crab or salted pork added for flavor, and *coocoo*, a cake similar to cornbread, made from corn flour and okra.

The national beverage of Trinidad and Tobago is rum, which is consumed liberally, especially during the country’s national holidays and numerous festivals. Nonalcoholic drinks include *sorrel*, made from the petals of the sorrel flower; *ginger beer*, which is similar to ginger ale; and *peanut punch*, which is something like a peanut-butter milkshake.

## 13 EDUCATION

Education is free at the primary and secondary levels and compulsory between the ages of six and 12. Formal education, which begins at age five, is highly valued in Trinidad and Tobago, and the country has a literacy rate of about 98.6%. In 1986 about 75% of high-school-age students were enrolled in school. The University of the West Indies has a campus on Trinidad offering courses in engineering, business administration, law, medicine, social science, natural science, education, agriculture, and humanities. Other facilities for higher education include government-supported technical colleges, five teachers’ colleges, and John F. Kennedy College, a liberal arts college near Port of Spain. In 2004 the University of Trinidad and Tobago was created. In its campuses, spread throughout the islands, the population can opt for technical and professional training in the sciences, technology, education, and other fields.

## 14 CULTURAL HERITAGE

Given the country’s small size and the fact that it had no written literary tradition until the 20th century, Trinidad and Tobago has produced an impressive roster of eminent writers, including V. S. Naipaul, who emigrated as a young man but brought his homeland to life for readers around the world in such books as *Miguel Street* and *A House for Mr. Biswas*. Other well-known Trinidad-born writers include Michael Anthony, Samuel Selvon, and Paul Keens-Douglas. Derek Wolcott, the

*British Prince Charles plays on a steel drum used in a steel band concert to greet his arrival in Port of Spain, Trinidad and Tobago. (Tim Graham/Getty Images)*

1992 Nobel laureate in literature, was born in St. Lucia but has spent much of his time in Trinidad, where he founded the Trinidad Theatre workshop in Port of Spain in 1959.

Peter Minshall, a celebrated designer for Carnival masquerade bands and other art forms in Trinidad and Tobago, has also achieved renown in the international art world. Several active theater groups in Trinidad and Tobago mount stage productions regularly; some of the most interesting take place at the Little Carib Theater.

## **15 WORK**

According to 2006 estimations, about 65.6% of the labor force in Trinidad and Tobago is employed in service-related jobs; 12.9% in mining and manufacturing; 4% in agriculture, forestry, and fishing; and the remainder in other occupations. Agriculture in Trinidad and Tobago is carried out on both large mechanized farms and on small tracts of land worked by peasant farmers without modern farm machinery. The oil industry, which brought great wealth to the country in the 1970s, employs only about 3% of the work force. The nation has had a high rate of unemployment—sometimes approaching 20%—for decades. Emigration has removed many skilled workers and professionals from the nation's labor force.

## **16 SPORTS**

Sports in Trinidad and Tobago reflect the historical influence of the British. Cricket is so popular that champion player Brian Lara is hailed as a national hero and has even received government recognition for his achievements. Another Trinidadian favorite is the quintessentially British sport of soccer (called football in Trinidad and Tobago, as it is in Britain). Most cities, towns, and even villages have their own soccer teams. Horse-racing is very popular as well.

Hasely Crawford won the first Olympic gold medal for Trinidad and Tobago in the men's 100 m race dash in the 1976 Summer Olympics. Nine different athletes from Trinidad and Tobago have won twelve medals at the Olympics, beginning with a silver medal in weightlifting, won by Rodney Wilkes in 1948 and most recently, a silver medal by Richard Thompson in the men's 100 m race in 2008.

## **17 ENTERTAINMENT AND RECREATION**

Music plays an important role in everyday life in Trinidad and Tobago, and much Trinidadian entertainment includes or revolves around it. The latest calypso songs, with their witty commentaries on public figures and controversial issues, can be heard on radios and sound systems throughout the country. SoCa—primarily recorded music that combines soul (“So-”) and calypso (“-Ca”) as well as other styles—has been universally popular since the 1980s. Trinidadians also enjoy watching

movies and television, and American soap operas are especially popular. Trinidadians of Indian descent enjoy seeing movies from India, a country noted for its film industry.

One Caribbean leisure-time tradition that is fast disappearing in Trinidad and Tobago is the rum shop, where working-class men have traditionally met after work to drink and socialize. The country's remaining rum shops are few in number but retain their spirit of informality and camaraderie.

### 18 FOLK ART, CRAFTS, AND HOBBIES

Two forms of native Trinidadian music, calypso and steel drum music, have become famous throughout the world. Calypso was originally developed by plantation workers as a covert way to poke fun at their owners and overseers and at rival work gangs. This subversive tradition continues today in calypso music that mocks politicians and other local figures and comments satirically on current affairs.

Steel drum music originated when members of traditional African percussion bands began using discarded oil drums. With their bottoms cut off and their tops hammered into a convex shape marked by a pattern of dents that produce different pitches, these objects turn into musical instruments capable of a surprising range of musical nuance and expression in the hands of expert players. The drums (called "pans") are tuned to four musical ranges: bass (also called "boom"), cello pan, guitar pan, and ping-pong.

In addition to steel drums, which are a prime example of Trinidadian crafts, the nation's artisans also produce handcrafted copper jewelry, woven straw goods, pottery, woodcarvings, boldly printed fabrics, and other handmade goods.

### 19 SOCIAL PROBLEMS

As Trinidad and Tobago becomes an increasingly urbanized society, its cities face housing shortages and difficulty in providing essential public services. Immigration of unskilled workers has contributed to the overcrowding of urban areas, while emigration of skilled workers has raised concern about a so-called "brain drain" depriving the country of needed talent. High unemployment has led to social unrest, particularly among the country's youth (43% of persons aged 15 to 19 were unemployed in 1994), and there has been an increase in serious crime, much of it drug- and gang-related.

### 20 GENDER ISSUES

Trinidad and Tobago has encountered several constraints in the promotion of gender equality. These include deeply entrenched patriarchal attitudes and practices, the impact of globalization, structural and institutional obstacles, and lack of adequate financial and human resources. Poverty is more widespread among female-headed households, and Trinidadian women occupy the lowest paying, traditionally female-dominated, fields of work.

To strengthen women's economic rights and remove discrimination against women, in 1998 the Maternity Protection Act guaranteed maternity leave with pay for a period of 13 weeks to all employed women. In order to help single mothers to have easier access to the world of work, some state and non-governmental agencies have established homework centers and afterschool clubs. In addition, Trinidad and Tobago's government has pursued different strategies to diminish gender inequality in the country. To stimulate the micro- and small-

enterprise sector among women, 43% of loan guarantees are awarded to women and 90% of training recipients are women.

Even though women have advanced in education, excelling beyond their male counterparts in some institutions, they continue to be grossly underrepresented in positions of power and decision-making. In order to begin to change this, Trinidad and Tobago supports the target of 30% of women in political decision-making posts. Participation of women in the media has also been largely at the lower strata of employment, for example, reporters, writers, and presenters. Management and decision-making is predominantly the domain of men. However, as of 2008, one woman had been appointed chief executive officer out of three major daily newspapers, and there was one female head of news.

## UKRAINIAN AMERICANS

For more information on Ukrainian history and culture, see **Vol. 4: Ukrainians**.

### OVERVIEW

Few Ukrainians immigrated to the United States before 1865. At that time, however, Ukraine was divided between Russia (eastern Ukraine), Austria (western Ukraine), and Hungary (Transcarpathia). The Austrians were fairly supportive of Ukrainian identity and gave the Ukrainians a certain amount of autonomy. The Russians and Hungarians, on the other hand, were very oppressive, the Hungarians especially so. The first wave of Ukrainian American immigrants came to the United States to escape the oppressions of their foreign rulers. Most were poor farmers from Transcarpathia.

Official immigration records list only 67,218 Ukrainians entering the United States between 1899 and 1906 and 187,058 between 1907 and 1914. This is certainly a low count, however, because Ukrainians were not listed as such until 1899 (most were called “Ruthenians” instead), and even after 1899, many were mistakenly recorded as Poles, Slovaks, Hungarians, or Russians. It is estimated that there were actually closer to 500,000 Ukrainian Americans living in the United States by 1914.

About 85% of these first-wave Ukrainian immigrants settled in Pennsylvania, New York, and New Jersey. As poor farmers, they lacked job skills relevant to the industrialized United States, and their lack of English-language skills presented another roadblock to success. Therefore, most worked as low-paid unskilled laborers. A large number took jobs in the coal mines of Pennsylvania because the wages were higher due to the dangerous nature of the work. Many were injured, became sick, or even died in the mines.

The second wave of Ukrainian immigration to the United States occurred between 1920 and 1939. The numbers were much lower during this second wave because of new immigration laws in the United States that placed quotas on the numbers of immigrants allowed in, and because the newly formed Soviet Union forbade emigration. Only about 40,000 Ukrainians entered the United States during this period. Most of these second-wave Ukrainian immigrants settled in cities of the Northeast, Mid-Atlantic, and Midwest, such as New York City, Philadelphia, Pittsburgh, Cleveland, Detroit, and Chicago.

In 1948, the United States passed the Displaced Persons Act, allowing people who had been displaced by the destruction of World War II (1939–45) to immigrate to the United States. Many Ukrainians took advantage of this opportunity, creating the third wave of Ukrainian American immigration. Some 85,000 Ukrainians entered the United States under this Act, most of them to escape Soviet rule. These third-wave immigrants were generally much better educated than previous Ukrainian immigrants to the United States. They also were more likely to have lived in cities in the Ukraine, so they had more experience with the industrialized urban world. Third-wave Ukrainian Americans adjusted much more quickly and easily to American life than did first- or second-wave immigrants.

The Ukrainian National Republic declared its independence from the Soviet Union in 1991 and became a recognized nation of the world a few months later. A fourth wave of Ukrainian immigration to the United States began at this time, as Ukrainians were once again free to leave and needed money to help build up their newly independent country. Most fourth-wave Ukrainian Americans come to the United States hoping to earn money to send back to Ukraine and eventually to return themselves.

As the Soviet Union collapsed, more and more former Soviet citizens emigrated to find a better, more prosperous life elsewhere. Of all former-Soviet emigrés in 1993, 38% were Ukrainians emigrating to the United States. Many came under the auspices of the Lautenberg Amendment, passed by U.S. Congress in 1989, which makes it much easier to claim refugee status.

According to the 2000 U.S. Census, there were 892,922 Ukrainian Americans in the United States (0.3% of the total U.S. population). The majority (72%) were American-born and have become very Americanized. The states with the highest percentages of Ukrainian Americans were Pennsylvania (1%); New Jersey (0.9%); New York (0.8%); Connecticut and Delaware (0.7%); and North Dakota (0.6%). The largest concentrations of Ukrainian Americans are in Philadelphia, New York City, northern New Jersey, Sacramento and Los Angeles, and northern Chicago. Smaller but vital Ukrainian American communities exist in Cleveland, Detroit, Pittsburgh, and Rochester (NY).

Because Ukrainians lacked a cohesive national identity for so much of their history, their cultural identity became centered on the Ukrainian Church. The Ukrainian Catholic Church follows the Byzantine Rite, rather than the Latin Rite followed by earlier Catholic immigrants to the United States. Therefore, Ukrainian Catholics set up their own churches when they came to the United States. By 1898, there were 51 Ukrainian Catholic Churches in America.

Around the turn of the century, many Ukrainian Americans began converting to Russian Orthodox because Ukrainian Catholic churches were not available in their communities, and Russian Orthodox was closer to their Byzantine Rite than were Roman Catholic churches. So Ukrainian Catholics in the United States petitioned the Pope for a Ukrainian bishop to serve in America. The Pope finally agreed, and in 1907, the first American Ukrainian Catholic bishop was appointed. In 1913, the Catholic Church set up a separate jurisdiction for American Ukrainian Catholics, and by 1914 there were 206 parishes in the United States. Today there are thousands of Ukrainian Catholics in America.

The Ukrainian Orthodox Church grew more slowly in the United States. Orthodox Ukrainian Americans began gathering together for worship in Chicago in the early 1900s. In 1924, an American Ukrainian Orthodox archbishop was appointed, and by 1932 there were 32 parishes in the United States. As of 2008 there were 105 Ukrainian Orthodox parishes in America.

In 1892, a group of Ukrainian Protestant farmers started a church in Yale, Virginia. Other Ukrainian Protestant farmers settled in North Dakota, and by 1914, North Dakota had more Ukrainian Protestant farming communities than any other state in the United States. Ukrainian American Protestants

belong to a variety of denominations, such as Presbyterian or Baptist.

Besides traditional religious holidays (Christmas, Easter, etc.) and common American holidays (Thanksgiving, Fourth of July, etc.), Ukrainian Americans also celebrate Ukrainian Independence Day on January 22, and Taras Shevchenko Day on March 14.

Ukrainian Americans maintain their ethnic identity through their various churches and through cultural and other ethnic organizations. There are dozens of these organizations in the United States today, including insurance clubs, credit unions, sports clubs, political associations, and women's leagues. These organizations were originally established to help Ukrainian immigrants adjust to life in the United States. They then became concerned with providing opportunities for second- and subsequent-generation Ukrainian Americans to learn about their Ukrainian heritage and maintain their Ukrainian identity. In recent years they have focused on providing for aging Ukrainian Americans and lobbying for government funding and services, etc., as well as supporting the development of democracy in the Ukraine.

There are two main umbrella organizations for Ukrainian American associations: the Ukrainian Congress Committee of America (UCCA), and the Ukrainian American Coordinating Council (UACC). The UCCA was founded in 1940 and grew to encompass over 50 associations. In 1983, however, radical supporters of the Liberation Front took over the organization, prompting 26 associations to leave. Those 26 groups joined with 30 others to form the UACC, defining themselves

as more moderate and "American-oriented," in contrast with the UCCA that had begun to focus heavily on independence efforts in Ukraine. The UCCA and UACC maintain an ongoing discussion regarding reuniting, but so far little progress has been made.

The first Ukrainian American all-day school (kindergarten–eighth grade) was established in Philadelphia by the Ukrainian Catholic Church in 1925. By 1947 there were 18 all-day Ukrainian American schools in the United States. Most Ukrainian parishes also had weekday afternoon or Saturday morning classes in Ukrainian language and culture. Some Ukrainian American high schools and junior colleges were established in the 1930s. Numerous Ukrainian American schools continue to thrive today.

Saturday "heritage schools" are run by the Ukrainian Orthodox Church and the Ukrainian Educational Council of the Ukrainian Congress Committee of America. These schools offer an 11-year study program in Ukrainian language, culture, history, literature, etc. The Ukrainian Research Institute founded in 1968 at Harvard University offers doctoral programs in Ukrainian studies, publishes Ukrainian-studies books, and has a large Ukrainian library.

Ukrainian Americans are proud of their Ukrainian cultural heritage and encourage their children to learn Ukrainian folk dances and folk songs. Bandura (the national musical instrument of Ukraine) schools exist throughout the United States. The Ukrainian National Chorus toured the United States in 1922–23, with great success and introduced the now-classic Christmas carol "Carol of the Bells" to American audiences.

Shortly after their highly successful tour, the entire Chorus emigrated to the United States. Other Ukrainian American musicians include opera stars Paul Plishka and Andrij Dobriansky, both with the Metropolitan Opera Company.

The best-known Ukrainian American actors are Jack Palance (born Walter Jack Palahniuk) and Leonard Nimoy. Anna Sten, John Hodiak, Nick Adams (Nicholas Adamchok), Mike Mazurki, and George Dzundza are among other Ukrainian Americans who have found success in the acting world. Sculptor Alexander Archipenko (1887–1964) and painter Jacques Hnizdovsky are two renowned Ukrainian American visual artists. Ukrainian American literature is still, for the most part, written in Ukrainian by first-generation immigrants and known only to other Ukrainian Americans.

Although early Ukrainian immigrants to the United States were generally uneducated farmers who worked as low-paid unskilled laborers in America, subsequent generations (and more recent immigrants) have increased their levels of education and are now well represented in all of the major professions. Many have risen to the top of their respective fields, such as Igor Sikorsky, founder of Sikorsky Aviation Corporation. Ukrainian Americans are also well-represented in government from the local to the federal level. Mary Beck was the first Ukrainian American woman elected to public office and served longer than any other Ukrainian American before or since. Beck served on the Detroit City Council from 1950 to 1970. In the world of science, Ukrainian American geneticist Theodosius Dobzhansky was instrumental in discovering the great variety of genes, especially recessive genes, in human society.

Two Ukrainian American soccer teams, the Ukrainian Nationals of Philadelphia and the New York Ukrainians, played in the national championships, both in the 1960s. Many individual Ukrainian Americans have also been successful athletes, including hockey players Bill Moseienko, Terry Sawchuck, Dave Balon, and Walter Tkaczuk; and football players Bronko Nagurski, George Andrie, Bill Malinchak, George Tatasovic, John Machuzak, and Don Chuy. Probably the best-known Ukrainian American athletes, however, are football player and coach Mike Ditka, and figure skater Sasha Cohen.

Summer camps, called Taboruvannia, are very popular with Ukrainian American children. Thousands attend these Ukrainian American camps each summer to learn about their Ukrainian heritage and/or simply enjoy the company of other Ukrainian American youngsters. Taboruvannia come in many varieties, including educational/recreational, sports, music, and other types of camps.

Ukrainian American women continue to do traditional embroidery, but perhaps the most loved Ukrainian folk art in America is the painting of Ukrainian Easter eggs, known as *pysanka* (*pysanky*). Classes in traditional egg-painting techniques are offered across the United States, and many craft stores now carry the necessary materials.

Problems in the Ukrainian American community stem almost entirely from divisions within the community itself, particularly between fourth-wave immigrants and those who immigrated to America in earlier waves. Fourth-wave Ukrainian Americans tend to see their time in the United States as temporary, so they are not interested in becoming involved in the Ukrainian American community to any great extent. Established Ukrainian Americans from earlier waves of immi-

gration resent the new immigrants for their lack of interest. The fourth-wave immigrants also tend to head for California and the Pacific Northwest, where jobs are more plentiful, rather than settling in established Ukrainian American communities. Also, the prevalence of the Russian language during the Soviet era means that many of the fourth-wave immigrants speak Russian rather than Ukrainian, upsetting the earlier immigrants who wonder why they would choose to speak the language of their oppressor.

Religious conflict has also increased because many of the newest Ukrainian immigrants are Protestant or Jewish, rather than Catholic or Orthodox like the majority of earlier immigrants. As the church has always been the center of Ukrainian cultural identity in America, these religious differences make it difficult for new immigrants to fit in with the earlier Ukrainian American cultural establishment.

Perhaps the most heated argument today among Ukrainian Americans is the legitimacy of the newest wave of immigrants. Some Ukrainian Americans feel that no one should leave the new Ukrainian National Republic. Rather, those who are there should stay and support it in its fledgling growth. They also question the “refugee” status of many of the new immigrants because Ukraine is now an independent state, no longer subject to any oppressive foreign rule. However, few (if any) Ukrainian Americans have returned to Ukraine to give their support to the new republic, so the new immigrants question established Ukrainian Americans’ right to criticize them for leaving.

The new independence of Ukraine after the fall of the Soviet Union created economic problems that resulted in a high unemployment rate, particularly among Ukrainian women. Approximately 75% of the unemployed in Ukraine are women. These desperate economic straits have prompted many women to leave Ukraine for better opportunities. Unfortunately, this makes the women vulnerable to traffickers who use skillfully constructed deceptions to trap them into slavery. An estimated 50,000 women from Southeast Asia, Latin America, and former Soviet bloc countries, including Ukraine, enter the United States illegally each year. About half of them end up working in sweatshops, while the other half are forced into prostitution. From 1988 to 1998, some 400,000 women under the age of 30 left Ukraine to work in the sex industry in Europe, Asia, the Middle East, and North America. There is also a burgeoning market for Ukrainian “brides.” Young women imagine that a wealthy American man will marry them and solve all their problems. Some of these “marriage” agencies are actually fronts for sex traffickers. Even the agencies that are legitimate promote false expectations among the desperate Ukrainian women who often find that circumstances are not what they had hoped once they arrive in the United States.

Ukrainian American organizations such as the Ukrainian National Women’s League of America are part of the expanding global effort to push for recognition of the sexual exploitation of women. The subject has been put on the national agenda in the United States, largely through the efforts of Ukrainian American organizations. Concerns over this criminal activity transcend the divisions between Ukrainian Americans and promote cooperation between Ukrainian and American groups.

# URUGUAYANS

**LOCATION:** Uruguay

**POPULATION:** 3,447,778

**LANGUAGE:** Spanish

**RELIGION:** Roman Catholicism; some Judaism; Afro-Brazilian churches; evangelical Protestantism

## <sup>1</sup> INTRODUCTION

Before the arrival of the Europeans, the territory that is now Uruguay was inhabited by Amerindian tribes. The Charrúas and the Guaraní, were the main tribes when the Europeans arrived. The Charrúas were a semi-nomadic ethnic group who occupied territory near the shoreline, where they fished and gathered clams and fruits. In winter, the Charrúas moved inland, where they could hunt for deer and rheas (*ñandú*), a flightless bird. Guaraní people were concentrated in the subtropical forests of eastern Paraguay.

In 1515, the first European expedition explored the region. The Spanish navigator Juan Díaz de Solís who, along with several of his men, was killed by Charrúa warriors, led the mission. Because of the lack of gold and silver, the European conquerors lost interest in the region.

Eventually, during the 16th and 17th centuries, Uruguay became a natural zone of contention between the Spanish and Portuguese empires. As the two countries expanded their colonial rule in Latin America, Uruguay became the focus of the conflict, and the Amerindians were driven out. The Portuguese, based in Brazil, migrated south into Uruguay in 1680 and founded a new colony called Colonia de Sacramento. In response to this challenge, Spain established a fort in nearby Montevideo, the present-day capital of Uruguay. A struggle for control over Uruguay ensued. Uruguay fell under Portuguese control and later became a province of Brazil. Uruguay was only granted full independence in 1828, through an agreement between Argentina and Brazil.

Modern Uruguay has an export-oriented agricultural sector, a highly educated workforce, and robust social spending. In 2007 the economy achieved a growth rate of 7% and the per capita gross domestic product (GDP) was \$11,600.

## <sup>2</sup> LOCATION AND HOMELAND

Uruguay is located between Brazil and Argentina on the Atlantic coast of South America. Its terrain is characterized by gently rolling hills and natural grasslands. In contrast to the Andean or Amazonian countries, a high proportion of Uruguay's territory is suitable for agriculture. Most of Uruguay's grasslands are used for grazing sheep and cattle. In addition, Uruguay produces a wide range of fruits, cereals, and other agricultural products.

Unlike many other Latin American countries, Uruguay does not have a native population. Although there were Amerindian groups that lived in Uruguayan territory at the time of the colonial expansion, they were either displaced or annihilated. As a result, since 1830 the Uruguayans have been ethnically European, descending mainly from Italians or Spaniards. There is also a small population of Afro-Uruguayans (2.5% of the population).

### 3 LANGUAGE

The official language of Uruguay is Spanish. No Amerindian languages are spoken in modern Uruguay. In regions close to the Brazilian border, however, a Spanish-Portuguese dialect called *Portuñol* (or *Portuniol*) is spoken.

### 4 FOLKLORE

The name given to Uruguay's capital, Montevideo, originates in Ferdinand Magellan's visit to the region in 1520. According to legend, a sailor on board saw land and shouted, "*Monte vide eu*"—"I see a hill." The origin of the city's name is also from a phrase in Spanish found on early maps: "*Monte VI de E.O.*," or "The sixth hill from east to west."

Uruguayan culture shares some features with Argentina, mainly because of their strong European influence. The most noticeable characteristic of this common background is the preponderance of the *gaucho*, a kind of cowboy (usually a *mestizo*—mixed European and Amerindian descent) in the art and folklore. Uruguay's theatre and music are broadly based in terms of support and participation.

### 5 RELIGION

Most Uruguayans are descendants of Italians and Spaniards and they have inherited the Roman Catholic tradition (66%). Although the Church has historically played an important role in Uruguayan society and culture, it has no official role in politics. A variety of minority religions are practiced in Uruguay in addition to Catholicism. A small Protestant population (2%) and some Jewish residents (1%), for example, exist in Montevi-

deo. Many Afro-Uruguayans who live in the Barrio Sur (South Neighborhood) of Montevideo practice the Afro-Brazilian religion of *Condomble*. In addition, more than 31% of the population does not profess any type of religion.

There is a sharp separation between church and state. This has actually led to the renaming of many religious holidays. Many have been given secular (nonreligious) names. Christmas, for instance, is widely referred to as Family Day. Similarly, Easter Week is also known as Criollo Week.

### 6 MAJOR HOLIDAYS

Perhaps the most celebrated holiday in Uruguay is Carnival (or Carnaval), a weeklong celebration that marks the commencement of Lent. During Carnival, the country virtually comes to a halt, as stores close and people celebrate. Drinking, feasting, and dancing accompany a series of street parades with music and elaborate costumes. Competitions are held for the best musical performance. Water throwing is a key ritual during Carnival. Water balloons and buckets of water are used to drench friends and strangers alike.

Many of Uruguay's festivals celebrate its cattle-raising heritage. During Easter Week, a Cowboy Festival (*Fiesta Gaucha*) is held in Montevideo. Rodeo competitions are the main event. Contestants compete in a variety of events, such as knife throwing, riding, and lassoing. Grilled beef and folk music accompany these celebrations.

### 7 RITES OF PASSAGE

Major life transitions, such as birth, puberty, and death, are marked by rituals and celebrations appropriate to each Uruguayan's particular religious tradition.

### 8 INTERPERSONAL RELATIONS

The most substantial meal of the day in Uruguay is not dinner, but lunch. Many Uruguayan employees are given a two-hour lunch break that enables them to return home for a large, home-cooked meal with their families. Evening meals are traditionally much lighter. When invited to a Uruguayan home, one may be offered *mate*, an herbal tea. Traditionally, *mate* is drunk through a silver straw, called a *bombilla*, from a carved gourd. The gourd and straw are passed around and shared by all present. In most urban homes, however, *mate* is now served in teacups.

In Uruguay, the Italian influence in both language and culture can be felt. For example, to say goodbye, most Uruguayans have adopted the Italian *ciao* or *addio* in place of the Spanish *adios*. In addition, it is proper to kiss someone both when saying hello and upon departing.

### 9 LIVING CONDITIONS

Uruguay does not have the extreme inequality of incomes and standards of living found in other Latin American countries. However, there is a marked difference in patterns of living in urban and rural areas. Nearly half the population lives in the capital, Montevideo. Montevideo is a modern city, with high-rise apartments and office buildings. The city has many restaurants, cinemas, and shopping centers. However, many of the poorer residents live in small homes or shacks on the outskirts of the city.

A substantial proportion of the population continues to live in rural areas. For many, cattle- and sheep-ranching is their way of life. Large-scale farms, called *estancias*, employ many people. Uruguayan cowboys, called *gauchos*, still wear traditional dress as they brand cattle, fix fencing, and round up the herd. Most *gauchos* live in simple communal housing on the farm where they work. Other households live in adobe homes.

The life expectancy in Uruguay (76 years) is almost equal to that of developed countries. Uruguay's relative prosperity gives most residents access to health care (94%) and clean water (98%). Adequate living conditions mean that the rate of infectious disease is low in comparison to other Latin American countries. Uruguay also has a varied agricultural sector, and locally grown beef and vegetables are affordable for most households.

### 10 FAMILY LIFE

The rights of women in Uruguay were historically more advanced than in other Latin American countries. As early as 1907, divorce due to spousal abuse became legally recognized. In addition, women now have the right to a divorce without giving a reason. This privilege is not offered to men. This growing legal protection of women and the secularization of society (i.e., the separation of church and state) enable women to escape traditional female stereotypes and work outside the home. Girls in Uruguay are also more likely to complete their schooling than are their counterparts in other Latin American countries.

Marriage in Uruguay can now be formalized through a civil, or nonreligious, ceremony. There is no requirement, as in other Latin American countries, that weddings be performed in a church. Civil weddings also mean that the bride no longer has to vow to obey her husband. Instead, both the man and woman pledge to treat their partner with respect.

Families in Uruguay are relatively small in comparison with other countries in the region. Most urban families have access to birth control and choose to limit the size of their families. In rural areas, however, access to birth control is more restricted, and women there typically have more children.

### 11 CLOTHING

The lifestyle of Uruguay's cowboys, or *gauchos*, has not changed dramatically since the 1800s. *Gauchos* proudly use the distinctive clothing worn by their ancestors. Because they spend most waking hours on horseback, *gauchos* have adopted the use of very baggy pants called *bombachas*. Wide-brimmed black hats offer protection from the midday sun, while woolen ponchos are used for warmth in the evenings. Leather boots and intricately tooled leather saddles complete the rugged picture.

In contrast, urban Uruguayans wear modern European dress. Today's youths favor jeans and tee shirts, while suits and ties are appropriate attire for businessmen.

### 12 FOOD

Not surprisingly for a cattle-ranching country, beef features predominantly in Uruguayan cuisine. Uruguayans are reputed to be among the largest consumers of beef per capita in the world. *Churrasco*, or grilled steak, can be said to be the national dish. Sometimes the meat is grilled with the skin on, in order to prevent it from drying out. Also very popular are *chivitos*:

hot steak sandwiches, topped with bacon, eggs, cheese, lettuce, and tomatoes.

The Uruguayans have also adapted traditional Spanish dishes. A Uruguayan version of *puchero*, Spanish meat stew, is sometimes cooked with blood sausage. Although this dish is considered a delicacy, it has been nicknamed *olla podrida*, or "rotten pot." Uruguay's cuisine also has a significant Italian influence. Pasta and lasagna are Uruguayan favorites.

#### Puchero (Uruguayan meat stew)

4 pounds osso buco (veal shanks), cut into six pieces  
1 cup chopped celery  
6 carrots, peeled  
6 white potatoes, peeled  
1 onion  
6 zucchini  
1 pound green beans  
1 bunch parsley  
6 ears of sweet corn, peeled  
4 teaspoons salt  
1 squash (medium size), cut into 6 pieces, unpeeled

Fill a large saucepan with water and bring it to a boil. Add all ingredients to boiling water, putting the meat in first, then carrots, onion, green beans, corn, squash, and celery. Then add potatoes and zucchini. Add parsley and salt to season the stew. Cover and simmer for 30 minutes, or until potatoes are tender. Drain off broth and serve meat and vegetables. To enhance the flavor, the stew may be served with mustard, mayonnaise, tomato, onion, or pepper sauce. If desired, add rice or noodles to remaining broth and serve in soup bowls.

(Recipe courtesy of the Embassy of Uruguay.)

### 13 EDUCATION

Uruguayans are among the most-educated people in Latin America, with a literacy rate topping 98%. The impressive educational system in Uruguay originated in the government of José Batlle y Ordoñez. Early in the 1900s, this president introduced sweeping educational reforms and invested in developing Uruguay's educational structures. Children are obligated by law to attend school until the age of 12.

The University of the Republic (1849) has numerous faculties, including a distinguished medical school that draws students from throughout the region. The Catholic University of Uruguay (1985) is also a well-reputed and prominent private institution.

### 14 CULTURAL HERITAGE

Uruguay has a rich literary tradition, combining both European and indigenous cultural influences. Perhaps the most celebrated poet was Juan Zorrilla de San Martín. Referred to as the "poet of the Fatherland," he wrote a poem in 1879 about the native Amerindians. The poem "Tabare" has been considered to be among the most powerful in Uruguay's literary history. A more-recent writer of international acclaim is Juan Carlos Onetti, a contemporary novelist.

Uruguay's musical tradition has been shaped by its European history—as in Argentina, the tango is a popular form of dance. One exception to the European influence is *candombe*,

Gauchos show their skills in a game involving a cow at Parada Arteaga, Uruguay. (Pablo Porciuncula/AFP/Getty Images)

an Afro-Brazilian musical and dance form that is also popular in Uruguay.

### 15 WORK

Uruguay's population works in many different sectors of the economy. Many urban dwellers find work in the industrial sector, including textile plants, breweries, and canning factories. Many industries are closely tied to the processing of agricultural products. For example, the leather industry generates employment. Small firms produce shoes, purses, bags, and other leather items. In addition, wool is an important export.

In addition to industry and manufacturing, Montevideo offers jobs as waiters, taxi drivers, and shopkeepers. Unemployment, however, is a major problem. Many Uruguayans are unable to find paid employment and are forced to develop their own small-scale enterprises. Many of these people turn to street vending, tailoring, or other activities to make a living.

Agriculture is the primary driving force behind the Uruguayan economy. Sheep- and cattle-ranching are the most important agricultural activities. Growing crops such as fruits, wheat, oats, sugar, and corn is less important than raising livestock.

### 16 SPORTS

Uruguayans love soccer (*fútbol*) and enjoy the game both as spectators and participants. They have won the World Cup twice, first in 1930 and later in 1950. In the second World Cup

game, Uruguay beat the strong favorite, Brazil. The country responded with such jubilation that the government declared a national holiday! Soccer is also a favorite of youths. Informal neighborhood matches can be seen not only in soccer fields but also on quiet streets throughout the city.

Uruguayans are equally passionate about horses. Rodeos where *gauchos* (cowboys) demonstrate their equestrian skills are always widely attended. Horseracing is also very popular. Uruguay also shares with Argentina a passion for polo. Regular matches between the two countries are held on the Punte del Este.

### 17 ENTERTAINMENT AND RECREATION

Many Uruguayan families flock to the beaches on weekends for rest and recreation. Many beautiful beaches provide an opportunity for swimming and sunbathing. Uruguayans are also fond of camping. The coastal forests provide numerous sites for camping and fishing. Weekends are often a time in the cities for visiting friends or having large family lunches. Montevideo also has a varied nightlife. Restaurants, cinemas, and musical shows are widely attended on weekends.

### 18 FOLK ART, CRAFTS, AND HOBBIES

Most of Uruguay's crafts involve processing the raw materials produced by the large cattle- and sheep-ranching sector. Uruguayans excel in producing handcrafted leather goods. Belts,

hats, boots, and purses of high quality are carefully crafted from homegrown leather.

Many craft items are produced by a well-known handicraft cooperative in Montevideo called *Manos de Uruguay* (Hands of Uruguay). This cooperative includes skilled artisans from all over Uruguay. They spin the wool, dye it, and knit sweaters. *Manos de Uruguay* produces over 100,000 sweaters each year. In addition to handmade woolen items, they also make ceramic crafts.

## 19 SOCIAL PROBLEMS

Uruguay's highly urbanized society faces the same problems common to other industrialized countries. Unemployment typically ranges from 10% to 15%, and there is a serious lack of housing. There is, however, no major drug abuse problem.

## 20 GENDER ISSUES

Gender equality in Uruguay presents a mixed picture. Girls and boys participate in the education system at approximately the same rates through high school. Women enter universities at a higher rate than men. In fact, some 60% of students at public universities are women. Women often pursued professional careers, and approximately 60 percent of public university students were women. Literacy rates for women are the same as for men, and Uruguayan women have the highest labor force participation rates in Latin America. However, fewer women than men receive unemployment insurance.

A serious societal problem affecting Uruguayan women is domestic violence: 46% of women reported that they were victims of domestic violence during the early years of the 21st century. An estimated one woman dies every nine days as a result of domestic violence in the country.

Gender differences persist in employment with respect to hiring women and promoting them to higher positions. As for the wage differential, the gap has been closing in recent years: women's salaries are now 84.7% of men's. At the same time, differences remain with respect to decision-making in the political, economic, and social spheres. The labor market remains segmented, both horizontally and vertically: women are still found mainly in traditional sectors and their increased levels of education and training have not translated into positions of professional responsibility. Among employees, women are more numerous than men in so-called "non-standard" or casual employment, and they are heavily represented in seasonal and part-time jobs.

As of 2008 Uruguay had 4 women senators (out of 30) and 11 female deputies (of a total of 99 representatives), making up 11% of the seats in the General Assembly. In addition, 3 of the 13 cabinet ministers are women. Given the weakness of the executive branch's gender mechanisms, the national legislature has assumed the role of coordinating efforts in the various areas of government and of civil society. This role is pursued through the Special Commission on Gender and Equity of the House of Representatives, and through the "Women's Bloc", an ad hoc mechanism created by female senators and deputies committed to gender issues, drawn from all political parties.

# VAUPÉS

**LOCATION:** Colombia (along the Vaupés River)

**LANGUAGE:** A variety of Amerindian or mixed languages and dialects, including Tukano and Lingua Geral; Spanish; Portuguese

**RELIGION:** Indigenous beliefs

## 1 INTRODUCTION

The Vaupés Indians of Colombia comprise several major tribes, including the Caribs, the Cubeos, the Uananas, the Karapanas, the Tucanos, and the Macús. Another tribe, the Arawaks, live further north along the Isana river. All of these groups share certain important features that relate directly to the lifestyle in a region consisting of tropical jungle and areas of savanna, along a major river, the Vaupés, and its tributaries. For example, it is now clear that conservation methods practiced in these areas of northwest Amazonia have been successful for thousands of years. It is also evident to historians and anthropologists that the trade along the rivers of the Vaupés among the varying tribal groups has been going on for a very long time. It is assumed that the origins of the Amerindians of this region lie in Central Asia. All of these groups share certain religious aspects, including shamanic practices, which are also found in Asia.

When Colombia was first colonized by the Spanish, the Vaupés region, because of its large expanses of dense jungle, remained remote and often inaccessible. Nevertheless, missionaries and traders made contact with the various tribes over the centuries, and rubber-tapping in particular brought more commerce to the region. After gaining independence from Spain, between 1821 and 1830, Vaupés regions became part of the first version of the Boyaca Department. Afterwards, between 1831 and 1857, the territory became part of the National Territory of Caquetá to later be part of the Sovereign State of Cauca. With the expansion of the rubber industry and the industrial revolution, exploration for rubber reached the area bringing colonizers that altered and, in some cases, extinguished the majority of the indigenous population. In 1910, the town of Clamar (meaning squid in English) functioned as the capital, and the rest of the territory was sectioned into commissaries. Later, and for security reasons, the capital was moved to the town of Mitú near the frontier with Brazil. The Department of Vaupé was constitutionally created in 1991.

Eventually, during the 20th century, the regional capital of the Vaupés (called Mitú) became a point of contact between the tribes of the Vaupés and regional government officials and traders. Although many Amerindians of the Vaupés, particularly the Cubeos, have resisted the efforts of White missionaries to Christianize them and to persuade them to adopt Western norms, some groups of Amerindians from many of these tribes have begun a process of cultural adaptation that is painful and, initially, at least, often plunges them into a type of dependence and poverty that is quite different from the rather magnificent self-sufficiency of which some of the Vaupés Indians are still capable.

In 1998 this remote locality achieved national and international popularity. In November of that year, a group of the FARC (Revolutionary Armed Forces of Colombia) attempted

to take control over the capital town of Mitú. The Colombian Air Force sent aerial and ground forces to support the national troops in its clash against the more than 1,000 guerrilla combatants. The fight left the town and the region severely damaged and more than 50 policemen and 10 civilians lost their lives.

## 2 LOCATION AND HOMELAND

The Vaupés region with its major rivers, such as the Vaupés and its tributaries, the Cuduyarí and the Querarí, forms part of the extensive Amazon basin that continues into Brazil. The Amerindian tribes of the Vaupés relate themselves geographically more to the Vaupés River and its tributaries, rather than to the boundaries of a particular municipality, department, or country. The Vaupés River itself flows into Brazil, and trade along this river system, which eventually flows into the Amazon River, has existed between the various tribes for centuries.

The Cubeos live between the Vaupés River and its tributary the Cuduyarí, whereas another major tribe, the Tukanos, live in the area between the Tiquié and the Poporí, which are both tributaries of the Vaupés. The Macús are scattered in several areas and also live among some of the other tribes, but some of their settlements lie in the area between the Apoporis and the Poco River, while other Macús live to the east of the Desanas, near the Negro River. The Karapanas and the Uananas live to the north of the Tucanos. In all cases, the Amerindians of the Vaupés divide the rivers and their banks into specific locations, some of which are, in effect, farming, hunting, or fishing areas belonging to particular clans, families, or individuals, whereas certain large rocks and other areas are considered sacred grounds.

## 3 LANGUAGE

The Vaupés Indians speak a variety of languages and dialects. It is not unusual for a single large home or *maloca*, which houses several nuclear families that together form the extended family unit, to include four or five languages. This is because there are strict rules governing suitable partners for marriage. In a maloca where several brothers live, there may be a number of wives, therefore, who speak other languages. One of the major languages of the Vaupés that, in effect, is understood by many is the Tukano language.

Those who have had contact with missionaries, traders, and government officials also speak some Spanish and Portuguese. There is also a dialect or language that has developed over time, containing a mixture of Spanish, Portuguese, and Amerindian, known as Lingua Geral, which means, in Portuguese, a "general language" that enables different types of people in this region and in the bordering areas between Colombia and Brazil to communicate with each other.

The Vaupés Indians often have a Spanish name, but among many of them, particularly the Cubeos, the name must be given to them by a White person. This confers an immense advantage, in their view, because it may be used without restrictions. Their Amerindian names are never used casually but are instead closely guarded. When they refer to each other publicly, among themselves, they will use a name relating to their position as a relative. For example, among the Cubeos, a woman may refer to her grandchild or to a young person as *Teumi*, which means "little one" and is used affectionately.

#### 4 FOLKLORE

One of the most important characters of Vaupés folklore, shared by several of the tribes, is Vaí Mahse, the Master of the Animals. His name is pronounced *Vaeeh Mahsuh*. He can appear in a variety of forms, including that of a red dwarf, and he watches over the balance of nature so that humans, as hunters, do not exceed themselves when hunting animals. He also is said to wander over the Milky Way, which is a pathway for him, where he watches over the activities of animals and humans. He is a guardian of all the animals.

A hero shared by several tribes is Kúwai. He is a mythical figure and is regarded as “the one who has the power to transform, to change.” Kúwai is not perceived as a god in the strict sense but rather as a teacher who taught the mysteries of creation, the use and manufacture of tools, and the practical arts such as fishing and farming. He is also seen as the creator of rivers.

Early travelers to the Vaupés region refer to a god called Yuruparí, but several anthropologists think this is a term used by all the Amerindians of the Vaupés region to refer to any sacred or taboo element or thing.

#### 5 RELIGION

In general, most of the Vaupés Indians see the earth as midway between the underworld and the sky, and they generally accept the existence of spirits and ghosts, as well as entities relating to nature. They have a concept of the body as separate from the person's spirit or soul, and there is among some groups a cult of their ancestors, who are not only figures from the past but whose presence can be invoked in the present, through the appropriate rituals, to accompany their descendants. There are a great variety of colorful myths to explain the origins of the various peoples of the region, but their very color and variety, indicative of a rich imagination, can sometimes veil a deeper, metaphysical way of thinking that links the proper conduct of humans and society to a genuinely spiritual purpose in life.

The Tukano peoples of the Vaupés believe there is a balance in nature that must be maintained, and everything humans take from nature must be replaced. Humans themselves have access to two worlds: the outer, or what we might call objective reality; and the inner, psychic, or mental reality. To fulfill the principle of restitution in nature, humans must come to understand that everything that can be perceived through the senses in the physical world also has a fundamental meaning in the mental or psychological world. To know and to understand these significances or meanings is the main aim in life for the Tukanos.

All the Amerindians of the Vaupés have shamans who mediate between this world and the spirit world. The Cubeos have a division between shamans who are essentially healers and the much rarer shaman known as the *yaví*, or “jaguar,” who is supremely powerful and who can, it is believed, take the form of a jaguar.

#### 6 MAJOR HOLIDAYS

Many of the Vaupés Indians do not observe the major national holidays of Colombia, including Independence Day, or the arrival of Christopher Columbus on American shores, or major Catholic holidays. They still live within their own cultural and religious norms, and their festivals coincide with major life events, such as initiation rites, naming rites, or marriage rites.

In the capital of the Vaupés region, the town of Mitú, there has been a gradual process of adaptation carried on in part by some Vaupés Indian women who have married townsmen and have begun over the last few decades to participate in the national holidays.

#### 7 RITES OF PASSAGE

When a child is born, a Vaupés woman will retire to a special place to give birth, outside the large hut where she lives with her extended family. Quite often she will give birth outdoors, in her own field where she grows manioc (cassava). She will reenter the hut or *maloca* through a special entrance, usually at the back of the house. Among some groups, the baby and the parents will be ritually painted, and this paint will last for a few days.

Childhood is somewhat different for boys and girls. The girls remain close to their mother and learn a wide array of skills that are considered appropriate for women, whereas boys essentially form groups and are allowed to play collectively until they reach adolescence.

Young children are treated with great tolerance and permissiveness, but the upbringing becomes much stricter when they become teenagers. After boys have reached puberty they are eventually initiated in a group, in secret rites well away from the gaze of girls and women. They are assisted by shamans, and they have to take special substances that will give them visions of the spirit world. Afterwards, they are entitled to wear special ritual jewelry and ornaments, as well as a headband decorated with feathers. They can also look for a suitable wife.

Among many Vaupés Indians, when a person dies, he or she is wrapped in his or her hammock and buried in his or her canoe. All the Amerindians of this region believe that a person's spirit leaves the body when he or she dies.

## 8 INTERPERSONAL RELATIONS

The Amerindians of the Vaupés region who continue to live in the traditional manner have particular orders and levels of importance governing their relations. The men have a greater status than the women, and young men who have been initiated have a greater standing than younger boys. These societies have been evolving, and chieftains have been replaced in importance by shamans and people with secret or hidden knowledge.

Among the Cubeos, the strongest bonds are between brothers. Their settlements are usually sparsely populated and include extended family units of about 35 or 40 members, including brothers, their wives, and their children. The Tukanos also live in extended family units consisting of up to seven or eight nuclear families (husbands, wives, and children). Strict rules govern marriage. Among the Tukanos, men must choose wives who speak a different language and therefore belong to a different group known as a *phratry* (derived from the Latin word for "brother"). Each phratry is composed of about 20 smaller groups called *sibs*. Each sib shares a common mythical ancestor. Groups defined in this way do not occupy particular areas and so cannot be called tribes.

The notion of a language group as a particular type of phratry also includes mental and psychological elements (the common mythical ancestor that unites each subgroup or sib). This is close to the idea of other types of Amerindian groups organized as clans with particular totems, which are sometimes symbolized by animals and the virtues of the particular animals. These totems or clan symbols form part of the inner landscape of a person and contribute to his or her identity.

The peoples of the Vaupés often gather for drinking parties and social occasions during which fermented drinks called *chicha* and *mihí* are consumed. This is a way of cementing relationships between groups or sibs that make up the larger phratries. Among these groups, those who live "down river" have a higher standing than those who live "up river." This means that the "up river" groups will often prepare the *chicha* for the "down river" groups.

The most important factor governing any occasion is the right inner mood of the person or persons taking part, and this applies both to work-related activities and to social or ceremonial occasions. Among the Tukanos and the Arawaks, the *chicha* is served in an elaborate, formal manner by hosts carrying the chicha-laden gourds, who dance towards the guests in single file in a crouching position. During these social occasions young men and women are provided with an opportunity to dance together. The dances usually begin quite formally, first with only the male dancers, and as the evening progresses the girls gather courage and join them, overcoming their initial shyness.

## 9 LIVING CONDITIONS

Some travelers to the Vaupés have observed that the Amerindians who have managed to preserve their lifestyle and resist the pressures of the missionaries to abandon their spacious, communal longhouses in favor of smaller, rather miserable, single-

family huts are in better health than the groups who are in a state of transition, attempting to adapt to White society. This may well be because the Amerindians who continue to live in the traditional manner have not lost their knowledge of medicinal herbs and plants. It is also possible that the stresses of adaptation may contribute to illness. Nevertheless, some groups are not averse to seeking the help of White doctors, who live in the town of Mitú, the capital of the Vaupés region.

The attitude to consumption is interesting in the Vaupés, since ritual objects and handicrafts created by the different tribes are highly valued, and there has been a form of barter in existence for hundreds and perhaps thousands of years. A good fishing area along the river is an important possession and may be given as a gift even to a child. At the same time, the Vaupés peoples display an amazing detachment, even in relation to highly prized ritual objects that are considered irreplaceable, in the case of children who take these objects without permission or destroy them. There is a calm acceptance and an equanimity that is part of a tolerant attitude to young children.

The traditional longhouses, or *malocas*, are about 18 m (60 ft) long and almost 12 m (40 ft) wide, built with sloping palm-thatched roofs. Up to seven or eight nuclear families live together, usually brothers, their wives, and children. Inside there are communal spaces, nuclear-family spaces, spaces for young men at the front of the house, and special spaces at the back reserved for women and young children. The front entrance is reserved for males, the back entrance for females. The outer front walls are often painted with geometric motifs related to the views of these cultures about the life-giving forces of the universe. In recent years, nucleated villages have replaced traditional settlements consisting of a single longhouse with four or eight nuclear families. Today, town sizes range from 15 individuals in a single household unit to 300 people in a town.

The attitude that what is consumed must be replaced in some way is essentially a successful attitude of conserving resources in the environment. This makes for a standard of living sufficient for the basic needs of life, without excesses that are seen to be harmful if they create imbalances in nature.

The most important form of transport in the Vaupés is the canoe, although hunters can trek on foot for days in the jungle or the savanna if necessary.

## 10 FAMILY LIFE

The role of women is significant as bearers of children and cultivators of food. They are also skilled in various handicrafts, such as pottery and some types of weaving, and are expected to prepare the food. Women usually own their own small fields where they grow manioc (cassava). This field is not simply an economically productive unit, but also a private space. An interesting and important aspect of a woman's life is her role as a trader. She often has less contact with White society than some of the men and has continued to engage in the traditional form of barter in use among the Vaupés for centuries. This is not just a form of trade, but a pattern of social relationships that becomes established through this type of barter and that imposes a series of obligations. Among many groups, people take great care in what they ask for, because merely asking for a particular object imposes an obligation to surrender it. Every object has a history (where it was obtained, from whom, and under what circumstances) that invests the object with less imperson-

al meanings than those of objects obtained in a Western-style, mass-consumption society where only certain things may keep these associations in the mind of the consumer.

Among the Tukanos, when a man wishes to take a wife, his father and some male relatives have to kidnap the girl and take her to the house where the prospective groom awaits her. Among the Cubeos, it is the groom himself who has to kidnap the girl, take her to his canoe, and then to his home. If the girl is unhappy, she can escape back to her parental home, and her parents will respect her if she wants to stay with them. Even after the marriage rites, this situation may arise, and the family of the girl will never force her to stay with her husband if she is unhappy. The “kidnap” must be understood as a ritual that always precedes marriage.

Some Amerindians of the Vaupés, particularly the Cubeos, have been known to keep dangerous animals as pets, even anaconda snakes.

### 11 CLOTHING

The Vaupés Indians wear a type of loincloth and some forms of feathered headbands and arm bracelets, as well as body paint. Women who live in the traditional manner also use body paint, but some have adopted skirts or even loose cotton dresses as a result of contacts with White society, including missionaries and traders.

### 12 FOOD

The staple food of the Vaupés is manioc, also called cassava, which is made into flour and cakes. Wild fruits and nuts are also eaten, and an important source of protein is fish. Sometimes the peccary and the tapir are hunted, as well as some species of monkey.

Some cooking utensils have the advantage not only of being made locally, but also of being multifunctional and graceful: a circular mat woven from the mirití palm serves as a cooking-pot cover and a plate.

Men grow tobacco and some plants that provide the ingredients used in initiation rites, and women grow manioc. Girls and boys help women gather wild fruits and nuts.

### 13 EDUCATION

Some children in the Vaupés have attended mission schools, and their traditional way of life has been altered in favor of the single-family unit preferred by missionaries. For many others, a traditional Amerindian education includes learning a number of tribal languages, as well as all the survival skills necessary for their traditional lifestyle, including hunting, fishing, farming, weaving, tool-making, and house-building. These are accompanied by instruction in correct understanding of the principles of conservation and a view of nature and the cosmos as an interplay of forces and energies where a balance has to be maintained.

Moreover, during the last years the Colombian government through the Ministry of Health has executed a healthcare program that genuinely attempts to preserve and support the Vaupés culture by creating the so-called “shaman school.” In this educational centers traditional shamans are in charge of teaching to younger members of their communities their ancestral rituals and therapeutic approaches. The shaman school project, as well as other grassroots blueprints, reflects the influence of large number of pressure groups that have argued that

top-down programs and polices often result in tremendous cultural losses. Along with the shaman school project, many successful struggles have been highly useful to ameliorate the Vaupés’ condition. For instance, today Colombian indigenous have the following rights: to be educated in their own languages, to be taught their own history and cosmology, and to have their own healing system incorporated into public programs of health. Moreover, Amerindians in Colombia enjoy advantages not granted to other citizens such as the exemption of paying taxes and to serve in the military. Among their rights stands out their privilege of having accesses to free education and to receive free healthcare.

### 14 CULTURAL HERITAGE

Music can be either sacred or secular. Sacred instruments are prepared and stored with care and used on ceremonial occasions. They include flutes, rattles, and drums. Both singing and dancing are important to the Amerindians of the Vaupés. These activities can occur in a religious and ceremonial context, such as initiation rites or the invocation of ancestor or burial ceremonies, or they can occur in a secular context such as social drinking parties to celebrate the completion of a house. Certain melodies played by young men on reed flutes are courtship songs well known in the area, suggesting unsung words meaning: “If the women from these parts do not want us, we will go somewhere else!”

The literature of the Vaupés Indians is oral, although some petroglyphs (symbolic designs and drawings on large stones along the river suggesting written hieroglyphic messages) have been found. This suggests that these cultures may be very old.

The myths and legends of the Vaupés represent a rich body of oral literature. There are stories of the origin of the world and of the peoples and all the natural elements, as well as of the plants and animals. The Desanas, a branch of the Tukanos, refer not only to the physical sun, but also to the invisible Sun Father who sent Pamurí Mahse, who carried his staff and searched everywhere in the Vaupés for a place to establish humanity. He stood in his canoe and probed the riverbank to find fertile ground. He had to find a place where his staff would cast no shadow. Finally, he found this place, and seed fell from his staff into a deep pool in the river, and from this seed the first Desana was born.

### 15 WORK

Some Vaupés Indians have worked in the past in the rubber-tapping industry, although others who do not participate in the cash economy and live in more remote areas, relying on barter and exchange, have regarded this as a calamity, a type of slave-labor that destroys the culture. Trade among tribes is an important activity, although trade with White people is becoming more common, and some Indian traders have become adept at bargaining. Hunting, fishing, and farming are major activities. The Vaupés Indians make beautiful fish traps along the riverbanks out of delicately woven reeds, and they also use blowpipes and spears for hunting. The fine arrows or darts used in the blowpipes are dipped in a specially prepared *curare* poison that paralyzes the prey.

### 16 SPORTS

The Vaupés Indians are remarkable boaters. This is due to the large number of rapids along the Vaupés River, which they

Colombia's President Alvaro Uribe shakes hands with an indigenous woman in Mitu, Colombia. Mitu is the capital of the southeastern Vaupés state. Vaupés is one of the states with the largest native population. Uribe promised that all indigenous people would have access to free government healthcare. (AP Images/HO-Miguel Solano, SNE)

navigate with marvelous skill in their canoes. While this activity is not, strictly speaking, conceived by them as a sport, much of the thrill and the intense concentration experienced by the sportsman are present during this activity, even when it is linked to the necessity of travel rather than sport.

### **17 ENTERTAINMENT AND RECREATION**

Children play a game relating to jungle demons and the *tem tem* bird. Girls and boys play the demons who surround a boy who is the tem tem bird and who has to try to break out of the circle. In another game, a girl builds a thatched palm shelter and waits inside for a boy hunter to free her. Some travelers to the area have described a game of catch where the ball is made out of corn.

A main form of recreation, which is enjoyed mainly by young adults but which also includes whole families, is the social drinking party where vast quantities of fermented manioc (cassava) beer or *chicha* is consumed, and people dance and sing all night, or until they drop! This type of reunion occurs between groups organized as *sibs*, a type of kinship that relies on a common mythical ancestor and is a type of clan.

### **18 FOLK ART, CRAFTS, AND HOBBIES**

The arts and crafts of the Vaupés include jewelry-making, particularly delicately beaded necklaces, as well as basket-weav-

ing. The Makú Indians are particularly skilled basket-weavers, and their baskets are deep and pleasingly shaped, as well as lightweight and strong. Makú baskets are an easily traded item along the Vaupés River. Body-painting is practiced by all the Indians of the region, and the attractive geometric motifs are also repeated on the walls of their spacious longhouses. The motifs refer to fertility, creation, and various entities from the spirit world, or animals that have counterparts in the spirit world, such as jaguars. The jaguar is a symbol of power, and very often jaguar spots are painted on people or on particular places as a form of protection.

The Vaupés Indians also make musical instruments such as reed flutes and larger flutes known as *chirimías*. Pottery, made mainly by women, takes a variety of pleasing shapes.

### **19 SOCIAL PROBLEMS**

The social problems of the Vaupés Indians relate mainly to the incursions of missionaries, traders, people involved in the rubber industry, and government officials, as well as, on occasion, curious but unsympathetic travelers who have disturbed the delicately balanced lifestyle that survived for hundreds or perhaps thousands of years. Missionaries over the years have disapproved of the extended family households and have tried to persuade the Vaupés Indians to live in single-family units. For this, they have been heavily criticized by anthropologists

who point out that the extended household is a form of social organization that, once it is broken up, impoverishes the families both physically and psychologically because they are deprived of important support systems well-suited to their environment.

## 20 GENDER ISSUES

Opposition and complementarities mark gender relations in Vaupés society. Even though women are excluded from religious rites, female attributes and values form a major element of the ritual symbolism. Typical Vaupés males display their virility openly in front of women. In addition, males are vigilant over women so that they carry out their daily responsibilities and duties, which communicate the fact that women are inferior (or at least subordinate) to males.

Women play a much more important role in the provision of dietary components (especially carbohydrates through the cultivation of manioc) than the relatively smaller contribution of men (mostly protein through fishing and hunting). However, the salience and significance of women in this respect is not acknowledged either in myth or reality. While only products of fishing and hunting are called “food,” the more abundant commodities supplied mostly by women are considered “side dishes.”

In terms of marriage relations, while male infidelity is accepted, women’s infidelity can be punished by death. Man’s economic position is related to polygamy in that women are a very important economic factor in the prosperity of the male, since women are major producers. Therefore, women are net economic assets or gain for the males.

# VENEZUELAN S

**LOCATION:** Venezuela

**POPULATION:** 27.3 million

**LANGUAGE:** Spanish (official); Amerindian languages

**RELIGION:** Roman Catholicism; some Protestantism, Judaism, and native Amerindian religions

## 1 INTRODUCTION

Spaniards discovered Venezuela during Christopher Columbus’ third expeditions to the New World in 1498, and named the country “little Venice” because of the stilt-supported villages on its coast. During the 18th century the export market of cocoa and coffee fostered a small elite of European planters, which turned the country into the world’s largest producer of coffee during the 1800s and produced Simon Bolivar, the father of independence. In addition to Venezuela, Bolivar helped to free Colombia, Peru, Ecuador, and Bolivia from Spanish rule. The decisive defeat of the Spanish forces in his home country took place at Carabobo in 1821, after which battle Bolivar was known as *El Libertador*, or The Liberator.

Following the discovery of petroleum resources at the end of the 19th century, oil overtook coffee as the main export commodity. The oil industry’s windfall profits made power struggles the normal state of affairs. Until 1958 Venezuela had enjoyed only three years of civilian rule. After the overthrow of the last dictator, General Marcos Pérez Jiménez, political elites made the explicit decision to reduce inter-party tension and violence in order to prevent further instability. This new orientation took concrete form in the agreement signed between the two mass parties: the social democrat Acción Democrática (AD—Democratic Action) and the Christian-democrat Comité de Organización Política Electoral Independiente (COPEI—Committee of Independent Electoral Political Organization).

In the Pact of Punto Fijo (1958) the parties committed to support a common program, a pledge that was reinforced by an agreement to participate in a coalition government regardless of the outcome of elections. In this way, all parties were devoted to the defense of the system, based upon a sustainable oil economy, through a power-sharing scheme. As part of the common project of the AD-COPEI coalition, the oil industry was gradually nationalized between 1974 and 1976 and the oil company *Petróleos de Venezuela* (PDVSA) was created to run it. The influx of petrodollars between 1973 and 1983 due to the oil price shocks provoked by the Organization of Petroleum Exporting Countries (OPEC), which Venezuela helped found, caused the oil price, and thus state revenues, to quadruple, and prompted the government to increase spending. However, after the price of oil began to plummet in 1983, the declining per-capita state oil revenue made poverty increase dramatically from 18% of the population in 1980 to 36% in 1984 and to over 55% in 1989.

In the midst of declining oil revenues and indebtedness due to the acquisition of international loans during times of high oil prices, second-time President Carlos Andrés Pérez implemented a package of neoliberal economic adjustments that he had negotiated with the International Monetary Fund (IMF) prior to becoming elected. The drastic 30% fuel hike ignited the *Caracazo*, a 19-city popular riot that lasted for a week. Unable

to reverse the economic crisis and having created no meaningful differentiation between their projects, the ruling coalition began losing its base support, faced two coup attempts in 1992, and finally lost the presidency to Hugo Chávez, a political outsider, in 1998.

Through his Bolivarian Revolution and the imposition of “21st-century socialism” in contradiction to the American-backed Washington Consensus, Chávez mobilized large segments of the lower classes, which felt excluded by established parties and did not possess institutionalized forms of political self-expression. After taking power, President Chávez called for a National Assembly to write a new constitution, which became official in 1999. A year later, he was reelected under the new electoral rules.

Even though the opposition has accused Chavez of authoritarianism and has tried to overthrow him, first by force in 2002 and then by calling a recall election a year later, Chavez’s electoral majority coupled with the more than 1,000% increase in oil prices since he became president in 1999 have helped him stay in power.

## 2 LOCATION AND HOMETLAND

Venezuela is the size of Texas and Oklahoma combined. It shares a border with Colombia to the west, with Brazil to the south, and with Guyana to the east. In the north its Caribbean coastline is around 3,000 km (1,865 mi) long. The central part of Venezuela consists of vast, grassy plains; the south is partly jungle, and a range of the Andes Mountains crosses Venezuela from the Colombian border, running in a northeasterly direc-

tion. These features contribute to Venezuela’s variety, from Andean peaks clad in eternal snow, to rain forests, beaches, and savannas. The greater part of the country has a warm climate.

While 67% of the population is Mestizo (European and Amerindian descent), roughly 21% of Venezuelans are largely unmixed European, predominately of Spanish descent, but also Italian, Portuguese, and German. Another 10% of the population is black or mulatto, and 2% is Amerindian. There are at least 40 Amerindian groups, mainly in the Amazon basin, and the majority of them retain their native language.

## 3 LANGUAGE

The official language of Venezuela is Spanish. The country offers a variety of accents. There is a difference in the Andean region, where Spanish is spoken more slowly, as compared to the rest of Venezuela where the language is spoken more rapidly, a feature it shares with other Caribbean areas of Latin America.

The majority of Amerindian tribes continue to speak their own languages; among these are the Guajiros who live near Maracaibo, the Warao in the Orinoco River region, and the Makiratare and Yanomani in the Amazon region in the south.

## 4 FOLKLORE

The folklore in Venezuela has evolved from blending of Spanish, African, and Amerindian customs. Several colorful festivals are the result of this blending of cultures. Carnival, known simply as *Carnaval*, is a nationwide yearly event that lasts for several days and begins just before Ash Wednesday (in February). There is a dramatic Dance of the Devils where people parade and dance in costumes and masks in the streets of San Francisco de Yare on Corpus Christi. Black African music influences the Fiesta de San Juan, held in Miranda state in June.

## 5 RELIGION

Even though 85% of Venezuelans are Roman Catholic, there are also Protestants and Jewish communities that reside mainly in Caracas. In addition, the majority of native tribes, particularly in the Amazon region, continue to practice their own forms of religion, which share some features with other Amerindian groups throughout the Americas, including a deep reverence for nature.

One of Venezuela’s important religious events takes place in the town of Guanare. It is an annual feast day honoring the Virgin, known in Venezuela as Nuestra Señora de Comoroto, Venezuela’s patron saint. It commemorates the occasion in 1652 when the Virgin is said to have appeared to an Amerindian chief on the shores of the Guanaguare River, encouraging him to accept baptism, and leaving him a tiny image of herself. The chief was frightened and ran away and later died of snakebite. Just before his death, however, he asked to be baptized and advised his tribesmen to undergo the same ritual.

## 6 MAJOR HOLIDAYS

Aside from religious festivals and the national Carnival, the major holiday in Venezuela is Independence Day, celebrated on April 19. Other public holidays marking important historical events include Simón Bolívar’s birthday on July 24, the victory over the Spanish in the Battle of Carabobo on July 5, and the discovery of America on October 12. Labor Day on May 1 is also a public holiday.

## 7 RITES OF PASSAGE

Since most of Venezuela is Roman Catholic, baptism and First Communion of children are important occasions. Most children will also bear the name of a saint, either exclusively or combined with another name, and many celebrate their saint's day as well as their actual birthday. When a person dies, prayers are held during nine days at the person's home, and relatives and close friends are usually in attendance.

## 8 INTERPERSONAL RELATIONS

Venezuelans are considered outgoing and friendly, and their spirit of gaiety is evident in their love of social gatherings and parties. In common with many other Latin Americans, they have a more easygoing attitude to time and are tolerant of late arrivals to meetings. Even business lunches can be lengthy affairs, lasting two or three hours.

Formal greetings include shaking hands, but women usually greet each other with a kiss on the cheek. In some other Latin American countries, the formal *usted* is used when addressing a person who is not well-known to the speaker, and this formality may continue for a long time. But Venezuelans tend to be more informal and they often use the more informal *tu* when addressing each other.

## 9 LIVING CONDITIONS

Even in the prosperous 1960s and 1970s, when the oil boom changed Caracas from a relatively quiet town to a busy center with shopping malls, numerous highways, many skyscrapers, and expanding residential areas, the contrast between prosperous and poor housing was vivid: lavish hotels and apartments blocks vied with shantytowns that were sometimes only a few streets away on the surrounding hillsides. Some of this housing was so precarious that it would slide down the mountainside in the wake of torrential rains. Although some of this poorer housing included dirt floors and corrugated iron roofs, Venezuelans living in these conditions nevertheless had electricity, refrigerators, and televisions, which was not the case in neighboring, less-prosperous South American countries.

This contrast also existed, but to a lesser extent, in other less-populated towns. Since then, the expansion of education and newer universities have contributed to the creation of a growing middle class, and this is reflected in the increased building of middle-class homes.

The rapid expansion of urban areas and the drift of people from the countryside to the cities in search of work put pressure on many urban services, including transport. To ease the traffic jams, which were particularly acute in Caracas, the government built a subway system.

## 10 FAMILY LIFE

Venezuelans value family ties, and the bonds between the extended family—which includes grandparents, aunts, uncles, and cousins—are very important. Occasions for larger family gatherings include major events such as birthdays, baptisms, First Communions, weddings, and major holidays. The extended family is regarded as a close source of support, particularly when there are young children, and also as a source of help in obtaining jobs in a society where personal contacts are important even to secure introductions that may lead to work opportunities. Extended families also gather on weekends

or on short holiday visits to sites such as beaches. In smaller towns, the extended family gathers often for family meals and celebrations. The family offers a secure network in the absence of some state services and benefits that are taken for granted in wealthier societies.

Women have made considerable progress in gaining access to what were traditionally male professions, including medicine, dentistry, economics, and the legal profession. In middle-class households, the workingwoman relies on servants to help in the home; in poorer households, older relatives or older children provide help wherever possible.

## 11 CLOTHING

In cities, men wear lightweight suits or shirts and trousers that suit Venezuela's climate. Women are generally very fashion-conscious and take considerable care grooming themselves, taking as much care of their hair and nails as of their clothes, which are frequently washed and carefully pressed. A woman is expected always to look her best, and the Venezuelan woman often succeeds, even when wearing informal clothing such as a blouse, simple trousers, and sandals, or a simple shirt and skirt. She will choose accessories and makeup carefully.

## 12 FOOD

A typical Venezuelan dish, which is in fact a hearty meal derived from the cattle-ranching areas of Los Llanos, consists of shredded beef, called *carne mechada*, served with fried plantains, black beans, cornmeal pancakes called *arepas*, rice, and sometimes white cheese.

Another type of corn pancake, called *cachapa*, is often served for breakfast with jam. A staple, tasty snack is the *empanada*, a fried cornmeal turnover sometimes stuffed with cheese, meat, or chicken.

In many poor households, tropical fruits such as coconuts, mangoes, watermelons, pineapples, and papayas enrich the basic diet of beans, rice, and plantains. In coastal areas the diet includes fish, which is often served fried or in a stew called a *sancocho*, with vegetables.

## 13 EDUCATION

Formal schooling begins in Venezuela at the age of six and is compulsory for the first six years. The four-year high school leads to a one-year preparation for college, which usually lasts four years but can be longer if the chosen university career is medicine or engineering. Many poorer households cannot afford schooling, and young people who are unable to complete high school often have to go out to work to supplement the family income. They might find work as street vendors or messengers, or in the building trade. In rural areas they will work in the fields.

Greater numbers of Venezuelans are nevertheless finding their way to universities and colleges, a few of which offer completely free tuition. There are about 30 universities, located in several towns. The largest is Universidad Central in Caracas with about 70,000 students, and another well-known university, Universidad de los Andes in the Andean town of Merida, has over 30,000 students.

Women have made great progress in university education, and about half of the student body at university level is now female.

Venezuelan woman picking coffee beans. Farming and cattle-ranching are major sources of work in rural areas. In cities, people work in a wide range of commercial activities or find work in factories. (Anne Kalosh)

#### 14 CULTURAL HERITAGE

Venezuela has produced fine writers, painters, poets, musicians, and, more recently, playwrights. The work of expressionist painter Armando Reverón is admired throughout the American continent, and he has been succeeded by others who have become known internationally, such as Hector Poleo, Alejandro Otero, Marisol, and the sculptor Jesús Soto. One of Venezuela's first poets was Andrés Bello, who knew Simón Bolívar. Venezuela's best-known poet is Andrés Bello, who died in 1955. One of his poems, "Angelitos Negros," became world-famous when it was made into a popular song and sung by artists everywhere.

Venezuela's most famous novelist is Rómulo Gallegos. In one of his novels, *Doña Bárbara*, he created a strong-willed, unforgettable character of the same name. His novel *Canaima* is a dramatic account of humans' struggle to survive, psychologically and physically, in the jungle. A contemporary of Rómulo Gallegos was Miguel Otero Silva, who died in 1985. His novel *Casas Muertas* is widely admired. Another internationally known writer was Mariano Picón-Salas, born in Merida. Also worthy of mention is Arturo Uslar Pietri, who greatly enriched the modern Venezuelan cultural scene as both a novelist and a historian. He also became well-known as a journalist, continuing a Latin American tradition in which literary figures also engage in high-quality journalistic writing.

The *zoropo* is Venezuela's national dance, and the music is played with a small harp, rattles, and a four-string guitar called the *cuatro*.

#### 15 WORK

The prosperity of the 1960s and 1970s based on the oil boom was followed by a world drop in oil prices that affected Venezuela as a major oil-producing country. Besides the rampant poverty and inequality after the oil-price downfall in the 1980s, neoliberal reforms smashed the labor market, severing the networks between the Democratic Action (AD) Party and grassroots labor. The previously strongly unionized labor force, which accounted for more than a quarter of the total workforce in the 1980s, was cut nearly in half; people working in the informal market rose from 34.5% in 1980 to more than 53% in 1998, and unemployment reached 15.4% of the urban work force. The labor force in 2007 was 12.5 million and the unemployment rate was 9.1%.

Farming and cattle ranching are major sources of work in rural areas. In cities, people work in a wide range of commercial activities or find work in factories. During times of economic hardship, casual labor increases and many have to find a living as street vendors or in the building trades when work is available.

For university graduates, the prospects vary depending on the choice of career. Mining is an important activity and mining engineers usually find jobs, as do oil engineers. Economists find work in business or banking, and medical and legal careers are still popular. Newer careers include the media, and television is a growth industry in Venezuela.

#### 16 SPORTS

Both baseball and soccer are national passions in Venezuela. In coastal areas, water sports such as swimming, boating, and fishing are very popular. Inland, in the grassy plains known as Los Llanos, riding is popular both for work and pleasure, and fine equestrians take part in colorful rodeos known as *toros colcados*, in which they compete to bring a bull down by grabbing its tail while riding at top speed.

#### 17 ENTERTAINMENT AND RECREATION

Venezuelans enjoy visiting their beautiful national parks, and they are also fond of traveling and taking part in a variety of festivals around the country, which include singing, playing instruments, and dancing. In the major cities there are nightclubs and discos. Venezuelans also enjoy eating out.

Television is popular, and Venezuela produces a variety of soap operas known as *telenovelas*. Going to bullfights is also a popular pastime.

#### 18 FOLK ART, CRAFTS, AND HOBBIES

Anthropologists and local historians have played an important part in helping Venezuelans become acquainted with the arts and crafts of the various Amerindian tribes. Much of their handiwork is now more readily available and includes pottery, baskets, hammocks, and rugs.

#### 19 SOCIAL PROBLEMS

Under the strong rule of Hugo Chávez, who managed to speak to the people's unfulfilled demands for social justice

by castigating the oligarchy, Venezuela is faced with increasing political polarization. However, the sharp increase of oil prices—which represents a third of Venezuela's gross domestic product (GDP) and 80% of the country's exports—from \$8 a barrel in 1999 to \$117 in 2008, created an impressive average economic growth rate of 7.6% between 2003 and 2007. This has kept the country in relative peace.

## 20 GENDER ISSUES

Human rights groups, women's rights organizations, and feminists have praised the new Venezuelan Constitution of 1999 as one of the most advanced constitutions in the world in terms of its vision on gender, because it recognizes the rights of Venezuelan women as equals with their male counterparts, promotes affirmative action, and is against discrimination. In addition, it gives a pension to housewives and mandates the use of gender inclusive language.

However, in 2008 only 18 of the 165 National Assembly Deputies, about 11%, were women. Moreover, only 2 out of 23 governors and 20 out of a total of 335 mayors were women, which amounted to 8.7% and 5.9% respectively. In recognition of the contrast between law and practice, the National Electoral Council (CNE) passed a resolution on 1 April 2005 that legally obliges all political parties to run an equal number of men and women to any deliberating body. In addition, the newly created Unified Command of Women for Unity and Parity has the role of processing the complaints of excluded women and of taking their cases before the Supreme Court of Justice to ensure that their rights are upheld.

# VIETNAMESE AMERICANS

For more information on Vietnamese history and culture, see **Vol. 3: Vietnamese**.

## OVERVIEW

Before 1970, only 3,788 Vietnamese had immigrated to the United States. The first real wave of Vietnamese immigration to the United States began on 30 April 1975 when Saigon fell to North Vietnamese communist forces. At least 65,000 South Vietnamese fled the country that same day. By the end of 1975, some 130,000 Vietnamese refugees had entered the United States. These early refugees tended to be well educated and wealthy; many were high-ranking military officers and government officials. With their high level of skills and education, they adapted quickly to American life and within 10 years were at an equal economic level with the average American citizen.

Because of its involvement in the Vietnam War, the U.S. government felt a responsibility toward the South Vietnamese refugees. Congress passed the Indochina Refugee Act in 1975, allowing up to 200,000 Southeast Asians to enter the United States under a special “parole” status. The U.S. government also allocated \$405 million in resettlement aid to help South Vietnamese and other Southeast Asian refugees start a new life in America. The refugees were moved to resettlement camps in the United States where their papers were processed and they were given English language classes. Private organizations matched each of them with a sponsor somewhere in the United States who would then help them resettle in the sponsor's community. Although most of these first refugees could only find low-paying jobs and many ended up on welfare, the U.S. government planned to phase out its aid program by 1977.

However, the situation in Vietnam worsened, and by 1978 thousands more refugees had fled the country. Some 85,000 climbed aboard overcrowded, flimsy boats and attempted to cross the sea to safety. These desperate folk came to be known as the “boat people.” U.S. Congress passed the Refugee Act in 1980 to admit more Vietnamese refugees. In this second wave of Vietnamese immigration, 95,000 refugees entered the United States in 1980 and 86,000 in 1981. In contrast to the first wave, most of these refugees were poorly educated farmers and fishermen who had a much more difficult time adapting to life in the industrialized United States.

The Orderly Departure Program was put into effect in 1982 to reduce the number of people risking their lives in boats to escape Vietnam. Under this new program, 66,000 more Vietnamese entered the United States between 1983 and 1991. In 1987, Congress passed the Amerasian Homecoming Act to help Amerasian teenagers (the children of Vietnamese women and American military men) and their families immigrate to the United States.

The 2000 U.S. Census counted 1,223,736 Vietnamese Americans (0.04% of the total U.S. population; about 10% of the total Asian American population). The total estimated population of Vietnamese Americans in 2006 had climbed to almost 1.5 million. According to the census, 73% of Vietnamese Ameri-

cans in 2000 were foreign-born and 83% spoke only or mostly Vietnamese at home.

At first, Vietnamese refugees settled near their U.S. sponsors throughout the United States. The U.S. government hoped to spread out the impact so that no one community would be overly burdened by a sudden influx of newcomers. Most Vietnamese settled in California, with a large number in Texas and sizeable groups in Pennsylvania, Florida, Washington, Illinois, New York, and Louisiana.

However, family and kinship groups are very important to traditional Vietnamese, so they began a secondary migration within the United States to rejoin their families. They also moved from smaller towns and rural areas to cities where they would have better access to jobs and community and government services. Many also moved to warmer climates. California and Texas now host over half of all Vietnamese Americans; the original “Little Saigon,” south of Los Angeles, is the center of the Vietnamese American community, with Houston’s newly dubbed “Little Saigon” taking second place.

Acquiring English language proficiency is no easy task for Vietnamese Americans. The Vietnamese language differs from English in fundamental ways, making the shift from one to the other extremely difficult. American-born Vietnamese Americans, who have grown up speaking English, and those who came to the United States as small children, are easily bilingual. Older foreign-born Vietnamese Americans, however, still speak Vietnamese almost exclusively at home and among friends and family and struggle to speak English when necessary in non-Vietnamese society. Vietnamese Americans have

not been in the United States long enough to have a significant population of third-generation immigrants (children born to American-born Vietnamese) who might begin to lose their fluency in Vietnamese.

Most Vietnamese Americans are Buddhist of the “Northern School,” also known as Mahayana Buddhism. Vietnamese Buddhist temples exist throughout the United States. Other religions are also represented among Vietnamese Americans, including Confucianism (considered a philosophy rather than a religion by some), Taoism, Cao-Dai (a combination of Eastern belief systems), and Hoa-Hao (a meditative sect originating in the Mekong Delta in 1939). A small minority of Vietnamese Americans are either Muslim or Protestant.

Although Roman Catholics make up only 10% of the population of Vietnam, a third or more of Vietnamese Americans are Catholic. This is due both to the high percentage of Roman Catholics among the first wave of refugees, and the involvement of Roman Catholic organizations in refugee resettlement in the United States. Many Vietnamese refugees, in gratitude to their Roman Catholic U.S. sponsors, at least nominally converted to Roman Catholicism. One of the largest parishes is in New Orleans and played a significant role in relief efforts after hurricanes Katrina and Rita hit in 2005. Some 30,000 Vietnamese Americans were affected by the hurricanes, either evacuated to other cities and states or left homeless in New Orleans. Told that their parish would not be resettled, Father Vien Nguyen of Mary Queen of Vietnam Catholic Church in New Orleans organized his parishioners to conduct a furious campaign of photos, petitions, and visits to the utility compa-

ny Entergy to persuade them to reestablish electrical service to the parish. Entergy eventually agreed to restart services, allowing for the return of more Vietnamese Americans as well as others to the city.

Another Vietnamese American organization contributed greatly to relief and resettlement efforts in Louisiana and Mississippi after the 2005 hurricane disaster. First established in 1980 to aid Vietnamese “boat people,” Boat People SOS (BPSOS) developed over the years into an agency that helps Vietnamese immigrants to the United States in many ways, including advocating for them with policy-makers in the U.S. government. When Katrina and Rita caused the flooding of New Orleans and the Mississippi coastline, BPSOS used its experience air-lifting boat people in the 1980s to rescue those stranded by the hurricanes. BPSOS continues to follow and assist Vietnamese Americans as they resettle either in their former homes or in communities to which they were relocated.

The most important holiday for Vietnamese Americans is Tet, the Vietnamese New Year. Occurring sometime between mid-January and mid-February (based on the Chinese lunar calendar), it is a combination New Year, spring, family, and national festival. Traditionally, Tet lasts for seven days, but most Vietnamese Americans celebrate only the first three. As every Vietnamese has two birthdays, their personal birthday and Tet, Tet also becomes a community-wide birthday party. Other elements of Tet include the payment of debts, forgiveness of past wrongs, and vows of personal improvement.

First-wave Vietnamese Americans, who were generally well educated and had job skills relevant to the industrialized American work world, now enjoy living conditions comparable to or better than the national average. Second-wave refugees, however, have had a more difficult time succeeding in the United States. With less formal schooling and few relevant job skills, many second-wave refugees have either been stuck in low-paying blue-collar jobs or remain unemployed. According to the 2000 U.S. Census, almost 10% of all Vietnamese American families, and over 25% of families with a woman alone as head of the household, lived below the poverty level. Some 12% of individuals were also living below the poverty level.

Health problems common to recent refugees, such as post-traumatic stress disorder, insomnia, and lowered immunities, plague the Vietnamese American community. Many Vietnamese Americans were also exposed to tuberculosis either in Vietnam or in refugee camps. Cultural attitudes and traditions contribute to health issues, particularly among Vietnamese American women. Modesty combined with the language barrier discourage many women from getting regular health screenings such as Pap smears and mammograms, resulting in a high fatality rate for cancers that remain undetected into advanced stages. In the late 1990s, the rate of cervical cancer among Vietnamese American women was higher than that of any other ethnic group and almost five times that of European American women.

Traditionally, the family is the center of Vietnamese culture. Most Vietnamese Americans continue to cling to the family as their source of support in their new home, as well as continuing to support those they left behind, sending money every month to family members in Vietnam and sponsoring their relatives to join them in the United States whenever possible.

Vietnamese Americans tend to eat traditional Vietnamese foods at home. A few cities with large Vietnamese American

populations now boast Vietnamese restaurants where traditional foods are served. In 2007 Vietnamese American chef Hung Huynh won the Season 3 Top Chef competition on Bravo TV.

Young Vietnamese Americans, like other Asian American students, tend to be high achievers at school. Despite language and cultural barriers, they work hard and are eager to acquire the skills necessary to succeed in their American homeland. Many adult Vietnamese Americans attend adult education classes for English language and job skills training. Vietnamese Americans often describe themselves with the traditional Vietnamese phrase *tran can cu*, which expresses a combination of hard work, persistence, ambition, and patience. Their short history in the United States so far shows this to be an apt description.

In recent years, more Vietnamese Americans are becoming known outside the Vietnamese American community for their successes in various fields. The book, *Watermark: Vietnamese American Poetry & Prose*, published in 1998 by the Asian American Writers' Workshop (edited by Barbara Tran, Monique T. D. Truong, and Luu Truong Khoi), gathers together the works of a number of Vietnamese American writers, including novelists, short story writers, and poets. In sports, Catherine Mai Lan Fox is a gold medalist swimmer, Danny Graves has played baseball in the major and minor leagues, and Dat Nguyen plays football with the NFL. Hugely popular in the Vietnamese American community, musician and composer Pham Duy has yet to become well-known among the general American population.

Vietnamese Americans have found the most employment success in the area of small business ownership. Most are family run and serve primarily Vietnamese American customers. Typical Vietnamese American businesses include restaurants, specialty grocery stores, laundries and tailor shops, convenience stores, beauty salons, car repair garages, and real estate offices. The U.S. Census Bureau counted more than 147,000 Vietnamese American businesses throughout the United States in 2002, with combined receipts of over \$15.5 billion.

Vietnamese Americans suffer from the same problem that all new immigrant communities face: the tension between foreign-born elders who continue to hold to traditional values and American-born young people who have been acculturated to American values. In the Vietnamese American community, this breakdown of traditional generational authority and respect has led to a particularly violent situation. Vietnamese American teenagers are bonding together in youth gangs to protect themselves from anti-Asian discrimination and to give each other the support they feel is lacking at home. Most often, gang violence is directed at other Vietnamese Americans. Much of it goes unreported because the victims do not trust the police, fear retaliation on the part of the gangs, and/or do not wish to give the Vietnamese American community a bad name.

There is also some tension between first-wave and second-wave Vietnamese Americans. The more educated and successful first-wave refugees criticize second-wave refugees for their lack of success and their dependence on welfare. Second-wave refugees, on the other hand, resent the privilege and snobbery of the first-wave refugees. For the most part, this tension is a continuation of class conflicts in Vietnam between the educat-

ed elite (the first wave of refugees) and less educated laborers (the second wave).

Vietnamese women have had a particularly difficult time in their journey to becoming Americans. Those who escaped Vietnam on boats were subjected to rape by pirates, and life in the refugee camps was likewise dangerous. Separated from family members and forced to survive on their own, they became both more independent than traditional Vietnamese culture allows for women, as well as deeply fearful of being without a man's support.

Traditional Vietnamese culture with its patriarchal structure promotes values of subordination and submission for women. The Four Virtues of womanhood are good work habits, good appearance, good speech, and good behavior. The Three Obediences command women to be subordinate to their fathers when young, to their husbands when married, and to their eldest sons when widowed. A man is allowed to beat his wife as long as he inflicts no lasting injuries, and women are expected to submit without complaint. These values come into direct conflict with American values of egalitarianism, as well as with U.S. laws prohibiting domestic violence. Some Vietnamese American women report that their husbands beat them less often since arriving in the United States for fear of being arrested. But traditional behaviors as well as the stress of relocation and dislocation contribute to an ongoing problem with domestic violence. Fear of bringing shame to the family, and a lack of knowledge about available services to help abuse victims, prevents many Vietnamese American women from reporting the abuse. Information about the extent of the problem comes from studies done within the population with those willing to speak out.

Gay and lesbian Vietnamese Americans also suffer from the rigid patriarchal structure of traditional Vietnamese culture. Such a heavy emphasis is laid on traditional gender roles, as well as on the importance of marriage and family, that many Vietnamese American lesbians and gays choose never to come out to their families rather than risk bringing shame to the family and/or being rejected by them.

# XAVANTE

**ALTERNATE NAMES:** Crixá, Curixá, Puxití, Tapacuí

**LOCATION:** Brazil

**POPULATION:** around 10,000 (2000 estimate)

**LANGUAGE:** Gê

**RELIGION:** Indigenous beliefs

## <sup>1</sup> INTRODUCTION

In the late 16th century, the Portuguese colonizers named the Amerindians that inhabited the north of the Goiás region. The chosen name was *Xavante*, and the reason for it is unknown. The name the Amerindians used for themselves bears no resemblance to it: *Auwe*, meaning people. The Xavante were numerous, strong, and rebellious. The Lisbon government only managed to dominate them for the first time in 1784, when they were put into mission villages surrounded by military guards. The Xavante had resisted the invasion of their lands by attacking mining camps and raiding the settlers' cattle and crops. It is perhaps because of this kind of resistance that the colonial governors called the period between 1784 and 1788 the "pacification."

Life in mission villages was not kind to the Xavante and, by the time the gold mines were exhausted and many of the settlers left, a group of the surviving Xavante abandoned the missions. They went west, crossed the rivers Araguaia and das Montes, and settled in eastern Mato Grosso, in the land of Roncador. The Xavante successfully defended their new territory against outsiders. They occupied these lands and lived in relative isolation until the 1930s, when they gained sudden notoriety due to their furious resistance to the new wave of settlers and government agents who were trying to bring central Brazil into the mainstream of Brazilian culture and economy. During the 1940s and 1950s Xavante, especially under the dictator Getulio Vargas, were mistreated, experiencing massacres and diseases. These efforts oriented to "pacify" the Xavante started again during the 1940s, this time by the Brazilian government, with the aim to open their lands to settlement. Contact was established, and the Xavante had made many adjustments during the last decades in order to deal with a wider society. However, they continue to this day to preserve a strong sense of identity. Until 1988 the Xavante, like all Amerindians in Brazil, were legally considered to be minors: they were not allowed to vote or make decisions for themselves. In 1983, Mario Juruna, a Xavante, became the first Amerindian to be elected as a member of the Brazilian Congress. He served until 1986. Brazilian Amerindians are now regarded as full citizens.

Traditionally, the Xavante were nomadic hunters and gatherers who lived in temporary horseshoe-shaped villages on the savannah and cultivated corn (maize), beans, and pumpkins on seasonally visited garden plots. They hunted tapir, deer, wild pigs, and birds and gathered roots, nuts, and honey. Xavante children are still initiated into age-based kinship societies where they are taught by their elders. This education process gives to the new generations the skills and insights of a people who depend directly on the natural world for survival.

## <sup>2</sup> LOCATION AND HOMELAND

The Xavante live in the state of Mato Grosso, between Rio das Mortes and the Araguaia River, in a region of upland savannah. This zone is about the size of France, Germany, and Great Britain combined. It is situated in the southwest of Brazil. *Mato Grosso* in Portuguese means "dense forest." Xavante villages used to be found at intervals for the entire length of the Rio das Montes, until the land was sold to private companies during the 1960s. Afterwards, the new settlers pushed the Xavante to the vast wasteland of eastern Mato Grosso and even drove them to seek the patronage of either the missions or the Indian Protection Service posts, which they had fought so successfully in the past. The forest, now depleted, once supplied rubber and rare timbers; diamonds and silver are still mined. The region is known as the Serra do Roncador or Snoring Mountains, though there is no real sierra (highlands). The hillocks look like mountains, however, because of the flatness of the surrounding countryside. The Xavante land is referred to as "savanna" but is really poor country, not a prairie, and only occasionally productive land. The Xavante prefer it to the tropical jungle because it is open country where hunting, one of their favorite activities, is more thrilling. They also consider the savanna to be more beautiful than the jungle and choose to build their villages out in the open.

Still, there are patches of tropical rain forest all over their territory, usually along the water courses. These local jungles, known as "galleries," are appreciated by the Xavante because in them they can find water and wild roots and fruits, which are the basis of their diet, as well as palms and trees that provide leaves and woods used to manufacture various artifacts. The seasons in the region are clearly marked: a very dry season from May to September, when even a shower of rain is most unusual and the lakes turn into an expanse of dried mud, followed by heavy rains in October; by January, hunters and Amerindians get used to walking perpetually in ankle-deep water.

## <sup>3</sup> LANGUAGE

The Xavante, though dispersed through a vast region, share a common language and culture. They are one of the Gê-speaking tribes of Amazonia. They have also been known by the names Crixá, Curixá, Puxití, and Tapacuí. Understanding their language often leads to a deeper understanding of their culture. *Ro was'té-di*, for example, is what the Xavante call the close country or local jungle. *Ro* means "country" and *was'té* means "bad," making no secret of their dislike of anything that is not open, that is not the savanna, which they call *ro pse-di*, or *ro we-de*. *Pse* means "good," and *we* means "pretty" or "beautiful." It is easy to guess, therefore, where they prefer to spend time and live their lives.

The Xavante language has 13 consonants and 13 syllables. Honorific and endearment terms are used to refer to others such as one's in-laws or grandchildren. Many of these key relationships are actually reflected in the grammar of the language. For example, when speaking directly to his son-in-law, a man will use the indirect (third person) grammatical forms instead of second person.

Xavante boys are not named at birth. They receive their first name at a ceremony performed by the mother's brother when they are about five or six years old. Although the naming ceremony is quite important, as it establishes their father's broth-

er-in-law's rights over the boy, adult Xavante rarely bother to learn the names of the boys because they will take fresh names when the time comes to enter the "Bachelors' hut" (adolescence). At initiation, boys take a third name, and when they graduate to the status of Mature Men, yet another. Each name cancels out previous ones. Today, not all Xavante pass through so many names by the time they reach maturity. On the other hand, some take even a fifth name: a man may assume further names if he so wishes.

As for girls, the ceremony of bestowal of their names is performed by the whole community, but no rights are asserted. This is because women do not play a part in Xavante politics.

#### 4 FOLKLORE

The Xavante tradition is very rich in legends that try to explain natural phenomenon and their history. Many highlight the value of the qualities the Xavante appreciate most: strength and courage. One tells of two young men who had the power of making new varieties of fruits grow, using only their words. But, a time came when they started using their powers to frighten their friends. Finally, they were killed, and in the place where their blood was shed, two trees grew. The Xavante use the wood from those trees to make sticks that they place in

their ears to protect themselves from dangers like jaguars and bad dreams.

Another legend tells about a hunter who was abandoned by his friends in the jungle because his body was covered with horrible boils. The vultures came and took him to heaven to heal. When the hunter returned to earth, he brought some potatoes, which became part of the Xavante diet.

The Xavante believe that the stars are the eyes of heavenly people who are watching us from up above. It happened that once a young man fell in love with the beauty of a particular star. When he fell asleep, the star came to earth in the shape of a woman and found him. Their love grew, and so did the palm where they were sitting, taking them up to the sky. When the young man came back to earth, he told his family about his affair and then went back to heaven and stayed with his loved one forever.

#### 5 RELIGION

Xavante are more concerned with change or discovery than with the question of creation. "The world was created because in the beginning there was nothing" was an explanation given to an interested academic. "Then Aiwamdzú came out of the earth. He was the creator and he was Xavante." By the time Aiwamdzú appeared, the earth already existed, but it was empty. The east—the beginning of the sky—had not been created yet. The north and the south were created afterwards, as well as the Whites and their towns. More-detailed are origin myths that tell about people becoming human after being like animals. For example, one myth tells how people used to eat only rotten wood because it was soft enough to chew and could be eaten without preparation, something animals do. But then a young girl discovered maize (corn) and a young boy discovered fire, so they could grow proper food and cook it.

The beliefs and ceremonies of the Xavante revolve around their reverence for life and fertility. Thus, the good spirits, the Danimite, protect and create life, while the bad ones, the Tsimihöpari, cause illness and death. During the *Way'a* celebration, the Xavante act out a fight between the good and bad spirits with songs and dances. The good spirits win, and the bad ones are buried in symbolic barrows. Extinction is thereby avoided and the Xavante people will not only live on but will be even stronger. A similar ceremony shows the recovery of an ill Xavante. For a whole night a group of men, some painted black as bad spirits, dance and sing until the good spirits defeat the bad ones, who are once again symbolically buried.

#### 6 MAJOR HOLIDAYS

Xavante holidays are full of joy and happiness. A sensational one is the *buriti* competition, in which their great athletic abilities are put to the test and celebrated. Some holidays are aimed at bringing back the good times, known as *Roweda*. Though in many of their holidays the men have a more active role than the women, some do have women as central figures. One of them is the ceremony of the naming of a child, in which many of the staged legends have women as protagonists. They tell about the female contributions to their cultural wealth, such as the time when their ancestors could only eat rotten wood and roots. The women, however, thanks to their immense curiosity, found a parakeet in the jungle that had white maize (corn). They took some of this maize and brought it back to the village and started to cultivate it. To get the quality of maize and the kind of

beans that the Xavante prefer, they had to fight bad spirits in their houses and with great courage drive them away. During the naming ceremony, the men imitate the voices of animals, like jaguars, leopards, wolves, and storks.

## 7 RITES OF PASSAGE

The Xavante have complex initiation rituals in which gender difference plays a fundamental role. The Xavante are divided into groups according to their ages: Babies; Not-Babies; Children; Boys and Girls; Bachelors; Young Men and Women; Mature Men and Women; and Elders. Each group is formed by those born in the same five-year period. Passing from one group to the next is celebrated with special rites, songs, and dances. When a group reaches adolescence, the boys leave their home and move into the Bachelors' hut. During this transition, generally at the age of fourteen, ears are pierced with small wooden sticks that are inserted in the earlobes. As time goes on, the size of these adornments is increased.

Through dramatic representations of legends, they learn the origins and significance of the new role they are about to take up. This is also the occasion to officially introduce brides- and grooms-to-be, to each other and to the rest of the village.

Among the Xavante, coupling is a process strictly regulated by laws. Marital relationships within families are discouraged. The decisions are made mainly by the parents, though they do listen to their children and take their feelings into account.

Like other Gê-speaking groups, the Xavante have an elaborate social organization. A village is divided in two halves called *moieties*. A moiety membership can be based on descent or on such distinctions as whether a person was born during the dry or rainy season. Moieties can carry out a number of reciprocal functions, such as burying each other's dead.

## 8 INTERPERSONAL RELATIONS

"The Xavante are full of life" is very often the opinion of those who have had the chance to meet them and especially to witness their many festivals. The sight of their bodies artistically painted with bright colors, the joy and energy transmitted through their songs and dances, and the wisdom imparted via representations accompanied by their own timeless rhythms all communicate vitality and an enduring commitment to survival.

The Xavante community sense is evident in the way they organize their economy. They exchange goods and distribute their wealth with one premise in mind: it should be equal both within families and among the members of the tribe. They guarantee their survival as a group with a cyclical system of give and take.

Hierarchy is mostly an organizational tool. When the Xavante hold council discussions, it is up to the chief to begin the deliberations. But, that does not mean that he has more power, as all decisions are made by consensus and every man in the council has his say. Whatever is decided is commonly announced by shouting it through the village at dusk and dawn.

From an organizational viewpoint, this Amerindian tribe has a dualistic societal structure formed by two clans: the *Âwawe* and the *Po'reza'õno*. With the intention of preserving the culture richness of both tribes, marriages are not allowed between members of the same clan.

## 9 LIVING CONDITIONS

Since being contacted by outsiders in the middle of the 20th century, the Xavante have gradually ceased to be nomadic. They now live in independent horseshoe-shaped villages on the open savanna. The opening of the horseshoe faces the water. The center is the setting for meetings of the council of aldermen: it is there where important decisions are made. Some Xavante have abandoned this traditional crescent for oblong Brazilian-style houses in rows by the side of the missions, but most favor the original "beehive" houses. Built by women, the round structures are made of sticks and cane and are covered with palm leaves all the way to the floor. Up to three families can share one house. Inside the houses, the light is perpetually dim, and the smoke and odor of cooking lingers while the insects crawl or buzz around.

Before and after the first "pacification" carried out by the Portuguese, the Xavante furiously defended their land and people. After their experience in the missions, around the middle of the 19th century, they remained isolated for some 80 years. The isolation protected them, among other things, from epidemic disease. When contact with outsiders was restored in the 20th century, various studies described the Xavante as powerful, numerous, and muscular, with keen vision, lack of dental decay, slow pulses, and low blood pressure. They were also among the tallest and heaviest of Lowland South American Indians. But, contact often led to a demographic crisis, through introduced diseases, and deaths by fighting to resist territorial incursion. Still, the Xavante groups that survived the shock have not only recovered but have increased their numbers. In some cases, the doubling time of population is 15 years or less. The Brazilian government Indian Agency initiated a vaccination program in 1990.

## 10 FAMILY LIFE

Women are still the queens of Xavante homes. They build the houses, and inside they manage the whole operation: they prepare the food and distribute it. Collecting, the most important economic activity, is primarily a woman's job. Though gathering is not regarded as a prestigious activity, it is an essential contribution to the household and the survival of the group. It also provides one of the few opportunities for women to go out and have a good time together. In the past, women were also responsible for the preparation of the land, as well as the planting and harvesting. Nowadays, because of the increasing importance of agriculture for the society, and a wider variety of crops, men share those tasks.

It is quite common to find Xavante men married to more than one woman. Young men marry 5 to 10 years later than young girls, as the boys are not permitted to marry until they are initiated. At the ceremony, the boys are introduced to their future wives, but the girls are often so young that the couples wait years before they can go to the next step: the wedding hunt. When the time comes, the bride then takes part in the *Adaba* ceremony: she kneels in front of her house until one of her friends approaches and removes all of her necklaces. The groom goes out hunting with a few friends and can only come back when he has caught enough game to impress his father-in-law. If all goes well, he can then visit his bride at night until their first child is born, after which he moves into her family's house.

Frequently a man's brothers marry into the same household with the younger sisters of their older brother's wife. Cases of polygyny also often involve sisters: a young man marries the eldest daughter in a household and then marries her younger sisters as they become of marriageable age. Some monogamous or widowed men marry much younger women. Women, however, if widowed after the age of 30 usually do not remarry.

### **11 CLOTHING**

Like many tribes of the eastern Brazil region, the Xavante originally went virtually naked. In contrast with the lack of clothes, however, there was an abundance of ornaments, such as ear-plugs, distinctive haircuts, body painting, and tattoos. Men wore penis-sheaths from the moment they entered the Bachelors' hut and were never seen without it again. The sheath is a tiny conical spiral of palmito bark. It is worn over the folds of the foreskin, covering only the tip of the genital organ, and the men would only take it off when urinating or having sex. In fact, were it to fall off when they were running or bathing, it would be the cause for great embarrassment.

Today, though, men usually wear shorts, and most no longer wear their penis-sheaths or their ear-plugs. Women have taken to wearing clothes and even make-up when they can get it. Most Xavante wear boots, and both sexes cut their hair short. In traditional Xavante communities, it is the men who do all the preening, but that has changed since contact with Whites and other tribes.

The Xavante are noted for their beautiful body painting. Urucú scarlet seeds are used to make red paint, and genipa is used for black ink. Red is the Xavante's favorite color. It is thought to be beautiful and have beneficial and creative properties. Furthermore, they believe it makes a person strong. Some of the designs also have special powers: the armbands of the wrestlers are believed to increase strength. Babassú nuts are the Xavante's favorite cosmetic. Men, who are more into taking care of their appearance than women, keep a supply of nuts that they chew carefully to extract the milky juice with which they oil their hair and bodies at least once a day.

### **12 FOOD**

The Xavante have a real passion for meat. Any game is hunted and eaten. Peccary, deer, and anteaters are fairly plentiful. Pigs, wild or domestic, steppe rats, monkeys, and armadillos, as well as most birds, are also part of their diet. The meat is roasted for a long time and protected with a covering of ash and earth so it can be kept for any length of time. Turtles are sought for their meat and their nourishing and fatty eggs.

Preferences aside, the Xavante live primarily on roots, nuts, and fruits. The roots are boiled or roasted and eaten with their skins, unless they are too dirty. Nuts and palmitos are eaten year-round. Palmitos are edible shoots of a palm that grows all over the interior of Brazil and can be found canned in supermarkets around the world. The Xavante collect the shoots and eat the younger ones raw. Older, thicker ones are cooked in an earth oven. Nuts, particularly babassú nuts, are a constant in the Xavante diet. Whenever they are hungry, they help themselves to their supply of nuts. This is the only food they eat without offering some to everyone present. From July until the end of the year, carob fruit is a staple food. Carob, burití (a fruit with a high vitamin-C content), and piquí are the most important fruits in the Xavante diet.

When first encountered, the Xavante mainly grew maize (corn), yucca, two kinds of beans, a few types of pumpkins, and potatoes. Later on, some groups were encouraged by government programs to grow upland rice, keep enough for their own needs, and sell the rest.

To prepare the brew for feasts, the women start the fermentation by chewing some corn or cassava mash and spitting it into a bowl, which is then covered and kept in a dark corner for three days. The result is a mildly alcoholic beverage that, according to some explorers, if drunk in huge quantities can produce a "grand intoxication." The Xavante also eat honey anytime they catch sight of a beehive. As many bees are stingless, the Xavante simply climb the trees, open the hive, and eat the contents, bees and all.

### **13 EDUCATION**

The level of formal education among the Xavante varies according to the geographical situation of their villages. It ranges from groupings where only one or two of the younger men speak some basic Portuguese for the purpose of dealing with the outside world, to villages where most children and young Xavante are literate and some have become teachers in their own hometown.

The very important skills to face life, like learning how to overcome exhaustion, pain, and fear, are taught by the elders through traditional legends. Many bear the message: "Be strong and courageous, and multiply." The education of children is a shared responsibility. In the early years, the mother is the main figure, but as they grow older, the grandparents help with the education of the girls. The boys, on the other hand, are guided by their godfathers, a group of young men about 10 years older.

### **14 CULTURAL HERITAGE**

Music and dance are at the core of the Xavante's ceremonies. Accounts of the Jaguar and girls naming ceremonies tell of groups of men singing from the morning through the day and the following night, of the hiding of gourd flutes for the girls to fetch, and of beating time with rattles made of pig's teeth. In their relentless quest "to make beautiful" the melodies, the Xavante choreograph their dances in a series of highly formalized patterns designed to inspire and delight both the performers and spectators.

### **15 WORK**

The Xavante practice shifting cultivation. Toward the end of the rainy season, a man fells an acre or two of trees and leaves them to dry. Just before the next rainy season begins, he sets them on fire. The ashes add mineral nutrients to the soil. Planting is time-consuming and sometimes even dangerous, for gardens attract snakes and stinging insects. Traditionally, the Xavante planted crops that required virtually no tending, such as maize (corn), beans, and pumpkins. Manioc (cassava) is also an important crop. These shrubs with starchy tuberous roots, even with indifferent cultivation, will yield four or five tons of tubers, which is quite convenient as the Xavante do not like to give much time or thought to their agriculture. Hunting is their passion: Xavante men spend a lot of their time planning communal hunts, discussing the possibility of finding deer or peccary in particular regions, or going out to enjoy the activity

*An Indian of the Xavante tribe smokes a pipe during a protest in front of the presidential palace in Brasilia, Brazil. The Indians were demanding the resignation of the president of the National Foundation of the Indian and an audience with the Brazilian president Luiz Inacio Lula da Silva. (AP Images/Eraldo Peres)*

for the fun of it. Fishing, which used to be the males' responsibility, is still a very important activity among the Xavante.

The traditional way of hunting is using darts with curare. Curare is a formula whose active ingredient comes from the sap of the vine *Strychnos toxifera*, along with 30 other magical ingredients, like stinging ants and powdered snake fangs. The active ingredient blocks nervous impulses to the muscles so they become flaccid, making the animals easy to retrieve: a monkey would simply fall to the ground. Nowadays, the Xavante hunt with firearms. Meat is regarded as a prime delicacy.

Wild roots, nuts, and fruits gathered in their wanderings are really the basis of the Xavante's diet, rather than meat. The Xavante collect roots and babassú nuts as part of their day-to-day activities. Fish are also stupefied with poisonous forest vines. Their sap dispersed through the water paralyzes the breathing apparatus but leaves the meat edible. This method works best in low waters and slow currents, as the poison lingers long enough to take effect.

However, the Xavante traditionally were not particularly interested in fishing. They did not have special arrows for the task and preferred to walk rather than sail, so they had rafts instead of canoes and would cross rivers by swimming. Nevertheless, the introduction of metal hooks and nylon has trans-

formed some sedentary Xavante into passionate fishers: it is a way of feeding the family without wasting time planting.

## 16 SPORTS

The Xavante are superb runners. As often as once a week, teams of relay runners, each carrying a length of burití palm that weighs around 80 kg (175 lbs), compete in a long race that may begin far out in the plain, ending with a dash into the village. The runners decorate their bodies with red and black vegetable dyes and tie a white cord around their necks with the tufted ends in the front like a bow tie. The winner is the team that can continue the longest, so the one who arrives first does not always win. The Xavante are reputed to be capable of catching game on foot. In some communities, the Xavante have developed a passion for soccer. Everybody plays, young and old, and when all the men get tired of playing, the women take over.

## 17 ENTERTAINMENT AND RECREATION

Hunting provides not only a means of subsistence but also a source of entertainment. Xavante men spend hours planning treks and telling tales of fights and hunting exploits. Xavante men enjoy all aspects of hunting, especially since it allows them to make a public exhibition of their manliness. It is an expression of virility. Xavante women, for their part, are inter-

ested in the end product. They are cold towards an unsuccessful hunter, discuss at great length the prospect of getting meat, and send their children to find out for them when the hunters are expected to return.

Xavante ceremonies have been compared to classical ballet, as the performers try to create a harmonious spectacle where beauty is most important. The Xavante word for "ceremony" is *dasipse*, which translates as "something that makes oneself good." The performances are carefully prepared, enjoyed by players and spectators, and regarded as a major form of aesthetic expression.

In 1996 an unusual event took place in Brazil. That year the world-wide-known Brazilian heavy metal band Sepultura (grave) recorded with the Xavante people and featured it on their album *Roots*. A small number of Xavante even traveled to Sao Paulo to participate in Sepultura's "Noise Against Hunger" concert in 1998.

### 18 FOLK ART, CRAFTS, AND HOBBIES

Among the first Xavante artifacts to become known to the outside world were the *uibro*. Characteristically used by the Young Men's age-grade, the *uibro* are war clubs that symbolize power. They are made from a young tree so that part of the root can be left as a knob at one end. The other end is sharpened to a point, and the club is exposed to the heat of the fire to make it hard. Many *uibro* were found by the corpses of people they had killed in the days when the Xavante were fighting the Brazilians. Other more polished clubs, decorated with woven bastwork, are carried by Mature Men. With one end pointed and the other broad, they can be used for digging and striking respectively.

One of the most stunning art forms of the Xavante is body painting. The process of making the paint the Xavante use to decorate their bodies is almost as elaborate and interesting as the designs themselves. They use the pasty covering of scarlet seeds, which are boiled to release the pigment. The bright red pigment is then mixed with oil and left until it congeals. The mixture is shaped into a ball and is then ready for use as a dye, insect repellent, or in decoration. To make domestic objects of wood, the Xavante use a chisel and fire. Fire is made by twirling between their palms a thin stick of wood into the surface of a thicker one until sparks are produced that ignite the sawdust. The chisel has been made in the same way for the last 200 years. Using a splinter of stone, they rub a piece of iron until they can cut it. Then it is sharpened with another type of fine stone. Finally, it is attached to the handle, which is made of wood. Other tools are the cutting teeth of the piranha fish and the sharp claw of the great armadillo. Palm leaves and bark from trees are plaited to make most household utensils, such as baskets, mats, and fans. A Xavante man can make a carrying basket out of green palm fronds in a matter of minutes, an ability that proves useful when hunting away from home.

Xavante's women weave an amazingly strong kind of basket, which is used for carrying newborn babies. The basket's wide strap is placed across their forehead while the basket lays against their back, freeing up the woman's hands for other tasks.

### 19 SOCIAL PROBLEMS

Amerindian tribes in Brazil are still burdened by colonization. The groups that survived the European "discovery" of the

Americas were being pushed off of their land at the end of the 20th century by private companies. Contact with Whites has also created the need among the Xavante to learn the national language and culture, in order to be able to function in the newly imposed way of life. However, education is not attainable by all, a fact that leaves many unable either to continue living in their traditional way or to embrace the new one.

Nevertheless, the Xavante are recognized as one of the most forceful people of the many Brazilian tribes. They frequently send their representative to Brasilia to defend their rights and insist on better treatment. The Xavante Mario Juruna, the first Amerindian to become a deputy in Brazil's parliament, spoke of the dangers and the wishes of his people: "Indian wealth lies in customs and communal traditions and land that is sacred. Indians can and want to choose their own road, and this road is not civilization made by Whites....Indian civilization is more human. We do not want paternalistic protection from Whites. Indians today...want political power."

The Xavante, like many other Amerindian tribes, are an endangered people. Modern technological society is threatening their way of life with the dangers of environmental degradation and cultural extinction. The Xavante and 11 other tribes such as the Karajá, Krikati, Bororo, and Tapirapé, among others, are facing the construction of a series of dikes on their life-sustaining rivers. The industrial waterway would dynamite, canalize, and dredge 1,200 miles from the mouth of the Amazon River through the Araguaia/Tocantins river basin, one of the world's most important reserves of biological and cultural diversity. Alterations of the river systems, proposed for 87 different sites, could have disastrous effects on the ecosystem causing the collapse of river banks, siltation, erosion, and flooding.

### 20 GENDER ISSUES

Xavante perceive their society through a male ideology. Men are seen as the guardians of culture and tradition and are responsible for the continuity of society. If it is through men collectively that society is culturally maintained, it is through women individually that it is renewed, through each body and each birth. In contrast to the central plaza of a Xavante village, considered as male and public space, the Xavante house is a female domain. The authority of Xavante women derives mainly from their control over the production, transformation, and distribution of food at the domestic level.

The women are responsible for looking after the house and plantations, while the men tend to do more of the hunting. There are some tasks that are gender specific to the tribe and there are some tasks that are shared between the genders.

Xavante society presents a sharp distinction between male and female naming practices. Women have a "girl's name," usually known and used only by members of their household, and a "woman's name" as a proof of maturity. The latter is conferred by groups of men in a public ceremony and never abandoned or substituted. A Xavante girl is said to become a woman at the birth of her first child.

# INTRODUCTION

by  
Rhoads Murphey

The first humans, or their immediate ancestors, seem clearly to have evolved in East Africa. By about two million years ago these creatures had spread to Asia and Europe. Archeologists have labeled them *Homo erectus*, and their bones and tools have been found in China, Java, and elsewhere in Asia. Over the time since their arrival in Asia, the minor physical differences that distinguish modern Asians from Africans or Europeans gradually emerged. The cold areas of Siberia were penetrated by people later and more slowly, but by about half a million years ago, that migration had also been accomplished. Australia was settled by people from Asia, probably via a land bridge linking the two continents at a time of lower sea level, by about 50,000 years ago. By about the same time, people also spread via Southeast Asia into Oceania (the islands of the Pacific east of Indonesia).

The native people of Siberia—Yakuts, Tungus, Kazakhs, Uzbeks, and many others—spoke different languages and had quite separate cultures. The Uzbeks and a few others who occupied dry areas had developed irrigated farming in scattered oases by about the beginning of the Christian era. The other Siberian groups remained dependent on hunting, gathering, and trapping in the vast forests.

## AUSTRALIA AND OCEANIA

Most of the inhabitants of Oceania also practiced hunting, gathering, and trapping until quite late, although they practiced rudimentary agriculture, based on cultivation of coconuts and taro and including the raising of pigs and fishing, by the second millennium BC. There are three major groups of the peoples of Oceania, each speaking a different language. (In the case of New Guinea, by far the largest unit of Melanesia, the people spoke many different languages). The groups are Melanesians, so called from their dark skin color, since *mela* means black; Micronesians, inhabiting a great number of small islands south and east of Melanesia; and Polynesians, settled over a huge arc of the Pacific on smaller islands as far east as Hawaii, speaking a common language, and sharing a common culture. (Polynesians of New Zealand have been known as Maoris since the fourteenth century AD.) The Polynesians are renowned for their long sea voyages in small outrigger canoes, which carried them over great distances in search of new islands to settle.

The aborigines of Australia are a different group that migrated from the Asian mainland much earlier than those who peopled Oceania. Thus, these Australian aborigines are largely unrelated to the Melanesians, Micronesians, or Polynesians; they survived in Australia with a relatively primitive technology centered on hunting and gathering without even domesticated animals.

In Siberia there was little change in culture or technology until the coming of Russian people in their expansion across Asia, beginning in the fifteenth and sixteenth centuries AD.

Russian explorers and conquerors crossed the Ural Mountains, the conventional boundary between Europe and Asia, seized Kazakstan and Astrakhan immediately east of the Caspian Sea by the early seventeenth century, and reached the Pacific by 1639. Their chief objective was to obtain furs, long Siberia's major export, but they also sought to colonize this vast area in the name of the Czar (the ruler of Russia). Russians became, and remain, the dominant settlers of Siberia in a narrowing wedge of patches as far east as Irkutsk near Lake Baikal, with a further extension in the valley of the Amur River that forms the boundary with China. Siberia is the center of the route followed by the Trans-Siberian Railway, completed by 1905, and the cities along it are dominated by Russian inhabitants. Although they have been drawn into the web of commerce, they are still hunting and gathering, mining for gold, and producing timber for export from the huge Siberian forests.

Oceania was penetrated by Westerners beginning in the late eighteenth century. These Westerners were largely explorers and whalers, many of the latter from New England. The cultures and peoples of Oceania were not too affected until the advent of missionaries and permanent white settlers, who (in Hawaii especially) attempted to convert the Polynesians to evangelical and puritanical Christianity, which condemned many aspects of their traditional culture. Europeans, including missionaries, had invaded New Zealand by 1820 AD, although the islands were not formally taken over by Great Britain until 1840. Many of the Maori inhabitants there were killed in small wars with the new arrivals. However, Maoris still constitute about five percent of the total population, with a number of mixed Maori-white descent.

Australia was first settled by whites, predominantly British, late in the 1780s. They quickly drove off or killed aborigines who lived in the better-watered areas along the coasts, pushing their settlements inland, where large areas of wheat and other crops were planted, and even larger areas were converted to grazing for sheep and cattle. Aborigines now survive on reservations in the driest and most remote areas, but are dwindling in numbers. Most now hold low-paying jobs in the dominant white economy, in areas including the big cities along the coast.

## SOUTH AND SOUTHEAST ASIA

The rest of Asia south of the former USSR and east of Afghanistan—sometimes called Monsoon Asia—is composed of the modern states of Pakistan, India, Nepal, Bhutan, Sikkim, Bangladesh, and Sri Lanka (together constituting what is called South Asia); Burma, Thailand, Laos, Cambodia, Vietnam, Malaysia, Singapore, Indonesia, and the Philippines (together constituting Southeast Asia); China, Korea, and Japan. Peoples of the Paleolithic or Old Stone Age were settled in all of these areas from about one million BC to about 25000 BC. The early

habitation by *Homo erectus*, including Peking Man and Java Man, gradually gave way to the universal spread of *Homo sapiens*, or Modern Man. But the pace of other change remained slow until about 30000 BC, when the last phase of glacial ice advanced and its subsequent retreat changed the physical environment and stimulated new adaptations. Fire had been used since about one million BC, but after about 30000 BC stone tools slowly improved and population probably increased.

The big change was the Neolithic revolution from about 10000 BC, including the appearance of settled agriculture. Neolithic means New Stone Age and finer and finer stone tools continued to be made. These were increasingly supplemented by tools of bone, including such delicate items as bone needles for sewing and bone fishhooks. Clothing—leather suits, suits or jackets made of fur pelts sewn together, fur hats, and leather boots—could now be made much less crudely and fitted to each individual. Hunting could now be supplemented on a larger scale by fishing, and population again increased. Agriculture began in two quite different and widely separated areas: the uplands of southwest Asia surrounding the Tigris-Euphrates lowland of Mesopotamia, and the coastal or near-coastal areas of mainland Southeast Asia, especially in what are now Thailand and Vietnam.

Neolithic settlements in what is now Turkey, Palestine, Syria, northern Iraq, and Iran began the transition from gathering grains, including the ancestors of wheat, in the wild to planing the seeds in tended fields. Wheat, barley, and other steppe (dry climate) grasses were native to this area of winter rains. Neolithic stone-toothed sickles, dated to about 10000 BC, have been found there with a sheen on them from cutting such grasses with their grain heads. Dating from a little later, small hoards of stored grain have been found. It must have been a longish process of adaptation from gathering grains in the wild to planting them, perhaps originally by accident, in fields that could be prepared and tended until harvest. Fields growing only the desired plants could obviously yield far more than could be gathered in the wild. But they did require care, and hence a permanent settlement was developed, usually one where a supplement of water was available. Soon after 10000 BC stone mortars (grinders) appeared, indicating that the grain was ground into flour and that it helped support a population beginning to grow well beyond what could be sustained by hunting and gathering.

By about 7000 BC there were large and numerous storage pits for grain, and clay pots for the same purpose and for storing and carrying water. By this time cultivated wheat, barley, and peas had evolved into more productive forms than their wild ancestors, probably through purposeful selection of the best seeds by the cultivators. Sheep, goats, and dogs were domesticated instead of being hunted, and in the case of dogs, used as hunting assistants. A thousand years later cattle and pigs had joined the list of domesticates. By about 4000 BC or slightly earlier agricultural techniques were advanced enough and populations large enough to allow the expansion of settlements into the different environment of the Tigris-Euphrates lowland, and somewhat later to the Indus valley in what is now Pakistan. Most of these areas were desert or near-desert, but the river floodplains, with their fertile soils and long growing seasons of high temperatures, were very productive if they could be given water through controlled irrigation. Both rivers are fed by rains and melting snow in their mountain source ar-

reas, and are thus subject to seasonal flooding, which had to be protected against. Techniques of irrigation and flood control were developed at about the same time in Egypt. The names of the cities supported by the newly productive agriculture are recorded in the world's first written texts, scratched on clay tablets while they were still wet: Ur, Eridu, Nippur, and others.

The Neolithic revolution was completed with the development of metalworking and the production of bronze tools and weapons. In Mesopotamia by about 4000 BC successive experiments mixing copper with tin and lead in varying proportions produced bronze, which made all these innovations possible, including the division of labor whereby some people were able to pursue non-farm occupations such as smelting and working metals. Perhaps through trade, agricultural and irrigation techniques spread east from Mesopotamia and western Iran, and by about 3500 BC were fully developed in eastern Iran, Afghanistan, and the fringes of the Indus valley. By or before 3000 BC irrigated agriculture was established on the floodplain of the Indus and its major tributaries, where the first true cities of monsoon Asia arose, growing out of Neolithic villages and towns. There and in Mesopotamia and Egypt cities had bureaucrats, tax collectors, priests, metalworkers, scribes, schools, and traffic problems, almost all the features of our own times.

In mainland Southeast Asia, the other equally early hearth of agriculture, upland fringes of river valleys and areas along the coast had probably begun to practice farming soon after 10000 BC. On the coast, gathering and early cultivation could be supplemented by fishing and by collecting from shellfish beds. This is an area of warm temperatures, ample rainfall, and an unbroken growing season. Rice and several tropical root crops such as taro and yams were native there in wild form. Root crops are easily cultivated in this tropical climate by setting cuttings in the ground. Rice was probably domesticated somewhere to this area. Unlike the dry Middle East, the constant humidity and high temperatures meant that no organic remains lasted very long, and we thus cannot date any of these developments accurately. But stone tools and the evidence from charcoal fires suggest that by at least 8000 BC, in what is now northern Vietnam, local people had moved from gathering to agriculture. By about 4000 BC, as in Mesopotamia, bronze objects had begun to appear there and in nearby northern Thailand (although this was long before the Thais, migrating south from south China, occupied the area). Chickens and pigs, both native to mainland Southeast Asia, are also identifiable at these sites, and at one there is a large cemetery, suggesting a large population. Later, perhaps by about 2000 BC, agriculture, by then further evolved, moved down from the early upland sites to the fertile floodplains of the great Southeast Asia rivers, Irrwaddy (in Burma), Mekong, and others, a move which paralleled the earlier one in Mesopotamia.

Most of the modern inhabitants of Southeast Asia came originally from what is now China, including Tibet, many thousands of years ago, although they surely interbred with other people already there. It seems to have been other waves of migrants from the Chinese course area that produced the people called Malays, who became the dominant inhabitants of the Malay Peninsula, what is now Indonesia, and the Philippines. Ethnically and physically the varied Malay people are broadly similar, speaking related languages and sharing a generally common culture, but they did not penetrate beyond what is now eastern Indonesia. The areas east of there belong

within Oceania, outlined above as Melanesia, Micronesia, and Polynesia. As they migrated south and east, the Malays brought agriculture and domesticated animals with them. The fertile volcanic island of Java came to support by far the greatest concentration of population.

## INDIA (SOUTH ASIA)

The Indus civilization collapsed by about 2000 BC, but we do not know for sure who its people were. We cannot read the script they wrote on clay tablets, but it seems likely that they were relatively dark-skinned ancestors of the present inhabitants of southern India. Beginning about 1700 BC or slightly later, the north was invaded over several centuries by a lighter-skinned central Asian or Iranian people who called themselves Aryans, speaking an early form of Sanskrit, the ancestor of the modern languages of the north, and through its Iranian (Persian) connection also those of modern Europe. In the years following 2000 BC these Indo-European people, as they are called, migrated both east into India and west into what is now Greece and Turkey from an original homeland probably in what is now Iran, bringing their language with them. In India they intermarried with the people already there, but although they remained a minority their military skills conquered the north, while mountain barriers and southern resistance kept them largely out of the south. The new rulers of the north evolved the religion of Hinduism, a blend of the ideas of the Indus civilization with those brought in from Iran, centered on the supreme gods Vishnu, Brahma, and Shiva, with many lesser gods, but basically monotheistic (one god) in its belief in a single creative principle and the sanctity of all life, or the great chain of being. According to Hindus, the faithful following of *dharma* or duty produces a good *karma* or character, which in turn determines identity in the next re-birth; a bad karma may result in re-birth as an animal or insect, while a good one can even result in escape from the endless cycle of re-birth to a bodiless reunion with the godhead, or *moksha*, equivalent to the Buddhist *nirvana*. Hinduism spread to all parts of India and remains the dominant religion even in the south.

Buddhism is a later offshoot from Hinduism that was developed in the sixth century BC, sharing most of its beliefs but centered on denial of worldly preoccupations, following the four noble truths announced by the Buddha: Life is full of pain, suffering, and impermanence. This is caused by desire. To end suffering, end desire. To end desire, end worldly attachments and live a charitable and holy life. Buddhism gradually was reabsorbed into Hinduism by the thirteenth century AD, and the few remaining Buddhists were slaughtered by the Islamic invaders early in that century. By the beginning of the Christian era Buddhism had spread to Southeast Asia and China, and from China to Korea and Japan, although it was later extinguished in the land of its birth. Most Indians, both Hindus and Muslims (followers of Islam) take religion far more seriously than any people elsewhere, and religion is still a major part of South Asian life.

The Mauryan empire, which ruled the north from 322 BC to about 180 BC, was followed by fresh invasions by several central Asian groups including those who formed the Kushan kingdom which ruled north India from about 100 BC to about 200 AD. Before the Mauryas Alexander the Great of Macedon had also invaded India and left behind several Greek kingdoms in the northwest. Trade with the Mediterranean continued for

several centuries thereafter, and early Christianity was carried to India in the first century AD. After the fall of the Kushans India relapsed into its more normal pattern of separate regional kingdoms until the rise of the Gupta empire which ruled the north from about 320 AD to about 550 AD. It was destroyed by new invaders from central Asia, probably Iranians, one more in the long succession of ethnically and culturally different outsiders drawn into India through its western passes and woven into the Indian fabric to form a hybrid population and culture. Outside groups however never conquered the south, which still speaks languages of the north. In the sixth century BC, the island of Ceylon (now Sri Lanka) off the southern tip of India was settled by the Sinhalese from north India largely displacing the original less technically developed inhabitants, the Veddas. Later Dravidian migrants from south India, the Tamils, settled in the north of the island, with their Hindu faith, but the Sinhalese had earlier been converted to Buddhism, which remains the major religion.

Beginning in the twelfth century AD India was again invaded, this time by Afghans and Turks from central Asia who brought with them the crusading religion of Islam. They were fiercely intolerant of other religions, and forced many Indians to convert to Islam while oppressing Hindus, but never conquered the south. The Delhi Sultanate, which ruled most of the north from 1206 to 1526, was replaced by the Mughal Dynasty which conquered Delhi and established a new empire that lasted into the new colonial order established by the British. The Mughals also came from central Asia, but were the carriers of a largely Persian culture as well as of Islam. Originally tolerant of Hindus, still the great majority of Indians, they later became less so and thus helped to sow the seeds of antagonism between Hindus and Muslims, although they never conquered the south. By 1600 the population of undivided India was about 100 million.

The last invaders of India were the British, never more than 100,000 in total but the dominant group after about 1800 out of a population which reached 200 million by 1800 and 400 million by the end of the Colonial period. The British transformed the country in partnership with many Indians. Some of the British married Indian wives and produced a new hybrid group of Anglo-Indians, while building a huge rail network and stimulating the beginnings of industrialization. Their early coastal trade bases: Calcutta, Bombay, and Madras, became the biggest cities in India, as Calcutta and Bombay still are, while Madras was overtaken after independence in 1947 by the capital of Delhi-New Delhi, a twin city where the Mughals had also ruled. South India had been ruled in Mughal times, as under the Delhi Sultanate, by many independent kingdoms, and it still preserves a distinct regional culture, distinguished from the north also by its different languages, collectively known as Dravidian. Modern India is thus a mixture of peoples, languages, and religions, more diverse than in any modern state. At independence in 1947, India was partitioned at Muslim insistence into Pakistan in the northwest, where there was a Muslim majority, and, later, Bangladesh in the east, also a largely Muslim area, leaving what is now the Republic of India occupying the largest share of the sub-continent. South Asia as a whole now has a population well over one billion, larger even than China's.

The small Himalayan kingdom of Nepal, independent since 1923, also has a mixed population, including Tibetans

with both Hinduism and Buddhism practiced. The neighboring kingdoms of Bhutan and Sikkim remain under Indian supervision while nominally independent. There is a long list of people called “tribals,” by no means all of them primitive and some highly developed. “Tribals” are concentrated in mountainous central India and along the mountain borders of India, Pakistan, and Bangladesh.

Ceylon (called Sri Lanka since 1975) had never been politically united with India but in larger terms belongs within Indian culture, except for its continued adherence to Buddhism. It became independent in 1948, but then was torn by violence between the dominant Sinhalese and the minority Tamils, about 18 percent of the population. Roughly half of the Tamils have lived there for some 2000 years after migrating from nearby south India. The other half are more recent arrivals in the nineteenth century who came to work on the tea and rubber plantations, and remain an underprivileged group. Tamil terrorism in support of their demands for regional autonomy has been met by harsh reprisal in an atmosphere close to civil war.

## SOUTHEAST ASIA

The label of Southeast Asia is a term of convenience rather than one that suggests regional coherence. It includes nine modern states: Burma, Thailand, Laos, Cambodia (Kampuchea), Vietnam, Malaysia, Singapore, Indonesia, and the Philippines, which have never operated as a political unit. Most of them also contain a variety of minority peoples, and most won their independence from Western colonialism only after the World War II. Burma (which the military dictatorship there renamed Myanmar) is dominated by the lowland Burmese who settled in the valley of the Irrawaddy before recorded history. Burma contains in its hill and mountain fringes a number of separate people who have similar origins in southwestern China but different cultures and languages; Shans, Kachins, and Karens are the largest such groups, in the past beyond the control of the Burmese government and now in chronic rebellion. The traditional capital was at Mandalay (earlier at Paga) in the mid-Irrawaddy valley. Thailand (formerly Siam) is numerically more dominated by the lowland Thais of the Menam or Chao Praya River, even though they seem to have become the main inhabitants more recently than the Burmese; they too came originally from south China, but probably in successive waves over many centuries, the last being in the thirteenth century AD. Laos is a small mountain country chronically split into factions, but the inhabitants are preponderantly Thai. Cambodia is what remains of the once far more extensive Khmer empire, which included much of what is now southern and central Thailand and southern Vietnam. The Khmers also originated in south China, following the valley of the Mekong River.

The Vietnamese are closely related to the Chinese and were for a thousand years incorporated into the Chinese empire. They reclaimed their independence in the tenth century AD and have always been a separate people with their own language. Their early center was in the valley of the Red River with their capital at Hanoi, but beginning in the thirteenth century AD they extended their occupation and rule southward, at the expense of the Khmers, and by the fifteenth century were the dominant inhabitants of the lower course of the Mekong River and its delta in southern Vietnam. The western mountain borders of Vietnam have long been occupied by a variety of dif-

ferent peoples, called by the French, who ruled Vietnam from 1886 to 1954, simply “Montagnards.” Malaya (known as Malaysia since 1963), occupying the tail of mainland Southeast Asia, was until recently thinly settled by Malays, with the towns being populated primarily with people who originated in China. As a British colony, Malaya boomed after 1890, when the discovery of tin and the developed of new rubber plantations produced major exports. As such, Malaya attracted large numbers of migrant Chinese and Indians as laborers, who became a dominant presence in the country. Chinese entrepreneurs prospered, handling much of Malaya’s trade with Indonesia. Following Malaya’s independence in 1957, Singapore was separated from the new state in 1965 and at the same time other formerly British areas in northern Borneo were added, to form the new state of Malaysia, primarily to reduce the proportion of Chinese and to give Malays a stronger majority. North Borneo includes some Chinese, but also more tribal groups such as Dyaks, Bugis, and others. Independent Singapore remains as a tiny city-state, 80 percent Chinese and 8 percent Indian.

Indonesia is both the largest and the most diverse country of Southeast Asia, composed of some 3000 islands inhabited by a great variety of people and never governed as a unit until the Dutch colonial rulers took over most of it at the end of the nineteenth century. The island of Java has always been by far the most populous and most developed; its language, Javanese, was not shared by the other islands, although its Malay culture was. Cultural influences from classical India were formative from the third century BC to the fourteenth century AD and survive in the Hindu-Buddhist religion of the island of Bali. From the fifteenth century Islam began to spread into what is now Indonesia via the trade routes from India, and is now the official state religion, but Christianity was established especially in the outer islands beyond Java by Portuguese, Dutch, and American missionaries, and original animism remains vigorous in many areas.

Modern Indonesia includes the large islands of Sumatra and Borneo (except for its northern coast), Celebes or Sulawesi farther east, the several small islands of the Muluccas or Spice Islands beyond, and many others directly east of Java, including Bali, each of these with its own original language. In 1960 the new Indonesian state, independent of Holland from 1949, forcibly took over the western half of New Guinea and named it Irian, thus adding a veritable welter of unrelated aborigines in hundreds of different tribal groupings. To try to give the new state some coherence, the Indonesian government created a new national language, Indonesian, based almost entirely on Malay, long the universal trade language of maritime Southeast Asia. It was taught in all schools, and most people in Indonesia necessarily became bi-lingual, retaining their own languages among themselves. The capital remained at Djakarta in west Java, where the Dutch had ruled. Java has long been extremely densely settled but also highly productive with its rich volcanic soils and unbroken growing season. The other islands, except for parts of Sumatra and Bali, are by contrast thinly populated. The Javanese may be regarded as a single people, but the rest of Indonesia, with a total population now of about 200 million, is made up of a very long list of separate cultural and language groups, including tribal groups.

The Philippines is even more fragmented than Indonesia—some 7000 islands rather than only 3000—and thus preserves many regional cultural differences. But conquest by Spain in

the sixteenth century, and by the United States in the twentieth, have brought nearly universal conversion to Christianity, a high literacy rate, and the rise of strong national consciousness, despite the survival of many small tribal groups and their separate cultures in the mountainous areas, even on the main island of Luzon, where Manila, the capital is also located. There is a somewhat larger community of Muslims on the southernmost island of Mindanao, a group known as Moros, relics of the early spread of Islam. Otherwise English has replaced Spanish as the major common language, although the official state language is Tagalog, a Malay-related language of lowland Luzon.

## CHINA

This most populous country in the world is dominated by ethnic Chinese called Han, but also includes a great number of ethnic and cultural minorities, altogether 6 percent of the total. The main non-Han groups are the Tibetans, Mongols, and Uighurs (in Sinkiang-Kinjiang), but others include the Manchus of Manchuria, the Khirghiz and Kazaka of Kinjiang, and a great number of groups scattered around south and southwest China too numerous to mention. The latter were the original inhabitants of most of south China but have been pushed off the best lands and into the mountains by the advancing wave of Han Chinese migration from the north, spread over the period from the fourth century BC to the present. There were several centers of early civilization in China where settled agriculture, bronze-making, and writing were gradually evolved. The best preserved evidence is in the dry north, in the middle Yellow River valley, where a fully developed late Neolithic site has been excavated at Banpo near modern Sian (Xian). Southern sites are less well preserved in a warm humid climate, but equally early developments with some archeological evidence have been found in the lower Yangtze valley and south of there. By about 2000 BC the Black Pottery Culture or Lung Shan in the north was building cities with pounded earth walls, making bronze, and producing early writing, while such developments were also present in the south.

Given the early evolution of agriculture, bronze, and domesticated animals in adjacent Southeast Asia, it seems probable that these techniques spread early into south China and were diffused northward from there. This included rice, the water buffalo, pigs, and chickens, all native to mainland Southeast Asia. There are no major mountain barriers between Thailand or Vietnam and south China, and until more modern times it is best to think of this area as a single cultural unit. It is hard to imagine Chinese agriculture without even one of these imports from Southeast Asia, something which strengthens the case for origins in south China as early as those in the north. By 1600 BC the first authenticated Chinese dynasty, the Shang, had emerged in the Yellow River valley, leaving behind written records using characters close to those still in use. Bronze making reached a height of perfection never surpassed elsewhere, and the Shang capitals, which were frequently moved, became true cities. Shang technology was probably matched in all respects in central and south China, which belonged to different cultures. The Shang were overthrown in 1027 BC by the Chou (Zhen) who founded a new dynasty which lasted until 221 BC when it was in turn overthrown by the Ch'in (Qin) conquest. The last several centuries of the Chou however were marked by the rise of rival regional states in north, central, and

south China as central control weakened. This was the period of Confucius (c. 551–c. 79 BC), who aimed to treat the chaos of his time by a return to order, following what he called the rules of an earlier golden era. His rough contemporary Lao Tzu rejected the Confucian prescriptions in favor of a philosophy based on inaction and contemplation, the heart of the religion he founded known as Taoism (Daoism), or simply “The Way.”

The Ch'in conquered all of the other rival states in a series of lightening campaigns culminating in 221 BC, and imposed its own imperial model on what had heretofore been a wide variety of regional cultures, including both spoken and written languages. Until this occurred, one could not speak of China or the Chinese as a single people but as a collection of separate groups united for the first time by the Ch'in as the first all-China empire. The Ch'in conquered much of the south plus northern Vietnam, but its rule was oppressive and it fell in a series of revolts, to be succeeded by the Han dynasty in 202 BC. Under the Han, which ruled until 220 AD, most of the area now within China's modern borders was conquered, and the movement of the Chinese southward acquired new momentum. The Chinese still call themselves “people of Han.” The Han empire included southern Manchuria, settled in large numbers by Han Chinese, northern Vietnam, parts of Inner Mongolia, and the far western desert of Sinkiang (Xinjiang), through which the silk road ran, guarded by Han watchtowers and garrisons. To begin with, most of the south was still occupied by non-Han people, but over the following centuries they were displaced by the movement of Hans from the north, especially after the fall of the dynasty in 220 AD and the invasion of the north by barbarians from the steppe. The Han census recorded a total population of 60 million, but the real total was almost certainly at least 80. We have only guesses for earlier periods, but the population of the whole of China in Shang times has been estimated at 5–10 million, and by mid-Chou at 20–30 million.

Buddhism had spread to China under the Han, via central Asia, and in the “time of troubles” after 220 its other-worldly message of salvation attracted many followers, although in many cases it blended with the Taoism already there. With the revival of empire under the T'ang dynasty (618–907) there was new resistance to this alien religion with its denial of the material world, and in the ninth century the T'ang government confiscated the large Buddhist landholdings as a threat to the state. From that time on Buddhism remained a small minority religion, merged with Taoism, in a society where Confucianism was again dominant. The T'ang reclaimed the empire won by the Han, and established new contacts with central Asia, while briefly occupying Tibet, although Chinese control there was not achieved until the eighteenth century. Korea, occupied as part of the Han empire, was not obliged to accept status as a tributary state, as was Vietnam after the fall of the T'ang. The Sung (Song) dynasty (960–1279) continued this arrangement but gave up the costly and unprofitable effort to hold Inner Mongolia, Sinkiang, and Tibet—until it was overwhelmed by the Mongol invasion which also conquered most of the rest of Asia and swept even into Europe. By 1350 the hated Mongols had largely been driven out of China, and the Ming dynasty (1368–1644) reaffirmed the traditional Chinese system, as did its successor the Ch'ing (Qing-1644–1911). Population totals reached 100 million in the Sung, 150 in the Ming, and 450 by the end of the Ch'ing.

With the fall of the Ch'ing in 1911, China lapsed into the chaos of the warlord years, briefly and incompletely relieved by the nationalist government from its capital at Nanking (Nanjing) for the ten years between 1927 and the full-scale Japanese attack on China in 1937. The long and bloody anti-Japanese war helped to destroy the nationalist government and to build up support for the Chinese Communist Party with its effective guerrilla resistance to the hated Japanese in north China. The Japanese had taken Manchuria in 1931 and developed its rich resources to create the largest industrial complex in East Asia, but Manchuria had been massively settled by Han Chinese from the late nineteenth century and was reclaimed by the communist guerrillas at the end of the war. The remnants of the nationalist government and its army, defeated by the communist advance into south China, fled to the offshore island of Taiwan, where the nationalists still rule.

Taiwan had been settled by Han Chinese from the early seventeenth century, slowly displacing the aboriginal occupants who now live largely on reservations, distantly related to but basically different from the Han. Taiwan had been ruled as part of the Japanese empire from 1895, but under nationalist control it experienced vigorous economic growth on foundations laid by the Japanese in industry, agriculture, and communications. Meanwhile the new communist government on the mainland declared the founding of the People's Republic in 1949, and announced a new policy toward the many non-Han minorities, who were to be given recognition as members of the greater Chinese family. Tibet, brutally re-occupied in the 1950s, Sinkiang, and Inner Mongolia were designated as "Autonomous Areas," but the hand of the Chinese state was strong and the people of these areas continued to be dominated by Han Chinese, who held all power together with their local collaborators. Smaller areas in mountainous south China where non-Hans remained numerically important were designated as "Autonomous Regions," including large sections of Kiangsi (Jiangxi) Province. But "autonomy" remained a cruel joke, and there were pressures on all non-Hans to conform to the standard Chinese way if they were to succeed in the new society.

One reason for Chinese reassertion of control was that most of these areas, especially Tibet, Sinkiang, and Inner Mongolia, lay along the country's international borders and hence had some strategic significance, especially after China and Russia became adversaries rather than allies in the late 1950s. Another reason was the new government's determination to reclaim all of the territory held by the great Chinese empires of the past, and thus to establish its credentials as their successor. Chinese behavior in Tibet, where there has been an effort to suppress Tibetan Buddhism and to root out other elements of Tibetan identity, has been so brutal, especially toward Tibetan protests, that it has attracted international censure. In Inner Mongolia, the tide of Han Chinese settlers has engulfed the remaining Mongol population and now outnumbers it by at least twenty to one, replacing the traditional pastoral nomadic economy with commercial agriculture and industrialization. Outer Mongolia, where Mongols are still the (slight) majority, declared its independence from China in 1921, but there too the trend is toward agriculture and industry rather than the traditional pastoral nomadism. In Sinkiang, Chinese technicians, managers, and political bosses are almost as numerous as the indigenous Uighurs, and the capital at Urumchi (Ulumuqi) has become a major industrial center. Wherever a

technically more advanced, more powerful, and more numerous people has become dominant over another population, it tends to overwhelm the latter and to force it to accept the rule and ways of the dominant group. (We have ample evidence in the fate of the North American Indians.) Non-Hans are about 6 percent of the total Chinese population, but the numbers have become vaguer as many Hans marry non-Hans in order to get the benefits reserved for the latter. Muslims are listed as by far the largest minority, although nearly all are in fact Han Chinese. Total population of China doubled between 1949 and 1982 and is now over one billion.

## KOREA

The Korean people came originally from eastern Siberia and northern Manchuria, as their spoken language, unrelated to Chinese but akin to Japanese, suggests. We do not know when this migration into the mountainous Korean peninsula may have taken place, but it was well before the beginning of any written records. By 2000 BC agriculture and domesticated animals spread to Korea from China; bronze-making was diffused from China somewhat later. The early Koreans were tribal peoples dependent on hunting, gathering, and fishing. As their culture merged into farming, permanent villages and towns arose, and bronze weapons and ornaments began to be made. Northern Korea, adjacent to Manchuria, was incorporated in the Han empire and settled significantly by Han Chinese, who introduced most elements of Chinese culture, at least to the Korean upper classes. Chinese influences continued after the fall of the Han dynasty, but Korea divided into three rival kingdoms which were later unified by the state of Koryo (the origin of the name Korea) in the tenth century. Buddhism had spread to Korea from China during the Han dynasty and spread widely, but after the founding of the Yi dynasty in 1392 Confucianism was favored and Korean Buddhism declined. Korea, especially its upper class culture, became a faithful echo of China while retaining its Korean distinctiveness. Koreans referred to China as "Elder Brother" and looked up to the Chinese model in all things, producing their own accomplishments in ceramics, printing, and the early use of moveable type as well as a magnificent art in the Chinese style but recognizably Korean.

The early tribes at the beginning of Korean history slowly merged into a single Korean people, and no traces of any early distinctions remain. Korea was conquered by the Mongols and was terribly exploited, including the forcing of its army and navy to aid in the Mongol conquest of China and its fruitless attempt to conquer Japan. After the Mongol collapse, Korea slowly recovered but then had to fight a Japanese invasion by the warlord Hideyoshi from 1592 to 1598 which devastated the country. There were some Korean successes against the Japanese, but Hideyoshi died in 1598 and his troops quickly returned to Japan. The Yi dynasty slowly lost effectiveness and was crippled by factional fighting among different upper class groups. It stubbornly resisted foreign pressures to open the country to trade and clung to traditional Korean culture, trying to prevent the disruption that inevitably comes with change. In the end, the Japanese took over Korea in 1895 and ruled in oppressively until their defeat in the second world war in 1945. Korea's population grew from an estimated five million in 1669 to 9 million by 1800 and continued to rise slowly

during the nineteenth and twentieth centuries to a 1995 total of over 60 million in north and south Korean combined.

In 1945, the newly independent Korea was partitioned between a Russian puppet government in the north and an American puppet regime in the South, as a reflection of the Cold War. This led directly to war when the North invaded the South in 1950, a campaign that was halted just short of success by an American-dominated United Nations force in aid of their South Korean allies, who drove slowly north, devastating the country yet again as they advanced. A stalemate was reached, and the armistice signed in 1953 returned matters almost exactly to where they had been before, the country still divided roughly along the 38th parallel. Since then the South, still a police state, has seen strong economic growth, while the even more repressive communist government in the North was less successful. Dangerous tensions between the two halves of the artificially divided country remained.

## JAPAN

As an island country—four main islands and many smaller ones—120 miles off the coast of Korea at the nearest point, Japan has preserved a separate identity and its culture has remained a distinctive variant from those on the Asian mainland. Like the Koreans, the present-day Japanese people can be traced back to migrants from northeast Asia or eastern Siberia, speaking an Altaic language related to Korean but not to Chinese. There were probably, however, some movements of people into Japan from south China and perhaps from the south Pacific. Paleolithic cultures were widespread in Japan by at least 50000 BC, and by about 6000 BC a variety of Neolithic cultures had arisen, of which the best known is called Jomon. Some Jomon groups had begun to practice a rudimentary agriculture about 300 BC, presumably diffused from China via Korea. They made cord-marked pottery, lived in sunken pit shelters, and engaged in hunting, gathering, and fishing. But the direct and principal ancestors of the modern Japanese did not begin to arrive, again via Korea, until some time between 300 BC and 200 AD, in successive waves. Other and unrelated groups already inhabiting the Japanese islands, including those of the Jomon culture, were absorbed by conquest and intermarriage, and the survivors of the Japanese invasion were slowly driven northward. The principal group among the aborigines was the Ainu, related to the Causasian family and with more facial and body hair than most East Asians. The Ainu seem to have been the principal opponents of the advancing wave of Japanese invaders as they moved north from their original beachheads in the southern island of Kyushu, closest to Korea, and by about 500 AD had established their chief center on the mainland of Honshu, on the Yamato Plain between modern Osaka, Nara, and Kyoto. For a long time the boundary with the Ainu lay just north of Kyoto along the line of Lake Biwa, although there was doubtless some interbreeding that may help to explain the greater hairiness of most Japanese than other East Asians.

Meanwhile the Jomon culture was progressively displaced beginning in the third century BC by an early agricultural culture called Yayoi. It is likely that the transition into settled agriculture was hastened by the arrival of the Japanese via Korea, bringing with them other new techniques used by the Yayoi people: the potter's wheel, cultivated rice, irrigation, and the beginnings of bronze and then iron tools and weapons, all diffused from China. A few Chinese coins found at Yayoi sites

show that there was trade with China, but we do not know for sure who the Yayoi people were, most probably a mix of the early Japanese and those already there. By the third century AD, with the Japanese migration largely complete, Yayoi sites included large earthen mounds over the tombs of prominent men, a practice that seems clearly to have been derived from earlier Korean models. Much of Yayoi culture, and its people, may most accurately be seen as provincial Korean. By the fifth century iron swords and armor appeared that were similar to or identical with Korean equivalents, as were the jeweled crowns and other ornaments found in some of the tombs. Houses were now raised off the ground, agriculture was becoming more productive with the help of iron tools, and pottery had become harder and more highly fired. Kyushu and Honshu had reached the technological levels achieved in China some 2000 years earlier and in Korea perhaps 1000 years thereafter. But Japan still lacked writing and we have no evidence of true cities or what the population totals may have been.

The earliest written accounts of Japanese and Chinese, compiled in the third century AD, describe the route via Korea. The country was shown as divided into a hundred “kingdoms”—probably better called “clans”—of about a thousand households each. The earliest Japanese written accounts, using the characters adopted from China, did not appear until the eighth century, strikingly late. They are a mixture of pious and often contradictory myths, especially for the early periods, with some more factual accounts of later events. They recount the story of the divine creation of the Japanese islands, and the descent of the Japanese emperor from Amaterasu, the sun goddess. We can infer that by the fifth century the earlier clan basis of Japanese society was giving way to an infant state called Yamato, on the Yamato plain, a label that the Japanese came to apply to themselves as a nation. The emperor was both a temporal and a spiritual ruler who presided over the worship of the sun goddess and the forces of nature. In later times this nature worship came to be called Shinto, or the “Way of the Gods,” but it was never a fully developed religion and had no coherent philosophy or moral code.

Immigration from Korea continued into the ninth century, and until the sixth century the Japanese retained a foothold on the southeast Korean coast. There may have been some form of alliance between groups on both sides of the Tsushima Straits, which now separate the two countries. Large numbers of Koreans lived in Japan, where they seem to have dominated or at least been prominent in Japanese society. A genealogical record of 815 AD, one of the earliest Japanese written texts, listed over a third of the aristocracy as claiming Korean or Chinese ancestry, clearly a mark of distinction. Koreans also served in Japan as skilled artisans, metallurgists, and other technologists. For some centuries there seem to have been periodic raids in both directions across the Straits of Tsushima, but by the fifth century such violent interactions faded. Those remaining in Japan continued to move northward, mainly against the Ainu, who were slowly overcome and now live as a tiny and dwindling group on reservations in the northernmost island of Hokkaido.

Buddhism came to Japan from Korea in the sixth century and brought with it further elements of Chinese and Korean culture. The pace and scope of such influences accelerated on a major scale with the rise of the T'ang dynasty of China in 618. The T'ang model of cultural brilliance powerfully attract-

ed the Japanese, who had by now reached a level in their own development where they were ready to move from a tribal and pre-literature state to a Chinese-style civilization. Successive embassies were sent from Japan to China beginning early in the seventh century, to bring back all they could learn about Chinese ways, including writing and city-building.

Japan is smaller than France or California and somewhat larger than the British Isles, but it is mainly covered with mountains. Settlement has thus remained heavily concentrated on the narrow coastal plain between modern Tokyo and Osaka, in a series of disconnected basins over an area roughly equivalent to the coastal corridor between Boston and Washington, D.C. in the United States. In practice this makes Japan an even smaller country since so much of it, in the mountains, is thinly populated. Hokkaido, the northernmost island, was occupied by the Japanese very late, mainly after World War I. Mountains retarded Japanese economic development and political unification came late, not until 1600, after many centuries of disunity and chronic fighting among rival regional groups. Agriculture too has been hampered by the shortage of level land. Japan's great agricultural advantage is its mild maritime climate, the gift of the surrounding sea, which keeps it humid, mild in winter, and largely free of the droughts that plague north China. The mountains are steep and come down close to the sea so that nowhere are there extensive plains where soil can build up. Fish from the surrounding seas have always formed an important part of the diet, especially convenient since the bulk of the population lives close to the coast. The Chinese, in their superior attitude toward other peoples, called the Japanese "hairy sea dwarfs," since they were also generally shorter than the Chinese norm (perhaps the result of a different diet, lower in meat); the "sea" is a reference to the highly successful Japanese piracy along the coasts of China.

Beginning in 710, a Chinese-style capital city was built at Nara, midway on the Yamato Plain, a direct copy of the T'ang capital, and including many Buddhist temples, the first real city in Japan. This was still a small country, and over half of the original plan for Nara was never built. A Chinese-style law code was also issued, and a census taken, but the results it reported were not clear. In 794 a new emperor began the building of a new capital at modern Kyoto (then called Heian), also on the Chinese model, as its checkerboard pattern still shows. The Japanese, despite their admiration of Chinese civilization, altered that system of government wherever necessary to fit Japan's quite different circumstances. But on the whole they successfully transplanted Chinese culture on a major scale, including T'ang music and dance, architecture, gardens, and the tea ceremony, most of these things long since gone in China. If you want to get a glimpse of T'ang China you must go to Japan, where these and other adoptions have been carefully preserved.

One important difference between Japan and China was the persistence in Japan of an hereditary and privileged aristocracy, as in Korea, where China had long before abolished it and set up a system of competitive examinations as a basis for selecting officials. Officials in Korea and Japan came only from the aristocracy. For other reasons, Japanese art, architecture, and literature slowly diverged to some extent from their Chinese origins, as was only to be expected. Japan also produced a number of outstanding women writers, including Lady Murasaki, author of the world's first psychological novel, *The Tale*

*of Genji* written about 1000 AD. Court women, such as Murasaki was, where literate, in both Chinese and the soon-developed Japanese phonetic system called *kana*, which represented the sounds of spoken Japanese. But the splendor of court life at Kyoto (Heian) was limited to a fortunate few. Most of the Japanese remained poor villagers, with limited exchange through barter, and many, perhaps most of them were, in effect, serfs. This may help also to explain the relatively slow movement of Japanese northward beyond Kyoto, not only because of Ainu resistance but because northern Japan was not a desirable place to live during this period. The Japanese had arrived at the sub-tropical island of Kyushu, and southern or western Honshu was not dramatically different. Northern Honshu, let alone Hokkaido, was cold and snowy. Japanese culture had adapted to a mild winter climate with hot summers. Their traditional houses could be opened to the breezes on all sides by sliding panels, there was minimal provision for heating, and people wore loose-fitting clothes, although all of this could be related, as some argue, to cultural or migratory influences from south China or the south Pacific.

The spread of Buddhism led to the building of many large monasteries as well as temples, and armed monks began to take part in fighting rival groups. Japanese Buddhism moved far from the Buddha's message of non-violence, and acquired magic elements such as the recitation of the Buddha's name as a means of salvation. At the same time, Japan became torn by warfare between rival secular groups. This was the age of the samurai or warriors, who destroyed the rule of Heian and set up successive military regimes headed by a *shogun*, who claimed to be the emperor's military lieutenant but was in fact the real power. The chronic fighting came to a climax in the civil wars of the sixteenth century, but was finally ended by the victory of a new shogunate, the Tokugawa, in 1600. The Tokugawa shoguns largely unified the country for the first time but tried to suppress change of any kind as threatening their feudal-style rule. Nevertheless pressures for change built up, and by the 1850's were ready to break out as trade had thrived and merchants had grown newly prosperous. In 1853, the U.S. government sent Matthew Perry to demand free trade access to Japan. His mission, resulting in a commercial treaty, sparked a new wave of change, and in 1868 a largely nonviolent revolution toppled the Tokugawa and put in power a new group of radical reformers who were determined to save Japan from western pressures by building up its military and by pushing wholesale westernization as a source of strength.

This change was called the Meiji Restoration, from the title of the new boy emperor, who in fact he remained, as in the past, an essentially powerless symbol, as the emperor still is today. Under the direction of the new Meiji era leaders, Japan quickly industrialized and became a major world power, defeating China in 1894 (and acquiring Korea and Taiwan as a result), and Russia in 1904. Japan was now acknowledged by the Western powers as an equal, but Western sentiment began to turn against the Japanese as pride in their military successes and their growing ambition led them to make plans for the conquest of China, beginning with Manchuria in 1931, and leading gradually to an all-out confrontation with the United States and Britain at Pearl Harbor and Singapore in 1941. World War II destroyed most of Japan's cities and factories, as well as killing over three and a half million Japanese, soldiers, sailors, and civilians, including those who died in the nuclear

bombing of Hiroshima and Nagasaki in the closing days of the war.

The recovery of Japan from such a disaster has been almost miraculously rapid. By 1965 Japan had become the world's third industrial power, thanks to its newly rebuilt factories but even more to the hard work and determination of its people. High quality Japanese goods won buyers all over the world. The American Occupation from 1945 to 1952 helped to push Japan away from militarism and in the direction of American-style democracy, which has struck deep roots in Japan, in part no doubt because rapid economic growth has created a new middle class and because general prosperity means that people are not seeking radical alternatives. Population growth has leveled off, as tends to happen when the survival of children can be assumed and families concentrate instead on providing well for their children. At nearly 130 million, Japan is clearly a dominant country, but the huge increase in population has been accompanied by a steep rise in living standards. The pop-

ulation in 1000 AD has been estimated at about 5 million, in the late sixteenth century at 15 million, and by the mid-nineteenth perhaps 30 million, but at each period most Japanese remained poor. Now most Japanese are affluent, and enjoy a wide range of social services plus a highly effective education system, which in turn is a major key to economic growth. Perhaps Japan's major shortcoming now is its limited living space. Over 80 percent of Japanese live in cities—Tokyo being the world's largest at over 30 million—and most of them live in tiny apartments. Space is at a premium, and very few Japanese begin to have the living space many Americans take for granted. The countryside, although very beautiful, tends to be horrendously crowded on weekends and holidays by urbanites anxious for a break. But Japanese know that in other respects they are very well off on any comparative scale.

The remainder of this Asia volume treats in more detail each of the major areas: South Asia, Southeast Asia, China, Korea, and Japan.

# ACEHNESE

**PRONUNCIATION:** AH-cheh-neeZ

**LOCATION:** Indonesia (Sumatra)

**POPULATION:** 2–3 million

**LANGUAGE:** Acehnese

**RELIGION:** Islam

**RELATED ARTICLES:** Vol. 3: Indonesians

## <sup>1</sup> INTRODUCTION

Located at the northernmost tip of Sumatra, Aceh has been the region of Indonesia most exposed to influences from the Islamic Middle East and Islamized India. Even the physical appearance of the coastal population reflects this: a great many Acehnese have Arab or Indian features. The Acehnese seem always to have played a key role in the trade linking India and China. Their closest linguistic relatives are the Cham of central Vietnam; their languages preserve a common fund of Austro-Asiatic loanwords that indicate intimate contacts with Mon-Khmer peoples. A network of kindred communities may have run from Vietnam to Sumatra through the Malay Peninsula, particularly as the earliest trade passed over the Isthmus of Kra instead of rounding the peninsula, as it did later.

The most renowned early state recorded in the Acehnese region is Samudra (meaning “ocean,” from which the name “Sumatra” probably comes). Still pagan when Marco Polo stopped there in 1292, it was already Muslim in 1323 when the famous Arab traveler Ibn Battuta passed through. Under a new name, Pasai, the kingdom became the model Islamic court in the archipelago. In its immediate vicinity, however, were other independent states: Barus, Daya, Lamri, and Aru. In the territory of Lamri, Sultan Ali Mughayat Shah established the kingdom of Aceh at the beginning of the 16th century. The new power profited from the Portuguese capture of Malacca; Muslim merchants (and later Protestant Dutch and English) sought refuge at Aceh, and the sultanate carried on a holy war against Malacca’s new Catholic rulers from 1540 to 1630.

These years, particularly during the reign of the autocratic Sultan Iskandar Muda (“Young Alexander”), constituted Aceh’s Golden Age. Acehnese ships carried pepper to ports in the Red Sea, providing half of Europe’s supply. Acehnese power extended far south on Sumatra (sultan’s viceroys were placed over the Minangkabau, Simalungan Batak, and Karo Batak) and into the Malay peninsula (Kedah, Perak, Johor, and Pahang fell under its sway).

In 1629 an Acehnese armada was destroyed in an attempt to take Malacca; from that point, Acehnese power began a slow decline. Bloody succession struggles led the Acehnese aristocracy to accept a series of female rulers in the 17th century, despite the conflict with Islam’s male bias. The power of the central government weakened as that of local lords (*uleebalang*, who controlled river mouths and thus the trade of the interior) grew.

The diffusion of political power to regional overlords did not harm Aceh’s economic vitality. Its wealth, particularly in pepper, attracted attacks by foreigners, such as the Americans and French, in the 1820s and 1830s. Because of a mutual defense treaty between Aceh and Britain, the Dutch did not launch a major invasion until 1871. Warfare with the Acehnese lasted

from 1873 to 1906 and cost the Dutch much in money and men.

The Indonesian Revolution took a particularly bloody form in Aceh; *ulama* (Muslim religious leaders) directed popular fury against the *uleebalang*, who were virtually exterminated as a class. In 1953, not wanting to be included with Christian Batak in the province of North Sumatra, Acehnese began a revolt against Jakarta that lasted for 10 years. In the end, the central government granted Aceh the status of “Special Region” (*Daerah Istimewa*), with autonomous jurisdiction over religion, education, and customary law. This special status notwithstanding, Suharto’s New Order regime (1966–1998) exploited Aceh’s natural resource bounty (natural gas, petroleum, gold, silver, and copper) without benefiting the rural majority of Acehnese, provoking the emergence of a separatist Free Aceh Movement (GAM—Gerakan Aceh Merdeka) that went into armed rebellion in the late 1980s; this in turn was answered by brutal military repression that killed 2,000 Acehnese in 1989–1991 and made thousands of others refugees within their own homeland or in neighboring provinces. The years immediately after the fall of the Suharto regime in 1998 were marked by Acehnese continuing to mobilize to demand autonomy and the central government going back and forth between conceding greater autonomy and resuming military offensives against GAM insurgents.

The guerilla war was again in full swing when a massive earthquake and tsunami devastated Aceh on 26 December 2004, killing 230,000 and leaving over 500,000 homeless. The epicenter of the earthquake was right off Aceh’s coast, though the resulting tsunami struck as far as Thailand and Sri Lanka. The catastrophe led GAM and the Indonesian government, under the mediation of Finnish ex-president Martti Ahtisaari, to reach a peace agreement (signed on 15 August 2005). With financial help for reconstruction coming from many foreign governments and organizations, Aceh is recovering. In 2006 the economy began to experience positive growth (7.7%). Aceh now enjoys the expanded autonomy granted in 2002, including the implementation of Sharia (Islamic law), the right to retain 80% of revenues from petroleum and natural gas production and receive foreign direct investment and not via the central government, and a new official name, “Nanggroe Aceh Darussalam” (literally, “The State of Aceh, Abode of Peace,” i.e. “domain of Islamic government”).

## <sup>2</sup> LOCATION AND HOMELAND

The Acehnese inhabit coastal lands along the northernmost end of Sumatra, as well as river valleys leading into the interior (the high mountains and thick forests of the interior are the home of another ethnicity, the Batak-related Gayo people). Acehnese comprise 50–70% of the population of the Nanggroe Aceh Darussalam, or 2–3 million people. There being no large cities (the capital of Banda Aceh counts only 80,000 inhabitants), the majority of Acehnese live in small towns in the fertile coastal plain, most hugging the modern 600-km (375-mi) road between Banda Aceh and Medan in neighboring North Sumatra province, Indonesia’s greatest metropolis west of Jakarta.

## <sup>3</sup> LANGUAGE

The Acehnese language is related to Malay but is even closer to the Cham languages of central Vietnam. The vocabulary of Acehnese and Cham includes some basic words adopted from

Austro-Asiatic languages (modern representatives of that family are Khmer, Mon, and Vietnamese). Until the 17th century, Acehnese used Malay in Arabic script as their sole written language; in the 17th century they began to produce literature in their own language.

#### 4 FOLKLORE

Traditional Acehnese believe evil spirits reside in forests, swamps, river mouths, and banyan trees. The *jen aphui* (fire spirit) appears as a light in the night. The *sibujang itam* is a coarse, scary, but magically potent being whom one can enlist for evil purposes. The *geunteut* is a giant who squeezes down on sleeping people. The *burong* are women who have died in childbirth. They are clothed in white and have unnaturally long fingernails and a hole in their back. The *burong tujuh* are seven sisters who died in childbirth whose spirits threaten those giving birth.

#### 5 RELIGION

As befits a region long known as the “front porch (*srambi*) of Mecca,” the region where all Southeast Asian Muslims used to embark on the Haj (the pilgrimage to Mecca), the Acehnese are regarded as among the most devout Muslims in the archipelago and their culture as the most inseparable from Islam. A saying expresses this: “*adat ngon hukum lagee zat ngon sifeuet*,” meaning, “[Acehnese] custom is to [Islamic] law as the essence is to manifestation.” Islamic law (Sharia) influences every as-

pect of family life: weddings, marital conflicts, civil suits, funerals, and inheritance.

The lowest-level religious court is held after Friday prayer. The Acehnese support the national Islamic political parties such as, formerly, the modernist Muhammadiyah.

The Acehnese are zealous in their observance of three of Islam’s five pillars: going on the pilgrimage to Mecca (Hajj); paying the tithe (*zakat*); and fasting (*puasa*) during the month of Ramadan. Many are less consistent in performing the five daily prayers. Pantheistic mysticism has been widespread, and it is common to make pilgrimages of the graves of famous mystics.

Outside the scope of Islamic orthodoxy is the use of magic to ensure success in agriculture and other enterprises. Ritual meals to bless rice cultivation (*kenduri blang*) and fishing (*kenduri laut*) include Islamic elements, such as Arabic prayers and the chanting of the surah “Yasin” from the Qur’an. There is a tradition of female shamanism. *Dukun* (spirit healers) issue *sijunde*, spells that can cause sickness or death or that can counteract the action of other spells. Healing includes exorcistic practices aiming to “cool” the sick person. *Dukun* also specialize in interpreting dreams and omens.

#### 6 MAJOR HOLIDAYS

See the article entitled **Indonesians**.

#### 7 RITES OF PASSAGE

Rites of passage generally resemble those of the Malays (see **Malays**). A boy’s placenta is buried under the spot where rainwater draining from the roof comes down, and a girl’s placenta is buried under the entry ladder. Features of the wedding process specific to Acehnese are as follows: the representative (*teulangke*) of the man’s side presents the woman’s side with gold and other valuables (*kongnarit*); if the latter accepts them, this renders the betrothal binding. In addition, the man’s side must deliver a bride-price (*jeunamee*) of 50–100 g (1.75–3.5 oz) of gold; alternatively, the bride-price may be given to the couple later as a *peunalang* to buy a separate house or rice land. Preparatory to the wedding are the *malam berinai*, during which the bride is made as beautiful as possible and the bridal dais is decorated; and the *mandi berlimau*, in which an old woman gives the bride her last bath as a single woman. The procession (*intat linto*) of the groom to the bride’s house is accompanied by noisemakers and the chanting of the *Barzanji* and *selawat Nabi* (tales of the life of Muhammad).

Children are buried in their father’s family burial place (*bhom*). Modernist Muslims (Muhammadiyah) do not perform the post-funeral prayers for the deceased that others do.

#### 8 INTERPERSONAL RELATIONS

Under the sultanate, the following hierarchy of political units existed: several *gampong* (villages) led by a *keusyik* (*geucik*), grouped into a *mukim* led by an *imeum*. A number of mukim fell under the jurisdiction of an *uleebalang* or, in the capital region, formed into one of three *sagoe* each under a *panglima*, kin of the sultan. Originally, the title *imeum* indicated the head official of a mosque, but its bearers gradually gained worldly power; sultans recognized the more powerful ones as *uleebalang* (regional lords, hereditary, and largely autonomous). The *uleebalang* appointed and could dismiss the *keusyik*; the latter was responsible for ensuring village security and prosperity and for arbitrating disputes. In addition, each village had

a *teungku* (a person knowledgeable in Islam to head religious observances and take charge of the *meunasah*), *ureung tua* (an elected village council), and a *tuha peut* (an expert on customary law). Of this structure, only the gampong and mukim remain under the Indonesian bureaucracy.

In the 19th century, society divided into the following classes: the sultan and those of royal blood; nobles (*uleebalang*); peasants; slaves; and *ulama*, a group of religious leaders not tied to a particular locale. Sultans' descendants carried the titles *ampon* for males and *cut* for females; the uleebalang, *teuku*; and the ulama, *teungku*. Nowadays, the only distinction recognized is that between the wealthy and the non-wealthy.

Touching the head, especially that of an older or higher-status person, is a grave insult. When meeting people, one must always greet them. One must speak politely and softly, especially with an older or higher-status person. Guests must be offered betel to chew before drinks are brought out. The duty to participate in community works binds villagers together: they cooperate to build the village mosque and other common buildings and, on Fridays, repair water channels and roads and clear away underbrush. Villagers also help each other build houses and establish wet-rice fields.

Traditionally, there was no free interaction between young men and young women. According to social norms, a man may not enter a house if the husband is not there. In the husband's absence, a visitor may not enter even the yard. If he has happened to, or must, enter the yard, he coughs to signal his approach so the women of the house can withdraw to the interior. These strictures are changing, one major reason being the fact that boys and girls are not separated in school. Nonetheless, censorship of sex-related material from films is considerably stricter in Aceh than elsewhere in Indonesia (where films edited by Jakarta authorities are screened).

## 9 LIVING CONDITIONS

A village (*gampong*) consists of 50–100 houses, with the houses of kin clustering or lining up with no more than a fence separating them. Each village has at least one *meunasah*, a structure that is open on all sides and raised on piles. It serves as a prayer hall and school, and as a place where the village's young men and houseguests sleep and public ceremonies are held.

Facing the sea or the south, houses are raised on 20–24 posts, each 30 cm (12 in) in diameter and 2.5–3 m (8–10 ft) in height (either wooden or bamboo, depending on family wealth). Floors are usually made of wooden planks, sometimes of bamboo; older houses employed rattan cording instead of nails. Roofs are two-sloped, 2–6 m (6.5–20 ft) high, and of plaited sago palm-leaf, lasting 20 years. The front room (*seuramoe keue*) is an open veranda where the children sleep, as do guests during weddings, funerals, and other celebrations. The middle room (*tungai*) contains a central corridor with the *romoh inong* on the left and *anjong* to the right (sleeping quarters for the women of the family and the parents respectively). The kitchen is in the back room (*seuramoe likot*) or in a room of its own (*tiphik*). Poorer families house their married daughters in annexes to the main dwelling. Harvested rice is stored inside the house in a *krong pade* or *berandang*. The garden contains coconut, citrus, and banana trees.

Nanggroe Aceh Darussalam has a Human Development Index (combining measures of income, health, and education) of 69 (2005 score), almost as high as Indonesia's national score of

69.6. Nanggroe Aceh Darussalam's GDP per capita is us\$7,752, moderately high for Indonesia (cf. us\$10,910 for North Sumatra, us\$6,293 for Central Java and us\$2,919 for North Maluku, with income from petroleum and natural gas production added, Aceh's GDP per capita reaches us\$12,679, among the highest in the country). In 2000, the level of infant mortality, at 39.71 deaths per 1,000 live births, was the fourth lowest in the country (after the national capital region of Jakarta, the highly urbanized Yogyakarta region, and North Sulawesi). Neglect by the central government and the effects of insurgency and military repression, compounded now by the devastation of the earthquakes and tsunamis of December 2004 and March 2005, have long denied Aceh a level of development fully commensurate with its resource wealth, a situation slowly being corrected since the post-tsunami peace agreement.

## 10 FAMILY LIFE

Following Islamic strictures, marrying an uncle or aunt or a nephew or niece is taboo. Nor should first cousins, especially the children of two brothers or of two sisters (parallel cousins), marry each other; this, however, occurs often, despite being thought very unlucky.

Except in some areas where the choice depends on whose parents are wealthier, in general a newly married couple lives with the wife's parents. As part of the marriage contract, the wife's parents pledge to support the couple until the first child is born, or for 3–4 years (the exact duration depends on the amount of the bride-price). In the case of poorer families, the husband does not reside in but rather only visits his wife in his in-laws' house, still regarding his own mother's village as his home. If the spouses are from the same village, the man will sleep in the *meunasah* when not with his wife. In some regions, many husbands trade or grow coffee far from home and only return for Ramadan festivities.

Parents-in-law and sons-in-law are very formal with each other until the birth of the first child. Parents-in-law will sleep in a back room to avoid hearing or running into a son-in-law; they will even speak to him only through the wall. A man feels much closer to his younger siblings-in-law; the latter can act as intermediaries between the man and his parents-in-law if the wife is out.

Children tend to be closer to their mother than to their father and are more likely to bring up their problems with the former (mothers raise the children, while the fathers are usually away all day working). Relations between fathers and grown children tend to be rather distant, with the father often appearing as an "autocratic" authority figure. Moreover, although the father's siblings are responsible for his children should the father die, children still tend to feel more intimacy with the mother's siblings. Grandparents love to spoil their grandchildren; because of this, parents prefer that their children not stay with their grandparents.

Only wealthy men take more than one wife at a time (a legitimate reason, according to Islam, would be the first wife's failure to bear children). Interference by parents-in-law in a couple's affairs constitutes the most frequent cause for divorce. If a wife dies while the couple is still being supported by the parents, her parents give the husband a refund of half of the bride-price or, alternatively, give one of their other daughters to him as a wife. If a husband dies, one of his brothers almost always takes the widow as his wife.

## 11 CLOTHING

Everyday wear for men consists of a shirt, sarong, and *peci* cap. Some women wear Acehnese-style black pants and the *baju tukulok*, a short-sleeved shirt; most wear a long-sleeved shirt and a sarong, with a sash over the shoulder.

For ceremonies, men put on a collared jacket, long pants (*cekak musang*), a sarong (*pendua*) over it, a *peci* cap (*makutup*), and a *rencong* (a slightly curved blade) tucked in the front. Women attire themselves in a *cekak musang*, with a *pendua* of silk woven on a traditional *pok teumpeun* loom over it, a shirt covering the hips, a waist sash (*pending*), and jewelry (necklaces, bracelets, and anklets). A bride wears a *kulah kama* crown with golden hairpins, and flower blossoms. The groom wraps a head cloth around the *peci* and puts a *kulah kama* on the front.

## 12 FOOD

Meals consist of rice and fish. Supplementary foods include cassava, sweet potato, maize, and *jeneng* (a kind of wild tuber). *Jeneng* are mixed with grated coconut or granulated sugar and eaten with coffee as breakfast. Acehnese prepare sticky rice in various ways: as *bu leukat keurabee*, mixed with grated coconut and salted; as *bu leumak*, cooked with coconut milk; as *bu leukat kuneng*, steamed with coconut milk and turmeric; and as *bu leukat meukuah*, cooked in a coconut milk sauce and optionally mixed with banana or durian. They also enjoy *kanji* (congee, a gruel of rice or sticky rice) cooked with coconut milk and sometimes mixed with mung beans.

Foods for special occasions include the following: *timphan*, rice flour boiled with grated coconut and sugar; *pulut panggang*, sticky rice mixed with coconut milk and grilled; and *guleplei*, a combination of *maninjau* fruit, green pepper, banana blossoms, young *maninjau* leaves, tamarind leaves, string beans, and small shrimp, eaten with rice. One special Ramadan food is *ibupeudah*, rice gruel mixed with 44 kinds of edible leaves and sprinkled with grated or finely chopped coconut.

Because Islam forbids the consumption of alcohol, those who do so must drink it secretly. Popular drinks include sweet palm-saps, sugarcane water, and coconut juice. Rather more exotic is *air madu*, the “honey” secreted by an *uno*, a kind of spider; *dukun* specialize in collecting this fluid.

## 13 EDUCATION

In Aceh, religious education is compulsory from age seven. This entails first instruction in reciting the Qur'an at a village *meunasah* then goes on to further education at a *pesantren*. In 2005, North Sulawesi's level of literacy stood at 95.98%, high by Indonesian national standards.

## 14 CULTURAL HERITAGE

Traditional dances include the *tari ranub lampuan*, depicting young women offering betel to guests; the Arab-influenced *seudati agam* for males and *seudati inong* for females; the *saman*, where dancers sit in a row on the ground, performing coordinated hand and body movements in a dynamic rhythm; and the *ramphak*, a female dance displaying courage in fighting the Dutch. One type of musical performance is *rapa-i*, playing the *rebana* tambourine to accompany chanting.

Many of the classics of Malay literature were created in Acehnese cities, e.g., the Pasai royal chronicle *Hikayat Raja-*

Acehnese students read the Quran at a mosque in Banda Aceh, Indonesia. (AP Images/Binsar Bakkara)

*Raja Pasai*; the heretical mystical poems of Hamzah Fansuri; and the Nuruddin ar-Raniri's *Bustan as-Salatin* (the Garden of Kings), an encyclopedic work on history and politics. Prose and poetry in the Acehnese language only began to be written in the 17th century. One classic is the *Hikayat Perang Sabil* (Chronicle of the Holy War), a narrative of the Dutch war.

## 15 WORK

The majority of Acehnese support themselves through wet-rice agriculture. Most fields begin as sectioned-off swampland; only some rely on irrigation from rivers and streams. Men, working cooperatively, manage irrigation, while women plant and weed. Swidden (shifting-cultivation) fields far from the village provide supplementary crops, such as dry rice, chilies, papayas, sweet potatoes, and vegetables. Formerly, pepper was the primary cash crop; now it is coffee. An alternative to farming is life as a trader, marketing agricultural produce.

Fishing is another major source of livelihood; traditionally, *pawang* guilds, each consisting of a chief and a boat crew, partitioned a stretch of coast among themselves. Acehnese also keep cattle and water buffalo, selling their animals as far away as Medan. A dairy industry exists, though it was introduced and remains in the hands of Bengali immigrants.

In the past, the primary exports were plantation-produced rubber and palm oil. Nowadays, oil and natural gas production supports local development.

## 16 SPORTS

*Pencak silat*, a Malay-style martial art characterized by the dance-like grace of its hand movements, is a popular sport; many women practice it.

## 17 ENTERTAINMENT AND RECREATION

## 19 SOCIAL PROBLEMS

See the article entitled **Indonesians**.

## 20 GENDER ISSUES

Nanggroe Aceh Darussalam's Gender-Related Development Index (combining measures of women's health, education, and income relative to men's) is 62.1, higher than Indonesia's national GDI of 59.2. The province's Gender Empowerment Measure (reflecting women's participation and power in political and economic life relative to men's) is 55.5, also higher than the national GEM (54.6).

The position of women is relatively high. For instance, a wife does not automatically submit to her husband's wishes. She takes an active part in wet-rice cultivation and within the home wields much power (the children fear her more than the often-absent father). Women have exercised leadership roles in Acehnese history; there were several queens in the 17th century, as well as a female military commander, Malahajati. However, a woman, especially one about to be married, cannot leave the house without her parents' supervision. When parents die, daughters inherit the house while sons get the rice fields, which usually end up under women's control, in any case, as men seek their livelihood away from the village. The ideal is for parents to build a house for each of their daughters as she marries, often spending their last years in a shack surrounded by the houses of their married daughters; if they cannot afford to build a separate house for a married daughter, they may leave their house to her and move into the kitchen (a separate structure).

Acehnese women suffered greatly during the struggle between GAM guerrillas and the Indonesian military. Many were brutalized, driven from their homes, and forced, with their children, to endure life in refugee camps (where they were even denied control of a kitchen of their own, the one place they were master in a society where Islamic teaching is interpreted to support patriarchy). Worse yet, many were raped by government soldiers. In the wake of the war, over 377,000 households are headed by widows. Women played an active role in promoting peace, from organizing regency-wide days of communal prayers to negotiating with the Indonesian army and presenting statements to the United Nations Committee in Geneva.

# AFGHANIS

**PRONUNCIATION:** af-GHAN-eez

**LOCATION:** Afghanistan

**POPULATION:** 31.9 million (2007)

**LANGUAGE:** Dari; Pashto (Pushto); Turkish

**RELIGION:** Islam (Sunni, 80–90%; Shia, 10–20%)

**RELATED ARTICLES:** Vol. 3: Hazaras; Kafirs; Vol. 4: Pashtuns

## <sup>1</sup> INTRODUCTION

Throughout history, the territory that is now Afghanistan has been a crossroads for conquering armies and a jumping-off point for invasions of India. This pattern seems to have begun when the Indo-European-speaking Aryans first began to penetrate the Indus Valley in about 1800 BC. The Persian Empire of Cyrus was established in 545 BC. Persian rule lasted for the next two centuries. From 330 BC to 327 BC, Alexander the Great campaigned in Afghanistan. In 307 BC, Seleucus, one of Alexander's successors, traded Alexander's conquest in India and eastern Afghanistan to an Indian ruler named Chandragupta for 500 war elephants. This deal introduced a millennium during which Afghanistan was divided along often-shifting frontiers between a part ruled from the East, with an Indic culture, and a part ruled from the West, with a Hellenic and later Persian culture.

The armies of the Islamic invasion of the 7th century AD conquered Afghanistan in AD 699. In 1220, Genghis Khan brought his hordes into Afghanistan. For the next century and a half, parts of Afghanistan were under the control of various descendents of Genghis Khan. Then, after a time of rule by other conquerors, a central Asian ruler named Babur established a base in Kabul in 1504. From there he marched into India in 1525 and founded the Moghul Empire that dominated India for nearly 200 years. Until 1739, the moghuls controlled parts of Eastern Afghanistan, although they were often resisted by indigenous tribal groups. Western Afghanistan came under the control of the Persian dynasty. For 150 years, Afghanistan was divided between two empires.

The Afghan Empire took shape when Ahmed Khan, a young Pashtun (or Pushtun) cavalry leader, led his 4,000 troops to Kandahar where he was elected leader of a group now renamed Durrani. The Durrani set out on a campaign of conquest and brought much of Afghanistan under control by 1750. At its height, the empire of Ahmed Shah Durrani covered modern Pakistan and Kashmir, Afghanistan, and the northeastern province of Iran. Modern Afghanistan can be considered the part of this empire that was not subsequently whittled away.

The existence of a national entity that we can recognize as Afghanistan dates from the reign of Amir Adbur Rahman in 1880–1901. The country came to have its present boundaries during this period. However, Afghanistan was still under the heavy influence of various foreign powers. It was not until 1919 that the Afghan government succeeded in gaining independence in conducting its foreign affairs. In 1964 a new constitution was adopted that looked toward development of a parliamentary democracy. In a coup in 1973, the king was ousted by his first cousin, Daoud, who declared the country a republic, with himself as president. Five years later, Daoud was killed in a leftist coup in April 1978. Within a year, the

widespread perception of the new regime as anti-Islamic and pro-Russian led to uprisings in most parts of the country. At least 400,000 refugees crossed over into Pakistan, and another 600,000 fled to Iran. Soviet military aid for the suppression of insurgency was not succeeding, so in December 1979 the Soviet army marched into Kabul. Thousands more Afghanis fled across the border. By late 1981, there were about 3 million Afghanis in Pakistan, and 250,000 in Iran. Ten years later, the number of refugees had climbed to 5 million.

The Soviet army left Afghanistan in 1989 and fighting among tribal and ethnic groups intensified. In the mid-1990s a Pakistan-supported mercenary army of Islamic fundamentalists called the Taliban (Arabic for "students") began taking control of large swathes of the country. Many Taliban fighters were Arabs who had come to Afghanistan in the 1980s to repel the Soviet occupation of a Muslim land. Their deeply traditional brand of Islam was welcomed in many parts of the country, particularly in the southern provinces around Kandahar. They were less successful in the Hazara lands to the east and the Tajik part of the north. By 1996 the Taliban had taken control of most of the country. A tiny pocket of Afghanistan was still ruled by a coalition of Uzbek, Hazara, and Tajik forces called the Northern Alliance.

After the al Qaeda-led attacks on Washington D.C. and New York on 11 September 2001, the United States and the United Kingdom began a bombing campaign of Afghanistan to overthrow the Taliban and to capture leaders of the al Qaeda terrorist network who were being protected by the government. The Taliban forces fell quickly and an interim government was established and backed militarily by a large contingent of American and North Atlantic Treaty Organization (NATO) forces. Partial peace returned to regions of the country held by NATO and the United States, and a democratic government, headed by Hamid Karzai, was established in 2004. The Taliban, however, were never fully defeated and beginning in 2005 they began a counter-offensive in the south, attacking from the mountainous border areas with Pakistan. By 2007 and 2008, suicide bombings were becoming common throughout the country, even in Kabul, by that time a heavily fortified and militarized city.

## <sup>2</sup> LOCATION AND HOMELAND

Afghanistan is a relatively inaccessible, mountainous, land-locked country of southwestern Asia. It is bounded by Pakistan; Iran; the republics of Uzbekistan, Tajikistan, and Turkmenistan; and, for less than 65 km (40 mi), China. Afghanistan is about the same size as the U.S. state of Texas. The mountain ranges of the Hindu Kush cover most of the country, with elevations rising to 7,300 m (24,000 ft). In the northeast, the mountains are perpetually covered with snow, while in the southwest there are rocky or sandy deserts. Most of Afghanistan's water supply comes from the snow that falls on the mountains between December and April, which only amounts to the equivalent of 38 cm (15 in) of rain. Without irrigation, little of Afghanistan's land can be cultivated. The climate varies widely according to altitude and regional weather patterns. The range between high summer and low winter is large. Almost all places have some freezing weather, and those below actual mountain zones have temperatures above 32°C (90°F). In some areas, temperatures can go above 38°C (100°F). A wide day-to-night range of temperature is also typical. The

area along both sides of the Afghanistan-Iran border is very windy—a south wind blows continuously from June through September, at speeds of up to 160 kph (100 mph). Wheat is harvested during the windy period and is ground with the aid of windmills with vertical vanes and a vertical shaft, an ancient invention of this region.

The 2007 population of Afghanistan was estimated to be 31.9 million. Since the U.S.-led invasion in 2001 and the overthrow of the Taliban regime, many of the estimated population of 6 million Afghanis have returned home from years as refugees in, primarily, Pakistan, Iran, and Tajikistan. Aid agencies differ as to how many Afghanis have returned home.

Ethnically, Afghanis are very mixed. Racially, there are Caucasians, Mongoloids, and Australoids. Pashtuns (or Push-tuns) make up about half the Afghani population and consider themselves the true Afghanis. Of Aryan stock, they appear to have lived in Afghanistan since the earliest recorded history. Pashtuns are tall and fair-skinned, with black or brown hair and brown eyes (hazel or blue eyes are also common). Tajiks are Persian, of Mediterranean stock. They are tall with fair skin and black hair (though some have red or blond hair). Afghanis of Mongoloid descent include Hazaras, Turkmen, and Kirghiz. Mongoloid races have Asian features. The Uzbeks, along with several small nomadic tribes, are of Turkish origin and have Turkish features and fairer skin than other Afghanis. There are also many groups of Afghanis who claim to be of Arab descent. They call themselves *sayyid* and speak a form of Arabic. Through centuries of intermarriage, most Afghanis are a blend of these different races. One more isolated group is the Nuristanis, about whom little is known. They seem to be of Mediterranean descent, with light-brown skin, thin straight noses, and black to brown or even blond, hair.

### 3 LANGUAGE

The principal languages of Afghanis are Dari, a variety of Persian; and Pashto (or Pushto), a language shared with the residents of the North West Frontier Province of Pakistan. Both are official languages of the country, and most educated Afghanis can use both. Schools use whichever is most common in the area and teach the other as a second language. The languages are related, though they probably split into two distinct languages millennia ago, before the Christian era. Speakers of Pashto, called Pashtuns (or Pushtuns), have been the ruling group in Afghanistan and have tended to set the tone for the entire nation. The Pashtuns constitute a single ethnic group, while the Dari-speakers are more diverse. Geographically, Dari is the predominant language of the Kabul area and the regions to the northwest of the Hindu Kush Mountains; while Pashto is principally located to the southeast of the mountains. Dari is a much more urban language, and is the language in which business is most frequently conducted. Both Dari and Pashto are written using adaptations of the Arabic alphabet. Dari adds four extra consonants for sounds not occurring in classical Arabic, and Pashto adds those four plus eight more letters. In written form, Dari and Pashto are closer than when spoken.

There are many other languages spoken by the various ethnic groups in Afghanistan. After Dari and Pashto, the major language family is Turkish. Turkic languages are spoken mostly in the northern regions of Afghanistan. Ancient Indo-European languages are also spoken, by small groups living in

isolated areas. Each language may have only a few thousand speakers.

Afghani names are for the most part Islamic. The Pashtun population uses non-Arabic names frequently. The father's oldest brother is usually the person to pick a child's name. The name is then officially conferred by a religious leader on the third day after birth. Surnames are a recent innovation in Afghanistan. Where they have been adopted, they usually have a geographic reference, or a connection with the professional interests of those using them. Since the choice of a surname is personal, close relatives (even brothers) may opt for different names. Pashtuns normally identify themselves by the tribal lineage-division to which they belong. Most Afghanis only use their given names in public. Within the privacy of the home, they call each other by nicknames, or *laqubs*. All nicknames are made up of combinations of the same few words—candy, flower, lion, uncle, dear, etc.—like “Lion Uncle,” or “Flower Dear.”

### 4 FOLKLORE

Afghanis love to tell stories, and they all have quite a repertoire that they know by heart to tell at a gathering. Stories for children are usually teaching stories about foolish people who get what they deserve, such as the Three Sons of Mah'madyar, or Bachey Kul (the “Bald Boy”). Another favorite character for Afghani stories is Mullah Nasruddin. Mullahs are respected Islamic religious teachers or leaders, but they are not sacred like the Quran, so people often poke fun at them in a friendly

way. The Mullah frequently figures as a “wise fool” in Afghan stories, appearing foolish but turning out to be very smart.

Adult Afghanis enjoy stories of love and/or heroism. The most popular love story is that of Leilah and Majnun, two doomed lovers who are separated when young and then cannot reconnect when old. They both die of grief and unfulfillment. Many hero-tales come from the *Shahnama*, *the Book of Kings*, written in Afghanistan for a Turkish emperor about the rise of the Iranian people. Other tales are about real-life heroes, such as the warrior Habibullah Ghazi who overthrew the Pashtun government in 1929 and ruled for nine months. The Pashtuns, on the other hand, call him Bacheh Saqao, “the Water Carrier’s Boy,” and paint him as a fool.

Afghanis believe in *jinns*, spirits who can change shape and be either visible or invisible. Jinns are usually evil, or at least out to do no good. Many Afghanis wear amulets around their necks to protect them from jinns. Stories of jinns are often told at night, like ghost stories around a campfire.

## 5 RELIGION

Afghanistan is one of the most solidly Muslim countries in the world. The overwhelming majority follow the mainstream branch of Islam, the Sunni tradition. About 10–20% of Afghanis are Shia Muslims, of both the Imami and Ismaili sects. There are also sufis (or dervishes), members of the mystical branch of Islam. Afghan Sufis generally belong to the Qadiri order or “path,” the most ancient and widespread of sufi paths. For the most part it is the folk level of Islam that is important to Afghanistan. The local religious leaders are not usually well-instructed. They are mostly peasants with other part-time work. In upper valleys of the tributaries that run into the Kabul River from the north between Kabul and the Pakistan border, there used to be a pocket of paganism. It was called Kariristan (“land of the heathen”) until 1896 when Abdur Rahman invaded it and forcibly converted the inhabitants to Islam. He then renamed these valleys Nuristan (“land of light”). The Nuristanis of today are a very distinct ethnic group in Afghanistan.

## 6 MAJOR HOLIDAYS

Probably the most important annual observance in Afghanistan is the ancient Persian New Year celebration, Nawruz (or Now Ruz), meaning “new day,” at the beginning of spring on March 21. It is marked by special foods, including *samanak*, a dessert made of wheat and sugar, and *haft miwa*, a mixture of seven fruits and nuts symbolizing spring; sporting events; and attempts to secure good fortune for the following year. The ceremonial raising of the flag at the tomb of Muhammad’s son-in-law, Ali, occurs on Nawruz at Mazar-e-Sharif. The standard of Ali, a staff, is raised in the courtyard there. For 40 days, pilgrims flock to touch it and gain merit or be cured of disease and injury. On the fortieth day after Nawruz, the staff is lowered and a particular red species of tulip blooms, disappearing soon after. Fairs and carnivals brighten Nawruz, as does the custom of dyeing farm animals—green chickens and purple sheep abound.

Most major holidays in Afghanistan are religious, following the Islamic lunar calendar (causing the dates to vary on the standard Gregorian calendar). The main Muslim holidays are Ramadan (or Ramazan in Afghan pronunciation), the month of fasting (called *ruzah* by Afghanis) from dawn to dusk; Ayd Al-Fitr, a three-day festival at the end of Ramadan; Ayd Al-

Adha, a three-day feast of sacrifice at the end of the month of pilgrimage to Mecca (known as the Hajj); the First of Muharram, or the Muslim New Year; Mawoulid An-Nawabi, the prophet Muhammad’s birthday; and Ayd Al-Isra wa Al-Miraj, a feast celebrating the nocturnal visit of Muhammad to heaven. Ashura is celebrated by Shia Muslims, after the first 10 days of the new year that are spent in mourning to commemorate the killing of Hussein, the grandson of the prophet Muhammad on 10 October 680. Ashura is an optional fast day.

Nonreligious holidays in Afghanistan include Jeshn, or Independence Day, on August 18, a week-long festival celebrating Afghanistan’s independence from Britain in 1919; Workers’ Day, or Labor Day, on May 1; and Revolution Day on April 27, the date in 1978 when President Daoud was overthrown by the leftist regime.

## 7 RITES OF PASSAGE

Weddings are the greatest occasions for celebration in Afghanistan. After several preliminary observances, the ceremonies connected with the actual wedding are spread over a three-day period, except in cities, where they are all condensed into one day. The most popular time for weddings is late summer or early fall. Most marriages are arranged by the parents and relatives, often when children are still very young. Men generally marry between the ages of 18 and 20; and women, between the ages of 16 and 18. Marriage between cousins, especially paternal ones, is preferred. A bride-price is paid by the groom’s family to pay for the loss of a valuable family member. A dowry of household goods, etc., is paid by the bride’s family to help with the initial setting up of a home. The groom’s family pays for the wedding, which involves much feasting and dancing. The official ceremony is called *nikah-namah* and consists of the signing of the marriage contract before witnesses, readings from the Quran by the *mullah* (local religious leader), and the tossing of sugared almonds and walnuts onto the bridegroom.

The birth of a first child is the occasion for a day-long celebration; most elaborate if the child is a boy. Children are named on the third day after birth. The name is chosen by a paternal uncle who then becomes the child’s guardian, responsible for the child if the father dies. The sixth night after a birth is observed with an “open house” for friends of the family, who bring small gifts. Boys are usually circumcised at about the age of seven (after which they begin wearing turbans). The circumcision is the occasion for a feast, likely to involve wrestling contests and other demonstrations of manliness.

Large-scale food distributions connected with funerals were made illegal in the 1950s. Now, commemorative meals take place several times in the year following a death.

## 8 INTERPERSONAL RELATIONS

Interpersonal relations among Afghanis are largely ruled by *Pashtunwali* (or *Pushtunwali*), unwritten laws and codes belonging to the Pashtuns but followed by almost all Afghanis. The laws and codes deal mostly with honor and self-pride. Hospitality is required for honor’s sake, so travelers and guests never go without food or shelter. *Pashtunwali* involves *mel-matia*, being a good and generous host; *ghayrat*, upholding personal and family honor; *namus*, defending women’s honor; *nanawati*, providing shelter to anyone who needs it; *sabat*, or loyalty; and *badal*, avenging blood with blood. Other requirements of *Pashtunwali* are never to kill a woman, a minstrel, a

Hindu, or an uncircumcised boy; to pardon any wrong—except for murder—when asked to by a woman, the wrongdoer's family, a *sayyid* (an Afghan who claims Arab descent), or a *mullah* (local religious teacher or leader); to punish adultery with death; and to spare the life of anyone who takes refuge in a mosque or shrine, or anyone in battle who begs for mercy.

Afghanis are very expressive with their bodies, using extravagant gestures and facial expressions to communicate. There is also a lot of physical affection expressed between members of the same sex. It is forbidden in Islam to touch members of the opposite sex who are not intimately related. Afghan men greet friends and acquaintances by clasping both hands in a firm handshake, hugging, and kissing each other on the cheeks. They often walk together, arm in arm. Business contracts are sealed with a nod of the head.

## 9 LIVING CONDITIONS

Nomadic Afghanis, called *kochis*, live in tents and move from place to place to find grazing grounds for their herds of camel and sheep. In the north, the Turkoman nomads have red dome-shaped tents. In the south, the Pashtun or Balūchī nomads live in black tents that look like huge bats. The Pashtun or Balūchī nomads keep large dogs with heavy shoulders and big heads; they are known as *kochi* dogs. Afghanistan is one of the few places left in the world with a sizable number of nomads. There are about 2 million nomads in Afghanistan.

Settled Afghanis mostly live in small villages with a few hundred to a few thousand people. They generally make their living as farmers. Some wealthier Afghanis live in *qalas*, or country forts, with other farmers working their land. Some 70% of Afghanis are farmers, even though the country is very dry, and only a tenth or less of the land is arable. Constant warring has prevented the Afghanis from developing and maintaining effective irrigation systems, so most of them barely scratch a living out of the soil. Afghanistan is one of the poorest countries in the world. With the harsh terrain and destruction from the continual conflicts, Afghanis have not been able to move very far beyond a medieval world of poverty and hardship. Many of the few major roadways in the country have been destroyed in the wars. Hydroelectric power is only readily available in the springs when the mountain streams swell with melting snow. During the dry summers, dams and reservoirs must provide this power.

Village houses are made of bricks plastered with a mixture of mud and straw. Most are flat-roofed, but in some regions domed roofs are preferred. An enclosed compound holds the livestock and storage sheds, as well as the cooking area and the general living area. Women carry water from nearby streams or pools (some wealthier Afghanis have artificial streams or pools called *juy*). Bathing and laundry are also done in these streams and pools. Households have the bare minimum of furniture, with mattresses spread on the floor at night for beds. The mattresses are then stacked in a corner during the day. In summer, Afghanis sleep on their flat roofs where it is cooler. Dung patties—made by the women and children, who collect the manure, shape it into patties, and slap them on the walls to dry—are used for fuel. Two uniquely Afghani ways to keep warm are *tawkhanah* and *sandali*. *Tawkhanah* are hot-air tunnels built under the floor with a fire at one end. The heat from the fire travels through the tunnels and warms the whole floor. These *tawkhanah* are used mostly in villages south of the Hin-

du Kush mountains. In other places, a small, low table with a blanket over it is placed above a charcoal brazier. The blanket holds in the heat, and the family then sits around the table to keep warm. This is known as the *sandali* system.

Villages in Afghanistan are circled around larger towns that act as commercial, communication, and administrative centers. Farm goods, crafts, and raw materials are brought to the towns from the villages. The goods are then sent to the cities. Horse-carts are used for transportation in the towns. From the towns to the cities, trucks are used. The trucks are often brightly painted with elaborate designs. *Caravanserais*, or inns, are located in the towns, as well as teahouses where men gather to smoke water-pipes, talk, and drink strong tea. The teahouses are known as *chaykhanas*. Markets, or bazaars, are located on the main street of the town. Most shop-owners live above their shops.

Where major routes intersect, cities have sprung up. The five major cities in Afghanistan are Kabul, Kandahar, Herat, Mazar-e-Sharif, and Kunduz. The first four all have populations of over 100,000 people, and Kabul has some 2 million residents. Kabul has become almost a separate nation, with a very different lifestyle and flavor than the rest of the country. High-rise buildings with bricks are found in cities to house their ever-growing populations. Though the standard of living is somewhat better than in villages and towns, it is still not modernized or consistently comfortable. Plumbing and water-supply are particularly iffy. Afghanistan has one of the highest infant mortality rates in the world.

## 10 FAMILY LIFE

Afghani life revolves around the family, and “family” includes all extended relations. Traditionally, Afghani society was tribal, and tribal affiliation is still the most significant organizing principle in parts of rural Afghanistan. Tribal units have a strong patrilineal organization, which is supported by Islam. “Modern” extended family units are still patrilineal, consisting of men related through their fathers, the men's wives, and unmarried female relatives. Extended families often live together in the same household, or in separate households clustered together. Even large cities are made up of small “villages” of extended family units. The women of the households form a single work group and care for and discipline the children. The senior active male member, typically the grandfather, controls all expenditures, and the grandmother controls all domestic work assignments.

Women have a great deal of say in the home, but little authority in public. Strong, courageous, and hard-working, women are primary members of the Afghani household. But Islamic tradition requires that they be veiled and kept separate in public, so they play little part in society outside the home. In Kabul, some women are leaving behind the traditions of Islam and venturing out to take jobs, serve in government (though very few women have gained prominence politically), and attend higher education classes alongside men.

Divorce is fairly simple in Islamic law—a man merely has to say “I divorce you” three times in front of witnesses to divorce his wife. A woman has to appear before a judge with reasons for divorcing her husband. Despite the ease of divorce, however, few Afghanis end their marriages. Polygamy is also allowed but rarely practiced. Adultery is punishable by death.

A young boy holds onto his mother's burqa while walking through a market in Kabul, Afghanistan. Despite the fall of the Taliban regime, most Afghan women still opt to wear the burqa. (AP Images/Farzana Wahidy)

Children are cherished in Afghani society, particularly boys. Girls are not openly abused, but often the needs of their brothers' come first, to the point where some girls may seem to be neglected. All children are raised in the women's quarters, and a baby is nursed until the next child is born or the child becomes too old. Children are expected to grow up quickly and learn to take care of themselves. They are toilet-trained and taught to feed themselves at a very early age. After a boy is circumcised, usually at age seven, he is treated like a man and is expected to behave like one. Girls have no rite of passage into adulthood, but by the time they are 9 or 10 years old they know all the skills necessary to be a wife and mother. They can grind wheat and corn, fetch water, cook, clean, and sew, and make dung patties for fuel.

Marriages are almost always arranged by the families, often when the couple are still young children. A match between paternal cousins is preferred. Boys usually marry at age 18–20, and girls at 16–18.

## <sup>11</sup> CLOTHING

The ordinary clothing of Afghani men is a rather baggy pair of trousers with a drawstring at the waist, and a loose, long-sleeved shirt reaching about to the knees. Over this (when

it is cool), a vest is worn. Coats worn in rural areas are often brightly striped, and they are quilted for winter warmth. Turbans—traditionally white, but now of any color—are wound around the locally favored type of turban caps. Pashtuns (or Pushtuns), and others who imitate them, leave some of the turban cloth hanging down, while most of those in the rest of the country tuck the end in. Pashtun men customarily have their hair cut off square at earlobe length. Other groups have their heads shaved about once a month. In villages and rural areas, men follow the Islamic custom of wearing beards and moustaches. In Kabul, many men are clean-shaven. The *pakol* hat has become popular recently. Originally a Nuristani hat, it was adopted as a sign of the Mujahideen resistance to the government. However, now even the president that the Mujahideen are fighting sometimes wears the *pakol*.

Women often wear pleated trousers under a long dress and cover their heads with a shawl. Urban women traditionally wore a *chadri*, an ankle-length cloth covering, like a sack over the whole body, with a mesh insert over the eyes and nose. Though the *chadri* was officially banned in 1959, some women continue to wear them. In the countryside, hard-working village and tribal women could not go about so encumbered, so they have never worn *chadris*.

In large cities, particularly Kabul, Western-style clothing is becoming increasingly popular, for both men and women.

## <sup>12</sup> FOOD

Afghani cuisine is a blend of all the different cuisines of the peoples who have occupied their country over the millennia. The strongest influences are from India and Iran. Staple foods are rice, a flatbread known as *naan*, and dairy products. A variety of fruits and vegetables are also available.

Afghan bread, leavened or unleavened, is baked thin on a very hot fired-clay surface. Typically, a round pottery vessel whose sides come in toward the bottom is buried in the earth and heated by coals in the middle of the bottom. The dough is formed and slapped onto the hot concave sides where it bakes rapidly. Bread is eaten at every meal, often serving as a utensil for scooping up the food, since Afghans generally eat with their fingers.

The main feature of a major meal is a rice *pilau*, which is rice cooked with meats or vegetables. There are as many kinds of pilaus as there are cooks, though certain combinations are common. For example, an honored guest would be served *qabli*—rice with raisins, shredded carrot, almonds, and pistachios. *Kala-pacheh* is rice with the head (including the eyeballs) and feet of a sheep. In rural Afghanistan, regular meals are not eaten between breakfast and supper, but people carry nuts and dried fruit to eat during the day for energy.

The usual beverage is tea, usually drunk without milk. Black tea is generally preferred south of the Hindu Kush mountains, while green tea is preferred in the north. Sugar is expensive in Afghanistan, but many Afghans will pay the extra price to soak a sugar cube in their tea and then either eat the cube or hold it between their teeth while they drink the tea. Alcohol is forbidden by Islam (as is pork).

Meals are spread on a cloth placed on the floor. The family and any guests sit on the floor around the cloth. A bowl is carried to each guest with fresh water poured into it for each person to wash their hands before and after eating. Most families

have a special pot and bowl for this purpose, called an *aftawagan*. Women and girls do the cooking.

A special soup served only on *Nawruz*, or the Persian New Year, is *haft miwa*. This soup is made of seven fruits and nuts to symbolize spring. In the recipe that follows, peaches are substituted for a locally grown Afghani fruit known as *sanje*.

#### Haft Miwa (Seven Fruits)

- 1 cup skinned almonds (unsalted)
- 1 cup skinned walnuts (unsalted)
- 1 cup skinned pistachios (unsalted)
- 1 cup dried peaches
- 1 cup red raisins
- 1 cup green raisins
- 1 cup dried apricots
- 6 cups water

If you only have salted nuts, rinse off the salt with water. Put the nuts in one bowl and the fruits in another. Add 3 cups of cold water to each bowl. Stir, cover the bowls, and put them in the refrigerator. After two days, combine the ingredients from the two bowls into one large bowl. Stir, cover the bowl, and put it in the refrigerator for two or three more days. Serve cold.

(Adapted from Ansary, p. 59)

### 13 EDUCATION

Western-style education has never been widely accepted in Afghanistan, and the literacy rate is still very low. Literacy in Dari is much more prevalent than literacy in Pashto (or Pushto).

Before 1903, the only education available was in mosque schools taught by the local *mullah* (religious leader or teacher). The mosque schools, or *madrassas*, were just for boys. Girls were taught at home by elderly women. At the madrassa, boys learned Islamic subjects and were taught to read and write using the Quran. The first modern school was established in 1903 in Kabul by King Habibullah. Both religious and secular subjects were taught there, and foreign teachers were brought on the staff by World War II (1939–45). King Habibullah also founded a military training academy and a teachers' college. Under King Amanullah in the 1920s, more schools were opened in both urban and rural areas. The first high school class graduated in 1923. The first school for girls was founded in 1924 in Kabul. The 1931 constitution made primary education mandatory and free for all children, but this aim was not realized for decades. With the constant warring, formal education has been erratic. The University of Kabul was founded in 1946, with separate faculties for men and women. By 1960, all faculties had become coeducational.

Before the Communist takeover in 1978, there were 3,404 schools with 83,500 teachers. After two decades of civil war, however, the number of schools and teachers had both been slashed dramatically. After the Taliban came to power, education of girls was banned and virtually all non-religious education was forbidden. After the Western allied powers installed the Karzai government, education was reformed (the 2004 constitution guarantees education to all Afghans) and by 2007 the government reported that there were 5.4 million children enrolled in schools, 35% of whom were girls.

Education in Afghanistan is conducted strictly, with few frills. Students sit in rigid rows of desks, with a blackboard

and perhaps a map or two on the walls. There is no playground equipment—at recess, if there is no shooting or bombing going on, students play simple games, or sit and talk with each other. Learning is by rote; the students repeat lessons back to the teacher. There are no group projects or “learning centers,” etc. Grades are based solely on oral and written exams given several times a year in each subject. Exam grades are added up at the end of the year, and students who pass move on to the next grade. Failing students repeat the grade, which is not uncommon. The educational system of Afghanistan consists of six years of primary school, and six years of *lycee*, or high school. Refugee students may receive no formal education at all.

### 14 CULTURAL HERITAGE

Persian is a language with a vast cultural and literary tradition (Dari is a form of Persian). The first shoots of classical Persian literature began to appear in the 9th century AD. During the late medieval period, a Persian civilization developed that embraced Iran, Afghanistan, and the Muslim-ruled parts of India. It also included much of Central Asia. Throughout this region, Persian became the language of administration. The small world of the literate also made it their principal medium of expression, whatever their native language, much as Latin dominated Western Europe. It was presumably during this period that Persian replaced other Iranian languages as the common speech in much of northern Afghanistan. Contemporary prose and poetry are most often written in Dari and often imitate classical Persian style and form.

Pashto (or Pushto) literature was essentially created by Khushal Khan Khattak, who lived from 1613 to 1690. He was a brilliant warrior who opposed the Moghul emperor. He was also a poet of wide-ranging interests. Pashto literature has not been cultivated since then to the extent that Dari literature has been. There has been little new or original art, literature, or architecture of any sort produced since the 17th century, when the rivalry between the Persians and Moghuls began. Almost constant warring, with no significant periods of peace, has prevented the Afghanis from giving their attention to the arts.

The Islamic reverence for poetry continues to inspire poetic recitals and some original writing. The greatest modern Afghani poet, Khalilullah Khalili, died recently. Mujahideen resistance fighters often quote his poems. The most popular theme in Afghani poetry is war, followed by love and jealousy, then religion and folklore (though almost all poems have some religious sentiment in them). There is also some nature poetry. Traditionally, Afghanis have not been known for writing fiction or other prose. After the 2001 war and its violent aftermath brought the world's attention to the country, a few notable books were produced by the Afghani Diaspora, as well as internationally renowned films. *The Kite Runner*, written by the Afghan-American writer Khaled Hosseini and published in 2003, was an international best seller. The Siddiq Barmak film of 2003, *Osama*, was the first film shot in Afghanistan since the Taliban had taken power. The film, which won several international awards, is a rather bleak assessment of life in modern Afghanistan.

Visual arts reached their peak in the 15th century AD. Since then, no exceptional painters or sculptors have emerged, and no new styles or content have been developed. Most painting is done in the form of calligraphy, illumination, or functional

decoration. Muslim architecture continues to be beautifully realized, particularly in the design of mosques. Tall minarets with bulbous domes and colorful, intricate tile-work make for one of the most graceful and elegant architectures in the world.

## 15 WORK

Most Afghanis (about 80%) are farmers and herders. Even those who engage in crafts such as pottery, weaving, shoemaking, and housebuilding are also part-time agriculturalists. The army and government administration are the only large-scale employers outside the agricultural sector. Wheat is the principal crop. For trade purposes, grapes and orchard fruit (dried or fresh), together with walnuts and almonds, are important. Cotton is also a commercial crop. Perhaps the most profitable crop in Afghanistan is opium derived from poppies grown in the northwest provinces near the Pakistani border. Opium is the base for morphine and heroin. Efforts have been made from time to time to curtail the illegal drug trade, but political instability, the power of local warlords, and continuing Taliban insurgency make it difficult to supervise people's activities effectively. By 2006 Afghanistan was the world's largest producer of opium.

Sheep are raised in most parts of the country. Some 14% of Afghanis are still nomads, traveling from grazing ground to grazing ground. Goats are often herded together with the sheep. The skins of the Karakul sheep ("Persian lamb") of northern Afghanistan are the country's most profitable product. Wool is also exported.

In towns there are traders and full-time craft specialists, teahouses, and schools, but only about 300 such communities exist in Afghanistan. Only the few large cities, and particularly the capital, Kabul, have a modernized economic sector. Besides these, there are a very small number of factories and mining centers in other locations. Some small industries begun by the government include tanneries; machine-repair shops; cotton-ginning mills; bakeries; fruit-processing plants; and oil, soap, shoe, and ceramics factories. Larger government industries include cotton, rayon, and wool mills; the production of domestic construction materials and chemical fertilizers; and mining, especially for natural gas and lapis lazuli. Afghanistan is the leading producer of the precious stone lapis lazuli. Some Afghanis also find jobs as truck drivers, transporting goods from towns to cities and vice versa.

In 2008 more than 50% of the population lived below the official poverty line. The country's economy was growing, but was largely dependent on foreign aid.

## 16 SPORTS

Afghanis are very competitive and take their sports very seriously. Winning is a question of personal, family, and tribal honor. Afghan sports also tend to be violent, although injuries are rare. A favorite Afghan sport is called *buzkashi*, or "goat pulling," though these days a calf is usually used. In this contest, a headless calf carcass is placed in the center of a circle formed by two teams of horsemen (known as *chapandaz*). Only men participate. Teams have been known to number up to 1,000 players. A signal is given and all the *chapandaz* move to the center to try to lift the carcass onto their horse. Once someone captures the carcass, he rides to a point 1.5 km to 5 km (1–3 mi) away, then returns to the starting point and drops

the carcass where he picked it up. During all this, the other *chapandaz* are trying to grab the carcass away from him. The Afghan Olympic Federation laid down rules to *buzkashi*, limiting teams to no more than 10 players and games to 1 hour, with a 10-minute break at halftime. Two declared fouls are intentionally hitting an opponent with a whip, and forcing an opponent off his horse. Horses must be trained for the sport for at least five years. These rules are only used at official games. *Buzkashi* is to Afghanis what baseball is to Americans.

Another popular Afghan sport is wrestling, or *pahlwani*, where the only rule is that one cannot grab one's opponent's legs. Some modern sports were introduced in the 20th century, including tennis, golf, cricket, basketball, soccer, and field hockey.

## 17 ENTERTAINMENT AND RECREATION

Afghani children do not have much time for play, nor do their families have the money to buy manufactured toys (which are not widely available in their war-torn country). So children play simple games with basic toys, such as dolls made from natural objects, or slingshots. *Buzul-bazi* is a game like marbles or dice, played with sheep's knucklebones. Girls play a game very similar to hopscotch or amuse themselves for days with *marayadast-tura-furamosh* ("I remembered, you forgot"). When a family cooks a chicken, the girls take the wishbone and break it in half, giving one half to each girl. Then they try to trick each other into looking at their half of the wishbone, for example by tying it up in a bandage on their finger and asking the other one to look at the injury. When one succeeds in tricking the other into looking at her wishbone, she shouts, "Mara yadast, tura furamosh!" One sighting does not end the game; rather, a game can continue for days with repeated successes.

Boys enjoy kite-fighting, or *gudi-paran jungi* (literally, "flying-doll fighting"). Each boy makes his own kite from tissue paper stretched over bamboo sticks, decorated with other tissue-paper cutouts glued on the surface (often to give the appearance of a face). The point of the game is to cross strings with another kite-flyer and saw your string back and forth on his to cut the string and set his kite loose. To make their strings more lethal, boys "glass" them by soaking them in a mixture of ground glass and paste. Each boy has his own jealously guarded method of "glassing."

Adults love to sing and dance, and do both often. Afghanis do not dance with partners; instead, they either dance alone or in circles. Once a party gets going, Afghanis can dance outside for hours. Men spend time in teahouses listening to music, drinking tea, and talking. They also indulge in a more violent entertainment—animal-fighting. Cocks (roosters) are used most often, but partridges, dogs, goats, and even camels are sometimes pitted against each other as well. The two animals fight to the death, and men bet on the outcome.

What movie theaters there are in the cities usually show movies from India and Pakistan.

## 18 FOLK ART, CRAFTS, AND HOBBIES

The main folk art, and the most profitable one, is carpet-weaving. The weaving is done by young girls and women (except in Turkoman, where men weave, too). Patterns are passed down from generation to generation. Carpet patterns, like recipes elsewhere, are considered "family secrets." The best carpets are from Meymaneh, woven from Karakul wool. These carpets

have as many as 55 knots per sq cm (355 per sq in), whereas coarser ones have only 20–30 knots per sq cm (129–194 per sq in). The finest work takes four weavers three months to finish a 6-sq-m (6.6-sq-yd) rug.

Embroidery is widely practiced. Indeed, Afghani women have raised embroidery to an art form, embroidering nearly everything around them. The skullcaps around which men's turbans are wound are usually decorated according to designs that are characteristic of the region. Shirts, vests, and coats may be embroidered—particularly ones for wear on special occasions.

Metalworking has produced silver jewelry and elaborately designed dagger handles, as well as trays and bowls. Lapis lazuli, which Afghanistan has produced for millennia, is made into jewelry. Folk artists paint colorful scenes on the body-panels of trucks. Herat is noted for glassware, and Istalif (in the mountains not far from Kabul) produces a special blue-glazed type of pottery.

## 19 SOCIAL PROBLEMS

Continual warfare is the biggest social problem facing the Afghans. It is hard to talk of any social problems that are not related to the fighting that has been going on for centuries. A country made up of separate tribes of people who are historically warriors seems almost doomed to drown in conflict. The Communists hoped to end that conflict by creating a unified state, but the devoutly Islamic Afghans rebelled against an “atheistic” government. Without a significant period of peace, there has been no time for Afghans to give their attentions to improving their standard of living. In Kabul, the only extensively modernized city in Afghanistan, the more-Westernized lifestyle has led to a disintegration of traditional family and tribal values. The elderly, who are respected and revered in villages, are neglected in the cities and turn to drugs for comfort, becoming heroin and opium addicts. Education, health care, employment opportunities, and even the basic food and shelter needs for survival have been severely disrupted by the fighting.

Even the relative peace that was imposed on the north of Afghanistan, in and around Kabul, after the U.S.-led invasion of 2001 has started to unravel. Suicide bombings, unheard of in Afghanistan just a few years prior, had become by 2007 and 2008 nearly commonplace.

Refugee resettlement is also a significant problem. Western countries have been encouraging Afghans to return to their homeland, but as violence has increased, the government has faced delays in finding homes for the returnees.

Opium cultivation also contributes to the lawlessness of Afghanistan. International agencies estimate that Afghanistan's crop, by far the world's largest, has the potential to create more than 500 metric tons of processed heroin annually. Money from the trade is used to arm local warlords and Taliban fighters. The Kabul administration has tried for years to eradicate opium crops, but simply doesn't have the resources, even with United States and NATO support, to make a significant dent in the trade.

## 20 GENDER ISSUES

Women in Afghanistan face great difficulties at nearly every stage of their lives. By nearly every internationally used measure of quality of life Afghani women rank near the bottom.

Their life expectancy in 2007 was 46 years, 1,600 women die in childbirth for every 100,000 births (it is reported that an Afghan woman dies in childbirth every 30 minutes), and only 12% of women over 15 years are literate. Although the constitution guarantees equality between the sexes, this has made few dents into centuries of traditional oppression. Women in much of the country must still cover themselves in a *burqa* to appear in public and can rarely go anywhere without a male relative accompanying them.

Violence against women is widespread. Most estimates suggest 30–50% of women experience physical, psychological, or sexual violence. It is estimated that between 70–80% of Afghan women are forced into marriage, often at a very young age. The 2004 constitution sets the legal age of marriage at 16 for girls and 18 for boys, but the laws are widely ignored. In villages, it is not uncommon for girls to be married at 11 or 12, often to men in their 40s, 50s, or even older.

# AHIRS

**PRONUNCIATION:** uh-HIRS

**ALTERNATE NAMES:** Goala; Gaura; Gopal; Rawat

**LOCATION:** India (middle Ganges valley; states of Bihar, Orissa, and Uttar Pradesh)

**POPULATION:** About 45–50 million

**LANGUAGE:** Language of the region of India in which they live

**RELIGION:** Hinduism

**RELATED ARTICLES:** Vol. 3: People of India

## 1 INTRODUCTION

The Ahirs are a traditional cattle-keeping caste distributed widely throughout northern and western India. They are thought to be the descendants of an immigrant, probably non-Aryan, tribe of ancient India. One first hears of this tribe, the Abhiras, around the 3rd or 2nd century BC. Abhiras are mentioned in the epic *Mahabharata* as “slaves” and “barbarians” coming from the northwest. Some authorities see them as nomads of Central Asian origin, perhaps entering India in the troubled times that followed Alexander’s death. Their early settlements were limited to the Punjab, Rajasthan, and Sind, but in the centuries following the beginning of the Christian Era they migrated towards the south and east. Abhira rulers established extensive kingdoms in Gujarat and nearby areas during this period. Abhiras may even have reached southern India, as legends of the Ayars (Abhiras) appear in the ancient Tamil literature. Eventually the nomadic Abhiras gave up their migratory ways and began to integrate with the surrounding communities. The Sanskrit *Abhira* becomes *Ahir* in the vernacular language.

Ahirs today are mainly cattle-keepers and dairy farmers. They are known locally by names such as Goala, Gaura, Gopal, and Rawat. Although their precise rank varies according to region, Ahirs are usually placed among the Sudras, the third of the four major caste groupings in Hindu society.

## 2 LOCATION AND HOMELAND

Because of the variety of names by which they are known and the lack of caste data in the modern census, any estimate of the Ahir population is, at best, crude. The 1931 census placed the number of Ahirs and related castes at just over 14 million people, or roughly 4% of the population. Assuming that this percentage has not changed significantly, with an estimated population of 1.13 billion in India (March 2008), the Ahir population would lie between 45 million and 50 million people.

*Ahir* defines numerous cattle-keeping communities with the same (or related names) distributed throughout India. These usually fall into regional groupings who are not interconnected and do not intermarry. Ahirs are most numerous on the alluvial plains of the middle Ganges valley. Significant Ahir communities are found in the states of Bihar, Orissa, and areas of Uttar Pradesh. Ahirs are also found in central India, and in the western states of Rajasthan and Gujarat.

## 3 LANGUAGE

Over time, Ahirs have adopted many of the cultural traits—including language—of the regions in which they have settled. Thus Ahirs in Gujarat speak Gujarati, in western Uttar

Pradesh they speak Braj, and in Bihar their language is Bihari. Ahirs in other parts of India speak the language current in the areas they inhabit. In some areas, the importance of Ahirs in the local population is reflected in the names of local dialects. Khandeshi, a dialect of the Gujarati language, is also known as Ahirani. Malvi, a Rajasthani dialect, bears the name Ahiri. Ahirwal (Ahirwati) is the name of a folk region southwest of Delhi in which Ahirs dominate and in which the local dialect is called Ahirwati.

## 4 FOLKLORE

The legend of Lorik is one of the most popular in Ahir mythology. Several versions of the legend exist, but the following is told in Mirzapur District in eastern Uttar Pradesh. Lorik is an Ahir who elopes with Chandani, his neighbor’s wife. He defeats her husband in a fight and then goes on to meet Mahapatiya Dusadh, chief of the gamblers. Lorik loses everything, including Chandani, but the girl argues her jewelry was not part of the stake and induces Lorik to play again. This time Chandani distracts the chief of the gamblers by displaying her ankles, and Lorik wins everything back. Chandani tells Lorik she has been insulted by his opponent, so Lorik cuts off the gambler’s head with his magic sword. The head and the body are turned to stone.

In his subsequent wanderings, Lorik gains a kingdom and marries the girl (not Chandani) to whom he had been betrothed. He eventually incurs the displeasure of the god Indra, and after giving in to temptation by Indra’s wife who assumed the form of Chandani, Lorik dies in shame in Varanasi (Banaras). Several elements of this tale—the gambling match, the magic sword, the body turning into stone, and the fidelity test—are common motifs in folk tales in both the East and the West.

## 5 RELIGION

The majority of Ahirs are Hindu and share in the basic beliefs and practices of Hinduism. They belong mostly to the Vaishnava sect, i.e., they worship the god Vishnu rather than Shiva. (In Bihar, however, many are Shaivites or worship the Mother Goddess). Ahirs pay particular respect to, and are closely identified with, the legendary god Krishna. Krishna is regarded as the eighth incarnation of Vishnu, although he is also worshiped in his own right. The name *Krishna* (meaning “black”) occurs in the Vedas, but not in reference to any deity. The dark-skinned god of later times is basically non-Vedic in origin, with a later Aryan overlay. Some scholars have argued that Krishna was a pastoral deity of the Ahirs, whose worship was spread throughout northern India during their migrations and subsequently absorbed into Hinduism. Others see aspects of Krishna (e.g., Krishna as child-god) as reflecting knowledge of Christ acquired by Ahirs from early Christian missionaries in India.

Many legends of Krishna, for example, his birth and childhood, his exploits as a cowherd, and his amorous dalliance with the *gopis* (cowgirls), are set in Braj, the region of western Uttar Pradesh State around Mathura and Vrindavan. Even today, many Ahir groups in northern India have a tradition that their ancestors came from this region of India. The cow is regarded as the favorite animal of Krishna, and Krishna-worshipers are among the most ardent supporters of the Hindu concept of the sanctity of the cow. Not only is the cow revered

as a deity, Ahirs also worship various local gods who are linked in some way with cattle and cattle-keeping.

## 6 MAJOR HOLIDAYS

Ahirs celebrate all the major festivals of Hinduism. Of particular importance among the community, however, are the festivals dedicated to Krishna. These include Holi, Divali, Janamastami (Krishna's birthday), and cattle festivals such as Gopashtami and Govardhan Puja. Gopashtami, literally "Cow Eighth," falls on the eighth day of the Hindu month of Kartik (October-November). It marks the occasion when the child Krishna first took his father's cattle out to graze in the forests of Braj. Cattle are washed and decorated at this time, processions of cattle are taken through the streets of towns and villages, and cows are worshiped (the *go-puja* ceremony). Govardhan Puja, another cattle-related festival, falls on the day after the Divali festival. The centerpiece of this ritual is the worship of an image made of cow dung said, in certain areas of the country, to represent Krishna. An unusual custom of the Ahirs of Bihar and West Bengal at Govardhan Puja is a ritual involving the goading of village cattle to trample a pig to death.

## 7 RITES OF PASSAGE

In the Chhattisgarh region of central India, Rawats (i.e. Ahirs) follow a rite known as *sidhori* during pregnancy. This involves feeding the pregnant woman special foods so that the unborn child will not hunger for these foods in its later life. If the birth is delayed, a line of men and boys is formed between the house and a well. A pitcher is then passed rapidly along the line, filled with water, and returned to the house. The speed acquired by the water on its trip to the house, it is believed, will be communicated to the woman and give rise to a quick delivery. The father is not allowed to see the mother or child until purificatory rites are performed on the sixth day. If a child is born on an inauspicious day, its ears are pierced in the fifth month after birth to protect it from possible harm.

Ahirs cremate their dead, after performing the appropriate funeral rites. One unusual ritual in Chhattisgarh involves bringing the soul back to the house. On the third day after death, women place a lamp on a red, earthen pot and go to a pond, river, or stream at night. Fish are attracted to the light and one is caught, placed in water in the pot, and taken home. The son of the deceased, or a close relative, takes a stone and washes it with water from the pot. After the sacrifice of a cock or hen, the stone is enshrined in the house as a family god. It is believed that the dead person's soul is brought back to the house in the fish and then transferred to the stone by the act of washing it in the water. The sacrifice of a fowl is repeated annually before the stone.

## 8 INTERPERSONAL RELATIONS

Ahirs follow the greeting patterns and visiting customs of the local communities among whom they reside.

## 9 LIVING CONDITIONS

Wherever Ahirs settled, they adopted many local customs concerning caste, kinship, and material culture. Ahir villages in Rajasthan, for example, differ little in form and appearance from other villages in the region. Settlements are nucleated, located in the center of the village lands. Houses, constructed

haphazardly along winding, unpaved lanes, are built of mud or sun-dried brick. Attached to the houses are small compounds, enclosed by low mud walls or thorn fences, used for keeping cattle at night. Residences contain living quarters and several small rooms used for storage. People sleep on the floor on mats or on low wooden cots. In the hot season, it is common to sleep outdoors or on the roof. Most houses lack sanitary facilities, with villagers going to the fields to perform daily bodily functions. In general, creature comforts and standards of living reflect the economic status of individual families.

## 10 FAMILY LIFE

Ahirs fall into several broad regional groupings which are not connected and which do not intermarry. In any given region, there are endogamous groups of Ahirs, each divided into exogamous clans (*gotra*). Marriage rituals do not differ much from those of other Hindu castes. The rules of marriage conform to broader regional practices. In Uttar Pradesh, for example, marriage is forbidden between a member of a clan and the clans of one sister's relations up to three generations. In Bihar, marriage is regulated according to territorial-based categories called *muls*. The marriage of first cousins is prohibited. Marriages are arranged. Ahir girls are wed around the time of puberty, although some groups prefer infant marriage. Residence is patrilocal, i.e., the bride moves into the household of her husband's family. Family structure conforms to regional patterns, with the extended family being the norm. Divorce is possible under certain circumstances, although it requires the

approval of the caste's *panchayat* or council. Widow remarriage is allowed.

### 11 CLOTHING

Just as they have adopted local languages, Ahirs have assumed the regional dress of their locality. Thus Ghosis (Ahirs who have converted to Islam) in central India wear tight, short pants of white cotton, a waist band with a fringe on either end, a short jacket, and a tight, saucer-shaped turban. Ghosi women wear a long bodice over a petticoat. Women wear a variety of jewelry. Rawat women favor large, cylindrical leg-ornaments called *churas*. Ahir girls are commonly tattooed immediately after marriage.

### 12 FOOD

Most Ahirs are nonvegetarian, eating goat, chicken, and, in some cases, pork. There are reports from central India that local Ahirs will even eat field mice and rats. Ahirs do not eat beef, however, and their special relationship with the cow is reflected in their good social standing in many communities. Many higher-caste communities will accept food and water from Ahirs. Milk and dairy products are important in the Ahir diet, which generally mirrors regional dietary patterns. Ahirs also consume local "country" liquor in fair quantities.

### 13 EDUCATION

In such a numerous and widely distributed community, literacy and educational levels vary. Although Ahirs have access to government schools, the nature of their occupation and their predominantly rural character is reflected in generally low levels of literacy and educational achievement.

### 14 CULTURAL HERITAGE

The folk songs and dances of the Ahirs reflect their pastoral traditions and their historical associations with Krishna. Known as *birhas*, Ahir songs are accompanied by the flute and tell of past heroes or of the carefree life of the cowherds. Some are love songs, expressing the longings of Ahir youth. Love is also the theme of the *rasas*, the folk dances depicted in early paintings and sculptural representations of Krishna. These often show the cowherd god playing on his flute, surrounded by a ring of dancing *gopis* (cowgirls). The *garba* dance of Gujarat and many of the folk dances of Uttar Pradesh and other areas are derived from the *rasas* of old.

### 15 WORK

The hereditary occupation of Ahirs is tending milk cattle and dealing in dairy products such as milk, butter, and *ghi* (clarified butter). In the past, Ahir women sometimes entered domestic service. One group, the Dauwa Ahirs of central India, are descended from the illegitimate offspring of Rajput fathers and Ahir women employed as wet-nurses. Today, perhaps no more than one-third of the Ahirs breed cattle or are dairy farmers, and even less cling to their old nomadic ways. The majority of Ahirs are now engaged in cultivation, either as farmers or as laborers. Those few who have acquired some education may work in offices or other low-level clerical jobs.

### 16 SPORTS

As might be expected, many of the traditional pastimes of Ahirs focus on their cattle. At the time of the Gopashtami festival, bull fights are staged in honor of Krishna. Two bulls are set on each other, and they lock horns in a test of strength until one submits to the other. The animals are separated before they hurt each other. Cattle sports represent an ancient tradition in India, with evidence suggesting "bull-jumping" took place in the Harappan culture nearly 4,000 years ago. Another modern practice found in rural areas is the "running of the herds." At the time of Govardhan Puja, village cattle are taken outside the settlement then stampeded towards their pens in the village. The men of the village try to stop them from reaching their pens. It is considered a sign of good fortune for the next year if the herds manage to reach their pens safely.

### 17 ENTERTAINMENT AND RECREATION

In addition to their folk activities, Ahirs seek recreation and entertainment at the numerous fairs and festivals of rural India. One of the biggest and best-known of these is the Pushkar Camel and Cattle Fair in Rajasthan, which is attended by livestock breeders and farmers from a wide area. The fair has even become an attraction for Western tourists. Depending on their individual circumstances and where they live, Ahirs have radios and televisions and can visit movie theaters in nearby towns for entertainment.

### 18 FOLK ART, CRAFTS, AND HOBBIES

Although pastoral themes and the legends of the cowherd god Krishna are prominent motifs in Indian art, paintings and sculptures depicting such subjects are produced by professional artisan castes. The Ahirs themselves have not developed folk arts or crafts that can be considered unique to the community.

### 19 SOCIAL PROBLEMS

Given the extensive geographic distribution and variation in culture of Ahir communities in India, it is difficult to make generalized statements about their social conditions. Ahirs are usually ranked as the highest of the cultivating castes and thus do not face the problems of discrimination, etc., encountered by Untouchables and tribal groups. However, in central India many Ahirs are hardly considered Hindu because they live in Gond villages.

There are many among the Ahir community who face problems typical of the rural peasant in India today, such as landlessness, poverty, debt, illiteracy, and alcoholism. In general, however, Ahirs are placed with the Jat and Gujar as being among the most successful cultivating castes of northern India.

### 20 GENDER ISSUES

Ahir women, like most women in India, occupy a low social status. They are involved in agricultural activities (many are agricultural laborers), collect fuel and run the household, but have little say or control in the social arena. Literacy among them is low, despite recent central government attempts to remove gender barriers in education. (Until 1976, education was solely the concern of states but a Constitutional Amendment permitted the Union Government to legislate educational reforms, viz the 2001 Sarva Shiksha Abhiyan (SAA) was which aimed at providing schooling for all 6-14 year-olds by the year

2005, at bridging all gender and social gaps by 2007, and at universal retention by 2010). Although formerly practicing child marriage (this still occurs, though it has been made illegal by the Union Government), there is a tendency among Ahirs for the age of marriage to be delayed to between 15 and 20 years for women. Customs regarding widow remarriage and divorce vary among Ahir groups. Occasionally, due to illness or the inability of a wife to bear children, a man is allowed to take a second wife, provided this act is approved by the local *panchayat* or tribal council.

# AINU

**PRONUNCIATION:** EYE-noo

**LOCATION:** Japan (Hokkaidô)

**POPULATION:** 25,000 (Official figure for Hokkaidô; some believe that the numbers are substantially higher for Japan as well as for Hokkaidô)

**LANGUAGE:** Japanese; Ainu (few present speakers)

**RELIGION:** Pantheistic beliefs

**RELATED ARTICLES:** Vol. 3: Japanese

## <sup>1</sup> INTRODUCTION

Until 400 years ago, the Ainu, a hunting and fishing people, controlled Hokkaidô, which in the late 19th century was incorporated as the northernmost of Japan's four main islands. Today they are a small minority group of Japan. Their origins remain in dispute. It was long believed that they came from Siberia or from the southern Pacific, originally comprising different groups; recent DNA studies seem to indicate, however, that the Ainu have approximately the same genes as mainstream Japanese and Ryukyuan, all stemming from north Asia. After centuries of developing Ainu culture in interaction with, but distinctive from, that of the Japanese, in recent centuries, they have faced Japanese government policy of modernization and integration. As with indigenous people in the United States and many other nations, the Ainu have largely assimilated. And like many other such groups, there have been signs of cultural revival in recent decades.

The oldest ruins found in Hokkaidô, the Ainu homeland, date from 20,000 to 30,000 years ago in the Old Stone Age. Iron was introduced approximately 2,000 years ago from either southern Japan or the continent, probably by ancestors or groups related to the Ainu. Between the 8th and 13th centuries, earthenware unique to Hokkaidô and the northern mainland appeared. Its producers were the direct ancestors of the Ainu. The subsequent 300 to 400 years saw the development of the culture known today as uniquely Ainu.

## <sup>2</sup> LOCATION AND HOMELAND

Hokkaidô is 83,520 sq km (32,247 sq mi)—one-fifth of Japan, and twice as large as Switzerland. A small number of Ainu live on southern Sakhalin. Earlier, the Ainu also lived in the southern Kuril Islands, along the lower reaches of the Amur River, and in Kamchatka, as well as the northern part of the Northeast region of Honshû. Their ancestors may once have lived all over Japan.

Hokkaidô is surrounded by beautiful coasts. There are many mountains, lakes, and rivers. Into the 20th century its land was densely wooded with ancient trees. Two major mountain ranges, Kitami in the north and Hidaka in the south, divide Hokkaidô into the eastern and western regions. The Saru River basin area in southeastern Hokkaidô is known as a historical center of Ainu culture.

An 1807 survey reported the Hokkaidô and Sakhalin Ainu population as 23,797. Mixed marriages between Ainu and mainland Japanese became more common over the last century. In 1986 the total number of people in Hokkaidô identifying themselves as Ainu was 24,381. A 2006 Hokkaidô survey found 23,782 Ainu in 72 municipalities, of which 59.5% resided in Hi-

daka and Iburi districts. There is Ainu population in mainland cities as well, including some 2,700 in Tokyo. The survey numbers represent only those who identified themselves as Ainu. In the past many people of Ainu ancestry may have preferred not to identify themselves as Ainu.

In the late 19th century, the central government created a colonial office for Hokkaidō's economic development and encouraged settlers from other parts of Japan. A similar government office now continues to promote Hokkaidō's development. With the loss or in some cases the deliberate destruction of their land, their livelihood, their language and their traditional culture, the Ainu had to adapt to a rapidly industrializing society.

### 3 LANGUAGE

Ainu is said to belong either to a Paleo-Asiatic or a Paleo-Siberian group of languages. It divides into Hokkaidō and Sakhalin dialects, and each can be subdivided into minor dialects. The Saru region dialect is said to be especially refined, rich with oral traditions. The Ainu language was first systematically studied by the British missionary John Batchelor (1854–1944), the Japanese linguist Kindaichi Kyōsuke (1882–1971), and the Ainu linguist Chiri Mashio (1909–1961).

Interesting characteristics of the Ainu language include: (1) *p*-, *b*-, *k*- sounds are interchangeable with *b*-, *d*-, *g*- sounds, and *c*-, *s*- sounds are close to *ch*-, *sh*- sounds; (2) instead of stress accents, as in English, a pitch accent system, as in Japanese, is found in most Hokkaidō dialects; (3) word order is similar to Japanese: the subject, the object, then the verb; (4) verbs and some nouns, instead of conjugating and declining as in Latin and other European languages, have affixes that indicate the first person (“I”) and second person (informal “you” and formal “you”).

To explain the fourth point, the noun *tek*, meaning “hand,” takes the form *ku-tek-e* when the hand(s) belonging to the speaker is meant (*ku*- indicating the first person and *-e* indicating the possessive mode). The verb *kore*, meaning “give,” takes the form *e-en-kore* if the giving occurs from “you” (second person singular informal) to “us” (first person plural). Affixing is a distinctive aspect of Ainu. Adding prefixes and suffixes can produce long words, even so long that they correspond to whole sentences in English or Japanese.

Ainu and Japanese share many single words. God (male or female) is *kamui* in Ainu and *kami* in Japanese. Chopstick(s) is *pasui* in Ainu and *hashi* in Japanese. The word *sirokani* (silver) and *konkani* (gold) in literary Ainu correspond to *shirokane* and *kogane* in literary Japanese (see quotation below). The two languages, however, are unrelated. Two well-known Ainu words still commonly used refer to venerated Ainu individuals: *ekasi* (grandfather or sire) and *huci* (grandmother or grand dame).

The Ainu historically had no written language. It can no longer be said, however, that there is no written Ainu language. It is the same situation as when the Japanese adopted Chinese characters to create the Japanese phonetic system of hiragana and katakana, or borrowed the Roman alphabet to write “Romaji,” Ainu adopted the alphabet and katakana, improving both systems over the years to represent Ainu language. Now “Ainu-go” is one of the language choices on the computer. Extended katakana (the Japanese phonetic syllabaries with some modifications) or the Roman alphabet is used to transcribe

or write Ainu. Few people now speak Ainu as their primary language. The folklorist from the Saru region Kayano Shigeru (1926–2006) called himself the youngest living Ainu able to speak fluent Ainu. In 1982 Kayano, a leading figure in the Ainu cultural preservation and revival movement, founded the first Ainu Language School. By 1993 the number of Ainu language schools had increased to 11; by 2007 the number had risen to 14 in Hokkaidō and a few in Kantō.

Traditional Ainu names are single names without surnames. For example, Kayano Shigeru's grandfather was named Totkaram (“may he grow well”), and his grandmother Tekatte (“an added hand”). Starting in 1876, the Ainu were forced to adopt Japanese names. A few Ainu people today have reclaimed their Ainu names, using a single name or combining it with a Japanese name. Thus, an Ainu embroiderer calls herself Chikap Mieko, “Chikap” being an Ainu name meaning “bird.”

The name Ainu comes from a common noun *ainu*, meaning “human(s).” Once the term was felt to be derogatory, but more Ainu now use the name positively, taking pride in their ethnic identity. Their land is called “Ainu Mosir”—peaceful land of humans. The phrase *ainu nenoan ainu* means “human-like human.” The following is a famous refrain from a poem about the owl deity:

*sirokanipe ranran piskan*  
(fall, fall, silver drops, all around)  
*konkanipe ranran piskan*  
(fall, fall, golden drops, all around)

In 2001 Kayano Shigeru opened a small Ainu language FM radio station called *FM Nibutani Broadcast* (nicknamed “*FM Pipausi*” after the name of the old village, meaning “a place where there are many marsh snails,” now part of present-day Nibutani). It only reached listeners in the Nibutani area then, but back numbers are now available on RealPlayer, a cross-platform media player. The radio not only provides local news and recalls Ainu tradition mostly in Japanese, but also offers Ainu lessons and airs recordings of old recitations by Ainu bards. The quarterly *Ainu Times* is a bilingual newspaper, with Ainu and Japanese printed side by side. STV (Sapporo Television) started an Ainu language lesson program in 1999 with Kayano Shigeru as the original instructor. It continues today with elderly and younger Ainu lecturers from different areas of Hokkaidō presenting Ainu local dialects. Kayano Shigeru was the driving force behind all these activities, along with Kayano Shirō, his second son.

### 4 FOLKLORE

The world was created, according to mythic poetry, when floating oil in the ocean rose like a flame and became the sky. What was left turned into land. Vapor gathered over the land and a god was created. From the vapor of the sky, another god was created and descended on five colored clouds. Out of those clouds, the two gods created the sea, soil, minerals, plants, and animals. The two gods married and produced many gods including two shining gods—the sun god and the moon god, who rose to Heaven in order to illuminate the fog-covered dark places of the world.

Okikurmi of the Saru region is a semi-divine hero who descended from Heaven to help humans, who lived in a beautiful land but did not know how to build fire or make bows and arrows. Okikurmi taught them how to build fire, to hunt, to

catch salmon, to plant millet, to brew millet wine, and to worship the gods. He married and stayed in the village, but eventually returned to the divine land.

Ainu historical heroes include Kosamainu and Samkusainu. Kosamainu, who lived in eastern Hokkaidô, led an Ainu rebellion against the mainland Japanese ruling the southern tip of Hokkaidô, called Matsumae. He destroyed 10 out of the 12 Japanese bases but was killed in 1457. Samkusainu organized Ainu in the southern half of the island during a 1669 uprising, but after two months they were destroyed by Matsumae forces armed with guns.

## 5 RELIGION

Ainu religion is pantheistic, believing in many gods. In the mountains dwell the god of mountains and in the river dwells the god of water. The Ainu hunted, fished, and gathered food in modest quantities so as not to disturb these gods. Animals were visitors from the other world who temporarily assumed animal shapes. The bear, striped owl, and killer whale received the greatest respect as divine incarnations.

The most important god in the home was the female god of fire. Every house had a fire pit where cooking, eating, and rituals took place. The main offerings made to this and to other gods were wine and *inau*, a whittled twig or pole, usually of willow, with shavings still attached and decoratively curled. A fence-like row of taller *inau* stood outside between the main house and the raised storehouse. Outdoor rituals were observed before this sacred altar area.

## 6 MAJOR HOLIDAYS

The spirit-sending festival, called *i-omante*, either for a bear or striped owl, was the most important Ainu festival. The bear *i-omante* was observed once in 5 or 10 years. After three days of reverence to a bear cub, accompanied by prayers, dancing, and singing, it was shot with arrows. The head was decorated and placed at the altar, while the meat was enjoyed by the members of the village community. The spirit, while visiting this world, had temporarily adopted the form of a bear; the bear ritual released the spirit from the form so it could return to the other land. Similar festivals are observed by many northern peoples.

Another important festival is boat-launching, called *cip-sanke*. A newly built canoe (or canoes) is brought from the place of construction to the river. The festival is still celebrated in Nibutani around August 20. In April 1996, the Nibutani dam was filled with water but the Ainu won their legal battle to have the water drained and the festival occurred one last time in the original Saru river. More recently, it has been celebrated in a lower reach of the Saru. It has become a festivity welcoming mainland Japanese as well, and the launching preceded by prayers and dances is followed by Japanese Bon-dances joined by all who wish to participate.

There are also youthful attempts to create new forms that combine traditional Ainu oral performances with contemporary music and dance. "Ainu Rebels," formed in 2006, is constituted mostly of Ainu youth but also including wajin and foreigners, is active, singing and dancing. They draw on Ainu oral tradition adapted to hip hop and other modern forms, as well as engaging in artistic activities that combine traditional Ainu art with contemporary artistic elements.

## 7 RITES OF PASSAGE

In preparation for adulthood, boys traditionally learned hunting, carving, and making tools like arrows; girls learned weaving, sewing, and embroidery. Girls, usually in their mid-teens, were tattooed around the mouth in stages by a skilled older woman; long ago they were also tattooed on the forearms. The Japanese government banned tattooing in 1871.

The gift of a knife mounted in carved wood from a young man indicated both his skill and his love. The gift of embroidery from a young woman similarly indicated her skill and her willingness to accept his proposal. In some cases, a young man visited the family of a woman he wished to marry, helping her father in hunting, carving, and so forth. When he proved himself an honest, skilled worker, the father approved the marriage.

A death was mourned by relatives and neighbors, fully dressed in embroidered costume, men wearing a ceremonial sword and women a necklace of beads. The important elements of a funeral were prayers to the fire deity and verse laments that included wishes for a smooth journey to the other world. Items to be buried with the dead were first broken or cracked so that the spirits would be released and travel together to the other world. Sometimes burial was followed by the burning of the dwelling. The funeral for an unnatural death could include a tirade against the gods.

## 8 INTERPERSONAL RELATIONS

A formal greeting, *irankarapte*, which corresponds to "how are you" in English, means "let me softly touch your heart."

It is said that Ainu people always shared food and drink with neighbors, even a cup of wine. As the host and the guests seated themselves around the fire pit, the host dipped his ceremonial chopstick in the cup of wine, sprinkled a few drops onto the fire pit giving thanks to the fire god (goddess of fire), then he and the guests shared the wine. The first catch of salmon of the year in early fall was a special item to be shared with neighbors.

There was a custom, called *ukocaranke* (mutual argumentation), for settling differences by debating instead of fighting. The disputants sat and argued for hours or even days until one side was defeated and agreed to compensate the other. Representatives with oratorical skills and endurance were chosen to resolve disputes between villages. Kayano Shigeru repeatedly emphasized the importance of this tradition, and the term is now widely known to mainlanders as well.

## 9 LIVING CONDITIONS

In the old days the Ainu house was made of poles and thatch plant and warmly insulated for the northern climate, with a fire pit at the center of the main room and an opening below each end of the ridge for smoke to escape. Between 3 and 20 such houses, built at appropriate distances from one another so that fire would not spread but a voice would reach in case of emergency, formed a village community called *kotan*. A *kotan* was usually located by water for convenient fishing but also in the woods to remain safe from floods and close to gathering grounds. As necessary, the *kotan* moved from place to place in search of a better livelihood.

*Tatsue Sato, wearing traditional Ainu clothing, in her Tokyo restaurant. To many Japanese, the Ainu remain a target of discrimination. In the summer of 1997, a law was passed to officially recognize the Ainu as a minority.*  
(AP Images/Shizuo Kambayashi)

## 10 FAMILY LIFE

Besides weaving and embroidering, women farmed, gathered wild plants, pounded grains with a pestle, and cared for babies, while men hunted, fished, and carved. Some accounts suggest that married couples lived in separate houses, others that they stayed with the husband's parents. A bilineal descent system was observed until recently. Males traced descent through different animal crests (such as a killer whale insignia) and females through hereditary chastity belts and forearm tattoo designs. The inheritance could include the art of a bard (male or female), a midwife, or a shaman. The midwife and shamaness Aoki Aiko (1914–1995) inherited her arts as the fifth generation offspring of the female line of the family. Dogs were favorite animals. In one scene of an epic poem describing the descent of a divine youth to this world, a dog is mentioned as guarding millet grains. Dogs were also used in hunting.

## 11 CLOTHING

The Ainu traditional robe made of a textile woven of inner elm bark fibers and worn with a woven sash is similar in shape to the mainland Japanese kimono. The male robe was calf-length. In winter a short sleeveless jacket of deer or other animal fur was also worn. The female robe was ankle-length and worn over a long undershirt with no front opening. The robes were hand-embroidered or appliquéd with rope-like designs. A

pointed edge at the tip of each front flap was characteristic of the Saru region.

The traditional costume is still worn on special occasions by some, but in everyday life the Ainu wear international-style clothing like other Japanese.

## 12 FOOD

Traditional staple foods were salmon and deer meat, in addition to millet raised at home and herbs and roots picked in the woods. Millet was largely replaced by rice earlier in this century. During the season, fresh salmon was cut up and boiled in soup. A rice porridge called *ciporosayo* was prepared by adding heaping servings of salmon roe to boiled grains.

As in other cold regions, Ainu children used to enjoy making maple ice candy. On a late March or early April evening, when a cold night was expected, they made cuts in the bark of a big sugar maple and placed containers of sorrel stalks (sorrel is hollow inside) at the roots of the tree to collect dripping syrup. In the morning, they found the sorrel cylinders filled with frozen white syrup.

*Sito*, dumplings made of vegetable starch, usually eaten with kelp-based sweet sauce, are still commonly enjoyed today.

Among the many traditional utensils and artifacts are the poison arrow, unattended trap arrow, rabbit trap, fish trap, ceremonial sword, mountain knife, canoe, woven bag, and loom.

In the early 1960s Kayano Shigeru began privately collecting many such genuine items in and around his village in the Saru region, when he realized that what was left of the Ainu cultural heritage were scatterings from the communities. His collection developed into the Biratori Township Nibutani Ainu Cultural Museum and the Kayano Shigeru Ainu Memorial Museum. Also famous is the Ainu Museum established in 1984 in Shiraoi in southeastern Hokkaidō on the Pacific.

## 13 EDUCATION

Traditionally children were educated at home, with grandparents reciting poems and tales while parents taught practical skills and crafts. From the late 19th century, the compulsory education emphasized the use of Japanese by Ainu children. According to a 2006 survey conducted by Hokkaidō, in the municipalities inhabited by Ainu, the rate of Ainu children advancing from junior to senior high school increased from 41.6% in 1972 to 93.5% in 2006. The rate of Ainu advancing to college increased from 8.8% to 17.4% in the same period. Nevertheless, the 2006 Ainu ratios are below those of mainstream Japanese in the same areas, which are, respectively, 98.3% (to senior high) and 38.5% (to college).

## 14 CULTURAL HERITAGE

The Ainu have handed down a vast body of oral traditions. The main categories are *yukar* and *oina* (longer and shorter epic poems in literary Ainu), *uwepekere* and *upasikma* (old tales and autobiographical stories, both in prose), lullabies, and dance songs. *Yukar* usually refers to heroic poetry, chanted mainly by men, dealing with demi-gods and humans, but it also includes *oina*, or *kamui yukar*, shorter epics chanted principally by women about the gods. The Saru region, in south central Hokkaidō, is especially known as the homeland of many bards and storytellers.

*Yukar* was narrated by the fireside for a mixed gathering of men, women, and children, with men sometimes reclining and

beating time on the belly. Depending upon the piece, it lasted all night or even for a few nights. There were also festival songs, group dance-songs, and stamping dances.

The best known Ainu musical instrument is the *mukkuri*, a mouth harp made of wood. There were also coiled-bark horns, straw flutes, skin drums, five-string zithers, and a type of lute.

## 15 WORK

Since the mid-19th century, hunting, fishing, and gathering of wild plants, accompanied by millet raising, have been replaced by rice and dry-crop cultivation and commercial fishing. Other activities in Hokkaidō include dairy farming, forestry, mining, food processing, wood working, pulp, and paper industries. The Ainu contribute to all of these. In 2006, 28.6% of the Hokkaidō Ainu population worked in the agricultural sector, decreasing over one half from 1972; 27.7% worked in manufacturing, increasing 1.4 times more from 1972; and 41.1% in small and medium-sized service-oriented enterprises, the latter increasing over 2.5 times.

## 16 SPORTS

Traditional sports for children included swimming and canoeing. In the early 20th century there was a children's game called *seipirakka* (shell clogs). A hole was bored through the shell of a large surf clam and a thick rope passed through it. Children wore two clams each, with the rope between the first two toes, and walked or ran about on them. The shells made a clicking noise like horseshoes. Another indigenous Ainu game was making toy *pattari* in the creek when the snow thawed in spring. They were made from hollow stalks of sorrel filled with creek water. With the accumulation of water, one end of the stalk dropped to the ground under the weight. On the rebound, the other end hit the ground with a thump. Adults used real *pattari* to pound millet grains.

## 17 ENTERTAINMENT AND RECREATION

The Ainu enjoy many forms of modern entertainment similar to those enjoyed by mainland Japanese, such as television, movies, theater, concerts, and karaoke. Appreciation of seasonal changes and holiday festivals are traditional pastimes that remain popular. Major festivals attract huge crowds, and famous sites for admiring plum and cherry blossoms, irises, azaleas, chrysanthemums, and the bright leaves of fall draw many visitors who come to view the sights and to party outdoors among the flowers.

## 18 FOLK ART, CRAFTS, AND HOBBIES

Weaving, embroidery, and carving are among the most important forms of folk art. Some types of traditional Ainu weaving were once almost lost, but were revived around the 1970s. Chikap Mieko, a second generation professional embroiderer, builds her original embroidery on the foundation of the traditional art. Carved trays and bears are treasured tourist items. Ainu influence on modern Japanese music has been observed in recent years. Again recently, two traditional musical instruments have become better known: *tonkori*, a five-stringed Sakhalin string instrument revived the musician by the name of OKI, and *mukkur*, a mouth harp. At Shiraoi Museum, *tonkori* lessons are given.

## 19 SOCIAL PROBLEMS

The 1899 Ainu law that treated the Ainu as "former aborigines" remained in effect into the 1990s. As a representative to the National Diet between 1994 and 1998, Kayano Shigeru took the lead in fighting to eliminate this law. A new Ainu law, called "A Law Related to the Promotion of Ainu Culture as well as Spread and Enlightenment of Knowledge related to Ainu Traditions," was enacted in 1997, replacing the 1899 law. The recent construction of a dam in Kayano's homeland, Nibutani village in Biratori town, exemplifies forceful development of Hokkaidō at the cost of the Ainu's civil rights. Despite the resistance led by Kayano Shigeru and Kaizawa Tadashi, construction proceeded and in early 1996 the village was buried under water. In a speech delivered in February 1988 at a meeting held in Hokkaidō's capital city on the use of Hokkaidō lands, Kayano stated that he would accept the Nibutani dam construction plan if only the salmon fishing rights be returned to the Nibutani Ainu in exchange for the destruction of their homes and fields. His request was ignored.

## 20 GENDER ISSUES

Ainu society traditionally was organized around clear cut divisions among men and women. Typically men went out to hunt or fish, and women wove, maintained the household, and ground grains. Traditionally, men chanted long heroic verses while women chanted shorter songs of the gods. By mid-20th century, with few male chanters available, women chanters replaced them.

## 'ALAWIS

**PRONUNCIATION:** ah-LOW-eez

**ALTERNATE NAMES:** 'Alawite

**LOCATION:** Syria; Lebanon; Turkey.

**POPULATION:** 1.4 million in Syria; 100,000 in Lebanon; indeterminate numbers in Israel-occupied Syrian Golan Heights, uncounted numbers in Turkey, and a small diaspora in Australia

**LANGUAGE:** Arabic

**RELIGION:** Secret 'Alawi faith; a branch of Shia Islam

### OVERVIEW

'Alawi (or 'Alawite) means "a follower of 'Ali," the Prophet Muhammad's cousin and son-in-law. The 'Alawis (and all Shia Muslims) believe that 'Ali was Muhammad's rightful heir to political and spiritual leadership of the Muslim community. Originally calling themselves "Nusairis," they became known as 'Alawis only in 1920 after the French colonizers dubbed them as such. As part of their colonial strategy, the French normally allied with the minority of any particular territory they occupied. The minority would then greatly benefit from the occupation of the country, as the French would promote them to positions from which they otherwise would be banned. This was true of the 'Alawis as well.

During the Abbasid Empire of the 12th century AD, Nusairi views became increasingly differentiated from mainstream Shia views. This resulted in increasing persecution by the Sunni government of the Abbasids. The Nusairis were forced to flee from Iraq and Arabia farther and farther west, until they reached the mountains in western Syria on the Mediterranean coast. There they survived, despite continuing persecution, for centuries.

The French granted the people they called 'Alawis a strong measure of autonomy in 1920 when the French occupation of Syria was formalized by the League of Nations. However, when the French left in 1946, the new Syrian government sent troops into the 'Alawi villages to squelch their autonomy and forcibly assimilate them into becoming fully integrated Syrian citizens. Although some 'Alawis moved down from the mountains to the Latakia province on the coast, they rarely mingled with the rest of Syrian society, even in their new urban environments.

The 'Alawi are believed to be remnants of an ancient Canaanite people, who were then influenced by both Islam and Christianity. They adopted the Arabic language and Islamic faith over the course of the Muslim domination of the region beginning in the 7th century AD. However, they broke away to form their own religion during the reign of the Abbasids. Sunni and Shia Muslims refuse to accept 'Alawis as true Muslims because of their belief in a holy trinity: the Imam 'Ali as the most important figure; Muhammad; and Salman al-Farisi, one of Muhammad's companions. In Syria, the president is required to be a Muslim by law, and as an 'Alawi, the first Asad had a religious cleric issue a fatwa, a Muslim religious pronouncement, that 'Alawis were Muslim. The head of state as of 2008, Bashar al Asad, relies also upon this fatwa for his legitimacy.

*Location and homeland.* In 2008 there were estimated to be about 2.6 million 'Alawis in the world. Most (about 1.4 mil-

lion) were concentrated in the Latakia province on the western coast of Syria though there are small numbers in Turkey, Israel (2,000 in Israel-occupied Golan Heights), Lebanon, and Australia. In Lebanon, they live in a small area just to the south of the Syrian border; in Turkey they occupy rather larger settlements near Antioch, the al-Kuysar plateau, and in the plains formed by the Lower Orontes river.

The ancient 'Alawi stronghold is the Jabal an Nusayriyah mountain range, which is named for them ("Mountains of Nusairi," as the 'Alawis were formerly known). The mountain range runs north-to-south along the Mediterranean coastal plain of Syria. It is sometimes called Jabal 'Alawite. The wetter western side of the range supports some farming, but the drier eastern side is good only for sheep-herding. It is a poor region, and the 'Alawis have for centuries been a poor, struggling people. Over 60% of the rural population along the coast in the Latakia province is 'Alawi. The largest ethno religious minority group in Syria, 'Alawis made up between 10% and 12% of the total Syrian population according to 2004 estimates; reliable, more precise figures are unavailable.

'Alawis are not considered by some to be true Arabs; they converted to Islam centuries after the majority of modern-day Syrians. Thus, 'Alawis have historically felt a sense of estrangement from the Sunni Arab majority that surrounds them. Centuries of persecution and life hidden away in tiny mountain strongholds has also led to a sense of separation and isolation for the 'Alawis. Their society is organized tribally, with most 'Alawis belonging to one of four main tribal confederations: the Haddadin, the Matawira, the Khaiyatin, and the Kalbiya. Three smaller tribes—the Darawisa, Mahaliba, and 'Ama-mira—settled at the northern end of the Jabal an Nusayriyah range. Some detribalized 'Alawis settled on the plains surrounding the mountain area. Modern 'Alawis are trying to replace tribal notions with notions of citizenship in the state, but all 'Alawis, even the children, still know which tribe is theirs.

*Language.* The 'Alawis adopted Arabic as their language during the period known in the West as the Middle Ages. Arabic, spoken by at least 300 million people worldwide, has many dialects. Nevertheless, most Arabs can understand each other's speech, although certain words may have different nuances in different countries. Written Arabic comes in two varieties: the classical Arabic of the Quran and Modern Standard Arabic (MSA). The latter is the version of the language printed in newspapers and books in all Arab countries. Arabic is written and read from right to left. "Hello" (*marhaba* or *ahlan*) in Arabic is a very informal greeting one rarely hears. Far more common is the traditional *As-salam alaykum*, "Peace be with you," with the reply of *Walaykum as-salam*, "and to you peace." *Ma'assalama* means "Go in peace." "Thank you" is *Shukran* and "You're welcome" is *Afwan*. These greetings and pleasantries are known not only in the Arab world but by virtually all Muslims around the world who use them daily. "Yes" is *na'am*, and "no" is *la'a*. The numbers one to ten in Arabic are *wahad*, *itnin*, *talata*, *arba'a*, *khamisa*, *sitta*, *saba'a*, *tamania*, *tisa'a*, and *ashara*.

*Religion.* The precise details of the tenets of the 'Alawi faith, its rituals and practices are somewhat mysterious. After decades of persecution by Muslims who considered their veneration of saints and other rituals and beliefs heretical to orthodox Islam, the 'Alawis began to carefully guard their holy books and practice their rituals in private. The 'Alawi story of creation tells of

An 'Alawi child makes a victory sign as women hold red flags and banners during a protest in Istanbul, Turkey. The people marched to commemorate deadly riots that happened in 1995 between police and 'Alawi residents. (AP Images/Murad Sezer)

a spirit world inhabited by beings of light who worshiped God but who began over time to deny his divinity. This caused their exile from paradise and condemned to the mundane existence of suffering humanity. The 'Alawis worshipped a pantheon of prophets and minor deities throughout their history, but in the Islamic era they have embraced devotion to a trinity consisting of the Imam Ali, the Prophet Muhammad, and Salman al-Farisi, one of the Companions of the Prophet, the men and women who were Islam's first converts and are held in great esteem all over the Muslim world. It is speculated that they perform a ritual using bread and wine to represent the body and blood of the incarnate God, much as Christians do in their Eucharist or Holy Communion. Only men take part in worship and are initiated into the faith. The initiation is a long process that begins no earlier than age 19, and involves tremendous study and the passing of trials and tests.

The 'Alawis believe that God has appeared on the earth seven times, the most recent being in the form of the greatly revered Imam Ali.

The most authoritative book for the 'Alawi faith is not the Muslim holy book of the Quran, which they interpret largely allegorically, unlike virtually all other Muslims, who consider it to be the direct words of Allah transmitted through the Prophet Muhammed. Rather, the 'Alawis' holy book is the Kitab al-Majmu, which has 16 *surahs* (chapters) and almost certainly was compiled over many years by many writers. 'Ala-

wi ritual and belief appears to involve the worship of sacred springs and trees, etc., probably descending from their ancient Phoenician pagan heritage. They also worship stars, planets, and other heavenly bodies, believing as they do that they began their existences as beams of light not unlike the heavenly bodies. Through successive reincarnations, 'Alawis believe humans may eventually return their souls to the heavens, becoming celestial bodies once again, healing the rift with God created by their doubting his divinity at the beginning of time.

The 'Alawis do not worship in mosques in a symbolic protest and recognition of the fact that their highly revered Imam Ali was killed in a mosque. Most 'Alawis gather in friends' houses for prayers. There is no prohibition against drinking alcohol among the 'Alawis. In addition, they do not, generally, adhere to the controversial topic among Islamic scholars as to the meaning of Allah's command that the wives of and daughters of the Prophet cover their heads and chests.

Other aspects of their beliefs relate to objects of light, including the belief by one 'Alawi sect, known as the Shamsis, that the Imam Ali lives in the sun; the Qamaris believe he lives on the moon. The Alawis believe in reincarnation and the existence of more than the world they currently inhabit. They believe that after death, 'Alawis that practiced goodness are reborn into another human form: the wicked are reborn as animals seen as unclean or predatory.

*Major holidays.* As the 'Alawis keep their faith so secret, it is difficult to discover their major holy days. It is said they do not observe the Muslim month-long fast of Ramadan or make a pilgrimage to Mecca (some believe doing so constitutes a form of idol worship), though the traditional Persian new year festival, known as Nowruz, is widely celebrated. There is good evidence they do celebrate something very similar to the Catholic mass and partake in the ritual of the Eucharist though the wine they drink is not meant to represent the blood of the Christian prophet Jesus but that of the Imam Ali. They may celebrate some Christian holy days such as Christmas, Easter, and Epiphany.

*Living conditions.* 'Alawis have traditionally been very poor. Living in marginal mountain villages, most families grow wheat and raise goats to provide their bread, bulghur (cracked wheat), yogurt, and butter. Wealthier families might have grapevines, fruit trees, and sheep. Since Hafiz al-Asad, an 'Alawi, ascended to the presidency of Syria, conditions have improved for his people. After his death in 2000 his son Bashar took over the country, with few expecting him to do other than follow his father's policies of preferences to the 'Alawis. In 1970, for example, only 10% of houses in the Latakia province had piped-in drinking water; in 2004, more than 90% did. Roads have been built to every village. Communications and technology have improved and Internet cafes are spreading in the major cities, though the state keeps close watch on their use. In 2007 Syria had 119 Internet providers and 1.5 million regular users. Its country domain code is .sy. Government power projects have supplied electricity to even the most remote corners of Syria. However, high inflation rates and a struggling economy eat away at the gains made in the 'Alawis' standard of living. Also, any change in government (if an 'Alawi is no longer in power) could, and probably would, return the 'Alawis to their former days of hardship and poverty.

*Education.* Through much of their history, 'Alawis were illiterate mountain dwellers. There were no schools in the mountain villages until the 1930s, when the French started some elementary schools there. After the Ba'ath Party takeover in 1963 with 'Alawi Hafiz al-Asad at the helm, 'Alawis poured into the educational system. By 1985, under the first al-Asad regime, 'Alawis were strongly represented in Syrian professions and upper-level government. Under the second al-Asad's Democratic Socialist regime, education has been made available to everyone at all levels of society. Between 40% and 62% of 'Alawi girls now attend school, a significant increase from earlier times.

*Work.* Before the Ba'ath Party takeover in 1963 when the 'Alawis came into power, many 'Alawis joined the military because it was the only opportunity for employment readily available to them in the Sunni-dominated society. It is these 'Alawis who joined forces to overthrow the government in 1963. The 'Alawis continue to be the largest ethno religious group in the Syrian military. Prior to the 1960s and 1970s, the only industry in the 'Alawi mountain area was tobacco, and it employed just a few dozen workers. By the mid-1980s, however, under President al-Asad's Democratic Socialist reform program, 40,000 'Alawi workers were employed in public sector companies in food processing and the manufacture of aluminum, cement, textiles, and carpets. Under the second al-Asad administration, tentative steps toward economic liberalization have been

instituted and in 2007 the country experienced a real economic growth rate of 3.5%.

*Social problems.* 'Alawis continue to be looked down upon by the Sunni Muslim majority. Their current good fortunes are largely due to the fact that an 'Alawi, Bashar al-Asad, is president of Syria. Any change in government resulting in a loss of 'Alawi power would probably reverse their situation and send them back to the struggling, persecuted poverty that they knew for so many centuries. In Turkey, where 'Alawis hold no political power, their situation is worse. The Turkish state does not even recognize them as a distinct ethno religious group from the Kurds.

*Gender Issues.* 'Alawi society is patriarchal in ways not dissimilar to most non-Western cultures around the world. Religiously, there are gender practices and rituals worth noting: for example, women are excluded from the priestly classes and are not allowed to participate in rituals intended to return the 'Alawis to their former existence as beacons of semidivine lights in the presence of God. This is justified by the belief that women are born of the devil. Some extreme 'Alawis even consider that women have no souls. On the other hand, Syria is a secular, quasi-socialist state where strict interpretations of Islam common in other parts of the Arab world, particularly in the Gulf and the Maghrib (western part of North Africa), are not adhered to. In this sense, women enjoy greater personal freedoms in Syria. They are highly visible in the public sphere, most do not cover their heads and, like all 'Alawis, are free to drink alcohol.

# AMBONESE

**PRONUNCIATION:** AHM-bawn-eez

**LOCATION:** Indonesia (Moluccas)

**POPULATION:** Over 800,000

**LANGUAGE:** Ambonese; Ambon Malay

**RELIGION:** Christianity; Islam

**RELATED ARTICLES:** Vol. 3: Indonesians

## <sup>1</sup> INTRODUCTION

No later than 40,000 years ago, the first humans entered the Moluccas, the same basic stock that would go on to settle Papua New Guinea, the Melanesian islands, and Australia. However, with the exception of parts of Halmahera (including the important former sultanate on Ternate), the present population of the Moluccas (“Maluku” in Indonesian) speaks Austronesian languages brought by farming and seafaring people from Sulawesi beginning 4,500 years ago. In physical terms, the Ambonese and other Moluccan groups represent a mixture of the aborigines and these newcomers.

Produced exclusively in the Moluccas until the late 18th century AD and traded as far as Syria as early as the 18th century BC, cloves first came into high international demand during the Han dynasty in China and the Roman Empire in the West. Traders en route between the north Javanese ports and the clove-trading sultanate of Ternate (Muslim since the 15th century) made stopovers at Hitu on the north coast of Ambon island. A year after capturing Malacca in 1511, the Portuguese sent an expedition under Antonio de Abreu to the famed Spice Islands, landing at Hitu. They set up a fort there in 1522, from which Hitu Muslims (with Ternatan aid) were to drive them in 1575. In the meantime, however, the first conversions to Catholicism occurred in 1538, to be greatly augmented by the work of St. Francis Xavier in 1565 (three decades later, 50,000 converts are recorded).

After their expulsion from Hitu, the Portuguese transferred to the south coast where they established the fort that would become Kota Ambon (Ambon City). This the Dutch captured in alliance with the Hitu Muslims in 1605, desecrating the Catholic churches and deporting the “white” and “black” (*mestizo*) Portuguese. The single-minded Dutch pursuit of the spice monopoly led to the notorious massacre of English traders in 1623 and to the *hongi tochten*, annual sweeps to locate and destroy spice trees (and growers) outside the monopoly areas. Cloves were permitted to grow only on Ambon, no longer on Ternate and Tidore. The Dutch pressed Ambonese men and boats into service on the *hongi tochten*, offering villages land rights in proportion to their contribution.

The spice monopoly made Kota Ambon a rich town, the “Queen of the East” beside which Batavia and Manila were said to pale. Fond of European dance and dress, the local notables shared this wealth and some of the power, joining a representative council in the archipelago at the side of Dutch East India Company officials. As coffee, tea, and sugar came to overshadow spices in the 18th-century European market, the city began to decline. In any case, the British occupation of Ambon from 1796 to 1802 released cloves for cultivation elsewhere.

The Ambonese played a prominent role in the expansion of Dutch power in the archipelago, forming half of the colonial

military (KNIL) and a disproportionate percentage of the bureaucracy. Priding themselves on their loyalty and discipline, Ambonese soldiers received higher pay and rations than non-Ambonese; the Javanese called them “dogs of the Dutch” and “black Dutchmen.” From the 1880s on, Ambonese (as many as 10% by 1930) migrated to fill jobs as soldiers, clerks, and minor professionals for which Ambon’s educational system, the best in Netherlands Indies, qualified them. Christian Ambonese in particular felt more tied to the Dutch than to other “native” peoples.

Strategic to both the Japanese and the Allies, Ambon, especially Kota Ambon, was devastated in World War II. After the war, Christian Ambonese, having identified more with the Dutch than with other “native” peoples, tried to set up an independent nation, the Republic of the Southern Moluccas (RMS), waging a guerilla war against the Indonesian national army until the capture of the RMS president in 1956. After the 1950 transfer of sovereignty to Indonesia, the Dutch government brought ex-KNIL soldiers to refugee camps in the Netherlands; with their expectation to return home to fight for the RMS frustrated, the soldiers and their families continued as a neglected minority in the “mother country.” It was only after some Moluccan youth resorted to terrorism in the 1970s that the Dutch government focused its attention on the problems of this 40,000-strong community, beginning programs for bicultural education and job procurement.

Under the New Order regime (1966–1998), the government policies promoting the emergence of a Muslim technocratic elite in the country as a whole as well as the largely spontaneous, non-government-directed influx of Muslim transmigrants into Maluku (especially Bugis and Butonese from their poorer provinces) threatened the fragile balance in the region between Christians and Muslims, heretofore evenly matched in numbers (a situation almost unique in Indonesia). Christian Ambonese, whose high education level gave them dominance in the bureaucracy, resented the Muslim newcomers from Sulawesi for taking increasing control over the regional economy (though they had not begrudged local Christian Chinese their economic power). Moreover, Christian Ambonese feared they would be pushed out of the bureaucracy by increasingly educated and increasingly numerous Muslims, who for their part saw the Christians as continuing to shut them out of positions of power in the province.

Post-Suharto democratization and decentralization intensified competition and tension between the two groups; hostility erupted into mass inter-ethnic/inter-religious violence, beginning in Kota Ambon (initially only between Protestant Ambonese and Muslim transmigrants but eventually involving Catholic and Muslim Ambonese) and then spreading to other parts of the province and to neighboring North Maluku. News of the conflict provoked many Muslims in other parts of Indonesia. Mass rallies in Jakarta called for jihad in Maluku, thousands of Laskar Jihad vigilantes streamed into the province to fight Christians (even as the Ambonese themselves, Christians and Muslims, were becoming tired of the violence), and anti-Christian/Chinese and anti-Hindu/Balinese rioting broke out on Lombok. The conflicts in Maluku and North Maluku ultimately killed 3,000–4,000 people; these constituted the worst episode of collective violence in Indonesia since the 1965–1966 anti-leftist massacres, surpassing even the Dayak-Madurese conflict in Kalimantan in 1997. The “Maluku wars” displaced

between 123,000 and 370,000 people, comparable to the numbers displaced by Indonesia's far more murderous 1975 invasion of East Timor. Since hostilities subsided in 2002 after a peace accord, Kota Ambon, heavily devastated by the fighting (including its state and Christian universities), remains segregated along religious lines (with people not being able to return to their homes if they are not of the majority religion of their neighborhood), but commerce and other contacts have resumed between Christians and Muslims.

## 2 LOCATION AND HOMELAND

For Indonesians from outside the region, "Ambon," including the island, the city, and the people, is the "Moluccas," hence, anyone hailing from any of this diverse array of islands is likely to be called an "Ambonese" (*orang Ambon*). However, in the strict sense, the Ambonese ethnic group comprises the populations of the islands of Ambon, Haruku, Saparua, and the western portion of the much larger "mother island" of Seram. The two "peninsulas" of Ambon Island itself, Hitu and Leitimur, were once separate islands but are now linked by an extremely narrow isthmus. The long bay formed by the joining of the two land masses provides excellent shelter for ships, and it was on the southern shore of the bay that the city of Ambon (Kota Ambon) rose. The relatively high precipitation level and the quality of the volcanic soils favor agriculture, although much of the land is too steep for cultivation. Off the long stretches of beach are coral reefs that, however, have in many places been

ruined by people fishing with dynamite or digging for sand to make cement.

The population of Ambon has grown very rapidly: in 1971, Central Maluku counted 378,870 people; by 1980, Ambon island alone had 651,000 inhabitants. In 2005, the two regencies corresponding to the Ambonese homeland plus Ambon city had a combined population of nearly 700,000. The growth of Kota Ambon appears even more dramatic when one considers that the population of 234,000 (up from 209,000 in 1980 and 80,000 in 1959) must squeeze into 4 sq km (1.5 sq mi) between the shore and the hills, with only some relief from reclaiming land from the sea and building houses up the hillsides.

Since colonial days, when they were disproportionately represented in the military and bureaucracy, the Ambonese have settled in cities throughout the archipelago, particularly Makassar and Jakarta. In addition, there are 40,000 Ambonese in the Netherlands, mostly former soldiers of the KNIL (Dutch colonial army) and their families who came for "temporary" refuge after Indonesian independence.

## 3 LANGUAGE

A member of the Central Malayo-Polynesian branch of the Austronesian language family (and thus more distant from Bahasa Indonesia than the languages of Madagascar and the Philippines), the Ambonese language is closely related to dialects in West Seram and, on a higher level, groups with the Austronesian languages in Timor.

At the end of the colonial period (1950), Dutch was widely known in Kota Ambon. As the city has always attracted migrants and sojourners from elsewhere in the archipelago, the dominant language, however, has been a version of the Malay lingua franca, Bahasa Melayu Ambon. Malay in its local variant, as well as Bahasa Indonesia, is displacing the indigenous speech.

## 4 FOLKLORE

A Christianized origin myth places the first people on the slopes of Mount Nunusaku in western Seram. There they lived in abundance until the Fall (as in Genesis), when they scattered to Ambon and other islands.

The short British occupation during the Napoleonic Wars produced two heroes whose resistance to the reimposition of Dutch rule earned them national honor. Thomas Matulesy, a.k.a. Pattimura, had served the British as a sergeant major before leading an uprising against the returning Dutch. The daughter of another rebel leader, Martha Christina Tiahahu, continued her father's struggle after his death and, when captured, refused to inform on her co-rebels; she eventually starved herself on the way to exile on Java.

An example of a ghost story is the legend of Soya Atas village. The daughter of the head of the village fell in love with a Dutch official. Because of her father's disapproval, she drowned herself. Her ghost is said to kidnap foreign men or small babies; the victims disappear, only to be found after a few days either dead or in shock. Only a drink of water given by the present head of the village can revive them.

In order to deter thieves, farmers put up *matakau* figures in their fields suggestive of a curse (e.g., a grasshopper symbolizes stomach pains like an insect crawling about inside the body). The owners of young coconut trees have the church council

pray for their protection; a potential thief knows that theft will lead to misfortune.

## 5 RELIGION

The Ambonese divide almost evenly into Christians (51%) and Muslims (49%). Except for five mixed villages, the rest (42) are either exclusively Christian or Muslim. Traders from Ternate and the north Java coast introduced Islam to Hitu (north Ambon) well in advance of the Portuguese, who in turn brought Catholic missionaries such as St. Francis Xavier. The Dutch uprooted these early Catholic communities. Conversions to Protestantism (the Dutch Reformed Church) accelerated only in the 19th century.

Indigenous beliefs focusing on ancestral spirits remain strong, though they coexist more harmoniously with Islam than with Protestantism. Village halls (*baileu*), which formerly one could enter only after asking permission of the spirits dwelling there, contain a mystically charged stone (*batu pamali*) used as an altar for sacrifices and other offerings. In some places, the heads of goats slaughtered in Islamic rites are placed on the stone in the *baileu*, alongside skulls from previous years. When getting wood from the forest for a school, church, or the *baileu* itself, one hangs the head of a sacrificed goat from an old *baileu* pillar. Before the Dutch forbade the practice, the taking of human heads was crucial to traditional rituals, including weddings (as part of the bride-price).

Coexisting with Muslim and Christian religious authorities, the *mauweng* mediates between humans and ancestral spirits, particularly in rites for success in agriculture. This folk religious specialist also heals the sick by employing divination techniques to learn the underlying cause of disease, i.e., what is displeasing the ancestors (modern medicines are considered effective only for treating symptoms).

Since the 1863 abolition of the clove monopoly deprived village heads of the basis of much of their power, in Christian villages, ministers (always originally outsiders to the village) have challenged their authority. The *mauweng* have supported the village heads, but the balance tends now to favor the minister.

## 6 MAJOR HOLIDAYS

In villages, the most important festival is the *cuci negeri*, the annual village cleansing. The *baileu*, as well as every house and yard, is thoroughly cleaned; one family's failure to do so would invite fatal illness or crop failure for the whole community. Village leaders make speeches to the ancestors who established the *baileu*, the springs, and the holy places and pray to God to grant well-being. Eating, drinking, and general merrymaking follow the ceremonies. In Soiya, however, scheduling the *cuci negeri* for the Friday before Christmas reduces the scale of the celebration.

Seven days after Idul Fitri, the end of the Muslim fasting month of Ramadan, young men in Mamala village strike each other with rattan brooms (consisting of the sharp central spines of pine fronds) until they draw blood. The wounds disappear after the application of a locally made coconut oil.

## 7 RITES OF PASSAGE

There are three ways to get married: by proposal (*kawin minta*); by elopement (*kawin lari* or *lari bini*); or by the man's "moving in" (*kawin masuk*).

For *kawin minta*, a young man first informs his family of his choice for a bride. His *famili* (all his paternal and maternal relatives) gathers to discuss arrangements for the bride-price, the wedding ceremony, etc. Once agreed, they send a delegation to the young woman's parents asking for a time when they can issue the marriage proposal. The man's kin sends a spokesperson at the time set by the woman's kin. After paying the customary forms of respect to the woman's kin, giving the young man's full name (including those of his family and clan) the spokesperson of his kin negotiates the amount of the bride-price and other arrangements with the young woman's kin. The bride-price must be paid in full before a Christian or Muslim wedding ceremony can be held; otherwise, the ancestors will be offended and may cause death to the couple's children. The slowness of the woman's father in accepting the man's side's terms often results in a postponement of the religious ceremony and in the birth of children out of wedlock, a situation very unsatisfactory to Christian authorities.

Marriage by elopement avoids all these negotiations and, thus, is by far the most popular form of wedding. The young man may prefer this method in order to avoid rejection, or his family might prefer it in order to spare themselves the shame of a refused proposal. Although the woman's kin do not prefer elopement in principle, they sometimes agree to it beforehand as a way for them to reduce the bride-price without losing face. The young man's brothers or friends help him to "abduct" his bride and carry away all her clothes and other things. If the young woman's family knows beforehand, the young man leaves a letter in a white envelope on the girl's bed explaining in flowery language who has taken their daughter and that she is safe. After a week in hiding, the young woman is brought to the young man's house for the wedding rite and feast. During the feast, the bride offers around a tray of cigarettes and drinks to show that she is officially a wife. All friends and neighbors are invited so that the marriage will be public.

While generally it is the bride who comes to live with the groom's family, under the third type of wedding, *kawin masuk*, the groom moves in with the bride's family. He may choose this if his own family cannot afford the bride-price (in which case he himself must work for his in-laws in lieu thereof), if his family does not approve of the match because of differences in status between the sides, or if the woman is an only child and the man must join the woman's clan.

## 8 INTERPERSONAL RELATIONS

Before the Dutch, related lineages originating in Seram formed *soa*, headed by an *upu* who was assisted by a military commander (*malessi*) and a religious leader (*mauweng*). Under Ternatan hegemony, *soa* formed federations (*uli*). Ambonese also applied the Javanese terms for "state" (*negeri*) and "king" (*raja*) to their own villages and village headmen.

The Dutch abolished these federations, replacing them with a system of independent villages run by councils (*saniri*). The highest council was the *Saniri Rajapatih*, consisting of the village head and the *soa* heads. The next lower council, the *Saniri Negeri Lengkap*, added to the above the various village officials: the *tuan tanah*, an expert on traditional land inheritance law; the *panglima*, formerly a military leader; the *kewang*, forest police; and the *marinyo*, the town-crier. Finally, the *Saniri Negeri Besar* included all adult males but was convened very rarely, usually only for village-head elections. In recent times,

the once-hereditary village headmanship has become largely ceremonial, with the soa heads rotating de facto governing duties among themselves.

While the distinction persists between a village's "original inhabitants" (the descendants of the village founder, as such the village elite) and "newcomers," Ambonese society recognizes many translocal organizations. Every village belongs to either the Patasiwa or the Patalima faction, a division tracing back to the manipulations of the Sultan of Ternate and referring to federations on either side of the Mala River on Seram. More significant is the *pela*, an alliance linking two villages, often very distant and of different religions. The allies draw blood with knives and dip the bloody knives in water. They seal an oath of alliance by drinking the water containing each other's blood. The villages provide famine relief to each other and refuge in war; a Muslim village will contribute funds to its *pela* partner's Christian church and vice versa.

## 9 LIVING CONDITIONS

While traditional dwellings were built on wooden piles, contemporary Muslim and Christian houses sit on the ground. These houses have a square floor plan with an open veranda (*dego-dego*) in the front. The frame consists of tree trunk sections or wooden beams, while the walls are made of plaited sago-palm leaf (*gaba-gaba*). As most houses lack windows, the steep roofs have holes in the corners to release smoke. Sometimes there is a room in back serving as a kitchen. The houses of village leaders are in the European style, partially brick with windows and separate rooms inside.

Villages usually consist of houses grouped closely along a main road, though houses may also be separated by fenced yards. Each village includes a *baileu*, the village head's house, a church or mosque, the clergy's house, and small shops.

In Kota Ambon, in addition to buses, *becak* pedicabs provide the most common means of transport; the city has more than 2,000 *becak* that, not all being able to share the streets at a single time, are divided into three color-coded groups (red, white, and yellow). Of the local boat types, the *patakora* from Ternate is regarded as the best. Big boats (*jungku* and *orambi*) carry merchandise to Kota Ambon.

Maluku province has a Human Development Index (combining measures of income, health, and education) of 69.2 (2005 score), almost as high as Indonesia's national HDI of 69.6. Kota Ambon's HDI is considerably higher at 76.2, while the two surrounding regencies, Central Maluku (a portion of the earlier province of that name) and Western Seram, have lower HDIs (respectively, 67.7 and 64.8). Maluku has a higher HDI than all the nearby provinces other than North Sulawesi. The closest, North Maluku, at 67, has one of the country's lowest. However, this is despite the fact that Maluku's GDP per capita is only us\$3,637, among the lowest in Indonesia (us\$9,784 for West Sumatra, us\$8,360 for North Sulawesi, but us\$6,293 for Central Java and us\$6,151 for West Nusa Tenggara). Kota Ambon's GDP per capita (us\$5,699) was higher, but still rather low. In 2000, the province's rate of infant mortality stood at 60.63 deaths per 1,000 live births (though only almost half this in Kota Ambon).

## 10 FAMILY LIFE

Perhaps under Muslim and Christian influence, kinship is patrilineal as expressed, for instance, in newlywed couples' residing with the groom's family.

A household includes parents, unmarried children, and married sons with their wives and children. An individual belongs to a clan (*rumah tau*, *matarumah*, or *fam*) of patrilineally related kin who has a name and possesses rights to titles (political office), land, and sacred stones and springs; one must marry outside the clan. Women join their husband's clan (unless she is an only child, in which case the man joins his wife's clan). The *rumah tau* has a meeting house built by the clan founder containing weapons, cloth, and other heirlooms, which are under the hereditary stewardship of a clan leader.

## 11 CLOTHING

Elements of traditional Ambonese clothing preserve influences from 16th century Portuguese fashion. While younger women wear bright pink, yellow, and blue Western-style dresses to church, older women wear long black dresses with long sleeves and a highly prized sash made of beads.

## 12 FOOD

As the sago palm grows abundantly in the local swamps, sago-palm starch is the staple; rice supplements sago-palm starch but does not displace it. A 6- to 15-year-old tree can be cut down for food. The preparer beats the tree core to loosen the flour-rich fibers. These are then washed and squeezed through a filter to obtain the starch, which is formed into squares (*tuman*). The *tuman* are either grilled or made into a thick porridge (*pepeda*).

Other foods are bananas and papayas, available all year round. Freshly grilled fish is served with *colo-colo*, a sauce of chopped onions, chili, and tomatoes. *Kohu-kohu* is a pungent salad of shredded tuna meat, bean sprouts, onions, and cabbage. Also eaten with a spice mixture are *laor*, seaworms who come to shore to breed in March and April. Local menus do not announce it, but black dog is also cooked. From the sap of the lontar palm, local people distill wine (*moke*).

## 13 EDUCATION

Since the 19th century, when Christian missionaries built schools, Ambon has enjoyed one of the highest education levels in the archipelago. This has allowed many local Ambonese to migrate to other parts of the country as office workers. In 2005, Maluku province's level of literacy stood at 96.16%, very high by Indonesian national standards and comparable or superior to provinces with much higher GDPs per capita. (See also the article entitled **Indonesians**.)

## 14 CULTURAL HERITAGE

Throughout Indonesia, the Ambonese are famous for singing (Western-style) music. Cassettes of local songs and singers are popular nationwide. Traditional instruments include the *tifa* (a single-membrane drum) and the ukulele. The latter forms part of the *kroncong* ensemble, a sentimental Portuguese-derived musical style, one of whose cradles was Ambon. Bamboo flutes are also played; orchestras of bamboo flutes open church services. Famous dances are the *lenso* and the *cakalele* (a war dance).

*Ambonese men perform a traditional war dance in Ambon, Indonesia. There has been religious turmoil between Muslims and Christians on this small eastern Indonesian island since 1999. (AP Images/Vonny Litamahuputty)*

## 15 WORK

Most people continue to obtain a living by agriculture, which involves slash-and-burn cultivation of tubers and peanuts. The Dutch brought potatoes, which remain a minor crop, grown on mountain slopes. Other crops are coffee, sugarcane, cassava, maize, and fruits (bananas, mango, mangosteen, durian, and gandaria, the last having medicinal value). Coconut production satisfies regional consumption. Farmers grow tobacco for their own use under the eaves of their houses, where they can benefit from rainwater coming off the roof; the leaves are dried on the roof itself. Although a Dutch clove monopoly no longer confines clove cultivation to Ambon, the spice continues to be grown, requiring little work from the farmer but yielding a substantial profit on the market (as an ingredient in Indonesian-made cigarettes, *kretek*). Farmers sell their surplus crops to obtain money for taxes, school fees, and daily necessities that they cannot produce themselves.

People hunt for deer, wild boar, and cassowary birds using traps that may endanger unwary humans. Fishing by hook, harpoon, and net also adds protein to the diet.

## 16 SPORTS

Children's toys include hoops from old bicycle wheels and stilts from palm trunks. Billiards is a popular pastime. Children play in the early evening, as the afternoon is too hot.

## 17 ENTERTAINMENT AND RECREATION

See the article entitled **Indonesians**.

## 18 FOLK ART, CRAFTS, AND HOBBIES

"Paintings" (usually intricate still-lives of flowers) are fashioned from thin slices of mother-of-pearl. Large models of boats made entirely of cloves and wire are common souvenirs. Embroidered *baju kurung* (long shirts) are also produced. The woodcarvings and *ikat* (tie-dyed) cloth available in Kota Ambon generally come from the more traditional Tanimbar islands to the southeast.

## 19 SOCIAL PROBLEMS

See the article entitled **Indonesians**.

## 20 GENDER ISSUES

Maluku's Gender-Related Development Index (combining measures of women's health, education, and income relative to men's) is 62.6, somewhat higher than Indonesia's national GDI of 59.2 (2002 scores). The province's Gender Empowerment Measure (reflecting women's participation and power in political and economic life relative to men's), however, is 51.8, rather lower than the national GEM of 54.6. Kota Ambon itself, however, has a GDI of 71.3, higher than Jakarta's (which is the highest among the country's province-level administra-

tive divisions) and a GEM of 59.4, higher than North Sulawesi's (which is number one among province-level administrative divisions). This contrasts sharply with the immediately surrounding province of Maluku Tengah, which has a GDI of 54.1 and a GEM of 34.3.

# ANDAMANESE

**PRONUNCIATION:** an-duh-mun-EEZ

**ALTERNATE NAMES:** Great Andamanese, Jarawas, Onge, Sentinelese

**LOCATION:** India (Andaman Islands)

**POPULATION:** 429 (2001 Census of India)

**LANGUAGE:** Andamanese

**RELIGION:** Animism

## 1 INTRODUCTION

The Andamanese are the original inhabitants of the Andaman Islands, which lie in the Bay of Bengal some 1,000 km (640 mi) southeast of the mouth of the Ganges River. Of Negrito (Asian pygmy) stock, this population consists of hunting-and-gathering tribes who are related physically and culturally to the peoples of Southeast Asia. Little is known of their origins, but the Andamanese most probably reached the islands from the Malay and Burmese coasts. The northernmost point of the Andaman Islands is only 300 km (190 mi) from the mainland of Burma (Myanmar).

Various explanations of the name *Andaman* have been proposed, but it possibly comes from the Malay *Handuman*, i.e., Hanuman, the monkey god of Hindu mythology. Lying astride the trade routes across the Indian Ocean, the Andamans have been known from early times. Among those who have mentioned the islands are Ptolemy, the Greek geographer, 7th-century Chinese Buddhist monks, 9th-century Arab travelers, and Marco Polo. A common theme in historical reports of the islands is the hostility and ferocity of the native peoples. In 1789, the colonial government of Bengal established a penal colony on the islands, though it was subsequently abandoned. The British returned in 1858 to found Port Blair and maintained a presence in the islands (except during Japanese occupation in World War II) until control of the islands passed to India when that country gained its independence from Britain. Today, the Andamans are administered by New Delhi as part of the Union Territory of the Andaman and Nicobar Islands.

## 2 LOCATION AND HOMELAND

In the early years of the 20th century, 13 distinct indigenous tribes were present in the Andaman Islands. By the mid-1960s, however, only 4 groups remained. These were the Great Andamanese of Strait Island, the Jarawas of Middle Andaman, the Onge of Little Andaman Island, and the Sentinelese of North Sentinel Island. The Andamanese are few in number compared to the rest of the islands' population, who are largely immigrants and descendants of immigrants from mainland South Asia. The total tribal population of the Andaman Islands was estimated to be 429 according to the Cennus of India, 2001, but this number is unreliable.

The tribal populations of the Andamans appeared to survive the tsunami of December 2004 relatively untouched, although at first there was concern that they had perished in the disaster. Their survival has been attributed to a knowledge of ancient lore and an understanding of the behavior of birds, wind and the sea. Apparently the tribal groups moved inland and thus escaped the worst of the tsunami, which ravaged much of the coast of the Andamans. Forty one of the 43 Great An-

damanese reported in the 2001 Census of India were sighted after the tsunami, as were 73 Onge of the 98 reported in the Census. The Jarawa, reported as having a population of 240 in the 2001 Census, are thought to number about 300, while the Sentinelese are reported as having 39 people (clearly an undercount—the population is actually estimated at around 300) in 2001

The Andamans are a group of 204 islands, 6,340 sq km (2,448 sq mi) in total land area, located in the Bay of Bengal. Centered at about 12°N latitude, they form an arc running north-south for 500 km (300 mi). North, Middle, and South Andaman Islands, known collectively as Great Andaman, are the chief islands of the group. Many of the other islands are uninhabited. Great Andaman consists of a jumble of hills rising to 740 m (2,427 ft) at Saddle Peak that enclose narrow valleys covered in dense tropical forest. Little Andaman, the southernmost island in the chain, is relatively flat. The climate is tropical, with heavy rainfall in the summer during the southwest monsoon.

### 3 LANGUAGE

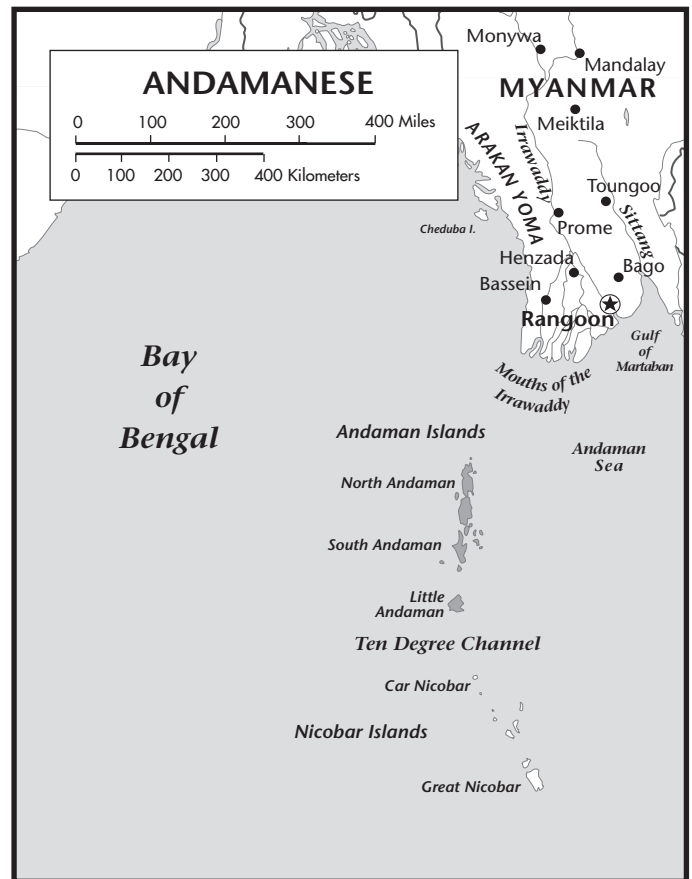

The aboriginal tongues of the Andaman Islands are grouped together in the Andamanese family of languages. They are clearly related, though early accounts of the Andamanese indicate that the tribes spoke languages that could not be understood by other tribal groups on the islands. The Andamanese languages have yet to be classified in relation to the major linguistic families of South and Southeast Asia. They fall into two main groups. Proto-Little Andamanese includes Onge, Jarawa, and Sentinelese, the tongues of the tribes in the southern islands. The various languages spoken by the tribes that once inhabited North, Middle, and South Andaman Islands fall into the category of Proto-Great Andamanese.

### 4 FOLKLORE

The following legend, from one of the Great Andaman tribes, accounts for the origin of night. In the early days of the world, the tale goes, in the time of the ancestors, there was no night; it was always day. Sir Monitor Lizard went into the jungle, where he found yams, resin, and a cicada (a type of insect). He brought them to the camp of the ancestors. He rubbed the cicada between his hands, crushing it. At this, the cicada let out its cry, and day became night. It remained dark for several days. The ancestors tried to get the day to return, lighting torches of resin, singing, and dancing, but with no success. Various types of birds also sang to try to get the day to return, but all in vain. Finally, after an ant sang, morning came. Ever since that time, day and night have followed one another.

### 5 RELIGION

The Andamanese religion is animistic in nature. Among the Onge, the supreme being (Eiugia) takes the shape of a lizard that is bigger than a crocodile. The thunder is his voice, and the wind is his breath; if he becomes angry, he breathes out storms and sets fire to the forest. In addition, two broad categories of spirits inhabit the Onge universe. There are the spirits associated with natural phenomena such as earthquakes, rainbows, and waterspouts, or which control the reproduction of plants and animals useful to humans. There are also the spirits of the dead, who may be benign or evil in nature. The Onge do not revere the spirits, but rather fear them. Their anger is to be

avoided, but the Onge do not hesitate to deceive or trick them if they can get away with it. The spirits of the ancestors are seen to be in direct competition for the resources of the islands.

Certain individuals among the Andamanese can communicate with the spirits while in a trance. Frequent contact with the supernatural is thought to enhance the powers of these shamans or medicine men. The medicine man is consulted to deal with the spirit world, to diagnose illness and effect cures, to help the community find food, and to determine its ceremonial activities.

### 6 MAJOR HOLIDAYS

Lacking any formal religious system, the Andamanese also lack a calendar of festivals or holidays. Celebrations revolve around ceremonies accompanying events such as birth or marriage. For the Onge, even a successful hunt is an occasion for gorging oneself and painting the body in white clay.

### 7 RITES OF PASSAGE

There is a complete absence of ritual surrounding the birth of children. Women do not go through any period of isolation or purificatory ceremonies after childbirth, returning to their normal activities within a few days. The Onge interchange or adopt children freely, perhaps reflecting both strong maternal instincts and the low birth rates among the group. Such children may be kept temporarily, for a number of years, or even permanently if the birth parents do not ask for their return. Matrilineal relatives assume responsibility for raising children

in their early years, and after menstruation a girl's ties with her mother's family become even stronger. Following his initiation, however, a boy's training and education lie in the hands of his father and paternal relatives.

Just as initiation makes an adult out of the child, so funeral ceremonies complete the transformation of the human to the spirit. In fact, the Onge believe that if the proper burial rites are not completed, the spirit becomes malevolent and will return to cause harm. The dead are buried underneath the floor of the communal hut. A second burial occurs later when the lower jaw is exhumed, colored with red ochre, and carefully reburied in the floor. Some of the bones are kept and worn as necklaces and ornaments around the neck. The spirits of the dead, which stay near the bones, are thus kept near their relatives to protect them and help them in their daily lives.

## 8 INTERPERSONAL RELATIONS

In the past, it was customary for the Andamanese to kill all outsiders who landed on their shores. Early encounters between Europeans and the Andamanese tribes resulted in bloody conflicts that frequently left casualties on both sides. The Jarawas, in particular, have an implacable hatred for outsiders. This hostility extends even to other Andamanese groups. Even today, the Jarawas have not been totally subdued and remain isolated from the rest of the islands' population.

## 9 LIVING CONDITIONS

During the dry winter season, the Andamanese migrate to coastal areas where they fish and hunt sea turtles and dugongs (sea cows). Groups of families set up camp, constructing flimsy lean-to huts and shelters (*korale*) in a circle around a central campground. With the onset of the rains in early summer, the Andamanese move into the interior. Breaking up into smaller groups of four or five families, they build temporary huts or live in rock shelters as they move through the forests in search of pigs and other game. At the end of the wet season, families gather at the circular clan hut (*berale*), which is tended throughout the year by men from the clan. This structure has a thatched roof and side walls, and contains permanent sleeping platforms for each family in the clan. Individuals sleep on mats, using log headrests as pillows. These, along with a few living utensils and weapons, are carried by the families on their yearly migrations between the coasts and the forests. Territory is identified with specific bands which generally hunt and fish within their own lands. Little Andaman, which is inhabited solely by the Onge, is divided into four divisions each of which is identified with one of the four Onge clans.

## 10 FAMILY LIFE

Clan and lineage might determine where one hunts, but the basic social and economic unit among the Andaman islanders is the family. This is nuclear in character, consisting of husband, wife, and children, both birthed and adopted. Women have an important role in Andaman society, with descent being reckoned by both male and female lines. Most rights and obligations are inherited through the female line, although items such as weapons and canoes may be passed down from the father's side.

Marriage is highly valued among the Andamanese. Marriages are arranged by tribal elders, with a man's patrilineal relatives approaching his matrilineal family for a suitable girl.

Given the relatively small populations of the surviving Andaman tribes, there is often some difficulty in finding a match. The actual marriage ceremony is simple. The man and woman take possession of each other in the presence of the group, and he leads her to a new bed built for the occasion in the group's sleeping quarters. The event is celebrated by dancing late into the night.

The Onge are passionately fond of dogs, which were introduced to the Andamans in 1850. They are kept as pampered pets, and puppies are even suckled by Onge women. A family may have 10 or 12 dogs. The animals are used for hunting pigs and other wild game.

## 11 CLOTHING

Traditionally, the tribes of the Andaman Islands went completely naked. The Jarawas still follow this practice, although Onge women have adopted a small apron to cover their genitals.

## 12 FOOD

The Andamanese subsist on a diet of seafood, wild game, and products gathered in the forest. The importance of fish to the Onge is seen in the fact that their word for fish (*cioghe*) also means food in general. Men fish with harpoons or bows and arrows, hunting sea turtles, dugongs (sea cows), and large fish. Men also collect turtle eggs. Women use nets, catching pilchards (sardines), crabs, and a variety of other fish. The pig is the favorite game of the Andamanese, who often gorge themselves to excess after a successful hunt. For the Onge, birds harbor the spirit of the dead and are never eaten. Honey is a favorite food, being gathered in considerable quantities during the dry season. When an Onge finds a beehive, he or she marks its location as a sign of ownership. No other would then dare to take possession of it. When convenient, the finder returns with others to help get at the nest and open it up. Other foods gathered in the forest include wild fruits, edible roots and tubers, and wild berries. The larvae of insects such as the cicada are regarded as delicacies. The Andamanese have no knowledge of salt or alcoholic drinks.

## 13 EDUCATION

As might be expected among relatively primitive hunting-and-gathering tribes, the traditional Andamanese have no written script and are totally illiterate, i.e., they have no ability to read or write. They also have no access to formal education. Individuals who have had contact with Bengālis and other peoples may have learned some Bengali or other Indian languages. The highest literacy rate is found among the Onge, who have taken advantage of development programs.

## 14 CULTURAL HERITAGE

Dancing is a common feature of Andaman culture. It is almost always done at night and marks occasions such as marriage or the end of a mourning period. In the past, a dance was held before going to battle, as well as to mark peace between warring groups. Among the coastal Great Andamanese, males and females form lines on either side of a man who beats out the rhythm of the dance on a type of convex shield made of a hard and aromatic red wood. Onge and Jarawa men dance in single file, hitting the ground first with the right heel, then with the

left, the toes raised just above the ground and moving forward a short way each time. Women clap their hands, then grasping the wrist of one hand with the other, slap one thigh with the open palm of the hand. Dances are accompanied by songs, each person composing his or her own song for the occasion.

### 15 WORK

Agriculture is unknown to the Andamanese, who survive entirely by hunting and gathering. Their weapons include the bow and arrow, and harpoons with detachable points. Fishing is carried out from dugout canoes with a single pontoon as an outrigger. Though they frequently capsize, the canoes rarely sink and are easily righted. The Onge use digging sticks to uproot yams and other tubers. As these have to be “stolen” from the spirits who own them, the Onge collect tubers some distance from the main stem and cover all traces of their activities. The traditional Andamanese had no knowledge of how to create fire, although they utilized it and carried it wherever they went.

The Jarawa and Sentinelese are still totally dependent on hunting and gathering. Some Onge, however, are employed gathering coconuts from plantations introduced into their area in 1958. They are paid for their services with food and manufactured items from the mainland. The Great Andamanese are furthest removed from their hunting-and-gathering roots, being paid a regular allowance by the government and also wages for taking care of citrus fruit plantations.

### 16 SPORTS

Children are introduced to skills they will need as adults through play and toy nets, shelters, canoes, and weapons. Hunting is a means of survival, rather than a pastime as it is among many other tribal groups in South Asia.

### 17 ENTERTAINMENT AND RECREATION

The Andamanese have no access to modern recreation and entertainment and rely on traditional activities such as dancing, singing, and feasting for their enjoyment.

### 18 FOLK ART, CRAFTS, AND HOBBIES

As is to be expected, the graphic or visual arts are poorly represented among the Andamanese.

Although some tribes resort to tattooing, the Onge do not, painting geometrical designs on their bodies with white clay instead. This seen as a protection from evil spirits (as well as from the attention of mosquitoes). The Andamanese have acquired a knowledge of pottery. Their pots have pointed bases, so they do not stand upright and are carried in baskets. Basket-making is practiced by the Andamanese, with the Onge being particularly adept in the art. The Andamanese fashion dugout canoes from single tree trunks. The Jarawas, however, appear to have lost their ability to make seaworthy craft. The Andamanese are skilled in making bows, arrows, and other weapons.

### 19 SOCIAL PROBLEMS

The Andamanese are unique in that they represent a contemporary example of perhaps the earliest form of society known to humans. Subsisting by hunting and gathering, and without even the means of making fire, they have survived undisturbed in their island refuge for thousands of years. Today, they face

*An Andamanese boy in Nicobar, India. (AP Images/Anthropological Survey of India, HO)*

a situation that it seems will almost inevitably lead to a loss of tribal identity. Contact with the large population of immigrants from the mainland of India and their more complex economic systems has already begun to erode the traditional Andamanese way of life. This will continue in spite of—or perhaps because of—attempts to promote development among the tribals by government and quasi-government agencies. For example, in 2002 the Supreme Court of India ordered the Andaman Trunk Road, the road that crossed the territory of the Jarawas, closed, though it still remains open. Similarly, in an effort to protect the Jarawas, tour operators have been warned that arranging “sightings” of the Jarawas also violates a Supreme Court order. But the most telling problem is simply a matter of numbers. The Andamanese population has been declining in recent decades. It may well be that the critical mass has already been passed, and that within a few generations the Andamanese people and their culture will no longer exist.

### 20 GENDER ISSUES

Given the nature of the Andamanese, it is not surprising that women occupy the traditional roles typically associated with primitive societies and do not participate in the “gender” advancement associated with other women’s groups in South

Asia. There are reports of sexual exploitation of Andamanese women.

# ANDHRAS

**PRONUNCIATION:** AHN-druz

**ALTERNATE NAMES:** Telugu

**LOCATION:** India (Andhra Pradesh State)

**POPULATION:** About 81 million

**LANGUAGE:** Telugu

**RELIGION:** Hinduism

**RELATED ARTICLES:** Vol. 4: People of India

## 1 INTRODUCTION

The Andhras, who are also known as Telugu, are a Telugu-speaking people of India. Ancient Sanskrit texts describe them as non-Aryans (*Anarya*). In later times, however, some Andhras claimed Brahman descent and added the suffix *-ayya* to indicate their high status. The Hindu epic literature refers to them as a primitive, indigenous tribe inhabiting wild, inaccessible forests to the south of the Aryan region. The traditional home of the Andhra people is the land between the Godavari and Kistna (Krishna) rivers in southeastern India. Today, Andhras make up the dominant element in the population of the Indian state of Andhra Pradesh.

Over 2,000 years ago, the Andhra region formed part of Ashoka's Mauryan Empire. It was strongly Buddhist and remained so for several centuries after the decline of the Mauryas. The 1st century BC saw the emergence of the earliest in a line of Andhra dynasties that were to rule much of central India. The Andhras subsequently came under the control of most of the important states that arose in southern India. These included the Pallavas, the Eastern Chalukyas, and the Cholas. At the time the Europeans arrived in India, the northern areas of Andhra country were in the Muslim state of Golkonda, while southern areas lay in Hindu Vijayanagara. During the colonial period, the British gained control of most of the Andhra region and administered it as part of their Madras Presidency. Northwestern areas remained under the Muslim princely state of Hyderabad, which accepted British paramountcy (overall British rule in India). Princely states in British India were supposed to accede to either India or Pakistan in 1947, but the Nizam of Hyderabad—ruler of the largest Muslim princely state in India—refused to join India. Hyderabad was invaded by the Indian army and integrated into the Indian Republic in 1949. Andhra pressure for a Telugu-speaking state resulted in the creation of Andhra Pradesh in its present form in 1956.

## 2 LOCATION AND HOMELAND

The population of Andhra Pradesh was reported at 76.3 million people in the 2001 census. To this number should be added Telugu-speakers who live in the border areas of the surrounding states, as well as a substantial Telugu population in Tamil Nadu State. Telugu-speakers are also found among the various immigrant Indian communities in Africa, Asia (especially Malaysia), and the West.

Andhra Pradesh falls into three geographic regions: the coastal plains, mountains, and interior plateaus. Running for some 800 km (500 mi) along the Bay of Bengal, the coastal lowlands are intensively cultivated and support dense populations. The central region is formed by the alluvial deltas of the Godavari and Kistna rivers. To the west, the plains are bounded by

the Eastern Ghats, the hills that mark the edge of the Deccan Plateau. These reach an elevation of 1,680 m (5,513 ft) in the north, decreasing to around 1,000 m (3,300 ft) in the south. The Ghats are not a continuous mountain system, but are broken up by numerous rivers flowing eastwards to the ocean. West of the Ghats lie the interior plateaus of the Deccan, averaging about 500 m (1,600 ft) above sea level. This area is drier than the rest of the state (annual rainfall is less than 75 cm or 30 in) and supports only scrub vegetation. Parts of the Eastern Ghats, however, have an extensive cover of tropical deciduous forest and thorn forest. Annual rainfall in coastal areas, associated mostly with the summer monsoon, approaches 125 cm (50 in). Summers along the coast are hot, with maximum temperatures exceeding 40°C or 104°F. Minimum temperatures in winter, especially in the plateau region, can fall as low as 10°C (50°F).

### 3 LANGUAGE

The language of the Andhra people is Telugu. It is a Dravidian tongue which, along with Tamil, Kannada, and Malayalam, is one of the four major languages of this linguistic family. There are several regional Telugu dialects such as Andhra (spoken in the delta), Telingana (the dialect of the northwestern region), and Rayalasima (spoken in southern areas). There are also specific dialects identified with social categories, i.e., Brahmans, non-Brahmans, and Untouchables. Literary Telugu is quite distinct from the spoken forms of the language. Telugu is written in its own script. This script is allied to Sanskrit but, because it was originally written on palm leaves, developed a cursive (i.e., rounded, flowing) form. Telugu is the official language of Andhra Pradesh, as well as being one of the regional languages officially recognized by the Indian constitution.

### 4 FOLKLORE

Hero worship is a significant element in Andhra culture and folklore. Andhra warriors who died on the battlefield defending their king, or who sacrificed their lives for great or pious causes, were deified and worshiped by the common people. Stone pillars or *lingams* (phallic symbols) commemorate their deeds. These memorials or “hero stones,” called *Viragallulu* in the Telugu language, are found all over Andhra country. Hero worship has become something of a cult in Andhra Pradesh and is observed by annual rituals in various parts of the region. The *Katamaraju Kathala*, one of the oldest ballads in Telugu, celebrates the heroic exploits of the 12th-century warrior, Katamaraju.

### 5 RELIGION

Andhras are mostly Hindu by religion. They accept the fundamental philosophy of Hinduism, from the concept of *dharma* (right conduct) and its related beliefs, to ideas of ritual pollution, concepts of sin (*pap*) and merit (*punya*), and the caste system. The Brahman castes, as everywhere in Hindu society, have the highest social status, and Brahmans serve as priests in temples dedicated to the gods of the Hindu scriptures. Andhras worship Shiva, Vishnu, Hanuman, and other Hindu deities. At the popular level, however, Andhra religion is distinctly South Indian in character. Worship of *ammās* or village goddesses is as important as that of the major gods of Hinduism. Durgamma presides over the welfare of the village, Maisamma protects the village boundaries, and Bamma is

a goddess of fertility whose anger causes sterility in women. These deities play a much more immediate role in daily life and are to be respected and feared. They are all forms of the great Mother Goddess, and their rites invariably require blood sacrifices. The lesser deities often have priests drawn from the lower castes, and low castes may use their own priests rather than Brahmans. Ancestor spirits have to be appeased, and ghosts and evil spirits cause trouble for the living. Ritual specialists are called on to deal with spirits, and also to protect against sorcery and witchcraft.

### 6 MAJOR HOLIDAYS

Important events on the Andhra festival calendar include Ugadi (the Telugu New Year's Day), Shivaratri (honoring Shiva), and Chauti (Ganesha's birthday). This is in addition to celebrations such as Holi, Dasahara, and Divali. Different castes also have their own caste festivals. For example, Rath Saptami is observed only by Brahmans and is an occasion for the worship of the Sun. In the northwestern Telingana region, the annual worship of Pochamma, the goddess of smallpox, is an important village festival. As described by Dube (1955) in a village near Hyderabad, the day before the festival the village drummers go around the village announcing the plans for the festival. Members of the potter caste clean the shrines of the village goddesses, and those of the washerman caste paint them with whitewash. Village youths construct small leaf sheds in front of the shrines, and women of the sweeper caste smear the ground

around the booths with red earth. On the day of the festival, every household prepares rice in a new, decorated earthenware pot called *bonam*. The Madigas, the Untouchable caste that act as village drummers, worship and perform sacrifices at their own Pochamma shrine, then return to participate in the main ceremony. They lead the village in procession to the Pochamma shrine, where a member of the potter caste (Kumari) officiates as priest at the ceremony. Every family, in strict order of caste and standing within the caste, offers some rice to the goddess. Goats, sheep, and fowl are sacrificed at the shrine. Following the ceremony, families return to their houses where they feast on the rice and meat. Even Muslims, though they do not participate in the worship, take part in the ceremony and offer sacrifices. They, just like the Hindus, feel the need to propitiate the goddess Pochamma.

## 7 RITES OF PASSAGE

Although the specifics of life-cycle rituals vary among castes, in outline they follow the forms set out by the Hindu texts. On the birth of a child, the mother and other family members are considered impure. Rituals are performed to remove this impurity, which last up to 30 days for the mother. In villages, women from the barber caste act as midwives for the “clean” Hindu castes. A Brahman may be consulted to cast the infant’s horoscope. The name-giving ceremony is held within three to four weeks, with the occasion marked by a feast for family and friends. Infants are raised by the women in the household, though young children are often left in the care of older siblings. As they grow up, children accompany their parents in their daily tasks and begin to learn their household duties and caste occupation at an early age. Higher castes often perform the sacred thread ceremony for males before puberty is reached. A girl’s first menstruation is accompanied by elaborate rituals, including a period of seclusion, worship of household gods, and a gathering of village women for singing and dancing.

The higher Hindu castes usually cremate their dead, except in the case of death from snakebite and smallpox. Children are normally buried, and burial is also common among low-caste and Untouchable groups. The corpse is bathed, dressed, and carried to the cremation ground or graveyard on a bier. On the third day after death, the first of several purifying rituals takes place. This involves cleansing the house, washing all the linens, and discarding all earthen pots used for cooking or storing water. On the eleventh or thirteenth day, rites for removing the impurity of family members are performed. This includes shaving the head and face if the deceased were one’s father or mother. Food and water are offered to the soul of the deceased, and a feast is given. The higher castes collect bones and ashes from the funeral pyre and immerse them in a holy river such as the Godavari. In exceptional cases, they are taken to the sacred Ganges in North India.

## 8 INTERPERSONAL RELATIONS

Andhras tend to be hypercritical and very sensitive in their interpersonal relations, especially in rural areas. There is a great tradition for argument that can easily progress to noisy quarrels or confrontations. There is a pervasive attitude of fault-finding, and people do not easily let pass the opportunity to criticize their neighbors. However, in situations that demand

generosity and good neighborliness, Andhras are quick to rise to the occasion.

## 9 LIVING CONDITIONS

In northern Andhra Pradesh, villages are usually linear in form, with occasional isolated outlying hamlets. Settlements in the southern areas of the state can be either linear or square, but they also may have tributary hamlets. House types and creature comforts vary according to the economic circumstances of the owner. The average cultivator in a village in Telangana typically has a square house built around an internal courtyard. The walls are made of stone, the floor is made of mud, and the roof is tiled. There are two or three rooms, used for living, sleeping, and housing livestock. There is invariably one room used for the family shrine, where family valuables are also kept. The doors are often carved, and designs are painted on the walls. Most houses lack latrines, the inhabitants using the fields for their natural functions. There may be a backyard used for growing vegetables and keeping chickens. Furnishings are sparse and may consist of a few bedsteads, wooden stools, and a crude chair or two. Kitchen utensils, except for metal plates for eating, are usually of earthenware and are made by the village potters. In cities, houses are more substantial, have modern conveniences such as running water, and are better furnished.

## 10 FAMILY LIFE

Andhras must marry within their caste or subcaste. These endogamous social units are divided into exogamous clans (*gotram*), each of which may be further subdivided into lineages (*vansham*). One must marry outside one’s own clan. And, as different clans have lineages of the same name, one has to make sure to marry outside one’s own lineage. (Members of the same lineage, even though of different clans, are regarded as brother and sister. A sexual union between members of the same lineage is viewed as incestuous.) Marriages are arranged, and cross-cousin marriage is common. The details of marriage practice vary according to caste, but in outline they follow normal Hindu practices. Newlyweds usually move into the household of the groom’s father. The extended family structure is regarded as ideal, although the nuclear family is also found.

Women occupy a subordinate role in Andhra society, being responsible primarily for rearing children and household chores. Among the cultivating castes, women also engage in agricultural activities. Divorce and widow remarriage are permitted by lower castes, though not by Brahmans and other high castes. Property is equally divided among sons.

## 11 CLOTHING

Male clothing consists of the Indian loincloth, or *dhoti*, tied in a distinctive Andhra manner and worn with a long *kurta* that comes down to the knees. In many rural areas, the material used is a slightly brownish, village-made *khadi* (handspun cloth). A cloth with a colored border is also thrown around the shoulders. Villagers commonly wear a turban. Women favor the *sari* and a bodice, the latter often brightly colored and embroidered. Saris are traditionally dark blue, parrot green, red, or purple in color. Young people, especially in urban areas, are turning to synthetic fabrics and ready-made, Western-style clothes. The sari is the preferred formal wear of women.

Andhra Pradesh folk artists get ready to perform during the India International Trade Fair in New Delhi, India.  
(AP Images/Manish Swarup)

## <sup>12</sup> FOOD

The basic diet of the Andhras consists of rice, millets, pulses, and vegetables. Nonvegetarians who can afford it eat meat or fish. All Hindus avoid beef (although Untouchable castes eat carrion meat), and Brahmans and other high castes abstain from any kind of meat, fish, or eggs. Economic standing also influences the diet of individuals. The relatively well-to-do eat three meals a day. A typical meal would be rice or *khichri* (rice cooked with lentils and spices) or *paratha* (an unleavened bread made from wheat flour and fried in oil); this would be taken with a meat or vegetable (e.g., eggplant or okra) curry, hot pickles, and tea. Coffee is a popular drink in coastal areas. Savories are preferred to sweets. Betel leaves, twisted into rolls and filled with nuts, are served after a meal and considered a delicacy. In a poor household, a meal might consist of millet bread, eaten with boiled vegetables, chili powder, and salt. Poorer-quality rice would be eaten, and meat would only rarely be consumed. As is common throughout South Asia, men dine first and the women eat only after the men have finished. Children are served as soon as the food is ready.

## <sup>13</sup> EDUCATION

Literacy in Andhra Pradesh is relatively low. Recent data are not available, but the 1981 census records a literacy rate of only

29.72% for the state. Even though this figure includes children and can be expected to have risen over the last few years, it still compares unfavorably with many Indian states. Variations in literacy rates range from 14.10% among women in rural areas to a high of 61.05% for urban males. Hyderabad, Andhra Pradesh's largest city and the state capital, is an important center of learning with several universities and institutions of higher education.

## <sup>14</sup> CULTURAL HERITAGE

The Andhra people have made major contributions to India's culture in the areas of art, architecture, literature, music, and dance. The early Andhra rulers were great builders and patrons of religion and the arts. From the 1st century BC on, they developed a style of architecture that led to the creation of some of the greatest Buddhist monuments of Central India. The *stupa* (a monument built to hold a relic of Buddha) at Sanchi, and the ruins at Amaravati and other sites, attest to the achievements of the Andhras. Many critics see sculptures of the mature Andhra period (c. 3rd century AD) as among the finest in India. Some of the paintings of the famous Buddhist caves at Ajanta are ascribed to Andhra artists.

The Andhras developed a style of classical dance known as *kuchipudi*. This is a dance-drama, presenting religious themes,

that is performed by certain Brahman families and passed down from generation to generation. The Andhra region and its people have contributed greatly to the development of South Indian classical music. South Indian compositions are mostly written in Telugu because of the smooth, rich, flowing sound of the language. Telugu literature dates to the 11th century AD. Major contributions were made by Shaiva (followers of Shiva) poets of the 13th century. However, Telugu literature reached its greatest heights under the patronage of the Vijayanagara kings around the 16th century.

### 15 WORK

Over three-quarters (76.75%) of Andhras live in rural areas, making their living mostly from agriculture. Rice is the dominant food grain. Sugarcane, tobacco, and cotton are grown as cash crops, in addition to chilies, oilseeds, and pulses. Periodic village markets throughout the region afford the opportunity for selling and trading one's goods.

Once basically agricultural in nature, Andhra Pradesh has emerged as one of the most highly industrialized states in India. Industries such as aeronautics, light engineering, chemicals, and textiles are found in the Hyderabad and Guntur-Vijayawada areas. As well as being an important port, Visakhapatnam has India's largest shipbuilding yard.

### 16 SPORTS

Young girls play with dolls, dressing them and celebrating doll marriages. Boys play ballgames and indulge in the usual pastimes of tag, hide-and-seek, and similar children's games. Playing with dice is common among men and women, and traditional amusements such as cockfighting and shadow plays are popular in rural areas. Modern sports such as cricket, soccer, and field hockey are played in educational institutions across the state.

### 17 ENTERTAINMENT AND RECREATION

Folk culture predominates in rural areas. Wandering entertainers put on puppet shows for the amusement of villagers. Professional ballad singers recount the exploits of past heroes, or tell stories from mythology. Modern media such as the radio have been used to make urban dwellers aware of folk traditions, as well as to expose rural people to Andhra's classical heritage. Andhra Pradesh has its own movie industry, making films in the Telugu language. The late N. T. Rama Rao, a popular movie idol who starred in over 300 Telugu films, rose to become chief minister of Andhra Pradesh.

### 18 FOLK ART, CRAFTS, AND HOBBIES

Andhra has a variety of traditional handicrafts. It is known for its wooden toys, which are carved and skillfully decorated. The subjects include birds, animals, human beings, gods and goddesses, and legendary beings from Hindu mythology. Other crafts include lacquer ware, hand-woven carpets, hand printed textiles, and tie-dyed fabrics. Bidri ware (silver inlay on metal), filigree silver work, embroidery, painting on ivory, basketry, and lace work are also products of the region. The making of leather puppets was developed in the 16th century under the Vijayanagara rulers.

### 19 SOCIAL PROBLEMS

With a population exceeding that of many of the larger European nations, Andhras are subject to the full range of economic and social problems that afflict India in the late 20th century. In contrast to the emerging middle classes, rural populations are frequently faced with excessive population growth, poverty, indebtedness, illiteracy, and lack of social infrastructure. Consumption of *arrack* or country liquor has been such a problem that pressure from women in recent years has led to the imposition of prohibition in the state. Economic problems are worsened by the destructive cyclonic storms (the last occurred in 1996) that sweep in from the Bay of Bengal. Currently, Andhra Pradesh State is involved in a longstanding dispute with Karnataka over the use of the waters of the Kistna River. Sporadic outbreaks of crime and violence are associated with the Peoples War Group (PWG), a quasi-political Maoist leftist organization that assassinates local government officials and political leaders as "class enemies" and "caste oppressors." Through all of this, however, the Andhras retain a very evident pride in being Andhra and have a strong sense of identity with Telugu culture.

### 20 GENDER ISSUES

Telegu women face the same gender issues as other women in South Asia—arranged marriages, child marriage, complaints over dowries and dowry deaths. In April 2008, SIFF (Save Indian Family Foundation) filed a memorandum with the Chief Minister of Andhra Pradesh complaining about the inadequacies of IPC (Indian Penal Code) Section 498A and the Dowry Prohibition Act by which people have been arrested without the complainant's charges having been investigated by police and demanding that laws (e.g. adultery laws, laws against rape and sexual harassment, domestic violence laws, divorce laws, child maintenance laws and child custody laws) should be gender neutral. The memorandum claims that innocent women have been incarcerated and even committed suicide because of the arrests made under these laws.

Despite the fact that Andhra Pradesh's performance in schooling of girls is better than many other Indian states, gender bias in schooling for girls still persists in the state.

# ANGLO AUSTRALIANS

**PRONUNCIATION:** AN-glo aw-STRAY-lee-uhns

**LOCATION:** Australia

**POPULATION:** 19.3 million (2007)

**LANGUAGE:** English

**RELIGION:** Christianity (majority); Islam; Buddhism; Judaism

## 1 INTRODUCTION

Australia is a relatively young country in the world community. Yet it is also a very ancient land, where for over 40,000 years the Aboriginal people had lived in harmony with their environment. When England first settled Australia in 1788, however, and made it a penal colony for its overcrowded prison population, all that was to change.

Australia was rich in mineral wealth and became a leading world producer of wool and wheat. But links with Britain kept it isolated until World War II, after which it turned more and more towards the United States. Today, Australia is becoming a multicultural society that is seeking to establish itself as a leading nation in the Asia-Pacific region.

Throughout the 20th and into the 21st century, Australia has had a democratic form of government in which individual freedom has been prized above all else. It is considered a safe, peaceful country that has never experienced internal war. Its standard of living is high and the country has some of the world's most uniquely beautiful environments. Consequently, one of its fastest-growing industries today is tourism.

Australia's identity is a result of its English and European past and its multicultural (i.e., a European and Asian mix of cultures) present. In a speech in Indonesia in 1992, the Australian prime minister Paul Keating said that Australia's identity in the 1990s was changing "due to the multi-cultural reality of our society, and the final passing of . . . our colonial past."

Australia today is a foremost member of APEC, the Asia Pacific Economic Cooperation forum, and looks to forge free trade agreements with China and ASEAN, the Association of Southeast Asian Nations.

## 2 LOCATION AND HOMELAND

Australia is both a continent and an island, situated in the southern hemisphere between the Pacific and Indian oceans. It measures about the same in area as the United States (excluding Alaska), yet it has a total population of only about 21 million people. Of those 21 million people, about 80% live in just 10 cities, all by the sea. By far the largest of these are Sydney and Melbourne. Approximately 92% of the population (about 19.3 million) is of European descent. In the 2006 Australian Census, about 25% of Australians specifically listed themselves as having English ancestry while another 29% listed themselves simply as Australian.

Most of the country is empty of people. In fact, Australia has one of the lowest population densities in the world. The state of Western Australia, for example, is three times the size of the US state of Texas, yet has only about 1.5 million people. The main reason for the low population density is that Australia is an extremely dry continent—two-thirds of the continent is desert.

Apart from the flat desert lands, however, the country's geography is quite varied. It includes large areas of tropical rain forests in the northeast, a long mountain range running along the eastern coast (the Great Dividing Range), snowfields in the southeast, and flat tablelands in the west.

The climate varies tremendously, from the tropics in the north with their "wet" and "dry" seasons to the much colder climates of Tasmania.

Because the country was first settled by England in 1788, most Australians were of English origin and, until 1950, about 90% of Australians were born there. Some 9% were immigrants from Britain. However, after World War II, the country took in more than 5 million immigrants from Europe and, in the post-Vietnam-War years, Australia was a major recipient of refugees from Indochina. The population in the early 21st century has become more international.

Immigration dropped dramatically in the late 1990s. Almost all immigrants have chosen to live in the ever-growing cities and have not populated the sparse country areas as was hoped.

## 3 LANGUAGE

The language of Australia is English, brought by the first English settlers. However, the accent is far more nasal and less clipped than the British English accent.

Since World War II, the culture of the United States has had a large influence on Australia, so that Australians are using many American expressions introduced by movies and television shows. However, a typical Australian greeting is still "G'day," and men routinely call each other "mate." To congratulate someone, Australians say, "Goodonya" ("Good on you"), and to reassure someone, they say, "She'll be right, mate." And, of course, there is what is known as the Great Australian Adjective—"bloody"—before almost everything, as in, "Oh bloody hell! I'm going to be bloody late for school again!"

## 4 FOLKLORE

Australia is an ancient land and for more than 40,000 years its Aboriginal people had lived there undisturbed, until the Europeans came over. Over time, a complex and rich Aboriginal mythology has evolved and has been passed down from generation to generation. This mythology is known as the Dreamtime Legends—the Dreamtime being the mystical time during which the Aborigines' ancestors established their world. These myths from ancient times are accepted as a record of absolute truth, and dominate the cultural life of the people.

There are many myths of the Dreamtime. One tells how the sun was made: Long ago in Dreamtime there was no sun, and the people had to search for food in the dim light of the moon. One day, an emu and a crane started quarreling. In a rage, the crane ran to the emu's nest and snatched one of its huge eggs. She flung the egg high into the sky, where it shattered and the yolk burst into flames, causing such a huge fire that its light revealed for the first time the beauty of the world below. When the spirits up in the sky saw this great beauty, they decided that the earth inhabitants should have this light each day. So, every night, the sky-people collected a pile of dry wood, ready to be set afire as soon as the morning star appeared. But a problem arose—if the day was cloudy, the star could not be seen and no one lit the fire. So the sky people asked the Kookaburra, who had a loud, braying laugh, to call them every morning. When

the bird's laugh was first heard, the fire in the sky was lit but threw out little heat or light. By noon, when all the wood was burning, the heat was more intense. Later, the fire slowly died down until the sun had set.

It is a strict rule of the Aboriginal tribes that nobody may imitate the Kookaburra's call, because that could offend the bird and he could remain silent. Then darkness would again descend upon the earth and its inhabitants.

There are some folklore tales regarding the early European settlers. Many stories have been inspired by the figure of William Buckley, an English convict sent to Australia who escaped from prison and lived among the Aboriginals. There are legends and folk songs about "bushrangers," escaped convicts that were wild enough to be unwilling or unable to live in mainstream communities. Ned Kelly represents one such popular folk hero. Some stories about gold diggers from the mid-1800s have survived as folk lore, painting these rugged men, who generally showed disdain for authority, as heroes of the land. Other folk tales relate to the drovers and shearers (cattle and sheep herders) of early European settlers. Romanticized tales of life in the bush or outback continue to be popular in modern culture.

## 5 RELIGION

Australia is predominantly a Christian country. Most Anglo-Australians are members of the Anglican Church of Aus-

tralia, accounting for 19% of the total population in the 2006 Australian Census. The Roman Catholic Church, however, is the largest denomination in the country with about 25% of the population claiming membership. The Uniting Church in Australia was established in 1977 through the union of the Congregational Union of Australia, the Methodist Church of Australia, and the Presbyterian Church of Australia. The Uniting Church, which embraces doctrines and confessions from all three of its founding traditions, was the third largest single denomination in the country in 2006 with a membership of about 1.1 million. About 18% of the total population claimed no religion in the 2006 Census.

## 6 MAJOR HOLIDAYS

Apart from those holidays celebrated throughout the Christian world, such as Christmas and Easter, Australia celebrates some of its own.

ANZAC Day on April 25 each year is set aside to honor Australians who died in all wars. ANZAC stands for the Australian and New Zealand Army Corps. Veterans of the armed forces march through the streets of Australian cities and towns in the morning and share drinks and memories in the afternoon. It is a solemn and patriotic day when the country remembers its war heroes.

Australia Day is celebrated on January 26, commemorating the day in 1788 when the English soldiers raised their flag and declared Australia a new colony. Today it is celebrated with street fairs, parties, picnics, and fireworks. It coincides with the last days of the long summer vacation from school and is a fun time for families. Backyard barbecues are very traditional on this day—followed by time on the beach or in the pool.

Boxing Day (December 26) is also a public holiday in Australia. It is known as a traditional day to spend at the beach and in practical terms it makes for a longer Christmas break.

## 7 RITES OF PASSAGE

At age five, children begin kindergarten at their local state or private primary school, which they attend through the sixth grade. There is usually a ceremony celebrating the child's graduation from primary to secondary school, consisting of a ceremony at the school with a guest speaker. There is usually a family celebration as well. The child then enters the high school (grades 7 to 10), followed by senior school (grades 11 and 12), and graduates from senior school at about age 18.

When students are in the twelfth grade they attend a senior school dance called the Formal. This is like the American tradition of prom night, when students hire limousines to attend a formal function sponsored by their school, usually held at some reasonably glamorous location. Just as in the US, the students place much emphasis on having the "right" clothes and the "right" date.

The 18th birthday party is a large, peer-group party celebrating entry into the adult world. At age 18 the young adult is given all legal rights. The 21st birthday celebration, a much more traditional family-and-friend celebration party, often is held in a hotel or restaurant. Gifts are traditionally given and this celebration often marks the time the young person leaves home to live independently.

## 8 INTERPERSONAL RELATIONS

Men shake hands when introduced to each other or to a woman. Women often greet other women with a kiss on the cheek.

Pub life—the sharing of drinks with friends at a hotel bar—plays a large role in most Australians' social lives. The “shout” system is used—i.e., one person in a small circle of friends buys a drink for themselves and for everyone else in the circle. When it comes time for the next round, another person in the circle does the same—and so on, until each person has “shouted a round” of drinks for their group.

When invited to dinner, guests are usually asked to come at “7:30 for 8:30” which means the guests should arrive somewhere between 7:30 and 8:30 pm for pre-dinner drinks, with dinner to be served at 8:30.

Young people in Australia usually begin dating around age 14 or 15 and make their own choices of friends and partners in life. They tend to marry in their mid-20s.

## 9 LIVING CONDITIONS

At the 2006 Australian Census, an estimated 33% of all dwellings were owner-occupied, with an additional 32% of dwellings being purchased by the occupant, either through a loan or rent-to-own plan. The most popular home is the freestanding brick house with a red tiled roof, a front lawn, and a back garden. Most people want to own a home and usually rent until they can afford one. There is a trend toward larger houses and prices of houses vary according to the desirability of the location. However, housing prices in all cities have increased steadily over the years. The average household size was 2.6 persons in 2006.

Australia does not have the extremes of wealth and poverty that the US does, and therefore does not have extravagant mansions or slum dwellings. Instead, homes tend to be more like those found in a typical American middle-class suburban dwelling. Young people in cities live in flats (apartments) or townhouses close to the inner city, where there is a great deal of night-life. Cities are usually busy centers of life at night, with restaurants, bars, theaters, and activities at the harbor.

Australia has a universal public health system called Medicare, under which a broad range of medical and hospital services are available either for free or with substantial government rebates. Private health care providers are free to determine their own fees and to choose what rebateable services they will provide. The Pharmaceutical Benefits Scheme pays for some physician services as well as most prescription medications. The 2006 National Health Survey reported that about 50% of the population aged 15 years and older had private health insurance.

Life expectancy for Australians at birth is about 80 years (2008); 77.8 years for men and 83.7 years for women. A majority of Australians are considered to be in very good or excellent health, according to a 2005 National Health Survey. Excessive weight was the most common health problem in the survey, with about 62% of men and 45% of women being in the category of overweight or obese.

## 10 FAMILY LIFE

Family life in Australia is changing, as the nuclear family unit of two married parents and two children with the father in the workforce and the mother at home is becoming a thing of the past. In 2006 only 49.6% of Australians aged 15 and old-

*A boy and his father celebrating Australia Day.  
(© Sean Davey/Corbis)*

er were married; representing a decrease from 51.4% in 2001. About 33.2% of the population had never married and 11.3% were separated or divorced. About 5.9% of the population was widowed. In 2005 the marriage rate was listed as about 5.4 marriages for every 1,000 people. This figure represents a downward trend in the number of marriages. In 1986, for example, the marriage rate was at about 7.2 marriages per 1,000 people. It was estimated that about 33% of all marriages entered into in 2000–2002 would end in divorce within about 14 to 16 years. In 2005 the median age for marriage was 30 years old for men and 28 years old for women. The number of couples choosing to cohabitate without a registered marriage has been increasing. In 2006 about 7.7% of the population aged 15 years and over were in such a de facto marriage. This figure represents an increase from 5.3% in 1996 and 6.4% in 2001. The decrease in the number of marriages and increase in the number of divorces translates into a larger number of children being raised in single-parent households, primarily with the mother as head of household.

Australian families have seen an increase in the number of adult children who remain living with their parents after leaving secondary school or university. This is due in part to unem-

*Bindi Irwin poses with a snake during a promotional tour for her show, "Bindi the Jungle Girl," at the Australia Zoo, Beerwah, Australia. (Bradley Kanaris/Getty Images)*

ployment, as some new graduates have a difficult time getting a job. However, the dreams of most young people remain the same as those their parents had at that age—to travel “overseas” (which means England, then Europe) usually for about a year, before returning and settling down.

### 11 CLOTHING

Australia’s temperatures are generally far milder than those found in the US. Australians favor easy-to-wear, light clothing in the summer. To stay cool, many Australians wear long socks and long tailored shorts instead of slacks. This is acceptable apparel even in the workplace. Clothing styles are a mixture of European and American fashions. People tend to dress stylishly in the city and the office but wear jeans and sneakers on the weekends.

All school children wear uniforms. School caps are now almost compulsory. These are usually “legionnaire”-style cloth caps with a flap covering the back of the neck for protection from the sun. All children also wear sunscreen all year round, as Australia has one of the highest rates of skin cancer in the world. In fact, having a suntan is regarded as a sign of foolishness. Most people are very careful to protect their skin from the fierce Australian sun.

### 12 FOOD

Good seafood is abundant along Australia’s coastline, and is very popular. Australians also eat a lot of meat—especially beef or lamb roasts.

The tropical north of Australia offers wonderful fruits and vegetables and there is also an excellent local wine industry with vineyards in the south of the country. Typically, a family would have cereal and toast or eggs and bacon for breakfast; sandwiches, salad, and fruit for lunch; and either meat or seafood with vegetables and dessert for the main meal in the evening, around 7:30 pm.

The influx of European and Asian immigrants over the past 20 to 30 years has led Australians to enjoy foods from all cultures, and Australian families now incorporate Chinese, Thai, or Indian foods into their weekly meal planning. European foods, particularly Greek and Italian, have always been favorites.

One food remains an Australian tradition—a black spread called Vegemite. This is made from yeast extract plus salt and is spread on toast and butter for breakfast or eaten in sandwiches for lunch—all children are brought up eating it from babyhood. The other famous Aussie meal is meat pie. Approximately 260 million meat pies are eaten by Australians every year. Favorite desserts include the Australian Pavlova—a cake-sized soft meringue filled with fruits and cream—and a small treat called Lamingtons, which are sponge cake cubes coated with chocolate and grated coconut.

### 13 EDUCATION

Education is compulsory for students aged 6 to 15. School children enter kindergarten at about age five or six. Primary school covers grades 1 to 6. High school consists of middle school (grades 7 to 10) and senior school (grades 11 and 12). At the end of the twelfth grade, when students are about 18 years old, the student takes a public exam called the Higher School Certificate. From this exam alone the student is ranked against others in the country and his or her grade determines which university, if any, the student may enter and which course of study to follow. If the student does not plan to enter a university, he or she needs the exam to enter any other higher education institution or to show a prospective employer. Therefore, this is a very stressful exam for the student.

University entrance is extremely competitive. Fees are very low by US standards, though up until the 1980s all university courses were free. Nearly all universities are government-run. In 2003 it was estimated that nearly 74% of the adult population was enrolled in some type of higher education program. At the university level, students enter their chosen field of study immediately, without needing to complete an undergraduate degree first. Students often live in large shared houses with other students around the universities, but many also continue to live at home. Apart from the universities, there are many institutions of adult education and career training, mostly government-run, with minimal fees, where students can study for other careers.

The literacy rate among Australians is about 99%.

### 14 CULTURAL HERITAGE

Australia has a growing film industry that is fast gaining international respect. In the 1980s and 1990s it produced such hits as *Babe*, *Muriel’s Wedding*, *Mad Max*, *The Piano*, and *Crocodile*

*Dundee*. Most celebrities must travel to Hollywood, however, to gain worldwide fame—e.g., Errol Flynn, Paul Hogan, Olivia Newton-John, Mel Gibson, and Nicole Kidman. Australian television shows that have been exported and well-received in the UK and the US include *The Crocodile Hunter*, *The Wiggles*, and *A Country Paradise*.

Sydney's Opera House is world-famous, designed by the Danish architect Utzen to resemble sails on the ocean. It houses the Australian Opera Company, theaters, concert halls, and restaurants, and attracts hundreds of thousands of tourists each year.

The country has wonderful wildlife and many natural attractions. The Great Barrier Reef is one of these—a world heritage coral reef, the longest and most complex living system in the world. Farther inland is the beautiful Kakadu National Park. This park has 275 bird species, and many ancient examples of Aboriginal folk art, and is classified by the UN Educational, Scientific and Cultural Organization (UNESCO) as a world heritage area, as are Cradle Mountain in Tasmania and Shark Bay in Perth. Also classified as a world heritage area is Ayers Rock—a giant red rock sacred to the Aborigines that stands majestically in the Olgas in the middle of the desert.

Famous Anglo-Australian writers include Patrick White, the author of *The Eye of the Storm* and winner of the 1973 Nobel Prize for Literature, and Germaine Greer, known for her feminist writings and her career in journalism. The composers Percy Grainger and Arthur Benjamin were both born in Australia.

## 15 WORK

Australians work in a wide variety of professional fields and trade occupations. In 2005 about 76% of the population aged 15 to 64 was employed. About 75% of the work force is employed in service-related professions and occupations, 21% in industry, and about 4% in agriculture. The unemployment rate in 2007 was estimated as 4.4%. The standard minimum wage in 2005 was at about us\$362.35 per week. Full-time workers usually receive four weeks annual vacation and belong to a superannuation scheme which will give them income when they retire. The working week is Monday to Friday, 9:00 am to 5:00 pm. Workers' rights are protected by numerous laws, and Australia has an attractive union system.

## 16 SPORTS

Australians love sports—both playing and watching them on television. The all-time favorite is football. Australians follow three different types, depending on which part of the country they come from: The Rugby League, played in N.S.W., Queensland, and Canberra; Australian Rules, played in Victoria, Southern Australia, Western Australia, and Tasmania; and Rugby Union, played in N.S.W. and Queensland (also played internationally, and usually the football game played by schoolboys, along with soccer).

In summer, Australians enjoy cricket. Within Australia, the states play each other to see who will win that year's Sheffield's Shield; teams also play internationally. Australia plays countries such as Britain and the West Indies to see who will win the Ashes.

Other popular sports include swimming, tennis, surfing, and sailing. However, the fastest growing new sport in Australia today is baseball.

## 17 ENTERTAINMENT AND RECREATION

In the cities, many forms of entertainment are offered. Theaters, movies, bars, and discos, plus every type of restaurant imaginable, are common. Australians enjoy a pub life similar to that found in England. But mostly they enjoy the ocean. On summer weekends the beaches are packed with surfers, and the harbors are full of boats of all types. Australians love to spend weekends outdoors near the water.

During their vacations, Australians travel within the country, usually by car, exploring the tourist attractions and the "Outback," as the dry, flat inland areas are called. When vacationing outside the country, favorite places are Bali, Fiji, and New Zealand.

Sunday afternoon barbecues at home are very popular. Traditionally, friends arrive around 2:00 pm for a barbecue lunch. The host cooks steaks, sausages, or seafood on a grill and friends talk, eat, and drink into the evening. Entertainment in Australia is mostly relaxed and informal.

Many Australians enjoy gambling, especially on horse-racing. This culminates in an event that takes place on the first Tuesday of November each year, at exactly 3:00 pm—the running of the Melbourne Cup. This event brings the country to a standstill—it is even broadcast live over loudspeakers in most offices. Everyone has a small bet on the outcome—usually "sweeps" are run among friends and at offices.

## 18 FOLK ART, CRAFTS, AND HOBBIES

Australian hobbies are very similar to those pursued by people in the US and just as varied. There is a rich culture of Aboriginal art and wood carvings in Australia—often using various hues of clay color. Aboriginal rock paintings and carvings are found in many of the states' National Parks and reserves.

## 19 SOCIAL PROBLEMS

As of 2008 the question of when and how Australia might become a republic was a source of political and social debate. Australia is still part of the British Commonwealth, with the queen of England serving as the official head of state. However, many citizens and politicians have argued that the government should reorganize into a republic with a president taking over the roles currently held by the queen and a governor-general. Concerns arise as to how power will be apportioned within the new style of government. These issues have yet to be decided.

Immigration is a further concern. Many people feel that Australia cannot support more people, because of the nature of the land. Others are concerned that the country is becoming multicultural too fast. The country has maintained a strict policy on unauthorized arrivals. Asylum seekers are held in detention centers, which have been criticized at home and abroad, until their cases are heard. However, in February 2008 Australia ended its policy of sending asylum seekers into detention on small Pacific islands, with the last refugees leaving Nauru.

## 20 GENDER ISSUES

An increase in the rate of divorces and decrease in the number of marriages has caused an increase in the number of single-parent households. Most single-parent households are headed by women. In 2006 approximately 87% of all single-parent households with children under the age of 15 years were head-

ed by mothers. Education and employment are issues of concern for single parents, both male and female. In 2006 about 39% of all single parents had left school before year 12. About 19% of all single mothers were employed full-time in 2006, compared to about 24% of married mothers. Approximately 32% of single-mothers worked part-time, compared to 39% of married mothers. Nearly 40% of all single mothers were unemployed and seeking employment. About 48% of single fathers worked full-time while 15% worked part-time and 10% were unemployed. About 85% of married fathers worked full-time while 6% worked part-time and 2% were unemployed. It has been estimated that 51% of all single-parents do not receive weekly income from child support or maintenance payments.

While women can and do participate in a wide variety of profession, women in the workforce tend to earn less money than men in similar employment positions. In 2007 it was estimated that women's full-time average weekly earnings were about 83.6% of those of men. Women can and do participate at all levels of government.

# ANGLO INDIANS

**PRONUNCIATION:** AN-glo IN-dee-uhns

**ALTERNATE NAMES:** Domiciled Europeans

**LOCATION:** India

**POPULATION:** 100,000–125,000

**LANGUAGE:** English

**RELIGION:** Christianity (Roman Catholic, Church of England [Anglican], other Protestant sects)

**RELATED ARTICLES:** Vol. 3: Goans; Vol 4: People of India

## <sup>1</sup> INTRODUCTION

“Anglo Indian” has two meanings, one essentially historical and one in use today. In the past, the term described Europeans (usually British) who had made India their permanent home and lived there for generations. They were sometimes known as Domiciled Europeans. In its modern usage, however, Anglo Indian refers to people of mixed European and Indian ancestry. This sense of the word received official government recognition in India in 1911. Prior to that, various designations such as “Eurasian” or “Indo-Briton,” or more derogatory terms such as “half-caste” or “mixed-breed,” were used to describe this population.

The Anglo Indian community has existed in India for almost 500 years. Its beginnings go back to AD 1498 when Vasco da Gama established a Portuguese colony on the Malabar coast of southwestern India. The Portuguese established a formal policy of encouraging Portuguese men to marry Indian women. This was seen as a way of spreading the Christian faith, as the women were required to be baptized before the marriage was approved by the authorities. During the 17th and 18th centuries, other Europeans established themselves in India. However, the Dutch presence was temporary and the French were defeated by the British, so few people today can claim a Dutch or French ancestry. The British East India Company, however, followed policies that encouraged mixed marriages and sexual unions between British men and Indian women. In the early 1700s, Anglo Indians in India outnumbered overseas British. Anglo Indians were in a favored position, filling many military and commercial posts as British interests in India expanded. At the same time, the British East India Company had a supply of trained recruits who were “Western” in their outlook who could be employed in the Company's service.

This situation changed following 1785. Fears that the Anglo Indians were becoming too powerful led the East India Company to prohibit their employment and dismiss those already working with the company. The next 50 years was a period of economic hardship for Anglo Indians, who had few alternate sources of employment. It also saw the alienation of the Anglo Indian community from the British, and the emergence of a sense of communal identity within the group. Anglo Indian fortunes changed again when the East India Company's policy of nonemployment was reversed after 1833. This was also the time when the railroad and telegraph were introduced into India, and Anglo Indians were closely involved in the construction and operation of these systems. As might be expected, the Anglo Indian community supported the British during the 1857 Sepoy Mutiny, and Anglo Indian military leaders played a prominent role in this conflict.

During the early decades of the 20th century, Anglo Indians in India were faced with growing economic and political pressures. A rising tide of Indian nationalism saw government reforms open occupations formerly reserved for Anglo Indians to Indians. The political concerns of the Anglo Indian community were largely ignored by the British government in England as it grappled with the problems of larger minorities such as the Muslims. As independence for India approached in 1947, many Anglo Indians, especially the more affluent and better educated, emigrated rather than remain in the country. Even though Anglo Indians fought for and received certain rights and special political representation in the Constitution of the newly independent India, the community remains a small and marginal one in the context of modern India.

## 2 LOCATION AND HOMELAND

Reliable data concerning the size of the Anglo Indian population in India today are unavailable. Leaders of the community suggest the population numbers 250,000 people, but a more realistic estimate is between 100,000 and 125,000.

The Anglo Indian community is essentially urban in nature, and this is clearly seen in its modern distribution in India today. The largest concentration of Anglo Indians is found in Calcutta, with sizable communities living in Madras, Bombay, Bangalore, and the Delhi area. In addition, there are small Anglo Indian communities in towns around the country, such as Ajmer, Jhansi, and Bilaspur, that are important centers on India's rail system. In many of these towns, Anglo Indians lived in "railway colonies." These were planned settlements, with housing constructed specifically for employees of the railways. They created de facto Anglo Indian neighborhoods which set the community apart from the surrounding population. With the decline in numbers of Anglo Indians employed by the railways since independence, this informal segregation is less noticeable today.

One group in India that is viewed as belonging to the Anglo Indian community by some, and not by others, is the Goans. Of mixed Portuguese and Indian descent, they are technically Anglo Indian. Many Anglo Indians of British descent, however, do not see them as "proper" Anglo Indians and do not accept them into their communities.

In 1947, there were approximately 300,000 Anglo Indians in India. Over the next 25 years, this number was reduced dramatically by a mass exodus of Anglo Indians from India. Even though Frank Anthony, a prominent leader of the Anglo Indian community in India, was able to negotiate two nominated representatives in Parliament, jobs for Anglo Indians, and educational concessions, many Anglo Indians saw little future for themselves in the new India. A first wave of emigration, in the years following 1946, took many Anglo Indians to Britain. A second wave of emigration occurred in the 1960s. By this time, however, British immigration laws were more restrictive, so many Anglo Indians relocated to Canada, Australia, and New Zealand. Studies have shown that although these overseas Anglo Indians continue to preserve a sense of their past, they integrate very quickly into their new societies.

## 3 LANGUAGE

A distinguishing feature of the Anglo Indian community, and also a matter of considerable pride, is the use of English as the mother tongue. While members of the group may be bilingual,

speaking Hindi or another regional language in addition to English, English is the language of choice used in the home. English is the medium of instruction in Anglo Indian schools. The use of the language has come to be a symbol of the "separateness" of the Anglo Indian community.

Some writers have identified an accent and speech patterns in the English spoken by Anglo Indians that set it apart from standard English. This includes a mincing or sing-song intonation of words and phrases that has been called *chee-chee*. This term was also used by the British in India as a derisive word for a member of the Anglo Indian community.

## 4 FOLKLORE

Anglo Indians are neither Europeans nor Indians. In the areas of culture and lifestyle, they are Western in outlook. They reject the Indian part of their heritage, yet they are not British or European, either. During colonial times, Anglo Indians were regarded as a separate and socially inferior community by the British. Any direct links with their British (or Portuguese) heritage are long gone. What remains is a sense of identity with a British past—perhaps, if one disregards genetics, more semimythical than real—that is reinforced by the consciously Westernized way of life followed by Anglo Indians in India today. For many of the older generation, even though they had never lived there, "Home" was Britain, not India.

## 5 RELIGION

All Anglo Indians are Christians, and the church plays an important role in the religious and social life of the community.

Anglo Indians often attend church on a regular basis and also participate in the church's organized social and recreational activities. There is no one particular Christian denomination that is exclusively identified with the Anglo Indian community. Catholics form the most numerous group, but non-Catholic denominations such as Church of England (also known as Anglican or Episcopalian), Methodist, Baptist, and Presbyterian are also represented. Of the Protestant sects, the Church of England is the most prestigious and attracts Anglo Indians of the middle and upper classes.

In the years since independence, the Anglo Indian Christian community in India has had to accommodate inevitable changes in their church life. One is the presence of Indian Christians in their churches. Historically, Indians who had accepted Christianity were looked down upon by Anglo Indians. The reality of declining numbers has meant that Indian Christians have been accepted into the congregations of churches that were formerly almost exclusively attended by Anglo Indians. However, subtle forms of discrimination against Indian Christians continue. Another major change since 1947 is the reorganization of the Christian Churches in the subcontinent as independent entities (e.g., the United Church of Northern India and the Church of South India). In addition, the clergy and church hierarchy are now almost exclusively Indian.

## 6 MAJOR HOLIDAYS

Anglo Indians observe the traditional Christian holidays with great enthusiasm. Attendance at church on holy days such as Good Friday, Easter Sunday, or Christmas is customary, to be followed by visits to friends and relatives, socializing, and entertaining. Children are given chocolate or marzipan Easter eggs at Easter. During the Christmas season, homes are decorated with Christmas trees and colored streamers, Christmas gifts are exchanged, and a traditional "English" Christmas lunch is eaten. Christmas is also a time when clubs and social organizations hold parties for children and dances for adults.

## 7 RITES OF PASSAGE

The rites of passage of the Anglo Indian community follow those of the Christian Church, with specific details being determined by the denomination involved. Infants are baptized in church, with godparents standing witness. Children attend Sunday School to receive religious instruction and at the appropriate time are confirmed and receive their First Communion. Marriages are performed in church and, with so many Anglo Indians being Catholic, the divorce rate is low. Death ceremonies follow the normal Christian pattern, with funeral services held in church, followed by burial in a cemetery.

## 8 INTERPERSONAL RELATIONS

Anglo Indians greet each other in the Western fashion, men shaking hands and women embracing and kissing each other on both cheeks. Young children address any adult visitor as "Auntie" or "Uncle" as a matter of respect, regardless of the relationship. Visiting and entertaining, especially at times such as Christmas and other holidays, is a common practice. Visitors are offered tea, snacks, or, should the occasion demand it, drinks such as beer, rum, or whiskey.

## 9 LIVING CONDITIONS

Anglo Indian homes are usually furnished in a Western style, with decor and furniture showing a marked British influence. Among the middle classes, furniture typically consists of overstuffed sofas and chairs, oak or mahogany tables, and carpets, mixed together with objects of local manufacture. Pictures on the wall may consist of European landscapes, with perhaps portraits of the British royal family, along with family photographs.

The living conditions of Anglo Indians reflect, by and large, their economic standing and social status. The affluent live in spacious, well-furnished houses with several bedrooms and modern conveniences, and servants to perform household tasks. By contrast, there are many Anglo Indians who, through force of economic circumstances, are forced to live in slum-like conditions. One writer cites an instance in which three families numbering a total of 23 people were living in a two-room house in Bangalore. In the area of Ripon Street in Calcutta, many Anglo Indians live in one- or two-room homes lacking running water, electricity, and modern toilet facilities. Large numbers of this community depend on the financial support of various welfare organizations.

## 10 FAMILY LIFE

Anglo Indian family structure has been described as the modified-extended family. This ordinarily consists of husband, wife, and children, and sometimes other dependents such as grandparents residing in the same household. The actual number residing in any given household, of course, depends to a large extent on economic circumstances.

Young adults are permitted to mix relatively freely with members of the opposite sex, and the selection of a spouse is a matter of individual choice, unlike the arranged marriages of Hindu society. Young married adults try to set up their own household if their finances permit it. In the past, Anglo Indians were a strongly endogamous community. The British would not marry Anglo Indians, while it was unthinkable for an Anglo Indian to marry an Indian (as it was for an Indian to marry an Anglo Indian). The great majority of Anglo Indians continue to marry within the community today, but intergroup marriage is evidently becoming more common. Increasing numbers of Anglo Indian girls are marrying Indians, both Indian Christians and men of other religious communities. This is partly economic, reflecting high unemployment among Anglo Indian males and their inability to support a family. It is partly a matter of choice, as economic security and a comfortable life with an Indian husband for some girls is more attractive than the possibility of years working as the main wage-earner to support an Anglo Indian husband. It should be noted that Anglo Indian girls marrying an Indian often face resistance and resentment from the husband's family. Because of their lifestyles and dress, Anglo Indian girls are viewed as loose and promiscuous by traditional Indians.

## 11 CLOTHING

Dress in South Asian society is of considerable symbolic significance, and the cultural orientation of the Anglo Indian community is clearly reflected in its dress styles. Men invariably wear Western attire. Among the older generation, the "solar topi" or sun helmet is worn as a sign of one's European descent. Women wear dresses, blouses, and skirts and follow Western

fashion fads such as miniskirts. Whereas Indian women traditionally wear their hair long, Anglo Indian women follow hair fashions prevailing in Western countries. Differences in hair styles, however, are becoming less apparent as more Indian women are adopting cosmopolitan fashions. Anglo Indian women and girls may wear the Indian *sari* for formal occasions or for work situations. Western dress, nonetheless, remains a symbol of Anglo Indian cultural identity.

## 12 FOOD

In few areas of life are Anglo Indians more Western than in food preferences and dining customs. The inevitable Indian influences are, of course, seen in a taste for curries and a liking for local “sweets.” But the kinds of food eaten, the methods of preparing food, and the style of eating show marked Western influences. Unlike Hindus and Muslims, who have strong religiously based food taboos, Anglo Indians have few restrictions on their diet. They are usually nonvegetarians, eating beef, pork, chicken, and other meat if they can afford it. They dine seated at the table, using plates, cups, and saucers, and eating with knives, forks, and spoons. The traditional Indian practice of eating with one’s hands is totally unacceptable in Anglo Indian society. In addition, alcohol may be served as an aperitif or taken along with the meal.

A typical day begins with early morning tea (“bed tea”), followed around 8:00 or 9:00 am by an English breakfast of porridge or cereal, eggs, toast, and tea. Lunch is curry and rice. Afternoon tea is taken around 4:00 pm, accompanied by biscuits or cake. Dinner, which is eaten quite late, usually starts with a soup course. Mulligatawny, a spicy “pepper-water” soup, is a standard on the Anglo Indian menu. The main course might consist of roast meat or cutlets, served with potatoes and vegetables. Dessert or cheese and crackers, perhaps followed by coffee, completes the meal.

The modern diet of Anglo Indians depends largely on financial circumstances. Wealthier families with having the resources to buy meat and other expensive foodstuffs may keep to traditional Anglo Indian menus. The less fortunate, who may not be able to afford meat, tend to eat Indian-style vegetarian dishes, and their diet more closely resembles that of the local Indian population.

## 13 EDUCATION

Literacy among Anglo Indians is high. This is a measure of the pride the community takes in English as a symbol of its European heritage. English-language schools, often church-run and staffed by Anglo Indian teachers, provide education of a relatively high standard. However, these schools are private institutions, and their fees are often out of the reach of the lower-class Anglo Indian. Competition for entrance is fierce, as middle-class non-Anglo Indians see English-language schooling as essential for their children to succeed in government service and the professions. A common perception is that many Anglo Indian students—especially boys—lack the motivation to pursue higher education.

## 14 CULTURAL HERITAGE

As a small, isolated community that has rejected its Indian heritage, Anglo Indians lack cultural traditions of their own. They live a consciously Western lifestyle and share, secondhand, in Western trends in fashions, dance, and popular culture. In the

1960s, for example, young Anglo Indians formed rock-and-roll bands that performed at dances and social events. Some Anglo Indians achieved fame in the West as pop singers, notably Engelbert Humperdinck and Cliff Richards. Other famous Anglo Indians include the movie stars Merle Oberon and Ben Kingsley.

Although it can hardly be said that there is an Anglo Indian literary tradition, many British writers have dealt with Anglo Indian society in their works. A few, such as John Masters, focus specifically on the Anglo Indian community, notably in his novel *Bhowani Junction*. Others paint a picture—of varying degrees of accuracy and bias—of Anglo Indians as part of their overall consideration of relations between the British and Indians in India. Such authors include Rudyard Kipling, E. M. Forster, and Paul Scott.

## 15 WORK

Under British rule, Anglo Indians fulfilled an important occupational role in the economy of India. They were well represented in the Indian railways, posts and telegraph service, customs, and police. Anglo Indians reached high rank in the British Indian Army and other branches of the armed forces. Following the policy of Indianization initiated in 1919, however, Anglo Indians lost their advantage over Indians in terms of employment in the civil sector. This process was speeded up following Indian independence in 1947.

As a community, Anglo Indians have not fared well in terms of their accomplishments in modern India. Some individuals have gained national recognition. Melville de Mellow, for instance, was a broadcaster of international fame on All-India Radio. Many Anglo Indians served with distinction in the armed forces during India’s wars with Pakistan and China. But these were of another generation. The picture for Anglo Indian youth today is bleak. Girls have traditionally become secretaries, teachers, and nurses. Unemployment among Anglo Indian men is high, with many reluctant to accept employment they feel is beneath their status. Many Anglo Indians also see discrimination by Indian society at large as a barrier to their advancement.

## 16 SPORTS

Anglo Indians had the reputation, particularly in the early decades of this century, of being the best athletes in India. They raised field hockey to new levels of play and dominated India’s representative teams at the time. Hockey teams dominated by Anglo Indians were fielded by railway departments, customs, and other organizations. They regularly swept national tournaments such as the Aga Khan Cup in Bombay and the All-India Scindia Gold Cup. Cricket and soccer were also popular sports.

## 17 ENTERTAINMENT AND RECREATION

Anglo Indians have full access to the recreational amenities of urban India. These include radio, television and movie theaters. Church-related social and recreational activities are important in many communities. In the past, clubs such as Railway Institutes were the focus of social life, but these are no longer exclusively the preserve of Anglo Indians.

## 18 FOLK ART, CRAFTS, AND HOBBIES

There are no folk arts or crafts that can be said to be unique to the Anglo Indian community.

## 19 SOCIAL PROBLEMS

Anglo Indians form a small and isolated community in India. Western in outlook and lifestyle, they reject their Indian background. Yet the question remains how long Anglo Indians, as a minority cut off from their European roots, will be able to maintain their separate identity in Indian society. A few Anglo Indians have prospered in post-Independence India and lead lives similar to other Indian elites. The majority, however, still clinging tenaciously to their non-Indian identity, have not fared so well. Anglo Indian men are typically identified with poor educational qualifications, high unemployment, poverty, and a high incidence of alcoholism. This has led to Anglo Indian women seeking partners outside the community, forcing men in turn to look elsewhere for their wives. Should the trend of marrying outside the community continue, the erosion in numbers of an already small group could threaten its very existence within the next few generations. With strong leadership, schools, and cultural organizations, and their focus on the English language, Anglo Indians may survive in India as a distinct entity. An equally likely scenario, however, is the gradual integration of the community into Indian society, as has happened to so many "alien" peoples in India in the past.

## 20 GENDER ISSUES

Anglo-Indian women, being more exposed to feminism and gender issues current in the West, are much more familiar with such issues than other women's groups in India. However, with more Anglo-Indian women marrying into Indian families, they tend to face discrimination because, to do so, they flout indigenous customs of arranged marriages and specific caste rules. However, once they bear male children, much of this discrimination disappears. Their children tend to be raised according to the customs of the caste into which they marry.

# ASMAT

**PRONUNCIATION:** AWZ-mot

**LOCATION:** Indonesian province of Papua on the island of New Guinea

**POPULATION:** Approximately 70,000

**LANGUAGE:** Asmat-Kamoro language family; Bahasa Indonesia (national language of Indonesia)

**RELIGION:** Christianity; Asmat religion based on spirit worship

## 1 INTRODUCTION

The Asmat are a Melanesian, or Papuan, people who live within the Indonesian province of Papua that occupies most of the western half of the island of New Guinea. They are widely known for the quality of their wood sculptures, and they are also notorious for their traditional practices of headhunting and cannibalism, which have been linked to the unsolved disappearance of Michael Rockefeller, 23-year-old son of former New York governor Nelson Rockefeller, in 1961 while touring the region to collect indigenous artwork.

The Asmat's first European contact was with the Dutch in 1623. Some 150 years later, Captain James Cook arrived on their shores. For many years, due to their fearsome reputation, the group had few outside visitors, and another 150 years passed before the Dutch began to settle the Asmat area in the 1920s, bringing in the first Catholic missionaries. The first permanent Dutch colonial post, at Agats, was established in 1938. During World War II, Asmat lands lay on the border between Allied-controlled Papua and Japanese-controlled West New Guinea, and some skirmishes occurred between the Japanese and the Asmat. Contact with the West has expanded steadily since the 1950s, and traditional Asmat warfare and cannibalistic practices have declined.

## 2 LOCATION AND HOMELAND

The Asmat have traditionally been a coastal people occupying a low-lying swampy region that covers approximately 25,000 square kilometers in southwestern Papua. The swamps are punctuated by stands of sago palms, mangroves, and patches of tropical rain forest. Numerous streams and tributaries that overflow their banks in the rainy season provide the primary means of transportation for the Asmat. The Asmat population is estimated at around 70,000, living in about 120 villages with populations of up to 2,000. There are five main cultural groups of the Asmat: Central Asmat, Casuarina Coast Asmat, Yaosakor Asmat, North Asmat, and Citak. In the remainder of this entry, Asmat will refer to the Central Asmat unless otherwise specified.

The Indonesian government granted Papua "special autonomy" status in November of 2001, along with a promise to provide limited autonomy and control to the indigenous peoples there such as the Asmat as long as they can substantiate their traditional land claims.

## 3 LANGUAGE

The Asmat languages belong to a larger language family known as Asmat-Kamoro. This language family is classified by linguists as being non-Austronesian or Papuan. There are around 70 different language families within the non-Austro-

nesian grouping, but their internal relationships to each other have not yet been determined. The Asmat-Kamoro family has over 50,000 speakers, which is fairly large by Papuan standards. Because of missionary involvement in the region, central Asmat now have a written form of the spoken language. A modest publishing effort in the language exists that produces children's readers and religious literature. A form of Bahasa Indonesia, the national language of the Republic of Indonesia, is spoken by many Asmat men.

#### 4 FOLKLORE

A significant body of mythology surrounds the origins of headhunting among the Asmat. According to the origin myth, two brothers were the original inhabitants of the Asmat region. The older brother convinced the younger brother to cut off his head, and the decapitated head instructed the younger brother about how to go headhunting, process the trophy head, and use it in initiation rituals for young males. The name of the older brother was also transferred to the younger brother, an event mirrored in the practice of an Asmat taking the name of a person he has decapitated. The number of names a man has reflects the number of heads he has taken in his lifetime. In accord with the great power traditionally accorded to the spirits of the deceased, the skull of a deceased relative was traditionally kept as a desirable protection against evil spirits.

#### 5 RELIGION

Prior to the introduction of Christianity into the territory, the Asmat religion was based on a belief in spirits that inhabited things in the natural world, as well as the fear of the ghosts of the dead. It was also believed that the deaths of all persons except the very young or very elderly were deliberately caused by some malevolent outside force. The ancestral spirits, to whom great powers were generally attributed, were said to demand that tribe members avenge a wrongful death by killing and decapitating an enemy and offering his body to the community for cannibalistic consumption. Headhunting and other male activities associated with that endeavor were the focus of many Asmat rituals.

#### 6 MAJOR HOLIDAYS

In traditional Asmat societies, there were elaborate cycles of ceremonial feasting that occurred throughout the year. Feasts that celebrate the feast-givers' deceased kinfolk are still very important celebrations. Other events that required a feast were the opening of a new men's house, the dedication of the tall ancestor poles (*bis*), the dedication of twenty or more war canoes, a celebration of masks, and a celebration of shields. In the past, most of the feasting events centered on male activities associated with raiding and headhunting.

Missionary activity has introduced Christianity into the Asmat area. Now some Asmat are professed Christians and celebrate the major Christian holidays. Although Islam is the major religion of Indonesia, it not practiced among the indigenous population.

#### 7 RITES OF PASSAGE

Male initiation was one of the most important rites of passage in pre-colonial Asmat society, although it has lost some of its importance today. In the past, initiates were given a decapitat-

ed head that they would contemplate. The power of the warrior, which was believed to reside in his decapitated head, was to be absorbed by the initiate. The initiates would fast during this time. They would then take a canoe trip to the sea. Their sponsors would eventually plunge the initiates into the sea, symbolically killing them. The initiates were reborn as warriors. Male prowess is still highly valued in Asmat society, although male initiation rites no longer involve decapitation.

Death is accompanied by grieving by family and friends of the deceased, who roll in the mud of the riverbanks to hide their scent from the ghost of the deceased. Ceremonies are performed to ensure that the ghost passes to the land of the dead, referred to as "the other side." The skull of a person's mother is often used as a pillow.

#### 8 INTERPERSONAL RELATIONS

Precontact Asmat life is only sketchily known to anthropologists. The earliest reliable accounts date from the 1950s around the time of pacification. These accounts focus more on ritual behaviors and practices than they do on the mundane.

Little is known about the Asmat's everyday life, and the current Indonesian practice of limiting the amount of time researchers may spend in Asmat country does not facilitate the acquisition of such information.

Missionary and governmental influence has affected practices relating to greetings and other forms of social etiquette. In precontact times, sexual relations between unmarried males and females were not prohibited, and there were extensive ritual contexts in which promiscuity was expected.

#### 9 LIVING CONDITIONS

The southern coast of Papua is an ideal setting for the proliferation of malaria, which is endemic to the region. The debilitating aspects of the disease take their toll on the Asmat population. Death due to crocodile attack is also common in parts of the Asmat territory. In one region, these deaths occur frequently enough to warrant the carving of special commemorative poles called "crocodile poles."

Houses are elevated on stilts to prevent them from flooding during the rainy season. There is no running water or electricity in a traditional Asmat house. Mission and government posts in the area typically do have these services, and Asmat who work with those institutions do have some access to these comforts. Most houses have an outside porch area where people can congregate to talk, gossip, smoke, or just watch their neighbors.

The coastal Asmat groups travel extensively by canoe along the coast and inland along rivers and tributaries. Most of their travel has traditionally been related to inter-village feasting and the visitation of relatives in other communities. Transportation for the Asmat is primarily by dugout canoe and also by foot on trails through the rain forest. There are different kinds of canoes constructed for different activities. War canoes of the Asmat are about 21 m (70 ft) long and can hold around 30 people. Paddling is done from a standing position, and the narrowness of the hull demands that each person maintain their balance; otherwise, the canoe could easily capsize. This is extremely dangerous in the crocodile-infested rivers, lakes, and streams.

## 10 FAMILY LIFE

Marriage among the Asmat is traditionally defined in terms of the village and the kin group. Asmat society is divided into two complementary and contrasting halves termed "moieties" by anthropologists. A person is supposed to marry someone from within their village who belongs to the opposite half of the society: the other moiety. In the past, men were allowed to have more than one wife. A groom had to pay a "bride price" to his prospective father-in-law to negotiate a marriage. In some cases, the price would be so high that he would have to make installment payments on the total amount due. However, he was also given rights to harvest a portion of his in-laws' sago trees. Before the introduction of European goods, the payments consisted of animal furs, bird of paradise feathers, triton shells, dogs' teeth necklaces, stone axes, and other weapons. In modern times, tobacco, money, and other Western goods are included in the payments. After the marriage, the bride moves in with her husband's family. Extended families occupy large houses built of bamboo, sago bark, and sago frond thatching.

Men sleep apart from their wives in the men's longhouse (*yew*). Ceremonial activities that take place inside the men's house are prohibited to women. Menstruating women stay in a separate house that is off-limits to men.

## 11 CLOTHING

The Asmat traditionally have worn little or no clothing. Footwear is not often owned. The Asmat women wore a fiber skirt, while men went completely naked. Men among the eastern Asmat wore rattan bands around their waists and a small hollow tube covering their penises. Plaited cane bands were also worn around the wrists and just below the knees. Because of missionary and governmental influence, many Asmat today wear Western-style clothing, often consisting of rugby shorts for men and floral, cotton dresses for women. Objects of bodily adornment that are still seen today include the tusks of wild pigs or boars that are worn in the pierced nasal septum of men. On ceremonial occasions, men and women have their bodies decorated with paints made from natural products and dyes including mud and ochre.

## 12 FOOD

Fish and the sago palm are the staple foods of all Asmat groups. The larva of a butterfly that is often found in the rotting carcasses of fallen sago palms is an important ritual food and a delicacy among the Asmat. Canned meats and fish, as well as flour, tea, and sugar have become important food items for the Asmat. These items are obtained from trade stores set up by Indonesians or from mission stores.

As opposed to other groups on the island of New Guinea, the Asmat did not have trading relationships with neighboring groups that would have allowed for specialization in foodstuff production in pre-colonial times. In other areas, one group would produce sago and trade it for the fish caught by another group. Instead, Asmat villages attempted to monopolize the food resources in their area. The Asmat went to great lengths to provide for the fertility of the sago palm stands in their territory. The heads of headhunting victims were frequently hung in the sago palm stands to promote the fertility of the trees. Ancestor poles (*bis*) were also erected in the sago stands to promote the sago palms' fertility. Although the fertility of the

sago stand is still important to the Asmat, they are no longer permitted to engage in headhunting activities.

## 13 EDUCATION

Outside influences on the Asmat include formal education. Missionaries and colonial administrations have set up various schools in the region. Agats, the regional administrative center in the coastal Asmat area, has schoolhouses for mass education. In precontact times, children would learn from their elders those tasks that were specific to their sex.

## 14 CULTURAL HERITAGE

As is the case with other Melanesian peoples, drums are important instruments. Asmat drums are similar in shape to drums produced in other parts of insular New Guinea. They have an hourglass shape and a single, lizard skin-covered head that is struck with the palm of the hand. The other hand is used to hold the drum by a carved handle. Ceremonial horns were also used by the Asmat. Although the Asmat regard drums as sacred objects, they do not define the sounds produced by instruments as music; only singing is classified as music in Asmat culture.

Dance was an important part of ceremonial life in precontact Asmat villages, although missionary activity has discouraged dancing among the Asmat. Written literature was not available to the Asmat, since their language was exclusively an oral one. However, they have an extensive body of oral literature. Epic songs that often lasted for several days and metaphorical love songs are still important forms of expression among the Asmat.

## 15 WORK

The Asmat are hunters and gatherers who gather and process the pulp of the sago palm and hunt crocodiles and other animals. Some also grow vegetables or raise chickens, which have been imported to the area in small numbers. There is a traditional division of labor along gender lines. Women are responsible for net fishing, gathering, and other domestic tasks. Men are responsible for line and weir (fence or enclosure) fishing, hunting, horticulture, and the felling of trees. Tree felling is an important job since canoes, ancestor poles, and domestic structures are all constructed from forest wood. An export market in crocodile skins and tropical hardwoods has been developing among the Asmat, and the sale of wood carvings to outsiders represents an additional source of income.

## 16 SPORTS

Traditionally, male competition among the Asmat was intense. This competition centered on the demonstration of male prowess through success in headhunting, the acquisition of fishing grounds and sago palm stands, and the cultivation of a number of feasting partners. Males still compete in these areas, except headhunting, which is now prohibited.

## 17 ENTERTAINMENT AND RECREATION

The Asmat region of Papua is still very isolated. Agats is the major administrative center for the entire southwestern coastal region. Amenities are available on a limited basis, but Western forms of entertainment and recreation are not available.

## **18 FOLK ART, CRAFTS, AND HOBBIES**

Asmat art has been highly valued by European and American art collectors ever since it was brought to the attention of the outside world. During the 1960s there was a move to collect Asmat art following pacification efforts throughout the entire region. It was known that much of Asmat artistic production was tied to the practice of headhunting, and with pacification and the prohibition of headhunting, the proliferation of artifact production declined.

Art from the central and coastal Asmat is the most widely known in museums in Europe and the United States. Groups in these areas produced decorated shields, spears, digging sticks, canoes, bows and arrows, and a wide range of figurative carvings. The most famous ritual carving of the central and coastal Asmat is the ancestor pole, called *bis* in the Asmat language. These elaborately carved and decorated poles commemorated the deaths of those killed in battle or by sorcery. They were erected during a feast that preceded a headhunting raid to avenge those deaths. Phallic symbolism is evident in the *bis* poles.

Birds and flying foxes were important motifs on shields and other objects because of their association with headhunting. In Asmat cosmology, trees and human beings are viewed as similar entities. The head of a human being is equivalent, symboli-

cally, with the fruit of a tree; therefore, creatures that eat the fruit of trees are equivalent to men who take the heads of other men. The praying mantis is also an important motif in Asmat sculpture.

The Asmat Woodcarving Festival is an annual event held in October. The purpose of the festival is to promote the development of Asmat art and culture for the Asmat people. It is a mechanism to support the continuation of traditional wood working. The carvings are judged and the one that is awarded the top prize is put on permanent display in the Asmat Museum of Culture and Progress in Agats. Many of the other carvings and poles are sold at auction during the festival.

## **19 SOCIAL PROBLEMS**

The Asmat are fighting to retain their traditional ways of life in the face of pressure by Indonesian administrators. As of the 1990s, many Asmat had converted to Christianity and were being educated in Western-run schools. However, they have had limited influence on Indonesian government's policy regarding the use of their land.

A native-run cultural center and museum in Agats called the Asmat Museum of Culture and Progress is striving to collect artifacts from all areas of Asmat culture. It also produces catalogues and cultural monographs on Asmat culture, my-

thology, and history to preserve these bodies of knowledge for future generations of Asmat.

## 20 GENDER ISSUES

By all accounts, Asmat women experience difficult lives in many regards. Wife beating is sanctioned within the society, although the influence of missionaries and the presence of local law enforcement officials currently mitigates this practice. Unmarried women and girls can be beaten by their fathers or brothers for promiscuity. A woman's property is transferred to her husband at the time of marriage, and, as a result, she loses control over any resources that she might derive from it. Traditionally, wife-swapping was a common practice, either to confirm a bond of friendship between two men or as a community-wide phenomenon in times of crisis. Women were directly involved with the fertility cult within the community. Sorcery was attributed to women only among the central Asmat.

The Asmat also engage in a practice called "wife exchange," or *papisj* in Asmat. In this practice, two men—or the families of two unmarried boys—determine that a *papisj* relationship needs to be established. In the case of married, adult men, the men rub sago powder on each other's foreheads and then return to their respective wives to convince them of the agreement. Once convinced, the wives will exchange households for one day/night where they will prepare a meal for the exchange family and sleep with the exchange husband. The following morning, the woman will be decorated with sago flour and feathers and will return to her husband and family.

Unlike neighboring South Coast cultures of Papua, the Central Asmat males did not engage in ritualized homosexuality. However, the Asmat did engage in ritualized heterosexuality especially as a means to calm disturbances in either nature or the village itself. There is evidence among the Casuarina Coast Asmat had ritualized homosexual relationships between males called *mbai*. The *mbai* relationship of the Casuarina Coast Asmat is very similar in many respects to the *papisj* relationship of the Central Asmat.

# ASSAMESE

**PRONUNCIATION:** as-suh-MEEZ

**LOCATION:** India (Assam state)

**POPULATION:** c. 20 million

**LANGUAGE:** Assamese

**RELIGION:** Hinduism

**RELATED ARTICLES:** Vol. 3: Hindus; People of India

## 1 INTRODUCTION

In referring to people, the word "Assamese" is used in two senses. It can identify the entire population of the state of Assam in northeastern India (numbering 26, 655,528 according to the Census of India, 2001). Used in this manner, it includes not only the majority ethnic group found in the Brahmaputra Valley, but also all the tribal groups (e.g., Bodo, Mikir, Miri, and Naga) and immigrants from other parts of India living in the state. In its more restricted sense, "Assamese" refers to the peoples of the Brahmaputra plains whose native language is Assamese and who developed what may be considered Assamese culture. Unless otherwise stated, it is this latter group that is the focus of this article.

The Assamese of the plains are mainly of Indo-Iranian stock, with some Mongoloid physical characteristics. This reflects the complex history of migrations into the area over many centuries. Early Indian texts identify Assam as Kamarupa, and the 7th-century Chinese traveler Hsuan-tsang has left a detailed account of the region. The Assam valley fell under various regional and local dynasties until the Ahom, a Shan people from Burma (Myanmar), assumed power in the 13th century. The Ahoms ruled Assam for four centuries, until their kingdom fell to Burma in 1821. The former Ahom lands were ceded to Britain in 1826 following the First Anglo-Burmese War (1824–26). Assam was administered as part of British India until India gained its independence in 1947. The modern state of Assam is much reduced in area from colonial times, reflecting the separation of many of the tribal areas of the northeast as states in their own right.

## 2 LOCATION AND HOMELAND

Assamese are the dominant ethnic group in Assam, making up some 48.8% of the state's population. The Census of India 2001 gives a population of 26,655,528 which, at current growth rates, would be projected to over 29 million people today.

The geographical and historical heartland of the Assamese people lies on the lowlands of the Brahmaputra Valley. One of India's great rivers, the Brahmaputra (literally, "Son of Brahma") emerges from the Himalayas in eastern Assam. It then flows in a southwesterly direction for 650 km (400 mi) through the length of the state. As it leaves Assam, the river swings south into Bangladesh where it joins the Ganges and flows into the Bay of Bengal. The Brahmaputra and its valley are the dominant physical features of Assam. The river is over 8 km (5 mi) wide during flood stage, and widespread and destructive flooding is common in the area. The valley, lying at elevations generally below 100 m (330 ft), averages about 100 km (60 mi) in width. To the north lie the foothills of the Himalayas. South of the valley are the Meghalaya Plateau and the hills that form India's eastern border with Burma. Climate is monsoonal. An-

nual rainfall varies from 160–320 cm (65–125 in) and falls mainly between May and September. Mean monthly temperatures range from 16°C (61°F) in January to 29°C (84°F) during the summer months.

### 3 LANGUAGE

Assamese is the language spoken by the Assamese people. It belongs to the Indo-Aryan language family but has been influenced in its vocabulary, pronunciation, and structure by its contact with the Tibeto-Burman dialects spoken in the region. Assamese is closely related to Bengali and is written in a script that shows only minor deviations from the Bengali script. Assamese has emerged as the *lingua franca* of northeastern India. A *lingua franca* is a language that is widely used for communication by peoples who do not understand each other's languages. Currently, there are about 20 million Assamese speakers, of whom perhaps 13 million reside in Assam (the remainder are found on the borders of Assam and in the Indian State of West Bengal. In 2001, for the first time, Assamese speakers accounted for less than half the population (48.8%) of Assam.

### 4 FOLKLORE

The *Mahabharata* and *Kalika Purana* relate numerous stories concerning Kamakhya, the site of an important temple near Gauhati, in Assam. According to legend, when the goddess Sati died, her distraught husband, Shiva, carried her body on his head as penance. Vishnu, fearing this would give Shiva excessive powers, cut Sati's body into numerous bits with successive throws of his discus. Each place on earth where a piece of Sati's body fell became a sacred center of pilgrimage. Tradition has it that Sati's sexual organs landed at Kamakhya, where a temple was built to mark the spot. There is no image of the goddess—who is also called Kamakhya—at the temple, but in the depths of the shrine is a cleft in the rock that is worshiped as the *yoni* (female organ) of the goddess. Kamakhya is one of the most important *sakti* or Mother Goddess temples in India. (*Sakti*, or “energy,” refers to the power of a deity manifested through his female counterpart.) Rites of worship at the temple include animal sacrifice.

### 5 RELIGION

The Assamese are Hindu and follow the basic observances of the religion. They worship many Hindu gods, are organized into castes, and have ritual specialists (the Brahmans) to perform religious functions. Within this overarching structure, however, there exists considerable diversity in practice. Vaishnavism has a strong following among the peoples of the plains, and Krishna (an incarnation of Vishnu) is by far the most popular deity among the Assamese. Villagers gather at *namghars* (prayer halls) to recite Krishna's name as part of the rituals of this devotional (*bhakti*) sect. Shiva, too, has his following, while the importance of Kamakhya has already been noted [see “Folklore”]. At the level of folk religion, local deities such as Manasa, the snake goddess, and Shitala, the goddess of small pox, are revered. Assamese believe in spirits who inhabit trees, water, and other elements in nature. Some are good, but some are evil and cause disease and other problems for humans. Various charms, spells, and rituals are used to deal with the spirit world.

### 6 MAJOR HOLIDAYS

The Assamese have three principal festivals known as Bihu. Baisakh Bihu is celebrated in mid-April to usher in the New Year. It also marks the end of the unlucky month of Chait, and the beginning of Baisakh which is considered auspicious. Cows are worshiped and bathed in the sacred Brahmaputra. They have their horns painted, are garlanded with flowers, and are then driven through the village streets in procession. It is a time for visiting friends and relatives, for singing and dancing, and for general rejoicing. The other Bihu festivals, Magh Bihu and Kati Bihu, are also occasions for feasting and merriment. Other major Hindu festivals such as Holi, Durga Puja, and Janamashtami (Krishna's birthday) are also celebrated.

### 7 RITES OF PASSAGE

The Assamese follow the basic life-cycle rituals as set out by the ancient Hindu lawgivers. Some specific customs, however, are unique to Assam. When a baby is born, for example, a knife is kept under the mother's bed to keep evil spirits away. Iron is believed to have certain magical properties. Similarly, fish play an important role in Assamese culture. When a baby is born, and particularly if it is a son, the Assamese distribute fish to friends and relatives. Fish is invariably served at the feast that accompanies the naming ceremony, which is usually held when the baby is around six months old. The period of pollution for a woman after childbirth lasts for a month. A girl attaining puberty is also considered unclean and is confined in a room during her first period.

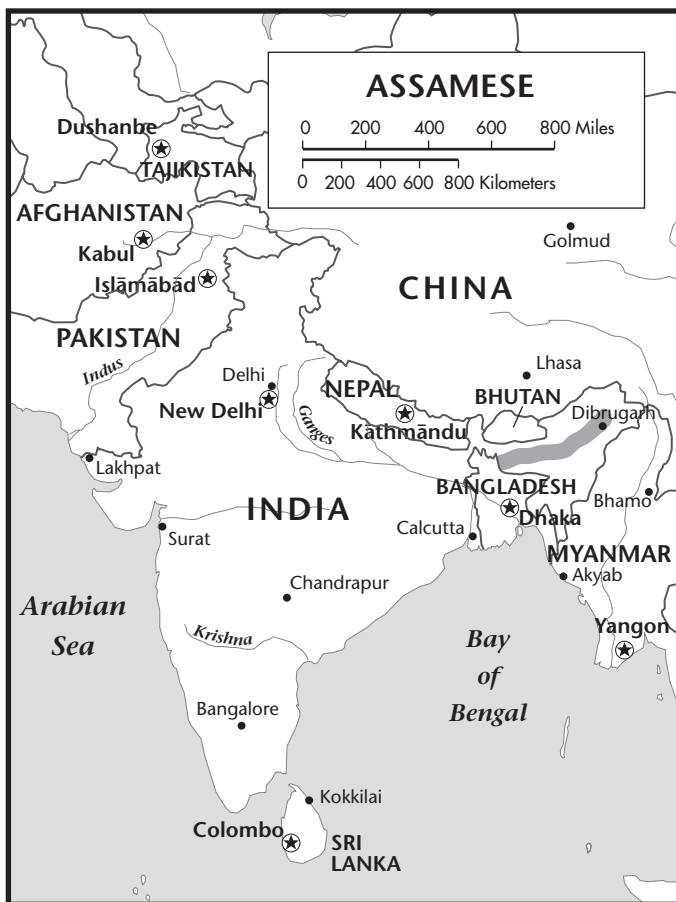

At death, the corpse is removed from the house. It is rubbed with oil and turmeric paste, before being bathed and dressed in new clothes. The dead person is thus ready for his or her last journey. The body is carried to the cremation grounds, where it is burned according to Hindu custom. The man who performs the *sraddha* (funeral) rites carries a knife, the metal being protection against evil spirits. The mourners returning from the cremation have to bathe, place their feet on stones, and step over a fire before they can enter the house. If it is late at night, they cannot enter until the next morning, in case the spirit of the dead person follows them into the house.

### 8 INTERPERSONAL RELATIONS

As a rule, Assamese have two names. One is known publicly, but the real one, which is given in accordance with astrological calculations, is kept secret. This is for fear that harm might befall the person if the true name is divulged. Names are often given after popular gods and goddesses in the hope of receiving protection from them, or of children acquiring their godly qualities.

### 9 LIVING CONDITIONS

The Assamese are mostly rural people, living in villages and hamlets on the alluvial lowlands of the Brahmaputra River valley. Traditional houses are built of wood, bamboo, and other available materials. The walls are plastered with a mixture of cow dung and clay, with the roof thatched with grasses or reeds. A residence typically consists of a building containing the living quarters and kitchen, a separate structure for cattle, and a storehouse—often built on piles—for keeping paddy rice and other items. Wealthier families may have a separate guest house, and a small hut for daily worship. Furnishings depend

on the means of the individual family but in villages typically consist of cane mats, wooden stools and beds, and the usual cooking and eating utensils.

### 10 FAMILY LIFE

The Assamese follow North Indian marriage patterns. They practice caste endogamy and clan (*jati*) exogamy. Marriages are arranged, and among castes such as the Brahmans and Kayasthas child marriage is still prevalent, particularly in rural areas. The marriage rituals last for two or three days and follow the Vedic rites, although certain practices reflect local customs and beliefs. In an Assamese marriage, for example, a conical structure called a *bei* is built of bamboo and bark, and the bride and groom bathe under it. A couple of eggs are buried at the spot of the bathing, and sometimes the bride has to carry two eggs to her new home. The egg is a symbol of fertility, and this custom may have been acquired from local tribal peoples for whom the egg has great ritual significance.

As with all Hindu groups, the bearing of male children is the desired outcome of any union. Divorce and widow remarriage are not permitted by most groups. The extended family system is traditional among the Assamese, with residence being patrilocal (i.e., the bride resides at the home of her new father-in-law). Although women are assigned an honored position in Assamese society, inheritance passes down the male line.

### 11 CLOTHING

The typical clothing of Hindu men on the Assam plains is the *dhoti*, the long cotton loincloth that is wrapped around the body, then drawn between the legs and tucked in at the waist. Villagers might go bare-chested, but the higher castes wear upper garments. The *kurta* and the Western-style shirt are common dress nowadays. Villagers of social standing often wear a turban. Female dress consists of a blouse, with a long cloth wrapped around the body just above the breasts like a sarong. Alternatively, the traditional *choli* (bodice) and *sari* are worn. Ornaments favored by women include earrings, necklaces, nose studs, armlets, bangles, and anklets. The use of scented oil is a common practice among both men and women.

### 12 FOOD

Rice is the staple food of the Assamese, eaten with a variety of fish or meat curries. A particular favorite is sour fish curry. Most Hindus in Assam, even the Brahman castes, eat fish and meat. However, all except the lowest Hindu castes avoid beef. At certain times, such as the period of mourning following a death, fish and meat are avoided. Caste Hindus usually do not eat chicken, eggs, or pork. The rice and curried dishes are served with vegetables, pulses, and condiments such as chutneys and pickles. Fruits such as bananas, pineapples, and oranges are also eaten. A type of rice pudding prepared with milk and sugar is a particular favorite of the Assamese. Rice beer is brewed and consumed in quantities, especially at celebrations such as the Bihu festivals. The chewing of areca nut and betel leaf is universal in Assam.

### 13 EDUCATION

Education in Assam is compulsory up to the age of 12, and free through the secondary level. However, actual educational levels of the Assamese vary considerably, according to factors such as openness to modernization, economic circumstances, and location. The literacy rate for the population of Assam 7 years and older was reported as 64.28% in the 2001 census. Literacy among males (71.93%) was higher than among females (56.03%). There are universities at Gauhati and Dibrugarh, as well as the Assam Agricultural University at Jorhat.

### 14 CULTURAL HERITAGE

The earliest indisputable work in the Assamese language dates to the 13th century AD. Literature of this period was mostly derived from Sanskrit sources, but by the 16th century the *buranjis*, the chronicles of the Ahoms, were being written in Assamese. The writings of Shankaradeva and other poets of the devotional Vaishnava sect greatly enriched Assamese literature during the 15th and 16th centuries. Modern literature in Assamese dates to the late 19th century but has done little more than mirror Western writing.

The Assamese have a rich tradition of oral literature, folk music, and dance. Of particular note are the songs (*nam*) associated with the Bihu festivals and weddings. Some folk songs are lullabies and nursery rhymes for children, others deal with love, while still others focus on the god Krishna and his life. In addition, there are ballads on both popular and historical themes. Dance is as important a part of Assamese culture as is music. Special Bihu dances are performed at the time of the Bihu festivals. *Ojha-Pali* is a group of dancers and singers that

Assamese Bihu dancers perform in Gauhati, India. (AP Images/Anupam Nath)

presents stories from the Hindu epics and the Puranas. *Deodhas* are temple dancers who are believed to become possessed and dance in honor of the snake-goddess Manasa and other deities.

### **15 WORK**

Most Assamese are cultivators, with rice being the dominant food crop produced in the region. Vegetables, pulses (peas, beans, lentils), and oilseeds are also grown. Sugarcane and jute are important cash crops. Tea is grown on estates on the flanks of the Brahmaputra Valley. However, these are often corporate ventures operated with immigrant labor from other parts of India. Assamese also work in the important forest industries, in the limited industries of the region, and in the service sector of the economy.

### **16 SPORTS**

The amusements of Assamese children are relatively few. For the most part, they play with balls, cowry shells (which pass for money), tops, kites, and the like. They play hide-and-seek, games of tag, individual wrestling, and team wrestling (*kabaddi*). At the time of the spring Bihu, fighting with eggs is a game popular with children. In the past, elephant-fights and buffalo-fights formed part of the Bihu festivities. Modern sports such as soccer, cricket, volleyball, basketball, and track-and-field are played in the schools, colleges, and universities of Assam.

### **17 ENTERTAINMENT AND RECREATION**

The Assamese are essentially a rural people. They rely mainly on festivals, fairs, and traditional forms of folk entertainment for their recreation. Modern entertainment such as radio, television, and movie houses are available in urban centers to those with the means to access it.

### **18 FOLK ART, CRAFTS, AND HOBBIES**

Assamese women are skilled in the art of weaving, producing fine cotton cloth and gold-colored *muga* and rough *endi* silks. Nearly every household has its hand-loom, and every young girl is taught the art of weaving. Embroidery is also a local art. Artisan castes work gold and silver; produce pottery, metal goods, and brassware; and make items of cane and bamboo. Wood from Assam's abundant forests is carved into both domestic items and religious icons.

### **19 SOCIAL PROBLEMS**

Since India became independent in 1947, separate states have been created for many of the tribal peoples of the "old" Assam. Despite this, the Assamese face serious social and political problems arising from ethnic tensions in the state. Since the 1980s, resentment among the Assamese against outsiders has led to widespread communal violence and the loss of hundreds of lives. The so-called "foreigners" targeted in this campaign are Bengali villagers who have lived in Assam for many years but still retain their Bengali identity; more recent immigrants from Bangladesh; Biharis; and Nepalis. The situation

is further complicated by other ongoing conflicts. Disaffected Bodo tribespeople have been agitating for a separate state of their own within Assam. In addition, some Assamese are advocating outright secession from India. Indian security forces operating against the militant United Liberation Front of Assam (ULFA) are facing numerous charges of violating the civil rights of Assamese civilians.

The Assam Accord was a Memorandum of Settlement (MoS) signed between representatives of the Government of India and the leaders of the Assam Agitation in New Delhi in 1985. The accord brought an end to the Assam Agitation and paved the way for the leaders of the agitation to form a political party and form a government in the state of soon after. Some of the key clauses of the Accord have yet to be implemented, which has kept some of the issues festering, and violence from insurgent groups remains a problem in Assam.

## <sup>20</sup> GENDER ISSUES

Assamese society has traditionally treated women with disdain, and the plight of women (mostly poor and low-caste or tribals) is one of exploitation. As a result of poverty, age, custom, and terrorism many women, out of dire need, are forced to sell their bodies and are engaged in the sex trade throughout India. In 2005, Javed Akhtar, a noted Assamese lyricist, raised a firestorm with his alleged remark on Assamese women on a private TV channel in Guwahati—"Assamese women are known for frequently changing husbands and can be purchased in any city of the country." Police are far too involved in fighting insurgents to turn their attention to the thousands of women and girls in Assam who go missing every year, many of these ending up as "sex slaves" for wealthy landowners in other parts of the country.

Despite this, a UNIFEM (United Nations Development Fund for Women) report finds greater gender equality in Assam than elsewhere in India. The society doesn't suffer from practices like dowry, child-marriage and bride-burning.

# AUSTRALIAN ABORIGINES

**PRONUNCIATION:** aw-STRAYL-yuhn ab-bor-RIDGE-in-eez

**LOCATION:** Australia; Tasmania

**POPULATION:** Approximately 517,000

**LANGUAGE:** Western Desert language; English; Walpiri and other Aboriginal languages

**RELIGION:** Traditional Aboriginal religion; Christianity

## <sup>1</sup> INTRODUCTION

Australian Aborigines, the original inhabitants of the continent of Australia, took up residence there at least 40,000 years before Europeans landed at Botany Bay in 1788. In 1788, the Aborigines were clearly the majority, numbering around 300,000. In 1996, they were a minority struggling to claim rights to their traditional lands and financial compensation for lost lands and resources. Relations between Aboriginal and non-Aboriginal inhabitants of Australia have not been very good, and there is a great deal of resentment on the part of many Aboriginal people for the treatment their ancestors received from the European colonists. In February 2008, Prime Minister Kevin Rudd formally apologized to Aboriginal peoples for mistreatment by the Australian government in the past. Prime Minister Rudd singled out the "Stolen Generations" who were children forcibly removed from their families to attend boarding schools where they were punished for speaking their native languages and following their native traditions. Australian Aborigines face many of the same problems that Native Americans face in the United States.

## <sup>2</sup> LOCATION AND HOMELAND

Australian Aborigines traditionally lived throughout Australia and Tasmania. As Australia and Tasmania lie south of the equator, the seasons are reversed from those of North America. The varied climatic zones gave rise to local cultural adaptations among populations. In Central and Western Desert regions, Aboriginal groups were nomadic hunters and gatherers. They had no permanent place of residence, although they did have territories and ate whatever they could catch, kill, or dig out of the ground. The Australian desert is an extremely harsh environment with hot days and cool nights and very few permanent water sources. In the southern parts of the island continent, winter is cold and Aboriginal populations had to shelter themselves from the cold wind and driving rain. Although many Aboriginal people move frequently within Australia, very few emigrate. Approximately 33% of the total population of the Northern Territory is Aboriginal according to the 2006 Australian Census of Population and Housing. This is the highest percentage of any Australian state/territory.

## <sup>3</sup> LANGUAGE

There were approximately 300 different Aboriginal languages spoken in 1788 when Captain James Cook claimed the island continent for England. Now, there are only about 145 Aboriginal languages still spoken. Only about 18 of these, like Walpiri, spoken in and around Alice Springs in the center of the continent, have a good prognosis. Walpiri is taught in schools and a

growing body of written literature is produced in the language daily. Other languages such as Dyirbal are dying out. Of the 145 language still spoken, 110 are severely and critically endangered. This category indicates languages that are spoken only by small groups of people, mostly over 49 years old. Aboriginal Australian languages are very different in structure from Indo-European languages such as English. Linguists believe that all of the languages of the Australian continent are genetically related to each other; however, there is some disagreement about the genetic relationship of the language of the Tasmanians, which is now extinct. The largest language in terms of number of speakers is called the Western Desert language, spoken by several thousand Aboriginal people in the Western Desert region of the continent. Most Aboriginal people speak English as their first or second language. In parts of Australia, distinctive kinds of English have developed within Aboriginal communities. In the Northern Territory there is a kind of English spoken by Aboriginal people that is called Kriol.

#### **4 FOLKLORE**

Australian Aborigines have a large body of folklore and oral history that is often referred to as “the Dreaming.” This body of verbal art relates humans to the natural and mystical landscape in which they find themselves. “The Dreaming” is the time when everything came into being and the rules of social relations and behavior were instituted by ancestral beings. It is the means by which Aboriginal people identify themselves with their territory and their heritage. “The Dreaming” is also the mechanism by which Aboriginal people claim traditional ownership of land through the display of intimate knowledge of the terrain and its inhabitants. Myths of “the Dreaming” often have cultural heroes as central characters. These cultural heroes, like those of most cultures of the world, have greatly exaggerated powers.

#### **5 RELIGION**

Traditional Aboriginal religion revolves around “the Dreaming.” Totems are also an important part of Aboriginal religious identity. Totems are symbols from the natural world that serve to identify people and their relationships with one another in the social world. These totems both defined social groups, such as clans and lineages, as well as individual totems. The conceptual landscape was inhabited by ghosts of the dead as well as a variety of spirits who controlled certain aspects of the natural world, such as the Rainbow Serpent, who brought rain. Rituals were performed to placate these spirits and also to increase the fertility of certain species of animals that were important.

Since the colonization of Australia, many Aboriginal people have converted to Christianity either by choice or by the influence of education in mission schools. About 75% of Aborigines indicate that Christianity is their primary religion. One aspect of the conversion of Aboriginal people to Christianity is that very few, if any, traditional elements of Aboriginal spirituality have been incorporated into Aboriginal Christianity.

#### **6 MAJOR HOLIDAYS**

As part of the larger Australian society, Australian Aborigines can participate in major holidays. Australia Day, January 26, is the equivalent of Independence Day in the United States. This holiday often invokes public protests on the part of Aboriginal people. Many Aboriginal people participated in major protests

on the event of the Bicentennial in 1988. Traditional Aboriginal society, however, had no holidays as such.

#### **7 RITES OF PASSAGE**

In some Aboriginal societies, there were both male and female initiation rituals that marked the passage of the child into adulthood. Male initiation still takes place among groups like the Aranda in central Australia. Circumcision is an important part of male initiation among the Aranda. Exclusion of young males is also an integral part of the initiation process; however, school schedules have to be taken into account in a modern context.

Death in Aboriginal Australian societies was accompanied by complex rituals. Among the Walpiri of central Australia, a wife would have to isolate herself from the rest of the community upon the death of her husband. She would live in a “widows’ camp” for a period of one to two years. During that time she would communicate through an intricate system of sign language. She was not permitted to speak during this period of mourning and seclusion. If a woman chose not to follow these traditions, her husband’s ghost could steal her soul, which would lead to her death.

#### **8 INTERPERSONAL RELATIONS**

Behavior and interpersonal relations among Australian Aborigines are defined by who one is related to and who one is descended from. In many Aboriginal societies, certain kinfolk stand in avoidance relationships with each other. For instance, in some groups a son-in-law must avoid his mother-in-law completely. Individuals will often change course entirely and go out of their way to avoid a prohibited in-law. In these complete avoidance relationships, he must not have any contact with her at all. In other types of relationships, a son-in-law can only speak to his mother-in-law by way of a special language, called “mother-in-law language.” The opposite of avoidance relationships are joking relationships. These are relationships between potential spouses that typically involve joking about sexual topics.

Aboriginal people comment that non-Aboriginal people say “thank you” all the time. Aboriginal social organization is based on a set of reciprocal obligations between individuals that are related by blood or marriage. Such reciprocal obligations do not require any thanks: If I am related to you and you ask me to share my food with you, I am obligated to do so without any expectation of gratitude on your part. Anglo-Australians often misconstrue this behavior as rude.

#### **9 LIVING CONDITIONS**

Health care is a central problem for most Aboriginal people. For rural groups, access to health care may be extremely limited. In precontact times, they would have relied on traditional health practices to cure illness and limit disease. However, through European influence, many rural societies have lost knowledge of traditional medicine and now must rely on Western medicine, which is often available only sporadically.

Aboriginal people receive a monthly allowance in restitution from the Australian government in the same way that Native Americans receive a monthly payment from the United States government. Aboriginal people buy various kinds of goods with this money. Often in rural communities, the majority of the check goes to food in the form of tea, flour, and

tinned meat. Some Anglo-Australians visit outstations after the checks are delivered to these communities. They then will set up a type of bank/general store from the back of a utility truck and sell products to the people at extremely inflated prices.

Housing varies between urban and rural Aboriginal people. The national, state, and local governments have encouraged nomadic groups to settle in houses in the European manner, and, to this end, they have built houses for some groups that live in the desert regions of central and western Australia. Aboriginal people have adapted these structures to their own design, using them as a place to store things, but generally regarding them as too small and too hot to actually eat, sleep, or entertain in.

### 10 FAMILY LIFE

Marriage in traditional Aboriginal societies is a complicated matter that has interested and perplexed anthropologists ever since they encountered the marriage prescriptions of Australian Aborigines. In many societies, first marriages were arranged. Husbands were often much older than their wives. Among the Tiwi of Melville and Bathurst islands off the northern coast of Australia, female infants were betrothed at birth. Females in this society were always married. This practice was related to Tiwi belief that females became impregnated by spirits; human males were not active participants in the process

of human procreation. Tiwi society also required that every individual needed to have a “social father.” Since the biological father was a spirit and could not provide for the child, and since procreation could occur at any time in a female’s life, it was necessary to ensure that any child that might be produced would have a social father: the husband of the female.

### 11 CLOTHING

Australian Aborigines were one of the only groups of people in the world to not wear any type of clothing. Both men and women went naked. Nowadays things have changed considerably. Urban Aborigines wear modern clothes appropriate to their age group. Rural groups dress like the Anglo-Australians who also live there: many of these people dress like American cowboys. Aborigines from the southeastern coast wear large blankets made from kangaroo hide to protect them from the cold, wind, and rain that characterize winter in that region.

### 12 FOOD

Since many Aboriginal groups were nomadic hunters and gatherers, they did little in the area of food preparation. Meals were simple. Almost all Aboriginal groups made a conceptual distinction between meat and non-meat foodstuffs. This is reflected in the terminology of the various languages. In Walpiri, the term *kuyu* refers to meat or any game animal or bird that is killed for meat. In contrast, the term *miyi* refers to vegetables or fruit.

### 13 EDUCATION

Most urban Aboriginal children have the opportunity to attend public school. They often encounter discrimination in the classroom in terms of their culture and their language. Some communities have developed their own educational programs to help Aboriginal children achieve in the educational system. At Yuendumu in central Australia, the Walpiri have a very well-developed educational system that provides both European-style education and education in the areas of traditional language and culture. As is the case for Anglo-Australians, school is mandatory through the tenth grade, with grades 11 and 12 being optional. There have been attempts to develop institutions of higher education targeted to Aboriginal people, for the most part in rural areas of the country.

### 14 CULTURAL HERITAGE

Traditional Aboriginal societies possessed little in the way of material objects due to their nomadic lifestyles. As a result, Aboriginal groups did not have many musical instruments. The most well-known Aboriginal musical instrument is the *dijeridoo*, a long, hollow tube made from a piece of wood that had been hollowed out by termites. These instruments were traditionally only found in groups in the Top End region of the continent, in the areas around Arnhem Land, Cape York Peninsula, and the Kimberleys. These long trumpets produce a characteristic drone that accompanies ritual dancing. Djiridoos have become popular instruments in the production of modern world music. A few Aboriginal people teach dijeridoo to non-Aboriginal people who want to learn to play it.

In many Aboriginal societies men used a “bullroarer” to frighten women and uninitiated males at ceremonial events. The bullroarer is a decorated and shaped piece of flat wood

that is attached to a line and swung around and around above a person's head to produce a whirring sound. The sound is usually said to be the voice of important spirits of the land. As opposed to their Oceanic neighbors, Australian Aborigines did not use drums.

Dance is an extremely important part of Aboriginal ceremonial life. Many Aboriginal dances mimic the movements and behaviors of animal species such as the *broilga* crane of the northern wetlands. Typically, men and women had separate rituals and, as a result, separate dances and dance performances. There are several Aboriginal performance troupes in Australia that travel to urban centers to perform traditional dances as well as newly created pieces.

### 15 WORK

In traditional Aboriginal societies there was a division of labor according to age and sex. Women and children were responsible for gathering vegetables, fruit, and small game such as *goannas* (a large lizard). Men were responsible for obtaining meat by hunting both large and small game. Men in Aranda society hunted with a variety of implements including spears, spear throwers, and non-returning boomerangs.

Aboriginal people in urban areas are employed in a variety of jobs. However, gaining employment is often difficult due to discrimination.

### 16 SPORTS

Rugby, Australian-rules football, and cricket are important spectator and participant sports in Australia, though basketball has been a fast-growing sport for some time now. Aboriginal people play for some of the semi-professional rugby teams.

### 17 ENTERTAINMENT AND RECREATION

In some parts of Australia, Aboriginal people have established their own broadcasting stations for radio and television. These establishments have been most successful in the central region of Australia in and around Alice Springs. In these communities, elders have realized that if they do not provide alternative programming for their youth, they will turn away from the traditional ways of life under the influence of American and Australian television programs. Aboriginal bands also produce music videos for these programs, as well as for distribution to the larger society.

### 18 FOLK ART, CRAFTS, AND HOBBIES

Australian Aboriginal art has been extremely popular on the world art market for some time now. The pointillist acrylic paintings of "dreamings" from the Central Desert region bring a high price, especially if the artist is one of the well-known Aboriginal artists. In the Walpiri community of Yuendumu, the elders decided to paint the doors of the classrooms of the school with various "dreamings."

There are regional differences in the art of Aboriginal Australia. Arnhem Land in the northern part of the Northern Territory is renowned for bark painting, weaving, rock art, and sculpture. The use of cross-hatched patterns is a distinctive characteristic of Arnhem Land art. Even within the Arnhem Land region, there are subregions whose art can be distinguished, demonstrating the complexity and variation in traditional Aboriginal artistic expression.

*An Australian Aborigine in New South Wales, Australia.  
(Tim Graham/Getty Images)*

### 19 SOCIAL PROBLEMS

The retention of the right to pursue traditional ways of life is one of the biggest social problems facing Aboriginal people. To pursue traditional lifestyles, language and folklore must be maintained in the face of societal pressure to modernize. Many Aboriginal communities have hired linguist-teachers to help in the efforts to preserve the traditional language for future generations; however, there are more languages in need of preservation than there are linguist-teachers willing to take on the task of aiding in the preservation and transmission of these languages.

Life in urban areas, where the standard of living is very low and prospects for further education and meaningful employment are minimal, has fostered a high incidence of domestic violence and alcoholism. In an attempt to reverse this trend, some older males have "kidnapped" young men and taken off to traditional lands to participate, involuntarily, in a kind of "scared straight" rehabilitation program. There have been mixed reactions to this kind of behavior both within Aboriginal society and the larger Australian society as a whole.

### 20 GENDER ISSUES

Most Aboriginal societies recognize two genders: male and female. Some Aboriginal languages encode gender grammatically through a system of noun classes. While somewhat sim-

ilar to the use of gender in many Indo-European languages, the Aboriginal systems are more complex and have provided some interesting semantic relationships. For instance, in Dyirbal, which was once spoken in far northern Queensland, there were four noun classes. The first class included men and animate objects. The second class included women, water, fire, and violence; all of which were considered dangerous by the Dyirbal. The third class was composed of edible fruits and vegetables, while the fourth class included everything that was not in the first three classes.

In traditional Aboriginal ritual and social life, male and female were sharply demarcated and differentiated. Any ritual that was sacred and secret to one gender was held out of eye and ear shot from the rest of the group. There are strict punishments for any females who transgress a male ritual. While the punishments were less extreme for men, they still avoid going near female rituals. In social life, gender and kinship also dictated behavior and decorum. There are precise rules that govern the interactions of men and women who are related to each other either by blood or marriage. To avoid contravening these rules, men and women tend to gather together in gender-exclusive groups when in public places.

For groups like the Mardu of Western Australia, the strong egalitarian nature of the society means that men and women feel equally able to make decisions and express opinions on most matters important to the well-being of the group. However, this does not mean that women and men have equal rights within Mardu society. For instance, women are not free to divorce their husbands, to have more than one husband at a time, or to engage in "husband-lending." Mardu men, on the other hand, are free to engage in the equivalent activities within the society. Older male relatives often make major decisions that will affect the lives of women, the most influential being infant betrothal. Infant betrothal is a social practice whereby an older male relative negotiates a husband for a baby girl, although the formal marriage does not take place until the girl attains puberty. The practice typically results in young girls being married to much older men.

# AZERBAIJANIS

**PRONUNCIATION:** ah-zer-bye-JAHN-eez

**LOCATION:** Azerbaijan; Iran

**POPULATION:** Estimated about 40-45 million worldwide:

Republic of Azerbaijan, 8.2 million; Iran, estimated 30 million; Georgia, Dagestan, Russia, China, Iraq, Germany, Sweden, United Kingdom, Canada, United States and Australia.

**LANGUAGE:** Azeri (also called Azerbaijani)

**RELIGION:** Islam (majority); Christianity (Orthodox and Evangelical); Judaism

## **1 INTRODUCTION**

The word Azerbaijan means "land of fire." Even today, it is possible to find places in Azerbaijan where fires ignite and burn spontaneously on the surface of the earth. These fires seem to burn eternally because they are fed by gas that seeps through cracks in the surface of the earth. The fires indicate that this land has vast oil reserves deep beneath the surface of the earth; geologists and geophysicists are discovering that Azerbaijan has more oil hidden below its surface than ever imagined before.

Azerbaijan is an ancient land. Some of the earliest evidence of all human civilization can be traced to this region. For example, in 1960 archeologists discovered a prehistoric cave (Azikh) that dates to the Neanderthal period. A human jawbone found there is believed to be 350,000–400,000 years old. Stone tools were also unearthed that date back to the Paleolithic and Mesolithic periods, which would make them approximately 1–1.5 million years old.

In ancient times, Azerbaijanis were believed to be skilled mariners who lived along the western coast of the Caspian Sea. The people of this advanced culture navigated, explored, and colonized many waterways, from the Volga and Dvina rivers in present-day Russia to the Black, Baltic, and North seas. Some archeologists believe that the ancestors of modern Azerbaijanis may have even traveled as far east as China and as far west as Norway and Sweden and that even modern Scandinavians themselves may have descended from ancient, fair-skinned Azerbaijani explorers and colonists.

Azerbaijan is located at the crossroads of Europe and Central Asia along what used to be called the Silk Road, which was a famous web of roads between Europe and China traveled by traders in mule and camel caravans. The Italian explorer and adventurer Marco Polo passed through Azerbaijan in about 1270. He wrote about the eternal fires burning from the earth and about a special oil that was used as medicine for skin diseases and other ailments in people and cattle. He observed that people came from neighboring countries, often from great distances, to obtain oil for their lamps.

Because visitors from many countries and nationalities passed through this region, not only were goods, such as silk and tea, traded, but also many ideas about music, literature, medicine, and science were exchanged. Even today, this openness to foreigners and this curiosity about other parts of the world is part of the Azerbaijani legacy.

Azerbaijan is a tiny country squeezed between three major economic and political powers—Russia, Iran, and Turkey.

Azerbaijan is bordered by Russia to the north, the Caspian Sea to the east, Iran to the south, and Armenia and Georgia to the west. There is also a 10-km (6.2-mi) strip that touches Turkey on the western border of Nakhchivan, an autonomous republic in Azerbaijan. Each of these countries (except Georgia) has, at different times in history, tried to gain control over Azerbaijan and to benefit from its vast natural resources, especially oil. Some people say Azerbaijan lives in a “tough neighborhood” because of the political pressures it has to deal with from all sides but as writer Yusif Vazir Chamanzaminli (1887–1943) described, Azerbaijan was located between “Two Fires”—Russia and Iran.

Over the centuries, many kingdoms and empires have fought to gain control over the region, including the Romans, Greeks, Mongols, Persians, and Russians. For example, Arabs from the south conquered this region in AD 642 and imposed the Muslim religion. Then Mongols from the east dominated the region from 1236 to 1498. The country was ruled by Safavids beginning in the 16th century. During the 18th century, Russians from the north began their territorial expansion into the region, only to be countered by Turks from the West.

By the beginning of the 19th century, the region was again under Russian jurisdiction. In 1918 Azerbaijan gained its independence and became known as the Democratic Republic of Azerbaijan. But, freedom was very short-lived. Less than two years later, in 1920, Soviet army troops invaded and occupied Baku. Azerbaijan then lived under the domination of the Soviet Union until 1991, when the Soviet Union collapsed and Azerbaijan was able to regain its independence. The country is now known as the Republic of Azerbaijan. Since 1988, the Armenians have been fighting with Azerbaijanis. As of 1994, Armenians occupied about 15% of Azerbaijan’s territory.

## 2 LOCATION AND HOMELAND

Azerbaijan is a small country. The map of Azerbaijan somewhat resembles an eagle flying eastward. The Republic of Azerbaijan covers 86,600 sq km (33,430 sq mi), making it about the size of the U.S. state of Maine. The land has many contrasts in temperature and terrain, from coastal lowlands (along the Caspian Sea and at the basins of the Kura and Araz rivers) to high mountain ranges of the Greater and Lesser Caucasus and Talish mountain chains. The mountain regions are extremely cold, but other regions in Azerbaijan are nearly as hot as tropical or desert regions. These vast temperature differences mean that many kinds of foods can be grown here. Azerbaijan grows cotton, grapes for wine, and a wide range of garden vegetables. The population of the Republic of Azerbaijan is approximately 8.2 million people. However, three times as many Azerbaijanis live to the south in Iran (an estimated 30–35 million). More Azerbaijanis live in Iran because of a treaty signed between Russia and Persia in 1828, splitting the country into two sections, northern (now the Azerbaijan Republic) and southern (now part of Iran).

Azerbaijanis also live in other parts of the former Soviet Union, especially Georgia, Dagestan, and Russia. Azerbaijanis also live in China (Xinjiang Province) and Iraq. An estimated 200,000 Azerbaijanis used to live in Armenia, but according to UNHCR about 182,000 Azerbaijanis fled Armenia in 1988 before the war started between these two countries. In the 1970s, many Azerbaijanis immigrated from Iran to Western Europe (especially Germany, Sweden, and England) and to Canada

(Toronto) and the United States (Los Angeles, Washington, D.C., and New York City). Also, a considerable number of Azerbaijanis from Iran have settled in Australia. An estimated 40–45 million Azerbaijanis live throughout the world.

## 3 LANGUAGE

Azerbaijanis speak Azeri (sometimes called Azerbaijani). It is a Turkic language belonging to the Altaic-Turkic language group, which also includes Anatolia Turkish and other Central Asian languages. For centuries, Azerbaijanis wrote their language using the Arabic alphabet. However, a Latin-based alphabet was adopted in 1923 in a purge by the Soviet government to rid Azerbaijan and other Muslim countries of the influence of Islam.

In the Muslim republics of the Soviet Union, the people were forced to burn books that were written in Arabic script into giant bonfires in the middle of their villages and towns; these books were not only religious books, but also books of poetry and medicine. It was tragic for Azerbaijanis and for the rest of the world that these books and manuscripts were destroyed. The Soviets wanted to destroy these books primarily because they associated the Arabic script with Islam (particularly the holy book, the Quran) and wanted to stamp out all religious influences in the region.

In 1939, Soviet dictator Josef Stalin (1879–1953) feared that the people of Azerbaijan and the other Central Asian Turkic Republics, who spoke Turkic languages, might join together and rebel against the Soviet government. In order to make it impossible for them to communicate with each other through writing, he imposed the Cyrillic alphabet that was used for the Russian language. Azerbaijan and the other Turkic republics (Kazakhstan, Turkmenistan, Uzbekistan and Kyrgyzstan) in the Soviet Union had no choice. Almost overnight, works were published, not in Latin any more but Cyrillic script. Furthermore, to confound the situation, Stalin assigned different letters for some of the identical sounds in their Turkic languages that did not exist in the Russian language. For example, there were seven different letters created in Turkic Cyrillic script to represent the “ng” sound (as in “English”). Thus, it became nearly impossible for speakers of related languages to read each other’s languages.

One of the first things that Azerbaijan’s parliament did after Azerbaijan gained its independence in 1991 was to readopt a Latin-based alphabet for their language. However, the enormous task of rewriting everything from street signs to textbooks to computer keyboards, as well as teaching in a new alphabet, has been daunting.

But, Azerbaijanis, who have changed their alphabet three times in the 20th century, feel that the new alphabet represents their new, independent country and that they are no longer under control of anyone else. It also reflects the desire of Azerbaijanis to develop friendships with people in Europe and the United States, countries where a similar Latin alphabet is also used.

## 4 FOLKLORE

Azerbaijanis have close family ties, spending much of their time talking with one another. Therefore, a rich tradition of oral folklore has developed in this region. Many songs, stories, proverbs, and expressions have been passed down over hundreds and thousands of years. The oldest known story in the

Turkic languages is Dede Gorgud. It was first written down in the 11th century, but its origin dates to the 7th century. Dede Gorgud is believed to have been a real person who entertained others with stories, many of which bear a resemblance to tales in the Greek *Odyssey*.

Azerbaijanis have many legends. One of the most famous is about an ancient tower, called Maiden Tower, which still stands today as the most famous landmark in Baku. According to the legend, a young girl ordered the tower to be built and threw herself from its heights into the sea below when her father wanted to marry her off. Legends like this have become favorite themes in the works of many Azerbaijani artists and poets. There is even a ballet based on the Maiden Tower legend.

Azerbaijanis have many proverbs, such as: "Wish your neighbor two cows so that you may have one for yourself" (In other words, wish good fortune for others so that you also may benefit); "Laughter is the remedy for 1,001 illnesses;" "The dog barks, the caravan passes" (Don't get discouraged and distracted when people criticize you); "The more you know, the less you should talk;" and "Even the ground has ears" (There is no such thing as a secret).

Like other people of the region, Azerbaijanis love the humor and wisdom of Molla Nasraddin stories. There are hundreds of stories, many set in the 13th century, that deal with social issues that are fundamental to human nature. Molla Nasraddin stories often point to an obvious truth taken for granted. Molla appears to be the fool but, in reality, he exposes other people's foolishness. Some of the stories are very short and witty. For

example, one story is as follows: "One day Molla was asked the secret to his long life. He replied, 'Keep your feet warm, your head cool, be careful what you eat, and don't think too much!'"

## 5 RELIGION

Some historians believe that Zoroastrianism (which involves the worship of sacred fire), which originated in the 6th century BC, was prevalent in ancient Azerbaijan because of the presence of underground oil and natural gas. Zoroastrianism is believed to have influenced Christianity, Judaism, and Islam.

It appears that Christianity was popular in the region from the 2nd through 6th centuries when the area was called Albania. Numerous archeological sites and churches date to this period. Recently, Dr. Zaza Alexidze (born 1935) of the Institute of Manuscripts in Tbilisi, Georgia, discovered a palimpsest manuscript in St. Catherine's Monastery at Mt. Sinai, Egypt, that proves that early Christians in the region known as Caucasian Albania (now Azerbaijan) had parts of the Bible available in the Caucasian Albanian script. This alphabet dates back to 5th–7th century. There are still people known as Udins in Azerbaijan and Georgia who speak this language.

In the 7th century, when the Arabs invaded the region, Islam was imposed. By the end of the 9th century, it is believed that most Azerbaijanis had become Muslims of the Shi'ite branch (as in Iran).

During the Soviet period, religious worship was discouraged, and most mosques and churches were either destroyed or converted into cultural centers or music halls. Atheism was the official religion. Today, Azerbaijan enjoys freedom of religion—Muslims, Christians (Orthodox and Evangelical), and Jews can all worship openly and freely. The constitution ratified by the Azerbaijan Parliament in 1995 guarantees freedom of religion to all. The state has no official religion, though most people are traditionally Muslim. The Constitution provides for separation of the powers of church and state. A person does not have to belong to a certain religion to be elected or hold an office. However, especially since 2000, more and more Azerbaijanis are becoming devout, practicing Muslims, and more women are wearing head scarves and modest apparel associated with Islam.

## 6 MAJOR HOLIDAYS

The most anticipated and joyful holiday of the year is Novruz (meaning New Year). Novruz is an ancient tradition marking the Spring Solstice (March 21) or the coming of spring. This holiday is not only celebrated by Azerbaijanis, but by others throughout the region, including Iranians, Afghans, Turks, and people in the Central Asian countries. During the Soviet period, Novruz was officially banned because the holiday was thought to be too nationalistic. Soviets wanted to emphasize the unity of the 15 republics of the Soviet Union, not the distinctive characteristics of individual states. Nevertheless, many Azerbaijanis commemorated Novruz in the privacy of their homes. Since 1990, Novruz has been an official holiday in Azerbaijan and is celebrated openly.

Novruz is always associated with the colors red and green and the newness of spring. One of the most vivid symbols of Novruz is a plate of green wheat seedlings that each family grows (or these days, often buys) that is tied up with a red ribbon. On the Tuesday before Novruz, young boys build bonfires

in their yards and in the streets and dare each other to jump over the flames without getting burned. Women bake cookies and sweets, and friends and relatives visit each other at home. Shops and government offices are closed, as are schools.

Azerbaijanis in the republic celebrate January 1 as New Year's Day, though in Iran, Novruz officially ushers in the new calendar year.

Since 1992, the Azerbaijan Republic has celebrated Independence Day on May 28, which commemorates the first period of independence from 1918–1920 before the Bolsheviks took power and Azerbaijan became a part of the Soviet Union.

The saddest public holiday of the year for Azerbaijanis is January 20. It commemorates “Black January” when Soviet troops attacked Baku in 1990 with tanks and machine guns and killed hundreds of civilians in the streets. Mikhail Gorbachev, then president of the Soviet Union, was afraid that Azerbaijanis would rise up and demand independence. He sent troops to Baku to squelch the rebel movement. Now on this day, people visit cemeteries and place red flowers on the graves of those who have died for Azerbaijan.

## 7 RITES OF PASSAGE

The most significant Azerbaijani rites of passage are connected with birthdays, marriage, and death. The birthdays of famous people, such as artists, musicians, scholars, or statesmen, are called Jubilees and become significant events in the life of the nation. Usually, jubilees occur on the person's 60th, 70th, or other decade birthdays. If a person has made an incredible contribution to the nation, his or her jubilee may be celebrated even after he has died. For example, the 120th jubilee of the famous composer, Uzeyir Hajibeyov, was celebrated in 2005 although he had died in 1948. Hajibeyov is honored as the founder of classical music in Azerbaijan.

The color red is associated with both marriage and death. Often, the bride wears a white wedding gown with a red sash tied around her waist. Weddings are important celebrations. In the countryside, weddings can continue for three days. In cities wedding celebrations usually take place in restaurants with big halls with ample space for dancing.

Thursdays are days for visiting cemeteries. Mourners place red flowers, usually carnations in pairs (for example, two or four) on the grave. When a person dies, the funeral is usually held the next day. Friends also gather again one week later, 40 days later, and then on the annual date of the death. When a person dies who has never married, a cracked mirror wrapped with a red ribbon is often placed near the grave. The red ribbon is a reminder that the person never had the chance to enjoy the joyous occasion of getting married and starting his own family.

## 8 INTERPERSONAL RELATIONS

Azerbaijanis are generally expressive with their emotions. They are not shy in expressing their love. People feel very comfortable holding hands and touching. When people meet each other, generally they kiss each other on the cheeks—men with men and women with women. Young girls often walk down the street holding hands, or arm in arm. Parents often hold the hands of their children, even older ones. Personal relations are highly nurtured and, in general, people are very courteous to one another.

Azerbaijanis are known for their kind hospitality to strangers. They love to invite guests from the international community to their homes for dinner. They enjoy traveling to other countries and making friends throughout the world. For about 70 years (1920–1991) Azerbaijan was under the control of the Soviet Union and lived behind what was called the “Iron Curtain,” which restricted them from being able to meet or communicate easily with people from other countries. Since Azerbaijan became an independent country, Azerbaijanis have been able to continue their tradition of international friendship. Now they travel abroad frequently.

## 9 LIVING CONDITIONS

The average life expectancy for Azerbaijanis in the Republic is not as high as in established industrialized nations. As in many of the other former Soviet republics, there has been a shortage of modern medical equipment and pharmaceuticals in Azerbaijan, especially during the transitional years since the collapse of the Soviet Union as Azerbaijan works to establish a market economy.

Azerbaijanis, however, especially those living in the Caucasus Mountains, are famous for their extreme longevity. Many people live to be over 100-years-old. Throughout Azerbaijan, there are numerous regions where longevity is the norm, including Lerik, Lankaran, Gazakh, Tovuz, Ismayilli, Jalilabad, Shamakhi, Lachin, Kalbajar, and Aghdam. Azerbaijanis credit their longevity to a variety of factors best described as a combination of heredity, environment, and psychological, social, and cultural patterns. They believe longevity is basically inherited; many of the oldest Azerbaijanis had parents who also lived long lives. Centenarians living in the mountains typically are poor and eat yogurt and vegetables that they grow themselves. Most say they have spent much of their lives involved in hard physical work.

The leading cause of death in Azerbaijan is heart disease, followed by cancer, respiratory infections, and accidents. Diabetes, tuberculosis, hepatitis A, and acute respiratory infections also pose serious public health problems.

The war with Armenians over the Karabakh territory in Azerbaijan began in late 1988. It has resulted in more than 25,000 deaths and many permanent injuries to people who stepped on land mines.

Much of the water supply is unsafe due to high levels of chemical and biological pollution. Much of the pollution comes from oil leaks at petroleum plants and from the dumping of raw sewage into the Caspian Sea. In Baku, for example, it is essential to boil any water intended for drinking.

## 10 FAMILY LIFE

Older people are greatly esteemed in Azerbaijan and are given high positions in the family and community. The elderly are never left to feel useless or unneeded. Traditional Azerbaijani social organization, including extended kinship and inter-generational bonds, makes aging less stressful. Children are greatly revered among the Azerbaijanis, as well.

## 11 CLOTHING

Clothing is very similar to Western styles. Women, especially, try to look as attractive as possible. Azerbaijani women rid themselves of the traditional Muslim veil (chador) in 1928. The event is even commemorated by various statues in Baku.

*An Azerbaijani shepherd with his sheep, standing between Dahana and Dagestan in the Caucasian mountains. Despite oil contracts and foreign investment, Azerbaijanis still live with low incomes. (Manoocher Deghati/AFP/Getty Images)*

However, the influence of Islam is becoming more evident, and more and more women do wear head scarves and long-sleeved jackets and long clothing.

## **12 FOOD**

Food consists primarily of bread, grains, fruits, and vegetables but is supplemented by meats, such as lamb, chicken, and fish. Pilaf (rice) and dolma (grape leaves stuffed with meat) is one of the favorite dishes. In Iran, Azerbaijanis eat rice nearly every day. In the Republic, the cuisine is patterned more on Russian-style food during the Soviet republics. In Russian meals there is more emphasis on bread, potatoes, and cabbage. The traditional beverage is black tea with sugar cubes. Azerbaijanis are excellent hosts and love to invite people to their homes to share meals. Dinners often last three hours or longer.

## **13 EDUCATION**

The Soviet period placed great emphasis on education. Azerbaijanis have achieved a high level of literacy, estimated at about 99%. Today, even though Azerbaijan has gained its independence, the education system is severely challenged. Nearly 800,000 refugees lost their homes in the early 1990s because of the ethnic conflicts with Armenia. This placed severe pressure on the education system. Many refugee children had no schools to attend. Sometimes, school buildings were used to house the

refugees, which meant that children from families who were not refugees also suffered. Salaries for teachers and professors still have not been adjusted to reflect current living standards and, therefore, enormous bribing goes on in the education system at all levels. This is beginning to have an enormous impact on the society. Many Azerbaijanis admit that education standards were higher during the Soviet period.

During the Soviet period, Russian was the predominant language taught in Azerbaijan. Today, young people have the greatest chances of getting the best jobs if they are trilingual—fluent in Azeri, Russian, and English. Great emphasis is being placed on learning English. Popular music in English is played on local radio stations.

## **14 CULTURAL HERITAGE**

Since ancient times, Azerbaijanis have held their poets and literary figures in highest esteem. The city of Baku has many statues devoted to Azerbaijani poets and literary figures, such as Nizami, Fuzuli, and Nasimi.

Baku is a charming city known for its architectural diversity, which is a unique synthesis of both Eastern and Western styles. An incredible architectural transformation took place during the relatively short period of the oil boom years (1880–1920) that completely altered the physical features and character of Baku, converting it from a sleepy, medieval feudal city

into a bustling international metropolis comparable to its European sister cities. One of the primary reasons so many Western-style buildings appeared was that a number of prominent European architects were hired by oil barons and brought to Baku from countries such as Poland, Germany, Austria, Italy, and Russia. Naturally, they drew upon their own experience and training. They introduced a wide range of European styles; for example, Neo-Classical, German, and Italian Renaissance Revival, French Islamic Maghrib, Venetian Gothic Revival, etc.

However, the architecture of the oil boom period in Baku is becoming overpowered by hundreds of modern apartment towers. The city has taken on a new skyline.

Azerbaijanis are famous for their music. It is impossible to truly understand Azerbaijani culture without understanding their deep love of music. The majority of Azerbaijanis have either been trained in music or perform it on Western or traditional Eastern stringed instruments, such as tar or kamancha, or wind instruments such as zurna and balaban.

Classical Azerbaijani music is a rich blend of eastern melodies, rhythms, and modes blended with Western forms and styles like symphonies, ballets, and opera. Azerbaijani world-class composers include Uzeyir Hajibeyov, Gara Garayev, Fikrat Amirov, and Agshin Alizade. The world-renown cellist Mstislav Rostropovich was also born in Baku

## 15 WORK

The greatest sources of employment are the oil industry, construction and agriculture. Enormous reserves of oil have been discovered in the Azerbaijan sector of the Caspian Sea. Many international companies are already helping Azerbaijan drill for oil and gas and building pipelines that will transport the oil and gas to international markets.

New Azerbaijan oil began reaching the international market in 2005. Already Azerbaijan is exporting about 1 million barrels of oil per day. However, the recent conflicts between Russia and Georgia have already impacted oil export because Azerbaijan's BTC (Baku-Tbilisi-Ceyhan) pipeline travels more than 1000 miles from Baku to Tbilisi (Georgia) before it reaches the Mediterranean port in Ceyhan (pronounced Jeyhan), Turkey.

The most serious challenge facing the economy is to make sure that the proceeds from the oil benefit the entire country and that the infrastructure within the country is built up for the benefit of all. In other words, that wealth is not concentrated in the hands of only a few.

## 16 SPORTS

Azerbaijanis love sports and excel at wrestling. They are famous for chess, as well. World chess champion Garry Kasparov grew up playing chess in Baku.

## 17 ENTERTAINMENT AND RECREATION

It is a rare Azerbaijani home that does not have a television. The few exceptions would occur in remote mountain villages. Satellite dishes are becoming popular throughout the country, many of which are affixed to the narrow balconies above the streets. Western television programs are well-liked among the Azerbaijanis, as are Russian and Turkish programs. Azerbaijanis, especially elderly people spend their leisure time playing nard (backgammon), dominoes and chess. Educational insti-

tutions, work places are computerized. Many homes now have personal computers. More than half the population has mobile phones.

## 18 FOLK ART, CRAFTS, AND HOBBIES

In Azerbaijan more emphasis is placed on music than on folk arts and hobbies, though during the Soviet period, many people enjoyed collecting postcards, stamps, and other memorabilia that made them feel more connected to the world.

## 19 SOCIAL PROBLEMS

Since the mid 1980s, Armenians and Azerbaijanis have been fighting over the territory of Nagorno-Karabakh within the borders of Azerbaijan. The region has a large percentage of Armenians who wanted to separate from Azerbaijan and join with Armenia. The Nagorno-Karabakh region has some of the most productive farmland in the area, favoring a wide cultivation of products including cotton, wheat, tobacco, grapes, tomatoes, and other fruits and vegetables. It also has gold mines. The fighting has caused a tragic loss of life (an estimated 25,000 people), and many have been permanently injured.

As of the late 1990s, the Armenian military occupied about 15% of Azerbaijan's territory. Approximately 800,000 Azerbaijanis who lived in this region were forced to flee their communities, their homes, their schools, and their workplaces. The refugees used to live scattered throughout the countryside in refugee camps, hostels, schools, and anywhere else they can find shelter but now there are no refugee camps left in Azerbaijan. Refugees move to special communities with buildings constructed by government. Azerbaijan wants to reclaim the Nagorno-Karabakh area so that the people can go back and rebuild their homes, schools, and factories that were burned down during the war. A cease-fire agreement has been in place since May 1994, but Azerbaijanis are eager to resolve the problem and bring about a permanent peace. At the same time, they are unwilling to give up their lands. The problem will probably take a long time to resolve.

## 20 GENDER ISSUES

Many women hold down office jobs as well as manage their households and raise the children. The work load on women is extremely heavy.

# BAHRAINIS

**PRONUNCIATION:** bah-RAIN-eez

**LOCATION:** Bahrain

**POPULATION:** 727,000 (2006)

**LANGUAGE:** Arabic (official); English; Farsi (Persian); Hindi; Urdu

**RELIGION:** Islam (Shia, 70%; Sunni, 24%); Christianity; Hinduism; Judaism; Baha'i

## <sup>1</sup> INTRODUCTION

Bahrain (meaning “two seas”) has been the only safe port on the Persian Gulf throughout history because of prevailing wind and weather patterns. Therefore it has played an important part in the life of the Gulf since civilization began there. This tiny island nation has been of strategic significance since Sumerian times (4000 BC) to the present. Despite this, it has had a relatively peaceful history.

The entire northern coastal region of the Arabian peninsula was once known as Bahrain, with present-day Bahrain known then as Dilmun. It is described in the Sumerian herotale *The Epic of Gilgamesh* as an island of immortals where heroes went after death to live in eternal bliss. In fact, Bahrain hosts the largest cemetery in the world: more than 170,000 burial mounds, dating from 2500–1800 BC, are located on the island of Bahrain. They range from slight lumps in the ground to mounds as high as 12 m (40 ft). The mounds have been pillaged by grave robbers for 3,000 years, however, and few archaeological artifacts remain.

For a time in ancient history, and later in modern days, Persia (now Iran) claimed Bahrain as its territory. The Portuguese laid claim to it in 1521, but they were forced back out by the Bahrainis in 1602. In 1782, the al-Khalifa Arab family took over the islands and have been the ruling family ever since. (They are cousins of the al-Sabah ruling family of Kuwait and are distantly related to the al-Saud ruling family of Saudi Arabia.) Pirates long used Bahrain as a base for attacking ships in the Gulf. In 1820, Bahrain signed an agreement with Britain to become a British-protected state, meaning that Britain would protect Bahrain's sovereignty in return for safe sailing up the Gulf for Britain's ships. Therefore, while Bahrain kept the pirates from attacking Britain's ships, Britain kept the Iranians (and others) from attacking Bahrain. This agreement lasted until Britain decided to terminate it in 1968. By 1971, all British troops had left Bahrain, although British soldiers still supervise Bahrain's army and security forces. On 15 August 1971, Bahrain proclaimed independence. The constitution of 1972 provided for a parliament, or National Assembly, the first in the nation's history, and elections were held in 1973. Two years later, in 1975, the Assembly was disbanded by the king for security reasons; the king claimed that some Assembly members were involved in subversive activities.

In 1993 the king created a 40-member Consultative Council, all of whose members serve by appointment. The 2002 constitution also created a 40-member Chamber of Deputies, whose members are directly elected by universal adult suffrage. Women have not only the right to vote but can also stand for office, and the Bahraini Chamber of Deputies typically has a few elected female members.

Known as “the land of sweet waters,” Bahrain's first wealth was in the form of fresh water that bubbled up in artesian wells and springs, even through the saltwater of the Gulf just off the islands' shores. Bahrain had more easily available fresh water than anywhere else on the Gulf coast. Pearls were the other big moneymaker, collected from offshore oyster beds. When the Japanese introduced cultured pearls in the 1930s, Bahrain's economy was in danger. However, oil was discovered in 1931, giving Bahrain the first oil well, and then the first oil refinery, on the Arab side of the Arabian Gulf. Although Bahrain has always produced less oil than other Arab states, oil continues to be the major source of income for the tiny island nation.

## <sup>2</sup> LOCATION AND HOMELAND

Bahrain is an archipelago in the Persian Gulf, lying 24 km (15 mi) off the northeast coast of Saudi Arabia, and 21 km (13 mi) northwest of the Qatar Peninsula. Of the 33 islands, only 5 are inhabited. The six major islands are Bahrain (also known as as-Awal), Muharraq, Sitrah, Umm al-Nassan, Jidda (used as the Bahraini prison), and Nabi Salih. The 27 minor islands include the Muhammadiyah and Hawar groups. There is dispute between Bahrain and Qatar over the possession of the Hawar Islands. The total area is 678 sq km (262 sq mi), of which 85% is the island of Bahrain. There are 126 km (78 mi) of coastline. The capital city, Manama, is located on the north coast of Bahrain island. A causeway 2 km (1.5 mi) long connects the islands of Bahrain and Muharraq (the second-most important island, where the ruling family lives). A bridge joins the islands of Bahrain and Sitrah. There is also a long bridge, the King Fahd Causeway, linking Bahrain to mainland Saudi Arabia.

Bahrain is essentially a desert surrounded by water. Although freshwater springs bubble up from beneath the sea floor just offshore (these “wells” are marked with iron posts that rise above the surface of the water), and other artesian wells flow out of the ground at the north end of Bahrain Island, the land is otherwise dry and sandy. The climate ranges from hot (up to 48°C [120°F]) and humid in the summer to chilly (down to 10°C [50°F]) and damp (as high as 90% humidity) in the winter. Only about 7.6 cm (3 in) of rain fall per year, always during the winter. In recorded history there has never been any rain during the months of June through September. The *shamal* is a wind from the southeast in the winter that brings damp air and occasional dust storms. In the summer, *gaws* blow from the southwest, bringing hot air and frequently blinding sandstorms. The climate has probably changed over time. In Sumerian times (4000 BC), the prevailing winds were most likely from the northeast, bringing more temperate weather.

There are no forests in Bahrain, and the plant life is restricted to date palms and desert plants. Wildlife includes desert rats, gazelles, mongooses, snakes, lizards, and rabbits. A large wildlife refuge at al-Andareen provides protected space for various exotic birds, gazelles, oryx, and ibex.

In 2006 the Bahraini population was estimated at about 727,000, with 63% Bahraini Arabs; 27% Pakistanis, Indians, and Iranians; 5% other Arabs; and 4% Europeans. The population is increasing rapidly, but as more women enter the workforce, the birth rate is expected to slow. Bahrain is a largely urban nation. A full 85% of Bahrainis live in cities, and only 15% live in rural areas. The largest city is Manama, the capital, with a population of more than 150,000. Muharraq is the second largest city with 75,000 people.

### 3 LANGUAGE

The official language of Bahrain is Arabic. English, introduced during the time Bahrain was a British-protected state (1820–1968), is also spoken by many Bahrainis. Farsi (Persian) is spoken by the Iranians in Bahrain. The Indian population speaks Hindi and the Pakistanis speak Urdu.

Arabic, spoken by 300 million people worldwide, is spoken in different dialects from country to country, and the same words may have different shades of meaning in different areas. Even within the small nation of Bahrain, the Arabic dialect used by the rural population sounds “uncultured” to urban Bahrainis. The written form of Arabic is called Classical Arabic or Modern Standard Arabic. It is the same for all literate Arabs, regardless of how different their spoken forms are. Arabic is written from right to left in a unique alphabet that has no distinction between upper and lower cases. It is not necessary for the letters to be written on a straight line, as English letters must be. Punctuation conventions are also quite different from English.

Arabic speakers tend to use emotional appeal, exaggeration, and repetition in their language. They are very interested in the poetry of the language. “Hello” in Arabic is *marhaba* or *ahlan*, to which one replies, *marhabtayn* or *ahlayn*. Other common greetings are *As-salam alaykum* (“Peace be with you”), with the reply of *Walaykum as-salam* (“and to you peace”). *Ma’assalama* means “goodbye.” “Thank you” is *Shukran*, and “You’re welcome” is *Afwan*; “yes” is *na’am*, and “no” is *la’a*. The numbers one to ten in Arabic are: *wahad*, *itnin*, *talata*, *arba’a*, *khamsa*, *sitta*, *saba’a*, *tamania*, *tisa’a*, and *ashara*.

Arabs have very long names, consisting of their first name, their father’s name, their paternal grandfather’s name, and finally their family name. Following Islamic tradition, women do not take their husband’s name when they marry but rather keep their father’s family name. Popular Arabic names include Mohammad, Abdullah, Hamad, and Ahmad for boys and Fatima, Laila, Hessa, and Shaima for girls. Because the majority of Bahraini Muslims are Shia, many are named for the great Shia Imams such as Ali and Husayn.

### 4 FOLKLORE

Bahrainis tell their children a popular legend that explains how the freshwater springs or wells bubble up from beneath the sea just off their shores. According to the story, falling stars knocked holes in the ground and Allah, the One God, cupped them up for his faithful followers to use. The ancient Sumerians (4000 BC) believed that the springs came from a freshwater sea that lay beneath the regular saltwater sea. This submarine sea was called *Abuz*, and it was ruled by a god known as *Abyss*, whom it was very important to please. In English, the word *abyss* has come to mean any bottomless depth. Geologists now believe the freshwater springs come from the Tuwaiq Mountains in Saudi Arabia—the water seeps through the porous layers of rock to flow towards Bahrain.

Pearls, long a source of wealth for the Bahrainis, have also inspired much folklore. Bahraini parents like to tell their children that pearls are created when a mermaid’s tears fall into an open oyster shell. Certain “magic” pearls have supernatural powers, such as helping to find lost objects or to bind love (if a young woman rubs her eyes with a pearl, she can make a man her slave simply by gazing on him).

### 5 RELIGION

At least 94% of the Bahraini population is Muslim. About 70% of Bahrainis are Shia, and 24% Sunni. A small percentage (5%) of the population is Christian, and the remaining 1% is Hindu, Jewish, Baha’i, or other faiths. Although Sunni Muslims are numerically in the minority, they have been the dominant religious community in Bahrain since the 17th century or before. The royal family of Bahrain and the majority of its wealthy merchant class are Sunnis. This has created many conflicts between the majority Shia and the ruling Sunnis. Even among the Sunnis and Shia there are various groups who are not always in agreement with one another, so Bahrain is beset with constant religious conflicts.

Islam is one of the youngest of the world’s main monotheistic religions, having only begun in the early 7th century AD when the prophet Muhammad received his revelations from Allah (which means “God” in Arabic). Muslims believe that Jews, Christians, and Muslims all worship the same God but by different names. Within just a few years of Muhammad’s

death in AD 632, Islam had spread through the entire Middle East. The Arab tribes were the first to convert.

Born into the Koreish tribe of Mecca (c. AD 570) in what is now Saudi Arabia, Muhammad was later driven from the city because of his outspoken denunciation of the pagan idols worshipped there (idols that attracted a lucrative pilgrim trade). The year of Muhammad's flight from Mecca, AD 622 (July 16), called the *Hegira*, is counted as Year One in the Muslim calendar. Muhammad fled to the city now known as Medina, another of the holy sites of modern-day Saudi Arabia. Eventually Muhammad returned to Mecca as a triumphant religious and political leader, destroyed the idols (saving the Black Stone, an ancient meteorite housed in the *Kaaba* [or Cube] building, which has become a focal point of Muslim worship), and established Mecca as the spiritual center of Islam. All prayers are said facing Mecca, and each Muslim is expected—and greatly desires—to make a pilgrimage there (called a *Haj* or *Hadj*) at least once in his or her lifetime. Islam is a simple, straightforward faith with clear rules for correct living. Religion, politics, faith, and culture are all linked together for Muslims.

The difference between Sunni and Shia Muslims, which has played an important role in Bahraini history, has to do with the early history of the religion. After the Prophet Muhammad's death, the entire Muslim community was divided over who should become the first political successor, or *caliph*. A strong minority believed that Ali, Muhammad's cousin and son-in-law, should be caliph. The rest accepted Abu Baker as the first caliph. Abu Baker assumed the caliphate and eventually obtained the allegiance of Ali.

Ali did not become caliph until after the death of Uthman, the third caliph. At that time, Mu'awiyah, the governor of Syria and a relative of Uthman, challenged Ali for the caliphate using Syrian troops personally loyal to him. The battles between the caliph and Mu'awiyah were inconclusive, and Ali remained in control over most areas except Greater Syria until his death. At that time, Mu'awiyah was able to defeat a number of challenges from Muslims of Muhammad's family and friends to firmly establish himself as caliph. He instituted a system of hereditary rule for his family, thus establishing the Umayyad dynasty. Those Muslims who refused to recognize the legitimacy of Mu'awiyah's caliphate and the Umayyad dynasty were called the followers of Ali, or *Shi'iat Ali*, while the supporters of the Umayyads were known as *Shi'iat Uthman*. Eventually the followers of Ali became known as the Shia.

Although there are doctrinal differences, the fundamental difference between the sects is an argument about authority, not doctrine. The Shia believe that the successors of Muhammad should have come from his close family (or *Ahl al-Bayt*) and that Ali should have been the first caliph. The Sunnis believe that although Ali was justified in defending the caliphate from Mu'awiyah, once the Umayyads took control it was more important to maintain political stability than to risk the chaos that might have resulted from a civil war. These political differences have developed into substantial theological differences over the centuries.

In present-day Bahrain, there is political tension between the Sunni ruling elites (including the royal family) and the majority Shia population. Many boycotted the 2002 parliamentary elections, and street demonstrations, which can turn violent, are common.

## 6 MAJOR HOLIDAYS

Secular holidays include New Year's Day on January 1 and National Day on December 16. Because 94% of Bahrainis are Muslim, their holidays are the official ones. Muslim holidays follow the lunar calendar, which moves back by 11 days each year, so their dates are not fixed on the standard Gregorian calendar. The main Muslim holidays are: *Ramadan*, the ninth month of the Muslim year, during which Muhammad received his first revelations, and which is celebrated by complete fasting from dawn until dusk each day of the entire month; *Ayd Al-Fitr*, a three-day festival at the end of *Ramadan*; *Ayd Al-Adha*, a three-day feast of sacrifice at the end of the month of pilgrimage to Mecca known as the *Haj* (families who can afford it slaughter a lamb and share the meat with poorer Muslims); the First of *Muharram*, or the Muslim New Year; *Mawoulid An-Nabawi*, the prophet Muhammad's birthday; and *Ayd Al-Isra wa Al-Miraj*, a feast celebrating the nocturnal visit of Muhammad to heaven. Friday is the Islamic day of rest, so most businesses and services are closed on Fridays. All government offices, private businesses, and schools are also closed during *Ayd Al-Fitr* and *Ayd Al-Adha*.

*Ashura* is only commemorated by Shia. It is a formal day of mourning marking the anniversary when Muhammad's grandson, Husayn, and a small band of loyal followers were massacred by Yazid, the son of Mu'awiyah, who was named caliph by the Umayyeds after Mu'awiyah's death. Yazid was almost universally despised by the Muslims for his impiety and oppression but maintained a strong army personally loyal to him. The massacre occurred at Karbala' in Iraq. The Muslims who had asked Husayn to oppose Yazid failed to show up at Karbala' to help him against Yazid's army. Today the holiday has political overtones as Shia cry and lament the failure of the Muslims to defend Muhammad's family and as they celebrate the bravery of Husayn in opposing an unjust ruler despite terrible odds.

## 7 RITES OF PASSAGE

Bahraini rites of passage are similar to those in other Arab and Islamic cultures. Marriage and family are the focus of most Bahrainis' lives. Typically, marriages are arranged, although young men and women are consulted about prospective partners and in most cases can refuse a potential spouse.

## 8 INTERPERSONAL RELATIONS

Arab hospitality reigns in Bahrain. An Arab will never ask personal questions, as that is considered rude. It is expected that a person will say what he or she wishes without being asked. Food and drink are always taken with the right hand, because the left hand is used for "unclean" purposes, such as cleaning oneself. When talking, Arabs touch each other much more frequently and stand much closer together than Westerners do. People of the same sex will often hold hands while talking, even if they are virtual strangers. Members of the opposite sex, however, even married couples, rarely touch in public. Arabs talk a lot, speaking loudly, repeating themselves often, and interrupting each other constantly. Conversations are highly emotional and full of gestures.

## 9 LIVING CONDITIONS

Bahrain has one of the highest standards of living in the Persian Gulf region. A rapidly increasing population is beginning to put a strain on housing and water supplies, however, raising the cost of living and causing poorer Bahrainis to live in substandard conditions. To help alleviate overcrowding in other cities, the government built a new town in the center of Bahrain Island called Madinat Hamad (Madinat is Arabic for “city” or “town” and Hamad is the name of the king who initiated the project). It encompasses 1,300 hectares (3,212 acres) of desert land, reaching 8 km (5 mi) from north to south and 2.5 km (1.5 mi) east to west. A road was built to connect Madinat Hamad to Manama and also gives access to the causeway linking the islands of Bahrain and Muharraq. After the first Gulf War (1990–91) many Kuwaiti refugees were resettled in Madinat Hamad. In 2001 the new city had a population of 126,000.

Bahrain’s oil wealth has enabled the government to make many improvements in Bahrain’s standard of living, including better health care, housing, and education. Technologically advanced medical care has led to the eradication of smallpox. There are government-subsidized medical facilities, as well as private ones. Bahrainis needing specialized care not available at home are flown abroad at the government’s expense. The government also provides social security coverage for pensions, industrial accidents, illness, unemployment, maternity, and a family allowance.

Although there is no railway system in Bahrain, there are now 225 km (140 mi) of paved roads, which is more than adequate for such a small country. Bahrain also has one of the most modern communications systems in the world, with two communications satellites in space (the first launched in 1968, the second in 1980). A state-of-the-art international airport serves more than 3 million passengers per year, and Mina Salman, located east of the capital city of Manama, is one of the most modern and efficient ports in the Middle East. Members of the older generation can still remember making their own shoes—that is how quickly the “industrial revolution” has happened in Bahrain.

Traditionally, Bahraini homes were made from palm fronds, or *barasti*. Modern homes are made of cement and lime brick. Rooms are built around an inner courtyard, and houses are built vertically (rather than horizontally, like ranch houses) to catch the breezes that blow higher in the air. “Wind towers” on the upper floors of many houses and other buildings catch these breezes and funnel the air down to the lower floors through air shafts. The most prized furnishings in Bahraini households are handwoven rugs, either imported from Iran or locally crafted.

## 10 FAMILY LIFE

Bahraini women are more publicly active than in most other Arab countries. With the increase in higher education and paid employment for women, traditional women’s roles are beginning to change. Fewer marriages are arranged by the couple’s parents as more couples choose their own partners. The dowry or “bride-price” paid by the groom to the bride’s family is disappearing. These changes are taking place only among the upper-middle and upper classes, however. Only those with sufficient money can afford to send their daughters for higher education, and only wealthy women can afford to

hire domestic help so that they may work outside the home. The lower and lower-middle classes of Bahrain remain much more traditional.

The family is the center of life for Bahrainis. Family lineage is very important, extending out to the whole tribe. Bahrainis continue to be fiercely loyal to their tribes. Children live with their parents until they are married, and sometimes after marriage as well. Polygamy (up to four wives) is legal, but few men practice it. Divorce is fairly simple, for both men and women, but it rarely occurs.

## 11 CLOTHING

Bahrainis have never been as conservative as many of their Saudi neighbors. Women were never as strict about covering themselves completely in public, and many modern Bahraini women no longer veil their faces at all. (Most do still choose to wear some sort of head covering and long sleeves.) Bahraini men wear a *thawb*, which is a long outer robe reaching from neck to ankles, made of white cotton, to keep them cool in the hot sun. They also wear a *ghutra*, a large rectangular piece of material draped over the head and held in place with an *agal*, a thick, black woven band. This headscarf protects them from the sun as well as from sandstorms (it can quickly be drawn across the face).

Western-style clothing is becoming more popular in the larger cities of Bahrain. The large numbers of expatriate workers normally dress as they do in their homelands, so it is a common sight in Bahrain to see, for example, cinema lines containing women in black abayas, Indians in saris, Pakistanis in shalwars, and Westerners in jeans and t-shirts.

## 12 FOOD

Meals are taken very seriously by Bahrainis. All talking is done during the hour or so before sitting down to eat; there is no conversation during dinner. After the meal, coffee is served, and then any guests leave. Coffee is also always served as a welcome to guests when they first arrive. It is most often drunk unsweetened and flavored with cardamom. Fresh vegetables, lamb, fish, chicken, and beef are common foods. (Pork is forbidden by Islam, as is alcohol.)

Meals always include a dish made with basmati rice. *Khoubz* is the name of the local flatbread, and *samouli* is a white bread (like French bread) that is glazed with water or egg and then sprinkled with salt or sesame or caraway seeds.

One of the most popular dishes is *ghouzi*, which was developed by the Bedu (or Bedouin) nomadic Arabs (see Bedu). A lamb is slaughtered and left whole, and then a chicken stuffed with rice, nuts, onions, spices, and shelled hard-boiled eggs is placed inside the lamb. The lamb is sewn up, trussed, and cooked on a spit. To serve *ghouzi*, the chicken and stuffing are removed and arranged around the lamb. Diners break off chunks of meat with their right hands (the meat is not carved).

Date groves, fruit orchards, and vegetable gardens are located along the well-watered northern and northwestern coasts of Bahrain island. Bananas, citrus fruits, pomegranates, and mangoes are grown there, along with dates and other produce.

Bahrainis love desserts, and they love dates. Here is a recipe that combines both:

Bahraini women in Manama wear traditional dress to celebrate the last day of *Ayd Al-Fitr*, which ends the Muslim holy month of Ramadan. (AP Images/Mohamed El-Dakhkhny)

### Date Bars

- 1 cup rolled oats, plain or instant
- 1 cup melted butter or margarine
- ½ cup all-purpose flour
- 2 eggs, well beaten
- ½ teaspoon baking powder
- 1 cup finely chopped pitted dates
- ½ cup dark brown sugar
- 1 cup chopped nuts (walnuts, peanuts, or pecans)
- ½ teaspoon salt
- ½ cup confectioner's sugar for garnish
- 1 teaspoon cinnamon

Preheat oven to 350°F. Grease 8-inch-square baking pan. Put oats, flour, baking powder, brown sugar, salt, and cinnamon in large mixing bowl and mix well. Add butter or margarine, eggs, dates, and nuts, and mix well using clean hands. Put mixture into greased baking pan and bake in oven for about 35 minutes, until firm. Remove from oven and cut while still warm into 1½-inch squares. Sprinkle with confectioner's sugar. Makes 16 date bars.

[Adapted from Albyn and Webb, *The Multicultural Cookbook for Students*, p. 73]

### 13 EDUCATION

Bahrain has had the highest literacy rate in the Arab world for decades. More than 90% of Bahrainis are literate. The public school system was established in the early years of the 20th century. The first school for boys in the Persian Gulf region, the Hadiyya al-Khalifiya school, was opened in Bahrain in 1919. The first school for girls in Bahrain opened in 1929. Education is compulsory and free for all children. Government primary and secondary education facilities are still segregated by sex, but the education received by boys and girls is comparable. Private institutions have mixed gender classrooms. Primary education runs from the age of 6 to the age of 11. Almost 100% of Bahraini children attend primary school. Secondary education lasts from age 12 to age 17. The University of Bahrain and the College of Health Sciences are two of the older universities in Bahrain. Foreign universities from the west have branch campuses in Bahrain, as they do in many other Gulf countries. The New York Institute of Technology, for example, has a campus in Manama.

### 14 CULTURAL HERITAGE

Bahrain has a well-established artistic community, including some of the most respected writers in the Persian Gulf region. Ibrahim al-Urayyid and Ahmad Muhammad Al Khalifah write lyrical poetry about heroes and romance in the classical Arab style. Younger poets have developed a more Westernized style, writing non-rhyming poems on personal and political subjects. Qasim Haddad (b.1948) is the best-known contemporary Bahraini poet. He has published several collections of poetry, including *The Good Omen* (1970), *Doomsday* (1980), and *Shrapnel* (1983). Hamdah Khamis (b.1946) is a journalist and a contemporary poet. Her collection of poetry, published in 1978, is called *An Apology for Childhood*.

Arab music is much like the Arab language—rich, repetitive, and exaggerated. The *oud* is a popular instrument; it is an ancient stringed instrument that is the ancestor of the European lute. Another traditional instrument is the *rebaba*, a one-stringed instrument. A traditional Arab dance is the *ardha*, or men's sword dance. Men carrying swords stand shoulder to shoulder, and from among them a poet sings verses while drummers beat out a rhythm.

Islam forbids the depiction of the human form, so Bahraini art focuses on geometric and abstract shapes. Calligraphy is a sacred art, with the Quran being the primary subject matter. Muslim art finds its greatest expression in mosques.

### 15 WORK

The pearl trade was the big money-maker for Bahrain until the Japanese introduced cultured pearls in the 1930s. Before that, divers would go down to depths of 30 to 120 ft, with just a nose clip and earplugs, to collect oysters. The best divers could hold their breath for up to two minutes. It was a dangerous trade for the divers, and not a lucrative one. Although profits were supposed to be shared by all on the pearl boat, the captains kept the largest share and gave the divers a minimal share, not even enough to repay their captain for the cost of food and expenses he had advanced to them. In this way, pearl divers were kept in virtual slavery by debts that were passed down through the generations.

Since 1931, oil has been a major industry in Bahrain, as well as natural gas. Although small in comparison to other oil-pro-

ducing nations in the region, the income from oil and natural gas has paid more than 70% of the Bahraini government's expenses in the past few decades. Unfortunately, Bahrain's oil reserves are quickly being depleted. Its offshore natural gas reserves are somewhat more plentiful, but still small in comparison to major producers in the area, in particular Qatar. Therefore, the government is attempting to diversify the industrial sector to prepare for the depletion of the oil and gas reserves. Bahrain has developed state-of-the-art technology for petrochemical plants and oil refineries that it will be able to sell to other oil-producing nations. It has also begun manufacturing plastics and producing aluminum.

International offshore banking has also become one of Bahrain's mainstays, in these days of large economic transactions. Like Dubai in the United Arab Emirates and Qatar, Bahrain has become an important banking center in the region. Many international financial institutions have set up offices in the kingdom. A stock exchange was opened in 1989.

Shipbuilding has long been a respected trade in Bahrain. Some of the shipbuilders of today can trace their lineage back through many generations, with skills passed down from father to son. Bahrain currently constructs everything from huge, industrial oil tankers to small wooden *dhow*s, which are built in the same style that has been used since ancient times (with motors added today).

Because of the desert climate, there is not much farming in Bahrain, but fishing is a significant industry. Bahrain is known for its fist-sized shrimp.

## 16 SPORTS

Football (known as soccer in the United States) is the national sport of Bahrain. It was introduced during the time when Bahrain was a British-protected state (1820–1968). Other popular modern sports include tennis, water sports, and dune-buggy racing. Ancient sports that are still greatly enjoyed are horseracing and -breeding (the famous Arabian horses, probably the oldest domesticated breed, date from 1500 BC or before), camel-racing, and falconry. Falconry is a sport for the rich because birds are very expensive; a well-trained falcon can cost up to \$15,000.

Bahrain has hosted a Formula One race, the Bahrain Grand Prix, since 2004. It was the first Formula One Grand Prix in the Middle East.

## 17 ENTERTAINMENT AND RECREATION

Camping is perhaps the favorite Bahraini family recreation. Men spend a great deal of time in coffeehouses, drinking tea and chatting. Educated and upper class women also congregate in coffee shops in upscale districts. There are many cinemas in Manama and they provide an important cultural gathering point. On weekends, Saudis drive across the causeway and fill the cinemas (movie houses are banned in Saudi Arabia), creating a lively, energetic atmosphere. Restaurants in malls are filled on weekends with young people from the upper classes, who have time and money to spare. Because of the intense heat in Bahrain, people spend a lot of time in their air conditioned cars and many young people spend their free time simply driving around and listening to the latest Arabic pop music.

## 18 FOLK ART, CRAFTS, AND HOBBIES

The government supports traditional arts with generous subsidies. Bahrain is known for its elaborate and uniquely designed coffee servers. Metalworking is an ancient tradition in Bahrain, as are ceramics and basket-weaving. Folk music is popular and the traditional music of the pearl divers, called *fijeri*, is widely performed. Bahrain is home to an important Islamic museum, the Beit al Quran (the House of the Quran). It has a large collection of Islamic holy books, some dating to the 8th century.

## 19 SOCIAL PROBLEMS

The rapidly increasing population has put a tremendous strain on Bahrain's water supply. In 1968 daily consumption of water was less than 4 million gallons; by 1982, consumption had risen to over 30.4 million gallons per day. Freshwater sources are unable to provide for the increasing demand and by 2005, three-fifths of Bahrain's water supply was from desalination plants. These plants, powered primarily with natural gas, are a great cost to the country and also cause significant environmental stresses. They contribute to global warming by burning fossil fuels and they alter the salinity of the Persian Gulf.

The increase in population has also put housing at a premium, driving the cost of living up. With the focus on new home construction, old homes are not given the attention or repairs they need and are becoming run-down and dilapidated. Many Bahrainis, therefore, are forced to live in overcrowded, substandard conditions.

Bahrain has experienced serious challenges to its ruling regime stemming from the lack of full democracy and from sectarian tensions. Although the new constitution did create a democratically elected chamber in parliament, the king retains the most power both through executive powers left to him in the constitution and by his power to appoint all the members of the Consultative Council. The politically and economically marginalized Shia majority regularly engages in street demonstrations and other forms of political protest, but the government typically responds with force. Some Shia look to predominantly Shia Iran for political inspiration, and this also causes great fear in Bahrain, a tiny island not too many miles distant from large, militarily powerful Iran. The United States maintains an enormous naval presence on the Island, and this also has caused social strains. This tension has increased since the U.S.-led War on Terror led to war in neighboring Shia-majority Iraq.

## 20 GENDER ISSUES

The status of Bahraini women is better than in some Islamic societies, but remains far behind the rights and privileges typical in Western countries. Women have the right to vote and to stand for political office (in 2007 there were two female cabinet ministers), but the Bahraini judicial system is based on Islamic (Sharia) law and women therefore face obstacles in obtaining divorces and in securing custody of their children after being divorced. A major problem is the lack of a personal status system of laws that would ensure some degree of rights to women. In the absence of such a system, legal matters are left to the discretion of judges who are free to interpret Islamic law and issue rulings. The judiciary is made up of conservative, religious men.

## BAI

**PRONUNCIATION:** BYE

**ALTERNATE NAMES:** Bo

**LOCATION:** China

**POPULATION:** 1.6 million

**LANGUAGE:** Bai; Chinese

**RELIGION:** Polytheism; some combinations of Buddhism and indigenous beliefs

**RELATED ARTICLES:** Vol. 3 : China and Her National Minorities

### 1 INTRODUCTION

The ancestors of the Bai people were called Bo and were descendants of the ancient Qiang (Tibeto-Burman group), who lived around present-day Sichuan more than 2,000 years ago. After unifying China, the Qin Dynasty (221–206 BC) planned to carve out a way to India through the area inhabited by the Bo. For this reason the Bo gradually migrated to Yunnan and joined the other Bo already living there. In 109 BC, the King of Yunnan pledged allegiance to the Han Dynasty (206 BC–AD 220), placing the Bo under the latter's authority. From the 1st century AD the Bo oscillated between submission and rebellion. Gradually the Chinese character that was in ancient times pronounced "Bo" came to be pronounced "Bai," both pronunciations meaning "white." This is an example of the different pronunciations of the same character in north (Bai) and south (Bo) China.

In the 8th century, following the unification of six small principalities, the powerful kingdom of Nanzhao was established with Dali (in northwest Yunnan) as its capital and ruled Yunnan for 247 years. Ten of the 13 successive kings received titles granted by the Tang Dynasty (618–907). Later, Nanzhao was replaced by Dali, which acknowledged allegiance to the Song Dynasty (960–1279) and ruled Yunnan for more than 300 years. In 1253, the Mongolian aristocrats conquered Dali. Before long, the Yuan Dynasty (1271–1368) set up a system appointing Bai headmen under the jurisdiction of the former royal court of the Dali Kingdom. In the following centuries, hundreds of thousands of Chinese, Mongolians, and Manchus moved from the central provinces into the areas of Yunnan inhabited by the Bai. There was much cross-cultural exchange and intermarriage. Chinese culture exerted a strong influence on the Bai.

### 2 LOCATION AND HOMELAND

Today over 80% of the Bai live in the Dali Bai Autonomous Prefecture. There are small communities dispersed in other counties of the Yunnan Province. Bai are also found in Sichuan and Hunan. Two rivers, Lancang and Nu, flow south through the Dali prefecture, which is located in the Yunnan-Guizhou Plateau. The deep river valleys are thickly forested. The snow-capped Cang Mountain and limpid Er'hai Lake in the suburbs of Dali inspired many beautiful legends of the Bai people. The Bai population was 1.86 million in 2000.

### 3 LANGUAGE

Bai is classified as belonging to the Sino-Tibetan family in the Tibeto-Burman group of languages. In 1990, it was estimated that 900,000 people speak Bai. Scholars still debate the exact

place of Bai as a branch of the Tibeto-Burman group. There are three Bai dialects. Bai is a self-given name. Most of the Bai speak Chinese.

#### **4 FOLKLORE**

Bai myths are usually long and complex. Most of them are related to daily life, love, and religious beliefs. A famous one, called “Husband-expecting Cloud” was transformed into a dance drama and a Bai opera. In short, a princess of Nanzhao Kingdom fell in love with a young hunter. They escaped to Cang Mountain and married in a cavern. During a snowstorm, the hunter left the cavern to find a suit of thick clothes for his chilled wife. Unfortunately, he was discovered by a Buddhist priest of the royal court. The priest turned the hunter into a stone mule, which was sunk into the Er’hai Lake. Dying from cold and hunger, the princess transformed herself into a cloud. If it suddenly appeared around the peak of Cang Mountain in winter, the stone mule in the deep water always cried in response. Then a strong gale blew abruptly, the water split, and the stone mule appeared in an awe-inspiring manner.

#### **5 RELIGION**

The Bai are polytheistic, believing in many gods. Each village enshrines and worships a certain god as the master and protector of the village. The villagers carve an idol made of wood or clay and put it in the temple. Most of the masters are famous personages of the kingdoms of Nanzhao or Dali. Some are part of their respective myths, while others are gods related to agriculture. After the 9th century, Buddhism became prevalent in areas around Er’hai Lake. The three Buddhist temple pagodas at the foot of Cang Mountain date from the Tang Dynasty. The stone relief sculpture of the Buddha and of the Kings of Nanzhao in the grottoes of Shibao Mountain are a combination of Buddhism and of Bai traditional belief in the Master God.

The Bai revere conch and fish. The Bai believe in the Fish God: whenever a fisherman catches a big fish, he puts it back in the water at once and prays while burning incense.

#### **6 MAJOR HOLIDAYS**

The Spring Festival extends from the last day of the old year to January 15 (lunar calendar; Western calendar, from February 6 to March 6) during the slack season. Each family cleans the house and prepares fine dishes for the holidays. A great variety of recreational activities are held, such as the Lion Dance, the Dragon Lantern Festival, walking on stilts, flying kites, playing the “tossing the silk ball” game, etc. Some villages devote most of the holiday to “meeting the Master.”

The Third Month Fair is a grand festival of the Bai, held March 15 to 21 (lunar calendar; Western calendar, from April 6–12 to May 4–10). It has a history of more than 1,000 years. On the occasion, the endless array of native products and the dazzling articles of daily use are exhibited on the streets and squares. The number of participants may reach hundreds of thousands, including various neighboring nationalities.

The “Memorial Ceremony for the Dead” in February, the “Torch Festival,” the “Rao San Ling,” and the “Yu Tan Hui” are also distinctive and colorful festivals celebrated in the areas inhabited by the Bai.

#### **7 RITES OF PASSAGE**

Gifts are important on the birth of a child, the engagement of two young people, and the birthday of a senior person. On these occasions, money or items that come in sixes are always welcome. For instance, a gift of 160 *yuan* (Chinese currency) will be gladly received, while 500 *yuan* might be refused. The reason for the prominence of the number “six” is that the Bai are descendants of six tribes. When, in the past, their king presented gifts to the Emperor of imperial Tang, each tribe prepared a gift of its own—altogether six. The gifts from the Emperor in return were also six and each tribe took one gift as its own. Moreover, in Bai language, the pronunciation of “six” is the same as that of “enough” or “handsome salary,” so six is an auspicious number.

A rite of “seeing off the soul” is held after the death of a senior person. In the eyes of the Bai, the soul will come back to its native house again and again. Therefore, on the first, third, seventh, thirtieth, and hundredth day after death, family, relatives, and friends perform the rite of “seeing off the soul.” On the occasion, the family will receive relatives or neighbors to dinner. It is believed that after the last ritual performance, the soul will definitely go to the “other side” to unite with the ancestors.

#### **8 INTERPERSONAL RELATIONS**

In addition to public festivals, every happy event of the family or clan is an occasion to pay a congratulatory visit. Gifts are absolutely necessary. When they are about to leave, guests usually receive a gift in return from the host.

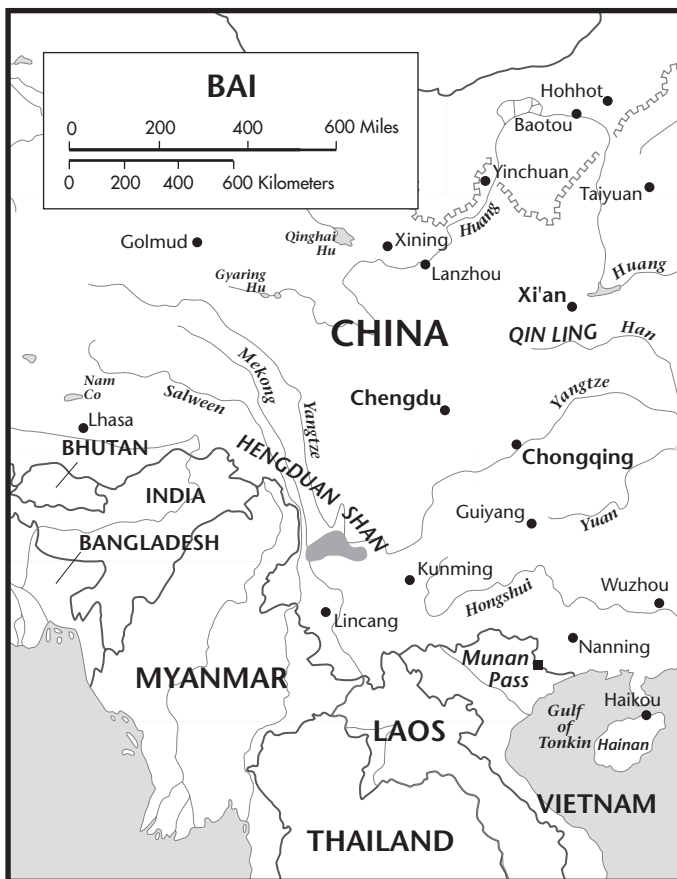

Young people used to express their feelings for the opposite sex by blowing on a tree leaf. The addressee tried to understand the meaning from the melody and the tune. This is a rather indirect method of courtship as compared with the antiphonal singing prevalent among neighboring ethnic groups.

#### **9 LIVING CONDITIONS**

Most Bai houses are two-story, made of wood and bricks (or adobes), usually roofed with tiles. The walls on two sides are often higher than the roof; this is to keep fire from spreading. The house is oriented toward the east. The family lives downstairs; the central room is for daily life and receptions. Rooms upstairs are for storage. In some areas, wooden houses on stilts still exist; in that case, pigs and chickens are kept on the ground floor, while the family lives on the second floor. Bai dwelling in mountainous areas have thatched-roof cottages; the family sleeps in the firepool room. Bai inhabiting the plains and valleys have a much higher standard of living than mountain-dwellers. Bai cities and towns have flourished since 1949. Many endemic (sometimes epidemic) diseases, such as schistosomiasis (a parasitic disease carried by certain types of snails) have been practically eliminated after years of treatment.

#### **10 FAMILY LIFE**

Bai family is patrilineal (traced through the fathers), with two generations usually living under the same roof. Parents live with the youngest son, because the older ones leave the house after marriage. A son-in-law is allowed to live with his wife’s parents if they lack a son. Childless families are allowed to adopt a child from brothers of the same clan. In those cases, the names of the son-in-law and the adopted son should be

changed to the family's surname; otherwise, they do not have the right of inheritance. Bai families are monogamous, but there exist cases of polygamy. The position of women is socially lower than that of men. People with the same surname or of the same clan are not allowed to marry. The marriage of cousins, however, is prevalent. Arranged marriage is common, although "love marriages" are increasing. Betrothal gifts are usually expensive.

### **11 CLOTHING**

Men wear multi-buttoned Chinese-style upper garments in white or blue, sometimes with a vest, and long white trousers. They wrap their heads with white or blue cloth and carry a decorated bag over the back of the shoulder. Most women wear white tops with a black or purple velvet vest and loose trousers in blue. A short apron with embroidered ribbons is fastened to the waist. A string of silver ornaments is hung on the right of the garment. Unmarried girls have a braid on their back or coil the braid on the top of the head. Married women comb their hair into a bun, which they wrap with an embroidered or printed scarf with the tassels hung over one side of the head. Some of them put together the four angles of the scarf on the back of the head, then fix them with string. They are fond of embroidered shoes. Their costumes for special occasions are not much different from their daily dress. Various ornaments are put on during the festival.

### **12 FOOD**

Rice and flour are the staple foods of the Bai. Mountain dwellers live on corn and buckwheat. All have a liking for sour, cool, and spicy dishes, as well as for a medium roast pork, which is shredded and seasoned. They are good at making salted fish, ham, and snail sauce. Baked tea is a distinctly favorite dish. As a rule, they take three meals a day.

### **13 EDUCATION**

There are primary schools, middle schools (junior and senior), and universities in Bai villages, counties, and cities respectively. Illiteracy, however, is still prevalent in the rural areas. The intensive manual labor in the fields often requires the participation of the children. As a result, many girls are usually obliged to drop out of primary or middle school. The overall cultural and educational level of the Bai is higher than the average for national minorities, but it is still below the average for the whole country.

### **14 CULTURAL HERITAGE**

The "Bai Melody" is a kind of national folk song. Although slightly different in various Bai districts, it is always a poem with five or seven characters to a line, accompanied by three stringed instruments (sometimes the opening bars are accompanied by a woodwind instrument). It is part of every important Bai festival.

Bai opera, as a combination of music, song, and dance, developed under the influence of Chinese models. The famous Lion Dance, however, was borrowed from the Bai by the Chinese during the Tang Dynasty. The works of Bai poets of Nanzhao Kingdom were included in the great Chinese poetry anthology called *Quan Tang Shi* (Complete poetry of the Tang).

### **15 WORK**

Bai economy rests principally on rice culture, complemented by barley, wheat, millet, and beans. Fruit growing, stock raising, and fishing on Lake Er'hai provide important sideline economic activities. Bai workers, with heavy slabs of marble on their backs, descend from a quarry in the Cang Mountain, just as their ancestors did 1,000 years ago; but, the processing of the slabs is now carried out with mechanical devices by Bai factory workers. The fine texture and natural designs have made Dali marble famous for more than 2,000 years and continues to inspire craftsmen in carving ingenious landscape scenes. Dali horses and knives carved by Bai artists are also much sought after by connoisseurs.

### **16 SPORTS**

"Tossing the silk ball" and "rattle stick dance" are traditional popular Bai sports and spectator sports as well. The game of "tossing the silk ball" is usually played on festivals. The ball is actually a small bag padded with cottonseed or rice husk, ½ to 1 lb in weight, and variable in size. Two teams, one of boys and one of girls, oppose each other, but are separated by a mat shelter. A member of one team tosses the ball over the top of the mat shelter; the ball should be caught by a member of the receiving team. If the ball is missed, a negative mark will be recorded. This game offers the occasion for boys and girls to meet and get acquainted socially.

The rattle stick is a 3 ft bamboo stick, thicker than one's thumb. There are nine openings on the shaft, each of which is pierced by a bamboo nail. Two-holed copper coins are hung on each bamboo nail. Each player taps his or her own shoulders, arms, knees, and feet with the rattle stick while dancing, jumping, marching, or squatting, but without letting the coins drop from the stick. The one who loses the least coins is the winner.

### **17 ENTERTAINMENT AND RECREATION**

The Bai people have complete access to movies, television, and other recreational equipment in their cities and towns, especially in Dali. More traditional forms of entertainment are mainly singing and dancing. Singing contests are held around Mount Wudiao in the fall of each year. Torches are kindled. The rising and falling sounds of songs fill the night like waves. Young boys and girls in Jianchuan, north of Dali, sing all night long in antiphonal style, accompanied by three-string instruments. When the busy season of transplanting rice shoots is finished, the Bai people have a festive dinner party in the temple of the Master. They dress as fishermen, woodcutters, peasants and scholars, participate in the procession of the "rattling stick dance," and tour their village for fun.

### **18 FOLK ART, CRAFTS, AND HOBBIES**

The artistic sense of the Bai is exemplified in their lacquerware and wood carvings, for which they are famous. More than 1,000 years ago, their lacquerware entered China proper. The lacquerers chosen by the central government of the Yuan and Ming dynasties were all Bai artists. The Bai also excel at wood carving, as may be seen in the exquisite birds, flowers, and personages carved on the doors and windows of Jizushan Buddhist Monastery. The continuation of their skills in all kinds of wood carving can be also found in present-day private house decorations.

### **19 SOCIAL PROBLEMS**

The economic cleavage of Bai society is quite prominent. On the one hand, urban Bai have a markedly improved living standard, especially in recent decades; on the other hand, mountain-dwellers still live in abject poverty. There is no easy solution to this problem, which is not specific to the Bai, but it is shared by every nationality whose people are divided into urbanites, valley dwellers, and mountain dwellers.

### **20 GENDER ISSUES**

The Chinese constitution states that women have equal rights with men in all areas of life, and most legislation is gender neutral. However, there are continued reports of discrimination, sexual harassment, wage discrepancies, and other gender related problems. The gap in educational level between women and men is narrowing with women making up 47.1% of college students in 2005, but only 32.6% of doctoral students. China has strict family planning laws, and it is illegal for women to marry before 20 years of age (22 for men) and it is illegal for single women to give birth. The Family Planning Bureau can require women to take periodic pregnancy tests, and enforce laws that often leave women with no real options other than abortion or sterilization. Prostitution and the sex trade is a significant problem in China involving between 1.7 and five million women. It involved organized crime, businessmen, the

*Bai women in traditional dress.*  
(© Steven Vidler/Eurasia Press/Corbis)

police and government workers, and as a result prosecution against prostitution has limited success. In 2002, the nation removed homosexuality from its official list of mental illnesses, and though it is still a taboo topic, homosexuality is increasingly accepted, especially in large, international cities.

# BAJAU

**PRONUNCIATION:** BAH-jau (Indonesian pronunciation) or bah-JOW (Philippine pronunciation)

**ALTERNATE NAMES:** Badjao (Philippine spelling), “Sea Gypsies”

**LOCATION:** Philippines (Sulu Archipelago), Malaysia, Indonesia

**POPULATION:** Over 200,000

**LANGUAGE:** Samal

**RELIGION:** Islam; indigenous beliefs

**RELATED ARTICLES:** Vol. 3: Filipinos; Vol 4: Tausug

## <sup>1</sup>INTRODUCTION

The Bajau (or Badjao) of the Sulu Archipelago are one of several groups of Sea Nomads who not only make their living from the region’s waters but also spend most of their lives on them. Little used in Sulu itself, the name “Bajau” seems to derive from the Wajo kingdom of the Bugis, who have had a long history of association with Sea Nomads. The Bajau of southern Philippine waters, however, were claimed as vassals by the Sulu sultanate of the Tausug people, rivals of the Bugis. Traditionally, Tausug *datus* extended their protection to particular Bajau groups in exchange for various services, such as delivering tribute in dried fish. Stressing a common origin with the land-dwelling Samal peoples of the archipelago, such as the Yakan and the Jama Mapun, the Sulu Bajau call themselves *Sama Laut*, or *Sama Mandelaut* (Sea Samal).

The term “Sea Gypsies” popularly applied to the Bajau is apt insofar as it reflects their position as outcasts within the wider Sulu society. Although it was Samal peoples, such as the Balangingi, who carried out (as clients of Tausug, Bugis, and Malay aristocrats) most of the piracy and slave-raiding that plagued Southeast Asian waters until the late 19th century, the Bajau themselves are a peaceable people whose response to exploitation or victimization by non-Bajau has been to take flight. Despising Bajau nomadism, passivity, and paganism, neighboring peoples refer to them with derogatory names, such as the Tausug *Luwa’an* (“that which has been spat out”) and *kuto dagat* (“lice of the sea”).

Occupied with the more assertive Tausugs, Spanish, American, and still to some extent Filipino governments have left the small numbers of Bajau largely to themselves. Over the last century, Bajau have more and more been abandoning the boat-dwelling life for a more sedentary one on land, as well as dropping animistic practices for a more orthodox Islam; these trends are reducing their distinctiveness from the other peoples of the Sulu archipelago. Devastated by the Moro separatist conflict, Tawi-Tawi province (where Samal peoples predominate) was separated from Sulu province in 1973 and was one of the four provinces that formed the Autonomous Region in Muslim Mindanao in 1989. Samal remain wary of reassertion of Tausug dominance, even to the extent of more readily identifying themselves as Filipino rather than Moro and on insisting on addressing Tausug in English rather than in Tausug as they can and the Tausug expect. In recent years, Muslims (commonly referred to as Badjao) have become highly visible in Manila, often as peddlers of pirated DVDs.

## <sup>2</sup>LOCATION AND HOMELAND

The Bajau communities, collections of either houseboats or houses raised above the water, lie mainly in a zone stretching from Zamboanga Bay through the Sulu archipelago to Semporna on the Sabah coast; the islands within this region are dominated, however, by non-Bajau. Other more distantly related Bajau communities can be found on or off the shores of eastern Kalimantan; northern, western, and southern Sulawesi; Flores; and Sumbawa; as well as the Togian, Bangga, and Sula island groups.

In the early 1970s, the Sulu Bajau numbered perhaps 20,000. In 2000, there were 13,180 Badjao and 49,000 Samal in Sulu province, while in Tawi-Tawi province a number of Samal groups were distinguished (Sama Dilaya, 115,400; Sama Abakon, 49,000; and Jama Mapun, 18,800). Among the Samal (including those outside Tawi-Tawi province), various dialect-groups are also identified (2000 figures): Jama Mapun, 40,600; Central Samal, 90,000; Southern Samal, 120,000). The largest group on Basilan island (35.8% of the population), the Yakan, speak a Sama-type language. About 6.37% of households in the Autonomous Region in Muslim Mindanao identified Samal (Sama/Abakon) as their first language (that could mean as many as 125,000 people). Bajau in Malaysian Sabah numbered 40,000 in 1980 and in eastern Indonesia 90,000 in 2000 (cf. early 1970s estimate of 10,000–15,000).

Sea Nomads can also be found in a zone stretching from the east Sumatra coast and the islands off it, up along the shores of the Malay peninsula as far as southern Thailand and beyond to Burma’s Mergui archipelago. Generally known as *Orang Laut* (Sea People), the groups there are often called “Bajau,” though their relation to the Sulu Bajau is unclear as they do not (at least presently) speak Samal but rather a dialect of Malay close to that of the land-dwelling Kubu.

## <sup>3</sup>LANGUAGE

The Bajau speak a single, largely homogeneous dialect of Samal. The Samal languages are Austronesian but form a group distinct from Tausug (a Visayan language) and the languages of mainland Mindanao and Borneo.

## <sup>4</sup>FOLKLORE

The Bajau believe in a variety of supernaturals (*saitan*), e.g., *panggauh* (ghosts), *umagad* (spirits), *balbalan* (vampires), and *ah-ah inggai tandah mata* (sorcerers).

They are careful not to trespass on the territory of *tungguh* (watcher), guardians of both animate and inanimate objects, who live in areas such as clumps of mangrove trees. If a family fishes in a particular area without asking permission of the *tungguh*, a member may suffer punishment, such as stomach pains. One appeases the *tungguh* by leaving offerings of betel or cigarettes or by placing small green or white flags at the spot. Such pennants also mark the roofs of the houses of village headmen who have the favor of an *omboh*, an illness-curing spirit; in the corner of such a house is a *bangku*, the *omboh*’s place, including a bed and a trunk holding a multicolored piece of cloth donated by the community.

Saitan also take the form of animals or fish, invading villages and spreading disease. Rites to combat epidemics include the launching of a spirit boat; thanksgiving celebrations require seven nights of dancing (*igal*) to entertain the *omboh*.

## 5 RELIGION

Most Bajau consider themselves Muslim, although they rarely perform the daily prayers, nor do their communities usually have mosques. Neighboring Muslim peoples look down on them as pagans. Nonetheless, *imam*, and older men with some knowledge of scriptures, lead prayer during ceremonial occasions and oversee life-crisis rituals.

Among the Bajau, mediums, both male and female, commune with spirits through dreams and trances in order to affect cures and predict the future. Several times a year, mediums renew their relations with their supernatural patrons in a nightlong public dance, a rite benefiting the entire community. Once a year, a village's women and children bathe in the sea to fortify themselves against spirits.

To cure an ill person, members of his or her *pagmunda* (a group of boats traveling together) gather at his or her houseboat while a knowledgeable person leads a curing ritual, burning incense to call the spirits and making food offerings to them. In case of serious illness, relatives swear to hold a *magtimbang* ceremony. The recovered individual is put into a sling hanging at one end of an improvised scale. At the other end are placed goods (bananas, sugarcane, and firewood) equal to his or her weight, which, after the scale is rotated several times while chanting, are distributed to those attending the ceremony.

Another important rite is thanking Omboh Dilaut, the Lord of the Sea, after a bountiful catch; one drops a plate, bowl, or saucer into the part of the sea where the fish were caught so the spirit will not be angry and will provide more fish in the future.

The college-educated among the Samal are those who tend to be the most interested in Islam. Many have been attracted to the teachings of the Ahmadi sect, which has been considered heretical by many Muslims worldwide for recognizing a prophet after Muhammad, the late 19th century Indian figure, Mirza Ghulam Ahmad. However, in Tawi-Tawi, ahmadi generally means anyone who questions traditions.

## 6 MAJOR HOLIDAYS

The Bajau observe the Muslim festivals, but seldom fast for Ramadan. In July or August, a *dakampungan* celebrates the *maggomboh* to avert disaster in the coming year. Each family obtains rice and places it in a special basket that they put at one end of the boat; everyone sleeps with their heads towards the basket. The next day the rice is cooked and formed into a cone. The families bring these cones to a central houseboat. A medium invites the spirits to partake of the rice, then takes some rice from each cone and mixes the handfuls in a common bowl for all the children of the *dakampungan* to eat. After this, the families take the cones home to consume with the next meal.

## 7 RITES OF PASSAGE

All infant girls undergo a first ear-piercing rite, accompanied by the chanting of an old man. Circumcision for boys can be a very simple ceremony, although wealthier families host elaborate celebrations, decorating the houseboat and making merry with music and dancing on the reef top or beach throughout the afternoon and evening.

For marriage, a boy indicates his preferred partner, or his parents persuade (but never force) him to accept a girl of their choice. Siblings of the boy's parents, rather than the parents themselves, convey the proposal to siblings of the girl's par-

ents. The boy's representatives present family jewelry and other valuables to the girl's side. After discussion, and with the girl's consent, her family announces the bride-price, setting an unreasonably high one if they are not interested in the union. As a single nuclear family cannot generally afford the bride-price, the boy's parents receive contributions from their siblings.

The engagement period commences with a *pag-angbat* announcement celebration, including a fluvial parade of the boy's kin to the girl's residence, to the accompaniment of gongs. The boy sends cash and goods to the girl's family but is not to speak to the girl during the engagement period.

Members of the Bajau fish on the Sulu Sea in the Philippines.  
(© Ted Spiegel/Corbis)

For one to two weeks before the wedding, there is merry-making every night, with relatives and well-wishers dancing to display their grace and skill. It is also a chance for young men to check out young women. To announce the wedding, a pole on which a multicolored blanket hangs is raised in front of the house. After the Islamic ceremony itself, three days of celebration begin, the highlight of which is the *paglibuhan*. Young women (15 from either kin-group) take turns dancing in front of the couple (earning a fee); at the end, the bride herself dances. The guests sometimes push the groom to join in as well.

A forced marriage (when a man abducts a woman or impregnates her) merits much less ceremony. The *imam* solemnizes the wedding, but subjects the couple to seven lashes to wash away the sin of premarital sex; the man, moreover, must pay a fine.

Formerly, at his death a man's boat was disassembled to make his coffin. All through the night following the death, most adults of the moorage or village drop in to chant prayers and sing laments. The next morning, a flotilla of boats accompanies the body to the cemetery islands where it is buried with the deceased's personal belongings. The surviving family makes periodic visits to the grave, leaving small offerings of betel nuts.

## <sup>8</sup> INTERPERSONAL RELATIONS

A consensus of a community's household heads selects a headman (*panglima*). The headman's duty is to call meetings when there is a dispute or breach of custom. He collects fines from an offending party, which he shares with the offended party. However, such penalties cannot be imposed without the voluntary submission of both parties. Those who have antagonized their neighbors can just move away to another community until the incident is forgotten.

## <sup>9</sup> LIVING CONDITIONS

Communities are either permanent villages of houses raised over water just off islands or reefs or, alternatively, are semi-permanent or seasonal collections of houseboats (as many as 40) moored together with or without onshore houses nearby. A channel open during low tide runs through a village like a main street; a complicated network of gangplanks connects most houses. Houseboat groups exhaust one fishing ground then move on.

The living space in a houseboat measures 3 m (10 ft) long, 1.2 m (4 ft) wide, and 1.2 m (4 ft) high. A portable bamboo framework with a plaited nipa roof provides the shelter. At the stern, food and water are stored, and meals are cooked and eaten.

A pile house is 6–9 m by 4.5 m (20–30 ft by 15 ft) and consists of a single large room; in front, an open platform for docking boats juts out, and the kitchen occupies a separate smaller building.

Average family income in the Autonomous Region in Muslim Mindanao, of which Tawi-Tawi province is a part, amounted to 89,000 pesos (us\$1,745) in 2006, the lowest in the country, cf. the national average of ₱173,000, the National Capital Region's ₱311,000, Southern Tagalog's ₱198,000, and those of the neighboring Davao and Zamboanga regions, ₱135,000 and ₱125,000 respectively. In 2000, Tawi-Tawi, however, had the second lowest Human Development Index, 0.391 (combining measures of health, education, and income) in the country (above Sulu and below Basilan, its fellow provinces in the Sulu archipelago, cf. the Philippines' national HDI of 0.656)

According to the 2000 census, the proportion of houses in Tawi-Tawi with a roof of galvanized iron/aluminum reached 52.2% (a great increase over just 37.9% ten years earlier) and the percentage of homes with a roof of grass or palm thatch was at 38.3% (down from 55.88%); 67.5% of houses had wooden outer walls, and another 21.3% walls of bamboo or thatch. 4.7% of households had access to a community faucet, 7.5% to a faucet of their own, and 21.6% to a shared deep well, while 39.3% obtained their water from a well, and 34.9% from springs, lakes, rivers, or rain. 41.3% of households disposed of their garbage by burning it, 25.6% by dumping it into a household pit, 5.8% by burying it, and 3.3% by feeding it to their animals; only 3.5% had it picked up by a collection truck. 71% of houses were lit with kerosene lamps, 17.2% with electricity, and 7.2% with firewood. 61.9% possessed a radio, 9.7% a television, 4.8% a refrigerator, 8.5% a VCR, 2.8% a telephone or cell phone, 2.3% a washing machine, and 14.7% a motorized vehicle.

## <sup>10</sup> FAMILY LIFE

For boat-dwelling Bajau, the *mataan*, consisting of a man, his wife, and their children, is the most important social group; this nuclear family may include, in addition, other relatives: a widowed parent, a divorced sister, or a husband's adult neph-

ew. The widowed remarry quickly, as houseboat life is too difficult without a partner. Sometimes, incomplete *mataan* will join forces, such as when two widowed second cousins with children set up a single household.

Most marriages are between cousins (excepting the children of brothers); marrying a relative of another generation or a close same-sex kin of one's former spouse is regarded as incestuous. The ideal, rarely achieved given such a mobile lifestyle, is for a new couple to settle in the wife's moorage after a few months of moving between the two parental houseboats (or after a year of living with the wife's parents).

Spending most of a day's 24 hours at sea cut off from other families, the members of the *mataan* develop extremely strong bonds. Bajau tend to trust only their own siblings and form the next-higher unit of economic and ritual cooperation, the *pag-mundah* (literally, a group of boats traveling or moored together) by uniting, on average, four sets of siblings, spouses, and unmarried children (a member leaves the *pagmundah* once he has married children who can form a *pagmundah* among themselves). Among house-dwelling Bajau, a house will shelter an entire *pagmundah*, with the senior male as the leader. Upon partition of the household, the youngest sibling stays with the original house while the others set up their own houses adjacent to it.

Most Bajau marry more than once, usually divorcing before the third year, once the romantic feeling is lost.

The Bajau keep no animals other than (occasionally) cats and fighting cocks.

### **11 CLOTHING**

Bajau clothing is similar to Tausug clothing [see *Tausugs*]. Young children are left naked so that they can get used to the extremes in temperature that they will encounter as fisher-folk. Once prestigious but now regarded as signs of ignorance were the filing, blackening, and gold capping of teeth. To preserve their complexion from the sun, women apply a thick coating of white *burak* rice powder to their faces.

### **12 FOOD**

The staple food is ground cassava root from which the juice has been squeezed; the resulting powder is wrapped in banana leaf as is, or it is fried or steamed. When they can afford it, people eat rice (often mixed with corn). Boiled or grilled fish is the main accompaniment; shark meat, sea urchins, and shellfish (crabs) are also eaten. Bajau prefer to sell the better-quality seafood such as shrimp and lobsters. Considering it unclean, Bajau avoid the meat of land animals. They rarely eat vegetables other than seaweed. There are no set mealtimes—the family eats when the father returns with the catch.

### **13 EDUCATION**

The Bajau take less advantage of modern educational opportunities (which in any case remain very limited) than Tausugs or other Samal.

According to the 2000 census, the literacy level in the Autonomous Region of Muslim Mindanao was 68.9%, very low by national standards. In Tawi-Tawi province, 39.9% had completed elementary school, 23.7% high school, and one in 8.6% college or university (the latter two percentages were actually higher than in Sulu).

### **14 CULTURAL HERITAGE**

Melodious, sentimental songs (*leleng*, *lolo*, and *tenes-tenes*) are performed by a young man and young woman alternating parts to the accompaniment of a *gabbang* xylophone. For exercise and relaxation and as a part of ceremonies and celebrations, Bajau perform *igal*, dancing to the beat of *kulintangan* and *agong* [see *Tausugs*].

### **15 WORK**

Fishing (by men) provides subsistence and a product to trade for (or sell for cash to buy) necessities available from non-Bajau (agricultural produce, cooking hearths, metal utensils, nipa matting). All year round, groups of siblings and siblings-in-law cooperate in fishing; large seasonal fish drives, however, bring as many as 60 boats together. One method, the *pag-am-bit*, involves a group of boats encircling a shoal of fish with a net. Women and children gather shellfish at low tide. Some Bajau have recently begun to tend onshore gardens on borrowed land.

Respected specialists include *imam*, herb doctors, midwives, woodcarvers, and boat builders.

### **16 SPORTS**

Popular sports include swimming and running races or playing volleyball on a sand bar at low tide, there being no suitable areas for basketball or softball.

### **17 ENTERTAINMENT AND RECREATION**

Bajau spend what little leisure time they have chatting, picking lice, playing cards, tossing coins, and enjoying water-splashing games. Today, they also like to record and play back their own and their children's singing on cassette recorders, as well as to go to movies in town.

### **18 FOLK ART, CRAFTS, HOBBIES**

Women weave mats that are in high demand in local and tourist markets.

### **19 SOCIAL PROBLEMS**

See the article entitled *Filipinos*.

### **20 GENDER ISSUES**

In 2000, in Tawi-Tawi the ratio between men and women was 99 men for every 100 women (a dramatic decline from 106 men for every 100 women just five years earlier); women were more numerous in the age group 0 to 39 years, men more numerous in the age group 40 and above (which may be partly the result of male insurgent casualties in recent years and high rates of women's deaths in childbirth in earlier years). Literacy levels in the Autonomous Region of Muslim Mindanao, low by national standards, were somewhat higher for men (69.8%) than for women (67.7%). In Tawi-Tawi (differing in this regard from the ARMM and the Philippines as a whole), despite there being more women than men, men were still somewhat more numerous among those completing all levels of education except in post-secondary education. In contrast to other parts of the country, such as Southern Tagalog, more overseas workers from the ARMM were female (56%) than male; the median age of those female overseas workers was 24 years. There are hiring

quotas for Muslim domestic workers employed in Saudi Arabia and other Muslim Middle Eastern states.

# BALINESE

**PRONUNCIATION:** BAHL-uh-neeZ

**LOCATION:** Indonesia (Bali)

**POPULATION:** 3 million

**LANGUAGE:** Balinese

**RELIGION:** Indigenized version of Hinduism

**RELATED ARTICLES:** Vol. 3: Indonesians

## <sup>1</sup> INTRODUCTION

Although, as Southeast Asia's prime tourist destination, Bali provides much of Indonesia's image to the outside world, Balinese culture deviates widely from the national mainstream, most crucially in its unique Hindu-animist religion. Created from the early 1st millennium AD on, huge stone sarcophagi and bronze drums attest to the fertile island's ability to support social stratification and attract long-distance trade. Inscriptions from the 9th to 10th centuries record the emergence of Hinduized kingdoms that would later fall under the domination, political and cultural, of the great east Javanese realms. In 1334, Gajah Mada, the prime minister of the Javanese kingdom of Majapahit, conquered Bali, laying the foundations for the later transplantation of Hindu-Javanese culture by refugees from Majapahit after its fall to Islamized rival states. In the 16th century, King Batu Renggong of Gelgel unified Bali (acquiring also Lombok, Sumbawa, and parts of East Java) and in partnership with the high priest Nirartha established the socioreligious order that continues to the present day.

By the 18th century, Gelgel's domain had fragmented into nine competing kingdoms. Beginning in the 1840s, the Dutch, initially on the pretext of punishing the Balinese for plundering shipwrecks, involved themselves more and more in the island's internal affairs, imposing direct rule on north and west Bali in 1853. Between 1894 and 1908, the Dutch subdued the Balinese kingdoms first in Lombok and then in south Bali; bloody resistance by the royal courts ended in *puputan* (suicide charges) into Dutch fire. However, the Dutch ruled Bali through the surviving aristocrats; the latter became administrators and major landowners, as well as playing up their religious authority. Colonial legislation rigidified caste hierarchies at the expense of rising commoner families. After Indonesia won its independence from the Dutch in 1950, increasing competition over land in an overpopulated island (suffering, moreover, the effects of the catastrophic eruption of Gunung Agung, Bali's most sacred volcano in 1963) and the penetration of rival nationwide political networks into Balinese rural society intensified social conflicts, culminating in the anticommunist massacres of 1965–66 that claimed 100,000 lives and annihilated whole villages.

Suharto's New Order regime (1966–1998) promoted Bali as a destination for international tourism, seeing the resulting income flow as essential to achieving its development goals for Indonesia as a whole. At the same time, the government sought to minimize what it considered to be the erosive effects of tourism on traditional Balinese culture by confining large-scale tourist infrastructure (especially high-class hotels) to a zone on Bali's southern peninsula; towns there, such as Kuta, are barely distinguishable from beach resort areas in other parts of the world, including the appearance of some European

nude bathing. Catering to foreign “hippies” and other budget travelers, cheap guesthouses have proliferated beyond the official tourist zone, and domestic tourism into Bali, particularly among urban middle-class Javanese and Chinese-Indonesians discouraged from travel abroad by heavy airport departure taxes, has grown massively.

Still, tourism is only one of the phenomena transforming contemporary Balinese culture: the same economy- and nation-building program pursued by the government in the rest of the country, including everything from the Green Revolution to the institutionalization of religion, has been a more important one as have been generic industrialization and urbanization. Balinese indigenous culture is changing and thriving, driven by internal dynamics to which tourist consumption of such things as abbreviated dance shows is peripheral. The complex situation is captured in the following paradox: while, in the cities, preparation of daily offerings to gods and demons has become a noticeably rushed affair with women and girls often simply buying offerings at market before heading to work, at the same time, the productivity of workers in the garment industry is lowered by the time and energy they spend on traditional rituals, ignoring workplace rules.

Bali has remained largely free of the violence that has afflicted some other parts of Indonesia during and since the fall of Suharto, though it was the site of the most murderous terrorist attacks in the world since the 11 September 2001 attacks in the United States, the suicide bombings of Denpasar tourist bars by (ethnically Javanese) Islamic militants on 12 October 2002 (202 people were killed, of which 88 were Australians and 38 Indonesians). The assertion of Islamism in Indonesia as a whole, though restrained by moderate Muslim, secular, and Christian counter-pressure, has caused some concern for the Balinese: a recent “anti-pornography” bill has been viewed as potentially threatening traditional Balinese religious art.

## <sup>2</sup>LOCATION AND HOMELAND

Separated by narrow straits from Java to the west and Lombok to the east, the island of Bali covers 5,808 sq km (2,243 sq mi), or an area slightly larger than the state of Delaware. Its population of 3.4 million is, however, four times as high as that of Delaware. Population density (2005 figures) reaches 601 people per sq km., three times as high as in neighboring West Nusa Tenggara, more than six times than in East Nusa Tenggara, and 79% that of East Java. An unbroken east-west chain of volcanoes leaves a narrow plain along the north coast. A series of valleys carved by swiftly flowing rivers stretches south to the Indian Ocean; the southernmost tip of the island is an arid limestone peninsula.

The axis between the mountains and the sea dominates the Balinese sense of orientation. For instance, custom dictates that one should sleep with one’s head facing *kaja*, the direction of the divine mountains, and one’s feet facing *kelod*, the direction of the demonic sea (the soles of the feet should not face a party that must be shown respect, in this case the mountains). *Kaja* can mean “north” or “south” depending upon the location.

The Balinese have not been known as a seafaring people nor, before the 20th century, as migrants (except in western Lombok). Overpopulation, however, has forced many Balinese to participate in government-sponsored transmigration to South Sumatra, Central Kalimantan, Sulawesi, and Nusa Tenggara

(Balinese form 3% of the population of West Nusa Tenggara province). On the other hand, Bali attracts people from other islands, especially Java; 11% of the population of Bali is ethnically non-Balinese.

## <sup>3</sup>LANGUAGE

The Balinese speak an Austronesian language whose closest relative is Sasak, the language of Lombok. Although now they increasingly use Latin letters, their traditional script was a calligraphically distinct version of the Javanese alphabet. From its earliest recorded form (in an inscription from AD 882), the Balinese language shows profound influences from Sanskrit and Kawi (Old Javanese).

Balinese linguistic etiquette employs a system of politeness levels (High, Refined, Middle, and Low). Most words only have one form in all levels, but a few hundred of the most basic words, ranging from conjunctions to names of body parts, do have more than one form, e.g., “to eat” can be *ngunggahang* (referring to a Brahmana priest); *ngajeng* (referring to other high-caste people); *nglungsur* (referring to common people); *naar* (referring to family members); or *ngamah* (referring to animals).

Nowadays, the High (*tinggi*) language is spoken only to Brahmana priests; in most families, no more than one member is fluent in it, and so he or she alone approaches Brahmana with requests. The Refined (*alus*) level is used when addressing higher-status people, older people, and one’s parents. The Low (*rendah*, also referred to as Ordinary, *biasa*, or Coarse,

Balinese dancers take part in a peace parade in Denpasar on Bali island. The peace parade took part one day before the anniversary of the bomb blasts that ripped through a night club in Legian Kuta, killing about 200 people in October 2002. (Sonny Tumbelaka/AFP/Getty Images)

*kasar*) level serves for talking to those one considers of equal or inferior status: children; relatives; intimate friends; and lower-status people, such as maids; men address their wives with the Low language. Strangers whose status is as yet unknown are addressed with a mixture of Refined and Ordinary levels. The Middle (*madia*) level is used to people of equal status with whom one is not intimate. When two Balinese meet for the first time, they begin the conversation in the Middle level, and then, once it becomes clear who is of higher status than the other, each speaker adjusts his level accordingly.

Although the old etiquette is scrupulously observed in the context of religious rituals and other customary activities, in other contexts this is becoming less and less the case. In recent times, higher-caste people have been using the Refined level with lower-caste people, particularly if the latter rank high in the national bureaucracy. Classmates converse in the Ordinary level, regardless of caste differences. In schools in the provincial capital of Denpasar, teachers address students using the Middle level (in conservative east Bali, the medium of instruction is the Refined level, which is also what strangers there will use the first time they meet). As in Java, the national language, Bahasa Indonesia, taught in school at all levels, offers a means of communication whereby people can avoid locating themselves and others within the traditional hierarchy

(though not necessarily evading any of modern society's status differences).

One common way of referring to adults is by a name that places them in relation to a child or grandchild, e.g., "Father (*Pan*) of X," "Mother (*Men*) of Y," or "Grandfather (*Kak*) of Z." Moreover, custom assigns names according to birth order among siblings. For Sudra families, the first-born will receive the name "Wayan," the second "Made," the third "Nyoman," the fourth "Ketut," and the fifth "Putu." To these, the Wesya will prefix "Gusti" for males and "Gusti Ayu" or "Ida"/"Ni," for females; the Satrya "Dewa" (males) and "Dewa Ayu" (females) or "Agung Gede," and the Brahmana "Ida Bagus" (males) or "Ida Ayu" (females).

#### **4 FOLKLORE**

*Leyak* are witches who are ordinary people by day but who leave their bodies at night, taking any shape (a monkey, a bird, a disembodied head, a ghostly light). Haunting cemeteries and crossroads, *leyak* can cause disease or crop failure, poison food, or introduce foreign objects into their victims' bodies. Amulets or *mantra* (incantations) acquired from a priest or shaman can combat them. A person who dies without any apparent cause is

regarded as having been a *leyak* whose spirit, for whatever reason, never returned to the body after a night's roaming.

## 5 RELIGION

Unlike the vast majority of Indonesians, the Balinese are not Muslims but Hindu (except for tiny Christian and Buddhist minorities). Their Hinduism is not a wholesale transplant of the Indian religion but rather consists of the grafting of Indian elements onto an indigenous stem. Balinese believe that *kesaktian*, "potency" or "magical power," is present in ritual objects, trees, stones, mountains, etc., and must be respected. The object of their religious practices is to maintain the equilibrium between the "upper" (pure, good, constructive) forces and the "lower" (impure, evil, destructive) forces. Thus, Balinese make offerings to both gods and demons, e.g. prepared food, especially rice cakes, or leaf-weavings for the former and the blood of freshly slaughtered animals for the latter.

The Balinese recognize an immense range of supernatural beings, ranging from demons to ancestral spirits to divinities, such as the sun god Surya (a manifestation of the Hindu deity Siwa [Shiva]) and the rice goddess Dewi Sri. Since the Indonesian state philosophy Pancasila emphasizes monotheism, the organization Parisada Hindu Dharma (founded in 1959) has promoted the worship of Sang Hyang Widhi Wasa, a supreme being of which all the other deities are lesser manifestations. This "reform" has not altered everyday practices other than to install Sang Hyang Widhi Wasa's shrine, an empty lotus seat, in every temple.

All rituals aim to purify and thus require holy water that people can only obtain from priests. Other religious specialists include several types of *balian*, "shamans" (masseuses, healers, augurs, spirit mediums, and so-called "literate" *balian*s who use *lontar*, palm-leaf manuscripts, in their magic).

## 6 MAJOR HOLIDAYS

Each of the thousands of temples on Bali celebrates its own *odalan* or festival, usually lasting three days. The timing of these festivals is determined by a calendrical system including a 210-day ritual cycle and a 12-month lunar cycle, the latter numbered according to the Indian *Saka* year, the first of which corresponded to AD 78. In addition, there are three "week" cycles: a Balinese market week (three days: Pasah, Beteng/Tegeh, Kajeng); a Javanese market week (five days: Umanis, Paing, Pon, Wage, Kliwon) and the seven-day week.

*Galungan*, a festival celebrated throughout the island, runs for 10 days, beginning with the first day of the eleventh week of the 210-day year; the Balinese invite the gods and deified ancestors to descend from heaven, which is directly above the island's greatest mountain, Gunung Agung. As *Galungan* originated as a harvest festival, *penjor*, high bamboo poles bending with decorations, are raised in front of each house and temple to represent fertility.

*Nyepi* occurs on the first day of the *Saka* year. While on the eve people make a great deal of noise, either to drive demons away or call their attention to offerings laid out for them, on *Nyepi* itself people observe absolute quiet—not even vehicles may travel.

*Eka Dasa Rudra* occurs only once every 100 years, the last time being in 1979. This entails several weeks of ceremonies at Bali's supreme temple, Besakih, on the slopes of Gunung

Agung, whose aim is to purify the entire universe by exorcising Rudra, the chaotic aspect of Siwa.

## 7 RITES OF PASSAGE

Depending on the caste or wealth of a family, as many as 13 life-cycle rituals (*manusa yadnya*) can be performed: the sixth month of pregnancy; birth; the falling off of the umbilical cord; the 12th, 42nd, and 105th days after birth; the 210th day after birth, marking the child's first "touching of the earth"; the emergence of the first adult tooth; the loss of the last baby tooth; the onset of puberty (first menstruation for girls); tooth-filing; marriage; and purification for study.

Great care is taken to show respect to a newborn infant's "spiritual siblings": the placenta, the amniotic fluid, the blood, and the *lamas* or *banah*, a natural yellow salve covering the skin; the placenta is buried under a river stone at the entrance of the sleeping house. These "four companions" (*kanda empat*) can, if properly treated, protect the child in life, but, if neglected, may harm it.

As a necessary prerequisite to adulthood, tooth-filing is performed on teenagers to purge them of the "animal" nature, associated with the evils of lust, greed, anger, drunkenness, confusion, and jealousy, that are symbolized by the fang-like upper canines.

Full adulthood, in the sense of complete social responsibility, begins only with marriage. Wedding protocol involves roughly three stages: a ceremony whereby the boy's family asks for the hand of the girl from her family; the wedding ceremony itself; and a formal visit by the new couple and the groom's family to the bride's family so that the bride may "ask leave" of her own ancestors. This would also be the time for the groom's family to deliver the bride-price, a custom largely dropped by educated people. Such "weddings by proposal" involve many expensive rituals and feasts, to which kin, neighbors, and *banjar* will contribute aid. A cheaper and very popular alternative is "elopement" (*mamaling* or *nyogotin*). A boy and a girl spend a night at a friend's house, a publicly known deed after which they must marry. The boy's family holds a wedding ceremony to which the girl's family are not invited, since the latter are obliged to appear angry even if they secretly consented to the match. Some time afterwards, bringing gifts, the boy's family pays a formal visit to the girl's family in hopes of reconciling her family to the union. After this, the girl's side can publicly accept the marriage.

As a proper cremation ceremony is extremely expensive, the family may take months or even years to accumulate the necessary funds, installing the body in a special pavilion or burying it temporarily in a cemetery. Many families wait until a high-caste family holds a cremation, in conjunction with which they can perform ceremonies for their own deceased at a much reduced cost. For the cremation itself, the body is placed in an ornate animal-shaped coffin installed in a portable tower, whose number of levels (roofs) reflects the status of the deceased (as many as 11 for royalty). Dozens of mourners carry the tower to the cremation field, rotating it at each crossroads so that the deceased's spirit cannot find its way back home to haunt the living. Under the supervision of a priest, the body, coffin, tower, and offerings are burned; the ashes are collected and with further ceremony cast into the sea. Only after all this has been done can the deceased become a deified ancestor.

One striking exception to the above pattern is the Bali Aga people of Trunyan: after mourning, the body is laid under a tree in a forest-cemetery and allowed to rot away.

## 8 INTERPERSONAL RELATIONS

Following the Hindu scriptures, Balinese society has been divided since the Majapahit period into four castes (which do not correspond to occupation in any straightforward way): Brahmana; Satria; Wesia; and Sudra. Comprising 15% of the Balinese, the first three (the Triwangsa) claim direct descent from transplanted Majapahit nobility, the privileged “insiders” of the pre-colonial kingdoms, while the Sudra majority were literally the “outsiders” (*Jaba*). However, a small minority, the Bali Aga or Bali Turunan, claiming to be the “original [pre-Majapahit] Balinese,” have kept themselves apart in mountain villages. The position of the castes relative to each other has always been a matter of great dispute. Only under colonial rule have the Brahmana been able to assert a certain superiority, a status unconceded, for example, by a Sudra subcaste, the Pande (blacksmiths in origin), who take holy water from priests of their own subcaste.

Balinese society divides into a great variety of organizations; an individual belongs to several of these groups at once (their memberships never completely overlap). All these organizations have a leader and a set of written regulations (*awig-awig* or *sima*, passed down through the generations). Agriculture, house repair, rituals, emergencies, and other major tasks require the cooperation of members of these organizations (though nowadays, hiring workers is often cheaper than feeding helpers).

The *banjar* is a subvillage residential unit, which in the lowlands may include as many as 100 families or 500–600 people; it is led by a *klian banjar*, elected by the membership (though often from a hereditary line), who is responsible for arbitrating conflicts falling under the jurisdiction of customary law, as well as leading the banjar’s religious activities. Eligible to join upon marriage, men may have to pay a fee for banjar membership; a man can expect aid from fellow members in staging his own family’s rituals and feasts.

The *subak* is an association of individuals who depend on the same irrigation network (which does not match village or banjar boundaries). *Subak* join other *subak* in reliance upon one of several mountain-lake temples from which their water ultimately derives.

*Sekaha* are associations for specific purposes, temporary or permanent, e.g., music, dance, and theater ensembles, or separate clubs for young men and young women.

Traditional etiquette, now increasingly confined to ceremonial occasions, requires that people of higher status (including greater age) sit on a physically higher place and closer to the *kaja* direction and the east. For Brahmana priests and in ceremonies, the greeting is “*Ohm Swastiastu*,” with a small bow and the palms put together at the chest (this is now being promoted as an equivalent to the Muslim “*Assalamu alaikum*”). In opening conversation with higher-status people, one also bows; but to children and lower-status people, one simply nods. One takes advice, instruction, or criticism with “*nggih*” (a deferential “yes”) or with silence and without contradicting; one does everything possible to comply with a request or command. Adults correct children indirectly, e.g., a mother will tell her children that she herself will be scolded if the child misbe-

haves, or that misconduct is “low-caste” behavior. High-caste wives do not dare to correct older people; they either let them do as they will or appeal to another older third party, such as a mother-in-law. Self-deprecation (referring humbly to one’s own person, property, or achievements) is essential to polite conversation.

Between adolescents of the opposite sex, only chatting at food stalls in the presence of others is acceptable. Balinese joke freely about sex but take great care to keep the genitals covered and to keep garments that have been in contact with them (especially those of menstruating women) in a place where they will not be above people’s heads.

## 9 LIVING CONDITIONS

Inhabited by a group of brothers and their respective families, a residential compound (*uma*) is surrounded by a wall pierced by a narrow gate. Within it, grouped around a central courtyard, are separate pavilion-like buildings on the *kelod* side for cooking (one for each nuclear family), storing rice, and keeping pigs, and in the other directions ones for sleeping (on the *kaja* side for grandparents, parents, or the senior brother; on the east for guests; on the west for children). Each compound has a shrine (*sangguh*) in the *kaja*-east corner. A thatched pavilion (*bale*) serves for meetings and ceremonies, and a walled-in pavilion (*bale daja*) stores family heirlooms. Rivers serve for toilet and bathing functions. The compounds of *banjar* members cluster around a meeting pavilion (*bale banjar*), which nowadays often has a television and ping-pong tables.

Villages (*desa*) may be compact (in the mountains) or dispersed among fields and gardens (in the lowlands). Each village has three, usually separate, temples: the most *kaja* is the *pura puseh*, associated with the god Wisnu and the purified ancestors; at the center is the *pura bale agung* or *pura desa*, dedicated to Brahma; and most *kelod* is the *pura dalem*, associated with Siwa and the not-yet-purified dead.

Bali has a Human Development Index (combining measures of income, health, and education) of 69.8 (2005 score), slightly higher than Indonesia’s national HDI of 69.6. The province’s GDP per capita is us\$10,033, relatively high for Indonesia (cf. us\$9,784 for West Sumatra and us\$8,360 for North Sulawesi, two regions with much higher HDIs, us\$6,293 for Central Java, which has the same HDI, and us\$6,151 for West Nusa Tenggara, which has among the lowest HDIs in the country). In 2000, the rate of infant mortality stood at 35.72 deaths per 1,000 live births, the lowest in the country after Jakarta, Yogyakarta, and North Sulawesi (by contrast, neighboring West Nusa Tenggara’s infant mortality rate was 88.55, the highest in the country).

## 10 FAMILY LIFE

Marriage between members of different castes is now common, although before Indonesian independence a woman marrying a man of inferior caste would be banished with her spouse from their locality. Unions between a husband’s sisters and a wife’s brothers remain taboo. With some exceptions, a newlywed couple remains in the groom’s compound; children belong to the clan or subclan of the compound where they live (either the father’s or mother’s as the case may be). Households include married sons and their families until they are able to establish their own households. At least one son must stay behind to care for the parents in their old age.

Clan organizations (*warga*) for the Triwangsa include branches scattered all over the island. The senior family (of most direct descent from the common ancestor) keeps the clan history and genealogy (*babad*).

## **11 CLOTHING**

In work outside the home, especially for office and store jobs, Balinese wear Western-style clothes. Around the house, men wear shorts and a tank-top or, alternately, a sarong. Men's traditional clothing includes a *kamben sarung* (a tube sarong) of *endek* or *batik* cloth. In temples, a *songket* cloth (woven with gold- or silver-thread designs) is worn over the *kamben*; for rite-of-passage ceremonies, the *kamben* itself would be of *songket*. Men are very particular about how the *kamben* and the head cloth (*udeng*) required for formal occasions are tied. The lower edge of the *kamben* hangs longer in the front (held up while walking) and may be hitched up trouser-like for work in the fields.

Women wear a *kamben lembaran* (a nontube sarong), usually of mass-produced *batik* cloth, often with a sash (*selempot*) when outside the house; going about outside the house with breasts exposed has long been rare. When carrying things on the head (the usual method), women put a cloth between the load and the head. For temple ceremonies, women wear a *sabuk* belt wrapped around the body up to the armpits and put a *kebaya* jacket over this (but no *kebaya* or *selempot* for rite-of-passage ceremonies). As most women now wear their hair too short for traditional coiffures, they wear wigs to complete ritual dress.

## **12 FOOD**

Balinese consume their ordinary meals individually, silently, quickly, and at no fixed times, snacking very frequently. Everyday food consists of rice and vegetable side dishes, sometimes with a bit of chicken, fish, tofu, or tempeh, and seasoned with chili sauce (*sambel*) made fresh daily. Many dishes require *basa genep*, a standard spice mixture (sea salt, pepper, chili, shallots, garlic, shrimp paste, ginger, galangal, tamarind, candlenuts, sugar, coriander, and citrus).

For ceremonial feasts, much male labor goes into the making of *ebat*, chopped pig or turtle meat (including innards) mixed with spices, grated coconut, and *lawar* (slices of turtle cartilage or unripe mango). Other Balinese specialties are *sate lembat* (barbecue skewers consisting of ground meat rather than pieces of whole meat), *babi guling* (stuffed pig turned over a fire), and *bebek betutu* (stuffed duck wrapped in banana leaves and cooked in ashes).

## **13 EDUCATION**

In 2005, the level of literacy stood at 86.22%, low by Indonesian national standards but comparable to provinces with high population densities and high numbers of poor, such as Central Java, East Java and South Sulawesi. (See also the article entitled **Indonesians**.)

## **14 CULTURAL HERITAGE**

An essential part of religious ceremonies as well as entertainment (for Balinese and tourists), traditional performing arts are highly developed and vigorously pursued. A great range of musical ensembles exist, variants of the *gamelan* orchestra

(drums, flutes, and bronze instruments or their substitutes of iron or bamboo). Examples are the *gong gede*, which plays slow, stately, and very old temple music; the delicate *gamelan semar pegulingan* accompanying court dances (also said to have once provided music for the palace bedchamber); and the dynamic *gong kebyar*, dating only from the beginning of the 20th century, also accompanying dance, theater, and rituals. A vast array of dances are performed, the most famous being the *Baris* dance, depicting drilling warriors; the *Legong* dance, depicting dueling princesses (sometimes girls in trance execute its intricate movements without previous instruction); and the *Barong*, in which a mythical lion, symbol of the good, combats the witch Rangda. Several dramatic genres are practiced: the *wayang kulit* shadow play (differing from the Javanese version in the form of the puppets and in the accompaniment by four *gender* instruments) and various forms of masked and unmasked theater (*topeng*, *wayang wong*, *gambuh*, and *arja*).

Balinese literature has been preserved incised on *lontar*, palm-leaf books. It divides into the epics of the gods and heroes of the previous world (in Kawi, Old Javanese) and tales of the old Balinese kingdoms (in Literary Balinese).

## **15 WORK**

Some 70% of the Balinese earn a living from agriculture, which, where water is sufficient (as in the south), means wet-rice cultivation and elsewhere means nonirrigated crops, such as dry rice, maize, cassava, and beans. Sharecropping has become common in the most densely populated areas. Coconuts are grown along the coasts; fruits, such as citrus and *salak* (snakefruit), are grown for the off-island market. Pigs, ducks, and cattle are kept; fish are raised in flooded paddies as well as caught in the sea.

Many Balinese find employment in cottage and medium-scale industries. Since the 1970s, the garment industry has expanded dramatically; there are also factories for printing, canning, and coffee and cigarette processing. With a flood of foreign and domestic visitors every year, tourism provides work in hotels, travel bureaus, guide and taxi services, and craft shops, as well as money for performing and visual arts.

## **16 SPORTS**

Although officially banned in 1981 as a venue for intense gambling, cockfights are still permitted as a necessary part of temple rituals (three rounds to appease demons). Cricket fighting continues as a milder substitute.

## **17 ENTERTAINMENT AND RECREATION**

See the article entitled **Indonesians**.

## **18 FOLK ART, CRAFTS, AND HOBBIES**

Painting, stone carving, and woodcarving in traditional and modernist styles, puppet making, mat- and basket weaving, and gold- and silver working are the most prominent crafts, with much production now directed towards the tourist market.

The most popular locally made cloth is *endek*, a kind of *ikat* (tie-dyed weft and solid warp). Particularly precious is another kind of *ikat*, *geringsing*, whose complicated dyeing process takes months to complete.

## 19 SOCIAL PROBLEMS

See the article entitled **Indonesians**.

## 20 GENDER ISSUES

Bali's Gender-Related Development Index (combining measures of women's health, education, and income relative to men's) is 61.2, significantly above Indonesia's national GDI of 59.2 and dramatically above that of both neighboring provinces, East Java (56.3) and West Nusa Tenggara (51.6, the second lowest in the country). The province's Gender Empowerment Measure (reflecting women's participation and power in political and economic life relative to men's), however, is among the lowest in the country, 45.6, compared to the national GEM of 54.6.

Although menstruating women are considered ritually impure and may not enter temples, discrimination against women is not pronounced. However, there is a clear division of labor: women buy and sell in the markets, cook, wash, care for the pigs, and prepare offerings; men work for the *banjar*, prepare spices and meat for feasts, play in orchestras, attend cockfights, and drink together in the early evenings. Women join the caste of their husbands; the wife of a Brahmana priest succeeds to his duties upon his death. Wives have control over their dowries and over their own and their husbands' earnings, have ownership of their clothing and jewelry and of family's small livestock (a form of capital, and a significant one, in itself), and in general manage family finances.

If a husband abuses his wife, is impotent, does not support his family, or takes a co-wife (*madu*) without his first wife's approval, she may return to her own family and, if she is able to convince a court of her husband's guilt, she gets custody of the children. Upon divorce a wife has rights to a share of assets jointly acquired with her husband. A wife who neglects her duties, commits adultery, or remains childless may be "thrown away" by her husband only if they had married by elopement. If they had married with familial consent or arrangement from the very beginning, it is much more difficult for him to do this, and he may go live with his lover while continuing to support his wife. In principle, inheritance goes only to men, but women can be classified as "males" for legal purposes and thus inherit (while their husbands become classified as legally "female").

# BALŪCHĪ

**PRONUNCIATION:** bal-OOCH-i

**ALTERNATE NAMES:** Baloch; Balochi

**LOCATION:** Pakistan (Province of Baluchistan); Iran; Afghanistan; Turkmenistan; Oman; East African coast

**POPULATION:** 7.5–11 million

**LANGUAGE:** Baluchi

**RELIGION:** Islam (mostly Sunni Muslim; also the Zikrī sect)

**RELATED ARTICLES:** Vol. 4: Pakistanis

## 1 INTRODUCTION

The Balūchī (also Baloch, or Balochi) are a semi-nomadic tribal people inhabiting the southern mountains and coastal regions of South Asia's west+ern borderlands. Though united by a common language and culture, they have suffered the fate of many groups in the region in that their traditional homeland is divided between several political units—Pakistan, Iran and Afghanistan.

The Balūchī, who believe they are descendants of Amir Hamza, an uncle of the Prophet Muhammad, trace their origins to tribes living in the region of Aleppo, in Syria. Migrating eastward, these tribes reached the southern shores of the Caspian Sea and from there settled in their present homeland sometime between the 5th and 7th centuries AD. Isolated by the remoteness and inhospitable nature of their lands, they existed for several centuries as more or less independent groups organized along clan lines. Persians, Arabs, Hindus, and others have laid claim to parts of Balūchistan, the traditional Balūchī homeland, at various times. None, however, succeeded in effectively establishing political control over the area. In the 12th century, Mir Jalal Han succeeded in uniting some of the Balūchī tribes under the short-lived First Balūchī Confederacy. Tribal conflict and intertribal rivalries were commonplace throughout the region, often instigated by competition for land, revenues, and resources. By the 16th century, the Balūchī were organized into three political entities—the Makran State, the Dodai Confederacy, and the Kalat Confederacy. In the 18th century, virtually all of the Balūchī tribes were united in a loose confederacy under the banner of Mir Adbullah Khan of Kalat.

The British annexation of Sind in 1843 pushed the frontier of British India to the borders of Balūchistan. Concerned with a possible Russian threat to their Indian Empire, and also with gaining access to the strategic Afghanistan frontier, the British sought to extend their influence over the Balūchī. They achieved this by playing local leaders against each other, exploiting the Balūchī through a policy of divide and conquer. Tribal chiefs were guaranteed local autonomy and cash payments in return for allowing British garrisons in their territory. Some areas along the Afghanistan border were brought under direct British administration. By the early 20th century, British control over the region extended to the borders of Afghanistan and Iran.

The British Province of Balūchistan passed to Pakistan when that country came into being in 1947. Pakistan also inherited the problems of the region, with the fiercely independent and warlike Balūchī tribes resisting integration into the new political state. Opposition to the central government led to brutal

confrontations with the Pakistani military in the mid-1970s. Indiscriminate air attacks were mounted on villages and civilian populations in an effort to subdue the Balūchī dissidents. Today, the Balūchī see themselves as a neglected minority in a country, whose government is dominated by non-Balūchī ethnic groups such as the Punjabis.

## 2 LOCATION AND HOMELAND

Balūchī speakers today are estimated to number about 8 million people. This figure is based on linguistic data, as census information from the countries in which the Balūchī live is unreliable. (The 2002 Pakistan Census estimate for the population of Balūchistan Province is 7,215,700.) In addition, there are perhaps half as many people again who, though essentially Balūchī in culture, have adopted the language of their neighbors. Thus, if cultural rather than linguistic criteria are used, the Balūchī in Pakistan could total around 11 million in number.

The traditional homeland of the Balūchī extends west from the borders of the Punjab and Sind, across a small section of Afghanistan, to the areas of the Iranian Plateau southeast of Kirman. The southern boundary of the region is defined by the coast of the Arabian Sea and the Gulf of Oman. The section of this territory falling within Pakistan makes up the Pakistani Province of Balūchistan, in which some 7 million people or 70% of the total Balūchī population live in Balūchistan.. Some 1-2 million Balūchī reside within the borders of Iran, and a further 300,000 are found in Afghanistan. Balūchī communities are also found in Turkmenistan in Central Asia, in Oman in Arabia, and along the coast of East Africa, and also in the Pakistani city of Karachi.

Apart from the fringing coastal lowlands in the south and the arm of the Indus flood plain that extends towards Sibi in Pakistan, the entire region is characterized by harsh, inaccessible terrain. Rugged mountain ranges are interspersed with upland plateaus and desert basins. In Pakistan, the eastern margins of Balūchistan are defined by the north–south-running Kirthar Hills and the Sulaiman Ranges. The latter average 1,800–2,100 m (6,000–7,000 ft) in elevation, but in places mountain peaks exceed 3,000 m (10,000 ft). Zargun, near Quetta, reaches a height of 3,591 m (11,738 ft). In southern Balūchistan Province, the mountain ranges swing westward to parallel the Makran coast. The northwest of the province is made up of the desert basin of the Hamun-i-Mashkel, a region of bare sun-cracked clay, sand dunes, and marshes. The entire region experiences an arid climate, with the hot summers and cold winters typical of desert regions.

The Province of Balūchistan is rich in natural resources, though its inhabitants perceive that they receive little benefit from this and that they are exploited by the central government.

## 3 LANGUAGE

The Balūchī language is an Indo-Iranian language of the Indo-European linguistic family. Related to Kurdish and Pashto, its origins are apparently to be found in the civilization of the ancient Medes or Parthians. Modern Balu chi shows borrowings from Persian, Arabic, Sindhi, and other languages. Distinctions are made between Western, Southern, and Eastern Balu chi, and six individual dialects of Balūchī are identified. No written form of the language existed before the early 19th century. Persian was used for official purposes until that time.

Subsequently, Balūchī was written in the Persian and Urdu scripts. With the rise of Balūchī nationalism, an adaptation of the Arabic script known as Nastaliq has been adopted for writing purposes.

#### 4 FOLKLORE

Bravery and courage are respected by the Balūchī, and many tribal heroes who remained true to Balūchī values are revered and honored in folk songs and ballads. Doda, for example, is remembered for defending the principle of *bāhot*, or protection. Legend tells of a wealthy widow, Sammi, who sought protection in the village of Doda Gorgez. One day, Beebagr, a relative of Sammi's deceased husband, carried off some of Sammi's cows. Even though Doda had just been married, he pursued the thieves because he was honor-bound to safeguard the property as well as the life of the widow. Doda was killed in the ensuing battle (a similar tale is found in Rajasthani folklore). In keeping with Balūchī tradition, Doda's death was eventually avenged by his brother Balach.

Balūchī culture incorporates many elements that pre-date Islam. The veneration of tribal heroes and belief in the power of ancestral spirits reflect these ancient practices. In the past, it was customary for the Balūchī to perform certain rituals and even sacrifice at the graves of heroes. No doubt under later Islamic influence, such rites are now undertaken at the shrines of Muslim saints.

#### 5 RELIGION

The Balūchī are Muslim, mostly Sunni but also including members of the Zikrī sect. Zikris (pronounced "Zigris" in Balūchī) were estimated to number over 750,000 people in 1998. If they increased in numbers at the same overall rate as Pakistan's population, today they would number close to 1 million people. They live mostly in Makran and Las Bela in southern Pakistan and are followers of a 15th-century *mahdi*, an Islamic messiah, called Nur Pak ("Pure Light"). Zikrī practices and rituals differ from those of orthodox Islam. For example, they do not observe the month of fasting during Ramadan. Zikris see themselves as Muslim, but in the eyes of Sunnis they are nonbelievers. This is because they place the teachings of their mahdi above those of Muhammad. As a result, Zikris are discriminated against by the dominant Sunni majority in Pakistan. They are also subjected to personal violence as well as attacks on their places of worship by Muslim extremists.

Balūchī Sunnis follow the teachings of Muhammad, keeping to the practices and principles of Islam as set out in the Koran (*Quran*). Religious instruction and the performance of religious ritual and observances lie in the hands of the *mullahs* (priests). However, many Baluch, and particularly the Zikris, are ardent followers of Sufi saints or *pirs*. These mystics, who can cure illnesses, foretell the future, and are reputed to perform miracles, are seen as evidence of the direct hand of God in the affairs of humans. For the Balūchī, religious beliefs and practices are very much an individual matter. The Balūchī do not support the idea of the religious state that underlies national policies implemented by Pakistani governments in recent years.

#### 6 MAJOR HOLIDAYS

The Balūchī observe the festivals of Id ul-Fitr, which marks the end of Ramadan, and Id ul-Adha, the Feast of Sacrifice that

falls at the end of the Islamic year. On these occasions, clean clothes are worn in honor of the occasion. The day begins with prayer, and the rest of holiday is spent in gambling, horse-racing, and general merry-making. Id ul-Adha is celebrated with the sacrifice of goats and sheep and the distribution of the meat to relatives, friends, and the poor. Alms are distributed at this time. The tenth day of Muharram is observed by visits to the graves of relations, followed by prayers and the distribution of alms to the poor. In general, the Balūchī pay less attention to celebrating festivals than do other Muslim peoples in South Asia.

#### 7 RITES OF PASSAGE

The birth of a child is greeted with much rejoicing, music, and singing. Food and sweets are prepared and distributed to commemorate the event. The birth of a male child is cause for greater celebration, and some tribes barely recognize the arrival of a girl. The naming of the child usually takes place on the sixth day after birth. Children may be named after deceased ancestors, days of the week, trees, plants, or animals. Names peculiar to the Balūchī include Lalla, Bijjar, Kannar, and Jihand. Other ceremonies mark occasions such as the circumcision of males, the child beginning to walk, and the first wearing of trousers. This last event, occurring around the age of 15, was traditionally an important stage in a boy's life. It marked his becoming an adult and the time when he took up arms and joined his people in tribal warfare.

Balūchī burial rites follow usual Islamic practices. The corpse is taken to the graveyard, where it is washed and dressed in a shroud. A *mullah* (Muslim priest) reads the prayer for the dead over the body before it is committed to the grave. The body is laid in a north-south direction, with the head turned toward the west, i.e., facing Mecca. Sweets are passed among the congregation, and prayers are offered up before the mourners disperse. For nomads on the move, the body is placed in a pit dug to serve as a grave, rather than in a cemetery. A goat or sheep is killed, and the meat is cooked and distributed instead of sweets. The initial mourning period lasts for three or five days, depending on the sex of the deceased. During this time, normal activities are restricted, and women discard their jewelry and wear black dresses. The end of this period is marked by *asrokh*, a ceremony involving prayers and the distribution of meat. A second period of mourning lasts several months, during which friends come from a distance to offer condolences to the family of the deceased.

#### 8 INTERPERSONAL RELATIONS

When Balūchī greet each other, they normally shake hands. However, if an ordinary tribesperson meets a religious leader, the tribesperson reverently touches the leader's feet. A meeting usually commences with inquiries after health (*durāhi*) and then proceeds to an exchange of news (*hāl*). Not to ask for news of the person one is meeting is considered the height of rudeness.

The Balūchī are guided in their daily lives and social relations by a code of conduct known as *Baluchmayar*, or "the Balūchī way." It is expected that a Balūchī be generous in hospitality to guests, offer refuge to those who seek protection (*bāhot*), and be honest in dealings with others. A Balūchī man should be merciful to women and refrain from killing a man who has sought sanctuary in the shrine of a *pir* (Sufi saint). He

Balūchī leaders of Pakistani opposition parties raise their hands during a demonstration in Quetta, Pakistan. Some 8,000 opposition activists protested in 2006 against the military operation in the restive southwestern Pakistani province of Baluchistan. (Banaras Khan/AFP/Getty Images)

is equally expected to defend his honor (*izzat*) and that of his women and family. Some insults are avenged only by blood, leading to reprisals and blood-feuds that have lasted generations. When both parties involved agree to it, such feuds are settled by the tribal council or *jirgāl*. Invariably blood-money or some form of compensation is required to be paid. Another means of resolving disputes is through *med*, a informal gathering of tribal leaders and elders who volunteer their services to help reach an end to the conflict.

The Balūchī are organized into territorially based tribes such as the Marri and the Bugti, each under the leadership of a central chief or *Sardār*. The tribes are made up of various kin-groups such as clans, clan sections, and subsections, with the smaller of these groups coinciding with the actual units of settlement found throughout the region.

## <sup>9</sup> LIVING CONDITIONS

Balūchī nomads live in tents (*gidām*) made of palm matting stretched on poles. Two upright poles are driven into the ground and a third connects them in the form of a crosspiece. The matting is thrown over this, with the corners and sides fastened to the ground with pegs and heavy stones. In winter the matting is replaced by goat-hair blankets. A coarse, goat-hair carpet forms the floor of the tent. Typical contents of the tent include a hand-mill for grinding grain, waterskins, and goat-hair sacks for holding grain, salt, and clothing. Flint and tinder are carried for making fires, and various cooking and eating utensils complete the list of household belongings. Both

the tent and its contents are transported on the backs of pack animals when the camp is on the move.

Permanent settlements are usually occupied during the summer months. They generally consist of small villages comprising a collection of mud huts clustered around the fort of a chief or headman for protection. More recent structures may be made of sun-dried brick, with houses built along narrow, winding village lanes. Both old and newer houses have an open courtyard in front, enclosed by a low mud wall or palm fence.

## <sup>10</sup> FAMILY LIFE

As in all Muslim societies, women occupy a subservient role among the Balūchī. However, they are less subject to social restrictions than are women among other Muslim peoples in South Asia. Traditionally, *pardah* (seclusion) was not followed, although some upper-class families have now taken up the custom. In addition to household chores, women share in the tending of the family's herds. The gathering of wild plants, water, and firewood are specifically women's work.

Balūchī have strong prohibitions against marrying outside the Balūchī community. Marriages are arranged, with the union of first cousins being common. Such a match has the advantage of strengthening the ties between related families that are already familiar with each other. A bride-price (*lab*) consisting of cash and livestock is customary, although in certain instances an exchange of brides is negotiated. Islamic law permits polygamy, but monogamy is the norm among the Balūchī. Adultery was traditionally punishable by the death of

the guilty parties under tribal law. Divorce occurs for reasons such as barrenness but is considered a matter of great disgrace. A widow returns to her father's home on the death of a husband, although she is allowed to remarry if it is acceptable to her family. Inheritance of property passes from father to son, a woman keeping only her personal belongings such as utensils, clothing, and jewelry.

### **11 CLOTHING**

Traditional clothing for the Balūchī man is a long, loose shirt (*jāmag* or *kurti*) that reaches below the knees, baggy trousers (*salwār*), and a turban (*pāg*) made of a long cloth wound around a turban cap. Shoes of leather or palm-leaf sandals complete the dress. A shawl or wrap (*chāddar*) provides extra warmth in winter but can also be used as a towel, waistband, or headcloth, or to carry objects. In the past, Balūchī wore only white, although this is now changing. An embroidered waistcoat or vest is sometimes worn over the shirt. Balu chi men may wear rings in the ears and on their fingers, but they disdain other jewelry. Hair is worn long, and most Balūchī men sport beards.

Dress for a woman is simpler, consisting of a long shift (*pa-shk*) reaching to the ankles, and a wrap used to cover the head, shoulders, and upper body. The wearing of trousers under the shift was restricted to women of high status. The clothes of better-class women are often made from silk and are elaborately embroidered. Colors are usually avoided, but widows wear black, and scarlet is popular among girls of marriageable age. Women wear an assortment of rings (nose-rings, earrings, rings on fingers and toes), necklaces, bracelets, and ornaments in the hair. Jewelry is made from gold or silver, depending on one's means.

### **12 FOOD**

The Marri Balūchī take food twice a day, in the morning and evening. The food for the family is cooked together, but men and women eat separately. The most important food-grain is wheat, though millets (*juārī* and *bājra*) and rice are also eaten. They are ground into flour and baked into unleavened bread in mud ovens. Meat is an important part of the Balūchī diet, *sajjī* being a particular favorite that is often served to honored guests. A sheep is killed, flayed, and carved into joints, with the meat being slashed and sprinkled with salt. The pieces of meat are spitted on green twigs, which are stuck into the ground in front of a blazing log. This dish is eaten with a knife, although Balūchī normally eat with their hands. Milk is drunk and also made into curds, buttermilk, and butter. In summer, a sherbet (*lassī*) is made with milk, molasses, and sugar. Dates and wild fruits and vegetables also form an important part of the Balūchī diet.

### **13 EDUCATION**

With their traditional seminomadic life-style, Balūchī have little access to formal education. Only an estimated 10% to 15% of Balūchī children attend school, mainly in the more-settled areas of the country. As a consequence, illiteracy among the Balūchī is high.

### **14 CULTURAL HERITAGE**

Although they lack a tradition of written literature, the Balūchī are heirs to a rich body of oral literature that extends back at

least to the 12th century AD. Poets and minstrels are traditionally held in high regard by Balūchī society. Epic poems, heroic ballads, romances, folk tales, and proverbs all form part of the Balūchī cultural heritage. Many works recount tales of Balūchī heroes and all embody the very essence of *Balūchmayār*, the Balūchī code of honor. Among the more famous and popular of these poems are those relating the legendary exploits of Mir Chakur, a 16th-century Balūchī warrior and chieftain of the Rind tribe. Music plays a role in all ceremonies, except death rituals which are of a more solemn nature. The Lori and Domb castes, though not of Balūchī blood, serve as professional musicians. Dancing accompanies many events such as weddings and other festivals, men and women forming separate dancing circles. Men's dances reflect the warrior traditions of the Balūchī. The drum, the lute, and the shepherd's flute are the most common instruments used to accompany singing and dancing.

### **15 WORK**

The traditional economy of the Balūchī combines dry-crop cereal farming with seminomadic pastoralism based on the herding of sheep, goats, and cattle. Of particular interest in central and southern areas is the cultivation of date palms, irrigated by underground aqueducts (*karez*). Some Balūchī communities along the southern Makran coast derive their living from fishing. Balūchī tend to look down on trade or commerce, these activities being viewed as unworthy occupations. Such business is left largely in the hands of non-Balūchī.

### **16 SPORTS**

Popular games include *chawk*, a type of checkers introduced from Sind and played with wooden pieces on a cloth divided into squares. Moves are governed by six or seven cowrie shells, which are thrown on the ground in the manner of dice. *Jī*, a game of tag, is played by village boys and young men. Games such as wrestling and horse-racing are useful in developing skills in young men for war. Shooting and hunting are favorite pastimes among the upper classes. Card games and gambling are also popular among some groups.

### **17 ENTERTAINMENT AND RECREATION**

Balūchī living in Karachi and other towns of southern Pakistan enjoy all the recreational facilities available to the urban resident. Those who follow a traditional seminomadic way of life in the remote Balūchī heartland have to rely on festivals, music, dancing, and folk culture for their entertainment.

### **18 FOLK ART, CRAFTS, AND HOBBIES**

The Balūchī are not particularly known for their folk art or crafts. However, women are skilled at embroidery and adorn their garments with elaborate geometric and abstract designs. They make felt from sheep's wool, and weave rugs for their own use and for the purposes of exchange.

### **19 SOCIAL PROBLEMS**

The Balūchī have not fared well in modern Pakistan. They form an ethnic and cultural population that has a transnational distribution, and whose natural affinities are more with their fellow Balūchī in Iran and Afghanistan than with other Pakistanis. Indeed, they are viewed as virtual "savages" by

the dominant Punjabi and Sindhi majority in the country. It is little wonder that the Balūchī have very little sense of identity with Pakistan. This alienation is intensified by the failure of the national government to promote economic development in Balūchīstan, one of the most underdeveloped areas of the country.

Many see poverty and lack of education as a major hindrance to Balūchī economic and political advancement. Even in major urban centers such as Karachi, Balūchī children are at a disadvantage. Though they speak Balūchī at home, at school they have to struggle with Urdu, Sindhi, English (the language of commerce and higher education), and Arabic or Persian (the languages of Islam). Few advance beyond high school or low-status or menial jobs. The sense that they are viewed as second-class citizens, combined with resentment against their treatment by a central administration seen as heavy-handed and corrupt, has in the past given rise to Balūchī separatist movements. This has occasionally led to armed conflicts such as the Marri insurrection of 1973–77. Though defeated in the 1970s, a resilient Balūchī nationalist movement lingers on, garnering recruits and support from a population disaffected with establishment policies that emphasize resource transfer. In October 1992, ethnic tempers ran high and clashes took place between the Balūchīs and second largest ethnic group, the Pathans in Balūchīstan. After the Chagai nuclear tests by Pakistan in 1998, some Balūchī students hijacked a PIA (Pakistan International Airways) plane to register their disapproval and draw international attention to the prevailing sense of discrimination in Pakistan against Baluch people and Balūchīstan. Balūchī nationalism remains a sensitive issue, especially given the strategic location of Balūchīstan on the shores of the Arabian Sea and the political dynamics of the region. A proposed pipeline will carry natural gas from Turkmenistan to India through Balūchīstan, although the security of the pipeline remains an issue for the Pakistani government, under Prime Minister Yousuf Raza Gilani, in the face of the continuing low level insurgency in Balūchīstan.

Increasing levels of violence in southern Afghanistan since 2005 have been attributed to Al Qaeda and Taliban fighters finding safe haven in the border areas of Balūchīstan along with support from local Balūchīs, with whom the Islamic extremists have cultural affinities. Indeed, from this time, extremists involved in the anti-U.S. conflict in Afghanistan have converted areas of Balūchīstan into an operational rather than a logistical base. Quetta is a hotbed of extremist activities and, though the Pakistani Army is fully aware of this, the Islamabad government under President Musharraf did little to bring the area under government control. It remains to be seen whether the newly elected government will tackle the situation.

In August 2006 Pakistani security forces killed Nawab Akbar Khan Bugti, the 79-year-old chief of the Bugti tribe and former Chief Minister of the province, an incident which was followed by widespread unrest in eastern Balūchīstan. Since early 2005, Bugti, who was seen by locals as a leader, had been fighting the Pakistani Army with a private force of 5,000 loyal tribesmen in the mountains of eastern Balūchīstan. Bugti claimed only to be seeking provincial autonomy for Balūchīstan, a view which, naturally, was not shared by the Pakistani Army and security forces, who saw him as “anti-Pakistani.”

## 20 GENDER ISSUES

As is to be expected in a Muslim society, Balūchī women are seen as inferior to men and are expected to be obedient to their husbands. However, Balūchī women are less restrained than women among other Muslim peoples in South Asia. As noted earlier, they are not subject to the custom of *purdah* (except in some upper class families). Monogamy is the norm, while divorce is permitted. A Balūchī woman is responsible for household chores, as well as tending the family's herds and the gathering of wild plants, water, and firewood.

“Honor killings,” originally common among the Balūchī tribes, is occasionally still faced by Balūchī women who still, even in urban areas, have low literacy and face difficulties in accessing education. Sexual and physical abuse by male family members also remain issues.

Women in Balūchīstan remain extremely poor, illiterate and bound by traditional norms of a tribal society that is patriarchal in nature, but they are nonetheless becoming involved in politics and play an increasingly influential role in society and in determining the future of the province.

## BANGLĀDESHĪS

**PRONUNCIATION:** ban-gla-DESH-eez

**LOCATION:** Bangladesh

**POPULATION:** 158 million

**LANGUAGE:** Bengali (Bangla)

**RELIGION:** Islam (majority Sunni Muslim)

**RELATED ARTICLES:** Vol. 3: Chakmas; Vol. 4: Santals; Pakistanis

### <sup>1</sup> INTRODUCTION

Banglādeshīs, like Indians and Pakistanis, owe their modern political identity to the events that accompanied the end of the British Empire in South Asia. When British India was partitioned in 1947, areas with a Muslim majority in the population were assigned to Pakistan, the new Muslim state. This included northwestern areas of the Indian subcontinent that were first conquered and settled by Muslim invaders in the 11th century AD. However, Muslim majorities also existed in the east of the subcontinent in Bengal. This area was separated to form the “East Wing” of Pakistan. Residents of the region thus became “Pakistani,” members of a Muslim state that was split into two territorial units separated by 1,600 km (1,000 mi) of Indian territory. The link between the two Wings was religion, their populations being followers of Islam. The ties of religion, however, were not strong enough to overcome historical and cultural differences, as the events of the following two and a half decades were to show.

The region in which Bangladesh lies is thought to have been settled around 1000 BC by Dravidian-speaking peoples who came to be called the “Bang.” This ancient tribal name is echoed in modern names such as Bangladesh, Bengal, and Bengali. For most of its history, Bengal (as it is convenient to call it) remained on the periphery of the great political events of the Indian subcontinent. At times, it fell under the control of the great pan-Indian empires such as that of the Mauryas (321–181 BC), while at other times it led an independent political existence. In AD 1202, however, Bengal came under the influence of the Muslim Turks who had established themselves in Delhi, and it remained under Muslim rule for the next 550 years. Beginning in the 13th century AD and continuing for several hundred years, Bengal saw the wholesale conversion of its people to Islam. These conversions were generally of the lower-caste Hindus, attracted by the ideals of brotherhood and equality taught by Islam.

Conversion to Islam did not mean adopting the language and culture of Islam. Bengali Muslims spoke the Bengali tongue and displayed a deep-rooted commitment to Bengali culture—something that was never fully understood by the national leaders of Pakistan, who were mainly from West Pakistan. Attempts in 1953 to impose Urdu as a second language in East Pakistan led to riots and several deaths. This day is still celebrated in Bangladesh as “National Mourning Day.” Cultural differences, economic pressures, neglect of East Pakistan by the central government, and West Pakistanis’ feelings of the superiority of their Islamic heritage, all contributed to deteriorating relations between East Pakistan and West Pakistan.

Popular dissatisfaction among Bengālīs resulted in a growing movement for autonomy in East Pakistan, led by Sheikh Mujibur Rahman (Mujib) of the Awami League. National elec-

*Banglādeshī women watch a fair during celebrations of Bengali New Year. (AP Images/Pavel Rahman)*

tions held in December 1970 gave Mujib a sweeping victory, and by rights he should have been appointed prime minister of Pakistan. However, General Yahya Khan, President of Pakistan, postponed indefinitely the convening of the National Assembly. When talks between Mujib and Yahya broke down, Yahya decided to solve the problem by force. In March 1971, the Pakistan Army embarked on a terror campaign in East Pakistan aimed at forcing the Bengālīs into submission. They identified and executed students, teachers, writers, members of the intelligentsia—anyone who was deemed a threat to the regime in power. For the next nine months, a bloody civil war was waged, pitting East Pakistan’s Mukti Bahini (Liberation Force) against the Pakistani military. One estimate claims that more than a million Bengali civilians died at the hands of the Pakistan Army. The matter was ended when the Indian Army entered the fray, leading to the capitulation of Pakistan’s forces on 16 December 1971. The “independent, sovereign republic of Bangladesh,” first proclaimed on 26 March 1971, now became a reality.

## **2 LOCATION AND HOMELAND**

Bangladesh lies in the eastern part of the Indian subcontinent at the head of the Bay of Bengal. It is a relatively compact country covering an area of 147,570 sq km (56,977 sq mi), roughly the size of the state of Iowa. The Banglādeshī population num-

bers 158 million people, which ranks the country the seventh most populous in the world.

Except for its southern coastline, Bangladesh is virtually surrounded on all sides by India. Of its 4,246 km (2,638 mi) land border, only some 193 km (120 mi) in the southeast is shared with Burma (Myanmar). Bangladesh extends over 650 km (approximately 400 mi) northwards from the mouth of the Ganges River almost to the foothills of the Himalayas. In the extreme northwest, its border comes so close to Nepal’s that less than 40 km (25 mi) of Indian territory separates the two countries. (The vulnerability of this narrow land corridor to Assam and its oil reserves was a strategic factor in India’s decision to enter the 1971 war on the side of the insurgent Banglādeshīs.)

Bangladesh lacks the geographical diversity of the other countries of South Asia. The Chittagong Hills in the southeast are the only significant hill system in the country. An extension of the mountain ranges of eastern India and Burma, they form narrow north–south ridges rising to between 600 and 900 m (approximately 1,970–2,950 ft) above sea level. The highest point in Bangladesh (1,046 m or 3,432 ft) lies here in the south east. Roughly 80% of Bangladesh is located on the fertile alluvial lowland of the Gangetic Plain and on the Ganges Delta itself. Soon after it enters Bangladesh, the Ganges River is joined by both the Brahmaputra River (known in Bangladesh as the Jamuna) and the Meghna River to form one of the largest del-

tas in the world. The coastal section of the delta is known as the *sundarbans*, a belt of low-lying tidal forests and mangrove trees that is the home of the Royal Bengal tiger.

The rivers of Bangladesh, some 700 in total, are at once its lifeblood and its curse. The annual flooding of the alluvial plain and delta renews the fertile soils of the region and allows it to support some of the highest agricultural population densities in the world. Yet periodically the region is subject to devastating floods with considerable loss of life and economic cost. In 1988, some of the worst flooding in the country's history occurred. Some 83% of the country was affected. Over 1,600 people died, a relatively small number compared to some natural catastrophes in the region, but the cost in terms of lost crops, livestock, and damage to the economic infrastructure was enormous.

Bangladesh experiences a subtropical monsoon climate, with the three distinct seasons typical of South Asia. Cool, dry winters are experienced from October to February. Temperatures rise during the following months to maximums between 32°C and 38°C (approximately 90°F to 100°F) in April, the hottest month. May sees the onset of early monsoon rains, with high humidity making for unpleasant conditions. June to October is the rainy season, with rainfall totals varying from 160 cm (63 in) in the west to 500 cm (approximately 200 in) in the northeast. During the late monsoon season, tropical cyclones periodically sweep in from the Bay of Bengal, often with disastrous consequences. In November 1970, such a storm slammed into the delta with winds exceeding 160 kph (100 mph) and a storm surge of 5.5 m (18 ft). Many of the coastal areas lie be-

tween 4 and 10 feet above sea-level and were completely submerged. Lacking an early warning system and given the poor transportation facilities, an estimated 250,000 people lost their lives in this storm. In November 2007, Bangladesh was struck by cyclone Sidr, which similarly caused enormous damage to the country. This was followed by severe flooding. As the Jamuna, Ganges and Meghna Rivers spilled over their banks, 30 million people were made homeless, 135,000 cattle died and 11,000 kilometers of roads damaged or destroyed. Two-thirds of the country was underwater.

Perhaps more than any other nationality in South Asia, Banglādeshīs are characterized by ethnic unity. Over 98% of the population are Bengālīs, speaking the Bengali language and identifying with Bengali cultural traditions. Biharis form another element, although a numerically small one, in the Bangladesh population. Biharis are non-Bengali, Urdu-speaking Muslim refugees from Bihar and other parts of northern India. This group stood to lose from Bangladesh's independence and supported the West Pakistanis during the 1971 war. At that time they numbered about 1 million. Many of them were repatriated to Pakistan after the war, however, but their current total is estimated at as many as 500,000 people.

Tribal peoples make up less than 1% of Bangladesh's population but they differ significantly from the rest of the population in their social organization, customs, and rituals. The largest of these groups are the Chakmas who, along with the Marmas, occupy the highland valleys of the Chittagong Hills. The Mros, considered the area's original inhabitants, and the Tiparas are other tribal groups of the Chittagong Hills. These hill tribes are of Sino-Tibetan descent and have distinct Mongoloid features. Other tribal groups, such as the Santal, Khasis, Garos, and Khajons, represent extensions of tribal populations from adjacent areas of India.

### 3 LANGUAGE

Bengali, or Bangla, is spoken by 98.8% of the population and is also the country's official language. It is a member of the Indo-Aryan branch of the Indo-European family of languages and is written in its own Bengali script. Regional dialects of Bengali include Rajbangshi, Varendra, and Vanga. Dialects such as Sylhetta and Chittagonian show strong Arab-Persian influences. Chakma, the tongue spoken by Chakma tribals, is a dialect of Bengali, although tribal languages such as Magh and Arakanese belong to the Tibeto-Burman branch of the Sino-Tibetan linguistic family. Urdu is the language spoken by Biharis. English remains an important language in Bangladesh.

### 4 FOLKLORE

Banglādeshīs identify with the folk traditions of Bengali culture. This includes belief in shamanism and the powers of *fakīrs* (Muslim holy men who are viewed as exorcists and faith healers), *ōjhās* (shamans with magical healing powers), and *Bauls* (religious mendicants and wandering musicians). *Sūfism* is strongly entrenched in Bangladesh, with Shah Jalal and Khan Jahan Ali being among the most celebrated Sufi saints.

Sheikh Mujibur Rahman, leader of the Awami League, and the fighters of the Mukti Bahini are regarded as national heroes of the Banglādeshī independence movement.

## 5 RELIGION

At its creation, Bangladesh was constituted as a secular state. However, a series of constitutional amendments in 1977 and 1978 led to the adoption of Islam as the state religion. Most Banglādeshī are Muslims, with nearly 90% of the population claiming Islam as their religion (2001 Census). The conversion of local populations to Islam began after AD 1202, when Bengal fell to invading Turkish armies, and continued for several centuries. Conversions were generally collective, with lower-caste Hindus and groups of Buddhists attracted to Islam by its ideals of equality, brotherhood, and social justice. Sufis played a major role in this process, and fakirs and *pirrs* (wandering Muslim holy men) were familiar figures in the villages of the region. Sufism remains an important element in the religious life of the people today. Most Banglādeshī are Sunnis, although small Shia minorities are found in urban areas. The *Shia* festival of Muharram is widely observed by Sunnis in Bangladesh.

Although many non-Muslims fled Bangladesh in 1947, Hindus still account for 9.2% of the population. Buddhists (0.8%), Christians (0.3%) and tribal groups (0.1%) form other religious minorities in the country.

## 6 MAJOR HOLIDAYS

As an Islamic state, Bangladesh officially celebrates the Muslim festivals of Id-ul-Fitr, Bakr-Id, Muharram, and other Muslim festivals as public holidays. In addition, several Hindu festivals (e.g., Janamashtami, Durga Puja), Christian holy days (Good Friday, Easter Monday, and Christmas), and Buddhist celebrations (Buddha Purnima) are recognized as holidays.

Secular holidays include National Mourning Day (21 February), Independence Day (26 March) National Revolution Day (7 November) and Victory Day (16 December).

## 7 RITES OF PASSAGE

The rites of passage of Banglādeshī follow normal Muslim patterns. Births are occasions for rejoicing, with male babies preferred over females. Muslim prayers are whispered into the baby's ears, and the naming ceremony is accompanied by the sacrifice of a sheep or goat. Male children undergo the *Sunnat* or circumcision. It is becoming fashionable, especially in urban communities, to celebrate children's birthdays.

Death rituals are performed according to Muslim canonical rules. The corpse is washed, shrouded, and carried to the cemetery where it is interred with the customary prayers for the departed soul. The next forty days are marked by various rituals, ending in the ceremonies held 40 days after death that bring the main period of mourning to a close.

## 8 INTERPERSONAL RELATIONS

Banglādeshī are a warm, accommodating people and follow the usual traditions of South Asian hospitality. Visitors, even casual ones, are expected to stay for refreshments. Even the poorest host will provide a visitor with a glass of water and a spoonful of molasses, a piece of betel nut (areca nut), or offer a *hukkā* (a pipe used for smoking tobacco).

## 9 LIVING CONDITIONS

Some have described Bangladesh as belonging not to the Third World of developing nations but to the Fourth World, the

poorest of the poor. This is reflected in its health statistics and economic indices. Life expectancy at birth in 2001 was 62.5 years—almost 20 years less than in Japan, the world's leading country in terms of life expectancy. Leading causes of death include typhoid fever, tetanus, and respiratory ailments such as tuberculosis. Medical advances have reduced infant mortality rates to around 62 deaths per 1,000 live births. Fertility rates are high, with the average number of births per childbearing woman in the population being 3.11 and the rate of natural increase of population is just over 2% per year.

Banglādeshī are a rural people, with some 78% living in villages scattered across the country. Rural house types and construction materials depend on local conditions. Reeds are used in the delta, but houses further inland are made of mud, bamboo, and brush wood. Roofs are thatched with palm leaves, though the more prosperous now use corrugated iron. Tribes in the eastern hills build their houses on raised platforms. Villages may also contain the more substantial houses of former landowners (*zamīndārs*) and Hindu moneylenders. Per capita income in 2006 was among the lowest in South Asia, at us\$2,300, well below the world average of \$10,200 per year. However, the middle classes in cities such as Dhaka (the capital) live very much in the manner of urban elites throughout South Asia.

Land communications in Bangladesh are generally poor, with only 4% of the country's 193,000 km (120,000 mi) of road paved. The numerous rivers of the country make rail transportation difficult (there is an average of six bridges or culverts per kilometer of rail line), but water transport is an important means of communications. Biman Bangladesh Airlines is the country's air carrier, providing both international and domestic services.

## 10 FAMILY LIFE

The basic social unit in rural Bangladesh is the family (*paribār* or *gushtī*). This consists of an extended family living in a household (*chula*) residing in a homestead (*bārī*). Individual nuclear families known as *ghar* are often to be found within the extended family. Beyond the circle of immediate relatives is an institution known as "the society" (*samāj*). This voluntary association concerns itself with issues such as the maintenance of the local mosque, support of a mullah (priest), and settling village disputes.

The extended family is the significant unit of economic endeavor, with jointly held property and household activities under the direction of the father's authority. Banglādeshī society is patrilineal, and married sons and their wives reside in the father's household. Marriage is a civil contract in Islam and is often made for the interests of the family rather than the individual. In Bangladesh, marriages are arranged by parents, although men may have some say in the choice of their spouses. Partners are chosen from families of similar social standing. The custom of paying a bride-price is followed, and some families have adopted the Hindu custom of providing a dowry.

Women remain subordinate to men in Banglādeshī society. Purdah, the seclusion of women from male company after puberty, is practiced to varying degrees. Even among modernized groups that have rejected purdah, segregation of the sexes continues. At public performances or lectures, for instance, it is common for men and women to sit in separate parts of the hall. Purdah also limits women's access to the workplace.

## 11 CLOTHING

In rural areas, Banglādeshī men wear the *lungi* and a vest or a shirt. The *lungi* is a piece of cotton cloth, usually checkered, that is wrapped around the waist like a sarong. The better-educated wear a collarless, tunic-length shirt known as a *punjābī*, and *pyjāmās* (loose cotton trousers.) On formal occasions, the *sherwani* (*śerwānī*), tight trousers known as *chūrīdār*, and a turban are worn. Hindus wear the dhoti or the *punjabi-pyjama* attire. Women typically wear the sari and blouse, although girls and young women prefer the *salwār-kamīz* tunic and pants combination. Western-style shirts, pants, and jackets are commonly worn by men in urban areas.

## 12 FOOD

Rice, vegetables, pulses, fish, and meat form the staples of the Banglādeshī diet. The tastes and preferences of Muslims and other groups, however, differ. Beef is popular with Muslims, though taboo for Hindus. At feasts or formal dinners, Muslims often serve Muhgal-style dishes including pilaf and *biryānī* (rice dishes containing meat and vegetables), *kebābs* (barbecued cubes of meat), and *kormās* (meat served in various kinds of sauces). *Ghī* (clarified butter) is commonly served at such meals. Milk forms an important element in the diet, and Bangladesh is known for its milk-based sweets. All communities eat with their hands rather than with utensils.

## 13 EDUCATION

Nearly 59% of Banglādeshīs 5 years of age and over have no formal schooling, and only 15.3% have completed their secondary education. This is reflected in literacy rates among the lowest in South Asia, with only 43.1% of the population over 15 years old being able to read and write (2001). This figure drops to 32.8% for females. Universal primary education is a goal of government education policy, but high drop-out rates, inadequate resources, and a lack of trained teachers at all levels have hindered education in the country.

The national government has attempted to modernize the curricula of *madrasas*, Islamic religious schools attached to mosques and supported by endowments and public charity but which cater mainly to males.

## 14 CULTURAL HERITAGE

Banglādeshīs are proud of their Bengali culture, with its traditions of music, dance, and literature. The country shares in the classical and devotional traditions of Hindu and Muslim music but has developed its own regional forms of popular music (e.g., *bātiālī* songs connected with boatmen and life on the river, and *baul*, mystical verse sung by a caste of religious musicians called Bauls). Indigenous dance forms include the *dhali*, *baul*, *manipuri*, and snake dances.

The Bengali literary tradition is one of the oldest regional traditions in India, dating to the 11th century AD. Its greatest figure was the poet Rabrindranath Tagore, who was part of the 19th-century revival of Bengali culture. Kazi Azrul Islam is a modern poet and playwright known as the “voice of Bengali nationalism and independence.” He forms part of a Muslim literary heritage in Bengali culture that can be traced back to the Sufi devotional compositions of the 13th century. A distinctive regional style of architecture may be seen in mosques

and other monuments built by Muslims beginning in the early 15th century.

## 15 WORK

Bangladesh is primarily an agricultural country, with 60% of the labor force involved in cultivation. Rice is the dominant food crop. Jute is the country’s major cash crop and an important export item. The industrial resource base is poor, and the manufacturing sector of the economy is quite small. Since the 1970s, however, Bangladesh has become a major producer of ready-made garments for export to the West (particularly the U.S.). Based on cheap Banglādeshī labor (mostly women), this now accounts for over 80% of export revenues, although the preferential system afforded Banglādeshī-made garments ended in 2005. The export of frozen shrimp and fish has also increased in importance over the last several decades.

Large numbers of Banglādeshīs are working in the Persian Gulf region, and remittances from this population is an important source of foreign exchange for the country.

## 16 SPORTS

Children in rural areas play games common to all of South Asia, such as hide-and-seek, flying kites, and spinning tops. *Ha-do-do* is a traditional game in which teams send a member into the opponents’ territory to tag as many of the opposition as possible while holding his or her breath. Wrestling is a favorite pastime for young men. Soccer is the most popular modern sport, while cricket, field hockey, badminton, and table tennis are also played.

## 17 ENTERTAINMENT AND RECREATION

In villages, festivals and fairs are occasions for entertainment and relaxation. Dances, music, and song are popular, as are the *jātrās* (village operas based on local myths). Boat races allow young men to display their prowess. In urban centers and those villages that have cinema houses, movies are by far the most popular form of entertainment. Radio and television broadcasts are available, but these are controlled by the government. The press is relatively free, but given the low literacy rates, newspapers in Bangladesh have a low circulation.

## 18 FOLK ART, CRAFTS, AND HOBBIES

Among the arts and crafts for which Bangladesh is known are *kathas* (finely embroidered quilt-work); hand printed textiles; terracotta dolls, toys, and idols; and *sikhars* (elaborate rope hangings for pots, bottles, etc.). *Alpana* drawings are designs made on floors and courtyards out of rice-paste. They are prepared by Hindu women in connection with certain religious festivals and rites. Copper and brass metalwork, basketry, and mat-weaving are also traditional crafts among Banglādeshī artisans. The region also has an important boat-building industry, and the decoration of boats is a thriving folk art in Bangladesh.

## 19 SOCIAL PROBLEMS

When Bangladesh became independent in 1971, the country was referred to in some foreign circles as an “international basket case.” It suffered from overpopulation, extreme poverty, malnutrition, and lack of resources. It was subject to periodic natural disasters—drought, famine, cyclones, and especially

the repeated flooding that plays havoc with peoples' lives and the country's economic infrastructure. Few thought there was much of a future for the country.

A quarter of a century later, little seems to have changed. Bangladesh ranks lowest among the nations of South Asia in many economic indices. Overpopulation and poverty are still a problem, and the country has one of the highest population densities in the world. Daily per capita calorie intake is over 2200 kcal, though 75% of the population is classified as below the poverty line in terms of caloric intake. Natural disasters still devastate the country. Yet the country's very survival is a victory of sorts, and the future looks less bleak than it did in 1971. Slowly, with generous foreign aid provided through the World Bank-led Bangladesh Aid Group in Paris, the economy is struggling upwards. Food production has increased and a nationwide birth control program has succeeded in lowering the rate of population growth. Flood control projects will help limit the incidence of flooding. Diversification of the economy has increased the value of the country's exports.

A major political problem faced by Banglādeshī was that of tribal unrest in the Chittagong Hill Tracts. Chakmas and other tribal groups resorted to armed resistance in support of demands for regional autonomy. Banglādeshī Army operations in the area during the 1980s and 1990s resulted in a flood of refugees into India, and charges of human rights violations against the government. In 1997 a peace agreement was signed between Chakma rebels and the government of Bangladesh, granting a degree of autonomy to the Chakma people. Bangladesh has also survived the imposition of military government and periods of civil unrest. Following rioting in early 2007, a caretaker government (now under Fakhruddin Ahmed, a former World Bank economist) was installed to oversee general elections, which were postponed until the end of 2008.

Concerns exist that Bangladesh is becoming a safe haven for al Qaeda and Taliban extremist terrorist groups.

Bangladesh continues to have major economic, social, and political problems. Despite an expanding economy, it will remain dependent on massive foreign aid for the foreseeable future. Its population remains among the poorest in the world, and its political future is uncertain. But it also has a population united by Bengali culture, the heritage of Islam, the legacy of its struggle for independence from Pakistan, a tradition of democracy and considerable optimism for the future and pride in its nation.

One success story in the development of the Banglādeshī economy has been the widespread propagation of microcredit by Muhammad Yunus (awarded the Nobel peace prize in 2006) through the Grameen Bank. The Grameen Bank currently has nearly 5 million members, many of them poor rural women.

In order to enhance economic growth, the government has set up several export processing zones to attract foreign investment. These are managed by the Bangladesh Export Processing Zone Authority. Exports of garments and agricultural products have helped propel Bangladesh to an annual economic growth rate of around 5% a year—not quite on a par with China and India, but quite impressive in its own right.

## 20 GENDER ISSUES

The Global Gender Gap Index 2007 ranks Bangladesh 100 out of 128 countries in terms of gender equality. Bangladesh being a predominantly Muslim country, women are viewed as

inferior citizens and subject to Shariah law. Despite this, the Bangladesh government is pushing ahead with a new National Women's Development Policy (NWDP). A section of Muslim clerics and some Islamic political parties say equal rights for women in terms of property would violate Sharia law on inheritance, which stipulates that a woman should inherit only half of what her brother would get (in April 2008, there were riots by Muslims protesting women receiving equal rights in terms of inheritance). Only 32.8% of women are literate (compared to 43.1% for men) and only 4% participate in tertiary education. Despite the two most important political parties in Bangladesh (the Bangladesh Nationalist Party and the Awami League) being headed by women (Khalida Zia and Sheik Hasina, respectively), only 15% of parliamentarians are women.

A certain ambiguity exists surrounding the question of violence against women in Banglādeshī society. On the one hand, violence is held in repugnance and may provoke outrage. On the other hand, violence against women is accepted, tolerated and "in certain prescribed forms and given contexts," it is legitimated. Gender inequality, leading to gender violence, is deeply embedded in the Banglādeshī social structure; all Banglādeshī social institutions permit, even encourage the demonstration of unequal power relations between the sexes.

# BANIAS

**PRONUNCIATION:** BAHN-yuhz

**ALTERNATE NAMES:** Vania

**LOCATION:** India (Uttar Pradesh, Rajasthan, Gujarat, and Maharashtra states; also sizeable communities in Delhi, Bombay, Calcutta and other Indian cities); Singapore; Malaysia; Fiji; Hong Kong; elsewhere in the Middle East

**POPULATION:** 55-65 million

**LANGUAGE:** Rajasthani, Marwari and other dialects of western Hindi or the language of the region from which they originate

**RELIGION:** Hinduism; Jainism

**RELATED ARTICLES:** Vol. 3: Hindus; Vol 4: People of India

## <sup>1</sup> INTRODUCTION

The word *Bania* (also *Vania*) is derived from the Sanskrit *vanij*, meaning “a merchant.” The term is widely used to identify members of the traditional mercantile or business castes of India. Thus, Banias are bankers, moneylenders, traders, and shopkeepers. Though some members of the Bania castes are cultivators, more Banias than any other caste follow their traditional caste occupation. Banias are classed as *vaisyas*, the third of the four great categories of Hindu society, and stand below *Brahmans* and *Ksatriyas* in caste ranking. They are, however, considered to belong to the “twice-born” castes of India, they wear the sacred thread, and they adhere strictly to the rules of behavior that go along with this status. The Aggarwals and Oswals are prominent Bania castes of northern India, while the Chettiar are a mercantile caste of the south.

Banias believe that the community originated 5000 years ago when an ancestor Maharaja Agrasen (or Ugarsain) of Agroha, Haryana divided the Vaisya (third in the Hindu *varna* system) community into 18 clans. Their surnames include Aggarwal, Gupta, Lala, Seth, Vaish, Mahajan, Sahu and Sahu-kar. There are six subgroups among the Bania—the Bisa or Vaish Aggarwal, Dasa or Gata Aggarwal, Saralia, Saraogi or Jain, Maheshwari or Shaiva and Oswal. The Bisa believe that they are descendents of the 17 snake daughters of Bashak Nag (cobra) who married the 17 sons of Ugarsain. The husbands slept with the handmaidens of the snake daughters resulting in Dasa offspring. The Bisa (“twenty”) consider themselves of a higher status to the Dasa (“ten”) and the Pancha (“five”). The Saralia are an offshoot of the Bisa who migrated to Saralia, near Ambala in Haryana State.

## <sup>2</sup> LOCATION AND HOMELAND

Although no recent data are available, the Bania castes make up an estimated 6% or 7% (or 55 million to 65 million people) of India’s Hindu population. Bania communities are found in cities, towns, and villages all over India but have their densest concentrations in the northwest in Rajasthan, Gujarat, and Maharashtra. and in Uttar Pradesh. There is considerable speculation as to why the trading ethic has been so important in the western part of the Indian subcontinent. Some scholars have argued that the harsh desert environment of Rajasthan forced much of the population to turn to nonagricultural occupations to support themselves. Others have suggested that proximity to the overland and maritime trade routes with the Middle

East have played a role in this emphasis on trade and commercial activities. Whatever the facts of the matter, Banias from the northwest have migrated to all parts of India and beyond. Much of the commerce of Bombay (Mumbai) is in the hands of Gujarati Banias. Rajasthani businesspeople, known as “Marwaris” after the region of Rajasthan called Marwar, are found as far afield as Assam and Tamil Nadu. There is an important, and also affluent, community of Marwaris in Calcutta.

The Bania castes, and Gujaratis in particular, also form an important element in the population of overseas Indians. They have settled in Singapore, Malaysia, Fiji, Hong Kong, and elsewhere in Asia where business opportunities present themselves. They are also found in the Middle East and among the Indian populations of the United Kingdom, Canada, and the United States.

## <sup>3</sup> LANGUAGE

Banias speak the language of the region from which they originate. Thus, a Shrimali from Gujarat speaks Gujarati, an Oswal from Rajasthan speaks Marwari (a Rajasthani dialect), and a Banajiga Lingayat (a trading subgroup of the Hindu Lingayat sect) from Karnataka speaks Kannada. Banias who are settled in regions where other languages are current obviously need to know the local language in order to do business. But, even though they are long removed in both distance and time from their original home, they still use their native tongue among themselves and at home. Marwari business communities in Gauhati and other towns in Assam, for example, still keep their books and converse among themselves in their own Rajasthani language.

## <sup>4</sup> FOLKLORE

The Bania castes share in the mythology and folklore of their own religious communities and regional cultures. Many Banias, for example, are Jains and are thus brought up in the traditions of the Jain religion. Vaishnavism is strongly rooted among the Bania castes of Rajasthan and Gujarat, and for these Banias the myths and legends of Krishna, the cowherd god of Hinduism, are of utmost importance. Each caste has its own lore and folk traditions. The Shrimali caste of Gujarat traces its origins to Bhinmal, a town in Rajasthan formerly known as Shrimal. There, they believe, 90,000 Shrimali families were created by Mahalakshmi, the daughter of the sage Bhrigu, to maintain 90,000 Shrimali Brahman families. One account says they came from her thigh; another, from her garland. Some explain the division of the Shrimali castes into two subdivisions by the fact that the Bisa Shrimalis sprang from the right side of Mahalakshmi’s garland and the Dasa Shrimalis from the left. Of interest here, Mahalakshmi or Lakshmi is the Hindu goddess of wealth and is of great importance to the Bania castes. The Shrimali Brahmans are still the family priests for the Shrimali Banias.

## <sup>5</sup> RELIGION

Banias are Hindu or Jain and follow the beliefs and customs of their respective religions. Some castes, such as the Shrimalis, have both Hindu (“Meshri”) and Jain (“Shravak”) sections. Thus, a Dasa Shrimali Shravak is a member of the Dasa section of the Shrimali caste who follows the Jain religion. Most Jains, because of religious restrictions on occupations they can follow without violating the principles of their religion, belong to the

Bania castes. They are split between the *Svetambara* (“white-clad”) and *Digambara* (“sky-clad”) sects of Jainism. Jains in northern India generally belong to the Svetambara sect. Hindu Baniyas are almost exclusively Vaishnavas, i.e., they worship the god Vishnu, in his incarnation as Krishna. Most follow the Vallabhacharya sect of Hinduism, in which Krishna is seen as the supreme deity. This sect is also known as *pushti-marga* (“abundance way”), as it calls on its followers to enjoy the good things of life Krishna has provided for their enjoyment.

## 6 MAJOR HOLIDAYS

Baniyas celebrate the festivals of their religious communities, although some are more significant than others. For example, Divali, the Hindu “Festival of Lights,” is kept by all Hindus but it holds particular importance for the Bania castes. It is an occasion for the worship of Lakshmi, the Hindu goddess of wealth, and is also a time when the financial books for the old year are closed and new ones started for the coming year. Houses are painted and all food in the household is thrown out and replaced. It is also a time for card-playing and gambling. The festival of Ganapati or Ganesh, the Hindu god of good fortune, is also important for the Baniyas. Jains celebrate the usual festivals of Jainism, but they, too, observe Divali, which coincides with their own festival honoring the death of the founder of the religion, Mahavira.

## 7 RITES OF PASSAGE

The life-cycle rituals of the Baniyas conform in general to Hindu and Jain practices, although they may show variations in their details. In Gujarat, a Hindu Bania woman usually returns to her father’s house for her confinement and to give birth. Various rituals such as the Sixth Day worship are performed. Among the objects used in this ceremony are a piece of paper, an inkstand, and a reed pen—items clearly related to the traditional occupation of the Bania caste. Similarly, to mark events such as a betrothal, contributions are made to the caste fund. The caste association is important among Baniyas, and many castes are still organized into trade guilds or *mahajans*. These are modern survivals of institutions that date to medieval times.

Like all Hindu groups, Baniyas cremate their dead. But again, some of the death rituals are unique to each caste. On his deathbed, a Hindu Bania in Gujarat traditionally performs Godan (“the gift of a cow”) by giving a Brahman a cow or the monetary value of a cow. He also names a sum of money to be given to charity in his name. After death, the body is taken to the cremation ground, bathed, wrapped in a shroud, and burnt on the funeral pyre. The ashes and bones are collected and thrown into a river or the ocean. A cow is milked on the spot where the body was cremated. Various rites are performed during the period of mourning. These include marrying a steer to a heifer, giving food to crows, and feeding dogs. This latter custom is of interest because in Hinduism the dog is usually viewed as an unclean animal. The funeral rites conclude by the giving of a caste dinner.

## 8 INTERPERSONAL RELATIONS

The term *bania* is often used by other castes in a negative sense to mean someone who is greedy, who exploits customers, who resorts to shady deals, and who will do anything to make a profit. There is, perhaps, an element of truth in this stereotype.

The Bania is the principal moneylender in the villages. Uneducated peasants who borrow money at high rates of interest so that they can grow their crops may never be able to pay off the loan. They eventually end up losing their land, and the Bania is seen as the villain. The same problem in repaying loans applies to the large amounts of money that may be borrowed for marriages and dowries. On the other hand, as bankers, moneylenders, traders, and businesspeople, Baniyas have played an essential role in the functioning of India’s economy. Some scholars argue it was Bania moneylenders who funded British economic development in India. Today, many of the country’s important industrialists and capitalists come from the Bania castes.

## 9 LIVING CONDITIONS

Baniyas are, by and large, prosperous, and this is reflected in their lifestyles and standards of living. However, the specifics of housing, creature comforts, and other aspects of their material culture are determined to a large extent by the place and social context of their lives. The Bania who runs a small shop in a village in Rajasthan lives very much like his or her neighbors. The Bania’s house may be bigger and built of better materials, and its furnishings may be more opulent, but in appearance and design it is little different from other houses in the village. On the other hand, the prosperous industrialist in Bombay or Calcutta is likely to live in a luxurious, air-conditioned house, with numerous servants, automobiles, and all the conveniences of modern living.

Traditionally, the Bania are strict vegetarians whose diet consists of wheat, rice, maize, pulses, lentils, vegetables, fruit and dairy products. Many younger men eat meat at social events outside their community. They do not drink alcohol but smoke and chew tobacco and *paan* (betel leaf).

Literacy levels are high as both boys and girls are encouraged to study further and attain university degrees. Banias visit clinics and hospitals as well as alternative indigenous medicine. Family planning is practiced to limit family size. They have made good use of media and communication and benefited from the government's development programs. They have embraced progress and developments. Agriculturists use fertilizers, pesticides and irrigation to increase crop yields. Loans provided by banks have enabled the Bania to expand or set up new businesses.

### **10 FAMILY LIFE**

Banias are divided into numerous castes distributed over the Indian subcontinent. As with all Hindu castes or *jati*, they are endogamous social units. The basic unit in which endogamy is practiced, however, may be a subcaste rather than the caste itself. Among the Banias of the northwestern region, the Bisas are considered the most pure and unpolluted section of the original caste. Dasas are ranked lower, perhaps because of intermarriage with local peoples in the past or the taking up of occupations considered demeaning by the caste. The Pancha section is ranked the lowest of the three. These various sections often act as endogamous groups in their own right. For example, the Shrimali caste of Gujarat has all three sections, Bisa, Dasa, and Pancha (known among the Shrimalis as Ladva). These groups do not intermarry, and the Bisa Shrimali does not even dine with the Ladva Shrimali. In this sense, the three sections virtually function as separate castes. The Bisa Shrimalis are exclusively Jain. In northern Gujarat, the Dasa Shrimali Shrivaks (Jain Shrimalis) will marry Dasa Shrimali Meshris (Hindu Shrimalis).

Marriage among the Banias reflects the basic differences between North and South India, as well as differing regional customs. In Gujarat, for example, cross-cousin marriage is prohibited, and there is a certain distance of relationship required within the marriage pool defined by the endogamous caste or subcaste. Marriages are arranged and are often seen as business associations between two families as well as unions of a boy and girl. In the past, child marriage was common, although obviously this has changed today. A wedding is an occasion for a display of wealth and may often last as long as eight days. The marriage ceremony follows the Hindu or Jain rites. Residence after marriage is patrilocal, i.e., the newlyweds move into the home of the groom's family. Bania families display the typical joint family structure of Hindu society. The role of women is primarily to deal with domestic matters, with the business affairs of the family left in the hands of the men. Divorce is not socially permitted but does occur rarely. Widow remarriage is allowed and is becoming acceptable except in Karnataka, where it is definitely not permitted. Levirate, i.e. when a woman marries a deceased husband's brother, and junior sororate, when a widower marries a deceased wife's younger sister, are permitted by most Bania groups.

### **11 CLOTHING**

Bania clothing reflects regional styles of dress. In Gujarat, this consists of a *dhoti*, over which is worn a jacket, a long-sleeved coat known as an *angarkha*, and a shoulder cloth (*pichodi*). A variety of turbans are worn, depending on locality, but all clearly identify the wearer as a Bania. In northern and central Gujarat, Banias wear a small, tightly folded, cylinder-shaped turban with numerous folds in the front and several coils at the back. Bania women wear the *sari* over a petticoat (*ghaghra*) and bodice (*choli*). Both men and women are fond of ornaments. A wealthy man may wear a silver girdle, a gold armband above the elbow, earrings, a necklace, and rings on his fingers. A well-to-do Bania woman wears gold hair ornaments, gold or pearl earrings, nose rings, and a variety of necklaces, bangles, anklets, and toe rings.

Although traditional dress is still worn in rural areas and in many towns, the modern businessman in a city such as Calcutta is likely to be dressed in a Western-style business suit, shirt, and tie.

### **12 FOOD**

Banias observe fairly rigid dietary restrictions. Both Jains and Vaishnavas are strictly vegetarian, out of concern for ritual purity, regard for animal life, and the sanctity of the cow. Liquor and narcotics are prohibited to the Bania castes (although this does not stop many Westernized individuals from drinking alcohol). Actual diet and eating habits tend to reflect regional cuisines. Thus, in Gujarat, where vegetarianism has long been an established tradition, the typical diet consist of breads (*roti*) made from wheat or other grains, eaten with vegetables, condiments, and copious amounts of *ghi* (clarified butter). Jain concern for *ahimsa*, the philosophy of nonviolence to all living things, means that even certain plant foods are taboo. Milk and milk products are an important part of the diet. Even where Banias have migrated to areas such as Bengal or Assam where eating fish is acceptable among the higher castes, they preserve their vegetarian traditions.

### **13 EDUCATION**

Banias, as a group, are highly literate because of their need to keep accounts. Young boys receive training in traditional accounting methods, mathematics, and mental arithmetic at an early age. These skills, combined with intelligence, shrewdness, and an ethic of hard work have contributed to the economic success of the community. In the past, they have been employed in positions of responsibility in the administrations of the princely states of northwestern India. The more conservative groups prefer traditional education to Western schooling. However, modern education has come to be seen as a means of success in both personal and business life. Among the Agarwal community of Delhi, for example, a premium is placed on education even for girls. Even though a woman may not use her education, it may be essential for finding her a suitable husband. Among the younger generation who are entering modern industrial or commercial concerns, university and even professional degrees are commonplace.

### **14 CULTURAL HERITAGE**

The Bania castes have a tradition of patronage and support for culture and the arts and also of giving to charity. They contrib-

ute heavily to the support of temples and religious institutions. Many impressive temples in northwestern India, some dating to the 11th century AD, reflect the generosity and piety of the Jain merchant community. The Birlas, a successful, modern bania family, have funded the construction of temples across India. The most recent, the Shri Radhakrishna Temple in Calcutta, with its exquisite Rajasthani carvings, was dedicated in 1996. Baniyas have supported artists and artisans, as seen in the Jaina school of painting or the magnificent wood and stone work found in the Bania houses and mansions (*havelis*) of Rajasthan and Gujarat. They have built, and still support, hospitals, schools, colleges, and universities throughout India.

Charity is an important part of the Bania ethic. Bania castes have their own charitable funds to help the needy of their caste. They also provide charity to the general public, feeding the poor and supporting hospitals and *dharamsalas* (rest houses for pilgrims). Two unusual institutions of the Baniyas are the *pinjrapol* and the *goshala*. The former is a Jain home for animals. Sick or injured animals are provided with medical care, and old animals are maintained until they die from natural causes. This institution originates in the Jain concern for *ahimsa* (nonviolence). The *goshala*, a home for old and useless cows, stems from the Hindu concept of the sanctity of the cow. Both institutions are supported by charitable contributions from Baniyas.

## 15 WORK

The Bania castes make up the mercantile classes of Hindu society, and most Baniyas continue to follow their traditional occupation today. Many remain small entrepreneurs, running stores and shops in villages and towns across India, they are traders of grain, groceries, and spices and also work as money lenders. They have a reputation of being shrewd and mercenary. Money is loaned at very high interest rates with secured collateral, usually against land or gold. They also work in government departments, private enterprise and agriculture, and include administrators, engineers, doctors, advocates, judges, teachers, scholars and stockbrokers among them. Others have emerged as leaders of commerce, trade, and industry in the modern Indian economy. The Birlas, for example, one of the most prominent business families in India, belong to the Marwari community of Calcutta, and the Singhanias, Modis, and Bangurs, also among the top ten business houses in India, are also Marwari. Baniyas are active in politics at local, regional and national levels and have a powerful presence in India.

## 16 SPORTS

There are no sports that are distinctively “Bania” in origin or practice.

## 17 ENTERTAINMENT AND RECREATION

Entertainment and recreation depends on individual circumstances. A conservative village Bania from Gujarat may forgo modern mass media in favor of traditional entertainment associated with religious festivals and local folk traditions. Affluent young Marwaris who belong to Calcutta’s business elite are more likely to lead a Westernized lifestyle, turning to golf, horse-racing, and exclusive clubs for their entertainment.

## 18 FOLK ART, CRAFTS, AND HOBBIES

There are no folk arts, crafts, or hobbies specifically associated with the Bania castes.

## 19 SOCIAL PROBLEMS

Baniyas, as a community, are relatively prosperous, and the problems they face are different from those of many other groups in India. As “twice-born” Hindus, they do not face the discrimination met by low-caste and Untouchable communities. As merchants, they are not as dependent as the cultivator on a good monsoon. Many are more concerned with the stability of India’s economic policies than with the arrival of the rainy season. Perhaps the most common problem faced by the community is the survival of the stereotype—especially in rural areas—of Baniyas as greedy moneylenders, traders who adulterate their goods, and shady dealers who make their living by exploiting the common person.

## 20 GENDER ISSUES

Bania women face the same problems as all women in a male-dominated society. Their families follow local caste customs in terms of arranged marriages, child marriage, dowry demands, widow remarriage, etc., even though child marriages and the giving of dowries have been legally banned by the government of India.

Women among the Bania castes have a low status and are usually confined to their homes though some help their husbands in the family shop and city women work. The women take part in social and religious functions only, although they do have input on financial matters relating to the family. The women sing folksongs and dance at marriages, births and festivals. They are known for their cooking, making rich dishes and sweets on special occasions.

Bania women tend to be better educated than other women in South Asia, though this rarely translates into achievement in the workplace, but rather is a means of obtaining a better match in marriage. The prime role of women is still to bear children, run the household and to complete household chores. Bania women who have migrated to other countries, especially the West, fare better in terms of education and the workplace, if they so choose.

# BANJARESE

**PRONUNCIATION:** BAHN-jar-eez

**LOCATION:** Indonesia (Borneo)

**POPULATION:** 3.5 million

**LANGUAGE:** Banjarese

**RELIGION:** Islam

**RELATED ARTICLES:** Vol. 3: Indonesians; Javanese; Vol. 4: Malays

## <sup>1</sup>INTRODUCTION

The modern Banjarese people are the product of the mixing of four Dayak groups (Ma'anyan, Lawangan, Bukit, and Ngaju) with Sumatran Malays, Javanese, Sundanese, Arabs, Chinese, and Buginese. What distinguishes them from their upriver and highland neighbors is their use of the Banjarese language, a dialect of Malay, and their adherence to Islam, both reflecting connections to the maritime world beyond Borneo. Their identity focuses on the now defunct sultanate of Banjarmasin, whose origins go back to the Hinduized kingdom of Negara Dipa. The city of Banjarmasin itself was founded at the end of the 13th century by Ampujatamaka, the son of a merchant from the Coromandel coast of southeastern India. In 1377, a Majapahit prince married the daughter and sole heir of the Negara Dipa king; thus, Banjarmasin became a vassal of the great Javanese realm and experienced strong Javanese influences, still reflected in the language and various local art forms. In 1526, one side in an internal power struggle triumphed, thanks to aid from the north Javanese state of Demak; conversion to Islam was the price for this aid.

The 17th century was the Golden Age of Banjarmasin when it flourished in the pepper trade, enjoyed vigorous commerce with Java and Gujerat in India, and exercised influence along the Borneo coast from Sambas and Sukadana in the west to Kutai and Berau in the east. Dutch attempts at extending its monopoly over Banjarmasin's pepper trade (including once destroying the city and expelling their British East India Company rivals) failed, due largely to competition from Chinese merchants.

From the late 18th to the mid-19th centuries, Banjarese internal struggles encouraged Dutch intervention. In 1817, one sultan with a less-than-solid claim to legitimacy obtained Dutch aid in exchange for ceding the rights to suzerainty over most of Banjarmasin's traditional sphere along the Borneo coast. The Dutch also demanded the right to name the sultan's successor. In 1857, their installation of their own candidate on the throne enraged the Banjarese and started a short but vicious and costly war. The Dutch dissolved the sultanate in 1860 but faced resistance mounted by Pangeran Antasari, a royal descendant, and Sultan Kuning (despite the title, a peasant) until 1864. Islamic leaders were to stage sporadic uprisings until as late as 1905.

With the exploitation of Kalimantan's timber and fossil fuel wealth, as well as the development of the immediate region's agricultural potential, Banjarmasin and South Kalimantan as a whole are developing rapidly. This is accelerating the forces of integration (Malayification and Islamization) through which the Banjarese community has always expanded.

## <sup>2</sup>LOCATION AND HOMELAND

Banjarese are the majority population of the province of South Kalimantan on Indonesian Borneo. The Meratus mountains, a long, broad range with no peak higher than 1,900 m (6,235 ft), run north-south through the province. The great Barito River and the Martapura, a tributary meeting it close to the sea, provide access to the interior of the province and beyond into Central Kalimantan. A vast tidal swamp occupies the coast. Over the last six decades, part of the swamp has been reclaimed for the cultivation of wet-rice and other crops; this area constitutes one of the major rice bowls in the Outer Islands (i.e., outside Java-Bali-Lombok).

According to the 2000 census, Banjarese numbered 3.5 million (Indonesia's tenth largest ethnic group), up from 2,755,000 in 1990. The 1990 figure represented a 55% increase over the 1980 level, the fastest growth rate for an Indonesian linguistic group during that period. As they have become integrated into wider society through conversion to Islam, increased economic activity, and cross-ethnic marriage, speakers of smaller regional languages in South Kalimantan have adopted Banjarese as their primary language in recent years (an acceleration of the process that created the Banjarese identity in the first place). Between 1980 and 1990, the Banjarese-speaking proportion of the province's population rose from 62.8% to 81.7%; in Central Kalimantan, the proportion nearly doubled over the same period, going from 17.5% to 32.3%. By 2000, the Banjarese proportion of the South Kalimantan and Central Kalimantan populations had declined slightly, to 76% and 24% respectively (probably due to the immigration of other ethnic groups, such as the Javanese who accounted for 13% and 18% respectively). At 14%, Banjarese were the third largest ethnic group in East Kalimantan, between the Javanese (30%) and the Bugis (18%), all immigrant groups.

## <sup>3</sup>LANGUAGE

Although popularly regarded as a separate language (and counted as such in Indonesian government usage), the speech of Banjar is essentially a dialect of Malay, although one which differs considerably from other dialects such as standard Bahasa Indonesia. Banjarese itself divides into two dialects: *Banjar Hulu* (upriver or interior) and *Banjar Kuala* (downriver or estuarine). The language is rich in words of Javanese origin, such as *pitu* ("seven"), *banyu* ("water"), and *lawang* ("door"), which correspond to Malay *tujuh*, *air*, and *pintu*. Under the influence of Javanese, a special *bahasa keraton* or "palace language," expressing respect to social superiors, developed and spread to the upper and middle classes. When speaking to someone younger, a person uses *aku* and *ikam* for "I" and "you," respectively. The younger, however, will say to the older, *ulun* and *sampiyon* in the Hulu dialect, and *unda* and *nyawa* in the Kuala dialect.

Banjarese is an oral language: writing (traditionally in the Arabic script) and formal speech-making are in standard Malay. In Islamic rites, Banjarese naturally use Arabic chants. In customary rites, however, incantations are in a mixture of Arabic and Kawi (Old Javanese) or will begin with "*Bismillah...*" ("In the name of Allah..."), go on to express the main content in Malay or Banjarese, and end with "*La ila ha ilalaha, Muhammadaddar Rasulullah*" ("There is no God but Allah, and Muhammad is His Prophet").

#### 4 FOLKLORE

According to the foundation myth of the Banjar kingdom, the first raja's wife emerged from a gigantic mass of white foam (or, alternatively, mud) with the assistance of the vizier Lambung Mangkurat, who would live for three generations to oversee the new realm. Other mythological or historical figures are regularly invoked in traditional rituals, e.g., various sultans, other aristocrats, such as Pangeran Surianata and Puteri Junjung Buih, and the *muwakkal* Datu Baduk a "good" (literally, "Muslim") spirit who came with Sheikh Banjari from Mecca.

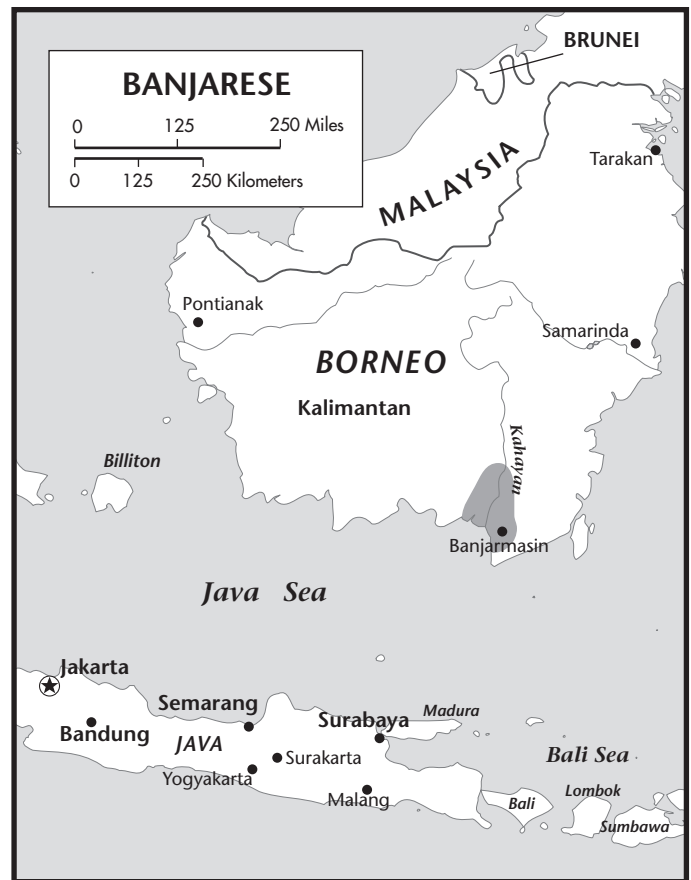

Banjarese recognize a variety of spirits or ghosts. One such is the *takau*, which appears as a black cat that can grow to the size of a water buffalo. A woman who has employed black magic to control her husband becomes a *penjadian* after death; smelling of pus, it visits its family to ask for food. *Tabib* (traditional healers) have the power to take spirit form while still alive, transforming themselves into grass or animals or becoming invisible so they can cause mishaps for persons to whom their clients have directed them. A woman who has drunk *minyak kuyang* (a kind of oil) becomes a monster capable of severing its head from its body. With the ears as wings and the heart, lungs, and stomach dangling as a tail, the monster flies about in search of pregnant women whose blood it can suck. The monster leaves the body hidden behind a door and returns to it before daybreak.

One type of amulet is the *jimat tambang liring*, used to enhance beauty and gain popularity. This consists of a paper with Qur'anic verses; a picture of the wayang clown-servants, Semar with his children; and one of the wayang heror Arjuna as Batara Kamajaya, the guardian of the heavenly nymphs (*bidadari*), with seven *bidadari*. The ink used in the amulet has been mixed with the blood of a killed person, whose spirit must continually be honored.

The Islamic texts *Syair Tajulmuluk* and *Syair Siti Zubaidah* are used to predict the future: one opens such a book to a random page, turns three or seven pages ahead, then interprets the content of the fourth or eighth page. One can diagnose diseases and ascertain cures by turning to the fourth page *before* looking at the random page. A man can similarly employ the surat "Yasin" from the Quran to make a woman fall in love with him or to harm an enemy.

#### 5 RELIGION

Being Banjarese by definition includes professing Islam. The region has produced Islamic scholars famous throughout the archipelago, the most renowned being Sheikh Muhammad Arsyad Al-Banjari (1710–1812), sent by the sultan to study in Mecca (his book, the *Sabilal Muhtadin*, gives its name to Banjarmasin's great mosque, resplendent with the finest marble and calligraphic decoration). Islamic mystical sects, some of which assert (heretically) the identity of God and self, have long been active. Mystics meditate in large buildings raised in the forest near villages, each man sitting within his own *kelambu* (mosquito net) and leaving only to defecate. In the early 20th century, conflicts arose between conservative and modernizing Muslims (respectively, the "older" and "younger" generations). If a modernizer came to pay respects to an older kinsman of the conservative group, the latter would receive him, but, after the modernizer left, the chair upon which he had sat would be wiped clean as if a leper had been there. Currently, both the conservative Nahdatul Ulama and moderniz-

ing Muhammadiyah organizations have strong constituencies among the Banjarese.

Families of *topeng* (masked dance) performers and *dalang* (shadow puppeteers) venerate Hindu gods, respectively Batara Kelana (the *Ramayana*'s Dasamuka) and Batara Kala, chief of the spirits and Lord of Time. A *dalang* cannot perform without receiving the *bisik wayang* ("whisper of the shadow puppet"), i.e., without being possessed by Arjuna and Semar [see *Javanese*].

#### 6 MAJOR HOLIDAYS

*Aruh* are ritual celebrations that community tradition obliges a village to hold at regular intervals. Of the various types of *aruh*, the most elaborate is the *aruh menyanggar banua*, held right before the Islamic New Year, or at any other time deemed appropriate or necessary. Led by older people versed in ritual, this *aruh* serves to purify the village of the evil of the previous year, ward off disaster in the next, and call on the aid of ancestors and Batara Kala. Prayers are recited and offerings made, including great quantities of uncooked rice, thread, old Chinese coins (*picis*), incense, and 41 kinds of traditional foods prepared by postmenopausal women. Various forms of entertainment complete the celebration: *wayang* (shadow plays); *topeng* (masked dance); *kuda kepang* (hobby-horse dances); and *gamelan* (music).

Another important *aruh* is the *aruh terbang besar*, celebrating the birth of Muhammad during the month of Maulud. Its

A Banjarese woman sitting at a loom and weaving in a shop in India that sells traditional woven caps.  
(© Christine Pemberton/The Image Works)

highlight is the performance of *hadrah*, a combination of Islamic changing and rhythmic movements.

## 7 RITES OF PASSAGE

Rites of passage generally resemble those of the Malays. Aspects of the wedding process specific to the Banjarese include the following: parents discuss the choice of a partner for their child with their closest kin and also consult a fortune-teller to learn the fate of the proposed union; and the man's family sends an old woman to make the initial inquiries of the woman's family and chooses a well-spoken and influential person to deliver the proposal. Included in the rites are ceremonial baths of purification. The bride and groom present each other with *palimbaian*, an arrangement of betel leaves and flowers; afterwards these are thrown to the unmarried women among the guests and the ones who catch the *palimbaian* are believed soon to find a partner. Clans bring out heirloom *naga-naga* (the carved heads of dragon-serpents) to escort the bride and groom in a procession around the village.

## 8 INTERPERSONAL RELATIONS

Traditional Banjarese society distinguished two strata: the *tutus* and the *jaba*. Possessing titles such as *pangeran*, *ratu*, *gusti*, *antung*, *nanang*, *andin*, and *rama*, the *tutus* were the aristocrats, descendants of the Banjar rulers. The *jaba* were com-

moners, including various office-holders, such as *kiai adipati*, *patih*, *tumenggung*, *ronggo*, *demang*, *mangku*, and *kiai*. While society once divided into aristocrats, *ulama* (Islamic scholars), merchants, and peasants, nowadays the main distinction is between educated people and "ordinary" people, with *ulama* remaining as a special category.

Etiquette within the family requires that, while eating, older individuals sit with other older folk, and younger sit with younger; older people also sit on a physically higher spot on the floor. Moreover, the younger walk behind the older and assume the heavier tasks.

The only occasion sanctioned by custom for young men and women to meet is during the communal preparation of food for large celebrations.

## 9 LIVING CONDITIONS

Villages (*kampung*) usually extend along rivers or roads. Houses line up along a riverside, with their backs facing the water and their fronts facing the road, if there is one. After pacifying the region in 1865, the Dutch forced the inhabitants of scattered interior villages to relocate along a newly built post road. A village includes one or more prayer-halls (*langgar*, or a mosque if the settlement is big enough), a bathing place (usually riverside), and an area for a once- or twice-weekly market.

The most characteristic Banjar house is the *rumah bubungan tinggi*, so called for its “high roof” that rises at a 45° angle, high indeed given the total area of the house. All types of houses are raised on piles. Roofs were once made of dried leaves, but now more often they are made of shingles. Wall materials range from palm leaf to tree bark to bamboo plaiting to wooden planks; beams are of long-lasting ironwood or other hardwoods. The front most section is the *palataran*, an open veranda where the family relaxes in the afternoon and where it receives guests. Deeper into the house on successively higher levels are the chambers *panampik kecil*, *panampik tengah*, *panampik besar*, and *palidangan*. The wall between the *panampik besar* and the *palidangan*, called the *tawing halat*, is decorated with intricate carvings; in front of it are seated the most esteemed guests during celebrations. On both sides of the *palidangan* are *anjung*, lofts for sleeping. Behind the *palidangan* at a lower level is the *panampik dalam*. Behind that and lower still is the *padapuran*, the kitchen; above the door to the kitchen is the *katil*, the sleeping area for the family’s unmarried daughters.

South Kalimantan has a Human Development Index (combining measures of income, health, and education) of 67.4 (2005 score), significantly lower than the national HDI of 69.6 and dramatically lower than that of the neighboring provinces, Central Kalimantan (73.2) and East Kalimantan (72.9), which are now attracting Banjarese transmigrants. South Kalimantan’s GDP per capita is US\$8,644, relatively high for Indonesia (cf. US\$9,784 for West Sumatra and US\$8,360 for North Sulawesi, but US\$6,293 for Central Java and US\$6,151 for West Nusa Tenggara), though much lower than that in the contiguous provinces (East Kalimantan’s is US\$23,253 even minus income from petroleum and gas). In 2000, the rate of infant mortality stood at 69.6 deaths per 1,000 live births, the third highest in the country, surpassed only by North Maluku (74.59) and West Nusa Tenggara (88.55).

## 10 FAMILY LIFE

The principal productive and property-holding unit is the nuclear family: a man, his wife or wives (polygyny is not uncommon), and their unmarried children.

A newly married couple sometimes remains for a time in the wife’s parents’ house. This results in parents, their unmarried children, and their married daughters with their husbands and children sharing the same roof (though sleeping in separate annexes and keeping their own kitchens). Married daughters usually, however, move out to a small house they have built themselves or which the parents have given them.

Parents usually choose their children’s marriage partners. A young man who already has an eye on a girl other than that selected by his parents may use magic to undermine the arranged engagement. Young women who meet their husbands for the first time only at the wedding ceremony itself often refuse to sleep with their husbands; the family will do everything in their power, including resorting to spells, to persuade the woman to accept her man.

Kin relations are traced through both paternal and maternal sides, but the father or, if he is dead, one of his brothers will represent the bride in the wedding ceremony. Terminology distinguishes a parent’s eldest sibling (*julak*) from the second eldest (*gulu*), from the third eldest (*angah*), and from the youngest (*pakacil* for uncles and *makacil* for aunts). Relatives

are almost always addressed with abbreviated kin-terms: *datu* (great-grandparents); *kaye* (grandfather); *ni* (*nini*, grandmother); *bah* (*abah*, father); *ma* (*uma*, mother); *lak* (*julak*, eldest uncle or aunt); *ngah* (*angah*, middle uncle or aunt); *cil* (*pakacil*/*makacil*, youngest uncle or aunt); *anak* (child); and *cu* (*cucu*, grandchild); or *yut* (*buyut*, grandchild).

## 11 CLOTHING

Everyday wear for men consists at its most simple of the *salarwar culuk*, trousers of unbleached cloth that reach down to the calf; the top of the trousers is folded over and rolled tight at the waist. Shirts and the *laung* head cloth are rarely worn with it. Alternatively, men may wear *salawar panjang* (long trousers), *baju taluk balanga* (an open-collared, long-sleeved tunic), and a *peci* cap. Women wear the *tapih kurung* (sarong), *kebaya* (long-sleeved blouse), and *kakamban* head covers; nowadays, the favored fabrics are from Pekalongan in Java.

Aristocratic styles can still be seen as ceremonial wear. A man will put on a *baju pokok pria*, a white sleeveless undershirt whose sides remain unsewn, secured by ties; and over this a *baju miskat*, a black or red long-sleeved shirt, tapering down to the waist and sporting a wide, stiff collar and buttons (always uneven in number). In addition, he will wear the *salawar pidandang*, trousers that taper towards the bottom to hug the lower leg, and a *laung* head cloth (differing in style according to rank). Women wear the *baju kurung basisit*, an open-collared, long-sleeved shirt of blue or black satin or silk, extending down to the knees. Ceremonial clothing for both sexes is decorated with motifs (plants, *naga* snakes, etc.), embroidered in gold thread.

## 12 FOOD

Meals consist of rice and side dishes. The latter could be fish (dried or fried) from rivers or flooded rice-fields, vegetables, and curries (e.g., preparations with squash, jackfruit, or taro). Supplementary foods include cassava, sweet potato, sago, *pati panguning* (a kind of tuber whose plant resembles turmeric), and a variety of bananas. One specialty available throughout Indonesia is *soto Banjar*, a rich soup of chicken meat and duck eggs eaten with *lontong* (rice steamed in banana-leaf wrappers).

Rice provides the basis of local sweets, such as *apam*, which is rice flour, palm or granulated sugar, and coconut milk blended into a batter, poured into molds, and steamed; *dodol*, a taffy made from glutinous rice flour, palm sugar, and lots of coconut milk, which is eaten with coconut meat, durian, or peanuts; and *kalapon*, green-dyed, ping-pong-size balls of rice flour filled with a chunk of brown sugar, steamed, and sprinkled with grated coconut before eating. *Amping* are chips made from newly harvested rice that has been pounded; they are eaten with grated coconut or sugar. One local drink of note is *banyu tipikan*, water in which ginger and brown sugar have been boiled.

## 13 EDUCATION

In 2005, South Kalimantan’s level of literacy stood at 94.47%, relatively high by Indonesian national standards, comparable to provinces with higher HDIs, such as West Java and Jambi (see also the article entitled **Indonesians**).

## 14 CULTURAL HERITAGE

An accompaniment for celebrations, such as weddings, *hadrah* is a performing art of Arab origin that combines Islamic chanting, the striking of the *rebana* tambourine, the waving of multicolored pennants, and the spinning of decorated umbrellas.

*Mumenggung* is an elegant step-dance welcoming spectators to all-male *mamada* plays (dramatizing tales from the *Thousand and One Nights*). The Banjarese also perform Javanese-style dances, *topeng* (masked dances), *wayang* (shadow plays), and *gamelan* music.

## 15 WORK

Agriculture is the most common occupation among the Banjarese. Since 1939, from the vast tidal swamp between Banjarmasin and the Java Sea, 100,000 hectares (247,100 acres) of land have been reclaimed for wet-rice fields, tangerine and orange groves, and vegetable gardens. Varieties of rice are cultivated that can grow in as much as 2 m (6.5 ft) of water; farmers harvest these from boats. Less and less by the swidden (shifting-cultivation) methods of the past, Banjarese also grow crops in dry-fields: dry rice, oil palm (*kelapa sawit*), *rosela* (a plant yielding fiber for sacks and ropes), sugarcane, and fruits. Traditionally, pepper was the primary cash crop, but cacao, *illipe* nuts, and especially rubber have taken its place.

Livestock includes water buffalo, horses, cattle, goats, sheep, ducks, and chicken. Some 160,000 people make a living fishing in the province's inland waters, and another 5,000 from the sea; large quantities of dried fish are exported to Java.

Although Banjarese shun work in the local lumber mills that process wood from the Kalimantan interior (leaving it to Javanese migrants), many do work in factories where upriver rattan is transformed into mats and furniture. Another alternative to agriculture is small-scale mining for gems (including diamonds) and panning for gold. Many Banjarese engage in commerce, such as the women of Banjarmasin's *pasar terapung* ("floating market"), who sell vegetables and other produce from boats. The region has long been the source of various "exotica": frog legs, snake and lizard skins, and roots for *jamu* (traditional herbal remedies).

## 16 SPORTS

Kite-flying and top-spinning are popular pastimes and form an integral part of post-harvest festivals.

## 17 ENTERTAINMENT AND RECREATION

See the article entitled **Indonesians**.

## 18 FOLK ART, CRAFTS, AND HOBBIES

Traditional crafts include the weaving of baskets and mats, the carving of house walls and furniture, and the working of metal and gems. One regional specialty is *batik sasirangan*, a tie-dyed cloth of many designs, once believed to ward off evil spirits and cure disease.

## 19 SOCIAL PROBLEMS

See the article entitled **Indonesians**.

## 20 GENDER ISSUES

South Kalimantan's Gender-Related Development Index (combining measures of women's health, education, and income

relative to men's) is 61, slightly above Indonesia's national GDI of 59.2. The province's Gender Empowerment Measure (reflecting women's participation and power in political and economic life relative to men's), however, is 51.8, lower than the national GEM of 54.6.

# BATAK

**PRONUNCIATION:** BAH-tahk

**LOCATION:** Indonesia (North Sumatra)

**POPULATION:** 6.1 million

**LANGUAGE:** Various Batak dialects

**RELIGION:** Christianity; Protestant Toba church (Huria Kristen Batak Protestant) and Catholic; Pebegu (indigenous animist religion); Islam

**RELATED ARTICLES:** Vol. 3: Indonesians

## <sup>1</sup>INTRODUCTION

The name “Batak,” which also applies to a totally different ethnic group on the Philippine island of Palawan, seems to have originated as a derogatory term by which Muslim lowlanders of the archipelago referred to pagan highlanders. In North Sumatra, six related though distinct peoples have come under the blanket classification of “Batak”: the Toba, Karo, Simalungun, Dairi (Pakpak), Angkola, and Mandailing. Of these, the heavily Islamized Angkola and Mandailing reject the label; only the largely Christianized Toba, the largest of the groups, has taken this former insult as a badge of pride.

The Batak descend from the earliest Austronesians to have settled on Sumatra, arriving from Borneo perhaps as early as 2500 BC, well in advance of the Malayic peoples whose dialects would come to dominate the coasts and, in the south, even the interior of the island [see **Malays**, **Acehnese**, and **Minangkabau**]. Thickly forested mountain ranges and the Batak’s own reputation for ferocity deterred coastal states from penetrating the highlands; thus, Batak villages enjoyed not only independence from foreign rule but also the freedom to wage war on each other. Moreover, although from the earliest times trade (most importantly in local benzoinwood, used to make incense) linked the Batak lands to the outside world, the Batak experienced the waves of Indic influence that transformed neighboring societies only as faint ripples, mediated by the island’s more modest Hindu-Buddhist statelets or by armed Tamil merchant guilds on the coast. While in general lowlanders or coastal peoples feared highland or interior peoples as headhunters (for instance, the Dayak of Borneo or the Igorots of Luzon), the Batak were also infamous as cannibals. Popular rumor has greatly exaggerated the extent of Batak cannibalism; some Batak groups were only recorded as subjecting a person condemned to die for especially heinous crimes to the additional torture of having fellow villagers slice off and swallow bits of his flesh.

Islamic influence remained similarly superficial until the early 19th century, when the Padri struggle to purge Minangkabau culture of pre-Islamic elements spilled over into the southern Batak lands as a war to force the conversion of the pagan Mandailing and Angkola. Intervening against the Padri, Dutch colonial power followed them into the southern Batak lands; by the 1840s, the coasts below the Batak highlands fell under Dutch control. Despite facing no pan-Batak resistance, the Dutch subdued all the Batak only after several fierce campaigns over the latter half of the 19th century.

In 1862, Ludwig Nommensen of the Rhenish Mission Society (German Lutheran) began working among the Toba. By 1900, most Toba had become Protestants, thanks in great part

to Nommensen distancing himself from the Dutch colonial authorities and offering his services as doctor, teacher, and mediator. Most concretely expressed in the 1908 construction of the first road into the highlands (formerly accessible only by footpaths), the Dutch penetration of Batak society, nonetheless, did face resistance: in armed syncretistic and messianic movements; in Karo and Simalungun mistrust of a Christianity viewed as a partner of colonialism; and, in the establishment of a self-governing Batak church, free of European missionary paternalism.

The educational advantages that Batak received from the mission schools enabled them to fill commercial and teaching jobs throughout the Netherlands Indies and, later, to play prominent roles in Indonesia’s national leadership from the revolution down to the present day. The Batak lands are undergoing rapid development as the farming hinterland of the oil- and rubber-rich northeast Sumatra coast, of Medan (the metropolis of western Indonesia), and even of Singapore and Malaysia. The Karo and Toba highlands are attracting the greatest number of tourists in all of Indonesia, after Bali and Yogya.

## <sup>2</sup>LOCATION AND HOMELAND

The Batak homeland in North Sumatra province is located on a high rolling plateau (1,000 m or 3,280 ft above sea level) between the two parallel volcanic ranges of the 2,000 m (6,560-ft-high) Bukit Barisan Mountains. The region centers on Lake Toba, a veritable inland sea occupying the crater left by a vol-

*A Batak man in Lake Toba, Indonesia. The Bataks are some of the original inhabitants of Indonesia and are now a remote tribe that lives around Lake Toba in Northern Sumatra. (AP Images/Horst Faas)*

canic explosion 75,000 years ago (2,000 times more powerful than that of Mount Saint Helen's). In this century, overpopulation has forced many Batak to settle in the densely forested piedmont and in the coastal plantation zones to both the east and west. Batak also form a major part of the population of the multiethnic metropolis of Medan and can be found in cities throughout Indonesia.

According to the 2000 census, Batak numbered 6.1 million, Indonesia's fifth largest ethnic group, which is 3% of the population. This was almost twice the 1990 census figure of 3.1 million for speakers of the three Batak languages. A more recent estimate puts the number at 9 million. The relative size of the various Batak sub-groups can be judged from the following estimates from 1991 (or 1989, where noted): 2 million Toba, living around Lake Toba, on Samosir Island, and in the highlands to the south; 600,000 Karo to the northwest of the lake; 1.2 million Simalungun, east of the lake; 1.2 million Dairi, west of the lake; 750,000 Angkola (1991) and 400,000 Mandailing (1989) between the Toba and the Minangkabau; and 800,000 Alas-Kluet (1989) in southern Aceh.

### **<sup>3</sup>LANGUAGE**

Batak dialects divide into three mutually unintelligible groups: Toba-Angkola-Mandailing, Karo-Dairi, and Simalungun. In the past, intercommunication was possible because many Batak knew Batak languages other than their own and some-

times also Malay (which could also be used with non-Batak). Today, it is a widespread mastery of Bahasa Indonesia that facilitates intercommunication.

Batak religious specialists have long employed a script (ultimately of Indian origin) to record occult knowledge; the letters vary slightly among the six Batak groups.

Children take as surnames the clan (*marga*) names of their father.

### **<sup>4</sup>FOLKLORE**

According to the Toba creation myth, the primordial universe consists of the seven-layered upperworld of the god Mula Jadi Na Bolon, and the watery underworld of the dragon-serpent Naga Padoha. Mula Jadi Na Bolon sired three sons by a blue hen: Batara Guru, Mangalabulan, and Soripada. He also sired three daughters to give to his sons as wives. It is the daughter of Batara Guru, Si Boru Deak Parujar, who created the earth. She married her cousin Boraspati ni Tano, the lizard-shaped son of Mangalabulan, and gave birth to twins of different sexes. In turn, these twins married each other, descended to the earth at the volcano Pusuk Buhit (on the west shore of Lake Toba), and founded a village, Si Anjur Mulamula. From this pair, all humanity descends. From one of their grandchildren, Si Raja Batak, all the Batak descend (the other Batak groups do not widely recognize this genealogy).

## 5 RELIGION

The Toba have been predominantly Protestant Christian for over a century, while the Angkola and Mandailing have been Muslim several decades longer. Pebegu, the indigenous animist religion, is strongest among the Karo, claiming 57% as adherents (though many of these describe themselves as “secular,” i.e., with a rather uncertain grasp of their religion). Some 12% of Karo profess Islam, while 31% are Christian (converts were few until the 1965 suppression of communism compelled every Indonesian to declare adherence to a universal religion). The self-governing Toba church (Huria Kristen Batak Protestant or HKBP) is the largest Christian body in Indonesia and one of the most powerful. The Simalungun and Karo Protestants have each established their own churches. Finally, about 10% of all Batak are Catholics, missionary work having begun only after independence. To a considerable extent, however, Christian and Muslim Batak maintain beliefs and practices of the traditional religion alongside those of the newer creeds.

The traditional Batak religion recognizes numerous gods but focuses much more upon handling spirits directly associated with human life. One of two deities who do figure prominently is Boru Saniang Naga, goddess of rivers and lakes, who must be honored before fishing, farming, and making or traveling by boats. The other is Boraspati ni Tano, a fertility god whose lizard form appears on house façades; every working of the soil requires that he be appeased.

*Tondi* (in Toba, *tendi* in Karo) is the life-force present in human beings (as well as in rice and iron). The god Mula Jadi Na Bolon gives each person his or her tondi before birth; the tondi also chooses the person's destiny before birth. The tondi is not bound to the body; it may roam, or a more powerful spirit may capture it. The separation of the tondi from the body causes illness, and, if the tondi cannot be enticed back by offerings or successfully summoned back by mediums, this can lead to death.

Upon death, the tondi disappears, releasing the *begu* or essential soul. The *begu* remains near its former home or in the vicinity of the cemetery and can contact surviving kin and descendants (for instance, it can express disapproval through a nightmare or a particular mishap). Babies who die before breaking their first tooth; persons who die by accident, murder, or suicide; and young women who die unmarried become *begu* who protect their families. If their kin group mounts large-scale funerary sacrifices, the *begu* of powerful individuals attain the higher status of *sumangot*, an ancestor figure around which a new subclan can be formed. Further rituals can promote *sumangot* to *sombaon*, prominent ancestors of 10 to 12 generations back who dwell in spooky places such as mountains or dense forests. Unelevated *begu* become resentful and, if not sustained through offerings, can harm rather than help humans. The *begu* is not immortal but will die seven times before turning at last into a blade of grass.

Religious specialists include *guru sibaso* (female spirit mediums) and *datu* (male priests). The latter acquire a specialized knowledge of the occult through a rigorous apprenticeship. *Pustaha*, folding bark-books in Batak script, record information on magic, divination, and medicine.

## 6 MAJOR HOLIDAYS

See the article entitled **Indonesians**.

## 7 RITES OF PASSAGE

A wedding links not only two individuals but, more importantly, two kin groups, usually reaffirming longstanding relations. The man's family sends a delegation to deliver an initial proposal to the woman's family. If the latter accepts the proposal, the two sides hold a later discussion to negotiate the bride-price and the gifts to be given by the man's side to the woman's relatives, as well as to fix the date of the wedding. Among Christianized Toba, it is important for the families to announce the wedding formally to the church congregation. The wedding feast is attended by kin of both sides and by all the inhabitants of the village where it takes place. The celebration includes the handing over of the bride-price, the slaughtering of a water buffalo or several pigs, and the distribution of the meat to the relatives.

Should any of the kin object to the wedding, the couple may elope, the man taking the woman to his parents' house. Before one day passes, the man's kin must send a delegation to the woman's side to inform them of the elopement and of the man's intention to marry the woman. After a while, the man's side asks pardon of the woman's side in a formal ceremony, after which a conventional wedding can take place.

Even among Christians, traditional funerary practices continue to be practiced. These include having masked dancers accompany the coffin to the grave. These masks, representing a male, a female, and either a hornbill or a horse, are oversized, as are the wooden hands that go with them; the masks are left on top of the coffin as protection against evil spirits. Proper funerary rites must be performed by a son; therefore, among the Toba, those without sons substitute a *si gal-gale*, a dummy with wooden limbs, for the son never born or earlier deceased.

While the poor are simply wrapped in a mat and interred, the wealthy receive elaborate, often massive, coffins, whose crafting often begins while the person is still alive. These incomplete coffins can be seen under houses. Karo are known for the *pelangkah*, a boat-shaped coffin adorned with a hornbill head at one end. Some Karo and Dairi place the elaborately confined body of a prestigious notable in a special structure, burning it after a year. More common is for Batak to exhume the bones of the powerful for reburial in a large stone sarcophagus, often with a *singa* (lion) carved in the front. Today, tombs no longer use stone but rather consist of massive concrete structures and statuary.

## 8 INTERPERSONAL RELATIONS

In pre-colonial times, political organization above the village level hardly existed. Among the Karo, an *urung*, a confederation of villages, looked to a *raja urung* or *sibayak* for leadership in time of war. The Toba recognized a line of priest-kings of very limited authority, the *si singamangaraja*. Only Simalungun chiefs who had received titles from the Acehnese sultan were said to wield “despotic” power over their districts.

Thus, for the most part, villages were independent and the individual village chief (*raja*) answered to no higher authority. The *raja* arbitrated disputes, extended hospitality to visitors to the village, and gave permission for people to move in or move out of the village. Although a member of the village's founding (and dominant) clan (in Karo, *merga taneh*), the *raja* himself was no more than a first among equals, relying on personal charisma to attract loyalty and compliance. He could not exercise authority without consulting with village elders and

his family's *anak boru* (wife-takers). The community could remove a *raja* for incompetence, and a wealthy freeman (*anak mata*) could command as much influence as an impoverished *raja*.

Traditional society distinguished between free persons and slaves (in Toba, *hatoban*; in Karo, *kawan*). The former divided into *biak raja*, the descendants of chiefs and other notables; specialists believed to be mystically potent (iron- and goldsmiths, woodcarvers, musicians, and singers); and ordinary people. Slaves were either debt-pawns or prisoners of war; they worked the lands of the *raja* and were generally well treated. The Dutch abolished slavery in 1860.

One is careful to speak respectfully to older people and strangers, for instance by prefacing a refusal with words of apology (in Toba, "*sattabi*"; in Karo, "*ula ukurndu litik*"). One touches hands in greeting, giving thanks, and bidding farewell.

Among the Toba, one way young people of different sexes may meet acceptably is *martandang*. In the evening, young men visit the house where young women live, under the supervision of a widow. The young people communicate in riddles. Should a young man find one of the maidens to his liking, he approaches her parents to ask her hand. Among the Mandailing, a young man can communicate with the object of his affection by *markusip*. He enters the space under her house, stands under the spot where she sleeps, and gives a secret signal to announce his arrival; the two whisper through the floorboards.

## <sup>9</sup>LIVING CONDITIONS

The traditional Toba village (*huta*) consists of 8 to 10 houses facing each other across a broad central avenue, which serves as a place for drying rice and gathering for ceremonial celebrations. All of the village inhabitants belong to the same clan. Community meetings take place in an open area (*partukhoan*) near the village gate. The Karo *kuta* is much larger, includes families of different clans, and possesses a meeting-house (*balai kerapatan*). Batak villages established in warlike pre-colonial times were ringed by a high wall of earth or sometimes stone blocks, a moat, and thick stands of bamboo.

Most Batak now live in brick or cement houses, and roofs of corrugated metal sheets have replaced thatched ones even on many traditional homes. Traditional Batak houses are rectangular structures raised on piles. The Toba house is home to a single couple, their unmarried children, the eldest son and his family, and the father's widowed sisters. The house has a high saddle roof whose ends project well beyond the walls of the house; the roof juts farther out in the front where there is a veranda; the foot of the entrance staircase is under the veranda.

The much larger Karo dwelling houses eight related families, each family inhabiting 5 sq m (approximately 54 sq ft) of living space and sharing a hearth with one other family. The apartments (which today can be rented by unrelated families) line up, four on either side of a central hall that often has a gutter down the middle for debris. The house has identical verandas and doors at both front and back. One particularly distinctive type of roof, for houses with a square plan, has side surfaces rise evenly to the ridgepole, while the front and back sides stop under the ridgepole and connect to it with a wall. Most impressive were the *rumah anjung-anjung* of *rajas* whose roofs were topped with a miniature house.

Human Development Indices (combining measures of income, health, and education) in the Batak region vary widely: the HDIs for the residencies of Toba Samosir (74.5) and Karo (73.5) are higher than that for North Sumatra as a whole (72), while those for Simalungun and Dairi residencies are below (71.3 and 70.5 respectively). All are above Indonesia's national HDI of 69.6. One Batak area, Mandailing Natal residency, has one that is slightly below, 68.8. Its GDP per capita is only us\$3,677, compared to us\$8,035 for Toba Samosir, and its infant mortality rate is 66.61 deaths per 1,000 live births, compared to 25.78 for Karo. The provincial IMR is 43.69.

## <sup>10</sup>FAMILY LIFE

Batak belong to lineages that trace back to a common ancestor though the male line. These broad patrilineages or clans (in Toba, *marga*; in Karo, *merga*) are numerous and divide further into subclans. A Toba *marga* is named after a common ancestor who can be traced back 20 or more generations through genealogies (*tarombo*). A Karo *merga* carries a group name that does not refer to a specific ancestor and does not keep *tarombo*.

The most important social unit is the group (in Toba, *saompu*; in Karo, *sada nini*) of all the descendants of a common grandfather who live together in the same settlement. Within the *saompu/sada nini* are numerous nuclear families (in Toba, *ripe*; in Karo, *jabu*), each of which includes a couple, their unmarried children, and their married sons.

The ideal (though now rare) match is between a man and his mother's brother's daughter. Matches between people of the same *marga* and between a man with his father's sister's daughter are taboo. Members of one kin group customarily take wives from a specific kin group, while giving wives to yet another kin group. Typically, kin group A would give wives to kin group B, which in turn would give wives to kin group C, which would give wives to kin group A, thus forming a circle.

A husband treats his wife's family with great respect, regarding them as *dibata ni idah*, "gods on earth." Only the wealthy have ever been able to take more than one wife. From time to time, a husband takes a second wife but only visits her, as she remains living with her parents (Christians do not practice this).

Along with childlessness and adultery, a wife's inability to get along with even one of her husband's kin is sufficient reason for divorce. The *raja urung* among the Karo or the convened village passes divorce decisions, usually requiring the wife's side to return the bride-price. A Karo wife can have a "temporary divorce" (*ngelandih*) if she goes to stay at her parents' house after a quarrel.

## <sup>11</sup>CLOTHING

Although elements of traditional clothing can still be seen in everyday use, modern Batak dress much as other Indonesians do, wearing international fashions, such as tee-shirts and jeans, or Malay-style *kebaya* blouses. Rectangular, finely patterned cloths called *ulos* (in Toba; *uis* in Karo) continue as an essential part of ceremonial celebrations, both as part of the attire and as gifts exchanged to affirm the bonds between social groups. An *ulos* can be folded for a broad headcloth, or worn over the back as a shawl or over the shoulder as a sash (also a baby-carrier). In former times, women wore an *ulos* as a sarong with the breasts exposed, or wore the cloth wrapped around their

whole body with only the shoulders bare. Traditional clothing also included jackets and vests.

The colors of traditional ulos were symbolic: white of the upperworld and life; black of the underworld and magical power; and red of the middle world, bravery, and spiritual potency. While Karo tradition preferred cloth of indigo, contemporary Karo prefer dark red, following Simalungun taste. Toba weavers have long produced cloth in Karo patterns for Karo buyers. Machine-woven fabrics imitate the older hand-woven styles and are actually preferred by the younger generation, who also have begun to request that traditional patterns be done in gold or silver thread (Malay-style *songket*).

## 12 FOOD

Rice is the staple food, supplemented by cassava, taro, maize, beans, and bananas. A common side dish is *bulung gadung tumbuk*, cassava leaves pounded and then stewed as a curry. A popular feast food is *saksan*, roast pig eaten with a ginger-laden spicy sauce that includes the blood of the animal. *Dengke ni ura dohot na margota* is a big lake fish, spiced and mixed with tamarind as a souring agent and kept for two or three nights before eating. *Dengke ni arsik* is carp with cassava leaves, spiced, then cooked until the fish is tender and dry. *Pinadar* is chicken or pig meat grilled until dry, then mixed with hot spices, tamarind, and salt. *Tuak tangkasan* is palm-sap alcohol, flavored with a kind of bark.

## 13 EDUCATION

In 2005, the Batak region's level of literacy was very high by Indonesian national standards; that of Mandailing Natal, the regency with the lowest HDI of all the Batak region's regencies, 98.53, was even higher than that of the national capital, Jakarta, 98.32. (See also the article entitled **Indonesians**.)

## 14 CULTURAL HERITAGE

Batak are celebrated throughout Indonesia for their love of music-making, often appearing as entertainers in hotels and restaurants. Traditional ensembles divide into two types: one for loud, outdoor ceremonial music and the other for soft, indoor informal music. The former includes *gondang* (a set of long, cylindrical, tuned drums, beat in dynamic rhythms), *sarune* (a penetrating oboe played with circular breathing), and *ogung* (gongs). The latter type of ensemble includes the *hasapi* (a long-necked lute), the *surdam* (a bamboo flute), and the *keteng-keteng* (a bamboo-tube zither, struck with sticks).

Accompanying themselves on guitars (and nowadays also on Yamaha electric organs), Batak sing passionate songs (*lagu Batak*), whose style reflects Portuguese and Spanish influences. This music is widely available on cassette. Churches may have as many as 10 choirs, singing (in unison and improvised four-part harmonies) many hymns that are no longer known in Europe.

Traditional dances served mainly three different functions: to show respect for guests, especially the host's wife-giving kin group; to induce possession by spirits (through orchestral crescendo); and for young people to divert themselves (often with a humorous erotic component). Funerals include the *tortor*, a solemn dance with slow and rigid movements.

Oral literature includes *andung-andung*, laments for the dead, including fixed expressions that can no longer be under-

stood; and *tonggo-tonggo*, poetical prayers recited during offering ceremonies (these include *tabas* incantations).

## 15 WORK

Most Batak gain a living from agriculture, in some areas cultivating irrigated rice, in others raising maize, cassava, indigo, sugar palm, and other crops in dry-fields, to some extent still with swidden (shifting-cultivation) methods. Karo and Simalungun farmers grow vegetables and fruits for the Medan market, but also for Singapore and Malaysia. Spreading over the Simalungun area since colonial times, and once employing primarily Chinese and Javanese labor, plantations grow rubber, oil palm, cacao, tea, and tobacco. Other cash crops are coffee (especially among the Mandailing and Dairi) and cloves.

Men clear and plow the land as well as set up irrigation systems, while women plant, weed, and harvest; neighbors and close kin cooperate in accomplishing agricultural tasks. Batak keep water buffalo as draft animals and to be sacrificed and consumed at ritual celebrations; pigs are raised both for meat for everyday meals and feasts. Cattle, goats, chickens, and ducks are raised for sale in coastal cities. Fishing is a major occupation on Lake Toba.

Because of a relatively high educational level, Batak fill office (including bureaucratic), teaching, and health service jobs throughout Indonesia.

## 16 SPORTS

See the article entitled **Indonesians**.

## 17 ENTERTAINMENT AND RECREATION

See the article entitled **Indonesians**.

## 18 FOLK ART, CRAFTS, AND HOBBIES

Villages and regions specialize in particular crafts: textile-weaving; mat- and basket weaving; iron-, gold-, and silver working; pottery; and woodcarving (important in decorating the walls of traditional houses).

## 19 SOCIAL PROBLEMS

See the article entitled **Indonesians**.

## 20 GENDER ISSUES

In 2002, the Gender-Related Development Indices (combining measures of women's health, education, and income relative to men's) of the regencies of the Batak region were almost all higher than Indonesia's national GDI of 59.2: 69.3 for Toba Samosir, 68.5 for Karo, 66.5 for Dairi, and 61.5 for Simalungun. Only Mandailing Natal was lower, at 58.4, which was also lower than that for North Sumatra as a whole, 61.5. The Batak regencies' Gender Empowerment Measures (reflecting women's participation and power in political and economic life relative to men's), however, were all lower than the national GEM of 54.6, ranging from Dairi's 53.4 to Karo's 46.

## BEDU

**PRONUNCIATION:** BEH-doo

**ALTERNATE NAMES:** Bedouin

**LOCATION:** Deserts of Israel, Jordan, Lebanon, Syria, Saudi Arabia, Iraq, Kuwait, Yemen, Oman, Qatar, the United Arab Emirates, Bahrain, and Egypt

**POPULATION:** 4 million to 5 million

**LANGUAGE:** Arabic

**RELIGION:** Islam

### <sup>1</sup> INTRODUCTION

The Western term *Bedouin* is actually a double plural; in their own language (Arabic), Bedouin refer to themselves as "Bedu" (also plural, but for simplicity it will be used here as both singular and plural). The definition of who is and is not a Bedu has become somewhat confused in recent times, as circumstances change and the traditional nomadic life of the desert herders had to adapt. Generally speaking, a Bedu is an Arab who lives in one of the desert areas of the Middle East and raises camels, sheep, or goats. The Bedu traditionally believe they are the descendants of Shem, son of Noah, whose ancestor was Adam, the first man. Bedu society is based on complicated lineages that govern the formation of tribes and family clans. Bedu introduce themselves by giving their name, then naming two generations of male ancestors, and then stating their tribe: for example, "Suhail son of Salem son of Muhammad of the Bait Kathir." Women are also known as the daughters of their fathers and grandfathers, and they keep their family names even if they marry into a different tribe.

Genetically speaking, the Bedu are Semitic in origin, of the Caucasian race. The Arabian Peninsula historically has been the crossroads for trade as well as war. Bedu tribes often took strangers into their system as *mawali* and offered them the tribes' full protection and identity, thus intermingling with other peoples. Where the Bedu have had little contact and, therefore, little intermingling with other races, their skin complexion is fair where it is not exposed to the sun. Bedu are considered the "most indigenous" of modern Middle Eastern peoples, meaning they lived there before anyone else. At the time when Arabs were first distinguished from other races, they were desert nomads. The first appearance of nomadic peoples in the Arabian desert can be traced back as far as the third millennium BC.

### <sup>2</sup> LOCATION AND HOMELAND

Bedu territory covers the Arabian deserts of the Middle East, including parts of the Palestinian territories and the modern states of Israel, Jordan, Lebanon, Syria, Saudi Arabia, Iraq, Kuwait, Yemen, Oman, Qatar, the United Arab Emirates, Bahrain, and Egypt. Their entire range extends over 2.5 million sq km (1 million sq mi), which is about the size of western Europe. It is difficult to count the exact number of Bedu living within this huge territory. Most estimates figure that the Bedu population is about 4 million to 5 million, which puts the population density at less than 1 person per sq km (around 2.5 persons per sq mi). It is estimated that approximately 10% of all Bedu continue to live in a purely traditional way: nomadic camel herders who follow the scattered, sporadic rainfall to find grazing

for their animals, live off the products of those animals (milk, meat, hair, and skins), and use them as their sole form of transportation. This article primarily focuses on the nomadic Bedu. Life for the other 90% of the Bedu is similar to that of other urbanized Arab peoples.

The desert environment is harsh and does not lend itself easily to the support of human life. Much of the Bedu territory receives only four inches of rain per year, and those four inches are scattered and unpredictable. Temperatures can go as high as 50°C (122°F) in the shade during the summer months, and as low as 0°C (32°F) during the winter. At night, the temperature drops dramatically, plunging as much as 30°C (54°F) from daytime temperatures. The beginning of summer is often heralded by violent sandstorms and scorching winds. The Bedu recognize four or five “seasons” that vary in length depending on the amount of rainfall. In a good, rainy year, spring can last as long as six weeks (during February and March), whereas in a dry year there may be no spring at all, with winter simply shifting right into summer.

Despite these harsh conditions, a great deal of life manages to exist in the desert. Wolves, foxes, wildcats, gazelles, hares, small rodents, reptiles, and many insects and spiders make their homes there, and flocks of migratory birds pass through on their way from summering to wintering grounds (and vice versa). A variety of plant species have also adapted to the extreme temperatures and lack of water, developing long roots and spiny leaves, water storage capacities, and seeds that will last hundreds of years in a dormant stage until conditions become right for sprouting. The Arabian deserts are not all sand, either, although they do boast the highest sand dunes on Earth, with some as high as 600 m (2,000 ft). Within Bedu territory are mountains, rock outcroppings, gravel and stony plains, *wadis* (dry riverbeds, which can become sudden torrents during a heavy rainfall), and stands of scrubby bushes or trees. A few days or weeks after a rainstorm, the desert floor is transformed into a carpet of grasses and brilliantly colored wildflowers. The Bedu travel in search of these green places in the desert.

### 3 LANGUAGE

The Bedu speak Arabic, but it is a very rich, stylized Arabic. Bedu Arabic is somewhat comparable to Shakespearean English. As is the case with many indigenous peoples, the Bedu language is filled with words that pertain to the details of their life, making distinctions that are difficult for others to comprehend. Just as the Inuit people have many words for snow, the Bedu have more than one word for desert, and the differences between them are hard to define in English. A *badiya* is something open and uncovered, a country in full view. A *sahra* is a vast open space that is generally level, defined in contrast to a “settled” area. The Bedu also have many words for water, which was historically far more important as a scarce resource in the desert.

### 4 FOLKLORE

The two main types of Bedu folk tales are realistic stories involving the familiar Bedu way of life and fantasies that tell of love and include a woman as a main character. These two types of folk tales generally fall into three categories: raiding stories, which celebrate heroism, strength, and courage; love stories, which revel in the emotional highs and lows of star-crossed lovers and struggles to overcome obstacles to true love; and

stories about thieves of the desert, which tell of robbery, murder, and treachery.

Some Bedu are superstitious, putting great stock in amulets and charms, lucky numbers (odd numbers are usually considered lucky), and spirits. Stones and designs in jewelry have magical qualities. Triangles, which represent hands, called *khamsa*, ward off the evil eye, as do blue stones, such as turquoise or lapis lazuli; red stones will stop bleeding or reduce inflammation. Children, especially boys, are protected by charms hung around their necks or ankles and with ear studs containing magical stones. Many adult Bedu still have the holes in their earlobes from these magic ear studs. Animals that prey on the Bedu herds (e.g., wolves, wildcats) are considered the embodiment of evil, and in southern Arabia the camel is believed to be the direct descendant of the spirits of the desert.

### 5 RELIGION

Bedu are now Muslim. At one time there were Jewish and Christian tribes, but none of them survive today. For the most part, Bedu do not follow Islamic duties and rules strictly. Given the Bedu desert environment and demanding existence, many Islamic rituals are difficult to practice in the same manner as elsewhere. For example, ritual dry washings are utilized when there is insufficient water. The *Hadj* (pilgrimage to Mecca) is an important ritual for the Bedu, and most parents take each of their children on his or her first pilgrimage at the age of seven or eight. Some Bedu construct a place of prayer, called a *masjid* or *mashhad*, shortly after setting up their tents by enclosing a small piece of land with pebbles. The morning and noon prayers are usually considered the most important of the five daily prayers of Islam.

### 6 MAJOR HOLIDAYS

The most highly regarded Islamic festival among Bedu peoples is *Ayd al-Adha*, the “feast of sacrifice,” when the Bedu sacrifice a camel or sheep from their herd to commemorate Abraham’s willingness to sacrifice his son. (Because Islam uses a lunar calendar, the dates for Muslim holy days change each year on the Gregorian calendar.) Given the strong identification with lineage and kinship in Bedu society, the rite of honoring those who have died is taken very seriously.

Because many Bedu do not fast during the month of *Ramadan* (the ninth month of the Muslim year, during which Muhammad received his first revelations, celebrated by complete fasting from dawn until dusk each day of the entire month), the festival of *Ayd Al-Fitr* (a three-day celebration to break the fast at the end of *Ramadan*) has little meaning. Bedu also do not pay much attention to the celebration of the prophet Muhammad’s birthday or his *hegira* (Muhammad’s flight from Mecca); in fact, some Bedu do not even know the dates for those holy days in any given year.

### 7 RITES OF PASSAGE

In some tribes, when girls reach puberty they must then cover their hair and wear a mask or veil over their faces when in public (which, in Bedu terms, means whenever anyone but immediate family is present). Girls look forward to wearing these head and face coverings as a sign of maturity, and many design them so as to be alluring and provocative. They use their masks and veils to great effect in flirtations.

## 8 INTERPERSONAL RELATIONS

Two things shape the interactions of Bedu people: the Arab tradition of hospitality and the Bedu code of honor, or *sharaf*. These things themselves are shaped by the extreme conditions of desert nomadism. Survival as small groups of wanderers in the unforgiving desert required tremendous cooperation. The guest fed in one's own tent today may be the one who can provide food tomorrow. Passersby traditionally exchanged formal greetings with the families in the tents they passed and were asked for any news. The polite reply was to say one has no news or only good news. The passersby were then invited into the men's side of the tent for coffee and tea, served in a ritual way. It is considered polite to drink at least three cups before wobbling your glass to show that you do not want it refilled. Guests were assured of food and shelter for three and one-third days and then protection for another three days after leaving the tent, that being considered the length of time it takes for all traces of the host's food to pass through the guest's body. (Before a guest departed, the host burned incense in a special crucible called a *madran* or *mijmar*, and the guest perfumed his headscarf and beard with the smoke.) Anyone who even exchanged greetings, whether they came into the tent or not, was considered a guest entitled to the host's protection for the customary three days.

Women are inviolate in the Bedu code of honor. No man who is not intimately related to a woman may touch her in any way, not even so much as to brush his fingers against hers while handing her something. To do so is to dishonor her, and the traditional punishment for that was death. Likewise, in some tribes, if a woman brings dishonor to herself, she shames her family, because honor is held not by individuals but by whole families. According to old Bedu custom, if a woman committed any shameful conduct, her father or brother traditionally had the right, and was expected, to kill her immediately. Even in wars or raids, women were not touched. Raiding parties left enough supplies in the raided camp to support the women and children there. The loss of a woman's honor, her *ird*, is extremely serious in the Bedu code.

Long-time warriors, the Bedu have developed a very clear idea of what constitutes a fair fight and have strict rules governing the conduct of wars and raids. Another important element of Bedu honor is *as-sime*, giving up something so that a weaker person will benefit. Children are trained in the code of honor and tradition of hospitality from a very early age. By the time they are seven or eight years old, boys and girls know well what is expected of them and can behave with adult dignity when called upon.

## 9 LIVING CONDITIONS

The traditional Bedu live either in tents made of woven goat hair, known as a *bait sharar* ("house of hair"), palm-frond shacks called *barasti*, or in the shelter of a few bushes or trees, on which they may drape blankets for more protection from the wind. Bedu adapted to more modern customs live more settled lives in villages or take advantage of technological items such as "portacabins."

Bedu tents vary in size, depending on the number and wealth of the people living in them. The smallest are two-room tents, about 4 to 5 m (12 to 16 ft) long, and the largest can be anywhere up to 45 m (150 ft) or more in length. Most tents are about 2 m (6 ft) high. Larger tents are harder to move, so nomadic Bedu tents tend to fall somewhere between those two

extremes. A tent houses an extended family of around 10 people, and it is divided into at least two sections—the men's side, or *al-shigg*; and the women's side, or *al-mahram*. Cooking is done and possessions are stored on the women's side, unless the tent has a third section for those purposes. Guests are entertained on the men's side, and the coffee and tea utensils and a fire for heating the water are located there. The men's and women's sections are divided either by a woven curtain called a *sahah* or *gata'ah*, or by a wooden mat called a *shirb* held together by wool woven around the canes in geometric patterns. These tent dividers are frequently beautiful works of art.

Bedu families stay close to their permanent wells during the dry summer months, then migrate to better grazing areas during the winter. The Bedu can travel as much as 3,000 km (1,600 mi) or more in a year. Traditional Bedu ride camels, which move by lifting both legs on one side at the same time, giving them a seesaw motion that requires a great deal of balance to ride. Some modern Bedu have acquired trucks and other four-wheel-drive vehicles to replace the camel as transportation. Each tribe has its own territory, or *dirah*, but as modernization encroaches on their range, the Bedu have had to cross over each other's territories much more frequently, and now it is commonplace to do so. However, each tribe still knows its *dirah* and the boundaries of those of other tribes.

The life of Bedu in oil-rich Arab nations is not quite as harrowing, as tanker trucks often bring water to outlying areas. Mobile medical units have made Western medicine more available to the Bedu, but most only turn to them when folk medicine fails. Traditional Bedu beliefs held that physical health is related to the actions of spirits and devils. The Bedu traditionally put red-hot coals to their skin to open a door for an evil spirit to exit the body at a place where it was causing trouble (e.g., between the eyes in the case of headaches). Herbal medicine (teas, poultices, etc.) is widely used, as are charms and amulets. Today, herbal treatments are no more considered "magical" among the Bedu than acupuncture is in the West. If all else fails, including folk and Western medicine, the Bedu may turn to *sahar*, practitioners of alternative medicine who have been outlawed by most state governments but who continue to provide their services.

## 10 FAMILY LIFE

Bedu live in extended families made up of paternal cousins. A group of families who are related to each other make up a *fakhadh* (literally, "thigh"), which means a clan "of the same root" or "part of the whole." A group of *fakhadhs* constitutes a tribe, called a *kabila* or *ashira*, though these words may also refer to subsections of a larger tribe. A group of tribes is a "confederation." Tribes vary widely in size and are constantly changing through marriage or territorial needs for grazing. A small tribe that has to move into the territory of a larger tribe to feed its herds may become absorbed by the larger tribe. Later, if the original small tribe has gained enough members and/or wealth, it may strike out on its own again.

Every group of Bedu has a *sheikh*, or leader. The sheikh always comes from the same family line within each group, but it is not necessarily the oldest son who takes over when the father dies. The post is given to the male family member most qualified for the job. A sheikh leads by consensus, not by absolute will, so all members of the group must respect the sheikh in order for him to lead them effectively.

Marriage is more of a social contract among the Bedu than a love match, although love often enters into it and sexuality within marriage is greatly enjoyed and celebrated by both men and women. The bride and groom are usually first cousins. Women marry between the ages of 16 and 22, while men marry between the ages of 18 and 30. The wedding is accomplished without much ceremony. It is essentially a process of customary negotiations after which the bride is escorted to the groom's tent. Divorce is just as simple: a man simply states in front of witnesses that he wants a divorce. A woman can initiate a divorce by moving back to her parents' tent. If she refuses to return to her husband's tent with him, he will grant her a divorce. Women give birth without much fuss as well. Siblings are very close to and protective of one another; brothers in particular guard their sisters' honor fiercely. Incest is forbidden and is virtually unknown.

### 11 CLOTHING

The primary article of clothing for both Bedu men and women is the *dishdasha*, a long gown worn by most Arabs that covers the body from the base of the neck to the wrists and ankles. Men wear the dishdasha as an outer garment with baggy trousers called *sirwal* underneath (some modern Bedu men wear sweatpants now instead), while women wear the dishdasha as an underdress beneath a larger, looser dress called a *thob*, which is almost always black. Women also wear baggy trousers, which are tight at the ankle and embroidered, under their dresses. Bedu men wear some sort of headcloth, the design of which varies from tribe to tribe. Adult women wear veils over their hair and either veils or masks on their faces (in most tribes). Both men and women use *kuhl* (kohl, a black powder made from lustrous antimony) to accent their eyes. It reduces glare from the harsh desert sun and is believed to help repel flies as well. Bedu traditionally walk barefoot.

Women love jewelry and wear a lot of it; they may also wear the family's wealth as jewelry, which will then be completely safe since, according to the code of honor, women cannot be touched. Older women may have tattoos, which were believed to enhance their beauty, but that tradition is dying out, and very few younger women wear them. It is considered effeminate for a man to have a tattoo. Men wear silver or gold belts with elaborate curved daggers called *khanja* strapped to them. Belts designed for carrying bullets are now popular, and nomadic Bedu men are rarely seen without their rifles.

### 12 FOOD

Bedu cooking emphasizes quantity rather than style. The traditional Bedu diet consisted mainly of camel milk, served cold or hot, boiled with bread, or cooked with rice. Meat, usually goat's meat, was an occasional luxury. Bedu along coastal areas also eat fish. Thin, flat bread is cooked over the fire on a curved metal sheet. The Bedu also hunt for meat to supplement their diet. They traditionally used trained falcons captured in the fall and released in the spring to hunt desert hares and foxes or migratory birds. Many Bedu hunt with a breed of dog called *saluki*, which is somewhat like an elegant greyhound. Although herding dogs are considered unclean and are never allowed to enter the living area, salukis are treated with a great deal of affection and live in the tent with their masters.

### 13 EDUCATION

Traditional Bedu education consists of training in the skills necessary to live the life of the nomadic desert camel herder. It takes years to learn how to take care of a herd of camels and a family in the harsh desert environment. Although some Bedu parents are beginning to provide a more formal education for their children in schools, this makes it difficult for those children to learn their desert skills. These skills are hunting, rope-weaving, camel-herding, -riding, -milking, and -breeding, tracking, and the rituals of entertaining guests for Bedu boys and weaving of all sorts, embroidery, cooking, cleaning, setting up and taking down camp, tent-making, and herding for Bedu girls. Traditional Bedu society was largely oral, without much need for reading and writing. However, reading the Quran is very important, and there are always some members of the family, including women, who must know how to read and write. Bedu can recite poetry and tell stories by memory, however, and recognize all of the hundreds of *wasms*, the camel brands of their own tribe and neighboring tribes. They can also "read" the signs left on the hard desert ground by people and animals that have passed that way.

### 14 CULTURAL HERITAGE

Poetry is considered the highest art in Bedu society; it is the outlet for emotional expressions otherwise restricted by the code of honor. The *rabab*, the one-stringed Bedu violin, is often played to accompany the recitation of poetic verse. Other literary genres, all oral, in the Bedu world are the *qissa* (folk tale), *qasid* (ode), riddles and proverbs, the *murafa'a* (pleading one's case before the magistrate), and the discussions of the *majalis* sessions (gatherings of family to pass on wisdom and traditions to the younger members).

Many Arab nations and even many Zionists within the modern nation-state of Israel regard the image of the Bedu as important to their cultural identity. For many, the Bedu shepherd is regarded as a bridge to the past. That link to the past is essential to nations that encompass ancient lands, peoples, and traditions but are relatively new as modern states.

### 15 WORK

Herding camels during the winter migration is a full-time job for at least two family members and usually requires two others part-time. Men and boys do most of the herding, but if there are not enough sons to do the job, teenage girls will help out. In a family with no sons, daughters take on all the work, including herding, entertaining guests, driving the vehicles (if they have any), and so on. Setting up and taking down camp is the women's job, plus all of the cooking, cleaning, weaving, and sewing. Pregnant women generally work right up to the time of delivery and then go back to work as soon as possible after giving birth. Nomadic Bedu life is a constant round of chores: collecting firewood, filling water drums, obtaining and preparing food, taking camels to pasture in the morning, and bringing them back to camp at night, milking the camels, moving camp, making and repairing tent cloths and clothing, and so on.

Many Bedu have given up full-time nomadic herding to take on wage-earning jobs. In many Middle Eastern countries, Bedu men form important elements in the military and are well compensated. In Jordan and Saudi Arabia, the armed forces are composed almost entirely of Bedu. In Israel, they

have also been enlisted as trackers and wardens to protect endangered desert species.

## 16 SPORTS

Nomadic Bedu do not have much time for sports, but they do enjoy camel racing and spend quite a bit of time and energy breeding fast, light camels and even training them to pick up alternate feet, rather than both feet on the same side at the same time, to make them easier to ride at high speeds. Hunting is done purely for sport by wealthier Bedu, though it is a necessity for poorer families.

## 17 ENTERTAINMENT AND RECREATION

Winter is a sociable time for the Bedu, with many clans and tribes gathered in good grazing areas, rather than stuck by their isolated wells in the dry summer. At night, they gather to recite stories in verse around the campfire. Other times, the women may sing to the men in an informal performance called a *summejr*. Given the harsh realities of nomadic Bedu life, there is not much time for more recreation than this.

## 18 FOLK ART, CRAFTS, AND HOBBIES

Textiles woven by Bedu women are the most important product and one of the oldest crafts of Bedu society. The ground loom used by Bedu women is shown in an Egyptian fresco dating to 2200 BC. The women weave sheep's wool, goat or camel hair, or cotton into geometric designs, sometimes including stylized representations of everyday objects such as coffee pots, scissors, or camels. The Bedu traditionally put no border on their designs, instead letting the design go all the way to the edge of the cloth to reflect the infinite horizon of the desert, which leads one's mind to reflect on the infinity of God. Natural dyes were traditionally used, producing muted earth tones, reds, and blues, but they are difficult and time-consuming to make, so many Bedu women now purchase commercial dyes that create brighter colors. Other Bedu crafts are basketry and weaving palm fronds into mats and bags.

## 19 SOCIAL PROBLEMS

The modern invention of national boundaries and the encroachment of cities and cultivated areas on the desert has reduced the Bedu range and forced many to become only semi-nomadic, settling in villages for part of the year and returning to their herds in the desert for only a few months, or to give up the Bedu way of life altogether. With the advent of trucks and planes, the Bedu services were no longer needed to transport goods and people along the Middle East desert trade route by camel caravan. The Bedu thereby lost their biggest asset and source of much of their wealth and power. Many of the Bedu themselves have purchased trucks and other four-wheel-drive vehicles for their own use or to cater to tourists as "taxis." Once the Bedu succumb to modernization, becoming dependent on motor vehicles and wells, they need cash to maintain this new lifestyle. When men take wage-earning jobs in the villages or cities, it separates them from their families and herds. Bedu parents see that their children will need formal schooling if they are going to succeed in this new modern life, so they settle near villages to take advantage of public education. The children then are divorced from their ancestors' traditional lifestyle and can no longer survive in the desert, so they must take

wage-earning jobs. As the Bedu come into more contact with the industrial world, they also see that their *sheikhs* have little authority there, threatening the respect necessary for the sheikh's leadership.

These changes have undermined the traditional Bedu way of life and threaten their very existence as a separate people. Because of assimilation into the settled, technological world and the poverty (even death) of those Bedu who attempt to continue their nomadic ways, the Bedu as an identifiable group may soon become extinct. Yet, the Bedu are a proud people and have fought to retain their way of life. Arab nations and even many Israelis recognize the importance of the Bedu to their cultural heritage and have tried to accommodate the nomadic way of life. Efforts to incorporate the Bedu into modern nations have had varying degrees of success. Israel, for instance, tries to encourage the Bedu to give up their nomadic ways and to settle into modern Israeli society. Many Bedu resist this call because they prefer their nomadic, rural way of life. Other Arab nations such as Jordan have tried to build their national identity on the basis of their leaders' Bedu ties. However, the difference between the settled nature of modern nations and the wandering way of life of the Bedu is difficult to reconcile.

## 20 GENDER ISSUES

The rise of the modern nation-state has not been beneficial to Bedu women. The nomadic lifestyle was harsh, but it did give women a great deal of independence and authority. Bedu women typically supervised the domestic affairs of their clans. While men dealt with matters of herding, women ensured that the social relationships within a clan functioned. Divorce often was instituted by women who chose to express their displeasure with a spouse by moving back into their natal family's tents. As Bedu were forced to settle into planned communities, women lost a great deal of their autonomy. Their role became one not of supervising movement but of housecleaning and serving the male members of their clans. Many modern Bedu women have rebelled against the constraints that the new way of life imposes upon them and have often left their clans to integrate more fully with modern Arab society.

# BENGĀLĪS

**PRONUNCIATION:** ben-GAWL-eez

**ALTERNATE NAMES:** Bangalis

**LOCATION:** Bangladesh (Bengal region); India (state of West Bengal and other northeastern states)

**POPULATION:** 380 million (estimate, including expatriates)

**LANGUAGE:** Bengali

**RELIGION:** Islam; Hinduism

**RELATED ARTICLES:** Vol. 3: Hindus; Vol. 4: Muslims

## <sup>1</sup> INTRODUCTION

Bengālīs are the inhabitants of Bengal in the northeastern part of the South Asian subcontinent. Historically, the area was known as Banga, after local peoples who settled in the region over 1,000 years ago. This ancient term survives in many modern names, e.g., the region of Bengal, the Bengali (or Bangla) language, and the country of Bangladesh (literally, “the land of the Bengali people”).

Bengal came under the influence of many political empires that arose in northern India. It was ruled by the Buddhist Pala dynasty from the 8th to the 12th centuries AD. Following this, it had a series of Muslim overlords and by the late 16th century formed part of the Mughal Empire. With the decline of the Mughals, the region was governed by the independent Nawabs of Bengal until they were deposed by the British in the middle of the 18th century (1757–64). In 1757, at the Battle of Plassey, a small village and mango grove near Calcutta (Kolkata), the forces of the East India Company under Robert Clive defeated the army of Siraj-ud-daulah, the Nawab of Bengal, and thus the Company gained the right to administer Bengal, and in 1765 it gained the *Diwani* of Bengal, which virtually conferred upon it the civil authority of the Province in perpetuity.

In 1905, Bengal was divided into the Provinces of Bengal (essentially the modern state of West Bengal and Bihar) and Eastern Bengal and Assam (the modern Bangladesh and the Indian state of Assam). There was considerable opposition to this partition, particularly among Bengālīs, and in 1912 Eastern Bengal was reunited with Bengal. Assam was created as a separate province in 1914. At the same time, at the end of 1911, the capital of British India was moved from Calcutta to Delhi, where Lutyens and Baker created an imperial capital that is today New Delhi.

The political events in the region following Independence in 1947, led to another partition of Bengal into East and West, again dividing the peoples of Bengali culture, not only between two administrative units, but between two countries. The eastern parts of Bengal, where Muslims were most numerous, were assigned to Pakistan when India was partitioned in 1947. East Pakistan, as it was known, became the independent nation of Bangladesh in 1971, following a bloody civil war between Bengālīs and West Pakistanis.

Calcutta, on the River Hooghly—a tributary of the River Ganges, is the capital of the Indian state of West Bengal and is the “Bengali” city, par excellence. It is a major center of intellectual activity (Bengālīs see themselves as the “intellectuals” of India). Today, it has a population of about 5 million and forms an urban conglomeration of approaching 16 million people, ranking third in size in India, after Delhi and Bombay.

Until 1911, Calcutta served as the capital of British India (it is the starting point of the Grand Trunk [GT] Road that links the cities of the Ganges Plain over its 2,500 km length to the North West Frontier) and is said to have rivaled London in its splendor. One only has to see the magnificent, decaying mansions that abound in Calcutta to get a sense of what it must have been like in the 19th century. Unlike Delhi, Calcutta is a colonial creation, being founded by the British in 1690. The city was a hotbed of the Free India movement prior to Independence, but experienced massive Hindu-Muslim riots prior to partition. The 1947 Partition of Bengal affected Calcutta’s hinterland. For instance, the city, a major regional center of the jute manufacturing industry, lost access to its jute-growing areas, which fell to East Pakistan.

West Bengal is one of the few states in the world that has had a democratically-elected communist government for several decades. The government led by Chief Minister Buddhadeb Bhattacharjee of the Communist Party of India-Marxist (CPI-M), is formed by the Left Alliance, a coalition led by the CPI-M. As of 2008, it had been in power since the 1970s.

## <sup>2</sup> LOCATION AND HOMELAND

The 2001 census puts the population of West Bengal at just over 209.5 million and that of Bangladesh at 131.3 million. This, along with the number of ex-patriots and growth since 2001, makes the 2008 estimate of the numbers of Bengali speaking peoples in the world around 380 million people. The greatest number of Bengālīs are found in Bangladesh with the remainder living in the Indian state of West Bengal. Significant communities of Bengali-speaking peoples are distributed throughout other states in northeastern India. Bengālīs have also emigrated in large numbers to the United Kingdom, Canada, and the United States.

The lower plains and vast delta of the Ganges and Brahmaputra Rivers lie at the heart of the Bengal region. The rich fertile soils, renewed by periodic deposits of sediment, support some of the highest agricultural population densities found anywhere in the world. Water is constantly present, in rivers, streams, and ponds. The many rivers that cross the landscape provide an important means of transportation, but also hinder land communications. Frequent floods in the region cause extensive damage and loss of life. In the extreme north, a narrow strip of West Bengal State reaches into the foothills of the Himalayas around Darjiling. The climate on the plains is hot and humid, with mean monthly temperatures at Calcutta ranging from 20°C (68°F) in winter to 30°C (86°F) in summer. In May 1991, maximum temperatures in Calcutta rose to 40° (104°F). Heavy rains, most of it falling between May and early October, occur during the monsoon period. Calcutta receives 158 cm (62 in) annually, though this total increases to nearly 400 cm (over 150 in) in some parts of the region.

## <sup>3</sup> LANGUAGE

The language of the region is Bengali, which is a member of the Indo-Aryan branch of the Indo-European linguistic family. Like most of the other languages of northern India, it is derived from Sanskrit. Dialects of Bengali, such as Radha, that are spoken in the western region are quite different from those in the east, which show strong Arabo-Persian influences. Other regional dialects include Rajbangshi, Varendra, and Vanga. Bengali is written in its own script, which contains 57 letter

symbols. Numerous Bengali speakers have migrated into the Indian state of Assam, so much so that Bengali is one of the state's official languages.

#### 4 FOLKLORE

The folk traditions of Bengal include folk tales, songs, and riddles that express the values, beliefs, superstitions, and taboos of the common Bengali people. One popular folk tale, known all over the region and even forming the basis for a film, is "Seven Champa Brothers and One Sister Parul." (The Champa and Parul are trees native to the Bengal area.) There once was a king, so the story goes, who was married to seven queens. When the favorite youngest queen gave birth to seven sons and a daughter, the barren elder queens were jealous. They killed the babies, buried them in a garbage heap, and substituted puppies and kittens instead. Fearing witchcraft, the king banished the youngest queen. Seven Champa trees and one Parul tree grew out of the garbage heap where the babies were buried. When the evil queens, and even the king, tried to pluck the flowers from the trees, the flowers moved away. They asked for the banished queen to be brought to them. She plucked the flowers, and a boy emerged from each Champa flower and a girl from the Parul flower. They were reunited with their mother and their father, the king. When the king learned the truth, he had the jealous queens killed and lived happily ever after with his remaining wife and children. The main theme of this tale is that jealousy leads to wrongdoing, but this will eventually be found out and punished.

#### 5 RELIGION

Bengālis, though unified by a common language and culture, are divided by religion. Over 60% of Bengālis, most living in Bangladesh, are Muslim. Even in Hindu India, more than 20% of West Bengal's population is Muslim. This reflects the historical importance of Islam in Bengal during nearly 800 years of the region's history. Most Muslim Bengālis are Sunnis, though Sufism also plays a role in their religious lives.

Bengālis in India are mainly Hindu, with beliefs and customs conforming to the orthodox forms of the religion. West Bengal, however, is also known for some unusual Hindu sects. Vaishnavas are followers of the Hindu god Vishnu. But Bengali Vaishnavas believe that Krishna is the supreme deity, rather than an incarnation of Vishnu. Accordingly, the rituals of this devotional (*bhakti*) movement focus solely on the forms and images of Krishna. Shaktism is a religious cult based on the worship of the female principle (*śakti*, literally "energy"). The Bengal form of Shaktism involves the worship of the goddess Kali. Kalighat in Calcutta, where animal sacrifices are carried out in the name of the goddess, is one of the major Shakti centers in the region. Popular religion in Bengal reflects a mixing of Hindu and Muslim folk beliefs, deities, and customs. For example, Hindus as well as Muslims worship at Sufi shrines.

Bengal is known for its itinerant religious musicians such as the Bauls. These, who are both Hindu and Muslim and tend to ignore sectarian differences between the two religions, wander from village to village singing devotional hymns and folk songs for the local people.

#### 6 MAJOR HOLIDAYS

Bengālis celebrate the major holidays of the Muslim and Hindu faiths. For Muslims, these include Id ul-Fitr, Id ul-Adha (Bakr-Id), and even Muharram. Bengali Hindus observe Holi, Divali, and other important festivals on the religious calendar, but Durga Puja is of particular importance to them. Dedicated to the goddess Durga, who is a manifestation of Shakti (female energy), the festivities last for nine days. Months before the festival, special images are made of Durga, showing her mounted on a lion and killing the evil demon Mahishasura. These images are lavishly painted and decorated. They are worshiped on each day of the festival. On the tenth day, the image, garlanded with flowers, is carried through the streets in procession by an excited crowd. The procession makes its way to a river or the ocean, where the image of Durga is thrown into the water to be carried away by the current or tide. Lakshmi, goddess of wealth, and Saraswati, goddess of learning, also have their annual festivals. At the level of folk religion, both Hindus and Muslims worship local deities such as Shitala, the goddess of smallpox.

#### 7 RITES OF PASSAGE

Rites of passage followed by Bengālis are prescribed in outline by Islam or Hinduism but have underlying currents that are specifically "Bengali" in nature. For example, Muslims follow the custom of saying the Call to Prayer (*azān*) to the newborn, but the umbilical cord is cut by the midwife who is usually a Hindu of the Hari caste. She performs the same task for Hindus, except for those who are of too low a rank to receive her services. Hindus observe the naming ceremony, the initiation ritual known as the "first feeding of rice" (*annaprāsana*), and—for the higher castes—the sacred thread ceremony (*upanaya-*

na). Muslim boys undergo the all-important circumcision rite (*sunnat*).

As with other Hindus, Bengālis cremate the dead. The funeral pyre is usually lit on the banks of a river or stream, with the necessary rites normally performed by the deceased's eldest son. Death is followed by a period of mourning (which varies in length according to caste), purification rites, and the *śrāddha* or death feast held at the end of the mourning period. Muslim practice requires that the body be ritually bathed and wrapped in a shroud before being taken to the place of burial. There the body is laid in its grave with the face turned to the west, i.e., in the direction of Mecca. Prayers for the dead and readings from the Quran are part of the funeral rites.

## 8 INTERPERSONAL RELATIONS

Hindu Bengālis greet each other by saying "Namaskar," placing the hands together in front of the body with the palms touching. This form of greeting is widespread throughout India. Sometimes the phrase "Kamen asso" (How are you?) is added. Muslim Bengālis use "Salaam" or "Salaam alaikum," accompanied by the appropriate gestures.

## 9 LIVING CONDITIONS

Rural settlement patterns in Bengal vary from the compact, shapeless villages of West Bengal, to the isolated farmsteads of the Ganges Delta, to the hamlet clusters of the northern plains. House types and construction reflect local environmental conditions. In the interior, houses are made of mud, bamboo, and brush wood. Roofs are thatched, though the more-prosperous now use corrugated iron. In Bangladesh, a typical village house consists of several huts around a compound. Facing the compound is the main structure, with a veranda in front that leads into the living quarters. These may consist of one or more bedrooms, a sitting room, and a kitchen. Other huts on the sides of the compound are used for storage and cattle sheds. There is usually no latrine, with villagers using the fields for their daily functions. Such a lifestyle and standard of living are in marked contrast to those of the urban elites, who enjoy all the modern conveniences of city living. Some of the wealthy industrialists and business owners of Calcutta have a style of living that compares favorably with that found among the wealthy in the United States.

## 10 FAMILY LIFE

Bengālis follow the normal patterns of Hindus and Muslims in South Asia in their social organization. Bengali Hindus belong to castes (*jāti*), and their caste ranking influences many aspects of their economic and social lives. Muslims are, in theory, egalitarian but they also retain traces of a social hierarchy. In both communities, marriages are arranged by the parents. Hindu marriages are governed by rules of caste endogamy (i.e., marriage within the caste) and lineage exogamy (marriage outside one's immediate line of descent). In contrast, Muslims have no caste restrictions, although marriage partners are usually chosen from families of similar social standing. Cousin marriage is common among Bengali Muslims. The actual wedding ceremonies follow standard Hindu or Muslim rites. After marriage, the newlyweds typically take up residence in the household of the husband's father.

The extended family is common among both Hindus and Muslims, though this is changing among the educated, urban

A Bengālī girl with water lilies. The water lily is Bangladesh's national flower. The girl sells them to visitors.  
(AP Images/Pavel Rahman)

elites. As in most communities in South Asia, women remain subordinate to men. Some Muslims continue the custom of *purdah* (the seclusion of women from males). Divorce and widow remarriage reflect traditional Hindu and Muslim practices.

## 11 CLOTHING

In rural areas, Muslim men wear the *lunglī*, a piece of (often checkered) cloth that is wrapped around the waist and extends to the ground, covering the legs. Hindus dress in the *dhotlī*, the long piece of white cotton cloth that is wrapped around the waist, then drawn between the legs in the manner of a loin-cloth. Village men usually go shirtless but on occasion may put on a vest or a long shirt called a *punjāblī* as an upper garment. Wooden sandals are common, and during the rainy season almost everyone sports an umbrella. Women wear the *sari* and blouse, though younger Muslim girls may favor the combination of *salwār* (loose trousers) and *kamlīz* (tunic). Women in the countryside go barefoot. A variety of rings, bangles, and other ornaments and jewelry are worn by women of all classes.

In large metropolitan areas such as Calcutta and other cities and towns, safari suits or Western-style business suits, shirts, and jackets are a common sight. Younger urban women may also dress in Western fashions, although the sari is retained for formal occasions.

## 12 FOOD

Boiled rice is the staple food in rural Bengal, eaten with vegetables such as onion, garlic, eggplant, and a variety of gourds

according to the season. Fish and meat are favorite foods, but their cost places them beyond the reach of most villagers. The vegetables, fish, and meat are prepared as spicy curried dishes. Beef and water-buffalo meat are popular with Muslims. Hindus view the cow as sacred, and so they do not eat beef. Most Bengali Hindus are not vegetarians, however, and will eat goats, ducks, chickens, and eggs, in addition to fish. Cuisine among the more-affluent includes Mughal-style dishes including pilaf and *biryanī* (rice dishes containing meat and vegetables), *kebābs* (barbecued meat), and meat dishes known as *kormā*. Milk forms an important element in the diet, and milk-based sweets are popular throughout the region. Tea may be drunk, as it is throughout India, at any time of the day.

### 13 EDUCATION

Literacy rates vary among Bengālīs. Those living in Bangladesh, especially in rural areas, are likely to be poorly educated and illiterate. Bangladesh has the lowest overall literacy rate (34.8%) of any South Asian country. By contrast, literacy in West Bengal (57.7% in 1991) is slightly higher than the average for India (52.6%). Education has long been a mark of higher social status among Bengālīs, and this is reflected in the high college enrollment in West Bengal. Vishva-Bharati University, founded by the Bengali writer Rabindranath Tagore in Shantiniketan, is world-famous as a center for the study of Indian history and culture. The University of Calcutta, with its numerous affiliated colleges, is one of the major academic institutions in India.

### 14 CULTURAL HERITAGE

Bengālīs are heirs to one of the richest literary traditions in the Indian subcontinent. The earliest known works in Bengali are Buddhist texts that date to the 10th and 11th centuries AD. The influence of the Vaishnava saint and mystic Chaitanya (1485–1534) on the development of medieval Bengali literature was immense. Some of the gems of Bengali poetry at this time were the songs dedicated to Krishna and his consort Radha. Islam, too, contributed to medieval Bengali literature through the devotional works of the Sufis and the writings of other Muslims.

More recently, Bengālīs have created a vibrant modern literature ranging from the novel and short story to poetry and drama. Rabindranath Tagore, the Bengali poet and writer, was awarded the Nobel Prize for Literature in 1913. Bengālīs have also achieved great success in the field of classical Indian music and dance. Satyajit Ray (1921–1992), the only Indian film director of his era to gain international fame and acclaim, was a Bengali. There still exists an important film industry in Calcutta producing Bengali films.

### 15 WORK

Bengālīs are predominantly rural and agricultural in nature, with over two-thirds of the region's population engaged in cultivation. Bengal's climate allows three crops to be grown in the year, with wet-rice cultivation dominating the economy. Jute, produced mostly in Bangladesh, is the major cash crop of the region. West Bengal, however, is also an industrial area. The cities and towns along the banks of the Hooghly River (an arm of the Ganges) make up one of India's most important manufacturing regions. It is here, 154 km (96 mi) upstream from the Bay of Bengal, that Calcutta is located. Founded in 1690 as a British trading post on the banks of the river, Calcutta is

now one of the world's largest cities with a population of over 12 million people. Its industries include jute processing, engineering, textiles, and chemicals. Calcutta is perhaps the most important intellectual and cultural center of India, a fact of which Bengālīs are extremely proud. The city is the birthplace of Indian nationalism, and of modern Indian literary and artistic thought.

### 16 SPORTS

Bengali children play games common to children all over South Asia. These include tag, hide-and-seek, kite-flying, marbles, and spinning tops. Youths and young adults enjoy wrestling. Cricket, soccer, and field hockey are major spectator sports, and many children play these games at school as well. Sports such as tennis, golf, and horse-racing are popular among the Westernized urban middle classes.

### 17 ENTERTAINMENT AND RECREATION

Recreational activities among Bengālīs vary to a considerable degree. Villagers in isolated rural areas may derive their greatest pleasure from fairs, religious festivals, and Bengali folk traditions such as *jātrā* (itinerant folk theater), the *bhātīālī* (boater's songs), and the *baul* (mystical songs sung by wandering minstrels). On the other hand, the sophisticated resident of Calcutta has access to radio, television, theater, movies, films, museums, and other cultural activities.

### 18 FOLK ART, CRAFTS, AND HOBBIES

The folk arts and crafts of Bengal reflect the diversity of its people and the skills of its artisans. Among the items produced are hand printed textiles, embroidered quilt work, terra-cotta dolls, toys, and idols such as those used during Durga Puja. *Alpana* drawings, religious designs prepared by Hindu women, are made on walls, floors, and courtyards out of rice-paste. The decoration of boats is a thriving folk art in the delta region. Copper and brass metalwork, pottery, weaving, basketry, and carpentry are among the many activities pursued by the craft-people in the region.

### 19 SOCIAL PROBLEMS

As might be expected in such a large and diverse population, problems vary considerably in their nature and scope. Some problems, such as frequent flooding in Bengal, reflect the region's environmental setting. Others—for example, poverty and illiteracy—result from the fact that the people live in countries that are still developing. Thus, malnutrition among villagers in rural Bangladesh mirror that country's standing as one of the poorest nations in the world. Similarly, the plight of the urban poor in cities like Calcutta and Dhaka is linked to the dynamics of urban growth in the Third World. Still other problems originate in the political volatility of the region. Bangladesh, for example, has experienced civil unrest, suspension of democratic rights, and repressive military governments.

Social tensions in the region often arise from a mix of cultural, historical, and political factors. There are non-Bengali minorities in both West Bengal (the Gorkhas in the north who want a Gorkha homeland) and Bangladesh (e.g., the Chakmas in eastern Bangladesh) who have resorted to violence to fight what they see as Bengali cultural imperialism. Similarly, large numbers of Bengālīs fled Bangladesh during both Partition

and the country's 1971 War of Independence. In West Bengal, this refugee problem was largely one of numbers. However, in India's northeastern states such as Assam and Tripura, where the population is non-Bengali, this created ethnic tensions between Bengali refugees and the local peoples. Resentment against these "foreigners" is strong and periodically, as in Assam in the early 1980s, leads to ethnic violence. An armed militant organization namely United Liberation Front of Assam (ULFA) was established in 1979 "with a purpose of liberating Assam from the illegal occupation of India," i.e. limiting the Bengali presence in Assam. Such events, however, are but the most recent chapter in the story of a people that extends back almost 1,000 years. Language, history, and shared traditions give Bengālis a sense of identity that makes Bengali culture one of the most unique and distinctive in all of South Asia.

## 20 GENDER ISSUES

Despite the efforts of governments and nongovernmental organizations (NGOs) such as Women for Women to promote gender equality for women among Bengālis, Bengali women suffer from the constraints of the society in which they live. Thus Hindu women face problems of arranged marriages, exploitation of girl children, child marriage and dowries, while Muslim women face issues of *purdah*, the wearing of the *burqa* and the role of women in Islamic society. Among both Hindus and Muslims, women are regarded as inferior to men and their main role is to take care of the household and bear (male) children. In rural areas, women participate in agricultural activities. Poverty is an issue for many Bengali women (though institutions such as the Grameen Bank in Bangladesh are providing capital for poor women wishing to go into business). Literacy among women in Bangladesh hovers around 40%, over 25 percentage points below the male average, and of course is much higher in urban areas than in the countryside. Fewer than 10% of Bengali women continue with higher education. However, women writers, such as Suchitra Bhattacharya and Bani Basu, have made a considerable name for themselves in the world of Bengali literature, in keeping with a tradition that extends back several centuries.

# BHILS

**PRONUNCIATION:** BEELZ

**LOCATION:** India (Southern Rajasthan and bordering areas of Gujarat, Madhya Pradesh, and Maharashtra states)

**POPULATION:** 12,705,753 (2001 census)

**LANGUAGE:** Bhili

**RELIGION:** Tribal religions (97%); Hinduism

**RELATED ARTICLES:** Vol. 4: Minas; People of India; Rajputs

## 1 INTRODUCTION

The name Bhil identifies various ethnic communities inhabiting the hills and forests of southern Rajasthan and neighboring areas of western India. Some scholars argue that "Bhil" comes from the Dravidian word for bow (*billa* or *billu*) and reflects the popularity of the bow and arrow as a weapon among these groups. The term is also used in a broader sense to refer to the aboriginal peoples of this region. Bhils are divided into numerous tribes and subtribes, including the Barela, Bhilala, Garasia, Gameta, Mina, Tadvi, and Vasave. Many of these groups, however, see themselves as quite distinct from the Bhil community.

The Bhils are mostly tribal in nature. In the past, they acquired a reputation for a fierce sense of independence. Isolated from the rest of Indian society by their rugged environment, Bhil groups have managed to preserve many of their ancient tribal customs. At the same time, close social and economic ties with their neighbors have exposed them to Hindu cultural influences.

Though little is known of their origins, the Bhils appear to be the oldest inhabitants of the area. They are generally dark complexioned and small of stature. Their racial affinities are uncertain, although they have been identified with both the Dravidian and pre-Dravidian peoples of South Asia. Some writers suggest that the wild, hill peoples of the region mentioned in the ancient Sanskrit literature were, in fact, the Bhils. A Sanskrit text dating to the very end of the 6th century AD mentions a Bhil chieftain, mounted on an elephant, opposing the passage of another king through the Vindhya Mountains. By the 7th century, various Rajput clans began to settle in western India and subdue the local peoples of the area. Some Bhils resisted the invaders and fled into the interior to preserve their independence. Other Bhil groups seem to have accepted this conquest peacefully, even intermarrying with the newcomers. One finds other ties linking the Bhils and the Rajputs. Bhils, for example, played a role in Rajput coronations. In some Rajput states, it was customary for a Bhil to place a ceremonial mark (*tika*) made with his own blood on the forehead of a new *raja* (king). Although no longer followed, the ritual has been seen by historians as a sign of Bhil allegiance to the Rajputs as well as of former Bhil power. The figure of a Bhil chief is included on the emblem of Mewar (Udaipur), an important Rajput state in southern Rajasthan.

The Bhils were treated quite differently by the Marathas. This Hindu group, which extended its military power northwards from Maharashtra into the region at the beginning of the 17th century, mercilessly persecuted the Bhils. If a criminal were caught and found to be a Bhil, he or she would often be killed on the spot. Historical accounts tell of entire Bhil

communities being wiped out. The Bhils retreated to the safety of their strongholds in the hills. From there, they raided villages in the neighboring lowlands and robbed travelers passing through their lands.

Although their reputation for banditry, thievery, and lawlessness has been exaggerated, the unruly Bhils did pose problems for local rulers. The British government in India, which gained control of the region in the early 19th century, even set up special military units to pacify local Bhil populations. The Bhils also took part in local tribal resistance movements during the 19th and early 20th centuries, protesting political and social injustices. However, the Mewar Bhil Corps, a unit of Bhils formed in Mewar in the 1840s with a view to weaning them away from their predatory habits, to give them honorable employment, and to assist the government in preserving order, were the only native troops in Rajasthan to stand by the British during the 1857 Mutiny.

The Indian Constitution (1949) designated the Bhils as a Scheduled Tribe, one of the groups identified as needing special representation and assistance in India after independence from British rule. Today, the Bhils remain a disadvantaged community with high levels of poverty, illiteracy, and other social problems.

## 2 LOCATION AND HOMELAND

The Bhil homeland lies at the western end of India's tribal belt. It includes southern Rajasthan and bordering areas of Gujarat,

Madhya Pradesh, and Maharashtra states. Bhil populations are concentrated in the southernmost hills of the Aravalli Range, the western uplands of the Vindhya and Satpura ranges, and the northernmost hills of the Western Ghats. Some Bhil groups occupy the nearby river valleys and coastal plains. The Gujarati term "Rewakantha," the basin of the Rewa (Narmada River), is sometimes used to describe the traditional territory of the Bhil peoples.

The environments inhabited by the Bhil are relatively inaccessible and unproductive. The rugged Aravalli hills of southern Rajasthan attain a height of 1,722 m (5,650 ft) at Mount Abu. The region experiences a semiarid climate. Annual rainfall in southern Rajasthan and Gujarat averages around 63.5 cm (25 in) and comes mainly from the summer monsoons. Rainfall is highly variable, however, and droughts are frequent. Maximum temperatures during the summer average over 40°C (104°F), but in winter they can approach freezing. The natural vegetation is thorn scrub forest, dominated by drought-resistant species such as acacias. The vegetation cover has been much degraded through overuse by humans and animals. To the south, in Maharashtra and Madhya Pradesh, rainfall increases and temperatures become less extreme. Scrub forests give way to denser deciduous forests, but here, too, the vegetation has suffered from human and animal activity.

The Bhils numbered 12.7 million people (12,705,753 according to the 2001 Census of India). Assuming population growth rates that approximate those of the rest of India, the current population of Bhils will be close to 14 million people. The Bhils are exceeded in number only by the Gonds among the tribes of India and account for over 10% of the country's total tribal population. The accuracy of the census data, however, is open to debate because of questions concerning exactly which groups should be included under the classification of "Bhil." The Bhils remain, nonetheless, one of the largest tribal groups in South Asia.

## 3 LANGUAGE

The language of the Bhils is called Bhili, a term that refers to the numerous dialects spoken by Bhils throughout western India. For example, Wagdi, Dungri, and Mavchi are Bhili dialects spoken in Rajasthan, Gujarat, and Maharashtra, respectively. Dialects change within a radius of 32 to 48 km (20 to 30 mi) and Bhils from one area may have difficulty in understanding those in a neighboring area. Bhili dialects show varying degrees of influence of regional languages such as Rajasthani and Marathi, but they all appear to have their origins in Gujarati. Gujarati, the language spoken in Gujarat, belongs to the Indo-Aryan language family. Thus, linguistically, the Bhils are unlike most tribal groups in India whose tongues more commonly are Dravidian or Munda in origin.

## 4 FOLKLORE

Bhil mythology and folklore place great emphasis on the antiquity of the Bhils, as well as the Bhils' traditional place outside the mainstream of Hindu society. At the same time, Bhil traditions demonstrate the longstanding influence of Hinduism on Bhil culture.

One account of the origin of the Bhils holds that Mahadeo (literally, the "great god," an aspect of the Hindu god Shiva) was resting in a forest, sick and unhappy. A beautiful woman appeared before him and, on seeing her, Mahadeo was cured

of all his ailments. The god was smitten by the woman and together they produced many offspring. One of these children was an ugly and vicious son. Mahadeo, enraged when this son killed his favorite bull, expelled him. All Bhils are said to be descended from this outcast.

Numerous variants of this tale exist, but Bhil myths of origin universally ascribe the beginnings of the Bhil tribes to some similar misdeed, a misfortune, or an incestuous union.

## 5 RELIGION

Bhil religion is essentially animistic in nature. It is the belief in the powers of supernatural forces and the need to order one's relations with these forces that dominate Bhil religious life. The Bhils are highly superstitious. They believe in omens and the evil eye and wear charms and amulets for protection from ghosts, evil spirits, and witches. Individuals, usually women, suspected of witchcraft, sorcery, or magic are identified by a shaman or witch-finder. (This figure is called a *Bhopa* in Rajasthan and *Badava* in eastern Gujarat). Traditionally, the victims were subjected to trial by ordeal, tortured, and even killed. The *Bhopa* and *Badava* play an important role in rituals performed to exorcise ghosts. The Bhils recognize gods and goddesses in the natural world, revering various deities of the sky, trees, water, and rain. Fire is held to be sacred, and totemic animals include the horse, tiger, boar, peacock, and sparrow. Animal sacrifice is a common Bhil practice.

The Bhils have long paid homage to Hindu deities such as Mahadeo, viewed as the creator of the universe; his consort Parvati; Hanuman, the monkey-god; and Bhairon. Mata-ji (Kali) is much respected and propitiated by the sacrifice of goats and male buffaloes. Numerous lesser gods and local godlings are worshipped.

Groups such as the aristocratic Bhilala, the descendants of Bhil-Rajput marriages, and some plains' Bhil have adopted formal Hindu practices. They use Brahman priests, accept the existence of a caste hierarchy, and show a greater degree of integration into Hindu society. Small numbers of Bhils have converted to Islam. Others have adopted Christianity as the result of the efforts of Christian missionaries during the 19th and early 20th centuries. However, census returns show that 97% of the Bhils follow tribal religions.

## 6 MAJOR HOLIDAYS

Although their chief festivals are held to honor the dead, Bhils also observe the Hindu festivals of Holi, Dasahara, and Divali in much the same way as their Hindu neighbors. Holi, the spring festival of India, for example, is marked by the burning of bonfires and throwing of colored water; and Dasahara, the autumn festival honoring the goddess Durga, is accompanied by the sacrifice of goats and buffaloes. There are, however, differences in observances. Holi, in particular, is celebrated with much revelry, with singing, dancing, and drinking lasting for up to 10 days or more. Bhils tend to celebrate the festivals of their region. In Rajasthan, for instance, Gauri is a popular festival.

Bhils, in the new Indian state of Chhattisgarh, celebrate the Bhagoriya Festival, a festival that occurs a week before Holi when lovers are officially given permission to elope. A male applies gulal (colored powder) to the head of a girl he likes and, if she reciprocates, the couple is at complete liberty. The marriage is formally consecrated at a later date. On the occasion of

this festival, Bhagoradev or the God of Dancing is worshipped religiously by the people of the Bhil community. The eldest member of the village supervises over the ceremony. Sweets are offered to the god and later these are distributed amongst the members of the tribe. (Chhattisgarh was created out of the southeastern districts of Madhya Pradesh and has a distinctive language and culture. It, along with Jharkhand and Uttarakhand, came into being as states in India in 2000).

## 7 RITES OF PASSAGE

Rites of passage of the hill Bhils tend to differ from those who live in the plains. For both groups, however, the chief ceremonies are associated with the naming of a child, the shaving of the male child's head, marriage, and death.

The birth of a son is announced to the community at large by a particular beat of a drum (*dhol*). Hymns may be sung to propitiate Shitala Mata, the goddess of smallpox who is widely feared by primitive peoples in India, and sweets and liquor are distributed. The male child's head is shaved after a few months and the naming ceremony soon follows. Among some groups, the shaving ceremony may not occur until the child is several years old. It is common for a child to be named for the day of the week on which it is born, or for some characteristic feature. For example, a child may be called Navapuria to denote that it was born on a Saturday, or Kalia (the dark one) because of its dark complexion. Male children are often tattooed on the wrist and forearm.

The ceremonies accompanying death are important in Bhil society. The dead are cremated after a period of mourning, although infants and victims of smallpox are buried. A carved wooden post or a stone tablet is placed at the site of cremation of males, with the deceased often represented on horseback with lance, sword, or shield. After 10 or 12 days, the *kata* (death-feast) is held for the community. Food consumed at this time includes maize, rice, sometimes the flesh of goats or buffaloes, and considerable quantities of liquor. During the feast it is important that a *Bhopa* be present to give voice to the demands of the spirit of the deceased. These demands are invariably met by the family and, once appeased, the spirit departs the confines of the settlement.

## 8 INTERPERSONAL RELATIONS

Social interaction among the Bhils conforms to local and regional practices. Bhil communities that are more integrated with broader society have greater contact with non-Bhil groups, while those in more isolated areas tend to keep to themselves. The Bhils are hospitable to visitors. No guest goes without food and refreshment, no matter how scarce such supplies may be.

## 9 LIVING CONDITIONS

Traditionally, Bhils live in small, dispersed hamlets known as *phala*, which are occupied by families of the same clan. Each settlement comprises a hut or group of huts standing alone in the middle of an area of cultivated land. Several hamlets may grow together to form a village or *pal*. The village may be a multi-clan community. Each village has a hereditary headman, who is a member of the village's dominant or founding clan. The headman is called *panch*, *vasavo*, *tadavi*, *naik*, *mukhi*, or other names according to local usage. The presence of the headman is necessary at most social and ritual functions in the village.

Young girls of the Bhil tribe at the Bhagoria fair in Valpur village, India. Bhagoria is an annual tribal festival held a week before Hoki, the Indian festival of colors. (AP Images/Prakash Hatvalne)

Individual huts are often surrounded by a bamboo fence. Their walls are typically built of mud or bamboo, wattle with mud, clay, and cow dung. The roofs are thatched, made from grass or leaves, and supported by rafters of teak or whatever wood is available. Huts are windowless and have a single entrance only. They are often used both as living quarters and for housing cattle. Bedsteads woven from bamboo or sleeping mats are used for sleeping, while household utensils are usually made from clay rather than metal. Earthenware jars and baskets are used for storage. The more affluent farmers may own cattle and possess a bullock-cart and other agricultural implements. Few Bhils attain this level of prosperity, and livestock is more commonly limited to a few goats and poultry.

## **10 FAMILY LIFE**

Kinship among the Bhils reflects regional Gujarati, Rajasthani, and Maharashtrian patterns. Bhil tribes and subtribes are endogamous; that is to say, marriage occurs within the social group. There is, however, little intermarriage between the inhabitants of the hills and the plains. The Bhils also make a distinction between the Ujwala (pure) Bhils and the Kalia (impure) Bhils, groups that also rarely intermarry. The Bhils are divided into numerous clans, and clan exogamy (marriage outside one's own clan) is strictly followed. However, beyond

its name and its role in defining a pool of marriage partners, the clan is of little significance in Bhil society.

In practice, brides come from villages within a limited geographical area—villages that are already linked through institutions such as the Gauri festival, weekly markets, and existing matrimonial ties. Marriage proposals invariably come from the suitor or his family, rather than from the girl's father. The groom's family pays a bride-price to the father of the bride. Marriage among the Bhils occurs much later than among Hindus, occurring between the ages of 16 and 21 years. The eve of the marriage ceremony is marked by singing, dancing, feasting, and drinking. Marriage rituals are similar to Hindu rituals, with the bride and groom walking around the sacred fire, and the giving of presents.

Bhil society is patrilineal, with inheritance passing down the male line. The new bride moves into the home of her husband's family and assumes the burden of household chores. She also participates in the family's agricultural activities. It is customary for a father to provide his son with land and a hut on his marriage, so that among the Bhil the nuclear rather than the extended family is the norm.

Polygamy, the custom of having more than one wife, is acceptable, particularly if the first wife is barren or too ill to keep house. Widow remarriage is permitted, with the deceased husband's younger brother being the most desirable partner. Di-

voce, though uncommon, is allowed but can only be initiated by the husband.

### **11 CLOTHING**

Though many have now adopted the local dress of loincloth, jacket, and turban, the Bhil formerly went nearly naked, wearing a loincloth and perhaps a blanket during cold weather. As is common throughout India today, some males wear Western-style shirts. The hair is traditionally worn long, either partly plaited and fastened with a wooden comb, or falling freely to the shoulder. Males wear earrings, and some carry guns or swords. The Bhils' traditional weapon, however, is the bow and arrow.

Women's dress consists of a skirt, bodice, and a loose cloth pulled up over the head. Clothes worn for festivals and special occasions are more colorful and made of finer cloth. Women wear head ornaments, usually made of silver or tin, and commonly wear brass rings around the arms. Brass rings may also be worn on the legs, often extending from ankle to knee. Children wear few clothes until close to puberty.

### **12 FOOD**

The Bhils were originally hunters and gatherers. They subsisted by hunting small game such as rabbits, foxes, deer, wild pigs, birds, and rodents. They fished the local streams and rivers, and gathered edible plants and fruits from the forest. When they turned to agriculture, the Bhils adopted the slash-and-burn techniques of shifting cultivation (*jhum*). Many continued this form of subsistence activity up to the middle decades of the 20th century. Today, however, most Bhils engage in settled agriculture using the plow and draft animals. The staple foods are maize, millet, barley, pulses such as lentils, chickpeas, and vegetables. Food is taken twice a day, normally in mid-morning and then again in the evening. Rice is occasionally eaten, but the Bhils partake of the flesh of the goat or buffalo only on special occasions.

Bhils are strongly addicted to the use of tobacco and alcohol, making liquor from the flower of the mahua tree (*Bassia latifolia*) or from the bark of the babul (*Acacia arabica*). The consumption of alcohol accompanies every feast and celebration.

### **13 EDUCATION**

As an economically depressed group, often inhabiting isolated and difficult terrain, the Bhils' access to education is limited. Despite the availability of state-supported schools and government-sponsored programs for the Scheduled Tribes, literacy levels and educational achievement among the Bhils are low, literacy rates being 6.6% (for women it is less than 1%).

### **14 CULTURAL HERITAGE**

Music, song, and dance are an integral part of Bhil life and accompany all feasts and celebrations. The Ghanna or Gher is a ring dance of Rajasthan. Men carry sticks in their hands and revolve in a circle around the drummers, alternately hitting the sticks of the men ahead and behind them. Other dances are performed to propitiate Mataji and other deities.

An important Bhil institution is the Gauri, a dance-drama with a strong ritual element that presents various episodes from the life of Mahadeo and Parvati. Undertaken by a village once every three or four years, the Gauri festival is held at the

end of the rainy season (usually in August). The festival may extend over a period of 40 days or more. Once the bhopa has given permission for the Gauri to take place, the village sends out a troop of male actors to stage performances in neighboring villages. The host villages are expected to provide food and gifts for the visitors, hospitality that is reciprocated when these villages in turn stage their own Gauri celebrations. The Gauri festival serves to tie villages together through ritual exchanges, because the villages visited by the performers are those where there are kinfolk, daughters who have been married, and those with important economic ties to the village that stages the Gauri.

### **15 WORK**

Most Bhils are farmers. However, the pressures of subsistence agriculture, uneconomic land holdings, the burden of debt, and frequent drought have forced many Bhils to leave the land and turn to other occupations. Many are laborers or earn a living cutting wood, preparing charcoal, and gathering forest products like gum and lac. Bhils in the past have made their living from hunting and other forest activities, and are renowned as trackers. Some Bhils have been employed as watchmen, while others have learned shop-keeping from their encounters with the bania (trading) castes, and a small number of them—perhaps 3%—operate shops, tea stalls and flour mills. Again, largely because of a lack of education, a few Bhils are involved in the service industry, but the vast majority are agricultural laborers.

Despite efforts by the Union and State Governments to promote economic development among the Bhil Adivasis (tribals), especially in the areas of agriculture, sericulture, and education, Bhils in India remain socially and economically disadvantaged.

### **16 SPORTS**

The Bhils do not engage in any organized sports.

### **17 ENTERTAINMENT AND RECREATION**

The Bhils, though regarded by outsiders as shy and retiring, have a strong sense of community. Social and cultural occasions are celebrated by singing, dancing, and feasting, with the free consumption of liquor. Hunting and fishing, formerly a means of subsistence, are popular pastimes, although opportunities for such activities today are greatly limited.

### **18 FOLK ART, CRAFTS, AND HOBBIES**

The Bhils do not possess a tradition of folk art or crafts. They rely on artisan castes to provide clothing, utensils, and other material necessities.

### **19 SOCIAL PROBLEMS**

During the last 100 years, many attempts have been made to improve the social and economic conditions of the Bhils. Christian missionaries, Hindu reformists, the followers of Mahatma Gandhi, and modern social workers have all worked to eradicate what have been perceived as the evils of Bhil society—the traditions of magic and witchcraft, thievery, alcoholism, meat-eating, and animal sacrifice. Many Bhil groups have abandoned their traditional customs and one community, the

Bhagats, has even adopted the observances and practices of orthodox Hinduism.

The Bhils face many social and economic problems today. Frequently inhabiting isolated and marginally productive environments, they experience widespread poverty and live in depressed economic conditions. Rapid growth of population, land fragmentation, unproductive landholdings, inefficient farming techniques, and constant indebtedness have forced many off the land to seek work as landless laborers.

While some groups have assimilated to a degree into Hindu society, the Bhils remain a people set apart from the mainstream of Indian society. They have yet to share in the wealth and social and economic advances of post-Independence India.

## 20 GENDER ISSUE

Generally, women in tribal societies experience more gender equality than their counterparts in Hinduism or Islam, although they still play a subordinate role to men. Bhil women are subject to arranged marriages and their families receive a bride price rather than pay dowries, but marriage remains a loose arrangement, and pre-marital and extra-marital affairs are common. However, once an affair becomes public, disputes are resolved by local panchayats, which tend to favor males and give short shrift to women's rights. In the past, movements existed among the Bhils for the identification and killing of witches.

Bhil women are sometimes subject to many of the restrictions of their Hindu upper caste neighbors. For instance, some Bhil groups have adopted the Hindu custom of veiling their women. Married women have to veil themselves in front of their elder male in-laws. This means that whenever they go out into public places like a market where an elder male in-law might pop up at any time, the married Bhil women have to remain veiled all the time, even though the custom is opposed by the Kansari nu Vadavno, a mass organization of Bhil women formed in 1998 to address women's issues (Kansari is the goddess who symbolizes the life-giving power of jowār (sorghum), the staple of Bhil life).

Kansari nu Vadavno ran a fairly successful campaign against the sale of illicit alcohol during the late 1990s. Their take was that the men under the influence of alcohol not only did not work but also beat them up and demanded excessive sex from them. They contended that the alcoholism of their men added considerably to the overall patriarchal oppression that they suffered.

Domestic violence, poverty, illiteracy, and lack of access to education remain issues for Bhil women.

# BHUTANESE

**PRONUNCIATION:** BOOT-un-eez

**LOCATION:** Bhutan

**POPULATION:** About 800,000–1.8 million (including Nepalese immigrants and other minorities, and Bhutanese in refugee camps in India and Nepal)

**LANGUAGE:** Dzongkha (official); Nepali; Assamese; Gurung; Tsangla; some Hindi

**RELIGION:** Mahayana Buddhism (official); Bon (shamanism); mix of Hinduism and Buddhism; Islam

**RELATED ARTICLES:** Vol. 3: Assamese; Bhutia; Gurung; Vol 4: Nepalis

## <sup>1</sup> INTRODUCTION

Bhutanese is the name given to the population of the kingdom of Bhutan, a small, landlocked country situated on the northern mountain rim of South Asia. The name *Bhutan* is derived from a word that means the “borderland” of Bhot, or Tibet. The Bhutanese themselves call their country *Druk-Yul* or the “Land of the Thunder Dragon.” The ruling monarch of the country carries the title *Druk Gyalpo* or “Dragon King.”

Bhutan’s early history remains obscure, although from the beginning of the 9th century AD the region was settled by Tibetans migrating southwards from the upland plateaus of their homeland. Some historians view this migration as an organized invasion, with Tibetan troops seizing the region from the ruling Hindu *maharaja* (princely chief). Bhutan assumed a distinct political identity in the early 17th century, when a Tibetan Buddhist monk established his authority as king, taking the title of *Dharma Raja*. The early Dharma Rajas were both temporal rulers and spiritual leaders, but they gradually left the country’s government in the hands of ministers who came to be known as the *Deb Rajas*. The current king, Druk Gyalpo Jigme Khesar Namgyel Wangchuk, is the fifth in a line of rulers descended from a territorial governor who was elected to become the hereditary king in 1907. The Dharma Raja has continued as leader of the Drukpa sect of Tibetan Buddhism, which remains the official monastic order of Bhutan.

The extension of British rule to India’s Brahmaputra Valley in the 1820s eventually led to conflict with Bhutan, which lies just to the north of Assam. At various times during the 19th century, Bhutan ceded territory to the British, and in 1910 its external relations were placed under the control of British India. In return, Britain agreed not to interfere in Bhutan’s internal affairs.

In 1949, India assumed Britain’s role in handling Bhutan’s external affairs. The occupation of Tibet by Chinese forces in 1950 further strengthened Bhutan’s ties with India, as Bhutan saw the need for foreign support against a potential threat from China. During the 1960s, Bhutan abandoned its historic policy of isolation (foreigners could only enter Bhutan at the invitation of the king) and embarked on a policy of modernization, which led to a coup d’état against the king at the end of 1964. The political crisis of 1964–1965 compelled the king to forge an alliance between him and the traditionalists and abandon his efforts at modernization. The integration of diverse ethnic and cultural groups into the Bhutanese state was forgotten, and Bhutan became dominated by the Ngalong

(Dzongkha-speaking Bhutanese). At this time, the king ruled as a constitutional monarch, although there was a 152-seat national assembly, the Tsongdu, with many of its members elected by popular (though indirect) vote. The king appointed the prime minister, the Cabinet, and a number of delegates to the Tsongdu. Religious groups also appointed a number of representatives to nonelective assembly seats.

Under the king, the state’s “Bhutanisation drive” and 1989 promulgation of Driglam Nam Zha (Etiquette and Manners), by which people were required to wear traditional Bhutanese clothes in public, led to ethnic conflict between the Ngalong-dominated state and the people of Nepali origin. As a result, numerous people of Nepali origin were expelled from Bhutan. The majority of them, estimated to be between 100,000 and 135,000 in number, are now living in the refugee camps in eastern Nepal maintained by the UNHCR.

The Bhutanese view the Nepalese as newcomers and fear having them become the most populous ethnic community in the country (they have the model of Sikkim, once an independent country, but now a state in India, in mind). Since 1990, antigovernment extremists among the Nepalese have been waging a terrorist war in Bhutan. Southern Bhutan was placed under Army control, and international human rights agencies have claimed extensive violations of human rights in the Bhutanese security forces’ operations against Nepalese dissidents.

In March 2005, King Jigme Singye Wangchuck unveiled the government’s new draft constitution—which would introduce major democratic reforms. In December 2006 the King abdicated the throne to his son, Jigme Khesar Namgyel Wangchuck, in order to give him experience as head of state before the democratic transition. In early 2007 India and Bhutan renegotiated their treaty to allow Bhutan greater autonomy in conducting its foreign policy, although Thimphu continues to coordinate policy decisions in this area with New Delhi. In July 2007 seven ministers of Bhutan’s 10-member cabinet resigned to join the political process, leaving the remaining cabinet to act as a caretaker regime until the new government assumed power following parliamentary elections. Bhutan completed its transition to full democracy in 2008, when its first fully democratic elections to a new National Assembly were held on 24 March 2008. Two parties contested the election: the Bhutan Peace and Prosperity Party (DPT, for *Druk Phuensum Tshogpa*), which was formed by the merger of the previously established Bhutan People’s United Party and All People’s Party, which is led by Jigme Y. Thinley, and the People’s Democratic Party (PDP), led by Sangay Ngedup. The DPT won over 67% of the vote and 45 of the 47 seats in the new parliament. Thinley’s party, which is widely viewed as being the most loyalist of Bhutanese political parties hews closely to the king’s vision for Bhutan and seeks to promote the objective of “Gross National Happiness,” an all-encompassing political philosophy that seeks to balance material progress with spiritual well-being.

The new government was to adopt the new constitution when it met in May 2008. This was to complete the historic transition from an absolute monarchy to a parliamentary democracy, albeit with considerable power still concentrated in the hands of Bhutan’s king.

## <sup>2</sup> LOCATION AND HOMELAND

Population data for Bhutan are unreliable. The Census of Bhutan, 2005, places the total population at 634,982. This figure,

however, excludes a large number of immigrants from Nepal. If the Nepalese and other minorities are included, the population may currently exceed 1.8 million. There are three major ethnic groups in Bhutan: the Bhutia (also Bhotia, or Bhoté), Nepalese, and Assamese. Bhutia comprise roughly 50% of Bhutan's population. The Nepalese, who include Rai, Gurung, Limbu, and other peoples, account for another 35%, while the Assamese and tribal groups make up 15% of the country's inhabitants.

Bhutan, with an area of 47,182 sq km (18,217 sq mi), lies in the eastern Himalayan Mountain Range. The country's location between India and Tibet gives it considerable strategic importance. Bhutan falls into three distinct geographic regions. In the south is a narrow strip of lowland known as the Duars Plain. The area receives between 500 cm and 760 cm (200–300 in) of rain a year. It is covered with dense subtropical forest and undergrowth and is hot, humid, and generally unhealthy. North of the Duars is the Inner Himalaya, a region of mountain spurs extending southwards from the main Himalayan Range. Between these spurs lie fertile valleys at elevations between 1,500 m and 2,700 m (5,000–9,000 ft). With a relatively moderate climate, these valleys support agriculture and relatively dense populations. Further to the north, along the Tibetan border, are the main ranges of the Great Himalaya. The highest peaks approach 7,300 m (24,000 ft), with Kula Kangra soaring to 7,554 m (24,784 ft). Below the high peaks are alpine meadows used for grazing yaks in the summer months.

### 3 LANGUAGE

The official language of Bhutan is Dzongkha, one of the many dialects of Tibetan spoken by the Bhutia people. In its written form, Dzongkha is identical with Tibetan. Some 40% of the Bhutan's population speak Dzongkha. Other languages spoken in Bhutan include Nepali, Assamese, and Gurung. Tsangla is a language of the Mon family spoken in eastern districts of the country. Some Hindi is found in southern areas that border India.

### 4 FOLKLORE

The Bhutanese possess an extensive lore relating to events and personalities of the region's past. One tradition tells of an Indian prince who settled in Bhutan in the 8th century AD and invited the monk Padmasambhava to his kingdom. Known in Tibet as Guru Rimpoche ("Precious Teacher"), Padmasambhava was primarily responsible for introducing Buddhism into Bhutan. Other stories center on the 15th-century lama Pemalingpa, who is seen as an incarnation of Padmasambhava. Pemalingpa is known for composing various dances that are popular among the Bhutanese. Another heroic figure of Bhutan's past is Shabdrung, the lama who assumed the title of Dharma Raja in the 17th century and laid the political foundations of Bhutan State.

### 5 RELIGION

Approximately 75% of the Bhutanese are Buddhist. Mahayana Buddhism is the official religion of Bhutan. The dominant religious order in the country is the Red-Hat sect (Kargyupa). The Bon religion, which embraces pre-Buddhist shamanistic traditions, is also practiced in Bhutan. Beliefs in sorcerers, spirits, demons, and the need for exorcisms as undertaken in the "devil dances" are thus a part of everyday Bhutanese religious practices. Lamas skilled in rituals are used to perform the necessary religious observances. Animal sacrifice has been replaced in Bhutan by the offering of *torma*, ritual figures made from dough and butter. Hinduism, or the mix of Hinduism and Buddhism that typifies Nepali culture, is the religion of the Nepalese peoples of Bhutan. Some 5% of the population follow Islam.

### 6 MAJOR HOLIDAYS

Losar, the Tibetan New Year, is one of the most important festivals in Bhutan. It is celebrated in February with feasting and drinking. Folk dances, including masked dances, are performed and archery competitions held. A recent custom is the exchange of greeting cards between friends and relatives. Domchheo and Tsechu are annual religious festivals marked by worship ceremonies and performances of the ritual masked dances by monks. These are held at monasteries and *dzongs*, the forts around which many Bhutanese villages are built. Various other Buddhist and Hindu festivals are observed. The king's birthday (February 22) and the National Day of Bhutan (December 17) are celebrated as public holidays.

### 7 RITES OF PASSAGE

Birth and marriage in Bhutan are observed with a minimum of ritual, being a social or family event rather than a religious one. Funerals, on the other hand, are elaborate affairs. After a death, a lama is called in to extract the spirit (*sem*) from the

body and speed it on its way. The body is placed in a sitting position before an altar, on which various ritual objects—including *torma* (figurines made of dough and butter)—are placed. A lama leads the service for the dead, reciting passages from various Buddhist texts. Cremation is the usual form of disposal of the corpse, although bodies may be buried or thrown in a river. Rituals are performed for 49 days after death, and during this period an effigy of the deceased is kept in the house. The end of the mourning period is marked by a feast, as is the first anniversary of the death.

## 8 INTERPERSONAL RELATIONS

A Bhutanese host greets a guest by bowing slightly, extending his or her hands towards the ground with palms facing the visitor, and moving the hand in a gesture inviting the guest into the house. The host may also say, “*Yala! Yala! Kuzu zangpola?*” (Hello! How do you do?). The guest, after responding in an appropriate manner, is then seated in the drawing room where she or he is served tea, beer, or other refreshments. Men and women mix and converse freely, without the restrictions that separate the sexes among other groups in South Asia.

## 9 LIVING CONDITIONS

Bhutan historically remained isolated from the outside world, and it was only in the 1960s that the country embarked on a path of modernization. As a result, Bhutan ranks among the lowest of the South Asian countries in terms of indices of development. Leading causes of death include respiratory tract infections, diarrhea and dysentery, various skin and parasitic infections, and malaria. Infant mortality rates are extremely high, running at over 70 deaths per 1,000 live births in 2003. The natural increase of population is 2.17% per year (2006 est.).

Bhutan is a predominantly rural country, with nearly 90% of the population living in villages scattered throughout the country. Although there are a handful of small towns in Bhutan, only Thimphu, the capital, exceeds 20,000 inhabitants in size. Domestic architecture in the north is Tibetan in style, while southern areas show Indian influences in house types and construction. Living standards are generally low, with per capita income standing at us\$1,400 per year (2006 est.), making Bhutan one of the poorest countries in the world.

Bhutan’s mountainous terrain makes for difficult land communications. No railroads exist in the country, and there are only 2,418 km (1,502 mi) of road providing links with India. Bhutan’s national airline, Druk Air, links the town of Paro with India, Nepal, Bangladesh, and Thailand.

## 10 FAMILY LIFE

The various ethnic groups that make up Bhutan’s population are endogamous, i.e., they marry within their own community. The age of marriage has been raised by the government to 16 years for women and 21 years for men. Although in the past marriages were arranged, more and more young couples are beginning to select partners for themselves on the basis of mutual attraction. Compared to the elaborate and expensive Hindu marriage ceremonies, Bhutanese marriages are relatively simple. A lama officiates at the religious ceremony. Offerings of *chang* (beer) are made to ghosts and spirits, and betel leaves, areca nuts, and fruits are distributed to those present at the wedding. Guests are provided with food and entertainment.

The Bhutanese are essentially monogamous. Polyandry (multiple husbands) has recently been abolished, and polygamy (multiple wives) has been restricted to a maximum of three wives per man. Bhutan is essentially a matriarchy, and a bride does not necessarily move into her husband’s household, as is common throughout much of the Indian subcontinent. The new husband may reside with his wife’s family if their need for labor warrants it. Alternatively, the new couple may set up their own household on their own plot of land. Divorce is permitted in Bhutanese society, although compensation is required from the party seeking the separation.

## 11 CLOTHING

Bhutanese dress consists of a long, loose robe (*ko*) that reaches the ankles. During the day, the robe is hoisted up and fastened at the waist by a woven belt so that it reaches the knees. At night, it is let down to the ankles. The coat fastens at the neck and, generally, during the day is left open. The sleeves are long and loose. Bhutanese men seldom wear a hat, but they sometimes wrap a scarf around the head at night. Shoes are rarely worn, though some men wear sandals, and those of the wealthier class use Tibetan-style woolen boots. Every man carries a long knife slung from his belt. When the *ko* is tied in the “up” position, it forms a pouch that is used for carrying objects.

Bhutanese women wear the *kira*, a woven dress that is fastened at each shoulder by silver buckles. A woven belt is tied around the waist. Women commonly wear necklaces of coral and turquoise, strung together with silver amulets. The hair is usually cut short.

## 12 FOOD

Rice is the main food in Bhutan and is eaten with meat whenever this is available. Though most Bhutanese are Buddhists, they are nonvegetarian and eat beef, pork, goat, chicken, and eggs. A typical Bhutanese meal might consist of *thugpa*, a meat soup prepared with herbs, rice (of the round, red variety), and a meat curry or omelet. Sweet rice (white rice cooked in milk and sugar) is served on special occasions. Tea, made with salt and butter, is a Bhutanese staple. Beer (*chang*) is made from cereals and served to guests and friends, as well as being offered to the gods.

At high altitudes where rice is not cultivated, barley and buckwheat are grown. The cereals are ground, then roasted or fried, and stored for future use. Fried corn powder is as popular among the Bhutanese as *tsampa* (roasted ground barley) is among Tibetans. Milk is scarce and of poor quality, although a hard cheese is made from yak milk.

## 13 EDUCATION

No formal schools existed in Bhutan before the early 1960s, except for those associated with religious institutions. Despite a concerted effort on the part of the government, and especially King Jigme Dorji Wangchuck, to improve education, Bhutan lags behind other South Asian countries in its educational achievements. A modern educational system was introduced into Bhutan only in the 1960s. Although in 2004 education was made compulsory up to the age of 11, only about 73% of primary-school-age children attend school, and this figure drops to 35% at the secondary-school level. Education, however, is a major priority of Bhutan’s development programs and

there now exist over 350 educational institutions in the country. These include The Royal University of Bhutan, founded in 2003, which was established to consolidate the management of tertiary education in the country. It is a federated university with 10 member colleges spread across the Kingdom. Literacy among adults now stands at about 47%. International organizations such as the World Bank and UNICEF are involved in promoting educational projects in Bhutan.

Bhutanese seeking higher education or professional training have to turn to foreign educational institutions. Most Bhutanese students being educated abroad receive technical training in India, Singapore, Japan, Australia, New Zealand, Britain, the Federal Republic of Germany (West Germany), and the United States. English-speaking countries attracted the majority of Bhutanese students. The vast majority of Bhutanese students return to their homeland.

#### 14 CULTURAL HERITAGE

Bhutan's culture is deeply rooted in Tibetan Buddhism. The country began as a theocracy (i.e., its ruler was a religious leader), and even today lamas are highly influential in the affairs of the country. The *dzongs* (forts) and monasteries remain centers of political, economic, social, and religious life. It is here that festivals are celebrated with religious music and masked dances, and lamas continue the traditions of Buddhist learning. Religion finds architectural expression in numerous *chorten* (relic mounds) and temples, while dzongs are often patterned after the Potala, the Dalai Lama's palace in Lhasa, the capital of Tibet. Religious objects such as the *mandala* (Buddhist Wheel of Life) and *thanka* (a painted religious scroll) are works of art in their own right.

#### 15 WORK

Bhutan is essentially an agrarian country, with 67% of its labor force involved in subsistence agriculture and animal husbandry. Much of the land is mountainous or heavily forested, and less than 3% of the country's area is under permanent cultivation. Rice, wheat, maize, and millet are the main crops grown in the country. Fruit production is important, with apples, peaches, plums, and apricots among the varieties grown. Livestock raised in the region include cattle, sheep, pigs, chickens, and the yak, a bovine adapted to high altitudes.

Although Bhutan restricts the number of tourists allowed into the country in order to limit foreign influences, tourism has great potential. The tourist dollar accounts for about 1.6% of the gross national product, but this figure may be expected to increase in the future. Electricity, timber and wood products, fruits and vegetables, and cement are important export items. India is Bhutan's major trade partner.

#### 16 SPORTS

The Bhutanese are well known for their archery skills, and archery competitions are commonly held at the time of festivals and national holidays.

#### 17 ENTERTAINMENT AND RECREATION

Bhutanese have limited access to modern forms of entertainment. In June 2000 FM radio service became available for western Bhutan with the inauguration of the main FM station at Dobchula and one relay station at Takti in the south. The

FM service was extended to central Bhutan in January 2001 and the rest of the country in 2005.

In 1989, in an attempt to preserve Bhutan's culture, the government banned the viewing of foreign television by ordering all TV antennas in the country to be dismantled, but in June 1999 permitted television—and later, the Internet—into the country. The last country in the world to permit television within its borders, Bhutan—which had remained virtually unchanged for centuries—was suddenly bombarded with 46 cable channels. The introduction of television into Bhutan was sparked by the World Cup Soccer Final of France in 1998. The 3-0 victory of the home side over Brazil was watched by thousands on a big screen in Bhutan's National Square. TV in Bhutan was such a success that a year later, on the 25th anniversary of his coronation, King Jigme Singye Wangchuk decided to allow the Bhutan Broadcasting Service (BBS), founded in 1973, to broadcast TV programming. However, the vast majority of Bhutan's population today (some 70%) do not even have electricity, let alone access to television.

Now, both cable TV, the Internet, and cell phone service are available in Bhutan, providing access to the outside world. With its new satellite television service (launched in February 2006), BBS's programming is now received in almost 40 Asian countries—from Turkey in the West to Indonesia in South East Asia.

The impact of access to TV screens has changed Bhutanese society considerably, especially one that, as a matter of policy, attempts to preserve and conserve traditional values. The editor of Bhutan's only regular newspaper, the bi-weekly *Kuensel*, explained that the thinking in the country is that as it will never be a military or economic power, its strength must be its unique society. He believes that television represents a direct threat to this. Some observers have noted an increase in violence among children and a rise in crime, while others note that the more the Bhutanese are exposed to globalization, the more likely they are to lose their own culture. Such concerns have led to the regulation of the industry and control what goes out over the airwaves through acts such as the 2006 Information, Communication, and Media Act, which bans the broadcasting of material (e.g. pornography and the U.S. wrestling series WWE, both of which, it is believed, leads to violence among Bhutanese children) thought to be detrimental to Bhutanese society.

The government publishes a bi-weekly newspaper, *Kuensel*, which faces competition from two other private newspapers the *Bhutan Times* and the *Bhutan Observer*, which began publication in 2006. But with the country's low literacy rate (47% in 2003), the papers have a very small circulation. Religious festivals and folk traditions such as singing and dancing are the primary forms of entertainment and recreation.

#### 18 FOLK ART, CRAFTS, AND HOBBIES

Bhutanese women are skilled at weaving and make their own clothing, bedding, tablecloths, floor coverings, and items for religious use. Embroidery is a favorite art. Much effort goes into making costumes and masks for the ritual dances performed at festivals. Smiths excel in working gold, silver, brass, and other metals.

*Bhutanese men, in traditional attire, engage in archery in Thimphu, Bhutan. Archery is one of the few sports to which Bhutan sends a team to the Olympics. (AP Images/Sherwin Crasto)*

## 19 SOCIAL PROBLEMS

The Bhutanese live in the least-developed country in all of South Asia. Despite efforts at modernization since the 1960s, poverty, lack of potable water, inadequate health care, illiteracy, and difficulties in transportation remain serious problems. Bhutan is heavily dependent on foreign aid in its efforts to improve the life of its people. Recently, ethnic tensions between the Bhutanese and Nepalese minority have created a problem in the country. Mindful of what happened in nearby Sikkim, where Indian immigrants eventually outnumbered the native Sikkimese and voted to accede to India, Bhutan has acted to restrict immigration from Nepal. Despite this, some estimates place the Nepalese population as high as 40% of Bhutan's total. The Nepalese see themselves as second-class citizens, resent government restrictions on them, and demand a greater say in the affairs of the country. They also object to government efforts to develop a Bhutanese "national identity" based on a Bhutia model.

## 20 GENDER ISSUES

Women in Bhutan enjoy considerable freedom and equal opportunity both in government and society in general. This is attributed mainly to the strong influence of Buddhism in every aspect of Bhutanese religion, culture, and tradition. In Mahay-

ana Buddhism, male and female are considered equal. Women are treated as equal to men under Bhutan law. The law of inheritance, for example, reserves equal rights for all children, irrespective of sex and age. Both men and women enjoy equal freedom to choose their partners. In contrast to other South Asian countries, parents in Bhutan do not have strong gender preferences for their children and treat girls and boys equally.

However, although officially the government encourages greater participation of women in political and administrative life, male members of the traditional aristocracy dominate the social system. Economic development has increased opportunities for women to participate in fields such as medicine, both as physicians and nurses; teaching; and administration. Reflecting the dominance of males in society, girls were outnumbered three to two in primary and secondary-level schools.

Women play a significant role in the agricultural work force, where they outnumber men, who were leaving for the service sector and other urban industrial and commercial activities. Up to 90% of all Bhutanese women are involved in agricultural work (70% of the land registered in Bhutan is owned by women), although this figure is decreasing as more opportunities become available for women in other sectors of the economy.

The government founded the National Women's Association of Bhutan in 1981 primarily to improve the socioeconomic

status of women, particularly those in rural areas. The association, at its inaugural session, declared that it would not push for equal rights for women because the women of Bhutan had already come to “enjoy equal status with men politically, economically, and socially.”

# BHUTIA

**PRONUNCIATION:** BOOT-ee-uh

**ALTERNATE NAMES:** Bhot; Bhotia; Bhute

**LOCATION:** Bhutan, Nepal, and India (southern Himalayan region)

**POPULATION:** Over 1 million

**LANGUAGE:** Bhutia; Tibetan; Hindi, Nepali

**RELIGION:** Forms of Buddhism, Hinduism, and animism

**RELATED ARTICLES:** Vol. 3: Bhutanese; Buddhists; Hindus; Vol. 4: Nepalis; People of India

## <sup>1</sup> INTRODUCTION

*Bhutia* (also Bhot, Bhotia, Bhute) is a generic term that identifies several socially unrelated groups of India's northern mountain rim. The name *Bhutia*, thought to be derived from “Bhot” or “Bod,” which means “Tibet,” reflects the Bhutia's origins. The Bhutia are believed to have emigrated southward from Tibet in the 9th century AD or sometime after and settled in the Himalayan mountain ranges along the Indo-Tibetan border. Although they are Tibetan in origin and retain Tibetan cultural traits, many Bhutia groups have adopted elements of Hindu culture. Bhutia society is transitional, representing a blending of Hindu-dominated South Asian and Buddhist Central Asian cultures. Although the various Bhutia groups of the Himalayas exhibit social, cultural, and religious differences, they do have certain features in common. All live in a mountain habitat and traditionally have been involved in trade across the Himalayas between South Asia and Tibet.

## <sup>2</sup> LOCATION AND HOMELAND

The Bhutias occupy a narrow belt of mountainous territory that lies along on the southern flanks of the Himalayas. This zone extends from the kingdom of Bhutan in the eastern Himalayas, through Nepal and the northern mountain states of India, to the mountains and plateaus of the Ladakh region of Kashmir. Population data for the Bhutia are unreliable, although their numbers exceed 1 million. They make up approximately 50% of Bhutan's population (approximately 400,000), and form minorities in Nepal (200,000) and India (200,000).

The Bhutia in the Garhwal region of India are the focus of this discussion. They live in three mountain districts known collectively as Uttarakhand (in 2008, the Garhwal and Kumaon regions of Uttar Pradesh became the 27th Indian state, known as Uttarakhand. Raputs form the main element in the state's population). In the north lie the main ranges of the Himalayas, with peaks reaching over 7,600 m (25,000 ft) above sea level. Much of this area is under permanent snow and totally uninhabitable. Bhutia settlements are found at altitudes up to around 4,500 m (15,000 ft) in valleys carved into the mountains by streams flowing in a general southwesterly direction. Winter conditions at these elevations are severe, and the Bhutia spend this time of year in the lower valleys.

## <sup>3</sup> LANGUAGE

The Bhutia speak various dialects of the Bhutia language, a member of the Tibeto-Burmese branch of the Sino-Tibetan language family. The dialects found in Uttarakhand belong

to the Central Bhutia group, and include Rankas, Chaudansi, and Darmi. Some Bhutia communities, such as the Joharis of Pithoragarh District, have forgotten their own dialects and use the language of their southern neighbors. All Bhutia groups are multi-lingual and know Tibetan, local hill (Pahari) dialects, and Hindi as well as their own tongue.

#### 4 FOLKLORE

All Bhutia groups in the Himalayas have their own folklore and traditions. In Uttarakhand, both the landscape and folk culture are dominated by Nanda Devi. At 7,817 m (25,645 ft), the mountain Nanda Devi towers over the other peaks in the region. Like many other Himalayan peaks, the mountain is identified with a deity, the Hindu goddess Nanda Devi. For more than 1,000 years, central Himalayan rulers have legitimized their authority by claiming a relationship with Nanda Devi. Nanda Devi, a form of Shiva's consort Parvati, is the focus of a local cult and figures prominently in the life of the Bhutia and other peoples in the region. Folk songs are devoted to Nanda Devi, pilgrimages made in her name, and the goddess is honored at the Nandashtami festival.

#### 5 RELIGION

Bhutia religion varies according to the specific Bhutia community involved. In Bhutan, for example, Bhutias are followers of the Tibetan form of Mahayana Buddhism. In the Central Himalayas, however, only the Jad Bhutia profess Buddhism. Other groups are Hindu, or their religion reflects a mixture of Lamaistic Buddhism, Hinduism, and animism. Hinduized groups such as the Johari Bhutia use the services of Brahmans while performing *puja* worship to the Hindu deities. Gabala, the god of trade, is among the most popular deities and is worshiped along with other Hindu deities such as Mahadev (Shiva) and Nanda Devi. Some gods (e.g., Saai and Laandey) are exclusive to the Bhutia, who also have their own clan deities. Ancestor worship is an important part of Bhutia life, and Bhutias also believe in ghosts and spirits. When disease or other misfortune befalls a community, a magician-priest becomes possessed and identifies the cause of the trouble. The villagers then perform the appropriate rites or sacrifices to appease the offended deity or spirit.

#### 6 MAJOR HOLIDAYS

All the Hindu festivals are celebrated by the Bhutia of the Central Himalayas. Some have particular significance and are the occasion for religious fairs. An annual fair is held at Bageshwar in mid-January. Bageshwar lies at the confluence of the rivers Gomti and Sarju, and participants take ritual baths at this sacred place and offer water to Shiva in the Bagnath Temple. Bhutia traders and customers from the entire region attend the fair to buy and sell woolen clothing, shawls, carpets, ponies and other livestock, and miscellaneous goods. Some festivals that are exclusively Bhutia in nature center on the community's seasonal migrations. At the Lapsa festival, which falls in October when the Bhutia are leaving their summer quarters, prayers are offered to the goddess Nanda Devi for a safe journey down the mountains. Bikhid and Asadh Shankranti are festivals related to the spring migration to the summer pastures. The Losar, the Tibetan New Year, is also an important festival celebrated by the Bhutia community. Losoong, which

marks Sikkimese New Year, is celebrated in December by Bhutias in Sikkim.

#### 7 RITES OF PASSAGE

The Bhutias of Uttarakhand show a considerable degree of Hinduization in their life-cycle rituals. Horoscopes may be drawn up by Brahmans, and a naming ceremony is held about three weeks after birth. Male children undergo the *mundan* (head-shaving) ceremony when they are around three or four years old. Infants are carried around on the backs of their mothers or elder sisters, tied in place with a length of cloth. For the seasonal migrations between winter and summer quarters, infants in arms are usually placed in a cylindrical basket strapped to their mothers' backs. As soon as they reach six or seven years old, however, Bhutia children are expected to assume a role in the annual migration of the family and its herds.

The Bhutia cremate their dead, except for children and those who died of tuberculosis, smallpox, or leprosy. It is customary for the men of the community to each carry a log of wood to the cremation ground for the funeral pyre. The final funeral ceremony, called *dudhung*, is usually performed in the family's summer residence. As traditional customs disappear, the *dudhung* is giving way to the Hindu forms of *sraddha* rites. The *sraddha* is an important ceremony involving numerous rituals, a feast, and the giving of gifts to Brahmans in the name of the deceased. It is believed that if the rites are not performed properly, it will adversely affect the soul of the departed.

## 8 INTERPERSONAL RELATIONS

A traditional institution of the Bhutias is the *Rang-Bang*, a meeting place or dormitory for unmarried youth. Young girls and boys from the village (and surrounding villages) gather in the evenings in a vacant house for dancing, drinking, and music. A considerable degree of sexual license is permitted. Couples pair off and spend the night together, going their own ways in the morning. Such meetings sometimes lead to courtship and marriage. Care is taken not to violate any taboos such as having sexual relations with a member of one's own clan. Today, the *Rang-Bang* is rapidly disappearing as an institution under the increasing influence of Hinduism and Hindu social values.

## 9 LIVING CONDITIONS

Bhutias in Uttarakhand typically have two settlements, one for summer and one for winter. The main village is the summer settlement, situated at elevations between 3,500 and 4,500 m (11,500–15,000 ft), where the community lives from May to October. These villages serve as bases for pasturing animals in summer and trade across the mountains into Tibet. Women, children, and livestock are left there while the men travel to the Tibetan market centers. Houses are built with stone walls and slate roofs and set in the middle of a patch of cultivated land. The harsh winters in the highland valleys force the Bhutia to descend to lower elevations for part of the year. They spend November to March in villages situated at altitudes between 1,500 and 2,500 m (5,000–8,000 ft). These winter quarters are not exclusively Bhutia settlements. Bhutia live in villages alongside Brahmans, Rajputs, Shilpkar, and other castes of the area. The more affluent among the Bhutia have both houses fully furnished, but most people must transport all of their household goods between the two residences every time they move.

## 10 FAMILY LIFE

The Bhutias of Uttarakhand are divided into eight subgroups based on factors such as religion, territory, and dialect. Each subgroup is again divided into clans, lineages, and sublineages, which serve to regulate marriage. The Johari Bhutia, for example, are defined on a territorial basis (they inhabit the Johar Valley). They marry within the Johari community, but are divided into 14 exogamous clans. Being the most Hinduized of the Bhutias in the region, they also have three endogamous social classes (Nitwal, Bharet, and Kunkiya) that function much like Hindu castes. The Kunkiya are regarded as ritually impure by the Nitwal and Bharet groups, who do not interdine or intermarry with them. Cross-cousin (i.e., father's sister's daughter, or mother's brother's daughter) marriages are preferred. Formerly, Bhutias had considerable freedom in selecting partners, but arranged marriages are becoming more common. "Bride-price" is paid and marriages solemnized according to Hindu rites. Women have traditionally had a considerable degree of freedom and equality in Bhutia society. However, as Bhutia communities come more under the influence of Hinduism, women are slipping into the lower status assigned them by Hindu society.

## 11 CLOTHING

The dress of Bhutias varies throughout the region, although many groups resemble the Tibetans in their appearance. In

Bhutan, Bhutia men wear long, loose-sleeved robes (*ko*) tied at the waist. Women wear the *kira*, a woven dress fastened at each shoulder by silver buckles. In Uttarakhand, as elsewhere in Bhutia country, clothes are of wool and usually made at home by Bhutia women. Male dress consists of tight-fitting trousers, a long coat that fastens on one side of the neck, woolen boots, and a white turban. The turban is sometimes replaced by a round "hill" cap or, at higher altitudes, by the warmer Tibetan-style hat. The traditional female dress is the *Chyung-bala*. The *bala* is a skirt, and the *chyunga* is a tunic-like smock that is open down the sides to the waist. A full-sleeved blouse is worn under the *chyunga*. A pair of embroidered boots and a white sash worn around the waist completes the outfit. A white, hood-like cap, multi-colored at the back and reaching down to the waist, is worn on the head. Jewelry includes earrings, nose rings, and an array of necklaces and chains around the neck.

## 12 FOOD

The staple food of Bhutias is rice, supplemented by millet, barley, wheat, and, in some areas, potatoes. Bhutias, whether Buddhist or Hindu, are nonvegetarian and eat beef, pork, and mutton. A typical meal in Bhutan might consist of *thugpa*, a meat soup prepared with herbs, red rice, and a meat curry or omelet. The Johari Bhutia of Uttarakhand have abandoned beef-eating, but still relish other meats. Lentils and vegetables, along with chutneys, are commonly taken at meals. The local version of Tibetan tea—made with tea, butter, and salt—is known as *namkin chai*. The butter is derived from the milk of goats, zebu cattle, and the yak. Bhutias can drink alcohol, both liquor distilled from rice and molasses and fermented rice-beer. Chang, a beer made from millet or other grains, is popular. Liquor is also offered when worshiping spirits and local deities.

## 13 EDUCATION

Education levels and literacy vary among the numerous Bhutia groups of the Himalayan region. Bhutan lags behind India and Nepal in the area of education, literacy among Bhutanese adults in Bhutan standing at 47% (2005). Compared to this, literacy among the Bhutias of Sikkim is 67.9% (according to the 2001 Census of India), above the norm among the Scheduled Tribes of India. In Uttarakhand, where literacy in the state stands at 72% (Census of India, 2001), the attitude of the Bhutias to education is positive, and the literacy rate is higher than the average for tribal groups in India. Nonetheless, the yearly migrations are disruptive to education, and drop-out rates are high, especially among the children of lower-income Bhutias.

## 14 CULTURAL HERITAGE

Many Bhutia customs reflect the influence of Tibetan culture on Bhutia life. In the days of Tibetan trade, the Bhutias were exposed to *lamas* and their teachings. They would build "Mana Walls," stone walls with the Buddhist mantra *Om Mani Padme Hum* inscribed on the boulders, for the safety of the village and its inhabitants. Bhutias believe that this mantra has great powers to protect against evil spirits and misfortune. The Bhutias are also greatly influenced by the Tibetan dragon symbol, which features as a prominent design in their handicrafts. Like virtually all Himalayan peoples, the Bhutia have a tradition of folk songs in which the mountains figure prominently. Dancing is popular, with both sexes usually participating. Some

dances are performed at the time of weddings, and others contribute to the evening's festivities at *Rang-Bang* gatherings.

### 15 WORK

Bhutias were traditionally engaged in pastoralism and trade across India's northern border. They would carry food grains, *gur* (molasses), utensils, clothing, woolen goods, and assorted manufactured items north into Tibet. There they would barter these goods for salt, wool, borax, musk, and yak-tails. The closing of the Tibetan border in the 1960s destroyed this trade. Bhutias were forced to turn to cultivation, their secondary occupation. In the Uttarakhand region, however, Bhutia land holdings were commonly too small for self-sufficiency, and many people had to seek other employment. Today, about one-third of the area's Bhutias are engaged in agriculture, and a similar number are involved in weaving and embroidery as a cottage industry. Some have turned to manual labor, and only a very small percentage of Bhutia continue in their traditional occupation of trade and commerce.

### 16 SPORTS

There are no sports that can be identified with the Bhutia community in general. However, certain groups have developed individual skills. The Bhutanese, for example, are well known for their archery skills, and they stage competitions for festivals and national holidays.

### 17 ENTERTAINMENT AND RECREATION

Living mostly in isolated villages and leading semi-nomadic lives, few Bhutias have access to modern forms of entertainment. However, their lives are enriched by the activities associated with religious fairs and festivals, social events, and folk traditions such as dancing and singing.

### 18 FOLK ART, CRAFTS, AND HOBBIES

Bhutia women in the Central Himalayas have a reputation as excellent weavers and embroiderers. Not only do they make their own clothes, but in the past they traded their blankets, rugs, and shawls to Tibet. Today, many women continue to produce these items for local markets as part of a thriving cottage industry.

### 19 SOCIAL PROBLEMS

Bhutia communities are found in the Himalayas from Bhutan to Ladakh. Each group faces problems that reflect its specific social, cultural, economic, and political context. The Bhutia, for example, are well aware of the deforestation and environmental degradation that is rampant in the Himalayan foothills. Bhutia in Uttar Pradesh are deeply involved in the Chipko movement, a popular environmental movement aimed at preventing the cutting down of trees. Historically, all Bhutia groups depended on trade with Tibet. The political events that brought an end to this trade have resulted in profound changes in the life of the Bhutias of Uttarakhand. They do not have the land to support themselves and so must purchase food grains. They have also seen a decline in the numbers of their livestock. The cutting off of wool supplies from Tibet has affected their weaving industry, leading to impoverishment for many. The plight of the Bhutia was recognized by the state government, which designated them a Scheduled Tribe in 1967. Many Bhutia

*Monks of the Bhutia community in India blow traditional ceremonial horns during a demonstration in New Delhi, India. (Prakash Singh/AFP/Getty Images)*

tia have abandoned their traditional occupations and turned to labor, office work, and government service.

In 2008 Baichung Bhutia, well-known international soccer player from Sikkim and currently captain of India's soccer team, was solicited to run with the Olympic torch in India, but he refused to carry the torch to show support for the Tibetan independence movement. "I sympathize with the Tibetan cause. I'm against violence but I thought I should stand by the Tibetan people in their fight," Bhutia said. His actions won him praise from the Tibetan community and its supporters in India.

### 20 GENDER ISSUES

Specific issues relating to gender vary considerably among the Bhutia. For example, Buddhism treats women as equal to men, and so Bhutia women in Bhutan, where the official religion is Buddhism, fare differently than their counterparts in the Indian Himalayas, especially among those groups who have adopted Hinduism. In the Indian state of Sikkim, for instance,

though agricultural chores are shared by men and women on a relatively equal basis, women are primarily responsible for taking care of poultry, hauling water, cooking, and other household chores. Bhutias are classed as a Scheduled Tribe in most states in India and, as such, are not subject to the Hindu Marriage Act of 1955. Custody of children and of household property is determined by customary law, which relies on elders to resolve custody issues. Child marriage and the dowry system are unknown among the Bhutia, though daughters have no rights of inheritance to their fathers' properties, even when there are no sons. All land is registered in the male's name, Bhutia society being patrilineal in nature. Bhutia women who marry outside of their ethnic group forfeit their rights to any property.

Bhutia women in Sikkim tend to have benefited best from access to education with over 60% of them being classed as literate, whereas in Ladakh, where the status of Bhutia women is generally low, many women have never attended school at all.

# **BRAHMAN S**

**PRONUNCIATION:** BRAH-muhns

**ALTERNATE NAMES:** Brahmin

**LOCATION:** India; Nepal

**POPULATION:** 65–70 million

**LANGUAGE:** The language of their geographic region; Sanskrit for religious purposes

**RELIGION:** Hinduism

**RELATED ARTICLES:** Vol. 3: Hindus; Vol. 4: People of India

## **1 INTRODUCTION**

Brahmans are members of the first and highest-ranked of the four *varnas* or classes of traditional Hindu society. The name *Brahman* is frequently spelled “Brahmin” to avoid any confusion between the caste, the supreme being of the Hindus (*Brahma*), and the sacred scriptures known as the *Brahmanas*. In ancient times, Brahmans were above all a priestly caste. Their duties included daily recitation from the *Vedas*, performing religious rituals, conducting sacrifices, and studying and teaching the sacred books of Hinduism. It was almost inevitable, given their control of ritual sacrifice and claim to be the exclusive guardians of sacred knowledge, that Brahmans should rise to a dominant position in the life of the Hindu people. Wherever Hindus went, as during their expansion into Southeast Asia in the 1st and 2nd centuries AD, Brahmans followed. (However, some scholars have argued Brahmans were brought to Southeast Asia by local rulers to help set up the administrative structures of their states). Even today, their former presence in the region can be seen in the Brahmans and caste system found on the Indonesian island of Bali.

Brahmans have faced periodic challenges to their power. The reformist religions of Jainism and Buddhism, for example, were founded on the basis of a society without castes or priests. The conversion of Ashoka (273–232 BC), in particular, to Buddhism was a serious setback to the Brahmans in India. However, the 5th century AD saw the beginnings of a Hindu revival that raised Brahmans to a position of social dominance. This was based on three features of Brahman society: a hostility to all languages not Sanskrit, an intolerance for all religions not Hindu, and a deep prejudice towards all castes not Brahman. From this point on, Brahmans openly claimed superiority in all aspects of life. This state of affairs continued for several centuries, until the Brahmans' dominance was threatened by the introduction of Islam and its egalitarian ideals at the end of the 12th century. Western ideas, introduced by missionaries and social reformers, and ideals of democracy have acted to reduce the power and prestige of the Brahmans in recent times.

## **2 LOCATION AND HOMELAND**

Brahmans make up about 6% of all Hindus, or roughly 65 to 70 (2007 est.) million people. Rather than being a single caste, Brahmans form a bewildering array of subgroups. Each of these can be considered a caste (*jati*) in its own right in that it is endogamous (i.e., marriage occurs within the group) and subject to restrictions on interdining. The orthodox Brahman from Malabar in South India, for example, cannot eat with the orthodox Brahman from Kashmir. Today, there are over 1,800 subdivisions of Brahmans. The Brahman castes are generally

divided into two broad divisions: those of northern India (*Pancha Gauda*), and those of the south (*Pancha Dravida*). Each of these divisions is further divided into five categories. The *Pancha Gauda* categories are the Sarasvata Brahmins of the Sindh, Punjab and Kashmir, the Kanyakuba Brahmins of Kanauj, the Gauda Brahmins of Bihar and Bengal, the Utkala Brahmins of northern Orissa, and the Maithila Brahmins of the areas of Bihar and Nepal north of the River Ganges. These groups include both high caste groups (e.g. the Kashmiri Pandits) and those of lower ranking (e.g. the Chithu and Prot [Purohit] Brahmins, also of Kashmir). Although in any given area Brahmins are ranked as the highest caste, there is no relationship between the Brahmin castes of different regions. The Brahmin castes are even ranked into a hierarchy among themselves, depending on factors such as occupation and descent.

Although Brahmins are found throughout India and Nepal, they are not spread evenly over the subcontinent. Their highest concentration is in Kashmir, where they form 35% of the Hindu population. Around 12% of Hindus in the upper Ganges plains are Brahmins. However, the numbers of Brahmins drop dramatically in areas distant from the Aryan heartland. In Assam, Orissa, and Tamil Nadu, for example, they make up less than 3% of the Hindu population.

### 3 LANGUAGE

Brahmins speak the language of their geographic region. Thus, the Kashmiri Pandit speaks Kashmiri, the Nambudiri Brahmin of Kerala speaks Malayalam, and the Ayyar Brahmin from Tamil Nadu speaks Tamil. The sacred language of Hinduism, however, is Sanskrit. Brahmins need to know Sanskrit to carry out their priestly functions. There is, however, considerable variation in the level of the Brahmin's knowledge of Sanskrit. A Vedic scholar may have extensive knowledge of Sanskrit and Sanskrit literature. On the other hand, a temple functionary may be illiterate and have learned the Sanskrit passages he needs to perform his duties by rote.

### 4 FOLKLORE

In Vedic legend, Purusha was a giant being, representing the original primeval male. He was thought to be a form of Brahma, who created the universe. The *Rig Veda*, the earliest of the Vedas, tells of the sacrifice of Purusha that served as the model for all future sacrifice. The four castes (*varnas*) of Hinduism were created from Purusha's severed body. The Brahmin was created from his mouth for the purposes of teaching humankind. The *khsatriya* came from Purusha's arms, the *vaishya* from his thighs, and the *sudra* from his feet. It is this origin from Purusha's (i.e., Brahma's) mouth that underlies the Brahmin's claim to superiority over all other castes in Hindu society.

### 5 RELIGION

Brahmins are Hindu and embrace the fundamental beliefs of Hinduism. These include concepts of the soul (*atman*), the illusion that surrounds one's physical existence (*maya*), the cycle of rebirths (*samsara*), the law of *karma*, the pursuit of righteous behavior (*dharma*), the philosophy of nonviolence (*ahimsa*), and the total release (*mokhsa*) of the soul from the physical world. They also include belief in the authority of the Vedas, in the caste system, and in the superiority of the Brahmin caste. Beyond this, however, Brahmins may follow differ-

ent philosophical systems. The Smarta Brahmins, for example, are followers of the Smarta sect of Hinduism. They are orthodox, but in their worship ceremonies they invoke five deities (Shiva, Vishnu, Suraj, Ganpati, and Shakti). In contrast, the Shri Vaishnava Brahmins of the Tamil region exclusively worship the Hindu god Vishnu. There are almost as many differences in Brahmin religious customs and practices as there are Brahmin castes in the country.

### 6 MAJOR HOLIDAYS

Brahmins celebrate all of the major festivals of the Hindu calendar. Of particular importance to Brahmins, however, is the festival of Shravani-purnima, the full moon of the month of Shravana (July-August). Sometimes this is known as "Coconut Day" because people commonly throw coconuts into the ocean and rivers. It is a day on which Brahmins (and other high-caste Hindus) renew the sacred thread. For many Brahmins, this is the beginning of the sacred year, and the rituals they perform on this day serve to purify them of the sins of the past year.

### 7 RITES OF PASSAGE

All periods of transition and change in Hindu life are held to be times of danger and are accompanied by rituals to counteract evil influences. These rituals (*samskara*, in Sanskrit) are set out in the Vedas and other Hindu texts. At one time they numbered over 300, but now have been reduced to around 9 or 16 (there is disagreement among scholars as to the exact num-

ber of rites that should be performed). All Hindus perform these rituals, no matter what their caste, although they are often more elaborate for Brahmins. The Maithila Brahmins of northern Bihar, however, observe no pre-birth rituals. Mother and child are viewed as ceremonially unclean until the *Chhat-tihar*, the ritual purification undertaken on the sixth day. During infancy, rituals to protect the child from black magic, the first-feeding ceremony, and the head-shaving ceremony (*mundan*) are performed. One of the most important rites for the Maithila Brahmin is the *upanayana* ceremony, the donning of the sacred thread. This is a ritualistic rebirth (hence the term “twice-born”) by which the male is initiated to the full status of a Brahmin.

In theory, soon after the sacred thread ceremony, a boy should enter the first of the four stages (*asramas*) into which a Brahmin’s life is divided. He lives as a student in the house of his teacher, studying the Vedas and the sacred law. Around the age of 30, he should return to his father’s house to marry, raise a family, and become a householder (the second *asrama*). Then, having raised his children and fulfilled his family obligations, a Brahmin is free to seek his own salvation. During the third stage, the Brahmin leaves his family for an austere life of discipline and meditation in the forest. Finally, he progresses to the stage of *Sannyasa*. A *sannyasin* is an ascetic who has given up his possessions and renounced the world. He has no home, begs for his food, and wanders the country awaiting the ultimate release of the soul from the physical body. Few Brahmins follow the ideal of the four *asramas* today, although individuals who have become *sannyasin* may be seen today at Hindu pilgrimage centers and holy places across the land.

Maithila Brahmin death rituals involve the custom of *Godan*, or “gift of a cow.” When possible, just before death a Brahmin worships a cow and gives it away as a gift to a near relative. This is seen as essential, as the cow will carry the dead Brahmin across the river of blood and filth (*Vaitarani*) that separates the earth from the land of the dead (this rite is described in the Vedic literature). The body is placed on a bamboo stretcher and carried out to be cremated. The Maithila Brahmins have no common cremation ground, each family having its own place, usually in a mango garden, for the burning of bodies. Water is sprinkled on the ground to thwart evil spirits. The corpse is bathed, dressed in a white shroud, and placed on the funeral pyre with the head pointing south. The chief mourner, usually the eldest son, places five pieces of wood on the pyre, walks around it three times, and then sets it alight. All the participants in the funeral ceremony take a ritual bath in a river or pond before returning home. Before entering the house, they are required to touch iron, stone, and fire, and then tear a chili into three pieces. Various rituals are performed in the following days, including the gathering up of the bones and ashes and placing them in the sacred Ganges River. A grand feast, at which fish and meat are served and to which a minimum of 11 Brahmins have to be invited, is held on the thirteenth day to complete the *sraddha* (funeral) rites. If the funeral rites are not performed correctly, it is believed the soul of the departed will become a ghost (*preta*) and never obtain salvation.

## 8 INTERPERSONAL RELATIONS

Brahmins use the standard Hindu greetings, “*Namaste*” or “*Namaskar*,” accompanied by the joining together of hands in front of the body. Orthodox Brahmins concerned with ritu-

al purity take great care to avoid physical contact with people of lower castes, and, thus, rarely venture into crowded public places or use public transport. Even the shadow of an Untouchable falling on a Brahmin is polluting and requires ritual purification.

## 9 LIVING CONDITIONS

The living conditions of Brahmins reflect factors such as occupation, economic status, and regional culture. The Anavil Brahmins, who are relatively affluent landowners in Gujarat, have a very different lifestyle from the Ganga-patra, a Brahmin who guides pilgrims through the sacred city of Varanasi (Banaras). The pilgrim-guide also leads an existence quite different from that of the Vedic scholar who lives and works in Varanasi, the holiest of the Hindus’ holy cities. In general, the material culture of Brahmins (e.g., settlement patterns, house type, household belongings, and furniture) conforms to regional cultural patterns.

## 10 FAMILY LIFE

Brahmins generally follow regional systems of kinship and marriage, although considerable diversity exists in their practices. Among the Nambudiri Brahmins of Kerala, for example, only the eldest son was traditionally allowed to marry. Like all Hindu castes, Brahmins are divided into exogamous *gotras*. One marries outside one’s *gotra*, but there are also complex rules delineating other *gotras* and degrees of relationship that are taboo. Marriages between persons of the same name is usually prohibited because they are considered to be related. The matter is further complicated by the fact that many Brahmins will not marry outside their own sect. Brahmins have been known to practice hypergamy, i.e., members of a caste will accept daughters from a caste of lower status but will not give their daughters in return. Marriages are, of course, arranged, and the forms of marriage available to the Brahmin are clearly set out in the sacred texts. The extended family with patrilineal residence is the norm for Brahmin families. Most Brahmin groups do not recognize divorce or widow remarriage.

## 11 CLOTHING

The traditional dress for the Brahmin man is the *dhoti*, a single piece of white cotton wrapped around the waist for half its length, and then drawn between the legs and tucked into the waist behind. There are regional variations in the way the *dhoti* may be tied. The chest is usually left bare. A turban, often red in color, may be worn by the cultivating castes. Any items made of bone or leather are regarded as unclean and are shunned. Women wear the typical Hindu dress of *sari* and *choli* (bodice) and share in their countrywomen’s love of jewelry. Orthodox Brahmins continue to wear their traditional clothing, though in many areas the cultivating castes have adopted local styles of dress.

## 12 FOOD

Geography and ecology set the broad outlines of the Brahmins’ diet. In the drier northern and western regions, cereals (wheat, millet, barley) made into flat, unleavened breads (*roti*) are the staple food. This is eaten with spiced vegetable dishes, pulses (*dal*), and fruits. Rice (*chawal*) replaces the cereals in the more humid east and south.

*Thai officials prepare for rice planting during royal plowing ceremonies, Bangkok, Thailand. The royal plowing ceremony is an ancient Brahman ritual that was reintroduced by King Bhumibol Adulyadej in 1960. It is considered the official commencement of the rice-growing season. (AP Images/Sakchai Lalit)*

The specifics of the Brahman diet are determined by concerns for ritual purity and the need to avoid pollution. Food habits in Hindu society are closely linked to social status and standing in the caste hierarchy. As high-caste Hindus, Brahmans are subject to rigid dietary restrictions. In theory, Brahmans are strict vegetarians, eating no animal flesh and even avoiding eggs. But Kashmiri Brahmans eat mutton, and Brahmans in Bengal eat fish. In South India, however, no orthodox Brahman will eat animal flesh. No Brahman in India will eat beef, either, as this violates the basic Hindu concept of the sanctity of the cow. Milk and milk products are important foods, however. They also have ritual significance, because the five products of the cow are regarded as both sacred and sanctifying. (These five products are milk, curds, *ghi* or clarified butter, dung, and urine—known collectively as *pancha-gavya*.) Some Brahmans even avoid foods such as onions and garlic that grow in the ground and are regarded as unclean. Alcohol is strictly forbidden. Even inadvertent violation of food taboos can lead to serious problems. An incident is recorded among the Maithila Brahmans where an individual accidentally ate a vulture, thinking it was a water-hen. He was cast out of the community for this act, and the priest refused to purify him.

Dietary restrictions extend not only to the foods a Brahman will eat, but also to who can prepare the food and with whom the Brahman can eat. In any given region, rules of commensality, i.e., rules concerning with whom one can eat, are a clear indication of one's standing in the caste hierarchy.

### **13 EDUCATION**

Educational levels vary among Brahman castes across the country. Some, such as the elites among the Pandits of Kashmir, have a long tradition of learning and scholarship. Jawaharlal Nehru, India's first prime minister, was of this caste. By contrast, a Brahman cultivator in a desert village in Rajasthan may have had hardly any schooling at all. There is a tendency among the more conservative groups, such as the Nambudiri Brahmans of Kerala, to shun Western education. This has restricted their opportunities for advancement in modern India.

### **14 CULTURAL HERITAGE**

Brahmans all over India share many common features, e.g., high social status, traditional priestly functions, and restrictive food taboos. However, the cultural heritage of a particular Brahman group is rooted in the group's own regional culture. Each group shares in the language, literature, history, and folk traditions of the regional society of which it forms a part. Thus, the Ayyars of South India are Brahmans by caste but Tamil in culture; the Pandits of Kashmir have helped shape Kashmiri society; and the Maithila Brahmans are an integral part of the peoples and culture of the middle Ganges plains.

### **15 WORK**

The traditional occupation of the Brahman castes is to serve as priests for Hindu society, either in temples or as family priests (*purohit*). In the past, because of their learning and literacy,

Brahmans rose to positions of power in the state administrations, acting as royal advisors and even attaining the rank of “Diwan” (Chief Minister). Textual sources indicate that, in addition to their priestly role, Brahmans have been teachers, soldiers, tillers of the soil, and even traders. Today, there are still Brahman castes (e.g., the Anavil Brahmans, the Bhaghban, and the Bhumihar) who are primarily landowners and cultivators, and who are barred from performing priestly functions. These groups do not, of course, have the ritual status of the priestly castes. Brahmans are also found in occupations such as teacher, scribe, and government clerk.

Of the Brahmans involved in religious occupations, those connected with the actual rituals of temple worship are considered socially inferior. These include the *pujari* who performs the *pujas* (rituals of worship) at temples and shrines, the *ojha* who exorcises demons and evil spirits, and the *gyotisha* or astrologer who casts horoscopes and determines auspicious dates. The Brahmans who act as guides for pilgrims at sacred centers such as Varanasi or Allahabad, as well as those who preside over funeral rites, also fall into this category of “inferior” Brahmans. By contrast, the Sarasvata Brahmans of the northwest are regarded as among the purest of the Brahman castes.

## 16 SPORTS

There are no games or sports associated specifically with Brahmans, although individual groups have developed certain athletic skills. For example, the Chaturvedis are a Brahman caste of Mathura (in western Uttar Pradesh) who are known for their wrestling ability.

## 17 ENTERTAINMENT AND RECREATION

There are no forms of entertainment or recreation specifically identified with the Brahman castes.

## 18 FOLK ART, CRAFTS, AND HOBBIES

Brahmans are not known for any unique folk arts or crafts.

## 19 SOCIAL PROBLEMS

Given the wide geographical distribution and varied occupations of Brahmans, it is difficult to generalize about their problems. Some problems, such as the violence and political instability in Kashmir or the deteriorating law and order situation in Bihar, are regional in nature and affect all castes. Others, for instance the difficulties faced by struggling Brahman cultivators, are class—rather than caste—related. Perhaps the single greatest problem facing Brahmans in recent years has been the emergence of a secular and democratic India. The modernization of India, especially in economic terms, has eroded the traditional power and prestige of the Brahmans. The adoption of the democratic principle of one person, one vote has given the lower castes, and especially the Untouchables, political power that they could never have possessed in times past. Political movements among the lower castes, such as the Dalit Panthers of Maharashtra State, often are based on a rejection of Brahmanism. Recent government actions, such as the Mandal Commission’s recommendations to “reserve” government jobs and university places for the Scheduled Tribes and Scheduled Castes, have further strengthened the position of the lower castes at the expense of the upper castes. It is per-

haps no accident that a militant Hindu nationalism (*Hindutva*), supported in part by Brahmans, has recently emerged as a major force on the Indian political scene.

The Bharatiya Janata Party (BJP) is an example of this. Created in 1980, the BJP is a major center-right Indian political party championing the socio-religious cultural values of the country’s Hindus and is supported by members of the set of Hindu nationalist organizations informally known as the Sangh Parivar, in which the Rashtriya Swayamsevak Sangh (RSS) plays a leading role. Currently, the BJP rules in eight states of India (Gujarat, Chhattisgarh, Himachal Pradesh, Madhya Pradesh, Meghalaya, Nagaland, Rajasthan, and Uttarakhand) and while its leaders are not necessarily Brahmans, the party supports the traditional values of Hinduism. Under Atal Bihari Vajpayee, the BJP led the National Democratic Alliance, which formed the Union (central) Government in Delhi between 1998 and 2004. L. K. Advani, Deputy Prime Minister under the Vajpayee administration explained the BJP’s unexpected loss to the Congress-led UPA (United Progressive Alliance) in the 2004 general elections in terms of a failure to keep to the tenets of Hindutva.

## 20 GENDER ISSUES

The Brahman’s emphasis on ritual purity has led inevitably to discrimination against women. In the past, Brahman women have been subject to the worst excesses of Hindu society—child marriage, early consummation of marriage, prohibitions against widow remarriage, and demands for dowry. As members of India’s highest castes, they were expected to religiously practice the basic tenets of Hindu society. Even though many of these practices have been made illegal in modern India, (viz. the 1984 Dowry Prohibition [Amendment] Bill), they still occur. One only has to read the press, even today, to find instances of “dowry deaths”: over 6,700 dowry deaths were reported in India in 2005 and one suspects many more go unreported as such. Brahman women also face problems in accessing education and tend to experience the same discrimination faced by all Hindu women, especially in rural areas where they are expected to perform agricultural labor, as well run the households. Casteism absolutely forbids a Brahman women from having any kind of physical relationship with a man of lower caste and requires marriage (usually arranged) into the Brahman caste.

Brahman women, by virtue of their status, tend to be better educated than other women in South Asia, and many have achieved prominence in public life in India. Indira Gandhi (Nehru’s daughter) was a Kashmiri Brahman (Pandit), who was educated at Oxford and continued the Nehru dynasty, ruling India with an iron fist from 1966 until her assassination by Sikhs in 1988 (with an inter-regnum between 1977 and 1980). Brahman women have risen to positions of prominence in science (for instance, Ashima Chatterjee in organic chemistry and Archana Sharma in particle physics) sports, and politics. But in general, they still play a subordinate role to males and their husbands, in particular, and face many of the same issues—access to education, poverty, health awareness, sexual discrimination and abuse, inequality in the workplace, inheritance of property and balancing work and family life—as other women in modern Hindu society.

# BRAHUI

**PRONUNCIATION:** brah-HOO-ee

**ALTERNATE NAMES:** Brohi

**LOCATION:** Pakistan (Baluchistan Province); a small number live in southern Afghanistan and Iran

**POPULATION:** 2.3 million

**LANGUAGE:** Brahui; Sindhi

**RELIGION:** Islam (Sunni Muslim)

**RELATED ARTICLES:** Vol. 3: Baluchi

## 1 INTRODUCTION

Among the rugged hills of South Asia's western borderlands lives a group of tribes known as the Brahui (also Brohi). Various explanations of the name *Brahui* have been suggested, the most likely being that it is a corruption of *Barohi*, meaning "mountain-dweller" or "highlander."

The origins of the Brahui remain unclear. The Brahui language belongs to the Dravidian linguistic family, and this has led some writers to argue that the Brahui are survivors of the peoples who developed the Harappan civilization. Others have argued that the Brahui and the Baluchi are one and the same, and that the term *Brahui* designates status rather than any ethnic differences. If this were true, then the Brahui would have been part of the Baluchi migrations into their present region between the 5th and 7th centuries AD. During the 17th century, the Brahui rose to prominence in Kalat, in Baluchistan, when Mir Ahmed Khan I acceded to the leadership of a confederacy of Brahui tribes in AD 1666. For nearly 300 years from that time, an unbroken line of Brahui rulers held the Khanate of Kalat. British expansion westward from Sind, and their interest in the Afghan border regions, brought them into conflict with the Khans of Kalat in the middle of the 19th century. The British eventually acquired control over the strategically located Kalat, although the state remained nominally independent until it was incorporated into Pakistan in 1948.

## 2 LOCATION AND HOMELAND

The current estimate of the Brahui population is 2.3 million people. Most of this number is concentrated in Pakistan's Baluchistan Province around Kalat, the historical focus of Brahui territory and power. Brahui-speakers are also found in southern Afghanistan and Iran.

The Brahui homeland lies on the Kalat Plateau, where elevations vary between 2,135 m and 2,440 m (7,000–8,000 ft). Running roughly north–south through the region is the Central Brahui Range. West of these mountains lie the uplands of Jhalawan and Sarawan. To the east, the land descends to the alluvial lowlands of Kacchi. This is an extension of the Indus plain that runs northward towards Sibi and the Bolan Pass. The region is extremely arid, with annual rainfall averaging less than 20 cm (8 in). Strong northwesterly winds prevail through the area, bringing dust from the Iranian deserts and scorching temperatures in summer and bitter cold weather in winter. The plateau consists of extensive areas of barren rock, or hills with a thin cover of drought-resistant vegetation.

### 3 LANGUAGE

The Brahui language is a Dravidian tongue related to the languages spoken in South India. The existence of this isolated pocket of Dravidian speakers almost 1,800 km (1,000 mi) from the main area where Dravidian languages are found is a problem that has long puzzled South Asian linguists. Brahui contains many loanwords acquired from the Indo-Aryan languages (e.g., Baluchi, Sindhi, and Persian) spoken by the peoples of the surrounding region. There is no Brahui script. Many Brahui-speakers are bilingual, speaking Baluchi or other local languages. Those Brahui settled in Sind tend to speak Brahui at home but use Sindhi (or in Karachi, Urdu) in dealings with others.

### 4 FOLKLORE

The Brahui language is rich in oral literature, the various genres including stories and tales, proverbs and riddles and songs. Brahui folk stories are mostly created by nomads, shepherds and farmers for the entertainment of their children and immediate family members. Mothers, for instance, tell their children legends about the *mammā*, a large apelike creature known for its physical strength and resemblance to humans, and once thought to be quite numerous. Other stories criticize the *sardārs* (hereditary tribal chiefs) and landowners from the point of view of the oppressed classes.

In Brahui, as in Baluchi, proverbs tend to have background stories. There is, for instance, the saying *Balwān nā barām* ("This is like the marriage of Balwān"), which is often used

when plans are too complicated or never come to fruition. The story goes that a simple, but foolish, man Balwān (or Balo Khān) was engaged to be married. His greedy father-in-law-to-be asked Balwān to bring him the required bride-price to marry his daughter. So, Balwān went to his relatives and collected the required amount of money. But when he went back to his father-in-law, the latter asked for more money. Balwān returned to his family to obtain the extra funds, and this situation continued for many rounds, so that Balwān never succeeded in marrying and died single. Hence the proverb.

Another Brahui story tells of Mulla Mansur, an orphan who got a job in the house of a *qadi* (a Muslim religious leader). The *qadi* was an insensitive man. Even though Mansur had served him loyally for seven long years, he beat him over a trifling mistake. Mansur left the *qadi* and took to traveling the world. He met an old shepherd, fell in love with his daughter, and married her. When Mansur and his wife returned to his home, the beauty of his wife caused such a stir that everyone from the *qadi* to the king desired to possess her. However, Mansur's wife was steadfast in her fidelity to her husband. When the *qadi* continued to make advances and tried to seduce her, she exposed him publicly. All the people joined in condemning the *qadi*, and the king banished him from the Brahui lands. This tale presents the Brahui view of the qualities and strength of character desirable in a wife, as well an element of skepticism toward religious leaders who preach purity to the world but practice otherwise.

### 5 RELIGION

The Brahui are Muslim, belonging mostly to the Sunni sect of Islam. They follow Islamic religious beliefs and practices as set out in the *Quran* (Koran), though many of their social customs are Indian in origin. Communal worship focuses on the mosque, and *mullahs* (Muslim priests) see to the spiritual and ritual needs of the people. Reverence for saints (*pirs*), a characteristic of Islam in South Asia, is also deeply entrenched in Brahui culture. Every family has its particular saint, and women often keep in their houses some earth (*khwarda*) from the saint's shrine to be used in time of need. For example, a little earth may be fed to a sick person along with prayers to the saint for a cure. Sacrifices of sheep or goats are performed at the shrines as an offering to the *pir* or in fulfillment of a vow. Many take their children to a shrine for the first shaving of the head or, failing that, place a little bag of the hair in the shrine, where it is hung from a pole. The Brahui believe in sorcery and possession by *jinn* or evil spirits. A *mullah* or *sayyed* (holy man) is often called in to read from the *Quran* or provide charms and amulets to exorcise these spirits. Should this fail, a *sheikh*, who is known for his power over *jinn* and casts them out by dancing, may be used.

### 6 MAJOR HOLIDAYS

The Brahui observe the usual holy days of the Muslim calendar. On the eve of most high festivals, respect is paid to the souls of the dead. The holiest of all is the eve of the tenth day of Muharram, which is known as *Imamak*. Women prepare special dishes of meat and rice during the day. The family gathers near sunset in the presence of a *mullah* (Muslim priest), who reads from the *Quran* and recites prayers for the dead over the food. Dishes of food are then sent to relatives and neighbors, who reciprocate with their own offerings. The following morn-

ing is an occasion for the head of the house to visit the graveyard to pray at the graves of his dead relatives.

## 7 RITES OF PASSAGE

The birth of a son is of utmost importance for a Brahui. A daughter is seen as little more than a gift to one's neighbor. Barrenness in a wife is a cause for reproach, and in the past female circumcision is reported to have been secretly practiced to try to remedy this situation. A craving for earth, and earth-eating, among pregnant women is also reported. When a son is born, the father announces it to the community by firing shots in the air. Various rituals are followed to protect the mother and child from the attention of witches and *jinn* (evil spirits). For the mother, the period of postnatal impurity lasts 40 days. Sheep are killed (two for a son and one for a daughter) and a feast held for relatives, friends, and neighbors. The child is then named, sometimes after a worthy ancestor. The head-shaving ritual (*sar-kuti*) is performed by the time the child is 2 years old, often at the shrine of a favored saint. A male child may undergo circumcision (*sunnat*) within 6 months, though the cost associated with the celebrations cause many to postpone it until as late as the age of 10 or 12.

No particular ceremonies accompany the male reaching puberty. An unusual rite is reported to be followed when a girl begins to menstruate for the first time. At sunset, the mother arranges three stones in a triangular pattern on the ground and has her daughter leap over them three times. It is thought that this will ensure that the girl's periods during the rest of her life will last no more than three days. Childhood did not last long in traditional Brahui society. If a girl were not married as a child, she would be soon after puberty.

At death, word is sent to relatives and friends, who gather for the funeral. A shroud is sent for from outside the house, and when the *mullah* (Muslim priest) arrives, the body is carried to a place of washing. It is washed by the mullah and near kinsmen (or the mullah's wife and female relatives, in the case of a woman), then wrapped in the shroud. The body is taken in procession to the graveyard, with the mourners reciting the *kalima*, the profession of faith. At the graveside, the mullah offers the prayer for the dead, and the body is given its burial. The traditional period of mourning was 11 days for a man and 9 for a woman, but this has been reduced in modern times. Women weep and wail, covering their faces in mourning. Other rituals include the singing of dirges (*moda*), and a death feast (*varagh*). Another feast is held on the first anniversary of the death.

## 8 INTERPERSONAL RELATIONS

The Brahui share their forms of greeting with the Baluchi. On meeting, they stop, shake hands, and embrace each other. The encounter continues with inquiries after each other's health and then proceeds to an exchange of news (*hal*) concerning family, friends, cattle, etc. Brahui are known for their hospitality to their guests.

## 9 LIVING CONDITIONS

Brahui settlements essentially reflect the economic activities of their inhabitants. Pastoral nomadism was the traditional occupation of many Brahui, and nomadic herders lived in tents and temporary camps, migrating with their herds in search of pasture. By contrast, in the Kacchi plains Brahui live in permanent villages that differ little in form and function from

their Baluchi neighbors' settlements. Pastoralism has declined in importance in recent years, and many Brahui in the upland areas have adopted a transhumant economy. Transhumance is based on a seasonal migration to differing elevations. Highland cultivating villages in the Korat Plateau are occupied for nine months of the year. During the winter months, however, the inhabitants drive their herds to the Kacchi lowlands where they live in tent camps. (This pattern is the reverse of transhumance in Europe. There, settlements are at lower elevations, and animals are taken up to alpine pastures during the summer months.)

## 10 FAMILY LIFE

The Brahui are organized into tribes, each of which has a hereditary chief (*sadar*). These are unlike the clans of the Rajputs with their elaborate genealogies; rather, they are loosely structured units based on patrilineal descent and political allegiance. This allows for a considerable degree of fluidity, with Baluchi and Pathan groups incorporated into the Brahui tribal units, and the movement of sections between Brahui tribes. Some of the more numerous Brahui tribes are the Mengals, Zahris, and Muhammad Hosanis. The Khans of Kalat were of the Ahmedzai tribe. The Brahui tribes are further divided into descending kin-groups down to the level of the immediate lineage.

The favored marriage among the Brahui is with the father's brother's daughter. Marriages are arranged, although the wishes of the couple are taken into consideration. In the past, child marriage was common, though this practice is now banned under Pakistani law. The betrothal and marriage ceremonies are important events in the life of both family and tribe. Disputes within tribes are usually settled at the time of marriages. A bride-price (*lab*) is paid by the groom's family. Although Muslim law allows polygyny (multiple wives), economic realities mean most Brahui marriages are monogamous. Family structure tends to reflect economic systems. The nuclear family predominates among nomadic Brahui, while extended families are common among village inhabitants. Divorce, though simple, is rare. In the past, adultery was punishable by death, although such practices are forbidden by Pakistani law. Widow remarriage is accepted.

## 11 CLOTHING

A young boy is given his first trousers at about three years of age, and thereafter wears clothes similar to those of adult males—the *kurti* (long shirt), worn over the *salwar*, the loose, baggy trousers found throughout the area. For men, a turban (*pag*) completes the outfit.

Women wear a long shift over trousers, although among Brahui nomads women wear skirts rather than trousers. Among the Brahui of the Jhalawan region, women's shifts are typically black in color. Women's clothes are embroidered with various patterns and designs in colored thread. Women's ornaments include finger rings (*challav*), nose rings (*vat*), and earrings (*panara*). Brahui settled in Sind tend to be indistinguishable from the Sindhi population in their dress.

## 12 FOOD

The settled Brahui cultivate wheat and millet, which are ground into flour and baked into unleavened breads. Rice is also eaten, but usually only on special occasions. Mutton and

goat are important in the diet of the Brahui, with the flesh of animals that are sacrificed at various rituals and festivals distributed to the community at large. The more-affluent farmers in lowland areas may raise cattle. As is common throughout South Asia, food is eaten with one's hands, and often from a communal platter. Milk is drunk and also made into curds, *ghi* (clarified butter), buttermilk, and butter. Dates, wild fruits, and vegetables are also part of the Brahui diet. Tea is drunk at meals and is also taken as part of various social ceremonies. Opium is also used.

### 13 EDUCATION

In general, levels of literacy among the Brahui are extremely low. The 1972 census for the Kalat Division of Baluchistan Province records an overall literacy rate of only 6.3% in the population over 10 years of age. The Brahui community is essentially rural in nature and lives in areas of Pakistan where the social infrastructure is poorly developed. Nomadic groups have no access to formal schooling, and even where schools do exist, attendance is low. In settled areas such as Sind where Brahui children are more likely to attend school, they are taught in the local language rather than in Brahui.

### 14 CULTURAL HERITAGE

The Brahuīs have an oral tradition of folk songs and heroic poems. These are sung by a class of professional minstrels and musicians called *Dombs*, who are attached to every Brahui community. Musical instruments include the *rabab* (an Afghan stringed instrument plucked with a piece of wood), the *siroz* (a stringed instrument played with a bow), and the *punzik* (a reed instrument). These have replaced the *dambura* (a three-stringed instrument played with the fingers) that is found in the more isolated areas. Dancing is an important feature at events such as weddings and funerals. The local country dance known as *chap* has largely been abandoned, however.

### 15 WORK

Historically, the Brahui were pastoral nomads, migrating with their herds of sheep, goats, and cattle from the upland plateaus to the low-lying alluvial plains. Today, however, many Brahui have abandoned their pastoral activities in favor of transhumant or settled agriculture. In the Kacchi lowlands, river and canal irrigation support cultivation, but settlements in other areas of the Brahui region depend on *qanats*. Qanat (or *karez*) irrigation is found over a wide area of Iran and Southwest Asia and even in the Turfan Depression of Xinjiang Province of China. It involves sinking a line of vertical shafts and then tunneling horizontally at the bottom of the shafts to create an underground passageway to carry water from its source to the fields.

### 16 SPORTS

Horse-racing and target-shooting were traditional sports popular among the more affluent sections of the Brahui community.

### 17 ENTERTAINMENT AND RECREATION

In the past, the Brahui had to depend on their own resources for entertainment and recreation. They found this in their family celebrations, their traditions of folk song and dance,

and in the festivities accompanying religious observances. This is still true for nomadic Brahui today. Epic poems are performed by specialist poets known as *Lorī*, who are considered as belonging to the lower-status groups in Brahui society. Their traditional occupation was to serve the Brahui at marriage ceremonies, playing the *dhol* (drum) at festivities and at funeral ceremonies. Folk songs are most often sung by the Brahui without musical accompaniment, although both men and women play musical instruments such as the *sironz* (a fiddle) and the *dambura* (a plucked string instrument). Women play the *daira* (tambourine). The Brahui settled in Karachi or villages on the plains have access to more modern forms of recreation.

### 18 FOLK ART, CRAFTS, AND HOBBIES

Like other women of the region, Brahui women embroider their garments with colorful designs. Tents and rugs are made from sheep's wool or goats' hair.

### 19 SOCIAL PROBLEMS

The Brahui tribes inhabit some of the harshest, most-isolated, and least-productive environments in Pakistan. This is reflected in the relative inefficiency of traditional economic systems and the generally low standards of living of the community. Belated government efforts to bring development to the region have done little for the welfare of the Brahui, who are essentially nomadic and rural in character. The lack of a written literature (what there is dates only from the 1960s) has hindered the development of a tribal consciousness, and matters are made worse by the declining numbers of people speaking Brahui. The Brahui appear to be rapidly assimilating with the surrounding Baluchi populations. Apart from their language, which gives them a sense of cultural identity, the Brahui lack a sense of identification with their country and have very little representation in the political arena. They still tend to function on a tribal basis, dealing with the government through their *sardars* and other tribal leaders. The Brahui remain one of the many tribal peoples of Pakistan who remain "outsiders" in a country dominated by ethnic elites such as the Punjabis and Sindhis.

### 20 GENDER ISSUES

Brahui women face the same gender discrimination that women do in all Muslim societies. Brahui women, for instance observe *purdah*, i.e. the segregation of women to ensure that family honor is maintained. This means that women live in compounds behind mud walls where they are virtually hidden from view. Women must avoid being seen by strangers, especially strange men. Access to compounds is restricted and a woman's mobility outside the compound is controlled by her husband and male relatives.

Most Brahui women are engaged in agricultural labor. During the productive season from March through mid-November, a woman may spend as much as 60% of her time in her agricultural role. A typical day for a Brahui farmer's wife is seventeen hours long, but her work is sheer drudgery because the labor she performs is merely repetitive and requires no decision-making as to how land and other resources are to be utilized—this is the prerogative of the males in the family. Women are responsible for transplanting, weeding, harvesting, and collecting fuel and water. Official statistics grossly underestimate the contribution of women to the agricultural

gross domestic product (GDP) in rural areas of Pakistan. Very few government departments or even projects collect gender disaggregated data, and most development projects are geared towards men.

In addition to the payment of bride-price and the custom of *pardah*, Brahui women are subject to all the ills of women in Pakistan—domestic violence, rape, “honor killings,” acid attacks, and trafficking. Proof of rape generally requires the confession of the accused or the testimony of four adult Muslim men who witnessed the assault. If a woman cannot prove her rape allegation she runs a very high risk of being charged with fornication or adultery, the criminal penalty for which is either a long prison sentence and public whipping, or, occasionally, death by stoning.

## 21 BIBLIOGRAPHY

# BRUNEIANS

**PRONUNCIATION:** Bru-NYE-uhns

**LOCATION:** Brunei

**POPULATION:** 372,360 (2005 estimate)

**LANGUAGE:** Malay

**RELIGION:** Islam

## 1 INTRODUCTION

The official name of Brunei, a tiny oil-rich Southeast Asian nation, is Negara Brunei Darussalam, which means, “The Country of Brunei, Abode of Peace.” According to Chinese and Arab records, Brunei existed as early as the 7th or 8th century AD at the mouth of the Brunei River. In the 9th century, Brunei was conquered by the Srivijaya Empire based in Sumatra. By the 13th century, Islam had spread to Brunei. In the 14th century, it was ruled by the Majapahit Empire based in Java. Brunei then became independent and experienced its golden age from the 15th to the 17th centuries when it was a huge empire and controlled the entire island of Borneo as well as parts of the Philippines. During this period, Brunei’s fifth sultan, Bolkiah (1473–1521), was famous for his sea exploits and for capturing Manila, while its ninth sultan, Hassan (1605–1619), was known for developing an elaborate court structure that, in part, still exists today.

Brunei then entered a period of decline due to internal problems over succession, which led to civil war, and to external problems in the form of Western colonialism, which resulted in its loss of territory. Brunei lost much territory to the British in Sarawak and Sabah. In the case of Sarawak, in 1839 a British adventurer, James Brooke, helped the Sultan of Brunei quell a rebellion by local chiefs and in return gained land that became the First Division of Sarawak. Brooke soon gained more land from the Sultan—Sarawak’s Second Division in 1852 and its Third Division in 1861. His successor, Charles Brooke, obtained further territory for Sarawak at Brunei’s expense. For instance, in 1882 Charles purchased Brunei’s Baram district, which became Sarawak’s Fourth Division, while in 1890 he took Brunei’s Limbang district (without the Sultan’s permission) and made it the Fifth Division after some chiefs had asked for his help against the Sultan. In the case of Sabah, in 1865, the Sultan of Brunei gave a ten-year lease to Charles Lee Moses who established the American Trading Company. In 1875 this company was purchased by an Austrian Consul, Baron von Overbeck, and his English partner, John Dent. In 1881, Dent bought Overbeck’s share in the company and formed the British North Borneo Chartered Company. The same year, the Sultan of Brunei permitted the Company to rule over Sabah. In 1888 Britain made Brunei, Sabah, and Sarawak British Protectorates to prevent the Brooke family or the Company from taking over Brunei. In 1906 Britain established the Residential System in Brunei, whereby a British Resident was to advise the Sultan in all matters except Malay customs and religion. In the 1920s the British discovered oil and natural gas in Brunei and began the extraction of these resources. During World War II the Japanese invaded and occupied all three areas. After the war, Brunei remained a British protectorate and retained a British Resident until 1959 while Sabah and Sarawak became Crown Colonies.

In 1959, Sultan Omar Ali Saifuddin introduced the country's first constitution, which made Brunei a self-governing state with Britain still responsible for its foreign affairs and defense. The Sultan was not keen on full independence, preferring instead a British presence. In 1961 he favored federating with the other British territories of Malaya, Singapore, Sabah, and Sarawak, and Brunei to form a larger political unit, the Federation of Malaysia, by 1963. In late 1962, however, he changed his mind about the merger after an armed coup by the Brunei People's Party, led by A.M. Azahari, revealed local opposition to the Federation. The British authorities crushed the armed revolt while the Sultan declared a state of emergency in Brunei. Since then, the Sultan of Brunei has ruled by decree as a non-elected prime minister. In October 1967 Sultan Omar Ali Saifuddin abdicated in favor of his son, Sultan Hassanal Bolkiah. In January 1979 Britain and Brunei signed an agreement declaring that Brunei would become fully independent within five years.

Brunei remained a British protectorate until 1 January 1984 when it attained full independence. On Brunei's Independence Day, Sultan {xe "Bolkiah, Hassanal"} Hassanal Bolkiah proclaimed Brunei's National Philosophy: *Melayu Islam Beraja* (Malay Islamic Monarchy), which incorporates the Malay language, culture, and customs with Islamic laws and values and with the monarchy system. In 1984 Brunei also joined the Association of Southeast Asian Nations (ASEAN) as the regional body's sixth member. In 1992, when Brunei celebrated the Silver Jubilee of the reign of Sultan Hassanal Bolkiah, the Sultan set up the Sultan Hassanal Bolkiah Foundation as a gift to his people. In 1994 through the Davao Agreement, Brunei

joined Indonesia, Malaysia, and the Philippines to form the East ASEAN Growth Area (BMIP-EAGA) to improve trade between them. In 1998 the Sultan proclaimed his son, Prince Haji Al-Muhtadee Billah, as the Crown Prince.

In 2000 the Sultan began civil proceedings against his brother, Prince Jefri, for misappropriating \$16 billion from the Brunei Investment Agency, but the case was later settled out of court. Since 2003 Brunei and Malaysia have held talks over the disputed territory of Limbang, which the Brooke family in Sarawak took from Brunei without permission in 1890. Meanwhile, in September 2004, the Sultan reconvened the 21-member Legislative Council, suspended since 1984, to debate several proposed amendments to the Brunei's Constitution, including the direct election of 15 members to the Legislature. In May 2005 the Sultan reorganized his cabinet, dismissing four prominent ministers and replacing them with new ministers with private sector experience. His other changes included the creation of a new Ministry of Energy and the appointment of the first ethnic Chinese to a cabinet position, Pehin Dato' Lim Jock Seng as Minister of Foreign Affairs II. In September 2005, the Sultan dissolved the existing Legislative Council, which acts as Brunei's Parliament, and appointed 29 new members. As of 2008, no schedule had been established for the holding of elections.

Brunei is an absolute monarchy, with the Sultan serving as Premier, Defense Minister, Finance Minister, and as the religious head of Brunei. The present Sultan is the 29th in a line that dates from Sultan Muhammad, who converted to Islam in 1514. His brother, Prince Mohamed, serves as the Foreign Minister while his son, Prince Haji Al-Muhtadee Billah, serves as the Senior Minister. The Sultan's cabinet is made up of members of his extended family, the Bolkiahs, who control all the government departments and most of the nation's wealth. The Sultan is assisted and advised by his Cabinet, the Religious Council, the Privy Council, and by the Council of Succession.

## 2 LOCATION AND HOMELAND

Brunei is located on the northern coast of the island of Borneo; it lies between the South China Sea and the Malaysian states of Sarawak and Sabah. It is divided by Sarawak into two unconnected parts: a larger western portion and a smaller eastern portion. The western portion contains three of Brunei's four districts—Brunei Muara, with the capital, Bandar Seri Begawan; oil-rich Beliat; and agricultural Tutong—while the eastern portion has the sparsely populated district of Temburong, which is separated from the rest of Brunei by Sarawak's Limbang district.

With a total area of only 2,228 sq mi (5,770 sq km), Brunei is a very small country that is roughly the size of Delaware. Its population centers are mainly along its flat coastal plains. To its west, Brunei has hilly lowlands, and to its east, mountains. Over 70% of Brunei's entire land area is covered by tropical rainforests. The Brunei government has set aside 317 sq mi (820 sq km) as national parks or forest reserves, in part to protect the unique wildlife found in its rainforests, such as the Bornean proboscis monkey, the silvered leaf monkey, and the slow loris, a tree dwelling nocturnal primate. Brunei has an equatorial climate that is hot, humid, and wet all year round. The average daytime temperature is between 79° F and 95° F. Although typhoons, earthquakes, and severe flooding are rare,

Brunei is subject to seasonal haze from forest fires in Indonesia. The country is rich in petroleum, natural gas, and timber.

Brunei has a population of 372,360 (2005 estimate), which is growing by 1.9% annually. Over 75% of the population lives in the urban areas, with 60,000 in Bandar Seri Begawan, the largest city. The Malays, the largest ethnic group, comprise 67% of the population while the Chinese make up 15% and the indigenous groups, including the Ibans, Muruts, Dusuns, and Melayu Tutong, form 6%. The remaining 12% includes European, Asian, and North American expatriates.

### 3 LANGUAGE

The official language of Brunei is Malay (Bahasa Melayu), which is the primary language of most Bruneians. A common greeting in Malay is *Apa Khabar?* (How are you?). Another typical greeting, particularly among Muslims, is the Arabic *Assalamu alaikum* (May peace be among you), to which the reply is *Wa'alaikum salaam* (And peace be upon you).

English is also widely spoken and used, especially in business settings. Among the Chinese, Mandarin, Hokkien, and other Chinese dialects are commonly used. Each indigenous group in Brunei also has its own language.

### 4 FOLKLORE

One Brunei folktale is the legend of Nakhoda Manis (Sweet Sailor) that tells of how the ship of an unfilial son was turned into a huge rock, known as Jong Batu, in the Brunei River. According to this legend, a widow, Dang Ambon, lived with her son, Nakhoda Manis, in the village of Kampong Ayer until he left home to seek his fortune in the city of Sulu. He eventually gained wealth and success, married a noblewoman, and became the owner of a large ship. He then planned a trip to the Brunei River to visit his mother. Since his mother longed to see him again, she paddled out in a small boat to his ship, shouting that she missed him. However, when the wife of Nakhoda Manis saw the mother, she was so disgusted with what she viewed as a very old and poor woman that she demanded that the mother be chased away. Unfortunately, Nakhoda Manis listened to his wife and ordered his crew to push his mother's small boat away. The heartbroken Dang Ambon then cursed her son. Soon thereafter his ship capsized in a storm. After the storm, a huge rock, called Jong Batu, appeared in the Brunei River where Nakhoda Manis had anchored his vessel.

### 5 RELIGION

Brunei's state religion is Islam. The importance of the Islamic religion is clearly seen in Brunei's description of its government as a Malay Islamic Monarchy (Melayu Islam Beraja), with the Sultan serving as the head of the Islamic community. He represents the main ethnic group in the population, the Malays, who are Sunni Muslims and who comprise over two-thirds of the total population. For Muslims in Brunei, Islamic law (Shariah) takes precedence over civil law in a number of areas, including divorce and inheritance. The importance of Islam in Brunei is also seen in the adherence by Muslims to the Five Pillars of Islam: profession of faith that there is no God but Allah and Muhammad is his prophet; prayer five times a day; giving alms to the poor; fasting from dawn until dusk during the holy month of Ramadan; and making a pilgrimage during one's lifetime to Mecca in Saudi Arabia. Under Islamic law, the drinking of alcohol is forbidden as is the eating of pork.

In 1991 the government introduced laws that made the sale of alcohol illegal.

The Sultan encourages the recital of the Holy Quran every morning prior to the start of work to obtain blessing and guidance from God. Every government function and project also incorporates the *Doa*, a very important link to God's blessing. The main mosques in Brunei are the magnificent Omar Ali Saifuddin Mosque, completed in 1958 in classic Islamic style, and the Jame 'Asr Hassanal Bolkiah Mosque, Brunei's largest, built to commemorate the Silver Jubilee of Sultan Hassanal Bolkiah's reign in 1992.

During the fasting month of Ramadan, all government officers and staff work a six-hour day, instead of the usual seven and a half hour workday, and all entertainment and sports activities are temporarily suspended. Non-Muslims are also encouraged during this period to refrain from eating, drinking, or smoking in public and from wearing clothing that expose their arms or feet.

The other two main religions in Brunei are Buddhism and Christianity, with Buddhists making up 13% of the population and Christians about 10%. Animism is also practiced in Brunei by some of the indigenous groups. The Brunei constitution guarantees religious freedom.

### 6 MAJOR HOLIDAYS

In Brunei, the following are public holidays: New Year's Day on January 1, National Day on February 23, the Royal Brunei Armed Forces Day on May 31, the Sultan's birthday on July 15, Christmas Day on December 25, and Chinese New Year, which follows the lunar cycle. Muslim celebrations, which follow the lunar calendar, are also public holidays. These include Hijrah (Islamic New Year); the Prophet Muhammad's birthday; Hijrah Hari Raya Aidiladha (the Feast of Sacrifice); Isra' Mikraj (the anniversary of Muhammad's ascension); Hari Raya Ed-il-Fitri (the end of Ramadan); Hari Raya Haji (the end of the Haji pilgrimage session); and Nuzul Al-Quran (the anniversary of the revelation of the Holy Quran).

Because the lunar cycle is shorter than the Gregorian calendar year, the Islamic New Year can occur twice in one Gregorian calendar year. For example, in 2008 the Islamic New Year fell on January 10 and on December 29. State-level celebrations accompany the Muslim celebrations.

### 7 RITES OF PASSAGE

One rite of passage is a ceremony called *mandi belawat*, held after a mother gives birth to the couple's first child. During this ceremony the mother and baby wear the *kain jong sarat* (a hand-woven brocade with gold and silver threads) while the guests present the *zikir*, a form of religious chanting, praising the prophet Muhammad. The *zikir* is a traditional welcome used not only for a baby's birth but also to welcome the arrival of a guest of honor at an event or ceremony.

Another rite of passage, a traditional one for Muslim boys, is the circumcision ceremony, which takes place when a boy is between the ages of 9 and 12. Whereas traditional healers used to perform the circumcision, nowadays the circumcision is usually carried out in a hospital. The circumcision is then followed by a family celebration.

Yet another rite of passage is the burial of Muslims after death. According to Muslim tradition, the burial must take place as soon as possible after a person dies. The body is first

ritually washed and then wrapped in a white cloth before it is placed in a coffin and transported to the cemetery. For the next three nights, prayers known as *takhil* are offered for the deceased at a family ceremony. In the weeks that follow, these prayers can be repeated by individuals or by groups of mourners. After a death, friends and relatives can offer condolences and money to the deceased's family but never flowers.

There are also rites of passage concerning marriage between Muslims in Brunei. After a Muslim couple decides to marry, several stages precede their wedding ceremony. For example, in the first stage, the members of the prospective groom's family make a formal marriage proposal to the family of the prospective bride. In the second stage, the engagement ceremony (*bertunang*), the groom's mother places the engagement ring on the bride's right hand. In the third stage, as the wedding approaches, the sending of dowries and gifts (*menghantar be-rian*) takes place. For example, the groom's family gives the bride's family a cash dowry and gifts such as a *kain jong sarat*, shoes, and handbags while the bride's family also gives some gifts in return. In the fourth and final stage before the wedding, the *majlis berbedak* is held separately for the bride and groom where they are given a religious blessing and showered with scented perfume. At this ceremony, family members also place dye on the palms of the bride and groom. The bride wears the *kain jong sarat* and also a floral headdress.

Then the wedding ceremony, or *akad nikah* (the solemnization of marriage vows) is held, usually at the home of the bride. At this ceremony, an *imam* (Muslim religious leader) reads a sermon and officially pronounces the couple as husband and wife. The wedding reception (*bersanding*) follows, with the couple seated on a dais as guests come up to congratulate them. The same evening, the groom's family brings food for the bride's family and the bride and groom feed each other. Three or seven days after the wedding, the groom's family usually brings the couple household items like rice and sugar or appliances like a washing machine or a television. The groom then stays with the bride's family for at least a week before the couple moves out to go to their own place.

## 8 INTERPERSONAL RELATIONS

When Bruneians meet, they shake hands by lightly touching the hands and then bringing their hands to their chest. Some also shake hands in the Western manner. When meeting with members of the opposite sex, some do not shake hands with them but instead nod, smile, or give a verbal greeting. When a person joins a small group, it is polite to greet each person individually, beginning with the person on the right. In the case of members of the royal family, they are first greeted by a bow and then by a light handshake.

When greeting others, Bruneians usually address them by their given name. In formal situations, however, full names are used. Malay men use their father's name, preceded by their own given name, as in Ahmad bin Ibrahim, with bin denoting "son of". The usual honorific for men is Awang. Malay women also use their father's name preceded by their own name and with a binte in between, to denote "daughter of," as in Fatimah binte Yusof. The usual honorific for women is Dayang.

In formal situations, titles are also used. For example, members of the hereditary nobility have the title *Pengiran* before their name and this title is included when addressing them. Another title is *Pehin*, awarded by the Sultan to commoners

and the equivalent of a life peerage in the United Kingdom. Some men also have the title *Dato*, awarded by the Sultan to male subjects and the equivalent of a knighthood in the United Kingdom. On the other hand, some women have the title *Datin*, awarded by the Sultan to his female subjects and the equivalent of a damehood. For men who have completed the pilgrimage to Mecca, the title *Haji* is used before their name whereas for women who have made the pilgrimage the title *Hajjah* is used before their name.

An important aspect of Bruneian life is visiting friends and neighbors. These visits usually take place without prior notification, although visitors know that they should avoid doing so during the Muslim prayer times. Evening visits usually take place around 8pm after the last prayer for the day. For special occasions like weddings and birthdays, formal invitations are extended. During a visit, guests remove their shoes before entering a home. Among the older generation, male guests often enter before the female guests. The host usually offers a drink of either tea, coffee, or a soft drink, and some snacks in the form of finger sandwiches, cakes, cookies or puddings. When visiting a sick person, gifts are not expected, but some visitors do bring cakes, fruit, or a cash gift for the sick person's family. When receiving food or gifts, only the right hand is used although the left hand may be used for support. When refusing any food that is being offered, it is considered polite to touch the plate lightly with the right hand.

It is considered rude to point with the index finger. Instead, the thumb of the right hand is used, with the four fingers folded beneath it. It is also considered rude to touch another person's head, although an adult may touch a child's head. In conversation, hand gestures are usually not used. However, among close friends and family members, some Bruneians do use some hand gestures.

Before entering a mosque, the shoes must first be removed. In the mosque, the women cover their heads and wear clothing that also covers their knees and arms.

## 9 LIVING CONDITIONS

Brunei's per capital gross domestic product (GDP), at \$33,600 in 2005, is among the highest in Asia. Crude oil and natural gas production account for over half of GDP and more than 90% of exports. Brunei is the third largest oil producer in Southeast Asia and the world's fourth largest producer of liquefied natural gas. The nation has no external debt and the Sultan ranks as one of the wealthiest men in the world. Brunei also has no personal income tax.

Brunei's healthcare system ranks among the best in Asia. Health services are free for Brunei citizens while permanent residents and expatriates pay a nominal charge. The healthcare system is a three-tiered system, with health clinics providing primary care, health centers providing secondary care, and district hospitals providing tertiary and specialized care. Patients requiring very specialized treatment are sent abroad, with expenses for Brunei citizens being borne by the government. Brunei's healthcare system is heavily subsidized by the government and its quality is comparable to any developed country. Private and public hospitals have very modern and up-to-date facilities. Nearly all the villages in Brunei have health centers and children clinics. In remote areas that are not easily accessible, the government provides health care through its Flying Medical Services. The military has its own hospitals to look af-

*A young Bruneian girl, wearing a traditional Muslim head-dress, known as a tudong. (AP Images/David Longstreath)*

ter the military personnel and their dependents. Since 1970 all major diseases have been eliminated, including malaria, cholera, and smallpox. The Ministry of Health carries out regular immunization programs and has a successful track record in preventative medicine.

Regarding housing, the Brunei government provides its employees with various types of accommodation at a monthly rental that is maintained at a relatively low price. The government also provides its employees with interest-free loans to enable them to build their own home or to buy one that has already been built. There are also national housing schemes of three categories that are open to all eligible citizens: the National Housing Development Program (NHDP), the Landless Indigenous Citizens Housing Scheme (LICHS), and the Land Entitlement and Infill Scheme (LEIS). Under the NHDP, there are five types of houses, each with three to four bedrooms. These houses are located at various housing sites with facilities like schools, community centers, mosques, parks, and playgrounds. The houses cost between \$52,000 to \$95,000 Brunei dollars, payable within a period of 15 to 30 years. Besides the government housing and the National Housing Schemes, Brunei has private sector housing schemes, such as the Brunei Shell Petroleum Housing Scheme and the Yayasan Sultan Haji Hassanal Bolkiah Scheme.

As for infrastructure, Brunei has two airports—the Brunei International Airport located in Berakas, near Bandar Seri Begawan, and the airport in Anduki, near Seria, used by the Brunei Shell Petroleum Company for its helicopter ser-

vices. The national air carrier is the Royal Brunei Airlines, which operates flights to destinations in Asia, Australia, Europe, and the Middle East. Regarding ports, the main one is Muara, about 28 km from the capital, while other important ones are the smaller Bandar Seri Begawan port and the port at Kuala Belait. There are also ferry services between Brunei and Labuan, Malaysia. There is one railway line, a 19 km railway in Seria operated by the Brunei Shell Petroleum Company. Regarding roads, a major highway is the Muara-Tutong coastal road. There are also several highways linking the districts and the towns and an extensive overland road network that connects Brunei to Sarawak and Sabah. From Brunei, one can also travel, via Sabah and Sarawak, to the Indonesian province of Kalimantan by road, air, or sea.

Brunei has one of the highest rates of car ownership in Southeast Asia, with most families having at least two cars. Drivers drive on the left hand side of the road. Taxis are available and are metered. Water taxis are also available and are unmetered, with fares negotiable. These water taxis are used to get to Kampong Ayer, Temburong District, and to the Malaysian towns of Limbang, Lawas, and Labuan. Bus services operate along selected routes throughout Brunei. Regarding tourist facilities, these are very good but underutilized; there are over 2,500 rooms spread over 30 establishments ranging from guesthouses to the very luxurious Empire Hotel and Country Club.

Most individuals in Brunei own a cellular phone and most households have a landline telephone. Broadband Internet is also widely available. The only local television station is government-owned, but foreign stations are available by satellite. The local television station broadcasts local programs and news as well as programs from the region and from around the world. Brunei has an advanced telecommunications system that offers international direct dialing services to 160 countries through two earth satellite stations. It also has a full range of worldwide telephone, telex, and facsimile facilities.

## **10 FAMILY LIFE**

On the whole, Bruneians have large families. This is especially so among the Malays and the indigenous groups, while the Chinese tend to have smaller families. A generation or so ago, many couples had as many as eight children and relied on help from extended family members to raise their children. Nowadays, however, the trend is towards smaller families as most women now work outside the home. Moreover, although extended families can still be found, in some cases with three generations living together, there are presently many nuclear families as well. Regarding maternity leave, women who work in the public sector receive 56 days of paid maternity leave. Women continue to be mainly responsible for looking after the children and for managing the household. For families who can afford the expense, they employ live-in domestic helpers, mainly from the Philippines or Indonesia, to help with childcare and with the tasks of cooking and cleaning. These live-in domestic helpers are usually given a separate room in the family home.

The family home, in olden days, was a traditional wooden house built on stilts. Now the usual family home is a modern Western style brick house with three to four bedrooms, a living room, and a kitchen. However, some traditional wooden homes can still be found in the rural areas, but with metal roofs, and

in Kampong Ayer (Water Village), a residential area of Bandar Seri Begawan, where homes are built on stilts over the Brunei River. Kampong Ayer has been called the world's largest water village on stilts. In fact, about 10% of Brunei's population lives in Kampong Ayer but the wooden houses are now equipped with modern appliances, satellite television dishes, and the latest amenities. Kampong Ayer is almost self-contained, with its own shops, mosques, schools, clinics, and a police station. To get to the mainland, the residents of Kampong Ayer use speedboats. In some parts of Brunei, one can also find many traditional longhouse communities where several families still live in one longhouse.

While family homes among the indigenous, the Malay, and the Chinese may differ in structure, the people of Brunei are one when it comes to their attitudes toward the elderly. They all tend to respect their elders and to care for them when they grow old. Because of this traditional respect for elders, Brunei has very few old folks homes or retirement homes. Many young adults also live with their parents, even after marriage. Arranged marriages have become less common as most of the young people prefer to choose their own spouse. Under Muslim law, unmarried couples are forbidden to date in secluded areas or to be by themselves in empty rooms or houses. Those caught violating these rules are fined by religious officials.

## 11 CLOTHING

The people of Brunei wear either traditional clothing or Western-style outfits and are usually smartly dressed. The traditional clothing for women is the *baju kurung*, a loose-fitting outfit consisting of a long blouse and a long skirt. The material used is either cotton, satin, or silk. This outfit is in keeping with the requirement under Muslim law that women wear conservative clothing, with the body to be covered except for the face and hands. Clothing that is revealing is considered immodest and thus socially unacceptable. Most Muslim women also wear a *tudong*, a headscarf that covers their hair.

For men, the traditional clothing consists of a *baju*, a loose shirt with long sleeves, trousers, and a *kain samping*, or short sarong. The *baju* and the trousers are of the same material and color. The *kain samping* is worn over the *baju* and trousers, covering the waist to the knees. The material used for the *kain samping* can vary in quality, with some made from brocade. Some men also wear the traditional Malay headdress, the *songkok*, a brimless hat made of black or blue velvet. For men who have performed the *Hajj*, the pilgrimage to Mecca, they wear a white skull cap instead of the *songkok*.

Westernization has impacted traditional dress and costumes in Brunei as Western clothing and other fashions from abroad are popular. For instance, professional women like bankers and lawyers often wear dress suits and other Western business attire while professional men are usually seen dressed in business suits and ties. Moreover, Western clothing like jeans and sports jackets are commonly worn by the young people.

## 12 FOOD

For breakfast, along with tea or coffee, Bruneians usually have fried rice, noodles, *soto* (noodle soup), *cucur* (fritters) or sandwiches. For lunch and dinner, the meal revolves around rice, the main staple, which is eaten with chicken, beef, lamb, seafood, or vegetables. Lunch is traditionally the main meal of the day but, with family members having different work and

school schedules, they usually sit down to a family meal at dinner time.

For most Bruneians, the traditional way of eating is with the fingers of the right hand although some do use utensils. Popular dishes at mealtime include *pais lauk* (grilled fish), *pais daging* (grilled meat), *lauk rabus* (a sour and spicy fish soup), and *nasi katok* (spiced chicken or beef with rice). These dishes, heavily spiced with garlic, chilies, ginger, and tumeric, are usually accompanied by *sambal belachan* (a spicy shrimp paste). Locals are also fond of *satay*, pieces of marinated meat cooked on skewers, and eaten with a tangy peanut sauce, fresh slices of cucumber and onions, and with *ketupat*, rice filled in pouches made of coconut leaves. A special dish, often referred to as Brunei's national dish, is *ambuyat*, made from the pith of the sago palm. This pith is grated, dried, and emulsified into a starchy paste that is then boiled with water to form *ambuyat*. To eat the *ambuyat*, special joined chopsticks called *chandas* are used to twirl the *ambuyat* like spaghetti around it. The *ambuyat*-coated *chandas* are then dipped into a special *ambuyat* sauce made from salted durian, lemon juice, shrimp paste, and *binjai*, a mango-like Bruneian fruit. Other side-dishes that traditionally accompany a meal of *ambuyat* include salads, boiled fish in a very hot sauce made from small chilies, and a preparation of ferns, or *pakis*, sautéed with ginger and garlic. One very popular salad is *rojak sotong*, which includes sweet turnip, cucumber, pineapple, and calamari.

Desserts are either fried or steamed and are made from glutinous flour, sugar, coconut and *pandan* (pandanus leaves). The desserts include *kuih talam*, made from sticky rice and *pandan* leaf jelly, and *kuih tako*, made from coconut and *pandan* leaf. A favorite drink is *teh tarik*, a frothy tea prepared from powered local tea-leaves. Other favorite drinks are cool, sweet drinks made from local fruits and spiced with cinnamon and anise. During Ramadan, drinks made from sugar and *pandan*, like *air selasih* and *air cincau*, are very popular. Local fruits include the durian, the rambutan, and the langsat.

## 13 EDUCATION

In Brunei, education begins with preschool, followed by six years of primary education and up to seven years of secondary education. For citizens, education is provided free from the age of five years and is mandatory for nine years. Muslim students who live more than eight kilometers (five miles) from their school are entitled to free accommodation in hostels, free transportation to school, or a subsistence allowance.

The schools are either Malay, English, or Chinese schools as they are classified according to the language of instruction. The Malay schools are public schools. While Malay is the medium of instruction in these schools, English and Arabic are used for certain subjects and Islamic studies form an important part of the curriculum. Students usually attend Islamic classes in the mornings or afternoons. Those who pass the sixth year of religious instruction can enter an Arabic course of study and many choose to go overseas, especially to the Al-Azhar University in Cairo. The private schools mainly use English or Chinese as the medium of instruction. The families of government employees receive educational allowances for sending their children to private schools.

The literacy rate in 2006 was 94.7%. In 1985 the Brunei government established the University of Brunei Darussalam on a sprawling campus overlooking the South China Sea. By 2005

the university had about 3,674 students and over 300 instructors. Another institute of higher learning in Brunei is the Brunei Institute of Technology. However, most of Brunei's college students attend universities abroad and on government scholarships, especially when the fields of study sought are unavailable locally. The most popular destination abroad for higher studies is the United Kingdom although many students also go to the United States, Australia, Malaysia, and Singapore.

#### 14 CULTURAL HERITAGE

Brunei's cultural heritage is derived from the Old Malay World, a region that encompasses the Malay Archipelago. The Malay origins of Brunei's culture are reflected in the country's language, architecture, customs, and ceremonies. Brunei's Malay culture has been impacted by animism, Hinduism, Islam, and by Western influences in the form of colonialism, legal systems, and trade. The most important impact, however, has been Islam, as clearly seen in Brunei's national ideology and philosophy of a Malay Islamic Monarchy, which incorporates Malay culture and the Islamic religion. This national ideology and philosophy is aimed at forging a stronger sense of identity and at fostering unity and stability.

The Brunei government is committed to the preservation of its people's culture, especially the core ethnic Malay and Islamic elements of that culture. In 1975 the government set up the Arts and Handicraft Center as a living testimony to the preservation of Brunei's traditional arts and crafts, such as boat making, bronze tooling, cloth weaving, silver-smithing, wood carving, and basket and mat weaving. Also on display at the Center are Malay weaponry, the Malay art of self defense (*silat*), traditional games, and traditional musical instruments. Some of these cultural artifacts can also be found in the Brunei Museum and in the country's Malay Technology Museum.

At handicraft centers and shops, traditional cloths can be purchased. These cloths include the beautiful gold or silver-threaded material known as *kain jong sarat* and collector textiles called *kain tenunan*. *Jong sarat* is usually worn during weddings and formal occasions. Also on sale are brassware, silverware, bronze items, gongs, and the traditional Malay dagger known as the *kris*. Some of the brassware, silverware, and bronze have been hammered and crafted by hand into attractive trays, jugs, spoons, jewelry boxes, bracelets, and napkin rings.

Brunei's cultural heritage includes its fine collection of Islamic art outside of the Arab world, such as its gilded Holy Qurans, its ceremonial items, and its intricate mosaics that adorn several of its religious monuments.

#### 15 WORK

The government is the largest employer in Brunei, employing more than half of the total labor force, which totaled 180,400 in 2006. About 10% of the labor force is employed in the oil and gas industries. The major sectors in Brunei's economy are oil, natural gas, government, construction, services, retail, and some light manufacturing industries. The light industries include textiles, foodstuffs, mineral water, soft drinks, and cement. In 2003 around 2.9% of the labor force was employed in agriculture, 61.1% in industry, and 36% in services. In 2006 the unemployment rate was 4%.

Because Brunei's small population is insufficient to provide all its manpower needs, the government relies on foreign

workers from Malaysia, Thailand, Indonesia, Singapore, Bangladesh, India, and the Philippines. They work mainly in the construction industry. The government carefully regulates the flow of overseas workers into Brunei. Work permits for foreigners are issued for short periods and must be continually renewed. Despite these restrictions, foreigners make up a significant portion of the work force, numbering 60,000 in 1995. The government is trying to reduce the country's reliance on foreign workers and is training more locals in technical and professional fields.

The economy's dependence on oil has made Brunei vulnerable to swings in world oil prices. Since oil reserves are expected to run out in the next 50 years, the government is doing its best to diversify the economy by developing tourism and other industries. Agriculture and fisheries are among the industrial sectors that the government has selected for highest priority in its efforts to diversify the economy as only about 15% of Brunei's land area is cultivated while roughly 80% of its food is imported. The government owns a cattle ranch in Australia and most of its beef supply comes from that ranch, which is larger in size than Brunei itself. The government is also encouraging foreign investments and developing education and human resources.

#### 16 SPORTS

Traditional sports include *silat*, a self-defense sport, and *sepak takraw*, a court game in which players pass a rattan ball using only the head, shoulders, or legs.

Brunei's most popular sport is soccer, which is both widely played and a spectator sport. Another very popular game that is also a spectator sport and widely played is badminton. Other popular sports are indoor soccer (*futsal*), cycling, golf, volleyball, softball, basketball, netball, cricket, and rugby.

Water sports include swimming, sailing, water-skiing, windsurfing, and snorkeling. Swimming pools are found throughout Brunei, for private and public use. Brunei also has several fitness and sports centers and a water sports marina. Other sports include athletics, squash, and horseback riding. Brunei has an assortment of world-class championship-quality golf courses, with some offering floodlit night golfing for cooler play. The Trijaya Equestrian Park has first-class facilities, including horses imported from Argentina, and is the world's largest indoor arena that can accommodate up to 50 horses at a time. It offers classes to all ages and abilities, including polo lessons for adults.

#### 17 ENTERTAINMENT AND RECREATION

For entertainment and recreation, families with young children go to the cinema or theater, or they go on hikes, jogs, or walks through a national park or a forest reserve. One of Brunei's best known attractions is Jerudong Park and Playground, a 57-hectare amusement park in Brunei's capital, with facilities that include an outdoor amphitheatre, a Sky Tower, a roller coaster, a skating rink, a go-kart track, a video arcade, a shooting gallery, and a French carousel for children. Another very popular family-oriented attraction is the Oil and Gas Discovery Center (OGDC), which is in Seria, outside the capital. With its seven galleries that showcase over 100 interactive exhibits, the Center attracts many visitors and is both an educational and recreational landmark.

On weekends, some families enjoy picnics at a swimming pool or at a beach. Karaoke is popular at restaurants and at home, as most families have karaoke machines. Other recreation activities in Brunei include kite-flying, snooker, and bowling. In the case of the young people, many of them enjoy socializing at sidewalk cafes and at shopping malls. For some, going shopping is also a favorite leisure time activity. Shoppers can be found at traditional markets, at tiny boutique shops, or in large shopping malls. The malls include the Yayasan Shopping Complex, the Hua Ho Mall, The Mall, and the Seria Plaza.

### **18 FOLK ARTS, CRAFTS, AND HOBBIES**

In general, Bruneians enjoy music and dance. The government's Ministry of Culture, Youth and Sports sponsors musicians and dancers who perform locally and abroad. Folk arts include traditional Bruneian performances like *Adai-adai*, a song and dance performed by men in fishermen attire, and *Puteri Lela Menchanai*, a musical tragedy about the accidental death of Brunei's fifth Sultan at the hands of his queen.

Among traditional crafts are weaving, silverwork, wood carving, and metalwork. Some of these crafts are taught to the young people in Brunei at a government-sponsored center aimed at preserving Brunei's national heritage.

Hobbies include the playing of traditional musical instruments, such as the gong, the small gongs or *tawak-tawak*, and a type of xylophone known as the *gulingtangan*. These musical instruments are played at wedding ceremonies and family gatherings. Among youth, their hobbies also include contemporary music and dance; these are taught at private studios.

### **19 SOCIAL PROBLEMS**

The Brunei government is concerned about the increase in domestic violence and abuse against women and currently has several pieces of legislation in place to protect women. The government is also concerned about the sexual exploitation and trafficking of women and children and has legislation to deal with these crimes.

There is also some concern about drug use but this is not a major problem. On the whole, Brunei has a very low crime rate, due to government stability and economic prosperity. It also has a very low prevalence of HIV/AIDS (less than 0.1% in 2003) as health care services are very good. Homosexuality is illegal in Brunei.

While race relations between the Malays and the Chinese remain cordial, it needs to be pointed out that it is not easy for the Chinese in Brunei to become citizens. The 1961 Citizenship Law raised the residency requirement for non-indigenous peoples (mainly Chinese) to 25 years, of which 20 years had to be continuous. In 1984, another Citizenship Law raised the residency requirement for non-indigenous peoples to 30 years, of which 25 years had to be continuous. As a result, many Chinese are stateless. Under the country's law, birth in Brunei does not automatically confer citizenship. All seeking citizenship in Brunei have to pass tests on Malay culture, customs, and language.

### **20 GENDER ISSUES**

Males outnumber females in population figures. Males also comprise the majority of scholarship holders and dominate the upper levels of the government echelon although more women

have achieved high government positions, including the posts of ministers. Moreover, of the 60 local pilots in the Royal Brunei Airline, only 4 are women. In addition, under Muslim law, women are left less inheritance money compared to men. However, in a marriage, a husband is required to share his earnings with his wife but is forbidden to touch his wife's money.

Females outnumber males at the university level, with nearly two thirds of Brunei University's entering class in the late 1990s being women students. Brunei also has more female than male teachers. Women serve in the armed forces and they have equal opportunities to land and house ownership. The government also emphasizes affordable and equal access to healthcare. In general, women have fair access to jobs across the Sultanate and Brunei does not have gender wage bias issues. In Brunei's public sector, the gender wage gap hardly exists due to the uniform pay scale for men and women. In the private sector, however, men on average earn 28% more than women in all occupations.

The percentage of women in the Bruneian workforce has grown significantly, from 20 % in 1971 to 59 % in 2006. Under Brunei law, women under the age of 18 are not allowed to work at night or on offshore oil platforms. The employment of children below the age of 16 is also prohibited. In the business sector the government's supportive measures for women include the financial assistance schemes through commercial banks, such as the Enterprise Facilitation Scheme, the Micro-Credit Financing Scheme, and the Working Capital Credit Fund. Nearly two-thirds of the beneficiaries of these schemes are women. The main government agency for women's affairs is the Department of Community Development, in the Ministry of Culture, Youth and Sports. This Department is responsible for the protection of women and girls and provides counseling services, welfare allowances, and emergency relief when needed. The Department's programs are strongly supported by the Women's Council of Brunei Darussalam, a non-governmental organization affiliated to the ASEAN Council of Women's Organizations, and by other government agencies and the private sector. Brunei has acceded into the Convention on the Elimination of All Discrimination against Women and is committed to the Beijing Declaration and Platform for Action and other regional and international declarations on gender issues. Brunei's National Registration and Immigration Act allows children of female citizens married to foreign nationals to be accorded Brunei citizenship upon application.

Regarding homosexuality in Brunei, it is frowned upon and considered illegal. As Brunei is a Muslim country, homosexuality can be punished by up to 10 years imprisonment or a fine of 30,000 Brunei dollars.

# BUDDHISTS IN SOUTH ASIA

**PRONUNCIATION:** BOO-dists

**LOCATION:** Sri Lanka; India; Nepal; Bhutan; Myanmar; all other countries of South Asia; East Asia

**POPULATION:** 30 million

**LANGUAGE:** Language of community or region in which they reside

**RELIGION:** Various sects include Theravāda (Hīnayāna), Mahāyāna, Tantric; also Tibetan Buddhism (Lāmāism)

**RELATED ARTICLES:** Vol. 4: People of India

## <sup>1</sup> INTRODUCTION

Buddhists are believers in the teachings of Gautama Buddha, who was born in the 6th century BC in what is now Nepal. Although his views represented a system of morality or ethics more than a religion, the Buddha founded what was to become one of the world's great religions. Today, there are an estimated 325 million Buddhists in the world. Buddhism is the dominant religion in the countries of mainland Southeast Asia and has a strong presence in East Asia. In South Asia, however, although it is of considerable historical importance, Buddhism has relatively few followers.

The birthplace of Buddhism lies on the Ganges plains in the modern Indian state of Bihar and adjacent areas of Nepal. This is where Buddha lived and died, leaving behind the Sangha ("Order") to continue his work. Buddhism remained a minor sect until the Mauryan Emperor Ashoka was converted in the 3rd century BC. This marked the beginnings of Buddhism as a world religion. Ashoka sent missionaries to the island of Ceylon (Sri Lanka) and converted the entire island to Buddhism. The southern form of Buddhism (Theravada or Hinayana) eventually spread from Ceylon to mainland Southeast Asia and Indonesia. Buddhism also spread northward into Central Asia and from there to China and Japan.

By AD 700, Buddhism had entered a period of decline in much of India, mostly as a result of the revival of Hinduism. The arrival of the Muslims after the 12th century was the death knell for Buddhism in India. Monasteries were destroyed, Buddhist monks were slaughtered, and the survivors fled to safety outside the country. It is one of the great ironies of South Asian history that Buddhism is virtually absent from the land of its birth.

Buddhism in India saw a revival in the late 19th century, with an increased interest in the religion on the part of both Western and Indian scholarship. Buddhists from outside India have campaigned to restore Buddhist sites in India, and post-1947 Indian governments have participated in efforts to preserve that part of the country's cultural heritage. The conversion to Buddhism of "untouchables" seeking to escape the inequalities of the Hindu caste system has swelled the ranks of Buddhists in India in recent years.

## <sup>2</sup> LOCATION AND HOMELAND

Buddhists in South Asia number approximately 30 million people. They are present in all countries in the region, although their greatest concentration is in Sri Lanka. Buddhism

is the religion of the Sinhalese people and accounts for 69% (c.14 million people) of the island nation's population. They are distributed throughout the country except in the north, where Hindu Tamils are in the majority.

There are some 11 and a half million Buddhists in India, amounting to a mere 1.1% of the population (Census of India, 2001). Found mainly in central India, many are recent converts to the religion and have been named "neo-Buddhists." Buddhists are also present in the northern mountains that fringe the Indian subcontinent. These are mostly followers of the Tibetan form of the religion, which is also known as Lamaism. Nearly 10% (about 4 million people) of Nepal's population are Buddhists, living mainly in the Kathmandu Valley and the northern mountain areas. Some 75% of the mountain kingdom of Bhutan's over 800,000 people are Buddhists. Buddhists are found in the Indian state of Sikkim and among the Bhutia population of eastern Kashmir. Small Buddhist communities are also found in Bangladesh and the Andaman and Nicobar Islands.

## <sup>3</sup> LANGUAGE

There is no language specifically identified with Buddhists. Buddha himself used the language of the common people, and the sacred literature of southern Buddhism is written in Pali, a literary language closely related to the language of Buddha's homeland. The scriptures of Mahayana Buddhism, however, use Sanskrit, the classical language of northern India.

Buddhists today use the language of their community or region. Sri Lankan Buddhists speak Sinhala, the language of the Sinhalese people. This is an Aryan language of the Indo-European language family and is closely related to the languages of northern India. Buddhists in Maharashtra speak various Marathi dialects. In the northern mountain belt, however, Buddhists speak languages of the Tibeto-Burmese branch of the Sino-Tibetan language family. They include Lepcha and dialects of Bhutia such as Dukpa in the eastern Himalayas and Ladakhi in Kashmir.

## <sup>4</sup> FOLKLORE

Numerous legends are told about the birth and life of Buddha. Before his birth, Buddha's mother Maya dreamed that four kings raised her to the Himalayas where their wives bathed her and dressed her in heavenly robes. Buddha appeared in the form of a white elephant carrying a silver lotus in his trunk. He circled the queen's bed three times, struck her right side, and entered her womb. Tradition has it that at the birth of the Buddha, the udambara tree (*Ficus glomerata*), which is said to blossom only when a Buddha is born, burst into flower.

Another story tells how the Buddha came to renounce his normal life and begin his search for the truth. Born into a noble family, the Buddha was kept protected from the outside world. However, one day while driving in his chariot, the young prince saw an old man bent with age stumbling down the road. He was struck with sorrow that all things must grow old. At another time, he saw a sick man and felt sad at the thought of the suffering brought on by disease. On a third occasion, he saw a corpse. On a fourth journey, Buddha saw an ascetic, totally at peace with himself, setting out with a begging bowl in search for wisdom. After pondering these signs, the prince left his family, newborn son, home, and possessions to pursue his search for enlightenment.

Over the centuries, the relatively simple mythology surrounding the life of Buddha became much more complex. Buddha came to be seen as the seventh in a series of Buddhas, and a popular mythology soon developed around his previous lives. These stories were later gathered in the *Jātakas*, a collection of 550 tales, riddles, and legends about his acts and teachings in past incarnations. In each tale, Buddha appears as a king, or a peasant, an animal, a bird; each story has a moral that elaborates on some Buddhist virtue. Westerners may be indirectly familiar with these stories through Aesop's Fables, which appear to incorporate some of the Buddhist tales.

## 5 RELIGION

Buddha was born Siddhartha, son of a king and member of the Gautama clan of the Sakya tribe, around 563 BC. His birth place was Lumbini, close to Nepal's border with India. The young prince led a pampered and secluded life, but in his 29th year he left his home to seek enlightenment. He became the student of a number of renowned teachers before rejecting asceticism as the path to salvation. He ultimately found Enlightenment (*Bodhi*) under a pipal tree (*Ficus religiosa*) at Bodhi Gaya at the age of 35. From that time, he was honored as the "Buddha" (the Enlightened One). He preached his first sermon in the Deer Park at Sarnath, near Varanasi (Banaras). Buddha died at Kusinagar in Bihar at the age of 80.

There is little evidence to suggest Buddha set out to reform Hinduism, but many of his teachings were in direct contrast to the practices and customs of the Hindus. He rejected the

authority of the *Vedas* (the sacred books of the Hindus), the superiority of the Brahmins, and the whole idea of the caste system. He was strongly opposed to ritual, the worship of idols, and particularly the sacrifice of animals. Nonetheless, Buddha's teachings embraced many of the philosophical concepts current in the religions of the time. Although they may be interpreted differently, concepts such as dharma, samsāra, karma, and ahimsā are common to Hinduism and Jainism as well as to Buddhism. In Buddhism, dharma has come to mean the Law, i.e., the teachings of Buddha. Samsara is the cycle of birth–death–rebirth in which we are all caught. Karma relates to the effect of good or bad deeds in life determining the nature of one's rebirths. Ahimsa is the doctrine of noninjury to living things that underlies much of Buddhist behavior.

Buddha taught that people are bound to the Wheel of Existence, an endless cycle of rebirths full of suffering and misery. The only way to obtain total release (*nirvāna*) from this cycle of existence is through the teachings of Buddha. In order to fully appreciate these teachings, certain basic truths have to be understood. These are the Four Noble Truths of Buddhism: 1) life is full of suffering; 2) the cause of suffering, which leads to endless rebirths, is desire; 3) release from suffering can only be achieved by abandoning desire; and 4) the way to stop suffering includes right views and right conduct—honesty, noninjury to living creatures (ahimsa), and forgiveness of enemies. A set of rules known as the Eightfold Path guides the pilgrim on the road to Nirvana, which is the ultimate goal of the Buddhist.

At his death, Buddha left behind the Sangha, the community of monks (*bhikku* or *bhikshu*), nuns, and laity who had accepted his teachings. The Order grew rapidly in numbers, but Buddhism remained a minor religion until the conversion of Ashoka, the third Mauryan Emperor, around 260 BC. Under his patronage, Buddhism spread throughout the Mauryan Empire, which included nearly the entire Indian subcontinent. Ashoka's newfound beliefs can be seen in the inscriptions he had carved on rocks and pillars throughout his empire. These Edicts of Ashoka were in effect statements of public policy. Their pronouncements included strong support for ahimsa and banned animal sacrifice, regulated the slaughter of animals for food, and even encouraged the creation of hospitals for animals. Ashoka was also responsible for sending Buddhist missionaries to Egypt, Greece, Syria, Malaya, and other countries outside of India. His own son and daughter went to Ceylon, where they converted the island's ruler to the Buddhist faith.

Following Buddha's death, Buddhism soon splintered into numerous sects. A major division is that between *Theravada* and *Mahāyāna* Buddhism. Theravada Buddhism, defined by the *Thera* (Elders) at the First Buddhist Council held c. 483 BC, remains true to the original teachings of Buddha. According to its teachings, there is no God, Buddha was an ordinary mortal who should be revered but not worshipped, and everyone is responsible for working out his or her own salvation. This form of Buddhism, sometimes called "southern" Buddhism, was introduced into Ceylon, and from there spread into Southeast Asia. It is also called *Hinayāna* Buddhism, the "Lesser Vehicle." Mahayana Buddhism, on the other hand, is derived from a sect that broke away from orthodox Buddhism at the beginning of the 4th century BC. Mahayana, literally the "Greater Vehicle" because it holds that salvation is open to greater numbers, made Buddha divine, surrounded him with angels and spiritual beings, and developed elaborate rituals for worship.

*Buddhist monks attend morning prayers at the Kopan Buddhist Monastery in Kathmandu, Nepal. Kopan Monastery hosts 360 Buddhist monks. (AP Images/David Longstreath)*

Mahayana Buddhism also contains the central concept of the *bodhisattva*, the “Savior Buddha,” who appears on earth at intervals to guide people on the path to salvation. It was Mahayana Buddhism that was carried northwards over the mountains and along the trade routes of Central Asia to China and Japan.

Two other forms of Buddhism have a presence in South Asia. *Tantrism* is of unknown origins, but it came to influence certain Buddhist (and Hindu) sects, especially in the east of the region. Tantrism is generally associated with occultism, black magic, and perverse sexuality. Tantric Buddhism gives tantric interpretations to Mahayana concepts. Thus “Buddhas” are demoniacal figures, each with their consorts, and forever involved in acts of sexual debauchery with female beings. Elements of Tantric Buddhism have been absorbed into the religion as practiced by the Buddhist peoples of the eastern hills of the Indian subcontinent.

It was a Tantric master that gave form to Buddhism in Tibet, the country located immediately to the north of India and Nepal. Buddhism had reached Tibet in the mid-7th century AD, most likely from Central Asia and China. Towards the end of the 8th century, however, a celebrated Indian Tantric monk was invited to Tibet. He was reputed to have miraculous powers and is credited with subduing the demons and spirits associated with Bon, the indigenous religion of the area. Despite the existing influence of Chinese Buddhism, a council decid-

ed that the Indian form of Buddhism should prevail. Tibetan Buddhism represents an intermingling of the sexual-magical Tantric Buddhist cult with Tibetan shamanism. Abandoning the traditional nonviolence of the Buddha, it holds that evil gods and spirits are to be overcome by the superior force of benign powers. The most important rituals are religious dances in which the performers, wearing fearsome and grotesque masks, impersonate the gods and demons. The masks of the gods are intended to strike fear into the hearts of the evil spirits. These so-called “devil dances” form part of all festivals of the Tibetan Buddhists. Tibetan Buddhism is also called Lamaism because of the importance of the *lāmās* or spiritual leaders in the religion. It is the form of Buddhism prevalent among groups such as the Lepchas, Bhutias, Sherpas, Tamangs, and other peoples of the Himalayan region.

Although Buddhism spread around the world from its place of origin in South Asia, it did not fare so well in its homeland. At times, under imperial patronage, Buddhism flourished throughout the subcontinent. But by the beginning of the 8th century, Buddhism in India was coming under increasing pressure from a revitalized Hinduism. Although it survived and flourished in northeastern India under the Pala kings, the death-blow came with the Islamic conquest of India following the 12th century. Muslims killed Buddhist monks, burnt their books, and destroyed their monasteries and centers of learn-

ing. Although Buddhism survived in Ceylon and in the mountain periphery, it was virtually annihilated in the heartland of the Indian subcontinent.

It is unlikely that Buddhism will ever again achieve its position of former prominence in India. However, two separate events have stimulated the expansion of Buddhism in the country since the mid-20th century. Dr. B. R. Ambedkar, author of the Indian Constitution and himself a member of an untouchable Hindu caste, announced his conversion to Buddhism in 1956. He recommended this as a means for the entire community of “untouchables” in India to escape the social and economic inferiority imposed on the lower castes by the Hindu caste system. Mass conversions occurred largely among two low-caste groups, the Mahars of eastern Maharashtra, and the Jadavs of Uttar Pradesh.

The second event that contributed to the modern Buddhist revival in India occurred in Tibet. From the mid-17th century, Tibet had been a theocracy, that is, its political ruler was also its religious leader. This figure was the Dalai Lama, the spiritual leader of the Tibetan Buddhists. For centuries, Tibet was in effect an independent country. In 1950, however, China invaded Tibet in support of its historical claim to the region. Resentment at Chinese attempts to undermine Buddhism led to an unsuccessful uprising by the Tibetan people. This was suppressed with considerable brutality by the Chinese Army, and in 1959 the Dalai Lama and some 100,000 of his followers fled to India. The Dalai Lama remains in exile in India. His presence, along with the Tibetans who have settled at Dharmasala, Kalimpong, Delhi, and other locations, has given added impetus to Buddhism in northern India.

The “Tibetan” issue has continued to fester since 1959. In 1995, for instance, the Dalai Lama in exile in India, with the help of Chatrel Rimpoche, the abbot of Tashilhumpo monastery (Xigaze, Tibet), named Gedhun Choekyi Nyima, aged six, as the new Panchen Lama. The Panchen Lama is the second highest ranking Lama after the Dalai Lama in the Gelugpa sect (also known as the Yellow Hat sect) of Tibetan Buddhism (the sect that controlled Tibet from the 16th century until the Seventeen Point Agreement established Chinese hegemony over Tibet in 1951). The successive Panchen Lamas form a tulku (reincarnation lineage) and are said to be incarnations of Amitabha Buddha. The name, Panchen Lama, meaning “great scholar,” is a Tibetan contraction of the Sanskrit *pandita* (scholar) and the Tibetan *chenpo* (great). In November of the same year, the Religious Affairs Office of China, in a bid to weaken the authority of the Dalai Lama, chose another six-year-old boy, Gyaincain Norbu, citing special ritual reasons. After this recognition, the little Gedhun Choekyi Nyima was apparently kidnapped by police and disappeared and has not been seen since. The Chinese authorities say “he is well, living with his family and does not want to be disturbed.” In March 2008, prior to the Olympic Games in Beijing, and coinciding with the 49th anniversary of the 1959 uprising in Tibet against China, violence erupted again in Tibet. Activists claimed over 100 protestors, mainly Buddhist monks, were killed and 1,000 arrested by the Chinese authorities. They sought to use the occasion of the Olympics to protest China’s “occupation” of Tibet. Protests and violence marred the carrying of the Olympic torch through the streets of London, Paris, and San Francisco, as supporters of Tibet rioted, and calls were made for world political leaders to boycott the Opening Ceremonies of the

Games in Beijing in August 2008. In April 2008, however, the Dalai Lama announced his envoys would be willing to meet with the Chinese authorities to discuss Chinese-Tibetan relations and the meetings commenced at the beginning of May. Popular forms of worship reflect differing Buddhist traditions as well as regional cultures, but there are two practices common to Buddhism wherever it is found. The first is veneration of the Buddha, or Buddha-like figures such as the bodhisattvas. The second is the support of monks by the lay Buddhist community. Other than this, Buddhists in different areas of South Asia have their own forms of religious practice. Tibetan Buddhism, with its distinctive monasteries, use of prayer wheels and prayer flags, mantras, and colorful festivals has quite a different feel from the more austere Theravada Buddhism of Sri Lanka, and both differ from the Buddhism of the hill tribes of eastern India or the neo-Buddhists of central India.

If religious customs vary among lay Buddhists in South Asia, the life of the monk is much more structured. The rules and responsibilities of life in the monastery are clearly defined. Initiation ceremonies for novices, the rites for ordination of monks, the custom of retreat during the rainy season, and other monastic practices are all set down in the Buddhist texts.

Pilgrimage is an important part of Buddhist religious life in South Asia. A pilgrimage may be undertaken for any number of reasons ranging from a desire for spiritual fulfillment to redeeming a pledge made at a time of sickness or misfortune. Lumbini, Bodh Gaya, the Deer Park at Sarnath, and Kusinagar—the places where the four great events in the Buddha’s life occurred—are the most sacred pilgrimage centers. Buddhists from around the world make the journey to visit these sites. Many Buddhist groups from outside South Asia have built temples and established educational centers at these locations. There are many Buddhist holy places in Sri Lanka, the most important being Kandy, where the Tooth Relic of the Buddha is kept, and Anuradhapura, where an offshoot of the original *bo* tree under which Buddha found Enlightenment still grows.

## 6 MAJOR HOLIDAYS

For Buddhists, Buddha Purnima (the full moon day that falls in the month of Vaisakha [May]) is a thrice sacred day. It is celebrated as the anniversary of Gautama Buddha’s birth; it is on this day that Buddha received Enlightenment under the pipal tree at Bodh Gaya; and it is also the day on which Buddha attained Nirvana. The festival is described by the Chinese traveler Fa-hsien, who visited India in the 5th century AD, and it has changed little from ancient times. It is marked by continuous recitation from the Buddhist scriptures and the worship of the statue of Buddha, with offerings of incense, candles, flowers, and fruits. Fruits and clothes are distributed to the sick. The Bodhi tree, the tree under which Buddha attained Enlightenment, is also worshipped and its branches decorated with garlands and colored flags. Oil lamps are placed around the tree, and milk and scented water are sprinkled on its roots. Large numbers of pilgrims gather at the four sites where the great events of Buddha’s life occurred to participate in the celebrations.

Other festivals commemorate Buddha’s sermon in the Deer Park (Wheel of Law Day), the end of the Bhikshu Vassa (the three-month period during the rainy season when monks are confined to their monasteries), and Magha Purnima, the full moon day in February when Buddha announced the time of

his impending death. Madhu Purnima is observed by offering honey (*madhu*) to Buddha and to monks in the monasteries. This celebrates the occasion when, according to the Buddhist scriptures, Buddha was presented with honey by a monkey while staying in a forest.

Every June a major festival is held at Hemis Gompa (monastery) near Leh, the capital of Ladakh in India, to honor the birthday of the monk who founded Lamaism in the 8th century AD.

## 7 RITES OF PASSAGE

Buddhists follow the practices of local cultures in their birth rituals. It is customary among some Buddhist groups for boys to enter a monastery for a short time on reaching puberty. They shave their heads, don the saffron robes, and lead the life of a novice before returning to normal life.

Buddhists in South Asia follow the basic customs of the region in their death rites, with bodies being cremated on a funeral pyre. The Buddhist scriptures tell how the Buddha's ashes were dispersed and entombed in *stūpas* across the land. In the northern mountains, however, where wood is scarce, it is the custom to expose bodies to be consumed by vultures and wild animals. Important figures in Lamaistic Buddhism, such as the Dalai and Panchen Lamas, are entombed in stupas in attitudes of meditation. In Tibetan monasteries, a sacred text known as *The Tibetan Book of the Dead* is sometimes read to dying monks. It is believed that the last thoughts in one's mind before death are of significance.

## 8 INTERPERSONAL RELATIONS

Buddhists follow local forms of greetings and visiting customs.

## 9 LIVING CONDITIONS

The living conditions of lay Buddhists reflect those of the culture and society to which they belong. Monks and nuns reside in monastic communities known as *vihāras* in India or *gompas* in Tibetan Buddhism.

## 10 FAMILY LIFE

Buddhist society reflects the kin system, family structure, and marriage customs of specific ethnic communities or of the dominant regional culture.

## 11 CLOTHING

Buddhist monks and nuns shave their heads and dress in simple saffron (yellow) robes when they join the monastic order. Tibetan Buddhist monks wear a coarse red outer robe, and on ceremonial occasions they wear elaborate headdresses. In lay society, Buddhists adopt local forms of dress.

## 12 FOOD

Food habits of Buddhists in South Asia reflect regional dietary patterns, subject to the specific restrictions imposed by their religion. However, Buddhist dietary laws and practices lack unity and show considerable variation from place to place. Many Buddhists are strict vegetarians out of respect for the ahimsa principle and reluctance to take animal life. But even Buddha himself taught that fish and meat could be eaten if the animal were not killed specifically for one's consumption (Buddha

is thought to have died after eating tainted pork). Thus in Sri Lanka, the Sinhalese Buddhists object to the slaughter of animals or the raising of livestock for food, yet many eat beef. By contrast, tribes in the eastern hills of India, though nominally Buddhist, make offerings of chickens, goats, and even pigs to deities and local spirits and eat the flesh of the sacrificed animals. Similarly, Buddhists in the western Himalayas avoid fish and even view fishing as sinful, while Buddhists elsewhere have no prejudices against eating fish.

## 13 EDUCATION

Education is important in Buddhism, and monasteries have always been centers of learning and religious education. In lay society, Buddhists mirror the educational standards of their specific communities. Thus, literacy rates vary from among the highest in South Asia (over 90% in Sri Lanka) to the lowest (15%) among the Chakmas of Bangladesh and other hill tribes of eastern India.

## 14 CULTURAL HERITAGE

Buddhists have a rich heritage of literature and art in South Asia. The Pali canon, the sacred literature of Theravada Buddhism, was set down between 350–90 BC. In addition to discussions of philosophy, it covers subjects ranging from the rules of monastic discipline to the ethical teachings of the Jataka stories. The best known of this collection of texts is the Dhammapada, the "Law-Path." The *Dīpavamsa* and the *Mahāvamsa* are later Pali works chronicling the history of Buddhism in Sri Lanka. Mahayana scriptures are presented as a series of dialogues and sermons (*sūtras*) delivered by Buddha himself. There are many hundred *sūtras*, most originally written in Sanskrit and translated into Tibetan, Chinese, and other Asian languages.

Buddhist architecture flourished centuries before the oldest known Hindu temples were built. The first Buddhist monuments were stupas—massive, hemispherical funeral mounds built to hold the relics of the Buddha. Stupas, though of a later date, are found today at Sarnath, Sanchi, and other Buddhist sites. The Buddhist sculptures at Bharhut, Sanchi, and Bodhi Gaya (all dated c.185–80 BC) are among the earliest in South Asian art. Buddhist frescoes at the Ajanta caves, along with the rock art at Sigiriya in Sri Lanka, are regarded as outstanding examples of early South Asian painting. The unique sculptures of Gandharan art represent a blending of Western influences with Buddhist traditions. In Sri Lanka, a Buddhist heritage extending unbroken for over two millennia is seen in the island's numerous monasteries, temples, and sculptures. The huge statue of the reclining Buddha (14 m or 46 ft long) at Polonnaruwa is one of the highest achievements of Sri Lankan art.

Buddhism has influenced many other aspects of life in the region. Buddhists kept the first systematic historical records in India. Three of India's greatest rulers (Ashoka, Kanishka, and Harsha) were Buddhist, and many early political and administrative systems have their origins in Buddhist democratic assemblies. The Buddhist universities at Nalanda and Taxila were ancient centers of learning in India. Buddhism has also had a profound influence on Hinduism, which adopted Buddhist practices in a struggle for the allegiance of the common people. Concepts such as nonviolence (ahimsa) and prohibitions against meat-eating and drinking liquor are Buddhist rather than Hindu in origin. Although Buddhism is virtually

absent from South Asia today, South Asian civilization cannot be fully understood without an appreciation of the contributions of Buddhism and the Buddhists.

### **15 WORK**

Belief in ahimsa, though not carried to the same extreme as in Jainism, prohibits Buddhists from occupations related to the killing of animals for food. Thus Buddhists do not become butchers, and some even object to the raising of livestock for slaughter. Beyond this, and some restrictions relating to anti-fishing sentiments among some groups, Buddhist laity are free to engage in the full range of activities offered by the economies of South Asia.

### **16 SPORTS**

There are no sports unique to Buddhists.

### **17 ENTERTAINMENT AND RECREATION**

There are no forms of entertainment or recreation associated specifically with the Buddhist community.

### **18 FOLK ART, CRAFTS, AND HOBBIES**

While there are no folk arts that can be termed "Buddhist," there are Buddhist (and non-Buddhist) artisans who produce items having religious symbolism for sale. These include the thankas (painted scrolls) and prayer wheels of Tibetan Buddhism, masks used for "devil-dancing," and metal and stone statues of the Buddha.

### **19 SOCIAL PROBLEMS**

Given the nature of Buddhism in South Asia today, it makes more sense to talk about individual Buddhist communities rather than Buddhists in general. Each community exists in its own cultural setting and each has its own set of problems. For the most part, these are political and social in nature rather than stemming directly from religion. In Sri Lanka, for example, Buddhism is symbolic of the island's Sinhalese majority. It is fear and resentment of the cultural dominance of this group that has led to the Hindu Tamil uprising in the north of the island. The problems of the Chakmas of eastern Bangladesh exist not because they are Buddhists, but largely because they are a non-Muslim tribal minority that is fighting to retain its identity and some of its traditional freedoms. The Tibetan refugees in northern India fled what was a concerted attempt on the part of the Chinese to stamp out the authority of Buddhism in Tibet. Although accepted by India, they remain exiles in a foreign land.

Dr. Ambedkar, a member of the Mahar community (a Hindu Untouchable group), converted to Buddhism in 1946 and gave rise to what have been called "neo-Buddhists" i.e. low caste Hindus who converted to Buddhism to escape the strictures of the Hindu caste system. On the occasion of his conversion, Ambedkar repeated what he had been saying for years: that only conversion could really change the social status of the lowest castes. However, unlike many of his followers, Ambedkar did not convert to Buddhism merely because he found it socially useful. He had studied Buddhism and did believe that it was the most rational and humane religious tradition, the best for all human beings, untouchables and touchables alike. He consequently rejected "opportunistic" conversions to Islam

and Christianity, not merely because he considered these religions a threat to India (on this point, he is supported by the Hindutva spokesmen), but because he considered these religions inferior to the humanism and rationalism of Buddhism. An additional reason for his choice of Buddhism was his highly unlikely belief that Buddhism, an elite religion thriving on patronage, had been the original religion of the Dalits. In Ambedkar's view, the Dalits should not seek a new religion but return to their original religion.

Today, there are about 10 million neo-Buddhists in India, most of them from Ambedkar's own Mahar caste and related Scheduled Castes. Occasionally, local mass conversions to Buddhism still occur in these communities. Buddhist sources claim that, in 2006, over 300,000 Dalits in central India converted to Buddhism on the occasion of the 50th anniversary of Ambedkar embracing the religion, though one suspects this number is exaggerated. Unlike the Dalai Lama, who emphasizes the close tie between Hinduism and Buddhism before his Indian hosts, the Ambedkarite tendency in Buddhism is overtly anti-Hindu and tries to maximize the separateness of the religion.

The problems of the neo-Buddhists are of a different nature than those of other Buddhists in India. With no local historical roots, and isolated from contact with the broader Buddhist community, they lack the traditional structures of Buddhist society. There is, for example, a scarcity of Buddhist monks to perform religious functions. As a result, it is common for leading members of the community to officiate at marriages and other ceremonies. One might reasonably expect neo-Buddhist society to develop along slightly different lines, with monks playing a less important role than in other Buddhist communities. This will only add to the diversity that characterizes Buddhism in South Asia today.

### **20 GENDER ISSUES**

Theoretically, in Buddhism, women are treated as equal to men and so gender issues should be absent from Buddhist societies, as claimed by women's groups in Bhutan. There are, for example, Buddhist nuns, but in Sri Lanka there is strong opposition to the idea of full ordination for women from conservative monks. Indeed, after the schism of Buddhism between Māhāyāna and Hīnayāna Buddhism, discrimination against women became entrenched in the latter. For instance, in Hīnayāna Buddhism, a woman cannot attain full Buddhahood. Such attitudes originate essentially in the views of Hinduism towards women.

Thus, the place of Buddhist women in society varies considerably throughout South Asia and is determined largely by the individual group among which a woman lives. Women in Hīnayāna societies, such as that prevalent in Sri Lanka, are seen as somewhat inferior to men, whereas in the Mahāyāna Buddhism prevalent in the north, such discrimination is not so overt. Women in Buddhist societies in India, such as newly converted low-caste groups, are strongly affected by traditional Hindu attitudes towards women and tend to occupy the role of inferior citizens so typical of Hindu societies. Poverty and lack of education remains the key to the role of Buddhist women in society.

Several states governed by the Hindu nationalist party, the Bharatiya Janata Party (BJP), have introduced laws to make conversions of low caste Hindus to Buddhism difficult. The

states of Rajasthan, Madhya Pradesh, and Tamil Nadu have all passed laws restricting conversions. Gujarat has reclassified Buddhism and Jainism as branches of the Hindu religion, in an attempt to prevent conversions away from Hinduism eroding the BJP's bedrock support. Officially, caste discrimination was outlawed when India gained independence in 1947, but many of the country's Dalits say that people's attitudes towards them remain the same.

# BUGIS, MAKASSARESE, AND MANDARESE

**PRONUNCIATION:** BOO-gheez, muh-KAHSS-uh-reez, and MAHN-duh-reez

**ALTERNATE NAMES:** Buginese, Bugis-Makassarese, Mandar

**LOCATION:** Indonesia (Sulawesi)

**POPULATION:** Bugis (5 million); Makassarese (2 million); Mandarese (0.5 million).

**LANGUAGE:** Buginese; Makassarese; Mandarese; Makassar Malay

**RELIGION:** Islam (Sunni Muslim)

**RELATED ARTICLES:** Vol. 3: Indonesians

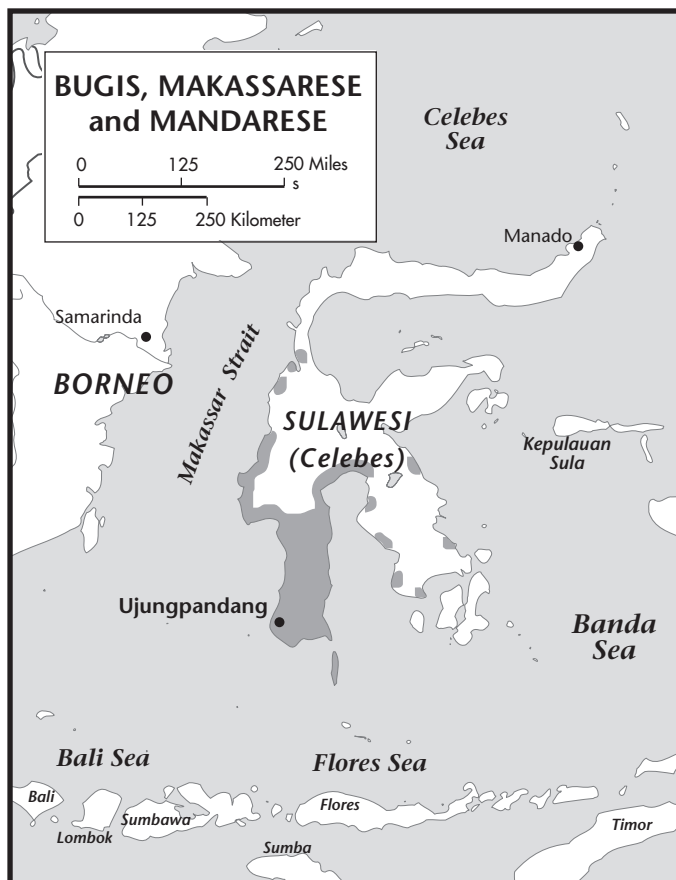

## <sup>1</sup> INTRODUCTION

Although the majority gains their livelihood from wet-rice cultivation, the Muslim peoples of Sulawesi's southwestern peninsula have long been renowned throughout the Indonesian archipelago as seafarers, whether as shipbuilders, traders, pirates, mercenaries, or migrants. While the Bugis, Makassarese, and Mandarese speak mutually unintelligible languages, they otherwise share so much in common that Indonesians often speak of one "Bugis-Makassar" ethnic group.

Austronesian-speaking agriculturalists entered Sulawesi from the Philippines about 4,000 years ago. In comparison with regions farther west, Indian civilization made little impact on early Sulawesi cultures, although pre-Islamic graves full of Chinese, Siamese, and Annamite porcelain attest to a bustling trade at this stopover on the route to the spice-rich Moluccas. First referred to in 14th century Javanese writings, the first kingdoms were founded on control of iron mines in eastern Luwu. Over the next three centuries, local rulers transformed village confederations into monarchies, basing claims to divine ancestry on possession of *arajang*, regalia believed to have descended from heaven.

Two of these kingdoms, Makassarese Gowa and Tallo, joined to form a power whose hegemony in the early 17th century extended far beyond the peninsula to coastal states in eastern Kalimantan, eastern Sulawesi, and the Lesser Sundas. Its capital, the fortified port city of Makassar, attracted Portuguese, Spanish, English, and Danes as well as Malays, Gujeratis, and Chinese eager to circumvent the monopoly that the Dutch East India Company (VOC) was then attempting to impose on the Moluccan spice trade. These widened contacts introduced South Sulawesi to Islam; Luwu converted in 1603, Gowa-Tallo two years later, and the other Bugis kingdoms shortly thereafter, upon being defeated by the Makassarese.

In 1615, Sultan Alauddin of Gowa replied thus to VOC envoys: "God made the land and the sea: the land He divided among men and the sea He gave in common. It has never been heard that anyone should be forbidden to sail the seas." The VOC succeeded in crushing this greatest obstacle to its monopoly only in alliance with Arung Palakka, a nobleman from the Bugis kingdom of Bone, who was able to gather a great army of Bugis resentful of Gowa dominance. As a VOC city rose on the ruins of Sultan Hasanuddin's capital, and power in the peninsula shifted to Bone, many Makassarese and Wajo Bugis found refuge elsewhere in the archipelago, the former fighting along-

side other enemies of the Dutch and the latter founding dynasties as far away as Johor and Selangor on the Malay peninsula.

Outside of the VOC strongholds at Makassar and along the south coast, Dutch colonial rule came to South Sulawesi only in the first decades of the 20th century after a series of hard-fought wars from 1824 to 1906 (the last Mandar resistance ended in 1916). After 30 years of stability, Sulawesi again changed hands, falling under the administration of the Japanese Navy from 1942 to 1945. Although the nationalist movement had only the shallowest of roots there, a very effective guerrilla movement sprang up to fight the bloodiest Dutch counter-revolutionary campaign in the whole archipelago. However, even after the Dutch puppet-state of “East Indonesia,” based in Makassar, dissolved itself on 17 August 1950, local strongmen who had seized power in the previous years of chaos were reluctant to move aside for the central government, and the central government in turn alienated much of the population by deflating hopes for an Islamic state and local autonomy. In July 1950, Kahar Muzakkar, a modernist Muslim leader and a revolutionary activist, launched a rebellion against the Jakarta government that only ended upon his death in 1965.

Under Suharto’s New Order regime (1965–1998), economic development resumed in South Sulawesi, and a new commercial elite emerged to join bureaucrats, military officers, university graduates, and Islamic religious leaders in replacing the aristocracy that had lost power with the coming of the Indonesian independence. Despite the real progress made, South and West Sulawesi continue to lag behind parts of the coun-

try with comparably dense populations and high incidences of poverty, such as Java and Bali. South Sulawesi has experienced a disproportionate amount of the collective violence occurring in Indonesia during the final years of the Suharto regime and immediately after and ranked third in number of incidents of inter-group or village brawls (132 in 1990–2003, compared to 193 for Central Java), as well as high in incidents of vigilante “popular justice” violence. The rioting that destroyed much of the Chinese section of Ujungpandang/Makassar in September 1997 as the Asian/global emerging markets financial crisis was making itself felt in Indonesia is only the most infamous example.

## 2 LOCATION AND HOMELAND

The topography of Sulawesi’s southwestern peninsula ranges from the precipitously rising limestone mountains of the north to a broad plain in the center (its lakes are the remnants of a shallow sea) to a volcanic range in the south. December and January bring the heaviest monsoon rains, while the hottest and driest season runs from June to August. The 1.5 million Makassarese (Indonesia’s thirteenth largest ethnic group) reside along the mountainous southernmost coast of the peninsula, on Selayar and other offshore islands, and on a bit of fertile lowland north of Makassar city. The 5 million Bugis (the country’s eighth largest ethnic group) live to their north, stretching as far as the northern highlands and farming the peninsula’s lowland midriff, eastern Indonesia’s greatest rice-bowl (while linguistically closer to the Sa’dan Toraja, the Massenrempulu of the northern highlands and the Luwu at the head of the Gulf of Bone are usually classified as Bugis due to their adherence to Islam). The Mandarese (500,000) occupy the mountainous westward bulge of the island, comprising half of the population of the new province of West Sulawesi (separated from South Sulawesi in 2004).

In addition, Bugis communities (and to a lesser extent Makassarese) can be found scattered along the shores of eastern Indonesia’s islands; they have traveled as far as the Philippines, Sri Lanka, and northern Australia and have settled in Sumatra, Malaya, and in the cities of Java. According to the 2000 census, Bugis, 42% of their ancestral province of South Sulawesi constitute the second largest ethnic group in the following provinces: 19% in Southeast Sulawesi; 14% in Central Sulawesi Tengah; and 18% in East Kalimantan Timur. An opposite movement has recently affected Luwu and Polewali Mamasa (directly east of the Mandar region): transmigrants from Java, Bali, and Lombok have compounded ethnic diversity in those areas. Makassar has long been a multiethnic city (the city’s official name from 1971 to 1999, “Ujungpandang,” recognized this reality); in addition to Makassarese, Bugis, Mandar, and Toraja, its population includes Chinese, Javanese, Minahasans, Ambonese, and representatives of virtually every group in eastern Indonesia.

## 3 LANGUAGE

Buginese, Makassarese, Mandarese, and Sa’dan Toraja constitute a discrete group of closely related Austronesian languages. Regionally prestigious, Bugis has over 500,000 second-language speakers, and Makassarese has over 400,000 (this does not include the many ethnic Chinese in Makassar for whom Makassarese is the first language). As its lingua franca, the multiethnic city of Makassar has long had its own dialect of

Malay, distinguishable from the now-common Bahasa Indonesia by, among other features, its use of Makassarese sentence-final particles (e.g., for “One only,” “*Satu ji*” instead of the standard “*Satu saja*”).

Reflecting Islam, personal names generally are Arabic in origin. Family names are not used.

#### 4 FOLKLORE

Running to thousands of pages, the Bugis epic *I La Galigo*, the greatest repository of the pre-Islamic mythology common to all the peoples of South Sulawesi (including the Sa'dan Toraja), recounts the adventures of the *Tomanurung*, beings descended from heaven whom South Sulawesi's kings claimed as ancestors. The epic begins with Batara Guru, the eldest son of the principal god of the upperworld, descending through a bamboo tube to eastern Luwu, then creating the earth's flora and fauna. After he completes a 15-day fast, other heavenly beings join him to cultivate the earth, and his cousin, a princess of the underworld, emerges from the sea to marry him. The rest of the epic focuses on six generations of his descendants, beginning with his son Sawerigading who, unable to consummate his love for his twin sister, embarks on adventures in the upper, middle, and lower worlds, finally gaining the hand of the princess We Cudai'. They have a son, La Galigo, whose exploits in love and war occupy most of the remaining narrative.

#### 5 RELIGION

Virtually all Makassarese, Bugis, and Mandarese adhere to Sunni Islam. These peoples are considered among the strongest believers of any in the archipelago, comparable in devotion to the Acehnese and the Minangkabau. Although Muslim Malay traders had sojourned in the peninsula's port since at least the 15th century, tradition attributes Islam's initial propagation to Minangkabau holy men arriving at the beginning of the 17th century.

Islam as practiced in South Sulawesi often includes elements of the pre-Islamic religion: offerings to ancestors and spirits of the sea, earth, and rice (an homage rendered also to Muslim saints); healing, agricultural, house-, and boatbuilding rituals; the care of *saukang* (supernaturally charged places); even a (now almost entirely vanished) transvestite priesthood (*bissu*) to care for the *arajang* regalia and perform oracles. In the 20th century, modernist Muslims, who considered many of the local traditions idolatrous, have worked with considerable success to eliminate them. However, pre-Islamic religious traditions are still observed by the To Lotang of Sidenreng (the government has classified their beliefs as Hinduism) and the Amma Towa of Bulukumba (who defend their identity as Muslims).

#### 6 MAJOR HOLIDAYS

See the article entitled **Indonesians**.

#### 7 RITES OF PASSAGE

Getting married among the Bugis and Makassarese entails the following steps. The man's family pays a formal visit to the woman's family to sound out the possibility of a union. If a proposal can be made, the man's family sends a representative to negotiate the bride-price, a wedding date, wedding expenses, and feast arrangements. After this, the wedding can be announced to all the kin of both sides. On the wedding day

itself, the groom with a procession of kin, young and old, male and female, arrives at the bride's house bearing the bride-price, women's clothing, and different kinds of food. Then, the wedding ceremony itself follows. For the reception, guests are invited inside the house; they give presents or money (formerly, paddy fields, gardens, or livestock) as a kind of competition between the bride's and groom's sides. A few days after the wedding, the new couple visits first the groom's family and then the bride's, giving out presents to all family members. The couple stays with the bride's parents before setting up their own household.

If the woman's family refuses the man's proposal or sets the wedding expenses too high (a kind of subtle refusal), the couple may elope. The elopement causes the woman's family to lose face, and her male kin might pursue and kill the man, if they catch him. The man seeks the protection of a powerful person who will try to assuage the anger of the woman's side. If the woman's family shows signs of accepting the union after all, the man's family takes the initiative to make a reconciliation meeting.

For additional information on rites of passage, see the article on **Indonesians**.

#### 8 INTERPERSONAL RELATIONS

The central value governing interpersonal relations is *siri*, a powerful sense of face that demands that the individual or the group strive as hard as possible to win prestige as well as uphold honor at all costs, even going as far as dying in the attempt to kill offending parties.

Traditional society distinguished three classes: nobility (“descendants of kings”); commoners (“freemen”); and slaves (war captives, violators of custom, and those selling themselves to pay debts). In the 20th century, the category of slave has disappeared. Noble titles (*Karaenta*, *Puatta*, *Andi*, *Daeng*, *Puang*) are still used, but, since World War II, education and bureaucratic position earn as much or more deference than ancestry alone.

Although linguistic etiquette is far simpler than in Java or Bali, one does modify one's speech according to whether the addressee is one's social superior, equal, or inferior: e.g., “Where are you coming from?” can be rendered in Bugis as *Pole tegai petta?* (deferential), *Pole tegaki?* (polite), or *Pole tega-ko?* (brusk, appropriate towards children or people of greatly inferior status). To show greater respect, euphemistic or indirect expressions can be employed: e.g., *Leccekki yolo mab-bura*, “Please transfer there and take the remedy,” rather than *Lokkakki yolo manre*, “Please go eat.” To persons of the highest status, such as religious teachers or royalty, an appropriate greeting is to bow and kiss the person's hand.

Contact between unrelated members of the opposite sex outside the surveillance of older family members is still strongly discouraged, although modern education and work provide some opportunities for this. For a young man to show interest in a girl, one strategy acceptable to custom is for him to steal her underwear while she (covered in a sarong) is bathing by a river. He then returns the underwear to her without telling anyone else about it. If the theft does become known to others, the girl's family loses face and may harm the young man.

## 9 LIVING CONDITIONS

Villages consist of 10 to 200 houses facing either south or west or backing onto a river if there is one; a banyan tree and a mosque or prayer house lies at the town center. .

Traditional wooden-frame houses are raised on 1.5-m to 2-m (5–7 ft) stilts. For floors and walls, richer houses use wood with zinc roofing, while poorer ones use bamboo with leaf-fiber roofing. The house is divided vertically into three parts: the spirit-inhabited area immediately under the roof; the middle area for human living; and the area under the house floor for storing tools and keeping animals. Horizontally, beginning in front facing the road, the house is partitioned into: an unroofed veranda; a vestibule where the family relaxes and guests wait before being invited in; a second room where the family eats, containing heirloom weapons and the house's central pillar (the place of the house's protective spirit); and a sleeping room, further divided into a front section for the parents and a back section for the daughters (sons sleep on the front veranda or at the village mosque). Commoner houses will have one lower roof over the vestibule and another higher one over the rest of the house; aristocratic houses may have as many as five further roofs. Cooking takes place at the back or behind the house.

South Sulawesi, comprising the ancestral homelands of the Bugis and Makassarese, has a Human Development Index (combining measures of income, health, and education) of 68.1 (2005 score), while that of West Sulawesi, the homeland of the Mandar, is 65.7, both figures considerably lower than the national HDI of 69.6. South Sulawesi's GDP per capita is us\$6,913, relatively low for Indonesia (us\$9,784 for West Sumatra, us\$8,360 for North Sulawesi, but us\$6,293 for Central Java and us\$6,151 for West Nusa Tenggara).

## 10 FAMILY LIFE

Ideal (but not obligatory) marriage partners are cousins of the first, second, and third degrees; marriage with a sibling, a child of a sibling, or a grandchild, however, is taboo.

A household consists of one nuclear family, including grandparents and unmarried adult children. In wealthier urban households, relatives from the countryside may stay for considerable lengths of time, joining in household chores. Traditionally, husbands and wives address each other respectively as "Father of [child's name]" or "Mother of [child's name]," e.g., in Bugis, "*Ambonna/Ambenna Beddu*" or "*Indonna/Emmakna Beddu*" (Beddu being the child). Parents call sons "*Baco*" and call girls "*Bece*." Children address fathers with a variety of titles (*Ambo*, *Abba*, *Puang*, *Petta*, and others) and mothers with *Indo*, *Emmak*, *Ummi*/*Mi* or a shortened form of the mother's name (e.g., "Lima" for "Halimah"). Older siblings call younger ones by their name or with *Anri*; younger siblings address older ones with *Kaka*, *Daeng*, or sometimes with their name.

## 11 CLOTHING

House clothes are shorts with or without a shirt for boys, and a shirt and a skirt down to the knees for girls. Adult men wear a plaid-patterned sarong with or without a sleeveless undershirt, while adult women wear a batik sarong with a *kebaya* blouse or a shirt with sleeves down to the elbow. In contrast to the practice elsewhere in Indonesia, men and women both wear the same type of tubular sarong, the only difference being that

traditionally men kept the sarong in place with a knot while women draped the edge over their right forearm.

For male street wear, although Western-style trousers and shirts are common, so too is the sarong with a long- or short-sleeved shirt. It is impolite to go out in public without a head-covering (a black velvet cap, a white *hajji* cap, or, now rarely, the *sangkok rucca*, a traditional brimless, flat-topped cap woven of palm-leaf fibers). For traditional ceremonies, a man adds a buttoned-up jacket to the shirt and sarong (often silk).

Female street wear consists of the sarong-blouse combination or modest Western dress. Traditional clothing, now largely ceremonial, is a silk sarong with a *baju bodo*, a blouse with wide, short sleeves (now over an undershirt). Before Indonesian independence (much less so now), the color of the *baju bodo* had to fit age and status: light reds for teenage girls and still-childless married women; dark reds for married women with children; green for the daughters of aristocratic families; purple for widows; white for nursemaids; and black for the elderly.

## 12 FOOD

Daily food consists of rice with fish, soupy vegetables, pickles, and chili sauce. Grilled fish, shrimp, and other seafood eaten with dipping sauces are popular, as are curries and meats stewed in coconut milk. Nationally famous are the region's sweets and cakes, *konro Makassar* (a beef-rib soup), and *coto Makassar* (a soup of water-buffalo lungs, intestines, liver, and tripe eaten with rice steamed in palm leaf packets).

Men eat first in the front room of the house, while women eat later there or in the kitchen. According to folk belief, one should close windows and doors before eating.

## 13 EDUCATION

In 2005, South Sulawesi's level of literacy stood at 84.6%, low by Indonesian national standards and even below other densely populated provinces with large numbers of poor, such as East Java and Bali. (See also the article entitled **INDONESIANS**.)

## 14 CULTURAL HERITAGE

Played solo or in small ensembles, traditional musical instruments include the drum, gong, *kesekeso* (a two-string vertical fiddle with a pot-bellied soundbox), a boat-shaped zither (*kecape* in Bugis or *kacaping* in Makassarese), the *pui-pui* (a high-pitched oboe-like instrument), and the Mandarese *jarumbing* (a pronged bamboo cane). Popular songs following national or international models are sung in the local languages, such as in the genre *lagu Makassar*.

Traditional dances divide into court and folk dances. Among the former are the Bugis *Pajaga* (danced by 12 aristocratic girls), the Makassarese *Pakarena* (12 girls and 12 boys), and the Mandarese *Pattudu* (6 to 8 girls); these contrast the restrained movements of the dancers with dynamic drumming. A similar aesthetic governs a wedding dance in which the bride remains impassive while being taunted by a pair of older male dancers. Folk dances include martial dances accompanied by the *rebana* flat drum, the *Pattenung* depicting weaving, the *Mappuka*, which imitates fishing, the Bugis *Mappadandang* harvest dance (an occasion for much horseplay among young men), and the Makassarese *Ganrang Bulo*, a highly syncopated dance with young boys beating time with bamboo rods.

The Bugis and Makassarese have written extensive literatures in their own script called *aksara lontara'*, after the lontar palm leaves used as paper (the Gowa king Daeng Pamatte standardized the letters in the 16th century). This literature encompasses customary regulations, augury books (especially for planting and harvesting times), genealogies, dynastic origin myths, factual chronicles, and court diaries (the last two genres are unique in Indonesia).

There is also a religious literature written in Arabic-derived letters called *aksara serang*, presumably introduced via Seram in the Moluccas. Local literary works were also composed in Malay, the most famous being the *Sya'ir Perang Mangkasara* about the defense of Makassar against the Dutch.

## 15 WORK

In earlier times, South Sulawesi exported rice, livestock, and dried fish to the food-deficient Eastern Kalimantan, Southeast Sulawesi, and the Moluccas. Decades of warfare ending only in the mid-1960s left the province among the poorest in Indonesia, and income remains below the national average, though it is rising rapidly as the region begins to fulfill its potential as eastern Indonesia's service and production center. In the past, the Bugis in particular have been dependent on rice cultivation for a livelihood but now are diversifying into coconuts, coffee, cloves, kapok, candlenut, and tobacco. Erosion caused by deforestation, however, threatens agricultural expansion. Fishing, and the collection of sea products such as sea cucumber for the Chinese market, is also an important occupation, particularly among the Makassarese and Mandarese.

Unlike certain other groups such as the Javanese, there is no prejudice against manual labor; what is important in a job is the extent to which one is free of other's commands.

## 16 SPORTS

One traditional sport is *paraga* in which boys or young men attempt to keep a rattan-work ball in the air with their feet to the sound of the drum and *pui-pui* playing.

## 17 ENTERTAINMENT AND RECREATION

See the article entitled **Indonesians**.

## 18 FOLK ART, CRAFTS, AND HOBBIES

The first European travelers admired the region's boat builders, the premier center being Bira at the southwestern tip of the peninsula with its access to the ironwood of Bulukumba and Selayar. Bira boatbuilding teams travel all over the peninsula and even to Kalimantan and Java in order to sell their skills. The boats are built from memory without written designs and with the simplest tools: a vertical saw, hand drill, adze, and a plane, and *no* nails. Only bolts are used to secure ribs to the hull. Traditional boat-types include the large, elegant *pinisi* and smaller outriggered *lepa-lepa* and *sande*. Today, the biggest boats are motorized and reach 500 tons.

Until the early 20th century, South Sulawesi exported silk and cotton; weaving still provides supplementary income for village women. Two styles are best known: *sarong Mandar*, cloth of very fine weave with checkered patterns in sober colors, widely traded in the archipelago; and *sarong Bugis*, brilliantly colored silk cloth with large patterns reminiscent of Thai fabrics.

Other highly developed crafts are blacksmithing (now using scrap metal rather than freshly mined ore), gold- and silver smithing (a specialty being fine filigree work), and mat- and basket-weaving.

## 19 SOCIAL PROBLEMS

See the article entitled **Indonesians**.

## 20 GENDER ISSUES

South Sulawesi's Gender-Related Development Index (combining measures of women's health, education, and income relative to men's) is 56.9, significantly below Indonesia's national GDI of 59.2. The province's Gender Empowerment Measure (reflecting women's participation and power in political and economic life relative to men's) is 45.6, also lower than the national GEM of 54.6.

According to anthropologist Christian Pelras, Bugis culture overall emphasizes the equality and complementarities of the two genders, despite Islamic influence often appearing to put men in the foreground and women in the background. The freedom and power of women in Bugis society struck early European observers; many instances are known of woman rulers (even one ruling her kingdom without interference from her husband, the ruler of another kingdom!) and woman warriors (female fighters participated in the Indonesian struggle for independence and female squads fought in the rebellions of the early post-colonial years). The strict barriers between classes in traditional Bugis society actually permitted a woman ruler to have men of lower rank, men who could never marry her, as her vassals or retainers. Although village leadership tends to be male, these male leaders are called "mothers of the people," another indication that political power and womanhood are not considered incompatible.

Women are not regarded as inherently weaker or more delicate than men (one type of "women's work," pounding rice, is very physically demanding). In the first years of his marriage, a man generally moves into his wife's parents' house and for that reason is not likely to be domineering towards his wife. The home is the domain of the wife, but this does not mean that the wife does not contribute to the family's economic livelihood; on the contrary, she, in addition to helping out with farming, engages in weaving, petty trade, or other activities to bring in income (in the case of fishing families, it is the wife who supports the family while the husband goes to sea, his earnings going largely to sustain him while he is away from home with the surplus he brings back serving as a mere supplement to family resources).

## BURMAN

**PRONUNCIATION:** BUR-muhn

**ALTERNATE NAMES:** Burmese, Myanmar

**LOCATION:** Myanmar (Burma)

**POPULATION:** 30 million, estimated.

**LANGUAGE:** Burmese (also called Myanmar)

**RELIGION:** Theravada Buddhism

### <sup>1</sup> INTRODUCTION

The country known today as Myanmar or Burma is a multi-ethnic entity, formed in colonial times from Burman, Rakhine, and Mon kingdoms; Karenni and Shan principalities; Chin, Kachin, Naga, and Wa chiefdoms; as well as Karen and other communities. Burmans are the largest ethnic group, with an estimated 68% of the population. Myanmar is an ancient name for the land of the Burmans, Burma (or Bama) is a less formal name. Burma was used as the name of the entire nation during the British colonial period and following independence, but the military government officially renamed the country Myanmar in 1989. The Burmese democracy movement, U.S. government, and BBC News continue to use Burma while the United Nations uses Myanmar. The Burman people are also called Bamar or Burmese.

Like many other peoples of Myanmar, the ethnic Burmans descended from western China. During the 7th century, they migrated to the dry areas in the valleys of the Irrawaddy River and the Chindwin River. Originally a hill tribe, they learned the art of wet rice cultivation from the indigenous Pyus and converted themselves to Buddhism, which flourished then among the Pyus. From the dry zone of Burma, the Burmans migrated to what is now lower Burma. In British colonial times, many Burmans moved to lower Burma, outnumbering the Mons in their own land. In the country's largest city, Rangoon (also spelled Yangon), much of the population is of mixed descent from China, India, and Europe.

King Anawrahta founded the first Burman kingdom in 1044 at Pagan. There were three Burman dynasties: the Pagan, Ava, and Konbong. Most Burman kings were aggressive towards their neighbors and attacked Arakan, Mon, Thai, Manipur, Shan, and Assam kingdoms whenever they were confident and militarily strong enough. Loot, slaves, and white elephants were the main attractions.

Burma's sovereignty ended in 1885 when the British annexed Burma for the final time and colonized the region. During World War II the Japanese invasion force was initially backed by ethnic Burman leaders and most of the Burman population, while other ethnic groups supported British and American forces. Although the Burman leadership under General Aung San switched sides later in the war, the wartime ethnic conflict continued after the war was over. The Burmans and other ethnic groups had grown to distrust each other.

In 1947 the Burman leader General Aung San negotiated with the British for Burma's independence. In the course of the negotiations, Aung San met with the leaders of the people bordering the land of the ethnic Burmans. The Chin, Kachin, and Shan agreed to join the Burman union. In 1948 Burma gained independence together with the Chin, Kachin, and Shan. General Aung San and his cabinet were assassinated right after in-

dependence. Since gaining independence the ethnic Burmans have built the governments that have ruled Burma, first replacing the British with the democratic government of the Union of Burma. Burma remained democratic until 1962, when the head of the military, General Ne Win, took over in a coup d'état, in order to crush ethnic and Communist insurgency. Ne Win's military dictatorship introduced "The Burmese Way to Socialism" and the Burma Socialist Program Party (BSPP), which ran the affairs of the country. A prosperous country under the British, Burma became one of the 10 poorest countries in the world. General Ne Win dissolved the BSPP in response to a mass civil disobedience uprising led by students against the government in 1988. After killing several thousand peaceful demonstrators, another military government—the State Law and Order Restoration Council (SLORC)—took over in September 1988 and was still in power as of 2008, although its name was changed to the State Peace and Development Council (SPDC). The most powerful of the generals is the SPDC junta's head, Gen. Than Shwe.

Rebellion by non-Burman ethnic groups continued on a small scale into the 21st century and the regime was notorious for its human rights violations against civilians in the non-Burman areas, including Karen and Shan States. Repression also extended to the Burman population, with Gen. Aung San's daughter, Aung San Suu Kyi, an extremely popular democracy movement leader and Nobel Peace Prize Laureate, held under house arrest for many years. Her party, the National League for Democracy won 1990 elections in a landslide, but was never allowed to take office. In 2007 Buddhist monks led tens of thousands of demonstrators in the streets of cities and towns, peacefully calling for change, but the "Saffron Revolution" was violently suppressed by the regime. On 2 May 2008 Cyclone Nargis devastated Burma's Irrawaddy Delta region, killing at least 80,000 people in Myanmar's worst recorded disaster, and leaving millions with their homes and farms destroyed. The Delta's population is mostly Burman and Karen and had been the major rice producer for the nation. The military regime was strongly criticized by the international community for rejecting immediate relief efforts from the outside world.

## 2 LOCATION AND HOMELAND

The population of ethnic Burmans is estimated at around 30 million, but a true census has not been taken since the 1930s. Burma is bordered by India, Bangladesh, China, Tibet, Laos, Thailand, and the Indian Ocean and it is the largest country in mainland Southeast Asia. Most of the Burman people live in central and southern areas, including the cities of Rangoon (Yangon), and the former royal capital, Mandalay, which is considered the cultural center for the Burman people. There are also many Burman refugees and emigrants in many other countries, although the bulk of overseas populations from Myanmar are of other ethnic groups.

## 3 LANGUAGE

The Burmese language (also called Bamar) belongs to the Tibeto-Burman subgroup of the Tai-Chinese group of languages. The Burmese language has affinity to Tibetan and the Lolo tribes in China. The Burmese script was taken from Sanskrit and is similar in that way to Urdu, Hindi, Thai, and Cambodian, although its rounded letters are very distinctive. Because of the colonial influence, English is widely spoken as the

second language of the Burmans, especially among the older generation.

Burman names are equivalent only to a first or personal name. The Burmans usually have no family names. Burman names have meanings. For example, "U Nu" (former Prime Minister) means "uncle young," or "uncle tender." "U" means "uncle" but is used in the same way as "Mr." in English. "Ma" is equivalent to "Miss" and "Daw" (aunt) for women. The Burmans stress age in social and human relations. An elder must be addressed as "uncle" or "aunt" or, if the ages are not far apart, as elder brother ("ako") or elder sister ("ama"). Most Burmese names consist of two or three words (e.g., Ne Win or Khin Maung Gyi.) Infrequently, a Burmese person will add a family name to their own, most notably Aung San Suu Kyi, whose name contains the name of her father, Burma independence hero Gen. Aung San.

## 4 FOLKLORE

The Burmans fear and respect spiritual beings called the Nats, which they celebrate in their ritual plays, prayers, sacrifices, and dances. These beliefs coexist with Buddhism in Myanmar, but are not part of the Buddhist religion. The Nats are believed to be very clever and possess immense power. They have human bodies and can exist in the trees, on top of mountains, in the ocean, and anywhere else. The 37 major Nats have distinct personalities, usually based on real people who died terrible deaths. The people give offerings to the Nats out of fear, so that they will protect them. Thagyamin, considered to be

*A Burman girl with a decorated face from a local cosmetic, called Tanaka, is photographed while selling souvenirs to tourists at a temple in Mandalay, Myanmar. Mandalay's Buddhist monasteries are among the most important in the country. (AP Images/Apichart Weerawong)*

a god, hears all and knows all, and is usually honored during the New Year Festival. The Burmans also honor the Naga, divine serpents that live at the bottom of rivers, seas, and oceans in palaces built from precious stones and pearls. They are the protectors of the water and land. The Naga serpents have the advantage of being able to take the form of human beings, whereby the female Naga can become beautiful women and marry powerful men in order to influence them. The Burmans also believe in Bilus, monsters who live in hidden places.

## **5 RELIGION**

The Burman people are close to 100% Buddhists of the Theravada type, which originated in Sri Lanka and emphasizes the wisdom of ancient scriptures to show how humans may overcome suffering. Before the Burmans came to Burma, the Pyu and Mon people were influenced by the Buddhism of India and Ceylon (Sri Lanka.) Burman kings invaded their neighboring countries and brought back slaves and artisans to build

pagodas or temples and captured religious teachers, such as the Mons. Burma has over one million Buddhist temples. Old Burman cities, such as Pagan, Ava, Sagaing, and Mandalay, remember past Burman glories with their numerous pagodas. Rangoon is the site of the magnificent gold leaf covered Shwe Dagon Pagoda. In cities, towns and villages, Buddhist monasteries are centers of community life, culture, and learning. In the morning, lines of monks walk along the streets, accepting offerings of food and blessing the households. Many Burmans practice meditation every day, as a way to gain insight into life and achieve a calm state of mind.

Although Buddhism is supposed to be tolerant, Myanmar's military regime has been accused of trying to impose the majority religion on non-Burman, non-Buddhist ethnic groups. Buddhist monks have often been a political force in Burma and marched against military rule in 2007's Saffron Revolution. They are highly respected by the Burmans, but many were beaten, arrested, and even killed by the military at that time.

After Cyclone Nargis in 2008 Buddhist monasteries provided sanctuary for storm victims and organized local relief efforts.

## 6 MAJOR HOLIDAYS

The Burmans have two major holidays. The New Year, combined with the Thingyan (or “Water Festival”), takes place April 13–16; April 17 is the New Year. During the Water Festival, at the height of Myanmar’s hottest season, everyone sprays each other with water from cups, buckets, or water-pumps. Respect is shown to elders, who have water poured gently on their hands, but everyone else (including foreign tourists) is fair game for getting completely soaked by the water splashing. Young Burmans take this opportunity to express their secret love to girls or boys by throwing water on them. Song and dance performances and satirical skits also take place at this festive time. The other major Burman holiday takes place on the full moon of Tasonmon in November and is called the Light Festival. Like Christmas in the Western world, at that time the Burmans decorate their houses with lights, mostly candles. Wearing their best outfits, young men and women walk the town streets, which are filled with people.

Myanmar’s national holiday commemorates independence from Britain on the fourth of January with military parades, speeches, and gun salutes. Union Day, observed on February 12, celebrates the signing of the Panglong agreement, in which the Shan, Kachin, and Chin agreed to join the Burmans to form the Union of Burma in 1947. Martyr’s day (August 12), the day Aung San, the founding father of the Union of Burma, was assassinated, is also observed.

## 7 RITES OF PASSAGE

As soon as a baby is born, the mother avoids eating meat, especially fish. From birth, boys and girls are treated differently. Names are usually given immediately after birth, but it is not unusual for the baby to be unnamed for many months. The initials of the names reflect the day of the week on which the baby was born, and that day is important in Burmese astrology, with an animal or symbol for each day of the week. For a girl, ear-piercing is an important event, meant to beautify her. When a boy is born, a learned man is invited to wash the baby’s hair. The learned man places gold and silver coins in a cup, which is used to wash the baby’s hair so that he will grow up rich.

One of the most important duties of the parents of a boy is to send him to the Buddhist temple to train as a novice monk. The boy can be anywhere between 9 to 13 years old, depending on whether the boy believes he is able to survive without food from noon until night, when the monks fast. The celebration starts with the boy’s dressing up as a prince and being carried on a platform to the temple. He is not supposed to touch the ground. On reaching the temple, the parents bring out a special cloth, on which the hair of the boy is to drop without falling on the ground. After the boy’s hair is shaved, he officially becomes a novice monk with prayers and Buddhist chanting. The duration of the monkhood can last from three days to a week. Some novices stay on to become monks, in which case the monkhood lasts a lifetime. Grown men sometimes go back to the monastery as monks for a limited period. Girls and women may become Buddhist nuns, sometimes in later life if they are widowed. In Myanmar, Buddhist monks wear robes of a dark red color, and Buddhist nuns wear pink robes. Their vocation is to know and teach the Buddhist scriptures, but

the monks and nuns provide support to their communities in many other ways.

A deceased person may be buried or cremated with a coin in their mouth so that the deceased can pay for boat and bus fares in the afterlife. The family brings leaves from the funeral ground back home so that the dead relative will know the way home. Seven days after death, a monk is called to tell the deceased that he can go anyplace he or she wishes to go from that day on. Most Burmans believe in ghosts and haunted houses.

## 8 INTERPERSONAL RELATIONS

Burmans greet each other by asking “Have you eaten?”—they do not have a specific “good morning” or “good evening” greeting. If the person is visiting and replies in the negative, the host is obligated to serve food. If the answer is in the positive, then the next question will be, “What did you have for your meal?” Meeting on the street, they tend to ask, “Where did you go?” or “From where did you come?” These greetings are more a formality than an actual question. In the morning they may say to each other, “Are you up already?” There is also an expression, “Mingalaba,” which means “Welcome” or “Hello.”

Burman men and women hold hands in public only if they are already engaged or married. However, men often hold hands with each other, and women may hold hands with each other, just as friends. Kissing is still regarded as a Western custom, and kissing in public places is regarded as uncultured. As would be expected, nodding the head means “yes,” and shaking the head means “no.”

Because telephones are very expensive, people visit each other at home whenever they have time. They visit each other in the very early morning or at night, usually unannounced. The Burmans are very friendly and are always open to visitors.

Parents often play a role arranging their children’s marriages. Astrologers match their birth day of the week for a man and woman; for example, two people are a good match if they are born on a Wednesday and a Saturday. Nowadays, a boy and a girl might meet more casually and go to see a movie or have dinner together. If a boy likes a girl, he may walk in front of the girl’s house a thousand times until the girl and her family notice him. He may also give her a love letter, which she might refuse or reluctantly accept, which does not mean complete rejection. In traditional Burman society, a girl’s acceptance of admiration is a serious commitment and indicates that a wedding is not far off. More casual relationships have become normal in urban areas and universities, however.

## 9 LIVING CONDITIONS

Myanmar’s health care system has gotten worse and worse under military rule, and malaria, diarrhea, dysentery, tuberculosis, hepatitis, and HIV/AIDS are among the common diseases. Malnutrition is also widespread, particularly among children. Most people live on one dollar a day or less, and own very few possessions. They have only necessities, such as two or three cooking pots, a few plates, wooden spoons, and some articles of clothing. Radios and books are cherished possessions, and only the elite own cars, telephones, computers, or TV sets. Even for well-off people in the cities, electricity is unreliable, so they must use generators to keep lights and appliances running.

Burma is an agricultural country and therefore about 80% of the population lives in the countryside. Most Burman farmers have a pair of oxen or water buffalo for wet rice cultivation,

a hoe, and a cart. Chickens, goats, and pigs are raised for food. Burman farmers do not own horses, but some towns still have horse carriages for transportation. Houses of the Burman rural people are made mostly from bamboo and have two partitions; one side is for cooking and storage, and the other half is used for sitting and sleeping. In urban areas, brick and concrete buildings, often dating back to colonial times, contain small apartment spaces.

Burmans' means of transportation include ox carts, bicycles and motorbikes. Trucks and jeeps take passengers between towns. River ferries, buses, and trains link towns and cities, and are usually very crowded and slow. There are also domestic airlines, which fly between Rangoon (Yangon), Mandalay, and a few other airports, but they are used mainly by government officials and tourists.

### 10 FAMILY LIFE

Usually a Burman family has at least five children. The family also includes grandparents and the extended family members. When a Burman man marries a woman, it is most likely that he will live with the woman's family. The grandparents of his wife and possibly the parents of his mother-in-law all live in the household. The brothers and sisters of his wife might also live in the house. The man goes to live with his in-laws because he is expected to go to work all day and be absent from the home. He has very little contact with his mother-in-law. On the other hand, if the wife went to live with his family, she would be in constant contact with her mother-in-law, and they may experience difficulties. Young couples also live together with their parents because the babies can be better taken care of by aunts and grandmothers. Burmans are expected to look after their elderly, so it is possible that parents may stay with their children their whole lives.

Dogs are the most common pets, but are kept outside to guard the house. Cats are also a common pet. Many Burman farmers keep cows and water buffalo for plowing their fields and pulling carts.

### 11 CLOTHING

Both Burman women and men wear sarongs, called *htami* for women and *longyi* for men. The sarong is a long tube of cloth that is wrapped and tucked in at the waist for women, knotted at the waist for men. The designs on the *longyi* and *htami* are different according to regions and fashions. Men traditionally wear collarless shirts with their *longyis* and women wear short, fitted blouses and jackets. The traditional clothes are made of cotton, but for special occasions they are woven of silk. Wealthy people adorn themselves with gold jewelry and the gems produced in Myanmar: rubies, sapphires, pearls, and jade. Farmers wear big conical hats as sunshades, and people often carry umbrellas as shelter from sun or rain. Burman women and children use a fragrant wood paste called *thanaka* as a cooling sunscreen on their faces and women also pin flowers in their hair.

Because the sarongs don't have pockets, a cloth shoulder bag is an essential accessory for men and women. Among younger Burmans, jeans have become popular. Sometimes jean jackets or t-shirts are worn with sarongs by younger people. The Myanmar school uniform is a green sarong and a white shirt for boys and girls, with a cloth shoulder bag for carrying

books. Everybody wears flip-flops outdoors and goes barefoot inside the house.

### 12 FOOD

The staple item of Burman food is white rice, eaten with a curry of fish, pork, beef, or chicken, plus vegetables, garlic, and ginger. Fish sauce, chili, and dried shrimp are used for flavor. *Ngapi*, a pungent fish paste, is eaten at almost every meal. Burmans do not eat meat in large quantities. Meat is usually cut into small pieces, about one-half inch on all sides, and fried with lots of oil. The two most common Burman noodle dishes are *Mohinga* and *Ohnokhawkwe*. *Mohinga* is rice noodles mixed in a thick fish soup. *Ohnokhawkwe* is a chicken stew cooked in coconut milk, also served with noodles. Burmans love to eat sour, sweet, salty, bitter, and spicy snacks. Unripe mangoes and limes are a must for the meal to be properly served. Fruit is usually served for dessert or a snack and may include ripe mango, pineapple, watermelon, or mandarin oranges. Tea, either plain or with milk and sugar, is the most common beverage. A salad called *laphet thoke* is made of pickled tea leaves with garlic and peanuts. Beer and soda pop are produced in Myanmar and imported beverages are very expensive.

Burmans eat rice and curry with their fingers and soup is eaten with a spoon from a shared bowl. Most restaurants in Burman areas are run by Chinese or Indian ethnic people; Burman food is normally available in homes or at temple fairs. Burmans normally eat two times a day, once in the morning, which could be considered brunch, and the other meal in the afternoon. They may start and end the day with tea or coffee and a few cookies. As the country has become more impoverished, many Burmans subsist only on watered-down rice soup, instead of rice and curry.

### 13 EDUCATION

The literacy rate among the Burmans was traditionally quite high because Buddhist monasteries served as the center of learning, where the monks functioned as teachers. After independence, with public schooling, Burma had one of the highest literacy rates in Asia. However, education steadily lost funding and declined under military rule. Because university students led the 1988 pro-democracy uprising, the regime closed down educational institutions nationwide for several years. Myanmar's educational system is highly controlled, with university students assigned their major fields of study instead of choosing for themselves. Teachers are underpaid and often work second jobs. Access to books and computers is very limited. In spite of the many problems, Burmans seek educational opportunities for their children (girls as well as boys) as their highest personal priority. Many overseas Burmans have advanced degrees and are medical doctors or university professors.

### 14 CULTURAL HERITAGE

Burmese classical music is performed by orchestras at Pwes or concerts, usually in open-air theaters. It uses a gong and drum percussion ensemble for complex rhythms, accompanied by stringed instruments and horns. Some Burmese music has also been adapted for the piano, an instrument imported by the British. Vocal music uses the orchestral compositions or a harp as background.

Burmese dances are very graceful movements of the whole body and feature hand gestures combined with fast, skilled

footwork. The classical dances are performed by learned professionals with years of strict training. Burmese dance dramas, with an orchestral score, mostly are romantic love stories and are accompanied by an orchestra.

"The Glass Palace Chronicle," written in the 19th century, recounts the history and mythology of the Burman monarchy. Although the Burmans have a rich literary history, often with Buddhist themes, literature has been very limited under military rule by strict censorship. It is extremely hard to get serious fiction or any nonfiction published, but popular magazines feature romantic stories and poetry. Books in Burmese and English are considered very valuable and are shared by many readers.

### 15 WORK

Most Burmans are farmers, going to work in their rice and vegetable fields very early in the morning, before dawn. When the sun becomes hot they go home to rest and eat. They go back to the fields when it cools down until darkness. Part of the rice crop is often confiscated by the military.

People with education often work as civil servants. Office hours are from 9:30 in the morning to 3:00 in the afternoon. In 2005 the SPDC moved the capitol of the country from Rangoon to Naypyidaw, in a remote area 200 miles to the north. Government workers were compelled to move there and a new complex of office buildings was built for them. Many government workers, and even teachers and doctors, must take second jobs to support their families.

Myanmar has some manufacturing of goods for local use and garments for export, although factory wages are low. Many Burmans work in small craft workshops, making lacquer ware, baskets, pottery, and tobacco cheroots. Burman men and women run shops, market stalls and street carts, selling a great variety of goods in rural and urban areas. Extra farm produce is brought to markets for sale, usually early in the morning. Children work on farms and in other occupations, including manufacturing and construction.

The army in Myanmar is very large, with almost half a million mostly Burman troops. Most soldiers join voluntarily in hopes of a better living standard; however, many are forced to join, and Myanmar's army is known for its thousands of child soldiers, who are raised with the military as their parents.

Burman refugees have tried to continue their education in exile, although most take any work available so they can survive in a new land. Some have careers in journalism or work for human rights organizations. Other exiles are professionals in the arts and sciences and Burman doctors can be found around the world.

### 16 SPORTS

*Chinlon*, a typical Burman sport, resembles hacky sack. A cane ball about 6 inches in diameter is kicked by people standing in a circle, passing the ball from one to the other. This sport can be played by two or more people, on flat ground anywhere. Soccer is the favorite spectator sport of the Burmans, attracting large crowds. Other popular sports include volleyball, badminton, and Burmese kickboxing.

### 17 ENTERTAINMENT AND RECREATION

The most common live entertainment for the Burmans is the Pwe, in which music and dance dramas are played along with

comedy skits, usually outdoors and lasting all night as part of a temple fair. Traditional puppet shows use a set of characters portrayed by large wooden marionettes.

Myanmar's television stations, like newspapers and other media, are completely controlled by the military regime, so satellite TV is a popular alternative. Burmans watch local or foreign movies in theaters, or on disc at video parlors. Hollywood movies set in Myanmar include *Beyond Rangoon* and *John Rambo*, both of which are banned by the regime.

Satirical comedy performances are a Burman tradition but often land the performers in trouble with the regime. Myanmar has an underground hip hop culture, whose rappers have ended up in prison as politically suspect. The SPDC controls the Internet servers, but young Burmans find ways to communicate with the outside world through Internet cafes. Burmans also enjoy karaoke singing and video games.

### 18 FOLK ART, CRAFTS, AND HOBBIES

Myanmar's Burman areas are replete with pagodas and monasteries. The prayer pavilions of the pagodas are decorated with elaborate wood carvings. Most Burman homes have a Buddhist shrine with Buddha images set on wood carvings resembling the thrones of Burman kings. Painted wooden statues of the various Nats are also made by the Burmans. Lacquer ware, in which layers of shiny shellac form a colorful coating on a bowl, tray, or box, is a popular Burman craft. The lacquer items often are carved with scenes or painted in gold. Burmans are also known for their silk weaving and for kalaga tapestries of royal or mythical scenes, which are embroidered with velvet and sequins. Charming toy tigers, elephants, and owls, hand-made of paper maché or wood are still sold in the markets of Myanmar.

### 19 SOCIAL PROBLEMS

Myanmar is one of the world's poorest countries despite many natural resources. Corruption is pervasive, usually involving military officials and rich business owners. Narcotics are easily available, and drug abuse affects a large section of the population, especially young people. Many people are unemployed and seek sanctuary in the power of drugs to forget their daily miseries.

In Burman areas the regime often demands that each household or family must supply laborers to work in the construction of railroads, roads, government buildings, etc., calling it voluntary work. However, these people are never paid and must bring their own food for the duration of their assignment. If a household is unable to supply a laborer, the household is fined a large sum of money.

While human rights violations are most severe in non-Burman areas of Myanmar, repression is also pervasive in Burman regions. People are often arrested without any reason given and jailed without trial for many years. Family members may be imprisoned if a dissident relative has escaped from arrest. Freedom of expression is almost completely nonexistent in Myanmar, although ties to the outside world through underground Internet and cell phone networks are increasing. Overnight house guests must register with the authorities and travel is highly restricted. Decades of repression and poverty for the Burmans and other people of Myanmar have led to a psychology of fear, depression, and resignation, which Aung San Suu

Kyi, the Buddhist monks, and student activists try to overcome with messages of hope and by examples of courage.

## 20 GENDER ISSUES

Traditional Burman society was distinguished by rights for women in property ownership, marriage, and divorce. While women are considered to have less status than men in Theravada Buddhism, they have always played an active role in Burman society. Women are vital participants in health care and education. Burman women sell goods in markets and shops and own small businesses. In the family, the wife has the duty to look after what her husband earns. The husband delivers his total paycheck to the wife, and the wife administers the household budget. Burmans are usually as eager to educate their daughters as their sons.

Contradicting the social and economic status of Burman women is Myanmar's military rule, which is entirely male-administered, with no women holding important office, although the main opposition party is headed by a woman, Aung San Suu Kyi, who is greatly respected throughout Myanmar and around the world. Burman folk beliefs also express a suspicion of women, who are thought to have powers that can weaken men. Many Burmans believe that these powers can contaminate men if they come into contact with women's sarongs or undergarments. Women and transgender people can become mediums to the world of the Nat spirits, a respected role in Burman society. Although its emphasis is on male/female marriage, Burman society is usually very tolerant of gay, lesbian and transgender people.

# BUYI

**PRONUNCIATION:** BOO-yeec

**ALTERNATE NAMES:** Buyue, Bunong, Buyai, Buzhang, Burao, and Buman

**LOCATION:** China

**POPULATION:** 2.5 million

**LANGUAGE:** Buyi

**RELIGION:** Ancestor worship; some Catholicism and Protestantism

**RELATED ARTICLES:** Vol. 3: China and Her National Minorities

## <sup>1</sup>INTRODUCTION

The Buyi represent one of the most ancient nationalities of China. They formed a branch of the ancient Yue of southern China, called Liao in ancient Chinese books. Around 200 bc, the state of Yuelang was established in an area long inhabited by the Buyi; thus, there may be a historical link between the Yuelang and the Buyi people. This area was later incorporated by the Western Han Dynasty (206 bc—ad 8). During the Tang Dynasty (ad 618—907), it was ruled by native officials following an agreement with the central government. In the 18th century, the native officials were replaced by Manchu or Chinese officials appointed directly by the Qing Dynasty (1644—1911). This reform evoked strong opposition from the Buyi and led to uprisings. Although their rebellion was short-lived, the names and heroic deeds of their leaders are still frequently on the lips of Buyi people.

## <sup>2</sup>LOCATION AND HOMELAND

The Buyi are mainly distributed in Guizhou, Sichuan, and Yunnan provinces, with dense concentrations in the city of Guiyang, the district of Anshun, and two autonomous prefectures in Guizhou. The famous scenic spots of Huangguoshu Waterfall and Huaxi are located in Buyi territory. On the whole, the Buyi inhabit fertile lands with smooth terrain, mild climate, and abundant rainfall, very suitable for farming. Their population was over 2.9 million in 2000.

## <sup>3</sup>LANGUAGE

Buyi language belongs to the Sino-Tibetan family, Zhuang-Dong group, Zhuang-Dai branch, and is closely related to the Zhuang language. The Buyi did not develop their own writing system, but use Chinese characters. In the 1950s, a written language based on Latin was created, and is very useful and convenient for the Buyi people.

Buyi is a self-given name. Other designations include Buyue, Bunong, Buyai, Buzhang, Burao, and Buman, reflecting a historic era when each clan had its own name. The ancient Chinese books called them Liao, Man, Li, Zhongjia, Yijia, etc. Buyi is the most commonly used designation nowadays.

## <sup>4</sup>FOLKLORE

Buyi folklore was transmitted orally from generation to generation for many centuries. Their myths were deeply influenced by those of the Chinese and other nationalities, so that we find many similarities among them. A myth called *Buyi* describes the creation of the universe by Pangu, a creator god. Buyi was

the man who successfully mastered the flood but died a heroic death. His son and daughter escaped from danger by hiding in a calabash. (They rolled down from the mountain top two millstones that laid one on top of the other when they came to rest, a heavenly-sent sign that they must marry.) After marriage, the girl gave birth to a fleshy lump. Her husband cut it into 99 pieces and threw them in all directions. They turned into 99 villages, each having its own name. Another myth called “Nian Wang shoots suns” says that there were originally 12 suns in the sky and the people suffered a great deal from their fierce irradiation. Nian Wang shot down 11 of the 12 suns to save the people.

The Buyi revere their heroes. Wei Chaoyuan and Wang Achong were leaders of an insurrectionary army against the Qing Dynasty. The Buyi erected statues in their honor and worshipped them (in Anlong County and Dangzhang village). This is rarely seen among other national minorities.

## <sup>5</sup>RELIGION

The Buyi believe in ghosts and worship their ancestors. The shaman, called *laomo* by the Buyi, acts as an intermediary between ghosts and human beings. Illness is considered mischief caused by a ghost, so a shaman is invited to perform rituals in which poultry or livestock is sacrificed. The importance of the sacrificial offerings depends upon the virulence of the ghost, which can only be assessed by the shaman. The Buyi also believe in chicken divination; whatever they want to do must be decided beforehand by divination, especially in the case of marriage, funerals, and house building. The Buyi regard their ancestors as gods of protection and blessing.

Since the beginning of this century, a sizable number of Buyi have converted to Catholicism and Protestantism.

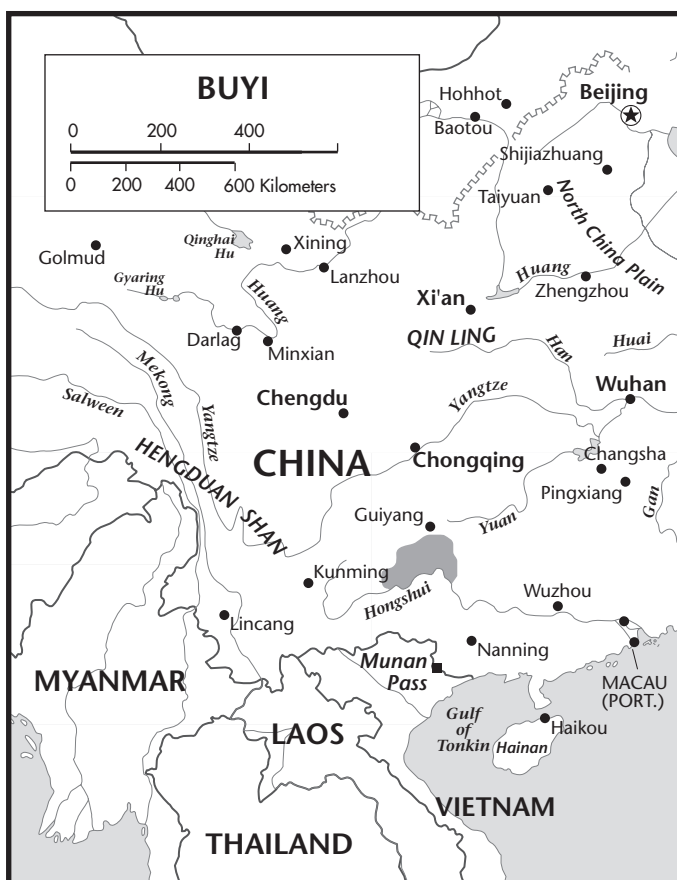

## <sup>6</sup>MAJOR HOLIDAYS

In addition to the Spring Festival and Mid-Autumn Festival, which they share with the other nationalities and with the Chinese, there are other major spring holidays. April 8 (lunar calendar; Western calendar, between May 2 and May 30) is called the Buffalo King Festival, held after the fields are plowed in the spring. Every household makes Buffalo King cakes and steams multicolored rice. People first offer them to the ancestors, then call back the spirit of the buffalo, and finally give half of the food to the buffalo and let it rest for one day. Today, all national minorities in Guizhou participate in this festival. There are spectacular performances, sporting games, and *sheng* (a reed-pipe wind instrument) competitions. The sixth of June (lunar calendar; Western calendar, between June 27 and July 27), called Genjiang or “lesser New Year” is second in importance only to the Spring Festival. Every village kills pigs and cows as sacrificial offerings to the gods of the mountain, of the land, and of the cooking stove. The Buyi of Zhenfeng County in Guizhou take a chicken, a piece of pork, and a cardboard paper horse to the limit of their field. They kill the chicken, splatter the blood onto the paper horse, which is then planted into the field. All of these rituals aim to avert misfortune and obtain a good harvest.

## <sup>7</sup>RITEs OF PASSAGE

The Buyi pay much attention to their newborn children. Besides celebrating the birth, they try to find a god to bless the baby and protect him or her from disease and danger. In the

past, the Buyi had a custom called *Qiangbaohun* (marriage in swaddling bands), that is, matrimonial engagement shortly after the baby's birth. When the boy grew to teenage years, he would ask somebody to put a hat called *jiake* on his fiancée's head. This meant that she was caught by her fiancé, indicating his request for a wedding. If she did not want to marry yet, she should beware lest anyone put the *jiake* hat on her head.

The Buyi make offerings to the spirit of the dead during funerals. The family will kill a buffalo as sacrifice to release the soul of the dead from purgatory. According to traditional custom, the Buyi bury the dead underground.

## 8 INTERPERSONAL RELATIONS

The Buyi are hospitable. A village is usually composed of 10 or more families belonging to a few clans. They are on intimate terms with each other. If something happens, the whole village will come to help. Guests will be treated cordially with wine and dishes. Song will never cease. Duck is often offered—first the head followed by the body—and presented politely. This indicates the hospitality of the host: the duck is all for the guest, from top to toe. The guest should never beg to be excused. Otherwise, it might seem that he thinks the food is unclean.

The Buyi youngsters practice group dating called *ganbiao*. They take advantage of festivals (or going to fairs) to get together. If a girl takes a fancy to a boy through antiphonal singing, she will throw an embroidered ball to him. If he is glad to receive it, they will move to a place close to the other youngsters and sing love songs to each other. After several dates, they

may be deeply in love, but their marriage must be approved by their parents. If disapproved, they usually cannot get married.

## 9 LIVING CONDITIONS

Most of the Buyi dwell at the foot of a hill and beside a stream. They live in houses of one or two stories. Some are combinations of one-story and two-story houses, that is, houses built on the slope, two-story on one side and one-story on the other. The family lives upstairs, while the bottom is for livestock and fowl. The frame of the house is made of wood, and the roof of tile, flagstone, or straw. Buyi in the Biandan Mountain district (in Guizhou) live in houses made of stone with stone tables and stools.

Most traditional infectious diseases have been eliminated or brought under control. By the time babies are one year old the majority have been inoculated against diphtheria, pertussis, infantile polio, and measles.

## 10 FAMILY LIFE

Patrilineal extended families of three and more generations are prevalent among the Buyi. A large family means that the parents live with several married sons and daughters-in-law. In the family, men are persons of authority, while women are in a subordinate position. Buyi families are monogamous. Although close relatives are not allowed to marry, marriage between cousins is prevalent. Furthermore, a woman should marry her husband's younger brother after her husband's death. In the old days, the Buyi married very early. The bride went back to her parents' home right after the ceremony and only returned to live with her husband for a few days at a time during festivals or the busy season. She moved to her husband's house if she got pregnant. After childbirth, she changed her hairstyle from pigtails to combing it plainly, as a nun, and fixing it with hairpins made of silver or horn.

Common pets include dogs, cats, and birds.

## 11 CLOTHING

Men usually wear long-sleeve shirts and long robes covering their pants down to the ankle. Solid navy or white-navy checked scarves are used on their heads. Women wear Mandarin-style blouses and trousers. Sometimes, they wear lace-trimmed blouses over multi-pleated and wax-printed long skirts. A beautiful embroidered cotton apron covers the skirt. During the holidays, Buyi women also like to use silver ornaments to decorate their costumes.

## 12 FOOD

The Buyi are agriculturists. Their staple food is rice, supplemented by wheat, millet, corn, buckwheat, and yams. They love glutinous rice most. They eat Chinese cabbage, radishes, hot peppers, melons, and beans. Protein comes from pork, beef, mutton, chicken, duck, goose, fish, and eggs. A favorite drink of the Buyi is sweet wine fermented from glutinous rice. Mixed with spring water, it makes for a cool beverage in summer. The Buyi take breakfast as early as five o'clock in the morning, then go right away to work in the fields. They return home for lunch at noon, although they sometimes bring a simple meal, which they eat at the edge of the fields. They leave work at five or six o'clock, then do the cooking at home, and take dinner at six or seven o'clock.

*Buyi people eating beside a tree in China. (© Panorama/The Image Works)*

### **13 EDUCATION**

There are primary schools in large villages of Buyi districts. All children over seven are able to receive a formal education. Middle schools, vocational schools, and normal schools were established in counties and some small towns. There are colleges in the cities. As a result, the number of professors and teachers, as well as professionals and technicians, has been increasing rapidly. However, rural families pay little attention to girls' education. The rate of illiteracy is very high among Buyi women.

### **14 CULTURAL HERITAGE**

Buyi songs include historic songs, love songs, labor songs, "weep songs," and lyrics. They can be divided into songs in the major mode and those in minor mode. The former are sung with inspiring strains on ceremonial occasions, such as marriages and funerals. The latter are sung tenderly in dating. *Yueqin*, a four-stringed plucked instrument with a full-moon-shaped sound box, and *Dongxiao* (or *Duanxiao*), a vertical bamboo flute, are their favorite instruments. An age-old traditional percussion instrument, the bronze drum with various figures and geometrical patterns, is available in almost every village. It is used as accompaniment for bronze drum dances in grand festivals, or beat by the shaman on funeral or sacri-

ficial offering rites. Famous dances include "Sewing Dance," "Chaff Packet Dance," and "Lion Dance."

The Buyi culture is rich in folk tales, myths, stories, fairy tales, fables, proverbs, and poems.

### **15 WORK**

The Buyi engage in self-sufficient agriculture. Sometimes the males go hunting in the slack season of farming, and the females gather edible wild herbs. Some peasant households grow apples and medicinal herbs. The double-cropping of rice requires intensive labor. Besides crop-growing labor, the household chores are women's burdens. The ready-made clothes now available in the market greatly lighten their load.

### **16 SPORTS**

Horse racing on festive occasions is a traditional sport. We find in Guizhou a kind of horse with short legs but great galloping speed and stamina. Dragon boat regattas held in broad rivers also attract a large number of spectators. The youngsters like to play a game called "throwing the chaff packet." Boys stand in line on one side and girls on the other. They throw small cloth packets filled with chaff to the opposite line, generally to the individual he or she likes.

## 17 ENTERTAINMENT AND RECREATION

Singing competitions are often held on festivals as entertainment. Dozens of singers of both sexes sing musical dialogues in antiphonal style. The songs are not allowed to cease and the words of the songs may not be repeated. There are two kinds of plays that are bound to appear on festive occasions. One is called *Dixi*, performed with masks and stage costumes, the songs being folk melodies. The other, a festive lantern play, is performed with a distinctive tune. The Buyi also like gamecock and buffalo fighting on festivals for recreation. Buffalo fighting is held among villages. Each side chooses buffalo of extreme sturdiness and prompts them to fight along the river bank. A rosette will be placed on the winning animal with pride and joy by the owner.

## 18 FOLK ART, CRAFTS, AND HOBBIES

The *ko-hemp* cloth, a typical Buyi craft, was traditionally sent as a tribute to the emperor. Wax printing cloth is one of the most famous crafts of the Miao and Buyi. They draw figures of wax on the white cloth, which is then dyed and dewaxed. A white decorative pattern in a blue background thus manifests itself at once. After a series of improvements in the technological process, multicolored wax printing cloth (*batik*) was developed and greatly welcomed in the market. Embroidery is a tradition of Buyi women. A pyramid-shaped bamboo hat with a variety of figures is not only beautiful and durable, but also useful as an umbrella for rain and sun.

## 19 SOCIAL PROBLEMS

Poverty and isolation are still the most important socio-economic problems of the Buyi. Modernization through reform and opening to the outside world has brought social and economic development to the coastal areas, border areas, and areas along the Yangtze River. The Buyi districts share, to a limited degree, in this new-found wealth.

## 20 GENDER ISSUES

The Chinese constitution states that women have equal rights with men in all areas of life, and most legislation is gender neutral. However, there are continued reports of discrimination, sexual harassment, wage discrepancies, and other gender related problems. The gap in educational levels between women and men is narrowing with women making up 47.1% of college students in 2005, but only 32.6% of doctoral students. China has strict family planning laws. It is illegal for women to marry before 20 years of age (22 for men), and it is illegal for single women to give birth. The Family Planning Bureau can require women to take periodic pregnancy tests and enforce laws that often leave women with no real options other than abortion or sterilization. Prostitution and the sex trade is a significant problem in China involving between 1.7 and 5 million women. It involved organized crime, businessmen, the police, and government workers, so prosecution against prostitution has limited success. In 2002, the nation removed homosexuality from its official list of mental illnesses, and though it is still a taboo topic, homosexuality is increasingly accepted, especially in large, international cities.

# CHĀKMĀS

**PRONUNCIATION:** chahk-MAHZ

**ALTERNATE NAMES:** Changma; Sawngma

**LOCATION:** Bangladesh; India; Myanmar (Burma)

**POPULATION:** around 700,000 (est.)

**LANGUAGE:** Dialect of Bengali (Bangla)

**RELIGION:** Theravada (Southern) Buddhism

**RELATED ARTICLES:** Vol. 3: Buddhists

## <sup>1</sup> INTRODUCTION

Chākmā is the name given to the most numerous tribe found in the hilly area of eastern Bangladesh known as the Chittagong Hill Tract (CHT). The name Chākmā was first used by British census-takers in Burma to describe the hill peoples of the Arakan. The tribe call themselves Changma or Sawngma. The derivation of this is unclear, though one author suggests it means “people of the Thek clan,” Thek being a Burmese name for the Chākmās.

Little is known about the origins and early history of the Chākmās. According to Chākmā tradition, the tribe is linked in some way to a mountain kingdom in the Himalayas and the Sakya clan (the clan to which Buddha belonged). Sakyas entered Burma and established kingdoms in northern Arakan and upper Burma at an early date, but the exact link with the Chākmās is unclear. Similarly, the Chākmās believe their ancestral homeland to be Champaknagar. The location of this is uncertain, though many place it in the modern Bihar.

More recent events are easier to outline. Chākmā oral history holds that the tribe migrated from Champaknagar to Arakan, the western hill region of Burma, where they lived for about 100 years. Around the 16th century, they moved northwards into Bangladesh and were granted permission by the ruling Nawab of Bengal to settle in the hill region of Chittagong. When political power in Bengal passed to the East India Company in AD 1760, the British formally defined Chākmā territory and recognized the powers of the Chākmā Raja—subject to payment of tribute. The exact amount of this tribute was a matter for dispute and resulted in a long drawn out war fought by the Chākmā Rajas against the British. The issue was settled by the peace treaty signed in 1787 between Raja Janbux Khan and the British government.

By and large, the Chākmā rajas and the British colonial administration remained on good terms. At first, the British followed a policy of noninterference with the Chākmā hill tribes. But unrest in the hill areas ultimately led to Chākmā territory being brought under direct British control. In 1860 and 1900, various rules and regulations were set in place for the administration of the Chittagong Hill Tracts.

At the partition of India in 1947, the Chittagong Hill Tracts were awarded to Pakistan rather than to India. This caused considerable resentment among the predominantly Buddhist Chākmā population, who saw their cultural affinities to be with the Hindu peoples of India rather than with the Muslims of East Pakistan. This resentment increased with the removal of the old British “Excluded Area” status that provided some protection for tribal areas. One result of this was an influx of Muslim settlers into the region. The seeds were thus sown for a tribal movement that came into focus in the early 1970s, when

it became clear that the policies of the new Bangladeshi government would differ little from those of the Pakistanis. The year 1973 saw the beginnings of an armed insurgency by the Shanti Bahini (“Peace Force”), aimed at gaining autonomy for the Chittagong Hill Tracts.

The problems in the Chittagong Hill tracts can be traced back to the completion of a dam at Kaptai near Rangamati between 1957 and 1963 when the area was a part of East Pakistan. At least 54,000 acres of settled cultivable land, mostly farmed by the Chākmā tribe, were lost in 1957 when the government began the construction of the Karnaphuli hydroelectric project. Over 400 square miles of land were submerged with far-reaching effects on the economy and life-style of the tribal people there. Some 100,000 people lost their homes and prime agricultural lands. Compensation for lost land was inadequate and over 40,000 Chākmā tribals crossed the border into India where the majority have sought Indian citizenship. At the same time, the Pakistan Government announced its intention to open up the area for economic development and encouraged poor Bengali families to settle there. This policy was even more vigorously pursued by the Bangladeshi government. Conflict over land together with the threat of assimilation into the majority culture of Bangladesh, provide the background to the armed conflict between Chākmās and Bangladeshis.

The Shanti Bahini was the name of the military wing of the Parbatya Chattagram Jana Sanghati Samiti (PCJSS)—the United People’s Party of the Chittagong Hill Tracts. It was formed in 1972, shortly after the creation of Bangladesh following the 1971 war between India and Pakistan, to preserve the rights of the tribal people in south-eastern Bangladesh, and fought for many years against the central government. In February 1972, a tribal delegation called on Prime Minister Sheikh Mujibur Rahman to put forward four basic demands: autonomy for the Chittagong Hill Tracts, together with provisions for a separate legislative body; retention of the provision of the 1900 Regulation that allowed a form of self government; the continuation of the offices of the traditional tribal chiefs; a constitutional provision restricting amendment of the 1900 Regulation; and the imposition of a ban on the influx of non-tribals into the area. All the demands were rejected and the 1972 Constitution of Bangladesh made no provision for any special status for the Chittagong Hill Tracts.

The Shanti Bahini did not become militarily active until the mid-1970s when it began to attack military and paramilitary personnel and their bases in the Chittagong Hill Tracts, as well as non-tribal settlers, resulting in hundreds of deaths and the abduction of foreign nationals for ransom money. Violent army operations in the Chittagong Hill Tracts began in March 1980 when it was reported that 22 soldiers were ambushed by the Shanti Bahini in the village of Kaukhali west of Rangamati where Bengali families were being resettled. The army retaliated by deliberately firing on two groups of unarmed tribal people killing a number of villagers after they were ordered to line up. From then on, Bengali settlers began to attack the tribal people apparently at the instigation of the army or in conjunction with the operations of army personnel. The army reportedly recruited armed groups known as Village Defense Parties (VDP—also called village defense police) from the new settlers and provided them with firearms to resist the Shanti Bahini. Official figures indicate that more than 8,500 rebels, soldiers and civilians were killed during two decades of insurgency. The

number of civilians killed is estimated at 2,500, with Amnesty International, the human rights organization, reporting serious violations of human rights in the Chittagong Hill Tracts by Bangladeshi military personnel, including rape, torture, indiscriminate shooting, assaults on women, capture of farmland by Muslim settlers, and the killing of Chākmā.

Rebels and Bangladeshi security officials say that, after the assassination in 1976 of Sheikh Mujabir Rahman, India secretly provided arms and money to the tribal insurgents fighting in the area. The rebels, who were mostly Buddhists, say they were being persecuted and pushed off their fertile lands by an influx of ethnic Bengali Bangladeshis, who are overwhelmingly Muslim. "We are not separatists and we do not want armed intervention by India," said Mr. Chākmā, a rebel spokesman. He said they wanted a stop to Muslim settlers, protection of the region's (Chittagong Hill Tract's) demographic character, free elections, and extensive economic and political powers.

In August 1992, the Parbatya Chattagram Jana Sanghati Samiti declared a unilateral cease-fire for three months, which remained in force indefinitely until the signing of the peace accord with the Bangladeshi government on 2 December 1997, although some organizations such as the Hill Students Council, Hill Peoples Council, and Hill Women's Federation opposed the peace deal and formed the United Peoples Democratic Front (UPDF), a dissident political party. The main provisions of the Peace Accord included the establishment of a Chittagong Hill Tracts Regional Council with its Chairman, who would be a tribal, having the status of a state minister.

Any new laws in connection with the Chittagong Hill Tracts were to be enacted in consultation with and on the advice of the Regional Council. No amnesty was to be provided to the army and police personnel for past human rights violations, but there was no commitment in the Accord that past human rights violations by the law enforcement personnel or the Bengali settler groups close to the army would be addressed. However, a general amnesty was to be extended in the accord to the former members of the Shanti Bahini who surrendered their weapons. The Accord committed both sides to "uphold the characteristics of tribal creed and culture."

Although the government has amended some existing laws to provide for the implementation of the Peace Accord, the Accord is currently in tatters. It was opposed by opposition groups at the time of signing and the current unstable political situation in Bangladesh has not helped matters (a caretaker government is in power to oversee general elections scheduled for the end of 2008). In August 2007 the High Court directed the government of Bangladesh to explain why the Accord should not be declared "illegal," and it has already set aside certain provisions of the Accord by directing the authorities to allow the illegal plains settlers who were implanted into the Chittagong Hill Tracts to register themselves in the voters' list. Few instances of past human rights violations have been investigated, and the main provisions of the Peace Accord have yet to be implemented.

## <sup>2</sup> LOCATION AND HOMELAND

The Chākmā population today is estimated to be around 700,000 people, but it is spread over three different countries. The majority (approximately 450,000 people) are located in the Chittagong Hill Tracts of Bangladesh. This population spills over into neighboring areas of southwest Mizoram State in India, where another 100,000 Chākmās live, and Burma (Myanmar), which has around 30,000 Chākmās. In addition, Tripura State in India had some 50,000 Chākmā refugees who fled Bangladeshi Army operations against their villages in the Chittagong Hills in 1988. By 2000, most of these refugees had been repatriated to their homeland. Another group of Chākmās, numbering around 100,000 people, is found in the foothills of the Himalayas in northeastern India. These refugees fled from Bangladesh to adjacent areas of India in the 1960s and were later relocated to Arunachal Pradesh state by the Indian government. The Chākmā refugees are often stateless, despite petitioning the Indian government for citizenship, although some have recently been granted voting rights in India over the protests of local populations.

Ethnically, the Chākmās are a Mongoloid people related to the Arakanese of southwestern Burma. The Chittagong Hills, the homeland of the Chākmās, are a northerly extension of the Arakan Hills and form part of the western fringe of the mountain systems of Burma and eastern India. They are formed by narrow, steep-sided ridges running north-south at elevations between 600 and 900 m (approximately 1,970 to 2,950 ft) and rising to the highest point in Bangladesh (1,046 m or 3,432 ft) in the southeast. The ridges are separated by lush valleys drained by numerous small rivers. On the west, the hills are bordered by a broad, fertile plain that extends to the Bay of Bengal. The climate of the region is subtropical monsoon, with warm temperatures, monsoonal rainfall patterns, and high humidity.

### 3 LANGUAGE

The Chākmās speak a dialect of Bengali (Bangla) and nowadays write in the standard Bengali script. This language of the Indo-Aryan branch of the Indo-European family of languages has clearly been adopted by the Chākmās through contact with their Bengali neighbors. At one time, however, it seems that the Chākmās spoke a Tibeto-Burman tongue, which today is called Changma Vaj or Changma Kodha. Changma Vaj is written in its own script, known as Ojhapatt, which uses a cursive script similar to those found in Burma and Cambodia, which in turn are derived from the scripts of southern India. Some authors suggest that the Chākmās common language is so distant from Bengali that its classification as a Bengali dialect is questionable.

### 4 FOLKLORE

The Chākmā myth of origin traces the tribe to the ancient kingdom of Champaknagar. One of the king's sons, so the story goes, marched east with a large army in the hope of conquering new lands. He crossed the "sea" of the Meghna River and captured the kingdom of Arakan in Burma, where he settled. His people intermarried with the Burmese and gradually adopted the Buddhist religion. The last of the Champaknagar dynasty was a ruler named Sher Daulat (contact with the Muslims led to the Chākmā rulers adopting Muslim names). He was credited with supernatural powers and was supposed to purify himself from sin by bringing out his intestines to wash them in the river. His wife, out of curiosity, hid herself and watched him do this one day. Sher Daulat found her spying on him and, in a fit of rage, killed her and all his family. His eccentricities and tyranny grew so great that finally his people tired of them and killed him. Fearing the consequences of this, the people left the Arakan, moving north into the area of the Chittagong Hills they occupy today.

### 5 RELIGION

The Chākmās are Buddhists and officially follow the Southern, or Theravada, form of the religion. Theravada Buddhism was introduced into Southeast Asia from Sri Lanka, but in Burma there appears to have been a mixing with elements of northern Tantric Buddhism. Exposure to Hinduism in the 19th century brought Hindu influences to Chākmā society. Likewise, Buddhism in the region has absorbed rather than displaced existing pre-Buddhist beliefs. Buddhism, as practiced by the Chākmās, is thus a mixture of the southern and northern forms, with a touch of Hinduism and aspects of shamanism and animism thrown into the mix.

Almost every Chākmā village has its Buddhist temple (*kaang*). Buddhist priests or monks are called *Bhikhus* and preside at religious festivals and ceremonies. The villagers support the monks with food, gifts, and offerings to Buddha. In the past it was customary for boys, usually around the age of puberty, to take Buddhist vows, even if only for a few days. The novice would shave his head, don the saffron robe, and live the life of a monk until his return to lay society.

The Chākmās also worship Hindu deities. Lakshmi, for example, is revered as the Goddess of the Harvest, and offerings of pigs and chickens are made to her. Similarly, *pūjās* (worship ceremonies) are performed for spirits of the hill, the wood, and the stream, with offerings of rice, fruit, and flowers. Spirits that bring fevers and disease are propitiated by the sacrifice of

goats, chickens, or ducks. Animal sacrifice is, of course, totally against Buddhist beliefs, but the Buddhist priests turn a blind eye to the practice. Exorcists (*ōjhās*) and spirit doctors (*baidyo*) are called in to deal with harmful spirits. The Chākmās believe in witchcraft and the casting of spells for both good and evil purposes. It is considered a very bad omen if vultures, kites, or owls settle on the roofs of Chākmā houses, and *pūjās* are immediately performed to counter this misfortune.

### 6 MAJOR HOLIDAYS

Chākmās celebrate various Buddhist festivals, the most important being Buddha Purnima. This is the anniversary of three important events in Buddha's life—his birth, his attainment of enlightenment, and his death. It is observed on the full moon day of the month of Vaisakh (usually in May). On this and other festival days, the Chākmā put on their best clothes and visit the temple. There, they offer flowers to the image of Buddha, light candles, and listen to sermons from the priests. Alms are given to the poor, and feasts are held for the priests. The three-day festival known as Bishu, which coincides with the Bengali New Year's Day, is celebrated with much enthusiasm. Houses are decorated with flowers, young children pay special attention to the elderly to attain their blessings, and festive dishes are prepared for guests. The Mahamuni fair, held at Rangunia at the time of Bishu, is a favorite with all the hill tribes, who attend in great numbers.

### 7 RITES OF PASSAGE

A Chākmā woman is subject to no particular restrictions during pregnancy. After the birth of a child, the father of the child places some earth near the bed and lights a fire on it. This is kept alight for five days, after which the earth is thrown away, and the mother and child are bathed. A woman is considered polluted for a month after childbirth and is not allowed to cook food during this period. Children are suckled to a considerable age by their mothers.

Chākmās cremate their dead. Sometimes, if death occurs during times of hardship when the proper funeral rites cannot be performed, the corpse may be buried and disinterred after the harvest for cremation. The body is bathed, dressed, and laid out on a bamboo bier. Relatives and villagers visit the body, and a drum used only at this time is beaten at intervals. Cremation usually occurs in the afternoon, and the ritual is presided over by a priest. The rich are carried ceremoniously to the cremation ground in a decorated chariot. The morning after the cremation, relatives of the deceased will visit the cremation ground to search for footprints, believing the departed will have left some mark of his or her new incarnation. Some remains of bones are collected, placed in an earthen pot, and placed in a nearby river. The mourning period for the family lasts for seven days, during which no fish or animal flesh is eaten. On the seventh day, the final ritual (*Sātdinya*) is held. At this time the family offers food to their ancestors, Buddhist monks deliver religious discourses, offerings are made to the monks, and the entire village participates in a communal feast.

### 8 INTERPERSONAL RELATIONS

Chākmā hospitality is a byword in the region, with guests plied with home-brewed liquor and the *hukkā* pipe. In the hills, Chākmās hail each other with the traditional hill-cry

“Hoya.” This exuberant shout is also used to express pleasure at victory in sports such as tug-of-war that accompany the numerous hill festivals held throughout the year. The influence of Muslim contacts is seen in the use of the “Salaam” greeting by some Chākmās.

## 9 LIVING CONDITIONS

Chākmās build their houses on slopes near the banks of a river or a stream. A few related families may build on the same plot of land, creating a homestead (*bāri*). Baris cluster together to form hamlets (*parā*), and a number of hamlets make up a village (*grām*).

The traditional Chākmā house is made of bamboo. It is constructed on a bamboo or wooden platform roughly 2 m (6 ft) above the ground, with access by means of a crude wooden ladder. The front area of the platform is bare, providing space for household activities. It is usually enclosed by a low fence for the safety of young children. The house is built on the rear of the platform. Mat walls divide the house into separate compartments, the exact number depending on the needs of the household. A veranda in the front of the house is divided in two by a mat partition, one area being used by males and the other by females. Small compartments may be built for storage of grain and other possessions. Household objects ranging from baskets to pipes for smoking tobacco are made out of bamboo.

## 10 FAMILY LIFE

Chākmās are divided into about 150 clans (*gojas*), which are further subdivided into subclans (*guttīs*). Chākmā rules of exogamy forbid marriage between members of the same subclan, although this practice is not always strictly observed. Adult marriage is the norm in Chākmā society. Parents arrange marriages, although the wishes of sons and daughters are taken into account. A bride-price is fixed during the course of negotiations. The marriage ceremony is known as *Chumulong* and is performed by Buddhist priests. If young people elope, the marriage can be formalized on payment of the appropriate fines. Chākmā society is patrilineal and patrilocal. Polygamy, i.e., marriage to more than one wife, is acceptable but rare. Divorce is allowed, as is widow remarriage.

## 11 CLOTHING

Chākmā men have given up their dress of *dhotī*, *kurtā*, and white turban in favor of Western-style shirts and trousers. It is the women who maintain the traditional Chākmā style of clothing. This consists of two pieces of cloth. One is worn as a skirt, wrapped around the lower part of the body and extending from waist to ankle. Its traditional color is black or blue, with a red border at top and bottom. The second piece of cloth is a breastband, woven with colored designs, that is tightly wrapped around the upper body. This is worn with a variety of necklaces, bracelets, anklets, rings, and other ornaments. Chākmā women are skilled weavers and make their own cloth. The *sārī* is becoming increasingly common.

## 12 FOOD

The staple food of the Chākmās is rice, supplemented by millet, corn (maize), vegetables, and mustard. Vegetables include yams, pumpkins, melons, and cucumbers and are supplement-

ed by produce gathered from the forest. Fish, poultry, and meat, even pork, is eaten, despite the Buddhist taboo on consuming animal flesh. Traditional diets have slowly been abandoned, as the Chākmās have been forced to flee their homeland and/or come into contact with nontribal populations. Some typical Chākmā dishes include fish, vegetables and spices stuffed into a length of bamboo and cooked in a low fire; foods wrapped in banana leaves and placed beside a fire; and eggs that are aged until they are rotten. Like most hill tribes, Chākmās view milk with distaste. Chākmās are hard drinkers, and every household distills its own rice-liquor. Alcohol is consumed freely at all festivals and social occasions.

Food is customarily served on a low table, roughly 15 cm (6 in) high. This is made of bamboo or, among the higher classes, copper. Diners sit cross-legged on a mat on the floor.

## 13 EDUCATION

As might be expected in a non-Muslim minority population in one of the more isolated parts of Bangladesh, Chākmās do not score highly in terms of educational achievements. Individual figures for Chākmās are not available, but overall literacy among the hill tribes stands at 14.8%. This figure drops to 7.2% for women. Literacy rates are much higher in the states of India. Mizoram, for instance, ranks second behind Kerala among the states of India for literacy, but even here the figures for Chākmā are only 45.3% for men and 36.6% for women. In Bangladesh, however, literacy in a second language (usually Bengali) stands at over 70%, which provides some indication of the extent to which the Bengali language is replacing Chākmā.

## 14 CULTURAL HERITAGE

The Chākmās possess a literary tradition of sorts, with a variety of works written in the Chākmā language. Buddhist texts, translated into Chākmā and written on palm leaves, are known as *Aghartara*. The *Tallik* is a detailed account of medicinal plants, methods of their preparation, and their use in the treatment of disease.

Folk music is a major aspect of Chākmā tribal culture. It includes romantic love songs known as *Ubageet*, the *Genkhuli* ballads relating some incident from the past, and epic poems like *Radhamon and Dhanapati*. This last work recalls the period when the Nawab of Bengal first gave shelter to the Chākmā Raja when the tribe entered southern Chittagong during the 15th century. Traditional musical instruments include a bugle made from buffalo horn, a circular piece of iron with a string stretched across it that vibrates to produce sound, and the drum. The bamboo flute is played by almost all Chākmā youth. Unlike other tribal groups of the eastern hills, dancing is not an important part of Chākmā life.

## 15 WORK

The Chākmās are agriculturalists, traditionally practicing shifting cultivation known by the local term *jhum*. This is common in the hill areas, where the slope of the land may be quite steep. Each year, land is selected for cultivation. There is no ownership of land, but Chākmā custom holds that no one should encroach or interfere with *jhum* fields that bear the mark of another person. Land is cleared of trees and bushes, and any remaining vegetation is burned during the dry season in April. Crops are planted after the first heavy rains, and harvesting usually takes place in October and November. All

A Chākmā woman with her children in the Bijoypur Chākmā refugee village. Several thousand Chākmās were displaced during the 1960s following atrocities allegedly committed by the majority Muslims and the construction of a hydro-electric dam in the Chittagong Hill Tracts of Bangladesh. The Chākmās sought refuge in India. (Parthajit Datta/AFP/Getty Images)

agricultural work on the fields is done by hand, or with a hoe. The fields are fenced to protect the crops from animals. Crops raised include dry paddy rice, root crops such as taro and ginger, vegetables, pulses, chilies, and garlic. Cotton is also grown, with Chākmā women using this for spinning and weaving cloth. Many of the tribes have now adopted permanent cultivation and use ploughs and cattle to till fields in the flatlands along the valley floors. Irrigated rice cultivation dominates in these lowland areas, with conditions favoring two harvests a year.

Some Chākmās have given up their farming lifestyle and entered the local labor market. Those fortunate enough to have the necessary education have gone on to clerical and other white collar jobs. Many, however, work as laborers in the factories and industrial projects that have grown up along the valley of the Karnafuli River.

## 16 SPORTS

*Ha-do-do* is a game played throughout Bengal. Two teams of equal numbers stand on either side of a central line within a defined playing area. They take turns sending a player into opposing territory to touch as many people as he or she can during the space of one breath, while at the same time saying “Ha-do-do.” If the player runs out of breath or is caught by his

or her opponents, he or she goes out. On the other hand, if the player successfully returns to his or her own territory, the players he or she has tagged must leave the game. Other pastimes include *Gila Khela*, a type of marbles game in which small wooden disks are used in place of marbles; *Nadeng Khela*, played with a spinning top; and various wrestling games. Girls do not have dolls or play at being “mother.”

## 17 ENTERTAINMENT AND RECREATION

Because Chākmās live in the more remote, hilly areas of Bangladesh and neighboring countries, their access to modern forms of entertainment is limited. Traditional forms of recreation include popular folk songs and music, and *jātrā*, the village opera. Wrestling and other sports held at fairs are popular. In the past, hunting and fishing were favorite pastimes, although they are less so today.

## 18 FOLK ART, CRAFTS, AND HOBBIES

The Chākmā are adept at making a variety of household goods from bamboo, often with nothing more than a hill-knife (*dao*) at their disposal. Women are expert weavers and dyers and make their own cloth called “Alam.” They are skilled in the art of making baskets from bamboo.

## 19 SOCIAL PROBLEMS

The Chākmā people face an unenviable situation today. Numerically, their population is larger than that of over 60 independent nations in the world, yet the tribe is fragmented and scattered over three countries. In each country, Chākmās form a minority and many are refugees from their homeland, living in conditions of squalor. One group of Chākmā has been transplanted over 500 km (approximately 300 mi) from their traditional home to Arunachal Pradesh in northeastern India. Chākmā refugees face resentment from local populations. A recent Indian Supreme Court ruling that Chākmās in Arunachal Pradesh be granted Indian citizenship is being strongly opposed by local politicians and other peoples of the area.

The most serious problem faced by the Chākmās is in Bangladesh, where charges of genocide have been leveled against the Bangladeshi government. Facing increasing numbers of Muslim migrants in the Chittagong Hill Tracts and erosion of tribal identity as the area was opened to economic development, tribal groups formed a political party (PSJSS or Parbatya Chattagram Jana Samhati Samiti) to fight for their rights. (The tribal peoples of the area now refer to themselves collectively as the Jumma people or the Jumma nation.) Some Chākmās and other tribal peoples have resorted to armed resistance, and since 1973 they have been involved in guerrilla warfare against the government. This, in turn, has led to reprisals by the police and Bangladeshi Army. Both Amnesty International and the U.S. State Department have reported human rights violations against civilians in the tribal area. The 1997 Peace Accord, signed with the Bangladeshi government, has yet to be fully implemented, and, given the general political situation in Bangladesh, may never be so.

## 20 GENDER ISSUES

Chākmā women, despite being Buddhist and therefore viewed as theoretically equal to men in their own society and facing none of the discrimination that characterizes their Hindu and Muslim neighbors, have fared badly in the conflict with Bangladeshi Muslims. Women have been subject to rape, violence, and other sexual abuses during the Chākmā insurgency. In 2002, for example, after the death of a local Muslim, which was blamed on local Chākmā, all the menfolk of the community of Madarbania, a remote village in the hill-tract Ukhia subdistrict of Cox's Bazaar, fled the village. With the menfolk gone, brutalities were heaped on the remaining Chākmā women. Many of them were raped or molested and several badly beaten up by the local attackers, who subsequently carried away all the livestock that the Chākmās had and prevented any women from getting out of the village. Occasional attacks on Chākmā women by the illegal plains settlers and security forces are still reported in the press.

Some women have banded together to form the Hill Women's Federation (HWF) to raise consciousness among the tribal women about their rights and duties as the most repressed section of Bangladeshi society in the Chittagong Hill Tracts. HWF is highly vocal against military repression on women and organizes protest demonstrations against every incident of human rights violations against tribal women. In 1996, HWF came into the national and international limelight when its organizing secretary Kalpana Chākmā was abducted by the Bangladeshi military, but, so far, the government has failed to bring the culprits responsible for her abduction to justice.

# CHAM

**PRONUNCIATION:** CHAHM

**LOCATION:** Cambodia; Malaysia; Vietnam

**POPULATION:** About 250,000

**LANGUAGE:** Cham; Cambodian

**RELIGION:** Islam; orthodox Cham; Hinduism

**RELATED ARTICLES:** Vol. 4: Muslims

## <sup>1</sup> INTRODUCTION

The Cham of Vietnam and Cambodia are descendants of refugees from the ancient kingdom of Champa, who fled central Vietnam 500 years ago. The Cham may have originally come from Java before migrating to the mainland peninsula of Southeast Asia—certainly their Kings and ruling class incorporated many Javanese traditions. They are one of several groups of Malayan stock, which also includes the Jarai and Rhade of Vietnam, the Dayak of Borneo, and the Igorot of the Philippines. The Cham of Cambodia, in current statistics, also includes more recent Malay immigrants.

The ancient Cham were heavily influenced by Java, which in turn was influenced by India, as seen in borrowed cultural elements, such as religion and art. Cham were fishermen, seagoers, rice-cultivators, and masters at temple construction. The remains of their religious monuments dot the landscape of Vietnam and Cambodia today and were imitated by others who came after them.

The Kingdom of Champa ruled much of what is now central Vietnam from the 2nd to the 15th centuries. From the 2nd to the 10th centuries, the Cham were usually at war with China to the north. From the 10th to the 15th centuries, Champa was frequently at war with the Khmers to the west, and the Vietnamese, also to the north.

By 1213 the Vietnamese had reduced Champa to a feudal state but Champa again gained its independence in 1326. Under a Cham hero named Che Bong Nga, Champa repeatedly attacked Vietnam throughout the 1300s. After this hero's death, Vietnam again continued its incursions into Cham land. By 1471 the Vietnamese ruler Thanh Ton had completely subdued Champa.

Over the next years, the Cham attempted but failed to end Vietnamese rule. From the 16th century on, the great Champa kingdom had been extinguished with the Cham. Numerous Cham fled central Vietnam for Cambodia, including a number of nobles and other dignitaries. The last royal descendent died in the early 1900s.

Since the 16th century, Cham have continued to live in Vietnam and Cambodia, minority neighbors to the majority ethnic Vietnamese and Cambodian population around them. Cambodian Cham today remember themselves as the survivors of the massacre of their people by the Vietnamese and the fighting in 1841 against the Cambodian armies of King Ang Duang.

Those who settled in Cambodia were well-treated by the French. From the first elections in 1946, they supported the Liberal Party of Prince Norindeth, and then, from 1955, the Sangkum movement of Prince Norodom Sihanouk. One prominent politician of Cham ancestry, Eng Meas, worked in the police, and his daughter Eng Marie, married Sihanouk's

second son Prince Norodom Ranariddh. Many Cham served in the Royal Cambodian Army and after the 1970 takeover by Lon Nol, a large number continued to serve him and also the pro-U.S. FULRO organization (United Front for the Liberation of Oppressed Races), which also heavily recruited from the Mountain Khmers. A Cham, Yisales Yasya, also served as a senator from 1972 until 1975.

In 20th century Cambodia, the Cham were again the victims of massacres by the neighboring majority population. From 1975 to 1979 Cambodia was ruled by the Khmer Rouge, Communist extremists determined to erase all non-Khmer characteristics from the population. The Cham were special targets of the Khmer Rouge for a number of reasons. In fact, it was a surprise to many surviving Cham and to observers that any remained in 1979. Many of those who managed to flee Cambodia during the 1980s supported the Khmer People's National Liberation Front or their allies, the Royalist FUNCINPEC movement (National United Front for an Independent, Neutral, Peaceful, and Cooperative Cambodia); although several, such as Abdul Koyom and Mat Ly (son of Sos Man, a long-time Communist), held senior positions in the pro-Vietnamese Communist party of Hun Sen.

The Cham were forced to adopt Cambodian language and customs and to abandon their own. Their communities, which had traditionally been separate from Buddhist Cambodians, were broken up and the people dispersed to other villages. Fishermen were forced to grow rice and dig canals, and religious leaders were stripped of their authority. Many were killed. In just two districts of Kompong Cham alone, over 40,000 Cham were killed by Khmer Rouge soldiers in the late 1970s.

The Cham claim that 132 of their mosques were destroyed during the Khmer Rouge period, and the Cham were not allowed to practice their religious rituals. Only 20 of the 113 most prominent clergy survived the Khmer Rouge period. This loss of leadership, as well as the destruction of mosques, dispersion of the population, and poverty, has slowed the re-establishment of mosques, services, and schools. Despite the losses, however, the number of mosques in Cambodia is roughly what it was before the Khmer Rouge era.

In Vietnam, the Cham have fared much better, but have also been subject to discrimination, pressure to assimilate to Vietnamese society, and ridicule for retaining their customs.

## <sup>2</sup> LOCATION AND HOMELAND

By the late 1800s, according to some reports, not many Cham were left—maybe as few as 15,000 in both Vietnam and Cambodia. By 1910, in other reports, there were approximately 45,000 Cham in both countries, half as many in Vietnam as in Cambodia. Their numbers then increased rapidly. In 1936 the census for Indochina listed the Chams as being 73,000, with 29,786 listed on the electoral roll (males over the age of 21), with a population of about 250,000 in 1975 when the Khmer Rouge Communists came to power.

From 1975 until 1978, the Cham were a particular target of the Communist Democratic Kampuchean government. Many died and others fled Cambodia entirely. By the late 1980s, though, their numbers were increasing. Some observers suggest their numbers still do not approach the figures of the 1970s; others conclude that the Cham population at least equals its number prior to 1975, although exact numbers remain elusive.

In Vietnam, most Cham continue to live in the south central area of the country. In Cambodia, the Cham have settled along the Tonle Sap and Mekong rivers and in western, southern, and central Cambodia. They have fared relatively well with their much more populous Khmer neighbors (with the exception of the late 1970s), despite their differences in religion, language, schooling, and even subsistence patterns.

Following the violence and massacre of late 1970s Cambodia, some Cham, along with other Cambodians, fled their homeland for Thailand. After some time in refugee camps, most were resettled in Malaysia, and also Western countries, where they continue to live.

Many resettled Cham live in communities separated from their fellow Cambodian and Vietnamese countrymen. Some have migrated thousands of miles in their new lands to join fellow Cham, even if they were strangers. Those in Malaysia have been welcomed by the majority Malay community. Other Cham attended the local mosque and found themselves having more in common with black American Muslims and immigrants from the Middle East, Africa, and Asia, than they did with other migrants from Cambodia.

### 3 LANGUAGE

Cham is an Austronesian language, and thus Cham is related to languages spread over much of Asia and the Pacific. Cham is also related to Jarai and Rade, languages spoken by Mountain Khmer hill tribespeople in northeastern Cambodia, and to Malay, a language also spoken in Cambodia.

Most Cham in Cambodia are bilingual, speaking both Cham and Cambodian (Khmer). Cambodian Cham speak a dialect called Western Cham, which is also spoken by some Cham in Vietnam. Western Cham is distinguished from Eastern Cham, which is spoken by Cham in coastal central Vietnam. Western Cham has borrowed numerous words from Khmer, Arabic, and Malay, and has borrowed also from Vietnamese, Chinese, Southeast Asian, and Malayo-Polynesian languages. The Cham language is atonal, with words containing up to three syllables.

The Cham language has its own writing system. Western Cham speakers, however, no longer use the traditional Cham script originally based on Indian Pali script, although it has been retained by Eastern Cham in Vietnam. Instead, Cambodian Cham is written in Arabic script. Protestant missionaries also developed a romanized script in the 1960s, which has been used occasionally.

### 4 FOLKLORE

Many ancient Cham are remembered as great heroes. The most famous was the king named Che Bong Nga, who ascended the Cham throne of central Vietnam in 1360. He led his armies against the Vietnamese and reoccupied Cham land to the north. While his victories were temporary, with the Vietnamese eventually overtaking the Cham empire, his triumphs over the Vietnamese are remembered.

The most renowned king of all, Po Rome, ruled Champa from 1627 to 1651. But his rule, remembered as glorious by present-day Cham, was overshadowed by a Vietnamese invasion. When Po Rome was killed by his Vietnamese enemies, his Vietnamese wife threw herself on his burning funeral pyre in grief.

### 5 RELIGION

Although numbers of Cham were already Muslim, the Cham who fled the Champa kingdom of central Vietnam in the 15th century apparently converted to Islam sometime before the 17th century, influenced by contacts with Malay kinfolk, who had been Muslims for some centuries.

Cambodian Cham are all Muslim, with Islam being their defining characteristic, and Cham adherence to their religion has undoubtedly helped their survival as a separate ethnic group. The Cham worship in their own mosques. Their holy book is the Quran, and each Cham community has a community and religious leader, called the *hakem*. There is also a *bilal* who calls the faithful to prayer and an *imam* who leads them in their prayers. Influenced by Hinduism from India, Cham continue to practice some Hindu beliefs along with their Muslim faith.

The spiritual center for Cham within Cambodia is Chrouy Changvar, a market town near Phnom Penh. There they go to consult the high Muslim officials in residence, to celebrate special occasions, and to visit with Cham throughout the country. Some young male Cham go each year to study the Quran in Malaysia or in Mecca. The greatest wish of every Muslim throughout the world, including Cambodia, is to make a *haj*, a pilgrimage to Mecca. In the 1950s, about 7% of the Cham population made the trip, and today, many more long to go.

Many Cambodian Cham are Sunni Muslim of the Shafii school, although there are traditionalist and orthodox branches. Traditional Cambodian Cham, numbering about two-thirds of the population, have kept many ancient traditions and rituals. Although they consider Allah the single, all-powerful God, they also recognize other non-Islamic deities. In this respect they resemble the Cham of coastal Vietnam more than Muslims of other countries. Traditional Cham believe in spirits and practice magic to avoid illness and death. Less concerned with making a pilgrimage to Mecca or praying daily, they do nonetheless celebrate many Muslim festivals.

The remaining one-third of Cambodian Cham are orthodox Cham, who retain religious beliefs and practices much closer to Muslims from other countries. They do so in part because of their close ties to the Malay migrant community in Cambodia. Many orthodox Cham have adopted Malay customs and many speak the Malay language in addition to Cham and Cambodian. They are much more integrated into the worldwide community of Islam believers, making the pilgrimage to Mecca and attending conferences, visiting mosques, and studying in other countries.

Most traditional Cham are scattered throughout central Cambodia, while orthodox Cham are located primarily around the capital of Phnom Penh, the former capital of Udong (formerly Oudong), and in provinces to the south.

Most Cham in Vietnam are Hindus who practice a form of Shaivite Brahmanism. The most important Hindu officials among the Vietnamese Cham are the priests, who are chosen for life. These men belong to the *basaih* caste. Some members of the *basaih* caste are taught sacerdotal rituals as young as 10 or 11 years of age. Other Hindu Cham officials include the priestess, who must remain celibate.

Members of the *camenei* caste, considered inferior to the *basaih* caste, maintain the temples. Musicians sing and play instruments in accompaniment to religious ceremonies. Another category of people gives offerings to higher officials and

performs ceremonial dances. Other officials, such as family priestesses, preside over family magical and religious rituals.

## 6 MAJOR HOLIDAYS

Both Hindu and Muslim Cham observe a number of religious and magic ceremonies. Most religious and magical ceremonies contain rituals that originate in Islam, Hinduism, and traditional religions of the area.

The two most important festivals of the Hindu Cham are the *Bon Kate* and *Bon Cabur*. *Bon Kate* is held during the lunar month, which corresponds to late September/early October, preferably on the fifth day of the fifth lunar month. *Bon Kate* is celebrated over a period of five days if possible, during which time Hindu Cham make religious offerings of a goat, two cups and one box of cooked rice, a tray of ground rice cakes, five cups of sticky rice, lemon juice, and 10 pieces of betel to the statue of their god. This ceremony continues to be celebrated by non-Muslim Cham in Paris, France.

The other important ceremony is *Bon Cabur*, held during the lunar month corresponding to late January/early February. Both ceremonies honor the spirits of the dead: similar festivals are also held by both the Vietnamese and Cambodian neighbors of the Cham. The people gather to share an elaborate feast and to celebrate for a period of five days.

Another major holiday is *Eidul-Fitr*, which celebrates the breaking of the 30-day fast observed by Muslims throughout the world. For the entire month of *Ramadan*, Muslim Cham refrain from eating from sunrise to sunset. A typical holiday feast includes lamb, chicken curry, and fish with the standard rice and vegetables.

## 7 RITES OF PASSAGE

As with their fellow Cambodians, the birth of a Cham child is considered a blessed event and is greeted by the family and community with great joy.

Toddlers are nursed until two to four years of age and are treated with considerable lenience. At age four, children are expected to feed, bathe, and control themselves, and shortly thereafter, to care for their younger siblings as many Cham have large families.

Most parents continue to exert almost complete control over their children until they are married. Even then, the influence of their parents is heavy. Children are expected to show great respect to their parents and elders and are severely punished for any lapse.

While the Khmer Rouge loosened the traditional control of parents over their children and modernization in urban areas continues to threaten traditional respect and obedience toward parents, most Cham continue to observe traditional fam-

ily behavior. Cham express pride in the fact that their children have suffered less rebellion and their families less conflict than many other Cambodian families. Children become full adults when they have jobs, their own households, spouses, and children. Even then, they are expected to follow the advice of their elders.

The Cham bury their dead after the funeral service. In the year following the funeral, several more ceremonies are held, each honoring the deceased person. At the end of the year, the bones of the deceased are exhumed and reburied in one final ceremony. The bones are then carried to the final permanent cemetery and are buried with the rings of the deceased person.

## 8 INTERPERSONAL RELATIONS

The Cham often exchange the traditional Muslim greeting, giving one another a blessing. One person begins by saying “*Salamu alaikum*,” to which another responds “*Alaikum salam*.”

Cham in Cambodia also greet each other with the traditional Khmer greeting, the *sampeah*, joining their palms together, their fingers pointing up or slightly tilted toward the other person, then bringing their hands up to their chest or forehead.

The Cham, like their fellow Cambodians and Vietnamese, place importance on hierarchy and proper behavior, influenced by Confucian ideas. Women must respect men, children must respect their elders, and everyone must respect their superiors, which includes anyone with higher status, greater wealth, or a more important job. Inferiors greet their superiors with greater respect, a deeper bow, or greater stoop when offering food or passing by. Visitors, both familiar and strange, are treated to the best the household has to offer.

Few young people date, and virginity remains highly valued for brides. Girls and boys have the opportunity to talk and flirt only on special occasions and during these times are surrounded by relatives and neighbors.

Most men marry between 19 and 25 years of age; women are slightly younger, usually between 16 and 22. Most young people continue to court as their parents did. It remains much more common for a young man to ask his parents’ permission and assistance in obtaining a wife than to do so on his own. His parents or a matchmaker approach the young woman’s family to see if they are interested in a match. If the response is positive, the families negotiate the terms and time of the marriage.

After an exchange of gifts, the young couple marries. It is still common for many young couples to spend the first year of marriage living in the home of the woman’s parents. After the parents are assured of their son-in-law’s stability, or after the birth of the first child, the young couple commonly moves into a new house built for them by their families.

## 9 LIVING CONDITIONS

Health care in Cambodia and Vietnam has been devastated by the events of the past decades. The subsequent isolation of both countries from much of the international community and the embargo against most imports and aid meant that inhabitants went another decade without even the minimum of modern health care.

International health assistance has improved services to many people. But the Cham continue to patronize local spiritual leaders for most health needs. Modern medicine is expen-

sive, with patients having to pay before being seen for services and medicines supposedly offered without fee.

Cham villages are usually comprised of only Cham. Most are located on or near the banks of rivers or lakes, although some are located inland. Villages remain small, with between 200 and 300 people.

Like the houses of the Vietnamese and Cambodians around them, their homes are made of split bamboo and thatch. Most houses are built on stilts to protect them from seasonal flooding; thus most stand 4–12 feet off the ground. The area beneath the house is used for housing domestic animals, such as chickens, ducks, and oxen, and is shelter for the family during the heat of the day. Families often gather there during the day to do chores, look after the children at play, and visit with neighbors and passersby. In the evening, most Cham retreat upstairs to their homes, where they eat, chat, and rest. Visiting is a traditional activity and occurs frequently.

The upstairs portion of the house may be an open room or may be divided into several rooms: a private room for keeping possessions and a public room for entertaining guests, eating, and visiting. A lean-to kitchen may be attached to the house, also on stilts.

Because of their isolation, most Cham do not have electricity, running water, sewage systems, or appliances, although in recent years some have installed small generators. Houses usually contain little furniture, decoration, or utensils. Most Cham continue to own few objects that they have not made themselves. A few books, a pad of paper, and a pencil or two may be wrapped in plastic and placed in the rafters for safe-keeping. The package is out of the way but can be easily reached. Other possessions are placed similarly or hang on pegs on the walls. People sleep on mats, which are rolled up and leaned against the wall or stored overhead during the day.

The most common piece of furniture for many Cham, especially in Cambodia, is a low platform bed. Bedding materials include mats made of rush or plastic, which people place on the wooden platform, and cotton and synthetic blankets.

Rather than using modern electric appliances in their kitchens, Cham use simpler, less expensive, often handmade items. They cook over an earthenware stand placed over a fire. Because most Cham do not have refrigeration, women use preserved, salted, or fresh food. Kitchen utensils include pots, bowls, cooking ladles, and spoons made of coconut shells, although plastic plates and utensils have started to be used by some communities. Basic work tools of Cham women include looms, spinning wheels, mortars for pounding rice, baskets, jars, and trays. The Cham also make rope, mats, wooden implements, and some iron tools.

Like many of their fellow countrymen, the vast majority of Cham have never ridden in an airplane, car, or motorized boat, although most have been in buses. Most have paddled a boat and those who own a bicycle consider themselves lucky, and the dream of most youth and adults is to be able to purchase a motorbike. For most Cham, the most common form of transportation continues to be by foot.

## 10 FAMILY LIFE

Women are viewed as important members of society, contributing materials and skills without which the group could not live. The Cham observe a fairly strict division of labor, with women caring for children and the household, and men repre-

senting the family in public and bearing the brunt of responsibility for supporting the family.

Men remain responsible for rice cultivation and the heavier chores of construction, tool craft, and repair. Men have the responsibility of gathering information from others, the government, and knowledgeable leaders. Both women and men are engaged in planning family subsistence activities and carrying them out. Men and women share much of the labor involved in supporting the family. Women tend to manage the household affairs and do most of the textile manufacture, such as carding, spinning, and weaving cotton. They are also generally responsible for the family vegetable and fruit gardens and for threshing, husking, and milling the grain. Women carry most of the family's water from the nearest lake, river, or pond to the family house.

The vast majority of Cham marry within their own group and religion. Those who do not often have difficulty adjusting to village schedules, diets, language, clothing, and ways of making a living. When Cham do intermarry, it is usually with members of other minority groups such as Vietnamese, Burmese, Malay, or Chinese in Cambodia, with Chinese or Cambodian in Vietnam.

Both young men and women are given considerable freedom in choosing a spouse, with preference going to other Cham. When a girl and her parents agree on a selection, her parents approach the parents of the young man.

Cham marriages are simple, involving little expense or ceremony. In the presence of an imam who acts as the witness, the parents of the young woman ask the groom if he will accept their daughter as his bride. After he agrees, the marriage is concluded and is then celebrated with a feast. Polygynous marriages are allowed (up to four wives), although the first wife must approve the selection of any subsequent wives. Divorce is also permitted. Most polygamy and divorce occurs in families with more resources.

Cham families are matriarchal and matrilineal. Cambodian Cham trace their descent and pass inheritance through the maternal line. Residence is also matrilineal, so that young couples go to live with the wife's family.

In the past, the Cham said they had a matrilineal clan system with two clans struggling for dominance: the areca nut tree clan and the coconut tree clan. Royal succession, however, was patrilineal, with the king's son inheriting the throne in the kingdom of Champa.

Cham villages are often divided into hamlets and are governed by elected officials. The religious leaders of the community often have considerable political influence.

Animals are kept to support the family, and an animal that does not contribute to the family's income or diet is a luxury that most families cannot afford. This is not to say that children do not occasionally get close to a dog or cat, but pet relationships as they exist in the United States are rare.

## 11 CLOTHING

The Cham wear distinctive clothing. Both men and women wear a *batik*, a garment much like a sarong, which is worn knotted around the waist. Men wear a shirt over their batik, while women wear close-fitting blouses with tight sleeves over theirs. Men and women usually wear a turban or a scarf.

On religious days, both men and women don their best clothing. Their leaders dress completely in white and shave

their heads and beards. On other days they wear clothing similar to other Cambodians: a *sambot* and blouse for women, a sarong or trousers and shirt for men. Children usually wear shorts, girls add a blouse, and both go barefoot or wear rubber thongs.

## 12 FOOD

With several important exceptions, the Cham of Cambodia and Vietnam eat much as their fellow countrymen. Rice is the most important food; eaten at virtually every meal, it forms the basis of most dishes.

Fish is almost as important and is eaten fresh, dried, and salted. Vegetables are also a vital part of their diet. The Cham grow a number of crops in their gardens, including onions, peppers, eggplant, tomatoes, and potatoes. Many homes are surrounded by coconut and banana trees and numerous other plants. Other fruits include mangoes, papayas, jack fruit, durian, and palm fruit. The sugar palm also yields syrup, which is used in cooking.

A traditional meal is a bowl of steamed rice eaten with a sauce containing bits of fish, fowl, or meat, eggs, vegetables, and spices such as onions, chilies, garlic, mint, ginger, or lemon grass.

The two important exceptions are pork and alcohol, consumed by many of their fellow Cambodians but forbidden to the Cham on religious grounds. Their refusal to eat pork is so great that many lost their lives during the Khmer Rouge period for refusing to do so.

The Cham usually eat an early meal of left-over rice, cakes, or fruit either at home or in the field. The big meal of the day is lunch around midday, followed by supper at twilight.

Cham men usually eat together, women and children later. Each has a bowl of rice and all take bites of food from several dishes sitting in the middle of the group. When eating on the job, away from the house, or under the house, Cham may eat sitting in a squatting position, their feet flat on the ground, their knees bent sharply, and their bottoms hanging almost to the ground. Whether squatting or sitting on the ground, the men cross-legged or, like the women, with their legs folding back to one side, they can sit for hours in positions that are uncomfortable for Westerners after just a few minutes.

In Vietnam most Cham use chopsticks to eat, while in Cambodia most use spoons like other Cambodians.

## 13 EDUCATION

A higher than average number of Cham are literate, for literacy is greatly valued and parents and religious leaders go to great lengths to teach reading and writing to their children. Cham children attend their own schools, where they learn Cham language and writing, religious instruction, and Cham history and traditions. Some children also attend Cambodian or Vietnamese public schools, their parents wanting them to have the benefits not only of Cham heritage but the economic opportunities available in the surrounding society.

## 14 CULTURAL HERITAGE

Literature is extremely important to the Cham, and they highly value their books and religious texts. The greatest cultural heritage of the Cham is their religion. Without it, they say, they could not sustain life, nor would they wish to. However, many of the holy books were destroyed by the Khmer Rouge in 1975.

## 15 WORK

Most Cham are involved in agricultural subsistence activities but are also engaged in domesticating animals, hunting, and fishing. Hunting is done with bows and arrows (and now guns), nets, beaters, dogs, and traps. Fishing is done primarily with nets.

Most agriculture involves the cultivation of rice, both wet and dry. The Cham also grow maize, manioc, peanuts, ferns, and vegetables. Other non-food plants include cotton, tobacco, and plants that yield castor oil. The Cham domesticate buffalo, goats, dogs, and fowl. They use animals not only for food but for making tools and in religious ceremonies.

The inhabitants of river villages are primarily engaged in fishing, cultivating rice, and growing vegetables. Many grow onions. Fishermen who do not cultivate rice or who need extra amounts exchange their fish for it with neighboring Cambodians. Women may make extra money by weaving. Other cash crops include tobacco and mangrove tree cultivation.

The residents of inland villages support themselves by fishing, cultivating rice, and numerous other activities, depending on their location. Some villages specialize in raising fruit or vegetables. Others concentrate on metal working.

Some Cham cultivate rice by swidden cultivation, which involves the slash-and-burn technique, whereby they cut down trees and underbrush, burn the material, and then cultivate the cleared area. The ash benefits the soil and crops can be cultivated there for several years before the process must be repeated in another area.

Many Cham are butchers, since Buddhists hesitate to do so because their religion teaches not to kill animals. Cham also have a reputation for breeding water buffalo.

## 16 SPORTS

Most Cham children spend only a few years in the classroom. The rest of their time is spent helping their families make a living. Even the smallest children help their parents fish, cook, gather firewood, and do a variety of chores. Both boys and girls help with younger children, and it is not uncommon to see boys carrying a baby sister for hours at a time.

Children are often responsible for caring for the animals. Boys herd the water buffalo and oxen when they are not being used for plowing, and girls feed the pigs and chickens. Boys climb up sugar palm or coconut trees seeking syrup or coconuts.

Children usually turn these subsistence activities into play and games. In addition, they enjoy swimming and running. A popular village game is played with rubber thongs. The boys draw a line in the dirt, then stand back and throw their sandals at the line. The boy who gets the closest is the winner. Girls and smaller children play a similar game with rubber bands, and the winner wears his captured bands around his wrist. Girls also play hopscotch.

The most popular spectator and participant sport is soccer. Volleyball is also a favorite, and both are seen frequently in Cham villages.

## 17 ENTERTAINMENT AND RECREATION

In Cham villages, local festivals remain the most common and popular leisure activity. Playing, games, visiting, and gossiping are everyday pleasures. Modern leisure activities, such as tele-

vision, movies, and videos are still rare in most Cham villages and homes.

## 18 FOLK ART, CRAFTS, AND HOBBIES

Like all Muslims, Cambodian Cham do not focus on visual arts, one reason being that Muslims believe it is improper to visually portray an image of God or of his prophets. Music, however, is exceedingly important. Cham musical instruments are similar to Cambodian and Vietnamese musical instruments and range from guitars to gongs, drums, and xylophones.

## 19 SOCIAL PROBLEMS

The Cham are proud of never having completely assimilated to either Cambodian or Vietnamese culture. A few Cham hope that one day the international community will force the Vietnamese to abandon Vietnam. When that happens, some Cham say their dream will come true and Champa, their great and ancient nation, will be reestablished and reoccupied by the Cham. But most Cham—in Cambodia, Vietnam, and overseas—are content to raise their families, practice their religion, and hope for a somewhat better life for their children.

## 20 GENDER ISSUES

Until the 1970s most Cham women remained home-makers, performing traditional roles in the house and in villages. The dislocation from the Civil War from 1970, and the Communist Khmer Rouge rule from 1975–1978, led to the deaths of many Chams, including large numbers of men, forcing many women to be involved in working in the rice fields and even in hunting. As the population has stabilized, women have returned to the traditional roles in the villages.

# CHAMĀRS

**PRONUNCIATION:** chah-MAHRS

**ALTERNATE NAMES:** Untouchables; Scheduled Caste

**LOCATION:** Northern India (mainly Uttar Pradesh state)

**POPULATION:** About 90 million (est.)

**LANGUAGE:** Local dialects of the region in which they live

**RELIGION:** Hinduism; traditional animism, nature-worship, and superstition

**RELATED ARTICLES:** Vol. 3: Hindus; Vol. 4: People of India

## 1 INTRODUCTION

Chamārs form one of the major occupational castes of India. Although known by different names in different areas, they are traditionally associated with the working of leather. Their name is derived from the Sanskrit word for a shoemaker or tanner (*chamakāra*). Chamārs include groups that skin and dispose of animal carcasses, tanners, and makers of shoes and other leather goods. Found throughout the country, Chamārs are most numerous in northern India.

Chamārs may be traced back to very early times in the Indian subcontinent. They are mentioned in the *Rg Veda*, the earliest of the *Vedas* that probably was composed some time before 900 BC. There are numerous references in the Vedic literature to leather goods (e.g., leather bags, clothing, bowstrings, reins, leather shields, etc.), and even instructions for the preparing of skins for manufacture. Tanners and leatherworkers were clearly an important occupational group in early Aryan society. But even at this time, it is likely that they were of inferior social standing. The Aryan village community must have been organized very much along the lines of villages in India today. The cultivators residing in the villages were Aryans, but on the outskirts of the village there would be laborers whose occupations made them unclean. These were often the conquered inhabitants of the country, or peoples of mixed descent who lived outside the Aryan community. It was to this non-Aryan segment of Vedic society that the Chamārs belonged.

The sheer number of Chamār castes and their widespread distribution in India today suggest that the Chamārs have originated from numerous sources. Some groups were tribal peoples who were assimilated into the lowest strata of Hindu society. Others appear to have been of higher social standing who were conquered or otherwise degraded to their present status. Still others may have their origins in illicit sexual relations between peoples of different castes. Yet there are certain characteristics common to all Chamār groups. Their traditional occupation handling carcasses, hides, and leather makes them “unclean.” This is reinforced by certain common practices, such as eating meat, that are usually identified with the lowest classes. Their touch is polluting to caste Hindus, and so they are regarded as “untouchables.” As such, even if they no longer follow their traditional occupation, Chamārs occupy the lowest rungs of Hindu society.

Chamārs are fighting for political representation in India, claiming they have been ignored for too long. Chamār and Madiga (leather workers from Andhra Pradesh) leaders from the south claim that they were not given a single position on the All India Congress Committee (AICC) or the Congress Working Committee (CWC), with the Chamār representation on

the latter coming from Uttar Pradesh and Maharashtra. Their claim is that there is poor representation of the “Chamārs” from the south despite Chamārs making up over 50% of the Dalit population in the country.

Chamārs and Dalits in the north have banded together to form a political outlet for Bahujans (the Other Backward Castes [OBCs], Scheduled Castes [SCs], Scheduled Tribes [STs]) who are viewed as being at the bottom of the Indian caste system. The Bahujan Samaj (*Bahujān Samāj*) Party (BSP) is a national political party with socialist leanings that claims to be inspired by the philosophy of Dr B. R. Ambedkar. The BSP was founded by the high-profile charismatic leader Kanshi Ram in 1984. The BSP is one of the most powerful political parties in north India, has 19 members in the lower House of Parliament (the Lok Sabha), supports the Congress-led United Progressive Alliance (UPA) coalition, which forms India’s current government in New Delhi, and is led today by Ms. Mayawati Kumari, herself a Chamār. The BSP was created and is dominated by Chamārs but nowadays also includes Brahmans and other high caste Hindus. At present, the BSP forms the state government of Uttar Pradesh with Ms. Kumari as Chief Minister (in fact, this is the third time Ms. Kumari has been Chief Minister. She occupied that position for a short time in 1995 and also in 1997 as part of a coalition with the Bharatiya Janata Party [BJP]).

## 2 LOCATION AND HOMELAND

The number of Chamār castes and subcastes, the diversity of names by which they are known, and the sometimes arbitrary identification of groups as Chamārs by census-takers makes it difficult to provide an accurate count of the Chamār population in India today. An acceptable estimate would place their total number at around 90 million people, although this number is a crude estimate, because of the problem of enumerating Chamār communities in census figures. It is based on Chamārs making up 50% of the Dalit (Untouchable) community, which is approximately 16% of India’s total population. Though Chamārs are found in small numbers throughout India, their main concentrations lie on the plains of the upper and middle Ganges Valley. By far the largest Chamār population—perhaps close to 50% of the total—is found in Uttar Pradesh. The neighboring states of Bihar, Madhya Pradesh, Rajasthan, Haryana, and Punjab all have significant numbers of Chamārs in their populations, as do areas of Nepal close to the border with India.

The explanation for this pattern is not immediately clear and may reflect a number of factors. In its broad outlines, Chamār distributions fall within the drier areas of India where cattle-breeding is an important economic activity. The role played by Chamārs in this context would be of more significance than in the wetter, rice-growing areas of the south and east. But perhaps of greater importance is the fact that the upper and middle Ganges Valley were among the first areas to be colonized by the Aryans as they expanded out of their original heartland in the Punjab. One might expect to find the structures of traditional Aryan society more developed here than in the non-Aryan parts of the country.

Many Chamār groups go by other names, and some such as the Jadav, Mochi, Satnami, and Raidas claim an identity distinct from the Chamār. This may be because they have separate origins, different myths, different religious and social practices, or even occupational differences. In Uttar Pradesh, the

Jadav and the Raidas are the main Chamār groups. Chamārs in Rajasthan are called Regar. Bhambi is a name used in Maharashtra. In the Punjab State, many Chamārs have converted to Sikhism and are known as Ramdasias (after Guru Ramdas). Mochis are a subgroup of Chamārs found in Madhya Pradesh, Orissa, and West Bengal. In Andhra Pradesh, the leather workers, equivalent of Chamārs elsewhere, belong to the Madiga caste. Chamārs are also referred to as Untouchables, for reasons already explained, and as a Scheduled Caste, because they are identified in special government schedules (lists) as a disadvantaged caste. Mahatma Gandhi called Chamārs *Harajans* (“Children of God”) in an attempt to improve their social standing. Today, many Chamārs consider themselves “Dalits,” another name for unclean, lower-caste Hindus.

### 3 LANGUAGE

Chamārs speak the local dialects of the region of India in which they live. Thus the language of Jadavs living around Mathura in Uttar Pradesh is called Braj Basha. Literally the “language of Braj,” the local name for the region, this is the dialect of Hindi spoken in the area. Similarly, a Chamār living in central Rajasthan speaks Marwari, the dialect of Rajasthani current in the region. Ramdasias in the Punjab are likely to speak Punjabi and write in the Gurmukhi script (the Sikh script). Hindi, Rajasthani, Punjabi, and the other languages of northern India commonly spoken by Chamārs belong to the Indo-Aryan branch of the Indo-European language family.

The leatherworking castes in southern India speak languages belonging to the Dravidian family. The Chakalliyans of Tamil Nadu, for example, speak Tamil, while the Madigas of Andhra Pradesh speak Telugu.

### 4 FOLKLORE

Chamārs are mostly Hindus and share in the mythological traditions of the Hindu religion. However, many Chamār groups have their own myths of origin. One account traces the Chamārs to a union between a lowly boatman and a despised Chandal (i.e., of non-Aryan or mixed descent) woman, but others assign them a respectable lineage. According to one legend, in the beginning there was only one family of men of the highest caste. In this family, there were four brothers. One day, a cow died. Since no one could be found to remove the carcass, the three older brothers decided the youngest should dispose of the animal. They agreed that they would accept him back on an equal footing after he had bathed. With much effort, the youngest brother dragged the carcass into the jungle, but his brothers refused to accept him back on his return. They made him live some distance away and told him that he was to skin carcasses and work with leather. So the Chamārs were born. On another day, the story continues, a buffalo died. The Chamār told his brothers that he was not strong enough to remove it, so the carcass just lay there. The three brothers complained of this to the god Shiva, who happened to be passing. Shiva suggested that one of the brothers help, but they protested at this. So Shiva told the Chamār to make a pile of refuse (*kūrā*) and urinate on it. When he did this, a strong man rose from the refuse, and from this man the Kuril subcaste of Chamārs arose.

### 5 RELIGION

In general, Chamārs are Hindus. They accept fundamental Hindu doctrines such as karma (the law of cause and effect) and samsāra (transmigration), follow Hindu rituals, and worship many Hindu deities. However, they do reject the Hindu teachings that make them Untouchables and the Brahman priests who proclaim these teachings. This does not affect the inferior status assigned to Chamārs by other Hindus. In the past, they were barred from entering many Hindu temples, and some Brahman priests still refuse to serve them. They are allowed to make offerings at temples dedicated to Devi, Bhairon, to various mother-goddesses, and at some Shiva temples. In many places, Chamārs have their own temples.

Underlying this layer of Hinduism is a widespread and deep-rooted belief in animism, nature-worship, and superstition. The worship of stones is universal. The stones represent village godlings and are anointed with vermilion (a red coloring), possibly a survival of an ancient blood-sacrifice. Many trees are worshipped, in particular the pipal tree (*Ficus religiosa*) and the nim (*nim*) tree (*Azadirachta indica*). The nim is considered to be the home of Shitala Mata, the goddess of smallpox. The snake, the tiger, the elephant, and various other animals and birds are revered and worshipped. The Chamār have numerous superstitions about evil demons, spirits (*bhūts*), and ghosts who have to be driven away or appeased through blood-sacrifice. Various diseases or epidemics are thought to be brought on by deities such as Shitala Mata or Mari, the goddess of cholera. Goats, pigs, chickens, and eggs are among the sacrificial

offerings made to appease demons and gods. Chamārs strongly believe in the dangers of witchcraft and of the evil eye.

Chamārs have a number of resources they can turn to for protection from evil spirits. There are numerous godlings—spiritual beings and local saints who are seen to have special powers over the forces of evil. Guga Pīr, for example, is worshipped in the Punjab to prevent snake-bite. He was born a Hindu, so his legend tells, but became a Muslim so he could enter the earth and bring the snake-kingdom under his control (a *pīr* is a Muslim saint). He is also worshipped on behalf of sickly children, to cure various diseases, and to remove barrenness. In addition, there are various practitioners skilled in dealing with the spirit world. These include sorcerers, magicians, witch-doctors, shamans, and the like known by names such as *ōjhā*, *sayānā*, *baigā*, and *bhagat*.

Given their low status in traditional Hindu society, it is not surprising that Chamārs have been attracted to religions that downplay or reject notions of untouchability. Many are followers of devotional (*bhaktī*) Hindu sects such as the Kabir Panth. One such group is the Satnami Chamār of Madhya Pradesh. Some Chamārs have accepted the teachings of the Sikh Gurus, while other Chamār castes such as the Julahas are Muslims. Christianity has made some headway among the Chamārs. More recently, some groups such as the Jadavs in Uttar Pradesh have converted to Buddhism. They were motivated in this by Dr. B. R. Ambedkar, an Untouchable and India's first minister of law, who became a Buddhist in 1956.

## 6 MAJOR HOLIDAYS

Chamārs observe the normal festival cycle of their religions and their regional cultural traditions. The spring festival of *Holi* is an important celebration among Hindu Chamārs and is marked with the customary bonfires and throwing of red colored powder. It is a time of drunkenness and sexual license that can last for days. *Nagpanchami* is held in the middle of the rainy season to honor snakes. Women make images of snakes out of cow dung and worship them. Saucers of milk are placed outside the house as offerings to snakes, and milk and dried rice are poured down snake holes. *Divali*, the festival of lights, is a time when the ancestral spirits visit their old homes. *Govardhan Puja*, a festival honoring Krishna and cattle, is accompanied by excessive drinking and gambling.

## 7 RITES OF PASSAGE

The bearing of children, especially sons, is of utmost importance to Chamār women. Barren women visit shrines and perform various rituals to ensure they conceive, and pregnant women employ ritual and magical devices to obtain sons. Chamārs take elaborate precautions to protect the expectant mother from witchcraft and the influence of evil spirits. After a birth, the local women gather and sing songs to Shitala Mata. The singing continues day and night for six days, and during this period, mother and child are never left alone. Purification rites are performed on the sixth day and again (usually) on the 12th day after birth. A black goat is frequently sacrificed to Kali Devi (the local form of the goddess Kali, the consort of Shiva) on the twelfth day. Childhood rituals include the first "rice-feeding" ceremony, held at about 6 months of age.

No special rites mark the onset of puberty, so there is no formal initiation ceremony such as the sacred thread ritual of the higher castes. However, a girl is carefully watched for the

first signs of menstruation and at its onset is kept in seclusion for four days. She must be kept out of the sight of men, and no one is allowed to touch her during this period. This results from a superstitious fear of menstrual blood. The menstruating girl has to avoid food containing sugar, salt, yogurt, and tamarind. She must not look up into the sky, nor see the sun, a cat, or a crow.

Chamārs both burn and bury their dead. The poor, who often cannot afford the wood necessary for a cremation, may scorch the face of the corpse and then dispose of it in a nearby river. Members of the Shiv Narayan sect practice burial. Death rituals include emptying all the water containers in the house, and breaking any earthenware utensils touched by the deceased just before the time of death. Chamārs believe that the dead return to visit the house, so for 10 days food is set out for the departed spirit. On the tenth day, a feast is held for relatives and friends to conclude the funeral rites. Portions of the food may be set aside as offerings to Brahmans and to local godlings. Food is also placed out for crows, in the belief that it will reach the ancestral spirits.

## 8 INTERPERSONAL RELATIONS

Chamārs follow the general customs of their region and religious community in their interpersonal relations.

## 9 LIVING CONDITIONS

Chamārs are among the most economically disadvantaged castes of India and, in general, live in poverty and squalor. Most live in villages, but as Untouchables they are required to remain separate from the other Hindus in the community. They are not even allowed to use the same wells as caste Hindus, as their presence is polluting. Small clusters of Chamār houses are found on the outskirts of virtually all Indian villages. These are usually simple, one-room structures made of mud and clay, and plastered with a mixture of mud and cow dung. Houses are sparsely furnished, according to the means of their occupants. In villages, there are no latrines and the people relieve themselves in nearby fields. Chamārs who live in cities may have better standards of living. Their houses may be of brick, have two stories, and possess some basic sanitary facilities. Chamārs in urban areas still live in segregated neighborhoods.

## 10 FAMILY LIFE

With the wide geographical distribution and diversity of religions found among the Chamārs, variations are to be expected in Chamār social organization and kinship systems. However, they tend to follow general regional practices. Castes and subcastes (*jāti*) are endogamous units, i.e., one marries within the caste community. These are subdivided into patrilineal clans (*got*) and lineages that are exogamous. Chamārs usually practice village exogamy, seeking marriage partners from outside the village in which they live.

Marriages among the Chamārs are arranged. In the past, it was customary for the first step, the betrothal (*mamgnī*), to take place during infancy. The actual wedding ceremony (*sadī*) would be performed in childhood, when the bride was around 8 years. In its outline, this ceremony follows Hindu marriage rituals—various ceremonies are performed in the homes of the bride and groom, the marriage procession (*barāt*) makes its way to the bride's home, and the wedding includes the ritual

Some of India's poorest people, known as Chamārs, or untouchables, participate in a march where they are demanding the government give back their land. The marchers say they aim to shame the government into keeping its promise to redistribute land. (Tauseef Mustafa/AFP/Getty Images)

walk around the sacred fire (*pherā*). Some customs, however, reflect the Chamārs' lowly origins. Among castes not served by Brahman priests, a senior relative has to officiate at the ceremony. Some groups sacrifice a goat or a ram as part of the wedding ritual. Bride and groom return to the groom's home for further ceremonies. If the bride is not of an age when the marriage can be consummated, she returns to her parents' house. The final step in marriage, the consummation or *gaunā*, occurs at puberty. A dowry is usually paid to the groom's family.

The role of a Chamār woman in family life is typical of all South Asian groups. She marries at an early age but does not achieve full respectability until she bears male children. She manages the household, cooks for her family, and performs all the household chores. A Chamār woman also contributes to the family income, working at menial labor, and even skinning animal carcasses.

### 11 CLOTHING

In their clothing, Chamārs are usually indistinguishable from the lower classes of their region. In Andhra Pradesh, for ex-

ample, the dress of Mochi males consists of a shirt and a *dhoti*, the typical Indian lower garment. They also wear a cloth on the shoulders, draped from the right to the left side. They tie their hair in a knot at the back of the head. Mochi women wear the *sāri* and blouse, with the usual array of ornaments, nose studs, and bangles.

### 12 FOOD

The staple diet of the Chamārs consists of breads (*roti*) made from cereals such as wheat, maize, barley, and millet (rice replaces *roti* in the wetter areas). Their main meal is consumed at night, when pulses (*dāl*) and vegetables supplement the breads. Chamārs also eat meat, even carrion meat (flesh from carcasses), which is a practice that contributes to their low-caste status in Hindu society. However, individual Chamār groups vary considerably in their attitudes towards meat-eating. For instance, the Bhambi, the leatherworkers of Maharashtra, are nonvegetarian, eating goat, pork, chicken, deer, and hare. The Bhambi of Karnataka will eat beef, but not pork. In Gujarat, however, Bhambis will eat fish and mutton, but not beef. Some Chamār groups have abandoned meat-eating in an effort to raise their caste status.

Food in India has important ritual and social dimensions as well as its basic nutritional function. This is true of Chamār society. The specific ranking of Chamār castes and subcastes in any region, who will accept food from whom, who can provide acceptable marriage partners, and many other social attributes are linked to the dietary patterns of specific Chamār groups.

### 13 EDUCATION

Historically, poverty and discrimination barred Chamārs from access to education. After independence, India legally abolished the practice of untouchability. The government set in place policies providing increased educational opportunities for disadvantaged communities such as the Chamārs. Many Chamār groups favor education, especially for boys, but educational levels vary from place to place. Literacy among the Chamārs of Goa, who are called Chambhars, is 58.02%, which is far above the average for the Scheduled Castes. By contrast, Chamārs in Bihar show a literacy rate of only 11.52%, with female literacy falling as low as 2.36%.

### 14 CULTURAL HERITAGE

Although they can hardly be said to possess a distinctive cultural heritage, Chamārs share in traditions of regional folk culture. Thus, legends of Guga Pīr (also known as Zahra Pīr) are widely known and popular among Chamārs and other low castes throughout northwestern India. In addition, specific groups have developed their own cultural traditions. The Chamārs of Gujarat, for example, express their art and culture in their leather goods, floor designs, tattooing, Garba folk dance, and folk songs sung at the time of birth and marriage. As with most nonliterate groups, Chamār culture is largely oral in nature, focusing on folk tales, song, music, and dance.

### 15 WORK

In the past, Chamārs carried out their occupation as tanners and leatherworkers in the context of the traditional Hindu economic system, the *jajmāni* system. In this, Chamārs had a hereditary relationship with a *jajmān* or patron, usually a

landowner in the village. They provided their services to the *jajmān* and in return received a portion of the landowners harvest. With the emergence of the cash economy, the mutual responsibilities of such a relationship no longer have meaning. Furthermore, historically Chamārs could not own land. While this is no longer true in independent India, few Chamārs have the resources to buy land. As a result, although some Chamār castes follow their traditional occupation as tanners, leatherworkers, and shoemakers, many Chamārs in rural areas live as landless agricultural laborers.

Those Chamār individuals who have managed to obtain the necessary education have been able to pursue white-collar jobs and enter the professions. A few successful Jadavs in cities in Uttar Pradesh, for example, own their own factories. Social policies that “reserve” jobs and legislative seats for the Scheduled Castes have allowed some of the more educated generation to enter government employment and politics.

## 16 SPORTS

There are no sports associated specifically with the Chamār community. Children play games common to the young throughout the country.

## 17 ENTERTAINMENT AND RECREATION

Chamārs enjoy gambling, while country liquor is consumed at most social events. In rural areas, entertainment is essentially limited to activities related to fairs and festivals. Chamārs living in towns and cities have access to movies and other urban entertainment.

## 18 FOLK ART, CRAFTS, AND HOBBIES

Not all Chamārs follow their traditional occupation today. Many of those who do, however, are known for their leatherworking skills. Chamārs have a strong tradition of folk songs and music.

## 19 SOCIAL PROBLEMS

The Chamārs are an economically depressed and socially disadvantaged community in India. They face problems of landlessness, poverty, debt, and lack of education. Gambling and excessive drinking is common among some Chamār groups. Population growth has resulted in increasing pressure on limited resources. The traditional occupation of Chamārs makes them polluted and polluting to caste Hindus. Even though they might no longer handle hides and carcasses, they are despised by most upper-caste Hindus. Recent attempts by Chamārs to claim some of their newfound rights in an independent, democratic India have led to conflict with upper castes in villages and towns across India. For example, serious rioting involving Jadavs and upper-caste Hindus occurred in Agra in 1978. As lawmakers in the United States have discovered, social equality can be proclaimed by the stroke of a pen. But it takes much longer to change social and cultural attitudes that have been in place for centuries—for the Chamārs, attitudes that have been in place for millennia.

## 20 GENDER ISSUES

In most states of India, Chamārs are classified as belonging to the Scheduled Castes, i.e. castes identified by governments as needing special help in terms of education and development.

Scheduled Castes also have “reservations,” i.e. a certain number of places in colleges and positions in the government are allocated to them in a type of affirmative action program. Because of their traditional occupation as leather workers and handlers of animal carcasses, however, Chamārs are considered as “untouchable” and polluting to caste Hindus. Chamār women are thus alienated from society on the basis of class, caste and gender. They tend to be poor and illiterate—in Tripura, only 54.4% of Chamār women were classed as literate in the 2001 Census of India, compared to 63.4% for Chamārs as a group—whereas in Bihar, the literacy rate among female Chamārs falls below 14%. Even though many Chamārs have changed their occupations (in the *terai* of Nepal, for example, they act as midwives), poverty and illiteracy have limited their upward social mobility. Other Hindu castes tend to treat Chamārs as traditional “untouchables,” no matter what their current occupation. One writer indicates that Chamār women are not very “shapely” and their lot remains “poverty and disease.” Chamār women experience the same travails as all women in Hindu society—arranged marriages, child marriage, dowry-giving (despite the giving of dowries being made illegal by the Union Government in 1961), limited access to education and health facilities, and lack of property rights.

Despite India being a signatory to the United Nations Convention on the Elimination of All Discrimination Against Women (CEDAW), which came into force in 1982, cultural oppression and social subjugation remains an issue with Chamār women, who are often subjected to domestic violence, physical assault, verbal abuse, sexual exploitation, rape, abduction, forced prostitution, and murder etc., which are usually inflicted by the men belonging to caste Hindus.

Nonetheless, some Chamār women have risen to a position of prominence in the political sphere. Ms. Mayawati Kumari, for instance, is leader of the Bahujan Samaj Party that forms the government of Uttar Pradesh State and she is, in fact, the State’s Chief Minister. She remains a national emblem for Chamār women.

# CHIN

**PRONUNCIATION:** CHIN

**ALTERNATE NAMES:** Sho, Asho, Zo, Mizo, Lai, Yaw, Zomi

**LOCATION:** Myanmar (Burma); India; Bangladesh

**POPULATION:** About 2 million in Myanmar, over 1 million in India

**LANGUAGE:** Chin

**RELIGION:** Christianity

## <sup>1</sup> INTRODUCTION

The Chins are a Tibeto-Burman people. Although they are collectively known as Chin by outsiders, they call themselves names such as Sho, Asho, Zo, Mizo, Lai, Yaw, Laizo, Zotung, Zophei, and Zomi. Whether their original name is Chin, Lai, Zo, or Sho is debatable, but it can be concluded that most of their clan names are similar sounding. Based on old Burmese inscriptions from the Pagan period, some contend that Chin is the original name. In history books written by British colonial officers, the people were referred to as Kuki, Lushai, and Chin because the British came in contact with Bengalis, Thado, and Burmese. The Bengalis called them Kuki, and the Thado, who the Bengalis gave the name Kuki, called the other clan living next to them Lusei, which was corrupted by the British to become Lushai. The British adopted the Burmese term “Chin” when they came to Burma (which was renamed Myanmar by its military government in 1989). The name Chin is commonly used in Myanmar and Zo or Mizo in India.

The Chin people originated from somewhere in Western China (possibly where the Lolo people, a Tibeto-Burman ethnic group, still live today) or Tibet. They reached the Chindwin Valley, northeast Burma, in the first millennium AD. After living in the Chindwin Valley they gradually moved into the Kale-Kabaw, Yaw, and Myittha valleys. During the 12th and 13th centuries they came in contact with the Burmese (Burman) ethnic group, Burma’s largest. Some, known today as the Asho, wandered to the south to live in the plains of Burma. The majority of them moved to the Indo-Burman ranges, where they have made their home for the last 500–600 years. Because fertile land was scarce in these Indo-Burman ranges, each clan either had to protect its own territories or find new ones, which created clan-oriented societies whose acquired territories were guarded by means of warfare. Through these skirmishes the people were pushed toward the north, south, and west, resulting in the formation of many different dialects and customs among the same people. The mountainous terrain further isolated different dialect groups. Each clan was ruled by its own chief. Some clans would attack others to widen their influence. Just before the British annexation, the Falam clan had control of almost the whole people. During the early 1800s, the British annexed the Chin country in the west at the Bengali/Chin border. They completed colonization of the Chin people in the 1890s. Even today, Chin society is often divided by clan-based regional rivalry.

## <sup>2</sup> LOCATION AND HOMELAND

The Chin people as a whole number over 3 million, with around 2 million in Myanmar (Burma). In India, at least 800,000 live

in Mizoram state. The Chin population in Bangladesh is about 50,000.

The Chins live mostly in the Indo-Burman ranges stretching from the Letha range in the north to the Arakan mountains and neighboring plains. Some also live in the Pegu and Popa hills of Myanmar, in the midst of the Burmese people. The British colonial administration divided the people into many administrative districts. The borders drawn by the British that divide the Chin exist still today. There is great contrast in living standards between the impoverished Chin areas of Myanmar and Mizoram, a modern, Mizo-governed state of India. In Myanmar, the Chins reside mainly in the Chin state and surrounding areas, in the State of Arakan, in the Prome-Thayetmyo area, in the Yaw Valley, in the Kale-Kabaw-Myittha valleys, in the Tamu-Hkamti area, and in the Popa and Pegu hills; in India, they reside in the Mizoram, Manipur, Tripura, and Assam states; and in Bangladesh, they reside in the Chittagong-Bandarban Hill tracts. Uneasy relations between the Kuki (Chin) people in Manipur, India and the non-Chin ethnic groups of that state have sometimes resulted in violent conflict.

Tens of thousands of Chins from Myanmar have fled the ruling military regime, taking refuge in neighboring Mizoram, where relations with the related Mizo people are often difficult, with the Mizos accusing the Chin refugees of being criminals. There are also thousands of Chin refugees in Indian cities such as New Delhi, in Malaysia, and other countries. Chin refugees have been settled in the United States in increasing numbers since 2006. Battle Creek, Michigan, is one place where many of those new immigrants have found a new life.

## <sup>3</sup> LANGUAGE

The Chin language belongs to the Tibeto-Burman family of languages. Dozens of regional dialects exist among the Chin. The major dialects are the Duhlian, Lai, Paite, Khumi (Mru), Cho, and Asho.

The Chins have family or clan names. With their clan names, they can recognize each other as relatives and friends. Whole communities can have a single name, such as Sizang, for example. The Sizang have a population of about 5,000 people living in five neighboring villages; all of them have the same clan name of “Suantak.” Because villages commonly carry the name of their founder, and all the village members stem from the same clan, they all have the same family name. Consequently, among their own people, the Chins usually do not use their family name, unless they come in contact with the outside world. Many of their names usually consist of two or three words. Every name has a meaning and describes the status of the person giving the name, as explained below.

The paternal grandfather has the prerogative of naming the male children. In the Tedim (Zomi) district, the grandson’s name begins with the last name of the grandfather’s first name (since names consist of more than one name). For example, if a grandfather’s name was En Vum, the grandson would receive the name “Vum Son.” The name “Son” means “to tell.” In other words, the name given to the baby means he should tell of the deeds of his grandfather. While the naming practice is similar in other Chin, they do not necessarily begin their names with the names of relatives. Conversely, the paternal grandmother has the prerogative of naming her granddaughters. Next in line are the maternal grandfather and grandmother. After them,

uncles or aunts may name the children. The people of northern Mizoram and Hualngo differentiate male and female by ending male names with the “a” sound and female names with the “e” sound. Chin people often have a Christian name from the Bible or an English nickname, as well as their traditional Chin name.

#### 4 FOLKLORE

The Chins say that they had their own writing at one time, which was kept written on leather. A myth tells that a dog ate the leather, and the writing was lost. Although they had no trace of that writing, the Chins have a long oral history, tracing back their history through songs. Every successful man had his own song. When Chins gather in mourning or in celebration they sing the songs of their forefathers, in which are composed the deeds of the ancestors. These songs have kept their history alive. However, because most Chins have converted to Christianity and these songs may be perceived as unchristian, their people’s oral history has been neglected.

The Chin heroes are those ancestors who were successful and whose lifetime deeds are recorded in the songs sung by their descendants. Many Chin clans have a myth that their originator came out of a hole in the earth, a cave named Sinlung.

#### 5 RELIGION

The Chin people were once animists. They believed in evil spirits who lived in trees, caves, high mountains, water springs, and everywhere else—even in human bodies. They could be two-legged or one-legged beings, and were always ready to bite or punish human beings. They were the source of all human suffering. The people therefore gave offerings to the evil spirits when they fell ill or when their crops failed. At funerals they sacrificed chickens, dogs, pigs, cows, and mithuns, a huge domesticated gaur (wild ox) so that the deceased could arrive in heaven as a rich person. Many families would keep a mithun as a family pet, letting it graze in the forest by day and calling it by name to come home at night. The mithun is the rarest of the large animals domesticated by humans. While they ate most of the meat of the sacrificed animals, they laid the rest of the meat, such as the legs or parts of the animal not suitable for human consumption, on altars for the evil spirits.

The Chins also believed in a powerful god, called Pathian, who was good to them. They did not give offerings to Pathian because he did not harm them. They also believed in going to another place after they died. They believed that they could take along their possessions. Thus, when someone died, the families had extravagant funerals at which they might slaughter a number of animals, especially the mithun. Long ago, when a powerful chief died, they went out to hunt for heads so that he could take slaves to his next life.

Christian missionaries arrived in the land of the Chins during Burma’s British colonial period. The first were American Baptist missionaries who came to the Hakka area in 1899. They were followed by other missionaries, who did medical work among the Chins and preached to them. Eventually, the majority of Chin people (estimated 90%) joined Christian churches, including Presbyterian, Baptist, Methodist, Catholic, Anglican, and other denominations. The Chins are known for a diversity of Christian sects, with a number of different churches even in small villages. There are also “new religions,” indig-

enous varieties of Christianity, and some Chins in Myanmar and Mizoram who became Jewish, following the Old Testament and considering themselves a Lost Tribe of Israel. Some of the Jewish Chin/Mizo population has emigrated to Israel in the 21st century.

Most of the Chins’ animist beliefs gave way to Christianity, but some survive, such as the use of mithuns for feasting. Many of the churches discourage the use of traditional fermented beverages like Zu. The Chins in Myanmar have experienced pressure from the military regime to convert to Buddhism, the country’s majority religion. Some Chin children have been taken to Buddhist boarding schools, and crosses erected by Chins on hilltops have been torn down and replaced by Buddhist pagodas by Burmese soldiers. It is very difficult for Chin congregations to get permission from the regime to repair or rebuild church buildings. Pastors and other church workers have been arrested and even killed by the Myanmar military, according to reports by the U.S. government and international human rights groups.

#### 6 MAJOR HOLIDAYS

The traditional Chin/Mizo holiday is the Harvest Festival during November/December at the end of the harvest season. The Harvest Festival is named according to the dialect of the people, such as Khuado, Khuangcawi, etc. The Harvest Festival begins with the slaughter of family-reared pigs, which must be large enough to produce some amount of pork fat. This time is the opportunity to eat plenty of food, when every household shares their cooking with relatives, friends, and the community. The women prepare plenty of *Zu*, a fermented rice, maize, and millet alcoholic beverage that is the Chin national drink. Everyone joins in the drinking, singing, and dancing in the evenings that could go on for the whole night and up to four days. There is also a corn harvest festival in Mizoram in August.

Christian holidays including Christmas and Easter are celebrated by the Chins with church services, singing, and feasts. Young people go from house to house with candles and torch lights, singing Christmas carols. The Chins in Myanmar also commemorate the arrival of the missionaries and founding of churches in their land. A Chin National Day is commemorated early in the year by exiles from Myanmar.

#### 7 RITES OF PASSAGE

The birth of a child is traditionally celebrated with the drinking of Zu by the neighbors and relatives. Friends or relatives kill a chicken, cook it at home, and bring it to the family. The chicken soup is for the mother, so that she has plenty of milk to breast feed the baby. A few days, weeks, or even months go by before the Chins give a name to the newborn. The giving of a name is celebrated by inviting relatives. The person naming the child contributes Zu and the meat, usually a pig or a cow.

A child joins his or her parents in the fields as soon as he or she can walk the distance. Most teenage boys and girls do the same work as their parents. Boys have fewer duties than their sisters. As soon as a girl is able, at the age of six or so, she is expected to help her mother in preparing food or other chores. Because many villages are built on the tops of hills, one of the usual duties of the girls is to carry water from the springs or streams to the house. They are also expected to carry firewood and to pound rice and corn. Boys are expected to look after the

livestock, to hunt, and to make traps to catch wild animals. In the villages, teenage boys used to sleep in a designated house; for example, the Mizo had the Zawlbuk (bachelor's house), where all young men of the village would sleep.

Life expectancy for the Chin in Myanmar is short, due to a high child mortality rate, and access to health care is very limited, so many people rely on traditional herbal medicine. The Mizos in India enjoy better access to hospitals, clinics, and health workers. Before the influx of Christianity, the dead were kept at home until the family could afford a proper burial. A proper burial included killing several animals and drinking a large number of Zu pots. Before the corpse was buried, the family would recreate the likeness of the person, wrapping his clothes around the skeleton. The people sang the songs of their ancestors, most importantly the song of the deceased. On wooden posts they would hang the skulls of the animals killed at the funeral. For an important person, relatives still erect a monument, usually a stone platform or tablet on the main road or trail. The monument carries inscriptions and animal figures that show how many animals the deceased hunted.

## 8 INTERPERSONAL RELATIONS

Before the British came the Chins normally did not shake hands, but today it is common practice. Their greetings are very personal, such as "Have you had your meal?," "Where are you going?," or "What are you doing?" If someone comes by to visit, they may say, "Are you coming to visit me?" Or if somebody is eating, the greeting will be, "Are you eating?" Then the person eating will say, "Please join me and have food." Should there be a guest when the family is eating (breakfast, lunch, or dinner), the guest is invited to join in the meal. The duration of the visit has no limits. It is very impolite to tell someone to go home. People visit each other early in the morning or any time of the day. If the host is busy the guest might help with the work while they chat.

In the traditional Chin society, when a young man was of age, which could be as young as 16, a marriage could be arranged. Because the Chins trace their ancestries over many generations, each person's lineage was known. A young man was expected to marry a girl from the mother's lineage. A man of good standing in the family, either the father, an uncle, or a close relative, was chosen as the ambassador to go to the house of the prospective girl to meet with her parents or guardians. The ambassador would take a chicken or a pot of Zu with him. In more recent times, he might take a small bag of sugar. The ambassador announces his mission in a cordial and very humble manner. For example, he may say, "The good-for-nothing boy of mine, Zam Tual, has come of age, and in life a man needs a woman to fulfill his life's obligations. I am here to ask your kindness in agreeing to match your daughter and my son." The parents of the girl, whether they mean it or not, will appear unwilling to give their daughter—not because they think the boy is not good enough for their daughter, but because their daughter is unfit for the boy. They may say, "The girl is lazy. She does not know how to work. She has a bad character, and you would not like her at all as your daughter-in-law." Now the ambassador would insist, explaining to the girl how bad the boy is but how much the boy needs a wife. He also must explain that because of the family ties, there is the need for the union of the two families. The girl's parents then explain the impossibility of giving away such a useless girl in

marriage. They then part cordially. The admirer and his family must wait about a month for the girl's reply. If the family does not return the presents, they have accepted the request. The ambassador once again goes to the girl's house to discuss the terms of the marriage, such as how many cows or mithuns are to be slaughtered at the wedding, what kind of bride-price the groom must pay, and the timing of the wedding. If the families had been at odds before, then a solution has to be found—usually an expensive bride-price or an elaborate wedding. The bride-price may depend also on the community's tradition, or on the physical appearance of the bride.

These days, young people are likely to meet at church activities and decide for themselves who they want to marry, but parental blessings are still important. In addition to a church marriage ceremony, weddings are celebrated by killing a cow or mithun at the bride's house. On that day, the main bride-price, given to the parents, is settled upon. There are also prices to be paid to the aunt, who took care of the bride when she was a baby, when the mother was working in the fields. After dinner is served, the bride is taken to the groom, where the friends will sing and play games the whole night. The actual wedding celebration is the next day when more cows or mithuns are slaughtered and the whole village and neighboring villagers are invited.

## 9 LIVING CONDITIONS

The land where most Chin people live is very rugged. Fertile land is scarce, and therefore living conditions for most Chins are very basic, although there is a much higher standard of living for the Mizo/Chin people in India than for Chins in Myanmar. The capital of Mizoram state, Aizawl, has a population of 340,000. The city's houses are mostly wood and bamboo, built on a series of hills connected by roads, paths, and stairs. Roads and an airport connect Aizawl with the rest of India. In Myanmar raids by soldiers and forced labor contribute to living difficulties for the Chins and cause many to look for refuge and work in other countries.

Chins in rural areas build their own houses with lumber and bamboo they cut themselves. Every homeowner yearns for two things: a wooden platform in front of the house and a corrugated zinc roof. Most Chin houses are divided into two parts. One part, the larger part of the house, stores grain. The other part of the house is used for eating and sleeping around a big fireplace. The front of the house is usually only partially enclosed and stores firewood and utensils for corn and rice husking. Most of the household chores are done in this part of the house, including pounding the rice or corn. As decoration, skulls of wild animals may hang on the walls. Family photographs, calendars, and Christian posters decorate the rooms.

Most Chins have very few consumer goods, weaving their own clothing and making all their utensils themselves, mostly using bamboo. There is hardly any furniture in the houses, except for cane or bamboo stools or benches for sitting. The only luxury in the house is the fireplace, used for cooking and warmth. Family members and visitors sit around the fireplace every day when it is cold. People use their blankets to keep warm when they go out in the cold mountain mornings or evenings.

In the Chin Hills of Myanmar, transportation of goods is mostly on people's shoulders and backs. Few people own horses, and carts cannot be used in the hills since there are few roads. People carry grain from the field to the house. Fire-

wood and drinking water are also carried the same way, but some villages may have bamboo flumes to guide water to their houses. In Myanmar only the towns and cities have electricity but even there the service is sporadic. In Mizoram roads good enough for four-wheel drive vehicles have been built to reach all but the most remote villages.

Most Chin households keep cats and dogs. The cat's purpose is to catch rats and mice, which eat the grain stored in the house, and the dogs are used for rat catching, guarding the village, and hunting.

## **10 FAMILY LIFE**

Most Chin families are large, averaging about five children per family. Girls marry and go to live with their husbands. The families in rural areas work together on their farms and older and younger generations live in the same house. Chin customs differ on who inherits the parent's house. The child inheriting the parents' house is expected to care for the parents in their old age. When the oldest son inherits the parent's property, he remains in the house. His brothers must move out soon after they marry. When the youngest son inherits the house, the older brothers move out after they get married. This makes sure that there is constantly a daughter-in-law who cares for the parents.

## **11 CLOTHING**

Men's traditional daily wear was the loincloth and, when the days were cold, men used the same blanket they slept under at night and wrapped it around them for warmth. For the women, traditional dress was a woven short skirt and, to keep out

the cold, they also wrapped their blankets around themselves. A jacket, longer skirt, and a headdress of porcupine quills are worn as dance costumes by Chin/Mizo women today. At present the Chin men wear trousers, jeans or shorts with t-shirts or other shirts, and jackets, while the women wear sarongs and blouses in Myanmar and skirts, dresses, or jeans in Mizoram, with sweaters or jackets for the cold. Even with those changes, traditional woven blankets are still used as cloaks and as ceremonial gifts, and traditional embroidery is used on sarongs, blouses, jackets, and even neckties. Chin men and women both carry woven and embroidered cloth shoulder bags. Weaving patterns, colors, and embroidery are very regionally distinctive, so one can tell where a person comes from by the clothes they wear. Christian symbols, such as crosses, are often included in the weaving or embroidery. Necklaces made out of Pumtek (petrified wood) or carnelian beads and silver bracelets are favorites among the women. Some older women still have traditional tattoo patterns on their faces.

## **12 FOOD**

Although the Chins work daily in the fields, they may not harvest enough food for the year. The Chin seldom eat meat. They usually eat two to three times a day. Their breakfast, lunch, and dinner may be very similar. Corn and millet are the staple foods for people living in higher elevations. Potatoes and sweet potatoes are commonly served for dinner. Dry corn grains are pounded to get rid of the skin, then cooked for four to six hours. Rice is the staple food for people who live in more fertile areas where rice can be grown in hillside fields. Meat usually is

boiled for a long time. The Chin were only introduced to spices by the Burmese and Indians, so they are not prevalent.

Chin farming tools are basically a hoe, a long knife, and an ax. The use of spades, breaker bars, and shovels was introduced by the British and they become very popular. Cooking pots and dishes made in China, India, or other parts of Myanmar are traded to the Chins; however, locally made pottery is also important because it is used for boiling corn soup, the staple food of the Chin. Every 48 years, a common type of bamboo that grows thickly in Chin/Mizo regions flowers, produces fruit, and then dies off. A huge population explosion of rats accompanies the bamboo flowering, as the rats eat the bamboo fruit. When the bamboo fruit is gone the rats raid the people's grain storehouses and devour everything. This phenomenon, known as *Mautam*, caused severe famines in the region in 1911 and 1959. While Mizoram prepared for the 2008 bamboo flowering by building roads and helicopter landing pads for food relief shipments, reports of starvation in Chin areas of Myanmar began emerging in early 2008. With a worldwide rice shortage and severe increases in the price of rice in Myanmar following Cyclone Nargis in May 2008, this was considered a particularly dangerous situation for the Chins.

### 13 EDUCATION

Prior to the British invasion in the later part of the 19th century, there were no schools for the Chin people. The only education they received was how to survive on rugged land. Although a writing system invented by Paucinhau (1859–1948) became popular in the Chin Hills in the 1930s, Christian missionaries taught the people to write their language with the Roman alphabet. The missionaries then translated the Bible into the Chin language with the Roman alphabet, so the Chin writing was lost. Today, the Chins are not allowed to teach their own language in the schools in Myanmar. Many young people cannot read or write in their language.

Although the British colonial administration offered very few schools, the missionaries started many schools. Today, Mizoram (in India) has a high literacy rate. However, the overall level of education in the Chin area of Myanmar is very low, due to lack of education by Myanmar's regime. Rules and regulations introduced by the military regime have prevented entry into the medical and engineering professions for Chin students. Because of the hardships faced by the people to simply survive, parents try to encourage children to go to school and learn so that they may gain employment, but it is hard for even the most educated Chins to find jobs in Myanmar.

### 14 CULTURAL HERITAGE

Because of the conversion of the people to Christianity, much of the traditional culture has disappeared. Instead of traditional songs, people are versed in Christian songs. It was the duty of important chiefs and personalities to compose their own songs, which would be remembered and sung during social gatherings. Today, these traditions are sometimes regarded as unchristian because of the missionaries' message that old forms of traditions were evil influences. Most young people do not know how to sing traditional songs, although there has been a revival of traditional dances for men and women, especially in Mizoram. Flute and stringed instrument music accompanies the dancers. Contemporary Chin/Mizo culture combines Christian influences with some of the old traditions.

Myanmar's military regime is dominated by the Burmese (Burman) ethnic group and suppresses cultural expression by other ethnic groups, including the Chins, but there are some performances by Chin cultural groups on national holidays in Myanmar. In contrast, the Chin/Mizo culture is very much encouraged in India's Mizoram and Manipur states, with literary journals, dance, music, martial arts performances, and a revival of textile arts.

### 15 WORK

Most Chins are hillside farmers using swidden cultivation, in which fields are cleared with fire and planted on a rotating basis. The farmers move from one location to another every year, returning to the same field in four to nine years, depending on the size of the village land. The whole household pulls together to cultivate the fields they own. Work begins at first light and ends at sundown, usually six days of the week with Sunday as a day of rest and churchgoing. Clearing of the fields starts during winter, sometime in December, and has to be finished before the end of February. The wood and grass are left to be dried by the summer sun, being burned at the end of March or beginning of April. A good burn is the key to good grain production. Surrounding forest is relied on for hunting and foraging but has been increasingly logged for the timber trade by Myanmar's military.

During Britain's colonial rule over Burma, many Chins were soldiers in the British Chin Rifles. Even after Burma's independence, Chins joined the national army, but that trend decreased after 1988, when the military was widely perceived as repressive, especially in ethnic minority areas, like the Chin state. After 1988, Chin students formed an armed resistance group, the Chin National Front, which is one of the few rebel armies in Myanmar that has not made a cease-fire deal with the regime. The Chin National Front occasionally stages guerrilla raids on Myanmar military units stationed in Chin areas. Exiled Chin student leaders founded human rights and refugee advocacy organizations and often present the plight of the Chin people to international conferences and groups of indigenous peoples. In Mizoram, a group that had fought the Indian government negotiated a settlement, and the former rebel leaders are now prominent politicians in the state's government.

Chin and Mizo people who live in towns and cities engage in a variety of occupations and professions, operating small shops and businesses. Not only Chin farmers, but the most educated young people have fled Myanmar as refugees, creating a "brain drain" to other countries. Chins who find work in India, Malaysia, or elsewhere usually try to send money home to their families through underground currency transfer networks. Chins in exile have established news agencies and web-based magazines, including *Khonumthung News Group* and *Chinland Guardian*.

### 16 SPORTS

Traditional sports included wrestling, martial arts, and the high jump. The British introduced soccer to the Chins, and it is now the most popular sport by far. Other sports such as tennis, badminton, volleyball, and basketball are played in the towns, but are very rarely played in the rural areas because of a lack of flat ground and the cost of equipment.

## 17 ENTERTAINMENT AND RECREATION

Church activities, like singing groups, are a primary source of entertainment for many Chin/Mizo people. Those who can afford it watch movies on disc or satellite TV. Mizoram and Manipur have rock and pop music scenes with numerous bands recording and giving concerts, as do the Chin refugee communities overseas. Some Chin pop singers have become well-known in Myanmar.

## 18 FOLK ART, CRAFTS, AND HOBBIES

The Chin/Mizo people are known for their traditional weaving and embroidery, including blankets, skirts, and bags. Their distinctive textiles have been exhibited in museums in the United States. They also make baskets and stools from bamboo and cane.

## 19 SOCIAL PROBLEMS

Severe narcotics problems affect young people on both sides of the Myanmar/India border. The northeast Indian states of Manipur and Mizoram have some of the highest HIV/AIDS infection rates in India, due to injection of narcotics. Drugs used intravenously include heroin refined from cheap opium produced in Burma, amphetamines, tranquilizers, and other pharmaceuticals. There are few options for drug rehabilitation or HIV/AIDS treatment, particularly in Myanmar.

Myanmar stationed increasing numbers of its troops in Chin areas during the 1990s and early 21st century. As in other regions of Myanmar, this military presence was characterized by human rights violations against the local civilians, including rape, torture, summary execution, imprisonment, forced labor, and forced relocation, a pattern that led to the outflow of refugees. Food shortages in 2008 may cause even more people to flee Myanmar's Chin areas

## 20 GENDER ISSUES

Traditional Chin/Mizo society was patriarchal, with the man regarded as the head of the household. Men rarely participated in the preparation of food and chores in the house; instead, they built and maintained the house itself and took care of the domestic animals. However, there was very little difference between what the women and men could do. The society as a whole was generally quite gender egalitarian.

In agriculture, the women are the main work force. Although the men work with the women and cut down the bigger trees, the women organize and lead the work. After working the entire day in the field and carrying firewood on their backs, the women are still expected to pound rice and corn when they come home. Cooking may be done by the children, supervised by the women. The men may walk around the village, visiting friends and relatives while the women cook, feed the children, and do household chores.

In the towns and cities of Chin/Mizo areas of Myanmar and India, women are often teachers, market vendors, shopkeepers, or owners of other small businesses. In recent years they are playing an increasing role in village administration and church activities, with female pastors leading some congregations. Chin women in exile from Myanmar have founded self-help economic groups and schools for refugee children. Cheery Zahau, an activist of the Chin Women's Organization in exile in India, presented documentation to the international

community in 2008, which stated that Myanmar's soldiers were raping Chin girls and women as a strategy to terrorize the ethnic minority people. Chin women participate in an underground movement resisting military rule and smuggling human rights information to the outside world.

Traditional Chin/Mizo society and evangelical Christianity in the region are not particularly tolerant of homosexuality, as the emphasis is on male-female marriage, but gay and transgender individuals are not usually harassed. Mizoram has gay and lesbian networking and support groups.

# CHINA AND HER NATIONAL MINORITIES

**ALTERNATE NAMES:** Han (Chinese), Mandchus, Mongols, Hui, and Tibetans

**LOCATION:** China

**POPULATION:** 1.33 billion

**LANGUAGE:** Austronesian, Gan, Hakka, Iranian, Korean, Mandarin, Miao-Yao, Min, Mongolian, Russian, Tibeto-Burman, Tungus, Turkish, Wu, Xiang, Yue, Zhuang

**RELIGION:** Taoism, Confucianism, and Buddhism

**RELATED ARTICLES:** Vol. 2: Chinese Americans; Immigrant Americans. Vol. 3: Bai; Buyi; Dai; Derong; Dong; Ewenki; Gaoshan; Han; Hani; Hui; Kazakh-Chinese; Korean-Chinese; Vol. 4: Li; Man; Miao; Mongols; Naxi; Tibetans; Tujia; Uighurs; Yao; Yi; Zhuang.

## <sup>1</sup>INTRODUCTION

The apparent uniformity of the Chinese population is a di-hard stereotype. The image of an ethnic mosaic better fits the real situation. From time immemorial, the territory comprised within the frontiers of the People's Republic of China has been, and continues to be, the homeland to a wide variety of nationalities.

Chinese historical records dating from the early Zhou Dynasty (1121–222 BC) already speak of the “Four Barbarians,” a blanket term covering a large number of tribes or ethnic groups surrounding the Chinese Middle Kingdoms of the Yellow River Valley. In many cases, the nationalities exercised full sovereignty over their land and were considered by the Chinese themselves as kingdoms or principalities.

All through Chinese dynastic history, the relationship between the Chinese (Huaxia in ancient times, Han since the 3rd century AD) and the Barbarians oscillated between hostility and friendly cooperation. There has been uninterrupted intermarriage between the Han and the other ethnic groups, as well as among these ethnic groups themselves, so that there are no pure ethnicities in China.

When Sun Yatsen established the Republic of China in 1912, he defined it as “The Republic of The Five Nationalities”: the Han (Chinese), Mandchus, Mongols, Hui, and Tibetans. In his speech of October 1, 1949, announcing the foundation of the People's Republic of China, Mao Zedong characterized China as a “multi-ethnic unitary State.” The various ethnic groups were invited to manifest themselves so as to enjoy their newly won equal rights.

By 1955, more than 400 groups had come forward and were registered by the state authorities. After years of research by Chinese ethnologists, this number was reduced to 56; the Han formed the national majority (now more than 1.2 billion people, by far the largest ethnic group on earth), and the other 55 ethnic groups formed the national minorities (now accounting for 113 million people or 8.5% of the total Chinese population).

According to China's constitution, all nationalities are equal under the law. National minorities were granted the right to govern themselves (*zizhi*) under the leadership and the author-

ity of the Chinese State and of the Chinese Communist Party. Five large “autonomous regions” were created for the most compact, populous, or historically important national minorities (Tibetans, Mongols, Uighur, Hui, Zhuang), while 29 autonomous districts, 72 counties, and 3 banners were established within provinces for the other national minorities.

Special laws were enacted by the Chinese State to preserve the culture of the diverse national minorities and to promote their economic and educational development. In order to stimulate their demographic growth, national minorities were exempted from the “one-child” policy; their percentage of the total Chinese population passed from 5.7% in 1964 to 8.5% in 2000.

## <sup>2</sup>LOCATION AND HOMELAND

One of the most striking features of the national minorities is the tremendous size and strategic importance of the land they occupy compared to their small population. Actually two-thirds of China's territory is inhabited by national minorities.

If one looks at a map of China, one realizes that the northern frontier is formed by the Inner Mongolia Autonomous Region (500,000 sq mi), the northwestern frontier by the Uighur Autonomous Region (617,000 sq mi), and the southwestern frontier by the Tibet Autonomous Region (471,000 sq mi) and by Yunnan Province (168,000 sq mi), whose population is composed of no less than 22 national minorities.

One can say in general that the totality of the Chinese continental borders (with North Korea, the People's Republic of Mongolia, Russia [and many former Soviet Republics], Afghanistan, Pakistan, India, Nepal, Sikkim, Bhutan, Burma, Laos, and Vietnam) lie in territories inhabited and governed by national minorities. This creates many sensitive situations; for instance, the same ethnic group may occupy both sides of the border.

The immense territories occupied by the national minorities also pose an acute economic problem: in many cases, the most important timber, hydroelectric, petroleum, and mineral resources needed for China's economic development lie in national minorities' territory. Besides the difficulty of access to these resources because of distance, weather, altitude, and lack of infrastructure (roads, railway, airports, bridges, towns), the reticence of the local populations adds a further obstacle to the development of these resources by the Han Chinese.

## <sup>3</sup>LANGUAGE

Obviously one of the most important factors—but not the only one—to identify distinct nationalities is the language spoken. One may distinguish the following linguistic families in China (figures are 1990 census estimates):

### HAN DIALECTS (SPOKEN BY 1.04 BILLION HAN)

Mandarin (all of north and part of southwest: more than 750 million)

Wu (Shanghai region: 90 million)

Gan (Jiangxi: 25 million)

Xiang (Hunan: 48 million)

Hakka (scattered in southern China: 37 million)

Yue (mainly Guangdong, but also Guangxi: 50 million)

Min (mainly Fujian; excluding Taiwan: 40 million)

**ALTAIC DIALECTS**

Turkish (Uighur, Kazakh, Salar, Tatar, Uzbek, Yugur, Kirghiz: 8.6 million)

Mongolian (Mongols, Bao'an, Dagur, Santa, Tu: 5.6 million)

Tungus (Mandchus, Ewenki, Hezhen, Oroqen, Xibo: 10 million)

Korean (1.9 million)

**SOUTHWEST DIALECTS**

Zhuang (Zhuang, Buyi, Dai, Dong, Gelao, Li, Maonan, Shui, Tai: 22.4 million)

Tibeto-Burman (Tibetans, Achang, Bai, Derong [Dulong], Hani, Jingpo, Jino, Lahu, Lhopa, Lolo, Menba, Naxi, Nu, Pumi, Qiang: 13 million)

Miao-Yao (Miao, Yao, Mulao [Mulam], She, Tujia: 16 million)

Austronesian (Benlong, Gaoshan [excluding Taiwan], Bulang, Wa: 452,000)

**INDO-EUROPEAN**

Russian (13,000)

Iranian (Tajik: 34,000)

Many of these linguistic groups show wide dialectical variations; for instance, Mandarin varies significantly according to regions: northern, western, southwestern, and eastern. These regional dialects are mutually intelligible.

Yue (Cantonese) also falls into various regional dialects: Yuehai, Siyi, Gao-Lei, and Qin-Lian, some of which are mutually unintelligible. Important dialectical variations also occur within the language family of given national minorities, often due to the isolation of subgroups. On the other hand, Mandarin Chinese is spoken more and more as a second language by the various national minorities.

**4 FOLKLORE**

Each national group in China has its own mythological tradition. Myths are usually shared by nationalities belonging to the same linguistic family. Thus, to have a complete view of Chinese mythology, one has to study the myths and heroes of the various peoples inhabiting China.

In most cases, myths and the rituals to which they were attached were handed down from ancient times to the present by an uninterrupted oral tradition. During the course of history, there were many cultural borrowings among the various ethnic groups. With a few exceptions, only the Han recorded their myths in writing.

One of the most common and ancient mythological traditions in China regards the beginning of humanity and society. According to this tradition, in remote antiquity humans and gods lived in harmony in Heaven and on earth. However, due to a conflict among the gods, the earth was flooded, and humanity was destroyed, except for a brother and sister who escaped by hiding in a huge pumpkin that floated on the waters. When the brother and sister came out of the pumpkin, they realized they were alone in the world. They were confronted with the problem of incest—if they did not marry, it would be the end of humanity, but if they married, they would break the taboo of incest.

So, the brother devised a ritual to know the will of Heaven: he and his sister would each let a millstone roll down a hill. If

the two millstones laid one on top of the other at the end of their run, it meant Heaven favored marriage; if the two millstones went separate ways, it meant Heaven wanted them to respect the incest taboo.

However, the brother surreptitiously placed two millstones one on top of the other in a hidden place down the hill. Later, he and his sister let two other millstones roll down the hill. Then, the brother led his sister to the two millstones he had hidden down the hill. After they married, the sister gave birth to a formless lump of flesh; the brother cut it into twelve pieces, which he threw in different directions. These became the twelve peoples of ancient China.

This myth seems to have originated with the Miao, who, around 1000 bc, lived in the Yellow River Valley. The Miao often clashed with the Chinese and were eventually forced to flee to southwest China. Their myth of origins spread widely, both among the Chinese and the nationalities of southern and southwest China.

Around the second century bc, the myth, profoundly transformed, was put into writing in Chinese. The brother and sister, called Fuxi and Nüwa, were represented as divine beings with human bodies and reptilian tails and as symbols of *yin* and *yang*.

In the north, the Tibetan, Mongolian, Uighur, Mandchu, and Korean peoples each has its own mythological tradition about the origin of mankind.

Another important myth widely spread in China is that of Huangdi, the Yellow Emperor. This myth, of Chinese origin, deals mainly with the origin of various cultural patterns (esoteric arts), socio-political institutions (marriage, emperorship), and technological inventions (chariot, medicine).

Among other well-known myths, one may mention the myth of Yu the Great, who tamed the great rivers of China and made the land inhabitable and productive, and Pangu, a primitive hero god, whose body, when he died, gave birth to the world.

**5 RELIGION**

Three major religious traditions contended for the hearts and minds of the peoples of China: Taoism, Confucianism, and Buddhism. Although many national minorities have preserved their own native religious traditions, they have primarily been influenced by the three major religions of China.

To have a full picture of the religious complexity of China, one would have to treat systematically the specific beliefs and practices of the 56 nationalities of China. Even within one single nationality, one may find important religious variations that demand to be studied on their own. Here, this entry will limit itself to the three great traditions mentioned above.

**TAOISM**

The origins of Taoism are lost. It seems Taoism derived from ancient popular religions linked to shamanism and nature worship. Around the 6th century bc, a philosophical wing developed whose main ideas were condensed in the *Daode jing* (Classic of the way and its power), attributed to the sage Lao zi, a senior contemporary of Confucius (551-479 bc).

The central idea of Lao zi is that of *Dao*, conceived as the ineffable source of creativity and harmony that animates the universe. The sage and saintly person is one who, being united to the *Dao*, partakes of its creativity and harmony. Such a per-

son lives in bliss, serenity, and inaction, being carried by the Power of the Dao: “doing nothing, nothing is left undone.”

When one is united to the *Dao*, all the other beings of the universe, as well as our perceptions and feelings, reveal their relativity. Between the 6th and the 2nd centuries BC, many important Chinese thinkers developed the ideas of Lao zi and formed a “Taoist School of Philosophy.”

Among the most important works issuing from the Taoist School of Philosophy, one may single out the *Zhuangzi* (Writings of Master Zhuang, 4th century BC), the *Liezi* (Writings of Master Lie, 4th century BC), and the *Huainanzi* (Writings of Master Huainan, 2nd century BC). These works exerted a deep influence on the Chinese view of life and of the world.

In the 2nd century AD, a Taoist preacher called Zhang Daoling established a formal Taoist Church (perhaps in response to the coming of Buddhism to China in the 1st century AD). Zhang Daoling claimed that the blueprint for his church was revealed to him directly by the divinized Lao zi, who became the god of his church, called the “Heavenly Masters.”

The Taoist Church, closely linked to the ancient cults, beliefs, and magical practices of popular religion, developed at a rapid pace, and by the 8th century AD had spread all over China. Despite severe constraints imposed by the government of the People’s Republic of China in the 1960s and ’70s, the Taoist religion has started to make a comeback in that country. Because of its ancient indigenous roots, it may be called the unofficial national religion of the Chinese people.

#### CONFUCIANISM

While Taoism refers to an ineffable being, Confucianism refers to the teachings of a human being, Confucius. Confucius was rather reserved about religious beliefs and practices. He said: “One must respect divine beings, but keep them at a distance.” He thought human beings had within themselves the power to be wise and good and did not need to seek wisdom and goodness from outside, even from a divine being.

Confucius’s main idea was that human beings are naturally inclined to do good to others. His conceptions of education, social relations, and government were based on this premise. Confucius recognized the value of certain religious attitudes, such as respect, earnestness, sincerity, devotion, decorum, etc. But, according to him, these values should foremostly inform human relations and not simply the man-god relation.

Confucius insisted that the quality of human relations within the family circle was the foundation of an orderly society and of a prosperous state. Confucius, the “father of Chinese philosophy,” may be viewed as a profound reformer who tactfully demythologized ancient Chinese religious beliefs and practices and sought to establish universal humanistic values based on reason and human nature.

Confucius was never considered a divine being by his contemporaries or by his disciples; he never made claims of divine ancestry or attributions. It was only about five centuries after his death, with the victory of Confucianism as the state ideology of the imperial Han dynasty (206 BC–AD 220), and with the emergence of many religious movements (among them Buddhism and Taoism), that a cult to Confucius as a god was established around the 2nd century AD. But, contrary to Taoism and Buddhism, religious Confucianism was mainly restricted to the literate elite of China, who looked on Confucius as their patron saint and never spread, as a distinct church, among the

masses—although many village temples regularly performed rituals at an altar dedicated to Confucius.

#### BUDDHISM

In contrast to Taoism and Confucianism, which were both indigenous religious traditions, Buddhism came from abroad, mainly from its birthplace, India. Buddhism was established by an Indian prince, Siddharta Gautama of the Sakyamuni clan, on the border between India and Nepal in the 6th century BC.

The term Buddhism comes from an ancient Sanskrit word meaning “enlightened.” Buddhism, which laid stress on meditation rather than ritual in reaction against Hinduism, spread rapidly in the Indian subcontinent and in Southeast Asia (mainly Burma and Thailand).

Two main churches developed: that of the “Small Vehicle” (*Hinayana*), which stressed monastic life and celibacy, and that of the “Great Vehicle” (*Mahayana*), which was opened to the laity. Mahayana Buddhism came to China through the Northern Silk Road in the 1st century AD.

Buddhism had been significantly modified by its passage through the Indo-Greek kingdoms established north of India following Alexander’s conquests, but the essential teaching remained the “Four Holy Truths” discovered by the Buddha: 1) Life is suffering; 2) suffering comes from desire; 3) to overcome suffering, one must extinguish desire; 4) to extinguish desire, one must follow the “Eightfold Path” (right views, intentions, speech, conduct, livelihood, effort, mindfulness, concentration) and attain the state of perfect bliss (*nirvana*).

Mahayana Buddhism developed rapidly in China, especially during the long period of disunity that followed the fall of the Han dynasty in AD 220. By the time the Tang dynasty (618–907) was established, the Buddhist conquest of China was complete, but it was a Buddhism with very strong Chinese characteristics.

The glory of Buddhism under the Tang was probably unparalleled in any other country to this day. Thousands of sutras and other Buddhist writings, written in Pali, Sanskrit, Persian, and many vernacular languages, were inspiringly translated into Chinese (in many cases, only the Chinese version is still extant); tens of thousands of monasteries, convents, temples, and sanctuaries spread in cities, suburbs, villages, and mountains throughout China. Under the Tang, the Buddhist Church was composed of some ten schools or patriarchates (*zong*). Each school recognized one patriarch as its founder and one sutra as representing its specific teaching and ritual.

Among the most famous schools one may mention *Chan*, whose first patriarch, Bodhidharma, came to China around AD 520; the Chan school was based on the *Lankavatara Sutra* (Sutra of the Transmission of the Lamp), which emphasized the importance of meditation (the Sanskrit *dhyana* was rendered *chan* in Chinese) to attain enlightenment.

Chan was transmitted to Japan around 1200, where it was known as *Zen* Buddhism, Zen being the Japanese pronunciation of the Chinese character for Chan. Because of the richness of its teaching and of its well-organized ritual and monastic life, Buddhism exerted a deep influence on all classes and nationalities of Chinese society.

For almost 2,000 years Taoism, Confucianism, and Buddhism coexisted as the three main religions of China. Their mutual tolerance may be explained, in part, by the fact that

each emphasized one aspect of three important concerns of religious consciousness: man's relation to nature (Taoism), to society (Confucianism), and to the absolute (Buddhism).

## 6 MAJOR HOLIDAYS

Although most of the numerous feasts and festivals celebrated in China originated with the Chinese, many are shared by the other nationalities. Practically every month there is at least one major celebration. The celebrations are usually held in accordance with the lunar calendar and are based on the yearly solstices and equinoxes. Among the most important, one may single out the following:

*The Spring Festival* (so called to distinguish the Chinese New Year from its Western counterpart), lasts about a

week between January 21 and February 20. The New Year begins with a midnight banquet starting on New Year's Eve; at dawn, the house is lighted and sacrificial offerings of thanksgiving are made to the ancestors and to the gods. Friends and relatives visit each other and share sumptuous banquets, where the main dish is Chinese dumplings (jiaozi). Children receive gifts—traditionally, money in a red envelope (hongbao).

*The Lantern Festival* (Dengjie), held around March 5, was originally a ritual in honor of the divine Supreme Unity. Recently, it has become a folkloric feast for children. Houses are lighted and large paper lanterns of every shape and color are hung in public places. A special

*Performers on the eve of the Chinese New Year celebrate at a park in Beijing, China. The Chinese New Year is based on the lunar calendar. (AP Images)*

cake (yanxiao) made of glutinous rice is eaten on this occasion.

*The Qingming* (“pure brilliance”) is a feast of the dead, which falls at the beginning of April. On this day, families pay a visit to the tombs of their ancestors, tidy up the burial ground, and offer incense, flowers, fruits, and cakes to the departed. On that day, the hearth fire is put out and only cold dishes (hanshi) are served.

*The Mid-Autumn Festival* (also called the Moon Festival) is both a harvest and a nature celebration (gazing at the full moon), held at the beginning of October. The main dish is “moon cakes.” It is said that in the last years of the Mongolian Yuan Dynasty (1279–1368), the Chinese hid a small piece of paper in the moon cakes inviting the population to revolt, and thereby succeeded in overthrowing the Mongolian rulers. The Mid-Autumn Festival is one of the most colorful and joyous celebrations in China. The Dragon-Boat Festival is usually held in conjunction with this festival.

*The National Day of China* is October 1, marking the founding of the People’s Republic of China. It is celebrat-

ed lavishly with all the main buildings and streets of cities illuminated.

## 7 RITES OF PASSAGE

Because of the restrictive one child policy of the Chinese government, the birth of a child, especially a boy, is considered an important and most joyous event in China. The traditional rituals surrounding courtship have given place to a freer, haphazard, and democratic choosing of partners—at school, at work, or in community activities, such as collective dances organized by the local authorities.

Under the Communist government, marriage has become a rather sober ceremony involving the spouses, some witnesses, and the State authorities. Private celebrations are held with friends and relatives. However, the traditional rituals are still alive in the rural and national minorities’ areas. In major cities, such as Shanghai, Beijing, and Guangzhou, well-to-do families tend to adopt Western-style marriages.

Because of demographic pressure, cremation has become the most widely used method of burying the dead. Private ceremonies for the deceased are held within the family circle and with close friends.

## 8 INTERPERSONAL RELATIONS

Strong interpersonal relations (*guanxi*) characterize Chinese society, not only within the family, but also among friends and in corporate groups (school, work, sports, entertainment, etc.). Besides daily social intercourse, the numerous feasts and festivals that punctuate the year are special occasions to strengthen individual and community ties. Visiting friends and relatives is an important social ritual; the guests bring gifts, such as fruits, candies, cigarettes, or wine, while the host usually offers a specially prepared meal in tune with the spirit of the feast.

Although most young people think that the best way to find a partner is through their own efforts, there are still a number of them who are helped by their parents, relatives, or friends. The role of the “go-between” is still important in China. On most occasions, the males take the initiative. The response of a girl invited for the first time in her life for a date is usually to postpone it until later, unless she is well acquainted with the inviter. Mutual attraction is of utmost importance in selecting a partner. Position and wealth are also important considerations.

## 9 LIVING CONDITIONS

Traditional household architecture varies a great deal according to regions in China. From the 1950s to the late '70s, socialist style architecture has dominated both in the rural areas and the cities, replacing, in part, the ancient structures. On account of their isolation and their attachment to their way of life, the national minorities have, by and large, escaped the destruction of their architectural heritage.

Since the mid 1980s, one witnesses the appearance of modern and even post-modern style, especially in large cities, such as Shanghai and Beijing. In the countryside, many communal apartment buildings have been replaced by two-story individual households with all the modern commodities. This is especially true in the farming villages surrounding large cities, where a class of wealthy peasants has arisen.

Lodging is still a problem in booming cities, such as Beijing, Shanghai, Tianjin, and Guangzhou, where the space available per capita is below the minimum defined by the United Nations. By curbing the influx of newcomers (mainly peasants) into the cities and by developing accelerated programs of apartment building, available space is increasing in urban areas and should reach 8 sq miles of living space per capita by the year 2000.

Transportation systems in and between cities have developed at a dramatic pace over the last decade. These include railways, subways, paved throughways, and air links. It is surely air transport that has known the most rapid development, on account of the relatively small investment in physical infrastructure.

One of the major rail developments is the new electrified line under construction between Beijing and Hong Kong. Rapid throughways already exist between Beijing and Tianjin, around Dalian, while others are under construction in the Shanghai-Nanjing axis and in the Guangzhou-Hong Kong axis. Local roads in the countryside have improved significantly in order to facilitate the exchange of goods.

It is estimated that more than 100 million Chinese travel by train to visit friends and relatives during the first days of the Spring Festival.

On account of China's traditional medicine, it is very difficult for a Westerner to understand the question of health in China. While China represents 20% of the world population, it spends only 3.5% of its gross national product (GNP) on health (world average: 8%); China's health expenditure per capita is only \$11/year (world average: \$329/year).

Medicine is primarily a family and community affair, at least one person in the extended family having some knowledge of herbal medicine, acupuncture, etc. The Chinese only resort to state clinics and hospitals for major ailments and accidents. Medical knowledge spread in rural areas and national minorities' areas in the 1960s and '70s, thanks to “bare-foot doctors.” At present, there is on average one doctor per 1,000 inhabitants in China. The peoples of China have a life expectancy of about 70 years (first among the developing countries).

## 10 FAMILY LIFE

Except for a few national groups, such as the Naxi in Yunnan, the various national minorities of China have traditionally adopted a patriarchal family structure. The social status of women was, therefore, rather low. One of the avowed goals of the Chinese Revolution and of the People's Republic of China was to overthrow the patriarchal system, linked to feudalism, and to establish a functional equality between men and women.

There is no doubt that the position of women in China has improved significantly since 1949, especially in the family, in the education system, and in the work place. However, there is still a gap to be bridged in the political sphere.

Mao Zedong advocated large families; from 1949 to 1980, the population of China increased from about 500 million to more than 800 million. Since the 1980s, China has adopted a stringent natality policy, the so-called “one child per family” policy. This policy has been successful (mainly in urban areas, not so much in rural areas) in drastically diminishing demographic growth, but at a significant human cost (forced abortions, female infanticide, international adoption, etc.).

National minorities, which only represent 8% of the population of China, have been exempted from the “one child per family” policy and their demographic growth is double that of the Han Chinese.

## 11 CLOTHING

In the 1970s and 1980s, city streets were uniformly grey and dark; men and women, young and old, wore clothes of the same style and the same color. Today, in the frozen north, down jackets, woolens, and fur overcoats in red, yellow, orange, and other bright colors liven the bleak winter scene.

In the south, where the climate is milder, people choose smart Western suits, jeans, sporty jackets, sweaters, and other fashionable clothing to wear year-round. Famous brand names and fashions are a common sight in large cities, and they sell quite well. Cheaper and more practical clothing is also available.

Similar changes have also occurred in the rural areas, especially among the new class of well-to-do farmers, as well as among the national minorities living near the Han Chinese. However, in isolated rural areas, peasants still wear their “Mao suits,” while most national minorities have kept their traditional style of clothing.

*Two Chinese babies sit with their mothers in a Beijing park. As a result of its strict one child policy, China has kept its growth rate from 1990-2000 at a low 1.5 percent.

## **12 FOOD**

There are important differences in the diets and food preparations of the various national minorities of China. The most widespread staple foods in China are rice, flour, vegetables, pork, eggs, and freshwater fish.

The Han Chinese have always laid much stress on cooking skills, making the Chinese cuisine (basically Han) well known throughout the world. Dumplings, wonton, spring rolls, rice, noodles, and roast Peking duck are examples of traditional foods.

## **13 EDUCATION**

The Han Chinese, who invented an original system of writing more than 3,000 years ago, and the university more than 2,000 years ago, have always prized education and literacy. The imperial government was based for more than 2,000 years on superior literary competence and skills tested by the civil examinations.

The rate of illiteracy and semi-illiteracy among the Han Chinese is only about ten percent. Some 98% of children enroll in school when they reach school age. More than 80% of the students who graduate from primary school and 45% of those who graduate from junior middle school continue to higher levels.

There are more than 1,000 universities and colleges and 800,000 primary and middle schools at different levels, with

a total enrolment of 180 million, including 2.6 million college students and graduate students. In addition, 800,000 students are now taking undergraduate training courses at home, while 14 million adult students attend classes of different levels in adult schools.

Although education is in progress, still about five million school age children do not enter school or have dropped out, and the college entrance rate is only 1.8%, below the average of developing countries. Deficiencies in education mainly result from underfunding.

Among the national minorities, the level of education varies significantly and depends on various factors: tradition, way of life, proximity of cities, etc. Some national minorities, such as the Koreans, have the highest level of education of any ethnic group in China, the Han included.

In general, advanced education in China supposes the knowledge of the Chinese language and writing system.

## **14 CULTURAL HERITAGE**

The variety of traditional musical instruments used in China is sufficient to form a full-fledged orchestra. The most popular instruments include the two-string violin (*erhu*), the lute (*zheng*), and the *pipa*.

Institutions of traditional music and dance were established throughout China early in the 1950s in order to promote tra-

ditional Chinese music. The rich musical heritage of many nationalities was thus preserved.

Most nationalities in China only have oral literary traditions. Since the 1950s, many important literary works of the nationalities (epics, poems, songs, short stories, novels) have been translated into Chinese and published. Some have now been translated from the Chinese into Western languages.

The Tibetans, Mongols, Manchus, Koreans, and Uighur have rich written traditions and some of their major works have been translated in English and other Western languages. However, it is the Han Chinese who have produced one of the longest and richest written traditions of the world: there is practically no genre in which they have not created world masterpieces.

The traditional literature of the Han Chinese—extending over a continuum of more than 3,000 years and written with the same Chinese writing system—includes poems, drama, novels, short stories, history, philosophy, religion, rituals, letters, and administrative documents. Many works have been translated into many languages and introduced into many countries; however, these translations represent but a tiny fraction of the immense Chinese literary output.

A single anthology of the Tang dynasty (618–907) contains more than 40,000 poems, including those written by the world class poets Li Bai and Du Fu. The monumental Chinese novels, starting in the 14th century with the epic *Water Margin*, also include *Pilgrim to the West*, *Golden Lotus*, and *Dream of the Red Chamber*. One should also mention philosophic masterpieces written around the 5th century BC, namely Confucius' *Analects* and Lao zi's *The Way and Its Power*.

The Han Chinese have also contributed greatly to world civilization by inventing paper and noodles (2nd century BC), ceramics (7th century), gunpowder (10th century), porcelain and movable printing (11th century), and the compass (12th century).

## 15 WORK

China is a developing country, but the rate of development varies considerably from region to region. The coastal area, open to international commerce, has known a real economic and technological explosion since the early 1980s.

While the hinterland has also developed at a rapid pace, the gap between the seaboard and inland China has widened significantly, producing a socially disruptive disequilibrium. The unbalance is not only *territorial*, it is also *technological*. For instance, in Gansu Province in northwest China, one sees both scientists engaged in highly technical research in nuclear power plants and peasants cultivating the land with centuries-old farming techniques and implements.

In general, the land inhabited by the national minorities, for various social, political, cultural, and logistical reasons, has remained rather undeveloped as compared to the Han Chinese regions. This explains the growing numbers of poor farmers who attempt to migrate to cities and to the eastern coastline in order to improve their lot. This has given rise to the phenomenon of unemployment in urban areas.

About 70% of China's population is rural and engages overwhelmingly in farming; for them, it is very difficult to change their income and lifestyle.

## 16 SPORTS

Sports do not play the same role in China as they do in the West. This is particularly true for competitive sports. Many sports in China are held only during seasonal festivals or in certain regions (especially among the national minorities).

Of course, the universal sport in China is ping-pong. Other widely practiced sports include traditional shadow boxing (both *wushu* and *taijiquan*). More recently, some Western sports, especially soccer, but also swimming, badminton, basketball, tennis, and baseball, have gained some popularity in China and are practiced mainly in schools, colleges, and universities.

The Chinese government has set up a Federation of Chinese Sports to train Chinese athletes for the international Olympics and for the Asian Olympics. Athletes from China have performed brilliantly in many sports, especially swimming, diving, gymnastics, ping-pong, and volleyball.

In the 2008 Summer Olympics held in Beijing, Chinese athletes earned 100 medals overall, ranking the country second after the United States (with 110). China ranked first in gold medals won, with 51 (to the United States' total of 36 gold medals).

## 17 ENTERTAINMENT AND RECREATION

Watching television has become a major daily evening entertainment for a majority of families in China. In addition, video cassette recorders and DVD players are now very popular in urban areas. Although movie theaters are usually full, they are scarce and can only accommodate a small percentage of the population.

Young people are often enthusiastic about dancing, karaoke, and rock music, while older people are likely to spend their leisure time attending the Peking opera, local drama, engaging in humorous dialogues, listening to classical music, or playing cards or mahjong.

Travel is quickly becoming a new way to spend one's free time, especially since the five-day work week was introduced in 1995. Storytelling is still a popular form of entertainment among many national minorities, who do not have ready access to television.

## 18 FOLK ART, CRAFTS AND HOBBIES

Each of China's 56 nationalities has its own tradition of folk art and crafts. The rich heritage of the Han Chinese is, however, the only tradition that has spread widely and is shared by many of China's nationalities. It goes without saying that many motifs and art forms of the Han Chinese were borrowed in ancient times from non-Chinese peoples and progressively "sinicized."

Calligraphy and traditional painting are the most popular folk arts of the Han Chinese. Paper-cutting, embroidery, brocade, cloisonné, colored glaze, jade ware, clay sculpture, and dough figurines, meticulously wrought by craftsmen, are famous around the world.

Chess, kite flying, gardening, and landscaping are hobbies among people of various ages.

## 19 SOCIAL PROBLEMS

China is in a period of transition, moving from a traditional to a modern society. The coexistence of the old social structure

*A Chinese military band playing in Harbin. (E. Gall/EPD Photos)*

and the new, immature social system produces a number of contradictions. The widening gap of living standards between rural and urban areas draws a surplus rural labor force of more than 100 million into the coastal areas looking for jobs. This situation, which favors mobility and exchange, entails serious social disturbances.

The disequilibrium of the economic development between the coastal areas and the inland, the irrational income for different occupations, the widening gap between the rich and the poor, the growing inflation, the spread of greed and bribery, and the reappearance of other ugly phenomena, such as gambling, drugs, prostitution, and abduction of women, create serious problems for the people and for the government.

## **20 GENDER ISSUES**

The Chinese government states that men and women have equal rights in all areas of life and most legislation is gender neutral. However, there are continued reports of discrimination, sexual harassment, wage discrepancies, and other gender-related problems. The gap in educational level between women and men was narrowing in the early years of the 21st century,

with women making up 47.1% of college students in 2005 (but only 32.6% of doctoral students).

One area of legislation that affects women involves marriage and family planning. China has strict family planning laws. It is illegal for a woman to marry before age 20 and for a man to marry before age 22. It is also illegal for single women to give birth. The Family Planning Bureau can require women to take periodic pregnancy tests to enforce this law. Single women face few options. They may be forced to undergo abortion or sterilization.

Prostitution and the sex trade is a significant problem in China involving between 1.7 and 5 million women. Because prostitution may involve organized crime, businessmen, the police, and government workers, prosecution of laws against prostitution has limited success.

In 2002, China removed homosexuality from its official list of mental illnesses. Although homosexuality is still a taboo topic, gay men and lesbians are increasingly accepted, especially in large, international cities.

## DAI

**PRONUNCIATION:** DYE

**ALTERNATE NAMES:** Daile, Daina, Daiya, Daibengm, Dianyue, Dan, Liao, Gold Teeth, Silver Teeth, Black Teeth, Baiyi

**LOCATION:** China

**POPULATION:** Over 1 million

**LANGUAGE:** Dai

**RELIGION:** Polytheism; ancestor worship; some Buddhism

**RELATED ARTICLES:** Vol. 3: China and Her National Minorities

### 1 INTRODUCTION

From ancient times, the Dai inhabited a region at the southern tip of Yunnan Province, which was set up under the name of Yizhou Prefecture in 109 BC by the Western Han Dynasty (206 BC—AD 8). In the 1st century AD, the Dai chief, Yongyoudiao, sent emissaries thrice to Luoyang, the capital of the Eastern Han Dynasty (25—220). Yongyoudiao was subsequently appointed to a high post by the central government, thus establishing formal political relations between the Dai and the Chinese authorities. Later on, the name of Yizhou Prefecture was changed to Yongchang. From the 8th to 13th century, the prefecture was successively under the jurisdiction of the Nan-zhao Kingdom and then of the Dali Kingdom of Yunnan.

As early as the 9th century, the ancestors of the Dai planted rice extensively in south and southwest Yunnan. Plowing was done by elephants and buffalo. Extensive water conservation works and irrigation systems were set up to increase rice and other grain production. Dai women wove a special cloth called "silver cotton cloth." The Dai decorated their teeth by covering them with a thin sheath of gold or silver; thus, different Dai tribes were named "Gold Teeth," "Silver Teeth," "Black Teeth," etc. A chief of the Dai in Xishuangbanna, Bazhen, unified all the tribes in the 12th century. Making Jinghong the capital, he founded the State of Jinglong. Paying homage to the emperor of China as his sovereign, he was granted an official title by the central government; the title passed on to his son. From the Yuan Dynasty (1271—1368) onward, the custom of appointing Dai hereditary chiefs became official. It was only in the 18th century, under the Manchu Qing Dynasty (1644—1911), that the Dai chiefs were replaced by officials of Manchu or Chinese nationality. From then on the Dai districts were directly administered by the central government.

### 2 LOCATION AND HOMELAND

The Dai population amounted to just over one million in 1990. They are mainly concentrated in Xishuangbanna Dai Autonomous Prefecture (South Yunnan) and in three western Yunnan "mixed administrations," namely Dai and Jingpo Autonomous Prefecture of Dehong; Dai and Wa Autonomous County of Gengma; and Dai and Lahu Autonomous County of Menglian. The rest of the Dai are scattered into more than 30 counties of Yunnan Province. They live mostly in the plain and valley areas at the foot of the mountains, a region of the subtropics with abundant rainfall and rich soil.

### 3 LANGUAGE

Dai is classified as belonging to the Sino-Tibetan family, Zhuang-Dong group, Zhuang-Dai branch. There are three dia-

*A young Dai woman performs a traditional dance in Manyanguang village, China. Young girls of the Dai ethnic group wear silk dresses to perform the umbrella dance to celebrate Datum, or the "Sending the Buddhist Scripture" festival. (AP Images/Eugene Hoshiko)*

lects (mutually unintelligible). The Dai have devised several alphabetic writing systems of their own in various regions, but these systems are mutually incompatible. The main systems are Daina (Dehong dialect), Daile (Xishuangbanna dialect), Daibeng (around Ruijiang), and Dairui (Quanping dialect).

Dai is a self-given name meaning "people who love peace and freedom." The Dai also call themselves by other names, such as "Daile," "Daina," "Daiya," "Daibeng," and so on. Other designations were given by the Chinese or by other nationalities, such as, "Dianyue," "Dan," "Liao," "Gold Teeth," "Silver Teeth," "Black Teeth," "Baiyi," etc. Dai was chosen as a unified designation since 1949.

#### **4 FOLKLORE**

One of the most stirring stories in the rich Dai mythology is the long poem "Princess Peacock and Prince Zhaoshutun." One day, Prince Zhaoshutun of Mengbanjia Kingdom went hunting. He saw seven princesses in peacock clothes bathing in the Golden Lake. Helped by the Dragon God, he stole the peacock clothes of the youngest princess, Nannuona. She could

not fly back to her Peacock Kingdom without those clothes. Besides, she loved the prince at first sight. They married and led a happy life. However, King Peacock was so angry about their marriage that he sent troops to attack the Mengbanjia Kingdom. Prince Zhaoshutun had to leave his beloved wife and lead his army to battle. Unsure about the length and the outcome of the war, King Peacock ordered a shaman to perform divination; he falsely accused Nannuona of being a demon and advised that she should be killed. She asked for remission, but it was refused. She then asked to dance one last time in her peacock clothes before her execution, to which he agreed. As soon as she put on her peacock clothes, she swiftly flew upward and returned to her Peacock Kingdom. Prince Zhaoshutun defeated his enemies and returned in triumph. Overcome with grief and regret, his father told him the story. He went back to the Golden Lake, where he was helped again by the Dragon God to stride over thousands of crags and torrents and ultimately arrived in the Peacock Kingdom. Surmounting all sorts of obstacles put up by the Peacock King, he was finally reunited with Princess Peacock, Nannuona.

According to the myths entitled "The Origin of Yingba" and "The Creation of Yingba," Yingba was the ancestor of all gods. The many stories attached to this mythological figure form an important part of the traditional beliefs of the Dai.

#### **5 RELIGION**

The Dai are polytheistic. They offer sacrifices to "Diula" (a divinized ancestor) on an annual, three-year, and even nine-year cycle. The rite is called "Diula Meng." "Meng" means an area where many villages are bound by blood ties. Therefore, many villages attend the rite, which may last from 1 day to as many as 10 days. The participants wear uniform ceremonial clothes. Oxen and pigs are butchered as offerings. The road leading to the ceremonial place should be sealed off and no outsiders allowed.

The Dai also offer a sacrifice to the Paddy Field Ghost before they transplant the rice shoots and after harvest. A makeshift shed is set up in the paddy field to perform the ritual. Four pairs of candles, a certain amount of areca leaves and one rice roll are used.

Each village may have a few "village gods" of its own; these are actually ancestors who made important contributions to the village in the past. Villagers offer them sacrifices at regular intervals.

Hinayana Buddhism came to the Dai in the 7th century (according to another version, in the 14th century). Sakyamuni receives special homage as the founder of Buddhism. The religion advocates as the highest ideal that the Buddhist believer become a monk or a nun, lead an ascetic life, free oneself from worldly preoccupations and, in the end, reach nirvana (a state of perfect bliss), equally detached from life and death. For this reason, people are asked to offer donations to the monks, the nuns, and their temples. In Dai areas, each village has its own temple and monks are very common. In Xishuangbanna, boys are expected to lead the life of a monk for a certain period of their life. They learn to read and to chant scriptures, then resume their secular life; some of them choose to remain monks all their lives.

## 6 MAJOR HOLIDAYS

Most Dai festivals are related to Buddhism, such as the Haolunwa Festival, Danpa Festival, Dangang Festival, Shanghan Festival, Danpopazhao Festival, Aowasa Festival, Danmuohaban Festival, Dandanmu Festival, the Haowasa Festival, etc. One of the goals of festivals is to offer donations to the temples.

Besides these temple festivals, traditional Dai holidays include the Spring Festival, the Multicolored Egg Festival, the Water-Splashing Festival, the Moon Worship Festival, the Opened-Door Festival, the Closed-Door Festival, and Huanglu Festival, and so on. Among them, the Water-Splashing Festival is the most elaborate and the best known. It is comparable to the Spring Festival of the Chinese, but is held June 24–26 (Dai calendar). The first thing the Dai do after dawn on the Festival day is to prostrate themselves before the Buddha and give alms to the monks. They splash clean water on the Buddha image to wash off the dust. Thus, they perform the “Bathe-Buddha Ceremony.” Then, they splash water on each other. It is said that a fire demon had occupied Xishuangbanna. One day, it kidnapped seven beautiful girls. The youngest of them, Nongxiang, coaxed a secret out of the demon: a long hair put around its neck would cut its head off. She did a good job with her hair, but the demon’s head turned into a fire ball. Wherever it went, it burned. The seven girls splashed a lot of water and finally put out the fire. They rid the people of a fierce scourge. In memory of their contribution, the Dai have performed water-splashing activities annually since then and ultimately turned the ritual into a festival. Water-splashing on each other is considered very auspicious. Many recreational activities, performances, and competitions are held on the same day. It is, of course, a great opportunity for the young people to date. If it happens to be raining, this is regarded as an omen of a bumper crop.

The Closed-Door Festival is a festival in which the door of love and marriage is closed and a grand donation activity is held in the temple. The Opened-Door Festival is held right after the Closed-Door Festival; it is a feast dedicated to young people, where dating and marriage are encouraged.

The Huanglu Festival is both a fair and a parade held at harvest time, fostering the exchange of commodities in the context of festive recreation; it follows the Opened-Door Festival. The central figure of the parade is the image of an elephant, woven with bamboo strips and covered with multicolored papers. It is operated by a man lying beneath the elephant belly. The base of the image is carried on the shoulders of four or eight strong men.

## 7 RITES OF PASSAGE

In the past, the education of Dai children was restricted to the temple. Only monks acquired a certain amount of knowledge through religious education. In Xishuangbanna, there has been a tradition that every boy should be a monk from the time when he was seven or eight years old. He only left the temple when he reached adulthood. Most of them then resumed their secular life and soon married. A select few chose the monastic life and remained in the temple for the rest of their lives.

In general, the Dai bury their dead in the ground, but the monks practice cremation. The ash of the dead monk is put into a pot and buried in the rear of the temple. A rite should be held for a widow or widower to cut off her or his relation with the dead. A thread is bound to the body of the widow or widower and its other end is attached to the coffin or to the straw mat

wrapping of the dead. A senior person cuts the thread, then the deceased is no longer related to the surviving spouse. This ritual is probably linked to the wedding ceremony, in which a thread-tying ritual is performed.

## 8 INTERPERSONAL RELATIONS

Taboos among the Dai often bear profound religious meanings. For example, to stroke a young monk’s head is strictly prohibited. When calling on a family, the guest is not allowed to stride over the firepool, sit behind the fire while facing the door, sit on the threshold of the door, lean against a column, or enter the inner rooms. In spite of such formalities, the Dai are very hospitable. Tea, tobacco, and wine are offered as soon as the guests arrive. The family prepares special dishes to honor the guests, including fish, chicken, pork, vegetables, sweet bamboo shoots, peanuts, and fruits after a meal. When a guest is to leave, the host will see him off to the gate.

Dai youngsters enjoy full freedom in dating. The sure way of knowing whether a girl is married or single is to look at her silver waistband. According to Dai custom, a married girl will hang the keys of her household on her waistband, thus indicating that she refuses any advance. “Tossing an embroidered ball” is a sport and also a ritual of social intercourse between boys and girls. The ball is a 4 in square bag padded with cottonseed, with a 1 m-long brocade band attached at one of its corners. Boys and girls are separated into two teams and stand in lines about 10 m apart facing each other. One member of a team—a girl, for instance—holds the band and rotates the ball, then lets the ball fly toward the opposite team; the ball should be caught by a young man. However, if the ball is tossed by a girl he likes, he might purposely “miss” the ball and let it drop; according to the rules, he must then walk to the girl, present a bouquet of flowers, and say something (in this case, of course, words expressing his innermost feelings). The girl should receive the flowers and listen to his confession of love.

## 9 LIVING CONDITIONS

The Dai live in stilt-supported storied houses made of bamboo. They use 24 to 40 bamboos as stilts. A wooden floor is laid on the stilts, 2-3 m above the earth. The house is cubic in shape. Rows of straw cover the double slopes of the roof. A bamboo ladder leads to the door. There is a corridor and a balcony for relaxation and cooling off in the evening and for hanging the wash out to dry. Livestock and miscellany are placed on the ground floor. The central room, covered with a large bamboo-strip mat, serves for eating, for resting, and for receiving guests. There is a firepool in the center, with a triangular iron framework for cooking or boiling tea. The inner room, separated by planks or a mat woven with bamboo strips, is the main bedroom; there are also bedrooms on each side of the central room. People should take off their shoes before they enter. Some houses are built with bricks and tiles. In Delong District, most houses are one-story. The wall is built by adobe or bamboo, the roof covered with straw.

Transportation in the Dai districts is very convenient. There are highways connecting almost all the townships and even the villages. A reinforced concrete bridge crosses the Lanchang River. A land and water communication network is already operative around Jinghong. There are airlines connecting Simao and Baoshan with Kunming, capital of Yunnan Province.

## **10 FAMILY LIFE**

Dai families are patrilineal and small. The parents live with the unmarried children. In case a couple has no son, the man is welcome to live with his bride's family. This situation is quite common. There are quite a few marriage rites. For instance, the bride's side and bridegroom's side set up tables exhibiting their respective wedding gifts. The gifts from the bridegroom's side usually include wine, two rolls of white threads, straight skirts, garments, two silver waistbands, a silver bracelet, a long sword, glutinous rice, eggs, and cooked chickens; the gifts from the bride's side usually include wine, a hat made of banana leaves, a piece of white cloth, a piece of black cloth, five strings of areca, two strings of banana, brown sugar, and salt. These traditional gifts are symbolic and express the wish that the new couple will lead a sweet and tasteful life.

During the wedding ceremony, the bride and the bridegroom sit on a felt mat, side by side. The master of ceremonies ties a white thread on their wrists. Then a senior person among the relatives binds the bridegroom's left shoulder, crosses their backs, and binds the bride's right shoulder. The thread is finally tied by a guest. "White" means pure love. "Tying the thread" means binding the couple together, never to separate.

In some districts, the bridegroom should work for the bride's family for three years. Then, the couple is allowed to move to his family's home.

## **11 CLOTHING**

Dai men wear collarless, edge to edge tops and long trousers. They usually wrap their heads with white or dark blue cloth. In the winter, they have felt draped over their shoulders. Tattoos are very common. As early as 11 years old, boys are tattooed over the chest, back, belly, loin, and extremities with the figures of animals and flowers, as well as with symbolic designs and even with Dai writing. Quite a number of the aged and middle-aged men are tattooed with Buddhist scriptures over their thighs. It was a custom in the past: anybody whose thigh was not tattooed with scriptures would be looked down upon.

The traditional clothes of women include short garments with tight sleeves and long straight skirts reaching to their feet. In areas around Mangshi, girls wear long trousers and a small waistband. Dai women usually comb their hair into a bun with a multicolored wooden comb stuck into it. They like to wear a silver waistband, a bracelet, and other ornaments.

## **12 FOOD**

Rice is the staple food of the Dai. They prefer pork to beef. Sweet wine is welcome by all of them, including the children. They usually take two meals a day. Chopsticks and bowls are used. In the case of glutinous rice, they take it with their hand. Their traditional foods include rice in a bamboo tube, sour bamboo shoots, roasted fish, sour vegetables, thick sauce made from shrimp, fish, crab, cicada, ant's eggs, or cricket, as well as fried ant's eggs, fried crickets, roasted spiders, and raw worms in the bamboo. They like to chew areca leaves (tropical Asian palms).

## **13 EDUCATION**

Primary schools, middle schools (junior and senior), and technical schools are set up in all Dai areas. The vast majority of students receive primary school education. Many Chinese

teachers, who learned the Dai language and writing, work as teachers. Newspapers and books written in Dai are published. Programs in the Dai language are broadcasted. Traditional temple education is gradually being transformed; however, the cultural and educational level of the Dai is still lower than the average for the national minorities of China.

## **14 CULTURAL HERITAGE**

Dai folk singers are called *zhuanha*. Their performances are well received. The Peacock Dance is usually performed on festivals by one or two dancers. They wear white masks and ornaments simulating peacock wings. Their movements imitate those of a peacock, such as leaving the nest, sliding down the slope, taking off, finding the water, looking at their image in the water, drinking, bathing, and flying. The performance is accompanied by musical instruments, such as the elephant foot drum, gongs, and cymbals.

## **15 WORK**

The Dai have acquired more than 1,000 years of experience in rice cultivation. They have well-integrated systems of cultivation, of water conservation, and of irrigation. This is the basis of their economy. Handicraft, trade, livestock husbandry, light industry, and mining are all making progress. There are nearly 100 small-scale power stations in Xishuangbanna Prefecture. Their Pu'er tea is famous throughout the country. The success of rubber tree plantations promises important developments in the rubber industry in the near future.

## **16 SPORTS**

Basketball, soccer, and volleyball are very popular with the youngsters. The Dai have also developed a distinct style of shadow-boxing based on the Peacock Dance.

## **17 ENTERTAINMENT AND RECREATION**

Besides movies and television, which are already popularized, karaoke halls have recently been set up in almost all townships. This is due to the influence of tourists who visit the Dai areas in increasing numbers. But, traditional forms of entertainment remain very much alive—in particular, song competitions and festival entertainment. For instance, during the New Year celebrations, groups of young people sing and dance in front of each household in the village. New Dai theater has developed from traditional themes.

## **18 FOLK ART, CRAFTS, AND HOBBIES**

The artistic sense of the Dai is best seen in the architecture and design of Buddhist buildings, especially the Manfeilong White Pagoda in Jinghong County, the Mangmengding Pagoda in Yingjiang County, and the Octagonal Pagoda in Jingzhen County. These are not only admired for their architectural sophistication, but also their exquisite carvings and paintings. Among handicrafts, Dai brocade items have a special attraction for the tourists.

## **19 SOCIAL PROBLEMS**

The Dai have their own calendar, writing system, and a well-developed agriculture. Their educational inadequacy, however, is quite marked among the minorities. This is related to their

traditional form of education and inhibits their economic development in the future.

## 20 GENDER ISSUES

The Chinese constitution states that women have equal rights with men in all areas of life, and most legislation is gender neutral. However, there are continued reports of discrimination, sexual harassment, wage discrepancies, and other gender related problems. The gap in educational level between women and men is narrowing with women making up 47.1% of college students in 2005, but only 32.6% of doctoral students.

China has strict family planning laws. It is illegal for women to marry before 20 years of age (22 for men), and it is illegal for single women to give birth. The Family Planning Bureau can require women to take periodic pregnancy tests and enforce laws that often leave women with no real options other than abortion or sterilization. Though minority populations were previously exempt from family planning regulations, policy has changed in recent years to limit minority population growth. Today, urban minority couples may have two children while rural couples may have three or four.

Prostitution and the sex trade is a significant problem in China involving between 1.7 and 5 million women. It involves organized crime, businessmen, the police, and government workers, so prosecution against prostitution has limited success. In 2002, the nation removed homosexuality from its official list of mental illnesses, and though it is still a taboo topic, homosexuality is increasingly accepted, especially in large, international cities.

# DANI

**LOCATION:** Indonesian province of Papua on island of New Guinea

**POPULATION:** 270,000

**LANGUAGE:** Dani

**RELIGION:** Native Dani, Dani Church, various sects of Christianity

## 1 INTRODUCTION

The Dani are a well-known tribal group from the province of Papua, Indonesia. Papua is the largest of the 33 provinces of Indonesia and was formed out of the former province of Irian Jaya in 2003. The province occupies a large portion of the western half of the island of New Guinea and is a disputed territory with the neighboring independent nation of Papua New Guinea. Indonesian encroachment into the highlands rapidly thrust the Dani into the 20th century. The Dani were contacted by expeditions prior to World War II, but wasn't until the 1950s that permanent contact was made by Christian missionaries working and living in the area. Former stone tool users, the Dani are now metal tool-using cash crop growers.

## 2 LOCATION AND HOMELAND

The Dani live in and around the Balim River Valley in the central highlands of Papua. While a significant number (approximately 90,000) of Dani live in the Grand Valley of the Balim drainage, there are an even larger number living west of the Balim River Valley (approximately 180,000). There are about 90,000 Dani in this area alone. The other 50,000 Dani live scattered throughout the highland region at altitudes ranging from 1,000 to 1,800 m (3,300 to 5,900 ft). The Grand Valley is a grassy region with rainfall averaging around 200 cm (79 in) per year. The nights can be very cool at this high altitude. The largest city in Papua, Wamena, is located at the south end of the valley. The best estimate of the population of Wamena is approximately 40,000. Included in this estimate is a significant number of non-Dani living and working there. Wamena has also been developing as a tourist hub with guest houses and hotels for tourists who want to experience Dani culture in the Balim Valley. Relocation of the Dani from their highland valley to the lowlands to allow non-Dani to establish farms continues to be a civil and land rights problem.

## 3 LANGUAGE

Dani is spoken in several mutually intelligible dialects in the central highlands. The Dani language family, which contains Dani and six other Papuan languages, is part of the larger Trans-New Guinea phylum, which includes most of the languages spoken along the highland ranges on both sides of the border between Indonesia and Papua New Guinea. The Dani have a special form of their language that they call "Police Talk," which was used with the early Dutch colonial officials and is still used with any outsiders who want to learn their language. The language is a simplified form of the everyday form of Dani that they speak to each other. One particularly intriguing aspect of Dani grammar is the fact that the language has only two basic color terms (dark and light), while English, for example, has 11 basic terms. This fact has been explored by

linguists and psychologists since the mid-1960s to provide evidence for the universality or specificity of color cognition.

#### 4 FOLKLORE

Myths are not very prevalent in Dani culture. There are myths that are told among the Dani that describe relationships between humans and birds. Each kinship group has a mythical relationship with a particular species of bird, and the group is prohibited from eating this bird. This kind of relationship is called "totemism" by anthropologists. Birds are very clearly identified with human beings; in fact, enemies killed in battle are called "dead birds" in some Dani groups. *Dead Birds* is the title of a renowned ethnographic documentary about the Dani that was filmed by Robert Gardner and the late Michael Rockefeller between 1961 and 1965.

#### 5 RELIGION

An important part of Dani indigenous religious belief is founded on the concept of *mogat*. *Mogat* is what leaves a person's body when he or she dies and tends to stay near the place where the person lived. The Dani concept of *mogat* corresponds very closely to the concept of a ghost. Ghosts are found everywhere, and most Dani have stories about either direct or indirect contact with ghosts. Ghosts are found especially at night and adults generally do not like to venture out after dark. Ghosts in Dani culture do not harm children because they are said to feel sorry for them. The Dani also believe in a vital essence called *edai-egen*. This substance is found in the chest, just below the sternum of adults. Children are born with this substance that grows and settles as they learn to walk and talk and become more social beings. Ghosts can affect the *edai-egen* and cause it to twist, which causes a person to become weak and susceptible to illness and disease.

In Dani traditional religion, it is only men who perform the ceremonies and rituals. Christianity has made a major impact in Dani territory and is steadily eroding adherence to the traditional ceremonies and rituals.

#### 6 MAJOR HOLIDAYS

The Dani culture does not recognize or celebrate holidays. As one of the populations of Indonesia, the Dani are exposed to Indonesian holidays that are celebrated by the local Indonesian population. Christian Dani celebrate the major holidays in the Christian calendar. An extremely important event for the Dani was the Pig Feast, which is celebrated by an entire alliance every five years. During the two-and-a-half weeks of the Pig Feast, all of the important celebrations since the last feast take place: weddings, funerals, initiations, and ritual affirmations of leadership and authority. The feast involves the killing and cooking of many pigs. Prior to the Pig Feast, the leader of the alliance will install a prohibition on the killing of any pigs. This typically lasts from two to three months before the Feast begins. The Pig Feast also allows people to pay debts they have incurred to others through the exchange of valuables and pig meat.

#### 7 RITES OF PASSAGE

Girls are permitted to marry at the first Pig Feast following puberty. The wedding begins at the bride's home. She is given items to indicate her passage into the world of adult women: a

digging stick, carrying nets, and a woman's skirt. The woman's skirt is wrapped around her waist by the older women. The skirt can measure up to 27 m (30 yd) in length and will be decorated with orchid fibers. The skirt is held on by pressure alone. There is a true art to winding and wrapping the skirt so that it does not fall off. A woman will essentially wear the skirt she receives at her wedding for life, only taking it off or replacing it on rare occasions. Since weddings take place only every five years, they are group affairs involving several couples. The ceremony culminates after four days when the new bride is delivered to the home of the groom's family. The groom plays no role in the ceremony at all. The couple will live in his father's house for at least a couple of years, and it is not until they move out that they will begin to have a sexual relationship.

The Pig Feast is also a time for male initiation. The ceremony is not as brutal as those of other groups in New Guinea. The initiation includes a brief period of seclusion, a mock battle, and a final immersion in fire to purify and restore the warmth of the boys at the end of the seclusion. Observers confirm that the boys are not burned because the fire is covered with damp leaves that contain the flames.

Upon the murder of a person, young girls who were particularly close to the individual would have had one or two fingers cut off. The process was performed by a specialist who would take off the first joint of the fingers with a stone adze. The purpose of this practice was to appease the ghosts since a murder had taken place. The Dani discontinued this practice in the mid-1960s.

#### 8 INTERPERSONAL RELATIONS

The traditional Dani greeting among men is to touch each other and to say "*halao*," which is the shortened version of *hal-loak-nak*, which translates as "Let me eat your feces." This is a friendly greeting and no one takes the stock phrase literally.

In traditional Dani society, visiting, working in the gardens, tending the pigs, and virtually every activity was constrained by the constant threat of war. War was endemic to Dani culture. Communities located near the frontier between two groups not united by an alliance could see and hear battles every day. These communities had to be on the alert for raids, especially when traveling to the gardens or tending the pigs away from the compound. Groups were separated by areas of fallow fields known as "no man's lands," where formal battles usually took place. Hundreds of men participated in these battles armed with bows, arrows, and spears. Men who carry the long jabbing spears and short throwing spears do not use bows and arrows. Bowmen do not carry spears. The tips of arrows were often smeared with dirt or grease to cause infection when they entered the body. Since the Dutch took control of the area in 1958, efforts have been made to put an end to the warfare in the Grand Valley. Except for a few relapses, warfare has ceased to be a part of Dani social life. The Indonesian government does permit and even at times encourage reenactments at ceremonies and for tourists who visit the area.

#### 9 LIVING CONDITIONS

The basic unit of Dani social life is the compound. The compound consists of a round men's house, a round women's house, a rectangular shared cooking house, and a rectangular pigsty. Large compounds may have as many as a dozen women's houses. All of these traditional houses are built of wood

*Dani tribes people wait for their turn to vote outside balloting booths at Pike Village near Wamena Irian Jaya, Indonesia. (AP Images/Mark Fallander)*

and have thatched roofs. A few Dani now live in government-built houses made from timber with corrugated roofs.

Health in the Balim Valley was relatively good until the recent introductions of malaria and different types of venereal diseases. Malaria was the byproduct of an agricultural scheme initiated by the Indonesian government to grow rice in Dani territory. Traditional medicine among the Dani was not highly developed, although there were certain botanical and herbal remedies for ailments. Some men were well known for their curing abilities.

#### **10 FAMILY LIFE**

Marriage is regulated through membership in moieties. The term moiety comes from French, in which it means "half." In the Dani system, a person is born into the moiety of his or her father and must then choose a spouse from the other moiety. The choice of a spouse may occur either through an arrangement between families of different compounds or through love matches arranged by individuals. The families begin a series of equal exchanges that occur over a generation. The purpose of these is to continue to bind the two families together in an alliance. This was extremely important before pacification took place in the Dani region. Polygyny, having more than one

wife at a time, took place in Dani culture but has now all but disappeared.

After a couple is married, they take up residence in the groom's father's house. Within a few years, the couple will relocate to their own place of residence within the compound. Families are rather small, with most women having only one or two children. Although divorce among the Dani is fairly easy, long-term separation is more likely to be the result of incompatibility.

#### **11 CLOTHING**

On most occasions the Dani now wear Western-style clothing. In the not-so-distant past, however, Dani traditional clothing was far from Western standards of modesty. Men wore the obligatory penis sheath made from the gourd of a vine that grows in the area. Women wore a braided cord fiber skirt and a large woven bag draped over their backs and buttocks. This bag would protect them from ghosts that might try to enter their bodies.

Prior to contact with Christian missionaries, Dani men wore their hair long and greased it with pig fat and soot. Men's hair was a source of pride. Following contact and the subsequent conversion of many Dani to Christianity, men began

to wear their hair short and washed it regularly. Bathing and washing was seen as a means to finding eternal life. However, as Christianity became better understood by the newly converted Dani, bathing and washing was continued as a habit no longer associated with spirituality.

## 12 FOOD

The major foodstuff in the Dani diet is sweet potatoes. They also grow other crops such as corn, taro, yams, sugar cane, bananas, cucumbers, ginger, and tobacco. Domesticated pigs are also part of the Dani diet, but they are not eaten on a daily basis; instead, they are only killed and eaten on ceremonial occasions. Pigs are also an extremely important medium of exchange among the Dani. The Balim Valley has been virtually decimated of all indigenous wildlife and any hunting for wild game must take place in the surrounding montane tropical rain forest. Western foods have not taken hold among the Dani.

## 13 EDUCATION

Formalized instruction of children in traditional Dani society was rare; however, the building of state-sponsored and missionary-sponsored schools in the Dani area has meant that Western-style education is more prevalent among the Dani. A growing number of Dani children are being taught to read and write Bahasa Indonesia, the national language of Indonesia. Child-rearing in general is very permissive and there are few expectations on the part of parents concerning their children.

## 14 CULTURAL HERITAGE

Artistic expression is limited among the Dani. Music consists mostly of songs, which include funeral dirges, victory songs after battles, and boy's songs that often have lewd lyrics.

## 15 WORK

In sweet potato production, men prepare the fields for planting with wooden digging sticks. Women do the planting, weeding, and harvesting of the crop. Dani men and women make their own fiber string for net bags, though only women weave the bags. There are no full-time specialists for any skill or activity. Dani society is what anthropologists refer to as an egalitarian society; egalitarian societies do not have inherent differences in status among different members of the group.

Dani children are given the responsibility of tending to the herds of pigs as they wander through the fields and nearby forests. Pig theft and loss are problems for the Dani.

## 16 SPORTS

Traditional Dani society does not have sports. There are mock battles and children play at the bow and arrow wars that were part of precontact Dani life. Wamena is the home of the Persiwa Wamena soccer team, one of only two such clubs on the Indonesian half of the island of New Guinea. The Persiwa Wamena club competes in the Liga Indonesia league competition that includes only the teams at the top of the Indonesian league system.

## 17 ENTERTAINMENT/RECREATION

The Dani have been described by anthropologists as one of the few cultures in the world that lack games. Competition is lack-

ing among the Dani, which is usually given as a rationale for the absence of games as Americans know them.

## 18 FOLK ART, CRAFTS, AND HOBBIES

The Dani produce little art of any kind. Body decoration is the most elaborated art form in Dani culture. The Dani do not produce masks, sculptures, or paintings, as do groups from the lowlands of Papua New Guinea. The Dani, like other highland cultures, focus on the body as an art form. Men decorate themselves more elaborately than do women.

## 19 SOCIAL PROBLEMS

Maintenance of cultural institutions and the right to self-determination are immense problems for the present-day Dani. The loss of land rights is also a major problem besetting the Dani. Encroachment onto traditional Dani territory by Indonesian transmigrants causes tension. The need for money and the lack of reliable ways to earn it are also problems for the modern Dani.

## 20 GENDER ISSUES

Like so many other highland societies of the island of New Guinea, the Dani exhibit a pattern of gender antagonism. Males and females are segregated beginning with the incorporation of boys into the men's houses. A group of boys will undergo introduction into the cult of adult men, and there is no corresponding cult for females. Sexual differences are elaborated and developed into a general fear of female sexuality, menstruation, childbirth, and female bodily substances.

Dani men are responsible for the construction of both wood and traditional grass houses. Men also prepare the fields for planting. Dani men weave the fiber skirts worn by women, and they also weave bark and shell bands. Dani women, however, are responsible for weaving the important net carrying bags that form part of their attire.

# DERONG

**ALTERNATE NAMES:** Qiao, Qiu men

**LOCATION:** China (Derong River Valley)

**POPULATION:** About 7,500

**LANGUAGE:** Derong

**RELIGION:** Polytheism

**RELATED ARTICLES:** Vol. 3: China and Her National Minorities

## 1 INTRODUCTION

The Derong is a nationality of limited population, amounting to less than 7,500 people. Their history has been overshadowed by several larger nationalities that exerted a marked influence on them. They lived for centuries in a canyon surrounded by great mountains, isolated from the rest of the world. Nobody was aware of their existence until the 13th century, when an ancient Chinese book recorded their presence and called them "Qiao." They were called "Qiu men" in the Yuan (1271–1368), Ming (1368–1644), and Qing (1644–1911) dynasties. Administered by local officials, headmen of the "Mu" clan, of Naxi nationality, they led a primitive life up to this century.

They still preserve many remnants of the primitive commune. There are 15 clans (*nile*) consisting of 54 family groups (*ke'en*). Each family group constitutes a village. There are two, three, or more "extended family houses" in a village, in each of which dwell three to four generations of family members, altogether 20 to 30 people. Collective cultivated land, granary, hunting, fishing, and gathering areas are owned and used by the whole village community. The Derong practice collective labor and egalitarian distribution of goods and commodities. Another form of collective labor is limited to a small portion of people. Small collectives of two to four individual families (mostly brothers, uncles and nephews of the patrilineal line) have their own land, cultivated collectively. All of these collectives are now splitting into smaller ones, mainly into individual farms.

Members of a family group (*ke'en*) belong to a common pedigree, acknowledge a common ancestor, and keep a joint name system. Every family group selects a head, generally of a senior position in the family hierarchy, and having a glib tongue. He takes charge of both internal and external matters of his village, including command of the collective labor, organization of sacrifice offering rituals, arbitration of quarrels, and negotiation of treaties with other villages, as well as participation in collective labor. Although members of a clan (*nile*) may share a bitter hatred of the enemy ("blood feud") when any one of them is treated unjustly or murdered, there is no unified organization of the Derong nationality, even to administer justice.

## 2 LOCATION AND HOMELAND

The population of the Derong amounts to about 7,430 living around the reaches of the Derong River Valley in 2000. The valley extends about 161 km (100 mi), walled in to the east by the Gaoligong Mountains and to the west by the Dandangli Mountains, both chains reaching more than 13,000 ft. Influenced by a maritime current from the Indian Ocean, the rainfall exceeds 100 in per year. There is a great disparity in the temperature at the peak and at the foot of the mountains. The snow cap on peaks over 13,000 ft lasts more than seven months

a year, while the annual average temperature in the river valley reaches 74°F. Vast areas of the mountains are covered by a thick primeval forest.

## 3 LANGUAGE

The Derong language is classified as belonging to the Sino-Tibetan family, Tibeto-Burman group, branch undecided. They can communicate with the people of the Nu nationality. They have no writing system.

## 4 FOLKLORE

The Derong have myths concerning human origins and the flood. A long, long time ago, there was no human being on earth. One day, two gods, Gamei and Gasha, descended on a big rock. They scraped some soil from the rock and kneaded the soil into a man, Pu, and a woman, Mu. Gamei and Gasha blew air into their bodies and the man and the woman began to breathe. The gods taught them how to work and how to have children. Mu was more clever than Pu, because the gods put more soil into her ribs. Human beings grew in number day by day. When they died, they were buried underground, for they should return to the soil from which they were created.

Another myth relates how human beings lived with ghosts in ancient times. They were friends, so close that they brought up each other's children as a kind of exchange of their friendly feelings. The children of ghosts were brought up nicely by the humans, while the human children were all eaten up by the ghosts. Thereafter, they became enemies. The humans chased

ghosts away by means of tree branches. Vengeful, the ghost king attempted to destroy mankind by throwing a large red-hot iron ball into the river, creating a catastrophic flood. All the humans drowned except for a brother and a sister who made a narrow escape to a high mountain. Two snakes that climbed on the same mountain were also spared. That is why snakes are so numerous nowadays. Later, the brother and sister married. Nine sons and nine daughters were born. They married each other and lived on the shores of nine different rivers. They are the ancestors of the Derong, the Nu, the Tibetans, and other nationalities.

## **5 RELIGION**

The Derong believe in a spiritual world. They ascribe spirits to animals, plants, and many other objects. They call ghosts *bulan*, which means “endowed with a supernatural force.” The shaman is not a professional, but usually holds a concurrent post as family group head. The Derong offer sacrifice to the Mountain God at regular intervals each year. This is a group affair, each household offering its own cake, meat, and dough figurines of humans and animals on the slope of the mountain by the village. The villagers are arranged in such an order that the men stand in front while the women are in the rear. Everybody prays to the god for safe and successful hunting. Then they sing and dance around a bonfire. The Harvest God is also revered. Each family offers some of the crops, a chicken, and several cakes to the field after harvest. Illness is always ascribed to the Mountain Ghost. When someone falls ill, the family hangs two bottles of wine and two chickens on a tree as propitiatory offerings. If this does not work, one offers a pig or an ox. The patient should be moved outdoors while the shaman recites the scripture for the diseased. Then, the animal is butchered.

## **6 MAJOR HOLIDAYS**

The only holiday of the Derong is the Kaqueqi Festival, their New Year. The date is not fixed, but usually falls around November or December on the lunar calendar. Each family group used to choose a lucky day by divination for the New Year. The duration also varies, usually depending upon the amount of food prepared beforehand. For the occasion, they butcher pigs and chickens, invite each other to celebrate, and give a banquet for the guests. The invitation is unique. It takes the form of a piece of wood. The number of notches carved on the wood represents the number of days before the feast. The banqueters usually bring some foods to the host. A rite of “Offering to Heaven” is held on this day. Led by the head of the family group, the villagers tie an ox to a wooden pole. A butcher kills it with a single stab. Then, the crowd of villagers wields their swords and dance, praying to Heaven to bestow good fortune.

## **7 RITES OF PASSAGE**

Ground burial is practiced. The coffin is carved out of a tree trunk. After the burial, wine and meat are offered to the dead; no tumulus (an artificial hill or mound) marks the grave location. The bereaved family receives grain, chicken, and wine from relatives as condolences for the deceased. Those who died a violent death or from a foul disease undergo fire or water burial.

## **8 INTERPERSONAL RELATIONS**

The Derong like to share their own food with members of their community. Whoever bags an animal in a hunt or butchers a pig or an ox will naturally give a banquet to his relatives and friends. The host usually presents a gift to the guests upon their leaving. Moreover, it is a custom to entertain a stranger passing by. Quite a few households have an extra firepool ready at any time to accommodate a guest. The firepool keeps the room warm and serves for cooking. Passersby are allowed to stop on the way for a rest at their house.

In the busy season, the Derong usually move to a place by the field. On these occasions, the house door is only fastened with a small wooden rod. A tender twig tied on it tells the guest that the host is not at home and feels sorry about it. When heavy snow seals the mountains, food and tools are hung on the trees; they are never taken by other people.

A small bamboo-strip basket is usually used as a token in relations between young men and women. Young Derong men make these small baskets about 7 inches in diameter. If a young man likes a girl, he will hang a basket on her house door around midnight. The girl can usually surmise who the maker is from the style of the basket. If she likes him too, she will carry it on her arm, to show the basket-maker that she is willing to have a friendly relationship with him and to show the community and especially other young men that she has a young man of her heart.

## **9 LIVING CONDITIONS**

There are two kinds of storied buildings. One is made of bamboo, usually built on a slope. Doors open to the front and the rear. One comes in and goes out by wooden ladders. The main entrance opens onto two rows of small rooms, each of which can accommodate a couple and their children. In some cases families break away from the collective houses and build their own houses and granaries. These storied houses of individual families are made of logs, usually small and low, the ground floor being dug well below the surface of the earth. The floor of the upstairs room is only 2–3 ft from the surface of the earth. The door is so low that one can enter only by bending. Most of these houses are windowless. There are usually two or more firepools in a house. One firepool symbolizes the family. A married son usually lives with his parents as well as his brothers and sisters, but he and his own family must use the second firepool. If another son gets married, he should build a new house attached to the old one.

Because of the craggy, mountainous terrain and the inclement weather, transportation is extremely inconvenient. From November to May, the mountains are sealed off and transportation is completely interrupted. After the bitter seasons, the only means of communicating with the outside world are sliding ropes and suspension bridges made of rattan or steel rope. The sliding ropes are made of steel wires, usually set up over a narrow river, between two mountains facing each other. Besides the sliding rope itself, a pulley with a few cords (sometimes a bamboo basket) is the only means available to cross the river. To see the Derong use the sliding rope and rattan suspension bridge across the turbulent waves of the Nu River is nothing less than breathtaking.

## **10 FAMILY LIFE**

The Derong families are patrilineal and small. The first married son lives with his parents, although he must use the second firepool. The other sons build their own houses after marriage. These houses are adjacent to the old parental home. This is one of the remnants of the patriarchal clan commune. All Derong women participate in field work, but their position is lower than the men's. They are not allowed to bear children inside the family house: otherwise, the farming and hunting of the family, so they believe, will be seriously affected. Thus, a makeshift shed is set up for childbearing.

The Derong still preserve vestiges of the "pairing marriage." For instance, several sisters may marry one husband without disturbing the family hierarchy. Intra-clan endogamy (marriage within the clan) is strictly prohibited. The systematic practice of exogamy (marriage outside the clan) has led to the formation of a fixed circle of inter-clan marriage. For example, a girl of the Rendang clan is married off to a young man of the Bukawang clan, whose daughter is married off to the Lopian clan. A girl of the Lopian clan is married off to the Bingdang clan, whose girl is married to the Muqiantu clan. The girl of the Muqiantu clan is married off to the Rendang clan. These seven clans form a circle related by marriage, allowing for the continuation of the exogamic rule.

In general, the Derong are monogamous, although polygamy does exist as a result of the sororate and levirate customs (marriage to the brother or sister of a deceased spouse).

## **11 CLOTHING**

The only traditional clothing preserved by the Derong and worn by both men and women is a black-and-white or multicolored striped linen wrapping the body and tied over the right shoulder. Otherwise, their garments and trousers are the same as those of the Chinese—polo and ordinary shirts, long trousers, women's skirts, and so on. The aged and middle-aged women usually have tattoos over their faces; formerly, girls were tattooed when they were 12 or 13 years of age. Although the figures and designs were different in different clans, the girls' forebrows usually remained untattooed. Tattooing is now rare among the youngsters.

## **12 FOOD**

The staple foods of the Derong include millet, corn, and buckwheat. Rice is rare. For six months a year, their food is supplemented by gathering, fishing, and hunting. They gather mainly the stem tuber of some wild plants that contain starch, such as wild yams and wild lily. They like homemade wine, tea, and tobacco; the latter is smoked in a long-stemmed pipe. They prefer roast meat to other cooking. Food and wine are divided equally by the hostess. A guest might have his share. A new firepool is added for a newly married son. Each firepool takes turns cooking for the extended family.

## **13 EDUCATION**

Nobody in the Derong communities received a formal education in the past. They knew only how to keep records by notching wood or tying knots. In recent decades, more than 20 primary schools have been set up. Half of the teachers are Derong. College students and intellectuals have emerged.

## **14 CULTURAL HERITAGE**

On occasions of productive labor, harvest, hunting, house building, marriage proposal, or festive activities, the Derong all sing and dance to express their thoughts and feelings. There are traditional melodies, while their lyrics are improvised for the occasion. They have only one percussion instrument, the *mangluo*, composed of three gongs fixed on a frame. There is a traditional group dance, *niuguoazhuang*, accompanied by songs.

## **15 WORK**

Derong agriculture is based on the slash-and-burn method, yielding very poor results. Because of grass burning and rotation farming, only half of the arable land is available for production in a given year. Rice has been introduced and some terraced fields have been built up. Unfortunately, the cold weather severely affects rice production. Hunting, gathering, and fishing are the main sources of food. Recently, livestock husbandry has been developed. Pigs, sheep, and oxen raised either by family groups or by individual families have proved beneficial to their quality of life. Hunting, fishing, and the manufacture of farm tools and of daily necessities made of wood and bamboo are specific male activities; gathering is left to the women. The Derong River, from which the nationality gets its name, has been its traditional fishing ground. Because of the swift current, small fishnets must be used, resulting in limited production. Thus, the fishing potential of the Derong is not expected to expand significantly.

## **16 SPORTS**

Arrow shooting with bows or crossbows is one of the skills in which the Derong excel; it is the main means of hunting and is very popular as a competitive spectator sport during festivals. Unique skills of the Derong are vigorous and nimble movement on the sliding rope and balanced, swift steps on the rocking and undulating suspension bridge made of rattan—skills that few athletes could perform with such consummate art.

## **17 ENTERTAINMENT AND RECREATION**

Only fearless emissaries of culture—in this case a film projection team—have accepted the challenge of striding across turbulent rivers and steep mountains 12,000 ft above sea level to bring the Derong the benefits of the seventh art in the guise of several long feature films.

## **18 FOLK ART, CRAFTS, AND HOBBIES**

Although the Derong are not known for handicrafts, the small and delicate bamboo-strip baskets usually used as love tokens and the small fishnet devised by the fishermen are exquisite objects of art.

## **19 SOCIAL PROBLEMS**

It is difficult to see how the Derong can overcome their poverty and illiteracy to improve their lifestyle as long as their isolation persists. It seems that the only way would be to leave their valley and accept resettlement. As of now, there is no movement in this direction.

## 20 GENDER ISSUES

The Chinese constitution states that women have equal rights with men in all areas of life, and most legislation is gender neutral. However, there are continued reports of discrimination, sexual harassment, wage discrepancies, and other gender related problems. The gap in educational level between women and men is narrowing with women making up 47.1% of college students in 2005, but only 32.6% of doctoral students.

China has strict family planning laws. It is illegal for women to marry before 20 years of age (22 for men), and it is illegal for single women to give birth. The Family Planning Bureau can require women to take periodic pregnancy tests and enforce laws that often leave women with no real options other than abortion or sterilization. While minority populations were previously exempt from family planning regulations, policy has changed in recent years to limit minority population growth. Today, urban minority couples may have two children while rural couples may have three or four.

Prostitution and the sex trade is a significant problem in China involving between 1.7 and 5 million women. It involved organized crime, businessmen, the police, and government workers, so prosecution against prostitution has limited success. In 2002, the nation removed homosexuality from its official list of mental illnesses, and though it is still a taboo topic, homosexuality is increasingly accepted, especially in large, international cities.

# DONG

**PRONUNCIATION:** DAWNG

**ALTERNATE NAMES:** Liao; Geling

**LOCATION:** China

**POPULATION:** 3 million

**LANGUAGE:** Dong; Chinese

**RELIGION:** Polytheism

**RELATED ARTICLES:** Vol. 3: China and Her National Minorities

## 1 INTRODUCTION

The Dong are a nationality whose origin can be traced through a branch of the Xiou tribe during the Qin (221–206 BC) and Han (206 BC–AD 220) dynasties more than 2,000 years ago. They were also called Liao, Geling, and other names in ancient Chinese works. It was said that some of the Dong ancestors went upstream through the Xun River and the Dulu River and arrived in the area now inhabited by the Dong. The Dong have lived in areas surrounded by the Miao, Zhuang, and Yao; these were ruled by the central government of successive Chinese dynasties. The Dong had their own social and administrative organization. The families of a given Dong village all bore the same surname. Public order was maintained by customary laws, which were decided through consultation among the heads of the villages. As a member of the village organization, every adult male participated in the general membership meeting to discuss matters concerned. This organization has been markedly weakened since the 1950s, but some of the customary laws are still effective to a certain extent.

## 2 LOCATION AND HOMELAND

The Dong are mainly concentrated in a mountainous area at the junction of three provinces, Guizhou, Guangxi, and Hunan, with warm climate, abundant rainfall, and criss-crossed by rivers running in all directions. The villages, located at the foot of hills and bordered by streams, are adorned by a drum-tower of exquisite beauty at the center with an ancient banyan tree on the side. Dong population was 3 million in 2000.

## 3 LANGUAGE

Dong language belongs to the Sino-Tibetan family, Zhuang-Dong group, Dong-Shui branch. There are southern and northern dialects, each having three regional idioms. Most of the Dong know the Chinese language, both spoken and written. An alphabetic system of writing based on Latin was created in 1958, and proved very helpful to those who did not know the Chinese language.

## 4 FOLKLORE

The rich mythology of Dong has been transmitted orally from one generation to the next without written records. An epic described the achievements of the Goddess Sasui and her offspring, including the creation, the flood, and the marriage of the brother and sister. This myth of origins is common (with many variants) to many national minorities of southwest China.

Another story described four tortoises incubating four eggs. Three eggs went bad. Only one egg hatched a boy. They

tried again. This time, also only one egg hatched, giving birth to a girl. The offspring married and gave birth to 12 sons and daughters. Among them were a brother, Jiangliang, and his sister, Jiangmei, who were naughty. The boy cut a tree with a saw, leading to a fire that hurt the Thunder Goddess. She got angry, so it rained continuously for nine months. Fortunately, Jiangliang and Jiangmei hid in a huge melon when the flood came. The Thunder Goddess raised 12 suns to dry up the flood, but they scorched the earth and the trees. Helped by bees, Jiangliang and Jiangmei shot down 10 suns out of 12. They left one sun for the daytime and the other for the night. An eagle tried to persuade them to marry. They rolled two millstones from the mountain top, which laid one on top of the other, a Heaven-given sign that they should marry. They married and their progeny formed various peoples, the Han, Miao, Yao, Dong, etc.

### 5 RELIGION

The Dong are polytheistic. They regard the almighty Goddess Sasui, the most lofty of all gods, as their protector. Each village has a temple in which there is a round altar made of stone, 4 ft in height, more than 10 ft in diameter, surrounded by banana trees and brambles. On February 7 or 8 (lunar calendar; Western calendar, between February 28 and March 27) the Dong will bring chicken, duck, fish, and a gruel of sweetened fried flour, as offerings to the goddess. They also revere huge stones, large trees, wells, and bridges. Divination by means of chicken, grass, eggs, snails, rice, or divinatory symbols is prevalent among the Dong.

### 6 MAJOR HOLIDAYS

The Spring Festival (lunar New Year; Western calendar, between January 21 and February 20) is the most important holiday of the year. In some districts, however, they choose one day in October or November (lunar calendar; Western calendar, between October 24 and January 18) as the Dong's New Year. Before the feast, every family member will take a bowl of rice gruel symbolizing a watery field to be ploughed in the future.

On the first of January (lunar calendar; Western calendar, between January 21 and February 20), right after the first cockcrow appears, girls will scramble to draw water from the well. The luckiest sign is to draw a bucket of water with white bubbles. Festival activities include buffalo fighting, mountain climbing, and bronze drum percussions. April 8 (lunar calendar; Western calendar, between May 1 and May 30) is the Festival of the Birth of the Buffalo God. Every household will clean the buffalo pen, feed it with black glutinous rice, give the animal a day off, and kill a chicken or duck as a sacrificial offering. In addition, this is also the day when a heroine boldly delivered a meal of black glutinous rice to her brother (imprisoned for having led an insurrectionary army to occupy Liuzhou City) and rescued him from jail. Commemorating that day, married women gather to sing and dance and to make black glutinous rice cakes that are carried to their parents' homes and offered as gifts to their relatives.

### 7 RITES OF PASSAGE

Three days (or one week) after childbirth, relatives bring glutinous rice, eggs, and chickens, as well as a hat, for congratulations. Gifts also include 3–5 ft of yellow cloth for the baby's clothing. According to Dong custom, one is not allowed to

make baby clothes before childbirth. The infant should be draped with used cloths right after its birth. The new clothing should be made of the yellow cloth given by the relatives. The maternal grandmother chooses a name for the baby while sewing the baby's clothes. Girls gather to sing blessing songs until late in the evening. When the baby is one month old, the mother paints the baby's brow with a little tang oil and soot from the bottom of a pan. Accompanied by her mother-in-law, the new mother will bring gifts to her own mother's house, where she will be received warmly. Next day, her mother will send a large glutinous rice cake to her house, indicating that the mother is allowed to call on relatives to present the baby.

The Dong bury the dead underground after shaving the hair and washing the body. It is taboo to have any copper or iron touch the body.

### 8 INTERPERSONAL RELATIONS

The Dong are hospitable. Bowls of gruel of sweetened fried flour will be repeatedly offered to the guest. Each bowl is offered with different refreshments. This ritual usually takes one hour or more. The wine before meal is sweet, but bitter wine is offered during the meal. All dishes taste sour: pork, fish, chicken, duck, cucumber, and hot pepper; it is a "sour feast." There is a Dong custom in Guizhou to receive a guest from each family. A man, representing his family, will bring his family's dishes to the dinner party. Thus, a great variety of dishes will be offered to the guests. A grand occasion of Dong celebration is when all the members of a village call on a neighboring village, usually after autumn harvest. There is a deafening sound of gongs and

*A Dong child wearing traditional clothing in Congjiang, China.*  
(© Keren Su/Corbis)

drums, reinforced by songs and reed-pipe wind music. Dating is common and dates last late into the night.

### **<sup>9</sup>LIVING CONDITIONS**

Most Dong houses have two or three stories, sometimes more, made of wood. The roof is covered with tiles or bark of China fir. Houses occupied by branches of the same family are sometimes connected by verandas and open into each other. Buildings at the foot of a hill or beside a river are built on stilts, sometimes 20–30 ft high. The family lives upstairs. Firewood and livestock are placed on the ground. A shrine for idols or ancestral tablets is set up in the central room. The “windswept rooms” on both sides are used as bedrooms and firepools. A Dong village is usually made up of row upon row of wooden houses. The pathways are paved with flagstones or crushed stones. The Dong live on self-sufficient agriculture. City dwellers have a standard of living similar to that of other residents.

### **<sup>10</sup>FAMILY LIFE**

Dong families are patrilineal. The position of women is much lower than that of men. They are not allowed to touch the bronze drum or to go upstairs if the men stay downstairs. They have a limited right of succession from their parents (“girl’s field”) only after their marriage—while the man inherits the

property. Women participate in heavy labor in the fields and bear the responsibility of all household chores.

The Dong are monogamous. They have freedom to choose their spouse. Arranged marriages are very rare. Youngsters of the same family branch or of different generations are not allowed to marry. The children of brothers are allowed to marry the children of sisters and vice versa, but the children of two sisters are not allowed to marry. The bride, holding an umbrella, accompanied by six women, walks directly to the bridegroom’s house. On certain occasions, girls of the whole branch are the bridesmaids. They are received by boys of the bridegroom’s branch, who see the bride to her family’s door right after the wedding ceremony. She will return to live with her husband for a few days only during festivals or after the busy season.

If she gets pregnant, she will then move to her husband’s house. If she does not get pregnant, she is expected to move three to five years after her wedding.

### **<sup>11</sup>CLOTHING**

The rural people like to use self-made yarn to dye and knit their traditional clothes, which are in dark navy, purple, white and blue colors. Men wear cotton shirts and pants and always wrap their heads. Women’s wear varies in the different districts; most of them wear nice trimmed short tops and multi-pleated skirts. They use dark navy cotton fabric to wrap their legs from knee to ankle and wear sandals. They usually comb their hair into a bun with colorful flowers. This is the typical style of most Dong women. Some women like to use a floral cotton patch to cover their shoulders and sew large pure silver buttons on their costumes for decoration. Others wear long shirts going down to the knee and loose pants. Their sleeve openings and the cuffs of pants are all piped and lace-trimmed. They even make dragon and phoenix embroidery on their clothes. However, Dong people living in urban areas usually wear the same basic clothes as the Chinese.

### **<sup>12</sup>FOOD**

The staple food is rice. The Dong like hot and sour dishes. One of their traditional meals is salted fish or meat. Raw fish or meat is salted for three days, seasoned with spicy pepper powder, ginger, Chinese prickly ash, and glutinous rice, and then put in hermetically sealed pots or wooden barrels. The preparation may be served after three months, but only reaches full flavor after many years. The salted fish or meat can be steamed, but the Dong prefer to eat it raw. A gruel of sweetened, fried flour is a favorite dish. Rice is stir-fried with tea leaves, then cooked in water; when it is done, the tea leaves are discarded. To serve, one puts fried glutinous rice, peanuts, walnuts, soybeans, sausages, or pork liver selectively in a bowl, then adds the hot gruel, sweetened or salted.

### **<sup>13</sup>EDUCATION**

Primary schools have been established in every village, and middle schools in every district. The number of college students is increasing. More and more teachers, engineers, scholars, and medical doctors are being trained. However, illiteracy is still present in remote mountainous areas, especially among women. Parents support the education of their children. However, boys form the greater majority of middle school and, especially, university students.

## 14 CULTURAL HERITAGE

One of the striking cultural accomplishments of the Dong in recent years is the creation of the Great Song of Dong, a women's chorus unaccompanied by musical instruments, which, under the leadership of a woman, has developed a unique style, free in tempo and full of power and grandeur.

The Pipa Song is also typical of the Dong musical tradition. The *pipa* is a plucked string instrument with a fretted fingerboard. The song borrows the name of the accompanying instrument.

Dong plays were developed in the last century from a genre of popular entertainment consisting of talking and thinking. The gait and movement are rather simple, but the music for voices is manifold. The actors wear Dong dress, but use no facial makeup. Songs are accompanied by a two-stringed bowed instrument, the *huqin*.

The Dong practice group dancing in a circle, boys and girls holding hands and singing while dancing. A musician-dancer blows the reed-pipe wind instrument (*lüshen*) while going through various dance movements.

The Dong area is the "land of poems and sea of songs." The rhyme scheme of their poems is rather loose. The Dong Song is a chanted rhymed poem, marked by an abundance of striking metaphors. The content includes themes of creation, flood, the origin of human beings, the migration of the Dong, customary law, as well as the exploits and the loves of heroes. Chinese stories also appear in Dong songs and plays.

## 15 WORK

In addition to farming, men are adept at carpentry and in building Dong-style wooden structures. Today there is a trend among young people to move to coastal areas and to engage in trade.

## 16 SPORTS

Wrestling is a favorite sport among the youth, while whipping a top is a popular game with children. Other sports widely practiced are basketball, table tennis, volleyball, and chess.

## 17 ENTERTAINMENT AND RECREATION

Some movies have been dubbed into the Dong language. Many Dong families now have black-and-white television. Recreation for youngsters is almost always related to dating. Singing is one of the favorite pastimes in Dong areas; the aged teach songs, the youth sing songs, and the children learn songs. Singers take much pleasure in performing. The Lion Dance and the Dragon Dance are performed on the Spring Festival.

## 18 FOLK ART, CRAFTS, AND HOBBIES

Dong crafts include embroidery, cross-stitching, rattan artifacts, bamboo articles, silver ornaments, brocade, and Dong garments. The Dong's wooden buildings are renowned for their exquisite architecture. The Drum Tower, all made of wood, is held by tenon and mortise, without a single iron nail; numbering 3–15 stories, it may reach 40–50 ft in height. It is the symbol of the family branch and a place of rally. The magnificent "Wind and Rain Bridge" is a wooden bridge built on stone piers, with three to five pavilions raised on top of the piers.

## 19 SOCIAL PROBLEMS

Poverty and slow development are still the most important social problems. Changes are slow and the way to modernization and wealth is long and difficult.

## 20 GENDER ISSUES

The Chinese constitution states that women have equal rights with men in all areas of life, and most legislation is gender neutral. However, there are continued reports of discrimination, sexual harassment, wage discrepancies, and other gender related problems. The gap in educational level between women and men is narrowing with women making up 47.1% of college students in 2005, but only 32.6% of doctoral students.

China has strict family planning laws. It is illegal for women to marry before 20 years of age (22 for men), and it is illegal for single women to give birth. The Family Planning Bureau can require women to take periodic pregnancy tests and enforce laws that often leave women with no real options other than abortion or sterilization. While minority populations were previously exempt from family planning regulations, policy has changed in recent years to limit minority population growth. Today, urban minority couples may have two children while rural couples may have three or four.

Prostitution and the sex trade is a significant problem in China involving between 1.7 and 5 million women. It involved organized crime, businessmen, the police, and government workers, so prosecution against prostitution has limited success. In 2002, the nation removed homosexuality from its official list of mental illnesses, and though it is still a taboo topic, homosexuality is increasingly accepted, especially in large, international cities.

# DRUZE

**PRONUNCIATION:** DROOZ

**LOCATION:** Lebanon; Syria; Israel; Jordan

**POPULATION:** 1 to 1.5 million (2007)

**LANGUAGE:** Arabic

**RELIGION:** Secret Druze faith (Muhwahhidun)

## <sup>1</sup> INTRODUCTION

The Druze are both a unique religious and a unique ethnic group whose history dates back to the 11th century AD. Originating in Cairo, Egypt, in 1009–1010, they then spread to the mountains of southern Lebanon and beyond. The Druze faith grew out of the Isma'ili sect of Shia Islam, but from its beginnings it has been an entirely new religion. Disillusioned with the Isma'ilis in 1009–1010, the Druze turned to caliph al-Hakim, of the Fatamid dynasty based in Cairo, Egypt, as their deliverer. In 1017 he declared himself to be the incarnation of God, and the prophet Hamza ibn 'Ali took over al-Hakim's mortal duties as *imam* (spiritual and political leader). Hamza is considered the leader of the Druze movement. One of his disciples was named Muhammad al-Darazi, who quickly came into conflict with Hamza and was rebuked publicly by him. On the last day of 1019, al-Darazi was assassinated and then proclaimed a heretic. It is commonly believed that the Druze get their name from this heretic; it was probably given to them by their detractors.

Caliph al-Hakim disappeared in 1021 (he was most likely murdered, though no one knows for sure), and Hamza went into hiding. The new caliph, al-Zahir, denounced Druzism and persecuted its followers mercilessly. The Druze in Cairo and north to Aleppo were wiped out. The survivors in southern Lebanon and Syria continued to follow their faith, becoming secretive and highly protective of their survival. Hamza (still in hiding) appointed a new imam named Baha' al-Din after the persecution eased off. Baha' al-Din collected and organized 111 letters and directives written by al-Hakim, Hamza, and Baha' al-Din himself into six books called *al-Hikmat al-Sharifa* (The Noble Knowledge), the Druze bible. In 1043, the call for converts was closed, and since then it is said that no new converts have been accepted, although a few infusions of new blood have occurred over the centuries. Technically, though, one must be born a Druze; one cannot become one by choice.

The Syrian Druze community grew rapidly in the 1980s and 1990s as many fled war-torn Lebanon. The Druze leader Kamal Jumblatt was murdered in 1977 in the Lebanese civil war, triggering an increase in Druze aggressions there. Compared to the Arab Muslims and Christians in Israel, the Arab Druze community is relatively well off because of their unqualified support for Israel. This is in marked contrast to the political position of the Druze in Lebanon, which supports traditional Arab nationalist principles favoring Palestinian independence. It is the only Arab community in Israel, besides a small group of Bedu, allowed to serve in the Israeli armed forces.

## <sup>2</sup> LOCATION AND HOMELAND

The total Druze population throughout the world is difficult to estimate because of the secrecy of the sect and because, for example, Syria's government demographic information is unreli-

able. Some estimates put their numbers as high as 2 million, but it is generally thought there are between 1 and 1.5 million. The vast majority of them live in Lebanon, Syria, Israel, and Jordan. Good estimates as to their dispersion are: Lebanon, 400,000–600,000; Syria, 600,000–800,000; Israel; 85,000 (including 15,000 Syrian Druze living in the Golan Heights); Jordan, 15,000; and at most 80,000 elsewhere in the world. The oldest and largest concentration of Druze is found in Lebanon. The largest communities outside the Middle East are in North and South America, with smaller groups in Australia, West Africa, and Western Europe. All are immigrants from Middle Eastern communities, especially from Lebanon. The Druze population in the United States is estimated at 20,000–27,000. Most US Druze settled in small towns and kept a low profile, joining Protestant churches (usually Presbyterian or Methodist) and often Americanizing their names. However, they continued to send money back to their families in the Middle East and even arranged marriages with persons from their home villages. They have now formed Druze associations in the US to develop community relations in their new homes.

The racial background of the Druze is obscure. They are definitely Arab, with Persian, Kurdish, Turkish, Byzantine, and probably European (from the time of the Crusades) physical traits mixed in. This has led to a great variety in physical characteristics among the Druze, despite centuries of marrying within their own group. Most Druze are still hardy, independent farmers living in mountain villages of less than 10,000. Some, however, have moved to larger urban centers and taken on other sorts of jobs. All Druze villages are located on the tops or sides of hills and mountains for a number of reasons, the first and foremost being defense. This position also puts them closer to their holy shrines, which are also always built on the tops or sides of hills and mountains. For farming purposes, it makes it easy to fertilize their fields: they simply collect dung from their livestock, pile it on the hill outside the village, and let the rains carry it down to the fields below. In Lebanon, most Druze have olive groves and fruit orchards. In southern Syria, they are more likely to be wheat farmers.

## <sup>3</sup> LANGUAGE

The Druze speak Arabic, with slight distinctive differences. For example, they have kept the *qaf*, the strong guttural *k* sound of classical Arabic that has been dropped or changed to a *j* or hard *g* sound in other Arabic dialects, and they have retained the *dad*, a soft, tongued *d* sound that is close to classical Arabic, which has lost its unique sound in other dialects.

Traditional, religiously significant names used to be common for both boys and girls: *Mohammed*, *Husayn*, and 'Ali for boys, and 'A'isha and *Fatima* for girls. But now most Druze children are given neutral names that are common to Christians and Muslims, such as *Samir*, *Salim*, *Fu'AD*, or *Fawzi* for boys.

## <sup>4</sup> FOLKLORE

See the following section entitled **Religion** in this article.

## <sup>5</sup> RELIGION

The Druze believe that Sunni Muslims follow the First Course of literal interpretation of scriptures, Shia Muslims follow the Second Course of allegorical interpretation, and they themselves follow the Third Course (*al-maslak ath-thalith*), or

*Tawhid*, of real knowledge of the unity of God and the unity of Being in God. They call themselves *Muhwahhidun* (rather than Druze), which means, essentially, Unitarian—they believe in absolute monotheism. Their beliefs have been held in secret since the closing of the call for converts in AD 1043. Since then, only a few people from each community in each generation are initiated into the details of the faith. The rest are called the *juhhal*, which means “noninitiated” but also has an implied meaning of “ignorant” or “uninformed.” The *juhhal* are given a simple outline of the faith to follow.

The initiated are called *`uqqal* (*`aqil*—masculine singular, and *`aqila*—feminine singular), or “enlightened,” and are put through rigorous tests to determine if they are able to handle the responsibility of enlightenment. Women have been included in the *`uqqal* since the beginning of the Druze movement. Those who pass the tests then go through a secret initiation ceremony, after which they wear a heavy white turban and never wear bright colors, swear or use obscene language, drink alcohol, or smoke. The *`uqqal* are then divided into two further classes: those who know some of the elementary aspects of the faith, and those who study for years to gain an in-depth knowledge of the mysteries of the religion. This most advanced class of Druze is called the *al-ajawid*, or “the righteous.” At the weekly Thursday-evening worship service, held at a place for seclusion and prayer called a *khalwa* or *majlis*, the *juhhal* attend the first part of the service, where community affairs are discussed, then they leave so the *`uqqal* can engage in prayer, study, and meditation.

Because the Druze faith is held in secret, few of their beliefs are known to the wider world. What is known is that they believe that God is One and All is God; God has had many incarnations in this world, including Jesus, but Jesus is not “God’s Son” as Christians believe. According to the Druze faith, the caliph al-Hakim was the final incarnation of God in this world. The Druze believe that prayer and ritual are unnecessary when true knowledge of God’s unity is gained (prayer is the association of the soul with the oneness of God and is a constant state of being, rather than something one does at certain times of day). The number of souls of believers and nonbelievers is believed to have been fixed at Creation, so every time a Druze dies, another Druze is born, and the soul of the deceased immediately enters the body of the newborn. This belief in the immediate reincarnation of souls leads the Druze to be fierce and fearless warriors, because death simply means they will leave one body and enter another.

## 6 MAJOR HOLIDAYS

The Druze believe that they have been freed from ritual on their Third Course, so holy days are not important as religious duties. They do have shrines, called *mazar* or *maqam*, located on the tops or sides of hills and mountains they visit frequently. At the tomb of the holy man or woman to whom the shrine is dedicated, the Druze pray quietly, leave small gifts of food and money, and take away small pieces of colored cloth as tokens of divine blessing to be kept in their homes or in the family car. Some families come for extended stays to sacrifice animals in the fulfillment of a vow. Others just have picnics or spend a quiet weekend there. Annual religious festivals attract thousands of Druze to some shrines, such as al-Nabi Shu’ayb. There is also an annual pilgrimage to the alleged burial place of Jethro, Moses’ father-in-law, near Horns of Hittim in Galilee.

## 7 RITES OF PASSAGE

The circumcision of males is not practiced as a ritual rite of passage among the Druze, as it is among Muslims and Jews. Weddings are small gatherings, though they can be extravagant, depending on the wealth of the family. Funerals are huge community events; people from all around attend. Every Druze village has a *mawqaf*, or “stopping place”—a small cement or stone amphitheater with rows of seats where hundreds, even thousands, can gather to honor and remember the deceased and give condolences to the family. When a respected community or religious leader dies, everyone who knew of the person, whether or not they had ever met, is expected to attend the funeral, either in person or by representative. Funeral arrangements are made immediately after death, and the ceremony is held the next day at the latest. Announcements are made, formerly by a town crier but now usually by loudspeaker, in the deceased’s village and other villages where he or she was known. The body is washed, dressed in the finest clothes available, and buried above ground-level just outside the village. Women lament in the traditional Lebanese Muslim way, although not as excessively, and acquaintances tell of the deceased’s virtues.

## 8 INTERPERSONAL RELATIONS

With the habit of secrecy and defensive privacy that the Druze have developed over their persecuted history, the average Druze has little contact with non-Druze, even in the same small village. Among themselves (and others they feel they can trust), however, the Druze are extremely hospitable and generous. There is a strict code of honor that all Druze are committed to maintaining. For example, Druze men, including soldiers, will never touch a woman in any harmful way, even if she is one of the “enemy” during combat. The Druze look after their own community’s orphans, widows, and poor people. There is no such thing as a Druze beggar. If an extended family cannot support one of their members for some reason, the rest of the community will help out. Almost all Druze villages have one or more *mudafat* (singular, *mudafa*), guest houses where visitors can stay. There is an extensive system of *awqaf* (singular, *waqf*), endowed properties for religious or charitable use given in wills for the purpose of establishing and maintaining *khalwa* (prayer-houses) or *mazar* (shrines).

## 9 LIVING CONDITIONS

It has been said by many throughout the ages that the Druze are a healthy and handsome lot. Most Druze still live in small villages. Some villages have electricity and telephone service; others do not. Almost all villages now have regular bus and taxi service to major nearby cities.

The quality of Druze life depends greatly on the country in which they live. Those in Israel, for example, generally have a higher quality of life than do those in small villages in Syria or Lebanon. The Diaspora, which accounts for a large number of Druze, live very comfortably in the West.

## 10 FAMILY LIFE

The family is central to Druze life, and the Druze make frequent formalized visits to their family members. Even those who have emigrated to other continents maintain their family ties as closely as possible. The most important factor in

Druze sheikhs cross the Quneitra checkpoint between Syria and the Israeli-occupied Golan Heights. Israel seized the strategic plateau in 1967 and annexed it in 1981. Some 18,000 Syrians, most from the Druze community, still live there. (Louai Beshara/AFP/Getty Images)

Druze family life is a woman's honor (*ird*), and her dishonor is the family's worst humiliation. For this reason, even though women have equal rights politically and religiously, they are socially very restricted (to minimize the possibility of dishonor). Women are expected to marry at a fairly early age (17 to 20) and become stay-at-home homemakers. The minimum age for marriage is 17 for women and 18 for men, but most men do not marry until age 21 to 23. Marriage partners usually come from the same village and frequently from the same extended family (including first cousins). These close family marriages are preferred in order to preserve property and maintain the knowledge of family background and heritage. Marriages are almost always arranged by the family, and the groom pays the bride's family a dowry. Polygamy, and the Islamic custom of *mut'a*, or temporary marriage, are forbidden, as is marriage to a non-Druze. *Shaykhs* and *masha'ik al-Din* (community and religious leaders) administer the law in matters of marriage, divorce, and inheritance.

The Druze prefer sons to daughters, particularly for the first-born child, and they will continue to have children until a son is born. The average family has 5 or 6 children, but Druze families can be as large as 10 to 12 children. The failure of a woman to bear children (particularly sons) is a frequent cause for divorce.

### 11 CLOTHING

Druze living in small villages still wear traditional clothing. Women wear a blue or black peasant dress with a gauzy white

head covering called a *mandil*, and red slipper-like shoes that are their only spot of bright color. Most *juhhal* (uninitiated) no longer wear *shirwal*, the baggy pants that are tight at the ankle, worn by the *'uqqal* (initiated). *Juhhal* men wear the common Arab headscarf, the *keffiyeh*, and the *'uqqal* wear heavy white turbans. Most Druze men sport large moustaches with waxed tips. Westernized Druze dress in modern clothing.

### 12 FOOD

Most Druze families grow their own fruit and vegetables and bake their own bread. They eat a mostly vegetarian diet with meat only on special occasions. Typical village meals include olives; mountain bread (paper-thin, round, unleavened bread); eggplant; cauliflower; chickpeas flavored with onions, garlic, and *tahini* (sesame paste); rice; bulghur (cracked wheat); potatoes; salad (made of tomatoes, cucumber, parsley, and other herbs, dressed with olive oil and lemon juice); yogurt; and seasonal fruit. Lamb (or kid—young goat's meat) is the favorite meat, with chicken second, and then beef. Eating pork is not forbidden, but it is not encouraged, either. Some Druze do occasionally eat pork.

### 13 EDUCATION

Among the younger generation of Druze (under age 25), literacy is almost universal. No literacy statistics are available for the general population, but the literacy rate is believed to be fairly high. Most girls traditionally stopped their formal schooling

after six years of basic elementary education, but more are now beginning to attend secondary school, and some even go on to university or professional training (as nurses or teachers, for example). Druze women are found on the faculties of universities in Lebanon, Syria, and Israel, but it is still very rare for a rural Druze girl to be allowed to leave home to study abroad. The urbanized Druze communities are far less conservative and Druze girls from these areas regularly attend university.

#### 14 CULTURAL HERITAGE

Druze poetry does not have any love songs, focusing instead on themes such as the love of God and of one's native countryside. Druze poets and writers include Samih al-Qasim, a poet from the town of al-Rama in Galilee; and Shaqib Arslan, a Druze prince known as "the prince of eloquence" (*amir al-bayan*), who was chosen in 1938 to be president of the Arab Academy in Damascus. Druze musicians have become known in both Western classical music (e.g., pianist Diana Taqi al-Din) and traditional Middle Eastern music (e.g., lute (*oud*) player, singer, and composer Farid al-Atrash [1916–1976]).

#### 15 WORK

Although they were traditionally farmers, Druze can now be found in all areas of business, including banking, trade, retailing, and transportation services. The former president and principal shareholder of Middle East Airlines, Najib 'Alam al-Dim, was a Druze, and a large percentage of the airline's personnel, including pilots, have been Druze throughout most of the company's existence.

Druze who leave rural communities are often successful businessmen and there are large numbers of Druze working in the oil rich Gulf countries, where they have earned a reputation as hard working and reliable. Druze women rarely work outside the home in rural communities, but in the West and even in the Gulf, Druze women do work in modern jobs.

#### 16 SPORTS

The Druze enjoy most popular sports including hunting, fishing, soccer, basketball, tennis, volleyball, water skiing, and water polo.

#### 17 ENTERTAINMENT AND RECREATION

Traditionally situated rural Druze in the Middle East lead traditional lives. Men dominate the social space and can be seen most days drinking tea in small tea shops. In cities, Druze engage in the sorts of activities typical to the country in which they live. They meet in restaurants, attend and play sporting events, and shop at malls.

#### 18 FOLK ART, CRAFTS, AND HOBBIES

The Druze are known for their weaving, carpet-making, and basketry.

#### 19 SOCIAL PROBLEMS

Because they are such a small, close-knit, protective society, the Druze have very few social problems within their own community. Their protective secrecy, however, has grown out of almost constant persecution from outsiders since their inception. Relegated to small mountain villages, the Druze have learned to take care of their own and to be suspicious of stran-

ers. This same protectiveness has led them to be misinterpreted and misunderstood for centuries, accused of everything from communism to fanatical aggression.

Modernity and the Diaspora have somewhat altered the lives of the Druze. As they have moved around the world, changes have slowly emerged. The tradition of dowry, or bride price, has caused some Druze to actually marry outside the community due to lack of financial resources. In Israel and in the Western Diaspora, women regularly take jobs outside of the community, and this has led to changes in Druze traditions.

#### 20 GENDER ISSUES

Druze women have high status in terms of religion. There are by some accounts, more female uqqal than male, because of teachings that women are more spiritual. Socially, however, women face fairly strict restrictions. It was only in the 1970s that Israeli Druze were allowed to obtain drivers licenses. In most rural Druze communities, women are forbidden to work outside of their home village, go to the cinema, or be photographed—a restriction that has to be overlooked for identity documents in most developed countries. It is forbidden to perform autopsies on Druze women and women are forbidden to give birth in hospitals without female physicians.

Though marriages are generally arranged, the woman has the right to refuse a spouse. Divorce is difficult to obtain, but women as well as men can initiate the proceedings. A man can obtain a divorce on grounds of: failure to bear children, or sons; disobedience; immodest behavior (proven adultery is an automatic, guaranteed ground for divorce); and mental or other chronic illness that makes regular sexual intercourse impossible. A woman can also obtain a divorce on those last grounds, as well as on grounds of impotence, nonsupport, and desertion or prolonged absence. A divorce is irrevocable—once divorced, always divorced. Ex-spouses cannot remarry each other or even be under the same roof ever again. In a divorce, women are almost always given financial compensation because it is difficult for a divorced woman to remarry and thereby be supported.

# EMIRIANS (UNITED ARAB EMIRATES)

**PRONUNCIATION:** em-EE-ree-uhns

**LOCATION:** United Arab Emirates (UAE)

**POPULATION:** 4,621,399 (2005 estimate/less than 20% are UAE citizens)

**LANGUAGE:** Arabic

**RELIGION:** Islam (majority Sunni)

## 1 INTRODUCTION

The United Arab Emirates is a confederation of seven sheikhdoms, or emirates, located on the shore of the Arabian (or Persian) Gulf. Each emirate is named after the main city within its boundaries. The largest is Abu Dhabi, the capital. Dubai is known as the confederation's business center. The other emirates are Sharjah, Ras al-Khaimah, Ajman, Umm al-Qaiwain, and Fujairah.

The nomadic and settled Bedu (or bedouin—*see Bedu*) tribes were converted to Islam during the 7th century AD. The following centuries were marked by continual wars and violence between rival dynasties. The emirates also became known as the Pirate Coast, because their peoples resented foreign ships in the Gulf and raided them constantly. After suffering these raids for many years, Britain launched an attack on the emirates, after which the emirates signed a peace treaty with Britain (1820). However, the raids continued to occur off and on until the emirates and Britain signed a “perpetual maritime truce” in 1853. The emirates then became known as the Trucial States. This arrangement lasted for over 100 years, until 1971.

When the truce ended, Bahrain and Qatar became independent states, and six of the other emirates decided to join forces. On 2 December 1971, Abu Dhabi, Dubai, Sharjah, Ajman, Umm al-Qaiwain, and Fujairah became the United Arab Emirates (UAE). In February 1972 the emirate of Ras al-Khaimah united with them as well. The provisional constitution drawn up at their union was made permanent in 1996. Because Abu Dhabi is the largest and most powerful of the seven emirates, its emir is designated the president of the UAE. The vice president and prime minister is the emir of Dubai, the second-largest emirate.

In 1962 oil was discovered in Abu Dhabi. Until then, the emirates had been poor, with pearling, fishing, and sheep and goat herding being the main forms of livelihood. The discovery and production of oil brought new wealth into the area, turning the Emirians from among the poorest people of the world into some of the wealthiest. Dubai began producing oil in 1969 and Sharjah in 1974. The other emirates have yet to discover oil on their land and depend on Abu Dhabi and Dubai for financial support. Proven oil reserves in Abu Dhabi are estimated to last for another 200 years, based on production rates in 2008. Dubai's oil reserves were projected in the late 1990s to run out in about 30 years, but the UAE has been decreasing its oil production and estimated in 2008 that overall reserves could last more than 90 years. Dubai has become a world trading center and will continue to have international significance and a source of income after its oil runs out.

Sheikh Zayid bin Sultan al-Nuhayyan, ruler of Abu Dhabi, served as president of the UAE from 1971 until his death in 2004. His successor was his son, Sheikh Khalifa bin Zayid al-Nuhayyan. Al-Nuhayyan took office on 3 November 2004 and organized the first elections in the UAE in December 2006. A group of 6,700 electors participated in the historic election.

## 2 LOCATION AND HOMELAND

The UAE is located on the southern coast of the Arabian (or Persian) Gulf and the northwestern coast of the Gulf of Oman. The total area of the UAE is 83,900 sq km (32,400 sq mi), which is about the size of the U.S. state of Maine. The UAE has 621 km (386 mi) of coastline on the Arabian Gulf and Gulf of Oman. Abu Dhabi is by far the largest emirate, with an area of 67,340 sq km (26,000 sq mi). Dubai is the second largest, at 3,885 sq km (1,500 sq mi). The areas of the rest of the emirates are as follows:

EMIRATE	SQUARE KILOMETERS	SQUARE MILES
Sharjah	2,590.0	1,000
Ras al-Khaimah	1683.5	650
Fujairah	1165.5	450
Umm al-Qaiwain	777.0	300
Ajman	259.0	100

The land is mostly desert with a mountain range in the north and oases scattered across the sands. The only other variation in the terrain, except for Ras al-Khaimah, is a few salt marshes. The emirate of Ras al-Khaimah is called the “garden spot” of the UAE because, unlike the rest of the emirates, the land there is very fertile. Almost all of the people in Ras al-Khaimah are farmers. The humidity is high on the coast, where all but one of the major cities and towns are located. The summer months, May through October, are extremely hot, with temperatures reaching 50°C (122°F) in the shade. Winters are much cooler, with temperatures dropping to 10°C (50°F). Humidity can rise as high as 100% in the summer and winters are also damp, but there is little rainfall during the year. Hot desert winds kick up occasional sand and dust storms.

Flamingoes are year-round residents of the coast, and many other birds pass through on their migration routes. As many as 25,000 migratory birds can be counted in August. Desert wildlife includes foxes, rabbits, gazelles, lizards, snakes, and eagles.

The human population of the UAE is estimated at 4.6 million. Only about 20% of these residents are Emirate citizens, or muwatiniin (locals). The rest are foreign workers who come mostly from other Arab countries, Pakistan, India, the Philippines, Western European countries, the United States, and Canada. The foreign workers hold no political power or privileges of citizenship. About two-thirds of the population is male because many of the foreign workers are men who leave their families behind in their home countries, or they are young men who have not married yet. The most densely populated city is the capital, Abu Dhabi, with about 1.7 million residents. Dubai, with 1.3 million residents, is the second most densely populated city.

## 3 LANGUAGE

The official language and native language of UAE citizens is Arabic. English is widely used in the business and public sec-

tors because of the large presence of foreign workers. Other languages spoken by UAE residents are Hindi, Urdu, Persian, Malayalam, and Tagalog.

Arabic, spoken by 100 million people worldwide, has many distinct dialects, so that people living as few as 500 km (310 mi) apart may not be able to understand one another. The written form of Arabic is called Classical Arabic or, for today's literature and press, Modern Standard Arabic. It is the same for all literate Arabs, regardless of how different their spoken dialects are. Arabic is written from right to left in a unique alphabet, which makes no distinction between capital and lower-case letters. It is not necessary for the letters to be written in a straight line, as English letters must be. Punctuation rules are also quite different from those of English.

"Hello" in Arabic is *marhaba* or *ahlan*, to which one replies, *marhabtayn* or *ahlayn*. Other common greetings are *As-salam 'alaykum*, "Peace be with you," with the reply of *Wa 'alaykum as-salam*, "and to you peace." *Ma'assalama* means "Goodbye." "Thank you" is *Shukran*, and "You're welcome" is *'Afwan*; "yes" is *na'am* and "no" is *la'a*. The numbers one to ten in Arabic are *wahad*, *ithnayn*, *thalatha*, *arba'a*, *khamsa*, *sitta*, *saba'a*, *thamanya*, *tisa'a*, and *'ashara*.

Arabs' names consist of their first name, their father's name, and their paternal grandfather's name. Women do not take their husband's name when they marry but rather keep their father's family name as a sign of respect for their family of origin. First names usually indicate an Arab's religious affiliation: Muslims use names with Islamic religious significance, such as Muhammad and Fatima, while Christians often use Western names, as well as Arabic Christian names, such as Elias and Butrus.

#### 4 FOLKLORE

Before the discovery of oil, pearling was a major source of income for the people of the Emirates. Pearl divers made up 85% of Abu Dhabi's male population. The pearl diving season lasted for four months, from May to September, after which husbands, fathers, and sons returned to their homes. The patience and hope of Emirian women for the safe return of their loved ones were beautifully depicted in the following folk song:

Neighbor of mine, my adventurous sailor shall return.  
Neighbor of mine, he shall return from the world of dangers.  
With perfumes, precious stones, rosewater and incense he shall return.  
He shall return, and to see him again will be like seeing the moon.

#### 5 RELIGION

Native-born Emirians are all Muslims. Most of the foreign workers are also Muslims, although there are also Hindus and Christians. The majority of Emirians are Sunni Muslims, with a small Shi'ite minority.

Islam is the youngest of the world's Abrahamic religions, having begun in the early 7th century AD when the Prophet Muhammad received his revelations from Allah (God). Within just a few years of Muhammad's death in AD 632, Islam had spread through the entire Middle East, gaining converts at a dynamic rate.

Born into the Koreish tribe of Mecca (c. AD 570), in what is now Saudi Arabia, Muhammad was later driven from the city because of his vigorous denunciation of the pagan idols worshiped there (idols that attracted a profitable pilgrim trade). The year of Muhammad's flight from Mecca, AD 622 (16 July), called the *Hijra*, is counted as the year one in the Muslim calendar. Muhammad fled to the city now known as Medina, another of the holy sites of modern-day Saudi Arabia. Eventually, Muhammad returned to Mecca as a triumphant religious and political leader, destroyed the idols (saving the Black Stone, an ancient meteorite housed in the *Ka'aba*, or Cube, building, which has become a focal point of Muslim worship) and established Mecca as the spiritual center of Islam.

The Islamic religion has five so-called "pillars": 1) Muslims must pray five times a day; 2) Muslims must give alms, or *zakat*, to the poor; 3) Muslims must fast during the month of Ramadan; 4) Muslims must make the pilgrimage, or *hajj*, to Mecca; and 5) each Muslim must recite the *shahada*: "*ashhadu an la illah ila Allah wa ashhadu an Muhammadu rasul Allah*," which means, "I witness that there is no god but Allah and that Muhammad is the prophet of Allah." Arabs say all their prayers facing in the direction of Mecca. Both men and women are expected, and greatly desire, to make the pilgrimage at least once in their lifetime. Ramadan, the ninth month of the Muslim year, during which Muhammad received his first revelations, is observed by complete fasting from dawn until dusk each day of the entire month.

Islam is a simple, straightforward faith with clear rules for correct living; it is a total way of life, inseparable from the rest of one's daily concerns. Therefore, religion and politics, faith and culture, are one and the same for Muslims. There is no such thing as the "separation of church and state." In theory, there should be no distinction between private religious values and public cultural norms in an Islamic country; in actuality, history, geography, and daily life have influenced the cultures of Islamic countries, resulting in standards of social behavior and interaction that are not always in agreement with religious codes of conduct.

The difference between the Sunni and Shi'ite Muslims, which has played such an important part in Arab history, has to do with the early history of the religion. After Muhammad's death, the entire Muslim community recognized the legitimacy of the next three successors, or caliphs. The fourth caliph was Ali, Muhammad's cousin and son-in-law. His legitimacy was challenged by Mu'awiyah, the governor of Syria, and after the Battle of Siffin, in 657, Ali was forced to withdraw. He moved his capital to Iraq and was murdered shortly thereafter. His followers refused to recognize the legitimacy of Mu'awiyah's caliphate and established the Shi'ite sect. Although there are doctrinal differences, the fundamental difference between the sects, therefore, is an argument about authority, not doctrine: the Shi'ites believe that caliphs must be direct descendants of Muhammad and that Ali was the legitimate fourth successor, while the Sunnis believe that caliphs should be elected by the people and therefore that Mu'awiyah and his successors were legitimate. Because there are more Sunnis than Shi'ites worldwide, the Sunnis refer to themselves as the "orthodox" sect.

The official religion of the UAE is Islam and the laws of the emirates are made in accordance with Islamic principles. For instance, Emirians and Muslim foreign workers are prohibited from consuming alcohol. However, the UAE exempts

non-Muslims from some rules of Islamic law and allows non-Muslims to practice their religion. Several Christian churches have been formed in UAE cities, and good relationships generally exist between the various religious groups. Despite the influence of Islam, many Emirians continue to identify themselves on the basis of their tribal affiliations. These affiliations influence their political, social, and financial decisions.

## 6 MAJOR HOLIDAYS

Secular national holidays include National Day, which is celebrated on December 2, and New Year's Day on January 1. Each emirate may also celebrate its own holiday. For example, August 6 is a holiday in Abu Dhabi marking the accession of Sheikh Zayid. Other official holidays are Muslim ones. Muslim holidays follow the lunar calendar, moving back by 11 days each Western year, so their dates are not fixed on the standard Gregorian calendar. The main Muslim holidays are *Eid Al-Fitr*, a three-day festival at the end of Ramadan; *Eid Al-Adha*, a three-day feast of sacrifice at the end of the month of pilgrimage to Mecca, when families who can afford it slaughter a lamb and share the meat with poorer Muslims; the First of *Muharram*, or the Muslim New Year; *al-Mawlid An-Nabi*, the prophet Muhammad's birthday; and *Eid Al-Isra' wa Al-Mi'raj*, a feast celebrating Muhammad's nocturnal visit to heaven. Friday is the Islamic day of rest, so most businesses and services are closed on Fridays. All government offices, private businesses, and schools are closed also during *Eid Al-Fitr* and *Eid Al-Adha*.

## 7 RITES OF PASSAGE

Births, especially the births of boys, are celebrated by Emirians, as they are among Arab Muslims generally. The first word spoken to a baby is "Allah." After birth, the next important event in a boy's life is circumcision, which, performed at the age of seven, formally makes him a member of the religious community. Children and adolescents are prepared for adulthood by being given adult responsibilities, sharply differentiated by gender. In adolescence, the sexes are strictly segregated while outside of their immediate family, and girls are monitored to assure their chastity.

Dating remains unacceptable among Emirians. Marriages are still arranged and often occur within extended families. Young men and women, however, do have the right to reject a proposed mate. Most men marry around age 26 while women marry between the ages of 22 and 24. In the traditional arranged marriage, the groom pays the bride a dowry, or *mahr*, which becomes her property no matter what happens. The *mahr* consists of two stages. The first stage is the *muqaddam*, which is a dowry given preceding the wedding to allow the bride to buy things for herself and her new home. The second stage, the *muta'akhir*, is a form of insurance for the woman in the event of divorce; the groom pledges in a contract that he will pay the bride an agreed-upon amount if he should divorce her.

Marriages traditionally involved spending a great deal of money on festivities and dowries, which led some Emirian men to seek non-Emirians as wives. The government has tried to encourage Emirians to marry each other and has set a limit on the dowry a groom must pay to his future wife. The government also pays for some wedding expenses and provides free housing to Emirian newlyweds.

## 8 INTERPERSONAL RELATIONS

Arab hospitality reigns in UAE. When talking, Arabs touch each other much more often and stand much closer together than Westerners do. People of the same sex will often hold hands while talking or walking. (In earlier days, members of the opposite sex, even married couples, never touched in public.) Arabs talk a great deal, talk loudly, repeat themselves often, and interrupt each other constantly. Conversations are highly emotional and full of gestures.

## 9 LIVING CONDITIONS

Before the discovery and production of oil, conditions were very primitive in what is now the UAE. Emirians had no electricity, running water, or sewage disposal system; there were no paved roads or telephones; public education and health care did not exist; and housing consisted of the bare minimum needs for shelter.

Since oil production began in 1962, conditions have rapidly improved, so that almost all Emirians now live in thoroughly modern homes in ultramodern cities. The government allots land to Emirian families so they can build their own homes and provides no-interest loans for housing.

Roads are paved and well maintained; multilane divided highways connect the major cities and link the UAE with neighboring countries. Automobiles and trucks crowd the streets, and four-wheel-drive vehicles race across the desert sands. A railway system is being planned to relieve some of the traffic congestion, particularly that caused by cargo trucks.

Five of the emirates have international airports, and there are radio and television broadcasts in Arabic and other languages, and broadcasts from other countries can be picked up on the many satellite dishes on apartment buildings and private homes. Telephone service is state-of-the-art; fax machines are very common.

Traditional *souks*, or street markets, exist right alongside huge new shopping malls. There is almost no crime in the UAE. Medical care is still not up to Western standards, but it is improving. Health care is provided free of charge at hospitals and clinics staffed mostly by foreigners. The average life expectancy of Emirians is 76 years.

### 10 FAMILY LIFE

Emirians are a tribal people, and family is the center of their life. Marriages are traditionally arranged by parents, with first cousins being the preferred match. Polygamy is legal—a man may have up to four wives, if he guarantees that all will be equally loved and cared for—but it is very rarely practiced. Divorce is a fairly simple procedure, but it does not occur very often. In a divorce, the father is given custody of all children over the age of five, and the mother takes the younger ones with her back to her parents' house, where she will live until she remarries.

Although the UAE is a conservative country by Western standards, it is still one of the most liberal in the Gulf. Women are much less restricted in the UAE than in other Arab countries. Over the past few years, women have made remarkable progress in obtaining education and joining the work force. As of 2008, about 98% of the female population of school age was attending primary or intermediate school. Women form 70% of the student body at the Higher Colleges of Technology and over 60% at the UAE University. The number of employed women almost quadrupled from 1980 to 1990, increasing from 5.3% to 16.3% of the total work force. Emirian women have also joined the armed forces and the police.

### 11 CLOTHING

Emirians wear traditional Arab clothing. For men, this consists of an ankle-length robe called a *dishdasha*, or *kandura*. The *dishdasha* is often made of white or off-white cotton cloth and sometimes in a dark color. A large piece of cloth, called a *ghutra*, is worn on the head, held in place with a piece of woven rope called an *'aqal*, which is a thick black circular band made of twisted wool. On formal occasions, a *bisht*, a full-length cloak embroidered with a golden thread edge, is worn on top of the *dishdasha*. Women's fashions vary and, with the new flow of wealth, some women import the latest fashions from the West. A traditional UAE woman's costume, however, is the *'abaya*, a full-length, black cloak-like garment that covers her from head to toe when she is in a public place.

### 12 FOOD

The Emirian cuisine includes a variety of dishes that are prepared and served on various occasions. Rice, meat, and fish are staple foods. They are cooked in various ways in varying combinations. Spices are an essential part of the Emirian cuisine. Among the most commonly used spices are coriander, cardamom, saffron, and turmeric.

A favorite dish in the UAE as well as in other Gulf countries is *machbous*, or rice and meat seasoned with spices, on-

ions, tomatoes, and dried lemon. During Ramadan, the month of fasting, *harees* is usually served. *Harees* is a dish consisting of small pieces of shredded meat with wheat and water, mixed together and thoroughly beaten over and over again to the consistency of porridge. Favorite desserts include *al-halwa*, a sweet made from sugar, eggs, starch, water, and oil; *al-Jibeet*, a sweet made from date syrup and sesame seeds; and *Kul Wis-kut*, a dessert made from a mixture of peanuts and sugar.

Coffee and tea are the most popular beverages and are often mixed with spices, coffee with cardamom and tea with saffron or mint.

### 13 EDUCATION

As a newly developing state, the UAE focuses much of its resources on education to give its young citizens the tools they need to compete in the modern world. Education is compulsory from age 6 to age 12, and it is free through the university level.

The government also provides full scholarships for study abroad if the course of study is not offered at United Arab Emirates University, which opened in Al Ain in 1977. In 2006, UAE University had about 14,500 students, with women making up 79% of the student body. The UAE established a second university, Zayed University, for women in 1998, with campuses in Dubai and Abu Dhabi. As of 2008, 3,400 students were enrolled.

Although public schooling was virtually nonexistent before the late 1950s, enrollment at public primary schools is now almost 100% and the literacy rate has risen to 89% for men and 88% for women, compared with an overall figure of 24.9% in 1980. Most teachers in the public school system are Arabs from other countries. Outside the public school system, there are also schools for foreigners run by their home countries.

### 14 CULTURAL HERITAGE

The only native Emirian artistic traditions are those passed down from the Bedu (or bedouin) nomads [see *Bedu*]. These include traditional Arab music, storytelling, dances, and the strong passion for poetry. Traditional Emirian music is characterized by a marked drumbeat accompanied by the sounds of various percussion and stringed instruments. The *tubool*, or drums, which come in various sizes, are beaten with a stick or with the fingers. The *oud*, a popular instrument, is an ancient stringed instrument that is the ancestor of the European lute. The percussion instruments include the soft sad tone of the Arabian flute or *nai*, and the *mizmar*, a long open-ended instrument which produces a loud, nasal sound. Another traditional instrument is the *rebaba*, a one-stringed instrument.

A famous dance which marks the UAE traditions and customs and is performed on almost every occasion is the *ayyala*. Men form two rows, shoulder to shoulder, facing each other at a distance. This is meant to resemble the scene of a battle, where one row represents the line of attack and the other row represents the cannons, reflecting the Arabs' love of expressions of courage and chivalry.

### 15 WORK

About 90% of the work force in the UAE is foreign. During the early part of 1995, the UAE launched a nationwide campaign aimed at bringing more Emirians into the work force. The largest industry in the UAE is the Dubai Aluminum Company,

*Emirati men greeting each other. (arabianEye/Getty Images)*

which opened in 1979, but most of the UAE's income (about 40%) comes from the oil industry. Most of the oil wealth comes from the emirate of Abu Dhabi. In the smaller emirates, sheep and goat herding, fishing, and farming are the main occupations along with boat-building, handicrafts, and jewelry. Business and industrial workers in the cities often take a two- to three-hour lunch break and then return to work and stay until 7:00 pm or later.

## 16 SPORTS

The traditional sports of camel and horse racing still attract great crowds. Nowadays, however, owners and fans often speed alongside the race course in four-wheel-drive vehicles, shouting instructions and cheering. No betting is allowed at camel races. The UAE boasts three ice-skating rinks and some Emirians and visitors enjoy sand skiing in the desert. Water sports are also popular throughout the UAE. The Dubai Desert Classic Golf Tournament is an annual event, drawing top international golfers. It is held at the Emirates Golf Club in Dubai, the first 18-hole grass course in the Gulf region; it opened in 1988.

Dubai also hosts world-class tournaments in tennis, rugby, snooker (or pool), soccer, cricket, volleyball, and chess. The

Dubai World Cup is one of the richest horse racing competitions in the world.

## 17 ENTERTAINMENT AND RECREATION

Movie theaters showing movies in Hindi, Urdu, Persian, Arabic, and English are very popular with Emirians. Videos can be rented, but they are censored. Several satellite channels, over eight TV stations, and numerous radio frequencies from all over the Gulf can be received in the UAE. Camping in the desert, family outings at parks, and listening to music are among Emirians' favorite pastimes.

## 18 FOLK ART, CRAFTS, AND HOBBIES

Most of the folk art sold in UAE markets is imported. The UAE's Women's Association runs a Handicrafts Center in Abu Dhabi that produces some local basketry and weaving. Baskets are made of palm tree fronds, called *al Khoos*. Wool from sheep is woven into colorful fabrics, to be used for pillowcases, covers, blankets, carpets, and bags.

## 19 SOCIAL PROBLEMS

The emirates have a long history of intertribal wars and violence, and although they are now united in an attempt at cooperation, old conflicts continually erupt. The financial and political structure also causes problems. Because Abu Dhabi is the largest emirate and has the largest oil reserves (and therefore makes the most money), it makes all the decisions in the UAE. Abu Dhabi's emir is the president of the union. Dubai is the only emirate large and wealthy enough to challenge Abu Dhabi's decisions. The other emirates are all too small and too dependent on financial support from Abu Dhabi to risk speaking out against the Abu Dhabi-dominated government. This creates resentment among the smaller emirates. Dubai occasionally acts on its own, going against decisions handed down by the Abu Dhabi leaders. The union of the emirates is too young, and the new oil wealth and resulting development too recent, to determine if the UAE will be able to maintain its unity and function as a stable federation of states.

The fact that the UAE is a young federation also creates some tensions between the traditional nomadic life of the Bedu and a more modern, sedentary world. Roles of men and women remain primarily traditional, with males expected to provide for their families and women expected to maintain control over the running of domestic affairs.

The UAE also faces some international disputes. Its reliance on foreign workers remains a pressing problem, partly because the government is unwilling to grant citizenship privileges to non-Emirians. Policies approved in 2007 allowed for companies to regulate the activities of foreign workers but gave the workers no additional rights. A longtime boundary dispute with Oman was ratified in 2003, but the agreement had not been published as of 2008. In addition, drug traffickers use the UAE ports as a transfer point in the exchange of illegal drugs. The country's great wealth also poses a possible problem. As a major financial center, the UAE is vulnerable to money laundering. Although the government has imposed some controls, its informal banking sector is largely unregulated.

## 20 GENDER ISSUES

Emirian women have enjoyed more educational opportunities with the opening of Zayed University, an all-women's university that emphasizes the enrollment of Emirians first. As such opportunities have opened up, women have consistently outperformed men in schooling. However, university opportunities have not been viewed by Emirian women or their families as career choices. Instead, a college degree is seen as improving the value of a young Emirian woman whose family wants her to marry well. Few Zayed attendees intend to pursue careers; most are interested in retaining the traditional social structure.

Women in many Arab nations have begun to press for more equality between the genders in the public sphere. Such a movement has not yet occurred among Emirian women because of the UAE's wealth and because of Emirian beliefs in the value that Islam places on women in traditional, more domestic roles. Many women, even those who attend universities, see a future as a wife and mother as one that their society values. The equality sought in the workplace and political sphere by women in other Arab nations means little to Emirians.

## 1 INTRODUCTION

The ancestors of the Ewenki dwelled northeast of Lake Baikal and in the forest bordering on the Shilka River. They lived from hunting, fishing, and raising reindeer. The Ewenki are historically linked to the Shiwei (especially the Bei Shiwei and the Bo Shiwei), as recorded in the ancient books in the Northern Wei Dynasty (386–534). In 544, the Shiwei began to pay tribute to the Eastern Wei Dynasty (534–550). The imperial Tang Dynasty (618–907) set up a government office in the area where the ancestors of Ewenki dwelled. Later on, they moved eastward. A branch moved as far as the middle reaches of the Heilongjiang River. The ancient books in the Yuan Dynasty (1271–1368) called them "the forest people." Under the Ming (1368–1644) and the Qing (1644–1911) dynasties they were called "the northern mountains deer riding people." From 1633 to 1640, the Manchus of northeast China conquered the Ewenki (at that time called "Kamonikan" and "Suolun"), who had to pay tribute to the Qing imperial government. After the mid-17th century, because of the invasion of Manchu territory by czarist Russia, the Qing moved the Ewenki to the Nen River Valley, close to the Greater Xing'an Mountains. In 1732, the imperial Qing placed more than 1,600 "Kamonikan" soldiers in garrison in the Hulunbeir grassland. They were allowed to bring their wives and children along. They finally settled there and became the direct ancestors of the present-day Ewenki.

## 2 LOCATION AND HOMELAND

The Ewenki amount to more than 30,200 people in 2000. They are mainly scattered in Inner Mongolia, living together with the Mongols, Daur, Chinese, and Oroqen. The region where they live in compact communities is called Ewenki Autonomous Qi County, a hilly grassland with more than 600 lakes as well as a large number of rivers flowing in all directions. Ewenki villages are also found in Nehe District in Heilongjiang Province.

## 3 LANGUAGE

Ewenki belongs to the Altaic linguistic family, Manchu-Tungusic group, Tungusic branch. There are three dialects but no writing system. Ewenki children are educated in schools set up in pastoral areas using Mongolian language, both oral and written. In agricultural and mountainous areas, however, Chinese language and characters are widely used.

Until the mid-20th century, the Ewenki living in different areas were called by various names: Suolun, Tongusi, Yakute, and so on. In 1957, according to their will, a unified name was adopted: Ewenki, which means "people living in the wooded mountains."

#### **4 FOLKLORE**

The origin of mankind is explained as follows in an Ewenki myth: After the creation of the sky and the earth, the god Enduli made 10 men and 10 women from the skeletons of birds. Encouraged by his success, he planned to make more men and women, 100 of each. He made men first, but in the process of his great work, he nearly ran out of bird skeletons. He had to use soil as a supplement to fashion the women. As a result, the women were weaker, a part of their body being made of soil.

The Ewenki have a special reverence for fire. This may be related to their tough Nordic environment and is reflected in one of their main myths. A woman was injured by a shower of sparks from the household hearth. Angered by her pain, she drew her sword and stabbed violently at the hearth until the fire died out. The following day, she tried in vain to light a fire. She had to ask for a burning charcoal from her neighbor. Leaving her house, she found an old woman crying miserably, with a bleeding eye. Replying to her queries, the old woman said: "It was you who stabbed me blind yesterday." The woman, suddenly realizing what had happened, kowtowed to the Fire God and asked for her forgiveness. The Fire God finally pardoned her. From then on, she never failed in lighting a fire. Up to the present, the Ewenki throw a piece of food or a small cup of wine into the fire as an offering before meals. However, sprinkling water on a fire or poking a fire with a sword during meat roasting is taboo.

#### **5 RELIGION**

The traditional beliefs of the Ewenki are rooted in shamanism and totemism, stressing worship of ancestors, animals, and nature. Special rituals are performed for Jiya (the livestock god) and fire. Fire should never be allowed to die out, even when Ewenki families migrate. Among the hunters, a number of rites and taboos demonstrate their reverence for the bear. When a bear is killed in hunting, they wrap its head, bones, and internal organs in birch bark or straw, then hang them in a tree. They kowtow, pretend to cry, and offer tobacco. In some areas, all the clans of the Ewenki have a bird totem, such as the eagle, swan, or duck. Whenever a bird flies overhead, they sprinkle a little milk in the air. Killing or doing harm to a bird is considered taboo, especially if the bird is one's own totem. Almost every clan has a shaman. He is not a professional, often playing the role of headman of a clan or a tribe and enjoying high status. The shaman explains the cause of disease, divines fortune and misfortune, exorcizes ghosts, and dances in a trance. He expects no reward.

In some pastoral areas, the Ewenki believe in Lamaism, the Tibetan form of Buddhism adopted by the majority of Mongols. In some areas, one finds communities belonging to the Eastern Orthodox Church, a remnant of czarist Russia's influence from the 17th to the 19th century.

#### **6 MAJOR HOLIDAYS**

In agricultural areas, the festivals of the Ewenki are not different from those of the Chinese. In pastoral areas, their festivals include Aobao Gathering and the Mikuole Festival. Aobao is a Mongolian term meaning "a pile"; it consists of a pyramidal pile of stones and adobes, flanked by a certain number of poles from which float multicolored silk streamers. Some streamers are covered with sacred Buddhist inscriptions. The Aobao is regarded as the dwelling of God in shamanism. In some ar-

reas, the Aobao is a large tree, called the Aobao tree. The Aobao Gathering, one of the most important festivals of the Ewenki, is held around June or July on the lunar calendar (Western calendar, between June 22 and August 21). Oxen and sheep are slaughtered as sacrificial offerings. The festival includes popular sporting events, such as horse racing and wrestling. The Mikuole Festival is essentially a fair of the stock raisers. It is held in the last ten days of lunar May (Western calendar, between June 11 and July 21). Horses are branded and their overlong manes are shaved; the sheep's ears are incised with the owner's mark. This is a special occasion for villagers to call on each other and to gather in dinner parties. The Ewenki also celebrate the Spring Festival (lunar New Year; Western calendar between January 21 and February 20), which is a common holiday for all the nationalities of China.

#### **7 RITES OF PASSAGE**

Regardless of gender, the young pastoral Ewenki start to look after calves at six or seven. Boys learn to ride a horse at seven and lasso and break in a horse shortly afterwards. Girls learn to milk cows at 10. The children pay due respect to their elders. Meeting them, the youngsters always salute by bending at the knee and cupping the hands in front of the chest. The seats and beds in the room are assigned on the basis of generation. Traditionally, the Ewenki practiced tree burial (or wind burial). The corpse was placed in a coffin or wrapped with bark or willow twigs and then hung high in a tree. The blowing of the wind, drenching of the rain, scorching of the sun, and beaming of the moon were regarded as effective in transforming the dead into a star. Ground burial is now more and more prevalent under the influence of the neighboring nationalities.

#### **8 INTERPERSONAL RELATIONS**

"People coming from afar," the Ewenki say, "cannot carry their own house on their back; nor can we when we go out." The visit of a guest is always a happy event. A fur cushion will be offered by the host. The guest sits on the cushion wherever it is; any shift of its place is considered impolite behavior. The hostess will carry a birch wood tray and serve deer milk, deer meat, toasted cake, and homemade wild fruit wine. The host will pour a few drops of wine on the fire first, then takes a sip for himself and finally hands the cup over to the guest.

The huntsmen store their food, clothes, and tools in their storehouse in the forest, which is never locked. Any huntsman is allowed to take food from the storehouse as needed without prior agreement with the owner. He should, however, return the amount of food taken when he meets the owner.

Arranged marriages are now abandoned. The youngsters will not lose any opportunity to choose a partner. Unfortunately, opportunities are rather limited in the pastoral areas on account of the great distance between villages and of the clan structure of individual villages.

#### **9 LIVING CONDITIONS**

The traditional Ewenki house resembles an umbrella, more than 10 ft in height and 13 ft in diameter, framed by 25–30 poles covered with birch bark and roe or deer skin. One side, provided with a door, is used as the living room. The other three sides are all platforms for sleeping. A fiery pit is in the center, with a pan hanging over it. There is an opening at the

top for ventilation. The tablet of the ancestors is attached to the top of the central wooden column.

In hunting areas, the house is a wooden cube. The walls are built by piling up logs. The roof is made of birch bark. In some areas, they live in Mongolian-style *yurt*.

Bicycles, horses, and cars are the main modes of transport of the Ewenki. The epidemic and endemic diseases of bygone days have now been controlled. Hospitals have been set up in various localities of the Ewenki Autonomous Qi County.

## **10 FAMILY LIFE**

The Ewenki live in small patrilineal families. Since they need mutual help in hunting and in searching pastures, they form nomadic villages. Villages, whether nomadic or sedentary (agricultural), have a clan structure in which each family has blood ties with the other families.

Ewenki families are monogamous. Marriage practices retain remnants of clan society, such as the marriage of cousins and inter-clan marriage. In bygone days, arranged marriage was prevalent. The parents of two families “engaged” their children when they were just a few years old or even before they were born. This led to precocious marriage. As an alternative, the custom of “elopement marriage” emerged. The date of elopement is agreed upon by the young man and woman who are passionately in love. The parents of the male side prepare a new house beforehand and an old woman is waiting there for the eloping girl. After dark, the girl escapes from her family. Riding on horseback, she comes directly to the new house. The old woman unties the girl’s eight braids and combs her hair into two large ones. This is a symbol that the marriage is now “legal.” Before dawn, the couple goes to the man’s paternal house and kowtows to the fire and to the tablet of his ancestors. Then, two persons are sent to the bride’s family, first to offer *hada* (a ceremonial silk scarf) to her ancestors and then to kowtow. They explain their purpose in coming, ask forgiveness and promise obedience. After long hours of persuasion, the bride’s parents finally agree. Consequently, all members of the clan congratulate the couple, who kowtow to the clan’s ancestors, to the village Fire God, and to the bridegroom’s parents. A sumptuous banquet follows, guests and relatives dancing and singing with utter delight.

There has been no inhibition of intermarriage between the Ewenki and other nationalities. The intermarriage with the Daur has a long history and is very popular. Some families and clans intermarried for generations. Thus, the Ewenki and the Daur are called two “familial nationalities.”

## **11 CLOTHING**

In former times, both sexes donned a long fur robe covering the ankles and a long coat down to the knees. The cuffs and the bottom of the women’s robes were embroidered with multicolored figures and designs. They all wore fur hats. Today, they mostly wear cloth robes and cotton padded garments in winter. Urban Ewenki dress is similar to that of the Chinese.

## **12 FOOD**

The Ewenki’s staple food is animal meat, including deer meat, mutton, beef, and pork of wild hog, supplemented by grains, such as Chinese sorghum, corn, millet, oats, and buckwheat. On account of the Nordic climate, vegetables are scarce. They like roasted meat. “Cooked meat held in hand” is very popular

during festivals. The meat, attached to the bone, is chopped in big pieces and is half-cooked with a little salt. They hold the big piece with their hand while eating. They like gruel with milk, which is also a sacrificial offering to the gods. The diet of Ewenki farmers is not much different from that of the local Chinese or Manchus.

## **13 EDUCATION**

Most of the Ewenki were illiterate in the past. Today, primary school education in the Ewenki Autonomous Qi County has become popular. Eighteen middle schools (junior and senior) have been set up. Quite a number of youngsters enroll in the university. Compared to other nationalities, however, their education is at a low level.

## **14 CULTURAL HERITAGE**

Ewenki folk songs, slow and unconstrained, evoke the vast expanses of the grassland. Dancing styles vary according to region and to occasions. A dance called Ahanba is performed by women at wedding ceremonies. There are no accompanying instruments; the tempo is set by the singers’ voices. Each group consists of two to four dancers. In the beginning, they cry softly, “A-Han-Ba, A-Han-Ba,” while swinging their arms. Then they turn face to face and bend their knees. The tempo is gradually hastened and the rhythm is intensified by the movement of their feet. Ultimately, the dance bustles in full swing. Another dance is performed by two young men. One of them is a hunter, the other dresses up as a wild hog. With their hands behind their back, they hit each other with their shoulders while roaring. A group led by a singer encircles the two actors, moves around a bonfire, and dances while singing.

Ewenki literature has been handed down orally; it includes myths, tales, folk songs, and riddles.

## **15 WORK**

The frequent migrations of the Ewenki in the course of history have resulted in scattered communities. Because of the significant difference of natural environments in which they dwelled, their mode of production and lifestyle varied a great deal. Those living in Ewenki Autonomous Qi County and in Chen Barag Qi practice livestock husbandry; those dwelling in Butha Qi, Arun Qi, and Morin Dawa Qi have a mixed economy, half farming and half hunting; those inhabiting Nehe in Heilongjiang Province are farmers; those inhabiting Ergun Zuo Qi are huntsmen, riding deer while hunting, and are thus called “Deer back riding Ewenki.”

## **16 SPORTS**

The Ewenki start to ride, lasso, and break in horses early in their childhood. Later, they frequently gather to learn arrow shooting, high jumping, pole vaulting, long jumping, and skiing. Brave hunters and capable herdsman have mastered these skills by the time they are adults. Horse lassoing is a popular competition mostly held on festivals.

As early as 1,300 years ago, the ancestors of the Ewenki, called Shiwei, fashioned a primitive form of skis. The skis used today by the Ewenki for hunting are but an improved version of the Shiwei “snow-sliding boards.”

*A cuoluzi (a tepee like structure) used by the Ewenki nomadic tribe in Da Hinggan Ling Mountains, China.  
(© Earl and Nazima Kowall/Corbis)*

## **17 ENTERTAINMENT AND RECREATION**

Most of the Ewenki areas are provided with a movie theater and a television station. Film studios and television broadcasting stations have been set up in Inner Mongolia and Heilongjiang Province. Therefore, most of the Ewenki can enjoy watching television as daily entertainment. In hunting areas, old hunters are master storytellers, spinning tales about ancient and modern heroes in their fight against the harsh environment and wild animals; this is still the preferred form of entertainment.

## **18 FOLK ART, CRAFTS, AND HOBBIES**

The Ewenki excel in designing and producing implements for daily necessities as well as toys from birch bark. Painting on the birch bark is a hallmark of the Ewenki. Canoes made of birch bark, besides their unique design, provide swift and easy transport on the many lakes and rivers of the Ewenki land.

## **19 SOCIAL PROBLEMS**

Poverty and isolation are serious problems confronting the Ewenki. Community fragmentation, harsh environment, illiteracy, and the absence of a market economy, make it difficult to implement a short-term, global solution for the whole population. It seems the situation can only be improved gradually in the long run.

## **20 GENDER ISSUES**

The Chinese constitution states that women have equal rights with men in all areas of life, and most legislation is gender neutral. However, there are continued reports of discrimination, sexual harassment, wage discrepancies, and other gender-related problems. The gap in educational level between women and men is narrowing with women making up 47.1% of college students in 2005, but only 32.6% of doctoral students.

China has strict family planning laws. It is illegal for women to marry before 20 years of age (22 for men), and it is illegal for single women to give birth. The Family Planning Bureau can require women to take periodic pregnancy tests and enforce laws that often leave women with no real options other than abortion or sterilization. While minority populations were previously exempt from family planning regulations, policy has changed in recent years to limit minority population growth. Today, urban couples may have two children while rural couples may have three or four.

Prostitution and the sex trade is a significant problem in China involving between 1.7 and 5 million women. It involved organized crime, businessmen, the police, and government workers, so prosecution against prostitution has limited success. In 2002, the nation removed homosexuality from its official list of mental illnesses, and though it is still a taboo topic,

homosexuality is increasingly accepted, especially in large, international cities.

# FIJIANS

**PRONUNCIATION:** FEE-gee-uhns

**ALTERNATE NAMES:** Taukei (indigenous Fijians)

**LOCATION:** Fiji

**POPULATION:** Approximately 828,000 (57% or 471,960 ethnic Fijians)

**LANGUAGE:** English; Fijian; Hindi are official languages of the Republic of Fiji

**RELIGION:** Christianity (Methodist)

## 1 INTRODUCTION

The term "Fijians" refers to any of the inhabitants of the chain of islands in the Pacific Ocean called the Republic of Fiji. The islands claimed independence from Great Britain in 1970 but remained part of the Commonwealth until October 1987, when they became the Republic of Fiji. Although there are a great number of ethnic groups indigenous to the Fiji Islands, they all share a number of cultural traits. Here the term "Fijian" is used to refer to the descendants of the indigenous population of this chain of islands. The Fijian word *Taukei* is now being used to refer to this group as opposed to other ethnic groups that inhabit the islands. In Fijian the word translates as "owner" or "original inhabitant." This term and the concept behind it have become more important recently as indigenous Fijians have sought to reestablish their claims to the land, resources, and political authority in Fiji.

## 2 LOCATION AND HOMELAND

The Fijian archipelago lies in the western Pacific Ocean, southwest of Hawaii. There are more than 300 islands within the Fijian group, the two largest being Viti Levu and Vanua Levu. These two islands account for around 86% of the total 18,272 sq km (7,055 sq mi) of land that makes up the island group. Of the approximately 300 islands, only about 100 are either inhabited or capable of human habitation. Most of the larger islands are referred to as "high islands." High islands are volcanic in nature and have high, rugged mountain peaks with deep, winding valleys and quick flowing streams and rivers. The deltas that have been created by the networks of waterways are very fertile and have been the primary areas of human settlement and farming from the earliest times. The archaeological record of Fiji indicates that the first human habitation of the archipelago was approximately 3,500 years ago. The first inhabitants were likely migrants from nearby Vanuatu and New Caledonia. Fiji was a crossroads of the Pacific in prehistoric times. The distinctive cultures and physical features of the Fijian groups are evidence of that fact.

## 3 LANGUAGE

The Fijian language belongs to the Oceanic branch of the Austronesian language family. Linguists usually refer to the Fijian language as a composite of approximately 300 dialects defined by village membership—that is to say, people from different villages speak different dialects of Fijian. Standard Fijian is based on the dialect spoken by the Bau. This dialect had also formed the basis for an earlier form of Fijian that was used to communicate more easily across dialect boundaries in the time before the arrival of Europeans. Missionaries to the islands chose this

*Fijians in traditional dress prepare a drink of Kava during a welcoming ceremony for Chinese Premier Wen Jiabao in Nadi, Fiji. (AP Images/Rob Griffith)*

dialect as their standard for translation of the Bible. Wesleyan Missionaries developed a written form of Fijian in 1850, which has contributed to the high degree of literacy in the islands. English is the official language of the country.

#### **4 FOLKLORE**

Fiji has a large body of folklore, mythology, and oral history. Many stories revolve around the feats of cultural heroes and gods. One myth details the protection of the island of Kadavu by the Shark God and explains why the inhabitants of the island today have no fear of the sharks which populate their island's reefs. There is also a series of myths which account for the Fiji practice of "fire walking," which has now become an important tourist event. Traditional fire walking was a ceremonial occasion accompanied by symbolic acts and the reenactment of the myth concerning fire walking. Before the fire walking ceremony, men would separate from any contact with women for a period of three days. Men would also refrain from eating coconut during this time. A large pit would be dug and filled with large river stones. A fire would be built on top of the stones about six hours before the event. The coals would be raked over the stones, eventually making the stones become white hot. Then the men would walk the circumference of the pit without any protection for their feet and without any apparent ill effects.

#### **5 RELIGION**

The overwhelming majority of indigenous Fijians, nearly 90%, are Methodist. Both Methodist and Catholic missionaries established churches, schools, and missions in Fiji in the 1800s. The Fijians were quick converts to the Wesleyan Methodist Church, probably due, in part, to the Methodists' use of Fijian in services and their early translation of the Bible into Standard Fijian. The Catholic Church still used Latin in mass at that time, and Fijians were not interested in listening to a language that they could not understand.

#### **6 MAJOR HOLIDAYS**

Major holidays for Fijians include the annual Hibiscus Festival, a celebration of things Fijian; Queen of England's Birthday in June; Fiji Day, October 13; Constitution Day, June 28; and Christmas Day and Boxing Day, December 26.

#### **7 RITES OF PASSAGE**

Children are socialized to recognize the social hierarchy of the extended family and the society as a whole. From the time they can understand, children take orders from the senior males in the family, especially their fathers. Respect and strict obedience are expected of their children by fathers. Discipline and punishment is the domain of the father. Mothers are more indulgent with their children.

In traditional Fiji society, women are expected to be virgins at the time of marriage. Premarital sexual relationships were not advocated within the society.

Disease and death were attributable to malevolent spirits in traditional Fijian culture. The mortuary ceremony was once very elaborate, especially for men of status. Groups with relationships to the deceased would visit the village and pay homage to the corpse. A set of taboos were enforced after the death and they remained in effect for up to 100 nights. In the past, wives were strangled to accompany their dead husbands into the spirit world. It was believed that the god Ruvuyalo would kill the spirit of any man who did not have his spouse accompanying him.

## 8 INTERPERSONAL RELATIONS

The standard Fijian greeting is *ni sa bula*, or the informal *bula*. Visiting a person's house always entails removing the shoes before entering.

## 9 LIVING CONDITIONS

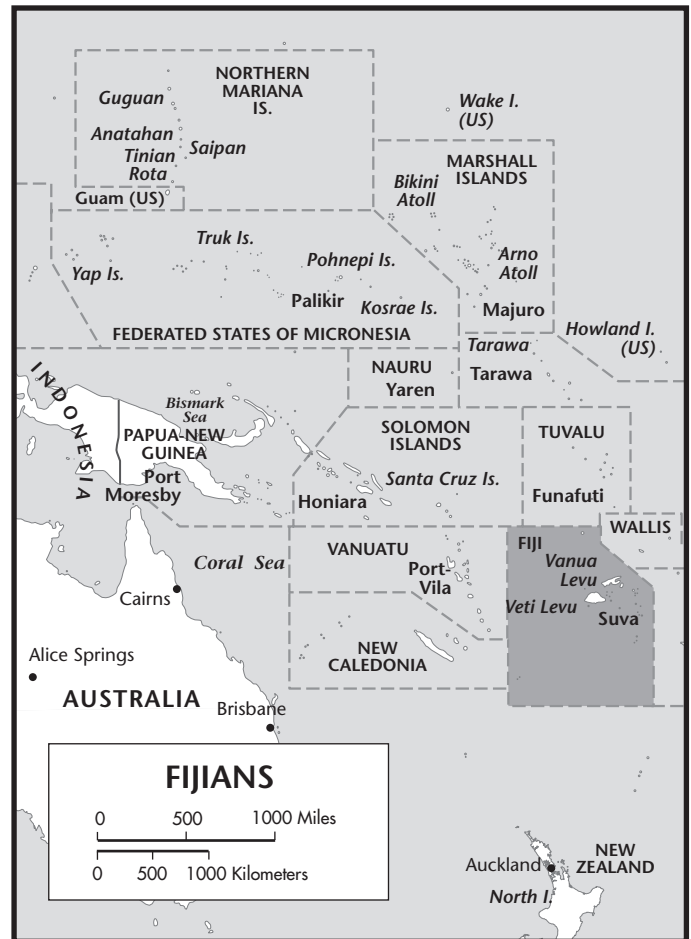

The majority of houses on Viti Levu are made of wood and concrete breeze blocks. Almost all homes have electricity and a piped water supply. On the smaller islands, houses are often constructed of local materials and have either thatched or corrugated iron roofs. Western-style houses are a sign of prosperity. Electricity is available in many rural areas. In very remote regions, people still use kerosene or benzene lanterns.

Villages in rural areas are centered on a village green, called *rara* in Fijian. At either end of the *rara*, each village has a church and a village hall. People who have left traditional villages to live in cities and towns often return for the Christmas season. In the 18th century, Fijians developed a new type of ocean-going double-hulled canoe. This type of canoe had a large mast set in the middle of the larger hulled vessel, and there was no significant difference between the head and stern. These ships were more maneuverable and faster than the other style of double-hulled canoes that were being used in other Oceanic societies. It permitted the Fijians of the time to move more quickly between islands and to escape quickly after raids. These canoes were elaborately carved and decorated.

## 10 FAMILY LIFE

In traditional Fijian society, the preferred marriage was between cross-cousins. Men were permitted to have more than one wife at a time, and the more wives a man had, the higher his social status. Chiefs especially had many wives and created a number of political alliances in the process. After a couple was married, they would typically reside in the house of the groom's father. Each household was composed of an extended family. Each extended family was under the leadership of one senior male. Divorce was easily accomplished by either the husband or the wife.

Family structure is very hierarchical. This reflects the larger pattern of hierarchy and position in Fijian society. The senior male of the family is equivalent to the chief of the family line. The higher the social position in the family, the more respect that has to be given to the person. Any food that is not eaten by the senior male cannot be eaten by anyone else. A woman's social position within an extended family is traditionally based on that of her husband, unless her family is of higher status than his.

## 11 CLOTHING

Traditional Fijian clothing for men is a native kilt called a *sulu*. Men also wear Western-style clothing, as do many women. The *sulu* is always worn during ceremonial occasions and has seen a renaissance due to social and political developments since the coup of 1987.

## 12 FOOD

The main staples of the traditional Fijian diet are taro root and cassava. Although sago palms are found on some of the Fijian Islands, this plant was never a staple foodstuff as it was in other nearby islands of the Pacific. Fish and shellfish are still important foods in the current diet, as they were in the past. Western foodstuffs and cooking techniques have become prominent in Fijian society.

## 13 EDUCATION

The literacy rate for the Republic of Fiji is estimated at 93%. Western education has been available in Fiji since European missionaries became established in the islands. Mission schools were built for the indigenous Fijians by Methodist and Catholic missionaries. Nowadays, primary education is free and compulsory. Villages in rural areas often share a common school. Adolescents between the ages of 12 and 16 attend junior secondary school, which is not free. High school education can only be obtained in towns and cities. The University of the South Pacific is located in the capital city of Suva.

*A Fijian throws a casting net to catch live bait in Suva, Fiji. Many Fijians still fish daily to provide food for themselves and to sell in the market place. (AP Images/Rob Griffith)*

#### **14 CULTURAL HERITAGE**

Dancing is an important part of traditional Fijian culture. Men and women danced separately. Women's dances often utilized intricate and delicate hand gestures. Many of the men's dances related to military exploits and involved aggressive posing with weapons. Both men and women had "sitting" dances. Singing was also important in traditional society. In the present day, Western-style instruments and singing styles have become popular.

#### **15 WORK**

Traditional Fijians engaged in subsistence horticulture, and some continue to do so into the present time. They raised taro root and cassava as well as fished and collected marine resources. Agriculture was the traditional domain of men. Fishing and the collecting of marine resources were tasks allocated to women. Now, although around 60% of Fijians are still rural, the loss of labor due to urban migration is a problem for village organization. Many younger Fijians seek wage labor opportunities in the towns and cities. Tobacco and sugar are important cash crops in the Fijian economy.

#### **16 SPORTS**

Rugby is an important spectator and participant sport for Fijians. Rugby Union is considered the national sport of Fiji. The Fijian team qualified for the Rugby World Cup in 2003. Soc-

cer is another important sport for Fijians. Fiji sent participants to the 1996 Summer Olympic Games in Atlanta and had very good performances from the athletes who competed in judo and swimming. Cricket is also popular in Fiji, but more so with the Indo-Fijian population there.

#### **17 ENTERTAINMENT AND RECREATION**

One form of social intercourse among adult Fijian men is the consumption of *yaqona*, known as "kava." Kava is an intoxicating beverage made through the pounding, grating, or chewing of the root of the shrub *Piper methysticum*. Kava drinking has a definite set of social rules. The sharing of kava accompanied the performance of pre-Christian religious events, political discussions, the curing of illness, and restricted social interaction of adult, "high status" men in Fijian villages. Kava drinking has become an important attraction for tourists who visit Fiji, although the event does not carry any of the ceremonial importance that it did in traditional contexts.

Electricity has made television, radio, video, and movies all popular forms of entertainment in Fijian cities, towns, and villages.

#### **18 FOLK ART, CRAFTS, AND HOBBIES**

Traditional crafts made by Fijian women include pottery, woven mats, and bark cloth. Men did a great deal of carving and sculpting in wood; creating beautiful spears, clubs, ceremonial

bowls for kava drinking; and elaborately decorated double-hulled seagoing canoes. In precontact times, the Fijians were well-known for their armory and especially their war clubs. The Fijians had several types of war clubs, each designed to perform a special function in battle. “Throwers” were constructed to be thrown at an enemy and strike with the wide, knobbed butt. “Penetrators” had a spike with a weighted head. They were made of the heaviest wood available and were used only by the most skilled warriors. The club would make a single, fatal hole in the skull of the victim. According to tradition, a person killed in this manner was the most desired for cannibalism and the killer received much prestige.

## 19 SOCIAL PROBLEMS

With the coup of 1987 and the constitution of 1990, Fijians have made it clear that they want to reclaim the resources and rights to self-determination that have gradually slipped away from them. This has heightened tensions between the Fijians and the other ethnic groups of the island, especially the Indo-Fijians.

## 20 GENDER ISSUES

Recent statistics for the Republic of Fiji indicate that females and males are now equally educated. There are no gender-based differences in literacy, and in fact, females at all levels have a somewhat higher literacy percentage. School enrollments for males and females are equal. In fact 1995 enrolment figures show girls comprising 48.6% of all primary level enrolments and a little over 50% of total enrollments at secondary level. Female attendance at tertiary level institutions has also significantly increased. However, women still tend to dominate in the courses traditionally considered for females (nurses, secretaries, teachers etc.) while males still dominate course such as engineering and marine studies. Enrolments at the Fiji Institute of Technology in 1996 for example, for these male dominated fields showed less than 3% were females. On the other hand the enrolments for secretarial studies and for office administration were over 98% females. These statistics reflect the prevailing attitudes on gender roles which will take considerable time to change.

The Fiji Women’s Crisis Center (FWCC) is a feminist non-government organization that was established in 1984 to deal with the social problem of violence against women and children. FWCC is the first organization of its kind in the Pacific region.

# FILIPINOS

**PRONUNCIATION:** fih-lih-PEE-nohz

**LOCATION:** Philippines

**POPULATION:** 93 million

**LANGUAGE:** Tagalog (national language); Cebuano; Ilocano; Hiligaynon (Ilongo); Bicolano; Waray-Waray; Pampango, and Pangasinan

**RELIGION:** Roman Catholicism (85%); Philippine Independent Church; Iglesia ni Kristo (Church of Christ); Protestantism; Islam; animism

**RELATED ARTICLES:** Vol. 2: Filipino Americans. Vol. 3: Bajau; Hiligaynon; Ifugao; Ilocano; Ilongot; Kalinga; Vol. 4: Mangyan; Maranao; Negrito; Tagbanua; Tausug; T’boli.

## 1 INTRODUCTION

Distributed among thousands of islands, themselves divided by barriers of mountain and jungle, the territory of the Philippines by its very nature has encouraged the proliferation of distinct local cultures. However, three centuries of Spanish colonialism provided most Filipinos with a single framework within which to develop a common, eventually national, culture. Despite speaking several mutually unintelligible mother tongues, the 90% of the population classified as “lowland Christian” share essentially the same civilization. The remaining 10% consist of numerous non-Christian peoples, who differ greatly from the Christian majority as well as among themselves.

As early as 40,000 years ago, the first modern humans, Australo-Melanesian hunter-gatherers ancestral to the modern Negritos, roamed the Philippines, which was at that time virtually linked to Asia by land bridges exposed during the Ice Age. The ancestors of most Filipinos, however, were groups of Austronesian-speaking, Southern Mongoloid agriculturalists who arrived from Taiwan beginning between 3000 and 2000 BC (some of their descendants would migrate further to colonize Indonesia, Madagascar, and the Pacific Islands).

With the opening of a direct passage between China and the Spice Islands through the Philippines in the early 2nd millennium AD, small trading-and-raiding chiefdoms begin to appear in Chinese records. By the 15th century, items of the wider Asiatic civilization, such as Chinese porcelain, the Malay lingua franca, and the Islamic religion, had reached the archipelago. The first natives of the Philippines to be found in European documents are the Luzones (Tagalogs affiliated with the north Bornean kingdom of Brunei) whom Tomé Pires, a Portuguese, described in 1512 as settling in the Malay city-state of Malacca at the crossroads of international trade.

Looking on the archipelago as a base from which to capture the Spice Islands and to evangelize China, Spain sent several expeditions to follow up on Ferdinand Magellan’s 1521 “discovery” of the islands (which eventually received the name “Filipinas” after the Habsburg Philip II). Only in 1571 did Miguel López de Legaspi succeed in establishing a viable colony at Manila. Aside from the lucrative galleon trade between China and Spanish Mexico that ran through Manila, there was little to attract Spanish settlers with the exception of Catholic missionary orders, whose friars became the only representatives of the colonial power that most natives ever regularly encountered. The Spanish not only imposed the Catholic religion, but

also introduced forms of political and economic organization, as well as arts and technologies, which transformed native life both for good and for ill. Colonial annals record frequent local revolts against Spanish abuses, but on numerous occasions Catholic Filipinos stood with the Spanish against invaders and their own rebellious brethren.

The opening of the colony to non-Spanish commerce and capital in the 19th century promoted the growth of an economy heavily dependent on plantation-grown cash crops, and the rise of landed elite of largely mixed European-Chinese-native blood. While economic changes exposed most natives to novel forms of exploitation, an unprecedented affluence permitted some Filipino families to send their sons to Europe for an education. The native intelligentsia that was thus created, the *ilustrados* (literally, the “enlightened ones”), at first hoped only to gain for Filipinos equal rights as Spanish citizens but, facing no Spanish response other than repression, began to long for independence.

In 1896, secular ilustrado ideals and folk Catholic notions of justice impelled the Katipunan, a Manilan secret society, to launch a revolution to end Spanish rule. The leadership of the struggle soon shifted to the provincial Filipino elite who were able to raise impromptu militias. Although on 12 June 1898 Filipinos proclaimed their independence, the United States, which had initially collaborated with the Filipinos in defeating the Spanish, moved to take possession of the islands for their strategic value. The ensuing war, which eventually established American dominance, dragged on for years, and caused directly or indirectly the death of a million Filipinos.

American rule introduced mass education in the English language and improvements in public health and communications. Although the United States early on decided to prepare the Filipinos for eventual self-rule, it sought to retain ultimate control by favoring the landed elite whose interests would be bound to its own. Because of this, American-introduced democratic institutions became little more than arenas for competition among powerful families, while the welfare of the laboring masses continued to decline.

Japanese invasion and occupation and American liberation during World War II devastated the country to which the United States was to grant independence in 1946. Desperate for U.S. reconstruction funds, Filipino leaders submitted to treaties that gave Americans privileged access to the Filipino economy, as well as to lands for military bases. Cold War-era American pressure on the Filipino government to exclude leftist parties from legitimate political participation left disaffected peasants no other recourse but armed rebellion. Elite resistance to land reform perpetuated conditions hospitable to Communist insurgency. It was ostensibly to overcome Communist and Muslim rebellions, the breakdown of law and order, and an economic crisis that President Ferdinand Marcos declared martial law in 1972. Marcos, however, accomplished little more than exchanging the old oligarchs for his own cronies, whose corruption and incompetence plunged the economy into a tailspin by the 1980s.

Finally, during snap elections in 1986, masses of unarmed ordinary people mobilized first to thwart government attempts at electoral fraud and then to block government troops from capturing Corazon Aquino, the genuine president-elect, and the generals who had defected to her. In the end, this peaceful revolution, the first to be internationally televised, left Marcos no other option than to flee in an American helicopter to Hawaii. Aquino restored democracy but, belonging to one of the country’s biggest land-owning families, restored the pre-1972 oligarchy to power. A series of army coups and natural disasters destabilized her regime and retarded economic recovery. However, with the election of Fidel Ramos in 1992, the country at last began to enjoy stability and embark on a consistent rate of economic growth closer to those set by the Philippine’s Asian neighbors.

The Asian/global emerging markets financial crisis of 1997–1998 affected the Philippines less traumatically than neighboring countries like Thailand and Indonesia; growth slowed to a minimal contraction but resumed by 1999 despite the instability under the presidency of former actor Joseph Estrada, who was later impeached on corruption charges in 2001. His successor, Gloria Macapagal Arroyo, has pursued policies that have made the Philippines one of the fastest growing countries in Southeast Asia, as reflected in the blossoming of Manila’s skyline and Cebu’s malls, though this has yet to translate into substantial alleviation of poverty, as seen in the continuing growth of slums. Many problems persist from earlier decades, including not only communist and Muslim separatist insurgencies but also massive corruption.

## 2 LOCATION AND HOMELAND

The 7,000 islands (1,000 inhabited) of the Philippines comprise a land area equal to that of Italy and a little larger than that of Arizona. If superimposed on the eastern United States, they would stretch east to west from New York City to Chi-

ago and north to south from Massachusetts to Florida. There are 11 major islands: Luzon (more than one-third of the total land area); Mindoro; Palawan; Masbate; Panay; Negros; Cebu; Bohol; Leyte; Samar; and Mindanao (another one-third of the land area).

Mountains separated by narrow valleys dominate the topography on all islands, although Luzon, Panay, and Mindanao have wider interior plains. The source of the fertility of much of the country's soils, the archipelago's volcanoes form a link in the circum-Pacific "Ring of Fire." Throughout the country, deforestation has reduced the once-thick rainforest cover, replacing it with cogon grass; in turn, this has encouraged erosion that ultimately silts up coastal waters and chokes coral reefs, already damaged by dynamite fishing and other harmful practices.

The tropical climate is dominated by the monsoon cycle: (1) from June to October the southwest monsoon carries torrential rains to most of the country; (2) from November through February the northeast monsoon brings warm, dry weather; and (3) from March to May easterly North Pacific trade winds afflict the islands with a period of extreme heat and drought. From 20 to 30 typhoons wreak havoc on sections of the country every year.

Though estimates vary rather widely, in 2008, over 90 million people inhabited the Philippines, making it the 12th most populous country on earth (after Mexico and before Vietnam); this represents a more than thirteen-fold increase since the beginning of the 20th century. Population density stands at a high of 320 persons per sq km. More than one in three of Filipinos (36.2% to be exact) are under the age of 14, constituting a heavy burden on the employed portion of the population and demanding in future years a continual expansion of education and labor opportunities; only 3.8% are 65 years or older (2005). The annual growth rate declined to 1.8% in 2005 from 2.3–2.4% in 1990, 2.6–2.75 in 1980, and 3.08 in 1970; in the period 2000–2005, 3.5 children were born for every woman of child-bearing age, down from 6.0 in 1970–1975. However, because of the opposition of the Roman Catholic Church to birth control and to inconsistent government support for family planning, reductions in the population growth rate have not been as dramatic as in the neighboring countries of Thailand and Indonesia.

Between the 1950s and early 1980s, the ratio of land per agricultural worker fell by half, from 1.0 hectare (2.47 acres) per worker to 0.5 hectares (1.24 acres), meaning that even vigorously pursued land reform could not provide each farmer with sufficient land. Land scarcity has forced people to move from more- to less-densely populated regions. More significantly, Filipino cities are growing rapidly, receiving a continual influx of migrants from the countryside: in 2005, 62.7% of the population was urban, compared to 48.6% in 1990 and 31.8% in 1990. Migration within the country has in a sense spilled over the borders, creating one of the great diasporas in modern history. In 2004, 8.1 million Filipinos were estimated to be working temporarily or residing permanently abroad, in countries as diverse as the Hong Kong, Saudi Arabia, Italy, and the United States.

### 3 LANGUAGE

Some 70 languages are spoken as mother tongues in the Philippines, virtually all belonging to three branches (Northern,

Central, and Southern Philippine) of the Austronesian family, which includes the languages of Indonesia, Madagascar, Oceania, and aboriginal Taiwan. The eight languages with the greatest number of speakers are:

**Tagalog**, the basis of Pilipino/Filipino, the national language, spoken natively by 28% of the total Filipino population (2000 census), concentrated in Manila and the immediately contiguous provinces and extending to coastal settlements on Mindoro and Palawan;

**Cebuano**, whose native speakers include 21% of the population inhabiting the islands of Cebu, Bohol, southern Leyte, eastern Negros, and the northern and eastern coasts of Mindanao (speakers of the language not from Cebu or eastern Negros prefer to refer to their dialects as "Bisaya" or "Binisaya");

**Ilocano**, whose speakers (approximately 9% of the population) originated along a narrow coastal strip of northwestern Luzon, but who can now be found throughout northern Luzon;

**Hiligaynon** (or Ilongo), natively spoken (7.6% of the population) on Panay, western Negros, and southern Mindoro;

**Bicolano**, whose speakers (almost 6% of the population) inhabit the long southeastern "tail" of Luzon;

**Waray-Waray**, spoken (nearly 3.4%) on the island of Samar and on northern Leyte; and

**Pampango and Pangasinan**, whose speakers live respectively at the southern and northern ends the Luzon's Central Plain.

Along with a number of smaller language groups, these eight ethnolinguistic groups constitute the "lowland Christian" majority of the country. Outside this lowland Christian majority there is a great diversity of **non-Christian ethnolinguistic groups**, constituting fewer than 10% of the population and falling into four broad categories:

Muslim peoples of Mindanao, the Sulu Archipelago, and Palawan—Maranao, Maguindanao, Tausug (each over 500,000 people), Samal (272,000), Yakan, Bajau, and others.

Animist highlanders of Mindanao, Palawan, and Mindoro—Mangyan (on Mindoro), Tagbanua and Palawan (on Palawan), Subanon, Bukidnon, Bagobo, Manobo, T'boli, and others (on Mindanao).

Animist highlanders of northern Luzon—Ifugao, Bontoc, Ibaloi, Kalinga, Isneg, Ilongot, and others.

Negritos—dark-complexioned, hunter-gatherers of extremely short stature, known to have lived in uplands throughout the archipelago but now confined to the northern Luzon highlands.

Among groups that have settled in the Philippines in historical times, the numerically most significant are the Chinese (mostly speakers of Hokkien), now numbering around 2.2 million people, or over 2% of the population.

*Filipino children peek through curtain slots of a passenger jeepney after a rainstorm in Manila, Philippines. The Philippines is slashed by typhoons and tropical storms each year with the heaviest rains falling from July to November. (AP Images/Aaron Favila)*

As the Spanish friars who administered most of the country chose to learn the local languages, only a small fraction of the population speak Spanish (Castilian), although numerous Castilian words became part of the native languages. Filipinos refer to Spaniards as “*Kastila*.” In some parts of the Philippines, a creolized form of Spanish, called Chabacano, is spoken as a mother tongue, with the most important concentration of speakers, 600,000, in Zamboanga on the former Spanish frontier on Mindanao.

After conquering the country, the Americans replaced Spanish with English as the language of government and education. In 1937, the Commonwealth government decided to promote the use of Tagalog, the most prestigious of the indigenous languages, as the national language, now called “Filipino/Pilipino,” though not without continuing resistance from non-Tagalogs, particularly Cebuanos. Taught in schools and heard in pop music, television programs, and movies, Tagalog-Pilipino has rapidly gained currency throughout the country, although people continue to use their local languages for most everyday purposes. Although competence in English seems to be declining (46.98% of the population, down from 63.71% in 2000), a mastery of English remains the key to professional, academic, government, and business careers. In the media, English-language publications and programming continue to command an audience; the Philippines, by one estimate is the country with the largest number of speakers of English as

an additional language, ahead of more populous Nigeria and Pakistan. It has often been remarked that the true national language is “Taglish,” a free mixture of the two languages.

Among Christians, names of Spanish origin predominate, although names from indigenous languages are common enough. While Catholicism requires Spanish baptismal names, a 19th-century Spanish decree directed Filipinos to choose Spanish surnames for taxation purposes (inhabitants of the same locality had to select surnames beginning with the same letter). Filipinos generally have three names in the following order: (1) one’s personal name, (2) one’s mother’s surname (usually appearing only as an initial), and (3) one’s father’s surname. Upon marriage, a woman’s name changes to the pattern: (1) her personal name, (2) her father’s surname, and (3) her husband’s surname.

Names vary among non-Christian Filipinos according to their ethnic group.

#### 4 FOLKLORE

Mounds of earth (including termite nests and backyard garbage heaps), particularly spooky old trees, and mist-shrouded mountains are said to be home to beings that can influence human lives for good or ill. In appearance, they range from beautiful goddess-like figures, such as Mariang Makiling, who is mistress of a Luzon mountain, to monsters, such as the *kapre*, a black-skinned giant, to dwarves and elves (often pic-

tured dressed in medieval European fashions). By far the most widely feared of supernatural creatures is the *asuwang*, a being who appears as an attractive woman by day but who at night leaves behind the lower portion of its body in a hiding place and flies about in search of human victims, usually the sick, from whom it sucks the entrails with the aid of a long, tubular tongue. Inexplicable deaths in sleep are often ascribed to attacks by *asuwang*, although they are frequently also credited to *bangungot*, a fatal nightmare induced by witchcraft. Filipinos expect recently deceased kin to return in some form, as a moth, a strange breeze, or, if resentful of the living, as a wail heard in the night.

The legendary Juan Tamad (“John Lazy”) appears in a great many folk tales; his extraordinary indolence and stupidity embroil him in all sorts of misadventures, usually ending in him being beaten up by his fellow villagers or scolded by his mother. In popular imagination, the opposite of Juan Tamad is Jose Rizal (1861–1896), the national hero, a European-educated doctor, scholar, and novelist. With his execution by the Spaniards during the Revolution (despite his disinclination for a complete break with Spain), Rizal became the supreme martyr; there is even a 250,000-strong sect, the Iglesia Watawat ng Lahi (“Church of the Banner of the Race”), which venerates him as a reincarnation of Christ and anticipates his return to earth to deliver his people from suffering.

## 5 RELIGION

As a result of Spanish evangelization, 81–83% of the population is Roman Catholic, making it the world’s third largest Catholic majority nation (after Brazil and Mexico). This gives the Roman Catholic Church a powerful influence on national life, despite the separation of church and state introduced by the American colonialists. Power within the Church was monopolized by Spanish friars, so that native priests being granted control of parishes became a key reform that was sought by the nationalist movement in the late 19th century, ultimately resulting in the founding of the Philippine Independent Church (also called Aglipayan after Gregorio Aglipay who established it in 1902). Claiming 3.9% of the population, the Philippine Independent Church maintains essentially Catholic practices but does not recognize the pope. Another 1.3% of Filipinos adhere to another indigenous church, the evangelical Iglesia ni Kristo (Church of Christ), founded in 1914, known for its tight hold on its members’ lives, demanding a temperate lifestyle, claiming a large portion of personal income (but also providing them with hardship support), and even dictating voting choices. The Church of Christ’s well-kept places of worship, noted for their tall, vaguely “Oriental” spires, can now be seen in every town. In addition to these, American missionaries since the beginning of the century have proselytized for various Protestant sects, such as Baptist or Methodist, which now count about 2% of the population among their followers.

First arriving in the 15th century, Islam, the majority religion in neighboring Indonesia and Malaysia, claims about 5% of the population, concentrated in the south of the country. The 3% of Filipinos classified as “tribal” highlanders still follow ancestral animist traditions to varying degrees. The country’s Chinese practice elements of Taoism and Buddhism, though many have converted to Christianity.

Belief in supernatural forces unrecognized by official Catholicism persists throughout the population. Faith healers

and spirit mediums, often employing exorcistic strategies in addition to the usual herbals and massage, continue in popularity. To a greater extent than in contemporary Europe or North America, Catholicism in the Philippines stresses the veneration of intercessor figures, such as patron saints and the Virgin Mary (who is invoked in frequent group recitations of the rosary). Filipinos concentrate on the more human face of the Christian God, as in the cults of Santo Niño (the Child Jesus, conventionally dressed as prince), especially popular in the Visayas, and of the Dead Christ, characteristic of the Bicol region. Although some do not regularly practice their faith (for instance, adult men tend to avoid weekly mass) or are skeptical of organized religion, many others express an intense personal devotion, subjecting themselves to acts of self-mortification such as the world-famous flagellations and (nonfatal) crucifixions, or joining Catholic lay organizations such as the Cursillo, the ultraconservative Opus Dei, or the charismatic El Shaddai.

## 6 MAJOR HOLIDAYS

As the majority of the population is Christian, Christian holidays are the most widely celebrated holidays in the Philippines. Christmas festivities begin on December 16 with the first of the *simbang gabi* or *misa de gallo*, masses held before sunrise every morning before Christmas itself. After Midnight Mass on Christmas Eve, kindred families gather at one of their homes for a feast, the *Noche Buena*. On Christmas Day itself, further parties are held, with children making the rounds of relatives and godparents to pay respect to them and receive presents.

The other highlight of the year is Holy Week in March or April, celebrated by spectacles differing from locality to locality. Many towns hold a *sinakulo*, a traditional sung drama, staged over several nights and occupying many hours per segment, focusing on the sufferings of Christ but often including scenes from the Old Testament, all the way back to Genesis. Mass on the night before Easter is followed by the reenactment of the meeting of the resurrected Christ and his grieving mother, represented by life-sized statues carried in procession.

Another important nationwide festival is the Santacruzán in May, commemorating the discovery of Christ’s cross by Helen, mother of Constantine the Great, the first Christian Roman emperor. These celebrations feature processions in which the daughters of prominent families are splendidly dressed as Reina Elena (Queen Helen) and accompanied by a male escort and a cortege of other couples. On All Souls’ Day (November 2), people gather at the graves of family members for a 24-hour vigil during which, in addition to praying, they clean the graves, decorate them with candles and wreaths, eat, drink, and play cards.

Each town has an annual fiesta in honor of its patron saint. In addition to religious rituals, fiestas include public feasting, fairs, brass-band playing, performing arts, social dancing, sporting events (especially cockfights), and beauty contests.

## 7 RITES OF PASSAGE

Taking care to bury the placenta in a place where it will not be stepped on is one the many folk customs that to some extent still ensures the well-being and good fortune of a newborn child. For Christians, baptism offers an occasion for the parents to make alliances with kin and non-kin through the godparent relationship.

Around the onset of puberty, Christian boys undergo circumcision, without religious connotations; a simple lecture on hygiene by older female relatives accompanies a girl's first menstruation. Graduations from elementary, high school, and college require major celebrations. Elite families give their daughters debuts on their 18th birthday; the girl, her close female relatives, and male partners rehearse set pieces of ballroom dancing to perform in front of the guests.

Catholic weddings in the Philippines consist of the standard nuptial mass, but also include a section during which a white veil and a cord are draped over the couple's shoulder and an *arias*, an object made of coins, is presented to them, all symbols of unity and prosperity. A couple will have several sponsors ("wedding godparents"). A reception follows, to which everyone even remotely connected to the couple and their families is invited.

Funerals are extended affairs, usually postponed several days, waiting for relatives of the deceased to arrive from as far away as the United States. The body remains in the house, and there are always people keeping vigil over it, usually by playing cards or mah-jong through the night. A procession accompanied by somber music from a brass band brings the body to church for the funeral mass and takes it from there to the cemetery amid dramatic weeping from older kinswomen. Afterwards, mourners gather for nine nights to pray for the departed, and then again at longer intervals such as the first anniversary of the death. Surviving kin will avoid brightly colored outfits for some time, often attaching a black ribbon to their clothes; a widow will wear only black for a full year.

## 8 INTERPERSONAL RELATIONS

Filipino values aim to promote group solidarity and to underline individuals' mutual dependence. A person must have *hiya*, a sense of "shame," which prevents him or her from violating social norms. Behavior unacceptable to the wider society will damage the reputation of the groups to which one belongs, particularly the immediate family. Moreover, an individual should strive to earn and keep the esteem of others (in other words, protect his or her good name), a value called *amor-propio*, Spanish for "loving oneself"; those who do not care about their own "face" will not be sufficiently sensitive to the dignity of others.

Filipinos are careful to show deference to those of superior status (greater age, educational attainment, organizational rank, perceived wealth, etc.). For instance, when speaking in Tagalog-Pilipino to an elder, a social superior, or a stranger, a person inserts the particle *po* or *ho* ("sir" or "ma'am") into virtually every utterance. In order to save face, both one's own and that of others, one avoids making direct demands of others by either resorting to "beating around the bush" or enlisting a go-between. A person should show proper gratitude for the good others have done him or her and be eager to reciprocate in whatever way he or she can. Some *utang na loob* ("inner debts") can never be repaid, e.g. a child's debt to its mother for the gift of life.

In addition to the Spanish-derived "*Kumusta?*" ("How are you?"), the most common greetings translate as "Where have you just come from?" and "Where are you off to now?" In reply, no one expects to hear more than "Just over there."

It is customary to greet older relatives with a kiss on the cheek or forehead or, more traditionally, to bow in front of

them, take their hand, and press it to the forehead to receive a "blessing." While passing in front of older or higher-status people, etiquette dictates that one walk slowly, bowing the head and either clasping the hands together in front or extending one of the open palms in the direction one is going. One beckons another to come closer with a downward motion of the open palm. Pointing with the fingers is offensive; people point pursed lips in the direction they wish to indicate. When catching sight of acquaintances, quickly raising and lowering the eyebrows is sufficient sign of recognition and may substitute for small talk if one is in a hurry. Prolonged staring, however, is considered aggressive, as is holding the arms akimbo. With merely a sharp, clipped hiss, mothers can show displeasure to their children; anyone can use a softer, somewhat more prolonged hiss as a very informal means of catching someone's attention. Physical contact between members of the same sex is a common sign of affection without homosexual connotation. In embarrassing situations, the reflex is to smile to cover over the natural emotion, or sometimes also to lower the head and rub the back of the neck.

Before entering a house, a visitor announces his or her presence by saying "*Tao po*" ("A person is here, sir/ma'am") and waits to be invited in. Even unexpected guests are always served drinks and whatever snacks are available. It is polite to appear shy to accept what is offered, but the host will vigorously insist that the guest partake. The guest leaves a little on the plate to show that the host has provided more than enough. Taking formal leave of the hosts and any older or distinguished people is a must; this is usually a lengthy operation as there tends to be a line of people waiting to say goodbye, and farewells tend to ramble. Party hosts always wrap leftovers for the departing guests to take home. Similarly, those returning from long-distance trips are expected to bring back presents (*pasa-lubong*) for those remaining at home.

In the past, a suitor stood below the door of his interest's raised house and serenaded her, often with companions at his side literally to provide accompaniment. If the girl liked him, she could invite him in to chat with her and her family. Contact between the sexes unmonitored by elders is increasingly common (such as in discos), but same-age chaperones and group dates continue to make "courting" a public affair. This is becoming more so as Filipinos introduce their relatives and friends to likely partners or approach their interests by asking the help of a common friend. Public displays of affection, though no longer taboo, are still subject to social disapproval; girls, in particular, are careful not to appear too free with boys. In urban areas today, though usually only after much dating, many young people engage in discreet premarital sex, often going to "love motels" because of lack of privacy at home. Many young men have their first sexual experience with a prostitute.

According to survey data plotted on the Inglehart-Welzel World Values Map, Filipinos are moderately more tradition-oriented than secular-rational-oriented and slightly more survival-oriented than self-expression-oriented (most resembling Peruvians, who are slightly more tradition-oriented, South Africans and Iranians who are slightly more tradition- and survival oriented, and Indonesians, who are both somewhat less traditional- and less self-expression-oriented).

Children throw confetti to dancing women wearing traditional dress during a celebration of the feast of Sto. Nino, Manila, Philippines. (AP Images/Pat Roque)

## 9 LIVING CONDITIONS

In 2005, per capita GDP, adjusted for Purchasing Power Parity, stood at us \$5,137 a year, placing the Philippines in the category of lower middle-income nations. Its ranking in the United Nations Human Development Index is 90 (out of 177 countries ranked). Countries with similar HDI's are Peru, Lebanon, Tunisia, Fiji, and Iran. Its HDI ranking is eleven places higher than its ranking according to GNP per capita (PPP), indicating that its population is somewhat better off in terms of health and education than per capita income alone would provide for (Tunisia's per capita GDP, adjusted for PPP, is 60% higher than the Philippines, but its HDI is slightly lower).

Some 30% of the population lives below the government-set poverty line (although the sharing of resources by more affluent family members and relatives working overseas mitigates somewhat the hardship of many of the poor). While recent economic growth has benefited a growing portion of the population, most of the nation's wealth remains in the hands of a small fraction of the population—elite families (some Spanish mestizo but mostly Chinese mestizo and Chinese-Filipino) who own plantations and other large enterprises. Nearly half the population (43%) lives on less than two dollars' equivalent a day, and 14.8% on less than a dollar a day. The proportion of the population living below the national poverty line (earning less than the amount needed to provide themselves a daily intake of 2,100 calories and other basic needs) has declined dra-

matically over the years, from 40.1% in 1976 to 16.58% in 2007. This last figure, however, represents a recovery from the situation in the aftermath of the economic collapse of 1997–1998; in 1990 the figure was 15% while the average for the years 1990–2004 was 27.1%. As measured by its Gini coefficient of 44.5, income inequality in the Philippines is severe by world standards (it is greater than in Japan, 29.9; Indonesia, 34.3; and the United States 40.8; though far less than in Brazil, 57). The richest 20% earns 9.4 times as much as the poorest 20%. Moreover, there is wide variation in the standard of living from region to region and between urban and rural areas.

Spanish colonialism dictated a settlement pattern that had at its core a *población*, a town laid out in a grid plan focused on a church plaza. The *población* was in turn the center for a number of *barrios*, villages surrounded by fields. Finally, the *barrios* themselves had often remote satellite hamlets, *sitios* with a small chapel visited only intermittently by the priest permanently resident in the *población*.

The *bahay kubo* or nipa hut, a two- or three-room structure with bamboo walls and floors and a cogon-grass or palm-leaf roof raised on wooden pillars, has provided housing for the peasants, who make up the vast majority of Filipinos, until recent times. Animals, primarily pigs, chickens, and a water buffalo, are kept below the house. . In less-developed parts of the country, this remains the most common type of house. In Sulu, 1990 census figures count nearly 90% of houses as having

neither solid roofs nor solid outer walls; the national average is 44.4% and 39.1%, respectively.

In contemporary towns, houses typically have two stories with wooden walls, corrugated iron roofs, and cement foundations. Wealthier residences adopt Spanish elements, such as tiled roofs and floors, walls of brick or stone, and iron grillwork on windows, fences, and gates. Whereas traditional neighborhoods juxtaposed rich and poor houses, modern urban development has favored: the growth of upper-class residential areas surrounded by walls, with entrances guarded by security personnel; middle-class subdivisions (including gated condominium complexes); and squatter settlements whose houses are improvised from scrap materials and lack utilities. About 25% of the Manila population was squatters in the early 1980s.

In 2004, 80.2% of households had access to safe drinking water within their residence, 86.2% to a sanitary toilet, and 79.7% to electricity. About 64.4% of households owned their residence, and for 70.5% of households that residence was a “strong housing unit,” defined as one with roof and outer walls of galvanized iron/aluminum, tile, concrete, brick, stone, and asbestos. In 2000, 1 in 3 households had a refrigerator, up from 1 in 5 in 1990 and 1 in 20 in 1970. About 46.1% of households in 2000 still disposed of garbage by burning it in their backyards, although the percentage of households that had their garbage picked up by a truck rose to 32.5% from just 15.8% in 1990.

Life expectancy has risen dramatically over the last generation: standing at 51.2 years for both sexes in 1960 and 58.1 in 1970–1975, figures for 1990 reached 69 years for women and 63 years for men, and for 2005 it increased to 73.3 and 68.9 respectively. Infant mortality was halved between 1950 (101 deaths per 1,000 live births) and 1989 (51.6 deaths); it was halved yet again by 2005 when it ran to only 25 per 1,000 live births. Still, 1 in 5 infants were underweight at birth and around 1 in 3 children under 5 years old were underweight and under height; 18% of the general population was undernourished (1996–2005 averages, down from 26% in 1990–1992). In 2005, 13.78% of deaths were due to intestinal tract infections. Communicable diseases were the cause of 25% in 1980 and 75% in 1923. About 41.8% of households included a member enrolled in the government health care plan; access to physicians and hospitals remains limited in rural areas, where there were only 58 physicians per 100,000 people. Individuals still consult traditional healers and employ herbal remedies.

Telephone access is spreading rapidly. Although the number of telephone landlines per 1,000 people only rose from 10 in 1990 to 41 in 2005, there were 419 cell phone subscribers for every 1000 people in that year. The number of internet users has reached 54 per 1000 people.

In 1990, only 7.9% of households owned a motor vehicle; by 2000, the figure had risen to 12.2%. Within urban neighborhoods or in the countryside (where *kalesas*, horse drawn carts, can still be seen), people take tricycles (motorcycles with a passenger car on the side). Brightly painted *jeepneys* (originally U.S. military surplus jeeps with back sections lengthened to accommodate passengers) are the cheapest way to get around cities and between towns. Buses, some air-conditioned, also carry passengers within cities and between more distant locations. Commuting to and within cities, metropolitan Manila above all, consumes much time due to extreme traffic congestion. Interisland travel is by large ferries or passenger ships or,

more expensively, by airplane; the traditional *bangka*, an outrigger canoe, is still in common use for fishing and local transport. Overall, per capita carbon dioxide emissions are still low, at 1.0 tons in 2004 (up from 0.7 in 1990).

## 10 FAMILY LIFE

The family is Filipino society’s central institution; to it individuals subordinate their own interests and frequently their obligations to other social groups, their workplace, or the government. The typical household consists of a married couple, children, grandparents, and sometimes servants, who are common in middle-class households. Children generally live at home until marriage, and often newlywed couples stay with either set of parents for some time. Older children, as well as grandparents and other relatives, aid the mother in caring for younger children; it is common for older children to sacrifice for the younger, such as by working to put them through school.

Great respect is shown for elders. Older siblings are addressed with special terms. In Tagalog-Pilipino, “Ate” is used for an older sister and “Kuya” for an older brother. Older cousins (as well as friends and associates) are also addressed with these titles. Traditionally, a person would address a younger cousin as “older sibling” if the cousin’s parents were older than his or her own parents. Filipinos have a bilateral kinship system that bonds them equally to relatives from both the mother’s and father’s sides. Relations between cousins of as far as the second and even third degree are close. Married couples are expected to maintain equal closeness with both spouses’ kin groups, though this is not always achieved. Inheritances are divided equally among the children of the deceased.

The Catholic sacraments of baptism, confirmation, and marriage give Filipinos opportunities to establish or reinforce relationships with non-kin through asking non-kin to become godparents to one’s children; these godparents can be old friends or individuals one wishes to make alliances with or seek the patronage of, though very often they are actually one’s own relatives. The godfather and godmother of one’s child are called one’s *kumpare* and *kumare* (from Spanish *compadre* and *comadre*), and one’s own godfather and godmother are called *ninong*, *ninang* (from Spanish *padrino* and *padrina*).

Individuals are free to choose their marriage partners, but family approval is an important consideration, often a decisive one. In agreement with Catholic doctrine, divorce (though not separation) is illegal except among Muslims and other non-Christians. Often, a man takes a mistress (*querida*), with whom he may have a second family. The need to work away from home or even outside the country has produced numerous “incomplete” households, which can be where one parent (often the father) must raise the family with only the occasional presence of the other, where grandparents must care for their grandchildren, or where elder siblings must care for their younger siblings. Illegitimate births have become common and do not always lead to marriage as was the case in the past because today there are fewer stigmas around this situation.

Filipinos are relatively tolerant of homosexuality. Though often the object of good-natured teasing, the *bakla*, the effeminate man with a “woman’s heart” (*pusong babae*) has an established place in society (*bakla* beauty contests are popular entertainment for the general public).

## 11 CLOTHING

The Spanish pressured Christianized Filipinos into abandoning the more “immodest” Southeast Asian articles of dress such as the G-string, but prohibited them from fully adopting European fashions. *Indio* (native) men wore collarless, long-sleeved, untucked shirts (*baro*) and loose pants that could be rolled up easily for heavy work. *Indio* women wore wide-necked, wide-sleeved short blouses and ankle-length skirts; in public, they draped a shawl over their shoulders and wrapped a *tapis*, a small piece of cloth, over the skirt (the *tapis* was in fact the skirt of pre-Christian times). The wealthier *mestizo* (mixed-blood) men added collars and cuffs to the *baro*, thus creating what would become the male national costume, the *barong tagalog*, finely embroidered and woven of pineapple leaf fibers. *Mestizo* women preferred fuller skirts (or sometimes ones ending in a long train) and butterfly sleeves, developing the *terno*, the later female national costume.

Nowadays, for formal occasions men wear either the *barong tagalog* or Western-style suits, and women wear either a modified *terno* or Western-style dresses. Suitable home attire very often consists of no more than shorts with or without a tank top for men, and a *maong*, a loose one-piece dress with wide sleeves and open neck for women. For younger people, t-shirts and jeans are common streetwear.

## 12 FOOD

Except for the 20% of the population (in the central Visayas) for whom maize is the staple, boiled rice is the indispensable component of a full meal, with all other foods being termed *ulam* (accompaniments). For peasants, the *ulam* may consist of no more than dried fish and some sliced tomato or onion. Only for the comparatively well to do is meat a regular part of the diet; most consume meat only at special celebrations (often in the form of *lechon*, roast whole pig). Common preparations include soups heavy with vegetables and meat or seafood (such as *sinigang* and *tinola*), meat or seafood simmered in coconut milk (*ginataan*), Chinese-derived noodle dishes (such as *pansit*), stewed meat dishes of Spanish origin (such as *adobo* or *kaldereta*), or, most simply, freshly grilled fish. Party menus emphasize dishes inspired by Chinese or Spanish cuisine, such as *lumpia* (spring rolls) and *paella* (a dish of meat, seafood, and rice cooked together).

Seasonings tend to be simpler than elsewhere in Southeast Asia, with ordinary dishes rarely employing more than garlic, ginger, peppercorns, soy sauce, fish sauce, and shrimp paste. Although Muslim peoples and Christian Bicolanos cook with hot chilies as much as Indonesians or Thai, elsewhere in the country one regularly encounters chili only as a flavoring for vinegar.

Aside from a Spanish custard, *letseplan*, and rich American-style baked goods, desserts consist of a variety of rice- or cassava-based cakes. A wide selection of fruits is available, such as numerous types of bananas (bananas are sometimes even eaten alongside the main meal).

Associated with peasant ways, the traditional mode of eating has been to scoop up food from flat dishes with the fingers of the right hand (the left hand being reserved exclusively for washing oneself after defecation). It is considered more refined to eat with a spoon and fork (using the fork in the left hand to push food on to a spoon in the right hand). Individual portions

are not separated; rather, everyone takes from common dishes laid out in the center of the table.

Breakfast usually consists of leftovers from the previous evening’s dinner (the remaining rice is often fried with garlic) or, alternatively of bread bought fresh from bakeries and eaten with coffee. Other common breakfast dishes consist of fried rice, fried eggs, and a meat product (longanisa sausage, *tosino* bacon, beef *tapa*, or spam). The heaviest meal of the day is lunch for country people (to satisfy hunger built up working in the morning, the coolest part of the day) and dinner for city people (when the entire family can gather together). Taking an afternoon snack, called the *merienda*, often virtually a meal in itself, is common for those who can afford it.

Smoking is common among men, but women smokers are rare. For a mild stimulant, some (far fewer than in the past) chew betel nut. Wines, made from palm sap, sugarcane, or rice, are the traditional alcoholic beverages, but today beer predominates. Small groups of men often gather at night on the porch of a house to chat and drink beer with *pulutan*, snacks ranging from peanuts or the eggs of quail or duck (the last often a fully formed chick in the shell, called *balut*) to grilled fish or shrimp.

## 13 EDUCATION

In 2003, literacy stood at 93.4%, a 10% increase over the 1970 level, though a minimal change from 1990. Elementary school lasts for six years beginning at age seven, and high school lasts for four years (seven years of education is compulsory). While 94% of the relevant age group was enrolled in elementary school, which is free, in 2005, only 61% of the relevant age group attended high school that year because poorer families cannot spare the money for fees, as well as travel costs to the often distant high schools, and need teenagers to help in the fields or otherwise earn income for the family. Of high school graduates, a large percentage go on to college, ranging from low-quality “diploma mills” to excellent universities, the most prestigious being the state-run University of the Philippines, the Jesuit-run Ateneo de Manila, and the Dominican-run University of Santo Tomas, which has been in existence longer than Harvard. About 31.2% of the relevant age cohort is enrolled in a tertiary educational institution. In 1990, 12.9% of the population held an academic degree. In addition to the public school system, private schools abound at all levels, teaching 7.3% of students at the primary level and 30.8% at the secondary, usually run by the Catholic Church or other Christian sects; Chinese and Muslim communities also have their own schools.

American policy promoted mass public education, the beginnings of which date back to 1863 under the Spanish. Since then, Filipinos have held a deep reverence for education, seeing it as a means of freeing oneself from manual labor by entering more prestigious occupations as doctors, lawyers, or, at least, schoolteachers. Families are willing to sacrifice a great deal to send a child to college. A major national problem has been providing the great number of college-educated people with jobs commensurate with their qualifications; many emigrate to attain the living standard proper to their educational attainments.

## 14 CULTURAL HERITAGE

The most prominent types of traditional group music making are the *rondalla*, which is an ensemble of Hispanic plucked and

bowed string instruments to accompany social dancing and suitors' serenades, and the municipal brass band, whose repertoire includes Italian opera overtures and other orchestral music to contribute to the gaiety of fiestas. Traditional songs (for instance the *kundiman*, a melancholy love song) are generally reminiscent of Spanish forms; certain types demand operatic vocal delivery. Similarly, modern vocal music follows American pop models with a preference for the sentimental and the Broadway-style dramatic (although rap in Tagalog-Pilipino does exist).

Folk dances include those that have analogues elsewhere in Southeast Asia, such as the *tinikling*, where a couple executes intricate figures while skipping through two bamboo poles being clapped together at an accelerating pace. Others are adaptations of European couple dances such the waltz, polka, and mazurka. Both disco and ballroom dancing have long been popular (especially Latin American styles such as the cha-cha).

At the time of the Spanish arrival, Filipinos were using their own alphabet (one derived via Javano-Malay or Cham scripts that in turn derived from Indian ones), incising messages (though not literature, which remained oral) on palm leaves or bamboo. Word play ranged from riddles (*bugtong*) to extended poetical debates (*balagtasan*), an integral part of courtship; formal declamation remains an important art. Long verse narratives, from retellings of Christ's Passion to heroic tales set in mythical lands, came to be composed in native languages; the culmination of this tradition was the Tagalog classic *Florante at Laura*, composed by Francisco Baltazar in the 1830s. By the last decades of the 19th century, Filipinos were producing poetry and novels in Spanish. Jose Rizal's patriotic poem "*Mi ultimo adiós*" and his anti-colonial novels *Noli Me Tangere* and *El filibusterismo* are the most famous examples. Under the Americans, writers switched to English, a tradition that continues today. Nick Joaquin is one of its most renowned heirs. Meanwhile, poetry, prose, and drama continue to be written in Tagalog-Pilipino and the other indigenous languages, although Filipino novels face strong competition from imported English-language books. For most people, consumption of literature in native languages is confined to stories (*nobela*) appearing serially in comics.

## 15 WORK

In 2004, over one in three Filipino workers (37%) was employed in agriculture, a dramatic reduction from the 1980 figures of one in two (49.2%). Some 70% of agricultural workers do not own the land they work, working either as tenant farmers or plantation laborers. The staple crops are rice, maize, and sweet potatoes. Wet-rice fields dominate the rural landscape, in some places as terraces climbing steep mountainsides. The principal cash crops are coconuts, bananas, pineapples, sugar, tobacco, and abaca (hemp). Livestock includes pigs, chickens, ducks, and goats. Raising cattle is limited to the few areas with suitable grazing lands; *carabao* (water buffalo) pull plows and carts and also provide meat and milk. Fishing provides many rural families with a livelihood or at least supplementary income. Complex networks of bamboo traps cover lakes and other bodies of water.

Manufacturing and construction employ 15% of the working population. Traditionally, industry has focused on producing consumer goods for the domestic market and the

processing of exported primary agricultural products. Recent years, however, have seen the growth of export-oriented manufacture, such as computer components assembly; though to a lesser extent than in neighboring Asian countries, Japanese and South Korean firms have outsourced many of their production operations to factories in government-established special economic zones in the Philippines, such as the one on the territory of the former U.S. naval base at Subic Bay.

Services accounted for 48% of all workers. Considerable stigma was traditionally attached to manual labor and mercantile occupations, though careers in business and technical professions, such as engineering, have recently gained greatly in respectability. Thanks to having one of the largest populations of young highly educated English-speakers in the world and low labor costs (in this respect resembling India, the world leader), the Philippines has become a major center of the call center industry; in 2004, it employed over a million people (largely in the Metro Manila region) and contributed to 12% of GDP.

Unemployment is high, estimated at 7.9% in 2007 (the 2004 figure reached 10.9%). Over 45% of the working population was employed in the informal sector.

Finally, the country's economic difficulties have pushed many people to emigrate in search of work. Although Filipinos already sought education and employment abroad in late Spanish times and Filipino migration to the United States began with the U.S. conquest of the Philippines at the very end of the 19th century, large-scale migration there and to elsewhere in the world only began in the 1970s. A command of English and a high level of education giving them a competitive in the world labor market, Filipinos can now be found in every region of the world, in over 200 countries and territories. In 2004, 8.1 million Filipinos, equivalent to nearly 10% of the population, were estimated to be abroad, mainly in the Middle East, Pacific Asia, North America, and Europe. These are divided into three categories: 3.6 million legally working abroad (termed "OFWs"/"Overseas Filipino Workers"); 1.3 million working illegally (mainly in the United States and Malaysia); and 3.2 million residing permanently abroad (termed "balikbayan," "returnees to the homeland). About 1.4 million had settled in the United States, where they constituted the second-largest group among the foreign-born, after Mexicans.

About 20% of all Filipino OFWs work as shipmen, and 25% of all shipmen worldwide are Filipinos. Filipinos are also particularly prominent in health care, (women) domestic service, and (men) construction work. Since 1992, women have outnumbered men among labor emigrants. Estimated at us\$8.5 billion in 2004 and expected to surpass us\$10 billion in 2005, remittances are essential to the economy as a source of hard currency, even surpassing the value of foreign direct investment; the Philippines is the world's fifth largest recipient of remittances (after India, China, Mexico, and France). Establishing a whole agency for the purpose, the government has institutionalized its management of labor migration/labor export, aiming to deploy 1 million OFWs annually. The country has developed a "culture of migration" under which true "ambition" is equated with the willingness to work abroad and 1 in 5 adults and 1 in 2 children 10–12 years of age express the desire to do so.

## 16 SPORTS

*Sipa* is an indigenous game in which two teams of one to four players each hit a wickerwork ball with their knees, legs, or feet over a net or across a circle. Introduced by the Americans, baseball and basketball are popular. The avidly followed professional basketball league pits teams identified by the companies that own them, rather than with cities as in the United States. Fond of watching boxing, many Filipinos also practice *arnis*, an indigenous martial art employing bamboo rods 1 m (3 ft) long. Cockfighting commands a fanatical following. Held during Sundays, public holidays, and fiestas in mini-stadiums, cockfights are the occasion for intense gambling.

## 17 ENTERTAINMENT AND RECREATION

In 2000, three in four households had a radio, and one in two had a television (up from two in three households and one in three respectively in 1990). Domestically produced programming is strong on talent shows, comedies, fantasy series, and tearjerker family dramas and romance stories.

Traditional theater consisted of the *comedia* or *moro-moro*, which are verse-plays depicting warfare between Christians and Muslims, usually ending in the conversion of the former. From the end of the 19th century, the *zarzuela*, a Spanish-derived operetta sung in local languages, has become popular. Film tickets are comparatively cheap, and cinema attendance rates are among the world's highest. The Philippines possesses one of the world's most prolific film industries, which turns out mainly comedies, action films (frequently punctuated with shoot-outs and kung fu), and melodramas (for which typical plots would be an ill-fated romance or the reunion of a dispersed family or the reconciliation of a divided one). For both television and cinema viewing, American imports attract a wide audience who generally can understand the dialogue. In recent years, foreign programs dubbed into Tagalog, such as Japanese anime and Korean and Latin American soap operas, have become more and more popular, not least because they express cultural values much closer to those of Filipinos than American shows do.

Children commonly play *sungka*, a game of skill in which players move cowrie shells around a course of two rows of seven holes carved in a wooden board. Every neighborhood will have chess enthusiasts, and the Philippines has produced many world-class players. Card games and *mah-jong*, a rummy-like Chinese game played with ivory tiles, regularly involve the gambling of large sums of money. There are 4 personal computers for every 100,000 people, but internet cafes are common not only in cities but also in provincial towns, where the clientele consists largely of young people playing computer games.

## 18 FOLK ART, CRAFTS, HOBBIES

A variety of crafts are practiced by individual Filipino ethnic groups, including woodcarving, weaving textiles, baskets, and mats, and tie dying.

## 19 SOCIAL PROBLEMS

Under the civil war conditions during the Marcos and Aquino regimes, human rights abuses were common, with government forces, insurgents, and anti-insurgent vigilantes victimizing noncombatant civilians as a matter of course. Under the Ramos and later regimes, the more prominent problem was violence

by criminal elements, and by supposedly noncriminal elements such as corrupt law-enforcers and elected officials. Filipinos have little faith in their justice system since the wealthy and powerful are able to buy the verdicts they want. Gambling (most notoriously the hugely popular *jueteng* numbers game), drug abuse, and the violence, criminality, and government corruption associated with them are major problems. Population growth has slowed but continues to overwhelm the country's economic, educational, ecological, and other systems. In 2008 a reproductive health bill mandating government funding for contraception and sex education was being hotly debated. Opponents, in addition to invoking Catholic moral principles, argue the economic benefits of a large, young population and the negative practical consequences of a shrinking, aging population as well as assert that calling for population control is a substitute for seeking genuine structural social reforms.

## 20 GENDER ISSUES

Filipino women have approached equality with men more closely than in most Asian countries. The country's Gender-Related Development Index is 0.768, slightly less than its HDI of 0.771. Although Filipino men often project machismo, women wield considerable power. Filipino wives manage family finances, dispensing pocket money to their husbands just as to their children. In terms of literacy and primary, secondary, and tertiary enrollment, rates for Filipino women (which are high) have surpassed those for men (most dramatically, a fourth more women are in tertiary education than men). Because of the gender preferences of jobs such as factory work and domestic service (as well as, unfortunately, prostitution and nightclub work), rural women are freer than men to find urban employment to support their families. Women are well represented in the professions, business, and the government, although women are still in the minority among the holders of top positions (women hold 22.1% of the seats in the national legislature and 25% of ministerial level positions). The country has had two woman presidents, Corazon Aquino and Gloria Arroyo, and Imelda Marcos, in addition to being first lady, served as governor of Metro-Manila, minister of human settlements, and special envoy to foreign leaders.

Reflecting the pervasive influence of Catholicism, both abortion and divorce are prohibited (Muslims, however, may divorce as permitted by their religion). In 2000–2005, the fertility rate stood at 3.5 births per woman. 92% of women from the richest 20% of society were attended by a skilled health professional while giving birth; the proportion was only 25% for the poorest 20% of society. About 170 women died in childbirth for every 100,000 live births during the period 1990–2004. For the richest 20% of society, infant mortality ran to 19 per 1,000 live births and under-five mortality to 21 per 1,000 live births; for the poorest 20% of society, the figures were respectively 42 and 66.

Despite enjoying empowerment in many contexts, in others many Filipino women continue to face exploitation and abuse. In export-processing zones where young women form the major component of the labor force in factories owned by multinational corporations, the government does not enforce laws protecting workers' rights. Filipino women working abroad as domestic servants often suffer inferior working and living conditions as well as physical brutality and sexual harassment

from employers. Coerced prostitution, human trafficking, and domestic violence are significant problems.

# GAOSHAN

**ALTERNATE NAMES:** Milin; Sanmei; Liuqiu; Amei; Taiyar; Paiwan; Bunong; Lukai; Beinan; Zou; Saixia; Yamei and Pingpu

**LOCATION:** China; Taiwan

**POPULATION:** 500,000

**LANGUAGE:** Taiyer, Saide, Zou, Sha, Ka, Paiwan, Ameisi, Bunong, Lukai, Saixiate, Beinan, Shao, Chinese

**RELIGION:** Traditional beliefs

**RELATED ARTICLES:** Vol. 3: China and Her National Minorities

## <sup>1</sup> INTRODUCTION

The ancestors of the Gaoshan belonged to the Min-Yue people (inhabiting part of present-day Fujian and Guangdong provinces) and, more remotely, to the Baiyue of ancient China. The history of the Gaoshan is closely related to that of Taiwan, because the Gaoshan are the aboriginals of that island. According to historical documents of the Three Kingdoms (220–265), their ancestors were divided into tribes, the members of which were called "Milin." Public affairs were administered by the tribe members themselves. Agriculture and livestock husbandry appeared in the 7th century, complementing hunting and fishing.

The historical records of the Ming Dynasty (1368–1644) describe their trade with the coastal inhabitants of mainland China. Between 1563 and 1603, the Japanese army invaded Taiwan several times, but it finally was defeated by the military forces of the imperial Ming. In 1624, the Netherlands' army intruded into southwest Taiwan, where it established fortresses and occupied the land. The Spanish army made incursions into the northern part of the island in 1626; however, the Dutch vanquished the Spaniards in 1642 and replaced them in northern Taiwan. An uprising led by Guo Huaiyi against Dutch domination in 1652 failed. In 1661, a former general of the imperial Ming, Zheng Chenggong, better known as Koxinga (1624–1662), setting out from Xiamen and Jinmen on the mainland, succeeded in landing his army on Taiwan. After nine months of fierce fighting, the Dutch invaders were compelled to lay down their arms.

In 1683, the Qing Dynasty (1644–1911) unified Taiwan. At that time, there were approximately 300 villages of Gaoshan people who had preserved important aspects of their primitive family type, clan organization, and religious beliefs. From the 17th century onward, there was a continuous flow of Chinese migrants to Taiwan, mainly Minnan from southern Fujian Province and Hakka (or Kejia) from Guangdong Province. In 1786, an armed conflict between the Gaoshan and the Chinese erupted and continued for more than one year but ended in a stalemate. Japan occupied Taiwan after the Sino-Japanese War of 1895. The Gaoshan and the Chinese united in opposing Japanese domination, uprisings flaring up every other year. An uprising in 1930 wiped out more than 4,000 Japanese soldiers. Following the end of the Second World War (1939–45), Taiwan returned to China in 1945.

## <sup>2</sup> LOCATION AND HOMELAND

The Gaoshan people number about 500,000, living mainly in mountainous areas, in the eastern coast plains of Taiwan,

and on Lanyu Island; they are also found in Beijing, Shanghai, Wuhan, and Fujian. They form a small portion of Taiwan's overall population of 24 million. The Taiwan Mountain chain extends from north to south, exerting a strong influence on the weather. Large areas of Taiwan, especially in the center and in the south, boast spring-like weather year-round. The abundant rainfall and rich soil make it possible to reap two rice crops a year and even three in the central and southern parts of the island. Taiwan is famous for its abundant production of sugarcane, tea, and fruits. There are vast forested areas; the production of camphor accounts for 70% of the world's output. The fishing industry, especially on the Pacific coast, is thriving. Mining is also an important economic activity. Since the 1970s Taiwan has become a leader in the productivity of its manufacturing sector, including both light and heavy industries. It is obvious that the Gaoshan have not benefited as much as could have been desired from this economic boom.

### **3 LANGUAGE**

Gaoshan languages are classified as belonging to the Austronesian family, Indonesia group. They have no writing system. The Gaoshan who have different names speak different languages. More than 20 languages have been identified, of which 13 are still in use. These languages can be divided into three groups: the Taiyar group, including Taiyer and Saide languages; the Zou group, including Zou, Sha, and Ka languages; and the Paiwan group, including Paiwan, Ameisi, Bunong, Lukai, Saixiate, Beinan, and Shao languages. In addition, there is a Yamei language on Lanyu Island. Most of these language groups are mutually unintelligible. The Pingpu branch of the Gaoshan now speaks Chinese.

Chinese historical documents recorded some of the ancient names of the early inhabitants of Taiwan: Sanmei during the Three Kingdoms, Liuqiu in the Sui Dynasty (581–618), etc. After the Tang Dynasty (618–907), Malays and other nationalities migrated to Taiwan successively and assimilated with the aboriginals. They were called Dongfan and Yi in the Ming Dynasty and Fanzhu and Tufan in the Qing Dynasty. During the Japanese occupation, they were called Fanzhu and Gaobushaozhu. The inhabitants of Taiwan other than Gaoshan usually call them Shandiren or Shanbao, which means “mountain people.” Because of their different languages and locations, they were divided into the Amei, Taiyar, Paiwan, Bunong, Lukai, Beinan, Zou, Saixia, Yamei, and Pingpu.

### **4 FOLKLORE**

The Gaoshan have a rich mythology. On Lanyu Island, it is said that the Yami are the offspring of two male gods, one of whom appeared from the splitting of a rock, the other from a bamboo rent in two by a seismic sea wave. When the gods' knees bumped against each other, there emerged a man and a woman, the remote ancestors of the Yami. According to the legend of the Saixia, a long time ago the almighty God created a number of men and women who led peaceful lives in the mountains. One day, a violent typhoon attacked them. Torrential rains poured down for days. Suddenly, an avalanche of water and mudflow rushed down the mountain. People, engulfed, disappeared in an instant. Only one man was lucky enough to escape. Viewing the bodies of the people, the almighty God was very sad. When he saw the only man alive, an aspiration to recreate mankind welled up in his heart. He put the man's skin

and flesh into the sea, and these became a multitude of people swimming to the land, setting up villages and settling down. God called them “Sasite,” the ancestors of the Saixia. He then put the intestine of that man into the sea. Another group of people appeared. They were the ancestors of the Chinese who dwell in Taiwan. They lived a long (*chang*) life because they came from the intestine (*chang*) of that man.

There is also in the legends of the Gaoshan a hero called Ali. He was a brave and good-natured hunter. One day, he saw two girls attacked by a tiger. He saved them from its jaws. Then came an old man, who seized the girls. When Ali drove him away, the sky turned dark all around, with lightning accompanied by peals of thunder. The girls told him that they were fairy maidens. Since they had stayed too long in the world, they would suffer a cruel punishment; his rescue had only made matters worse. Subsequently, the Jade Emperor ordered the Thunder God to kill all the people as well as the plants and animals in the area where Ali had saved the girls. The girls sought to draw the thunder against themselves at a barren mountain not far away, where the fire could not spread. Thinking that it was he who stirred up all the trouble, Ali ran to the barren mountain. He cried loudly to the Thunder God: “It is all my fault, so punish me if you want!” A deafening thunderclap smashed the body of Ali to pieces. Since there were no trees or bushes on the barren mountain, the fire died out quickly. After his death, the barren mountain was covered by a thick forest. Deeply moved by his heroic behavior, the two fairy maidens turned themselves into grass and flowers. In memory of this nice young man, the mountain has been called “Alishan” since then. It is now a very famous tourist resort.

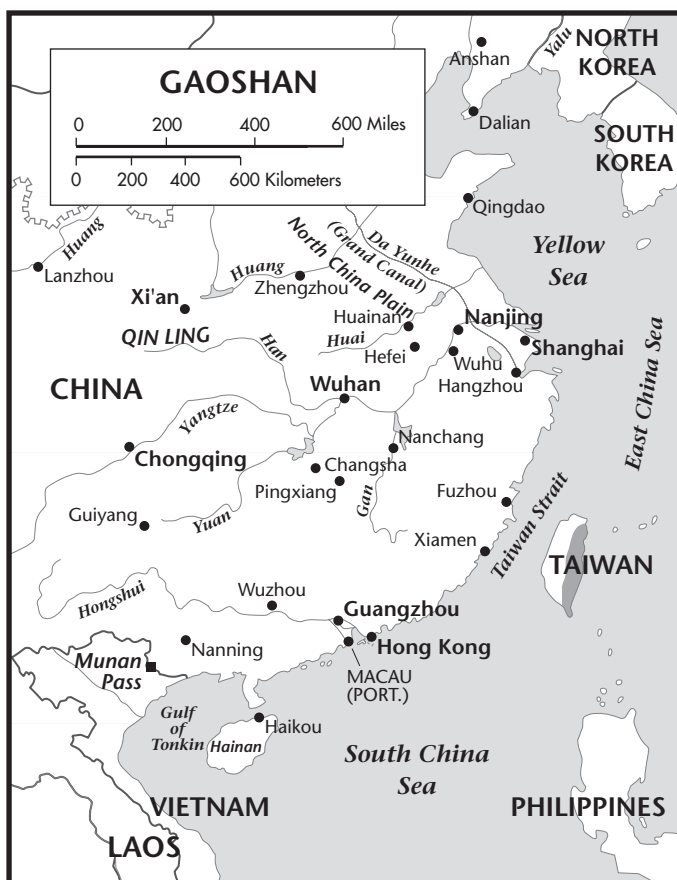

### **5 RELIGION**

The Gaoshan have preserved many primitive beliefs and rituals. They believe the spirits are in all things around them and revere a great many gods, such as the gods of the universe, of Heaven, of nature, as well as a variety of spirits and goblins. However, the gods they worship are not the same from one district to the next. Witchcraft is widespread. There are various talismanic scriptures. Methods of divination include birds, dreams, water, bamboo, rice, and the wooden dipper.

### **6 MAJOR HOLIDAYS**

Gaoshan holidays, based on the lunar calendar, are closely related to their work and to their religion. On lunar New Year's Eve (Western calendar, between January 20 and February 19), members of each household are reunited for a dinner party held around a large table, on which a chafing dish is the central dish. People are entertained with drama in the temple. It is humorously called “creditor avoiding drama,” because some people hide themselves among the spectators to dodge the creditors at the end of the year—the time for settling accounts. On the Spring Festival (Western calendar, between January 21 and February 20), they call on each other's family, saying a few auspicious words, and participate in recreational activities. The Good Year Festival coincides with traditional holidays in August, lasting for about 10 days. They offer sacrifice to ancestors. Many centuries ago, the sacrifice included a human head. Later on, it was replaced by a half-year pig. Actually, a series of sacrificial rituals are held, including the family ritual, the village ritual, the road ritual, the rally ritual, the moon watching ritual, the god touring ritual, the god greeting ritual, the sing-

ing and dancing ritual, etc. The ceremonies are presided over, in turn, by the headmen of the clans. On the first day of the festival, matches should not be used for lighting the stove; they are replaced by drilling wood to make a fire. Grand performances of dancing and singing are held for entertainment. The Bumper Harvest Festival is held in October, lasting for three or four days. More than 100 wine jars are placed in an open space. The ceremony is presided over by the headman of the tribe, who dips his fingers in the wine and sprinkles it to his left and right, in the air and on the earth. This is the libation for the gods and ancestors. Then all of the participants dance hand in hand while singing and drinking. The Fifth Year Festival is so named because it is held only once every five years on a selected date after the autumn harvest. For the occasion, a sacrificial rite for the ancestors is held. Participants celebrate the bumper harvest and enjoy the entertainment.

## **7 RITES OF PASSAGE**

A tradition handed down from the ancient Yue on the mainland requires that youngsters reaching adulthood should have one or two canine teeth extracted. This rite of passage, which also includes tattooing, is still practiced in some districts today. In other areas, lovers will each extract two incisors and exchange them as a token of their lasting affection.

The Gaoshan generally practice ground burial. In some areas, however, the body is buried inside the house beneath the bed of the deceased. They put the body inside a box made of wooden planks, which also contains half of the deceased's clothes, a dark blue cloth three meters (about one yard) in

length or a deer skin. In other districts, the box is made of stone slabs, cubic in shape, and the body is put in a sitting posture with the knees flexed. In certain districts, they practice naked burial. The clothes are completely taken off and the body is wrapped with deer skin. Four relatives carry it to the mountain. They open the deer skin, put the body inside a cavern, wrap it with a few pieces of the dead person's clothes, and finally cover it with earth. They consider that the dead body does not need clothes any more, which should be offered to the soul.

## **8 INTERPERSONAL RELATIONS**

The Gaoshan are very hospitable. Guests are received by the host and offered not only a cup of tea, but also some bread or biscuits.

Every youngster is free to express his or her affections. For instance, the Taiyar young man conveys his feeling through whistles. Some Amei girls go to a young man's family to present a gift and to express their love-sickness. In some districts, a girl's parents build up a room for their daughter when she reaches adulthood, where she may live by herself. The young men will come to play musical instruments to express their passions. One of them will be invited to her room to talk about love. Before long, they will go hand in hand to her parents, announcing that they have decided to be life-long companions. A wedding ceremony will be held.

## **9 LIVING CONDITIONS**

Most Gaoshan houses have wooden structures, thatched roofs, and small square windows. The beds encircle the room. Some houses are built of stone, roofed with flags and floored with slab stones. Coastal Gaoshan double the wall thickness of their house with planks inside and cobbles on the exterior. The floor is two-to-three meters (about two-to-three yards) below the ground. This is an ingenious means devised by the Gaoshan to withstand the typhoons, which yearly hit the east coast with formidable strength.

Communications and transport are very difficult for Gaoshan inhabiting the high mountains. They throw sliding ropes, suspension bridges made of rattan and bamboo, and arch bridges, across the canyons. They live in compact communities, each consisting of 60–70 families. A large village community may accommodate 600–700 households. There is public land, a part of which may be used freely by the community members. There are also collective activities, such as sacrificial rites, hunting, fishing, and farming. Therefore, one notices hardly any difference in the living standards of the villagers of a given community.

## **10 FAMILY LIFE**

One finds patrilineal, matrilineal, and bilateral families among the Gaoshan. The Bunong and the Zou belong to a patrilineal family structure, with a man as the patriarch and only men have the right of inheritance. The Amei and the Beinan are matrilineal, with a woman as the head of the family. The pedigree follows the matrilineal line, the eldest daughter inheriting the family property and married men live with their wife's family. Families of the Paiwan are bilateral: the family property is inherited by the eldest son or eldest daughter. Therefore, the size of the family varies, 6–7 members on average, 30–40 in some cases.

The Gaoshan are monogamous. The youngsters select their spouses, but marriage of close relatives is prohibited. Young men of the Amei and a part of the Paiwan live in a public meeting place for a period of time before their marriage—until they reach adulthood.

### **11 CLOTHING**

Gaoshan clothes are mostly made of linen and cloth. They vary in style in different areas. The men usually wear capes, vests, short garments, shorts, head wrappings, and puttees (leggings). Some of their vests are made of rind of rattan or willow. The women usually wear a short garment (with or without sleeves), trousers or skirts, an apron, and a cloth (or linen) wrapping the body and tied over the shoulder. The cloth or linen is woven and dyed by women. They like to do embroidery on their scarf, apron, sleeves, and garments. The Taiyar sew strings of shells in transverse rows on their clothes. Some of them sew strings of pearls or shells on a cloth and sell it as “pearl cloth” or “shell cloth.” Women like to wear ornaments made of shell or animal bone. Men carry a bag containing a smoking set and areca for chewing. Some of them like to decorate their hair with eagle feathers. Tattooing is practiced in some districts. As for the Gaoshan living in cities, their lifestyle is hardly different from that of the Chinese.

### **12 FOOD**

The staple foods of the Gaoshan include rice, millet, and taro. They take three meals a day, some only two. Rice is taken at breakfast and dinner. They like glutinous millet cakes. Some of them add peanuts and animal meat in glutinous millet, rolled up in leaves and steamed. The diet proteins come from pork, beef, and chicken, sometimes from wild game, which is taboo for pregnant women. The Gaoshan take roasted meat and rice in bamboo tubes and chafing dishes on festivals. They produce their own utensils, mostly potteries. Drinking and smoking are prevalent.

### **13 EDUCATION**

Urban Gaoshan have a high level of education, while peasants in the mountainous regions have a rather low one. The Pingpu receive the same formal education as the Chinese do.

### **14 CULTURAL HERITAGE**

The Gaoshan gather to sing and dance on festivals. Their folk songs include ancestors' songs, hunting songs, cultivating songs, and elegies. The “Pestling Song” of Gaoshan women is unique. They gather around a stone mortar while pestling the rice. The regular rhythm of their pestling sound creates a tempo of percussion, which accompanies their melodious songs.

Besides the “Drinking Dance” performed by a few dancers, the “Sacrificial Rite Dance” of both sexes and the “Hair Swinging Dance” of the girls are group dances. The “Hair Swinging Dance” is popular on Lanyu Island. Girls in rows sing a traditional song while dancing. They swing their long hair slowly in the beginning. Following the acceleration of tempo, they bend their body to touch the ground with their hair, then swiftly stretch their body to swing their hair behind their head. They dance in this way until they are exhausted.

Myths, legends, and folk songs form the main body of their literature, which was handed down orally.

### **15 WORK**

Generally speaking, the Gaoshan mainly engage in agriculture. Those dwelling in the mountainous areas hunt as a sideline. The Amei and the Beinan hold large-scale hunting expeditions once or twice a year. Guns, arrows and crossbows, nets, and pitfalls are used. The Yamei of Lanyu Island fish and raise chickens and pigs. The main economic activity of the Paiwan is ox-raising. The Zou and Bunong, living in mountainous areas, are good at tanning hides. The Amei and the Beinan build canoes out of tree trunks, while the Yamei of Lanyu Island make a unique fishing boat with both ends rising high above the water. The Taiyar are adept at fishnet and string bag weaving, as well as at wood carving of mortar and pestle.

### **16 SPORTS**

Spectator sports are usually held on festivals. The sports include wrestling, tug-of-war, arrow shooting, and a series of competitions related to their daily life, such as rice pestling, thatched cottage building, and weight lifting. In the rice pestling competition, a young man and girl representing the village pestle an equal amount of paddy. Those who attain the best quality in the shortest time win the match. Thatched cottages as shelter are necessary in hunting; therefore, cottage-building competitions are meaningful for young men. It begins with bamboo-strip paring and concludes when a thatched cottage is built. Time, quality, and external appearance are the main standards of evaluation. The weight lifting competition, held right after harvest, is quite exhausting. The ears of rice are tied up into two bundles (altogether 450–550 lbs) and put on the two ends of a bamboo pole. Several young men lift the pole to one shoulder of a contestant, who marches on at once. The distance the contestant can carry the load is the main criteria for determining the winner.

### **17 ENTERTAINMENT AND RECREATION**

Movies and television are already popular and easily accessible for the Gaoshan in Taiwan. But most Gaoshan still prefer their rich fount of traditional songs and dances, in which they excel and which plays an important social function, especially on festive occasions. There are quite a few “social” games that retain their appeal for the community at large. For instance, a girl carries a basket on her back and runs ahead in twists and turns while a young man, chasing her, tries to throw areca or oranges into her basket. He who has placed the largest number of areca or oranges inside the basket within the prescribed time is declared the winner. Flower crown weaving is a game for girls. They must weave the most beautiful flower crowns during a given time. The crowns are offered as gifts to the spectators.

### **18 FOLK ART, CRAFTS, AND HOBBIES**

The Gaoshan, especially the Paiwan, excel at painting and carving. The columns, thresholds, wall planks, and lintels of their house, daily-used artifacts and ornaments, implements and canoes, are frequently adorned with painting or carving of personages, animals, flowers, figurines, and geometric designs. They like to engrave the image of snakes with human heads. Articles made of bamboo and rattan, such as baskets, hats, vests, or suits of armor, are solid and artistically made.

*Chiu Ku and A Pei-lung of the Gaoshan tribe play together as they wear traditional Gaoshan costumes and crowns made of millet and leaves during an aborigines harvest festival, Taipei, Taiwan. Taiwan's aborigines represent nearly 2% of the population and are divided in ten main tribes. (AP Images/Jerome Favre)*

## **19 SOCIAL PROBLEMS**

The different Gaoshan groups have profited in a very unequal manner from the tremendous economic development of Taiwan: Those residing in the plains near the cities (Suao, Hualien, Pingtung, Kaohsiung, Taichung, etc.) have experienced unprecedented economic development, while those inhabiting high mountainous areas or barren coastal areas have become relatively poor (in terms of purchasing power). Although attempts have been made to improve the education of the Gaoshan, no effective school system has been set up, especially for the poorer and more disadvantaged Gaoshan groups.

## **20 GENDER ISSUES**

The Chinese constitution states that women have equal rights with men in all areas of life, and most legislation is gender neutral. However, there are continued reports of discrimination, sexual harassment, wage discrepancies, and other gender-related problems. While the nationwide gap in educational level between women and men is narrowing (with women making up 47.1% of college students in 2005, but only 32.6% of doctoral students), the Gaoshan have not participated significantly in higher education.

China has strict family planning laws. It is illegal for women to marry before 20 years of age (22 for men), and it is illegal for single women to give birth. The Family Planning Bureau

can require women to take periodic pregnancy tests and enforce laws that often leave women with no real options other than abortion or sterilization. While minority populations were previously exempt from family planning regulations, policy has changed in recent years to limit minority population growth. As of 2008 minority couples living in urban areas may have two children, while minority couples living in rural areas are permitted three or four children.

## GOANS

**PRONUNCIATION:** GO-uhns

**LOCATION:** India (Goa state)

**POPULATION:** 1,343,998 (Census of India, 2001)

**LANGUAGE:** Konkani; Marathi; some English and Portuguese

**RELIGION:** Hindu; Christian; small numbers of Muslims

**RELATED ARTICLES:** Vol. 4: People of India

### 1 INTRODUCTION

Goans are the inhabitants of the former Portuguese territory of Goa, which is located on the west coast of India some 400 km (250 mi) south of Bombay (Mumbai). Although Goa is now an Indian state, Goan culture and religion reflect nearly five hundred years of Portuguese influence.

Goa is mentioned in the *Mahābhārata* epic, and the *Purānas* refer to it as Govapuri, "the Paradise of India." During the third century BC, Goa formed part of the Mauryan Empire. After the decline of the Mauryans, the area was ruled by a series of Hindu dynasties that arose in west central India. The most notable of these were the Satvahanas, the Chalukyas, and the Kadambas. Goa was held briefly by the Muslims during the fourteenth century before it was incorporated into the Vijayanagara Kingdom. The Muslims reconquered Goa in 1469, but in turn they were ousted by the Portuguese under Afonso de Albuquerque in 1510. Goa was the first Portuguese territory in Asia and remained under Portuguese control for the next four and a half centuries. Its natural harbors and location on the shipping routes to the Far East gave it great strategic significance for the Portuguese. Goa eventually became the capital of all the Portuguese territories in Asia.

After Britain's departure from India in 1947, Portugal came under increasing pressure to cede Goa and its other territories on the subcontinent to India. The matter was resolved in 1961, when India's armed forces invaded and "liberated" Goa, Daman, and Diu. Goa was a Union Territory administered by the central government until 1987, when it became a state of the Indian Union.

### 2 LOCATION AND HOMELAND

Goa's population is currently estimated to be just under 1.5 million persons (the 2001 census reported a population of 1.34 million). Sizable emigrant populations of Goans are found in Bombay and also overseas in the Gulf States, Britain, and North America (particularly in Toronto, Canada).

The ethnic makeup of Goans reflects the many peoples that have contributed to the population of the Konkani (the coastal region between Bombay and Mangalore). These include Proto-Australoid tribal groups, Dravidian speakers, and, later, Indo-Aryan peoples. Of particular significance over the last 500 years has been the Portuguese presence in the region. The Portuguese encouraged intermarriage of settlers with local women, and today Fernandes, Pereira, Gomes, and de Souza are common family names in Goa.

Goa is one of India's smallest states with an area, of only 3,702 sq km (1,429 sq mi) and ranks as 4th smallest in terms of population, behind Sikkim, Mizoram, and Arunachal Pradesh. The original Portuguese colony was centered on the estuaries of the Mandavi and Juari Rivers, and today Goa's capital, Pan-

aji, is located on the south bank of the Mandavi. The modern state has 100 km (62 mi) of coast, lined with coconut palms and sandy beaches, along the Arabian Sea. Inland, the coastal plain gives way to rolling hills before rising to the peaks of the Western Ghats. These mountains reach an elevation of 1,034 m (3,393 ft) in the area of the Sahyadri Hills.

The climate is hot and humid. Annual rainfall varies from 240 cm (about 94 in) on the coast to over 400 cm (157 in) in the Ghats, which receive the full force of the summer monsoon. Temperatures average close to 26°C (79°F) through much of the year.

### **3 LANGUAGE**

Hindus and the majority of Goan Christians speak Konkani, the language of the Konkan region. Many also know Marathi, which is commonly used for correspondence. Although Konkani is the state's only official language, Marathi can also be used for any official purpose. Both Konkani (which has borrowed words from Portuguese) and Marathi belong to the Indo-Aryan language family and are written in the Devanagari script. When Christians write Konkani, however, they use the Roman alphabet. Many Goan Christians speak English, and members of the older generation of Goans may also speak Portuguese.

### **4 FOLKLORE**

Goan proverbs, songs, dance-music and folktales hold the key to the social history of pre-Portuguese Goa. Perhaps the most honored of all artisans in Goa are the goldsmiths. The belief in Goa was that the metal was a representation of the Sun and that the yellow metal also had therapeutic properties. In pre-Portuguese Goa, Brahmans, goldsmiths, and merchants were exempted from being flogged even if they had committed heinous crimes. It is small wonder then that the goldsmiths of Goa became the butt of jokes in Goan folklore. Despite the honor and the ridicule accorded to the village goldsmith, it was simple jasmine flowers that came to be seen as a Goan girl's best friend. Mardol village in North Goa is supposed to be famed for its supply of fresh jasmines. In a folk song from this region a dancer says to her Lord, "I shall buy flowers in profusion, I shall deck my hair with them. I shall sit in front of my Lord. Yes, I shall sit."

In another story titled *The Girl in the Straw Hat*, a poor girl is on her way from her wealthy husband's house to her grandmother's when she is accosted by three water nymphs who give her a grain of rice each. "Throw this grain of rice on your grandmother's hut and it will turn into a palace," says the forest water nymph. "Throw this grain into your grandmother's room and it will be filled with riches," says the second water nymph. "Throw this grain of rice in the kitchen and it will be filled with a hundred servants," says the third. This is a symbolic illustration demonstrating to the young girls of pre-Portuguese Goa that a good harvest is the only key to a wealthy and prosperous home.

Although Goa has its own folk traditions, it is better known throughout the Roman Catholic world for a historical personage who has attained almost legendary status, St. Francis Xavier. His tomb is in the Basilica of Bom Jesus in Old Goa. A pupil of Ignatius Loyola, who founded the Jesuit Order, Francis Xavier arrived in Goa in 1542 to begin his missionary work in Asia. After several years in India, he traveled to the Moluccas (now in Indonesia) and to Japan to spread the Christian faith.

He fell ill and died on the return journey and was buried in the Moluccas. Later, when his successor opened the grave to pay his respects, the body was still fresh and lifelike. Francis Xavier's remains were sent to Goa, where he was elevated to sainthood, and the body was placed in the Basilica of Bom Jesus. Parts of the body have been removed and sent to Rome and other places for use as relics. It is said that a Portuguese woman who wanted a relic of the saint bit off one toe in 1554. The body of St. Francis is taken out in procession every ten years, the last time being in 2004. An annual festival is also held in Old Goa every December 3, the anniversary of St. Francis's death in 1552.

### **5 RELIGION**

Goans are mostly Hindu (about 66% of the population) and Christian (27%) and there are a small number of Muslims (under 7%). Whatever their religion, Goans tend to be orthodox in their beliefs.

Goan Christians are Roman Catholics, like their Portuguese conquerors. The Inquisition vigorously stamped out any of the older "heathen" customs that converts tried to bring into their new religion. Like all Catholics, Goans believe in the divinity of Jesus Christ, worship Mary as the mother of God, and revere the Christian saints. They worship in churches and attend confession and Mass. The many churches and cathedrals of Goa, some active today but many now abandoned, bear witness to the piety of the Portuguese and their subjects in the past.

The Hindus are largely followers of Shiva, although they show the characteristic diversity of beliefs and practices identified with Hindu peoples.

### **6 MAJOR HOLIDAYS**

Goan Hindus observe all the major Hindu festivals, but perhaps the most important for them is Ganesha Chaturthi, the birthday of the god Ganesha. Known in Goa as Chovoth, this festival can last up to nine days, and it is a time for worshipping Ganapati (Ganesha) and his parents Mahadev (Shiva) and Gauri (Parvati). Shigmo is the Goan counterpart of the Holi festival.

The Christian community celebrates Christmas, Good Friday and Easter, and the feast days of various saints. Carnival (the equivalent of Mardi Gras) is an important Christian festival held just before Lent. The first day, Sabado Gordo or Fat Saturday, is marked by a parade of floats in Panaji, headed by the character King Momo. People dress in costumes, wear masks, and indulge in three days of revelry and excitement. The Procession of the Saints, when images of twenty-six saints are carried through the streets, is held in Old Goa on the first Monday of Easter week. The Feast of St. Francis Xavier, the patron saint of Goa, is celebrated every year on December 3.

Muslims, as elsewhere in India, keep the festivals of Muharram, 'Id ul-Fitr, and 'Id ul-'Adha'.

### **7 RITES OF PASSAGE**

Certain social customs appear to be observed by all Goans, whatever their religious community. It is not unusual, for example, for a Christian woman to be sent to her mother's home for the delivery of her first child. This practice is widespread among Hindus in India. Similarly, Christians announce the birth of a child with firecrackers—two for a girl, three for a boy—as do Hindus. In their rites of passage, however, Goans fol-

low the rituals prescribed by their respective religions. These include baptism, the first Holy Communion, and confirmation for Christians; various *samskaras* (e.g. the naming ceremony, the head-shaving ceremony) for Hindus; and birth ceremonies and circumcision for Muslims.

At the time of death, Christians are given the last rites, a funeral service is held in the local church, and the deceased is buried in the cemetery. Masses are held periodically for the soul of the departed. Hindus cremate their dead, except for the Gavli (milkman) caste, who claim to be Lingayats and bury their dead in a sitting position. Their funeral customs conform to those of other Konkani Hindus, with a period of mourning, a *sraddha* ceremony, and the offering of food and gifts to Brahman priests. Muslims bury their dead with rites similar to those of other Muslims in South Asia.

## 8 INTERPERSONAL RELATIONS

Hindus use the “*Namaste*” to greet each other while Christians, especially in the better-educated upper castes, follow the custom of shaking hands when meeting. In general, social relations are determined by caste status. Even among Christians, who are more flexible in such matters, the upper castes tend to keep the lower castes at a distance.

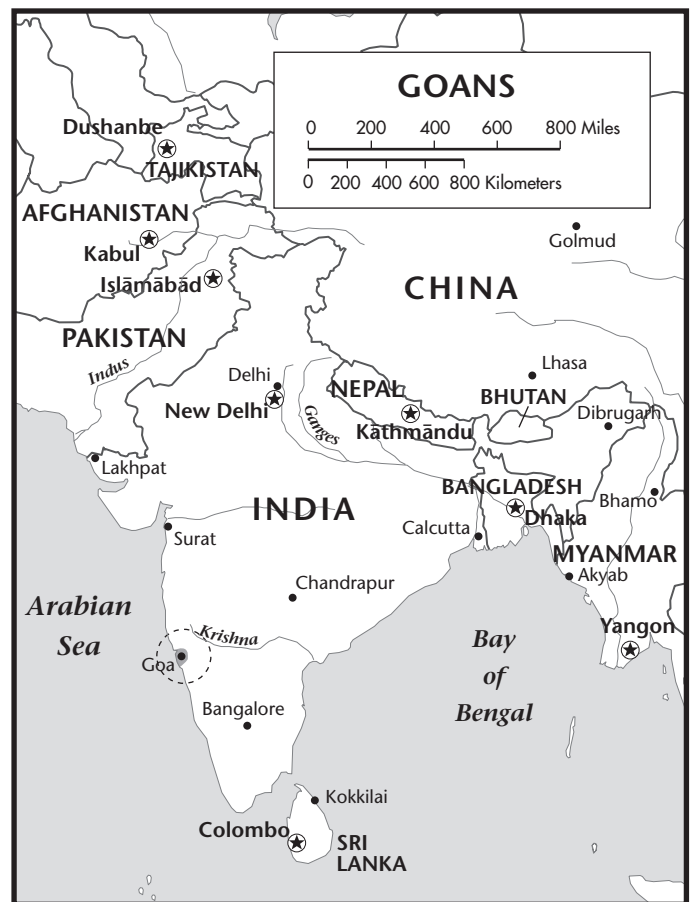

## 9 LIVING CONDITIONS

Living conditions in Goa vary according to locale, caste, and economic status. The old parts of towns such as Panaji preserve much of their Portuguese character, with narrow winding streets, white-washed houses with overhanging balconies, and red-tiled roofs. Wealthy Christian landlords of upper-caste standing have spacious one-story mansions, with antique furniture, mirrors, and European-style chandeliers, and sometimes even a private chapel. The walls of their houses are often tiled, a typically Portuguese custom. By contrast, houses of lower-caste villagers, whether Hindu or Christian, are likely to be much more modest, built of mud with thatched roofs, and more sparsely furnished.

## 10 FAMILY LIFE

Goan Christian society has a caste system very much like its Hindu counterpart. The high-caste Christians are the *Bamonn* (converts originally from the *Brahmans*), the *Chaddhe* (*Ksatriyas*), and the *Gaude* (*baniyas*). The Christian equivalent of the *sudras* or artisan castes are the *Sudir*, while Christians of aboriginal heritage are called *Kunbis* or *Gaudas*. Christians, just like Hindus, are required to marry within their own caste. A *Bamonn* will marry another *Bamonn*, a *Chaddho* (singular of *Chaddhe*) will marry another *Chaddho*, and so on. Marriages are not arranged; most young men and women select their own partners. Once a suitable match has been found, however, details of the marriage proposal, acceptance of the proposal, negotiation of the dowry, and so forth are left to the families. Marriages are performed in church according to the Catholic rites. The ceremony is usually followed by a Western-style reception and dance. Newlywed couples may live with the groom’s father although the joint family is increasingly giving way to the nuclear family structure.

Goan Hindus and Muslims follow the traditions of their own communities.

## 11 CLOTHING

Christians dress in Western clothes, with men donning pants and shirts for everyday wear and dark suits and ties for formal occasions. Women wear blouses and skirts or dresses, but for special occasions they use the elegant Indian *sari* or long formal gowns. Young girls keep up with the latest in Western fashion. Only Christian women of the laboring classes wear the *sari* as their usual clothing. Hindus wear clothes similar to those of their neighbors in Maharashtra. For men, this is the *dhoti*, or loincloth and shirt. Most men do not wear hats, but some members of the older generation still wear “Gandhi caps,” the type of folding cap that Mahatma Gandhi made popular earlier in this century. Many men have adopted the Western-style pants and shirt. Hindu women wear the typical dress of the Konkani—the short-sleeved bodice or blouse (*choli*) and a *sari* tied in the Maharashtrian fashion (pleats tucked in at the back of the waist, and the end of the cloth drawn under the right arm, across the chest, and over the shoulder). Both men and women seem to enjoy wearing jewelry and ornaments.

## 12 FOOD

The staple food of Goans, both Catholics and Hindus, is fish. A typical lunch consists of a prawn or fish curry eaten with rice. The meal is often accompanied by fried fish or shrimp and green vegetables. However, the similarities end there. The Hindu diet appears to have been little influenced by the European tastes, while the food of Catholics shows a strong Portuguese influence. Catholics eat both beef and pork, which are taboo

Dancers from Goa perform during the annual Goa carnival celebrations in Panaji, India. (AP Images/Str)

in most Hindu households. Pork *vindalho* (a type of spicy pork curry) is a typical Christian Goan dish and *sarapatel* is considered a Goan classic. It is thought to be derived from two Portuguese dishes, *sarrabulhada* (a pork stew) and *cabidel* (pork giblets). Another Goan specialty is *chouriço*, or pork sausage. *Sanna* are rice cakes that are soaked in palm toddy (liquor made from the fermented sap of palm trees) before cooking. Prawn *balchao* is a type of spicy prawn condiment that may have originated in Southeast Asia. Goans brew a liquor called *feni* from cashew nuts or coconuts. Christians drink alcohol at their social gatherings.

### **13 EDUCATION**

The literacy rate among Goans seven years and older stands at 82% (as of 2001). The figures for males and females are 88% and 76%, respectively. This rate is second only to Kerala and Mizoram among all the Indian states. There are many private schools in Goa, many of them affiliated with the Catholic Church. Most of them hold their classes in the English language. The benefits of education are apparent to even the lower-caste villagers, who enroll their children in free, government-run primary schools. English and Konkani are the languages of instruction, and Marathi is sometimes being taught as a third language. Most students in Goa, however, complete their high school using English as the medium of instruction. Primary schools, on the other hand are largely run in Konkani. As is the case in most of India, enrollment for vernacular media has seen a fall in numbers in favor of English medium education.

Goa University is the sole university in the state located in Taleigao and all Goan colleges are affiliated with it. The state of Goa contains four engineering colleges and one medical college. In 2004 BITS Pilani university (the Birla Institute of Technology and Science) is located in Pilani in Rajasthan and consistently ranks among the top 5 engineering schools in the country) started its first Indian satellite, BITS Pilani Goa Campus near Dabolim. Unlike other Goan institutes, BITS Goa admits students through a nation-wide aptitude test that it shares with its parent institute. Because of this BITS Pilani Goa Campus is the only college in the state to have a regionally mixed student body.

There are also two national oceanographic science-related centers in Goa, the National Centre for Antarctic and Ocean Research (NCAOR) and the National Institute of Oceanography (NIO), located in Vasco and Punjim, respectively.

### **14 CULTURAL HERITAGE**

Portuguese heritage is seen in religion, architecture, place names, language, food, and many other aspects of Goan life and culture. There is often a blending of the European and the Indian in Goa. Christians, for example, have borrowed the caste structure of Hindu society. On the other hand, Carnival has become a Goan celebration rather than a specifically Christian religious festival. There is a body of historical literature in Konkani, the local Indian language, but it is mainly of Christian inspiration and is written in the Roman alphabet—a practice introduced by the Portuguese. Even though Konkani is not one of the languages recognized in the Indian consti-

tution, it has the status of a modern literary language in India. Although Goans never developed any classical forms of dance or music, there are many local traditions of folk music and dance-drama. *Mando*—not quite a waltz and not quite a Portuguese *fado* (popular romantic song) but with elements of both—is a dance popular among Goan Christians. The *Khel* is a form of folk-drama that entertains villagers through criticism and caricature of socially prominent people such as the village landlord. Hindus have their own repertoire of Konkani folk songs and dances.

## 15 WORK

Agriculture continues to be the main activity of Goans. Christians are involved in cultivation, but they are also found in a wide range of other occupations: office workers, government employees, accountants, hotel workers, and the tourist industry. Some Goans are engaged as cooks and crewmen on ships. Many Goans work abroad, and the money they send back to their families helps to raise the standard of living of many people.

In addition to the tourist industry, Goa is developing as a center of the high-tech industry. It has been selected by the Union government to be the location of a high-tech park, no doubt based on making use of the educational facilities found in the state. The Info Tech Corporation of Goa Ltd. is setting up the software park on 75 acres of land at Dona Paula, about 30 kilometers from the Goa Airport and about 8 kilometers from the capital, Panaji. The Hi-Tech Habitat is proposed to be a modern, state-of-the-art and high quality IT software park and services unit with necessary infrastructure including roads, services, satellite connectivity, captive power supply, “plug and play” facilities, Internet cafeteria, health and recreational center, and landscaping. It will also have a conference center.

## 16 SPORTS

Young boys play with toys such as rattles, pipes, and whistles, while girls have their dolls. As they grow up, children play tag, hide-and-seek, and similar games. *Kaji* is a popular game in which boys line up cashew nuts (*kaju*) and try and hit them from a distance with a heavier cashew nut. Team games include *kabaddi* (wrestling) and *khokho* (team tag). Modern sports such as cricket, field hockey, and basketball are played, but soccer is by far the most popular sport.

## 17 ENTERTAINMENT AND RECREATION

Modern entertainment in Goa includes movies, radio, and television. Goan Christians have followed Western trends in music, and some have their own rock bands. Many of the hotels have modern discos for tourists. In the villages, however, recreation still centers around festivals and folk traditions.

## 18 FOLK ARTS, CRAFTS, AND HOBBIES

The main handicrafts of Goa are pottery making, wood carving, and making lacquer ware and brass articles. Goan artisans are also skilled in ivory carving and silver work. A government-run store has been set up in Panaji to promote the sale of local handicrafts.

## 19 SOCIAL PROBLEMS

With its blend of Portuguese and Indian culture, Goa is unique among the states of India. While many Goans would have preferred to remain independent in the post-colonial era, it was always likely that India would eventually annex Goa. Liberation in 1961 brought many Hindus to Goa from nearby areas. Goa's relatively small size and population help keep to a minimum some of the social and economic problems that are found in other parts of India. Many Goans have left to pursue opportunities in other places, but they continue to send money back to their families. Goa is an important tourist center, and this not only brings in the tourist dollar, but also provides jobs for the local people. During the 1960s Goa's magnificent beaches were a magnet for the hippie generation from the West. While this era is long gone, drugs (although illegal) are still readily available and something of a problem.

Tourism is still a big part of Goa's economy, but often brings increased levels of crime, prostitution, and drug use into local communities, negatively influencing local cultural norms. For instance, in March 2008 the Minister of Tourism in Goa accused local Indian police of trying to cover up the murder of a British girl. Scarlett Keeling was found dead on a beach in Goa in February 2008. Police initially said she had died after drinking too much and a local man, Samson D'Souza, was charged with rape but not with murder. The statement by the government official was made after the dead girl's mother pressed the issue, the cover-up clearly being an attempt not to impact tourism negatively. Goa's indigenous culture is deeply conservative. But many Westerners think India's poverty and tolerance of outsiders frees them to behave in a way that would be tasteless in London, let alone elsewhere in the developing world. The Times of India said 126 foreigners have died in Goa over the last two years—many from drug overdoses—while Western women have been attacked, sexually assaulted, and even murdered. Goa is also a Mecca for pedophiles with an emerging, though unwelcome, reputation as a center for child sex tourism.

Goa's BJP government is said to be the most corrupt in a long time—corrupt but effective. “Better to have a corrupt government that gets things done than a corrupt one which does nothing,” was a philosophical Goan's observation. Talk has it that key figures in the opposition Congress party, too, have been bought off. A construction boom is underway in Goa and where there is construction and developers, payoffs are inevitable, at least in India. Apparently, the amount that developers have to pay to the concerned ministry has also been fine-tuned. India's National Security Council also claims that the Russian mafia, which is heavily involved in drugs and prostitution, is laundering money by investing in real estate in Goa.

## 20 GENDER ISSUES

The Christian Anglo-Indians of Goa are regarded as “loose” by many Indians, largely because of their Westernized lifestyle. However, ever since the neighboring state of Maharashtra closed its “dance-bars” in early 2005 because they were viewed as a breeding ground for crime and prostitution, there has been a migration of women (mostly Hindu) from Bombay (Mumbai) to Goa where they work in the vice trade.

In May 2005 a national conference on women's issues was held in Goa attended by some 400 registered participants. This reported that rather than being “victims” of the technological

development that has focused on fisheries, many Goan Catholic fisherwomen, in contrast to their Hindu counterparts, have made an economically successful transition from “barefoot, headload peddlers” in the villages to market entrepreneurs. However, the Kharvi caste of fishers (the women do the fishing) have not made the transition so successfully. Though their average working hours are very high, the returns are insignificant. They lament that they “have lost their hold over their traditional occupation.” Surprisingly, this closely knit and vociferous community of fisherwomen has neither institutionalized itself nor claimed minority rights, although the Kharvi are classed as a “backward” Hindu caste.

Christian Goanese women are generally freer than their non-Christian counter-parts, Hindus and Muslims usually being subject to the restraints of their religions. Given the relatively high rates of literacy and excellent educational system, the main issues for women in Goa arise out of poverty, limited access to health care and traditional cultural values.

# GONDS

**PRONUNCIATION:** GAHNDS

**ALTERNATE NAMES:** Koi; Koitur

**LOCATION:** India

**POPULATION:** About 14 million

**LANGUAGE:** Gondi

**RELIGION:** Cult of the Persa Pen (clan deities); ancestor spirit worship

**RELATED ARTICLES:** Vol. 4: People of India

## **1 INTRODUCTION**

The Gonds are numerically the most important tribe in South Asia. Strictly speaking, the term Gond is a generic one that refers to numerous tribal peoples who are found over wide areas of the interior of the Deccan peninsula of India. While they are by no means all alike, there is a limited measure of cultural uniformity among these groups. Most significantly, they all describe themselves as Gonds or, in the local Gondi dialects, as Koi or Koitur. The meaning of the latter names is uncertain. It was the Mughals who first used the name “Gond” (hill people) to describe the peoples of the area. Gonds have lent their name to Gondwana (“the Land of the Gonds”), the part of India in which they live. They are found over almost all of India except the northwestern states (Rajasthan, Haryana, Punjab and Jammu and Kashmir) and the extreme south, but have their greatest concentrations in the rugged hill country of central India.

Little is known about the origins of the Gonds. They belong to the strata of aboriginal peoples of India who pre-date the Aryan and Dravidian speakers of the country. They are usually classified as Proto-Australoids by race. As their language is Dravidian, the Gonds may have passed through lands to the south where the Dravidian languages are found. DNA evidence suggests they might have branched off from early Proto-Australoids who apparently traveled from Africa to Australia along the coastal margins of India. But Gond migrations before they reached their present homeland remain shrouded in the mists of time. Scholars believe that the Gonds settled in Gondwana between the 9th and 13th centuries AD. The core region of Gondwana can be considered to be the eastern part of the Vidarbha region of Maharashtra, the parts of Madhya Pradesh immediately to the north of it, and parts of the west of Chhattisgarh. From the 14th century onwards, Gond history comes into focus with Muslim writers describing the rise of Gond states in the region. Between the 16th and mid-18th centuries, when Gonds were at the height of their power, Gond dynasties ruled in four kingdoms (Garha-Mandla, Deogarh, Chanda, and Kherla) in central India.

Following the 1740s, the rising tide of Maratha power swept over the Gonds. The Gond *rajās* were overthrown and their territory annexed, except for some of the more remote hill areas that held out against the invaders. Local Gond *zamindaris* or estates survived in the region until relatively recent times.

The recent creation of two new states in central India, Chhattisgarh and Jharkhand, has increased the relative proportions of Gonds, who are classified as Scheduled Tribes in both states, in the population. Thus, in Chhattisgarh, which was formed in 2000 from sixteen Chhattisgarhi-speaking districts in southeastern Madhya Pradesh, Gonds number over 4 million peo-

ple, of the current estimated state total population of c. 24 million people. They are concentrated in the south, especially in Bastar district, where they account for more than 20% of the district's total population. Jharkhand, created in 2000 from the southern areas of Bihar largely to fulfill the aspirations of its tribal populations (c. 89% of the total state's population), also contains a considerable number of Gonds among its estimated 40 million people.

## **2 LOCATION AND HOMELAND**

The Gonds form the largest tribal group in the Indian subcontinent and perhaps even in the entire world. The Census of India 2001 did not enumerate caste, so the population figure should be regarded as approximate, since many Gond communities have become Hinduized and are no longer counted as Gonds. Nonetheless, even using conservative estimates of growth rates, the Gond population in India must exceed 14 million today.

Gonds are found over a wide area of central India. Gondwana, their traditional homeland, lies in the eastern part of the state of Madhya Pradesh and western Chhattisgarh, though large Gond populations are also found in Maharashtra and Orissa States. Gond territory lies south and east of the upper reaches of the Narmada and Son rivers and extends to the Godavari River and the Madhya Pradesh–Orissa border. Within this area, there are numerous tribal communities who are designated as Gonds. Madhya Pradesh classifies over 50 Gond groups as belonging to the Scheduled Tribes (communities in India identified as needing special social and economic assistance). A similar number of Gond groups in Maharashtra are designated as Scheduled Tribes. By contrast, there are Gond groups such as the Raj Gonds and the Katholias who claim high social standing and have substantial land holdings. The Dhur Gond, Bisonhorn Maria (so-called because of their distinctive horned headdress worn for dancing), the Muria Gond, and the Paharia Gonds are some of the Gond groups found in the region.

As might be expected with Gond tribes dispersed over so wide an area, the environmental setting in which they live varies greatly. Yet their characterization as “hill people” identifies one of their underlying traits, namely their traditional association with the hills and uplands of the Peninsula's interior. The densest concentrations of Gonds are found in the eastern ranges of the Satpura Hills, the Maikala Range, and the Son-Deogarh uplands. South of this line of hills, the Gond population thins out in the Wainganga Valley and the Chhattisgarh plain. As one continues south, however, the highly dissected plateau of Bastar forms another stronghold of the Gond tribes. A distinct cluster of Gond tribes, somewhat isolated from the main Gond distributions, occurs in the Garhjat Hills of northern Orissa. The upland areas generally lie between 600 and 900 m (roughly 2,000–3,000 ft), with isolated peaks occasionally exceeding 1,200 m (approximately 4,000 ft). The region is drained by the headwaters of many of India's major rivers (e.g., the Narmada, Tapti, Son, Mahanadi, and Godavari). Forest cover is dense in places, and communications are generally difficult. The climate is typical of the northern interior Deccan. February sees the start of the hot season, with temperatures rising to over 40°C (104°F) in early June. The summer brings the monsoon rains, with precipitation amounts varying from 120 cm (47 in) to over 160 cm (63 in) in the more southeaster-

ly locations. Late September marks the return of the cool, dry weather of winter.

## **3 LANGUAGE**

Gondi is the mother tongue of the Gonds. It belongs to the Dravidian family of languages and is closely related to Tamil and Kannada. Clearly, the Gonds are not physically related to the Dravidian-speaking peoples of India, thus at some time they must have abandoned an earlier language in favor of Gondi. There is, however, no evidence of what this language might have been. It is the Gondi language, as much as anything else, that lends a sense of cultural uniformity to the diverse tribal groups that make up the Gonds. Even so, many Gonds are bilingual or trilingual, speaking Hindi, Marathi, or Telegu as well as their mother tongue. Some Gond groups have totally abandoned Gondi and speak the language or dialect common in their locality.

## **4 FOLKLORE**

Gond myths and legends are preserved by hereditary bards and professional storytellers called Pardhans. All Gond traditions are oral and, consequently, numerous variations of the same tales are recounted. Yet it is in mythology and the deeds of Gond heroes that the social norms of Gond society are rooted.

According to the Gond creation myth, when the Gond gods were born they were abandoned by their mother. The goddess Parvati rescued them, but her consort Sri Shambhu Mahadeo (Shiva) imprisoned them in a primeval cave. They were rescued from the cave by the Gond culture hero Pahandi Kapar Lingal, with the assistance of the goddess Jangu Bai. When released from captivity, they came out of the cave in four groups, thus laying the foundations of the basic fourfold division of Gond society. Lingal is also held to be responsible for the creation of the Gond kinship system, as well as the establishment of the great gods (*Persa Pen*) who were to be worshiped by the Gonds.

## **5 RELIGION**

The most distinctive feature of Gond religion is the cult of the *Persa Pen*, or the clan deities. Like many other tribes in the region, Gonds worship a high god known as Baradeo, or Bhagavan, or Sri Shambu Mahadeo (known sometimes, rather confusingly, as *Persa Pen*). Baradeo is the Supreme Being, creator of the universe and giver of life and death, but he is rather remote. He oversees the activities of the lesser gods and he is to be respected and worshiped, but he does not receive the fervent devotion reserved for the clan deities. Each Gond clan has its *Persa Pen*, who extends its protection to all clan members in return for their ritual offerings and worship. The *Persa Pen* is essentially good but can be dangerous and violent. Many Gonds believe that the play of the Pardhan bard on his fiddle is necessary to control the deity's fierce powers.

In addition to Baradeo and the clan deities, the Gond world is populated by numerous other deities and spirits that are to be worshiped at the appropriate time. Each village has its Village-Guardian and Village-Mother who must be worshiped whenever the village community embarks on ritual activities, such as a seasonal celebration or a sacrifice. There are family gods and household gods to be propitiated. Gods of the field and gods of cattle must receive their offerings to ensure a productive harvest. Disease must be warded off by appeasing dei-

ties such as Shitala Mata, Goddess of Smallpox. Every hill, every river, every lake, every tree is inhabited by a spirit who may be benevolent but may also be unpredictable and harmful. The ancestor spirits, who reside with the clan deities, are also to be worshipped.

Gond relations with the gods and the spirits lie mainly in the hands of priests and individuals with special supernatural powers. The village priest (*devari*), whose office is usually a hereditary one, performs the sacrifices and rituals for village festivals. Family ceremonies and sacrifices are carried out by the head of the household. The clan priest (*katora*) has the responsibility of tending the shrine and ritual objects of the clan's Persa Pen. He is the guardian of the sacred spear point, which is never kept in the shrine but rather is hidden in a location known only to himself and a few close kinsmen. He also organizes and officiates at the annual clan festivals.

Virtually all aspects of Gond ritual life, from the greatest festivals to the building of a new cattle shed, are accompanied by sacrifice. The offering depends on the particular deity involved. Certain deities, especially female ones, demand blood-sacrifice. Chickens, goats, and sometimes male buffaloes (and reputedly in the past, humans) are the sacrificial victims. Periodically (every 9 or 12 years), the Gonds sacrifice a pig to the god Narayan Deo in an important ceremony known as the Laru Kaj ("Pig's Wedding"). Not all Gond ritual requires animal sacrifice; offerings sometimes include fruits, coconuts, flowers, colored powder, and strings.

While the village and clan priests perform sacrifices, diviners and magicians deal with the supernatural in another way. Gonds believe that most diseases and misfortunes in life are caused by evil spirits and the displeasure of the gods. They turn to soothsayers and diviners to find out the cause of their problems and the appropriate remedies to be taken. If these practitioners cannot help, the services of magicians and shamans must be sought. Magicians believe that through magic formulas they can control the actions of the deity or spirit who is the cause of a particular affliction. Shamans are individuals who fall into a trance and give voice to the demands of the offended god or spirit. Like many tribes in the area, Gonds believe in the evil eye, black magic, and witchcraft. Witches, usually women, are held to bring sickness and misfortune to the community. They are widely feared and, when discovered, are driven from the village or even killed.

## 6 MAJOR HOLIDAYS

The details of the Gond festival calendar varies from region to region but, as might be expected of agricultural peoples, many of the important celebrations are connected with the agricultural seasons. Some Hindu festivals, such as Holi, Dasahara, and Divali, are celebrated, though often the Gonds have no real understanding of the significance of these feasts. The Gonds, however, have their own explanation for their observance and celebrate the feasts in the Gond manner, complete with sacrifices. Pola, a cattle festival, and Nagpanchami, the snake festival, are celebrated by the Gonds along with the other peoples of the area.

Some festivals, such as the feasts of village or clan deities, are specifically Gond celebrations. One particular custom is the Dandari stick dancing undertaken by young people in the two or three weeks following Dasahara. Bands of young people, dressed in their newest and best attire, travel from village to village entertaining the inhabitants with dancing, music, and singing. In doing so, they are perpetuating a custom initiated by the legendary heroes of the Gond epics. The dancing is seen as a religious duty as much as an occasion for fun and entertainment.

## 7 RITES OF PASSAGE

Pregnant women are subject to certain taboos as a protection against magic spells and evil influences. Various rituals, including sacrifice to the household gods, are performed after birth. The baby is named after three to four weeks, with the name-giver usually being the mother's brother for a boy, or the father's sister for a girl. Although sons are preferred, daughters are equally welcomed. There is little to mark the passage from childhood to maturity. Children grow up as part of a family, clan, phratry (one of the four main divisions of Gond society), and village community and gradually learn the ways of their people. At a certain age, they begin to assume some responsibility for household and agricultural chores. Both boys and girls help guard their family's crops from birds and monkeys. Males undergo a ritual shaving of the beard, mustache, and eyebrows as a sign of adulthood, although many boys undergo the rite long before they reach puberty. There is no comparable rite for girls, but a girl is considered full-grown at her first menstruation. Only the Muria Gonds of Bastar have youth dormitories (*ghotul*) that are used for the education of youth in married and civic life.

Gonds cremate or bury their dead, depending on status and the circumstance of death. Children, unmarried persons, and individuals dying an inauspicious death (e.g., in an epidemic) are buried without much ceremony. Elaborate and costly ceremonies, including sacrifice, are performed at funerals by those who can afford it. The Gonds believe that a human being has a life-force and a spirit. On death, the life-force is reincarnated into another earthly existence, but the spirit remains in the other world. All Gond death rituals are undertaken for the welfare of the spirit, performed to ensure its smooth passage through the spirit world and its acceptance by the ancestral spirits of the clan. In times of economic stress, the important *karun* rite may be postponed for up to three years but it has to be completed in order for an heir's obligation to the deceased to be fulfilled. Memorial pillars are erected to honor the dead. Gonds believe the ancestral spirits watch over the moral behavior of the living and punish offenders of tribal law. In this sense, they are the guardians of the Gond community.

### 8 INTERPERSONAL RELATIONS

Visiting customs vary throughout the region, though Gonds are normally a hospitable people. The visitor is welcomed and presented with small gifts, perhaps some dried tobacco leaves or fruits from the forest. Many villages and homesteads have guest huts where the visitor may stay with some degree of privacy.

### 9 LIVING CONDITIONS

Gonds live in villages scattered throughout central India. Each village has a headman (known by local names such as *mukhia*, *mahji*, or *patel*) and a village council (*panchayat*) chosen by the villagers. The council, made up of the headman, the priest, the village watchman, and four or five elders, is responsible for the smooth running of the village and upholding Gond customs and traditions. More important affairs are discussed and decided upon by all the men of the community. In addition to its Gond inhabitants, a village has its service castes such as the Ahir (cowherds), Agaria (blacksmiths), Dhulia (drummers), and Pardhan (bards and singers).

A typical Gond village is made up of several hamlets, each consisting of the homesteads of a group of closely related kinfolk. The homestead (which contains dwellings, stables, and sheds) houses a family, often a joint family, consisting of the parents, married sons, and their families. Houses are usually rectangular, built of mud and thatch. They consist of a living room, a kitchen, a veranda, and a special room to which women retire while they are menstruating. Among many South Asian societies, women in this condition are regarded as ritually polluted and are segregated from the rest of the family. In one corner of the house is the shrine to the clan gods.

Standards of living among the Gonds reflect socioeconomic status. Many Gonds are relatively poor farmers or agricultural laborers, and this is seen in their lack of material possessions. Gond houses contain little furniture, perhaps some cots and a few wooden stools, with mats used for sitting and sleeping. The kitchen contains an assortment of cooking utensils, brass and earthenware pots, and baskets for storage. Today, wealthier Gonds build their houses out of stone and furnish them more lavishly.

### 10 FAMILY LIFE

Gond society is divided into four exogamous, patrilineal descent groups known in anthropological terminology as phratries. Each phratry (*saga* in Gondi) traces its descent to one of the four groups of gods who emerged from the primeval cave after their release by the hero Lingal. The phratry is divided into a number of exogamous clans (*pari*). A clan consists of a group of people who believe that they are descended in the male line from a common ancestor. Thus, no one can marry a partner belonging to the same phratry or clan. Violation of the rule of exogamy is considered to be incest. Not only would offenders expect to be punished by the gods, but they are also excluded from the tribal community. Many of the Gond clans bear the names of animals or plants, which suggests a totemic origin. Some Gond clans still observe totemic taboos and avoid eating the flesh of certain animals.

Kinship and marriage customs among the Gonds reflect broader regional patterns. The norm is the cross-cousin marriage (e.g., marriage with one's mother's brother's daughter) so typical of South Indian society. Groups that have been influenced by northern peoples such as the Marathas, however, follow northern customs in determining marriage partners. Similarly, northern Gonds allow what are called "levirate" marriages, that is, a widow remarries a brother of the deceased husband. This is not allowed in southern India, and the southern Gonds conform to this prohibition.

Gonds traditionally married on reaching physical maturity, with the selection of mates based on mutual choice, subject to the approval of the tribal council. Nowadays the Gonds increasingly follow the Hindu custom of arranged marriages when the children are still young. A bride-price is paid by the father of the groom. A Gond wedding is accompanied by many significant ceremonies, although, in general, rites conform to the marriage customs of the locality. The central rite of the Gond wedding consists of the groom walking with his bride seven times around a wedding post erected in the center of the wedding booth. Gond society is patrilocal and the newlyweds reside with the groom's family until such time as they move into a house of their own. Although the extended family is traditional among the Gonds, the nuclear family is becoming more common. Inheritance passes down the male line, with all sons receiving equal shares.

In addition to the negotiated marriage, other forms of marriage among the Gonds include elopement of an unmarried girl with a boy, or the capture of a girl and her forced marriage to her captor. Such marriages must later be legalized by the relatives and village councils of the partners. Similarly, divorce is permissible among the Gonds and is relatively easily obtained, but it must be obtained from the panchayat.

### 11 CLOTHING

Gonds differ little from the other cultivating castes of their locality in the area of dress. Men typically wore a small loincloth, but many have now adopted the *dhoti*. This is a long piece of white cotton cloth that is wrapped around the body, with its end drawn between the legs and tucked into the waistband at the back. In the past, the torso remained bare, but today cotton shirts are worn with the dhoti. White or colored turbans complete the outfit. In winter, waistcoats or woolen pullovers are worn for warmth, and sometimes a coarse woolen blanket is used for extra protection. Women and girls wear the

A ruined palace that was built by the Gond kings sits on the Narmada River, Ramnagar, India. (© Brian A. Vikander/Corbis)

cotton *sari*. This is wrapped around the waist, with one end drawn between the legs and tucked in at the back and the other thrown over the right shoulder covering the breasts and stomach, which are left bare. More and more Gonds are wearing the bodice (*choli*) along with the sari, in the manner of Hindu women.

Both men and women wear heavy silver ornaments bought from professional silversmiths. Women also wear colored glass bangles, as well as several types of beads, including their marriage necklaces made of small black beads. They often tattoo their bodies.

## 12 FOOD

The staples of the Gond diet are two millets known locally as *kodo* and *kutki*. These are prepared either boiled to a broth or cooked until all the water has evaporated. Sometimes it is ground and baked into a flat cake. Millet is eaten three times a day, with the broth being preferred for the first two meals and the dry cereal taken with some vegetables in the evening. Vegetables are either grown in the garden or collected from the forest along with roots and tubers. Honey is also gathered from the forest.

Rice is preferred by many Gonds, but for most it is too expensive to purchase and their land is too poor to cultivate it. Rice remains a dish reserved for feasts or festival days. Most Gonds, except for those who have adopted Hindu dietary taboos, like meat. Animals sacrificed at ceremonies are eagerly consumed, and the diet is supplemented by animals hunted in

the forest. Gonds must abstain from the flesh of certain animals, e.g., the tortoise, that are their clan totems.

Gonds are passionate smokers and grow tobacco for their own consumption. They also consume large amounts of liquor distilled from the *mahua* tree (*Bassia latifolia*) as a part of both religious and social celebrations.

## 13 EDUCATION

Education and literacy levels among the Gonds vary but are generally low. Literacy varies from 62.5% in Maharashtra to 50.3% in Madhya Pradesh. Among females in Madhya Pradesh, it drops to only 30.4%. Few children attend school regularly, and girls rarely continue past primary school. Only 1.5% of the population, mainly males, continues on to graduate level studies.

## 14 CULTURAL HERITAGE

Music, song, and dance play an important role in Gond society. Gonds are ardent dancers and all festive occasions are celebrated by song and dance. In some instances, such as with the Dandari dancers, dances celebrate the dramatic retelling of events from Gond mythology. However, dances are not necessarily associated with any particular event or festival and may be performed just for enjoyment. Many of the songs that accompany dances tend to be of a suggestive nature. The Dhulia is the professional musician caste serving the Gonds. Pardhan bards preserve the legends, myths, and history of the Gonds, passing these traditions on from generation to generation. Among the numerous myths of the Gonds, perhaps the most

important is the great epic that celebrates the origins and exploits of the culture hero Pahandi Kapar Lingal.

### **15 WORK**

The Gonds' ties with the forest suggest that, in the past, they were nomadic hunters or food gatherers who took up shifting cultivation. Today they are mainly plough-cultivators whose agriculture differs little from other farming castes in their region. Although some Gond communities have risen to the status of landowners, increasing pressure on land is reflected in large numbers of landless laborers among the Gonds.

### **16 SPORTS**

There are no sporting activities associated with traditional Gond society.

### **17 ENTERTAINMENT AND RECREATION**

Leisure time is passed with the family or visiting friends and neighbors. Gonds like to assemble on feast days or full-moon nights to sing and dance. Cock-fighting is a favorite pastime of some Gond groups.

### **18 FOLK ART, CRAFTS, AND HOBBIES**

Gonds have a rich tradition of tribal arts and crafts that includes pottery, basket-making, body-tattooing, and floor-painting. They are artistically gifted, painting designs on their house walls in red and black on a white background. The drawings are often done to celebrate festivals and include animals and birds, human figures, the hunt, and the dance. The Gonds make musical instruments, and they carve memorial pillars in wood and stone for their dead. They often carve doors and panels to decorate their houses.

### **19 SOCIAL PROBLEMS**

The Gonds face problems typical of tribal peoples throughout South Asia. As a less sophisticated group, they have faced exploitation and discrimination from their culturally more advanced neighbors. They occupy less productive lands in some of the more remote areas of the country. They are experiencing increasing pressure on their land, a rise in the number of landless laborers, and high levels of poverty. Lack of education and low levels of literacy further reduce economic opportunity.

Beyond this, the very nature of the Gond community is in itself a problem. Despite their numbers, the Gonds are an assemblage of diverse tribal groups. Although they all see themselves as Gonds, there is little to unite them into a cohesive political force. Their wide geographical distribution and degree of tribal fragmentation works against the creation of a Gond political identity. Even if this were not so, the leadership to achieve this is sorely lacking. This places the Gond community at a major disadvantage in India today, where access to resources for socioeconomic advancement is often subject to political patronage.

For instance, some non-tribals, through political jockeying, have managed to gain legal tribal status, that is, to be listed as a Scheduled Tribe. The Gonds of Andhra Pradesh effectively lost their only advantage in trying to protect their lands when the Banjaras, a group that had been settling in Gond territory, managed to get classified in the state as a Scheduled Tribe in 1977. Their newly acquired tribal status made the Banjaras

eligible to acquire Gond land "legally" and to compete with Gonds for reserved political seats, places in education institutions, and other benefits reserved for Scheduled Tribes. Because the Banjaras are not scheduled in neighboring Maharashtra, there has been an influx of Banjara emigrants from that state into Andhra Pradesh in search of better opportunities.

### **20 GENDER ISSUES**

The status of women is markedly better among Gonds than in Hindu caste society. Women play an important role in the domestic economy of Gond societies, they are usually allowed to move freely, and have the right to choose their marriage partners or at least have a large say in this (it is always, at the very least, a family affair). Divorce is possible and much easier to obtain than in Hindu societies, and tribal widows—unlike their Hindu sisters—have no problem in remarrying. But, again, these are generalizations and there are indigenous societies in which child and forced marriages are common. In many tribal societies, paying a bride price is part of the marriage arrangement. This stands in contrast to the dowry practice in Hindu society, which means that the birth of a baby girl represents a heavy economic burden for poorer Hindu families, with enormous repercussions on the status of women, and on the sex ratio in the population. Studies have shown that baby girls are less well-looked after than boys in Hindu society, leading to a higher infant mortality rate among Hindu children. The possibility of pre-natal sex identification has led to a rapid drop in the births of baby girls. But the sex ratio of Gonds is higher than the national average, suggesting that discrimination against female children is totally lacking, or at least less than in other groups.

In hardly any indigenous society do women participate in formal political decision-making and this, too, is true of the Gonds, though women are often consulted, by their husbands or in community meetings. But they are not members of village councils and cannot become the village chief. Women also hardly ever play an important role in religion, although they may be spirit mediums or healers. Generally, Gond women are valued mostly for their productive and reproductive functions.

With the exception of a few matrilineal societies (such as the Garo and Khasi of Meghalaya in the north-east of India), women in the country do not inherit land. And even among the matrilineal societies, the land is in reality managed and controlled by men. But it is very important for unmarried women and widows. Ownership normally rests with their fathers, brothers or husbands. Men therefore tend to have greater control over agricultural production and products. However, Gond women do enjoy spheres in which they retain some control. In India, in particular, the gathering of forest products—which has been very much a female activity—is crucial for women to maintain at least some degree of autonomy since they have control over these products, i.e. they sell them themselves. However, poverty and lack of access to educational and health facilities remain major stumbling blocks in the way of Gond women bettering themselves.

Some Gond women have banded together to help alleviate poverty and promote female empowerment. For instance, in Orissa's Kalahandi and Nuapada districts, life is an endless nightmare of deprivation and hunger for Gonds. The men leave their homes in search of employment, often ending up as

bonded labor in distant places. Left to fend for themselves, the women, the elderly and children have to eke out an existence or starve. Now, thousands of tribal women have, quite literally, spun themselves out of the web of despair in which they were trapped, thanks largely to a local livelihood initiative that employs Gond women to make handmade cotton fabric. Aptly called “Nuakala,” which means “new craft,” the name also incorporates the first two syllables of the districts Nuapada and Kalahandi where the program is based.

# GREEK CYPRIOTS

**LOCATION:** Cyprus

**POPULATION:** 786,800 (2007)

**LANGUAGE:** Greek and English

**RELIGION:** Church of Cyprus (Greek Orthodox)

**RELATED ARTICLES:** Vol. 5: Greeks

## <sup>1</sup> INTRODUCTION

The name “Cyprus” comes from the Greek word for “copper” (*kypros*). It was the island’s lucrative deposits in copper, discovered around 3000 BC on the slopes of the Troodos Mountains, which first appealed to many foreign powers along the eastern Mediterranean coast. The conflicts among these rival groups and their rise and fall in power form the turbulent history of Cyprus, which is the third largest island in the Mediterranean and neighbors Syria to the w (100 km/60 mi), Turkey to the s (68 km/40 mi), and the Egyptian coast to the n (343 km/203 mi).

The first inhabitants of Cyprus, who resided in the Khirokitia region and are traceable to the peoples of Asia Minor (modern-day Turkey), date from the 8th to the 6th millennium BC, as evidenced from samples of obsidian rock which identify these Cypriots of the Neolithic Age as rather impressive Indo-European peoples who possessed a written language. The Greek heritage of the island was introduced through the settlement of Achaean Greeks from 2000 to 1600 BC, as well as Arcadian commercial traders who arrived from the northeastern Peloponnesus region of the Greek mainland after 1400 BC. These settlements and a distinctly Hellenic culture were reinforced by the subsequent arrival of Trojan War heroes in 1184 BC.

In contrast to the distinct Hellenic ethnicity of Cyprus’s early peoples, the conquest of the island by the Egyptian leader Thutmose III around 1450 BC preceded a varied line of eastern and western invaders who seized the island until their defeat by another foreign power. Thus, Egypt lost power to the Assyrians in 800 BC, who then fell to the Egyptians in 550, who in turn were usurped by the Persians in 525. Until Turkey finally dominated the island from AD 1571 to 1878, Cyprus had been claimed and controlled by peoples and leaders as diverse as Alexander the Great (333 BC), the Egyptian Ptolemies (323 BC), Rome (58 BC), and England’s Richard I (AD 1191), who passed Cyprus to the titular king of Jerusalem and Frankish ruler Guy of Lusignan.

Turkey finally claimed Cyprus from its Venetian–Lusignian possessors of AD 1489–1571 and held firm to the island until its own collapse in the Russo–Turkish Wars of 1877–1888. For an annual “lease” of \$500,000, through which Turkey retained formal possession of Cyprus, Britain accepted administration of the island at Turkey’s request in order to curtail the spread of Russian power. However, the annual fee was never received by Turkey, but instead deposited in the Bank of England to compensate for Turkey’s defaulted Crimean War loans; this disturbed Cypriots as well as the Turks. After World War I (1914–1918), the 1923 Treaty of Lausanne was imposed on the Turks as a peace settlement, through which Britain gained formal possession of the island.

Despite Britain's dominance and perceived control over Cyprus, riots erupted in 1931 from the Greek community's petition for and denial of *enosis*, the political union of Cyprus with its Greek mainland. Britain responded by suppressing the island's political parties and activities, as well as dismantling the Cypriot legislative council. Following World War II Britain offered the Cypriots the potential for self-rule; however, *enosis* was a priority to the islanders and both the AKEL party (*Anorthotikon Komman Ergazomenou Laou*—Progressive Party of Working People) and the EOKA party (*Ethniki Organosis Kypriakou Agonos*—National Organization of Cypriot Struggle) were formed as separate efforts to secure *enosis*, the spokesman of which was Makarios III. In response to heightened riots, Archbishop Makarios was elected president on 13 December 1959, while a Turkish Cypriot, Fazil Kuchuk, was elected vice president.

The Greek Cypriot cries for *enosis* were only countered by the Turkish Cypriot movement toward partition (*taksim*). What had optimistically become the independent Republic of Cyprus in 1960, represented by both Greek and Turkish leaders, collapsed only three years later through the dysfunction of bicomunal provisions which were intended to provide equal treatment and representation to both Greeks and Turks. By the close of 1963, the Turks had fully abandoned their political positions and, as the ability to share government power further declined and intercommunal violence increased. United Nations (UN) peacekeepers were sent to the island in 1964.

The peace process fully faltered in 1974 after a Greek coup displaced Makarios and installed Nicos Sampson, formerly an EOKA terrorist, as a more aggressive move toward *enosis*. This

only prompted the response of *taksim* and a Turkish invasion that left 180,000 Cypriot refugees and divided the island at the "Green Line," which spans the area from Morphou through Nicosia to Famagusta. In 1983 the Turkish Cypriots declared independence as the Turkish Republic of Northern Cyprus. This independent status, however, has only been officially recognized by the government of Turkey. UN peacekeeping forces have continued to protect a buffer zone between the north and south. On 1 May 2004 the Republic of Cyprus became a member of the European Union (EU), and adopted the euro on 1 January 2008. In March 2007 the Greek Cypriot authorities demolished a wall that for decades had stood at the boundary between the Greek Cypriot controlled side and the UN buffer zone. The wall had cut across Ledra Street in the heart of Nicosia and was seen as a strong symbol of the island's division. In 2008 Ledra Street was reopened in the presence of Greek and Turkish Cypriot officials.

## 2 LOCATION AND HOMELAND

Following Sicily and Sardinia, Cyprus is the third largest island of the east Mediterranean basin. Geologically part of Asia Minor, it measures 9,251 sq km (3,572 sq mi) and stretches 206 km (128 mi) w to e, and 97 km (60 mi) from Cape Gata in the s to Cape Kormakiti in the n. Comparable to the state divisions which comprise the United States, Cyprus is divided into six districts: Famagusta, Kyrenia, Larnaca, Limassol, Paphos, and Nicosia. Nicosia has remained the capital of the island despite the 1974 Turkish invasion and partition of the island.

The topography of Cyprus, flat and largely deprived of forestation, is sculpted by the Troodos Mountains, an igneous rock formation in the southern and western regions of the island which ranges from Pomos Point in the northwest almost to Larnaca Bay. Mt. Olympus, the highest point on the island, which is a haven for skiers in the winter and hikers in the summer, rises to 6,505 feet and is called by islanders Mt. Chionistra (*chioni* meaning "snow"), for its accumulation of snow during the winter. The jagged, steep limestone slopes of the Kyrenia Range, perhaps the most dramatic, spectacular aspect of the topography, extend from Cape Kormakiti to Cape Andreas. These mountainous regions dramatically surround the flatland of Cyprus, the Mesaoria, which receives less rain than regions of higher altitudes. Cypriots endure hot, dry summers from June through September (mid-summer temperatures swelter to 112° F), and they likewise enjoy mild, though rainy winters from October through March (averaging 22° F).

In 2007 the population of the Greek Cypriot controlled area of southern Cyprus was estimated at 786,800 inhabitants. After the 1974 Turkish invasion, thousands of Greek Cypriots were displaced from their homes in northern Cyprus. At the end of 2006 the estimated number of displaced Greek Cypriots and their descendants was 238,000. The same year there were approximately 369 Greek Cypriots living in the Turkish controlled north.

## 3 LANGUAGE

While Greek, Turkish, and English are all official languages of Cyprus, Greek is the primary language spoken by Greek Cypriots. The Greek spoken by Cypriots, however, resembles ancient rather than modern Greek dialects. Greeks from Cyprus therefore seem to speak a different language than those from the mainland, who, for example, say *ti kanete* ("how are

you?”) in contrast to the Cypriot pronunciation of *tambu kanete*; likewise, the commonplace conjunction *che* (“and”) is the Cypriot pronunciation for the standard Greek *ke*. Greek Cypriots strongly maintain English as a second language, largely because the island was a British colony until 1960. In contrast, Greek Cypriots typically have no fluency in Turkish as a result of the political and physical boundaries imposed between the two peoples after the 1974 Turkish invasion and partition of the island.

Despite differences in pronunciation, the Greek Cypriots share the 24-letter alphabet of the Greek mainland, which is pronounced and appears as follows:

Aα	alfa	a as in alfalfa
Bb	veeta	v as in victory
Γγ	gamma	g as in language
Dd	thelta	th as in the
Eε	epsilon	e as in eatable
Zζ	zeeta	z as in zebra
Hη	eeta	e as in eat
Θθ	theeta	th as in thread
Iι	yota	y as in yoke
Kκ	kapa	k as in kitchen
Λλ	lambda	l as in lamb
Mμ	me	m as in meat
Nν	knee	n as in neat
Ξξ	xee	x as in extra
Oο	oh	o as in only
Ππ	pea	p as in pear
Pρ	row	r as in rodeo
Σσ	sigma	s as in seat
Tτ	taf	t as in tax
Υυ	epsilon	e as in bee
Φφ	fee	f as in find
Χχ	hee	h as in hair'
Ψψ	psi	psi sound as in <i>pepsi</i>
Ωω	omega	o as in oat

#### 4 FOLKLORE

Populated by some 30,000 Cypriots on the west coast of the island, Paphos pays tribute to Greek mythology as a landmark for the birth of Aphrodite, the erotic goddess of love and desire who, according to myth, emerged from the foam of the Cypriot waves, as captured in Botticelli's famous *The Birth of Venus* painting. Paphos shares its name with the mythical daughter born of Venus (Aphrodite's Roman name) and Pygmalion, and features of its western landscape symbolically reinforce the myth of Aphrodite's birth: the jagged rocks scattered to the south of Paphos are regarded as Aphrodite's Rocks (*Petra tou Romiou*); the sanctuary of Aphrodite and onetime shrine is located at Kouklia Village within Paphos; the Baths of Aphrodite, a celebrated site of fertility where the goddess of love bathed before her marriage, are found at Polis; and the Fontana Amorosa, the Fountain of Love spring which enamors its drinkers, is likewise in Paphos.

Digenis Akritas also colors the folklore of Cyprus as a figure of an anonymous epic poem who often battled the deathly grip of Charon, the ferryman of death, before succumbing to his mortality. He is also credited with the creation of *Pentadaktylos* (five-fingered), another name for the mountainous Kyrenia Range in northeastern Cyprus, which resembles five fingers

and which resulted from the drowning Digenis' gripping the range from the Mediterranean Sea, leaving the imprints of his one hand in the mountain range.

Folklore which enters the modern-day beliefs and practices of the Greek Cypriots include the existence of *kalikanzari* (little monsters), who, until Christmas, devour the trunks which were believed to hold the earth in place. During Christmas, their respite from this habit allows the earth to heal, as they rise from the depths beneath the earth to participate in and sabotage Christmas festivities. Epiphany, celebrated by Cypriots on January 6, carries this pagan overtone into the common practice of throwing *lokmades* (little doughnuts) atop the roofs of their homes to appease the little monsters and to return them to the depths, where, unfortunately, they continue to devour the trunks of the earth until the Christmas season returns.

#### 5 RELIGION

Nearly all Greek Cypriots belong to the Orthodox Church of Cyprus, which is an independent church of the Eastern Orthodox tradition. Greek Cypriots are proud of their Christian heritage. Universally, Christians recognize Cyprus as the sacred site at which the first pagan political authority, the proconsul Sergius Paulus, was converted to Christianity by the apostles Paul and Barnabas, who arrived in Salamis and journeyed to Paphos in AD 45. Apart from the impact of these apostles, whose missionary work in Cyprus is documented in the New Testament (Acts 13), Christianity subsisted until the rule of Constantine the Great in AD 313, which resulted in an increased number of dioceses. The 5th century was not only a period of grand basilica construction, as can be seen today in Kourion and Cape Drepanum, but also the time at which the Church of Cyprus earned its privileged status as an autocephalous church free from other patriarchates, a status it powerfully retains today. Cyprus attained this unusual, privileged status through the Archbishop Anthemius of Constantia (Salamis), whose unique vision led him to the tomb of St. Barnabas, where he discovered the Gospel of St. Mark. Thereafter, as endorsed by the emperor Zeno (the recipient of the Gospel), the archbishop functioned as an imperial power, carrying a scepter rather than a pastoral staff, wearing purple robes, and signing his name in purple ink.

Still, during the Byzantine Empire, Cyprus was subject to the Eastern Empire at Constantinople, under which Orthodoxy and its distinctions evolved until the period of Lusignan and Venetian rule (1192–1489). The Church of Cyprus, then acknowledged as different and separate from the precepts of the Catholic faith, was compelled to uphold the Roman pope as a religious authority. When Cyprus was then usurped and controlled by the Ottoman Empire (1571–1878), the Cypriots' religion was overlooked by these Muslim conquerors, whose rule through “millets” or religious communities enabled the Church of Cyprus to gain sovereignty; positions within the church were therefore upheld for their spiritual as well as secular authority. This duality of church and state is embodied in the figure of Mihail Mouskos, later dubbed Archbishop Makarios III, a young monk who was elected president of the republic in 1959 and held the position until his death in 1977. As president, Mouskos heightened the quality and training of priests at the Cypriot seminary in Nicosia, and served as a political activist for the cause of *enosis* (union with the Greek

mainland). His status as both a religious and political authority was succeeded by the conservative Archbishop Chrysostomos, who led the Church of Cyprus until illness led to his removal from office. He was succeeded in 2006 by Archbishop Chrysostomos II.

The constitution allows the Orthodox Church of Cyprus to have full authority over the administration of its own internal affairs and property. The Church is one of the largest landowners in the country and holds significant investment properties in banking, construction, and hotels.

Unlike most Greek Orthodox churches in the United States, the Cypriot Orthodox service doesn't feature a choir, and the balcony area found in most churches is reserved for women (termed *ginekonitis*, which literally translates to mean "women's section"). Segregation likewise exists on the ground level of the church, as men usually sit on one side and women on the other, an observed separation which will even split married couples apart for the duration of the service, though this practice is more common among rural, village churches than in urban ones.

## 6 MAJOR HOLIDAYS

Most Cypriot holidays revolve around the Orthodox religion, with the celebration of Easter serving as a central event. Religious holidays in the Orthodox churches are celebrated following the Julian calendar, rather than the Gregorian calendar used by Western Christians, therefore the dates of such holidays as Easter and Pentecost are often different than those celebrated in the Western world.

Like the American Mardi Gras, Carnival, most notably that of Limassol, is upheld as a time to feast extravagantly before the fast of Lent. It is celebrated with colorful parades and an abundance of specialties, including *bourekia* (a minty-cheese pastry) as well as the sweetmeats *daktyla* and *kandaifi*. The first week of Carnival is known as *Kreatini*, or Meat Week. The second and final week of Carnival is known as *Tyrini* (cheese week) and extends to Green Monday.

Green Monday, 50 days before the Orthodox Easter, is the first official day of Lent. It is a legal holiday celebrated as a day for picnics and kite flying, when Cypriots head for the hillside or the mountains with a basket of "greens," or a vegetarian meal, to be enjoyed by family and relatives. Freed from work responsibilities, Cypriots optimistically greet this dawning of the Lenten season with the phrase *Tha pame na kopsume ti miti tis Sarakostis* ("We're going to cut the nose of the first forty days") and do so with a Lenten feast which includes fresh vegetables, baked potatoes, pickles, fresh bread, and a sweet called *halva*. Only the most devout Cypriots continue this fast from meat, milk, eggs, and olive oil for the entire 40 days of Lent (Sundays are not counted as fasting days during Lent since the Lord's day is always meant to be a celebration). Most Cypriots will not observe these eating restrictions again until Holy Week.

Holy Week features many lengthy, elaborate services and ceremonies that bring most Cypriots to church each evening. The betrayal of Jesus is observed on Holy Thursday through a lengthy three-hour service which requires Cypriots to stand and listen to the solemn reading of the gospels; with each reading by the priest, a candle is lit. School children also participate in the service through their adorning of the *epitaphion*—a large, ornately carved, free-standing structure which sym-

bolizes Christ's tomb—with flowers they have gathered from the village. The crucifixion is then observed on Good Friday, when the epitaphion is carried by laymen of the church in a funeral-style procession. On this day the women of the village prepare rich pastries called *flaouna*, which are made with a special cheese and which prompt ceaseless discussion among housewives in defense of their special recipe. The resurrection, the climax of Holy Week, is celebrated on Holy Saturday in a midnight candle-light service which closes with the repeated singing of *Christos Anesti* (Christ is Risen), a phrase which is repeated by devout Cypriots in passing 50 days thereafter. After the midnight service, families and relatives return to their homes to feast on an Easter "breakfast," which consists of a lemon-based chicken and rice soup (*avogolemono*), along with boiled eggs dyed red to commemorate the gloriously shed blood of Christ. As among the Greek-Americans in the United States, the eggs are used in a tableside game in which one person holds an egg steady between forefinger and thumb while his "competitor" hits the stationary egg with his own egg; the champion possesses the egg which remains free of cracks.

During the Easter day, the midday meal—which usually consists of a whole lamb, a goat, or other skewered meat—is grilled outside and shared by relatives who visit for the day. The Easter Sunday meal is enjoyed among family and acquaintances, and children often receive a chocolate egg and, more recently, gifts. The festivities and visits of Easter Sunday extend into the week, as many Cypriots are relieved of their work responsibilities on the Monday and Tuesday which follow Easter.

The Day of Ascension, 40 days after Easter, is observed as a holiday of fasting, prayer, and meditation. Pentecost, the Day of the Holy Spirit, is celebrated 50 days after Easter. In Cyprus a holiday known as *Kataklysmos* (which means "flood" is celebrated on the same day as Pentecost. Originally celebrated as a water festival to commemorate Aphrodite, its water theme has evolved into a Christian celebration of the flood story of Noah from the Old Testament and involves music, dancing, and poetry readings in a fair-like setting. The Feast of the Assumption of Mary on August 15 is a public holiday, as are Christmas and Epiphany (celebrated as the Baptism of the Lord).

Secular, more politically inspired holidays include Greek Independence Day (March 25), Independence Day (October 1), and Greek National Day (October 28).

## 7 RITES OF PASSAGE

Engagement, marriage and childbirth are events which herald a child's arrival to adulthood. As premarital sex is strongly condemned, girls formally become women and mothers through the vow of marriage and it is only when they have children that they learn how to care for them. Unlike in the United States, grandmothers attend to children and act as babysitters, rather than teenagers.

For men, military service is a rite of passage and is demanded of all males 18 years of age for a period of 26 months. Prior to their service and immediately following their graduation, boys will devote many hours to friends—either making commitments to girlfriends or spending hours with other boys at discos and listening to music which dramatizes their sentiments at this crucial maturation point in their lives. A few weeks following high school graduation, boys begin basic training and learn their location site, the most desired being air artillery and communication units, the worst being the infantry.

A Cyprus farmer stands in a field with his goats and sheep. (Hugh Sitton/Getty Images)

## 8 INTERPERSONAL RELATIONS

To maintain a tourism industry, Cypriots have acquired a national reputation as very hospitable, pleasant people. The islanders themselves, particularly in the 300 remaining villages, sustain close same-sex relations: men often gather together at cafés to play an intense game of *tavali* (backgammon) and to talk politics, though women, except for tourists, are strictly excluded from the café. Male bonding also endures between a groom and his *koumbaro*, the best man at his wedding who also baptizes the first child; women also maintain close relations with their *koumbara*.

## 9 LIVING CONDITIONS

The shift of Greek Cypriot living from the village to the city peaked in 1974, when the Turkish government seized the most fertile, productive agricultural regions of the island. The houses and apartments of urban Cyprus are equipped with the amenities found in any modern city. Families are typically situated close to each other within the city and maintain a village house as well.

Despite movements toward a more urban society, a connection between the villages and the cities was made through advancements in transportation; British annexation of the island in the early 1900s introduced isolated villages to the cities through a system of roads. An estimated 10,448 km of highway stretch across the Republic of Cyprus, roughly half of which are paved. The cars which travel those highways—the

most popular being Japanese models as well as Mercedes and BMW—cost Cypriots double what Americans pay; car maintenance and even gasoline are also highly priced. Since the shutdown of the Nicosia International Airport after the 1974 Turkish invasion, the only legal means of entry into the country has been through the Larnaca International and Paphos International Airports, as well as the ports of Limassol, Larnaca, and Paphos.

Despite the 75-year life expectancy for males and the 80-year life expectancy for females, most Cypriots are aged between 15 and 64; a mere 12% are over the age of 65. In 2008 the birth rate averaged 12.5 births/1,000 population, while the death rate averaged 7.8 deaths/1,000 population, with a national population growth rate of 0.52%. As in the United States, good health is maintained through athletic clubs, which largely appeal to young male and female professionals, who will pay a monthly membership to reap both the social and physical benefits of industrialized fitness. Women usually participate in same-sex aerobics classes and perform some weightlifting, which is more common among men, in addition to running and using a punching bag. Older people become members only at the recommendation of a doctor and many heart patients will opt for a morning walk rather than the more modern gym.

## 10 FAMILY LIFE

Traditionally, Greek Cypriots define themselves through their family. A Cypriot household will typically house a husband, wife, and unmarried children. Grandparents usually live nearby or within the home of an adult child (usually the daughter) in the event of declining health. Nursing home facilities are seldom used and only when the aged parent is beyond home care. Grandparents in otherwise good health retain a functional, respected role in Greek Cypriot families and are revered in the eyes of their grandchildren. Grandfathers will often take their grandchildren to and from school and grandmothers perform most child-rearing responsibilities while mothers work. Until the 1950s marriages were accompanied by oral promises in which parents contributed to the new lives of the couple through traditional gifts: the bridegroom's family would provide a home which the bride's family would furnish. In some cases a written dowry contract is signed by the couple and their parents and then authorized by a religious party.

The Old World attitudes toward marriage failed to consider love as a viable motivation, as romantic love was disparaged in Cypriot society and marriages were often mediated by a third matchmaking party whose intimate knowledge of the family qualified them and endorsed the match. In modern culture, men and women typically select a mate of their own accord and interests and are largely swayed by feelings of romance. In the past, heterosexual contact was only permitted with parental supervision and within the physical boundaries of the village fountain and the church. Modern-day Cypriot society encourages earlier heterosexual contact within academic settings and the work force. While sexual promiscuity and a relaxing of morals is evident among adolescents and unmarried couples, it is still considered taboo for an adolescent couple to be home or out alone and relationships in general are platonic. Adolescents congregate in groups, though there is virtually no pressure to enter a relationship during adolescence, and boyfriends and girlfriends who are present among teen groups seldom stray off by themselves. Though parents might be aware of their son or daughter's relationship, they usually make no effort to meet the beau, who would not be invited to dinner and whom the adolescent would keep to himself or herself anyway.

Once a Cypriot has completed his or her education, possible university studies, and has secured a job, engagement is the necessary course of action for the bulk of the Cypriot population. Couples may discover each other through the friends and co-workers encountered at their places of employment. For example, a woman who is introduced to a co-worker's brother and considers him a prospect for marriage will ask her co-worker about the bachelor's "eligibility" and potential as a husband. If the woman receives an endorsement from the co-worker, the two families will work together at arranging meetings to determine the viability of the match and to make plans for engagement, which has the same weight and formality as the actual wedding.

Greek Cypriot weddings of the past, in the Orthodox tradition, encompassed an entire week of festivities; modern weddings are performed in only half a day and begin with the elaborate dressing of the bride and groom, who proceed to the church service. The equivalent of the American wedding reception usually begins at 8 pm and includes traditional Cypriot fare (*kleftiko*, *pastitsio*, *resi*, and *kourabiedes*), and is accompanied by traditional music otherwise not usually heard

in modern Cyprus. *Bouzoukia*, the electric guitar, drums, and the violin are harmonized together for dances such as the *tsifteteli* belly dance and the historic *remetiko*, performed by a sole dancer within a circle of clapping acquaintances. The final dance of the evening is the *choros tou androjinou*, which finds the married couple alone on the dance floor strewn with banknotes. Separation and divorce, usually caused by extramarital affairs and abuse, are more common and legally permissible in modern culture than in the past.

## 11 CLOTHING

Traditional Cypriot dress, reserved for some weddings and festivals, finds men in loose, black *vrakas* (knicker-like pants), dark vests embellished with bright designs, and tall black boots. However, styles in Cyprus reflect the modern fashion industry in Europe and America. Jeans and casual shirts are often worn at home and at leisure. Business attire and formal wear are similar to that found across Europe.

## 12 FOOD

The rich food of Cyprus, while largely Greek in flavor, traces its origins to the palates of the island's diverse invaders and settlers, featuring Greek, Turkish, Arabic, and even some British influences. Therefore, one who sits down to a challenging table of *Meze*, which translates as "mixture" and which forms the common fare *Mezedhes* ("little delicacies"), could encounter up to 30 sample cuisines. A common table of *Mezedhes* will include the Cypriot specialties of *halumi*, cheese exclusive to Cyprus and produced from thyme-fed goats; *taramosalata*, a dip of smoked cod's roe; *kleftiko*, slow-roasted lamb; and *moussaka*, a minced lamb and potato casserole which is flavored with bechamel sauce. *Koupepia*, or grape leaves, are a favorite of the village as well as the city:

### Koupepia

Koupepia are basically made in two steps: the first prepares the leaves, the second prepares the filling for the leaves.

#### Leaves

Blanch and rinse in cold water 30 vine leaves (which can be picked from grape vines in June); put them aside.

#### Filling

1 tablespoon finely minced peppermint, parsley, and onion

½ pound diced tomatoes

1 egg white

½ pound ground meat, browned.

Salt and pepper to taste

Mix together the peppermint, parsley, onion, tomatoes, egg white, and ground meat. Add salt and pepper to taste.

Sprinkle lemon juice over 2 tablespoons rice; let stand for five minutes, then add to meat mixture.

Carefully place a blanched and rinsed grape leaf on your work area, and place 1 tablespoon meat filling in the center. Fold the edges of the leaf together so they meet, and then roll the leaf up to resemble a small sausage.

Place all the filled vine leaves in a pot; cover with meat broth, and simmer for 40 minutes.

Common morning fare for Cypriots includes toast topped with a slice of cheese and perhaps honey. Similarly, the older generation awakens to bread with tomatoes, olives, and *hal-loumi*, a cheese only made in Cyprus. This is accompanied for most with instant coffee made with milk and served either cold or hot. Children drink Nesquik, while their grandparents usually drink warm, sweetened milk.

In accordance with the fasting of meat, eggs, and dairy products which is observed under the Greek Orthodox religion, lunch for devout Cypriots consists of dried or fresh beans three days a week. The vegetarian victuals are either dressed in olive oil and lemon juice and eaten with plenty of fresh bread and tomatoes, or cooked with a tomato sauce stew of celery, carrots, and onions. Those who choose not to fast enjoy both traditional fare, which can be sampled at a table of *Meze*, as well as more British entrees such as steak and french fries, as meat is enjoyed by most Cypriots on a daily basis.

### **13 EDUCATION**

While Cyprus bitterly endured British control of the island, it was the presence and initiative of the English, through the Education Law of 1895, which empowered the local government to raise taxes to develop primary schools. The number of schools created through this legislation more than doubled from the 76 that existed in 1897 to 179 only 20 years later. In addition, the British diminished illiteracy on the island. In 2003 the literacy rate was at estimated at 97%.

Like children in America, Cypriot children begin their educational careers at the age of about 5½; unlike American children, they are required to attend school only to the age of 15. The Greek Cypriot school system, which is rigidly governed by the Ministry of Education, potentially spans four levels. Pre-primary education for children aged from 2 to 5½ emerged only after the 1974 Turkish invasion of the island and more than half of the eligible Greek Cypriot students are estimated to attend preschools. Primary school is required and begins for students aged 5½; it covers a six-year, general curriculum program in which English is a required course for the final two years. Students continue their education in secondary school, the first level of which is required, free, and termed "Gymnasium"; the final three years of secondary school, which are optional, is termed the "Lyceum," and it offers five fields of concentration: classical, science, economics, commercial/secretarial, and foreign languages.

Higher education and specialized training for professionals such as teachers, technicians, engineers, hoteliers/caterers, foresters, nurses, and health inspectors is furnished by technical and vocational colleges. The University of Cyprus located in the capital city of Nicosia, was founded in 1989 and enrolled its first students in September 1992. The cost is free for Cypriots who maintain a twelve-credit course load. Most Greek Cypriots seeking a college education will attend schools in Greece, the United Kingdom, or the United States.

### **14 CULTURAL HERITAGE**

The Ministry of Education is charged with the cultural enhancement as well as the educational advancement of Cypriots. Cultural Services, established by the Ministry of Education in March 1968, is the branch of government which ensures the preservation of Cypriot culture by financing and promot-

ing such groups as the Cyprus State Chamber Orchestra; the Cyprus State Youth Orchestra; the Establishment of Cultural Centers; the Development of Refugee Settlements; archives for writers, painters, and sculptors; the National Struggle Museum; the National Gallery; and Folklore Culture. Cultural Services also issues state awards for literature, donates Cypriot books abroad, and purchases publications within Cyprus as well as work from Cypriot artists.

The Cyprus Department of Antiquities is another government organization whose excavation and preservation of historic sites and artifacts—including theatres, sanctuaries, castles and churches—allows Cypriot culture to flourish.

As the ancient theatres of Salamis, Soli, Kourion, and Paphos were cultural centers since the Middle Ages, so they have been excavated by the Cyprus Department of Antiquities, and are the modern sites of both classical and contemporary plays from around the world. The Cyprus Theatre Organization (THOC) was organized in 1971, consists of a nine-member panel, and promotes theatrical arts both on the island as well as international exchanges outside Cyprus.

### **15 WORK**

The Greek Cypriot labor force numbered about 373,000 in 2006. Jobs commanding the highest respect are "professional" positions: doctors, lawyers, civil servants, teachers, dentists, and business men. Wealthy "upper class" professionals—typically educated in elite institutions in the United Kingdom, Western Europe, or the United States—enter such professional positions. They typically own manufacturing, construction, and consumer goods companies. As in the United States and other countries, the upper class enjoys increased upward mobility in banks and semi-governmental organizations because of contacts, which are virtually necessary for professional success in Cyprus. The middle class are either educated in the United States and Europe, where exclusive college scholarship opportunities are offered to Cypriots, or in Greece, where free education is available for students who perform well on placement exams. Jobs taken by scholarship-educated, middle class Cypriots are in areas of government, teaching, banking, insurance, and semi-governmental organizations, as well as management within the retail sector. These positions still command adequate respect, unlike the lower class vocations of manual laborers, skilled craftsmen, and manufacturing and construction workers; the sheer scarcity of these workers has actually allowed them to earn high wages, as do many farmers. While considered low class, farmers are usually wealthy because land in Cyprus is valuable, especially if near the sea and zoned for hotels.

In 2006 about 71% of the labor force was employed in service-related industries. About 21% of the work force was employed in industry and 8% in agriculture. Unemployment in 2007 was estimated at 3.8%.

### **16 SPORTS**

Though Cypriots were allegedly numbered among the first Olympians and ancient gymnasiums have been preserved on the island, sports only recently commanded government attention through the creation of the Cyprus Sports Organization (CSO) in 1969. This non-profit, government organization successfully administered its first Five-Year Development Plan

from 1978 to 1982, initiating the construction of stadiums, swimming pools, and sports halls throughout the island. Successive Five-Year Development Plans continued the construction and maintenance of sports facilities and channeled grants to various sports organizations. In addition, the CSO extended its interest in sports to the international level, creating protocols and developing sports relations with the Commonwealth of Independent States, Bulgaria, Czechoslovakia, Austria, and Germany. Cyprus also shares sports-related technical and financial interests with Greece. The third Five-Year Development Plan aimed to enhance the performance and competitive aspect of individual sports; consequently, 35 sports federations and 4 cofederations are present on the island and are acknowledged by parallel international organizations, as well as by the International Olympic Committee.

Greek Cypriot men, reflecting the recreational tastes of so many European countries, are most strongly drawn to football (soccer in America) as both spectators and players. Three league divisions composed of 36 teams currently exist under the Cyprus Football Association, and the island has been a participant in World Cup matches. The hunting season likewise attracts a throng of Cypriots, as the countryside will host as many as 40,000 male hunters on Wednesdays or Sundays.

Apart from ballet, dancing, and karate, which are strongly affiliated with the performing and cultural arts, sports are not introduced to young Cypriots by way of arduous training which underlies the development of stellar athletes. Still, many Cypriot children have increasingly participated in sports through the CSO's Sports For All and other programs targeted at children. The natural resources of the island offer Cypriots of all ages diverse sports activities in a variety of seasons. The installment of three ski runs on Mt. Olympus has drawn skiers to the Troodos Mountains from the months of January through mid-March. During the warmer seasons, swimming can be enjoyed throughout the many beaches.

### **17 ENTERTAINMENT AND RECREATION**

Like many tourists, Cypriots enjoy packing the car with family, relatives, and ample foods, and heading for the mountains. While nightclubs, restaurants, and movie theaters are popular for many, most Greek Cypriots enjoy entertaining family and friends in the home.

### **18 FOLK ART, CRAFTS, AND HOBBIES**

For more than a century, *lefkaritiki* embroidery and linen has been marketed throughout the world, and it takes its name from the city of its origin, Pano Lefkara. Crafted from Irish linen, each piece is unique, requires several weeks of work, and can be quite costly. The art has been somewhat industrialized, however, by four manufacturing companies within Lefkara who together employ more than 600 workers, and have brought much prosperity to the city through this art.

Official Handicraft Centers have been established in Limassol, Larnaca, Paphos, and Nicosia for the purpose of maintaining folk art, which has recently suffered from the cheap reproductions of authentic Cypriot pieces that have been mass-produced and imported from Hong Kong and Greece.

### **19 SOCIAL PROBLEMS**

Social and political tensions between the Greek Cypriots and Turkish Cypriots have led to discrimination between the groups, but incidences of major violence have been rare as UN-sponsored negotiations continue. Harassment and acts of vandalism have been reported as effects of discrimination from both sides. Greek Cypriots are particularly interested in resolutions that would insure property and settlement rights and a return of territory under a single integrated government structure. The Turkish Cypriots, however, are in favor of maintaining two autonomous societies with limited contact between the governments and political equality in the eyes of the world. While travel between the two communities is allowed, each side places certain restrictions and regulations on border crossing. For example, Greek Cypriots must have automobile insurance from a company within the Turkish Cypriot administered area in order to drive into the area. The Greek Cypriots place a similar regulation on Turkish Cypriot motorists. At the end of 2006 there were approximately 238,000 Greek Cypriots listed as internally displaced persons as a result of the political conflict. Many of these individuals rely on government financial assistance. The entrance of Cyprus into the European Union in 2004 caused a great deal of tension between the Greek and Turkish Communities, since the Turkish Cypriot administered area is not recognized as an independent government within the European Union. Though the recognized Cypriot government has switched its currency to the euro as of January 2008, the northern Turkish Cypriot controlled government continues to use the new Turkish lira.

There have been some reports of discrimination against other minority ethnic groups within the country, such as the Roma. Homosexuals also face social discrimination despite antidiscrimination laws. While Cyprus was once believed to be a narcotics brokering center for drugs shipped to Europe, Cypriot police have joined with other European centers of justice to curtail drug trafficking and have developed no tolerance policies on drug trafficking issues.

### **20 GENDER ISSUES**

While women have been granted the same legal status as men and are generally able to find positions in the workforce, there is still a strong belief in society that a woman's primary roles are those of wife and mother. Sexual harassment in the workplace is widespread, even though a majority of specific cases go unreported by women who may fear losing their jobs or simply enduring an increase in harassment. Domestic abuse of women is also widespread, again with many incidences left unreported. While the law requires that men and women receive equal pay for equal work, most women in blue-collar jobs earn about 25% to 30% less than their male counterparts. The percentage is less in white collar professions, but there is still no pay equity.

## GUJARATIS

**PRONUNCIATION:** goo-juh-RAH-teez

**LOCATION:** India (Gujarat state)

**POPULATION:** 50,596,992 (2001 Census of India)

**LANGUAGE:** Gujarati

**RELIGION:** Hindu; small populations of Muslims, Jains, Parsis

**RELATED ARTICLES:** Vol. 4: People of India

### <sup>1</sup> INTRODUCTION

Gujaratis are the inhabitants of Gujarat, one of the western states of the Republic of India. The names of both the state and its people are derived from the “Gujara,” a people identified by some as a branch of the White Huns, who ruled the area during the 8th and 9th centuries. The name “Gujarat” has also been linked to the Gujaras, a pastoral caste found throughout northwestern India.

Gujarati history goes back much farther than the Gujaras. Archaeological evidence reveals that the region was settled during prehistoric times. The remains of cities in Gujarat dating from around 2000 BC indicate that the people shared in the cultural achievements of the Harappan civilization. The known history of Gujarat, however, begins around 250 BC. Carved rock edicts in the Girnar Hills in Saurashtra show that Gujarat formed part of Ashoka Maurya’s Empire at this time. In succeeding centuries, the region came under the rule of most of the great dynasties (e.g. the Sakas, Guptas, Gujaras) that arose in western India. The end of the thirteenth century, however, saw Gujarat conquered by the Muslims.

For the next 450 years, Gujarat was ruled by Muslims, either independent sultans or the vassals of the Mughal emperors. Gujarat was overrun by the Marathas in the mid-eighteenth century, but its control passed to the British East India Company in 1818. In the following decades, the Gujarat area was administered variously as a part of Bombay Province, as a province in its own right, and as a States Agency (the region contained many princely states paying tribute to the British). Following India’s independence in 1947, Gujarat was incorporated into Bombay State. In 1960, the Gujarati-speaking areas of Bombay were split off to form the present-day state of Gujarat.

In the years following 1960, the state government of Gujarat was formed by the Indian National Congress, interspersed with rule by the Janata party in its various incarnations (1975–76, 1977–80, 1990–94, 1996–98), but in 1995 the Bharatiya Janata Party (BJP), a Hindu nationalist party, took power (the Rashtriya Janata Party ran the state government from 1996–98). In 2008 the Chief Minister, Narendra Modi was serving his third term as Chief Minister—he and his government belong to the BJP—and assumed his office in 2002. Modi has been accused of presiding over what the Indian press has termed the “Gujarat Holocaust.” The story begins with the destruction of the Babri Mosque in 1992 by Hindu nationalists, supported by the opposition (at the national level) BJP. The mosque was believed by Hindus to have been built on the site of Ram’s birthplace (Ram Janmabhoomi—Ram was a king in ancient India and is held to be an incarnation of Vishnu, an important Hindu deity) in Ayodhya in the Indian state of Uttar Pradesh. Despite a com-

mitment by India's Supreme Court that the mosque would not be harmed, the mosque was stormed and destroyed by Hindu nationalists, who saw its presence as a sacrilege. They were believers in "Hindutva" (Hinduness), a word first coined in 1923 and used to describe movements devoted to Hindu nationalism. Ever since, the site has been a center of pilgrimage for devout Hindus, and trainloads of Hindus, volunteers for the Vishva Hindu Parishad (VHP), an organization dedicated to serving the interests of Hinduism worldwide, have been making the journey by train from Ahmedabad in Gujarat to Ayodhya for pilgrimage and "*kar seva*" (technically, *kar seva* means "construction of or cleaning of religious sites").

On 27 February 2002, a train carrying Gujarati *kar sevaks* was returning to Ahmedabad from Ayodhya, where they were helping build a temple to Ram on the site of the former *masjid* (mosque), when it was stopped by a mob near Godhra Junction railway station, east of Ahmedabad in Gujarat State: the train was set alight, one car was completely gutted, and 59 people, all Hindus, died in the conflagration. A *bandh* (general strike) was called by the VHP for the next day, even though *bandhs* are generally accompanied by violence and have been made illegal by the central government. The *bandh* was supported by the Modi administration. The next day turned into an anti-Muslim orgy of mass slaughter, arson, and the complete breakdown of law and order in the state. Over the next three months, Muslim shops and homes were destroyed and in Ahmedabad and Vadodra (Baroda) several Muslims, including a former Congress MP for Ahmedabad, were burnt alive. The communal violence between Hindus and Muslims continued until May 2002 and Modi was accused of at best standing by and doing nothing to stop the carnage and at worst of being complicit in the violence.

In September 2004 the Banerjee Committee, a panel appointed by the central government and headed by former Supreme Court judge UC Banerjee to probe the Godhra train fire concluded that the fire was accidental. Its findings, however, were challenged by the BJP and the Gujarat inspector-general of police. A Citizens Tribunal headed by retired Supreme Court justice Krishna Iyer collected evidence and testimony from more than 2,000 riot victims, witnesses, and others. In its report, the tribunal accuses the state government and Chief Minister Modi of complicity in the violence. International organizations estimate over 2,000 people, mostly Muslims, were killed during this period.

## 2 LOCATION AND HOMELAND

The 2001 census reported Gujarat's population as 50.6 million persons. Assuming population growth rates similar to those of the 1991–2001 decade, the current population is estimated to be close to 59 million. This figure does not include the sizable community of overseas Gujaratis, mainly pursuing business activities, in Asia and the Pacific, the Middle East, Africa, and the West.

Gujarat lies on India's west coast, and part of its western boundary is also India's international border with Pakistan. Its coastline runs from just east of the mouth of the Indus River, curves around the great peninsula of Saurashtra that juts out into the Arabian Sea, then swings south to a point roughly 160 km (100 mi) north of Bombay. Geographically, Gujarat falls into three broad divisions, mainland Gujarat, the Saurash-

tra Peninsula, and Kachch. Mainland Gujarat consists of the broad coastal plains east of the Gulf of Cambay. These merge to the north with the lowlands around Ahmedabad and northern Gujarat. Fringing this area on the north and east are the uplands of the southern Aravallis, the western Vindhya and Satpura Ranges, and the Western Ghats. The Narmada and the Tapti are major rivers that flow across the southern lowlands to enter the Gulf of Cambay. Southern areas receive 160 cm (63 in) of rain a year, which, combined with fertile soil, makes them a productive agricultural region. The amount of rainfall declines rapidly to the north and west, however, and most of Gujarat is semiarid or arid.

Saurashtra (also known as Kathiawar) is an important historical and cultural region of Gujarat. It consists of a peninsula bounded by the Gulf of Cambay, the Arabian Sea, and the Gulf of Kachch. Broad coastal plains surround a series of low plateaus and hills in the interior. One of these, the Gir Range (about 640 m or 2,100 ft), is home to a wildlife sanctuary for the last Asian lion population in the world. Kachch, in the far west, is another historical and cultural region. Much of its area is taken up by the Rann of Kachch, a vast expanse of tidal mud flats and salt marshes that merges almost imperceptibly with the Thar Desert to the north. Rainfall in the Rann averages around 30 cm (about 12 in). Maximum temperatures in the hot season average over 43°C (110°F) in northern Gujarat.

In the early hours of 26 January 2001, Gujarat experienced a devastating earthquake. Resulting from the release of pressure as two of the earth's major tectonic plates (the Indian and the Eurasian plates) collided, and measuring 8.1 on the Richter scale, the quake had its epicenter near Bhuj, in Kachch, and resulted in the death of at least 20,000 people with more than 150,000 people injured and over 1 million homes destroyed. National and international aid in the form of specialized rescue assistance, medical aid, food and clothes poured in, but the distribution of this aid offered an insight into the partisan nature of both state and society in Gujarat and provided a portent of events to come in early 2002 (the Godhra communal violence). There was discrimination against Muslims in the distribution of aid by both the state government and the Sangh Parivar, the loose association of Hindu organizations in the state, through which much of the aid was administered.

## 3 LANGUAGE

Gujarati, the language of Gujarat, is an Indo-Aryan language derived partly from Sanskrit and partly from Prakrit (an ancient language spoken by the common people of India rather than by Brahmins and scholars). There are several dialects of Gujarati. These include Kachchi, spoken in Kachch, the Kathiawadi of Saurashtra, and the Surati dialect of the southern region around Surat. Bhili, the tongue of the tribal Bhils in the northern and eastern areas of the state, is very similar to Gujarati. An ancient form, Old Gujarati was once spoken in neighboring areas of Rajasthan, and dialects in these areas still show strong connections with Gujarati. Gujarati is written in a cursive script modified from Devanagari.

## 4 FOLKLORE

According to Hindu legend, the hero-god Krishna was forced to abandon his ancestral home of Mathura and moved his capital to Dvaraka (the modern Dwarka) at the western tip of the

Saurashtra Peninsula. Following the events related in the epic known as the *Mahabharata*, Krishna returned to a city beset by ominous signs. The Yadava chiefs, Krishna's relatives, began to quarrel and became engaged in a drunken brawl that had the entire city in an uproar. Soon, nearly all the Yadava chiefs were dead. Krishna's own son was killed, and his brother was mortally wounded. Disheartened by these events, Krishna retired to the forest near the city to ponder the situation. He was mistaken for a deer and killed by a hunter. The city of Dvaraka was then engulfed by the sea.

Writers note that the events of Krishna's later life are quite "un-Indian" in their tragic nature. The drunken brawl, the slaughter of so many people, the slain hero, the city engulfed by the sea—all are themes found in early European literature, but nowhere else in Hindu mythology.

## 5 RELIGION

Gujaratis are overwhelmingly Hindu; about 90% of the population follows Hinduism. The Vallabhacharya sect of Krishna worshipers has a particularly strong following among the Gujarati *bania* (trading) castes. Dwarka, Krishna's famed capital in Saurashtra, is an important place of pilgrimage for this sect, and is regarded as one of India's seven sacred cities. Shiva also has his following among Gujaratis. The Somnath Temple, on Saurashtra's southern coast, is an important Shaivite shrine. Although their religious practices may differ in details, all Gu-

jarati Hindus accept the fundamental beliefs and philosophy of the Hindu religion.

Muslims make up some 8.73% of Gujarat's population. Sunnis predominate, although the Khoja and Bohra form a significant Shiite minority. Jains, although comparatively few in number, have played a major role in the shaping of Gujarati culture. They are mainly of the Svetambara ("white-clad") sect of the religion. Girnar and Satrunjaya Hill, near Palitana, are major centers of Jain pilgrimage. There are small Parsi communities in Surat and Navsari.

## 6 MAJOR HOLIDAYS

The various communities of Gujarat celebrate their own religious festivals. Thus Muslims observe Muharram and the "Ids," Jains celebrate Mahavira's birthday, and Parsis keep their Gahambaras (six seasonal festivals). Hindus observe the major festivals of the Hindu calendar, but Navratri is a special holiday of the Gujaratis. Navratri, literally "nine nights," is celebrated on the nine nights leading up to Dasahara day. It is a time of gaiety, when men and women gather in village squares and temple compounds to sing and dance. The festival ends on Dasahara day, when artisans worship their tools, farmers their ploughs, and students their books.

Janamashtami (Krishna's birthday) and other Krishna festivals are important for Vaishnavas. Of particular significance in Gujarat is the national holiday that marks M. K. Gandhi's birthday. Mahatma Gandhi, one of the great men of the twentieth century, and universally regarded as the father of the modern Indian nation, was born in Porbandar in Saurashtra on 2 October 1869.

## 7 RITES OF PASSAGE

Gujaratis follow the life-cycle rituals prescribed by their communities. Thus, although the details of the ceremonies may differ according to caste, Hindus observe the rituals (*samskaras*) set out in the Vedas and other Hindu texts. These include ritual purification after childbirth, the name-giving ceremony, the first-feeding ceremony, and the head-shaving ceremony.

One of the most important rites for the higher castes is the *upanayana* ceremony, the donning of the sacred thread. Virtually all groups have some sort of period of seclusion followed by purification rites for girls at their first menstruation. Jain rituals in general follow Hindu patterns. Muslim practices include whispering the Call to Prayer (*azan*) in a newborn baby's ear, head-shaving and naming ceremonies, and the all-important circumcision (*sunnat*) for males.

Most Gujarati Hindus cremate their dead, although some lower-caste groups bury them. Again, death rites follow procedures set out in the Hindu sacred texts, with Brahman priests officiating at the funeral ceremony. Ashes and bone are collected from the funeral pyre to be scattered, if at all possible, in the sacred Ganges River. Hindus carry out rituals to remove pollution after the funeral, observe a period of mourning, and hold the important death feast (*sraddha*). Jain funeral customs tend to follow the Hindu pattern, while Muslims bury their dead.

## 8 INTERPERSONAL RELATIONS

Gujarati Hindus greet each other with the *namaskara*, which consists of the gesture of joining hands (*anjali*) accompanied

by the words “*Namas*” or “*Namaste*” (an exclamation of homage for the deity). Muslims use the “*Salaam*” when they meet. A handshake or a casual wave of the hand is a common greeting in urban areas.

## 9 LIVING CONDITIONS

A typical Gujarati village consists of a cluster of one- or two-story houses arranged along a central street. A temple, a village square, a few shops, and the well used by higher castes are found in the village center. Around this central area, where the agricultural and trading castes live, are the houses of the artisan castes. In the past, villages were surrounded by mud walls for protection against robbers. The untouchable castes, the *Dheds* (road sweepers) and *Bhangis* (cleaners), live outside the boundaries of the village.

The houses of the cultivators are generally roomy, and built of mud or brick, according to the wealth of the owner. Furniture consists of a couple of strong wooden boxes to hold valuables, wooden bed and coverings, and copper and earthenware cooking utensils. There is usually no stable for livestock, so cattle and goats are kept in the house. Living conditions in a village setting are quite different from those of the affluent business castes in cities such as Ahmedabad, Vadodara (Baroda), and Surat.

## 10 FAMILY LIFE

In general, Gujaratis conform to northern Indian patterns of kinship, marriage practices, and family structure. The norm is to marry within one's caste, but outside one's clan. Caste divisions and subdivisions among the *Banias* can be quite complex. Descent is determined through the father's line, and newlyweds live with the father's family. Marriages are arranged, and marriage rituals follow the customs and traditions of each individual caste or religious community. The joint family is typical among Gujaratis, with a household consisting of two or three generations of men and their dependents. A woman's main responsibility is the bearing and raising of children, preferably sons. Among the higher castes, women are mostly housewives. Lower caste women are expected to work in the fields or otherwise contribute to the family income.

## 11 CLOTHING

The traditional dress of a well-to-do Hindu man in Gujarat consists of a loincloth (*dhoti*), over which he wears a shirt (*badan*) and a coat (*angharko*) closed with strings instead of buttons. A length of cloth (*picchodi* or *dupatto*) is worn as a scarf over the shoulders or sometimes tied around the waist. The turban (*paghdi*), often fringed with gold brocade at each end, is tied in a manner that identifies the wearer's caste. Country-made shoes complete the outfit. A woman of high status typically wears the *sadi* or *sallo* (types of *saris*) with the *choli* (blouse). Gujarati women share their fellow Indians' love of jewelry.

As in the rest of India, dress styles vary according to caste and region. A *Bania* merchant from Ahmedabad dresses differently from a *Kunbi* farmer in Saurashtra, who in turn dresses differently from a member of the Bhil tribe of eastern Gujarat. There are also distinct regional patterns of dress. A man from Kachch, for example has clothes and a style of tying his turban that set him apart from someone from Junagadh or Bhavnagar.

A Gujarat woman. (Anthony Cassidy/Getty Images)

While traditional dress is still seen in rural areas, many urban dwellers (particularly men) have followed the modern trend toward Western-style clothes.

## 12 FOOD

Gujarati cuisine is strictly vegetarian, reflecting the strong influence of Jains and the Vaishnavas in the region. Wheat and the two kinds of millet (*jowar*, *bajri*) are the main staples. Flour is made into unleavened bread called “*roti*.” This is eaten with a variety of vegetable dishes. The villager takes a light breakfast of *roti* and milk or curds before setting out for the fields. Lunch is usually *roti* and buttermilk.

The main meal is eaten in the evening and consists of rice, split peas (*dal-bhat*), and vegetables. More substantial meals are served on the *thali*, a metal tray on which *roti*, rice, and small round bowls containing various dishes are placed. The bowls may hold vegetables such as eggplant, potatoes, beans, *dal* (lentils), and *dahi* (curds). *Kadhi*, a savory curry of curds and fried cakes made from pulses, is a popular dish. And no Gujarati would eat a meal without generous helpings of *ghi*

(clarified butter). Milk-based desserts are common. *Srikhand* is a rich dessert made with curds and spiced with saffron, cardamom, nuts, and fruit. Gujarat is also known for its delicious ice cream. There is strong religious-based sentiment against alcohol, and Gujarat has been under prohibition since 1947.

### 13 EDUCATION

The Gujarati emphasis on business activities provides a strong motivation for literacy. Among the *Bania* castes, education in reading, writing, mathematics, and accounting begins early in life. Literacy among males approaches 100%. However, when tribal people and the lower castes are figured into the equation, literacy in Gujarat State drops to 69.97% (80.5% for males and 58.6% for females). These figures were reported in the 2001 census.

### 14 CULTURAL HERITAGE

Gujaratis have a cultural heritage that can be traced back to the Harappan civilization of three thousand years ago. While the exact nature and extent of Harappan contributions to Gujarati culture are unclear, it is likely that some elements survive in modern folk traditions. The beadwork of Saurashtra, for instance, may well have had Harappan origins. A substantial bead factory was uncovered at the archaeological site at Lothal. Gujaratis have a literature that dates to the twelfth century.

Many other groups have contributed to Gujarati culture. From the Vaishnavas come the legends and mythology of Krishna, to whom are ascribed the popular *Ras* and *Garba* folk dances. Jains influenced temple architecture and developed a distinctive style of painting. The Jain commitment to nonviolence (*ahimsa*) is seen not only in Gujarat's vegetarian cuisine, but in institutions such as animal homes (*pinjrapols*). Muslim architecture in Gujarat combined Hindu elements with its own styles.

### 15 WORK

The trading (*bania*) castes are very important among the Gujaratis. They make up a significantly higher proportion of the population than elsewhere in India. Gujaratis have traveled to Bombay, to other cities in India, and around the world in search of business opportunities. Gujarat is also a leading industrial state. Ahmedabad, often referred to as the "Manchester of India," is a major center of textile manufacturing. Vadodara and Surat are also important industrial towns. Agriculture is more commercial than in many other parts of India; cotton, sugarcane, oilseeds, and peanuts are major cash crops.

### 16 SPORTS

Children in Gujarat are relatively free of responsibilities until about nine or ten years of age and spend their leisure time in a variety of ways. Girls play "house," dress their dolls, and hold mock wedding ceremonies for them. Boys' activities center on playing marbles, spinning tops, and flying kites, and games such as *kabaddi* (team wrestling). *Khokho*, a kind of team tag game, is another popular local pastime. Modern sports such as soccer, cricket, field hockey, and basketball are played throughout the Gujarat region.

### 17 ENTERTAINMENT AND RECREATION

Especially in the cities, Gujaratis have access to movies, radio, and television. In the more isolated villages, however, traditional forms of entertainment remain a part of community life. These may be linked to religious fairs and festivals or provided by traveling bands of professional entertainers. A folk drama known as *Bhavai* is performed by Targalas and other castes whose ancestral profession is music and the theatrical arts. The Bhats and Charans are bards and genealogists in Gujarat who have preserved much of the region's folk culture and traditions.

### 18 FOLK ARTS, CRAFTS, AND HOBBIES

Gujarat is well known for its traditional handcrafted textiles. Fine silk saris are made in Patan, and attractive block prints are produced in Ahmedabad. Surat is famous for its *zari*, embroidery using gold or silver thread. Jumnagar is a center of colorful tie-dyed work, while peasant women in Saurashtra and Kachch produce embroidery containing tiny mirrors as well as beadwork items. The making of jewelry and cutting of precious stones is a traditional handicraft of Gujarat. The artisans of Kachch are known in particular for their silver work. Woodcarving is an ancient skill in Gujarat, as can be seen in the fine carvings found in houses and temples throughout the region. Wooden furniture is also produced in a distinctive Gujarati style.

### 19 SOCIAL PROBLEMS

Although Gujaratis have made great strides in improving the living conditions of their state's population, problems of poverty, malnutrition, and a lack of basic amenities such as drinking water and health facilities remain in some areas. An outbreak of pneumonic plague in Surat in 1994 caused panic among the population and also drastically reduced tourism in India at that time. The Gujarat government is deeply involved in the massive Sardar Sarovar Dam which has been built on the Narmada River. Although it was planned to help provide irrigation and power to the state, a lack of resources combined with squabbling among the partner states (Gujarat, Maharashtra, Madhya Pradesh, and Rajasthan) has delayed the project. An anti-dam environmental movement has reached a national and even international audience.

As Gandhi's home state, Gujarat has been identified with the nonviolence movement. However, communal violence erupts from time to time across the normally peaceful state. In December 1992, for example, riots that cost both Muslim and Hindu lives swept Ahmedabad, Vadodara, and Surat. They were triggered by the destruction of the Babri Masjid mosque in Ayodhya in Uttar Pradesh by Hindu fundamentalists. On the positive side, Gujaratis have taken full advantage of the recent liberalization of India's economic policies to attract foreign business and investment to the state.

A major, ongoing issue in Gujarat is the displacement of population from the countryside by the construction of the Sardar Sarovar Dam on the Narmada River, in south-eastern Gujarat. The Dam is part of a network of more than 3,000 dams that will make up one of the world's largest water projects with an extensive canal and irrigation system providing water to, according to government estimates, over 1.8 million

hectares (over 700,00 acres) of the states of Rajasthan, Madhya Pradesh, Maharashtra and (mainly) Gujarat. However, over 25,000 families will be displaced by the dam, their villages and lands submerged under water, and the construction is opposed by organizations such as the Narmada Bachao Andolan (NBA). Protests against the dam's construction, such as those organized by NBA, played a major role in convincing the World Bank to pull funding from the project in 1993. The displaced families claim that the compensation and land they are due to receive is inadequate, but in 2000, despite this opposition, the Supreme Court of India gave permission for the construction of the dam to proceed.

## 20 GENDER ISSUES

Hindu women, especially those of lower caste experience the constraints of their religion and, like their Muslim counterparts, suffer from poverty and illiteracy. Gujarat, despite being considered an industrialized, developed, wealthy and cultured state, ranks 21st amongst India's states in the sphere of women's literacy. The Census of India 2001 shows female literacy in Dahod, a town in eastern Gujarat on the borders of Rajasthan and Madhya Pradesh to be only 31.87%. The difference between literacy rate of male and female is over 20%, a difference which the Government of Gujarat and the people of Gujarat cannot ignore. This issue is being addressed as part of the government's Continuing Education Scheme which involves the setting up of Continuing Education Centers (CECs) and Nodal Continuing Education Centers.

According to the 2001 Census of India, Muslims form the largest minority group in Gujarat, numbering over 50 million people and accounting for nearly 8.73% of the population (89.48% of Gujaratis are Hindu). Women in the Muslim community suffer the restrictions of their religion, from *purdah* and wearing the *burqa* to child marriages and "honor killings." In addition to illiteracy and poverty, Muslim women were subjected to "unimaginable inhuman and barbaric" sexual violence during the 2002 Godhra carnage, and some still live in refugee camps, being too afraid to return to their homes.

Fetching and carrying water is women's work in rural India. In the villages of the desert district of Banaskantha, in northern Gujarat, women spend up to six hours a day bringing water from distant sources to their homes. They carry up to 15 liters on their heads on each trip, often walking barefoot. Banaskantha receives less than 7 inches of rainfall each year. The water table has dropped by 6.5 feet a year, as withdrawals exceed natural replenishment. Over 75% of the district's villages no longer have reliable, year-round sources of fresh water. It was not until the end of the 20th century that the government formally recognized the need to involve rural communities in managing water resources, and only in 1999 did it establish guidelines for involving women. However, the women of Gujarat began taking their first steps toward self-governance in water issues long before then.

Guided by an all-women trade union—the Self-Employed Women's Association (SEWA), founded in Ahmedabad in 1972—Gujarati women gradually began to exert their influence over state authorities and secured a greater voice for themselves not only within the community but also inside their own homes. The underlying strategy behind this success has been to link protecting the environment with improving

livelihoods. For rural women, economic benefits often depend on the health of the natural resources they rely on. Governments, however, often treat the environment and economic development as mutually exclusive. For example, Gujarat is home to the massive Sardar Sarovar dam, which is now under construction on the Narmada River. Despite the project's goal of alleviating water shortages in rural communities, an independent review commissioned by the World Bank found that plans for the delivery of water to villagers in the drought-prone regions of Gujarat are not on track and they are not likely to happen any time soon, if at all.

In 1986, the State Water Board of Gujarat invited SEWA to increase its participation in village-level water committees. After three consecutive years of drought, the water board believed that proactive local communities might succeed where more centralized management had failed. The water works in many regions were in complete disarray. SEWA held a number of meetings where villagers expressed two urgent needs: The need to conserve water, revive traditional sources like surface wells and ponds, and create alternative water sources like roof rainwater harvesting structures. The second need was to find non-water based work, as seasonal water shortages caused a loss of jobs.

To push for these changes, SEWA encouraged women to join local water committees, called *pani samitis*. SEWA had already organized women into about 50 business-development groups—with activities from embroidery to timber and rainwater harvesting—to help them earn more money. Giving women a voice on local water committees was the next logical step because women are primarily responsible for fetching and using water.

At first, however, women were reluctant to come forward because water "infrastructure" was regarded as a male responsibility. Most men were critical of women's participation, and several went so far as to say they would not drink water from a source created by women. But women slowly gained confidence as they began to take the lead in water activities, raised their productivity, and saw their incomes increase. The initial 42 *pani samitis* were to take over maintenance of the piped water system in the Santhalpur and Radhanpur sub-districts, including collecting user fees. But after the state government reversed its position on this, the village women turned to reviving and maintaining their traditional community sources of water. *Pani samitis* began constructing check dams, deepening existing ponds, and lining ponds with plastic sheeting to prevent salinization of the water from the region's salty soils.

By 1995 the women's association had accumulated a great deal of experience in the water sector throughout Gujarat, and its projects were yielding tangible economic, social, and environmental benefits throughout the state. The state government, recognizing SEWA's successes, invited the group to lead and implement a state-wide watershed development program. SEWA used this unprecedented opportunity to launch a more comprehensive program than the state had envisioned, one that not only promoted ecological regeneration, but fostered economic development as well. The Water, Women, and Work Millennium Campaign, as it has been called, integrates erosion controls, water conservation measures, tree-planting and forestry initiatives, dryland agriculture, and education, training, and capacity building for communities.

Between 1995 and 2001, the water campaign spread to a total of 502 villages in 9 districts. Women comprised 80% or more of the membership of most of the new water users committees, and committee activities revolved around issues of particular interest to women—fodder growing, nursery plantations, improved agriculture, rain-water harvesting and capacity-building.

Results of the water campaign in Banaskantha District have been impressive. Aquifers in 18 villages have been recharged. A total of 150 wells, including surface wells, tube wells, and farm wells, have been recharged in eight villages. In Porana village alone, a total of 25 wells have been recharged. Salinity has decreased in the treated land thanks to various innovative and low-cost mechanisms for sweetening and recharging the groundwater. Groundwater is lifted with a water pump for irrigation and farmers are able to grow three crops annually instead of one. The investment was just Rs 5,000 (US\$106) for each pump system. SEWA's success has prompted villagers and civilian society groups to question India's trend toward privatizing water distribution services. There is some sign that government agencies are beginning to trust the "people's sector" to handle water supply activities, despite skepticism that poor, illiterate women could prove competent.

Apart from its work in the area of water, SEWA has expanded into other areas. Since the 1990s, SEWA has been involved with banking and providing credit to rural women, the SEWA Mahila Housing Trust helped distribute food and assisted people in rebuilding their homes after the devastating 2001 earthquake, SEWA is involved in providing health facilities, in running craft associations and dairy co-operatives, and is a partner, with the state government and UNICEF, in the Development of Women and Children in Rural Areas (DWCRA) program.

**ALTERNATE NAMES:** Tamu

**LOCATION:** Nepal (central Himalayan Mountain region)

**POPULATION:** 543,571 (2001 Census of Nepal)

**LANGUAGE:** Gurung; Nepali

**RELIGION:** Mix of Tibetan Buddhism, Hinduism, and local animistic practices

## 1 INTRODUCTION

The Gurungs are a hill people living on the southern slopes of the Himalayan Mountains in central Nepal. In their own language, they call themselves “Tamu” (*Ta* means thunder, *mu* symbolizes sky). Their origins are uncertain, although they are of Mongoloid stock and their ancestors may have migrated to their current location from Tibet around 2,000 years ago.

Gurung tradition maintains that in ancient times a Gurung kingdom, ruled by a “Ghale Rājā,” emerged among the numerous small kingdoms and states that existed in the Himalayan foothills. This kingdom was conquered by a neighboring *Rājā* in the 15th century AD. During the 16th century, it was incorporated into the expanding Gurkha empire of the Shah dynasty. Gurungs served as soldiers in the armies of the Shah kings, including Prithvi Narayan Shah who conquered the Kathmandu Valley in 1768 and completed the unification of Nepal.

The tradition of Gurung service in the army of the Gurkha Kingdom continued into the 19th century, and Gurungs were involved in military campaigns against both the Chinese and British. The British were so impressed with the fighting qualities of the Gurkhas following the 1814–1816 Anglo-Gurkha war that they began recruiting Gurkha soldiers into the service of the East India Company. Gurungs (along with the Magars) make up the bulk of the soldiers serving today in the Gurkha regiments of the British and Indian armies.

The Gurung, like all peoples in Nepal, have been influenced by political events in the region. Nepal was an absolute monarchy until 1990, when, faced with a people’s movement against the absolute monarchy, King Birendra, agreed to large-scale political reforms by creating a parliamentary democracy with the king as the head of state and a prime minister as the head of the government. All Nepalese citizens 18 years and older became eligible to vote and in the first free and fair elections in Nepal in 1991, the Nepali Congress was victorious. However, governments in Nepal have tended to be highly unstable, no government having survived for more than two years since 1991, either through internal collapse or parliamentary dissolution by the monarch.

In February 1996 the Communist Party of Nepal (Maoist) began a violent insurgency in more than 50 of the country’s 75 districts. Nearly 13,000 police, civilians, and insurgents are estimated to have been killed in the conflict since 1996. In July 2001 Prime Minister Deuba announced a cease-fire, which the Maoists pledged to observe, as part of a government effort to seek a negotiated solution to the conflict. Although Maoist-instigated intimidation and extortion continued, the killings largely subsided after the cease-fire was announced. The government and Maoists held talks in late 2001.

It is claimed that, hoping to free themselves from dominance by the Brahman-Chhetri-Newar (BCN) elite, Gurungs supported the Maoist insurgency. But Gurungs were also represented in the armed forces and police so they took casualties on both sides of the conflict. An estimated 12,800 deaths are reported during the insurgency, with a further 100,000 to 150,00 people being displaced. The government feared that Gurungs, with their military background, were providing training to insurgents in remote areas of Nepal.

On 1 June 2001, however, Crown Prince Dipendra was officially reported to have shot and killed his father, King Birendra; his mother, Queen Aishwarya; his brother; his sister, his father’s younger brother, Prince Dhirendra; and several aunts, before turning the gun on himself. Gyanendra, Birendra’s brother, succeeded as King, but on 1 February 2005, suspended the parliament, appointed a government led by himself, and enforced martial law. The King argued that civilian politicians were unfit to handle the Maoist insurgency. A broad coalition called the Seven Party Alliance (SPA) was formed in opposition to the royal takeover, encompassing the seven parliamentary parties who held about 90% of the seats in the old, dissolved parliament. A countrywide uprising began in April 2006, resulting in massive and spontaneous demonstrations and rallies held across Nepal against King Gyanendra’s autocratic rule. Eventually, an agreement was reached by which the monarchy was to be abolished. Nepal’s monarchy was abolished at the end of May 2008, thus ending 240 years of royal rule, and Nepal became the Federal Democratic Republic of Nepal with the prime minister becoming head of state.

## 2 LOCATION AND HOMELAND

Assuming the population has increased at the national rate for Nepal since 2001, the current Gurung population is estimated at around 620,000 people. This does not include the small number of Gurungs who live in Sikkim, Bhutan and the Indian state of West Bengal. Traditional Gurung territory extends along the mountain slopes north of the Kali Gandaki River between the towns of Gorkha and Baglund. Some Gurungs are found in the upper Kali Gandaki valley itself and along the Marsyandi and Buri Gandaki rivers. Recent migrations towards the south have seen Gurungs settle in the hills of the Inner Terai zone.

The highland, or *lekhāli*, Gurungs retain a lifestyle closely tied to older traditions. They are dependent on high-altitude pastoralism and are strongly Buddhist in culture. The southern Gurungs, however, have a cereal-based economy and show a significant accommodation to Hindu cultural systems. In addition to this highland-lowland division, it is possible to distinguish between western, central, and eastern Gurungs, largely on the basis of linguistic differences.

Gurung villages are located at elevations between 1,050 and 2,150 m (approximately 3,500–7,000 ft). They often lie at the top of a hill or cling to the slopes of the steep gorges that rivers in the region have cut into the mountains. Above these, the terrain rises to the ridges and sheer cliffs that mark the southern slopes of the Annapurna, Lamjung, and Himalchuli ranges. Winters are cold and dry, although the temperature rarely drops below freezing. Differences in altitude and aspect, however, create considerable local variations in temperatures and precipitation. Mean monthly temperatures at Gorkha (elevation 1,667 m or 5,469 ft) range from about 8° to 30°C (approx-

mately 46°–86°f). Rainfall at Gorkha averages 193.5 cm (76 in) and is received mostly in the summer months. Vegetation is mostly temperate mixed forest, with oak, elm, and conifers. Bamboo and numerous rhododendron species are common at lower elevations.

### 3 LANGUAGE

Gurung, also known as Tamu or Temu, is a Tibeto-Burman language of the Sino-Tibetan linguistic family. It is similar to other languages, such as Newari and Tamang, spoken in the hills of Nepal. The Gurungs have a tradition of oral literature, but there is no written form of the language. Most Gurungs are bilingual, speaking Nepali as well as Gurung.

### 4 FOLKLORE

The Gurung myth of origin tells of a king of the Surya (solar) dynasty who broke with tradition by crowning his favorite younger son as his successor. As a result, the elder son, Lochan, left the kingdom to seek the life of an ascetic in the Himalayas. He took with him his wife Kali, his priest, a slave, and their wives. On their journey to the mountains, so the legend goes, the group was forced to seek shelter for a night in the company of two prostitutes. During the night, the prostitutes broke Lochan's and the priest's sacred threads, poured wine on the sleeping men's lips, and then fled. On waking, Lochan and the priest thought they had become drunk and had sexual relations with the prostitutes. Ashamed at their behavior, they

continued on to the mountains where they abandoned the usual customs of their upper-caste status.

Over time, Lochan's wife gave birth to 3 sons named Ghale Mahan Gurung, Ghodane Mahan Gurung, and Lama Mahan Gurung, and a daughter. The priest fathered 2 sons—Lamechane Mahan Gurung and Plone Lamechane Gurung—and 3 daughters. The children of Lochan and the priest intermarried, and their descendants form one of the two subtribes of the Gurung, the *Chār Jāt* or "Four Clans" group. These clans are the Ghale, Ghodane, Lama, and Lamechane, in order of rank. The slave and his wife had 16 sons and 10 daughters. These married among themselves and were the forerunners of the *Solah Jāt* or "Sixteen Clans" subtribe. The *Chār Jāt* consider themselves superior to the *Solah Jāt*.

This legend serves to explain why the Gurungs, who have been strongly influenced by Hinduism, do not show the classic features of Hindu society such as a rigid caste structure and commensal (dining) restrictions. The mythical genealogy traced to a *ksatriya* ruler and the loss of former high-caste status is common among tribes who have their origins outside Hindu society. It places a tribal people firmly in a Hindu mold and provides them with a legitimizing Hindu pedigree.
