Social relations among the Luo indicate a number of underlying principles from the past that continue to be very strong in present-day social life. These principles revolve around kinship, gender, and age. The Luo have what can be called a "segmentary lineage" form of social organization. This means that Luo are organized into more or less maximal and minimal kinship groups that are like the branches of a vine. Descent is traced through only the male sex (one's father) to reckon relatives from near to distant kinsfolk, who align themselves with and against other such groupings for purposes of exchange, marriage, and political alliance. There is a strong emphasis in this system on the male gender, through which both men and women are placed within the kinship system. Names are received through the male line, and after marriage women go to reside in the homesteads of their husbands. Nevertheless, women are not without power and influence in this "segmentary patrilineal" system. For example, as a wife of a patrilineage, a woman builds up alliances over time for her husband's family by maintaining strong relationships after her marriage with her brothers and sisters who live at her birthplace or elsewhere. It is expected that after marriage a woman will bear children for her husband's patrilineage. It is for this reason that bride-wealth is given by her husband and his lineage mates to her family in exchange for her hand in marriage. It is this bride-wealth that has contributed to the woman's capacity to maintain warm ties throughout her life in her own birth family, which she left behind after marriage.

By having children, a woman greatly enhances her power and influence within the lineage of her husband. As the chil-

dren grow older, they take special care of her interests. Perhaps as many as 30% of Luo homesteads are polygynous (in which a man has more than one wife). This contributes to solidarity between a mother and her children, and between children born of the same mother, within the context of polygynous extended families. In such families children have different mothers and a common father. Nevertheless, polygyny is commonly accepted by both men and women, provided traditional ideas and regulations are maintained. This includes, for example, a special recognition for the first wife or "great wife," whose house and granary are located prominently at the back of the homestead opposite the main gate. Subsequent wives have homes alternatively to her right and left in the order of their marriage. Sons are provided with homes adjacent to the main gate of the compound in the order of their birth. The common father for the polygynous extended family maintains a homestead for himself near the center of the compound. His own brothers, if they have not yet formed their own homesteads, reside on the edge of the compound near its center. As Luo become wealthy in Luoland or elsewhere, it is common for them to build a large house for their mother. This is especially necessary if she is a "great wife," as it is considered improper for younger wives to have larger homes than wives more senior to themselves.

The spatial ecology of the polygynous homestead symbolizes the significance of age-grading in social relations. Brothers are ranked in the homestead, and co-wives are differentiated by their age. Children are commonly reared by their older siblings who are nurses to them, carrying them about and singing lullabies to them. Male elders have a prominent place in the community. They are significant players in the politics of marriage and family alliances. This is enhanced by their control over cattle, land, and other resources. Elders are indispensable for rituals that center around important community events, such as weddings and funerals.

Visiting and being visited is the major source of pleasure for the Luo. The social principles of age, kinship, and gender obligations impose a heavy schedule of ritual obligations on Luo, irrespective of their residence. Rituals center around sickness and death, stages in the life of children, marriages, and succession to leadership in lineage and clan groupings. Attendance at funerals is a significant obligation for all Luo. There is a constant movement between Nairobi and Luoland for attendance at funerals. A powerful, prominent man or woman, for example, in Nairobi may be but a child while visiting home, where he or she behaves with great deference to Luo senior in age or to families where there is a relationship of respect based on marriage ties. At funerals, Luo consume large amounts of meat, beer, and soft drinks and socialize with friends, relatives, and members of the opposite sex. Funerals last for four days for a male and three days for a female. After the burial and expression of grief through orations and viewing of the body, there is a period of feasting and celebration. Visitors come from far and wide and are housed around the compound of the deceased where he or she will be buried. This location and the duration of the ritual is an excellent opportunity for young people to meet and observe members of the opposite sex, or for elders to discuss marriage alliances that they might wish to promote. Dating may well follow initial meetings or deliberations at the funeral.

## 9 LIVING CONDITIONS

In rural areas, houses are of several types, based on wealth and degree of permanence. A common house is made of mud and wattle walls and thatched with grass. Another style includes mud and wattle walls, but its roof is made of corrugated sheets of metal. A more elaborate and permanent type of house is built of brick walls and a roof covered with iron sheets or tiles. Bricks, iron sheets, and tiles are all items of prestige, and their ownership symbolizes success in farming, animal husbandry, or some modern occupation, such as teaching, the ministry, or shop keeping. Homes vary in shape as well as size. Some homes of the old variety made of wattle and mud are circular. Those with more permanent materials tend to be rectangular. A prosperous man who is the head of a large extended family may have several wives whose homes are situated by their rank within a large circular homestead.

Luo living in Kisumu, the regional capital, or Nairobi have homes that vary according to their relative social status. Some Luo are numbered among the very elite Kenyans whose homes are very elaborate, with facilities for automobiles, sleeping accommodations for visiting relatives, and servant's quarters. Other less fortunate Luo are numbered among those who live in Nairobi's crowded slums where homes are quite temporary, made of wattle and mud and short-lived materials such as tin, paper, and plastic.

In Kisumu, a city of about 323,000 people, the bicycle is a very important means of transportation. Bikemen serve as taxis and carry traders and passengers throughout the town and region. Some of the bicycles have hoods on them. The *matatu*, or communal taxi, and public buses are other significant conveyances seen throughout the region. For those traveling the 500 km (310 mi) between Nairobi and Kisumu, there is daily train and air service, as well as frequent buses and taxis.

Because of their marginal position in the national economy, the Luo do not have a great deal of access to medical services. Moreover, their environment is hot and humid throughout much of the year, and they live in the low-elevation malarial zone in Kenya. Malaria is a major killer in Luoland. Children's diseases, such as *kwashiorkor* (a form of protein malnutrition), are a threat in those families without access to a balanced diet or knowledge about nutrition and health standards. Medical services are a mixture of socialist and capitalist principles. Kisumu, for example, has a large public hospital where services and medicine are free. In these hospitals, there is a frequent shortage of medicine and a perception that services are not as good as those in private hospitals where patients must pay to see a doctor or to purchase drugs. There is an emphasis on preventive medicine in villages, so that most rural communities have clinics with medical health workers who place a great deal of emphasis on sanitation, prenatal care, nutrition, and other practices known to reduce the risk of disease. There is some blending of indigenous and medical ideas about the origins of illness arising from spiritual causes, such as ancestors and witchcraft, and the more recent "germ theory of disease." Many Luo participate in a dual medical belief system for any particular ailment or other misfortune.

## 10 FAMILY LIFE

Marriage was traditionally considered to be the most significant event in the lives of both men and women. It was thought inappropriate for anyone to remain unmarried. This was so

because of the significance of the value of community and communalism over the needs and rights of individuals considered apart from family concerns. In a society without industrial technology, where subsistence depended on human labor, it can be understood why large families were adaptive for the Luo. The system of polygyny worked to ensure that all people achieved a marital status. After the death of a woman's husband, she was "inherited" by her dead husband's brother. This custom, known as the *levirate*, guaranteed that a woman remained within the extended family of her husband. Her new husband took over all of the domestic roles of his dead brother. This custom is still widely practiced in Luoland and is the subject of heated debate between those favoring autonomy and individualism over and against those more traditionally inclined. Generally, churches with international ties, such as the Anglican CPK and the Roman Catholic Church, frown on the levirate, as do women with considerable formal education. The levirate receives support from independent churches and those men and women for whom traditional values take priority in their lives. They note, for example, that in Dholuo the term for wife is "our wife," symbolizing that her marriage involves an entire family, not just herself.

The significance of bride-wealth is increasing, even among the educated. In this custom, members of the groom's family initiate a process of negotiation with the bride's family that may unfold over many years. Negotiations can be intense, and for this reason a "go-between," thought to be neutral to the interests of each family, is used. Luo believe that divorce cannot occur after bride-wealth has been exchanged and children have been born. Even if separation happens, the couple is still ideally considered to be married. Failure to have children, however, is thought to be the fault of the bride and, for this, she will be divorced or replaced by another wife. Cattle are the primary object of wealth given in bride-wealth. In determining the value of a prospective bride, her family takes into account her health, looks, and, nowadays, her level of formal education. Women with university degrees are expected to draw many cattle and they frequently, in spite of their high formal education and outward acceptance of nontraditional ideas, are offended if their suitor does not offer a big bride-wealth. Failure of men to raise a high bride-wealth presses many of them to propose elopement, a practice that is on the increase today.

A marriage custom that is now rarely practiced is referred to as *meko* ("catching"). In this practice, a woman is "dragged" by her husband's male relatives to his home, where the marriage ceremony occurs and the marriage is consummated. The timing of the *meko* depended on how much of the bride-price had been paid, such that it could be assumed that the marriage would, in fact, occur. Members of the girl's family, particularly her brothers, kept guard to "protect" her from being dragged. It is said that the bride was often secretly pleased with all of the attention from her brothers and her new husband and brothers-in-law. The last would thereafter refer to her as "our wife." There was, nevertheless, outward screaming and resistance on the part of the girl while being dragged.

Young people in Kenya still tend to marry within their own ethnic groups. Tribal elders frequently caution against "intertribal marriages." The more distant the ethnic group in space and customs from the Luo, the greater the cautionary warnings. For this reason, Luo intertribal marriage is most likely to occur with members from neighboring Baluya societies,

which are Bantu. However, most Luo marry within their ethnic group.

### **11 CLOTHING**

Traditionally, the Luo wore minimal clothing. Animal hides were used to cover private parts, but there was no stigma associated with nudity. Today, clothing styles are largely European in origin and varies according to a person's social class and lifestyle preferences. It is not uncommon to see in remote rural areas people fashionably attired according to some of the latest tastes. In the past, for example, when platform shoes were common for women, or today when jeans are popular among teenagers, these fashions were and are popular in remote areas. Nevertheless, for those Luo living in Nairobi, for example, there is a tendency for their apparel to be very cosmopolitan by rural standards and no different from clothing styles as seen in New York or Paris.

In rural areas, most people dress according to their work routines. For example, women while farming or attending market wear loose-fitting dresses made of solid or printed cotton fabric. Wearing sandals or going barefoot is typical while working. Men wear jeans as work pants while farming. During the rainy season, the roads can become very muddy. Boots and umbrellas are especially prized by both men and women. These days, there is a strong market in second-hand clothing, making available to even the poorer families slacks, dresses, coats, undergarments, sweaters, shoes, handbags, belts, and other items. Luo enjoy dressing up for funerals and weddings and are considered to be very fashionable throughout Kenya.

### **12 FOOD**

Agriculture is very significant and is a primary responsibility of women. They tend to use hand hoes while men use ox plows. The primary crops are maize, millet, and sorghum. While coffee, tobacco, cotton, and sugarcane are important cash crops, cattle, sheep, goats, and chickens are also very significant, especially cattle, which are used for bride-wealth. Fish from Lake Victoria and streams are important, especially tilapia. Many foods are purchased, such as sugar, bread, and butter, which are consumed with tea on a daily basis, a custom known as "tea time" and derived from the British colonial era that ended in 1963. Tea may also be taken with cakes and occurs in mid-morning and late afternoon.

The staple food eaten several times per day is *ugali*. This is made from maize meal stirred in boiling water until it becomes a thick and smooth porridge. *Ugali* is always taken with an accompanying sauce, such as meats and stews. Greens (*sukumawiki*) are also frequently eaten with *ugali*. Maize, popular throughout Kenya, is frequently sold for money. This has led many families, when pressed economically for money for school fees or clothes, to sell their maize. For this reason, there is a periodic famine throughout Luoland that occurs every year during the long, dry season prior to harvest.

The Luo had no ideas about private ownership of land prior to the colonial period, which spans the 20th century. They followed communal principles that guaranteed that everyone was assured access to land for cultivation. Women did not inherit land but had access to the land of their husband and their own unmarried sons. Explorers who arrived in western Kenya before colonialism noted that food was very abundant throughout Luoland. With private property, however, it be-

came increasingly impossible for the land to be made available to those without money. Land alienation and a rise in population, which in Kenya is one of the highest in the world, have caused periodic hunger for many people. Presently, there is a stigma associated with selling land; for this reason, money obtained through its sale is considered by many Luo to be "bitter"; that is, it is money that is obtained through some injustice. This money must be kept apart from transactions involving livestock and bride-wealth. Also considered taboo is money obtained through the selling of roosters. Luo homes are considered incomplete without a rooster, which symbolizes "maleness," especially fertility. After the funeral of a man, a rooster is taken from his house and eaten by his relatives. This signifies the end of his homestead. When a new homestead is founded, a man is given a rooster from his father's home.

### **13 EDUCATION**

Kenya introduced a new system of education in the 1980s known as the "8-4-4 system," modeled after the American system. Luo now go eight years to primary school, four years to secondary school, and four years to college. There is the desire to make secondary school more practical than it was under the British system in which students attended primary school, followed by high school with stressful and consequential 0-level and A-level exams that determined a student's vocational placement for life. Only those with the highest scores on the A-level could proceed on to the university. The British system emphasized performance on exams that often had questions reflecting European rather than African content. The new system places more emphasis on school performance and subject matter that is more African.

Luo attend technical, secretarial, nursing, computer, teacher training, and business schools after high school as alternatives to the university. There is a new university at Maseno near Kisumu that will provide easy access for those wishing to attend university. Education is highly valued among the Luo, and they are well represented in the professions, especially university and higher-educational institutions. Nevertheless, there still remains a high level of illiteracy, especially among females. For example, in polygynous marriages there is a strong tendency for younger wives to be more educated than their older counterparts. This pattern reflects recent changes where more Luo are now recognizing the importance of sending girls to school.

The Luo success in academic pursuits may well be related to the value given to "wisdom" in their culture. Modern philosophers have applied the term "sage philosophy" to describe individuals among the Luo who, in the past and present, excel in teachings and reflections on the human condition. The Luo society is an open one. All individuals are encouraged to express themselves publicly. "Truth" (*adier*) is expressed through songs and folklore by respected elder men and women who are acknowledged as wise. Most respected, however, is the *japaro*, a term that translates into English as "thinker," who is consulted on all matters of interest to community welfare. The most famous sage until his death in the mid-1990s was Mr. Oginga Odinga, a widely respected elder and former vice-president of Kenya. He spoke out publicly during colonialism and in post-colonial politics against what he considered to be injustices. In his writings he emphasized Luo values for communal welfare

and concern for preservation of traditional values. His death was deeply felt by most Luo and many other Kenyans as well.

#### 14 CULTURAL HERITAGE

The Luo consider their entire traditional way of life to be an important community resource. There is a great deal of disagreement over what should be preserved and what should change. Customs centering around marriage and gender relations are hotly debated. It is felt that many practices should be retained from this area of life as well as from music, dance, and folklore. The Luo, however, did not develop an elaborate material culture given that they were, for much of their history, primarily a pastoral population and therefore on the move in search of pasture. They did, however, excel in the verbal arts and philosophical arts associated with successful communal life.

Songs are very popular today as in the past. Musicians nowadays praise and lament political, generational, economic, and cultural contradictions in contemporary life. Luo devote much time to listening to music and purchasing records, tapes, and CDs. Christian church music is also a form of entertainment. It is said that the short story was a well-developed art among the Luo in traditional times. Such stories were often accompanied by music. Perhaps because of the importance given to the short story in Luo culture, the most important short-story writer in Kenya today is the Luo woman, Ms. Grace Ogot. In her stories she includes many traditional themes as well as modern dilemmas, such as an educated woman living in a polygynous arrangement. Some of her best-known stories are, "The Other Woman," "The Fisherman," and "The Honorable Minister."

#### 15 WORK

The most notable fact about the Luo agrarian economy is that women play the primary role in subsistence farming. Before the introduction of the modern money economy, the garden was the centerpiece of the women's world of work. Industrious women could amass considerable wealth by exchanging their garden produce for animals, handicrafts, pots, and baskets. Presently, there continues to be a very strong vocabulary involving farming in the Dholuo language. For example, terms distinguish the relative size of gardens, the conditions of the soil, and the quality of the landscape. There is also a rich vocabulary of farm activities. These include terms for clearing, digging, planting by scattering or placing seeds into holes, weeding, reweeding, and harvesting. Each of these terms has many constituent terms to cover fine points of variation. A complicated vocabulary also exists for farm instruments. The crops themselves are described in great detail, as are troublesome weeds. For example, concerning maize, some of the terms are: *oduma* (white maize), *nyamula* (yellow maize), *oking* (fine grain maize), and *obabari* (bigger, not-so-shapely maize grain and cobs).

A young girl is expected to assist her mother and her mother's co-wives in farming land owned by her father, brothers, and paternal uncles. Even though a girl may go to school and rise to a prominent position in society, there is often still a strong association with the land and digging. Many Luo living in Nairobi, for example, practice "urban agriculture." When returning home to the rural areas on vacation, women frequently "dig" to get vegetables to bring with them back to the city.

Men are preoccupied with livestock and have mastered an impressive vocabulary to differentiate among them. It is said that men spend a great deal of their time in "social labor" concerned with placing their cattle in good social contexts, such as bride-wealth exchanges, trading partnerships, and commercial sales. In the modern economy, cattle and goats have taken on monetary value as well as being items of social prestige in and of themselves. Men, as compared to women, have the major control over animals and those crops that are primarily cash crops. In sum, the Luo idea that work should be divided according to the principles of age and gender are still evident.

#### 16 SPORTS

The Luo are participants in all of the major national sports currently played in Kenya. One sport, however, that receives a great deal of support is soccer. The soccer club known as Gor Mahia (Gor Mahia, like Ramogi and Lwanda Magere, was a great ancestor in Luo history) is Luo and symbolizes success for the ethnic group when they are victorious on the field. Some other ethnic groups support their own soccer teams, too. Secondary schools provide an assortment of sports for young people, giving them an opportunity to engage in competitive games such as track-and-field and soccer. Children enjoy games in the village, such as racing, wrestling, and soccer. Some boys who live near the lake are good swimmers.

#### 17 ENTERTAINMENT AND RECREATION

Childhood play activities for girls include grinding soil on a flattened stone in imitation of adults who grind grains. Girls play "babies" with dolls made from clay or maize cobs in imitation of their mothers or child nurses who care for them. Female names are given to the dolls. Girls and boys imitate funeral ceremonies by mourning over the "death" of a playmate. Boys and girls play hide-and-seek together, and "house" by constructing small domiciles modeled after adult huts. Girls play *kora* with pieces of broken pottery or stones. In this game, stones are collected in the palm then thrown into the air. The main purpose is that more than one of the stones thrown into the air must come to rest on the back of the hand. As children reach middle childhood, between 6 and 10 years of age, separate play groups are formed by gender. Now girls spend more time at home caring for younger siblings and assisting in household duties and gardening. Boys have more freedom and combine play activities with responsibilities for herding and care of animals. One game in particular played by children and adults is *bao*, the name of a board game played widely throughout Africa. This game involves trying to place seeds on the opponent's side of the board while he or she attempts to defend against this.

Entertainment is now available through radio and television. In Luoland, programs are provided in KiSwahili, English, and Dholuo on the radio. Virtually all homes have radios, which are a significant source not only of entertainment in stories and music but also of education for health and national development. Books and printed media have now largely replaced public oratory as a means of entertainment. Nevertheless, visiting is a special joy that can be characterized as socially lively with lots of animated discussion. The verbally adroit person is still widely admired and respected.

Birthday parties are now much more important than they were in the past, when individuals did not reckon their age in years. Parents try to make their children's birthdays special

with a birthday cake, cards, and gifts. Weddings and funerals, as in the past, are still major forms of entertainment for old and young alike. Church groups, clubs, women's organizations, and schools are important organizations for their members' social calendars.

## **18 FOLK ART, CRAFTS, AND HOBBIES**

See "Entertainment and Recreation."

## **19 SOCIAL PROBLEMS**

Luo consider their most pressing social problem to be their perceived isolation from Kenya national politics. Kenya today is characterized by a multi-party democracy. One of the consequences of the multiparty system in Kenya is that there is a tendency for members of a specific ethnic group to align themselves with a given party. This relationship between ethnicity and politics is, of course, not unique to Kenya and is found in most multi-ethnic nation-states practicing democracy. The Luo dominate within the Ford-Kenya party, one of the several opposition parties presently in Kenya. Within the Ford-Kenya party, there are Luo factions that vie for party leadership. During the colonial era and since independence, the Luo have been somewhat isolated from national leadership even though they are the second-largest ethnic group in the country. The first vice-president of Kenya, and the most significant politician in post-colonial Luo politics, was Oginga Odinga. He was instrumental in initiating the multi-party movement in Kenya in the early 1990s, after his isolation (since independence) from participation in national governments by those in power. It is felt that his isolation was intentional by those seeking to keep the Luo out of power. Another prominent Luo politician was Tom Mboya, widely admired around the world. He was killed by an assassin's bullet in 1969 while serving as the Minister of Economic Planning and Development and Secretary General of the Ruling KANU Party. His death prevented him from succeeding President Kenyatta as the president along the lines felt likely to have occurred by his numerous supporters. His death was considered by many Luo to have been politically motivated.

Specific social problems follow from what the Luo consider to be marginal political participation in Kenya. It is believed that economic development in Western Kenya is low as part of a concerted effort to isolate them from development projects. It is, in fact, true that the districts where Luo live in the west are marginal on most indicators of development. Roads are usually badly in need of repair, rates of HIV infection are comparatively high, food shortages are frequent, and infant mortality is among the highest in the country. Typical of this situation is that, although Kisumu is on the shores of Lake Victoria, nevertheless it suffers from an acute water shortage. Moreover, the municipal water supply is so badly treated that residents suffer from water-borne diseases, such as typhoid fever, amoebic dysentery, common dysentery, and diarrhea. Typically, tourism has bypassed Luoland and Lake Victoria in favor of Nairobi and the coastal area of Kenya. This is so even though Lake Victoria has many features of interest to tourists such as hippopotami, freshwater fish, and cultural attractions. All in all, there is little doubt that the facts of marginalization are difficult to deny, in spite of differences of opinion over their causes.

*A woman from the Luo tribe sits with two children on some of the belongings they salvaged from their home. Members of the Luo tribe set fire to homes alleging they were owned by a Kikuyu. At least ten lives were lost in renewed political and ethnic clashes in western Kenya in early 2008. (Yasuyoshi Chiba/AFP/Getty Images)*

## **20 GENDER ISSUES**

Just like their neighboring Luhya, the Luo people follow a patrilineal system of kinship. Gender roles are assigned to men and women in ways that create, reinforce, and perpetuate the relationships in which males are viewed as superior and women are viewed as subordinate. Patriarchy in the Luo context has traditionally ensured that women cannot pose a challenge to male dominance. Luo boys and girls are conditioned to behave in certain ways and to play different roles in society. The Luo people have distinct cultural practices governing the gender division of labor, marriage, and women's access to resources. For example, women are supposed to do most of the domestic chores, such as fetching firewood, cooking, taking care of children, and also farm work. Because of the high rate of male out-migration, an estimated 30–60% of households are headed by females, who have to single-handedly farm their fields in the absence of men.

Kenya as a whole ranks poorly in the Gender Gap Index in terms of women's economic participation, educational attainment, health, political empowerment, maternity and child-bearing, earnings, and basic rights. The AIDS epidemic has also taken a toll among both men and women in Luoland, especially in the main urban center, Kisumu. In short, gender empowerment and equality constitute the major gender issues among the Luo.

# MAASAI

**PRONUNCIATION:** MAH-sigh

**LOCATION:** Kenya, Tanzania

**POPULATION:** Approximately 880,000

**LANGUAGE:** Maa (Olmaa)

**RELIGION:** Traditional beliefs

**RELATED ARTICLES:** Vol. 1: Kenyans; Tanzanians

## <sup>1</sup> INTRODUCTION

The Maasai are thought of as the quintessential cattle herders of Africa, yet they have not always been herders, nor are they all today. Because of population growth, development schemes, and land shortages, cattle raising is in decline. However, cattle still represent "the breath of life" for many Maasai. When given the chance, they choose herding above all other livelihoods. For many Westerners, the Maasai are Hollywood's noble savage—fierce, proud, handsome, graceful of bearing, and elegantly tall. Hair smeared red with ochre, they either carry spears or stand on one foot tending cattle. These depictions oversimplify the changes in Maasai life during the 20th century. Today, Maasai cattle herders may also be growing maize or wheat, rearing Guinea fowl, raising ostriches, or may be involved in tourism and ecosystem management.

In precolonial times, Africans, Arabs, and European explorers considered the Maasai formidable warriors for their conquests of neighboring peoples and their resistance to slavery. Caravan traders traveling from the coast to Uganda crossed Maasailand with trepidation. However, in 1880–81, when the British inadvertently introduced rinderpest (a cattle disease), the Maasai lost 80% of their stock. The colonizers further disrupted the life of the Maasai by moving them to a reserve in southern Kenya. While the British encouraged them to adopt European ways, they also advised them to retain their traditions. These contradictions resulted in benign neglect and allowed the Maasai to develop almost on their own. However, drought, famine, cattle diseases, and intratribal warfare in the 19th century greatly weakened the Maasai and nearly annihilated certain tribes.

Since Kenyan and Tanzanian independence in the 1960s, land tenure has changed dramatically. Modern ranching, wheat schemes, and demarcated grazing boundaries in the Maasai district are becoming common. Wage and cash economies are replacing barter. Consequently, the Maasai have begun to integrate themselves into the modern economies and mainstream societies of Kenya and Tanzania, albeit with considerable reluctance.

## <sup>2</sup> LOCATION AND HOMELAND

The Maasai are thought to have originated in the Upper Nile Valley. Their myths speak of ascending from a broad and deep crater bounded on all sides by a steep escarpment. By the 1600s they had begun migrating with their herds into the vast arid, savannah-like region of East Africa straddling the Kenya-Tanzania border. Presently, their homeland is bounded by Lake Victoria to the west and Mt. Kilimanjaro to the east. Maasailand extends some 500 km (310 mi) from north to south and about 300 km (186 mi) at its widest point.

In 1994 estimates placed the Maasai population inside Kenya's borders at 450,000 inhabitants, and 430,000 Maasai living in Tanzania (1993 estimate). The greater Maasai nation comprises several cultural groups, which the Maasai have absorbed through conquest or assimilation. Besides their rural lifestyle, their language—Olmaa—unites them.

### 3 LANGUAGE

The Maasai are speakers of the Maa language, which is spoken as well by the Samburu and the Chamus living in central Kenya. Maa is a Nilotic language whose origins have been traced to the east of present-day Juba in southern Sudan. More than 20 variants of Maa exist, grouped into a northern cluster and a southern cluster. The Maasai belong to the southern group and refer to their tongue as Olmaa.

### 4 FOLKLORE

Maasai legends and folktales tell much about the origin of present-day Maasai beliefs, including their ascent from a crater, the emergence of the first Maasai prophet-magician (Lai-bon), the killing of an evil giant (Oltatuani) who raided Maasai herds, and the deception by Olonana of his father to obtain the blessing reserved for his older brother, Senteu (a legend similar to the Biblical story of Jacob and Esau).

One myth of origin reveals much about present-day Maasai relations between the sexes. It holds that the Maasai are descended from two equal and complementary tribes, one consisting strictly of females, and the other of males. The women's tribe, the Moroyok, raised antelopes, including the eland, which the Maasai claim to have been the first species of cattle. Instead of cattle, sheep, and goats, the women had herds of gazelles. Zebras transported their goods during migrations, and elephants were their devoted friends, tearing down branches and bringing them to the women for home and corral building. The elephants also swept the antelope corrals clean. However, while the women bickered and quarreled, their herds escaped. Even the elephants left them because they could not satisfy the women with their work.

According to the same myth, the Morwak—the men's tribe—raised cattle, sheep, and goats. The men occasionally met women in the forest for trysts. The children from these unions would live with their mothers, but the boys would join their fathers when they grew up. When the women lost their herds, they went to live with the men, and, in doing so, gave up their freedom and their equal status. From that time, they depended on men, had to work for them, and were subject to their authority.

### 5 RELIGION

In contrast to the predominantly Christian populations of Kenya and Tanzania, the Maasai traditionally place themselves at the center of their universe as God's chosen people. Like other African religions, that of the Maasai holds that one high God (Enkai) created the world, forming three groups of people. The first were the Torrobo (Okiek pygmies), a hunting and gathering people of small stature to whom God gave honey and wild animals for sustenance. The second were the neighboring Kikuyu, cultivators to whom God gave seed and grain. The third were the Maasai, to whom He gave cattle, which came to earth sliding down a long rope linking heaven and earth. While the pygmies were destined to endure bee stings, and the Kikuyu

famines and floods, the Maasai received the noble gift of raising cattle. A Torrobo, jealous of the Maasai's gift of cattle, cut the "umbilical cord" between heaven and earth. For many Maasai, the center of their world remains their cattle, which furnish food, clothing, and shelter.

### 6 MAJOR HOLIDAYS

The traditional Maasai calendar has no designated holidays. It is divided into 12 months belonging to three main seasons: *Nkokua* (the long rains), *Oloirurujujuj* (the drizzling season), and *Oltumuret* (the short rains). The names of the months are very descriptive. For example, the second month of the drizzling season is *Kujorok*, meaning "The whole countryside is beautifully green, and the pasture lands are likened to a hairy caterpillar."

Maasai ceremonial feasts for circumcision, excision, and marriage offer occasions for festive community celebrations, which may be considered holidays. As the Maasai are integrated into modern Kenyan and Tanzanian life, they also participate in secular state holidays.

### 7 RITES OF PASSAGE

Life for the Maasai is a series of conquests and tests involving the endurance of pain. For men, there is a progression from childhood to warriorhood to elderhood. At the age of four, a child's lower incisors are taken out with a knife. Young boys test their will by burning themselves on their arms and legs with hot coals. As they grow older, they submit to tattooing on

the stomach and the arms, enduring hundreds of small cuts into the skin.

Ear piercing for both boys and girls comes next. The cartilage of the upper ear is pierced with hot iron. When this heals, a hole is cut in the ear lobe and gradually enlarged by inserting rolls of leaves or balls made of wood or mud. Nowadays plastic film canisters may serve this purpose. The bigger the hole in the lobe, the better. Those dangling to the shoulders are considered ideal.

Circumcision (for boys) and excision (for girls) is the next stage, and the most important event in a young Maasai's life. It is a father's ultimate duty to ensure that his children undergo this rite. The family invites relatives and friends to witness the ceremonies, which may be held in special ceremonial villages called *imanyat*. The *imanyat* dedicated to circumcision of boys are called *nkang oo ntaritik* ("villages of little birds"). After completing the prerequisite requirements, the young warriors establish a village camp some miles away, called a *manyata*, where they will live with their mothers and sisters.

Circumcision itself involves much physical pain and tests a youth's courage. If they flinch during the act, boys will bring shame and dishonor to themselves and their family. At a minimum, the members of their age group will ridicule them and they will pay a fine of one head of cattle. However, if a boy shows great bravery, he receives gifts of cattle and sheep.

Girls must endure an even longer and more painful ritual, which prepares them for childbearing. (Girls who become pregnant before excision are banished from the village and stigmatized throughout their lives.) After passing this test of courage, women say they are afraid of nothing. The guests celebrate the successful completion of these rites by drinking great quantities of mead and dancing. The boys are now ready to become warriors, and the girls ready to bear a new generation of warriors. In a few months, the young woman's future husband will come to pick her up and bring her with him to live with his family.

After passing the tests of childhood and circumcision, boys become young warriors and must fulfill a civic requirement similar to military service. They live for periods of up to several months in the bush, where they learn to overcome pride, egotism, and selfishness. They share their most prized possessions, their cattle, with other members of the community. However, they must also spend time in the village, where they sacrifice their cattle for ceremonies and offer gifts of cattle to new households. This stage of development matures a warrior and teaches him *nkaniet* (respect for others), and he learns how to contribute to the welfare of his community. The stage of "young warriorhood" ends with the *eunoto* rite, with which a man ends his periodic sojourns in the bush and returns to his village, putting his acquired wisdom to use for the good of the community.

## 8 INTERPERSONAL RELATIONS

To control the vices of pride, jealousy, and selfishness, each child belongs to an "age set" from birth and must obey the rules governing relationships within the set, between sets, and between the sexes. Warriors, for example, must share a girlfriend with at least one of their age-group companions. All Maasai of the same sex are considered equal within their age group.

Many tensions exist between children and adults, elders and warriors, and men and women, but the Maasai control these with taboos. A daughter, for example, must not be present while her father is eating. Only non-excised girls may accompany warriors into their forest havens, where they partake of meat (see Food). Though the younger warriors may wish to dominate their communities, they must follow rules and respect their elders' advice.

## 9 LIVING CONDITIONS

Maasai living conditions may seem primitive, but the Maasai are generally proud of their unencumbered lifestyle and do not seek to replace it with urban amenities. Nevertheless, the old ways are undergoing transformation. Formerly, cattle hides were used to make walls and roofs of temporary homes during migrations. They were also used to sleep on. Permanent and semi-permanent homes resembling igloos were built of sticks and supple branches plastered with mud, and with cow dung on the roofs. They were windowless and leaked considerably. Nowadays, tin roofs and other amenities are fairly common replacements for these Spartan dwellings.

Generally, the Maasai are remarkably healthy people. Their resistance to disease stems in part from their use of medicinal herbs and bark and their dietary discipline, which includes judicious use of cattle fat. Babies receive a spoon of beef or sheep's fat daily from birth to weaning, which strengthens them and immunizes them from deadly diseases. In some Maasai groups, when a cow dies of anthrax, husbands of pregnant women give their wives a piece of the infected animal's tumor, which inoculates the fetus. The mother is likely to survive because she also was inoculated before birth. This allows the Maasai to eat the meat of sick cattle, including those that have died of anthrax, which is normally fatal to humans. Warriors regularly consume a soup made of medicinal bark to thwart common ailments.

Today a few paved trunk roads and many passable dirt roads make Maasailand accessible. The Maasai travel by bus and bush taxi much like their fellow citizens when they need to cover sizable distances.

## 10 FAMILY LIFE

The Maasai are a patriarchal society. Men typically speak for women and make decisions in the family. Male elders decide community matters. Until the age of seven, boys and girls are raised together. Mothers remain close to their children, especially their sons, throughout life. Once circumcised, sons usually move away from their father's village, but they still heed his advice. Girls learn to fear and respect their fathers and must never be near them when they eat.

One's age-mates are considered extended family and required to help each other. Agemates share nearly everything, even their wives. Girls are often promised in marriage long before they are of age. However, even long-term arrangements are subject to veto by male family members.

Once married, a woman leaves her family to live with her husband, automatically becoming the wife of her husband's age-mates, too. Thus, a warrior may arrive in a village, ask for a man of his age group, and oblige him to find other lodgings for the night. The wife receives the stranger with hospitality, takes care of his staff, knife, and other effects, and offers him milk and the bed across from hers. She may agree to sleep with him,

*Maasai at a wedding in Kenya. (David Johnson)*

but she has the right to refuse. Children from these unions belong to the woman and her husband.

### **11 CLOTHING**

Maasai apparel varies by period, age, sex, and place. Traditionally, shepherds wore capes made from calf hides, and women wore capes of sheepskin. The Maasai decorated these with glass beads. In the 1960s, the Maasai began to replace animal-skin capes with bolts of commercial cotton cloth. Women tied these around their shoulders in different ways as capes (*shuka*) and perhaps over a dress or tied around the waist. The Maasai color of preference is red, although black, blue, striped, and red checkered cloth is also worn, as are multicolored African designs. Elderly women still prefer red, dyeing their own cloth with ocher. Until recently, men and women wore sandals cut from cow hides, which now are increasingly replaced by tire-strip sandals and plastic sandals and shoes.

Young women and girls, and especially young warriors, spend much time primping, and styles change with successive age groups. The Maasai excel in designing jewelry, and they decorate their bodies through such practices as tattooing, head shaving, and hair styling with ocher and sheep's fat, which they also smear on their bodies. A variety of colors are used to create body art. Women and girls wear elaborate bib-like bead necklaces, as well as headbands, and earrings, which are both colorful and strikingly intricate. When ivory was plentiful, warriors wore ivory bands on their upper arms much

like the ancient Egyptians. Jewelry plays an important role in courtship.

### **12 FOOD**

As with shelter and clothing, the Maasai depend on cattle for both food and cooking utensils. Cattle ribs make stirring sticks, spatulas, and spoons. The horns are used as butter dishes and the large horns as cups for drinking mead.

The traditional Maasai diet consists of six basic foods: meat, blood, milk, fat, honey, and tree bark. Wild game (except the eland), chicken, fish, and salt are ritually forbidden. Allowable meats include roasted and boiled beef, goat, and mutton. Both fresh and curdled milk are drunk, and blood is drunk at special times: after giving birth, after circumcision and excision, or while recovering from an accident. It may be tapped warm from the throat of a cow, or drunk in its coagulated form. It can also be mixed with fresh or soured milk or drunk with therapeutic bark soups (*motori*). It is from blood that the Maasai obtain salt, a necessary ingredient in the human diet. People of delicate health and babies eat liquid sheep's fat to gain strength.

Honey is obtained from the Torrobo tribe and is a prime ingredient in mead, a fermented beverage that only the elders may drink. In recent times, fermented maize with millet yeast or a mixture of fermented sugar and baking powder have become the primary ingredients of mead.

The Maasai generally take two meals a day, in the morning and at night, following an unusual pattern dictated by the dietary prohibition on mixing milk and meat. They drink milk for ten days—as much as they want morning and night—and eat meat and bark soup for several days in between. Some exceptions to this regime exist. Children and old people may eat corn meal or rice porridge and drink tea with sugar. For warriors, however, the sole source of true nourishment is cattle. They consume meat in their forest hideaways (*olpul*), usually near a shady stream far from the observation of women. Their preferred meal is a mixture of meat, blood, and fat (*munono*), which is thought to give great strength.

Many taboos govern Maasai eating habits. Men must not eat meat that has in any way been in contact with women or handled by an uncircumcised boy after it has been cooked. Older members do not eat meat belonging to younger ones unless they are “bribed” for the honor. A new husband does not eat his bride’s food until she “bribes” him by giving him a heifer.

### 13 EDUCATION

There is a wide gap between Western schooling and Maasai traditional education, by which children and young adults learned to overcome fear, endure pain, and assume adult tasks. For example, despite the dangers of predators, snakes, and rogue elephants, boys would herd cattle alone with the blessing of their fathers. If they encountered a buffalo or lion, they were supposed to call for help. However, they sometimes reached the pinnacle of honor by killing lions on their own. Following such a display of courage, they became models for the other boys, and their heroics were likely to become immortalized in the songs of the women and girls.

Prior to independence, school participation gradually increased among the Maasai, but there were few practical rewards for formal education and therefore little incentive to send a child to school. Formal schooling was primarily of use to those involved in religion, agriculture, or politics. Since independence, as the traditional livelihood of the Maasai became less secure, school participation rates climbed dramatically.

More recently, there has been a concerted push by government and nongovernmental organizations (NGOs) to enroll Maasai children in schools and assimilate the Maasai into mainstream Kenyan and Tanzanian society. The elders, who have been at the forefront of resistance to change, fear that schools have become tools to strip the Maasai of traditional respect for and unity of their culture. Those who embrace modern education argue that the Maasai must adapt quickly or die.

### 14 CULTURAL HERITAGE

The Maasai have a rich collection of oral literature that includes myths, legends, folktales, riddles, and proverbs. These are passed down through the generations (*see* Folklore and Entertainment and recreation). The Maasai are also prolific composers. Women are seldom found at a loss for melodies and words when some heroic action by a warrior inspires praise. They also improvise teasing songs, work songs for milking and for plastering roofs, and songs with which to entreat their traditional god (Enkai) for rain and other needs.

### 15 WORK

Labor among traditional pastoral Maasai is clearly divided. The man’s duty is to his cattle. He must protect them and find them the best pasturage possible and the best watering holes. Women raise children, maintain the home, cook, and do the milking. They also take care of calves and clean, sterilize and decorate calabashes (gourds). It is the women’s prerogative to offer milk to the men and to visitors.

Children help parents with their tasks. A boy begins herding at the age of four by looking after lambs and young calves, and by the time he is 12, he may be able to care for cows and bulls and move sheep and cattle to new pastures. Similarly, the girls help their mothers with domestic chores such as drawing water, gathering firewood, and patching roofs. Nowadays, many Maasai perform a mixture of traditional and modern workforce labor, including ranching, conducting tourists to Maasai villages, and limited agriculture.

### 16 SPORTS

While Maasai may take part in soccer, volleyball, and basketball in school or in nontraditional settings, their own culture has little that resembles Western organized sports. Young children find time to join in games such as playing tag, but adults find little time for sports, or “horsing around.” Warding off enemies and killing lions are sports in their own right.

### 17 ENTERTAINMENT AND RECREATION

Ceremonies such as the *eunoto*, when warriors return to their villages as mature men, offer occasions for sustained partying and much merriment. Ordinarily, however, recreation is much more subdued. After the men return to their camp from a day’s herding, they typically tell stories of their exploits. Young girls sing and dance for the men. In the villages, elders enjoy inviting their age-mates to their houses or to rustic pubs (*muratina manyatta*) for a drink of beer.

### 18 FOLK ART, CRAFTS, AND HOBBIES

The Maasai make decorative bead jewelry for necklaces, earrings, head bands, and wrist and ankle bracelets. These are always fashionable, though styles change as age-groups invent new designs. It is possible for the astute observer to detect the year of a given piece by its age-group design. Maasai also excel in wood carvings, and increasingly produce tourist art as a supplementary source of income.

### 19 SOCIAL PROBLEMS

In the recent past, cattle theft and intertribal warfare were major social problems for the Maasai. Today, the main dilemma they face concerns adaptation to economic and social change. Key issues include land encroachment, formal schooling for children, jobs and skills development, and conserving traditional ways. Threats to their pastoral way of life have created a great deal of tension within the Maasai community, and in the foreseeable future, Maasai will struggle with the challenges of acculturation and assimilation. The Maasai may fear losing their children to Western schooling, but a modern education has increasingly become a necessity for the Maasai in order to remain competitive with their neighbors.

## 20 GENDER ISSUES

Male dominance in Maasai culture is enshrined in myths and folktales (see Folklore). The more benign aspects of this phenomenon are manifested in a traditional division of labor: women raise children, tend house, gather firewood, carry water, do the milking, cook (most foods) and serve guests. The taboos regarding what women can eat and do (see *Food*) are further indications of this subservience, while the woman's role in early marriage and her relationship to her husband's cohorts reveal how female submissiveness is embedded in Maasai thinking. Nonetheless, there is an abiding respect between men and women and boys and girls in Maasai culture, which has held the society together for centuries. As more Maasai children attend formal schools, and are exposed to ideas from outside the traditional sphere, gender relations will change. Whether they will reflect those of the broader Kenyan and Tanzanian societies around them, or whether they will take a different tack remains to be seen.

# MALAGASY

**PRONUNCIATION:** mahl-uh-GAH-see

**LOCATION:** Madagascar

**POPULATION:** 20 million

**LANGUAGE:** Malagasy (Merina); French

**RELIGION:** Traditional beliefs; Christianity; Islam; animism

## 1 INTRODUCTION

The origins of the Malagasy people remain a mystery. Scholars believe the Malagasy are a kaleidoscopic mix of Indonesian, Malayo-Polynesian, and African descendants. It is not known where the original people, the *Vazimba*, came from, nor where they are today.

Supposedly, the Indonesians were the first arrivals. Then came the Arabs, the Southern Indians, and merchants from the Persian Gulf. South and East Africans followed, and eventually Europeans, starting with the Portuguese, then the Spanish, the British, and finally the French, who conquered the island in 1895.

Today, the Malagasy population of 20 million people is divided into 18 identifiable ethnic groups in addition to the Comorans, the Karane (Indo-Pakistan), and the Chinese. The white people are either *zanathan*, a French term, local-born, or *vazaha* (newcomers).

Merina live in the central highlands of the island's capital, Antananarivo or Tanananrivo. Their home region is called Imerina. They are thought to have come from the east of Mangoro or from the northeast, pushing back, intermarrying with, and finally conquering the original inhabitants, Vazimba.

The Merina society is hierarchical and extremely structured. Previously they were divided into three main castes: the *Andriana*, the nobles; the *Hova*, freemen who are the commoners; and the *Andevo*, slaves descended from former slaves. Today, the caste division is no longer practiced or is not obvious.

The Merina ruled Madagascar before the French assumed control in 1895. They are usually highly educated and represent the modern middle class and the intellectual elite. They can be found scattered around the island, except in the extreme north or south and a portion of the west coast, as businessmen, doctors, ministers, managers of plantations, technicians, and government officials.

Betsimisaraka, "the many inseparables" or "the many who do not want to separate," are the second-largest ethnic group, found in the east. They are cultivators. They reside in isolated villages because of differences in dialect, in ritual or local political office, in cultural practice, and in material culture. Their political organization is village-based.

Betsileo, "the numberless invincibles," are a peaceful and hardworking peasant tribe of the central highlands around Fianarantsoa or the east coast of Madagascar. They are skilled craftsmen known for their mastery at managing water for their irrigated and terraced rice and cassava fields on poor soil. They share customs, beliefs, and historical traditions similar to the Merina, but are less warlike and less well organized.

Tsimihety are "the people who do not cut their hair"—a phrase that could be a sign of mourning or a sign that they did not observe hierarchy. It may also be derived from the fact that during the 19th century, facing Marofelana bandits, Tsimihety

men let their hair grow long so that they might be mistaken for women and would not be attacked. They reside in the north of Madagascar. They have 40 localized kinship groups, the largest being the Antandrona, the Maromena, and the Maromainty.

The Tsimihety are often referred to as mobile semi-nomadic people because it is their custom to move around for freedom. Peter J. Wilson, in his book *Freedom by Hair's Breadth: Tsimihety in Madagascar*, observes: "Through this mobility they could express their sense of freedom and defiance of outside authority because they could always exercise what Albert O. Hirshman has called the "exit option." They are egalitarians who do not believe in the ownership or transmission of land; rather they believe that individuals are stewards with a responsibility to manage the land on behalf of their ancestors. Land belonged to those who cultivated it or to those who have ancestors buried in a particular area."

Sakalava, "dwellers in long valleys," are a tall tribe of dark brown people, formerly the most powerful of the tribes. Majunga, now called Mahajunga, is their most important city. They are associated with the Islamic groups of Madagascar's southeast. Europeans from around the coast, communities already established in the southwest, and migrant people from the eastern seaboard form the Volamena (literally, "red silver" or "gold") royal lineage.

Anteifsy, "people of the sands," lived originally on the African continent and live in the southern end of the east coast of Farafangana, in Fianarantsoa Province. They live in three strata:

nobles, commoners, and descendants of slaves. Members of each stratum marry solely within their own group.

Antandroy, "the people of the thorny brambles," are a dark-skinned, primitive, and attractive tribe who live in the arid south around Ambovombe in the east. They are a branch of the Sakalava of the west coast and worked readily for colonists all over the island. They are a large, cohesive group with a uniform set of customs.

Tanala, "the people of the forests," live in areas where forests have been cut down on the slopes inland from Manakara on the east coast. They are divided into two subgroups—the Tanala Menabe and the Tanala Ikongo—with the Menabe living in less desirable areas. The Tanala lack political organization but are skilled hunters, food gatherers, and woodsmen.

Anteimoro, "the people of the coast," live in the region of Vohipeno and Manakara on the east coast, south of the center of the island. Some have Arab blood, and traces of an Arab culture exist. They are the only group that knew how to write before the London Missionary Society arrived in Madagascar in 1818. Unique contributions from the Anteimoro include manuscripts dealing with history and religious matters, written in the Malagasy language using Arabic script. They claim to be descended from Arabs who arrived by boats from Mecca in the 13th century, married local women, and founded a kingdom.

Their society is divided into castes, with the upper level claiming to be direct descendants of Arab settlers. Their culture also is divided by age, with each group being assigned specific functions and a particular status for a given number of years. They are known for the *ombiasy* (divine healers) and *sikidy* (fortune tellers).

Bara is a name with no certain meaning. The Bara are nomads of the southern highlands around Ihoisy and Betroka. They are artists, sculptors, dancers, cattle rustlers, and athletes. They are divided into four kinship groups living in different areas: Bara-Be, Bara-Iantsantsa, Bara-Vinda, and the Bara-Antevondro. They once considered agriculture degrading work; however, one can find some Baras working as sharecroppers on tobacco plantations in Miandrivazo or Malaimbandy.

Sihanaka, "those who wandered in the marshes," are found around Lake Alaotra, the largest fresh water lake on the island north of Antananarivo, west of Tamatave in Tamatave Province. They work as farmers, cattle herders, and fisherman, and are known to drain swamps to make rich agricultural land. They have features similar to the Merina and live next to them; however, they refuse to mix.

Antanosy, "the people of the island," are dark-skinned, flat-nosed, thick-lipped people. They were the first to drive the French settlers out of Fort Dauphin, in and after 1643. The Antanosy were divided by chiefdoms belonging to the noble class.

Mahafaly, "those who put taboos on things," are a dark-skinned, primitive tribe living around Ampanihy. Their kings were related to the kings of the Sakalava tribe before Madagascar was conquered. They are known for their mastery in carving the long wood staffs used to garnish their tombs.

Maka or Masombiky, "people of Mozambique," live on the west coast across from Africa, and are the only truly African descendants of the imported slaves, perhaps brought from the Mozambique Channel by Arabs from Zanzibar.

Bezanozano means "many little braids"—a name referring to their traditional hairstyle. In many ways, they resemble the

Betsimisaraka, with whom they live intermingled in the subprefecture Moramanga. They are herders and woodsmen.

Antakarana “people of the rocks,” lived in the northern tip on Diego-Suarez, now Antsiranana (Cap d’Ambre to Sambirano River). They are a heterogeneous group with mixed Sakalava, Betsimisaraka, and Arab ancestry. During Merina conquests, part of the group settled on the northwest coast, where they managed to preserve considerable independence. This group became Muslim, but they still maintained traditional customs dealing with family relations and burial practices. They raise cattle and also grow maize, rice, cassava, and other crops.

Antambahoako, “the descendants of Rabevahoaka,” are the smallest of the tribes. They live near Mananjary, south of the center of the east coast. They are the only ethnic group with a single common genealogy, being descended from King Raminia, who came from Mecca in the 14th century. They are no longer in contact with the Islamic world, but they retain fairly strong Muslim influences. They are divided into eight kinship groups and resemble the Betsimisaraka, whose homeland surrounds them. They are known as good fishermen and boatmen.

The Vezo are a small group of people living in the southwest part of Madagascar who, as John Mack notes in *Madagascar: Island of the Ancestors*, “do not practice circumcision, which is a central ritual elsewhere on the island, circumcision often being for men a crucial condition of access to ancestral tombs. This in itself argues for a strong African rather than Southeast Asian element in Vezo culture, and to this day they retain strong contacts with coastal peoples in Mozambique.”

In the 1800s, three major movements among the Sakalava, the Betsimisaraka, and the Merina created an alliance. Nevertheless, tension was constant, particularly among the different ethnic groups who were “ultimate masters of adaptation.”

On 26 June 1960 Madagascar gained independence from France.

In 1993 the government changed from a Communist dictatorship to a still-adapting free market democracy. Madagascar is being pressured by economic and environmental forces on all fronts. The economy and infrastructure continue to decay due to constant corruption and political instability. Economic reforms have been erratic. Other nations seem more interested in preserving the endangered species rather than the people.

Overall, Madagascar is ranked as one of the poorest countries in the world, suffering from chronic malnutrition, underfunded health and education facilities, a 3% annual population growth rate, and a severe loss of forest lands accompanied by erosion.

Madagascar has six governmental administrative divisions: Antananarivo or Tananarive, Antsiranana, Fianarantsoa, Mahajanga, Toamasina, and Toliary. Elections were held in February 1997. Following those elections, President Didier Ratsiraka was reinstated chief of state. (President Ratsiraka was the president of Madagascar from mid-1975 until the end of the 1980s.) However, in the 2001 presidential elections, Marc Ravalomanana shocked most outside observers when he claimed outright victory, supplanting veteran politician and longtime president of 27 years, Ratsiraka. In the elections of May 2006, Marc Ravalomanana was once again declared the winner of the presidential elections. In April of 2007 voters in a referen-

*The Malagasy population is divided into 18 identifiable ethnic groups in addition to the Comorans, the Karane (Indo-Pakistan), and the Chinese. (Cory Langley)*

dum endorsed constitutional reforms to increase presidential powers and make English an official language. The consolidation of power by Ravalomanana has raised questions about his authoritarian tendencies.

The legislative branch of government is a bicameral Parliament which consists of a National Assembly or Assemblée Nationale and a Senate. The National Assembly consists of 127 seats, reduced from 160 seats by an April 2007 national referendum. Members are elected by popular vote to serve four-year terms. The Senate or Senat has 100 seats; two-thirds of the seats are filled by regional assemblies and the remaining one-third of seats appointed by the president to serve four-year terms. The decentralized regional assemblies were elected in February 1997 and in the May 2006 elections.

## **2 LOCATION AND HOMELAND**

One billion years ago a piece of land broke away from Africa and moved southeast to become an island continent in the Indian Ocean—Madagascar. Many of the species of plants and animals found on the island became extinct or pursued separate evolutionary courses. As a result, 90% of all species on Madagascar are unique, found nowhere else in the world. Some of the unusual species that evolved are the lemurs, the tortoises, the *Aepyornis* (elephant birds), the tenrec, the chameleons, and other strange and exotic insects and birds.

Madagascar, located 250 miles off the east coast of Africa, is the fourth largest island in the world, after Greenland,

New Guinea, and Borneo. It is approximately 1,000 miles long and 360 miles wide, nearly the size of California, Oregon, and Washington combined.

### 3 LANGUAGE

Malagasy, French, and English are the country's official languages. The Malagasy language is rich in metaphor and poetic imagery and belongs to the Malayo-Polynesian family of languages. Although the Malagasy language includes many dialects, the Merina language is the official language of the state and is universally understood. The basic Malagasy vocabulary is 93% Malayo-Polynesian in origin and there is evidence of borrowings from Arabic, Bantu, Sanskrit, and Swahili.

### 4 FOLKLORE

Malagasy ancestor worship includes a celebration known as the *famadihana* (turning over the dead). Each year, ancestors' bodies are removed from the family tomb and the corpses are rewrapped in a fresh shroud cloth. Family members make special offerings to the dead ancestors on this occasion, which is accompanied by music, singing, and dancing. Malagasy do not consider death to be the absolute end to life. In fact, Malagasy believe that after death, they will continue to be interested and involved in the affairs of their family. Malagasy believe that dead family members continue to influence family decisions and are thus honored. For this reason, Malagasy tombs are usually far more substantial in construction and luxurious than the homes of the living."

Many Malagasy believe that spirits are present in nature, in trees, caves, or rock formations, on mountains, or in rivers or streams. Some also fear the *tromba*, when the spirits of the unknown dead put people into a trance and make them dance. The one who is possessed must be treated in a ritual by an *ombiasy* (a divine healer). These ombiasis are known to have supernatural forces, particularly in the area of constellations. This is why, quite often, people consult or rely on the ombiasis to look over the ill or the dying, or to decide the proper date to have a marriage, a circumcision or a *famadihana* (turning of the dead).

### 5 RELIGION

Traditional religion in Madagascar is identical with traditional culture; ancestral civilization determines values and behavior. All Malagasy believe that there is one supreme being called Zanahary (God) or Andriamanitra (Rakotozoa). There is no dogma or clergy. "Men who die 'leave to become God,' having powers with the rank they held in life," and "prayers are always asked for blessing with both Zanahary and the ancestors," observes Harold D. Nelson in his *Area Handbook for the Malagasy Republic*. He goes on: "about [half] of the population are Christians, divided almost evenly between Roman Catholics and Protestants; [there is a] small Muslim element; [the] rest [of the] population adheres to indigenous beliefs and practices in which [an] ancestor cult is [a] primary feature."

### 6 MAJOR HOLIDAYS

The government of Madagascar's official holidays include the following:

January 1	New Year's Day
March 29	Memorial Day
Movable	Monday Easter
May 1	Labor Day
May 8	Ascension Day
Movable	Monday Pentecost Holiday
May 25	Unity African Organization Day (UAO)
June 26	National Day
August 15	Assumption
November 1	All Saints' Day
December 25	Christmas Day

### 7 RITES OF PASSAGE

An important celebration of Malagasy culture is circumcision or *mamora raza*. Once a young boy is circumcised, the eldest male in the family is expected to eat the foreskin with a banana.

However, circumcision in the Tsimihety culture is a "hit or miss" situation which the circumciser, or *tsimijoro*, performs with or without parental consent. The term for this is *kiso le-hifitra*. Tsimihety do not have a celebration or feast after the procedure, but celebrate before if the ceremony is formalized. Formalization takes place when and if the boy's father invites the *tsimijoro* and his wife's brother; both males contribute a cow to the proceedings. Then, meat is distributed to the family or close affinities. At night, before the circumcision, both families sing for the happiness of the child. The operation is performed before dawn. Special powerful water, or *rano mala-za*, is poured over the penis, after which the prepuce is marked with white earth. The foreskin is then given to the wife's brother, who has to swallow it, or he might throw it over the roof of the house. The *tsimijoro* spits salted water onto the wound. After six days, the boy is thrown into a river or pond where he is bathed.

The *Vezo* do not practice circumcision, nor is female circumcision practiced in the Malagasy cultures.

### 8 INTERPERSONAL RELATIONS

On a personal level or in one-to-one relationships, the Malagasy people are hospitable, very warm, and amicable. However, in unfamiliar surroundings with unfamiliar people, they appear to be reserved, somewhat distant, or unassertive. They are not likely to be the first to initiate a conversation and are not likely to continue a conversation.

A single handshake and a "hello" is the proper greeting when people are introduced. A handshake is also used when saying goodbye. Among family and close friends, a kiss on both cheeks is exchanged at every meeting, regardless of the number of people present or how often they have met during the preceding days. The custom is for women and the young to initiate greetings when they meet elders.

A polite but simple refusal of an offering, especially food or a dance from an invited guest, is considered rude and pompous. It is better to fabricate excuses than to simply refuse politely. It is also considered embarrassing if a host does not offer a visitor a chance to sit and have something to eat and drink.

Regardless of the situation, elders and seniors are always right, and women are expected to take the modest position, particularly in public.

## 9 LIVING CONDITIONS

The high incidence of disease in Madagascar is a result of a nutritionally inadequate diet and insufficient medical care and sanitation practices. Malaria, schistosomiasis, and tuberculosis are common diseases, along with leprosy, bubonic plague, diphtheria, typhoid, venereal infections, tetanus, hepatitis, and gastroenteric parasites.

Madagascar is considered a third world country, and basic essential necessities such as electricity, clean water, stable housing, and transportation are hard to come by for the average citizen.

When walking the streets of Madagascar, it is evident that the people are sharply divided between an upper class and a lower class. A middle class virtually does not exist. Many upper-class homes are fenced and guarded 24 hours a day and filled with maids who work at the beck and call of their owners.

## 10 FAMILY LIFE

The strong and significant social value of Malagasy culture is summed up in the word *fiavanana*, which refers to both kinship and solidarity. As Nelson observes, "Family loyalties override all others, and help with expenses occasioned by marriages, funerals, and sickness continues to be a moral imperative." Help is never regarded as an exchange of economic services but, instead, as the demonstration of a moral link between kin, related or not, especially in times of death.

Most Malagasy social activities revolve around family—which usually consists of three generations—whether family members may live in one household or in a number of households. The head of the local family is usually the oldest male or father, who makes major decisions that affect the family interests, represents the family in dealings with the outside world, and reprimands those who act counter to the welfare and reputation of the family. In some instances, the oldest female plays these roles.

But the powers of the eldest male have diminished in the cities, where he can no longer protect family members as he would have in the past, or where the young can escape his control. Nevertheless, parental control remains stronger in Madagascar than in Western countries. If a father is deceased, then the eldest son assumes the role of the father and is often referred to as "father" or *dada* by the younger siblings. Daughters are required to perform household duties and to care for younger siblings, while sons go to school or are allowed to play.

In general, women are expected to care for family and domestic affairs. They are less educated than men and are hardly consulted in the decisions which affect the future of the society. They are discouraged from taking jobs away from men and are rejected from traditional male-dominated occupations. In a nutshell, women are subordinate to men, and younger Malagasy are subordinate to their elders.

An ancient ideal of having seven boys and seven girls per household is now regarded as a joke—a common thing to say

to a couple who has just married. A more modern expectation nowadays is four children per household.

Most communities are represented by a *fokon'olona*, a village council in which older generations always take precedence over younger generations. They lead meetings and make final decisions. In short, the senior male is the final authority.

In many ethnic groups, there is a tendency to marry within one's kinship group and within one's social rank. Other groups, such as the Tsimihety and the southeastern groups, insist on marrying outside the kinship group to forge stronger links with other villages. Merina marriages between close kinsmen keep land inheritance by both sons and daughters continuous.

A ceremony of purification is performed in cases of marriage between close kin. Marriage between the children of two sisters is considered most incestuous of all, because it is the mother, not the father, who gives *ra* (blood) to the child according to Malagasy beliefs.

Nelson tells us, "Polygamy, which formerly was frequent, has almost disappeared except for the Muslim Comorians and some people in the south and southwest, such as the Antandroy, Antanosy, Mahafaly, and Antaisaka." However, in Tsimihety culture, marriage is either expanded or not, and trial marriages are practiced because of their belief in partnership. Adolescents are free to have sexual relations in hopes of finding someone they would like to marry. Once the adolescents have chosen, the parents are informed, and the parents inform senior kin. Then discrete inquiry by relatives on both sides begins. First, as Peter Wilson describes in *Freedom by Hair's Breadth*, they "try to find whether there already existed a kinship relationship between the two individuals, and, second, whether the households and extended family were diligent or slovenly and whether the prospective spouse was likely to have been brought up well to perform his or her role. The usual method was to contact a kinsperson who was likely to know if the person was fit or not."

Malagasy marriages are preceded by lengthy discussions, or *kabary*, by a representative from both families. As a gesture, the groom's family will give a few thousand Malagasy francs or perhaps one head of cattle, which is called a *vody ondry*, to pay for the bride. This gesture also serves as a reimbursement for the expenses and hardship incurred for raising her.

Women are expected to obey their husbands, but in practice they have a great deal of independence and influence. They manage, inherit, and bequeath property and often hold the family purse strings.

## 11 CLOTHING

Many of the Malagasy have come to regard anything Western as desirable and fashionable. Therefore, the markets are full of poor-quality imported clothes and imitation Western outfits. However, traditional clothing varies throughout the island.

Common clothing items include the *lamba*, which is worn somewhat like a toga, with or without additional clothing underneath. Lambas are made of bright, multicolored Malagasy patterns that usually have a proverb printed at the bottom. In some cases, lambas are used to carry a child on the woman's back. Elder women wear white lamba made of fine silk, or raphia from the leaves of a tropical plant over their dress

A Malagasy family prepares food in Antanetikely, Madagascar. Medical teams visit this village, south of the capital, twice a year to treat children and give them measles vaccinations, doses of Vitamin A, and de-worming tablets. The government hopes this will save thousands of children a year. (AP Images/Jerome Delay)

or blouse and skirt. It is not common for the women to wear pants.

In rural areas, men wear *malabars*, dress-like shirts made of cotton woven fiber. They are usually colored in earth tones.

## <sup>12</sup> FOOD

In Madagascar, rice is synonymous with food. If you have not eaten rice during the day, then you have not eaten, as rice is eaten two or three times a day.

Nevertheless, the Malagasy diet varies. It is common to have leftover or fresh rice for breakfast, sometimes served with condensed milk. Lunch and dinner consists of often heaping mounds of rice topped with beef, pork, or chicken with a vegetable relish. However, beef is usually served only for a celebration or an offering. The Tsimihety eat with disinterest; the cooking is bland, unimaginative, and aesthetically impoverished.

The coffee and vanilla that Madagascar supplies to the world is hardly part of the Malagasy diet. Candy, ice cream, and cake make up a small part of part of their daily or holiday diet.

It is common for a visitor or someone important to be given a basket of uncooked rice and a live chicken. Chicken is usually served to guests rather than beef. In some of the more rural areas, the Malagasy also eat fruit bats, civet cat, and lemurs. Or, like the Tsimihety, they may snack on roasted corn, roasted in-

sects, guinea fowl, and fruit. Children in particular eat roasted beetles, grasshoppers, and grubs.

A national snack called *koba* is a paté of rice, banana, and peanut.

A typical drink is *ranompango*, which is water added to a pot after all the rice but the crust has been removed and then allowed to boil, so as to take the flavor of burnt rice. Some villages produce sugar cane fermentation for rum (*betsabetsa*) or distilled rum (*laoka*), which are mostly used for bartering or for addressing ancestors, by pouring it on the ground.

Dessert usually consists of fruit, sometimes flavored with vanilla.

Some typical Malagasy dishes include:

### *Akoho sy voanio*—Chicken and Coconut

- 1 chicken
- 1 coconut
- 2 tomatoes
- 2 onions
- 2 cloves of garlic
- 20 g of ginger
- Oil, salt, pepper

Cooking Instructions:

Sprinkle chicken with salt and pepper to taste. Slice tomatoes into small cubes. Set aside.

Shred the coconut into a clean cloth. Fold the cloth around the shredded coconut. Wet the cloth using a glass of warm water. Squeeze the cloth and the shredded coconut to extract coconut milk. Discard the shredded coconut. (If obtaining a fresh coconut is not possible, you may substitute a can of unsweetened coconut milk instead.)

Add a small amount of oil to a frying pan. Sauté chicken over medium heat until cooked thoroughly.

Add onions to the pan. Continue stirring over medium heat until the onions are brown.

Add ginger, tomatoes, and garlic to pan. Sauté together briefly over medium heat.

Add coconut milk. Mix well. Reduce heat.

Simmer over low heat for 30 minutes.

Serve with rice and salad.

Serves four.

#### *Lasary Voatabia*—Tomato and Scallion Salad

In a 1-quart bowl, combine:

1 cup scallions, finely diced  
2 cups tomatoes, finely diced  
2 tablespoons water  
1 teaspoon salt  
Several drops Tabasco sauce

Stir lightly and chill.

Serve approximately 1/3 cup per portion in small dishes.

#### *Kitoza*

A popular delicacy in Madagascar in which beef is cut into strips and broiled over a charcoal fire:

Cut round steak to ¼-in thick.

Cut meat into pieces about 4 in by 2 in. Thread the strips on a fine strong cord, and hang the cord as you would a small clothesline. The meat will become quite dry in a few hours.

Put the strips over a charcoal brazier so that the meat dries to a crispness but does not burn. Remove meat immediately from the fire when it crisps.

This dish is usually eaten with a watery cornmeal mush for breakfast.

#### *Vary Amin Anana*—rice and greens

In a 4-quart saucepan:

Sauté ½ pound boneless chuck cut into ½-in cubes in 2 teaspoons oil until meat is brown on all sides.

Add 1 tomato cut into ½-in chunks.

Cook with the beef for 10 minutes.

Add 1 bunch of scallions cut into 1-in pieces

½ pound mustard greens cut into small pieces

1 bunch watercress cut into small pieces

Sauté, stirring occasionally with cover on until vegetables soften.

Add 2 cups water (or enough to cover vegetables)

1 cup rice

1 tablespoon salt

½ teaspoon pepper

Cover tightly and simmer slowly until rice is thoroughly cooked and all the liquid is absorbed.

Correct the seasoning to your taste.

*Sakay*, a hot red pepper, is usually served on the side with all Malagasy dishes.

### **13 EDUCATION**

In 2005 over 70% of Madagascar's population ages 15 and over could read and write. The level of education achieved typically depends upon geographic area and an individual's rank and status. However, parents expect their children to reach the highest level of education possible, including a master's degree or a Ph.D. Parents commonly send their children to France or elsewhere overseas for higher education because the quality of education in Madagascar is poor.

### **14 CULTURAL HERITAGE**

In the liner notes to the recording *Music from Madagascar*, D'Gary proclaims, "Musically speaking, Madagascar is a liberated heaven with no closed doors!" Stephane De Comarmond goes on: "Music in Madagascar can be divided in two extremes: melodic and rhythmic! The capital and High Plains of the center—most oriental-oriented—are packed with melodies and harmonies, whereas the coastal regions, which have been in regular contact with Africa, are the home of the beats." One musical form, *Salegy*, which in the 1960s was evident on the northern coast, has become widespread on the island with the introduction of non-traditional instruments such as the electric guitar, bass, and drums. Most Malagasy music and lyrics are about daily life.

Internationally recognized Malagasy musicians include: Earnest Randrianasolo, known as D'Gary, a Malagasy guitarist of the Bara culture. He is an original guitarist and musical visionary. He has been successful in transferring the music of many unique, traditional Malagasy instruments to a finger-picked acoustic guitar. One D'Gary song, "Betepotepo" (the name of a town) is about the desire to return to the home village. His themes include nostalgia for children, family, and village life. Other musicians include Dama Mahaleo, a Malagasy folk-pop superstar; Paul Bert Rahasimanana, known as Rossy, a group of 12 musicians; Jaojoby; Justin Vali, "the master player of the valiha"; Mama Sana, a 70 year-old valiha master; Poopy; Jean Emilien; Rakotofrah; and Kaolibera, a well-known guitarist. Another group is Tarika Sammy. Tarika means group, specifically referring to a performing ensemble. The Tarika Sammy group plays tradition-based music. The lead group is Sammy, or Samoela Andriamalalaharijaona. One song produced by Sammy is called "Mila Namana" ("I Need a Friend"); it is about feeling lonely and needing a friend. Another song is called "Eh Zalahy" ("Hi there!").

Classical music, such as music by Mozart and Dell, is played in the churches.

Some of Madagascar's unique melody instruments include: the vahila, a tubular harp; the marovany, a box zither; the kabosy, a cross between a guitar, mandolin, and dulcimer; the lokanag, a solid-bodied, Malagasy fiddle; Sodina-b, a flute made from bamboo ("B" indicates "big flute"); and Tahitahi, tiny flutes, usually of wood, gourd, or bamboo, used by Tarika

One of Madagascar's unique musical instruments is the vahila, a tubular harp. (Camille Killens)

Sammy as bird call sounds. Percussion instruments include: Ambio, a pair of resonant wood sticks that are struck together; and Kaimbarambo, a bundle of resonant grasses played many ways—sometimes called a kefafa, which literally means “broom.”

### 15 WORK

In *The Great Red Island*, Arthur Stratton writes: “The Malagasy laborer has none of his European or American counterpart’s inducements to work for fixed wages during certain hours of the day or the night, and regular days of the week, throughout the year—not even with a paid holiday in summer. The Malagasy needs are simple and his wants are easily satisfied. He is not concerned with climbing any sort of social, spiritual, or economic ladder to get within reach of any real or illusory goal on top. His concept of success does not goad him along to ‘improve’ himself, to keep up with the Joneses, or to buy himself some status symbols like a Cadillac or a mink coat. . . . They have no drive to occupy their minds or their hands; they like to do nothing serious at all; they have no sort of compulsion to steady occupation; they do not live from payday to payday. A Malagasy man and his family can get by very happily with highly irregular working hours amounting to no more than three or four wage-earning months of the year. The rest of the time they spend in resting up after enjoying themselves. Thus there is a chronic labor shortage in Madagascar while there is also a chronic unemployment.”

Today, the French, the Creoles from Réunion, the Chinese, the Indians, and the Merina highlanders dominate in business in Madagascar.

The Chinese are known for their integrity and are appreciated in Madagascar because, when they migrated to Madagascar, they chose to live among the Malagasy on the same footing. However, they keep to themselves and operate in a different manner.

The Indians, or *karana* on the other hand, are thought to be “slippery and an unpopular lot.” A marriage between a *karana* and a Malagasy virtually never happens; however, marriage between a Chinese person and a Malagasy is highly possible.

Women’s role in agricultural work is often more arduous than the men’s, including water carrying, wood gathering, and rice pounding, much of it to compensate for inadequate technical services in the economy. Special roles in planting and cultivation, marketing surplus crops, preparing food, and domestic crafts keep women occupied throughout the day and the year; men insist on conventional periods of repose.

### 16 SPORTS

Typical sports played in Madagascar are soccer, volleyball, and basketball. Other activities include martial arts, boxing, wrestling or *tolona*, swimming, and tennis.

### 17 ENTERTAINMENT AND RECREATION

Because most social activities center around the family, recreation and entertainment consist of family members and relatives meeting to play typical sports and to dine together.

Unique Malagasy games include games with stones, board games such as Solitarie and Fanorona, cock-fights, singing games, and hide-and-seek.

### 18 FOLK ART, CRAFTS, AND HOBBIES

In *Madagascar: Conflicts of Authority in the Great Island*, Philip M. Allen writes: “Malagasy artistic creativity finds itself in crisis today. In the past, Madagascar excelled in traditional architecture and sculpture—seen especially in tombs of the west and the south—as well as in oral and literary poetry, in textile design, and especially in music. Paintings remain servile to French academic styles, including determination of palette choices to render typical scenes of Malagasy life, the most popular subject for oil painters and water colorists. The imitative process results in waves of local-color celebrations for the tourist market rather than a true expression of the Malagasy creative spirit.”

Madagascar is known for its basket weaving and painting on silk.

### 19 SOCIAL PROBLEMS

The primary social problem is poverty, and *quatre-amie*, or street children, who beg for food or search for it in the garbage. Rapid population growth over the recent past threatens biodiversity because every year nearly one-third of the island’s former scrub forest and desert is set afire to keep land arable. The Human Development Report indicates that between 1990 and 2004, over 70% of the population was living below the national poverty line. Although mortality rates have declined dramatically, fertility rates are extremely high in Madagascar. Other

demographic indicators such as infant mortality rates are also relatively high. Malnutrition is also rampant.

## 20 GENDER ISSUES

As already noted above, women are expected to care for family and domestic affairs and be subservient to men. According to the UNDP Human Development Report 2006, in 2004 the literacy rate for men was 76.5% and 65.3% for women. The primary-school enrolment ratio for male and female students had climbed to 1:1, but girls leave school more often than boys because of the burden of household chores, parents' views on the importance of girls' education, concern for girls' safety, and a lack of gender-sensitive school environments. Women are conspicuous by their absence from gainful employment and public life in Madagascar. The position of women is weakest in the political sphere: women received the right to vote and to stand in elections in 1959, yet in 2004 only 8.4% of seats in parliament were held by women. In a nutshell, women are subordinate to men, and younger Malagasy are subordinate to their elders.

In terms of human rights, Madagascar has signed or ratified five of the six principal international human rights treaties. Since 1993, human rights have been generally respected and although the death penalty remains in force, it has not been applied for more than 40 years. However, despite government commitment to human rights, judicial proceedings against people associated with the Ratsiraka government, including those suspected of human rights abuses during the 2002 crisis, were often unfair. There are reports of police brutality against prisoners and political detainees, as well as instances of arbitrary arrest and detention. Quite often prison conditions are deplorable and life threatening. Women prisoners are routinely subjected to violence and abuse including rape.

Generally, homosexuality is not condoned in rural and urban Madagascar. However, homosexuality appears to be legal in Madagascar with 21 years as the age of consent. Neither homosexuality nor sodomy are mentioned in the criminal laws of Madagascar. Nevertheless the government is actively engaged in curbing sex tourism with punishment for prostitution and pornography.

# MALDIVIANS

**PRONUNCIATION:** mal-DEEV-ee-ans

**ALTERNATE NAMES:** Divehi

**LOCATION:** Maldives, an island nation in the Indian Ocean southwest of Sri Lanka

**POPULATION:** 385,925 (2008 estimate)

**LANGUAGE:** Divehi or Dhivehi

**RELIGION:** Islam (Sunni)

## <sup>1</sup>INTRODUCTION

Maldivians are known as Divehi. They reside primarily on Maldives, an island-nation southwest of Sri Lanka. In the Divehi language, Maldives is known as Divehi Rāje, which translates as “island kingdom.” Maldivians link much of their identity to islands, and the Republic of Maldives itself consists of 1,190 tiny islands that are organized into approximately 26 coral atolls. The word “dives,” which is found both in the nation of the Maldivian people and in their geographic home, comes from a Sanskrit word, *dvīp*, for island. The word “dives” also is used to identify many of the other islands within the Maldives archipelago.

Maldivian society is relatively small in size. Its people draw a shared sense of identity through their history, the Divehi language they speak, and their belief in Islam. Individuals value strong community ties, loyalty to their national president, and family obligations. Modern-day Maldives earns much of its revenue through tourism, and the Maldivians are known as tolerant and respectful of those who visit their island-nation.

The Maldivian society is among the world’s oldest. However, the origins of the Maldivians themselves are not entirely known. Some scholars believe the first people to arrive in the islands were sailors from Sri Lanka and southern India as early as 2000 BC. Others trace the origins to Aryans who had migrated into northern India at about the same time and continued to journey southward. Archeological evidence indicates that the earliest inhabitants practiced Hinduism and Buddhism, which also were practiced widely in southern India and Sri Lanka.

Arab and Persian sailors who began traveling trade routes through the Indian Ocean in AD 900 brought Islam to Maldives. The first recorded arrival was in AD 947, and by 1153 most Maldivians had converted to Islam. However, Maldivian culture is derived from many other sources as well. Inhabitants of some of its islands are descendents of former slaves while others claim lineage to members of Arabian nobility who arrived in Maldives while making the hajj, or pilgrimage to Mecca, that is a vital component of Islam. Inter-marriage between these different peoples has made the Maldivian community rich with traditions from many cultures. The Maldivian language, Divehi, also reflects this mixing. Divehi’s roots are Sinhalese and Sanskritic, which reflects the migration of people from present-day Sri Lanka and the Indian subcontinent. However, the spoken language contains many words that are of Persian, Arabian, and Portuguese influence. A fusion of several cultural traditions also is seen in traditional Maldivian medicinal practices, which include uses of Chakra, Ayurveda, and Unani.

Portuguese traders arrived in Maldives in the 16th century, invading the capital of Malé in 1558. Maldivians reacted to the Portuguese with hostility. A local uprising led by Maldivian hero Muhammed Thakurufaanu drove out the Portuguese in 1573. Thakurufaanu established Maldives as a sultanate, which remained in place until 1887 when the sultan at the time signed an agreement with British forces and made the Maldives a British protectorate.

Maldives remained under British control until 1965, first as a protectorate, then as a republic. On 26 July 1965, however, a new nation-state was formed and Maldives became independent. The modern-day country elected its first president, Ibrahim Nasir, in 1968. Nasir remained in power until 1973. Nasir was replaced by Maumoon Abdul Gayoom. Gayoom held the position until 2008 despite three armed attempts to unseat him in the 1980s and riots in 2004. Gayoom managed to stay in power largely because there was only one political party until 2005, when the government introduced more democratic reforms and legalized political parties. A new constitution was ratified in August 2008 and elections took place in October of that year. The elections resulted in a new president, Muhammad Nasheed.

In the years since independence, Maldivians have benefited from a relatively stable economy based largely on tourism, which the government introduced in 1972. Its worst economic disaster occurred in December 2004 when a devastating tsunami swept through the Indian Ocean. More than 80 people were killed in Maldives, and thousands of other residents lost their homes. The country’s infrastructure also suffered heavy damage. A rebound in tourism, however, has helped the country recover. Despite growing problems of poverty and drug abuse, the close interdependent community and kinship ties that Maldivians have nurtured for centuries keep the country and its people vibrant today. Even as the country shifts to a more democratic political structure, families who are at the top of Maldives’ social structure retain power. Village administrators deal with disputes at the local level by reporting them to the national government and waiting for instructions on how to proceed. More than 70,000 foreign workers also reside in Maldives. Most are from India, Sri Lanka, Bangladesh, and Nepal, and work in the tourism industry.

## <sup>2</sup>LOCATION AND HOMELAND

The archipelago that makes up Maldives is in the Indian Ocean southwest of Sri Lanka. The land mass consists of 1,190 coral islands. Those islands are then grouped into 26 atolls. About 200 of the islands are inhabited by local Maldivians. An additional 80 islands maintain tourist resorts. Although the archipelago stretches in a north-south direction for 820 km (509.5 mi), the total land-mass of Maldives is fairly small, about 300 sq km (186 sq mi). That mass is roughly 1.7 times the size of Washington, D.C. Most of the islands are no more than 8 km (5 mi) in length, and the main vegetation is palm trees. About 80% of the islands’ land has a very low elevations of about 1 m (3 feet). These low elevations have made Maldives quite vulnerable to rising sea levels that are being produced through global warming. Although a sea wall protects Malé, the nation’s capital, many geographers predict that the archipelago may eventually become completely submerged.

Lagoons, deep blue waters, coral reefs, white sandy beaches, and palm trees characterize the appearance of the Maldiv-

ian islands. That natural beauty along with year-round balmy temperatures has helped in developing the archipelago's tourist economy. Some islands also have fresh water lakes, as well as swamplands and clusters of mangroves. The overall climate is typical of a tropical monsoon area. The weather is generally warm and quite dry from December through March, which is the northeast monsoon season. From May to October, during the southwest monsoon season, Maldives receive a great deal of rainfall. Temperatures remain relatively constant throughout the year, ranging between 25 and 30°C (77 and 86°F).

The Maldives lies along major maritime travel routes in the Indian Ocean. Winds that accompany the yearly monsoons historically made Maldives favorable to trade, and many Maldivian sailors traditionally planned trading expeditions to the Indian subcontinent and Sri Lanka around the seasonal schedule. Today, most Maldivians live in small villages and earn their living through fishing and tourism. Dolphins, manta rays, whale sharks, basking sharks, and sea turtles all inhabit the waters around the archipelago. About 13% of the land is useful for agriculture, but most agricultural activities are of a subsistence nature. Maldivian villagers plant coconut, breadfruit, taro, cassava, millet, sorghum, bananas, papaya, and drumstick (a long tough stem vegetable that tastes a little like a cross between asparagus and green beans). Maldivians also raise goats and chickens. Most homes include a small vegetable garden that provides for the needs of family members.

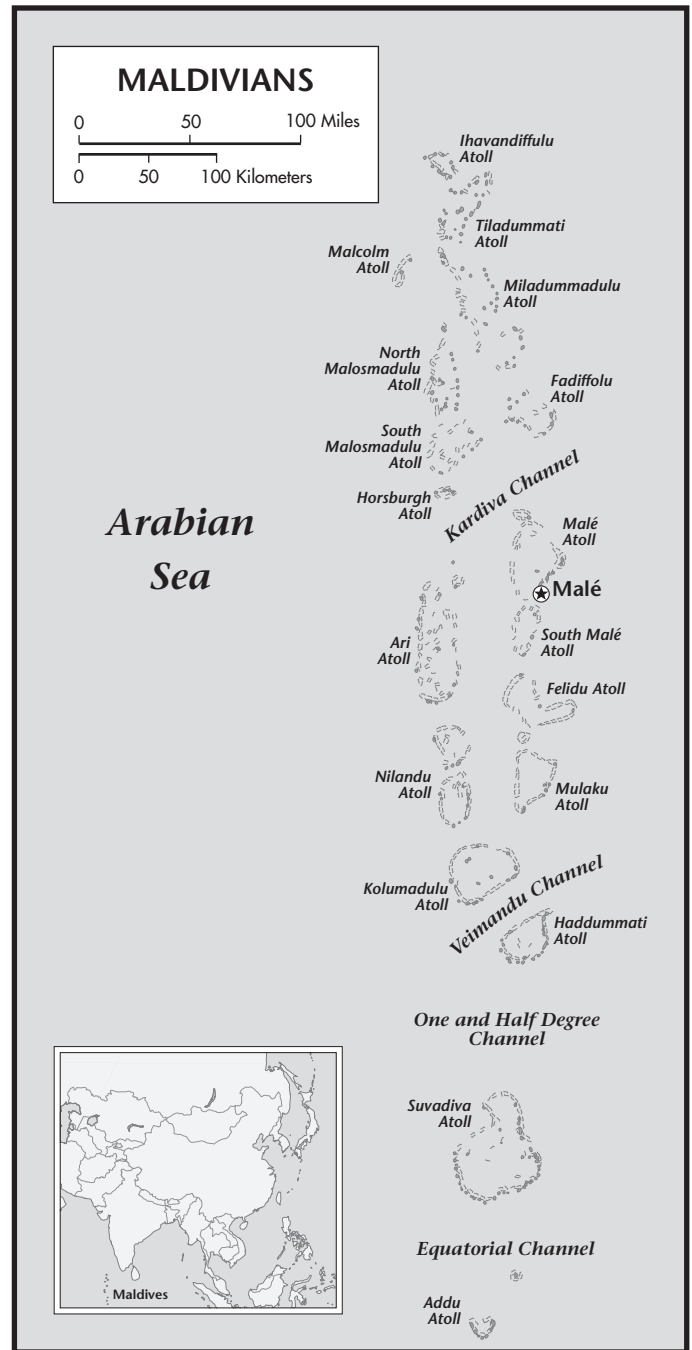

Maldivians obtain drinking water by sinking shallow wells into the sand. Rain percolates through the sand, which creates a series of fresh water aquifers that the islanders long have taken advantage of. These aquifers, however, are growing depleted and a loss of fresh water supplies is one major threat facing Maldivians.

The geography of the archipelago has influenced the character of the Divehi people. Generally, they consist of three ethnically distinct groups. A central group of Maldivians, who make up about three-fourths of the population, are the main group and live between an island known as Ihavandippu (Haa Alif) and an island known as Haddummati (Laamu). A southern group occupies the atolls closest to the equator and makes up about 20% of the total population. The final group, the people of Minicoy, live on one long island (10 km or 6.2 mi in length) at the northern end of the archipelago. Their island is administered by India, and the Minicoy make up about 4% of the total population. The Minicoy community is both geographically and politically isolated from the rest of Maldives.

### 3 LANGUAGE

The official language of Maldives is Divehi (Dhivehi). It is part of the Indo-Aryan language group and grew out of Sinhala (the main language spoken in Sri Lanka) and Sanskrit (the language from which many of the languages of the Indian subcontinent including Hindi were derived). Divehi is spoken only in the Maldives. On Minicoy, the area under Indian administration, the language is known as Mahl. Divehi also contains words borrowed from Arabic, Tamil, Malayalam, Hindi, French, Persian, Portuguese, and English.

Regional variants in pronunciation and vocabulary have developed across the archipelago. Malé Bas, which is the form of Divehi spoken in the nation's capitol, is considered to be the most mainstream form of the land. The language sounds distinctly different, however, in some of the southern atolls such

as Huvadu, Fua Mulaku, and Addu. Variants also have developed in Haddummati and on Minicoy. Malé Bas is the main form used in writing. However, popular songs and poetry often draw on the richness of the regional variants. Divehi uses a written script, Thaana, which, like Arabic, is read from right to left.

The use of Divehi is primarily local. In business settings, English is widely used and is taught in schools. The tourist industry also has brought Maldivians into contact with numerous Europeans, and it is not unusual for those who work in the tourism industry to speak several languages in order to communicate with the Europeans who visit the islands.

*A young Maldivian girl wearing traditional finery waits outside her house to bid goodbye to leaders and dignitaries of the 9th annual South Asian Association for Regional Cooperation Summit. (AP Images/Sherwin Crasto)*

#### **<sup>4</sup>FOLKLORE**

Much of Maldivian folklore appears to have come from Buddhist culture, and features an emphasis on the superstitious and supernatural. Many of the myths that survive today are based on the islanders' dependence on coconut trees and fish for survival. One story holds that many Maldivians died until a *fanditha* (sorcerer) created coconut trees from the skulls of the deceased settlers. In a different story, the tuna fish, a major fish eaten by Maldivians, is said to have been brought to the seas around the archipelago by Bodu Niyami Kali fanu, a mythical sea traveler who voyaged to the end of the world and found the fish at Dagas, a mythical tree.

A story about a prince from the Indian subcontinent known as Koimala is associated with the founding of the present day capital of Malé. In this story, Koimala was welcomed by Maldivians and invited to settle on a sandy bank that had been stained with fish blood. Koimala planted trees in the bank and from them, the first papaya fruit was harvested. Eventually, Maldivians accepted Koimala as their ruler. Koimala ordered a palace to be built and to name the island Maa-le Malé.

The arrival of Islam to Maldivian society also has come to be associated with a folk tale. In this story, a visiting Muslim named Abu al Barakat ul Barbari triumphed in battle with a sea demon known as Ranna Maari. That act convinced the Maldivian king to convert to Islam. The story persists, even though other versions of the story describe the visitor as a saint from Persia whose tomb occupies a central site in today's capital.

Myths of extinction preoccupy Maldivians, with some predicting that a great catastrophe will cause the islands to be submerged by the ocean. Other stories warn of evil spirits, sea monsters, and heroic sea creatures such as fishes, crabs, and seabirds. Folk tales also have arisen around local plants and trees. Some stories that came to the islands through interactions with foreigners have been adapted to fit the needs of island living.

#### **<sup>5</sup>RELIGION**

Maldives is an Islamic society. The Maldives government follows the Sharia (laws and practices based on the Quran), and

businesses generally close for 15 minutes each time that Muslims are called to perform their five daily rounds of prayer. Nearly all Maldivian locals are Sunni Muslim, although Hinduism, Buddhism, and Christianity are practiced by expatriates and foreign workers. These practices are allowed by the government as long as they remain confined to private homes.

The government limits contact between natives and tourists, partly to protect its Muslim traditions from outside influences. As a result, most resorts have been built on previously uninhabited islands and locals generally were not allowed to spend extended amounts of time in the tourist areas. These rules are beginning to be relaxed, but contact between tourists and natives remains fairly limited.

Despite the adherence to Islamic law, Maldivians continue to use charms and spells to protect themselves from evil spirits. Most of these practices, which are related to the magical-religious system of *fanditha*, continue mainly in remote, rural areas. Traces of mother-goddess worship practiced by Dravidians and of Buddhism also remain a part of life within these rural settings.

## 6 MAJOR HOLIDAYS

Maldivians observe all of the major Islamic holidays. Ramadan is a 30-day fasting period that occurs in the ninth month in the Muslim calendar. The observance of Ramadan greatly affects the Maldives daily way of life. Government offices close after 1:30 p.m. during that month, and businesses generally shut down at 3 p.m. The end of Ramadan is known as *Kuda Eidh* or *Eid al Fitr* and is celebrated with three days of festivities. Maldivians traditionally go back to their home islands for this festival and take part in such activities as a traditional tug-of-war game. During *Bodu Eidh*, the Feast of the Sacrifice, Maldivians celebrate with a week of dances, plays, sporting events, and other cultural activities. It is common during this period for Muslims who can afford to do so to travel to Mecca for the hajj pilgrimage. Maldivians also celebrate the birth of the Prophet Muhammad.

Secular holidays include Independence Day on July 26; New Year's Day on January 1, Republic Day on November 11, the day that Muhammed Thakurufaanu defeated the Portuguese in 1573.

## 7 RITES OF PASSAGE

Maldivians traditionally celebrate the birth of a child with a naming ceremony seven days after the child is born. *Bondibai*, a sweet dish made of rice, is served. Spiced meats or chicken are given to family and friends, and the newborn receives his or her formal name. Boys undergo circumcision at age six.

Dating remains uncommon among Maldivians. Many Maldivian young men and women meet each other through group picnics to uninhabited islands that family groups arrange. It is typical to marry someone from one's own island or atoll. When a marriage is set to occur, families of the bride and groom notify their island's chief. Ceremonies are civil services with large celebrations afterwards. Most Maldivian women are in their early 20s when they marry. New couples often live in the home of the man's parents.

Upon death, family members bury the deceased within 24 hours. Memorial ceremonies honor the deceased on the third and fortieth days after the burial occurs, and on the anniversaries of the death.

## 8 INTERPERSONAL RELATIONS

Maldivian culture is Islamic based. As a result, children learn at an early age to respect their elders. Greetings are relatively formal, consisting of a handshake and a smile. Women typically do not take the last names of their husbands but retain their own last names, which they inherit from their fathers.

Unarranged visits are common in Maldives. Visitors are welcomed, and both hosts and guests sit together to converse. Tea, cool drinks, and pastries typically are served. The atmosphere is casual.

## 9 LIVING CONDITIONS

The traditional island home in Maldives is a one-storey compound that includes several rooms, a courtyard, and an open-air bathroom. Homes may be built of concrete or coral, and roofs are made of either coconut thatch or corrugated iron. Many homes receive electricity through generators. More and more Maldivians are abandoning the traditional way of life to seek work on resort islands. Those who work in the tourist industry often are away from their homes and families for up to eleven months out of the year. They live in cramped apartments that are located mostly in Malé. Many tourism workers save money to build dream homes on their home islands. They often spend their vacations working on these homes. Much of this construction was ravaged during the 2004 Indian Ocean tsunami, and families were relocated, often against their will.

Fishing, water-gathering, and household duties were traditional practices on rural islands. These practices continue even though work in the tourist industry is breaking up many Maldivian families. More industrial businesses also are being developed on the islands, such as fish-canning and shipbuilding.

The birth rate in Maldives is among the world's highest, with 14.84 births recorded annually for every 1,000 persons, according to 2008 statistics. Many infants do not survive; about 30.63 infant deaths are recorded for every 1,000 live births. The average life expectancy for Maldivians is approximately 74 years. Overpopulation is a threat, in that the islands are becoming less self-sufficient and more reliant on imported goods. Water supplies are growing brackish, and many islands face the prospect of overflowing solid waste and sewage disposal systems.

The government of Maldives has developed excellent health care facilities, with a regional hospital placed in each group of atolls and clinics on every island. However, the government does not provide much financial assistance to families in need of urgent medical care. As a result, many Maldivians prefer to first use a more traditional method of healing. Uses of herbal remedies and sand massages are common. One of the more serious health issues facing Maldivians is a blood condition known as *thalassemia*. The condition requires frequent transfusions, and it can be passed from one generation to the next.

## 10 FAMILY LIFE

The tourist economy upon which Maldivian families rely makes it difficult for families to spend much time together. It is not uncommon for spouses to be separated from each other for several months or for a parent not to see children more than once or twice a year. Nevertheless, the government emphasizes the importance of the family unit in Maldivian society and encourages the nurturing of family ties during extended holiday periods in the islands.

Men who do not work in tourism may carry out small-scale fishing enterprises. Many women also work in tourism. Those who do not work in tourism take responsibility for childrearing, cooking, cleaning, and collecting water. Women are expected to run their households even if they work outside the home. Salaries earned by resort workers typically are sent home and divided among family members. The lure of steady income that jobs in tourism offers drives some families to put education and other matters on hold so that at least one family member can take a tourism position.

### **11 CLOTHING**

Temperatures in Maldives range between highs of 30°C (86°F) and lows of 25°C (77°F). As a result, most Maldivians dress casually. Men wear T-shirts with shorts, lightweight trousers, or sarongs. Women might wear a long-sleeved dress. However, many also dress quite simply in a blouse or tunic worn over a skirt or slacks. T-shirts and jeans also are common, as well as a head covering in accordance with Muslim customs.

Women generally follow Islamic dress codes and keep their thighs and shoulders covered. Women also tend to avoid wearing swim suits or bikinis, even when visiting the beach or swimming.

### **12 FOOD**

Traders and visitors from the Indian subcontinent, Africa, and Europe have influenced many aspects of Maldivian culture, including the Maldivian diet. Traces of Arabic, Indian, Sri Lankan, and East Asian spices, ingredients, and cooking methods can be found in Maldivian meals.

The staple diet consists primarily of rice and fish. Tuna is the most widely consumed fish. Maldivians also eat pumpkin, coconuts, papaya, pineapple, and sweet potatoes. To these basic foods are added chilis and other spices. Many Maldivians will eat betel nuts with cinnamon or cloves after meals to cleanse the digestive system and the breath. Most abstain from alcohol in accordance with Islamic codes. The most widely consumed drink is tea. During Ramadan, the Islamic month of fasting, Maldivians typically drink fruit juices and eat dates to break the fast at the end of each day.

Maldivians traditionally have eaten with their fingers, a custom also practiced in the neighboring nations of India and Sri Lanka. The right hand is generally used for eating, and it is believed that the practice of eating with the fingers completes the cooking of the food. In the past, families would eat together. Now, the practice of sharing meals is less common. Men often are gone for long periods of time on fishing trips, and many Maldivians—both male and female—are away from their families for several months working in the tourist industry. Restaurants in the tourist areas serve Indian and Sri Lankan foods as well as many European dishes. Many Maldivians working in these areas eat at such restaurants, as well.

### **13 EDUCATION**

Although education is not compulsory, Maldives has a highly literate population. Approximately 96% of all Maldivians over age 15 can read and write. Most attend primary schools on their home islands, although some will attend private, religious-based schools. After five years of primary school, Maldivians can attend up to seven years of secondary school.

Schools emphasize basic mathematics as well as reading and writing in Divehi and English.

At age 16, students take “O” or Ordinary Level exams. These are followed by “A” or Advanced Level exams taken at age 18. To qualify for “A” level courses, Maldivians often must leave their home islands and reside in the nation’s capitol. That dislocation often prompts Maldivians to end their education after age 16 and begin working in the tourist industry to help support their families.

Maldives has one university and several colleges. Still, some Maldivians choose to attend university abroad. The government and several private organizations have set up sponsorship programs to help students who leave the country for educational purposes.

### **14 CULTURAL HERITAGE**

Maldivian cultural traditions reflect their ancient ties to southern India and Sri Lanka, as well as their contact with Arabic and African peoples who settled on their shores. The popular film industry in India, based in Mumbai and known as Bollywood, has also influenced Maldivian culture. North Indian dances, such as kathak, are widely enjoyed. Many elderly Maldivians enjoy Hindi songs from the 1950s and 1960s.

A local form of music and dance is known as bodu beru. The term translates as “big drum” and refers to an instrument made from the trunk of a coconut tree that has been hollowed out. Men will play the drum while others sing and dance. Any celebration is likely to feature the bodu beru, but the drum also is brought out for everyday entertainment. The bodu beru is said to have originated in the northern atolls in the 11th century, and some scholars trace the drum to African settlers in Maldives. The dance and music practice begins with a slow, rhythmic beating of the drum. The beat gradually gets faster and louder. Along with the bodu beru are other instruments including the bulbul, which resembles an accordion, and a form of music that is said to have Arabic roots known as thaara.

Culturally, Maldivians also have a rich tradition in calligraphy and stone-carving. Many art pieces reflect these works, including tombstones in older cemeteries, stonework at mosques, and verses from the Quran that are on display at the country’s Islamic Center.

### **15 WORK**

Most Maldivians work in tourism and the industry makes up nearly one-third of the gross domestic product of Maldives. Fishing, agriculture, and manufacturing also employ Maldivians. It is not unusual for families to send one or more members to resort islands to work and earn income to support the rest of the family.

Maldivians who remain on their home islands tend to work in fishing or subsistence farming.

### **16 SPORTS**

The deep blue waters of the Indian Ocean that surround Maldives and its year-round tropical climate have made swimming a favorite sport. Most Maldivian men are excellent swimmers and many free-dive long distances for pleasure. Islamic codes discourage women from revealing their bodies. However, many women enjoy the ocean waters by swimming fully clothed.

Maldivian men also enjoy playing soccer and volleyball. Early evening matches take place frequently on the non-resort

islands. Women enjoy the game of bashi, which is similar to softball but is played with a tennis ball and racquets.

## 17 ENTERTAINMENT AND RECREATION

Watching Hindi films from India and listening to Hindi songs is a favorite pastime among Maldivians, particularly those of older generations. Younger people enjoy playing sports such as football and tennis, and making day trips to resort islands. Evening walks along the beaches and marinas are extremely popular as well.

Nearly all Maldivians engage in fishing, either for work or pleasure. Night fishing is a particularly unique form of entertainment in the archipelago. Maldivians will anchor a boat to a reef just before sunset, prepare their fishing lines, and drop them into the water. Through the evening, they will sit under the stars quietly, relaxing and feeling the gentle rock of sea waves. The hope is to catch a red snapper, but many find the experience of being out on the water satisfying enough.

## 18 FOLK ART, CRAFTS, AND HOBBIES

Maldivians are known for weaving, ceramics-making, wood-carving and painting. The rise of tourism has helped revive many traditional crafts, and beautiful, bright-colored, intricate reed mats are a favorite souvenir item for visitors. Vases made from local woods and painted in bright colors also have found a tourist following, as have large pots and jars.

## 19 SOCIAL PROBLEMS

A rapidly increasing population, overcrowding, and the threat of rising sea levels produced by global warming are major problems that face Maldives. The tiny island-nation's birth rate has long been one of the highest in the Asia Pacific region. As a result, more than 50% of the local resident population in the state capitol is under the age of 15, according to a report on the Maldives prepared by the United Nations' Ministry of Planning, Human Resources, and the Environment for the Asia Pacific region. The report also notes that housing in the capital is so tight that many dwellings are literally jammed together side-by-side along the one-kilometer (0.6-mile) length of the island. The high rate of births and a correspondingly high number of infant deaths have made issues of malnutrition and poverty serious concerns among Maldivians. The government has taken steps in recent years to launch a population control program and is developing an information campaign that is aimed at educating Maldivians on the uses of contraception and on the importance of reducing the size of families.

The low elevation of Maldives makes it quite vulnerable to rising sea levels. Former president Mamoun Abdul Gayoom warned of the threat in 1992, stating that scientists had predicted that the archipelago could disappear altogether within the next century if steps were not taken to reduce global warming. When the 2004 Indian Ocean tsunami occurred, ocean waters submerged the islands for several minutes. Only nine islands did not experience flooding. Fifty-seven islands experience serious damage, and fourteen islands were completely evacuated. Six islands were destroyed forever. The tsunami left more than 100 people dead, and displaced 12,000 others from their homes. Damage estimates exceeded \$300 million. Although the economy has since rebounded, the experience of seeing islands that are no more than three feet in elevation submerged

by waves that were reached fourteen feet illustrated the threat that a rising sea level poses for Maldivians.

## 20 GENDER ISSUES

Maldives had one of the world's highest divorce rates until recently, when the government instituted laws that required the person requesting a divorce to pay child support to the other. Males typically had requested divorce, but the financial obligation has lessened that likelihood.

The change in divorce laws has been accompanied by a general improvement in the status of women. Women used to marry as early as age 14. Now, they wait until their early 20s. Males used to engage widely in the practice of polygamy. Today, even though Maldivian laws allow men to have up to four wives, most have only one.

More than 25% of Maldivian women work outside the home. Some work for the government and while others work in the tourism industry. In more rural areas, women tend crops and make handicrafts. Maldivian laws allow both men and women to inherit property.

# MALIANS

**PRONUNCIATION:** MAHL-ee-uhns

**LOCATION:** Mali

**POPULATION:** 12–13 million

**LANGUAGE:** French (official); national languages: Bamana, Bobo, Bozo, Dogon, Fulfulde, Hassaniyya, Khassonke, Maninka, Minyanka, Senufo, Soninke (or Sarakolle), Songhai (or Sonrhay), and Tamasheq.

**RELIGION:** Islam, Christianity, indigenous beliefs

**RELATED ARTICLES:** Vol. 1: Bamana; Dyula; Malinke; Songhay; Tuaregs

## <sup>1</sup> INTRODUCTION

Mali has a very long and rich history. Although economic indicators place the country among the poorest in the world today, the empires of Ghana, Mali (see **Malinke**), and Songhai (see **Songhay**) developed and flourished in different parts of its territory long before the arrival of Europeans. The Mali Empire had the most enduring influence on various peoples of the region and has given the country its name. In addition to the early empires, other states of variable size existed at different points in time.

The area of contemporary Mali captured the European imagination ever since the medieval trans-Saharan gold trade and Emperor Musa I's famous pilgrimage to Mecca in 1324–25. Europeans began to explore the territory in 1795 in search of new markets and raw materials, followed by territorial conquest in the latter part of the 19th century. Advancing from their colony of Senegal in the west, French troops created a post at Bamako in 1883 and from there pushed north and eastward. In spite of resistance from the leaders of then-existing states and from autonomous villages and nomads, the French had consolidated their conquest into the colony of "Soudan Français" by the turn of the century. Administered from Bamako, the name was changed to Haut-Sénégal-Niger from 1900–1920 and the boundaries were altered several times during the period of French colonial rule. Following the struggle for independence and a short-lived federation with Senegal (known as the Mali Federation), the colony became the Republic of Mali on 22 September 1960.

The first government under President Modibo Keita had a socialist orientation. It was overthrown by a group of military officers in 1968 that made Moussa Traoré the new president. Traoré was able to maintain himself in power until 1991 when he was removed by some of his officers after ordering the army to put down demonstrations with brutal force. A transitional government was formed and elections were held within a year. Alpha Oumar Konaré became the new president in 1992. He was reelected for a second five-year term in 1997. His successor Amadou Toumani Touré also was elected for a second term (2007–2012).

## <sup>2</sup> LOCATION AND HOMELAND

Located in the interior of West Africa, the Republic of Mali shares borders with seven countries: Algeria in the north; Mauritania and Senegal in the west; Guinea and Côte d'Ivoire in the south; and Burkina Faso and Niger in the east. In 2008 the country's population was estimated at more than 12 mil-

lion with over one million living in the Bamako metropolitan area. Over 2 million Malians are said to live and work elsewhere in Africa, Europe, North America, and other parts of the world. Although the territory of the republic extends over 1.24 million sq km (478,767 sq mi), a large part of it is covered by the Sahara Desert and receives less than 30 cm (12 in) of rain a year. As a result, most of the population is concentrated in the southern half of the country. The Niger, one of the major rivers in Africa, traverses Mali for 1,700 km (1,050 mi) of its course. It flows in a northeasterly direction, joined by the Bani River in the city of Mopti to form a vast interior delta before making a wide bend to continue southeastward into the neighboring Republic of Niger. Mali is divided into eight administrative regions, each headed by a governor, with capitals at Kayes, Koulikoro, Sikasso, Segou, Mopti, Timbuktu, Gao, and Kidal, respectively. The national capital of Bamako is a separate administrative district. In early 1991 groups of Tuareg people in the northern desert regions began a rebellion to protest their marginalization in the national power structure and the distribution of resources. Following extended negotiations, the Konaré government brought about a political solution but isolated incidents of violence continue to occur from time to time.

## <sup>3</sup> LANGUAGE

The official language of Mali is French but national languages remain the preferred mode of communication. The Bamana language has become the lingua franca and is mutually intelligible with Maninka. Bobo, Bozo, Dogon (several dialects), Fulfulde, Hassaniyya, Khassonke, Minyanka, Senufo, Soninke, Songhai, and Tamasheq have variable numbers of speakers and dominate in different parts of the country. Most television programs are in French, but many radio stations broadcast news and other programs in the different national languages.

Tamasheq has a script (*tifinagh*) dating back to the early centuries of the common era. A Guinean Maninka speaker created N'ko, an alphabet for Bamana/Maninka, in the late 1940s. Starting in 1967 a newly created national linguistic institute began developing writing conventions for Maninka/Bamana, Fulfulde, Songhai, and Tamasheq. By 1972 the first newspaper was published in the Bamana language. N'ko has gained some proponents but most Malians who are literate in any of the national languages use the orthographies developed by the national linguistic institute.

## <sup>4</sup> FOLKLORE

For many Malians, the ancestors who actively resisted French colonization (e.g., Babemba Traoré of Sikasso) hold the status of national heroes. Otherwise, heroes and myths vary from one ethnic group to another. Sunjata Keita occupies a special place as the founder of the empire that gave the country its name; the recitation of his epic to musical accompaniment can arouse strong emotions among the Maninka people in the southern parts of the country. Only specially trained *griots* (praise-singers and oral historians) from certain families are permitted to perform the epic. All of Mali's ethnic groups have a rich store of proverbs, riddles, and tales that communicate and transmit cultural norms and moral values.

## 5 RELIGION

About 90% of Malians identify as Muslims. Trans-Saharan traders first introduced Islam to their local hosts and members of the political elite. Islam spread gradually among different populations beginning in the 11th century but it did not become a majority religion until the 20th century. The ways in which Islam is practiced across Mali today reflects the historical legacy of different Muslim leaders and movements, trans-regional connections, the recent influx of funds from Arab countries as well as the use of broadcast media in the dissemination of Islamic knowledge.

Christians constitute less than 2% of the population. The overwhelming majority are Catholics because Christianity was introduced by Catholic missionaries during French colonialism. Protestant Christian churches have thus far had only limited success in their search for converts. The remainder of the population continues to follow indigenous religious practices which may involve sacrifices to the ancestors and to community spirits, divination, spirit possession, and membership in initiation societies.

## 6 MAJOR HOLIDAYS

Public offices and some private businesses (e.g., banks) are closed on Sundays. Offices close at midday on Friday to allow the faithful to participate in Friday prayer at the mosque. Muslim holidays, as well as Christmas and Easter, are officially recognized. The two most important Islamic holidays are *'Id al-fitr*, at the end of the holy month of Ramadan, and *'Id al-adha*

(also known as *Tabaski*), on the tenth day of the last month in the Muslim calendar. Each lasts three days and is celebrated with public prayers, new clothes for family members, festive meals and visiting with family and friends. Families commemorate Abraham's sacrifice by slaughtering a sheep on Tabaski.

Secular holidays include September 22, Independence Day (see above), and March 26, Democracy Day. The latter memorializes the end of the three-day uprising that brought down the Traoré regime.

## 7 RITES OF PASSAGE

Special ceremonies mark birth, marriage, and death throughout the country. The way they are celebrated varies somewhat between ethnic groups, urban and rural areas, and according to religious affiliation and economic status. However, they commonly bring together the extended family and larger social networks, with men and women congregating in different parts of the home. In urban areas, women relatives and friends come to the name giving ceremony with a gift of cloth or soap for the mother of the baby. The mother of a bride also receives cloth from her relatives and friends on behalf of her daughter. Men give money to a bridegroom on his wedding day to help him defray expenses, since it is the husband and his family who are responsible for the wedding festivities. When someone dies, male and female relatives, neighbors, and friends visit the bereaved family to offer condolences as soon as they receive the news. Among Muslims, only men accompany the body to the cemetery.

Most of Mali's ethnic groups practiced circumcision for boys and excision for girls. In the past, the highly ritualized procedure took place during the teenage years, but it is now often done much earlier. Many urban parents currently have their infant boys circumcised in the hospital shortly after birth, and an increasing number no longer excise girls. Women's groups have been engaging in educational campaigns to discourage excision nationwide.

## 8 INTERPERSONAL RELATIONS

Maintaining personal dignity, one's own and that of others, is extremely important and requires proper greeting and hospitality. Upon entering a household, a visitor initiates a short greeting. If the visitor is a stranger or someone who visits only irregularly, the host responds with a longer greeting, inquiring about the person's well-being and that of his or her relatives; the visitor then does the same in turn. Young people visiting a friend show their respect by greeting the head of household and/or the friend's mother. A visitor who arrives at meal time is invited to share the food. Greetings may be exchanged without physical contact, or by taking the interlocutor's right hand. Shaking hands is common among coworkers in offices. Late afternoon, before sundown, is the preferred time for paying social calls.

Young women and men usually socialize in groups, either same- or mixed-sex. Dating occurs more often in the company of others than as a couple. Although many young people in urban areas now choose their spouses themselves, a young man must still send a family representative to the family of the woman he wishes to marry. The woman's family must give their consent and stipulate the gift exchanges to take place before the wedding can be celebrated.

## 9 LIVING CONDITIONS

Successive governments elected since 1992 have sought to improve the basic infrastructure of the country. Nonetheless, life remains difficult for the majority of Malians. Those with an income must support not only their nuclear families, but also aged relatives and members of the extended family who are unemployed. Households rarely encompass only a nuclear family, and even well-to-do Malians have numerous obligations toward less fortunate relatives. The most commonly owned consumer goods are transistor radios, cell phones, and motor bikes or bicycles. In Bamako, car ownership has increased significantly since the 1990s. A growing number of households with access to electricity own television sets and, to a lesser extent, VCRs. Many urban families aspire to a living room furnished with a couch, table, chairs, and a china cabinet, but the interiors of most rural and urban homes are more modest. Given the climate, much of daily life takes place in the courtyard or in the shade of the veranda. A substantial part of income is spent on food, clothing, and health care. The majority of physicians practice in urban areas while nurses and midwives are the primary healthcare providers in rural areas. Aspirin and malaria medication are readily available and relatively inexpensive, but the cost of prescription drugs is high. For this reason, and because some herbal remedies are very effective, people may resort to indigenous pharmacopeia or seek out a healer before going to a clinic.

## 10 FAMILY LIFE

Malian law allows men to have more than one wife. A substantial number have two wives but only a small percentage has three or four, as permitted by Islam. Each wife is entitled to her own house or apartment. Women in polygamous households take turns preparing family meals. Many urban households with a regular income employ live-in domestic servants, generally young unmarried women from the rural areas. Household size and composition vary between rural and urban areas and, though more restricted in the latter, are usually not limited to a man and his wife (or wives) and their children. Visitors are also common for varying lengths of time.

Women work in all sectors of the rural and urban economy; only a minority is not involved in income-generating activities. Even women designated as "housewife" in the national census frequently engage in activities that range from small trade in cooked food to craft production, market gardening, and rain-fed agriculture. Women, like men, dispose of their own income, though spouses have different responsibilities for the maintenance of the family.

## 11 CLOTHING

Traditional dress varies for Mali's different ethnic groups, though what is considered "traditional" has also changed over time. Conversion to Islam and integration into a commodity economy has brought about greater uniformity in clothing styles throughout the country. For married women to be well-dressed means wearing an ample, full-length tunic (called *boubou*) combined with a matching wraparound skirt (*pagne*) and headdress. Men wear the *boubou* over matching pants and a loose-fitting shirt. Type and quality of material, design details, and embroidery create distinctions and signal a person's means. Unique colors are often achieved through hand dyeing. Women complement their attire with gold jewelry, especially

on festive occasions. Some men wear the *jellabiya* common in the Middle East. A minority of Malian women cover themselves in a black *burka* when they leave the home and a growing number express their piety by wearing a thin veil over their clothing since the end of the 1990s, particularly in the urban areas.

Teenage girls and young women in their twenties dress in wraparound or narrow tailored skirts and matching tops made of colorful cotton prints. The tops are done in a variety of styles with innovative details which change with the fashions. A small number of teenage girls in urban areas wear pants, mainly when they go out in the evening.

When working, many men wear Western-style pants and shirts or short (waist- or hip-length) tunics. Women put on wraparound skirts and tunics or tailored tops made of less expensive cottons while working at home. Imported second-hand clothing from Europe or North America, especially blouses, shirts, T-shirts, and (for men) pants, is also common during manual labor. Young people often have good second-hand clothing refitted and restyled for regular everyday wear.

## 12 FOOD

Traditional foods are regionally specific. The food and eating habits discussed here are those of the capital city. They show some uniformity in spite of the population's ethnic diversity. The two staples throughout most of the country are boiled rice and a stiff porridge or a couscous made of millet. Millet is the more traditional food, but rice is preferred and has almost replaced millet for those who can afford it daily. Both are served with a sauce which may include fresh vegetables, fish, meat, or chicken. Those who are able return home at midday for their main meal and then eat something lighter, or some leftover food, in the evening. Others make do with a snack (e.g., some fried plantain or a skewer of beef with French bread) until the early evening. A light meal may be a cream of rice, liquid enough to be eaten like a soup. Salad is also gaining in popularity among those born since the mid-1950s. A typical breakfast food is gruel made with millet flour, tamarind, and sugar or, for variety, small leavened pancakes made with millet. French bread and coffee with milk and sugar are popular with many in the cities, but too expensive for the vast majority.

Western-style kitchens are rare, and most cooking is done on a brazier in the courtyard or in a detached kitchen house. Food is served in bowls, and family members gather around a common bowl and eat with their hands or with a spoon. Children are taught at an early age to wash their hands before eating, to eat with their right hand, and to wash again after eating. In large families, women and men generally eat separately.

## 13 EDUCATION

Estimates of the percentage of children enrolled in formal education range from 30–50%. This includes children in *madrasas* but not in Quranic schools because the Malian state does not recognize Quranic schools as formal education. Created in the 1940s, madrasas are private Islamic schools where Arabic is the primary language of instruction for religious and secular subjects and French is taught for several hours a week beginning in the third grade. About 30–40% of all school-going children today are said to be in madrasas.

Public schools consist of two main types: schools whose entire curriculum is in French and bi-lingual schools where a na-

tional language is the medium of instruction during the first four years. Mother tongue instruction in the Bamana language began on an experimental basis in a few schools in 1979. It was expanded gradually and other languages were added over time. By 2006, 2550 schools across Mali hosted bi-lingual programs in one of eleven national languages. In spite of this increase, the percentage of children in bi-lingual programs compared to the classical French programs has actually declined (less than 10% in 2005) due to demographic growth and the expansion of schooling.

Many new madrasas and secular schools (funded by the state or by local communities) were created after the democratic opening in 1991. Universal primary education however remains a challenge since about 50% of Mali's population is under the age of 15. Many parents cannot afford to send or keep their children in school even where schools exist. Enrollment varies across regions. Bamako has the highest enrollment rates in primary and secondary education. The national university, created in 1996, is located in Bamako. Numerous private institutions provide professional and some university-level education.

#### 14 CULTURAL HERITAGE

The old towns of Djenne and Timbuktu and the tomb of Askia Mohamed in Gao are world heritage sites. The Ahmed Baba Center and the Kati Foundation in Timbuktu house rich collections of Arabic manuscripts from the period when the city was a flourishing center of Islamic scholarship (13th to 16th centuries).

Music, theater, dance, and oral literature particular to the different cultural traditions of the country continue to be practiced in rural villages as well as in urban neighborhoods. They also evolve as they address new themes and incorporate new technologies. Musical performances are a regular feature on Malian television. Successive governments have made the promotion and development of Mali's cultural heritage an integral aspect of national politics since independence. Beginning in the 1960s, youths in the various regions were encouraged to develop theater, music, or dance performances and the best groups were selected to represent their region at a biennial festival in Bamako. Since the late 1990s, regional festivals (e.g. in the north of Mali) are also organized through local initiatives. The National Institute of Arts, a professional secondary school in Bamako, has long promoted the cultural heritage through training in several artistic genres and professions (e.g. music, theatre, jewelry making, etc.). A Conservatory of the Arts and Media was recently created to provide advanced training in the plastic arts, theater, dance, and multi-media. It is directed by the internationally acclaimed painter Abdoulaye Konaté. The National Museum has a permanent arts and crafts collection from different periods and cultural traditions and also hosts excellent temporary exhibits.

The male and female Malian musicians who have become household names on the world music scene are too numerous to mention. The films of Souleymane Cissé and Cheik Oumar Cissoko and the photography of Seydou Keita and Malick Sidibé are internationally recognized. Mali has also produced a number of literary figures writing in French such as Amadou Hampaté Ba, Massa Makan Diabaté, Moussa Konaté, Ibrahima Ly, Yambo Ouologuem, and Fily Dabo Sissoko, to name only a few.

#### 15 WORK

The majority of Malians are self-employed, making a living in agriculture, herding, fishing, trade, craft production, small-scale enterprises, and services. Profit margins are generally small. Most of the salaried positions are in the civil service or in international organizations. Beginning in the 1980s, structural adjustment policies imposed by the World Bank and the International Monetary Fund compelled the government to reduce the civil service and thus to hire fewer secondary school and higher-education graduates. This has resulted in greater unemployment and underemployment because the private formal sector, though growing, is still limited. Many Malians, single men as well as entire families, emigrate in search of work and better opportunities on a short- or long-term basis.

#### 16 SPORTS

Soccer is by far the most popular sport and is played recreationally as well as in national and international competitions. Mali hosted the Africa Cup in 2002. Basketball is played by some male and female teams. Athletics has gained wider attention through the Grand Prix de Bamako since Mali began hosting the Pan African Athletics meeting in 2000.

#### 17 ENTERTAINMENT AND RECREATION

Private radio stations have mushroomed since the 1990s and people of all ages tune in for their favorite programs. Many urban residents relax in the evening by watching Brazilian or North American soap operas or other programs on television, often in the company of neighbors or friends. Young people enjoy listening to Malian, other African, and international popular music. Concerts by well-known performers draw large crowds. While rural youths dance mostly at local festivals, urban youths also frequent discotheques and other dance events on weekends. Socializing with relatives, friends, and neighbors remains the most popular pastime for young and old, men and women, in urban and rural areas. In the cities, many men belong to a *grin*, a circle of friends with whom they meet regularly to talk or play cards while brewing a strong sweet tea. The importance of movies as a form of entertainment has diminished in recent years and a number of theaters have closed.

#### 18 FOLK ART, CRAFTS, AND HOBBIES

Folk arts and crafts are alive, and some flourish, as a stroll through the open-air markets of Bamako will reveal. Different regions and ethnic groups specialize and excel in particular products: Fulbe men in the Mopti region, for example, weave wool blankets with a variety of geometric designs, Tuareg women in the north of Mali make dyed leather goods (pillow covers, bags, knife sheaths, etc.), and women from Kayes are known for their indigo dyed cloth. Although the bulk of wool blankets and leather goods are now intended for the tourist market, they and other products are also made for home consumption. These include gold and silver jewelry, pottery (e.g., water jars), spoons and ladles made of squashes, and a range of mats and basketry. Hand woven cotton cloth in various colors and patterns is still sewn into blankets for use during the winter months but its production for women's wrappers and men's tunics has declined considerably. The tie-dyed damask cloth produced by urban women in innovative designs and colors,

especially in Bamako, is prized for elegant wear not only in Mali but also in neighboring countries.

## 19 SOCIAL PROBLEMS

From 1960 to the overthrow of the Traoré government in 1991, political prisoners were frequently banished to the salt mines of the Sahara desert. Since the democratic opening of 1991, local human rights activists and the dynamic press keep the spotlight on the government and don't hesitate to discuss social, political, and economic problems openly. Most social problems result from the inability of many Malians to find employment and/or to earn an adequate income. Theft, prostitution, and homelessness are most prevalent in the cities. Drug use exists in some youth circles but is discouraged by the government and by Islam. Alcoholism is not widespread.

Malaria diminishes the quality of life and economic productivity of many individuals during the rainy season and, in the south of the country, at other times of the year as well. Lack of refrigeration often leads to gastrointestinal problems. Respiratory illnesses, parasites, and infections of various kinds are also common among children and adults. In 2003 HIV/AIDS prevalence in adults was estimated at 1.9%. Internationally funded initiatives seek to mobilize youths in the fight against HIV/AIDS and sexually transmissible diseases.

## 20 GENDER ISSUES

Women's and men's rights and responsibilities within the family, and their contributions to the household economy, vary in accordance with age, marital status, position within the household, as well as between ethnic groups and between urban and rural areas. Male and female legislators have worked for years to revise the national family law code to bring about greater equality between men and women in the areas of marital status, parental rights, ownership of land and inheritance, wages and pensions, employment laws, and education. Opposition from conservative groups has led to repeated compromises and has delayed passage.

In several regions of the country a majority of girls are married before the age of eighteen. As with excision, women's associations carry out educational campaigns with strong financial support from international donors.

Awa Keita (b. 1912), a trained midwife who lived and worked in different parts of the country, was active in the struggle for independence and in the organization of the women's branch of the USRDA nationalist party. In spite of this example, only small numbers of women have sought political office. The major political parties have attempted to change this pattern by setting quotas for female representation to encourage women to run for elective office.

# MALINKE

**PRONUNCIATION:** mah-LING-kay

**ALTERNATE NAMES:** Mandinka, Maninka, Manding, Mandingo, Mandin, Mande

**LOCATION:** Territory covering The Gambia, Senegal, Mali, Guinea Bissau, Guinea, Sierra Leone, Liberia, and Côte d'Ivoire (Ivory Coast)

**POPULATION:** 7.75 million

**LANGUAGE:** Variations of Mande languages

**RELIGION:** Islam

**RELATED ARTICLES:** Vol. 1: Gambians; Guineans; Ivoirians; Malians; Senegalese

## 1 INTRODUCTION

The name Malinke is just one of many similar names used for a large group of closely related peoples in West Africa. They are also commonly referred to as Mandinka, Maninka, Manding, Mandingo, Mandin, and Mande. The areas that they occupy are among the earliest places of Neolithic agricultural settlements in sub-Saharan Africa, dating as far back as 7,000 years.

The Malinke have the distinction of being heirs to the great Mali Empire, a medieval merchant empire that flourished from the 13th to the 16th centuries and greatly influenced the course of West African history. Much of the northern region of Africa, of which the Malinke territories were a part, was incorporated into the world of Islam in the 11th century, and most of the West African chieftains adopted the Islamic religion. One of the famous kings of the Mali Empire, Kankan Musa (r.1312–37), made a pilgrimage to Mecca in 1324 with a tremendous entourage of camels laden with gold, and some 60,000 men, including 500 slaves carrying golden staffs. The renowned city of Islamic teaching, Timbuctu, was also part of the vast and prosperous Mali Empire. The empire declined in the 15th century and was gradually absorbed and usurped by the Songhai Kingdom, which extended to the 17th century.

As early as 1444, Portuguese traders had enslaved the first Malinke people, and in the next three and a half centuries, thousands of Malinke and other peoples were transported by Portuguese, British, French, and Dutch merchants to the Caribbean and the Americas to work as slaves on plantations.

Interesting descriptions of the areas inhabited by the Malinke were gathered in the late 18th century by Scottish explorer Mungo Park, who led two expeditions exploring the Gambia and Niger Rivers. During the first expedition, between 1795 and 1797, he was imprisoned by an Arab chieftain for four months before escaping, and later lay ill in a Malinke town for seven months. Park wrote a book about this expedition, called *Travels in the Interior Districts of Africa* (1797). Park was drowned during an attack by natives on the Niger River in 1806.

During the 19th century the kingdoms of the Malinke peoples were subjugated by the British, French, and Portuguese and were incorporated into their colonial systems. It would take over a century for them to gradually gain autonomy in independent African nations whose boundaries crossed their tribal territories.

The Malinke people gained some popular attention when Alex Haley published his best-selling book, *Roots* (1974), later made into a television series. The story of Haley's ances-

tral family and the book's main character, Kunta Kinte of the Mandinka (Malinke) people, personalized the terrible plight of African slaves and their families who were sold into slavery. Indeed, a great many slaves were taken from the areas around the present countries of The Gambia and Senegal, particularly in the 16th century. By the mid-18th century, when Kunta Kinte was captured into slavery, regions to the south mostly supplied the slave trade.

The Malinke were not only victims of the slave trade, but they were also perpetrators of the trade themselves, having had a long history of owning and maintaining slaves. The explorer Mungo Park, during his first journey through the area of Senegal and The Gambia, estimated that three-quarters of the population were hereditary slaves. There were two distinct kinds of slaves to be found: those that had been captured in battle or purchased; and those that had been born into the slave families of their village. The first had no rights and were treated like objects to be bought and sold. The second kind had a number of rights and privileges and could sometimes even buy their freedom. These hereditary slaves might be sold out of the village as punishment for a crime. Mungo Park documented how some free people, during a severe drought, would voluntarily give themselves as slaves to relatively wealthy Malinke farmers in order to save themselves from starvation.

The indigenous slave trade persisted into the 19th century, somewhat beyond the time that the British, French, and American slave trade had been declared illegal. Even today the lowest caste in the Malinke system of social structure comprises descendants of former slaves.

## 2 LOCATION AND HOMELAND

Today there are more than 7.75 million Malinke distributed over several African nations within a wide arc that extends 1,300 km (800 mi). It starts at the mouth of the Gambia River in the northwest and circles around in a bow form, ending in Côte d'Ivoire (Ivory Coast) in the southeast. The territory includes areas in the nations of The Gambia, Senegal, Mali, Guinea-Bissau, Guinea, Sierra Leone, Liberia, Ghana, Burkina Faso, and Côte d'Ivoire. There are numerous other African ethnic groups sharing these areas. Of the 7.75 million Malinke scattered throughout West Africa, there are 2.8 million in Guinea; 1.1 million in Mali; 1 million in the Ivory Coast; 1 million in Senegal; 600,000 in The Gambia; 400,000 in Sierra Leone; 400,000 in Burkina Faso; 200,000 in Guinea-Bissau; 100,000 in Liberia; and 100,000 in Ghana. They do not form a majority group in any of the above countries. In The Gambia they represent approximately 39% of the country's total population, in Guinea 32%, and in Guinea-Bissau 14%.

## 3 LANGUAGE

The Malinke peoples speak slight variations of the broad Mande branch of the Niger-Congo family of languages. The term "Mande" frequently refers to a group of closely related languages spoken by the Malinke and other West African peoples, such as the Bambara, the Soninke, and the Dyula. The Mandinka language, sometimes referred to as Mandingo, is a Mande language spoken by millions of Mandinka people in Mali, Senegal, The Gambia, Guinea, Ivory Coast, Burkina Faso, Sierra Leone, Liberia, Guinea-Bissau, and Chad; it is the main language of The Gambia. It belongs to the Manding branch of Mande, and is thus fairly similar to Bambara and Maninka or Malinke. It is a tonal language with two tones: low and high.

## 4 FOLKLORE

Details of the early days of the Mali Empire and the lifestyles of the people have been kept alive for centuries through the epic poem, "Sonjara" (or "Sundiata"; also "Sunjata"), which has been sung and resung through many generations by the *griots*, bards or praise-singers of West Africa. In over 3,000 lines of poetry in the oral tradition, it tells the story of Sonjara, a legendary leader who, after countless obstacles and trials, unites the Malinke clans and chiefdoms at the beginning of the 13th century. As a young child he was hexed and made into a cripple by his father's jealous second wife, who wanted her own son to be king. He finally learns to walk and decides to become a hunter, giving up his claim to the throne and starting on a long exile with his mother and siblings. After many adventures, a delegation from Mali pleads with him to come back and save them from an evil sorcerer-king, Sumanguru, who has put calabashes (gourds) over the mouths of their heroes. Sonjara organizes an army to return and regain his rightful throne. With help from his sister, who seduces the evil sorcerer-king to discover his vulnerable points and, after long and bloody battles, he triumphs over Sumanguru, liberating and uniting the surrounding chiefdoms. "Sonjara" is now considered one of the famous epics of world history, and it is still being performed by griots for the Malinke.

## 5 RELIGION

The majority of the Malinke are Muslim and have adapted the tenets of Islam into their native beliefs, resulting in a wide range of syncretic variations. Most Malinke villages have a mosque, often a large cylindrical structure with a thatched roof that contains a hole through which the call to prayer can be shouted; some village mosques have a minaret, and most mosques are enclosed by a palisade fence. Women sit separate from the men, both in the mosque and during outside religious services. Those villagers who have made a pilgrimage to Mecca, or even descendants of those who have made the journey, are highly respected. They may have the word for the sacred pilgrimage, *Hadj*, as part of their name.

The principal religious leader is the elected *imam*, an elder who leads prayers at the mosques and has great religious knowledge. The other Islamic clerics who play a major role as healers and religious counselors are the *marabouts*. They are respected as preservers of morality through oral tradition and as teachers of the Quran. These specialists have many talents, being able to foretell the future, interpret natural signs, and make herbal concoctions for curing illnesses. They are experts at preventing and healing ailments or injuries inflicted by evil spirits or by mortals.

Prevention and cure is frequently done by means of *gri-gris*, or charms. The most common ones are written charms. The marabout copies selected lines in Arabic script from a master copy—either from the Quran or from a book with medicinal messages. These lines written on a piece of paper comprise a charm that can be folded in any shape—rectangle, triangle, square—and taken to the leatherworker to be covered in a leather pouch with a string and worn around the neck, waist, or arm. Charms can be obtained for protection from illness, from bullets or weapons, for help in finding employment, or even for making oneself attractive to the opposite sex. Another type of charm is the water charm, in which some lines from the master copy are written in washable ink onto a writing board. The ink is washed into a bowl. The recipient can drink a bit of the solution every day or rinse the body with it, for example, to help gain success in school.

A marabout can also provide a blessed string to be placed on the wrist of an infant hours after birth to protect it from evil spirits, or on the tails of cattle if there is fear of an epidemic caused by evil spirits. A personal blessing of the marabout is considered helpful for healing; he will spit lightly on the forehead of a patient and press the area with the palm of his hand. Children in particular may be seen with several charms around their neck, waist, or wrist. The common use of charms is an indication that the Malinke are fearful of many evil spirits, which can bring death or misfortune.

## 6 MAJOR HOLIDAYS

The Malinke look forward to the important Islamic holidays. The favorite is Tabaski, which usually falls in the spring or summer, the day being determined according to the Islamic lunar calendar. Tabaski commemorates the moment when Abraham was about to sacrifice his son Isaac in obedience to God's command, when God interceded and a ram was substituted. The Malinke start saving months ahead of time for the celebration to purchase new clothes and to have an abundant supply of food. The most expensive item is the ram or sheep to be slaughtered at the precise moment determined by the lunar

calendar. It is prestigious to have a very large and fat ram to slaughter. Households that can only afford a goat or chicken are rather embarrassed. On this day people attend the mosque, and there is much eating (especially roasted mutton) and visiting of friends. Other religious holidays include the Feast of Ramadan celebrated at the end of the annual 30-day Muslim fast, and Muhammad's birthday.

## 7 RITES OF PASSAGE

A week after the birth of an infant, the Malinke hold a name-giving ceremony. A marabout leads prayers during a ceremony, shaves the infant's head, and announces the name of the child for the first time. If the parents can afford it, a goat or sheep will be killed, and the meat will be served along with balls of dough blessed by the marabout.

Puberty rites and circumcision are very significant in the lives of the Malinke, both male and female. Children are teased about the status of being uncircumcised, and from an early age they are curious as well as fearful. It is the most important rite of passage, for one cannot attain adulthood or marry without it. For boys the rite is held about once every five years and includes novices from 6 to 13 years old, who may be in a group of 30 to 45 boys. There are variations in the ceremony, but the following is typical. A circumcision lodge is built with millet stalks after the harvest in December or January. At dawn the novice is carried to the place of circumcision on the shoulders of an "older brother" or guardian who has already been circumcised. The village men proceed to the lodge. Each boy is circumcised, after waiting reflectively, by a circumciser or elder; the boy sits at the edge of a hole with his legs around it, and the foreskin is buried in the hole. Either indigenous herbs or Western ointment may be used to help heal the wound. Just after the circumcision the guardians race back to the village to spread the news, waving branches in the leaf dance.

In the evening the novices, draped in white clothing with hoods, enter the lodge to begin a period of six to eight weeks of seclusion. They carry large square charms to ward off evil spirits. They undergo an education in a fearful atmosphere by the lodge chief and guardians who teach them to act as a collective group. The frightening sounds of a bull-roarer (a flat board whirled around on a string) are heard, and they are threatened that evil demons will be called in. They learn circumcision songs that reflect the values of society, for example, respect for elders. The novices undergo four stages of education, including a feast prepared by their mothers. When they return home with a new status there will be a polite distance between mother and son. The boys who were circumcised in one ceremony form an age-set, which is given a name; they will have a close bond for life.

The girls' circumcision is organized and convened by the "circumcision queen," a village woman leader who is a respected midwife and supervises rituals concerning women. Girls are circumcised in smaller groups, and the ceremonies occur more frequently. The girls are carried on the backs of their "older sisters," their guardians, just as mothers carry infants on their backs. They are blindfolded and taken to a symbolic women's tree used to make women's tools or mortars and pestles. Each novice in turn sits on the edge of a hole, supported by an elder woman behind her. The clitoridectomy is done by an elder woman specialist. Boiled bandages and ointments are applied, and the girls stay secluded for ten days to two weeks. During

this time they are taught Malinke values and how to work together as a group. The stages of seclusion are similar to those of the boys. In recent years there is pressure to have circumcision in clinics. In general, however, the older generation is very reluctant to let go of these traditional rituals, and circumcision is still an important prerequisite to marriage.

Marriage ties are important for creating and cementing bonds between families. Marriage for a Malinke girl may begin with her betrothal at birth to a boy who may be 12 years old or less. The preferred marriage partner is the matrilineal cross-cousin: the boy is betrothed to his mother's brother's daughter. Prior to marriage, several steps in the payment of a bride-price by the suitor to the parents of the prospective bride are made, taking from three to seven years. The installments include money, kola nuts (bitter, mildly hallucinogenic nuts), salt, and some livestock. Although the girl can sleep intermittently with her future husband, she cannot go to live in his compound until the full payment is made, amounting to what is a large sum in Malinke economy. Additional gifts are made to the bride's mother-in-law before the actual marriage ceremony can take place.

The typical Malinke wedding, called a "bride transfer," takes place on a Thursday or Friday—the two holiest days of the week. The bride is dressed in dark blue with a white smock, a blue turban, and a dark blue shawl over her head with just the eyes showing. She wears anklets and bracelets of silver beads and ties a silver coin in her hair. The "circumcision queen" comes to the bride's house and performs a dance. The bride walks behind the queen with her hands on the queen's hips; this is called "carrying the bride." The two are followed by a throng of women, symbolically weeping because the bride will be leaving her parents' home. The bride goes to her husband's house and sits on his bed. A period of seclusion lasting up to three days begins, a period in which the bride is considered very vulnerable to an evil spirit. The seclusion ends when the husband unveils the wife. The village women give gifts of cooking utensils and hold a dance.

The Malinke practice polygyny (plural wives), and Islam permits men to take up to four wives. Only prosperous men can afford several wives due to the expensive bride-price and the fact that all wives should be provided for equally.

The final rite of passage, death, is not seen as a natural event for the Malinke. Their word "to die" also means "to kill," and death is seen to be caused by some evil force. At the same time, the person is believed to rise again to one of three regions in an afterlife: heaven, hell, or purgatory (somewhere in between). The corpse is ritually bathed and the water collected so it cannot cause sickness. The men conduct the funeral while the women gather nearby. A senior marabout gives the eulogy and the imam says the final prayers. Men carry the body on a mat to the burial place with the women wailing. It is buried on its right side, head facing east, feet to the north. A fence is built around the grave to protect it from animals; sticks are put over the hole to provide a "breathing space." The corpse is said to be interviewed by the angel Malika during a 45-day judgment period. In that time three mortuary ceremonies are held at which oil cakes and kola nuts are distributed to those attending.

## 8 INTERPERSONAL RELATIONS

When the Malinke encounter a family member or friend, the greetings they have for one another are very important, as they

are for other West Africans. An extensive ritual exchange of rather formal greeting questions ensues, that can take up to a minute. They might say, "Peace be with you," "Is your life peaceful?," "How is everything going?," "Are your family members in good health?," "How is your father?," or "Is the weather treating your crops well?" The questions go back and forth and may end with, "Thanks be to Allah." Even if one is not feeling well or if things are not going well, the answers are usually positive. It is considered very bad manners not to engage in the lengthy greeting exchange.

The Malinke people in general are very warm and hospitable. If a guest drops by at mealtime, he or she will surely be invited to share the meal. Giving gifts and sharing are very important values in the Malinke culture. Richer people especially are expected to be generous. The idea is that those who have been blessed by Allah should be willing to share some of their wealth. If not forthcoming with generosity, a person might be asked outright to give something.

## 9 LIVING CONDITIONS

The Malinke who live in the cities have adapted to an urban lifestyle. Most, however, still live in traditional villages of anywhere from a few hundred to a few thousand people. The villages are rather compact, consisting of groups of compounds enclosed by millet-stalk fences. A compound contains several cylindrical houses built of sun-baked bricks or wattle and daub, with a thatched roof; there will also be a granary and a separate cylindrical kitchen with low half-walls and a thatched roof. Behind each house in a traditional compound is a small enclosure containing a pit latrine. This enclosure is also used as a private place for bathing with a bucket of water.

As the residence pattern after marriage is patrilocal, those living in the compound will be the brothers of a family with their wives and unmarried children. If a man has more than one wife, each will have her own house in the compound. The houses are grouped around a center courtyard that may contain a well. Much activity will be going on in the courtyard: children playing, women engaged in activities, such as washing clothes, shelling peanuts, or cooking (a very lengthy and laborious task). The houses, which may have a couple of small windows, are very sparsely furnished; they may just have a bed consisting of a frame with thin poles across the width, covered by a mat; a small table; and a chair or two. Possessions may include a transistor radio and a suitcase with diverse mementos and valuables. Most of the living and socializing goes on outside in the courtyard, where the beds may be placed to sit on, or to sleep on when it is too warm inside.

An average village may have a small shop selling a few items. The most popular local consumer goods are refined sugar, tea, kola nuts, salt, cooking oil, tobacco, cigarettes, matches, and batteries. For transportation, a bicycle, an occasional motorbike, an ox cart, or a horse cart are the means used by those who can afford these items. More frequently, villagers walk to a road where there is a bus or perhaps a "collective taxi," or they simply walk to their destination. Women do not have much opportunity to leave their villages because travel for women is discouraged by the Malinke culture.

## 10 FAMILY LIFE

The Malinke consider large families to be important. Children are one's wealth in an agrarian society. A large compound with

brothers and their plural wives will always be bustling with family members of several generations and children of many ages. Young girls who are old enough to carry an infant will usually be seen with one strapped to their back or carrying one on their hip. Infants are coddled and indulged, never lacking attention. Mothers carry their infants on their backs wherever they go and breastfeed them whenever they cry. Young children have certain chores to do, but in general they lead a wholesome and carefree life with plenty of playmates around.

For men and women there is a division of agricultural labor. The men do the plowing, sowing, planting, and a major part of the harvesting work. Some also engage in hunting and fishing. Women do weeding and tend vegetable plots. Women are always busy with some kind of work, while it is common to see men sitting under a tree in the village square, chatting with other men and having a smoke and some tea that the women have brought them. The women are responsible for cooking, which involves many labor-intensive steps. They gather the firewood and bring it back on their heads in large bundles. They draw water at the well. They pound the millet, sorghum, or corn for hours with a mortar and pestle and then sift it to prepare the staple food of couscous. Cooking the meal involves hours of squatting in intense heat, tending earthenware pots propped on three stones around an open wood fire. Usually the women of a compound share the many tasks of cooking and take turns being responsible for meals. The women also wash the clothes and do much maintenance and cleaning work in the compound. While tending the children they are usually doing some income-generating activity, such as shelling peanuts.

The male head of the household is responsible for food procurement for his family, for buying clothes, and for providing agricultural tools and seeds for planting. The household heads have the authority to make all important decisions, although women wield a significant amount of power behind the scenes.

The social organization of the Malinke is based on an ancient caste system into which members are born. A Malinke can never change the caste-status into which he or she is born. There is rarely intercaste marriage. In an average village, however, the difference in wealth or status among the castes is barely visible. There is more of a feeling of egalitarianism, and all people have an agrarian lifestyle, cultivating crops and tending small herds of livestock. The size of the family is often more of an indication of wealth; small families with few children and few extended family members are thought of as poor and unfortunate. The caste system is comprised of nobles at the top, artisans and griots in the middle, and the descendants of slaves at the bottom. It is an elder from among the nobles who serves as headman or chief. All castes may provide marabouts, but certain other functions are caste-specific.

The artisans are divided into two main occupations: blacksmiths and leatherworkers. The blacksmiths are considered to be the most important of the middle caste. They make iron tools and implements, such as plow points and axe heads, as well as wooden furniture, mortars, and pestles. Some Malinke smiths have gained excellent reputations as sculptors and artists in iron objects or woodcarvings. They are usually the bicycle repairmen of the village as well. Smiths have a reputation for truthfulness and hospitality. They have the important function of male circumciser and chief of the lodge in circumcision

ceremonies. There are many leatherworkers who are just farmers and do not do much work in leather. Some, however, have a good additional income from making the leather pouches or cases to cover the *gri-gri* charms.

The griots are the traditional bards or storytellers, providing entertainment and singing songs that keep alive the oral tradition of the people. Some just chant praise and recite honorific names and parables from the Quran. Others recite rhymed phrases accompanied by a drummer. They are paid for their skills at various ceremonies. Many griots are musicians who know how to play the *kora*, a stringed instrument made from half a large gourd covered with leather as a resonator. Some griots play the *balaphon*, a wooden xylophone with a row of gourd resonators. They teach all these skills to their children from an early age. Often the musicians will migrate from village to village to market their talents.

In addition to the castes, the Malinke have groupings in age-sets consisting of men or women who were circumcised at the same time and who maintain a strong egalitarian bond throughout life. Sometimes particular age-sets are called on to perform community tasks. The male age-sets pass through three age-grades, which are an important aspect of social control. The “boys” are those from about 10 to 20 years of age, who are the focus of enculturation, learning the proper norms and values of the Malinke culture. The “young men” include those from about 20 to 40 years old who are either unmarried or who have just formed their own nuclear family unit; they are responsible for carrying out decisions made in village meetings. The “elders” are those over 40 years old who are heads of extended family household units; they are the most influential in making decisions and settling disputes.

Malinke villages have secular leaders and religious leaders, whose roles sometimes overlap. The secular leader is the chief, who is typically a descendant of the noble caste and the village founders. The chief presides over a council of elder men who may convene to settle disputes, for example, if there is a theft or a question of someone’s livestock damaging crops, or if a decision must be made about the return of the bride-price if an abused wife goes back to live in her father’s compound.

The imam is the principal religious leader who may serve several small villages. Unlike the chief, the imam is elected; the position is open to elders with Quranic wisdom, who are not descendants of slaves. His main duty is to lead prayers at the mosque. Sometimes the chief is also a marabout, an Islamic healer and counselor, who can rival the imam in performing religious duties.

Many Malinke villages have an additional influential person who could be said to be a leader: the *kanda*. A *kanda* is a self-made man, who with his large family, strong personality, organizational abilities, and hard work has amassed considerable wealth. He has no formal power, and he does not refer to himself as a *kanda* for fear of jealousy and alienation. He wields a great deal of authority at meetings and when important decisions must be made. Because of the deep respect for elders, both men and women, it can be said that they are also village leaders. Their status grows as they age, and younger people are instilled with the value of respecting their elders.

In addition to the council of elder men who settle disputes, the Malinke have a fascinating means of social control—through the powerful demon-spirit called a *kangkura*, portrayed by a mask-wearer who covers his body with blood-red

bark, making an awesome and frightful figure. The kangkuraao must be summoned by the chief, the imam, or the circumcision lodge chief, who gives the demon-spirit a benevolent mission to carry out. The spirit figure can demand that people participate in public works, such as digging a well or weeding for fire prevention; he can enforce taboos against eating fruit until it is ripe; and he can discipline novices at circumcision ceremonies. Moreover, he can exact fines for those who do not obey. Even though the Islamic religion prohibits graven images, the kangkuraao has survived as part of the Malinke tradition.

### 11 CLOTHING

Malinke who live today in urban centers, especially the men, may have adopted Western-style clothes. Villagers, on the other hand, take pride in their traditional clothing, which is important to them. In fact, one of the obligations of a husband is to give each wife the cloth for at least two new outfits every year.

Women generally wear a loose, scoop-necked smock over a long skirt made by a wrap-around piece of cloth. They often tie a matching piece of cloth around their head in an informal turban, each woman's turban having its own special flair. They use brightly colored cotton prints with splashy, large designs; some also wear tie-dyed, wood-block, or batik prints. The traditional casual dress for men is made with the same bright prints fashioned in an outfit that resembles pajamas.

For formal occasions men and women may wear the *grand boubou*. For women this is a loose dress that extends to ground level and may be trimmed in lace or embroidery. For men it is a long robe-like garment covering long pants and a shirt. Many middle-aged or elder men wear knit caps. Shoes are leather or rubber thongs.

### 12 FOOD

Traditional Malinke are cultivators who grow varieties of millet, sorghum, rice (in the swampy areas), and corn as staple crops. As cash crops they grow peanuts and cotton and, to supplement their diet and gain a bit of income at weekly markets, grow diverse vegetables in garden plots. Some villages have a bakery where small loaves of French-style bread are baked.

The wealthier Malinke own some livestock—cattle, goats, chickens, and perhaps a horse for plowing. The cattle are used for milk and for the prestige of owning them; they are rarely slaughtered. There is little meat in the diet. Those who live near rivers or lakes may supplement their meals with fish.

A typical breakfast might consist of corn porridge eaten with a spoon made of a small, elongated calabash (gourd) split in half. The midday and evening meals may consist of rice or couscous with sauce and/or vegetables. Couscous can be made of pounded and steamed millet, sorghum, or cornmeal. A substantial quantity of rice or couscous is placed in a plastic or enamel basin around which those sharing the meal sit. Small bowls of sauce—often peanut sauce—or vegetable mixtures are distributed over the rice or couscous. Those sharing the meal take portions of it with the right hand, forming a bite-sized ball.

Tea-time is an important break for the Malinke. Tea is made by filling a small pot with dried tea leaves and covering these with boiling water. The brewed tea is extremely strong and is served with several small spoons of sugar in tiny glasses. After the first round of tea, the pot is filled with boiling water a sec-

ond and third time, thus the second and third rounds of tea are a bit diminished in strength.

### 13 EDUCATION

Many villages today have a government school and a Quranic school for learning to recite verses from the Quran. The educational models of the government schools, as well as the medium of instruction, are based on those of the ex-colonial masters, either French or British. As the nations where the Malinke are found today have many tribal peoples in addition to the Malinke, it is likely that the teachers posted to the school will be of a different ethnic group and will not speak the Malinke language.

It is difficult for a child to start first grade in a school that teaches only in French or English, languages totally different from his or her native Malinke. Poor attendance and high drop-out rates are common in the village schools. There are few instructional materials, and the teaching methods are very formal: rote recitation, "chalk and talk," and copying exercises. As the Islamic parents do not think it is as important for their daughters to get an education as it is for their sons, the enrollment of boys is much higher than that of girls. Only a small percentage of the village pupils can pass the state examination at the end of sixth grade in order to go on to high school. The countries in which the Malinke are found have generally low literacy rates, around 40%, with literacy for males much higher than for females.

### 14 CULTURAL HERITAGE

Much of the cultural heritage of the Malinke is embedded in the great Mali merchant empire of the 13th to the 16th centuries and the Islamic religion that was adopted by the chieftains. There was a flourishing trade in gold, and many ornate ornaments, jewelry, and staffs of gold date from that period, documenting a wealthy and proud past. Additionally, the cultural heritage has been immortalized in the famous epic poem "Sonjara," sung by *griots* (minstrels) since the 13th century (see Folklore).

### 15 WORK

Farming is a respected occupation, and all members of society are given farming tasks. The children, too, guard the fields against wild boar, monkeys, and birds. The Malinke use natural fertilizer, allowing livestock to graze on the fields lying fallow. Children are often seen tending the livestock.

### 16 SPORTS

The Malinke of today have some traditional sports in their school curriculum that were introduced with the French model of education. Many of the village schools are too poor to have good quality balls or much sports equipment. Boys might be seen playing soccer with a homemade ball. They enjoy listening to soccer matches, both national and international, on the radio or watching these on television in town; many Malinke men and boys can recite the names of international soccer stars.

### 17 ENTERTAINMENT AND RECREATION

In addition to the storytelling and music provided by the *griots*, the Malinke like to listen to the radio, a typical possession

in most households. If they live in a village with electricity, a television set is a prized item. It is common for large groups of villagers to gather in the compound of the television's owner, who will position his set on a high platform outside so large numbers of people can watch.

"Woaley" is a board game similar to backgammon. It is a major pastime for the Malinke as well as other West Africans. The board is in the form of a rectangle with twelve indentations to hold beans and two larger indentations at the ends to hold the captured beans. Both spectators and players of all ages enjoy woaley matches. (The game is referred to by many other names as well.)

### 18 FOLK ART, CRAFTS, AND HOBBIES

Some of the most important art of the Malinke is the oral art, songs, and epic poems sung by the griots playing a kora musical instrument. In former times it was common for the blacksmiths to forge ornamental oil lamps from iron and large iron door locks, as well as fanciful iron figures of spirits or animals to crown the staffs; the blacksmiths also carved wooden figures and masks. These artistic endeavors are less common today.

Present day hobbies of Malinke young men may include collecting cassette tapes of their favorite singers, which could be reggae singers from Jamaica or American rock stars. Something that young women enjoy doing and might consider a hobby is braiding each other's hair, making decorative rows or braiding in long strands of synthetic hair.

### 19 SOCIAL PROBLEMS

As the Malinke people are socialized with a strong sense of responsibility to their family and lineage, many of the kinds of social problems that might be prevalent in an industrialized society are not encountered. AIDS and the spread of venereal diseases by men who have brought these back from urban areas is a problem in some places. Since the society is Muslim, alcoholism is not found. At the same time, malnutrition and a lack of understanding of its causes is a subject that needs attention. From a Western perspective, the situation of women, including fewer opportunities for education, fewer rights, and having to share a husband with co-wives, may be seen as a social problem.

### 20 GENDER ISSUES

Malinke society is patrilineal (male-dominated) and the smallest social unit is the family. The oldest male serves as the head of the lineage. A "minor lineage" consists of a man and his immediate family. A "major lineage" consists of households of relatives and their families. The majority of the Malinke men are farmers. The men do all of the fieldwork by hand with no help from machinery or fertilizers. The staple crops native to this area are rice, millet, sorghum, and peanuts. There are also many men who raise livestock. Cattle are rare and are used mainly to show prestige or used as a bridal dowry. Only men are allowed to hold positions of high respect in a Malinke village. Among the Malinke, men do the heavy farm work, hunt, and fish. They also hold leadership positions, such as village elders and *imams*. The women help with the farming, as well as cooking, cleaning, and caring for the children.

Traditionally, parents arranged their daughters' marriages while the girls were still infants. Today, marriages are still arranged, but not as early. The groom is required to work for the

bride's family both before and after the wedding. He must also pay the girl's family a "bride price." Polygamy is commonly practiced, but the men rarely have more than three wives.

Malinke believe the crowning glory of any woman is the ability to produce children, especially sons. The first wife has authority over any subsequent wives. The husband has complete control over his wives and is responsible for feeding and clothing them. He also helps the wives' parents when necessary. Wives are expected to live together in harmony, at least superficially. They share work responsibilities of the compound, cooking, laundry, etc.

While farming is the predominant profession among the Malinke, men also work as tailors, butchers, taxi drivers, woodworkers, metal workers, soldiers, nurses, and extension workers for aid agencies. However, most women, probably 95%, remain in the home as wives and mothers.

# MAURITANIANS

**PRONUNCIATION:** mawr-uh-TAY-nee-uhns

**LOCATION:** Mauritania

**POPULATION:** 3.3 million (2007 est.)

**LANGUAGE:** Hassaniyya Arabic; French; Azayr; Fulfulde; Mande-kan; Wolof

**RELIGION:** Islam (Sunni Muslim)

**RELATED ARTICLES:** Vol. 1: Wolof

## <sup>1</sup> INTRODUCTION

Mauritania is located in the western Sahara region of Africa, which also includes Algeria, Mali, and Morocco. Archaeological evidence, oral history, and legends indicate that the western Sahara supported a flourishing culture during the millennia preceding Christianity. There is archaeological evidence of copper mining and refining in west-central Mauritania dating back to 500 bc to 1000 bc. An early Berber group called the Bafour inhabited the area that is now known as Mauritania. The Bafour engaged in fishing, hunting, and rural livestock herding. The ancestors of two modern-day ethnic groups—the Toucouleur and the Wolof black Africans—engaged in valley cultivation. Changes in Mauritania's climate and the desertification of the Sahara caused these early Mauritians to move southward.

Waves of immigrants began to flow into Mauritania from both the north and south during the 3rd century ad. The first group to immigrate to the country were the Berbers of North Africa. Berbers first settled in Mauritania during the 3rd and 4th centuries; a second wave of immigrants settled there during the 7th and 8th centuries. Some indigenous Mauritians became vassals to the Berbers; others migrated to the south.

Between the 8th and 10th centuries, a loose association of states known as the Sanhadja Confederation served as a decentralized political system linking the major Berber groups. The Sanhadja Confederation was controlled by the politically dominant Berber group, the Lemtuna. During this time, caravan trade routes linked Mauritania with neighboring peoples in North Africa, the empire of Ghana (which included all of present-day southeastern Mauritania in its territory), and the empire of Mali. Gold, ivory, slaves, salt, copper, and cloth were carried by caravan. Important towns developed along the trade routes, becoming commercial and political centers.

By the 11th century ad, Berber and Arab traders had spread the Islamic religion throughout the western Sahara. Early in that century, the Sanhadja Confederation broke up, and a group known as the Almoravids conquered the entire region of the western Sahara. The group was established around 1041 when 'Abdallah ibn Yassin, a Sanhadja theologian, and his followers built a religious center known as a *ribat*. The men of the *ribat* were called *marabouts*, or *murabitun*, and they became known as the Almoravids. In 1042, the Almoravids launched a war to establish a purer form of Islam in the western Sahara region. The Almoravid empire spread from Spain to Senegal and replaced Ghana's hegemony over southeastern Mauritania. The Almoravids ruled Mauritania until the 12th century.

Between the 12th and 17th centuries, black Africans from Ghana, Mali, and Songhai immigrated to Mauritania. By the late 17th century, a wave of Yemeni Arabs had penetrated Mau-

ritania from the north, and a Yemeni group known as the Bani Hassan dominated the area. As the Arabs moved southward, the Berbers and blacks migrated further south as well. The Berbers tried to fight Arab domination during the unsuccessful Thirty Years' War of 1644–74. When they failed to achieve liberation from the Arab forces, the Berbers became vassals to the Arabs.

By the late 17th century, Mauritanian society comprised four social groups. Three of these—the Arabs, the Berbers, and the black slaves—spoke Hassaniyya Arabic and became known as the *Maures*. The fourth social group was composed of free black Africans who settled in the Senegal River basin in the south.

Early European interest in Mauritania was limited. In the mid-15th century, about 1,000 slaves per year were exported to Europe. The Dutch and French purchased gum arabic from producers in southern Mauritania during the second half of the 16th century. Interest became more intense in the mid-19th century, when French forces briefly occupied two of Mauritania's southern regions—Brakna and Trarza. Early in the 20th century, French forces occupied and set up a colonial administration in Mauritania. France ruled Mauritania indirectly through its existing institutions and made little attempt to develop the region's economy. After World War II (1939–45), France granted some administrative and political freedoms to Mauritania, touching off disputes between the Maures (Arabs and Berbers) and the black Africans. Some Arabs and Berbers wanted to unite with Morocco to the north, whereas many southern (non-Maure) black Africans wanted to join with Senegal and Mali.

Mauritania became fully independent on 28 November 1960. The nation's first president, Moktar Ould Daddah, ruled until a coup ousted him from power in 1978. Divisions between the Maures and the non-Maure black Africans continued after independence, as the non-Maure blacks resented Maure domination of the Mauritanian political system and armed forces.

By 1975, Mauritania had become embroiled in a military conflict over the Western Sahara—territory then known as the Spanish Sahara—with the Polisario guerrillas of the Sahrawi Arab Democratic Republic (SADR). The Polisario is a group seeking national self-determination for the people of the Western Sahara, Mauritania's neighbor to the northwest. It is the military wing of the SADR, the government in exile of the Western Sahara. Mauritania occupied a southern province in the Western Sahara, partly to prevent Morocco (which also had claims to the country) from occupying the entire territory. In 1976, Spain relinquished control of the Western Sahara, dividing the territory between Morocco and Mauritania. The Polisario guerrillas then waged a war against Morocco, and Mauritania allied itself with Morocco against them. The result was a costly war and resentment of the ruling Maures among black Mauritians.

Rising political dissension led to a military coup in July 1978 that made Colonel Mustafa Ould Salek the prime minister. Salek was replaced in April 1979 by Colonel Ahmed Ould Bouceif and Colonel Muhammad Khouna Ould Haidalla. Bouceif died soon afterward in an airplane crash, and Haidalla became Mauritania's prime minister. Haidalla ended Mauritania's military involvement in the Western Sahara and gave diplomatic recognition to the SADR. In 1984, Haidalla was replaced in yet another coup by Colonel Ma'ouya Ould Sidi Ahmad Taya, who

established a military government. Taya began to reform the political system, holding local elections and releasing some political prisoners. In the area of foreign relations, Taya strengthened relations with the Soviet Union and China and with the wealthy Middle Eastern states. His objectives were to gain access to trade and financial assistance and to rid Mauritania of its dependence on the West. In May 1987, Taya named three women to cabinet-level positions in the government. One was appointed minister of mines and industries; another became associate director of the presidential cabinet; and a third was named general secretary of the health and social affairs ministry. In July 1991, Mauritania drafted a new constitution, which, importantly, legalized a multiparty system in place of the former one-party system. As soon as the restrictions were lifted, 16 political parties were formed. The constitution stresses equality and individual freedoms (article 10). It makes Islam the state religion (article 5) and decrees that the president must be a Muslim (article 23).

A bloodless coup in 2005 ended Taya's 21-year autocratic rule. A council of military leaders took control of the country, promising democratic reforms. The 2007 elections, deemed free and fair by observers from both the United States and the European Union, brought to power Sidi Ould Sheikh Abdullahi, a former finance minister in the Taya government. He won 52.8% of the vote. Abdullahi campaigned on promises to redress Mauritania's serious problems of human trafficking and slavery. Although slavery was explicitly outlawed in 1981, many black Maures continue to serve their former masters as household servants and farmhands. In 2008, Human Rights Watch reported that slavery continued to be a serious problem.

Mauritania's government comprises three branches: executive, legislative, and judicial. The president, who is elected to a five-year term, heads the executive branch. The prime minister (Zeine Ould Zeidane since 2007) is appointed by the president. The legislative branch has two houses: a National Assembly consisting of 95 members who are elected by the people to five-year terms, and a Senate consisting of 56 members who are elected by municipal councilors to six-year terms. The judicial branch safeguards individual freedoms and ensures enforcement of the laws of the country.

## 2 LOCATION AND HOMETLAND

Mauritania is located in Africa at the intersection of North Africa (a region known as *the Maghrib*) and West Africa. Its neighbors to the north are Morocco and Algeria; to the northwest lies the Western Sahara; to the east and southeast lies Mali; and to the southwest lies Senegal. The Atlantic Ocean borders Mauritania to the west.

Mauritania's official name is the Islamic Republic of Mauritania. Its capital is Nouakchott. The country is roughly 1.5 times the size of Texas. It spans an area of 1,031,000 sq km (398,069 sq mi), about two-thirds of which is desert, with an occasional oasis. The topography is generally flat, arid plains, and only 400 sq km (150 sq mi) of the area is water. There is very little rain in the northern 75% of the country, which is desert or semidesert, and in the far south, the yearly rainfall averages 40–60 cm (16–24 in). Most of this falls between the months of July and September.

About 40% of the country is covered with sand. Some of the sand sits in fixed dunes; other dunes are carried about by the wind. Mauritania has four geographic zones: the Saharan, the

Sahelian, the Senegal River valley, and the coastal zone. The Saharan zone covers the northern two-thirds of the country. Temperatures in this zone fluctuate widely between the morning and afternoon. It has very little vegetation. The Sahelian zone, south of the Saharan zone, extends to within 30 km (20 mi) of the Senegal River to the south. Temperatures here have much smaller daily variations. More vegetation grows in the Sahelian zone, including grasslands, acacia trees, and date palm trees. The Senegal River valley is a belt of land extending north of the Senegal River. It is vital to Mauritania's agricultural production, though it has suffered much desertification during severe and prolonged droughts since the 1960s and into the 21st century. Nevertheless, it experiences more rainfall than the rest of the country, and the river floods annually. The coastal zone is made up of the western section of the country along the Atlantic coast. It has minimal rainfall and moderate temperatures.

The census of 2007 determined that Mauritania had a population of about 3.3 million people. The annual population growth rate is almost 2.9%. The number of Mauritanians who can be considered urban dwellers is difficult to calculate because of the country's nomadic culture and sporadic industry. Among Mauritanian urban migrants, by far the most live in the capital city of Nouakchott and in Nouadhibou. The remainder live on farms or in small towns. Almost half of the population, more than 45%, is under the age of 15.

The Maures, descendants of both the Arabs and Berbers, are the largest ethnic group in Mauritania. They live mainly in the northern and central regions. Over the centuries, there has

been much intermarriage between those of Arab-Berber origin and the black African population. The Maures are thus a group that includes both blacks and whites. The other major ethnic groups are racially black African; these are the Bambara, Fulbe, Soninke, Toucouleur, and Wolof groups. Black Mauritanians are traditionally farmers, livestock herders, and fishers and live mainly in the south. According to government figures, Maures constitute 70% of the population. This figure is disputed by black Africans, who argue that the Maures manipulate the figures to maintain dominance over the blacks.

Mauritania's largest city is the capital, Nouakchott, now home to thousands of former farmers and livestock herders who lost their farms and herds after drought and desertification began to plague the country in the 1970s. These Mauritanians flocked to Nouakchott and other cities in search of new jobs. The result was overcrowded living conditions and difficulty finding enough jobs for the influx of migrants. In 1960, Nouakchott had 5,000 inhabitants. By 1985, the number had reached 500,000. In 2005, the population was reported to be between 900,000 and 1.1 million. The discrepancy can be attributed to the migratory nature of Mauritanian culture and traditions.

### 3 LANGUAGE

Since 1968, Mauritania's official language has been Hassaniyya Arabic, which is spoken mainly by the Maures. The study of Hassaniyya in secondary schools was made compulsory in 1966. Hassaniyya is a largely Arabic language with many Berber loan words, and it reflects the both Arab and Berber ancestry of the Maures. Many people in the larger cities and villages speak French, which is also an official language. Mauritania's other official languages are Arabic, Poular, Soninke, and Wolof. These have many similarities, and most are rooted in the Niger-Congo language family.

Common boys' names are *Ahmad*, *Hamadi*, *Muhammad*, and *'Uthman*. Common girls' names are *Fatima*, *Bana*, *Hadia*, and *Safiya*.

### 4 FOLKLORE

It is common in Mauritania to believe in divination and supernatural powers associated with holy men who lead Islamic Sufi brotherhoods (mystical associations). These religious leaders are venerated among West Africans and North Africans and are considered well educated. They are called *marabouts*, or *murabitun*, and it is believed that their *baraka*, or divine grace, allows them to perform miracles. They make and administer amulets and talismans. These are believed to have mystical powers that give them protection from illness and injury.

### 5 RELIGION

Most Mauritanians are Sunni Muslims. The region's inhabitants have adhered to Islam since the 9th century ad. Mauritania's Constitution Charter of 1991 declared Islam to be the state religion and requires that the president be a Muslim.

In Mauritania, as in much of West Africa, Islamic Sufi brotherhoods known as *tariqas* gained importance around the 13th century. Sufism is a religious movement that stresses mysticism and the needs of the human spirit. The brotherhoods transcended ethnic and tribal lines, thus helping to develop a broad national identity going beyond that of individual clans and ethnic groups. Mauritania has two major and

several minor brotherhoods. The major brotherhoods are the Qadiriyya and Tijaniyya orders. The Qadiriyya brotherhood stresses Islamic learning, humility, generosity, and respect for one's neighbors. The Tijaniyya brotherhood places less stress on learning. It is a missionary order that denounces theft, lying, cheating, and killing and emphasizes continual reflection on God.

### 6 MAJOR HOLIDAYS

Mauritania's major national holiday is Independence Day (November 28). It is celebrated with a military exhibition in which soldiers, tanks, and citizens parade in front of a stage on which the president and his entourage sit. The president delivers a speech to the nation addressing political and economic developments. The secular New Year (as opposed to the New Year on the Islamic calendar) is celebrated among the younger generation. They organize parties and have a New Year's Eve countdown, though without the traditional champagne, as Islamic countries forbid the consumption of alcohol.

Two major Islamic holidays are observed in Mauritania. One is *Eid al-Fitr*, which comes at the end of the holy month of fasting called Ramadan. During Ramadan, Muslims refrain from eating, drinking, smoking, or having sexual relations during the daytime in order to reflect on God and on the plight of the unfortunate who do not have enough food. At the end of the month, Muslims celebrate for three days. The other major Muslim holiday is *Eid al-Adha*, which commemorates the willingness of the Prophet Abraham (Ibrahim in Arabic) and his son to obey God's command in all things, even as Abraham was ready to sacrifice his son. The holiday signals the end of the Muslim pilgrimage to Mecca, or *hajj*, which every Muslim must undertake at least once during his or her lifetime. Traditionally, Islamic holidays are celebrated by wearing new clothes and cooking grilled meat. Girls color their hands with henna.

### 7 RITES OF PASSAGE

Every Mauritanian is expected to marry and have children. A wedding ceremony consists of an *'aqd*, the Islamic contractual commitment in which the bride and groom pledge themselves to the marriage. This ceremony is followed by a party. The next step in the wedding is the *marwah* party, which is a reception to see the bride off to her new family. The *marwah* is bigger, noisier, and has more entertainment and dancing than the *'aqd* party.

### 8 INTERPERSONAL RELATIONS

Like most Arabs, Mauritanians are known to be friendly people. Even in the capital city of Nouakchott, which suffers from poverty and overpopulation as a result of urbanization, people are friendly. Elders, even outside one's family, are respected by the young. This practice, known as *essahwa*, requires the young to respect social customs in the presence of an elderly person. For example, a young Mauritanian would not smoke in front of an elderly Mauritanian. Also, the young must be careful to use appropriate language (no swearing), to avoid displays of affection (e.g., kissing) with an intimate friend, and to avoid talking too loudly in the presence of the elderly.

## 9 LIVING CONDITIONS

Mauritanians, for the most part, are very poor. Those who are wealthy have incomes comparable to those of middle-class Europeans. The unemployment rate is 24%. The per capita gross national product in 2007 was estimated at \$1,800, although income derived from barter is not reflected in this estimate. The capital, though a desperately poor city by most measures, has modern appliances such as mobile phones, televisions with DVD players, and Internet cafés. Estimates suggest that the country has about 100,000 Internet users; its domain is .mr. There were two satellite television providers as of 2008. The national telecommunications company was privatized in 2001. Mobile phone penetration was 35 per 100 persons in 2008.

In the desert valleys of the countryside, known as the *badiya*, people live in tents made of cotton. These are light-colored on the outside so that they do not absorb sunlight and have brightly colored fabrics draping the inside of the tent walls. The floor of the tent is sandy, but it is covered with large woven mats known as *hasiras*. Furniture in the tents is made of wood and leather, and it can be folded to be transported on camels through the desert. Because they have no plumbing, desert dwellers get their water from an outside well. Containers made of animal skins, called *guerbas*, are used to carry water from the well to the tent. Cooking is done over an outdoor fire.

In the southern regions, homes are built of cement. They are rectangular with flat roofs and small windows. City homes are furnished with carpets, mattresses, and floor pillows. The villages have public faucets, from which people fill large buckets or tubs with water to carry back to their homes. There, the water is poured into a clay pot to keep it cool and clean. Stoves fueled by gas tanks are used for cooking in the villages.

The drought that has afflicted Mauritania since the 1970s has forced the northern population to migrate southward. The result has been a major housing crisis in the towns of southern Mauritania. Shantytowns, known as *kebes*, were erected around the towns and along the major streets. The migrants set up homes of wood and scrap metal, sun-dried bricks, or tents. In the capital of Nouakchott, more than half of the population lived in shantytowns and slums in the early years of the 21st century.

Health care and medical facilities do not meet the needs of the population, especially in rural areas. In 2005, the World Health Organization (WHO) reported a life expectancy among Mauritanians of 55 for males and 60 for females. In all, 125 Mauritanian children per 1,000 can expect to die before the age of five. In 2004, total expenditures on health care totaled 2.9% of gross domestic product. In that year, the WHO also reported that there were 0.11 physicians for every 1,000 people. Many diseases are common, such as measles, tuberculosis, and cholera in the north and malaria and schistosomiasis in the south. Hepatitis, bacterial and protozoal diarrhea, and Rift Valley fever also are problems. It is reported that child malnutrition is a major problem. For example, in rural areas, 38% of children under five suffer to such an extent their development is stunted. The figure for urban areas, 30.2%, is hardly better. In 2008, HIV/AIDS prevalence was low at 0.6%.

Mauritania has two major airports—at Nouakchott and Nouadhibou—that are capable of handling international air traffic. In 2008, the country also had 25 smaller airports (8 with paved runways, 17 without) for internal domestic flights between Mauritania's cities. Nouakchott and Nouadhibou are

also major seaports. Although some roads are paved, most are not, especially in the desert, where roads consist simply of tracks in the sand.

## 10 FAMILY LIFE

Mauritania's traditional social unit is the family and its descent, or lineage, group. A family's lineage is traced back five or six generations. The lineage serves as a basis of socialization for the young, with elder members of the lineage guiding younger members to conform to social norms. A group of related lineages that maintain social ties is known as a clan. The smallest unit within the clan is the extended family, which consists of related males with their wives, sons, and unmarried daughters. Marriage within the clan is preferred. First cousins are traditional marriage partners.

There is great emphasis on homemaking skills for girls, and so most daughters are given training in raising a family and taking care of the house. Often, girls are educated at home instead of at school. Mothers are expected to prepare their daughters for their future careers as homemakers, and fathers are expected to provide well for their daughters so that they can grow up to be healthy and physically attractive. Thin girls are not considered beautiful, and preteen girls are encouraged to eat well, and especially to drink milk, in order to ensure their physical beauty. Traditionally, girls became engaged or married by the time they were 8 or 10 years of age, but today many girls wait until they graduate from high school or college.

Mauritanian men are permitted to marry more than one wife. Though some choose to do so, most do not. Often, however, they marry in succession, divorcing one wife and then marrying a second. In 2008, the country had a very high fertility rate of 5.78.

## 11 CLOTHING

Mauritanian attire is influenced by the desert heat and Islamic practice. Islam dictates that women should cover all the body except the hands and face, and men should cover the area from the navel to the knees. Both men and women in Mauritania often wear attire that covers the entire body, commonly with the face, hands, feet, and arms showing. Women wear a *malaffa*, which is a long cloak wrapped loosely around the body from head to toe. The men wear a *dar'a*, which is a long, loose robe worn over baggy pants known as *sirwal*. Some men wear head coverings, predominantly turbans or *hawli*, for protection from the winter cold and summer heat. Typical office attire for men is Western-style pants and shirts. Southern women wear dresses or skirts and blouses. They also wear long robes called *boubous*.

## 12 FOOD

Lunch is the largest meal of the day in Mauritania. Commonly, villagers eat a spicy fish and vegetable stew with rice for lunch. Another popular Mauritanian lunch that is common in the northern desert is spicy rice mixed with *tishtar*, or small pieces of dried meat. A common dish served at dinnertime is *couscous*; it is semolina wheat sprinkled with oil and water and rolled into tiny grains. The grains are then steamed and ready for use in a favorite recipe. The couscous can be mixed with a number of sauces and vegetables. In some parts of Mauritania, couscous is known as *lachiri*.

*Babi, a camel milker near the Mauritanian capital of Nouakchott, shows the milk collected from a camel, which will be made into camel cheese. Camel cheese exports would put cash into the hands of this nation's nomads if international regulations could be overcome. (AP Images/Ben Curtis)*

After washing their hands, members of the family gather around a large platter of food placed on the floor. They scoop up small portions of food from the platter with either their hands or utensils. Each person eats only from his or her side of the platter. Many households use a central serving platter but provide diners with individual plates. In some households, men and women eat separately.

A favorite drink is *zrig*, a cool beverage made from goat's milk, water, and sugar. Despite the heat of the desert, tea is consumed throughout the country. Mauritanians drink imported green tea (from China). It is made with fresh mint and served in small glasses a few times per day. Alcoholic beverages are forbidden in Islam, and in 1986 the government banned their import, purchase, and consumption.

### 13 EDUCATION

It is not mandatory that children attend school, and attendance is far from universal. Only 35% of young children attend elementary schools, while even fewer older children—only 8% to 19%—attend secondary school. Though girls often attend

elementary school (25% of girls under the age of 11 attended elementary school in 2003), once this education is complete, it is common for girls to stay home. The French colonial administration established public schools, mainly in the Senegal River valley, where black Africans constituted most of the population. Black Africans thus came to have a primarily secular education. After independence from colonial rule, the Mauritanian government also stressed secular education. Elementary school lasts for six years, followed by two cycles of secondary school. The lower secondary cycle lasts for four years, and the upper secondary cycle lasts for three years.

Schools that provide Islamic education are common throughout the country. These traditional schools are often centered around a learned Islamic leader known as a *marabout*. Parents encourage their children to learn from these men. Boys generally attend religious schools for seven years, and girls attend for two years. Though emphasis is placed on religious learning—that is, memorizing passages from the Quran—language, arithmetic, logic, and other subjects are also taught.

Mauritania has one major secular university, one Islamic institute of higher education, and some vocational institutes. The Mauritania Institute for Scientific Research (founded in 1974) and the Advanced Center for Technical Education (founded in 1980) are perhaps the nation's oldest. According to the nation's 2005 census, the literacy rate was 52%, though this figure is believed to be inflated.

Arabic is taught in all schools. Other local ethnic languages are also taught in elementary schools. French is taught throughout the public school system.

### 14 CULTURAL HERITAGE

Much of the literary work of Mauritanian writers focuses on Islamic and legal affairs. Islamic jurists pen elaborate discussions of Islamic norms. In addition to the focus on religion, there is also a love of literature and poetry. Stories and poems are passed down through the generations in musical form, recited by storytellers known as *ighyuwn*. As the *ighyuwn* tells his tale, he is accompanied by a drum, by the music of the Mauritanian guitar (*tidinit*), or by women playing a harplike instrument (*ardin*). The stories told are often short fables. Poetry is sung by minstrels and ballad singers. At social events, poetry praising the host or the guests is commonly sung.

### 15 WORK

Until a devastating drought struck Mauritania beginning in the 1970s, 80% to 90% of Mauritanians led a nomadic or seminomadic lifestyle, raising cattle, sheep, and goats. Tens of thousands of animals have died in the drought, which encroaches on previously fertile land by about 6.5 km (4 mi) per year. By the early 21st century, about 85% of herders had moved to the cities to find other employment.

The largest employer of Mauritanians outside the public sector is the mining industry. Iron and copper ores, both discovered in the 1950s, together accounted for 40% of the nation's exports in 2007. Another major employer is the fishing and fish-processing industry; the country's national waters are some of the richest in the world. Unfortunately, although some Mauritanians are employed by the fishing companies, Koreans, Japanese, and Russians have attained major fishing rights off the Atlantic coast, depriving Mauritanians of income that could improve the economy.

## 16 SPORTS

Football (called soccer in the United States) is by far the most popular sport in Mauritania. In 2008, the national team was ranked one-hundred-fourteenth in the world by FIFA (International Federation of Association Football).

## 17 ENTERTAINMENT AND RECREATION

Because of the desert heat during the afternoon, desert dwellers rest after lunch, waiting for the sun to descend. In the evenings, families gather outside the tent, sitting on a light mat called a *hasira*.

Children are creative and make many of their toys, such as cars and airplanes made of wire and tin cans. They also play games requiring no toys. One of these games is a variation of tug-of-war known as *ligum*.

## 18 FOLK ART, CRAFTS, AND HOBBIES

The products of skilled craftspeople and artisans are valued among the elite in Mauritanian society. They are known for their woodwork, jewelry, leatherwork, pottery, weaving, tailoring, and ironwork. Handwoven rugs and handcrafted silver and gold jewelry and cutlery are popular with tourists.

## 19 SOCIAL PROBLEMS

One of the major problems facing Mauritania is the extent of desertification of the land. By 2006, more than 90% of once-arable land had become desert. Other major problems are low standards of health care and shortages of medical equipment and professionals. Infectious diseases such as malaria are prevalent.

A political problem has arisen as a result of the low social status accorded to non-Maure black Africans in Mauritania. The Maures, who comprise both black and white members, dominate the political and social system, government bureaucracy, education, and land ownership. They openly discriminate against the non-Maure black Africans. The non-Maure black population has been a source of slaves, a problem that continued into the early 21st century. Maure domination of the country has spurred opposition among some black groups. The requirement that all secondary school students learn Arabic has also created dissent among the black Africans. The Toucouleur, also called the Halpularen, are the largest black African ethnic group in Mauritania, and it has challenged the domination of the Maures. The Toucouleur lead an illegal antigovernment organization based south of Mauritania, in Senegal—the African Liberation Forces of Mauritania, or the Forces de Libération Africaine de Mauritanie (FLAM). Antigovernment activities by the FLAM have, according to the government, included attempts to overthrow the government. The government has executed some FLAM members for these activities, resulting in demonstrations against racism and violent clashes between supporters and opponents of the government. Following the 2005 coup, a FLAM splinter group renounced violence for political ends and engaged in tentative political negotiations with the government of President Abdullahi. As of 2008, few outstanding issues had been resolved.

## 20 GENDER ISSUES

Of the total Mauritanian workforce, the United Nations has calculated that 44% are female and, of these women, 53% work

in agriculture. Human slavery and the trafficking of women remain serious concerns.

In response to these issues, the government enacted several laws and policies regarding the rights of women and children. The United Nations reports that in the early 21st century, the president issued decrees that changed domestic laws to bring them into line with international norms. The minimum age for marriage, for example, was raised to 18—high for a Muslim country. In 2003, the country implemented the Act on the Suppression of Trafficking in Persons, prohibiting all forms of sexual exploitation and human trafficking. Additionally, Mauritania initiated reforms to increase female access to education beginning in 2002.

# MOROCCANS

**PRONUNCIATION:** muh-RAHK-uhns

**LOCATION:** Morocco

**POPULATION:** 33.7 million (2007)

**LANGUAGE:** Arabic; French; English; Berber; Spanish

**RELIGION:** Islam; Christianity; Judaism

## <sup>1</sup> INTRODUCTION

Morocco is located in an area called the Maghrib, a region in the western part of North Africa that borders the Mediterranean Sea. (Maghrib is the Arabic word referring to the direction of the sunset.) Morocco is known as *al-Maghrib al-Aqsa*, the furthest west, or simply *al-Maghrib*, a fitting name for this country that is located at the extreme western corner of North Africa. Morocco is ruled by a king who claims direct descent from the Prophet Muhammad, the 7th-century messenger of Islam.

Morocco has endured a series of foreign intrusions throughout its history. The inhabitants of Morocco were called *Barbari* by the Romans—a broad, derogatory term for peoples outside the purview of the Roman Empire—and in time, they came to be called Berbers. During the Punic Wars between Rome and Carthage (located in present-day Tunisia) in the 2nd and 3rd centuries bc, the Berbers sided with the Carthaginians. In 149 bc, the Carthaginians were defeated, and the Romans began to settle in North Africa. The Roman emperor Claudius divided the empire's possessions in ad 42 and established a series of provinces across the northern coast of Africa, naming what is now known as Morocco *Mauretania Tingitana*. Roman control of the region was never extensive, and the Berber tribes periodically rebelled against the invaders. As a result, Rome abandoned most of Mauretania Tingitana in the period ad 286–304, though it retained control of strategic locations in the north to oversee the Strait of Gibraltar.

In ad 429, the German king Gaiseric, backed by 80,000 Vandals (a German tribe), invaded North Africa from Spain. The Vandals' influence in North Africa was relatively short-lived. Like the Romans, they found that they could not suppress the Berber uprisings and either abandoned the region or were absorbed by the remaining Roman elites. The Byzantine emperor Justinian sent his army to North Africa in 533 and, for a time, regained at least tenuous control over Morocco.

The next invaders were Arab Muslims. Beginning in ad 662, the Arabs, led by Uqba bin Nafi, were by far the most influential conquerors of Morocco. At the time, many Berbers were Jewish, animist, or polytheistic in their religion, and there was strong resistance on the part of the Berber tribes to the new invaders. Eventually, however, the majority of Berbers adopted the Islamic religion. The ruling Arab view of Islam at the time was that Islam was primarily a religion for Arabs, and therefore non-Arab converts were treated as second-class citizens—a practice that fostered tensions between the Arabs and the Berbers. The tensions persisted until 786, when the Arab Moulay Idris, a self-proclaimed descendent of the Prophet Muhammad, followed by his son, Idris II, established a dynasty that would control large sections of the Maghrib for nearly 200 years.

Following the decline of the Isdrisids, Morocco was ruled for almost 500 years by dynasties of Berber origin. The first of these were the Almoravids, who spread Islam further north into southern Spain. Under the Almoravids, Andalusian culture, art, and architecture were brought from Spain to Morocco, marking the beginning of a cross-cultural flowering that would continue until the late 15th century. By 1140, another tribal dynasty, the Almohads, had seized control of Morocco. Under the Almohad caliph 'Abd al-Mu'min, the country became a center of learning, and under Almohad patronage, the study of philosophy, mathematics, and Islamic law, as well as Islamic mysticism (known as Sufism), flourished.

Spain, Portugal, England, and France all had a strong interest in their neighbor to the south, and during the 15th century, each set out to control various coastal areas of Morocco. By this time, small Christian communities from Europe had settled in Morocco. Direct descent from the Prophet Muhammad became the chief source of political authority, replacing the tribal systems that had dominated Moroccan political leadership for centuries. The Sa'adi rulers brought great unity and prosperity to Morocco. They were succeeded in the middle of the 17th century by the 'Alawis, who, despite substantial colonial interference from the European states, continue to rule Morocco as of 2008.

By the 19th century, Europeans had gained many concessions from the 'Alawi rulers and virtually controlled Morocco, though they stopped short of political governance. This changed during the early 20th century, when Spain gained control of a northern strip of Morocco, which it would hold until 1956. In 1912, France established a protectorate over the rest of Morocco. The 'Alawi sultan, Moulay Hafid, authorized the protectorate by signing the Treaty of Fez, which gave France the power to establish civil order in Morocco. The result went beyond mere civil authority—France took over Morocco's foreign and economic policy as well. The European presence expanded in Morocco, and by the mid-1930s, 200,000 Europeans, 75% of them French, were living in Morocco. They built new towns and roads, expanded the existing railroads, modernized agriculture, and built ports.

Anti-French Moroccan nationalism began to grow in the 1920s and strengthened during World War II (1939–45). During the war, the Vichy government that supplanted the French government insisted on the persecution of Jews in Morocco. The Moroccans were unwilling to cooperate in this persecution, and tensions mounted between the colonial French rulers and the Moroccans. Moroccans fought on the side of the Allied powers during the war, and Morocco was liberated by Allied troops in 1942. When Sultan Muhammad V met with the Allied powers at Casablanca in 1943, he expressed his desire for independence from France, but it would be more than a decade before this desire was realized.

In 1947, a national campaign for self-government was launched, and in 1949, Sultan Muhammad V gave the campaign his official backing. In 1953, the sultan was deposed by the French, with some Berber assistance. He was exiled to Madagascar, an action that precipitated a number of anti-French disturbances in Morocco. In 1955, Berbers killed every French person in the town of Oued Zem. In the aftermath of the violence, the French restored Sultan Muhammad V to power. Independence was finally granted to Morocco on 2 March 1956. In the same year, the northern territory under Spanish rule

was granted independence as well. In 1957, the sultan adopted the title of king and named his son, Hasan, crown prince. The prince became King Hasan II after his father's death in 1961. Hasan II survived attempted coups in the early 1970s and confronted, in the course of his reign, a number of critical economic and political challenges, notably the emergence of an increasingly influential Islamist movement.

In 1971, Hasan II began a battle to establish sovereignty over the resource-rich Western Sahara, a territory then known as the Spanish Sahara, to Morocco's south. He encountered resistance from Algeria and Libya. In April 1976, an agreement was reached whereby Morocco would retain a section of the disputed territory. Mauritania would control another section, and the remainder of the Spanish Sahara would become independent under the name Western Sahara. Mauritania later relinquished its claim, and Morocco annexed the freed territory. Conflict between Morocco and the Algerian-backed Popular Front for the Liberation of the Sahara and the Rio de Oro (Polisario) continued throughout the 1980s. A cease-fire was brokered in 1991, although sporadic fighting continued. For many years, the international community has sought a resolution to this long-running dispute, but with little success. Formal talks between Morocco and the Polisario resumed in 2007 and continued as of March 2008.

Muhammad VI took the throne upon his father's death in 1999. The early years of his reign were characterized by cautious liberalization—politically, economically, and socially. Generally enjoying broad popular support, Muhammad VI became part of new generation of Arab leaders attempting to maintain a viable balance between tradition and modernization, continuity and change.

The king is head of state and, by virtue of his descent from the Prophet Muhammad, he is known as *amir al-mu'minin*, or "Commander of the Faithful." The king appoints a cabinet, known as the Council of Ministers. He also appoints a prime minister as head of the government. A *Majlis al-Nuab*, or Council of Representatives, is made up of legislators elected by the people. The council is referred to as the Parliament, but it legislates only criminal, civil, and commercial matters and can be disbanded by royal decree.

## 2 LOCATION AND HOMELAND

Morocco, a country divided into 43 provinces, has an area of 446,550 sq km (172,368 sq mi) covering the northwest corner of Africa. It lies 13 km (8 mi) to the south of Spain, separated by the Strait of Gibraltar. The Mediterranean Sea separates Morocco from Europe. Morocco is bordered on the west by the Atlantic Ocean, on the east and southeast by Algeria, and on the south by the Western Sahara. The Moroccan coastline is more than 1,600 km (1,000 mi) long, allowing for a thriving fishing industry (mackerels, anchovies, and sardines) and a tourism industry that features beach resorts on the Atlantic and Mediterranean coasts. The population of Morocco was estimated to be 33,757,175 in 2007.

The Moroccan landscape consists of mountains, rivers, desert, and plains. It has four major mountain ranges. In the north, bordering the Mediterranean Sea, are the Rif Mountains. While the Rif themselves rise only to 2,100 m (6,890 ft), their cliffs drop off sharply to the sea and thus make access by modern transportation difficult. The Rif area has few coastal towns or beaches. South of the Rif are three ranges that make

up the Atlas Mountains. From north to south, these are the Middle Atlas, which rise only to 3,000 m (9,850 ft); the High Atlas, rising to more than 4,000 m (13,130 ft); and the Anti-Atlas, rising only to 2,400 m (7,880 ft). Morocco's highest mountain is Mount Toubkal in the High Atlas range. Mount Toubkal is 4,165 m (13,670 ft).

The northwestern part of the Sahara covers Morocco from the foothills of the Anti-Atlas Mountains to the east. Most of the habitation consists of small groups of people living in the oases.

Morocco's rivers are not navigable, but they are a significant source of irrigation and provide water for 20% of the arable land. Three rivers rise in the Middle Atlas and empty into the Atlantic Ocean. These are the Sebou, Morocco's largest river; the Bou Regreg; and the Oum al-Rabi'. The Moulouya also rises in the Middle Atlas and flows northward into the Mediterranean. To the south are the Tensift, the Sous, and the Dra'a rivers, which flow into the Atlantic Ocean, and the Ziz and Rheris rivers, which flow into the desert.

Several flat, featureless plains lie between the mountain ranges and between the Atlantic coast and the mountains. A variety of crops are cultivated, some of which are processed for export. The most fertile region lies between the Atlas Mountains and the Atlantic Ocean. Here, oranges, figs, olives, almonds, barley, and wheat are grown in abundance. The west-central plain boasts the largest phosphate reserves in the world, and Morocco is responsible for nearly 20% of the world's phosphate extraction.

Morocco has a variety of weather patterns. The desert is hot and dry, cooling off precipitously during winter nights. The coastal plains and coastline enjoy a Mediterranean climate, with mild temperatures attributable to the proximity of the sea. In the low mountain elevations, summers are hot and dry, and winters are cold and rainy. In the higher mountain elevations, summer days are hot and nights are cool. Winters are cold there, and snow is common.

### 3 LANGUAGE

Both Arabic and French are taught in Moroccan schools. English is also taught in some schools. Modern Standard Arabic is the official state language, and it is used in most forms of public discourse. Moroccans speak their own dialect of Arabic, which displays slight regional variations. This dialect is increasingly used in formal contexts such as advertising and public awareness campaigns. Some of the more common Arabic words used in Morocco are religious in nature. When pledging to do something, a Moroccan Muslim often says *insha' Allah*, or "if God wills it." Prior to any action, a Muslim will often say *bismillah*, or "in the name of God." Common female Arabic names are *Fatima*, *'Aisha*, and *Khadija*. Common male Arabic names are *Muhammad* (and variants such as *Ahmed* or *Hamid*), *Hasan*, and *'Ali*. All of these are also the names of famous people in Islamic history.

Educated Moroccans are expected to speak French, and French vocabulary words have entered the Moroccan language as a result of years of French colonization. French is commonly used in business transactions and in hotels and resort areas where foreigners congregate. Fluency in French helps Moroccans to climb the social ladder. Spanish is spoken in the northern region of Morocco, which was formerly under Spanish rule.

Berber, among the oldest languages in Africa, is spoken almost exclusively by the Berbers, although some Berber words have made their way into Moroccan Arabic. Berbers speak three distinct dialects: Tarifit in the north, Tamazight in the Middle Atlas region, and Tashelhit in the south. Approximately 55% of Berbers speak both their native dialect and Arabic. In 2001, the Royal Institute of Amazigh (Berber) Culture was founded, and Berber was recognized as an official language. On 11 February 2003, King Muhammad VI declared that Tifnagh would be the official alphabet of written Berber. The language has since been used in computers and word processing programs.

Titles of respect are often attached to names. Thus, an older woman may be referred to as *Lalla*, which is comparable to "Ma'am." A man may be referred to as *Sidi*, or *Si* for short, which is comparable to "Mr." A more respectful title, reserved for men of high political status, is *Moulay*. A man who has undergone the pilgrimage to Mecca is called *Hajj*, and a woman who has done so is called *Hajja*.

### 4 FOLKLORE

Morocco has many legends based on the exploits of Muslim leaders who acted as mediators in disputes between families and tribal groups. These leaders often came from religious backgrounds and were considered well educated. These holy men, or *murabitin* in Arabic, are somewhat analogous to the Christian saints, and they were believed to possess *baraka*, or divine grace, which allowed them to perform miracles. Their

burial sites, small domed structures surrounded by a walled courtyard, are often sites of pilgrimage. Many people visit the *murabitin* to ask for intercession and hope that they will receive blessings and favors from the popular saints. The burial sites have also become unofficial centers for the collection of alms for the needy. The *murabitin* are more commonly found in the countryside than in the urban areas.

Some Moroccans believe in spiritual beings called *jinn*—often translated in English as "genies"—who are said to assume the guise of animals so as not to be recognized. They are thought to frequent public baths and other areas associated with water. To ward off these spirits and to prevent them from meddling in human affairs, Moroccans wear verses from the Quran on an amulet. They also wear the "hand of Fatima," a charm in the shape of the right hand that protects against the evil eye. In the years following the 2003 terrorist bombings in Casablanca, the hand of Fatima was used as a symbol for anti-terrorism campaigns.

Often, women in the Moroccan countryside believe in (and might practice) *sihr*, or witchcraft. *Sihr* is administered orally, usually as a potion mixed with food or drink, with the intention of influencing the behavior of another person. This might involve casting a spell to make someone fall in love or administering a curse to take revenge on someone for hurtful behavior. The victim of such a curse might seek the advice of a religious teacher to undo the spell.

Most folklore in Muslim countries tells stories of important figures in religious history, many of which are found in or derived from material found in the Quran or in later forms of Islamic literature.

### 5 RELIGION

The overwhelming majority (99%) of Moroccans are Sunni Muslim, about 69,000 are Christian (mainly Roman Catholic), and a minority of 6,000–7,000 are Jewish. Islam is the state religion, and although many Moroccans do not outwardly practice all of the pillars of Islam, most profess adherence to the religion. The Malaki school of Islamic law, or *Shari'a*, has traditionally predominated in Morocco. Sufism has historically been an important dimension of Moroccan Islam, and Sufi groups continue to play an important role in both official and popular forms of the religion. The Hassan II Mosque in Casablanca is the second largest mosque in the world (second only to the Great Mosque in Mecca) and can accommodate 25,000 inside and a further 80,000 in its courtyard.

### 6 MAJOR HOLIDAYS

Moroccans commemorate both secular and Muslim religious holidays. One major Muslim holiday is *Eid al-Fitr*, which comes at the end of the month of fasting called Ramadan. During Ramadan, Muslims refrain from eating, drinking, or having sexual relations during the daytime in order to reflect on God and on the plight of the less fortunate. At the end of the month, Muslims celebrate for three days. The other major Muslim holiday is *Eid al-Adha*, which commemorates the willingness of the Prophet Abraham, as well as his son, to obey God. This holiday signals the end of the Muslim pilgrimage to Mecca, or *hajj*, which every Muslim is obliged to undertake at least once during his or her lifetime. Traditionally, each family slaughters a lamb to feast on during Eid al-Adha. Today, because of the high cost of purchasing a sheep, it is not uncom-

mon for poorer families to pool their resources and purchase an animal to share.

Secular holidays include King Hassan II's Coronation Day (March 3), Labor Day (May 1), Independence Day (November 18), and New Year's Day (January 1). Festivals are also held to commemorate anniversaries of the birth or death of saints.

## 7 RITES OF PASSAGE

Marriage is the norm in Moroccan society. Weddings are conducted over a period of several days, during which the families of the bride and groom might hold separate parties. These are elaborate affairs featuring food, music, and dancing. Child-bearing is expected of every wife. When the newborn baby is seven days old, a celebration known as the *subu'* is held. It is common for a lamb to be roasted for the party, and guests bring gifts for the baby and the mother. Circumcision of males is an obligation within Islam. In Morocco, it is usually undertaken while the boy is young, before his sixth birthday.

Upon the death of a relative or a neighbor, the deceased is buried within 24 hours, and family and friends gather together to mourn for a period of three days. This involves ritual recitations from the Quran. Close friends prepare food for the bereaved family during the mourning period. Another mourning period occurs on the fortieth day after the death. Again, friends and relatives gather together to recite the Quran in memory of the deceased. At this time a large meal, known as *sadaqa*, is offered to guests who join in the mourning.

## 8 INTERPERSONAL RELATIONS

Moroccans shake with the right hand during greetings and farewells, and they will often touch the hand to the heart to show respect or affection. Close friends of the same sex commonly hug and exchange kisses on the cheek. It is appropriate for persons of the opposite sex to simply shake hands without intimate physical contact. Some very religious women prefer not to shake hands with men, believing that any physical contact is inappropriate. In the home, men and women often sit and converse in separate sections of the room or house. A common greeting among Moroccans is the phrase *al-salamu 'alaykum*, which means, "May peace be upon you." The response is *wa 'alaykum al-salam*, or "May peace be upon you also." During greetings, Moroccans often exchange a great number of pleasantries and inquiries about one another's families before beginning the conversation.

Homes are shelters against public intrusion, and windows are usually shaded to preserve a family's privacy. Family members are generally courteous to one another, and guests in a Moroccan home characteristically receive gracious attention and respect. Though a Moroccan will show the utmost hospitality to a guest in his or her home, the street or marketplace is a public space in which no such courtesies are necessary. Thus, in public, each person hopes to advance his or her own interests and therefore may show little regard for the interests of others.

Boys and girls are typically kept apart until they are old enough to understand sexuality. Intermingling of the sexes outside marriage is generally considered inappropriate, and perhaps even shameful. Premarital sex is strictly forbidden, and a girl who loses her virginity outside marriage is stigmatized and brings great shame to her family's reputation. Moroccan men are free to socialize outside the home; the café is

Moroccan women have more freedom in the cities, while more restrictions are placed on rural women. (Cory Langley)

a common gathering place. Women are rarely (never, in rural areas) seen at cafés. Homosexuality is illegal in Morocco.

## 9 LIVING CONDITIONS

A majority of Moroccans live in urban areas, most of which comprise a precolonial district, or *medina*, and a colonial or postcolonial area, sometimes called the *ville nouvelle*. The medina is usually surrounded by high, thick walls that enclose houses ranging in age from medieval to modern. Many Moroccans live in *bidonvilles*, shantytowns that are erected on the periphery of urban areas. Originally built as temporary settlements for migrant workers, these bidonvilles, in many cases, have become permanent slums with little infrastructure and few public services, if any. The range and quality of the public services available in Moroccan homes varies widely. Houses in the north are frequently white, whereas those in the south are often reddish brown. In the newer, postcolonial towns, houses are built with Western amenities. These may be either single-family detached dwellings or rows of townhouses attached at the sides or rear. Many homes, especially in the city of Marrakech, feature an open courtyard surrounded by several stories of rooms. Most rooftops are flat, and they are used for washing and hanging out laundry, as well as a variety of social purposes. In areas of high elevation, such as in the mountainous Middle Atlas village of Ifrane, roofs are slanted to allow the snow to slide off.

Moroccans generally have access to clean water and to cooking and heating fuel. Cooking stoves range from a com-

mon three-burner cooking top to full ovens and ranges. These may be fueled by bottled propane or butane gas. The majority of residential toilets are porcelain-covered holes in the ground. Modern homes have Western-style toilets with seats. Most homes also have electricity, with at least one outlet per room. Some homes, though by no means most, have central heating and telephones. Nearly half of all Moroccans own cellular phones, and approximately 6 million people are connected to the Internet.

Streets are well maintained, and most cities are connected by two-lane roads. As of 2007, there were 507 km (315 mi) of new, multilane expressways, or *autoroutes*, linking the major cities. At present, there are autoroutes linking Casablanca to Al-Jadida, Tangier, Marrakech, and Fes. Those connecting Tangier to Ceuta in the north, and Agadir to Marrakech in the south, were still under construction as of 2008. Railroads built during the era of French colonization continue to operate today. Approximately 1,907 km (1,185 mi) of rail runs east to west and north to south, connecting most of Morocco's major cities and connecting Morocco with Algeria. Cities that cannot be reached by train are serviced by buses, which offer extensive coverage. The country has four major seaports and more than a dozen smaller ones. Morocco is linked to the rest of the world by its seven international airports. There are more than 50 civil airports as well.

Moroccans' median age is 24.3 years; approximately 31% of the population is under the age of 14. Casablanca is the most populous city, with more than 3 million inhabitants. The next most populated city is the capital, Rabat, with approximately 1.7 million people. Morocco's population growth rate is 1.528%, and its life expectancy is 68 years for males and 73 for females. Morocco has an infant mortality of 39 deaths per 1,000 live births.

## 10 FAMILY LIFE

The family is central to the vast majority of Moroccans' lives. Children live with their families until they marry or go away to school. After a Moroccan man is married, it is common for the husband to bring his wife to his family's home, where they live together with the extended family. The elderly are highly respected, and when they are too old to take care of themselves, they are cared for by their families. Both men and women may play a strong role in decision making, but females are taught early on that they are expected to take care of the home and their siblings. Women generally have more freedom in the cities, whereas more restrictions are placed on rural women.

Marriage is expected of every Moroccan, both men and women. For many women, marriage and childbearing are the ultimate goals in life. Ideally, most women seek to be married before their mid-20s, and most men before they turn 30. Though not all marriages are arranged, parents have great influence over the spousal choices made by their children. Marriage is thus a family decision, not merely an individual one. Generally, the family seeks to make sure that the prospective spouse will bring prosperity and virtue to the family, so that the family's good name and reputation are enhanced. Divorce is seen in a very negative light, but it is not forbidden. Both men and women can initiate divorce proceedings.

## 11 CLOTHING

The national attire of the Moroccans is a one-piece, floor-length, hooded garment known as a *jellaba*. It is commonly worn by men and women of every social class, both urban and rural. The wealthy often have their jellabas tailor made, whereas many simply purchase them from a ready-to-wear rack. Western attire is often worn under the jellaba. Western-style—often very fashionable—attire for women and suits and slacks for men are also common, especially in cities. Religious or conservative women cover their hair in public. Berber women wear long, colorful dresses, often covering their heads with straw hats. They often have tattoos on their forehead, cheek, or neck; this custom is slowly fading away, however. Rural men often wear turbans, and a knitted skullcap is common attire for men going to a mosque. The maroon-colored *fez*, once a ubiquitous sign of respect and wealth, is declining in popularity, especially among younger men. In cold weather, many men cover their jellabas with a hooded cloak called a *burnus*.

## 12 FOOD

Moroccans generally eat three meals per day. Breakfast consists of bread, olive oil, butter, and preserves. It may also include eggs, croissants, a pancake-like food known as *baghrir*, and a number of other pastries and breads. Coffee or tea usually accompanies the meal. Lunch, the largest meal of the day, is a time-consuming affair. Dinner may be a light or a heavy meal, with soup and bread being common. Moroccans are avid tea drinkers. Sweet green tea flavored with mint is served all day long. Coffee, usually with much milk and sugar, is also very popular. Moroccans, being Muslim, are prohibited from consuming pork and alcoholic beverages. The latter, however, are served in bars and cafés throughout the country. Despite the Islamic prohibition, Morocco produces its own domestic wines.

Moroccans eat at a low, round table, and they are often served from one platter. Bread is commonly served with every meal; it is used to scoop up food. Berbers bake bread virtually every day. Morocco's national dish is *couscous*. This is steamed semolina wheat formed into tiny granular particles that are combined with other ingredients to make a main course. Couscous can be accompanied by meat, such as lamb or chicken, or mixed with a variety of vegetables. It is generally served on Friday, the Muslim day of rest. Another favorite Moroccan dish is *tajin*, which is a stew of vegetables and meat baked in an earthenware pot. *Harira*, Moroccan soup, is made in many different styles, each often associated with a particular ritual. For example, during Eid al-Fitr, it consists of semolina flavored with anise. After a woman gives birth, she is given harira flavored with wild mint and thyme. Harira is also consumed to break the fast during the month of Ramadan.

## 13 EDUCATION

Public schools are free and, since 1963, compulsory for children between the ages of 7 and 13. The Moroccan government spends approximately 20% of its budget on education. As of 2005, 85% of girls and 90% of boys attended primary school. Participation in education is markedly higher in urban areas. In 2004, an average of 52.3% of adults were literate—65.7% of men and 39.6% of women. Although the country's schools teach Arabic-language curricula, public schools are modeled on the French system. French is taught in all public schools from the

A man walks past Berber carpets on display in Marrakesh, Morocco. (Tim Graham/Getty Images)

third grade through the completion of secondary school. English is taught in public schools at the secondary level. Morocco has many institutions of higher learning, the largest and most prestigious of which is Muhammad V University in Rabat. An English-language university—Al-Akhawayn—opened in the Middle Atlas region in 1995. Private American schools in Casablanca, Rabat, and Tangier offer courses in English from elementary through secondary school. Private French schools are found in every city. The school year is similar to that in Western countries: Classes begin in September and end in June.

#### **14 CULTURAL HERITAGE**

Moroccans enjoy rhythmic music and dancing. Though most music on the radio and television is traditional Arab entertainment, an increasing amount of Western music is being broadcast, with a great variety of music channels now available by satellite on television. Traditional Arabic music is dominated by string instruments, such as the *rebec*, *lotar*, *'ud*, and *kamanja*. Hand-held drums of different shapes and sizes are played at parties. It is common to see girls and women dancing at informal gatherings. Sometimes, dancers enter a trance-like state that may culminate in fainting. *Gnawa* music, which is of Berber, Arab, or African origin, is very popular; it features a

three-stringed bass-like instrument called the *gimbri* with percussion accompaniment.

Much dancing and musical entertainment takes place at festivals held in honor of local saints. The festivals often feature horsemen, wearing white robes and white turbans, who gallop toward the audience and then fire their guns into the air.

#### **15 WORK**

Morocco's upper class is made up primarily of wealthy merchants and wholesalers or of descendants of the Prophet Muhammad, known as the *Sherfa*. The latter group includes the royal family. The middle class is made up of educated professionals such as university professors, civil servants, doctors, lawyers, and high school teachers. The less educated tend to fall into a lower socioeconomic status. These Moroccans are employed predominantly in factories and farms. In 2007, the urban unemployment rate was 15%. In 2005, a plan was initiated to reduce poverty and unemployment in Morocco's slums. Many of the unemployed take odd jobs as they become available, find work as day laborers, or beg on the streets. Many Moroccans also seek employment outside Morocco and join the emigrant workforce, or *mujahirin*. Most of these people find work in France, Belgium, Canada, Italy, Libya, and the Nether-

lands. The remittances they send to their families in Morocco are a significant source of foreign currency in the country.

The service sector accounts for nearly half of Morocco's gross domestic product. As of 2003, 45% of Moroccans worked in the service sector, 40% in agriculture, and 15% in the industrial sector. Many of Morocco's industries are centered around the city of Casablanca. Berbers in particular engage in small-scale livestock farming, most commonly sheep and goats. Farming methods are not highly developed, although modern equipment and irrigation technology are increasingly being used. The plains of Morocco are cultivated with barley, corn, wheat, tobacco, citrus fruits, olives, tomatoes, and other fruits and vegetables. Though some of these crops are processed for export, Morocco's chief source of export income is phosphate mining and processing. Morocco has the largest phosphate reserves in the world. Other minerals in the country, though not fully exploited, are iron ore, coal, cobalt, copper, lead, manganese, and zinc. The presence there of key resources is one reason for the ongoing conflict over the status of neighboring Western Sahara. Fishing and tourism are also key sources of revenue.

## 16 SPORTS

Football (known as soccer in the United States) is popular in Morocco, as it is throughout the Middle East and North Africa. It is both a spectator sport viewed on television and a field sport engaged in by men and boys throughout the country.

## 17 ENTERTAINMENT AND RECREATION

Moroccan men spend much of their leisure time socializing at outdoor cafés. Women in rural areas do not go to cafés, although women in urban areas have begun to frequent them. Most socialization among women is done in the home or on the rooftop. There, they might knit, crochet, or embroider in the company of other women. Women also socialize in public baths. Large cinemas and shopping malls are increasingly found in Morocco's cities, and they are frequented by both men and women.

Morocco has several television stations, with programming in both Arabic and French. Arabic programs come predominantly from Egypt. Satellite transmission has brought a wide range of programming to the country, with tens of thousands of channels to choose from. Even the relatively poor may have access to satellite channels.

## 18 FOLK ART, CRAFTS, AND HOBBIES

Moroccan crafts include rugs, pottery, woodworking, textiles and leatherwork. Rugs and carpets are often woven by hand using a loom; the work is frequently done by women. These rugs have intricate patterns and can take months to complete. Handbags and clothing are crafted from animal skins, which are first prepared and dyed at a leather tannery. Tattooing is an art learned by many women, especially Berbers. Henna, a nonpermanent natural dye that tints the skin a reddish-orange color, is often used to adorn the hands and feet in very detailed, ornate patterns. The construction of the Hassan II Mosque in Casablanca utilized skilled craftsmen from throughout Morocco and features a rich variety of indigenous Moroccan styles and techniques.

## 19 SOCIAL PROBLEMS

The government uses strong tactics against people and groups it considers threats to internal security. Members of political opposition movements have thus become targets of arrest campaigns. Morocco has many political prisoners, drawing criticism from human rights organizations. These include both left-wing and Islamist activists, such as members of movements known as the Islamic Youth, the *mujahideen*, and Justice and Charity (al-'Adl wa al-Ihsan). International attention prompted the government to release 2,163 political prisoners between June 1989 and April 1990, despite denial of their existence. A 2003 Human Rights Watch report criticized article 489 of the Moroccan penal code, which criminalizes consensual homosexual acts.

Many claim that Morocco's most pressing problem is the lack of socioeconomic opportunities available to the population. Several riots have taken place to protest the rising cost of food and education. Unemployment is widespread, particularly in rural areas. The current unemployment rate is about 15%, but underemployment is much more prevalent. The government discourages people from moving from the countryside to the urban areas in search of job opportunities. These and other socioeconomic concerns have prompted increased numbers of young Moroccan men to join Islamist movements such as al-Qaeda and other groups operating in Iraq and Central Asia.

Crime is common in Morocco, but very little of it is violent. Thefts and burglary are perhaps the most common crimes. Though hard drugs are a rarity, hashish and marijuana are common but illegal.

In the past, the Moroccan government has spent a large proportion of its foreign reserves fighting a war against the Western Sahara's independence movement, the Popular Front for the Liberation of the Sahara and the Rio de Oro (Polisario).

## 20 GENDER ISSUES

Morocco has historically been a patriarchal society. Since the 1980s, however, women have begun to play a more prominent role in Moroccan public life. In the early years of that decade, approximately 20% of families had female heads as a result of rising divorce rates. By 1990, women constituted more than one-third of the workforce, working as judges, doctors, teachers, and university professors. In 1992, Morocco's constitution was amended to place greater emphasis on the equality of men and women in the political sphere and on human rights generally.

In the late 1990s, the Moroccan government began to draw up the Plan for Action to Integrate Women into Development, a document that proposed changes to the Moroccan *mudawwanah*, or family code, in order to improve women's legal rights, health, economic development, and education. The plan met with strong resistance from conservative and Islamist groups. On 12 March 2000, organized marches took place in both Rabat and Casablanca. In Rabat, the Moroccan March 2000 for Women demonstrated support for the objectives contained in the Plan for Action and called for banning polygamy, raising the legal marriage age for women from 14 to 18, and improving women's legal rights in cases of divorce. The Casablanca march, in which Islamist groups were the dominant actors, demonstrated in direct response to the Rabat march and in support of more traditional, Islamic roles for women. Accurate

numbers for the marches are not available, but large numbers of both women and men participated in both demonstrations.

In January 2004, the *mudawwanah* was reformed to ensure equality between men and women, particularly in family roles. The reforms abolished the principle of wifely obedience to one's husband, raised the legal marriage age for women to 18, granted wives the right to request a divorce and the right to property in the case of a divorce, granted women the right to retain child custody in the event of remarriage, and included several important items safeguarding the rights of children. Despite these advances, in 2007, the World Economic Forum's *Global Gender Gap Report*, which measures inequality between men and women in terms of economic participation, educational attainment, political empowerment, and health and survival, ranked Morocco one-hundred-twenty-eighth out of 132 countries studied.

# MOSSI

**PRONUNCIATION:** MOH-say

**ALTERNATE NAMES:** Moose, Moshi, Mosi

**LOCATION:** Burkina Faso, Côte d'Ivoire

**POPULATION:** 5 to 6 million in Burkina Faso, 1.2 million in Côte d'Ivoire

**LANGUAGE:** Moré

**RELIGION:** traditional religion (3 main components: creator, fertility spirits, ancestors)

**RELATED ARTICLES:** Vol. 1: Burkinabe; Ivoirians

## 1 INTRODUCTION

The Mossi make up the largest ethnic group in Burkina Faso. Because of extensive migration to more prosperous neighboring countries, Mossi also are the second-largest ethnic group in Côte d'Ivoire (Ivory Coast). The Mossi occupied the interior lands within the "*boucle de Niger*" ("great loop of the Niger River") and thus controlled trade between the empires along the great Niger River and the forest kingdoms to their south. The three Mossi kingdoms were known for their resistance to Islam in a region where all other kingdoms and empires were Muslim, at least in their ruling elites, after about the 10th century. Mossi culture nonetheless shows Muslim influences.

The Mossi's story of their origins involves the conquest of native farming peoples by immigrant cavalry soldiers from the northeast, toward what is now northern Nigeria. From the beginning, the Mossi people moved, and their idea of society included people moving in, out, and around.

Mossi migration increased notably after the French conquest of the Mossi in 1896–97; the Mossi were one of the last peoples in Africa to be brought under colonial rule. Like the other colonial powers, the French wanted their colonies to generate money for their European homeland. In less than 10 years after the first conquest, the French demanded that the Mossi pay taxes in French francs. Traditional Mossi taxes to chiefs and kings had been paid in goods, and cowrie shells had served as money. By making the Mossi pay in French money, the colonial government required them to grow, dig, make, or do something the French were willing to pay for. As little was grown or mined in Mossi country that the French wanted to buy, many Mossi were forced to migrate to the Ivory Coast (then a French colony) and the neighboring British Gold Coast (now Ghana) to earn money there. The demand for labor on the mainly African-owned coffee and cocoa farms in the coastal forest in those countries coincided with the dry season in the savanna of Burkina Faso, so Mossi men could migrate south between growing seasons and bring money back to their families. Mossi men also traveled widely as traders and as soldiers in the French army.

The Mossi were organized into three kingdoms, Tenkodogo, Wagadugu, and Yatenga, along with a number of buffer states around their edges. All of them together are sometimes described as "the Mossi empire," but there has never been a time when all the Mossi were unified under one ruler. Each kingdom was ruled by a king, with a court of officials who were responsible for various functions, such as defense, and who governed different areas of the kingdom. Within such areas, groups of up to 20 villages were ruled by a district chief, and

each village had its own chief. There is one word for all these rulers—kings, district chiefs, and village chiefs: *Naba*. A *Naba* is a man who has been properly installed as ruler by the community and thereby has been granted the *nam*, which is the religious power to rule other people. A person who seized power without being properly chosen and without the correct rituals of installation would not be regarded as a real ruler by the Mossi. The fact that the political system of the Mossi was so closely connected to their religion was the main reason that their rulers resisted conversion to Islam at the time when their counterparts to the east and west across the savanna were accepting Islam. Even when individual kings converted, as happened once or twice, the society as a whole did not. Not until the French conquest showed that divine protection of the traditional system was not absolutely guaranteed did Mossi people in any numbers convert to Islam or to Christianity.

Nabas were chosen by the court officials from among the sons of the previous *Naba*. While in principle the oldest son should succeed his father, the ministers tried to ensure that the new *Naba* was capable of ruling well. In the case of kings, who had many wives, the number of eligible sons might be large. One of the ways that the Mossi states expanded their territory was that sons who were not chosen to succeed their fathers founded new political units on the edges of the Mossi area, conquering (or persuading) local peoples who had the same general way of life, but lacked kingdoms, to become Mossi.

Exactly when the Mossi states were founded is still debated, but a Mossi raid on Timbuktu in 1329 is recorded in Arabic histories written in that city.

## 2 LOCATION AND HOMELAND

The Mossi homeland is the central portion of Burkina Faso, known until 1984 as Upper Volta for its location on the three branches of what in Ghana becomes the Volta River.

Because the Mossi were the dominant people in the region before and during colonial rule, their population statistics in relation to the modern nation have been affected by political factors. In 1962, the French counted 10% of the population and estimated from that sample survey that 48% of the total population was Mossi. However, there has been suspicion that the number 48% was picked by the French so that the Mossi, who already were most of the leaders of the new country, would not have an outright majority as the Republic of Upper Volta became independent. The following censuses of 1975 and 1985 did not publish national totals for the country's ethnic groups, in order to avoid ethnic conflict. Therefore, estimating the Mossi population is a matter of dividing the national population roughly in half. In 1995, the estimated national population of Burkina Faso was 10,422,828, of whom some 5 to 6 million would be Mossi.

Burkina Faso is roughly the size of Colorado, with the Mossi area in the center running from Tenkodogo in the southeast to Ouagadougou in the northwest. The national capital, Ouagadougou, is also the capital of the largest and strongest Mossi kingdom, which has the same name. The importance of Ouagadougou as a kingdom was emphasized by the fact that its *Naba* was the only one whose title was not just the name of the kingdom, district, or village attached to the word *Naba*, but was *Mogho* (or *Moro*) *Naba*, meaning "ruler of the world." The country is mainly savanna, or grassland, with scattered trees; unfarmed land is brush and trees. The extreme north of the country is part of the true Sahel, the transition zone between the Sahara desert and the savanna grasslands. The few rivers and streams are seasonal, with only scattered pools keeping water through the dry season; most water used by the Mossi is drawn from wells.

As the economies of Ghana and the Ivory Coast improved, and as transportation became easier, more and more of the Mossi did not merely migrate seasonally to work as farm laborers, but settled and became farmers or city or town dwellers. As a result, there is a network of Mossi across all three countries, greatly expanding opportunities for relatives back home. The Mossi are the second-largest ethnic group in the Ivory Coast; they were the majority of the 1.2 million Burkinabe counted in the 1988 census.

## 3 LANGUAGE

The Mossi language is Moré. It is a language of the Gur group within the larger Niger-Congo language family. Like many African languages, Moré uses tones (differences in pitch) as well as individual sounds to distinguish meanings; also, like many African and African-influenced languages, it indicates both tense and "aspect." That is, a verb indicates both whether an action is in the past, the present, or the future, and also whether it is an ongoing action or one happening only at one particular time. Mossi speech, both in everyday use and in formal political contexts, is rich in proverbs.

A person's name is not a random choice by his or her parents, but it also reflects circumstances of birth. Names can refer to events that happened during pregnancy or just before or during childbirth. A baby might be named *Gyelle* if his or

her mother accidentally broke an egg while she was pregnant. Many names refer to sacred places or forces whose protection was sought for the birth or the baby.

As with many other West African peoples, there are Mossi names indicating the day of the week when a person was born: *Arzuma* (boy) or *Zuma* (girl) signifies a child born on Friday, whereas *Hado* was born on Sunday and *Larba* on Wednesday.

Being born during a festival may also be reflected in a person's name. Festivals have one or more names associated with them, which are given to a baby born at that time; often the name is the same name as that of the event: *Basga*, for example, or *Tengande*. Such events might reflect Muslim rather than traditional Mossi holidays. *Lokre* is a name for someone born at the end of the fasting month of Ramadan, while *Kibsa* names one born during the festival of Tabaski forty days later, when Muslims sacrifice a ram in honor of the biblical patriarch Abraham.

In much of Africa, high rates of infant mortality meant that twins (who were each usually smaller than other babies, and therefore weaker) were less likely to survive; twins therefore have a special religious significance (sometimes seen as a blessing, sometimes as the opposite, but almost always different) and have special names. For the Mossi, there are special names for twins, *Raogo* ("boy") and *Poko* ("girl"), with diminutive forms for a "younger" twin of the same gender, the younger being the *first* one born and therefore in the uterus for a shorter time. There are even special names for the second, third, and fourth children born after a set of twins.

Children who are born in Muslim or Christian families, or persons who convert to those religions, have names common to Muslims and Christians everywhere in the world, which are Arabic forms of Quranic and Biblical names for Muslims (Adama, Aminata, Binta, Azara, Fatimata, Issa, Issaka, Karim, Mariam, Moussa, Ousman, Saidou), and French forms of Biblical names and (for Roman Catholics) saints' names (Abel, Daniel, Elisabeth, Etienne, Jean, Marie, Moise, Pascal, Pauline, Philippe, Pierre).

#### 4 FOLKLORE

While there have always been some Mossi who were Muslim and literate in Arabic, in general there were no written records in Mossi society. Specialist praise singers, usually called *griots* across the West African savanna, were the keepers of royal traditions and genealogies, but the entire society relied upon folktales and proverbs to concentrate wisdom and experience and to pass them on to succeeding generations.

The Mossi's account of their founding is handed down through an oral tradition that nicely exemplifies important and necessary elements for such an origin myth. Long ago (over 40 generations), a king of the Dagomba, Mamprusi, and Nankana peoples in what is now northern Ghana, Naba Nedega, had a daughter whom he would not allow to marry because he valued her warrior skills so highly. Therefore, Princess Nyennega took a horse and fled north into what is now Mossi country, where she married a local man. Their son was named *Ouedraogo* ("stallion") and after growing up with his maternal grandfather, he returned with Dagomba cavalry and conquered Tenkodogo and its indigenous people, his father's ethnic group, the Bisa. The Mossi people came from the intermarriage of Ouedraogo and his cavalry with Bisa women. To this day the royal families of the two largest Mossi kingdoms,

Ouagadougou and Yatenga, are named *Ouedraogo*. There is a statue of Princess Nyennega on horseback in the city of Ouagadougou to commemorate the story.

The tale of Princess Nyennega and Ouedraogo highlights several important points that illustrate how such stories serve as the basis for organized society. Princess Nyennega is a woman, who marries a man she finds in what becomes Mossi country. This is important for two reasons. First, like most African peoples, Mossi do not believe land can be bought or sold; it is in trust from the ancestors to the living, who must maintain it for generations still to come. Land is owned by the family that originally "domesticated" it by clearing uninhabited wilderness. Secondly, Mossi, like about two-thirds of peoples in the world, trace family membership and family names through the lineage of fathers and their fathers.

For the Mossi to be legitimate owners of their land, then, they had to have a story tracing their ancestry back to the original inhabitants of the land, even though the kingdoms were founded by members of a cavalry (the dominant military technology of the West African savanna until this century) who were immigrants. By making the founding cavalry leader a son of a local man and an immigrant princess, the Mossi validate their claim to their kingdoms. That founder's name, and its perpetuation in the name of the royal clan, underlines the importance of horse soldiers in creating kingdoms where people previously had lived only in extended families.

#### 5 RELIGION

The Mossi are like many African peoples in having traditionally had a religion with three main components. There is a belief in an all-powerful creator, *Wende*, usually discussed as *Wennam*, "God's power." *Nam* is the power ritually granted to a *naba* to rule over humans. While *Wende* is all-powerful, he is also very distant and not concerned with the daily lives of people. More important in day-to-day religion are generalized spirits of rain and the earth, which govern fertility and crops, and the role of ancestors in the lives of their descendents.

The fertility spirits are worshiped as needed, by sacrifices of sheep or goats, or more often of chickens or guinea fowl, and of eggs by the poorest people, at sacred spots in the landscape, such as an outcropping of rocks or a notable baobab tree. Offerings of millet beer and millet flour in water also accompany prayers at such times when a whole village may gather, for example, to seek rain in time of drought.

The most immediate part of religion, however, is the part played by ancestors. Families are traced in the male line from founding ancestors through the living to future generations. The ancestors watch over their descendents, punishing them or rewarding them for their behavior. The cycle of rituals is mostly concerned with them. A household has a shrine, an inverted pottery bowl, with sacred plants and objects under it, which is honored once a year at the time of the harvest festival, when sacrifices and offerings are made to this shrine and to graves of male ancestors (which are located near where their houses stood); these offerings are like those given to the earth spirits.

#### 6 MAJOR HOLIDAYS

The *Basega* festival comes in December, after the millet crop has been harvested. It is a festival of thanksgiving, thanking the ancestors for their part in bringing in a successful harvest

and asking their aid with the coming year's crops. It is a family-based ritual even though it takes place in a political context. That is, a family cannot sacrifice to its ancestors until the day when their district chief sacrifices to his, and the chief cannot do so until the king has done so. While the king's *Basega* is a very large and impressive ceremony (with the luxury of bulls being sacrificed), witnessed by many of his subjects who partake in feasts he offers, strictly speaking he is sacrificing to his ancestors for his harvest, not for the whole kingdom's. Sacrifices and food offerings are also made on special occasions, such as the threshing of a family's millet.

The Muslim community pays formal respects to the king at his *Basega* but celebrates its own holidays, as do the Christians. Most Mossi Christians are Roman Catholic; the first African Cardinal in that Church was a Mossi. About one percent of Mossi are Evangelical Christians, members of the Assemblies of God Church.

While most Mossi are not formally educated—because the nation's poverty limits the number of schools, and children are needed for farming, herding, and household work—those children who do attend school have frequent holidays, since the schools and the government observe secular holidays as well as Muslim and Christian ones. The anniversary of the date marking full independence from France, 5 August 1960, has long been a holiday, as has December 11, the anniversary of the proclamation of the Republic in 1958. Since the revolution of 1983, its anniversary, August 4, has been the official national day. National holidays are celebrated with parades and, in towns and cities, bicycle races.

Besides the national and religious holidays, the need to mobilize people for special tasks makes some days special events in a given community. Until modern times, the Mossi used horses (for the rulers and the rich) and donkeys for transporting goods and people but not for pulling plows. Farming was, and mainly still is, done with short-handled iron hoes. Tasks, such as preparing fields for planting, weeding them, harvesting millet, and threshing it, as well as house-building jobs, such as making a thatched roof and lifting it onto an adobe (mud-brick) hut, requires more labor than an individual household can supply. So, for such occasions, the family whose fields are being hoed or whose millet is being threshed summons neighbors and relatives (more or less the same people), prepares millet beer and food and hires drummers to provide a rhythm for working. People gather, work for intervals, take breaks for food and conversations, and work some more. People have a good time, the work gets done, usually in a morning, and in return the family being helped owes similar labor to the people who have helped them. These are not formally holidays, but they are special days.

On a more regular cycle, and one going beyond individual villages, there is market day. In Mossi society almost everyone is a farmer, but some people are also merchants in a cycle of markets. Because buyers want as many choices as possible, and a merchant can be in only one place at a time, each region of Mossi country has an organized market system. Each day is a market day somewhere within a walkable distance, but only one place has a market on a particular day. Each market recurs every third day. When a market falls on a Friday, the Muslim Sabbath, which happens every 21 days, it is especially large and draws people from greater distances. This is so even though most Mossi are not Muslim.

## 7 RITES OF PASSAGE

From birth until death (and, indeed, after death, in the ceremonies honoring ancestors), major transitions in a person's life are marked with formal rites of passage. In much of Africa, the number three is associated with males and four with females. A Mossi baby is formally presented to the community three days after birth for a boy and after four days for a girl. At that time, the baby's name is announced, and the child is formally welcomed into its lineage and becomes a bearer of the family name.

In the past, children at one or two years of age were given distinctive facial scars, but since children who are marked in this way may not be enrolled in school due to modern laws against the practice, markings have been eliminated.

Before puberty, both boys and girls, in separate groups, are circumcised. Boys go in groups of 15 to 30 to bush camps, where they stay for 90 to 100 days. This allows time for them to recover from the operation, to form a group that will be closely linked for the rest of their lives, and, not least, to be instructed by older men in what they need to learn to become members of society. Full adulthood is marked by marriage.

In a society with few or no written records, the cumulative experience of elders is crucial to everyone's life; for example, an elder might recognize a particular kind of crop blight that no younger person has ever seen before and could be the only one who would know what to do about it, or, at least, what to expect as a result. The great respect shown by all African societies toward elders is in part a recognition of this all-important store of wisdom they hold for the community and is at the same time, and for related reasons, a consequence of the fact that the elders are "almost ancestors" and will soon make the transition from living members of the community to (deceased) spiritual guardians of the community.

Therefore, Mossi funerals are important family and religious events. A funeral is different from a burial, although both are rituals. In a tropical country, burial must occur very soon after death. Men are buried at the edge of their home, just west of the patio area outside the walled family compound. Women are buried in fields; while they are buried in their husband's village, the burial ritual is done by members of their own family, symbolizing their continued membership in it even though they have borne children for, and lived among, their husband's family.

The funeral occurs ordinarily up to a year after a burial and may be very much later. It is the ritual that confirms the transition of the dead person to the ancestors. The next of kin is responsible for the funeral—the eldest son for his father's, for example. If the son were working in another country, in an extreme case a funeral might be held 20 or 30 years after the burial.

## 8 INTERPERSONAL RELATIONS

Mossi greetings are very elaborate, more so than in most African societies. The persons greeting each other shake hands while each asks how the other is. The questions extend to how each other's wives are, and their children, and their cows, and sheep, and so on. A full Mossi greeting of an honored elder can take half an hour. While the greeting is taking place, the person who is of lower status shows respect to the other by placing himself or herself in a lower position in relation to the other. If a commoner is formally greeting a chief, he will lie down in

front of him and symbolically throw dirt onto his head to show how much lower he is in status.

If two people of equal status meet, however, each tries to respect the other by slowly dropping from a standing posture to a crouching one. Since each person is simultaneously trying to show respect to the other one, two people start out standing shaking hands and finish up, still shaking hands, each crouched low and sitting on their heels.

When visiting a household, a guest stands outside the walls of the compound and claps his or her hands to announce his or her arrival. The head of the household then comes out of the walled compound to greet the visitor. Only a close friend or relative would go into the walled compound.

## 9 LIVING CONDITIONS

The Mossi live in villages of extended families. The village boundaries may be streams or other natural features, but in general the village is a social unit more than a geographical one. This is because houses are 75 to 100 yards apart and surrounded by fields, so that when the main crop, millet, is fully grown to 10 to 12 feet in height, the houses are invisible to each other. Where one village stops and another begins may not be obvious from the landscape.

The traditional Mossi house is a number of round adobe huts with conical thatched roofs, all surrounded with an adobe wall. The household might include a man, his younger brothers, and their married sons. Each of them, and each wife, would have their own hut, and there would be other huts for kitchens, storage, and the sheep, goats, and chickens. There would also be granaries for storing the threshed millet. Houses face west, and the notion of the house is wider than just the walled compound; it includes a patio-like area of pounded, swept dirt with an awning, where people rest during the day and guests are greeted.

As the modern economy has involved increasingly greater numbers of Mossi, the rural standard of living has changed. Corrugated-aluminum roofs are sometimes seen; they are something of a status symbol although they are hotter and are noisier during rainstorms than the traditional thatched straw. Bicycles are common for transportation, with better-off people owning motorbikes. Transistor radios are also common. Radio programming includes "personal notices" programs that allow people in separate parts of the country to pass messages to each other. Vans have replaced trucks as the main form of long-distance transportation in Mossi country. Most people, even in cities, cannot afford an automobile.

Malaria remains a chronic health problem among the Mossi; the cost of importing malaria-suppressing drugs is so high that most people cannot afford them. The fact that most people are infected with malarial parasites makes them less able to fight off other diseases. Measles is a major health problem for children, for whom it is often fatal. Again, the cost of foreign-made vaccines and the staff and transportation to administer them means that this entirely preventable disease continues as a serious health problem.

The impact on the Mossi of the great Sahelian drought of the 1970s was compounded by the fact that some of the potentially most fertile land, along the larger rivers with year-round water, was uninhabitable due to onchocerciasis, or river blindness. This disease, whose parasite is transmitted by the bite of

the black fly, can eventually result in blindness. In the 1970s and 1980s, the world's largest public-health project attempted to eliminate this disease and allow people to resettle from crowded parts of the country into potentially fertile lands that had become infested. This has been done by suppressing the black flies that carry the parasite. But, since the flies can only be suppressed, not wiped out, the new, mostly Mossi, villages will be kept habitable only through regular helicopter spraying of the rivers for the foreseeable future.

## 10 FAMILY LIFE

As noted above, traditional Mossi villages are groups of households surrounded by fields, where men related to each other through their fathers live with their wives and children. Because the incest taboo means that a man must marry a woman from another family, women ordinarily live in a village other than the one where they grew up, in a household of closely related men and the women from various other families who have married in. This makes life harder for women, who are outsiders in the household. While many Mossi men have only one wife, there are two reasons wives often want their husbands to have an additional wife or wives: the sheer drudgery of household work makes it useful to have another wife to help, and another wife is equally a stranger and someone to talk to when a husband is surrounded by his relatives for support and advice.

Marriage is ordinarily arranged between families. The idea that the family is a continuous set of kin from ancestors to as-yet-unborn descendants gives the whole lineage a stake in making sure there are children to carry on the family. Since the wives who will bear the children have to come from other families, the whole family is involved in arranging the marriage. Because the reproductive power of the woman is taken away to bear children for a different family, her own family is compensated upon the marriage by payments from her husband and his kin. Traditionally, this "bridewealth" was in the form of cattle and trade goods, but in the modern world there is a wider range of possibilities for payment.

Paying bridewealth is sometimes labeled "bride price" by writers describing societies, such as the Mossi, that practice it, but it does not mean "buying" a wife, any more than the European or Asian custom of dowry meant "buying" a husband. It does underline, though, the fact that marriage in many, if not most, societies is not based upon romantic attraction between two individuals, but instead is a much more complex relationship involving families' need to perpetuate themselves and individuals' need for both male and female skills and roles to make a household economy work. (For example, Mossi men weave cloth, but the women spin the cotton thread from which it is woven.)

In the modern era, with more Western-style education, more ways of earning a living than farming, and, especially, easier long-distance transportation, it is less rare for men and women who have fallen in love to elope if they cannot convince their families to agree to the marriage. It has never been true that all marriages were arranged.

The importance of complementary roles in the daily household routine extends to more than husbands and wives. Children have important roles to play in watching the family's sheep and goats, and in helping to haul water and gather fire-

*A Mossi man from Yakko, Burkina Faso, wearing traditional clothing. It is increasingly common for men to wear shirts and trousers, whether of Islamic or European style. (David Johnson)*

wood for cooking, both of which are major tasks. There is so much work to be done in the kitchen, for example, that if a household does not have a preadolescent girl to help with the cooking, it will foster one from another part of the extended family. Major modern improvements in rural life have been the digging of deeper, cement-lined, year-round wells to ease water hauling, and the acquisition of gasoline-powered mills to grind millet seeds into flour, previously done by hand with a grindstone.

It seems that household sizes are getting smaller in modern Mossi society as more people pursue more varied ways of earning a living and become more involved in a money economy, in which they are more interested in spending their cash on their own children and are less involved in the joint farming of a larger household. But, it is certainly not unusual for households to have more than one wife, or more than one set of husbands and wives. The high infant mortality rate and the lack of social security payments for most people still place a premium on having lots of children to ensure that some will survive to help in making a living and to support their parents in their old age. The infant mortality rate has dropped in the last 30 or so years from roughly 50% to an estimated 11%.

Within the walled compound of the Mossi house, each wife has her own hut for herself and her children and prepares meals for herself and for them, with her husband joining each in rotation if he has more than one wife.

Pets are not usual in Mossi society. Dogs are used for hunting and as watchdogs but are not treated with the affection and pampering that Europeans and Americans usually give them. A rural household will have chickens and guinea fowl, sheep and goats, and sometimes pigeons, as household animals, but they are raised for food, for market, and for sacrifices, and are not pets.

Wealthier Mossi may own cattle, but these are not kept at home. Instead, they are cared for by Fulani herders who live in the unfarmed lands among the Mossi. The Fulani, who live all across the West African savanna, are herders rather than farmers. For the Mossi, having cattle with the Fulani means both that the animals are in the care of specialists and that a man's wealth in the form of cattle may be kept hidden from government tax collectors and from his own relatives. Only in the last 20 or so years have some Mossi begun to use oxen or donkeys to pull plows, and donkey-drawn carts were also introduced only in the modern era.

Horses were the basis of the Mossi kingdoms and chieftaincies because cavalry was the basis of military power, even after guns began to be traded in from the Ashanti states to the south. The lack of wheeled transportation for hay made it difficult to concentrate horses, and the lack of pastures to keep them in have meant that horses were, and are, status symbols whose cost in care and feeding limits their possession to chiefs and other nobles and a few especially well-off commoners.

## **11 CLOTHING**

The Mossi grow cotton and weave it into cloth. The traditional loom wove a long strip of plain or patterned cloth about six inches wide. Strips were sewn together to make cloth for clothes or blankets. In pre-colonial times the Mossi exported large "wheels" of cotton strips, carried on donkeys, to other West African peoples. The French greatly encouraged the growing of cotton as a cash crop, as does the Burkinabe government.

While traditional strip-woven cloth is still available, and is still worn, most everyday clothing is made from factory-woven cotton cloth in one-by-two-meter panels. Such cloth is manufactured in Burkina Faso and is also imported.

Women wear a long skirt made of a cloth panel wrapped around the waist. It is now common to wear a top as well, but this is a recent change in rural areas. It is increasingly common for men to wear shirts and trousers, whether of Islamic or European style. Wealthy men and chiefs wore, and wear, richly embroidered robes in the Muslim-influenced style of the savanna. Modern sewing machines have made the embroidery easier to do, but it is still a luxury.

In the last 30 years or so, a major trade in used American clothing has reached into even rural Mossi markets, so that the everyday working outfit of a farmer is likely to be a strip-woven shirt and a pair of cutoff blue-jean shorts. Rubber shoes and sandals have been added to the leather ones Mossi have traditionally worn.

## **12 FOOD**

The staple of the Mossi diet is millet, along with its relative, sorghum. These crops require less rain, and less regular rain, than wheat. Millet is ground into flour and made into porridge by boiling in water. The result, a loaf-like bowl of somewhat doughy food, is called *sagabo* in Moré and *tô* in West African French. One eats it by breaking off a piece with the right hand

and dipping it into a sauce made of vegetables, spices, herbs, and, sometimes, meat. The sauce supplies the protein and most of the flavor. Sorghum is used to brew a cider-like beer that is drunk from calabashes, half-gourds, by all except Muslims and Protestant Christians.

Rice was domesticated in West Africa and has long been a luxury food for the Mossi; it is served for weddings and other special occasions. It is cooked to a very soft consistency and formed into balls the size of baseballs and is eaten in the same way as the millet porridge.

Corn (maize) is a recently introduced crop that is grown widely; since it depletes soil nutrients faster than millet and is less tolerant of irregular rain, millet remains the staple food.

Peanuts, also native to West Africa, are widely grown; they are eaten boiled, roasted, and ground into sauces.

The extended families to which people belong are grouped into larger clans. Except for chiefs' families, who must be able to show exactly how a claim to a position is justified, most families do not keep detailed genealogies, but just maintain enough sense of kinship to share lineage land, and in the wider community, to know who is an eligible marriage partner and who is not. Members of clans often cannot state exactly how they are related, but they will share a family name and a claim of common descent from some distant, usually heroic, ancestor. Each clan's story of its origin frequently includes an account of how its ancestor was saved at some point of danger by an animal, which then has a special relationship to the clan's members. One clan would not eat crocodile meat because a crocodile was said to have helped hide its ancestor from his enemies; but Mossi in other clans could, and would, eat that animal. Food taboos, then, tend to vary from clan to clan. Some families will eat dog meat, for example, and others will not.

In a farming society where most families do not have electricity, people rise early and go to bed soon after dark. Breakfast may be leftover millet porridge, or, today, French-style bread and coffee. The main meal is in the evening. Food is taken out to those family members working in the fields. Meat is enough of a luxury that it is usually added to sauces in small amounts; grilled meat is for special celebrations.

### 13 EDUCATION

In traditional Mossi society, most education came from living with, watching, and helping more experienced people older than oneself. The circumcision camps provided a few months of group instruction to boys. There have always been some Muslims among the Mossi, and especially among those who were long-distance traders for whom Islam was a key link to traders in other places. For them, there were Koranic schools where Arabic and the Koran were taught. On the other hand, even though most Mossi did not go to school, they often spoke other African languages besides their own, especially Fulbe (Fulfulbe), the Fulani language.

Modern education is becoming available, but it is not universally offered anywhere. Thirty years ago only 7% of Mossi children attended school. As of 1990, only 18% of the population over age 15 could read and write; they comprised 28% of men and 9% of women. Such education is given in French, the national language of Burkina Faso. The government has established standards for writing the Mossi language, but little beyond Christian religious texts and some agricultural information is written in it.

The rather small number of schools in existence during the French colonial period meant that independence brought job opportunities for Mossi and other Burkinabe who had even an elementary education. As more schools have reached more students, however, the limited number of jobs in one of the world's poorest countries has meant that today's students do not qualify for jobs that their parents or older siblings might have gotten in the past with the same educational qualifications.

### 14 CULTURAL HERITAGE

Music has been important to Mossi society for entertainment and also for work, in setting rhythms for tasks such as hoeing and threshing. The main instruments are drums. Some drums are large calabashes with leather drumheads and are played with the hands. There are also wooden drums played with sticks, whose pitch can be changed while it is played by a change in arm pressure on the strings tying the head to the drum. There are also flutes and stringed instruments. Drums are made and played only by members of a specific clan, which is also the only Mossi clan that makes pottery.

Some, but not all, Mossi, have traditions of masked dancing for rituals such as funerals. More secular dancing occurs at celebrations and festivals.

The Mossi have a rich literature of proverbs and folktales. Proverbs are not merely a means of transmitting traditional wisdom, but in political debate they provide a way to make the discussion less a contest between rivals and more a weighing of the collective wisdom and experience of the whole society.

### 15 WORK

Besides the drummers and potters just mentioned, ironworking among the Mossi (as in many African societies) has been restricted to only one clan, whose members were both feared and needed because of their skill. Smelting iron requires mining; and digging in the earth, the source of fertility, is considered supernaturally dangerous. Mossi smiths no longer smelt iron from ore, but work imported and recycled iron into hoes, knives, and axes.

Traditionally, Mossi were farmers, some of whom were part-time traders or soldiers (although wars tended to halt during the farming season), with a few specialist artisans and the chiefs and their courts who governed. Modern Mossi, of course, have all the occupations of a modern nation open to them, and have gone into all of them, but most are still farmers. Farming is nowadays a mix of subsistence farming and cash crops; cotton is grown, but so is the millet needed for city dwellers. Some farmers grow vegetables or fruit for urban markets and for export, and they increasingly use modern technologies, such as fertilizers and insecticides, as well as animal- or tractor-drawn plows.

### 16 SPORTS

Traditional Mossi society had little leisure time. There were games like *warri*, in which stone or seed counters are moved in pits on a board or in the dirt in a game of strategy aimed at capturing the opponent's pieces. Military training required practice with swords, spears, and bows and arrows.

As part of modern Burkina Faso, the Mossi participate in soccer and bicycle racing, the two major national sports. Towns and cities have bicycle races on most holidays. Basketball has a

*Mossi using traditional cultivating methods with oxen near Toma, Burkina Faso. Only recently have more modern occupations been integrated into the farming tradition. (David Johnson)*

small presence and a national team, but reaches few Mossi or other Burkinabe.

## **17 ENTERTAINMENT AND RECREATION**

Aside from music, dance, and conversation, there were not many forms of entertainment or recreation in traditional Mossi society. Griots recited genealogies and traditions at weddings and other events. Radio is important to modern Mossi both for entertainment and for communication in a society with few telephones and relatively few people able to read or write letters.

Television is barely a factor in Mossi life. In 1992 (the most recent available figures), there were only two television stations in the country, one each in Ouagadougou and in Bobo-Dioulasso, the county's second-largest city, to the west of Mossi country. There were only some 41,500 TV sets in this country of some 10 million persons, and the TV stations broadcast only two hours a day during the week and five hours each on Saturday and Sunday.

Movies are important, although theaters are limited to the larger towns and cities. Relatively few movies are made in Africa, or in African languages, so that the movies people see are often from foreign cultures and in foreign languages (Films from India, for example, are widely viewed in Africa.). This is changing, however, and Burkinabe and Mossi filmmakers are playing a major role. The main film festival in Africa is FES-

PACO, the Festival Panafricain du Cinéma d'Ouagadougou. Mossi filmmakers, such as Gaston Kaboré and Idrissa Ouédraogo, are making feature-length films that are seen increasingly in Europe and North America, but also, because they are in Moré, are fully accessible to the Mossi themselves. As videotape makes it easier to bypass theaters, more and more Mossi will be able to participate in this modern expression of their culture.

## **18 FOLK ART, CRAFTS, AND HOBBIES**

Pottery is limited to the one clan of potters and drummers. For those Mossi communities that have masked dancing, the carving and painting of masks is a major art form; Mossi masks are in most major collections of African art. Unlike some other peoples sharing the same general culture and related languages, the Mossi do not paint designs on houses. Metal earrings and jewelry are produced. Hats, bags, and cushions are made from dyed leather. Cowrie shells from the Indian Ocean were once used as money by the Mossi and are still used as decorations for clothing and hats. Venetian glass trade beads have been worn by Mossi for centuries. Children often make toy cars and airplanes from wire; these are now sometimes seen in American museums and shops. Some craft techniques, such as batik dyeing of cloth, have recently been introduced into Mossi culture to produce craft items for export or for sale to the relatively few tourists who visit Burkina.

## 19 SOCIAL PROBLEMS

The Mossi share the social problems that many African societies and peoples face in dealing with very rapid social change in some areas, and not enough change, not fast enough in others.

As more Mossi live in Ouagadougou and other cities and large towns and earn their living in an increasing variety of ways, traditional gender and family roles come under pressure. A man is supposed to grow his family's millet, but urban wage-earners cannot. So far, urban life for the Mossi is less dangerous than urban life in many other parts of the world. Ouagadougou is hundreds of years old, so cities as such are not new to the Mossi. At the same time, some of the most powerful films by Mossi filmmakers have dealt with the pressures of urban life and the pressures of traditional life upon women and young people.

Burkina Faso was long noted in modern Africa as having more political freedom than most countries, even (paradoxically) when there was a military government. African governments face the task of meeting many demands with few resources, which can result in few tangible accomplishments; in turn this can make way for the military to seize power in the name of honesty and efficiency. Burkina has the distinction of twice having the army seize power, without injuring anyone, and then eventually returning the government to civilian rule. When younger officers led by Thomas Sankara seized power in 1983, however, there were casualties in the fighting and from execution of political rivals. Sankara made a strong effort to break the country out of its dependence on foreign aid, but in 1987 he himself was killed by his associates, who continue to rule the country. Burkina has multiparty elections, but they have been extensively boycotted by parties that argue that the government is manipulating the political system.

Alcohol and drugs are not major problems. While there is a brewery in the country, and there have been complaints of French army veterans drinking their pensions instead of investing in development, the cost of commercially-produced alcohol is too expensive for many Mossi to consume in quantity. The traditional millet beer is alcoholic but is an established part of both traditional society and household organization and is therefore a culturally controlled substance. Kola nuts, rich in caffeine and the basic ingredient in cola drinks, are widely chewed and are a routine gift to a host, three or four (according to gender) being offered. They are imported from Ghana to the south. They are the preferred stimulant for Muslims, who do not drink alcohol.

## 20 GENDER ISSUES

As in most African countries, traditional practices have kept women in a subordinate position. In the traditional setting a woman is considered to be property that can be inherited upon the death of her husband. As such, traditional law does not recognize inheritance rights for women. Women suffer from frequent domestic sexual abuse and violence, and no specific laws have been put in place to protect women. Abusive husbands go free as there are no legal channels to investigate or prosecute such individuals. Another problem for girls is that they are married early in life. It is estimated that about 52% of women are married before the age of 18.

However, female excision (commonly known as female genital mutilation) was abolished in 1996. A committee known as The National Committee for the Fight Against Excision was

also established in 1996 to work toward complete eradication of this practice in Burkina Faso. Estimates indicate that up to 70% of girls and women had undergone the procedure before it was abolished in 1996. Since then, incidences of excision have declined by about 40%, and more than 400 people have been sentenced for performing the practice.

Women are responsible for subsistence agriculture, and few are involved in the more lucrative private sector. Women hold only about 11.7% of the seats in parliament and form about 25% of the government workforce. Many of the women in government earn low wages as they generally hold low paying jobs. In terms of human rights, excessive poverty has seen many Mossi living deplorable lives with no access to basic human rights. Child labor, child trafficking, violence, and discrimination against women and children are quite rampant in the country. People are also arrested without charge or trial and excessive force is often used against civilians with official impunity.

**LOCATION:** Mozambique

**POPULATION:** 20.9 million

**LANGUAGE:** Portuguese (official); 33 African languages; English (trade)

**RELIGION:** traditional African religions; Islam; Christianity

**RELATED ARTICLES:** Vol. 1: Chewa; Swahili

## <sup>1</sup> INTRODUCTION

As is the case with the vast majority of African countries, the boundaries of Mozambique resulted from the European “scramble for Africa” and are not reflective of a single distinct cultural group. Mozambicans are a people in transition, still recovering from two recent traumatic experiences. First, from 1962 until 1975 the country experienced guerrilla warfare led primarily by the Mozambique Liberation Front (FRELIMO) in opposition to Portuguese colonial rule; this eventually led to independence from the colonial power on 25 June 1975. From 1975 until the early 1990s, however, guerrilla forces continued to war in Mozambique as FRELIMO was challenged by the Mozambican National Resistance (RENAMO).

FRELIMO formed in 1962, and under the leadership of Eduardo Mondlane initiated an armed campaign against the Portuguese. When Mondlane was killed in an explosion in 1969, Samora Machel led FRELIMO and was appointed the first president of Mozambique after independence in 1975. Machel died in an air crash in 1986 and was succeeded by Joaquim Chissano. Since the ascendancy of Joaquim Chissano to the presidency, three multi-party general elections have been held. The ruling FRELIMO party has won each time. Just before the third election, Chissano voluntarily stepped down after almost two decades in power. Guebuza led FRELIMO to its third victory in February 2005. FRELIMO pursued Marxist-Leninist policies, envisioning a socialist country in Mozambique that would avoid the capitalist abuses of the colonial system. However, in recent years the FRELIMO government began to adopt free market enterprise with support from the International Monetary Fund (IMF) and the World Bank. A progressive constitution is in place, which guarantees press freedom, gender equality and basic human rights.

Following independence from Portugal, the FRELIMO government of Mozambique supported the anti-apartheid movement in South Africa. RENAMO was formed from neighboring Rhodesia (which became Zimbabwe in 1980) to discourage Mozambican support of the Zimbabwe nationalist movement. After Zimbabwe's independence in 1980, South Africa continued to support RENAMO's terrorism of Mozambique in order to distract FRELIMO from supporting anti-apartheid forces in South Africa. The cause of the plane crash that killed President Machel was never determined, and the Mozambique government believed that South African involvement caused the crash. A General Peace Agreement was signed between RENAMO and FRELIMO on 4 October 1992, and a general ceasefire began. In 1994 Joaquim Chissano was democratically elected president of Mozambique.

The long-term war economy in Mozambique has meant that normal activities, like going to school, were not common until

recently, and that cultural identity in Mozambique is in transition. During the war years, many Mozambicans could not distinguish between RENAMO and FRELIMO forces; many could not identify the president of the country; and many did not realize that the world referred to them as Mozambicans. Part of FRELIMO's socialist strategy was to minimize ethnic and racial distinctions after independence, but most people in Mozambique continue to identify more with local and/or traditional African groups than with their nationality. The 10 major ethnic groups currently found in Mozambique include the Macua-Lomwe, Ajao, Nguni, Tonga, Choipe, Shona, Maconde, Maravi, Chicunda, and the Nyungwe.

Historically, the area of present-day Mozambique was populated by the Yao, Tumbuka, Batonga, and Makua peoples. The first inhabitants of the area were Bushmanoid hunters and gatherers, ancestors of the Khoisan peoples who are presently found in South Africa, Botswana, and Namibia. Around ad 1–4, Bantu-speaking farmers and ironworkers migrated from the north into the plateau and coastal areas of present-day Mozambique. The Zanj migrated east of Lake Nyasa by the 7th century. Islamic chiefs came to the Pemba/Zanzibar coast by the 9th century, and coastal trading forts were held by Arabs as far south as the island of Mozambique. Tsonga and Ronga (later known as Zulu) were in the south of the country from the 15th century, and at about the same time Caranga (also known as Shona) peoples moved to the north.

Since peace officially came to Mozambique in 1992, civil strife and natural disasters have continued to plague the country. The aftermath of nearly 30 years of war has been intensified by recurrent drought in the hinterlands; severe drought and floods in the central and southern provinces; cyclones in the coastal areas; and desertification and pollution of surface and coastal waters due to increased migration to urban and coastal areas. Mozambique remains one of Africa's poorest countries. Indeed, many sources name Mozambique as the world's poorest country.

## <sup>2</sup> LOCATION AND HOMELAND

Mozambique is located in southern Africa between South Africa and Tanzania. Malawi, Swaziland, Zambia, and Zimbabwe all border Mozambique to the west, and the country's eastern coastline is separated from the island country of Madagascar by the Mozambique Channel. The country is slightly less than twice the size of California, with a total area of 303,037 sq mi. The climate is tropical to subtropical, and most of the country is coastal lowlands. Uplands in the center of the country rise to high plateaus in the northwest and mountains in the west. Mozambique is divided into 10 provinces. The capital, Maputo (formerly known as Lourenco Marques), has an estimated population of 2 million. The second and third largest cities are Nampula in the far north and the port city of Beira in central Zambezi Province.

With a population of nearly 20.9 million, Mozambique also has an estimated 100,000 refugees from the earlier years of civil war living in Malawi, Zimbabwe, and South Africa. By the end of 1994, 1.6 million refugees had returned to Mozambique. One million Mozambican refugees were in Malawi in 1991. In 1990, it was estimated that 3 million Mozambicans had been displaced by the war. Of the current population, 99% are indigenous ethnic groups such as Shangaan, Chokwe, Manyika,

Sena and Makua; 0.06% are European; 0.2% are Euro-African; and 0.08% are Indians from India.

### 3 LANGUAGE

The official language adopted by FRELIMO is Portuguese, though only an estimated 30,000 people in Mozambique speak the language, and 27% of those speak it as a second language. The *Ethnologue* lists 33 languages spoken in Mozambique. Those with more than one million speakers include Makhwua-Makhuwana (2.7 million speakers), Makhwua-Metto (1.5 million speakers), and Lomwe (1.3 million speakers). Makhwua-Shirima, Chopi, and Chwabo follow in popularity. In urban centers, particularly in Maputo, English is becoming popular because many neighboring countries use English as their official language.

### 4 FOLKLORE

The various ethnicities of Mozambique contribute to a rich and important presence of myths and legends in the country. Traditional African religions generally place great emphasis on the importance of ancestors. The long dependence on the use of oral tradition to pass histories from one generation to the next has resulted in a wealth of folk traditions and stories. One such legend from the Maconde people demonstrates the importance of folklore to present-day Mozambicans. The Maconde believe that they descended from one man who lived alone in the forest like a wild pig. The man wanted a family, so he carved a wife and eventually had children. The first two children were born near the river and both died. The third was born on the plateau and survived. This was taken as a sign that the Maconde should live on high ground. The Maconde, who are world-renowned for their wood carvings, believed that their carving abilities proved they could control the world of nature and communicate with ancestors and spirits. The Maconde word for woodcarving, *machinamu*, also means ancestors and carvers. They have traditionally produced human figures for family worship as well as masks for initiation ceremonies.

### 5 RELIGION

As indicated by the variety of ethnicities found and languages spoken in Mozambique, an array of religions are practiced. Roughly 60% of Mozambicans practice traditional African religions, 30% are Christian, and 10% are Muslim. Most traditional African religions believe in one supreme being who acts through spirits and ancestors. Traditional religions are not necessarily viewed as incompatible with “imported” religions such as Christianity and Islam. Many Mozambican Christians continue to practice the witchcraft, sorcery, spells, and magic associated with traditional religions. RENAMO used the traditional beliefs of Mozambicans to gain the respect of peasants and to influence soldiers. RENAMO commanders were often Ndua-speakers, among whom *espiritistas* (spirit mediums), *curandeiros* (healers), or *feiticeiros* (witch doctors) enjoyed great influence. Such mediums were believed to give fighters courage, and many practiced rites to make warriors “invisible” or “bulletproof.” While the Ndaus constitute less than 2% of the Mozambique population, they were well known for their use of magic.

At first, FRELIMO tried to ignore traditional African religion and discounted *curandeiros* and chiefs, preferring to emphasize “scientific socialism.” FRELIMO soon relaxed the

party's anti-religious policies, however, and traditional beliefs influenced peace as well. Spirit mediums were believed to have created “neutral zones” by harnessing supernatural powers. Both sides in the fighting respected such areas.

### 6 MAJOR HOLIDAYS

In addition to the national holiday, Independence Day (June 25), many major religious holidays are celebrated in Mozambique. The Portuguese Catholic influence is very heavy among the 30% Christian population, and consequently, holidays such as Christmas and Easter are celebrated much as they are in Western cultures. Similarly, the Muslim population observes Islamic holy days.

During wartime, Independence Day was often marked by increased caution by the general public, as RENAMO often chose the holiday as a time to increase attacks.

### 7 RITES OF PASSAGE

As with most traditional African societies, rites of passage are very important to the peoples of Mozambique. Such practices, however, vary from one ethnic group to another. The Tsua, a sub-group of the Tonga, practice circumcision of boys aged 10 through 12, while the Shona (also called Caranga) do not practice initiation or circumcision for boys. The Maconde practice initiation ceremonies that integrate young people into the adult world through links with ancestors and supernatural beings. Circumcision is an important part of the Maconde

*Mozambican families taking the ferry to Catembe Island for a day on the beach. (Jason Laure)*

passage from boyhood to manhood, and the Maconde rites of passage ceremonies include the use of masks.

### **8 INTERPERSONAL RELATIONS**

As with rites of passage and religious practice, customs concerning greetings, visiting, body language, and dating vary from one ethnic group to another. Portuguese and English greetings are common in urban areas.

### **9 LIVING CONDITIONS**

Life under civil war was devastating, and Mozambique has not yet truly emerged from the heavy influence of its more than 30-year struggle. The influence of colonialism also remains in many aspects of life, including housing. “Cement town” describes European-style settlements once occupied by colonists, and “cane towns” are the African settlements that surround them. Mozambican homes are often constructed of cane and mud. In the cities, high-rise apartments are crowded, with 20 people sometimes living in three-room apartments. Electricity and plumbing are often unreliable in the cities and are nonexistent in rural areas.

In 1995 there were only 3.8 radios per 100 inhabitants and in 2000 there were 0.5 television receivers per 100 inhabitants. Two television broadcasting organizations—the national state television network and another private organization—offer two television channels with an average of nine hours of programming per day. The city of Maputo contains 64% of tele-

communications lines. In 1995, 69 of the 142 administrative districts in the country had no lines at all. Mozambicans have a very low awareness of computer communications, though e-mail was introduced in 1995 at Centro de Informatica Universidade Eduardo Mondlane (CIUEM). Most Internet users, however, are members of international organizations located in the country.

The war left nearly half of the country’s primary healthcare network destroyed. Today, children continue to die of preventable diseases like measles and malnutrition. An estimated one million land mines remain in the country. Since 1995 in the Maputo province alone, scores of people have stepped on landmines—many of whom were children. The current death rate is 18.97 per 1,000, and life expectancy at birth is 41.6 years.

During the war years, airplanes provided the only safe transportation mode in Mozambique. RENAMO forces destroyed railways and attacked automobiles on roadways, even those autos protected by government convoys. Many roads still have not been repaired since the war ended, nor have industries necessary for automobile maintenance been developed. Most taxis now found in Mozambique cities are many years old and in disrepair.

### **10 FAMILY LIFE**

While Western cultures generally place equal importance on descent and kinship through both the mother’s and father’s side of the family (bilineal), most African cultures emphasize

one more heavily than the other. In matrilineal groups, for example, not only is the family tree traced through the mother's side of the family, but property passes from one generation to the next based on matrilineal descent. Kinship ties are more important in African societies than in Western societies, in part because land ownership is usually exercised by the extended family group rather than individuals.

Both matrilineal (the Maconde and the Macua-Lomwe, for example) and patrilineal descendant groups exist in Mozambique, although men usually have a decided advantage in terms of decision-making. Men generally control issues related to ownership and access to land. Polygamy is practiced in some areas, although economic pressures have reduced the number of families with multiple spouses. Families in Mozambique continue to practice subsistence farming as a means of survival. Men traditionally perform the initial plowing or hoeing to prepare the land for planting, but women maintain the farm and are responsible for most of the harvesting. Women are also responsible for the traditional roles of taking care of children, food preparation, and home making. During the war years, women were called on to do more than their traditional responsibilities, and as a new social structure emerges in Mozambique, the roles of women are expected to change and to become less subordinate.

Children are also expected to help with farming, and most children do not attend school past the primary years. The usual pets such as dogs and rabbits are popular in Mozambique.

### 11 CLOTHING

During the war, *deslacados*, people dislocated by the war, often had no clothes and covered themselves with tree bark. Clothing became a precious commodity and was often more valued than currency in many areas. In Maputo, guards were posted at clotheslines, and a shirt cost as much as a laborer could earn in a month. Western-style clothing is common, but traditional clothing such as *capulanas* and head scarves are still in use. *Capulanas* are squares of colorful cloth that can be worn as a wraparound skirt or on the upper body, where they double as baby slings.

### 12 FOOD

In parts of Mozambique meat is scarce, but pork and wild pig are favorite dishes and are usually prepared in a marinade. One marinade consists of Madeira (a type of wine) and wine vinegar, salt, pepper, garlic, cloves, red peppers, and bay leaf. Following as much as eight hours of marinating, the meat is fried. Just before serving it on a bed of rice, the meat is laced with orange juice and more wine. The Portuguese influence can be found in Mozambique cuisine in the use of spicy sauces such as *piri-piri*. *Piri-piri* is a sauce made of lemon juice, olive oil, red pepper, salt, and garlic. Products of the fishing industry, especially prawns and shellfish, are popular in the coastal region. The mainstay, however, in Mozambique as well as other parts of southern Africa, is maize. Mealie pie, for example, is a cornmeal mash that is a southern African staple. Many Mozambicans during the war depended on food from relief agencies, some scavenged for wild berries, nuts, and caterpillars, and many others starved.

*A young woman grinds grain in Nampula, Mozambique. Maize is the principal grain for Mozambicans and many other peoples living in southern Africa. Mozambican families continue to practice subsistence agriculture as a means of survival. (Corel Corporation)*

### 13 EDUCATION

By 1989, 52% of first-level primary schools in Mozambique had been destroyed or forced to close by RENAMO. War had so disrupted education that most students in Zambezia Province in 1988 were in the first grade, and *deslocados* were often too hungry to attend school. Teachers, also hungry, were targeted for attack by RENAMO.

A 1995 estimate qualified 33% of Mozambicans over the age of 15 as literate. In 1975, 97% were illiterate. A very small percentage of primary school students continue to secondary school, and the country has limited capacity for professional and academic education. Primary education is free of charge, and 40% of primary school age children enroll. Secondary education is not free. Based on 1992 statistics, of the 1.2 million enrolled in the first five-year phase of primary education, only 100,000 continue with the second, two-year phase. Of that 100,000, only 50,000 continue for secondary, professional, technical, or university education. The 1992 higher education enrollment in the country was 4,600.

During the war, school was often conducted under trees, without books or supplies. Many schools were destroyed during the war years. Mozambique has a very small educated population from which to draw teachers, and families often cannot afford the loss of labor in subsistence farming for children to attend school.

In recent years, the government has made efforts to decentralize its political and economic structures and improve social services. Schools have increased their enrollments dramatically. The net school attendance rate, only 43% in 1991, shot up to 71% in 2004, according to the *UNDP Human Development Report 2006*. However, the quality of education remains a challenge. Most classrooms are overcrowded with about 70 children to just one teacher, almost half of whom are unqualified. Repetition rates are high, reaching 21% in 2004. The proportion of girl pupils attending school remains lower than that of boys and literacy rates for men in 2006 were 67% compared with 38% for women.

#### 14 CULTURAL HERITAGE

Mozambicans practice various forms of music, dance, and storytelling. As in most of Africa, African art is used to communicate spiritual messages, historical information, and other truths to society. Thus, cultural heritage plays an important role among the various ethnic groups in Mozambique. Various groups are known for different aspects of their cultural heritage. The Chope, for example, who were believed to have come from the Vilankulu, are masters of the African piano, the *mbila*. The Maconde are world renowned for their wood carvings.

Many writers and artists are natives of Mozambique, including the poet Albuquerque Freire; short-story writer and journalist Luis Bernardo Honwana (also known as Augusto Manuel); and poet and painter Malagatana Gowenha Valente. Poet and artist Rui de Noronha is considered to be the “father of modern Mozambican writers,” and Noemia Carolina Abranches de Sousa (also known as Vera Micaia) is considered to be the first Mozambican woman writer. Much Mozambique literature, like other African literature written in Portuguese, is anticolonial and promotes traditional African themes.

#### 15 WORK

Most Mozambicans rely on *machambas*, family garden plots, for survival. As much as 80%–90% of the population practice some agricultural activity, primarily subsistence farming. During the war, people sometimes had to walk one to two hours to farm their plots during the day, then return to settlements that were guarded against RENAMO bandits at night. The need for and demands of subsistence farming undermined FRELIMO's attempts to establish communal farms and villages in Mozambique following independence. The annual per capita income for Mozambicans is \$90 per year, and unemployment registers at about 21%.

#### 16 SPORTS

Soccer is the most popular organized spectator sport in Mozambique. One of the leading soccer players for Portugal in the 1960s, in fact, was Eusobio from Mozambique. Many other Western sports are played by children and adults, particularly in the urban centers.

#### 17 ENTERTAINMENT AND RECREATION

In Mozambique's urban centers, theater and television are popular. FRELIMO tried to promote rural village theater, but the effort was disrupted during the war years and has not been reestablished. Children enjoy playing games such as hopscotch and hide-and-seek.

#### 18 FOLK ART, CRAFTS, AND HOBBIES

As previously noted, the various ethnic groups have rich cultural heritages that contribute to the art of Mozambique. For example, the Maconde, a matrilineal ethnic group of the Mueda Plateau in North of Pemba Province, are well known for their wood carvings. The carvings now reflect more recent styles. In the Shetani style, the carvings are tall and gracefully curved with stylized and abstracted faces and symbols, and most are carved in heavy ebony. “Shetani” is a Swahili word meaning “devil.” The carvings are used to translate a spirit or group of spirits. The Ujamaa-style carvings are totem-type structures showing lifelike people and faces, huts, and everyday articles like pots and agricultural tools. These carvings are representative of family. The Maconde are also known for their water pots as well as masks used in initiation ceremonies.

#### 19 SOCIAL PROBLEMS

A vast array of social problems obviously afflict a country so recently traumatized by war. While Mozambique adopted a democratic constitution in 1990, human rights violations continue to be reported, including a pattern of abusive behavior by security forces and an ineffective judicial system. Mozambique is facing continuing uncertainty as a result of the war years, and the transition to better economic conditions, improved health care and education, and the guarantee of human rights will take time.

#### 20 GENDER ISSUES

The Mozambican constitution enshrines gender equality and legislation has been passed to support women's rights. Unlike in other African countries, women are well represented in parliament. As of 2008 30% of members of parliament (MPs) were women, as was the prime minister and the foreign minister. But in the home women often have little negotiating power. They continue to be subservient to men. Despite the government's efforts to eliminate gender disparities in access to education, the proportion of girls attending school is significantly lower than for boys. In secondary schools only 40.7% of the students are girls. In terms of human rights, Mozambique's constitution and legal framework establish safeguards for all citizens' civil rights and liberties, but the treatment of individuals who are arrested or detained remains a concern. In addition, prison conditions are substandard, and trafficking of children and women has increased.

Homosexuality is illegal in Mozambique. Laws covering homosexual activity criminalize male homosexuality with a penalty of up to three years imprisonment in a “re-education institution” where hard labor is used to alter the prisoners “aberrant behavior.” However, the decision in South Africa to legalize same-sex marriages has had an impact on the way Mozambique looks at homosexuality. Following South Africa's decision, homosexuality got a very positive discussion in the national press in Mozambique.

## NAMIBIANS

**PRONUNCIATION:** nuh-MIB-ee-uhns

**LOCATION:** Namibia

**POPULATION:** 2.2 million

**LANGUAGE:** Afrikaans (most widely used); English (official); Diriku; Herero; Kwangali; Kwanyama; Lozi; Mbukushu; Nama; Ndonga; Tswana; Ju|'hoan; Subiya; Zemba and also German

**RELIGION:** Christianity (80–90%); indigenous beliefs (10–20%); Muslim and Hindu also occur

### <sup>1</sup> INTRODUCTION

German Chancellor Otto von Bismarck proclaimed South West Africa (now Namibia) a German protectorate in 1884. The conquest of German South West Africa by South African forces during World War I resulted in its subsequent administration by that country, from 1917 to 1990, under a League of Nations mandate. A war (1966–1989) between the occupying South African forces and the SWAPO (South-West African People's Organization) liberation movement finally led to the implementation of United Nations Resolution 435 on 1 April 1989. This made provision for free and fair elections, which resulted in SWAPO coming to power. On 21 March 1990, Dr. Sam Nujoma was instated as the country's first president. Namibia has been governed by SWAPO since independence and in November 2004 Hifikepunye Pohamba was elected to replace Nujoma as president.

The last African country to become independent, Namibia is not as well known as some of its neighbors, but is truly a land of remarkable contrasts. Situated along the southwestern coast of the African continent it has a land surface of 824 269 square kilometers, nearly four times the size of Great Britain. Situated south of Angola, north of South Africa, and west of Botswana, Namibia has 1,500 kilometers of Atlantic coastline. The cold waters off this coast ensure that deep-sea fishing represents Namibia's third largest industry and export. The Atlantic also spits diamonds onto the sands of the coastal Namib Desert, which earn Namibia, along with smaller quantities of gold, copper, uranium and other metals, over one billion dollars per year.

Namibia was furthermore the first country in the world to incorporate the protection of the environment into its constitution and some 14% of the land is protected, including virtually the entire Namib Desert coastal strip.

### <sup>2</sup> HOMELAND

Despite its size, Namibia is one of the most sparsely populated countries in Africa with its estimated population of about 2.2 million people. The north-central part of the country is the most densely populated area with an average population density of 26 people per square kilometer, more than 10 times the national average.

Namibia boasts three distinct environments—the Namib Desert in the east, the more populous Central Plateau, and the Kalahari Desert in the west, famous for the San people (known as Bushmen) and majestic wildlife. The defining term for all three regions is *dry*. Namibia averages less than 28 cm (11 in) of rain per year, and most of that falls on the central Plateau,

supporting cattle, goat and sheep herding, and marginal subsistence agriculture. The borders are formed by the Kunene and Okavango rivers in the north and by the Orange in the south. Interior rivers become dry washes, called *oshana*, in the dry season, and most irrigation is provided by bore-holes. A severe drought in 1992 turned a precarious situation into a disaster, sending 30,000 farmers to live as squatters in the cities as their crops and animals died.

To the west, the icy Atlantic Ocean pounds the Namib desert shore with relentless fury, throwing up all manner of flotsam, including numerous shipwrecks. It is called the Skeleton Coast for obvious reasons.

In many ways Namibia is a startling country. It contains the world's second largest canyon, the highest dunes, the oldest desert, the largest existing meteorite, and the smallest antelope. Vast areas of the country are true wilderness, which is home to an array of wild animals.

For nearly two decades since independence, Namibia has enjoyed peace and stability. Economic development has recently been due to its productive mining, fishing, tourism, and agricultural industries.

Though for such a vast country, the population is small, yet it is home to a rich diversity of people. The ancestors of the San (Bushmen) arrived in Namibia 2,000 years ago as hunter-gatherers. They were followed by Bantu-speakers after AD 1500 and several other groups joined them subsequently.

The largest population group, the Ovambo, comprise some 50% of Namibians. Other significant communities are: the Kavango (9%); Herero (7%); Damara (7%); Whites (6.6%); Nama

(5%); Caprivan (4%); Bushmen (3%); Baster (2%); Tswana (0.5%); and so-called Coloreds.

The *Ovambo* are mainly found in the northern-most area of Namibia, previously known as Ovamboland. They comprise subgroups with different dialects: the Kwanyama (divided by an indiscriminate international border drawn by the colonial Portuguese and Germans between Angola and Namibia); the Ndonga; Kwambi; Ngandjera; Kwaluudhi; Mbalanthu; Nko-honkadhi; and the Eunda. The Ovambo are agriculturalists and cattle breeders and plant mahango, a kind of millet, their preferred staple diet.

The large *Kavango* community, a riverine people, lives along the banks of the Kavango River in northeast Namibia. They practice agriculture along the narrow strip of soil along the river. Cattle and goats are kept for their milk, meat, and hides. Funnel-shaped fishing baskets are used in the river and the men are renowned wood carvers.

The *Herero* people moved south into Namibia during the 16th century, probably from an area west of Lake Tanganyika. Some (the Ovahimba) stayed behind in Kaokoland in north western Namibia, and a large group moved on to settle in the central and southwestern regions but mainly in the district of Okahandja. The Herero are known for their vast herds of cattle. The Himba, who stayed behind, faced long spells of drought, which forced them to live off the land, collecting wild fruit and digging for roots. Because of this the proud southern Herero regarded them as inferior, thus calling them "Tjimba" from "ondjimba-ndjimba," meaning aardvark, or someone who digs food out of the ground. The Himba are characterized by their traditional loin cloth and the fact that they smear their bodies with red ochre mixed with animal fat.

Most of the *Damara* people live in the northwestern regions of the country but others are found widely across Namibia working in towns, on commercial farms, in mines, and at the coast. They are unrelated to any of the other communities and are believed to have their origin in northwestern Africa from where they migrated south long before the other migrations of African people to the southern parts of the continent. They were originally hunter-gatherers but due to domination and enslavement by the Nama and Herero, they lost their language and cultural traditions. When pursued by the dominant peoples they used to flee into inhospitable mountains and hence became known as "Bergdamara" or Mountain Damara.

The large *white* community is the result of the arrival of people of European descent in different stages. Explorers, hunters, adventurers, prospectors, and traders first travelled north from South Africa. The first missionaries from the Berlin Missionary Society settled in 1806. Soldiers (German) and administrative personnel arrived during the Herero Nama conflict and Boers/Afrikaners came to the country particularly as a result of the Anglo-Boer (South African) War of 1899–1902. The discovery of diamonds attracted more Europeans and after the First World War new white settlers increasingly bought property in Namibia.

A Khoekhoen ("Khoi") people, having initially moved south, and some of the *Nama* later migrated from South Africa back to Namibia. Originally nomadic pastoralists, the Nama still today keep stock. They are found in scattered communities all over Namibia, e.g. the Topnaars at Sesfontein in Kaokoland, the Bondelswarts at Warmbad, the Fransmanne, Kopers, Veld-

skoendraers, GootDoden, Swartboois, Witboois, etc. There are 15 distinct such communities.

The *Caprivians* are hunters and fishermen but they also till the soil, keep stock, and gather food. They live along the rivers of the Caprivi Strip in the far northeastern corner of Namibia. Two communities are distinguished, the Fwe in the west and the Subia in the east.

Essentially gatherers of food who also hunt for game, the *Bushmen (San)* are some of the earliest inhabitants of Namibia. One of the smallest communities in the country, they have become increasingly sedentary. Thus, the largest of their communities, the !Kung, are found in Okavango; the Mbarakwengo, or River Bushmen, are found along the eastern Kavango River region, the Heikom around the Etosha National Park, the Naro east of the towns of Grootfontein and Gobabis and in neighboring Botswana, and the very small, near-extinct Auni, in the lower Nossob district.

The progenitors of the *Baster* (“Bastard”) people were the early Dutch and other European men, who intermarried at the Cape in South Africa with local Khoekhoen and San (Bushmen), and later also Malays, brought there by the Dutch from the East Indies. Having first gathered around mission stations in South Africa, some eventually moved north to Namibia in 1868 and reached Rehoboth in 1870 where they settled. They adopted the language, Afrikaans, and culture of their forefathers and this included particularly the observance of Christian beliefs.

A relatively small community of *Tswana* people lives on the Namibian side of the border of Botswana (“Land of the Tswana”) to the east. Botswana is however where most of the Tswana live and the Namibian Tswana share affinities, including kinship relations, with them.

The small *Colored* community of Namibia also stems from early mixed marriages at the Cape (hence “colored” or mixed), and their antecedents moved from there due to discrimination denying them full participation in social and economic activities of the then South Africa. Afrikaans is their native language, and they are found centered mainly in the larger Namibian towns.

### 3 LANGUAGE

Although only 7% of the population speaks English as a mother tongue, it is the official language. Afrikaans is the most common language and the languages of Ovambo (Kwanyama, Ndonga, Kwambi, Ngandjera, etc.), together referred to as *Oshivambo*, are the most widely spoken. The languages of the San (Bushmen) and Khoekhoen (Nama) are characterized by click sounds. The other Namibian languages were earlier referred to in Section 2. “Hello” in some of these languages is: *Hallo*—Afrikaans; *Nawa*—Ovambo; *Matisa*—Damara; *Koree*—Herero; and *Mazwara*—Okavango.

### 4 FOLKLORE

Through oral tradition most of the Namibian communities have their legends and beliefs handed down over generations. Likewise certain customs are still practiced by people in rural areas, given that Namibia is a country with a population that is still 68% rural.

Many Namibian folk heroes achieved their status through stories of more recent battles. One 19th century Ovambo sub chief, named Madume Ndemufayo, fought the Angolan Por-

tuguese from the north and the Germans from the south, only to be captured and killed by the Germans. His exploits were passed on through oral tradition, as indigenous languages had never been written. The Herero, too, have their stories of resistance and military exploits. Many Herero feel, in fact, that they are not given the same recognition in national lore and policy as the earliest victims and resisters of the Germans. The 1904 German-Herero War ultimately resulted in genocide: over 75% of the Herero population was massacred or banished to die in the Kalahari.

## 5 RELIGION

Namibians describe themselves as very spiritual. European missionaries saw early success here, and today 90% are Christians, mostly Lutheran. While it is common for Africans to incorporate traditional beliefs and practices into their religious life, less than 20% of Namibians claim to do so. Western churches hold great influence in Namibia, which may account for some traditional practices like polygyny (marrying more than one wife) not being accommodated in the country’s legal code.

## 6 MAJOR HOLIDAYS

Two important Namibian holidays fall on August 26. This day was first established in the 19th century as Red Day by the Herero in remembrance of their fallen chiefs and is still marked by the wearing of dark red costumes. After independence, August 26 also became Heroes Day, an official holiday celebrating SWAPO’s first armed battle with the South African military. Many Herero feel that the honor of Red Day is being challenged by Namibia’s ruling party government. Independence Day, March 21, bears the characteristics of Independence Days celebrated throughout the world: military parades, speeches by politicians, plenty of food, alcohol, and reverie.

## 7 RITES OF PASSAGE

Much of Namibian ritual life involves cattle. Cattle have provided the economic cornerstone for most of Namibia’s ethnic groups for centuries. A gift is presented by a man to his future father-in-law before marriage can be sanctioned, in the case of the Ovambo this is an ox or *oyonda*. Cows in general play a particularly important role in funerary ritual. The passage from life to death for a man of an Ovambo household is a case in point: His body must remain in the house for at least one day before burial, during which time all his pets must be killed. Traditional Ovambo compounds, called *kraals*, have gates that regulate the comings and goings of both cattle and humans. But at death, the owner may not pass through this gate, or the cattle will die and the kraal will come to ruin. A new hole is cut for him to pass through. A bull is slaughtered, cooked without oil or flavoring of any kind, and a portion is eaten by everyone in the village. Then the kraal and all its contents must be moved at least 15 meters (50 feet). The cattle are not permitted to rest on the same earth that witnessed the death of their owner.

## 8 INTERPERSONAL RELATIONS

Namibia is one of the most peaceful nations in Africa. Due both to its increasing prosperity and the friendly demeanor of its inhabitants, the people generally go about their ways.

*The average Namibian household has five to seven members. One-third of all dwellings have electricity, and slightly fewer have plumbing. Those that do not have plumbing typically have lime-pit outhouses. In the rural areas, children can walk miles to school, and the donkey is often the best form of transportation. (Cory Langley)*

Namibia is ruled by a multiparty parliament with a democratic constitution. The government's policy of national reconciliation and unity embraces the concepts of tolerance and respect for each other.

The friendly way people, even strangers, greet each other seems to bear witness to this. The sparsely populated and rural nature of much of the country probably has much to do with this and also with the various ways different communities show respect. Among some groups, women and youth bend at the knees as a sign of respect to older men. When greeting or agreeing, Caprivians clap their hands. Basters may kiss close friends and relatives on the lips. But, the handshake is the most common form of personal introduction.

## **9 LIVING CONDITIONS**

The Namibian economy is heavily dependent on the extraction and processing of mineral for export, yet this sector only employs about 3% of the population while nearly half of the population depends on subsistence agriculture for its livelihood. Namibia normally imports about 50% of its cereal requirements and in times of drought food shortages are a major problem in the rural areas. A high per capita gross domestic product (GDP—estimated at \$5,200 in 2007), relative to the region, hides one of the world's most unequal income distributions. The United Nations Development Program's (UNDP)

2005 Human Development Report for example, indicated that 34.9% of the population lives on \$1.00 per day and 55.8% lives on \$2.00 per day.

Life expectancy is 43.1 years (2007 estimate); the infant mortality rate is 47 deaths per 1,000 live births (birth rate: 34.17/1,000 population—or 23.19/1,000, 2008 estimate); and the literacy rate has been variously put at 65% (Namibia Tourism Board, 2008) and 85.4% (Namibia Facts and Figures, 2001 census, counting literacy as those aged 15 and over being able to read and write). Some of the estimates are now beginning to take into account the effects of excess mortality due to AIDS. The adult prevalence rate for HIV/AIDS was 21.3% in 2003, the number of people living with HIV/AIDS was 210,000 in 2001, and HIV/AIDS deaths totaled 16,000 in 2003.

Although medical services in Namibia are of a relatively high standard, the availability of most services is restricted to the main towns.

## **10 FAMILY LIFE**

Africa has been thrust into modern life more suddenly than any other continent, and Namibia is no exception. As a result, family life has changed drastically and sometimes painfully. One of the most obvious changes regards the role of women in society. Polygyny had been the traditional ideal for men in many ethnic groups and the practice is still significant, al-

*Namibian men mining diamonds. Namibia is among the world's leading producers of gem-quality diamonds, and the mining industry is the largest private sector area of employment. (Jason Laure)*

though not accommodated in legislation. Virginity before marriage had been the traditional ideal for women and errant women could even be banished. Today, one-third of all girls by the age of 18 have had at least one child, while 21 is the average age for first conception, and 25 is the average age for marriage among women. A related trend is the number of households run by women. In Ovamboland, a matrilineal society where men had always been the heads of households and the only owners of property, 45% of all households are headed by women, many of whom are single parents to their children. Namibian women have legal access to birth control, as well as rights to demand child support for their children. More and more women are exercising these rights. Modern birth control is used by 25% of all women, far more than in most of Africa.

Despite women's gains in reproductive choice, their rights to family property are still precarious. In most Namibian cultures, when a man dies his property often accrues to his parents and siblings.

### **11 CLOTHING**

Most Namibian city-dwellers dress in modern fashions, as in the West. Several examples of customary dress stand out, however. Herero women, both rural and urban, have adopted the German Victorian fashions of the 19th century colonists, wearing long petticoated gowns, shawls, and adding extravagant headdresses. The Himba, as was mentioned, a cattle-herding

people from the extreme northwest, whose traditional culture has not changed extensively, typically wear leather thongs or skirts, smearing their bodies with ochre—a reddish pigment extracted from iron ore. The women wear elaborate braids and copper or leather bands around their necks, making them appear elongated.

### **12 FOOD**

Fish is Namibia's largest non-mineral export, yet Namibians do not eat much fish as most of them are not a coastal people. Canned pilchards and dried horse mackerel are available in the towns, but are not a traditional staple. Ostrich farming has become big business in Namibia, but nearly all ostrich meat is exported to northern Europe. Beef, mutton, milk products, millet, sorghum, peanuts, pumpkins, and melons are common subsistence crops. Mealie, a dish similar to hominy grits, is the most common and inexpensive staple grain. While game hunting was traditionally practiced all over Namibia, it tended to take a back seat to livestock raising, and often marked special occasions. Today, private game parks abound to serve the Western tourist interested in hunting.

### **13 EDUCATION**

Namibia's adult literacy rate has been improving rapidly over the last number of years (see *Section 9: Living Conditions*, above). Namibia also has one of the most highly skilled bu-

reaucratic classes on the continent. One reason for this is the policy of reconciliation that the SWAPO government adopted in order to keep the white, educated business owners and civil servants in the country after independence. As of 1993, 20% of the population had never been to school, and only 1% went on to university. Those that do get a higher education can go to the university in Windhoek, though some go to South Africa or Germany. In addition, several ministries have internal training colleges to better prepare their new class of African civil servants for work.

#### 14 CULTURAL HERITAGE

The Namibian government has established a team of cultural preservationists to encourage the continuation or resuscitation of cultural traditions and heritage. The job of this group of performers, artists, historians, and researchers is to record and then bring to life the cultural heritage of Namibia's people before it is irrevocably lost. Given the largely rural population of Namibia and the remote dispersal of many communities, there is still a significant adherence to such practices.

#### 15 WORK

Namibians have a strong work ethic. While the state provides pension and social security plans, many elderly people expect to feed themselves from their own agricultural labor until they are physically unable to do so. Urban government workers can invest in savings plans or the local stock market. Still, two-thirds of all Namibians are rural dwellers, and most of them describe themselves as subsistence farmers or herders. The government is currently trying to convince some communities to abandon their conception of cattle as the highest form of saved wealth and to turn their skills toward commercial ranching and beef export. Among some traditionalists this is inconceivable, because selling off the herd for mere cash is like selling the legacy of the ancestors. Namibians consider themselves very self-reliant and in many of the outlying areas this is what they became accustomed to over generations.

#### 16 SPORTS

As everywhere in Africa, soccer, or football as it is known in Namibia, is the national sport with the most passionate followers. Even Himba children grow up playing it, maybe making do with a ball made of twine. Track and field, called "athletics" locally, is becoming more popular, especially with the silver medal win of compatriot Frankie Fredricks in the 100- and 200-meter dash at the 1996 Olympic Games in Atlanta. Schools and clubs in towns have well-supported rugby teams and Namibia has fielded a national team at the Rugby World Cup. Most Namibians get their physical exercise through daily chores. Many rural children must walk or run five kilometers a day to school and hoeing and harvesting is the lot of most adults.

#### 17 ENTERTAINMENT AND RECREATION

American popular culture is so pervasive globally, it is almost unavoidable. Most popular music tends to come from South Africa, with its rich history of local performers. Namibia has produced a number of popular performers but more often than not they seek the more lucrative market to the south, in South

Africa. Pockets of more traditional music are found in the more remote rural areas.

#### 18 FOLK ART, CRAFTS, AND HOBBIES

Traditional arts and crafts in Namibia cater to daily living. Wood carving, despite the relative dearth of trees, has a long history, and beautiful utensils, knife handles and sheaths, masks, musical drums, beer strainers, and sleeping mats continue to be made and sold. Baskets for holding everything from fish to grain to water are made out of the palm leaf, or out of reeds along the northern rivers.

#### 19 SOCIAL PROBLEMS

Unemployment reached 35% in urban areas after the 1992 drought but by 2006 the unemployment rate was 5.3%. After independence, the government did not nationalize all industries nor did it confiscate land and equipment from the white ruling class. As a result the economy remained stable by 2008. The international investment community has more confidence in Namibia than it does in many African countries that have experienced undisciplined governments and crumbling infrastructures. Interpersonal and intergroup relations are positive, and the Namibian economy is growing steadily and significantly—which all augers well for the future.

#### 20 GENDER ISSUES

The constitution of Namibia, underpinned by appropriate legislation, provides for the protection of individual rights. In the urban centers and other public domains there is also an increasing awareness and recognition of the position of women and their rights as citizens of Namibia. However, in many of the rural areas (see *Section 2: Homeland* and *Section 10: Family Life*, above) women still function in patriarchal societies where the males as husbands or leaders hold sway in terms of authority and privilege. This even applies to the matrilineal Ovambo, bilineal Herero, and the bilateral/cognatic San-Bushmen—all kinship systems where a certain acknowledgement or emphasis is accorded to females.

# NDEBELE

**PRONUNCIATION:** nn-deh-BEH leh

**ALTERNATE NAMES:** Amandebele; Ndzundza; Manala

**LOCATION:** The Mpumalanga and the Northern provinces of South Africa

**POPULATION:** 403,700

**LANGUAGE:** Ndebele (IsiNdebele); Sepedi; Afrikaans; English

**RELIGION:** Christianity; African Christianity

## 1 INTRODUCTION

The Ndebele of South Africa refer to themselves as “Amandebele,” or “Ndzundza” and “Manala”—denoting two main sections or tribal groupings. Early writers used the term “Transvaal Ndebele” to distinguish them from the “Zimbabwean Ndebele” (or “Matebele”). On geographical grounds, the Transvaal Ndebele was subdivided into the “Southern” (Ndzundza and Manala sections) and “Northern” Ndebele. Oral tradition points to a possible common origin for both the Southern and Northern groups, although the latter, as the numerically smaller group, became absorbed into their Northern-Sotho-speaking neighbors.

After a succession struggle, the Ndzundza section migrated to KwaSimkhulu (“Place of Large Fields”), approximately 260 km (160 mi) east of the present Pretoria, in the Mpumalanga province. The numerically smaller Manala section occupied settlements such as Ezotshaneni, KoNonduna, and Embilane-ni, which include the present eastern suburbs of Pretoria in the Gauteng Province.

The Ndzundza chieftaincy is believed to have extended its boundaries along the Steelpoort (Indubazi) river catchment area between the 1600s and early 1800s. Several of these settlement sites (KwaSimkhulu, KwaMaza, and Esikhunjini) are known through oral history and are currently under archaeological investigation.

Both the Ndzundza and Manala chiefdoms were almost annihilated by the armies of Mzilikazi’s Matebele (Zimbabwean Ndebele) around 1820. The Manala in particular suffered serious losses, while the Ndzundza recovered significantly under the legendary Mabhoko during the 1840s. He revolutionized Ndzundza settlement patterns by building a number of impenetrable stone fortresses and renamed the tribal capital: Ko-Nomtjharhelo (later popularly known as Mapoch’s Caves). The Ndzundza developed into a significant regional political and military force during the middle 1800s. During the colonial era, white settlers derogatively referred to the Ndzundza-Ndebele as “Mapoggers” after their ruler Mabhoko, called Mapog or Mapoch by whites.

The Ndzundza-Ndebele soon had to face the threat of these white colonials, against whom they fought in 1849, 1863, and finally in 1883 during the lengthy Mapoch War against the ZAR forces. The latter’s tactic of besiegement forced the famine-stricken Ndzundza to capitulate. They lost their independence, their land was expropriated, the leaders were imprisoned (Chief Nyabela to life imprisonment), and the Ndebele were displaced and indentured as laborers for a five-year (1883–1888) period among white farmers. (The Manala chiefdom was not involved in the war and had previously (1873) settled on land provided by the Berlin Mission some 32 km (20 mi) north of Preto-

ria, at a place the Manala named KoMjekejeke, also known as Wallmannsthal.)

Chief Nyabela Mahlangu of the Ndzundza was released in 1903 after the Anglo-Boer War (1899–1902) and died soon afterwards. His successor tried fruitlessly in 1916 and 1918 to regain the tribal land. Instead, the royal house and a growing number of followers privately bought land in 1922, around which the Ndzundza-Ndebele reassembled. They have never gained permission to reoccupy their original land.

Within the framework of the bantustan or homeland system in South Africa, the Ndebele (both Manala and Ndzundza) were only during the late 1970s allowed to settle in a homeland called KwaNdebele.

## 2 LOCATION AND HOMELAND

The majority of Ndebele live in the Mpumalanga and the Limpopo provinces) of South Africa between 24°53’ to 25°43’ south latitude and 28°22’ to 29°50’ east longitude, and approximately 65 km to 130 km (40–80 mi) northeast of Pretoria, South Africa. The total area amounts to 350,000 hectares (865,000 acres), including the Moutse and Nebo areas. Temperatures range from a high of 36°C (97°F) in the northern parts to a low of –5°C (23°F) in the south. Rainfall in the north averages 5 cm (2 in) per year and 8 cm (3 in) per year in the south. Almost two-thirds of the entire former KwaNdebele lies within a vegetational zone known as Mixed Bushveld (Savanna-type) in the north. The southern parts fall within the Bankenveld (False Grassland-type) zone.

Population figures are based on the 1991 census figures for the former KwaNdebele homeland (now part of Mpumalanga Province), updated for the April 1994 general elections. The total population for the area was estimated at more than 403,700 people. A minority of labor tenants and farm workers outside the former homeland are not included.

## 3 LANGUAGE

The Ndebele language, called IsiNdebele by its users, is one of nine official languages recognized by the interim South African constitution. It forms part of the Nguni language group (including Zulu, Swazi, and Xhosa), which comprises 43% of mother-tongue languages in South Africa. It is estimated that Ndebele comprises 1.55% of African languages in South Africa. Mother-tongue speakers seldom distinguish between the dialects of IsiNdzundza and IsiNala. A written orthography was only recently published, in 1982. Most Ndebele are fluent in the neighboring Northern Sotho language called Sepedi, as well as in Afrikaans (mostly elderly people) and English (the younger generation).

IsiNdebele, like other Nguni-type languages, contains a variety of click sounds. The Ndebele have also absorbed a proportionate amount of Afrikaans words in their vocabulary. These assimilated terms were probably adopted during the period of indenture on Afrikaner-owned farms. The everyday greeting term is, “Lotjani!” (“Good day”), followed by “Kunjani?” (“How are you?”), etc. The departing person will end the conversation with: “Salani kuhleke!” (“Goodbye to all of you!”)

## 4 FOLKLORE

Among a rich collection of oral traditions, many relate and explain the founding history of the various clans or family names (called *izibongo*), most of all that of the ruling Mahlangu clan

among the Ndzundza. Praise poetry, as recited by praise poets (*iimbongi*), relates heroic escapes from captors, battle field tactics, treachery and revenge, and the introduction of new customs, by past rulers (i.e. circumcision by Mahlangu).

The most well known oral tradition concerns the founder of the Ndebele, a chief called Musi who lived at KwaMnyamane (“Place of the Black Hills”) near Pretoria. Musi had five sons and there was a succession struggle between Musi’s two eldest sons, which shows remarkable similarity to the Jacob and Esau myth in the Bible. While the eldest son Manala was on a hunting trip he was betrayed by his younger brother Ndzundza (the clever one), who disguised himself as Manala and received the royal regalia from his aged and blind father Musi. When Manala pledged revenge in pursuit of the already fleeing Ndzundza and his followers, the other three sons migrated northwards and one of them, Kekana, became the founder of the Northern Ndebele, among others.

Many past events and experiences, and even recent events, are handed down through generations via the media of song and dance. During the 1986–87 unrest in the former homeland, Ndebele women protested, through female initiation rituals and songs of protest, the atrocities committed by the infamous Imbokodo vigilante movement who terrorized the area. One such song mourned the death of a popular community leader (Somakatha), and another celebrated the death of the notorious vigilante leader (Maqhawe).

Even contemporary heroes of the struggle against apartheid are remembered: Prince James Mahlangu, leader of the comrades movement against the Imbokodo vigilantes in 1986–87;

and Umkhonto Wesizwe (MK) African National Congress (ANC) military-wing-martyr Solomon Mahlangu, who was reburied in Mamelodi in Pretoria and honored with a memorial that was unveiled by Nelson Mandela.

## 5 RELIGION

Traditionally, there is the belief in a creator god, Zimu, and in ancestral spirits (*abezimu*). Disgruntled ancestral spirits cause illness, misfortune, and death. The royal ancestral spirits are annually honored, while individuals may consult the family ancestral spirits before and during important rituals and even before the annual school examinations. Traditional practitioners (*iinyanga* and *izangoma*) act as mediators between the past and present world and are still frequently consulted. Sorcerers (*abathakathi* or *abaloyi*) are believed to use familiars such as the well-known “baboon” midget *utikoloshé*, especially in cases of jealousy towards achievers in the community in general. Both women and men become healers after a prolonged period of internship with existing practitioners.

Nineteenth-century missionary activities by the Berlin Mission did little to change traditional Ndebele religion, especially among the Ndzundza. Although the Manala lived on the Wallmannsthal mission station from 1873 on, they were in frequent conflict with local missionaries. Recent Christian and African Christian church influences spread rapidly, and most Ndebele are now members of these churches: ZCC (Zion Christian Church), a variety of (African) Apostolic churches, Roman Catholic, etc.

## 6 MAJOR HOLIDAYS

Apart from national holidays, the two Ndebele royal houses (of Ndzundza and Manala) honor their past heroes with celebrations at the respective historical settlements and graves. Since 1969 the Ndzundza have celebrated Nyabela day on December 19 at KoNomtjharhelo (Mabhoko’s caves), where they were forced to surrender during the 1883 war. The site has been declared a national monument and a statue of Nyabela was erected from funds contributed by the Ndzundza community. Several Manala-Ndebele chiefs (e.g., Silamba, Libangeni) are buried at the KoMjekejeke historical site at Wallmannsthal where the tribe holds their annual celebrations on Silamba day.

In recent years, apart from paying tribute to past heroes with praise poetry, song, dance, and music during these events, Ndebele politicians have used the occasions for political rallying and to air grievances on issues such as land restitution and better governance within the Mpumalanga Province.

## 7 RITES OF PASSAGE

Initiation at puberty dominates ritual life in Ndebele society. Girls’ initiation (*iqhude* or *ukuthombisa*) is organized on an individual basis within the homestead. It entails the isolation of a girl in an existing house in the homestead, which is prepared by her mother after the girl’s second or third menstruation. The week-long period of isolation ends over the weekend when often more than 200 relatives, friends, and neighbors attend the coming-out ritual. The occasion is marked by the slaughtering of cattle and goats, cooking and drinking of traditional beer (*unothabalala*), song and dance, and the large-scale presentation of gifts (clothing and toiletries) to the initiate’s mother and father. In return, the initiate’s mother presents large quan-

tities of bread and jam to attendants. The notion of reciprocity is prominent. During the girls' initiation, female activities (including song, dance, and the display of traditional costumes) dominate those of men who are spatially isolated from the courtyard in front of the homestead.

Male initiation (*ingoma* or *ukuwela*), which includes circumcision, is a collective and quadrennial ritual that lasts two months during the winter (April to June). The notion of cyclical regimentation is prominent as initiates receive a regimental name, with which Ndebele men identify themselves for life, from the paramount (chief). The Ndzundza-Ndebele have a system of 15 such names that run over a period of approximately 60 years, and the cycle repeats itself in strict chronological order. The Manala-Ndebele have 13 names.

The numerical dimension of Ndebele male initiation is unparalleled in South Africa. During the 2006 initiation, some 13,000 young men were initiated. The ritual is controlled, officiated, and administered by the royal house. It is decentralized over a wide area within the former KwaNdebele, in rural as well as urban (township) areas. Regional headmen are assigned to supervise the entire ritual process over the two-month period that involves nine sectional rituals at lodges in the field and the homestead.

## 8 INTERPERSONAL RELATIONS

Three institutions pervade Ndebele daily life. Firstly, there is the lineage segment or family (the *ikoro*), which consists of three to four generations and is of functional value, especially in ritual and socioeconomic reciprocity. Secondly, this lineage is composed of various residential units (homesteads) called *imizi*. The third important unit is an economic one, the household, which may be composed of a man, his wife and children (including children of an unmarried daughter), wives and children of his sons, and his father's widowed sisters.

A Ndebele woman has a lifelong obligation to observe the custom of *ukuhlonipha* or "respect" for her father-in-law. The custom implies the physical avoidance of her father-in-law. While he has unlimited freedom of movement in and around the homestead, she will at all costs enter and exit the homestead bearing in mind her father-in-law's whereabouts in an effort to avoid him. In the event of accidental contact, she will turn her back on him and cover her face. She will furthermore never mention his first name.

Space in and around the Ndebele homestead is gender-specific. There is an abstract division between front (male) and back (female), and inside the house between left (female, *incabafazi*) and right (male, *incamadoda*). Male visitors on arrival at the homestead occupy the front courtyard (*isirhodlo*), while women visitors proceed to the "domestic" back courtyard (*isibuya*). During meals this spatial separation is maintained. Even in modern Western-style houses, men dine in the lounge/TV room while women eat in the kitchen.

## 9 LIVING CONDITIONS

Living conditions for rural and urban Ndebele are integrally part of the past and current political and economic conditions in South Africa. The Ndebele is probably numerically the single largest community that has never been allowed to reclaim the land they lost in 1883. When they were drawn into apartheid's homeland dispensation, the land they received was alien to them in more than one respect: it was far away from ances-

tors, climatologically harsh, and without infrastructure (e.g., transport).

Apart from a few examples in KwaNdebele and on White-owned farms, the three-generational homestead (*umuzi*) has almost disappeared. This type consists of a number of houses (*izindlu*) representing various households centered around a cattle enclosure (*isibaya*). Other structures in the homestead include the boys' hut (*ilawu*), various smaller huts for girls behind each house, and granaries. Each house complex is separated from the other by an enclosure wall called *isirhodlo*.

Pre-colonial Ndebele structures were of the thatched beehive dome-type. Since the late 1800s, they have adopted a cone-on-cylinder type of structure consisting of mud walls and a thatched roof, while simultaneously reverting to a linear outlay that has replaced the circular center cattle pattern. The present settlement pattern consists of a single house built on a square stand and occasionally providing for two or more extra buildings, as well as cattle and goat enclosures. A wide range of modern building material and house designs have been introduced.

## 10 FAMILY LIFE

Ndebele society is structured into approximately 80 patrilineal clans (*izibongo*), each subdivided into a variety of subclans or patrilineages (*inanazelo*). Each clan associates itself with a totem animal or object. Members of the same clan do not marry, and certain clans, such as the Nduli's and the Giyana's, will not intermarry because there is a saying, "Long ago, we were brothers!"

Polygyny (more than one wife) has almost disappeared. Bride-wealth (*ikhazi*) consists of cattle and/or money. Marital negotiations between the two sets of families are an extended process. These include the presentation in installments of six to eight heads of cattle, the last installment often given long after the birth of the first child. Fathers demand more bride-wealth for educated daughters. Nowadays wealthy women with children often marry very late or stay single.

Weddings often involve a customary as well as a Christian ceremony. The married couple settles at the husband's village for a few years, and the new bride (*umakhothi*) is involved in cooking and the rearing of other small children of various households in the homestead. The taking of a substitute wife (*umngenandlu* or *ihlanzi*), in cases of infertility, was still common in the 1960s. In case of divorce, witchcraft accusation, and even infidelity, a woman is forced to return to her natal homestead.

## 11 CLOTHING

Western-style dress is the norm among most South Africans. Traditional Ndebele attire such as beaded aprons and blankets, and beaded arm bands and anklets for women are worn during ritual performances as indicated in Rites of Passage above.

## 12 FOOD

The rural staple diet consists of maize, bread, vegetables, and, to a lesser extent, meat. Considering the climate and low rainfall in the rural area, very little maize is self-produced but is rather bought at stores, as is chicken, and if people can afford it, red meat. The only time when there is a relative abundance of meat is during rituals when cattle and goats are slaughtered. During the summer rain season (September to March), many

South African model Nonkululeko Sibisi dressed in a traditional Ndebele outfit for a fashion competition at the annual Canon Gold Cup horse race in Durban, South Africa. The high-profile event attracts socialites, racing enthusiasts, and celebrities, who dress up to watch the race. (Rajesh Jantilal/AFP/Getty Images)

Ndebele women seem to be able to produce their own vegetables (*umrorho*), such as two indigenous types of spinach (*imbuyane* and *irude*), and tomatoes. Spinach is often dehydrated, stored, and consumed during the winter months. Other popular vegetables include cabbage and pumpkin.

Maize porridge (*umratha*) accounts for more than 80% of the daily diet and is consumed during midmorning and during the evenings. Occasionally soft porridge (*umdogo*) is eaten with sour milk (*amasi*) during the day. Breakfast, in particular for school children, consists of sliced bread, often without any spread, and tea. Dinner as the main meal mostly consists of porridge, a piece of cooked chicken, tomato sauce, and spinach or cabbage.

A delicacy that is often consumed during rituals is “Ndebele beer” or *unothhabalala*. No social event is regarded as complete without this drink of which the main components are mealie (corn) and sorghum sprouts. Sprouts are ground with a grinding stone (*imbokodo*), cooked, sieved, and filtered, mixed with maize flour, and cooked again before being poured into large

container gourds called *amarhabha*, which are then sealed and stored away to ferment for three to four days. The opening of the containers is often publicly announced to boast the skills of the manufacturer, usually an old woman and her younger team.

### **13 EDUCATION**

Like most other Black South Africans, the Ndebele, in particular those in the former homeland, still suffer from the consequences of the Bantu education system. During the homeland period, teachers were grossly underqualified, classrooms were overcrowded, and text books were in perpetually short supply. Although school buildings and equipment were never damaged or destroyed, as was the case elsewhere in South Africa during the unrest periods (1976, 1986–87), the area experienced frequent school boycotts, student and teacher stayaways, and strikes. Another concern of parents during the late 1970s was the complete absence of mother-tongue education and the lack of Ndebele-speaking teachers. Teaching in IsiNdebele could only be gradually introduced after 1982.

The adult literacy rate in the area is low. The majority of female and male students have become early school drop-outs, mainly due to economic circumstances. It appears as if the tide is turning as many early dropouts, after spending some time earning a salary, are now reregistering either as full-time or part-time students. In the early 21st century, the education system is still hampered by lack of resources such as classrooms, textbooks, and qualified teachers.

### **14 CULTURAL HERITAGE**

Communal singing and dancing in Ndebele society is either related to tribal ritual activities (initiation, divination, and weddings) or of the congregational type practiced during church services. Women in particular are active participants in tribal singing and dancing since traditional costumes play an integral part. Musical instruments are limited, although a plastic tube (*iphalaphala*), replacing the antelope horn, and anklet rattles (*amahlwayi*) are used during the dance.

A royal praise poet (*imbongi*) always accompanies the paramount and guests on arrival at the royal capital. When the paramount attends official meetings outside the royal capital, he is always presented to his audience by this same poet. The poet, dressed in traditional costume, asks guests to rise, shouting, “Bayede!” “Ngwenyama!” and “Ndabezitha!” As the paramount enters the room, the *imbongi* recites the royal praises, which could last for half an hour if he wishes, depending on the historical depth of the recital.

Most Ndebele love listening to music of their choice on the regional Radio Ndebele (SABC) service that broadcasts from Pretoria. Young people attend discos at night, or the occasional music concert in the area. African jazz (Soweto String Quartet), local African bands (Mendoza and Ladysmith Black Mambazo), reggae (Lucky Dube), and Lionel Ritchie are among the favorites. Ndebele are particularly fond of local heroines such as Nothembi Mkhwebane.

### **15 WORK**

The majority of Ndebele are daily, weekly, or monthly migrants to urban Johannesburg and Pretoria, where most women are employed in the domestic sector and men in the building and

related industries. There are few employment opportunities inside their home area.

Elderly women engage in hawking fresh produce near shopping centers and taxi stands. Likewise, men in the former bantustan have few job opportunities, mostly in the heavily competitive taxi industry; low-income industries such as vehicle repairs; and private enterprise, including selling liquor privately or running a bar lounge and opening *spaza* shops (small-scale general stores) at home. Economically, rural Ndebele depend heavily on the resources of urban kin to support the household.

Most male urban Ndebele employees have over the past four decades carved a niche for themselves in the building industry, a skill it is believed they obtained during the arduous years of indenture and labor tenancy on farms. Many of these building artisans are private contractors—bricklayers, plumbers, electricians, pavers, and painters—especially in the Pretoria region, and are in great demand.

Many Ndebele women are domestic servants, and in certain suburbs in Pretoria they tend to “ethnically monopolize” the area. Others choose self employment and become street vendors in fresh produce or sell hot food (*vetkoek*, meat and maize porridge). The latter category cook food on paraffin or gas stoves, or on wood (referred to as *imbawula*) in open parking areas, on street corners, or alongside taxi ranks.

## 16 SPORTS

The sport of netball, introduced by the schools, is popular among girls, while soccer tops the list in terms of popularity among men and women. Bets are taken before most important matches in the South African Professional Soccer League itinerary. No particular club is favored, although the Orlando Pirates (Bucs), Kaizer Chiefs (Amakosi), and the Pretoria-based club Mamelodi Sundowns (Brazilians) are among the most popular.

The most-talked-about Ndebele sports star is the 1996 Atlanta Olympic gold medalist in the marathon, Josiah Tungalwane. Special honor was bestowed upon him when the late Paramount Mayisha presented him with a special Ndebele *iporiyana* (ritual cloth for males).

## 17 ENTERTAINMENT AND RECREATION

A variety of traditional games such as *umadlwandlwana* (freely translated as “to play house”) and *unomkhetwa* are still popular pastimes for children. *Unomkhwetwa* usually involves two players who try to outdo each other by tossing a collection of stones up in the air and catching it without losing any stones, almost like juggling.

## 18 FOLK ART, CRAFTS, AND HOBBIES

If anyone around the globe remembers the name Ndebele, it would most probably be in connection with the mural art and beadwork that has made them internationally famous, especially since the late 1950s. Mural painting (*ukugwala*) is done by women and their daughters and entails the multicolored application of acrylic paint on entire outer and inner courtyard and house walls. Earlier paints were manufactured and mixed from natural materials such as clay, plant pulp, ash, and cow dung. Since the 1950s, mural patterns show clear urban and Western influences. Consumer goods such as razor blades; urban architectural features, including gables and lamp posts;

and symbols of modern transportation such as airplanes and license plates act as inspiration for women artists.

Beadwork (*ukupothela*) also proliferated during the 1950s and shows similarity to murals in color and design. Ndebele beadwork is essentially part of female ceremonial costume. Beads are sewn on goatskins, canvas, and nowadays even cardboard, and worn as aprons. Beaded necklaces and arm and neck rings form part of the outfit, which is worn during rituals such as initiations and weddings.

As Ndebele beadwork became one of the most popular curio art commodities, women also started to bead glass bottles, gourds, animal horns, etc. The recent prolific trading in Ndebele beadwork concentrates on “antique” garments as pieces of art. Some women are privately commissioned to apply their painting to canvas, shopping center walls, and even cars. The first artist who won international fame was Esther Mahlangu (from KwaNdebele) who painted murals and canvasses in Paris, Japan, Australia, and Washington D.C. Others started to follow in her footsteps and apply their mural art on an international level e.g. by painting shopping center surfaces, automobiles, and aircraft carriers.

## 19 SOCIAL PROBLEMS

Except for the 1800s, the Ndebele as a political entity were not involved in any major regional conflicts, especially since 1883 when they lost their independence and had their land expropriated. In 1986, almost a century later, they experienced violent internal (and regional) conflict when a minority vigilante movement called Imbokodo (“Grinding Stone”) took over the local police and security system and terrorized the entire former homeland. In a surprising move, the whole population called on the royal house of Paramount Mabhoko for moral support, and within weeks the youth rid the area of that infamous organization. Human rights abuses relating to that period are heard by the national Truth and Reconciliation Committee.

Probably the most challenging problem for the Ndebele leadership at present is how to define and negotiate the former homeland’s residents’ needs in terms of the provincial dispensation. Large-scale discontent has emerged among the rank-and-file Ndebele on the authoritarian and ethnically chauvinist way in which the new Mpumalanga Provincial government in Nelspruit is handling the well-being of the residents in the area. There is widespread discontent with the lack of resources in the region, in particular hospitals and clinics, schools, electricity and pure water reticulation.

## 20 GENDER ISSUES

Ndebele society is a patriarchal one with male dominance in most socio-economic and socio-cultural sectors. Rural Ndebele women have found it difficult to cope with notions such as gender equality, which is regularly advocated in the South African Constitution and the Gender Commission. However, there were a few landmark events in the recent past that gave them a foothold on regional and national level. During the 1986 unrest it was the female vote that helped with the toppling of the Imbokodo vigilante regime in the homeland. Before that election (in 1988) Ndebele women did not have the franchise. They obtained this on the eve of election with an urgent court interdict, successfully brought by themselves. Ever since the 1970s Ndebele women use the female initiation ritual

(the iqhude) to mock and demean male dominance when they perform the so-termed “traffic cop” performance. During this rite they dress in traffic cop attire and “fine” male taxi drivers who transport participating female guests to these rituals. Although this is performed only over weekends, Ndebele argue that this opportunity empowers them to take control of the dominant male order.

# NIGERIANS

**PRONUNCIATION:** nigh-JIR-ee-uhns

**LOCATION:** Nigeria

**POPULATION:** 138.2 million

**LANGUAGE:** English; English Creole; Bantu; and Chadic languages

**RELIGION:** Traditional African religion; Islam; Christianity

**RELATED ARTICLES:** Vol. 1: Fulani; Hausa; Igbo; Ijo; Yoruba

## 1 INTRODUCTION

Beginning in ad 600, the territory that is now Nigeria witnessed the steady rise and decline of city-states, kingdoms, and empires. While states like Bornu became wealthy through interstate trade, others such as the Niger Delta states increased their power by slave trading. By 1862, the British had annexed Lagos, and they took control of the palm oil plantations of the Niger Delta in the 1880s. Following a series of struggles with individual states and with the French, the British united the colony of Nigeria and established a capital at Lagos in 1914. For the next half-century the British ruled the colony indirectly through local potentates and chiefs, strengthening regional differences and, after independence, encouraging regional rivalries. The most serious conflict occurred from 1967–70, when the Igbo fought unsuccessfully to secede as the Republic of Biafra. More than one million died in the war, with many dying from famine, illness, and starvation.

Since independence in 1960, Nigeria has weathered a series of military coups. A succession of military and civilian governments have tried, not very effectively, to control corruption, nepotism, and regional favoritism in public affairs. Moshood Abiola, a southerner, won the democratic presidential election in 1993, but General Sani Abacha seized power. Pro-democracy strikes and regional strife followed. However, despite its domestic instability, Nigeria has demonstrated that it is the political and economic giant of West Africa. Nigeria led the Liberian peacekeeping effort in the 1990s, and in May 1997 sent troops to Sierra Leone to restore order following a military coup. Nigeria is the dominating member of the West African Economic Community (ECOWAS).

A major challenge for Nigeria has been to unite a diverse group of peoples and to balance political rule with economic and social development among three major groups: the Hausa-Fulani in the north, the Yoruba in the west, and the Igbo in the east. To hedge against ethnic rivalry and regional divisions, Nigeria experimented with federalism and expanded its number of states from 18 to 39. A change in electoral rules also required that national leaders win a minimum number of votes from each state. Since 1992, the capital has moved from Lagos to the more centrally located Abuja, which, like Washington, D.C., is a federal district.

A new constitution, adopted and made effective in May 1999, launched a new period of multi-party elections. Despite being marred by serious voting irregularities, violence and protests, the 1999 and 2003 presidential elections provided a measure of consensus among Nigerians for civilian rule—the longest period without military interference since independence. In the general elections of April 2007 Umaru Musa Yar’adua of the People’s Democratic Party (PDP) succeeded President

Obasanjo. Although these elections also were criticized as seriously flawed, they marked the first civilian-to-civilian transfer of power in the country's history. The PDP kept its majority in the legislature winning 70 seats, and 75% of state governorships. Yar'adua has surprised many observers by exerting his independence from Obasanjo, dispelling predictions that he would be Obasanjo's rubber stamp.

## 2 LOCATION AND HOMELAND

Nigeria is the most populous country in Africa and is the sixth most populous in the world (138.2 million est. 2008). Indeed, one in five Africans is Nigerian. At current growth rates, the population should reach nearly 191 million in 2015. It is also one of the world's most ethnically diverse countries, with more than 250 distinct groups. The largest of these is the Hausa and Fulani (29%), followed by the Yoruba (21%), the Igbo/Ibo (18.0%) and the Ijaw (10%). The Kanuri, Ibibio and lesser groups account for the remainder. Nigeria is very densely populated in the Niger Delta, where there are more than 1,000 persons per square mile. Four-fifths of the country has fewer than 200 persons per square mile.

Nigeria shares borders with Benin, Niger, Chad, and Cameroon. From the Gulf of Guinea in the south, a series of plateaus and plains cover much of the country. To the east, the Gotele and the Mandara Mountains form a common border with Cameroon. With the equator just to the south, the climate becomes tropical in the central regions and arid in the north.

## 3 LANGUAGE

English is the official language, but English Creole is the lingua franca (common language). Besides these, many Bantu and Chadic languages are spoken in the regions.

## 4 FOLKLORE

Proverbs, chants, folk stories, and riddles are popular folkloric forms. Because of Nigeria's long and diverse past and its oral traditions, folklore constitutes an area for much research. In one unusual example, the people of the Ijo village of Toro Arua perform the *Ozidi* saga. Performances occur only once in a generation. Therefore, all village members attend. The saga tells the story of the mythological history of the people of this community. Lasting more than eight days, each morning a sacrifice to the water spirits is made to ask for their blessing. A poetic narrator, an orchestra of drums, a choir of singers, male and female dancers, and actors portray the heroes and foes of the community. The event reminds adults and instructs youth about their glorious past and their distinguished ancestral heritage.

## 5 RELIGION

Nigerians widely hold on to their traditional African religious beliefs in addition to subscribing to various branches of Islam and Christianity. The state maintains neutrality in religious issues, and the constitution guarantees freedom of worship. Islam is most firmly rooted in the north, where it was first a religion of rulers and courtiers in the 11th century ad. Muslims now constitute about 50% of the population with Christians comprising roughly the other half, thanks to strong missionary campaigns in the 19th century. Currently, Protestants outnumber Catholics by about two to one. Of note are the African

church movements and breakaway groups rooted in the 1920s and 1930s that established African versions of Christianity. About 11% of the population belongs to these distinctly African Christian churches.

Very much alive is traditional religion, which operates on three levels. Most ethnic groups have names for a supreme being whom they believe created the universe. The Yorubas call him Olorun (Lord of Heaven), the Hausas, Ubangiji (God), and the Efiks of Calabar, Abasi Ibom (The Great God). Lesser gods and deities are more accessible and act as intermediaries between people and the Creator. They possess special powers. People build shrines, make sacrifices, and offer prayers and libations to them. At the lowest levels are spirits of the dead, both good and evil, that have not yet found their rest. They may do the wishes and desires of persons who properly handle them. Sacred objects represent the lesser gods and spirits, and care must be taken not to offend them or the deities with which they are associated. Traditional religion has influenced Nigerian crafts, art, music, dance, agriculture, and language.

## 6 MAJOR HOLIDAYS

Secular holidays include National Day (October 1). Muslim and Christian holidays include *Tabaski* (commemorating Abraham's sacrifice) and the end of Ramadan and Easter and Good Friday.

Beside these non-indigenous holidays, Nigerians celebrate many cultural festivals throughout the year, such as the Arungu Fish and Cultural Festival on the banks of the Sokoto

Woman winnowing grain in Gumel, Nigeria. About 43% of Nigerians work in agriculture. (Corel Corporation)

River. During this celebration, hundreds of fishermen jump into the river at once, scaring the fish into the air and into their nets. Their yellow calabashes bob around on the water waiting to be filled with the catch.

## 7 RITES OF PASSAGE

Nigerians typically celebrate rites of passage with music, dance, and ceremony. These life-defining moments are critical for the individual within his or her community, and therefore are borne by all members of the community. At his or her naming ceremony a child becomes a member of the community; at initiation, an adolescent assumes the responsibilities of adulthood; a woman moves to her husband's family after marriage; an elder is bequeathed a title for lifelong service; and eventually, a community member joins the spirit world.

Nevertheless, modernity and urbanization are breaking down customary rituals. In a 1993 documentary film on initiation rites for girls (*Monday's Girls*), urban pressures and the weight of custom collide in the delta region. Here, Waikiriki girls participate in a five-week coming-of-age ceremony (*Iria*), which transforms them into marriageable women. A city girl who has returned to the village for the ceremony contrasts with the other girls. She and her cohorts are secluded in a house and "fattened up" for the ceremony. They are pampered and must do no work. Elderly women shear their hair, teach them how to be mothers and take care of their husbands. The old women paint the initiate's bodies before the young women appear in public with uncovered breasts to be scrutinized by the elders.

This act serves to verify the initiate's purity. Throughout, the city girl resists the process, allowing just a shock of her hair to be cut, and refusing to appear in public uncovered. She argues that she does not need anyone to teach her how to treat a husband. In the end, she greatly offends her father and disgraces her family. The other girls, though bored with their confinement toward the end, seem happy to have fulfilled this traditional rite.

## 8 INTERPERSONAL RELATIONS

Nigerians often use English in greeting strangers because of their linguistic diversity. In the Igbo language, *Isalachi*, and in Hausa *Yayadei*, mean "good morning." As elsewhere in Africa, two men may hold hands and stand near each other when talking because their sense of personal space is closer than that of Americans.

In most parts of sub-Saharan Africa, passing an object with the left hand or with only one hand is impolite. Nigeria is the same. Children especially must learn to offer and accept objects with both hands. Some Nigerians consider waving an insult, particularly close to the face.

## 9 LIVING CONDITIONS

Despite being Africa's largest oil-producer (2.44 million barrels a day), half of all Nigerians live below the poverty line. The infant mortality rate is high even for Africa at 94 for every 1,000 live births, and life expectancy is under 50 years of age. The HIV/AIDS prevalence rate is also high for West Africa at 5.4% and the number of people living with HIV/AIDS is 3.6 million (est. 2003). In terms of living standards and quality of life, Nigeria ranks near the bottom—158th out of 177 countries worldwide on the Human Development Index.

Depending on region and disposable income, Nigerians build simple rectangular or cylindrical houses of reed, mud brick, or cinder block. In urban areas, the federal and state governments have sometimes helped low-income people get affordable homes. Migrants often live in crowded conditions with several families sharing a few rooms, common cooking areas, and latrines. Lower- to middle-level income workers can afford small- to medium-sized houses with at least a standpipe in the courtyard, if not indoor plumbing. Middle- to upper-level groups have Western-style furniture, refrigerators, television sets, and motorcycles or cars. A small, very rich elite live in mansions and drive Mercedes.

Except urban squatter areas, conditions are generally more rudimentary in rural areas than in urban. About 70% of Nigerians live in villages and without indoor plumbing and electricity. Only half of all families have access to a potable water source, which means that many people—mostly women and children—have to walk great distances to draw water suitable for drinking. They may go further to scavenge wood for cooking in northern arid regions. Men and women often alternate bathing periods at a local stream or river. Laundering of clothes takes place near bathing sites so that long trips are reduced. Like many sub-Saharan people, Nigerians must cope with tropical and infectious diseases. Lack of window screens, refrigeration, mosquito nets, and hygienic water storage contribute to health problems.

One benefit of Nigeria's oil revenues is the extensive network of roads and rail lines. The major railways run from coastal port cities such as Lagos and Port Harcourt to terminals up-

country as far as Nguru and Maiduguri. Many trunk roads are paved, and several interstate highways connect commercial centers and medium-sized towns. Nigeria even has toll plazas, and a four-lane expressway links Lagos with Ibadan. Secondary and tertiary roads may be bumpy, rocky, and unimproved. Vehicle life on these roads is usually shortened considerably, but Nigerians are good mechanics. Though car bodies may rattle and shake, every mile is squeezed out of them.

## **10 FAMILY LIFE**

Typically Nigerian families live together in compounds where nuclear families share the same hut. The father and husband are generally the dominant heads of the household. Family members deeply respect their elders, and the mark of a well-reared child is quiet and respectful behavior in the presence of adults.

Nigerians practice polygyny, and under Islamic law, a Muslim man can have up to four wives if he can support them. Typically the groom will pay a bride-price to the family of his bride. In the cities one sees Western-style dating, but this is rare in the villages. Because weddings are expensive, many couples may live together without social stigma until they can afford to give a proper wedding feast.

Nigerian women hold distinction in international circles as leaders in academia and business. They spearheaded a national feminist movement that gained momentum in 1982. Traditionally, non-Muslim women have had independent economic status and have made their mark in interregional trade. Despite these advances, Nigerians still regard single women as an oddity, and men consider them sexually available. Abortion is legal only when the mother's life is threatened or in cases of rape or incest.

## **11 CLOTHING**

Western-style garments, makeup, hats, bags, shoes, and other accessories—symbols of the Western-educated elite—are increasingly replacing traditional apparel, especially in the cities. In the past, men dressed to show their acquired prestige. Women wore necklaces, earrings, bracelets, toe rings, finger rings and hair ornaments made from stone beads, ivory, leather, seeds, mother-of-pearl, iron, the teeth and claws of animals, and the vertebrae of snakes. Vestiges of the past are seen in rural areas, where many women and men wear long loose robes of either white or bright colors. Women often wear scarves or turbans. The Igbo traditional dress is a *danshiki*, a long loose-fitting top. Formerly Igbo women added pieces of cloth to show their status in marriage and number of children. Colors were also used to symbolize cultural status, royalty, or bloodline.

Nowadays special dress is losing its traditional functions. Men dress for status rather than prestige. Cheaper European cotton thread and commercial dyes have replaced the aesthetically superior hand-woven cloths. European makeup and cheap costume jewelry, too, are supplanting traditional cosmetics and ornaments. The former elaborate traditional hair-dressing is losing its symbolic meanings.

## **12 FOOD**

Nigerians rise early, and therefore may eat several times a day. Early breakfast begins at 5:00 am and late dinner comes at 9:00 pm. Breakfast may consist of rice and mango or fried plan-

*Vestiges of the past are seen in rural areas, where many women and men wear long loose robes of either white or bright colors. Women often wear scarves or turbans. Western-style garments are increasingly replacing traditional apparel, especially in the cities. (Jason Laure)*

tains. At around 11:00 people might eat *efo* (stew) or *moyinmoyin*, bean pudding made with steamed black-eyed peas.

Nigerians generally like their food hot and spicy. Therefore, cooks do not spare hot red peppers either in the dishes themselves or alongside as a relish. Typically, stews or sauces are made from greens or fish, and if one's means allow, from meat or chicken. These are eaten with rice or yams. Cassava and corn are popular too, and various flours, such as yam and cassava, may be mixed and cooked into a steaming ball of *fufu*. Nigerians in the coastal regions drink palm wine and locally brewed beer. Muslims are great tea drinkers. In the cities, coffee houses and pubs are very popular.

## **13 EDUCATION**

The Nigerian formal educational system is patterned after the British public school system. At the age of six or seven, children begin primary school. Muslim children learn Arabic and religious teachings in informal Quranic schools, or private Quranic schools licensed by the government. Others in rural areas receive basic farming instruction and other skills through an apprenticeship system. Some preschool, special education, adult education, and classes for the gifted and talented exist, too.

Nigeria has one of Africa's most developed systems of higher education. At least 25 institutes of higher learning, including

several universities, exist. The largest of these is Ahmadu Bello University in Zaria. Despite high school enrollments, many Nigerian children leave early because of economic hardship. A significant portion of the population still views advanced education as unnecessary for girls. This attitude is reflected in literacy rates—in 2005 the overall literacy rate was 69%, but only 44% of girls and women could read and write. The literacy trend for girls however, is positive; more than 60% of girls aged 15–19 are now literate.

#### 14 CULTURAL HERITAGE

Nigerians have a long history of music, traditional dancing, visual art, and oral literature. Modern drama, opera, cinema, films, and written literature build on Nigeria's cultural heritage. Historically, culture has flourished in these various forms; it dates back 2,000 years in Nok figurines, Ife terra cottas and bronzes, Benin ivories, and Igbo Ukwu objects. The Yoruba are famous artists, making magnificent masks such as the ones used at the Ogen Festival. Sculptures served to comfort the bereaved. Benin bronzes depicted individuals and events at court and glorified the king, immortalized the dead, and served to worship the royal ancestors. The Yoruba traditionally sculpted wooden verandah posts, ceremonial masks, twin figures for the cult of the twins, and bowls and trays for Ifa divination. The Igbo make exquisite carvings of masks and the elephant spirit headdresses.

To many Nigerians, culture is synonymous with dance because traditional dancing at festivals combines music, artistic masks, costuming, body painting, drama, poetry, and storytelling. Much can be said of Nigerian dance and music because they are essential to the celebration of events connected with every aspect of life. People often celebrate child-naming, marriage, burial, house warming, chieftaincy installations, and harvesting with music and dance. At initiations, priests and initiates perform dramatic dances, and deities are represented by elaborate costumes and masquerades that conceal the identity of the wearer.

Nigerian authors are gaining international recognition for modern written works. Chinua Achebe's *Things Fall Apart* and *A Man of the People*, harsh critiques of colonial days and contemporary Nigerian politics and society, now make regular appearances in American college classrooms.

#### 15 WORK

Because the petroleum industry has provided easy money, Nigeria has a relatively undiversified economy and undeveloped labor force of over 50 million workers. Most people remain in subsistence agriculture (nearly 70%). In the cities, people do whatever it takes to survive. They carry water, sell food on the street, wash clothes, peddle household items, haul lumber, and engage in prostitution. Many sleep where they work until they can afford to rent a room or share an apartment. Lagos has the world's sixth largest population (over 20 million) and draws thousands of migrants daily to its slums in search of work.

One of the more enterprising developments in recent times is Nigeria's burgeoning film industry, dubbed "Nollywood." Nollywood employs more than 20,000 workers and continues to grow. Its digital home video films are distributed around the world and are readily available in the United States.

#### 16 SPORTS

Nigerians enjoy several sports. Traditionally Nigerians have wrestled, performed archery, organized foot and horse races, and developed acrobatic displays. Soccer now tops the list of modern competitive sports. Schools at all levels, business, and industry organize matches throughout the country, which has been described as "football mad." Some 62 league clubs exist. Nigerians competed internationally in World Cup competition most recently in 2002. During the playoffs, people crowded in front of TV sets stacked on top of each other on sidewalks to view their Super Eagles. In professional boxing, Nigeria has produced at least three world champions. Other sports include table tennis, tennis, basketball, polo (especially in the north), cricket, and swimming.

#### 17 ENTERTAINMENT AND RECREATION

Home visiting is popular, and now many middle-class people have home entertainment centers with sound systems and television. As a measure of television's popularity, the government estimates that some 40 million Nigerians watch it on about 40 stations. Over the past decade, the Nigerian home videos have become very popular. Western dating customs in the towns make these forms of recreation even more popular. For music and dancing, the older generation may still appreciate high life bands, but younger people prefer Afro-Beat and Juju music—styles that originated in the Lagos area.

#### 18 FOLK ART, CRAFTS, AND HOBBIES

Nigerian folk arts and crafts range from ivory carvings to body painting to painting of the interior and exterior walls in decorative motifs. Many arts and crafts traditionally owe their inspiration to religion and royalty. Colonial repression of indigenous religion and its artful expression led to its degeneration. Nowadays commercial motives have taken over as artists supply the tourist market.

Given the plentiful grasses on the northern plains, craft-people there make colorful and durable baskets, fans, tables, and floor mats. Wood carving has flourished in Benin and Awka. Carvers make figures for shrines, portraits, masks, and spirit representations of natural features such as fields, forests, streams, water, fire, and thunder. The thorn of the wild cotton tree serves to make delicate, but decorative sculptures giving the effect of dresses, caps or head ties, and shoes. Some of these works have become collectors' items. Artists also cast sculptures in bronze and brass, produce glass and metal work, and make quality leatherwork and calabash carvings in Kano and Oyo. Nigerian pottery has a long tradition and ranks among the most artistic in the world. Cloth weaving in the town of Akwete also has caught the fancy of many women. The designs are both colorful and imaginative, and the pieces are unusually wide, about 1,200 mm.

#### 19 SOCIAL PROBLEMS

Nigeria suffers a plethora of social ills. Corruption has left the country more than \$37 billion in debt (2006). Dubbed as the "resource curse," oil has fueled greed and nepotism and turned the country into a showcase of embezzlement, fraud, and bribery. In the oil-rich delta region, gangs kidnap oil workers, abduct officials, and takeover oil installations. Bunkering—illegal tapping into oil pipelines—drains 10% or more of oil produc-

tion and has killed thousands of people in explosions and fires. Gang clashes in Port Harcourt resulted in at least 10 deaths in 2007.

Nigeria also has been a staging point for drug trafficking to Europe and the United States. Political instability, crime and lack of rule of law continue to plague the country. Government occasionally shuts down independent newspapers, and it harasses opposition journalists. In an internationally acclaimed case in 1995 the government hung human rights leader Ken Saro-Wiwa and eight other activists in a trial that observers widely denounced as based on trumped-up charges. Many high-level officials and wealthy individuals are known to be involved in racketeering and scams of various types.

## 20 GENDER ISSUES

As elsewhere on the continent, women do not enjoy the same rights and privileges as men and are subject to lower pay, unequal inheritance rights, and other societal discrimination. Polygamy is legal and one out of five girls and women undergoes female genital mutilation. The law permits husbands to chastise their wives, but owing to weak enforcement, domestic violence, rape, trafficking and other crimes against women and girls often go unpunished. In addition to raising children and keeping house, women in rural areas walk several miles a day to hoe fields, gather firewood, fetch water, and do the marketing. In some areas women are considered part of their husbands "property" to be inherited along with his other possessions. In 12 of the northern states, women's rights are subject to Shariah Law, which affects both Muslim and non-Muslim women. For example, in Zamfara women are obliged to take separate transportation and use separate health care facilities. Of the more than 500 high-level political posts in the country, women hold 6 cabinet, 9 senatorial, and 27 representative positions.

# NIGERIENS

**PRONUNCIATION:** nee-zher-YEN

**LOCATION:** Niger

**POPULATION:** 13.3 million

**LANGUAGE:** Hausa; Zarma; Songhay; Fulfulde; Tamasheq; Kanuri; Arabic, Tubu; Gourmantche; French

**RELIGION:** Islam; small numbers of Catholics and Protestants; indigenous religious practices

**RELATED ARTICLES:** Vol. 1: Fulani; Hausa; Songhay; Tuaregs

## 1 INTRODUCTION

Niger was one of the world's least known countries until the severe drought of the 1970s brought the terrible predicament of Sahelian rural populations to the attention of Europe and North America. Today, still, a commonly made assumption is that "Niger" is simply a misspelled term for "Nigeria," the powerful, oil-producing southern neighbor of this thinly populated Sahelian nation. A landlocked, drought-ridden country in the heart of West Africa, Niger is composed of a variety of ethnically diverse populations who, despite their shared Sahelian traits, struggle to survive as a nation and to find common values and goals. Though this former French colony is presently situated in one of the globe's harshest ecological regions, it was not always so. When early inhabitants established themselves in the area 60,000 years ago, the northern territories of what is now the Republic of Niger were blessed with relatively abundant rainfall, and extensive human settlements were founded. People first relied on agriculture, and later engaged in cattle herding, besides developing complex stone tools.

As ecological conditions changed and the northern regions became drier, people were forced to relocate south and to develop mixed economies based on agriculture, farming, and long-distance trade. By the 7th century ad, the Western area was controlled by the powerful Songhay state, while the eastern regions were under the influence of the Kanem-Bornu Empire. As the authority of these states gradually waned in the 16th century, the Hausa states emerged as significant political and economic centers, thanks to their location at one of the terminus of trans-Saharan trade routes.

Meanwhile, the pastoralist Tuareg, always quick to impose their domination on sedentary communities whenever possible, were making incursions into southern territories and were becoming increasingly involved in trade and agriculture. By the 19th century, the dominant Hausa power in the eastern regions was Damagaram. Most of the central Hausa states were tributaries of the Sokoto caliphate, whose holy war against the un-Islamic practices of its neighbors had resulted in the creation of a vast Fulani empire. The French conquest of Niger culminated in the creation of the colony of Niger in 1922, after the Tuareg resistance was crushed.

Niger was granted independence from France in 1960. Except for a brief boom in the 1970s, however, the end of colonial rule has not translated into prosperity for this already economically marginal West African nation. Niger was governed by a single party civilian regime until 1974, when then-President Hamani Diori was ousted in a military coup led by Col. Seyni Kountché. Kountché's death in 1987 marked the beginning of a 12-year period in which power frequently changed hands

between civilian and military governments. From 1990–1995 there was an armed rebellion by Tuareg peoples from northern Niger, who sought an autonomous desert region and greater control over the country's uranium revenues. In 1999 Mamadou Tandja was elected president in a democratic election. He was reelected in 2004. In May 2007 a second Tuareg rebellion began.

## 2 LOCATION AND HOMELAND

The territory of Niger, two-thirds of which is located in the central Sahara, lies between 11°37' and 23°23'n. Surrounded by Algeria and Libya to the north, Chad to the east, Nigeria and Benin to the south, and Burkina Faso and Mali to the west, Niger is primarily desert. The southern part of the country, where the vast majority of the population lives, is semi-arid Sahel and receives between six and twenty inches of rain per year. In the Sahelian region, most people grow millet, sorghum, peanuts and peppers or herd cattle, goats, sheep or camels. Niger is a predominately rural country, and villages generally incorporate people of different ethnic identities. Over the last 50 years, dwindling resources and opportunities in the rural areas have forced many to migrate to the cities. Niamey, the capital, has thus grown with the influx of migrants from all parts of the country.

## 3 LANGUAGE

To downplay ethnic differences and prevent divisiveness, the people of Niger are usually classified according to ethno-linguistic categories.

Though over 30 distinct groups and 21 languages have been identified, the population is nevertheless divided into five major groups:

- the Hausa, who speak Hausa, constitute the largest group, with over 56% of the total population;

- the Zarma/Songhay/Dendi, who speak Zarma or closely related Songhay, make up about 21% of the population;

- the Fulani or Peul, who speak Fulfulde, are 8.5% of the population;

- the Tuareg, who speak Tamasheq, represent 9.3 % of the population;

- the Kanuri, who speak Kanuri, make up 4.7% of the population;

Arabs, Tubus, or Gourmantches, unrelated groups who speak Arab, Tubu, and Gourmantche, make up the remaining 1.2% of the total population.

Many Nigeriens speak more than one language. For instance, in Niamey, the capital, most native Zarma speakers also speak Hausa, which has become the lingua franca (common language) of Niger. Nigeriens who have attended Western-style schools (approximately one-third of the population) also speak French, the primary language of government and education.

## 4 FOLKLORE

The people of Niger believe they are surrounded by spiritual forces that regularly intervene, for better or for worse, in the lives of humans. In the pre-colonial era, some of these spirits protected communities from enemy attacks and were regularly propitiated to ensure the prosperity of one's land or herd. Today, spirits allegedly grant health, fame, protection, or fortune to those who obey their requests for sacrificial offerings or who become their mediums. Among the Zarma-Songhay, the Hausa, the Fulani, and the Tuareg, for instance, some individuals are chosen by the spirits to become their human vessels. A family strife, declining prosperity, or lengthy illnesses that cannot be cured by Western medicine, Islamic medicine, or herbal remedies alone may be diagnosed as being caused by spirits who are reminding their victims of their powers.

Among Hausa-speaking populations, a myth explains the presence of these powerful, but invisible, creatures as follows. Adamu, the first man, and Hawa, the first woman, had given birth to 50 sets of twins. One day, the supreme being and their creator told them that he wanted to see the children. Afraid that he would keep them for himself, the cunning Hawa told her husband they would hide the more beautiful siblings of each 50 pair of twins in a cave, and only show the supreme being the remaining ones. Seeing how they had deceived him, the omniscient god decided he would punish Adamu and Hawa by making the hidden twins invisible forever. The spirits who plague humans and are dependent on them for subsistence are nothing but the descendants of the beautiful twins condemned by God to remain invisible.

Witchcraft, experienced and expressed in various forms, is also thought to be a major cause of pain, illness, and misfortune. Mothers, for instance, cover their young children's bodies with amulets in the hope of warding off the nefarious

influence of human agents as much as the destructive powers of spiritual forces.

## 5 RELIGION

Islam first came to Niger through traders involved in trans-Saharan commerce in the 9th century. For nearly 1,000 years, Islam was primarily a religion of the governing elite, traders, and the educated. Widespread conversion to Islam began in the 19th century. Today, 95% of the Nigerien population is said to be Muslim, though in many cases being a follower of the prophet Muhammad is not antithetical to the propitiation of spirits or the use of divination. Thus, anyone may enlist the help of the spirits to pass an exam, to ensure one's safe return from a trip, or to protect oneself from jealous kin. Wherever it has taken roots in Niger, Islam has been influenced by local beliefs and practices. Today, children are given Muslim names, while most men (especially in the rural areas) wear Muslim flowing gowns and pray conspicuously five times a day.

Of late, reformist religious groups such as *Izala*, an anti-Sufi movement, have made numerous converts among the youth by preaching against an Islam that they see as tainted by local traditions. *Izala* members advocate frugality and Islamic education for all, challenge the authority of elders, and condemn the use of amulets.

During the colonial period, Christian missions were established throughout Niger. Today, they are still active but Catholics and Protestants make up less than 5% of Niger's population.

## 6 MAJOR HOLIDAYS

In Niger, a variety of Christian, Muslim and national holidays are celebrated. Legal holidays include January 1 (New Year's Day), April 24 (Concord Day, commemorating the coup that ousted Hamani Diori in 1974), May 1 (Labor Day), August 3 (Independence Day), December 18 (Republic Day), and December 25 (Christmas Day). Most Nigeriens celebrate also celebrate Muslim holidays, which fall on a different day each year because they are determined by the lunar calendar. Muslim holidays include *Tabaski* (a feast commemorating the sacrifices of Abraham), *Mouloud* (the prophet Muhammad's birthday), and *Eid al-Fitr* (a feast marking the end of Ramadan, a holy month of fasting). Nigeriens celebrate the *Tabaski* by slaughtering a ram, which they cook on an open fire and eat with friends and family. During *Eid al-Fitr* and *Mouloud*, people wear new clothes, enjoy feasts of meat, rice, and fruit, and men go to the mosque to pray.

## 7 RITES OF PASSAGE

When a Nigerien woman delivers her first child, she becomes an adult by virtue of having demonstrated that she is capable of giving life. Among the Tuareg, the new mother's coming of age is celebrated by a blessing of the mother's tent and a lively display of wrestling by the wealthiest and most prestigious women. On the sixth day after her baby's birth, female relatives perform the *kishakish* ritual, during which the newborn is brought out of the tent for the first time and later given a name. The Tuareg naming ceremony bears similarities to rituals performed among the Hausa and other populations of Niger. A ram is usually killed and the baby's head is shaved to signify the change of status.

Membership into the spirit possession troupe usually requires the holding of an initiation ritual, during which the medium's new status is officially recognized.

Marriage, especially to a first spouse, involves an important change of status for both men and women (in Hausa, for instance, there is no word for a woman who had reached adulthood but has never been married). But "tying the knot" involves more than anything the union between two lineages, and this is why it is so important to know the background of the person one marries.

Death, since the advent of Islam, no longer involves specific rituals intended to separate, once and for all, the dead from the living. Burial is a simple affair. The deceased is buried immediately after death. Kin, friends, and neighbors come to offer their condolences to the grieving family, but in most cases tears should not be part of the picture. Restraint and dignity are expected of everyone; women who visit a grieving mother, for example, should chat as if nothing special was going on so as to distract the mourner from her pain.

## 8 INTERPERSONAL RELATIONS

Nigeriens are warm and friendly, but, because of the influence of Islam on local life, there exists a strong segregation between the sexes. Muslim women are, by and large, constrained by their domestic duties, while men have access to more public spaces such as the market or the court. What goes on between men and women in public or in private varies, of course, with education, social status, and ethnic identity. Younger women are more daring, and they usually have a say in the choice of a husband. They must remain modest, and once married, it is improper for a Muslim wife to look at her husband directly in the eye or to confront him.

Proper behavior is characterized by restraint and modesty to such an extent that it is considered inappropriate, for instance, to complain about pain or to advertise one's hunger. Greetings, in Hausa for instance, involve asking about one's health, the health of one's children, and whether one has had a good night, morning, etc. To the question *Ina kwana?* ("how was the night?"), it is appropriate to answer *Lahiya lau* ("fine") even if one is at death's door.

Nigeriens are highly hospitable people who always have food available for guests and visitors. Generosity is valued regardless of one's degree of wealth. Among the Hausa, it is, in fact, primarily by redistributing one's wealth that one achieves prestige, visibility, and respectability.

## 9 LIVING CONDITIONS

Niger remains a very impoverished country struggling to become, with the aid of international partners, a stronger and more self-sufficient nation. Most rural communities have no electricity, and in many villages women still draw water daily from the communal well. With the spread of conservative Islam, an increasing number of wives are living in seclusion, which means that their mobility during the day is severely curtailed. Men who seclude their wives usually pay another woman to bring water to the household, while they themselves purchase the necessary ingredients for the family meals.

While free healthcare is available in towns and cities, most people in rural areas do not have access to a hospital or dispensary. Malnutrition among young children is prevalent, which

A Nigerien woman baking. In Niger, where drought is a constant threat to human survival, the staple food is millet.  
(Cory Langley)

explains the high rate of child mortality. In Niger, one third of children born do not reach the age of five.

Nigeriens travel a great deal to visit relatives or to search for seasonal work. While they may walk or ride a horse to visit a nearby village, they often use bush-taxis to cover large distances.

## **10 FAMILY LIFE**

The concept of family among sedentary populations usually includes a host of extended kin who may or may not live in the same household. This has long meant that members of extended families pooled their resources together under the authority of the head of the household. Under the post-colonial pressures of increasingly individualist modes of farming, the extended family has splintered. Young men have become largely responsible for raising the money for bride-price and for paying taxes—expenses that had traditionally been the responsibility of the household head.

Women spend most of the day taking care of the children and preparing meals. According to Islam, men can marry up to four wives at a time; there is no limit to how many they can marry in their lifetime, as long as they keep divorcing their previous wives. Women who are divorced usually go back to their parents' homes until they remarry. Tension and competition between co-wives is not infrequent, but husbands are en-

couraged by Islam to minimize jealousy by not privileging one wife at the expense of another.

Among the Hausa, relations of avoidance prevent a woman from publicly showing her affection for the first two or three children she gives birth to. She cannot utter their names, nor can she call her husband by his name, tease him, or contradict him. A good wife should be humble and obedient. Grandparents, on the other hand, enjoy a joking relationship with their grandchildren, which means that they can be affectionate towards them, tease them, or be teased by them.

## **11 CLOTHING**

Through the style, lavishness, and color of their clothes, Nigeriens communicate a great deal about their ethnicity, religious identity, and educational and social status. While most Zarma, Songhay, and Hausa women wear gay, cotton, custom-made blouses with flounces, pleats, elaborate collars, and short-sleeves together with wrappers of the same fabric, women among the Tuareg or Fulani wear dark indigo-dyed clothes. In urban areas, professional women may wear Western clothes, but many are pressured by reformist Muslims to give up their revealing garments in favor of the more modest local attire that often includes a type of head-covering. While many women wear a small scarf or even a large veil that shrouds their shoulders, female Izala members are covered from head to ankle by a voluminous tent-like veil, the *hijabi*, whose bright color matches the rest of their outfit.

For many Nigerien men, the flowing, sleeveless gown of heavy brocade that is worn over a matching shirt and drawstring pants has become the garment of choice. Despite its cumbersome nature, it gives respectability to its wearer by advertising his or her Islamic status. When they do not wear a turban, men often sport an embroidered rimless hat. Among the Tuareg, it is not the women but the men who cover their faces with a veil. Among Bororo Fulani, men make up their faces and compete in beauty pageants, during which women designate the most handsome participants. Educated civil servants characteristically wear tight-fitting European pants and tailored shirts in dull colors and go hatless.

## **12 FOOD**

In Niger, where drought is a constant threat to human survival, the staple food is millet. Millet is the main ingredient in the traditional midday meal of *fura*, a porridge of water, spices, sometimes milk or sugar, and cooked flour. Pastoral Tuareg, who rely heavily on the consumption of dates, add crushed dates to their *fura*. Millet can be consumed during the evening meal as a thick paste having the consistency of polenta, onto which is spooned a spicy sauce that may contain tomato paste, onion, okra, sorrel, squash, pumpkin, eggplant, or meat. Along the Niger River, the Songhay prepare a thick paste of corn with a sauce made of baobab leaves, to which is added meat or smoked fish. When they do not eat millet or sorghum, Nigeriens enjoy beans or rice. For breakfast, they usually eat the leftovers of the previous meal, though in town, coffee and bread are becoming increasingly appreciated by those who can afford the expense. All enjoy snacks made of skewered meat, grilled tripe, fried bean meal beignets, or ground peanut cakes. The mango season brings ample supplies of these sweet delicacies to rural communities that have otherwise little opportu-

*Nigériens with their camels. (Cory Langley)*

nity to sample fruits. During the cricket season, women fry the insects for snacks.

Observant Muslims do not eat pork or consume alcohol; they eat only meat that has been slaughtered by a Muslim man in the proper Muslim fashion.

### **13 EDUCATION**

In Niger, where schooling is free but compulsory between the ages of 7 and 15, students can attend a Western-style school where all instruction is in French, or they can acquire an Islamic education in Arabic. Only a small minority of Nigériens are literate and can read either in French or Arabic. Even fewer finish secondary school to later pursue a higher education. An increasing number of children are attending Quranic schools thanks to the renewed Islamic fervor the country has been experiencing. There, they first learn by rote the entire Quran before moving on to the second stage of learning, which consists of understanding and interpreting each of the verses they have memorized.

In French private or public schools, the curriculum as established by the Ministry of National Education is designed to impart strictly secular knowledge. Local languages such as Hausa or Zarma are banished from the curriculum, and all instruction is in French. Children learn French grammar, math, science, civics, history, geography, drawing, music, and physical education.

Many parents believe that government schools are dangerous places because their children will forget their traditions and will be lost to their parents. Pious Muslims may send their sons, but keep their daughters home for fear of sexual promiscuity.

### **14 CULTURAL HERITAGE**

The history and tradition of Nigerien people is often evoked at social gatherings and celebrations by the *griots*, bards (most often male) who are simultaneously praise-singers, messengers, and historians. Men sing in Tuareg society, while in Hausa society women often use the medium of song to express themselves, whether they sing lullabies to their babies, work songs, or verses mocking their husbands.

Nigériens are very fond of listening to and reciting tales that explore traditional themes and values of the local culture and history, such as marital relations, virtue, generosity, or religious piety. Storytelling, like the recitation of song poems, praise-singing, or theater plays, is an important form of entertainment among children and adults alike. Today, the stories are often told by women, while men concentrate more on Islamic narratives and poems.

The Nigerien theater, in its present form, was introduced by French colonial administrators through schools and cultural associations. Nearly all comic, the plays, which reflect and promote popular concerns and aspirations, are improvised from a scenic outline arranged from a chosen theme. Performed in schools, village cultural centers, and on national radio and tele-

vision, plays enjoy a wide popularity and are often performed in Hausa (the most widely understood language in Niger).

Nigerien writers and poets are not well-known outside of Niger, except perhaps for Boubou Hama, the former president of the National Assembly, whose wonderfully rich autobiography, *Kotia Nima*, received the main literary prize of Sub-Saharan Africa in 1970.

### 15 WORK

A majority of Nigeriens remain farmers. They grow millet, sorghum, and beans as primary crops, but almost all of them are involved in secondary occupations such as petty trade, smithing, dyeing, tailoring, etc. Land is unfortunately becoming an increasingly scarce resource as parcels divided up between male children keep getting smaller. One-sixth of the work force is engaged in livestock production. Tuareg and Fulani, who were traditionally pastoralists, are progressively abandoning a precarious existence to settle in urban or semi-urban areas. Employed civil servants who are fortunate enough to receive a monthly salary are often faced with the predicament of having to support more relatives than their meager resources can bear.

### 16 SPORTS

Traditional wrestling has been promoted by the government as an activity that is distinctly part of the cultural heritage of Nigeriens. Wrestling tournaments draw large crowds. Each city now has a wrestling arena where people can come to follow the careers of their champions. Soccer is a popular source of entertainment for young boys and men. Given the fondness of Hausa and other Nigeriens for horses, horse races are also events that attract numerous onlookers.

Among pastoral Fulani, young men regularly engage in *soro*, a competitive game in which a man violently hits his partner with a large stick on the chest. The receiver pretends not to be hurt and simply smiles at the audience to demonstrate his control over pain.

### 17 ENTERTAINMENT AND RECREATION

Spirit possession ceremonies are public performances that can draw large crowds of onlookers in search of entertainment. Despite the Muslim prohibition on dancing and mixed-sex gatherings, many men and women enjoy stomping their feet to the sounds of the drums (calabashes) and the one-stringed violin during these events. The birth of a child is an occasion to rejoice and eat food. Wedding celebrations in urban areas also involve an evening of dancing to the sound of African pop music.

Though it remains a luxury that only salaried workers or wealthy traders can afford, television is becoming increasingly popular among Nigeriens. Parents and children enjoy American television series when they are not watching a Nigerian or Indian video at the house of a neighbor who is charging entrance fees to increase his earnings. In some rural communities, villagers can watch television even though they have no electricity. Thanks to solar-powered batteries, some neighborhoods share a television that is turned on every night after the evening meal.

Hausa and Hindu melodramas or karate films are popular among the younger generation who, in urban areas, can watch their idols on the big screen in open air cinemas. In the rural

areas, market days are occasions to meet friends or relatives and catch up on the latest news. The market is often the place to hear gossip, to learn about new fashions, or to discuss marriage plans.

### 18 FOLK ART, CRAFTS, AND HOBBIES

Nigeriens are skilled craftsmen. Zarma women, for instance, are deft potters, known for their large earthenware water jars decorated with white geometrical motifs. Songhay pottery is decorated with ochre, black, or white triangular motifs. Hausa earthenware jars have a characteristically large opening.

Tuareg and Hausa craftsmen are famous for their elaborate leather work—beautiful boots, colorful sandals, and multi-pocketed bags in goatskin. Tuareg men manufacture leather boxes with intricate geometrical designs, as well as horse and camel saddles, sword sheaths, and multi-colored, fringed cushions and pouches.

Hand-woven, multi-colored cotton blankets made of thin bands that are sown together are part of women's most treasured possessions. Hausa women, for instance, keep their blankets in trunks and only display them on the day that their newborn child is given a name. The embroidery that enlivens the collars of the large Islamic robes worn by so many Nigerien men is also a local craft.

Smithing is a traditional activity among the Tuareg, who manufacture a wide range of jewelry: Agadez or Iférouane silver crosses, rings, wrist and ankle bracelets made of braided silver or copper strands, necklaces made of beads or agate set in silver, amulets, and locks worn around the neck. Fulani women wear numerous large silver earrings and heavy brass anklets.

The people of Niger enjoy music, whether they listen to Islamic chanting on the radio or attend a formal musical event honoring local authorities. They listen with great pleasure to the griots, the professional bards whose praise-singing is accompanied by drumming from a whole series of instruments, including the *ganga*, a medium size drum, and the *kalangu*, an hourglass drum held under the armpit. On formal occasions, one may hear the sound of the *algaita*, a reed instrument that requires of its player an elaborate breathing technique. Among the Tuareg, three women are needed to play the *tinde*, a type of drum that is often accompanied by a flute (*tassinsack*). Tuareg men enjoy singing about their exploits as warriors or lovers while women perform instrumental music.

### 19 SOCIAL PROBLEMS

When Niger gained its independence in 1960, only 5% of the population lived in cities. Since the 1984–85 drought that displaced so many pastoralists, Niamey, the capital, has expanded by over 10% every year. This dramatic urbanization has introduced a variety of social ills that the successive regimes have failed to address seriously. There has been, for instance, a significant increase in violent crime, juvenile delinquency, and alcoholism. Drug use among workers is reportedly on the increase. Growing numbers of partially educated youths who cannot find work in the public or industrial sector either remain unemployed or are absorbed by the informal sector in petty trade, hustling, and smuggling when they do not turn to crime. Another drought and locust infestation in 2005 led to food shortages for as many as 2.5 million Nigeriens.

Infanticide, rape of young girls, forced early marriage, and teenage prostitution are becoming increasingly common. Faced with Niamey's demographic explosion, the state has been unable to supply the most basic services. This is why postal service, sewage system, and water supply are nonexistent in many neighborhoods of the capital.

## 20 GENDER ISSUES

Because of the influence of Islam on local life, there exists a strong segregation between the sexes. Muslim women are, by and large, constrained by their domestic duties, while men have access to more public spaces such as the market or the court. What goes on between men and women in public or in private varies, of course, with education, social status, and ethnic identity. Younger women are more daring, and they usually have a say in the choice of a husband. They must nonetheless remain modest. Once married, it is improper for a Muslim wife to look at her husband directly in the eye or to confront him.

Gender strongly affects access to education in Niger. While 43% of men are literate, only 15% of women can read and write. Many women are unable to attend school because of responsibilities within the home and early marriage (often between the ages of 14 and 20). The average Nigerien woman will have between seven and eight children in her lifetime, one of the highest fertility rates in the world.

# NUER

**PRONUNCIATION:** NOO-uhr

**LOCATION:** Southern Sudan

**POPULATION:** 4 million

**LANGUAGE:** Nuer

**RELIGION:** Traditional faith (worship of Kuoth); Christianity

**RELATED ARTICLES:** Vol. 1: Dinka; Shilluk; Sudanese

## 1 INTRODUCTION

To generations of anthropology students, the Nuer of southern Sudan have been one of the best-known peoples in Africa, thanks to the pioneering cultural studies of British social anthropologist E. E. Evans-Pritchard.

Early in the 20th century, the Nuer were estimated to number about half a million. They occupied the swampy flood plain known as the Sudd region along the White Nile. These farmer-herders lived by raising cattle and cultivating crops, moving away from their permanent settlements in the dry season after the rains had tapered off and the floods had receded in order to take advantage of grazing in low-lying areas near rivers and streams. Fishing, hunting, and the gathering of wild fruits rounded out their diet.

When the British conquered Sudan and eventually brought the Nuer people under their control, they were surprised that the Nuer could have high population densities and broad, stable networks of social organization without any formal political organization or leadership. To account for this complexity of this relatively egalitarian organization based on kinship relations, as well as the legendary military successes the Nuer enjoyed, the famous British anthropologist E. E. Evans-Pritchard developed the concept of "segmentary lineages." These kinship groups, which traced descent in the male line, could mobilize in opposition to similar-level opponents in any social conflict among the Nuer or between them and outsiders. Thus, even without a centralized political leader, they could effectively unite against enemies, making them a formidable military foe. The theory of segmentary opposition and studies of the Nuer have fascinated anthropologists and their students ever since.

Thus the fame of the Nuer stems from their early notoriety as one of the most courageous and steadfast peoples of Africa in their resistance to colonial conquest and imperial domination. British and Egyptian forces conquered Sudan in 1898, and most Nuer communities had nominally submitted to British rule before the outbreak of World War I, but non-cooperation and resistance remained widespread. It was not until the 1920s that systematic efforts were made to extend effective British presence into some areas of Nuerland. The last large-scale armed uprising was not put down until the end of the 1920s, when Royal Air Force planes were deployed in an "experiment in the pacification of primitive peoples" to fire-bomb Nuer villages and the earthen mounds dedicated to their prophets. The invaders also strafed the fleeing people and confiscate their cattle.

Once armed resistance was finally crushed, the British colonizers had the difficult task of subjecting the proudly independent Nuer people to the principles of "indirect rule" and regularizing administration and taxation in spite of the lack of native institutions and structures for political control. The

British never truly accomplished this task; neither did the series of Sudanese governments that followed. In fact, by the time of Sudanese independence in 1956, civil war had broken out in the southern region, eventually pulling the entire Nuer area into armed conflicts that continue into the late 1990s, with only one short relatively peaceful period from 1972 to 1983. The Khartoum government brutally suppressed the African ethnic groups in an attempt to control the oil and water on their land.

The civil war between the Sudan People's Liberation Movement/Army (SPLM/A) led by the late General Garang and the Government of the Sudan (GoS) raged from 1983 to 9 January 2005 when a Comprehensive Peace agreement was signed between the two parties. The war claimed millions of lives, forced many into exile and wasted livelihoods of millions of people, destroyed the physical infrastructure, hampered the economic base and caused the disintegration of social fabrics. This in turn has had a serious impact on traditional value systems, norms, and adaptation mechanisms. The treaty granted Southern Sudan a semi-autonomous status within the larger Sudan. Nevertheless, many Nuer still feel that they have been shortchanged in the composition of the Government of National Unity (GONU), headed by President Al Bashir and Salva Kiir Mayardit. They allege the government is dominated by the Dinka tribe and therefore misrepresents the Sudanese reality.

## <sup>2</sup> LOCATION AND HOMELAND

Nuerland is located in the southern Sudan between 7° and 10° north and 29° and 34° east. The main channel of the Nile River divides the country into western and eastern regions. The vast majority of the Nuer today live in their traditional homeland, located in the east Upper Nile Province around the junction of the Nile River with the Bahr el Ghazal and Sobat Rivers, and extending up the Sobat across the Ethiopian border. Nuer are geographically located in the heartland of the Upper Nile towards the Eastern Region of Jonglei state in Southern Sudan. They are bordered by the Gawaar of Ayod from the West, Dinka of Bor from the South West, Murle from the South, Anyuak from the East, Jikany of Nasir from the North East, Dinka of Ngok, and Luach from the North.

The region receives heavy rains—about 50 to 100 cm (20 to 40 in) per year—which falls almost entirely from May through October, with average daily maximum temperatures about 30° to 32°C (86° to 90°F). Dry winds blow from the north from November until April, bringing clear, sunny skies, with March and April being very hot months with high temperatures in the range of 38°C (100°F). The Nuer homeland is very flat, causing slow drainage and widespread flooding during the rainy season. Those same lands offer lush grazing for cattle during the dry season. The landscape also includes a few trees, such as small groves of thorny acacias and lalob trees, a very large shade tree, and a few palm trees.

While most Nuer still live in their home area, many have migrated to urban areas at various times to take advantage of job opportunities. During the civil wars in the period since 1955, and especially since 1983, thousands of Nuer have also fled north to the national capital, Khartoum, to other cities, or even to other countries to seek refuge from the fighting. Since the 1960s, thousands of rural Nuer have lived outside Sudan, particularly in western Ethiopia along the upper stretches of the Sobat river.

It is difficult to assess how life has changed in the traditional territories of the Nuer along the upper Nile and Sobat rivers because of the disruption of life in the region. However, in the time since the end of the colonial period, many Nuer have come to live outside their homeland, particularly in the cities of the north, where they have led very different lives. Taxes imposed by the British, as well as measures restricting Nuer raids on other groups for cattle, led to the first significant migrations of Nuer in search of work for pay. Most migrants intended to return home after a brief period, with enough money to buy a herd large enough to support a family in the traditional way of life; but the dislocations of the civil war and a devastating flood in 1964 that destroyed many herds have made returning increasingly difficult for many Nuer.

In seeking wage employment in the north, the Nuer men looked for work that they considered in keeping with their proud heritage as brave warriors. Much of the work available was in domestic service and other menial work that Dinka and other refugees from neighboring southern communities accepted, but which most Nuer rejected as demeaning. Instead, many Nuer found their way into construction labor, where they became the core labor of the labor force in many northern cities and on construction crews for irrigation dams and other structures. Women eventually began to accompany the men, and whole families would live on construction sites in shelters built from available scrap material. This reduced the

living costs of the workers, but it created problems because the conditions were not compatible with the standards of female modesty and seclusion common among Muslim northerners.

### 3 LANGUAGE

The Nuer call themselves *Naath*, which means “human beings.” The Nuer, Dinka, and Atwot (Atuot) are sometimes considered one ethnic group. The Nuer language is a Nilotic language closely related to the speech of the Dinka and Atwot. The language is uniform with no definable dialects.

To the ears of English speakers, the Nuer language sounds airy, light, melodic, and breathy, with few hard consonants. It has several consonants that are not usually found at the beginning of English words, such as the sound *ng* (as in *sing*) or *ny* (as the Spanish *ñ* in *señor* or French *gn* in *Boulogne*). For example, most common names for Nuer women and girls begin with the latter sound: *Nyayoi*, *Nyawec* (the *c* at the end is pronounced *ch*). Because of these unusual sounds, the written form of the language developed by missionaries in the 1930s and 1940s includes several letters not used in writing European languages.

To identify a person, the given name is followed by the name of the father, since the Nuer consider kinship through the father's line very important. So if a man named Cuol names his son Gatkuoth and his daughter Nyaruol, they would be called Gatkuoth Cuol and Nyaruol Cuol. A child is usually named by the father or another member of the father's family and may have another name that the relatives on the mother's side use. Women do not change their names when they marry, but after a woman has a child (named *Wei*, for example), other women might often call her “mother-of-Wei.” People also have nicknames and ceremonial names. Among male friends of their own age groups, for example, boys and men are often called by the name of the bull they received at initiation or the name of their current favorite bull in their herd.

Most Nuer cannot read their language, but oral language is well developed. Nuer enjoy verbal wit, and are known as brilliant conversationalists. Major forms of entertainment include joking, creating and reciting poetry, and composing and performing original songs for one another. Sample Nuer expressions include *wut pany* (“a real man”), *male magua!* (“big hello!”), *jin athin?* (“Are you there?”=“How are you?”), and *nyang* (“crocodile”).

### 4 FOLKLORE

Nuer honor the memory of their famous prophets, known as *guk*, who are believed to be possessed by one of the sky spirits or lesser divinities. One such prophet was a man named Ngundeng, who died in 1906. He was said to be able to cure illnesses and infertility. During his lifetime he and his followers constructed a large earthen pyramid, approximately 12 m (40 ft) high, made of earth, ashes and cattle camp debris; they surrounded it with over a hundred upright elephant tusks. It was built in honor of the sky god Deng and for the glory of the prophet Ngundeng; people came from miles around to help with the building and later to sacrifice cattle there. The monument was blown up by the British in 1928. The songs and prophecies of Ngundeng and other prophets are passed down the generations through oral tradition and are still influential today. It is believed that the spirit that possesses a prophet later possesses one of his descendants.

### 5 RELIGION

The Nuer religion involves belief in a divine creator or high god, *Kuoth*, who sustains life and health, and in many lesser spirits. The Nuer honor both the high god and the spirits (or lesser divinities) through observance of moral rules (including observation of kinship duties and other social obligations) and sacrifices. The two kinds of leaders in the Nuer religious system are prophets, who are believed to be earthly representatives of some of the lesser divinities/spirits of the air, and “earth priests,” also known as “leopard-skin chiefs.” The latter name for these leaders comes from their traditional mark of office, a leopard skin cape, and their recognized leadership role; but they are not really political leaders, as the term “chief” seems to imply. Instead, they are considered sacred people who can intercede with spirits, conduct sacrifices to help cure illnesses that are believed to be spiritually based, and serve as intermediaries between feuding families, as when revenge is sought after a murder. There are still some active Nuer prophets today, including Wutnyang Gatakek (whose name means “man of crocodile, son of reputation”), a young man who encourages his followers to work hard, become self-reliant, and not succumb to the tendency to blame other ethnic groups for their problems (a practice known as “tribalism”). He does not consider his spiritual leadership to be in conflict with Christianity, and he encourages Christians to continue to follow their religion.

During periods of epidemics or even individual health crises, oracles are sought out to identify the offended spirits and determine the proper recourse. Frequently an offering is presented or an animal is sacrificed in order to appease or drive away the evil spirit. The Nuer pray for health and well-being, offering sacrifices to *Kuoth* so he will answer their petitions. There is no organized religious hierarchy or system, but many individuals serve as diviners and healers.

The Nuer own the Bieh State, a name which originated from the emerging days of Ngun-Deng Bong, the well known great prophet of Nuer. Bieh in the Nuer language means shrine of Nyun-Deng. It is a Holy place where Nuer people including the non-Nuer from all walks of life come periodically to Bieh for worship.

The Nuer do not believe in a place of after life for the spirit, and their religious concepts deal with concerns of this life. However, they do believe the spirits of the dead can affect their current life, with the more recently deceased having more influence. The Nuer honor and appease the spirits of their ancestors. Cattle are sacrificed to god and the spirits. As among the neighboring Dinka, religious thought and practice is a dialogue with *Kuoth*. The Nuer pray for health and well-being to *Kuoth*, offering sacrifices of cattle in hopeful expectation that their sentiments may be realized. Whereas many individuals become diviners and healers (*tiet*), there is no organized cult or hierarchy of religious functionaries. In most cases, other available medical resources are resorted to when spiritual healing does not bring about the desired outcome. Like other Nilotic peoples, the Nuer regard long-deceased ancestors with respect and veneration, but are concerned in their earthly lives with the power of the recently deceased to cause misfortune. Cattle play an important part in Nuer religion and ritual. Cows are dedicated to the ghosts of the owner's lineages and any personal spirits that may have possessed them at any time. The Nuer believe they establish contact with these ancestor ghosts

and spirits by rubbing ashes along the backs of oxen or cows dedicated to them, through the sacrifice of cattle. No important Nuer ceremony of any kind is complete without such a sacrifice. There is also a widespread belief in the concept of the “evil eye,” where a malevolent person possessing supernatural powers can cast a spell on someone just by gazing upon them.

Although Christian missionaries had worked in some Nuer areas for several decades, relatively few rural Nuer had converted before 1964, the year when all foreign church workers were expelled by the government. In the period of peace (1972–83), however, many new Christian congregations were formed and many Nuer, particularly in the east, converted to Christianity. The majority of Sudan’s people, living in central and northern Sudan, are Muslims, and although some southerners have converted to Islam, recent reports suggest that the Nuer prefer their traditional faith or Christianity. The government of Sudan, especially in the period after Islamic Law was declared in 1983, tried to pressure the non-Muslim peoples of the south to convert to Islam. Since the Islamic-led government has more respect for Christianity than for traditional African religions like the Nuer religion, many Nuer have preferred to become Christians. This has made for many interesting social dilemmas among the Nuer. For example, when Christian and non-Christian Nuer socialize together, as when an animal is sacrificed for religious reasons and later eaten, they try to avoid conflict over beliefs by not referring to the major Divinity or by asserting that “Divinity is one”; that is, they express the belief that there is only one god, even if different people use different names and worship differently.

## 6 MAJOR HOLIDAYS

Until recently, most Nuer did not use dates to calculate the passage of time. Even during the 1970s, most Nuer did not know in what year they were born or how old they were. A woman might tell you her daughter was born “the year of the measles epidemic” or the year of a flood when they had had to eat a lot of *lalob* fruit. So instead of specific dates for annual holidays, people hold rituals and celebrations whenever they seem appropriate. For example, if a group of boys is ready to be initiated, it can be done at any time of the year, although it is most likely to take place at the end of the rainy season, after harvest, when people have the time and plenty of food has been stored.

## 7 RITES OF PASSAGE

A woman in childbirth is attended to by another woman, usually a close relative, who must herself be a mother. People are careful to protect the mother and newborn child from any spiritual danger by making sure that pregnant women or their husbands do not enter the house.

The Nuer nomenclature is rather complex. In some groups the child is named along the male lineage, but traced either through the mother or father’s ancestry. A similar system gives the child the last name of the paternal grandfather’s first name, the middle name being the father’s first name, and the first or given name selected by the father. Christian children often have Biblical names and Sudanese names, used interchangeably. First names, when used, are commonly preceded by a title, like “Mr.”

Among the Nuer, puberty is seen as the passage into adulthood and its responsibilities and is a marked occasion for both sexes. The Nuer do not circumcise either boys or girls, but they

do practice certain other body modification rituals related to life transitions. For girls, passage from childhood to adulthood is marked by the first menstruation, at which time the mother prepares her for motherhood and home management.

For males, there is a complicated set of rituals which an entire village age-set progresses through, culminating in ritualized tattooings or scarifications across the forehead. In the past, nearly all boys (and, at least in some areas, girls, too) had their four lower incisors removed at about the age of eight. Aesthetically, this permanent loss of teeth was accompanied by efforts to force the top front teeth outward a little, so that the beautiful white teeth would be more visible in the smiling face. This “orthodontia” was for the purpose of making the children look more beautiful. More recently some families have refused to continue these practices.

Between the ages of 9 and 13, Nuer boys seek permission from their fathers to undergo a manhood initiation ritual. In the past, the boys were much older, about 14 to 16 during the 1930s and about 16 to 18 a century ago. They wait until a group grows to between 5 and 15 boys for mass initiation. The ritual requires extensive preparation of food, and the boys must be healthy and well fed prior to the ritual. On the chosen day, the boys’ heads are shaved and anointed. The climax of the ritual is a ceremony in which the boys lie down in a row. Each in turn is cut with a knife by the scarifier, who makes six horizontal lines across the entire forehead and above the ears, all the way down to the bone. Although it is extremely painful, the boys try to show courage and remain silent. Parents and friends gather to watch. Loss of blood is a risk, and the wounds are sometimes cauterized to stop the bleeding.

After the cutting, the young men stay secluded together in a house while the scars are healing, lying for a time on their backs to keep the forehead upward. They can have unmarried people, nursing mothers, and old people as visitors, and they have nothing to do but eat porridge and milk, sleep, and play. Once they are considered healed (after some weeks), the young men are released and lead a procession to the river to bathe. They then return home and declare themselves men, and they and their families and guests celebrate with feasting, games, singing, and dancing. Traditionally the father of each initiate presents him with a spear, a fishing spear, and a bull from which he takes his “bull name.” After this initiation, boys can begin to be sexually active and marry and they take on adult work roles. Those initiated in the same period of years have a very special friendship throughout life.

Some young men today do not want to undergo this ritual, under the influence of education and Christianity. Those who do not undergo the full manhood initiation are being called “bull boys,” indicating that people know they are grown up, but do not recognize them as fully adult men who have proven their courage and been scarred like other Nuer.

The next significant transition rite is marriage. This usually follows a period of courtship when visits, poetry recitations, and other intimate exchanges give a couple a chance to decide whether they love each other. Incest is a taboo. If the parents agree to the marriage, the man’s family must supply an agreed-upon number of cattle to the bride’s family as a bride-price payment. In the old days when cattle were plentiful, the payment might be as many as 40 cows, but today marriages require fewer cattle due to the difficulties of civil war and mi-

gration. Some other valuables, such as money, can be substituted for some of the cows.

When a person dies, the corpse is laid to rest in a fetal position on a cowhide in a grave about four feet deep, then covered with another cowhide and buried. Families mourn for a few months, during which time close relatives do not wear ornaments. They then hold a ceremony in which one or two cattle are killed (both to honor the dead and to provide meat for a feast), purification rites are performed, lengthy speeches are made, prayers are offered, and people wash themselves and the possessions of the deceased and shave their heads. (Since almost everyone wears their hair short for cleanliness, it is not unusual for both men and women to shave their heads.) After these ceremonies people again wear ornaments.

## 8 INTERPERSONAL RELATIONS

Nuer place great value on behaving in a respectful way toward others, offering greetings to strangers and friends alike, and offering hospitality to travelers. It is not considered necessary to offer every visitor a meal, especially if there is no woman around at the moment (since men are not expected to cook for guests), but offering something to drink is important.

Wit, joking, and animated conversation are common among friends and as part of courtship. People generally show respect for their elders. Although men are in a social position somewhat superior to that of women, women have much personal freedom and make most of their own decisions about work, possessions, and interpersonal relations. Relative age is of great importance in interpersonal relationships, determining not only the terms of address but also the manner of acting with others. For example, men of the same "age set" will call each other "brother" and will act informally with one another. Alternatively, someone older than you is accorded utmost respect, and is referred to as "uncle" or "aunt," or even "father" or "mother" if related by blood.

The sharing of food forms a common bond among people. Leaders who extend hospitality and do not rely excessively on others are admired. Relatives are always expected to share food with each other. Newlyweds do not eat together until after the birth of their first child, when their two families are then considered more solidly related.

## 9 LIVING CONDITIONS

In rural areas, Nuer build round, one-room houses out of poles, which are plastered with an adobe-like mixture of mud and dung that dries into solid brown walls. The tall, pointed roofs are thatched with straw. Sometimes the doorways are built very small, so that one has to crouch or even crawl to enter, making it easier to barricade the door at night as protection against wild animals. Similar construction methods are used for the large cattle barns. During the rainy season, the cattle sleep inside, and many of the young men sleep in the rafters of the barns. Since there are many insects—flies by day and mosquitoes by night—smoky fires are lit near the cattle at night; both people (especially children) and animals are often smeared with ashes to keep some of the insects off. While people may look rather strange when newly covered, this is the only insect repellent available in the villages.

Villages do not have electricity or running water, so people must draw water from wells, rivers, or pools, and they make good use of natural light, rising early, and enjoying the warmth

and glow of fires at night. Furniture is simple—mats, cowhides, logs for benches, and simple stools and headrests are common; and some people have wood-frame rope beds. For containers, pottery, aluminum pots, and bottles, as well as gourds and baskets, are ordinarily used.

The Nuer homeland is not hospitable for horses, camels, and donkeys, which are commonly ridden in other parts of Sudan, since they develop hoof problems during the rainy season. When people want to travel, they either walk or get a ride on top of the load carried by one of the large open trucks that travel the bumpy, rutted dirt roads of the region. During the rainy season, the roads cannot be used. Dugout canoes or rafts are used on the rivers.

The Nuer experience numerous difficulties in accessing medical care, although to different degrees depending on background factors like educational level exposure to biomedical care in Sudan. They routinely share over-the-counter medications or borrow prescription medicines from others to treat similar symptoms. This is a result of coping with chronic shortages of medicine and severely limited care facilities in Sudan, and of course it circumscribes expensive medical costs.

Herbal preventive and curative measures are particularly relied upon where there is no access to clinics. There are multiple herbal and traditional remedies used by Sudanese. For example, a widely used cure for migraine headaches is a certain chalky compound (clay, mixed with certain leaves and water), which is rubbed over the head. To relieve the symptoms of malaria, there is a certain root chewed like a stick. One common form is called *visi ri*, a bitter shrub that bends its shoot to follow the sun.

## 10 FAMILY LIFE

Each married woman has her own house where she and her young children live. The Nuer practice polygyny, so husbands can marry more than one wife if they can afford to. Husbands sleep in the houses of their wives (if they have more than one wife, they go to whichever they wish) or in the cattle barns with other men. Several married women's houses in an extended family may surround large family courtyards, or people can live separately. Houses are usually built near the fields where crops are grown, and often there are some good shade trees and a thicket or forest nearby which can provide firewood and other wild products.

Young children usually work with their parents, gradually learning skills such as milking, gardening, herding, spreading cow dung to dry for fuel, and caring for younger siblings. Fathers and mothers as well as grandparents and other relatives enjoy playing with children. The Nuer prefer to have large families with several children, but poor health conditions and the war have made it difficult for many of their children to survive. It is probably rare today for a mother to have more than three or four surviving children.

Families often have scrawny short-haired dogs that eat scraps and help protect the homestead. They usually do not receive much attention. In contrast, the cattle, although they are the main economic assets of a family, are treated in some ways like pets. People often try to make their cattle beautiful, as by working on their horns as they grow so as to give them interesting shapes, or by brushing the coats of the cattle or decorating their horns with tassels and beads. Sometimes people compose songs or poetry praising their beautiful cattle.

At the domestic level, a woman may, with luck, give birth to six children during her childbearing years. Co-wives do not necessarily reside in proximity. And when they do, the domestic unit can easily number more than a dozen individuals.

## **11 CLOTHING**

The Nuer homeland is a hot climate, and for much of the year people do not need to wear much. Thirty years ago, a simple leather skirt or loincloth was all that a person needed while in his or her own village, although women usually had at least one good dress and both men and women wore capes or blankets tied over one shoulder when they traveled away from home. Currently, men and boys prefer to wear loose-fitting cotton shirts and shorts, while women and girls prefer colorful cotton dresses with perhaps a cape or a head scarf in addition.

Body decoration has always been important to the Nuer. Not only do they remove the lower front teeth, as noted above, but they also make decorative scars on the body in dotted patterns, especially on women's torsos, faces, and other parts of the body. Earrings are popular with both men and women, and the Nuer were doing multiple piercings of the ear long before it became popular in the West. Some people like to stretch the ear piercing with progressively larger plugs, working their way up to film canisters. One style is to loop stiff black giraffe hairs through ear piercings to make macramé-like decorations. Lip piercings decorated with metal ornaments are popular with some girls. For men especially, hair dyeing (especially orange) and patterned head shaving are popular, as is hair sculpture, with some arrangements made to look like cattle horns. Beautiful white beads are made from broken ostrich eggshells (found in ostrich nests), and these are made into stunning white necklaces and waistbands. Some people are skilled at fashioning ivory bracelets that both men and women like to wear on the wrists or upper arms. Ivory is not so common any more as the elephants have become scarce and cannot be hunted, so bone, cowrie shells, and imported plastic and glass ornaments have become more commonly used as jewelry.

Since Nuer have very dark skin, there is no tradition of tattooing, but people often mark their bodies in patterns made with temporary colorings (especially chalky white) for celebrations.

## **12 FOOD**

The commonest daily foods for the Nuer are dairy products, especially milk for the young and soured milk, like yogurt, for adults. Liquid butter is also made from milk that is soured in long-necked gourds and shaken for an hour or so to separate out the fat. Since there are no refrigerators to chill the butter, it remains liquid and is used for cooking or poured onto cooked foods. Grains such as corn and sorghum are cooked and eaten with large spoons like hot cereal, with milk, yogurt, or butter. Apart from cow's milk, a soft porridge made from fermented sorghum, mixed with a sour fruit, is commonly used as a weaning food (as well as a food for the infirm or elderly). In the general diet, sorghum, prepared in many different ways, is the most common starch.

The Nuer do not eat meat very often; they prefer to keep their cattle alive, but on a special occasion one of the cattle may be sacrificed and then eaten. When a cow is killed, the meat is often shared with relatives and neighbors, and some of the extra meat is hung out to dry, like beef jerky, to preserve it for fu-

ture use. Men and older boys normally carry spears with them when they walk around the countryside, in case they have a chance to hunt an antelope, gazelle, or other animal. If they are lucky, this can mean a delicious meat meal without anyone having to give up a cow.

Fish are eaten often during the dry season when the herds are taken to pasturelands near the rivers or pools left in low places as the floods recede. River fish trapped in pools are easy to catch as the waters dry up, so that even very young children can catch them by throwing fishing spears in shallow water. Boys 8 to 10 years old can bring home dinner for the whole family while they are out playing in the water on a hot day. At times when fish are plentiful, people can catch more than they need and sun-dry the extras to sell or save for later in the year. Drying gives fish a sour, tangy, flavor that is an acquired taste.

Various vegetables—squash, tomatoes, chili peppers—are grown and cooked, generally in pots on outdoor fires. Vegetables and greens, both wild and cultivated, make up a large proportion of the traditional diet, with meats including freshwater fish, and chicken (although chickens are generally more valued for egg production).

Another very nourishing food that is an acquired taste is cooked cow blood. A small amount of blood can be taken from the neck of a healthy animal without harming it. When cooked, it becomes solid, like the blood sausage eaten by some Europeans, and eating it is somewhat like eating a hunk of bologna.

Wild fruits and nuts are favorite snacks. The most popular food is wild honey, but it is hard to find. A favorite of older people during the dry season—when there is not much work to do and plenty of grain has been harvested—is homemade beer. It looks more like a thin porridge and is very cool and filling, but only mildly alcoholic. Most younger people seem to consider beer drinking in the shade of a tree a rather boring way to spend an afternoon, and since they take pride in being healthier, stronger, and less decadent than their elders, they do not drink beer. Similarly, the pipe tobacco that is raised seems to be smoked mainly by older married men and women.

## **13 EDUCATION**

Most Nuer children today still do not have the opportunity to attend school, since the few rural schools that once existed were destroyed or disrupted by the civil war. However, concerted efforts are being made by both the Government of Southern Sudan and the international community ever since the signing of the Peace Agreement in 2005, to improve the education sector as part of the reconstruction program. Many Nuer are still returning home from refugee status. As refugees go back home they have to reconstruct their individual and family lives and it is common for children to try to support themselves by selling things in the streets or looking for jobs.

Long before the civil war, some missionary schools taught children to read their own language; they also learned English, the language of their colonial power (Britain), and then Arabic. Thus among the educated Nuer in the older generation, many are able to speak, read, and write three languages. But the vast majority of Nuer men and women, although they speak Nuer and often also Arabic, are illiterate.

However most of the Nuer who were able to secure asylum in North America, Western Europe, Australia, and Kenya, for instance, have been able to access education in special programs.

For instance some of the Nuer refugees in Kenya were allowed to attend the same classrooms as other Kenyan children.

#### 14 CULTURAL HERITAGE

Nuer music consists mainly of singing. People sing songs they have composed, sometimes accompanying themselves on a simple instrument like the so-called African thumb piano (a small, hollow wooden box with metal tines of different lengths that give different pitches when they are twanged). The *raba-ba*, a rural Sudanese stringed instrument, is also often used, in a homemade form made from simple materials: a gallon can, wooden rods, and wires for strings. Whistles and bells are also used in music and dance, but the human voice is the most popular musical instrument. Some songs are widely known and sung in unison, but most are solos. The Nuer do not sing in harmony. Some songs are very rhythmic, and others are more pensive and chantlike. Dancing is usually accompanied by singing and is mostly done for fun.

Written literature is rare, since a system for writing the Nuer language was not developed until the 1930s. But oral literature is well developed, with songs and poetic prophecies passed down through memorization from generation to generation.

#### 15 WORK

Nuer who live in the rural areas must know how to do many types of work just to survive, for they have only themselves to rely on. Children and young men and women herd the cattle. Adult men are responsible for many other tasks and decisions involved in caring for the cattle, as well as slaughtering and butchering. Women and children usually milk the cattle and goats, and women make dairy products. Both men and women grow crops, cultivating with hoes, and children help them. Women process grain, cook food, and brew beer. All adults participate in various aspects of building and repairing houses. Men hunt with spears and sometimes find honey, and everyone gathers wild fruits or nuts when they find them.

For Nuer men living in cities—as many do for at least part of their lives—the most common type of work for pay has been in the construction industry. Often the whole family may live at a construction site for a few months while Nuer workers put the wooden frames, bricks, and mortar of a high-rise building into place. The goal of this urban work is often to save money for buying more cattle when the family returns home.

#### 16 SPORTS

The popularity of soccer has spread to many areas, but children usually do not have real soccer balls and have to improvise with whatever they can find.

#### 17 ENTERTAINMENT AND RECREATION

Children and young teenagers often play with small objects they have made from mud, which contains much clay. Because they are cattle herders, Nuer children often form the mud into cows and bulls. In the last several years, with their experience of war, many children have begun to mold rifles with the mud. Given the warm climate, squirt guns would probably be popular, but there are few plastic or other manufactured toys. In addition to the objects made from mud, there are carved wooden animals and rag dolls.

Older teenagers enjoy singing and dancing, especially around the evening campfires. In one particularly athletic dance style, young men repeatedly leap rhythmically straight up into the air as high as they can, trying to make their movements seem nonchalant and effortless. Girls and boys dance as individuals in a group or with partners. Young men and women sometimes sing personal songs to try to attract many dance partners of the opposite sex. In some areas, a popular dance style for young men is a mock duel, in which one dancer “accidentally” leaps backwards and bumps into a young woman whose attention he is trying to get.

People make themselves as attractive as possible for dances, often decorating themselves with flamboyantly colored leggings and beads and carrying special dance rods, flashlights, or other fancy portable trade goods, even including books. One popular type of dance skirt for women and girls is made with twisted grass ropes that hang from the waist to just above the knees and may be decorated with cattle tails or small bells. For dancing, men and boys wear tight shorts, especially ones with pockets, and go shirtless. Sometimes dancers use simple body paints that imitates cattle markings, and they may even decorate a cow or two for a special occasion.

Nuer also enjoy games, including the two-player game of distributing small stones or mud tokens in rows of pits hollowed in the ground, and attempting to win more pieces than the opponent. This game, which is played in many parts of Sudan and other parts of Africa, can be played by people from different cultures who cannot understand each other’s language.

#### 18 FOLK ART, CRAFTS, AND HOBBIES

The Nuer in rural areas have always been fairly self-sufficient, making and decorating many of their own household items. The carved headrest is probably the most common piece of furniture for the Nuer, something that is light and easy to carry when they hike to the cattle camps but which makes it much more comfortable to lie on a mat or cowhide on the ground. Some people are very skilled at making decorated pottery and the bowls for pipes, while others make aesthetically pleasing and highly functional baskets. Smiths process scrap metals into beautiful spoons shaped like the old-fashioned cattle-horn spoons, make spear heads, decorate pipe stems with brass, and fashion bracelets.

#### 19 SOCIAL PROBLEMS

The ongoing post-war resettlement and reconstruction is the main challenge facing the contemporary Nuer people. Many had lost their homes or had to escape the fighting by moving to other countries or to cities. Some had been captured by neighboring hostile groups and forced to work or become part of their captors’ families. Others had undergone military training at an early age, deepening the “culture of violence” that has led to small arms proliferation in Nuerland. Others have been psychologically scarred by the tragedies of war and displacement threatens to displace some of their more positive traditional values. Cultural erosion which condemns the immorality in Nuer ancestral life is now being replaced with the culture of unjust banditry and other similar activities. For the Nuer living in cities, poverty, sickness, and insecurity are daily problems. For all of these Nuer, a peaceful and just implementation of the January 2005 Peace Agreement are a major part of their hope for the future.

## 20 GENDER ISSUES

Nuer domestic groups are based on the ideals of patrilineal descent. Each Nuer village typically contained a patrilineage segment, some of the in-laws of the “ruling” males and an adopted Dinka lineage. The male elders are the “bulls” of the village. People named hamlets or villages after the numerically dominant patrilineal group.

During marriage, cattle and women are—and have always been—the central objects of reproductive exchange and hallmarks of the distinctive Nuer culture. This is seen in the transfer of cattle at the bride wealth exchange, which is considered crucial for the reproduction and survival of the agnatic line. Through the second half of the 20th century, the range of exchangeable objects expanded to include weapons and cash. For instance, bridewealth negotiations were traditionally settled with what Hutchinson refers to as “cattle of girls” (i.e., cattle collectively acquired through the agnatic line’s exchange of daughters).

Women, as expected by the society, take pride in the number of children they bear.

Polygyny and wife inheritance are practiced. A man may marry additional wives depending on his economic ability. Widows usually remarry one of their husband’s close relatives (such as a brother), without any additional bride wealth. Co-wives, however, do not necessarily reside in proximity; the bride is relocated in the husband’s natal family following her intermarriages. Patrilineal residence at marriage further consolidates the patrilineal structure of Nuer communities.

Childrearing is traditionally the responsibility of all the women in the village; while the father takes considerable pleasure in his children, discipline is the responsibility of the mother.

# NYAMWEZI

**PRONUNCIATION:** nyahm-WAY-zee

**ALTERNATE NAMES:** Wanyamwezi

**LOCATION:** Unyamwezi (Tanzania: Provinces of Tabora and Shinyunga, Northwest central, between Lake Victoria and Lake Rukwa)

**POPULATION:** 1.5 million

**LANGUAGE:** Kinyamwezi; Nyamwesi; Kiswahili (Tanzania's national language); English; languages of neighboring ethnic groups

**RELIGION:** spirituality shaped by traditional beliefs; Islam; and Christianity

**RELATED ARTICLES:** Vol. 1: Tanzanians

## <sup>1</sup> INTRODUCTION

The Nyamwezi people, or the Wanyamwezi, live in the East African country of Tanzania. (The country of Tanzania was created when Tanganyika and the island of Zanzibar formed a union in 1964. Before German colonial occupation in the late 1890s there was no geographical entity known as Tanganyika.) They are the second largest of over 120 ethnic groups in Tanzania. Their home area, Unyamwezi, which means “the place of the Wanyamwezi,” is located in the western plateau area of the Tanzanian provinces of Tabora and Shinyanga, south of Lake Victoria and east of Lake Tanganyika. While this is considered the traditional homeland of the Wanyamwezi, many Wanyamwezi work in the commercial and agricultural centers of Tanzania.

In trying to understand Nyamwezi culture, it is important to remember that it is not static or insulated from broader political and economic changes that have affected the larger Tanzanian society. Nyamwezi society and culture have been dynamic, constantly evolving to meet the changing environment. Over the years, Nyamwezi culture has both influenced and been influenced by the cultures of neighboring African societies as well as the national Tanzanian culture. Islam and Christianity have also had a great impact on modern Nyamwezi cultural practices. According to oral tradition, the Nyamwezi are thought to have settled in west central Tanzania (their present location) sometime in the 1600s. The earliest evidence comes from the Galahansa and confirms their presence there in the late 1600s.

The notion held by many Europeans during the colonial era, that the Nyamwezi were an ethnically uniform tribe ruled by a chief, did not fit the realities of Nyamwezi life. Even though the Wanyamwezi shared a common language and culture, they did not see themselves as one people and they were never united into one political entity that corresponded with the boundaries of their cultural group. The Wanyamwezi speak three distinct dialects of their Kinyamwezi language and are made up of four distinct subgroups, the Wagalaganza, the Sagala, the Kahama, and the Iguluibi. Each group claims to descend from its own special ancestor. The largest group, the Wagalaganza, consisted of thirty states in the 1860s. Culturally and linguistically, there is very little that separates the Wanyamwezi from their neighbors, including the Wasukuma, who are the largest ethnic group in Tanzania (more than 5 million or 13% of the population). Before the onset of colonial rule, all people who

were part of the present day Sukuma, Sumbwa, and Nyamwezi ethnic groups were called Nyamwezi by outsiders to the region.

The term *Nyamwezi* probably meant either “people of the moon” or “path of the moon,” most likely referring to their location in the Western part of Tanzania. In the Nyamwezi language, *Sukuma* means “north,” and the Wasukuma were those who lived north of Unyamwezi. Perhaps the best way to characterize Nyamwezi identity before colonialism would be as an ethnic category, meaning that the people shared a common language and culture without a sense of self-identification.

The Wanyamwezi are believed to have migrated during the 16th and 17th centuries from various parts of east and central Africa to their homeland in western Tanzania. The first Nyamwezi settlers formed small communities that grew into larger kingdoms ruled by a *mtemi*, or king. Prior to the 1860s, Nyamwezi states tended to be small, usually numbering a few thousand persons. They had no standing armies and depended on the men of the society to defend their country from raids or to raid neighboring states. These raids and counter raids were aimed at capturing grain, cattle, and other goods or avenging a wrong done by one state or ruler to another. Prior to the 1860s, it was unusual for one state to use military power to impose its authority over another. However, in the years leading up to the 1860s Nyamwezi societies began to undergo important changes.

The Wanyamwezi were well-known traders in the pre-colonial era and played an important role in developing the region's trade. They pioneered caravan routes throughout east and central Africa, while Nyamwezi trading settlements spread throughout central Tanzania. It is the Nyamwezi who are said to have established the caravan routes to the coast that were later used by Swahili and Arab traders and European explorers, including Dr. David Livingstone, Henry Morton Stanley, Richard Burton, and John Hanning Speke. In the years leading up to the 1860s, trade with the coastal areas became increasingly important. As trade developed with the coast, one of the Nyamwezi states, Unyanyembe, became a prosperous trading center. Unyanyembe used its wealth to become the most powerful state in Unyamwezi. Soon after the rise of Unyanyembe, a rival state under the leadership of the famous *mtemi* Mirambo challenged Unyanyembe's control over the caravan routes. Unlike Unyanyembe, which used its control over trade to increase its military power, Mirambo was a great military tactician who used force to enhance his country's trading position. Mirambo can be thought of as a Nyamwezi nationalist with the vision of a unified Nyamwezi people. However, Mirambo was unable to conquer Unyanyembe and failed to build a united Nyamwezi nation-state. After Mirambo's death in 1884, Urambo split into a number of smaller kingdoms.

The onset of colonial rule brought many important changes for Nyamwezi society. For the first time the Wanyamwezi, along with the 140 other African ethnic groups in Tanzania, were united under one government. The German colonial occupation of Tanzania was very brutal. During the 1880s and 1890s Germany conducted a series of military operations throughout Tanzania with the aim of establishing a colony. Vicious reprisal raids against African areas that resisted German authority characterized German military campaigns. Often the Germans depended on local allies in their wars and raids. The first German military expedition arrived in Unyamwezi in

1890. Although it did not spark an immediate confrontation, it planted the seeds for a future German military conquest of Unyamwezi. Its commander, Emin Pasha, allied himself with the opponents of the *mtemi* Isike of Unyanyembe.

In 1892, another German expedition reached Unyanyembe and, acting on reports from Pasha and Isike's enemies, launched a series of attacks on Isike's headquarters, *Isiunula* (the "impregnable" fort). Isike's fortress proved to be well named, as the European attackers were defeated three times by Isike's troops. Later, in December of 1892, the Germans sent their best military officer, Lieutenant Tom von Prince, to fight Isike. Prince formed alliances with the son of Mirambo, Katukamoto, who ruled what was left of Urambo, and Bibi Nyaso, an internal opponent of Isike from Unyanyembe.

Using German African troops and the forces of Isike's enemies, Prince was able to capture Isiunula. Rather than being captured by the Germans, Isike unsuccessfully tried to commit suicide by blowing himself up with his ammunition dump. After the Germans stormed the fort, they hanged his nearly lifeless body from the closest tree and shot his young son. The Germans then made Bibi Nyaso the *mtemi* of Unyanyembe. The killing of Isike, however, did not bring Unyamwezi fully under German control; for two years after the attack on Isiunula, Isike's chief minister, Swetu, led a guerrilla war against the Germans. Swetu was eventually forced to retreat from Unyanyembe, bringing an end to Nyamwezi armed resistance to German colonial rule. Ironically, Mirambo's son, Katukamoto, who used the Germans to defeat his rival Isike, was later imprisoned by his onetime ally in 1898. The Germans then broke up the remaining parts of Urambo and appointed their own *mtemi* to rule it.

In many respects the European colonialists in Tanzania used the "take us to your king" approach to rule Tanzania, and where no king existed the Europeans created one. For example, in nearby Usandawe, Mtoro, the leader of a Nyamwezi trading settlement, was appointed chief of the Sandawe people. The Wasandawe had no supreme leader or king and authority was dispersed throughout society. These types of African societies were difficult for Europeans to understand and to incorporate into their colonial administration. In Usandawe, the Germans mistakenly thought that the Wanyamwezi settlers were an immigrant ruling class, much as the Germans saw themselves in Tanzania. However, the Nyamwezi trading center was more of an enclave that the Wasandawe tolerated but did not particularly like.

When the Germans appointed Mtoro the headman of the Wasandawe, the Wasandawe showed their displeasure by expelling the Wanyamwezi settlers from their territory and taking their cattle. In response, the Germans launched two punitive expeditions against the Wasandawe. The first force killed 800 Wasandawe without suffering any casualties, and the second confiscated over 1,000 head of cattle, most of which were given to the displaced Wanyamwezi settlers. Under German protection the Wanyamwezi returned to their settlement. But when the German soldiers left Usandawe, they were attacked by the Wasandawe, who also raided the Wanyamwezi settlers. The Germans responded by launching a bloody war against the Wasandawe that finally established their authority in the area.

Colonial rule in Unyamwezi and throughout Tanzania was based on physical violence and a racial hierarchy in which Africans were segregated into a rural and urban underclass.

Nyamwezi *watemi* (*watemi* is the plural of *mtemi*) were made responsible to German colonial authorities. Nyamwezi leaders who did not suit the Germans were removed. The Germans forced *watemi* to collect taxes and to supply men to labor on European plantations or public-works projects such as roads and railroads. These activities often made African leaders who cooperated with the Germans unpopular with their people, for the conditions for African laborers were very harsh, including whippings, beatings, and the withholding of food and wages. However, African leaders who resisted the Germans faced the threat of being deposed, arrested, or exiled, or possibly of exposing their societies to brutal retaliatory raids by the Germans. The goal of the Germans was to reduce the authority of the *watemi* and to administer Unyamwezi directly through German colonial officials.

German rule was deeply resented. One of the notable acts of resistance to colonial rule was the Maji-Maji rebellion, which engulfed Tanzania from 1905 to 1907. A prophet named Kinjikitile, who called on the African people to take up arms to expel the Germans, inspired the rebellion. Specially trained assistants who traveled throughout Tanzania spread Kinjikitile's message. While historians believe that many Wanyamwezi supported Kinjikitile, Unyamwezi did not erupt in violence against the colonialists, as did the southern and coastal regions.

After World War I, Britain replaced the defeated Germany in Tanzania. Britain inherited Tanzania as a League of Nations Trust Territory. As such, Tanzania was to be administered to the benefit of the African inhabitants, but in practice, British administration of the territory was characterized by racial segregation.

While the Germans aspired to administer Tanzania directly without going through traditional or indigenous leaders, the British strove to create a system of local government, called "indirect rule," which incorporated "tribal" units of government into the colonial administration. Like the Germans, British colonial authorities believed that all Africans belonged to a tribe, just as all Europeans belonged to a nation. They viewed the tribe as a cultural and political unit with a common language, a single social system, established customary law, hereditary membership, and a chief. But the realities of African social structures often did not match European conceptions, and African societies were restructured, and sometimes invented, by colonial authorities. In Unyamwezi, the British followed a policy of amalgamating smaller Nyamwezi states into larger ones to create larger administrative units. For example, the British subordinated a number of smaller Nyamwezi states into Unyanyembe. They also replaced the ruling line of Bibi Nyaso as *mtemi* of Unyanyembe with a descendant of Isike, in order to avenge Bibi Nyaso's collaboration with the Germans. Under British rule, Africans were denied the right to participate in politics or public administration outside of "tribal" government.

Conflicts between chiefs and Arab traders lasted through the last half of the 19th century. Chiefs such as Isike and Mirambo, no longer being purely ritual, had found that the arrival of firearms enabled them to establish standing armies and a new state organization. It was firearms and trade that transformed the region, for trade generated the wealth needed to obtain firearms. Chiefs were normally ritual figures who had no very rigid rules of succession. They lived very restrict-

ed lives, with the most significant duties being carried out by headmen. They were strangled when they became seriously ill (as probably happened to Mirambo while dying of cancer) for the well being of the state and its continuation was identified with chief and his subordinate administrators. A hierarchy of territorial offices came into being. There were sub-chiefs, assistant chiefs, headmen elders, ritual officials, etc., as each dynasty seized power from another. Greater Nyamwezi had become a war zone.

Colonialism brought about a fundamental change in the way the Wanyamwezi perceived themselves. Many Wanyamwezi, fighting against the racism associated with colonial rule, which portrayed Africans as primitive, culturally backward, and unfit for independence, directed their energies into promoting their cultural traditions, writing histories, and developing feelings of Nyamwezi identity. While a shared language and culture, which provided the foundation for building an ethnic group, had existed in Unyamwezi since the early 1800s, it was not until the onset of the colonial era that the Wanyamwezi began to see themselves as one people. In the towns, the Wanyamwezi formed ethnic associations to help their members find work, organize and conduct funerals, write letters for the illiterate, and help in other ways in times of need. One of the first Nyamwezi urban associations was "The New Wanyamwezi Association," formed in 1936 in Dar es Salaam. The organization reflected the loose sense of Nyamwezi identity and was open to all people from the western plateau, including the Sukuma and Sumbwa.

Many Wanyamwezi, like Tanzanians of other ethnic groups, played important roles in the struggle for independence. The brother of the chief of Unyamwezi, Abdallah Fundikira, was an early leader of the Tanzania National African Union (TANU), the political party that spearheaded the fight for Tanzanian independence. Many Wanyamwezi became labor leaders after workers gained the right to form labor unions during the midst of the independence struggle in the 1950s.

While numerous traditional leaders including Abdallah Fundikira supported TANU, many others did not and sided with colonial authorities. After independence the role of traditional leaders in local government was abolished by TANU, which was interested in developing a national culture that helped people to identify with the new nation, rather than promoting sub-national identities.

Tanzania like many modern African states embraces a democratic system of Government with multiparty competitive elections and a free-market economy. The Wanyamwezi participate actively in the political process of Tanzania. A number of Wanyamwezi have emerged as leaders of the opposition parties and have played important roles in the ruling party, CCM (Chama cha Mapinduzi/Party of the Revolution, formerly known as TANU).

## 2 LOCATION AND HOMELAND

The Nyamwezi make up about 4% of the Tanzanian population and number around 1,500,000. They live in the northwest central area of the country, between Lake Victoria and Lake Rukwa. Unyamwezi is located in a high plateau area with elevations ranging from about 900 to 1,375 meters (about 3,000 to 4,500 feet). Much of the land is covered by dry woodland with strings of ridges and numerous granite outcroppings. Most of Unyamwezi is not considered prime agricultural land. Water

is often scarce. From April to October, very little rain falls and the rivers often dry up. The rainy season lasts from October to April and is characterized by wide variations in yearly rainfall. Unlike some of the more fertile agricultural regions, which have two growing seasons, Unyamwezi has only one. The major city in Unyamwezi is Tabora, a famous pre-colonial trading center and former colonial administrative center. Tanzanians of various ethnic groups live in Unyamwezi. Many Wasukuma, Wasumbwa, and Watusi live throughout Unyamwezi, and even in some rural areas, non-Wanyamwezi may make up as much as 73% of the population. Many small shop owners in the rural areas are Arabs, as there are many people in Tabora. There are also a number of Asian Tanzanians, whose ancestors came from India and Pakistan, living in the larger commercial centers of Unyamwezi. About 30% of the Nyamwezi live and work outside Unyamwezi, mainly in neighboring areas and in the coastal regions.

## 3 LANGUAGE

Historically, there have been five tribal groups, all referring to themselves as Wanyamwezi to outsiders: Kimbu, Nyamwezi, Sukuma, and Sumbwa, who were never united. All groups normally merged have broadly similar cultures, although it is an oversimplification to view them as a single group. The Nyamwezi have close cultural ties with the Sukuma people. Their homeland is called Unyamwezi, and they speak the language Kinyamwezi, although many also speak Swahili or English. Many Wanyamwezi can speak at least three languages. Most

are also fluent in Kiswahili, Tanzania's national language. Many Wanyamwezi are also able to speak English and the languages of neighboring ethnic groups, such as Kisukuma, the language of the Sukuma people.

Kiswahili has borrowed many words from Kinyamwezi, and vice versa. For example, the Kiswahili term for the president's residence is *Ikulu*, which is the Kinyamwezi word for the mtemi's residence. Kinyamwezi has about 84% lexical similarity with Sukuma, 61% with Sumbwa, and 56% with Nilamba.

#### 4 FOLKLORE

One of the most important historical figures for the Wanyamwezi is the mtemi Mirambo. Mirambo was the mtemi of a small state in Nyamwezi called Uyowa. By the time of his death, he had created a central African empire that incorporated the greater part of Nyamwezi. Mirambo was a brilliant military tactician, known for his fierceness in battle. Ironically, the inspiration for the innovations that made Mirambo's army a powerful fighting force came from an early battlefield defeat. After failing to conquer a neighboring state, Mirambo decided to reorganize his army. Mirambo asked a neighboring chief to train his army in Ngoni fighting techniques, which were based on the style of warfare pioneered by Shaka Zulu of South Africa. It was said that Mirambo acquired his name, which means "corpses" in Kinyamwezi, from his Ngoni allies who marveled at the large number of people he killed in battle. Mirambo was so feared throughout Nyamwezi that mothers would stop their children from crying by telling them, "*Hulikaga, Limilambo likwiza*" ("Be quiet, Mirambo is coming").

Mirambo created a standing army called *rugaruga*, which was organized into regiments of similar-aged soldiers. Soldiers between 20 and 30 years of age formed the backbone of the *rugaruga*. They were not allowed to have wives, children, or houses and lived with Mirambo inside his fortress capital, Iselemagazi. These young *rugaruga* were used on campaigns to conquer other states and to raid for cattle, slaves, and property. The young *rugaruga* wore red cloth often decorated with feathers or human hair said to have been shaved off their fallen victims. The *rugaruga* were armed with pistols, muzzle-loading rifles, spears, bows and arrows, and shields. Before battle, Mirambo's soldiers would eat meat specially prepared by ritual experts and smoke *bhang'i* (Indian hemp, or marijuana). Older, more experienced soldiers were mainly used for defensive purposes and organized into units called *sinhu*. They were allowed to marry and have their own houses. A special king's guard, wearing black uniforms and turbans, was created to protect Mirambo during battle.

After reorganizing his army, Mirambo conquered and raided the other Nyamwezi states as well as nearby non-Nyamwezi states. Success on the battlefield led to a rapid expansion of Mirambo's *rugaruga*, which grew from a few hundred in the 1860s to 10,000 by the 1880s. The fear of Mirambo's *rugaruga* led many states to voluntarily accept Urambo rule. Leaders who aligned their states with Urambo were allowed to continue as leaders of their territory, but those who fought against Urambo were killed.

Mirambo used military force to take control of the caravan routes leading west to Lake Tanzania, over which ivory and slaves passed, as well as the caravan routes heading north to Lake Victoria and the markets in Buganda, Bunyoro and the other large kingdoms in the lakes region. Mirambo's kingdom

grew in size and power to the point of rivaling Unyanyembe, the dominant Nyamwezi state of the time. Urambo blocked Unyanyembe's access to important markets to the west and north. Feeling their position threatened by Mirambo, the merchants in Tabora and the leaders of Unyanyembe invited dissidents from Urambo to train their army in Mirambo's military tactics. The growing tension between Urambo and Unyanyembe caused Mirambo to close the caravan routes to traders from Unyanyembe. Hostilities broke into open warfare in 1871, when Unyanyembe attacked Urambo. After reaching far into Mirambo's territory, Unyanyembe's army was successfully ambushed by Mirambo's forces. Mirambo then attacked Tabora. Mirambo was unable to conquer Unyanyembe, however.

Mirambo's war with Unyanyembe interrupted trade and angered the large Arab and Indian commercial houses on the coast. In an effort to defeat Mirambo militarily, the Sultan of Zanzibar sent three thousand troops to help Unyanyembe. However, the Tabora Arabs refused to cooperate with the leader of the troops, and the troops were withdrawn. On the coast, the Sultan enforced sanctions against Mirambo, especially with regard to firearms and gunpowder. To evade sanctions, Mirambo entered into blood brotherhoods with European missionaries, traders, and explorers and asked them to trade his goods on the coast. Mirambo died in 1884 while on a campaign against the Nyamwezi state of Ukune. After Mirambo's death, the component states of Urambo reasserted their independence and his empire broke up.

The historical importance of Mirambo lies in the fact that he was a brilliant military leader and diplomat who was able to deal with Europeans from a position of strength and use Europeans to further his own interests. The example of Mirambo challenged the basic assumptions on which European colonial rule in Africa was built.

In honor of the important historical role played by Mirambo, his grave was made a national monument by the government after independence. A major street in the nation's capital, Dar es Salaam, and the military garrison at Tabora were also named after him. One of Mirambo's war songs, "*Ohoo Chuma chabela mitwe*" ("Iron has broken heads"), was adopted by Julius Nyerere, Tanzania's first president, who changed the words and used it to inspire the young nation. However, one major difference existed between Mirambo and the nationalist movement. While Mirambo was dedicated to creating a great Nyamwezi kingdom through the force of arms, the nationalist movement was geared toward creating an independent Tanzania through peaceful means. The violence associated with Mirambo has lessened to some extent, his suitability as a hero for modern Tanzania.

#### 5 RELIGION

Traditional beliefs, Islam, and Christianity have shaped Nyamwezi spirituality. Most follow a traditional religion, despite conversion attempts by Islam and Christianity. They believe in a powerful god called Likube (High God), Limatunda (Creator), Limi (the Sun) and Liwelolo (the Universe), but ancestor worship is a more frequent daily practice. Traditional Nyamwezi spirituality centers on the connection between the living and their ancestors. Ancestors are seen as upholding the tradition, law, and values of society. The spirits of the ancestors are believed to be capable of intervening into the affairs of the living, either to show their pleasure or, more commonly, to show

their anger. Not honoring one's ancestors is a sign of disrespect for Nyamwezi culture and tradition and is bound to lead to adverse consequences, usually sickness.

Offerings of sheep or goats are made to ancestors, and the help of Likube is invoked beforehand. Spirits also play an active role in Nyamwezi religious life, with mfumu, witchdoctors, or diviners, playing the role of counselor and medical practitioner. Bulogi (witchcraft) is a powerful force in Nyamwezi culture, with cults forming around (for example) possession by certain types of spirit. The Baswezi society recruits people possessed by the Swezi spirit.

With the main exceptions of the villages around Tabora and of areas around some Christian missions, neither Islam nor Christianity has flourished strongly among villagers. Religion in the area, like society itself, is accretive rather than exclusive.

Beliefs in a High God are widely held but involve no special cult. Ancestor worship is the main element in the religious complex. Chiefs' ancestors are thought to influence the lives of the inhabitants of their domains, but ordinary ancestors only affect their own descendants. Belief in witchcraft is widespread and strong.

In addition to the High God and the ancestors, some non-ancestral spirits are believed to influence some people's lives. Spirit-possession societies, such as the Baswezi, deal with such attacks and recruit the victims into membership. As a link between belief and action, the diviner (mfumu) is a key figure in religious life; diviners interpret the belief system for individuals and groups. They decide which forces are active and help people to deal with them. Although it is not strictly an hereditary art, people often take up divination when a misfortune is diagnosed as having been induced by a diviner ancestor who wishes them to do so. There are often several diviners in a village, but only one or two are likely to attract a wide clientele. All diviners, like their neighbors, engage in farming and participate fully in village life.

Divination takes many forms, the most common being chicken divination, in which a young fowl is killed and readings are taken from its wings and other features. Sacrifices and libations, along with initiation into a spirit-possession or other society, may result from a divinatory séance. Divination and subsequent rituals may divide people, especially if witchcraft is diagnosed, but in many contexts the system allows villagers to express their solidarity with each other without loss of individual identity. In addition to ritual focused upon individuals and attended by their kin and neighbors, there is some public ceremonial at village and wider levels. Chiefly rituals are still sometimes performed, and there are ceremonies to cleanse a village of pollution when a member dies.

Likewise, the inability to live socially with family and friends is liable to cause the ancestors to intervene. Relations with the ancestors and respect for Nyamwezi traditions are maintained through ritual activity such as animal sacrifices and other ceremonies. These activities are overseen by diviners, who act as spiritual advisers for the Wanyamwezi, interpreting events and determining which spirits are involved and what rituals should be followed to restore balance in people's lives. Both men and women can become diviners, many of whom are self-taught, having worked through their own serious spiritual difficulties.

During pre-colonial times, spirituality underscored the mtemi's power. The mtemi was seen as the embodiment of the law of the ancestors on earth. He was mediator in the relation-

ship between the living and their ancestors and had an important ceremonial role. Each inhabitant of a Nyamwezi country was seen as the child of his or her own ancestors and a child of the royal ancestors. The mtemi would oversee royal spiritual ceremonies directed toward the former watemi, societal heroes, and legendary diviners. The relationship between a community and its ancestors was very important. Breaks in this relationship could lead to ancestors' showing their displeasure with the mtemi or society through some calamity such as drought or military defeat.

Nyamwezi spirituality fulfills two needs. First, it is practical in that rituals are designed to help people diagnose the source of their problems and offer solutions. For example, diviners will tell people the cause of their sickness and what ceremonies to perform to restore a balance in their lives. Secondly, Nyamwezi spirituality centers on giving a moral meaning to people's problems. It focuses on how people can live at peace with themselves and with those around them.

Although Nyamwezi religion emphasizes living in harmony with one's ancestors and community, witchcraft is a serious problem in Unyamwezi. It offers an outlet to built-up social tensions that are found in the intense interpersonal relations that develop in rural village society. Some people have moved from their homes to escape the power of witches, who are believed to be able to poison and bring misfortune to their victims.

The traditional Nyamwezi belief system has influenced the way many Wanyamwezi interpret Islam and Christianity. While many rural Wanyamwezi are not practicing Christians or Muslims, they do believe in one overarching god. However, unlike Christianity or Islam, which provide their followers with a personal religious code to be followed, Nyamwezi spirituality emphasizes personal spiritual development and the creation of personal behavioral taboos so that the individual can live in harmony with the community and ancestors. While many Wanyamwezi follow traditional practices in regard to healing, this does not preclude going to doctors or hospitals. Rather than competing with Christianity, Islam, and modern medicine, traditional Nyamwezi beliefs and diviners supplement the newer religions and practices.

## 6 MAJOR HOLIDAYS

The major holidays in Tanzania are Union Day (April 26), which celebrates the creation of the union between mainland Tanzania and the Islands of Zanzibar; May day/Workers Day (May 1); Independence Day (December 9); and New Year's Day (January 1). Major religious holidays are Christmas, Good Friday, Easter, Id ul-Fitr (end of Ramadan), Id ul-Haj (Festival of Sacrifice), Islamic New Year, and the Prophet Muhammad's Birthday. Secular holidays such as Independence Day are characterized by military parades and speeches by the country's leaders, while religious holidays are usually celebrated by attendance at the mosque or church and visits with family and friends. Feasts on these days often feature pilau, a spicy rice dish.

## 7 RITES OF PASSAGE

For the Wanyamwezi, the first major rite of passage is birth. It should be noted that with the introduction of Western medical practices and new values, many of the practices surrounding birth have changed. Traditionally, newborn babies were se-

cluded until their umbilical cords fell off. When the child was brought out of seclusion, he or she was presented to the village and given a name by the midwife. The child would often be named after her grandfather or grandmother. If the pregnancy had been difficult, the child was usually named Maganga, Misambwa, or Kalamata. If the mother or father had died before the child was born, the child would be called Mulekwa or Kalekwa, meaning “the one who is left behind.” For baby boys, their father would make them a small bow and arrow as a symbol of strength. The male child, together with his bow, was then taken before the male village elders. After a feast, the elders one by one would shell a peanut near the child’s ear in a ceremony called *bupatula matwi*, so that the child would be alert and attentive when he grew up. If the child was a girl she would be brought before a group of women elders.

Traditionally, twins, babies born with teeth, and those born legs first were considered a bad omen for their parents and the community. It was thought that if they lived, the parents would die and the community would experience disasters. Usually these children were killed and elaborate ceremonies involving the *mtemi* were needed to counter the effects of their birth. Not surprisingly, many of the early converts to Christianity in Unyamwezi were these outcast children and their families. Today, these practices are against the law, and new societal norms and practices have been adopted.

In precolonial times (and even today), long journeys were considered a rite of passage into manhood. Another rite of passage is the requirement that a man be capable of establishing his own household, meaning that he must be economically independent before he can get married.

Marriage is a very important Nyamwezi institution. As in the United States, the majority of marriages end in divorce. Nyamwezi men usually marry for the first time in their late teens or early twenties; women tend to marry at a slightly younger age. Polygyny is practiced in Nyamwezi society, but in many respects polygynous marriages tend to be unstable than single-partner marriages. The courtship process typically involves a young man’s search for a suitable young woman to marry. With one or two male friends, he visits her home and discusses the possibility of marriage. Usually this process goes on for a number of weeks. If, after consulting with her female elders, the young woman agrees, bride wealth negotiations begin. Male neighbors of the groom and bride, acting on instructions of the couple’s fathers, meet at the bride’s house to discuss bride wealth. Often negotiations are carried out for several days before an agreement can be reached. Typical payments consist of livestock for the bride’s paternal grandfather and maternal uncle. Other payments might also be required. Much, but not all, of the bride wealth would be returned in case of divorce. After the bride wealth is agreed upon, the groom’s father holds a large feast, during which a delegation from the bride’s family comes to collect the cattle and other goods. After the bride wealth has been paid, a wedding ceremony, usually lasting one to three days, is held; and amidst much feasting, dancing, and singing, the bride and groom receive blessings in public from their parents and relatives. Many of these traditional practices have been incorporated into Christian weddings, while Muslim weddings tend to mirror those found at the coast.

The last important rite of passage is death. After a person dies, close relatives have their heads shaved in mourning. The bereaved parents and spouse go into a period of seclusion.

When it is time for the actual burial, all the men in the village come together to help; the women and children must hide themselves until the body is buried. A special ritual is then performed to purify the village, followed by a divination to determine the cause of death. Finally, a ceremony is held to mark the end of mourning. Traditionally, witches and people with diseases such as leprosy would not be buried, and their bodies would be left in the bush. This practice is no longer followed. Funerals are important rituals for bereaved families and their kin and neighbors. Neighbors dig the grave and take news of the death to relatives of the deceased who live outside the village. The dead become ancestors who may continue to affect the lives of their descendants and demand appeasement. The idea that the dead live on in their descendants is expressed in terms of shared identity between alternate generations

## 8 INTERPERSONAL RELATIONS

Greetings are very important in Nyamwezi society. Greetings last for several minutes, and it would be considered rude just to pass a friend on the street and say, “Hi” as in the United States. As a form of respect, younger people usually initiate greetings with their elders; then the elder will take the lead in the ensuing conversation, inquiring how the person is doing, how work or studies are going, and whether the relatives are well. One greets very important people by bowing, clapping one’s hands, and averting one’s gaze before a handshake. Greetings among close friends are less formal and often incorporate some teasing and joking. Greeting is always accompanied by a handshake, as is leave-taking. After the greetings, it is considered impolite to “get straight to the point,” and the matter to be discussed is usually approached gradually in an indirect manner.

Visiting relatives and friends is a favorite activity on the weekends, on holidays, or after work. Hospitality is taken very seriously. It is customary for the visitor to be given some refreshments, usually soda, tea, coffee, or traditional beer, and a snack. If the person comes at mealtime, he or she will be invited to join the family for the meal. It is customary to cook more food than is usually eaten by the family, in case guests arrive. If an important visitor comes or someone comes from a long journey, it is customary to slaughter a chicken and have a large feast in the person’s honor. At parties or celebrations, it is the responsibility of the host to provide guests with a good meal, beverages, and entertainment. As some celebrations last all night, the host is often responsible for providing sleeping accommodations.

## 9 LIVING CONDITIONS

Tanzania is one of the poorest countries in the world. Within Tanzania the most prosperous area is Dar es Salaam, the capital, while the poorest region is the southern coast. Unyamwezi falls between these two extremes. Although Tanzania is one of the poorest countries, its quality of life indicators such as literacy rates, life expectancy, and access to safe drinking water tend to be comparable with countries that have higher income levels.

Most people in Unyamwezi live in houses made of mud bricks with either thatched grass or corrugated iron roofs with dirt floors. Most houses do not have electricity or indoor plumbing. Since rural incomes are very low, most people have few material possessions; these consist mainly of radios,

bicycles, lanterns, secondhand clothes, shoes, and household goods.

One of the main problems affecting the Wanyamwezi is malaria. The disease is endemic in most parts of Tanzania, including Unyamwezi, and it is about as common as the flu is in North America. The disease, while not usually fatal for healthy adults, can be fatal for people in a weakened condition or for the very old or very young. Another major health problem in Unyamwezi is the tsetse fly. It is slightly larger than a housefly and has a stinging bite. The tsetse fly is a carrier of two diseases, which adversely affect humans. One disease, sleeping sickness, is lethal to humans. The other is lethal to cattle and is called trypanosomiasis. Tsetse flies thrive in areas where there are abundant wild animals, which are immune to the diseases that strike humans and their livestock.

Diviners and other local experts provide herbal and other forms of treatment for illness. Shops sell some Western medicines, including aspirin and liniments. Village dispensaries and state and mission hospitals also provide Western medicine. People commonly use both Western and indigenous treatments rather than trusting wholly in either.

Transportation is a major problem in Tanzania. Most roads are in terrible shape and filled with potholes, making long-distance travel very difficult. Currently a major project to repair the roads in Tanzania is under way, which has eased some of the difficulties in road transportation. Tabora, the main city in Unyamwezi, is at the crossroads of the central railway line and is easily reached from Kigoma on Lake Tanganyika, Mwanza on Lake Victoria, and Dar es Salaam. There is also an airport in Tabora, but the cost of tickets keeps most people from flying.

## 10 FAMILY LIFE

Most families are made up of a mother, a father, and their children. Families often take care of relatives' children. Men have traditionally controlled most of the power within a household. For example, only men are able to inherit property. This pattern is changing, as the government has stressed equal rights for women. Within the household women are responsible for many of the daily chores, such as weeding crops and cooking, while the men are responsible for work such as building the house and clearing the fields. Children help their parents watch the fields to keep birds from eating the millet and sorghum. Girls also help their mothers with household work, while boys help with herding the livestock. It is not unusual for school enrollment rates in rural areas to fall during harvest and planting times as children help their parents with agricultural work.

Historically, villages were normally not kinship units and people found their relatives spread over wide areas. Spouses generally came from outside the Tembes and sons commonly moved away from their father's homestead. The core members of a domestic group consisted of the husband, his wife or wives, and any children who still lived with them. Sometimes relatives, such as a mother, younger unmarried brothers or sisters, and their children could be found together. The sexes usually ate separately. In general men did the heavy work, while women did the recurring tasks and much of the everyday agricultural work.

Ideally every adult person should be married, and every married woman should have her own household and bring her own household utensils. The husband is said to technically own his wife's hut, fields, and most of the household's food,

but a wise husband usually listened to the wife's advice. There was little ranking between co-wives, although seniority in terms of who was first married was at times recognized. Jealously and sorcery were common, much depending on how well co-wives got along. Unlike the Wagogo, divorce was common, a large majority of persons experiencing at least one divorce by the time they were 50 years of age, which included the return of bride wealth minus the number and sex of the children born. Divorce was most often accomplished by the separation of either party. Chieftdom courts found certain reasons to automatically justify divorce: a woman's desertion, being struck by a wife, the wife's adultery, sexual refusal of the wife, and having an abortion, were all adequate reasons. Grounds for a husband to claim divorce were failure of the wife to carry out household duties, visiting a doctor without permission, and possible infertility. A wife could divorce if the husband deserted for a period of time without supporting her; if the husband seriously injured her by, for example, breaking a limb, but not simply beating her; the husband's impotence or perversions; or if her husband generally failed to maintain her and her children properly. A husband's adultery would not be one of the grounds.

It was customary for the younger brother of her former husband to inherit a widow, (a kind of "widows and orphans" security system), although it was not done against her will. Among some, inheritance of a widow by her husband's sister's son was particularly favored.

## 11 CLOTHING

Wanyamwezi traditionally wore clothing made of bark cloth, but as trade grew in the 18th century, imported textiles became popular. Many women wear *khangas*, printed cloth adorned with Swahili sayings and vitenge, printed cloth with brightly colored and ornate designs. Dresses based on Arab, European, and Indian styles are also popular. Men wear trousers and shirts, and on special occasions Muslim men wear flowing white robes called *Kanzus*.

## 12 FOOD

A favorite food is *ugali*, a stiff porridge made from corn, millet, or sorghum meal and served with beef, chicken, and vegetables. Cassava, rice, bread, peanuts, spinach, cassava leaves and other vegetables are also eaten. Snacks often consist of fruits. When available, the meat from wild game is a special treat. *Ugali* a porridge made from hominy and served with meat and vegetables. Beer made from fermented corn, sorghum, or millet was also common. Goats were used for ancestor sacrifices, but the economic value of goats and sheep lay in their meat and skins. By tradition five goats or sheep equated one bull; two bulls were worth one cow. Their year is divided into two seasons, wet and dry, with considerable variation depending on time and place.

## 13 EDUCATION

Before the European colonial occupation of Unyamwezi, children were educated by their elders. They would learn how to farm, hunt, cook, herd cattle, and do other work from their parents. Stories told by parents or grandparents after the evening meal were an important way in which children were socialized into Nyamwezi society. Typically stories began with a

call and response, in which the story teller would tease the listeners as follows:

Listeners: Story!

Storyteller: A Story.

Listeners: There once was what?

Storyteller: Someone.

Listeners: Go on!

Storyteller: You know who.

Listeners: Go on!

Many children's stories in the United States are based on African folktales. For example, one Nyamwezi story closely resembles the tale of "Br'er Rabbit." It tells of some farmers who decided to catch a hare that was eating their crops by using a wood carving covered with glue. When the rabbit came to the field and saw the wood carving he tried to talk to it. When the carving did not respond the rabbit resorted to violence, kicking and punching the carving and becoming stuck in its glue. When the farmers returned to kill the rabbit he pleaded with them not to beat him to death on the sand. When the farmers tried to do this, the soft sand broke the rabbit's fall and he was able to run away.

Proverbs are another important way in which Nyamwezi culture is passed on from generation to generation. One Nyamwezi proverb states that "Hoes that are together don't stop scraping each other." What this proverb means is that when people live together, disagreements are going to occur. Unlike American society, where people place a high value on their privacy and are socialized to mind their own business, Nyamwezi culture stresses the importance of outside intervention in a conflict. When quarrels erupt it is expected that neighbors, friends, family members, and elders will help to calm the situation. After a disagreement it is customary for the people involved to tell their sides of the story to mediators and for a consensus to be reached on who is at fault. The guilty party is then asked to refrain from the same behavior in the future, and the parties shake hands to show they have made up.

While informal education is still important for teaching societal values, formal education plays an important role in equipping the Wanyamwezi with the basic skills needed for life in modern Tanzanian society. After independence the leaders decided to devote most of the educational resources to providing free elementary education for all Tanzanian children. Until about 1980, this policy was very successful in improving elementary attendance rates: from 45% before independence to around 90% by 1980. However, enrollment rates have dropped in recent years in response to deteriorating economic conditions and the poor quality of some elementary schools. Very few Tanzanian children (around 5%) have a chance to go to high school, and only a very small percentage of high school graduates are accepted for university studies. Until 1994, all students who finished high school were required to attend National Youth Service. However, economic difficulties have caused the suspension of this program.

Education is very important for most Tanzanian families. But their appreciation of education is mixed with practicality. The low quality of some elementary schools, rising costs associated with education, strong competition for the few spots available in secondary schools, and the difficulties many secondary and university graduates have in finding jobs have

caused some parents and students, especially in poorer families, to question the usefulness of elementary school.

## 14 CULTURAL HERITAGE

The Wanyamwezi have a rich cultural heritage. Perhaps the most important part of their heritage is their emphasis on harmonious and balanced social relations. Nyamwezi society has historically been open and placed a high value on tolerance. This has allowed many people from outside Unyamwezi to live peacefully in the area and has allowed the Wanyamwezi to live throughout Tanzania. One of the unique institutions governing the relations among different ethnic groups in Tanzania is *utani*, or what is often called a joking relationship. *Utani* involves a special bond that allows people from different ethnic groups to verbally abuse each other without taking offense. Usually these joking relationships also entail an exchange of services and mutual aid, such as helping with funerals or helping visitors with directions or getting settled. *Utani* allows people arriving from a distant place or coming as strangers into a community to seek and receive help. Historians speculate that *utani* developed as a way to manage previously hostile and sometimes violent relationships between people of different ethnic groups. In addition to creating a positive and peaceful relationship between groups whose relationships could otherwise be marked by tension, hostility, and unpredictability, *utani* provides amusement and elevates the insult to a high art form.

For the Wanyamwezi, music and dance are an important part of their cultural heritage and play an important part in wedding festivities and other ceremonies.

Hunting is also an important part of Nyamwezi culture, and many men belong to secret societies of hunters with special rituals to help them track various types of animals.

It had always been part of the Nyamwezi system for the chief to receive tribute, bring success and prosperity to the people, and play an active role in ceremonies. All land was said to have belonged to the chief and he had the right to expel witches and undesirables; abuse was checked by the general need to maintain a large population; and while no one had the right to sell land in a chiefdom, the people had considerable security in their rights to the land. Permission to clear land was not needed, but care was taken so as not to conflict with others in the area. If there was a shortage of land in an area to be inherited, a headman could insist upon other holdings. Water was free to all.

Representational art is not strongly developed; it has mainly ritual functions. Music and dancing are the main art forms, and drums are the main instruments, although the nailpiano (a box with metal prongs that twang at different pitches) and other instruments are also found. Traditional songs are sung at weddings and at dances, but new songs are also composed by dance leaders. Male dance teams are the most common, but some female and mixed teams perform. Ritual and other societies have their own dance styles. Transistor radios are now widespread. Local and visiting jazz and other bands play in the towns.

## 15 WORK

In the precolonial era the Wanyamwezi were known for their trading activities. From the beginning of the 19th century, Nyamwezi long-distance trading caravans dominated the cen-

tral routes through Tanzania, stretching from Mrima coast ports such as Bagamoyo and Saadani to Ujiji on Lake Tanganyika. Despite the inroads of Omani Arab and Swahili trading enterprises from the middle of the century, the Nyamwezi maintained a position of strength. In the second half of the 19th century, market relations emerged as the dominant form of economic organization along the central routes, although the market for many commodities was clearly fractured by transport difficulties, and non-market relations frequently substituted for weakly developed commercial institutions and tools. Most caravan porters in 19th century Tanzania were free wage workers, and nearly all were clearly migrant or itinerant laborers. The development of a labor market for caravan porters was an early and significant stage in the transition to capitalism, which began in a period of violence and political upheaval. The argument that porters were mostly wage laborers rests on evidence that their labor was bought and sold according to fluctuating labor market conditions. Market conditions in the second half of the 19th century shows a broadly rising demand for porters, a demand that could only be met if caravan operators offered adequate wages and observed the customs established within porter work culture. Thus, market conditions along the central routes contributed to the development of a free wage labor, characterized by a unique labor culture. The Nyamwezi acted as middlemen for bringing goods plentiful in one area to areas where they were scarce. For example, salt was a scarce commodity throughout mainland Tanzania. However, high-quality salt was produced nearby at Uvinza, so the Nyamwezi traded it for iron goods in neighboring Usumbwa and Usukuma. The Nyamwezi would trade the salt and iron for cattle and skins from the Wagogo, who lived in central Tanzania (around the present day city of Dodoma). They would also trade grain, honey, bark cloth, and other forest products for cattle from the Wasukuma, Wahaya, and Waha. Nyamwezi traders traveled as far as present-day Zambia and southern Democratic Republic of the Congo and pioneered trade routes to the coast in the late 1700s. By the 1800s large Nyamwezi caravans consisting of thousands of people would head to the coast carrying ivory to trade for cloth, beads, firearms, ammunition, and gunpowder. From the early 1800s to the Civil War, the United States was one of eastern Africa's major trading partners, with ships from Salem, Massachusetts, trading American-produced cloth (called *marakani*) for ivory to make billiard balls and piano keys and gum copal, which was used in making varnish.

While the Nyamwezi had a reputation for trade before the colonial era, they gained a reputation as laborers during the European occupation. The transformation of the Nyamwezi from traders to workers had its origins in the years preceding the colonial occupation. Shortly after Nyamwezi caravans began to bring ivory to the coast, Arab and Swahili caravans launched from the ports of Bagamoyo, Pangani, Tanga, Sadani, and Dar es Salaam went into the interior and established trading centers. With support from the State of Zanzibar, coastal traders increasingly displaced their Nyamwezi counterparts. Many Nyamwezi porters were forced to work on contract or as slaves on coastal caravans.

After the Germans took power in Tanzania they used physical coercion and taxation to force the Nyamwezi into migrant labor while at the same time discouraging them from earning money through cash-crop production. As early as the

1890s, labor recruiters spread throughout the western plateau, trying to gain workers. Many Wanyamwezi went to work on European-owned plantations in order to pay their taxes. As work conditions on the plantations were very bad, characterized by flogging, poor housing, hunger, and disease, there were chronic shortages of labor. Areas of labor migration for the Wanyamwezi have included sisal plantations near Tanga, the clove plantations of Pemba, and more recently the cotton-growing areas of Usukuma. The Wanyamwezi became the backbone of mainland Tanzania's labor force, being employed in great numbers to construct and work on the railways; work on the docks in Mombasa, Kisumu, Tanga and Dar es Salaam; work on Kenyan farms and in the Kenyan police; work for British safari firms; and even work in South African gold mines.

Since independence, a number of Wanyamwezi have become politicians, civil servants, teachers, businesspeople, and professionals such as doctors, lawyers, and accountants. While many Wanyamwezi have become involved in the various aspects of the modern economy, most are agriculturalists relying on traditional farming techniques.

While trade and wage labor were important activities for the Wanyamwezi, the backbone of Nyamwezi society has been agriculture. Many Wanyamwezi men would farm for half the year and engage in trade for the other half. As in the past, most of the farming is done manually although some tractors and animals are now used. Since the Wanyamwezi live in areas where rainfall is often unreliable, they long ago developed techniques, such as ridging their fields, to conserve water. The major crops are sorghum, millet, maize (corn), rice, sweet potatoes, cassava, peanuts, beans, chickpeas, gourds, sunflowers, pumpkins, cotton, and tobacco.

Elephant hunters have historically been one of the most prestigious occupations among the Nyamwezi, since the elephant hunters could get very rich from ivory trade. The elephant hunters were organized in a guild, which only accepted those who could pass the apprenticeship and the tests that were associated with it. Hunting had a wide variety of forms. Guild members often used lethal poison, and when they used it, in a German sergeant's words, "it worked slowly but surely."

The guild members believed they possessed powerful hunting medicine acquired through rigorous apprenticeships, tracking game in all types of terrain and moving swiftly and silently through thorny underbrush. The elephant hunting led to a decrease in elephant population, which combined with the increased trade in slaves, led to large changes in the social and economic conditions.

In addition to agriculture, crafts were a part-time occupation and were not hereditary. Regionally traded products of importance were drums, ladles, stools, storage boxes for grain, and snuffboxes of horn. Iron and cloth were very important in regional networks, but the cloth industry in particular was ailing in 1857 because of severe competition from India, and over the next 60 years almost disappeared. Ironwork came from localized settlements whose products were then traded over wide areas: bows, arrows, spears, the payment of fines, and the extremely valuable hoes for bride wealth were all produced with considerable ritual by the smiths; and depending on the place that was blamed, for the heavy deforestation to obtain charcoal.

## 16 SPORTS

By far the most popular sport is soccer. The Tanzanian landscape is dotted with soccer fields, and children and teenagers enjoy playing the game, often in bare feet with homemade soccer balls. On weekends many people enjoy listening to soccer games on the radio. For those who can go to the stadium, Simba and Young Africans of Dar es Salaam are the most popular teams to watch. Many Wanyamwezi also support their local team, Mirambo, based in Tabora and named for the great pre-colonial leader Mirambo.

## 17 ENTERTAINMENT AND RECREATION

Besides soccer, many people like to play cards or play a board game called *bao*. *Bao*, sometimes called African chess, is a very complex game in which good players need to plan many turns in advance to capture their opponents' markers, or pieces. One plays by placing one's markers (usually large round seeds) into carved-out depressions on a large wooden board. More affluent families enjoy watching videos, especially action films, musicals, and Indian films—which usually combine a musical, an action film, and a love story into one movie. Perhaps the most important form of relaxation in Unyamwezi, especially in the rural areas, is visiting friends after work or on the weekends and drinking traditional homemade beer.

## 18 FOLK ART, CRAFTS, AND HOBBIES

A hobby for many children is making their own toys. Children in Unyamwezi have done this for many years. In the 1870s, children made toy guns and used ashes for gunpowder. More modern toys consist of wire cars with wheels cut out of old pieces of rubber from tires or flip-flops. Children also make their own soccer balls out of string tied around old plastic bags or socks.

Important crafts in Unyamwezi include iron-working, basket making, and making traditional stools. Some skills are closely guarded secrets that are passed down within a family or a close-knit secret society. For example, in the case of iron-working, most blacksmiths are non-Wanyamwezi, outsiders, whose work is cloaked in magic and spirits. In the case of stool making, this skill is more widely spread through Unyamwezi and is not particularly associated with any immigrant community or guild.

For adults, beer brewing is an important hobby. There are many types of traditional beer brewed by people in Unyamwezi. One of the more popular is called Kangala and is made from fermented corn bran. After the beer has been prepared, a process that takes several days, the brewer will have a party with much singing and dancing. Traditional beer is an important part of Nyamwezi life. It is used in numerous ceremonies, including weddings, funerals, feasts, and holidays. It is said that next to water, traditional beer is the most popular drink in Unyamwezi.

## 19 SOCIAL PROBLEMS

The most pressing problem facing the Wanyamwezi, as with most Tanzanians, is poverty. Malnutrition, along with lack of clean water, health care, and medicine allow opportunistic diseases to take their toll. As in most countries, poor people are often put at a severe disadvantage in dealing with more afflu-

ent groups and in protecting their rights and advocating their interests within official channels.

Tanzania was ruled from 1965 to 1992 by a one-party state that tended to restrict political rights and individual liberties. The implementation of a radical new societal development plan called ujamaa, or African socialism, in the 1960s and 1970s led to numerous economic problems including a shortage of basic goods, corruption, high rates of inflation, declining production, and a deterioration of the nation's physical infrastructure. However, these problems need to be considered within the context of a ruling regime that seemed committed to building a new egalitarian society and promoting a national culture that has so far avoided much of the ethnic animosity that has characterized numerous other multiethnic societies.

Malnutrition, the lack of clean water, and insufficient health care allow diseases to take their toll. As in most countries, poor people are often at a severe disadvantage in protecting their rights and advocating their interests through the official channels of government.

## 20 GENDER ISSUES

In traditional Nyamwezi society the roles of men and women were different. Women had an extremely important economic role as the food producers and in some cases held high political office. It is also suggested that at the village level, perceptions about correct gender roles have not changed greatly, and there is a willingness to accept women in authority, which is an indication of changing times and attitudes.

There is a strong gender division of labor. In general, men do shorter, heavy tasks, and women do more repetitive chores. Cattle are mainly men's concern, as are iron working and machine sewing. Only men hunt. Pottery is women's work. Some urgent tasks, such as harvesting, are done by both sexes. Most diviners are men. The state has been keen to draw women into politics, but only moderate progress has been made.

## OROMOS

**PRONUNCIATION:** Oro-moo-s

**LOCATION:** Oromia in the Ethiopian Empire; Kenya; Somalia

**POPULATION:** 40 million

**LANGUAGE:** Afaan Oromoo

**RELIGION:** Waaqeffannaa (original Oromo religion); Islam; Christianity

**RELATED ARTICLES:** Vol. 1: Ethiopians

### 1 INTRODUCTION

Although Oromos have their own unique culture, history, language, and civilization, they are culturally related to Afars, Somalis, Sidamas, Agaws, Bilens, Bejas, Kunamas, and others. Oromos are best known for their former egalitarian social system known as *Gada*, and their military organization that enabled them to emerge as one of the strongest ethnations in the Horn of Africa between the 12th and mid-19th centuries. *Gada* was a form of constitutional government; it was also a social system. Politically it was practiced through the election of political leaders; corrupt or dictatorial leaders would be removed from power through *buqisu*, or recall before their official tenure. Oromo women had a parallel institution known as *Siqqee*. This institution promoted gender equality in Oromo society.

*Gada* closely connected social and political structures. Male Oromos were organized according to age and generation for both social and political activities. The *Gada* government was based on democratic principles: the *Abba Boku* was an elected “chairman” who presided over the assembly, and the *Abba Dula* (the defense minister) was one of the leading figures in the government. The *Abba Boku* presided over the assembly and proclaimed the laws, and the *Abba Dula* was the leader of the army. A council known as *Shanee* or *Salgee* and retired *Gada* officials also assisted the *Abba Boku* in running the government. *Gada* laws were passed by the *Chaffee* (assembly) and implemented by officials. This assembly is called *Gumi Gayo*, and held every eight years.

All *Gada* officials were elected for eight years by universal adult male suffrage; the main criteria for election to office included bravery, knowledge, honesty, demonstrated ability, and courage. The *Gada* government worked on local, regional, and central levels. The political philosophy of the *Gada* system was manifested in three main principles of checks and balances created to avoid subordination and exploitation: periodic succession of eight years, balanced opposition between different sectors, and power sharing between higher and lower political organs. The *Gada* government was based on popular democracy and equal representation for adult males. This government had independent executive, legislative, and judicial branches for balancing and checking the power of political leaders to avoid corruption and misuse of power. Some elements of *Gada* are still practiced in southern and other regions of Oromia.

The *Gada* system was the pillar of Oromo culture and civilization, and it helped Oromos develop democratic political, economic, social, and religious institutions for many centuries. The *Gada* political system and military organization enabled Oromos to defend themselves against enemies who were competing with them for land, water, and power for many

centuries. Today Oromos are engaged in a national liberation movement under the leadership of the Oromo Liberation Front (OLF) to achieve their national self-determination and to restore Oromo democracy. Most Oromos support this liberation organization and its army, the Oromo Liberation Army. There are many Oromo organizations in North America, Europe, the Middle East, Australia, and Africa that support the Oromo national movement. Oromos are struggling for self-determination and the opportunity to reinvent an Oromian state that will reflect the Gada system of popular and representative democracy.

## 2 LOCATION AND HOMELAND

Oromos call their nation and country Oromia. They have been living in the Horn of Africa for all of their known history. They are one of the largest ethnonations in Africa with a population estimated at about 40 million people. Oromia is located mainly within the Ethiopian Empire and covers an area of 600,000 sq km (232,000 sq mi). The 3.5 million-year-old fossilized human skeleton known as “Lucy,” or “Chaltu” in Oromo, was found in Oromia. Oromos also live in Kenya and Somalia. During the last decades of the 19th century, Oromos were colonized and mainly incorporated to Ethiopia and lost their independent institutional and cultural development. Great Britain, France, and Italy supported the Ethiopian colonization of Oromos. Oromia is considered the richest region of the Horn of Africa because of its agricultural and natural resources. It is considered by many to be the “bread basket” of the Horn. Agricultural-

al resources including barley, wheat, sorghum, xxafii (a grain), maize, coffee, oil seeds, *chat*, oranges, and cattle are abundant in Oromia. Oromia is also rich in gold, silver, platinum, marble, uranium, nickel, natural gas, and other minerals. It has several large and small rivers that are necessary for agriculture and to produce hydroelectric power. Today the resources of Oromia are exploited by the Tigrayan-led Ethiopian government and its domestic and international supporters. The nominal state of Oromia is still a colony of Ethiopia. There are millions of Oromo refugees in Africa, the Middle East, North America, Australia, Europe and other parts of the world. Particularly, the number of Oromo refugees has increased since 1992, when the Tigrayan government started its terrorism and genocidal massacres.

## 3 LANGUAGE

The Oromo language is called Afaan Oromoo. Afaan Oromoo has more than 65 million speakers; ethno-national groups such as the Sidama, Berta, Adare, Annuak, Koma, Kulo, Kaficho, and Guraghe speak the Oromo language in addition to their respective languages. Afaan Oromoo is the third-most widely spread language next to Arabic and Hausa in Africa; it is the second-most widely spoken indigenous language in Africa south of the Sahara.

Despite the attempt by successive Ethiopian regimes to destroy the Oromoo language, it has continued to exist and flourish in rural areas. Until recently Oromos were denied the right to develop their language, literature, and alphabet. It was a crime to try to write in this language for almost a century. With the development of the Oromo national movement, Oromo intellectuals adopted the Latin script for this language in the early 1970s. The OLF adopted this script and began to introduce literacy in Afaan Oromoo. Today millions of Oromos write and read in their language although the Tigrayan-led Ethiopian government banned independent Oromo institutions and organizations that are committed to develop this language. Every Oromo word has historical or contextual meanings.

## 4 FOLKLORE

Oromos believe that Waaqa Tokkicha (the one God) created the world and them. They call this Supreme Being Waaqa Guuracha (the Black God). Most Oromos still believe that it was this God that created heaven and earth and other living and nonliving things. Waaqa created *ayaana* (spiritual connection) to connect itself to its creatures. The Oromo idea of creation starts with the element of water, since it was the only element that existed before other elements.

Oromos believed that Waaqa created the sky and earth from water; he also created dry land out of water, and *bakkalcha* (star) to provide light. With the rise of *bakkalcha*, *ayaana* emerged. With this star, sunlight also appeared. The movement of this sunlight created day and night. Using the light of *bakkalcha*, Waaqa created all other stars, animals, plants, and other creatures that live on the land, in air, and in water. When an Oromo dies, he or she will become spirit. There are still Oromos who believe in the existence of ancestral spirits with whom they attempt to establish contact through ceremonies. These ancestral spirits appear to relatives in the form of flying animals. Original Oromo religion does not recognize the existence of hell and heaven. If a person commits sin by disturbing

the balance of nature or mistreating others, the society imposes appropriate punishment while the person is alive.

Oromo heroes and heroines are those individuals who excelled in doing something for the benefit of the community. Thinkers who invented the Gada system, *raagas* (prophets), military leaders, etc., are considered Oromo heroes and heroines. Currently, those individuals who are contributing to the Oromo national movement politically, militarily, intellectually, and in other ways are considered heroes and heroines.

## 5 RELIGION

Oromos recognize the existence of a Supreme Being or Creator that they call Waaqa. They have three major religions: original Oromo religion (Waaqeeffannqa), Islam, and Christianity. The original Oromo religion considers the organization of human, spiritual, and physical worlds to be interconnected phenomena whose existence and functions are regulated by their creator, God or Waaqa. Waaqa acts in the person's life through each person's *ayaana* (spiritual connection). There are three Oromo concepts that explain the organization and interconnection of human, spiritual, and physical worlds: *ayaana*, *uuma* (nature), and *saffu* (the ethical and moral code).

*Uma* includes everything created by Waaqa, including *ayaana*. *Saffu* is a moral and ethical code that Oromos use to differentiate bad from good and wrong from right. The Oromo religious institution is called the *qallu*; the *qallu* is the center of the Oromo religious view. *Qallu* leaders traditionally played important religious roles in Oromo society. The Ethiopian colonizing structure suppressed the Oromo system of thought and worldview by eliminating Oromo cultural experts such as the *raagas* (Oromo prophets), the *ayaantus* (time reckoners), and oral historians. Today Islam and Christianity play important religious roles in Oromo society. In some Oromo regions, Orthodox Christianity was imposed on the Oromos by the Ethiopian colonizing structure; in other areas, Oromos accepted Protestant Christianity to resist Orthodox Christianity. Some Oromos accepted Islam to resist Ethiopian colonialism and Orthodox Christianity. Islam was imposed on other Oromos by Turko-Egyptian colonialism. However, some Oromos have continued to practice their original religion. Both Christianity and Islam have been greatly influenced by the original Oromo religion.

## 6 MAJOR HOLIDAYS

Oromo original holidays, such as *Ireecha* or *buuta*, and Islamic and Christian holidays are celebrated in Oromo society. Recently Oromos have started to celebrate an Oromo national day to remember Oromo heroines and heroes who have sacrificed their lives to liberate their people from Ethiopian colonialism.

## 7 RITES OF PASSAGE

Since children are seen as assets, most Oromo families are large. The birth of a child is celebrated because each newborn child will become a potential worker. Marriage is also celebrated since it is the time at which boys and girls enter the stage of adulthood in the society. Death is also an important event that brings members of the community together to say goodbye to the deceased member.

Traditionally Oromos had five gada-grades; the names of these grades varied from place to place. In one area, these grades were *dabalee* (ages 1–8), *rogge* (ages 8–16), *follee* (ages

16–24), *qondaala* (ages 24–32), and *dorri* (ages 32–40). There were rites of passages when males passed from one gada-grade to another. These rites of passages were called *buuta* or *erreacha*. Between the ages of 1 and 8, Oromo male children did not participate in politics and had less responsibility. When they were between 8 and 16 years old, they were not allowed to take full responsibility and marry. Between ages 16 and 24, they took on the responsibilities of hard work, learning war tactics, politics, law and management, culture and history, and hunting big animals.

When young men reached between 24 and 32 years of age, they served as soldiers and prepared to take over the responsibilities of leadership, of peace and war. Those males between 32 and 40 years old played important roles and shared their knowledge with the *qondaala* group, and carried out their leadership responsibilities. Nowadays those who can afford it send their children to school. These children also complete their teenage years in school. Children and teenagers engage in agricultural and other activities to survive. Young boys and girls marry and start the life-cycle of adulthood.

## 8 INTERPERSONAL RELATIONS

Oromos are friendly people, and they express their feelings openly. Oromos greet one another when they meet by shaking hands; they talk to one another warmly. “*Asahama?*”—“*Atam?*”—“*Fayaadha?*”—and “*Matinkee atam?*” (“How are you?”—“Are you healthy?” and “Is your family o.k.?”) are common greeting phrases or questions. The respondent answers, “*Ani fayaadha*” (“I am fine”), “*Matinkos nagaadha*” (“My family is o.k.”), “*Ati fayaadha*” (“What about you, are you fine?”).

When people visit Oromo families, it is customary to be provided with something to drink or eat. It is expected that visitors will eat or drink what they are offered. Individuals can drop by and visit friends or relatives without informing them in advance.

Dating is an important interpersonal relation between a boy and a girl. Usually a young boy initiates this kind of relationship by expressing his love for a girl whom he wants to date. When a girl agrees that she loves him, too, they start dating each other. Premarital sex is not expected, but kissing and dancing are acceptable. Parents are not usually informed of a dating relationship. Dating may or may not lead to marriage. Having girlfriends and boyfriends provides social status and respect among peers.

## 9 LIVING CONDITIONS

Since Oromos are colonial subjects, their resources are mainly extracted by Ethiopian elites and their supporters. The majority of Oromos are rural people who lack social amenities, such as school and health services. They do not have basic services such as clean water, electricity, appropriate housing, transportation facilities, clinics, and hospitals. Electricity that is produced by Oromian rivers is mainly used by Amhara and Tigrayans.

Sometimes the Oromo people do not have enough food to eat because of the exploitation by the Ethiopian government. Since Oromos have been denied education by successive Ethiopian regimes, the size of the Oromo middle class is very small. The living condition of this class is better than that of the Oromo majority. Members of this class mainly live in urban areas.

Currently, because of the military conflict between the Oromo Liberation Army and the Ethiopian government militia, Oromo peasants are constantly harassed, murdered, or imprisoned by the government. The Ethiopian government robs their properties, claiming that they are harboring guerrilla fighters. Because of poverty, war, lack of modern agricultural technology, lack of education, and exploitation, the living standard of the Oromo people is very low. They live in overcrowded huts; most huts house large, extended families consisting of parents and grandparents, brothers and their wives, unmarried brothers and sisters, and other relatives. Oromos use human labor and animals such as donkeys and horses for transportation in rural areas. They use cars, wagons, buses, and trucks for transportation in cities. Oromos are probably one of the most impoverished societies in the world.

### 10 FAMILY LIFE

The basic unit of a household is the family. There are neighborhoods and communities that are important social networks connected to the extended family. A man, as head of the family, has authority over his wife (or wives) and unmarried sons and daughters. An Oromo man in general has one wife, but because of religious conversion to Islam and other cultural borrowing, some Oromo men marry more than one wife (a practice known as polygamy). Divorce is discouraged in Oromo society. Recently, Oromo women have begun to resist polygamy. Because of patriarchy and sexism, Oromo women are subordinate to men. Despite the fact that there are Oromo women fighters and military leaders who are engaged in the liberation struggle, the status of Oromo women is not yet changed.

### 11 CLOTHING

Some Oromo men wear *wooya* (toga-like robes), and some women wear *wandabiti* (skirts). Some Oromo men and women wear garments of leather or animal skin robes, and some women wear *qollo* and *sadetta* (women's cloth made of cotton). Oromo men and women also wear different kinds of modern garments made in different parts of the world. In cash-producing areas and cities, Oromos wear modern Western-style clothes. Oromos have special clothes for special days. They call clothes they wear on holidays or other important days' *kittii*, and clothes that they wear on working days *lago*.

### 12 FOOD

The main foods of Oromos are animal products including *foon* (meat), *anaan* (milk), *baadu* (cheese), *dhadha* (butter), and cereals eaten as *marqa* (porridge) and *bideena* (bread). Oromos drink coffee, *dhadhi* (honey-wine), and *faarso* (beer). There are Oromos who chew *chat* (a stimulant leaf).

The special dish of Oromos is called *itoo* (made with meat or chicken, spices, hot pepper, etc.) and *bideena* (made from xxafi or millet). Sometimes *marqa* or *qincee* (made from barley) is eaten for breakfast. All members of the family eat together. *Ancootee* (root food) is special food in some parts of western Oromia. Members of the family sit on stools, eat off wooden platters or dishes, use wooden spoons or other spoons for liquid foods, and use washed hands for nonliquid foods. The majority of Oromos eat twice, in the morning and at night. Muslim Oromos do not eat pork for religious reasons.

### 13 EDUCATION

Literacy is very low in Oromo society, probably less than 5%. Oromos mainly depend on family and community education to transmit knowledge to the younger generation since they do not have control over modern education. Older family and community members have a social responsibility to teach children about Oromo culture, history, tradition, values, etc. When some children go to colonial school to learn what the colonial government wants to teach them, oral historians and cultural experts make sure that these children properly learn about Oromo society.

Although their numbers are very limited, there are three kinds of schools in Oromia: missionary, *madarasa* (Islamic), and government schools. Islamic schools teach through sixth grade, and the other schools teach until twelfth grade. Oromos do not have control over these schools; hence, Oromo culture and values are constantly attacked by these schools. Despite all these problems, Oromo parents have very high expectations for education. If they can afford it, they do not hesitate to send their children to school.

### 14 CULTURAL HERITAGE

Respect and social equality are expected among members of the Oromo community. These values are expressed in *geersara* or *mirisa* (singing), storytelling, poems, proverbs, etc. *Geersara* is used to praise good behavior and discourage behavior that is not approved by the community. Respect for elders, social responsibility for the community and individuals, helping others, bravery, hard work, and work excellence are all appreciated. Historical and cultural knowledge is admired. Oromos can count their family trees through 10 generations or more.

Oromo cultural heritages are expressed through *mirisa*, *weedu*, and different cultural activities. There are different kinds of *weedu*, such as *weedu fuudha* (marriage song), *weedu lola* (war song), and *weedu hoji* (work song). Oromo women have their own song called *helee* that they use to express their love for their country, children, husbands, etc. Young boys sing to call girls to marriage ceremonies by singing *hurmisu*. Men do *dhichisa* (a men's dance to celebrate the marriage ceremony) and girls do *shagayoo* (singing and dancing) during marriage ceremonies. There are prayer songs called *shubisu* and *deedisu*.

### 15 WORK

Oromos are mainly farmers and pastoralists. Young educated Oromos move to cities to look for job opportunities and other social amenities. There are also merchants in Oromo society, although their number is very small. There are also weavers, goldsmiths, potters, and woodworkers.

### 16 SPORTS

Hunting and military skills were important sports in pre-colonial Oromia. Oromo men used to hunt large animals for a test of manhood; they also used products of the game, such as hides, ivory, and horns. Hunting was seen as a school of warfare for young Oromos; it helped them learn how to handle their weapons and prepare themselves for difficult conditions.

Popular sports played by children and young adults in Oromo society include *gugssa* (horseback riding), *qillee* (field hockey), *darboo* (throwing spears), *waldhaansso* (wrestling), *utaalu* (jumping), and swimming. Oromo society has pro-

*Oromo women binding straw. (The Image Works)*

duced athletes who have competed and won in international sports events. Wami Biratu, an Oromo soldier serving in the Ethiopian colonial army, was the first Oromo athlete to participate in the Olympic Games, in 1956, and he became a source of inspiration for other Oromo athletes.

Ababa Biqila, another Oromo soldier, won the 1960 Rome Olympic Marathon and set a new world record by running barefoot. Another Oromo soldier, Mamo Wolde, became the 1968 Olympic Marathon Champion. Other Oromo soldiers had also succeeded in international competitions, including Mohammed Kedir, 10,000-meter bronze medalist, and Kebede Balcha, Bakala Daballe, Daraje Nadhi, Wadajo Bulti, Eshetu Tura, Adunya Lama, and Challa Urgeesa who were international cross-country champions. Their Oromo coach, Nugussie Roba, won three consecutive international cross-country titles.

In 1988, Ababa Makonnen, Ababa Biqila's nephew, won the Tokyo Marathon, and Wadajo Bulti and Kabada Balcha came in second and third. Daraje Nadhi and Kalacha Mataferia won first and second place, respectively, in the World Cup marathon in 1989. In 1992, Daraartu Tullu, an Oromo woman, won the gold medal for her victory in the 10,000-meter race in the Barcelona Olympic Games. In 1996, another Oromo woman, Fatuma Roba, became a women's marathon gold-medalist; she was the first from Africa to win this kind of victory, and she was the fastest marathon runner in the world. The successes of

these Oromo athletes demonstrate the rich cultural heritage of athleticism in Oromo society. Unfortunately, the victories of these athletes went to Ethiopia, not Oromia.

## **17 ENTERTAINMENT AND RECREATION**

Oromos come together and enjoy themselves during ceremonies such as weddings, holidays, and harvest festivals. During these events they eat, drink, sing, dance, talk, etc. Jumping, running, swimming, wrestling, and other sports activities are used for recreation by boys and young adults. Oromo adults like to come together and sit and chat during weekends, after work, and on holidays.

## **18 FOLK ART, CRAFTS, AND HOBBIES**

There are Oromos who specialize in making musical instruments such as the *kirar* (five-stringed bowl-lyre), *masanqo* (one-stringed fiddle), drums, etc. Iron tools, such as swords, spears, hoes, axes, and knives, have been important for farming, fighting, and hunting. Woodworking has been known for a long time in this society; carpenters make such objects as platters, stools, spades, tables, bows and arrows, wooden forks, honey barrels, etc.

Similarly, goldwork has been practiced in some parts of Oromia. Goldsmiths specialize in making earrings, necklaces, and other gold objects. There are Oromos who specialize in making other utensils from horn, pottery, and leather. Mugs,

spoons, and containers for honey-wine are made from horn. Basins, dishes, water jars, and vessels are made from pottery. Various kinds of milk vessels are made from leather. There are Oromos who specialize in making clothes.

## 19 SOCIAL PROBLEMS

Oromo human and civil rights have been violated by successive Ethiopian governments and their supporters. Oromos do not have control over their lives, lands, other properties, or their country. They do not have a voice in the government, and they are not allowed to support independent Oromo political organizations. Oromos have been systematically harassed, murdered, or imprisoned for sympathizing with the Oromo national movement, particularly the OLF. Oromos are not administered by the rule of law. Today the Tigrayan-led government engages in state terrorism and gross human rights violations because of two major reasons. The first reason is to destroy the Oromo national movement led by the OLF. The second reason is to loot the resources of the Oromo people and in order to enrich the Tigrayan elites and develop Tigray.

Today thousands of Oromos are kept in secret concentration camps and jails just for being Oromo or trying to determine their destiny as a people. Some Oromo activists or suspected activists are killed by Ethiopian soldiers, and their bodies are thrown on the streets to terrorize the Oromo people and to prevent them from supporting the Oromo national movement. Human rights organizations such as Africa Watch, Oromia Support Group, and Amnesty International have witnessed many human rights abuses inflicted on Oromos.

## 20 GENDER ISSUES

Before the colonization of Oromo society by Abyssinia/Ethiopia, the Oromo people had their own government and institutions such as Gada and Siqqee. These intuitions defended the interest of Oromo women on some level. The Ethiopian colonial system suppressed or destroyed both the Gada system and the Siqqee institutions and undermined the role and power of Oromo women in society. The emergence of class and gender stratification in some regions of Oromia also undermined the role of Oromo women in those regions.

The Habasha (Ethiopian) colonial government targeted Oromo women by cutting their breasts, raping, terrorizing, torturing and killing them. All of these crimes against humanity have been committed on Oromo women to commit genocide on Oromo society. Currently, the agents of the Meles regime are frequently raping Oromo women and young girls in an attempt to demoralize and destroy the Oromo people. The soldiers and officials of the Meles government have collected young Oromo girls and women into concentration camps and gang raped them in front of their relatives, fathers, and husbands to humiliate them and the Oromo people.

Because of Ethiopian colonialism and an oppressive cultural system, almost all Oromo women are part of the most impoverished sector of Oromo society. Today, the Oromo people in general and Oromo women in particular are exposed to state-terrorism and other forms of violence and poverty. They do not have personal and economic security. Since Oromo resources such as land are owned by the Tigrayan government, Oromo women cannot produce enough food and cash crops to feed their children. The Ethiopian government controls and owns most of Oromo economic resources, including the land.

In Oromo society, the remaining economic resources are mainly in the hands of Oromo men. As a result, Oromo women are denied access to education, business, health services and other opportunities. In addition, Oromo families usually use their meager economic resources to educate Oromo boys while limiting Oromo girls to engage in agricultural and domestic activities. The three forms of oppression—national, class and gender—are combined to force Oromo women to the bottom of Oromo society. Generally speaking, Oromo women have been also oppressed because of gender norms even by their parents, brothers, husbands and communities. Religious beliefs also do not promote equality of gender in Oromo society.

Oromo culture does not promote gender equality despite the claim of Gada democracy and the legacy of Siqqee institution. There are several ways in which the inferior position of women is expressed in Oromo society. Oromo families are happier when baby boys are born than when girls are born. Jeylan W. Hussein notes that “after a child is born the midwives declare the sex of the child, usually by ululating five times for the baby son and four times for a baby daughter.” This cultural practice demonstrates how society values boys more than girls. In addition, most Oromo families and communities send only boys to school. Consequently, there are only a few educated Oromo women today in Oromo society.

One way of maintaining the norms of gender inequality in Oromo society is proverb (mammakissa). For instance, let us consider the meaning of the following proverb: “Beerti qoon-qoo tolchiti malee dubbi hintolchitu.” Those who use this proverb limit the role of Oromo women to cooking and deny their capacity to engage in other roles such as education and administration. Another proverb says, “Beeraafi harreen ba’aa hin dhadhaban” (Women and donkeys do not complain about burden). This proverb claims that women should do difficult tasks without complaining in their society, such as cooking, fetching water, and rearing children. Some proverbs reflect that women are ignorant and are not capable of comprehending much. “Dhalaan akkuma harmaati ayliin rarraati” (Women’s hearts sway just like their breasts). Feminine body parts and brains are attacked by this kind of proverb to humiliate women and maintain gender stratification.

Oromo culture prepares women to be subservient to men. It victimizes them culturally, politically and psychologically. For example, one proverb states the following: “Niiti fii farda abbatu leenjifata” (The owner domesticates his horse and his wife). First of all this proverb reduces the status of a wife to that of a horse. This automatically violates her human rights. Second, if a husband treats his wife and his horse equally, the wife is not a free human being. Of course, there are proverbs that demonstrate Oromo women are very important in society. One of them is, “Dudaaf dubartin ka’u” (A man who has a strong and intelligent wife is successful in life). Yet, women have to work day and night to earn such praise. These oppressive gender values in Oromo culture have limited the development of the vision and potential of Oromo women as the Ethiopian colonial system has negatively affected both men and women. Both Islam and Christian beliefs enforce these oppressive values. Islam allows a man to be married to more than one wife. There are non-Muslim Oromo who get married to many wives. Such practices oppress Oromo women.

Today in the 21st century, very few Oromo women are formally educated because of the denial of access to education

both by the Ethiopian colonial system and Oromo cultural values. Almost all Oromo women are also denied economic opportunities, liberties, and social power. As the most oppressed and exploited sector of Oromo society, Oromo women struggle daily for the survival of their families and children by focusing on basic necessities such as food and shelter. Most of them suffer from absolute poverty, malnutrition, disease, and other social disabilities. Moreover, they do not have security and protection in their own communities because of the violence of the Ethiopian government that targets Oromo women to destroy the foundation of Oromo society.

In addition, they do not have adequate knowledge, skills, and time to organize themselves to represent their interest in society by being involved in decision-making processes on the political level. These conditions have also limited the involvement of women in the Oromo national struggle both in Oromia and the Diaspora. Since the population of Oromo women is equal to or more than Oromo men, without their vision and full participation, to think about the liberation of the Oromo people is an illusion. Therefore, the realization of the potential of Oromo women is required to fully mobilize the Oromo nation to struggle for liberation, freedom, economic development, and democratic governance and national security.

Although a serious attention is not given for the liberation of Oromo women from gender oppression by Oromo nationalists and Oromo liberation organizations, it is impossible to liberate the Oromo nation without the total mobilization of Oromo girls and women. The mobilization of Oromo girls and women requires to include their interest in the Oromo national struggle and to involve them in the decision-making process at all levels. While struggling against Ethiopian colonialism, it is very important to fight against gender inequality and the aspects of Oromo cultural values that degrade women. Furthermore, Oromo women need to organize themselves in order to fully participate in the ongoing Oromo national struggle and social revolution to liberate themselves from all forms oppression and exploitation.

# RWANDANS

**PRONUNCIATION:** ruh-WAHN-duhns

**LOCATION:** Rwanda

**POPULATION:** 9 million

**LANGUAGE:** Kinyarwanda; French; Swahili; English

**RELIGION:** Catholicism (60%); Protestantism (20–30%); Islam (5%); small numbers of Baha'is

**RELATED ARTICLES:** Vol. 1: Hutu; Tutsi

## 1 INTRODUCTION

Since 1994, the country of Rwanda has become infamous for political upheaval and ethnic strife. This unfortunate image has obscured the fact that Rwanda in better times is a very pleasant country to live in or to visit, and its people are quite industrious. Rwanda is one of the few ancient African kingdoms to have survived colonialism as a viable political entity. However, it underwent profound changes during the colonial era that continue to have negative repercussions. The population is composed of three ethnic groups: the Hutu (approximately 85–90% of the total population), the Tutsi (10–15%), and the Twa (less than 1%). The two most numerous groups, the Hutu and the Tutsi, have often been pitted against one another in what appears to be an ancient tribalistic struggle, but really is a direct result of the way Rwanda was governed under colonialism (1895–1960).

When German colonialists first established contact with the Rwandan king in the 1890s and later signed a treaty with him that turned Rwanda into a colony, the Germans thought that, because the king was Tutsi, the entire Tutsi group was racially superior and more intelligent than the Hutu group. As a result, a small number of Rwandan Tutsi benefited from German colonial rule and became native chiefs. Later, when the Germans lost World War I (1914–1917), Rwanda came under Belgian colonial control. The Belgians did little to change the pattern in ethnic relations that had emerged under the Germans. A small number of Tutsi (though not the entire group) continued to benefit disproportionately from the colonial system. Naturally, this did much to foster resentment among the much more numerous Hutu. Despite these conflicts, the Hutu, Tutsi, and Twa have spoken the same language, Kinyarwanda, for the past 500 or more years and have shared many cultural characteristics.

During the 1950s it began to appear that many Tutsi favored independence from Belgium (possibly inspired by anti-colonialist leaders in the neighboring Belgian Congo, such as the alleged “communist,” Patrice Lumumba). The Belgians, therefore, decided to change directions and favor the Hutu. Towards the end of the decade, Belgian colonial administrators began replacing Tutsi chiefs with Hutu ones, and encouraged the Hutu's animosity towards the Tutsi. Claiming that they were acting in the interests of Rwanda's majority and thus being “democratic,” the Belgians were actually creating a new system of ethnic favoritism. Events took a violent turn in 1959 after several Hutu political leaders were slain by Tutsi. Shortly afterward, large numbers of Hutu began to attack, kill, and/or drive Tutsi from their homes. Tens of thousands of Tutsi were slain, and many more fled to neighboring countries as refugees. In UN-monitored elections in 1962, Hutu political par-

ties won an overwhelming majority, and the Tutsi monarchy was abolished.

For the next three decades, Rwandan Tutsi were treated as second-class citizens. In 1990, however, a rebel group—the Rwandan Patriotic Front, composed largely, though not entirely, of Tutsi refugees—invaded Rwanda from Uganda. Fighting raged on and off for the next four years. The Rwandan government resorted increasingly to racist anti-Tutsi propaganda to assure its shaky support among Hutu. Finally, after the Rwandan president was killed in a mysterious rocket attack on his plane in April 1994, a genocide against Rwandan Tutsi was launched in which up to 1 million people were killed. Victims of this carnage were mostly Tutsi, although perhaps thousands of Hutu opponents of the regime also perished. In July 1994, the rebel group (the Rwandan Patriotic Front) defeated the former government's army. Since then, Rwanda has been governed by a group dominated by Tutsi, but in which there are several Hutu who occupy important positions. Many Rwandan Hutu, however, mistrust the present Rwandan Patriotic Front (RPF) government.

Unity and reconciliation between Rwandan citizens is a high political priority for the present government, who vows to break completely with the past 100 years of Rwandan history and to construct a society in which ethnicity no longer plays a part. The government's national reconciliation discourse is based on a view that ethnicity in Rwanda was invented and politicized by colonial occupation. Consequently, in today's public discourse, all references to Hutu, Tutsi and Twa have been banned and replaced with the all-inclusive Rwandans. The Rwandan population is urged to reconcile with each other and to live with each other peacefully.

The local juridical court (known as Gacaca, which is translated as “justice on the grass”) and the solidarity camps (known as Ingando) are some of the initiatives that the government has taken in order to reach unity and reconciliation among its citizens. The International Criminal Tribunal for Rwanda, located in Tanzania, has concentrated on bringing the ringleaders of the genocide to account. However, tens of thousands of other genocide suspects still await trial in Rwanda's crowded prisons. Given Rwanda's shortage of judges and lawyers, the government has turned to the Gacaca, a traditional system of justice, in order to escape impunity (freedom from punishment). Over 250,000 community members have been trained to serve in Gacaca courts all over Rwanda. Gacaca hearings are held outdoors every week, and most villagers take part. The tribunals first identify victims, then suspects—and finally hold trials. Local residents give testimony on behalf of and against the suspects, who are tried in the communities where they are accused of committing crimes, and many of those who are tried become prisoners.

Ingando are civic education camps that the government runs to plant seeds of reconciliation. Rwandan citizens from diverse walk of life, including students, church leaders, ex-soldiers, ex-combatants, genocidaires (perpetrators of the genocide), and others, are encouraged or required to attend Ingando. The camps include lectures on the government program, Rwandan history, and unity and reconciliation. In spite of the governmental efforts to unite the Rwandans, many people still feel insecure and suspicion remains strong between different groups. Retribution and false accusations at the Gacaca courts constitute some of the fears. Witnesses also feel insecure, as many of

them have been attacked and even killed in connection with Gacaca. Coming to terms with the ethnic divisions of the past remains a major challenge.

## 2 LOCATION AND HOMELAND

Rwanda is a tiny country about the size of the US state of Massachusetts. It is located in the Great Lakes region of Central Africa. To Rwanda's west lies one of Africa's largest countries, the Democratic Republic of the Congo (formerly Zaire), while to the east is Tanzania. Uganda is the country directly to the north, while Burundi is located to the south. Despite the country's proximity to the equator (about 2°s), high altitude keeps the climate temperate. Most Rwandans live at altitudes between 1,500 m (5,000 ft) and 2,100 m (7,000 ft) above sea level. Rwanda usually receives a fair amount of rain (about 100–150 cm or 40–60 in), but there are occasional droughts. During a typical year, there is one long rainy season (March to May), one long dry season (June to September), another wet season (October to December), and a short dry season (January and February), but these seasons are seldom regular.

Rwanda is Africa's most densely populated country and the population has increased with almost 2 million people since the genocide in 1994, currently reaching a total population of approximately 9 million people. Approximately 89% of Rwanda's population lives in rural areas and gains its livelihood from agriculture, but there are several cities. Kigali, the capital, is the largest city, with a population of about 800,000 people.

In 1994 over 3 million refugees, virtually all Hutu, scattered across the region, residing in refugee camps in Tanzania, the Democratic Republic of the Congo (DRC), and Burundi. These refugees fled Rwanda in the late spring and summer of 1994 as the Rwandan Patriotic Front (RPF) gradually took control of the country. Some fled the country out of fear that the largely Tutsi RPF would take reprisals against them. Others fled simply because they were forced to do so by soldiers of the former Rwandan government's army and its allied militias. During the last months of 1996, the RPF invaded the DRC and destroyed refugee camps; thousands of Hutus were killed during those attacks while most others had to re-enter Rwanda, and began to return in large numbers. A high percentage of Tutsi, who fled to neighboring countries during the 1960s, have also returned to Rwanda since the RPF came to power. The government of Rwanda has encouraged all Rwandans who fled the country to come back. In 2007, 50,000 Rwandans still remained in exile, while all the rest had returned. Most of the returnees are re-integrated and accepted back into their communities. The majority of Rwandans who remain in exile do so due to disagreements with the present government, or out of fear of facing genocide charges upon their return.

## 3 LANGUAGE

All Rwandans speak Kinyarwanda, a Bantu language, that is rather difficult for most foreigners to master. One of its major sources of difficulty for Europeans and Americans is its vowel system. Vowels can differ in length and tone, and such changes entirely alter the meaning of a word or phrase. Another difficulty in Kinyarwanda is the fact that there are 20 different noun classes. English has only two basic noun classes: singular and plural.

Many educated Rwandans also speak French, the country's second official language and the language used by the Bel-

gian colonialists. Rwandans may also speak Swahili, which is something of a lingua franca (common language) in East and Central Africa. Finally, English is becoming increasingly common, especially in urban areas. This is partly because the new group of leaders in Rwanda (affiliated with the Rwandan Patriotic Front) were raised in English-speaking Uganda. But it is also because many people in recent years have decided to learn English at courses taught in Kigali and other cities.

## 4 FOLKLORE

Rwandan culture is rich in oral traditions, including legends, stories, and poetry. In fact, Rwandan art is much more devoted to literature, poetry, music, and dance than it is to painting or sculpture. Much of Rwandan folklore from the 19th and early 20th centuries had to do with Rwandan sacred kingship. Until 1931, the Rwandan king was non-Christian and was believed by many of his subjects to have sacred powers. Ritual specialists associated with the king possessed special knowledge of Rwandan history and ritual. Much of this enormous body of knowledge was kept in their memories in the form of poetry. Occasionally, the specialists were called upon to recite their allotted portions of the sacred texts.

In the early 20th century, Belgian colonial authorities and Catholic missionaries succeeded in deposing the non-Christian Rwandan king and replaced him with his Christian son. By the 1940s and 1950s, it became apparent that the sacred knowledge possessed by the ritual specialists would soon die with them, as they were growing old and no new specialists

were being trained. In order to prevent this, Rwandan and European scholars set about recording and transcribing the sacred and historical texts. For this reason there is a record of traditional Rwandan ritual, poetry, history, and literature that far surpasses most other sub-Saharan African societies. The rituals that were associated with Rwandan sacred kingship included rainmaking rituals, rituals to stop the rain in the event of flooding, rituals to assure that the cattle reproduced in abundance, rituals to assure that the bees produced honey in abundance, and rituals to assure victory in battle.

Where ordinary people were concerned, Rwandan culture was also quite rich in stories and legends for the moral instruction of children, or simply for entertainment and distraction. Many of these stories, or variants of them, are still recounted to this day.

## 5 RELIGION

Catholic and other Christian missionaries have extensively evangelized Rwanda since the colonial era. For that reason, about 60% of Rwandans today are Catholic, and another 20–30% are Protestants of various denominations. The number of Muslims has increased in recent years. Many that have converted to Islam are said to have done so because of mistrust towards the Christian church, as some Catholic and Protestant religious leaders played an active role in the genocide, while Muslims stayed neutral in the conflict. Still, the Muslims make up less than 5% of the population in Rwanda. In a few Rwandan cities such as the capital of Kigali, the Baha'i faith is gaining a foothold.

It is difficult to determine with precision how many Rwandans follow a traditional religion. Often Rwandans will follow both traditional religious practices and some form of Christianity at the same time. They see no contradiction in doing this, for they feel that Imaana (the supreme being) can only be reached through intermediaries. Whether these intermediaries are Christian or traditional in origin is of little importance. According to Rwandan conceptions, Imaana is both a benevolent, creative spirit responsible for all life, and at the same time a distant and indifferent god. The most common means of communicating with Imaana is through the spirits of deceased family members (*abazimu*), or through more important deities that are like “super” ancestors. Two of the most common deities of this latter sort are Ryangombe, who is quite commonly venerated in southern and central Rwanda, and Nyabingi, a goddess who is venerated in northern Rwanda. In both cases, people who venerate either Ryangombe or Nyabingi claim that these spirits are intermediaries to Imaana, not ultimate sources of power and beneficence.

With regard to ancestors, many Rwandans (Christian or not) believe that after death one's spirit joins other ancestral spirits. Usually these spirits are thought to exert a protective influence upon the living, as long as the living remember to honor the ancestors with occasional sacrifices. An ancestral spirit might afflict a living person with illness, if the living person “forgets” the ancestor, i.e., neglects to offer the occasional small sacrifice in the ancestor's honor. Ancestral spirits might also afflict one of their descendants because the latter has wronged another member of the extended family.

## 6 MAJOR HOLIDAYS

Rwandans today go by the Christian calendar and observe the major Christian holy days such as Christmas and Easter. Other Roman Catholic festivals are also observed, such as Ascension Day and All Saints' Day. National holidays also include Independence Day on the first of July, which marks independence from the Belgian colonizers, and Liberation Day the fourth of July, which marks the end of genocide. Liberation Day is celebrated throughout the country with music, dance and recitals. Moreover, the country observes a national day of mourning each year on April 7, the day on which the genocide started. Each year a new site is chosen from which bodies from the genocide are exhumed and given a formal burial. The president leads the ceremony, which is broadcast on state television and radio. The day is also commemorated all over the country at lower administrative levels. National television and radio channels devote their broadcasts to the theme of genocide. The month of April more generally is considered to be a month of mourning and parties or celebrations of any kind are discouraged.

Most of the traditional Rwandan festivals are no longer officially observed, with the exception of *Umuganura*, a harvest ritual that is celebrated in August.

## 7 RITES OF PASSAGE

Rwandans mark major transitions in life by performing rituals that demonstrate to the community that an individual has changed her or his social status. These include birth, marriage, the joining of the cult of Ryangombe or Nyabingi, blood-brotherhood, and death. For those Rwandans who practice the traditional religions (the cult of Ryangombe, or the cult of Nyabingi), becoming a member of the cult also requires the performance of a rite of passage. For those Rwandans who are members of Christian sects, baptism and confirmation serve as rites of passage.

Birth is the first important rite of passage. When a woman gives birth to a child, she and the child are supposed to be kept in seclusion, traditionally for eight days, though today it is usually only for four days. Care is taken during this time to properly dispose of the umbilical cord and the placenta, which are usually buried near the house. On the day that the woman and her child leave their seclusion, friends and family members visit the household and share in a celebration. Many people bring gifts to the new mother and father. The parents of the new mother bring a gift to their daughter's husband, and a quantity of sorghum porridge to their daughter. It is also on this day that the baby is presented to the public for the first time, and that the child's name is announced.

In contrast to many other sub-Saharan African peoples, Rwandans do not celebrate any type of initiation at puberty for either boys or girls. After puberty, marriage is the most important rite of passage. Females marry by about age 18 and males by age 22 or later. Marriage is extremely important for Rwandans because a person is not considered fully adult until she or he has been married and had at least one child. Marriage is actually a series of rites of passage, beginning with the betrothal and continuing with the wedding and with the birth of each child. At each of these stages, gifts are exchanged between the families of the wife and the husband. The most important of these gifts is the bride-wealth cow that the husband gives his wife's father. Later, when this cow gives birth to a female

calf, the calf will be given to the husband. It is extremely important to have children in Rwandan culture because dying without leaving descendants means that no one will honor the deceased's spirit.

A funeral ceremony is the final rite of passage for a Rwandan. Although most Rwandans have a Christian funeral through their respective churches, many Rwandans also practice traditional rituals at this time. Because death is said to be "hot," it is not rare for a traditional ritualist to come to the home of a deceased person to "cool" the house and to aid the deceased's spirit in its transition to an ancestral spirit. It is also common to sacrifice a cow or bull as part of this ritual.

## 8 INTERPERSONAL RELATIONS

Under most circumstances, Rwandans are polite, warm, and helpful. Greetings are a central part of social etiquette. In rural areas, it is important to greet everyone that one passes in the fields and on pathways. Although this etiquette is not closely observed in large cities like Kigali, where one passes many people on the street, even in an urban environment it is considered rude not to acknowledge someone with whom one has some acquaintance. For certain people, a heartier form of greeting is in order. Here, the two parties "embrace" one another. In this type of greeting, the left hand reaches out to gently clasp the other person's hip, while the right hand reaches upward to touch the other person's shoulder.

To be a socially acceptable person, one must visit one's friends and relatives, as well as accept the visits of others. Rwandans spend much of their time visiting one another. This helps to maintain good social relations with others. Someone who rarely visits others is considered antisocial and would probably arouse the suspicions of his neighbors and relatives. Although Rwandans do not always offer a guest something to eat, it would be considered a breach of etiquette if the guest were not offered something to drink. Drinking is the foremost social activity among Rwandans, and drinks range from very mildly alcoholic to moderately so. The two most common forms of alcoholic beverage are a drink made from sorghum, and one made from fermented plantains. Whenever a visitor arrives, the good Rwandan host attempts to find him or her something to drink. If a guest is present at one's home while others are drinking and is not offered something to drink, it is considered an insult.

It would be wrong to assume, however, that all people are equal when it comes to social occasions where drinking or eating is involved. It is here that we see Rwanda's ethnic differences at work. When Tutsi and Hutu eat or drink together, they will often share the same cooking and drinking vessels. They may, for example, pass a calabash (gourd container) with a wooden straw in it from one person to another. Each person drinks in turn, pressing his or her lips to the straw. When Twa are present, though, they are not allowed to drink or eat from the same vessels. They will be served something to drink or eat, but their drinking and eating utensils will be separate from those of the others present.

## 9 LIVING CONDITIONS

Living conditions vary immensely between social classes and between urban and rural Rwandans. Affluent Rwandans who live in cities enjoy the amenities of running water, indoor plumbing, electricity, and phone service. Their houses resem-

ble those one would find in an affluent American suburb, and are usually made of brick and concrete. But the majority of urban Rwandans live more simply. Many have small mud-walled houses with corrugated iron roofs. Although some may have electricity in their dwellings, most have neither electricity, running water, nor indoor plumbing.

In rural areas, a variety of house types exist. One may occasionally find brick houses with tile roofs, but only wealthy rural notables occupy this type of house. More frequently, one finds houses of wattle-and-daub construction. The traditional shape of a house is circular, but since colonial times many Rwandans have built rectangular houses. The roofs of such houses are usually constructed from corrugated iron, but it is not uncommon to find thatched-roof houses as well. These houses almost never have indoor plumbing, electricity, or running water. To obtain water, one must usually walk some distance to a spring or stream, a difficult and time-consuming chore that men leave to women and children. A few years ago, many rural Rwandans had to travel a long way to access a phone. Today village phones, that are found in many areas where no telecommunication service previously existed, allow people to make phone calls near their homes. Thanks to an improved health care system, access to health care has also improved for the rural population. Approximately 85% of all Rwandans live within 10 km of a primary health care facility. However, medical care remains an economical barrier to many people, and geographic distance and mountain terrain still constrain access to health care for many rural Rwandans. Rwanda is characterized by what is known as a "dispersed settlement pattern." This means that individual homesteads are spread out all over the countryside, rather than being gathered together in hamlets or villages. When Rwandans speak of their local area, they talk about which hillside they come from, rather than which village.

## 10 FAMILY LIFE

The term for family in Kinyarwanda, *inzu*, can mean either "family," "household," or "house." This unit consists of a husband, a wife or wives (a small percentage—perhaps 10%—of Rwandan men have more than one wife), and their children. When a man has more than one wife, each one will have a "house" within the fenced-in enclosure that encircles the whole homestead. Sometimes other persons who are related to the man of the house by blood, adoption, or marriage will live within this unit as well, but this is not common.

People from several related *inzus* who trace their descent from a common male ancestor about five or six generations back comprise another kinship unit known as an *umuryango*. Usually the eldest or most influential male is considered the head of this unit. As descent through males is most important where one's social identity is concerned, Rwandan society is said to be patrilineal. The *umuryango* often controls a portion of land that it divides and allocates to its individual adult male members. Today, however, as a result of colonialism, much of Rwanda's land is owned by individuals as private property and can be bought and sold without seeking the approval of an *umuryango*.

When Rwandans marry, they must marry outside of their *umuryango*. A young man who is interested in marrying a particular young woman makes this wish known to his father. The father will then visit the young woman's father, bringing sorghum and plantain-beer as a gift, and the two fathers will

*Rwandan children begin primary school at age seven. According to Rwandan law, all children are guaranteed at least a sixth-grade education. (Jason Laure)*

discuss the issue. Very often, several visits will be necessary, which becomes costly for the prospective bridegroom's father as he must bring beer each time. Moreover, the bridegroom and his father will have to pay at least one bride-wealth cow to the bride's father in order for the marriage to take place. It is this payment of the bride-wealth cow that legitimizes any children that result from the marriage.

### **11 CLOTHING**

In precolonial and early colonial times, Rwandans wore clothing made from animal skins and from pounded bark-cloth. Today this type of clothing is seen only in museums. Today Rwandans wear clothing that is the same as that worn by people in Western countries. The only difference is that the clothing Rwandans wear is second-hand. Only some Rwandans can afford to buy new clothing made by tailors in Rwanda. Rwandans began wearing European clothing during the colonial era. Today there is an active import trade in used clothing. In the cities men often wear shirt and pants. Rwandan women often wear dresses and scarves made from the printed cloth, but in the last ten years urban women and girls have increasingly started to use pants.

### **12 FOOD**

The diet of the average Rwandan is high in starches, low in protein, and quite low in fat. The two most common foodstuffs are starchy plantains and beans. Often the two are boiled together.

Perhaps the next most common foodstuff is sorghum grain, which may be consumed as a cereal beverage, a porridge, or as sorghum meal. Sorghum and plantains are also used to prepare native Rwandan beers. Other commonly consumed vegetable foodstuffs include white potatoes, sweet potatoes, manioc, and maize (corn). Cabbage and carrots are also eaten occasionally. In certain areas of Rwanda, avocados are seasonally available, as are mangoes and pineapples.

Most Rwandans rarely eat meat, although the wealthy may consume it daily. The most commonly eaten meat is goat, which is usually barbecued over a charcoal burner. Beef is the most desired meat, but it is usually available only when a rural Rwandan has sacrificed a bull or cow on a ceremonial occasion. Urban Rwandans may consume beef more frequently. Cattle are valued for their prestige value and for their milk. Rwandans who can regularly drink milk count themselves as very fortunate. Mutton is also eaten, but most Tutsi, and many Hutu, spurn it because sheep are deemed to be peaceful animals whose presence is calming to cattle. In the past, only Twa ate mutton. When a sheep died, it was skinned. The skin was used to hold a baby on its mother's back, while the meat was given to Twa to eat. Today, though, many Rwandans eat mutton. Another new item in today's diet that was rarely eaten in the past is fish. Tilapia and catfish have become much more common as fish farming expands.

Only urban Rwandans eat three times a day. Rwandan farmers usually wake early, have something to drink, and work in the fields until about midday, at which time they eat something that they have brought with them. Often they cook the food right in the field. At the end of the day, after returning home, they eat again.

### **13 EDUCATION**

Rwandan children begin primary school at age six. According to Rwandan law, all children are guaranteed at least a sixth-grade education. In reality, this does not always occur because parents sometimes cannot afford the cost of school uniforms, school supplies, and other minor expenses that even a primary student needs, and some families need their children's support in the household or to generate income. After the sixth grade, attendance at a secondary school is dependent upon selection. Before 1994, admission to secondary school was supposedly based on grades and test results, but it was often a political matter. Until the change of government in 1994, Tutsi stood much less chance of being admitted to secondary school than did Hutu, and virtually no Twa attended secondary school. Today the selection is based on the national exam taken at the end of primary school. The transition to secondary school is however very low. The reason for this low transition rate include poor performance in primary examinations, high fees charged in secondary schools, and long distance to existing schools, especially in rural areas.

Kinyarwanda is taught in all schools in the lower grades, while French and English are used for instruction in secondary school. Education in Rwanda seeks to inculcate a culture of nationhood marked by tolerance, social cohesion, and conflict resolution, and to stem the spread of HIV/AIDS. Challenges met are how to include orphans and children from child-headed households into education, and how to teach about the modern history of Rwanda and the genocide, a subject that still remains excluded from the curriculum.

*Rwandans gather to watch dancers. Ritual occasions such as weddings include traditional music and dance, but there is also likely to be modern popular music as well. (Cynthia Bassett)*

Higher education is mainly provided by universities and specialized institutes. Beyond secondary school, it is possible to attend a university in Rwanda, to attend nursing school, or even to attend medical school. There are also many post-secondary institutions that offer a wide range of courses such as finance, management, computer studies, statistics, economics and secretarial studies. There are also a number of teacher training colleges. Rwandan students who complete secondary school are required to attend Ingando (see Introduction) before they commence their university studies.

Although the literacy rate in Rwanda is only 49%, with a high rate of illiteracy in the countryside, many other Rwandans are quite well educated. Some have also had the opportunity to study in Europe or the US. Because of the number of educated people in Rwanda, international organizations have little trouble filling positions that require a college education or better. In recent years, educated Rwandans have been experiencing difficulty in obtaining employment.

High educational attainment is respected in Rwanda, and families make sacrifices to educate their children. Although every family strives to educate all its children, this is rarely financially possible. Because of the great expense of education, some children are favored over others. For those who receive the privilege of an education, it is expected that they will financially assist their other siblings and their parents in old age.

#### **14 CULTURAL HERITAGE**

Rwandans have a rich musical culture. Special dance groups known as *intore* perform dances that once had ritual significance in the context of war and sacred kingship. Dancers in the *intore* groups wear flowing headdresses made from dried grasses and carry small shields on their left arm. Variations of these dance styles are also performed by ordinary people at festive occasions such as weddings and other rites of passage. Several traditional musical instruments are played in Rwanda, and many among the Twa people are renowned as highly proficient musicians. Rwandans also possess a rich oral literature.

#### **15 WORK**

Rwandans are very industrious. In rural areas, men try to find paid employment wherever and whenever possible. They usually participate in some farming tasks as well. Women tend to farm the family land rather than work in wage-labor employment. In urban areas, though, many women have salaried jobs. In recent years, the number of women with salaried jobs has increased as the educational opportunities for women have improved.

#### **16 SPORTS**

The most popular sport in Rwanda is soccer. Numerous soccer clubs exist, competing in organized leagues. Rwandans attend soccer matches in droves, especially when the national team is

playing. If they cannot attend an important match in person, they listen to it on the radio. The sport has become so popular that from a very tender age boys can be seen kicking and running after a “ball” that is merely a spherical bundle of rolled-up banana leaves. Often young girls join in these games as well, and there are even a few soccer clubs for adult women in cities like Kigali. Perhaps the next-most-popular sport after soccer is running, an activity that also inspires competitive interest from a very young age. Very few Rwandans swim. Those that live near lakes may swim recreationally but do not engage in the activity as a sport. Finally, there are a few urban, affluent Rwandans who have taken up tennis.

### **17 ENTERTAINMENT AND RECREATION**

Ritual occasions such as weddings serve an important recreational function. Although a good portion of a wedding ceremony is likely to consist of speeches made by both the groom’s and the bride’s sides of the family, food and Rwandan beers will also be served. Later, when the speeches have ended, there will be music and dancing. Some of this will consist of traditional music and dance, but there is also likely to be modern popular music as well. Although the custom of formally inviting people to weddings and other ceremonies is becoming more common, no one who shows up is turned away from a festival. In fact, a large crowd at such an occasion reflects positively on the prestige of the host.

Rwanda has had a national radio station for almost 30 years, and a number of private radio stations have arisen in recent years. In the past 15 years, a television station has also been operative. Virtually everyone in the country owns and listens to a radio. In urban areas, TV ownership is increasing but is still mostly confined to the more affluent. Watching videos on VCRs has also become so popular that video rental stores now exist in large cities. Popular music, particularly American rock music, has had tremendous success in Rwanda. In urban discotheques, one can hear American rock, Caribbean reggae, and Zairian and Kenyan pop music. American dances and clothing fashions are quite popular, but these are always given something of a Rwandan “twist.”

### **18 FOLK ART, CRAFTS, AND HOBBIES**

Rwandans are known for their basket- and mat-weaving. Woven into these everyday utensils are elaborate geometric designs. One can also see these same designs painted on the large cooking vessels made by Twa potters. Occasionally these same motifs can be observed on the interior walls of traditional Rwandan houses, but today this is quite rare. In former times, Rwandans did not engage in woodcarving, sculpture, or artistic painting, but in recent years, these have become important craft activities. In cities, one can find many Rwandan artists who sell paintings, woodcarvings, and ceramic sculptures.

### **19 SOCIAL PROBLEMS**

After the genocide of the Tutsi in 1994, and the following massacres of Hutus by the RPF army, reconciliation among Rwandans is a great challenge. Many initiatives have been taken by the Rwandan government to bring Hutu and Tutsi along the road to reconciliation, but genocide still leaves its mark for the most part of society.

The genocide has left a profound sense of injustice, fear and distress among Rwandans. The survivors of the genocide

have complained that they have not received appropriate compensation for their suffering. A large part of the Hutu population also consider themselves to be victims of the war, refugee camps or post-genocide revenge killings, but feel that they are being silenced and disregarded in the recovering process, rendering distrust towards the government. This situation has engendered resentment and frustration among the population, as well as suspiciousness between the groups.

Truth telling and fulfillment of justice through Gacaca (see Introduction) helps reconciliation for some Rwandans, but also means fear for a lot of people. Internal immediate conflicts are centered on Gacaca; genocide suspects, witnesses, and survivors have been assaulted, threatened and even killed in connection to the trials. In July 2006 the Gacaca commenced the trials of over 700,000 people accused of genocide, and during 2007 close to 100,000 people were held in Rwanda’s overpopulated prisons, most of them accused of participation in the genocide. Groups of Hutus have left the country rather than to face the Gacaca courts, some out of fear of false accusations, which has already imprisoned several innocent Hutus and caused anger among them and their families. In spite of the government’s work to obtain unity and reconciliation, and the will of many citizens to do so, mistrust prevails in many places, and fear of the other group still exists. Security is generally a pressing problem for survivors.

Rwanda is, even by African standards, a very poor country. Food security is a problem for a large part of the population, and the growing economic disparities between urban and rural population has created tension in the country. Since the era of colonialism, some Rwandans have improved their economic condition significantly. Others, particularly those involved in agriculture, have not yet seen their circumstances improved. Having a family member in prison is a heavy burden for an impoverished Rwandan household to carry, since the absence of labor is detrimental to agriculture, reducing productivity and hence food availability. Survivors left without family or relatives are also unable to cultivate land effectively. Further, AIDS is keeping many adults out of work and unable to support their already vulnerable households. AIDS has also left thousands of children orphaned, and when combined with the large number of Rwandan children who lost their parents in the genocide, this has resulted in one of the world’s largest orphan populations (1.26 million). These children are extremely vulnerable to further neglect, abuse, and exploitation, and many are left to fend for themselves and their younger siblings.

### **20 GENDER ISSUES**

Gender relations have changed in Rwanda since 1994. After the genocide, many women found themselves without a husband or male relatives to provide for them and were forced to handle tasks that they previously had not been considered suitable for. Furthermore, a strong political commitment to include women in the reconstruction of a country that was in shambles, has enabled women to enter the political arena. Rwanda’s new constitution, adopted in 2003, mandates a 30% quota for women in parliament and in government. Additionally, political parties have promoted female candidates, which resulted in the world’s highest ranking of women parliamentarians, 49%, in the elections in 2003. However, the commendable achievements in parliament and other decision-making positions have not yet translated into any major differences for the vast ma-

majority of women in Rwanda. At a grassroots level, women's unpaid household work, feelings of inferiority, lack of experience in politico-administrative activities, and the high level of illiteracy, are barriers to their political participation.

Female-headed households constitute more than a third of all the households in Rwanda (which is largely a legacy of the genocide as it left many women widowed, and many men in prison). Those households are generally more affected by poverty than households led by men. Moreover, Rwanda is a patriarchal society that influences women's social position and gender relations in practice: Boys are sent to school rather than girls, and women remain in inferior positions to men and their social roles are foremost as mothers and wives.

# SAN

**ALTERNATE NAMES:** Khoi-San, Kung, Khwe, Juwasi, Basarwa, Bushmen

**LOCATION:** Botswana, Northern South Africa, Namibia

**POPULATION:** 100,000

**LANGUAGE:** Khoisan

**RELIGION:** San Religion

## <sup>1</sup> INTRODUCTION

The San trace their roots to the Kalahari Desert region of southern Africa. Several ethnic groups who historically survived through a hunter-gatherer lifestyle comprise the San people. The language of these groups is similar in origin. At one point in history, the San were known as "Bushmen," a term that most scholars today regard as racist. Controversy still surrounds the naming of these peoples. Other terms such as Khwe and Basarwa also have been used to describe these groups. The term San has been the preferred term by anthropologists since the 1970s, although the term Khoi-San also is commonly used. The Khoi (Hottentots) differ from the San in that they are taller and made their living through agriculture instead of foraging.

It is believed that San have lived in the area of the Kalahari Desert for thousands of years; they may be the first humans to have occupied this region before the appearance of the Nguni and other black peoples. Historians and anthropologists attribute the presence of the San in the Kalahari to animated paintings that appear on rocks, walls, and caves in areas as distant as Namaqualand, the Drakensberg, and the Southern Cape. These forms of painting are considered the oldest in Africa. Many San subgroups continue today to live nomadic lives among more sedentary peoples such as the Bantu. There are many different San peoples, who lack a collective name but are variously referred to as "Bushmen," "San," "Basarwa" (in Botswana), and so on. The individual groups identify by names such as Juhoansi and Kung, and most call themselves "Bushmen" when referring to themselves collectively.

As hunter-gatherers, San initially subsisted on animals they caught, as well as honey, roots, and fruits they would gather. What they ate and where they resided was dependant traditionally on the seasons and the movement of animals indigenous to the Kalahari. Many scholars regard their traditional way of life as being in harmony with nature. The San would take care to use only what they needed and would not overhunt or take too many plants. Their bodies are characterized as short and slight in build. Their hands and feet are small, and their yellow-brown skin would wrinkle early in life. Some San groups most likely kept cattle and sheep.

Two languages spoken by the San—Khoe and Zhu I ōasi—contain words referring to agricultural terms that date back 2,000 years. Further development of an agriculturalist way of life appears to have occurred 500 years later with the arrival of Bantu-speaking peoples to the region. The Bantu planted sorghum and millet, kept goats, and practiced metallurgy. Some linguistic evidence suggests that San peoples sold or traded cattle with Nguni and Sotho-Tswana Bantu speakers. These patterns suggest that while foraging remained important to the San people, it was combined with herding and farming over time.

The arrival of white colonists to the San's traditional hunting grounds in the 17th century changed the San way of life. While some San joined the white society in subservient roles, others migrated to the west and north in search of lands where they could continue their traditional way of life. Today the San live primarily in the northwestern Cape, the Kalahari, Namibia, and Botswana. While a few San, mainly those who continue to live in the desert, still practice their traditional way of life, the people as a whole are considerably less nomadic.

Most San groups maintain a practice of hereditary leadership. This tradition is seen in the term for "chief," which is *I xaiha* and comes from a root word for "wealth." The authority of these leaders is limited today, although some individuals who possess such leadership positions will be elected to state-created offices, such as heads of village development committees. Holders of such positions tend to be older and respected among their people.

Since the mid-1990s the central government of Botswana has promoted a relocation policy aimed at moving the San out of their ancestral land on the Central Kalahari Game Reserve into newly created settlements. Although the government categorically denies that relocation has been forced, a 2006 court ruling confirmed that the removal was unconstitutional and residents were forcibly removed. Opponents to the relocation policy claim that the government's intent is to clear the area—an area the size of Denmark—for the lucrative tourist trade and for diamond mining. As of the mid-2000s, many San were

poised to return to the Central Kalahari Game Reserve, one of Africa's largest protected nature reserves.

Similarly, the San group as a whole has little voice in the national political process and none of the tribal groups is recognized in the constitution of Botswana. Over the generations, the Bushmen of South Africa have continued to be absorbed into the African population, particularly the Griqua sub-group, which are an Afrikaan-speaking people of predominantly Khoisan. Today, less than 5% of the approximately 100,000 San live as hunter-gatherers. Their cultural heritage is in danger of disappearing.

## 2 LOCATION AND HOMELAND

The San peoples occupy highly diverse geophysical regions that share a number of features: seasonal rains, falling mainly as localized thunderstorms during the hot months, October to May; high variation in average annual rainfall—around 45 centimeters (18 inches) in Ngamiland (some 50% higher in Angola and 50% lower in central Botswana); summer temperatures that often exceed 37°C (99°F); and cool winters, with night temperatures as low as -4°C (25°F) in Botswana and Namibia. The Zhu I *ōasi* live in northwestern Botswana, in a semi-arid savanna region known as Ngamiland and in surrounding regions of Namibia. The Xu group live in more tropical open woodlands in southern Angola that receive considerably more precipitation. Axoe occupy the banks of the Okavango River, in the Caprivi Strip of Namibia while the Hai I I om reside in north-central Namibia, between the Cunene River and the Etosha Pan. The Nharo live in the Ghansi District of Botswana, an area known for its limestone. The G I wi, G I I ana, and Koō live in central Botswana and Namibia in areas that are sandy and receive little rainfall. The I I Anikhoie live in a flood plain created by the Okavango Delta; the Deti live along the Boteti River. Several other peoples who are called San in the ethnographic literature speak Khoie languages and live in the hill, mopane (a type of tree) forest, and salt-pan environments of eastern Botswana.

Because the San groups are so diverse, estimating the population is difficult. In 1980, it was estimated that about 30,000 San-speaking peoples lived in Botswana, about 12,000 in Namibia, and about 8,000 in Angola—representing about 3% of the population of Botswana, 1.2% of that of Namibia, and 0.1% of Angola's people. As of 2008 the entire San population was estimated at about 100,000. That year, regions with significant San populations include Botswana (55,000), Namibia (27,000) and South Africa (10,000).

The Zhu I *ōasi*, who previously had a low birthrate and often waited years between births to conceive, now have one of the highest recorded birthrates in the world. In 1980, 6.7 live births were recorded for every 1,000 women of childbearing age. However, the infant mortality rate for the Zhu I *ōasi* is comparatively low among Africans; in 1980, it stood at 85 per 1,000 births. Life expectancy has been improving since the 1960s when it was 45 years for Zhu I *ōasi*. Now, demographers estimate that children who live to age 5 have a good chance of living into their 70s. Health ministry surveys done in Botswana suggest the Zhu I *ōasi* statistics are similar for other San groups.

### **3 LANGUAGE**

The term “San” as an ethnographic term refers to both the contemporary and the pre-colonial southern African peoples who speak, or spoke, languages containing click consonants and who traditionally practiced a hunter-gatherer or forager way of life. They speak numerous dialects of a group of languages known for the characteristic “clicks” that can be heard in their pronunciation, all of which incorporate “click” sounds represented in writing by symbols such as ! or /.

Thus, San-speaking peoples do not constitute an ethnic group in the usual sense. The most widely known are those who call themselves “Zhu I òasi” (Kung or Juwasi in most ethnographies), although the other peoples mentioned above have also been extensively described; about 10 other groups have been well studied by linguists.

San languages are considered part of the Khoisan language family. Among the San languages are three sets. The first set is the Northern Khoisan Group. It consists of speakers of Zhu I oasi, Xu, and Au I I ei and was common to the area around Lake Ngami. This language today has few living speakers, and is distinct from other Khoisan languages in its grammar, syntax, and vocabulary. The second set is known as the Central Khoisan Group. It includes speakers of G I wi, G I I ana, Kxoe, Nharo, and I I Anikhoë, plus several other dialects, Deti, Buga, Tshukhoë, and Kwa, among them. It is closely related to Nama (also known historically as Hottentots), and Hai I I om, a dialect of Nama. The languages within the Central Khoisan Group are generally quite similar to each other, though differences in vocabulary and sentence structure develop in regions that are further from the central area. The final group of languages is known as Southern Khoisan, and consists of languages spoken along the southern Kalahari area. The primary languages in this area are Koõ and Tsassi. All of the Khoisan languages are known for containing mostly mono- and bisyllabic words. They also are tonal in nature, and contain click consonants. In writing, symbols such as ! and | typically designate a click consonant, although Bantu orthography is starting to replace that practice by using c for | and q for !. The use of letters in place of symbols is occurring more frequently in eastern Botswana, and some of the Khoisan languages are being replaced altogether by Setswana. That replacement marks a further erosion of San culture.

### **4 FOLKLORE**

San stories grow out of an oral tradition in which dramas about natural phenomena, dancing, drumming, poetry, death, and struggles between justice and mercy provide insight into how the ancient San people lived. In one story, retained as part of an online collection of oral narratives, the sun and moon spar. Ultimately, however, the sun spares the backbone of the moon so that it may grow again. Other works capture feelings of sadness that come from separating from a friend, or a loss of community because of migration and a desire to return home.

### **5 RELIGION**

San religions are polytheistic. Many gods are worshipped; however, San people do acknowledge that one god is supreme. Religious rituals show respect for deities, wives and children of deities, and spirits of those who have died. Some San also refrain from tilling soil, believing that such an agricultur-

al practice would violate the world order established by god. San stories incorporate the role of gods in day-to-day life, with deities often serving as educators about good moral behavior. How gods are viewed varies with the different San peoples. The Zhu I òasi and the Koõ, for instance, regard the supreme god as playing the role of creator as well as administrator of earthly events. Lesser gods in many San groups are ancestors from their communities.

Many San practice a communal dance as a healing ritual for their community. The dance is believed to transform spiritual energy into medicine. During the dance, many participants go into a trance, and spiritual energy is called on to heal physical and psychological illnesses. Religious practitioners in San communities tend to be healers or shaman who will visit the world of spirits in order to create rain, ward off evil, and cure illness. Many San use blood, fat, and sweat from the eland (an African antelope) to generate spiritual energy, and images of the eland today often are made from the actual blood of the animal. The dancing that the San practice often involve performing in a circle around an animal carcass. As men and older women move their bodies in trance, young women clap and sing. The dancing occurs for hours, and leads often to an altered state of consciousness and hallucinations on the part of the shaman. The dances occur during occasional ceremonies or when the community is in crisis.

### **6 MAJOR HOLIDAYS**

No major holidays exist in indigenous San culture. San who have converted to Christianity or moved to more urban areas generally observe the same holidays as the dominant communities of those locales.

### **7 RITES OF PASSAGE**

The main ceremonies among San peoples are dance performances; these are usually attended by members of an extended family, but may include other relatives. The first menstruation of girls and the arrival of adolescence for boys traditionally were celebrated with dances initiating the youngsters into adulthood.

In the past, scar marks would be applied to the face, back, and chest of men and to the thighs of women to mark important life events, but these rituals are rarely performed today. Female genital mutilation also has not been recorded among the San people. Zhu I òasi, Nharo, and G I wi girls have a brief initiation at first menstruation, and Tshukhoë boys are circumcised.

Most San marriages are monogamous, although polygamous relationships are permitted for wealthier men. San parents generally arrange marriages of their children, in consultation with elders within their kinship groups. Some San groups—including the Zhu I òasi and Khoë—will allow cousins to marry. For others, the choice of more distant relatives as marital mates is preferred. If a child is not quickly born to a newly married couple, divorce is likely to occur.

The San treat death as a movement into a new spiritual realm. The Zhu I òasi understand death as a source of food for the supreme god. In this belief, humans are caused to die so the deity can eat. Some relatives of a newly deceased individual will believe that the god would try and cause the early deaths

of survivors out of a desire to eat them, as well. The worry of early death fades as time passes.

## 8 INTERPERSONAL RELATIONS

The San organize their households and their communities on the basis of kinship ties. The Zhu I *ōasi*, for instance, make use of what they call *hxaro* networks that link persons who are related through common great-grandparents. Sometimes, these networks create communal living arrangements. At other times, they create a sense of family among nomadic communities that span distances of 200 kilometers (125 miles) or more. Other San groups, including the Nharo and Khoe groups, have similar exchange networks. In the *hxaro* networks, marriages are arranged and certain familial obligations are imparted to participants. Gifts—called *kamasi* in Zhu I *ōasi* and *kamane* in Nharo—are given in separate exchanges. San peoples also create social networks based on individuals who might not be related by blood but are of a similar age, as well as name groups, which often were based on identification with particular clans.

San groups maintain order through the use of ridicule, verbal abuse, dispersal, and divination. These practices have replaced executions and murders that were communally sanctioned in the past. The communities use informal hearings to resolve minor disputes. More serious cases are referred to local and district courts.

San children often live in huts built next to those of their parents. Parents and elders teach children proper forms of behavior at an early age. As a result, children tend to be well behaved and are taught to play with each other and to treat members of the opposite sex with respect and kindness. The wisdom and knowledge about the past that elderly San possess also is greatly valued by the community.

## 9 LIVING CONDITIONS

The Kalahari Desert makes living conditions for the San harsh. San shelters are made of sticks that are arranged in a circular form. Mats woven from reeds cover the sticks on top and along the sides. The idea behind such simple dwellings was to keep them simple and fast to take apart and re-assemble for when the San group was ready to move to a new locale. Such mat-covered huts are still used in Namaqualand.

Today, most San peoples live in or near villages that have small shops that provide for their needs. Groups in the central Kalahari, western Ngamiland, and at cattle posts, however, still rely on trades and itinerant visitors for goods. These groups often will travel several dozen kilometers by foot, donkey, or horseback for necessary supplies.

## 10 FAMILY LIFE

Each family resides in its own hut. As children reach adolescence, they often will move out of their parent's hut and build a separate dwelling nearby. If a family is polygynous, each wife will typically have her own hut. The extended family network remains important in San life and often families will live together in a homestead, where houses will be built close together and open up into a common area. Use of certain lands is often based on inherited rights that are based on past practices. However, to continue use of a particular area of land, one must reside on that area and participate in family affairs regularly. The current leader of a landholding group is generally re-

garded as the "owner" of the land and can grant permission to nonresidents to use the land. Permission generally is granted to family members but not to others.

A dozen homesteads, each one with a set of households for extended members, will make up a San settlement. Larger settlements often consist of 200 to 300 individuals. The homesteads typically will be located near seasonal rain pools where hunting and foraging of plants can take place, wells can be built, and livestock can be maintained. At times, many San groups, each speaking a different language, may reside in a single settlement, particularly in Ngamiland. Although homesteads are compactly built, a settlement may be more dispersed, with homesteads scattered apart by 2–3 kilometers (1–2 miles). Often, clients of a family or domestic help will live in huts adjacent to the families that employ them.

Both the arrangement of huts within homesteads and the collecting of homesteads into settlements reflects the interdependence that the San people regarded traditional as crucial to their survival. As foragers of food and hunters of meat, working in small groups who could quickly take down and build up an encampment was a means of living with little but always having enough. Rules based on names and age were frequently used to dispel confusion over relationships among family members. In recent years, many San have begun to settle into larger groups around water sources, and many have also settled into the communities of their neighbors.

## 11 CLOTHING

Traditional San clothing consists of a cloak known as a *kaross*, which is used to carry foods and supplies such as firewood, and loin cloths, sandals, and short aprons made of animal skin. All of the clothing is designed in a way that makes it easy to move quickly and carry basic household needs.

## 12 FOOD

Households within a San homestead may move apart during the winter when food supplies dwindle. The traditional San diet includes wild melons, roots, and berries that women gather. Men will use a bow and arrow to hunt wild animals. Arrowheads are covered with a poison made from an insect. San men are known for having great stamina. They are willing to follow an animal herd for days until they are close enough to use their bow and arrow to kill. A kill results in a feast. Families build a fire, and sing and dance in a trance-like ritual.

During hard times, women will chew on a tree bark that acts as a contraceptive to reduce the potential of having more children. San peoples also will eat snakes, lizards, and scorpions when necessary. They store water in ostrich shells, which they bury deep into the desert sands until the time comes to tap them for drinking.

## 13 EDUCATION

Traditional San education occurred within families, with elders teaching children proper behavior. Today, many San children face challenges in learning how to balance a rapidly modernizing world against their community's traditional way of life.

#### \*14 CULTURAL HERITAGE

In 2006 archaeologists reported evidence of rituals practiced by the San around 70,000 years ago—the oldest indications of human rituals ever found. The ancient artwork and artifacts were discovered in the Kalahari Desert in Botswana in a cave that the San have traditionally used for rites associated with the python, an animal that plays a major role in their creation stories.

The long and rich cultural heritage that the San add to southern Africa has been exploited in recent years in an effort to promote tourism. Stereotypical depictions of the “Bushman hunter” that were first popularized in Western films such as “The Gods Must Be Crazy” have led to interest in developing more awareness and knowledge of San culture. However, the San people have drawn little benefit from these efforts. They suffer much poverty, social marginalization, and general indifference on the part of other Africans. A cultural center, known as !Khattu, was established north of Cape Town in 2006 in an effort to change the San situation. The center is run by San communities who use it to promote education of their people and entrepreneurship opportunities for members of their communities. The center also creates a place for scholars to help the San themselves learn more about their cultural background and past.

The center continues a legacy of San traditions. The community, for instance, has long valued modesty and egalitarianism.

Although elders within families and kinship groups do command some authority, there is economic or political differentiation among the San people themselves. The community has long valued cooperation between others. Material goods are usually shared communally. In many ways, that egalitarianism fits with the mobile nature of the San people. There is no point in accumulating wealth or material goods because the groups are always prepared to move when necessity arises. If they are burdened with material goods, that mobility is threatened.

#### 15 WORK

Traditionally the San have had a strong work ethic. Many continue that practice today and balance farming with traditional practices of hunting and foraging along with jobs in industry and trade. Other traditional work practices that the San engaged in included pottery making and metallurgy.

The hunter-gatherer nature of the San way of life continues to some extent. In the 1970s, for instance, hunting provided less than 20% of the diet of the Zhu I ǀasi and plants that were gathered by women contributed about 80% of the calories that were consumed by those who owned no livestock. San communities also fish along rivers, and hunt large antelope as well as giraffe. As communities have begun to rely more on farming, many families also create small products for sale or for trade, such as iron for arrow points and spears, metal containers,

glass beads, tobacco, sugar, coffee, and tea. Many San women also brew and sell beer.

Although some San men began working in South African gold and diamond mines in the late 19th and early 20th centuries, those opportunities are no longer available to San speakers.

## 16 SPORTS

Few San people engage in games or sports activities in the Western sense.

## 17 ENTERTAINMENT AND RECREATION

Leisure activities include conversations, music, and gathering for ritual communal dances.

## 18 FOLK ART, CRAFTS, AND HOBBIES

San peoples are known for beads that they make from the ostrich eggshells. Many also create glass beadwork from glass beads obtained through trade. Three San artists (two Zhu I ōasi and one Nharo) have gained recognition as watercolorists, and San rock paintings remain famous as one of the world's oldest art forms.

## 19 SOCIAL PROBLEMS

The San have suffered displacement periodically over the centuries. Bantu tribes invaded their homelands around 500 AD and white colonists began fighting for control of the rich resources in southern Africa beginning in the 17th century. These invasions have caused the San to suffer discrimination, eviction from ancestral lands, murder, and oppression. Today, many San groups are perceived as backward and primitive, and face pressure to assimilate with more urban communities or to live more like sedentary agriculturalists. Governmental policies that restrict their movement and limit land-use rights continue to be implemented into the early twenty-first century.

Alcoholism and related social problems are said to be widespread and men have been imprisoned for unauthorized hunting.

## 20 GENDER ISSUES

Although traditional responsibilities were gender based, the status of San women is relatively equal to that of San men. While men retain control over hunting, women determine when and where to gather traditional foods. Men tend to gain power and influence when they bring meat to their settlements. However, it is women who retain control over the daily life of the settlement when men go on hunting trips, often for days at a time.

# SÃO TOMÉANS

**LOCATION:** São Tomé & Príncipe

**POPULATION:** 206,178

**LANGUAGE:** Portuguese, Angolar, Príncipeense, São Toméense, Creole dialects

**RELIGION:** Christian (80% Roman Catholic, 15% Protestant, 3% Muslim)

## <sup>1</sup>INTRODUCTION

São Toméans live on the islands of São Tomé and Príncipe off the Atlantic coast west of Equatorial Guinea and south of Cameroon and Nigeria. São Tomé is the Portuguese word for St. Thomas. Portuguese explorers stumbled upon São Tomé in the 1470s. The first wave of Portuguese settlers came to the island in the 1480s. It consisted of several thousand Jewish children forcibly taken from their parents and converted to Christianity. There were also exiled undesirables in Portuguese society, known as *degradados*, who were banished there, such as convicts and prostitutes. The new settlers soon brought African slaves to the islands to work on sugar plantations.

By decree of the king of Portugal, Jewish settlers and other *degradados* were allowed to marry slave women in order to increase the population of the island. Their offspring were promised freedom from slavery. The population increased dramatically, creating a large free African and mixed-race population. A new cultural entity was born from the intermixing and intermarriages between the Portuguese settlers and the African slaves. As such São Toméans are culturally a Luso-African creole people who trace their descent from Portuguese settlers and African slaves.

São Tomé and Príncipe remained a Portuguese colony until its independence in 1975. The Movement for the Liberation of São Tomé and Príncipe (MLSTP) took power from the Portuguese in 1975 and ruled the islands as a single-party state until in the elections of 1990 when the MLSTP was defeated in multi-party elections. During the post-independence era, there has been a substantial immigration of new arrivals from Angola, Mozambique and Cape Verde.

Today, six different ethnic groups of São Toméans can be identified based on whom they descended from. The first group is the Mestico. These are mixed-blood descendants of African slaves brought to the islands from Benin, Gabon, and Congo during the early years of settlement. They are also known as “filhos da terra” or “sons of the land.” The second group is the Angolares, who are said to be descended from Angolan slaves who survived a 1540 shipwreck near the islands. Today, their main livelihood is fishing. The Forros form the third group and are descended from freed slaves after the abolishment of slavery. The fourth group is known by the name “Servicais.” These are contract laborers from Angola, Mozambique, and Cape Verde who have come to the island to make a living and hope to return home. Tongas, forming the fifth grouping, are the children of contract laborers who are born on the islands. The final group is the Europeans, largely of Portuguese origin. The São Toméans are thus made up of peoples with many different ethnic backgrounds.

## <sup>2</sup>LOCATION AND HOMELAND

The islands of São Tomé and Príncipe are located in central Africa about 200 miles west of the coast of Gabon and Equatorial Guinea and south of Nigeria and Cameroon. They are located right on the equator in the Gulf of Guinea. They are two tiny volcanic islands with an area of about 400 square miles. The topography is mountainous with tropical climatic conditions and two distinct wet and dry seasons.

The mountainous topography of São Tomé rises to about 2,000 m (6,640 ft). This geography results in swift streams radiating down the mountains through lush forest and cropland on their way to the sea. Along the coastal areas the climate is hot and humid with average temperatures of up to 27°C (80°F). Given their tropical climate, the islands experience ample amounts of rainfall ranging from 101 cm to 508 cm (40 in to 200 in) per year, with the rainy season lasting from October through May. The volcanic soils are rich for the production of plantation crops such as sugar.

## <sup>3</sup>LANGUAGE

Portuguese is the official language and the language of education. However, there are several other dialects that are simply known as Luso-African creole spoken by Africans with quite a substantial number of words from Portuguese. São Tomeans refer to their creole language by different names, the most popular of which is Forro. Apart from Portuguese, there are three main creole dialects that are spoken by São Toméans on the two islands, namely Angolar, Príncipeense, and São Toméense. All three trace their origin from Kwa and Western Bantu languages. Angolar is spoken on the southern tip of São Tomé and has its origin in Kimbundu of Angola, Kongo, Bini, and Ndingi. Príncipeense is the creole spoken on the island of Príncipe, while São Toméense is the creole spoken on São Tomé.

## <sup>4</sup>FOLKLORE

Among the São Toméans, poetry has become a major vehicle for narrating historical events. Poetry and stories tell of the discovery of the islands by Portuguese explorers, early Portuguese settlements, and the slave trade that saw large numbers of Africans arriving on the islands to boost the islands' population. There is also a well developed set of plays and performances, all of which are designed to convey the rich history of the various ethnic groups that arrived on the islands in the 15th century. For example, masked performers in colorful attire accompanied by drums, flutes, and dancers entertain the audience with Portuguese historical plays.

## <sup>5</sup>RELIGION

São Toméans are largely Christians, with the majority being Roman Catholics (80%). Protestant and evangelical churches account for 15% of the population and 3% are Muslim, with the rest having no religion or practicing some indigenous African traditional religion. Many of the African population still retain their beliefs in ancestral spirits that can be traced back to the homelands they were uprooted from during the slave trade era. It is, therefore, not surprising that while believing in Christianity, São Toméans of African descent also practice rituals that are not sanctioned by the Church. For example, the Forro ethnic group practice a communal ritual called *djambi* in which an entire neighborhood or village gathers to drum,

dance, and witness spirit possession. Traditional medicine men are also readily available to provide divination, healing, and protection from evil spirits.

## 6 MAJOR HOLIDAYS

São Toméans celebrate a number of public and religious holidays throughout the year. The most important ones are New Year's Day on January 1, Martyrs' Day on February 3, Labor Day on May 1, Independence Day on July 12, Armed Forces Day on September 6, Agricultural Reform Day on September

30, All Saints Day on November 1, and Christmas Day on December 25.

## 7 RITES OF PASSAGE

Rites of passage among São Toméans are largely determined by membership in the Roman Catholic Church. Soon after birth, the newborn is baptized as the first rite of passage. As one gets older, he or she goes through the Catholic Church rites of first Communion, confirmation, and so on. Children also attend the modern school system.

Some African traditions have survived the test of time as rites of passage. For example, the Forros believe that the spirits of the dead are never disconnected from the world of the living. They thus follow a strict form of funeral rites, similar to that practiced by Africans on the coastal zones of Equatorial Guinea and Gabon. Once a death occurs, all adults except pregnant women are expected to participate in ceremonies of singing and dancing. A goat or a chicken is often sacrificed with the blood poured on the dead. At the cemetery, the corpse is buried in the grave in the fetal position to signify that it will rise and be reborn. Thus, the dead are considered to be part and parcel of society, necessitating the offering of sacrifices to placate the spirits of the dead until they are reborn.

## 8 INTERPERSONAL RELATIONS

Similar to other ethnic groups in Africa, São Toméans value good conduct. Age brings with it seniority and, therefore, respect from the community. Older men and women are considered to be the keepers of wisdom and are treated with great respect and deference. Men and women with many children and/or grandchildren are treated with great respect. When greeting each other, it is courteous for one to inquire about the health of an individual and his family.

## 9 LIVING CONDITIONS

Poverty is one of the major problems affecting the living conditions of São Toméans. Many live in abject poverty, but the rich oil finds off the waters of these two islands have great potential to raise wealth and, therefore, improve living conditions. However, corruption is another obstacle in translating the new-found wealth into something that benefits all.

Houses are typically made out of local materials, with brick or cinderblock walls and iron sheets as roofs. For the poor, the walls of houses are constructed either of mud or planks made from timber with the roofs covered by galvanized iron sheets. The poor live in shanty towns with few amenities and dilapidated buildings. Wealthy families live in modern houses or in old colonial bungalows. Run-down old colonial bungalows are often occupied by the poor.

Life expectancy in São Tomé is 63 years up from 56 years in 1970, a decent increase at a time when many countries in Sub-Saharan Africa are experiencing declining life expectancies because of the HIV/AIDS epidemic. Almost all children receive vaccinations for tuberculosis, polio, measles, DPT, and Hepatitis B.

## 10 FAMILY LIFE

Given that almost 95% of São Toméans identify themselves as Christians, marriages are conducted in the Christian tradition

and are supposed to be monogamous. Polygamy is not an accepted norm, although it is practiced in rural areas to a lesser extent. In spite of this, many men and women have several partners concurrently or over the course of their lives. Poor women often have visiting relationships with several men. This affords them a little income to subsist on and take care of their children.

In rural areas, women are responsible for taking care of the household chores, such as farming, gathering wood and water, preparing food, and raising the children. Fertility rates in rural areas are quite high, with a total fertility rate of over four children per woman. In the city, women live better lives in comparison to their rural counterparts. They have fewer children and may compete for male-dominated jobs.

### **11 CLOTHING**

São Toméan dress is similar to Western forms of clothing. Men will normally wear pants, shirts, suits, neckties, shoes, and so on, depending on the occasion. Women also generally dress in Western fashions. Some women may dress in traditional garb, consisting of a blouse and a loin cloth that they wrap around their waists to below the knees. Boys and girls prefer to wear the omnipresent jeans and T-shirts. São Toméans will go to great lengths to wear colorful and descent clothing during religious ceremonies and holiday celebrations or festivals.

### **12 FOOD**

Given their location surrounded by the Atlantic Ocean, the main source of protein is fish. The fish is taken with carbohydrate rich tropical root crops, such as yams and cassava, as well as plantains and bananas. Tropical fruits, such as mangoes, guava, papaya, and citrus trees, are widespread and quite abundant. The favored national dish among the São Toméans is stew with traditional palm oil.

Spices are used to add taste and color to dishes. There is also a diversity of vegetables that are used in fixing delicious São Tomé dishes. Goat, lamb, beef, chicken, and wild monkey form the main meat dishes that are taken with rice, spices, raisins, almonds, and honey. One of the classic ways of preparing chicken is to stew it in a peanut and tomato sauce. Another tasty São Toméan meat dish is chicken marinated in an onion-mustard mixture. The Portuguese influence in food preparation can be seen during important occasions, such as weddings, baptisms, and funerals, when São Toméans prepare lavish tables with a large array of dishes for all to admire. For the wealthy families, the dishes may be served with bottled beverages and wines, while the poor have locally made palm wine and cane alcohol.

Most food needs to be imported. Many of the people are subsistence farmers, producing inadequate amounts for their families. As a result, a small proportion of the population suffers from malnutrition. Food insecurity is a direct result of the plantation system of agriculture that was introduced during the colonial era and continues to this very day, where cash crops, such as coffee and cocoa, take precedence over food production.

### **13 EDUCATION**

Education is patterned after the Portuguese system of primary school, secondary school, and university, with Portuguese as the language of instruction. Although primary school is universal and compulsory, data shows that only 78% of chil-

dren are enrolled in school. One of the major challenges of the country's educational system is regional inequality between urban and rural areas. Urban schools enjoy higher standards of education in comparison to rural schools. For rural residents, secondary education is nonexistent. Some rural residents send their children to live with relatives in urban areas so they may continue their education. The country also faces a major challenge to rehabilitate its crumbling educational infrastructure.

Despite these difficulties, the country has a 79% literacy rate, one of the highest on the continent. Gender-parity in educational attainment is also near equal. The girls-to-boys ratio was 0.92 in 2000. Over 68% of children finish elementary school, but there is a high drop-out rate at the secondary level, due to their unavailability in rural areas. Up until 1996, there were no institutions of higher education on the islands. The only way for a high school graduate to receive university education was to go abroad, something many could not afford. However, since 1996 the Ministry of Education has established two institutions of higher learning in São Tomé and Príncipe. The first one, created in 1994, is private and the second one, established in 1997, is public.

### **14 CULTURAL HERITAGE**

Centuries of Portuguese colonialism makes the country a homogeneous cultural entity. The government has attempted to stress the country's African heritage with little success. Language, family structure, and religion are basically Portuguese. However, many African elements have been adopted in the cooking, customs, beliefs, and dress of the common people. The poorer individuals speak creole, a language that traces its origin from several Bantu languages, but with many Portuguese words.

São Tomé is a party to the World Heritage Convention, whose main aim is to preserve historic sites. For example, in the framework of the Slave Route Project, the country has participated in the implementation of the Tourism of Memory program. Storytelling reflects this heritage, with many of the stories recounting the slave trade experience. Poetry is the most highly developed form of literary expression, with historical events as the main subject. Folktales and short stories are also part of the cultural heritage of São Toméans.

The mixture of Portuguese and African heritage is clearly illustrated in dance and music. During festivals, masked dancers in colorful attire are accompanied by drums and flutes to entertain the audience. Drama is often conducted to portray Portuguese historical events. The young people prefer to dance to imported music, such as the samba from Brazil and popular music from the United States and the Democratic Republic of the Congo.

### **15 WORK**

Subsistence agriculture and fishing are the main activities for the majority of the people on the islands. Subsistence crops grown for local consumption include root crops, vegetables, plantains, and bananas. Industries are virtually nonexistent, except for a few processing plants for food, beverages, and soap. The timber industry through logging has contributed to the economy, but it has resulted in deforestation of pristine tropical rainforests. The two islands of São Tomé and Príncipe are endowed with natural beauty and a relatively safe environment. This could propel the country into a tourist haven, but it

still remains to be realized due to unreliable air transportation to the islands. The international community is also unaware of the existence of these two islands, as there is rarely any news about them, much less travel brochures. There has been some investment in hotels and other tourist facilities in recent years.

The country is heavily dependent on an export-oriented plantation economy of cash crops, such as cocoa and coffee. In turn it imports rice, beans, and salt fish to feed the plantation workers. Cocoa is the major export, accounting for over 90% of foreign exchange earnings. Other export crops grown on the plantations include coffee, coconuts, and palm kernels.

Recently the country has run into some fortune. Billions of barrels of oil are believed to be present off its shores. Should the oil reserves come to fruition, São Tomé's economy will certainly go through massive transformation overnight. Drilling of the oil reserves is under way and commercial production is expected to begin within a few years.

## 16 SPORTS

Soccer is the most popular sport in São Tomé. Although the country has a national soccer team, it has not been active in international sports and has recently been removed from the FIFA World Rankings list. There are several other popular sporting activities, such as basketball, handball, volleyball, and track.

## 17 ENTERTAINMENT AND RECREATION

There are two television stations in São Tomé and Príncipe to provide entertainment to its citizens. Wealthy families may have access to a satellite dish that connects them to what is happening throughout the world.

## 18 FOLK ART, CRAFTS, AND HOBBIES

Crafts are an area of interest for the government, which is trying to adapt local production to the demands of the international market. Many of the paintings by local artists depict important historical folk scenes. These paintings can be viewed at the Francisco Tenreiro Cultural Center or the National Museum.

## 19 SOCIAL PROBLEMS

Among the major challenges facing São Toméans in the 21st century are poverty, food insecurity, and the prevalence of malaria. Poverty is the major cause of petty theft on the islands. Consumer goods are also in short supply. Malaria remains one of the biggest health problems, although initiatives begun in 2000 have helped reduce the number of cases. There have also been recurrences of cholera.

## 20 GENDER ISSUES

In terms of education, São Tomé has achieved gender equality in primary school education. Nevertheless, women are still under-represented in the job and the political sectors. Although the country had a female prime minister, women are rarely represented in politics, with only 4 out of 55 deputies being women in the parliament in 2008. Data also shows that the labor participation rate was 39% for women against 80% for men. Traditional beliefs and a high rate of teenage pregnancies often reduce women's educational and economic opportunities.

Within the family, women exercise some control over their resources. Women are able to own businesses that are run independently of the husband or other male relatives. Some women have been able to accumulate a large amount of cash through the selling of produce and fish at markets. This cash is managed by the women independent of the men.

**POPULATION:** 12.8 million

**LANGUAGE:** French; Wolof; 38 African languages

**RELIGION:** Islam (Sunni, with traditional aspects); Roman Catholicism

**RELATED ARTICLES:** Vol. 1: Fulani; Malinke

## 1 INTRODUCTION

Senegal has a rich precolonial history with a rare degree of unity. The lands now comprising Senegal once were part of three successive empires: Ghana, of which the Tekroun King was a vassal; Mali, which brought Muslim culture and letters, peace, and trade to the region until AD 1350; and Songhai, which reached its apex nearly 200 years later. In the 11th century, the Fulani and Tukolor ethnic groups converted to Islam and later waged jihads (religious wars) over a period of 225 years. Senegalese culture strongly reflects influences from these Islamic rulers and conquerors.

In 1444, Portuguese sailors became the first Europeans to visit the Senegalese coast. The French later founded the Senegal colony in 1637, making it the oldest and longest-lasting French colony in Africa. The slave trade, which flourished from the 1600s until 1848, devastated this area. Today one sees remnants of this tragic epoch in the island fortress of Gorée off the coast from the capital, Dakar. Gorée had served as one of West Africa's main slavery depots.

As the French advanced their territorial claims eastward, Wolof states resisted them in the 1880s, but eventually succumbed to superior military force. In 1889, an agreement with the British created The Gambia, a country along the valley of the navigable Gambia River that is almost entirely surrounded by Senegal. The location of The Gambia has had the negative effect of cutting off the southern Senegalese province of Casamance. Dakar acquired added importance when the French made it the capital of their West African territories in 1902. Under Léopold Senghor, who was a member of the Académie Française and a French parliamentarian, Senegal declared its independence in 1960. Senegal formed confederate governments twice, first with Mali (1958–60), and then with Gambia (1982–89).

In 1975 Senegal became one of Africa's first countries to allow a political opposition. For 40 years, however, a de facto government ruling party—the Socialist Party—dominated the competition. Then in 2000 President Abdoulaye Wade was elected, marking one of Africa's first civilian transfers of power to an opposition party. Wade was reelected in February 2007, but 12 opposition parties boycotted the June 2007 legislative polls alleging fraud. The boycott gave 131 of 150 seats in Parliament to the ruling coalition, SOPI, and in the 100-member Senate (a new legislative body), the opposition gained virtually no seats. In May 2008 press reports circulated that Wade (in his second and last term) was considering tampering with the two, five-year term limit rule, something other African leaders have done to prolong their hold on power.

Senegal has had mostly peaceful relations with its neighbors, although a brief border conflict (1989–90) with Mauri-

tania to the north resulted in the expulsion of nationals from both sides. However, the most serious threat to stability has been the low-level insurgency in the southern region of Casamance where rebels have been fighting a secessionist war with the government since 1984.

## 2 LOCATION AND HOMELAND

Located at the westernmost point of Africa, Senegal has a total area of 196,713 sq km (75,951 sq mi), making it smaller than the US state of South Dakota. Senegal shares borders with Mauritania, Mali, Guinea, Guinea-Bissau, and The Gambia. Much of Senegal is very arid with scattered trees and scrub covering low, rolling plains that become foothills in the southeast that reach an altitude of 581 m (1,906 ft). Four main rivers run east to west to the Atlantic Ocean. Three of these—the Saloum, Gambia, and Casamance—form large estuaries inland. The Casamance runs through a marshy basin before reaching the ocean.

The climate varies greatly from north to south, but rains fall throughout the country from December to April. Hot, dry, Harmattan winds blow from the Sahara Desert during the summer. Natural resources include phosphates, iron ore, manganese, salt, and oil. However, seasonal flooding, overgrazing, and deforestation contribute to environmental erosion and desertification.

In 2008, estimates placed Senegal's population at 12.8 million, growing at a rate of 2.6%. Senegalese are members of more than 20 ethnic groups, which for the most part have managed to live harmoniously together. The largest is Wolof (43%), followed by Fulani (24%), Serer (15%), and lesser groups including Toucouleur, Diola, Malinke, and Soninke. Large numbers of Lebanese traders live in the cities.

## 3 LANGUAGE

French is the official language of Senegal, but most people speak Wolof. Besides French and Wolof, people speak the language of their ethnic group, such as Pulaar, Serer, and 38 different African languages.

## 4 FOLKLORE

In Senegalese society, the most accomplished storytellers are professional African bards, or *griots*. In a way, they are like the European minstrel of the Middle Ages. They are Africa's renaissance women and men, combining the historian, poet, musician, and entertainer all into one person. They must be familiar with history, know many people, and talk about them diplomatically, but honestly and critically. Griots use props, flutes, harps, and break into song as they perform. No ceremony or celebration of consequence is held without them.

Senegal's well-known modern statesman, Léopold Senghor, was also an accomplished poet. He was Senegal's first president and the founder of the negritude movement, a revival of the African cultural past. A poet, academic, and politician of great influence, Senghor left a lasting imprint on Senegal, Africa, and the African diaspora. Someday griots will recount his accomplishments much as they do the deeds of past heroes. Senegal's modern griot is Sembene Ousman, whose stories and films in French, Wolof, and Diola chronicle politics and social life in Senegal and France (see Cultural Heritage).

## 5 RELIGION

The Senegalese are overwhelmingly Muslim. More than 90% of the population belongs to the Sunni branch of Islam. Less than 10% is Christian, mainly Roman Catholic. Religious practice is highly tolerant, and clashes between members of different faiths for religious reasons are virtually unknown.

*Marabouts* play a unique role in Senegalese society. In orthodox Muslim communities, marabouts are teachers of the faith, and where indigenous beliefs mix with Islam, they are also diviners and fetishers. In Senegal, they became intermediaries between Allah and the faithful. Under the French, they assumed leadership of administrative units (*cantons*), replacing traditional ethnic chiefs. Their political influence remains strong, particularly in determining the outcomes of elections in the hinterlands.

As in many colonized cultures, people overlay their traditional beliefs with the imposed religion, such as Islam. The Wolof typically wear protective amulets or *gris-gris* to overpower evil spirits. Whereas the small leather pouches once contained herbs and medicines, they now hold verses of the Quran. The Bassari in the east and the Diolas to the south retain their animist beliefs more than the other groups.

## 6 MAJOR HOLIDAYS

Independence Day is April 4. Muslims celebrate the end of the holy month of Ramadan by feasting for three days. Catholics celebrate Easter and Christmas. Each region has its own secular and traditional folk feasts according to its own calendar. In

Casamance, Oussouye hosts an annual royal feast day, which occurs at the end of the agricultural season and before the beginning of the school year. It is announced in Dakar, and people from the region, as well as others who just want to see the spectacle, come. The highlight of the feast is a fight featuring young women, one of whom may be chosen by the king to spend the night in the sacred woods in the heart of the forest.

## 7 RITES OF PASSAGE

Most Senegalese today follow Islamic custom in their rites of passage, including baptism, circumcision, marriage, and death. Each passage marks a part of the cycle culminating in passage to the spirit world. To this end, people and communities constantly celebrate life events. Griots are an integral part of these occasions.

In ancient times, Senegalese peoples celebrated the arrival of puberty with initiation rites. The minority populations in the south still organize rites of initiation, lasting from one to three months during the long school vacations. The purpose of initiation is to build courage and endurance, communicate traditional and practical knowledge of life, and transfer responsibility to a younger generation. Some of the knowledge is known only to males, and therefore cannot be shared with females or with the uninitiated. The initiation begins with circumcision, binding the boys by blood. Elders initiate boys of the same age, dividing them into age sets or groups. These sets become "fraternities" for life. Members have both the duty to help each other and the right to reprimand each other for improper behavior. Girls pass through similar processes, and many also are circumcised. However, for girls, this practice is increasingly questioned for reasons of health and sexual fulfillment.

Initiation rites often mark occasions of great community celebration. The Bassari, for example, bring down sacred masks from the mountains that represent supernatural powers. Dancers wearing these masks engage the newly circumcised adolescents in a mock battle, which becomes dance, song, and feasting.

## 8 INTERPERSONAL RELATIONS

Greeting is an extremely important custom and can last for several minutes. Indeed, it is quite possible that if you do not greet someone and inquire after their health, family, and well-being, he or she will not talk to you. The French custom where men and women kiss three times on the cheeks is common in Dakar and in towns but much less so in villages. Friends and strangers typically greet each other by offering a handshake with the right hand, sometimes touching the left hand to the right arm. However, men and women do not shake each other's hands. A common Wolof exchange (with 5–10 additional inquiries) would be as follows, with praise for Allah interspersed throughout the greetings:

"Nanga def?" (How does it go?)

"Mangi fii rekk." (I am here only.)

"Nunga Fe." (They are there.)

"Mbaa sa yaram jamm." (I hope your body is at peace.)

"Jamm rekk." (Peace only.)

"Alhumduillah." (Praise be to Allah.)

As in many African societies, Senegalese give much respect to age and status. It would be impolite to make eye contact

Senegalese fishermen. Senegal's national dish is *Tiebou Dienn*, a type of fish stew. (Carolyn Fischer)

with an elder, a person of higher status, or someone of the opposite sex. Traditional girls and women normally would curtsy to elders out of respect. In Muslim society, the right hand is used to pass and to take objects. Pointing is considered rude, but people may point with their tongues.

People are accustomed to visiting each other unannounced. They never consider impromptu visits to be rude or an inconvenience. Senegalese do not permit a visitor to leave without sharing a meal, having tea, or spending the night. The Senegalese refer to this hospitality as *Terranga*.

## 9 LIVING CONDITIONS

The government continues to make reforms to the economy, although jobs are hard to find leaving many young Senegalese to migrate out of Senegal in search of employment and a better life elsewhere. In 2006–07 Dakar experienced regular power outages, and urban centers around the country continued to struggle with inadequate water supply, poor sanitation, and environmental degradation. In general, high population growth outstrips the capacity of the government to provide basic services. Inflation and a high cost of living, especially in Dakar, also made life difficult for the average family.

Nonetheless, living conditions for the middle- and upper-middle class have reached very comfortable levels in some Dakar neighborhoods. In addition, many affluent Dakarais have beach houses on the *petite cote* (outside Dakar), and a mix of Senegalese and foreigners—mostly French—are buying condo-

miniums in resort areas on the coast. Their lifestyles, however, are not reflective of average living conditions. Most people in urban and peri-urban areas live in small, cramped cinder-block housing, which may have indoor plumbing, but might also depend on outdoor kitchens, standpipes, and latrines. In rural areas, many houses are made of local materials such as mud brick, millet stalks, or reeds, and roofs of thatch. Dirt floors are common, but are swept daily. As families acquire the means, they build more durable structures of concrete and galvanized iron. Partially finished houses are a common sight because people build them in stages as money comes in.

In arid rural areas, women and girls do the washing at wells. Few people have access to streams and rivers and still fewer to plumbing. A daily chore for women and girls is going to the well, which is traditionally hand-dug, to fetch water for the family. The well is often at the center of the village and serves as a social gathering place. The huge plastic tubs are filled with water and carried on top of the head to some sort of holding tank (or old oil drum) in the family compound. In the cities, people have access to indoor plumbing or may share a communal faucet.

Senegal has one of the best paved road networks in Africa, but it still only has four miles of expressway (in Dakar), and about 2,500 miles of paved roads overall. The most common form of transportation is by bush taxi—French Peugeot 504s—which take up to seven passengers just about anywhere in the country. Colorful pickup trucks painted with designs

and inscriptions, outfitted with truck caps and wooden plank benches, are also available. These carry as many as 14 to 24 passengers. Their roof racks hold suitcases, packages, and small livestock.

## 10 FAMILY LIFE

Traditional Senegalese live in compounds with their extended families. Nuclear families live in their own huts. The elders are highly respected. Besides hauling water, women gather firewood and cook the meals. Few women work outside the home, unless it is to cultivate family gardens and fields, or to sell goods at the market. Men increasingly leave their villages and homes during the dry season to look for work in the cities.

Western ideas take root more easily where traditional family influences are absent or less prevalent. This is noticeable in Dakar where more girls and women speak French, and where women hold political offices, practice law or medicine, and teach. As society changes, so also must laws. Senegal permits a couple to adopt an optional prenuptial agreement limiting the number of wives a husband will take during his marriage either to one or two. Divorce is consensual. Women have the right to initiate a divorce process, though in practice they seldom do.

## 11 CLOTHING

In Senegalese society, personal appearance is very important. Most urban men and women wear Western-style clothing. Men typically wear shirts and trousers and wear suits for dress occasions. Women wear dresses. One rarely sees women in jeans or pants. Similarly, shorts are reserved for children, unless they are worn for sports. In more traditional settings, people wear *boubous*, loose-fitting cotton tunics with large openings under the arm. Men wear cotton trousers underneath, while women wear sarongs. With much imagination, women tie matching headscarves or turbans to complement their boubous. For men, footwear includes open or closed and pointed leather sandals, according to the occasion. Women have a greater variety of footwear including colorful, decorated sandals. Depending on the purpose of the boubou, it may be elaborately embroidered and could cost \$200 to \$300.

## 12 FOOD

Senegal's staple foods include rice, corn, millet, sorghum, peanuts, and beans. These foods are typically found throughout Africa at this latitude. Milk and sugar also form an important part of the diet for some people and certain ethnic groups. The Senegalese generally eat three meals a day, with the main meal at about 1:00 pm, and the evening meal served late. In traditional households, men, women, and children usually eat separately. It is not polite to make eye contact while eating. Senegalese eat from a communal platter or large bowl with the right hand, as is the Muslim custom. Muslim adults, and children aged 12 and older, do not eat or drink from sunrise to sunset during the holy month of Ramadan.

Senegal is famous for its national dish, *Tiébou Dienn* (pronounced "Cheb-oo Jen"). The dish can be made as simply or as elaborately as desired. Basically, it is a fish stew cooked in cilantro, scallions, garlic, pepper, onions, tomato paste, bouillon cubes, and oil. The stew is mixed with squash, sweet potatoes, okra, tamarind, and different kinds of peppers. People eat this on rice, which has been cooked in the fish broth. The Wolof

people are also known for their *Mbaxal-u-Saloum*, a spicy tomato, peanut, and dried fish sauce with rice. Another popular dish is *Menue*, cornmeal mush, served with *baloumbum*, a peanut sauce.

Meat is a sign of wealth, as is oil. Special occasions usually require a meat dish, but one might also serve Yassa chicken. The chicken is marinated in a sauce of red vinegar, lemon juice, red chili peppers, bouillon cubes, and soy sauce, and then grilled over charcoal. It is served with heaps of sliced browned onions over cooked rice, on a platter placed on a cloth spread on the ground. Guests sit or squat around the tray, after having washed their hands and removed their shoes. Using their right hands, they gather a morsel of chicken, sauce, and rice from the part of the tray in front of them, squeeze it gently into a compact ball, and eat.

## 13 EDUCATION

Senegalese place a high value on education, but the cost of living, school fees, and the need for children to help with family income deter most children from attending beyond the primary level. Literacy is about 40%, and only about 29% of women and girls can read and write in French. Many girls leave school to wed. Parents of means send their children away to live with relatives in a town where schools are better organized and commuting is easier. In addition to formal schooling, the majority of children attend Quranic (Muslim) schools in the afternoons or evenings where they learn Arabic and memorize portions of the Quran. Technical schools offer training in dyeing, hotel management, secretarial work, and other trades.

In the mandatory formal system, primary school begins with a two-year initiation class called *Ceci*. At the end of four more years, pupils take a high-school qualifying exam. In the French system, classes begin with Class Six, counting down to Class One. A final year follows, which prepares the student for the state baccalaureate exam. But few students reach this level, and an even smaller percentage of high school graduates continues at the University of Dakar, which in Africa is quite prestigious. Before independence, Africans from all over French West Africa came to study public administration at the famous William Ponty school.

## 14 CULTURAL HERITAGE

Senegal has one of the richest bodies of written and film literature in all of Africa. Leopold Senghor was a leading poet and philosopher and the author of the *négritude* movement. Similar to the Harlem Renaissance school in the United States, *négritude* aimed to restore dignity and pride to African peoples through a revival of their cultural past. Senegalese filmmakers such as Sembene Ousman and Safi Faye are internationally famous.

Literature and film notwithstanding, the title of Senegal's national anthem offers a clue to Senegalese musical culture: "Pluck your Koras, Strike the Balafons." The traditional *kora*, a stringed calabash (gourd) instrument, symbolizes the bard tradition in the country. A unique percussion sound is made with a small drum held under the arm, which can be pressed against the body to produce different pitches. The goatskin drumhead is hit by a wooden stick with a curved end.

Senegalese musicians have adapted traditional music by using electric and acoustic guitars, keyboards, and a variety of drums. Several Senegalese rap groups in Dakar have evolved

Some 90% of Senegalese belong to the Sunni branch of Islam. The remaining 10% are Roman Catholic. (David Johnson)

from the special blend of Western and African musical traditions. In particular, *griots* (bards) perform traditional Senegalese rap songs to tell stories about society, much like ancient griots narrated the lives of ancient kings.

One of the best known Senegalese performers is Youssou N'Dour. N'Dour is a leader in popular world music, and sings in English, French, Fulani, and Serer, besides his native Wolof. He has collaborated with Paul Simon (*Graceland*), Peter Gabriel (*So*), Neneh Cherry, and Branford Marsalis.

### **15 WORK**

Rural Senegalese typically work in subsistence agriculture or grow cash crops for export such as peanuts and cotton. Senegal is well known for its peanut production in the Kaolack region. Senegal has a small industrial sector (less than 10%), and because of its long dry season, limited amounts of arable land (27%). About one in four people works in the service sector, but half of the workforce is un- or underemployed. Tourism is important, accounting for about 60% of the gross domestic product. Most urban dwellers work in the informal sector as petty traders and small service providers. They peddle clothing, watches, and electronic goods; polish and repair shoes, tailor shirts, cut hair, and sell goods at market. In downtown areas, it is typical to be approached constantly by peddlers. Motorists caught in traffic can buy anything from apples to brooms from roadside hawkers.

### **16 SPORTS**

Soccer, basketball, track and field, and jogging all are popular sports in Senegal. The national soccer team, the Lions, has produced some world-class players, reaching the World Cup quarter-finals in 2002. Senegal is also known for its traditional wrestling—*Laamb* in Wolof. It is renowned especially among the Serer people. In ancient times, wrestlers competed before the king and queen in village squares. Singers, dancers, and storytellers embellished the match. Wrestlers wore amulets to ward off evil spirits and black magic from their opponents. Nowadays, the tradition remains strong. As in former times, *griots* (bards) praise the victors in song and dance. Drumming, dancing, singing, and a *marabout's jujū* (religious leader's fetish magic) are vital to the competition.

### **17 ENTERTAINMENT AND RECREATION**

Dakar offers a variety of recreation from television to movies, to DVD rentals, night clubs, and sporting events. Foreign and national films are enjoyed, especially in the towns where technology is more advanced. Dakar popular music is enjoyed and danced to widely throughout the country by teenagers, and adults, too. Some 20 FM stations have emerged since the 1990s, with several Dakar stations playing hip-hop music. The Internet also has blossomed, and Internet cafés are now popular meeting spots in every town around the country.

The more traditional pastimes such as socializing and visiting people in their homes remain popular as well. Older men

enjoy playing checkers. *Griots* (bards) entertain at ceremonies such as baptisms and marriages. Cultural events such as folk ballets, theater productions, or local dance troupes also provide recreational outlets. However, in many rural areas, *marabouts* (religious leaders) frown upon dancing and sometimes do not allow drumming or dancing in their villages.

### 18 FOLK ART, CRAFTS, AND HOBBIES

Each region of Senegal has its own traditional crafts. Senegal's many tourists have given a boost to folk art and crafts cottage industry. One finds jewelry, baskets, pottery, handwoven fabrics, glass paintings, and woodcarvings. Handcrafted jewelry includes gold, silver, and bronze. Bead and amber necklaces, which Fulani women traditionally wore, are also popular. Tourist items such as handbags, clothing, and footwear are made from locally printed fabrics and leather. Craftspeople fashion animal skins, such as iguana and crocodile, into belts and shoes.

Although tourists are attracted to the decorative quality of the *kora* (traditional gourd instrument), Senegalese artisans build professional instruments to meet local demand. Their exquisite koras are made from huge calabashes (gourds), through which a 1.5-m (5-ft) wooden pole is set. The strings are stretched from the calabash (the sound chamber) to the pole on which they are tied. The musician faces the instrument, grasps two wooden pegs that serve as handles, and plucks the strings mainly with the thumbs. The calabashes have eye-catching decorations of brass and silver buttons and traditional designs. A hole about 12 cm (5 in) across in the side of the calabash serves to project the sound, and also makes a convenient "hat" into which tips can be placed.

### 19 SOCIAL PROBLEMS

Senegal's most basic social problems are related to its economic constraints. The widespread use of marijuana among young men and migration to Europe are indications of the severity of the problem. Some villages are populated only by women, children, and old men. Another indication is the never-ending secessionist struggle in Casamance. On the one hand, Casamance has been the country's most distant and neglected province, but on the other is unable to develop as long as rebels and splinter groups kill civilians, commit robberies and harass local populations. Government forces now fight not only against rebels of the Movement of Democratic Forces of the Casamance (MFDC), but also with the Movement of the Liberation of the People of the Casamance and with Atika, another separatist movement led by Salif Sadio.

Senegal does not incarcerate as many of its citizens as does the United States, but its jails hold twice the number of prisoners they were designed to hold. Because of corruption and weak law enforcement, traders administer mob justice on thieves, and there are reports of domestic violence, child abuse, child marriage, child trafficking, abusive child labor and male and female infanticide. While these practices may get reported to the authorities, the police often do nothing and the courts fail to prosecute perpetrators.

### 20 GENDER ISSUES

Women face discrimination, especially in rural areas where traditional customs and polygynous relationships are the norm. Indeed, one in two marriages in the hinterlands are po-

lygynous, and unless agreed to beforehand, husbands do not need to notify or seek consent of their wives to enter into subsequent marriages. Even though the law proscribes marriages for girls under 16, it is not uncommon in rural areas for girls 13–15 years old to be married as they represent a means of income via the brideprice. Female genital mutilation (FMG) is also widespread, despite efforts by government officials to eradicate it. Programs implemented by NGOs such as TOSTAN to create more awareness of the health risks associated with it, have reduced the incidence of FMG, but the practice remains deeply ingrained in the culture. Since the man is the head of the household, women cannot take legal responsibility for children, and women have difficulty inheriting and purchasing property. In addition to running the household, they also do 85% of the agricultural work.

# SEYCHELLOIS

**PRONUNCIATION:** say-shel-WAH

**LOCATION:** Seychelles Islands

**POPULATION:** 82,247

**LANGUAGE:** Creole, English, and French (official languages);  
Gurijati; Chinese; other European and Oriental languages

**RELIGION:** Christianity (Roman Catholicism)

## 1 INTRODUCTION

The Seychelles Islands take their name from the Viconte Moreau de Seychelles, controller-general of finance in the reign of Louis XV of France. A French possession until 1814, the Seychelles then became a dependent of Mauritius under the British and then a British crown colony in 1903. Early European settlers cut down and sold the hardwood trees of the islands, altering the original ecology and replacing it with a plantation economy. After the abolition of slavery in 1834, Africans worked mainly as sharecroppers, traders, fisherfolk, artisans, and wage laborers. Seychelles gained its independence from Britain in 1976.

From 1977 to 1993, Seychelles was an authoritarian, one-party socialist state. The country's 1979 constitution failed to provide for basic human rights, including them instead in a preamble as a goal of the Seychellois people. France-Albert René took power in a coup in 1977, and intimidated dissidents and opponents by threatening indefinite imprisonment, exile, or confiscation of the property of his political opponents. Police brutality, though not widespread, occurred as a result of René's unchecked power. In June 1993, Seychellois voted for a new constitution, and in July 1993 they voted in the country's first free and fair multiparty elections since the coup. René emerged victorious and was re-elected in 2001. He later surprised many observers when he stepped down in favor of his vice president, James Michel, in 2004. In July 2006 Michel outpolled Wavel Ramkalawan and was elected to a five-year term. His government continues to maintain control over public sector jobs and contracts.

## 2 LOCATION AND HOMELAND

The Republic of Seychelles is one of the world's smallest nations in size and population. It has a total land area of only 444 sq km (171 sq mi), about two-and-a-half times the size of Washington, D.C. The population measures only 82,247 (2008 estimate). The exact number of islands is unknown but has been estimated at 115, of which about 41 are granitic and the remainder coralline. The republic also includes numerous rocks and small cays. Hills up to 940 m (3,084 ft) high characterize the granite islands, with some narrow coastal plains. The granitic islands are of striking scenic beauty. Coral reefs are found on the east coast, but the coral islands are without fresh water. The tropical climate varies little, rainfall is balanced throughout the year, and temperature is tempered by monsoon ocean breezes.

Mahé, the main island, is the largest at 25 km (15.5 mi) long and 8 km (5 mi) wide, with an area of about 148 sq km (57 sq mi). About 90% of all Seychellois live on Mahé. It contains the capital and only city, Victoria, and the only port, with a population somewhat over 25,000 people (2008 estimate). Vic-

toria lies approximately 1,600 km (1,000 mi) east of Mombasa, Kenya; 2,750 km (1,700 mi) southwest of Bombay; 1,700 km (1,060 mi) north of Mauritius; and 885 km (550 mi) northeast of Madagascar. The only other important islands by virtue of size and population are Praslin and La Digue, situated about 50 km (30 mi) to the northeast of Mahé. The population of the outer coralline group is only about 500 people, mainly composed of plantation workers gathering coconuts for copra. To restrict population growth on Mahé, the government has encouraged people to move to Praslin and other islands where water is available. The population growth rate nationally is only 0.43%.

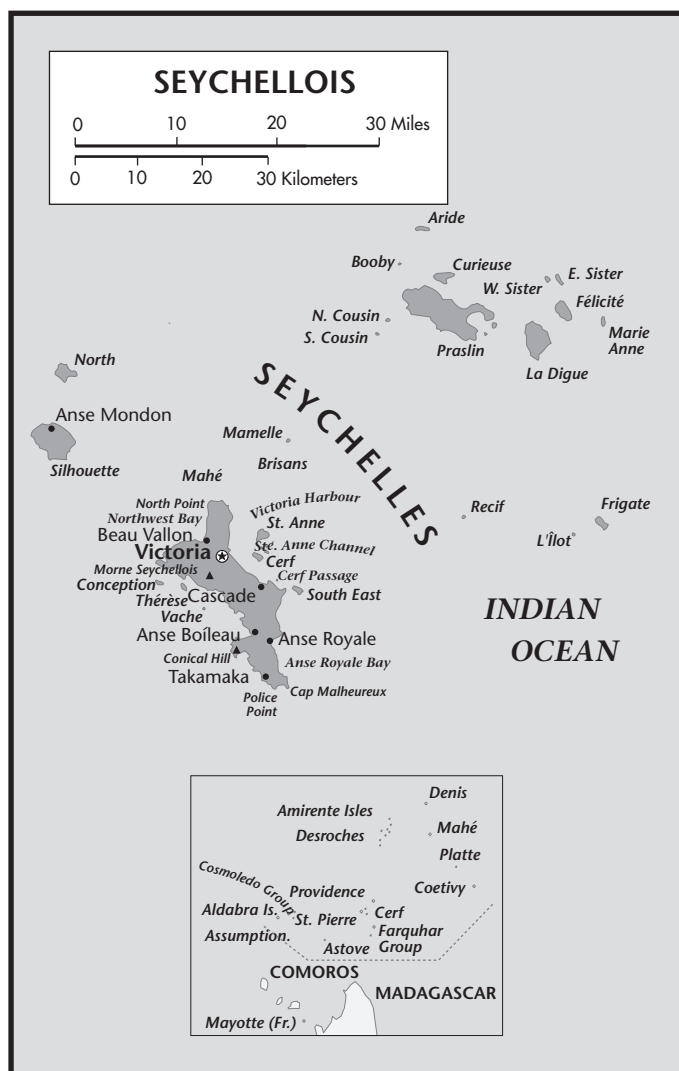

Most of the population is a relatively homogeneous mixture of African, European, Indian, and Chinese. The majority is Black, having Black African ancestors who arrived on the islands in the 18 and 19th centuries. Chinese were attracted to the islands by small trade. Then British and French colonials came. The Malabards from Maurice Islands and India arrived after the abolition of slavery. Over time, the groups have intermarried, creating an assortment of racial characteristics and numerous shades of complexion. The blending is such that it is impossible to define a typical Seychellois.

## 3 LANGUAGE

Seychellois have three official languages: Creole, English, and French. Ninety-six per cent of the population speaks Creole; 45%, English; 37%, French; 0.5%, Gurijati; 0.4%, Chinese; 0.9%, other Oriental languages; and 0.6%, other European languages. Creole was adopted as the first official language in 1981. English is the second official language, and French is the third. The government has emphasized Creole to facilitate reading among primary school pupils and to help establish a distinct culture and heritage. Opponents of the René government thought it a mistake to formalize Creole, which according to them had no standardized spelling system. They regarded it as a great advantage for Seychellois to be bilingual in French and English.

Creole in Seychelles developed from dialects of southwest France spoken by the original settlers. It consists basically of a French vocabulary with a few Malagasy, Bantu, English, and Hindi words and has a mixture of Bantu and French syntax. Very little Seychelles Creole literature exists. The development of an orthography (spelling system) of the language was completed in 1981. The government-backed Kreol Institute promotes the use of Creole by developing a dictionary, sponsoring literary competitions, giving instruction in translation, and preparing course materials to teach Creole to foreigners.

The great majority of younger Seychellois read English, which is the language of government and commerce. It is the language of the People's Assembly, although speakers may also use Creole or French. The principal newspapers carry articles in all three languages. Seychellois Radio and Television Broadcasting both offer programs in Creole, English, and French. Although discouraged by the René regime as a colonialist language, French continues to carry prestige. It is the language of the Roman Catholic Church, and it is used by older people in correspondence. Some 40% of television transmissions are in French—beamed by satellite to an earth station provided by the French government—and most Seychellois can speak and understand the language.

#### 4 FOLKLORE

Seychellois folklore is as rich as its people's cultural heritage. Accomplished storytellers and singers teach people their culture and social mores through fables, songs, and proverbs. The Creole proverbs are interesting also for the way they demonstrate linguistic derivation. For example, "Sak vid pa kapab debout" (One doesn't work on an empty stomach) translated literally reads "an empty bag will not stand up on its own."

Storytelling becomes more dramatic at night in the light of a bonfire or under a full moon. Moon shadows from the palm trees, and moonlight glinting from the palm fronds, create a natural theatrical atmosphere for the *moutia* performance. The *moutia* began as African slave dancing and improvisational storytelling, which provided a form of release after a long day of laboring for French colonial masters. Two men opened with dialogues on the hard labors of the day. Women then joined in the dance, to much singing and chanting. The pure form has rarely been seen by outsiders, but contemporary performances have become popularized. They still involve dancing with typical African rhythms and hip movements and musicians playing drums from hollowed-out coconut trunks covered with goatskins. The drums are heated by a palm frond fire before

the performance to give the desired tone. As in the past, drinks of palm-wine and sugarcane liquor lubricate the performance. The dance is still very personal in some outer islands, and performers often use satire and well-intentioned social critiques to entertain and to teach people of all ages.

#### 5 RELIGION

Almost all the inhabitants of Seychelles are Christian, and more than 90% are Roman Catholic. Seychelles comprises a single diocese, directly responsible to the Holy See. British efforts to establish Protestantism during the 19th century were not very effective. Sunday masses are well attended, and religious holidays are celebrated throughout the archipelago, as both religious and as social events. Practicing Catholicism, similarly to speaking French, confers a certain social status by its association with French culture.

About 7% of the population of Seychelles are Anglican, most coming from families converted by missionaries in the late 19th and early 20th centuries. Evangelical Protestant churches are active and growing, among them Pentecostals and Seventh-Day Adventists. Some 3% of the population are adherents of other faiths, including Hinduism, Buddhism, and Islam. A small group of Indian Muslims do not mix with the other groups. No restrictions are imposed on religious worship by any of the faiths.

Similar to other Africans, many Seychellois reconcile their Christian beliefs with traditional religious practices, such as magic, witchcraft, and sorcery. It is common for Christians, despite the disapproval of Church authorities, to consult a local seer known as a *bonhomme de bois* or a *bonne femme de bois* for fortunetelling. People want to influence the course of events in their love life, a court case, or a job interview. They may also wish to obtain protective amulets or charms, known as *gris-gris*, or to cause harm to enemies.

#### 6 MAJOR HOLIDAYS

The Seychellois have 10 public holidays, some of which reflect the strong Roman Catholic background of the Seychelles: New Year's Day, January 1; January 2; Good Friday; Easter Sunday; the Fête Dieu (Corpus Christi); Assumption Day, August 15; All Saints' Day, November 1; the Day of the Immaculate Conception, December 8; Christmas Day, December 25; and the Queen of England's official birthday. Families often take advantage of public holidays to picnic at the beach and swim. On these occasions, they may also find entertainment in the coconut groves, where local musicians and dancers put on a *moutia*-style performance (see "Folklore").

#### 7 RITES OF PASSAGE

Weddings and funerals are occasions for lavish spending. A family might spend half a year's income on a child's wedding because such displays confer status on the family. The guests may stay to party all night. Sometimes both families foot the bills, but sorting out who pays what and how much is tricky and often creates ill feelings when the accounts come due.

Funerals also make social statements about wealth and status. On Mahé, the Catholic Church offers three basic categories. The full treatment consists of bell-ringing three times, singing, organ music, and a sermon. The loud tolling should make the death known to everyone. The middle category involves ringing the bells twice, and everything is much less

A fisherman displays his catch to visitors at a roadside on the main island of Mahé in the Seychelles. Most visitors to the area spend time on this island for its beaches, larger hotels, and water sports facilities. (AP Images/Sayyid Azim)

showy. The lowest category provides only a single bell rung 11 times, but it is free. Islanders might not attend such a funeral, however, for fear of losing status.

## **8 INTERPERSONAL RELATIONS**

Seychellois are extremely sociable as a rule and often gather in the evening to enjoy each other's company. While older people may share a game of cards or checkers, younger people prefer playing the guitar and singing together on the veranda. Western-style dating is fairly common in Victoria, but in the outer islands traditional forms of recreation usually bring couples together with other young people.

Officially no racism exists in the islands, but Seychellois associate higher social status with lighter skin shades. This norm derives from the formerly dominant Europeans who monopolized wealth and public authority. Thus property, plantation, and business owners, and higher civil servants—mainly Whites or near Whites—are called *Grand Blancs*. Some 20 planter families, for example, trace their heritage back to French settlers. Under the socialist government, they lost the power and social prestige they once had. The working-class White who works for the grand blanc bears the humorous label, *Blanc Coco* (white chocolate). *Blanc Rouille* or “Rusted White” refers to a plantation owner who has inherited a big fortune but is

lazy, without education, and needs an educated Black Seychellois to do the accounting. Whites whose cleanliness is doubtful are called *Blanc Pourri* (Rotten White). Lower-class landless people, mostly of African origin, are at the bottom of the status ladder and are called *Rouge* (Red) or *Noir* (Black), depending on the darkness of their skin.

Thus, skin color figures importantly in social relationships and in career opportunity. A *Grand Blanc* generally marries into a family of Whites and near Whites, but so might a person of darker skin color if he or she has the wealth. Since higher-paying prestige jobs usually go to near-White or light-skinned people before those of darker complexion, marrying someone with lighter skin also brings its economic rewards. It is said, jokingly, that after giving birth, a Seychellois mother asks first what the color of her child is and second whether it is a boy or girl.

## **9 LIVING CONDITIONS**

Health and nutritional conditions are remarkably good in the Seychelles Islands, approaching those of a developed country. Seychelles ranks 36th out of 177 countries on the Human Development Index with the average life expectancy at birth in 2008 at 72.6 years overall. Many factors account for long life expectancy, including a healthy climate; the absence of infec-

A woman makes palm flowers to sell as souvenirs from the Seychelles. (Alison Wright/National Geographic/Getty Images)

tious diseases such as malaria, yellow fever, sleeping sickness, and cholera; and the availability of free medical and hospital services to all Seychellois. Improvements in prenatal and postnatal care since the late 1970s have brought the infant mortality rate down from more than 50 deaths per 1,000 live births in 1978 to an estimated 14.4 deaths per 1,000 live births in 2008, a rate comparable to that of Western Europe. Some 90% of protein in the diet is derived from fish, which along with lentils, rice, and fruits, gives most people a reasonably nutritious diet. Nevertheless, poverty, limited education, poor housing, polluted water, and unbalanced diets adversely affect the health of children. Hookworms and tapeworms have become serious health threats to barefoot children, or to people who eat improperly cooked pork.

Traditional houses rise on stilts above the ground. The main room is used for eating and sleeping. The kitchen is separate to maintain cleanliness. Woven coconut leaves make naturally cool walls and roofs, although galvanized iron is gradually replacing them for roofing.

Buses and cars are the main form of ground transportation in Seychelles. No trains exist. People depend on a government ferry service, which links Mahé, Praslin, and La Digue. The airlines, serviced by 15 airports—six of them with unpaved runways, provide access to the outer islands.

## <sup>10</sup> FAMILY LIFE

A unique feature of the Seychellois social and family system is the prevalence of sexual relationships without formal marriage. Most family units take the form of de facto unions known as living *en menage*. One result of this practice is that nearly three-fourths of all children born in the islands are born out of wedlock, but many are nonetheless legally acknowledged by their fathers.

The institutionalization of *en menage* unions as an alternative to legal marriage can be attributed to several factors. The expense of socially required wedding festivities, trousseaus, and household furnishings can exceed a year's income for a laborer. An extreme difference in economic status of partners, a mother's wish to retain the earning potential of her son, or a previous marriage by one partner may be impediments to marriage. The difficulty and expense of divorce also tend to discourage a legal relationship. Although frowned upon by the Church and civil authorities, *en menage* unions are generally stable and carry little stigma for either partner or for their children. Among women of higher status, prevailing standards of social respectability require that they be married to the men with whom they are living. Sexual fidelity is not as likely to be demanded of husbands, who often enter into liaisons with lower-class women.

The pig is a common sight around the Seychellois homestead, much like dogs or chickens. Outside town, 45% to 50%

of homes keep at least one pig—veritable “piggy banks.” Pigs are fattened up for sale at peak condition and are usually sold when the family needs cash.

## 11 CLOTHING

Dressing well is important for Seychellois, particularly to go to Mass and to special functions. Generally, whether formal or informal, clothing in the Seychelles is similar to that in the United States. For everyday use, people dress comfortably depending on their work. Women go to market in cotton smocks and sandals, wearing locally made straw hats for sun protection. They may also wear African sarongs. These are dressy when going out. Men wear hats too and loose-fitting, short-sleeved shirts and trousers. In the island environment, both men and women wear shorts when dressing casually. Some uniformed public servants, such as traffic police, also wear shorts.

## 12 FOOD

The Seychellois are splendid cooks and offer a wide variety of cooking styles, such as English, French, Chinese, and Indian. The diversity of all these cooking styles is combined to create Creole cuisine. Creole cooking is rich, hot, and spicy—a blend of fruit, fish, fresh vegetables, and spices. The basic ingredients include pork, chicken, fish, octopus, or shellfish. Coconut milk makes a good sauce for seafood meals. Seychellois cuisine includes crab, beef, lentil, and onion soups and a whole range of shellfish, fish, poultry, and meat dishes. People also enjoy salads and fruit desserts of mango, papaya, breadfruit, and pineapple.

Seychellois consume an average of 80 kg (176 lb) of fish a year. It is served in many ways: grilled on firewood, curried, in bullions, and as steak. Turtle meat was once easily found and is called “Seychelles beef.”

Typically, people eat three meals a day. Breakfast may include eggs and bacon, while lunch is the heaviest meal of the day and usually includes rice. The high consumption of rice means that much rice must be imported. The government subsidizes rice imports, but wines and imported fruits and drinks are expensive and out of reach for most budgets. Locally made alcoholic beverages include palm-wine (*calou*) and *bacca*, a powerful sugarcane liquor regulated by the government. People drink *bacca* on ceremonial occasions.

## 13 EDUCATION

Seychelles has a high literacy rate: more than 92% of school-aged children read and write. Although many older Seychellois did not learn to read or write in their childhood, thanks to adult education classes, 85% were literate by 1991. Until the mid-1800s, schooling in the islands was mainly informal. Both the Roman Catholic and Anglican churches opened mission schools in 1851. The missions continued to operate the schools (the teachers were monks and nuns from abroad) after the government took charge in 1944. After a technical college opened in 1970, a supply of locally trained teachers became available, and many new schools were established. In 1979, the government introduced free and compulsory primary education for children between 6 and 15 years of age. In 1980, the government initiated a program of educational reform based on the British comprehensive system. Since 1981, a system of free education has been in effect, requiring attendance by all children

in grades one to nine, beginning at age 5. Some 90% of all children also attend nursery school at age 4.

Children first learn to read and write in Creole. Beginning in grade three, English becomes the teaching language in certain subjects. In grade six, pupils begin learning French. After completing six years of primary school and three years of secondary school, students who wish to continue their education attend a National Youth Service (NYS) program. The NYS is a Seychellois hybrid of scouting and 4-H. Students live at an NYS village and wear special brown and beige uniforms. In addition to academic instruction, the students receive practical training in gardening, cooking, housekeeping, and livestock-raising. One of the purposes of this program is to reduce youth unemployment. Students produce much of their own food, cook their own meals, and do their own laundry. They learn the principles of self-government by holding group sessions and serving on committees.

After completing their NYS program, students may attend Seychelles Polytechnic, a technical trade school. The largest number of students are enrolled in teacher training, business studies, humanities and sciences, and hotels and tourism. Since no opportunities for higher education are available on the islands, students study abroad through British, US, and French scholarship programs.

## 14 CULTURAL HERITAGE

The diversity of peoples has made Seychellois culture unique. African, European, and Asian influences are present in Seychellois music, dance, literature, and visual art. African rhythms are apparent in the *moutia* or *séga* dance performances, which include body-shaking and hip movements found on the continent. The *sokoué* dance resembles masked African dancing. Dancers portray birds, animals, and trees under the camouflage of coconut leaves and straw. The *contredanse* is a French import, with origins in the court of Louis XIV. The earliest French colonists introduced it to the islands. It synthesizes waltzing and polka, and is enjoyed at parties and weddings. Traditionally, Seychellois performed their music with drums, violins, accordions, and the triangle. Nowadays, the acoustic guitar typically accompanies these instruments.

Seychellois life is also told through poetry. Poems tell of the good old days, legends, superstitions, nature, and community. Seychelles’ most celebrated poet is Antoine Abe.

## 15 WORK

Seychelles’ economy is built upon tourism, fishing and offshore business and financial services. With a per capita gross domestic product (GDP) over more than \$18,000 in 2007, Seychelles ranked in the upper-middle income group of countries. However, given Seychelles’ dependence on imports and the consequent high cost of living, the minimum wage of \$290/month (2007) did not provide a living wage. To make ends meet, many households kept a home garden and a family pig (see “Family Life”).

Most jobs on the islands are created by tourism. Up to 180,000 annual visitors—the vast majority of whom are tourists—provide employment in services, hotel construction and other tourist industry activities. Thirty percent of the population is directly employed by this sector.

An unusual profession on the islands is *calou* (palm-wine) tapping. The government has licensed several thousand palm

trees for this purpose. A tapper may rent a tree from its owner for tapping, or may collect the sap for the owner or tree-renter. The tapper must climb the tree twice daily and collect the juice, which flows from a tap, which pierces the growing tip of the palm. The sap is collected in a bamboo or plastic receptacle. A palm cannot produce coconuts and *calou* simultaneously. Constant tapping, however, can kill a tree.

## 16 SPORTS

Seychellois play a variety of sports. The most popular participant and spectator sport is soccer, but basketball is also popular. Leisure sports such as diving, sailing, windsurfing, and waterskiing are mainly enjoyed by tourists.

## 17 ENTERTAINMENT AND RECREATION

Seychellois have moved into the age of modern communications and world culture through television, cell phones, and the Internet. The government reported that Seychellois had 13,000 television sets in 1994. The government television station reaches between 75% and 80% of the population via three relay stations. Videos, DVDs, and movies are popular, too. More than one-third of the population uses the Internet for news, entertainment, and messaging.

Traditional forms of recreation revolve around socializing, music and dancing. Families and friends enjoy a Sunday afternoon at the beach and gathering on their verandas in the evening for friendly games of checkers and cards. Seychellois also are fond of singing and often perform informally at night when visiting with friends. At parties they may dance the whole night through. They are quite uninhibited in this respect. Thousands of people listen to Seychellois music on the radio throughout the day. Two young performers, Patrick Victor and David Filoé, have transformed the traditional *moutia* and *séga* dances in their contemporary music.

## 18 FOLK ART, CRAFTS, AND HOBBIES

Seychellois artisans have transformed traditional folk art and crafts into livelihoods. Seychellois are accomplished painters, drawing inspiration from the mountains, coves, palms, sun-streaked skies, and workers in the islands. Sculptors and carvers fashion chalices of teak, cigar, and jewelry boxes, and board games such as dominoes and backgammon. Jewelers make coral and shell bracelets, necklaces, and earrings. Batik-dyed cloth is becoming fashionable and is in high demand by tourists. Artisans use natural motifs such as birds and fish in their original designs.

## 19 SOCIAL PROBLEMS

Although close to being an island paradise, the archipelago is not without its social problems. Since the 1970s, Seychelles has struggled with patronage, corruption, and human rights violations. Since the early 1990s, the record has improved—partly because the government has relaxed its attitude toward dissident and opposition groups. However, other social problems are emerging. Juvenile delinquency, associated with boredom and isolation, is a growing problem. Many adults suffer from alcoholism, and an alarming number of young people are beginning to use marijuana and heroin. Venereal diseases are widespread, and efforts to contain them have been ineffective. Wife-beating remains a problem, and reports indicate that a

significant number of girls under 15, usually from low-income families, are being raped and sexually abused. The police have not prosecuted these cases vigorously.

In addition, the financial benefits of Seychelles' tourist industry come with costs. After 11 September 2001, the number of tourists dropped sharply serving as a reminder to the country that its major industry was vulnerable to terrorist threats and outside shocks. Moreover, thousands of visitors stress the country's fragile eco-system, and along with indigenous population pressures, have an adverse impact on the environment. Further, efforts to accommodate tourists have increased illegal drug use and encouraged prostitution.

## 20 GENDER ISSUES

In principle, women enjoy the same legal, political, economic, and social rights as men. Women form nearly half of the enrollment at the prestigious Seychelles Polytechnic. In 2008 two women held cabinet posts, and there were 10 women in the 34-seat national assembly, seven of whom were directly elected and three of whom were chosen by proportional representation.

Female assertiveness is due partly to an essentially matriarchal society. Mothers are dominant in the household, controlling most daily expenditures and looking after the interests of the children. Men are breadwinners, but their domestic role is relatively peripheral. Older women can usually count on financial support from family members living at home, or from contributions of grown children. Family size is relatively small by African standards, largely because about one-third of all Seychellois women of reproductive age use some form of contraception (1980).

Nevertheless, women are not exempt from exploitation and they do suffer discrimination. In 2007 the police registered more than 50 rape cases, four sexual assaults, and there were reports of domestic violence and female prostitution.

# SHAMBAA

**PRONUNCIATION:** shahm-BAH

**ALTERNATE NAMES:** Shambala (Bantu people)

**LOCATION:** Shambaai (West Usambara mountain range—northeastern Tanzania)

**POPULATION:** 664,000

**LANGUAGE:** Shambala, Swahili

**RELIGION:** Traditional Shambaa beliefs (healing the land and the body), Mufika (ancestor worship), Christianity, Islam

## 1 INTRODUCTION

The Shambaa, also referred to as the Shambala, are a Bantu people found mainly on the West Usambara mountain range in Tanzania. Their language is Shambala. The homeland of the Shambaa is called Shambaai (or Shambalai). Other Bantu ethnic groups in the area include the Bondei, the Zigua, the Nguu, and the Pare.

The Shambaa were traditionally ruled by kings. The Shambaa kingdom was made up of several descent groups with a common origin, but the kingdom was governed by a single descent group. The survival of the whole descent group and its steady increase in size were crucial. The king ruled over several chiefdoms. Growth of the kingdom led to growth in the number of chiefdoms. The chiefs were appointed by the king and received tribute from their chiefdoms as representatives of the king. All the wealth of the land was regarded as the king's. This gave him control over his subjects and the right to demand tribute from them. The king, in return, was expected to bring rain and food to his territory.

Peasants and slaves were the king's subjects. Peasants lived in village groups under a patriarchal system. The nuclear family's well-being was important for the whole village. The peasants were free to go about their daily work on the farm and homesteads. They paid tribute to the king in the form of food, livestock, and labor. Slaves lived in the king's household, where he was free to deal with them as he pleased. At times they were sold to the coastal slave traders or even killed at the king's command.

The system of chiefdoms no longer exists in Tanzania; it was abolished soon after independence. The country is now divided into regions, which are further subdivided into districts. A district commissioner (DC) is in charge of each district. Regional commissioners are appointed by the president to govern the regions.

## 2 LOCATION AND HOMELAND

The Usambara range is located in Tanga province in northeastern Tanzania, south of the border with Kenya. The range rises out of a plain. Shambaai is divided into two administrative districts, Lushoto and Korogwe. Muheza and Handeni are the neighboring districts.

In 2001 the Shambaa population was estimated to number 664,000 persons. Most of the people in Lushoto are Shambaa, with some Pare and Ma'a speakers as well. Korogwe is shared by the Shambaa with the Zigua and Bondei from neighboring Handeni and Muheza districts. The Shambaa are also found in the neighboring districts of Same in the northwest and Muheza

in the southeast. Across the border in Kenya to the north live the Kamba, and to the east live the Wataita and the Wataweta.

The Shambaa are located in the mountain area accessible from the plains. This is an area of abundant rainfall, with thriving banana plants. The Shambaa regard the *nyika* (plains) as a dangerous place of disease and death, preferring instead the mountain area. Thus, the population density is high in the mountain area, where the villages are located near each other with nearly all arable land cultivated. Overpopulation is considered a problem as it affects traditional farming practices. Some Shambaa people have now moved to the *nyika* and to urban areas, such as Dar es Salaam and Tanga.

## 3 LANGUAGE

Shambala is the main language spoken by the Shambaa; it has three main dialect areas. Mlalo forms the center for the northern area, Korogwe for the southern area, and Lushoto for the central area. Despite these differences in dialect, the Shambaa can understand one another's speech. Shambala is mutually understandable also with the Bondei, Zigua, and Nguu languages. Lexical similarity is 75% with Bondei, 68% with Nguu and Zigula. While Shambala is the first language of most Shambaa, it is used mainly for oral communication. Only a few people can write in Shambala at this time.

The Shambaa also speak Swahili, the national language of Tanzania, which is now having an influence on the development of Shambala, especially its vocabulary. Young people prefer to speak Swahili, and they use Swahili words in Shambala. Swahili was initially spread to Shambaai by the coastal people. Other factors affecting Shambala and its use are urbanization, the mobility of speakers, ethnicity, and intermarriage between peoples. Many Shambala speakers can switch easily from one dialect to another and to Swahili.

Shambaa children are taught Swahili in primary school. It is used in business, communications, and other places of employment. Instruction in secondary schools and universities is in English.

## 4 FOLKLORE

The story of Mbegha (or Mbega) is the most famous of Shambaa myths. There are more than 26 versions of this myth. Mbegha was a hunter from Ngulu Hills to the south of Shambaai. He was forced to leave his homeland after a dispute with his kinsmen over his share of an inheritance. Mbegha fled to Kilindi, where he became a blood brother to the chief's son. The chief's son died accidentally while hunting with Mbegha. This caused Mbegha to flee again, into the bush, to escape punishment from the chief. He lived in caves and camps, hunting wild animals. After crossing the Pangani River, Mbegha arrived on the southern escarpment of the Usambaras. The Ziai people saw the smoke of his campfire and approached him. Upon learning that Mbegha was a skilled pig hunter, they asked him to rid their village of pigs. He was invited to live in Bumbuli, where he grew famous as an arbitrator, hunter, and storyteller. The grateful villagers gave Mbegha a wife. Mbegha also helped the people of Vugha and was known as a lion slayer after killing a lion on the way to their village. He was made the chief of Vugha. Mbegha's son Buge grew to be the chief of Bumbuli. When Mbegha died, Buge succeeded him as king of Shambaai.

## 5 RELIGION

Traditional Shambaa beliefs center on healing the land and the body. Rainmakers were important people in the society, for they were believed to have the power to prevent or cause rainfall.

*Mufika* (ancestor worship) was important since the Shambaa believed that ignoring one's ancestors, especially one's deceased father, was sure to lead to misfortune. A traditional medicine man was called in to perform the rites of ancestor worship, at which women were not allowed to be present. Even today, *waghanga* (local healers) are called in to treat illness.

The Protestant and Catholic faiths are both well established in Shambaa. The Christian influence in Shambaa was spread by missionaries through education and preaching. The missionaries learned Shambala in order to be able to communicate freely with the Shambaa; religious texts, including the New Testament and the Book of Psalms, were translated into Shambala. Congregations in all areas of Shambaa used these texts. Christianity was more influential in the northern area of Shambaa. It has brought changes to traditional Shambaa beliefs and practices, which have been weakened and adapted to the newer Christian beliefs.

Islam was spread in Shambaa by the Zigua, mainly in the trading towns.

## 6 MAJOR HOLIDAYS

The Shambaa observe both secular and religious holidays. The main government holidays now celebrated are New Year's Day,

Union Day (April 26), Workers Day (May 1), Peasants Day (August 8), and Independence Day (December 9). Government holidays are public rest days when offices and shops remain closed. Nationwide public rallies are held in the urban areas, with military parades and speeches by government officials. Villagers generally continue with their farm work during these holidays.

Both Christian and Muslim holidays are celebrated with public observances. The major Christian holidays are Easter weekend and Christmas. The major Muslim holidays are Id-el-Fitre, Id-el-Hajji, and Maulid. Religious holidays are a very special time for family gatherings. Urban dwellers visit their families in rural areas. Special dishes cooked at this time include roast meat, *chapatis* (flat bread), and *pilau*.

## 7 RITES OF PASSAGE

The Shambaa consider it very important to have children. Before the birth of his children, the father is expected to complete all his marriage rituals and bride payments. Failure to do so will mean that his children will belong to their mother's clan. When his wife is pregnant, the husband gives his father-in-law a female goat. After the birth of his child, another goat is sent to the in-laws. A cow is sent after the second child is born. The children are then regarded as the husband's. A goat is also given to the in-laws with every subsequent birth. It is the custom for the pregnant wife to leave her home and go back to her father's house to give birth. The new father does not see his child until later when he visits his wife at his in-laws' home. Traditionally, a baby may be killed by the father for various reasons, including having deformities, cutting its upper incisors first, or having been conceived in adultery.

Traditionally, the Shambaa held initiation ceremonies for both young women and young men. Initiation for boys began with the *ngwaliko wa kava*, in which a boy was circumcised when he reached the age of three or four years and a *kungwi* (mentor) was chosen for him. After circumcision, a boy was considered a *wai* (initiate) until all ceremonies were complete; then he was regarded as an adult. At puberty, the initiate undergoes the *gao* ceremony, in which he is instructed in acceptable behavior.

Now, circumcision takes place in health facilities for sanitary reasons. The initiation ceremony has been shortened but is still required before the young man takes on adult responsibilities. Young women are not circumcised, but they also go through a *gao* ceremony of instruction that is required before a young woman can marry or become a mother. It is scandalous for a young woman to get pregnant before the *gao* ceremony. In the past, a baby so conceived before the ceremony would have been killed by its grandfather.

The final rite of passage for the Shambaa is death. A man keeps a banana garden near his homestead to serve as his burial place. After a man dies, his wealth (mainly livestock) is divided among his wives and their children, with the first wife's elder son receiving the largest share. Each child inherits wealth from his or her mother. Girls may inherit household items, ornaments, and clothes from their mother and sisters. Boys inherit the land and livestock given to their mother when she married their father.

## 8 INTERPERSONAL RELATIONS

Greetings are important in Shambaa culture. When people meet for the first time, they exchange the particular greeting required for that time of day. In the morning one may say *onga mahundo* ("Good morning"), and may receive the reply *ni vedi*. *Hangize wako* ("Fine and yours"). *Onga mshi* is an afternoon or evening greeting. *Ikaa wedi* is said to wish someone well when leaving. Greetings may be prolonged, for it is customary to inquire after a person's family, health, and even work, and people exchange them before conducting any business, no matter how urgent or important. Younger people are expected to show respect and deference to their elders while greeting and conversing with them and to help them with their work without being asked.

Some taboos have developed from required polite behavior. These include pointing at someone, which may suggest a curse, and sitting with one's head between one's hands, which may make people think one is in mourning when no one has died.

Traditionally, men and women were socially segregated, and this has formed the basis for all their relationships. Couples do not eat together at home. Mothers usually eat with their children while the father eats alone. Persons of opposite sexes do not show any affection publicly through bodily contact; this is considered highly inappropriate. Male companions and female companions may hold hands out of friendship in public without fear of having the action misinterpreted. At social gatherings, women keep to themselves in their own clusters while eating and drinking, as do the men in theirs. This practice of segregation has extended to official gatherings and even to churches.

A person may drop in at any time for a visit and usually arrives with a gift for the host. If the person arrives at mealtime, he or she is expected to join in the meal. Refusal to eat may be considered an insult and distrust of one's host. The Shambaa normally cook an extra share so as to have food for any visitor who may drop in. Visits are normally made in the late afternoon or evening hours, when it is cooler and most of the farm work has been completed.

## 9 LIVING CONDITIONS

The Shambaa live in large villages consisting of peoples of several lineages, or family groups. Villages are usually located on upper hillsides. Banana groves separate the homesteads and protect against famine. A traditional Shambaa house is round, with thatched roof and sides. Traditionally, when household members would go out to work on their farms, they would tie a rope to the front door to show visitors and passersby that no one was at home. There are also rectangular houses in Shambaa, with walls of wattle and mud and thatched roofs, modeled on what is called a Swahili design. Now, these houses commonly have cement walls and corrugated metal roofs.

Compared to most rural regions in Tanzania, the infrastructure network in Shambaa is better developed. Some major roads are blacktopped or all-season dirt roads. A major road-repair program is under way. Buses transport villagers to and from Tanga town, Dar es Salaam, and other regional centers. There is a railway line linking Dar es Salaam and Moshi and passing through the Korogwe district, providing a valuable link for passengers and products. Some people own small trucks and provide rides to villagers for a small fare.

The Shambaa child mortality rate has fallen, thanks to improved access to Mother and Child Health (MCH) services, which provide health education and immunization. Health centers and dispensaries are available in the rural areas, with larger hospital facilities available in the cities.

## 10 FAMILY LIFE

Polygamy was widely practiced by the Shambaa. A man married as many women as he could support. He also fathered as many children as possible. It was the father's duty to defend the family from all harm, including illness and hunger. Under the influence of Christianity, Christian marriages are now often monogamous.

Survival skills and material goods were handed down from father to son. The son's well-being, his family and prosperity, all depended on his father's pleasure. Incurring the father's displeasure was dreaded as it could lead to a curse (*ute*). It was believed that the curse could cause the son to lose all his possessions, wander about like a fool, and even die. A father had considerable authority while alive and was believed to retain some control as a ghost even after his death. Thus, all the sons are believed to share a common fate through their dependence on their father, both alive and as an ancestral ghost. The ghosts' influence over the daughters and their descendants ceased when the daughter died.

A father was required to pay the bridewealth for his sons' first wives. He was also required to pay the medicine man when any of his family members fell ill. He also provided his son with an additional garden when the son married for the first time. A Shambaa man cannot marry within his own lineage or marry a cousin from an outside lineage. He is often expected to marry within his neighborhood. Women are free to accept or reject a marriage proposal. It is the responsibility of the husband to allocate a garden to each wife as a source of food for her and her children. The children help their mother in her garden when they are old enough to do so. The garden is the sons' inheritance. For more affluent Shambaa, expectations for providing for wives and children were much higher. For example, a king provided each wife with chieftom for her children to rule.

The wife was responsible for the daily farm work. A husband was responsible for increasing his *mai* (wealth). Wealth was increased mainly through acquisition of more livestock in the form of goats, cattle, and sheep. Cattle were kept mainly for bridal payments and ceremonial purposes. A person increased his status and standing in the community by lending out his livestock. This enabled the person to build a network of supporters who could help in times of need. Those who were lent cattle used the milk and were sometimes allowed to keep the offspring to build up their own herds.

An adult son was given his own farm by his father. The son could buy livestock from the sale of his harvest, but he was still dependent on his father for bridewealth.

Traditionally Shambaa families have kept dogs as watchdogs and cats as rodent catchers. Today some animals may be kept as pets, especially in urban areas. Other animals are kept for food, transportation, or farmwork.

## 11 CLOTHING

The Shambaa dress code has been greatly influenced by the coastal people, who are mainly Muslim and who have been influenced, in turn, by their religion and by Arab traders.

Men wear *khanzus* (long, flowing white robes) and a small cap, or *barghashia*, on their heads. Women use lengths of colorful cloth as wrappers for the body; these are called *kangas* and *kitenges*. A wrapper may be worn over a dress or used to carry a baby on the back or hip. Young women after puberty are required to wrap a *kanga* around their waist when working or leaving the homestead. Married women cover their heads and clothes with two pieces of *kanga*. Women purchase these colorful pieces of cloth from the marketplace or shops and may also take them to tailors to have them sewn into dresses and skirts. Men may also have tailors sew trousers and shirts for them. Shambaa men may be seen wearing shirts and trousers especially in the urban areas; however, for ceremonies and important events they put on *khanzus*.

Traditionally, women do not wear short clothes in public. Short skirts with shorts may be worn for sporting events and in military camps. Secondhand clothing (*mitumba*) may be bought in the marketplace and is generally worn by the poorer people.

## 12 FOOD

The Shambaa plant many different food crops adapted to the climate of the area, including tubers, medicinal plants, tobacco, beans, and bananas. Banana plants are better suited to the Shambaai than to the *nyika* and used to be the main food crop of the Shambaa. This has changed with the introduction of maize and cassava to the area. Cassava is drought-resistant and is grown as a safeguard against famine. Maize is grown in both *nyika* and Shambaai in different planting and harvesting seasons. Many farmers plant maize during both seasons and are kept busy all year.

The Shambaa diet is composed of starchy foods, such as rice, maize, and sweet potatoes, usually accompanied by beans, meat, and vegetables. Dairy products are available, and sour milk is often drunk for breakfast. Meat consumption is on the increase.

## 13 EDUCATION

Traditionally, Shambaa children have received instruction from their parents. Youths receive further instruction during the *gao* ceremonies in the form of songs and stories. During this time the young men are taught the tribal norms and proper sexual conduct by a *shefaya* (ritual leader), the youths' mentors (*makungwi*), and other village adults. Young women are taught their responsibilities and proper conduct by women elders.

The Christian missionaries were the first to offer the Shambaa formal education. When the missionaries arrived, those Shambaa who were able to obtain some education rose in status in their local areas. Generally young men were sent to these schools while girls were kept at home. Those girls who went to school often dropped out earlier to get married because parents thought that it was a waste of money to educate daughters who would move to other households when they married.

The Shambaa, like other Tanzanian people, are encouraged to obtain at least primary-level education. Since 1971, the government has required that all children seven years of age and

older attend primary schools for at least seven years. Primary education has been provided free for all Tanzanians, but in the early 1990s the government reinstated school fees. Four years of secondary education are required before a student can continue to high school, after passing the national Ordinary Level examinations. High school is for two years; then the student sits for the Advanced Level examinations before applying for university admission. Alternative trade and business schools provide instruction for those students unable to continue with formal education and wishing to acquire skills. Parents now have to pay more for their children's education since the government is no longer able to provide fully subsidized education. Older people, especially in the rural areas, are involved in adult literacy programs.

## 14 CULTURAL HERITAGE

The Shambaa have a rich cultural heritage of songs and dances. Songs are used to instruct younger people on their history and expected behavior as adult members of the tribe. Drums were used to transmit messages of approaching danger as well as important news, such as the death of a king. Storytelling by the elder generation is a popular evening pastime with children. Storytelling serves to maintain oral history. Traditional dances are still popular, especially at wedding celebrations.

The Shambaa have shown a liking for the various types of music they have encountered through interaction with other cultures. Swahili songs produced by various Tanzanian bands may be heard frequently over the airwaves in public places. The Shambaa enjoy listening to *taarab* (ballads), a tradition introduced to the coastal people by the Arabs. *Kwasa kwasa* and other west and central African music and dance forms are also gaining popularity and may be heard during various celebrations. The younger generation of Shambaa prefers to listen and dance to Western music, including reggae, pop, and hip hop.

## 15 WORK

Traditionally, for the Shambaa work centered on the farm and was divided between men and women. The whole household was responsible for the production of subsistence food crops. Farmwork and crop yields were divided between a husband and his wives. Men were responsible for planting and tilling on the farms while women were in charge of weeding and harvesting their own farms.

With the ever-diminishing size of the land holdings and declining yields and soil erosion, the Shambaa men are increasingly forced to seek outside employment. The Shambaa have been forced to change their farming patterns because of their increased population density. Women are usually left in the homestead to tend to the farm and children while the husband seeks employment in the urban areas and on plantations, visiting his family periodically.

Educated Shambaa have better chances of finding jobs in the cities as clerks, teachers, and administrators. Previously, all Tanzanians were guaranteed employment, on completion of postsecondary education, in the civil service or parastatals (government-owned companies). Now both men and women in the urban areas compete for jobs in the private sector, for the government is no longer able to hire everyone.

## 16 SPORTS

Like other Tanzanian children, the Shambaa children first come into contact with sports at school. Primary-school children are encouraged to participate in interschool competitions leading to interregional level and national level championships. Popular sports at school are soccer for boys and netball for girls. All children participate in athletics. At secondary schools Shambaa youth may be introduced to other sports, such as basketball, table tennis, and volleyball.

Soccer is the most popular sport in Tanzania. The national soccer league broadcasts games, which are greatly enjoyed by the Shambaa. There is a friendly rivalry between the supporters of the two major soccer teams in the league, Simba and Yanga. On weekends, standard and makeshift soccer fields are crowded with spectators and players.

## 17 ENTERTAINMENT AND RECREATION

Radio broadcasts by the state-owned radio station have been the major source of entertainment. Many households have transistor radios, and people enjoy listening to music, radio plays, and sports programs. The government uses the radio station to transmit major broadcasts and matches. Shambaa men gather around a radio in public meeting places, usually with a local brew in hand. Recently the government has allowed private TV and radio stations to operate, increasing the choice and quality of programs. Many people now own television and video sets, and they may tune in to broadcasting stations in Dar es Salaam, Zanzibar, and Kenya. Television ownership has led to the opening of many video lending libraries in Tanga, where action movies are the most popular.

## 18 FOLK ART, CRAFTS, AND HOBBIES

The Shambaa are mainly agriculturists and prefer tilling the land to craftwork. They have been fortunate to be able to obtain their ornaments and tools through trade. There were blacksmiths forging iron tools and weapons. Toymaking was a favorite pastime for children who adapted pieces of wood into objects like small spears and cooking utensils. Children still make their own toys, especially boxcars and cloth dolls, as manufactured toys are expensive.

## 19 SOCIAL PROBLEMS

The greatest problem facing the Shambaa today is the gradual loss of cultural identity. Interest in the norms and culture of the Shambaa is declining in the younger generation. They now prefer to adopt a national identity of being simply Tanzanian as opposed to being a Shambaa first. This decline in cultural identity may be attributed to exposure to new religions espousing the unity of humankind and formal education leading the Shambaa to accept Western culture. The use of Swahili as a national language has led to a preference for it in daily use in Shambaa. Tribal intermarriages are on the increase, no longer seen as objectionable. The Shambaa are trying to reverse the erosion by recording their cultural values and history. Younger people in the urban areas are encouraged to regularly visit Shambaa, where they may learn their traditions and converse in Shambala.

Another serious problem facing the Shambaa is a shortage of land. The reasons for this are population increase and stability among the tribes. Formerly the Shambaa could obtain new

land by clearing the forests and engaging in warfare against neighboring tribes. Under colonial administration, the land to the north of Shambaa was declared a forest reserve and unavailable for cultivation. Plantation estates were also created around Shambaa for growing of sisal, further limiting land availability. This decrease in arable land in Shambaa has led to soil depletion since the land is not left to fallow. Soil erosion is also on the increase on the mountain slopes, further compounding the problem. The government is trying to introduce better crop types and farming practices into the area through its research center at Amani, Tanga. The Shambaa cannot rely on work in the sisal plantation estates, for the crop has declined sharply in value on the world market since the late 1960s. Younger people are seeking employment farther and farther from Shambaa.

Like all Tanzanians, the Shambaa face the problem of poverty. Tanzania has been experiencing economic problems since the late 1980s. By the early 1990s the government was no longer able to sustain its social services, especially in education and health. By 2002, 80% of the population was engaged in agriculture, and 36% of the population lived below the poverty line.

## 20 GENDER ISSUES

Shambaa culture is predominantly patrilineal, with the men controlling most aspects of the society. Although Christianity has brought about a monogamous influence on the modern Shambaa family, polygyny was widely practiced by the Shambaa, depending on how many wives and children the husband could raise and support.

Labor among the Shambaa was also slightly divisible by gender. While the men were responsible for planting and tilling the fields, weeding and harvesting was left to the women.

The husband was responsible for increasing his *mai* (wealth) by tightly controlling the lending of his livestock, a practice that would eventually help to increase his wealth and social status. However, now women are usually left in the homestead to tend the farm and children while the husbands seek wage employment in the urban areas and on plantations.

Whereas there was little control over what men should wear, women's dressing and even sexuality was largely tied to social taboos and customs such as women should wear clothes that cover their full-length bodies and married women in particular were to cover their heads as a sign of subjugation.

In terms of educational opportunities, while the boys were sent to school, the girl-child was left at home to be trained on house-bound tasks and eventually get married off.

## SHILLUK

**PRONUNCIATION:** shil-UK

**LOCATION:** Sudan

**POPULATION:** about 150,000

**LANGUAGE:** Shilluk

**RELIGION:** Animism; indigenous beliefs

**RELATED ARTICLES:** Vol. 1: Dinka; Nuer; Sudanese

### <sup>1</sup> INTRODUCTION

The Shilluk have long occupied a region along the White Nile in the modern Sudan. It is estimated that Prenilotes may have been present in the area from the 4th millennium BC. Arab travelers to the central Sudan in the 9th century AD recorded Prenilotic Barea and Kunama peoples in this area. During the Funj Sultanates from 1504 to 1821, it appears that slave raiders attacked Shilluk lands. Regional disturbances during the Funj Sultanates probably led to some southward migration of the Shilluk in the 16th century and to a more concentrated village pattern. Perhaps reflecting this time, the Shilluk mythology records that Nyakang (Nyikang) was the first *reth* or king to unify the Shilluk people in a proto-state formation.

The area was first reached by Europeans in the 18th century. The Ottoman slave raids of the early 19th century victimized the Shilluk. Ottoman administration reached them in 1867. Mahdist rule (1884–98) was generally resisted by the Shilluk as they were set upon by zealous and slave-raiding Arabs from the north. The Shilluk region was again inaccessible to Europeans at this time. It was not until the early 20th century that serious ethnographic and historical attention began to be paid to the Shilluk. Even then, the interest was focused on the concerns of the British colonial administration and missionaries who were in the Shilluk region. A new census is planned but not yet conducted.

### <sup>2</sup> LOCATION AND HOMELAND

The Shilluk are concentrated along the western banks and islands of the White Nile, especially between the Renk-Malakal reach, as well as being located on the lower section of the Sobat River. In other terms, they live between 9° and 14° degrees north latitude, about 640 km (400 mi) south of Khartoum, the modern national capital of the Sudan. Malakal, the present provincial capital, is in the southern portion of Shilluk land, but on the east bank of the Nile.

The precise ancestral homeland of the Prenilotic Shilluk is unknown but is likely to be in the present vicinity of Shilluk concentration. Perhaps it was they who replaced the aboriginal hunting and gathering population. The Shilluk and Nilotic people are remarkably tall (179 cm or 5 ft 10 in on average) and lean and may be distinguished from other neighboring Africans for this reason. Blood samples of the Shilluk and other Nilotics show Rh-allele frequencies which are notably different from all their neighbors. Even though malaria is now present in Shilluk lands, they also have a very low frequency of sickle cell alleles. These facts add up to a picture of long-term isolation.

The ecosystem is mainly grasslands, swampy river banks, and islands, but some trees appear in places. There are something like 150 compacted hamlets (*myer*) constituting the Shil-

luk domain. They are divided into the Ger (northern) and Luak (southern) royal districts. Each of these has its own supreme chief and royal settlement at Golbany and Kwom, just north and south of the central capital at Fashoda (also known as Kodok) on the western bank. The royal heads of Ger and Luak must concur about the appointment of a new reth.

At Fashoda the reth usually makes his royal residence with his royal children, courtiers, bodyguards, and retainers (*bang reth*), and his wives. It is here that he receives the council of lineage elders, while he sits on his royal stool-throne. Fashoda was also the site of an historic meeting in 1898 of the military forces of the French (under Major Marchand) and the English (under General Kitchener) in determining the European partition of the Sudan. The French withdrew; the Sudan became an Anglo-Egyptian colony.

Neighboring the Shilluk to the east are the related Anuak people; to the immediate south are the Nuer and the vast Sudd papyrus swamplands which blocked exploration for millennia. In the 19th century the region supported large elephant herds, which have since been decimated for their ivory. Further to the southwest are large populations of Dinka. West of the Shilluk are diverse sedentary peoples of the Nuba mountains. To the northwest the Shilluk meet various nomadic Arab peoples from whom they must sometimes defend themselves.

### 3 LANGUAGE

The Shilluk belong to the Eastern subfamily of the Sudanic linguistic stock. The Sudanic languages have only a few loan words from the Semitic languages to the north or Cushitic languages to the east. Within the Sudanic stock, the Shilluk are further identified with the Nilotic language speakers, which also include the Anuak and Meban peoples, who are collectively considered as Prenilotes. The Shilluk preceded, but are related to, other Nilotic groups, like the Nuer and Dinka, whose languages are understood by many Shilluk. The Shilluk are also self-known as the "Chollo." Gender, number, and case can be noted in the Shilluk language.

### 4 FOLKLORE

As with most animist or polytheist religious systems, the sacred and secular worlds of the Shilluk are linked. Spiritual forces abound in animals, elements, and places, and the folklore of the Shilluk serves to integrate the people with this worldview through storytelling, origin myths, sacrifices, and invocations. For example, the great creator, Jo-uk, is tied through four supernatural generations to Nyakang, the founder of the Shilluk rethship.

The father of Nyakang, U-kwa, has many folkloric expressions. He lived along the Nile, where he was attracted to women with half-crocodile bodies who lived in the water. Tempted by these women, U-kwa captured two of them (Nik-ki-yah and Ung-wahd). Their cries quickly drew their father (U-dil-jil), whose presence had been unknown. The father's left side was human, while his right side was a green crocodile. After some debate and negotiation, U-kwa married the women and from his wife Nik-ki-yah he had his son Nik-kang (likewise half-man and half-crocodile). From a third wife, U-kwa had three more sons, one of whom was Du-wad, who became Nyakang's rival as reth. The conflict escalated and was only resolved when Nyakang and his brothers, Omoi and Jew, created a new kingdom at the mouth of the Sobat River. There, Nyakang created

men and women from hippopotamuses, crocodiles, and wild animals to populate his kingdom. The animal ancestors died and the Shilluk people were thereby born.

Nevertheless, Nik-ki-yah lives forever, usually as a crocodile, and she is sometimes offered a goat as a sacrifice. Occasionally, in trials-by-ordeal, suspected people are forced into the river to be judged by Nik-ki-yah. Fear of crocodiles quickly has them confessing.

### 5 RELIGION

The complex animist religious beliefs of the Shilluk are held most devoutly. The most important spiritual force is that of Nyakang. Special annual sacrifices are made to Nyakang at the start of the rainy season. In addition to this ancestral spirit of all Shilluk, there is also the universal Shilluk creator god, Jo-uk, with whom deceased persons will reside eternally, if they are well-behaved during their lifetime. According to Shilluk origin myths, it was from the Nile that Jo-uk created D'ung Adduk (White Cow). In turn, D'ung Adduk gave birth to a son, Kola, whom she nursed. Kola had a son named U-mahra, whose son was Wad-maul, whose son was U-kwa, who was the father of Nyakang, ancestor of all reths. A few Shilluk have turned to Islam and Christianity, but traditional beliefs are still strongly held. As more Shilluk are educated more are turning toward Christian faiths.

## 6 MAJOR HOLIDAYS

The Western concept of “holiday” is not really inherent to Shilluk life, but some note may be given to Sudanese national holidays such as Independence Day on 1 January. Those who are Muslim or Christian might follow those religious celebrations. For the Shilluk, the chief “holidays” would be the installation of a new reth, a marriage festivity, collective fishing and harvesting, and especially the celebration of Nyakang at the start of the rainy season, which involves the slaughtering of animals, dancing, and drinking fermented sorghum (*merisa*). Most villages have a shrine to Nyakang where amulets and charms may be placed to invoke ancestral spirits, often by a tree.

The election of a reth is considered the most significant event in Shilluk life. This integrates the society with its traditions, provides for political leadership and continuity, and presents the greatest opportunity for public oratory and group confirmation. A notable amount of the literature on the Shilluk is focused on the transfer of rethships.

The first stage in the appointment of a reth begins with a mock battle without real spears. This “battle” between the northern and southern Shilluk groups is mediated by a messenger who carries scornful retorts between the two “competing” groups. An effigy of the reth is symbolically paraded with an ostrich-feather fan shade which is placed on the royal stool. When the effigy is restored to its shrine, the new reth will be infused with the spirit of Nyakang, and he can then assume the official responsibilities by sitting on the royal stool.

The bipartite or moiety structure of the Shilluk is based on a model of segmentary opposition, similar to a modern monarchy with a bicameral parliament. The chiefs of each component settlement group (*podh*) of the Ger and Luak districts are consulted at a lower level. Typically a reth’s son does not inherit from his father, although the work of Evans-Pritchard presents the opposing view that he usually does. In any case, a new reth is found from a prince (*nyireth*) or close relative, or from a different natal village, often during an interregnum struggle. The ritual conflict preceding the appointment and purification of the reth is a central feature of Shilluk society.

Some early reports state that regicide was practiced by royal wives or close kinfolk when a reth was deemed to be too ill, old, or ineffective to continue in office. Evans-Pritchard (1962: 76, 82–83) considers that the reports of institutional regicide were a fiction but that violent ends for reths certainly did occur amidst the precarious balance in Shilluk political life. In any case, the persistent discussion of regicide, whether symbolic or real, is not only a warning to seated reths but is also a symbolic expression that the spirit of Nyakang is no longer at ease and needs transfer, since the spirit of Nyakang resides eternally with the reth, and the reth himself is mortal.

As the reth gains his position through the council of lineage elders (*jal dwong pac*), it seems evident that the council can also determine that a prince (*nyireth*) of the royal clan (*kwareth*) is justified in recognizing a failed rethship, and that regicide is appropriate so that intraethnic struggles can be avoided and the continuity of the Shilluk people thereby ensured. A certain measure of rotation between the royal lineages (*kwareth*) of the north and south also assists in reaching this political equilibrium.

Clearly the reth will be eternally nervous about his position and he will make public efforts to be responsive to the lineage elders. Alternatively he will make special provisions to be pro-

ected by armed attendants and to be aloof and reserved. The formal, mock battle between village groups symbolizes the actual power struggles for this prestigious appointment.

The Celebration of the January 2005 Comprehensive Peace Accord is observed nationally.

## 7 RITES OF PASSAGE

Unlike many Sudanese Arabs, few Shilluk girls are subject to female circumcision as a rite of prepubescence. The practice of removing the lower incisor teeth is common for Shilluk youths, as well as ethnic scarification which consists of making a series of raised bumps across the forehead just above the eyebrows. Other decorative scars are also known. The umbilicus of baby boys is buried to the right of the front door while Shilluk girls have their umbilicus buried to the left. Other gender-differentiated customs are seen with Shilluk boys who have noted puberty rites of passage while Shilluk girls have few special rites and are rarely subject to female circumcision. Likewise dancing, clothing, decoration and child names are gender specific.

The death of commoners is followed by burial in the ground, unlike other Nilotes who may use water burial. Upon the death of the reth, the corpse is walled in his royal house, which thereby becomes his temporary tomb. Later his bones are collected for interment in the hamlet of his birth.

Male or female commoners are washed and shaved at death and wrapped in a shroud. The body is rested on its right side with the head facing easterly. Post-mortem memorial services take place first at graveside, a few months later, and for higher status person a commemoration can take place a year or more later.

## 8 INTERPERSONAL RELATIONS

The interpersonal relations of Shilluk people are guided by kinship, social hierarchy, and gender. They follow a form of matrilineal descent, unlike their Arab neighbors to the north. The Shilluk follow a descriptive type of cousin terminology which implies specific role relationships within the kinship network. Lineage membership is a critical feature of interpersonal relations. Within lineage groups, solidarity is maintained by age-grade cohorts, which are common in societies requiring military defense for the nation and the reth. The position of the reth is also distinguished by deferential behavior, sociolinguistic markers, a hippo-hide whip and staffs, use of royal antelope skins for dress, ritual stepping over color-selected bulls, and the exclusion of children from the royal compound. The well-being of the bang reth (the reth’s retainers) rests upon their unquestioned loyalty, which is rewarded by the reth through provision of food and security.

Aside from the royal personnel (*bang reth*) surrounding the reth at Fashoda, the Shilluk have a second class of people who are high-ranking but without legitimate access to the rethship. An additional group of nobility are known, but these are the Shilluk who had access to authority in the past and are no longer associated with the reth. The largest group of Shilluk are commoners (*colo*) who belong to various lineages but are not high-ranking whatsoever and are expected to show deference to those who are. Last in the traditional hierarchy are slaves who have entered Shilluk society as war captives, for punishment, by purchase, or as refugees from famine and disorder.

The reth and the council of lineage elders are responsible for maintaining order in Shilluk society. If conflicts arise within

lineages, the elder or his council intervenes; if there are conflicts between lineages, such as raiding, adultery, or theft, the reth intervenes and, under his almost absolute authority, he can apply various punishments such as confiscation of property or enslavement with use of his royal bodyguard. Adultery with the daughter of a reth is punished by death. The reth also controls trade in ivory, giraffe tails, and slaves. Toniolo and Hill (1975: 251) estimate that in 1876, two-thirds of the slaves in the northern Sudanese town of Wad Medani were of Shilluk, Dinka, and “Fertit” origin.

## 9 LIVING CONDITIONS

The Shilluk live in hamlets of compact villages made of round houses (*tukls*) of wattle and daub construction and with conical thatched roofs. The house of the lineage-head, especially if he is the reth, might be placed on a higher elevation indicative of higher status. Electricity, piped water, and other conveniences were not present until modern times in the provincial capital. Many Shilluk have moved from rural areas to Malakal, the largest regional center.

## 10 FAMILY LIFE

Shilluk marriage is a primary institution which requires the use of a considerable quantity of livestock to collect the bride-wealth payments for completing the marriage contract. Unlike Arabs, Shilluk usually avoid marrying first cousins, and they practice lineage exogamy. However, like Arabs, the Shilluk do allow for polygyny, in particular a man marrying sets of sisters (sororal marriage). Postmarital life follows a pattern of matrilocal (sometimes avunculocal) residence in a compound of houses. If the household is polygynous, then additional houses are built to accommodate the other family members with their mothers.

## 11 CLOTHING

Today most Shilluk men wear Western clothing or Arab *jellabiyas*, but traditional attire is still seen. For women, traditional clothing was either animal-hide wraps, skirts (*rahat*), or aprons. Women’s hair was usually shaven. Males were traditionally naked, but a reth or his noblemen could wear a toga-like garment. For men and women, armllets, breastplates, bracelets, beads, bells, necklaces, and body-painting were common. For men, hair sculpture (especially in a popular flared helmet shape, protected at night by a headrest) and ostrich feathers in the hair were widespread. For those young men with military functions, their dress would not be complete without their narrow hide-shields, clubs, spears with broad leaf-shaped points, drums, and leopard skins.

## 12 FOOD

The Shilluk are predominantly sedentary farmers of the fertile banks and islands in the White Nile. Their economy is based on the Sudanic food complex of millet (*durra*) or sorghum, but other foods such as corn, melons, okra, sesame, and beans are also known. The *durra* is fermented to make an alcoholic drink (*merisa*). As farmers they are endowed with livestock including sheep, goats, and especially cattle which play important roles in religion and kinship. However, cattle for the Shilluk are not nearly as significant as they are for the neighboring Nuer and Dinka. Shilluk men are in charge of milking the cows, and

they do not use fresh cattle blood, unlike the Dinka and Nuer. Because the Shilluk are riverfolk, their foods are diversified by hunting and fishing. Antelope-hunting on royal island preserves is restricted.

## 13 EDUCATION

Only under British colonialism and under post-independence Sudanese governments did the Shilluk receive a formal secular or missionary education. Traditional education was structured around acquiring the skills of an agricultural and military population. On the other hand, the transmission of oral history was very important, especially in maintaining the lineage system from which political leadership emerged for the council of elders and the reth.

## 14 CULTURAL HERITAGE

The population of the Shilluk has not been properly counted for years, but early in the post-colonial period there were at least 110,000 Shilluk-speakers who shared a common cultural heritage. The Shilluk’s unique office of the reth and the role of Nyakang bond them closely together in their villages and region. The Shilluk traditions of the royal throne, semi-divine kingship, dynastic rule, social hierarchies, sororal marriage, oppositional division of the kingdom, the use of a water purification ritual, and origin myths are noted to be held in common with ancient Egyptians. The degree to which this may be true, and the direction of cultural borrowing, is not determined with precision, but the hypothesis that these two ancient Nile valley populations are related remains an important subject for research.

## 15 WORK

For the traditional Shilluk, work is assigned by gender, age-grade, and lineage rank. The reth, ranking princes, and lineage elders do very little physical work, while females are heavily engaged in domestic tasks, food production, and child care. Young males have cultivating, fishing, herding, and hunting tasks. Dugout canoes (2.5–6m or 8–20 ft long) and small reed floats (*ambatch*) are made for fishing and local transport.

## 16 SPORTS

Some modern Shilluk play soccer.

## 17 ENTERTAINMENT AND RECREATION

Traditional recreation was usually aimed at improving military and hunting skills, such as at the mock battles that surrounded the election of a new reth. Songs, poetry, and call-and-response dancing are popular. Among the popular dances are a mock threat “war dance” with infantry spear charges; an amusing hyena dance-play in which hunters stalk and “kill” an enacted hyena threatening sleeping children; and a lion dance in which masked dancers appear with lion heads and are pursued by hunters until wounded and killed.

## 18 FOLK ART, CRAFTS, AND HOBBIES

Like other Nilotes, the Shilluk entertain themselves with public and private discourse which can include folklore. Expressions of folk arts are in jewelry, clay sculpture, hairstyling, and hide-tanning.

## 19 SOCIAL PROBLEMS

The gravest structural challenge within traditional Shilluk society is the interregnum between reths. This potentially conflictful time can sometimes spill over into violence. Meanwhile, relations between Dinka and Nuer can involve mutual cattle-raiding which can evolve into wider conflicts. During the current war in the southern Sudan, these ethnic groups sometimes spend as much time quarreling among themselves as against their perceived common enemies in the Afro-Arab northern Sudan.

Among the greatest present social problems are regional development and security, as well as the prejudicial attitude of some northern Sudanese towards southerners. Many post-colonial governments in Khartoum have pursued military rather than political solutions for national integration, and the Shilluk have long occupied a main river route connecting these conflicting regions. The economic development of the Shilluk and their survival from famine, relocation, and military operations have been major concerns.

## 20 GENDER ISSUES

Traditionally Shilluk culture was markedly patriarchal and paternalistic as the ruling positions were dominated by men, although it is reputed that in the mid-17th century one reth, Abudok nya Bwoc, was a woman. Also, in such cases woman-to-woman marriage was rare but possible. However, at present after many years of regional civil war between Arab northerners and southern Nilotics there have been many instances of gender violence such as rape and assault. Generally the Shilluk managed to be somewhat less involved in the main battlefields and contests for power, with some important exceptions in contests for political and military leadership.

As a result of the historic Comprehensive Peace Accord of 2005, the southern Shilluk women were more empowered to address gender roles and improved the position of women in general and address some specific matters in education and in HIV/AIDS education. Thus traditional social values are intact, but are being negotiated more substantially than previously. The prominent Shilluk national leaders such as Pagan Amum Okech, Lam Akol Ajawin, and Peter Adwok Nyaba are also oriented to progressive and more secular models of cultural transformation that have helped to improve the position of Shilluk women.

# SOMALIS

**PRONUNCIATION:** suh-MAH-leez

**ALTERNATE NAMES:** Somalians

**LOCATION:** Somalia

**POPULATION:** More than 7 million

**LANGUAGE:** Maxaad tiri; Arabic

**RELIGION:** Islam (Sunni)

**RELATED ARTICLES:** Vol. 1: Swahili

## 1 INTRODUCTION

Somalia was much in the news during the last two decades. Many people have therefore gained their knowledge of the country and the Somali people from brief television images of pick-up trucks fitted with large caliber weapons, American marines hitting the beach, tomahawk missile attacks on suspected terrorist enclaves, street fighting among different factions in Mogadishu and starving people in rural areas. This image of a country and people in distress does not convey the richness and complexity of Somali life and culture, a culture that stretches back hundreds of years with roots in Arabia and both North and sub-Saharan Africa.

Somalia, unlike the majority of nation-states in Africa, has only one ethnic group. That group does have, however, significant divisions based on membership in various clan-families. What unites the Somalis is a common language, a reliance on animal husbandry, a shared Islamic heritage, the long-term inhabitancy of the Horn of Africa, and a belief that all Somali speakers, whether they live within the boundaries of Somalia or not, are descended from a common ancestor. Thus, in addition to the approximately 7-8 million Somalis who inhabit Somalia proper, the Somali-speakers who live within the northern province of Kenya, the Ogaden region of eastern Ethiopia, and the country of Djibouti are all considered to be part of one Somali nation.

## 2 LOCATION AND HOMELAND

Somalia is located in eastern Africa on what is commonly termed the Horn of Africa. The Horn extends into the Indian Ocean to the east, and the Gulf of Aden to the north. As a result, Somalia has a coastline extending almost 3,200 km (2,000 mi). To the west, Somalia is bounded by Ethiopia; to the southwest, by Kenya; and to the northwest, by Djibouti. The total area of the country is about 647,500 sq km (250,000 sq mi). Two long, sandy coastal plains dominate the coastal areas of the country. The interior is characterized by a series of moderate mountain ranges in the north, and a large rugged plateau in the south. The major rivers in Somalia are the Jubba furthest south, and the Shabeelle in the south-central area. The climate can be described as ranging from semiarid to arid, with average rainfall being less than 28 cm (11 in) per year. Animal husbandry is the most common subsistence activity in Somalia, with the major animals kept being camels, cattle, sheep, and goats. Agriculture is possible between the country's two major rivers, with sorghum, maize (corn), and a variety of legumes being raised.

In the late 19th century, the northern half of Somalia became a British protectorate. The southern half of Somalia was an Italian colony until 1960 when it was united with the north-

ern half to become an independent republic. However, independence did not unite all Somali people. A unification that would bring Somalis living in Kenya, Ethiopia, and Djibouti into an expanded nation-state has remained a political goal for the last half century.

## 3 LANGUAGE

The language spoken by the vast majority of the Somali people is referred to as Maxaad tiri, but various dialects are spoken by members of the major clans within the country. Maxaad tiri and Arabic are official languages in Somalia, and many older people in the south also speak Italian. Government officials in the cities often speak English. Names for both males and females follow the Islamic pattern of a given first name followed by one's father's name, then one's father's father's name, father's father's father's name, and so forth. It is therefore common for a Somali to have names stretching back 15 generations. Somalis take extreme pride in their patrilineal ancestry. The perpetuation of family names, and the ability to recite each of them, is an important way of maintaining a connection with these ancestors.

## 4 FOLKLORE

Ceremonial feasts among the Somali people always include the telling of heroic tales of ancestors, as well as stories of more recent events in the lives of the storytellers themselves. As patrilineal ancestors are held in such high esteem by the Somalis, much of their folklore revolves around these family "heroes" who have aggrandized the wealth or status of the clan through fighting or clever economic actions.

## 5 RELIGION

The official state religion of Somalia is Islam, and almost 100% of the Somali population is Sunni Muslim. Although the Somalis follow the practices associated with Islam—praying five times a day, not eating pork products, abstaining from alcohol, and males having up to four wives at one time—they are not as traditional as many Muslims. Women do not practice *pardah*, or seclusion. They do not wear veils or cover their entire bodies when outside the home. They are full participants in subsistence activities in the rural areas, and they frequently own shops and work in a variety of occupations in urban areas, as well. (See section on Gender issues for more detail.)

As is common in many parts of the Islamic world, Somalis incorporate a belief in a spirit world into their religious system. These spirits, or *jinnns*, can be good or evil and can affect the lives of individuals, families, and even large kinship groups. It is therefore necessary to placate them, and sometimes to metaphorically fight them, in order to avoid and overcome illness, loss of property, marital problems, infertility, and even death. There are specialists who "fight" *jinnns* through prayer, ceremonies resembling exorcisms, and the ritual killing of animals. In addition to providing remedies for a variety of misfortunes, these ceremonies serve as important mechanisms for both enhancing clan solidarity and linking different kinship groups.

## 6 MAJOR HOLIDAYS

Holidays in Somalia are associated with Islam. Ramadan is a month-long fast during which Muslims, in order to exhibit their beliefs, do not eat or drink during daylight hours. Rama-

dan ends with the feast of Id Al-Atah. This is also the first day of the month of Haaj during which believers are expected, at least once in their lives, to make a pilgrimage to Mecca. Muhammad's birthday, Mowlud, is also a holy day among the Somalis and is celebrated with feasting.

## 7 RITES OF PASSAGE

Life events among the Somali are celebrated by feasting. The type and number of animals killed, and the particular individuals invited to the feast, depend on the wealth of the family involved and the nature of the event. The feasting is both an announcement that an important event has occurred, and a validation of the role of the family in the life of the clan. Birth is always an important event. Although boys are more highly valued among the Somali than girls, one or more sheep or goats will be killed to celebrate the birth of either. Death also results in feasting. The type and number of animals killed varies directly with the status of the deceased: a goat for a young child, to one or more camels for the death of an old, wealthy male.

Marriage is viewed by Somalis as a bond between two kinship groups, rather than only between two individuals, and is marked by a series of exchanges and ceremonies. The opening exchange is termed *fad* and usually consists of a relatively small amount of sorghum, a sheep, or a goat that the potential groom's patrilineal kin group presents to the kin group of the family of the potential bride. If the *fad* is accepted, then negotiations over the much larger bride-price (*meher*) can begin.

The *meher* is gathered by the groom's patrilineal kinfolk and can consist of camels, cattle, sheep, and goats. These animals are given to the family of the bride and are further distributed to close kin of the bride's father. The bride's family prepares the items necessary for family life: the *aqal* (a portable house), a bed, cooking utensils, mats, ropes, and skins. These are given to the married couple. The groom's family is responsible for slaughtering a camel and/or cow, which is consumed by the two immediate families. The bride's family will slaughter one or more animals to feed all the other guests.

## 8 INTERPERSONAL RELATIONS

Contrary to their depiction on television over the last two decades as rampaging killers, the vast majority of Somalis are extremely friendly, warm, and peaceable. There is a strong tradition of hospitality that obligates individuals to welcome close kinfolk, clan members, and even strangers with tea and food. Because of the continual movement of people and animals throughout a large territory, and the precariousness of the arid environment, this type of hospitality is not uncommon among pastoralists, but the Somalis take special pride in providing it. The most common greetings are "Maalin wanaagsan" (Good day) and "Nabad myah?" (How are you?). For men, these greetings are followed by an extended shaking of hands, which is usually repeated with the same person even after a short absence. Women are less formal when greeting each other, and men and women who are not closely related by blood never shake hands or express other forms of intimacy.

There is nothing that could be construed as dating in the rural areas of Somalia. Even in urban areas, the contact between unmarried men and women is limited. Marriage is closely controlled by older men, and premarital sex is strongly forbidden. Unmarried men in their 20s will display their virility and prowess to women of marriageable age by dancing as a group, but older men do all they can to keep the young men far away from the unmarried women.

Although chronological age is not the sole marker of elder status, there is a general level of respect given to "older" men, especially when age is combined with success in other areas of Somali life. In particular, wealthy older men are accorded great respect, since wealth can only be gained by making wise decisions about animals, labor allocations, and marriages. It is expected that these older men use their status to increase the wellbeing of their immediate patrilineal kin and their clan.

## 9 LIVING CONDITIONS

It is necessary to differentiate between the inhabitants of rural and urban areas when discussing the living conditions in Somalia. The vast majority (90%) of the Somali people live in small villages scattered throughout the rural areas of the country. Few of them have electricity, clean running water, paved roads, or public services. There are two types of housing utilized by people in the rural areas: *mundals* and *aqals*. *Mundals* are permanent structures made of a mud and dung mixture spread over a wooden frame and then topped with a thatched roof. These houses are occupied by a husband and wife, with their children. An *aqal* is a mobile house made of wooden sticks and hides, which can be transported on the back of a camel from one location to another. Every married woman owns an *aqal* and is responsible for erecting and dismantling it as animal camps are moved.

*Somali family structure is based on patrilineal descent. Men belong to the clan of their fathers and trace relationship through male lines back to the beginning of the clan, with the inheritance transferred from father to son. (AP Images)*

The approximately 10% of the Somali population who live in cities experience a life much different from those who live in the rural areas. Before the civil war began, the residents of Mogadishu, Baidoa, Hargeysa, Kismayu, Berbera, and Marka had access to electricity, running water, paved roads, hospitals, and large markets. Most urban dwellers lived in single-family houses and in the 1990s worked as shopkeepers, traders, or craftspeople, or for the government. Conditions brought about by continued civil-strife in several urban centers, especially Mogadishu and Baidoa, have made it impossible for normal life to function.

## **10 FAMILY LIFE**

Since wealth is equated with the number of animals a man has, the goal for most men is to have more than one wife, and as many children as possible, in order to care for more animals. As Muslims, men are allowed as many as 4 wives at one time. It is not unusual for older wealthy men to have 3 or 4 wives. However, divorce is easy and common, and therefore some men may have had 10 or more wives during their lifetime. Likewise, many women will have been married to more than one man because of divorce or the death of a husband. Men do not usually marry until they are in their late 20s and have been able to accumulate some camels and cattle. Women, on the other hand, marry for the first time at 13 or 14 years of age.

After marriage, women live in the village or animal camp of their husband.

Family structure is based on patrilineal descent. Men belong to the clan of their fathers and trace relationship through male lines back to the beginning of the clan, with inheritance (*wahaad*) from father to son. There are six major patrilineally based "clan-families" in Somalia. The Daarood, the largest, live in an area from the tip of the Horn westward into Ethiopia. The Hawiyya are found primarily in the central plains and eastern coastal regions, and the Dir inhabit the most northern area of Somalia into Djibouti. The Isxaaq occupy the area between the Dir and Daarood in the northern plains. The Digil live along the southern coast between the Jubba and Shabeelle rivers; and the Rahanwiin inhabit the fertile area north of the Digil.

## **11 CLOTHING**

Clothing worn by Somalis is greatly influenced by the hot and dry climate of the Horn. Consequently, men have traditionally worn a long piece of lightweight cloth (*mawhees*) as a wrap-around skirt. A lightweight shirt is usually worn, and most men also use a long piece of cloth as a shawl at night when the temperature can drop to near freezing, and as a turban during the heat of the day when temperatures can reach above 38°C (100°F).

*Somali women dressed in traditional costumes perform at Mogadishu. Women traditionally wear dresses that cover their entire body from shoulders to ankles. It is also customary for women to wear shawls which they can use to cover their heads when in the presence of nonfamily males. (Jason Laure)*

Even though women do not keep *purdah* (seclusion), they still traditionally wear a dress that covers their entire body from shoulders to ankles. It is also customary for women to wear a shawl that they can use to cover their heads when in the presence of nonfamily males. This layering of clothing allows women to remove their shawl when indoors or when outside in the heat of the day, and yet have appropriate covering for modesty purposes and when temperatures fall.

Prior to puberty, young girls usually wear a simple dress made of a lightweight fabric. Young boys wear shorts and, most recently, imported tee-shirts with a variety of logos of American and European sports teams. Unmarried males in their late teens and early 20s are responsible for herding their family's camels and often spend months far away from their homes. They wear the traditional mawhees, but are almost always shirtless in order to show off their physiques. To further accentuate their virility, these young men cover their torsos and cake their hair with *ghee*—aged butterfat. This form of attire is worn to attract females and is abandoned immediately after marriage.

## 12 FOOD

Given that the main economic activity among Somalis is the raising of animals, it is not surprising that the most desired food is meat. Although camel, cattle, goat, sheep, and even

chickens are killed and eaten, camel meat is the most desired. Even though animals are plentiful and meat is the most desired food, it would be a mistake to think that meat is eaten every day. In rural areas, animals are generally only killed and meat eaten on special occasions. In urban areas, meat is available at markets, but once again it is not eaten daily. Instead, grains and vegetables are the everyday staple.

Sorghum, a grain crop widely grown in sub-Saharan Africa, is the most common food. Maize (corn), both locally grown and imported, began to be available in the 1970s in the urban areas of the country, as did imported rice. All the grains are cooked as a porridge and are traditionally eaten from a common bowl. Following Islamic practice, the porridge is eaten using only the right hand, without utensils. When meat is eaten, it is cooked separately from the porridge and then placed on top of the cooked grain. It is common, especially in rural areas, for men and women to eat separately.

Food delicacies include camel's hump, sheep's tail, goat's liver, and camel's milk. Camel's hump and sheep's tail (which are primarily fat stored by the animal in order to be reabsorbed during the dry season) and goat's liver are fried, and are only served on special occasions. Camel's milk is drunk more frequently, especially by unmarried males who are responsible for herding these animals. Although these traditional foods are available in markets, urban dwellers have access to a much

wider range of foods, including specialty foods imported from overseas.

### 13 EDUCATION

Although during the 1970s and 1980s education for all children was a high priority for the government of Somalia, few children in rural areas attended school. Even fewer of those who did completed more than the primary grades. Children in urban areas had a greater opportunity for education, and college attendance was increasing. However, the continuing civil strife has destroyed the educational infrastructure, and almost all government-run schools have been closed since the mid-1990s. The only schooling that exists today for the majority of children are Koran schools taught by Sheikhs, Muslim holy men. These schools are usually attended only by boys and emphasize the memorization of important portions of the Koran. However, since the factional fighting began, many of these schools have expanded their curriculum in order to provide a broader education.

### 14 CULTURAL HERITAGE

At feasts, usually associated with rites of passage, men recall past events affecting their animals and lives, tell heroic tales of patrilineal ancestors, and recite passages from the Koran. This feasting and storytelling promotes unity among members of a particular subclan, the larger clan family, and ultimately the entire Somali nation. Dancing, accompanied by singing, is usually only performed by unmarried males in their 20s. These sexually charged "dances" often involve the young men proving their bravery by slashing their arms and legs with large knives. Although leaving dramatic scars on their bodies, this expression of virility in most cases does not permanently harm the participants. Although "frowned upon" by married men, who themselves usually have numerous scars on their arms and legs, these ceremonies are an important activity.

### 15 WORK

Somalis practice a clear division of labor based on gender. Men and boys tend to the animals, and women and girls prepare meals and undertake other domestic tasks. Boys as young as 6 or 7 years old are responsible for the care of sheep and goats, which are kept close to the village or animal camp. Teenage boys and men care for the cattle, which are moved further from home in search of feed and therefore require more skill to handle. Camels are herded by young men in their late teens and 20s. The camels and their herders are often away from their homes for months at a time in search of grazing and water. Thus, the ability for these males to make decisions and protect this valuable asset is an important rite of passage. In rural areas, older men function as resource managers as they constantly adjust their labor force comprised of their wives and children to maximize production of animals and, in the southern part of the country, grain.

Women are primarily responsible for child-rearing, food preparation, and all other domestic tasks. Although at first glance these domestic roles appear far less dramatic, and perhaps even less important, than the care of the herds, without the completion of these tasks males would be unable to successfully care for the herd animals. One particularly important task undertaken by women is the preparation for moving the household from animal camp to animal camp. This involves

dismantling the family's *aqal* (portable house), packing it and all other domestic items on a camel, trekking to the next camp site and reassembling the *aqal*, reestablishing the homestead, and preparing the evening meal, all in less than 10 hours. In areas where domestic crops can be grown, women undertake an even greater work role, as they, and their children, are largely responsible for tending, weeding, and harvesting the crops. In urban areas, it is very common for women to own and run small shops selling a wide-range of products.

### 16 SPORTS

Soccer is the most popular and widely played sport in Somalia. However, its play is primarily restricted to the cities and larger towns and is not that prevalent in the villages. This is because children assume important roles within the pastoral society at an early age and particularly boys have little time for organized sport. Boys and girls play games, but the responsibilities assumed by children at an early age restrict the free time necessary for the organization and play of games.

### 17 ENTERTAINMENT AND RECREATION

Most entertainment among rural Somalis is in the form of ceremonies associated with major life transitions: birth, puberty, marriage, and death. For these ceremonies, animals are killed and the meat distributed to all who are in attendance. Most patrilineal kinfolk will be invited to these ceremonies, as well as relatives through marriage and other members of a village or animal camp. The main object is to reinforce kinship and other relationships through feasting and talking. Storytelling, recitation of ancestral names, and recounting the accomplishments of kinfolk and ancestors is a form of entertainment that has been lost in Western society, but which provides hours of pleasure for the pastoral Somalis.

Television is nonexistent in Somalia, although before the civil war the government did provide a radio service. Many urban and rural Somalis listen regularly to BBC broadcasts on the radio and are consequently well-informed about world events. Movie theaters also operated in all major cities and towns before the outbreak of widespread fighting. Most movies shown were either produced in India or were adventure movies from Hollywood.

### 18 FOLK ART, CRAFTS, AND HOBBIES

The Somali have little activity that could be described as folk art or crafts, but this does not mean that they make few objects. Quite the contrary, the Somali are quite proficient in crafts, producing fine wooden utensils, leather goods, woven mats and ropes, knife blades, and arrow points. However, each of these products has a definite utilitarian function, rather than being a remnant of a previous folk art or craft. Just as there are religious specialists and healers, there are people who specialize in, for example, ironworking or woodcarving. Much of the craft work, however, is undertaken by ordinary inhabitants of villages who have need of a woven rope or a carved knife handle. Perhaps in the future these utilitarian crafts will become a folk art, but until then, these are skills that are necessary for the functioning of Somali society.

## 19 SOCIAL PROBLEMS

Because of the continuing civil strife, there has been a complete breakdown of civil government since the early 1990s, resulting in the cessation of most public services in many of the areas of the country. This civil strife is the culmination of a movement to depose General Muhammad Siad Barre, who seized power in a military coup in 1969 and ruled as a virtual dictator until 1991. Unfortunately, the united clans that drove Barre from the country could not agree on a governmental structure. Fighting among them began in late 1991 and in some form or another, has been going on ever since. During the fighting, agriculture and livestock-raising has been disrupted, and well over one-half million people died of starvation and at least another 100,000, mostly in Mogadishu and surrounding areas, died in the fighting. The United Nations and a variety of non-governmental relief organizations (NGOs) have launched relief efforts over the last two decades, but the lack of a central government has resulted in little actual help for the people who need it most. The lack of a central government that could control the various clan factions, eliminate fighting and provide basic services for the population resulted in the rise of the Union of Islamic Courts (UIC) in 2005. By 2006, the UIC had gained control of Mogadishu and much of southern Somalia and, through the imposition of Sharia courts (the application of traditional Islamic justice), had brought relative peace to much of Mogadishu and the south. However, splinter groups of the UIC, especially a group of young Islamist fighters known as al-Shabab, made alliances with other world-wide radical Islamists resulting, in 2006, with the United States placing the UIC on its list of "foreign terrorist organizations." In response to this action, Ethiopian troops invaded Somalia in late 2006 to aid Somalia's government in its fight against the UIC. Since Ethiopia is the traditional enemy of the Somali peoples, this action resulted in the formation of the Alliance for the Liberation of Somalia (ALS) in late 2006 to launch both military and diplomatic actions to force the Ethiopians out of the country. In 2007 the African Union sent the first troops to Mogadishu in an attempt to reestablish civil order, but these efforts have had little positive impact. As of early 2008 over 250,000 Somali had been displaced from urban centers and were living in squalid refugee camps in rural areas of the country.

## 20 GENDER ISSUES

Gender issues among the Somali are largely dependent on the local interpretation of Islamic law and traditional practice. Although traditionally Somali women have had more rights and independence of actions than in many other Islamic countries, the rise of more fundamentalist factions has resulted in purdah being imposed, depending on which faction is in control, in Mogadishu and other urban areas.

Since traditionally marriage functions to unite kin groupings, most marriages are arranged by older males within the clan with neither groom nor bride having input in the marriage choice. Men dominate marriages and can easily initiate and be granted divorce, while women have only limited ability to initiate divorce. It is very common for men to not only have more than one wife at any given time, but to marry and divorce frequently. Women can remarry after divorce, but most frequently these marriages are less desirable. Because they have lost the ability to provide children to the clan of a potential husband, post-menopausal women have the most difficulty remarrying.

Within marriages, men dominate almost all economic matters and it is difficult, but not impossible, for women to own and control animals and land independent of their husbands. Children are members of their father's clan with the result that mothers, although having normal maternal responsibilities, have little say in the most important matters impacting their children, e.g., marriage partner and inheritance. This does not mean that children do not feel strong affection towards their mothers and it is not unusual for sons to support their mothers once widowed or divorced, but the patrilineal bond dominates all kin relationships. It is not an exaggeration to term traditional Somali society as patriarchal.

# SONGHAY

**PRONUNCIATION:** song-HIGH

**LOCATION:** Eastern Mali, western Niger, northern Benin

**POPULATION:** 3.5 million

**LANGUAGE:** Dialects of Songhay; French

**RELIGION:** Islam combined with indigenous beliefs

**RELATED ARTICLES:** Vol. 1: Beninese; Malians; Nigeriens

## 1 INTRODUCTION

The Songhay have one of the most glorious histories of any African people. Known throughout West Africa as great and fearless warriors, the Songhay established one of the three great medieval West African Empires in 1463. The first Songhay king, Sonni Ali Ber, who spent much of his 30-year reign engaged in war, extended the boundaries of the Songhay state far beyond its ancestral lands, which extended some 100 km (62 mi) from each bank of the upper bend of the Niger River in what is today eastern Mali and western Niger. His successor, Askia Mohammed Touré, who founded a new dynasty, the Askiad, ruled from the Songhay capital at Gao, still a town today along the banks of the upper Niger River in Mali. Askia Mohammed made Songhay a great empire by extending its control throughout much of West Africa.

The political skill of Askia Mohammed's sons, who succeeded him, paled in comparison to that of their father, who set up elaborate and efficient bureaucracies to govern the empire. During his sons' reigns, however, corruption weakened the structures of imperial bureaucracy and treachery compromised imperial power. Toward the end of the 16th century, imperial Songhay was little more than an empty shell. In 1591 a small column of Moroccan soldiers crossed the Sahara and routed the excessively large Songhay army at the battle of Tondibia. The Moroccans installed a pasha (civil and military official) and controlled the northern sectors of Songhay. The Songhay nobles, all descendants of Askia Mohammed, fled southward to present-day Niger, where they continued their much diminished imperial rule. In time, the southern empire splintered into independent principalities that were mutually hostile. These principalities remained independent until 1899 when they were subjected to French colonial authority, which continued until the founding of the Republic of Niger in 1960. In the first three governments of the Republic of Niger, Songhay played central political roles. Compared to other ethnic groups in the Republic of Niger, they have a disproportionately large representation in the officer corps of Niger's army.

<sup>2</sup> Location and homeland

The Songhay-speaking peoples live near the Niger River in eastern Mali, western Niger, and northern Benin. Key towns in Songhay country include Gao and Timbuktu in Mali, and Ayoru, Tillaberi, Niamey, and Tera in Niger. Songhay country is situated in the semiarid Sahel, which consists of flat rocky plains broken by rocky mesas in the south, and sandy dunes in the north.

The vast majority of Songhay are agriculturalists who grow millet and sorghum in sandy fields or cultivate rice in the shallows of the Niger River. This region features one of the harshest climates in the world. From October to May it does not rain. The dry period consists of two seasons: cool and hot. The cool

season is dry, windy, and dusty with daytime temperatures rising well above 27°C (80°F) and nighttime temperatures often plummeting below 10°C (50°F). By February, however, the daytime readings reach 38°C (100°F) or more. By April and May, afternoon temperatures sometimes exceed 46°C (115°F). At night, the mercury drops only to 30°C (85°F) or so. The rains come in late May or early June and break the heat. The rainy season lasts from June through September.

Songhay-speaking peoples have a more than 100-year history of migration from Niger and Mali to the Guinea Coast countries of Nigeria, Benin, Togo, Ghana, and Ivory Coast. More recently Songhay traders have traveled to France as well as to the United States, where Songhay traders live and work in New York City. The vast majority of Songhay people, however, remain in Mali and Niger. Into the 21st century, in the US, most Songhay immigrants live in New York City, mostly in Harlem and the South Bronx and in a vibrant community in Greensboro, North Carolina.

## 3 LANGUAGE

Songhay is a language spoken by 3 million people in the Republics of Mali, Niger, and Benin. There are several dialects of Songhay. In Timbuktu, Songhay people speak *kwaara cini* (literally, "town talk"). The Songhay spoken between Gao and Tillaberi along the Niger River is called *issa cini* (literally, "river talk"). By contrast, people living in far western Niger in such towns as Tera, Dargol, and Wanzerbe are said to speak Songhay. Peoples living east of the Niger River from Tillaberi south to the town of Say speak the Zarma dialect. People living along the Niger River near the Niger-Benin border speak Dendi, yet another Songhay dialect. Because Mali, Niger, and Benin are all French-speaking nations, many Songhay people living in these states are conversant in French.

As in many African languages, greetings are important in Songhay. The first greeting is: "*Manti ni kaani*," "How did you sleep?" One usually replies, "*Baani sami, walla*," meaning, "I slept (implied) well, in health." The greetings in the morning focus upon work and the health of people in one's compound. The midday greetings ask after one's afternoon. Late afternoon greetings reference questions of health. In the dusk greeting, people exchange salutations of peace and health. At bedtime, one says: "*Iri me kaani baani*," which means "May we both sleep in health and peace."

## 4 FOLKLORE

Songhay trace their origins to the 8th century AD and the coming of Aliman Dia to the Niger River. Aliman Dia possessed iron weapons and with these he subdued the resident peoples, *sorko* (fishers) and *gow* (hunters). Aliman Dia brought these peoples together and founded the first Songhay dynasty, the Dia. Descendants of Aliman Dia governed Songhay until the 15th century when a dynasty, the Sonni, succeeded them.

The ancestor of the *sorko*, Faran Maka Bote, like Aliman Dia, is a Songhay culture hero. Faran Maka Bote's father, Nisili Bote, was a fisherman. His mother, Maka, was a river spirit. Faran grew to be a giant with vast magical powers. As an adult he battled a river spirit, Zinkibaru, for the control of the river spirits, which meant control of the Niger River. Faran won this battle and became master of the Niger River. But his confidence soon surpassed his capacities. Dongo, the deity of lightning and thunder, demonstrated his displeasure with Faran by

burning villages and killing people. He summoned Faran and demanded that the giant pay his humble respects to Dongo by offering music, praise-poems, and animal sacrifices. Dongo told Faran that if he organized festivals, Dongo would descend into the bodies of dancers and help the people along the Niger River. This event marked the first Songhay possession ceremony. These ceremonies are still performed today. One of the most important members of a Songhay possession troupe, moreover, is the *sorko*, praise-singer to the spirits and direct descendant of Faran Make Bote. In this way, myth in the Songhay world is connected to ongoing social and religious practices.

## 5 RELIGION

Although almost all Songhay are practicing Muslims, Islamic practices have not excluded pre-Islamic beliefs. Songhay see life as a series of paths (the life path or paths; in the Songhay language, the *fonda* or *fondey*) that constitute life in the world. Like paths in the Songhay bush, the metaphoric paths of life end when they meet two new paths that fork off in different directions. At these crossroads, points of potential danger where the spirit and social worlds meet, people are vulnerable to misfortune, sickness, and possibly death. Because life is seen as the continuous negotiation of dangerous crossroads, Songhay people regularly consult diviners, who read shells that indicate what precautions a person must take to move forward on her or his path.

The paths of Songhay religious specialists are steeped with learning and fraught with difficulties. There is *sohancitarey*,

the path of Songhay sorcerers, descendants of the Songhay king, Sonni Ali Ber. There is the path of *sorkotarey*, which is followed by praise-singers to the spirits, descendants of Faran Maka Bote. Healers descended from slaves, called *horso*, follow the path of their ancestors (*horsotarey*), practicing magic passed down from generation to generation. *Cerkowtarey* is the path of witches, who precipitate illness, misfortune, and death in Songhay villages. They are said to fly in the night and to be able to transform their appearance. Death results when witches steal and eat their victims' souls. There is also the path of *zimatarey* that is followed by spirit-possession priests, who work with the *sorko* to stage spirit-possession ceremonies. Except for witches, who receive their powers through ingesting their mothers' milk if their mothers are witches, these specialists must serve long apprenticeships to master the knowledge of history, plants, words, and practices. Along their paths, apprentices become vulnerable to the powers and rivalries of the spirit world, which the Songhay call "the world of war."

For most Songhay, whose contact with the spirit world may well be frightening but is generally infrequent, the path of Islam is well followed. They pray five times a day, avoid alcohol and pork, honor and respect their elders, give to the poor, observe the one-month fast of Ramadan, and try to the best of their ability to make the exceedingly expensive pilgrimage to Mecca. If they submit to these practices, they believe that they will ascend to heaven. These beliefs, however, do not preclude beliefs about the spirit world.

## 6 MAJOR HOLIDAYS

Songhay people, like other groups in the Republic of Niger, celebrate Nigerien Independence Day, and other state-related holidays. They also celebrate such major Islamic holidays as Muhammad's birthday, the end of the Ramadan fast, and *tabaski*, which commemorates Abraham's biblical sacrifice of a ram. For *tabaski*, people slaughter one or two sheep and roast them in their compound. They feast on the roasted mutton and offer raw and cooked meat to needier people who knock on their door seeking an offering.

## 7 RITES OF PASSAGE

Like all peoples throughout the world, the Songhay perform rituals to underscore the major events of the life-cycle. Most of these rituals follow Islamic prescriptions, though some practices related to birth, puberty, marriage, divorce, and death predate Islam in sub-Saharan Africa. Birth, for example, is seen as a time of danger for both mothers and their children. During pregnancy, most Songhay women avoid certain foods. During and immediately following childbirth, men are kept from the mother and child. Mother and child are presented to family and neighbors for the first time at the *bon chebe* (literally, "showing the head"), at which the child is named. As children mature, they are educated by their fathers and mothers. Young boys learn to farm millet and sorghum, cultivate rice, fish, and hunt; young girls learn cooking, child care, and other domestic chores. In the past, young Songhay practiced a pre-Islamic female initiation called the *gosi*, during which young girls were ritually purified for marriage. This practice did not involve female genital mutilation. Young boys once underwent circumcision at a relatively late age. Circumcision specialists (*guunu*) would travel from village to village and circumcise

scores of boys in one afternoon. These days, circumcisions are performed on toddlers by physicians in hospital settings.

In adolescence, Songhay often forge life-long friendships. Groups of friends will work together and attend social events like drumming ceremonies or dances organized by the *samaryia*, which is a village-level young people's organization. Eventually women and men are ready to marry. In the recent past, there were many cousin marriages among the Songhay, especially among families of nobles, descendants of Askia Mohammed Touré. Young men and women were encouraged to marry the children of their father's siblings. Nowadays, cousin marriages are less frequent.

Once the groom asks the bride's father for permission to marry the latter's daughter, he is expected to pay his future father-in-law a bride-price, which today is a fixed sum of money. He is also expected to give his future wife many gifts: cloth, blankets, perfume, and soap. He will also give his in-laws gifts of rice, meat, and kola nuts. The significant expense of marriage makes it difficult for young men to afford to marry, which is why most Songhay grooms are significantly older than their wives. The marriage ceremony is marked by the presentation of gifts and the sanctification of an Islamic contract (*kitubi*) that binds husband to wife. Drummers play music and people eat and dance in the bride's compound.

Divorce, which is quite common among the Songhay, is not marked by ceremony. Men initiate formal divorce by consulting a Muslim cleric and proclaiming, "I divorce thee" three times. If there are children in the marriage, they live with the father after two years of age. This practice, too, follows Muslim law. Since there is no joint property held between husband and wife, divorces are easy to obtain and free of property disputes. Women informally initiate divorce by leaving their husbands, who then proclaim their divorce in the wife's absence.

Adulthood among the Songhay is spent working and raising families. As people age, they have fewer responsibilities. When they become elders, they spend much of their time conversing with their friends and imparting wisdom to the younger generations. When Songhay die, they are buried quickly and without fanfare. Mourning lasts for 40 days, during which the family receives regular visits from relatives and friends. During these visits people honor the person who died by talking about his or her life, his or her likes and dislikes, and perhaps his or her peculiar expressions.

## 8 INTERPERSONAL RELATIONS

Generosity, grace, and modesty are key ingredients of ideal Songhay interpersonal relations. One is supposed to direct one's social energies towards the other and the group. Self-absorption is looked down upon. The Songhay are, like many peoples in the West African Sahel, known for their generosity. When strangers arrive they are housed, well fed, and treated with great dignity—even if the hosts are poor. Such is the hallmark of Songhay graciousness, which may have developed in response to the harsh ecological and economic conditions in which they live.

Songhay are also modest people. If they are wealthy in comparison with their neighbors, they do not flaunt their material success. Dress is also modest. Men wear long flowing robes (*boubous*) over loose-fitting cotton trousers and shirts. Women wear long wrap-around skirts (*pagnes*) and tops. In both cases, people dress for comfort and avoid wearing clothes that show

off their bodies. Young men are supposed to be respectful of young women, who in turn are supposed to be shy around young men. This code is expressed in body language. Boys do make eye contact with girls. Girls, however, will often look at the ground when talking in public to boys. Whenever young men and women become involved with one another, they do so in private. Their public behavior maintains a socially sanctioned modesty.

## 9 LIVING CONDITIONS

Songhay people in rural areas live mostly in small villages, which are usually near a water source—a series of wells, a pond, or the Niger River. Families live within walled or fenced compounds, which usually consist of a main house for the husband, and smaller houses for each of his wives and their children. The houses are usually made of mud bricks and have thatched roofs. More traditional homes are circular huts with thatched roofs. New houses may be made of cement and feature tin roofs. Homes offer Songhay protection from heat, wind, and rain. Most social activity, however, is conducted out of doors in the compound, where food is prepared and eaten, and where people visit one another in the evenings.

Songhay who live in such urban areas as Niamey, the capital of the Republic of Niger, also live in compounds. Space in urban areas is, of course, limited, which means that people live in crowded conditions that tend to be less sanitary than in the countryside. In the Songhay Diaspora in France and in New York, families live in small apartments in neighborhoods in which other West African immigrants have settled. In New York City Songhay men and women live in Harlem, the South Bronx, and in Brooklyn.

## 10 FAMILY LIFE

Songhay families tend to be large. In rural areas, brothers live with their father, mothers, wives, and children in large communal compounds. In some cases, more than 100 people might live in a rural compound. In urban areas, families are a bit more scattered and smaller in size. In the family, women play central roles. They fetch water, buy and prepare food, clean the house and compound, and look after the children. As a woman ages, she expects younger wives (if the marriage is polygamous), daughters-in-law, or daughters to perform domestic chores. Men work in the fields and are often away from the family compound. When they return, women give them bathing water and feed them.

Men and women lead fairly separate lives. They do different kinds of work. They eat separately. They often talk exclusively to other people of their own gender. When a marriage occurs, a woman's primary allegiance is to her blood kin, for it is from them that she will inherit wealth. If husbands are abusive, the wife's brothers will often intervene to end the abuse. If a woman earns money, she will keep it for herself or share it with her blood kin. She rarely gives her husband money, for it is his responsibility to feed, clothe, and otherwise care for his wife. In the Diaspora, Songhay husbands spend long periods of time away from their wives and families. They meet their familial obligations by wiring money to their families in Niger.

## 11 CLOTHING

Rural as well as urban Songhay men today wear a combination of traditional and Western clothing. More often than not,

A Songhai bride from Mali adorns her hair with silver coins and gold filigree ornaments containing blessings. The remarkable hairstyles of the Songhai woman are reminders of the sophisticated Songhai Empire that held sway for 600 years until the end of the sixteenth century. (Carol Beckwith/Angela Fisher/Getty Images)

they wear tailored suits consisting of trousers and a loose-fitting shirt that they wear untucked. Younger men might wear used jeans and tee-shirts they buy at local or regional markets. There are some men, however, who prefer to wear traditional garb, which includes a damask cotton three-piece outfit, consisting of matching drawstring trousers, long-sleeved loose-fitting shirt with an open neck, and long billowy robe (*boubou*) with a deep chest pocket. These robes are sometimes covered with elaborate designs brocaded in silver and gold thread. The only Songhay women who wear Western fashions belong to the upper classes of Nigerien society. Most Songhay women rarely, if ever, wear Western clothing.

## 12 FOOD

The staple of the Songhay diet is millet, a highly nutritious grain that Westerners use principally as bird seed. Millet is consumed in three ways: as a pancake (*haini maasa*), as porridge (*doonu*), or as a paste (*howru*). No matter how it is consumed, the millet must first be pounded or milled into flour.

Millet flour can then be mixed with water to make a pancake batter, which is then fried on a griddle. This food is usually eaten at breakfast. Porridge, which is eaten at the noon meal, is mixture of millet flour that has been shaped into a doughy ball, milk, water, and sugar. Millet paste is made by mixing millet flour in a pot of boiling water until the mixture stiffens. This paste, which is consumed at the evening meal, is topped by a variety of usually meatless sauces made from okra, baobab leaf, or peanuts. Songhay season their sauces with ginger (*tofunua*), hot pepper (*tonka*), onion flour with sesame (*gebu*), sorrel paste (*maari bi*), and a variety of other ingredients that have no English-language equivalents.

Food is served in porcelain bowls that Songhay buy at markets. In rural areas, bowls are fashioned from large gourds and are decorated. Men and women eat separately. Food is served in a common bowl from which people eat with their right hands. The left hand, which people use to clean themselves, is considered impure.

## 13 EDUCATION

Education takes two forms among the Songhay: informal and formal. Mothers and fathers informally educate their children in matters of subsistence: farming, fishing, hunting, building huts and houses, cooking, weaving, and sewing. Even though thousands of Songhay children attend elementary school, illiteracy is common. In remote areas, some Songhay parents see formal schooling as a loss, for it often means that semieducated sons and daughters leave the countryside for towns and cities. Elementary school students must pass screening examinations to attend middle schools. Middle school students must pass the *brevet*, another screening exam, to advance to the *lycée*, or high school. After four years of high school, students must pass a baccalaureate exam in order to qualify for university education. In Niger there is one university, Université de Niamey; several normal schools, which train primary school teachers; and several advanced education centers where bureaucrats and technocrats acquire their respective training.

## 14 CULTURAL HERITAGE

The Songhay are proud of their imperial past and celebrate it with song, dance, and epic poetry. Singing, dancing, and praise-songs, performed by *griots* (both male and female), are central to the celebration of births, marriages, and secular and religious holidays. Epic poetry is also performed on secular and religious holidays. It recounts the heroic feats of cultural heroes like Sonni Ali Ber and Askia Mohammed Touré, the greatest of the Songhay kings. Poetry performances are frequently broadcast on national radio.

## 15 WORK

The principal activity of most Songhay men has been millet and rice farming. Since the tasks associated with farming do not consume an entire year, many Songhay men have developed secondary occupations: trading, transport, or tailoring. More than a few Songhay men spend the nonplanting season working for wages in Niamey, the capital of Niger, or in far-away coastal cities like Abidjan, Lome, or Lagos. Except in upper-class families, Songhay women remain wedded to domestic activities. In some cases, divorced women sell cooked foods or trade in cloth to make their way in the world. A small percentage of Songhay women work as civil servants for the

government of Niger. In the Diaspora, Songhay men in New York City work as street vendors, import-export businessmen, security guards, factory laborers and gas station attendants.

## 16 SPORTS

Soccer is the major sport among Songhay boys and young men. No matter the size of the village, there is a space where young boys and men regularly play soccer. Larger villages support soccer clubs and teams that compete against other villages. The national team recruits its players from these local soccer clubs and competes against teams from other African nations. Boys and men also race horses both informally and formally. During secular holidays, villages sponsor horse races and present the winners with prizes.

Wrestling is the other major sport. The idea is not to pin one's opponent but merely to throw him to the ground. There are wrestling competitions in most larger villages as well as a prestigious national competition. Songhay girls are not encouraged to participate in sports, although those who attend school are required to take physical education and engage in intramural competition.

## 17 ENTERTAINMENT AND RECREATION

Such religious rituals as spirit-possession ceremonies are also occasions for group entertainment. When a spirit-possession ceremony is staged, vendors come to sell cigarettes, cooked foods, and candy to the audience. In many Songhay towns there is a local theater, in which young people stage plays about the social conflicts of growing up in a changing society. Sometimes these local theater troupes perform on national radio. Towns also sponsor local singing and dance groups, as well as gatherings for young people where they can dance and socialize.

Television has become an important medium of entertainment in many of the larger Songhay towns. Most people cannot afford electricity, let alone a television set. But neighborhood chiefs, who own televisions, will invite their neighbors into their compound for evenings of television viewing.

## 18 FOLK ART, CRAFTS, AND HOBBIES

Songhay are well known for weaving blankets and mats. The elaborate cotton blankets woven by men in the town of Tera (*terabebe*) are highly prized throughout the Sahel. Women living along the Niger River weave palm frond mats that feature geometric designs.

## 19 SOCIAL PROBLEMS

There are two great social problems facing the Songhay. The first is the ever-present prospect of drought and famine. Songhay live in the Sahel, which throughout its history has been prone to drought and famine. In the past 35 years there have been many devastating droughts and famines that have prompted the widespread migration of rural Songhay to towns and cities. In any given year, even the slightest disruption of the cycle of rains can precipitate grain shortages, hunger, and famine.

The second principal social problem involves politics. At present the Republic of Niger is politically unstable. The first three governments of the Republic of Niger were led by Songhay-speaking peoples, which led to charges of ethnic favorit-

ism from the other ethnic groups (Hausa, Fulani, Kanuri, and Tuareg) that constituted the majority of the population. Thirty years ago, the issue of tribalism was important. Today, the power and relevance of the state has diminished, especially in rural areas. While in the past people might have charged the government with ethnic favoritism toward the Songhay, people in the present must concentrate their energies on making their way in a politically and socially uncertain world. In the Diaspora, the principal social problem is the separation of families, which sometimes precipitates divorce. This same separation sometimes results in new marriages in the host country, meaning that some Songhay men have two families: one in Niger and one in a new home like New York City

## 20 GENDER ISSUES

Gender is central to the flow of social relations. In rural Songhay villages, men and women have relatively distinct identities. These identities have been shaped by patterns of work and social obligation as well as by the influence of Islam. In general, women run household economies and, for the most part, participate directly in child-rearing. The man's domain is usually outside of the home—in the fields or at the market. These "roles" shift somewhat in urban areas in which women engage in economic activities outside the home. Indeed, some urban Songhay women are educated and have civil service positions. These women hire others to cook, clean, and look after their young children. The same can be said of Songhay women who live in places like Paris or New York City. Sometimes, the expanded roles that Songhay women enjoy in urban or diasporic communities precipitate domestic tension in the household.

# SOTHO

**PRONUNCIATION:** SOO-too

**LOCATION:** Lesotho, South Africa

**POPULATION:** 8.2 million in South Africa, 2.1 million in Lesotho

**LANGUAGE:** Sotho language (Sesotho or Sepedi)

**RELIGION:** Traditional beliefs (supreme being Modimo), Christianity

## 1 INTRODUCTION

The Sotho people are an ethnic group living in Lesotho and South Africa. There are two major branches, the southern Sotho and the northern Sotho (also called the Pedi). Southern Sotho people make up about 99% of the population of Lesotho. The southern Sotho and the northern Sotho taken together are the second largest ethnic group in South Africa. Speakers of southern Sotho make up about 8% of the South African population while speakers of northern Sotho make up about 9.5%. Culturally and linguistically, both groups are also closely related to the Tswana people of Botswana.

Sotho society was traditionally organized in villages ruled by chiefs. The economy was based on the rearing of cattle and the cultivation of grains such as sorghum. In the early nineteenth century, several kingdoms developed as a result of a series of wars, the *difaqane*, which engulfed much of southern Africa. During this period, southern Sotho people as well as other ethnic groups sought refuge in the mountainous terrain of Lesotho. A local chief named Moshoeshoe emerged as a skillful diplomat and military leader who was able to keep his country from falling into the hands of Zulu and, later, white (Afrikaner) forces. After Moshoeshoe's death in 1870, this independence was weakened, and white (English) authorities from the Cape Colony tried to administer Lesotho as a conquered territory. The people resisted this attempt at control, however, leading to the Gun War of 1880-1881 in which the Cape Colony was defeated.

The northern Sotho suffered much devastation at the hands of African armies during the *difaqane*, but several chiefdoms were able to recover. After 1845, the Pedi also had to contend with an influx of white Afrikaner settlers, some of whom seized Pedi children and forced them to work as slaves whom they euphemistically labeled "servants" (*inboekseling*). The Pedi ruler Sekwati and, later, his son Sekhukhune, successfully resisted Afrikaner encroachment on their territory for a number of years, but the Pedi were finally conquered by a combined force of British, Afrikaner, and Swazi men in 1879. Thus the northern Sotho lost their independence and fell under the political control of white authorities. All of the land of the northern Sotho was fragmented and turned into the African "reserve" of Sekhukhuniland. Under apartheid, Sekhukhuniland and some surrounding lands occupied by other African peoples were made into the Bantustan of Lebowa. There were forced relocations of Sotho people to Lebowa, QwaQwa, and several other Bantustans, causing great hardship. These structures were disbanded with the end of apartheid.

In 1884, Lesotho became a British protectorate. Unlike the Pedi kingdom, therefore, Lesotho was not incorporated into South Africa. However, rich agricultural land once claimed

by Moshoeshoe (territory which included much of the South African Free State) was lost to Afrikaner control. Lesotho became an independent country in 1966, although because it was surrounded by apartheid South Africa, it was never completely free. The nation has also had trouble in establishing a democracy of its own. The first democratic elections after independence were voided by the government of Leabua Jonathan. Jonathan ruled Lesotho from 1970 until he was overthrown in a coup in 1986. Military rule came to an end in 1991, but the transition to democracy has been difficult. In 1998 and 1999 violence erupted in many parts of the country as a result of disputed election results. For several months during this period, the country was occupied by South African and other African forces who maintained they were there as invited peacekeepers. This period saw the destruction of much valuable property, particularly in urban areas. Although there are many opposition parties, the Lesotho Congress for Democracy (LCD) has held power since this time.

## 2 LOCATION AND HOMELAND

According to 2008 estimates, there were about 8 million people who identified themselves as southern or northern Sotho in South Africa. In Lesotho there were about 2.1 million southern Sotho.

The home of most of the southern Sotho is in Lesotho and in South Africa's Free State Province. There are also many Sotho who live in South Africa's major cities. Lesotho is a mountainous country that is completely landlocked within the borders of South Africa. It has an area of about 30,350 sq km (about 11,700 sq mi). The Free State is a highland plain, called a *highveld* in South Africa, bordering Lesotho to the west. The eastern section of Lesotho is also a highveld, punctuated by plateaus similar to those found in the American Southwest. The Maloti and Drakensberg mountains are in the central and western parts of the country. The Drakensberg Mountains form sharp cliffs that drop off dramatically to South Africa's KwaZulu/Natal Province. The climate of South Africa in general is temperate, but the mountains make for cold winters. In fact, winter snows are not uncommon in the Lesotho highlands.

The region considered a traditional home by many rural Pedi is between the Olifants and Steelpoort rivers in South Africa's Limpopo Province. It is bounded by the Leolo Mountains on the east and by dry plains to the west. This region and neighboring areas are also home to other ethnic groups, including the Lovedu, Tsonga, Ndebele, Venda, Zulu, and Afrikaners. Northern areas of South Africa are much warmer than Lesotho.

Although many people of northern Sotho background considered the territory that became Lebowa their homeland, this Bantustan was to a large extent an artificial creation. In the 1970s and 1980s, ethnic tensions developed as a result of the apartheid state's attempt to define peoples in terms of a simplistic notion of homeland and tribe. Other peoples defined by the apartheid state as southern Sotho were forced to move to the impoverished "homelands" of Bophuthatswana and QwaQwa. Conflict generally has intensified in rural areas because the lands of northern and southern Sotho people have been heavily eroded, overpopulated, and overgrazed for many years.

### 3 LANGUAGE

The Sotho language, or Sesotho, is a Bantu language closely related to Setswana. Bantu languages are characterized by a system of organizing nouns by prefixes. For example, the “se” prefix is used in front of all languages while “ba” is used with nouns for people. To be polite it is most appropriate even in English to speak of the Sotho people as “Basotho” or, when referring to one person, as “Mosotho.” As in the South African languages Zulu and Xhosa, Sotho discourse is rich in proverbs, idioms, and special forms of address reserved for elders and in-laws.

The division between southern and northern Sotho people is based on the dialectal differences between the two groups. The southern form of Sotho is spoken in Lesotho, and the northern form is spoken by many in South Africa’s Limpopo Province. The northern form is called Sepedi. Southern Sotho utilizes click consonants in some words (although not so many as in Zulu and Xhosa), while Sepedi and Setswana do not have clicks. Currently, southern Sotho has two spelling systems, one in use in Lesotho and another in South Africa. For example, in Lesotho a common greeting is *Khotso, le phela joang?* (literally, “Peace, how are you?”). In South Africa, the word *joang* (how) is written *jwang*, and *khotso* is written *kgotso*.

Names in Sotho generally have meanings that express the values of the parents or of the community. Common personal names include *Lehlohonolo* (Good Fortune), *Mpho* (Gift), and *MmaThabo* (Mother of Joy). Names may also be given to refer to events. For example, a girl born during a rainstorm might be called *Puleng*, meaning “in the rain.” Individuals may also be named after clan heroes. Surnames are taken from relatives on the father’s side of the family.

In recent years, African languages have been undergoing rapid change due to the influence of European languages. There is also influence from multicultural urban slang. As a result, many Sotho speakers today readily mix words and phrases from other languages into their speech.

### 4 FOLKLORE

According to one Sotho tradition, the first human being emerged from a sea of reeds at a place called Ntswanatsatsi. However, little is known or said about the events of this person’s life.

Sotho has a rich tradition of folktales (*ditsomo* or *dinonwane*) and praise poems (*diboko*). These are told in dramatic and creative ways that may include audience participation. Folktales are adventure stories that occur in realistic and magical settings. One of the best known of the folktales is about a boy named Sankatana who saves the world from a giant monster.

Praise poems traditionally describe the heroic real-life adventures of ancestors or political leaders. Here is the opening verse of a long poem in praise of King Moshoeshoe:

“You who are fond of praising the ancestors,  
Your praises are poor when you leave out the warrior,  
When you leave out Thesele, the son of Mokhachane;  
For it’s he who’s the warrior of the wars,  
Thesele is brave and strong,  
That is Moshoeshoe-Moshaila.”

Such traditional forms of creative expression continue but they have also been incorporated into contemporary

music and art. One young performer notable for incorporating Sotho praise poetry into modern poetic and musical forms is Lesogo Rampolokeng. Modern or “urban” legends also circulate informally today about unusual events and circumstances that are said to have occurred recently.

### 5 RELIGION

The supreme being that the Sotho believe in is most commonly referred to as Modimo. Modimo is approached through ancestral intermediaries, the *balimo*, who are honored at ritual feasts. The ancestral spirits can bring sickness and misfortune to those who forget them or treat them disrespectfully. Among the North Sotho Kgakga clan, a drum cult centered around the figure of the paramount chief (king), who was venerated as a rainmaker and ensurer of fertility. Like some other South African peoples, the Sotho have traditionally believed that the evils of our world are the result of the malevolent actions of sorcerers and witches.

Today, Christianity in one form or another is professed by the majority of Sotho-speaking people, with rates as high as or more than 90% in many areas. In Lesotho Catholics make up about 45% of the population, with the largest Protestant group, the Lesotho Evangelical Church, representing about 26%.

In recent years, independent South African denominations founded by charismatic African preachers have been growing in popularity. The independent churches combine elements of African traditional religion with the doctrines of Christian-

ity. They also place a strong emphasis on healing and the Holy Spirit. One of the largest of these churches in South Africa, the Zion Christian Church (ZCC), was founded by two brothers of Pedi background. This church has been very successful in attracting followers from all over South Africa, Swaziland, and Lesotho. Each spring the ZCC hosts an Easter ceremony that attracts tens of thousands of people to the church's rural headquarters at Moria City, in the Limpopo Province.

## 6 MAJOR HOLIDAYS

The major holidays among the Sotho of South Africa are the same as those of South Africa as a whole. These include the Christian holidays, plus Workers' Day (May 1), the Day of Reconciliation (December 16), Heritage Day (September 24), Youth Day (June 16), and Human Rights Day (March 21). Another important holiday recognizes April 27 as the day black South Africans first voted in a genuine national election.

Lesotho has a number of holidays that recognize its own history. These holidays include Moshoeshoe's Day (March 12) and Independence Day (October 4). Moshoeshoe's Day is marked by games and races for the nation's young people. Independence Day is celebrated by state ceremonies that often include performances by traditional dance groups.

## 7 RITES OF PASSAGE

Women give birth with the assistance of female birth attendants. Traditionally, relatives and friends soaked the father with water when his firstborn child was a girl. If the firstborn was a boy, the father was beaten with a stick. Among other things, this suggested that while the life of males is occupied by warfare, that of females is occupied by domestic duties such as fetching water. For two or three months after the birth, the child was kept secluded with the mother in a specially marked hut. The seclusion could be temporarily broken when the baby was brought outside to be introduced to the first rain. These traditions continue in modified form today, although they are practiced to different degrees in different areas.

There are elaborate rites of initiation into adulthood for boys and girls in Sotho tradition. For boys, initiation involves a lengthy stay in a lodge in a secluded area away from the village.

The lodge may be very large and house dozens of initiates (*bashemane*). During seclusion, the boys are circumcised, but they are also taught appropriate male conduct in marriage, special initiation traditions, code words and signs, and praise songs. In Lesotho, the end of initiation is marked by a community festival during which the new initiates (*makolwane*) sing the praises they have composed. In traditional belief, a man who has not been initiated is not considered a full adult. Changing elements of the initiation are particularly evident at the time of the *makolwane*. Here new elements of fashion may show up in the way the young men ornament themselves, particularly with eye wear and jewelry. Today some urban or Westernized youths may chose not to undergo the ritual but they are still looked down upon by traditionalists.

Initiation for girls (*bale*) also involves seclusion, but the ritual huts of the *bale* are generally located near the village. *Bale* wear masks and goat-skin skirts, and they smear their bodies with a chalky white substance. They sometimes may be seen as a group near the homes of relatives, singing, dancing, and making requests for presents. Among some clans, the girls are

subjected to tests of pain and endurance. After the period of seclusion, the initiates, now called *litswejane*, wear cowhide skirts and anoint themselves with red ocher. Initiation for girls does not involve any surgical operation. Today initiation seems less popular for girls than it is for boys although this may vary by local area.

When someone dies, the whole community takes part in the burial. Speeches are made at the graveside by friends and relatives, and the adult men take turns shoveling soil into the grave. Afterward, all those in attendance go as a group to wash their hands. There may also be a funeral feast.

## 8 INTERPERSONAL RELATIONS

In Sesotho, the words for father (*ntate*) and mother (*mme*) are used commonly as address forms of respect for one's elders. Politeness, good manners, and willingness to serve are values very strongly encouraged in children. The general attitude toward childhood is well summarized by the proverb *Lefura la ngwana ke ho rungwa*, which roughly translates as "Children benefit from serving their elders."

The standard greetings in Sotho reflect this attitude of respect towards age. When saying hello to an elder, one should always end with *ntate* (my father) or *mme* (my mother). Words for brother (*abuti*) and sister (*ausi*) are used when one talks to people of the same age. A child who answers an adult's question with a simple "Yes" is considered impolite. To be polite, the child needs to add "my father" or "my mother."

Good hospitality and generosity are expected of normal people. Even those who have very little will often share their food with visitors. Of course, those who share also expect the favor to be returned when it is their turn to visit.

Dating was not part of traditional Sotho life. Marriages were arranged between families, and a girl could be betrothed in childhood. Nowadays, most people pick their mates.

Traditionally, interpersonal relations were overseen by village headmen and chiefs. Today, although some are unsure of its place in the contemporary world, a modified system of chieftaincy continues. For example, 22 seats in the national senate of Lesotho are reserved for the country's principle hereditary chiefs.

## 9 LIVING CONDITIONS

Rural areas in South Africa and Lesotho are marked by high rates of poverty and inadequate access to health care. Diarrheal diseases and malnutrition are not infrequent. Malaria is also found in the low-lying regions of Limpopo Province. In recent years many people have moved to urban areas in search of employment. This has led to the development of urban shantytowns with little or no sewer, water, or electrical services. A number of development projects to improve these conditions are underway, but they are hampered by needs that are greater than resources.

There is a brighter side to this picture, however. Those with access to land and employment can enjoy a reasonable standard of living. Lesotho's capital city, Maseru, and most of South Africa's cities and towns, for example, include a well-developed service infrastructure. Sotho people enjoy going from shop to shop to get the best prices for consumer goods. In South Africa and Lesotho there are also a growing number of vendors who sell their goods in informal markets.

Many South Africans identify the Sotho of Lesotho with the brightly colored blankets that they often wear instead of coats. These blankets have designs picturing everything from airplanes to crowns to geometric patterns. Although these are appropriately identified with the Sotho, there is no tradition of local manufacture. The blankets are store-bought. (Jason Laurre)

The most common forms of transportation for black people in southern Africa are buses, trains, and “taxis.” “Taxis” are minivans that carry many individual riders at one time. Most such taxis are used for short distances in urban areas, but they are also used as a faster alternative to the long-distance routes of buses. Personal cars and trucks are also not uncommon, although in recent years high rates of inflation and skyrocketing oil prices have driven prices up considerably.

## <sup>10</sup> FAMILY LIFE

In Sotho tradition, the man was considered the head of the household. Women were defined as farmers and bearers of children. Family duties were also organized into distinct domains based on gender for all Sotho, but the Pedi maintained a stricter separation of living space into male and female areas. Polygynous marriages were not uncommon among the elite, but they were rare among commoners. Marriages were arranged by transfer of *bohadi* (bridewealth) from the family of the groom to the family of the bride. Upon marriage, a woman was expected to leave her family to live with the family of her husband.

The Sotho have clans, many of which bear animal names, such as the *Koena* (crocodile). These clans stress descent through the male line, but there is considerable flexibility in defining clan membership. A unique feature of Sotho kinship

was that a person was allowed to marry a cousin (*ngwana wa rangoane*) who was a member of the same clan.

Family life for many rural Sotho has been disrupted for generations by migrant labor. Today, many Sotho men continue to live in all-male housing units provided by the gold-mining companies they work for. With the end of apartheid, some of the families previously separated by the old labor laws are leading new lives together in urban areas.

## <sup>11</sup> CLOTHING

Much about Sotho apparel is the same as the apparel of people in Europe and the United States. However, the most acceptable form of clothing for a woman is still the dress, and her hair is expected to be covered with a scarf, head cloth, or hat. The *mokorotlo*, a conical hat topped with a complicated form, is the national symbol. A handicrafts shop located prominently in Lesotho’s capital is shaped in the form of this hat. Many South Africans identify the Sotho of Lesotho with the brightly colored blankets that they often wear instead of coats. These blankets have designs picturing everything from airplanes to crowns to geometric patterns. Although these are appropriately identified with the Sotho, there is no tradition of local manufacture. The blankets are store-bought.

## 12 FOOD

Sotho people share many food traditions with the other peoples of South Africa. Staple foods are corn (maize), eaten in the form of a thick paste, and bread. Beef, chicken, and mutton are popular meats, while milk is often drunk in soured form. The South African form of sorghum beer, brewed at home or store-bought, is more nutritious than Western beer.

Eggs were traditionally taboo for women, and a newly wedded wife was not allowed to eat certain types of meat.

The major mealtimes are breakfast and dinner (in the evening). Children may go without lunch, although there are some school lunch programs.

Sotho people enjoy food and drink from other cultural traditions, but typically retain a fondness for beef and mutton. Sotho-style food is not spiced with pepper or curries, but some today may use such spices as they are readily available in many areas.

## 13 EDUCATION

The first Western-style schools for Sotho-speakers were begun by missionaries. Religious institutions and missionaries continue to play a major role in education in Lesotho today. Many of Lesotho's high schools are boarding schools affiliated with churches. Discipline can be strict at these schools, but students may participate in entertainment such as school concerts, dances, and movies. In Lesotho, only a minority of students manage to graduate from high school because school fees are high and the work is very demanding. To graduate, one must pass the Cambridge Overseas Examination. Today, Lesotho claims an adult literacy rate in the Sotho language of nearly 85%.

Under apartheid, Africans' access to education in South Africa was restricted, and many of the best schools were closed. As a result, adult literacy rates dropped, in some areas to as low as 30%. Today, the goal is free education for everyone 7 to 17 years of age. Literacy and education are now seen as keys to success and are highly valued by most people in Lesotho and South Africa.

## 14 CULTURAL HERITAGE

Sotho traditional music places a strong emphasis on group singing, chanting, and hand clapping as an accompaniment to dance. Instruments used included drums, rattles, whistles, and handmade stringed instruments. One instrument, the *lesiba*, is made from a pole, a string, and a feather. When it is blown, the feather acts as a reed, producing a deep, resonant sound.

Dance groups are regularly featured during public celebrations. *Mokgibo* is a dance done by women who perform by moving their heads and shoulders in unison to the music while all sitting down on their knees and lower legs. *Mohobelo* is a men's line dance that is characterized by rhythmic marching and high stepping kicks.

Generations of mine labor have led to a distinct migrant-worker subculture in Lesotho. This subculture includes song and dance traditions. Some types of mine dances have synchronized high-kicking steps. One song tradition, *difela*, has lyrics relating the travels, loves, and viewpoints of the migrant workers. Other popular music in Sotho includes dance tunes played by small groups on drums, accordions, and guitars.

Sotho written literature was established in the nineteenth century by converts to Christianity. One of the first novels in a

South African language was *Chaka*, written in southern Sotho by Thomas Mofolo in the early years of the 20th century. It is still read today and has been translated into a number of languages. Oliver Kgadime "O.K" Matsepe is considered by many to be the "Sepedi Shakespeare." He wrote 14 books including the 1954 novel *Sebatakgomo*.

## 15 WORK

Wage labor for many rural Sotho has meant leaving home to find employment in the city. In Lesotho, a term of mine work was once considered a kind of rite of passage that marked one as a man, but increasingly in the 20th-century such work became necessary for supporting a family. However, as South Africans increasingly look to their own citizens for the country's labor, there have been increasing ethnic tensions. By 2003, the number of mine workers from Lesotho was said to be fewer than 60,000 compared to a high of more than 125,000 a decade earlier. This also remains a dangerous business. In 2006, some 200 miners were killed in various mining accidents.

In South Africa, Sotho people under white rule were most frequently hired as miners and farm laborers. Women also worked as farm laborers, but work in domestic service was more highly valued. For those with high school and college educations, the greatest opportunities were in health care, education, and government administration. Today, the Sotho seek degrees in all fields.

South Africa's migrant-labor system has dramatically altered Sotho social life. Besides putting strains on the family, migrant labor has led to the development of new social groups. For example, associations of young men called *Marussia* formed with values that combined urban and rural attitudes. Critics see the "Russians" as no better than the criminal gangs based on home ties.

In recent years Lesotho experienced a rapid growth in garment manufacture. However, this has suffered a serious downturn since 2005 due to the lifting of international quotas on China and the declining value of the American dollar.

## 16 SPORTS

Many of the games popular among Sotho children are found worldwide. These include skipping rope, racing, swimming, playing catch, dodgeball, and hopscotch. Boys also enjoy wrestling and fighting with sticks. A common pastime for rural boys is making clay animals, especially cattle. Young boys and girls enjoy playing make-believe house (*mantlwantlwane*). The most popular traditional game among young men and old men is a game of strategy called *morabaraba*. This is similar to the game played elsewhere in Africa known as mancala.

Today, the most popular sport in Lesotho and South Africa is soccer. This is played informally by neighbors as well as by amateur and professional teams. In South Africa, there are many professional teams as well as teams associated with schools and businesses. In Lesotho, every district has several amateur teams. In the schools, there are also organized races and field events.

## 17 ENTERTAINMENT AND RECREATION

Contemporary people enjoy modern entertainment in the form of movies, plays, music, and television. Most of the movies are imported from foreign countries, but there is a growing South African film industry as well. Director Teboho

Mahlatsi's 2006 short film set in Lesotho, *Meogho and the Stick Fighter*, received international critical acclaim. Televisions and videocassette recorders are becoming widespread, although listening to the radio is most common due to the lower cost. South Africa broadcasts some shows in Sotho as well as other African languages, with soap operas being the most popular shows. Music videos of popular South African musical groups are also seen. In rural areas, however, there can be little to do for entertainment.

South Africa has a well-developed music industry. Recorded music includes many forms, from choral music and the songs of migrant workers to pop tunes, jazz, and reggae. Since 1999, a large annual music festival has been held annually in the town of Morija, Lesotho. Some popular musicians and groups of recent decades include Puseletso Seema, Tau ea Linare, Ray Phiri, Stimela, and Amatso Makaota, Tau ya Matsega.

### 18 FOLK ART, CRAFTS, AND HOBBIES

Traditions of folk art include beadwork, sewing, pottery making, house decoration, and weaving. Functional items such as sleeping mats, baskets, and beer strainers continue to be woven by hand from grass materials. Folk craft traditions have been revived and modified in response to the tourist trade. Popular items include tapestries and woven hats such as the *mokorotlo*, the national hat.

### 19 SOCIAL PROBLEMS

Many of the social problems faced by Sotho people today stem to some degree from the apartheid past. They include high rates of poverty, malnutrition, crime, and broken homes. Competition for scarce resources in South Africa has also led to conflict with other ethnic groups. Recently, illegal immigrants in South African shantytowns, most of them from Zimbabwe, have been subjected to violent attacks. In Lesotho, the end of apartheid has not meant the end of dependence on the wages of migrants.

The Sotho community also has internal divisions that have led to social problems. Significant differences exist in the values and aspirations of the young and old, the rural and urban, the highly educated and illiterate, and men and women. In addition, there is potential for conflict between the old systems of rule through chiefs and the military, and the new forms of participatory democracy.

### 20 GENDER ISSUES

Sotho culture historically assumed that female status was subordinate to that of males. A woman was considered a junior member of society in that when she married, responsibilities for her were transferred from the father to the husband. Upon divorce, custom also indicated that children should remain with the husband's family.

Economic circumstances have contributed to changes in women's status and behavior. Because of the migrant labor system, many rural women were left in practice as household heads. Harsh economic conditions have also forced many women to fend for themselves. This also led to changes in sexual practices. Long periods of separation between husbands and wives led to problems of adultery and prostitution. Some men and women also engaged in homosexual practices, although the idea of a gay identity has not been widely accepted.

Because young men traditionally were expected to spend most of the day tending livestock, girls often had greater opportunity to receive schooling. Consequently, unlike in many countries of the world, in Lesotho women have a higher rate of literacy than men. This is estimated by the government to be about 75% for men and 95% for women.

Today, both the South African government and the Lesotho government have policies promoting gender equality.

## <sup>1</sup> INTRODUCTION

The history of the Sudan, “Land of the Blacks,” has been predominantly one of invasion and conquest. The earliest known events date back to 750 BC when Piankhy, king of Napata in northern Sudan, invaded Egypt and founded the 25th dynasty. A century later, his successors were forced back to Napata, and in c. 590 BC moved their capital south to Merowe, on the confluence of the Nile and Atbara rivers. The kingdom of Merowe was to be a major political power in the region for over 900 years. Remains of Meroitic culture can still be seen in the small pyramids beneath which their kings were buried. The culture was obviously influenced by Egypt, but also reflected contact with the wider classical world. A society of farmers and herders, its long prosperity was due primarily to trade and to ample supplies of iron ore. The art of ironworking may well have developed locally and spread from Merowe to other parts of Africa.

In AD 350 the kingdom of Merowe was destroyed, probably by invading armies from Ethiopia. The center of power then shifted to the Christian kingdoms of Nubia, which persisted till the late 14th century. In 1504, the remains of the Nubian forces were defeated by a powerful group known as the Funj, who had moved into the area from farther south. From their capital town, Sennar, on the Blue Nile, the Funj dynasty (also known as the Black Sultanate) ruled a vast area for over 300 years.

By 1820, the Funj dynasty was in decline and put up little resistance to the invading army of Muhammad 'Ali, viceroy of Egypt (then a province of the Ottoman Empire), who was seeking to control the trade in gold and slaves. For the next 60 years, the region was ruled by the Turkish-Egyptian administration in Cairo. During this period, Khartoum was developed as a capital, and much of the administrative infrastructure of modern Sudan was laid: the telegraph and rail systems, commercial agriculture, and international trade.

Turkish-Egyptian rule was already weakened by 1881 when Muhammad Ahmed, a holy man living on Aba Island on the White Nile, declared himself to be the *Mahdi* (Promised One) sent by God to return Islam to its original ideals. People from many different tribes rallied to his support as he declared a *ji-had* (holy war) and successfully repulsed an Anglo-Egyptian force sent to restrain him. In 1884, General Charles Gordon was sent from Cairo to Khartoum to assist in the withdrawal of the Egyptian forces. Gordon was killed when the Mahdi's forces captured the capital. For the next 14 years (the *Mahdiyya*), the Sudan was an independent Islamic state. It was led (after the Mahdi's untimely death in 1885) by the *Khalifa* Abdullahi. However by 1898, the region was again caught up in European politics. An Anglo-Egyptian army led by General

Herbert Kitchener routed the Khalifa's brave but poorly armed troops at Kerari (also known as the Battle of Omdurman). Though the pretext for the invasion was to avenge the death of Gordon, the real motive was to strengthen British interests in this part of the world. It ushered in the period of joint Anglo-Egyptian rule in the Sudan known as the Condominium (1898–1956), in which real power rested with the British. The present boundaries of Sudan were only finalized in the early years of the Condominium, by agreements between the British and other European nations trying to establish their interests in the region. They largely disregarded local tribal, cultural, and linguistic boundaries and the history of slavery in central Africa. Herein lay the causes of much contemporary political upheaval and distress. The Sudan has been sharply divided between north and south, as people from the south and west have struggled to either secede or gain some autonomy, from those powerful northern elites who inherited power from the colonial state. In the process, the divisions are over-simplified between Arab and African, or Muslim and non-Muslim. The reality remains far more complex.

In the half century since independence (1956), three periods of parliamentary rule (1956–8, 1964–9, 1986–9), have alternated with three of army rule (1958–64, 1969–86, 1989–present). The longest period of stability and prosperity was during the administration of Jaafar Nimeri (1969–85). In the first 10 years of his presidency, Sudan's economy boomed, as oil was discovered in the southwestern region. Nimeri even succeeded in bringing peace to the south. By the early 1980s, however, Sudan faced recession, drought, and political instability caused partly by large numbers of refugees from neighboring countries. Nimeri himself became increasingly unpopular, and when he introduced a severe form of the *Shariah* (Islamic law), opposition to him quickly mounted. He was ousted in a peaceful coup in 1985, but after a brief period (1986–9) of democratic rule under Sadiq al-Mahdi (grandson of the Mahdi), the army once again seized power under General Omar al-Bashir, supported by the powerful National Islamic Front (NIF). The country has since become increasingly isolated from the west, both politically and economically, despite a shift towards civilian rule in 2001 and the cessation of the so-called “second” civil war (1983–2005) with the signing of the Comprehensive Peace Agreement (CPA) between the government of President al-Bashir and the Sudan People's Liberation Movement (SPLM). The halting of hostilities led to the renewal of oil production in southwestern Sudan, and to a general economic recovery in the country as a whole.

Meanwhile in 2003 civil war erupted in the west, in Darfur, when opposition groups there sought similar government concessions, and government-supported militias (called *janjawid*) attacked “rebel” villages. In the intervening years, thousands of innocent bystanders have been killed, displaced or subject to terrible trauma and violation.

## <sup>2</sup> LOCATION AND HOMELAND

The Republic of the Sudan (generally known simply as Sudan) is the largest country in Africa, encompassing nearly 2.6 million sq km (1 million sq mi) and stretching over 2,000 km (1,250 mi) from north to south, slightly more than a quarter the size of the US. It shares common boundaries with nine countries: Egypt, Libya, Chad, Central African Republic, the Democratic Republic of the Congo, Uganda, Kenya, Eritrea, and Ethiopia.

Its landscapes range from rocky desert in the north (almost a quarter of its total area), through savanna with increasing vegetation, to the mountainous rain land along the Uganda border in the south. Its most important physical feature is the Nile River, which traverses the whole length of the country. The Blue Nile (rising in Ethiopia) meets the White Nile (from Uganda) in the capital city of Khartoum, and they wind jointly north through a series of cataracts or falls to Lake Nubia (the “Aswan Dam”), the largest artificial lake in the world.

Sudan has an estimated population of approximately 40 million, with a new government census planned for 2008. The population includes a large number (almost 600) of distinct ethnic or tribal groups. The country remains predominantly rural, but towns have expanded rapidly since Sudan gained its independence from Britain in 1956.

As a result of the long civil wars, and opposition to political realities, there is now a very large Sudanese diaspora, scattered from the US to Australia, with large concentrations (of southern Sudanese) resident in neighboring Kenya and Uganda, and (largely of northern Sudanese) throughout the Middle East.

### 3 LANGUAGE

Arabic is the official language of Sudan, although many other languages continue to be used in the home. At independence, it was estimated that 100 distinct languages were spoken in the Sudan. Today, all educated people speak the local or colloquial form of Arabic—the language of government, schools, and of most northern Sudanese. This is reflected in the preponderance of Arabic names: Muhammad, Abdullah, and ‘Ali for men, for example, and Fatima, Aisha, or Muna for women.

In the south and west, English is spoken alongside the variety of indigenous languages, of which Dinka [see **Dinka**] is the most widespread. Common southern names such as Deng (Dinka) or Shull (Shillukh), sometimes coupled with Christian names, such as Maria Deng, reveal the bearer’s ethnic as well as religious background.

### 4 FOLKLORE

The Sudanese have a rich and varied folklore that embodies much of their indigenous wisdom. It continues to be passed on orally, at least in the countryside, and is passing into the lyrics of popular music and culture, now widely enjoyed on television and radio. Certain older women are renowned for their storytelling, embroidering often brief tales with elaborate gestures and colorful description. Many of the stories reflect the rural way of life, the society and culture to which the Sudanese belong, and center on human rather than animal or supernatural themes. A favorite character in Muslim Sudan is Fatima the Beautiful, who outwits a variety of male relatives and rivals in a series of amazing feats. She usually ends up marrying the man of her choice, and often vindicates her whole family as well. A supernatural figure who figures large in warning stories told to small children is Umm Ba’ula, the mother of boogys, who carries a large basket in which she carries away disobedient children.

### 5 RELIGION

The majority of Sudan’s population (70%) is Sunni Muslim. Islam was introduced to the northern Sudan by Arab traders as early as the 7th century AD. For many centuries Islam coexisted with an earlier branch of Christianity (which had spread

here from Alexandria), though Islam ultimately absorbed it. From the beginning, Islam was spread largely by traders and wandering holy men (*faki*, pl. *fugara*) who preached a more mystical (*Sufi*) form of Islam. Many of these established a way (*tariga*, also called Brotherhood) that their followers observed. These Brotherhoods continue to be very important in the practice of Sudanese Islam, particularly the *Qadriyya* (the oldest Brotherhood), the *Sammaniya*, and the *Khatmiyya* (a more modern organization that grew out of 18th century reformist movements). Sufi practices also exert a considerable influence on popular culture, as the religious songs (*madih*) of the much beloved late Sammaniya Shaikh al-Bura’i attests.

Sudan is now an Islamist state, run by the National Congress Party (NCP), which replaced the National Islamic Front (NIF) and which in turn grew out of the Sudanese Muslim Brotherhood. This reformist movement reached Sudan from Egypt in the 1950s and became popular particularly with the emerging intellectual class. Other reformist trends known as Salafism (*al-salafiyya*) further contribute to the dynamic and diverse Islamic landscape of Sudan, with groups like the *Ansar al-Sunna al-Muhammadiyya* also seeking to purify existing Islamic practices.

However, many peoples, particularly in southern and western Sudan, are not Muslim. Some (5%) are Christian, as various denominations of missionaries have been active outside the Sudanese Islamic areas since the mid-19th century. Many (25%) also continue to practice indigenous beliefs, particularly those concerned with various types of spirits. Such beliefs also infuse the practices of both Islam and Christianity in the

Sudan. One of the most widespread is known as *zar*, which is found throughout northern Africa.

## 6 MAJOR HOLIDAYS

The major holidays in the Sudan are religious holidays. In Muslim areas, the celebrations at the end of the fasting month of Ramadan and to mark God's sparing of Ishmael (the *Eid* of Sacrifice) are most important, marked with special foods, new clothes, and family visits. The birthday of the Prophet (the *Moulid*) is also celebrated over several days, an occasion for the various Brotherhoods to perform their ritual prayers and recite their historical narratives.

In Christian areas, the major holidays are also religious events. Christmas is particularly important, celebrated with special church services, as well as new clothes and traditional foods.

The day independence was gained from Britain is officially recognized on January 1 but has little significance in everyday life for the Sudanese.

## 7 RITES OF PASSAGE

"To the house, wealth, and children" is the customary congratulations given to newlyweds. Children are greatly desired and a birth is a significant event. An expectant mother tries to return to her parent's home to give birth, and is attended by some of her closest friends and the local midwife. After the birth, she and the baby may remain confined for 40 days, at the end of which a party is held to name the child and introduce it to outsiders.

The major rite of passage for most children in northern Sudan is circumcision, which is routinely performed on many girls and all boys between the ages of 4 and 8. The child is referred to as the bride or bridegroom, and much of the formal ritual of a marriage ceremony is foreshadowed in the practices that surround the operation and party. The use of brightly colored silk sheets (*jirtiq*), of cosmetics and perfumes, and the sacrifice of a sheep, as well as the foods served to guests, all anticipate rituals to be repeated with greater drama in the marriage ceremony.

After a child has been circumcised, gender segregation becomes marked. Young girls help their mothers and aunts, and care for younger siblings. Young boys begin to spend more time with their peers outside the home and away from the company of women. For boys, adolescence is often a time of irresponsibility and freedom, while adolescent girls are expected to carry out a large share of the domestic chores and at the same time observe strict rules of modesty, thus protecting both their own honor and the honor of their family.

In much of southern Sudan, initiation into age-sets (rather than circumcision) was formerly essential for entry into adult status. Ceremonies of initiation differed from tribe to tribe and for males and females, though they were less common for girls than boys [see **Dinka** and **Nuer**].

Marriage is the major event, of religious and social importance, in every Sudanese's life, celebrated with great ritual even in poor neighborhoods. It is at least partly arranged, seen as an alliance between families rather than simply between two individuals. In the Muslim North, marriage with a close relative is common: for a girl, usually with her *wad amm*, the son of her father's brother, a member of her own lineage. The legal basis of the marriage is the marriage contract, based on the

*Shariah* (Muslim law) and drawn up by a learned man together with (male) representatives of the bride and groom. In southern Sudan, marriages were arranged differently [see **Dinka** and **Nuer**]. The unwritten contract was traditionally arranged between male elders of both families, sometimes without the knowledge of either the bride or the groom. This revolved around the payment of bride-wealth—special cattle were reserved for this type of exchange, though by the early 1980s a small proportion might be paid in cash.

Payment of bride-wealth by the groom's family to the bride's family remains an essential part of the marriage process. In the north, it includes gifts and money for the bride's family to help finance the wedding, as well as gifts for the bride herself, particularly gold, which is the basis of the bride's own formal assets. With the rise in overseas employment, there has been a great inflation in bride-price and consequent delay in the time of marriage. Many men find they have to postpone marriage until they can save what are often exorbitant sums. Increasing numbers of women remain unmarried or have to accept a polygynous marriage. In much of the south, the old marriage currency in cattle has broken down because of the long wars, and weddings tend to be briefer and cheaper.

Formal religion surrounds many of the rites associated with death and burial. Because of the heat, the deceased is buried quickly, usually the same day. Formal mourning lasts for several days, during which all acquaintances of the family are expected to visit to offer condolences.

## 8 INTERPERSONAL RELATIONS

The Sudanese are intensely social people, caring about family and neighbors in a very personal way. Although much social interaction is highly formalized, it is accompanied by great warmth. Visits from guests, for however long a period, are regarded as an honor to the host and his whole family, and take priority over other arrangements. Such visits should also be returned before too long, and need not be scheduled ahead of time. Refreshments are served to guests immediately—a cup of water to relieve them after their journey, followed by hot sweet tea and later by coffee and food, if the visit seems prolonged.

Greetings are warm and often effusive. Accompanied by handshaking, the Arabic greeting "*Izeyik*" is exchanged, followed by inquiries about each other's health, "*Qwayseen?*" (Are you well?), to which the standard reply is to thank God—"*Al-humdulillah.*" For older people especially, this is then an opportunity to proclaim their devoutness through a lengthy exchange of Quranic verses. Throughout the exchange, each person underscores their pleasure in meeting. When one person indicates they want to take their leave, the other urges them to stay a little longer. Finally, goodbyes are exchanged: "*Maasalam!*" followed by "*Al-iy-selimik,*" which may also be accompanied by warm handshakes.

People are more relaxed with friends of the same sex. Friendship is especially valued, and it is not uncommon to see two young men walking hand in hand, or with their arms draped across each others' shoulders.

The concept of "dating," as in the Western world, is still quite rare, at least in Muslim Sudan. Until the successful completion of the marriage ceremonies, bride and groom and their families are concerned to protect their honor. Thus, meetings between unrelated men and women are closely monitored and efforts are made in the work place to segregate men and

women, at least publicly. However young people now are given some input into their choice of marriage partner, in which class and education levels are becoming as important as family connections.

## 9 LIVING CONDITIONS

Early European visitors to Sudan found it a difficult and unhealthy place. They succumbed frequently to such tropical diseases as malaria, bilharzia, cholera, and dysentery, diseases that continue to plague many Sudanese. Health issues are further exacerbated by contemporary economic problems, food shortages caused by drought, and political instability. In addition, many disorders not known to Western physicians are recognized locally, such as those caused by the Evil Eye, by spirits, or by sorcery. For such conditions, the advice of local healers continues to be sought.

Although Sudan is regarded as one of the poorest countries in the world, its people have long found ways to accommodate their harsh environment. In the rural areas of the north, even without electricity and air conditioners the mud-baked flat-roofed houses remain cool in the hottest temperatures. In the south, the conical grass huts provide warmth and safety from heavy rains and more variable climates. In the towns and cities, there is a wider range of buildings and standards of living. In first-class districts occupied by senior officials, wealthy merchants, and families supported by expatriate relatives, European-style villas, cooled by air-conditioners and flaunting satellite technology, are surrounded by elegant lawns. In contrast, on the outskirts of towns and cities, squatter settlements of make-shift huts and lean-tos (*rakuba*) provide temporary homes for new migrants and their families, but offer little shelter from the heat, cold, or discomfort.

Markets have long been important centers in this region, and they continue to reflect the many faces of the Sudan. Goods imported from Libya or China are sold alongside craft articles produced locally, and foods and crops grown in the surrounding countryside. Bargaining is expected, and indeed the social ties developed through such trade are regarded as essential aspects of the economic transaction.

There is a wide range of public transportation within the Sudan, although few people own cars. Within settled communities, public cars (often small trucks with specially constructed passenger areas on the back) provide an effective network around town for a small fee. In recent years, large numbers of motorized rickshaws have been imported from India and provide a slightly more expensive, but more private option. Between communities, the more affluent travel by bus (which between major cities is now air-conditioned), though most people settle for a place on the back of a truck, which is often part of a commercial fleet of such vehicles. Train service connects the capital, Khartoum, with other major cities. Since compartments are usually packed, enterprising passengers also crowd onto the roof. Finally, many individual men own their own donkey, bicycle, or (occasionally) horse and cart (*caro*).

## 10 FAMILY LIFE

In Sudanese life, the family is highly valued and much protected. Large families are universally desired. Children are looked on with incomparable pride, welcomed as the only reliable insurance against old age, as well as their parents' natural heirs and assistants in business. For a woman, childbearing brings

esteem. Also, if her husband dies, she is secure in the knowledge that, at least under Islamic law she and her children will inherit favorably.

Women's roles are primarily those of homemaker and mother. In Muslim families, after the birth of her first son, a woman is henceforth known as *Umm 'Ali*, "Mother of 'Ali," for example, a practice known as teknonymy. This emphasis on male offspring and the male line is found throughout the country, as families are overwhelmingly patrilineal and patriarchal in nature.

While nuclear families are becoming common, extended families are still found and are often polygynous (more than one wife). Polygyny is acceptable in Islam as well as in Southern tribes [see *Dinka* and *Nuer*], and cuts across urban/rural and social differences. The levirate, whereby a man may marry his deceased brother's widow, is still practiced. This is believed to safeguard the welfare of a widow, for whom her husband's family, specifically her brother-in-law, is regarded as responsible. Among non-Muslim Sudanese, relationships between wives and their children are structured more according to seniority and age. Here children of a levirate union are regarded as belonging to the deceased man, a situation possible because of the cultural separation of concepts of physical and social parenthood. The sororate, whereby a man marries his deceased wife's sister, is found only when the dead woman has borne no children. So-called "ghost marriages" are also common among Nilotic peoples. Should a man die without children, his relatives are obliged to take a "ghost-wife" for him. The children she bears are his descendants. Finally, a Nuer or Dinka woman who is infertile may become, in effect, a social man. She may "marry" a wife who produces children for her.

With the imposition of the *Shariah* (Islamic law), it seems probable that ethnic variations in family forms will slowly disappear. Patrilineal, patriarchal families, with increasing limitations on women's roles and intolerance for alternative social practices, have been the trend since the early 1990s.

Attempts to control the birth rate in Sudan are slowly making progress. Modern contraception is expensive (in financial and social terms), and there has been a lack of investment in terms of training sensitive fieldworkers to determine individual and family needs, but the high costs of living, coupled with expanding education opportunities for women, is resulting in somewhat smaller families. The fertility rate in 2007 was 4.69 children born to one woman.

## 11 CLOTHING

Western-style clothing (long trousers, with a shirt) is commonly worn by Sudanese men in professional workplaces. However, elsewhere Muslim Sudanese prefer traditional dress: long pastel-colored robes (*jalabiya*), with a skullcap (*tagia*) and length of cloth (*'imma*) covering their head. Laborers wear baggy pants (*sirwal*) covered by a thigh length tunic (*ragi*). Women in public today are bound to wear Islamic dress. For much of the 20th century, this was simply a 9-m (30-ft) length of material (*tob*) wound round the body, leaving the wearer looking elegant and distinctive. Today some women choose instead to wear an Islamic shawl (*hijab*) folded tightly over their head, a loose long-sleeved shirt, and a long, plain skirt, a style of dress found throughout the Muslim world. Many women also wear the *abayah*, a black overcoat more common in the

Middle East. In the privacy of their own homes, women simply wear light dresses.

## 12 FOOD

For most Sudanese, the staple food is *durra*, sorghum, which is grown locally and used to make breads (both leavened and flat) and porridges. These are then eaten with various types of stew, beans, lentils, and salads. Sheep is the favorite meat, though beef and chicken are also consumed. Meat may be fried, stewed, or (occasionally) roasted. For desserts, seasonal fruit is sliced and served fresh, though *crème caramelle*, jelly, and sugared rice are also common. Meals are eaten communally and by hand from a round tray on which the various bowls of food are surrounded by breads used for dipping. After the Quranic injunction, only the right hand should be used for eating; and great care is taken before and after the meal to ensure its cleanliness. Meals are segregated by gender, younger children usually eating with the women or with each other.

Water is the preferred drink, generally protected in a large clay pot (*zir*) that keeps it cool. Favorite beverages for guests are tea and coffee. Both are served very sweet and often mixed with spices (known as medicine, *dowa*, but commonly either cinnamon or cardamom). Tea is served in small glasses, and coffee (roasted and ground fresh, and very strong) is served in thimble-like cups. Another delicious drink is made from freshly squeezed limes, and during the month of fasting either this or a sweet and nutritious drink made from sorghum (known as *abrit*) are commonly used to break the fast. Several types of homemade cakes, such as *ligimat* (a type of doughnut) or *cak* (which resembles shortcake) are served to guests or simply enjoyed for breakfast or supper.

Sudanese eat two, sometimes three meals a day. Sweet tea with milk (or water) is drunk when they awake in the morning, and breakfast is eaten several hours later, usually necessitating a break from work. Lunch, the main meal of the day, is served in mid-afternoon, after work or school is over. A light supper, not unlike breakfast, is sometimes eaten in the evening.

In the past two decades there has been a steady deterioration of the average daily diet, as traditional staples (beans, fruit, meat) become too expensive for poorer families, who are forced to rely on cheaper, less nutritious foods such as macaroni and sugar.

## 13 EDUCATION

Quranic schooling, based on memorizing the Quran, has a long history in the Sudan and remains popular. More secular forms of formal education go back only to the early years of the 20th century and are still not universal. Adult literacy (measured probably in terms of secular education) is now 61%, and there is intense competition among children for the limited places in schools, particularly higher education. For the most part, parents are anxious for both sons and daughters to receive formal education, seeing this as a path to a more successful future. Unfortunately, their expectations are not always realized, and opportunities for both higher education and jobs in the modern sector are still limited.

Occupations for women are especially limited. Until recently, high school diplomas were seen primarily as their path to a good marriage. Though this began to change as more women entered the professions (medicine, law, education), women

generally have fewer opportunities for employment and advancement than men.

## 14 CULTURAL HERITAGE

The cultural heritage of contemporary Sudanese is particularly evident in their music. Singing, drumming, and dancing are popular, spontaneous activities for children, and are indispensable for any major celebration. Elaborate wedding parties include a group to sing and play, and a microphone to make sure the whole community can share in the festivities. Western, Arab, and Indian, as well as African performers have become popular through film, television, and radio. Their influence is evident in the dynamic and distinctive musical forms of Sudan. The best-known Sudanese singers today include Muhammad Wurdi, Gabli, and Muhammad el Amin, poets as well as musicians.

The favorite instrument of the Sudanese is the drum, and small children learn very early how to pound out a rhythm and to dance. For all ceremonies, the *daluka* (baked mud and cowhide drum) is used to accompany singing and dancing. Another favorite instrument is the *rababa*, a type of violin that points to an Arab link, as does the classical *lud*, used on more formal occasions.

In Muslim Sudan, men and women dance separately and have different dancing styles. Men use their arms more and take wider, firmer steps, while women remain stationary and stretch their necks, their feet, and their chests, at the same time demonstrating control of their bodies. Elsewhere, such distinctions are less apparent, and there are other popular styles of dancing such as the "Stomp Dancing" of the Nuba Mountains and further south.

Story telling has long been a popular and admired art form that underlies a rich tradition in poetry and fiction. Sudan's greatest novelist in Arabic is Tayeb Salih (b.1929). His novel *Season of Migration to the North* (1967), which draws on his country's colonial experience, set in a typical village context, has been translated into many languages. His short story "The Wedding of Zein" has been made into a film by that name. Popular Sudanese writers in English include Leila Aboulela (b.1964), author of several novels including *The Translator* and *Minaret*, and Jamal Mahjoub (b. 1960) whose novels include *The Drift Latitudes* and *Travelling with Djinnns*. Both draw on their own multi-cultural backgrounds in tales that are wide-ranging in time and space.

## 15 WORK

Despite massive migration to urban areas since independence, many Sudanese continue to work in agriculture. This includes pastoralism (dependence on large herds, particularly camels and cattle) and cultivation: both subsistence cultivation (where the staple crop is sorghum, mixed with vegetables, peanuts, and beans) and commercialized agriculture, particularly on irrigated agricultural schemes. The largest and oldest of these is the Gezira Scheme, between the Blue and White Niles, which produces the bulk of the country's major export crop, long-staple cotton. This has served as the model for other agricultural schemes set up since independence, in which tenant farmers grow export crops under the management of the state-owned company, as well as foods for their own use. These schemes have been less than successful, partly because there appears to be insufficient incentives to farmers to collaborate

South Sudanese army personnel keep vigil at Rikwangba near Garamba forest on April 10, 2008. The site was to host a peace agreement to be signed by elusive rebel leader Joseph Kony, Uganda's top rebel leader of the Lord's Resistance Army (LRA). Kony requested further consultations before signing a peace agreement to end one of Africa's longest conflicts.  
(AFP Photo/Tonu Karumba/Getty Images)

with the company, and because deteriorating political and economic situations pushed many farmers into joining the exodus to seek alternative work in towns or outside the country, especially to the oil-rich Arab states. Labor migration throughout the Middle East, and to Europe and North America, has had a considerable impact on the Sudanese economy and overseas remittances are a major source of income.

Agricultural work in Muslim areas is also subject to gender segregation. In poorer families, females usually carry out tedious tasks such as picking cotton while males perform the heavier work of clearing the land, digging irrigation ditches, and planting. In families more comfortably situated, women are expected to work only inside the home, while men do the outside jobs, including marketing.

Family work is also very demanding in the Sudan. This includes not only taking care of the family and household, but also demonstrating concern for the wider family and community by a tireless round of visiting, caring for the sick, attending neighborhood ceremonies such as weddings, thanksgivings, and funerals; and providing labor and cash to support these ceremonies.

## 16 SPORTS

Sudan, like many African countries, has a love affair with soccer. Most small boys learn to play, even if they have to use a wooden ball, and identify with one of the leading national football teams. Among the educated, tennis and (to a lesser extent) volleyball are played in some of the clubs that continue to serve as reminders of the colonial past. Sudanese regularly compete against other African countries in most major sports but have yet to develop the resources for Olympic competition.

## 17 ENTERTAINMENT AND RECREATION

Television is popular throughout the country. Even in rural areas, the men's club usually owns a set that village children are able to watch. Among the most popular programs are the nightly soap operas (*musalsal*), often acquired from Egypt or Lebanon, though Sudan has begun to produce its own. Islamic programs are also widely enjoyed.

Open-air cinemas are found in all the towns and larger villages and are attended by mainly male audiences. They tend to show some of the worst exports from the East (especially India) and West (Italian gangster movies are popular). Most people, however, prefer to spend their spare time visiting with friends and family, attending neighbor celebrations such as

weddings or homecomings, or simply chatting quietly in the shelter of the night. Again this is largely divided by gender: men frequently gather in one of the men's clubs after supper, while women visit with their neighbors at home.

### 18 FOLK ART, CRAFTS, AND HOBBIES

Various traditions reinforce the importance of large families and community closeness among Sudanese. Before marriage, a girl learns from her friends and relatives how to perform traditional dances and to use specific homemade cosmetics (incense, oils, smoke-baths, henna decoration, perfumes) that are believed to enhance sensuality and are very much a part of marital relationships. Throughout the country, people employ charms or amulets to stimulate fertility, as well as to decorate themselves.

The most elaborate folk craft is basketry. Some of the finest baskets come from the west of the country, from Darfur, in the form of large round food covers, used to protect the food tray from insects and dust. Even more common is the manufacture of rope beds and stools, staple items of furniture that appear to have changed little since Pharaonic times, and that are still widely used.

### 19 SOCIAL PROBLEMS

The 2005 peace agreement (CPA) between North and South has so far withstood the death of the former Southern leader Colonel John Garang and escalating hostilities in western Sudan. Peace and security remain elusive in much of southern Sudan, however, and provisions for a referendum for the south in 2011 make fragmentation of the present state seem likely. Meanwhile more than 2 million people have been displaced and at least 200,000 people have died as a result of the violence in Darfur, which in 2008 showed no sign of abating, despite the presence of African Union troops in the region. Indeed many innocent bystanders have lost their liberty and even their lives in the violence.

Ongoing environmental issues also present serious problems. Changing climatic patterns, including the inexorable movement of *al-Sahara* (the desert), declining forest and woodland, expanding urbanization and increasing pollution are all taking their toll on human life. Within the congested squatter settlements in the towns particularly, new and old diseases add to human difficulties: malaria and tuberculosis, diabetes and bilharzia, various gastro-intestinal and respiratory problems. Despite a much expanded medical profession, not everybody can afford help. The cost of living has risen so dramatically that even former staple food items have become luxuries that few can afford. The benefits of oil revenues have yet to trickle down to the poorer in society.

In addition, the massive relocations of people to larger villages, to towns (especially to the greater Khartoum area) and even outside the country, have led to breakdowns in many Sudanese families. The elderly are no longer automatically surrounded by their caring children, while the young may not have the support of their parents. The immediate future for the Sudanese, therefore, does not look bright, but most remain optimistic that better times lie ahead.

### 20 GENDER ISSUES

Many gender issues in Sudan today are part of a larger complex of problems associated with war, violence, and poverty that af-

fects society as a whole, though particularly those in the south and west. Women in Darfur have suffered disproportionately in recent years, from displacement, violence, rape, sickness, and hunger, as their male relatives have been killed or fled. A peace settlement, a return to their homes, and some measure of stability is desperately needed by women of all ages.

Women's roles have also been targeted by the reforms of the Islamist government. Their dress, their public appearance, and their occupations have all been variously subject to political scrutiny and censure. Invariably it is poor women and non-Muslims in particular who suffer most as Sudanese society is variously redefined by those in power.

Female circumcision (including excision and infibulations, and known locally as *fironi*, pharaonic circumcision) has long been practiced in Muslim Sudan, alongside male circumcision. In the past decade there are clear signs that this is now a contested tradition; many parents are either giving up the practice for their daughters or are preferring more moderate forms of cutting. It remains to be seen how far this trend will become lasting.

## 1 INTRODUCTION

For at least a thousand years, Swahili people, who call themselves Waswahili, have occupied a narrow strip of coastal land extending from the north coast of Kenya to Dar es Salaam, the capital of Tanzania, and also several nearby Indian Ocean islands (e.g., Zanzibar, Lamu, Pate). Legends claim that Swahili people migrated from a place in northeast Africa called Shungwaya; however, archeological studies and epic poems locate the earliest settlements on Kenya's north coast. Over the past few hundred years, the coastal area has been the site of extraordinary movements of people and goods and has been conquered and colonized several times: by Portuguese who captured Mombasa in the 16th century, by Middle Eastern Arabs who ran a slave trade in the 19th century, and by British colonizers in the 20th century. Thus, Swahili people are accustomed to living with strangers in their midst, and they have frequently acted as "middlemen" in trade relations. In addition, they have incorporated many people and practices into their vibrant social world.

Waswahili are all Muslims. They became Muslim through the influence of people coming from the north and also from across the Indian Ocean. They have forged extensive economic, political, and social ties with Middle Eastern Muslims. Since at least the 18th century, Muslim men from Oman and Saudi Arabia have married Swahili women. Waswahili are known for bringing people into their ethnic group, including slaves brought from the interior of Africa in the 19th century and members of nearby ethnic groups (e.g., Giriama). Scholars have long debated whether, given their tendency to embrace new people, Waswahili even constitute an ethnic group, like the Zulu or the Ashanti, but Swahili people themselves have no doubts that they are a culturally distinct group of Muslims with a mixed African and Arab ancestry.

In the early 19th century the Sultan of Oman moved his capital to the island of Zanzibar and, from there, governed the coastal region. Swahili people competed with Arabs for political and economic power, yet they were a strong community by the end of the last century. During the colonial period and since independence in the early 1960s, Swahili people have been a minority Muslim population in the secular states of Kenya and Tanzania.

## 2 LOCATION AND HOMELAND

Given the shifting nature of Swahili ethnicity, it is difficult to substantiate the general belief that Swahili people number about a half a million.

The deep harbors along the coast have long sustained a profitable fishing and shipping economy. The extensive coral reef several miles off the coast keeps these waters calm. The lush

coastal plain provides a fertile environment for growing coconut palms, fruit trees, spices, and mangrove in swamp areas. Today, Swahili people live primarily in the urban areas of Lamu, Malindi, Mombasa, Tanga (mainland Tanzania), the island of Zanzibar, and Dar es Salaam.

Hundreds of Swahili people left for the Middle East after the Zanzibar Revolution in 1964. Over the past several decades, thousands have migrated to the Middle East, Europe, and North America largely for economic reasons.

## 3 LANGUAGE

Kiswahili, the Swahili language, is widely spoken across East Africa. For most Kenyans and Tanzanians, Kiswahili is learned as a second language. Swahili people speak Kiswahili as their "mother tongue," and it reflects their mixed origins and complex history. The language includes many words borrowed from Arabic (and other languages), yet its grammar and syntax place it in the Bantu language family, which has roots on the African continent. Like many Kenyans, Swahili people also use English in their daily interactions, particularly in schools, government offices, and the tourist industry.

As in other Bantu languages, all Kiswahili nouns are organized into classes. A noun's class governs the formation of plurals and the agreement among subjects, verbs, and adjectives. The "person" class includes *mtu* (person) and *mwaliimu* (teacher). The "n" class includes many words that begin with the letter "n," such as *ndoa* (marriage) and also many borrowed words, for example, *televisheni* and *komputa*. Kwanzaa, the African American holiday, incorporates many Kiswahili terms from the "u" class of abstract nouns, including *ujamaa* (pulling together) and *umoja* (unity).

Most names are Arabic in origin and indicate a person's Muslim identity by linking him or her with a prophet or with a Muslim ideal. Common names for girls are Amina and Fatuma; for boys, Mohammed and Moussa. A person's first name is followed by their father's name: Mohammed bin (son of) Moussa or Amina binti (daughter of) Moussa. Clan names added to these reflect the relations among larger groups of people. Shortened forms of standard names (e.g., Tuma for Fatuma) are popular as nicknames.

Kiswahili has a wide population of speakers with records of as many as 50 million. Currently, it is the official language in Tanzania. In Kenya and Uganda, it is a national language, since official communication and the medium of instruction in the two countries is English. The language is also spoken in the Democratic Republic of Congo, Rwanda, Burundi, Somalia and South Africa.

## 4 FOLKLORE

Myths and heroes are generally from Islamic sources. For example, many people tell short, moralistic tales based on the Prophet Mohammed's life.

## 5 RELIGION

Being Swahili is inextricably connected to being Muslim. Excavations of mosques provide evidence that Islam flourished from at least the 12th century. Swahili Muslims recognize the five pillars of faith that are basic to Islamic practice worldwide: 1) belief in Allah as the Supreme Being and in Mohammed as the most important prophet; 2) praying five times a day; 3) fasting during the month of Ramadan; 4) giving charity; and

5) making a pilgrimage (Hajj) to Mecca, if feasible. For Swahili people, Islam encompasses more than just spiritual beliefs and practices; Islam is a way of life. The times for prayer organize each day, and Muslims pray at home or at mosques. On Friday, the holiest day of the week, men pray together. Both men and women attend religious lectures on Fridays and other days.

Like most African Muslims, Swahili people claim allegiance to the Sunni sect of Islam, yet their practices are distinctive in several ways. Some communities revere local religious figures from times past, paying them homage as “saints” on special holy days. Islam includes the belief in spirits (*jini*, singular; *majini*, plural). These beings are capable of possessing individuals for good or evil purposes. Those who are afflicted by bad spirits and, as well, people skilled in controlling them, participate in groups where, through prayers, trance, and ceremonies, spirits are called forth to account for their acts. Dangerous spirits can be driven away by a skillful practitioner of Islamic spiritual medicine. Such local practices are criticized as old fashioned by some who promote either more “modern” religion or a purer version of Islam. Although some young men in the cities are involved in political parties organized to promote Muslim causes, the influence of fundamentalism is low compared with other African contexts (e.g., Algeria, Sudan).

## 6 MAJOR HOLIDAYS

Along with all other Kenyans, Swahili people celebrate the nation’s secular public holidays, including Jamhuri Day and

Madaraka Day, which mark the steps toward Kenya’s Independence in the early 1960s.

For Muslims, the most important holidays are religious. Idd il Fitr marks the end of the month of Ramadan. Idd il Hajj celebrates the yearly pilgrimage to Mecca. Each Idd is celebrated by praying at a mosque or at home, visiting relatives and neighbors, eating special foods and sweets, and, on Idd il Hajj, slaughtering a goat and sharing the meat with family and neighbors. During the month of Ramadan, Swahili Muslims fast from sunrise to sunset. Even though Swahili people endure the hardships of going without food, water, or cigarettes for about 14 hours each day, Ramadan is a very festive time. After breaking the fast at the end of each day by eating a date and drinking strong coffee, families enjoy a meal of many different delicious foods. Then the evening and most of the night is spent visiting friends, watching videos, praying, playing cards, or, as Idd nears, going shopping at the stores, which stay open late. The last meal is eaten shortly before dawn. Maulidi, or the Prophet’s Birthday, is widely celebrated by Muslims; however, the largest celebration in all of East Africa is hosted by the island of Lamu. Thousands of Swahili and other Muslims come for the occasion that lasts several days and includes large gatherings for prayers at the main mosque and many cultural events. Older men dazzle the crowds with the subtle beauty of their “cane dance,” which they perform by holding canes as they sway slowly from side to side. Young people wander the island, and groups of religious school students march in a parade.

## 7 RITES OF PASSAGE

Prior to giving birth most women return to their parents’ homes to receive help from their female relatives. Once the newborn is washed, a relative whispers “*Allahu Akbar*” (“God is Great”) into each ear to call him or her into the Muslim faith. Seven days after birth, males are circumcised in a ceremony attended by family members. Newborns wear a string around the waist with charms, and black ink is painted on the forehead to ward off bad spirits. A new mother rests at her parents’ home for 40 days after giving birth. As she regains her strength, relatives help her to care for the new baby.

There are no specific rites of passage for children or teens. Birthday parties are increasingly popular, and these celebrations include eating cake, disco dancing, and opening presents. Ceremonies associated with secular and religious school, such as graduations, are occasions for marking a young person’s educational progress. For example, most religious and secular schools hold yearly performances where students recite lectures and poems.

Marriage marks a person’s transition to adulthood. Marriages are usually arranged by parents who try to find a kind, responsible, and appealing spouse for their child. A young woman cannot get married without her father’s permission, and at the same time she has the right to refuse someone chosen for her. Prior to the wedding, a female relative or family friend counsels the bride about her duties as a wife. Weddings can include several days of separate celebrations for men and women, such as dancing and drumming, musical performances, viewing the bride in all her finery, and eating lavish meals. Only men attend the actual marriage vows, which take place in a mosque. A male relative represents the bride. One of the women’s events, attended by only close relatives, is a purification

tion rite during which the bride's skin and hair are beautified with herbs.

Muslims are buried within 24 hours of dying. They are wrapped in a white cloth and carried to the graveyard by men who offer prayers. The female relatives of the deceased stay at the house wailing to express their sorrow. Women friends and family gather to comfort the bereaved and to pray. Relatives sponsor remembrance prayers forty days after the burial and again after one year.

## **8 INTERPERSONAL RELATIONS**

Swahili people are as likely to greet one another with the Arabic greeting "*Asalaam Aleikhum*" as they are to say "*Jambo*," which is the common Kiswahili greeting in East Africa. People who know each other exchange a string of greetings enquiring about the health of family members and the latest news. Greetings can reflect the time of day ("*Habari za asubuhi?*"—"What's new this morning?") or the length of time since a previous encounter ("*Habari tangu jana?*"—"What's new since yesterday?"). Upon entering a Swahili house, a guest greets everyone present, shaking each person's hand. From a very young age children are taught to greet an elder with respect by kissing his or her hand. Friends who have not seen each other for a long time grasp hands warmly and kiss on both cheeks.

Swahili people greatly value modest behavior. To guard against romantic relationships developing outside of marriage, men and women are not permitted to mix freely. Most people pursue their daily activities with others of the same gender. Close relatives interact across gender lines, although women are encouraged to congregate at home, while men spend time in public places.

As in many parts of Africa and the Middle East, the right hand is considered "clean" and the left "dirty." Accordingly, most gestures between people—shaking hands, eating communally, or even handing something to someone—are done with the right hand. A polite way to accept a gift is to place the left hand under the upturned right palm. To indicate that something (e.g., a bus, a room, a cup) is full (of people, water, etc.) the left fist is clapped against the right palm striking the base of the thumb in several quick movements. It is considered rude to call someone over by using the index finger. Instead, the right hand is extended and the straight fingers bent to the palm in a sharp inward gesture repeated several times.

Because coastal culture is marked by frequent coming and going, visiting is a well-established custom. Visitors call out "*Hodi!*" to announce their arrival, and the response "*Karibu!*" welcomes them in. Many women either go visiting or receive visitors daily, usually in the late afternoon. Friends and relatives coming from far away are welcomed to spend the night.

Because marriages are usually arranged by family members, dating between men and women of any age is frowned on and generally non-existent. Also, gender segregation makes it difficult for people of the opposite sex to meet openly. But young people (and some older ones too) do manage to meet each other in school, at social events like weddings or parades, or even when traveling on the bus. They routinely succeed in striking up friendships and sometimes fall in love. Secret phone calls to boyfriends or girlfriends are a favorite pastime of young people brave enough to risk severe reprimands from disapproving parents.

## **9 LIVING CONDITIONS**

Swahili people suffer the diseases of developing countries, such as malaria, yellow fever, and polio, and, because they eat a diet high in fat, they also experience the diseases of industrialized countries, such as cancer, high blood pressure, and diabetes. Most people have access to rudimentary medical care in government and private hospitals, although treatment is sometimes expensive. Traditional Swahili medicine includes herbal remedies, massage, and bloodletting. Also, some practitioners treat emotional troubles through prayer, protective charms, or exorcising evil spirits.

As the longtime middlemen in a mercantile economy, Swahili people are avid consumers who, depending on their means, seek out new products. Radios, TVs, VCRs, watches, and cameras are obtained from relatives or friends returning from travel outside Kenya where such goods are cheaper. Women save to buy imported clothes and jewelry for themselves and their children. Teens have limited cash, but they try to keep up with the latest fashions, such as running shoes and track suits for boys and beaded veils from the Middle East for girls.

Houses vary depending on a family's means and the type of town in which they reside. "Stone towns," like Lamu and Mombasa, are characterized by large stone houses, some divided into apartments. Some Swahili people living in "country towns" still occupy houses made of hardened mud and stones, although these are less common than houses of stone or coral.

Most homes have electricity, indoor plumbing, several bedrooms, and a living room furnished with a couch and chairs. Access to water is critical for Muslims who must wash before prayers.

In comparison with many people in Kenya, Swahili people enjoy a relatively high standard of living. They are firmly in the cash economy, even though they are more likely to have limited commercial ventures rather than big businesses. Some own their own property.

Travel among the coastal towns is an important part of Swahili life, and many Swahili men work in the transportation industry. Buses, vans, and a small number of private cars are the main means of transport.

## **10 FAMILY LIFE**

In family matters, Swahili women are the partners of men, yet their partnership is unequal. Under Islam, husbands and fathers have authority in the home; they can make decisions for wives and daughters and compel them to behave properly to preserve the family's honor. But, Swahili women also wield considerable power in the daily life of the family, as they take charge of meals, marriage arrangements, and holiday celebrations.

The average number of children in each family has declined from 10–14 early in the 20th century to 5–8 at mid-century to 3–4 for young couples today. Women who have been educated and/or work outside the home tend to limit births. Entrusting a friend or relative to raise one's child is a common practice that draws the parents and caregivers closer together. Residents of an individual household might include many people beyond the immediate family, such as grandparents, nieces and nephews, and in-laws.

Marriages are generally arranged by family members, with preference made for marrying cousins. Most newlyweds are not well acquainted with one another; however, Waswahili be-

lieve that love grows as the marriage endures. Men are permitted to marry up to four wives, but the expectation that they must support each one equally means that most marriages are monogamous. Divorce is frequent, especially among young people who decide that the arranged choice is not working and among older couples if the husband marries another wife.

Arab heritage emphasizes relations through the father's family (patrilineal descent) as the primary form of kinship, but Swahili people also recognize close ties through their mother's relatives. Each Swahili family also identifies with a clan.

Cats live in many Swahili households, and, although children sometimes play with them, they are valued less as pets than for their service in warding off mice. Dogs are thought of as dirty and not allowed near homes.

## 11 CLOTHING

In the early 20th century in Swahili fishing villages, women wore brightly colored cotton cloths (*kanga* or *leso*) wrapped around their waists and upper bodies and draped over their shoulders and heads. Some women adorned themselves with plug earrings of up to an inch in diameter. Family status determined how a woman veiled. For example, wealthy women in Zanzibar Town walked unseen behind a cloth enclosure carried by servants. Men wore a striped cloth (*kikoi*) wrapped around the waist and hanging to the knees. As a mark of being Muslim some men sported small white caps with elaborate tan embroidery. Both men and women wore leather sandals, and wealthy families used wooden platform shoes when they entered the bathroom. Islam forbids men to wear precious metals, but women own gold necklaces, earrings, and bracelets. Gold, which many women receive at the time of marriage, is both an adornment and an investment that they might cash in if times become financially tough.

Clothing reflects a Swahili family's status and also an individual's personal style. Dressing well and dressing modestly are both highly valued. Women wear "Western style" dresses in many colors, patterns, and fabrics. At home, a woman might wrap a *kanga* around her waist, like an apron. Outside the house, she wears a long, wide, black, floor-length cloak with an attached veil, called a *buibui*. She pulls the veil tight against her cheeks and secures the fabric under her chin, leaving her face exposed. Women veil to show that they are proper Muslims from respectable families. Men wear Western-style trousers and shirts. On Fridays, or other religious occasions, they wear long, white caftans. Shorts are worn only by children.

## 12 FOOD

Swahili cuisine, which is highly spiced, has African, Middle Eastern, and Indian influences. Rice, the staple, is cooked with coconut milk and served with tomato-based meat, bean, or vegetable stews. Meals incorporate locally-available vegetables (eggplant, okra, and spinach), fruits (mangoes, coconuts, pineapples), and spices (cloves, cardamom, hot pepper). Fish—fried, grilled, or stewed in coconut sauce—is also central to the diet. Sweet tea with milk is served several times a day. It is prepared by placing loose, black tea (2 teaspoons) in a small saucepan with milk (1 cup) and water (1 cup). Bring to a boil, reduce heat and cook for about five minutes, stirring frequently. Bring to a boil again and cook longer if a creamier tea is desired. Stir in sugar (at least 2 teaspoons) and a pinch each of powdered ginger and powdered cardamom. Strain to serve.

Rice cooked with meat and spices (*pilau*) and served with a tart tomato and onion salad is a favorite dish for special occasions. Chicken and goat meat are popular for holiday meals. Special sweets include moist, rice flour cake flavored with coconut and *kaimati*, which resemble doughnut holes, and are soaked in rose water syrup. When Kenya's first president, Jomo Kenyatta, tasted *kaimati* for the first time, he enjoyed them so much that he asked the joking question: "Can I get the seeds that Waswahili use to grow these?"

Although increasingly people eat at tables, they often spread straw mats on the floor and sit around a large, metal tray on which is piled the rice to be shared. They pass bowls of stew, vegetables and fruit and eat either with their right hand or a spoon. Before the meal begins, food is protected from insects by brightly painted straw covers. Several utensils are needed to process coconut, which is a frequent addition to rice and stews. First, the coconut is cracked in half with a sharp blow from an iron bar. Then, the cook grates each half on a serrated blade attached to a low stool. The gratings are placed in a long straw tube, which is then soaked in water to release a thick white milk.

Waswahili, like all Muslims, are prohibited from eating pork or drinking alcohol. The members of one clan from northern Kenya observe a taboo on eating fish.

Guests are always offered something to eat or drink, and it is polite to accept. Gifts of meat or special sweets are routinely exchanged among neighbors and relatives. Even children are encouraged to share food.

A light breakfast of tea and bread is eaten early in the morning. Many people have more tea and snacks mid-morning, and the main meal is eaten in the early afternoon. Supper includes tea and leftovers or light fare, such as an omelette.

## 13 EDUCATION

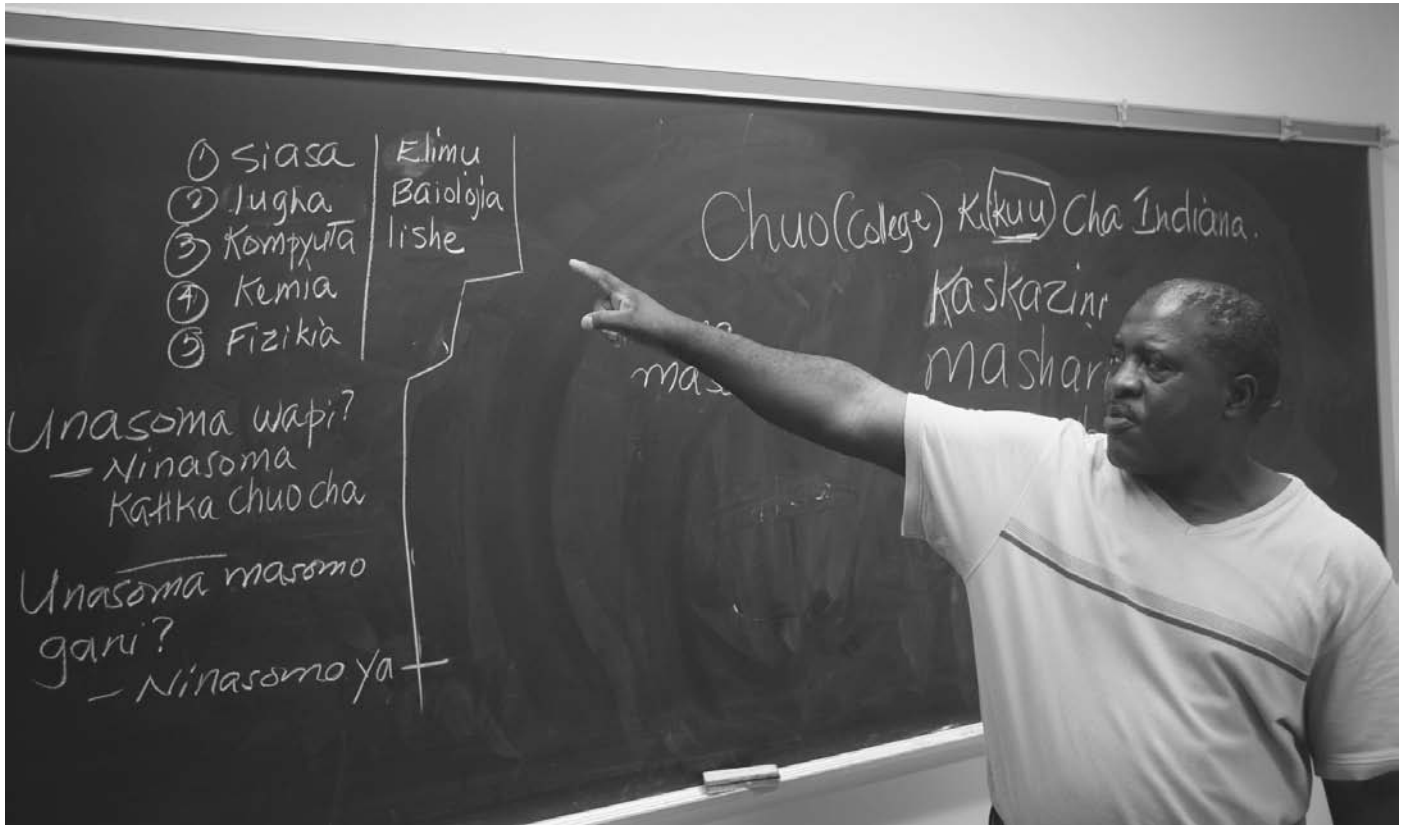

Through Islam, literacy came to the East African coast much earlier than to most other parts of the continent. Knowing how to read the Koran is religiously important, thus Swahili people have a high rate of literacy. Some people are literate in Arabic as well as Kiswahili. Those who have been to secular school are literate in English as well.

Many adults over fifty have had no secular education. Some adults in their forties had limited primary education, and only a very small number, mostly men, went on to secondary schools. Adults in their thirties tend to have at least several years of primary education. Young people today tend to finish primary school, and some go on to secondary school. Most Swahili young people attend religious school at least several times a week where they learn to read Arabic and to recite passages from the Koran.

Most parents, particularly those in urban areas, recognize the value of education in preparing their children for employment. Families vary as to whether they believe that girls should be educated as extensively as boys. The availability of single sex schools can affect this decision.

## 14 CULTURAL HERITAGE

*Taarab* music, which has distinctly Arabic origins, is performed at weddings and concerts. Band members play keyboards, flutes, brass instruments, and drums to accompany singers. Many of the Kiswahili lyrics are double entendres that hint at romantic love.

University of Kansas teacher Leonce Rushubirwa, from the United Republic of Tanzania in East Africa, helps students learn the African language of Swahili at the University of Indiana. About 80 students enrolled in a seven-week course at the Summer Cooperative African Language Institute. The goal of the course was to increase the number of competent African language speakers in the United States. (AP Images/Herald-Times, Jeremy Hogan)

Several women's dance groups perform at weddings for all-female audiences. They dance *chakacha*, which resembles belly dancing, and also *lelemama*, a very subtle dance with tiny hand movements. These groups used to engage in competitions, and they wore elaborate costumes, including military uniforms.

Kiswahili oral literature includes songs, sayings, stories, and riddles. The main written form is poetry. Kiswahili poems, which include long epics, prayers, and meditations on many subjects, conform to a complex rhyme and meter.

## 15 WORK

Some Swahili still fish, farm, and trade as they did in previous generations. But the difficult local economy has meant that many people are unemployed or dependent on the unpredictable tourist industry. Educated men and women enter the civil service and work in offices, shops, and schools. Although husbands are obligated to provide for their families, many wives earn money for their families through cooking food, sewing, or trading from their homes.

## 16 SPORTS

Few adults play sports. Many boys join soccer teams and play in hotly contested competitions. Soccer matches involving Kenyan regional teams or local boys' clubs provide rare, though exciting entertainment, mostly for men. In school, girls play

sports such as netball and track. Children are sometimes taken to swim at the ocean.

## 17 ENTERTAINMENT AND RECREATION

Weddings and holiday celebrations are the most important forms of entertainment. The main guests at weddings are adults; however, young people enjoy weddings too, especially the musical concerts at night. Groups of young women, using their veils as camouflage, watch the wedding festivities from the sidelines. Traveling to and from weddings, people sing songs and celebrate with vigor.

There are only a few theaters in the urban areas, and young men are the most likely to attend films. Watching videos is a favorite pastime, especially for women and young people. Although not every household has a television and VCR, people tend to know friends or relatives with whom they can watch videos, such as action films from Japan, romances from India, Islamic epics, and detective stories from the United States. If a video contains love scenes, an adult might fast-forward to protect the modesty of those present. Local and foreign soap operas, news, and sports are also popular. Young people enjoy music tapes and music videos from the United States, Europe, India, and the Middle East. Several local bands are also popular, although men are much more likely than women to see them perform. On the weekends, young people sometimes go

to discos, and women enjoy walking on the beach or going for a picnic.

### 18 FOLK ART, CRAFTS, AND HOBBIES

Artisans on the island of Lamu are famous for their intricately carved wooden furniture and doors. They also construct miniature, painted replicas of the boats (*dhow*s) used for fishing. Young boys play with these at the shore. Women use brown colored henna to paint complex flower designs on their hands and feet (up to the knees) as preparation for attending a wedding. The color, which stains the skin and nails, lasts for several weeks.

### 19 SOCIAL PROBLEMS

Waswahili view the declining economy and erosion of their culture by tourism as significant social problems. Tourists who walk around in immodest clothing (e.g., shorts and bikinis), drink alcohol in public, and encourage loose behavior among young people have threatened the proper Islamic life that many Swahili people struggle to maintain.

Waswahili face some discrimination by Kenyans who have resented their connection to the slave trade and their ties to Middle Eastern wealth. Their role in Kenyan politics, though marginal, is increasing as Kenya moves forward in multiparty democracy.

Although some individuals drink alcohol, even to excess, the Islamic prohibition mentioned above guards against widespread alcoholism. A more worrisome problem is the growing prevalence of drug use (marijuana) among young men, which is condemned as anti-social. However, chewing *miraa*, a plant grown locally that contains a mild stimulant, is regarded as an acceptable social activity in which participants share stories and jokes as well as the bubble gum that must be chewed to hide *miraa*'s bitter taste.

### 20 GENDER ISSUES

Although Swahili culture is generally a heavily patriarchal system, women did once play vital roles both socially and politically. There is recorded evidence that show that Swahili women held high political positions, some of the women ruled as queens while others as chiefs. Even while male rulers predominated, some women occupied positions of authority, such as Asha Binti Muhammad, Chief of Ngumi in AD 1686; Mwana Mkishi, the first ruler of Mombasa around AD 1500; Queen of Pemba in AD 1686; and other queens such as Mwana Fatuma binti Darhash, Mwana Aisha and Mwana Mize binti Mnaba. After the 17th century, however, tilted political positions remained the exclusive domain of men.

In the traditional Swahili society, women fully participated in familial and public festivities. They were not excluded from attending mosques alongside men and even went through literacy programs just like their male counterparts. Women became literate and studied formal Islamic sciences. They even enjoyed the rights to property and inheritance just as men did. However, Swahili women slowly lost control of economic resources and were increasingly denied access to education. Despite the strides made in education in East Africa, Swahili women still occupy subordinate roles to men in religious, economic, and political spheres.

# SWAZIS

**PRONUNCIATION:** SWAH-zeez

**LOCATION:** Swaziland

**POPULATION:** 1,100,000 (2006)

**LANGUAGE:** SiSwati

**RELIGION:** Christianity (various sects), traditional religious beliefs, and Islam

## <sup>1</sup> INTRODUCTION

Swazi history dates back to the late 16th century when the first Swazi king, Ngwane II, settled southeast of modern-day Swaziland. His grandson, Sobhuza I, established a permanent capital and drew the resident Nguni and Sotho people within a centralized political system. During the mid-19th century, Sobhuza's heir, Mswati II, from whom the Swazis derive their name, expanded the Swazi nation to an area much larger than modern Swaziland. Mswati established contact with the British, who later made Swaziland a protectorate following the Anglo-Boer War of 1899–1902. Swaziland became independent in 1968.

Today, Swaziland's government is headed by a dual monarchy, consisting of Mswati III, the hereditary king and head of state who is titled *Ingwenyama* (Lion), and the queen mother who is titled *Indlovukati* (Lady Elephant). This traditional structure operates parallel to a "modern" (post-European contact) structure, consisting of the administrative head of government, i.e., the prime minister, and statutory bodies including a cabinet and a bicameral parliament, which enacts legislation subject to approval by the king. Swaziland did not have a Constitution after 1973; a Constitutional Review Commission (CRC) submitted proposals for a new Constitution to the King, and it was adopted in 2006.

## <sup>2</sup> LOCATION AND HOMELAND

The Swazi reside primarily in Swaziland, a small landlocked country of 17,363 sq km (6,704 sq mi) which is perched on the edge of the southern African escarpment. It is bounded on three sides by South Africa and on the fourth side by Mozambique, both countries also housing many ethnic Swazis. Four distinctive topographic steps largely determine the characteristics of its natural environment: the highveld, middleveld, lowveld, and the Lubombo mountain range.

Swazi identity is based on allegiance to the dual monarchy, and ethnic Swazis living in the Republic of South Africa and Mozambique are not under its effective political control. In 2006, the World Bank estimated the total number of Swazis at about 1.1 million people. The population is growing at a rate of 2.9% per year, and nearly half (44.4%) of all Swazis are 14 years of age or younger. Swaziland is one of the few African countries with a homogeneous (sharing common descent) population. Most Swazis live in rural homesteads, but in the middleveld, where nearly one-half of the Swazi population resides, rural homesteads are interspersed with densely populated settlements around employment centers. The two major cities are Mbabane and Manzini.

## <sup>3</sup> LANGUAGE

"Swazi" refers to the nation, tribe, or ethnic group. The language spoken is referred to as "siSwati." SiSwati speakers are found in Swaziland, South Africa, and Mozambique. SiSwati is a tonal Bantu language of the Nguni group, closely related to Zulu and, more distantly, to Xhosa. It is spoken in Swaziland and in the Eastern Transvaal province of the Republic of South Africa. Little has been published in SiSwati.

## <sup>4</sup> FOLKLORE

Swazi oral historical tradition is arguably the richest still existing in southern Africa. The reason largely lies in the fact that the Swazis' political structure was not disrupted following colonial rule to the same degree as were the structures of other southern African kingdoms. Elder Swazis still recount rich histories of their forebears—numerous conquering kings and chiefs—dating back several centuries. The first king, Ngwane II, who led his followers from their home on the east coast and moved inland, is commemorated in one of many royal praise-songs, "Nkosi Dlamini—You scourged the Lebombo in your flight."

## <sup>5</sup> RELIGION

Adherents of traditional Swazi religion believe in an aloof supreme being known as *Mkhulumnqande*, who created the earth but who is not worshipped and is not associated with the ancestral spirits (*emadloti*). He demands no sacrifices. Swazis believe that ancestral spirits are ranked, as are humans. Men play important roles in traditional religious life, offering sacrifices for the spirits, but women, acting as diviners, also communicate with spirits. The Queen Mother serves as custodian of rain "medicines." Among the Swazi, spirits take many forms, sometimes possessing people and influencing their welfare, primarily their health.

The Methodists established the first Christian mission in Swaziland. Currently, many Christian sects are present in the country, ranging from the more eclectic Catholics to the more rigid Afrikaner Calvinists. Although the statistical breakdown of adherents to different religions varies in different accounts, it is probably reasonable to state that the population is approximately 35% Protestant, 25% Roman Catholic, 30% Zionist (indigenous Christianity), and 10% Islamic or other beliefs. The majority of Swazis are registered as Christian, but it should be noted that most Swazis also follow traditional beliefs. Moreover, as the statistics above indicate, a significant number of Christian converts belong to Zionist churches, which practice a flexible dogma and great tolerance of custom.

## <sup>6</sup> MAJOR HOLIDAYS

The annual ritual of kingship, the *Incwala*, is a traditional national holiday that is rich in Swazi symbolism and only understandable in terms of the social organization and major values of Swazi life. The central figure is the king, who alone can authorize its performance. The *Incwala* reflects the growth of the king, and his subjects play parts determined by their status, primarily rank and gender. Before this ceremony (which is sometimes described as a "first fruits ceremony" or a "ritual of rebellion") can be performed during a three-week period each year, considerable organizational and preparatory activities must be undertaken. For example, water and sacred plants are

collected at distant points to strengthen and purify the king. Thereafter, the oldest warrior regiment opens the *Incwala*. Sacred songs that are concerned with the important events of kingship (a king's marriage to his main ritual wife, the return of ancestral cattle from the royal grave, and the burial of kings) as well as dances are performed. Themes of fertility and potency predominate. Celebrants are adorned in striking clothing, including feathers of special birds and skins of wild animals. The *Incwala* symbolizes the unity of the state and attempts to reinforce it: it dramatizes power struggles between the king and the princes, or between the aristocrats and commoners, with the Swazi king ultimately triumphing. Other national royal rituals include the Reed Dance and rainmaking rites, while local rituals include funerals, marriages, and initiations.

A contemporary national holiday is Independence Day, which has been celebrated since the country's independence from Britain on 6 September 1968.

## 7 RITES OF PASSAGE

During childhood, young Swazi boys play and run errands around rural homesteads until they are old enough to accompany their age-mates to the fields with the cattle herds. Young Swazi girls play and help their mothers with minor domestic chores and child care. Fathers may play a small role in child rearing—especially if they are employed at distant locations within Swaziland or in South Africa.

At puberty, a boy is tended by a traditional healer and eventually joins his age (warrior) regiment (*libutfo*), where he learns

about manhood and service to the king. A girl, upon having her first menstruation, is isolated in a hut for several days and instructed by her mother about observances and taboos. The Swazi have not circumcised males since King Mswati's reign in the mid-19th century, but both boys and girls traditionally had their ears cut (*ukusika tindlebe*).

Following puberty, a girl's and boy's families begin marriage negotiations. A man and his family acquire rights to children by transferring to the woman's family bride-wealth (*lobola*) valuables such as cattle and nowadays some cash. A new bride thereafter goes to live with her husband and in-laws. In contemporary Swaziland, a couple may contract one of several forms of marriage: a customary marriage, which may take the form of a "love" marriage, an arranged marriage (*ukwendzisa*), or a bride-capture marriage (the third form is uncommon and may not involve the exchange of bride-wealth), or a Christian marriage. In the past, a preferred form of customary marriage was the sororate, in which a woman married her sister's husband, thereby becoming the subsidiary wife (*inhlanti*). A customary marriage ceremony, particularly for high-ranking couples, tends to involve numerous and protracted ritual exchanges between the families (sometimes lasting decades), and brings into play singing, dancing, wailing, gift-giving, and feasting. In recent years, greater numbers of individuals have opted to elope or remain single.

Following death, the corpse of a deceased person undergoes a mortuary ritual that varies according to the deceased's status and his or her relationship with different categories of mourners. The more important a deceased person was the more elaborate are the funerary rites given his or her corpse—especially true in the case of a deceased king. The closer the blood or marital ties were between a deceased person and a mourner, the more elaborate is the mourner's ritualized display of grief. A widow may be expected to continue her husband's lineage through the levirate (*ngena*), in which she marries a brother or another male relative of her deceased husband; however, this practice is not practiced as frequently as in the past. Many Swazis believe that the spirit of a deceased person can manifest itself in illness and in various omens, occasionally materializing in the form of a snake.

## 8 INTERPERSONAL RELATIONS

The Swazi, who like the Zulu were once feared as fierce warriors, display a multiplicity of traits in their daily interactions. They can be generous to a hungry stranger or receptive to a jovial comrade, but they can also be proud and arrogant to the unfortunate stranger who transgresses the rules of social propriety. In particular, the Swazi demand strict adherence to rules concerned with kingship and the associated sociopolitical hierarchy: forms of greetings; body language; and gestures. According to custom, youth must show deference to their elders, women to men, and low-ranking persons to high-ranking persons. People demonstrate respect by lowering their eyes, kneeling, and moving quietly.

An interesting symbolic representation of interpersonal relations among Swazis was once found—and to some extent is still found—in beads. In the past, a newborn baby was welcomed into the world with white "luck" beads placed around its waist, wrists, and/or ankles. An adult wore beads to designate his or her social status (i.e., commoner or royalty) and love or marital status. Regarding the latter, a young woman

Swazis participating in the Umhlanga (Reed Dance) in celebration of the Harvest Festival. (Jason Laure)

gave beadwork to her sweetheart as a token of love. In a sense, beadwork served as her “courting letter,” with different bead patterns representing different stages in the courtship. Within the beadwork pattern were symbols that represented letters and words that communicated ideas. In “reading” a beadwork love message, groups of girls noted the meaning of the bead color, its position in the pattern, the background on which it was fitted, and the sex or social status of the recipient.

## <sup>9</sup> LIVING CONDITIONS

Everyday concerns of Swazis relate to housing, transport, and the acquisition of basic household necessities. Many consumer items are available—particularly to people who reside in urban areas and receive an income through wage labor. In urban areas people have better access to public transport, medical services, and jobs, and they are also better situated to receive electricity and piped water. Most people buy manufactured blankets, clothing, and cookware; many people buy “prestige” items such as battery-operated radios; and a few people are able to purchase cars or trucks for transport. Most people satisfy their food requirements through their own or relatives’ labors in agriculture and animal husbandry, although nearly all people purchase processed foods such as bread, sugar, and tea. Most Swazis construct their own homes from rocks, logs, clay, and thatch; those persons with sufficient funds hire builders and buy corrugated iron roofs, glass windows, and solid wood doors.

A special concern of Swazis relates to health and general well-being. Swazis direct their health concerns to both Western-influenced, biomedical practitioners and traditional practitioners. Many Swazis believe that traditional practitioners, who serve a much larger segment of the population, identify and correct the imbalances between the human and spirit worlds that lead to misfortunes and illnesses. These practitioners are of three types: herbalists or *tinyanga* (about 50%), diviner-mediums or *tangoma* (about 40%), and Christian faith-healers (about 10%). Men are usually *tinyanga*, and women are usually *tangoma*. Most Swazis believe that serious diseases do not simply happen; rather, they are created and sent mystically by a person of ill-will. Swazis differentiate between conditions or diseases that are “African” and conditions or diseases that are foreign; they emphasize that a condition, such as madness caused by sorcery, is best treated by traditional medicine and practitioners, while a disease, such as cholera, is best treated by Western medicine and biomedical practitioners. In the current context of the AIDS pandemic, both biomedical and traditional practitioners are treating patients; importantly, the two types of practitioners are often working cooperatively in treating patients.

## <sup>10</sup> FAMILY LIFE

In rural areas, the ordinary Swazi resides in a homestead, *umuti*, which is headed by a male homestead head, *umnumzana*, who is assisted by his wife (or main wife in a polygamous mar-

Swazi nuclear families typically are large by American standards, with six children or more. (Cory Langley)

riage). The head determines resource allocation such as land distribution, makes major decisions regarding both production (plowing and types of crops grown) and economic expenditures, and mobilizes homestead labor. Homestead residents have access as individuals to arable land, and as community members to communal pasturage.

Within a complex homestead are households; each household (*indlu*) generally consists of one nuclear family (a man, his wife, and their children) whose members share agricultural tasks and eat from one kitchen. Sometimes a wife has an attached co-wife, *inhlanti*, who, along with her children, forms part of the same “house.” A married son and his wife (wives) and dependents may form another house within the wider “house” of his mother.

Many Swazi homesteads have few or no chairs or beds, and people therefore sit and sleep on grass mats. If a homestead lacks a stove, women or girls will cook on an open fire in a hut or in the yard. Women’s and men’s utensils and tools may be limited and homemade. Homestead residents are resourceful in accomplishing tasks: for example, some women clean their earthen floors by smearing moistened cow dung over them—a process which leaves them smooth and sweet-smelling.

## 11 CLOTHING

Swazis wear either traditional or modern-day clothing in both towns and rural areas and for both everyday and ceremonial purposes. Men’s traditional clothing consists of a colorful cloth “skirt” covered by an *emajobo* (hide apron), further

adorned by various ornamental items on ceremonial occasions: the *ligcebesha* (neckband), *umgaco* (ties), *sagibo* (walking stick), *siphandle* (limb ornaments), and in the case of royals, the *ligwalagwala* (red feathers). Women’s traditional clothing consists of the *ilihhiya* (cloth). Married women cover their upper torso and sometimes wear traditional “beehive” hairstyles, whereas single women sometimes wear only beads over their upper torso—particularly at special ceremonies, such as the Reed Dance performed in honor of the Queen Mother.

## 12 FOOD

Swazis cultivate maize, sorghum, beans, groundnuts, and sweet potatoes for consumption. They also raise cattle, the traditional basis of wealth and status within their society, as well as smaller livestock. Mealie-meal (ground maize) serves as the primary food and is accompanied by cultivated or wild vegetables and meat—chicken on ordinary occasions and beef on festive occasions. Sometimes traditional Swazi beer is brewed.

Most people eat a breakfast consisting of tea, bread, and/or sour-milk porridge; a lunch consisting of bread or leftovers; and a dinner consisting of porridge, vegetables, and meat. Although most people eat from metal, plastic, or ceramic dishware, some people follow customary practice, thereby drinking beer from a black clay pot and eating meat from a carved, wooden bowl. Many people enjoy sharing food from the same plate or bowl with their friends and age-mates; each person scoops out food with his or her fingers.

## 13 EDUCATION

In the past, Swazi children were educated within their families and age-groups. Both boys and girls were taught domestic and agricultural tasks, and boys were instructed in warfare. Today, intertribal warfare no longer exists, but male members of the warrior age-classes (*emabutfo*) continue to learn how to perform ritual functions.

In contemporary Swaziland, children receive a secular education under the auspices of the Ministry of Education. Many children attend mission schools which convey Christian values. Schoolchildren do their lessons from siSwati textbooks in the lower grades and English textbooks in the higher grades. SiSwati literary tradition is not highly developed as the language was not put into writing until the 20th century.

Only those children whose families can afford to pay their annual school fees receive a formal education. Mothers often assume primary responsibility for earning the money to educate their children; they prepare and sell crops, handicrafts, and other goods to pay the school fees and purchase uniforms. Children who complete school are expected to assist with the education of their younger siblings and to care for their parents in old age.

The ongoing AIDS pandemic has created many orphans—most of whom lack sufficient funds to pay for their education. When the government allocated money in 2003 to pay the school fees of orphans, the impoverished parents of other children complained about favoritism. In any case, the money proved to be vastly inadequate to assist all orphaned children. By 2006, UNICEF estimated that 80,000 children had been orphaned by AIDS in Swaziland.

## 14 CULTURAL HERITAGE

Swazis have inherited a rich tradition of music and dance. Their ceremonial music has been unaffected by Western influence and retains a distinctive individual style which sets it apart from that of related ethnic groups. Nonetheless, the *siBhaca* recreational dance music has been adopted from the Xhosa-speaking people of South Africa.

Swazi women sing together as they work in groups on tasks such as digging or weeding, and men sing together as they pay tribute to their chiefs or past and present kings. Celebrants also perform special songs at weddings, royal rituals, coming-of-age ceremonies, and national Independence Day festivities. Swazi praise-poets have long been known throughout southern Africa. They compose praise-poems for kings, chiefs, and prominent persons.

Swazi specialists craft musical instruments to accompany popular singing and dancing activities: among those instruments used either in the past or present are the *luvene* (hunting horn), *impalampala* (kudu bull horn), *ligubhu* and *makhweyane* (a calabash attached to a wooden bow), and *livenge* (a wind instrument made from a plant). Some people play drums and European instruments.

## 15 WORK

Swazis divide work tasks according to sex, age, and pedigree. Men construct house frames and cattle *kraals* (corrals), plow, tend and milk cattle, sew skins, and cut shields; some men are particularly accomplished at warfare, animal husbandry, hunting, and governing. Women hoe, plant and harvest crops, tend small livestock, thatch, plait ropes, weave mats and baskets, grind grain, brew beer, cook foods, and care for children; some women also specialize in pot- and mat-making. Age is important in determining who will perform tasks associated with ritual performances. Rank is important in determining who will summon people for work parties in district and national enterprises and who will supervise the workers. Nowadays, some men migrate within Swaziland and to South Africa in search of work and income.

In contemporary Swaziland, people derive income from various agricultural and commercial activities. The country's main export crop is sugar, based on irrigated cane. Several other cash crops, including maize, rice, vegetables, cotton, tobacco, citrus fruits, and pineapples, are traded both within and outside the country. Swaziland's mineral wealth, which consists of iron ore, coal, diamonds, and asbestos, is mined for export. Meat and meat products are also exported. The industrial estate at Matsapha produces processed agricultural and forestry products, garments, textiles, and many light manufactured goods. According to government statistics from 2000, 63,598 people were employed in the private sector, and 28,554 people were employed in the public sector. As of 2004, the national unemployment rate was 31%.

## 16 SPORTS

Soccer (i.e., football) is popular throughout the country and is played by boys and men. In rural areas, both boys and girls play games with various sorts of balls which are often home-made from twine or rubber.

## 17 ENTERTAINMENT AND RECREATION

In the past, various ritual ceremonies, including weddings and funerals, provided the main opportunities for people within and across communities to gather and enjoy themselves. Feasts were held and traditional dances were performed. Some elder Swazis currently lament that young men no longer know the traditional warrior dance, the *umgubho*.

Nowadays, with family members living and working in distant locations, and with the advent of technological innovations, the occasions and forms of entertainment have changed. In urban areas, where electricity is more readily available, some households have televisions. In rural areas, many households have battery-operated radios and people enjoy musical, news, and sports programs. Rural Swazi children, as in many parts of Africa, usually do not have sufficient money to buy manufactured toys; nonetheless, they are adept at creating toys out of discarded items, such as tires, tin cans, wires, and maize cobs. Boys build intricate, moveable toy cars from rubber and metal scraps, and girls fashion dolls from maize cobs.

## 18 FOLK ART, CRAFTS, AND HOBBIES

In the past, smithing, a task assigned to men, was a prestigious activity that produced iron hoes, knives, and various kinds of spears as weapons of war. Today, smithing is less important, but pottery-making and woodcarving continue. Pottery-making, using the coil technique, is a task assigned to women. Basket-weaving is also done by women. Woodcarving, a task performed by both men and women, results in functional, unornamented implements and utensils, such as meat dishes and spoons. Schools are encouraging the production of masks or sculptured figures for the tourist trade.

## 19 SOCIAL PROBLEMS

In present-day Swaziland, various social and economic changes, including altered sex roles, increased job competition, labor migration, and the growth of an educated elite class, have produced new problems. These problems include, for example, an increase in crime and alcoholism—particularly in the outskirts of urban areas. Some Swazis complain that they are no longer able to deal effectively with their problems because traditional “witchfinding” is legally prohibited, thus freeing perceived social miscreants to behave as they please.

Some Swazis argue that a significant social-political problem concerns the hierarchical ranking system, headed by the King and the royal family. In recent years, this system has been challenged by disaffected new elites who have achieved status through the acquisition of an education and wealth but who do not have hereditary position.

Most Swazis, as well as outside observers, argue that the country's most significant social problem concerns a health issue, the HIV prevalence rate, which at 38.8% of the country's adult population (2003 estimate), is the highest in the world. In 2007, life expectancy was less than 33 years. As indicated above, huge numbers of children who were orphaned by AIDS are not well cared for and face an uncertain future.

## 20 GENDER ISSUES

Swazi society is patriarchal, with men continuing to hold positions of power in both the private and public sectors. Before Swaziland's new constitution was adopted in 2006, women had

the legal status of minors and were unable to own property or open a bank account without the permission of a male relative or husband. Some observers have linked Swazi women's low status to their high HIV infection rates as well as to the high rates of sexual violence against them (a survey in 2007 indicated that one in three Swazi women experienced some form of sexual violence before turning 18). In addition, some observers attribute the high rate of sexual violence against Swazi women and girls to the belief by some HIV-positive men that sleeping with a virgin girl can prevent AIDS. It remains to be seen whether the new constitution, together with new legislation and policy—particularly as concern land and property rights—will eventually improve women's status in practice.

**RELIGION:** Islam; Christianity; indigenous beliefs

**RELATED ARTICLES:** Vol. 1: Chagga; Luo; Maasai; Nyamwezi

## 1 INTRODUCTION

The United Republic of Tanzania, or *Jamhuri ya Mwungano wa Tanzania*, includes the mainland of Tanganyika, Zanzibar, and some offshore islands. Zanzibar and the coast have a long history of lucrative trading, which Arabs, Europeans, and Africans each have attempted to control. In 1840 the Sultan of Omani established his capital in Zanzibar. From there the caravan trade brought the Swahili language and Islam into the hinterlands as far as what is now the eastern part of the Democratic Republic of the Congo. In 1885, the Germans gained control and made Tanzania a protectorate, incorporating it into German East Africa along with Burundi and Rwanda. Dispossessed of its colonies after World War I, Germany ceded control to the British, who ruled until 1946 under a League of Nations mandate. The UN made Tanzania a trust territory under British rule after 1946.

Anti-colonial sentiment grew as the British administration favored white settlers and immigrant farmers. In 1929 Tanzanians formed the Tanganyika African Association. Julius Nyerere transformed it into the Tanganyika African National Union in 1954. Nyerere's party won 70 of 71 seats in the national assembly in 1960, and he became prime minister in May 1961. On 9 December 1961, Tanzania gained its full independence.

After independence, Tanzania embarked on an ambitious, large-scale project of national self-reliance. Led by Nyerere, the teacher (*mwalmu*), the government promoted *ujamaa* (family villages), whose aim was to bring scattered families together in village cooperatives. Simultaneously, under the Arusha Declaration of 1967, Nyerere's single-party government nationalized banks, industry, schools, and transport. The main goal was to promote an African-based form of development, where villages work together and people reach decisions through discussion and consensus.

Although *ujamaa* made it easier to organize rural development, it did not achieve the lofty economic goals envisioned. In the 1980s Tanzania joined many African countries undergoing structural adjustment and poverty reduction programs with the World Bank and the International Monetary Fund. Disillusioned with his program's lack of success, Nyerere became one of Africa's first presidents to resign on his own accord in 1985. His vice-president, Mwinyi, replaced him. After serving two terms, Mwinyi was succeeded by Benjamin Mkapa, and in 2005, Jakaya Kikwete was elected president. Because of its extensive patronage networks, the ruling party has never been seriously threatened at the polls.

Post-independent Tanzania has had to make nation-building a top priority. Nyerere insisted that Swahili be the common unifying language for Tanzania, and unique electoral and representational rules kept Zanzibar and the mainland under one

Republic. For example, Zanzibar elects a president who is head of government for matters internal to Zanzibar, and while the National Assembly enacts laws that apply to the entire Republic and also only to the mainland, Zanzibar has its own House of Representatives that enacts laws pertaining solely to Zanzibar.

## 2 LOCATION AND HOMELAND

Tanzania covers 942,804 sq km (364,017 sq mi), about twice the size of the US state of California. Tanzania borders Mozambique, Malawi, Zambia, the Democratic Republic of the Congo, Burundi, Rwanda, Uganda, and Kenya. The mainland has 1,374 km (854 mi) of coastline on the Indian Ocean. Tanzania's climate and topography relief have much variety. The highest point in Africa is at the summit of Mt. Kilimanjaro 5,883 m (or 19,300 ft above sea level) and the lowest point is at the floor of Lake Tanganyika 361 m (or 1,184 ft below sea level). Temperatures range from tropical to temperate and vary with elevation. Rainfall for much of the country comes from December to May, but the central third of the country is semiarid. Sporadic rainfall makes agricultural and livestock production unpredictable.

Tanzania's physical and climatic variation is rivaled by its ethnic and cultural diversity. Its peoples belong to more than 120 ethnic groups, none of which exceeds 10% of the population. The Sukuma and the Nyamwezi are the largest, together making up about 21% of the population. Many Indians and Pakistanis live in the urban centers.

At 39,300,000 people in 2008, Tanzania is one of Africa's most populous countries, but its growth rate has slowed from 4.3% in 1995 to 2.07% in 2008. Despite its size, the population remains quite rural. On the fertile slopes of Mt. Kilimanjaro, population densities reach 250 persons per sq km (402 persons per sq mi). The coastal city of Dar es Salaam had 2.5 million residents as of the 2002 census.

## 3 LANGUAGE

Tanzania, like most African countries, is composed of numerous ethnic groups each with its own language, culture, and traditions. Thanks to this diversity, the country has over 130 living languages, but successfully adopted a single African language—Swahili—for purposes of national unity. As a trade language, Swahili (or Kiswahili) belonged to no single ethnic group. It became the language of instruction in secondary education and in some university courses. It also became popular in literature. Unlike Congolese, who sing their national anthem in French, or Kenyans, who sing theirs in English, Tanzanians sing “Mungu ibariki Africa,” (“God Bless Africa”) in Swahili.

Swahili originated on the coast and became the lingua franca (common language) for much of East Africa, including Kenya, Uganda, and the eastern part of the Democratic Republic of the Congo. Though Swahili is a Bantu language in its origin and structure, it draws its vocabulary from a diversity of sources, such as English, Arabic, and other Bantu languages. The media use Swahili in television, radio, and newspapers. English is also the official primary language of administration, commerce, and higher education. Arabic is widely spoken on Zanzibar Island.

## 4 FOLKLORE

In many Tanzanian ethnic groups, heroes are illustrious ancestors who distinguished themselves in valor, intelligence, and generosity. Younger generations become aware of these ancestors through storytelling and wedding ceremonies. In the Bahaya group, for example, the groom must research his family history and choose an ancestor whose reputation will be recalled during the marriage ceremony. It is understood that the young man will be expected to measure up to this role model. By contrast, experts in ceremonial rituals in the Masai tribe believe themselves to be descended from a boy with magical powers. According to legend, Masai warriors found the young child naked and seemingly abandoned on a mountaintop, and they decided to adopt him. They observed that he had the power to make springs gush forth, grass to grow, and pools of water to appear. Even in times of famine, his cattle were always well fed and fat.

While Tanzanian folklore largely revolves around figures associated with individual ethnic groups, as time passes it becomes more likely that characters will emerge from a national stage. It will be interesting in this respect to observe how Tanzania's first president, Julius Nyerere, will be extolled and mythologized in national folklore by future generations.

## 5 RELIGION

As a potentially divisive issue, religion has assumed great importance in Tanzania. Approximately 30-40% of the population identifies itself as Muslim with an equal percentage

subscribing to Christianity. Zanzibar is 99% Muslim. The remainder practices indigenous religion, although an overlay of indigenous beliefs characterizes much of the country. Islamic Law may apply to Muslims in cases of domestic issues and the president of Zanzibar appoints a Mufti, who is a public servant, to settle disputes and register Islamic groups on the archipelago. Christians include Roman Catholics, Protestants, Pentacostals, Seventh-day Adventists and others, while the vast majority of Muslims (more than 80%) are Sunni.

Though relations between Muslims and Christians have generally been peaceful, at times they have been tense and occasionally violent, owing to perceptions on both sides that government favors one faith over the other in hires, public benefits, and law enforcement. Tanzania therefore has had to balance relations carefully between the two major faiths. For example, in 2005 according to an unwritten rule of Tanzanian politics requiring alternating power between the two faiths, the ruling party nominated Jakaya Kikwete, a Muslim to succeed President Mkapa, who is Catholic. In 2007 Christian groups accused President Kikwete of favoring Muslims in his political appointments.

Indigenous religion usually blends the Muslim/Christian notion of a high god with African belief in lesser, intermediate gods. For example, children usually have a Christian or Muslim name, and in addition will be named for an ancestor whose name reflects a relationship with the spirit world. One such name in a local language means “demigod,” that is, a spirit of an intermediate level who intercedes with the high god. As is common in Africa, many people resort to diviners to detect the cause of misfortune, and in case of sickness, they consult traditional healers.

## 6 MAJOR HOLIDAYS

In the spirit of impartiality, Tanzanians celebrate eight religious holidays—four Christian and four Muslim. Among them are Christmas, Easter, the prophet Muhammad’s birthday, and the beginning and end of Ramadan. As a rule, Christian and Muslim friends invite each other to celebrate their religious holidays. On Christmas and Muhammad’s birthday, children receive gifts of clothing, and everybody hopes to wear something new.

Tanzanians remember President Mwinyi for restoring several holidays in the country. Should a holiday fall on a weekend, it is moved to the following Monday. Tuesday is then declared a holiday as well to allow for a long break. Among the secular holidays are Zanzibar Revolution Day; *Nane Nane* (formerly *Saba Saba*—Farmer’s Day, in August); Independence Day (9 December 1961); and Union Day (26 April 1964), which commemorates the unification of Zanzibar and the mainland.

People celebrate holidays differently depending on their occupation and location. In the village, secular holidays may offer an occasion simply to tend the fields as on most any other day. If the holiday falls on a long weekend, city people take advantage to travel to their home villages, if possible. Huge parades or party events at the stadium usually take place in the cities. On Labor Day (May 1) for example, office colleagues gather at their place of work to be ferried to government rallies at the stadium. Everyone with a radio at home just turns it on for the day, since the president may have a proclamation to make regarding pay raises or promotions. Shops close on all

holidays, but hotels, restaurants, and nightclubs are open for party-goers.

## 7 RITES OF PASSAGE

Tanzanians of all ethnic backgrounds participate in rites of passage. The form and content of the rites vary according to tribal group and religious faith, but they remain important as symbolic markers of growing up, assuming responsibility, exercising leadership, protecting loved ones, and commitment to a particular faith or worldview.

To the extent that people practice traditional ways, their rites reflect the accumulated wisdom of previous generations. In the example of the Masai, all of life is seen as a conquest. Young boys leave home early to watch the calves, then the cows and other cattle. Their mission is to learn to conquer fear. They soon are left on their own, protecting their herds from lions and other wild beasts. Children of both sexes voluntarily undergo body piercing and tattooing. Incisions are made with needles and knives. Large holes in the upper ear cartilage are first made with a hot iron. Then marvelous ornamental earrings adorn the ears of young girls.

Circumcision or excision follows. This most important rite decides the self-control and bravery of the child in becoming an adult. Flinching during the ceremony would bring dishonor and humiliation to the family. On the other hand, the successful male initiate receives gifts of cattle, and the female feels prepared to undergo whatever pain childbearing entails. From this level, both males and females must prove themselves productive and cooperative members of Masai society.

## 8 INTERPERSONAL RELATIONS

People place much importance on greetings because they denote politeness, respect, and relationship in Tanzania. Therefore, greetings are usually more complex than a casual “Hi” or a simple wave of the hand, as is common in Western cultures. The type of greeting offered may depend on someone’s status. A special greeting used only between married men suggests their elder status. Similarly, a younger brother uses a particular form of greeting to address his older brother. A generic but common Swahili greeting among friends is “*Ujamba, habari gani?*” (“Good morning, what is your news?”).

Dating and marriage in Tanzania differ considerably from European and American customs. Western-style dating is uncommon, especially in the rural areas. In the village, young people choose their spouses but their families help arrange the marriage. For example, in Kagera Province on Lake Victoria, young men ask for the hands of their fiancées indirectly through designated representatives. The envoy generally is a family relative but might be a professional marriage intermediary. In any case, the ambassador must be articulate and eloquent and must be the first to visit the father of the fiancée on the day of the request. Since Africans begin their day early, it would be unsafe to arrive later than 6:00 am. The envoy then prostrates himself before the father and creatively implores the hand of the daughter for his master. The process usually takes several visits and many cases of beer. In rural areas, the finest local brew makes its appearance, and customarily is first refused as unfit for consumption. The repartee over the quality of the drink and the qualifications of the taster goes on until the fiancée’s family “gives in” and agrees to the marriage. Women dance and ululate (hoot or howl) to announce the joyous con-

clusion. Members of clans sharing the same totem (such as a certain animal) may not marry.

## 9 LIVING CONDITIONS

Living conditions qualify as among the most difficult in the world. The Human Development Index, which offers a broad comparison of well-being and standard of living worldwide, ranks Tanzania 159th out of 177 countries (2005). This low score reflects extremely low purchasing power (GDP per capita of \$744/year), and weak economic growth due in part to the impact of HIV/AIDS on working aged people. Because the majority of Tanzanians live on less than \$2 a day, there is no discretionary income to purchase extras.

Social indicators are alarming. Life expectancy at birth is 51 years, the infant mortality rate is 70 for every 1,000 live births, and the HIV/AIDS prevalence rate is nearly 9%. As children grow, malnutrition and tropical diseases such as malaria, schistosomiasis, and sleeping sickness cause illness and fatalities. Preventable diseases thrive in open sewers and latrines and uncovered garbage piles. In the villages, many people draw their water from contaminated streams, lakes, and pools. While conditions have improved in some towns, urban migration has outpaced government capacity to plan for and provide basic services. Given lack of zoning and building code enforcement, houses tend to be poorly ventilated and overcrowded, thereby contributing to ill health and low productivity.

## 10 FAMILY LIFE

As in most of Africa, families tend to be large and extended, but socially cohesive. Cousins are considered brothers and sisters, and nieces and nephews as children. In towns and cities, nuclear families may absorb relatives for long periods, and given the absence of social safety nets, grandparents live with their adult children in the same household. In polygynous households mothers usually live separately with their children and in the village they occupy their own huts within the same compound. The women and girls perform the household chores, while all who work outside the home are expected to help cover family expenses. Although family members may go their own ways early in the day, they typically return home to eat an evening meal together. Among some ethnic groups, women and men eat separately.

Family members have special relationships that bind them intergenerationally. Grandchildren refer to their grandmothers as *bibi yangu* (my wife) while grandmothers refer to their grandsons as *bwana yangu* (my husband). Grandmothers may tease their actual husbands by calling their grandsons *banda*, "rivals" of their husbands' affection.

## 11 CLOTHING

In rural regions, Muslim men usually wear a long embroidered cotton gown, or *kanzu*, with a matching skull cap. Muslim women often wear a *kanga* consisting of two or three pieces of brightly colored fabric wrapped around them and covering their head. On the island of Zanzibar and along the mainland coast, Muslim women wear *buibui*, a black veiled shawl, and *chador* (veils), which allow them to go out while avoiding male scrutiny of their physical beauty. Few women wear more jewelry than the Masai, who adorn themselves with elaborate beaded earrings, necklace bands, rings, and headbands.

*The typical family meal in rural Tanzania is prepared by the mother with help from her daughters. The most popular staple is ugali, a stiff dough made of cassava flour, cornmeal, millet, or sorghum. (International Labour Office)*

In urban areas, Western-style clothing is common. Men wear suits and ties on formal occasions; otherwise, they wear shirts and trousers. Women wear dresses. Shorts, miniskirts, and revealing clothing, considered indecent, are avoided.

## 12 FOOD

The typical family meal in rural Tanzania is prepared by the mother with help from her daughters. They may cook it on a wood or charcoal fire in the open courtyard, or in a special kitchen either attached to the house or separate from it. People usually have two main meals a day, although tea is drunk throughout the day while socializing and visiting.

The most popular staple is *ugali*, a stiff dough made of cassava flour, cornmeal, millet, or sorghum. The coastal people prefer rice as a staple, while plantains are consumed daily in the north. *Ugali* is eaten with a stew of fish, vegetables, or meat from a communal bowl, using the right hand. People pass a basin of water for hand washing before and after meals.

Tastes in food vary greatly, but Tanzanians generally are fond of goat meat, chicken, and lamb. *Pilau* is a delicious dish of rice spiced with curry, cinnamon, cumin, hot peppers, and cloves. *Vitumbua* are sweet fried breads eaten between meals or accompanying tea. For breakfast, masala-spiced milk tea and freshly baked French-style bread are popular. The milk is brought to a boil, and then tea, masala, and sugar are add-

*A Tanzanian loads bananas onto his bicycle. About 90% of Tanzanians make their living in agriculture, though only 5% of the land is arable. Many people are subsistence farmers, meaning that small field plots of 2 hectares (5 acres) or less are cultivated.*  
(Cory Langley)

ed. The Masai diet is exceptional in that it consists of only six foods: meat, milk, blood, animal fat, tree bark, and honey.

While the marriage laws have made it more common for families to eat together, eating customs vary according to ethnic group and religious beliefs. In some groups, taboos forbid fathers-in-law from sitting to eat at the same table with their daughters-in-law. Taboos may also prohibit men from entering the kitchen. Women in some tribes abstain from eating eggs or chicken. In Muslim households, men and women usually eat separately. During the holy month of Ramadan, Muslims do not eat or drink from sunrise to sunset.

### 13 EDUCATION

Former President Nyerere, an educator by profession, placed great importance on learning for all Tanzanians. Nyerere's self-reliance and *ujamaa* (family village) programs promoted literacy in the Swahili language, increasing the literacy rate to over 70% (extremely high for Africa). Literacy programs also aimed to raise consciousness about hygiene, agriculture, crafts, basic math, and personal achievement.

School completion rates are high (for Africa). About 56% of school-eligible children graduate from primary school, and about 33% from secondary (high) school. Completion rates for boys and girls are the same, reflecting Tanzania's egalitarian approach to education. Although in principle schooling is

free, parents often pay for books, uniforms, and school lunches in addition to basic fees, especially beyond form two (second year of high school) where day students typically pay \$15 and boarding school children \$61 a year in fees. Extra-curricular activities such as art, music, and sports receive much less attention than in Europe or the U.S. and schools mostly concentrate on basic academic preparation.

To enter secondary school, students are required to pass an exam. Languages specific to ethnic groups are taught in the earlier years of schooling, then progressively Swahili and English are introduced in the educational system. The National University of Dar es Salaam has an international reputation and once belonged to the prestigious East African system, which included the Universities of Makerere (in Kampala, Uganda) and Nairobi.

### 14 CULTURAL HERITAGE

Tanzania has a rich oral and written literature in Swahili. Film is less developed, but filmmaker Flora M'mbugu-Schelling's prize-winning films in Swahili portray significant social issues facing Tanzanian women. Tanzania's major music contribution is its Swahili, Arab-influenced classical music tradition. Many accomplished composers and musicians produce this unique blend of African-Arab-Indian sound.

In art, Tanzanians produce many fine pieces of jewelry and carved ivory, some for the tourist trade. Artists excel most, however, in refined wood sculpture. African art is much preoccupied with the human figure and with its moral and spiritual concerns. In particular, the Makonde people of the southeast are famous woodcarvers of statuettes and masks, which sell internationally. One of their pieces, probably produced for the European market, depicts a “tree of life” carved from ebony. The carver has surrounded an ancestor with present and past generations of people, one on top of the next, supporting each other throughout time. The motif shows the influence of traditional African thought in a modern sculpture.

### 15 WORK

Most Tanzanians are subsistence farmers, meaning that small field plots of two hectares (five acres) or less are cultivated with traditional African hoes, without the benefit of irrigation. Some of these farmers, and others—employed by large companies—produce crops for export. The slopes of Mt. Kilimanjaro and Mt. Meru are extremely fertile coffee, tea, and pyrethrum (used in making insecticides) areas. Along with sisal, cotton, tobacco, cashews, fruits, and cloves (Zanzibar), they account for more than 50% of the gross domestic product.

Tanzania also has 23 export processing zones with economic free zones that provide employment in light manufacturing and assembly. More traditional industry consists of the processing of sugar, beer, cigarettes, sisal twine, and light consumer goods. Some diamond and gold mining exists as well.

Wages in the informal sector tend toward survival, but also are low in the formal sector. In 2006 the minimum wage for hotel workers was \$55 per month, while workers in the mining sector made \$300 per month. To pay for school fees and health care, many Tanzanians engage in side businesses such as tailoring and cooking and they send their children into the streets to peddle wares. Government employees are covered by the 40 hour per week work law, but the vast majority of people work at least 50 hours a week. Officially 35% of children ages 5–14 are in the work force, but in reality this number is far higher.

### 16 SPORTS

Few adults actively play sports, but men follow national African and professional European soccer teams religiously on television and radio. In rural areas it is common to see boys playing soccer on the village pitch near the school or the village square. Basketball, boxing, and running are popular, and though not as successful as Ethiopia and Kenya, Tanzania has produced several world-class long-distance runners. Although many westerners think of big game hunting on the Serengeti plains as sport, trophy hunting is reserved for foreign tourists and the locals depend on game for food and livelihood.

### 17 ENTERTAINMENT AND RECREATION

The daily grind of hauling water, tending herds, gathering firewood, cooking meals, caring for children, and mending huts leaves little time for leisure for most Tanzanians. Yet people find time in the evenings for the things they love, especially music and dancing, storytelling, and socializing. In cities and towns, people socialize at coffee houses and make home visits—typically unannounced. These visits are an important social custom and at the same time provide people with a low-

cost form of entertainment. On the coast, people play *mbao*, a board game that uses small stones. Women dance the *chaka-cha* at celebrations and marriages. Tanzanians are fond of action-packed martial arts and kung fu films. Movies made in India are also popular. In addition to AM and FM radio, many urban Tanzanians now get entertainment and news at Internet cafes.

### 18 FOLK ART, CRAFTS, AND HOBBIES

Tanzanians produce many arts and crafts of high quality. The Zaramo on the outskirts of Dar es Salaam produce conventional figures of Masai warriors, elderly men, nude women, and carved walking sticks. They carve these using only hand tools. Meerscham pipe-carving is also one of Tanzania's international trademarks. Besides the tourist market, the Nyamwezi (in former times) carved thrones for their chiefs. The Masai make shields with intricate geometric designs. Zanzibar doorways with their geometric patterns offer a glimpse of the island's Arabic history and tradition.

### 19 SOCIAL PROBLEMS

Many social ills are linked to poverty, weak law and order, discrimination, and cultural beliefs such as witchcraft. The scarcity of good jobs means that husbands look for work in South Africa, girls are vulnerable to early marriage and prostitution, and children often are forced to work in conditions of servitude. Men who have worked as migrants often return home with the AIDS virus and infect their partners. Corruption on grand and petty levels undermines economic growth. Nearly 20% of the national budget is lost each year to corruption, and because of corrupt and ineffective police, people turn to street justice. In 2006 a mob burned a man who was caught stealing two chickens.

Discrimination hurts marginalized members of society such as the handicapped. Albinos are deliberately killed for their body parts, which are trafficked for their presumed powers of witchcraft. Older women are subject to accusations of witchcraft and there is low tolerance for homosexuals. Tanzania has welcomed some 600,000 refugees from Congo and Burundi, but their presence has placed additional stress on land and has caused resentment owing to differential treatment from international aid agencies. The negative impact of HIV/AIDS cannot be overstated. The disease afflicts some 3.5 million persons. The absorption of more than 2 million AIDS orphans by family and relatives has strained family life and persons living with AIDS face societal discrimination in hiring and services.

### 20 GENDER ISSUES

Women do most of the work, have fewer privileges under the law, and as many as 25% report physical and sexual violence since the age of 15. Wife beating is considered acceptable. Though illegal, as many as 15% of girls are subjected to female genital mutilation (FGM) often performed by *Ngaribas*, traditional practitioners. A concerted movement led by Tanzanian and international nongovernmental organizations (NGOs) to end FGM has successfully reduced the practice from 18% to 15% during the period from 1995–2005.

In spite of these issues, Tanzanian women enjoy greater social status than in many neighboring countries. After the 2005 elections, women occupied 91 of 320 parliamentary seats (nearly reaching the 30% constitutional guarantee), 7 ministe-

rial and 10 deputy ministerial posts including Finance, Foreign Affairs, and Justice. Seven women serve as justices on the High Court and one on the Union Court of Appeal. Also, many women engage in trade and keep their earnings for themselves and their children. Girls must be at least 15 years old to marry, wives must register their official approval before their husbands take a second-wife, and Muslim husbands can no longer simply declare "I divorce thee" three times before a divorce occurs. Although many women are not aware of their rights, they have recourse to a marriage reconciliation board, and they are entitled to inheritance when their husbands die.

# TIGRAY

**PRONUNCIATION:** TIH-gray

**ALTERNATE NAMES:** Tigre, Tigray, or Tigrinya

**LOCATION:** Tigray state (Ethiopia), Eritrea

**POPULATION:** 4.3 million in Ethiopia, 2.3 million in Eritrea

**LANGUAGE:** Tigriñña, Amharic

**RELIGION:** Christianity

**RELATED ARTICLES:** Vol. 1: Eritreans; Ethiopians

## <sup>1</sup> INTRODUCTION

The Tigray (Tigre, Tigray, or Tigrinya) have a history that goes back before the time of Jesus Christ. Over the past two thousand years, all the Ethiopian emperors have been either Tigray or Amharas (the ethnic group in Ethiopia most closely identified with the Tigray). According to Tigrayan, as well as Amharan, history, the Axumite empire, which later became the Ethiopian empire, was founded by Menilik, the son of King Solomon of Israel, and Queen Sheba (or Saba). According to this history, it was Menilik's men who captured the Ark of the Covenant from the Israelites and brought it to Axum (also spelled *Aksum*) in what is now the Tigray region in Ethiopia, where it remains to this day.

The seat of the Ethiopian empire has moved over the centuries. It has been located in a Tigriñña-speaking area (also spelled Tigrinya); in other times it has been in an Amharic-speaking area. In the 4th century, a Syrian named Fromentius was brought to Axum as a scribe in the royal court because he was literate in Greek. The court at Axum, like other courts of the ancient world, maintained an orientation toward Greek culture. Fromentius's influence went far beyond that of a scribe. He was a Christian, and his conversion of the court spread this religion to most of the Tigriñña, and later to the Amharic-speaking areas. After the collapse of the Mediterranean worlds of the Greeks and the Romans, the Ethiopian empire had less contact with outside centers of culture. During the Middle Ages in Europe, the Ethiopian empire was known as the home of legendary Christian ruler, Prester John of the Indies.

Between 1884 and 1891, Italy attempted to conquer Ethiopia, in an effort to become a colonial power but lost at the battle of Aduwa (a town near Axum). Emperor Yohannes did, however, cede the region that is now the heart of Eritrea to Italy as part of a strategy of solidifying Christian power in the south. In 1936, Italy added the remainder of Ethiopia to its holdings. With the expulsion of Italy in 1941, Eritrea was officially made a province of Ethiopia. A struggle for Eritrean independence from Ethiopia began in the 1960s and finally succeeded in 1991. Today Tigriñña is the dominant language of the Tigray region of Ethiopia. Tigriñña and Arabic dominate in neighboring Eritrea.

The Tigray and the Amhara (as co-inheritors of the Ethiopian empire) have represented the political elite of the country, except during a brief period of Italian colonial rule (1936–1942). Until the Empire ended with the Marxist revolution and Haile Selassie's death in 1974, all emperors were either Amharas or Tigrays. In the post-empire period, many Tigray became part of the Eritrean Liberation Front and Tigrayan People's Liberation Front, which for a time became the most powerful antigovernment force. Since the ouster of the socialist govern-

ment of Mengistu Haile Mariyam in 1991, Tigray have dominated the Ethiopian government.

## 2 LOCATION AND HOMELAND

Today, Tigrinya speakers number about 6.6 million and are concentrated in Tigray state (Ethiopia) and in Eritrea. The regions of Ethiopia and Eritrea where most Tigrinya speakers live are high plateau, separated from the Red Sea by an escarpment (cliff-like ridge) and a desert. In good years, rainfall on the plateau is adequate for the plow agriculture engaged in by the majority of Tigray. However, when rainfall is low, the region is subject to disastrous droughts. Approximately 80 per cent of the Tigray live in a rural setting. It is these Tigray who are discussed here.

A significant number of Tigray still live in the Sudan, where they moved as refugees from the Ethiopian civil war and the Eritrean war of independence. Tigrinya speakers live in many urban centers of the United States and Europe, notably Washington, D.C. and Minneapolis.

## 3 LANGUAGE

Tigrinya, the language spoken in Tigray, is from the Semitic family of languages, and is related to Arabic, Hebrew, and Aramaic (the language spoken by Jesus Christ). To the north of the Tigrinya speakers live people who speak the closely related language known as Tigre. Amharic, the official language of Ethiopia, is so closely related to Tigrinya that most Tigray have little difficulty communicating in Amharic. Tigrinya, Amharic, and the liturgical language Gi-iz are written with the same script. Many of the letters used in writing these languages derive from ancient Greek. Many young men learn to read and write while studying to become deacons and priests. Between World War II and 1991, public schools taught Amharic and English. After 1991 public schools put an emphasis on local languages. Only a minority of rural Tigray attend school.

Most Tigray names have specific meanings. Some examples appear in the accompanying table. Generally, people refer to one another by their first names. If one wished to distinguish between several people with that name, one would add the person's father's name. Abraha, for example, becomes Abraha Gebre Giyorgis, meaning, Abraha is the child of Gebre Giyorgis. If a further distinction must be made, the grandfather's name could be added, for example, Abraha-Gebre Giyorgis-Welede Mariyam. Men's and women's names follow the same rules, with the exception that wives are often given new names by their mothers-in-law when they first come to live with the husband's family. This applies only to the first name; distinguishing names (father's, father's father's, etc.) remain the same.

Some examples of Tigrinya names include:

NAME	MEANING
Abraha	the dawn
Atsbaha	the sunset
Gebre Giyorgis	granted by Saint George
Gebre Yesus	granted by Jesus
Gebre Selassie	granted by the Holy Trinity
Gidey	my share
Mitslal Muz	shadow as sweet as the banana
Haile Mariyam	the power of Mary
Welede Mariyam	child of Mary
Zenabu	rains

Most names represent things of high and positive value. In this context, a few names would appear to be strange. For example, a name such as Gidey (my share) is often given to a child if the family's earlier children have died. By naming a child Gidey, one could be seen as saying: "God, you have already taken your share: let this child be *my share*."

## 4 FOLKLORE

Most Tigray place a high value on verbal skills. Poetry, folktales, riddles, and puns are central to entertainment. A person who has returned from studying at a monastery and can display a facility with *qene*, the art of "poetic combat," is much sought after for public gatherings. One indicator of the value placed on verbal skills is that the heroic figures of folklore are often known for the cleverness of the poetic couplets they composed. At a wedding, a *qene* expert might give a greeting that on the surface complemented the guests, but by a small change in pronunciation state that they are sitting on a royal dunghill. Riddles are an endless source of pleasure. This value on verbal cleverness is also seen in royal figures and saints. The Ethiopian saint Tekle Haymanot ("sower of the faith") is depicted as having verbally outwitted the devil. Another Ethiopian saint represents a contrasting heroic quality. Gebre Memfis Qudus ("granted by the holy spirit") gained sainthood by showing extraordinary compassion. The future saint was a monk who wandered among the wild animals. During one of Ethiopia's droughts he came upon a bird that was dying of thirst. The monk was so moved by the bird's plight that a tear formed un-

der his eye. He allowed the bird to drink the tear. This bird was actually the Holy Spirit. These two heroic figures, Tekle Haymanot and Gebre Menfis Qudus, express two virtues—one of the mind, the other of the heart—highly prized by the Tigray.

## 5 RELIGION

Many people think of Christianity in Africa as a European import that arrived with colonialism, but this is not the case with the Tigray (or with the Amhara). The empire centered in Axum and Adowa was part of the Mediterranean world in which Christianity grew. Fromentius's 4th-century arrival in Axum was roughly contemporary with St. Patrick's arrival in Ireland and predated the arrival of Christianity in most of Europe by hundreds of years. Many Tigrayan churches were cut into cliffs or from single blocks of stone, as they were in houses of religion in Turkey and in parts of Greece, where Christianity had existed from its earliest years.

The church is a central feature of communities and of each family's daily life. Each community has a church with a patron saint. There is a close relationship between the community of worship and the community of citizenship. Until recent years, a town meeting was held just beyond the walls of the churchyard after Sunday mass. Members of the community moved from worship directly to the discussion of such topics of community governance as when to repair a village road or how to collect the taxes. Today's administrative structure retains the sense of community participation, but separates administrative and legislative meetings from the church.

Tigray, like members of other culture groups, often justify action on the basis of long-standing practice of belief. An example of a traditional Tigray explanation of an individual's symptoms of illness would be that he or she was possessed by a *zar* spirit. Another traditional belief is that some people—*Budda* and *Tebib*—have the capacity to unknowingly cause another person to have misfortune when they feel envy toward that person. Such beliefs are comparable to the “evil eye” in many Mediterranean cultures.

## 6 MAJOR HOLIDAYS

As in much of the rest of Ethiopia, most Tigray holidays are associated with the church calendar (Easter, Epiphany, etc.). The secular holidays include Ethiopian or Eritrean national holidays. The Ethiopian calendar runs on a different cycle from that originating in Europe. New Years entails a major holiday but comes on what in our calendar is September 11. There is also a difference in the calendar year and the clock. The Ethiopian millennium celebration fell in the European calendar year 2007. The sun rises at about 12 o'clock.

## 7 RITES OF PASSAGE

Births are attended by female friends and neighbors, and are private affairs. The infant is recognized as a member of the community in a naming ceremony held 40 days after birth for boys, and 80 days after birth for girls. Should a baby die after the naming ceremony, a funeral is required in recognition that a person has died; death in early infancy prior to the naming is not marked with a funeral.

Mothers have primary responsibility for children under age seven, who stay close to home. Boys older than seven begin accompanying their fathers to the fields. About the age of 12, children reach the “age of reason” and take on more responsi-

bility, such as helping care for younger brothers and sisters and for herding farm animals. Also at about this age, children are baptized and enter the community of religion.

Adolescence is a time when boys begin to prepare for a career. For most rural Tigray, this career will be secondary to farming. Boys often begin studying with a biblical master, known as *diakonin* or *deftera* (deacons), who have been ordained by the Bishop (*Abuna*). Many of these young men hope to become priests (*qashi*) or deacons themselves. Orthodox deacons and priests are not prohibited from marriage, so a priest is often also a husband and farmer.

Studying the Bible is not simply part of religious training; it is also a stepping stone to other forms of career advancement. Students learn to read and write Ethiopian script, traditionally a necessity for most political offices. The path through religious study toward literacy is becoming less important with the increased availability of government schools. Boys who are serious about becoming priests often become mendicants (religious beggars), and go door-to-door asking for food. Because religious roles are not available to women until late in life, religious study is not an avenue to literacy for girls. For boys, studying, begging, and becoming a deacon are also steps toward careers such as medicine. Most diagnosis of illness and prescription of cures is done by *deftera* (deacons or diviners) who have left formal religious work. Whether Bible students or not, adolescence is a time for young people to develop a reputation for competence, and to show that they are prepared to become good heads of households (for women, *ba-altigeza*, and men, *ba-algeza*). Young women demonstrate culinary skills and take care of their younger brothers and sisters. Young men are expected to accumulate a sum of money.

With adulthood come new responsibilities. One of the signs of adulthood is community citizenship, that is, attendance at village meetings after church on Sunday mornings. Other signs are marriage or becoming a deacon.

The death of a person requires a funeral. Funerals, with ceremonies in both the village and the church, normally take place before the sun sets on the day following death.

## 8 INTERPERSONAL RELATIONS

Tigriñña uses an elaborate system of greetings to indicate honor, the closeness of the relationship, and gender. There are ten personal pronouns people use to address one another. The choice of greeting is important in establishing and maintaining good relations. When meeting a stranger whom one judges may deserve some special respect, one might decide to address him with *khamihaduru* (“How are you, my honored equal?”). After learning that a stranger is due a great deal of respect, one might address him with *khamihadirom* (“How are you, my honored superior?”).

The body language employed by Tigray is even more elaborate than the terms they use to address one another. Between any two people, there is always relative rank, referred to as a *azazi-tazazi* (“servant-master”) relationship. Every person is *azazi* (servant) in some relationships, but *tazazi* (master) in others. This relative rank is expressed in both greetings and body language. One may express deference by lowering the eyes when meeting a superior's gaze. Both men and women move to lower seats, stand back to allow others to pass at doorways, or bow to show respect to others. Draping of the toga is an important part of social interaction. The socially successful

person is adept at switching the arrangement of the cloth rapidly to go from indifference to respect when moving from one person to another in a social gathering. Used European clothing has replaced the toga for many rural Tigray, requiring a corresponding replacement of clothing's communication with other body language.

When a Tigray man or woman arrives at someone's house, he or she does not knock on the door to signify he or she has arrived at someone's house; rather, he clears his throat. On hearing this signal, the occupants of the house will come out to greet the arriving guest and invite him in. Guests are usually offered coffee. The way the coffee, *buna*, is served also expresses the relative status of relationships. If the host wishes to be polite, he or she will offer the first cup of coffee to the guest with the greatest *khibri* (honor). The guest is likely to refuse the offer, expressing humility, and the sentiment that the host is even more worthy, and should therefore drink the first cup. Similar interactions take place between the next most important guest and the host, and so forth, until all have been offered coffee. Finally, the most honored person will give in and accept the cup of coffee, signally that all guests can be served, in order, giving a clear picture of the honor each is accorded.

When *sewwa* (beer) is served, quite a different social dimension is expressed—for the moment, all present are equal members of a community, and the host makes sure that all glasses are always full. While coffee is used to reinforce the differences among people, beer is used to emphasize commonality.

For rural Tigray, there is no dating in the Western sense. Expressions of romantic interest between two people are not indicated by the couple going out together. Instead, parents of both create an agreement for a union between the two households, and a marriage takes place. Parents generally take the interests of their child into account. If a person becomes divorced, he or she may date prior to entering into a second marriage.

## 9 LIVING CONDITIONS

There are still few Western-trained physicians and life expectancy is low in Tigray. An increase in government clinics has not eliminated this problem. Chronic, parasitic diseases, such as malaria and schistosomiasis, are a problem in some regions. Many children die from communicable diseases such as measles and chicken pox. However, heart disease and lung cancer are rare, and people in their 50s are at the peak of their careers. By age 70 most people have retired from active farming.

In rural areas the main prestige items purchased are mules, often as status symbols for display to people outside the community. Generally speaking, status symbols have little importance. Within a community, people know one another well, and only deeds can add to a person's reputation.

A Tigray house provides shelter and contributes to the occupant's reputation in the community. A young couple's first house is usually a *gujji*, a practical, unimpressive house that the couple builds for itself. A *gujji* is a hut of wattle and daub—rods interwoven with twigs or branches—with a thatched roof. If the couple is successful, their next house will be more elaborate, with masonry walls and domed roofs supported by heavy wooden beams. Increasingly houses are roofed with sheetmetal. A very powerful family may later add stone walls around the yard.

Guests often bring stones with them as gifts of respect, to be added to the walls. One may view the walls as a concrete demonstration of one's friends' esteem.

Even the most elaborate rural houses have neither electricity nor running water. Candles or oil lamps provide light in the evening. The masonry walls and domed roofs provide good insulation and are comfortable in both cold and hot seasons. Fires for cooking and heating are fueled by wood or dried cow dung.

An average household in a farming community produces and consumes goods valued in hundreds of dollars per year; even small purchases by Western standards, such as soft drinks, represent substantial expenditures for rural Tigray.

Trucks and buses provide nearly all the road transportation, but many places people wish to go are not accessible by roads. Thus, many people travel by foot and carry loads on donkeys, mules, and camels. (Camels and mules also carry salt tablets from salt beds below sea-level in the Danakil depression up to the 8,000 ft plateaus of Tigray, where they are loaded onto trucks for transport to other parts of Ethiopia.)

## 10 FAMILY LIFE

The people living in a Tigrayan household are a family. They are generally related to each other and have a moral responsibility for one another. A rural Tigray household can also be seen as an agricultural firm, consuming directly most of what it produces, but selling some to get cash to buy items like spices and needles. To function efficiently, each family farm needs all jobs to be filled, and relies on every member to perform her or his job effectively. If a family is large, a son or daughter may go to live with an aunt or an uncle to help operate that household's farm.

Tigray women and men both bring property into the marriage; should there be a divorce each takes out what she or he brought in, and either party may call for the divorce. Typically, domestic goods, pots and pans, etc., are claimed by the wife. Farming tools, plows, etc., are claimed by the husband. In the case of divorce, younger children tend to stay with their mother. Older children stay with their same sex parent. When a household has both a wife and a husband, the husband is expected to represent the household's views to the outside world. The wife will speak for the household if her husband is not available. When a household is headed by a single woman, she is the spokeswoman. Though women occasionally hold political office, most offices are held by men.

Women are responsible for food preparation and the care of small children. The husband is responsible for plowing, planting, and the care of animals. Older girls work beside their mothers, older boys beside their fathers. Men may help around the house, and woman may help in farming, especially in weeding and at the harvest. In the case of divorce or death of a spouse, the surviving spouse will hire the help he or she needs to keep the farm and household in operation.

Households vary widely in size, from one member (widow or widower) to twenty (extended over two or three generations). The average family has a husband, wife, and four children.

For most couples, the first marriage is arranged by a contract between the parents of the bride and the groom. After a divorce, second marriages involve contracts between the new husband and new wife. Except for priests and deacons, couples

typically do not go through a church marriage until later in life.

Tigray households go through changes as the occupants mature. A household is usually established by a new couple, with children added soon afterward. When young adults are old enough to marry, they may bring a spouse to live within the parental household. Whether the new couple joins the wife's or the husband's family's household is a matter of choice. In this manner, powerful families often add several subfamilies—the families of their married children. Most young couples leave their parents' household as soon as they can afford to farm on their own.

Families often keep dogs and occasionally keep a cat. However, these animals are generally regarded as working animals—watchdogs and mousers—and not companions.

### **11 CLOTHING**

Traditional Tigray clothing is white, which is regarded as Christian, with little adornment. For dressy occasions and church, women express piety—reverence for religious obligations—by wearing ankle-length dresses with long sleeves made of fine material. Men wear a form of jodhpur—ankle-length pants that are tight from the knee to the ankle and baggy in the upper legs and hips. A fitted, long-sleeved shirt covers the upper body. The shirt extends to just above the knee for laymen and to just below the knee for priests and deacons. Both men and women wear a *gabbi* or kutta (toga) draped around the shoulders; it can be draped in a complex set of patterns to express a person's relationship to others.

Until recently, everyday clothing was similar to dress clothes. Men wore a variety of shirts and pants under their togas. For women, everyday clothing was simply less fancy than church clothes. For many Tigrays, used clothing imported from Europe has replaced traditional clothing for day-to-day wear.

### **12 FOOD**

Probably the most important fact about food in Tigray is that there is not enough of it. Households must make up for food deficits with government subsidies. In Tigray, bread is one of the main foods. Two of the more common varieties are a thin, pancake-like bread preferred by most people, and a dense, disk-shaped loaf of baked whole wheat bread known as *kham-basha*. Pancakes are 30 to 45 cm (12 to 18 in) in diameter, and are made from many kinds of cereal grains (wheat, barley, etc.). The favorite pancake is made from a grain called *taff* that does not grow in all regions. Where *taff* cannot be grown, *kham-basha* is the everyday food. A variety of *tsebhi* (spicy stew) is eaten with the bread. Families and guests normally eat from a *messob* (shared food basket), with each person breaking off pieces of bread from the side nearest them and dipping it into *tsebhi* (stew) in the center of the basket.

Special occasion foods are similar to those eaten everyday, but use higher-quality ingredients. Festive breads are made of whiter flour, and stews are more likely to include meat. *Mies*, a honey wine or mead may replace *sewwa* (barley beer).

Eating utensils, such as silverware, are not used at most meals. One uses the right hand to tear off a piece of injera (pancake) or bread and dips it into the stew (or sauce), much like eating “dip.” On festive occasions like weddings, where a large piece of meat (sometimes uncooked) is served to each guest,

a knife is provided. Cups have a variety of shapes and meaning. One of the first investments a new couple makes is a set of *finjal*, small coffee cups resembling those used to serve tea in Chinese restaurants. Beer glasses come in three basic varieties: cow horn, unglazed pottery, and glass or plastic. The *mies* (honey wine) should be served in a *berile* (special glass flask) with a long narrow neck. A Tigray saying is “*Mies* served without a *berile* is just beer.”

In Tigray, using the left hand to touch food that others will have contact with is regarded as very bad manners. The same relationship between left and right can be seen in many settings. For example, sitting on the right side of someone important is better than having to sit on the left. The right side of the church, as viewed from the altar, is holier than the left.

Some foods—pork, shellfish, and rabbit—are believed to be unfit for Christian Tigray to eat. (Most are also considered non-kosher or prohibited foods by Jews.) The justification for these food prohibitions is found in the Christian Old Testament book of Leviticus. During the 40 days of Lent, plus a 14 day cleansing period before it, observant Tigray Christians do not eat animal products, including meat, milk, cheese, butter, or eggs.

The first meal of the day is eaten shortly after rising and usually consists of leftovers from the night before. On most days, both the midday meal and afternoon dinner consist of pancakes or bread and stew (or a sauce). When people are in the fields plowing, herding, winnowing, or weeding, they bring lunch in an *agelgil* (leather covered lunch basket). Snacks generally consist of toasted grains, and are eaten as one eats popcorn.

### **13 EDUCATION**

Traditionally, boys learn to read Tigriña, Gi-iz, and Amharic as Bible students. Today, some rural boys, and a few girls, attend public schools, with a percentage of them completing high school. Children living in town are much more likely to go to school than their rural counterparts. In larger towns, such as Makelle, Aduwa, or Aksum, public education is available through high school. There are universities in Addis Ababa and Makelle in Ethiopia and in Asmara in Eritrea.

Many rural parents encourage Bible study for literacy and the career opportunities it provides. Rural parents see advantages (in terms of a non-farming career) and some disadvantages to sending their children to school in town: although the student receives an education, he or she may not return to the family farm, and thus may not support their parents in old age.

### **14 CULTURAL HERITAGE**

There are two main categories of music: church music and praise songs. Deacons sing and accompany the song with drums and a *tsinatsil* (sistrum, a rattle-like instrument) as part of the mass. Praise singers form a kind of caste—families of praise singers intermarry with other families of praise singers. Singers accompany themselves with a one-stringed instrument that is a little like a violin. Hosts often hire singers to entertain at parties, such as weddings. Guests give tips to the singers to sing, often humorously, about their friends.

Deacons dance as part of some church holidays. Women dance as entertainment on a few secular occasions. Rural men and women do not dance together in public.

Passages from the “Book of Psalms” are frequently brought into discussions of people’s behavior. Many priests and deacons carry the psalms called a *dawit* (for King David) in a leather pouch.

*Qene* is an admired form of poetry known for its use of double meanings, beautiful language, and cleverness. A couplet should have a surface meaning and a deeper one. *Qene* is described as being like “wax and gold,” an analogy that refers to the process of casting gold objects in wax molds pressed into sand. In *qene*, the listener “hears the wax” and must use thought to find the gold inside. Tigray kings and princes are often remembered for their *qene* compositions.

## 15 WORK

Until recently, most rural Tigray considered farming to be the most honorable work. Today’s food shortages have made many parents rethink this proposition. Trade and government employment are seen as providing better opportunities. Those who make their living as blacksmiths, weavers, potters, or musicians are looked upon with some disfavor and suspicion. Most families farm, including those of priests and deacons. Farmers need plow animals in the Tigray region. The plow used is similar to those of Egypt further north, with a main shaft made from olive wood for strength. The plow shear is tipped with steel provided by blacksmiths. Because all farmers need plow animals, most are considered herders as well. People who can’t afford animals must form partnerships with wealthier households. Since the 1974 revolution, Tigray farming has gone through several land redistributions, aimed at equalizing wealth. Nevertheless, shortages of oxen for plowing means that some households must form alliances with others who are better off than themselves.

The calculations that go into food production in the Tigray environment are complex and daunting. Nearly all parts of Tigray are subject to drought. Rainfall varies in timing and intensity. Different soil types perform differently. Tigray select from 17 varieties of cereal crops. Each household must choose the right seeds to maximize the amount of food and to minimize the chances of having too little food in years when rain is too heavy, too light, too early, or too late for any given field. An aggressive choice of mixes of seed might lead to wealth for the household or starvation if the rains and the seeds are a bad match that year. A conservative set of choices may lead to the household not getting ahead. The calculations are comparable to what is required to manage a stock portfolio and is taken at least as serious by Tigrayan farmers.

Men are responsible for crops and women for the house and young children. Both help in the other’s domain, and household decisions are made by mutual discussion. Teenage boys do much of the herding and help with plowing. Teenage girls work alongside their mothers.

## 16 SPORTS

A sport that seems to be unique to the Tigray and Amhara is a kind of cross-country field hockey. Those who are serious about the game grow their own hockey sticks, by training saplings to grow with the proper curve. When the sapling reaches the right stage of growth, they cut the tree and shape it into a hockey stick. The game is played running across the countryside, over cattle-yard fences, and through creeks. Hockey is associated with Easter.

The game played most by the Tigray is *Timkhats*, sometimes described as chess. In the center of neighborhoods, men play it all year round, and boys play it while watching the herds. *Timkhats* is played on a grid usually scratched in the ground. Two players take turns placing markers on intersections of the grid in what might be thought of as a three-dimensional tick-tack-toe game. The rules are similar to those of the German game, *die müller*. Spectators offer advice on, and criticism of, the players’ moves.

While *Timkhats* is the most common spectator sport when measured in hours spent by the most people, soccer is the sport that captures people’s passions as they cheer for their favorite school teams and town teams.

## 17 ENTERTAINMENT AND RECREATION

While film, television, and to a large extent radio, are more a part of life in town than in rural areas, storytelling and riddles are part of the popular culture in both.

## 18 FOLK ART, CRAFTS, AND HOBBIES

Some of the most spectacular Tigray art is associated with the church. Tigray churches are famous for their architecture, with many cut into solid stone. The churches that are built of masonry are large and incorporate design features of the Par-

thenon in Athens, Greece. Icon painting—the creation of images of sacred people—is another art form associated with the church. Some deacons who have studied at *debri* (monasteries) return as icon painters. Icons are purchased by individuals and used to reinforce a relationship with a particular saint.

The major non-religious art forms are architecture and basketry. Masonry houses are meant to reflect the personality of the owner, and include details such as decorative borders below the roof line. Basketry, including the beautiful *messob* (shared-food baskets) that are the centerpieces of entertaining, are produced by women after their children have left home. Families specializing in weaving produce embroidered dresses. Some artisans and craftspeople—such as weavers, musicians, blacksmiths, and leather workers—are expected to marry within their group.

### 19 SOCIAL PROBLEMS

Since the 1970s, Tigray and Eritrea have experienced powerful social upheaval. In these two areas of greatest Tigray concentration, people have experienced a civil war, a struggle for independence, and a number of famines. Many observers believe that the human rights situation, after improving, has taken a downturn. Many challenges remain for the governments and people of Eritrea and Ethiopia.

Probably the most important social problems are associated with Tigray's food deficit and un- and underemployment. The government's attempt to combat these problems has taken two forms—relief efforts and public works—much of it in the form of terracing to improve the region's agricultural output.

Each government interprets civil rights in its own way, and government policy has gone through much transformation as it evolved from the imperial rule of Haile Selassie (1936–74), the Marxist-oriented government of Mengistu (1974–91), to the current, more democratic government. In 2008, Melles Zenawi, a Tigray, is the president

HIV-AIDS has become a significant public health issue, particularly in road towns.

Alcoholism is not widespread among rural Tigray. The *sewwa* (beer) brewed by each household is very low in alcohol content. *Mies* (honey wine) is somewhat higher in alcohol content, but is reserved for special occasions, such as weddings or entertaining political figures. *Araqi* (anise flavored brandy) is occasionally drunk to symbolize the finalizing of agreements, such as wedding contracts.

### 20 GENDER ISSUES

Under both traditional law and current law, men and women have equal rights. Under the pre-Mengistu land tenure systems rights to land were counted equally through male and female ancestral claims. On a mother's death, all of her children (male and female) had equal claim on shares of her land. The same was true in the event of a father's death. In other words, each household's holding were a mix of claims through combinations of male and female ancestors. Similarly, after a divorce each spouse kept his or her own land. Movable community property was divided equally. Nevertheless, in practice divorce often created more of a problem for women than for men. For practical reasons of sharing herding duties new households were often set up near the husband's parents. Thus a woman was more likely to have to move after a divorce.

In public life, men are usually the spokesmen for their households. As a matter of etiquette, a man will act as host. In the husband's absence, the wife will act as host. A woman and her husband are equally "owners" of the household. A woman will represent her household, before an adult son will. Ownership counts more than gender in representing the household.

There are two major settings in which men and women are seated separately. In church, men sit on the right half of the church and women on the left, from the perspective of the altar. In a community meeting people sit in three groupings. Married men, representing their households sit as a group. Female household heads sit in another. Adult men who have not yet established a household sit in yet another.

Male and female roles are quite separate. As mentioned in the Section 15, above, men have responsibility for agricultural production and women have responsibility for food preparation and childcare. While each may help in the other's domain, the responsibilities are defined.

# TONGA

**PRONUNCIATION:** TAWNG-guh

**LOCATION:** southern Zambia

**POPULATION:** 1,500,000

**LANGUAGE:** Chitonga

**RELIGION:** Christianity combined with indigenous religious beliefs

**RELATED ARTICLES:** Vol. 1: Bemba; Chewa; Zambians

## 1 INTRODUCTION

The Tonga live in southern Zambia in a corridor along the Zambezi River. The name “Tonga” is apparently a Shona term which means “independent,” a reference to the fact that the Tonga people were a people without chiefs before the era of colonization. While many other ethnic groups in southern Africa had developed centralized forms of political organization, the Tonga recognized no political leaders as chiefs and preferred to live in dispersed homesteads rather than in villages. The Tonga belong to the Bantu group of peoples, and evidence seems to indicate that they are descendants of the earlier Iron Age Bantu peoples who migrated to the southern parts of Zambia during the 15th and 16th centuries from the Congo area. Due to the fact that the Tonga were a chiefless society, many scholars argue that this reduced their power and influence in comparison to the Bemba and Chewa. Indeed, upon the arrival of colonial rule, the colonial administration appointed individuals of influence as local chiefs whom the Tonga jokingly referred to as “Government Chiefs.”

Although the Tonga are generally known as a chiefless society, there were some important people within Tonga society that wielded influence, such as the *Sikatongo*, a priest who made sure that the spirits took care of the people and made the crops grow. He could also cause rain, cure all diseases, and protect the people from all kinds of calamity. In every neighborhood (a grouping of several villages), there was also a man called the *Ulanyika*, the owner of the land. The *Ulanyika* was usually the first person to settle and live in the neighborhood. He commanded some influence in his neighborhood, and hunters gave him parts of every animal they killed within the surroundings of the neighborhood. Like all the peoples of Zambia, the Tonga came under British colonial rule at the end of the 19th century. Zambia gained independence in 1979 under the leadership of Dr. Kenneth Kaunda, who ruled Zambia until 1991 when he lost the presidency to Frederick Chiluba. After a two-term stint of five years each as president of Zambia, Chiluba was succeeded by President Levy Mwanawasa in 2001. Mwanawasa attempted to steer Zambia away from corruption that had become well entrenched during Chiluba’s rule.

## 2 LOCATION AND HOMELAND

The Tonga are concentrated in southern Zambia along the Kafue and the middle Zambezi rivers. Most of the Tonga area has low-quality soil and erratic rainfall, which makes it less significant for agricultural purposes. The area is sparsely populated, except in the Gwembe Valley region of the middle Zambezi and areas along the Kafue River and the line of rail on the plateau. Most of the Tonga region is a plateau of high altitude ranging from 900 m to 1,500 m (3,000–5,000 ft) above sea level. Some

areas of the plateau provide favorable environments for agricultural and pastoral living. The agricultural cycle is centered around a single rainy season which begins in November and ends in April. While on average the region gets about 65 cm to 90 cm (25–35 in) of rainfall per year, there have also been years of drought and years of flooding, with rainfall as low as 25 cm (10 in) and as high as 125 cm (50 in). In terms of population, the Tonga account for 15% of Zambia’s total population, currently estimated at 11.5 million people.

## 3 LANGUAGE

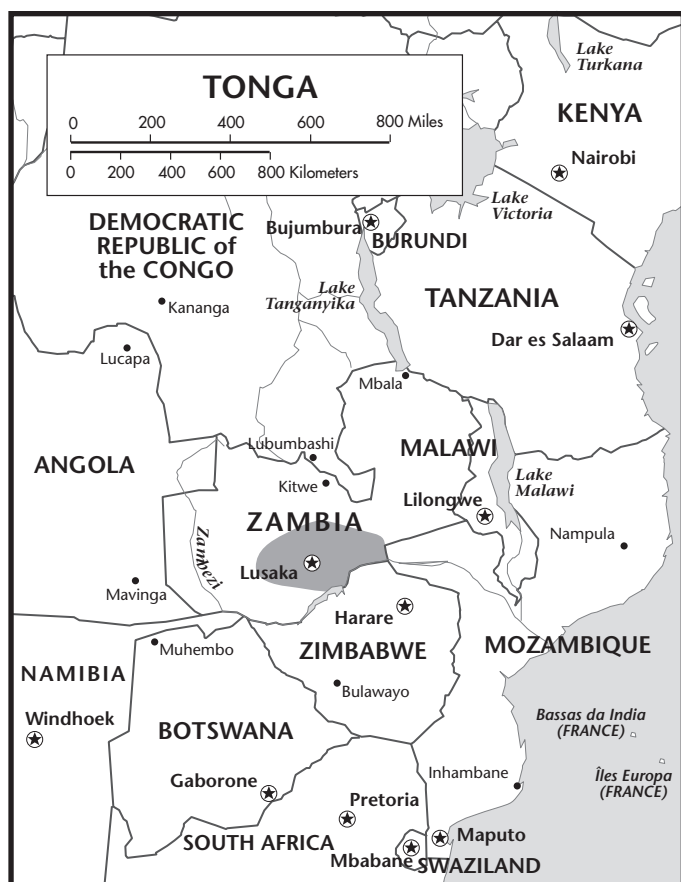

Linguistically, the Tonga people are part of the Bantu language family. The Tonga language is known as Chitonga and has a substantial number of words that are similar in many respects to other Bantu languages such as Bemba, Chichewa, and Luyana. For example, “to write” in all three languages is *kulemba*; a chicken is known as *a’nkoko* in Bemba, *nkuku* in Luyana, *nkhuku* in Chichewa, and *inkuku* in Tonga; a traditional doctor in all four languages is called *ng’anga*.

## 4 FOLKLORE

The Tonga have no written history prior to their encounter with the British explorer David Livingstone in the early 1850s. Nevertheless, like many other peoples in Africa, they have a rich tradition of oral history and folklore. In almost all the villages, elders are the reservoirs of mythical stories. The stories, usually featuring animal characters, are narrated around a fire at night. They convey certain traditional principles, values and customs, and the origins of the Tonga people. One of the stories deals with the beginning of Tonga society. Contrary to popular belief that the Tonga are a chiefless society, local tradition suggests that there was once a powerful chief in the town of Monze before the arrival of the British. According to oral tradition, the first Monze chief descended from heaven and called the Tonga people, including those living outside of Tongaland proper, to join him and settle in his chiefdom centered around the present-day town of Monze. The chief was liked by most people because he had powers to heal, to cause rain, and to maintain peace by frustrating enemies through his communication with the ancestral spirits.

## 5 RELIGION

In traditional Tonga society, there is a well-developed cult of the “shades” or *muzimu*. It is believed that at death each person leaves a shade or spirit, a *muzimu*. The *muzimu* commutes between the spirit world and the world of humans. Usually the *muzimu* is integrated into society by selecting an individual within the lineage to inherit the *muzimu* at a special ritual. Witchcraft is also central to traditional beliefs in that there are some bad people and spirits in society who can cause great bodily harm to an individual through sorcery. However, many of the Tonga people have been converted to Christianity because of early mission influence and European settlement in Tongaland. Initially, there were only a few converts because the missionaries demanded complete renunciation of traditional beliefs such as polygamy, bride-wealth, ancestor worship, and witchcraft. Today, there are a substantial number of people who practice both Christianity and indigenous religious beliefs. Converts to Christianity merely add a new religion, while retaining their traditional beliefs.

## 6 MAJOR HOLIDAYS

The major national holiday in Zambia is Independence Day on 24 October. Zambia obtained its independence from Great Britain in 1964 on 24 October. During this day every year there are celebrations arranged in major urban areas and throughout the country. There is much drinking, dancing, and singing. In the afternoon, people congregate in stadiums to watch a game of soccer between major leagues, or to see the national team play a friendly match with a national team from a nearby country such as Malawi. In addition to Independence Day, Zambia also observes several other holidays (both secular and religious) which include: January 1, New Year's Day; Second Monday in March, Youth Day; March or April, Good Friday and Easter Monday; May 1, Labor Day; May 25, African Freedom Day; First Monday in July, Heroes' Day; First Tuesday in July, Unity Day; First Monday in August, Farmers' Day; December 25, Christmas Day; and December 26, Boxing Day.

## 7 RITES OF PASSAGE

Throughout Zambia today the law states that an individual becomes an adult at the age of 18. At this age an individual is allowed to vote and to drive a car. In most cases, no special ceremonies are performed to show that one has achieved adult status. In the past, most Zambian peoples had special initiation ceremonies and education for children as they attained puberty. The Tonga were no exception in this regard. However, the Tonga did not have an elaborate initiation ceremony such as *Chisungu* among the Bemba and *Chinamwali* among the

Chewa. In the traditional setting, as a girl approached puberty she was trained for her future role as a man's wife. Usually, there was a period of seclusion during which a short ceremony was observed to mark the girl's maturity, and she was given a new name to signify her adult status.

In terms of marriage, the prospective husband had to pay bride-wealth to the family of the girl, usually in the form of cattle. A man could pay two cattle or some clothing to marry a girl. Although the Tonga are a matrilineal society, the preferred form of residence is patrilocal; in other words, the husband goes to the wife's village, gives presents, and brings the wife back to his village where they set up their own household. Polygamy was encouraged, but this practice is on the wane because of the influence of Christianity and a modern economic system. Highly educated individuals feel that polygamy is uneconomic.

When a child is born it is given an ancestral as well as a Christian name, in the case of those who are Christians. A special naming ceremony may be held at which beer-drinking and dancing occur. In the old days, every baby was believed to be protected by one of its ancestral spirits. It was therefore necessary for the parents to give the baby the name of the right ancestor, which was divined by saying all the names of the ancestors to the baby until he or she cried. Whatever name the parents had spoken when the baby cried was that of the protecting ancestor, whose name the baby was then given.

Although the Tonga no longer have specific initiation ceremonies for boys and girls, there is a strong belief that children must be taught and trained for adult life, and that growing up is not a simple process of maturation. Throughout the process of growing up, children are taught proper manners by older people, including older children. During their teenage years, boys and girls are encouraged to do their separate chores according to sex roles; for example, girls' chores are to draw water from wells and fetch firewood, while boys hunt small game and fish. This is not to imply that these are always mutually exclusive tasks; there are instances when boys carry out girls' chores, and vice versa.

When death strikes, there are special rituals to be performed during burial and soon after burial to make sure that the "shade" or spirit of the dead person is reintegrated into society and does not cause harm to anybody. Devout Christians follow church dogma and sing Christian hymns and prayers at funerals.

## 8 INTERPERSONAL RELATIONS

Girls and boys who have not reached puberty are encouraged to play together. Since there is no specific instruction given on sexual matters, children are expected to acquire such information by casual observation and through experimentation on their own. People talk freely in the presence of children about sexual matters such as menstruation, pregnancy, and childbirth. In the village setting, children are even allowed to be present at childbirth during labor but are excused when the baby is about to be born. Most parents feel that sexual play between children of the same age is not a matter for concern. However, an older man and/or woman is not expected to have sexual liaisons with a girl or boy below the age of puberty since it is believed to be detrimental to the health of both parties.

When a boy who has reached puberty decides to marry, he can find his own mate, but he must inform his uncles and par-

ents to negotiate with the parents of the girl since bride-wealth must be paid. Cross-cousins of the same generation and age are in a joking relationship and may be addressed by spousal terms such as “my wife” or “my husband” and may cajole and harass each other without any recriminations. Boys sleep in the same room as their parents until age seven, when they move into their own hut. However, girls may continue to sleep in the same room as their parents until they reach puberty, or they may be allowed to sleep in the hut of an older woman, preferably a widow.

Generally, married women are expected to respect and cook for their husbands, and men are expected to take care of their wives. For example, when in the presence of men, a woman is expected to observe certain aspects of traditional female etiquette such as downcast eyes and servility. Women are also expected to dress modestly since any view of knees or thighs is thought to be an irresistible provocation. However, in urban areas many women have sought to retain their social autonomy and resist male dominance in numerous ways, such as staying single and earning a wage through a regular job or some type of home-based employment such as brewing beer.

## 9 LIVING CONDITIONS

The different circumstances of Tonga society such as short lineages, dispersed homesteads, the lack of chiefs, and their location along the line of rail from Zimbabwe to the copperbelt on soils suitable for agricultural production made it easy for the Tonga to participate fully in commercial agriculture during the colonial era. Due to the availability of a colonial market, the Tonga responded by intensifying and dramatically increasing their agricultural production. The Tonga were one of the few peoples to adopt agricultural innovations, such as ox-drawn plows and the use of fertilizer and hybrid seed, earlier on during the colonial period. Thus a relatively wealthy group of commercialized farmers among the Tonga emerged, and most Tonga chose to participate in agricultural activities rather than to migrate to the urban centers and the mines in the copperbelt. There also developed a series of smaller urban centers such as Monze, Livingstone, Makoli, Zimba, Kalomo, Mazabuka, etc., along the line of rail, which spawned a local urban elite in Tongaland. Today these urban Tonga consider themselves part of modern Zambia, the wealthy elite with modern consumption patterns such as a modern home and occasionally a car.

In rural areas, people live in isolated homesteads or villages with a few huts. In most cases, houses, granaries, and cattle *kraals* (corrals) are temporary structures which can be easily abandoned within a short period of 5 to 10 years. New sites can then be cleared and new structures raised. With the advent of commercial farming and a cash economy, some houses are of modern appearance, durable and nicely decorated. Roofing materials for such houses are corrugated iron sheets. Some of the Tonga live in small urban areas along the line of rail that passes through their territory. These are part of the sub-elite; they may own a well-stocked shop with modern goods such as sugar, tea, clothing, milk, etc. Just like in other parts of Zambia, tropical diseases such as malaria, bilharzia, intestinal worms, etc., are quite common among the Tonga.

## 10 FAMILY LIFE

Similar to many African societies, “family” among the Tonga refers to the wider extended unit rather than the nuclear family of wife, husband, and children. The extended family unit, much like a lineage or clan, cooperates in many ventures, such as farming and provision of food. In times of trouble, such as famine and drought, the extended family serves as a social safety net with members coming to each other’s rescue. In most instances, a village may be a large extended-family unit composed of members that can trace descent from a common ancestress.

Marriage is a negotiation process between two families rather than an affair of two individuals. Marriage involves the transfer of bride-wealth from the groom’s family to the bride’s family. As noted earlier, although the Tonga follow the matrilineal system of kinship arrangement, the preferred form of residence is patrilocal where, after the payment of bride-wealth, the wife moves to the husband’s village. In the traditional setting, bride-wealth is not considered a form of “buying” a wife; rather, it has three main functions. The first function is to serve as a legitimizing symbol of a marriage, much like a marriage certificate in the West. Secondly, it functions as insurance for the continued survival of the union. Both families have a vested interest in the survival of the marriage since, if divorce should occur and the wife is in the wrong, all the bride-wealth would have to be returned; or, in cases where the husband is at fault, his extended family would lose the bride-wealth after the breakup. The third function, common among patrilineal societies, is that bride-wealth serves as a mechanism to transfer any offspring from the union to the father’s lineage so that in times of divorce all the children remain with the father. Bride-wealth apparently does not serve this function among the Tonga since children remain with the mother’s lineage but are free to choose either to live with the father or the mother after divorce.

Bearing as many children as possible is the most important undertaking in a Tonga marriage since children are valued for their labor and social security in old age. While divorce is quite common among societies without bride-wealth, marriages in societies that pay bride-wealth are relatively stable. There is a general feeling these days that modern, urban life has brought increasing instability to the family and that the divorce rate is much higher than it used to be. As more girls spend more time in school, coupled with the breakdown of traditional morals in urban areas, many women are opting to be single, to break away from the shackles of traditionalism that put women in an inferior position, and to exercise their own autonomy. Polygamy, although still practiced in rural areas, is not as common as it used to be and is generally a thing of the past. However, there is a contemporary practice in urban areas where men keep mistresses or “girlfriends” outside the home, something which could easily be interpreted as men informally exercising their right to many wives. This kind of practice, however, only serves to increase the proliferation of sexually transmitted diseases such as HIV/AIDS.

## 11 CLOTHING

Clothing among the Tonga is used to differentiate the sexes. As soon as the children begin to run about, girls are given a dress or a skirt, while boys are given a shirt and a pair of shorts. Children are taught that boys and girls wear different types

of clothes, girls in dresses and boys in shorts and shirts; thus, dress marks the beginning of sex identification. But women in urban areas do wear pants and shirts just like their male counterparts, although the majority of women still prefer traditional women's clothing.

## 12 FOOD

Most of the area in which the Tonga live is rural, and the majority follow a subsistence way of life, growing maize as the main staple. Other traditional staple crops are millet and sorghum. The diet consists of *inshima* (thick porridge), taken together with a relish in the form of either meat and gravy or vegetables such as beans and pumpkin leaves. Typically a group of relatives eat from the same dish, using their fingers to break off a piece of *inshima* from the common dish and dip it in gravy before eating it. This diet is taken twice a day during the slack season, i.e., for lunch and dinner, and once a day during the agricultural season since the women are busy tending the field and have very little time to cook.

## 13 EDUCATION

Most parents send their children to a nearby primary school. Boys and girls begin their day by helping out with household chores, such as taking the cattle for a short grazing trip and/or going to draw water for the parents, in the morning before going to school. At school they learn a few basic subjects such as English, biology, and arithmetic. After 8 years of primary school, it is possible to be selected to attend a secondary school with forms 1 through 4, modeled on the British Ordinary Level General Certificate of Education. The subjects may include mathematics, chemistry, physics, and biology, among others. The few lucky students who do extremely well in government exams are selected to attend the university, or different types of colleges.

In 1976, the government of Zambia made education free in the hopes that it would be accessible to the great majority of people. The end result has been a dramatic increase in literacy rates at the national level from a low of 10% at the time of independence in 1964 to 70% at present. Some parents, especially those living in urban areas, value education quite highly and have great aspirations for their children. This is not the case for people in rural areas where children's labor, rather than their education, is more critical to daily living.

## 14 CULTURAL HERITAGE

Music, dance, and literature are part and parcel of Tonga daily life. Stories that impart much-needed knowledge and principles to the young are narrated by grandfathers and grandmothers during the early hours of the evening around a fire. Each story might have several lessons for both the young and the old. The lessons could be as varied as how to act in a clever way, how to be imaginative, how to demonstrate intelligence to win the hand of a beautiful girl, the virtue of perseverance in bringing success, and appropriate behavior in certain situations. Drumming, singing, and dancing at beer parties, funerals, and naming ceremonies are a daily activity among the Tonga. At beer parties, men and women dance together in the open.

## 15 WORK

Urban elites in the few urban areas of Tongaland mostly find jobs in the government bureaucracy. Some find jobs as teachers, nurses, office clerks, or laborers on the railway. (During the colonial era, most of these positions were taken up by Europeans and Asians.) Others engage in petty trading such as selling fish, salt, sugar, and other basic commodities in open markets. But the majority of the Tonga people remain subsistence farmers who basically produce enough for the family and a little surplus to sell for money. Some of the local farmers who have adopted Western farming techniques have become relatively wealthy and are in a special class of their own. Livestock, such as cattle and goats, are another preoccupation for the Tonga. Such livestock provide a nutritious diet but are considered mainly to be a repository of wealth. Livestock such as cattle are also important in paying bride-wealth in times of marriage.

## 16 SPORTS

Even in the most remote parts of Tongaland, soccer (locally called football) is the favored sport for boys and young men. There is usually a makeshift soccer field in each village and whenever a ball is available, boys will play soccer continuously until they are very tired. School-going girls like to play netball, a game somewhat like basketball. In well-equipped secondary schools, boys and girls play games with which students in the West are familiar, such as tennis, badminton, and gymnastics. In rural areas, boys and girls will normally devise different games and play together when they have free time from household chores.

## 17 ENTERTAINMENT AND RECREATION

The most popular game among boys and girls that have not reached puberty is playing "house," especially during the slack season when agricultural work is completed. Children build themselves ramshackle playhouses at the edge of the village and pretend they are adults, with girls taking the sex-roles of women, and boys the roles of men. Girls do the cooking and boys come to eat the food. This is part of growing up and socialization within the traditional setting.

Although game is rare, men still like to go out for hunting and fishing in the nearby woodlands and rivers, such as the Kafue and the Zambezi and the numerous tributaries of these rivers.

## 18 FOLK ART, CRAFTS, AND HOBBIES

Pottery, carvings, basketry, and mats are crafted by older men and women among the Tonga for use in their daily lives. For example, pots are made in different sizes to be used for drawing water, cooking, brewing beer, and storing grain and other foods.

## 19 SOCIAL PROBLEMS

At the time when Zambians were demanding independence from British colonial rule, one of the most prominent politicians in Zambia was Harry Nkumbula, a school teacher from Tongaland. He opposed colonial rule alongside prominent leaders such as Simon Kapwepwe and Kenneth Kaunda, both from the Bemba-speaking group. In time, Nkumbula lost favor with Kenneth Kaunda and Simon Kapwepwe and was sidelined in the new independent Zambia. Naturally, the Tonga were not

pleased and Nkumbula continued to draw support from his ethnic group, which became a stronghold of anti-Kaunda sentiments. Although the government of Kaunda did not punish the Tonga openly, few of them were invited to join the national political establishment. Despite the ethnic animosities between the Tonga and the post-independence government leadership, however, human rights in Zambia have generally been better than in other African dictatorships.

## 20 GENDER ISSUES

In Zambia, like in many African countries, the participation of women in government and other gainful economic activities is still extremely low. For example, in the 2006 poll, elected women candidates accounted for less than 15%, despite women constituting the majority of voters. Girls are also marginalized in the educational system, with 11% of girls aged 15 to 24 illiterate compared with 8% of boys. However, the Zambian government is slowly moving in the right direction in as far as gender issues are concerned in the sense that a National Gender Policy and a bill on gender-based violence have been approved. These efforts will somewhat assist in helping to empower women and bridge the gender gap.

In traditional Tonga society a man is considered to be the head of the household/family. This is a role assigned to men who are viewed as natural leaders and decision makers at the household level, even in cases where men may not be knowledgeable. When a wife makes a decision within the home she is supposed to keep such a deviation from the norm secret. The low position of women in Tonga society is in contradiction to their matrilineal traditions in which women are supposed to command the high ground. The mix of patrilineal and matrilineal traits among the Tonga has resulted in women being subject to the disadvantages of each system without the benefits of either.

Although human rights in Zambia are enshrined in the constitution, and the Mwanawasa government has been credited with respecting the rule of law with regard to human rights, Zambia has a poor human rights record. It has been reported that the security forces routinely carry out unlawful killings, torture, beatings, and abuse of criminal suspects and detainees. Prison conditions are often very poor and life-threatening. Rallies by the political opposition have often been obstructed and violence against women and/or homosexual groups is quite common. As a matter of fact the first ever homosexual association to be formed in Zambia in 1998 (the Lesbians, Gays, Bisexual, and Transgender Association—LEGATRA) was immediately banned by the government soon after its formation.

# TUAREGS

**PRONUNCIATION:** TWAH-regs

**LOCATION:** Saharan and Sahelian Africa (mostly Niger, Mali, Algeria, Libya, and Burkina Faso)

**POPULATION:** Approximately 1.2 million

**LANGUAGE:** Tamacheq

**RELIGION:** Islam, combined with traditional beliefs and practices

**RELATED ARTICLES:** Vol. 1: Algerians; Burkinabe; Libyans; Malians; Nigeriens

## 1 INTRODUCTION

The Tuareg, a seminomadic, Islamic African people, are best-known for their men's practice of veiling the face with a blue, indigo-dyed cloth. Hence, early travel accounts often referred to them as "the Blue Men" of the Sahara Desert, the region where many Tuareg live. Tuareg are believed to be descendants of the North African Berbers and to have originated in the Fezzan region of Libya. They later expanded into regions bordering the Sahara and assimilated settled farming peoples from regions south of the Sahara into their traditionally stratified, hierarchical society. Tuareg traded with these populations and also, in the past, raided them for slaves, absorbing the slaves into their families. Therefore, today Tuareg display diverse physical and cultural traits, ranging from North African Arabic influences to influences from Africa south of the Sahara.

The Tuareg came to prominence as livestock-breeders and caravanners in the Saharan and Sahelian regions at the beginning of the 14th century, when trade routes to the lucrative salt, gold, ivory, and slave markets in North Africa, Europe, and the Middle East sprang up across their territory. As early as the 17th century AD, there were extensive migrations of pastoral nomadic Berbers, including the two important groups related to contemporary Tuareg: Lemta and Zarawa. Invasions of Beni Hilal and Beni Sulaym Arabs into Tuareg Tripolitania and Fezzan pushed Tuareg southwards to the Air Mountains, located in contemporary Niger Republic. Among these was a group of seven clans, allegedly descending from daughters of the same mother. There are "matrilineal" or female-based forms of inheritance and descent, which trace property and family ties through women, and many myths and rituals emphasize founding female ancestors. These institutions counterbalance more recent "patrilineal" institutions introduced by Islam, which emphasize male-based family ties and inheritance of property from father to son.

By the late 19th century, most trade from the Saharan interior had been diverted to the coast of Africa by the ocean routes. European explorers and military expeditions in the Sahara and along the Niger River led to French domination and incorporation of the region into French West Africa. By the early 20th century, the French had brought the Tuareg under their colonial domination, abolished slavery, and deprived Tuareg of their rights to tariff collection and protection services for trans-Saharan camel caravans.

Since the early 1990s, Tuaregs in Niger and Mali have sought either autonomous desert states or independence. In both countries, Tuaregs have been disappointed with the responses of national governments to serious droughts in the 1970s and

1980s, when many Tuaregs lost all or most of their animals. In Niger, Tuaregs also sought a greater portion of uranium revenues, as uranium comes from the historic Tuareg homeland in the Air Mountains. Peace accords were signed in both countries in 1995, but sporadic fighting began again in 2007.

## 2 LOCATION AND HOMELAND

Most Tuareg today live in the contemporary nation-states of Niger, Mali, Algeria, Libya, and Burkina Faso, where they are ethnic minorities. For example, Tuaregs constitute about 8% of the population of Niger. The total population of Tamacheq-speakers who identify themselves culturally as Tuareg has been estimated to be about 1 million. The Saharan and Sahelian regions of southern Algeria, western Libya, eastern Mali, and northern Niger where most Tuaregs live includes flat desert plains; rugged savanna and desert-edge borderlands, where agriculture is possible only with daily irrigation; and volcanic mountains. The major mountain ranges are the Hoggar Mountains in Algeria, and the Air Mountains in Niger. Climatic features include extreme temperatures (up to 55°C or 130°F in the hot season), aridity and erratic rainfall (often less than 25 cm or 10 in of rainfall each year). Many herds of animals were decimated in the droughts of 1967–73 and 1984–85. During the brief cold season, there are high winds and sandstorms. Recently, many Tuareg have migrated to rural and urban areas farther south, due to natural disasters of drought and famine, and political tensions with the central state governments of Mali and Niger.

## 3 LANGUAGE

There are numerous dialects of Tamacheq, the major language, which is part of the Berber language family. A written script called Tifinagh is used in poetry and love messages and also appears in Saharan rock art and on some jewelry and musical instruments. Many contemporary Tamacheq-speakers also speak Songhay, Hausa, and French, and read Arabic.

Significant in Tuareg identity are names referring to the pre-colonial social categories based on descent and inherited occupational specialties, which remain important in rural communities. For example, *imajeghen* (nobles) refers to those of Tuareg of aristocratic origin. *Imghad* refers to those of tributary origins, similar to the European category "vassal," who in the past raided for nobles. *Inaden* refers to the smiths/artisans. *Iklan* and *ighawalen* refer, respectively, to peoples of various degrees of servile and client or "serf"-like origins, who in the past worked for and paid rent to nobles. In principle, individuals are supposed to marry within their own social category, but this practice has been breaking down for some time, particularly in the towns.

## 4 FOLKLORE

There are many proverbs, riddles, myths, and folk tales among the Tuareg. These are usually recited orally, by smiths/artisans and women in the evening at home. Animal tales depicting human moral dilemmas are used to socialize children. They feature the jackal, hyena, and rabbit—animal characters widespread in African folklore. Many Tuareg groups recognize mythical female founding ancestors such as Tagurmat, who fought a battle on Mount Bagzan in the Air region, and whose twin daughters allegedly founded the herbal healing profession. Other stories depict mythical Berber queens and

ancestors such as Tin Hinan in the Hoggar Mountain region of southern Algeria; and Kahena, who allegedly fought the Arab invaders. Another popular figure in myth and folk tales is Aligouran, said to be the author of messages and drawings on rocks throughout the Sahara. Aligouran is portrayed in a series of tales about the adventures of an uncle and his nephew. Other heroes are Boulkhou, an early Islamic scholar who built the first mosque and sank the first well in the Air Mountain area; and Kaousan, leader of the 1917 Tuareg revolt against the French. Many stories are about spirits, called *jinn*, who are believed to trick humans traveling alone in the desert.

## 5 RELIGION

Most Tuareg are Muslims, but religious practices generally incorporate pre-Islamic beliefs in jinns, spirits that mediate interactions between humans and the natural world, as well. Most spirits are considered evil, the cause of many illnesses that require healing by special exorcism rituals featuring drumming and songs. Some Tuareg perform divination and fortune-telling with cowrie shells, lizards, mirrors, and the Quran. Also, smiths/artisans play important roles in many Tuareg rites of passage, alongside Islamic scholars.

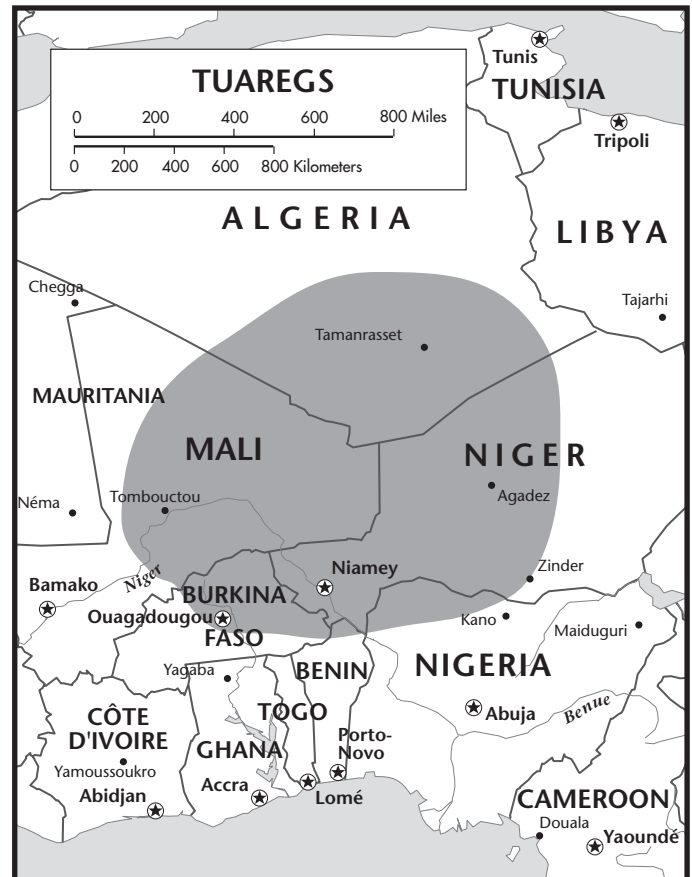

Islam most likely came from the west and spread into the Air Mountain region in the 7th century AD. Tuareg initially resisted Islam and earned a reputation among North African Arabs for being lax about Islamic practices. For example, local tradition did not require female chastity before marriage. Today most Tuareg women freely go about unveiled in public, and women may independently inherit property and initiate divorce. Islamic scholars, popularly called *marabouts*, are believed to possess a special power of blessing, called *al baraka*. They educate children in Quranic verses, officiate at rites of passage and Muslim holidays, and practice psychosocial counseling and, in rural areas, Quranic law.

## 6 MAJOR HOLIDAYS

Important holidays the Tuareg celebrate include Muslim holy days, as well as secular state holidays. Tabaski commemorates the story (from the Bible as well as the Quran) of Abraham's sacrifice of a ram in place of his son. Each household slaughters a goat or ram, feasts on its meat, and prays at the prayer ground. Tuareg celebrate Ganni (also called Mouloud in the Muslim world), the Prophet Muhammad's birthday, by special sacred and secular songs and camel races. The end of the month-long Ramadan fast, during which Tuareg neither eat nor drink from sunrise to sundown, is celebrated by animal sacrifice, feasting, prayer, and evening dancing festivals.

## 7 RITES OF PASSAGE

Principal rites of passage are namedays, weddings, and memorial/funeral feasts. In addition, there is a ritual marking men's first face-veiling. Namedays are held one week following a baby's birth. On the evening before the official nameday, elderly female relatives take the baby in a procession around the mother's tent and give him or her a secret Tamacheq name. The next day, while a smith woman shaves the baby's hair in order to sever the baby's ties to the spirit world, the *marabout* (Islamic scholar) and the father give the baby his or her official Arabic name from the Quran at the mosque. The *marabout* pronounces the baby's official Quranic name at the same mo-

ment as he cuts the throat of a ram. There follow feasts, camel-races, and evening dancing festivals.

Weddings are very elaborate. They last for seven days, during which the groom's side of the family arrive in the camp or village of the bride on gaily decorated camels and donkeys, and elderly female relatives of the bride construct her nuptial tent. At weddings, there are camel-races and evening festivals featuring songs and dances. These are accompanied by a drum called a *tende*, constructed from a mortar covered with a goat-skin and struck with the hands; and a calabash (gourd) floating in water, struck with a baton. These musical instruments are symbolically associated with romantic love, and their music is opposed to the sacred music and prayer identified with Islam. The wedding festivals provide an opportunity for youths of diverse social backgrounds to initiate romantic relationships outside of official marriage.

Mortuary rites are simpler than namedays and weddings. Burial takes place as soon as possible after death and is quickly concluded with a graveside prayer led by an Islamic scholar. Burial is followed by *iwichken* or condolences, when relatives and friends gather at the home of the deceased, and an Islamic scholar offers a prayer and blessing. Guests consume a memorial feast, consisting of foods similar to those at namedays and weddings. Sometimes, these memorial feasts are repeated at intervals following death, offered as alms in the name of the deceased. According to Tuareg belief, the soul (*iman*) is more personalized than spirits. It is seen as residing within the living individual, except during sleep when it may rise and travel about. The souls of the deceased are free to roam, but usually

A Tuareg woman, hands colored by the traditional indigo dye, performs a dance in Tombouctou, Mali. (AP Images/Ben Curtis)

do so near graves. Tuareg make offerings of date-wine at tombs of important Islamic scholars, in order to obtain the special *al baraka* blessing.

Tuareg men begin to wear the face-veil at approximately 18 years of age. This marks their adult male status and signifies that they are ready to marry. The first veiling is performed in a special ritual by an Islamic scholar, who recites verses from the Quran as he wraps the veil around the young man's head.

## **8 INTERPERSONAL RELATIONS**

As in many African societies, greetings among the Tuareg are extremely important and elaborate. Upon encountering someone, it is considered highly impolite not to greet her or him. In the Air regional dialect, "*Oy ik?*" signifies "How are you?" (directed to a man). This is followed by "*Mani eghiwan?*" signifying, "How is your family?" and additional greetings such as "*Mani echeghel?*" ("How is your work?") and sometimes "*Mani edaz?*" ("How is your fatigue?"). The usual polite response to these questions is "*Alkher ghas,*" or "In health only." In addition, there are many nonverbal greetings, for example, extending and withdrawing the right hand (associated with religious purity) several times. Other hand signals are used at festivals to indirectly express romantic interest. Visiting is frequent in both rural and urban communities. Gift exchange between women is important as a sign of friendship.

## **9 LIVING CONDITIONS**

Since independence and the establishment of nation-states in the region in the early 1960s, Tuareg have continued to lose economic strength and power. They resisted French and, later, central-state schools and taxes, believing them to be strategies to force them to settle down so that they could be more easily controlled. As a result, Tuareg tend to be underrepresented today in urban jobs in the new economies of their nations, as well as in central governments in the region. These governments have imposed restrictions on trade with neighboring countries to protect national economic interests. Droughts and decreasing value of livestock and salt—their last remaining export commodity—have weakened a once strong and diverse local economy. Geographic barriers, economic crises, and political tensions have had an impact upon health care. Health care among Tuareg today includes traditional herbal, Quranic, and other ritual therapies, as well as Western-style biomedical clinics. However, traditional medicine is more prevalent in rural areas because many rural Tuareg, especially women, tend to be suspicious or shy of medical personnel who are of outside origins. Thus, although many rural residents desire some biomedical remedies such as antibiotics, they rely more upon traditional specialists and remedies. These include Quranic scholars who cure with verses from the Quran and psychotherapy; female herbalists who cure with leaves, roots, barks, and holistic techniques of verbal incantations and laying on of

hands; and curers called *boka* who work with perfumes and incense.

## 10 FAMILY LIFE

In rural communities, each tent or compound corresponds to the nuclear household. Each compound is named for the married woman, who owns the nomadic tent. This tent was built by elderly female relatives and provided as dowry upon the woman's marriage. She may eject her husband from the tent upon divorce. Compounds in less-nomadic communities contain diverse residential structures. These may include several tents, a few conical grass buildings, and sometimes, among the more well-to-do in settled oases, an adobe house, built and owned by men. Thus, there are significant changes in property-balance occurring between men and women upon the increasing settlement of nomads.

Most camel-herding is still done by men. Although women may inherit and own camels, they tend to own and herd more goats, sheep, and donkeys. Caravan trade is exclusively done by men. Women may, however, indirectly participate in caravan trade by sending their camel(s) with a male relative, who brings goods back to them. Men plant and irrigate gardens. Women harvest crops. Although women may own gardens and date-palms, they leave the gardening to male relatives.

Islam has had long-term effects upon the family, the role of women, and property. Unless the deceased indicates otherwise before death with a witness in writing, Quranic patrilineal inheritance prevails: two-thirds of the property goes to the sons; one-third, to the daughters. Alternative inheritance forms from pre-Islamic institutions include inheritance called "living milk herds," animals reserved for sisters, daughters, and nieces; and various pre-inheritance gifts. Clan membership allegiance is through the mother and social class affiliation through the father. Political office in most groups goes from father to son. There are relaxed relationships featuring joking and horseplay with cousins and extremely reserved relationships featuring distance and respect with in-laws. Cultural ideals are marriage within one's own social category (noble, tributary, smith, and former slave) and close-cousin marriage. In the towns, both these patterns are breaking down. In rural areas, these rules remain strong, but many individuals marry close relatives only to please their mother, and later divorce, subsequently marrying nonrelatives. Some prosperous gardeners, chiefs, and Islamic scholars practice polygynous marriage to several women at the same time.

## 11 CLOTHING

The Tuareg men's face-veil has several levels of meaning. It is, first of all, a symbol of male gender role identity and conveys important cultural values of respect and reserve. It also protects from evil spirits believed to enter through bodily openings. Furthermore, it has aesthetic importance; it is considered attractive and can be worn in diverse styles. In addition to personal preference, the style of the veil depends upon the social situation. The face-veil is worn highest (covering the nose and mouth) in order to express respect and reserve in the presence of important chiefs, older persons, and parents-in-law. Tuareg women do not wear a face-veil, but rather a head-scarf that covers the hair. A woman begins to wear this after her wedding to convey her new social status as a married woman. Other features of Tuareg dress include men's long Islamic robes in rural

areas; women's wrapper-skirts and "bolero"-style embroidered blouses; and in the towns, more varied dress, including West African tie-dyed cottons and, among more cosmopolitan Tuareg, European styles.

## 12 FOOD

On oases, crops include millet, barley, wheat, corn, onions, tomatoes, and dates. Millet, spices, and other foods are also obtained through caravan trade. Almost 95% of the daily rural diet consists of cereal, with the added protein from animal products (milk and cheese), as well as a few seasonal fruits such as dates, mangoes and melon. Dried and pounded vegetables are added to sauces. Meat is consumed primarily on holidays and at rites of passage. A very sweet, thick, and richly blended beverage called *eghajira* is also consumed on these special occasions, as well as when traveling. It consists of pounded millet, dates, and goat cheese, mixed with water and eaten with a ladle. In towns, the diet is slightly more varied but, nonetheless, still consists of mostly nonmeat protein. Along the River Niger, some fish (both dried and fresh) are consumed.

## 13 EDUCATION

Until recently, many Tuareg, particularly nobles, resisted secular schools established by French and, later, central-state governments, because the schools are associated with forced settling of nomads and taxation. Nowadays, however, more Tuareg recognize the importance of education. Many rural residents achieve at least a primary school education, and some continue on to junior high school and high school levels in towns. Very few Tuareg are represented at universities. Quranic schools are important and respected. Much traditional education also consists of apprenticeship in adult tasks with older relatives.

## 14 CULTURAL HERITAGE

In Tuareg culture, there is great appreciation of the visual and oral arts. The large body of music, poetry, and song are of central importance during courtship, rites of passage, and festivals. Men and women of diverse social origins who dance and perform vocal and instrumental music are admired for their musical creativity. But distinctive musical styles, dances, and instruments are associated with the various social categories. *Marabouts* (Islamic scholars), men, and older women perform sacred liturgical music on Muslim holidays. Youths perform more secular music on such instruments as the *anzad* and the *tende*. The *anzad*, a bowed, one-stringed lute, was traditionally played by noble women, and the *tende* drum was historically played by smiths and former slaves.

## 15 WORK

Traditionally, occupations corresponded to social origins. Nobles controlled the caravan trade, owned most of the camels, and remained more nomadic, coming into oases to collect a proportion of the harvest from their client and servile peoples. Tributary groups raided and traded for nobles and had rights to the products and offspring of nobles' animals in their care. Peoples of varying degrees of client and servile status performed domestic and herding labor for nobles. Smiths manufactured jewelry and household tools and performed praise-songs at noble patron families' weddings. They also

served as important oral historians and political go-betweens and assisted in noble marriage negotiations.

Because of natural disasters and political tensions, it is now increasingly difficult to make a living solely off nomadic herding. Thus, there is now less correspondence between social origins, occupation, and wealth. For example, many nobles have become impoverished from loss of herds. Most rural Tuareg today combine different occupations, practicing herding, oasis gardening, caravan trading, and migrant labor. Other contemporary careers include tourist art, in which many smiths are active, and house-guarding in the towns. In towns, there are a few business entrepreneurs and teachers.

## 16 SPORTS

Soccer is extremely popular among young people. Traditional wrestling has been actively promoted by the governments of Niger and Mali, and wrestling arenas exist in most major towns. Tournaments are generally held at least once a year. Finally, camel races occur at major festivals and celebrations and are considered an important expression of Tuareg cultural heritage.

## 17 ENTERTAINMENT AND RECREATION

In the towns, television, films, parades, and culture centers offer diversion. Movies from Nigeria, India, and China are popular. In the countryside, most residents make their own entertainment. Children make their own dolls and other toys; and adults dance, sing, and play musical instruments at festivals. In addition, people of all ages play board games with stones and date pits, which approximately resemble Western board games such as chess.

## 18 FOLK ART, CRAFTS, AND HOBBIES

Visual arts consist primarily of metalworking (silver jewelry), woodworking (delicately decorated spoons and ladles and carved camel-saddles), and dyed and embroidered leather, all of which are specialties of smiths, who formerly manufactured these products solely for their noble patrons. In rural areas, nobles still commission smiths to make these products, but in urban areas many smiths now sell jewelry and leatherwork to non-Tuareg such as African civil servants and European tourists, as nobles experience greater economic difficulty in supporting smiths.

## 19 SOCIAL PROBLEMS

Development programs involving the Tuareg from the 1940s into the 1970s failed miserably because they worked against the traditional pastoral herding production systems. During the 1984–85 drought, some Tuareg men, who called themselves *ishumer* (a Tamacheq variant of the French verb *chomer*, which means “to be unemployed”) left for Libya, where they received military training and arms support. In the early 1990s, they returned to their homes and demanded regional autonomy in a separatist rebellion from 1990–1995. Since that time, there has been continued sporadic fighting in some regions of Mali and Niger. Some Tuareg have been forced into political exile and refugee camps.

## 20 GENDER ISSUES

Tuareg women are known for their independence and ability to freely circulate in public spaces before marriage. In spite of the fact that the vast majority of Tuaregs are Muslims, Tuareg women do not veil. Women also exert significant influence over political and economic matters. Men are normally chiefs, but chieftaincy passes through maternal bloodlines. Inheritance of property is also matrilineal, and it is not uncommon to find women engaged in large-scale trade.

Within the household, women are generally responsible for collecting water, preparing meals, and caring for children. Many Tuareg women also have herds of goats and donkeys. They are also permitted to own camels, though camel herding is generally left to men. Women usually do not participate in long-distance caravan trades with men, and thus are left responsible for their households when men are traveling.

# TUNISIANS

**PRONUNCIATION:** too-NEE-zuhns

**LOCATION:** Western North Africa (the Maghrib)

**POPULATION:** 10.25 million

**LANGUAGE:** Arabic; French

**RELIGION:** Islam (Sunni Muslim)

## <sup>1</sup> INTRODUCTION

Tunisia is one of the countries forming the *Maghrib*, the term used to describe the western part of North Africa. Modern Tunisia's name can be traced back to the ancient settlement of Tunis, which by the 13th century had developed into Tunisia's capital. Tunisia was known to the Roman and Arab conquerors as *Africa (Ifriqiyyah)*, and later *Africa* came to be used for the entire continent. Tunisia is the most westernized state in North Africa and maintains strong ties with France, the colonizing power from 1881 to 1956. Until recently, Tunisia's modern development was considered a model for other nations emerging from European colonialism.

Tunisia's history dates back to Neolithic times (the Stone Age). Anthropologists have found evidence indicating that the coastal area was populated by hunters and fishermen as well as farmers. While south of the Atlas mountains, Tunisia is now primarily desert, until 4000 BC, the region was a vast savannah with giant buffalo, elephants, rhinoceros, and hippopotamus. Neolithic civilization, which is characterized by animal domestication and agriculture, developed in the area between 6000 and 2000 BC.

The various nomadic peoples who eventually settled in the area came to be called Berbers. The Phoenician, Roman, Greek, Byzantine, and Arab conquerors all attempted to defeat or assimilate the Berbers into their cultures, with varying degrees of success. Phoenician traders arrived in the area around 900 BC and established the city of Carthage around 800 BC. From there, the Phoenicians established towns along the coast. These became centers for trade with areas as far away as Lebanon. The Berbers were either enslaved by the Phoenicians or forced to pay tribute. By the 4th century BC, the Berbers formed the largest part of the Phoenician slave army and eventually revolted as the power of Carthage weakened. In time, several Berber kingdoms were created that vied with each other for power until the arrival of the Romans in AD 24.

The Roman conquest was disastrous for the Berbers. Tribes were forced to become settled or leave the area. For this reason, the Berbers continuously resisted Roman rule. The Romans began their occupation by controlling the coastal lands and cultivating the area. It is estimated that the Roman province of Africa produced 1 million tons of cereals each year for the Roman Empire along with fruits, figs, grapes, beans, and olive oil.

Along with the Roman presence, Judaism and Christianity began appearing among the Berbers. Many Jews who had been expelled from Palestine by the Romans settled in the area, and some Berber tribes converted to Judaism. Christianity arrived in the 2nd century AD and was especially attractive to slaves. By the end of the 4th century, much of the settled areas had become Christian.

In AD 429, the German king Gaiseric, along with 80,000 Vandals (a German tribe), invaded North Africa from Spain, eventually weakening Roman control. With the weakening of Rome, Berber tribes began to return to their old lands. Meanwhile, the Byzantine emperor Justinian sent his army to North Africa in AD 533 and within a year conquered the German forces, although the Byzantines never established as firm a hold on the area as had the Romans.

The most influential conquest in the area was the invasion of Arab Muslims between AD 642 and AD 669. In AD 670, the Arabs established the town of al-Qayrawan south of Tunis as a rival to the Byzantine influence of the more northern areas. The largely Christian Berber tribes in Tunisia converted to Islam, and in AD 711 the Muslims established firmer control in the region.

The ruling Arab view of Islam at the time was that Islam was primarily a religion for Arabs and Arabs subsequently treated non-Arab converts as second-class citizens. Many political trends developed among Muslims in the Arabian Peninsula, however, that rejected the Arabism of the ruling Umayyad dynasty in favor of strict equality for all Muslims. Followers of this movement, called Kharijites, spread to North Africa, and many Berbers became attracted to their message of Islamic equality and strict piety. They eventually rebelled against the Arab caliphate's control of the area and established a number of kingdoms.

In AD 750, the Abbasids—who had succeeded the Umayyad dynasty—spread their rule to the area and appointed Ibrahim ibn al-Aghlab as governor in al-Qayrawan. The Aghlabi dynasty was a perfect example of what has been called the Judeo-Islamic culture of the Muslim world. A thriving Jewish community with a long intellectual tradition existed in Muslim Spain and North Africa, and there was a great deal of interaction between the two communities.

Al-Qayrawan became a great center of learning, attracting students from all over the Muslim world. In the 10th century, Constantius Africanus, a Christian from Carthage, went to Italy and introduced the advanced Islamic learning to Europe. The works of the ancient Greeks, which had been translated long ago by the Arabs and studied as major texts, were now translated into Latin, thus reintroducing the Greek works to Europe.

To the west of Aghlabi lands, the Kharijites, under Abd al-Rahman ibn Rustum, established a Rustumid kingdom from AD 761 to AD 909. The leaders were elected by the leading citizens of the town and gained a reputation for honesty and justice. There was much support for scholarship, astronomy, astrology, theology, and law. By the end of the 9th century, Ismaili Muslims (Shia Muslims who followed a more esoteric and mystical interpretation of Islam) led a revolt against the established Sunni rulers in Tunisia and the rest of North Africa. In AD 909 the Ismaili forces established the Fatimid Dynasty in North Africa, first at al-Qayrawan and later in Cairo, Egypt.

The Fatimids were more interested in the lands to the East and left Tunisia and neighboring Algeria to Berber rule. However, considering the conflicting loyalties of the different tribes, conflict became inevitable. In the 11th century, the Fatimids sent Arab bedouins to North Africa to assist their forces against other Berbers. Eventually, the influx of Arabs promoted the Arabization of the entire area.

Nevertheless, independent kingdoms did manage to establish themselves in the area. The greatest of these were the Almoravids, the Almohads, the Hafsid, and the Zayanids. These kingdoms were all led by Muslim leaders who greatly encouraged learning and the arts.

Meanwhile, the Catholics of Spain were involved in reconquering southern Spain from Muslim control. Spain had become a cosmopolitan and pluralistic center of learning under Muslim rule. The Spanish conquest in 1492, however, fundamentally changed the character of the area. The new rulers forced all Muslims and Jews to convert to Christianity. Many fled to North Africa, and a sizable community of Jews settled in Algeria, Tunisia, and Morocco. Tunis changed hands a number of times until 1574, when Muslim troops loyal to the Ottoman Empire (based in present-day Turkey), finally established rule over Tunis.

The Ottoman empire controlled Tunisia through appointed governors, or Beys, for the next 250 years. However, by the beginning of the 1800s, real power was in the hands of the Beys, who had established the Husayn dynasty. In 1830, France invaded neighboring Algeria on a self-proclaimed “civilizing mission.” In June of that year, 34,000 French soldiers invaded Algiers, and after a three-week battle, took the city. Then, in 1835, the Ottomans re-established direct rule in Libya. In light of the brutality of the French invasion and subsequent annexation of Algeria by France, a direct threat to Tunisia’s west, and increased Ottoman power in Libya, to the east, the Tunisian leaders instituted a number of policies thought to be favorable to Europe.

Tunisia quickly attempted to modernize its government institutions and build a modern army. Tunisia took huge loans from French banks in order to pay for the reforms. Mustafa Khaznadar, the prime minister and treasurer at the time, unscrupulously cooperated with French banks to build up a large personal fortune while allowing France to charge extortionately high interest rates for its loans. This provided France with a lever to further its colonialist goals in Tunisia.

Eventually, as Turkish power weakened worldwide, Europe began imposing reforms on Turkey as well as Tunisia designed to make the economic environment more favorable for European exploitation. Meanwhile, the Tunisian government’s policies of assuming huge loans from an obliging France, as well as famines and the plague, finally led to its bankruptcy. In 1868, Tunisia was forced to give up control over its financial affairs to a commission of French, British, and Italian bankers called the International Financial Commission (IFC). The Europeans restructured Tunisia’s economy to provide payments to the European banks. Lands, for example, were confiscated from Tunisians and sold to Europeans.

In 1878 at the Congress of Berlin, Britain and France secretly agreed to allow each other the “right” to take over certain Ottoman territories. Britain took Cyprus, and France was given Tunisia. France, however, had to wait until 1881 for an excuse to invade Tunisia from Algeria. Using the pretense that tribesmen from Tunisia had raided in Algeria, France sent more than 40,000 troops to take over Tunis. In the south, a tribal leader named Ali ben Khalifa, with the help of Ottomans in Libya, held out until 1883.

France established what it called a “protectorate” in Tunisia, creating a model to be followed by a number of European countries thereafter. The leaders in the country were allowed to remain in power and personally profit from the occupation as long as they provided legitimacy for France’s presence.

Unlike the brutal occupation in Algeria, the colonization of Tunisia was a more gradual affair. Parallel institutions were created for Europeans and Muslims. French corporations moved in to take over the best land. The previous inhabitants of these areas were then hired as low-wage earners for the French corporations.

As in most occupied Muslim territories, a new nationalist class composed of Western-educated leaders developed in Tunisia. At first, they carefully asked for more rights and greater equality with the Europeans, never challenging the French occupation of the country. This made them more popular with the elite Tunisians, who also had been educated in the West, than with the overwhelming majority of Tunisians, who led a much tougher existence under occupation. In order to broaden their appeal, the nationalists, who called themselves the “Young Tunisians,” also began advocating the rights of Tunisian workers.

During World War I (1914–18), more than 60,000 Tunisians joined the French army to fight in Europe, expecting more rights upon their return. They were sorely disappointed, however, thereby increasing support for the nationalists. As the Young Tunisians became more popular and organized themselves into political parties, they were able to exert greater political influence on Tunisians, through newspapers and direct petitions to the government. The French began to take tougher action against them and on 9 April 1938, the French killed

122 rioting Tunisians and many prominent nationalists were arrested.

During World War II (1939–45), the Muslims joined the French forces in opposing the Nazi invasion. Once France was quickly defeated by Hitler's forces, the local French government in Tunisia also joined Hitler's forces and allied with Mussolini's Italy.

As the Germans took over the area, they freed Arab nationalist leaders, including Habib Bourguiba of Tunisia. Germany tried to court favor with the nationalists, urging them to provide support for the fascists. Despite their profound distrust of French leaders, the nationalists unanimously refused to issue any statements of support for Germany.

Coordinated attacks by American and Free French forces from the west and British forces from the east eventually defeated the German and Italian armies in North Africa, with heavy fighting on Tunisian soil. Tunisians once again had high expectations that they would be granted independence as a reward for their steadfast support of the Allies. Bourguiba even had a personal correspondence with U.S. President Franklin D. Roosevelt, expressing his admiration of American democracy and urging American support for self-determination in Tunisia. The Allies, however, were more interested in maintaining the status quo, fearing instability if independence were granted to any colonies. The French leaders were reinstated in Tunisia, and the nationalists were once again imprisoned.

By 1952, Tunisian resistance turned violent, and many civilians—European and Arab—were killed. By 1954, the French decided to negotiate an agreement in Tunisia while exerting most of their military efforts in Algeria. Internal autonomy was provided to Tunisians for the first time since the protectorate. By 1956, Tunisia was officially independent and in 1957, the monarchy was abolished and Habib Bourguiba became the country's first president. Although France maintained military forces in Tunisia along with a large settler presence, the nationalists' gradual approach to independence was in stark contrast to the bitter war in neighboring Algeria.

After independence, Tunisia became a one-party socialist state ruled by Bourguiba's Neo-Destour (the New Constitution) Party. French law was maintained on many civil issues at the expense of Muslim sensibilities. For example, a part of the *Al Zaytuna* mosque, the center for Muslim scholarship, was incorporated into the University of Tunis, but the rest of the center was simply closed down. Tunisia announced a policy of non-alignment, allying with neither the Soviet Union nor the United States, although in practice Tunisia continued to have very close relations with France and, in recent years, with the United States.

Bourguiba personally led Tunisia to adopt Western laws and practices in public and private spheres. Polygamy, or the practice of marrying more than one wife, was outlawed. Women were provided with social rights similar to men. In order to increase productivity, Bourguiba even encouraged Muslims to stop fasting during the Muslim month of Ramadan as required by Islam.

However, Bourguiba did not extend his Westernizing policies to politics. Under his strong one-party rule, all dissension was effectively quashed, and opposition to his policies was viewed as sedition. By the 1970s, the strong-arm tactics of the government and the lack of political freedom led to a series of strikes and demonstrations by students and unions. These

were also encouraged by rising unemployment and lower standards of living resulting from the government's economic policies. By 1977 the army was called in to fight demonstrators and strikers for the first time since independence, and in 1978, 150 Tunisians were killed in clashes with security forces.

Opposition parties, some in exile and some in Tunisia, began to form. One of the most influential was the Islamic Tendency Movement (MTI). The MTI wanted to promote economic reform along with the increased "Islamization" of the state. Eventually, the government began taking stronger action against MTI activists, finally arresting their leader, Rachid al-Gannouchi, and thus causing further disturbances. The aging Bourguiba had become increasingly authoritarian and erratic in his behavior, and attempted to have the head of the MTI executed. The United States and France both intervened, fearing civil unrest if the order were carried out. Although Bourguiba at first acquiesced, he once again attempted to have Gannouchi executed and was finally deposed by his prime minister, Zine al-'Abidine Ben 'Ali, a 51-year-old former army general trained in the United States. Gannouchi was subsequently exiled from Tunisia. In 2008 Ben 'Ali remained in charge of Tunisia as president.

Ben 'Ali stabilized the situation by calling for political pluralism and respect for human rights. In strong contrast to the secular Bourguiba, Ben 'Ali publicly acknowledged Tunisia's Arab Islamic heritage. However, within a couple of years this atmosphere of trust and openness was gone and most of the leadership of the MTI (which had changed its name to *Al Nahda*) were either imprisoned or in exile. Ben 'Ali refused to support U.S. intervention in the first Gulf War in 1991. This move angered the United States and the European Union (EU) but was popular with Tunisians.

After introducing a highly restricted form of political pluralism, Ben 'Ali went on to win three landslide election victories, gaining over 98% of the vote. Facing constitutional term limits, he engineered a constitutional change that cleared the way for him to continue to run for the presidency indefinitely. Economically, his rule has been relatively successful, with Tunisia among the most liberalized economies in Africa and the Middle East. Unlike its neighbor Algeria, which has experienced varying degrees of civil war between secularist and Islamist factions since the 1990s, Tunisia has remained a reliable, relatively secular ally of Western power in the region.

## 2 LOCATION AND HOMELAND

Tunisia has a population of 10.25 million, 24% of whom are under the age of 14. Some 300,000 Tunisians live abroad, many in France. Half the population in Tunisia lives in urban areas, with the remainder in rural areas. Unlike in other North African states, the Berber and Arab populations in Tunisia are completely intermixed, and all speak Arabic.

The country is located on the northern border of the continent of Africa. Tunisia, Algeria, Morocco, and Tripolitania (in northwest Libya) together form the region of the Maghrib. The Mediterranean Sea borders Tunisia on the north and east. The country has three gulfs: Tunis, Hammamet, and Gabes. Tunisia has an area of about 164,000 sq km (63,320 sq mi) and a coastline of about 1,600 km (994 mi). To the west, Tunisia shares a border with Algeria; to the south and east, it borders Libya. Northern Tunisia is relatively fertile and mountainous.

The Dorsale mountain chain, Tunisia's branch of the Atlas Mountains, extends from the northeast to the southwest. The Mejerda River, which lies north of the mountains, rises in Algeria and drains into the Gulf of Tunis. The far south includes part of the Saharan desert.

### 3 LANGUAGE

Arabic is the national language of Tunisia. Arabic arrived with the Arab conquests of the 7th and 8th centuries, before which Berber dialects were the chief spoken languages. Berber is today used by very few Tunisians, mainly in the south of the country.

Arabic, a highly evolved Semitic language related to Hebrew and Aramaic, is spoken by almost everyone. Written Arabic is in the form of classical Arabic or a simpler version called "modern standard," which is taught in schools throughout the Arab world and is originally based on the Quran. This Arabic is used in the media, government, and literature throughout the Arab world, tying the Arab world together culturally. Tunisians also speak a North African dialectal Arabic that includes a number of slang terms, many from French. The Tunisian dialect also includes many Berber words, including the names for plants and geographic areas.

When the French occupied Tunisia, they emphasized the use of French. After independence, the new Tunisian government implemented a policy of reintroducing Arabic while maintaining the use of French. Today, French is used orally as well as in the sciences and the military and is important in education, international trade and government. About 60% of television programs are in Arabic and 40% are in French, and some of the major newspapers are printed in French. However, while most Tunisians have some knowledge of French, only an educated minority can speak it fluently.

Common women's names in Tunisia are *Leila*, *Hayat*, *Wasila*, and *Mariam*. Common men's names are *Muhammad*, *Habib*, *Moncif*, and *Ali*.

### 4 FOLKLORE

The Maghrib, including Tunisia, has many legends based on the exploits of Muslim leaders who acted as arbiters in disputes between families and tribal groups. These leaders often came from highly religious backgrounds and were considered well learned. They are called *marabouts* (holy men), and they were believed to have *baraka* (divine grace), which allowed them to perform miracles. Despite the fact that in Islam only God can bestow baraka, some marabouts have become saints in the popular mind, with sacred powers of their own and many Tunisians make pilgrimages to the tombs of these saints to ask for intercession. These tombs also act as focal points for local communities and as sites for yearly festivals, occasions for the reestablishment and confirmation of group solidarity. Many such tombs are located at or near particular landscape features, at natural springs, in forests, caves, or on hilltops, for example, suggesting links to more ancient religious beliefs. Before independence, Tunisian marabouts were very influential, but their popularity has dwindled since.

Many other folk beliefs have also lost popularity since independence, primarily because Bourguiba, the first president, encouraged modernization and discouraged superstition. Some Tunisians believe in evil spirits called *jinn*, who are said to assume the guise of animals so as not to be recognized. To ward

off these evil spirits, Tunisians wear verses from the Quran on an amulet. They may also wear the *khomsa* ("hand of Fatima"), a charm in the shape of the right hand that protects against the evil eye.

Most folklore in Muslim countries tells stories of important figures in religious history. One such story, which is also cause for annual commemoration throughout the Islamic world, is that of *al-Isra' wa al-Mi'raj*. According to legend, on the 26th day of the Islamic month of Rajab, the Prophet Muhammad traveled at night from Mecca, Saudi Arabia (then Hijaz) to Jerusalem. From Jerusalem, he rode his wondrous horse, al-Burak, on a nocturnal visit to heaven.

### 5 RELIGION

The overwhelming majority (98%) of Tunisians are Muslims. Most Tunisians belong to the *Maliki Sunni* school of Islam, introduced by the Arab invasions in the 7th and 8th centuries. There are still remnants, however, of the Muslim *Kharijite* influence in the south, which espouses a stricter egalitarianism. *Sufi* Islam, which stresses the mystical nature of the divine and which was closely connected to the monarchy, has lost much of its former influence. There are also small Jewish and Christian minorities.

Islam teaches that God (Allah) regularly sent guidance to humans in the form of prophets, and Islam accepts the earlier Semitic prophets, including Abraham, Moses, and Jesus. Muslims believe that Muhammad was the last in the line of prophets sent with the message that there is only one God. Muslims also believe in heaven and hell, the Day of Judgment, and angels. The Quran is the holy book of Muslims, and it teaches that, to get to heaven, men and women must believe in God and do good works by struggling in God's way. Belief and action are tightly bound together in Muslim literature.

The Islamic religion has five pillars: (1) Muslims must pray five times a day; (2) Muslims must give alms, or *zakat*, to the poor; (3) Muslims must fast during the month of Ramadan; (4) Muslims must make the pilgrimage, or *hajj*, to Mecca; and (5) each Muslim must recite the *shahada* —*ashhadu an la illah ila Allah wa ashhadu in Muhammadu rasul Allah*—which means "I witness that there is no god but Allah and that Muhammad is the prophet of Allah."

Most Tunisians use the Quran, *Hadith* (oral traditions relating to the words and deeds of the prophet Muhammad) and a form of *Shariah* (Islamic law) to define and regulate their behavior, social relations, and daily rituals. The practice and belief of Islam varies, with the urban middle and upper classes generally being more open to the adoption of non-Muslim practices such as Western forms of dress (like the bikini), public socializing between the sexes, and the consumption of alcohol.

As in many other parts of the Muslim world, personal piety became highly politicized in the last decades of the 20th century. Many political parties have been created in opposition to authoritarian governments in the region, using Islamic symbols to promote their legitimacy and support within society. In Tunisia, where political parties based on such factors as religion, language, region or ethnicity are illegal, the main Islamist opposition group, *Al Nahdah* ("The Renaissance"), has been banned and its leaders imprisoned or exiled. The government has also responded by increasing harassment of Muslims who

*Tunisians parade with camels during the reenactment of a Bedouin traditional wedding at the 36th Sahara Festival of Douz in southern Tunisia. The festival showcases cultural traditions, including dance, poetry, and crafts. (AP Images/Hassene Dridi)*

exhibit outward signs of piety either in their dress or behavior under the assumption that certain kinds of religious behavior, attendance at a particular mosque for example, is an indication of political opposition. This has not only begun to fracture society between the more “secular” and the more “religious”, but has also led to rising apathy and discontent towards civil society in general.

## 6 MAJOR HOLIDAYS

Tunisia commemorates secular and Muslim religious holidays. One major Muslim holiday is *Eid al-Fitr*, which comes at the end of the month of fasting called Ramadan. During Ramadan, Muslims refrain from eating, drinking, or sexual relations during the daytime in order to reflect on God and on the plight of the unfortunate. In Tunisia, perhaps more so than any other Muslim nation except Turkey, the practice of fasting is quietly discouraged by the government, although the holiday at its end, *Eid al-Fitr*, is still celebrated for three days. The other major Muslim holiday is *Eid al-Adha*, which commemorates the willingness of the prophet Abraham and his son to obey God’s command in all things, even when Abraham was about to sacrifice his son. *Eid al-Adha* signals the end of the Muslim pilgrimage to Mecca, or *hajj*, which every Muslim must attempt to undertake at least once during his or her lifetime. Religious holidays are celebrated by going to the mosque for communal

prayers and then coming home to large meals with family and visiting relatives. Islamic practice says that a part of the meat slaughtered for the feast is given to relatives and to the poor. More Sufi Islamic holidays such as the Birthday of the Prophet Muhammed and the Feast of *Ashura*, commemorating the martyrdom of the Prophet’s grandson at the Battle of Kerbala, usually involve communal visits to tombs and shrines.

Secular holidays include the Proclamation of the Republic Day (25 July); socialist May Day (or Labor Day, 1 May), which commemorates worker solidarity around the world; Independence Day (20 March); Martyrs’ Day (9 April); to commemorate a French massacre of 122 Tunisians in 1938; and a holiday to mark the final evacuation of French troops in 1963 (15 October). There is also Constitution Day (1 June), Women’s Day (13 August), and a holiday to mark the assumption of the presidency by Ben ‘Ali (7 November).

## 7 RITES OF PASSAGE

The main rites of passage are regulated by Islamic traditions. The birth of a child in Tunisia is a much-celebrated event. Immediately after she delivers a baby, a new mother is fed a creamy mixture of nuts, sesame seeds, honey, and butter, known as *zareer*. On the seventh day after the birth, guests visiting the mother and baby are given the same sweet desert in celebration of the birth. On the seventh day, it is also custom-

ary to slaughter a lamb and have a dinner party with friends and family who bring gifts for the newborn child.

Male circumcision is carried out on almost all Tunisian pre-pubescent males. The boys are dressed up in formal clothes, taken to the local hospital where the operation is quickly carried out. They are then taken home where they are visited by extended family, congratulated and presented with gifts.

Engagement can be a long and difficult process, with much negotiation over finances, etiquette and gifts. Marriage, almost universal in Tunisia, can be arranged through the extended family or according to individual choice, generally depending on the socioeconomic status of the family. Cousins are preferred, as they are seen to hold equal social status, a particularly important factor for girls. Mothers in Tunisia often search for brides for their sons in the *hammam* (public bathhouse). On marriage, the bride is taken to the newly prepared house of the groom, who then enters and consummates the union. The newlyweds are usually left alone for several days before they reappear in public society.

Pilgrimage to Mecca, a duty for all Muslims, is the most important midlife rite of passage both for men and women. The extended family is usually closely involved in helping to prepare for and fund this costly journey. Much prayer and celebration surrounds the pilgrimage, and the returnees are addressed as *hajj* (men) or *hajja* (women), terms of real respect within the community.

Death is considered a natural transition and the soul is believed to live on. Mourners are encouraged to bury a loved one as soon as possible after death. The corpse is washed and wrapped in a shroud. It is then carried by a group of mourners dressed in red to the family tomb. There the body is laid on its left side facing Mecca. Condolences are given for three days after a death, and it is understood that the mourning period is over after the third day.

## 8 INTERPERSONAL RELATIONS

While Tunisian society is relatively egalitarian, traditional manners still inform behavior and women are expected to dress and behave with modesty in public. In public, many women will wear a *sifsari* (a long plain cloth garment with head covering) over their normal clothes. Men, too, are expected to show respect to women and each other. For example, a man should not smoke when in the company of his father. Brothers might choose to frequent different cafés so as not to inhibit each other's relaxation.

Upon greeting, men shake hands with other men and with women. Two men who have not seen each other for a long time may kiss on the cheeks. Women may either shake hands with other women or kiss each other on the cheeks. Men and women, however, cannot kiss one another in public, and it is considered improper for unmarried men and women to kiss. In formal settings, it is common to greet one another using titles, mainly French—*Monsieur*, *Madame*, *Mademoiselle*, *Docteur*, and *Professeur*. The Arabic word for Mr. is *sayyid*, Mrs. is *sayyida*, and Miss is *anisa*.

Boys and girls attend separate classes until they enter college, and there is little dating until a man and a woman are ready for marriage. Male-female relations are governed by the Islamic code of modesty, and men and women avoid public displays of affection.

As Muslims, Tunisians eat and shake hands with the right hand. Tunisians enjoy bathing in the *hammams*, or public bathhouses, which they visit to socialize. These have separate hours for men and women, except in some resort towns where *hammams* are unisex for the benefit of tourists. Cafés are popular hangouts for men in the evenings. Here they smoke *chichas* (water pipes) and play cards. Both men and women smoke, but women hesitate to do so in public.

## 9 LIVING CONDITIONS

The government has actively promoted housing development and the vast majority of Tunisian families own their own homes. Most of the main Tunisian cities contain a traditional Islamic core, colonial and postcolonial suburbs, and slum areas. The Islamic urban center is comprised of the mosque as communal political locus, the market for exchange, and the public baths for health, informal networking, and relaxation.

Tunisian homes differ from region to region, although most are built of stone, adobe, or concrete because of a scarcity of lumber. Most homes have white walls and blue doors. In Tunis, the capital, it is common to find luxury homes and modern apartment buildings. Tunis is crowded, as are the other Tunisian cities, because of a growing middle class, and because former country folk have moved into urban areas. In urban areas, homes sit directly adjacent to the roads; there are no front yards and very few windows. The front doors of houses open directly onto streets. Most single-family homes are small, and it is common for neighboring walls to touch each other. Many houses are built to two or three stories to make up for the small size of the foundation. The flat rooftops are commonly used as outdoor living space. As of the early 21st century, most houses had water, electricity, sewerage, and other public services.

Surrounding the capital, many families live in *gourbis*, which are permanent tents set up for those who had once tended flocks of animals but have now settled into a sedentary life. Rural families often live isolated on their farmland and access to sufficient water was increasingly a problem in the late 20th and early 21 century. In southern Tunisia, Berber dwellings are carved out of rocks, and in Matmata homes are built more than 6 m (20 ft) underground in enormous craters that have a central courtyard. Since these homes are built out of the mud and stones that are excavated for the construction, they tend to be cool in the summer and warm in the winter. Scenes from the 1977 movie *Star Wars* were filmed there.

Tunisian cities are connected by railroads and highways, 80% of which are metalled. Tunis has a modern tram system. Railroads reach most urban centers and the mines in the southwest, and provide a link to neighboring Algeria. Tunis, Bizerte, Sfax Gabes and Sousse are all major ports. Tunisia has five international airports, with the largest located in Tunis.

The Tunisian telephone system has been automated since the mid-1980s and international calls can be placed directly from homes. However, as of 2006, there were six times as many cellular phones as land lines. The telecommunications market has been deregulated and Internet access is rising rapidly, though it is subject to government censorship.

Upon the evacuation of the French forces, Tunisia's modern health care system virtually collapsed as the vast majority of doctors, who were of European origin, left the country. Since independence, Tunisia has made great improvements in health care, although much remains to be done. In 2003, the govern-

ment spent over 7% of its budget on health care. A pyramid-like health care system was created in which the government constructed many local clinics and small hospitals that would refer more serious cases to larger regional hospitals, which, in turn, would refer the most serious cases to specialized hospitals in large cities. More than 80% of all health care provided is free. Even for those who must pay, the cost is subsidized. The greatest problem with the health care system is the concentration of facilities in Tunis. About 60% of all the country's doctors practice in the capital, leaving rural areas and other cities understaffed.

More traditional forms of health care also play a role in Tunisian society. The public baths, *hammam*, important for a variety of rituals, including engagements, weddings and pregnancy, is also a locus for medicine and healing. An innovative program of health care, and one that has received international praise, is based on the traditional postpartum visit to the *hammam* by the mother, about 40 days after giving birth. A group of Tunisian doctors adapted this custom so that postpartum women are provided with a comprehensive range of health care services for both themselves and their newborn child, and the program has been adopted nationally.

In parts of the center and south of the country especially, traditional ideas of health persist. In the practice of *Tasfiḥ*, for example, pre-menstrual girls receive seven small cuts to the knee, recite ritual language, and eat raisins soaked in the blood from the knee to encourage chastity as they enter pubescence. Just before marriage, a similar ritual is then carried out to allow conjugal relations.

## 10 FAMILY LIFE

Before the French occupation, Tunisian family life was very traditional and based heavily on kinship ties. Tunisians lived with their extended families in tightly knit communities. A mother and father would live with their children in one home, and the father's parents would usually also live with them. As the male children married, they would bring their wives to the family as well. If a daughter became divorced or widowed, she too would live with the family. Children were raised by the entire extended family, and the people in a town paid close attention to all children in case they needed anything. Marriages were conducted by negotiation between the families of the bride and the groom.

A combination of the French occupation and the country's attempt to industrialize since independence have gone a long way to break down these traditional family structures. In the cities as well as rural areas, the nuclear family started to predominate. For example, by 2004 the average family consisted of only four members, and more than 11% of family heads were women, a consequence of widowhood, divorce, single parenting, and males emigrating to work abroad.

The role of women has changed most noticeably. Women had traditionally been segregated in public life; their primary responsibilities were raising children and taking care of the home and the husband. Although this remains the popular view even among the Westernized elite, the Tunisian government has passed a number of laws giving women social rights similar to those of men.

Society, however, has found it difficult to keep up with the law. Although educated men began seeking out educated women to marry, in part because they could have careers and

bring home an additional income, the traditional expectations of women as keepers of the home and family have persisted. This has created unrealistic demands on women, who must essentially have two careers—one at home and one in the public sector. These clashes of expectations have contributed to a remarkably high divorce rate for a Muslim country—nearly 50%. Because of increased economic uncertainty, many families have begun to return to more traditional frameworks. Many marriages are still conducted within extended families, and some women have left their public careers to work at home.

## 11 CLOTHING

Two trends in clothing are visible in Tunisia. Many Tunisians dress in Western-style clothing; Western suits for men and dresses for women are common. Traditional dress, however, also remains common, particularly in the villages and among the elderly. Tunisian men often wore a *chehia* on their heads. This is a type of fez the shape and color of which vary depending on the part of Tunisia the wearer is from. The hat is made of brown or red felt and either rounded or flat-topped. The fez was made almost exclusively in Tunisia in the 19th century and exported throughout the Ottoman domains. Traditionally, men wear a *jalabiyya* (a long dress-like garment) and baggy pants.

Traditionally, women wear a *sifsari* (a long outer garment with loose folds and head covering) over Western-style dress. The *sifsari* is a practical garment, keeping women warm in the winter and protecting them from dusty winds in the summer. Country women wear a *mellia* (a large, loose head covering) draped across the head and shoulders. Berber women commonly use *kohl* (black eyeliner). Some tattoo their faces with ochre and blue designs, mainly on the forehead, cheeks, and chin. It is not strange to find women walking side-by-side in Tunis, one dressed in traditional *sifsari* and the other in a skirt and blouse. Since 1956 Bourguiba's secularization of Tunisian society and Ben 'Ali's strict clampdown on Islamism have resulted in the government officially discouraging the wearing of the *hijab* (Muslim veil) by women. As in Turkey, female government employees are banned from wearing hijab and risk losing their jobs by doing so.

## 12 FOOD

The most popular dish in Tunisia, as in all the Maghrib, is *kusksi* (couscous). This consists of semolina wheat sprinkled with oil and water and rolled into tiny grains. The grains are then steamed and ready for use in favorite recipes. Couscous can be mixed with a number of sauces (e.g., tomato sauce), and then combined with a stew of meat and/or vegetables. It is served regularly for lunch and dinner. Lamb cutlets, seafood, and shish kebabs are also common foods.

A very popular Tunisian salad is *chakachouka*, made of tomatoes, onions, peppers, and hard-boiled eggs. *Mechouia* (literally, "the grilled") is a main course that combines grilled tomatoes, peppers, and onions with olive oil, tuna fish, sliced hard-boiled eggs, lemon juice, and capers. Tunisian food is often cooked and/or served with *harissa*, a hot red sauce made from chili peppers, spices, garlic, olive oil, and tomatoes.

Tunisians cook a variety of *tajines*, stews that are cooked in conical *tajine* earthenware dishes. Spinach *tajine* consists of beans, beef, onions, tomato sauce, pepper, spinach, and egg—all combined and baked in an oven. Other varieties of *tajine*

make use of everything from chicken to prunes and honey. Reflecting the influence of the French colonial days, Franco-Tunisienne cuisine is common, especially in tourist restaurants and hotels. Seafood, especially lobster, is a prominent menu item. Tunisians commonly drink strong Turkish coffee and sweet mint tea. Pork and alcohol are both forbidden by Islamic religious code. However, alcohol is widely available and consumed, much of it produced by Tunisian companies.

### **13 EDUCATION**

One of the government's major reforms after independence was to emphasize education for children. The government adopted the French system, creating three levels of education. First, there is a six-year primary-level cycle that all students must attend. The secondary level includes a three-year comprehensive cycle. The third level includes a four-year cycle of specialized academic or technical education similar to the American university system. Students who do not go to the third level may enroll in three-year vocational cycles that teach students various technical trades. Women are considered the primary teachers of children and thus are encouraged to get an education. In agricultural areas, however, women's education takes second place to working in fields and caring for the home. Almost half of urban students are girls and nearly 40% of all university students are women, but the percentages are far lower in rural areas.

All schooling, even at the university level, is free. This includes books, school supplies, uniforms, and meals. University students in Tunisia and abroad receive stipends equal to those of a factory worker in Tunisia. However, in many cases, Tunisian students must supplement this with private funding. Classes are taught in French and Arabic, with an increasing emphasis on the latter. In the 1990s and early 2000s, English language materials were being used more frequently in Tunisian schools.

Literacy rates in Tunisia are evidence of the success of its education program. At independence, the nation had a literacy rate of only 30%. As of 2004, at least three quarters of the population over the age of 15 was considered literate, although rates for women stood at just 65% compared to over 80% for men.

### **14 CULTURAL HERITAGE**

*Malouf* is a uniquely Tunisian form of music, played on lutes, guitars, violins, and drums. It is thought that this music originated in North Africa and was exported to Spain in the 8th century. There it was influenced by Iberian folk songs and re-exported to Tunisia in the 17th century when Jews and Muslims were expelled from Spain. Today's *malouf* music is sad. Players sing along with the highly rhythmic music, and members of the audience often cry as they listen.

Tunisian literature, more in Arabic than French, has thrived. Such writers and poets as Tahar Haddad, Ali Douagi, and Aboul Kacem Chabbi have built international reputations for their work. There are increasing numbers of women writers and poets, such as Amina Sa'id and Hayat ben al-Shaykh. However, many, such as the poet Tahar Bekri, have chosen to remain outside the country owing to the lack of political freedom, thus limiting their Tunisian audience, especially if they write in French.

Tunisian film, a major focus of interest for Bourguiba, has earned a respectable international reputation. In the 1960s and 1970s, Omar Khilfi's films on anticolonial resistance, for example, were very successful and he became one of the most prolific directors in North African cinema. In the late 1970s and 1980s, a new generation of directors appeared, such as Selma Baccar, Ferid Boughedir, and Nourid Bouzid (a former political detainee). This generation focused more on sociopolitical critique, issues of gender, and comedy. The 1990s saw the rise of more women directors, including Moufida Tlatli, with a focus on women, the growing Islamism in Tunisia, and the effects of globalization on Tunisian society.

### **15 WORK**

Slightly more than half of Tunisia's population works in agriculture. Since independence, a major focus has been on expanding industrial production. This has meant a broadening of types of employment for Tunisians. Many work at oil fields, in electricity production, in cement production, and in mineral mining (especially phosphates). Investments in the food industry have produced jobs in flour milling, sugar refining, vegetable canning, and water bottling, among others. One of the major employment sectors is tourism, and students attend tourism schools and institutes of hotel management to cater to the large pool of tourists who visit Tunisia in the summer months.

Traditionally men go out to work while women are expected to work at home, processing foods or spinning wool, for example. Some women work as agricultural wage labor, where they are paid half the men's rate. Many urban women also work, in factories, offices and as professionals, but they are still expected to fulfill the more traditional duties of the housewife. While child labor is relatively uncommon, unemployment levels in Tunisia are relatively high, officially about 14% in 2007, though unofficial rates are probably considerably higher.

Although poverty has declined significantly, from an estimated 40% in 1970 to 4% in 2000, rural poverty is four to five times the urban rate and the rural population remains vulnerable to economic downturn. There is considerable rural-to-urban migration in the search for work, and there are an estimated 400,000 Tunisians working overseas, particularly in the Persian Gulf countries.

### **16 SPORTS**

Tunisia's national sport is soccer ("football"), which is both a spectator sport and played in the streets and open fields. Soccer in Tunisia is highly developed, with most towns fielding their own teams. Teams are organized into a three-tier league system. The Tunisian national team has qualified for the FIFA World Cup four times, and in 2004 it won the African Nations Cup.

Athletics is also becoming a major sport among both men and women, and Tunisian teams often win medals, particularly for long distance events. In the northern mountains, horse riding and hunting wild boar are popular. The development of tourism as a major industry has introduced and popularized such sports as scuba diving, windsurfing, and golf. Camel races are another spectator sport and are the focus of festivals, such as the International Festival of the Sahara, which began in 1910 and is held in Douz each November.

## 17 ENTERTAINMENT AND RECREATION

Tunisians hold many festivals throughout the year. Camel races are held at the International Festival of the Sahara, which is held in Douz each November. Parades are held at the festival in Nefta each April. Classical music and theatre performances are held at a festival in Dougga held each summer. In 1997 Dougga was named a UN World Heritage site. A falconry festival is held in el-Hawaria in June. Theater performances are held at the Roman theatre during the Carthage festival in July and August. The Carthage film festival is held biennially in October.

Tunisians seeking recreation often turn to water activities. They socialize while bathing in the *hammam* (public bathhouse), and they flock to the beaches that line the coast of the Mediterranean Sea. Tunisians are also increasingly subscribing to satellite television and the Internet. There is a well-developed, though government-censored, press, reflecting the high rates of literacy.

## 18 FOLK ART, CRAFTS, AND HOBBIES

Craftsmanship is an ancient tradition in Tunisia. Craftsmen make goods out of olive wood, copper, textiles, leather, wrought iron, glass, and ceramics. Pottery is made for everyday use, and molded pots are made in rural areas. Blankets, rugs, and grass mats are woven in rural areas. Hand-woven rugs and carpets are particularly popular, especially with tourists. Knotted carpets follow traditional decorative designs; Berber rugs (*mergoums*) are brightly colored and have geometric designs. Jewelry is also handmade. A very popular design is the shape of a hand, known as the *khomsa*, or the “hand of Fatima.” This is made of either gold or silver and found on earrings and pendants.

## 19 SOCIAL PROBLEMS

The greatest problems facing Tunisia today stem from continued economic stagnation and a lack of political freedom. The growing Tunisian middle class (80% of the population) is pushing for greater participation in society, for greater political freedom and pluralism, and for an expanded and more independent civil society, currently dominated by huge government funded organizations. Although Tunisia is a highly secular society and the government has banned Islamist groups, the failure of the government to positively address economic and political complaints has contributed to the growth of a religious conservatism among both urban and rural dwellers. Monitoring and controlling this has led to an expansion of the security services and a deteriorating human rights record, and in the winter of 2006–2007, security forces engaged in armed clashes with Islamist terror cells on the outskirts of Tunis.

While college studies have been emphasized as part of the nation’s education drive, this has resulted in an excess of graduates who cannot find appropriate jobs, particularly in nonscientific fields such as languages and social sciences. Unemployment and social problems related to it are expected to increase, as many educated Tunisians are unable to find suitable work. The labor market was already tight in the 1990s; it will be hard-pressed to meet the demands of the next two decades. In the past, many Tunisians emigrated to France and Italy in search of work. However, the immigration policies of European countries, in response to their own economic and

political conditions, have become stricter. Laws to further limit immigration to European nations were expected to be passed, which will certainly increase social pressures in Tunisia.

## 20 GENDER ISSUES

Gender issues in Tunisia are dominated by the Code of Personal Status (CPS) or *majalla* of 1956, a key part of Bourguiba’s program of secularization and modernization. The CPS, revolutionary for its time, regulated marriage, divorce, custody, and inheritance and profoundly changed family law and the legal status of women by significantly expanding their rights and responsibilities. For example, polygamy and forced marriage were criminalized, a minimum age for marriage for women was established, and a man’s right to divorce through simple repudiation was abolished. The result of this was that women were generally considered by law to be equal to men in terms of inheritance, ownership of property, custody of children, and divorce.

Since its passage, the CPS has been almost updated frequently, to increase separated and divorced women’s control over their minor children, establish a fund to support divorced women and their dependent families, and to allow women to marry non-Muslims, for example. The CPS therefore lies at the core of the Arab world’s most gender-progressive society.

Tunisian society is characterized by high divorce rates, around 50%, and female-headed households are common. Contraception is widely available and socially accepted. Abortion for the first trimester is fully legal (the only Arab country where this is the case). In addition, there are a number of increasingly powerful women’s political, economic, and social organizations. Tunisia’s statistics for school and higher education enrollment, life expectancy, and reproductive health are all at the high end for both Africa and the Middle East. There are significant numbers of women in politics, business, and the professions: almost half of all doctors and secondary school teachers, a third of lawyers and journalists, and a quarter of all judges are women.

In practice, women in Tunisia still face discrimination on individual and collective levels. Many working women are expected to fulfill their duties as housewives and recent research has found that sexual harassment remains ubiquitous. On the other hand, the incidence of rural teenage girls being employed as domestics or for agricultural labor is declining, mainly due to effective law enforcement.

Homosexuality is illegal in Tunisia and there is no formal lobbying focus for gay or transgender rights.

## TUTSI

**PRONUNCIATION:** TOOT-see

**LOCATION:** Rwanda, Burundi, northeastern Democratic Republic of Congo (formerly Zaire)

**POPULATION:** Approximately 3–4 million

**LANGUAGE:** Kinyarwanda, Kirundi, Swahili, French, English

**RELIGION:** Christianity (with aspects of traditional belief)

**RELATED ARTICLES:** Vol. 1: Burundians; Rwandans

### 1 INTRODUCTION

Tutsi refers to the people who live in the densely populated African countries of Rwanda, Burundi, and in border areas of neighboring countries. In Uganda Tutsis are commonly known as *Bafumbira*; in the Democratic Republic of Congo (DRC) as *Banyamulenge*. The Tutsi share many cultural traditions with the Twa and the Hutu. In fact, Tutsi, Twa, and Hutu are not only culturally similar; they also share the same language and culture.

During the period of colonial rule in Rwanda and Burundi, Tutsi and Hutu labels became associated with rigid stereotypes, although it is quite difficult to say exactly what the labels mean today. Both Tutsi and Hutu have been victims of violence that can be accurately described as genocide.

The Tutsi are said to be people of Nilotic (region of the Nile River) origin who were traditionally cattle-herding pastoralists, living the life of herders. They are said to differ physically from the Bantu farmers and Twa hunters who inhabited the region before the Tutsi arrived.

The Tutsi label is also used to refer to members of a high-ranking social category, similar to a caste. This is because in Rwanda and Burundi Tutsi came to form the majority of an aristocratic elite, even though they were a minority of the population in both countries. To further complicate things, some believe that the Tutsi and Hutu were not always ethnically different, but that they became two separate groups as a reflection of their different ways of life. Whatever their origins, people known as Tutsi came to rule others called Hutu. Lowest in this status system were the Twa, who were descended from pygmy people.

There are important divisions within the Tutsi category that complicate this picture even more. For example, in Burundi the highest status Tutsi were the *ganwa* (princes) and the people of the *Tutsi-Banyaruguru* (royal family). Lower status Tutsi, the *Tutsi-Hima*, were looked down upon by the royals.

With such complexities, it has not been difficult to distort what is known of the past for crass political purposes. For example, some have overemphasized ethnic divisions in order to foster ethnic and racial hatred. On the other hand, some have downplayed Tutsi-Hutu distinctions in order to maintain that that there has been no systematic domination of one group over another. In reality, the true history of the Tutsi-Hutu divide is incompletely understood, although it certainly has had much to do with kingship, the changes brought by colonialism, and contemporary struggles for power.

Through many periods of history, the rule of the *mwamis* (Tutsi kings) was autocratic, but it was not always unpopular. Historically, the *mwami* was strongest in central Rwanda. In Burundi the Tutsi king relied more on Hutu support. Hutu

leaders were able to rise to positions of power and influence within the court.

Social relations in Rwanda and Burundi were modified by European rule—Germans from the 1890s until World War I and Belgians from World War I until 1962. During most of this period, the Tutsi were treated with favor by the Europeans, but the Hutu were encouraged to attempt to end Tutsi domination by the Belgians toward the end of their rule.

The first major social upheaval began in Rwanda in the wake of a Hutu-led campaign for independence from Belgian rule in 1959. Hutu leaders seized power and abolished the monarchy, and some Tutsi fled to neighboring countries. During this period, and again in 1962 and 1963, thousands of Tutsi civilians were killed.

In Burundi, there was a more peaceful transition to independence in 1962. Initially, the king served as an intermediary between Tutsi and Hutu sides, but the monarchy was abolished by Tutsi leaders following a failed Hutu coup attempt in 1965. Law and order broke down altogether after Hutu forces invaded the country from Tanzania in 1972. This was followed by another coup that brought the Tutsi-Hima into power. After repulsing the Hutu invasion, they implemented widespread repression. All those identified as educated Hutu, even down to the level of elementary school students, were systematically hunted down. More than 100,000 people were killed in a campaign of what has been called “selective genocide.”

The Tutsi-Hutu divisions in Rwanda and Burundi thus became more rigid and violent as a result of colonial rule and the independence process. The end result of the colonial period was that opposite sides controlled each country. In Rwanda, the Hutu became associated with the power of the state. In Burundi, the state came to be controlled by a branch of the Tutsi. Efforts to end Tutsi domination in Burundi were crushed in 1988; five years later, in 1993, there was another period of genocidal violence. This was followed by a long period of conflict between the Tutsi dominated army and Hutu rebels that did not abate until a peace deal was reached in 2003. (Even then the conflict has not entirely been settled.) In Rwanda, Hutu domination ended only after the army of the RPF (Rwandan People’s Front) succeeded in overthrowing the government in the wake of the genocide of 1994. Since then, thousands of Tutsi refugees have returned to the country.

Former RPF commander Paul Kagame has been the dominant leader in Rwanda since 1994. In 2003 he won election as president. In Burundi, a former Hutu rebel leader and college professor, Pierre Nkurunziza, was elected president in 2005.

## 2 LOCATION AND HOMELAND

Rwanda and Burundi are mountainous countries in east-central Africa. Burundi shares a northern border with Rwanda. Rwanda’s northern border is with Uganda. Both countries are bounded by the Democratic Republic of Congo (formerly Zaire) to the west and Tanzania to the east, but much of western Burundi is bounded by Lake Tanganyika. The combined total area of Rwanda and Burundi together is approximately 20,900 sq mi (54,100 sq km). This is roughly comparable to the combined size of Maryland and New Jersey.

Tutsi also live in northeastern Democratic Republic of the Congo, particularly in the Mulenge region of the South Kivu province where they have lived for many generations. However, because of Congo’s recent civil war, many have had to flee as

refugees from the Mulenge region. Congolese Tutsi are commonly referred to as *Banyamulenge*.

Population densities in the region are among the highest in Africa. In 1994, there were an estimated 208 people per sq km (220 per sq mi) in Burundi. In 1993, there were an estimated 280 people per sq km in Rwanda. Today these figures are even higher. Despite the years of genocide and poor health care, the combined population of all groups in Rwanda and Burundi was approximately 19 million in 2008. Of these, more than one half are young adults and children.

## 3 LANGUAGE

The Hutu, Tutsi, and Twa of Rwanda and Burundi all speak a Central Bantu language. This language is called Kinyarwanda in Rwanda, and Kirundi in Burundi; the two are dialects rather than distinct languages. Banyamulenge may be most at home speaking Congolese languages as well as French and the East African trade language, Swahili.

As with Bantu languages in general, Kinyarwanda/Kirundi is characterized by a system of noun classes identified by prefixes. These prefixes differentiate singular from plural, and group nouns into like categories. Thus, a word such as *Banyamulenge* (“Ba-nya-mulenge”) can be broken down into parts. The prefixes “banya” refer to people; Mulenge is the name of a region. Altogether, the word means “people of Mulenge.” Bantu prefixes are often omitted in English. For example, *Kinyarwanda* may be referred to as Rwanda in English, or *Kirundi* as Rundi. Many Tutsi from the region also speak Swahili.

As a result of its colonial history, Rwandese and Burundians have long received their formal schooling in French. Another implication of this is that many people in the two countries have French first names. However, since the change in government in Rwanda in 1994, English has become increasingly important there.

African personal names have meanings that reflect important cultural values. They may be derived from events, borrowed from praise poetry, or reflect attitudes about religion, kingship, or cattle. For example, the name *Ndagijimana* means “God is my herder.” *Hakizumwami* is a name that means “only the king can save.” *Muvunanyambo* means “the defender of noble cows.” Greetings may also reflect the traditional value placed on cattle. For example, a common greeting is “amasho,” literally meaning “may you be rich in cattle.”

Traditionally, the ability to express oneself well orally was highly valued. Aristocrats were expected to maintain a dignified style in speaking, and demonstrated their high status by calculated use of silence. Cattle terms were used to refer to the best and most precious aspects of social life. For example, the king of Rwanda was referred to as “the bull of the herd.”

#### 4 FOLKLORE

Verbal arts include praise poetry, proverbs, folktales, riddles, and myths. Traditionally, these were vibrant parts of everyday life. Tutsi elite typically knew the names of their ancestors to at least six generations, and many believed they were descendants of a mythical founding king named Gihanga.

Among the Tutsi, the most elaborate praises were reserved for the king, but cattle were named individuals worthy of praise and poetry as well. Herders commonly entertained themselves by singing the praises of their cattle during their daily rounds to the pastures.

One popular folktale tells the story of a greedy man named Sebgugugu. Sebgugugu is a poor man who is helped by God. God provides food for him and his family in a number of miraculous ways, but each time the greedy Sebgugugu wants more. Through his greed, Sebgugugu finally loses everything.

#### 5 RELIGION

Most people in modern-day Rwanda and Burundi are Christians, particularly Catholics. In the wake of the 1994 genocide, many Tutsi have converted to Islam. In traditional thought, the Creator is somewhat remote, although his power is manifest in the king. The word for creator, *Imaana*, means both God and “God’s power to ensure prosperity and fertility.” The king had special access to this power, and he demonstrated this to the people through his sacred fire, the royal drums, and the royal agricultural rites. For this reason, he was thought to be responsible for the nation’s fate. Ancestral spirits, called *abazima*, also act as intermediaries between God and the human world. However, the *abazima* may also hold grudges against the living and bring misfortune to those who do not respect them. To protect against the *abazima*, offerings are made, and diviners are consulted to interpret their wishes. Special ceremonies are held to pay respect to the most powerful of the *abazima*.

#### 6 MAJOR HOLIDAYS

National holidays include Independence Days, May Day, New Year’s Day, and the major Christian holidays. Rwanda has several new holidays. These include February 1 (National Heroes

Day); April 7 (Genocide Memorial Day); July 4 (National Liberation Day); and 1st of October (Patriotism Day). Other traditional holidays, such as the annual holidays connected with the *mwami*, are no longer observed. The elaborate royal rituals associated with these holidays included specially trained dancers and the use of giant sacred drums. Some of these practices have been preserved in the form of professional entertainment.

#### 7 RITES OF PASSAGE

Rites of passage for Tutsi and Hutu are very similar. The first ritual of life passage, the naming ceremony, takes place seven days after a child’s birth.

Marriage is legitimated by the transfer of *bridewealth*, a kind of compensation for the loss of the woman’s labor. Bridewealth is paid by the family of the groom to the family of the bride. For most Tutsi, bridewealth consisted traditionally of a cow and other gifts. In central Rwanda, however, the prestige of the Tutsi elite was such that they were often exempt from bridewealth payment. The traditional marriage ceremony itself is complex, and the details vary from region to region. These customs may or may not be practiced today by people most influenced by European culture. Except for marriage, there is no formal initiation process to celebrate the change from adolescence to adulthood.

Death is marked by prayers, speeches, purification rituals, and restrictions on many everyday activities. Close family members are expected to refrain from sexual relations and to avoid physical exertion during the period of mourning, at the end of which the family hosts a ritual feast.

#### 8 INTERPERSONAL RELATIONS

Social life in traditional Rwanda and Burundi was dictated by status distinctions. Signs of social status are indicated by posture, body language, and style of speech. The ideal for a person of elite status is to act with dignity, emotional restraint, and decorum. This ideal was called *kwitonda*.

There are separate greetings for morning, afternoon, and evening. In the early decades of the twentieth century, people of the same age greeted each other in an elaborate ritual that included sung greetings, stylized embraces, and formalized gestures. Subordinates showed deference to their social superiors by kneeling in their presence.

A system of cattle exchange helped to keep harmony among the factions of society. In this system wealthy elites (often Tutsi) lent cattle to herdsman (often Hutu) in exchange for their labor, loyalty, and political support. This was called *buhake* in Rwanda and *bugabire* in Burundi.

Traditionally, romantic relationships between young men and women were expected to occur within the caste group, and marriages were usually arranged. In the late twentieth century, socializing in group activities was more common than individual dating, although Western-style dating and socializing at nightclubs is practiced by some in urban areas.

#### 9 LIVING CONDITIONS

The average life expectancy in Rwanda and Burundi is very low by world standards. However, in the past Rwanda and Burundi have been healthy and prosperous places, benefitting from the high elevation that offered protection from malarial mosquitoes. More recently, there are not only the problems of extreme political violence but also of inadequate nutrition, health care,

and diseases such as bacterial diarrhea, hepatitis A, and typhoid fever. It is also estimated that about 5% of adults are suffering from AIDS. Infant mortality is also very high.

Despite a high population density, the majority of the population remains rural. Houses were traditionally bee-hived shaped huts of wood, reeds, and straw, surrounded by a high hedge that served as a fence. The hut interiors of wealthy Tutsi were often elaborately decorated with screens that functioned as room dividers. Modern Tutsi are using the money they make from the sale of agricultural products to buy Western-style housing material to build rectangular houses, with corrugated iron or tile roofing.

For rural people, the chief source of income comes through the sale of agricultural products such as coffee and tea.

Transportation infrastructure in the region is not well developed. Roads are often unpaved, and there is no railway. In Rwanda, an aggressive plan of economic development has been promoted by President Kagame.

### **10 FAMILY LIFE**

The basic unit of society is the household. These were not organized in villages but remained distinct as separate homesteads built on hills spread across the landscape. The concept of house, or *inzu*, is so important that it refers not only to a physical home but also to one's family and ancestral line.

Tutsi and Hutu families are organized patrilineally (through the fathers) into lineages and clans. Polygyny (a man having more than one wife) was permitted but the goal was to have a large family. Although love matches were not unknown, and elopements occurred, marriage in Rwanda and Burundi was traditionally about maintaining power and relationships between families. In modern times, however, marriage is more often a matter of personal choice.

Legitimate marriages between Tutsi and Hutu did occur, but they were rare. Twa men and women were looked down upon by both Hutu and Tutsi and were not generally considered acceptable mates. People from mixed Tutsi-Hutu families were also targeted in the 1994 Rwandan genocide.

### **11 CLOTHING**

Tutsi men and women wore gowns and robes imported from the African coast before the arrival of the Europeans. A common form of dress was a wrap around skirt and top piece tied at the shoulder, not unlike a Roman toga. A woman's ceremonial dress included a plain white robe, with perhaps a few geometric designs, and a number of white headbands. On most occasions today, however, Western-style clothing is worn. Women wear dresses, headscarves, and the printed clothes that are popular throughout East Africa. Men wear pants and shirts.

In the past, Tutsi women wore numerous copper bracelets and anklets. These were often so heavy that the elite women were unable to do much work. In fact, this very inability to do agricultural labor helped distinguish them from the ordinary women who had to work in the fields.

### **12 FOOD**

Milk, butter, and meat are the most highly valued foods traditionally. Because of the social and religious value of cattle, however, people do not often butcher a cow without some ritual justification. While goat meat and goat milk may be consumed as well, these foods were taboo. The ideal for the elite

Tutsi was a pure diet of milk products, supplemented by beer made from fermented plantains or sorghum grain. Meal times are flexible, often revolving around work obligations.

Today the most common foods are beans, corn, cassava, peas, plantains, and sweet potatoes. Tropical fruits are also popular.

### **13 EDUCATION**

Literacy rates have been at times lower than 50% in Rwanda and Burundi in the vernacular (native language), and lower in French, but seem to be improving. Rwanda currently reports a literacy rate of about 70%. In Burundi, literate Hutu were persecuted in 1972, but education began to be encouraged again in the 1980s. There are teacher-training schools and at least one university in both countries.

In Rwanda, educational structures were disrupted by the 1994 political violence. Prior to 1994, the Rwandese school system was moving toward an emphasis on education in French but there is now a new emphasis on English, with a goal of trilingual education. The government also has the goal of providing free primary and secondary school education for all.

### **14 CULTURAL HERITAGE**

The kings of Rwanda and Burundi maintained elaborate dance and drum ensembles that were associated with royal power. On ritual occasions in Burundi two dozen tall, footed drums were arranged in a semicircle around a central drum. The musicians moved in a circle around the drums, each taking a turn beating the central drum. This style of drumming has survived the demise of the kingship. Since the 1960s the Royal Drummers of Burundi have toured the world giving performances. They have also recorded albums and collaborated with Western musicians.

In Rwanda some young men, children of nobility, were singled out for special training. Known as *intore*, these students received the best education in rhetoric and warfare and served as the king's elite dance troupe. Their dances involved leaping and rhythmic stomping of the feet. Today they perform for tourists at the national museum.

Music, dancing, and drumming are all important in rural life. People compose many kinds of popular songs—hunting songs, lullabies, and *ibicuba* (songs praising cattle). In some areas, there were traveling minstrels who sang the news, accompanying themselves with a seven-string zither. A special dance was also part of the rituals of courtship. These days people also enjoy modern entertainment by way of television, movies, and recorded music. Some of today's musicians have developed new forms of music that combine elements of traditional and modern elements.

Many of the details of the cultural heritage of Rwanda were described in French by the renowned Rwandan scholar-priest Alexis Kagame. One example of his work is *La poésie dynastique au Rwanda* (The dynastic poetry of Rwanda), which was published in 1951. More recently, a number of individual Tutsi survivors of the genocide have published autobiographies and Rwandans who have gained experience working on such movies as *Hotel Rwanda* have begun to produce their own films.

### **15 WORK**

People of Tutsi background who cultivated the soil were often considered poor and could lose their status as nobles. In this

*Jeanette Nyirabaganwa, a Tutsi, in a coffee warehouse that she runs for the Maraba Coffee cooperative in Butare, Rwanda. Most of her family was murdered in the Rwandan genocide of 1994, where about 1 million Tutsis were killed by Hutus. Nyirabaganwa now employs many of those suspected of the killings on her coffee and sorghum plantation.*

way some Tutsi “became” Hutu. On the other hand, an especially high status was reserved for the *abashumba* pastoralists. These were a special class of herders whose job it was to take care of the king’s prize cattle (*inyambo*).

Today Tutsi as well as Hutu are farmers. In addition to growing food crops, they also produce cash crops, especially coffee and tea.

## 16 SPORTS

The main spectator sport in Burundi is soccer. Many people also enjoy playing the game informally.

## 17 ENTERTAINMENT AND RECREATION

There are movie theaters that show contemporary European and American films in the capital cities. People also enjoy television, video, and a variety of modern musical forms. Contemporary musicians from Tutsi backgrounds who have developed international reputations include Jean-Paul Samputu and Cornelius Nyungura, popularly known as “Corneille” (Crow).

A popular game for young people and adults is *igisoro*, played with a wooden board that has rows of hollowed-out places for holding beads or stones that are used as counters. The object of the game is to line up one’s pieces in rows in such a way as to capture as many counters as possible. This is very

similar to the game is known as mancala played in other parts of Africa.

## 18 FOLK ART, CRAFTS, AND HOBBIES

Both Rwanda and Burundi have traditions of basketwork, pottery, woodwork, metal work, and jewelry making. Items carved from wood included drums, quivers, shields, and stools, but wood carving was not highly developed. Metal objects included copper bracelets and rings, and iron spear points. Traditionally, Tutsi women were noted for their expertise in weaving, especially for their intricately woven screens with geometric designs used in the houses of the wealthy as room dividers and decorations. Recently, handicrafts are being produced for the international market. Most notable among them are the “peace baskets” woven by Rwandan women and marketed by a major American department store.

A national ballet was established to promote folk dance traditions in Rwanda during the rule of Juvénal Habyarimana (1973-1994). At its height it had more than 200 members. However, its reputation was tarnished when its founding director was implicated in the genocide.

## 19 SOCIAL PROBLEMS

Sporadically since the early 1960s, the peoples of Rwanda and Burundi have experienced some of the worst violence in the history of Africa. In Burundi, massive genocide was carried out against Hutu by Tutsi in 1972 and in 1993. Perhaps 100,000 died in the first case, and at least that many died in the latter case. In Rwanda, the roles of killer and victims have been reversed. In 1962, Hutu people massacred thousands of people they defined as Tutsi. Thirty-two years later, Hutu leaders directed the killing of an estimated 800,000 people, most of them Tutsi. Labeling this violence simply as Hutu versus Tutsi is an oversimplification, however. In practice the killings were not merely ethnic but also political. For example, in some regions, there was also major Hutu-on-Hutu violence that appears to have been related to local disputes. In addition, the United Nations and the major world powers have not acted effectively to stop the genocides.

The effects of the 1994 Rwandan genocide spilled over into neighboring Congo after defeated Hutu soldiers fled there, while an influx of civilian refugees into Burundi contributed to that country's pre-existing instability. In 1996 a military conflict began in the DRC between *Banyamulenge* (ethnic Tutsi) and the remnants of the Hutu military who had fled to the refugee camps there in the wake of their defeat in Rwanda.

After the Hutu soldiers were routed, most the Hutu civilian refugee population was able to return to Rwanda. Nonetheless, the incursion of armed Rwandans into the DRC helped spark a violent civil war that ultimately led to the death of several million Congolese.

In Rwanda, the government has made some dramatic attempts at Hutu-Tutsi reconciliation. Most prominent among these was implementation of the *gacaca court* system under which low level actors in the 1994 genocide were offered the opportunity for amnesty. In this system local communities conducted public proceedings and the mass of perpetrators who acted under the auspices of higher authorities were given the opportunity to confess. Critics complain, however, that attempts at political reconciliation are hampered by practices in government that discourage open dissent.

## 20 GENDER ISSUES

Traditionally women were socialized to seek fulfillment as wives and mothers. They were expected to be subordinate to their husbands and did not have full rights of property and inheritance. Historically, a major exception to this occurred in central Rwanda under the administration of Mwami Rwabugiri (1865–1895). During this time some Tutsi women were able to acquire land. Some even could go to war or become war chiefs.

More recently, moves toward gender equality have been promoted. Both Burundi and Rwanda now require that a significant percentage of its elected representatives be women. In Rwanda, the government has enacted legislation to support women's economic rights. While once women were discouraged by many from obtaining education, today dropout rates for females have fallen and their rate of college attendance has increased dramatically. The gap between males and females in literacy rates appears also to be narrowing. Nearly 50% of the parliament is composed of women representatives; and half of national judges are women. For such accomplishments, President Kagame received the "African Gender Award" from the

Pan-African Center for Gender, Peace, and Development in 2007.

Violence against women remains a problem in the area. In the lead up to the 1994 genocide in Rwanda, propaganda was particularly directed against Tutsi women, and they were frequently raped before being killed. As a consequence of the ongoing civil conflict in Burundi, women continue to be subjected to high rates of violence there.

Homosexuality is rarely openly acknowledged by Tutsi or Hutu. This is also something that many people find sinful according to the doctrines of the Catholic church. Homosexual acts are illegal in Burundi. In 2007, the government of Rwanda began considering a provision to the penal code that that would also penalize homosexual behavior.

## TWA

**ALTERNATE NAMES:** BATWA, MBUTI (BAMBUTI), BAKA, AKA

**LOCATION:** Congo-Brazzaville (Republic of the Congo), Democratic Republic of the Congo, Rwanda, Uganda, Zambia

**POPULATION:** About 100,000

**LANGUAGES:** Kinyarwanda, Kirundi, Rukiga, Balese, Bira, Mangbetu

**RELIGION:** Indigenous (traditional) religions (90%), Christianity (10%)

### <sup>1</sup> INTRODUCTION

The Twa people of the Great Lakes Region in Africa are a pygmy minority strewn across several countries, including Cameroon, Congo-Brazzaville, Democratic Republic of the Congo, Rwanda, Burundi, Tanzania, and Uganda. It should be noted at the outset that the term "pygmy" is considered derogatory by many scholars as it perpetuates the discrimination of this group of people due to their characteristic small stature. The total population of the Twa and other similar groups is estimated to be anywhere from 82,000 to 126,000 people. The Twa, also known as the Batwa, are one of many ethnic groups, such as the BaKola, Aka, BaBongo, BaMbuti, Mbuti (Bambuti), Baka, and Aka. They are often referred to as the forest people, the original inhabitants of this region. They are traditionally a hunter and gatherer group, surviving on what the rainforests provide. However, as forests continue to dwindle due to deforestation, their livelihoods and way of life have become ever precarious, and many are undergoing a lifestyle change. They are no longer able to hunt or gather from the bounty of the tropical rainforest, but are reduced to a precarious lifestyle of subsistence agriculture. Those still found deep in the tropical rainforest continue to practice their culture and lifestyle as they have done for thousands of years.

The arrival of the Bantu peoples in the region brought the subjugation of the Twa. The Bantu people began arriving in the area from their original homeland (eastern Nigeria and Cameroon) between the 12th to the 15th century. Two such groups in present day Rwanda and Burundi were the Tutsi, a Bantu-speaking Nilotic people, and the Hutu, a Bantu group. The Tutsi soon became the ruling group that dominated both the Hutu and the Twa. The Tutsi created a highly centralized kingdom, presided over by Tutsi kings who came from one ruling clan. In pre-colonial times, the relationship between the ordinary Hutu, Tutsi, and Twa was one of mutual benefit through the exchange of labor and the goods they traded. However, during the colonial era, the Tutsi were more favored by the colonizing powers, particularly the Belgians. Coupled with the hierarchical nature of Rwandan traditional society with the Tutsi at the top, the colonial policies laid the foundation for present day upheavals and genocide in this region.

It is estimated that during the 1994 Rwandan genocide, over 30% of the Twa lost their lives. Today, the Twa play a marginal role in Rwandan and Burundian politics and are often ignored in discussions about the conflict between the Hutus and Tutsis. Many have been pushed away from the remaining patches of tropical rainforest and forcibly settled in areas where they have to abandon their way of hunter/gatherer life. They are current-

ly undergoing untold hardship as they try to adopt new ways of making a living, such as agriculture and raising livestock. Massive deforestation of their habitats, because of agriculture, logging and other development by their Bantu and Tutsi counterparts, has deprived the Twa of the natural resources essential for the cultural survival of this endangered and marginalized group.

## 2 LOCATION AND HOMELAND

The homeland of the Twa and associated groups is generally the tropical rainforest of central Africa around the Great Lakes of Eastern Africa. The Twa are scattered in a number of countries in this region, which include Cameroon, Gabon, Congo-Brazzaville, Democratic Republic of the Congo, Rwanda, Tanzania, Uganda, and Zambia. The rainforest homeland of the Twa people is tropical and experiences large amounts of rainfall, ranging from 127 to 203 cm (50 to 80 in). The forest, which experiences a short dry season for about a month or two, is a moist and humid region with many rivers and lakes. Not all Twa are restricted to the tropical rainforest, some are found in the savannah environments of southern Africa where they might have migrated out of the rainforest alongside the great migration of the Bantu people.

Around the Great Lakes region of eastern and central Africa the Twa people resided in high altitude mountain forests around Lakes Kivu, Albert, and Tanganyika. The tropical rainforest offers an excellent habitat for the semi nomadic and hunter-gatherer way of finding food that the Twa have survived on for generations. However, because of massive deforestation, as a result of logging and agriculture, their traditional homeland is under siege and many find themselves landless, poor, deprived of their traditional hunting and gathering grounds, and despised by other groups in the region because of their small stature.

## 3 LANGUAGE

There is no such thing as a language for the Twa people. The Twa speak several different languages, depending on the country or region in which they find themselves. For example, in Rwanda they speak Kinyarwanda, in Burundi they speak Kirundi, and in Uganda they speak Rukiga. This is not to say that they never had a language of their own. Some still speak their original languages, such as Balese, Bira, and Mangbetu among the Bambuti in the Democratic Republic of the Congo. For some of them, interaction with other groups has resulted in their languages being diluted and/or disappearing altogether. Thus, interaction with the new groups that moved into their homeland has resulted in the dilution and, in many cases, the death of their languages and the modification of their rituals. Kinyarwanda, Kirundi, and Rukiga are part of the Bantu group or the Niger-Congo group of languages. Lukiga/Rukiga has a noun class system in which prefixes on nouns mark membership of one of the noun genders. Examples here include the following: *mu* - person (singular), e.g. *mukiga* = inhabitant of Bakiga land; *bu* - land, e.g. *Bukiga* = land of the Bakiga; *lu/ru* - language, e.g. *Lukiga/Rukiga* = language of the Bakiga; *ba* - people, e.g. Bakiga = The Bakiga people; *ki* - customs or traditions, e.g. *kikiga*, denotes religious tradition common to the Bakiga people. This is also true of languages such as Kinyarwanda and Kirundi.

## 4 FOLKLORE

The Twa have a well-developed and sophisticated folklore with legends, stories, and poetry. Their folklore has important lessons about their forest environments, movements, and their history and origin. For example, one of the legends narrates the origins of the Mbuti group of the Twa. It notes that Mutwa was a native of African tropical rainforests. He occupied the current Itwari and Bwindi forests in the Democratic Republic of Congo and western Uganda respectively. In the DRC he was known locally as Mumbuti (singular) and Bambuti (plural), while in Uganda he was Mutwa (singular) and Batwa (plural). He was a nomadic hunter and gatherer. In most cases, Mutwa lived in solitude. Therefore, when he died no one else was there to witness the death or burial. The legend goes on to narrate burial customs and taboos, the use of spears for hunting, and the glorious life in the forest. In short, this legend refers to the Twa as singular, denoting their lifestyle of roaming in small bands as individuals and their way of hunting and gathering what the environment provides, i.e. honey, animals, fruits, and other edible plants from time immemorial.

Another famous folklore legend narrated by Turnbull (1961) concerns the singing of the "Bird" with the "Most Beautiful Song." Turnbull writes:

"This bird was found by a young boy who heard such a Beautiful Song that he had to go and see who was singing. When he found the Bird he brought it back to the camp to feed it. His father was annoyed at having to give food to the Bird, but the son pleaded and the Bird was

fed. The next day the Bird sang again; it sang the Most Beautiful Song in the Forest, and again the boy went to it and brought it back to feed it. This time the father was even more angered, but once again he gave in and fed the Bird. The third day (most Pygmy stories repeat themselves at least three times) the same thing happened. But this time the father took the Bird from his son and told his son to go away. When his son had left, the father killed the Bird, the Bird with the Most Beautiful Song in the Forest, and with the Bird he killed the Song, and with the Song he killed himself and he dropped dead, completely dead, dead for ever.”

This legend tells of the importance of singing among the Twa in their forest homeland. Indeed, during the early hours of the night, the Twa sit by the fire outside their camp in their small bands and tell riddles and legends. Some sing, mimicking the various beautiful animal sounds in the forest. Central to the folklore of the Twa people are the many animals found in their environment. Many of these animals take on characteristics of men, for example, the ever-wise turtle and the cunning trickster hare. Thus, animals are used to tell entertaining stories designed to teach about human behavior and relationships.

## 5 RELIGION

Only a small portion (about 10%) of the Twa people has been converted to Christianity. The majority continue to adhere to indigenous beliefs in many gods. The most important deity of the Twa people is the god of the hunt, Khonvoum. He wields a bow made from two snakes that together appear to humans as a rainbow. His second in command is the god of thunder, through which he contacts mortal man. The Twa believe that man was forged from clay by Khonvoum, who forged different races and peoples from different types of clay, e.g. black people from black clay, white people from white clay, and the Twa from red clay. Khonvoum was also generous to the Twa by providing them with a forest rich of resources and animals for them to hunt. There are, of course other gods, such as Tore who is the god of the forest, as well as the god associated with death, as he decreed it on humans after his mother had died. Many of these gods appear as animals, such as the elephant, the chameleon, the leopard, and reptiles. This is keeping with the fact that the life of the Twa is part and parcel of the forest, their great provider, something to keep in awe, a sacred place bequeathed to them by their benevolent pantheon of gods.

## 6 MAJOR HOLIDAYS

For the Twa people, there are very few holidays and, when celebrated, they are often impromptu. They celebrate a few traditional holiday events, such as the rite of passage for young boys, the end of Nkumbi (the honey feast dance), and other ceremonial activities. These traditional festivities are in keeping with their lifestyle of hunting and gathering. However, the few Twa that have been settled and live sedentary lives may be involved in national holidays, such as Independence Day or Christmas for Christians.

## 7 RITES OF PASSAGE

In traditional Twa society, there were and still are rites of passage for boys and girls. The girls' initiation is called the *elima*. The *elima* initiation ceremony signifies the coming of age of

girls. This is done during the first menstruation of the girl. She is immediately secluded into a hut with her friends who have also celebrated the coming of maturity. The girls are taught the duties of motherhood by an older and wiser woman in the community. There is much singing and dancing by both older women and girls. The *elima* is considered a great joyous occasion celebrated over days or weeks.

Boys undergo the *nkumbi* initiation ceremony. The *nkumbi* is the village circumcision school, which is done in partnership with the Bantu villages near the forests. The Twa and the Bantu have long interacted with each other, trading goods and resources from the forest. It was during these interactions that the Twa adopted some of the customs of the village Bantu and vice versa. One such custom is the *nkumbi* ceremony that is celebrated jointly. It happens after every four years. Boys from both the Bantu village and the nomadic Twas are secluded and undergo circumcision and initiation into manhood together. However, the relationship is still unequal, with the village boys in a more dominant position than the Twa, who are considered to be in a subservient position of their more powerful Bantu partners. Nevertheless, the joint initiation and circumcision ceremony is evidence of the symbiotic relationship between these two groups, in that one group provides material goods the other group does not have. In this way the two groups take care of each other. However, some initiation rituals are kept a total secret among the Twa. For example, the rite of initiation and the Spirit of the Forest is the preserve of Twa men only, who are revered as the holders of initiation knowledge. They are never supposed to talk about or reveal the secrets of this initiation to anyone, including their own women.

Another important ritual occurs when an important person in the Twa society dies. This is referred to as the *molimo* ritual that is celebrated with much noise. The Twa believe that they are the children of the forest and the forest is their caretaker and protector. They believe that when one dies, the forest must have gone to sleep and needs to be woken up, hence the noisy *molimo* celebration. The *molimo* is actually a trumpet made of wood or bamboo that is played by the men during the death ritual. When not in use, it is hidden away in the forest. The ritual is conducted at night around the campfire, and only men are allowed to be present. The *molimo* is also said to be a dangerous animal from the forest, not to be seen by women and children, who are hurriedly sent off into the huts. The men surround the *molimo* as it bellows out its forest noises and songs. There is much dancing and feasting by the men as they awaken the forest to come and protect them from death and other calamities.

## 8 INTERPERSONAL RELATIONS

The Twa have what might be considered an egalitarian society in which no one has authority over another. It has been suggested that egalitarianism was one of several central characteristics of nomadic hunting and gathering societies, since mobility precluded the accumulation of material possessions for any one single member in the band. Furthermore, clear evidence exists concerning the sexual division of labor among Twa. Females are primarily assigned the food-gathering chore as they have developed a keen sense for and the greatest familiarity with nutritive plants, such as wild fruits and vegetables. Hunting activities are the realm of men. The Twa do not see themselves as living a solitary or poor life, constantly at the

mercy of the environment. They consider themselves to be living in a forest paradise on this earth.

Women continue to play a major role in community decision-making. Women are free to access forest resources anytime they wish. The Twa people have great respect for each other. Children learn this aspect of life early on, because anyone in a band can and is allowed to discipline any child. Children are also free to wander around into other peoples huts at will and are generally cared for by anyone in the band. Night is a time for socializing around a campfire. People come together to tell stories, legends, and riddles and sometimes to settle disputes between members of the camp.

The Twa are also a gregarious people that like to live in small groups or bands. However, from time to time, individuals or families will travel to visit other camps in the forest, where they might stay for substantial periods of time, to socialize and look for prospective wives or husbands. There is also a symbiotic relationship between the Twa of the forest and their Bantu neighbors, with whom they have interacted for generations. Although many consider the relationship between the Twa and their sedentary Bantu neighbors as unequal in favor of the Bantu villagers, others have argued that this is an interdependent relationship in which there is a flow of commodities either way. It is seen as a mutually beneficial relationship and, in some cases both groups, share some rituals such as the joint initiation of boys.

## **9 LIVING CONDITIONS**

The Twa people live simple but rewarding lives. Their huts, often built by women, are made of branches and leaves. The Twa consider the forest to be their father and mother, a benevolent force that provides all their material needs. Hunting is one of the most important activities, as it is the main way of providing food and sustaining the group. Their material possessions are simple, geared towards the hunting and gathering way of life. The most prized possessions of the Twa are spears, bows and arrows, nets for hunting, and pots for cooking. They have developed an excellent trading relationship with the sedentary Bantu groups around them, with whom they trade forest products for important items, such as metal tips for their weapons. The huts are simple and temporary and can be abandoned anytime the group desires to move on. Women construct the huts from tree branches, covered with large leaves to ward off the constant dripping of the rain. The Twa sleep on leaves and sometimes mats woven from reeds. They usually live in a camp for up to one to five months, until they have exhausted the food resources around the camp and it is necessary to move on to a new environment. Thus, material comfort and wealth are not a significant aspect of Twa society. The forest provides the necessities for survival.

## **10 FAMILY LIFE**

The Twa live in small camps of about 30 to 100 individuals. They learn to depend on each other and share everything they collect from the forest. Children are raised by the entire group, calling all women mother. In terms of family and marriage, the Twa used to practice monogamy, but this may have changed slightly with the influence of their Bantu neighbors, who practice polygamy. In terms of kinship and descent, the Twa follow the patrilineal system in which children belong to the father, particularly male children. A typical Twa family consists of a

husband, a wife, and their children. Marriages can be arranged or two individuals can fall in love and marry each other. However, as in many other ethnic groups, marriage is the affair of extended families; it joins two groups, rather than simply the husband and wife. As a patrilineal society, when a marriage ends in divorce, male children stay with the father or return to the father's band when they grow up.

## **11 CLOTHING**

The Twa's clothing is simple, consisting of a loincloth for men either made from bark cloth or fabric. Bark cloth is made from the layer underneath the bark of selected species of trees. The bark is beaten until it is thin and soft to wear. The Mbuti and Efe groups of the Twa in the Ituri rainforest in northeast DRC and southwest Uganda are best known for their bark cloths. Today, cotton fabrics and western forms of clothing are quite common for both men and women.

## **12 FOOD**

The forest provides all the food the Twa need. Hunting is one of the most important activities of Twa men. Skilled hunters who specialize in hunting big game, such as elephants, are highly respected in Twa society. Other hunted animals include wild pigs, the giant forest hog, antelopes, and monkeys. While men are hunters, women gather products from the forest, such as wild yams, berries, fruits, roots, leaves, cola nuts, mushrooms, and other edible plants, as well as small animals such as larvae, snails, ants, termites, caterpillars, and reptiles.

Men and women also get involved in fishing activities, using various techniques such as traps, dams made of branches and trees, and nets for fishing from canoes. The most popular fishing technique by women is dam fishing. During the dry season, when the water level is low, areas of the river can be drained to catch the fish in the mud. The collection of honey, one of the most prized treats among the Twa, is left to men, as sometimes they have to climb 15 m (50 ft) to collect it from the trunks of huge forest trees.

Food is prepared in various ways. Meat is cooked in earthenware pots, children help to pound cassava or manioc with a pestle and mortar, vegetables are minced before cooking, and palm oil is processed and used in cooking food. Some Twa have adopted the agricultural lifestyle, farming crops of yams, legumes, beans, squash, sweet potatoes, peanuts, plantains, cassava, and maize. Sometimes these foods are obtained by trading with their agricultural neighbors. The Twa also practice certain food taboos. For example, a group may not hunt or eat an animal that is used as a totem for that band.

## **13 EDUCATION**

The Twa who have been settled and now follow a sedentary way of life send their children to schools, especially in parts of Rwanda and Burundi. However, many Twa have resisted Western forms of education, preferring to teach their children in the ways of their life and traditions. From as early as three years old, boys are taught to use the bow for hunting and to climb trees to collect honey. Quite often, young boys accompany older men on their hunts. The boys carry the hunting nets, arrows, and bows for the older men. Girls are initiated into the tasks of a woman, which include gathering forest products for food, cooking, and fishing.

#### **14 CULTURAL HERITAGE**

The Twa people are renowned for their musical skills. As children of the forest, they mimic the many sounds they hear in the forest in their songs and dance. Twa culture is dominated by music and dances; from almost all life events, from healing to initiation rituals, from traditional tales to group games, from hunting songs to entertainment moments, music is ever present. Birth, initiation, and death are all marked by rituals where music and dance play a very important role.

When night falls, it is time to sit around a campfire and tell stories and folktales about legendary ancestors and forest spirits. While some may think there is little to talk about concerning the cultural heritage of the Twa, they have nevertheless perfected a way of living that promotes egalitarianism and teaches all members to do their part for the good of the entire community. Perhaps this aspect of their culture is their greatest legacy. Community and family come first and the individual is but a part of the whole.

#### **15 WORK**

The most important work for the Twa is hunting and gathering. For the Twa deep in the forest, they hunt and gather just enough for them to survive. However, for the Twa who are in contact with the Bantu or African villagers, they hunt and gather a little more to trade for commodities they need from the villagers. They hunt and gather from the forest meat, honey, and fruits to exchange for plantains, maize, beans, cloth, and iron tools. Recently, money has found its way into Twa society.

As such, both men and women offer their labor to the villagers to help them cultivate their fields in exchange for cash. They are also asking for cash even for the forest products they bring to the villagers instead of simple bartering.

Although there is some division of labor by gender among the Twa, certain activities are a communal affair. For example, men, women, and children can all get involved in a hunt if nets are used. In such instances, women will make noises and beat the bushes to herd the animals towards the net, while the men wait by the net to trap the animals that come their way. Some activities, such as foraging, are done by both men and women, while others such as cooking, cleaning, building huts, and obtaining water are reserved for women. For small game, such as monkeys and antelope, men may hunt alone using poison-tipped arrows.

#### **16 SPORTS**

As in every society, Twa children are quite playful. Children play games that teach them important hunting and gathering skills, as well as group cooperation. Children and adults play games together where hunting skills are imparted into the children through mock hunts. For the adults, women and men may compete in a tug-of-war to see who is the strongest. The game is designed to teach the members of a band their interdependence on each other.

## 17 ENTERTAINMENT AND RECREATION

Entertainment among the Twa comes in the form of feasting and dancing, especially after a successful hunt during which the giant forest hog or an elephant has been brought down. This would imply lots of meat and feasting for the group. There are celebrations, such as the honey festival, where there is much singing and dancing. In the shadow of the full moon at night, children, men and, women sit around a campfire for entertaining storytelling, riddles, or dancing.

## 18 FOLK ART, CRAFTS, AND HOBBIES

The Twa are skilled in fashioning many of the implements they need for hunting and gathering, such as bows and arrows. They also make their own nets from forest vines for hunting, and weave baskets and mats from reeds and grasses. They have excellent skills for making bark cloth that they fashion into loin cloths.

Given that music plays a central role in the daily life of the Twa, they have developed an impressive array of musical instruments. Some of the instruments are obtained from the Bantu villagers, such as the cylindrical drums, the arched harp, and rattles. Others are traditional to the Twa, such as the musical bow (made and played exclusively by women) and flutes.

## 19 SOCIAL PROBLEMS

One of the major problems facing the Twa today is their disappearing homeland, due to clearing of forests for agriculture purposes by the Bantu groups. Forested areas have receded as agriculture has expanded on the rich volcanic soils in the Rwanda, Burundi, Uganda, and DRC regions. By the 1980s, much of all the available land, apart from areas reserved for wildlife conservation and environmental protection, was under cultivation, particularly in Rwanda and Burundi. Pressures on the forests intensified through production of export crops such as tea, quinine, and coffee.

Thus, the forest environments for the Twa hunting and gathering activities have decreased resulting in their becoming a landless and endangered group. Their traditional forest-based culture that includes their religion and rituals as well as their language is in grave jeopardy. Some Twa have adapted themselves to new forms of livelihoods such as making pottery, basketry, and metalworking. Others have attached themselves to powerful and rich individuals in a subservient position and have become singers, dancers, messengers, guards, warriors, and hunters for these individuals. But, many continue to remain poor and landless with their food supply threatened. The ongoing civil unrest in the great lakes region has also affected them adversely.

In short, recent activities in the region, including logging, mining, road building, and commerce have brought the Twa into greater contacts with the modern world that threatens to erode their values, beliefs, and way of life. In addition to the loss of their tropical rainforest homeland, the Twa are despised and exploited by their Bantu neighbors, who often regard them to be subhuman. Recently, HIV/AIDS has been introduced into the Twa society, as many Bantu believe that sexual intercourse with a Twa can cure diseases such as AIDS. For those who have moved to live in towns and cities, commercial sex work for Twa women is on the increase putting them at an even greater risk for HIV infection. For the Twa still in the forests, there have reports of soldiers in the Congo hunting and eating them in

order to absorb their forest powers. These factors have caused untold hardships for a people used to living in harmony with their environment, and their culture could be obliterated in the near future.

## 20 GENDER ISSUES

As an egalitarian society, men and women have equal power and women are often involved in making important decisions, such as where to move the camp or where and when to go hunt or forage for food. Although some chores are left for women alone (e.g. cooking, cleaning, and fixing huts), women and men often go out hunting or fishing together.

There are of course some gender issues among Twa society that affect women unfairly. For example, the custom of sister exchange as a common form of marriage implies the bartering of women, rather than marriage through love. However, it needs to be emphasized that monogamy is the norm for Twa marriages and bride wealth does not exist in Twa society. Polygamous unions are increasing, although these are also rare in Twa society. In short, gender equality is an aspect of Twa society.

# UGANDANS

**PRONUNCIATION:** yoo-GAN-duhns

**LOCATION:** Uganda

**POPULATION:** 26,404,543 million

**LANGUAGE:** English (official); various tribal languages

**RELIGION:** Christianity; Islam; indigenous beliefs

**RELATED ARTICLES:** Vol. 1: Baganda; Banyankole

## <sup>1</sup> INTRODUCTION

Uganda's present ethnic history is largely a result of two population movements that occurred in the first 500 years of the 2nd millennium AD. The first movement by cattle herders, known as Hima, into exclusively agricultural areas contributed to the development of centralized kingdoms in the west-central portion of the country. The second movement of Nilotic speakers into the northern and eastern areas also stimulated the further development of centralized kingdoms to the south by contributing ruling clans to them. These migrations contributed to the political and ethnic divisions that were present at the arrival of the British in the latter half of the 19th century and that can still be seen today.

Until 1967, Uganda had a number of tightly centralized kingdoms such as Butoro, Buganda, Bunyoro, Bunyankole, and Busoga in its southern and western areas. These kingdoms were sometimes internally divided between cattle owners, who were considered to be royal, and farmers, who were subservient to them. In Bunyoro, these groups are called Huma and Iru; and in Ankole, Hima and Iru, respectively. In Rwanda and Burundi, countries to the west of Uganda, these still warring groups are called Tutsi and Hutu. Northern Uganda was made up of Nilotic-speaking peoples (of the plains, and of the rivers and lakes) who did not develop kingdoms, although they had contributed leaders through conquest of the ancestors of the southern kingdoms. At the time of Uganda's independence in 1962, a sharp linguistic and cultural divide still existed between northern and southern regions of the country. A relatively more socialistic, egalitarian philosophy was preferred in the north. In the south, however, existing class differences were more compatible with capitalism.

The British established Uganda as a protectorate and worked with the Baganda from 1900 onward to establish their control over the other ethnic groups. Asians of Indian or Pakistani descent had been brought over to work as laborers on the Uganda railroad, which extended from Mombasa on the coast of Kenya to Kampala, Uganda. The British developed cotton as a cash crop in Uganda in the early 20th century. The Asians remained in Uganda as brokers in this and other emerging business enterprises. In the 1920s, for example, sugarcane was established in Uganda through plantations and processing plants run by Asian entrepreneurs. By this time, three-fourths of the cotton gins in Uganda were owned by Asians. Much later, coffee emerged as the most important export of Uganda. Europeans, particularly the British, were important in government, church, education, and banking, but their population in Uganda was quite small in comparison to the neighboring colony of Kenya, which attracted a large white settler community.

Uganda, which Winston Churchill once called "the pearl of Africa," had a promising future at the time of independence. A

favorable environment with fertile soil and regular rainfall, as well as a talented, multiethnic population contributed to this optimism. Nevertheless, ethnic divisions proved insurmountable. In 1967, Prime Minister Milton Obote from the north declared kingdoms illegal and tried to impose on the nation his "Common Man's Charter," a socialist doctrine. Sir Edward Mutesa, the Kabaka (King) of Buganda, and the first president of the Republic of Uganda, was overthrown by Obote, who then declared himself the president. In 1971, Obote was overthrown by his army commander, Idi Amin. This led to a repressive reign of terror against all Ugandans. The Asian community was ordered out of the country in 1972, and their businesses were given away to Ugandans without respect to their qualifications. The economy was soon in ruins. Milton Obote returned to power after a combined force of Tanzanian soldiers and Ugandan exiles drove Amin from the country. Obote became president again in 1980, although it was claimed that the elections had been rigged. An ensuing guerrilla war ended in 1986, with Yoweri Museveni becoming president. Uganda currently is experiencing a rejuvenated economy and political system under its present government, which has maintained an open style of leadership receptive to the participation of all ethnic groups.

## <sup>2</sup> LOCATION AND HOMELAND

Uganda is located in East Africa astride the equator between Kenya and the Democratic Republic of the Congo. Its area is not large, being about the size of the state of Oregon. Uganda is landlocked but has several large inland waterways, including Lake Victoria with its inland water ports at Jinja and Port Bell. Its climate is tropical with two rainy seasons; however, the northeast is semiarid. The country is primarily plateau with its capital city of Kampala about 1,200 km (4,000 ft) above sea level. Its population is about 20 million people. The Africans belong to about 40 ethnic groups, of which the Baganda, the Karamojong, the Iteso, and the Lango are the largest groups. There also are a small number of Europeans, Asians, and Arabs. A republic with a one-party political system, Uganda has a president as chief of state. The current president is Lt. General Yoweri Kaguta Museveni.

## <sup>3</sup> LANGUAGE

The official, national language of Uganda is English. Bantu languages are spoken by the greatest number of speakers in the nation, concentrated in the southern and western areas of the country. Nilotic languages predominate in the northern regions. The northwest area includes Moru Madi-speakers. The eastern border of Uganda, which is shared with Kenya, has both Bantu languages, such as Lusomyia, and Nilotic languages, such as Teso. Kiswahili, a Bantu language, is spoken widely throughout eastern Kenya.

Luganda, another Bantu language, is the mother tongue of the Baganda, who are the largest ethnic group in Uganda, comprising 17% of the population. Luganda spread throughout Uganda, particularly in the southern, eastern, and western regions, during the late 19th and early 20th centuries as a language of domination. This was supported by the British, who worked through Baganda chiefs as a form of indirect rule over other Ugandan ethnic groups. For this reason, Luganda, to this day, is understood in various sections of the country. There is also a well-developed indigenous literature in Luganda in the

form of histories, stories, folk tales and songs, political documents, plays, and newspapers.

Ugandans are typically comfortable in more than one language. Luganda, English, and Kiswahili, for example, are commonly used languages in Kampala. In other regions of the country, children learn English in addition to their own ethnic language. Nevertheless, even among the most highly-educated Ugandans, there is a strong preference for the mother tongue at home and in social situations. For this reason, perhaps, there is a strong tendency for individuals to marry those that speak a common ethnic language, or to remain within either the Bantu or Nilotic language families.

#### 4 FOLKLORE

All the ethnic groups of Uganda have a rich oral tradition made up of tales, legends, stories, proverbs, and riddles. Folk heroes include, for example, those thought responsible for introducing kingship into a society, such as the legendary Kintu, the first *Kabaka* (king) of the Baganda, or the first *Bito* ruler of the Bunyoro, King Isingoma Mpuga Rukidi. Morality tales were common throughout Uganda. Some Ankole tales include one about a wise woman and her selfish husband, which teaches faithfulness to one's wives during hard times; one about a pig and a hyena, which preaches against self-indulgence; and the wisdom of the hare, which demonstrates the advantages of being quick-witted and friendly against all odds.

Proverbs and riddles are perhaps the most significant mechanisms for teaching values to the young, while at the same time providing entertainment. The importance of parenting, for instance, can be seen in the following proverbs from the Baganda:

I will never move from this village, but for the sake of children he does.

He who does a good service to one's child, does better than one who merely says he loves you.

An only child is like a drop of rain in the dry season.

My luck is in that child of mine if the child is rich.

A skillful hunting dog may nevertheless produce weaklings.

A chicken's feet do not kill its young.

That which becomes bad at the outset of its growth is almost impossible to straighten at a later stage.

Collective riddling games are a popular evening entertainment in rural villages. Among the Baganda, these games involve men and women of all ages. A person who solves a riddle is given a village to rule as its "chief." Some examples of riddles are:

Pass one side, and I also pass the other side, so that we meet in the middle? (a belt)

He built a house with only one pole standing? (a mushroom)

He goes on dancing as he walks? (a caterpillar)

He built a house with two entrances? (a nose)

He has three legs? (an old man walking with his stick)

#### 5 RELIGION

About two-thirds of Ugandans are Christian, evenly divided between Protestants and Roman Catholics. The remaining third are about evenly divided between Muslims and those practicing indigenous, African religion. Religious holidays are celebrated in Uganda, especially Christmas and Easter for Christians, and Ramadan for Muslims. Each of the major religious denominations is associated with its own hill in Kampala, reflecting the practice of major institutions being situated on a hill in 19th century Uganda. Thus, there is a hill for the university, for the national hospital, and for the Catholic, the Anglican, and the Muslim houses of worship. Of international interest is the shrine near Kampala dedicated to the Uganda martyrs who are recognized as saints in the Roman Catholic tradition. These Christian martyrs were executed in the 19th century for refusing to renounce their religion at a time when Christians, traditionalists, and Muslims were competing for converts and influence in the emerging, but hostile, religious plurality of the day.

Indigenous supernatural ideas, such as belief in witchcraft, the evil eye, and night dancers, are still widespread. Among some groups, such as the Samia, amulets are worn to protect children from the evil eye of a jealous woman, which is thought to cause them sickness or death. Witches found in most societies also cause misfortune to people of all ages. A widely feared person throughout Uganda is the night dancer. He is a community member by day, who is thought to roam about at night eating dead bodies while floating along the ground with fire

between his hands. People generally avoid traveling alone at night for fear of these *Basezi*. Ancestors are highly respected and feared. They communicate with the living through dreams to warn them of impending dangers and to advise them on family matters. Children are advised to report their dreams to their elders soon after arising in the morning. Among the Lango, ancestor spirits (*Tipu*) are thought to cause illness, barrenness, impotence, and quarrels among the living, which may result in the division of kinfolk into new communities.

Most societies in Uganda believe that there is a high god who is the supreme creator. Among the Baganda, for instance, their supreme god was called *Katonda*. He was also known by other names that suggested his power, such as *Mukama* (the Master), *Lugaba* (the Giver), and *Liisoddene* (the Great Eye). *Were*, the high god of the Samia, is associated with the sun and was venerated each morning with its rising. Today, such beliefs have merged with Christianity and Islam. The older pantheon of lesser deities, each with their oracle priest and priestesses and special temples, has given way to churches and mosques. Nevertheless, Ugandans remain a very religious people with a deep-seated spirituality.

## 6 MAJOR HOLIDAYS

There is a single national holiday, celebrated on October 9, which commemorates the day in 1962 when Uganda achieved its independence from the United Kingdom.

## 7 RITES OF PASSAGE

The ethnic groups in Uganda recognize developmental stages in the life-cycle. Birth is generally received with a great deal of joy, as children are warmly welcomed into the community. Infancy is considered to be an important period in the child's development. For this reason, ceremonies such as those related to the milestone of sitting up alone and also obtaining one's clan name, often occur during the first years of life. Among the Baganda, for example, an infant is seated on a mat along with others who are to receive their clan names. Prior to this time, the infant has been regularly encouraged to sit by being placed in a hole in the ground or in a washbasin with cloths around the waist and buttocks for support. When the infant succeeds in sitting alone for the first time, there is a brief ceremony, and it is proclaimed, "now you are a man," or "now you are a woman," accordingly. Among the Lango, *Kwer* ceremonies are held throughout childhood to recognize changes in the status of a mother that are associated with the maturation of her child. Ceremonies involve exchanges of food and the drinking of beer by adult relatives of the child. Such celebrations occur, for example, shortly after childbirth when the mother spends several days in seclusion; after a mother has given birth to several children; after her oldest child is about 8 years old; when the oldest child is sick; and when the oldest child is about 12 years of age.

Childhood varies depending on whether the child comes from a wealthy or a poor family, or lives in the city of Kampala or in a small, rural village. Many young children walk upwards of 16 km (10 mi) daily to school. Since schools require fees, family members often need to pool their resources in order to send children (or, in some cases, only the most promising child) to school. This child, if successful, is expected to help other family members in turn. Boys and girls generally have household tasks to do. Girls 7 to 9 years old can be seen

caring for their younger siblings while the mother is working in the home or garden. During this time, the child caretaker will carry the infant on her back, sing lullabies, play, and otherwise amuse the baby. In rural areas, young boys typically are expected to care for livestock. Children from wealthy parents, by contrast, have fewer work responsibilities and more leisure time in that they live in homes with servants. They are also afforded opportunities for travel, better schooling, and luxury material goods, such as computers, TVs, and videos.

The teenage years are devoted to education, work, and courtship. Girls in rural areas are increasingly likely to become pregnant prior to marriage, especially if there is little prospect for education or gainful employment later in life. Although parents frown on teenage pregnancy, the infant is usually welcomed by the infant's maternal grandparents and may be raised as their own child. Abortions are discouraged in Uganda, given the high value placed on children.

Among many of the Nilotic societies, an age-group system is important. For the Karamojong, all males are formally initiated into an age-set that provides an established ranking. For example, all males are in one of two fixed generations, so that all the sons of one generation are in the same group, regardless of their ages. Therefore, the junior generation contains members who are still too young to be initiated. Should a male child be born before all members of the preceding generation have been initiated, he must wait to be named and publicly recognized. About every 25 years, a new generation is publicly established through a series of rituals officiated over by grandfathers of the new group. A final ceremony of inclusion occurs for a man with the ritual slaying of an ox that is then eaten in a communal feast. When a new generation is allowed to begin, some men are middle aged while others are quite young during this first year of initiation. Initiations are held about every 3 years with the average age being about 19. The name of a new group is chosen by the senior men. Common names are buffalo, jackal, leopard, topi, and snake. The age-set system functions most notably during rituals and determines participation, seating, and distribution order of meat. Authority is strictly along age-set lines in matters of discipline and community morality.

Pubescent girls were traditionally secluded and formally instructed by elder women (such as one's *Ssenga*, or father's sister), in societies that have patrilineal descent in sexual matters, domestic skills, and other expectations for married life. While the age-set system for boys is still evident in some communities, the seclusion of girls and associated sexual and domestic instruction has largely disappeared. Instead, girls learn about these matters through advice columns in daily newspapers and magazines and peer gossip in secondary schools. Traditionalists sometimes bemoan the fact that sex education is nowhere to be seen in the contemporary school system and dominant Christian ideology. Teenage pregnancies are thought to be one consequence of this change.

Adult life is concerned with work, family, religion, and community and national service of various forms. Death is a significant social event in all ethnic groups, where visiting and rituals are obligatory. Absenteeism from work for attendance at funerals is frequent and excused. Christian or Muslim burial is now commonplace. Ugandans widely believe that spiritual life continues after death, in accordance with Christian or Islamic concepts. Belief in the continued involvement of dead ancestors in family life is not uncommon. In some societies,

infants are named after ancestors so that a person can live on as long as his or her name is remembered. This form of reincarnation was seen by some demographers to be a deterrent to family planning efforts, given that to limit one's offspring is in a very real sense limiting one's opportunity to be reincarnated. Exposure to newer religions has caused some practices to decline, although many still persist from indigenous religions.

## 8 INTERPERSONAL RELATIONS

Ugandans on the whole are deeply imbedded in the social life of their communities, be these villages, schools, neighborhoods, clubs, churches, mosques, age-sets, clans, homesteads, or extended families. There are, of course, individual exceptions to this generalization, especially among those who are highly educated and who have the opportunity to travel. Ugandans enjoy looking "smart" (attractive) and are exceptionally fashionable. Women from Uganda have a favorable reputation in neighboring countries for their beauty and charm. Women from western Uganda, for example, traditionally went into seclusion prior to marriage and spent an extended period of time drinking milk in order to gain a good amount of weight prior to marriage. Today, plumpness is still considered desirable. Thus, eating disorders, such as bulimia and anorexia nervosa, are virtually nonexistent in a culture where thinness is not valued. Obesity, nevertheless, is also extremely rare since Ugandans remain quite physically active, given that most do not own cars and, therefore, travel on foot.

Sociability is best symbolized through a pattern of ritualized greetings that vary according to time of day, a person's age, social status, and length of time since an encounter. Each ethnic group tends to have its own characteristic greeting pattern and vocabulary. Not to greet someone is considered to be a serious impropriety. The following is an example of a Kiganda greeting:

Mawulire ki? (What is the news?)  
 Tetugalaba. (We have none.)  
 Mmm or Eee.  
 Mpoza mmwe? (Perhaps you have?)  
 Naffe tetugalaba or Nedda. (We have none either.)  
 Mmm or Eee.

Dating occurs prior to marriage in a variety of social contexts. Young people meet at funerals, weddings, churches, and school socials. Nightclubs are a popular place for dancing, with friends or on a date. Love songs are popular with people of all ages. Some post-independence songs heard on jukeboxes in bars, and on the radio contain clever phrases that are admired in courtship. The following are some examples of songs in Luganda by Baganda composers. The song, "*Nassuna*," by E. Kawalya contains the lyric: "Your photograph which I have is now like my mirror. I always look at it. Great are the parents who gave birth to you." Another song, "*Nakiganda*," by C. Ssebaduka states: "I have been waiting for you, Nakiganda, my love. Why are you late? I placed my chair by the road so that I could watch you come. . . . Your picture you gave me. . . I took it and showed it to my parents." It goes on to explain that if the gentleman did not marry Nakiganda it must be, according to his father, due to someone "bewitching" him. A third, popular song also mentions parents in the context of love and romance precisely because marriage throughout Uganda involves large,

extended families and is not simply a matter of two individuals falling in love. The song, "*Ntonga*," by D. Mugula laments, "Really, Ntonga, I beg you and your parents not to listen to those who may want to come between our friendship. . . Here is some sugar for your parents, for what harm did they do in giving birth to a beauty like yourself?"

## 9 LIVING CONDITIONS

President Museveni's rule has had to contend with severe political and economic devastation brought about by the previous Obote and Amin regimes. Nevertheless, Uganda is in the process of making a comeback. Tourism is being revived, with an emphasis on conservation and ecology. Agriculture remains the basic livelihood, with about 90% of the population continuing to reside in rural areas. Important subsistence crops include millet, corn, cassava, and plantains. Beef, poultry, and milk are also significant, especially among pastoral populations where agriculture is less significant than cattle as a means of livelihood. Coffee remains the largest export, earning over 75% of foreign currency. Recently, flowers such as roses are being cultivated for export to European countries. Fishing along the northern and western shores of Lake Victoria is important for communities located in these areas.

Population densities are highest in the south and southeastern areas, sometimes exceeding 116 persons per sq km (300 persons per sq mi). Other regions of Uganda are sparsely populated. Kampala, the capital city, and its environs have about 0.5 million people. It is the administrative, commercial, and cultural center of the country. This city is a transportation hub with a network of good, paved roads connecting Kampala with smaller towns in rural areas throughout the country. The taxi market is an impressive sight, with hundreds of "speed taxis" coming and going with travelers to and from the city. Outdoor markets with foodstuffs, household items, second-hand clothing, and various other items are densely crowded. Automobiles are seen commonly in Kampala, but in rural areas the bicycle is the most important conveyance, especially for transporting items to and from the marketplace.

Homes in rural areas are frequently made of wattle and daub and have thatched or corrugated-iron roofs. Affluent residents of rural areas may, however, have elaborate homes. This is particularly true for those who have gained wealth through commercial farming and livestock maintenance. Urban homes are typically of concrete with corrugated-iron or tile roofs, and have glass windows. In the suburbs of Kampala, multilevel and ranch homes are very plush, with servant quarters, swimming pools, and elaborate gardens. Urban gardens of produce and flowers are also a common feature of the city landscape.

Uganda's population suffers from malaria and HIV/AIDS, known locally as "slim disease." Despite efforts at eradication, malaria-infested mosquitoes are present throughout the country. Southern Uganda has a particularly high rate of HIV/AIDS infection, and virtually every family there has lost loved ones to the disease. The government has maintained an active policy of public education. The daily newspaper, *The New Vision*, carries a regular column known as "AIDS Corner," which is meant to educate the public. Infant mortality rates are also high due to poverty, malnutrition, diarrhea, and measles. The infant mortality rate is 112 deaths per 1,000 live births.

*Ugandan life is concerned with work, family, religion, and community and national service of various forms.*  
(Paul Joynson-Hicks)

## <sup>10</sup> FAMILY LIFE

Marriage and family life are primary pursuits of most Ugandans, whatever their ethnic group or religion. The extended family concept continues to be the ideal, although individualism and the nuclear family have made inroads due to European and Christian influences on the nation's culture. Monogamy (one husband and one wife at a time) is now the national ideal, even though polygyny (one husband and several wives at a time) is sometimes encountered. Polygyny is functional in situations in which marriage is very much a negotiation between large, extended families. Polygyny became a mechanism for large, extended families to increase the number of children in their community—not a bad idea in a rural, subsistence economy based on human labor. Ideals of love and affection were maintained in both monogamous and polygynous marriage situations.

The importance of extended family ties in marriage can be illustrated by the Banyankole people's complex traditional marriage customs. When a man decided he wanted to marry, he visited the girl's parents and informed them. If they agreed to the marriage, he returned with some of his relatives and, over pots of beer, discussed with his prospective father-in-law and his brothers the amount of the marriage fee. Routinely, goats, for example, were divided as follows: seven for the bride's father, three for an elder brother of his, two for his mother's brother, one for the father's sister, and one for a younger brother of the father. The bridegroom would go to his own family

members to raise the fee needed for his marriage. After these fees had been paid, the bridegroom kissed both palms of his father-in-law's hands and returned home. His home was a portion of his own father's large compound. When the bride arrived in her new home for the first time, she entered the room of her father- and mother-in-law. She sat first on her father-in-law's lap and then on her mother-in-law's lap, to symbolize that she was now like a daughter who would bear children for the family. After this ceremony, future contact with her father-in-law was taboo. Emphasis on large, extended families and bride-fees seen in the context of reciprocal exchange often made for strong, lifelong relations between brothers and sisters because wealth brought into the family on the occasion of a girl's marriage often provided the means for the brother to obtain a bride for himself.

Nowadays, Ugandans typically continue to have some form of marriage fee, maintain allegiances to their extended families and clans, and generally marry outside of them (a custom known as exogamy). Children of these unions usually belong to the clans of their fathers and take their clan names from his group. Some common clans in Uganda are elephant, bushbuck, rat, fish, lion, mushroom, civet cat, and many other plants and animals. People are not supposed to eat the plant or animal associated with their clan names. In some societies, such as the Lango or the Karamojong, women join the clans of their husbands; but, in other groups, such as the Baganda, they do not.

Traditional marriage ceremonies, rituals, and practices persist in varying degrees depending on ethnic group and location, as well as on degree of conformity to Christian or Muslim ideals. Most women, regardless of their educational level, desire to have children. Family planning, when it is used, has the function of attempting to space children, rather than to reduce their number or to avoid having them at all.

## <sup>11</sup> CLOTHING

Most Ugandans wear Western-style clothing. Young people are especially attracted to American clothing styles, such as jeans and slacks. The most prominent indigenous form of clothing is found in southern Uganda among the Baganda. The woman typically wears a *busuuti* (a floor-length, brightly colored cloth dress with short puffed sleeves, a square neckline fastened by two buttons, and a sash placed just below the waist atop the hips). Baganda men frequently wear a *kanzu* (long white robe). For special occasions, a western style suit jacket is worn over the *kanzu*. In western Uganda, Bahima women wear full, broad cotton dresses, with a floor-length shawl used to cover their bodies while seated, and to cover their heads and shoulders while standing. Northern societies such as the Karamojong wear cowskins, and signify social status (e.g., warrior, married person, elder) by items of adornment, such as feather plumes and large coiled, copper necklaces, and armbands.

## <sup>12</sup> FOOD

Ugandan stores, supermarkets, and open-air markets make available a wide choice of foods from local and international sources. Each region of the country tends to have its own local foods and traditions, which have endured since pre-colonial times. Among pastoral groups, such as the Karamojong, there is a strong emphasis on cattle that provide meat and milk (sometimes eaten in curdled form, or mixed with blood drawn from the neck of an ox). Cattle are also a source of many other

necessities, such as clothing and blankets. Containers are made from the horns and hoofs. Cattle urine is mixed with mud as a base for the floor of huts, since water is scarce. Dung is used for fertilizer in those communities where grain is grown. Millet and sorghum are common grains available to communities throughout northern regions, where rainfall is not sufficient for root crops such as cassava, manioc, and sweet potatoes. Root crops and plantains are staples in southern and eastern Uganda where rain is plentiful year-round. In western Uganda, the Banyankole are internally divided into the Bahima, who are pastoralists having very long-horned cows; and the Bairu, who grow grains such as millet and sorghum.

Kampala is supplied daily with large amounts of plantains (*matooke*). *Matooke* is the staple of the Baganda, the largest ethnic group in Uganda and in the city of Kampala. *Matooke* is served with various sauces that may be composed of peanuts, green leaves, mushrooms, tomatoes, meat, fish, white ants, and/or grasshoppers. Before eating, a bowl of boiled water and soap are passed around so that each person can wash his or her hands. Banana leaves are used to cover the steamed plantain while cooking and during serving. *Matooke* is eaten by taking the right hand and forming a small portion of the *matooke* into a ladle, which is then dipped in the sauces. The combination of a staple with a sauce is common throughout Uganda, as is eating with the right hand, although cutlery is available when desired.

Drinks include a wide variety of bottled beers and soft drinks. In rural areas, traditional beer fermented from maize (corn), bananas, millet, sorghum, or pineapples is sometimes available. Metal cooking pots and pans, dishes, and glassware are now commonplace in rural areas, although traditional gourds and ceramic containers are also prevalent. Throughout the country, agriculture is the special domain of women, who are responsible for the farming of staple foods. They also exercise much control over the foods that they grow and prepare in the kitchen, which is also considered to be a woman's domain. Men tend to be responsible for cash crops such as coffee and tea.

Chocolate bars and other sweet candies are not generally eaten as treats by children in rural areas. Instead, children enjoy picking sugarcane and chewing it for its sweet juices. Fruits, such as mangoes and small sweet bananas, are also favorite treats. These preferences make for strong gums and teeth. Thus, dental problems are rare, a fact also attributed to the custom of cleaning each tooth separately with a stick. Dental problems are becoming more of a problem, however, among young people today who have more exposure to processed sweets.

### 13 EDUCATION

The Obote and Amin years witnessed deterioration in the educational standard of the country. Makerere University College, which began as a secondary school in the 1920s, became a university in 1950 (known then as the University College of East Africa). It drew students from Kenya, Tanganyika (now Tanzania), and Zanzibar, as well as Uganda. In 1961, it became Makerere University College and continued throughout the 1960s to educate a large number of East Africans in a wide variety of fields including medicine. What was a distinguished university and faculty was decimated by the interventionist policies of Amin, who drove into exile or killed faculty and students

*Success in school is seen as the means to a better livelihood for the individual who is, in turn, expected to help his extended family. For this reason, Ugandan students are typically very hardworking and achievement-oriented. (AP Images)*

alike. The vice-chancellor of Makerere “disappeared,” never to be seen again. Prior to 1970, an excellent secondary school system was also in place, and included very prestigious schools such as Kings College Budu, Kisubi, and Gyaza Girls among others. The school system was modeled after the British system, having primary, secondary (Cambridge certificate—O level), higher (A levels), and three years of university education.

The present government is in the process of rebuilding the nation's school system. There are many challenges. For example, in the total population aged 15 and over, about half are illiterate. Literacy is higher among males than females. This sex imbalance is due in part to a policy of favoritism shown by the British during the protectorate years for the education of boys. Another problem interrupting the education of girls is a high rate of pregnancy among schoolgirls, usually requiring that they leave school. Poverty is another factor contributing to illiteracy, given that schooling can be expensive. For those with means, the boarding school is a popular concept, as are single-sex institutions.

Parental expectations are high concerning education. Success in school is seen as the means to a better livelihood for the individual who is, in turn, expected to help his extended family. For this reason, Ugandan students are typically very hardworking and achievement-oriented. They can be found working and studying in all professions and vocations both in Uganda and abroad.

## 14 CULTURAL HERITAGE

The expressive arts embodied in music and dance remain a significant part of Uganda's cultural heritage. Dance forms vary somewhat by ethnic group, but everywhere people of all ages participate in dance and song in the course of routine rituals, family celebrations, and community events. Among the Karamojong and their neighbors, dance is especially significant during times of courtship, when young people dance late into the night outside in the open air. They dance by jumping up and down, facing members of the opposite sex, in accompaniment to hand-clapping and singing. Musical instruments are not present in these lively interactions.

Many Baganda households contain at least a small cowhide drum for regular use in singing and dancing. During the kingship, there were 93 royal drums called *mujaguzo* that varied in size, each with its own name and specific drumbeat. Other musical instruments included string instruments, such as fiddles and harps, and woodwind instruments such as flutes and fifes. Baganda dancers are skilled in their ability to swiftly move their hips to the alternating beats of drums playing simultaneously.

Among the Banyankole, pots are used as a percussion instrument. These are ordinary water pots filled with different levels of water, whose mouths are beaten by sticks to which small bundles of weeds are attached. Men and women accompany the rhythms, which sound not unlike drums, by singing, dancing, and beating their hands on their bodies. A familiar dance routine in imitation of cows is done. The dancer jumps up and down while holding the arms overhead, in imitation of a cow's horns, while producing a hissing sound with the mouth.

Modern nightclub and disco dancing are also part of the teenage scene, particularly in urban areas. Nevertheless, visits to rural areas to see relatives or friends may engage young people in traditional dances. In some areas, during large celebrations, such as a wedding or a funeral, many older people gather around the drum or water pot for music, while the young people prefer international music from the radio or CDs and audio cassettes played on a boom box.

Before the devastation of Uganda's economic and intellectual life, Uganda was in the process of developing an extremely rich literary tradition in English, especially in association with Makerere University. The Baganda also had developed a robust vernacular literature in Luganda that included novels, short stories, essays, historical writings, songs, plays, and poems. Perhaps the most famous Ugandan writer from the pre-Amin years was Okot p'Bitek, an essayist, poet, and social critic who once headed the Uganda National Theatre and was professor of creative writing at Makerere. Although he died in 1982, his work is still read throughout East Africa, as well as internationally. His best known work, "Song of Lawino," depicts the circumstances of modernization in his native Acholi land through the eyes of a woman who laments her husband's blind preference for women who wear modern makeup, speak English, know all of the modern dances and customs, and who look down on traditional women, such as herself.

## 15 WORK

During the Amin years, the economy in Uganda lost virtually all of its expatriate and Asian populations, who were significantly involved in the modern sector of banking, commercial

activities, and industry. Nevertheless, Uganda has maintained (up to the present) a strong subsistence agricultural base, so that recovery from the Amin years has the advantage of a plentiful food supply and a population that is overwhelmingly agrarian and rural in lifestyle. Most urban-dwellers in Kampala maintain continued access to nearby agricultural areas. These abound within short distances of the city and provide a reliable, inexpensive source of local food on a year-round basis.

Small-scale economic opportunities, involving tailoring, shop keeping, hair care, repair work of various sorts, carpentry, and the marketing of food and other household necessities, employ numerous Ugandans in Kampala and throughout the country's smaller towns and villages. The professions, including teaching, law, and medicine, are growing and employ many supportive staff, such as secretaries, receptionists, and computer personnel. Comparatively poor people can be seen operating small all-purpose stands, with huts that are folded up and taken down at closing time. Cigarettes, matches, candy, soft drinks, biscuits, cookies, and bread are available here for sale to people who may have missed a chance to visit stores during regular hours.

The leisure-time industry is quite lively, encompassing restaurants, bars, and nightclubs that together employ many thousands of Ugandans. A somewhat unique and striking aspect of this industry is the uniformed barmaid found in bars throughout the country, even in remote rural areas. Tourism, involving safaris to game parks to see mountain gorillas, tree-climbing lions, crocodiles, and elephants, is once again on the upswing as well.

## 16 SPORTS

Soccer is the most popular sport, with a national league and hotly contested playoffs. Cricket and rugby are also quite popular sports enjoyed by many spectators. Boxing is another competitive sport for which there is a national trophy awarded for the best in each division. Uganda sends competitors abroad to international events such as the Olympics and has in the past won medals for excellence in track-and-field.

## 17 ENTERTAINMENT AND RECREATION

Most Ugandans own radios and enjoy listening to the variety of educational programs, plays, stories, news, and music offered. There are 10 stations, broadcasting in English and the major ethnic languages. There is a national television station that includes programs from the United States and England, in addition to its local subject matter. The American CNN provides an entertainment and news link to worldwide news. Television is available in most affluent homes and in hotels.

Individuals and families enjoy visiting restaurants and clubs where they can watch traditional dancing, whose performances are regularly available in Kampala. Popular theater is also a very significant means of entertainment in Uganda. Plays have a long-standing tradition often containing themes of concern to the population at large such as politics, social change, and health and family matters. Recently, plays have been used in Kampala and throughout the country to promote knowledge about health matters, especially those concerning HIV/AIDS and its prevention. The significance of public plays for educational purposes cannot be underestimated in a country in which about half of the country's population is illiterate.

## 18 FOLK ART, CRAFTS, AND HOBBIES

Rural Ugandan women can often be seen sitting on the ground outside their homes weaving beautiful and colorful straw mats. Tightly woven coiled baskets are also prevalent. Wooden milk pots and bowls are carved and decorated. Elaborate and simple pipes for smoking are popular in remote areas. In general, much of Ugandans' everyday artistic endeavors involve useful objects that are part of their everyday existence.

Basketry is a highly developed art form in Uganda. Common fibers used to weave are banana palm, raffia, papyrus, and sisal. Weaving is used for house walls, fences, roofs, baskets, mats, traps, and receptacles for drink and food. Table mats and cushions are also common uses today. Bark-cloth was once a widespread craft used for many purposes, including clothing. Today, remnants of bark-cloth can be seen in its use as decoration on place mats and greeting cards, as well as in the making of blankets and shrouds. Another art form using cloth is batik, a type of cloth painting that can be hung on walls for decoration. The revival of the tourist industry currently underway is likely to stimulate the production of arts and crafts for foreign consumption.

## 19 SOCIAL PROBLEMS

Uganda suffers from one of the highest HIV/AIDS infection rates in the world. It has one of the best public awareness programs associated with HIV/AIDS anywhere. Many families have experienced the loss of loved ones to this disease, resulting in a large number of orphans. Another problem is the flow of refugees coming to Uganda from neighboring nations suffering from political turmoil. Hundreds of thousands of southern Sudanese have fled to Uganda in recent years, due to religious conflict in the Sudan. Regularly, refugees from Rwanda fleeing from ethnic conflict enter Uganda's western border. Many Banyarwanda are now citizens of Uganda, having fled there in the 1960s. Despite one of the most highly publicized terrorist regimes in modern times under Idi Amin, Uganda by all accounts is now well on the way to democracy, although it is still under one-party rule. Ugandans, on the whole, are very optimistic about their future.

## 20 GENDER ISSUES

In spite of the significant social and economic responsibilities that women shouldered in the traditional Ugandan societies, their roles were still subordinate to those of men. From their infancy, women would be taught to accede to the wishes of the men in their lives, including fathers, brothers, and husbands. Women were expected to demonstrate their subordination to men in public. For instance, among the Baganda, women would kneel while conversing with a man.

The responsibilities of childcare and subsistence farming rested in the hands of women. In religious circles, women also were allowed a dominant role. For example, Alice Lakwena, a religious Ugandan woman, led a revolt against Ugandan political establishment dominated by men. In a few areas, women owned property and large tracts of land for cash crop farming. In Uganda societies, there seems to be a clear-cut gender-based division of labor. The kitchen in most societies is a woman's domain, while taking care of cattle is a man's domain. Boys over the age of 12 were forbidden from going to the kitchen.

In the family circles, men have the overall authority. Women and older girls share the domestic chores while men and older boys may help digging in the farms or taking care of the livestock. Defending the society as well as making societal decisions was a man's duty. Women depend so much on men that they rarely have influence on matters related to their families or society in general. They are tied to male relationships for their sustenance and survival of their children.

The political violence that characterized Uganda in 1970s and 1980s during the rule of Idi Amin Dada affected women more negatively than it did men. Women faced a lot of hardships at home especially because they had very limited economic opportunities. It was, perhaps, these challenges that inspired them to be involved in the political struggle that led to the fall of Idi Amin and ushered in the reign of the current president. Ugandan government has promised to do away with all forms of discrimination against women and there are many women in the parliament due to affirmative action.

## WOLOF

**PRONUNCIATION:** WOE-loff

**LOCATION:** Senegal

**POPULATION:** About 5 million

**LANGUAGE:** Wolof

**RELIGION:** Islam (Sunni Muslim); Roman Catholic; small percentage of Protestants

**RELATED ARTICLES:** Vol. 1: Mauritians; Senegalese

### <sup>1</sup> INTRODUCTION

The Wolof form the majority ethnic group in Senegal and are influential culturally and politically in Senegalese life. Apart from oral narratives, information about their pre-colonial origins is sketchy and incomplete. The earliest Portuguese explorers in the 15th century observed that the Wolof and Sereer groups were well established along the Senegalese coast at that time. The Wolof had probably occupied that area for centuries and over time assimilated smaller neighboring groups. An alternative theory holds that several groups including the Soose, Sereer, and Pulaar joined to constitute the Wolof.

From the 1600s to the mid-1800s, slave trading caused much dislocation, though it did not deplete the Wolof to the same degree as other West African peoples. A reminder of this tragic epoch is the island fortress of Gorée, off the coast of Dakar, which served as one of West Africa's main slavery depots.

The French founded the Senegal colony in 1637, making it the oldest French colony in Africa and the longest-lived. As the French advanced their territorial claims eastward, the Wolof states resisted in the 1880s, but eventually succumbed to superior military force. Dakar acquired added importance when the French made it the capital of their West African territories in 1902. Colonization favored the Wolof and in just seventy years, from 1900 to 1970, the group nearly quadrupled its population to 1.4 million.

Since the first political reforms in 1946, the Wolof have played a leading role politically, culturally, and economically in Senegal. Despite the country's weak economy—or perhaps because of it—the Wolof have built a reputation for international commerce and trading. Wolof businesspeople are found throughout Africa, Europe, even on the streets of New York City and Washington, D.C. In Senegal, their key challenges are similar to those of their fellow citizens in neighboring countries: cope with stagnating economies, create living wage job opportunities, build adequate housing and provide basic services to meet rapid population growth and relentless urbanization.

### <sup>2</sup> LOCATION AND HOMELAND

The Wolof presently occupy the westernmost point of Africa, between the Senegal River to the north and the Jurbel region about 300 km (185 mi) south. From the Atlantic Ocean on the west, the Wolof extend to the Ferlo desert, some 300 km (185 mi) east. In pre-colonial times, this territory included the kingdoms of Waalo, Jolof, Kajoor, and Baol. Today, this area remains approximately the same as the group's ancestral homeland. Neighboring minorities include the Maures and the Tuculor, the Sereer and the Peul—some of whose members have lived for centuries within the Wolof area.

In Senegal, the Wolof account for nearly 40% of some 13 million people (estimate 2008), followed by the Fulani (15%), Serer (15%), Toucouleur (9%), Dyula (9%), Malinke (9%), and others (3%). In Mauritania they account for about 7% of the population. Though they are a minority in The Gambia, they nonetheless comprise about 50% of the population of Banjul, the coastal capital city of The Gambia.

Physically, their homeland is flat and desert-like, covered by dunes and sandy plains. These are easily traversed in the dry season when vegetation is sparse and thin. The vegetation consists mainly of bushes, acacia, ficus, and baobab trees, and clay soils favor the cultivation of millet. Where the Senegal river overflows its banks, farmers grow sorghum, potatoes, and beans. There is a short rainy season lasting three months from July to September, but cyclical droughts and increasing deforestation add to the insecurity of crop farming.

### 3 LANGUAGE

Wolof is Senegal's dominant language. Practically all Senegalese understand Wolof, and the vast majority of non-Wolof speak it as a second language. Senegalese radio and television broadcast both in French and Wolof. Wolof is also spoken in Mauritania and Mali, and in The Gambia, although in a different form. Given the large number of emigrés, one finds Wolof speakers in France, and on the streets of West Harlem in New York City. Some 7 million people worldwide speak one or more of the six dialects of Wolof (which belongs to the Niger-Congo and Atlantic-Congo family of languages). One growing concern is that the language, especially among Dakar youth, is becoming 'polluted' by French. It is rare in Dakar to hear a complete Wolof sentence without one or several French words mixed in.

### 4 FOLKLORE

As elsewhere in Africa, orality characterizes Wolof folklore. In Wolof and Senegalese society, the most accomplished storytellers are African bards, or *griots*. They are similar to the European minstrel of the Middle Ages, combining the functions of historian, poet, and musician. They must be familiar with history, have many acquaintances, and speak about them diplomatically, but honestly. *Griots* use props, play flutes and harps, and break into song as they perform. Because they are archivists and entertainers in one, no ceremony or celebration of consequence is held without them.

The Wolof consider Lat Dior Diop, the Damel (king) of Kayor, to be a hero and liberator from French occupation in the 19th century. He opposed the building of railroads because he believed they would allow the French to control the entire region. In Senegalese schools, children learn that he was shot by the French and died in battle. Ironically, according to legend, after Diop's death, his horse stood on railroad tracks until hit by a train.

### 5 RELIGION

An overwhelming majority of the Wolof are Muslim, belonging to the Maliki branch of the Sunni group. The remaining 10% are Roman Catholic. Less than 1% is Protestant. There has been some syncretism of traditional, Muslim, and Christian beliefs. The Wolof typically wear protective amulets or "gris-gris" to overpower evil spirits. The small leather pouches once

contained herbs and medicines, but they now hold verses of the Koran.

The Wolof depend on *marabouts*, teachers of the faith, who also exercise much political and economic influence. People give a portion of their salaries to the marabouts, to build mosques and make charitable donations.

### 6 MAJOR HOLIDAYS

The Wolof celebrate Muslim as well as Christian holidays and also secular holidays, such as Senegalese Independence Day (April 4). Four of the Muslim holidays are determined by the lunar calendar. The most popular of these is Tabaski, or the "feast of the lamb." This feast commemorates Allah's provision of a lamb for Abraham to sacrifice in the wilderness in the place of his son Isaac. In the morning prayers are offered at the mosque, and then a lamb is slaughtered. People get together with family to partake of a large meal and then visit their friends later in the day. Typically, children receive new clothing and money, and families often go into debt for the occasion.

### 7 RITES OF PASSAGE

The most important Wolof rites of passage are naming ceremonies, circumcisions, marriages and funerals. Much significance is attached to names. Parents carefully choose a name for their children, usually the name of a family member or friend who has influenced them and who will provide a model for their child. The decision may take up to a year and is revealed during a naming ceremony.

At age seven to eight, boys are taken from their homes and circumcised in the bush, where they wear white gowns and caps. When they return, they are looked after by a big brother, or *Selbe*, until they are fully healed. The *Selbe* educates them about Wolof heroes and legends. They also visit friends and family and receive gifts from them. After this rite, the community regards them as men.

Marriages give much reason to celebrate as they unite two families and symbolize readiness for children. Weddings are festive and typically involve civil, religious, and traditional ceremonies before they are complete. The reception is held at the home of the groom where the bride will come to live. In order to gain the consent of the bride, the groom's parents bring gifts to her parents. Once the bride has given her consent to marriage, her parents distribute cola nuts to family and friends as a way of announcing the marriage.

At death, according to Islamic custom, funerals are held at home the same or the following day. In the city, where regulations are stricter, the corpse may be taken to a funeral home. A 40-day mourning period follows, during which people visit the family of the deceased and offer gifts of money.

### 8 INTERPERSONAL RELATIONS

Greetings can last 10–15 minutes. One who does not take time to inquire after another person's health, well being, and family may be snubbed altogether. The French custom of kissing three times on the cheeks is common in Dakar and in the towns. Handshaking is the preferred traditional greeting, but men and women do not shake each others' hands. A common Wolof exchange is illustrated below, although 5 to 10 additional inquiries would be routine. Praise for Allah is interspersed throughout the greetings:

*A Wolof girl helps bathe her little sister. (The Image Works)*

“Nanga def?” (How does it go?).

“Mangi fii rekk.” (I am here only).

“Nunga Fe” (They are there).

“Mbaa sa yaram jamm” (I hope your body is at peace).

“Jamm rekk” (Peace only).

“Alhumdullilah” (Praise be to Allah).

As in many African societies, Wolof respect both age and status. It is considered impolite for a woman to look a man directly in the eye. Women and girls traditionally curtsy to their elders. As in other Muslim societies, only the right hand must be used to shake hands, or to pass and receive objects, because the left hand—used for personal cleansing—is thought unclean. Pointing is considered rude, although people do point with their tongues.

Wolof are accustomed to visiting each other unannounced, even as late as midnight. Impromptu visits are not considered rude or inconvenient, though customs are changing owing to the cell phone culture. A visitor must share a meal, have tea, or spend the night. This traditional hospitality is called *Terranga*.

## **9 LIVING CONDITIONS**

Living conditions vary greatly from the city to the countryside. In Dakar, St. Louis, and Diourbel, most homes have electricity and indoor plumbing, although the water supply—and sometimes electricity too—are unpredictable. Houses are made of

concrete with tin roofs. People who can afford it cook with bottled gas; however, most people use charcoal. Jobs, adequate housing, and coping with inflation pose major challenges for city dwellers. The cost of living in Dakar is relatively high.

Health care is available from the state for a nominal fee, though people must pay for their medicine. Many Wolof prefer to consult traditional healers first. While their spells have no known scientific basis, their other treatments involve the use of local herbs, bark, and roots that do indeed have medicinal properties.

Outside the cities, life is rustic. People live in huts made of millet stalks and thatched roofs. They sleep on traditional beds of wooden sticks with one end raised and draw water from wells or rivers. With no electricity, the only modern appliances to be found in some villages are radios—and yes, cell phones. In the absence of paved roads, the countryside is honeycombed with sand tracks. Trucks follow these or make new “roads,” going almost anywhere they please in the dry season.

## **10 FAMILY LIFE**

The nuclear family is the pillar of Wolof life. Whatever misfortune may befall them, family members are there to support each other. The man of the family may officially make the decisions, but the wife and mother runs the household. She takes care of the children, does the marketing and cooking, draws water, and finds firewood. Mothers nurse their children for

about one year. A Wolof father blames the mother if the children make mistakes (“Look what your son did!”), but enjoys taking credit for a child’s accomplishments. A typical family has as many as ten or eleven children. In polygynous households, wives occupy separate rooms or dwellings, but they live together as co-mères. The first wife exercises seniority over her co-mères, but all join in the child-raising communally.

Traditionally, when a child comes of age, the mother looks for an appropriate spouse of equal or higher social status. For example, members of the *Guer* (noble) caste generally do not marry into the *Griot* (artist) caste. Similarly members of the *Griot* caste do not marry *Jam* (serfs), whose ancestors were servants. The father waits for the mother’s selection of a prospective spouse and then usually approves it.

Wolof do not keep pets, fearing that their prayer mats and other furnishings will be ruined if dogs bring dirt and fleas into the house and that friends might be discouraged from visiting. Cats are not well liked either, except to catch mice. However, people keep lambs because they believe that the “evil eye” will be deflected on the lamb instead of the family.

## 11 CLOTHING

In Wolof society, personal appearance is important. In town, men typically wear shirts and trousers and suits for special occasions; women wear dresses. It is becoming common to see teenage girls in jeans and T-shirts, but only children wear shorts in public. In traditional settings, people wear *boubous*, loose-fitting cotton tunics with large openings under the arms. Men wear cotton trousers underneath, while women wear sarongs, as well as matching headscarves or turbans that complement the *boubous*. Some *boubous* are elaborately embroidered and may cost as much as two to three hundred dollars. Men wear open leather sandals, or closed, pointed ones; women’s sandals may be colorfully decorated.

The wearing of tattoos is gaining popularity among urban youth, and ear piercing is traditional for girls. It is becoming popular with boys as well. White teeth are a sign of beauty, and teenage girls pierce their gums with needles to whiten them. Girls braid their hair, especially in the country.

## 12 FOOD

The Wolof usually eat three meals a day. Townspeople with the means to afford them drink cacao and eat French bread with butter or mayonnaise, jam, and processed cheese imported from France. The traditional breakfast consists of a paste-like dough made of millet with milk poured over it (*lakh*), or *som-bee* (boiled rice covered with curdled milk, sugar, and raisins).

Wolof are famous for *Tiébou Dienn* (cheb-oo-jen), a dish that can be made as simply or elaborately as desired. Essentially, it is a fish stew cooked in cilantro, scallions, garlic, pepper, onions, tomato paste, bouillon cubes, and oil. The stew is mixed with squash, sweet potatoes, okra, tamarind, and different kinds of peppers. It is eaten with rice that has been cooked in the fish broth. The Wolof people also are known for their *Mbaxal-u-Saloum*, a spicy tomato, peanut, and dried-fish sauce with rice. Another popular dish, *Mafé*, is made with peanut sauce, meat, and potatoes, sweet potatoes, or cassava, with a bit of dried fish to flavor it. The favorite drink of the Wolof is *bissap*, which is red and tastes somewhat like cranberry juice. It is considered a purgative, or a digestive drink.

People eat together on a large floor mat. They kneel on one knee and eat the food directly in front of them, using only their right hands. After finishing their portions, they wait for their neighbors to push some food their way. The goal is to get to the center of the food tray.

At night, Dakar residents enjoy going out to a *Dibiterie* (or *Dibi*) for the traditional mutton cooked over a wood fire and covered with a spicy sauce. A meal is completed with the evening tea ritual, *ataya* (the Arabic word for green Chinese tea). Three servings are poured into small glasses, each round sweeter than the last.

## 13 EDUCATION

Only 30% of Wolof read and write in French, and only about one woman in five is literate. School is mandatory and based on the French system, but attendance is not enforced. At the age of four or five, the majority of children attend Koranic schools, where some continue until they have memorized the entire Koran. In the cities, however, this practice is dying out.

Six years of primary school begin with a two-year preparatory program. At the end of four more years, pupils take a high-school qualifying exam. In the French secondary education system, classes progress from Class Six to Class One. A final year follows, in which the student prepares for the state baccalaureate exam. Few people reach this level, so holding a high-school diploma confers considerable prestige on its holder. A small percentage of high-school graduates continue at the University of Dakar. Those who can afford it prefer studying abroad in France or other French-speaking countries like Belgium, Switzerland, and Morocco.

## 14 CULTURAL HERITAGE

Senegal is a leader in West African film and literature. Its internationally known filmmakers include Djibril Mambeti Diop, who is a Wolof. Another Wolof, Alioune Diop, founded *Presence Africaine*, the foremost African publishing house in Europe. He was also a prolific writer.

Wolof are accomplished musicians and have pioneered modern forms of traditional *griot* music. Modern *griot* “rap” performed in the Wolof language narrates stories about society, much like ancient *griots* narrated the lives of ancient kings. The internationally acclaimed singer Youssou N’dour performs in his native Wolof and in several other languages, including English, and has recorded CDs as well. Traditional Wolof instruments include a small drum (*tama*), held under the arm, which can be pressed against the body to produce different pitches. The goat-skin drum head is hit by a wooden stick with a curved end. The Wolof have skillfully adapted such instruments for pop music.

## 15 WORK

Many Wolof farm and keep herds. Although Wolof generally do not fish, a Wolof-speaking people, the Lebu, are fisherfolk on the coast of Senegal. If the Wolof have an international reputation, it is mainly for their tailoring, wood carving, and business acumen. They have traded with Arabs for centuries and specialize in import-export trading. According to a popular Wolof joke, when Neil Armstrong landed on the moon, a Wolof tapped him on the shoulder and asked, “*Gorgui* (sir), would you like to buy this product?”

## 16 SPORTS

The Wolof participate in soccer, basketball, track and field, and jogging. Their traditional sport, however, is similar to ancient Greco-Roman wrestling. Called *Laamb*, it has been played for centuries. Each year, champions are crowned and praised in traditional songs. Two forms exist. In the first, wrestlers strike each other with their bare hands, whereas in the second this form of physical contact is not permitted. A wrestler loses the match when his back touches the ground.

In addition to its physical dimension, *Laamb* also has a spiritual dimension. Like promoters in American boxing, Wolof wrestlers count on *marabouts* or “Juju Men” to organize pre-match rituals. Even the most technically proficient wrestlers would not dare enter the ring without participating in these rites. The wrestlers dance around the ring with drummers and singers. They wear amulets on their arms, legs, and waist to protect them from the witchcraft of their rivals. Spectators enjoy this aspect of the sport as much as they do the fight. In ancient times, matches were organized in the village squares and provided occasions for storytelling by *griots*.

## 17 ENTERTAINMENT AND RECREATION

City folk have access to videos, video games, radio and (satellite) television, but it is cheaper and more enjoyable for many people to create their own fun. For example, in Dakar, as the day cools down late in the afternoon, *griots* play drums in the streets, often accompanied by very suggestive dancing. The *griot* can speed up the beat to dizzying levels.

Young people enjoy nightclubs. In Dakar, some clubs are very elaborate, with moving dance floors, electronically controlled backdrops, and special effects including smoke, mirrors, and sophisticated light shows. *M'balax* is the Senegalese pop music. Rap, reggae, Caribbean zouk, macossa from Cameroon, and sukous from the Democratic Republic of the Congo are also popular with the younger set.

Older people find enjoyment in quieter pursuits, such as socializing at home, in the mosques or playing checkers at a local coffee house. For excitement, they go to wrestling matches, traditional dug-out canoe racing, and horse racing on weekends (although betting is frowned on). Cap-Vert, as the Dakar peninsula was so named by Portuguese explorers, is surrounded by water on three sides. It has excellent beaches, like N'Gor, offering respite from the heat as well as people-watching entertainment on the weekends.

## 18 FOLK ART, CRAFTS, AND HOBBIES

The Wolof *Laobé* are known for their woodcarvings. They fashion statues, figurines, and masks, mainly for the tourist market. Wolof are also fine tailors, and the *Teug* caste specializes in jewelry. Men prefer silver bracelets and rings, while women wear gold necklaces, chains, and rings. Some Wolof are traditional weavers. Hobbies may be practical, such as gardening, or instructive, such as storytelling.

## 19 SOCIAL PROBLEMS

Wolof society is undergoing rapid change from a rural to an urban style of living, which places stress on social structures, family relationships, and traditional values. Many Wolof villages have been depopulated as men migrate to the cities hoping to find work, especially white-collar jobs. Children and

young people often find it difficult to adjust—a factor in the rising abuse of alcohol and drugs by the Wolof.

Unemployment is also a major problem. Poverty and idleness have led to an increase in burglary, prostitution, mugging, drug trafficking, and even human trafficking. Pickpockets are common in downtown Dakar. Beggars frequently knock on doors for food, and people often cook extra food, in preparation for these visits. Nevertheless, serious crimes such as murder and armed robbery are still very rare. Handicapped people are generally, but not always, cared for by their families.

## 20 GENDER ISSUES

Women face discrimination, especially in rural areas where traditional customs and polygynous relationships are the norm. Indeed, one in two marriages in the hinterlands is polygynous and, unless agreed to beforehand, husbands do not need to notify or seek consent of their wives to enter into subsequent marriages. Even though the law proscribes marriages for girls under 16, it is not uncommon in rural areas for girls 13-15 years old to be married as they represent a means of income via the brideprice. Female genital mutilation (FGM) is also widespread, despite efforts by government officially to eradicate it. Programs implemented by NGOs, such as TOSTAN, to create more awareness of the associated health risks have reduced the incidence of FGM, but the practice remains deeply ingrained in the culture. Since the man is the head of the household, women cannot take legal responsibility for children, and women have difficulty inheriting and purchasing property. In addition to running the household, they also do 85% of the agricultural work.

# XHOSA

**PRONUNCIATION:** KOH-suh (“X” represents a click sound)

**LOCATION:** South Africa (southeastern and urban areas)

**POPULATION:** 8 million

**LANGUAGE:** Xhosa (Bantu)

**RELIGION:** traditional beliefs (supreme being *uThixo* or *uQamata*), Christianity

## 1 INTRODUCTION

The word Xhosa refers to a people and a language of South Africa. The Xhosa-speaking people are divided into a number of subgroups with their own distinct but related heritages. One of these subgroups is sometimes rather confusingly called Xhosa as well, while other subgroup names are Bhaca, Bomvana, Gcaleka, Mfengu, Mpondo, Mpondomise, Xesibe, and Thembu (Tembu). Unless otherwise stated, this article includes all these subgroups, and refers to all Xhosa-speaking people.

The Xhosa, among all the Bantu-speaking peoples of South Africa, penetrated furthest south towards the Cape of Good Hope. Well before the arrival of Dutch in the 1650s, the Xhosa had settled the southeastern area of South Africa. In this territory, they interacted with the foraging and pastoral people who were in South Africa first, the Khoi and the San.

The Europeans who came to stay in South Africa first settled in and around Cape Town. As the years passed, this limited region was not enough for some of the settlers. A subculture of *trekboers* (white pastoralists) moved away from the Cape, increasing the territory of white control. This expansion was first at the expense of the Khoi and San, but later Xhosa land was taken too. A series of wars between *trekboers* and Xhosa began in the 1770s. Later, in the nineteenth century, the British became the new colonizing force in the Cape. They directed the armies that were to vanquish the Xhosa. Sustained military resistance to the Cape forces ended in 1853, although warfare continued for another 25 years until at least 1878.

Christian missionaries established their first outposts among the Xhosa in the 1820s, but met with little success. Only after the Xhosa population had been traumatized by European invasion, drought, and disease did Xhosa convert to Christianity in substantial numbers. Most of the initial conversions began in the 1850s following the failure of a prophetic movement known as the Cattle Killing. Some 20,000 people died of hunger and disease after killing their cattle to fulfill the Cattle Killing prophecy. Without other recourse and in despair, many Xhosa sought help from the missionaries. Others were forced to flee the territory, taking menial positions working for whites.

In the aftermath of the Cattle Killing, a cultural division developed between mission-educated “school” people and traditionalists, who were called “Reds” after their practice of anointing themselves with red ochre. School people saw themselves as enlightened by Christianity and civilized by Western education, while red people saw themselves as being true to proper Xhosa traditions and the ways of their ancestors.

In addition to land lost to white annexation, legislative acts such as the Glen Grey Act of 1894 reduced Xhosa ability to control their own political affairs. Political authority was allocated to white magistrates, and landholdings were privatized.

Over time, Xhosa people became increasingly impoverished and had no other option except to become migrant laborers. In the late 1990s, Xhosa make up a large percentage of the workers in South Africa’s gold mines.

Under apartheid, the South African government created separate regions that were described as *Bantustans* (homelands) for black people of African descent. Two regions—Transkei and Ciskei—were set aside for Xhosa people. Although these regions were proclaimed independent countries by the apartheid government, they were not recognized as such outside South Africa. Apartheid policy denied South African citizenship to many Xhosa, and thousands of people were forcibly relocated to remote areas in Transkei and Ciskei. Rural areas became even more impoverished, although a few urban centers such as Umtata did achieve some economic growth. After apartheid ended, these areas became part of the Eastern Cape province. In fact, only one of the six districts of the Eastern Cape was not formerly a part of Transkei or Ciskei.

## 2 LOCATION AND HOMELAND

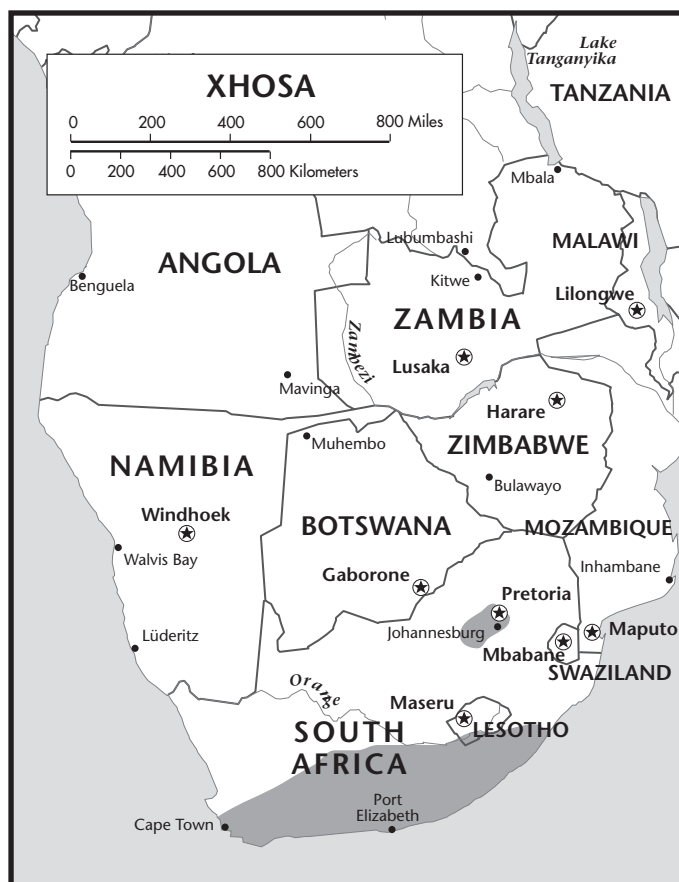

Before the arrival of the Europeans in the late 1600s, Xhosa-speaking people occupied much of eastern South Africa, extending from the Fish River to regions inhabited by Zulu-speakers south of the modern city of Durban. This territory includes well-watered rolling hills near scenic coastal areas as well as harsh and dry regions further inland. Many Xhosa-speaking people live in Cape Town (*iKapa*), East London (*eMonti*), and Port Elizabeth (*iBhayi*). They can be found in lesser numbers in most of South Africa’s major metropolitan areas. As of 2007, there were about 8 million Xhosa, making up approximately 17.5% of South Africa’s population. Others may speak Xhosa as a second language without necessarily identifying themselves as a Xhosa person.

## 3 LANGUAGE

The Xhosa language, properly referred to as *isiXhosa*, is a Bantu language closely related to Zulu, Swazi, and Ndebele. There are also a number of dialects that are frequently associated with clans predominant in certain areas. “Thembu,” for example, may refer to people of a particular clan as well as a particular dialect. It is often suggested that the dialect of the Mpondo is most distinctive. As with other South African languages, Xhosa is characterized by respectful forms of address for elders and in-laws. The language is also rich in idioms. To have *isandla esishushu* (“a warm hand”), for example, is to be generous.

The historically close relationship between the Xhosa and other peoples is evident in the language. For example, Xhosa contains many words with click consonants that have been borrowed from Khoi or San words. The “X” in Xhosa represents a type of click made by the tongue on the side of the mouth. This consonant sounds something like the clicking sound English-speaking horseback riders make to encourage their horses. English speakers who have not mastered clicks often pronounce Xhosa as “Ko-Sa.” There are other consonants used in the written language to represent clicks as well, including “c,” “gc,” and “nq.” Modern Xhosa speakers also borrow words liberally from English and Afrikaans.

Names in Xhosa often express the values or opinions of the community. Common personal names include *Thamsanqa* (“good fortune”) and *Nomsa* (“mother of kindness”). Names

may also make reference to topical events, or be coined from English words. Adults are often referred to by their *isiduko* (clan or lineage) names. In the case of women, clan names are preceded by a prefix meaning “mother of.” For example, a woman of the Thembu clan might be called *MamThembu*. Women are also named by reference to their children, real or intended; *NoLindiwe* is a polite name for Lindiwe’s mother.

#### 4 FOLKLORE

Stories and legends provide accounts of the Xhosa ancestral heroes. According to one oral tradition, the first person on Earth was a great leader called Xhosa. Another tradition stresses the essential unity of the Xhosa-speaking people by proclaiming that all the Xhosa subgroups are descendants of one ancestor, Tshawe. Historians have suggested that Xhosa and Tshawe were probably the first Xhosa kings or paramount (supreme) chiefs, although the time of their reigns cannot be precisely dated. Madzikane, a hero among the Xhosa-speaking Bhaca, was a contemporary of the famous Zulu leader Shaka in the early 19th century.

Xhosa tradition is rich in creative verbal expression. In the hands of masters, *intsomi* (folktales), proverbs, and *isibongo* (praise poems) are told in dramatic and creative ways. Folktales relate the adventures of both animal protagonists and human characters. These are related in ways that make them both theatrical and musical performances. Praise poems traditionally relate the heroic adventures of ancestors or political leaders. Folk themes are also incorporated into the modern

storytelling art produced on television and other media. One prominent artist named Gcina Mhlope tells stories in this way to promote literacy and education in general.

#### 5 RELIGION

The supreme being among the Xhosa is called *uThixo* or *uQamata*. As in the religions of many other Bantu peoples, God is only rarely involved in everyday life, but may be approached through ancestral intermediaries who are honored through ritual sacrifices. Ancestors commonly make their wishes known to the living in dreams.

Xhosa religious practice is distinguished by elaborate and lengthy rituals, initiations, and feasts. Modern rituals typically pertain to matters of illness and psychological well-being. A common spiritual affliction is a demand from ancestors to undergo *ukutwasa* (“initiation”) into *amagqira*, a cult of healers. An individual may experience physical ailments until he or she agrees to undergo the initiation process, which may take many months and is very expensive.

Christianity in one form or another is accepted by most Xhosa-speaking people today, although historically there was a division between traditionalists who rejected Western belief and those who embraced Western education and the message of missionaries. Among Xhosa-speaking Christians, this division may still be observed—traditionalists are more likely to belong to independent denominations, rather than to one of the denominations that were brought to South Africa by the missionaries. In South Africa, the independent denominations combine the Christian creed with acceptance of the ancestors and other traditional beliefs and practices. These denominations make up a slight majority of today’s Xhosa Christians. Statistics gathered in recent years in the Xhosa heartland of the Eastern Cape suggest that the most popular internationally known Christian denominations are Methodist (19%), Catholic (7%), Anglican (6%), and Presbyterian (5%). Varieties of independent churches known as “Zionist” are followed by approximately 13% of Xhosa while those known as “Apostolic” make up about 9%. Another 9% of Xhosa do not identify with any religion.

#### 6 MAJOR HOLIDAYS

Xhosa observe the same holidays as other groups of South Africa. These include the Christian holidays, Workers’ Day (or May Day, May 1), the Day of Reconciliation (December 16), and Heritage Day (September 24). During the apartheid era, two unofficial holidays were observed to honor black people killed in the fight for equality and political representation: June 16th, a national day of remembrance for students who were killed by police in Soweto on that day in 1976; and March 21, a holiday honoring protestors who were killed by authorities during a demonstration in Sharpeville in 1960. Both days are recognized with a day of rest, meetings, and prayer. Another important holiday recognizes April 27, the date of the first national election in which black South Africans could vote.

#### 7 RITES OF PASSAGE

After giving birth, a mother is expected to remain secluded in her house for at least ten days. In the past, this seclusion lasted longer, frequently until the child’s umbilical cord dropped off and the navel area healed. In Xhosa tradition, the afterbirth

and umbilical cord were buried or burned to protect the baby from sorcery.

At the end of the period of seclusion, a goat was sacrificed. The meat was distributed in a prescribed way, and the baby anointed with the meat juice. Those who no longer practice the traditional rituals may still invite friends and relatives to a special dinner to mark the end of the mother's seclusion. On this occasion, guests bring presents or money for the baby and mother.

Initiation for males in the form of circumcision is practiced among most Xhosa groups, except among the Mpondo, Bhaca, and Xesibe. The *abakweta* ("initiates-in-training") live in special huts isolated from villages or towns for several weeks. Like soldiers inducted into the army, they have their heads shaved and wear special clothing. They wear a loincloth and a blanket for warmth, and their bodies are smeared from head to toe with a white clay. They are expected to observe numerous taboos and to act deferentially to their adult male leaders. Traditionally, the initiation was complete when young *amakwala* ("graduates") performed dances wearing special grass and reed costumes. Different stages in the initiation process were marked by the sacrifice of a goat. The actual physical operation of circumcision has considerable health risk because the surgeon typically have not received medical training. Risks include infection, gangrene, and even death. Recently in some areas, formally trained physicians have been working in the Eastern Cape to lessen these risks.

The ritual of female circumcision is considerably shorter, although there are similarities with the boys' ceremonies. The *intonjane* ("girl to be initiated") is secluded for about a week behind a screen set up at the rear of her home. During this period, there are dances, and ritual sacrifices of animals. The initiate must hide herself from view and observe food restrictions, but there is no actual surgical operation.

A traditional marriage agreement is finalized by the parents of the bride and groom and formalized by the transfer of *lobolo* ("bridewealth") from the groom's family to the bride's family. When the agreement was settled, traditionally the family of the bride walked in procession to the home of the family of the groom, driving a sacrificial ox before them. The traditional full marriage ceremony took place over several days and involved a number of ritual sacrifices and dances. The bride and her female attendants were led out of their hut, their faces, heads, and bodies completely covered by hoods and blankets. In a ceremony that took place inside the family's cattle enclosure, the women's coverings were removed at a dramatic moment. These days such ceremonies may be combined with Western church weddings or they may be abandoned all together.

Funeral ceremonies are important community rituals. Friends, relatives, and neighbors gather at the house of the deceased, bearing gifts of money and food. Prior to the burial, a *inkonzo yomlindo* ("wake") is often held, during which a large gathering of people sing hymns and pray through the night.

## 8 INTERPERSONAL RELATIONS

Xhosa have traditionally used greetings to show respect and good intentions to others. In rural areas, greetings between strangers frequently extend into conversations about travel intentions, health, and personal well being. In greeting, a distinction is made between addressing an individual and a group. *Molo* ("hello") is used when greeting one person, and

*molweni* when greeting two or more. On departing, one makes the same distinction: *Hamba kakuhle* ("Go well") for one person and *Hambani kakuhle* for two or more.

In interacting with others, it is crucial to show respect (*ukuhlonipha*). In order not to be rude, youths are expected to keep quiet when elders are speaking and to lower their eyes when being addressed. Hospitality is highly valued, and people are expected to share with visitors what they can. Socializing over tea and snacks is a common form of interaction practiced throughout English-speaking southern Africa.

In Xhosa tradition, one commonly found a girlfriend or boyfriend by attending dances. One popular type of dance, called *umtshotsho* or *intlombe*, could last all night. On some occasions, unmarried lovers were allowed to sleep together provided they observed certain restraints. A form of external intercourse called *ukumetsha* was permitted, but full intercourse was taboo. For Westernized Xhosa, romances often begin at school, church, or through mutual acquaintances. Dating activities include attending the cinema as well as going to dances, sporting events, concerts, and so forth.

## 9 LIVING CONDITIONS

During the early period of white rule in South Africa, Xhosa communities were severely neglected in terms of social services. In fact, rural areas were deliberately impoverished so as to encourage Xhosa to seek wage labor employment. In the later years of apartheid, some attempts were made to address major health concerns in these areas, but most government money continued to be set aside for social services that benefited whites. As the Xhosa population in rural areas expanded through natural increase and forced removals, rural lands became increasingly overcrowded and eroded. In the twentieth-century, many men and women migrated to urban shantytowns such as those that exist on the outskirts of Cape Town. Poverty and ill health are still widespread in both rural and urban communities. Tuberculosis, malnutrition, hypertension, and diarrheal diseases are common health problems. Since 1994, however, the post apartheid government has expanded health and nutritional aid to the black population.

Housing, standards of living, and creature comforts vary considerably among Xhosa-speakers. Xhosa people make up some of the poorest and some of the wealthiest of black South Africans. Poor people live in round thatched-roof huts, labor compounds, or single-room shacks without running water or electricity. Other Xhosa people are among an elite who live in quiet suburban neighborhoods, in large comfortable houses on par with any to be found in Europe or the United States. In South Africa, a person can acquire all the creature comforts that money can buy, provided that one has the money to buy them.

The most common forms of transportation for black people in South Africa are buses, commuter trains, and "taxis." "Taxis" are actually minivans that carry many individual riders at a time. Most such taxis are for short distances in urban areas, but they are also used as a faster alternative to the long-distance routes of buses. Personal cars and trucks are also not uncommon, although in recent years high rates of inflation and increasing fuel costs have driven up prices considerably.

## 10 FAMILY LIFE

The traditional Xhosa family was patriarchal. Men were considered the heads of their households; women and children were expected to defer to men's authority. Polygynous marriages were permitted where the husband had the means to pay the *lobolo* (bridewealth) for each and to maintain them properly. Women were expected to leave their families to live with the family of her husband. The elaborate marriage ceremony discussed previously helped ease a woman's transition to the new home. In addition, her acceptance into the family was confirmed when she was given a ritual offering of milk.

In urban areas, traditional restrictions on sexual expression have been hard to enforce. Consequently, there have been higher rates of unmarried pregnancies than existed in the past. The migrant labor system has also put great strains on the traditional family, with some men establishing two distinct families—one at the place of work and the other at the rural home. With the end of apartheid, some of the families previously separated by the labor laws are beginning new lives in urban areas. Some of these families live under crowded and difficult conditions in shanty towns and migrant labor compounds.

## 11 CLOTHING

Many Xhosa men and women dress similarly to people in Europe and the United States. However, pants for women have only recently become acceptable. Also, as a result of missionary influence, it has become customary for a woman to cover her hair with a scarf or hat. As a head covering, many rural women fold scarves or other clothes into elaborate turban shapes. These coverings (*imithwalo*), plus the continued practice of anointing the body and face with white or ocher-colored mixtures, gives a distinctive appearance that marks them as Xhosa. Other signs of Xhosa identity in dress include intricately sewn designs on blankets that are worn by both men and women as shawls or capes.

## 12 FOOD

Xhosa people share many food traditions with the other peoples of South Africa. Staple foods are corn (maize) and bread. Beef, mutton, and goat are popular meats. Milk is often drunk in its sour form, while sorghum beer, which is also sour in taste, continues to be popular.

One particular food popularly identified with the Xhosa is *umngqusho*. This is a dish that combines hominy corn with beans and spices. Xhosa also regularly eat the soft porridge made of corn meal flour that is widespread in Africa. Eggs were traditionally taboo for women, while a newly wedded wife was not allowed to eat certain types of meat. Men were not supposed to drink milk in any village where they might later take a wife.

The major mealtimes are breakfast and dinner. Children may go without lunch, although school lunch programs have been established recently by the government. As with other South African peoples, food preferences change with the time. For example, a variety of American or British-style fast-food services are available in urban areas throughout the country. Fine locally produced wines are also popular.

## 13 EDUCATION

The first Western-style schools for Xhosa-speakers were begun by missionaries. Many of these schools were remarkably successful. One of the most famous of the missionary institutions, the University of Fort Hare, boasts Nelson Mandela and a number of other famous African leaders as former students. Unfortunately, however, an indirect consequence of the mission-school heritage was that public education for Africans was not considered a matter of national concern.

Under apartheid, African access to education was restricted and many of the best mission schools were shutdown. As a result, adult literacy rates dropped, in some areas to as low as 30%. Today, the goal is free education for all those aged seven to seventeen. Literacy and education are now seen as keys to success and are highly valued by most people.

## 14 CULTURAL HERITAGE

Xhosa traditional music places a strong emphasis on group singing and handclapping as accompaniment to dance. Drums, while used occasionally, were not as fundamental a part of musical expression as they were for many other African peoples. Other instruments used included rattles, whistles, flutes, mouth harps, and stringed-instruments constructed with a bow and resonator.

Xhosa people also have specific styles in the material arts. They have distinctive forms of beadwork, pottery making, body decoration, basketry, and, as mentioned above, headwear. Many Xhosa-speaking artists today see themselves as employing their traditions creatively in the context of the world's entire art scene.

Missionaries introduced the Xhosa to Western choral singing. Among the most successful of the Xhosa hymns is the South African national anthem, *Nkosi Sikele' iAfrika* (God Bless Africa), written by a school teacher named Enoch Sontonga in 1897, with additional verses by S.E. K Mqhayi.

Xhosa written literature was established in the nineteenth century with the publication of the first Xhosa newspapers, novels, and plays. S.E. K. Mqhayi (1875-1945) is considered by many to be the Xhosa national poet. His work *USamson*, published in 1907, is arguably the first Xhosa novel. Other early writers include Tiyo Soga, A.C. Jordan, I. Bud-Mbelle, and John Tengo Jabavu.

Today there are many individuals of Xhosa background working in literature and the arts. Among them are Fatima Dike, John Kani, Zakes Mda, Gcina Mhlope, and Sindiwe Magona.

## 15 WORK

Wage labor for many rural Xhosa has meant leaving home to find employment in the city. Under white rule, Xhosa men were most frequently hired as miners and farm laborers. Women also worked as farm laborers, but work in domestic service was more valued. For those with high school and college educations, the greatest opportunities were in health care, education, and government administration. Today, Xhosa seek degrees in all fields.

South Africa's migrant labor system has dramatically altered Xhosa social life. Besides putting strain on the family, migrant labor has led to the development of new social groups. For example, associations of young men called *iindlavini* were formed. *Iindlavini* are typically young men with some school-

ing who have spent time working in the mines. They adopted some of the ways of the city while developing their own particular traditions as well. Changes in international economic conditions greatly affect Xhosa peoples. For example, when gold prices declined in recent years, many Xhosa lost their jobs. These workers and the people who depend on their wages suffered considerably.

## 16 SPORTS

Many of the games popular among Xhosa children are found worldwide. These include skipping rope, racing, swimming, playing hopscotch, and so forth. Boys also enjoy wrestling and stick fighting.

The most popular sport in South Africa is soccer. There are many professional teams as well as teams associated with schools and companies. In school, there are also organized competitions in athletics, what Americans call “track and field.”

## 17 ENTERTAINMENT AND RECREATION

Popular entertainments include attending movies, plays, and musical performances. Televisions and videocassette recorders are also popular. Most of the movies are imported foreign films, but a South African film industry is developing. A Xhosa version of Georges Bizet’s *Carmen* (*U-Carmen eKhayelitsha*) set in a Cape Town won top honors in the 2005 Berlin Film Festival. Plays are often broadcast over TV and radio. Television broadcasts also include programs in Xhosa, with Xhosa “soap operas” a regular feature. Music videos can be seen as well.

South Africa has a well-established music industry. The most popular musicians are typically those that perform dance tunes, although religious choirs are also popular. One of the most famous of South Africa’s musicians, Miriam Makeba, is of South African background. By listening to her version of the “click” song, one can get a good sense of how clicks operate in the language, but she is also known for her contributions to world music. Today there are many other Xhosa musicians whose work is globally oriented and multicultural. Among them are the classically trained composer Bongani Ndodona-Breen and the late pop musician Brenda Fassie. Xhosa-speaker Thandiswa Mazwai is also known as one of the founders of the South African pop music form known as *kwaito*.

## 18 FOLK ART, CRAFTS, AND HOBBIES

Folk craft traditions include beadwork, sewing, pottery making, house decoration, and weaving. Hand-woven materials were generally functional items such as sleeping mats, baskets, and strainers. Xhosa ceremonial clothing is often elaborately decorated with fine embroidery work and intricate geometric designs.

Xhosa-speaking artists today may see themselves as employing their traditions creatively in the context of the world’s entire art scene. Thus, they incorporate traditional forms into modern works of art.

## 19 SOCIAL PROBLEMS

Most of the social problems found among Xhosa people today stem directly or indirectly from the apartheid past. These include high rates of poverty, disease, fractured families, mal-

*A Xhosa-speaking worker creates a necklace from beads at Umtha Beads, a craft business run by David and Cheryl Milligan. The couple started the business after David was laid off work as companies restructured in the new South Africa. (The Image Works)*

nutrition, and crime. Poverty and social dislocation may also tempt people to form gangs and to abuse drugs and alcohol. Competition for scarce resources has also led to conflict with other South African groups such as the Sotho, the Zulu, and people of mixed-race. The high numbers of refugees and illegal immigrants who have come to South Africa from other African countries in recent years has also led to tension. There are divisions within the Xhosa community as well—between men and women, young and old, rural and urban, and highly educated and illiterate—which may lead to tensions if not resolved in the post-apartheid era. One of the biggest challenges for South Africa as a whole is to meet rising expectations for education, employment, and improved standards of living.

South Africa as a whole has suffered considerably from HIV/AIDS. Recent estimates suggest that nearly 700,000 people in the Eastern Cape are HIV positive with some 5.4 million South Africans suffering from the condition. These are some of the highest rates in the world. Deaths from AIDS and AIDS-related diseases have also led to a high proportion of orphans and poorly cared-for young people. On a more positive note,

the numbers who are receiving appropriate treatment has increased dramatically since 2006.

## 20 GENDER ISSUES

Xhosa society was in the past fairly typical of patriarchally organized societies. Women were expected to seek primarily fulfillment as wives and mothers. Under apartheid family bonds were strained under the system of migrant labor upon which many rural people depended. During this time, women in effect became household heads when their husbands' were away at their jobs. Families were further impoverished during the period of forced settlement in the Bantustans. These conditions also fostered high rates of gender violence, including domestic abuse and rape. The forced separation of husband and wives under apartheid led to other problems as well, such as adultery and prostitution. Also, some men and women engaged in homosexual behaviors, although the idea of a gay identity has not been widely accepted.

The South African government has made improving conditions of gender inequality an important part of its educational and economic development strategy. In terms of education, roughly the same proportions of males and females attend school and graduate, but they do not always achieve parity in employment and promotion opportunities. To correct this within the government, one goal is to have 50% of the managers in public service be women.

**PRONUNCIATION:** YAWR-uh-buh

**LOCATION:** West Africa (primarily Nigeria; also Benin and Togo)

**POPULATION:** 19,327,000

**LANGUAGE:** Yoruba

**RELIGION:** Ancestral religion, Islam, Christianity

**RELATED ARTICLES:** Vol. 1: Beninese; Nigerians

## 1 INTRODUCTION

The Yoruba are one of the largest and most important ethnic groups south of the Sahara desert. Their tradition of urban life is unique among African ethnic groups. The Yoruba rank among the leaders in economics, government, religion, and artistic achievement in West Africa. Within Nigeria, where they dominate the Western part of the country, the Yoruba are one of the three largest and most important ethnic groups. The Yoruba people are not a single group, but are a series of diverse people bound together by common language, dress, ritual, political system, mythology, and history.

There has been much speculation about the origins of the Yoruba people. Based on their beautifully cast brass sculptures from Ife, one opinion held that Yoruba culture had been introduced by Etruscans who reached West Africa by way of the "lost continent" of Atlantis. Others suggested that the Yoruba may have come from Egypt. Many educated Yoruba people accept this view, which is also supported by theories relating to similarities in the languages of the two people.

However, archeological evidence has not supported any of these claims. It is now recognized that Ife was the early center of an important glass-making industry and the home of native brass casting. Archeologists have also uncovered a town wall of about 8.8 km (5.5 mi) in circumference surrounding the city that was probably built between AD 950 and 1400. A later town wall of about 12.8 km (8 mi) in circumference from the middle of the 19th century was also discovered. This evidence seems to indicate that Ife was an important artistic and religious center by around AD 1000. As far as the origins of the Yoruba are concerned, all that archeology can point to is some stylistic similarities between pottery in Ife and in Northern Nigeria, dating to a period between 900 BC and AD 200. This indicates that they probably migrated southward from the savanna into the tropical forest area after that time.

The Yoruba are divided among over fifty kingdoms. Yoruba mythology holds that ultimately all Yoruba people descended from a hero called Odua or Oduduwa, and the Yoruba kings validate their right to rule by claiming direct descent from him through one of his sixteen sons. Today there are over fifty "kings" who claim to be descendants of the sons or grandsons of Odua and to have migrated directly from Ife. It is not possible to determine how many kingdoms there were before warring began between them in the last century, but they probably numbered over twenty. Yoruba country was torn by warfare for decades. One of the most damaging effects of the centuries-long warfare was the enslavement of many Yoruba people and their transport to the Americas. In 1893, the Governor of Lagos brought the Yoruba kingdoms in Nigeria under the Protectorate of Great Britain, and peace was achieved. Until 1960

Nigeria was a British colony and the Yoruba were British subjects. On 1 October 1960 Nigeria became an independent nation with the political structure of a federation of states.

## 2 LOCATION AND HOMELAND

The Yoruba people live in West Africa, primarily in the country of Nigeria, but with some scattered groups in Benin and Togo. According to the 1963 census, out of a total Yoruba population of 5.3 million, 4.1 million lived in the five states of Oyo, Ibadan, Abeokuta, Ijebu, and Ondo. These states are primarily Yoruba, with the percentages of Yoruba in the population ranging from 89.2% for Ondo state to 97.7% in Ibadan State. These states have a combined area of 75,370 sq km (29,100 sq mi), giving an average population density of 58 per sq km (150 per sq mi), but ranging from a low of 31 per sq km (81 per sq mi) in Oyo state to a high of 141 per sq km (365 per sq mi) in Ibadan State.

Most of the other Yoruba are found in the Federal Territory, in Ilorin and Kabba Provinces in Northern Nigeria, in Benin, and in Togo. In Nigeria, the Itsekiri of Warri are a Yoruba-speaking offshoot who have been strongly influenced by Benin culture. Yoruba traders are also found in nearly all the major market towns of West Africa. Descendants of Yoruba slaves, some of whom can still speak the Yoruba language, are found in Sierra Leone where they are known as Aku, in Cuba where they are known as Lucumi, and in Brazil where they are known as Nago. During the four centuries of the slave trade when their territory was known as Slave Coast, uncounted numbers of Yoruba were carried to the Americas where their descendants preserved Yoruba traditions. In several parts of the Caribbean and South America, Yoruba religion has combined with Christianity, resulting in Yoruba deities being identified with Catholic saints.

The Yoruba homeland in West Africa stretches from a savanna region on the north to a region of tropical rain forests on the south. Lagos, the present federal capital of Nigeria, is located at the southern end of this area. It is this range of climate, together with the intensity of cultivation in the savanna area, that determines a very sharp division between regions and in the occupations and living situation of the Yoruba in the two areas.

## 3 LANGUAGE

The Yoruba language belongs to the Niger-Congo branch of the Congo-Kordofanian language family that includes most West African languages. While there are many dialects within Yoruba, Yoruba-speaking people can all understand each other.

Yoruba is a tonal language; the same combination of vowels and consonants has different meanings depending on the pitch of the vowels. For example, the same word, *aro*, can mean cymbal, indigo dye, lamentation, and granary, depending on intonation. *Pele o* is "Hello;" *Bawo ni?* is "How are you?;" and *Dada ni* is "Fine, thank you."

## 4 FOLKLORE

The most important myths of the Yoruba are related to their origins. Yoruba believe that, not only did they originate at the city of Ife, but the earth and the first human beings were created there as well. According to this myth, the deities originally lived in the sky, below which there was only primeval water. Olorun, the Sky God, gave to Orishala, the God of Whiteness,

a chain, a bit of earth in a snail shell, and a five-toed chicken, and told him to go down and create the earth. However, as he approached the gate of heaven, he saw some deities having a party and he stopped to greet them. They offered him palm wine, and he drank too much and fell asleep, drunk. Odua, his younger brother, had overheard Olorun's instructions, and when he saw Orishala sleeping, he took the materials and went to the edge of heaven, accompanied by Chameleon. He let down the chain, and they climbed down it. Odua threw the piece of earth on the water and placed the five-toed chicken upon it. The chicken began to scratch the earth, spreading it in all directions, and as far as the ends of the earth. After Chameleon had tested the firmness of the earth, Odua stepped on it at Idio where he made his home and where his sacred grove in Ife is located today.

When Orishala awoke and found that the work had been completed, he put a taboo on wine that his worshippers observe today. He came down to earth and claimed it as his own. He insisted that he was the owner of the earth because he had made it. The two brothers began to fight, and the other deities who followed them to earth took sides with them. When Olorun heard of the fighting, he called Orishala and Odua to appear before him and told them to stop fighting. To Odua, the Creator of the Earth, he gave the right to own the earth and rule over it. To Orishala he gave a special title and the power to mold human bodies; he thus became the Creator of Mankind.

Yoruba mythology goes on to explain that when Odua grew old he became blind. He sent each of his sixteen sons in turn to the ocean for salt water that had been prescribed as a remedy.

Each returned unsuccessfully, bringing only fresh water, until Obokun, the youngest finally succeeded. Odua washed his eyes in the salt water and could see again. In gratitude, he gave Obokun a sword. Obokun took it and cut some of the beaded fringes from Odua's crown; because of this, he was not permitted to wear a crown to cover his face, as the other Yoruba kings do. Obokun went to the city of Ilesha where he became king, and the other sons founded kingdoms of their own.

## 5 RELIGION

In the last census the number of Yoruba who said that they adhere to their ancestral religion, rather than being Christians or Muslims, varied from 20% of the population in Oyo to only 6% in Ijebu. However, most people continue to participate in the annual festivals of their town, though Muslims are probably somewhat more rigid than Christians in the non-observance of certain rites. The rest are divided about evenly between Muslims and Christians.

Yoruba traditional religion holds that there are 401 deities. Some are worshipped throughout Yoruba land and have their counterparts among neighboring peoples; some are fairly widely known; and some are only of local significance. Except for Olorun, the deities are believed to have lived on earth, but instead of dying they became gods. The worshipers of a deity are referred to as his "children." An individual usually worships the deity of his father and some of his mother. Many deities are identified with a particular clan. After marriage, women return home for the annual festival of their own deity but they assist in the performance of the annual festival of their husband's deity. The priests of Yoruba cults usually hold no political office; they do not sit among the chiefs. They are usually men of little wealth; their prestige in the community is often low, but their sacred powers are feared.

There are three gods who are available to all. Olorun is the high god, the Creator, but no shrines exist to him, and there is no organized priesthood. He is invoked in blessings or in thanks, and one may call on him with prayers or by pouring water on kola nuts on the ground. Eshu is the youngest and cleverest of the deities and is the divine messenger who delivers sacrifices prescribed by the diviners to Olorun, after these are placed at his shrine. Regardless of what deity they worship, everyone prays frequently to Eshu. Ifa is the God of Divination and a close friend of Eshu. He is often spoken of as a scribe or clerk and is described as a learned man or scholar. Olorun gave him the power to speak for the gods and communicate with human beings through divination. Most importantly, he is the one who transmits and interprets the wishes of Olorun to mankind and who prescribes the sacrifices that Eshu carries to him. Whatever personal deities they may worship, all believers in the Yoruba religion turn to Ifa in time of trouble.

Other gods include Odua, the creator of the earth; Orishala, the god of whiteness; Ogun, the god of iron; Oranmiyan, the son of Ogun and Odua; Shango, the god of thunder; Shopona, the god of smallpox; and a number of river gods and goddesses. Cults to these deities are maintained by families or clans whose members participate in the annual festivals.

## 6 MAJOR HOLIDAYS

In addition to local town festivals (usually dedicated to individual deities), Yoruba may also celebrate the following holidays, depending on whether they are Christians or Muslims:

(Muslim holidays vary according to the lunar calendar): New Year's Day, January; *Idul Adha* ("Feast of Sacrifice") June or July;

Easter (March or April); *Maulid an-Nabi* ("Muhammad's birthday") September or October; Ramadan (March–April), followed by a 3 day feast; Nigerian Independence Day (October); *Idul Fitri* (March–April); Christmas (December).

## 7 RITES OF PASSAGE

A newborn infant is sprinkled with water to make it cry. No word may be spoken until the infant cries, in the belief that silence will prevent the infant from becoming impotent or barren. No one younger than the mother should be present. The infant then is taken to the back yard where the umbilical cord is bound tightly with thread and then cut, using either a knife from the midrib of a leaf of the bamboo palm, or a piece of glass. The placenta is buried in the back yard. On the burial spot, the child is bathed with a loofah sponge and rubbed with palm oil. The child is held by the feet and given three shakes to make it strong and brave. After a specified number of days, a naming ceremony is held and attended by relatives who bring gifts of small amounts of money. Circumcision (boys) and clitoridectomy (girls) are usually performed in the first month and scarification of the face (the cutting of the facial marks) follows about two months later. Christians and Muslims are giving up scarification, but circumcision and clitoridectomy is still done.

Many children are given special names according to the circumstances of their birth. For example, the first-born twin, who is considered younger because he was sent ahead by the other, is called Taiwo, meaning that he came to inspect the world. The second-born or senior twin is called Kehinde, meaning that he arrived afterwards. There are special names for the first, second, third, and fourth children born after twins, for children born with the umbilical cord around their neck, for children born in an unruptured caul (membrane surrounding the fetus), for children born face down, for children born with six fingers, and for other circumstances of birth. Many Yoruba names begin with the name of the deity that the individual worships, for example, *Fagbemi* means "Ifa helps me."

In the past, men past adolescence were divided into a system of age-graded associations. These groups were formed at three-year intervals and continued until the death of all their members. Membership was automatic and universal. The age grades designated a young man's public duties in the town. The youngest grade, 0–9 years, did no work. The next grade weeded the roads, and the two highest grades provided the warriors. At the age of 45, a man became an elder and was exempt from manual public work. This system is now becoming obsolete, as all children attend school.

Girls were generally engaged before puberty in former times, often by age five. This is no longer the practice, although a man still must negotiate through an intermediary with the girl's father (usually before the girl reaches puberty) to arrange a marriage and cannot approach either the girl or her parents directly to propose marriage. If the parents approve of the young man, they consult a diviner. If he is approved by the diviner, the suitor is told to visit the family and to bring the first installment of the bridewealth (payment to the bride's family) to seal the engagement. This process is known as "becoming in-laws." The second installment, known as "love money" can

be given at any time before the third year after puberty when the girl becomes marriageable. The final installment is made just before marriage and is known as "wife money." When the girl reaches marriageable age her family notifies her suitor that it is time for her to have her body decorated with scarified designs. The groom then sends six calabashes (gourd-like fruit, hollowed out and used as a carrier) of water, six bundles of firewood, and the necessary leaves, oils, and other materials. Weddings are frequently performed in the season after the heavy rains. The night begins at the bride's house after dark with a feast to which the groom also contributes yams. The bride then is taken to the groom's house by women from his house after she has been blessed by her mother and her father. In the groom's house she is taken to the main chamber where she is washed from foot to knee with an infusion of leaves meant to bring her many children. For a period of 84 days, the bride then makes ritual visits to her parents' home, returning to her husband's compound after nightfall. For eight days, starting with the wedding night she spends two nights and two days each in her husband's and in her parents' compounds alternately, returning on the ninth day to make a sacrifice to the God of Divination in her husband's home.

Burials are performed by the adult men of the clan of the deceased, but those who can trace actual relationship to the deceased, including a man's brothers and sons, do not join them. The men divide themselves into two groups: one digging the grave and the other bathing the corpse. The body is laid out in the house and laid on fine cloths placed on a bed and covered with still finer cloth. Relatives and friends are notified of the death as soon as possible and they come to console the immediate family and to pay their respects to the departed. The grave is dug in the floor of the room where the deceased lived. Interment in the past was delayed as many as eight days, during which time there was feasting. Now it follows as soon as the grave has been dug. After the burial there is a period of feasting, lasting as long as eight or ten nights if the children can afford it. These funeral ceremonies may be postponed up to a year if the children do not have the resources to do it at once. Many of the rituals associated with burial are intended to insure that the deceased will be reborn again.

## 8 INTERPERSONAL RELATIONS

Kinship is the most important relationship for the Yoruba. This is where an individual gets his identity and where his primary loyalties lie. Not all ties are based on kinship, however. Friendship may or may not cut across kinship lines. A best friend is referred to as "friend not-see-not-sleep," meaning one does not go to sleep without having seen his best friend. Through experience one learns whose advice he can rely upon and whom he can trust not to reveal confidences. In times of trouble Yoruba turn to the best friend even before turning to the mother. The Yoruba shares his last wishes with the best friend—what is to be done at his burial, how he wishes his property to be divided—and the best friend shares this information with his family at his death.

The second institution that is not based on kinship is the club or association that may grow out of childhood associations. When his clan is performing a religious festival, or when he is sacrificing to his ancestral guardian soul, a child may invite his playmates and their friends to come to eat with him; and, he may be invited by them in return. If this continues,

*Yoruba girls in Lagos, Nigeria. Every Yoruba is born into a patrilineal clan whose members are descended from a remote common ancestor. The clan and sub-clan completely overshadow the immediate family in importance. (Jason Laure)*

they choose a name for the club and invite an elder man and an elder woman to serve as advisors. The members of clubs will consequently be more or less the same age. A man can invite the members of his club to his feast when he is performing a festival and to accompany him as he travels around town accompanied by a drummer on that day. A man's social position is judged by the number of his followers on such occasions. Clubs hold monthly meetings, with the members serving as hosts in turn.

## **9 LIVING CONDITIONS**

The Yoruba people have lived in towns as long as their history has been recorded. These towns consist of dense aggregates of buildings housing 30 persons to the hectare (75 persons to the acre) in the built-up areas. The traditional compounds in these aggregates are vast structures of rectangular courtyards, each with a single entrance. Around each courtyard is an open or a semi-enclosed porch where the women sit, weave, and cook; behind this are the rooms of each adult. Today, the old compounds are rapidly being replaced by modern bungalows made of cement blocks with corrugated iron roofs.

Most Yoruba towns, even small ones, have adequate basic services, including electricity, running water, and paved roads. The major Yoruba cities, such as Ibadan and Abeokuta, have modern central areas that include banks, government buildings, churches, and hospitals. There is public transportation

connecting all settlements, mostly by mini-buses and taxis. The more affluent people own cars.

Traditional medicine continues to play an important role in the health care of people, alongside modern Western health services. Among the Yoruba both practices flourish. Since Nigeria became independent, the general health of the population has improved with the expansion of the public health network. In the late 1980s, an increase in vaccination against major childhood diseases was carried out under the government's health policy. Nevertheless, many problems remain, and chronic diseases, such as malaria and guinea worm, still resist efforts at eradication.

## **10 FAMILY LIFE**

Whether urban or rural, the Yoruba live in large residential groups, called compounds. The members of the compounds consist of patrilineally related men and their wives and children. After marriage, a bride comes to live in one of the many rooms in the compound of the groom's father. Every Yoruba is born into a patrilineal clan whose members are descended from a remote common ancestor. An individual accepts all members of his own clan as blood relatives, even if he does not know in what way they are actually related. Both sons and daughters are born into the clan of their father.

Clan members are spoken of as "children of the house" with males distinguished as "sons of the house" from the females

or “daughters of the house.” The females live in the compound of their birth until they marry, when they go to live with their husbands. The males constitute the nucleus of the compound, being born, married, and buried in it. The wives of the male clan members are known as “the wives of the house.” Except for their own children, they are not related by blood to the rest of the compound members.

The clan and the sub-clan are each headed by its eldest male member, known as the *Bale* or “father of the house,” a term that also refers to a husband as the head of his own family. No one except a male member of the clan can hold this position, and it follows according to strict seniority. The *Bale* serves as the principal judge of the compound, presiding when disputes are brought before him. A husband is responsible for settling quarrels within his own family; but if he is unsuccessful or if an argument involves members of two different families within the compound, it is referred to the *Bale*. The *Bale* is also responsible for assigning living quarters within the compound, administering clan farmlands assigned to the compound, sacrificing to the founder whose name the compound bears, and making medicines and atonements to keep its inhabitants in good health and at peace.

The hierarchy within the clan, based on seniority, runs from the eldest *Bale* of its several compounds down to the youngest child, and is very important in regulating conduct between the members. Each person is “elder” to all others born or married into the clan after him. The reciprocal obligations involve authority on the one hand, and deference and respect on the other. Males are seated and served according to their relative seniority, and elders can take larger and choicer portions of what is served.

In terms of seniority or age, the male members of the compound are divided into three groups: the elders, the adult males who are economically independent, and the young men and boys who are still economically dependent on their fathers. The elders, the adult males, and wives of the compound hold separate monthly or bimonthly meetings to discuss the affairs of the compound, the allocation of clan farm land, and the collection of taxes.

The clan and sub-clan completely overshadow the immediate family in importance. The immediate family, consisting of a man, his wives, and their children is of less significance and is known only by a descriptive name referring to the dwelling that it occupies, “house that of mine,” to distinguish it from the compound.

The sub-family, consisting of a wife and her children within the polygynous family (husband with two or more wives), is an important unit of everyday life. They have a room in the husband’s house to themselves, and they share possessions in common. Each mother cooks for her own children only, and ties of close affection bind a mother and her children. A man is expected to treat each wife equally and not according to the number of her children, but the mothers compete to gain additional favors for their own children. The father is distant and authoritarian, often seeing little of his children. When they are young, children of co-wives play together on the best terms, but as they grow older and property rights become important, they usually grow apart because of quarrels over possessions. When the father dies, his personal property is divided into approximately equal shares according to the number of children each wife has. It is the children, not the wives, who inherit, and

the eldest son of each wife takes one share in the name of all the children of his mother. He may keep and use this inheritance as he sees fit, but he is held responsible for the economic welfare of the others.

## 11 CLOTHING

Western-style dress is the style of clothing worn in urban areas. Traditional clothing, which is still worn on important occasions and in rural areas, is very colorful and elaborate. Women wear a head tie made of a rectangular piece of cloth tied about the head in a number of distinctive ways. Women carry babies or young children on their backs by tying another rectangular cloth around their waists. A third such cloth may be worn over the shoulder as a shawl, on top of a loose-fitting, short-sleeved blouse. A larger rectangular cloth serves as a wrap-around skirt.

Men wear tailored cloth hats, gowns, and trousers of several different patterns. A popular form of gown is shaped like a poncho; it reaches to the fingertips, but is worn folded back on the shoulders. Trousers are usually very loose and baggy. All the cloth from which traditional clothing is made is hand woven and often decorated with elaborate embroidery.

Facial and body scarification (making small, superficial incisions or punctures in the skin) are both symbols of clan affiliation and a means of beautification. Hair styles, referred to as hairdress, are important forms of decoration for women. The most common hairstyles are composed of parallel, tightly braided stripes running from the forehead to the back of the head. From there, they are wound in a row of tiny queues, from the back of the head to the forehead, from the top of the head downward and ending in a circle of tiny queues on the top of the head where they form a small topknot.

## 12 FOOD

The Yoruba diet consists of starchy tubers, grains, and plantains, supplemented by vegetable oils, wild and cultivated fruits and vegetables, meat, and fish. Although yams are the staple food, they are both expensive and there is prestige associated with serving them. Therefore, they are reserved for social occasions. The daily family diet relies on cassava, taro, maize, beans, and plantains. One of the most popular foods is *foo-foo*, similar to a dumpling, but made of cassava. Rice is now widely grown all over Nigeria, and the Yoruba use it for ceremonial or important meals. In the past, meat was also reserved for ceremonies and special occasions. The predominance of starch in the diet is indicated by the fact that of 56 food recipes recorded in Ife, 47 describe different ways of preparing yams, maize, plantains, cassava, and taro. Six are stews, which may or may not contain meat or fish; they are made of vegetable oil and are highly seasoned with salt and chili pepper. Of the remaining three, two are based on melon seeds and one is simply toasted peanuts.

The following recipes are very popular and are usually served together:

### Pounded Yam

White yams, preferably round and fat in shape with long, thorn-like hairs

1. Scrub yams, peel, and cut into chunks or slices. Place in a pot with water to cover. Cover and cook until the yams can

be pierced easily with a fork.

2. Pound the yams in a mortar, one piece at a time, until it forms a mass that pulls away from the sides of the mortar and is elastic to the touch. (This cannot be done with electric mixers, because the pounded yams will be very stiff.)

Pounded yam is served with soups and stews of many types at main meals.

Variation: Boil some ripe plantain with the yam and pound it with the yam.

### Chicken and Okra Soup

Ingredients:

- 1 medium chicken
- 1 small onion, chopped
- 18 large okra
- 3 grams (1 teaspoon) dry ground red pepper
- 40 grams (1.4 ounces) dry crayfish, ground
- 2 medium fresh tomatoes
- 6 grams (2 teaspoons) tomato paste
- Pinch of salt
- 1.5 grams (½ teaspoon) potash

1. Clean and cut the chicken into pieces, breaking the bones. Place in a pot with salt and pepper, cover with water and boil until tender. Drain, reserving the broth.

2. Grate the okra coarsely. Combine with remaining ingredients and boil for 5 minutes. Add the chicken to the okra mixture and continue to cook for 5 minutes more. Serve with the pounded yam.

### 13 EDUCATION

When Nigeria gained independence from Britain in 1960, its new parliamentary government set a priority on education, and universal primary education soon became the norm in southern Nigeria where the Yoruba live. Secondary school (high school) education also became widespread. The Yoruba were much involved in these efforts since education had a long tradition among them. The first university in Nigeria—established in 1947–48 and originally called University College, Ibadan—was located in a Yoruba city. (After independence, it was renamed the University of Ibadan.) The majority of students at Ibadan are Yoruba.

As a consequence of the priority on education, the literacy rate among people under 30 is high, even though the older generations may still be illiterate.

### 14 CULTURAL HERITAGE

The Yoruba cultural heritage includes verbal arts, such as praise names, praise poems, tongue twisters, hundreds of prose narratives and riddles, and thousands of proverbs. Whether the principal characters are humans or animals, the folktales all have a moral or lesson. Myths and legends impart information that is believed to be true about Yoruba heritage.

An evening session of telling folktales is usually preceded by a riddling contest among the children. Riddles sharpen the wits and train the memory of children. Adults share proverbs that express Yoruba morals, ethics, and social approval and disapproval.

There are songs of both ridicule and praise, as well as lullabies, religious songs, war songs, and work songs. These usually follow a “call and response” pattern between a leader and chorus. Rhythm is provided by drums, iron gongs, cymbals, rattles, and hand clapping. Other instruments include long brass trumpets, ivory trumpets, whistles, stringed instruments, and metallophones. Perhaps the most interesting musical instrument is the “talking drum.”

### 15 WORK

Traditional Yoruba economy was based on hoe farming, craft specialization, and trade. About 75% of the Yoruba men are farmers, producing food crops for their domestic needs. Farming is considered men’s work, and men only do clearing or hoeing fields. Wives can help their husbands with planting yams or harvesting corn, beans, or cotton. Wives also help at the market selling farm produce. A common practice was for several men to have a labor exchange, where they work together an equal number of days or hoeing the same number of heaps on each farmer’s land. Alternatively, a man might invite his relatives, his friends, or the members of his club to a working bee during busy periods. Wealthier farmers could hire laborers.

Since the 1920s cocoa has been an important cash crop in the Yoruba economy. This caused a shift in emphasis to wage labor, doing away with much of the traditional forms of exchange labor.

The Yoruba enjoy trading and huge markets with over a thousand sellers are common. In addition, Yoruba long distance traders can be found as far away as Accra in Ghana and Bamako in Mali. Trade in foodstuffs and in cloth is confined to women; meat selling and produce buying is the province of men.

A farmer can become prosperous by working hard, by enjoying good health and by being blessed with many sons. Today only a few men have enough capital to establish large cocoa farms worked by hired labor. But, by trading an astute man can become very rich. In the past there were noted traders; today the produce buyers, the building contractors and the truck owners are a town’s wealthiest men, enjoying the highest prestige. In the past this wealth was often spent on luxuries—houses, clothing, and the acquisition of wives. Today modern houses and cars are in vogue and every man hopes to send his children, especially his sons, to be educated at a university. The new, educated generation is moving away from farming and its members are looking for white collar jobs.

### 16 SPORTS

See the following section entitled “Entertainment and Recreation.”

### 17 ENTERTAINMENT AND RECREATION

In addition to rituals, dances, and traditional music, modern forms of entertainment include television, going to the movies, and discos. Many urban households own television sets. The more religious households prohibit family members, especially women, from going to see films. Among urban teenagers, American youth culture is popular. Most young people listen to rap and rock music.

## 18 FOLK ARTS, CRAFTS AND HOBBIES

The Yoruba engage in both visual and verbal art forms. Visual arts include weaving, embroidering, pottery making, woodcarving, leather and bead working, and metalworking. The Yoruba are considered among the most prolific of the art-producing people of Africa.

Both men and women weave, using different types of looms. Women weave on a vertical "mat loom," producing a cloth about 60 cm (2 ft) wide and 213 cm (7 ft) long. Men weave on the horizontal narrow-band treadle loom that produces a strip of cloth only 3 to 4 in (7.5 to 10 cm) wide, but as long as may be needed. The long strips are cut to the desired length and sewn together to make clothing. Patterns are named often after the clubs that ordered them. Cloth is woven from wild silk and from locally grown cotton.

Men also do embroidery, particularly on large gowns worn by men and on men's caps. Men are also the tailors and dress-makers. Floor mats, mat bags for storing clothing, baskets, and strainers are also made by the men.

Women are the potters. In addition to palm oil lamps, they make over twenty kinds of pots and dishes for cooking, eating, and carrying and storing liquids. Most everyday pottery is brown or black without decoration. Pottery used for rituals is decorated with red, white, or blue designs. Gourds or calabashes (a gourd-like fruit) are also used for drinking, serving food, and for carrying palm wine sacrifices and goods to sell in the market. Some are also used as containers for the ingredients of medicines. Some calabashes are decorated with carved designs.

Woodcarving accounts for the greatest variety of decorated and sculptural forms. The woodcarvers, all of whom are men, carve "art," that is, both sculpture and geometrical designs. Those who carve masks and figurines are distinguished from those who simply carve wood into mortars, pestles, and utilitarian bowls. Some Yoruba woodcarvers also work in bone, ivory, and stone.

Blacksmiths work both in iron and brass to create utilitarian and decorative objects. The brass Ife heads of the period before contact with outsiders are considered among the finest art works of the world.

## 19 SOCIAL PROBLEMS

There are vast differences in wealth among Yoruba social classes. Differences in income and lifestyle are related to the person's occupation. In some rural areas, farmers barely manage to feed their families. Many traditional urban occupations, such as water carriers, hawkers, and sweepers, also do not provide adequate wages to support a family. Lower-skilled workers are employed in house construction and crafts, or as clerks, all at very low incomes. The oil boom and provisions of schooling in the 1970s and 1980s resulted in the growth of a sizable middle class, most of whom adopted a Western lifestyle. The social elites include traditional chiefs and wealthy business and government leaders. The elite lifestyle is characterized by conspicuous consumption of material goods.

Nigeria is party to several international human rights treaties, but the current government's human rights record is poor. Military rule deprives many citizens of their rights through detention without trial, physical assault, torture, and harassment. An active human rights group, the Civil Liberties Organization (CLO), was founded by a group of lawyers led by Olisa

Agbakobe, a Yoruba. It is one of several organizations critical of the government's violations of civil rights.

The crime rate in Nigeria is high, particularly in Lagos, Ibadan, Abeokuta, and other urban areas. More than half the offenses are property crimes. Worsening economic conditions and an ineffective police and military heightened the incidence of crime in the 1980s.

Drug-related crime has emerged as a major problem, and young people are using both marijuana and cocaine in increasing numbers.

## 20 GENDER ISSUES

Gender relations among the Yoruba are complex. A lot of gender constructs are portrayed in their myths, which form both their social and religious practices. Some of the Yoruba gods, like Osun, were females and there were female priestesses too, thus illustrating the pivotal role that women played in Yoruba religious and spiritual matters.

As in many other societies, there were specific expectations for females and males. Such expectations were determined by the people's living experiences. For example, women were expected to be peaceful and fruitful; thus, female principles were generally regarded as symbols of coolness, whereas male principles were construed as representing toughness and virility. Consequently, men were portrayed as rough and violent while women were portrayed as peaceful. Hence, some years that are difficult are called "Male Years" (ako odun) while those that are fruitful and peaceful are referred to as "Female Years" (abo odun). In Yoruba culture, a woman who acts like a man is ridiculed and so is a man who behaves like a woman.

The people's social expectations as recorded in wise sayings and proverbs further portray social expectations. For example the Yoruba proverb *Ogbo-ogbon lagbalagba-a fi nsa fun eranla* (It is with dissembling that a venerable man flees from a wild beast). This proverb encourages men to confront danger with bravery and not to run away. Such would be the social expectation.

In Yoruba culture, the gender constructs stress complementary relations between women and men. Thus, they do not necessarily translate to issues of oppression and domination of women by men. This complementary nature of Yoruba gender relations is deeply ingrained in the socio-religious domains and the either gender is vital for a smooth coexistence and harmonious living experience in the society. In fact neither gender fully dominates a particular domain, be it private or public. All the same, either gender can enjoy prominence in a specific area like religious rituals, while the other may be prominent in settling disputes and reconciliation. For example, while women take care of the children and are in charge of the daily running of the homes, men are the providers of resources, such as yams, and defenders of the community against any imminent attacks. Thus, both females and males manifest cooperation in the running of the affairs of the community.

## ZAMBIANS

**PRONUNCIATION:** ZAM-bee-uhns

**LOCATION:** Zambia

**POPULATION:** 11 million

**LANGUAGE:** English; Bemba; Nyanja; Tonga; Lozi; Lunda, Luvali and Kaonde

**RELIGION:** Christianity; Christianity with traditional African beliefs; Hindu; Islam; traditional African beliefs

**RELATED ARTICLES:** Vol. 1: Bemba; Chewa; Tonga

### 1 INTRODUCTION

Although the 70 recognized ethnic groups who now reside in Zambia have distinct migration histories, different languages, and varying social, economic, and political organizations, they share a common colonial and post-colonial history. Zambia is a butterfly-shaped, landlocked country in southern Africa whose political boundaries are the result of European colonization of the region. The distinct groups who were living within the arbitrarily drawn boundaries at the time were first referred to as "Northern Rhodesians" under British domination. They became "Zambians" in the post-independence era.

For at least the past 500 years, the people of Zambia have been characterized by a high degree of migration. This migration, including urban to rural, rural to urban, and rural to rural, continues today. History and archeological evidence reveal that by 1500 much of modern Zambia was already occupied by Bantu-speaking horticulturalists who are the ancestors of many of the present day Zambians, particularly the Bisa and the Ila people. The Ngoni and the Kololo arrived in the region in 1855. Both groups came from South Africa as a result of the wars sparked by Chaka. The Ngoni and Kololo found the Tonga people already residing in the south, and the Chewa and Nsenga groups in the east. The Chewa and Nsenga had migrated earlier from the territory that would later be called Malawi. The Lozis trace their history to the Lunda people, and the Bemba trace their roots to the Luba people.

Prior to the arrival of the British, the nation's ethnic groups lived in relative isolation from one another. The first Europeans in the area were the Portuguese in the 16th century. David Livingstone traveled through the region in the 1850s and "discovered" Victoria Falls in 1855. He is credited with bringing British attention to the area. In 1889, the British South Africa Company (BSAC), under the leadership of Cecil Rhodes, received permits to trade and establish a government in what would become Northern Rhodesia. The BSAC maintained economic and political control of the region until 1924, when the British crown took over administration of the country by means of indirect colonial rule.

Kalomo, now a small district capital, was the first Capital of Northern Rhodesia, until 1911 when the capital shifted to the town of Livingstone. Livingstone remained the capital of Northern Rhodesia until 1935. Lusaka became the administrative center at that time. Between 1929 and 1939, four large copper mines in the north-central part of the country opened. Northern Rhodesia became a supplier of copper to the world market.

Along with many African countries, Zambia won its independence in 1964. It was a multiparty state until 1972, when it

became a “one-party participatory democracy.” The freedom-fighter leader Kenneth Kaunda was president of Zambia from 1964 to 1991. President Kaunda’s greatest strength as a leader was his ability to unite the various ethnic groups of Zambia under his “humanism” platform of “One Zambia, One Nation.” The first decade after independence was marked by the government’s proclaimed commitment to socialism, and its investment in social welfare programs. This was the decade of prosperity when copper prices and people’s spirits were high.

The historical importance of copper and the subsequent growth of the mining industry in Zambia, led to the rapid growth of Zambia’s towns. From the end of World War II to the late 1960s, Zambia’s urban areas, especially the Copperbelt and Lusaka, grew at phenomenal rates. Zambia soon became the most urbanized and industrialized of Africa’s countries. In 1980, 43% of Zambians lived in town, compared to roughly half that for the rest of Africa. Currently it is estimated that 36% of Zambians live in urban areas.

Compared to Zambia’s relative prosperity of the 1960s, overall economic growth rates throughout Africa have declined since the mid-1970s. Throughout the continent, economic troubles have increased due to a decrease in agricultural production and a continued, albeit slower, growth of the urban areas. Zambia’s problems were compounded by the sudden drop in the world market price of copper in the mid-1970s. At that time, copper accounted for 94% of Zambia’s export earnings. Over reliance by the government on copper revenues had resulted in little economic diversification in general, and tremendous neglect of the agricultural sector in particular. Subsidies on maize (corn) meal, which the urban population had come to rely on, compounded the agricultural sector’s problems. The combination of all of these factors in Zambia led to what observers have called “the greatest—and most rapid—economic decline” among all the nations of sub-Saharan Africa.

In the wake of economic problems in the 1970s and 1980s, President Kaunda’s government made several attempts at economic reform, all of which failed. In an attempt to revamp the economy, the 1980s saw the implementation of the Structural Adjustment Program (SAP). This approach, however, failed to achieve its intentions, as it left some 73% of the people in the country living in poverty. Throughout the 1980s, support for the government continued to erode. In October 1991, for the first time in decades, Zambia held multiparty elections. Long-time president Kaunda was voted out of power and President Chiluba, of the Movement for Multiparty Democracy (MMD), was voted in. In an effort to redress the economic recession, the MMD adopted the Economic Recovery Program (ERP). As of 2004, 67% of the population was still living in poverty.

President Chiluba’s objectives were to diversify the economy, increasing the country’s food supply and thereby reducing food imports. Because copper was the primary export and foreign currency earner, the agricultural sector has long been ignored. Only 7% of the land area is under cultivation, with corn, sorghum, and cassava being the primary subsistence crops. The agricultural system is still largely unreliable, as it is dependent on rainfall. In 2001, at the end of his second term, per the constitution, President Chiluba stepped down. Elections were held and the MMD maintained the presidency, with Levy Mwanawasa as the new president. President Mwanawasa provided a level of stability and continuity, which, combined with increasing commodity prices, led to investment and growth. In 2006

Zambia issued its Fifth National Development Plan, which has a vision for Zambia in 2030 to be a prosperous and stable middle income country. According to the United Nations’ Millennium Development Goals, Zambia appears to be on the path toward achieving that vision.

## 2 LOCATION AND HOMELAND

Zambia is a landlocked country of south-central Africa, with an area of 751,000 sq km (290,000 sq mi). Zambia is bordered on the south by Zimbabwe and Namibia, on the southeast by Mozambique, on the east by Malawi, on the northeast by Tanzania, on the north and west by the Democratic Republic of the Congo, and on the west by Angola. Zambia is dominated by a tropical savanna climate. Most of the country has a single rainy season. Zambia has four great rivers: the Zambezi, Kafue, and Luangwa in the south and east of the country; and the Luapula in the north. The rivers offer a valuable resource potential in the form of hydroelectric power. Zambia has a wealth of mineral resources, including copper, lead, zinc, and coal. The earth is characterized as red and powdery and not very fertile. The country was very rich in game before the advent of widespread poaching. Now many species are threatened.

Thirty-six percent of Zambia’s 11 million people live in urban areas, with a trend indicating that urban to rural migration is growing. Most of the people are of Bantu origin (including Bemba, Tonga, Lozi, and Lunda). Some 98% of the population is African, with less than 2% being European and Asian.

### 3 LANGUAGE

The official language of Zambia is English, which also serves as the lingua franca (common language), but there are seven national languages. Bemba is largely spoken on the Copperbelt, where the majority of the labor force are Bemba. The Bemba people were largely recruited to mine copper because of their proximity to the Copperbelt. Nyanja is another commonly spoken language which comes from the Chewa and Nsenga people of Malawi, and now also from people of the eastern province of Zambia. Nyanja can be heard most commonly in the capital city of Lusaka because of the large eastern-province population that was recruited to work there by the British. The other national languages are Tonga, spoken largely in the south of the country, Lozi, spoken in the west of the country, with its origins in Botswana, and three languages are found in the northwest of the country: Lunda, Luvale and Kaonde.

### 4 FOLKLORE

Zambians have an active tradition of oral history and have passed proverbs, fables, riddles, and creation myths down through many generations. Even today, parables are in active use in conversation.

### 5 RELIGION

Some 72% of Zambia's population report that they are Christian or combine Christianity with traditional African religions. The remainder practice African beliefs, or are Hindu or Muslim. Zambia was officially declared a Christian Nation by President Chiluba, who was himself a born-again Christian. However, there is religious harmony in the country.

### 6 MAJOR HOLIDAYS

Official holidays include New Year's Day (January 1); Youth Day, March 12, Easter weekend (late March or early April); Labor Day (May 1); African Freedom Day (May 25); Heroes and Unity Day (the first Monday and Tuesday in July); Farmers Day (the first Monday in August); Independence Day (October 24), and Christmas and Boxing Day (December 25 and 26).

### 7 RITES OF PASSAGE

Initiation ceremonies for boys are practiced among a number of Zambia's tribal groups. These rituals commonly involve circumcision in the north western part of the country, as well as instruction in hunting and in the group's culture and folklore throughout the country. At puberty, girls are also instructed in the ways of their culture, and receive instruction in sex, marriage, and child rearing, as well.

Both traditional arranged marriages and modern marriages are accompanied by the *lobola*, or bride-price, a payment by the man to his fiancé's family. Many Zambians have church weddings, however traditional marriages are also very common. Zambia is governed by both statutory law as well as customary law. These are sometimes in conflict with each other, such as in the case of property inheritance. Statutory law allows for the wife to inherit at least 20% the property of her deceased husband, while with customary law all property belongs to the family of the deceased husband. Many women have found it difficult to access their lawful right to property, due to the strong influence of customary law and the poor enforcement of statutory law.

Upon the death of a spouse, in-laws may require that a widow or widower undergo sexual cleansing (an act of intercourse with a member of the deceased family, often a brother or other close relative). In some areas it is said that this takes place to rid the widow or widower of the ghost of the deceased spouse. In the age of HIV and AIDS there was a lot of concern that this was increasing the transmission of HIV, therefore, many traditional leaders have outlawed the practice in their areas.

The funeral of a relative, even a distant relative, is considered an event of great importance that one must attend to show respect for the dead. However, in the era of HIV and AIDS, funeral traditions have been modified to ease the high cost of a funeral, as people were finding themselves overwhelmed with the higher than normal rate of mortality. Fortunately the introduction of HIV treatment has begun to slow this higher death rate.

### 8 INTERPERSONAL RELATIONS

In formal situations, Zambians address each other by their last names, prefaced by the terms for "Mr.," "Mrs.," or "Miss" in their local languages. Different greetings are used in different parts of the country. *Mulibwanji* ("How are you?") is common in the Lusaka area; *Mwapoleni* ("Welcome") is generally used in the Copperbelt region; and *Mwabonwa* ("Welcome") is a standard greeting in the southern part of the country. In most parts of Zambia, people commonly greet each other with a handshake, using the left hand to support the right, a gesture traditionally considered a sign of respect. People in the Luapula, Western, and North-Western provinces frequently use a greeting that involves clapping and squeezing thumbs. People often kneel in the presence of their elders or those who are their social superiors. Zambians, like many other Africans, often avoid eye contact out of politeness. It is considered unacceptable for men and women to touch when greeting each other.

### 9 LIVING CONDITIONS

Zambia's towns are bustling centers with a host of problems that are common to cities in general. Most of Zambia's urban residents live in poverty in low-cost, high-density housing areas, out of sight of the relatively few elite who reside in the few low-density, previously European sections of town. In the decade following independence, the population of Zambia's cities doubled in size. In those years the city represented opportunity and privilege. There was food on the table, transportation in the streets, and goods in the shops. Economic opportunities drew people from every province of Zambia, with the largest populations arriving in Lusaka from the Eastern Province (Chewa and Ngoni), and arriving on the Copperbelt from the Central Province (Bemba). The growing discontent in Zambia's large towns, as a result of the economic decline that began in Zambia in the mid-1970s, caused many Zambians to take up the challenge of leaving town and trying to make a living growing food. Recent renewed prosperity can be seen in the urban centers, especially Lusaka, where there is a housing boom, with a lot of new construction and high rents.

Average life expectancy in Zambia has dropped to under 40 years. This is largely due to HIV and AIDS and the opportunistic infections associated with it, such as tuberculosis and various cancers. The country also has a high rate of infant mortality—85 deaths out of every 1,000 live births, due to mal-

*A Zambian woman and her sons grinding millet into flour. (Jason Laure)*

nutrition, diarrhea, and childhood illnesses such as measles. Malaria is also a major cause of death in all age groups, but recent innovations in the use of insecticide-treated bednets, and household spraying are beginning to pay off with a reduction in the incidence of malaria. The country has over 1,200 health facilities with 12 major medical centers, concentrated in urban areas, and smaller health centers throughout the country. Free medical care is provided for those who cannot afford to pay for it.

In rural areas, buses are the main mode of transportation. With the recent economic prosperity, more and more Zambians own cars and traffic is becoming a problem in some urban areas. Taxis are also available to urban-dwellers.

#### **10 FAMILY LIFE**

Urban and rural studies of Zambia, as well as census data, indicate that relationships between the sexes are difficult and tenuous. As heads of households, men assume authority within the home. The cultural double standards of condoning polygyny (having more than one wife) and men's extramarital affairs while expecting complete fidelity from women, causes friction in many urban households and contributes to the spread of HIV. What is more, men are not obliged to share their resources within the household, and their access to resources is greater than women's. Certain themes about relations between women and men recur in the Zambian literature. Customary practices continue to shape gender and generational relation-

ships in conflict with, or accommodation to, ongoing social and economic changes.

Regardless of whether descent is traced matrilineally (through the mother's line) or patrilineally (through the father's line), cultural norms and assumptions support male authority and power. A woman's access to productive resources is very often mediated through a man: her father, husband, uncle, or brother. Bride-wealth continues to be transferred at marriage—from the groom's household to the bride's. Kinship and family systems often influence the manner in which women are able to act as full participants in all kinds of relationships. In general, women's access to and rights over property and people are still much more circumscribed than men's.

#### **11 CLOTHING**

With the decline of the economy, and the growth of the world trade economy, there has been a tremendous growth in the second-hand clothing industry, or what Zambians call *salaula*. The term *salaula* means to "rummage through a pile." In this case, the term refers to the bundled used clothing that arrives via Tanzania and South Africa from the industrialized north, including the United States, Canada, Denmark, and the United Kingdom. During the colonial era, and in the decade following independence, Zambians could afford to produce their own textiles and wear tailor-made clothing. With the decline in the economy, they have been forced to purchase the first world's second-hand clothing from local traders, who purchase the large bundles and sell pieces individually. Zambians have a

keen sense of style, nonetheless, and have been characterized by visitors and researchers in the past as being very stylish and particular about appearances.

There is little form of traditional dress, except in the western part of Zambia. The Lozi people appear to have been influenced by Victorian culture and women wear a dress made with local style *chitengi* cloth, but in a design with a long skirt and many petticoats. The men wear outfits more reminiscent of what one would consider traditional dress, with skins forming the man's short skirt, and a red beret on the head.

In other regions of Zambia, women commonly wrap a *chitengi* around their waist as a skirt. In many areas, men and women have adopted some of the more West African style of tailoring, using *chitengi* cloth. In both cases, these are not traditional to Zambia.

## 12 FOOD

The most important dietary staple is a dough or porridge called *nshima* generally made from cornmeal, but in some areas from cassava, or millet. It is typically eaten in combination with foods such as meat stew, vegetables, or a relish made from fish or chicken. Sweet potatoes and peanuts are commonly eaten in rural areas. Families that can afford it eat hot meals at both lunchtime and dinnertime, and a breakfast of porridge or bread and tea. However, in rural areas, especially during the seasonal period before the harvest, many families can only eat one meal a day. Beer is a popular beverage, both commercial and traditional brews, and alcohol abuse is a big problem.

## 13 EDUCATION

Education in Zambia continues to be modeled on the British system, where children begin in kindergarten and progress through the grades to high school. In an effort to provide basic education to all Zambian, public school is free, up to grade eight, but there are costs, such as the Parent-Teacher Association (PTA) fees and uniforms which can make education too expensive for some Zambians. As a result, illiteracy is high, totaling 27% (higher for women). Only 20% of Zambians have a secondary education, and only 2% are college graduates. Recently, with the increase in orphans and children made vulnerable due to HIV and AIDS, there has been a dramatic increase in open community schools, which do not require uniforms, but they also receive little support from the government and the standards can be quite low. In an effort to redress this, there is now a distance education radio program to support the community schools and to standardize the learning among those students.

## 14 CULTURAL HERITAGE

Dance, accompanied by drumming, xylophone, or thumb piano, plays an important cultural role in Zambia. Dances are generally done in two lines, with men in one and women in the other. Dances, which are traditionally associated with the casting out of evil spirits, are performed to celebrate personal milestones (such as an initiation) as well as major communal events. In addition to their own traditional forms of music, Zambians enjoy contemporary music and music from neighboring African countries. To support the arts in Zambia, the National Arts Council introduced an annual national arts awards ceremony, the Ngoma Awards, which recognize Zambian talent in all areas of the arts.

## 15 WORK

If work is defined as wage-earning, then the history of work in Zambia has largely been characterized by high levels of rural to urban migration. When the British arrived, the people residing in Zambia were farmers and/or cattle-herders. The people (primarily men) were recruited by the British to work in the cities for cash, either working in the mines or as domestic servants. For rural entrepreneurs and farmers, access to labor is varied and often influenced by gender- and age-related access to resources. Men are more often wage-earners and homeowners than are women, and they have greater access to cash than women do. Women often find work or are able to recruit workers through personal networks. The 1980 census reports that men are more economically active in the urban areas, while women are more active in rural settings. The census defines the working population as those engaged in agriculture, forestry, hunting, fishing, or production and other related occupations. Subsistence farming, which is not included under the category "work," was dominated by females, with 69% of all women engaging in subsistence farming compared to 44% of all men.

The Bemba are best known for their slash-and-burn cultivation practices, called *citimene*. The Bemba farm in the central region of Zambia where the soil fertility is low. The ashes left from cutting, piling, and burning the brush fertilize the soil, enabling farmers to grow grains (mainly). After a few years when the soil is depleted, the farmer will move on and repeat the *citimene* process. The MMD government has placed a high priority on increasing land productivity through foreign investment, and encouraging a largely unemployed urban sector to "go back to the land."

## 16 SPORTS

Soccer is the leading sport in Zambia, which entered a soccer team in the 1988 Summer Olympic Games in South Korea. Also popular are boxing, track and field, basketball and cricket. Golf is considered a game of the elite. The most popular sport among young women is a version of basketball called "netball."

## 17 ENTERTAINMENT AND RECREATION

In the rural areas of Zambia, the primary forms of recreation are drinking and traditional dancing. Urban-dwellers participate in social clubs, church activities, and volunteer groups. Other leisure-time pursuits include dancing at discos, and amateur drama (*ifisela*), as well as a variety of sports. Television is available to people living in the cities and larger towns.

## 18 FOLK ART, CRAFTS, AND HOBBIES

The people of the Northwestern Province of Zambia are known for their masks, which are made of bark and mud, with fierce faces painted on them in red, black, and white. A traditional art among Zambian men is the carving of wood sculptures, sometimes decorated with costumes made of beads. Zambian crafts include sleeping masks, various types of beadwork, and the weaving of baskets and *chitenges*, the national costume, which consist of brightly dyed cloth wrapped around the body. Some of the designs on Zambian pottery are thousands of years old.

Recently there has been an increase in the production of modern art in Zambia. This includes painting, sculpture in

*Kinship and family systems often influence the manner in which Zambian women are able to act as full participants in all kinds of relationships. In general, women's access to and rights over property and people are still much more circumscribed than men's.*  
(Cory Langley)

wood and stone, lithography, and multi-media installations. Famous Zambian artists include the naive painter, Stephen Kapata, and sculptor Friday Tembo.

## 19 SOCIAL PROBLEMS

Poverty, crime, unemployment, rapid inflation, lack of health care and education opportunities, and housing shortages as well as a mushrooming informal economy are causing a growing discontent among residents of Zambia's towns. Pressure on the land, resulting in environmental degradation including deforestation and soil erosion, is a more immediate concern. Estimates indicate that of the 24 million hectares (over 59 million acres) of arable land in the country, only 6% is utilized. Land is currently being distributed to encourage development and investment .

## 20 GENDER ISSUES

Zambian women have a relatively low socioeconomic and political status. They face multiple forms of discrimination and abuses, including gender-based violence and insecure property rights. For example, in a survey in 2001, more than half of the ever-married women reported being beaten or abused by their husbands.

On the positive side, the government has enacted laws to protect women and their rights. The government has established specialized units of the police to handle cases of domes-

tic violence and in 2006 a cabinet minister was appointed for gender and development. Zambia has also ratified many regional and international treaties that require the government to eliminate violence and discrimination against women and to guarantee their rights to health, physical security, non-discrimination and life. One such international agreement was the ratification of the UN's Millennium Development Goals, which include national targets on gender equality and the empowerment of women. There are many civil society organizations that provide services and support to women, especially those who experience violence.

**LOCATION:** Zimbabwe

**POPULATION:** 12.5 million

**LANGUAGE:** ChiShona; isiNdebele; English

**RELIGION:** Indigenous beliefs; Christianity; Islam

**RELATED ARTICLES:** Vol. 1: Ndebele

### <sup>1</sup> INTRODUCTION

Internationally, particularly in the West, Zimbabwe (formerly Rhodesia) has been known for its rich tradition of stone sculpture and natural tourist attractions such as the Great Zimbabwe and Victoria Falls. Zimbabwe has a total area of about 400,000 sq km (150,000 sq mi). Before its colonization by Britain in 1896, the country was ruled by various autonomous ethnic kingdoms. The earliest people to inhabit the country were the San, sometimes referred to as the Qoisan or Khoisan (erroneously called “Bushmen”—this is a derogatory label). Their presence in the country can be deduced from the rock paintings scattered all over the country. After the San, the Shona arrived, who built stone walls in the region; the best-known of these are the Great Zimbabwe and Khami Ruins. Some of the well-known pre-colonial Shona kingdoms were the Great Zimbabwe, Munhumutapa, Torwa, Barwe, and the Rozvi.

Zimbabwe has been in a state of economic crisis since the early 2000s. The roots of the crisis date back to the mid-1960s and the era of African independence. In 1965, Ian Smith, the leader of Southern Rhodesia, declared unilateral independence from Britain, but imposed white minority rule, through the Unilateral Declaration of Independence (UDI). The UDI resulted in international backlash, including sanctions, and a guerrilla war, which lasted until 1979. More than 36,000 people died in the war and at least 15 million people were displaced. A peace deal was negotiated between Ian Smith's government, Robert Mugabe's Zimbabwe African National Union (ZANU) and Joshua Nkomo's Zimbabwe African People's Union (ZAPU).

Elections were held in 1980 and Mugabe became prime minister. In 1988, the ZANU and ZAPU parties merged into ZANU-PF, effectively creating a one-party state. In 1990, Mugabe's attempt to create a de jure one-party state failed, but despite that, in 1996, Mugabe succeeded in winning reelection on a platform of land reform. By 2000, Mugabe backed war veterans as they forcibly seized many of the white-owned farms. This led to shortages of commodities and a crippling of the economy.

The economic and political crisis has continued. Inflation is spiraling out of control. In January 2008, inflation was pegged at over 100,000%—the world's highest. Chronic food shortages, the collapse of basic services, compounded with over 20% HIV prevalence and corruption have led Zimbabwe to the brink of disaster. It remains to be seen if international pressure or negotiation will bring Zimbabwe back, or if collapse and chaos are inevitable.

## 2 LOCATION AND HOMELAND

Zimbabwe is situated in Southern Africa; it is one of South Africa's northern neighbors. It is located between 14° to 23°s and 25° to 33°e. By 2003, the country's population was estimated at 12.5 million—some 98% are African, and 2% are European, Asian, and mixed-race (sometimes referred to as “colored”). The geographic distribution of the population reflects the racial, ethnic, and economic make-up of the country. The rich farm land with favorable climatic conditions is inhabited and cultivated by the former colonial Europeans (whites), while Africans (blacks) cultivate poorer, overcrowded land. The industries in urban centers are controlled by the former colonial Europeans, Asians, and people of mixed race more than by Africans. Among Africans, those who live and work in the city are better-off economically than those who live in the countryside.

## 3 LANGUAGE

The African population of Zimbabwe is made up of at least 13 ethnic groups who speak different languages. Some of these ethnic groups are the Tonga, Kalanga, Nambya, Ndebele (who migrated from present-day South Africa), Shona (who migrated from present day northeast Africa), Shangani, Sotho, San (Abathwa), Dema, Shangwe, amaFengu, Sena, and Lemba. Two ethnic groups that have received much academic study and international visibility are the Shona and Ndebele. The Shona people make up over 70% of the country's population, while the Ndebele people make up less than 20%.

While these ethnic population groups have distinct cultures and languages, most people in the country speak at least two languages, including one of the three official languages: chiShona, isiNdebele, and English. All the indigenous languages fall within the so-called Bantu group of languages. Most of them are tonal languages.

These African groups also share some cultural practices pertaining to their social organization, folklore, religion, and historical experiences such as colonialism, pastoral economies, and the war of national liberation against British colonialism. Ironically, it was colonialism that provided the context within which most of the integration between the various ethnic groups occurred, particularly the educational, religious, and political systems. Even today, the education system has provided one of the means of developing a national culture that cuts across ethnic and racial boundaries.

## 4 FOLKLORE

Each ethnic group has its own historical heroes or heroines, legends, and myths that recount their origins, traditions, and history. Some of the heroes such as Mbuya Nehanda, Kaguvi, and Lobengula have become national symbols.

## 5 RELIGION

Historical processes have resulted in changes that have altered indigenous African life. Most families live in two worlds—the African and the European (or Western), and in their daily lives, they blend these two. Thus, while ancestral worship is the most dominant religious practice, Christianity and Islam have a stronghold in Zimbabwe.

Every ethnic group has its particular language, folklore, history, religion, cultural practices, cultural heritage, and folk

arts. All indigenous Zimbabweans practice some form of ancestral religion, and more than 75% of the population are also Christian or Muslim.

Some of the indigenous practices such as rites of passage, interpersonal relationships, family life, clothing, food, work, sports, and other forms of entertainment have borrowed some elements from European culture. Most of these changes are fostered by the education system. In essence, there is no longer what could be regarded as purely indigenous practices. However, some of the practices are heavily embedded in indigenous culture.

## 6 MAJOR HOLIDAYS

The various racial and ethnic groups of Zimbabwe share a number of holidays. There are about 12 public holidays observed nationally, as well as those observed by the various religious groups such as Muslims and Christians. There are no indigenous holidays observed nationally, but families may have special days in the year during which they remember their deceased relatives. The most important national holidays are Independence Day, April 18; Workers' Day, May 1; Africa Day, May 25; Heroes Day, August 11; and Defense Forces' Day, August 12. These are generally celebrated under the supervision of the state. Government officials, including the president of the country, usually address the nation, especially on Independence, Heroes', and Defense Forces' days. These celebrations are accompanied by poetry, music and dance, and plenty of food and drink. Workers' Day is run by trade unions.

Easter and Christmas holidays are Christian holidays celebrated by Zimbabwean Christians. For most people, these holidays are an opportunity for rest or travel. They provide urban workers with the opportunity to visit their families in the communal lands (in the country).

## 7 RITES OF PASSAGE

While most Zimbabweans still practice their indigenous culture, that culture has been significantly eroded by Christianity and European colonization. Most of the traditional practices and beliefs associated with rites of passage are being replaced with Western ones such as baptism and birthday parties. The public celebration of rites of passage associated with birth and puberty has almost ceased, except among a very few ethnic groups such as the amaFengu (a subgroup of the amaXhosa people of South Africa). The amaFengu practice public adolescent male circumcision, to announce boys' graduation to manhood. There is one minor ethnic group, the Remba, who still practice infibulation, an extreme form of female genital mutilation. Marriage and death are still conducted in a manner that is very close to tradition. Marriage has remained a symbol of one's graduation into adulthood, while death and burial mark one's passage into the world of the "living dead," that is, ancestors.

## 8 INTERPERSONAL RELATIONS

Interpersonal relations in Zimbabwe are characterized by a combination of African and European cultural practices. These practices vary according to ethnic group, although different ethnic groups borrow some practices from one another. Each ethnic group has its particular greetings and visiting customs. In some groups, elders have to initiate greetings, while in others someone younger should initiate them. Some shake hands and some do not. Bowing one's head, and bending one's knees are other customs followed by some groups but not others. Whenever one visits another person's homestead, the visitor has to humble himself or herself before the hostess or host. Gesturing, including eye and facial expressions, are also an important aspect of greetings and interpersonal relations.

Another important aspect of interpersonal relations that has been affected by Western culture is dating. Any form of dating in Zimbabwe always has a mediator. Most people do not usually date a stranger, for obvious reasons. Dating a complete stranger is regarded as one of the recipes for disharmony in a relationship. Another explanation has to do with incest. People who do not know each other's family histories risk being involved in an incestuous relationship. However, these beliefs are changing because most young people meet and date in schools, colleges, and universities with no prior knowledge of each other's family background.

## 9 LIVING CONDITIONS

Not all Zimbabweans enjoy the same living conditions, particularly health facilities, housing, and transportation. Rural parts of the country are the worst, and cities enjoy most of the best conditions. However, the current economic crisis has heavily impacted both rural and urban areas. Most rural families do not have tap water. Transportation has become challenging in all parts of the country due to both fuel shortages and poor upkeep of the road system. Many parts of the country no longer have regular transport. The same is true for health facilities.

The whole country does not have adequate health facilities, but the rural population is hardest hit. Many communities do not always have access to a fully trained nurse let alone a doctor. Medicines are always inadequate. Some of the most common diseases are malaria, bilharzia, sexually transmitted diseases, tetanus, cholera, polio, and typhoid, and this is all compounded by the high HIV prevalence.

In both the city and the country, there are also local differences in the standard of living. In the city, the differences are based on race, gender, and class. People of European origin, Asians, people of mixed race, and elite blacks enjoy a better standard of living. In cities, women are the worst off because of the employment discrimination and related sexist practices that keep them from accessing resources such as land, credit, and housing.

## 10 FAMILY LIFE

Marriage and the family are the cornerstones of Zimbabwean society, regardless of ethnic group and race. Besides being an important rite of passage, marriage is regarded as a sacred practice. It is through marriage that the living are connected with their ancestors. It is within the family that gender roles are defined. Most ethnic groups have patriarchal families, in which women play a subordinate role. They are expected to serve their husbands, work for them, and bear them children. However, women have particular rights, and access to a form of power that is not usually expressed publicly. Families are usually headed by men, although there are a growing number of single-parent families headed by women. A typical family is made up of a husband and wife and at least two children. Traditional families are big, including five or more children, grandparents and children of relations. There are also what are known as extended families, composed of a father, a mother, and their son or sons with their own families.

Some men have more than one wife. It is not uncommon to find a man with 10 wives. One of the most common features of a Zimbabwean family, especially in the rural parts of the country, are animals. Most animals are not reared merely as pets but to serve other purposes. For instance, cats are kept in houses in order to kill pests such as mice and rats, and dogs are used to guard homes and for hunting.

## 11 CLOTHING

Most Zimbabweans do not wear traditional clothing as part of their everyday dress. European dress is the most dominant form of clothing in the country. There are very few people who wear traditional clothes on a regular basis. Traditional dress comprises a headdress, wraparound cloth, and ornamentation such as earrings, necklaces, and bracelets. This dress is usually seen during ceremonial and state occasions such as Independence Day and Heroes' Day.

## 12 FOOD

Zimbabwe's staple food is called *sadza*, made out of cornmeal and eaten with any relish, the most common being either greens or meat (particularly beef and chicken). Other traditional foods are milk, wild fruits, rice, green maize (corn on the cob), cucumbers, peanuts, beans, and home-brewed beer. While most of the utensils used are Western, some traditional utensils are still in use. Some of these are calabashes (gourds) that are used to store and cool water and milk; and clay pots

*Education is regarded as an asset in a family since it is perceived as a passport to a good job. Zimbabwean parents invest a lot of money in the education of their children as a form of future investment, because children are supposed to look after their elderly parents. (Jason Laure)*

used for cooking special foods such as meat, and for storing milk. Wooden plates and spoons are still in use alongside Western ones. Since colonization, Zimbabweans have adopted some of the European food or the foods introduced by Europeans, especially sugar, bread, and tea. Most families usually have a minimum of three meals: breakfast, lunch, and dinner. Nowadays, for breakfast people may eat porridge made out of cornmeal or oatmeal, cereal, or bread and tea. Leftovers from the previous day may be eaten for breakfast, too. For lunch, people usually have sadza with an accompanying relish, or any available heavy food. A similar meal might be eaten for dinner. However, foreign foods such as macaroni and cheese and mashed potatoes are now part of the staple diet. In cities, people can get meals from restaurants or take-out food places. Some of the fast-food places are Chicken Inn and Kentucky Fried Chicken.

There are taboos associated with certain types of foods. These taboos depend on a number of factors: family name, age, sex, and context. In some cultures, certain food is eaten only when it is in season. For instance, the amaNdebele discourage the eating of corn on the cob outside its season. Most ethnic groups also discourage the consumption of an animal, plant, or any other form of food that bears their family name. For instance, if one's family name is Nkomo (cattle: cow or oxen), one is not supposed to eat beef. Young children are discouraged from eating eggs. When a woman is menstruating, she is

not supposed to drink milk because it is believed that doing so might harm cows and their calves.

### **13 EDUCATION**

Zimbabwe has traditionally been one of the very fortunate countries in Southern Africa to have basic education facilities, especially for young people. While there are some people who cannot read or write, historically most people have at least three years of elementary education. Education has been regarded as an asset in a family since it is perceived as a passport to a good job. Thus, parents traditionally spend a lot of money on the education of their children as some form of future investment, because children are supposed to look after their elderly parents. After independence, especially in the late 1980s, the country invested many resources in education. This resulted in huge numbers of students graduating from four years of secondary school education. There was also an increase in the number of students with six years of secondary school education, the requirement for university enrollment. On average, the highest level of education is four years of high school. However, there have been growing numbers of people with a college education. Recently, the economic chaos has also had an impact on the education system. Many of the private schools have closed and the quality of public education has plummeted.

The national adult literacy rate increased from about 62% in 1982 to about 90% by 2004. The adult literacy rate is higher in urban areas than in rural areas. In both rural and urban areas, there are more literate males than females, and more males than females attain higher education levels. Attendance is mandatory for primary levels. Primary education is 7 years; secondary school, 6 years; college, about 2 to 3 years; and university at least 3 years to 7 for medical school.

University or college education gives one's family pride and happiness. However, the education system reflects the cultural and economic practices of Zimbabwean society. Most Africans in the country believe in educating sons rather than daughters because when daughters marry, they take family resources to another family.

#### 14 CULTURAL HERITAGE

Zimbabwe has a very rich tradition of the arts, including music, dance, fine art and crafts, and literature. Traditionally, Africans transmitted knowledge through the arts, especially through music and dance. Music and dance were, and to some extent are still, part of ceremonial celebrations and rites of passage. Other media continue to be used as forms of communication, such as praise songs (an equivalent of poems), stories and proverbs.

#### 15 WORK

Traditionally, work is defined along gender lines. Most domestic work such as cooking, brewing, and housekeeping is performed by women, while men work outside the home tending cattle, hunting and cultivating land. However, women also participate in agricultural work, by performing tasks that are defined as "light," such as planting and cultivation. These roles are changing, however. Men help with some of the roles that were previously set aside for women, and women and girls now herd and milk cattle. In the early days of colonization, some families did not allow women to engage in waged employment in the city, mines, or commercial farms. The colonial state also did not allow the employment of women, especially black women, in wage-labor. However, despite these constraints, women found their way into cities to seek work. The independence government introduced legislation that abolished labor discrimination against women. As a result, the number of women in waged labor, such as factories, corporate, and government positions, increased. There is still a lot to be done, however, for women and the disabled to improve their opportunities.

#### 16 SPORTS

The country's national sport is soccer. The Zimbabwe national soccer team is one of the rising soccer powerhouses in Southern Africa, if not in all of Africa. The team participates in the African Cup and World Cup competitions quite regularly. There are a handful of Zimbabweans who play on European soccer teams, especially in Britain, Germany, and Belgium. Other sports are track-and-field, golf, cricket, rugby, wrestling, boxing, netball (women's), tennis, and horse-racing. Sports in Zimbabwe are organized and funded along racial lines. Soccer, boxing, wrestling, and track-and-field are popular among Africans, while Europeans prefer golf, cricket, rugby, tennis, and horse-racing. However, people from either race cross over to other sports that are not common in their community.

Before colonization, people played indigenous games such as hide-and-seek, and engaged in various hobbies for amusement. Boys, while herding cattle, ran races or mounted small bulls, and played a type of stone game called *intsoro* or *tsoro*. Girls also had their own games such as *nhoda*, another kind of stone game. Today, most of the sports and games played are a mixture of indigenous and foreign ones. This has come about through the influence of schools and the mass media.

#### 17 ENTERTAINMENT AND RECREATION

Traditional forms of entertainment such as drinking, singing, and dancing have persisted in contemporary society. Traditional ceremonies, state functions, and rites of passage also serve as entertainment. Race, class, and geographical location shape one's form of entertainment or recreation. Europeans (whites) have their own forms of entertainment such as going to movies, horseracing and riding, bird watching, stamp collecting, boating, watching plays, flying kites, and going to concerts. The concerts that whites and Asians go to are usually different from those that Africans attend.

Children have their own forms of entertainment and hobbies that are developed through the school system and the mass media, especially radio and television. They watch a lot of television and listen to Top 40 radio. Most of the television programs, videotapes, and films come from the United Kingdom and the United States. Children in Zimbabwe also play video and computer games. Zimbabwe is one of the dumping grounds of cheap and old popular culture products from the United States and the United Kingdom, such as TV shows like *Dallas* and *Falcon Crest*, professional wrestling, and soccer games. As a result, young people dress and try to imitate the lifestyles of musicians and actors from these two countries, especially African American performers. They also listen to local and regional pop artists, especially those from South Africa and the Democratic Republic of the Congo. Some of the local well-known musicians are Oliver Mutukuzi, Dorothy Masuka, Thomas Mapfumo, Lovemore Majaiwana, Bhundu Boys, and Andy Brown and Storm. Two internationally known films have come from Zimbabwe: *Neria*, a story about a woman whose property is about to be taken away from her by the relatives of her deceased husband; and *Jit*, a serious comedy centered on a young man who is torn between Western life and his ancestors.

#### 18 FOLK ART, CRAFTS, AND HOBBIES

Zimbabwe is well known for its folk arts, particularly stone sculpture and woodcarving. Stone sculpture is a Shona tradition, while mat making and related arts and crafts are popular among the Ndebele, Kalanga, and Nambya people. Among the most-practiced arts in the past were house-decorating, beadwork, tie-dyeing material, mat- and basket-making, and iron-smelting. Pre-colonial Zimbabweans made weapons, hoes, and other tools for domestic use, such as knives from iron. Wild cotton and wild bark were used to weave mats, dresses, beehives, food containers, and water coolers. Baskets, storage containers, chairs, fish traps, carpets, and sleeping mats were and are made from cane, reed, grass, sisal, and related materials, both for domestic use and for sale.

Some of the traditional arts and crafts have continued to be used and adapted to the present. This can be seen in urban toys such as wire bicycles, hats, pieces of sculpture sold at airports,

and related crafts, as well as popular culture such as music. Some dances and crafts are now used to attract and entertain tourists at places such as Victoria Falls.

## 19 SOCIAL PROBLEMS

Despite the long strides that Zimbabwe has made in terms of building a democratic society, since the 2000s, these gains have been undermined. Soon after independence in the early 1980s, there was a lot of political instability and violation of human rights in the southwestern part of the country known as Matabeleland, where the government claimed there was some rebel political activity (dissident activity). In an attempt to deal with the situation, government forces killed many civilians and violated other human rights in the region. This continued until 1988. It is estimated that more than 5,000 people were killed. Opposition is a political right in Zimbabwe, but it is not tolerated by the current government. Most opposition parties have found themselves having to give up because the state blocks their access to the government-controlled mass media and other resources that any political party requires. Most minority parties cannot access state funding because of existing legislation. As of 2008 the political crisis had shed light on more human rights abuses and raised concerns that the abuses could escalate. In 2005 the government undertook mass evictions and the demolition of many informal structures, known as Operation Murambatsvina. The United Nations reported that this operation deprived over 700,000 Zimbabweans of their homes or their livelihoods, or both. It has been suggested that this operation was conducted to punish those who were not supportive of the ruling party. There are concerns that more repressive laws are being introduced to suppress criticism of government policies. For example, in 2005 the parliament passed the Constitutional Amendment Act, giving government the power to expropriate property without the possibility of judicial appeal and to invalidate passports for those considered a threat to national security. Concerns have been expressed that while much of the international community has expressed outrage over these developments, the African leaders have been more conservative in their response, opting for "quiet diplomacy."

Another area of human rights concern is the treatment of women. It is a well-known fact that Zimbabwe had become one of the countries in the world with a very progressive legal system as far as human and women's rights are concerned. However, this legal system has not been backed with action. The current government continues to harass and detain women as prostitutes, and has taken away some of the gains that women had made since independence. Some of the laws that empowered women, such as the Legal Age of Majority Act that gave women the right to marry whomever they wanted independent of parental approval are likely to be repealed.

Economic and social problems are intertwined. Since the late 1980s, the country has seen growing unemployment, especially among high school graduates. Coupled with the effects of the war of national liberation and consistent drought cycles, this has resulted in more social problems such as crime, drug and alcohol abuse, disease, and a depressed health system.

## 20 GENDER ISSUES

The constitution says that "every person in Zimbabwe" has fundamental human rights, regardless of race/color, tribe, place of origin, political or religious opinion, or gender, how-

ever, domestic violence and discrimination against women remains a problem.

Women are underrepresented in government and politics. In the year 2000 only 20 of the 150 members of parliament were women. While women may legally participate in politics without legal restriction, traditionally husbands, particularly in rural communities, direct women to vote according to the husband's preferences.

Violence against women, especially wife beating, is common. In 1998 more than 60% of the murder cases tried in the Harare High Court were due to domestic violence. There has been increased media reporting on sexual violence against women, but it has been noted that some High Court Judges impose lenient sentences in such cases.

The health status of women is worse than men. Women are more likely to be infected with HIV than men, due to both biological and cultural reasons. While women normally carry a heavier burden of care-giving, this has been intensified as a result of the high prevalence of HIV. While fertility is relatively low, with only 3.34 children per woman, maternal mortality is very high, with almost 600 per 100,000 live births resulting in the death of the mother.

Despite the efforts of government and an active civil society supporting the empowerment of women, women remain disadvantaged in society. Widespread illiteracy, economic dependency, social norms and traditional practices reinforce discrimination. Girls are less educated than boys, more likely to marry at a young age and to a person not of their choosing. They are also less likely to have their own land, formal employment, or to achieve economic independence. Furthermore, tradition does not respect decision making among women.

# ZULU

**PRONUNCIATION:** ZOO-loo

**LOCATION:** KwaZulu-Natal Province of South Africa, urban areas

**POPULATION:** 23.8% of South Africa's 47.4 million people are Zulu-speakers

**LANGUAGE:** IsiZulu (mother tongue)

**RELIGION:** Traditional beliefs, Christianity, and syncretic religions

## <sup>1</sup> INTRODUCTION

For many people, the Zulu are the best-known African people. Their military exploits led to the rise of a great kingdom that was feared for a long time over much of the African continent. They have a royal line that can be traced back to Shaka, the king of the Zulu during the 19th century. Shaka built his kingdom from small tribes that resided in what is today the South African province of KwaZulu-Natal. The Zulu are the descendants of Nguni-speaking people. Their written history can be traced back to the 14th century, when they migrated southward from the east to settle in what is now South Africa. Archaeological excavations on early Iron Age sites indicate that people ancestral to the Nguni-speaking peoples of KwaZulu were settled there from about 1500. At that time, all the Nguni tribes of the area were autonomous; however, some were more powerful than others.

In the early 19th century a young prince, Shaka, from the Zulu tribe came onto the scene and welded most of the Nguni tribes into the powerful Zulu Kingdom. Shaka ruled from 1816 until he was assassinated by his brothers in 1828. During his reign, Shaka recruited young men from all over the kingdom and trained them in his own novel warrior tactics. After defeating competing armies and assimilating their people, Shaka established his Zulu nation. Within twelve years, he had forged one of the mightiest empires the African continent has ever known. Few leaders in history have accomplished so much so quickly. However, during the late 1800s, British troops invaded Zulu territory and divided the Zulu land into 13 chiefdoms. In 1906, a section of the Zulus under chief Bambatha attempted a rebellion against the British, but they were defeated by a better-equipped British force.

The Zulu never regained their independence. Throughout the mid-1900s they were dominated by different white governments, first the British and later on the Afrikaner. In the period leading up to South Africa's first democratic election in 1994 and continuing into the 21st century, the Zulu endeavored to regain a measure of political autonomy via the Inkatha Freedom Party. They have been unsuccessful, however, both with the National Party government and the African Nationalist Congress-dominated government. As of 2008, the president of the majority ANC party was Jacob Zuma, who is Zulu by birth.

## <sup>2</sup> LOCATION AND HOMELAND

Approximately 75% of the Zulu-speaking people live in KwaZulu-Natal Province of South Africa, while the remaining 25% are scattered throughout the other South African provinces. KwaZulu-Natal is situated between 27° to 31°s and 29° to 31°e.

It borders on Mozambique in the north, Eastern Cape province of South Africa in the south, the Indian Ocean in the east, and Lesotho in the west. The provincial capital is Pietermaritzburg. KwaZulu-Natal constitutes 92,180 square kilometers (35,590 square miles), which is 7.6% of the total area of South Africa. It is a semi-fertile region with a flat coastal plain, highlands to the west, and numerous rivers and streams. The subtropical climate brings lots of sunshine and brief, intense rain showers.

Some 23.8% of South Africa's total population of 47.4 million are Zulu-speaking. While many Zulu still live in traditionally orientated rural communities, others have migrated to urban areas. However, links between urban and rural residents remain strong. A mixture of traditional and Western ways of life is clearly evident in the lives of almost all Zulu people. With urbanization, rural people have been affected directly and indirectly by modernization. Normal daily life for a 21st century Zulu is difficult to distinguish from that of other black people in South Africa.

## <sup>3</sup> LANGUAGE

The dominant language in South Africa is isiZulu, known commonly as Zulu. In KwaZulu-Natal, the most frequently spoken languages are Zulu and English. Zulu as a paralinguistic is idiomatic and proverbial and is characterized by many clicks. The daily life of a Zulu person can be captured in the naming system of people, buildings, organizations or associations, events, etc. Every name has a meaning and may relate to the past, the present, or the future. For example, the name "Welile" means literally "a person who has crossed something" (the river). Figuratively, it means a person who has overcome obstacles.

The Zulu language is characterized by words that pertain to the details of life, making distinctions that are difficult for others to comprehend. It is also characterized by *hlonipha* (respect) terms. Addressing those who are older than oneself, especially elderly and senior people, by their first names is viewed as disrespectful. Therefore, terms like *baba* (father) and *mama* (mother) are used not only to address one's own parents, but also other senior men and women of the community.

## <sup>4</sup> FOLKLORE

The belief in ancestral spirits (*amadlozi* or *abaphansi*) has always been strong. These are the spirits of the dead. The Zulu people recognize the existence of a supreme being. God is known as uMvelinqangi (One Who Came First) or uNkulunkulu, because he appeared first. This supreme being is far removed from the lives of the people and has never been seen by anyone. No ceremonies are, therefore, ever performed for uMvelinqangi, and his influence on the lives of the people is not direct. Zulu people believe that the intermediaries between uMvelinqangi and the people on earth are the spirits of the dead. The deceased heads of families are supposed to return after death to watch over the destinies of those who remain behind. The spirits, in turn, act as mediators with uMvelinqangi. Death is believed to bring one nearer to that mysterious supernatural personage. Because the ancestral spirits are believed to watch over those left behind, those alive have to ensure that they do not offend them. The ancestral spirits are believed to be offended when people break away from accepted customs. This belief has contributed to the conservatism for which some Zulus are known.

Zulus believe in a long life that continues after death. Getting old is seen more as a blessing than an unfortunate or unwanted phenomenon. This is based on the myth that long ago people did not die but rather lived for years. According to this myth, the Creator did not think that people should die and spoke to a chameleon, saying, "Chameleon, I am sending you to the people. Go and tell them that they are not to die." Although the chameleon was very slow, the Creator did not mind. He waited for the reply. However, after walking a long distance, the chameleon saw wild berries and decided to stop and eat them. The chameleon convinced itself that the Creator would not find out. Unfortunately, the Creator saw the chameleon and became very angry. Now the Creator called the lizard, which came swiftly. Angry, the Creator told the lizard to go and tell the people that they were to die. The lizard sped off, passed the chameleon on the way, and delivered the message to the people. After a long time, the chameleon appeared, breathing heavily, and delivered its message. The people were very angry and said to it, "Why did you waste time? We have already received the lizard's message!" Thus, growing old among the Zulu is seen as a special privilege, signifying that the Creator is overriding the lizard's message. Elderly people are believed to be sacred and are thus always respected.

## 5 RELIGION

Ancestral spirits are important in Zulu religious life. Offerings and sacrifices are made to the ancestors for protection, good health, and happiness. Grave sites are sacred because that is where the dead (who in turn will become ancestral spirits) are buried. Ancestral spirits come back to the world in the form of dreams, illnesses, and sometimes snakes.

The Zulu also believe in the use of magic. Anything that is beyond their understanding, such as bad luck and illness, is considered to be sent by an angry spirit, either from an ancestor or someone bewitching them. When this happens, the help of a diviner or herbalist is sought. He or she, in turn, will communicate with the ancestors or use natural herbs and prayers to get rid of the problem. Kinship members are prohibited from practicing magic or bewitching each other.

Under colonialism, many Zulu converted to Christianity. Although there are a large number of Christian converts, ancestral beliefs have far from disappeared. Instead, there has been a tendency to syncretize traditional beliefs and Christianity. This kind of religion is very common, especially among urbanites. Besides these two types of religions, there is a third type: fervent Christians who view ancestral belief as outdated and sinful.

## 6 MAJOR HOLIDAYS

In addition to recognizing the national holidays of the Republic of South Africa, the Zulu people celebrate Shaka's Day every year in September. This holiday is marked by celebrations and the slaughtering of cattle to commemorate the founder of the Zulu Kingdom. On this festive day, Zulu people wear their full traditional attire (clothing and weapons) and gather at Shaka's tombstone, kwaDukuza in the village of Stanger, KwaZulu-Natal province. This is a very colorful day attended by both national and international dignitaries who represent their governments. *Izimbongi* (praise-poets) sing the praises of all the Zulu kings, from Shaka to Zwelithini, whose reign began in

1968. Zwelithini remained traditional king of the Zulu as of 2008.

## 7 RITES OF PASSAGE

Life among the Zulu is seen as a cycle that starts at birth, continues through puberty and marriage, and finally ends in death. All these stages are celebrated and marked by the slaughtering of sacrificial animals to ancestors. The first two stages are particularly celebrated. To Zulu traditionalists, childlessness and giving birth to girls only, are the greatest of all misfortunes, and no marriage is permanent until a child, especially a boy, is born. In olden days, relatives of a childless woman used to send her sister to the woman's husband to beget a new generation. When a child is born, the older women take great care in handling the umbilical cord and the afterbirth, which are buried near the birthplace. The new mother and her child are secluded for a time, usually until the navel string of the child falls off. During this period, the mother is believed to be polluted (unclean) and weak, and thus a possible source of evil influences. After a period of a month, a ritual ceremony is performed, to "introduce" the baby to its ancestors.

The next in the cycle of rites of passage is usually *umemulo* (the puberty ceremony), which entails a transition to full adulthood. This ceremony, which nowadays is performed only for girls, involves separation from other people for a period to mark the changing status from youth to adulthood. This is followed by "reincorporation," which is characterized by the ritual killing of animals, dancing, and feasting. After the cer-

*Zulus celebrate Shaka's Day every year in September. This holiday is marked by celebrations and slaughtering cattle to commemorate the founder of the Zulu Kingdom. On this big day, Zulu people wear their full traditional attire. (Jason Laure)*

emony, the girl is declared ready for marriage. The courting days now begin and the girl may take the first step by sending a "love letter" to a young man who appeals to her.

Zulu "love letters" are made of beads. Different colors have different meanings, and certain combinations carry particular messages. White beads are the symbol of love; black symbolizes darkness, doubt, or unhappiness; green represents weak or jealous feelings; pink signifies poverty; yellow symbolizes wealth; red signifies hurt and sorrow; and blue beads represent a happy dove that can fly over hills and rivers. Hence, a string of white and pink beads would express a young woman's love and her concern that the young man might not have the means to take care of her when they are married.

Dating for Zulu people occurs when a young man visits or writes a letter to a woman telling her how much he loves her. Sometimes the man may not be known to the woman. Once a woman decides that she loves this man, she can tell him so. It is only after they have both agreed that they love each other that they may be seen together in public. They usually hide their relationship from the parents, who should become aware of it only when the man informs them that he wants to marry their daughter.

Death and burial are not a family matter but involve the whole community. This is a time of unity and solidarity. Burial rites among the Zulu have a twofold purpose: first, to separate the deceased as painlessly as possible from the living; and second, to usher him or her into a marginal waiting period. After

death, the spirit of the deceased person is believed to wander about, in the veld or near the grave, until the *ukubuyisa* ceremony is performed, whereby the spirit of the dead person is integrated into the world of the ancestors. The *ukubuyisa* ceremony is only performed for men. A special beast is set aside by the members of the household to be slaughtered. The animal should be large enough to satisfy the deceased. A small, lean one might annoy him. On the appointed day and time, all men assemble in the cattle *kraal* (corral) where the beast is to be slaughtered. One of the oldest male relatives of the deceased recites the *izibongo* (praise-poems) of the deceased and also those of his fathers and forefathers. As he recites the praises of the dead, he implores the spirit of the departed one to return and look after his children still remaining on earth. The beast is then slaughtered.

## **8 INTERPERSONAL RELATIONS**

In contrast to their reputation as fierce warriors, on a personal level the Zulu are very warm and amicable people. *Ubuntu* (literally, humanness, good moral nature, good disposition) shapes the everyday life of the Zulu people. This comes from a notion that a human being is the highest of all the species in the world. There are hundreds of proverbs written about ubuntu, relating to the treatment of people, good and bad behavior, pride, ingratitude, bad manners, moral degeneracy, conceit, cruelty, obstinacy, pretense, helping others, etc. Very often a Zulu will be heard remarking, "Wo, *akumuntu lowo*.

*Akazi ukuthi lithatha osemamo limbeke emnyango* (“Oh, that is no person, he/she does not know that it [lightning] takes the one at the back and throws him/her in front”). This saying is an apt warning to people who, because they find themselves in easy and comfortable circumstances, tend to ignore and ill-treat those who are less fortunate. Just as the action of lightning is unpredictable, so is the future. In other words, “He who is scorned today may hold the whip in his hand tomorrow.”

“*Sawubona*” is usually enough of a greeting for strangers, but a formal greeting is more appropriate for those who are familiar. The formal greeting includes a three-times handshake, while asking about the well-being of the person and his or her relations (“*Ninjani?*”). It is considered bad manners to greet people while they are involved in conversation. In these situations, raising the right hand is usually more appropriate. Taking leave involves the standard “*Sala /Nisale kahle*” (“Remain well”), with the other person responding, “*Uhambe /Nihambe kahle*” (“Go well”). It is customary for juniors and the young to initiate the greetings when they meet their seniors and their elders.

It is considered rude and pompous to refuse an offer, especially of food. A straight answer like, “No, thank you” is received like a slap in the face. An excuse of any sort will be more appropriate. It is also considered “inhuman” and an embarrassment to the host not to offer a visitor something to eat. Elders and seniors are always considered in the right and women are supposed to take an inferior or subservient position. Not following this traditional hierarchy would be considered “lack of respect”. However, some of the *hlonipha* (respect code) behavior is losing ground with modernization.

## 9 LIVING CONDITIONS

In South Africa, living conditions cannot be divorced from local politics, and conditions for the Zulu are similar to those of other black people. As of the early 21st century, they can be categorized into two groups, namely the rural and the urban Zulu. Most of the rural areas do not have adequate basic services such as electricity, clean water, formal housing, transport, hospitals, or clinics. Urban Zulu live in the so-called black townships of South Africa and the areas fringing industrial cities. Their living conditions are, at least, better than those in rural areas. Urban Zulu constitute the middle class and their lifestyle is usually no different from that of other Western urbanites. Since the education available in rural black schools is inferior, the people in these areas are not equipped to migrate and seek a better life in the urban areas, where living conditions are better. Even if they migrate, most of them end up in the poor areas fringing cities. Democratization and modernization has brought far-reaching changes and Zulu-speakers are to be found making their mark in every walk of South African life—as star athletes, politicians, academics, and business people.

In the rural areas of KwaZulu-Natal, a typical Zulu homestead will be circular and fenced. The houses themselves are thatched-roof rondavels. Most households comprise extended families: brothers with their wives, unmarried sisters, children, parents, and grandparents all staying together in the same homestead.

## 10 FAMILY LIFE

Although the Zulu are aware of their immediate family, the term “family” (*umndeni*) includes all the people staying in a homestead and who are related to each other, either by blood, marriage, or adoption. As a sign of respect, parents and seniors are not called by their first names; instead, kinship names are used. The Zulu believe that first names are not important because changing such names is very easy, whereas patrilineal names never change. To the question, “Who are you?” the answer given is one’s surname rather than the first name.

The Zulu family is patriarchal, with a man not only being the head of the family but also the figure of authority. It is not unusual for young men to have as many girlfriends as they wish. If they can afford it, they can take more than one wife when they decide to get married. In the past, for a man to pass by a woman on the street without showing interest was viewed as an insult. Women were not supposed to go out and work, since it was a man’s responsibility to care for and support them. However, the status of Zulu women is slowly improving with more women receiving education.

Marriage is exogamous. Marriage to any person belonging to one’s father’s, mother’s, father’s mother’s, and mother’s mother’s clan is prohibited. If it happens, the *ukudabula* (literally, cutting of the blood relationship) ritual is performed. Once a man decides that he wants to marry his girlfriend, his clan group sends an *umkhongi* (a go-between) with *lobolo* to the girl’s family to open negotiations. To an outsider, *lobolo* can be mistakenly viewed as a business transaction, but to the Zulu it is part of the gifts that pass to and fro between the “contracting” families. Modern *lobolo* is usually in monetary form and, on average, totals about \$4,000. To show that this is not an economic exchange of women, the bride’s parents also reciprocate with endless gifts. Only children born after *lobolo* has been handed over will be regarded as legitimate.

## 11 CLOTHING

The everyday clothing of a modern Zulu is no different from that of any modern urbanite. Traditional clothing, however, is very colorful. Men, women, and children wear beads as accessories. Men wear a garment, *amabheshu*, made of goat or cattle skin. It looks like a waist apron, worn at the back. They decorate their heads with feathers and fur. The men also wear frilly goatskin bands on their arms and legs. Women wear *isidwaba*, a traditional Zulu black skirt made of goat or cattle skin. If a woman is not married, she may wear only strings of beads to cover the top part of the body. If she is married, she will wear a tee-shirt. Only on special occasions, such as Shaka’s Day and cultural gatherings, do Zulu wear their traditional clothes.

## 12 FOOD

Since the rural Zulu economy is based on cattle and agriculture, the main staple diet consists of cow and agricultural products. This includes barbecued and boiled meat; *amasi* (curdled milk), mixed with dry, ground corn or dry, cooked mealie-meal (corn flour); *amadumbe* (yams); vegetables; and fruits. The Zulu traditional beer is not only a staple food but a considerable source of nutrition. It is made from grain which is soaked, allowed to sprout, then dried, ground, boiled, fermented, and finally strained. The result is a whitish, not altogether homogeneous, beverage. Besides the nourishment it provides,

it is socially and ritually important and is drunk on all important occasions.

The everyday staple food of the Zulu today is soft porridge, made of mealie-meal, with bread and tea for breakfast; leftovers or any available light meal for lunch; and for supper, which is the main meal, any curry and *uphuthu* (made by boiling mealie-meal in salted water for about 20 minutes). The Zulu *uphuthu* differs from that of the Sotho-speaking people of South Africa in the sense that the latter is like a hard porridge while the former is coarse.

On average two meals are prepared each day—breakfast, after which adults and children leave the household, and supper when everyone is back from school and work. During lunch time, people eat whatever is available. If there are no leftovers, lunch may consist of bread alone. In South Africa, bread has become a basic food for most black households because it is relatively inexpensive and easy to prepare.

Many traditional utensils are still used in the modern Zulu kitchen, but the main one is the calabash (a decorated gourd). It is used to store Zulu traditional beer. The kitchen and the preparation of food is women's domain. The preparation of beer is also a woman's duty.

The Zulu follow many food taboos. A newly widowed woman cannot prepare food until cleansing rites are performed. In the past, unmarried women were not allowed to eat eggs and chicken so that they would not embarrass their parents once they were married by stealing their in-laws' chickens and eggs. Sour milk was reserved for clan members only and not for outsiders.

Drinking and eating from the same plate was and still is a sign of friendship. It is customary for children to eat from the same dish, usually a big basin. This derives from a "share what you have" belief that is part of *ubuntu* (humane) philosophy.

### 13 EDUCATION

Illiteracy is high among most black South Africans. However, by the mid-2000s education in South Africa in general, and that of Zulu children in particular, was slowly improving. In the past, children had gone to school only if their parents could afford to send them. Schooling started at 7 years of age and continued until about 24 years of age. It is, however, difficult to estimate the actual number of years of schooling. Since education was not compulsory, pupils could take their time to finish matric (high school) and no teacher could tell them that they were too old to be in school. Passing matriculation was and still is regarded as a high achievement by the whole community. In daily conversation, people will talk about so-and-so having "finished schooling." After finishing matric, those parents who can afford it usually send their children to college. Although the literacy rate for South Africa as a whole is 86.4%, the literacy rate for the largely rural Zulu people is the lowest in the country. The traditional professions for Zulus who seek higher education were teaching and nursing, but other professions are increasingly being pursued by some students. Once the children achieve these levels, the parents feel that they have done their part and thus can "retire" and wait for their children to take care of them. The University of Zululand was exclusively for Zulu people until 1994, and few Zulu students enrolled elsewhere. But students now enroll wherever their career plans, financial resources, and practical considerations allow them to go.

Raising and educating a child is one part of the family cycle among the Zulu. Parents spend all they have to raise and educate their children and, in turn, the children take care of their parents and their own children when they start working. This becomes a necessary cycle, and a person who breaks it is viewed as a community outcast and one who has forgotten about his or her roots. Consequently, education is regarded as a personal achievement and also an achievement by the whole community.

### 14 CULTURAL HERITAGE

The Zulu are fond of singing as well as dancing. These cultural activities promote unity, especially when the occasion calls for a great degree of harmony within the group, e.g., in the anxious moments of happiness and sorrow, and at all the transitional ceremonies such as births, weddings, and deaths. All the dances are accompanied by thunderous drums, the men are dressed as warriors, and they dance waving their clubs and thrusting their cowhide shields forward.

The tradition and folklore of the Zulu are transmitted through storytelling, praise-poems, and proverbs. These explain Zulu history and teach moral lessons. Praise-poems (poems recited about the kings and the high achievers in life) have become part of popular culture in South Africa.

### 15 WORK

In the past, it was only able-bodied men who were supposed to work. Before the 1970s, especially in rural areas, when a young boy was capable of sending a written letter and receiving a reply, he was considered ready to go and look for work. He might seek employment in the big cities or go to work in the gold mines in Johannesburg. Being able to read and write was once a kind of rite of passage. However, that has changed with parents and children striving to pass matriculation before entering the workforce.

In the mind of the Zulu, work should benefit either one's parents or children and siblings. The first paycheck (or at least a large portion of the first paycheck) is usually given to parents in return for blessings.

### 16 SPORTS

Soccer, called football in South Africa, is very popular with both young boys and men. Children learn the game by watching their older brothers play. Whenever boys are together and not engaged in some household or school activity, they play soccer. Having a ball (of any kind) means a game of soccer for a group of local boys. They have their own rules and usually everyone is familiar with them. In rural areas, where living standards are poor, the stake for a game can be two to five dollars. Whoever wins gets the money. The spectators are usually friends of the players. Adult soccer is played like any other soccer (football) in the world. Young boys, especially those who live next to big rivers, also compete in swimming.

Girls, if they are not at school, are expected to assist their mothers in the house. However, they can play games once they have finished their chores. Games change with every generation, but one of the popular games played by girls, especially in rural KwaZulu is *masishayana/maphakathi*. Two girls stand opposite each other, usually not too far apart. Another girl stands between them, facing the one who is holding a tennis ball. The idea of this game is to try to hit the girl standing in

the middle with the tennis ball, while she tries to avoid being hit. If the ball hits her or touches her clothes, she is out. Being able to avoid being hit ten times earns the girl a point. Having the most points means winning a game and becoming the best player in your circle of friends. One sport that both girls and boys participate in is athletics (track and field), which is an organized school sport.

## 17 ENTERTAINMENT AND RECREATION

Ritual ceremonies, including transitional ceremonies, serve as part of the entertainment and recreation for the whole community. A formal invitation to any occasion where food will be served, like weddings and birthday parties, is not part of Zulu custom. They believe that food should be shared; thus, uninvited arrival at a celebration is not frowned upon but is considered an honor by the host. During these celebrations, singing and dancing will be enjoyed.

From a young age boys engage in stick fighting and as they grow older and more proficient this activity becomes an intensely competitive and macho pastime.

Television is very popular in urban Zulu households. Those who can afford to go to the movies do so. However, since electricity in rural areas is often not available, owning a television set is a luxury for rural Zulu. For urban teenagers, American youth culture, especially clothing and music, is very popular. Among the adults, *stokvels* (voluntary or common-interest associations) not only function as financial assistance associations, but also as occupational, friendship, and recreational associations.

## 18 FOLK ART, CRAFTS, AND HOBBIES

The Zulu, especially those from rural areas, are known for their weaving, craft-making, pottery, and beadwork. Women and children weave mats for everyday use, beer sieves, and baskets for domestic purposes. They also make calabashes (decorated gourds that serve as storage vessels). Men and boys carve various household objects and ornaments from wood and bone, such as headrests, trays, scrapers, household utensils, chairs, etc. Beadmaking is mainly women's work, because beads are believed to be a unique way of sending messages without being direct.

## 19 SOCIAL PROBLEMS

The Zulu terms *ubuntu* and *hlonipha* summarize everything about human rights. However, if these factors are studied thoroughly, it becomes evident that some individuals in Zulu society, particularly women and children, enjoy fewer human rights than others. KwaZulu-Natal has a history of struggle between the two political parties, the African National Congress and the Inkatha Freedom Party. People have been known to be killed, not only in fights between these groupings, but also between other factions.

Alcoholism and drugs are not serious social problems, especially among rural Zulu. The level of alcoholism and drug abuse is not high. *Dagga*, the most common drug, was smoked traditionally like a cigarette; it can be and is still grown like any other plant. However, with Christianization and since colonialism, dagga is forbidden and illegal. The use of alcohol is very low among rural females. Culturally, a woman who drinks alcohol and smokes cigarettes is regarded as lacking morals.

However, modern Zulu women in urban areas do smoke and drink alcohol.

South Africa no longer conventionally issues birth rate, health, mortality rate, and other statistics by community or race, but the HIV/AIDS rates are much higher for certain sections of the nation, such as the colored townships (townships where black South Africans live). For South Africa as a whole, the HIV/AIDS adult prevalence rate was 21.5% according to a 2003 estimate. This translates to about 5.3 million people who are living with HIV/AIDS. An estimated 370,000 people died from HIV/AIDS in 2003. However, the statistics for Kwazulu-Natal, where the Zulu people predominantly live, have consistently the highest among all South Africa's provinces.

## 20 GENDER ISSUES

South Africa's constitution, in Act 108 of 1996, defines individual rights and protections. Equal rights for all citizens are guaranteed in Chapter 2 [9(3)], which specifically indicates that "The State may not unfairly discriminate directly or indirectly against anyone on one or more grounds, including race, gender .... etc". But the reality is that a significant percentage of the Zulu-speaking people still live in rural-traditional contexts. Elder/senior males are still considered to be always in the right and must be shown respect; females are regarded as inferior; women are not supposed to go out to work, as work is regarded as a man's responsibility; polygyny is still practiced; a woman can become a regent but does not succeed to become a chief or king (contrary to both the constitution and legislation); women, like children, do not generally enjoy full human rights.

However, with migration, urbanization, modernization, and democratization, change has taken place. Even in the rural areas where Zulu tradition still thrives there are minor signs of improved conditions for Zulu women.

Arnold Strickon

## THE STUDY OF THE ANCIENT

The ancestors of modern humans evolved in Africa. They migrated into the Eurasian land mass as pre-modern species. The last of the continental land masses occupied by human beings were those of the Western Hemisphere. The people who first occupied the land mass of the New World were full members of our species, modern *Homo sapiens*. The question of the antiquity of human beings in the New World is still being hotly debated among interested scientists. As this is being written, scientists postulate that it was between 12,000 and 15,000 years ago that humans first set foot in the New World. This is according to the most widely accepted and presently available evidence. Scientists call these earliest settlers of the New World "Paleoindians." They are the ancestral population of the Americas.

The terms *Indian* and *Native American* are widely used and misused. In this "Introduction," the terms *Indian* and *American Indian*, *Inuit*, *Eskimo*, *Aleut*, and *Hawaiian* are used to refer to people of those specific ethnic backgrounds. The term *Native American* is used to refer in general to all the descendants of the original settlers of the New World, whatever their specific ethnic background.

There was, of course, no one to record the arrival of the first humans. Our knowledge of it derives from the efforts of scientists from a wide range of fields. Archeologists study ancient tools and other artifacts made or modified by human effort and left behind by people who have generally left no written historical record. Paleoanthropologists study ancient human remains and paleontologists study ancient animal remains of all kinds. Anthropologists study the culture, the way of life, arts, and technology of peoples—living or historical. Linguists study the languages of a people. In addition, botanists, geologists, zoologists, and even chemists and physicists contribute their expertise to efforts to understand the first Americans, focusing their special knowledge and techniques upon the physical remains left behind by the Paleoindians in ancient campsites scattered from Alaska to Chile.

Living populations contribute data to this effort as well. Linguists compare the similarities and differences among Native American languages and make inferences about the history of these languages and the people who spoke them. Geneticists compare marker genes and genetic frequencies among geographically far-flung populations and make inferences about historical connections among them.

Scientists from these diverse fields collect and analyze clues to help us learn when and where the first pioneers entered the New World and settled. The task is made more difficult because the first settlers were foragers—people who subsisted by hunting, fishing, and gathering wild, edible plants. Foragers live in

small, widely scattered groups that are almost always on the move. Thus, what they leave behind is spread over a wide geographic area. Physical belongings are not likely to be preserved from generation to generation, leaving little for future archeologists to study.

Most European settlers of the New World believed until well into the nineteenth century that God had created the world only a few thousand years earlier. By the mid- to late-nineteenth century, however, thinking about the age of the earth, and of the creatures who lived upon it was undergoing radical change. The work of Sir Charles Lyell (1798–1875), the founder of modern geology, and Charles Darwin (1809–82), creator of the theory of evolution, expanded the time stage on which history played from thousands to millions of years.

By the end of the nineteenth century most scientists agreed that modern humans—in the Old World and the New—had evolved from forms different from the historic human species, *Homo sapiens*. Investigators found pre-sapiens (that is non-modern and extinct) human remains in most parts of the Old World, but none in the New. This led scientists to postulate that the New World was occupied relatively recently, after the appearance of modern forms of humanity some 40,000 years ago. Darwin had pointed out that the anthropoid (man-like) or great apes, such as gorillas and chimpanzees, had no representatives living in the New World. In fact, no fossil remains of great apes have ever been found anywhere in the New World.

## THE PLEISTOCENE: THE GLACIAL EPOCH

The emergence of *Homo sapiens* occurred 1.6 million years ago during the Pleistocene epoch when gigantic glaciers covered much of the planet. In the northern hemisphere these glaciers isolated habitable portions of the New World from regions of the Old World inhabited by humans. This seemed to support the idea that the earliest modern human populations could not have occupied the New World earlier than 8,000 year ago, when the last glaciers "withdrew." From the end of the nineteenth century until the 1920s and early 1930s, this was the accepted time period for the human settlement of the New World. Both professional and amateur archeologists claimed to have discovered sites containing ancient remains dating to an earlier period; in these cases, the evidence was dubious, the excavation and record-keeping badly done, and therefore, the case not proved.

## FIRST EVIDENCE OF THE PALEOINDIANS

In 1926, while excavating a site in central New Mexico near the town of Folsom, scientists uncovered the bones of a giant buffalo that had been extinct since the Pleistocene. Imbedded in one of its ribs was a finely chipped stone projectile point, about five centimeters (two inches) long, with a central channel running most of its length. There could be no doubt that it was

made by the hands of a human being, and that it was stuck into the living bone of an animal that had been extinct for thousands of years. Archeologists discovered other sites containing “Folsom Points” elsewhere in the southwestern and western US, and in the western provinces of Canada in the years that followed. Archeologists generally believe that these artifacts are 8,000 to 9,000 years old.

Shortly after the discovery of the Folsom artifacts, scientists unearthed another, even earlier and more significant, projectile point at Clovis in eastern New Mexico. The initial discovery was followed by the excavation of many more Clovis sites, where more characteristic artifacts and projectile points with the distinctive Clovis design were found. Since then, excavations containing Clovis-related artifacts have been made all over North America, including some as far south as central Mexico. In addition, scientists working in South America have found assemblages of artifacts similar to those found at Clovis. Clovis artifacts have been discovered in association with the remains of animals such as mammoths and relatives of the llama and horse—all of which had long been extinct in the New World by the time the Europeans arrived. (In fact, one noted archeologist has suggested that it may have been the hunting by the Paleoindians that drove many of the large Pleistocene mammals to extinction.) The association of these assemblages with long-extinct game animals is a powerful indication that modern human beings were in the New World 12,000 to 14,000 years ago. There have even been claims for earlier dates for New World sites: students of the Monte Verde excavations in southern Chile have assigned dates as early as 30,000 years ago to that location, and a few archeologists have made similar claims for sites in the Amazon River basin in Brazil. As of the late 1990s, findings from the sites alleged to predate Clovis are being subjected to further study before gaining widespread acceptance.

#### When Did Humans Come to the Americas?

For a period of 100,000 years or more, gigantic continental glaciers alternately covered and uncovered many parts of what are now Earth’s temperate zones. During periods of extreme cold, snow and ice in these areas failed to melt, causing the glaciers to expand in thickness and extent. By locking up huge amounts of water as ice, these periods of glacial expansion also led to a drop in sea levels all over the world. Within the glacial period, referred to as the Pleistocene epoch by geologists, there were times when rising temperatures caused melting, reducing the size of the glaciers. When this occurred, sea levels rose once again.

This rising and falling of the sea was crucial for the population of the New World by people from the Old World. An arm of the sea (now known as the Bering Straits) separated the New World from adjacent parts of Asia. For foraging people, especially for those who lived 100,000 years ago, such a stretch of open ocean was indeed an unbreachable obstacle. About 50,000 years ago there was a period of glacial expansion and growth that caused a fall in sea level of some 200 feet. This was sufficient to open a land bridge between Siberia and North America. There is no evidence that *Homo sapiens*, even if such a population existed in northern Asia at this time, found their way across the land bridge to the New World. Some 45,000 years ago, the weather warmed, the glaciers retreated, and the sea level rose once again. This warm period created a barrier

between the Old World and the New World that was to last for 20,000 years. The last glaciation took place between 25,000 and 15,000 years BP (before the present). It led to a fall in sea level, lowering the surface of the Bering Straits about 10 meters (300 feet) and once again creating an isthmus (land bridge) between Asia and North America. This time, there was human settlement in northeast Asia. It is around this time—between 12,000 and 14,000 years ago—that the earliest Paleoindians appear in the archaeological record. These first settlers did not necessarily realize they were going to a New World—they were following the large game that they hunted. As their hunting grounds slowly shifted eastward across the land bridge, the occupation of the Americas commenced.

#### Who Were They?

It is highly probable that the process of migration across the isthmus between the continents lasted for a long time, perhaps as long as the land bridge remained passable. It is unlikely, however, that all the migrants came from any single linguistic, cultural, or social group. In fact, there is every reason to suppose the opposite. Some linguists have suggested that America was originally peopled by three distinctive linguistic populations that came in three waves within a few thousand years of each other. Recent work in historical linguistics classifies all languages spoken by Native Americans (not counting the Hawaiians) as belonging to one of three ancestral language families: Amerind, Eskimo-Aleut, or Na-Dene. Some linguists believe that Amerind speakers were the first group to come to what are now the Americas. Most languages spoken by American Indians appear to be descended from that language. The second of the ancestral languages, Eskimo-Aleut, is still spoken by the groups in the Arctic and sub-Arctic regions of Alaska and Canada. A number of American Indian languages originated from the third of the ancestral languages, Na-Dene. The most common of these are the Athabaskan tongues, which include languages spoken in the northwestern quarter of North America and Navajo and Apache spoken in the American Southwest. This linguistic view of the first settlers in the New World is supported by comparative genetics.

In the beginning, the Paleoindian population was small. A modest population increase of 1 percent per year over a period of 12,000 to 15,000 years resulted in a very large population. Conservative estimates place the New World population in 1492 at about 12 million people, while other estimates are as much as three or four times greater. As their numbers grew and became more geographically dispersed, the simple hunters and gatherers that had begun the human occupation of the New World developed a wide variety of Native American cultures. We cannot here trace the archaeological record to see how and by what processes these simple societies were transformed. We must, rather, be content to describe this complexity in the broadest and most general of terms.

### CLASSIFICATION OF NATIVE AMERICANS

Why and how are cultures classified? Every culture, every society—like every person—is unique. Yet for some purposes it is useful to classify people into larger abstract entities called categories or classifications, such as spouse, parent, or member of a political party. In considering the larger category, much of the uniqueness of each individual is overlooked. So it is with cultures. Every culture, in all its detail, is unique, but it may be

useful to classify cultures along lines of resemblance. One way of doing this is along lines of similarities of artifacts, art styles, and other regularities that can be observed. Cultures that are geographically adjacent to each other are classified as “culture areas.” Similarities of economy and major political institutions are classified as “culture types.” In either case these terms permit us to stress the similarities among otherwise distinctive societies and cultures.

#### Classification by Culture Area

A culture area is a region where people of differing social and political groups practice roughly similar life styles, art forms, technologies, subsistence practices, and philosophical and religious beliefs. In the New World, culture areas generally coincided with natural ecological regions. The various people in these societies need not be of a similar race or even speak the same language. They do not constitute a single political entity, and may fight quite bloody wars among themselves. Thus, Europe may be viewed as a culture area, and North Africa as another.

The culture area does not exist in nature, but rather in the mind of the historian or anthropologist. Not all people who live within the geographical confines of a culture area necessarily follow the way of life typical of that area. A culture area that includes village-dwelling farmers may also contain hunters and gatherers, or fishers. It may also contain people marked by philosophical and religious beliefs, artistic traditions, quite different from those of the larger number people who typify the culture area.

Museum curators originally developed the idea of the culture area in the first decades of the twentieth century as a way of organizing museum exhibits. It has since grown to represent a useful tool for describing the way of life or culture of large areas of the world.

#### Classification by Culture Type

Another way to classify cultures and societies is by *social* or *culture type*, where the emphasis is placed on social, political, demographic, or economic characteristics, or some combination of these. A culture type may cut across a culture area classification. Thus one might speak of “industrial states” as a culture type that would include societies in different “culture areas” such as Europe and Asia. The culture type is an idea or construct that serves the analyst of the group—not necessarily the people who comprise it. As with the culture area, the purpose of the culture type is to permit us to generalize and speak of broad similarities among societies.

## NATIVE AMERICA AT THE CONQUEST

The European conquest of the native peoples of the New World was not one event, but a process that continued for hundreds of years, and continues today.

In Native America, culture areas and culture types intersect in an interesting way. The cultures of pre-conquest North and South America are quite distinctive. Art styles, beliefs, details of village and extra-village political arrangements, and family and kinship institutions tend to differ; there were also differences in the subsistence crops grown and species of game animals hunted. In spite of these differences, anthropologists identified several social and political culture types that were the same on both continents, and observed an approximate

parallel between culture areas and culture types. Major culture categories are described in the sections that follow.

#### The Southeast and the Circum-Caribbean

The first major Spanish settlement in the New World was on the island of Hispaniola in the Caribbean Sea, where the modern nations of Haiti and the Dominican Republic are located. Relatively large and complex societies based upon productive agriculture existed on many of the neighboring Caribbean islands, in parts of Central America, in northern South America, and in what is now the southeastern United States. In its northern reaches the subsistence base of these societies rested upon corn (maize); in the southern continent and the Caribbean islands, upon corn or manioc. The people of both areas lived in rather large villages; populations of over 1000 were not unusual. Shared political and religious institutions often linked a number of villages into larger political units called confederacies or chiefdoms. These societies had part-time chiefs and priesthoods with restricted powers over the members of the confederacy except in times of crisis. It was people of this type who had created the great palisaded villages and temple mounds in Cahokia in southern Illinois, the largest archaeological remains in the United States. Succumbing more to Spanish diseases than to Spanish military might, these societies in the Caribbean were rapidly destroyed and their people almost exterminated. In parts of Central America and on the South American mainland some survived by withdrawing inland, especially to the rainforests of the Amazon River basin. Here, reduced in numbers and simplified in culture content and political organization, some survived.

In North America the chiefdoms or confederacies of the southeast fared somewhat better, with many surviving in place until early in the nineteenth century. Ultimately, however, Americans, hungry for more land, forced the southeastern Indians to relocate. The United States government resettled Indians on reservations far from their ancestral homes. In the Florida Everglades—territory particularly well-suited for defense and guerrilla warfare—the Seminole managed to survive for a time without suffering military defeat, but the United States ultimately subdued even them.

The cultures of the Southeastern United States—the Choctow and Seminole for example—are presented in detail in this volume. The Cuna Indians, also described in this volume, lived in eastern Panama and are the descendants of this type of Indian society. Their current society is far less complex than was that of their ancestors before the coming of the Europeans.

#### The State Societies of Meso-America and the Andes

The Spanish came into contact with the people of the Caribbean islands first. Soon, however, tales of immense wealth on the mainland enthralled and hypnotized them, drawing them to explore there. What they found—the great state societies of Meso-America (the region from central Mexico south through Guatemala and Belize) and the Andes—was even more spectacular than the tales had led them to believe.

The aboriginal state societies of Meso-America and the Andes were the central jewels of Spain’s New World empire for 300 years, although there were differences between the two regions. To many observers, the art and monumental architecture of Meso-America appear more interesting and sophisticated than that of the Andean civilizations. However, the Inca empire in the Andes practiced bureaucratic controls and central admin-

istrative complexity that were far more advanced, in the eyes of modern observers, than the organizational practices of their counterparts in Meso-America.

When the Spanish found these state societies, they already had long histories of expansion. Again, there were differences in the way the societies implemented their expansion practices. The Aztecs of the Valley of Mexico expressed domination of their neighbors by demanding tribute payments from those they defeated rather than by direct political incorporation or military occupation. The Inca empire of South America, on the other hand, had expanded by military force by defeating neighboring states and then incorporating them. Once that was accomplished, the defeated aristocracy was incorporated into the Inca state. The Inca sometimes resettled the population of the defeated group in a foreign region, where the defeated people would be surrounded by a population loyal to (or sufficiently cowed by) the victorious Inca. Then, the territory evacuated by the defeated people would be repopulated by a people loyal to the Inca state.

The state societies of the New World were characterized by social stratification. There was an upper class of royalty and aristocrats, and a middle class of artisans, artists, bureaucrats, architects, and engineers. The society rested upon the labors of the largest part of the population, the agricultural peasants. The peasants produced the crops and other products that provided the economic foundation of the empire.

The state conscripted peasants to serve in the army and on a wide variety of construction projects desired by the rulers. The projects included roads, walled cities, temples, storehouses, and huge irrigation systems. The peasants accomplished great feats of engineering without metal tools and without the use of the wheel. In the Andes, there was no knowledge of written language, although in Meso-America, however, there was. The Indians of Meso-American also developed a calendar system that was more accurate than the one used by the Europeans who conquered them.

Initially, gold and silver attracted the Spanish to the New World states. The real wealth of these states for the Spanish, however, lay in their massive population of peasant farmers, as it had been for the Incas and Aztecs before them. The peasants lived in agricultural villages where they farmed to provide food for themselves and the rest of society. The peasants were assessed part of the food they grew as taxes to support the state and priesthood. In the Inca empire, peasants provided two-thirds of the goods they produced for this purpose.

The Inca state designed, built, and maintained the irrigation system that most of the peasants required to grow their crops. The government also maintained roads, storehouses, and reserve food supplies in case of emergencies or local crop failure. The priesthood dealt with the complex spiritual world of the Inca people. The Inca state was a vast, complex, and centralized political system. Initiative flowed from the top down, and obedience and wealth flowed from the bottom up.

The states of central and southern Mexico lacked the centralized character of their Andean counterparts, however, but they too, showed the characteristics of a complex state—hierarchy of social class and well-developed religious, trade, and military institutions.

When the Spanish conquered the New World states, they intertwined their own institutions with those of the pre-conquest state, thus asserting control over the agricultural peas-

ants. Contact with the Spanish came at a high cost for Indian societies. Millions died from exposure to previously unknown European diseases ranging from the common cold to smallpox. These plagues disrupted families and destroyed age-old patterns of community life. Despite massive drops in population from disease, villages still had to send workers to labor in the mines, construction projects, and plantations of the Spanish.

The Spanish justified their conquest of the New World by citing the obligation to bring Christianity to the Indians. As part of this effort, the Spanish destroyed every symbol and structure of the Indian religions. If the symbols were made of precious metals that could be melted down and shipped as gold or silver ingots to Spain, so much the better. The Spanish attempted to convert massive numbers of Indians to Christianity in great ceremonies carried out in Spanish and Latin. For those Indians forced to participate, such a “conversion” could have had scant meaning. Over time, the Indians did become Catholic, but they did not completely forget their old religious beliefs. Many of the old pagan beliefs were transformed and incorporated into the folk Catholicism that the Indians still practice in many parts of modern Meso-America and the Andes.

There was resistance and rebellion by some Indians against the Spanish, but none was successful in the long run. However, the culture and languages of the ordinary people of the New World states did not completely disappear, as demonstrated by the articles in this volume on the Guatemalans, Mayan, Peruvians, Ecuadorians, Bolivians, Quechua, and Aymara.

The pre-conquest populations had been so large that, in spite of the high mortality following conquest, enough people remained to provide the foundation for the human population of these colonies. In the modern homelands of the pre-Columbian states, the majority of the population are descendants of both Indian and Spanish ancestors.

It is not only genetically that the Indians left their mark. Millions of people of Mexico and Guatemala speak Nahuatl, the language of the Aztecs, or various dialects of Maya. The linguistic situation is similar in the Andean countries, where millions speak Quechua and Aymara. In Mexico, about ten percent of the people do not speak Spanish as their primary language; in Ecuador and Peru, that figure rises to twenty-five percent; and in Bolivia, those who do not speak Spanish as their household language rises to fifty percent. In all of these cases the vast majority of are speakers of Quechua, Aymara, Nahuatl, or Maya.

### Village Farmers

The people known as village farmers largely inhabited the forested land of the hemisphere, including the northeast, southwest, and the Amazon River Basin. In what is now the United States, this included the forested lands east of the Mississippi River, where the people were primarily growers of corn, beans, and squash—which they planted together and called “the three sisters.” Their diet was supplemented with animal proteins from hunting and fishing.

European Americans subjugated most of these village farmers east of the Mississippi River by the early nineteenth century. They displaced these people from their home territories and resettled them on reservations, often in the Indian Territory (present-day Oklahoma and parts of Kansas and Nebraska). The Indian Territory was far—and ecologically different—

from their original homelands. Here their traditional ways of life were put under immense pressure. The US government and private groups subjected the Indians to growing pressure to use European farming methods and to surrender their traditional family institutions. Missionaries sought for them to surrender traditional religious beliefs. The government took their children away to educate them in boarding schools that attempted, above all else, to strip the children of their cultural heritage.

The conquerors incorporated whole communities and states into their empires in Mexico and the Andes. Among village farmers the possibility existed for escape. People of the village farmer type had fewer material goods to slow them down or hold them back, and there were other areas—unsettled or less densely settled—to which they could escape. However, escape only delayed for a short time—a few generations at best—some kind of incorporation into the conquering empires or the nations that replaced them.

In South America, village farmers were found primarily in the basins of the Amazon and Orinoco Rivers, where they grew corn or manioc as their chief subsistence crop. Manioc or cassava is a plant whose large tuber—sometimes weighing as much as 20 kilograms (40 pounds)—resembles a massive yam. The Indians (and present-day Brazilians) use the tuber to produce flour and starch for cooking. Manioc remains a major food source in Brazil and Latin America. Manioc comes in two varieties, sweet and bitter. The bitter variety is more widely used and contains large amounts of prussic acid, a poison. The grower must remove the poison through a complex processing procedure involving grating and pressing before the manioc can be safely consumed.

Kinship, age, and gender provided the hierarchy that ordered daily life among village farmers. All aspects of life—household structure, economics and trade, religious life and rituals, warfare and defense, and intergroup relations—were largely organized by these same three characteristics. Work tasks were assigned on the basis of age and sex and not always in the ways we would expect today. Women, for example, did most of the farming. Each household produced most of its needs, but people depended upon their kinsmen-neighbors to help them in times of crisis. Thus, everyone in society contributed according to their place in the hierarchy. There were no professional priests, armies, artisans or artists, traders, or, for that matter, people who did nothing but farm or hunt.

There were no social classes among the village farmers. All in the community lived at essentially the same economic level. If economic conditions improved, they improved for all; conversely, if conditions worsened, they worsened for all. However, some people had more influence than others. Some were better farmers, weavers, hunters, or warriors than others. The powers of leaders, however, were governed by the constraints of age, gender, and kinship. No one member can force another to do something. For example, a man may have chosen not to join in an attack against another community, and his relatives and neighbors could not physically coerce or punish him for so choosing. However, such a decision could not be made lightly and was not without repercussions. The request would have come from the members of his community, all of whom were kinsmen. Every member of the community knew that one day, he or she would need help from those same kinsmen. Thus, it was difficult to refuse to give assistance when called upon.

Even the residential arrangements differ from what is typical in modern Western cultures. Groups of people—often a group of brothers and their wives and children or a group of sisters and their husbands and children—resided together in a single large structure. (A couple never lived alone with their children in a separate home.) Within the extended family structure, each couple and their children had their own sleeping places and campfire, but all were within plain sight and hearing of each other. Home was not a place of privacy.

In many groups in the Amazon River basin—Yanomamo, Xavante, and Tenetehara, among others—men did not live in the same residence as their wives and children. Instead, they resided with adult males and older boys of the community in a Men's House. Women and children lived in group dwellings of their own. A man, his wife (or wives), and children still constituted a family, which represented a significant social and economic unit.

As the conquerors discovered new groups during their explorations, they incorporated whole communities and states into their empires. For the people of the Amazon and Orinoco basins, this process continued into the twentieth century. Even as of the late 1990s, new, previously unknown or barely known, groups of Indians are discovered in Brazil and Venezuela. However, the rate of discovery of new groups is declining, as fewer and fewer of them retain their independence. There are fewer deep forests to which they might escape. When these Indians experience first exposure to European viruses, it was just as deadly in the late 1990s as it was in 1496. A number of Indian groups are attempting to organize themselves into alliances for political opposition to European expansion into the little remaining territory.

#### **Village Farmers and Pastoralists of the American Southwest**

In many ways, the cultural conditions for the people of the American Southwest are different. The first dimension of this difference is environmental. The Northeast and Southeast culture areas are found in humid, temperate forests. The Southwestern culture area is the high, arid deserts of what is now New Mexico, Arizona, Colorado, and Utah. Within this region are two different types of societies that came to share much in the way of cultural content.

The first of these Southwest societies are the Pueblo (after the Spanish word for “village”) people. The modern Pueblo people includes groups such as the Hopi described in greater detail later in this volume. These groups are traditionally growers of corns, beans, and squash. Their villages consist of adobe “apartment houses” several stories high. Their founders located them atop high, flat plateaus, called mesas or tables. The Pueblo people have left behind a long archaeological record in the region. Their ancestors had also lived in great multi-storied pueblos, but until several hundred years before the Spanish arrived these were not located on the mesa tops. They moved to these easily defensible locations due to the appearance at that time of hunting people and raiders from the north—ancestors of the Apache and Navaho—speakers of Athapaskan languages.

After the Spanish arrived, the Apache and Navaho learned how to herd sheep. They also learned agriculture and weaving from the Pueblos, but this did not dampen their raiding proclivities. The raids were now against the Spanish, and later, the Americans, as well as the Pueblos.

Although the Spanish occupied the Southwest relatively early in the conquest, an Indian revolt drove them out in 1680. The stark, dry country and lack of significant plunder helped preserve the independence of both the farmers and the hunters until the period of the US Civil War (1860s). By this time an increasing European population in the Southwest led the US government to bring the Hopi, Zuni, and Navaho under its control. The Apache fought on for a few years more. In 1886, the last of the remaining independent Apache leaders, Geronimo, succumbed to American soldiers.

The US government placed the Indians of the Southwest on reservations. Unlike many of the eastern Indian groups, those of the Southwest ultimately stayed in their traditional territories. The reservations, however, were much smaller than the Indians' pre-reservation territories. Within the territory of the United States, the Indians of the Southwest have probably managed to retain a larger proportion of their pre-European cultures than any other groups located between Alaska and the Rio Grande River.

### Foraging People

Although foraging peoples are often found living among agricultural peoples, there are culture areas populated largely by foragers—peoples living by hunting, gathering, fishing, or some combination of the three—only. Foragers generally live in highly mobile groups, and in North America these groups varied widely in terms of population size and density. There were even large degrees of variation in social complexity and technological sophistication, reflecting differences in historical experience and habitat.

### Buffalo Hunters and Guanaco Hunters

The open grasslands of the Great Plains of western North America and of the Pampas of southeastern South America supported herds of large herbivorous grazing animals before the arrival of the Europeans. In North America, these grazers were the buffalo (Bison) that roamed in huge herds numbering in the thousands or perhaps tens of thousands. The large grazing herbivore of the Pampas was the guanaco; the wild relative of its better known domesticated cousins, camel and llama. These animals lived in relatively small herds of perhaps fifty animals or less.

Prior to the arrival of the Spanish, small groups of Indians hunted on the grasslands of North and South America, where hunting large herding game on foot was difficult. Hunters attempted to wage as stealthy an attack as possible, since the herd would bolt as soon as the animals sensed a threat. Thus, the herd would quickly be out of range of the hunters' simple weapons. The number of animals the hunters could hope to kill was therefore quite limited. A group of hunters, with careful planning, could improve their results by inciting a herd to stampede off a cliff. However, even when such a massive kill was successful, the means of preserving meat, chiefly drying (jerking), limited the amount of meat that the hunters could preserve for later use. Thus, hunting conditions dictated that the groups of hunters be quite small—about 100 people. Their social organization and technology were simple, based upon kinship and neighborly cooperation.

Things changed drastically on both continents after the arrival of the Spanish and their domesticated horses. The Indians of the Plains and Pampas soon acquired horses, and learned—or taught themselves—how to ride. The impact of this devel-

opment was dramatic. For many scholars, the emergence of the Great Plains and Pampas as distinctive culture areas dates from the introduction of the horse. It was now possible for the hunters to keep up with fleeing herds, hunting as they went. The Great Plains of North America could now support larger populations. Groups of over 1,000 people could remain together for long periods. The Indians' demand for horses led to trade with and raids against the Spanish, and later Argentines, Mexicans, Americans, and other Indians. The larger populations, the trade, and warfare led to the appearance of some temporary, more complex, societal institutions that governed these activities to some degree. It was a complexity rarely found among hunting and gathering people. The way of life that the Plains could now support was so attractive that many previously agricultural groups abandoned or curtailed their past way of life and became hunters of the buffalo.

Similar developments occurred at the northern edge of the Pampas in what is now northern Argentina and adjacent parts of Paraguay and Brazil. In the Pampas, the Indians also became more efficient hunters of guanaco from horseback, but the guanaco lived in small herds. Thus, improvements in hunting of guanaco did not result in the dramatic increases in the size of the hunters' groups that had occurred among the Plains Indians of North America.

In North America, these mounted warriors and hunters of buffalo generated a culture that became, in the eyes of most non-Indians, the stereotypic Indian culture. The icons of this culture—teepees, warfare, horses, feathered headdress, and all the rest of what is seen in film and on television—is Indian culture to people around the world. Even today, these icons are over-represented whenever Indian culture is described, thereby fostering a distorted view that all Native Americans were like these hunters.

European expansion had helped create the Pampas and Plains cultures, and improved transportation and agricultural technology helped end it. Railroads, thoroughbred cattle, refrigerated ships and railroad cars, barbed wire, windmill-driven pumps, steel moldboard plows, and mechanical reapers made it possible for European farmers to make massive use of the American Plains, and Latin American Pampas. By warfare or treaty, the Argentines and Americans drove the Indians out of the great grasslands by the end of the nineteenth century. The colorful, dramatic, and romantic cultures that had emerged on the Pampas and the Plains in the early years of the eighteenth century barely lasted two centuries.

### Other Foragers of the New World

In South America, the simple cultures of the pre-horse Pampas extended as far south as Tierra del Fuego at the very tip of the continent. In the northern reaches of the western United States and Canada were a variety of hunters and gatherers, their societies reflecting the habitats they exploited, the game and plants they sought, and the size of the population they could sustain. Furthest north were the Aleuts and Inuit (or Eskimos). The Tlingit, Kwakiutl, Nootka, and Haida and similar peoples inhabited the temperate rain forest of the Northwest Coast—from Vancouver Island to central Alaska. Outsiders knew them best as carvers of totem poles, but their talents and abilities extended far beyond those. The people of these cultures exploited rich fisheries, including massive salmon runs in their rivers and streams. They mastered sophisticated food preser-

vation techniques, hunted mammals on land and sea, and collected a rich harvest of wild plants. They supported very large populations—perhaps 10,000 people—though not in a single community. They lived in fixed villages of impressive wooden plank buildings, and were governed by complex systems of social organization that differentiated social rank based upon kinship, rather than by specialized political institutions.

The Paleoindians who had arrived in the New World some 8000 years before the first European settlement evolved into a wide variety of distinctive societies and cultures. They did not—and do not—constitute one single society. They did not recognize a common identity any more than Europeans, Asians, or Africans did. The patterns of Native American culture molded and channeled what was to happen to the next wave of settlers to arrive in the New World.

The first known European settlers in the New World—Vikings from Iceland and/or Greenland—arrived and settled briefly in northern Newfoundland in the second half of the tenth century. These settlements did not long survive, however; the first effective, sustained European presence in the New World began with the Spanish in the last years of the fifteenth century.

## CHARTER SOCIETIES AND CULTURES

Canadians refer to “charter societies and cultures” when describing the cultures that first traveled from Europe to what is now Canada. These were the people who provided the basic culture—laws, customs, and institutions—that influenced development in Canada from the time of their arrival until the present day. It was the charter societies that made the first contact with the Native Americans, and to which the Native Americans had to respond. For Canada, there were two charter societies—England and France. Later immigrants to Canada adjusted to the preexisting society and culture of English or French Canada, not the other way around.

The concept of the charter society remains useful in studying the New World, where four major charter societies—the major European conquerors and colonizers—and five significant charter cultures have been identified. Britain left its indelible mark on the social and cultural development in Canada, in much of what is now the United States, and on a number of Caribbean islands, including Jamaica and Barbados. France also played a major role in parts of Canada; to a lesser degree in the lower Mississippi River valley in the United States; and in several islands in the Caribbean, most notably in Martinique and the part of Hispaniola now known as Haiti. The third charter society for the New World was Portugal, which colonized the great eastern bulge of South America, notably Brazil. Finally, Spain, which colonized much of the New World, left its cultural imprint from California, in North America, to Tierra del Fuego, at the far southern tip of South America, and all over the Caribbean, especially in Cuba, Puerto Rico, and the part of Hispaniola now known as the Dominican Republic. The fifth charter culture, unlike the other four, was brought by slaves who were brought by colonizers and conquerors.

### Plantation Societies

The societies created in the New World by the European conquerors were not uniform. Most obviously, they differed by areas settled by the charter societies. However, even settlements by the same colonizing power differed from area to area. For

example, English colonies in New England and the Caribbean islands differed greatly from each other. Differences were most dramatic between colonies that were located in different ecological and environmental regions. Colonies of different colonizing powers might show some similarities if they inhabited similar settings and were involved in similar economic undertakings. The most striking pattern of similarity between colonies of different charter societies is illustrated by plantation societies, built upon the production of valuable tropical or semi-tropical crops, especially sugar. These crops, for large-scale export, were grown on landed estates that depended for the most part upon massive numbers of slave laborers. The plantation society was the point of insertion of the charter culture of the African slaves brought to the New World by the colonizers. Unlike the other charter societies, the Africans were not supported by the institution of state power. African culture was carried in the minds of those Africans who survived the horrors of the shipment from Africa. The culture survived despite the attempts by slave masters to expunge anything that remained of the slaves’ former way of life. In some areas—part of the United States, the Caribbean, and Brazil, for example—the number of slaves was so great that they represented the majority in the population of the region and imposed their cultural mark upon the later cultures of the area.

Still other colonies saw few, if any, slaves. The colonizers’ decision to introduce slaves was neither random nor routine. It reflected the habitat and ecology of the region, the economic goals of the European colonizers, and the type of Native American society that had inhabited the region before the arrival of the Europeans. Prior to the arrival of the Europeans, village agriculturalists tended to inhabit those regions that were to become the regions of plantation societies.

The native peoples of the Caribbean islands were largely wiped out by disease and the violence of the conquest. In Brazil, however, there was a large, thinly inhabited back country that served as a place of refuge for many Indian populations. There were massive displacements ever deeper into the Amazon and Orinoco River basins of coastal and other Indian societies accessible to the Europeans. They were not safe there forever. In later centuries the lure of gold, diamonds, rubber, and other commodities drew the Europeans and their heirs ever deeper into regions that had once provided safe refuge to the Indians. This process continues even in the late 1990s.

These same tropical and semi-tropical areas held great potential value for the Europeans as a place to grow sugar crops. Sugar was only in its early stages of becoming a common commodity in European marketplaces. Sugar could be easily shipped over long distances as brown sugar, or in an even more condensed form as molasses. Molasses was the most profitable of all, since it could be converted into rum. Sugar could best be grown in tropical conditions, but it required great amounts of intensive labor. The colonizers hoped to use the Indians for this purpose, but the Indians managed to escape. Elsewhere, on the Atlantic island colony of Madeira, the Portuguese had already solved the labor problem on sugar plantations by importing slaves from Africa. This solution was introduced to the Americas on the sugar plantations on the northeast coast of Brazil, where enslaved Africans were imported to work. From there, this pattern of sugar plantation agriculture spread over much of the rest of the tropical and semi-tropical New World.

The trade in African slaves continued for some three hundred years after the conquest. The enslaved Africans who survived shipment to the New World did not come from a single society or culture in Africa. In Brazil, on the northern coasts of South America, in the Caribbean, and the southeast United States, the Africans left their indelible stamp. Their presence shaped religious practice and concepts, family life and organization, music, and folklore. They influenced not only the plantation regions, but the greater nations of which these later became a part as well.

Plantation America was not the only system to grow out of economic opportunity and a unique labor force. Similarly, the variables of economic potential for the colonizers interacting with Native American cultural and demographic patterns produced two other important social and cultural New World patterns, known as Indo-America and Euro-America.

### Indo-America

The Europeans found much of value in the New World. The regions of the pre-conquest New World were largely temperate or semi-tropical. Although generally not suited to sugar production, they did have the potential to support a wide variety of European crops and animals. Of even greater importance to the Europeans were the gold and silver that could be found there. For the Spanish, most important of all were the large, dense, and highly organized populations of agricultural peasants that the Spanish Empire gained by the conquest. These peasants were accustomed to laboring to produce crops for their own subsistence and for their masters as well. The Spanish destroyed the ancient aristocracies and bureaucracies, but they retained or modified the structures of command. They simply replaced the former rulers with their own leaders to control the mass of surviving Indians. In these densely populated regions, there was no need to import African slaves or European peasants, workers, and farmers. The Indian peasantry remained the source of Spanish wealth and power as they had been for the Aztecs and Incas before them.

The Spanish attempted to maintain a sharp separation between Spanish and Indian. As always with such attempts, it was doomed to failure, and mating between Spanish and Indians began almost immediately. Most of the children of these unions were rejected by both the Spanish and Indian communities. In time in contemporary Mexico, Guatemala, Ecuador, Peru, and Bolivia, however, the descendants of people of mixed ancestry became the majority or plurality. Despite the great numbers of people of mixed ancestry, political power remained in the hands of people of European background until the early years of the twentieth century. This situation only changed beginning with the early years of the twentieth century. By the late nineteenth century, political and economic differences had developed between the still largely white upper class and the largely mixed-race, urban, middle- and working-classes in these nations. These differences were of social class within a more all-encompassing national culture.

As previously noted, about ten percent of the population of Mexico does not speak Spanish as their primary language; in Ecuador and Peru, the proportion rises to twenty-five percent, while in Bolivia it reaches about fifty percent. The vast majority of these speakers are American Indian. Largely in rural areas within these nations, there are still communities that maintain modified Indian culture and speak the local Indian language.

These cultures are not unchanged from those of their 16th century ancestors. Rather, they have been much buffeted by the non-Indian world, and in some places and times, have risen in rebellion and revolution. They show a continuity with the past in many cultural practices, including language, the form of the Catholicism they practice, arts, lore, diet, and sometimes family organization. The Indian way of life is not totally shared by the other people of equivalent social and economic position in their homeland.

It should not be assumed that these Indian communities are in some way more “Indian” in a genetic sense. The people of these communities—like the rest of the nation in which they live—show a great deal of admixture of European genes. What defines a community as Indian is its culture, not primarily the physical appearance of its members. In the nations of Indo-America a person’s “racial” identity is a function of his or her cultural affiliation, not physical appearance.

### Euro-America

In North America, Euro-America extends roughly from northern Mexico north to the southern edges of the Arctic slopes. In South America, Euro-America extends roughly from southern Brazil, through Uruguay, Chile, and Argentina south to Tierra del Fuego. The habitat in South America did not offer the opportunity and potential for growing high-profit crops like sugar, and thus, there was no economic rationale to import slaves on a massive scale. Although great wealth lay buried beneath the land, it was not until the nineteenth century that this potential was appreciated and the technology developed to exploit it. The population of Indians who inhabited these regions was relatively small in number and relatively mobile. There were no great central states under which they were organized, and because of their small number, they offered no great potential as a labor force to the Europeans.

In North America, the colonists and their European masters lusted after furs, which the Indians would collect and trade, with little immediate or obvious negative impact upon their culture. In the long run, however, the European impact was just as profound upon these people as it had been upon the agricultural Indians who lived further south. These temperate colonies offered a variety of economic benefits to the European empires. These, however, were not as valuable as those colonies that lay in less temperate areas.

The European populations of Euro-America were small in the beginning. The crops, timber, fish, and livestock they produced were essentially similar to those produced in Europe. In southern Brazil and Uruguay, in Argentina and Chile, in the English colonies north of Virginia, and in the French colonies of eastern Canada, the inhabitants created European societies. These were not perfect and complete copies of their European homelands, however, since the class structure was incomplete—few aristocrats settled in these lands. Not all European regions sent immigrants to the New World. A middle class of free farmers, artisans, and merchants was over-represented, especially in North American. These isolated bits of Europe, sitting on the edge of vast forests, prairies, and plains, were to be the lure and haven for the third round of population transfer from the Old World to the New World.

## IMMIGRANT SOCIETIES

The Industrial Revolution that began quietly in Europe in the eighteenth century has continued to enhance in power and impact until the present. It initiated and stimulated a wave of demographic change probably unmatched in prior history. The economic, political, social, and cultural changes that it inaugurated worked together to set Europe, and later the rest of the world, on the move. By the middle of the nineteenth century, a tidal wave of migration began to flow. This flow of humanity occurred both within and between the nations of Europe and between Europe and the Americas. The flow within Europe was primarily a rural-to-urban migration, with large numbers of people from farms and small towns being drawn to the growing industrial cities. To a large degree, this was also true of the population movements between Europe and the Americas. People left peasant farming communities and moved to industrial and commercial cities. In this case, however, the cities were in another hemisphere half a world away. Many also came to the Americas seeking land, which was in short supply and expensive in Europe, but was available and relatively inexpensive in many parts of Euro-America.

The potential host societies in the Americas sought immigrants during this period, and in fact, competed for them. These societies were driven by their expanding economies and apparently unquenchable need for inexpensive labor.

North Americans think of the goal of the immigrant waves of the nineteenth and early twentieth centuries as directed primarily at the United States and, to a lesser degree, towards Canada. In truth, however, the immigrants were drawn to countries all over the Americas. The greatest number went to those nations in Euro-America: the United States and Canada, southern Brazil, Uruguay, Chile, and Argentina. Smaller numbers of European immigrants settled in other parts of the Americas as well. In the nineteenth and early twentieth centuries, far fewer immigrants came to the Americas from Asia and Africa, but by the mid-twentieth century, these numbers would grow. In the second half of the twentieth century the impact of industrialization, war, and revolution increased the flow of emigrants and refugees from Asia. Also, discriminatory laws against Asians in many host countries were softened, and the gates to Asian immigration were thus opened a bit wider.

The world in which new immigrants arrived had been shaped by the various charter societies for several hundred years. The assumption on the part of the host populations was that the newcomers would learn the ways of the host country, give up their “foreign ways,” and in time, become indistinguishable from everyone else. In the United States, this was expressed through the metaphor of “the melting pot.” In some ways, this metaphor was accurate, but in others it was not.

### Acculturation, Assimilation, and Ethnicity

Social scientists distinguish between acculturation and assimilation, two social and cultural processes. Acculturation refers to the process by which a group—usually socially and politically subordinate—learns the culture, language, dress, rules, and laws, of another—usually dominant—group. Assimilation refers to the process by which one group loses its identity through total absorption into another group. Acculturation without assimilation is common. Assimilation without acculturation is rare at best, and may even be impossible.

Many variables contribute to the process of acculturation and assimilation for an immigrant group, family, or individual. For generations of immigrants who came from the Old World as adults, acculturation occurs rather slowly because they are already trained in and accustomed to another culture. The first generation born in the new circumstances faces a complex problem. In their home environment, they learn aspects of their parents’ native culture; in the outside world—at school, for example—they are exposed to the host culture. The grandchildren of the original immigrants (the second generation born in the new environment) will usually be exposed to relatively little of the grandparents’ native culture. After two generations, all other things being equal, it will usually be difficult, if not impossible, to identify any highly visible cultural differences between the descendants of the immigrants and those of the host population.

All things, however, are not always equal. A Norwegian family, as an example, that settled in a place where there were no other Norwegian immigrants would have to learn the ways of the hosts quickly in order to live their everyday lives. The children, and certainly the grandchildren, of such a family would probably have few opportunities to even think of themselves as “Norwegians” or “Norwegian-Americans.”

If, on the other hand, that same family had settled in a community with many other Norwegian immigrants, they would face a different situation. They would have people with whom they could continue to practice at least some aspects of Norwegian culture. They could attend and support Norwegian-oriented institutions like churches, parochial or after-schools, colleges and universities, hospitals, newspapers, magazines, and social clubs. In a case such as this, two levels of acculturation might be observed. At the level of everyday life—on the job, in the street, in the public school—the people in such an immigrant-based community would appear no different than anyone else. At another level, they would practice a rich culture of Norwegian origin. They might, in appropriate circumstances, think and speak of themselves as “Norwegian-Americans.” Such a community could celebrate Norwegian Independence Day (17 May) as a holiday that mixes together Norwegian and American culture, symbols, and themes. The Norwegian immigrant family that settled among non-Norwegians and thus lost a sense of Norwegian identity would be considered assimilated. The Norwegian family that settled with other Norwegians to create a Norwegian-American community must be considered less assimilated. Both, however, are acculturated.

The process of assimilation is far more complex than the process of acculturation. Many factors affect the process of adaptation to a new way of life in a new culture. Examples include the nature of the diplomatic, political, and military relationship between the host and the homeland of the immigrant group; and racial categories and stereotypes held by both immigrant group and host nation, as well as the laws and customs relating to such issues in the host country. There are also important social and cultural differences among immigrants from a single country that influence acculturation and assimilation. Late nineteenth century Italian immigrants, for example, were different in almost every way from those who arrived late in the twentieth century. The older charter populations in the New World did not always welcome those who came later. Levels of education, wealth, social class, religion, and other

factors had major effects on immigrants. Very often the later immigrants were discriminated against—even to the point of physical attacks—due to racial, religious, social, economic, and other fears and prejudicial attitudes that the older populations had learned from their own ancestors. Most North Americans can easily understand the process of the loss or preservation of “national identity” by immigrant populations—perhaps having experienced it within recent generations in their own families. However, much the same process was at work all over the Americas, for not only immigrants from the Old World to the New, but also for those immigrating between countries of the Americas. Huge flows of population—black, white, and brown—flowed from rural to urban locations within the nations of the Americas and between them.

The effects of these processes of acculturation and assimilation, conquest and colonization, have left the New World a

mosaic of cultures and societies. None is homogeneous. All reflect a mix of identities and loyalties, social classes, races, and religions that is constantly changing and never stable. It is this complex set of psychological, social, and cultural processes that defines ethnicity in the New World.

Thus, generalizing about ethnicity is complicated at best. The reader will encounter the many groups that populate the nations of the Americas in this volume. It is more important to be alert to and aware of this complexity. The writers’ attempts to inform is unavoidably subject to some distortion. This volume provides a place to begin learning about the people of the Americas. It also leads the reader on, to sources for further study in the process of discovering the people and cultures of the Americas.

# AFRICAN AMERICANS

**ALTERNATE NAMES:** Blacks

**LOCATION:** United States

**POPULATION:** 37 million (half of whom live in the Southern states, 2006)

**LANGUAGE:** English (sometimes with Black English variants)

**RELIGION:** National Baptist Convention; Church of God in Christ (Pentecostal); Roman Catholicism; Nation of Islam; African Methodist Episcopal Church; African Orthodox Church; Judaism; Rastafarianism

**RELATED ARTICLES:** Vol. 2: Americans

## 1 INTRODUCTION

Unlike other immigrants to the United States, the ancestors of today's African Americans did not come to America of their own free will. Beginning in 1619, they were captured and forcibly brought from their West African homelands to serve as slaves, mostly on Southern plantations. The inhuman conditions aboard the ships on which they traveled killed many Africans before they reached the New World. When the thirteen British colonies declared and ultimately won their independence from Britain in the 18th century, the institution of slavery was retained, although largely confined to the Southern states. During the Civil War, President Lincoln signed the Emancipation Proclamation, freeing the Southern slaves; the Thirteenth Amendment to the Constitution, passed in December 1865, abolished all slavery in the United States. At the close of the Civil War, African Americans accounted for 14% of the U.S. population.

The newly freed slaves made progress during Reconstruction, especially in education, but the end of this period, in 1877, brought a new era of repression marked by lynchings and other forms of persecution, in which the recently formed Ku Klux Klan played a prominent role. In 1909 the National Association for the Advancement of Colored People (NAACP) was formed. The following two decades saw the migration of about 1.6 million Southern blacks to Northern cities in search of newly available industrial jobs. Weathering the hardships of the Depression, blacks continued their northward migration through the years of Franklin Roosevelt's New Deal policies and World War II.

During the Civil Rights Movement of the 1950s and 1960s, the country's most egregious forms of racism were eliminated, as blacks joined forces to demand their legal and human rights through civil disobedience and other forms of protest and social activism. The 1954 Supreme Court ruling in *Brown v. Board of Education* declared school segregation illegal. Progress was also made in the area of voting rights, as well as the desegregation of public facilities, especially in the South. In 1963, the Reverend Martin Luther King, Jr., delivered his famous "I Have a Dream" speech at the Lincoln Memorial. The 1960s also saw the growth of the black nationalist movement, whose leadership was assumed by the Black Panthers following the assassination of Black Muslim leader Malcolm X.

By the 1970s, African Americans had been elected as mayors of several major cities, and affirmative action programs had created new opportunities in employment and education. However, many of these programs were weakened or eliminat-

ed during the presidency of Ronald Reagan in the 1980s. In the 1990s, the country's continuing racial tensions were brought to the forefront of national attention by events including the riots in Los Angeles in response to the court's decision in the Rodney King case and the 1995 acquittal in the O. J. Simpson murder trial.

African-American achievement in American society has been remarkable in the 21st century. Black political leaders in the late 20th and early 21st centuries included: civil rights leader Jesse Jackson, who ran for the Democratic Party's presidential nomination in 1984 and 1988; Douglas Wilder, elected the first state governor (Virginia) in the United States in 1989; Carol Moseley-Braun of Illinois, who became the first black woman elected to the U.S. Senate (1992); General Colin Powell, Chairman of the U.S. Armed Forces Joint Chiefs of Staff from 1989–1993, and Secretary of State, 2001–2005; Condoleezza Rice, National Security Adviser from 2001–2004, and Secretary of State beginning in 2005; Ron Brown, United States Secretary of Commerce, 1993–1996; Supreme Court justices Thurgood Marshall and Clarence Thomas; and President Barack Obama, who was sworn in as the 44th president of the United States in 2009.

## 2 LOCATION AND HOMELAND

According to the United States Census Bureau, there were an estimated 37 million African Americans in the United States in 2006, a population larger than that of most African nations and one that represents 12.4% of the total U.S. population. The Census Bureau projects the black population of the United States to rise to 61.4 million by July 1, 2050. On that date, blacks would constitute 14.6% of the nation's total population. As of 2006, 18 U.S. states had a black population of at least 1 million. New York, with 3.5 million blacks, led the way. The 17 other states were Alabama, California, Florida, Georgia, Illinois, Louisiana, Maryland, Michigan, Mississippi, New Jersey, North Carolina, Ohio, Pennsylvania, South Carolina, Tennessee, Texas and Virginia. Approximately 31% of the black population was younger than 18 in 2006. At the other end of the spectrum, 8% of the black population was 65 and older.

## 3 LANGUAGE

African Americans speak English, although some blacks, either in addition to or instead of Standard American English, speak a variant known as Black English Vernacular (BEV), or Black English. In the late 1990s, the term *ebonics* was coined by linguists to refer to the grammar of Black English. The grammar and syntax of Black English are traceable to West African and Niger-Congo languages. They include the frequent omission of forms of the verb "to be" ("He nice" instead of "He is nice"); the use of "be" in place of "is" ("He be home today"); the absence of endings from third person singular verbs ("She know"); absence of the possessives when possession is signified by word order ("That John house"); replacement of a final "th" sound in a word by an "f" sound ("I going wif you"); and replacement of indefinite pronouns such as "anyone" by negative pronouns when verbs are negated ("He don't like nobody"). Black English Vernacular has introduced African words such as *goober* (peanut), *tote* (carry), *juke* (juke box), and *okay* into the English language, as well as produced original terms later incorporated widely into general informal or conversational use, such as *jive*, *hip*, and *jazz*. In other cases, Standard English

terms have been given new meanings, as in the case of *cat*, *rap*, *bad*, and *awesome*.

In 1996, Black English Vernacular, newly labeled Ebonics, was the subject of nationwide debate when the Oakland, California, school board passed a resolution declaring it a separate language distinct from standard English in order to institute programs aimed at educating teachers in this dialect and inculcating respect for its African linguistic roots.

#### 4 FOLKLORE

African Americans have a folklore tradition that dates back to the period of black slavery. Early forms of African-American folklore include animal-trickster tales, spirituals, and folk beliefs, such as the belief in conjurers, figures similar to African medicine men who, by using spells and charms, could either heal or cause injury. Folk traditions were also passed down through the generations by proverbs, sermons, prayers, and a variety of folktales.

Modern African-American folklore includes the “dozens,” insult matches favored especially by young men and generally including disparaging remarks about each other’s mothers. Another popular type of folklore consists of rumors about organized anti-black conspiracies. Today these rumors take the form of “urban legends” that are in widespread circulation in the black community but virtually unknown to other ethnic communities. Examples include the assertions that the Ku Klux Klan tampers with Church’s fried chicken in ways that cause sterility among black men; that American scientists de-

liberately created the AIDS virus and then attempted to test it by infecting African populations with it; and that twenty-eight African Americans were killed in the course of interferon research at the Centers for Disease Control in Atlanta.

#### 5 RELIGION

The National Baptist Convention of the U.S.A., Inc., with some 7.5 million members in 2008, is the largest black religious denomination, followed by the Church of God in Christ, a Pentecostal sect (2008 membership of over 6 million). Roman Catholicism (with a black membership of more than 2 million in 2008) and the Nation of Islam both claim large black followings as well. Other religious affiliations include the African Methodist Episcopal Church, the African Orthodox Church, Judaism, and Rastafarianism.

#### 6 MAJOR HOLIDAYS

African Americans observe the national holidays of the United States and the religious holidays of the faiths to which they belong. Dates with special significance for African Americans are the birthdays of the Reverend Martin Luther King, Jr., on January 15 and of Malcolm X on May 19, and Juneteenth, which commemorates the date on which black slaves in Texas learned that they were free—June 19, 1865. In 1994 Congress passed the King Holiday and Service Act, designating the third Monday in January (near Martin Luther King Jr.’s birthday) as a national day of volunteer service. The joyous holiday of Kwanzaa, the festival of first fruits, is celebrated from December 26 to

January 1. Each day of this holiday, inaugurated by the philosopher Maulana Karenga in 1966, is devoted to and named for a particular virtue.

## 7 RITES OF PASSAGE

African Americans with active religious involvement mark major life events such as birth, marriage, and death within their respective religious traditions. “Jumping the broom” is a time-honored custom at African-American weddings. The African Americans of Louisiana’s New Orleans Creole community are known for their jazz funerals. Observers within the black community have decried the lack of coming-of-age rituals for young black men, and some groups, including the Urban League and PUSH (People United to Save Humanity) have developed rite-of-passage programs that focus on responsibility, values, character, and discipline. (PUSH also offers such programs for young women.) Increasing numbers of parents are also adopting African-based rites of passage for children, which are called *mfundalai*, or Changing Season rites.

## 8 INTERPERSONAL RELATIONS

Common greetings in Black English Vernacular include “Word up,” “Yo,” and “Look out.” A common nonverbal greeting consists of slapping another person’s outstretched palm. When done above the head it is called a “high five”; at knee level it is a “low five.” The women’s version of this greeting consists of sliding one’s forefinger across the forefinger of the other woman. Expressions of farewell include “See you later,” “Word to the Mother” (referring to the motherland of Africa), and “Stay black.” “Man” is commonly used in informal situations as a form of address for men; black women often address each other as “girlfriend” or “sista.” Many young African Americans still observe the West African custom of addressing their elders as “Aunt” or “Uncle.” Like people from many Asian and Latin American cultures, African Americans, especially those from the South, often avoid eye contact as a sign of respect.

## 9 LIVING CONDITIONS

African Americans have a disproportionately high incidence of heart disease, diabetes, high blood pressure, cancer, AIDS, obesity, and asthma than whites. The health of low-income blacks in particular is affected by a lack of affordable high-quality medical care and the health insurance that could pay for it. The rate of Sudden Infant Death Syndrome (SIDS) for black infants is as much as twice as high as for whites, a fact attributed to the lower quality of prenatal care many black mothers receive. However, recent increases in life expectancy have been pronounced among black males, whose average life expectancy increased from 64.5 years in 1990 to 69.5 years in 2004, following a decline in life expectancy in the late 1980s. Some of this increase reflects declines in homicide rates among black males during the mid- and late-1990s. Despite these increases, however, black children are still almost twice as likely as white children to die before reaching age 20. In 2004, white newborns had an average life expectancy of 78.3 years, compared with 73.1 years among black newborns.

Limited in their choice of housing by income and racial discrimination, the great majority of African Americans lived in substandard housing until the middle of the 20th century. Between 1950 and 1970 the proportion of blacks living in substandard dwellings dropped from 73% to 23%. In 2005, 48.2%

(Brendan Smialowski/AFP/Getty Images)

of blacks owned their own homes, compared with 69% of the total population and 72.7% of whites. Blacks are disproportionately represented among the impoverished of the United States: in 2006, 24.2% of blacks were below the poverty line, compared to 12.3% for the total population. As a result, they are more likely than whites to need housing assistance. African Americans are also disproportionately represented among those who have criminal records, and as such are more likely to be rejected for public housing on that basis.

## 10 FAMILY LIFE

African-American family life offers many variations on the nuclear-family model, including single-parent families (usually headed by women); “blended” families that include a couple’s

children with previous partners as well as any children they may have together; adults, who live together, with or without children; and extended families, which have long played an especially important role in the lives of African Americans. In addition to grandparents, extended families may include aunts, uncles, cousins, and other relatives, who may join the nuclear family either temporarily or long-term. One prominent social trend has been a decrease in the number of married African-American couples, which has been associated with a variety of factors, including a demographic shortage of black men; increased opportunities for black women in the labor market; imprisonment of large numbers of black men; unemployment and low earnings among black men; and rising rates of intermarriage.

### **11 CLOTHING**

African Americans wear clothing similar to that worn by other Americans. Certain fashions among inner-city youth, such as baggy, loose-fitting pants that hang down far below the waist and baseball caps worn backwards, have caught on among young men of other ethnic and racial groups. Doo rags are also in vogue among black men. Doo rags are made of a silk-like material, usually black, that wraps around the skull, with a small flap hanging down in the rear, over the neck. They were popularized by hip hop artists in the 2000s.

### **12 FOOD**

Traditional African-American food, commonly known as “soul food,” originated with the mingling of the West African culinary heritage of black slaves with the cooking styles and available foods of the American South. In particular, the African custom of using all edible parts of both plants and animals was of great importance to the sustenance of blacks, who had to make do with scraps and leftovers. This practice has been especially evident in the preparation of pork, which has long been the most common meat eaten by African Americans, who traditionally used virtually all parts of the animal, including the hocks, snout, ears, feet, and tail—everything, it was said, “but the oink.” Other dietary staples of African-American diet have included chicken, corn, both white and sweet potatoes, okra, and a variety of greens. Barbecues are popular among African Americans, who take great pride in their sauce recipes. Depending on geographical region, fish has also been a staple of the African-American diet, and fish sandwiches with hot sauce on white bread are a current favorite in black communities. Popular desserts, including pralines and shortening bread, are often sweetened with molasses; and watermelon, which was brought to the New World from Africa, is still a favorite food.

### **13 EDUCATION**

Education has been a strong concern of those seeking to improve the lives of African Americans, especially those in inner-city neighborhoods. In 2005, 6% of non-Hispanic whites ages 16 to 24 were not enrolled in school and had not completed high school, compared with 11% of blacks. As of the 2000 census, there were 14.4 million African Americans who held at least a high school diploma, and 2.8 million African Americans who held a bachelor’s degree or higher. Cities including Baltimore, Detroit, and Milwaukee have experimented with Afrocentric and multicultural curricula and other programs geared toward the cultural background and educational needs

of African-American youth. Among the oldest black colleges in the nation are Wilberforce University, Fisk University, Talladega College, Morehouse College, Howard University, and Tougaloo College.

### **14 CULTURAL HERITAGE**

The most famous period in African-American literature was the Harlem Renaissance between the two World Wars, when writers including Langston Hughes, Countee Cullen, and Zora Neale Hurston exposed racial injustice in works that reflected their personal experience. Classics of black literature in the years following this period included Richard Wright’s *Native Son*, Ralph Ellison’s *Invisible Man*, and James Baldwin’s *The Fire Next Time*. The Black Aesthetic Movement of the 1960s and 1970s reflected developments of the civil rights and black nationalist movements, as well as African Americans’ growing awareness of their African cultural roots. Since the 1970s, many black women writers have risen to prominence, including Nobel laureate Toni Morrison, former U.S. Poet Laureate Rita Dove, Maya Angelou, Alice Walker, Gloria Naylor, and Carolyn Ferrell.

Important genres of African-American music include spirituals, gospel, rhythm and blues (“R&B”), ragtime, jazz, soul, Motown, funk, rap, and hip hop music. Some of the greatest names of the jazz tradition include trumpeter Louis Armstrong, vocalist Ella Fitzgerald, bandleaders Duke Ellington and Dizzy Gillespie, saxophonist Charlie Parker, and trumpeter Miles Davis.

Prominent African-American visual artists in the 20th century have included Romare Bearden, Benford Delaney, Jacob Douglas, Aaron Douglas, Horace Pippin, Clementine Hunter, Keith Haring, and Jean-Michel Basquiat. Kara Walker is a 21st century American artist whose works are known for their exploration of race, gender, sexuality, violence, and identity.

### **15 WORK**

African Americans—and especially black men—are more likely to be unemployed and to work in low paying jobs than whites. But trends are showing that African Americans are making strides in employment in the 21st century. For instance, in 2007, for the first time in five years, the African-American unemployment rate dropped, from 8.4% in December 2006 to 8% in January 2007. In 1991 only 18% of blacks were employed in professional and managerial jobs. By 2006, 27% of blacks age 16 and older worked in management, professional, and related occupations. Nevertheless, black households had the lowest median income in 2004 (\$30,134). Asian households had the highest median income (\$57,518); the median income for non-Hispanic white households was \$48,977 and \$34,241 for Hispanic households.

### **16 SPORTS**

Many disadvantaged black youths have dreamed of a professional sports career—especially in basketball—as a way out of the urban ghetto, a dream most poignantly portrayed in the 1994 documentary film *Hoop Dreams*, which chronicled the lives of two talented inner-city teens over several years. Although the chances of making it as a professional athlete are slim, sports scholarships give many young blacks educational opportunities that can provide solid, if less spectacular, forms of upward mobility.

Within the field of professional sports, current issues include the hiring of blacks in coaching and front-office positions. In addition to the accomplishments of great African-American athletes in basketball, baseball, boxing, and football, black athletes have more recently made pioneering achievements in what had been all-white sports, tennis and golf. Arthur Ashe became the first black American to garner the Wimbledon and U.S. Open championships, and African American tennis stars Venus and Serena Williams have both been ranked number one in the world. In 1997 21-year-old Tiger Woods became the first athlete of black ancestry to win the Masters' Tournament. As of 2008, Woods was the top golf player in the world and the highest-paid professional athlete in 2006. By 2008 Woods had won 13 major golf championships, the second highest of any male player, and 64 PGA Tour events.

### 17 ENTERTAINMENT AND RECREATION

African Americans enjoy many of the same types of leisure-time activities as other Americans, including television, movies, concerts, dancing, family gatherings, and both participatory and spectator sports. The Black Entertainment Television cable network broadcasts *hip-hop and R&B music* videos, black collegiate sports, public affairs programs, reruns of popular programs, *religious programming, and urban-oriented movies and series*. Dance clubs, at which music is provided by disk jockeys, create a sense of community for many young people, with popular dance styles including hip-hop, lofting, and house.

### 18 FOLK ART, CRAFTS, AND HOBBIES

Traditional forms of African-American folk art include basket weaving, pottery, wood-carving, quilting, and the making of musical instruments. Prominent characteristics of black folk art include a pervasive religious theme; the frequent appearance of bird, serpent, and other animal imagery; the use of significant figures in African-American history, both white and black, including Abraham Lincoln and Dr. Martin Luther King, Jr.; and a talent for transforming scrap objects into works of art. Precisely this form of art was in evidence in "The Quilts of Gee's Bend," a nationwide exhibition of more than 60 quilts made between 1930 and 2000 by four generations of quilt makers from a rural community in Alabama. *The New York Times* declared that the exhibition featured "some of the most miraculous works of modern art America has produced."

### 19 SOCIAL PROBLEMS

Social problems faced by African Americans include the lack of good jobs, high unemployment, gang violence, the sale and use of crack cocaine in inner-city areas, reductions in social spending by governments at all levels, the high teen pregnancy rate and high percentage of households headed by young single mothers, and tensions with recently arrived Asian and Hispanic immigrants. In 2006, 46% of all African-American children in the United States lived below the poverty level.

### 20 GENDER ISSUES

African American women face some of the same problems as other American women when it comes to gender discrimination. However, black women are more likely than white women to become pregnant when they are young and unmarried,

which not only makes it difficult for them to hold together and support their families, but also may prevent them from furthering their educations or careers.

Gay and lesbian African Americans face disproportionate degrees of homophobia from the black community than whites face in the general culture. Researchers have suggested this is due in part to the prominence of the black church in African Americans' lives. Beginning in the 1980s, HIV/AIDS became a dominant area of concern for homosexuals.

# AFRICAN BRAZILIANS

**LOCATION:** Brazil

**POPULATION:** About 16 million

**LANGUAGE:** Portuguese with some African terms

**RELIGION:** Afro-Brazilian sects such as Condomble; spiritualist sects

**RELATED ARTICLES:** Vol. 2: Brazilians

## 1 INTRODUCTION

Brazilians of African origin comprise nearly 10% of the total population of Brazil. As in the United States, their arrival can be traced back to the slave trade of the mid 1500s. It is estimated that nearly 4 million or more slaves were shipped to Brazil from various African countries. This is vastly higher than the number of slaves that were imported into the United States, which has been estimated at approximately 600,000. The Portuguese crown traded African slaves to Brazil in order to have abundant and cheap labor in sugar plantations and mining. The majority of Africans brought to Brazil came from Ghana, Nigeria, Guinea-Bissau (Republic of Guinea-Bissau), Benin, Angola, Republic of Congo, and Mozambique. In ethnic terms, the people brought to Brazil were part of two major groups: Sudan and Bantu people.

It is not surprising, therefore, that Afro-Brazilian culture is an important part of Brazilian society. Afro-Brazilian cooking customs and religion, for example, are practiced not only by blacks, but also by Brazilians of all races and ethnic backgrounds.

Brazilian law prohibits discrimination on the basis of race. Little overt tension or racial violence exists in Brazil, as it does in many countries around the world, including the United States. However, subtle racial discrimination continues to exist, and Afro-Brazilians have limited access to higher education and economic opportunities. As a whole, Afro-Brazilians are a socio-economically disadvantaged group in society.

## 2 LOCATION AND HOMELAND

Brazil is an ethnically diverse country. The population of 162,661,214 persons is primarily composed of indigenous Indians, mainly Amazonian tribes; Portuguese and other European immigrants; and Afro-Brazilians (about 16,000,000). More recent immigration in the 19th and 20th centuries has added Arabs and Japanese to the mix. These ethnic groups have intermixed. As a result, the percentage of the population that considers itself to be Black in the national census has been in dramatic decline, while the number of those who consider themselves Brown has increased. This has been called the "bleaching" of Brazil.

The northeastern state of Bahia can be considered the heart of Afro-Brazilian culture. Both sugar and cacao were produced in the northeast region and Bahia became the port of arrival for many slaves. Afro-Brazilians reside throughout the country, however, with large concentrations in the major cities of Rio de Janeiro and Sao Paulo.

## 3 LANGUAGE

The official language of Brazil is Portuguese. Afro-Brazilians originating from many different African countries and ethnic

groups learned Portuguese as a way of communicating both with colonial Brazilians and with each other. Some words of African origin have been incorporated into everyday language (i.e., *samba*). This can be seen most clearly in the area of Afro-Brazilian religion, which retained the original African names of deities, ceremonies, and dances.

## 4 FOLKLORE

The Afro-Brazilian folklore has a rich tradition in Brazil. One of the most revered historical figures is Zumbi. He was a rebel slave leader in the region of Palmares, a zone in Brazil occupied by escaped African slaves, Amerindians, and other mixed races. The zone of Palmares was organized following African traditions with a king and an assembly where the best warriors were elected kings. Zumbi was the most famous of them.

Slaves, Amerindians, and people of mixed races of Quilombos dos Palmares fought for more than 65 years against Dutch and Portuguese soldiers. Today, many Afro-Brazilians celebrate November 20, the date that, according to the popular belief, Zumbi jumped off a cliff to avoid being captured by government forces. However, other historic accounts suggest something different. In 1694 Domingo Jorge Valho would have fought and defeated the African resistance of Quilombos dos Palmares and Zumbi would have survived and managed to escape feeding up the rumors that assured that the black leader was immortal. On 20 November 1965 Zumbi would have been captured and immediately decapitated and his head would have been brought to the public plaza to show the rest of the community that Zumbi was not immortal. The heroic actions of Zumbi have made him a legendary figure to Afro-Brazilians.

Perhaps the most well-known and powerful mythical creature in the Afro-Brazilian culture is the *boiúna*, or *mboiaçu* that lives in the rivers of the Amazon. According to the myth, the cobra-grande (large serpent) lives in the water and can take different shapes to frighten away the fishermen.

## 5 RELIGION

Brazil is a cosmopolitan country, and its cultural diversity can be appreciated in the existence of different religions. Even though most of African-Brazilians are Christians there is an extended range of religions rooted in African traditions. These Afro-Brazilian religious sects are becoming increasingly popular with Blacks and Whites alike in Brazil. There are a variety of religious groupings that continue to follow traditional African religious practices. The first is Condomble, a religion originated in the city of Salvador and first practiced by slaves from the Yoruba tribe. Based largely in the state of Bahia, Condomble followers worship many different gods and goddesses of nature, such as Iemanjá, the goddess of the sea. Condomble services are characterized by pulsating drums and rhythmic music that encourages followers to reach a trancelike state. Animal sacrifices, healing, and dancing are part of these ceremonies, which are conducted not on Sunday mornings, but late at night. It has been estimated that over 1,000 Condomble temples exist in the city of Salvador, Bahia.

Other spiritualist sects, such as Umbanda, combine African and non-African religious influences. In these religions, it is common for the services to be led by a female priestess. Umbanda is becoming widespread in Brazil's major cities. Followers of Umbanda invite spirits into their bodies as part of the services. When they are "possessed," they traditionally light a

Followers of African-Brazilian religious sects carry offerings to Iemanja, an African water goddess, on February 2, Iemanja's Day. (AP Images/Ricardo Moraes)

cigar. Umbanda services account for the majority of cigar sales in Brazil.

## 6 MAJOR HOLIDAYS

Bahia is the center of Afro-Brazilian culture, and it is there that its festivals are most celebrated. On February 2, residents of Salvador celebrate the Condomble goddess of the sea, Iemanja. Gifts and offerings are made to Iemanja and are floated out to sea in small handmade sailboats. These offerings are usually sent by fishermen's wives, in the hope that the goddess will protect the fishermen and ensure calm waters. Condomble rhythmic music accompanies the ceremonial events.

Another Afro-Brazilian festival is held in the city of Cachoeira. An Afro-Brazilian religious society holds an annual festival to celebrate the liberation of slaves in Brazil. Dancing, music, and prayer act to remind Afro-Brazilians of the suffering of their slave ancestors. Afro-Brazilians also celebrate Carnival (see **Brazilians**).

## 7 RITES OF PASSAGE

Major life transitions, such as birth, puberty, and death, are marked by ceremonies appropriate to each Afro-Brazilian's religious tradition.

## 8 INTERPERSONAL RELATIONS

It is difficult to distinguish Afro-Brazilian customs from those of Brazilian society as a whole. Afro-Brazilian mannerisms,

traditions, rituals, and music have been incorporated into wider Brazilian culture.

Afro-Brazilians are an outgoing and gregarious people. They speak animatedly and use a variety of hand gestures to add emphasis to what they are saying. Afro-Brazilians are also accustomed to close personal contact. Women will often walk down the street hand in hand, and male friends will greet each other with a hug.

Music has been incorporated into many aspects of Afro-Brazilian life. Samba clubs that rehearse for Carnival are an important form of social organization. In addition, music is incorporated into their traditional sports, *capoeira* (a martial art), and into religious services. Most Afro-Brazilians are deeply religious and these beliefs pervade every aspect of their lives. It is common, for example, for food and candles to be left on street corners as offerings to spirits.

In January in Bahia, colorful ribbons are sold that are believed to be good luck. These ribbons must be received as gifts and should never be bought for oneself. These ribbons are tied with multiple knots around the wrist. The wearer makes a wish with each knot tied. The ribbons are then worn continuously until they fall off from daily wear. Only then are the wishes granted.

## 9 LIVING CONDITIONS

Many Afro-Brazilians live in poverty in the urban slums that surround the major cities of Sao Paulo and Rio de Janeiro.

Many of these slums, called *favelas*, are on steep hillsides. The earlier settlers can be found at the base of the hill, which is more accessible. These areas are likely to have electricity and running water. Further up the hillside are newer, less accessible communities. Pathways between houses are narrow and cramped. Often large families will live in a single-room dwelling. The lack of running water and the accumulation of sewage in these densely concentrated areas create many health problems for residents. Gastrointestinal and infectious diseases are widespread. Clinics and health care, when they exist in the favelas, are overcrowded and poorly equipped.

The favelas surrounding Rio de Janeiro are also at risk of flooding. Heavy rain will carry garbage down the hillsides and can create landslides that wash away flimsy housing.

### 10 FAMILY LIFE

In Brazil, there are different types of socially accepted marriages. Unions between couples can be religious, civil, or common-law. Civil marriages are those recognized by the state. Most couples undergo a civil wedding followed by a religious ceremony.

Long-term relationships between couples that live together are common and socially accepted in Brazil. This practice, known as *amasiado*, is common among Afro-Brazilians. Official forms of marriage are perceived to be unnecessary. As with other types of marriage, some couples ultimately separate while others may last a lifetime. Couples in *amasiado* are accepted as married by the community and may have children without fear of being shunned.

The extended family provides an additional source of mutual assistance and support. The role of godparent is taken very seriously and entails many responsibilities. Family loyalty takes first priority. Relatives offer both economic and moral support to family members in need.

### 11 CLOTHING

Regional differences in dress in Brazil are pronounced. In the largely Afro-Brazilian regions of Bahia, Black women dress in clothing inspired by 18th century attire. Colorful, full-length skirts are worn with delicately embroidered white blouses, which are sometimes worn off the shoulder. Women in Bahia, known as *Baianas*, also wear scarves or turbans wrapped tightly around their heads.

Brightly colored beads are worn by both men and women. These beads have religious symbolic meaning. The color of the beads worn reflects the individual's *orixa*, or African Condomble god.

### 12 FOOD

Brazilian cuisine has diverse culinary roots. The majority of its typical dishes are heavily influenced by culinary styles from Europe and Africa, syncretism that is expressed in a variety of tastes and aromas. Afro-Brazilian food combines African, Portuguese, and indigenous ingredients and cooking traditions. African peppers and spices are now grown in the tropical northeastern state of Bahia and are used widely in Afro-Brazilian cooking. *Dende* oil, for example, is extracted from an African palm now grown in Brazil. *Dende* is used to make *moqueca*, a spicy mix of sautéed shrimp, tomato, and coconut milk.

The most distinctive Afro-Brazilian dish is *feijoada*, also considered to be the national dish of Brazil. *Feijoada* is a black bean and pork stew, traditionally cooked in African-style earthenware pots. The dish was created by Brazilian slaves. They were given the discarded pieces of pork, such as the tail, snout, and feet, which they stewed slowly with spices and beans. This dish was so tasty that it was soon copied by the slave owners. *Feijoada* is now usually made with prime cuts of pork and beef and is a Saturday lunch time favorite.

*Vatapá* is another traditional dish among Afro-Brazilians. Its main ingredients are bread, shrimp, coconut milk, and palm oil. In some areas of Brazil, shrimp is replaced by fresh fish, tuna, chicken, or turkey. To prepare *vatapá*, all the components are smashed until getting a creamy paste. *Vatapá* is served with white rice.

### 13 EDUCATION

Brazil has a serious problem of illiteracy. Approximately 20% of the Brazilian population does not know how to read or write, while many others have only a rudimentary ability to read. Although the proportion of children that attend school has increased since the 1960s, the quality of the education they receive is poor. Not surprisingly, the schools in the poorer neighborhoods where many Afro-Brazilians live have limited resources. Classes are extremely crowded and there is often a shortage of books. A larger proportion of Afro-Brazilian children, moreover, fail to attend school. Many children, particularly in both rural and urban areas, begin work at a young age to help the family make ends meet. The low level of education most Afro-Brazilian children receive makes it difficult for them to find employment as young adults.

### 14 CULTURAL HERITAGE

Most of the slaves brought over from Africa were illiterate, and slave owners preferred to keep it that way. As a result, an oral tradition of storytelling and history became very important in Afro-Brazilian culture. Many family histories, stories, and myths continue to be passed down through successive generations. Afro-Brazilian themes have also become an important aspect of Brazilian culture. Jorge de Lima is a poet who was widely read in the 1960s. He drew from African-style verses and wrote about the plight of Africans in Brazil.

Afro-Brazilian cultural heritage can be more readily seen in the powerful influence it has had on Brazilian music generally. Brazil's varied music traditions draw heavily from traditional African instruments, rhythm, and dance. Samba music, now popular around the world, is a direct descendant of African music. A more pure form of Afro-Brazilian music is performed by *afoxes*, dance groups that perform to music of the Condomble religion. Using drums and percussion, these dance groups have increased in popularity in recent years. The African influence continues to shape Brazil's music and culture.

### 15 WORK

Brazil is a vast country and common types of work vary from region to region. In the northeast regions, cattle-raising and ranching are important economic activities. In the southeast, sugarcane, cotton, and coffee are also grown and exported. This diverse agricultural sector provides employment as field hands for many Afro-Brazilians. This work, however, pays poorly and

is very laborious. In addition, many field workers are separated from their families to find employment at harvest time.

Brazil also has an impressive industrial and manufacturing sector. Autos, shoes, textiles, and electronic equipment are all made in Brazil, providing steady employment for many people. The manufacturing sector, however, does not generate enough employment for the millions of urban slum dwellers. Many *favela* (slum) residents work as self-employed street vendors or develop small-scale enterprises in their own homes. Many women, for example, work as seamstresses or hairstylists from their homes.

## 16 SPORTS

Perhaps the most famous soccer player in the world is an Afro-Brazilian, Edson Arantes do Nascimento. Better known as Pele, he continues to be a global personality. He rose from a low-income family in the state of Sao Paulo and had limited formal education. Pele led the Brazilian national team to World Cup championships in 1958, 1962, and 1970. Brazil was the first country to win the World Cup three times.

A more distinctive Afro-Brazilian sport is *capoeira*. This form of Angolan martial art is now more of a dance than an actual form of fighting. Brought over by slaves from Angola, this form of foot-fighting was banned by slave owners. In order to disguise this practice, slaves transformed foot-fighting into a rhythmic gymnastic dance form. Accompanied by music, capoeira dancers gracefully use arm and leg motions, designed to barely miss the opponent. Well-aimed high kicks skim over the head of the other fighter.

## 17 ENTERTAINMENT AND RECREATION

Most entertainment revolves around music and dancing. Preparations for Carnival, for example, can begin up to six months in advance of the festival. Samba schools are popular in the *favelas* (slums) and provide an outlet and form of recreation for many Afro-Brazilian youths.

The other central form of recreation for Afro-Brazilian youths is practicing the national sport—soccer. Brazil is probably the country most enthusiastic about soccer in the world. Both in urban and rural areas, playing soccer is the preferred after-school activity.

## 18 FOLK ART, CRAFTS, AND HOBBIES

Afro-Brazilians produce a wide variety of arts and crafts. In Bahia, the African tradition of cooking in ceramic pots is still followed, and functional clay pots can be found in many markets. Intricately hand-carved rosewood and handmade lace are art forms passed down through successive generations. Banana leaf fibers are sometime used in place of thread for lace making.

Many Afro-Brazilian arts and crafts are closely linked to African religious traditions. Many objects used in Condomble rituals are produced by skilled goldsmiths in Bahia. Charms and other forms of jewelry traditionally worn around the waists of slave women in Brazil are still popular.

The state of Bahia is also home to a growing number of painters. Numerous galleries have been set up in Salvador, Bahia, to market the paintings of talented local artists. Many of these paintings deal with themes relating to Afro-Brazilian life and culture.

## 19 SOCIAL PROBLEMS

Drug trafficking and related violence are serious problems that are on the rise in urban slums, or *favelas*. Organized gangs operate in the favelas, selling drugs and engaging in other types of crime. In part, this is the result of high unemployment among youths. Teenagers in the favelas are unlikely to have completed their formal education, and their employment prospects are bleak. The lure of easy money by selling drugs has drawn many young people into this dangerous activity. Conflicts between competing gangs often lead to violence and many deaths. Other forms of violent crime are also becoming widespread in the favelas.

## 20 GENDER ISSUES

The socioeconomic, political, and cultural situations of Afro-Brazilian women are, in general, extremely precarious. Most live below the poverty line and endure situations of social exclusion. Most black Brazilian women have limited levels of education and do not have access to information technology or training. It is not uncommon for black women to be educated in antiquated public school systems that do not promote cultural diversity or equal rights.

In addition, there is no public health policy that specifically addresses the needs of black women in Brazil, such as treatment or clinical testing programs for diseases that typically affect this population more frequently. Afro-Brazilian women also constitute the majority of sexual exploitation cases, feeding the sexual tourism and human trafficking markets in growing numbers. Statistics reveal that, in Brazil, the HIV/AIDS epidemic is growing mainly in the most impoverished social strata, and at an even faster rate among women. Black women are hit the hardest by the disease, since they are the poorest and least educated of all of Brazil's ethnic groups. Another health problem among Afro-Brazilian women is pregnancy-related deaths. For instance, in the state of Paraná, black women from that state are seven times more likely than other women to die from pregnancy- and childbirth-related causes.

In the labor market, Afro-Brazilian women suffer the highest rates of unemployment and spend the most time unemployed. When they do receive wages, they are paid on average 55% less than white women. Black women also constitute the majority of workers in the informal market. In addition, they are primarily employed in jobs that are considered less skilled, such as domestic work. According to the 1999 National Household Survey, 56% of all domestic servants are black women.

Regarding politics, Brazilian women are not adequately represented among elected officials. The number of elected female representatives falls short of the participation quota of 30% stipulated by Brazilian law. The situation of Afro-Brazilian women is even bleaker. In terms of political representation, black women are far from accessing institutional power resources.

## ALEUTS

**ALTERNATE NAMES:** Unangan  
**LOCATION:** Aleutian Islands; Alaska  
**POPULATION:** 11,941 (2000 census)  
**LANGUAGE:** English; Aleut  
**RELIGION:** Based on animism

### <sup>1</sup> INTRODUCTION

About 1,100 miles southwest of mainland Alaska lie the Aleutian Islands. They are home to a people known as the Aleuts, who also inhabit the Pribilof Islands and parts of western Alaska proper. No one knows the meaning of the word “Aleut,” which was first bestowed upon the islanders by Russian fur traders. Among themselves, the Aleuts are known as unangan, which means, “the people.” Racially and ethnically, the Aleuts are close relatives of the Inuit, or Eskimo. Nonetheless, they have developed their own unique culture and language.

Contact between the Aleuts and the outside world was first established around 1750, when Russian fur traders entered the area in search of fox, fur seals, and sea otters. They forced most of the Aleut men to hunt sea otters and other animals for their pelts and, by the latter part of the century, relocated some Aleuts to the Pribilof Islands to serve as forced labor in harvesting the pelts of the northern fur seal. The Aleut population suffered a steady decline over the next 100 years as a result of illness and maltreatment at the hands of the outsiders. By 1867, when the United States purchased Alaska, only about 3,000 Aleuts still lived on the islands, and an outbreak of tuberculosis at the close of the century reduced this small population still further.

In 1913 the Aleutian Islands were designated a National Wildlife Refuge by the U.S. Department of the Interior, which banned the hunting of sea lions and prohibited most other hunting without a special license. Between the two world wars, most Aleuts left their villages to relocate to the Alaska coast, where they worked in salmon canneries. The U.S. Navy removed the remaining villagers during World War II and destroyed many villages to prevent possible Japanese access to them. After the war, a naval base was built on Adak Island. The Aleut League was formed in 1967 to lobby for expanded economic assistance from the federal government, but it had little success. The 1971 Alaska Native Claims Settlement Act provided each Aleut village with title to some land within the Aleutian Islands and created the Aleut Corporation, which was also given ownership of certain lands. Today most Aleuts live in mainland Alaska rather than the islands, where government jobs provide virtually the only employment.

### <sup>2</sup> LOCATION AND HOMELAND

The Aleutian Islands are located at approximately the same latitude as the British Isles, that is, about 800 miles south of the Arctic Circle. The entire Aleutian chain consists of over 150 small islands of volcanic origin and is typically divided into four sub-groups: the Near Islands, the Fox Islands, the Rat Islands, and the Andreanof Islands.

The climate of the Aleutian Islands is harsh and forbidding. In the summer the weather is generally wet, cool, and cloudy, while winter brings cold temperatures, bitter winds, and heavy

precipitation. Most of the time, the islands are covered with a thick layer of fog, and heavy rainstorms occur frequently. These barren, wet, and windswept islands provide little support for trees or long-rooted vegetation, which cannot grow on the mountainsides, cliffs, reefs, and rocky soil. Thus, the Aleuts have always established their settlements near the seashore, depending for their sustenance on the enormous local populations of fish, sea mammals, and birds, the seasonal migrations of which lead them to feed in Aleutian waters at certain times of the year. The islands are also used as breeding grounds for sea mammals such as sea lions and fur otters.

The Aleut population was once estimated at between 12,000 and 25,000 individuals. At the time of the 2000 U.S. census, it stood at nearly 12,000 people, of whom only some 1,500 lived on the Aleutian Islands, with the rest residing on the Alaskan mainland and elsewhere. There are some thirteen native villages remaining, most of them in the eastern Aleutians and the Pribilof Islands.

### 3 LANGUAGE

The language of the Aleuts originated from the same remote ancestor as that of the Inuit, from which both probably separated about 3,000 years ago. The language family that Aleut belongs to is called Eskimo-Aleut, or Eskaleut, or Eskimoan. Today Aleut and Eskimo, which includes Inuit, form two quite distinct and independent branches. Modern speakers of Aleut and Inuit cannot understand one another at all. The Aleutian language is spoken nowhere else in the world but on the Aleutian Islands and their immediate environs. Aleut is a highly endangered language with less than 400 speakers in Alaska and a possible additional 450 speakers in Russian territory.

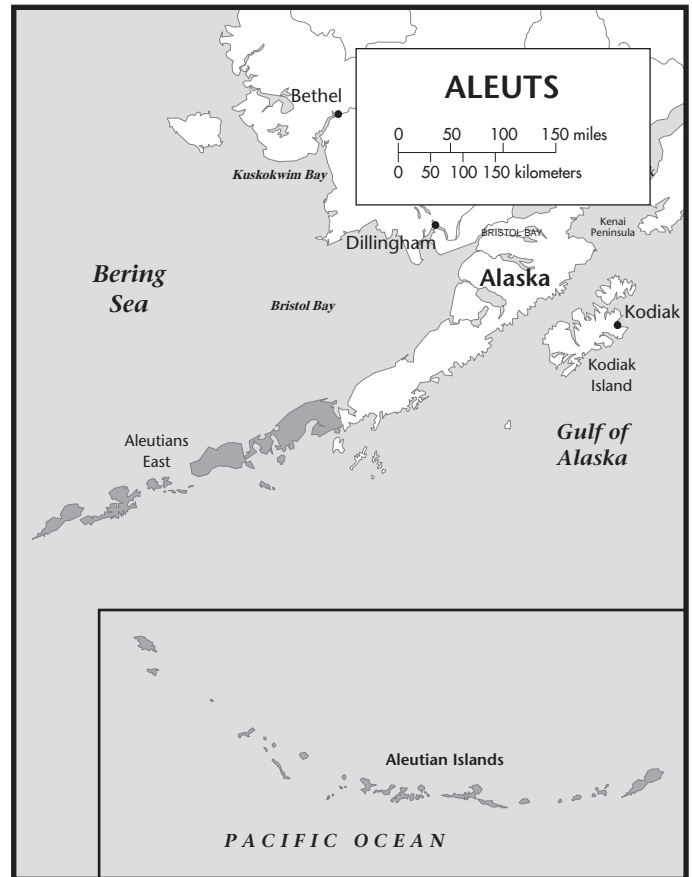

### 4 FOLKLORE

The Aleuts have a strong storytelling tradition. Reflecting the communal nature of Aleut folktales, storytellers typically begin their narratives with the clause "This is the work of my country." As a method of discipline, parents often tell their children cautionary tales peopled by dangerous characters called "outside men." The Aleuts also have a tradition of folk medicine, including knowledge of herbs that has been passed down through the generations. They traditionally believed that all running water, especially seawater, was sacred and practiced sea bathing even in the winter.

### 5 RELIGION

The early Russian fur traders who first came in contact with the Aleuts also first exposed them to Christianity, particularly the Russian Orthodox variety. The first Russian missionaries arrived in Aleut territory by the late 18th century, and Russian Orthodoxy had largely replaced the precontact Aleut religion by the mid-1800s. Today most Aleuts belong to the Russian Orthodox Church, and many have been trained as priests.

Like those of most hunting and gathering cultures, the traditional religion of the Aleuts was based on animism, which imparts spirits or souls to all the animals and objects in the landscape, together with the belief that these spiritualized animals and objects could be influenced by prayer or sacrifice. According to Aleut belief, human beings possessed several souls, or spiritual essences, one of the most important of which was the name. A common belief among Aleuts is that a dead per-

son's soul will occupy the body of a newborn infant if the child is given the same name as the deceased.

The belief that the environment can be influenced, either for good or ill, by human intervention led to the development of a whole constellation of customs and taboos intended to ensure prosperity and prevent disaster. Many such customs and taboos were designed to placate and mollify the souls of the polar bears, whales, walrus, and seals that are the Aleuts' chief prey. By way of example, one might note the widespread custom by which it was considered proper for a hunter's wife to offer a dead seal a drink of water when it was brought to the entranceway of the dwelling. This token of hospitality was believed to relieve the animal's soul of any resentment it might feel toward having been killed. In some areas, especially western Alaska, complex annual ceremonies of thanksgiving are performed to honor the souls of seals and whales that have given their lives for the sake of the Aleut hunters and their families.

The most important human figure in Aleut religious belief was the shaman, who served many vital roles within Aleut society. The Aleut shaman was either male or female and functioned as priest, doctor, and counselor to his or her people. In times of crisis, the shaman provided a course of action for the group to follow. In times of sickness, the shaman healed and cured. In times of deprivation, the shaman located the source of the problem, usually some member of the social group who had been guilty of breaking a taboo and thus angering the souls of the animals.

## **6 MAJOR HOLIDAYS**

In addition to the national holidays of the United States, most Aleuts celebrate the holidays of the Russian Orthodox calendar.

## **7 RITES OF PASSAGE**

Aleuts observe major life events such as births, weddings, and funerals within the Russian Orthodox religious tradition. In the traditional Aleut religion, commoners and slaves were cremated when they died, but young children and members of the elite were mummified. After removal of the internal organs, the body was washed in a stream, oiled, wrapped in furs, and suspended in a dry cave.

## **8 INTERPERSONAL RELATIONS**

The indigenous population of the Aleutian Islands was traditionally organized into small, relatively stable settlements scattered here and there throughout the island chain. Within each social group, a formal hierarchy was maintained. Each settlement, called a *deme*, was composed of an extended kin group and dominated by a chief. A higher chief was chosen by election from among the *deme* chiefs to govern a larger group of villages or an entire island. The village leader's responsibilities included watching over village hunting grounds, settling dis-

putes among village members, determining the appropriate punishment for criminals, organizing the group's activities, and leading the village warriors in the warfare that frequently broke out among villages, usually as a result of insults, raids, or murders committed by members of other villages. In return for his leadership efforts, the *deme* chief received a share of all catches made by the hunters of the village.

Social status was determined according to wealth, and traditional Aleut society was divided into three distinct classes—the upper class, the common or working class, and the slaves. Since they lived in permanent settlements all year round, the Aleut were able to accumulate commodities such as furs, shells, and slaves, and those who possessed much personal property were highly regarded. Aleuts shared food and possessions according to three principles: duty to relatives, repayment of a loan of supplies or equipment, and generosity toward the less fortunate. Through this system of mutual obligations, the Aleut protected the welfare of every village member.

## **9 LIVING CONDITIONS**

The Aleut had a sophisticated level of precontact medical knowledge, much of it gained from their awareness of the anatomical similarities between humans and the marine mammals that populated their environment. Some of their

knowledge came from autopsies of these sea mammals. Their medical treatments included bloodletting and a form of acupuncture, as well as various spiritual measures. Today modern medical care is available to a limited extent to Aleut villagers, although they must travel to cities for certain services.

The traditional Aleut house (called a *barabara*) was a gigantic structure built on a rectangular frame made of whalebone or driftwood logs. The house was sunk three or four feet into the ground to provide added insulation. As a result, the entranceway was in the roof, as was another opening designed to allow light to enter the dwelling. The roof itself consisted of rafters of crisscrossing logs or other pieces of available wood, covered with sod and dried grass. The houses of the Aleut were similar to the sod dwellings of the Inuit in consisting of a single room. In many cases, however, that single room was very large, housing as many as 150 individuals from 40 or 50 different families. The family units within a single house divided the space into stall- or cubicle-like living areas that lined the walls of the common area. By the beginning of the 20th century, nearly all Aleuts lived in conventional above-ground dwellings that housed a single nuclear family. For transportation, the Aleut most often relied on skin-covered boats, usually using them to skim the waves in search of aquatic mammals to hunt.

### **10 FAMILY LIFE**

Unlike many aboriginal cultures, traditional Aleut society was not based on the tribal unit. Instead, the basic social unit was the extended family, consisting of a man and wife and their unmarried children, along with their married sons and their nuclear families. In the normal course of events, several such family units joined forces to hunt and provide one another with mutual protection and support. Such a group of families was named by adding the suffix *miut*, or “people of,” to the name of the geographic region they inhabited. The leader of the group was typically the oldest male still physically able to participate in the hunt. Such a group leader was called upon to resolve quarrels within the group or among his own group and others.

### **11 CLOTHING**

For the Aleut, life often depended on one single piece of clothing, the parka, or outer jacket, made of fur and bird skins. As opposed to the traditional Inuit parka, the Aleut parka did not have a hood. Rather, it had a high collar protecting the neck and stretched clear to the ankles for all-over protection from the elements. Aleut parkas also differed from Inuit parkas in that they were unisex in form: men and women’s parkas were the same. In keeping with the somewhat milder temperatures of the islands, the Aleut parka was often worn with nothing underneath, and many Aleuts traditionally spent much of their time barefoot. Special to the Aleut was a unique type of headgear—either a hat or a visor, shaped somewhat like an inverted garden trowel, made of wood, and brightly decorated with animal motifs and abstract designs. Some examples of Aleut head wear are elaborately adorned with ornamental objects including shells, beads, feathers, sea lion whiskers, and carved ivory figurines. The level of ornamentation of the headgear signaled the status of an Aleut. Only the wealthiest hunters earned the right to wear the most beautiful hats, as well as hats that covered the entire head.

Today most Aleuts wear modern, Western-style clothing.

### **12 FOOD**

The Aleut did not normally store food, since the damp climate made it difficult to maintain most foodstuffs in an edible state. And with most animal resources readily available on a year-round basis, there was little motivation to develop effective means of food preservation. As a rule, the traditional Aleut diet was characterized by greater variety than that of the Inuit. Meat was provided by marine mammals, such as sea otters, sea lions and harbor seals. Other food resources included marine invertebrates (such as sea urchins, mussels, and clams) and fish (including halibut, cod, and several different species of salmon). The typical Aleut meal combined fish and sea mammal meat with edible plants like cow parsnip, wild parsnip, kelp, and other greens, although plant foods played a relatively small role in the Aleut diet. The Aleut also had at hand many kinds of edible berries, including blueberries, blackberries, cranberries, and salmonberries.

### **13 EDUCATION**

The curriculum of today’s Aleut schools is similar to that of other schools around the world. Children are taught math, history, spelling, reading, and the use of computers. Aleut teachers are also concerned that the students learn something about their culture and old traditions. Most Aleut villages have high schools, but relatively few villagers attend college.

### **14 CULTURAL HERITAGE**

Ritual dances were part of the Aleut cultural and religious tradition, although early missionaries banned dancing because they considered it sinful. At wintertime feasts celebrating the tribe’s ancestors, wooden masks with pictures of spirits and ancestors were worn by dancers. When dancing, Aleut men wore special gloves decorated with puffin beaks that rattled with the movements of the dancers. Special dances were done to ensure the success of the whale hunt.

### **15 WORK**

Traditionally, the Aleut survived by harvesting sea lions, whales, and fish in their skin-covered boats as well as by foraging on land for birds’ eggs and plants. Today many Aleut have entered the modern work force. Even those who live on the islands and still hunt, fish, and gather their traditional foods participate at least to some degree in the modern cash economy. Many travel from their villages to work at seasonal construction and fishing jobs.

### **16 SPORTS**

Aleut men traditionally engaged in contests of strength, such as wrestling, plus a variety of throwing and catching games.

### **17 ENTERTAINMENT AND RECREATION**

Traditional recreational games of the Aleut include a form of chess played on a board with 56 squares instead of the customary 64 and a nonstandard distribution of pieces at the beginning of the game. Cat’s cradle is another traditional favorite. Today’s Aleut enjoy many of the same modern recreational pursuits as other Americans.

### 18 FOLK ART, CRAFTS, AND HOBBIES

Traditionally, the Aleut have excelled at weaving dune grasses to make baskets, sleeping mats, and other necessary household items. They have also devoted much time and effort to the creation of their elaborate headgear. Nearly the only craft that is still practiced is the weaving of grass baskets.

### 19 SOCIAL PROBLEMS

Today, like many other Native American peoples, the Aleuts suffer from declining population and the destruction of their culture. The rate of unemployment is high, and alcoholism is a major problem.

### 20 GENDER ISSUES

The special powers and rights that were associated with whale hunting, as well as chieftainship, passed from fathers to sons in traditional Aleut society. Not all families in Aleut society had the right to whaling, and those families that did possess such rights held high status. The Aleut were like the Tlingit (See article on **Tlingit**) in having a class system of the wealthy, commoners, and slaves. Slaves in Aleut society were most often captives taken in raids or in feuding. It was primarily women who were taken as captives and then became slaves as warriors were typically tortured, defiled, and then killed.

Both men and women in traditional Aleut society could have more than one spouse at a time. Bride service was the normal means by which a man would acquire his first wife. In this system, the man would work for his maternal uncle and would be betrothed to one of his uncle's daughters during the duration of his service, which as typically from one to two years. Anthropologists refer to this marriage pattern as cross-cousin marriage, and it was the preferred pattern in precontact Aleut society. Following marriage, the couple would continue to live with the woman's parents until the birth of the first child, at which time they would relocate and live with the man's parents from then forward.

In some Aleut groups, women owned the home and all of its possessions except for the hunting, whaling, and fishing gear that belonged to the men of the household. The home and female possessions were inherited by the eldest daughter, and this pattern suggests that the eldest daughter would continue to live with her parents following marriage and the birth of the first child.

Due the rapid decimation of the Aleut population following Russian domination in the mid-18th century, there is only fragmentary evidence regarding the cultural construction of gender in precontact Aleut society.

# AMAHUACAS

**LOCATION:** Peru (Amazon river basin area)

**LANGUAGE:** Panoan

**POPULATION:** 500 (estimate)

**RELIGION:** Indigenous religion based on spirits, with possible Christian influences

## 1 INTRODUCTION

The Amahuacas are an Amerindian tribe who live in the Peruvian part of the great Amazon River basin area, which extends through Brazil to parts of Bolivia, Colombia, Ecuador, Venezuela, and Peru. The Amazon River and its mighty tributaries (17 of which are over 1,600 km or 1,000 mi long) drain about 40% of South America, including the largest area of tropical rain forest in the world. The largest community of Amahuacas lives in the surroundings of Puerto Varadero, a community located in the tropical jungle next to the Peruvian-Brazilian border.

The first expedition of Spanish conquerors into this region was led by Vicente Yáñez Pinzón, who discovered the mouth of the Amazon and ascended it for about 80 km (50 mi) in AD 1500. This was a section of the river subsequently referred to as the R'ó Marañón. Subsequently, the Spanish explorer and conqueror Francisco de Orellana embarked on the first descent of the river from the Andes to the Atlantic Ocean in 1541.

Battles with Amerindian tribes occurred from the 16th century onwards and have continued in one form or another even until today: a variety of scattered tribes, including the Amahuacas, continue to try to defend their land rights and their way of life.

The comparative remoteness of many areas allowed for the establishment of small settlements, missions, and trading posts, as well as some river ports established early on (such as Pucallpa on the Ucayali river, one of the longest tributaries of the Amazon), but prevented the total conquest of this vast area. Even 30 or 40 years ago, large areas of the eastern lowlands and jungles of Peru, known as the *montaña*, where the Amahuacas and other groups live, were largely unexplored. Even before the arrival of the Spaniards, the many tribes scattered in this part of the Peruvian Amazon basin area and along the Ucayali River were engaged in a complex relationship with each other, which included trade on the one hand and raids on the other.

During the 19th and 20th centuries the Amahuacas, among other Amerindian peoples, suffered the consequences of the exploitation and commercialization of rubber in the Amazon. Even though the so-called rubber boom helped to enhance regional development, it also had a huge impact on the environment and on the life of this community as a result of the appropriation of indigenous territories and the exploitation of their work force. Today, the Amahuacas, as well as other Amerindian people, are an endangered tribe menaced by different threats, such as ecological devastation, diseases, extraction of oil, and illegal loggers.

## 2 LOCATION AND HOMELAND

The Amahuacas of eastern Peru are part of a group of tribes classified together as Panoans and located generally in the Ucayali Valley. Some of the stronger and more aggressive tribes, such as the Chama Indians, lived along the shores of the

Ucayali River itself. They went on raids and took slaves from neighboring tribes who also spoke the same or closely related languages.

These continual raids compelled the Amahuacas to seek a less exposed position. They feared some of their more powerful neighbors because if they were captured during raids they would be taken to work as slaves for them. Together with some other tribes, they kept to the headwaters of some of the tributaries. In the case of the Amahuacas, they settled mainly along the headwaters of the Ucayali, the Juruá, and the Puruá rivers.

This is a hot, humid region that has an immensely rich plant and animal life. Jungle life usually conjures up images of unpleasant mosquitoes and dangerous snakes, but in the Amazon basin area only about 1 in 25 varieties of snakes is poisonous. A great variety of tall trees form a thick canopy so high up they seem to reach for the sky, in all shades of green, with the occasional brilliant burst of flowers. Manatees and turtles swim in the rivers, along with hundreds of species of fish. Fireflies light up the darkness in flashes of gold or green or red. Flocks of parakeets splash their color against the sky, and hundreds of different butterflies add bright touches of turquoise, yellow, orange, red, and black in gorgeous patterns. In the evening the cicadas beat their wings in noisy concert before the hush that precedes nightfall, when the nocturnal animals begin their secretive forays.

## 3 LANGUAGE

The Amahuacas speak a language that forms part of what is known as Panoan, which is spoken in Peru. The Amahuaca belongs to the Panoan language family and it is spoken in the southern part of the Peruvian Amazon Basin as well as in the border areas with Brazil by several dozen tribes, such as the Chamas, Remos, Cashibos, Nianaguas, Ruanaguas, and others. The language is also known as Amawaka, Amaguaco, Amehuaque, Ipitineri, and Sayaco. It is believed that because of the Spanish influence, the Amahuaca language have used Latin as its base. According to different sources, it is estimated that around 500 people of different tribes are fluent in the Amahuaca language. Children, especially boys, attend school for a few years and bilingualism is common. The language features suffixes “-gua” and “-hua,” both of which mean “people.”

## 4 FOLKLORE

The Amahuacas, along with many Amerindian tribes of the area, have creation stories of how the world came to be how and how they as a people came to be. In many stories, animals play a prominent part. Long centuries of observation led to an appreciation of the skills and strengths of many different animals, which play roles that are sometimes of symbolic importance in the stories. There are extended family formations where the affiliation to a particular animal (sometimes called a totem) is not only a symbol of identity but also a focal point for the contemplation of that particular animal's strengths and qualities.

Early explorers, adventurers, and traders differed greatly in their capacity to appreciate the various Amerindian cultures. The Amahuacas and others were sporadically visited by Christian missionaries from the 17th century onwards, but many missions failed over the centuries. However, this type of contact with White people, even if it did not succeed in Christianizing many groups in this area, did influence some of their

myths, legends, and stories. The individual variations of each group have meant that Christian concepts have been incorporated in widely different ways, even by groups living in the same vicinity.

## 5 RELIGION

The Amahuacas believe that every living thing has a spirit, be it a rock, a tree, a bird, a jaguar, a body of water, or a person. There is a widespread belief among people of the Amazon that there are also some evil river spirits, although in some interpretations they are thought to correspond more closely to ghosts. The Amahuacas have shamans who are seen as mediators between this world and the spirit world.

Amahuacas share a belief, widespread among the Amerindian tribes of the Amazon basin, that illness is not a natural event. Rather, it is often attributed to the harmful influence of either another person or a being from the spirit world. It is thought that illness is caused by an actual attack by one of these agents, and it is believed that a thorn or a similar sharp object that is harmful enters the person and causes the illness. It is therefore important for the shaman to manufacture his own magic thorns or similar sharp objects, which he can then direct at the offending person or entity. Shamans are seen not only as protectors for the group, both from evil spirits and from illness, but also as people who can cause harm if the occasion calls for this type of action. The Amahuaca who is preparing himself to be a shaman has to imbibe a special drug, called *cayapí*, and then he has to isolate himself in the forest and receive his magic thorns from a magician there.

Catholic missions have not been successful among many tribes in this area, including the Amahuacas. The Amahuacas were not only hostile to some of the raiding tribes, especially the Piros, the Cashibos, and the Shipibos, who at various times enslaved them, but also to White people. It was reported in the 19th century that slaves were in some cases kept to work for the capturing tribe and in other cases were sold to White people.

Nevertheless, one of the Amahuaca beliefs (about what happens to human souls after death) is superficially similar to Catholic belief, and it may be that even the few attempts to Christianize the Amahuacas on the part of missionaries left faint traces. The Amahuacas believe that a soul after death usually goes to a heaven or paradise, but some go to a type of underworld. This may be an adaptation of the Christian concepts of heaven and hell. However, where the Amahuaca beliefs differ is in the vision of what heaven offers. The soul continues to live in some respects as it did when on earth. If it is in heaven, it can get married and it consumes food. If it goes to a lower or netherworld, it lives with a spirit called Tjaxo.

## 6 MAJOR HOLIDAYS

The Amahuacas are very isolated from mainstream Peruvian culture and do not participate in the holidays, whether religious or secular, of the majority of Peru's inhabitants.

## 7 RITES OF PASSAGE

When an Amahuaca baby is going to be born, the mother retires to a secluded place and is usually assisted by a few other women during childbirth. After the baby is born, the afterbirth and the umbilical cord are buried in the earth.

Some tribes along the Ucayali River have special rites when a girl reaches puberty. The Chama customs include an elaborate festival where a group of teenage girls, having reached puberty, are gathered together during the full moon at night, while the adults of the tribe celebrate the girls' fertility by dancing and singing all night. Some other tribes isolate the girls for a few days to mark the transition from childhood to adulthood. Among the Amahuacas, no special ceremonies are reported.

There have been cases where a girl is betrothed or promised in marriage while she is still a child. In the majority of cases, if a girl wishes to marry, the girl's father has to give his permission. In some cases a man has several wives.

There is great variation in burial ceremonies, and some of these have changed over time. At different times, all of these have been practiced in the Ucayali River region: cremation, burial in a funerary urn, burial in a canoe, burial underneath the floor of the house, and burial in the earth outside of the house.

Travelers to the Ucayali reported that the Amahuacas at one time cremated the body of the dead person and then consumed the ashes. This was done by mixing the ashes with *masato* and drinking them. In more recent history, the Amahuacas continued to cremate the body but no longer consumed the ashes. Infants are buried in urns. The personal effects of the deceased are burned, and sometimes the house is either burned or abandoned. The small fields where the dead person grew his or her crops are then passed on to relatives.

## 8 INTERPERSONAL RELATIONS

Greetings respect social norms, which include the positions occupied by the various members of the family and the ex-

tended family. However, Amahuaca settlements are small, with an average of five houses inhabited by 15 people. Each of these settlements are separated by several hours walking distance. Economically and politically, each village is completely autonomous. There are no shamans or headmen, and no kin groups larger than the extended family.

It would be difficult to approach an Amahuaca casually, since this tribe has long been suspicious of strangers, quite often for very good reason. The rubber boom that swept the region in the 19th century decimated at least 90% of the Amerindian population: the Indians died from diseases to which they had never been exposed before, from brutal working conditions when they were forced to work as slaves, from starvation, and from armed conflict.

Girls and boys are allowed to have sexual relations once they have reached puberty.

## 9 LIVING CONDITIONS

For those unused to living in the tropical lowlands, life in the Ucayali river region can be very hard. It is remarkable that the Amahuacas and others adapted and survived, perhaps for hundreds if not thousands of years, in what is perceived by many as a hostile environment, where nature is fierce rather than benign. Some jungle ants not only sting but also bite; there are also scorpions and spiders, some of which are poisonous, as well as several poisonous snakes. In some rivers, the boa constrictor and the cayman pose dangers. Jaguars are hunted but also greatly feared.

The Amahuacas use a number of medicinal plants, including the leaves of a plant known as *Dracontium longpipes* that is used for snake bites, and also seek help in case of illness from their shamans. Many of the medicinal herbs of this area are not generally known to outsiders.

The Amahuacas lead a simple, sustainable lifestyle, but the strategies for survival require a considerable number of skills. Amahuacas use balsa rafts for fishing and for transporting goods. For hunting expeditions along the river, standard dug-out canoes are used. These activities of hunting and fishing provide the most important sources of protein for the Amahuacas' diet. Fish are caught with harpoon, arrows, spears, poison, bows, and arrows.

The pattern of agriculture in this area includes the slash-and-burn method, which means that when the land is exhausted after a few years, it becomes necessary to move on to another part of the forest to grow crops, often in clearings on the shores of a river. This requires a type of house that is light and methods through which a house can be quickly rebuilt elsewhere. Amahuacas also grow maize and bananas, and it is believed that this agricultural tradition was assimilated from Peruvians and missionaries.

The Amahuacas build rectangular huts with sticks and cane. Often the chonta palm is used for thatching roofs. Many accommodations are located close to water, and Amahuacas prefer to sleep in box-shaped nets instead of traditional hammocks. Some 19th-century travelers thought that the Amahuacas and some other tribes probably moved about a great deal, because they reported that they saw them living in boats. It is now appreciated that proper care and conservation, in an environmental sense, of this large rainforest area with its many rivers and tributaries does, in fact, require small settlements scattered over a large area and mobility to allow the land to lie

fallow for a time while other small areas are cultivated. This conservation strategy, which evolved over thousands of years, is now in danger of being overturned by colonists from outside the area, landowners hungry for more land, prospectors, and others.

## 10 FAMILY LIFE

The role of women is important among the Amahuacas in the sense that their society is matrilineal. When a couple gets married, they go to live with the bride's family. The extended family unit can consist of a man with several wives, but it is usual for the man to work with and for his wife's father. The Amahuacas do not live close together in large villages, but rather in extended family households over a scattered area. A household can consist of the head of the household as leader of the unit, his wife, his married daughters, and his unmarried sons.

The women do much of the productive and often heavy work, including farming and transporting goods, as well as cooking and preparing drinks, such as *masato*. They also make pottery and weave. Most Amerindians in this area grow cotton for weaving, and *urucú* or *genipa* for body paint.

The Amahuacas keep guinea pigs as pets.

## 11 CLOTHING

Amahuaca women wear a cotton skirt. Clothing for important or ceremonial occasions may include, for the man, a garment known as the *cushma*. These garments sometimes have painted panels. The designs are often geometric and the colors include black and red. They are woven of bark or cotton.

Amahuacas tattoo the face in a permanent form of ornamentation, which is usually carried out in childhood. The tattoo is made by using a thorn and soot from the copal tree. They also blacken their teeth. The dark color is obtained by chewing a species of pepper. Although little clothing is worn, a great variety of ornaments are used, including beaded necklaces, headbands, arm bands, anklets, bracelets, and rings.

## 12 FOOD

Amahuacas are a sedentary tribe that complements its diet with hunting and gathering of fruits and vegetables. A wide range of food is available in this region, including wild fruits and berries, wild honey, fish (including catfish), and game, such as water hogs, deer, tapir, peccaries, monkeys, agutis, some water snakes and caymans, and some species of water fowl, as well as parrots. The Amahuacas are skilled hunters and use bows and arrows. The arrows have four different types of tips. They also grow and use certain types of poison for fish. Food is sometimes cooked over open fires. The Amahuacas grow corn and cassava or manioc, and they use stone grinders to prepare some of the food. They also make their own clay cooking pots and a few wooden utensils, as well as sieves and graters.

## 13 EDUCATION

The education of boys includes the teaching of all the necessary survival skills, especially hunting and fishing, as well as house-building and boat-building and the making of weapons, such as bows and arrows. Girls are taught cooking, farming, pottery, and weaving skills.

The Amahuacas do not use a written language. They transmit their sense of identity and their explanations about the

world orally, through chants and stories. Officially, therefore, they are considered illiterate.

#### 14 CULTURAL HERITAGE

Music and dance form an important part of life for most Amerindian tribes of the Ucayali region. Musical instruments include gourds, rattles, flutes, and drums. These are played on ceremonial occasions.

The Amahuacas pass on to their children the sense of who they are, how they came to be, how the world came to be, and so on through stories that are transmitted orally.

#### 15 WORK

Collecting wild plants and berries is an activity that men, women, and children can perform. Hunting and fishing is a man's job among the Amahuacas. Women often till the soil and transport goods, as well as look after young children, cook, weave, and make pottery and ornaments.

#### 16 SPORTS

It has been noted by a variety of travelers that games are often very individual affairs among the Amerindian tribes of the Ucayali. There are miniature bows and arrows and dolls made for young children, as well as other miniature toys. These toys are played with individually, and these efforts do not develop into team games or sports. Children also play with corn-leaf balls, but team-based ball games are not played. Sometimes children enjoy wrestling. There are no adult sports.

#### 17 ENTERTAINMENT AND RECREATION

Most Indian groups of the Ucayali, including the Amahuacas, enjoy occasions for feasting. Typically, a successful hunt can provide an occasion, or the arrival of visitors from tribes the Amahuacas consider friendly, or a special ceremonial event. Drinking bouts are quite frequent. Fermented drinks are made from corn, sugarcane, and other plants.

#### 18 FOLK ART, CRAFTS, AND HOBBIES

Pleasingly shaped and simple pottery in everyday use is made by Amahuaca women. They also weave cotton for simple garments, and these are sometimes decorated with panels in various colors. Dyes are prepared from *genipa* and *urucú*.

The Amahuacas sleep in hammocks in their huts, and weaving a strong yet resilient hammock out of *fique* or hemp requires real skill. Baskets and various types of bags for carrying are also woven. Some pipes are made for smoking tobacco, which is not in general use. Among the Amahuacas it is often the shaman who uses tobacco ceremonially in various rituals to protect a person or a group from illness or enemies.

Ornaments and jewelry are made, including earrings and beaded necklaces.

#### 19 SOCIAL PROBLEMS

The Amahuacas have resisted incursions for a very long time, but there has been a significant change that could shatter the Amerindian communities of eastern Peru. A U.S. oil company signed a contract early in 1996 with the Peruvian state oil company. It is thought that this is the most biologically diverse region on the planet. There are about 19 Amerindian tribes in this area, including Amahuaca settlements between the upper

Piedras River and the Cujar River, which is a tributary of the Purces river. There are also some tribes that have possibly never been contacted before.

Oil prospecting requires detonating underground explosives at particular set intervals and analyzing the shock waves to assess oil deposits. Wildlife will be severely disturbed in the area, which will threaten the food supply of the Amerindian communities. It will also be difficult, if not impossible, to maintain the roving, seminomadic pattern that is an essential part of the way of life for Amahuacas and others. The Amahuacas range over long distances and their lifestyle, which plays a part in the conservation of the important resource that is the Amazon basin, may not survive this type of onslaught.

#### 20 GENDER ISSUES

Amahuacas have a high index of masculinity, which means that there are considerably more men than women in their tribes. Their social structure is based on patrilocal extended families and a hierarchical division of labor in which men are primary providers, and leaders are paradigmatic providers. The senior male of a local group owns the land, which is defended against incursions by outsiders.

With few exceptions, the work of men and women is strictly divided and complementary. While men hunt and fish, cut and clear gardens, plant manioc, bananas, and tobacco, construct houses, and make telescope storage baskets, wooden tools, utensils, weapons, and benches, women plant, harvest, and transport most of the crops, cut and fetch firewood, draw water, grind maize, butcher game, cook, and care for children. Amahuaca women also spin, weave, make pots, mats, and most of the baskets, and drill seeds for beads.

Until recently, Amahuacas were removed from modern society and were said to participate in infanticide and cannibalism. Rules structuring marriage suggest strong endogamy among Amahuacas. Young men are usually forced to marry their cousin: the daughter of their uncle on their mother's side or the daughter of their aunt on their father's side. When a young couple gets married they usually live on the husband's family land, unless the father of the bride needs help cultivating his crops.

# AMERICAN IMMIGRANTS

**LOCATION:** United States

**RELATED ARTICLES:** Vol. 2: Americans

## <sup>1</sup> INTRODUCTION

Virtually all Americans are immigrants or descendants of immigrants. As far as we know, the very first immigrants to America migrated from Asia to the North American continent somewhere between 15,000 and 40,000 years ago. The descendants of these first immigrants are now known as Native North Americans, Native Americans, American Indians, or First Nations people.

The majority of African Americans are not considered to be descended from immigrants because their ancestors were brought to America against their will. Another group of early colonists who were not truly immigrants were some 50,000 English criminals exported to America by the British government. They also did not freely choose to immigrate to America, but once in the New World, they settled down to a new life and became productive citizens.

European explorers arrived on the North American continent in the 15th century and continued to explore its lands throughout the 16th century. By the 17th century, England, France, Spain, and the Netherlands had all established American colonies. The Dutch (Netherlands) were conquered by the English in the late 17th century and withdrew from America, leaving the English, French, and Spanish to fight for control of the continent. The Europeans pushed the Native North Americans westward as they expanded their territories, eventually confining the original North American inhabitants to small reservations on undesirable land.

The 13 English colonies revolted against the crown in 1775 and declared independence from England in 1776. By 1783, the colonists had won the American Revolutionary War and established themselves as the United States of America. The U.S. Constitution contained no laws on immigration. In 1790 the U.S. government did legislate the process for becoming a naturalized U.S. citizen, however, restricting this privilege to any “free white person” who had resided in the United States for at least two years. In 1810 U.S. president Thomas Jefferson increased the residency requirement to five years, where it has remained ever since.

Because the original 13 states were former English colonies, the language, religion, architecture, customs, and legal, economic, and governmental systems of those English colonists became the standard for the United States. For the next 200 years, all immigrants were expected to be assimilated to the English norm. Only since the late 20th century has the expectation begun to shift away from assimilation towards multiculturalism in the United States. The basic structure of U.S. society is still based on the English standard, however.

The original English Puritans were fiercely Protestant, committed to a strong work ethic, and violently opposed to any extravagance. They had come seeking freedom from religious persecution but then refused that same freedom to others in their colonies. Other colonists, however, such as William Penn, promoted religious freedom for all, and a number of Catholics and Jews began to settle in America as well. In the 18th

century, Scottish and Scotch-Irish (Protestant), Welsh (Protestant), French Huguenot (Protestant), and German (Protestant, Catholic, and Jewish) immigrants arrived in the United States. Most came to escape religious, economic, and/or political oppression. France and Spain also continued to control parts of North America, and French and Spanish immigrants (nearly all Catholic) settled in those areas.

The rate of immigration rose sharply after the invention of the steamboat in 1819, which cut the length of an ocean crossing from two or more months to one or two weeks. Those who had resisted the notion of traveling for months in miserable conditions over dangerous seas on a sailing ship were much more inclined to take a one- or two-week trip on a heavy steamship. Most ship captains also required that passengers supply their own food, and more people could afford to buy one or two weeks’ worth of meals than two or more months’ worth. Conditions on the new steamships were still overcrowded and unsanitary, and many immigrants continued to become seriously ill or even die en route. But overall, the risks were fewer and the costs much less, and the number of immigrants increased rapidly.

A population boom throughout Europe in the late 18th and 19th centuries, caused by better living conditions and medical care, had also created pressure to emigrate. Most European countries did not have enough land to support all the new people, nor were there enough jobs in the pre-industrial cities to support landless peasants. Therefore, people were forced to look elsewhere for means of support. The United States was expanding rapidly and needed workers and homesteaders. Those immigrants who wished to continue farming took advantage of all the free or cheap land available in the United States, especially when the Homestead Act went into effect in 1862 (giving parcels of land at little or no cost to anyone who agreed to work it for at least five years). Others who wanted to get off the farm took one of the plentiful jobs available in mining, railroad and canal construction, lumbering, smithing, and other skilled and unskilled labor necessary for expansion.

Immigrants who came to the United States before 1880 are considered to be in the “first wave” of immigration. First-wave immigrants are also called “old immigrants.” Up until the 1880s, the United States had an open-door policy allowing almost anyone to enter the United States. Certain restrictions were applied in the mid-1800s to those with communicable diseases and to indigents with no resources, and no skills to acquire those resources. However, few were turned away, and the U.S. population grew in its multinational character.

“Old immigrants” were primarily Irish, German, Scandinavian, Canadian, and Chinese. Many were single young men who hoped to save up enough money to return home in better circumstances. Some did, in fact, return to their homelands, but the majority ended up settling permanently in the United States. These young men then encouraged their relatives and friends to join them in America, setting off a chain migration. The friends and relatives settled near the original immigrants, creating ethnic neighborhoods or farming communities. “Chinatowns,” “Germantowns,” and Irish parishes sprang up across the United States. Some of them still exist today.

About two-thirds of all U.S. immigrants by the mid-1800s came through New York City. In 1855, the city opened Castle Garden, a reception center for immigrants where they could stay while being processed. Castle Garden was replaced in 1892

by Ellis Island, which remained in service until 1943. Millions of immigrants to America passed through Ellis Island in its 51 years of functional existence. In 1976 Ellis Island opened for visits, and so many visitors came that in the 1980s the buildings were renovated and then reopened in 1990 as a museum of U.S. immigration history.

The period of 1880–1920, the second wave of U.S. immigration, is referred to as the “Great Migration” because so many immigrants entered the United States during those four decades. In contrast to the first-wave, or “old immigrants,” these second-wave “new immigrants” came mostly from southern and eastern Europe and Japan. Southern and eastern Europeans looked quite different from the old immigrants. While the old immigrants were generally fair-skinned Anglo-Saxons, the new immigrants were darker-skinned Slavic and Mediterranean peoples. Most old immigrants had spoken English or another Germanic language upon arrival in the United States, but the new immigrants spoke languages that sounded completely foreign to the old immigrant population. Many more Jews came during the Great Migration, along with Eastern Orthodox and Italian Catholics.

The influx of Japanese to the West added to the anti-Asian sentiments already developing in response to the Chinese presence there. Filipinos “imported” to work on the sugar plantations of Hawaii and in the agricultural industry of the West Coast further increased the perceived Asian threat to European Americans. In 1882 the U.S. government passed the Chinese Exclusion Act, the first serious restriction on immigration and the only one to target a single ethnic group in U.S. history. The act was extended in 1892 for another 10 years and was then extended indefinitely in 1902. The Chinese Exclusion Acts were not repealed until 1943 when China became a U.S. ally in the war against the Japanese in World War II (1939–45).

The Great Migration of 1880–1920 brought 27 million immigrants through Ellis Island. In 1907 Congress passed legislation barring immigrants with physical or mental disabilities that would prevent them from working, immigrants with tuberculosis, and unaccompanied minors (children without adult supervision). Only about 1% of all immigrants were rejected. Once the United States reached its western border and the rate of expansion began to slow down, U.S. residents began to feel pressured by all the new arrivals. In 1921, therefore, the U.S. Congress passed the first generally applied immigration act, limiting new immigrants to 3% of the total population from each ethnicity or nationality already living in the United States. This was an attempt to keep the ethnic makeup of the United States predominantly Anglo-Saxon.

The Johnson-Reed Immigration Act of 1924 limited immigration even further, setting stricter quotas for all nationalities. The Oriental Exclusion Act of the same year prohibited any Asians from immigrating. In 1929 the stock market crashed, and the U.S. economy descended into the Great Depression. Jobs were scarce, and there was no longer much to offer new immigrants. In response, Congress enacted the first complete national origins quota system, establishing a total limit of 150,000 immigrants from the Eastern Hemisphere, divided up according to percentages of the current U.S. population. Great Britain was allowed nearly half the total allowance. Great Britain, Ireland, and Germany combined comprised two-thirds of the total. Italy, which had been sending the largest number of

immigrants of any country just prior to enactment of the quota system, was now allowed only 6,000 immigrants per year.

Because the restrictions pertained only to nations of the Eastern Hemisphere, there was no limit on the number of Mexicans who could immigrate to the United States. Mexican workers leapt at the chance to fill the gaps left by European and Asian laborers who could no longer immigrate. However, there were not many jobs available during the Depression years of the 1930s. The United States even began a “repatriation program” to remove Mexican Americans back to Mexico. With the onset of World War II in 1939, however, American men left their jobs to fight in the war, and the United States suddenly suffered a labor shortage. Those same Mexicans who had been repatriated a few years before were now hired as *braceros*, contract workers with temporary visas.

World War II also brought other immigrants to the shores of America. In 1946, Congress passed the War Brides Act, allowing the immigration of foreign women (and men) who had married or become engaged to U.S. military personnel while they were stationed overseas. Many British women in particular became U.S. residents through this act. The Displaced Persons Act of 1948 opened the doors to U.S. immigration a little bit wider, allowing refugees from war-torn Europe to move to America. Many Jews who had been excluded by earlier immigration acts were now able to escape Nazi terrorism through the Displaced Persons Act. The Chinese Exclusion Acts were also repealed, as mentioned above.

A new quota system was introduced in 1952 by the McCarran-Walter Act. The new system still favored northern and western Europeans, however. Not until 1965 did Congress loosen the restrictions on southern and eastern European immigration, as well as immigration from other continents. The Immigration and Nationality Act of 1965 removed the quota system and instead allowed immigration on a first-come, first-served basis, with preferences given to those who had close family members already in the United States, and those with “desirable” job skills. Total annual limits were placed on immigration from the Western Hemisphere (120,000) and elsewhere (170,000), with a maximum of 20,000 allowed from any one country. In 1978, the act was revised to a single global limit of 290,000, with no distinctions between hemispheres.

Post-World War II immigrants are considered to be the “third wave.” The third wave of U.S. immigration is characterized by an easing of restrictions and a rise in the numbers of immigrants from Asia, Latin America, and the Caribbean. The 10 countries with the highest numbers of foreign-born immigrants in the United States today are Mexico (representing 30% of all foreign-born persons counted in the 2000 U.S. Census), China, the Philippines, India, Vietnam, Cuba, Korea, Canada, El Salvador, and Germany. The fastest-growing segment of the U.S. population is now Hispanic Americans from Latin America, who comprised 52% of the foreign-born population in 2000.

Between 1975 and 1988, some 900,000 refugees from Vietnam, Cambodia, and Laos also entered the United States. Because of the need to assist refugees from Southeast Asia and other parts of the world, the United States passed the Refugee Act of 1980, setting a special quota of 50,000 for refugees and allowing the U.S. president to accept more as well, if necessary. The general limit for total immigration to the United States was also raised from 290,000 to 320,000. Since 1980 the U.S.

*Mexican immigrant Maria Teresa Camino (center) waves an American flag along with others after being sworn in as new American citizens during a ceremony in Los Angeles, California. (AP Images/Nick Ut)*

president, in consultation with Congress, has set the quota each year for the number of refugees allowed from different parts of the world. For example, in 2008, a total of 80,000 refugees would be accepted, with 28,000 from the Near East and South Asia, 20,000 from East Asia, 16,000 from Africa, 3,000 from Europe and Central Asia, and 3,000 from Latin America and the Caribbean, with the remaining 10,000 “unallocated” to be used for special regional needs as they arise.

A “refugee” is defined as one who is homeless due to racial, religious, political, or social persecution. Economic oppression is not considered valid for refugee status. This distinction and the way it is used to exclude certain people from immigrating to the United States is quite controversial. Immigration limits and the refusal by the U.S. government to grant certain people refugee status leads many of those who are excluded to enter the United States by “illegal” means. The number of “illegal” immigrants—the preferred term among the Hispanic community is “undocumented migrants”—has risen sharply since the latter half of the 20th century. Mexicans have crossed the U.S. border without proper documentation since the late 1800s, but they are now being joined by Central Americans, Haitians, Dominicans, and others.

In an effort to reduce the number of undocumented migrants, the U.S. government passed the Immigration Reform

and Control Act of 1986, granting amnesty to undocumented migrants who arrived in the United States before 1982 and could prove at least five years’ residency. Immigration offices were unprepared for the hordes of people who applied for amnesty. Those who met the requirements were automatically given a “green card,” or legal immigrant status. With legal status, they could now sponsor their relatives to immigrate. So many chose to do so that the U.S. government had to create a new quota category in 1990 to accommodate relatives of recent amnesty recipients.

The 1986 Immigration Reform and Control Act also imposed stiff penalties on employers who knowingly hire “illegal aliens.” Unfortunately, this did little to stem the flow of undocumented migrants but did make their situation once in the United States much worse than before. A number of employers stopped hiring undocumented migrants, forcing them to go even further underground to find work. Consequently, they became even more vulnerable to exploitation. Many employers, however, discovered that even with the fines they could still save money by hiring undocumented migrants because they could pay them much less than the minimum wage required by law.

Undocumented migrants contribute a great deal of money to the U.S. economy through paying taxes (which almost all do

on a regular basis) and spending their money. They also help keep prices down by saving employers wage costs. Very few undocumented migrants make use of government services (such as welfare or food stamps), and what it costs to educate their children is much less than what they give back to the economy. Undocumented migrants also create jobs by starting new businesses and by spending their money at other businesses, enabling those businesses to hire more workers. Despite these realities, however, many established Americans blame much of the economy's ills on undocumented migrants, claiming they take jobs away from legal Americans and drain the economy through the use of public services. In fact, neither is true. As long as both the U.S. economy and the migrants benefit from the arrangement, as they now do, undocumented migration to the United States will continue.

The most recent attempts to limit unwanted immigration into the United States are the Immigration Act of 1990 that limits the number of unskilled workers allowed to immigrate to 10,000 per year; and part of the USA Patriot Act, passed in response to the attacks of 11 September 2001, which specifically prohibits the immigration of any known or suspected terrorists or anyone who has supported or is in any way related to a terrorist organization.

Since the 1980s, the movement in America has been away from assimilation to the Anglo-Saxon norm and toward multiculturalism. Cities with large Hispanic populations have become de facto bilingual, and many schools now offer bilingual education. Ethnic groceries make it possible for newcomers to continue to eat the traditional foods of their former homelands. Multicultural education and ethnic and racial pride are gaining force across America. Racism and prejudice are still widespread realities, however. A nation made up of individuals from many different racial, ethnic, and cultural backgrounds was a unique experiment when it began in the 18th century. Whether or not Americans can continue to create themselves out of such disparate elements in healthy and harmonious ways remains to be seen.

## **2 LOCATION AND HOMELAND**

Groups of immigrants from the same country or ethnic background tend to settle together, at least in the early days of their immigration. Because most immigrants entered the United States by way of New York City, many simply settled there or in the surrounding areas. New York City itself is home to large concentrations of Irish, Chinese, Italian, Jewish, Greek, Southeast Asians, Dominican, Puerto Rican, Hungarian, Russian, and Ukrainian Americans, among others. Members of these groups are also spread across the Northeast (Boston is home to many Irish and Jewish Americans, in particular). Franco-Americans live in the northern sections of the Northeast, near the Canadian border.

California and the West Coast are very popular among Asian, Central American, and Mexican Americans. Cuban and Haitian Americans, as well as some U.S. Central Americans, on the other hand, prefer Miami, Florida. Filipinos and Japanese are heavily concentrated in both California and Hawaii, those being common ports of entry for Pacific immigrants. Texas is another popular destination for both Mexican and Vietnamese Americans. There is also a fairly large German American population in Texas.

For the most part, however, German Americans chose the farmlands of the Midwest and Dakotas, as did Scandinavian Americans. A special group of German immigrants, called the Amish, also settled in the Midwest, as well as the Mid-Atlantic region. They set up their distinctive farming communities on the fertile soil of such states as Pennsylvania, Ohio, Indiana, and Illinois.

Immigrants who were not interested in farming headed for the industrial cities of the Northeast, Mid-Atlantic, and Midwest regions of the United States. Chicago drew Italian, Jewish, Slavic, Polish, Greek, Hungarian, and Irish Americans. Hungarian Americans, along with Slavic, Polish, and Ukrainian Americans, also settled in cities such as Detroit, Pittsburgh, Philadelphia, Buffalo, and Cleveland. Arab Americans continue to flock to the Detroit, Michigan, area where they were originally drawn by jobs at the Henry Ford Motor Company. Many still work in the automotive industry.

Scotch-Irish immigrants in the 18th century tended to settle in Pennsylvania, while those from Scotland preferred the South, especially North Carolina. Louisiana, with its French flavor, drew both Cajuns from Canada, and French plantation owners from Haiti. Bordering on Mexico, and having once been Mexican territory, Arizona and New Mexico are natural destinations for Mexican Americans.

Between 1820, when immigration records first began to be kept, and 2000, the largest number of immigrants came from Germany (7,176,071). Mexico has risen in the past decade to second place (6,138,150), followed by Italy (5,435,830), Great Britain (5,271,016), Ireland (4,782,083), Canada (4,487,572), and Austria-Hungary (4,367,664). About 40% of all U.S. immigrants throughout much of U.S. history have been from the five European nations of Germany, Italy, Great Britain, Ireland, and Austria-Hungary. Although Latin American (especially Mexican), Caribbean, and Asian immigration is increasing rapidly and will soon change the balance, German Americans are still the largest ethnic group in America, among those who claimed an ancestry other than simply "American" in the 2000 U.S. Census. German Americans are followed (in descending order) by Irish, African, English, Mexican, Italian, Polish, French, Native North American, Scottish, Dutch, Norwegian, Scotch-Irish, and Swedish.

According to 2000 U.S. Census foreign-born population figures, today's immigrants prefer to settle in California (8.9 million), New York (3.9 million), Texas (2.9 million), Florida (2.7 million), New Jersey (1.5 million), and Illinois (1.5 million).

## **3 LANGUAGE**

In general, U.S. immigrants are expected to learn English, and most work hard to do so. Foreign-born immigrants who do not speak English are at a great disadvantage in the English-dominated society of the United States. Language barriers severely limit employment opportunities and make life in general much more difficult. American-born children of first-generation immigrants grow up speaking English at school and with their friends, however, so they develop a natural fluency. This can create tension in the family as children become more capable in many ways than their parents. Parents may also resent the fact that their children lose fluency in the language of the parents' homeland. Communication and cultural conflicts abound between first- and second-generation immigrants due to these language differences.

The recent influx of Spanish-speaking immigrants has led to de facto bilingualism in many major cities, including Miami, New York City, Los Angeles, and Chicago. Hispanic Americans promote bilingual education, at least in elementary school, to give their children a greater chance of succeeding. An anti-Hispanic backlash among some European Americans has spawned the “English Only” movement, which began in Miami in 1980 and spread quickly across the United States. “English Only” proponents want to have English declared the official language of the United States.

American English has incorporated many words from its immigrants’ languages, however. “Cookie,” “spook,” and “waffle” come from the Dutch, while German Americans contributed “kindergarten,” “gesundheit,” “ouch,” “delicatessen,” and “blitz.” Even Filipino Americans, though small in number, have given American English the words “yo yo” and “boondocks.”

English has borrowed numerous words from the French, including “boulevard,” “avenue,” “laissez-faire,” “coup” and “coup d’état” “potpourri,” “r.s.v.p.” (répondez, s’il vous plaît), “chic,” and “déjàvu.” French and Italian have given Americans many words for foods and cooking methods, such as “omelet,” “mayonnaise,” “hors d’œuvres,” “bouillon,” “filet,” “purée,” “sauté,” and “à la mode,” from the French, and “pasta,” “spaghetti,” “ravioli,” and the like from Italian.

Many U.S. immigrants Americanize their names in order to blend in with mainstream society. This was particularly true for second-wave immigrants. German names like Schmidt became the common English name Smith. Lebanese Americans changed their names from Haddad and Ashshi to their English equivalents, Smith and Cook. Italian Americans simply removed the final letter or letters from their names to change Italian-sounding names like Rossi and Gilberti to the English Ross and Gilbert. Today’s immigrants are more likely to retain their original names, although some Hispanics drop their mother’s surname, keeping only their father’s (as is customary in mainstream America), and some Asians reverse their names to follow the standard American given name-surname order.

#### 4 FOLKLORE

Immigrants to the United States bring with them the legends and folktales of their homelands. Some of those tales have made it into the general American culture. The German stories in the Grimm brothers’ collection, as well as those by the French storyteller Charles Perrault and Danish master Hans Christian Andersen, are very well known by nearly all second- and later-generation Americans. Persian tales from the Arabian Nights and English nursery rhymes from Mother Goose are also quite familiar to most Americans.

Poet Henry Wadsworth Longfellow immortalized two early American heroines. Longfellow’s poem *The Courtship of Miles Standish* recounts the romance of Priscilla Mullins (Molines), a French Huguenot immigrant, and *Evangeline* tells the story of a young Cajun woman of that name. A real-life Cajun character who has since become legendary is pirate Jean Lafitte.

In recent years, increasing efforts are being made to record the folktales of various ethnic groups in America. Hmong legends have been collected by Charles Johnson in a book called *Myths, Legends, and Folktales from the Hmong of Laos*, published by Macalester College in 1985. Amy Tan and other Asian writers have begun telling the stories handed down to them by their parents and grandparents. Anthologies of Irish,

Scottish, and other folklore are becoming widely available as well in libraries and bookstores across America.

#### 5 RELIGION

The first English colonists in America were staunch Protestants and gave the United States a definite Protestant character for much of its history. The early English Protestants were joined by Dutch, French (Huguenot), Scotch-Irish, Scandinavian, and German Protestants during the 18th and early 19th centuries. This union cemented the Protestant slant of the United States. The Irish constituted the first major wave of Catholics in the United States and came to dominate the American Catholic Church. Some Italian, some German, Polish, and Hispanic Catholics found Irish Catholicism rather unappealing when they arrived in the United States and formed their own parishes.

The Greeks and Eastern Europeans brought another form of Christianity to America, known as the Orthodox Church. Small groups of Anabaptists, such as the Amish, Quakers, and Mennonites, created their own distinctive Protestant communities. American Jews gathered together and built synagogues, and Asian American Buddhists and Hindus constructed temples and ashrams. Eventually, enough Arabs immigrated to the United States to establish Muslim mosques; the lack of mosques had discouraged Arab immigration for some time.

Clearly, the United States is no longer a Protestant nation. Christianity is still the majority religion, but other religions are well represented. Mainstream Americans have recently shown an increasing interest in Asian philosophy and religion, such as Buddhism, Zen, yoga, and the martial arts.

#### 6 MAJOR HOLIDAYS

Most U.S. immigrants learn to celebrate major American holidays such as Memorial Day (the last Monday in May), Independence Day (July 4), Labor Day (the first Monday in September), and Thanksgiving (the last Thursday in November). They also celebrate whichever holidays are recognized in their particular religious faith. Many non-Christian Americans observe Christmas as well because it has become as much a secular, commercial holiday as a religious one in America.

Every ethnic group seems to have its own New Year’s Day. The official American date for New Year’s is January 1, but for Jewish Americans, New Year’s (or Rosh Hashanah) falls sometime in September or October; for Chinese and Vietnamese Americans, it occurs in late January or early February; the Cambodian American New Year is in mid-April; and Hmong Americans ring in the New Year in December.

French Cajun and Creole Americans hold a huge festival every year in New Orleans on Mardi Gras (“Fat Tuesday”), the day before the Christian observance of Lent begins on Ash Wednesday. Parades of costumed, masked figures, music and dancing, feasting, and general revelry draw thousands of visitors from across America. Irish Americans introduced St. Patrick’s Day on March 17, and Italian Americans made Columbus Day on October 12 into a national holiday.

Certain holiday traditions have also spread from specific ethnic groups into mainstream America. Blindfolded children of all backgrounds swing sticks at Hispanic *piñatas* (hollow, animal-shaped pottery or plaster containers that are filled with candy and gifts), and try to break them so the contents will spill out. The American name for Santa Claus comes from the

Dutch word for St. Nicholas, *Sinterklaas*, but the character itself was brought to America by the Germans. German Americans also introduced the traditions of Christmas trees and New Year's Eve festivities.

## 7 RITES OF PASSAGE

Other than birth, marriage, and funeral rites, most American immigrants drift away from traditional rites of passage. As a society, America has few meaningful rituals to denote passage from one stage of life to the next. Academic graduations, the first job, getting a driver's license, reaching the legal voting or drinking age, buying a house, and marriage are today's American rites of passage. Only Jews (and some Native North Americans) have managed to maintain their traditional rituals. Most Jewish boys and many Jewish girls go through a bar or bat mitzvah at the age of 13, the ritual age of adulthood.

## 8 INTERPERSONAL RELATIONS

Every immigrant group brings with it to the United States its own customs of interpersonal relations. American-born children, however, quickly become "Americanized" and begin to lose their distinctive ethnic style of interaction. Certain tendencies may remain for generations, such as the Italian American flair for dramatics versus the German American somber stoicism.

Nearly every immigrant group soon establishes mutual assistance organizations, as well as social and cultural associations. These organizations and associations replace the support given by extended families and close-knit communities in the immigrants' homelands.

## 9 LIVING CONDITIONS

Newly arrived immigrants to the United States often live in overcrowded slums until they are able to earn enough money to move to better neighborhoods. Those who do not speak English have an added barrier to success and must work extra hard to improve their circumstances. Even immigrants who have English language skills and upper-level educational and employment experience may still have to start working below their qualification level and find themselves with a much lower standard of living than that to which they were accustomed in their former homeland.

Refugees suffer from shock, injuries, and illnesses sustained prior to and during immigration, post-traumatic stress disorder, and other stress-related diseases. Many of today's refugees from Southeast Asia and Latin America have problems as severe as those found in survivors of Nazi concentration camps in World War II (1939–45).

Many immigrant groups continue to practice traditional folk remedies, such as teas or charms, to cure illness. First-generation immigrants from less industrialized countries are often hesitant to use modern Western medicine or go to Western doctors or hospitals. Mainstream Americans, on the other hand, are becoming increasingly interested in some of these folk remedies, creating an "alternative" medicine movement. Eastern medicine, brought to the United States by Asian Americans, has gained many adherents throughout the United States among Asian and non-Asian Americans alike.

## 10 FAMILY LIFE

Family structure is perhaps the element of immigrants' lives that undergoes the most change upon resettlement in America. Many immigrants come from cultures that center on extended families with clearly defined gender and generational roles. American society, on the other hand, is highly mobile (creating a focus on nuclear family units), youth-oriented, and much less gender-defined. Immigrant families are often torn apart by immigration or the need to travel once in the United States to find work. Children quickly learn that American youth are independent and begin to resent their parents' control. Foreign-born parents are dismayed by their Americanized children's lack of respect and obedience. Foreign-born parents whose traditional culture involves arranged marriages are also distressed when their Americanized children want to go out on dates without chaperones and choose their own mates.

Many women are forced to work outside the home to help support the family, perhaps the first time they have ever done so. Men feel diminished because they are no longer the sole breadwinner, and they may feel their authority is threatened. Some women discover that they like having more freedom and begin to resist their traditionally defined roles. Some men who are frustrated by their inability to support their families and by their wives' new independence turn to drugs or alcohol to numb their feelings. They may also take out their frustrations on the women and children around them by becoming verbally or physically abusive. Domestic violence is a serious problem among some immigrant families.

The generation gap that always exists between parents and children, and even more so between grandparents and grandchildren, is intensified by the cultural differences between foreign-born parents and grandparents and American-born children. For some immigrants, a new conflict between men and women is introduced by the increased freedom for women in the United States, and the necessity for women to work outside the home. Tensions lessen with each succeeding generation as the family becomes more Americanized. However, with the lessening of tensions comes a loss of traditional ethnic culture.

## 11 CLOTHING

Today's world is becoming increasingly westernized, and many recent U.S. immigrants arrive in America with much the same clothing as mainstream Americans wear. Others, such as some Asian Indian women and Muslim Arabs, continue to wear their traditional clothing in the United States. Separatist groups like the Amish and conservative Mennonites wear distinctive dress based on centuries-old styles. All ethnic groups have cultural festivals in which dancers or parade participants wear the traditional dress of their particular culture, but most U.S. immigrants quickly adapt to American-style clothing for everyday use.

Certain elements of typical American dress were introduced by U.S. immigrants. For example, the blue denim used to make blue jeans is probably based on a kind of Cajun cloth dyed with indigo. Tartan plaids and tweed woollens were brought to America by the Scottish and Scotch-Irish. Various immigrant groups have brought with them different types of hats that then were worn by all Americans, such as the English bowler or French beret.

## 12 FOOD

American food is a colorful blend of many different ethnic traditions, as well as indigenous foods such as squashes and turkey. The cuisine of some immigrant groups has become popular on its own, like Mexican, Italian, French, Chinese, Japanese, Asian Indian, Middle Eastern (Arab), Greek, and Cajun. Ethnic restaurants do a good business in most areas of the United States. Newer immigrant groups are beginning to introduce their cuisines to the general American public; restaurants serving Cuban, Central American, Vietnamese, or Cambodian foods are gaining popularity.

Many immigrant groups have introduced specific foods that have become a part of mainstream American eating. Jewish Americans contributed bagels with lox, deli foods, kosher dill pickles, potato latkes, and chicken soup (as a cure for the common cold). From the Dutch came pancakes, waffles, coleslaw, doughnuts, and cookies, while the Germans brought beer, frankfurters, hamburgers, potato salad, bratwurst, liverwurst, and pretzels. Sauerkraut is credited to both Germans and Poles, and Poles and Russians share credit for vodka. Poles also gave America kielbasa, pierogis, Polish dill pickles, and Polish ham, and Russians taught Americans to eat chicken kiev, stroganoff, sour cream, borscht, and pumpernickel bread, as well as to drink tea with lemon. The Scottish can be thanked for Scotch whiskey.

## 13 EDUCATION

Almost without exception, immigrants to the United States place a high value on education. A number of immigrants come to the United States expressly to pursue higher education or to give their children a chance at a good education. A few immigrant groups dismissed higher education at first as unnecessary (such as Polish, Slavic, and Italian Americans), believing a steady job was more important than an academic degree. Later generations of these groups have become more interested in education after seeing the opportunities it makes available in the United States. In particular, after World War II (1939–45), many soldiers took advantage of the GI Bill to pay for higher education and advanced themselves to skilled labor or professional positions.

A number of immigrant groups founded ethnic schools, usually meeting on weekday afternoons or weekend mornings, to promote their traditional language and culture. Armenian, Russian, Ukrainian, Greek, Chinese, Japanese, and Korean Americans, among others, created these schools to teach their children traditional ethnic ways. Foreign-born parents for the most part want their children to become Americans, but they also fear the complete Americanization that makes their children strangers to them and to their ancestral language and traditions. Most children resent the extra time they must spend on ethnic school work when their other American friends are out playing or taking part in extracurricular activities. Some children, on the other hand, appreciate learning about their ethnic background and enjoy speaking their ancestral language.

The Roman Catholic parochial school system, which provides good-quality, inexpensive private education for many American children, was established by Irish Americans in the 1830s–1840s. German Americans introduced the concept of kindergarten and founded the first U.S. kindergartens in the 1850s. They are also responsible for the inclusion of physical education in school curricula. Higher education for the deaf

was developed in large part by the French American Gallaudet family, founders of what is now called Gallaudet College in Washington, D.C., the only liberal arts college for the deaf in the United States. French Americans also founded the Juilliard School of Music in New York City, the premier music school in America.

Other colleges and universities founded by U.S. immigrant groups include St. Olaf College in Northfield, Minnesota, established in 1874 by Norwegian Americans; and Princeton University in Princeton, New Jersey, founded by Scottish Americans as a Presbyterian seminary in 1746.

## 14 CULTURAL HERITAGE

American arts culture, like American food, is a rich mixture of various ethnic elements contributed by the multitude of immigrants who make up America's population. Greek architecture with its massive columns stands alongside small Swedish log cabins and Haitian "shotgun" houses. Latin American surrealist fiction and poetry shares the shelf with books of Japanese haiku. The Japanese arts of ikebana (flower-arranging) and origami (paper-folding) are pursued by non-Japanese as well as Japanese Americans. One of the most enduring symbols of America, the Statue of Liberty, is a combination of French and Jewish talents. The statue was designed by French artist Frédéric-Auguste Bartholdi, and the poem on the base ("Give me your tired, your poor,/ Your huddled masses, yearning to breathe free . . .") was written by Jewish American Emma Lazarus.

The Hollywood film industry was founded by two Hungarian Americans, Adolph Zukor and William Fox, and countless immigrant American actors and directors have made it a worldwide success. Italian Americans brought with them a love of opera, and in New York City in 1932, Italian immigrant Lorenzo Da Ponte founded the Italian Opera House, the first opera house in the United States.

American music is a true festival of ethnicity. Cajun music, Zydeco, Latin salsa, Cuban rhythms, Mexican mariachi and Tex-Mex sounds, Polish and German polkas, Asian Indian ragas, and the drone of Scottish bagpipes are heard across the United States. The rumba, mambo, Conga lines, and chachachá, very popular dances in mainstream America during the 1930s and 1940s, were introduced by Cuban immigrants. The now-common Christmas carol, "Carol of the Bells," was first brought to the United States by the Ukrainians.

The structure of blues music, one of the most "American" forms of music, is based on Haitian folk songs sung by early Haitian immigrants to Louisiana in the 19th century. Haitian Americans also contributed certain drums and rhythms, as well as the banjo, to American music. Early American folk music consisted largely of old ballads from England, brought by the very first English settlers. Today's American folk music, as well as country and western, rock, funk, and other genres, is an inextricable blend of elements from nearly every immigrant group that has ever set foot on the shores of America.

## 15 WORK

America is built on the backs of its immigrants. All immigrant groups, from the very first to the most recent, documented and undocumented, have poured their energies into the American labor pool. Many immigrants begin in unskilled, menial labor positions because they lack the language and/or industrial-

ized job skills to be employed at higher levels. Even those with advanced degrees and experience must often start out in jobs for which they are overqualified, until they gain the language skills and accreditation required in the United States for higher-level positions.

During times of expansion and economic growth, the United States has encouraged immigration in order to build its labor force. During the late 1800s, the United States even advertised for immigrants in Western European countries. In contrast, when the economy is depressed, immigration is discouraged because of fears of job scarcity. Peoples of many less-industrialized countries continue to see America as a land of opportunity regardless of the current state of the U.S. economy because even during a depression, the United States still offers a great deal more in the way of economic advancement than do their homelands.

When the United States chooses to restrict immigration during economic downturns, many underprivileged peoples choose to use “illegal” means of gaining entry to America. Undocumented migrants have always existed in U.S. society; the agricultural industry of the West and Southwest was largely developed through undocumented migrant labor. Employers continue to hire undocumented workers because they do not have to pay them the legal minimum wage and can therefore save a great deal in wage costs. The employers’ savings are passed on to the consumer in lower prices. Although the U.S. government attempts to stem the flow of undocumented migration, the U.S. economy actually benefits from the migrants’ labor, encouraging both sides (migrants and government) to continue playing their part in the game.

## 16 SPORTS

Many sports now popular in the United States were introduced by immigrant groups. For example, both downhill and cross-country skiing were brought to America by the Norwegians, while the Scots brought golf and curling (a sort of shuffleboard on ice). The Italians taught Americans to play bocce (lawn bowling), and the Chinese, Japanese, and Koreans shared their various martial arts.

The United States introduced the sport of baseball to other countries, and many players from those countries now add their skills to U.S. teams. Cuban, Dominican, and Central American players, among others, are common in the U.S. major leagues. Softball leagues and Little League teams are sponsored by many different U.S. immigrant groups. Soccer, the most popular sport in the rest of the world, is becoming more popular in the United States through the influence of a variety of immigrant groups. Sports, particularly baseball, can open the door for some immigrants who would otherwise have a difficult time being accepted for immigration to the United States.

## 17 ENTERTAINMENT AND RECREATION

All immigrants to America bring with them their own forms of entertainment and recreation. Some of those entertainments make their way into the larger American culture. For example, the early English Puritans were very somber people who did not believe in frivolous activities. When the Germans arrived, however, they instilled a different sense of fun into American society. Rather than the strict observances of the Puritan sabbath on Sundays, German Americans spent the day resting

and enjoying a break from their labors. Today’s understanding in the United States of weekends as a time of play descends from those original German Americans. German Americans also introduced the ever-popular Oktoberfest, and beer gardens, to the United States.

Many U.S. immigrant groups gather one or more times a year for cultural festivals that serve as ethnic pride and education events, as well as times for socializing. Among some traditional groups, the festivals are also an opportunity to meet potential marriage partners. Others simply enjoy eating their ethnic foods, wearing their traditional costumes, and listening and dancing to traditional ethnic music. On an everyday basis, most U.S. immigrants quickly adopt American forms of entertainment and recreation, such as watching television or going to movies.

## 18 FOLK ART, CRAFTS, AND HOBBIES

Examples of ethnic folk arts can be found at the various cultural festivals held across the United States each year. Certain ethnic crafts, such as painted Ukrainian Easter eggs and Hmong *paj ntaub* (an intricate form of needlework, also known as *pa ndau*), have become more widely popular in America. Some Amish crafts are considered valuable collectors’ items in the United States.

Mexican and Central American folk arts are gaining popularity among the general American public today. Hispanic American murals grace the walls of many buildings in major U.S. cities, and shops selling *santos* (homemade religious figurines) or other Latin American crafts are frequented by Hispanic and non-Hispanic Americans alike. The new trend towards multiculturalism and ethnic pride in the United States is creating a wider market for folk arts and crafts of all ethnic groups in America today.

## 19 SOCIAL PROBLEMS

The Ku Klux Klan, a violent white supremacist group, was founded in the 19th century by Scotch-Irish Americans. This was not the beginning of racism in America, however. Racism has always been a serious problem in American society, as has religious discrimination, ethnic hostility, and cultural prejudice. The Puritan settlers of the 1600s came to the New World to escape religious persecution in England but then proceeded to persecute non-Puritans who dared to settle near them in America. Anti-Asian legislation was passed in California as early as the 1850s, and the Chinese Exclusion Act, barring any further Chinese immigration to the United States, was passed a short time later in 1882.

Anti-German hysteria during World Wars I (1914–18) and II (1939–45) was so extreme that music by Beethoven was banned from symphony concert programs, sauerkraut was renamed “liberty cabbage,” and even dachshunds (meaning “German hounds”) were dubbed “liberty hounds.” Hungarian Americans also met with suspicion during the wars, as Hungary was allied with Germany. All American ethnic groups were driven to hide their ethnicity and prove themselves “good Americans” during the war years.

One of the most blatant and grievous examples of racial hostility in the United States was the internment of Japanese Americans in detention camps during World War II (1939–45). Americans whose only crime was their ethnic background were forced from their homes and imprisoned for the dura-

tion of the war with Japan. Anti-Asian violence continues to be a problem today, particularly with the recent influx of large numbers of Southeast Asian refugees into many U.S. cities.

The brutal attacks on the United States on 11 September 2001 by the terrorist Al Qaeda group sparked a new xenophobic era of prejudice, violence, and discrimination against all Arabs or even those who “look” Arab, even though many Arab Americans were also killed in the attacks and others rallied to the support of the victims. Much confusion over the identities and allegiances of the attackers prompted non-Arab Americans to blame anyone in a headscarf or with an Arab name for the horrors and to retaliate accordingly. At the same time, a number of Arab and non-Arab American groups took the opportunity to begin educational programs and cooperative efforts to promote better understanding among all Americans. The result was that along with the rise in hate crimes came a new sense of neighborliness and mutual cross-cultural respect.

Although the American consciousness continues to lean towards multiculturalism and ethnic pride today, racism and cultural conflicts still plague the United States. Current immigration policies, though made more inclusive by reforms in the 1960s, continue to provoke accusations of racism, as white Cubans are welcomed while black Haitians and Dominicans are denied entry. Mixed-race Mexicans and Central Americans are also refused refugee status. U.S. investments in foreign countries and influence over their governments play a large part in refugee status decisions as well. However, racism cannot be denied. The perpetual flow of undocumented migrants across the Mexico-U.S. border is another contentious issue with continuing debates in Congress as well as among the general population over proposed solutions. A bill was passed in 2006 to build a “secure fence” along the border, but the efficacy of that solution (as well as how to fund it) continues to be hotly argued by opponents. A number of demonstrations have been staged in recent years by supporters of both sides of the controversy surrounding undocumented migration.

Another result of the September 11 attacks was an increased concern with national security, particularly as it relates to our borders. Keeping undocumented Mexicans out of the United States is not the only reason to tighten border regulations. There is a very real desire to keep out those who wish to do America harm. Even the long-open border with Canada now requires a passport from all wishing to cross into the United States.

Despite new fears, and old ones, the great experiment of a nation created out of many racial, ethnic, and cultural elements continues in America. New immigrants arrive daily to add their ingredients to the mix, and American society takes on a slightly different flavor with each one. The United States is faced with many decisions today about who and how many to allow through its doors, and tomorrow will surely bring others. The choices that are made will determine the future shape of America.

## 20 GENDER ISSUES

Throughout its entire history, U.S. immigration law has consistently denied one group access to legal immigration to the United States: homosexuals. The 1952 Immigration and Nationality Act excluded those “afflicted with psychopathic personality, epilepsy or mental defect,” which was understood to include homosexuals. In 1965, the act was amended to state

this intention more clearly, excluding those “afflicted with sexual deviation.” When the U.S. Surgeon General issued a new policy in 1979 declaring that homosexuality should not be considered a mental disease or defect, homosexuals began to challenge decisions by the Immigration and Naturalization Service (INS) that excluded them on the basis of their sexual orientation alone and finally won a case in 1983. Given these changes, the 1990 Immigration Act no longer excluded immigrants based on sexual orientation.

However, anyone testing positive for the HIV/AIDS virus is still denied entry to the United States, and all applicants for immigrant visas are required to take an HIV/AIDS test. Also, anyone found carrying HIV/AIDS medications in their luggage can be refused entry. This obviously prevents homosexuals who are HIV-positive from crossing the border. A noncitizen living legally in the United States can even be refused reentry after traveling abroad if he or she is HIV-positive.

The major obstacle to immigration for homosexuals, however, is the centrality of “family reunification” in U.S. immigration law. Because same-sex marriage is not recognized by the U.S. government, a gay or lesbian U.S. citizen cannot sponsor his or her same-sex partner for immigration, as an opposite-sex spouse can do. Even if the immigrant’s country of origin recognizes the same-sex marriage, or if the couple was married in a U.S. state where the marriage is legally recognized, the INS refuses to view the couple as “family.” This leaves binational same-sex partners with few options. Most try to juggle different types of visas to extend their time together; some choose to stay beyond the expiration date of their visas and become “illegal” immigrants, or even enter into sham heterosexual marriages to stay near their partner, taking the risk either way of being deported if discovered. Others decide to leave the United States altogether and move to a country that honors same-sex unions.

The Permanent Partners Immigration Act was introduced in Congress in 2000 to change the INS definition of “family” to include same-sex partners, but the bill never made it out of committee. It was then rewritten and resubmitted in 2005 as the Uniting American Families Act and has over 100 co-sponsors from both houses. Among the many organizations that support the bill are Amnesty International, Human Rights Watch, and People for the American Way. If passed, the act will add the term “permanent partner” to all sections of the Immigration and Nationality Act where “spouse” appears, thereby allowing lesbians and gays to sponsor their same-sex partners for immigration.

## AMERICANS

**LOCATION:** United States

**POPULATION:** 300 million (2006)

**LANGUAGE:** English; Spanish, and other minority languages

**RELIGION:** Christianity (Roman Catholic, Protestant [Baptist, Methodist, Lutheran, Presbyterian]); Judaism; Islam

**RELATED ARTICLES:** Vol. 2: African Americans; American Immigrants; Native North Americans

### 1 INTRODUCTION

The United States of America, with a population of more than 300 million, is a nation of immigrants. The very first Americans are thought to be prehistoric Asian peoples who first arrived on the North American continent sometime before 10,000 BC. From these first settlers evolved the cultures of the North American Indian tribes. When the European explorers first came to North America in the 1500s, an estimated two million people were living in the land that was to become the United States. The Europeans had advanced industrial, military, communications, transportation, and construction technologies that enabled them to dominate the native peoples. Successive waves of European immigrants ultimately led to a policy of forcibly resettling the tribes to make way for the new settlers. In the process, thousands of native people were killed or died when driven from their homes. By 1890, according to the official census count, there were only 248,253 native peoples remaining in the United States. Still, many tribal societies survived warfare with white settlers and retained their cultures. Their survival, however, has been on the fringes of North American society. Today, less than 1% of the population of the United States consists of these first Americans.

Another people subjected to the domination of the early European Americans were the African slaves who were forcibly brought by businessmen to America to work the plantations in the South during the 18th and 19th centuries. By the outbreak of the Civil War in 1861, the slave population of the United States had reached a figure of 4,000,000 persons. Although slavery was abolished in the 1860s, discrimination against blacks remained institutionalized until the major social legislation of the 1960s. Even in the 21st century, racism is one of America's enduring social problems. As of 2008, approximately 13% of the population of the United States could trace its ancestors back to these African peoples.

Ultimately, the Native Americans, African Americans, the European settlers, and the successive waves of immigrants that followed worked together to build one of the most powerful nations on Earth. Americans excel or lead in almost all areas of human endeavor.

European immigration to the United States peaked between 1880 and 1920 when over 20 million Europeans came to America. In 1900, 96% of all immigrants to the United States came from Europe, especially from Germany, Ireland, and Italy. In many cases these immigrants were fleeing starvation, poverty, and war. America offered hope and opportunity. For them, America was a great "melting pot" where people from many different lands came together and melted into a new American society. People from throughout Europe left the languages and customs of their native lands behind and began the process of

being assimilated into American society. After three or four generations in the new land, their descendants felt as American as the descendants of the original colonists. Unfortunately, the Europeans were reluctant to welcome non-Europeans into this “melting pot.” Still, Americans held a deep belief in the principles of equal rights and equal opportunities. These principles, embedded in the nation’s constitution and enforced by law, ultimately opened the door to full participation in American society to all Americans. Some would argue, however, that the door has not been opened very wide. Consequently, minority groups in America continue to struggle to assert their rights as American citizens. Estimates of the foreign-born population in 2000 ranged between 10.5 and 11 percent—higher than it had been since 1930, but still well below the peak of nearly 15 percent between 1870 and 1910.

As of the 2000 census, the American immigrant was more likely to be Asian (25.5% of all immigrants) or Hispanic (51.1%) rather than European (15.3%). Demographers predict this immigration pattern will continue. They estimate that by the year 2050 over 29% of the population will claim Hispanic origin (up from 10% in 1990), 13% will be blacks, while another 9% will be Asian (3% in 1990). By then, only 47% of the population will be of European origin, as opposed to 85% in 1960. Census categories, however, can be confusing and sometimes misleading. Whereas the terms Asian and Black are terms that define a *race* of peoples, the term Hispanic defines a geographic location (people from the Caribbean, Mexico, and Central and South America). Consequently, a person of Hispanic origin can be of any race. Many Hispanics are black while others trace their ancestors to the European countries of Portugal and Spain. There are even small percentages of Hispanics with Japanese, Chinese, or Filipino ancestry.

Now that the non-European groups are becoming a stronger force in American culture, the “melting pot” paradigm is fading. Today, most academics term America a multicultural society that is more like a “salad bowl” than a “melting pot,” with each ethnic group maintaining its identity in the mix. The well-known political scientist Samuel Huntington observed that former President William Clinton was the first American president to stress diversity instead of unity as a national goal.

## 2 LOCATION AND HOMELAND

The land Americans came to call their own is located in the Western Hemisphere on the continent of North America. The United States is the third-largest country in the world with a total area of 9,826,630 sq km (3,794,083 sq mi, land and water area combined). The northeastern coast, known as New England, is rocky, but along the rest of the eastern seaboard, the Atlantic Coastal Plain rises gradually from the shoreline and merges with the Gulf Coastal Plain in Georgia. To the west is a plateau, bounded by the Appalachian Mountains. This plateau extends from southeast Maine into central Alabama. Between the Appalachians and the Rocky Mountains, more than 1,600 km (1,000 mi) to the west, lies the vast interior plain of the United States. The Rockies and the ranges to the west—the Sierra Nevada, the Coast, and Cascade ranges—are parts of a larger mountain system that extends through the western part of Central and South America. Between the Rockies and the Pacific Ranges lies a group of vast plateaus containing most of the nation’s desert areas, known as the Great Basin. The coastal plains along the Pacific Ocean are narrow, and in many places,

the mountains plunge directly into the sea. Separated from the continental United States by Canada, the state of Alaska occupies the extreme northwest portion of North America. The state of Hawaii consists of a group of Pacific islands formed by volcanoes rising sharply from the ocean floor.

## 3 LANGUAGE

The primary language of the United States is English, enriched by words borrowed from the languages of Indians and immigrants, predominantly European. Some 82% of all Americans speak only English while at home. Over 10% of the population speaks Spanish at home. The majority of Spanish speakers live in the Southwest, Florida, and eastern urban centers. Other languages spoken at home include French, German, Chinese, Tagalog, Vietnamese, and Italian. Of the 20 non-English languages spoken most widely at home, the largest proportional increase in the 1990s was Russian. Speakers of this language nearly tripled from 1990 to 2000, from 242,000 to 706,000. The second largest increase was among French Creole speakers (including Haitian Creoles), whose numbers more than doubled, from 188,000 to 453,000.

## 4 FOLKLORE

Characters associated with the taming of the American wilderness, especially cowboys and Indians, are featured prominently in American folklore. Among the best known of these mythical figures are John Henry, Paul Bunyon, and Pecos Bill. John Henry was a “steel-driving man” (someone who used a sledgehammer to drive spikes into railroad ties) who challenged a steam-driven hammer to a spike-driving contest. As the story goes, John Henry won the race but immediately died thereafter. Paul Bunyon was a woodsman who could fell a tree with a single swing of his ax. He rode a giant blue ox named Babe. Pecos Bill was a cowboy in the so-called “wild west.” He could lasso a tornado and ride a mountain lion.

Americans are fascinated with outlaws. Among America’s most famous outlaws are Billy the Kid and Al Capone. Born in 1859, Billy the Kid had a career of cattle rustling and murder. He was shot and killed in New Mexico by Sheriff Pat Garrett on 15 July 1881. In the 1920s, “Big Al” Capone was a gangster who dominated the Chicago crime scene. He engaged in gang warfare and bootlegging during America’s Prohibition period when the sale of alcohol was prohibited. Although a ruthless killer, Al Capone was never convicted for any of his violent crimes; he went to jail for income tax evasion.

Since baseball is known as the national pastime, it is fitting that the story of baseball hero Babe Ruth has reached mythic proportions. The “Babe” is considered by many as the best player ever to have played the game. Some people have said that with the World Series, baseball’s championship, on the line and his team, the New York Yankees, behind on the scoreboard, Babe pointed with his bat to the outfield bleachers and then promptly hit a home run right to the designated spot.

Americans have a deep belief that anyone can achieve wealth and success if he or she works hard enough and is smart enough. Consequently, many Americans know a “rags to riches” story of someone who has beaten the odds and gone from poverty to immense wealth.

**5 RELIGION**

Although all of the world's major religions have adherents in the United States, the U.S. is primarily a Christian nation. Over 23% of the population is Roman Catholic, while another 51% are Protestant or non-denominational Christian. The largest Protestant denominations are the Baptists with more than 16%

of the population, followed by the Methodists (6.8%), Lutherans (4.6%), Presbyterians (2.7%), and Pentecostal/Charismatics (2.1%). Approximately 1.7% of the population is Jewish and 0.6% is Muslim. Atheists or agnostics account for 4% of the total population. Trends show that mainline Protestant churches

are in decline, non-denominational churches are gaining, and the ranks of the unaffiliated are growing.

Although Americans observe the holidays and traditions of their respective faiths, no religious holiday has become as institutionalized as Christmas, the day Christians celebrate the birth of Jesus Christ. However, for many Americans, the Christmas holiday has become as much a secular holiday as a religious one. The custom of buying Christmas presents for family and friends has made Christmas an important season for many of America's retailers. Consequently, the profits generated during the Christmas shopping period are watched closely by stock market investors on Wall Street and economic analysts in the government in Washington, D.C.

Although the U.S. constitution mandates a strict separation between church and state, the relationship between these two spheres of society is often blurred. For example, American currency is inscribed with the words "In God we Trust" and many public offices, including most public schools, close for the important Christian holidays. In areas with a heavy Jewish population, the public schools close for the Jewish holidays as well. On the other hand, officially sanctioned prayers in public school are forbidden.

## 6 MAJOR HOLIDAYS

The most important non-religious holidays celebrated by Americans are Independence Day (the fourth of July) and Thanksgiving Day (the fourth Thursday in November). Independence day celebrates the signing of the United States' Declaration of Independence from England on 4 July 1776. On the fourth of July, many Americans have an outdoor picnic or barbecue. Many communities sponsor parades with high school marching bands, local dignitaries in antique cars, and fire trucks with their sirens blaring. At the end of the day, people gather at a local park to watch a display of fireworks.

Thanksgiving Day celebrates the Pilgrims' first harvest in the new world. When the Pilgrims arrived from England, they had little knowledge of how to survive in their new land. They were helped by the local native Americans who taught them how to plant corn. The harvest was successful, and the Pilgrims celebrated by inviting the local inhabitants to share in a meal of thanksgiving. Since then, Americans have set aside Thanksgiving Day as a day to give thanks for their good fortune. For children and adults, a traditional activity is watching the Thanksgiving Day Parade in New York City on television. The parade features giant helium-filled balloons made in the shapes of famous cartoon characters. These balloons, some nine or ten stories tall, float high among the New York skyscrapers and are dragged through the streets by teams of people holding long ropes. Thanksgiving day is one of the busiest travel days of the year with many Americans visiting family and friends. Another prominent feature of the day is the football games that are televised nationally. The highlight of the day is the Thanksgiving Day meal (see **Food**).

## 7 RITES OF PASSAGE

Apart from religious rituals and family occurrences like births, deaths, and marriages, rites of passage for all Americans include their first day at school and the day they graduate from high school. High school graduating classes have reunions every 5 or 10 years. Of particular importance are the 10-year and 20-year reunions. Of somewhat lesser significance, but heav-

ily anticipated nonetheless, is the day a teenager receives his or her driver's license. Many teens take the written and skill tests required to earn a license to drive shortly after their sixteenth birthday. Sixteen is the minimum driving age in most states. Perhaps the most bittersweet rite of passage is a person's retirement from the workforce. This day is often marked by some celebration involving one's coworkers and close family members. A prominent individual with a long career at one company may be given a party at a local banquet hall. A lesser employee or one with few years at the same company may celebrate the event with a special lunch at a local restaurant. The traditional gift for someone retiring from the workforce is a gold watch.

## 8 INTERPERSONAL RELATIONS

Americans are generally regarded as friendly and outgoing. In formal business communications, men are referred to as Mr. and women as Ms. (Ms. came into popular use during the 1970s when women argued for equal treatment in the workplace.) In social correspondence, some women prefer Mrs. or Miss. This may be the case with older American women. Social etiquette is changing as the society struggles to become less racist and less sexist. In business settings, shaking hands with people upon first meeting them is appropriate. This is true when meeting either men or women. However, when a man is introduced to a woman, the man may prefer to wait for the woman to offer her hand first. Kissing another person on the cheek in a business setting is not appropriate unless you know the person very well. Often in a social setting, men and women who have met previously kiss each other on the cheek upon greeting. In business and social settings, addressing the newly met person by his or her first name is typical. Exceptions to this include: if Mr., Ms., or Mrs. was used in the introduction; if the new acquaintance is significantly older or has significantly greater stature; if the situation is formal in atmosphere. In these cases, Mr., Mrs., or Ms. should be used to avoid offending anyone. When meeting or talking with someone, Americans feel that looking the other person directly in the eyes is important. This is a sign of openness and trustworthiness, as is a firm handshake.

Young people begin dating in groups or under loose adult supervision at the ages of twelve or thirteen. However, dating begins in earnest when teenagers begin receiving their drivers' licenses at the age of 16. At this age, parents rarely chaperone their children. Using the family car for a first date is an extremely important occasion for any teenager. Traditionally, the boy was the one to ask the girl out on a date; customarily, the boy would pay for the date. These social norms, however, are fading. Dates are frequently scheduled for Friday or Saturday nights. A typical date might consist of a casual meal and a movie or concert. School dances and sporting events are also popular. Most parents set curfews for their children to be home by midnight.

American society values equality, so language should not be used in a derogatory, sexist, or racist manner. A sexist or racist remark made to a coworker is not only rude but also illegal. Although there is a wide disparity in income levels among Americans, Americans generally think of America as a classless society. Some people have said that the American president Abraham Lincoln treated his butler with the same respect he treated visiting heads of state. In a country where most

Americans referred to the former American President William Jefferson Clinton as “Bill,” the average citizen feels his or her voice in political affairs is as important as that of the very wealthiest and most powerful of Americans.

## 9 LIVING CONDITIONS

Americans have one of the highest per capita incomes in the world. The average American household has income of over \$46,000 per year. Approximately 70% of American homes are single-unit structures. According to the National Association of Home Builders, the average home size in the United States was 2,330 sq ft in 2004, up from 1,400 sq ft in 1970. The remaining homes are multiple dwelling units such as two- and four-family houses and large apartment buildings with more than 50 units. Sixty-nine percent of American families own their own homes. Almost every American household has hot and cold running water, electricity, indoor plumbing, a refrigerator, a telephone, and a television. American homes usually have toasters, automatic coffee makers, microwave ovens, and clothes washers. One significant 21st century development in American living conditions is the prevalence of the Internet in Americans’ lives. As of December 2007, there were 215,935,529 Internet users out of a population of some 300 million, amounting to 71.7% of the population.

Not all Americans, however, share in this wealth. Although they represent only 1% of the total population, a significant number of Americans are homeless. The homeless population in the United States is estimated at some 3,500,000 in any given year. Children account for some 25% of the homeless population.

As of 2008, the country was experiencing a recession that was related to a housing crisis. Referred to as the subprime mortgage crisis, the economic problem had to do with liquidity issues in the banking system. The crisis began in 2006 with the collapse of a nationwide housing bubble, and high default rates on “subprime” and other adjustable rate mortgages (ARM) made to higher-risk borrowers with lower income or lesser credit history than “prime” borrowers. Loan incentives and a long-term trend of rising housing prices encouraged borrowers to assume mortgages, believing they would be able to refinance at more favorable terms later. However, once housing prices started to decline in 2006–2007 in many parts of the country, refinancing became more difficult. Defaults and foreclosure activity increased dramatically. During 2007, close to 1.3 million American housing properties were subject to foreclosure, up 79% versus 2006. As of 2008 it was estimated subprime defaults would reach a level between \$200 and \$300 billion. Also dismal was the news that for the first time in at least 40 years, and possibly since the Great Depression, the median price declined for an existing single-family home across the country in 2007. It was the first such annual drop since the National Association of Realtors began collecting data in 1968. Academics agreed the previous such decline was in the Great Depression. Families nationwide saw the median home price fall 1.4% in 2007 to \$218,900, from \$221,900 in 2006.

Automobiles are a very important part of American life. In many suburban communities pedestrians are an uncommon sight. Consequently, public transportation is not a primary form of transportation, and many housing developments no longer include sidewalks. Most Americans would find it hard to survive without an automobile for transportation. Every-

where in America are well-paved roads (including a multi-lane, high speed, interstate highway system that links every major and secondary city in the nation). Driving from east coast to west coast and from north to south is possible using these high-speed interstate highways.

America has been termed a consumer society. In fact, for many people, shopping is as much a pastime as a chore. In most American communities, shoppers are drawn to the local mall. The mall became a fixture in American society in the 1970s when developers began to gather hundreds of independent stores under one roof. These giant buildings, decorated inside with trees and fountains, are flanked by acres of parking lots. Inside, shoppers can go from store to store and be sheltered from the weather. The local mall took the place of the town square and quickly became a favorite meeting place for teenagers. The mall also changed the nature of the community by forcing the stores in the downtown area of the city out of business, thereby hastening the decay of America’s urban centers. In their place, a new type of suburban outdoor mall began to emerge, with stores arranged as if in a city or town, mimicking the urban centers they replaced. Another trend in American consumerism is the mail order catalog. Pioneered in the 1920s by Sears and Montgomery Ward, the mail order catalog made a comeback in the 1980s and now offers Americans at-home shopping for everything from fruit to sweaters to sofas. Internet shopping also became very popular in the early 21st century, and such auction sites as Ebay allow Americans to buy and sell goods to and from one another on the Web.

## 10 FAMILY LIFE

Most Americans get married for the first time when they are in their twenties. However, some 40% of first-time marriages end in divorce. In 2003, there were 7.5 marriages per 1,000 people and 3.8 divorces. American families consist of an average two children. For every 1,000 live births, there are 291.5 abortions; the abortion rate has been decreasing in recent years. The issue of abortion is one of the most divisive ones in American politics. Even though legal since 1973, many Americans still see abortion as a morally tinged decision. In 2004, 35.8% of all births in the United States were to single mothers as opposed to 5% in 1950. In 2005, the adolescent birth rate dropped to a record low, to 21 per 1,000 young women ages 15–17, down from 39 per 1,000 in 1991. This decline followed an increase of one-fourth between 1986 and 1991.

In the 1950s and 60s, the husband in the family typically went to work and the wife usually stayed home and managed the house and children. Women’s roles in society were more strictly defined then, and opportunities outside of the home were limited. In the 1970s and 80s, however, economic pressures and the increasing desire of more women to pursue careers in the workforce resulted in both husband and wife working full-time jobs. However, the school day does not conform to the work day, and many children spend the hours before and after school in day care centers or alone at home until their parents return from work sometime after 5:00 pm, the typical end of the work day.

Increasing public tolerance of single-sex unions as well as the high divorce rate and incidence of birth to unwed mothers is changing the definition of family in American society. The traditional notion that family members are primarily related by blood is being expanded to include bonds based more on

*Madison and Jake Zeiss catch up on homework in the back of their family minivan. The Zeiss family in Los Angeles, California, is participating in a study of the modern American family by UCLA scientists. (AP Images/Kevork Djansezian)*

emotional or economic factors. Extended and blended families, comprised of a husband and wife and their children and relatives from previous marriages, are altering the way Americans view the household family unit.

Mobility of Americans increasingly means that family members find themselves living many hundreds of miles away from their parents and siblings. When older adults are no longer able to live on their own, they typically move into a nursing home or assisted living facility rather than into the homes of their children.

## **11 CLOTHING**

Conservative dress for a businessman typically consists of a western-style suit and a tie. Conservative dress for a businesswoman is a suit or dress in a subdued style—in muted colors and with modest tailoring. Less traditional businesswomen may prefer more fashionable styles, stronger colors, and more dramatic tailoring. Increasingly common among American businesses is the “dress-down” day. On this day, typically Fridays, all employees are encouraged to wear casual clothes. Men’s and women’s suits give way to casual slacks or skirts and sweaters. Formal footwear is replaced by running shoes or loafers. Many Americans who work in service industries or factories wear uniforms that are supplied by their employers.

When not at work, Americans prefer casual clothes, such as denim blue jeans, T-shirts, and sweatshirts. Increasingly, a baseball cap with team or other logo has become an important addition to the casual wardrobe. Casual clothing is often decorated with the logo of a sports team or the designer who designed the clothes. T-shirts often carry some advertisement or message. Casual footwear for Americans typically means some type of sports shoe: Tennis, basketball, walking, etc. These sports shoes can be very expensive and some, especially those endorsed by professional sports figures, are highly prized by some teenagers and young adults.

Children who attend private schools typically wear school uniforms. Children who attend public schools are free, within reason, to wear what they like to school. For many public school students, school clothes are the same as their play clothes. However, the increasingly outrageous fashions of school children sometimes disrupt the educational process.

Young adults in their late teens and early twenties may have their bodies tattooed or pierced. Until the early 1990s, tattoos were socially taboo. Women did not usually have tattoos. Consequently, the decision to get a tattoo was an act of social defiance and independence. By the late 1990s, some young men and women, following the lead of fashion models and rock stars, found tattooing a socially acceptable practice. Accord-

ingly, the decision to get a tattoo no longer had quite the same significance it did when fewer people engaged in the practice. Subsequently, as those young tattooed people began to age and look for professional employment, there emerged a growing market for tattoo removal. Young adults in the 21st century also found they had to go farther if they wanted to make a social (as well as fashion) statement with their bodies. This may explain the phenomenon of body piercing. Body piercing first gained widespread social acceptance in the 1960s and 70s when women began piercing their ear lobes and wearing pierced earrings. In the 1980s, having more than one hole pierced in each ear became fashionable for young women. At that time, young men took up the practice as well. However, unlike women, men have one ear pierced and wear a small earring. A minority of young Americans also pierce other parts of their bodies including their noses, eyebrows, navels, tongues, lips, and nipples. Whereas pierced ears are as common as the suit and tie, pierced noses and eyebrows still gain attention as unique fashion statements.

## 12 FOOD

The foods Americans eat are as diverse as the population. Regional specialties include clam chowder in the northeast seaboard, Tex-Mex with jalapeno peppers and tortillas along the border with Mexico, and spicy Cajun dishes in Louisiana. To say that all Americans favor a typical selection of food would be a gross oversimplification. However, certain foods are common throughout the United States and are familiar to almost all Americans.

For American children, a typical morning breakfast may consist of a bowl of cereal and cold milk and a glass of juice. Children's breakfast cereals, made out of wheat, rice, or corn, have brand names like "Fruit Loops," "Cheerios," and "Frosted Flakes." The more popular ones are heavily coated with sugar. Cereal boxes (some as large as 13 inches high, 8 inches wide, and 3 inches deep) are creatively decorated with games, contests, and advertisements. Oftentimes, children read the box as they eat their morning bowl of cereal. Older Americans may have a glass of orange or grapefruit juice, a cup of coffee, and toast and butter. Bagels and cream cheese, always a favorite of New Yorkers, have become popular throughout the country. A more hearty breakfast for children and adults alike may consist of eggs, hash brown potatoes, and either ham, bacon, or sausage. Also popular are pancakes or waffles covered with butter and maple syrup.

At the mid-day meal, young American children rarely refuse peanut butter and jelly sandwiches. Adults and older children prefer sandwiches made with sliced meats (bologna sandwiches are popular with children), cheese, and lettuce. Soups are also widely consumed.

Dinner is the main meal of the day for most Americans. The conventional dinner meal consists of a portion of meat (chicken and pork are affordable and popular), a vegetable like broccoli, corn, peas, or green beans, and a salad made from fresh lettuce.

Increasingly, however, the busy schedules of Americans make it difficult for families to find the time not only to prepare the meal but also to sit down together to eat it. An alternative to the traditional home-made family meal may be a pre-prepared frozen dinner purchased at a grocery store. These meals can be quickly defrosted, warmed in a conventional or

microwave oven, and ready for serving within ten minutes. Also popular are pizzas that are ordered from local pizza restaurants and delivered to the home hot and ready for serving.

The frantic pace of American life has led more and more Americans from the kitchen and into restaurants for many of their daily meals. Among the most popular restaurants are those that offer "fast foods," especially hamburgers and French fries. In a fast food restaurant, the customer orders his or her meal from a fairly restricted menu at a counter. The food is delivered wrapped in paper or cardboard and served on a tray. The food is then taken by the customer to tables provided for the customers' convenience. Upon finishing the meal, customers clean up after themselves. Most fast-food restaurants are equipped with a drive-through window. The customer drives his or her car up to a microphone and places the order. He then drives his car to a window in the side of the building where an attendant takes his money and gives him his food in a bag. Among the most popular of these fast food restaurants are McDonald's, Wendy's, Taco Bell, and Burger King.

In addition to fast-food restaurants, Americans increasingly are eating out at more traditional restaurants, typically on the weekend but also during the work week. This can add up to a considerable expense for a family's food budget. Single people as well as couples are often found congregating at bars and restaurants after work or on the weekend.

Perhaps the most enduring traditional American meal is the annual Thanksgiving dinner. The traditional version of this meal consists of a whole roasted turkey stuffed with seasoned bread cubes and served with gravy. Children often ask for the legs of the bird, referred to as "drumsticks." Side dishes include mashed potatoes and gravy, corn, cranberries, a salad, and rolls. The meal is topped off with apple or pumpkin pie for dessert. In many parts of the country, a traditional feature of the Thanksgiving meal is the ceremonial breaking of the wishbone. Two people each hold an end of the wishbone and make a wish. They pull the wishbone apart, and whoever holds the larger end will have their wish granted.

## 13 EDUCATION

Most American children start their formal education at the age of 5, although many attend preschool or day care from an earlier age. The school year begins sometime near the beginning of September and ends in mid-June. Children do not attend school during the summer months of June, July, and August. This poses a dilemma for families where both parents work. Five-year-olds go to kindergarten where they learn socialization skills and receive instruction in arithmetic, reading, and writing. Although attended by most five-year-olds, kindergarten is not mandatory in all states; it is only a half-day program. After kindergarten, children attend elementary school (also referred to as primary or grade school) for grades one through six. In some school districts, primary schools end at grade four or five, after which the children attend what is known as middle school. Middle schools include grades six and seven, after which time the students attend junior high school. Junior high school goes until grade eight or nine. High school starts at grade 9 or 10 and goes to grade 12. The configuration of elementary, middle, junior, and high school is often a function of the number of students in a district and other nonacademic factors. Some districts have only elementary schools (1 through 8) and a high school (9 through 12). In most school

districts, the school day lasts about six hours for elementary students and up to eight hours for high school students. Children attend school Monday through Friday.

A feature of many school districts is busing to achieve racial integration. Until the 1960s, many students were segregated by race for education. Some school districts directed resources to white schools and away from black schools. To correct the situation, the federal courts required offending districts to bus children to schools outside of their neighborhoods to achieve racial balance in the classrooms. When first instituted, busing resulted in “white flight” as whites moved out of cities affected by busing and into adjacent suburban neighborhoods insulated from the court orders. Some argue that this demographic trend resulted in even greater segregation and a general impoverishment of America’s urban centers as the more wealthy white citizens moved away. Others argue that the remedy offered superior educational opportunities to black children and a more equal educational environment. Since the first court order in 1954, the issue of racial integration in American schools has torn at the fabric of American society. In the 2000s, the racial makeup of schools and neighborhoods is still an underlying motivation in where many people choose to live.

Children are required by law to attend school until age 16, usually having completed 11 years of education. As of 2004, 13.5% of the U.S. population age 25 and over did not have a high school diploma. Approximately 28% of Americans that year had attained at least a bachelor’s college degree. Some Americans pursue a degree from a technical college, which offers a two-year program designed to prepare the student for a specific job. Approximately 9.4% of Americans go on to graduate from a professional or graduate school (another three to eight years depending on the discipline). As would be expected, the more highly educated Americans make the highest earnings in the workforce.

#### 14 CULTURAL HERITAGE

It can be argued that Americans do not have a common cultural heritage. For many Americans, their cultural heritage is that of the homeland of their immigrant ancestors. However, some cultural forms, which are viewed by the rest of the world as typically American, have evolved. Among them are the numerous popular musical forms including the blues, gospel, jazz, rock and roll, and country and western. In the world’s symphony halls, America is represented by many important composers including Virgil Thomson, Charles Ives, Aaron Copeland, and John Cage.

American poets of significance include Walt Whitman, Emily Dickinson, Wallace Stevens, Robert Frost, T. S. Elliott, John Ashbery, and James Merrill. Novelists also feature prominently in American culture. Colonial American life (1700s) has been captured in Nathaniel Hawthorne’s *The Scarlet Letter* and life before the Civil War (1861–65) was chronicled in the works of Mark Twain, including *The Adventures of Huckleberry Finn*. The excesses of the 1920s inspired *The Great Gatsby* by F. Scott Fitzgerald, while the Great Depression (1929–40) that followed inspired *The Grapes of Wrath* by John Steinbeck. Contemporary American authors who explore the human experience include Thomas Pynchon, Don DeLillo, Toni Morrison, Paul Auster, Cormac McCarthy, Joyce Carol Oates, Lorrie Moore, and Annie Dillard.

Perhaps America’s most conspicuous contribution to world culture is the motion pictures that are synonymous with the city of Hollywood, California. Feature films like *Gone With the Wind*, *The Sound of Music*, and the *Wizard of Oz* are both embedded in the American psyche and distributed worldwide. Of similar significance are television programs. Throughout the world, people see America through the reflection of such popular programs as *Bonanza*, *Dallas*, and *Baywatch*. In 21st century “reality” television became popular, where television series chronicle the lives and escapades of everyday Americans doing either everyday or extraordinary things. Such programs include *American Idol* and *Survivor*.

#### 15 WORK

The United States has an advanced industrialized economy offering almost any job conceivable. The typical American workweek lasts 40 hours. Although the workday could begin and end at any hour, most Americans work between the hours of 8 am and 5 pm. The lunch break typically starts between 11:30 am and 12:30 pm and lasts between 30 minutes and an hour. Businesses, however, do not close during the lunch break. By law, as of 2007, the minimum wage employers must pay employees was \$5.85 per hour. The 2007 Fair Minimum Wage Act will raise the federal minimum wage twice more: to \$6.55 per hour on 24 July 2008 and to \$7.25 per hour on 24 July 2009. After 40 hours, an employee is entitled to overtime pay. Though some workers are paid by the hour, many Americans receive a weekly salary. Instead of an hourly wage, these employees are paid a fixed sum and are not paid extra when their work week extends past 40 hours. Many companies offer their employees one or two weeks of paid vacation after one year on the job. The number of vacation days given to an employee typically increases with the number of years he or she has been on the job, but rarely exceeds four weeks. Americans begin to retire from the workforce at age 65, although many work well into their 70s.

In the 1950s, the American workplace was dominated by white men. Since then, federal laws banning discrimination on the basis of sex and race have opened the workplace to women and ethnic minorities. Consequently, the workplace is becoming more diverse. However, the leadership of many American companies is still composed predominantly of white males.

In the late 1990s, a phenomenon of immediate urgency in the American workplace was the practice of “downsizing.” In order to stay competitive in the world economy, companies of all sizes were reducing the size of their workforces by laying off large numbers of employees. This was the case even with companies that were performing well and generating generous profits for their owners. Many of the employees who were downsized out of their jobs were the more highly-paid white-collar workers in their 40s and 50s. Through the decades of the 1950s, 60s, and 70s, workers felt that there was an unwritten understanding that if a worker was loyal to his or her employer and did a good job, he or she could expect to work at that company until retirement—at least as long as the company was profitable. In the 1990s, workers lost their jobs not because they were performing poorly, nor because the company was losing money, but because the company had changed its organizational structure and eliminated the workers’ positions altogether. This “change in the rules” changed employees’ attitudes toward employers and forced them to be more self-reliant and

self-centered. Savvy employees no longer saw their employers in a paternal light, and company loyalty was to a lesser extent part of the employer/employee relationship.

Another challenge for the American economy is the scarcity of good paying jobs for lower-skilled workers. The manufacturing jobs of the 1950s and 60s paid good wages and offered good benefits to low-skilled workers, most of whom were supported by a powerful labor union. However, these jobs have increasingly been automated or shipped offshore to countries where nonunionized workers earn a fraction of their American counterparts. The jobs available to low-skilled workers offer much less.

These structural changes in the economy are increasing the income disparity between the rich and the poor in American society.

## 16 SPORTS

About 40% of all Americans play sports. Americans enjoy and participate in all sports. The primary sports played by school children include baseball, basketball, football (American style), ice hockey, and soccer. Although these more rigorous sports are abandoned by most Americans as they reach their mid-40s, interest in them remains strong and, except for soccer, they are the most popular spectator sports enjoyed by Americans. Older Americans who participate in competitive sports prefer golf, tennis, and bowling.

The most popular noncompetitive sport is walking for exercise, followed by swimming, bicycle riding, fishing, and camping. With a growing emphasis upon the need to become healthier, Americans in greater numbers are joining gyms, hiring personal trainers, and participating in other forms of working out to reduce health risks and live longer and happier lives.

## 17 ENTERTAINMENT AND RECREATION

Entertainment opportunities abound in the United States. Many Americans go to motion pictures, sporting events, and amusement parks. Perhaps the best known amusement park in the United States is Disney World in Orlando, Florida. This mammoth installation is a city unto itself. Americans also entertain themselves by going to a restaurant for dinner or by reading. Sporting events including games staged by the National Football League (NFL), major league baseball, and the National Basketball Association (NBA) are watched by millions both on TV and in giant stadiums and arenas, many holding 50,000 persons or more. The annual football championship game, the "Super Bowl," is always the most watched televised event of the year. In fact, "Super Bowl Sunday" is approaching the status of an American holiday.

Many Americans have hobbies like gardening, coin collecting, and model building. However, no entertainment medium is as widely experienced as television. The average American spends more than four hours a day watching television. This number is certainly higher for children. The most popular shows on television are half-hour-long situational comedies, referred to as "sit-coms." These shows are shown during "prime time," the most popular viewing period of the day, between 8 pm and 10 pm. Most popular shows during the daytime are soap operas where ongoing dramatic interpersonal situations are presented with story lines running for months or years. In many American households, the television is on whenever

someone is in the house, even if no one is watching. Ninety-nine percent of households possess at least one television set, but the number of TV sets in the average U.S. household is 2.24. Sixty-six percent of American homes have three or more television sets. On average, the television is on in the home for 8 hours and 14 minutes per day. Sixty-six percent of Americans regularly watch television while eating dinner. Americans also pay for cable television or direct satellite broadcasts, and rent DVDs (previously videos). The U.S. is now moving to digital television. Legislation passed in 2006 requires over-the-air stations to cease analog broadcasting by February 2009. But led by female teenage viewing, in the 21st century average American television viewing continues to increase in spite of growing competition from new media platforms and devices, such as video iPods, cell phones, and streaming video.

America is becoming a nation of gamblers. Gambling, long considered a morally objectionable activity, has become a wildly popular form of entertainment. Until the late 1970s, most forms of gambling were either illegal or highly restricted. Gambling's transition to respectability was aided by the institution of state-sponsored lotteries that are now used in 42 states, the District of Columbia, and the Virgin Islands as a means to generate revenues. In the early 21st century, more Americans gambled than went to movies, theater, opera, and concerts combined.

Popular children's toys include video games and bicycles. Action figures like GI Joe are popular with boys, while crafts and dolls are preferred by girls. Perhaps the most famous doll in America is "Barbie." Most American girls have at least one Barbie doll.

## 18 FOLK ARTS, CRAFTS, AND HOBBIES

Typical American crafts include basketweaving, knitting, needlepoint, woodworking, pottery, glass blowing, and weaving. If a visitor from another country set out to purchase a craft item essentially American, he or she may wish to shop for a patchwork quilt.

## 19 SOCIAL PROBLEMS

American society struggles with many social problems chief of which are crime, alcohol and drug abuse, poverty, racism, sexism, and violence. The prevalence of sex and violence in American movies, television shows, and even popular songs on the radio has led the government to encourage the entertainment industry to establish a ratings system designed to help parents shelter their children from objectionable content. According to estimates, U.S. citizens spend as much as \$220 billion a year on illicit drugs, 44% of the world retail illicit drug market total. In 2001 it was estimated that 41.7% of the U.S. population 12 years old or over had used illicit drugs at some time in their lives.

In recent years sexual activity among teenagers has declined in the United States, and contraceptive use has improved, but teenage sex is still a significant social issue for Americans. As of 2003, 47% of all teenagers in grades 9–12 reported having had intercourse. Although American teen sexual activity is similar to that in other developed countries, American girls are much more likely to become pregnant: 34% of women in the United States become pregnant at least once before they are 20 years old.

In 2006, over 7.2 million people were on probation, in jail or prison, or on parole—3.2% of all U.S. adult residents or 1 in every 31 adults. At the beginning of 2008, 2,319,258 Americans were in jail or prison—one in 99.1 adults. The U.S. prison population is disproportionately African American. The United States has imprisoned more people than any other country: 500,000 more than China, which has a population five times greater than the United States. Statistics reveal that the United States holds 25% of the world's prison population, but only 5% of the world's people. The 50 U.S. states spent more than \$49 billion on corrections in 2007, up from less than \$11 billion 20 years earlier. The rate of increase for prison costs was six times greater than for higher education spending. The average annual cost per prisoner was \$23,876, with Rhode Island spending the most (\$44,860) and Louisiana the least (\$13,009).

## 20 GENDER ISSUES

Homosexuality has gained increasing acceptance in the United States, although gay people often face discrimination, prejudice, and violence. Same-sex marriage is a divisive political issue in the United States. Massachusetts recognized same-sex marriage in 2004, although this only affects state law. The federal government does not recognize same-sex marriages in Massachusetts as being marriages under federal law. Connecticut, Vermont, New Jersey, California, and New Hampshire created legal unions that, while not called marriages, are explicitly defined as offering all the rights and responsibilities of marriage under state (though not federal) law to same-sex couples. Maine, Hawaii, the District of Columbia, Oregon, and Washington created legal unions for same-sex couples that offer varying degrees of rights and responsibilities of marriage. However, 26 states have constitutional amendments explicitly barring the recognition of same-sex marriage, confining civil marriage to a legal union between a man and a woman. In 2006, the Federal Marriage Amendment, which would prohibit states from recognizing same-sex marriages, was debated in the U.S. Senate, but was ultimately defeated in both houses of Congress.

There are more women in the United States than men (149.1 million versus 144.5 million in 2004), and women live longer than men. While women in America have made great strides in approaching equality with men, women still have not gained parity with men in earnings: in 2004 women aged 15 and older who worked full time, year-round, earned 77 cents for every \$1 earned by their male counterparts. More women hold high school diplomas and bachelor's degrees than men, and women vote more regularly than men. There were 25.4 million women age 25 and older with a bachelor's degree or more education in 2004, more than double the number 20 years earlier. However, there are fewer women in the workforce than men, and more women work in the educational services and health care and social assistance industries than in any other. There were 6.5 million women-owned business in the United States in 2002, up 20% from 1997. Women in 2004 had an average 1.9 children during their lives, down from 3.1 in 1976. The total number of active duty women in the military in 2004 was 212,000. Of that total, 35,100 women were officers and 177,000 were enlisted.

# THE AMISH

- ALTERNATE NAMES:** Old Order Amish, Amish Mennonites, Plain People, Anabaptists
- LOCATION:** United States (majority in Ohio, Pennsylvania, and Indiana); Canada (Ontario)
- POPULATION:** 218,000
- LANGUAGE:** English (with outsiders); German dialect known as Pennsylvania Dutch [or Pennsylvania German] (with each other)
- RELIGION:** Amish (an Anabaptist Christian sect)

## <sup>1</sup> INTRODUCTION

The Amish are members of a Protestant religious sect that traces its roots back to the Anabaptist movement in 16th-century Europe. The Anabaptists (a word that means “rebaptizers”) believed in adult baptism (instead of the prevailing practice of infant baptism) and promoted a literal interpretation of the teachings of Jesus. In seeking to pattern their daily lives around the teachings of scripture, they promoted a complete separation of church from the government, a move that led to the persecution and death of many Anabaptists in the 16th century. In 1536 Menno Simons, a Dutch Catholic priest, became the leader of a small group of Anabaptists who soon became known as Mennonites. In the late 17th century, followers of the Swiss Anabaptist cleric Jacob Ammann broke away to form their own church, whose members came to be called the Amish. To the basic Anabaptist doctrines of adult baptism and nonviolence, Ammann added the inclusion of ceremonial foot-washing in the communion service, the strict shunning of excommunicated church members, and the practice of dressing in plain clothing.

Responding to government persecution and economic hardship, the Amish, like other Anabaptist groups, began emigrating to other parts of the world, including America. They arrived in the United States in two stages. The first wave of Amish immigrants settled in Pennsylvania between 1727 and about 1790; the second migrated to Ohio, New York, Indiana, and Illinois between 1815 and 1865. The Amish who remained in Europe were eventually assimilated into Mennonite or mainstream Protestant congregations, leaving only those who had emigrated to preserve their religious tradition. In the New World, the Amish faced hardships, including pressure to fight in the American Revolution, but found the religious freedom they had sought. They have continued to practice their religion, succeeding at agricultural and, more recently, nonagricultural work while preserving their cultural roots across the generations.

Those communities that practice strict adherence to Amish precepts and customs are known as the Old Order Amish and are easily recognizable to outsiders by their somber, conservative clothing reminiscent of a previous century and by their use of horse-drawn buggies instead of automobiles. In their attempt to live lives of simplicity comparable to those of their ancestors, they also farm without tractors and make do at home without telephones, electricity, central heating, and other modern conveniences. Living in close-knit communities, they rely on each other and on their devotion to their religion to meet their needs and ensure the continuation of their way of life.

While the Amish strive to live in the world, but not of it, they have not been able to completely maintain a distance from the ever present media. Since the mid 20th century, many movies, books, and television shows have portrayed the Amish community in not always favorable terms, often without a full understanding of the customs and practices of the people. Often this unwanted publicity leads to discrimination against the Amish, as they may be portrayed as backward people who are defiant of local governments. The practices of shunning and *rumspringa* (a time when some Amish youth rebel against the practices of their community) are sometimes portrayed for their sensational value without offering a complete explanation of their purpose in strengthening the bonds of community. Occasionally, the public eye is shown a little bit of the great faith and commitment to love and forgiveness that are so central to the Amish faith.

In 2006, a non-Amish gunman in Lancaster County, Pennsylvania, went into an Amish school and held 10 girls as hostages. He then murdered five and injured the others before killing himself. The immediate response from the families and friends of the Amish children was one of forgiveness and reconciliation, not only for the shooter, but for his family as well. The Amish and Mennonites are often thought of as being part of the same group. However, while both share a common heritage and many common beliefs and practices, they are properly defined as two separate groups and, since immigrating to North America, they have generally maintained separate settlements.

## <sup>2</sup> LOCATION AND HOMELAND

The Amish population in the United States and Ontario, Canada, was estimated at just over 218,000 in 2007. The three largest communities are located in Ohio (54,270), Pennsylvania (48,600), and Indiana (36,180), accounting for nearly 70% of the total Amish population. Both Ohio and Pennsylvania have over 300 Amish church districts and Indiana has more than 260. Some studies have shown that the Amish population doubles about every 20 years. In 1951 there were about 200 church districts in the U.S.; in 2007 there were about 1,615. From 2000 to 2007 the largest number of new settlements were found in Wisconsin. The Amish also live in other parts of the country and can be found as far west as Montana and as far south as Florida and Texas. Altogether, they are found in more than 27 states in the U.S. There are over 4,100 Amish in Ontario, Canada.

## <sup>3</sup> LANGUAGE

The Amish speak English with outsiders and a German dialect among themselves. Their language is a combination of their native German and the English that they learned upon their arrival in North America. It is known as Pennsylvania Dutch. In this case, the word “Dutch” does not refer to the Netherlands, but rather comes from the German word *Deutsch*, which means “German.” A sample of Pennsylvania Dutch words:

Mamm	Mother
Daat	Father
Grossdawdi	Grandfather
Grossmudder	Grandmother
redd-up	tidy up
outen	turn out, as in “outen the light”

strubbly	messy
dabbich	clumsy
rutchich	not well-behaved

Pennsylvania Dutch is the language used at worship services and most members read from a German Bible. However, most Amish read and write in English. English is the primary language of instruction in the schools. A small number of Amish speak Bernese Swiss German; they are known as Swiss Amish.

The Amish refer to all non-Amish as English. They sometimes refer to themselves as Plain People.

#### 4 FOLKLORE

The Amish do not believe in any non-Christian folktales, myths, or legends. However, many have retained a body of beliefs about folk healing, derived from both German and rural American traditions. Home remedies, including teas, tonics, salves, and poultices, are passed on from one family to another and between generations. In addition, some Amish subscribe to a somewhat controversial type of faith healing called sympathy "curing," or "powwowing," which relies on charms, amulets, and physical treatments. The following is a typical powwowing charm, said to cure a person who has worms. The following words are repeated silently while the healer circles the patient three times:

You are a little worm, not entirely grown.  
 You plague me in marrow and bone.  
 You may be white, black, or red,  
 In a quarter of an hour, you will be dead.

#### 5 RELIGION

The Amish are Christians who believe in the direct influence of the Holy Spirit on the heart of the believer. For them, the Bible (Luther's German Bible) is of primary importance since they consider its text to be the direct word of God. The Amish faith is also shaped by two other texts: *Martyrs Mirror* and the *Ausbund*. *Martyrs Mirror*, first published in 1660, is a collection of stories concerning those who have been persecuted and martyred for their faith. The *Ausbund* is a hymnal of lyrics written by persecuted Anabaptists in the 16th century. The Amish profess the 18 articles of Dordrecht Confession, written in 1632, as a central creed. Individuals will study these tenets and accept them as their own confession of faith at their baptism.

The Amish adhere to the Anabaptist tenets of nonviolence and believer baptism. Their most distinctive belief, however, is that of a strict separation between church and government. The German word *gelassenheit* (gay-la-sen-hite), meaning "yielding oneself to a higher authority," is a primary principle of Amish life and religion. Believing that the laws of man are often at odds with the teachings of scripture, they choose to live by faith, apart from the common society, embracing the teachings of scripture as a guide for daily living, rather than conforming to local customs.

The Ordnung (meaning "order") is the set of scripturally-based practices and principles by which the Amish pattern their daily lives. The Ordnung is primarily a collection of oral traditions and beliefs passed down through the generations. While many practices are common to all Amish communities, the Ordnung generally differs somewhat from one community to the next, based on the local customs and interpretations of scripture.

There are four primary groups of Amish. The Old Order Amish are the most conservative in their strict adherence to traditional practices of plain dress, rural life and occupation, and separation for worldly customs. The Amish Mennonites and Beachy Amish split from the Old Order Amish and have fewer restrictions in practice. For instance, the Amish Mennonites and Beachy Amish may use electricity in their homes and drive automobiles, while the Old Order Amish travel by horse and buggy and rely on other fuels such as wood and kerosene for power. The New Order Amish separated from the Old Order in the mid 1960s. They also tend to use horse and buggy for transportation, however, many groups allow the use of electricity and telephones within the home and modern tractors may be used instead of the horse-drawn plows of the Old Order Amish.

Settlements that are geographically close to one another may form a single church district. Each district is headed by a bishop, two or three ministers, and a deacon, all of whom are chosen by a process known as "the lot." Only men may serve in these leadership positions and all men may be eligible for selection as a leader. No special theological training is required. The bishop presides over the sacraments of the church (such as baptism, weddings, and funerals). Bishops and ministers may preach at worship services. Deacons serve as coordinators for charity within the congregation.

Regarding church buildings as a sign of worldliness, the Old Order and New Order Amish hold their three-hour long Sunday worship services in the homes of church members without adornments such as candles, flowers, or musical instruments.

In many areas, services might take place every other Sunday, allowing for one bishop to serve two congregations. Services include singing from the *Ausbund*, prayer, scripture reading, and messages offered by the presiding bishop and one or two presiding ministers. Beachy Amish, and Amish Mennonites have adopted practices of holding weekly services in a meetinghouse. Special communion services open to the entire district are held twice a year, in the spring and fall.

As a community-based faith, maintaining strict church discipline is considered to be an important principle in strengthening both the spiritual and social bonds of the community. Minor offenses against church rules typically result in a rebuke or temporary ban, while serious infractions such as adultery or refusal to submit to church authority may result in excommunication and in “shunning” by the entire community. The practices involved in shunning and excommunication may differ from one congregation to the other; however, the overall purpose is not to condemn or cast out a member but to give them an opportunity to mend their ways, confess, repent, and return to the church. Only baptized members of the church are subject to the laws of church discipline.

## 6 MAJOR HOLIDAYS

The major Christian holidays that are important to the Amish include Christmas, Good Friday, Easter, Ascension Day, and Pentecost, although the manner and degree of observance vary from one community to another. Every wedding is a holiday in itself, involving not only the day on which the service actually occurs (always a Tuesday or Thursday) but also the day of communal preparation that precedes it. Christmas is the most important holiday, although Christmas trees and Santa Claus do not form part of the festivities (children may, however, receive modest presents, such as a simple toy or nuts and candy). The extended family holds a festive meal on Christmas Day. Good Friday is observed as a day of fasting. Some Amish observe Christmas and Easter for two days in the European manner. Thanksgiving is celebrated without all the festivities usually associated with it by non-Amish Americans. For the Amish, Thanksgiving is a quiet day for visiting friends and relatives.

## 7 RITES OF PASSAGE

Baptism is viewed as the most important rite of passage within the community. Most individuals choose to be baptized, between the ages of 18 and 22. At the time of their baptism, they are expected to make the profession of faith and a vow that marks the beginning of their lifelong commitment to the teachings of scripture and adherence to the *Ordnung*.

In some communities, the decision to be baptized is preceded by a period known as *rumspringa*. Beginning at about age 16 and sometimes extending to the age of about 22, many young men (primarily) and women may participate in “worldly” activities such as wearing English style clothing, going to movies, buying and driving cars, going to bars and nightclubs, and even spending time in the English world with English acquaintances. The purpose of *rumspringa* is to show the youth that their decision as to whether or not they will be baptized into the church and the community is a personal choice, not a dictate. Once a member takes their baptismal vow, he or she is expected to follow all of the practices of the church and is subject to church discipline, including shunning and excommu-

nication. Individuals who choose not to be baptized may leave the community without formal sanctions from the church.

Weddings are large public affairs in which the entire community participates; for this reason they are usually held in the fall (particularly in November), when the agricultural workload is light and everyone can be involved. Weddings are typically held on a Tuesday or Thursday, a schedule that allows for one full day of cooking and other preparations, one day for the wedding party, and one day for clean up. Weekend weddings would conflict with the Sunday Sabbath day of rest. The wedding itself involves a church ceremony followed by an elaborate communal meal, usually at the bride’s home. The bride typically wears a blue dress that she has made herself and a white apron. This dress will serve as a Sunday worship dress. The groom will wear a black suit. The couple’s parents provide substantial gifts, such as farm equipment or livestock, to help the couple start out on their own. The newlyweds may live with the bride’s parents until they have a home set-up for themselves. During the weeks following the wedding, the couple will spend weekends visiting the homes of relatives, at which time they often receive wedding gifts of practical household items.

Although death is treated with solemnity, it is accepted as a matter of course. Funerals usually take place on the third day after death. The deceased is typically dressed in white and buried in a coffin made to traditional specifications by an Amish carpenter. A woman may be buried with the same white apron that she wore at her wedding.

## 8 INTERPERSONAL RELATIONS

Since the Amish tend to marry within their own communities, many Amish people have the same family names—among a population of over 200,000 there are only about 126 surnames altogether. The most common names in Indiana and Ohio are Miller and Yoder; in Pennsylvania, they are Stoltzfus and King. Given the small number of surnames, it is common to find Amish persons who share exactly the same first and last names, a problem dealt with by the widespread use of nicknames within the Amish community.

Most social interaction between members of the community takes place in private homes. Husbands and wives do not display affection in public, since it would be considered immodest. Young men and women often meet together for a Sunday evening singing. It is often through this fellowship gathering that young couples meet and begin a courtship. The young man may drive or walk the young woman to and from the singing and might then spend some time at her home as the two get to know one another. When they decide to marry, the woman’s father will announce or “publish” the engagement during a Sunday worship service and announce the date of the wedding.

While the Amish do interact with their English neighbors from time to time, this is usually in a public business setting, such as at shops or restaurants. The Amish do not serve in the military, vote, or recognize the authority of any worldly government. The Amish suspicion of government and authority is a holdover from the mistreatment they received long ago from the governments of their European homelands. As much as possible, the Amish reject worldly things and material goods. Within their church congregations, they strive to maintain

*Amish children peer from the rear of a horse-drawn buggy in Lancaster County, Pennsylvania. (AP Images/Rusty Kennedy)*

strong discipline, as well as honesty and love for all, inspired by the example set by the earliest Christians.

## **9 LIVING CONDITIONS**

Since the Amish practice of separation from the outside world rules out college attendance, there are no Amish physicians. While some may find doctors they trust outside their own communities, many Amish also consult with folk healers and other providers of alternative medicine, including chiropractors. While there is no specific Biblical citation against the use of modern medical practices, most Amish choose to forego more high-tech procedures and medications as a way to express faith in healing from God. Some Amish people resist preventive health care measures such as immunization. Most women give birth at home with the aid of a midwife.

Amish homes tend to be large and simple, with little decoration other than quilts and china. Furnishings must be spare enough to allow room for religious services, which rotate from one home to another instead of being held in a church. Area rugs are preferred over wall-to-wall carpeting, which is considered overly extravagant. In the winter, individual rooms are typically heated with a kerosene heater or wood stove rather than central heating. The use of electricity and other services provided by public utilities is generally forbidden.

A strong sense of community and mutual aid is present in every Amish community. Members of the community freely offer their financial and other physical resources to one another

in times of need. The Amish typically do not accept government-sponsored welfare or social security and do not purchase health or life insurance. Instead, the needs of families and individuals are provided for by extended family or by the community at large through special funds set up for this purpose. Amish communities are also supportive of each other in a greater reach as well. If one settlement suffers from floods, tornadoes, or other natural disasters, members of other settlements will travel, sometimes at great lengths, to assist in rebuilding.

The main means of transportation for the Amish is the horse-drawn buggy or wagon. They do not use motor vehicles. Some may refuse even to ride bicycles, although Amish children are generally allowed to ride scooters.

## **10 FAMILY LIFE**

The Amish are strongly committed to marrying within their own communities—and remaining married to their original partners—since the perpetuation of their way of life depends primarily on producing new generations rather than increasing their numbers through conversion of people from outside their communities. The centrality of the family in Amish life can be seen in the fact that the Amish measure the population of their communities by the number of families rather than the number of individuals. Their families are typically large. The average number of children in an Amish family is about seven and one-fourth of the Amish have ten or more children. Divorce is not permitted.

Family roles are clearly defined. The husband is considered to be the head of the household, as both the spiritual leader and primary breadwinner. Women serve as the primary caregivers for children while maintaining the home. Husbands and wives do not display affection in public. While strict obedience is expected of Amish children, attitudes toward children are generally loving and affectionate. Amish children begin helping their parents with farm work or other domestic chores at an early age. Older children are expected to help care for and set an example for their younger siblings. It is not unusual for the family home to contain three generations. The elderly often live in small apartments attached to or on the same property of the home of one of their adult children. Adult brothers may maintain farms or businesses in cooperation with each other. Adult sisters may maintain a relationship with one another through special “sister’s day,” held once a month or so at the home of one of the women as a means to combine both social and work activities, such as canning vegetables together or sewing a quilt.

An Amish person who is excommunicated by the church and shunned by the community is also shunned by his or her spouse and family as well. While the particular practices involved in shunning differ from one community to another, the shunned individual is not necessarily expected to leave the family home. In some communities, the one who is shunned is not permitted to participate in some social activities with other family or community members and is not permitted to sit at the same dinner table as the others. The period of shunning is meant to lead a person to confess their wrong doing, repent, and reaffirm their vow to the church and the community.

## **11 CLOTHING**

The plain style of dress adopted by the Amish is part of the reason that they have become known as the Plain People. The practice of dressing in plain clothes is related more closely to the concepts of community than to any religious belief. Humility and obedience are of far greater importance to the Amish community than pride and individualism. By dressing plainly and in similar fashion, the community embraces a sense of oneness and of separateness from the world.

Colors and styles of clothing may vary from one community to the next, but there are many similarities. The Amish fasten all their clothing by means of old-fashioned hooks and eyes or buttons, rather than zippers or Velcro. Most clothing is made at home with fabric purchased at a local store that specifically carries the types of fabrics acceptable for use. Amish women wear solid color dresses with long sleeves and full skirts. Some groups may allow short-sleeves for women, especially in summer months. Although they do not use patterned fabrics, their clothes can be colorful. Besides the neutral black, gray, and brown, dresses may also be green, blue maroon, or purple, among other colors. Women typically wear aprons and shawls. Women’s clothing is fastened with straight pins or snaps. Women and girls almost always wear a bonnet or prayer covering. The styles of these head coverings may differ by community and, within each community, the color and style of the bonnets may have special significance. For instance, young, single women might wear black bonnets while married women wear white. A community might have one style of bonnet for children and youth and another style to show that one has been baptized. Women never use makeup or perfume, nor do

they wear jewelry of any kind, including wedding rings, since wearing such items might lead to prideful attitudes. Women wear their hair in braids or in a bun.

The men normally wear ordinary solid colored shirts, often blue or white, with full-cut pants called “broadfalls.” The broadfalls are so named because instead of having a zipper in front, they have a wide flap that folds down when necessary and is fastened up at the sides. Broadfalls are always held up by suspenders, never belts, and they do not have creases or cuffs. Suit coats are straight-cut, black or navy blue, and without collars or lapels. Men typically wear broad-rimmed black felt hats. Straw hats are worn by some groups, particularly in summer. Boys and single men stay clean-shaven until they get married, at that time, they grow beards, but never mustaches. Men and women wear boots, sneakers, or any other plain, comfortable footwear. In the summer, many go barefoot.

## **12 FOOD**

Amish meals are typically prepared in old-fashioned country kitchens, on a gas or wood stove, since the Amish do not use electricity. Women will generally can their own fruits and vegetables. Meals tend to be plain and filling, of the meat and potatoes type of meal, and entirely homemade. Very few processed or prepared foods are purchased by Amish families. Even so, the Amish do enjoy some unique and tasty dishes. Dandelion salad with bacon-fat dressing is a favorite. Another is *Snitz un Knepp*, dried apple slices cooked in sugar water with dumplings like doughnuts and served as a stew. Snitz pie is a pie made from dried apples. *Chow-chow* is an assortment of pickled vegetables. A tasty snack is cup cheese, a creamy smooth cheese that is best when spread on bread or crackers. Lebanon bologna is a type of cold sausage and red beet eggs are pickled in beets and vinegar and sometimes eaten straight from the jar. Cream of celery soup is a particular favorite for many Amish weddings. In Amish families, the main meal is served in the evening during the part of the year when school is in session. When summer comes, the main meal is served at noon, with soup and sandwiches for supper.

## **13 EDUCATION**

Most Amish communities have their own schools, where children of all ages learn together in one- or two-room schoolhouses with no restrooms and no hot water. In some rural communities, Amish children will attend public schools. Amish young people complete school only up to the eighth grade. After that, they are expected to become full-time workers on the family farms or businesses, although they sometimes continue their schooling one-half day each week, perfecting their skills as needed. The Amish do not believe it is necessary for their young people to attend high school or pursue an education at the college level. They do not value education for its own sake or feel that education makes one a better person. The standard curriculum includes reading (in basic German and in English), basic arithmetic, spelling and grammar (primarily in English), and some history and geography. Topics in science, independent thinking, or critical analysis are not considered appropriate or necessary. As for life skills, Amish boys learn farming from watching and helping their fathers, while Amish girls learn to be good homemakers by imitating their mothers. Teachers in Amish schools are not required to have attended college. Instead, young Amish people, usually women, who

have distinguished themselves as students simply remain in the school, assuming the role of teacher to the younger children. Within the school, older children will serve as tutors to the younger children.

#### **14 CULTURAL HERITAGE**

Although artistic expression does not play an important role in the plain and simple lifestyle of the Amish, they do enjoy singing religious songs—mostly hymns sung *a cappella* as part of their religious services, at weddings, and Sunday singing sessions for young adults. The Amish also entertain their young children with sing-alongs and nursery songs. There are several Amish publications, including two newspapers, *Die Botschaft* (“The Message”) and the *Budget*, which consists largely of news about the various Amish communities. There is also a magazine for Amish teachers, *Blackboard Bulletin*, a monthly called *The Diary: Of the Old Order Churches*, and a publication called *Family Life*.

#### **15 WORK**

Traditionally, most Amish people are farmers, with family farms small enough to be run without the aid of mechanization, including tractors. More concerned with subsistence than with high profit margins, these Amish farmers raise livestock in modest numbers along with a variety of crops. Since about the 1960s, however, some farms have become more specialized, such as dairy farms or chicken farms and tend to be more fully mechanized, with items such as mechanical milkers and large cooling tanks. Many Amish have begun working at nonfarm jobs within their surrounding English communities. Amish men might find work at commercial construction companies or start their own businesses in furniture and cabinet making. The Amish community in Pennsylvania’s Lancaster County is home to over 1,000 such businesses, including furniture makers, construction contractors, and quilt shops. Relying on long hours and quality workmanship, Amish entrepreneurs are thriving, with a failure rate much lower than the average for small businesses. Some single women or married women whose children are grown might find part-time jobs at local shops or restaurants. Women may also make quilts for sale at local shops or offer their own canned and baked goods for sale at farmer’s markets, bakeries, restaurants, and general stores.

#### **16 SPORTS**

The Amish play as hard as they work. Although they do not participate in organized community or professional sports, they often play games of softball or volleyball. In season, hunting is a popular pastime among Amish men and Amish boys enjoy hiking. The country life of the Amish provides many opportunities for outdoor recreation. In the summer, everyone enjoys fishing, swimming, and all kinds of games; while in the winter, sledding and skating on frozen ponds provide plenty of excitement.

#### **17 ENTERTAINMENT AND RECREATION**

Amish children usually play with homemade rather than store-bought toys. Teenage girls enjoy playing clapping games called “botching,” played by two people seated opposite each other in chairs. Families often spend leisure time attending weekly auctions and visiting relatives and other members of the commu-

nity. In the fall, the many weddings that take place typically occupy much of a family’s leisure time. Sunday evening singings are a popular activity for young men and women. Some Amish will travel to different areas of the country for family reunions or simply to visit other Amish communities. Some families might vacation by travelling to historic sites or national parks. Some Amish communities may even charter buses to travel to distant locations.

#### **18 FOLK ART, CRAFTS, AND HOBBIES**

The Amish women are known for their quilts, which are all hand-stitched with distinctive styles. Quilt making is an important communal activity as well as a form of artistic expression. In addition, it has taken on increasing economic significance as Amish women have begun selling quilts to the general public in greater numbers. Amish quilts are also exhibited in museums and other public places, both in the United States and in other countries throughout the world. Amish made furniture and cabinetry has also become popular in the general commercial market. Personal photography and other types of representational art are not generally used among the Amish, in part because of a religious belief against creating graven images, but also because photos and other images of individuals might lead to expressions of pride rather than humility.

#### **19 SOCIAL PROBLEMS**

A primary problem for the Amish and similar groups is the struggle to maintain their traditional ways in the face of the temptations of the modern world that surrounds them. The Amish are very much in the world, if not of it, and they see quite clearly the advantages that modern technology can provide. An Amish farmer toiling behind a horse-drawn plow can look up and watch his neighbor do his plowing with a tractor in a fraction of the time. An Amish family travelling in a horse-drawn buggy may worry about their safety on roads with fast cars and semi-trucks. The temptations of the English world are even more evident to the young people. Like teenagers everywhere, many Amish young people engage in typical forms of mischief. Usually, though, they return to the old ways as they grow older.

The strict beliefs and practices of the Amish mean that problems such as alcoholism and addiction, homelessness, or domestic violence are very rare. If such issues arise, they are usually quickly and strictly dealt with by church officials and those who are in need of assistance are offered such.

The Amish have sometimes faced difficulties with government authorities over issues of health care, education, and child labor, since they do not accept standard government regulations in these matters. The Old Order Amish Steering Committee, organized in the late 1960s, serves as a representative body through which the Amish may most easily deal with specific issues that arise. Most cases are settled amicably as most issues fall under a protection of religious freedom.

The Amish are sometimes discriminated against as being a backward and uneducated people. Their separation from the world is sometimes interpreted as hostility or general defiance against government. However, the Amish believe it is important to show respect for local government and government officials. They will accept the rules and regulations of the government as long as they do not come in conflict with their

religious convictions. The Amish do contribute to society by paying state and federal income tax, sales and real estate taxes, and in many cases, public school taxes. The Amish are exempt from Social Security taxes because they consider it to be a form of insurance. In return, they do not accept Social Security or other government-subsidized welfare benefits. The Amish are permitted to vote, but most do not, unless there is a particular local issue that affects their community.

## **20 GENDER ISSUES**

The roles of men and women are clearly defined along very traditional lines. It is very rare for men or women to remain single. The husband is the head of the household as a spiritual leader and as the primary financial support for the family. The wife is the primary caregiver for the children and is primarily responsible for maintaining the home. Women may perform some tasks on the farm, such as milking or care of livestock. Husband and wife might make joint decisions concerning the household and on matters of discipline for children. However, the amount of input that the wife has in such decisions may depend on the attitude of her husband. Mothers with young children generally do not work outside of the home and farm. Single women or mothers with grown children might work part-time in local shops or restaurants. Some single or older women may be permitted to own and operate a business, such as a quilt shop, bakery, or greenhouse, but only when this is allowed within the Ordnung and if the woman's husband (or father in the case of single women) approves. Only men are permitted to be leaders in the church and community.

# ANTIGUANS AND BARBUDANS

**PRONUNCIATION:** An-TEE-gahns and Bar-BYEW-dahns

**LOCATION:** Antigua and Barbuda

**POPULATION:** 69,842

**LANGUAGE:** English; Creole dialect, Spanish

**RELIGION:** Anglican Church; other Protestant groups; Roman Catholicism

## **1 INTRODUCTION**

The nation of Antigua and Barbuda (pronounced An-TEE-gah and Bar-BYEW-dah), located in the Leeward Islands, consists of two islands lying approximately 43 km (27 mi) apart and also encompasses a third, uninhabited island, Redonda. The country's main source of income is tourism, which employs most of the population, and its international airport serves as a base for travel throughout the region.

Christopher Columbus sighted the island of Antigua in 1493 and gave it its original name, Santa Mar'a de la Antigua, in honor of the Church of Santa Maria de la Antigua in Sevilla, Spain. The Carib Indians and the island's scarce water supply kept the Spanish, as well as the French, English, and Dutch, from colonizing it until 1632, when a group of British settlers from St. Kitts landed and managed to stay, establishing tobacco and ginger plantations. Except for a brief period of French rule in 1666, Antigua, joined shortly afterward by neighboring Barbuda, was to remain under uninterrupted British control for over 300 years.

At first, tobacco was grown, but in the 17th century sugar crops were found to be more profitable. It was Sir Christopher Codrington in 1674, who introduced sugar plantations to Antigua, together with the large numbers of African slaves needed to work on them.

Eleven years later, Codrington leased the island of Barbuda, primarily to supply Antigua with livestock and provisions. The Codrington family's lease of Barbuda continued for nearly 200 years; in 1860 Antigua and Barbuda were legally united under Great Britain.

As the sugar industry on Antigua grew, much of the land was deforested, exacerbating the island's water supply problems, which have continued to the present day. After the slaves were emancipated in 1834, their living conditions were little better than they had been under slavery and were in some instances worse, as they were now required to provide their own food and shelter out of their meager wages. There was little improvement in the situation of Antigua's Black laborers over the next century. In addition, an earthquake in 1843 and a hurricane in 1847 hit the island causing severe economic turmoil among the population. As a consequence of this dire situation, Barbuda decided to go back to the crown in the late 19 century. With the passing of time, Barbuda's administration became so dependent on Antigua that in a short period of time Barbuda was ran by its neighbor.

The inhabitants of Barbuda, which had no plantations, continued their subsistence farming on small plots of land. In the 1930s, drought and economic depression worsened conditions on Antigua to the point of civil unrest, and a specially appoint-

ed British commission recommended the establishment of a trade union, which proceeded to win a series of labor victories for Antiguan workers.

Extending its influence to the political realm, the Antigua Trades and Labour Union (ATLU) formed the Antigua Labor Party (ALP) in 1946. Thanks largely to its efforts, Antigua and Barbuda achieved universal adult suffrage with no income or literacy requirements by 1951. The party's leader, Vere Cornwall Bird, rose to political prominence, becoming chief minister of the Antiguan Parliament in 1961. Full internal self-government for Antigua and Barbuda was granted by the British in 1967. By the 1970s Antigua had developed an independence movement led by its Prime Minister George Walter, a politician who opposed the British system of independence within a federation of islands and supported complete independence from the European crown. However, and in spite of his plan for the island, Walter lost the 1976 elections at the hands of Vere Bird, who supported and encouraged regional integration. In 1981, Antigua and Barbuda achieved independence, with Vere Bird as its first prime minister. The newly formed state obtained United Nations and Commonwealth membership and joined the Organization of East Caribbean States.

In the 1990s, the government fended off multiple scandals, including allegations of smuggling Israeli arms to Colombian drug cartels, as well as misuse of public funds. Nevertheless, the Antigua and Barbuda public, as well as overseas investors, has retained confidence in the government, and the country has achieved much international acclaim for its input and contributions to democracy, human rights, economic and social programs, and on issues relating to defense—particularly of the Americas. In 1994, Vere Cornwall Bird (Father of the Nation) resigned as prime minister and was succeeded by his son, Lester B. Bird.

Politics in Antigua and Barbuda take place in a federal parliamentary representative democratic monarchy framework. In this system the Head of State—Elizabeth II as of 2008—is the monarch; the monarch appoints the Governor-General as the vice-regal representative. In 2007, Louise Lake-Tack became the first female to hold the position of Governor-General in the history of Antigua and Barbuda.

Economically, the dual-island nation has performed well. Construction oriented to building infrastructure in the tourism sector—especially hotels and housing—has been pivotal in achieving a steady pace of economic growth. In 2002, the service industry represented 74% of the economy, the industrial sector another 22%, and tourism accounted for 3.8%. Agricultural production is focused on satisfying the internal demand. Agricultural production has been hindered by the lack of water supply and scarcity of labor due to higher salaries in the construction and tourism realms.

## 2 LOCATION AND HOMELAND

Antigua and Barbuda—close to the midpoint of the Lesser Antilles—is located at the outer curve of the Leeward Islands, between the Atlantic Ocean and the Caribbean Sea. Antigua is 650 km (404 mi) southeast of Cuba. With an area of 281 sq km (108 sq mi), it is the second-largest of the Leeward Islands and about two-thirds the size of New York City. Its terrain is mostly low-lying, although Boggy Peak, located among volcanically formed hills in the west, rises to 399 m (1,309 ft). The interior is primarily scrub-covered with some forest cover.

Annual rainfall—averaging about 11 cm (4.3 in) per year—is lighter than that on most other islands in the West Indies, and there are no permanent rivers or streams on either Antigua or Barbuda, so water supply and conservation are of great concern to the nation's people. However, the country's dry climate, together with its abundant natural harbors and sandy beaches (said to number 365, one for each day of the year) have made it a prime location for tourism, and Antigua was one of the first sites in the Caribbean to attract foreign tourists as a vacation spot.

Barbuda lies about 50 km (31 mi) northeast of Antigua and is about half its size—176 sq km (68 sq mi). It is very flat—its highest elevation is 44.5 m (146 ft)—with sandy beaches and a large lagoon and mangrove swamp on its western side. The island, which was leased to a single British family for nearly 200 years, has only one village, Codrington. Much of the island is a scrub-covered wilderness covered with cactus and thornbush and roamed by a variety of undomesticated animals, including what may be the only deer on a Caribbean island. The uninhabited island of Redonda, which has been under the jurisdiction of Antigua since 1869, has an area of 2.6 sq km (1 sq mi). Phosphate mining was carried out on the island until 1914. The population of Antigua and Barbuda is estimated at just under 70,000, of which 1,200 lived on Barbuda. St. John's, the country's capital and economic center, has an estimated population of between 35,000 and 40,000 people.

Demographically, descendants from African slaves (black or mulatto—mixed black and white race) account for more than 90% of the population. Other mixed races represent 4.4% and

close to 2% are white. The majority of the population has Irish, British, and Portuguese roots; there are also Arab, Jewish, and Asian minorities.

### 3 LANGUAGE

English is the official language of Antigua and Barbuda, but most inhabitants speak a Creole dialect that is based on standard English combined with African expressions and local slang. English pronunciation and grammar are also modified. One of the most noticeable differences is in the use of object pronouns in the subject of a sentence, as in "Her my friend" (which also omits the helping verb "is" that would be found in the standard English sentence, "She is my friend."). A similar construction is "Us alive" for "We are alive." Objective pronouns may also replace possessive pronouns, as in "You come me church," which also omits the preposition "to" of the standard English construction, "You come to my church." Spanish is also widely spoken among certain groups in Antigua, mainly because of the constant waves of migration from the Dominican Republic and other Spanish-speaking zones to Antigua and Barbuda.

### 4 FOLKLORE

*Obeah*, a collection of animistic beliefs and practices derived from Africa, has adherents in Antigua and Barbuda, although it has been declared illegal. Those who subscribe to it believe it can heal the sick, harm one's enemies, and even be used for such mundane purposes as "fixing" a court case. Its features include a belief in spirits (of which the best-known are *jumbies*) and the preparation of herbal potions. There is also a body of unrelated medicinal folklore that has been preserved on the islands, which includes such remedies as the use of a paste made from a plant known as the cancanberry bush to treat thrush, and the ingestion of maiden-blush tea for a variety of purposes.

### 5 RELIGION

The Anglican Church has the largest membership of any religion in Antigua and Barbuda, claiming about 25% of the population. Other Protestant groups also have an important presence in the region. The Seventh-Day Adventists represent 12.3% of the population, Pentecostal followers account for 10.6%, the Monrovia Church, 10.5%, Roman Catholics, 10.4%, the Methodists, 7.9%, and the Baptists with 4.9% of the total population.

### 6 MAJOR HOLIDAYS

Public holidays in Antigua and Barbuda include New Year's Day (1 January), Labor Day (first Monday in May), CARICOM Day (3 July), Independence Day (1 November), Christmas (25 December) and Boxing Day (26 December), as well as Good Friday, Easter Monday, and Whit Monday, which occur on different dates each year.

The nation of Antigua and Barbuda is particularly known for its Carnival celebration, held in late July through the first Tuesday in August. Historically, this holiday celebrates the abolition of slavery in the British West Indies. Most of the festivities take place in the capital city of St. John's, including street parades led by revelers wearing elaborate glittering costumes, calypso and steel drum music, street dancing ("jump-up"),

and contests. The climax of the festival is J'Ouvert on the first Monday in August, when thousands of celebrants pour into the streets at 4:00 AM in a frenzy of dancing accompanied by steel drum and brass bands. The island of Barbuda holds its own more modest Carnival celebration, Caribana, in June.

### 7 RITES OF PASSAGE

The religious confirmation of young men and women, performed at puberty, signals their acceptance into the Church by the general congregation. Other major life transitions, such as birth, marriage, and death, are also marked by religious ceremonies.

### 8 INTERPERSONAL RELATIONS

"Aunty" and "Uncle" are sometimes used as terms of respect in addressing one's elders, and a woman may be addressed by the word "Mistress" before her last name. A handshake is a customary greeting among business associates.

### 9 LIVING CONDITIONS

Most Antiguans and Barbudans live in houses constructed of concrete and wood, with at least two bedrooms, a living/dining room, a kitchen, and a bathroom. Most homes on both islands now have indoor plumbing and electricity.

The average life expectancy in Antigua and Barbuda is 73 years. In the late 1980s, gastroenteritis and dysentery, mostly due to poor sanitation, were the most common illnesses and causes of death, especially in children. Other causes of death include heart disease, cerebro-vascular disease, cancer, and influenza. Hypertension is the most common medical condition on Barbuda, which has a 10-bed hospital. There is some malnutrition among the nation's children, some of whom are not immunized against common diseases.

Antigua and Barbuda has 1 physician for every 2,200 people, and one general hospital, the Holberton Hospital. In the early 1990s the hospital was often short of basic supplies, but since 1994 supplies and services have been readily available. Sewage treatment and waste disposal problems have been under better control since the mid-1990s.

Antigua has 240 km (149 mi) of roads, previously known for their absence of street signs and other markings, including village names and distance indicators. Today, many streets and roads are marked, and through the cooperative efforts of local business and community organizations, road signs and village markers are more commonplace.

In 1992, 17,000 motor vehicles were registered. There is a railway consisting of 78 km (48 mi) of narrow-gauge track. St. John's is the major port, and Vere Cornwall Bird International Airport, about 10 km (6 mi) northeast of St. John's, accommodates large jetliners, serving as a hub for tourist travel in the region.

### 10 FAMILY LIFE

Couples in Antigua and Barbuda, as in other parts of the English-speaking Caribbean, are united in three basic types of relationships: legal marriage, unmarried cohabitation, and "visiting unions," where the man and woman live apart and the woman raises the children. Many children are raised by relatives other than their parents, and some grow up in a succession of different households. Decisions about where a child

will live are influenced by a variety of factors, including the parents' financial situation and employment patterns, educational opportunities, and the necessity of caring for the elderly. Inheritances are usually divided equally among legitimate and illegitimate children, and a 1987 law made it illegal to discriminate against children born out of wedlock. The country's fertility rate (estimated for 2008) is 2.2 children for each woman. With the growth of the tourism industry, an increasing number of women have entered the labor force.

### 11 CLOTHING

The people of Antigua and Barbuda wear modern Western-style clothing. Colorful costumes are worn by many during the Carnival celebration in August.

In 1992, a national competition to select a national dress was held as a part of the islands' eleventh anniversary of independence. The winning design was submitted by native Antiguan Heather Doram. The costume, which has versions for men and women, is worn by many Antiguan and Barbudans on Independence Day, 1 November.

### 12 FOOD

The Creole cuisine of Antigua and Barbuda is similar to that of other West Indian nations and includes such staples as rice and peas, pumpkin soup, and pepperpot soup. Fish and shellfish are an important part of the national diet, and the regional species of spiny lobster is especially popular, as are crabs and conch. Fungi, a sort of cornmeal pudding made with boiled okra, is another staple on the islands, especially served with salt fish.

Breadfruit (originally introduced to the region from the East Indies) is another staple, and meat-filled pastries ("pasties") are sold by street vendors. The country's most distinctive fruit is the Antigua black pineapple, which is exceptionally sweet.

### 13 EDUCATION

Primary and secondary education is compulsory between the ages of 5 and 16, and pre-primary schooling is available from the age of 3. The educational system in Antigua and Barbuda is based on the British system, which has grade levels called "forms." Primary education is provided for five or six years, after which an examination is taken to pass on to the upper grades. Students then complete four or five years of secondary education.

There are 45 primary schools and 12 secondary schools. Although the nation has a literacy rate of 90%, there are serious deficiencies in the educational system, including a shortage of qualified teachers and inadequate facilities and supplies. Technical and teacher training is offered at the Antigua State College, and there is an offshore medical school, the University of Health Sciences, which was founded in 1982. In addition, the regional University of the West Indies has a continuing education facility in Antigua and Barbuda.

In 1998, Antigua and Barbuda decided to become the main provider of medical services in the Caribbean area. To accomplish this mission the nation built the most technologically advanced hospital in the Caribbean, the Mt. St. John Medical Centre.

*Antiguan girl carrying water jug. Many children are raised by relatives other than their parents, and some grow up in a succession of other households. (AP Images)*

### 14 CULTURAL HERITAGE

The music of the Fife Band is an important part of the islands' musical heritage. The band is made up of a stringed guitar, drum, and fife (or flute).

The Museum of Antigua and Barbuda, in St. John's, is dedicated to preserving the islands' heritage by maintaining their archaeological relics and historic buildings.

Internationally acclaimed author Jamaica Kincaid was born and grew up on the island of Antigua and now resides in the United States. Her novels and short stories, including *At the Bottom of the River* (1983) and *Annie John* (1985), provide a vivid portrait of the Antiguan people and way of life based on images and memories from her youth. Kincaid has also been a staff writer for *The New Yorker* magazine since the 1970s, and her 1988 book-length essay, *A Small Place*, is a searing indictment of British colonialism, the tourist industry, and government corruption and neglect in post-colonial Antigua. Antiguan playwright Dorbrene "Fats" Omarde is known for dramas that address the social and political issues confronting his country.

### 15 WORK

The vast majority of people in Antigua and Barbuda are employed by the government. The figure for total employment in commerce or in service-sector jobs is 82% of the work force, while agriculture employs 11%, and industry employs the remaining 7%. Since tourism-related jobs are, in many cases,

seasonal, it is a common practice to have more than one source of income, which may include such part-time agricultural pursuits as keeping livestock or selling produce from “back-yard farming” at the market. Fishing is an important source of income on Barbuda, as are government employment and tourism.

## 16 SPORTS

Cricket is the national sport of Antigua and Barbuda, and the country has produced some of the world’s most outstanding players, including Viv Richards, Andy Roberts, Richie Richardson, and Curtley Adams, a fast bowler. Antiguan teams compete against teams from neighboring islands, and Antiguan play on the West Indies cricket team, which has been one of the world’s best since the 1970s. Soccer is another popular sport.

## 17 ENTERTAINMENT AND RECREATION

The Caribbean’s universal male pastime of dominoes is enjoyed in Antigua and Barbuda. A game called *warri* is also popular. Favorite types of music include calypso, reggae, and hymns. Cricket is played recreationally, as are soccer, basketball, and netball.

## 18 FOLK ART, CRAFTS, AND HOBBIES

Antiguan artisans are known for the exceptional quality of their hand thrown pottery. Striking items, both decorative and functional, are also crafted from hand-woven sea cotton adorned by batik and embroidery. Other handicrafts include woodcarving and basketry.

## 19 SOCIAL PROBLEMS

Antigua and Barbuda has serious environmental problems that threaten the nation’s economy and the health of its residents. In the absence of a central sewage system, contamination by raw sewage and other forms of domestic waste poses a grave threat to the water supply in a country without permanent natural lakes or perennial rivers. In addition, the removal of sand for construction purposes threatens the nation’s beaches, which are the basis of its tourist industry.

Inadequacies in the educational system have contributed to a shortage of skilled workers, and the tourist industry, while highly labor-intensive, creates work that is in most cases unskilled and low-paid. The government’s abolition of personal income taxes and its reliance on foreign borrowing has left the country with a massive foreign debt.

## 20 GENDER ISSUES

Violence against women, including spousal abuse, is a problem in both Antigua and Barbuda. The Domestic Violence Act prohibits and provides penalties for domestic violence, rape, and other sexual offenses, with maximum sentences (rarely imposed) ranging from 10 years to life imprisonment. Violence against women came into sharp focus in October 2005, when Senate President Hazelyn Francis was assaulted and raped in her home. In January 2006 authorities charged an 18-year-old youth with the attack.

While the role of women in society is not restricted legally, economic conditions in rural areas tend to limit women to home and family, although some women work as domestics,

in agriculture, or in the large tourism sector. Women are well represented in the public sector, accounting for 54% of the public service and more than half of the permanent secretaries (the most senior level in each government department). In addition, 41% of bar association members are women. However, there is no legislation requiring equal pay for equal work.

There is one woman in the 17-seat House of Representatives and two women appointed to the 17-seat Senate. In addition, the speaker of the House of Representatives and the president of the Senate, both appointed positions, are women. However, there are no women in the prime minister’s cabinet.

## ARAB AMERICANS

For more information on Arab history and culture, see **Vol. 1: Algerians, Egyptians, Libyans, Moroccans, Sudanese, Tunisians**; and **Vol. 3: Alawis, Bahrainis, Bedu, Druze, Emirians, Iraqis, Jordanians, Kuwaitis, Lebanese, Ma'dan, Maronites, Omanis, Palestinians, Qataris, Saudis, Syrians, Yazidis, and Yemenis**.

### OVERVIEW

The first Arabs to immigrate in large numbers to the United States were Lebanese Christians in the 1880s (see **Lebanese Americans**). Lebanese Muslims began to immigrate to America in the early 1900s and were joined by other Arabs, mostly Palestinians. Arab immigration to the United States continued in a steady stream until 1924, when the United States placed severe restrictions on the number of immigrants allowed in from each country. Arab countries were given extremely low quotas; for example, only 100 Syrians were allowed to enter the United States each year. Arab immigrants continued to trickle in to America for the next few decades, but sizeable immigration did not resume until U.S. immigration reforms were introduced in 1965, opening the doors to much greater numbers of Arabs. The humiliating defeat of Arab forces by Israel in the Six-Day War of 1967 triggered a sharp rise in Arab immigration to the United States. Since 1970, over 10,000 Arabs each year have immigrated to America.

Early Arab immigrants were mostly poor, uneducated farmers hoping to earn money quickly and then return to their homelands. The majority were Christian. Many became traders or peddlers. Others took factory jobs, especially in the Detroit auto industry. Detroit and Dearborn, Michigan, continue to lure Arab immigrants today; the Detroit-Dearborn area currently boasts the largest Arab American population in the United States.

Arab immigrants to the United States since World War II (1939–45) differ in a number of ways from those who came before. The majority are Muslim. They are mostly well-educated professionals or students seeking higher education. Whereas earlier Arab immigrants tended to take up the life of the traveling salesperson (both men and women worked as peddlers), newer immigrants are more likely to settle down in large cities and work in their various professions. Lebanese immigrants dominated earlier waves, while recent waves have brought large numbers of Egyptians, Syrians, Palestinians, and Jordanians.

When Palestine was partitioned into a Jewish state and an Arab state in 1947, and the nation of Israel was formed in 1948, hundreds of thousands of Palestinian Arabs were driven from their homes. Many decided to immigrate to the United States, at least temporarily. Civil unrest and a lack of economic opportunities in their former homeland led a great number to decide to stay in America permanently.

The Egyptian Revolution in 1952 drove many wealthy Egyptians out of Egypt when their property was confiscated and their businesses nationalized. As a result, Arab countries suffered a severe “brain drain” with 90,915 Arabs immigrating to the United States in the 1950s and 1960s, most of them (90%) professionals. In the past few decades, other Arabs, such as Yemenis, Iraqis, and North Africans, have also immigrated

to the United States in search of a better life than that available to them in their conflict-ridden homelands.

Getting an exact count of the Arab American population is impossible for a number of reasons. Immigration records are misleading because early Arab immigrants were often listed as “Turks” (since Lebanon was under the rule of the Ottoman Turkish Empire). More recent immigrants frequently come to the United States from some other country than their homeland, as so many are displaced Palestinian refugees, and they are registered according to their last residence rather than as Palestinians. Some are still listed under vague categories such as “other Asian” or “other African.” Self-reported statistics on the U.S. Census are also incomplete because Arab Americans may fear revealing themselves as such due to anti-Arab sentiments in America. Others classify themselves in terms that are difficult to distinguish clearly as Arab.

The 2000 U.S. Census counted 1,189,731 Arab Americans. An acceptable estimate, however, of the true current Arab American population is 3,500,000. Almost half have arrived in the United States since 1990. Arab Americans live all across the United States, though the largest population (over 69,000) is in the New York area. Michigan has the highest percentage (1.2%) of Arab Americans in its state population. About half of the total Arab American population lives in the states of California (190,890), New York (120,370), Michigan (115,284), Florida (77,461), and New Jersey (71,770). Other states with large numbers of Arab Americans include Ohio (54,014), Massachusetts (52,756), Illinois (52,191), Pennsylvania (48,678), and Virginia (41,230). In proportion to the total state population, Rhode Island (7,012; or 0.7%) has a significant Arab American population as well.

Christian Arab Americans have tended to become Americanized quite quickly. Many early immigrants Americanized their names in order to fit in with mainstream American society. More recent immigrants find less need to change their names in the new atmosphere of multiculturalism in the United States. However, some still use Americanized names in public and reserve their Arabic names for family use. The Arabic language is an integral part of the Islamic religion, so Muslim Arab Americans retain at least some fluency in Arabic, even into the third and fourth generations. The majority, however, are also fluent in English. According to the 2000 U.S. Census, although 70% of Arab Americans spoke a language other than English at home, 65% also spoke English very well. Christian Arab Americans are more likely to lose their fluency in Arabic as soon as the second generation.

Muslim Arabs hesitated to immigrate to the United States in the early years of Arab immigration because America was a Christian nation, by and large. There were no mosques in America in the 19th and early 20th centuries. Although mosques have been built and Muslim communities have developed in several regions of the United States, Muslim Arab Americans still find it difficult at times to follow some of their religious practices, such as praying facing Mecca five times a day or fasting during the month of Ramadan. However, Islam does provide alternate ways of meeting religious obligations, and many Muslim Arab Americans choose to give extra money to charity or spend time educating young Muslims in place of missed prayers or fasting. Second- and later-generation Muslim Arab Americans often leave their parents' religion as they become Americanized and/or marry non-Arabs.

Because Druze religious leaders are not allowed to leave their homeland in the Middle East, Druze Arab Americans have never built a place of worship in the United States. Druze are also very protective of their faith and maintain a high degree of privacy or even secrecy around their religion. Many Druze Arab Americans attend Christian churches instead, as Druze and Christians worship the same God.

Christian, Druze, and Muslim Arab Americans almost never intermarry, nor do Sunni and Shia Muslim Arab Americans or Maronite and Melkite Christian Arab Americans. Arab Americans do intermarry, however, with non-Arabs. Muslim Arab Americans discourage marrying non-Arabs, but some do, especially as later generations become less attached to their religious and cultural traditions.

Intermarriage with non-Arabs creates difficulties for both parties, however, particularly in the area of family relations. The extended Arab family, with its complex and close relationships, is quite foreign to Western Europeans who focus on the nuclear family unit. Non-Arab American spouses can become quite frustrated with the multitude of in-laws who drop in at any time without warning, call at all hours, help themselves to food from the kitchen, etc., all of which are expected in Arab culture. Arab Americans may not understand their non-Arab spouses' frustrations or lack of connection with their own extended families.

Arab culture also has great respect for the elderly, and aged parents and grandparents are always cared for at home. Nursing homes do not exist in Arab countries, and Arab Americans almost never make use of them in the United States. This

can be another source of tension between Arab and non-Arab American spouses, as most non-Arab Americans are not used to caring for aging relatives in their homes.

Family and food are central elements of Arab culture, and this remains true for Arab Americans. Both family and food are enjoyed by Arab Americans at picnic festivals known as *mahrajan*. Arab foods such as hummus, kibbe, fattoush salad, and baklava have become popular in mainstream American society today, thanks to the many Arab Americans who opened Middle Eastern restaurants in cities across the United States.

Arab Americans also place a high value on education. Although the earliest immigrants were mostly uneducated and illiterate, they made sure that their children were given the best education available in America. Many of today's Arab immigrants are students seeking higher education. In 2000 some 85% of Arab Americans over the age of 25 had at least a high school diploma (in contrast to only 80% of the U.S. population as a whole), and 41% (almost double the total U.S. rate of 24%) had a bachelor's degree or higher.

Perhaps most central to an Arab's heart is poetry, and Arab Americans have lost none of their love for this art. Lebanese American poet Kahlil Gibran became internationally known with the publication of his book of mystical verse, *The Prophet*. Written in English, *The Prophet* has since been translated into 20 languages. More than 4 million copies have been sold in the United States alone.

Other Arab Americans who have contributed to American society in the arts include actors Danny and Marlo Thomas,

*Arab Americans join hands to form a human chain as a sign of Arabic unity during a rally in front of Dearborn City Hall on June 6, 2007. The event was designed to show their concern for increased divisions in the Arab and Muslim world. The metro Detroit area has the largest Arab-American population concentration in the United States. (Bill Pugliano/Getty Images)*

Jamie Farr, Kathy Najimy, Salma Hayek, and Tony Shalhoub; musicians Paul Anka, Sammy Hagar, Frank Zappa, Paula Abdul, Tiffany, and Shakira; and children's book author Naomi Shihab Nye. Among the many Arab American contributors to the world of politics are U.S. senators George Mitchell, John Sununu, and Spencer Abraham; Donna Shalala, former Secretary of Health and Human Services and the first Arab American appointed to a Cabinet post; Helen Thomas, former dean of the White House press corps; consumer advocate and former presidential candidate Ralph Nader; John Zogby, founder of Zogby International polling service; and retired General John Abizaid, commander of the United States Central Command (CENTCOM) from 2003 to 2007. The co-founder of Apple, Inc, Steve Jobs, and the founder of Mothers Against Drunk Driving, Candy Lightner, are both Arab Americans. Just one of the numerous Arab American sports figures is Doug Flutie, winner of the 1984 NFL Heisman Trophy.

Because early Arab immigrants to the United States were mostly Christian and tended to scatter across the country in their work as traders, they met with little overt discrimi-

nation or prejudice from other Americans. They blended in with Christian mainstream America, and their small, scattered numbers did not pose an economic threat to established communities. Later Muslim Arab immigrants, however, stood out in sharp relief from mainstream America, with their exotic religious and cultural customs. They were also more likely to settle together in Muslim Arab American communities, presenting a more noticeable perceived threat to non-Arab Americans.

Since World War II, anti-Arab sentiment in the United States has been on the rise. The United States has consistently supported Israel in the Arab-Israeli conflict that began in 1947, although the United States has also participated in efforts to bring peace to the warring factions. Jewish Americans, whose population is about twice that of Arab Americans, are quite vocal in their support of Israel. Such dissension creates a difficult situation for Arab Americans who are then seen as "the enemy." U.S. politicians hesitate to accept any support from Arab Americans for fear of alienating Jewish American voters.

In general, Arab Americans are stereotyped in mainstream American culture as terrorists and/or greedy oil barons. With the heightening terrorist activity in the Middle East and beyond, the oil embargo of the 1970s and rising oil prices since then, the Iran-Iraq War of the 1980s, and the Gulf War of the 1990s, anti-Arab sentiment in the United States steadily increased. The tragic events of 11 September 2001 brought anti-Arab feelings to a head, resulting in many hate crimes as well as legislative reforms and security procedures that single out Arabs for suspicion. Arab Americans are often subject to discrimination, harassment, and even violence.

Arab Americans have formed a number of organizations to address these problems and work towards legal, political, and educational solutions. Jewish American and Arab American groups have joined together to begin establishing better relations between their peoples. Many other individuals and groups throughout America have also initiated efforts to transcend fear and prejudice since 9/11, with varying degrees of success so far.

Although almost two-thirds of Arab Americans are Christian, and many Arab American Muslim women do not wear headscarves or other identifiably “Muslim” clothing, the headscarf in particular has become a focal point of controversy and tension in American and other Western European countries. Muslim Arab American women who choose to wear a headscarf for religious reasons face the prospect of confusion, fear, and discrimination from other Americans. Muslim women are likely to be refused jobs or promotions if they refuse to take off their headscarf, young girls suffer bullying at school, and those electing to travel by air may be subjected to invasive searches simply because they “look like” terrorists. The conflicts between religious freedom and civil liberties versus national security and the promotion of a secular public society in America find a focal point in Arab American women’s choice of headgear.

# ARGENTINES

**LOCATION:** Argentina

**POPULATION:** 40 million

**LANGUAGE:** Spanish (official); Italian; German; Quechua; Mapudungun; Guaraní; Toba

**RELIGION:** Roman Catholicism; Evangelical Protestantism; Judaism; Islam; Mormons

## 1 INTRODUCTION

Argentina derives its name from the Latin word for silver, *argentum*, and this is what drove the Spanish to explore the land during the 16th century. There was little silver to be found, however, but the fertile soil of the Pampas was to become the country’s most valuable asset. It was during the late 1800s that Argentina found a wealthy outlet with the export of meat and grain to Europe. This lucrative trade increased until, by the early decades of the 20th century, Argentina had become one of the wealthiest nations in the world. However, soaring inflation and a damaging series of complex political conflicts in recent years have badly affected the economy.

Argentina has always attracted European immigrants. During the 19th century, waves of Europeans, such as Italians, Basques, Welsh, English, Ukrainians, and immigrants of other nationalities poured into Buenos Aires. In the 16th century, early European settlers discovered a wide range of Indians across the country, with different economic and social systems. There were large populations in the Andes, in the tropical and temperate forests there were seminomadic farmers, and nomadic hunters and gatherers lived in the Amazon and on the Patagonian steppes. But as the European settlers moved out across the country to claim the lands for their own, the Indian populations were ousted from their lands and virtually disappeared. A quasi-feudal system of land control was established in Argentina, similar to those of most other Latin American countries.

During the 1820s, a series of independence movements throughout South America combined to pry control of the continent away from the hands of Spain. Under the leadership of General José de San Martín and others, the United Provinces of the River Plate, Argentina’s direct forerunner, declared independence in 1816. The Argentina Constitution was established in 1853.

After an oligarchic state-building process, mass politics erupted into Argentine political life in the first half of the 1900s due to the rapid expansion of the working class. However, the 1929 economic crisis brought to an end the democratic experiments. After a period of “oligarchic authoritarianism,” Colonel Juan Domingo Perón won the presidential elections of 1946 with the support of the organized labor and what would become the Partido Justicialista (PJ). With his charismatic wife, Eva Duarte de Perón (“Evita”), he established a regime based upon import substitutions and the empowering of the working class.

Between the mid 1950s and 1970s soft military and weak civilian administrations traded power, while the economy grew strong. However, the escalating political violence in the context of the Cold War pushed the armed forces to take power from 1976 to 1983. The military government was embroiled in

the Dirty War against “subversives,” an infamous chapter of Argentina’s history, which saw the death of thousands of innocent victims. Paramilitary death squads, operating with the covert approval of the authorities, were responsible for many other victims. A familiar phrase used at this time referred to people “disappearing.” What the phrase meant was that someone had been abducted, detained, tortured, and probably killed. All of this was carried out without any pretense of the administration of justice.

Eventually, a fast-declining economic situation and growing public resentment brought about huge demonstrations in the streets. In order to stay in power, General Leopoldo Galtieri decided to launch an invasion of the Falkland Islands (Islas Malvinas) in an attempt to distract the public. War with Britain followed, but Argentina’s badly trained and demoralized army finally had to admit a humiliating defeat after 74 days. Argentina’s military dictatorship was over, and within a year Raul Alfonsín of the Radical Civic Union (UCR) was elected to the presidency.

Despite the return of democracy, Alfonsín was incapable of stabilizing the economic and the growing cycle of hyperinflation. After winning the 1989 presidential elections, Carlos Menem of the PJ imposed a peso-dollar fixed exchange rate and adopted far-reaching neoliberal reforms, which contributed to investment and growth. However, the liberalization of the markets undermined the local industry and made the country vulnerable to international crises. In 1998 the Asian financial crisis precipitated an outflow of capital and Argentina entered into a recession that culminated in the economic crisis of 2001. After the freezing of bank accounts and the devaluation of the peso, Argentineans hit the streets, forcing the resignation of then-president Fernando de la Rúa of the UCR. Within the space of two weeks, the presidency changed hands on five occasions until a joint session of both houses of Congress elected Eduardo Duhalde (PJ), the former governor of the province of Buenos Aires.

After Duhalde decided to abandon the peso-dollar fixed exchange rate, Argentina defaulted on its international debt obligations and inflation spiked. However, after implementing new policies based on re-industrialization, the economy stabilized and began to grow again. In 2003 Néstor Kirchner of the PJ became president and renegotiated Argentina’s international debt. Four years later, his wife Cristina Fernández became the first woman to be elected as president of the country.

## 2 LOCATION AND HOMELAND

Argentina is the world’s eighth-largest country, only slightly smaller than India. It has a total area of about 2.8 million sq km (1.1 million sq mi), excluding the South Atlantic islands and the Antarctic quadrant it claims as national territory. From Quiaca on the Bolivian border to Ushuaia in Tierra del Fuego, it is nearly 3,500 km (2,175 mi), about the same distance as from Havana, Cuba, to the Hudson Bay in Canada, or from the Sahara Desert to Scotland.

Approximately 86% of the population of 40 million people lives in urban areas. More than 33% live in Gran Buenos Aires, which includes the Capital Federal and its suburbs in the Buenos Aires province. Most Argentineans are of European origin (85%), including about 400,000 Jews, the world’s eighth-largest Jewish community. Approximately 15% of the population is Mestizo—people of mixed indigenous and European blood.

The four main provinces are the Andes; the lowland North; the Pampas, home to the famous *gaucho*, the Argentine cowboy; and Patagonia. The Andes separate Argentina from Chile, while rivers form its borders with Uruguay, Brazil, and Paraguay. The country also shares a short border with Bolivia.

## 3 LANGUAGE

The official language of Argentina is Spanish, but a number of the European-descended communities still maintain their own languages. Italians, who constitute the largest immigrant group, have approximately 1.5 million speakers. Some 17 native languages still survive, being Quechua (900,000), Mapudungun (100,000), Toba (19,800), and Guaraní (18,000) the most prominent.

## 4 FOLKLORE

Despite the fact that Argentina regards itself as extremely cultured and European, spiritualism and the worship of the dead play an important part in the lives of the people. One of its own

famous novelists, Tomas Eloy Martinez, has commented that the country's national heroes, such as San Martin, are honored not on the anniversary of their birth but of their death, in the same way that saints' days are celebrated. Steady processions of pilgrims regularly visit the Recoleta and Chacarita cemeteries in Buenos Aires where personal prayers are said and ritual offerings are left, especially at the tombs of Juan and Evita Peron and the tango singer Carlos Gardel.

During the 1800s, the *gaucho*, the Argentine cowboy, came to represent a free-spirited symbol for the country. He was seen as a rebel who took on authority in order to preserve his freedom. Legends about him grew, and he became the inspiration for many writers.

## 5 RELIGION

Even though Roman Catholicism is the religion the government should support, this does not imply that it is Argentina's official religion. The Catholic Church estimates that approximately 70% of the population identifies with Catholicism. Evangelical Protestant movements are making converts among traditional Catholic believers, as is happening elsewhere in South America, since the 1980s. Today, they account for 3.5 million people or about 10% of the population. Around 2% of the population is Jewish, 1.5% is Muslim, and 0.8% of Argentines are members of the Church of Jesus Christ of Latter-day Saints (Mormons).

## 6 MAJOR HOLIDAYS

All the main Christian festivals such as Easter and Christmas are celebrated throughout the country. There are also national celebrations of historical times and heroes such as the May Revolution of 1810; Independence Day on July 9; Malvinas Day, on June 10, which celebrates the establishment of the "Comandancia Politica y Militar de las Malvinas" in 1829; and Dia de San Martin, the anniversary of San Martin's death on August 17.

## 7 RITES OF PASSAGE

Baptism, First Communion, and saints' days are major events, important to both individuals and families. Because of the strong Spanish and Italian heritage and the abiding influence of the Catholic Church, these occasions are used as important family get-togethers that serve to reinforce the family structures.

Younger people, however, are no longer getting married in church as a matter of course, and there is a growing trend toward divorce and remarriage. Civil marriages have become popular.

## 8 INTERPERSONAL RELATIONS

Argentines are extremely gregarious and eagerly invite visitors to participate in their activities.

One famous pastime is drinking *mate*, a Paraguayan tea made from holly leaves. This is more than a simple drink like tea or coffee. It is an elaborate ritual, shared among family, friends, and colleagues. For those taking part, the sharing of the tea-making process seems to be the whole point of the *mate* ritual. During the process, one person is responsible for filling a gourd almost to the top with the tea. Meanwhile, water is heated, but not boiled, in a kettle and then poured into the

vessel. Everyone sips the liquid from a silver tube with a bulbous filter at its lower end that prevents the leaves from entering the tube.

Argentines are quite formal in public and are very aware of proper civilities. Even when asking a stranger for directions in the street, one is expected to approach the person with a greeting such as *buenos dias* or *buenas tardes*, "good day" or "good afternoon."

## 9 LIVING CONDITIONS

The major cities in Argentina have a European look to them. The middle classes live in tall, modern apartment buildings, or in bungalows with small gardens. Since the 1930s, rural workers have flocked to the big cities and a number of slums have sprouted on the outskirts, where the workers live in shacks. Rural houses are often built of adobe, with earth floors and roofs of straw and mud.

## 10 FAMILY LIFE

The strong Catholic and Spanish heritage has meant that the role of the family plays a central part in Argentine life. There is still a strong belief in the nuclear family, which also extends to grandparents, uncles and aunts, and close relatives.

Much social life is family-centered, and occasions such as birthdays, First Communion, weddings, and funerals are of major importance. A favorite family get-together is the barbecue. Mealtimes are also regarded as important occasions for family cohesion and are often elaborate, time-consuming events.

## 11 CLOTHING

Most city-dwellers wear Western-style clothes, and many enthusiastically follow the fashions of Europe, particularly those of Italy.

In the rural areas, however, many workers on the *estancias* wear at least part of the *gaucho* costume—a wide-brimmed hat and loose trousers tucked into the boots. In the northwest, the Indians wear ponchos, colorful skirts, and bowler hats.

## 12 FOOD

Given the enormous cattle ranches of the Pampas, it is hardly surprising to find that the Argentine diet is very meat-oriented. At the same time, there is a surprising ethnic and regional variety to Argentine cooking. The huge Italian presence has resulted in a great popularity for pasta dishes such as spaghetti, lasagna, cannelloni, and ravioli. Beef, though, is the center of most meals. The most popular form is the *parrillada*, a mixed grill of steak and other cuts.

Some regions have very distinctive food. The Andean northwest offers very spicy dishes, and it is common to find Middle Eastern food in the Mendoza north.

## 13 EDUCATION

With a 97% literacy rate, Argentina is one of Latin America's most literate countries. From the age of 5 to the age of 12, education is free and compulsory, and the comprehensive secondary education system is based on the French model.

Universities are traditionally free and open, but the courses tend to be rigidly specialized. With so much higher education available, the system has turned out many people with profes-

*Couples taking part in the 5th Tango Dance World Championship pose for photographers in Buenos Aires, Argentina. More than 450 couples from different parts of the world competed. (AP Images/Natacha Pisarenko)*

sional qualifications, such as doctors and lawyers, not of all of whom can easily find work in Buenos Aires. Despite this, few of them are willing to move to the provinces.

#### **14 CULTURAL HERITAGE**

During the early 19th and 20th centuries, Buenos Aires readily adopted French trends in art, music, and particularly architecture, which can be seen in many of the turn-of-the-century buildings in the capital.

Argentine writers, much of whose work is available in English, have achieved international stature. They include Jorge Luis Borges, Julio Cortazar, Ernesto Sabato, Manuel Puig, Osvaldo Soriano, and Adolfo Bioy Casares.

In Buenos Aires, the Teatro Colon opera house is one of the finest of its kind in the world. Classical music and ballet, as well as modern dance, are staged here. The capital also has a lively theater circuit, as rich as any major city elsewhere in the world. Even in the provinces, live theater is an important part of cultural life.

#### **15 WORK**

Despite its abundant natural resources and its well-educated and cultured population, Argentina has failed to live up to its potential. Earlier in the 20th century, Argentina was seen to be on a par with prosperous countries such as Canada and Aus-

tralia. Yet it has not only patently failed to keep up with them, it has continually fallen behind them.

Its per capita gross domestic product (GDP) of nearly us\$6,500 makes Argentina one of Latin America's wealthiest countries, but its economy is in a constant state of crisis. Faced with foreign debt of us\$118 billion in September 2007, the living standards of the middle class are being eroded, while the working class and the poor are seriously suffering.

Like other Latin American countries, one of Argentina's fundamental problems lies in the poverty of its rural areas. Control of the richest agricultural lands of the Pampas are in the hands of a small number of wealthy families, while most rural people are reduced to scratching out a living on marginal lands or working as poorly paid workers on the big estates.

Corruption and inefficiency have plagued state enterprises, where workers frequently hold down a number of government jobs. A standing Argentine joke is to refer to these employees as *noquis*, named after the traditional potato pasta served in Argentine households on the 29th of each month—the implication being that these people appear on the job just before their monthly paychecks are due. Not surprisingly, such corruption has led to massive inflation rates, often exceeding 50% per month. Despite a determined government clean up of *noqui* workers, which led to a drop in state employment from 1 million to 370,000 persons between 1990 and 1995, reform

measures have hardly touched government departments in the provinces.

## 16 SPORTS

The country is soccer-crazed. In March 2007, the Argentine national football (“soccer”) team was ranked first in the world for the first time by FIFA (Fédération Internationale de Football Association), the international football organization. Argentina won the World Cup, at home in 1978, and again in 1986. The Argentine soccer team also won the gold medal at the Olympic football tournament in 2004. It has provided a number of internationally known players such as Diego Maradona and Daniel Passarella. There are more first-division soccer teams in Buenos Aires than anywhere else in the world.

Several tennis players have also become world-famous, such as Guillermo Vilas and Gabriela Sabatini.

The game of basketball has also become a notable sport in Argentina, following the influx of many North American athletes who were unable to play professional basketball in America or Europe. In 1995, the Argentine national team defeated the U.S. team for the gold medal in the Pan American Games in Mar del Plata. The team also won the Olympic Tournament in 2004.

## 17 ENTERTAINMENT AND RECREATION

The best-known and most-striking feature of Argentine popular culture is the tango, both as music and dance. It first became popular in 1880, when it emerged from working-class districts where it was frequently played in brothels. It was a blend of *gaucho* (cowboy) verse with Spanish and Italian music. Then came Carlos Gardel, the music’s most famous exponent, who created the *tango canción*, the “tango song,” lifting it out of the brothels and the poor streets and into the smart salons of Buenos Aires.

For many Argentines, the tango song sums up the fears and anxieties of life. It can carry themes as diverse as love, jealousy, and betrayal to everyday subjects such as going to work or coping with one’s neighbors. It is often full of sad nostalgia about a way of life that is fast disappearing.

In addition to tango, Argentina is known for being a major producer of motion pictures. Argentine cinema enjoyed a golden age between the 1930s and the 1950s due to state-sponsored productions. More recent films from the “New Wave” of cinema since the 1980s have achieved worldwide recognition, such as *The Official Story* (*La historia oficial*), *Nine Queens* (*Nueve reinas*), *Man Facing Southeast* (*Hombre mirando al sudeste*), *Son of the Bride* (*El hijo de la novia*), and *The Motorcycle Diaries* (*Diarios de motocicleta*).

## 18 FOLK ART, CRAFTS, AND HOBBIES

In artisans’ *ferias*, found throughout the country, the variety of handicrafts is extensive. *Mate* paraphernalia is widespread, and gourds and *bombilas* range from simple and inexpensive aluminum, often sold in street kiosks, to elaborate and expensive gold and silver found in jewelry stores. In the province of Salta, the distinctive *ponchos de Guemes* are produced.

## 19 SOCIAL PROBLEMS

Runaway inflation was temporarily halted by the government under Carlos Menem, which reduced the public sector defi-

cit by selling off inefficient state enterprises and curbing the powers of militant labor unions. The trouble is that continuing privatization has led to increasing unemployment, justified by the government as a necessary casualty of reform.

In 1995, official unemployment figures stood at 12.2%, and then rose to nearly 20% as the economy contracted in the aftermath of President Menem’s election. After three years of recession, the economy broke down in 2001 and millions of Argentineans saw their purchasing power drastically reduced. Since 2002 there has been an improvement in the living situation of poorer Argentineans and a strong economic rebound for the middle class. The urban poverty rate dropped to 26.9% by 2007, down from 48% in 2003. However, inflation, which reached 20% in 2007, and the risk of an over-heated economy are once more beginning to threaten the livelihoods of the lower and middle classes.

## 20 GENDER ISSUES

Even though Argentinean culture is strongly rooted in the machismo of *gauchos*, women have been prominent in traditional politics since the second half of the 20th century. The tradition began with Eva Duarte, an actress who became the nation’s patron saint through marriage to President Juan Perón. After Perón died during his second term of office, his third wife, María Estela (“Isabelita”), a former nightclub dancer, briefly succeeded him as president.

During the years of the “Dirty War,” women were the most prominent advocates of human rights. The mothers and grandmothers of the Plaza de Mayo are the best known of the human-rights campaigners. After the return to democracy, a 1991 law required that at least 30% of the candidates on party lists for Congress must be women. Women made up 35% of the Senate seats in 2001. In 2005, Argentina was among the top 15 ranked countries in the world after Rwanda, Sweden, Norway, Denmark, Finland, the Netherlands, Cuba, Spain, Costa Rica, Mozambique, Belgium, and Austria in terms of the representation of women in the national legislature. In 2007 Cristina Fernandez became the first woman to be elected as president of Argentina.

## ARMENIAN AMERICANS

For more information on Armenian history and culture, see **Vol. 4: Armenians**.

### OVERVIEW

Few Armenians immigrated to the United States before the late 1800s. The first massive wave of immigration began around 1890 as a result of massacres of Armenians by the Ottoman Turk sultan Abdul Hamid. In the decade from 1890 to 1900, over 12,000 Armenian refugees entered the United States. Although the Turkish Empire forbade emigration for a few years (1899–1907), Armenian immigration to the United States continued sporadically until the end of World War II (1939–45). A particularly large number came in 1915 after a second round of massacres by the Ottoman Turks (often referred to as the Genocide).

The second wave of Armenian immigration to the United States began in the 1950s and continues today. Most of these second-wave Armenian Americans are from Iran, Lebanon, the former Soviet Union, and other countries of the Armenian Diaspora. They tend to be more educated, skilled, and worldly than first-wave immigrants (although first-wave Armenian Americans were much more highly skilled and educated than most other immigrants to the United States at that time). Many recent Armenian immigrants arrived with some proficiency in the English language, and a few came complete with financial fortunes from their former homelands.

For the most part, Armenian Americans were too few in number and too scattered throughout the United States to engender much discrimination. The one exception was Fresno, California, where a large Armenian American community suddenly developed in a fairly small area during the first wave of immigration. Fortunately, a long history of violent oppression had equipped the immigrants with the ability to avoid direct confrontations, and the racism never escalated to physical violence. The Armenians quickly were assimilated into American culture and were soon accepted as “Americans.”

The exact Armenian American population today is uncertain. There are no official records of the number of Armenian immigrants because they were often mistakenly recorded as “Turks,” “Arabs,” or “Russians” in the early days, and recent immigrants have Lebanese, Iranian, or other passports. Armenian American population estimates run anywhere from 600,000 to 1,000,000. The 2000 U.S. Census lists 385,488 persons reporting “Armenian” ancestry. About 20% of those Armenian Americans are foreign born.

The Turkish Armenians of the first wave of immigration tended to settle in northeastern cities, particularly New York City, Providence (Rhode Island), Worcester (Massachusetts), and Boston. Russian Armenians have settled mostly in southern California, especially Los Angeles. Iranian Armenians have almost all settled in Los Angeles.

Some early Armenian immigrants later moved from the Northeast to the Midwest, settling in Chicago, Detroit, Racine (Wisconsin), and Waukegan (Illinois). About 20% of those who listed themselves as Armenian American on the 2000 U.S. Census live in the northeastern and mid-Atlantic states; half (50%) live in California; roughly 10% are in the Midwest

(mainly Wisconsin, Michigan, and Illinois); and the rest are scattered throughout the United States.

The Armenian language is one focus of the dispute between traditional and progressive Armenian Americans. Traditionalists believe that fluency in Armenian is a requisite for a claim to Armenian ethnicity. Progressives (most of whom are not fluent in Armenian) feel that fluency is good but not necessary. The fact is that few second- or later-generation Armenian Americans speak, read, or write Armenian. By the 1960s, English was the official language of the Armenian American community, and even Armenian churches have modified their services to include portions in English. All-day and afternoon (or Saturday morning) schools exist throughout the Armenian American community to teach children the Armenian language, along with Armenian culture and history. Attendance at these schools is low and dwindling, however.

The Armenian Church was traditionally the center of Armenian life, and it has continued to play a crucial role in the lives of Armenian Americans, although its influence is rapidly declining among successive generations. Many Armenian Americans do not attend services on a regular basis, and a growing number are no longer even affiliated with the church.

The Armenian Church is said to have been founded in the 1st century CE by St. Thaddeus and St. Bartholomew, two of Jesus’ original apostles. In CE 301, Armenia’s King Tiridates III converted to Christianity, making the Armenian Christian Church the first national Christian church in the world. In the millennia following, the Armenian Church became divided into separate factions. These factions are represented in the United States by the Eastern and Western Diocese of the Armenian Church of North America (EWDACNA), the original American diocese founded in 1892, allied with the Patriarchate in Armenia; and the Eastern and Western Prelacy of the Armenian Apostolic Church of America (EWPAACA), allied with the Catholicate of Cilicia in Lebanon.

The EWPAACA was created in 1933 when members of the Tashnag (Armenian revolutionary) party murdered Archbishop Tourian in New York City during a Christmas Eve service. All Tashnag members were expelled from Armenian Apostolic churches and forced to begin their own. The Tashnag congregation remained independent until 1957, when they allied themselves with the Catholicate of Lebanon.

In recent years, there has been increasing talk in support of reuniting the two factions. A new leader, Karekin I, was elected in April 1995 as the worldwide head of the Armenian Apostolic Church. Karekin visited the United States and Canada in early 1996, calling for reunification of the Armenian Church in America. Born in Syria, Karekin served as the primate of the Armenian Apostolic Church in America from 1974 to 1977, so he is familiar with the situation of the Armenian Church in the United States, and he himself is familiar to Armenian Americans. A “unity commission” has been established to work towards unifying the two factions, both of whose headquarters are located in New York City.

Armenians have also become affiliated with other churches. In the United States, 69% of Armenian Americans belong to the Armenian Apostolic Church, while 10% are Armenian Protestant (of various denominations), and 3% are Armenian Catholic. Some 13% of Armenian Americans belong to other non-Armenian churches, and 5% are not affiliated with any church. As of 2008 there were more than 150 organized

Armenian churches in the United States: 102 associated with the EWDACNA; 26 with the EWPAACA; 24 in the Armenian Evangelical Union of North America (AEUNA), not counting those in Canada; and 9 Armenian Catholic parishes. All Armenian American churches suffer from a severe shortage of adequately trained clergy.

With each succeeding generation, Armenian Americans become more "Americanized." Most young Armenian Americans today follow mainstream American customs around birth, weddings, funerals, etc. They celebrate mainstream American holidays, such as Thanksgiving and American Independence Day (4 July), as well as the major Christian holidays of Christmas and Easter. Some Armenian Americans may include elements of their Armenian heritage in these celebrations, performing Armenian folk dances and serving Armenian foods like rice pilaf and shishkebab.

Recent Armenian immigrants to the United States maintain more of their traditional customs, but those customs vary according to the land of their birth. Armenians today are scattered among a number of countries in Europe and Asia, including Turkey, Iran, Lebanon, and the former Soviet Union. This is known as the Armenian Diaspora. Therefore, traditional "Armenian" customs are flavored by the cultures of Armenian Americans' various former homelands.

Overall, Armenian Americans have a high level of education. With each successive generation, more Armenian Americans attend college and universities and become professionals and executives. The average income for Armenian Americans is fairly high compared to other ethnic groups in America and

continues to increase with subsequent generations. Many early Armenian immigrants became small business owners, and there is still a high rate of small business ownership among Armenian Americans today. But fewer children enter the family business as more go on for higher education and become doctors, lawyers, teachers, etc.

The best known Armenian Americans in the worlds of music and literature are singer-actress Cher (Sarkisian Bono Allman) and Pulitzer Prize-winning author William Saroyan. Other successful Armenian American actors include Arlene Francis (Arlene Kazanjian) and Mike Connors (Krekor Ohanian). Singer Kay Armen was well-known in the 1950s, and the Zildjian family has made world-famous cymbals for generations, beginning in Constantinople and continuing after the family immigrated to the United States. Another Armenian American who made a name for himself in the music business is Ross Bagdasarian, a music producer also known as David Seville of The Chipmunks.

Celebrated Armenian Americans in the worlds of science, technology, and public life include Christopher Der Seropian, who developed in 1843 the black and green dyes used on all U.S. currency today; Dr. Varazted Kazarijian (1879–1974), a world-renowned plastic surgeon; and George Deukmejian, who served as governor of California from 1983 to 1991. Alice Peraula was one of only a few women steelworkers and became a key player in the United Steelworker's Union in the 1960s and 1970s, fighting for and winning increasing rights for women in the steel industry.

Armenian Americans demonstrated against the visit of Azerbaijan President Geidar Aliyev in 1997 in Washington, D.C. Aliyev's visit was to seek U.S. aid for Azerbaijan, which has a long-standing conflict with Armenia. (Joyce Naltchayan/AFP/Getty Images)

Football's Ara Parseghian and wrestler Robert Manoo-gian are among the important Armenian American figures in sports. Another is lesser-known Captain G. Harry Adalian, inventor of the high-speed Futurity Foto-Finish Camera that was installed at the finish line of race tracks beginning in 1936 to eliminate disputes over winners of horse races.

Armenian Americans today struggle with factionalism within the Armenian American community itself. Conflicts exist over everything from church divisions to Armenian language proficiency to musical tastes (what is called "traditional" Armenian music in the United States is considered "Turkified" by non-Turkish Armenian Americans). There is also a heated debate over whether to use the term "genocide" to refer to the massacres of Armenian Christians by the Ottoman Turks in the late 1800s and early 1900s. At the climax of these massacres in 1915, at least 1.5 million (or 60% of the total population) of Armenians were killed, many of them on forced deportation marches to Syria. Most Armenian Americans, many of whom are children or grandchildren of survivors of the 1915 massacres, are pressing for official recognition of the atrocities as genocide. U.S. foreign policy, however, is influenced by conflicting political interests and economic concerns regarding the U.S. relationship with Turkey, so no official declaration has yet been made, leaving Armenian Americans feeling sidelined and unable to claim fully their identity as Americans.

Traditional Armenian culture is extremely patriarchal, with women assuming submissive roles in all aspects of life. At marriage, the bride goes to live with her husband's family and must become essentially mute—speaking only to her children and husband within the confines of the home—until her mother-in-law deems it time for the silence to end (usually when the first grandson is born). These patriarchal values make it difficult for Armenian immigrants to cope with the freedoms given to women in the United States. Second and third generation American-born girls come into conflict with their parents and grandparents over their social life, particularly where boys are involved. It is also not traditionally expected for girls to attend college, although education in itself is highly valued by Armenians. Sons, not daughters, are encouraged to pursue higher degrees. In very traditional homes, girls may even be expected to work to help pay for their brother's education. Armenian Americans who have lived in the United States for several generations now are becoming much more "Americanized," however, even to the point of some women choosing to pursue professional careers rather than get married.

## ASHÁNINKA

**ALTERNATE NAMES:** Campa (derogatory)

**LOCATION:** Peru; Brazil

**POPULATION:** 45,000

**LANGUAGE:** Asháninka; Spanish

**RELIGION:** Native mythical beliefs

### 1 INTRODUCTION

Even though the Spanish conquerors were efficient and successful in subjugating a large portion of the Inca Highlands of Peru, they did not have the same luck in the eastern rainforests. According to many accounts, the Spanish invaders were expelled and killed by the Amazon people. The majority of these ferocious warriors call themselves Asháninka.

The Asháninka are an ethnic group of the Peruvian Amazon rain forest. They are also known in Peru and abroad by the name "Campa," which they consider derogatory because it derives from the Quechua *thampa*, which means ragged and dirty. Asháninka means "our fellows" or "our kinfolk." In 1595 an expedition led by Juan Vélez took along two Jesuit priests, Juan Font and Nicolás Mastrillo, in the first attempt by the Europeans to colonize the area.

For over three centuries, the Asháninka attempted to maintain their independence, efforts that were curtailed by Franciscan and Dominican missionaries who established settlements in the jungle. In 1742 this first period of colonization came to a sudden end with a general Indian rebellion led by the legendary Juan Santos Atahualpa. The uprising lasted until 1752 and succeeded in expelling all missionaries and colonists from the area. Historical chronicles suggest that after the revolt no Catholic missionary or soldier dared enter the jungle. The Asháninka and their neighbors controlled the area for over a century.

By the mid-19th century two simultaneous economic situations brought the missionaries back: the encroachment of agriculture from the Andes and the rubber-tapping industry from the Amazon. In 1847 a military garrison was set up, and from there recolonization by Franciscans and European, Chinese, and Japanese settlers began. Some 2 million hectares (5 million acres) of Asháninka territory, along with the main rivers, were granted to the British-owned Peruvian Corporation 44 years later. The Asháninka were then used as labor, and the appalling working conditions together with virus epidemics took a heavy toll on the communities. In the lower part of the territory, the rubber boom brought slavery, a trend that continued even after the rubber economy collapsed in 1915.

During the last decades of the 20th century, the Asháninka territory has been the site of conflicts between the Peruvian Army and rebel groups. Some Asháninka had a messianic leader, Guillermo Lobatón, whom they regarded as the Son of the Sun. He became the leader of the Movement of the Revolutionary Left, or MIR, inspired by the teachings of Fidel Castro. In 1965, many died in fighting between the military and the MIR. Only 14 years later, the Tupac Amaru Revolutionary Movement (MRTA) killed the Asháninka leader of the Pichi river, claiming he had helped the police take their own leader. Since the beginning of the 1980s, the Shining Path has entered

their territory. Since then, guerrilla and army actions often result in Asháninka deaths.

## 2 LOCATION AND HOMELAND

The Asháninka, one of the largest ethnic groups of the Americas (their population numbers around 45,000 people), inhabit mainly the Central Forest in the Amazonian part of the eastern Andean foothills in Peru, but their communities stretch across the easternmost Peruvian Amazon and even as far as the State of Acre in Brazil. They inhabit an area of more than 103,600 sq km (40,000 sq mi). Their traditional heartland is the Gran Pajonal, a remote plateau of rolling terrain dissected by the gorges of rivers. On the slopes there are *pajonales* (grasslands), created in part by a long history of Asháninka clearing and burning.

Difficult access to the region allowed the inhabitants to remain isolated from outside influences until relatively recently. The area is strategically important, being directly east of the Peruvian capital, Lima, and linked to it by roads that cross the Andes. The degree of integration with their neighbors varies according to the geographic situation. Close to the frontiers, the Asháninka are more integrated with the settler society, living side by side with them. But, in remote areas, they are often the only inhabitants of large territories.

Asháninka people are highly dependent on agriculture to survive. After cleaning their lands through a process consisting of burning the soil, this Amerindian tribe grows yucca, corn, banana, rice, coffee, cacao, and sugar cane among other goods. Asháninka people complete their diet through the gathering of fruits and vegetables in the jungle. The major source of protein comes from hunting and fishing

## 3 LANGUAGE

The Asháninka language belongs to the pre-Andean Arawak linguistic family, which is the largest language family in South America and includes several dialects. In the Central Peruvian forest there are some variations: in the south of their territory they speak Asháninka, while in the north Ashéninka is spoken. Asháninka, like all pre-Columbian Arawak languages, is of a highly verbal nature. When examining oral narratives it has been found that the ratio of verbs to nouns is about four to one. As to gender, it is straightforward for humans, but when it comes to animals, gender depends on whether they were male or female when they were human, before they were transformed into animals, all in reference to legends.

In some regions, both Spanish and Asháninka are official languages. However, most of the aborigine population is monolingual until they go to school, where they learn Spanish. Children are given a provisional name when they start walking. Their official name is decided when they are seven years old.

Asháninka literacy rates range from 10% to 30%.

## 4 FOLKLORE

Among the Asháninka, history and nature are explained through myths and heroes. A great cliff in the Tambo river, for example, used to be a Spanish ship that Avireri, a powerful hero, transformed into a rock, its sailors becoming red ants. Other dangerous insects, like wasps, are also transformations of bad men. The moon itself used to be a man who ate other men, and as a punishment he was exiled to the sky. From

there, he continues eating Asháninka souls, which explains the phases of the moon. As to the origins of their neighbors, it is said that Avireri, the great mythological transformer, turned a murderous hawk and his wife into huge rocks, and they can be seen in the Ene river. Their feathers became canoes and each carried Piros, Matsiguenkas, Shipibos, and all the other Indian groups that live down the river.

A technological genius named Inka, according to another Asháninka myth, was swept away by a great flood of the river Tambo and carried to Lima where the White people, the Wira-cocha, captured him and are still forcing him to produce Western goods that really belong to them. Only the return of Inka will bring justice to the land.

## 5 RELIGION

The Asháninka cosmology is mainly mythical. There is not a figure of a creator but a hero, Avireri, who transformed humans into animals, plants, mountains, and rivers. Their universe is inhabited by the living forms that can be seen and also by a host of invisible beings. Their spiritual universe is dualistic. Good spirits or *amatsénka*, "our fellow spirits," reside on the mountain ridges in their territory, along the rim of the known world, and on other levels in the universe. Among them are the Sun (*Pavá*) and the Moon (*Kashiri*). There are male and female spirits, and they reproduce, albeit not through sex as their genitalia are diminutive and they are devoid of the passion of lust. The good spirits can assume the guise of several animals that have a power denied to humans, like a bird that can fly.

There are also evil spirits or *kamári*, a term used to refer to that which is repugnant, malevolent, or reprehensible. Some animals, like the deer, are demons and cannot be eaten. Nature is populated by bad spirits, like the Katsivoreri of Mironi, who can kill if encountered. Death is feared because the soul can return to earth as a bad spirit. The Asháninka also traditionally believed in the existence of child wizards who had to be killed or buried alive, or even left to die of hunger. They personify the very real dangers of the jungle.

The Asháninka have shamans or *sheripiári* who are intermediaries between the people and supernatural beings. Shamans use tobacco and some hallucinogens to enter trances that will allow them to communicate with the supernatural. Illness is cured with the help of steam baths, magical herbs, and sessions with the healer, who tries to send the disease back to the one who originated it. In the case of the plague and the flu, it is believed that they were brought by White human beings, blond with blue eyes, a mythical explanation that bears some resemblance to historical facts.

Throughout their history, the Asháninka have had an apocalyptic vision of the world. They believe that this world is plagued by evil forces, and people will be destroyed. Then there will be a new world with new people without sickness or death.

## 6 MAJOR HOLIDAYS

The Festival of the Moon is a celebration of the god Kash'ri who, according to the legend, is the father of the Sun. Kash'ri appeared to a young girl and introduced her and her people to manioc (cassava). He taught them how to grow it and prepare it, putting an end to years of a diet of earth. He made the young girl his wife, and in giving birth to the Sun she was burned to death. Kash'ri began taking his nephews to the forest, where he

slaughtered and ate them. When his brother-in-law threatened to kill him, he escaped by rising into the sky. Kash'ri continues eating human souls and that explains why the moon gets fatter every month.

As some of the formal education available to the Asháninka is provided by Christian missionaries and, in any event, because Peru is a fervently Catholic country, some Indians gradually lose their traditions in the process of acculturation and begin to celebrate national holidays.

## 7 RITES OF PASSAGE

The magical world of the Asháninka includes a number of rites aimed at protecting the people. Prospective parents, for example, follow a diet during the pregnancy. They refrain from eating turtle meat, for fear that this would make their child slow-moving and slow-witted. Asháninka children are born in the house, and the umbilical cord is cauterized with burning coal. The mother has to remain indoors for a week. The child is only named when it learns to walk, and at the age of seven he or she gets a new name.

When girls reach adolescence, they spend up to six months in isolation. During that time they spin thread. Afterwards they are welcomed back to daily life with a celebration that has been described as orgiastic. Although after death a human soul can join the good spirits if the person was sufficiently good in his or her lifetime, the Asháninka consider it far more likely that the soul will become an evil ghost. In that case, it will revisit the settlement and attack those living there. That was the reason why, traditionally, the Asháninka would often abandon a settlement after someone died. If the deceased was believed to be a witch, the corpse was sometimes cremated so that the soul would be destroyed by the flames and would be prevented from joining the demons that taught it witchcraft.

## 8 INTERPERSONAL RELATIONS

The Aráwakan tribes were perceived by explorers as being hostile among themselves and towards the Whites. But, inside the villages there is a real sense of community: many economic activities are carried out collectively, such as hunting and fishing, and the take is divided equally among the dwellers. There is also enough evidence of intertribal trade to suggest that it has always existed. Exchanging goods must have involved some degree of amicability and a recognition of the skills of others.

The Asháninka have been described as morose but open to and capable of change. Some Whites distinguish between "civilized campas" and "savages," and of the latter say they are rough and practice cannibalism on victims of war to assimilate their virile qualities. Nowadays, it is said that most Asháninka are friendly and carry out trade or work as day laborers in order to get metal tools.

## 9 LIVING CONDITIONS

Traditionally, a native community would house between 300 and 400 people. There is a communal home surrounded by private dwellings of nuclear families that are related to the other families. They also erect observation platforms. There is a constant fire burning inside the houses and woven or bark mats for sleeping. The houses have two walls made of tree trunks, palm leaf roofs, and floors raised 20 cm (8 in) from the ground, built with pona palm trunks. But, the Asháninka territory has been the scene of conflicts between the Peruvian Army and guer-

rillas, as well as of the illegal trade in coca. Nowadays, under the raised floor, the Asháninka build trenches where they keep provisions, anticipating attacks. The situation has affected the Asháninka living conditions badly. Many are now refugees, having been forced to abandon their homes and land to save their lives. Historically, the Asháninka would only leave their homes for three reasons: soil exhaustion, a death in the family, or pressure by colonizers.

In 1991 the world witnessed a degree of malnutrition among Asháninka refugees never before seen in the American continent. Epidemics, such as cholera and measles, are another cause of premature death, and gastric, respiratory, and skin diseases are a common denominator among communities. The violence in the region has also affected the mental health of the population. Transport to many of the remaining Asháninka communities is costly. Vast regions are only accessible by light airplane as the roads cannot be used. The traditional means of transportation in the rivers is pointed balsa rafts held together with chonta nails and crossbeams.

Hunting, gathering, and some limited cultivation are the main ways of obtaining basic staples. Official statistics in the late 1980s suggest that 70% of Asháninka children suffer from malnutrition, and over 95% of Asháninka adults are illiterate.

## 10 FAMILY LIFE

There are few restrictions on marriage among the Asháninka, apart from the immediate family. It is possible to marry a cousin but not an uncle or aunt. To prevent pregnancy, some women eat chantini roots. Polygyny is practiced, and women were once traded for goods from other tribes. According to early accounts, many Asháninka were not married, and widows and widowers did not get married again.

As social conditions have worsened, the typical way of life of the Asháninka has become almost impossible for many communities. The traditional family and community life that was closely linked with nature has had to be abandoned, as most men have had to devote themselves to defense duties. Nevertheless, in the midst of this crisis, women have taken up the role of community organizers. They have formed mother's clubs and crafts committees both to generate income and to feed their families and refugees. In many cases, women have replaced men on the communal farms, and it is they who cultivate the land.

## 11 CLOTHING

The Asháninka wear *chusmas*, a traditional garment made of a long piece of fabric with an opening in the middle for the head: from front to back for men, and from side to side for women. It is joined on the sides with vertical lines for men and horizontal lines for women. The *chusmas* are made of dyed wild cotton and are ornamented with feathers and beads. This traditional dress is a handmade robe fabricated from cotton, which is collected, spun, dyed, and woven by the women on looms. The shoulders of these traditional clothes are ornamented with seeds. Because of the laborious work that each piece requires, it can take up to three months to complete one finished robe.

Certain plants are sometimes used to perfume the fabrics. The Asháninka wore *chusmas* before they came in contact with White people, only then they were reserved for special occasions. On regular days, they would go virtually in the nude, though women often would wear an apron suspended from a

*Guillermo Naco, a leader of an Asháninka Indian community in Lima, Peru, speaks to the press during a meeting between Andean and Amazon communities. (AP Images/Silvia Izquierdo)*

string, covering their genitals. Accessories include nasal pendants and pins made of silver, pins for the lower lip, necklaces, feather headdresses, and arm and leg bands. They also groom their hair with a composite comb, paint their bodies with genipa, and blacken their teeth with *Piper*aeae.

## **12 FOOD**

The list of Asháninka crops is long, and ingredients for meals are certainly varied. Crops include yucca, the staple regional vegetable, as well as yams, peanuts, sweet potatoes, bananas, pineapples, tuber beans, macaba, pumpkins, and peppers. Some communities have added potatoes, maize, and lima beans. To grind the food, they use a wooden plate and a stone. Women are in charge of the garden, and men hunt. The Asháninka also keep and eat chickens and their eggs, and they hunt tapirs, boars, and monkeys. To supplement their diet, they collect honey, a root called *mabe*, ants, and several palm fruits. They also fish. The meat is cooked over the fire using sticks, in the shape of a pyramid or a rectangle, to hold it. The smoke from the fire helps preserve the meat for a few days. The Asháninka season their dishes with salt and pepper. Out of necessity, the Asháninka have begun to produce cash crops, such as coffee.

## **13 EDUCATION**

Education has been badly affected by the social unrest in the area. Since 1990, according to the Satipo Educational Services Unit, 71 rural schools have been closed and the same number of teachers are counted as “disappeared,” as it is not known if they are dead, have joined the rebels, or are in hiding. Though many schools have been destroyed, some make do with improvised chairs and tables made of tree trunks, and blackboards donated by aid organizations.

## **14 CULTURAL HERITAGE**

Music and songs are part of Asháninka ceremonies and rituals. Their voices, imitations of jungle animal sounds, and stamping of the feet are accompanied by various instruments that they make using available materials and decorate with indigenous paints in their particular style. Early accounts of what had been found among the Asháninka include lists of their numerous instruments: two-headed monkey-skin drums, five to eight-tube panpipes, bone flageolets, six-hole longitudinal flutes, two-hole transverse flutes, and musical bows.

## 15 WORK

Most Asháninka still live by fishing, hunting, and cultivating small plots of land. Early observers characterized the Asháninka as hunters rather than agriculturists because most males spent much of their working time hunting. Though meat is indeed the main source of protein and the frequent movement of the early settlements was related to the depletion of local game supplies, most of a family's food comes from cultivated plants. Through the slash-and-burn method they grow yucca, plantain, peanuts, sweet potatoes, and sugarcane. Colonization brought extensive coffee, cacao, rice, and coca plantations to some areas. They also grow medicinal herbs and *barbasco*, which is used for fishing. When possible, the Asháninka cultivate plots of land along the riverbanks, but in violent circumstances they move to the hilltops. Selling their produce provides some income. Asháninka communities are self-sufficient, and most economic activities are carried out collectively. The product is divided among the families. There is also a long tradition of trade between tribes.

## 16 SPORTS

The Asháninka, since before the arrival of the Europeans, made some objects that seem to indicate the practice of some kind of sport or games, such as humming tops, bull-roarers, and maize-leaf balls. In tune with their status as warriors, they also practiced wrestling. In modern times, those who live side-by-side with settlers take part in the spectator sport culture. Soccer is Peru's favorite sport, and it is played even in the most remote regions.

## 17 ENTERTAINMENT AND RECREATION

Contact with Western civilization has brought to some communities new forms of recreation. Radio and television have joined more traditional forms of entertainment, such as storytelling, singing, and dancing. Actually, a number of Asháninka did more than watch: in Werner Herzog's film *Fitzcarraldo* (1982), the majority of extras were Asháninka men. In remote areas, where life continues to be quite similar to the past, the division between work or ceremonies and recreational time is not as sharp: there is a lot of work to do, but because many activities are carried out collectively, they also offer a chance for social intercourse.

## 18 FOLK ART, CRAFTS, AND HOBBIES

The Asháninka traditionally are a seminomadic tribe, and as such their material culture is minimal. But, the few objects they possess are manufactured with great skill and are artistically decorated. One of their most characteristic designs is that of a heavy line outlined by one or two fine lines. Similar designs, consisting of complex angular, geometric patterns drawn in rectangular panels, adorn most objects, from pots and beadwork to musical instruments and clothes. The Asháninka make the fabric for their typical costume, the *chusma*. They use wild cotton and two different kinds of frames to weave: one for small bands, and a vertical loom for large pieces of cloth. With gynerium stalks, the Asháninka make twined telescope baskets. They also make sieves and mats. Some containers are made of calabashes. Their plates are made of clay and have red designs.

## 19 SOCIAL PROBLEMS

The Asháninka traditional way of life is a casualty of the war between the national army and guerrilla groups. The mountain area of the Asháninka's forest territory was the birthplace of the rebel Shining Path. The Asháninka and other Indian peoples of the region have tried to remain outside of the conflict between the national army and the guerrillas but have often been its victims.

During the 1980s and 1990s the internal conflict in Peru led by the Maoist group Shining Path provoked massive displacement and death among its inhabitants. These years were especially hard for the Asháninka since the Shining Path gave just two options to the Asháninka population: to join their struggle against the national government or become a slave. In this precarious scenario the indigenous population was unable to fish and hunt due to the threat posed by armed groups in the forest. As corollary, many Asháninka were reduced to the status of refugees in their own land, and those who have been able to remain in their villages have seen their social structure severely affected by political violence.

According to the Truth and Reconciliation Commission, 10,000 Asháninka were displaced, 6,000 Asháninka died, and 5,000 Asháninka were taken captive by the Shining Path during this time, and 30 to 40 Asháninka communities disappeared. Furthermore, the coca that has been grown in the area for centuries and used since ancestral times for its medicinal qualities has been turned into cocaine in the hands of the Whites, a dangerous and profitable drug that attracts outsiders interested in the illegal trade. Asháninka peoples, together with other indigenous tribes from the region, have formed pressure groups and with the help of international organizations demand justice and defend their human rights. There is still a long way to go before they can also secure Indian rights and be free to conduct their own way of life. In the mid-2000s, the Asháninka gained legal title to a portion of their ancestral lands.

## 20 GENDER ISSUES

The phases of Asháninka women's reproductive life cycle are based on ritual and myth, with great significance placed on the transition from childhood to young adulthood. The Asháninka mark this transition with a series of initiation rites that recognize not only physical changes in the woman, but also the expectation that she will now assume a new set of roles and responsibilities within the community. The average age of marriage for women is between 15 and 19, but it is not uncommon for girls as young as 12 to be married shortly following their first menstrual cycle.

The most pressing health problems for women are early marriage and pregnancy, sexual violence (including marital rape), high number of children, and internal pains and hemorrhaging. Among the Asháninka, women's sexuality is understood in terms of men's needs and expectations. Women "please" men and provide them with children, with the fear that if they fail to do so, they will be abandoned. Women put their desired number of children at four or five, but given difficulties associated with contraception and men's desire for large families, the average number of children per woman is seven or eight.

Violence against women is both physical and psychological, a byproduct of the power imbalance in married couples. Men decide how many children women will have and often coerce

women into sexual relations or accuse them of infidelity if they resist sexual advances. Women internalize this behavior as legitimate given their subordinated roles in the social structure of the communities.

# ASIAN INDIAN AMERICANS

For more information on Asian Indian history and culture, see **Vol. 3: Indians**.

## OVERVIEW

Asian Indian Americans began migrating to the United States from India in small numbers during the 19th century. By 1900, the U.S. Census counted 2,050 Asian Indians living in the United States, mostly professional men, merchants, and travelers who settled along the east coast, particularly in New York. Asian Indian students also came to study at American colleges, mostly on the east coast, although a sizeable number attended universities in California by the time of World War I (1914–18).

Asian Indian nationalists, organizing a revolt against British rule in India in the 1800s and early 1900s, used the United States as a base for their activities. The Ghadr (“Revolution”) Party was organized by Asian Indian nationalist Har Dayal in 1913 with its headquarters in San Francisco. After 1905, Asian Indian laborers began immigrating in large numbers to Canada. When Canada began to regulate Asian Indian immigration, turning away several thousand applicants, many chose to enter the United States instead. Though most were from an agricultural caste in India, the majority found work in the railroad and timber industries. Because almost all Asian Indian immigrants at this time were single males, they were willing to work long hours for low wages and soon became a threat to other potential employees. The same was true for those Asian Indians who had found their way to California where they were employed as migrant farmworkers. European American workers began to intimidate them, trying to force them off the job as they had earlier tried to intimidate Chinese and Japanese workers. The Asian Indians formed partnerships to protect themselves and saved money to buy their own land. By 1919, they owned 2,077 acres and leased 86,315 acres of land in California, producing rice, cotton, nuts, fruits, and potatoes.

European Americans formed the Asiatic Exclusion League in the early 1900s to persuade the U.S. government to restrict Asian immigration. The government did indeed turn away some 3,453 Asian Indians between 1908 and 1920. At first, Asian Indians tried to fight back through legal means, filing suits in court and lobbying government officials. When these methods failed to achieve success, Asian Indians sought the help of radical Har Dayal and the Ghadr Party. When Dayal was arrested and deported after a demonstration, however, the movement fell apart and all but disappeared in America by 1917.

The Immigration Act of 1917 placed severe restrictions on Asian immigration to the United States, and the Alien Land Law of 1920 prevented those of Asian ancestry from owning land. Some Asian Indians transferred the title of their land to European American friends so as not to lose it, while others were forced to become landless laborers once again. A number of Asian Indians married Mexican women and put their lands in their wives’ names and the names of their American-born children. (Anti-miscegenation laws prevented Asian Indians

from marrying American women.) Between 1913 and 1946, 92% of Asian Indians living in southern California were married to Mexican women (76% of those in central California, and 47% in northern California).

Asian Indian immigration to the United States slowed down considerably from the 1920s through 1940s. By World War II (1939–45), the number of Asian Indians in the United States had dwindled to 2,405. Only 4% were professionals, while 65% were in agriculture (15% farmers, 50% laborers). At the end of World War II, relations between India and the United States improved, and Asian Indians were finally allowed to immigrate to the United States, become U.S. citizens, own property, and marry Americans.

At first, only a small number of Asian Indians took advantage of these new opportunities; about 6,000 Asian Indians immigrated to the United States between 1947 and 1965. In the past few decades, however, Asian Indian immigration has increased rapidly, with 387,223 residing in the United States by 1980; 786,694 by 1990; and 1,899,599 by 2000. While the total U.S. population increased by only 13% between 1990 and 2000, the Asian Indian population rose by 113%. As of 2004, Asian Indians were the second-largest group (after Chinese Americans) among Asian/Pacific Americans.

Many Asian Indian Americans are students who decided to change their status to “immigrant” once in the United States. Because Asian Indian migration to the United States in significant numbers is such a recent development, and because so many are young students, most Asian Indian Americans (over 71% in 2000) are foreign-born. Asian Indian families have

not lived in the United States long enough to have developed a large population of second- or third-generation American-born children.

Most Asian Indians continue to settle in California (360,392, according to the 2000 U.S. Census) and New York (296,056), with sizeable communities in New Jersey (180,957), Texas (142,689), and Illinois (133,978), especially Chicago (27,889), as well. During recent decades, the number of Asian Indian women migrating to the United States has just about equaled that of Asian Indian men. The overall median age of Asian Indian Americans in 2004 was 31.7 years. Less than 5% of Asian Indian Americans are over the age of 65, as compared to 12% of the total U.S. population. Most Asian Americans are in the middle-adult taxpaying age range.

There are almost 2,000 languages and dialects spoken in India, with Hindi (spoken by 30% of the population), English, and 14 regional languages—including Bengali and Urdu—officially recognized by the constitution. Because most Asian Indian Americans are foreign-born, they speak their native languages, as well as English. Almost 75% of Asian Indian Americans speak a language other than English at home, but 77% also speak English quite well.

Asian Indian religions have greatly influenced American life since the mid- to late 1900s, when Buddhist and Brahmanic philosophies birthed movements such as Theosophy (originating in 1875) in the United States. The first Asian Indian religious leader to visit the United States was Swami Vivekananda in 1893. He established the Vedanta Society to bring Hindu teachers to the United States and spread the wisdom of the Ve-

Senior correspondent Hari Sreenivasan prepares for a weekly show inside CNET's television studio. (© Ed Kashi/Corbis)

das (Hindu scriptures). Many Hindu, Buddhist, Ayurvedic, and other Asian Indian philosophies have since made their way into American life. A recent Asian Indian religious teacher and healer to settle in the United States is Deepak Chopra, author of many books, including *Quantum Healing: Exploring the Frontiers of Mind/Body Medicine* (1989), and founder of the American Association of Ayurvedic Medicine.

Asian Indians celebrate many different holidays, depending on their religious and cultural backgrounds. Immigrants to the United States bring their religious and cultural traditions with them, continuing to celebrate the holidays of their homeland. Some of the major holidays celebrated by various Asian Indian Americans are Baisakhi, the Hindu solar new year; Buddha Purnima, the birthday and day of enlightenment of Gautama Buddha; Dussehra and Durga Puja, the triumph of good over evil; Deepavali or Diwali, the festival of lights (also the financial new year); Gandhi Jayanti, the October 2 birthday of Mahatma Gandhi; Holi, a spring festival; Ramadan, Id'Ul'Fitir, Id-Uz-Zuha, and Muharram—Muslim holidays; American Independence Day on July 4; Asian Indian Independence Day on August 15; Janmashtami, the birthday of Lord Krishna; Mahavir Jayanti, the birthday of Vardhamana Mahavira; Onam, and Pongal or Sankranti, harvest festivals; and Republic Day on January 26, marking the adoption of India's constitution in 1950.

Asian Indian Americans are more likely to be wealthy than members of any other American ethnic group, including European Americans. In 2004, they had the highest median annual household income of any Asian American group, at \$69,000 (compared to \$56,000 for all Asian Americans, and only \$45,000 for the U.S. population as a whole). Fewer Asian Indian Americans (10%) live below the poverty line as do other Asian Americans (12%). Asian Indian Americans are also less poor than the U.S. population as a whole, of whom 13% live below the poverty line.

Very few Asian Indian Americans live alone. The vast majority live either in family households or with friends, fellow students, etc. Most live in nuclear family units of at least three persons. In 2004 more than two-thirds of Asian American adults were married. Divorce is rare (about 3%).

Many foreign-born Asian Indian American women wear traditional dress, which varies according to the region of India in which the women grew up. Most wear *sarees* (or *saris*), made from six yards of silk, cotton, or other lightweight fabric draped around the waist over a long petticoat, with the end gathered together over one shoulder. A close-fitting blouse of matching fabric and color is worn underneath. Styles of draping and decorating the saree vary from region to region in India.

Asian Indian American men have mostly adopted Western-style clothing, only wearing traditional dress on special occasions. Traditional Asian Indian clothing for men consists of a long robe called a *sherwani* worn over either tight-fitting pants called churidars, or looser, straighter pants. Sometimes a loose shirt called a *kurta* is worn instead of the robe, and a vest is often added. A *dhoti*, several yards of fabric draped around the legs to form loose trousers, is sometimes worn instead of other types of pants.

Asian Indian food has become very popular in the United States in recent years. Most medium-sized and large cities have at least one Asian Indian restaurant, where dishes such as dal (lentil soup), tandoori chicken (coated with a yogurt sauce and baked in a special oven called a tandoor), and chapatis (flat bread) are served. The Asian Indian diet, based on rice and other grains, several kinds of beans, and vegetables, with lean meats such as fish and chicken, is very healthy and appeals to vegetarians and meat-eaters alike.

Asian Indian Americans place a high value on education and are generally high achievers. Over 68% of Asian Indian Americans over the age of 25 are college graduates, and 90% have a high school diploma. With their high grade-point averages and competitive scores on standardized tests and college entrance exams, Asian Indian Americans are eligible for acceptance at the best universities in the United States. Some schools, such as California State University at San Francisco, Harvard, Yale, and Stanford, have a significant Asian Indian student population.

Traditional Asian Indian music is divided into two styles: Hindustani, which is popular in the north; and Karnatak, popular in the south. The predominant musical instruments are the *sitar* in the north and *veena* in the south, both of which resemble a guitar. Flutes, drums, and other instruments are also prevalent. Ravi Shankar is a well-known Asian Indian sitarist who established the Kinnara School of Music in Los Angeles in 1967. Shankar also collaborated with Asian Indian conductor Zubin Mehta, former director and conductor of both the New York and Los Angeles Philharmonic Orchestras, to fuse Western and Eastern music and bring Asian Indian music to the attention of the West.

There are many successful Asian Indian American writers of both fiction and nonfiction, including Dhan Gopal Mukerji, one of the first Asian Americans to write books for children; Bharati Mukherjee, who won the National Book Critics Circle Award for her novel, *The Middleman and Other Stories* (1988); Jhumpa Lahiri, who won a Pulitzer Prize for her collection of short stories, *Interpreter of Maladies* (1999); and Ved Mehta, a journalist and staff writer for *The New Yorker* magazine.

A greater percentage (61%) of Asian Indian Americans are employed in professional and managerial positions than any other Asian American group (45% for all Asian Americans) or Americans in general (34%). Through the extended family or ethnic network, Asian Indian Americans have virtually taken over the running of newsstands in New York City. Many independent motels in the United States are also managed by Asian Indian Americans. A growing number of gas stations are owned by Asian Indian Americans, and Asian Indian Americans are second only to Hasidic Jews in the Diamond District of the jewelry trade.

Although Asian Indian Americans have been largely successful in their new home country, they have been (and con-

tinue to be) the victims of racial prejudice. "Glass ceilings" prevent them from attaining the highest executive positions in corporations, despite excellent academic and professional qualifications. Discrimination leads many European Americans and other non-Asian Indians to refuse to see an Asian Indian American doctor. Hate crimes cause injuries, death, and tremendous stress in Asian Indian American communities. In September 1987, for example, Asian Indian American doctor Kaushal Sharan was attacked near his home in Jersey City, New Jersey, by members of a racist gang who beat him unconscious. At that time, many anti-Asian Indian hate crimes were being perpetrated in Jersey City by gangs calling themselves the Dotbusters (referring to the red dot, or *bindi*, worn by East Indian women on their foreheads) and the Lost Boys.

Traditional Asian Indian culture, like other Asian cultures, views sexuality as a taboo subject, with little or no room for the acknowledgment of homosexual preferences. Asian Indian American gays and lesbians, therefore, find themselves at a loss within their families to be recognized for who they are. Many choose never to reveal their homosexuality to members of their family. Gay and lesbian Asian Indian Americans must also deal with a lack of acceptance among homosexuals because of their Asian ethnicity. Many feel as isolated within the homosexual community as within the Asian American community. Asian Indian American homosexuals must therefore wrestle with family disapproval and ostracism as well as racial isolation in their quest for identity.

# AYMARA

**LOCATION:** Bolivia; Peru; Chile

**POPULATION:** About 2 million (Bolivia); 500,000 (Peru); 20,000 (Chile)

**LANGUAGE:** Aymara; Spanish

**RELIGION:** Roman Catholicism combined with indigenous beliefs; Seventh Day Adventist

## 1 INTRODUCTION

The Aymara have existed for more than 2000 years and are considered more than an ethnic group. They constitute a linguistic unity among several ethnic groups, such as the Lupaca, Pacaje, Canchi, Uru, etc. They are found in the altiplano—a vast windy plateau in the central Andes—and in smaller numbers in the northern regions of Chile and Argentina. Because of the harshness of the region commonly inhabited by the Aymara people, they have been forced to develop sophisticated techniques that have allowed them to survive and become one of the most skillful agriculturists and herders in America.

The Aymara appeared in the altiplano after the decline of the Tiahuanaco civilization (1580 BC–AD 1172), probably having migrated from the southern part of the continent. Before they were conquered by the Incas, the Aymara population was widely spread in South America, where the most important regions were Colla and the Lupaca. After resisting more than 100 years of Incas attacks, the Aymara finally succumbed to their rule in the late 15th century. Since then, the Aymara have experienced three different periods of acculturation, first under the Incas, then under the Spaniards, and finally during the course of modernization.

The Aymara later joined forces with the Incas to fight and subdue other native tribes. While the Aymara retained their own language and many of their customs, the influence of the Incas on their religious and social traditions was pronounced. It is sometimes difficult for anthropologists today to determine whether a practice or custom has Inca or Aymara origins.

The Aymara faced great hardships under Spanish colonial rule. In 1570, the Viceroy decreed forced labor in the rich silver mines on the altiplano. Potosi was once the site of the richest silver mine in the world. Millions of Aymara laborers perished in the wretched conditions in the mines. As in the case of many other Amerindian groups, the Spanish Conquest had severe consequences over the indigenous population because of the spread of new and unknown European diseases and colonial exploitation, which eventually led to the decline in aborigine population.

Nowadays, Bolivia has the highest proportion of indigenous peoples of any country in South America, and not surprisingly, it is the poorest country on the continent. The Aymara have an estimate population of about three million in the early 21st century.

## 2 LOCATION AND HOMELAND

The Aymara live on high-altitude plains in the Bolivian Andes, on the Lake Titicaca plateau near the border with Peru. The altiplano is at an elevation of 3,000 m to 3,700 m (10,000–12,000 ft) above sea level, where weather conditions are cold and harsh, making agriculture difficult. In such conditions, Ayma-

ra grew crops that were suitable for the Andean climate, such as coca, and breed alpaca and llama. An ethnic group closely related to the Aymara live among the Uru islands on Lake Titicaca. These communities live not on land but on islands that are made of floating reeds.

An estimated 2 million Aymara live in Bolivia, with 500,000 residing in Peru, and about 20,000 in Chile. It should be emphasized that the Aymara are not confined to a defined territory in the Andes. After almost five centuries of hybridization of the region, many live in the cities, participate fully in Western culture, go to urban schools (sometimes private ones), play a variety of sports (basketball, tennis, soccer, volleyball, cycling), and dress in Western-style clothes. Most of the ethnic and cultural characteristics pointed out here refer to isolated villages and to the rural regions where perhaps half of the Aymara live.

## 3 LANGUAGE

The Aymara language, originally called *jaqi aru* (the language of the people) is still the dominant language in the Bolivian Andes and in the southeastern parts of Peru. Aymara is an amazingly versatile language in which—through suffixes—a word can be concrete or abstract, noun or verb, and through which nuances can be incorporated into the language, something unknown to many modern languages. In the rural areas one finds that the Aymara language is predominant, while in the urban areas the Aymara are bilingual in Spanish and Aymara, and even trilingual in Spanish, Quechua, and Aymara in regions where Inca rule was prominent. The Aymara language is the second-most-prevalent indigenous language in the Americas, second only to the Quechua spoken by descendants of the Incas. Since colonial times, most Aymara Indians have Christian first names but preserve their Aymara last names, for example, Francisco Mamani (“falcon” in Aymara). Given the large numbers of Aymara-speaking people in Bolivia, there are several radio stations and a couple of television channels that transmit only in Aymara.

## 4 FOLKLORE

The Aymara share with other ethnic groups some of the Pan-Andean myths of origin. In one of them, the god Tunupa is a creator of the universe, but he is also the one that taught the people all his customs: how to develop agriculture, the songs they sang, how to weave, the languages each group had to speak, and the precepts to lead a moral life. Aymara mythology abounds in myths of origin, such as the origin of the wind, of hail, of mountains, and of lakes.

## 5 RELIGION

The religious practices of most Amerindian groups are a unique fusion between their traditional, indigenous practices and the religion imposed by the colonizers. The Aymara are no exception. The Aymara, however, have had two cultures imposed on them: first by the Incas and later by the Spanish. The Incas permitted the Aymara to maintain their language and all their customs, yet many of the religious practices of the Inca religion were adopted by the Aymara. Similarly, the Incas adopted the idols of the groups they vanquished and kept them in their temples. The similarity of these beliefs, which revered natural forces, such as the sun, the moon, and thunder, made the new religion easy to assimilate.

They suppressed native religious institutions but effected only a superficial conversion to Christianity. Today, the Aymara maintain their beliefs in a multispirit world, have many categories of magicians, diviners, medicine men, and witches, but are Christian in their beliefs about the afterworld. Independence and economic development brought changes in social organization and a decline in traditional arts and crafts.

Spanish conquerors prohibited native religious institutions. Catholicism was introduced during the colonial period and has been adopted by the Aymara. For example, the Aymara will attend Mass and celebrate baptisms, followed the Catholic calendar of important Christian events but the content of their many religious festivals, however, bears evidence of their traditional beliefs. The Aymara regularly make offerings to Mother Earth, in order to assure a productive harvest or to cure illnesses. The Aymara believe in the power of spirits that reside in mountains, in the sky, or in natural forces, such as lightning. The most potent and sacred of their gods is Pachamama, the Earth Goddess who has the power to make the soil fertile and ensure a good crop. Today, Aymara people maintain their beliefs expressed in the existence of many categories of magicians, diviners, medicine men, and witches.

Most recently, the Seventh-Day Adventists have made great inroads in Aymara communities, and the religion is attracting an increasing number of followers.

## 6 MAJOR HOLIDAYS

The Aymara, being mostly Bolivian, celebrate the same holidays as everybody else in the country: the civic holidays, such as Independence Day, and the religious ones, such as Christmas and Easter. One particular holiday is Dia del Indio, on August 2, which commemorates their cultural heritage. The Aymara celebrate many holidays throughout the year. In every town, they celebrate the day of their patron saint on the liturgical Catholic calendar. These festivals last up to seven days and are celebrated with music, traditional dancing, and abundant consumption of alcohol. For each fiesta, a host is found. This person, known as the *preste*, is responsible for providing the food and drink for the community. To be a *preste* is an honor that Aymara seek, and they save for years in order to afford the expense.

The Aymara also celebrate Carnival. Carnival is a festival marking the beginning of Lent that is widely celebrated throughout South America. Dancing to drums and flutes accompanies a week-long celebration. Also important is the festival Alacistas, which features the God of Good Luck. Most households will have a ceramic figure of the Good Luck spirit, known as Ekeko. Purported to bring prosperity and grant wishes, the Ekeko doll is a round, plump figure, carrying miniature replicas of household goods, such as cooking utensils, bags of food, and money.

## 7 RITES OF PASSAGE

An Aymara child is gradually introduced to the social and cultural traditions of the community. Key stages in the development of a child are marked by traditions and rites of passage. A significant event in the life of an Aymara child is the first hair cut, known as *rutucha*. A baby's hair is allowed to grow until the child is able to walk and talk. At approximately two years old, when it is unlikely that he or she will succumb to childhood diseases that are prevalent in the Andes, the head is shaved bare.

## 8 INTERPERSONAL RELATIONS

For the Aymara culture, the basic social unit is the extended family conformed basically by wife, sons, brothers, and unmarried daughters. However, this social organization had been affected by the expansion of cities and modern life resulting in migrations motivated by the hope of finding better salaries for them and their families in urban settlements.

A dominant feature of the Aymara culture is reciprocity and the social obligation to help other members of the community. The exchange of labor and mutual aid play an essential role within an *ayllu*, or community. Such exchanges are invoked at times when substantial amounts of labor are required that a single family cannot provide. An Aymara peasant might ask for help from a neighbor to build a house, dig an irrigation ditch, or harvest a field. In return, he or she is expected to reciprocate by donating the same number of days' labor to the neighbor.

## 9 LIVING CONDITIONS

Living conditions of the Aymara depend mainly on where they live and how much they have been integrated to the Western style of life. To generalize about their living conditions would be a gross mistake. Many Aymara that reside in cities live in

modern houses or apartments. There are also large numbers of poor Aymara in the cities who have just one room. In rural areas, the construction of an Aymara house depends largely upon its location and the availability of materials. A typical Aymara house is a small oblong dwelling constructed of adobe, although near the lake reeds are the primary building material. Thatched roofs are made of reeds and grasses.

The high altitude makes life in the altiplano very difficult. The low level of oxygen in the air can leave one with *soroche* (altitude sickness), which causes headaches, fatigue, and nausea. *Soroche* is also potentially fatal. In order to adapt to life in the mountains, the Aymara have undergone clear physiological changes that enable them to cope in this environment. Most significantly, the Aymara and other mountain peoples have a greatly increased lung capacity relative to their body size. Expanded lung capacity enables them to increase their intake of air and, therefore, oxygen.

The use of coca leaves also ameliorates the effects of altitude sickness. Chewing coca leaves releases a mild alkaloid that combats fatigue and hunger. Coca leaves produce a mild medicinal effect and do not contain cocaine, which results only after major chemical processing of the leaves.

## 10 FAMILY LIFE

The central social unit of the Aymara is the extended family. Typically, a family will encompass parents, unmarried children, and grandparents in one house, or in a small cluster of houses. Large families are common, with many families having seven or eight children. Systems of reciprocity and mutual obligation are very strong within the extended family, and cousins, in-laws, and other relatives form a network of support and assistance. Relatives help with minding the children and harvesting, and they may provide loans in times of economic hardship.

There is a sharp division of labor within an Aymara household, but women's work is not necessarily considered inferior. Planting, in particular, is a task ascribed to women that is highly respected. Women in Aymara society also have inheritance rights. Property owned by females will be passed down from mother to daughter, ensuring that not all land and property goes to the sons, as it does in other cultures. This practice, however, has had some drawbacks, as parcels of land become so small through generations of inheritance divisions as to be agriculturally impractical.

Marriage is a long process that entails many steps, such as the inheritance feasts, a planting ritual, and the building of the house. Despite the lengthy marriage ritual, divorce is accepted and is relatively simple.

## 11 CLOTHING

Clothing styles vary greatly among the Aymara. Men in the cities wear regular Western clothes, and women wear their traditional *polleras* (ample skirts) made of fine materials, such as velvet and brocade. They wear shawls that are embroidered, and bowler hats (some of which are made in Italy). In the altiplano, the story is different. The strong cold winds that blow on the altiplano require warm woolen clothing. Demonstrating the clear influence of the colonial Spanish, women wear long homespun skirts and sweaters. Layers of skirts are used to provide some protection against the cold. For festivals or important occasions, women will wear as many as five or six skirts

Aymara women dancers in traditional dress in La Paz, Bolivia.  
(David Johnson)

on top of each other. Traditional weaving techniques dating back to pre-Inca times are used to produce brightly colored shawls, which are also used to strap children to their backs or carry loads of goods. For headwear, the women wear distinctive *bowbin*, or bowler hats. Aymara men in the altiplano wear long cotton trousers and woolen caps with ear flaps. In many regions, men also wear ponchos. Both sexes may wear sandals or shoes, but many go barefoot despite the cold.

## 12 FOOD

In cities, the Aymara diet is varied with one distinctive characteristic: *aji*, a hot pepper used to season the dishes. In the countryside, potatoes and grains, such as quinoa, form the staple diet. Quinoa, which is becoming increasingly popular in health food stores in the United States, is a nutritious, high-protein grain that has been grown in the Andes for centuries. The extremes of temperature that exist in the high Andes make it possible for potatoes and other tubers to be naturally freeze-dried and preserved. The cold air at night will freeze the moisture from the potato, while the sun during the day will melt and evaporate it. After a week lying out in the elements, the potatoes are pounded. The result is *chuño*, small, rock-hard

pieces of potato that can be stored for years. Lengthy soaking in water will rehydrate them and prepare them for cooking.

Meats are also freeze-dried. A traditional dish is *olluco con charqui*. *Olluco* is a small potato-like tuber, which is cooked with *charqui*, dried llama meat. Llamas are important for their wool and packing ability and are therefore consumed only rarely. Fish from Lake Titicaca or neighboring rivers is an important part of the diet in many communities.

Food is cooked in clay stoves into spicy stews or soups. Condiments include *aji*, other hot peppers, and peanut sauces. For festive occasions, guinea pig is eaten. Spicy guinea pig stew is the most desirable dish at a feast.

### 13 EDUCATION

In Bolivia, primary school education is mandatory until the age of 14. However, as in other developing countries, children of subsistence peasants are less likely than their urban counterparts to complete their schooling. Most rural families rely on children to conduct many essential household chores. Children often have the responsibility of tending to a herd or taking care of younger siblings. Male children are more likely to complete school than are girls, who have greater household responsibilities, even at a very young age.

Despite this, Bolivian literacy rates are fairly high, estimated at 85% for males and 71% for females. Perhaps this is the result of the rural school program that was massively implemented after the agrarian reform of 1953. The state universities, being virtually free, educate many Aymara who achieve degrees in all the professions, including medicine, law, and engineering. There are also trade schools where Aymara electricians, carpenters, plumbers, and mechanics are trained.

### 14 CULTURAL HERITAGE

The Aymara have a rich musical tradition. Although a clear Spanish influence can be discerned, the Aymara's primary musical influences date as far back as their pre-Inca ancestors. Percussion and flutes are featured prominently at festivals and celebrations. Panpipes (*zampoñas*) and the *pututu* horn, made out of a hollowed-out cow's horn, are traditional instruments that are still widely played. Homemade violins and drums are also common.

Indigenous dances have also been passed down through the generations. Each festival has its particular traditional dances. Many dances feature large, brightly painted masks and costumes. Many dances symbolize and parody the Spanish colonizers. The "old man dance," for example, features a bent-over Spanish aristocrat with a broad top hat. In this satirical dance, the dancer imitates the gestures and mannerisms of old Spanish gentlemen to comic effect.

The Aymara have a very rich and long oral tradition. During colonial times many of their songs, poems, and stories were compiled by missionaries or Ladino Indians (Indians that had learned how to write). In the 20th century, many ethnographers and linguists have also transcribed their texts. Aymara literature has recently undergone a renaissance. Now there are many Aymara who write down their stories and legends. Many of them are published in bilingual (Spanish-Aymara) editions.

### 15 WORK

Many Aymara are subsistence farmers in a harsh, high-altitude environment. The high altitude, cold nights, and poor soil

greatly limit the types of crops that are able to be sown. The Aymara follow traditional patterns of agricultural production, often still relying on pre-Columbian terraces, and following a careful pattern of crop rotation. The most important crop is the potato, which originated in the Andes. Also important is corn, quinoa (a grain), and barley. Many families own land at different altitudes, which enables them to grow a diverse range of crops.

Tractors or even oxen teams are rare in the high Andes. Traditional agricultural implements, such as the *taclla*, a foot plow, are still widely used. While the men do the plowing and digging, the sacred task of planting is reserved exclusively for women, as only they have the power to give life. This is also out of deference to *Pachamama*, the Earth Goddess.

The Aymara are also herders, deriving both wool and meat from herds of llamas, alpacas, and sheep. A family may also supplement their grazing herd with a couple of cows, frogs, or chickens. Many communities are beginning to diversify economically and produce off-farm income. The growing tourist trade has increased the demand for the luxurious wool of the alpaca, and sweaters are often knitted for the tourist trade, generating much-needed cash income. Some Aymara also work as laborers in silver or tin mines. These mines are dangerous and can cause health problems. However, they offer a scarce opportunity for cash income.

Many Aymara have entered politics since the reforms of 1952. They have founded a political party, Katarista, and they have senators and representatives in the Bolivian congress.

### 16 SPORTS

Although there are no sports that are strictly Aymara, soccer is the Bolivian national sport and many Aymara participate.

### 17 ENTERTAINMENT AND RECREATION

With the proliferation of mass media, the Aymara now enjoy their own TV shows, both as spectators and as performers. A kind of soap opera in Aymara is transmitted on the Aymara channel. There are musical groups that have made recordings that are avidly consumed by many Aymara. Urban Aymara are frequent moviegoers. One of the preferred activities is to dance in folklore festivals, for which they rehearse many months. Young people use these occasions to socialize among peers.

### 18 FOLK ART, CRAFTS, AND HOBBIES

The Aymara are skilled weavers, a tradition dating back to their pre-Inca origins. Many ethnologists believe that the textiles of the Andes are among the most highly developed and complex textile traditions in the world. The Aymara use a great many materials in their weaving, including cotton, as well as sheep, alpaca and llama wool. Additionally, the Aymara use to-tora reeds to make fishing boats, baskets, and related artifacts. Styles, patterns, and colors used in textile-weaving differ by region. Among the most sought-after textiles are those made in the town of Potolo. Potolo weavers emphasize zoomorphic designs that depict horses, llamas, and other animals.

### 19 SOCIAL PROBLEMS

The social problems faced by the Aymara stem from colonial times. European colonizers and their descendants have marginalized the Indians and exploited them constantly, putting

them in the lower strata of the social scale. Beginning with the Spaniards, the Aymara culture (and, for that matter, of all Amerindians) has been stigmatized and forced to acculturate to the colonizers' imposed values and beliefs. In spite of all the efforts made during almost half a millennium to erase or extirpate their culture, however, the Aymara have preserved some of their indigenous traits, which unfortunately have maintained them on the fringes of a society sharply divided among classes. It has been only in the second half of the 20th century that there has been an openness to accept their heritage without derogatory connotations. After the MNR revolution of 1952 [see "Bolivians"], all Indians enjoy all the civil rights of every Bolivian. With their access to education, their participation in the life of the country is beginning to be more active, but there are still class and racial barriers to overcome before they can fully participate in the modern life of the country. Unfortunately, too many of the Aymara still remain in poverty in rural areas, forcing large numbers to migrate to the cities where life becomes even harder for them in many respects.

## 20 GENDER ISSUES

One of the pillars of Aymara culture is the concept of *ayni* (reciprocity and balance), which used to give married Aymara women independent rights to own land. Moreover, in Aymara tradition, the principle of parallel lines of descent in which men conceived themselves as descending from a line of men and women from a line of women, was one of the key rules ordering pre-Columbian Andean kinship. Within this system, the basic structural unit was the sibling pair, which also ordered political and religious relations in the Andes. In addition, within the kin group itself, the designation of authority was based on order of birth, with no distinction made in terms of gender. Therefore, the male-dominated structure that the Spanish brought to the Andes imposed a special burden on Aymara women.

Aymara women are a marginalized, poor, and deprived social group, with low education, high unemployment, extreme poverty, inequality, and social exclusion. They also lack knowledge in Spanish. Illiteracy among Aymara women is more than one third and maternal mortality, especially in certain rural areas of the highlands, reaches 887 per 100,000 live births, one of the highest in Latin America.

In addition, Aymara women struggle against social traditions, which are particularly hard to break. Women rear the children, keep the house running, often manage the family business, and are preponderant in streets and markets selling everything from vegetables to electronic products.

# BAHAMIANS

**LOCATION:** Bahamas

**POPULATION:** 307,451

**LANGUAGE:** English; Bahamian dialect

**RELIGION:** Christianity

## <sup>1</sup> INTRODUCTION

Although the islands of the Bahamas are actually located in the western Atlantic Ocean, they are often identified with the Caribbean. They were the first islands to be sighted by Christopher Columbus in 1492, and the explorer named them *baja mar* (literally, “low water” in Spanish) for the shallow sea that surrounds them. Since the Bahamas lacked the mineral wealth found on other islands in the region, the Spanish did not settle them but rather used the more than 32,000 native populations of Lucayans as slaves on Hispaniola and other islands. Within a quarter of a century, the islands were depopulated and remained so for over 100 years. During the 17th century, the Bahamas became both a refuge for English settlers and a base for pirates, including the notorious Blackbeard.

In 1647 the Company of Eleutherian was founded in London with the objective of exploiting the land of the Island of Eleuthera, formerly known as Buhama in America. The formation of this company was the kick off for the first permanent English settlement in the island, which was a community founded in 1649 by 70 colonists from Bermuda, comprising religious independents as well as women who originally came from England. With the pass of time, more settlers followed, bringing African slaves with them. Even though the English imagined a prosperous plantation colony, unproductive soil and Spanish interference made the project fail. In 1670 King Charles II granted the islands to the Lords Proprietors of the Carolinas who rented the islands from the king with rights of trading, tax, and administering the country. But, under the Lords Proprietors administration the Bahamas and the region became a dangerous place infested by pirates. To solve this problem, the Bahamas was made a British Crown colony in 1718. In the 1780s the islands received an influx of British loyalists—also with slaves—from the colonies following the defeat of the British in the American Revolution. By the end of the 18th century, the number of Blacks in the Bahamas was twice that of the European population.

As it was common in the Caribbean region, the Bahamas witnessed slave riots during the years that preceded the elimination of servitude. Slavery was abolished in Britain and its possessions in 1833, but illegal slave traders used the Bahamas as a base to smuggle slaves into the southern United States. During the American Civil War, New Providence became a site of blockade-running and gunrunning for the Confederate States. In the following decades, the Bahamian economy languished, except for a temporary period of prosperity during the Prohibition era in the United States, when rumrunners operated on Nassau. With the introduction of commercial aviation in the 1930s, the islands’ tourism industry began, and by the end of the following decade it had become their primary source of income.

A series of constitutional changes in the 1960s led to full national independence in 1973. In the 1960s new tax and finance

restrictions in the United States led to the Bahamas’s becoming an international center of finance.

The Bahamas has become one of the richest countries in the Caribbean and its economy relies heavily on tourism and offshore banking. Since 1986 total tourist arrivals—mostly from the United States—has topped 3 million per year, over half of which are cruise ship passengers. The tourism realm accounts for around 60% of GDP and directly or indirectly employs half of the archipelago’s labor force. The increased demand for visiting the zone has meant an extraordinary boom in construction of new hotels, resorts, and residences.

Financial services constitute the second-most important sector of the Bahamian economy and, when combined with business services, account for about 36% of GDP. In 2007 close to 90% of the population was employed in the service realm, 7% was occupied in the industrial sector, and just 3% was working in agriculture. It is important to remember that just 0.58% percent of the land is arable.

In 2007 the Bahamian economy grew 3.1%.

## <sup>2</sup> LOCATION AND HOMELAND

Located in the Atlantic Ocean off Florida’s southeastern coast, the Bahamas is an archipelago consisting of approximately 700 islands, of which about 30 are inhabited, as well as over 2,000 reefs and cays. Their total land area of 13,934 sq km (5,380 sq mi, or slightly more than the combined area of New Jersey and Connecticut) is spread out over nearly 260,000 sq km (100,390 sq mi). The islands are bisected by the Tropic of Cancer, which passes between Great Exuma Island and Long Island. Besides the United States, the Bahamas’ nearest neighbors include Cuba to the southwest and Haiti and the Turks and Caicos Islands to the southeast.

The two main islands of the Bahamas are New Providence, where the capital city of Nassau is located, and Grand Bahama, the site of Freeport, the nation’s only other metropolitan area. The remaining, less-developed islands are generally called either the “Family Islands” or the “out islands.” Among these are Bimini, Abaco, Eleuthera, the Exumas, Andros, Cat Island, Long Island, Rum Cay, and Crooked Island. The islands’ terrain includes rocky cliffs, dense jungle swampland, pine forests, isolated coves, and sandy beaches. The highest point in the Bahamas, on Cat Island, is only 63 m (207 ft) above sea level.

The Bahamas has an estimated population of some 307,000 people, of whom about 65% live in cities and about 35% in rural areas. New Providence and Grand Bahama, the most densely populated islands, account for more than 75% of the Bahamian population. About 85% of Bahamians are of African descent, 8% are of mixed ancestry, and the remainder are White (mostly of British origin). Most White Bahamians live on New Providence, the Abacos, or Grand Bahama.

In the 1950s and 1960s—the era of the Civil Rights movement in the United States—race relations in the Bahamas began to change. Until then, economic opportunities for Blacks were severely limited, and they endured the overt racism of being barred from theaters, hotels, shops, and other public places. Thanks to a movement known as the Quiet Revolution, together with government policies that improved educational and job opportunities, the lot of Black Bahamians has improved and a new Black middle class has come into being on New Providence and Grand Bahama.

### 3 LANGUAGE

Standard English is the official language of the Bahamas, but most of the population speaks some version of an English-based Creole language called the Bahamian dialect. The rise of Creole language finds its explanation in the influx of Haitian migrations since the mid 20th century.

The language of the working class is the furthest from Standard English, while that of Whites and middle-class Bahamians of African ancestry generally falls somewhere on a spectrum between the official language and the creolized version.

An example of the Bahamian dialect can be found in the following verse from the poem "Islan' Life" by poet and playwright Susan J. Wallace:

Islan' life ain' no fun less ya treat errybody  
like ya brudder, ya sister, or ya frien'  
Love ya neighbour, play ya part, jes' remember das de art,  
For when ocean fen' ya in, all is kin.

### 4 FOLKLORE

The Bahamas is rich in myths and legends, especially those related to specific islands. Little Exuma Island is said to be haunted by a woman named Pretty Molly Bay, who is actually the source of two different legends. In one, she is a drowned slave who roams the beaches at night; in the other, she is a young White woman turned into a mermaid. There are stories about creatures called "chickcharnies"—three-toed sprites with red eyes—who hang upside down from trees on the island of Andros and are capable of turning a person's head around to face backwards. Bimini is traditionally associated with the Fountain of Youth, and North Bimini is associated with the lost city of Atlantis.

The 19th-century Haitian leader Henri Christophe, who committed suicide according to official accounts, is popularly thought to have escaped to Inagua Island in the Bahamas. The American playwright Eugene O'Neill based his play *The Emperor Jones* on this legend. The Bahamas' history as a base for pirate operations in the 17th and 18th centuries has spawned tales about buried treasure throughout the islands (treasure has actually been found on some sunken ships and on Cat Island).

### 5 RELIGION

Most Bahamians are Christian. According to the 2000 census, Baptists account for about 35.4% of the population, while Roman Catholics represent 13.5%, and Anglicans account for about 15.1% of the population. Other important creeds in the islands are Pentecostals representing 8.1% and Methodist with a 4.2%. Other Christians account for 15.2% of the population and 2.9% do not have a specific religious tendency.

It is not unusual for Bahamians to attend services at their own church and others as well. The influence of Christianity is reflected in the popularity of gospel music on the islands. On some of the islands, Christian beliefs are combined with the ancient African practice of *obeah*.

### 6 MAJOR HOLIDAYS

Public holidays in the Bahamas include the major holy days of the Christian calendar as well as Labor Day (the first Friday in June), Independence Day (July 10), Emancipation Day (the first Monday in August), and Discovery Day (October 12). The best-

known celebration on the islands is Junkanoo, held on both Christmas and New Year's. Thought to be descended from the day off formerly given to slaves on Christmas, it is a boisterous, colorful event that shares much of its character with Carnival festivities in such Caribbean countries as Trinidad and Tobago. Costumed groups unified by specific themes compete for prizes as they and masses of other revelers parade through the streets to the accompaniment of whistles and goatskin drums called *gombays*. Fringes of brightly colored crepe paper adorn masks and costumes alike.

### 7 RITES OF PASSAGE

Christian ceremonies, such as baptism and confirmation, mark the major passages from one stage to another in a Bahamian's life.

### 8 INTERPERSONAL RELATIONS

Bahamian culture is an amalgam of its African and European heritages and the influence of the peoples of the Caribbean and the Americas. Even though family life is still important in their culture, it is also important to point out that the incorporation of women to the labor force has diminished women's leverage as cultural agents.

The Bahamas has a large urban population heavily influenced by the country's large tourism industry. The legal system is based on English common law.

*A Bahamian child's primary caretaker, generally either the mother or grandmother, is also the person in charge of discipline in the family.  
(Cory Langley)*

## **9 LIVING CONDITIONS**

Living conditions range from the modern urban bustle of Nassau (on New Providence) and Freeport (on Grand Bahama) to the rural existence on the Family Islands (also called the out islands), whose inhabitants have little or no exposure to tourists and live a simpler, more traditional life. Migration to the cities for better jobs has produced an urban housing shortage, especially in low-income areas. In the 1980s new housing did not keep pace with demand. A World Bank report described 40% of the islands' dwellings as being in average to poor condition. Most Family Islanders live near the shore in villages whose scattered houses are simple wooden structures, some without plumbing or electricity (according to the World Bank, two out of three households in the Family Islands did not have running water in 1986).

The Bahamians have made great progress in health care since the 1960s. Average life expectancy is 68 years for men and 75 years for women. However, during the last years, the effect on mortality rates due to AIDS has been catastrophic. Life expectancy has decreased to 62.5 year for men and 69 years for women.

In 1992 there was 1 physician for every 714 people. There is a system of clinics on the out islands (there were 107 clinics in 1992), and patients who need additional care are flown to Princess Margaret Hospital in Nassau. Most Bahamian doctors receive their training in the United States, Great Britain,

or Canada. Bahamians in the out islands often use folk medicine, including herbal remedies, such as boiling parts of certain plants to produce medicinal teas.

Motorists in the Bahamas drive on the left side of the road, a legacy of the British presence on the islands. The more densely settled islands of New Providence and Grand Bahama have modern, paved roadways, but few Bahamians own their own cars. In 1991 the country had only 70,000 registered passenger vehicles, including buses, taxis, government-owned vehicles, and motor scooters (a very popular form of transport). More than half the registered vehicles were on the island of New Providence. Most of the Family Islands have only one or two roads, which run the length of the island, and boats are the preferred mode of transportation, since settlements are usually located near the coast. There are no railways on the Bahamas, but there are international airports at Nassau and Freeport.

## **10 FAMILY LIFE**

Although the model family in the Bahamas is the two-parent nuclear family, the migration of adults to Nassau and Freeport has left many families in the out islands headed by grandparents, and there are also households headed by single parents. However, it is unusual for unmarried couples to live together. A child's primary caretaker, generally either the mother or grandmother, is also the person in charge of discipline in the family. Adult children often give their mothers gifts or financial assistance. On the out islands men and women often do

the same kinds of work, including farming and wage labor. According to a 1994 agricultural survey, 33% of the nation's farmers were women (and 50% of all agricultural workers were Haitians).

### **11 CLOTHING**

Bahamians wear modern Western-style clothing. Colorful costumes of all kinds can be seen at the annual Junkanoo festivals in Nassau and other locations.

### **12 FOOD**

Seafood is the mainstay of the Bahamian diet. The conch shellfish is a national favorite used in many dishes. Other popular fish and shellfish include grouper, snapper, crayfish (which Bahamians call lobster), and shark. Peas and rice, reflecting the islands' African heritage, is a dietary staple consisting of dried pigeon peas and rice prepared with thyme and other spices. Sauces—dishes containing lightly pickled meats—also figure prominently in Bahamian cuisine. Developed in the days before refrigeration to preserve meats in the islands' tropical climate, they are made from various meats (including lamb tongue and mutton) or conch stewed in lime juice and spices. Served with cooked grits and johnny cake (a type of bread), they are a popular breakfast food. The traditional Bahamian breakfast is based on the diet of fishers who needed a hearty meal before spending the day at sea.

#### **Chicken Souse**

2 chickens	2 cups chicken broth
cut-up celery stalks	10 allspice berries
4 potatoes, chopped	1 bay leaf
2 onions, chopped	1 teaspoon dried thyme
2 Scotch Bonnet peppers	½ cup lime juice

Put both chickens in a large pot with enough water to cover, and bring the water to a boil. After cooking for two minutes, pour out the water and add enough fresh water to cover the chickens. The vegetables and all other remaining ingredients except the lime juice should be added when the water boils, and the mixture should be allowed to simmer for 10 minutes. Then add the lime juice and simmer for 10 more minutes. May be served hot immediately (after skimming off the fat), or served cold after refrigeration.

### **13 EDUCATION**

Over 96% of adult Bahamians are literate. Education is mandatory between the ages of 5 and 14, but most students continue their schooling until at least the age of 16. The educational system is modeled on that of Great Britain, with secondary education referred to in terms of "forms" (12th grade is called 6th form in the Bahamas) and exams required in order to attend college. Students must also take exams at the end of every school year in order to pass to the next grade. Before independence in 1973, students from the out islands traveled to Nassau for their secondary education, but in the years since then secondary schools have been started on many of these islands.

The government-run College of the Bahamas opened in 1974, and the Bahamas has also been home to a branch of the University of the West Indies since the 1960s. The Industrial Training Center offers programs in such fields as electrical installation, plumbing, and auto mechanics, and the Bahamas

Hotel Training College prepares students to work for hotels, tourism organizations, and other tourism-related businesses. In addition, many Bahamians attend colleges and universities in North America and Great Britain.

### **14 CULTURAL HERITAGE**

Susan Wallace, from the island of Grand Bahama, is the nation's best-known poet. She has also edited *Back Home*, an anthology of Bahamian literature. Playwright Winston Saunders, author of *You Can Bring a Horse to Water*, is the director of the Dundas Theatre, which stages plays by Bahamian and other authors. The meticulously groomed and disciplined Royal Bahamas Police Force Band, reflecting the British influence on Bahamian history and culture, performs at all major public events. Well-known artist Alton Lowe captures many facets of Bahamian life in his realistic paintings.

### **15 WORK**

The government is the largest employer in the Bahamas. Many government jobs are related to tourism, which together with related employment, provides jobs for the majority of Bahamians—estimated at 50% or more of the labor force. Agriculture and industry are much smaller contributors to the nation's economy and employ far fewer people. Subsistence farming and fishing have traditionally been the main occupations on the out islands, whose inhabitants also earn money producing crafts or through seasonal employment in resort areas. Because of the shortage of salaried jobs in these areas, many residents move to Nassau or Freeport to seek employment.

### **16 SPORTS**

Softball is the most popular sport in the Bahamas, whose teams compete regularly in the World Softball Conference. Other favorite sports include basketball, volleyball, and track and field. Student athletes compete in intramural and interscholastic basketball and volleyball, and scholarships in these sports have helped many Bahamian young people attend universities in the United States. Water sports, including sailing, windsurfing, and fishing, are popular with Bahamians and tourists alike. Many islanders race in the Family Islands regatta, held every April and based in George Town, on the island of Exuma.

### **17 ENTERTAINMENT AND RECREATION**

In addition to the indigenous Bahamian *goombay* (goatskin drum) music, calypso, soca, and reggae are also popular, as is gospel music, which is performed in concert halls and on outdoor stages as well as in churches. There is approximately one television for every four persons in the Bahamas. Programming includes American situation comedies, professional sports, British Broadcasting Corporation (BBC) programming, and British and Canadian educational broadcasting. Church programs are broadcast on Sundays. Radio programming includes calypso music, soft and hard rock, "oldies" music, and talk shows.

### **18 FOLK ART, CRAFTS, AND HOBBIES**

Bahamian folk music is closely related to the African-based Junkanoo festival, where the popular goatskin drum called the *goombay* was originally heard. Today, goombay is also used to refer to the calypso-style music whose satirical lyrics it often

*Bahamians dance, sing, and play at a Junkanoo dance. The origin of the word Junkanoo is obscure, though some say it comes from the French. (David McLain/Aurora/Getty Images)*

accompanies. In the out islands, local bands playing the goombay, the guitar, and the saw entertain at weddings and dances. Folk dance in the Bahamas ranges from the European quadrille to the African-derived jump dance and the West Indian limbo.

Crafts including woodcarving, quilting, basketry, and shellwork that were once produced chiefly for use by their creators have become profitable commercial items for sale to the country's tourists. The straw work produced on the out islands is especially distinctive. Using palm fronds braided into long strips that are then sewn together, the island women make hats, baskets, purses, and other items, often decorating them with raffia paper and seashells.

### **19 SOCIAL PROBLEMS**

The Bahamas has not traditionally been a violent society and, in the past, serious crimes, such as homicide, have been rare. However, in recent years, drug trafficking has caused a substantial increase in crime. In New Providence the use of crack cocaine has resulted in frequent armed robberies.

### **20 GENDER ISSUES**

Even though family life is important to most Bahamians, single women head an increasing number of households. Before the 1940s, women tended to be stay-at-home mothers and wives.

Now, as a result of increased educational opportunities and the development of the tourist industry, most women work outside the home.

Although legally Bahamian women have equal status under the law, men tend to dominate the higher-income and higher-status positions in the public and private sectors. While men dominate fishing and other maritime endeavors, the building trades, and the transportation industry, women dominate fields such as nursing, elementary school teaching, and office work. Out-island women tend to be farmers, shopkeepers, craft specialists, and domestics when they are employed.

Regarding marriage, a sexual double standard exists in which Bahamian women are supposed to be chaste until marriage and faithful during marriage whereas men are expected to have premarital and extramarital affairs. Because women are almost eight times more prone to get infected with HIV than men, the Bahamians's sexual standard tends to play in favor of spreading of the virus.

Among the hardest hit regions in the world, second only to Sub-Saharan Africa, Bahamas has the highest annual incidence of HIV/AIDS in the English-speaking Caribbean. Moreover, HIV/AIDS is the leading cause of death for Bahamian men and women between the ages of 15 and 44 years. As in most of the world, women in the Bahamas represent the fastest growing segment of the population with HIV/AIDS.

The first female member of parliament was elected in 1982. Since that time, there have been female cabinet ministers, legislators, and supreme court justices.

# BARBADIANS

**ALTERNATE NAMES:** Bajans

**LOCATION:** Barbados

**POPULATION:** 281,968 (2008)

**LANGUAGE:** English with West African dialect influences

**RELIGION:** Christianity: Anglican church (majority); Roman Catholicism; Methodism; Rastafarianism; other groups include Jehovah's Witnesses, Hindus, Muslims, Baha'is, Jews; Apostolic Spiritual Baptist is the island's only indigenous religion

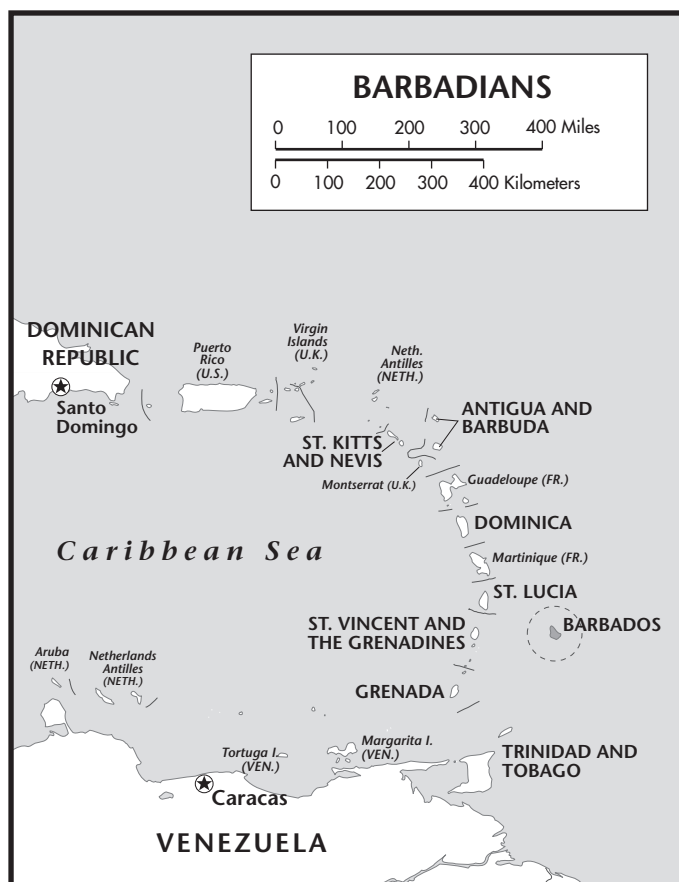

## <sup>1</sup> INTRODUCTION

Barbados is unique among the islands of the Caribbean in having been governed by only one colonial power, the British, and the resulting influence has given the country its nickname of "Little England." The Barbadians' name for themselves (Bajans—pronounced BAY-juns) is derived from "Barbajians," which is the way the British commonly pronounced Barbadians. Although previously settled by the Arawak and Carib Indians, the island was uninhabited when the British first landed there in 1625. Sugar-growing was introduced by the Dutch from Brazil shortly afterward and African slaves were imported to work on the great sugar plantations. After the abolition of slavery in 1834, Black workers stayed on the plantations and life on the island changed very little. Economic and political power was maintained by a small minority of White landowners, and the fortunes of the territory were dictated by the alternating booms and slumps of the sugar trade.

Following an outbreak of rioting in 1937, the Barbados Progressive League, antecedent of today's Barbados Labor Party (BLP), was founded to promote social, economic, and political reform. Sir Grantley Adams emerged as its leader. A series of political reforms culminated in universal suffrage in 1950 and Grantley Adams became premier of a self-governing Barbados in 1953. Errol Barrow broke away from the Barbados Labor Party in 1954 to found the Democratic Labor Party (DLP) and led Barbados into independence in 1966. In 1976 Errol Barrow was defeated by Tom Adams, the son of Sir Grantley Adams. In 1974 Barbados participated in the founding of CARICOM (the Caribbean Community and Common Market) and in 1994 the island was the site of the United Nations Global Conference on Sustainable Development of Small Island Developing States. The BLP led the government for fifteen years, from 1993 until the 2008 general election, when the DLP led by David Thompson came to power.

## <sup>2</sup> LOCATION AND HOMELAND

Belonging to the Lesser Antilles, Barbados is the easternmost Caribbean island, with a total area of 430 sq km (166 sq mi). The terrain of the pear-shaped island consists of lowlands and terraced limestone plains separated by rolling hills that run parallel to the coasts. With a 2008 estimated population of 281,968 persons on an island about the size of San Antonio, Texas, Barbados is one of the world's most densely populated countries (about 625 people per sq km or 1,620 people per sq mi in 2002). However, in recent decades its population has been controlled by an effective family planning program. The annual population growth rate in 2008 was 0.3%.

About 90% of the population is of African descent, descended from West Africans brought to the island to work as slaves on sugar plantations. About 4% are white, descendants of both wealthy plantation families and indentured servants from Scotland, Ireland, and Wales (called “redlegs” because many wore kilts that allowed their legs to become sunburned). Most people in Barbados have some admixture of European blood. The remaining 6% of Barbados’ population are of Asian or mixed race. Some of the most recent immigrants are from south Asia and the Middle East.

### 3 LANGUAGE

English is the official language of Barbados, but it is universally spoken in a dialect strongly influenced by the languages of West Africa. Many words, such as *duppy*, the term for ghost, are derived from African terms and the African practice of duplicate words (“sow-pig,” “bull-cows,” “gate-doors”) has also been imported into the language. Doubling is used for emphasis (“fast fast” instead of “very fast”), another typical African practice. The present tense of verbs is used to express actions in the past (“She cook dinner last night”). Actions in the present are expressed by the present participle (“He dancing to the music”), while the simple present tense (accompanied by “does”) is reserved for habitual actions (“He does dance on Tuesdays”).

Common words and expressions in Barbadian and their standard English equivalents are:

#### BARBADIAN

again  
all two  
black lead  
cool out  
duppy umbrella  
fingersmith  
jump up  
nyam or yam  
sand side  
t’ink  
yuh  
break fives  
tie-goat  
hag

#### STANDARD ENGLISH

now  
both  
pencil  
relax  
mushroom  
thief  
dance  
eat  
beach  
think  
you  
shake hands  
married person  
bother

### 4 FOLKLORE

Barbados has a rich body of folklore that harkens back to the African roots of most of its population. A number of folk beliefs center on ways to keep the ghost of a departed person—known as a *duppy*—from returning to haunt the living. These include sprinkling rum on the ground, walking into the house backwards, and hanging certain herbs from the windows and doorway. Other figures from Barbadian folklore include the *Conrad*, an avenging spirit thought to possess people, making them do and say strange things; the *heartmen*, who kill children and offer their hearts to the devil; and the *bacchoo*, a tiny man who lives in bottles and can decide one’s destiny.

Some examples of Barbadian proverbs are:

“One-smart dead at two-smart door” (No matter how smart you seem to be, there’s always someone who can outwit you).

“Coconut don’ grow upon pumpkin vine” (Children inherit their parents’ characteristics—equivalent of U.S. proverb, “The apple doesn’t fall far from the tree”).

“Coo-coo never done til de pot turn down” (equivalent to U.S. proverb, “It’s never over until it’s over” or “It’s not over until the fat lady sings”).

### 5 RELIGION

Religion plays an important role in the lives of Barbadians. The school day usually begins with a prayer, small revivalist churches abound throughout the island, and there is a one-year waiting list for church choirs who want to perform on the popular Sunday afternoon television program, *Time to Sing*, which features a different group every week. Priests exert some influence over public policy and cultural life (one reason for the absence of casinos from the island), and a substantial amount of radio air time is devoted to religious programming.

The main religion of the Bajans is Christianity with the most members belonging to the Anglican Church, a legacy from the days of British rule. In 2007 there were about 70,000 members of the Anglican Church, with about 67% considered to be active members. Seventh-day Adventists made up the next largest group with about 16,000 members, 64% of whom were active members. Of the 11,000 Roman Catholics in 2007, about 20% were active. Other Christian groups include Pentecostals, Methodists, and Jehovah’s Witnesses, as well as small numbers of Baptists, Moravians, and Latter-day Saints (Mormons).

Other religious groups, including Hindus, Muslims, and Baha'is, are generally made up of immigrants. A small Jewish community descended from Sephardic Jews expelled from Spain worships at a synagogue that dates back to 1640. The Jewish synagogue, destroyed in the hurricane of 1830 and rebuilt in 1834, fell into disuse in the early 1900s and was only recently restored with the help of public and government donations. Rastafarianism, which originated in Jamaica, was introduced to Barbados in 1975. After a rocky period when it was associated with rebellious youths and criminals attracted by its cocky image and dreadlocks, it has been accepted by Bajan society and includes among its ranks such well-known figures as actor Winston Farrell and calypso artist Ras Iley.

The Apostolic Spiritual Baptists (popularly known as "Tieheads") occupy a special place in Barbados' religious spectrum, as the island's only indigenous religion. Fashioned after other West Indian revivalist religions, the sect, founded in 1957 by Bishop Granville Williams, combines Christian observance with the foot stomping, hand clapping, and dancing characteristic of African religious practices. Converts are baptized and then sequestered for 7 to 10 days in the "Mourning Ground," a special area of the church. Tieheads, so-called because of the cloth turbans worn by both men and women, sport colorful gowns in colors symbolic of particular qualities.

## 6 MAJOR HOLIDAYS

The Christian holidays of Good Friday, Easter, Easter Monday, Whit Monday (Pentecost Monday), and Christmas are all national holidays. Other Barbadian holidays include New Year's Day (January 1), May Day (May 1), CARICOM Day (first Monday in August), Independence Day (November 30), and United Nations Day (first Monday in October). The island's major celebration is the Crop Over festival, which takes place in July and early August. This three-week festival was derived from the traditional festival that marked the end of the sugarcane harvest. Events include the ritual presentation of the Last Canes and the judging of costumed groups (called "bands") on Kadooment Day, the climax and final day of the festival. The festivities include calypso music and abundant food.

## 7 RITES OF PASSAGE

Couples often engage in "visiting" relationships, in which the man visits the woman at her home, or common-law marriages, recognized after five years of cohabitation, both of which are similar in their rights and conditions to legal marriages. Major life events (birth, puberty, marriage, death, etc.) are marked by the religious ceremonies particular to each Bahamian's faith community.

## 8 INTERPERSONAL RELATIONS

Barbadians are known for their politeness and civility, a legacy both of British influence and of the island's high population density—living in close proximity with others imposes pressure to avoid censure and unpleasant confrontations. Describing his homeland, well-known Barbadian author John Wickham wrote, "The inability of people to remove themselves from one another has led to concern for public order, a compassion for others, and a compelling sense of a neighbor's rights and integrity."

## 9 LIVING CONDITIONS

The standard of living on Barbados is among the highest in the Caribbean. The United Nations' 2007 Human Development Report rated the quality of life on Barbados—based on such factors as health, education, and earning power—first among 108 developing nations considered.

About 76% of Barbadians own their own homes. Nearly the entire population has access to safe drinking water. The traditional Barbadian wooden house, which can still be seen throughout the island, is called a "chattel" house. A single-story structure built from a single layer of planks, it boasts a unique feature—portability. It can be taken apart and moved to another location, traditionally when its owner is evicted by the landlord or saves enough money to buy his or her own plot of land elsewhere. The house is usually symmetrical, with a door in the center and windows to either side. The traditional roof of wooden shingles has given way to sheets of galvanized iron that create uncomfortably hot conditions within.

The newer type of house and the one favored by Barbadians today is the suburban "wall" house built of cement blocks and stucco, so-called because it is usually surrounded by a small cement wall. By economic necessity, the wall house, like its wooden predecessor, is often built in stages. Just as second and even third structures were often added to the chattel house ("two-roof house and shed"), the wall house may consist of cement block additions added to a wooden home, one room at a time.

The excellent health care system developed on Barbados in the postwar period has reduced the incidence of infectious disease and improved the overall health of the population significantly. Average life expectancy is 71.2 years for males and 75.2 for females (2008 est.). The infant mortality rate was estimated at about 11 deaths per 1,000 births in 2008. In addition to modern medicine, many Barbadians still rely on folk medicine and use home remedies either as a supplement or as an alternative to conventional treatment.

Barbados' small size and flat terrain have facilitated travel, and it is possible to get to any point on the island quickly and easily, a fact that has enabled many rural dwellers to commute to urban jobs. However, the traffic congestion accompanying Barbados' growing prosperity has strained the narrow, winding roads of Bridgetown, a city founded in 1628.

## 10 FAMILY LIFE

Many Barbadian households are based on arrangements other than that of a legally married couple living together with their children—this is a legacy of slavery, which often separated men from women and from their children, as well as the traditional shortage of males on the island due to emigration. As such, there are many single-parent families with the mother as head of household. Other relatives, particularly grandmothers and aunts, play an important role in child-rearing, often taking care of the children so that the mother can work. Older children may be expected to take on many household chores, including care of younger siblings.

Common-law marriages are legally recognized after five years and each partner is entitled to half the joint property.

## 11 CLOTHING

Barbadians wear modern Western-style clothing in casual, business, and formal situations. Colorful and inventive cos-

tumes may be seen at festivals, especially the Crop Over celebration in July and August. Members of the Apostolic Spiritual Baptist sect (popularly known as “Tieheads”) are known for their turbans—worn by both men and women—and their colorful gowns.

## 12 FOOD

Generations of Barbadian cooks have triumphed over the island’s limited selection of produce—as well as the Barbadian’s traditionally limited budget—to create a rich culinary tradition that draws on West African, English, Spanish, French, and other types of cuisine. *Cou-cou*, one of the most popular national dishes, is a cornmeal and okra pudding related to the African *foo-foo*. It is typically served with gravy and salt cod, another dietary staple. Another favorite food is flying fish, a locally abundant species. These fish are served fried, steamed, or baked using a special Barbadian seasoning that combines onion, garlic, pepper, thyme, paprika, lime juice, and other flavors.

Rice served with any of a variety of peas (including green, blackeye, cow, and gunga) is another dietary staple. The variety of ways pork is used to supplement the islanders’ diet has inspired the claim that the only part of a pig Barbadians can’t use for some dish is its hair. The most famous pork dish is pudding and souse. A black pudding made from sweet potatoes and pig’s blood, stuffed into cleaned pig’s intestines and boiled, is sliced and served with “souse,” made from cooked pig meat pickled in lime juice and hot peppers and served with onions, cucumbers, and peppers.

Popular beverages include coconut water, lemonade with fresh limes, and drinks made from such fruits as mangoes, guavas, gooseberries, tamarinds, and passion fruit. *Mauby* is a beverage made from the bark of a tree. *Falernum* is an indigenous liqueur made from lime juice, sugar, rum, and water, flavored with almond extract. A favorite dessert is coconut bread, which may be prepared using the following recipe:

### Coconut Bread

6 oz brown sugar	2 tsp almond extract
6 oz shortening	¼ lb raisins or mixed fruit
1 large egg	1 cup milk
3 cups grated coconut	1¼ lbs flour
1 tsp powdered cinnamon	½ tsp salt
1 tsp powdered nutmeg	3 tsp baking powder

Combine shortening and sugar. After beating the egg, add it in and mix thoroughly. Next, mix in the spices, almond extract, fruit or raisins, grated coconut, and milk. After sifting, mix in the dry ingredients and pour the dough into two greased loaf pans—a 1-lb pan and a 2-lb pan. Preheat oven to 350°F and bake loaves for one hour, or until browned. Cool on racks before serving.

## 13 EDUCATION

Educational opportunities on Barbados have expanded greatly since World War II and the country boasts a literacy rate of between 95% and 100%, the highest in the Caribbean. One of the strongest values typically imparted by the Barbadian family is the importance of academic achievement. In 2003 primary school enrollment was estimated at 100% while secondary school enrollment was listed as about 90% of age-eligible stu-

dents. Attendance is legally required between the ages of 5 and 16, and all education is free, including college.

Students are tracked into classes based on standardized test scores, so many travel great distances to schools located far from their homes. Thousands of children can be seen at bus terminals throughout the country every day on their way to or from school. However, new zoning was introduced in the 1990s to ameliorate the situation.

Thanks to movements aimed at giving recognition to the Barbadians’ African heritage, children are now exposed to African folklore and music in the schools. A branch of the University of the West Indies was opened on Barbados in 1963, and other institutions of higher learning include Barbados Community College, the Samuel Jackman Prescod Polytechnic, the Codrington College Seminary, Barbados Institute of Management and Productivity, and Erdiston Teachers Training College. Students may also receive scholarships for college studies in the United Kingdom and other Caribbean institutions.

## 14 CULTURAL HERITAGE

Although Barbados has a long oral storytelling tradition, written literature by Barbadians received its first real debut in the 1940s and 1950s in a Barbadian literary magazine called *Bim*, which was the first showcase of works by a number of Caribbean writers destined for future fame, including Derek Walcott, the 1992 Nobel laureate in literature, who was born in St. Lucia but has spent a large portion of his time in Trinidad. Well-known Barbadian writers include essayist John Wickham, novelist George Lamming (best known for *In the Castle of My Skin*), and poet Edward Kamau Braithwaite, winner of the 1994 Neustadt International Prize for Literature and a professor of Comparative Literature at New York University.

Barbados has a flourishing community of artists producing paintings, murals, sculptures, and crafts, many of which reflect strong African influences. The arts in Barbados have been supported since the mid-1950s by the Barbados National Arts Council, and tourism has provided many local artists, especially musicians, with patrons.

## 15 WORK

Most Barbadians belong to a large middle class that includes both skilled blue-collar workers and white-collar professional and managerial employees. The labor force contains an equal number of men and women. About 75% of employment on Barbados is in service-sector jobs, while industry accounts for about 15% and agriculture at 3.5%. The unemployment rate in 2003 was estimated at 10.7%. Many Barbadians work abroad and send money back home. In 2003 the World Bank estimated the total value of remittances to be about us\$97 million, or about us\$385 per capita, accounting for approximately 3.7% of the gross domestic product (GDP). In 2007 about 25% to 30% of the workforce was unionized.

## 16 SPORTS

Cricket is by far the most popular sport on Barbados—some have called it a “national religion.” When the nation gained its independence in 1966, it immediately challenged the rest of the world to a cricket match. Most of Barbados’ national heroes are cricket stars, such as Sir Everton Weekes, Sir Clyde Walcott, Sir Frank Worrell, and Sir Garfield Sobers, recognized as the greatest all-around cricketer of all time. The effigy of Sir Frank

Worrell adorns the island's five-dollar currency note. Other popular sports include horse-racing, soccer, hockey, rugby, volleyball, and softball. The local game of road tennis, played with a homemade wooden paddle and a long piece of wood for a "net," is a cross between ping-pong and lawn tennis.

### 17 ENTERTAINMENT AND RECREATION

The traditional locale where Barbadian men spend their leisure time is the rum shop, which combines the functions of grocery store, bar, and domino parlor. The island has one rum shop for every 150 adults. Women have traditionally gravitated toward the local church as a social center. Dance, music, and theater are all popular pursuits, and about 80% of Barbadian households now have television sets.

### 18 FOLK ART, CRAFTS, AND HOBBIES

In addition to the popular calypso, reggae, and steel band music that reflects the influence of neighboring Trinidad and Jamaica, Barbados has its own indigenous musical tradition, the *tuk* band, which provides the backbeat for all major celebrations on the island. Composed of pennywhistles, snare drums, and bass drums, it is reminiscent of a British military band, but with a distinctly African flair.
