# PREFACE

*The Worldmark Encyclopedia of Cultures and Daily Life, Second Edition*, contains over 500 articles exploring the ways of life of peoples of the world. Arranged in five volumes by geographic regions—*Africa, Americas, Asia & Oceania* (two volumes), and *Europe*—the volumes of this encyclopedia parallel the organization of its sister set, the *Worldmark Encyclopedia of the Nations*. Whereas the primary purpose of *Nations* is to provide information on the world's nation states, this encyclopedia focuses on the traditions, living conditions, and personalities of many of the world's culture groups. Entries emphasize how people live today, rather than how they lived in the past.

Defining groups for inclusion was not an easy task. Cultural identity can be shaped by such factors as geography, nationality, ethnicity, race, language, and religion. Many people, in fact, legitimately belong in two or more classifications, each as valid as the other. For example, the citizens of the United States all share traits that make them distinctly American. However, few would deny the need for separate articles on Native Americans or African Americans. Even the category Native American denies the individuality of separate tribes like the Navajo and Paiute. Consequently, this encyclopedia contains an article on the Americans as well as separate articles on the Native Americans and the Navajo. Closely related articles such as these are cross-referenced to each other to help provide a more complete picture of the group being profiled. Included in this encyclopedia are articles on groups as large as the Han of China, with over one billion members, and as small as the Jews of Cochin, with only a few dozen members. Unfortunately, although the vast majority of the world's peoples are represented in this encyclopedia, time and space constraints prevented many important groups from being included in the first edition. Twenty-three new groups have been added to this second edition, and the editors look forward to including many more culture groups in future editions of this work.

New entries include in Americas: Sudanese Americans ("Lost Boys"); in Africa: Afar, Berbers, Ewe, Guineas of Guinea Bissau, Jola, Maldivians, San (Bushmen), Sao Tomeans, and Twa; in Asia and Oceania: Brunei, Coptic Christians, Kashmiris, Moro, Rajasthanis, and Timorese; and in Europe: Alsations, Kosovars, Maltese, Montenegrins, Serbs, Tyrolese, and Vlachs.

Over 175 contributors and reviewers participated in the creation of this encyclopedia. Drawn from universities, consultancies, and the press, their in-depth knowledge and first-hand experience of the profiled groups added significantly to the content of the articles. A complete listing of the contributors and reviewers together with their affiliations appears in the front of each volume.

## ORGANIZATION

Each volume begins with an introduction that traces the cultural developments of the region from prehistoric times to the present. Following the introduction are articles devoted to the peoples of the region. Within each volume the articles are ar-

anged alphabetically. A comprehensive table cross referencing the articles by country follows the table of contents to each volume.

The individual articles are of two types. The vast majority follow a standard 20-heading outline explained in more detail below. This structure allows for easy comparison of the articles and enhances the accessibility of the information. A smaller number do not follow the 20-heading format, but rather present simply an overview of the group. This structure is used when the primary purpose of an article is to supplement a fully rubriced article appearing elsewhere in the set.

Whenever appropriate, articles begin with the **pronunciation** of the group's name, a listing of **alternate names** by which the group is known, the group's **location** in the world, its **population**, the **languages** spoken, the **religions** practiced, and a listing of **related articles** in the five volumes of this encyclopedia. Most articles are illustrated with a map showing the primary location of the group and photographs of the people being profiled. The twenty standard headings by which most articles are organized are presented below.

**INTRODUCTION:** A description of the group's historical origins provides a useful background for understanding its contemporary affairs. Information relating to migration helps explain how the group arrived at its present location. Political conditions and governmental structure(s) that typically affect members of the profiled ethnic group are also discussed.

**LOCATION AND HOMELAND:** The population size of the group is listed. This information may include official census data from various countries and/or estimates. Information on the size of a group's population located outside the traditional homeland may also be included, especially for certain groups with large diaspora populations. A description of the homeland includes information on location, topography, and climate.

**LANGUAGE:** Each article lists the name(s) of the primary language(s) spoken by members. Descriptions of linguistic origins, grammar, and similarities to other languages may also be included. Examples of common words, phrases, and proverbs are listed for many of the profiled groups, and some include examples of common personal names and forms of address.

**FOLKLORE:** Common themes, settings, and characters in the profiled group's traditional oral and/or literary mythology are highlighted. Many entries include a short excerpt or synopsis of one of the group's most noteworthy myths, fables, or legends. Some entries describe the accomplishments of famous heroes and heroines or other prominent historical figures.

**RELIGION:** The origins of traditional religious beliefs are profiled. Contemporary religious beliefs, customs, and practices are also discussed. Some groups may be closely associated with one particular faith (especially if religious and ethnic identification are interlinked), while others may have members of diverse faiths.

**MAJOR HOLIDAYS:** Celebrations and commemorations typically recognized by the group's members are described. These holidays commonly fall into two categories: secular and religious. Secular holidays often include an independence day and/or other days of observance recognizing important dates in history that affected the group as a whole. Religious holidays are typically the same as those honored by other peoples of the same faith. Some secular and religious holidays are linked to the lunar cycle or to the change of seasons. Some articles describe unique customs practiced by members of the group on certain holidays.

**rites of passage:** Formal and informal episodic events that mark an individual's procession through the stages of life are profiled. These events typically involve rituals, ceremonies, observances, and procedures associated with birth, childhood, the coming of age, adulthood, and death. The impact of twenty-first century communications and global media on customs are addressed here.

**interpersonal relations:** Information on greetings, body language, gestures, visiting customs, and dating practices is included. The extent of formality to which members of a certain ethnic group treat others is also addressed, as some groups may adhere to customs governing interpersonal relationships more/less strictly than others.

**living conditions:** General health conditions typical of the group's members are cited. Such information includes life expectancy, the prevalence of various diseases, and access to medical care. Information on urbanization, housing, and access to utilities is also included. Transportation methods typically utilized by the group's members are also discussed.

**family life:** The size and composition of the family unit is profiled. Gender roles common to the group are also discussed, including the division of rights and responsibilities relegated to male and female group members. The roles that children, adults, and the elderly have within the group as a whole may also be addressed.

**clothing:** Many entries include descriptive information (size, shape, color, fabric, etc.) regarding traditional clothing (or a national costume), and indicate the frequency of its use in contemporary life. A description of clothing typically worn in the present is also provided, especially if traditional clothing is no longer the usual form of dress. Distinctions between formal, informal, and work clothes are made in many articles, along with clothing differences between men, women, and children.

**food:** Descriptions of items commonly consumed by members of the group are listed. The frequency and occasion for meals is also described, as are any unique customs regarding eating and drinking, special utensils and furniture, and the role of food and beverages in ritual ceremonies. Many entries include a sample recipe for a favorite dish.

**education:** The structure of formal education in the country or countries of residence is discussed, including information on primary, secondary, and higher education. For some groups, the role of informal education is also highlighted. Some articles may include information regarding the relevance and importance of education among the group as a

whole, along with parental expectations for children. In addition, literacy levels are described where appropriate.

**cultural heritage:** Since many groups express their sense of identity through art, music, literature, and dance, a description of prominent styles is included. Some articles also cite the contributions of famous individual artists, writers, and musicians.

**work:** The type of labor that typically engages members of the profiled group is discussed. For some groups, the formal wage economy is the primary source of earnings, but for other groups, informal agriculture or trade may be the usual way to earn a living. Working conditions are also highlighted.

**sports:** Popular sports that children and adults play are listed, as are typical spectator sports. Some articles include a description and/or rules to a unique type of sport or game.

**entertainment and recreation:** Listed activities that people enjoy in their spare time may include carrying out either structured pastimes (such as public musical and dance performances) or informal get-togethers (such as meeting for conversation). The role of popular culture, movies, theater, and television in everyday life is also discussed.

**folk arts, crafts, and hobbies:** Entries describe arts and crafts commonly fabricated according to traditional methods, materials, and style. Such objects may often have a functional utility for everyday tasks.

**social problems:** Internal and external issues that confront members of the profiled group are described. Such concerns often deal with fundamental problems like war, famine, disease, and poverty. A lack of human rights, civil rights, and political freedom may also adversely affect a group as a whole. Other problems may include crime, unemployment, substance abuse, and domestic violence.

**gender issues:** New to this edition is a section focusing on women's issues including cultural attitudes, discrimination, status, health, sexual issues, education, and work and employment. Some discussion on the group's attitudes toward homosexuality may be included in this section, where relevant.

**bibliography:** References cited include works used to compile the article, as well as benchmark publications often recognized as authoritative by scholars. Citations for materials published in foreign languages are frequently listed when there are few existing sources available in English.

A glossary of terms and a comprehensive index appears at the end of each volume.

## ACKNOWLEDGMENTS

The editors express appreciation to the members of the Cengage Gale staff who were involved in a number of ways at various stages of development of the *Worldmark Encyclopedia of Cultures and Daily Life, Second Edition*: Christine Nasso, Barbara Beach, and Leah Knight, who helped the initial concept of the work take form; and Larry Baker and Allison McNeill, who supported the editorial development of the profiles for the first edition. Carol Nagel and Ellen McGeagh were instrumental in the planning and scheduling of the second edition of this work. Anne Marie Hacht selected the photo illustrations and provided valuable review of the entries. Marybeth Trimper,

Evi Seoud, and Shanna Heilveil oversaw the printing and binding process.

In addition, the editors acknowledge with warm gratitude the contributions of the staff of Eastword Publications—Debby Baron, Dan Lucas, Brian Rajewski, Kira Silverbird, Maggie Lyall, Karen Seyboldt, Tajana G. Roehl, Janet Fenn, Cheryl Montagna, Jeneen Hobby, Dan Mehling, Karen Ellicott, Alexander Barnes, and Elizabeth Gall—who managed interactions with contributors; edited, organized, reviewed, and indexed the articles; and turned the manuscripts into the illustrated typeset pages of these five volumes.

SUGGESTIONS ARE WELCOME: Maintenance of a work the size and scope of *Worldmark Encyclopedia of Cultures and Daily Life, Second Edition*, is a daunting undertaking; we appreciate any suggestions that will enhance future editions. Please send comments to:

# INTRODUCTION

by  
James L. Newman

Counts vary, but a conservative one for Africa would enumerate at least 1500 distinct ethnolinguistic groups, by which is meant peoples who speak recognizably different languages and identify themselves as having their own special cultural historical traditions. Since current evidence suggests humanity took its first steps in Africa, an account of how this diversity came to be could begin over four million years ago. Space, however, prohibits such a long temporal journey, and thus our starting point will be between 10,000 and 5000 years ago when the first glimmers of today's languages can be detected. Despite their large numbers, all the indigenous languages can be placed within four classifications that are termed Khoisan, Nilosaharan, Afroasiatic, and Niger Congo. Each arose within a particular regional setting, and over time went through branchings and re-branchings, often in association with migrations, that altered population distributions in substantial ways. Fueling these migrations were changes in food economies, the development of new technologies, especially iron-making, opportunities for trade, and sometimes religious affiliation.

Joining diversity and fluidity as hallmarks of Africa's peoples is complexity. Most have arisen from multiple influences, the forces and intensities of which have varied with time and place. And while some identities have hundreds of years of history to them, others have come about more recently. European colonialism in the nineteenth and twentieth centuries was especially important to identity formation, and the colonial era was when many of these identities crystallized. Administrators of colonies needed boundaries and they drew them, usually according to what they called tribes, which were thought to be entities rooted in some unchanging past. About this the colonialists were clearly mistaken. Nevertheless the boundaries that were drawn and the names that were employed became realities that continue to define the peoples of Africa to this day. We, therefore, cannot avoid using them in our portrayal. In a few instances, errors often involving names with derogatory connotations that were given to a group by others, have been corrected. In those instances where the changes made are generally agreed upon, the old name is noted in parentheses.

## KHOISAN

The Khoisan languages are best known for their clicks, which are implisively as opposed to explosively formed consonant sounds. The prototype of this language appears to have originated somewhere south of the Zambezi River, and then branched into others that spread throughout the region as well as into the savanna lands of eastern Africa, perhaps to as far north as the Tana River in Kenya. The peoples speaking Khoisan languages gathered, hunted, and fished for their sustenance, and fashioned tools out of stone, wood, and bone. They lived in bands that moved seasonally in response to changes in food availability and were comprised of 30–50 individuals.

Around 2000 years ago, groups residing near the Zambezi River in the vicinity of today's border between Zambia and Zimbabwe acquired sheep and goats and with them they migrated southward. Some eventually settled the rich grazing lands between the Vaal and Orange Rivers in South Africa, while others chose the equally productive lands in and around the Cape of Good Hope peninsula. Still others occupied the less fertile Karoo bush lands. Organized into loosely knit kinship alliances, these herders would become known as Khoikhoi (formerly Hottentot), while those who continued as hunters and gatherers are now referred to as San (Bushmen).

Both Khoikhoi and San were soon challenged by others with superior technologies. In the first centuries AD, Iron Age Bantu-speaking farmers began arriving from the north, claiming most of the better agricultural lands of the Transvaal and Natal. Then in the 1650s, Europeans took up residence at the Cape, from where they expanded inland, staking out huge land claims to support the pastoral economy they had developed. Displacement, conquest, and disease all took their tolls on the Khoisan peoples, and today only a few groups in southern Africa, such as the well known !kung San of Botswana, survive as distinct cultures. In eastern Africa, the Sandawe and Hadza of Tanzania attest to the once widespread Khoisan presence there.

## NILOSAHARAN

Ten thousand years ago, the climate of northern Africa was much wetter than it is today and the area we now call the Sahara Desert contained numerous large lakes and river valleys. The rich and varied aquatic resources these provided supported growing populations, that included the ancestors of Nilosaharan speakers. During the course of the next several thousand years, their economies were enriched by the addition of livestock, especially cattle, and then shortly thereafter the cultivation of sorghums and millets. This allowed them to expand southward into the savannas bordering the equatorial rainforest, the region of Central Sudanic language family formation. Nilosaharans also occupied the grasslands and marshlands surrounding the White Nile River valley of the southern Sudan, where the Nilotic peoples, including the Nuer and Dinka, came into being. Cattle had high economic and cultural value, and competition between groups for grazing grounds and water led some groups to move southward and into the savannas of eastern Africa. The migrations began as early as 500 BC and continued into the nineteenth century, giving rise to, among others, the Samburu, Masaai, Karamajong, and Luo, and adding to the composite that would become the Tutsi.

Other Nilosaharan migrations produced today's Nubians of the Nile Valley between Aswan and Khartoum. These migrations took place in several stages during the first centuries AD, with earlier residents being either absorbed or displaced.

Another series of Nilosaharan migrations led to the formation of the Kanuri peoples of the Lake Chad region, who founded the state of Kanem-Bornu about AD 1000. Using profits derived from trans-Saharan trade, the state remained a regional power for more than 800 years.

Within and around the Sahara, however, the Nilosaharans lost ground. From the east came Afroasiatic-speaking peoples, while those of Niger Congo affiliation encroached from the west. Notable survivors include the Songhai along the bend of the Niger River, who formed the core of the extensive 16th century state of the same name, and the Tibbu of the Tibesti Mountains in Chad.

## AFROASIATIC

The Afroasiatic languages most likely originated in northeastern Africa somewhere between the Red Sea and Nile River. From there they have spread across a roughly crescent-shaped area extending from Kenya northward, and then westward to Morocco. One of the languages was Ancient Egyptian as seen in the hieroglyphics left behind by Pharonic Egypt. Already a highly populated area during Stone Age times, densities along the banks of the Nile River north of Aswan rose rapidly after the adoption of agricultural methods of food production some 7000 years ago. These were introduced from sources in the adjacent Levant, and included wheat and barley, as well as cattle, sheep, goats, and pigs. About 2000 years later, the many agricultural villages that dotted the landscape were politically united under the First Dynasty, beginning a span of Pharonic rule, culture, and technological achievements that would last nearly 3000 years.

South of Egypt was Nubia, an enigmatic land about which far less is known. It clearly absorbed many influences from the north and was raided regularly by Egyptians for its gold and other precious commodities. This sometimes produced considerable dislocation, including the nearly complete abandonment of sections of land from time to time. A high point was reached early in the second millennium BC with the founding of the Kingdom of Kush centered on the Dongola region of the Nile between the third and fourth cataracts. Who the founders were is unclear. The surviving inscriptions are in Egyptian, but it is unlikely that this was the everyday language of the people. Given the location, though, some branch of Afroasiatic seems most probable.

Farther south still, Ethiopia became home to the Cushitic languages. A central branch emerged in the highlands among grain cultivators who domesticated teff (a cereal grass) and finger millet (eleusine). Between 4000 and 3500 years ago, Semitic speaking immigrants from south Arabia started settling among them. One result was the introduction of Judaism, which came to distinguish people who today call themselves Beta Israel (Falasha). A broader cultural synthesis also took place and produced the peoples who founded the kingdom of Aksum. These were the ancestors of the Tigrinya, who, during the first half of the first millennium AD, built one of the world's great powers. They did so by controlling the eastern end of a lucrative Indian Ocean trade in precious commodities that included gold, ivory, and, so it seems, the biblically famous frankincense and myrrh. At its height, Aksum's territorial control extended from the confluence of the White and Blue Niles across the Red Sea to south Arabia. In the fourth century AD, the Monophysite version of Christianity became Aksum's

official religion, thus making Ethiopia one of the world's oldest and longest enduring Christian strongholds. The kingdom began to decline in the sixth century, but it left a tradition that had spread throughout the highlands and would be revived by succeeding dynasties, the last being that formed in the nineteenth century under Amhara rule.

Other branches of Cushitic developed in the lowlands among herding peoples such as the Beja, Somali, and Oromo. Beginning in the eighth century, they took Islam as their predominant religion, setting in motion a regional contest between the two universal faiths that has persisted to this day.

The area west from the Egyptian Nile to the Atlantic coast became home to a multitude of Berber-speaking groups. They were initially grain farmers and herders of sheep and goats who found the fertile valleys and slopes of the Atlas Mountains a conducive environment. Others, however, developed economies more dependent on cattle and camels, the latter of which allowed them to extend into desert oases, often at the expense of pre-existing Nilosaharan communities. The most expansionary were the Tuareg, who established themselves in the Ahaggar Mountains and Air Highlands. From these bases, they controlled many trans-Saharan trade routes and also regularly raided settled communities south of the desert for slaves and other goods.

The impetus of Afroasiatic expansion carried some groups beyond the desert and into northern Nigeria. These would form into the Chadic peoples, with the Hausa attaining predominance. They lived in nucleated villages, with the most successful growing into fortified towns that exercised control over the surrounding countryside in a feudal-like arrangement of lords and their dependents. The largest towns were Gobir, Katsina, Zaria, and Kano, which by the thirteenth century had become major centers of both intra- and interregional trade. Each had its own area of influence and remained independent of the others. Hausa specialties were trade and skilled craft work, especially in leather, metals, and textiles. Many Hausa migrated beyond their homeland, seeking opportunities to practice their skills.

Arabic belongs to the Semitic family of Afroasiatic, and its speakers first entered Africa in large numbers with the Islamic armies that conquered the northern coastal region of the continent in the seventh century. Attacks were focused on the major cities, such as Alexandria, Cyrene, and Carthage, that had become largely Christian during Roman and Byzantine times. By this time, both empires were crumbling and the Islamic armies met little organized resistance. The soldiers were followed by holy men who went inland making converts among the Berbers. Later, other Muslim Arabs entered as nomads (Bedouin), with the major migrations occurring between the ninth and eleventh centuries. These appear to have been prompted by worsening drought conditions that had hit the Arabian peninsula. Considered by civil officials as a destabilizing factor to local economies, the nomads were forced to keep moving westward. As they did so, the Berbers lost ground, except in the mountains, where they remained dominant. In the lowlands of Morocco, an Arab/Berbers synthesis took place, creating the Maures. From here they moved southward to as far as the Senegal River valley. Also losing ground were followers of Christianity, who all but disappeared from northern Africa. The Monophysite Copts of Egypt were the exception. Though

Arabic-speaking, they resisted Islam and have continued as an important minority even to this day.

The creation of northern Africa as a region of Arab peoples dates from these events. In point of fact, however, the numbers of immigrant Arabs were never that great relative to Egyptians, Berbers, and others. Instead, many people consciously changed their identities. Arabic had become the language of political and economic opportunity and not to speak it would put one at a disadvantage. Similarly, adopting Islam was beneficial. It often was synonymous with being Arab and also linked a person to a wider and usually ascendant world of culture and commerce. The advantages continue attracting new adherents to Islam to this very day.

## NIGER CONGO

The Niger Congo languages currently are more numerous and cover a larger area than all others combined. They have achieved this status as a result of migrations and subsequent divergences from a nuclear area north of the savanna/rain forest boundary in what is now Nigeria and Cameroon. A westward expansion took these peoples to the upper reaches of the Niger and Senegal rivers, where they developed agricultural systems based on fonio (a grass) and African rice. Here they seem to have encountered Nilosaharan communities, who they eventually displaced, except for the Songhai. They were proto-Mande speakers who in the late centuries BC created a series of small trading-based states based upon occupational specialties in farming, fishing, and livestock herding. The best known site is that of Jenne-jeno located within the agriculturally rich inland delta of the Niger River. It was part of a larger regional trading network that included manufactured items in stone, iron, and copper.

Jenne-jeno and others centers like it were the direct fore-runners of a series of kingdoms and empires that would flourish within the region. The first that we know of was Ghana. Founded by speakers of the Soninke branch of Mande, it was already well established when described by a Muslim visitor near the end of the eighth century. Ghana grew to prominence by controlling trade in salt and gold. The salt came from mines in the western Sahara and was in demand throughout the salt-poor savanna and forest regions of western Africa. Gold, on the other hand, came from an area along the upper Senegal River known as Bambuk. It was traded across the Sahara following routes that had existed since Carthaginian and Roman times and was used by the Ghanaian royalty as symbols of their status. Accompanying gold across the Sahara were slaves, the demand for which rose following the Arab conquest of northern Africa. Used primarily as domestics and soldiers, they were valued both here and throughout southwestern Asia.

Ghana's successor was Mali. Founded by another Mande people, the Malinke, Mali reached its apogee during the middle of the fourteenth century. Prior to this Mali's leaders had become Muslims, and they made centers such as Timbuktu and Djenne famous throughout the Islamic world for their mosques, holy men, and scholars. From these and other towns, merchants traveled throughout western Africa. Many settled permanently beyond Mali's borders, creating in the process groups that would be known as Wangara, Dyula, Marka, and Yarre.

An expansionary state, at its height Mali stretched from the headwaters of the Senegal and Niger rivers, eastward to be-

yond the bend of the Niger, and northward into the Sahara. As a result of this great size, it incorporated many non-Malinke, which toward the end of the fourteenth century resulted in the eruption of serious factionalism. Unable to control these forces, Mali lost provinces one by one, until it finally disappeared in the sixteenth century. Taking its place as the preeminent regional power was Songhai, mentioned earlier. Its wealth and Islamic fame were even greater than Mali's, but it too was soon plagued by internal factionalism. Then in the 1590s, Songhai was invaded by forces of the Sultan of Morocco, who was seeking to control the sources of gold supplying the trans-Saharan trade. The Songhai armies were routed, despite their superior numbers. Songhai arrows and spears were no match for the Moroccan's harquebuses (early type of firearm) and muskets. With the army gone as protection, the Songhai state collapsed.

There was no immediate successor to Songhai. Instead, this portion of Africa would now be characterized by smaller, more ethnically homogeneous polities. One was Takrur, which developed along the lower and middle reaches of the Senegal River valley. It was founded by Tukolor-speakers of the Atlantic branch of Niger Congo sometime during the latter half of the first millennium AD, when it also became the first polity south of the Sahara to embrace Islam as the state religion. This served as a powerful force to preserving its unity, as did ethnic homogeneity resulting from a lack of imperial ambitions.

From Tukolor origins sprang the Fulbe or Fulani. They had adopted a cattle-oriented way of life, probably as a result of contacts with Berber-speaking nomads who had reached the area of the Senegal River valley sometime prior to AD 1000. Initially a part of Takrur, the Fulbe began moving out in search of grazing lands to support their growing herds. One route took them into the Fouta Djallon highlands, where they settled among resident Dyalonke farmers, providing livestock products in exchange for grazing rights and agricultural produce. Another route taken was along the Niger River, which brought them into the orbits of Mali and Songhai. Here they also established exchange relationships with farmers, a pattern that would be repeated many times over as they continued moving eastward, eventually reaching Hausaland. While on their moves, some Fulbe took up residence in towns and adopted Islam. They then converted the herders and the Hausa as well, it seems. The two would form a powerful alliance and help spread Islam throughout the savanna zone of western Africa during the eighteenth and nineteenth centuries.

Other important local polities that had formed early on and became locally important after the fall of Songhai were those of the Mossi, Mampruli, Dagomba, Woloff, and Serer. Each has served as a source of continuing ethnic identity.

Another area of Niger Congo consolidation and expansion took place in the savanna/rain forests borderlands near the confluence of the Niger and Benue rivers. Between 5000 and 4000 years ago, the people living here began to grow yams and oil palm to supplement gathering, hunting, and fishing. Population growth followed, leading to the formation of the Kwa and Benue Congo languages. Members of the Kwa family moved westward, eventually reaching the Bandama River, where a boundary with Mande speakers was formed. Once again under the impetus of trade, certain areas emerged as population centers. Several were close to the original Kwa hearth in Nigeria. One is represented by the archeological site of Igbo-Ukwu, located near the present city of Onitsha. It shows a relatively

large population having existed by the ninth century AD, plus artifacts that came from as far away as the Mediterranean. From all accounts, this was the homeland of the Igbo (Ibo) peoples, who, over the course of the next centuries, would colonize much of the area of what is now southeastern Nigeria.

The present-day Yoruba trace their ancestry to Ife, a town-like settlement also dated to the late first millennium AD. It apparently developed at a highly strategic location that allowed Yoruba population numbers to grow and support the founding of other towns both to its north and south. That the Yoruba were highly prosperous during these times is evidenced by the large number of towns that served as centers for local kingdoms and by the quality products that were manufactured from ivory, bronze, copper, iron, and leather.

Roughly contemporaneous with Igbo-Ukwu and Ife was Benin, founded by Edo-speaking peoples. Unlike, the others, however, it grew to dominate surrounding settlements, creating a wider Benin state by early in the fifteenth century. With trade routes that reached the Hausa city states and even Songhai, Benin achieved a regional military and economic dominance that continued for several centuries to come.

Farther west, a fourth Kwa cluster developed in north central Ghana. By the eleventh century there is evidence of the existence of a substantial farming population that is thought to be associated with the origins of the Akan family of Kwa. They were connected by trade in gold and kola nuts to Ghana and Mali and this led them to expand southward into the rain forest seeking sources. By the sixteenth and seventeenth centuries a number of small, localized states had formed, but they were soon superseded in importance by Asante. Centered on Kumasi, the Asante developed a powerful kingdom whose expansion triggered the relocation of smaller groups throughout the region.

From the sixteenth through early nineteenth centuries, population developments throughout western Africa were influenced in many ways by the transatlantic slave trade. It began modestly enough with the Portuguese bartering for slaves along the Senegambia coast with the resident Woloff, Serer, and Malinke. A favorite holding point was Gorée Island. The Portuguese also traded with Akan merchants, using the fort they had built at Elmina for the storage of gold as a base of operation. The Portuguese attempted to interest Benin in supplying slaves, but its rulers showed little interest, preferring instead to keep captives for their own labor supply needs.

Demand began to accelerate toward the end of the sixteenth century, when the Dutch, French, British and others entered to supply the new plantation-based economies of the Caribbean and Brazil. It continued to grow during the seventeenth century and then reached its peak in the eighteenth century when on average 40,000 slaves were removed per year. A decline in the value of slaves due to a shift away from plantations in the Caribbean and rising abolitionist sentiments, particularly in Great Britain, caused the numbers to begin falling in the first decades of the nineteenth century and by mid-century the trade in slaves from western Africa was all but over.

Disagreements about the total number of Africans taken across the Atlantic as slaves continue to exist. It was certainly more than ten and maybe closer to fifteen million, with more than half having been obtained from sources in western Africa. The area that experienced the biggest loss by far ran from what is now the coast of Benin to Calbar, east of the Niger

River delta. A secondary area was the Gold Coast. Somewhat less debatable are impacts of the slave trade. Overall, during its existence, population growth seems to have stagnated, but this hides a pattern of winners and losers. The winners, at least in population numbers and regional influence, were the better organized and militarily more powerful polities. Among these were the Igbo, Yoruba, and Asante. Rising to prominence largely as a result of slave-trading activities was the Fon state of Dahomey, which by the end of the eighteenth century contended with the Yoruba state of Oyo for regional dominance.

The losers were smaller communities, some of which completely disappeared as distinct entities. A particularly hard-hit area was the so-called “middle belt” that lay between the coastal powers and those in the interior such as the Hausa and Mossi. Even today, the area is characterized by comparatively low population densities.

Politics and economics were other spheres to feel the slave trade’s impacts. More authoritarian regimes emerged, backed by the guns and armies they now possessed, and agriculture and manufacturing both declined. They did so because of dislocations that those being raided experienced and because the profits from selling slaves proved far greater than those that could be earned in any other way.

Developments within Benue Congo would have even more far ranging repercussions. These were mostly due to Bantu migrations, which carried its speakers east and south to reside in virtually half of the continent. Their migrations began about 5000 years ago from the vicinity of the Cross River valley. Skilled as fisher folk and hunters, they had begun cultivating yams and other crops, and this combination of activities seems to have stimulated population growth and a need for new lands. Some groups moved east through the moist woodlands that bordered the northern margins of the equatorial rain forest. By 3000 years ago, vanguards had reached the rich agricultural lands between lakes Albert and Edward and Victoria. Here a new Bantu population nucleus formed that would serve as a source for numerous and highly complex migrations. Some led elsewhere in eastern Africa, while others took Bantu speakers to South Africa in the first centuries AD.

Apparently, what kept the Bantu moving east was a concurrent expansion of another Niger Congo linguistic group, the Ubangians. They started off with a food economy similar to the one practiced by Bantu, but enriched it with grains and livestock gained from contacts with Central Sudanic groups living to their north. The early Ubangians consolidated their position north of the equator and later branched into such modern groups as the Zande, Mangbetu, and Nzakara.

Meanwhile, other Bantu migrants had taken more southerly routes that led into the equatorial rainforest. Following river valleys, they established villages wherever the right combination of fertile soils for their crops, rich fishing grounds, and hunting opportunities could be found. This brought them into contacts with pygmoid gatherer/hunters who had entered the forests thousands of years earlier. The contacts, for the most part, do not seem to have been hostile ones. Instead, cooperative relationships were established in which the pygmoids supplied the villagers with products from the forest in exchange for agricultural commodities and manufactured goods. So close did these contacts become that whatever languages the pygmoids spoke were replaced by those spoken by the villagers with whom they associated. In time, the growth of Bantu

numbers resulted in a decline in forest lands available to the pygmoids and today only a few groups such as the Mbuti and Twi remain as distinctive populations.

An important key to Bantu success was their use of iron tools. With them in hand, they could clear and cultivate more land and fashion superior arrow points and spearheads. Two sources for their adoption of iron making technologies can be identified. One is Taruga near the margins of the Jos Plateau in Nigeria. Furnaces and slag deposits have been dated to between 700–400 BC and the technologies of iron making seem to have spread from here in all directions, including to the Bantu. The second is in Buhaya in the interlacustrine region, with dates that are only a couple of hundred years later. No direct links to Taruga have been established, so developments are thought to have been independent.

Once through the rainforest, the routes followed by Bantu migrants headed in many directions and interconnected with those coming from eastern Africa. Eventually particular areas emerged as centers of population concentration. One was in the interlacustrine region, where agricultural productivity was greatly enhanced by the adoption of plantains and bananas. These had been domesticated in southeast Asia and reached the Bantu here from still unknown sources some 2000 years ago. Populations grew and by 600 to 700 years ago kingdoms had begun to form, the most prominent becoming those of Bunyoro, Buganda, Nkore, Rwanda, and Burundi. In the latter two, a cattle-based aristocracy developed from a synthesis of migrant Nilotic herders and Bantu. They would become known as Tutsi, while the vast majority of the people took on the identity of Hutu.

Other Bantu clusters in eastern Africa emerged in the highlands, especially around Mt. Kenya, producing the closely related Kikuyu-Meru-Embu peoples. Mt. Kilimanjaro became home to the Chaga, the Usambara Mountains to the Shambaa, while the uplands north of Lake Malawi were settled by the Nyakyusa. Later migrations into less fertile lowlands would produce such peoples as the Hehe, Gogo, Turu, and Nyamwezi. From the rift valley of Kenya to central Tanzania, contacts between Bantu and Nilotes were common. These contacts sometimes erupted into conflict, but for the most part, relations were peaceful and based on exchanges of livestock products for grains and other produce of Bantu fields.

Beyond eastern Africa, Bantu migrations also led them first to the most productive agricultural lands. This explains their early presence on the Transvaal, where numerous Sotho-Tswana groups developed, and along the coast and hills of Natal, which is where the Nguni settled. The polities among both remained small and basically self sufficient until the end of the eighteenth century when the Nguni Zulu began to expand. Their *impi*, or army, developed new means of warfare that allowed them to expand at the expense of neighboring groups during the first half of the next century. Destruction and dislocations often followed Zulu victories, producing what became known as the *mfecane* (scattering). Some groups completely disappeared from history, while in other instances, new ones, such as the Mfengu and Basotho, formed from the survivors.

Good quality agricultural land also accounts for the initial prosperity of the Shona of Zimbabwe. Their rise to regional prominence, however, had more to do with trade, particularly in gold. The ability to monopolize it led to the formation of the city state of Great Zimbabwe, which prospered from the

twelfth to the fifteenth centuries. Thick stone walls were built to house a nobility that shipped the gold to Arab and Swahili merchants at the ports of Sofala and Kilwa in exchange for luxury items such as silks, carpets, and porcelain wares. When Great Zimbabwe lost its trade centrality to other Shona states, notably Mutapa and Batua, it went into decline and was eventually abandoned.

Another people who took advantage of the combination of productive agriculture and trade were the Kongo who resided along the banks of the lower Congo River. The kingdom they formed was already a regional power when visited by the Portuguese near the end of the fifteenth century. Commercial relations were established and the two nations even exchanged diplomatic personnel. Ivory and beeswax were traded at the outset, but early in the next century the Kongo had turned to selling slaves. Initially, this enhanced their position, but soon led to internal and external competition that resulted in the kingdom's demise in the seventeenth century.

The slave trade would continue to impact central Africa until after the middle of the nineteenth century. It fueled both the transatlantic trade, which from here supplied mainly Brazil, and a growing domestic demand for slaves by those powerful enough to secure them, such as the Ovimbundu, Lunda, Chokwe, and Lozi. By the nineteenth century it was closely tied to the ivory trade, which not only reached the Atlantic coast, but the Indian Ocean one as well. The disruptions caused by the slave trade were far greater than those experienced in West Africa and produced considerable population loss among those preyed upon. Among the hardest hit were Ubangians whose isolation kept them secluded until the middle of the nineteenth century when they were the targets of slavers coming from Khartoum.

## OTHERS

There are other African peoples who derive either completely or partially from non-indigenous sources. Among those who became regionally prominent are Afrikaners, Coloureds, Swahili, Creoles, and Americo-Liberians.

Afrikaner (language Afrikaans) origins are traceable to the employees sent out by the Dutch East India Company in 1652 to establish a supply station at Cape Town for ships on their ways to and from southeast Asia. Small numbers of Dutch and other Europeans, mostly French Huguenots, continued to arrive for the next several decades, but by the turn of the century, immigration had pretty much come to an end. Those who took up farming were called Boers, and as land became increasingly scarce around Cape Town, they began moving inland, at the expense, as noted, of Khoikhoi and San. Continuing expansion led them finally to contacts with Xhosa early in the eighteenth century, initiating a series of border wars that would continue for more than 100 years.

Meanwhile, the British had superseded the Dutch at the Cape. Seeking to escape what they perceived as alien and hostile rule, thousands of Afrikaners began leaving in the early 1830s in what became known as The Great Trek. Joined by others who had wearied of constant strife with the Xhosa, they headed north across the Orange River and into the Transvaal. Here they found ideal grazing lands for their herds, much of which had been depopulated as a result of the *mfecane*.

The so-called Coloured people of South Africa also have their origins in policies initiated by the Dutch East India Com-

pany. To augment the labor force at Cape Town, it imported some slaves from elsewhere in Africa and then turned to sources on the Indian sub-continent and the islands of Indonesia. Sexual liaisons among them produced mixed children, as did those between Europeans and slaves, Europeans and Khoikhoi, and slaves and Khoikhoi. Some formed new groupings, such as the Rehoboth and Griqua, and most became self-consciously Afrikaner in culture, speaking Afrikaans, following the Dutch Reformed religion, and taking Afrikaner names. Eventually, all of these peoples of mixed backgrounds would be grouped together as Coloureds.

Swahili is a Bantu language, the origin of which can be traced to people who lived in small villages centered on the lower Tana River of Kenya during the first centuries AD. Some of these villages began to trade with merchants from the Arabian peninsula, who had for centuries beforehand taken advantage of the seasonal monsoons to sail between there and the Persian Gulf. The most successful grew into towns that between the ninth and twelfth centuries had produced a class of mercantile rulers who fashioned an urban culture to distinguish them from others. Included were Islam and a new language that would soon become known as Swahili. The name comes from Arabic, which had begun adding vocabulary to the language, and translates as "people of the coast."

Towns such as Pate, Lamu, Malindi, Mombasa, and Rhapsa flourished from the twelfth through fifteenth centuries, but then went into decline as a result of Portuguese interventions and unstable conditions in their hinterlands that disrupted trading activities. They were revived when the Sultan of Oman decided to relocate his capital to Zanzibar in 1832 in order to better control the sources of ivory and slaves that had become so important to Oman's prosperity. The now substantial Arab presence led to considerable cultural borrowing by the Swahili that included claims of direct descent from the Prophet Muhammad, the incorporation of many more Arabic words, the

use of Arabic script, and styles of dress and building. From their coastal locations, Swahili now traveled inland for the first time, establishing small communities at key commercial locations and with them went their language as a commercial lingua franca.

The Creoles of Sierra Leone are the result of population relocations that took place at the site of Freetown. The first wave landed in 1787. They were black loyalists who had fled to England at the time of the American War of Independence. Following were other refugees, such as Maroons (escaped slaves) from Jamaica, but the largest contribution came from slaves who had been freed from ships captured by the British. (The British had made slavery illegal throughout the empire in 1833 and established an anti-slavery squadron to patrol the coast of West Africa.) This new population from many diverse backgrounds created its own language called Krio and took on a strong British-based culture. They specialized in trade and from Freetown moved along the coast to wherever they could find profitable opportunities to exploit.

A second people who owe their existence to anti-slavery sentiments and activities are the Americo-Liberians. With support from an organization known as the American Colonization Society, a small number of freed American slaves was landed at Cape Mesurado in 1822, and they called their new settlement Monrovia. It grew slowly but surely and in 1839, Monrovia along with several other settlements that had formed, united to create the Commonwealth of Liberia, which secured its political independence in 1848. The Americo-Liberians modeled their constitution after that of the United States and developed a very strongly Americanized culture under the influence of Baptist missionaries.

# AFAR

**ALTERNATE NAMES:** Danakil or Adal (older sources)

**LOCATION:** The Afar Triangle or Horn of Africa (Ethiopia, Eritrea, Djibouti, Somalia)

**POPULATION:** Between 3 to 5 million (accurate census figures do not exist)

**LANGUAGE:** Afar (Qafar Af)

**RELIGION:** Sunni Muslims, Traditional Animism, few Christians<sup>333</sup>

**RELATED ARTICLES:** Vol. 1: Djiboutians; Eritreans; Ethiopians; Oromos; Somalis

## <sup>1</sup> INTRODUCTION

The Afar are an ethnic group who reside principally in the the Horn of Africa in the countries of Ethiopia, Eritrea, and Djibouti. The name Afar means “The Best” or “First” in the Afar language. Northern Afars are sometimes referred to by the Arabs as the Danakil, which refers to Danakil Desert near the Red Sea in Ethiopia and Eritrea, Southern Afars are sometimes called the Adel or Adal, a reference to the historic Adal Sultanate, which existed until the mid-1500s in the region occupied today by southern Ethiopia and Djibouti. Afars regard the name Danakil as negative and preferred it not be used to describe them.

Little is known for certain about the origins of the Afar. According to traditional accounts, there are two divisions of the Afar: *Asayahamara* (The Red Ones) and *Adoyahmara* (The White Ones). It may be that the Asayahamara are descended from a group that originally invaded from the Ethiopian highlands and who imposed their rule on the Adoyahmara.

The Afar make up about a third of the population of Djibouti and are a recognized ethnic group in Ethiopia. The Afar language (Cushitic) is spoken in the Afar region of Ethiopia, eastern Eritrea, and Djibouti. Since the Afar were traditionally nomadic herders, Afar-speakers may be further south.

The language and culture of the Afar are related to those of the Somalis and Oromos, although the Afar are a distinct ethnic group. The Afar continue to preserve and practice their traditional culture and beliefs. They have retained many ancient animistic practices.

The Afars’ skin tone is generally dark brown and their facial features are similar to those of the Somalis and Oromos, although generally members of both of those groups have darker skin. The Afar are probably related to the ancient Egyptian race.

Little has been confirmed about the history of the Afar people. J. S. Trimingham, author of *Islam in Ethiopia*, offered this explanation: “Little is known about the the Afar because of their aversion to strangers. They didn’t let outsiders in, so outsiders didn’t learn much about them.”

The ancestors of the Afar seem to have settled in farmland in the Ethiopian highlands some time before AD 1000 and primarily raised livestock. Shortly after they began a gradual transition to a more nomadic lifestyle and moved to the area they currently occupy. Since then they have been involved in many conflicts with bordering tribes and peoples.

Arab writer Ibn Sa’id writing in the 13th century, mentioned the Afar. This is the earliest known reference to the

group. The Afar are also mentioned occasionally in Ethiopian history. Records include mention of Afar assisting 14th-century Ethiopian emperor Amda Seyon in a campaign. Afar are also described as assisting Emperor Baeda Maryam more than 100 years later in the 15th century.

The Afar themselves claim to be descended from Arabs, through a mythic Yemeni ancestor. This myth of origin seems unlikely, since the two groups do not share a common race, language, or culture.

The Afar language, however, and their traditional religious practice of animism points to a common history with neighboring peoples in the Horn of Africa. No written Afar records exist from previous eras.

Historically, the territory occupied by the Afar was organized into sultanates, semi-independent regions ruled by sultans. In each sultanate, the group’s unique culture and customs thrived. Traditionally each sultanate was made up of several villages.

The Afar maintained a loose confederation of four sultanates. The sultans did not gain their position through heredity, but were appointed by the people.

Each Afar sultan was the religious and political leader of his clan. The Afar generally do not become involved in central political governments. They are not interested in pursuing opportunities presented to them by outsiders, although in recent years they have been cautiously open to offers of aid in such areas as medical care and to programs to improve the safety of drinking water. Throughout history, the Afar have strongly resisted domination by others, and this tradition continues into the 21st century.

The Afar have been active in Muslim-led military campaigns against the Christians who inhabited the highland regions of Ethiopia. In the 16th century, Afars fought in support of Ahmad Gran, the emir of Harar, who was attempting to establish a Muslim empire in Abyssinia (modern-day Ethiopia).

In the 19th century, the Afar also fought with the Muslim forces of the Adal kingdom, which stretched across what is now northeastern Ethiopia, Djibouti, and Somalia. The Muslims were battling with the Amhara.

The Afar were also active in the Arab slave trade, serving as guides to Arab slave traders. A major slave route to Arabia crossed Afar territory. Afars continued to participate in the lucrative slave trade until 1928 (or later according to some accounts).

Since the mid-1800s and especially in the 20th and 21st centuries, interaction with external political and economic systems has caused the breakdown of the sultanates and the traditional values they represented.

The leadership of the Afar National Regional State in Ethiopia has faced many challenges as the traditional customs and culture of the Afar come under the influence of Western groups and other African cultures. During the early years of European colonization in Africa, the Afar coastal regions (part of present-day Eritrea) witnessed several battles. The Afars demonstrated tenacity and bravery in resisting the advancements of foreign forces.

The presence of foreign forces in the coastal regions of their territory threatened the sovereignty of the entire Afar nation. However, the Afars were no match for the Europeans equipped with high technology weapons. Despite persistent resistance from Afar fighters, Europeans succeeded in occupying the

coastal territory. As a result of the European presence, the Afar people were divided. The modern-day nations of Djibouti and Ethiopia (and later Eritrea) resulted.

In 1967, the territory colonized by the French changed its name from “French Somaliland” to the “French Territory of the Afars and Issas.” In 1977, it became the independent nation of Djibouti.

In 1975 after an Afar sultan led an unsuccessful attempt to restore sovereignty, the Afar Liberation Front (ALF) was born in Ethiopia. In Djibouti, a similar movement simmered throughout the 1980s, eventually culminating in an Afar insurgency in 1991.

Groups of modern-day Afar may be seen camped just outside Djibouti, the capital and largest city in Djibouti. The Afar may travel to Djibouti to engage in trade or to seek medical care.

In Djibouti, where they account for almost half the population, the Afar remain under Somali domination and suffer in the ongoing struggle between Somalia and Ethiopia over the coastal territories.

## 2 LOCATION AND HOMELAND

The Afar live in a region often referred to as the “Afar Triangle.” A large part of this triangular area is made up of the Danakil Desert, one of the earth’s hottest, driest, and most inhospitable spots. The terrain is characterized by desert flatlands. There is little vegetation and limited wildlife. The Afar are among the only people who have survived life in this difficult terrain.

The Danakil Desert is a deep depression, reaching a depth of nearly 400 feet (120 meters) below sea level. One of the lowest elevations on earth, daytime temperatures may reach 50°C (145°F) in the sun. Much of the desert territory is made up of salt flats, cut by deep cracks from the sun’s heat.

There are isolated mountain groups, interrupted by valleys where the thorny acacia, also known as the thorn tree, grow.

The desert region is occasionally dotted with green oases of doum palm trees. The large oval yellow fruit of the doum palm tastes similar to gingerbread, giving the tree its common name, gingerbread tree. The fruit may reach two to three feet in length.

There are between 3 and 5 million Afar spread across the three countries: Ethiopia, Djibouti, and Eritrea.

## 3 LANGUAGE

The Afar language belongs to an Eastern Cushite group. Linguists generally identify four distinct dialects of Afar: Northern, Central, Aussa, and Baadu. Arabic is widely used with neighbors and trading partners.

The Afar language (Qafar Af), like Somali and Oromo, uses the Roman alphabet. The Afar language follows the subject-verb structure. While there is little written history, the Afar language is rich in oral traditions. There are many Afar proverbs, narratives, songs, and riddles. In addition, the Afar have a very comprehensive plant and animal nomenclature system.

## 4 FOLKLORE

Afar culture is oral in tradition. Afar oral literature reveals a high esteem for military prowess, with a whole repertoire of war chants. Today, Afar songs tend to extol the virtues of the camel. The Afar have a myth of origin that describes Arab ancestors traced to ancient Yemen.

Afars also think their color designations (*Asayahamara* or Red Ones and *Adoyahmara* or White Ones) came from the reddish soil of inland deserts and the white saline coastal areas.

Many Afar proverbs relate to their hot, arid environment. For example, a proverb for the salt flats worker is “As rain falls from morning clouds, so should a man cut salt early in the day.”

## 5 RELIGION

The Afar began to convert to Islam in the 10th century after contact with Arabs. Afars adhere to the Sunni branch of Islam, but also follow many traditional animistic practices and concepts. The unique style of Islam they practice incorporates pre-Islamic beliefs, such as belief in the sky-father god, Wak. They also believe that the spirits of the dead possess power to influence the living. In addition, some Afars believe that certain trees have sacred powers.

Rituals that persist from ancient Afar animism include anointing one’s body with butter or ghee (clarified butter) and the annual celebration of *Rabena*, a holiday to honor the dead.

In general, religious and community activities are governed by Shariah (Islamic law) as put forth in the Muslim holy book, the Quran. The Afars observe special days for sacrificing animals and for rainmaking ceremonies.

A small percentage of the Afar practice Orthodoxy. Christian mission sources report that Afar Christians are now engaged in producing radio broadcasts in the Afar language. The radio broadcasts use a storytelling format to recount the tales of the Old Testament.

In recent years, Christian agencies have been active in various economic, medical, educational, or cultural assistance work among the Afar.

## 6 MAJOR HOLIDAYS

The Afar observe the Muslim holy days.

## 7 RITES OF PASSAGE

Marriage is an important rite to the Afar. A first cousin is preferred as a spouse. In terms of geneology and marriage, the lines are patrilineal, that is, they follow the father's clan rather than matrilineal, that is, following the mother's clan. Divorce rates are high.

Rituals involving the genitals are practiced for both boys and controversially girls. The Afar practice infibulation, the sewing together of the female vulva, in an effort to ensure virginity. Boys are circumcised upon coming of age and are judged for their ability to endure the pain of this procedure. Following circumcision, a boy may select the bride of his choice, although he is strongly encouraged to select a first cousin.

## 8 INTERPERSONAL RELATIONS

The Afar have traditionally kept to themselves, maintaining an isolated but mobile society.

Among the Afar, when a host offers a guest a drink of milk and the guest accepts, a bond is formed. The tradition of the bond requires that the host protect the guest if trouble arises and for avenging his death if he is killed.

The Afar people are known for their fierceness and fearlessness. They are hostile toward anyone who crossed their lands without permission. Because of the nomadic lifestyle of the Afar, any who visits Afar territory will find himself trespassing on tribal or family territory. Roads and pathways are not regarded as public walkways, since the Afar regard the territory as their own property.

Travelers may carry an official warrant from the government designed to allow travel through Afar territory. The warrant is not always honored by the Afar, however. Tradition dictates that the Afar are responsible for anything that happens on their land. Thus, they are unenthusiastic about unknown visitors. Travelers must seek permission for the Afar leaders before traveling through their territory. If permission is granted, Afar hospitality will be extended to the traveler.

The Afar maintain self-segregation from neighboring peoples. They are suspicious and antagonistic to their neighbors, especially the Somalis and other people of Ethiopia.

While the Afar are suspicious of humans who invade their land, they feel protective of all wildlife. The Afar respect and preserve their physical environment and try not to harm the meager plant and animal life sharing their hostile territory. The Afar may be largely responsible for the protection of the endangered African wild ass (*Equus africanus*), which has become extinct elsewhere in Africa.

## 9 LIVING CONDITIONS

The Afar lead a nomadic lifestyle, moving from highland to lowlands depending on the flood seasons. They carry their tent-style houses with them, packed on the backs of camels. The dome-shaped tents are made from palm ribs covered with palm mats. The tents provide shelter at night and a respite from the blistering sun during the day. The tents are erected, usually by the women, usually near water spots.

The Afar people in this area are usually found to be malnourished. Since there are few natural sources of water for the

Afar people, water must be tanked in. Water is an expensive necessity for the Afar and scarcity of water often leads to conflicts. It is not uncommon for the Afar to be anemic or afflicted with malaria. Each community has a small group of men assigned to guard their herds and water. The guards are not reluctant to use violence to protect these precious resources.

## 10 FAMILY LIFE

The Afar people generally live in groups isolated from mainstream society. The clan, a group of extended families, is the most important political and social unit of Afar culture.

Descent is patrilineal. The Afar believe that men inherit strength of character from their fathers, but their physical characteristics from their mothers. Spirituality is also inherited from the mother. Afar men typically marry just one wife. Traditionally girls were eligible for marriage at age 10.

## 11 CLOTHING

The Afar culture includes unique items of clothing. Men and women generally wear the same article of clothing, the *sanafil*, which is a length of fabric wrapped around and tied at the waist. The woman's sanafil was traditionally dyed brown, but modern Afar women have adopted multicolored sanafil. The man's sanafil was traditionally undyed, and that preference persists to the modern day.

Married women traditionally wear a black headscarf called a *shash*. Afar men are also known for wearing the *jile*, a long, double-edged curved dagger, at their waists.

## 12 FOOD

The diet of the Afar consists of fish, meat, and sour milk. They also enjoy a porridge made from wheat flour and heavy round pancakes made of wheat topped with red pepper and ghee (clarified butter). Milk is so important to the Afar that it is also used as a social offering, given to visitors to establish a proper guest-host relationship.

Reflecting Muslim practice, food must be handled with the right hand. The left hand is used for impure purposes. Using the left hand for food, to accept a present, or for shaking hands is considered a serious affront.

The Afar enjoy a type of palm wine made from the doum palm.

## 13 EDUCATION

Literacy levels are low among the Afar people. Education in the Afar language is still inaccessible to the majority of the rural population in the Horn of Africa. There are some schools in the more densely settled areas and in communities along the main roads. However, courses are taught in Amharic, an official language in Ethiopia. Afar families are more likely to send boys away to study than girls.

What schools do exist are overcrowded, poorly equipped, and understaffed. For children of Afar, the school year and the location of the schools does not match well with the migratory cycles of the nomadic families. Since boys and young men are likely to be among those who must travel to tend the family herds of goats and sheep, it is nearly impossible for Afar children to participate in traditional schooling.

Literacy campaigns have been undertaken by international organizations. In addition, the Afar cultural and political lead-

A man packing salt in Mekele in the remote Ethiopian region of Afar. (Jose Condon/AFP/Getty Images)

ers in Ethiopia have focused their efforts on improving educational opportunities, access to healthcare, and transportation. Reflecting their fiercely independent tradition, the Afar believe that they will be able to solve their own problems if these tools are in place.

#### 14 CULTURAL HERITAGE

The Afar have a traditional type of dance, called *jenile*, which is associated with their ancient religion.

#### 15 WORK

The Afar nomads have a unique culture. They tend their livestock, primarily sheep and goats. Sheep are raised for Islamic holiday meals and celebrations. The Afar herd their animals to find water and land for grazing. Camels are used as pack animals, but the Afar do not ride them. To maintain this nomadic lifestyle, labor is divided along gender lines.

Women are responsible for setting up the *burra* (or camp). The *burra* includes two or more tents. Women manage the day-to-day running of the family's life, and when it is time to move, women repack the household goods on camel's backs for transportation. Women also milk the goats and make butter or ghee

(clarified butter). Music-making also falls to the women of the tribe.

Many Afar work at Lake Assal in the Danakil Desert mining salt. They trade the valuable salt with the Yemenis across the Red Sea, or with Ethiopians for grain. At one time, salt was cut into blocks and wrapped in palm leaves for transport. Modern miners shovel salt into large plastic bags. The Afar sell the salt that they dig from the desert, along with milk and animal hides, at markets in Senbete, Ethiopia, among other marketplaces.

The Afar living near the Red Sea are more settled. They engage in fishing and trading for a living. Governments in Ethiopia and Djibouti have urged the Afar to establish permanent settlements, but the Afar persist in sustaining their nomadic lifestyle. The Afar have not responded positively to the efforts of the Ethiopian government to encourage them to resettle in areas where irrigation systems support the enterprise of cotton farming. Only a small minority of Afars has migrated to urban areas.

In the early 20th century, the development of railroads made it possible for the Afar to transport their goods—meat, butter, milk, and hides—to new markets. This brought more Afar into contact with other ethnic groups and the urban economies of the region.

#### 16 SPORTS

A traditional game among the Afar is *kwosso*. *Kwosso* is played by two teams. Each team tries to keep a ball made of rolled goatskin away from their opponents.

Few Afars engage in Western-style games or sports activities. The majority of them are nomadic pastoralists and so have little leisure time.

Among the few who enjoy sports, however, soccer is the most popular.

#### 17 ENTERTAINMENT AND RECREATION

Entertainment media, such as television and radio broadcasts, are accessible to the small number of educated Afar living in urban areas. The majority of Afar do not participate in recreational activities in the Western sense.

#### 18 FOLK ART, CRAFTS, AND HOBBIES

The Afar traditionally engage in various kinds of skills such as wood and metal working, weaving, pottery, and tanning.

They weave fabric to be made into traditional clothing, including the man's *sanafil*, a white cloth wrapped at the waist and tied at the right hip. The woman's *sanafil* is wrapped the same way, but the fabric is dyed brown. Fabric is also woven for the optional *shash*, a black cloth that married women may choose to wear on their heads.

The Afar do some metalworking to produce tools and instruments, such as the *jile*, a curved, double-edged dagger.

#### 19 SOCIAL PROBLEMS

The Afar are a pastoral people with a fearless reputation. Coping with the modern development of the installation of irrigation systems in the lowlands is one of the many challenges facing the Afar. The national governments, especially in Ethiopia, are attempting to displace the nomadic communities by encouraging them to establish permanent settlements and

cultivate cotton, made possible by the supply of water for irrigation.

The basic necessities of life which include water, health services, education, and means of communication are largely inaccessible to the Afar people. Their nomadic lifestyle that requires them to travel long distances in search for water and pasture puts the lives of the Afar and their herds at the risk of perishing in the Danakil.

In addition, persistent border conflicts between Ethiopia and Eritrea, coupled with drought conditions, compound the problems faced by the Afar. The ongoing conflict has displaced some Afars and have made cross-border animal trading less reliable. Many Afar are malnourished and do not receive adequate medical care.

The Afar region of Ethiopia is one of the areas where the people are to a very large extent illiterate. This exacerbates the Afar's difficulty in dealing with natural catastrophes, malnutrition, war, and the HIV/AIDS epidemic.

## 20 GENDER ISSUES

The Afar are a predominantly patrilineal community. There are deep-rooted traditions that have a negative impact on women's lives. The Afar customs pertaining to marriage, paternity, and dress are skewed in favor of men.

Afar believe men inherit traits such as strength of character from their fathers, but physical characteristics like height from the mother.

The division of labor is largely unequal, with women assigned more manual work than their male counterparts.

Afar families are more likely to send boys to school than girls. The fact that educational materials are lacking in the Afar language makes it even more difficult for the average person to gain access to vital information in his/her own language. According to the United Nations (UN), illiteracy severely affects Afar women more than men.

The Afar practice infibulation, a type of female circumcision, to control the virginity and sexuality of women.

Other challenges faced by Afar women include poverty, homelessness, and lack of fresh water, disease (HIV/AIDS and others), food shortages, refugee camps requiring resettlement, political instability, and neglect.

# AFRIKANERS

**PRONUNCIATION:** ahf-rih-KAHN-ers

**ALTERNATE NAMES:** Boers

**LOCATION:** Republic of South Africa

**POPULATION:** About 3,500,000

**LANGUAGE:** Afrikaans

**RELIGION:** Protestantism

**RELATED ARTICLES:** Vol. 5: Netherlanders

## 1 INTRODUCTION

During the 17th century, Dutch colonists (to become known as Boers) settled at the southern point of the African continent. Over the next 200 years, British, French, and German settlers joined indigenous Africans and imported Malays to produce a unique genetic blend. In time settlers moved inland, developing their own language, Afrikaans (first as a spoken dialect and later in written form), cultural identity, and worldview. Thus, emerged the Afrikaners.

Over the next 300 years, the Afrikaners battled indigenous African peoples, established independent republics in the interior, and fought the British in two wars known as the Anglo-Boer Wars (the second is now known as the South African War). All territories were finally united on 31 May 1910 in the Union of South Africa. At this time there was a clear division between the Afrikaners (who belonged to Afrikaner political parties, spoke Afrikaans, supported Afrikaner cultural and linguistic endeavors, and belonged to one of the Dutch Reformed Churches) and British-oriented, English-speaking South Africans. In 1948 the Afrikaner-based National Party came to power and, under a strong Calvinistic religious philosophy and racist social policy, started to implement the system of *apartheid*, which separated the peoples of South Africa along color lines. To their credit, there were many Afrikaner academics, church spokespersons, and business leaders among those who finally pressured the politicians to do away with apartheid and to introduce a new South Africa. As a result, political prisoners (including Nelson Mandela) were released and majority rule was established.

The Afrikaners are a numerical, ethnic, and political minority living in South Africa. Increasingly “Afrikaner” is being defined along linguistic-cultural lines, resulting in the inclusion of persons other than whites only. This discussion aims at representing traditional Afrikaner culture and thus assumes a historical setting prior to the transition to a new democracy represented by majority rule.

## 2 LOCATION AND HOMELAND

The Afrikaners are concentrated in the Republic of South Africa, located at the southern tip of the African continent. Geographically this includes the region between 22° to 35°S, and 15° to 33°E. This means that a large part of the country experiences summer rains. The southern tip, however, falls in the winter rainfall zone. The country is divided into a narrow coastal zone below 450 m (1,500 ft) in altitude, while the largest part is on a plateau with an altitude of more than 900 m (3,000 ft). The country actually consists of four plateaus: the coastal zone, averaging 150 m (500 ft) above sea level; the Little Karoo, averaging 450 m (1,500 ft); the Great Karoo, averaging

760 m (2,500 ft); and the High Veld, which averages 1,200 m (4,000 ft) and rises to 1,800 m (6,000 ft) in the northeast. Temperatures are remarkably uniform due to the increased altitude as one moves north. Johannesburg, the largest city, has an annual mean temperature of 15.6°C (60°F), and this varies only slightly by altitude and latitude (e.g., coastal Durban is about 6°C or 10°F warmer but is also marked by coastal winds). Rainfall (which is so critical for farming and ranching) decreases as one moves from east to west, and while South Africa enjoys a sparse average rainfall of 44.5 cm (17.5 in), this represents a relatively well-watered eastern coastal zone and a western veld tapering into the Kalahari desert (75% of the country receives less than 63.5 cm or 25 in of rain per year). The highest rainfall is in the mountain region of the southern winter rainfall zone, which receives up to 508 cm (200 in) per year.

For more than four decades the white Afrikaners (as a numerical minority) governed the country. Originally concentrated in rural areas, they have since been involved in a major process of urbanization and have become distributed over most of the country. Population figures show Afrikaans as the home language of approximately 3.5 million whites, 400,000 Coloreds, and 15,000 persons of Asian extraction. The country's total population is 47.4 million (2006 estimates).

## 3 LANGUAGE

Afrikaans, the language spoken by Afrikaners, evolved as a dialect spoken by pioneers on the frontier during the 18th and 19th centuries. The root stock was 17th-century Dutch, but as various linguistic groups settled in the new colonies of those days, they contributed to the emerging language. These included French, German, and English speakers. The Dutch colonial authorities brought slaves from their holdings in southeast Asia, especially Malays, and in time these people contributed to the linguistic (also the cultural, religious, and genetic) mix that was emerging. Early contact had also occurred between settlers and the indigenous Khoekhoen (herders) and San or Bushmen (hunter-gatherers), from whom vocabulary (and cultural) elements were incorporated. On the frontiers more intimate contact developed with the Bantu-speaking peoples, and once again linguistic and cultural transfers took place. The new spoken language, Afrikaans, first appeared in print during the early 19th century and since then has produced material in a wealth of literary and scientific forms. Among the unique features of the language is the double negative: *Hy wil nie speel nie* (literally, “He does not want to play not”).

Personal names derive, in most cases, from a European tradition, usually given a Germanic (Afrikaans) form. It is the custom for married couples to name their first son after the husband's father and their first daughter after the wife's mother.

## 4 FOLKLORE

Early Afrikaner beliefs and traditions come from two major sources: those derived from their European ancestry, and those acquired locally due to intimate contact with indigenous peoples (Khoekhoen, San, and Bantu-speaking) and eastern immigrants (Malay and Indian). This includes childhood beliefs in mythical figures like *tikoloshe*, a diminutive urchin. As is true among many peoples, heroes and myths became intertwined as oral traditions were recounted or selected aspects re-

corded. As is also quite common, heroes frequently are from the political or religious realm.

Much of Afrikaner tradition recounts the exploits of pioneer leaders who with faith and fortitude “tamed” the interior of South Africa, wrestling the land from wild animals and warring native tribes. Thus, school children grew up with the names of Charl Celliers, Andries Potgieter, Piet Retief, and Gert Maritz. Much of the national folklore revolved around *Oom* (Uncle) Paul Kruger (the erstwhile president of the Afrikaner republic), for instance, recounting his experiences when he visited Queen Victoria. In the immediate past, sports heroes have emerged, particularly in the field of rugby where great physical prowess, fleetness of foot, and an accurate kicking boot have created modern heroes—often of mythical proportions.

## 5 RELIGION

The religion of the Afrikaner derives from Protestantism as practiced by the 17th-century Reformed Church of Holland. However, in 1685 when the French government repealed the Edict of Nantes (which guaranteed religious freedom in a heavily Roman Catholic-dominated France), Protestants fled, some going to Switzerland and others to Holland. These French Huguenots then emigrated from Holland to the Cape in 1688 to assure their religious freedom, and they added a special anti-Papist strain of Protestantism to the Afrikaner religion. They also brought a rich tradition of viniculture. After the British took over administration of the Cape in 1806, they brought English-speaking (especially Scottish Presbyterian) ministers to South Africa. Under the influence of the Swiss reformer John Calvin (and others) regarding church and state, the status of women, purity of the race, and related doctrines, a rather unique blend of Protestantism emerged in South Africa expressed by the three varieties of the Dutch Reformed Church.

## 6 MAJOR HOLIDAYS

Days and dates of special significance to Afrikaners are those that are associated with their religion and their national history. Many of these are no longer recognized in the new constitutional dispensation, while new holidays have been added to recognize the cultures of other ethnic groups.

Historically, religious holidays in South Africa have been tied to the Christian calendar. Christmas and Good Friday are still recognized as public holidays. Ascension Day (40 days after Easter) was once recognized as a public holiday, but was removed from the list by the Public Holidays Act of 1994. In the same act, the secular holiday of Family Day was created to replace Easter Monday and the Day of Goodwill, on December 26, replaced Boxing Day. December 16 was once celebrated as the Day of the Covenant, commemorating the day when Afrikaner pioneers beat back an attack of Zulu warriors in 1838. Since 1994, December 16 has been celebrated as the Day of Reconciliation. Other public holidays in contemporary South Africa include New Year's Day (January 1), Human Rights Day (March 21), Freedom Day (April 27), Worker's Day (1 May), Youth Day (June 16), National Women's Day (August 9), and Heritage Day (September 24).

Partly due to the Calvinistic overtones in Afrikaner society, Sundays were days of rest. Stores were closed, movie theaters were locked, organized sports were not permitted, and very

little activity took place. People were expected to attend church services. None of this applies any longer.

## 7 RITES OF PASSAGE

Birthdays are almost universally celebrated, usually with a party accompanied by the giving of gifts. It is expected that all infants should be baptized. Afrikaner children grow up attending Sunday school, where Biblical texts have to be memorized and simple religious instruction occurs. When young people are about 16 years old, they study catechism, learning the tenets of the Reformation and the Biblical basis of Calvinistic Protestantism. This allows for confirmation as a church member and First Communion. In many families this age also permits individual dating. To this day, the twenty-first birthday is a major celebration in which a son or daughter might ceremonially receive a key.

Adults celebrate birthdays, frequently with a *braai*—the equivalent of the American barbecue, where meat is roasted on hot coals and other dishes are prepared. Death is marked at the family level by mourning and the wearing of black dresses by women, and black ties or a black arm band by men. However, these latter practices are becoming less common. The Dutch Reformed Churches celebrate the passing of the old year and the coming of the New Year with a midnight service on 31 December. The front pew is draped in black or purple to remember those who have passed away during that year, and their names are read aloud.

*Days and dates of special significance to Afrikaners are those that are associated with their religion and their national history. Many of these are no longer recognized in the new constitutional dispensation, while new holidays have been added to recognize the cultures of other ethnic groups in South Africa. The Afrikaners shown here at Voortrekker Monument are celebrating the Day of the Covenant, which commemorates the day when Afrikaner pioneers beat back an attack of Zulu warriors on December 16, 1838. (Jason Laure)*

## **8 INTERPERSONAL RELATIONS**

When meeting people it is customary to greet each person, including children, with a handshake. Friends and relatives of both genders greet each other with a kiss on the lips (this practice does not generally apply to males greeting males), accompanied by a standard question, "How are you?" Taking leave involves the same actions and the standard "*Totsiens*" ("Till we see [each other] again"). Afrikaners used to practice informal gender separation in that men would visit with men, would move aside after a meal to smoke and talk together, or would discuss national affairs with each other. Women were supposed to stay with women and talk about "womanly" affairs, such as homemaking, the servants, and the children. More recently, as women have become better educated and moved into the professions, and as men have lost some of the macho image, a more equitable relationship has developed.

## **9 LIVING CONDITIONS**

South Africa, under Afrikaner administration, was an anomaly as had been true in many colonial and neocolonial situations. Whites lived in First World luxury, represented by housing, swimming pools, schools, hospitals, and clinics, while the same was only incidentally true for individual members of politically unrepresented groups. Afrikaners there-

fore were almost universally in a favored situation with civil service and other jobs, dependable salaries, automobiles, and electricity in their homes. Thus, they joined the consumer race to acquire the accoutrements of comfort and luxury, including televisions, videos, and computers. Because of a well-developed infrastructure, airplanes, trains and buses could deliver passengers to their destinations, while telephones served as a link for friends and people in business. There are a significant number of indigent Afrikaners.

## **10 FAMILY LIFE**

The traditional Afrikaner family involved a young man courting his girlfriend and then formally requesting permission from her parents (especially her father) to become engaged. For three Sundays prior to the wedding, the couples' names were read in church and, if there were no objections (e.g., that one was already married or for some other legal or moral reason), the marriage was performed in church, followed by a reception. Historically, on the frontier and among farming families, Afrikaner families were large because children represented wealth and support. There also was a literal interpretation of the Biblical injunction to "go forth and be fruitful." Some Afrikaner politicians advocated a policy of large families to counter the number of non-whites and to assure the position of whites in South Africa. Today, Afrikaner families average two or three

children per family. Essentially the Afrikaner family is an example of the Germanic patriarchal extended family, but under conditions of urbanization and modernization they have moved toward the individual nuclear family unit occupying a single family home or apartment. Dogs and cats are favored as pets, while the former are also bred to protect home and property. The status of women has improved over the years and today is approaching equity as regards opportunity and salary.

### **11 CLOTHING**

The everyday clothing of Afrikaners is no different from that of any modern Western urbanite. Reaching back to frontier days when women wore long dresses and bonnets, this dress has been retained for formal folk dancing called *volkspele*. It is a pleasing sight, though becoming less common, to see the women in their multicolored long dresses and colored bonnets swirling around, accompanied by their male partners, who are also uniformly dressed in shirts, vests, and pants.

### **12 FOOD**

The everyday meal of the Afrikaner is characterized by an emphasis on meat, starch, and cooked vegetables, and the near absence of green or fresh salads. This is particularly true of the Sunday midday meal, where it is customary to have more than one kind of meat, rice, and potatoes, at least two cooked vegetables, and dessert. The breakfast staple is some kind of porridge. In the interior, Afrikaners learned from the native peoples to make a gruel called *stywe pap* or *putu pap* ("stiff porridge" or "putu porridge"). It is common to have this porridge for breakfast with milk and sugar and also to eat it with meat or *boerewors* ("boer sausage," made of beef and pork) at a barbecue. *Braaivleis* ("roasted meat") is traditional and very common, like the barbecue. Some years ago one would only find mutton, usually ribs and chops, at a *braai*, but today all kinds of meat are cooked, and a prawn *braai* is particularly enjoyed.

Traditional foods frequently have Eastern origins, emphasizing the mixed cultural traditions. One of these is *sosaties* (marinated meat much like shish kebab), frequently included in a *braai*. Another is *bobotie*, which contains ground meat with a curry spice flavor. Deriving from the same southeast Asian origins is a twisted doughnut that is fried in hot oil and then submerged in cold sweet syrup. This *koeksister* ("cruller") is a popular delicacy. Venison has always formed part of Afrikaner dishes, as grazing animals could be hunted or culled from national parks. Fish has become very popular for those living close to the ocean, and dishes containing *snoek* (a type of fish native to the South African Cape region) are famous. Two food items that trace back to pioneer days are very common among Afrikaners: *beskuit* and *biltong*. The first is translated as "rusks" in English and comes in different varieties but essentially is a biscuit that has been oven-dried. It is usually dunked and enjoyed with coffee. *Biltong* consists of strips of dried meat, from beef or venison (and also from ostrich), which are treated with salt, pepper, and spices prior to drying. Dried fruits, either in individual pieces or in the form of a ground paste, are delicacies.

### **13 EDUCATION**

Children go to school at age 6 and are obliged to stay in school through age 16. Most of the Afrikaans medium schools require a school uniform: girls wear the same color dress or skirt and

blouse, while boys wear the same color shirt and pants. During most of the year boys wear shorts with long stockings. Each school has its own colors, and girls and boys wear blazers that display the crest of the school. Among whites (thus including Afrikaners), school attendance and literacy are nearly universal. It is common for Afrikaans students who have completed high school by successfully passing the national matriculation examination to go to one of the four primarily Afrikaans medium universities, or to a "technicon," which is more technically oriented. Since the Constitution of the Union of South Africa (1910) recognized Afrikaans and English as official languages, students have been bilingual, and many have attended one of the four English medium universities. In contemporary democratic South Africa there are now 11 official languages, recognizing each of the major ethnic groups. English, however, has established itself as the common language of commerce and of politics.

### **14 CULTURAL HERITAGE**

A great deal of the Afrikaners' heritage is derived from and reinforced by European cultural traditions. Thus, the great number and diversity of the performing arts, musical compositions, literary creations, and expressions in ballet and dance all follow the Western European model. Obviously, South African themes have been included in many of these, as is true of the visual arts.

### **15 WORK**

Most Afrikaners are formally employed. Coming from a rural tradition, they moved haltingly into urban forms of employment, first into civil service and education, and then into mining, industry, and business. Today they are firmly established in the urban industrial world. Among whites in the rural areas, Afrikaners predominate. Afrikaners are characterized by a Calvinistic work ethic that requires hard, industrious work. Children are raised with statements like, "Idleness is Satan's pillow," implying that idleness is the parent of vice.

### **16 SPORTS**

Afrikaners are active sports participants. TV was not permitted in South Africa until the 1960s, then for a number of years it was only shown at night. The emphasis was on *playing* sports. Afrikaner children play a variety of games in an informal manner. Organized sports start early as boys go out for rugby, cricket, or "athletics" (which means track-and-field). Girls play netball (similar to basketball), field hockey, and participate in athletics. Sports like golf, swimming, soccer and tennis also feature. It is common to see a group of boys on an open field with a tennis or rubber ball playing single wicket cricket, or tossing a ball in a variation of touch football. Girls are more likely to be at home and to participate only in school or club sports. Intramural and league competitions are well developed in many sports, allowing students to battle for the honor of their class or their school. A dwindling number of people, particularly the older generation, engage in a competition called *jukskei*, which traces back to pioneer days. In the game, carved pieces of wood, resembling the yoke pin used on draft animals, are tossed in an attempt to knock over a stake. The game is similar to the American game of horseshoes.

Spectators flock to venues where high school, college, club, provincial, or national teams compete in all of these sports.

Traditionally Afrikaners excelled more in rugby and athletics but increasingly they have made their mark in other sports, producing world and Olympic champions.

### 17 ENTERTAINMENT AND RECREATION

Popular culture used to be alien and was frowned on by the elders. Thus, young people entertained themselves in folk dances, church-sponsored youth activities, and the bioscope (movies). It is now common for a group of young people to rent videos, gather at a bar or a dance, or go to a disco. Increasingly too, it has become acceptable to mix socially, and even intimately, with English-speaking persons and even members of other communities. There is a variety of theaters, lectures, and other expressions of the performing arts that are widely attended.

### 18 FOLK ART, CRAFTS, AND HOBBIES

In the days of frontier living, and later on farms and ranches, there existed a clear sexual division of labor. Certain things were in the man's realm, while the woman dominated domestic activities. These divisions are still sometimes carried over to the present. Women are known for quilting, crocheting, and knitting; and a beautiful doily with a circle of shells or beads covers every jug of milk. In rural areas it is common for women to make soap, bottled jellies, jams, and preserves, and do all the baking of breads, *beskuit*, and cakes. Men used to be adept at woodworking, delicate leatherworking, and the making of chairs with seats of interwoven strips of leather.

### 19 SOCIAL PROBLEMS

Modern Afrikaners bear a heavy, and in some cases unfair, cultural burden. That burden was created by their ancestors who accepted and reinterpreted a Calvinist Protestantism, developed a racist-based philosophy that led to the policy of apartheid, and in the process became the pariahs of the world. Not all Afrikaners agreed with the policy of their government, not all Afrikaners were racists, and not all Afrikaners accepted the social or political conditions. Yet, being Afrikaners, they are uniformly labeled. Afrikaners had been in a very favorable situation, and for some this created concern and guilt. In contemporary South Africa, also referred to as the "Rainbow Nation," a great number of legal and other actions are being implemented to correct earlier wrongs in the fields of civil rights, economic conditions, housing, etc. Today, Afrikaners are effectively facing the challenge to create a niche for themselves and to become a vital part of South African society.

South Africa's transition to democracy in 1994 brought equal rights and new opportunities to the disadvantaged sectors of the population. Unfortunately, it also sparked a dramatic increase in the rate of crime and violence—an inevitable by-product of poverty and high unemployment in the context of a new political system where social expectations are unrealistically high. Burglaries, muggings, car-jackings, rapes, and murders have all increased since the late 1990s. Afrikaners are as much the victims of this crime rate as any other sector of the population. High levels of crime have led to demands for tough action by the government as well as a return to capital punishment, which is banned in South Africa. One result has been a growing rate of emigration. Another has been the growth of private security-related services and the development of gated communities.

HIV/AIDS is a major problem in South Africa, with the adult prevalence rate at 21.5% (2003 est). The number of people living with HIV/AIDS stood at about 5.3 million in 2003, with 370 000 related deaths that year. The Afrikaners however, comprise one of the communities least affected by the pandemic.

### 20 GENDER ISSUES

The Constitution of the Republic of South Africa (Act 108 of 1996) guarantees many individual rights. Chapter 2[9(3)] specifically indicates that "The State may not unfairly discriminate directly or indirectly against anyone on one or more grounds, including race, gender ... etc." In 2003, the Department of Education launched the Girls Education Movement (GEM) as one of the government's key gender focus programs, implemented in partnership with the United Nations Children's Fund. This program aims to ensure that girls will have access education and that their retention and achievement rates will increase. It is founded on three pillars, namely career mentorship, skills development, and advocacy.

As opposed to many communities in South Africa, particularly in the rural, patriarchal communities, Afrikaners in the country are much further along the road of gender parity. Much like other industrialized nations, Afrikaner women in South Africa are increasingly career-oriented and fill prominent positions in virtually every sector of society.

# AKA

**PRONUNCIATION:** AH-kah

**ALTERNATE NAMES:** Pygmies; tropical forest foragers; Biaka; Bayaka; Bambenzele

**LOCATION:** Tropical forests of southern Central African Republic and northern Congo

**POPULATION:** 30,000

**LANGUAGE:** Diaka

**RELIGION:** Indigenous beliefs

**RELATED ARTICLES:** Vol 1: Central Africans; Congolese; Efe and Mbuti

## <sup>1</sup> INTRODUCTION

In the U.S., the Aka are better known as “pygmies.” The term *pygmy* refers to a person of short stature (usually under 1.5 meters [4 ft 9 in]) who hunts and gathers and has a strong identity with the tropical forest. It is generally a derogatory term that emphasizes their physical characteristics. Among Central African farmers, the term carries a connotation of beings closer to animals than to “civilization” (i.e., people who farm), so anthropologists currently use the term *tropical forest forager* instead. By comparison, in the United States there are the Hopi, Navajo, Lakota, Cheyenne and many other indigenous peoples, but when referring to them as a group, they prefer to be called “Native Americans” rather than “redskins.” In Central Africa, the Aka, Baka, Efe, Mbuti, and other indigenous forest hunter-gatherers have generally been referred to by outsiders as “pygmies.” Researchers suggest replacing the term with “tropical forest foragers” until such time that these forest people become politically organized and decide for themselves what they would like to be called as a group.

Why are the Aka short? Medical exams of children and adults indicate that their health is generally better than that of most peoples in the developing world, so their small stature is not due to lack of food. Aka children’s growth is slightly slower than U.S. children’s growth (as is the growth of most children in the developing world), but the biggest difference occurs when Aka children reach 14 years of age. Aka do not experience the dramatic growth spurt during the teenage years that is common in most human populations. This diminished adolescent growth is due to a lack of receptors for a particular growth hormone (IGF-I). It is also true that most mammals living in tropical forests are shorter than their savanna relatives (e.g., forest elephants are smaller than savanna elephants), which suggests that smaller size may be adaptive to the humid tropical forest.

The Aka are just one of at least 10 ethnically and linguistically distinct groups of tropical forest foragers (“pygmies”) who occupy the tropical forests throughout Central Africa. Tropical forest foragers have been living in the tropical forests for hundreds, if not thousands, of years. Consequently, the Aka are referred to as the “first citizens” of the Central African Republic and Congo (much like Native Americans in the United States).

The farming peoples of Central Africa moved into the tropical forest area about 2,000 years ago and slowly established regular trading relationships with tropical forest foragers. Farmers needed game meat, honey and other forest products,

and forest foragers liked the cultivated foods of farmers. Today, Aka-farmer relations are very complex, and they attend each other’s funerals, births, and marriages as well as having regular economic exchanges. The farmers see themselves as superior to Aka and talk about “their” Aka. Even though Aka-farmer trading relationships may have lasted for trading generations, Aka can (and do) leave any time they feel a “patron” is not treating them well.

The Aka generally live in areas that do not have roads, but this does not mean they do not know what is going on in the world or that they have not been influenced by colonialism. At the turn of the century, the French colonizers of the Central African Republic and Congo wanted ivory, rubber, and antelope skins, and it was often the Aka who provided these items through their village trading partners. The European desire for antelope skins increased the frequency of net hunting, and the desire for ivory increased the status position of *tuma*, great elephant hunters who could communicate with the supernatural forest spirits. Because ivory trade is now banned in Central Africa, the position of *tuma* is not as important as it was 40 years ago.

There are few Aka status positions. There is no chief in the sense of a person commanding ultimate authority, yet there is the *kombeti*, who is generally more influential in subsistence and camp movement discussions. The *nganga* is the traditional healer and provides a wide range of services to the community—such as divination on hunts, curing of witchcraft, and herbal healing. The *tuma* is the great hunter who has often killed several elephants on his own. He leads spear hunts and important hunting and seasonal rituals, and organizes the training of young boys in the men’s secret society. The status positions are usually held by males.

The Aka are fiercely egalitarian and independent. No individual has the right to coerce or order another individual to perform an activity against his/her will. Aka have a number of informal non-institutional methods for maintaining their egalitarianism. For instance, they practice prestige avoidance; one does not draw attention to his or her activities. There are certainly exceptional hunters, dancers, and drummers, but individuals do not brag to others about their abilities.

## <sup>2</sup> LOCATION AND HOMELAND

About 30,000 Aka live in the tropical forests of southern Central African Republic and northern Congo, generally between 1° and 4°n latitude. Their east and western limits are the Oubangui River in the east and the Sangha River, respectively.

Most Aka live in remote areas of the tropical forest where the population density is less than one person per square mile. Aka women average six live births during their lifetime. About 20% of Aka children do not live to their first birthday, and many die before they reach age 15. Infectious and parasitic diseases are the most common causes of death. Approximately half of the population is under age 15, and there are approximately equal numbers of males and females.

## <sup>3</sup> LANGUAGE

There are approximately 15 ethnic groups that speak 15 languages and live in association with the approximately 30,000 Aka in the Equatorial region. The Aka language is a distinct Bantu language and classified in the C-10 Bantu language group. It belongs to the Benue-Congo group of the Niger Con-

go. In addition to their own language the Aka speak the languages of their neighbors.

The Aka speak a Bantu language called *diaka*, which is characterized by three tones. The language often sounds musical, and different tones can dramatically change the meaning of a word (e.g., *mbongo* can mean “cup,” “a type of bee,” or “panther”). Most Aka speak at least two other languages—the Bantu or Oubanguian language of their village trading partners and some Sango, the national language in the Central African Republic.

Aka are given personal names a week or so after birth. Personal names have meanings attached to them—for example, *Bimba* (“flea”), *Madjembe* (“intestinal worms”), *Ngunda Oti* (“without hospitality”). In the last case, a boy’s mother gave him the name because, at the time of his birth, the boy’s father’s family did not provide her with much food. Sometimes Aka simply like the sounds of new words and use them as names. For example, Aka now use the following as personal names: *Boutros Boutros Ghali*, *Konvocation* (convocation from missionaries), and *Bonannee* (from “happy new year” in French). Personal names often change as one gets older, or a person may be known by several different names. Names are informal, similar to nicknames in the United States. If someone has a particular physical characteristic, or personality trait (e.g., a person with big ears, a quiet person, someone who is always sick, or a good rat trapper), people start to call the person by that name. There are no last names, but both men and women inherit a clan name from their fathers. Clan names refer to particular plants or animals that have supernatural abilities, and people who belong to a particular clan cannot eat that

plant or animal. Trails in the forest are associated with particular clans, and after marriage a couple eventually lives with members of the husband’s clan.

In addition to personal and clan names, a person can also be called by a kinship term. In the United States, we are familiar with the kinship terms *mother*, *father*, *brother*, *sister*, and so on. Aka kinship terms are quite different in that almost everyone in the same generation has the same kinship term. For example, if you were Aka, you would call your natural father, your father’s older brother, and the husband of your mother’s sister by the same term—*tao*. You would refer to your brothers and sisters and all of your first cousins by the same term—*kadi*. You could refer to your grandparents and all your great aunts and great uncles by the same term—*koko*. If you had children and your brothers and sisters had children, you would use the same kinship term for all of them—*mona*. So when an Aka parent is asked, “Who are your children?” he or she recites the long list of people who in the United States would be considered nieces and nephews. Aka would feel right at home with the African-American who uses the term *bro* to refer to any man in the same generation.

#### 4 FOLKLORE

Aka say that long ago they lived in villages and farmed, but one day a woman heard bees in the sky and a group of people decided to go into the forest to see where they were going. They found the bees’ hive, loved the honey and, finding plenty of food in the forest, decided to stay. This is how Aka describe the origin of their life in the forest. In 2003 the oral traditions of the Aka were proclaimed one of the “Masterpieces of the Oral and Intangible Heritage of Humanity” by the United Nations Educational, Scientific, and Cultural Organization (UNESCO).

#### 5 RELIGION

Aka religious beliefs are best characterized by their regional and individual variation rather than by a standardized pattern. The Aka occupy a large territory, and religious beliefs vary by area. Some Aka believe in *bembe*, a creator of all living things, but those who believe in *bembe* indicate that he/she retired soon after creation. *Djengi* is the most consistently mentioned, powerful, and generally benevolent forest spirit. *Djengi* has supernatural abilities, but in many ways he/she is not much different from Aka. *Djengi*, a spirit, can be thought of as another member of the camp whom one sees and shares with on a regular basis. *Djengi* shares resources with people, people visit and socialize with *djengi*, and there is a general trust in (if not love for) *Djengi*. *Djengi* comes into the camp in the form of a raffia mask and encourages people to have a party and celebrate in the forest spirit. *Djengi* asks for cigarettes, water, and other items while in camp and likes it when people dance and sing well. *Djengi* is a spectacular dancer, especially when the Aka are singing well. Communication with *djengi* takes place through a traditional healer or *tuma* who has the ability to translate the supernatural language.

Most Aka camps have a traditional healer (*nganga*). *Ngangas* cure all forms of illness (e.g., malaria, worms, bad luck, attack by witchcraft); see into the future to help one make decisions about travel, marriage, or friendships; and can see game animals deep in the forest while on the net hunt. The majority of *ngangas* are part-time and hunt and gather most of the day.

*Ngangas* acquire their knowledge through training and initiation. During initiation, the insides of their eyelids are cut, and medicine is placed in the cuts to help the *ngangas* see those things most others cannot.

Aka also believe that family members do not entirely leave this earth after they die. An ancestor's spirit (*edjo*) stays around, visits with the family, and often wants things. (One woman said that the *edjo* of her father knocked her down while she was walking through the forest.) Many Aka believe in witchcraft (*gundu*), especially to explain unexpected adult deaths. Witches send poison darts (*ndoki*) into the body of a victim, and the person eventually dies from the poison unless the *nganga* can extract the dart, usually by sucking it out. If someone is accused of witchcraft, he/she may have to take a drink made from special roots. The root is believed to have supernatural power so that if a person is guilty, he/she will go into convulsions and possibly die (the root contains strychnine).

Many Aka rituals are linked to hunting and gathering, and Aka engage in a number of individual and group hunting rituals to ensure a successful hunt. To assist hunting efficiency, the net can be ritually washed of bad spirits (*kose*) or a variety of medicines (*bouanga*) can be placed on them to increase good luck. The number and types of rituals increase as hunting success decreases.

Many Aka have been contacted by missionaries, but it is difficult for missionaries to convert Aka to Christianity because the Aka move around often, and it is not possible to drive a car to most of their camps. Missionaries generally tell the Aka to stop dancing to *djengi*, and they are generally the only group that is trying to provide formal education and Western health care to Aka.

## 6 MAJOR HOLIDAYS

Aka do not use a numerical calendar, so they do not have specific dates that are celebrated each year, but there are holidays in the sense that there are days off to relax and party. Such holidays occur after good hunts or when large game animals, such as elephant or wild pig, have been captured. Holidays also occur during the honey, caterpillar, and termite seasons.

## 7 RITES OF PASSAGE

Aka do not have much in the way of group ritual activities. At birth, parents place protective cords made from forest vines around a baby's neck, wrists, and ankles to provide protection from bad spirits and help connect the newborn to the forest. At five or six years of age, boys are circumcised in a very informal manner. A man who is good at this comes into camp early in the morning, and the boy often runs into the forest. Everyone laughs, eventually the boy comes back, his father holds him, and the whole thing is over in five minutes. Aka are not teased if they cry and there is plenty of social and emotional support.

During the teenage years, boys and girls get their top four incisors pointed. This is done when the teenager feels ready and is conducted in a very informal atmosphere. Aka believe that pointed teeth make one look handsome or more beautiful. Some Aka, primarily teenage girls, get the bottom four incisors pointed as well. Teenagers bring in new fads from other areas. Current fads include coloring teeth with a purple dye from a forest vine, piercing the nasal septum with a small twig (girls only), and shaving stripes into one's eyebrows.

The only large, group-level ritual occurs at death. Relatives travel long distances and sing and dance for days. Camp sizes more than triple during funeral ceremonies. Teenagers go to as many funerals as possible because they are fun, and it is an opportunity to develop relationships with teenagers from other areas.

## 8 INTERPERSONAL RELATIONS

There are no formal greetings among the Aka, and people do not say good-bye, in part, because they are likely to see each other again. Aka are very warm and hospitable.

Relationships between men and women are egalitarian: men and women both contribute to the household diet, a husband or wife can initiate divorce, and violence against women is very rare. Women have their own dances and songs in which they ridicule men. Spouses can and do ridicule each other with rather crude joking, including uncomplimentary remarks about the size and shape of a partner's genitals, but for the most part the partner does not pay much attention to such ridicule.

Relations between young and old are also egalitarian in that there is minimal deference towards the elderly. Aka elders are expected to hunt and gather as long as they can, and grandparent-grandchild relations are playful and relaxed.

The Aka are fiercely egalitarian and independent. No individual has the right to coerce or order another individual to perform an activity against his/her will. Even when parents give instructions to their children to collect water or firewood, there are no sanctions if they do not do so. Aka have a number of informal methods for maintaining their egalitarianism. First, they practice prestige avoidance; one does not draw attention to his or her abilities. There are exceptional hunters, dancers, and drummers, but individuals do not brag to others about their abilities. If a man kills an elephant, he says someone else did all the work and talks about the small size of the elephant. Second, Aka practice rough joking with those who start to accumulate, do not share, or who act egotistically. For instance, if a teenager eats most of the honey before returning to camp, others will joke about the size and shape of his genitals. And third, Aka practice "demand sharing." This means that whatever one has will be given up if requested. If I like the shirt you are wearing, I ask for it and you say you really did not need it. This way most material items circulate around the camp. This is one reason Aka have been slow to take up farming. An Aka who spends three to four months farming must give everything away at harvest time when all the relatives come to visit and request food.

Sharing, cooperation, and autonomy are but a few others of the Aka core values. The community cooperates daily in the net hunt (described in the section on Work), food hunted is shared with members of the camp, and decision-making is the reserved prerogative of the individual; if one is not content with living conditions, one moves to another camp, which is easy and acceptable.

## 9 LIVING CONDITIONS

The Aka are extremely poor in terms of Western socioeconomic status and material wealth. They seldom have money and do not attend formal schools because they would be teased by the villagers and do not have money to buy books. They do not obtain Western medical care because they do not have money to

purchase medicines, and clinic doctors usually discriminate against them.

Aka camps consist of 25–35 people living in five to seven dome-shaped houses. Houses are close to each other and all of them occupy an area the size of a large living room. Houses are three feet high so one cannot stand up in a house. Each family has their own house and everyone in that house sleeps together in the same bed. The house is big enough for one bed and a campfire for warmth during the night. The two or three adolescent boys in the camp share one house (the bachelor pad) while teenage girls each make their own small house. Houses are made by women, with the exception of the bachelor pads (which are often poorly constructed and leak water all the time), and are constructed from saplings and large leaves. The beds are made from logs, animal skins or leaves.

Aka move their camps about eight times a year and there are daily changes in camp composition as visitors (e.g., relatives, friends, traders) come and go, and members leave to join other camps.

Water sources are generally not contaminated because the Aka do not live in one place very long. Aka do not brush their teeth or use streams for washing. It rains frequently, so Aka simply wash off as they walk through the forest.

## 10 FAMILY LIFE

The family (husband, wife, and children) is extremely important as this is the unit of production and reproduction: The family works as an economic unit on the net hunt and in a variety of other subsistence activities (e.g., collecting caterpillars and mushrooms). Additionally, the conjugal family is where most cultural skills are transmitted and acquired. The camp (*lango*) consists of 1 to 15 nuclear families, but averages around 25 to 35 individuals. Aka children grow up in an environment of trust, love, and indulgence. Infants are held throughout the day (even while sleeping), nursed on demand (four times an hour), and caregivers attend immediately to any fuss or cry. Although Aka are very indulgent and intimate with their infants, they are not a child-focused society. Parents seldom stop activities to pay undivided attention to their children.

Although the mother is the primary caregiver, Aka fathers provide more care to young children than fathers in any other society. Numerous others also help out with infant care. While in camp, infants are held by their mothers less than 40% of the time. Rather, they are transferred to other caregivers an average of seven times per hour, and they have seven different caregivers holding them during a single day.

Aka childhood lacks negative forces and violence. Seldom does one hear a parent tell a child not to touch or do something. If a child hits another child, the parent will simply move the child to another area. Corporal punishment for a child who misbehaves seldom occurs. In fact, if a parent hits a child, it is reason enough for the other parent to ask for divorce.

Generally, it is difficult for parents to get their older children to do much. When older children (7–11 years old) are asked to collect water or firewood, they often simply ignore their parents' requests. Parents may sometimes shout at their children but, more often than not, they simply go and get what they need themselves. During the teenage years, same-sex friends seem to be inseparable—they go everywhere together. Girls collect water, nuts, or fruit together, and boys take trips to the village or go on small game hunts together (hunting mice with

small nets is a favorite pastime for boys.) Teenagers often travel to visit relatives and explore territories other than their own, so they may be absent from the camp for long periods.

The teenage years are a time of social and sexual exploration and teenagers are key members of the camp. They provide new and fresh energy to the camp. For example, they bring in new dances from other camps and are often the first to start dancing at night (the adults join in later). They are many times the ones to initiate changes in Aka culture (e.g., nose-piercing, breaking of relationships with villagers). In many ways, Aka parents seem similar to U.S. parents: they complain that teenagers are smoking more and having sex earlier than in the past.

First marriages occur between 17 and 21 years of age. Once a man moves his traps and spear into the house of a woman the two are considered married; there is no formal marriage ceremony. The husband must stay at the camp of his wife for two years or so, or until the first child is born and walking well. After this, “bride service,” the family moves to the camp of the father's brothers. About 25% of marriages end in divorce, the majority of these being first marriages. Divorce takes place by one partner simply moving out of the house. If divorce occurs, children go with the parent they prefer.

## 11 CLOTHING

The temperature never drops below 21°C (70°F) during the day. Men and women wear loincloths made of commercial fabric obtained in trade with villagers. When Aka visit the village, they put on any Western or “villager” clothes they might have. Men wear T-shirts and shorts, and women wear a cloth that they wrap around their waist.

## 12 FOOD

The Aka know more about the tropical forest than do most botanists and zoologists. The Aka know hundreds of forest plants and animals, but they subsist primarily on some 60 plant species, 20 insect species, honey from 8 species of bees, and around 30 species of game. The Aka collect roots and leaves, nuts, and fruits. They collect mushrooms, termites, crickets, grubs, and caterpillars. The Aka hunt large game (primarily hog and elephant) with spears, antelope with nets, monkeys with crossbows, and rat, mongoose, and porcupine with a variety of small snare and net traps.

Although there is enormous diversity in the Aka diet, their favorite game animal by far is porcupine. Forest porcupines have fat throughout their bodies, and so are very tasty. Honey is another favorite food (the “candy” of the forest) and people spend large parts of the day looking for just a handful of honey. Aka do not hesitate to cut down an entire mahogany tree in order to get a pound of honey from its top.

Aka obtain metal pots, pans, and cooking utensils by trading game meat and other forest products with farmers. Aka do not use plates and utensils to eat. Everyone in a family eats out of two or three shared bowls of food, and they use their hands to eat. A typical meal consists of a bowl with boiled game meat in nut sauce and a bowl of some carbohydrate, usually manioc obtained through trade with farmers. The piece of manioc is picked up with one's fingers and dipped into the meat sauce.

Because the Aka live near the equator, the sun comes up at 6 am and sets at 6 pm throughout the year. Most people get up at sunrise and prepare a hot meal of leftovers from the previ-

ous evening meal. Aka then snack throughout the day as they hunt and gather. If they find fruits or nuts, they eat some immediately and save some for back at camp. The largest meal occurs after families have returned from hunting, gathering, and trading—usually at about 7 pm.

### **13 EDUCATION**

Aka do not usually attend formal schools, but they begin learning about hunting and gathering when they are infants. Parents teach their 8-to-12-month-old infants how to use small, pointed digging sticks, throw small spears, use miniature axes with sharp metal blades, and carry small baskets. One- and two-year-olds use knives, axes, and digging sticks. They build play houses and imitate the dances and songs of adult life. By three or four years of age, children can cook themselves a meal on a fire; by age 10, Aka children can live alone in the forest if necessary. By age 10, they can identify hundreds of plants and animals and know all the important subsistence skills, with the exception of elephant hunting. Aka do not read or write, but they are very interested in acquiring these skills.

Catholic missionaries have started schools for Aka in a few locations, so some Aka speak French.

### **14 CULTURAL HERITAGE**

The Aka have a reputation as being the best dancers in the Central African Republic and Congo. They are frequently invited to the capital city by the president to dance at national festivals. Aka music is unique; it has yodeling, hocketing, and polyphonic harmonies and is often heard on the national radio station.

### **15 WORK**

The Aka are one of the last groups of people on earth to spend most of their days hunting and gathering. The tropical forest is not known for its abundance of wild edible foods, but if one has extensive knowledge of the forest it can be a land of plenty. Aka actually work fewer hours per week than do middle-class Americans, although Aka do not clearly distinguish work versus playtime: they regularly play and joke during net hunts and other subsistence activities.

Net hunting is the most important hunting technique, and it is unique among hunting techniques in that it involves the whole family—men, women, and children—and focuses on making noise rather than stalking and being quiet. Each family has a net that measures about 45 meters (150 feet) long and 2.2 meters (4 feet) high. The hunt takes place at night and begins by connecting all the families' nets together so they make a semi-circle or circle around an area about half the size of a football field. Men go to the center of the nets, women stay next to the net, and children go wherever they want. Once a sound is given to start the hunt, the men yell, scream, and pound logs on the ground to make as much noise as possible in order to wake up and scare the antelopes (most of which are nocturnal). If an animal is scared into the net, the nearest woman tackles it, grabs it behind its hind legs, and smashes its head against a nearby tree. If it is a large antelope, other women will assist in tackling and killing it. Game animals are shared with everyone in camp.

Over the course of a year, the Aka spend about 50% of their time hunting, 30% in gathering, and 20% in village work for farmers. The relative importance of hunting and gathering ac-

tivities fluctuates from season to season. For example, the Aka spend up to 90% of their time net hunting during the dry season (January to May), but during part of the rainy season (August to September) 60% of their time is spent collecting food, especially caterpillars. August is caterpillar season, and caterpillars are eaten at every meal. They can be roasted, boiled, or fried and taste like french fries. Much of the vegetable food in the Aka diet is obtained by trading game meat to farmers for manioc, corn, or other village foods.

### **16 SPORTS**

Forest people do not play sports in the Western sense. They do, however, learn basic skills through mock hunts and other games. Children play games similar to sports that teach them about group dynamics and personal achievement. Elders teach children the strategies and techniques of hunting by pretending to be animals and showing children how to drive them into a piece of old net. The adults also play a game (more ritual than sport) resembling our tug-of-war. The purpose is to remind the community that cooperation can solve conflicts between the sexes. The tug-of-war begins with all the men on one side and the women on the other. If the women begin to prevail, one of them leaves to help out the men and assumes a deep male voice to ridicule manhood. As the men begin to win, one of them joins the women and mocks them in high-pitched tones. The battle continues in this way until the participants have switched sides and have had an opportunity to both help and ridicule the opposition. Then both sides collapse, laughing over the point that neither side gains in beating the other.

### **17 ENTERTAINMENT AND RECREATION**

Aka do not have televisions, radios, or books. They do not have electricity, so after it gets dark they sit around fires to socialize, gossip, tell stories (often about gorillas or chimps having affairs with humans) and dance and sing. Dances usually occur about twice a week, but they are held every night during caterpillar season or when hunting is especially good.

### **18 FOLK ART, CRAFTS, AND HOBBIES**

Aka do not have paper and pencils so their art often takes the form of body modifications—painting, scarification, haircuts, and so on. The dark juice from a fruit is used to draw designs on the face and the body that represent the sounds and sights of the forest. Scarification often takes place before a dance. Teenagers get together and cut various designs into their bodies, often around the navel. Aka use razor blades traded from villagers to cut their hair and shave their heads into some very original designs—triangles, lightning bolts, caterpillars, and so on.

### **19 SOCIAL PROBLEMS**

Today the Aka continue to be affected by the world economy in several ways. In Bokoka, for instance, the Aka move into the village for part of the dry season, at the expense of missing the best net hunting of the year, to help the farmers with their coffee plantations. The coffee, destined for the European market, is the primary means by which villagers acquire money. Some Aka help villagers hunt elephant for ivory, while other Aka work for lumber companies in the region.

European logging companies are building roads and mills to extract mahogany and other hardwood trees (most caterpil-

lars come from these trees). Europeans and Africans are going deeper into the forest to dig for gold and diamonds. And Western conservation groups are trying to establish national parks and reserves to save tropical forests, but this means that Aka often lose their lands.

The farmers who are the Aka's trading partners are trying to grow more and more cash crops (e.g., coffee) to buy commercial goods (e.g., radios, VCRs), and so they try to get "their" Aka to work in the fields with little or no remuneration. Consequently, traditional trading relations are breaking down and Aka now say that villagers turn into chimpanzees when they die. There is little question that both African farmers and European investors exploit Aka. Aka are quiet and self-assured, and they often respond to outside pressures by fleeing deeper into the forest. Aka are not politically organized, nor do they have the literacy skills to try and mitigate these threats to their existence.

Alcoholism and drugs are not major problems for the Aka, except in logging towns where some Aka are paid for locating hardwoods. Aka, used to immediate consumption of collected or captured foods, do not store for the future. When they are paid for their labor, they spend all their money within a day or two, often on alcohol or cannabis.

Aka do not currently have AIDS, but they know about it from all the deaths among villagers. In the past, Aka seldom had sexual relations with villagers; now they say that if they sleep with a villager, they will die from AIDS. Their hunter-gatherer lifestyle exposes them to blood of jungle fauna, thus they have among the highest rates of seropositivity for Ebola virus in the world.

## 20 GENDER ISSUES

Aka male-female relations are extremely egalitarian by cross-cultural standards. Both males and females are regular contributors to the diet. Aka husbands and wives are together often and cooperate in a wide variety of subsistence tasks such as to net hunt, collect caterpillars, termites, honey, fruit, and sometimes fish. But wives are less likely to participate in cross-bow hunting for monkeys and trap-line hunting for medium size game, and never participate in spear hunts for wild pig and elephants. It is also clear that Aka men and women like to be with members of the same sex at least as much as being with their spouses. Men enjoy hunting game together, and women enjoy collecting nuts and fruit away from the men.

The political power and social prestige of Aka women is pronounced, but is not as structurally salient as that of Aka men. Aka men hold all the named positions of status—*kombeti*, *tuma*, and *nganga*—but as mentioned already, these men hold no absolute power. They influence people through their hospitality, persuasiveness, humor, and knowledge, not by their position. Aka women challenge men's authority on a regular basis and are influential actors in all kinds of decision-making. Women participate in decisions about camp movement, extra-marital affairs, bad luck on the hunt, and sorcery accusations.

Autonomy within the context of group interdependence is a vital feature of Aka gender relations. Husbands and wives cooperate in a wide range of activities, but there is respect for each other's feelings and peculiarities. Husbands cannot force their wives to come on the hunt, and the wives cannot force their husbands to look for honey. Spouses can and do ridicule each other with rather crude joking (e.g., uncomplimentary re-

marks about the size and shape of their partner's genitals), but for the most part the partner does not pay much attention to the ridicule. If the couple does not get along, divorce is a matter of one partner simply moving out of the house. While men and women have clearly defined subsistence and social roles, one is not ridiculed for trying a role usually assigned to the other gender. Women carry the nets, spears, and crossbows of the men and men carry the baskets and digging sticks of the women. This sex role flexibility is seen in the different types of net hunt. On most net hunts, men go to the center of the nets and chase the game into the nets while women stand nearby to jump on and kill the captured game. But for social or environmental reasons (getting tired of doing one type of net hunt or trying to capture especially large game) the roles are sometimes reversed, and women go to the center of the nets while men stay next to the net.

Physical violence in general is infrequent and violence against women is especially rare. The lack of violence enhances female autonomy and encourages husband-wife cooperation and trust. Husband-wife conflicts do of course occur but they are usually resolved through talking, rough joking, leaving camp for awhile, or mediated assistance from other camp members.

It is essential to understand Aka gender relations, particularly husband-wife relations, if one is to understand the Aka father-infant relationship. A 2005 UNESCO report named Aka men as the "Best Dads in the World." Aka fathers have their infant within arms' reach 47% of the time. Husband and wife are together often, know each other exceptionally well, and cooperate on a regular basis in a diversity of tasks. Men and women have distinct tasks, but there are few underlying beliefs that one sex is naturally inclined to perform certain tasks. The capabilities of men and women are very similar, and therefore tasks can be reversed easily. Male and female experiences and socialization are different, but men and women know the tasks of the opposite sex. Women are also valued and respected members of the group. Aka men, however, though are similar to men cross-culturally in that men predominate in the named status positions, only men hunt large game, and polygyny is relatively common. In summary, Aka male-female relations have commonalities with male-female relations cross-culturally, but the Aka are probably as egalitarian as human societies get.

**PRONUNCIATION:** al-JIR-ee-uhns

**LOCATION:** Western North Africa (the Maghrib)

**POPULATION:** 33,333,216

**LANGUAGE:** Arabic; Berber; French

**RELIGION:** Islam (Sunni Muslim)

**RELATED ARTICLES:** Vol. 1: Tuaregs

## 1 INTRODUCTION

Algeria is one of several countries forming the Maghrib, a region in the western part of North Africa that borders the Mediterranean Sea. (Maghrib is the Arabic word referring to the direction of the sunset.) Algeria's history has been turbulent, involving repeated conquests and a particularly bitter resistance to modern European colonialism. This history has left its mark on contemporary Algeria, which from 1992 to 1998 experienced a violent civil war between the military junta running the country and a coalition of Islamist opposition parties known as the Islamic Salvation Front (FIS). Ferocious fighting killed between 100,000 and 300,000 people—the exact figures are in dispute and likely will never be known. The conflict erupted following a December 1991 election in which the FIS won by a landslide; the government quickly annulled the results, spurring outrage.

Algeria's known history can be traced as far back as 30,000 BC. Cave paintings found at Tassili-n-Ajjer and elsewhere in Algeria, dated to between 8000 BC and 4000 BC, show how ancient hunters shared a savannah region with giant buffalo, elephants, rhinoceroses, and hippopotamuses. Neolithic civilization, which is characterized by animal domestication and agriculture, developed in the area between 6000 BC and 2000 BC. Today, this area is primarily desert.

The various peoples who eventually settled in the area came to be called Berbers. Roman, Greek, Byzantine, and Arab conquerors all attempted to defeat or assimilate the Berbers into their cultures, with varying degrees of success. Phoenician traders arrived in the area around 900 BC and established the city of Carthage in approximately 800 BC in what is today neighboring Tunisia. From there, the Phoenicians established towns along the coast and in the area that would become Algeria. The Berbers were either enslaved by the Phoenicians or forced to pay tribute. By the 4th century BC, the Berbers formed the largest part of the Phoenician slave army and began to revolt as the power of Carthage weakened. In time, several Berber kingdoms were created that vied for power until the arrival of the Romans in AD 24.

The Roman conquest was disastrous for the Berbers. Tribes were forced to become settled or leave the area. For this reason, the Berbers resisted Roman rule. The Romans began their occupation by controlling the coastal lands and cultivating the area. It is estimated that North Africa produced 1 million tons of cereal each year for the Roman Empire, in addition to fruits, figs, grapes, beans, and olive oil.

Along with the Roman presence, Judaism and Christianity began to influence the Berbers. Many Jews who had been expelled from Palestine by the Romans settled in the area, and some Berber tribes converted to Judaism. Christianity arrived in the 2nd century AD and was especially attractive to slaves.

By the end of the 4th century AD, much of the settled areas had become Christian along with some Berber tribes.

In AD 429, the German king Gaiseric, backed by 80,000 Vandals (a German tribe), invaded North Africa from Spain, eventually weakening Roman control. With the decline of Roman power, Berber tribes began to return to their old lands. Meanwhile, the Byzantine emperor Justinian sent his army to North Africa in AD 533 and within a year conquered the German forces, although the Byzantines never established as firm a hold on the area as the Romans had.

The most influential conquest in the area was the invasion of Arab Muslims between AD 642 and AD 669. Nomadic Berbers quickly converted to Islam en masse and joined the Arab forces. Christian Berber tribes in Algeria converted to Islam, and in AD 711, the Muslims established firmer control in the region.

The ruling Arab view of Islam at the time was that Islam was primarily a religion for Arabs, and therefore non-Arab converts were treated as second-class citizens. Political sentiment developed among Muslims on the Arabian Peninsula, however, that rejected the Arabism of the ruling Umayyad dynasty in favor of strict equality for all Muslims. Followers of this movement, called Kharijites, spread to North Africa, and many Berbers became attracted to their message of Islamic equality and strict piety. They eventually rebelled against the Arab caliphate's control of the area and established a number of independent kingdoms.

In AD 750, the Abbasids, successors to the Umayyad dynasty, spread their rule to the area and appointed Ibrahim ibn al-Aghlab as governor in al-Qayrawan, in Tunisia. By the end of the 9th century AD, Ismaili Muslims (Shi'a Muslims who followed a more esoteric and mystical interpretation of Islam) converted the Kutama Berber tribes from Algeria and led them against the established rulers. In AD 909, the Ismaili forces established the Fatimid dynasty in North Africa.

The Fatimids were more interested in the lands to the east and left Algeria and neighboring Tunisia to Berber rule. However, considering the diverse loyalties of the different tribes, conflict became inevitable. In the 11th century, the Fatimids sent Arab bedouins to North Africa to assist their forces against other Berbers. Eventually, the influx of Arabs promoted the arabization of the entire area.

Nevertheless, independent kingdoms did manage to establish themselves in the area. The greatest of these were the Almoravids, the Almohads, the Hafsids, and the Zayanids. These kingdoms were all led by Muslim leaders who greatly encouraged learning and the arts.

Meanwhile, the Catholics of Spain were set on reclaiming southern Spain from the Muslims. Spain had become a cosmopolitan and pluralistic center of learning under Muslim rule. The Spanish conquest in 1492, however, fundamentally changed the character of the area. The new rulers forced all Muslims and Jews to convert to Christianity. Many fled to North Africa, and a sizable community of Jews settled in Algeria, Tunisia, and Morocco.

Between 1560 and 1620, Algeria became a base for privateers, or pirates. Because Muslim vessels were not allowed to enter European ports, Muslim pirates began raiding European ships. The most famous of these pirates was Khayr ad-Din, known to Europeans as Barbarossa, or Red Beard. Thanks in part to Khayr ad-Din, the Muslim Ottoman Empire (based in

what is today Turkey) managed to spread its rule over North Africa and form a buffer against European expansion.

Many European states paid tribute to the rulers in Algeria in order to ensure the safety of their ships. Once the United States became independent of England, its ships were no longer protected by British payments and were subsequently attacked. In 1797, the United States signed a treaty with rulers in Algiers, Algeria's capital, paying tribute in exchange for safe passage.

By 1815, however, the European states were in a temporary state of peace and decided to combine forces against the North African states. Spain, the Netherlands, Prussia, Denmark, Russia, and Naples declared war against Morocco, Algiers, Tunis, and Tripoli. The United States also joined the battle, which eventually ended the practice of privateering.

In 1827, politics in France prompted the French to establish a blockade against Algiers that would persist for three years. The French monarch, Charles X, was politically weak and thought that strong action against Algiers would strengthen his popularity at home. In 1830, he decided to invade Algeria on a self-proclaimed "civilizing mission." In June of that year, 34,000 French soldiers invaded Algiers and, after a three-week battle, took the city. French troops raped women, looted the treasury, desecrated mosques, and destroyed cemeteries. Their actions set the tone for the next century of French rule.

By 1834, a new liberal government had been established in Paris. Although the government was initially opposed to the occupation of Algeria, it annexed the country and its 3 million Muslim inhabitants as a colony for the sake of national pres-

tige. All occupied areas were seized from their inhabitants and sold at extremely low prices to poor immigrants from France and other European countries. The colonists were called *colons* or *pied noirs* (black feet). Many were prisoners from France who had been exiled to Algeria.

France still had many battles to fight, however. 'Abd al-Qadir, a 25-year-old Muslim, united the tribes throughout Algeria to resist the French occupation. By 1839, he controlled more than two-thirds of Algeria, creating a government, collecting taxes, supporting education, and promoting the economy. The French sent 108,000 soldiers—one-third of the French army—to defeat 'Abd al-Qadir's forces. They starved the Muslim population by destroying their crops, orchards, and herds. 'Abd al-Qadir was finally forced to surrender in 1847.

In 1871, another insurrection against the French broke out as a result of French economic policies, which had led Muslim areas to famine. Between 1868 and 1871, 20% of the Muslim population of the city of Constantine alone died of starvation. As a result of the revolt, France confiscated even more land.

By the time of World War I (1914–1918), a new class of European nationalists had emerged among the Algerian Muslims. Almost 200,000 Algerians fought for France during the war, and many now wanted full rights as French citizens. Some, however, wanted national independence for Algeria. The French denied both. Muslims were forbidden to become citizens in most cases unless they renounced Islam, and France considered Algeria an integral part of its nation.

During World War II (1939–1945), the Muslim opposition to France nevertheless joined the Free French forces in opposing the German Nazi invasion. Following the defeat of France by Adolf Hitler's forces, the local French government in Algeria joined the Nazi troops. At one point, they ordered that all Jews in Algeria be shipped to concentration camps in Europe. The Jews in Algeria hid in Muslim homes.

Upon the defeat of the French and German Nazi forces, the Algerians—along with Tunisians and Moroccans—asked France and the United States for independence as a reward for their support throughout the war. Their request was refused, and many of the same French leaders who had supported Hitler were reinstated in Algeria.

These events led to the Algerian War of Independence in 1954, in which Algerian Muslim nationalist parties launched a series of bombings on French military positions around the country. In August 1955, the Algerians attacked French civilians for the first time, killing 123 people in an attack in the city of Phillippeville. The French army responded by massacring as many as 12,000 Muslims. Between 1957 and 1960, the French—in what today would be called "ethnic cleansing"—forcibly removed more than 2 million Algerians from their villages to concentration camps in the plains, where tens of thousands died.

Nearly a million people—one-tenth of the Algerian population at the time—were killed between 1956 and 1962. It was one of the worst genocides in modern history. France eventually decided that the price of occupation was too high, and French president Charles De Gaulle negotiated a French withdrawal from Algeria. On 1 July 1962, Algerians voted nearly unanimously for independence, and Algeria was declared an independent country on 5 July 1962—exactly 132 years after the French invasion.

After independence, Algeria became a one-party socialist state ruled by the National Liberation Front, which had led the War of Independence. Many European companies were nationalized. French law was maintained on many civil issues, although Islamic traditions were also given representation in the law of the land. Algeria announced a strict policy of non-alignment, allying with neither the Soviet Union nor the United States.

The stagnation of oil prices on the world market negatively affected all Middle Eastern and North African states, including Algeria, which relies on oil for the majority of its revenues. Riots erupted in 1988 to protest the price of food, very high unemployment, and corruption among government officials. The riots were put down with bloody force, and hundreds were killed.

In response, the government rewrote the constitution to allow new parties to form and to liberalize the economy. The most popular of the new parties was the Islamic Salvation Front (FIS), which preached a return to traditional Islamic values and strict morality in public service. Its message had great appeal for the millions of unemployed Algerian young people. In the 1990 local elections, the FIS made substantial gains in all the major cities. In the first round of national elections in December 1991, the FIS also won large-scale victories despite the fact that the government had arrested its leaders. Fearing an FIS victory, the army took over, canceled elections, and sent 10,000 FIS activists to concentration camps in the desert; many were simply killed.

In response, civil war erupted. The exact number of dead in perhaps the most vicious civil war in North Africa will likely be never known. Estimates range from 100,000 to 300,000. Many of these deaths resulted from unprovoked raids by marauding militias attacking villages, often hacking their victims to death with hatchets.

## 2 LOCATION AND HOMELAND

Algeria has a population of almost 34 million, 60%–70% of whom are under the age of 30. Some 100,000 Algerians live in France, mainly for economic reasons but also because of deep historical ties. Many of these Algerians lead marginalized lives outside the mainstream of French culture, although they are third- or fourth-generation French residents. In 2006, French president Nicolas Sarkozy, for example, wondered aloud why there are no “French” players on the French national football team. The team’s most famous player, Zinedine Zidane, was born in the French town of Marseille but is of Algerian descent.

Algeria is located in North Africa on the Mediterranean Sea. It is situated to the west of Libya and Tunisia and east of Morocco. The north is relatively fertile and mountainous. The south includes part of the Sahara desert. In all, more than four-fifths of the country is desert.

## 3 LANGUAGE

Arabic is the national language of Algeria. Before the Arab conquests, Berber was the chief spoken language. Today, Berber is still spoken in very rural areas.

Arabic, a highly evolved Semitic language that is related to Hebrew and Aramaic, is spoken by the majority of people in Algeria. Written Arabic has two forms: the first is classical Arabic, which is derived from the Quran. Modern Standard

Arabic is the language of the written media throughout the Arab-speaking world. Algerians also speak many dialects of Arabic. The Algerian dialect includes many slang terms from French. The dialect also includes many Berber words, including the names for plants and areas.

The literacy rate among Algerians over 15 years of age is 70%–79% for men and 60% for women. French is widely spoken, English less so. As in all Arabic countries, the Algerians take great pride in the Arabic language, as they believe it is the language in which Allah narrated the Quran to the Prophet Muhammad.

Some of the more common Arabic words used in Algeria (as in most Arabic) are religious in nature. When pledging to do something, an Algerian Muslim says, *Insha’ Allah* (If God wills it). Prior to any action, a Muslim should say, *Bismillah* (in the name of God).

Common Algerian female names are *Nafisa*, *’Aysha*, and *Farida*. Common male names are *’Abd al-Haq*, *Hamid*, and *’Abd al-Latif*.

## 4 FOLKLORE

Algeria has many legends based on the exploits of Muslim leaders who resisted the Crusaders or the French colonizers. These leaders often come from highly religious backgrounds and are considered well learned. They are called *marabouts*, or holy men, and they are believed to have *baraka*, a blessing or divine grace that allows them to perform miracles. Their burial sites are often destinations of pilgrimage, and some have become saints in the popular mind. Many people visit their graves to ask for intercession.

Most folklore in Muslim countries tells stories of important figures in religious history. One such story, which is commemorated annually throughout the Islamic world, tells of *al-Isra’ wa al-Mi’raj*. According to legend, on the 26th day of the Islamic month of Rajab, the Prophet Muhammad traveled at night from Mecca, Saudi Arabia (then Hijaz) to Jerusalem. From Jerusalem, he rode his wondrous horse, al-Burak, on a nocturnal visit to heaven.

## 5 RELIGION

The overwhelming majority of Algerians are Muslims. The practice of Islam, however, varies from individual to individual. For example, the secular revolutionaries who fought against France in the War of Independence called themselves *mujahideen*, or “those who struggle in the cause of God.” Once victorious, however, the Algerian revolutionaries created a secular state. Most Algerians belong to the Sunni sect of Islam, which was introduced by the conquering Arabs. There are still remnants, however, of the Kharijite influence, which espouses a stricter egalitarianism.

Islam teaches that God regularly sent guidance to humans in the form of prophets and accepts the earlier Semitic prophets, including Abraham, Moses, and Jesus. Muslims believe that Muhammad was the last in a line of prophets who were sent with the message that there is only one God. Muslims also believe in heaven and hell, the Day of Judgment, and angels.

The Quran is the holy book of Muslims, and it teaches that in order to get to heaven, men and women must believe in God, do good works, and follow the dictates of Allah, as spelled out in the five pillars of Islam: (1) Muslims must pray five times a day; (2) Muslims must give alms, or *zakat*, to the poor; (3)

*A man overlooks the capital city of Algiers. (AP Images)*

Muslims must fast during the month of Ramadan; (4) Muslims must make the pilgrimage, or hajj, to Mecca; and (5) each Muslim must recite the shahada—*ashhadu an la illah ila Allah wa ashhadu in Muhammadu rasul Allah*—which means, “I witness that there is no god but Allah and that Muhammad is the prophet of Allah.”

There are about 25,000 Roman Catholics in Algeria who remained after the French evacuation. Although there were about 140,000 Algerian Jews before the revolution, most moved to France. Today, there are only 1,000 Jews in Algeria.

## 6 MAJOR HOLIDAYS

Algeria commemorates both secular and Muslim religious holidays. One major Muslim holiday is *Eid al-Fitr*, which comes at the end of the month of fasting called Ramadan. During the month, Muslims refrain from eating, drinking, or having sex during the daytime in order to reflect on God and on the plight of the unfortunate who do not have enough food. At the end of the month, Muslims celebrate for three days. The other major Muslim holiday is *Eid al-Adha*, which commemorates the willingness of Abraham, as well as his son, to obey God’s command in all things, even as Abraham was ready to sacrifice his son. This holiday falls on the last day of the *hajj* (pilgrimage to

Mecca), and pilgrims are expected to sacrifice a goat or sheep and to offer the meat to the poor.

Religious holidays are celebrated by going to the mosque for group prayers and then coming home to large meals with the family and visiting relatives. Muslims exchange gifts on religious holidays. Part of the feast is normally given to relatives and to the poor.

Secular holidays include New Year’s Day (1 January); the socialist Labor Day (1 May), which commemorates worker solidarity around the world; and Independence Day (5 July). Most businesses, banks, and government offices close on these holidays.

## 7 RITES OF PASSAGE

Children between the ages of 5 and 15 are required by law to attend school. After that, they choose their preference for secondary education from a general, technical, or vocational track. Exams taken at the end of their studies decide whether students qualify for continuing education in a university, a technical institute, or a vocational training center.

Major personal events that cause Algerian families to celebrate together include births, baby-naming ceremonies, male circumcisions, and weddings. Weddings are very joyous affairs and feature customs particular to the different regions of the

country. In general, marriage celebrations last for several days; the groom is responsible for the cost of the festivities. After days of singing and eating, the bride is carried off to her groom, and the union is followed by another week of celebrations.

## 8 INTERPERSONAL RELATIONS

Algerians shake hands when greeting one another, and kissing on the cheek between two good friends of the same sex is common. Religious men and women do not shake hands with persons of the opposite sex.

Most socialization revolves around the family. Guests are treated with great hospitality and are served pastries and sweets. Visitors to Algeria frequently find themselves invited to join strangers in tea shops and even in private homes.

Algerian men and women do very little private socializing together. The sexes are separated at most gatherings. Dating is not allowed, and marriages are therefore arranged by well-meaning families or matchmakers.

## 9 LIVING CONDITIONS

Upon the evacuation of the French forces, Algeria's health care system suffered. Many hospitals were destroyed by the departing French. Because of poor education, there were only 300 doctors in all of Algeria at the end of the war.

Since independence, Algeria has made great improvements in health care. After 1975, the government provided free national health care for everyone. In 1984, the government began shifting the focus of medical care to preventing disease. Instead of building large hospitals, clinics and health centers were built in many areas, and these provided free immunizations and health care. In 2007, Algeria spent 3.6% of its gross domestic product (GDP) on health care. The government spent \$104 per capita on health care in 2004. In 2002, Algeria had 2002 physicians, equivalent to 1.13 per 1,000 persons; there were 62,000 nurses, or 1.99 per 1000 persons.

Housing, on the other hand, has become a greater problem than it was at the time of independence. Initially, as hundreds of thousands of French left Algeria for France, many poor Algerians were able to move into vacant properties. Other poor Algerians began building shantytowns near the cities. Unfortunately, the government did not pay much attention to the need for housing. As Algeria's population grew, the number of homes remained relatively stagnant. Today, Algeria has an acute housing shortage, and many families live together in the same home.

Algerian houses and gardens are surrounded by high walls for privacy. Inside, most homes have a central open area or patio, which is surrounded by the rooms of the house. Homes have a receiving room, bedrooms, kitchen, bathroom, and, if the family is wealthy, a second patio. The outside of the house is usually whitewashed brick or stone.

In the 1980s, Algeria began investing heavily in transportation, though these investments were seriously derailed by the years of vicious violence. In 2004, there were 108,302 km of roadways, of which 70% were paved. There are approximately 4,000 km of railways. A rail line connects major cities and links Algeria with Morocco and Tunisia. Algeria has eight international airports, and its national airline, Air Algérie, links major Algerian cities and serves foreign destinations. There is frequent discussion of privatizing air travel in Algeria, but as of 2008, there were no private domestic carriers.

The Internet and mobile telephony are widely available in Algeria. In 2006, there were 21 mobile phone subscribers, 2.8 million land lines, 25 AM radio stations, 1 FM radio station, and 46 broadcast television stations. Algeria's Internet domain is .dz. In 2007, the country had 2,077 Internet hosts and 2.5 million regular Internet users.

## 10 FAMILY LIFE

Before the French occupation, Algerian family life was very traditional. Algerians lived with their extended families in tightly knit communities. A mother and father would live with their children in one home. The grandparents of the father would usually live with them. As male children married, they would bring their wives into the family as well. If a daughter became divorced or widowed, she, too, would live with the family. Children were raised by the entire extended family, and people in a town would pay close attention to the children of others in case they needed anything. Marriages were conducted by negotiation between the families of a bride and groom.

With the destruction of so many towns and villages by the French forces, extended family units broke down. Instead, Algerians developed loyalties to people who shared their particular predicament. A group of families living in a concentration camp, for example, developed loyalties to each other, similar to the blood ties of earlier times. In cities, the nuclear family started to predominate as more well-off Algerians began to imitate the French colons. The creation of modern, capitalist industry also turned most Algerians into hourly wage earners. Men and women alike worked in order to provide a minimum standard of living for their families.

In traditional Algerian society, women had generally been segregated in public life. Their primary responsibilities were raising children and taking care of home and husband. During the War of Independence, all this changed. Women were often involved in military battles, and some became commanders. Housewives became involved in planning resistance activities and hiding revolutionaries. The active participation of women led to a greater feeling of self-worth and greater self-empowerment among women. Men, too, began to change their perspectives as they learned to appreciate the contributions that women were making in all fields.

After independence, women were removed from the spotlight but continued to hold on to many of the gains they had earned during the war. As Algerian society has become more conservative in the face of economic deterioration, women's battle to maintain rights already won has taken on a greater urgency. In the last 10 years, women have become particularly politicized, engaging in demonstrations and more vocally expressing their interests.

## 11 CLOTHING

Two trends in clothing are currently visible in Algeria. Many Algerians, especially in the cities, dress in Western-style clothing. Many others, however, dress in traditional attire. Village men wear a *burnous* (a long hooded robe) and baggy pants, and women wear a *haik* (a long piece of cloth draped over the entire body and head). The *hijab* (a long, loose dress and hair covering) is an Islamic garment worn by many women.

During the civil war, traditional Algerian dress became politicized. The French banned women from wearing the hijab, but the prohibition had little practical effect. Women contin-

ued to dress traditionally, both as a sign of resistance to colonialism and because many Muslim women believe that their religion requires the modesty afforded by the hijab. Once independence was achieved, many women continued to wear hijab in public in order to gain greater public access. The hijab, it was felt, allowed them to interact with society as humans, not specifically as women. Recently, armed groups from the government and the opposition have begun assassinating women for dressing either in Western dress or in hijab, as they are viewed as expressing loyalty to either the military junta or to the Islamist opposition parties.

## 12 FOOD

Couscous is Algeria's national dish. It is steamed semolina wheat formed into tiny granular particles that are combined with other ingredients to make a main course. Couscous can be accompanied by meat, such as lamb or chicken, and/or mixed with a variety of vegetables. Algerians enjoy combining meat and fruit, and this combination is often served with couscous. The following is a Berber dish that combines all three North African favorites.

### Chicken Stuffed with Dried Fruit

3-1/2 pound chicken  
5 tablespoons olive oil  
1 onion, chopped  
1/4 cup pine nuts or chopped almonds  
1 cup mixed dried fruit (apricots, apples, pears, prunes, and raisins), soaked, drained, and chopped  
salt and pepper

Preheat oven to 325°F. Heat 2 tablespoons oil in a pan, and cook the onion until pale gold. Stir in the nuts and cook for 2 to 3 minutes. Add the dried fruits and seasoning. Let cool. Stuff the chicken with the dried fruit mixture and truss. In a large, heavy, flame-proof casserole, brown the chicken in the remaining oil. Sprinkle with salt and pepper, and lay the chicken on one side. Cover the dish and cook in the oven for 1-1/2 hours, turning the chicken every 30 minutes. Leave chicken breast-side up for the last 30 minutes. Serve the chicken and stuffing with couscous.

(from *North African Cooking: Exotic Delights from Morocco, Tunisia, Algeria and Egypt*, by Hilaire Walden)

Spices are used in abundance in Algerian cooking, especially cumin, coriander, and cinnamon. Couscous can be mixed with honey, cinnamon, and almonds to make a pudding-like dessert.

Pork and alcoholic beverages are forbidden by the Islamic faith. Algeria does, however, produce wine, which it exports to Europe.

## 13 EDUCATION

Algeria has made great advances in education. At the time of independence, fewer than 1 million children were enrolled in school. The government sent many teachers to be trained abroad and hired many teachers from other countries to help make up the shortfall. Schools were built and enlarged. By 1975, 1.5 million children were in school, and by 2004, 12.5 million were enrolled. The seriousness with which the government viewed education is evidenced by the country's expenditures in the area. In 2003, Algeria spent 40% of its budget on

schooling. The results can be seen in improved literacy rates. At the time of independence, only 10% of Algerians were literate. By 2007, fully 70% of the population had achieved literacy.

## 14 CULTURAL HERITAGE

Algerian literature stresses themes of nationalism, land, and tradition—elements that are considered vital to the decolonization process that Algeria has undergone. Perhaps the most famous French-language Algerian writer is Albert Camus, an essayist, playwright, and novelist. In 1957, Camus won the Nobel Prize in Literature. Another great Algerian French writer was Frantz Fanon, author of *The Wretched of the Earth* (1961), which is considered one of the great works of postcolonial literature. Algerian-produced films have gained acclaim worldwide. The 1982 Cannes Film Festival award was won by an Algerian, Mohammed Lakhdar-Hamina, for his film *Desert Wind*, about the lives of Algerian women within traditional society. By far the most famous Algerian film is the 1966 black-and-white classic *The Battle of Algiers*, directed by the world-renowned Algerian director Gillo Pontecorvo. It tells the story of the Algerian War of Independence against the French and features some of the actual guerrilla fighters in the film. It won the Grand Prize at the Venice Film Festival and was nominated for three Academy Awards in the United States: best screenplay, best director, and best foreign-language film.

## 15 WORK

Since independence, Algeria has worked hard to industrialize its economy. The costs of industrialization and social welfare have been met by oil and natural gas production. In 2007, oil and gas made up approximately 60% of Algeria's budget revenues, 30% of GDP, and 96% of export earnings. The country has the eighth largest natural gas reserves in the world and is the fourth largest gas exporter. Algerians have recently begun mining and exporting nonfuel minerals such as mercury, phosphate, and iron ore. Algeria's GDP growth rate in 2006 was 4.6%, outpacing most of Europe and the United States. In addition to these sources of employment, Algerian laborers manufacture electronics, building materials, plastics, fertilizer, paper, clothing, leather goods, and food products. About one-third of workers are employed in the industrial sector. Although in the 1980s and 1990s, many Algerians worked in the farm sector, in 2004, only 8.1% did. In all, 61% worked in industry. Algerians who do not find work at home are often successful at finding employment across the Mediterranean in Europe. Algerian workers are commonplace in Europe, especially in France.

## 16 SPORTS

Algeria's national sport is football, known as soccer in the United States. Football is popular both as a spectator sport and as a participation sport played by boys and men. In the city, boys play outside housing developments. Algeria has a national team that participates in matches organized by the African Football Confederation. In 2008, FIFA (International Federation of Association Football) ranked Algeria's national team 17th among the teams in Africa and 78th in the world. Algerians also enjoy horseback riding and swimming. Clubs that specialize in water activities are found along the Mediterranean coast.

## 17 ENTERTAINMENT AND RECREATION

Algeria's newspapers are published in both Arabic and French, and television shows are also produced in both languages. There are three radio networks, and each broadcasts in a different Algerian language—Arabic, French, and Berber.

Although Algeria has movie theaters, there are not enough for Algeria's population. Swimming pools in most cities and villages are very limited in number, and Western-style dance halls are almost nonexistent. Algerians are beachgoers. Summer resorts along the Mediterranean coast are popular with the middle class and are centers for swimming, water skiing, and tennis.

## 18 FOLK ART, CRAFTS, AND HOBBIES

Algerian handicrafts include rugs, pottery, embroidery, jewelry, and brass. Handwoven baskets are sold at *suqs* (markets) and used by customers to carry the goods they purchase.

## 19 SOCIAL PROBLEMS

The greatest problems facing Algeria today stem from the bitterness engendered by the long, vicious civil war. In addition to the hundreds of thousands of civilians massacred by both sides, the infrastructure of the country suffered great deterioration. The capital, Algiers, became an armed camp, with certain districts controlled by the military and the remainder run by the resistance. Both sides targeted civilians in order to spread fear and hatred.

Life has slowly returned to normal, but in 2007, several European tourists were kidnapped, some of whom died in captivity. Violence has returned to parts of Algeria since a lull in the late 1990s; though crime rates are significantly reduced, the trend is troubling for the country.

In 2007, the unemployment rate was 14%, and the percentage of the population living below the poverty rate was 25%.

The government is also faced with the question of what to do with the refugees from the disputed Western Sahara. According to 2006 estimates, 90,000 were living in squalid conditions in the southwestern part of the country. Additionally, there are approximately half a million internally displaced persons as a result of continued internal violence.

## 20 GENDER ISSUES

Human trafficking is a significant problem, particularly among sub-Saharan women, who are often promised transit through Algeria to the European Union but find themselves instead sold into brothels in Algeria or other destinations. Slavery is also a concern, particularly among orphaned children. During the bloody civil war, many urban, educated women sided with the moderates against the Islamists, fearing the imposition of strict Islamic laws. Still, as in many Islamic countries, many Algerian women gladly wear the abaya and the hijab, believing it to be a marker of modesty, a highly valued attribute in both Arab and Muslim culture, as well as a symbol of adherence to the teachings in the Quran.

# AMHARA

**PRONUNCIATION:** ahm-HAH-rah

**LOCATION:** Ethiopia

**POPULATION:** About 14 million

**LANGUAGE:** Amharic

**RELIGION:** Coptic Monophysite Christianity

**RELATED ARTICLES:** Vol. 1: Ethiopians; Tigray

## 1 INTRODUCTION

Among the many ethnic groups in Ethiopia, the Amhara are the most populous, representing about one-fourth of the population. Their language, Amharic, is the official language of Ethiopia. From the time when modern Ethiopia was the realm of Abyssinia, the Amhara and the Tigray filled the ranks of the political elite of the country, except when the Italians controlled Ethiopia as a colony from 1936–1942. Until 1974, all Ethiopian emperors were either Amhara or Tigray. In the 2000s, Tigray dominate the Ethiopian government. Amhara remain a dominant social force, however.

## 2 LOCATION AND HOMELAND

The traditional homeland of the Amhara people is the central highland plateau of Ethiopia. For over 2,000 years they have inhabited this region. Walled by high mountains and cleaved by great gorges, the ancient realm of Abyssinia has been relatively isolated from the influences of the rest of the world. Situated at altitudes ranging from roughly 2,100–4,300 m (7,000–14,000 ft) and at latitudes roughly between 9° to 14° north of the equator, the rich volcanic soil together with a generous rainfall and cool, brisk climate offers its population a stable agricultural and pastoral existence. However, because the Amhara were an expansionist, militaristic people who ruled their country through a line of emperors, the Amhara people can now be found all over Ethiopia.

## 3 LANGUAGE

The language of the Amhara people is Amharic. It is a Semitic language somewhat related to Arabic and Hebrew. Its origins derive from a Sabeian language spoken by merchants and traders who migrated into Ethiopia from the Yemen region of South Arabia about 3,000 years ago. This South Arabian population settled in the highlands of Ethiopia as farmers and traders mixed with those inhabitants already present. These earlier residents are known as the Agau people. Borrowing occurred from the Agau language and Amharic emerged as it is spoken today.

## 4 FOLKLORE

Amhara culture has a wealth of folklore in the form of proverbs, legends, myths, and religious parables and anecdotes. This folklore often teaches moral lessons to children and reminds adults of proper conduct. It also provides explanations for phenomena that are otherwise unexplainable to the average Amhara peasant farmer, since scientific explanations are most often outside the realm of Amhara knowledge. A good example which shows how a story weaves explanation into a cultural institution and reinforces that institution is the phenomenon

of menstruation. How does one account for this regular emission of blood when modern knowledge of reproductive biology is outside the realm of one's culture?

The Amhara culture is patriarchal and authoritarian, emphasizing the superiority of the male over the female. The Amhara people historically had an imperialistic, militant, and expansionist government led by highly capable emperors directing armies with superior military strategies. There is much in Amhara folklore idealizing the image of the Amhara warrior who vanquishes the enemy through the shedding of the enemies' blood. In the same way that a warrior sheds the blood of his enemy, according to Amhara folklore, so God has "cursed" woman, shedding her blood each month to remind her that she is the vanquished, the servant of her father and her husband. In return for her loyalty, she will be rewarded with healthy children, a large family, and a strong man to keep her family safe. There are also stories that teach that the enemy is not to be hated but is rather to be appreciated, because without an enemy, how is a warrior to prove his worth and establish his identity and status in his community and society?

## 5 RELIGION

The Amhara people are Coptic Monophysite Christians. The population was converted to Christianity in the 4th century AD and their form of the religion has changed very little, if at all, since its beginnings in Ethiopia. Ancient Amhara culture had a writing system, and there exists a wealth of texts that have preserved the ancient teachings of Christianity in a language that is not spoken by living communities today but remains the language of the Church, something like Latin does within the Catholic religion. This is the language of Geez.

Amhara Christianity is very unlike what Westerners recognize as Christianity. Ethiopian Christianity is loaded with Old Testament religion and folklore, as well as material often considered a part of so-called "pagan" religion. Hence, we can say that Amhara religion consists of four separate but interwoven realms of religious belief. First, there is the dominant Monophysite Christian religion, including the Almighty God, the Devil, and the saints and angels in Heaven. Second, there are the *zar* and *adbar* protector spirits who exact tribute in return for physical and emotional security and who may punish, in the case of the former, or neglect, in the case of the latter, for failure to recognize them through the practice of the appropriate rituals. Third is the belief in *buda*, a class of people who possess the evil eye and exert a deadly power over the descendants of God's "chosen children." The fourth category of beliefs includes the ghouls and devils that prowl the countryside, creating danger for unsuspecting persons who cross their path. Although the Christian beliefs have been practiced since nearly the beginning of Christianity, the "pagan" elements probably go back much further.

## 6 MAJOR HOLIDAYS

Each and every Amhara person has a patron saint who is recognized on that saint's day. The celebration involves the host throwing a party for relatives and friends at his or her homestead, serving coffee and small treats, and having hours of conversation. There are major saints' days that everyone will celebrate. Sts. Mary (Mariam), Michael (Mikaeyl), Gabriel (Gahbrieyl), and George (Giyorgis). On these days chickens, sheep, or goats may be slaughtered for feasting. But there are

also over 200 days of the year in the Coptic Christian calendar which prescribe fasting, such as Easter. There are also secular holidays such as Battle of Adwa Day, celebrating the victory over the Italians in 1896, and Freedom Day, celebrating the driving out of the previous communist dictatorship in 1991.

## 7 RITES OF PASSAGE

Marriage and death mark two major rites of passage in Amhara society. In a society where the virginity of the girl is highly valued, she is very often married very young, normally shortly after her first menstruation, but sometimes even earlier. Marriage is an elaborate celebration involving gift-giving negotiations and reciprocities, feasting, date-planning, new house-building for the couple, and so on. The day of the actual wedding is an all-day, all-night party involving feasting, drinking, and intense conversation. The bride's virginity must be proven after consummation of the marriage by a show of blood on a cloth. In the Amhara warrior tradition, the men in the wedding party wave the cloth like a flag of victory, put it on their heads, and dance and sing and drink to celebrate the victory and the consummation of the marriage. If the bride does not shed blood, implying that she is not a virgin, she risks the punishment of being hung upside down in a tree and semiasphyxiated over a smoky *qoso* fire. The groom may take a piece of glass or a razor blade to bed with him to assure that blood is on that cloth in order to preserve his honor (marrying a woman who is not a virgin is considered dishonorable).

The ritual of death is a very quiet affair. Upon the passing of an aged person the body is washed, wrapped in new funerary clothing, and, within 24 hours after death, is carried in a woven straw mat to the church, where it is buried, accompanied by the prayers of the priest. The death of a person who is younger, by accident or disease, is a time of great shock and sadness and often involves much more community activity. For a period of time after the burial, relatives and friends will come to the house of the deceased and sit for a time in quietude. The host will serve coffee, bread, and small snacks to the visitors, who offer their prayers and condolences and depart.

## 8 INTERPERSONAL RELATIONS

The Amhara espouse an ancient feudal culture with a considerable elaboration of outward formalities. There are prescribed behaviors of deference to persons of higher status, and a rich inventory of proverbs and parables that teach proper conduct in numerous types of situations: public behavior of children with parents and older relatives; women with their husbands; or men with older or more powerful men. But among status equals—children among themselves; men together in informal situations, such as in beer houses; women enjoying coffee together; men and the women they are with privately—here there is informality and the free expression of feeling.

## 9 LIVING CONDITIONS

The traditional peasant Amhara lead a life that has not changed much in the past few thousand years, because they practice an ancient form of agriculture which involves ox-drawn plow, simple irrigation techniques or complete dependency on rainfall, and simple tools for harvesting their crops of wheat, barley, hops, beans, and an Ethiopian grain called *teff*. In times past, the cool, temperate highland plateau was blessed with a fertile volcanic soil and ample rainfall to make possible three

harvests per year. In recent times, the drought and famine of the 1980s, which continues in parts of the highlands to this day, has affected other regions of Amharaland. Because the new government, which took over in 1991, is unsympathetic to the Amhara people, they continue to suffer hardships from the climatic disaster, as well as from political discrimination.

In the city, the Amhara live among peoples from many other cultural groups in tightly clustered contiguous villages. Their houses are built of mud, with corrugated iron roofs. Some travelers have called Addis Ababa “the city of iron roofs.” Families most often have either latrine-type toilets or no human waste disposal system at all. In most cases water is acquired from a public pipe located amid these settlements of crowded communities.

## 10 FAMILY LIFE

Both peasant farmers and city residents value large families. Married couples seek to have many children. Parents who have seven living children are considered to be blessed by God. Children represent a source of economic support when they are grown, a form of social security for the parents in their old age. Many children in a family promise many grandchildren who are a joy to be with, and a promise of carrying on family traditions. A family lives and works together. The day begins at dawn. The woman boils the water, roasts the coffee beans, and pounds them into the grounds that are brewed for the morning coffee. She prepares the breakfast, which is often the leftovers from dinner the night before. The children eat first

An Amhara woman with her child in Ethiopia.  
(Robert Caputo/Aurora/Getty Images)

and are sent on their errands that contribute to the tasks of the household. Then the husband eats his breakfast. In the city the husband will go off to work, if he has work, while the wife remains in the village caring for hers and other children of relatives and friends. Often women have their own jobs to go to; many women own coffee or beer houses or work in hair salons. One commonly sees an unrelated child working in the house, taking care of a baby and doing simple household chores. This child may be an orphan or one who was abandoned in the streets of Addis Ababa because of extreme poverty.

### **11 CLOTHING**

The Amhara live at cold, high altitudes. Even the capital city of Addis Ababa lies at about 2,300 m (7,500 ft). Therefore, Amhara clothing is designed to conserve body heat. The Amhara of the city today commonly wear familiar Western-type clothing made in China, Singapore, and the Philippines. But many still prefer the native dress which consists of jodhpur trousers and long shirt, covered by a soft, sheet-sized cotton wrap called a *gabi*. This is worn by both men and women, but the style of these clothes varies according to the gender of the person. In the countryside, the Amhara do not wear shoes, but in

the towns and the city shoes are generally worn to protect the feet against the sharp debris of the streets.

### **12 FOOD**

The range of altitude in Ethiopia allows for a great variety of food crops to be grown. In the highlands the Amhara grow barley, wheat, hops, and a variety of beans. In the mid-range altitudes the farmer can grow millet and *teff*, another variety of wheat. The major export cash crop, coffee, is grown in this mid-range ecology. Coffee is an integral part of the Ethiopian cuisine as well as a major national cash crop for both internal consumption and export. In the lowlands, the Amhara grow the staple spice that is central to the cuisine of Ethiopia—cayenne pepper, which, together with a dozen other spices ground together, makes up the *berbere* sauce that is key to Ethiopian cuisine. Sugar cane is a major lowland crop the people cannot do without. Although Amhara cuisine is known to be very spicy, much of the vegetable fare need not be hot and spicy and may be favored by people with sensitive stomachs. The rate of coffee consumption is one of the highest in the world, although tea is also a very popular beverage. The eating of pork is forbidden by the Christian Amhara.

### **13 EDUCATION**

The Amhara have traditionally seen formal education as under the authority of the Ethiopian Coptic Christian Church. In modern times, encouraged by the last emperor, Haile Selassie I, secular education has become a dominant institution in the urban areas, and to a lesser extent in the countryside as well. Although in the towns and countryside secular education would appear slow compared to the Western view, in the city and in some towns Western-sponsored educational institutions provide a decent enough education to allow their students to enter the Addis Ababa University. This university provides good training in political science, economics, history, and anthropology. Many students today may attend institutions for graduate education in Europe and America, studying medicine as well as the above subjects.

### **14 CULTURAL HERITAGE**

Some 3,000 years ago, Semitic-speaking people (very likely including Jews) from South Arabia crossed the straits of Babel-Mendab into the highlands of Ethiopia. Discovery of the fertile soils there then brought farmers as well as traders and merchants. They brought with them agricultural skills which included terracing, irrigation, canals, hydraulic devices, the plow, and the camel. They were also skilled in weaving and making incense. They brought a writing system consisting of a 256-character syllabary, and they practiced sophisticated techniques of construction which included stone-masonry. They also were familiar with and established a large-scale political system which enabled them eventually to evolve a centralized empire. The earliest and most notable example of this was the city-state of Axum where, in the mid-4th century, the emperor Ezana converted his people to Christianity.

### **15 WORK**

In the countryside, work roles and specific tasks are segregated according to age and sex. Children collect cow dung from the fields, throw it into a hole, mix it with water, and make cow

pie batter which is then shaped into round, flat pies and dried to use as fuel for the hearthfires. Women carry water back to their homesteads in large, round, narrow-necked clay jugs that can weigh over 45 kg (100 lbs). They also grind the grain, make bread from the flour, prepare the meals, and make the beer and liquor. Men plow the fields, cut the grain, litigate in court, and serve in the local militia. Both men and women look forward to the weekly market day when goods are bartered, bought, and sold, and a good deal of social activity is enjoyed. In the towns and city, numerous small businesses flourish, selling everything imaginable, and other forms of wage-labor can be found, if one is fortunate. Beggars are a very common sight in the city, and include ex-soldiers from the losing side of the recent civil war; mothers with their infant children in their arms; old men and women with no means of support; and children whose families have been lost in the war, from disease, or who have simply abandoned them because of extreme poverty.

## 16 SPORTS

Soccer, known as “football,” is a passion among most Ethiopians. Running is also a very popular sport, as well as a mode of physical conditioning. Amhara and other Ethiopian individuals are prime marathon runners because the high altitude prepares them well for competition in other countries. There is also the traditional sport of *ganna*, which is somewhat like hockey. The whipping contest carried out on the holiday of *Buhe* is a test of Amhara endurance and toughness. In this contest, two teams come together on a “battlefield” and whip each other until one team flees or is so badly beaten that the elders proclaim the other team the victors. This is a true test of Amhara masculinity and warrior abilities, traits which are emphasized in Amhara culture.

## 17 ENTERTAINMENT AND RECREATION

In the countryside, children make their own toys such as dolls, animals, weapons, cars, etc., out of mud, sticks, rocks, rags, tin cans, and the like. Male youth engage in competitive sports. Adults drink in the drinking houses, sing, dance, gossip, and patronize the minstrels who travel from village to village singing of the news and gossip in other villages and in the city and towns. The city offers much more in the form of movie houses, electronic game parlors, drinking houses and night clubs, television videos (a booming business in Addis Ababa), and organized sports.

## 18 FOLK ART, CRAFTS, AND HOBBIES

Amhara painting is a dominant art form in Ethiopia. It is usually oil on canvas or hide, and it normally involves religious themes. Paintings from the Middle Ages are known by art historians from Europe and America as distinct treasures of human civilization. The Amhara are also weavers of beautiful patterns embellished with embroidery. They are also fine gold- and silversmiths and produce delicate works of filigree jewelry and religious emblems.

## 19 SOCIAL PROBLEMS

Haile Sellassie I, Emperor of Ethiopia, was the last in the line of Amhara kings who ruled Ethiopia for almost 2,000 years, with the exception in the Middle Ages of a few incursions from the Falasha Black Jews of the Simien mountains, led by the zeal-

ous Queen Gudit, and Islamic invaders, led by Ahmed Gragn. There were also Italian incursions at the end of the 19th century and again just prior to World War II. The bloody so-called “communist” revolution of 1973 ended the Amhara reign and, with drought and famine raging in the north, threw much of Amhara society into chaos. The overthrow in 1991 put an end to both the brutal dictatorship and the 30-year civil war, but it also left large segments of the Amhara people dispossessed of their land, split from their families, and more impoverished than ever before. Many thousands of Amhara, individually or with families, migrated to towns and the city of Addis Ababa to find a source of food to stay alive, and to try to establish a life until their land could be regained, if at all possible. Because people from many other cultural groups were also migrating to the city, Addis Ababa became overpopulated. Once a lovely city supporting a population of about 600,000 in the mid-1960s, by the 2000s it had swelled to nearly 4 million people.

Amhara men, farmers without city-adapted skills, could only look for day labor or go begging in the streets. Women could cook or sell beer and soft drinks in little mud huts or kiosks. If they were young and attractive, they could work in bars and prostitute themselves making much more money than domestic work could bring. Poverty has driven a preponderance of Amhara women to engage in prostitution either part- or full-time, their ages ranging from around 9 or 10 to 25 or 30 years old. The diseases of poverty accentuate the problems: HIV, tuberculosis, a variety of intestinal bacterial infections, internal and external parasites, leprosy, elephantiasis, schistosomiasis, roundworms, and tapeworms are all widespread. Current efforts to solve these problems have been too few and too weak to make any significant impact on the poverty in one of the poorest nations in the world.

## 20 GENDER ISSUES

Sexuality and gender have always been issues to be worked out in traditional societies the world over. The underlying motivations include: a) explaining bodily functions, mainly of women, b) creating symbolic distinctions between the sexes through ritual and genital excision, c) maintaining male domination over reproductive females, and very importantly, d) to create a level of efficiency in work roles—who can do what work best.

Amhara organization of gender roles and the issues that arise from this, especially in modern times, are no exception to these general categories. Amhara women, as in all living species, conceive, gestate, and birth their young. The mother nurses her infant with the milk in her breasts. If she bears twins or if she hasn't enough milk for her child she may seek a lactating woman, a “wet nurse” who has either lost her child or is still lactating shortly after weaning her own child. The most fundamental bond of humans, that of mother and child, prepares the mother to nurture the child through infancy. During infancy the Amhara child is not given its Christian name until it is five years old and strong enough to survive. Until then it is called a pet name which may have no gender reference, such as “pretty little one” or “my lovely.”

At forty days the male infant is circumcised. This is performed by a specialist who is expert in this operation and it is relatively simple with very little incidence of complications. After eighty days the female infant has an excision ceremony. This has some variation depending on what part of Amharaland one is in. In the central highlands of Manz the labia mi-

nor are excised with a scissors or razor blade. In the region of Gojjam, to the northeast of Manz, the clitoral hood is excised, leaving the clitoral organ exposed. These genital operations are relatively mild compared to those performed in other regions of Ethiopia and Africa. In modern times we see these customs disappearing in the capital city of Addis Ababa and the larger towns, but in the remote rural regions ancient customs prevail.

Amhara women are therefore much more closely tied to their children and the nurturance-based work roles of the homestead. Mothers teach and discipline their young children relative to their age. The work of girls and women include carrying water in large clay vessels on their back, fetching firewood and dung for fuel. When children are available they will retrieve dung and make dried cakes preparing it for fuel. Women clean, separate, and grind grain for either flour or fermentation in making beer or for distillation in making liquor. Women's work begins often before dawn and ends near midnight.

The work of men includes preparing the soil with ox-drawn plow, seeding their apportioned land with the start of the light rains. Then he has little to do until his crops are ready for harvesting. He normally enjoys life at the bars, traveling to see relatives, litigating in the court. But plowing is very hard work. Cutting the barley or wheat or bean crops is tedious. It is his work to slaughter the chickens, sheep, goats, and cattle when the occasion arises. The man is also the hunter when opportunity allows. Certain game on the highland plateau of Ethiopia are endangered species such as the Walia Ibex, Gelada Baboon, Lammergeier Vulture—a majestic bird with a ten foot wingspan, and Semien Wolf. There is protection for these animals yet, the meat of the Ibex, a species of mountain goat, is highly valued and the luxurious main of the Gelada Baboon is worn as a headdress on certain ceremonial occasions.

These gender-defined roles have been fixed by three thousand years of tradition. They have served to adapt and survive these highland populations. But in times of culture change in the more urbanized areas, who are now more in touch with world media and modern technology, culture change is evident. An amendment to the constitution of the present government has a section devoted to the rights of women. Where traditionally girls were frustrated from or directly prevented from going to school, today a girl has the right to an education. A girl's work in the home was important and much needed, but parents are realizing that a girl's education may create opportunities for her to contribute to the family in other ways. Health facilities are becoming more available to women who have had complications in birth or gynecological problems stemming from excision or infection. The Fistula Hospital was the first in the world to treat and surgically repair women torn from birthing through excision adhesions. Oprah Winfrey publicized this hospital in her drive to abolish female genital excision. Women now have greater access to legal services to address problems with husbands or to argue for higher wages or to litigate her fair share of inheritance. And today it is easier for women to enter into the political arena and serve in office. Women's Affairs Offices, called setoch guday in Amharic, are evident in many towns in the Amhara region and serve the women who seek them out. The Women's Affairs Agency is aggressively promoting the education of sex-workers in how to prevent HIV/AIDS or seek help after infection.

# ANGOLANS

**PRONUNCIATION:** ang-GOH-luhns

**LOCATION:** Angola

**POPULATION:** 15 million

**LANGUAGE:** Portuguese, Ovimbundu, Mbundu, Kongo, Chokwe, and other Bantu languages

**RELIGION:** Christianity (Catholic and Protestant); indigenous religious beliefs

**RELATED ARTICLES:** Vol. 1: Bakongo

## <sup>1</sup> INTRODUCTION

The territory within the boundaries of the Republic of Angola has had over 500 years of contact with the Portuguese, much of it conflictual. In 1482 the Portuguese established forts and missions along the coast and converted King Alphonso of the Kongo to Christianity. His kingdom maintained perhaps the most harmonious and equal relations with Portugal, engaging in cultural and economic exchanges.

This relationship changed dramatically with the demand for slaves. Beginning in 1483 slave trading began along the coast, penetrated to the interior in the 1700s, and subsequently passed through a series of bans. The first of the bans was in 1836, and although the Portuguese formally abolished slavery in 1875, it was not until 1911 that the slave trade ended.

Portuguese settlement in Angola began earnestly in 1575 with the founding of Luanda, originally a settlement of convicts. However, Angola's great economic potential beckoned Portuguese colonists who in the 1840s arrived in considerable numbers and began cultivating cotton, sugar, sisal and coffee. They also engaged in fishing. With the consent of the European powers, Portugal determined Angola's borders in 1891. In the early 1900s newly developed cacao and palm oil plantations were soon followed by diamond mining. Economic prosperity led to the designation of Angola as a Portuguese overseas territory in 1951. A year later, Portuguese immigrants began to flood the first *colonatos*, planned settlement projects. The Portuguese had a policy of "whitening" the population, and it became state policy for Portuguese men to go out and impregnate Angolan women. Further efforts were directed at culturally assimilating these and other Angolans under the *assimilado* policy. By 1960, only 80,000 of a population of 4.5 million people enjoyed the privileges of Portuguese citizenship, and the policy was abandoned.

Angolan resistance movements pushed back against Portuguese colonization. The People's Movement for the Liberation of Angola (MPLA) led by Agostinho Neto, the National Front for the Liberation of Angola (FNLA) led by Bakongo leader Holden Roberto, and the Union for the Total Independence of Angola (UNITA) led by Ovimbundu leader Jonas Savimbi engaged in armed resistance. The 1974 coup in Portugal, which brought down the government, ended Portugal's colonial wars in Angola as well as in Mozambique and Guinea Bissau. After a protracted struggle and two separate declarations of independence by the MPLA and UNITA, Angola gained its independence from Portugal on 11 November, 1975.

Shortly after independence, the coalition government of the MPLA, FNLA, and UNITA collapsed. Civil war followed, lasting nearly 15 years. With the Cold War in full swing, the

Soviet Union backed the ruling MPLA with the assistance of Cuban troops. The United States, Zaire (now the Democratic Republic of the Congo), and China supported the UNITA-FNLA coalition, and South Africa made periodic incursions in support of UNITA. José Eduardo dos Santos succeeded Neto upon his death in 1979. In 1989, dos Santos and Savimbi agreed to elections and foreign withdrawal, completed in 1991. In the first round of the 1992 elections, UNITA perceived that electoral fraud was underway and launched simultaneous attacks around the country. In 1994, the two sides signed a peace treaty guaranteeing UNITA a share in the government and providing for the deployment of a UN peacekeeping force. Nonetheless, heavy fighting resumed intermittently up to Jonas Savimbi's death in a gun battle with government troops in 2002, which also ended UNITA's bid to overthrow the MPLA.

In the post-Savimbi era, the MPLA with international assistance disarmed, demobilized and reintegrated some 80,000 UNITA ex-combatants and thousands more of their family members into civilian life. However, head of state President José Eduardo dos Santos repeatedly postponed elections and manipulated political processes to forestall the promised transition to representative democracy.

## <sup>2</sup> LOCATION AND HOMELAND

Angola is bordered by the Democratic Republic of the Congo to the north, Zambia to the east, and Namibia to the south. Cabinda, to the north, is physically separated from the rest of Angola by the Congo River and a narrow corridor of land belonging to the Democratic Republic of the Congo. To the west lies the Atlantic Ocean. The total area is 481,354 sq mi (1,246,700 sq km). The capital is Luanda. Two types of terrain characterize the country: a narrow coastal plain borders the Atlantic Ocean to the west, and an interior plateau covers the rest of the country. The climate is semiarid in the south and along the coast; in the north it varies from cool and dry to hot and rainy.

Several major rivers find their sources in the centrally located Bié Plateau, including the Cunene River flowing to the south and west, the Kuanza River flowing northwest to the Atlantic, the Kwango River, flowing northward, which joins the Congo River to the north, and the Zambeze to the east, far below Victoria Falls. The Cunene River has four hydroelectric dams.

The tallest mountains are found in the region of the Bié Plateau. To the southwest, in the Serra Xilengue, Mt. Moco rises to a majestic height of 8,594 ft. While some areas are prone to flooding, others are threatened by desertification. Oil is the main natural resource, but Angola is also rich in diamonds, gold, copper, iron ore, zinc, and manganese. Only 2.65% of the land is arable; much of it is forest and woodland (43%), and 23% is meadow and pasture. Other uses account for 32%.

A network of roads connects most of the country, although it is least developed in the southeast. Three rail lines terminating at ocean ports run approximately east to west from the interior. The longest and most important of these originates in the Katanga copperbelt of the Democratic Republic of the Congo. Since 1928 the Benguela Railroad carried the bulk of Zaire's minerals to Lobito port until rebels sabotaged the line in the 1980s. In 2008 work to reopen the line was nearing completion.

In 2000 the population was estimated to be around 15 million and was projected to reach over 20 million by 2015. The largest city was Luanda with a population of 500,000. The majority ethnic group was the Ovimbundu, comprising 37.2% of the population. The Mbundu were second at 21.6%, followed by the Kongo at 13.2%, and the Luimbe-Nganguela and the Nyaneka-Humbe at 5.4% each. Smaller groups account for the remaining 17.2% of the population. Scattered in the arid lower third of Angola are seminomadic peoples, who until the 20th century hunted and gathered. They since have adopted more sedentary lifestyles such as herding and planting.

### 3 LANGUAGE

Portuguese is the official language, although 95% of Angolans speak Ovimbundu, Mbundu, Kongo, Chokwe, and other Bantu languages. Portuguese remains important because it is the language of government, national media, and international relations. However, since independence, African languages have been introduced into the primary school classroom. Literacy in African languages is being encouraged and regional radio broadcasts occur in local languages.

### 4 FOLKLORE

The Kongo ethnic group to the north claims descent from the ancient Christian kingdom founded by Alfonso I in the early 16th century. Alfonso I has assumed a great importance both to Kongo identity and to Portuguese international relations history.

The first president of Angola is also its greatest hero. Agostinho Neto was both a physician and an accomplished poet. He made many contributions to *Mensagem*, a literary review with anti-colonial goals. He belonged to a group of young intellectuals responsible for shaping the country politically and culturally. Their battle cry in the early 1950s was, "Let us discover Angola." They also coined the term, *angolidade* (Angolity), Angola's equivalent of *negritude* or "Africanization." In 1955 he published nationalist poetry. He was the founding father of the resistance movement, MPLA.

### 5 RELIGION

Angolans are extremely Christianized with as many as half of the population identifying themselves as Catholic and at least 15% as Protestant. Estimates of traditional religious practices vary, but it is likely that close to half of the population also believes or subscribes to some form of indigenous religion. The Catholic Church has at times been identified with colonialism, and therefore has gone through periods of conflict with the government. In 1949 Simon Mtoko, a Protestant, founded a Christian sect patterned after the Kimbanguists of Lower Congo (DRC). Kimbanguism, an African offshoot of Protestant Christianity, is practiced by an undetermined number of Bakongo in the northwest region of the country (see **Bakongo**).

### 6 MAJOR HOLIDAYS

Independence Day, November 11, is the national holiday. On this day the president usually makes a national address, and celebratory events such as wheelchair races are held. Other public holidays include the Day of the Martyrs in January to commemorate a huge massacre of Angolans committed by the Portuguese; *Inicio de Luta Armada* (Commencement of Armed Struggle Day) on February 4 (1961); National Hero's Day (anniversary of the birth of President Neto) on September 17; and Foundation of the MPLA Workers' Party Day on December 10 (1956). Victory Day is on March 27, Youth Day on April 14, Armed Forces Day on August 1, and Pioneers' Day on December 1. The most recent holiday is Reconciliation Day on April 4 to mark the anniversary of the end of the war approximately two months after the death of Jonas Savimbi.

Christian holy days and New Year's Day are widely celebrated. On Christmas and New Year's Day friends assume godmother (*madrinha*) and godfather (*padrinho*) relationships. They take turns giving gifts to each other; one offers the other a gift on Christmas and the other returns the gesture on New Year's. In the capital, young people are likely to spend New Year's Eve with their families until midnight, just long enough to taste some champagne, and then head for the night clubs with friends until early morning. Angolans celebrate *carnival*, (Mardi Gras) the Tuesday immediately preceding Ash Wednesday.

### 7 RITES OF PASSAGE

Indigenous traditions revolving around birth, puberty, and death still persist despite acculturation to Christianity and Western customs. For example, the Mbwela people hold masked festivals during the *mukanda* circumcision rite. In the ceremony, the *ndzingi* (masked anthropomorphic giants) dance for the young boys. Christianity has influenced the rites of passage for a majority of the population. Birth, baptism, marriage, and funeral ceremonies are marked by church rites.

*Classroom in Luanda, Angola. Schools continue to struggle against social instability, low investment, and teacher shortages. (Jason Laure)*

People drink champagne and give gifts to celebrate the birth of a child. Some funeral celebrations last for days and are accompanied by feasts and drink. They can move quickly from sadness to festivity where it is fitting to celebrate a life fully lived (as opposed to mourning the loss of a child or young person).

## **8 INTERPERSONAL RELATIONS**

High value is placed on personal relationships and greetings are essential to making and maintaining good relations. The most common greeting is the Portuguese *Ola* (Hello) followed by *Como esta?* or *Como vai?* (How are you?). Depending on the time of the day, one might hear *Bom dia* (Good morning), *Boa tarde* (Good afternoon), or *Boa noite* (Good night). Handshaking is common. A kiss on each cheek is becoming an accepted greeting among friends in urban life, although older people prefer to shake hands. Pointing is considered rude.

Young people usually choose their own spouses, but it is viewed as risky to wed someone who may not be able to bear children, and it has become customary for a serious boyfriend to wait until his girlfriend becomes pregnant before proposing marriage. In fact, the end of budding love relationships is seldom formally declared so that at some future point the boy can return and resume a sexual relationship with a former girlfriend. Once engaged, the boy brings his family and a small delegation of friends to visit the family of his girlfriend. It is common practice for the boy to bring enough cloth for his girlfriend's mother to make a dress, a western suit and tie

for the father (or ranking father figure), drinks for the family and friends, and perhaps an envelope with money and a written note explaining intentions to be read before all gathered.

As sexual intercourse is considered a normal part of life, straight men and women may have occasional interludes with members of the same sex, and such encounters do not lead to anxious self-questioning about sexual orientation.

## **9 LIVING CONDITIONS**

Living conditions deteriorated dramatically, especially for the Ovibundu over the course of the civil war, and have not returned to pre-war levels. The majority of Angolans still do not have access to clean water, health care and medical facilities, and a dependable food supply. Some 10 million people live on less than \$1 a day, over 40% of children under the age of five are underweight for age, and life expectancy for the average adult is 45 years. On the Human Development Index, which measures general well-being (life expectancy, education, and standard of living), Angola ranks 162nd out of 177 countries.

Houses are typically made out of local materials, with mud or cinderblock walls and thatched or galvanized iron roofs. In Luanda, where space is limited, apartment living is becoming more common. However, since 2002 more than 50,000 people have been evicted from their houses to make room for luxury housing in Luanda.

## 10 FAMILY LIFE

Families tend to be close-knit nuclear units with strong extended kin relationships. Until the war, there was little need for orphanages or hospices as working family members took in those needing special care. However, the large number of casualties and land mine victims in the prime of life has meant that children, elderly people and kin have had to assume greater responsibility for their families, which has raised tension and stress in family life.

Most ethnic groups are both matrilineal and patriarchal, meaning that males inherit from their mother's brother. In the Mbundu ethnic group, a daughter would join her husband in his village, and a son would join his mother's brother's village. The Ovimbundu ethnic group has a double inheritance system, both matrilineal and patrilineal.

## 11 CLOTHING

In the towns and cities, Western-style clothing is common and urban Angolans go to great lengths to be in sync with the latest fashions in clothing, accessories, cell phones, and sunglasses—much of which is imported from Brazil. Angolan youth prefer casual jeans and T-shirts, except for special occasions. The villages remain more traditional, where women wear *panos*, African wrap-around batik garments. Body tattoos on young people are catching on, but are rare in rural areas. Some groups such as the Mukubao in the southern province of Kuando Kubango are very traditional and do not wear clothing.

## 12 FOOD

Those who can, eat three meals a day. A good breakfast consists of bread, eggs, tea, or coffee. On occasion, mothers may prepare a special breakfast treat of sweet rice (*arroz doce*), which is a mixture of rice, milk, eggs, sugar, and a twist of orange or lemon rind for flavoring. If the noon-day meal is heavy, something light like soup will be served for supper.

The staple foods include cassava, corn, millet, sorghum, beans, sweet potatoes, rice, wheat, and bananas. Typical noon-day meals in the north consist of a ball of manioc dough called “fungue bombó” (cassava flour mixed with boiling water) with fish, chicken, or meat. People everywhere enjoy pounded cassava leaves (*kizaka*). In the south a maize meal dough ball is preferred called “fungue” or “pirao” in Portuguese.

Specialty dishes include *mwamba de galinha*, a palm-nut paste sauce in which chicken, spices, and peanut butter are cooked, creating a delightful aroma. The abundance of fresh and saltwater fish provides the opportunity for an unusual combination of fresh and dried fish in a unique dish, *kalulu*, the key ingredients of which are African eggplant, gumbo, and red palm oil. Beans cooked in palm oil also are popular. However, *cabidela*, chicken cooked in chicken's blood sauce and eaten with rice and cassava dough, stands out as one of Angola's mouthwatering delights.

Angolans also drink a lightly fermented corn beverage called “kissangua.” A version of this drink is made from sprouted whole sorghum grains. It is lacto-fermented, slightly alcoholic, fizzy, and highly nutritious.

## 13 EDUCATION

Education is compulsory between the ages of 7 and 15 years, and is provided free. However, at the primary level education

tends to be of low quality, and high schools are rather elite. For both girls and boys, primary enrollment is 37% while secondary enrollment is 18%. Overall, 56% of males are literate compared with 28% of females. Schools continue to struggle against social instability, low investment, and teacher shortages. Private schooling exists, but is costly.

Angola has two well-established universities: The Catholic University of Angola (CUA) and Agostinho Neto University, the public university in Luanda. However, the three campuses of Agostinho Neto have been devastated by poor economic conditions resulting from the war. Other universities include the Universidade das Lusiadas with a campus in Benguela and one in Lobito. Parents who can manage it, send their children to study abroad in Cuba, Russia, and more popularly, the United States.

## 14 CULTURAL HERITAGE

As in most of sub-Saharan Africa, orality has characterized literature in Angola since time immemorial. It is generally agreed that written literature began in 1850 with a book of verse by José da Silva Maia Ferreira. Since 1945 and the liberation struggle, strong links developed between literature and political activism. Many MPLA leaders and members, including Agostinho Neto, took part in this movement. From 1975 until the early 1990s, Angolan writers had to be affiliated with a quasi-governmental organization in order to be published.

Music is closely linked to African oral history. Angolan musicians made their own instruments such as *clochas* (double-bell) and marimbas. Percussion, wind, and string instruments are found throughout the regions. The bow lute (*chilhumba*) is played in the south during long journeys; the lamellophone (*likembe*) is popular in the east. Musical performances often include dancing. Members of the Ngangela ethnic group in the east dance masked. The choreography is distinguished by a young woman catching a man on her shoulders.

Traditional music has strongly influenced popular music. While older people may enjoy Angolan music from the 1970s, young people prefer upbeat rhythmic Angolan *kizomba* music, danced closely together by couples. Cape Verdian music is also considered *kizomba* and is popular. Angolans love their own “semba” music, which has complex secondary and tertiary rhythms that accompany the main beat. Couples dance *semba* much like *kizomba*, but the steps are authentically Angolan. Much of the internationally known Angolan music goes by the name “bonga,” but really is *semba* music. Because many Angolan professionals were educated in Cuba, the older crowd also appreciates Cuban and “bachata” music from the Dominican Republic. In the late 1990s, techno music, “kuduru” (literally “hard ass”), became the rage among young Angolans. Kuduru is strongly syncopated, uses rap lyrics, and provides a break from close dancing.

Angola's cultural heritage is tied to the Portuguese language and to a colonial past shared by four other African countries. Along with Mozambique, Guinea Bissau, Sao Tomé and Príncipe, and Cape Verde, Angola is a member of “The Five,” meaning the African Lusophone countries. They meet regularly to promote culture, trade, and political relations among themselves. Many new buildings in Angola reflect influences of 15th-century Portuguese architecture, some of which still stands. For example, ancient forts, churches, and homes built by Portuguese colonists are found around Luanda.

## 15 WORK

Labor and productivity in Angola suffered immensely from the abrupt departure of 90% of the white settlers in 1975. Before leaving, however, the colonials destroyed factories, plantations, and transportation infrastructure. Owing to the subsequent insurgency, the labor force never fully recovered. Today some 71% of Angolans are engaged in agriculture, but mostly in subsistence, which produces only 10% of the gross domestic product (GDP). By contrast, only 10% of the population is engaged in industry, which accounts for 62.6% of the GDP. Angola's cash cow is petroleum, and provides 89.9% of Angola's exports while diamonds provide 5.5%. However, with the exception of artisanal diamond mining, neither is a major provider of jobs. Recently, many young people have found jobs in teaching and in health services. Many Angolans living on the coast supplement their income by fixing up and renting out their homes.

## 16 SPORTS

Soccer is the most popular participant and spectator sport, played by both girls and boys. In 2006 Angola was one of only four sub-Saharan countries to qualify for the World Cup. The "Citadel" in Luanda is one of Africa's largest stadiums. A new spin on soccer is "fustal," which is played indoors or outdoors on smaller courts in urban areas. Competitions often are organized between members of the television and radio stations for special entertainment. Basketball is also popular. Since winning its first-ever basketball medal at the Nairobi University Games, the Angola national team won three consecutive All-African championships. Backboards and baskets have sprung up on street corners everywhere. Handball, volleyball, and track and field round out the most popular sports. Angola also has nearly a dozen international chess masters. Children enjoy a traditional game, *ware*, which is played by moving stones around a board either carved from wood, or dug out of the clay soil.

## 17 ENTERTAINMENT AND RECREATION

The advent of the satellite dish has made television an increasingly popular form of entertainment in Luanda and other urban centers. The dishes are status symbols and allow Angolans to supplement the government-run station with an array of channels from all over the world. Angolans connect with world popular culture by watching Brazilian shows (in Portuguese), MTV, and American movies with Portuguese subtitles. Residents in apartment buildings lower their costs by sharing the same satellite dish. While cinemas remain a more popular form of entertainment up-country, video rental stores are mushrooming in Luanda, and home video is part of an urban trend toward home entertainment.

## 18 FOLK ART, CRAFTS, AND HOBBIES

Luanda's three museums, including the Museum of Anthropology, contain a fine collection of African art and handicrafts. Non-commercial masks and sculptures vary according to ethnic group, and symbolize rites of passage or changes in seasons, and play important roles in cultural rituals. Artisans work with wood, bronze, ivory, malachite, and ceramics. The Lunda-Chokwe in the northeast provinces are uniquely known for their superior plastic arts.

Ten years ago, the Ministry of Culture stifled art by monopolizing control over art production and marketing. Recent deregulation has made handicraft production a blossoming cottage industry. Stylized masks, statuettes, and trinkets (airport art) now flood the popular Futungo tourist market on the outskirts of Luanda. This art may not reflect the deep cultural beliefs of the people, but it provides work and a source of income for people with artistic skills. Shoppers at Futungo market are treated to musicians playing traditional instruments such as *marimbas*, *kissanges*, *xingufos* (big antelope horns), and drums, giving the feeling of a village festival.

## 19 SOCIAL PROBLEMS

Angola's social ills are myriad. The country still has between 2 to 10 million land mines buried in roads, trails and fields. At least 80,000 people have suffered injuries from those mines and are in need of psycho-social counseling and healing. Ex-combatants are especially susceptible to lawlessness and vice, and they risk returning to the bush as a way of life. The Kimberley Process, launched in 2003, has helped to curb trade in "blood diamonds," but thousands of artisanal miners dig and pan for diamonds in alluvial pits. Many internally displaced persons (IDPs) are still without homes, land, and a dependable source of food. Poor governance and corruption are also rife. It is estimated that \$4.2 billion in oil revenues disappeared from government coffers between 1997 and 2002. If these revenues had been invested in Angola's social sector, poor health access, lack of shelter, unemployment, and low productivity could be things of the past.

## 20 GENDER ISSUES

As in many parts of Africa women work as hard as or harder than men, but enjoy fewer rights and privileges. Women cultivate the fields, gather wood and water, and do domestic chores. In the village, women typically raise between 6 and 12 children. Because abortion is legal only to save a woman's life, many abortions are performed in secret and under unsafe conditions.

The gap between women's rights in towns as compared to rural villages is quite pronounced. In urban areas, women have fewer children and compete for male-dominated jobs. They drive cars, study at university, vote, occupy non-combatative positions in the army, and serve as traffic policewomen. In recent history, five women ministers have led government ministries including oil, fisheries, and culture. Five women are Public Ministry magistrates, and there are three women judges. After the 1992 elections, women won 9.5% of the seats in the legislature, although 5% fewer than in the First Republic. One woman heads a political party and was a candidate in the 1992 elections.

Women's rights groups such as the Organization of Angolan Women are helping to establish literacy programs and health units for women, and ensure that polygynous families have sufficient wealth to support more than one wife.

## AZANDE

**PRONUNCIATION:** uh-ZAHN-day

**LOCATION:** From upper Nile basin in the southern Sudan to the borders of semitropical rain forests in the Democratic Republic of the Congo

**POPULATION:** 3.8 million in all countries

**LANGUAGE:** Azande (Niger-Congo group)

**RELIGION:** Beliefs revolving around ideas associated with *mangu* (witchcraft); Christianity

**RELATED ARTICLES:** Vol. 1: Sudanese; Central Africans; Congolese; Zairians

### <sup>1</sup> INTRODUCTION

The ethnic term *Azande* refers to a culturally diverse group of peoples who, over the past 200 years, have been brought together under the governance of a number of distinct kingdoms. They call themselves Azande but others call them simply *Zande*. Other alternate names are Azande, Zandi, Pazande, Sande, and Badjande. Little is known of their history prior to this period and reliable first-hand accounts of the Azande only began to appear toward the middle of the 19th century. By the 1950s, however, the Azande had become well-known to anthropologists through the ethnographic monographs written about them by British anthropologist Sir Edward Evan Evans-Pritchard. Indeed, one of the lasting classics of modern anthropology, his *Witchcraft, Oracles and Magic among the Azande*, is still cited in contemporary textbooks. It is widely accepted that the ancestors of Azande society migrated from the west, from what is now the Central African Republic, into the Democratic Republic of the Congo and the southern region of the Sudan, beginning perhaps 300 years ago. Because of their relative physical isolation from colonial centers of governance, the Azande practiced many traditional beliefs and customs well into the 20th century. Azande now live across the borders of three modern nation-states, and in recent decades they have been more exposed to the effects of market economies, missionary education, and related phenomena, so generalizations about the Azande as a whole are difficult to make.

### <sup>2</sup> LOCATION AND HOMELAND

Reliable estimates of population figures for the Azande are not available. As of 2008 it was estimated that some 3.8 million people considered themselves ethnically Azande. Azande territory covers a vast expanse of land—some 500 miles from east to west—from the fringes of the upper Nile basin in the southern Sudan to the borders of semitropical rain forests in the Democratic Republic of the Congo. Azande are found in the Maridi, Yambio, and Tambura districts in the tropical rain forest belt of Western Equatoria (a state in southwestern Sudan) and in Bahr el Ghazal (a region in southwestern Sudan). The Azande are also found in the Democratic Republic of the Congo and Central African Republic; areas, which originally constituted part of the great Azande Kingdom destroyed by the Belgian, French, Mahdists of Sudan, and finally the British in the context of the European scramble for Africa.

The open savannah forest laced with streams that comprise the Nile/Congo divide marks most of Azande country. Changes in micro-environmental zones have a direct impact on modes

of production, principle subsistence crops and modes of settlement of the Azande. Throughout this region of Africa, there is a season of intermittent rain (roughly from April to October), followed by a dry season (from November to March) when rain seldom falls. In pre-colonial times, Azande homesteads were typically dispersed. A common pattern was for men who shared patrilineal ancestry to live in the same general area. A circular hut was the primary living space, and this was surrounded by gardens of one to two acres where a man and one or more of his wives cultivated staple crops, from sorghum to cassava. Footpaths through the savannah forest interconnected homesteads of closely related relatives. An expanse of uninhabited terrain separated one such cluster of homesteads from the next. Homestead clusters were typically located near one of the many streams transecting the countryside, as streams provided fishing and other resources. During the colonial period, many Azande were forced to move from this type of settlement in an alleged effort to eradicate sleeping sickness. The result was that many Azande found themselves living in European-style villages of parallel straight streets, often living next to people who were strangers rather than kinsmen. This change had a significant impact on Azande culture in general, and particularly on Azande notions of witchcraft (see **Religion and Interpersonal Relations**).

### 3 LANGUAGE

The Azande were an expanding secondary series of kingdoms at the time of European domination in Africa. The Azande speak Zande language. The linguist Greenberg (1963) classified the Azande language as one of the Niger-Congo group. The Azande are a Bantu group and their language is similar to the other Bantu languages. Approximately five dialects of Azande are spoken throughout the area they occupy. Dialects include Sango in Central African Republic and Dio and Makaraka (Oodio) in Sudan. The speech of the Azande in Sudan is fairly uniform, with a few exceptions (Mbomu, Sueh-Meridi, Bile, Bandiya, Bamboy, Bomokandi, and Anunga). In the contemporary world, most Azande also speak rural dialects of Arabic, French, or English. The Azande language is a tonal tongue, so that significant semiotic usages result from different pitches used in pronouncing identical lexical units.

### 4 FOLKLORE

Traditional Azande culture was rich and highly developed as is common in non-literate societies. The anthropologist E. E. Evans-Pritchard collected hundreds of Azande folktales and legends and published as many as he could in the Azande language with English translations. Probably the most important and comprehensive collections of this genre are found in Evans-Pritchard's book, *The Zande Trickster*.

The most famous Zande tales all center on the imagined activities of the trickster Ture. The character of a trickster is common to folklore throughout the world. Typically, the trickster is an animal or human protagonist who inverts the standards of expected behavior, who flaunts and ridicules the accepted order of things by doing the inverse. In Evans-Pritchard's understanding, Ture could be regarded as a collective manifestation of Azande personality. The animals act and talk like persons because people are animals behind the masks social convention makes them wear. What Ture does is the opposite of all that is moral and all us can see ourselves in Ture. The

Azande character of Ture is also closely related to an important element of traditional Azande folklore known as *sanza*, or “double-speak.” Evans-Pritchard wrote that *sanza* “includes any remark or action which is intended to be oblique, opaque, ambiguous, any words or gestures which are intended to suggest a meaning other than they have in themselves, which have, that is, a double meaning, a manifest meaning and a hidden one.” Azande use *sanza* in conversations between princes and commoners, husbands and wives, at beer parties, and in the language of love.

There is no one single myth that describes the origin of the Azande people. The general Azande belief is that people return to life after death, reincarnated as an animal (often a lion). The most important royal chiefs may be reincarnated as leopards, pythons, snakes, warthogs, or rats. Some believe that lightning is the reincarnated spirit of a royal clan chief. When an animal dies, it signifies the end of that specific life force. Thus, Azande man will only kill an animal in self-defense.

### 5 RELIGION

Historically, the Azande practiced animism. Modern Azande are more likely to practice Christianity. Their traditional beliefs revolve around magic, oracles, and witchcraft. The Azande term *mboli* might be translated as “divinity” or “god.” In explaining misfortune, death, and the complications of life, Azande more typically assigned the responsibility to *mangu* or “witchcraft” rather than to *mboli*. Witchcraft is believed to be an inherited substance in the belly that lives a fairly au-

tonomous life, performing bad magic on the person's enemies. Indeed, Evans-Pritchard, the best-known ethnographer of Azande custom and belief, suggested that a Western notion of divinity was largely a consequence of foreign ideas in Azande discourse, the result of Islamic and Christian influences. During the period of British colonial rule in this part of Africa, policy dictated that formal education was to be provided by practitioners of various Christian faiths. Thus, becoming Christian was often a consequence of becoming literate. At the present time some Azande profess faith in Islamic principles and others profess Christianity, but beliefs about causation, death, and misfortune still revolve around *mangu*.

## 6 MAJOR HOLIDAYS

The Azande clans, which consist of several families with a common ancestor or ancestors, gather for important occasions, including weddings and funerals.

## 7 RITES OF PASSAGE

When an Azande woman becomes pregnant, tradition and superstition dictates that she avoid certain foods, including water buck meat and mene, a type of sweet potato. These foods are believed to cause miscarriage.

When the child is born, there is no special ceremony. When the infant is four days old, a fire of green leaves is made at the threshold of the house. The green leaves create a smoky fire and the mother, with the infant in her arms, sits in the smoke for a short period. The smoke is believed to give the newborn infant strength. After the fire dies out, the ashes and any remaining leaves are strewn on a path leading to the village. This action is believed to protect the infant from illness and disease.

Before colonization, boys were often initiated into manhood by serving the Azande nobility. Later, a ritual circumcision, held in the forest, became common, although this practice has also been discontinued. Modern Azande perform circumcision on their boys when they reach the age of nineteen. This circumcision ritual is unrelated to Islamic practices.

The Azande do not circumcise girls. Rather, girls are initiated into their gender role by observing and assisting their mothers. Traditionally, in order to marry, an Azande male had to present the bride's family with a ritualized payment (called "bride-wealth"), often consisting of a number of iron spears. As of the 21st century, the bride-wealth is more commonly paid in cash or in the form of material goods, such as cloth, cassava, or goats.

The Azande have no special ceremonies connected with marriage.

## 8 INTERPERSONAL RELATIONS

Social identity was largely established by membership in a specific kinship group, by the division of labor, by an over-arching patriarchal social order, and by the hierarchical order of Azande political life. Thus, one was either born a commoner or a member of the royalty, or was incorporated into one or the other through warfare or slavery.

One of the central facets of life among the Azande is their belief in witchcraft, which is used to explain and cope with all kinds of adversity, both great and small. Rather than singling out particular individuals as witches, the Azande believe that anyone is capable of causing the misfortunes of another person by ill will toward that person—even if he is unaware of do-

ing so. (Women are excluded from the tradition surrounding witchcraft.) When something bad happens to an Azande, he must first find out who caused it. For minor problems, an Azande consults an oracle that he reaches by rubbing two pieces of wood together as he tries out the names of different suspects. The perpetrator is identified when the pieces stick together instead of rubbing smoothly against each other. For major misfortunes, the "chicken oracle" is consulted. In one version of this procedure, poison is placed on the beak of a chicken. If the chicken dies when a certain individual is named, then that is the guilty party. Once the perpetrator of misfortune has been pinpointed, the aggrieved party confronts him and asks him to stop his witchcraft. On hearing of his misdeeds, the "witch" has no trouble believing that he is indeed the cause of his tribesman's misfortunes and makes amends by expressing his goodwill toward the victim and spitting on the wing of the dead chicken.

Azande witchcraft encompasses every conceivable adverse occurrence, from tripping over a tree root to adultery and murder (for which the oracles were traditionally submitted to a type of court). Witchcraft practices are also associated with social standing within the tribe because they give an added measure of status and control to wealthy householders, who often use their chickens to consult the oracle for a less fortunate kinsman or neighbor who doesn't have enough chickens of his own.

## 9 LIVING CONDITIONS

In pre-colonial times, Azande lived in dispersed settlements where patrilineal relatives tended to live in close proximity. In colonial times, efforts were made to relocate Azande into European-designed towns. Traditionally huts were made of wood and mud, and each individual homestead was surrounded by gardens tended largely by women. In polygynous marriages (marriages in which one man had more than one wife), each wife had her own hut where she lived with her minor children. In the past, hamlets such as these were interconnected by footpaths through forest and open savannah. The introduction of bicycles and automobiles during the colonial period had a dramatic impact on inter-hamlet relations, especially in terms of the introduction of cash crops and a market economy.

In the past, when Azande lived in dispersed settlements, communal diseases were rare. Personal health was largely affected by bacterial diseases typical to subtropical environments. Malaria, sleeping sickness, and schistosomiasis (a waterborne disease) were common causes of death in pre-colonial Azande country. Many Azande have gained Western knowledge of medicine in recent decades.

## 10 FAMILY LIFE

Azande society is divided into the royal clans and commoners. The royal clans, known as the Avungara are descended from Gbudwe, a strong leader, and his two sons, Yambio and Tambura. Most commoners were incorporated into the Azande through wars, conquest, and other means of assimilation. Azande settlements consist of single households made up of a man and his wife (or wives).

Azande follow certain social norms. Children are reared but by their birth mother and all the patrilineal kin living in nearby homesteads. Children are taught how to cultivate do-

mesticated plants at an early age. Young boys are taught about hunting and fishing.

### 11 CLOTHING

Azande women wear cloth skirts. Infants and children wear necklaces made from chains of metal rings. Some Azande also have their heads wrapped in cord, which is thought to protect their brains from malevolent spirits. In the past, Azande musicians wore costumes consisting of a cloth skirt, an elaborate headdress, and beads and bangles on the arms and around the ankles.

### 12 FOOD

The traditional dietary staple of the Azande is a type of millet called *eleusine*. In the western portion of the group's territory, this has been replaced by cassava. Other crops include rice, maize, sorghum, squash, legumes, okra, peanuts, greens, and bananas. To supplement their diet, the men hunt game and the women catch fish. Chicken and eggs are considered delicacies, as are termites during the dry season. Beverages include palm wine and spirits made from cassava.

### 13 EDUCATION

Some Azande live in towns with modern educational facilities. Access to Western-style education has had both social and political effects. In some areas, power traditionally held by the royal elite has passed to educated commoners.

### 14 CULTURAL HERITAGE

Both vocal and instrumental music, as well as dance, play a significant role in Azande culture. The most common traditional musical instrument of the Azande is a small, bow-shaped, harplike instrument, often decorated with a small carved human head at one end. The Azande also make a variety of other instruments, many with designs that incorporate human or animal forms. One is a mandolin-like stringed instrument modeled on the human figure, with a peg approximating a head perched atop an arched neck and legs and feet at the base. Another is the *sanza*, made of wood or hollowed gourds, which is similar to a xylophone but in the shape of a dancing woman, with arms and legs jutting out from the body of the instrument. Other typical instruments include a bell in the shape of a stylized human figure with the arms used as handles and various drums shaped like cattle.

In addition to a variety of functional items, Azande artwork includes carved wooden sculptures thought to have been given as gifts by tribal chiefs.

### 15 WORK

The Azande have developed an agrarian lifestyle in response to their physical environment. They engage in subsistence farming because their homesteads are typically established a long distance from the markets. Food crops produced include maize, cassava, telebun (millet), yams, fruits: mangoes, citrus, pineapples, palm trees (from which they extract ombiro—palm oil), and coffee. They also have exotic and economically important hardwood trees such as mahogany and teak. The Azande hunt, using traps, nets, and heavy spears, and fish in the streams that flow through the countryside.

In 1948 the Equatoria Project Board (EPB) was established to develop the economic potential of the Zandeland. The Azande were encouraged to grow cotton as a cash crop. Enterprises were established to gin cotton and weave cloth and to produce edible oils, soap, and other products from cotton. This project helped link the Azande economy to other markets in south Sudan.

### 16 SPORTS

Typical sports among the Azande include sparring (one-on-one fighting), which serves as a way for males to practice their combat skills.

### 17 ENTERTAINMENT AND RECREATION

Singing and dancing are major forms of entertainment among the Azande, especially at feasts and other celebrations. Storytelling is another popular form of recreation.

### 18 FOLK ART, CRAFTS, AND HOBBIES

Functional artwork includes wood, bark, and pottery storage boxes. The distinctive Azande throwing knife, the multi-bladed *shongo*, is used in combat. It is made of copper or steel and adorned with elaborate patterns. Some of these knives are also used as bride-wealth (payment a man makes to acquire his wife). Other folk art includes pots, wooden utensils, and woven mats and baskets.

### 19 SOCIAL PROBLEMS

Although relative calm was restored to Sudan by the 2005 pact between the SPLA and the Khartoum government to end the civil war, at the time of this writing in 2008, the Azande, along with hundreds of thousands of the people living in the southern Sudan, had fled the Sudan to live in neighboring countries, including the Democratic Republic of the Congo, Uganda, and the Central African Republic. As a result, much of traditional Azande culture and custom is endangered or has ceased to exist.

Still, security is an issue among the Azande. There have long been tensions between the Azande and the Dinka. From across the Congo border there were accounts of abuses of Azande refugees by armed groups and returning refugees returning to Sudan have been accompanied by Congolese refugees.

Infectious and parasitic diseases like malaria, diarrhea, HIV-AIDS, and sleeping sickness pose a grave danger to the Azande population.

### 21 GENDER ISSUES

Traditional Azande society was highly patriarchal. Women's roles were limited to the domestic sphere. Women were responsible for raising the children, farming, preparing food, and completing the household chores. Men held all positions of public authority, with women being subservient (in a lesser, obedient position) to their husbands. A marriage was arranged by contract between two families and involved the exchange of goods, known as bride-wealth. Commoner men typically had just one wife, but nobles, and in particular kings, had many wives.

# BAGANDA

**PRONUNCIATION:** bah-GAHN-dah

**ALTERNATE NAMES:** The King's Men

**LOCATION:** Uganda

**POPULATION:** About 3 million

**LANGUAGE:** Luganda

**RELIGION:** Christianity (Protestantism and Roman Catholicism); Islam

**RELATED ARTICLES:** Vol. 1: Ugandans

## 1 INTRODUCTION

The Baganda of Uganda are sometimes referred to as "The King's Men" because of the significance of the role of the *Kabaka* (King) in their political, social, and cultural institutions. Until 1967, the Baganda were organized into a tightly centralized, bureaucratized kingdom. From 1967 until 1993, there were no kingdoms in Uganda due to their abolishment by the national government. In 1993, the national government reinstated the Kabakaship by permitting the coronation of Ronald Muwenda Mutebi II as the 36th king of the Baganda in a line of succession extending back to AD 1400 to the first king known as Kintu. In the middle of the 19th century, the Kabaka ruled an area extending about 150 miles around the northwestern shores of Lake Victoria in what is now the nation of Uganda. He ruled over a hierarchy of chiefs including village, parish, subcounty, and county levels of stratification. Chiefs collected taxes in the form of food and livestock, and distributed portions on up the hierarchy, which eventually reached the Kabaka's palace in the form of tribute. Chiefs were also responsible for settling disputes and maintaining roads in their respective jurisdictions. The Kabaka made direct political appointment of all chiefs so as to maintain control over their loyalty to him. Kabakas were chosen from the Lion clan, whereas commoners from the other 40 clans were eligible to become chiefs or even rise to the position of *Katikkiro* (prime minister).

Another category of powerful men known as *Batongole* were commoners who were given land throughout the kingdom so they could serve as spies and informers for the Kabaka in case a *Katikkiro* sought to foster a rebellion, which they sometimes did. Commoner families hoped to enhance their fortunes by providing wives to powerful men, especially the Kabaka, who in some cases had hundreds of wives. These wives were then in a position to obtain "favors" for their families. Young boys were sent regularly to live with chiefs, or to the King's palace where they served as pages in the hope of being eventually rewarded by political appointments. The Baganda have many stories and songs that sing the praises of their Kabaka, as well as honoring commoners who have risen to the rank of *Katikkiro*.

The King's Palace was generally located on a hill, which on the occasion of his death served as his burial ground, with his successor choosing another hill for his palace. The King's Palace contained hundreds of household compounds that were occupied by his many wives, pages, and chiefs, all of whom were expected to reside in the Kabaka's palace for significant periods of time in order to demonstrate their loyalty to him. Chiefs served as military commanders of the army and navy, which provided a powerful defensive force as well as a mecha-

nism for invasion of neighboring kingdoms to steal slaves, ivory, and women.

Many rituals surrounded the person of the king. For example, commoners had to lie face down on the ground in his presence. The Kabaka's only direct social interaction was with the Katikkiro, and he generally ate alone. His hairstyle sometimes resembled that of a rooster to symbolize his virility, and he has been described as walking like a lion to further symbolize his power. The mother of the Kabaka had the title of *Namasole* (Queen Mother). One sister was selected to be his *Nalinnya* (Queen Sister). Each of these women had her own palace and chiefs while remaining distinctly inferior to the Kabaka. Nevertheless, the *Namasole* could often exercise much influence over her son.

Today, the Kabaka has only ritual functions and no political power. He was removed of his power so that tribal differences would not interfere with the formation of a nation state. Baganda are presently divided on their beliefs about the role of the Kabaka in the nation state. All Baganda participate in the Ugandan governmental system, which has 39 districts and a national president. These districts contain separate units that were formerly part of the Kingdom of Buganda. Formal education in schools and a national university have replaced the old system of informal education embodied in the page system as a means of upward mobility. Nevertheless, the kingdom and associated institutions remain a strong force in the cultural practices and values of the Baganda.

## <sup>2</sup> LOCATION AND HOMELAND

The Baganda, who number about 3 million people, are located along the northern and western shores of Lake Victoria in the East African nation of Uganda. The former Kingdom of *Buganda* is bounded on the north by the former Kingdom of Bunyoro, on the east by the Nile River, and on the west by the former kingdoms of Ankole and Toro. To the south of Buganda is the present country of Tanzania. The Baganda are the largest tribe in Uganda, and the Kingdom of Buganda is the largest of the former kingdoms. Kingdoms were abolished as political institutions in the 1960s by the national government of Uganda. The Baganda are located 2° north of the equator to 1° south of the equator, but the temperature is moderate because the altitude varies throughout the region from 900 to 1,500 m (3,000–5,000 ft) above sea level. The former Kingdom of Buganda, with a total area of about 65,000 sq km (25,096 sq mi) comprises slightly more than one-fourth of Uganda's total land mass. Kampala, the largest city in Buganda and Uganda, has a mean temperature of 21°C (69°F), ranging from a high monthly mean of 28°C (83°F) to a low monthly mean of 17°C (62°F). Rainfall averages 114 to 127 cm (45–50 in) per year, and it comes reliably each year in a heavier rainy season lasting from March–May and a lighter season that lasts from August–December. Most Baganda are peasant cultivators who live in rural villages, where the homes are strung out along hills that are themselves usually about 150 m (500 ft) above valley floors consisting of papyrus swamps or forests. Rich red clay on the hills, a moderate temperature, and plentiful rainfall combine to afford the Baganda a generous environment for the year-round availability of plantain, the staple crop, as well as the seasonal production of coffee, cotton, and tea as cash crops. Some Baganda reside in towns and in Kampala, working in a variety of white-collar and nonprofessional occupations; nevertheless,

these Baganda maintain close ties with their agrarian roots in villages, while also frequently practicing “urban agriculture” in town homesteads by growing crops in small available areas and by keeping goats, chickens, and, occasionally, cows.

## <sup>3</sup> LANGUAGE

The Baganda speak a Bantu language called Luganda, which is a member of the Niger-Congo family of languages. In these languages, nouns are made up of modifiers known as prefixes, infixes, and suffixes. These modifiers vary depending on noun classes, such that word stems alone have no grammatical meanings. The stem *ganda*, for example, has no meaning in Luganda, but the term *Buganda* means the location or kingdom where the *Baganda* people live. Objects belonging to Baganda people, or to an individual *Muganda* person, are referred to as *kiganda* things. Like many other African languages, Luganda is tonal so that some words are differentiated by their pitch. For example, the word for excrement and the word for water (*amazzi*), while spelled the same, carry different meanings according to their pitch. Luganda is very rich in metaphor and in verbal genres, such as proverbs and folktales.

Children learn speech skills early in childhood that prepare them for adult life in a verbally rich culture. The clever child is one who can masterfully engage his or her peers in a game of *ludikya*, or “talking backwards.” For example, *omusajja* (“man”) becomes *jja-sa-mu-o*. Words in sentences appear in their same order. Another version of this game involves inserting the letter *z* after each syllable containing a vowel, followed

by the vowel in that syllable. In this version, *omusajja* would become *o-zo-mu-zu-sa-za-jja-za*. Both boys and girls play *ludikya*, which they claim is frequently done to conceal secrets from adults. Many homes participate in the evenings in collective riddling games (*okukokkya*) involving men and women of all ages. A person who successfully solves riddles is awarded villages to rule and becomes a chief. Some examples of common riddles are:

I have a wife who looks where she is coming from and where she is going at the same time (a bundle of firewood, since the two ends are similar).

I have a razor blade which I use to shave hills (fire which is used to burn the grass for planting).

When my friend went to get food for his children, he never came back (water in a river).

My man is always surrounded by spears (the tongue which is surrounded by teeth)

#### 4 FOLKLORE

The content of riddles, myths, legends, and proverbs all combine to provide for the Baganda an account of their ethnic origin and history, as well as explanations for the workings of the everyday world of people and objects that make up their culture and environment. Speech-making is especially valued and adaptive in a highly stratified society like Buganda where upward mobility was traditionally achieved by an aggressive, verbal manipulation of others through such means as cleverly turned compliments, exaggerated humility, or what the Baganda refer to as *kufukibwa*, the art of being ruled.

The most significant legend involves Kintu, the first Kabaka, who is believed to have married a woman called Nambi. First Nambi had to return to heaven where Gulu, her father, objected to her marriage because Kintu did not know how to farm but only how to obtain food from cattle. Nambi's relatives, therefore, tested Kintu in order to determine his suitability as a spouse. In one test Kintu was asked to identify his own cow from a herd, a difficult task given that there were many cows like his own. By chance, a bee told Kintu to choose the cow on whose horns he would alight. After several large herds were brought to him, Kintu reported that his cow was not among them, while continuing to watch the bee that remained on the tree. Eventually, Kintu, with the help of the bee, identified his cow, along with several calves that had been born to his cow. The amazed father eagerly gave his daughter's hand in marriage, prodding them to hurry to leave for Kintu's home before *Walumbe* (Death) would come and want to go with them. Gulu warned that they should not come back even if they forgot something for fear that Death would follow them. They left carrying with them cows, a goat, fowl, sheep, and a plantain tree. Unfortunately, over the protests of Kintu, Nambi went back to obtain grain that had been forgotten. Although she tried to run away without Death, she was unsuccessful. After many years of happiness on earth, *Walumbe* began to bring illness and death to children and then adults. Up to the present day, Death has lived upon the earth with no one knowing when or whom he will strike.

We see in this legend an account of the origin of the Baganda people, as well as answers to fundamental questions about the origins of such things as crops and livestock. Death is im-

plicated in this account as an unfortunate happenstance resulting from disobedience to king or parents. Obedience is a prime value of Kiganda morality. Kintu's partnership with the bee is one example of a common motif in Kiganda folklore where animals are the subject of numerous folktales that illustrate moral themes. Animal pairs, such as "the Leopard and the Hare," "the Lion and the Crocodile," and the "Cat and the Fowl," are familiar subjects to all Baganda. Proverbs, which are abundant, are prime sources of moral instruction for young people. Some examples of Kiganda proverbs are:

He who has not suffered does not know how to pity.

The stick which is at your neighbor's house will not drive away the leopard.

An only child is like a drop of rain in the dry season.  
He who likes his mother's cooking has not traveled.

He who passes you in the morning, you will pass him in the evening.

You have many friends as long as you are prosperous.  
That which is bent at the outset of its growth is almost impossible to straighten at a later age.

#### 5 RELIGION

The majority of present-day Baganda are Christian, about evenly divided between Catholic and Protestant. Approximately 15% are Muslim. Each of these major denominations is headquartered on a major hill in the Kampala area, reflecting the past practice of each major institution being constructed on a specific hill, a practice originated by the Kabakas. In the latter half of the 19th century, most Baganda were practicing an indigenous religion known as the *Balubaale* cult. This cult consisted of national gods who had temples identified with them. Each temple had priests who served as oracles on behalf of their respective god. Similar to the Greek pantheon, these gods were each concerned with specific problems. For example, there was a god of fertility, a god of warfare, and a god of the lake. The Supreme God known as *Katonda* had created everything, and the Baganda paid homage to him upon awakening each morning. *Katonda's* power was seen in proverbs. The following are some examples:

What God put in store for someone never goes rotten.

*Katonda* gives his gifts to whomsoever he favors.

God's favors should not be refused.

*Katonda* was also known by other names, such as *Mukama* (the Master), *Lugaba* (the Giver), and *Liisoddene* (the Great Eye). The Baganda also believed in spiritual forces, particularly the action of witches, which were thought to cause illness and other misfortune. People often wore amulets to ward off their evil powers. The most significant spirits were the *Muzimu* or ancestors who visited the living in dreams and sometimes warned of impending dangers. These spirits resided in the vicinity of the homestead and could be reincarnated if their names were bestowed on an infant, for which there was a special ceremony.

Christianity and Islam, both monotheistic religions, were not incompatible with the Kiganda belief in a High God. Nevertheless, throughout the second half of the 19th century, bitter rivalries and bloodshed prevailed as Kabakas, chiefs, and

Ugandan high school students, all members of the Baganda tribe, wait for their turn to parade before their monarch during a day of tribal celebration. Three of Uganda's four traditional monarchies, Baganda, Batoro, and Banyoro, were restored in 1993. (AP Images/Brennan Linsley)

Katikkeros became variously aligned with Anglicans, Roman Catholics, and Balubaale believers. During this period, a number of Baganda pages were put to death for allegiance to their Christian faith and are recognized today as martyrs and saints by the Roman Catholic tradition. Contemporary Baganda are considered to be extremely religious, whatever their faith, although the Balubaale cult no longer exists. Beliefs in ancestors and the power of witches are still, however, quite common.

## 6 MAJOR HOLIDAYS

Religious holidays are very significant in Buganda, especially Christmas for Christians and Ramadan for Muslims. Attendance at funerals is a major ceremonial and social event. People travel from all parts of the nation to attend funerals, which last many days.

## 7 RITES OF PASSAGE

In the indigenous life cycle, the Muganda person passes through stages, such as *omwana* (child), *omuvubuka* (youth), and *omusajja* or *omukazi* (man, woman), until at death one becomes an *omuzima* (spirit) and, therefore, a candidate for reincarnation. Although there is no Luganda word for fetus, the being inside the mother is nevertheless considered to be living and separate from the mother. Thus, if a pregnant woman dies, her fetus is extracted and buried separately. During preg-

nancy, the woman remains physically active, often working on her farm or *shamba* (garden) until the time of delivery. The pregnant woman is typically seen carrying food or water on her head, while often carrying her previous baby on her back. Birth is attended by midwives and female relatives. The umbilical cord is retained for later use in a ceremony called *Kwalula Abaana*, in which the child is seated on a mat along with other members of the father's clan (being a patrilineal society) who are to receive their clan names. The new infant is a source of considerable joy and is passed around to visitors for their pleasure. Should twins be born, special rituals are performed and the parents receive names indicating that they are the mother and father of twins. Each twin is given a special name in accordance with his or her gender and birth order.

The childhood years, beginning at about the age of seven, are characterized by the expectation that both boys and girls will conform in their behavior to what the Baganda refer to as *mpisa* (manners). This includes such things as being obedient to adults, greeting visitors properly, and sitting correctly (for girls). Tasks are assigned to boys and girls, although girls have more consistent work expectations than do boys. Girls are charged with the care of their younger siblings, whom they carry on their backs and to whom they sing lullabies, especially when their mothers are working in their *shambas* (gardens) or

marketing. Boys are frequently asked to run errands for family members or to babysit.

Nowadays, children as well as teenagers pursue educational opportunities to enhance their career objectives in the modern nation state. Traditionally, teenage boys and girls were occupied with their political careers or marital prospects, respectively. Sex education for females was and is more systematic than it is for males. The father's sister (*Ssenga*) is for girls the most significant moral authority, as she represents the patrilineal extended family of which the girl is a member. Grandmothers instruct girls soon after their menstruation, during a period of seclusion, about sexual matters and future domestic responsibilities. The Baganda are quite prudish about public displays of sexuality, and affection between the sexes is reserved for private occasions. Kissing is a recent innovation. Traditionally, tickling of the hand, breast, or stomach area by either sex was considered sensuous. A common complaint of young school girls today is that their elders did not teach them anything about sex so they must now seek advice and sexual instruction from popular pamphlets and the mass media.

Among the Baganda, marriage and the birth of children are generally still prerequisites for adult status. Today, most Baganda men and women no longer live out their lives only in the context of the Buganda Kingdom. Baganda can be found in all of the modern occupations and live throughout the world from where they regularly return or seek to return to their homeland, especially for burial. The old person (*mukadde*) is happy if he or she has achieved success in the world and if they have grandchildren, who are a particular source of joy for them and their clan.

## 8 INTERPERSONAL RELATIONS

The Baganda place paramount emphasis on being sociable, often in a clever and assertive way so as to achieve upward mobility. Verbal skills and manipulative styles are seen in the daily life of work, school, courtship, and marriage. Individualism and being alone are not valued. In fact, a person who spends too much time alone may be thought to be a spy or a witch. Elaborate greeting rituals best symbolize the importance attached to being sociable. One of the first things that a child learns is how to greet others properly in the high-pitched voice that is considered to be respectful. Propriety requires that neighbors exchange lengthy greetings when meeting along the road. Greetings vary according to the time of day, age of participants, and length of time since previous encounters. When city folk return to their villages, formal greetings may take upwards of 15 minutes.

In Kampala, greetings are far less frequent and shorter in duration than in rural areas. Also, women in Kampala are much less likely to kneel while greeting men or other social superiors, a custom still prevalent in rural areas. Sociability is at a premium during social events, especially at burials and funerals when villages can seem deserted because their members are away, staying in temporary shelters constructed to accommodate guests who have amassed for several days of feasting, drumming, and dancing.

Dating and courtship are significant in the lives of most Baganda in their younger years. Both men and women value men who are able to flatter through verbal expertise and their power of persuasion. Common phrases of endearment include: "Your eyes are big and shiny like a light"; "Your teeth are as

white as elephant tusks"; "You are as slender as a bee"; "You are my twin"; and a recent addition to a man's repertoire, "You are worth a million dollars." Women, too, are verbally adroit. Although she should not flatter a man, a woman is expected to deceive him (*okulimba*) into thinking that he is her only suitor. In physical features, there are numerous preferences that include moderation in height, weight, and skin color. Eyes should not be too large, "like a fish," nor too small, "like a hole in the cow's skin." In girls, a small space between upper front teeth (*muzigo*) and horizontal lines in the neck (*ebiseera*) are especially desirable. Baganda of all ages are very well dressed and admire those who dress well.

## 9 LIVING CONDITIONS

Rural homes located among banana groves or *shambas* (gardens) are usually made of wattle and daub and have thatched or corrugated iron roofs. More affluent farmers live in homes constructed of cement, with tile roofs. Some homes have electricity and running water, but for many water must be fetched from a well or collected when it rains. There commonly is a separate cooking house where cooking is done on an open wood fire. A latrine is located behind the house in the shamba. Household furniture usually consists of a wooden platform bed with a mattress, a table, and wooden chairs. Woven straw mats are used for sitting by women and children, although some homes have sofas and arm chairs. Urban homes, by contrast, are typically of concrete with corrugated iron or tile roofs and glass windows. Indoor plumbing, indoor kitchens, electricity, and toilet facilities are common in the city. Radios are frequent in both rural and urban homes. Photographs and other pictures are typically on display on the walls to commemorate family members, political figures, or religious personages.

On the whole, Baganda enjoy a fairly high standard of living in Uganda through income obtained from land rentals, agricultural produce sold for cash, and wage labor as clerks, teachers, and craftspeople, often combined with agriculture. Some Baganda in rural areas are fishermen, carpenters, mechanics, or conveyors of produce to market via bicycles, a more common vehicle than the automobile. All Baganda have daily access to a plentiful food supply, given their year-round growing season. On the other hand, Baganda suffer from malaria, given the presence of swampy areas harboring the malarial-infected mosquitoes. A particular form of childhood protein-calorie malnutrition known as kwashiorkor is frequently seen as a result of early weaning and a protein-deficient diet of matooke (plantain staple).

## 10 FAMILY LIFE

Traditionally, the term for marriage, *jangu enfumbire* ("come cook for me"), symbolized the authority patterns that prevailed in the typical household. The husband/father was supreme, and in the domestic sphere emulated the authority of the Kabaka in the wider political system. Children and women knelt to the husband in deference to his authority, and he was served his food first. Baganda children frequently describe feelings of fear and respect for their fathers and warm attachment for their mothers. One should never marry a person from one's own clan lest clan sanction and sickness result. Marriage is, therefore, exogamous in terms of clans, although Baganda tend to marry within their own tribe.

After marriage a new household is established, usually in the village of the husband. Most marriages are monogamous, although polygamy was not uncommon in the past. Co-wives lived in separate, but adjacent, houses while the husband had his own house in front of the women's quarters. Affinal relatives (*Bako* or in-laws) are afforded great respect, and Baganda avoid physical contact with one's mother- or father-in-law. Brothers- or sisters-in-law are often close and affectionate. Children's surnames are taken from the father and easily identify the clan from which they come. In addition to not marrying within one's own clan, it is taboo to eat the clan totem. Some common totems are: leopard, civet cat, anteater, otter, dog, cow, buffalo, bush buck, sheep, crow, and elephant, as well as yam, bean, and mushroom.

### 11 CLOTHING

The rural Muganda woman typically wears a *Busuuti*, a floor-length, brightly colored cloth dress with a square neckline and short, puffed sleeves. The garment is fastened with a sash placed just below the waist over the hips, and by two buttons on the left side of the neckline. It can be worn throughout pregnancy by simply loosening the sash, since the skirt portion consists of several yards of material. Traditionally, the busuuti was strapless and made from bark-cloth. The busuuti is worn on all festive and ceremonial occasions, even in Kampala where Western-style clothing predominates on a daily basis. The indigenous dress of the Baganda man is a *kanzu*, a long, white cotton robe. On special occasions, it is worn over trousers with a Western-style suit jacket over it. Younger people wear Western-style clothing. T-shirts with international celebrities on them are particularly popular. Slacks, jeans, skirts, suits, and ties also prevail.

### 12 FOOD

The staple food of the Baganda is *matooke*, a plantain that is steamed or boiled and commonly served with groundnut sauce or meat soups. Sources of protein include eggs, fish, beans, groundnuts, beef, chicken, and goats, as well as termites and grasshoppers in season. Common vegetables are cabbage, beans, mushrooms, carrots, cassava, sweet potatoes, onions, and various types of greens. Fruits include sweet bananas, pineapples, passion fruit, and papaya. Before eating, a bowl of boiled water and soap are passed around for each person to wash his or her hands. Steaming matooke is mashed and placed upon banana leaves in a basket, then covered by more leaves in order to keep the food hot. Portions of matooke are mixed in with the soup or sauce and eaten together. Although Baganda have cutlery, most prefer to eat with their hands, especially when at home. Drinks include indigenous fermented beverages made from bananas (*mwenge*), pineapples (*munansi*), and maize (*musoli*). Bottled beers fermented in national breweries are especially popular in the cities and towns, as are soft drinks. Coffee and tea are common hot drinks, and many homes recognize "tea time" in the afternoon as a special heritage from the British colonial days. Traditionally, women did not eat eggs or chicken, but this custom is very rare at present. Women also traditionally ate separately from men on mats on the floor. Nowadays, the urban family tends to eat at the table together. Baganda women take great pride in their cooking, and for most it is considered inappropriate for a man to enter the cooking area. Knowledge of the over 40 varieties of plan-

tain used in cooking is a special domain in which women excel. They also have a working knowledge of agriculture. Two or three meals of plantains per day are customary. Metal cooking pots and pans, cutlery, dishes, and glassware are now ubiquitous, although in rural areas bottled gourds and ceramic containers are not uncommon.

### 13 EDUCATION

Missionaries introduced literacy and formal education into Uganda in the 19th century, going on to establish in subsequent years a large number of schools and hospitals throughout Uganda. Baganda were among the first converts and, therefore, among the first literate population in Uganda. The Baganda value modern educational opportunity and will often sacrifice a great deal to obtain schooling for further advancement. Members of a family will combine resources to support a particularly promising student, who upon the completion of that education is expected to help his or her relatives. Rural areas contain primary schools often made of wattle and daub. Secondary schools vary in quality, and there is tremendous competition to get into the better ones. Kings College Budu, for example, a secondary school where Baganda royalty have studied, also accepts commoners. Accordingly, schooling serves as a leveling mechanism in modern society, much as the old page system did previously. Fostering of children in advantageous homes such as those of a chief. Today, the modern boarding school is a favorite mechanism of upward mobility. Currently, both boys and girls attend school in large numbers, making formal education an important means of mobility for women also. The Baganda value literacy highly and have long maintained a vernacular press with a rich tradition of publishing books, pamphlets, songs, stories, and poems in Luganda and English, the national language. Makerere University in Kampala attracted many Baganda in the 20th century who went on to outstanding careers in law, medicine, and other professions.

### 14 CULTURAL HERITAGE

Today, Baganda are among the best songwriters, playwrights, poets, novelists, artists, and musicians in Uganda. Performing arts have a long history of development in music and dance. The Kabaka's Palace was a special place where royal dances and drummers regularly performed. Each clan had its own particular drum beat. Most Baganda households contained at least a small drum for regular use in family singing and dancing. Drums were used to announce special events such as the birth of a child or the death of a person. The most significant drums, however, were the royal drums, called the *mujaguzo*, which numbered 93. Drums varied in size and each had its own name and specific drum beat. Drums were made from hollowed-out tree trunks and cowhide or zebra skin. Other musical instruments included stringed instruments, such as fiddles and harps, and woodwind instruments, such as flutes and fifes.

Dancing is frequently practiced by all Baganda, beginning in early childhood, and the best dancers and musicians are renowned for their skills. Baganda dancers are remarkable for their ability to move their hips swiftly to the beat of alternating drums playing simultaneously. Today, Uganda dancers and musicians are frequently seen performing abroad. In Kampala,

they can be seen entertaining regularly in night clubs, bars, and other public locations.

Basketry is still a widespread art, especially mat-making by women. These mats are colorful and intricately designed. In addition to creating useful household containers, woven basketry and coiled basketry are also widespread arts that serve as the foundation for stockades, enclosure fences, and houses.

### **15 WORK**

Most Baganda are peasant farmers, but others live in towns and in the city of Kampala and work at various white-collar and nonprofessional jobs.

### **16 SPORTS**

Football (soccer), rugby, and track and field are common, popular sports in Uganda. Baganda boys participate in all these sports, while girls participate in track and field. Traditionally, the Baganda were renowned for their skills in wrestling, which was considered to be their national game. Males of all ages participated in this sport. Wrestling events were accompanied by beer-drinking, singing, and drumming. It was, however, considered inappropriate to defeat the Kabaka. Other traditional outdoor games by boys include the competitive throwing of sticks and a kicking game in which boys stand side by side and attempt to knock over the other boy.

### **17 ENTERTAINMENT AND RECREATION**

Children play games involving a chief for boys or a mother role for girls. *Okwesa*, played by both boys and girls, is a game of strategy involving a wooden board and stones or beans that are placed in pockets in the board. Verbal games are played frequently, especially at night and in the company of grandparents.

### **18 FOLK ART, CRAFTS, AND HOBBIES**

In addition to basketry and musical instruments, the manufacture of products from bark-cloth was and continues to be significant. The bark from a species of fig tree called *mutuba* is soaked in water, then beaten with a wooden mallet. This yields a soft material that is decorated with paint and then cut into strips of various sizes. Larger strips traditionally were used for partitions in homes, while smaller pieces were decorated with black dye and worn as clothing by women of royalty. Later, bark-cloth dress, particularly reddish tan-colored bark-cloth, became the national dress. Today, one rarely sees bark-cloth dresses, which have been replaced by the cotton cloth Busuuti. Bark-cloth is found today as decorative placemats, coasters, and designs on cards of various sorts. It is also rare to find traditional pipes, pots, and other ceramics, which in the past were elaborately decorated functional objects, in use today.

### **19 SOCIAL PROBLEMS**

The Baganda have had some problems integrating their political culture into the nation state of Uganda. The first president of independent Uganda (1962) was Sir Edward Mutesa, who was also King of Buganda. The first prime minister, with whom he shared power, was Milton Obote, who was from a district outside of Buganda. Within four years, Obote had abolished the kingdoms, and Mutesa fled Uganda and eventually died in exile. In 1971, Obote was overthrown by Dictator Idi Amin,

under whose presidency all Ugandans, including the Baganda, suffered greatly from political and social oppression, death, and the loss of personal property. Currently, the Baganda participate in what is widely considered to be a national recovery from the havoc and dissension of the Obote and Amin years.

Since the mid-1980s, AIDS has resulted in many deaths among friends and family members and is a source of great grief for Baganda. Caring for the children of parents who have died of AIDS is an especially serious problem. Nevertheless, this disease has been the subject of a spirited public education effort through mass media and theatrical productions, as part of a broad public educational effort toward prevention. These efforts led to the first substantial declines in HIV prevalence in Uganda. Nevertheless, the epidemic remains serious in, with infection levels highest among women (7.5% compared to 5.0% among men) and urban residents (10% compared to 5.7% among rural residents).

### **20 GENDER ISSUES**

In terms of gender relations, patriarchy is central to Baganda culture. In pre-colonial times there was a strict division of labor among the Baganda, where women did most of the agricultural work, while men often engaged in commerce, politics, and warfare. In recent times, the Museveni government has taken steps to elevate the plight of women as a major development issue. The Museveni administration has encouraged women to participate in politics and other aspects of public life. In 2008, each of Uganda's districts had a female member of parliament. One-third of all local council seats are reserved for women. As a result, women make up about 24% of the legislature. There are active women's rights groups, including the Uganda Women Lawyers Association (FIDA-U), Action for Development, and the National Association of Women Judges. However, in spite of these advancements, women are often targets of violence and sexual abuse. Women who reveal their HIV-positive status to their spouses are often beaten and sometimes murdered by their husbands.

In terms of human rights, Uganda's past has been checkered with torture and abuse, and according to some human rights organizations, these abuses continue in present-day Uganda. The army has been accused of committing atrocities against the populations in northern Uganda, and security forces are alleged to routinely torture suspects and members of the opposition. Homosexuality is illegal under Victorian-era legislation still in force in Uganda and many other English-speaking countries in Africa. The laws reflect a deep aversion among many Africans to homosexuality. But, the truth remains that gays and lesbians exist in Uganda, although they pay a high price for their sexual orientation, often facing discrimination, and even torture and imprisonment.

## BAKONGO

**PRONUNCIATION:** buh-KAHN-go

**ALTERNATE NAMES:** Kongo

**LOCATION:** Congo River region (Angola, Democratic Republic of Congo, Republic of Congo)

**POPULATION:** 5.45 million

**LANGUAGE:** Kikongo

**RELIGION:** Christianity, Kimbanguism, and indigenous beliefs

**RELATED ARTICLES:** Vol. 1: Angolans; Congolese

### 1 INTRODUCTION

The solidarity of the Bakongo people has a long history based on the splendor of the ancient Kongo kingdom and the cultural unity of the Kikongo language. Founded in the 15th century AD, the kingdom was discovered by the Portuguese explorer Diego Cao when he landed at the mouth of the Congo River in 1484. As trade developed with the Portuguese, Mbanza Bata, located south of the Congo, became the capital, later known as San Salvador. Portuguese missionaries baptized King Nzinga, who adopted the Christian name Alfonso I. Within a few years, the kingdom was exchanging ambassadors with Portugal and the Vatican.

By the end of the 16th century, the Kongo kingdom had virtually ceased to exist. Incursions by neighboring groups from the east severely weakened it, and it became subservient to Portugal. In the 17th century, British, Dutch, and French slave ships reportedly carried 13 million persons from the Kongo kingdom to the New World. Ironically, the monarch and his vassals profited financially from the trade as their kingdom crumbled beneath them. In 1884–85 at the Conference of Berlin, the European powers divided the kingdom among the French, Belgian, and Portuguese. By the end of the 19th century, little remained of the once great Kongo civilization.

The 20th century witnessed a resurgence of Kongo nationalism and culture. Inspired by the prophetic teachings of Simon Kimbangu, thousands of Bakongo and other Congolese joined his initial followers. Belgian persecution of Kimbangu encouraged anticolonial sentiment and eventually Kimbanguism became a springboard for Congolese independence. In addition, the zeal for the past of European historians and missionaries such as Georges Ballandier and Father Van Wing, spurred Bakongo intellectuals to demand immediate independence in 1956. They founded a political party, whose candidates won the vast majority of municipal seats in 1959, leading to the election of President Joseph Kasavubu, a Mukongo, as the Congo's first president.

While Kongo secessionist movements have come and gone, the early 21st century marks an upsurge in revivalist fervor, which at times has been violent. A movement to establish a Kongo federal state composed of five provinces would bring together Bakongo living in the southern Republic of Congo (Congo-Brazzaville), the Angolan enclave of Cabinda, the lower province of the Democratic Republic of the Congo (DRC, Congo-Kinshasa), and northern Angola. Its name would be *Kongo Dia Ntotela* (the United States of the Kongo). In January and February 2007 Bunda Dia Kongo (BDK—Kingdom of Kongo) protested alleged corruption during the 2006 gubernatorial elections within Bas-Congo province of DRC. The pro-

tests resulted in government forces shooting and killing more than 100 persons—mostly civilians. In February and March 2008 government soldiers shot and killed scores more and burned their houses in an effort to restore state authority. The BDK has called for the establishment of an “ethnically pure” kingdom for the Bakongo.

## 2 LOCATION AND HOMELAND

The Bakongo are a composite of peoples who assimilated the Kongo culture and language over time. The kingdom consisted of some 30 groups at its inception. Its original inhabitants occupied a narrow corridor south of the Congo River from present-day Kinshasa to the port city of Matadi in the lower Congo. Through conflict, conquest, and treaties, they came to dominate neighboring tribes, including the Bambata, the Mayumbe, the Basolongu, the Kakongo, the Basundi, and the Babuende. These peoples gradually acculturated and through intermarriage became indistinguishable from the Bakongo.

At its apex, the nuclear kingdom covered about 300 sq km (116 sq mi). Its boundaries extended as far as the Nkisi River to the east, the Dande River to the south, the Congo (Zaire) River to the north, and the Atlantic Ocean to the west. The greater kingdom of the 16th century extended another 100 km (62 mi) east to the Kwango River and 200 km (124 mi) further north to the Kwilu River. Today, the Bakongo peoples still live in their ancestral homeland. It is quite mountainous and subject to a dry season lasting from May to August/September. Of the three ecological zones to the south of the Congo River, the hilly

middle zone receives the most annual rainfall (1,400 mm/55 in) and has relatively fertile soils and moderately warm temperatures. Consequently, it is more densely populated than the dry, sandy coastal region and the infertile arid plateau to the east.

There are about 5.45 million Bakongo. They are the largest ethnic grouping of the Republic of the Congo accounting for nearly half of the population (1.9 million). In Angola, they are the third largest group, making up 13% of the population (1.9 million) and in DRC they number about 1.65 million.

## 3 LANGUAGE

The Bakongo speak various dialects of Kikongo, similar to the Kikongo spoken in the ancient kingdom. These dialects differ widely across the region; some are almost mutually unintelligible. To further its nation-building efforts after independence, the government of the former Zaire created a standardized version of the language, which incorporated elements of the many variants. Standard Kikongo is used in elementary schools throughout the Lower Province and Bandundu, and is called Mono Kotuba or Kikongo ya Leta (State Kikongo).

## 4 FOLKLORE

Legends trace Bakongo ancestry to Ne Kongo Nimi, who is said to have had three children, whose descendants, grouped into three clans, form the Kongo nation. The children of Ne Kongo Nimi were called Bana ba Ne Kongo, literally the children of Ne Kongo. The abbreviation became Bakongo. Proverbs, fables, legends, and tales occupy an important place in daily life. Some popular legends are only recognizable by their core content, since storytellers add their own spice and take great liberties in embellishing the traditional legends. One popular character, Monimambu, is known to the Bakongo and other peoples through oral and written literature. He is not a hero—rather he is a fictional figure with human foibles and feelings who has some successes but makes mistakes, too. His adventures are entertaining, but the stories not only amuse, they instruct as well. A favorite animal figure in Bakongo tales is the leopard.

The Bakongo recognize Dona Beatrice as a Kongolese heroine. Born Kimpa Vita, she became a Christian martyr, and later a symbol of Congolese nationhood. She lived in a time of great crisis. Rivalries had torn apart the kingdom, and the capital of San Salvador had lain in ruins since 1678. In 1703, at the age of 22, Beatrice sought to restore the grandeur of the Kongo. She warned of divine chastisement if the capital were not reoccupied. Within two years she established a new dogma and teaching and renewed the church. But her opposition to foreign missionaries led to her demise. Beholden to the Portuguese, King Pedro IV arrested her. She was tried by a church tribunal for heresy, condemned, and burned at the stake. Her idealism and sacrifice inspired a tradition of mysticism among the Bakongo, and she is considered a precursor to the 20th-century prophet Simon Kimbangu (see **Religion**).

## 5 RELIGION

The Bakongo were among the first sub-Saharan African peoples to adopt Christianity, and, as a kingdom, had diplomatic ties with the Vatican. In the colonial period, Belgian missionaries established Catholic seminaries in the villages of Lemfu

and Mayidi and built mission churches and schools throughout Lower Congo.

Many Bakongo overlay their Christianity with traditional beliefs. According to the traditional religion of the Bakongo, the creator of the universe, called Nzambe, resides above a world of ancestor spirits. Many people believe that when a family member dies a normal death, he or she joins this spirit world, or village, of the ancestors, who look after the living and protect the descendants to whom they have bequeathed their lands. Spirits of those dying violent and untimely deaths are thought to be without rest until their deaths have been avenged. Sorcerers are employed to divine the agent responsible for the death through the use of fetishes or charms called *nkisi*. In addition, healing practices and traditional religion go hand in hand. Traditional healers called *nganga* may be consulted for herbal treatments or to root out *kindoki* (witches practicing black magic, who are thought to cause illness through malice, and to eat the souls of their victims by night).

In the 1920s, Simon Kimbangu, a member of the English Baptist Mission Church, claimed to have received a vision from God, calling him to preach the Word, and to heal the sick. He taught the law of Moses and repudiated sorcery, fetishes, charms, and polygamy. When his ministry acquired anti-clerical anti-colonial overtones, the Belgians arrested him and sentenced him to death. Later his sentence was commuted to life in prison, where he died in 1951. Kimbanguism gained legal recognition from Belgian authorities in 1959, and through cooptation of its leaders, the Kimbanguist church became a staunch supporter of President Mobutu after independence. Officially known as "The Church of Christ on Earth by His Special Envoy Simon Kimbangu," believers number somewhere between 1 and 3 million.

## 6 MAJOR HOLIDAYS

Bakongo celebrate the national political holidays of their respective countries as well as Christmas and Easter. Those who are Kimbanguists make an annual pilgrimage to the Kamba River to honor their prophet. At the river they offer sacrifices, pray, ask for blessings, and take some of the water, which is considered holy. Kimbanguists believe in Jesus as the son of God and therefore commemorate Christmas and Easter. In addition, they celebrate April 6, which marks the beginning of Kimbangu's healing ministry; October 12, which marks his death; and May 25, which marks the birthday of Papa Dialungana, their spiritual leader.

In the DRC, the Bakongo celebrate Parents Day, August 1, along with their fellow citizens. On this holiday people go to the cemeteries in the morning to spruce up the family graves. The grave sites may be overgrown with tall dry elephant grass, which is burned away, creating an Armageddon-like atmosphere. In the evenings, families get together to share a festive meal with the extended family.

## 7 RITES OF PASSAGE

The Bakongo believe in a close relationship between the unborn, the living, and the dead. If they are Christian, they baptize their children. At birth, there is a ritual called a *ko-bota elingi* (which literally means "what a pleasure it is to give birth"), a party to which friends and relatives come to share in the parents' joy and to celebrate the continuity of the family.

Until recently, initiation (*Longo*) held a critical place among the rites of passage. *Longo* teaches children the secrets of Bakongo traditions essential to assuming the responsibilities of adulthood. During *Longo*, children learn adult behavior, including control of their physical and emotional reactions to evil, suffering, and death. The ceremonies differ in form, duration, and name among the different Bakongo subgroups. In the past they lasted up to two months. Gradual westernization and rigid school calendars mean that fewer children undergo the rite.

Death is a passage to the next dimension, the spirit village of the ancestors (see **Religion**). In the past, Kongo tombs were remarkably large, built of wood or stone, and resembled small homes into which the family of the deceased placed furniture and personal objects. The corpse was dressed in fine apparel and placed in a position recalling his trade. Graves these days are often marked with no more than concrete crosses. But some are works of art that still reflect Portuguese influence and display statues of friends and family mounted on and around the tomb.

## 8 INTERPERSONAL RELATIONS

Bakongo are friendly people who typically greet each other both verbally and by shaking hands. The familiar greeting in Kikongo is *Mbote, Tata/Mama. Kolele?* ("Hello, Sir/Madam. What news?"). Respect for authority figures and the elderly is shown by holding the left hand to the right wrist when shaking hands. Men commonly hold hands in public as a sign of friendship. Children are always supposed to receive objects with two hands.

Although young people may initiate courtship, marriage is often the product of family intervention, with older siblings or extended family members suggesting prospective mates.

## 9 LIVING CONDITIONS

Living conditions are austere for most Bakongo. Rural families typically live in one- or two-room mud brick huts with thatch or tin roofs, and without electricity. Cooking is done mostly outside. Windows are unscreened, allowing access to flies and mosquitoes. Water sources are mostly unprotected and subject to contamination. Infectious and parasitic diseases in the DRC cause more than 50% of all deaths. Children under five, who make up 20% of the DRC population, account for 80% of deaths. Their daily diets are generally deficient in vitamins, minerals, and protein. Despite poor road networks, much of the produce of the Lower Congo region feeds urban populations in Brazzaville, Kinshasa, and Luanda.

## 10 FAMILY LIFE

The Bakongo family lives as a nuclear unit and is rarely polygamous. Although women typically give birth to as many as 10 children, diseases and other illnesses claim the lives of many while they are still infants or toddlers. Nevertheless, children are a sign of wealth, and parents consider themselves blessed to have many children.

The Bakongo are matriarchal. Children belong to their mother's lineage, and the maternal uncle exercises jurisdiction over them even while their father is alive, wielding great power but also carrying great responsibility. The maternal uncle decides where his sister's children will study and what vocation they will pursue. If a man succeeds in life but refuses

A wooden figure with nails, belonging to the Bakongo, dates to around the 16th–20th century. (Getty Images)

to help the family, he may be censured by his uncle. On the other hand, in the case of certain misfortunes, the uncle himself may be blamed—uncles have been stoned when they were suspected of wrongdoing. The European patriarchal tradition has weakened this once monolithic system.

### **11 CLOTHING**

In ancient times, the Bakongo wore clothing made from bark softened by pounding. However, through their long association with the West, the Bakongo adopted Western apparel at an early date. Photographs from the late 1880s show them wearing suits over their sarongs. They generally are considered very proper dressers by other Congolese. Women adopt the latest local fashions and hair styles, which change every few months. The mainstay is the African sarong (*pagne*). Many families are forced to buy used clothing at the markets; children typically sport T-shirts, shorts, and cotton smocks for everyday wear.

### **12 FOOD**

The Bakongo typically eat three meals a day. For breakfast, a village family eats a pasty dough-like ball made from cassava flour (*fufu*) with yesterday's sauce. More urbanized peo-

ple drink coffee and eat French bread, which is baked locally throughout the region.

The midday meal is the largest of the day. Bakongo enjoy one of several sauces, eaten with *fufu* or with rice. Cassava leaves (*saka saka*), pounded and cooked, are always a favorite. Dried salted fish (*makayabu*) or pilchards are added to make a rich *saka saka*. Another local favorite is pounded sesame seeds (*wangila*), to which small dried shrimp are added. Pounded squash seeds (*mbika*) seasoned with lots of hot pepper and wrapped in banana leaves are sold at roadside stands, and are a popular snack for travelers. The most common dish is white beans cooked in a palm oil sauce of tomatoes, onions, garlic, and hot pepper. The beans are eaten with rice, *fufu*, or *chikwange* (a cassava loaf prepared in banana leaves).

Supper generally consists of leftovers, but *chikwange* with a piece of *makayabu* covered in hot pepper sauce may be found at local markets in the evening, and is very satisfying with beer. “Kin sept jours” (meaning Kinshasa seven-day loaf) is a giant *chikwange* so large that it purportedly takes a whole family a week to eat it.

The Bakongo are fond of palm wine. Palm juice is tapped from the top of the coconut palm trunk. It ferments within hours and must be drunk the next day. On Saturday and Sunday afternoons, people sit under mango trees, enjoying the milky, tangy substance. They also make sugar cane wine (*nguilala*), fruit wines, and homemade gin (cinq cents). It is customary to pour a small amount on the ground for the ancestors before imbibing.

### **13 EDUCATION**

By virtue of their close and sustained contact with European missionaries, the Bakongo have enjoyed relatively high levels of literacy and education. Currently, most parents want to send their children to high school and beyond, but many children from average families are obliged to drop out, at least temporarily, for financial reasons. Thus it is not uncommon to find 20-year-olds in some high schools.

### **14 CULTURAL HERITAGE**

Kongo court art ranks with that of the Bakuba of Kasai and the Baluba of Katanga, tribes of the southeastern DRC (Democratic Republic of the Congo). One type of statue—the *mintadi*, or “chief”—was a large piece of sculpture designed to “replace” the chief at court while he was at war or visiting the king in San Salvador. These statues, of which few remain, were sculpted of stone or wood and showed the chief's rank. Another type—“maternity”—depicted a mother and child. In their resemblance to portrayals of the virgin Mary, these show a Catholic influence and are notable for both their non-stylized realism and their serenity.

Besides its reservoir of oral literature, Kikongo has a centuries-old written tradition. Kikongo verse is rich in proverbs, fables, riddles, and folktales. Parts of the Bible were translated into Kikongo in the latter part of the 19th century.

### **15 WORK**

Except for the urban migrant, most Bakongo are subsistence farmers with small patches of cassava, beans, and vegetables. Fruit tree plantations are abundant in some areas. Generally, crop cultivation is only moderately productive because of the dry climate and infertile soils along the coast and into the

plateau regions. Along the coast, however, fishing provides a livelihood for many people. Despite the building of the large Inga dams, the promise of industry touted in the 1970s never fully materialized. Recent protests in Bas-Congo DRC have carried overtones of refusing employment to outsiders, and to restricting work and business opportunities to residents of the province.

## 16 SPORTS

In all three countries home to the Bakongo, soccer is the national participant and spectator sport. Boys and young men play it wherever and whenever possible. As a rule, though, people find much less time to play sports than in the West. Even on Sundays, they may cultivate their fields or tend fruit trees in order to ensure a good harvest.

## 17 ENTERTAINMENT AND RECREATION

Besides playing and watching soccer, people love to tell stories. In rural areas people grow up listening to and learning to narrate tales. In addition, nearly everyone enjoys music and dancing. Kinshasa and Brazzaville are centers for African music, which is enjoyed throughout the continent. The larger cities are famous for their live music and nightclubs. Young people, especially, are continually learning the latest dances. In recent years the advent of satellite TV has made it possible for the more affluent to be entertained in their homes. But affordable video houses have become a popular means for the general public to enjoy movies and music videos.

## 18 FOLK ART, CRAFTS, AND HOBBIES

Traditionally, Bakongo artisans have excelled in wood carving, sculpting, painting, and stone work. An example of their intricate carving is found in their wooden bowl covers that have protruding human busts for handles. They also specialize in scepters, ankle bells, cow-tail fly swatters, and bottles for medicinal and magical powders, often displaying images of people and animals. Masks, on the other hand, have been less important to the Bakongo than to other people, such as the Luba.

One unique type of folk art is the fetish, which is an animal carved from wood and driven full of nails. The Mayumbe near the coast paint calabashes (gourds), embellishing them with hunting scenes and colorful geometric designs.

## 19 SOCIAL PROBLEMS

The Bakongo face many of the same problems as their fellow citizens in their countries. They must cope with uncontrolled urbanization, collapsing state health infrastructure, lack of well-paid jobs, economic instability, and discontent among youth for lack of opportunities. In DRC, Bakongo have long-standing grievances with the national government that their farm produce, natural resources and other sources of revenues to the national treasury far exceed the benefits they receive in state services.

Social problems are not entirely separable from political issues. As noted, Kongo nationalists have never accepted the division of their ancient kingdom at the conference of Berlin in 1884–85. They argue that the partition was a unilateral European decision in which no Congolese participated. Consequently, since the 1950s in Angola, Holden Roberto and the National Front for the Liberation of Angola (FNLA) opposed

first the Portuguese and then the Popular Movement for the Liberation of Angola (MPLA) regime; their goal was the reunification of the Bakongo spread across three countries. Tragically, their protests and uprisings resulted in repression and massacres, including “Bloody Friday” on January 1993 when between 4,000 and 6,000 Bakongo were killed. In Angola, Bakongo still are viewed with suspicion by the regime because of their support during the civil war for the National Union for the Total Independence of Angola (UNITA). It would be difficult to estimate the cost of these allegiances in terms of lost social and economic development, but Bakongo clearly have paid and continue to pay dearly for their separatist ideas.

## 20 GENDER ISSUES

Women have not benefitted equally from development, and traditionally they have had to take a subservient role to men in political, social, and economic affairs. Women and girls still perform the majority of household chores including fetching water, collecting firewood, cooking and caring for children. They also plant, weed and harvest crops, and tend household gardens. Most girls, because they are expected to help their mothers with this workload, do not complete primary and secondary school. While women produce around 60% of the food, they receive only a fraction of agriculture extension services and generally do not own land. Some are subject to sexual violence though not nearly on the scale as experienced by women in eastern Congo. Nevertheless, initiatives like schooling for girls and women’s savings and credit cooperatives have gone a long way to empowering women.

# BAMANA

**PRONUNCIATION:** bah-MAH-nah

**ALTERNATE NAMES:** Bambara

**LOCATION:** Republic of Mali

**POPULATION:** 4–5 million

**LANGUAGE:** Bamanankan

**RELIGION:** Islam; indigenous religion

**RELATED ARTICLES:** Vol. 1: Malians

## 1 INTRODUCTION

The Bamana live in the Republic of Mali. The development of a Bamana ethnic identity dates back to the pre-colonial states of Segu and Kaarta. According to oral tradition, Biton (Mamari) Kulubali founded the Segu kingdom (named after its capital) in about 1712 when he was banned from his own village after a dispute. His age mates followed him, and together they organized raids on surrounding communities. Their ranks were swelled by men whose freedom they purchased (e.g., men who had committed crimes or fallen into debt bondage) and by others who joined voluntarily. Extending his raids over an ever-larger territory, Biton gradually came to control the entire Middle Niger region. Some members of the Kulubali clan resisted his authority and migrated westward into the area of Kaarta where they founded a second Bamana state.

Biton Kulubali died in 1755. His sons quarreled over his succession and ultimately lost the throne to the military commander Ngolo Jara. Ngolo brought back stability and expanded the boundaries of the kingdom. The state was at its largest and strongest during the reigns of Ngolo's son Monzon and his grandson Da Monzon. The Scottish explorer Mungo Park, the first European to travel in this part of West Africa, visited Segu during the reign of Monzon in 1796 and again in 1805. Internal strife began again after the death of Da Monzon in 1827, and central rule became weaker. Al Hajj Umar Tal, a Muslim cleric from the Futa Toro (now Senegal), took control of Kaarta in 1855 and conquered Segu in 1860 in the course of a *ji-had* (military struggle). He was succeeded by his son Amadu, who retained power in Segu until the French conquest in 1890. Bamana villages in Kaarta and in the former Segu kingdom resisted the imposition of colonial rule but finally succumbed to superior military power. The French established an administrative center in Segu and reinstalled a descendent of the Jara dynasty as a local figurehead but soon accused him of fomenting a revolt and executed him. A French administrator then governed the territory until Mali gained its independence from France in 1960. Segu has been the capital of Mali's fourth region since then.

## 2 LOCATION AND HOMELAND

The Bamana compose the largest of Mali's ethnic groups, numbering more than 4 million. They predominate on both sides of the Niger River between Bamako and Kè-Macina, northwest of Bamako, and between the Niger and Bani rivers southeast of Segu. Bamana families and groups of families also live among other ethnic groups elsewhere in the country. Large numbers of rural men and women move to Mali's cities, especially to the capital Bamako, to earn money during the long dry season or to establish themselves permanently. Others seek work outside

the country. Côte d'Ivoire was a favorite destination until the eruption of the civil war in 2002.

## 3 LANGUAGE

The Bamana language (*Bamanankan*) belongs to the Mande group of languages, which are a branch of the Niger-Congo family of African languages. A national orthography for Bamana was developed after independence but the spelling of most personal and place names still reflect French writing conventions; for example "Ségou" rather than "Segu." The language is tonal so that the meaning of words changes depending on the tone of a particular syllable. (*So* with a low tone, for example, means "horse," whereas *so* with a high tone means "house.") Definite and indefinite articles are also marked by raising or lowering the tone. The language is semantically rich. Bamana convey this when they say "*Bamankan kònò ka dun*" ("The Bamana language is profound").

Since Segu is considered the Bamana heartland, the dialect of Bamana spoken in and around Segu is said to be the most authentic form of the language.

## 4 FOLKLORE

The foremost Bamana heroes are the king Da Monzon Jara, the king's bard Tinyetigiba Dante, and his warrior chief Bakari Jan Koné, whose deeds are celebrated in the epic of Da Monzon. This epic telescopes certain historical figures and events before and after Da Monzon's reign. In recent memory, Da Monzon's popularity even overshadows that of the kingdom's founder Biton Kulubali, although the popular Segu band Super Biton, which has represented the region at the biennial National Arts Festival, is named after the latter.

## 5 RELIGION

Al Hajj Umar Tal (see **Introduction**) and his successors tried to eliminate Bamana religious practices but they did not convert people by force. Bamana men and women embraced Islam of their own volition over the course of the 20th century. The vast majority are Muslims today.

Indigenous Bamana religion was anchored in respect for the ancestors, village protective spirits, and several secret societies. The abode (*dasiri*) of the village protective spirits is in a grove near the village where the villagers would collectively make annual sacrifices. Individuals and households could obtain blessings through sacrifices to ancestors at household shrines as well as to village protective spirits at the *dasiri*. Six major secret societies (*ndòmò*, *kòmò*, *kònò*, *koré*, *ciwara*, and *nya*) were instrumental in social and religious life. Only men could become members. Historical evidence suggests that there were also some female societies in the past. Not all of the six societies were represented in each village or area occupied by Bamana. All young boys were once initiated into the *ndòmò* society, where they participated in annual rituals and learned self-discipline. Once circumcised, a boy could join one or more of the other societies in his area. Members were required to participate in meetings and rituals and refrain from discussing the knowledge they acquired with non-members. Non-members were unable to approach the area where rituals were held; sometimes they even had to remain in their houses when rituals were taking place in the village. In such instances, a bell signaled the beginning and end of the curfew. Although the societies differed in the scope and content of their

esoteric knowledge, rituals, symbols, and practices, they all upheld community values and sought to protect the community against misfortune and harm by individuals (e.g., through sorcery). Divination through procedures such as geomancy, throwing cowries, or animal sacrifice was used widely when important decisions had to be taken.

## 6 MAJOR HOLIDAYS

Traditionally, Bamana observed either Monday or Thursday as a day of rest. During the agricultural season, they suspended work in the fields on that day and relaxed around pots of home-brewed beer. Very few observe these days any longer due to labor migration and widespread conversion to Islam. The Bamana New Year, the first day of the lunar month *jominé*, is still recognized by some, but everyone now celebrates the national holidays (see **Malians**).

## 7 RITES OF PASSAGE

Ethnic differences in the celebration of rites of passage in Mali have diminished as a result of conversion to Islam and increased urbanization. Many Bamana women in rural areas still give birth at home with the assistance of a midwife. New mothers stay home and rest with the baby for seven days until a naming ceremony is held. The household elder chooses the name in consultation with the infant's father. If the family is Muslim and has no preference, the local *imam* (religious leader) will select a name and say prayers. In the rural areas outside Segou, village men assemble for the name-giving ceremony and make a small monetary contribution, but women do not bring gifts of cloth for the mother as in the city.

Village boys of roughly the same age are circumcised together and remain secluded until their wounds are healed. The same holds for girls who are excised (i.e., have part of their clitoris removed). Whether or not excision should continue is increasingly being debated. Excision is a pre-Islamic practice which many Bamana retained when they became Muslims. It was considered parallel to circumcision, and each was seen as playing a vital role in the unfolding of female and male sexuality respectively. Celebrations at the end of seclusion have also diminished considerably. In the past, when boys and girls were teenagers by the time of circumcision/excision, these rituals signaled the end of childhood and the "coming out" of the new adults was a joyous affair with much feasting, visiting, and dancing. Young women were considered marriageable thereafter and young men ready to court women. The future in-laws of girls who were already betrothed would come bearing gifts.

Weddings follow the transfer of gifts from the groom's to the bride's family (bride wealth) and are held in the home of the groom. In rural areas, entire villages or neighborhoods participate in the festivities and help the groom's family feed the guests by bringing cooked food. Friends and acquaintances of the groom come from near and far, offering their best wishes and monetary contributions. The bride is accompanied by a throng of female relatives, and her trousseau is opened and displayed for the village women. Some of the cloth she brings with her is distributed among her husband's female relatives. After the wedding, the bride spends only a few days with her husband and returns home for several weeks before joining him permanently. In the past weddings were held during the dry season, but they are now often celebrated during the rainy season when young people return from labor migration. Wed-

dings are equally important social occasions in the cities. Since space is more limited than in the rural areas, some of the festivities take place in the street in front of the groom's home. Families block off part of the street and erect tents to accommodate guests and musicians.

Muslim Bamana funerals are simple and differ little from others in Mali. Among non-Muslims, the death of an old woman or man gives rise to festivities celebrating the person's life, especially if (s)he has numerous children and grandchildren.

## 8 INTERPERSONAL RELATIONS

Learning the etiquette of greeting and hospitality is part of the socialization process of any Bamana child. The greeting ritual involves a rhythmic exchange of inquiries and responses concerning the interlocutors' well-being and establishes their membership in social groups. If the two people know each other, they inquire about family members and friends. If they are strangers, the host seeks to locate the guest socially through questions posed in greeting. During the greeting, the interlocutors lower their eyes. A younger person always shows respect by not looking an elder in the eye while greeting. Following the greeting, a visitor is offered a drink of water and a place to sit. Depending on the nature and length of the visit, a guest may also be offered food and a parting gift (e.g., a chicken or other local product). A visitor (relative, friend, neighbor, or stranger) who arrives at mealtime is always invited to join in the meal. One way to honor a guest is to offer him or her a kola nut. Most visiting takes place on the veranda or in the courtyard, but if a

visitor is invited to enter someone's house, he or she traditionally removes his or her shoes.

Even among people who see each other daily, greetings are very important. There are greetings for virtually all occasions and activities. Someone returning from the market, for example, is hailed, "*I ni dògò*" (literally: "You and the market").

## 9 LIVING CONDITIONS

As is the case with rural Malians of other ethnic groups, rural Bamana have few material comforts. Their houses are generally made of mud bricks and have no electricity or running water. Women and young girls carry all water for drinking, cooking, and bathing home from the nearest well. They cook over an open fire in the courtyard or, during the rainy season, in a kitchen house. Each married woman is entitled to her own house with an attached bathing area and toilet. If a man has more than one wife, he must provide this for each one. A man with multiple wives frequently also has a small house of his own where he keeps his personal belongings and entertains guests. The most prevalent consumer goods include clothing, enamel bowls, garden chairs, kerosene lamps, flashlights, transistor radios, bicycles, and motor bikes. Those who do not own or have access to a bicycle or motor bike generally travel by foot or donkey-cart between rural villages.

Health problems and treatment options are generally the same as for other Malians. Because the majority of rural Bamana engage in agriculture, they are prone to work-related injuries and infected wounds.

## 10 FAMILY LIFE

The households of Bamana cultivators are usually multi-generational, including a man and his wife or wives, and their sons with their respective wives and children. Social relations are governed by an age and gender hierarchy. Men are ranked according to their biological age and women on the basis of their marriage into the household. Those who are older have more authority than their juniors and men have more authority than women. This principle is mitigated by various factors including earning capacity and personal dynamism. Moreover, elder women are an important force within the household by virtue of having worked and born children for their husband's family. Decisions concerning the household are made by the eldest male in consultation with his brothers or grown sons. Women are now often consulted in decisions regarding the marriage of daughters and sons, and they are able to influence decisions even when they have no direct input.

Family members cooperate in the cultivation of household fields and the crops, and/or the proceeds from their sale, provide food for the household meals and resources for agricultural improvements, marriage expenses, and other household needs. The wives of the men in the family are responsible for meal preparation. They cooperate in pounding grain unless they are able to pay for having it ground by machine, and they take turns cooking. Elder women are freed of these duties once daughters-in-law can assume them. Family members eat together, usually in same-gender groups. Since meals are taken in the courtyard for most of the year women can often overhear conversation among men and vice versa. There may also be conversation and banter back and forth. Married women host friends, visiting relatives, or their husband and his guests at their own house.

In order to generate income that is under their personal control, both men and women can grow specialty crops, produce handicrafts, or engage in small trade during the off-season or during leisure hours. Individual women and men also have the right to own chickens, goats, sheep, or cattle in addition to any animals which all members of the household may own jointly. If conflict arises and cannot be managed, jointly owned land and animals are divided, and the household breaks up into smaller units.

## 11 CLOTHING

Contemporary Bamana women and men dress like other Malians. Traditionally, women spun cotton and men wove it into strips that were sewn together into clothing for young and old of both genders. In the early part of the 20th century, adult male attire consisted of a tunic and ample knee-length pants that closed with a drawstring, both often dyed a rust brown by a man's wife or mother. Women traditionally wore a hand woven wrap skirt in multi-colored patterns or designs done in a mud-dye technique. They wore a piece of similar cloth around the upper part of their bodies. Basic jewelry included gold ear and nose rings for women and a single gold earring for men.

## 12 FOOD

The basis of the diet in rural areas continues to be millet and, to a lesser extent, sorghum and fonio. Rice is increasingly popular but not eaten every day. Millet (or sorghum and fonio) is pounded by hand or machine-ground and then prepared as a gruel (for breakfast or as a light meal) or as a stiff porridge or couscous. Both porridge and couscous are eaten with various sauces made of hot pepper and ground baobab leaf or peanut paste. Dried fish is often used for flavoring the sauce because most people cannot afford meat or chicken every day. Smoked or fresh fish is more commonly eaten than either chicken or meat. Apart from okra and sorrel, vegetables are only gradually entering the rural Bamana diet. *Ngòmi* is a millet pancake fried in shea butter oil (from the shea tree) and eaten with sauce or sugar water. Finally, a traditional Bamana liquid food, often eaten between meals, is *dègè*, which is made of finely ground millet flour and cream that are allowed to sour. At the time of consumption, it is diluted with water and sweetened with sugar. Young women who have been on labor migration occasionally prepare foods they have learned to cook in the city (e.g. pasta) as special treats.

## 13 EDUCATION

Educational statistics are not broken down by ethnic group. Bamana children and youths are represented in the secular schools as well as in the *madrasas* and Quranic schools prevalent in Mali. Many rural villages still do not have any school and children have to walk to the nearest village or town to attend. Secondary schools are located mainly in cities and in administrative centers such as county seats. This means that students from outlying areas must board if they want to continue their educations beyond elementary school.

## 14 CULTURAL HERITAGE

The tomb of Biton Kulubali, founder of the Segu kingdom, is located on the banks of the Niger in Sikoro, a few kilometers from Segu. Nearby is the reconstructed room from where Bi-

ton is said to have conducted the affairs of state. The symbol of Segou is the *balanzan* tree (*acacia albida*), which loses its fine leaves during the rainy season. In 2005 Segou hotel owners joined with local nongovernmental organizations (NGOs) and city representatives to organize the first Festival on the Niger in order to showcase regional cultural traditions and promote cultural tourism. The festival has been held every February since then and also brings national musical talent to the city.

Music is an integral part of all Bamana rituals and celebrations, with drums providing the major musical accompaniment. Young men who have the talent and interest learn drumming by working with accomplished drummers. Bands usually consist of three drummers who play in a neighborhood or village. Bands that gain a reputation have the opportunity to perform for a fee on special occasions. Women and men dance in same-sex groups. Hunters' associations have bards who make music with a lute (*donso ngoni*) that is accompanied by a scraper (a baton-like metal instrument). Another type of lute was used during secret society rituals. Women have their own musical instrument, the *gita*, used as an accompaniment to singing. The *gita* of married women consists of a calabash (gourd) turned upside down on a piece of heavy cloth and is struck with two wooden batons (similar to chopsticks). The *gita* used by unmarried girls is a calabash decorated with an incised pattern and cowry shells; it is tossed shoulder-high with both hands and turned at the same time to make a percussive sound.

Although Bamana figure among Mali's writers, oral literature has the widest audience and includes a variety of genres. Apart from the epic, there are tales, proverbs, and riddles. Children in particular exercise their intellect by telling riddles.

Puppet theater and mud cloth, discussed below, are part of the Bamana cultural heritage.

## 15 WORK

Agriculture continues to employ most Bamana but it is rarely the only source of income. Those who remain in the rural areas combine it with other income-generating activities, ranging from market gardening to craft production, small trade, and construction. Bamana women work in the fields alongside men, but households with enough male labor may free them from planting and weeding to pursue other activities. In the past, Bamana prided themselves on being accomplished cultivators. Young men could show prowess by excelling during collective work parties in the fields. When the village youth group worked in someone's field, it was accompanied by drummers and adolescent girls who sang to urge the men on in their work.

Seasonal or longer-term labor migration is a widespread means of supplementing rural incomes. The majority of male migrants pursue a variety of occupations in the urban informal sector while young women work as domestic servants in urban households. Like other Malians, Bamana also seek work outside the country. Women and men who complete their schooling enter a variety of occupations appropriate to their educational achievement.

## 16 SPORTS

Soccer is a popular sport introduced by Europeans. There are no traditional sports, although male dancing involves acrobatics such as somersaults.

## 17 ENTERTAINMENT AND RECREATION

Theater has long been popular among the Bamana, in small villages as well as in urban neighborhoods. In the rural areas, it is generally organized by the local youth association. One type of theater, known as *kotèba*, satirizes local practices and individuals. A favorite entertainment related to *kotèba* is comedy whereby a man or woman dressed outrageously acts the part of a buffoon known as *koréduga*. A second type of theater, *sògòbò*, may involve either puppetry or costumes made of reeds, cloth, and masks worn by men. The puppets represent animals, spirits, and human characters, including white colonial officials. They are commissioned from a blacksmith-carver. Performances involving reed costumes are generally held

only at night at the beginning of the harvest season. Villages vie with each other for the best performances and some reach national acclaim. Both *kotèba* and *sògòbò* are done with live drumming and a male chorus.

The departure of young men and women during the long dry season has greatly diminished rural entertainment during this time of year. Weddings animate villages at the beginning of the rainy season with visitors and musical entertainment. Village youth groups invest in microphones and amplifiers since they are now considered a requirement for successful musical performances. In the absence of live performances, people of all ages listen to the radio or to music on cassettes. Socializing with friends, neighbors, and relatives remains a primary form of recreation.

### 18 FOLK ART, CRAFTS, AND HOBBIES

Weaving was once a widespread dry season occupation for Bamana men but it has declined considerably since the 1990s. Some men still weave blankets of home- or machine-spun cotton in red and white or black and white checks and stripes. Mud cloth (*bògòlan fini*), a cotton textile for ritual purposes and everyday wear, was traditionally painted by and for women in black- or brown-white geometric patterns using vegetable dyes and fermented clay. Over a decade ago it was adapted for fashionable wear, bags, and wall hangings and marketed nationally and internationally. Malians embraced it as an emblem of national identity and African Americans began wearing it as a symbol of pride. Malian artists played an important role in this transformation. Since its production for the national and international market place, men have also become involved in painting mud cloth.

Blacksmiths have historically not only made iron objects but also carved masks used in rituals, including the famous antelope headdresses seen in many museums. Wives and mothers of blacksmiths are skilled potters.

### 19 SOCIAL PROBLEMS

There are no social problems that are unique to the Bamana as an ethnic group. The consumption of fermented drinks, especially millet beer, on ritual occasions was common in the past but is now limited to those who continue to practice their indigenous religion. As Malian citizens, the Bamana are covered by the human and civil rights observed at the national level.

### 20 GENDER ISSUES

The discussion of family life above provides a glimpse into Bamana gender relations and shows that they are cross-cut by age and other forms of social status. Gender ideology places men above women but daily life allows for considerable ambiguity and flexibility. Since family land is inherited through the male line, women have to integrate their husband's home upon marriage. Rural married men who work in Bamako for extended periods of time increasingly take their wives with them during the early years of marriage. Once they have children however, women generally have to stay in the village unless the husband decides to relocate permanently to the city. A man with two wives may have one accompany him to the city while leaving one behind in the village. In sum, couples are often separated for months at a time because families cannot earn an adequate income in the rural areas. The revision of the

Malian family law code, once passed, will improve women's juridical status.

# BANYANKOLE

**PRONUNCIATION:** bahn-yahn-KOH-lay

**LOCATION:** Ankole in southwestern Uganda

Population: 400,000

**LANGUAGE:** Runyankole; English, KiSwahili (two national languages)

**RELIGION:** Christianity (Roman Catholicism, Church of Uganda—Anglican, Fundamental Christianity); indigenous Kinyankole religion

**RELATED ARTICLES:** Vol. 1: Ugandans

## 1 INTRODUCTION

The Banyankole, who numbered about 400,000 people at the turn of the century in 2000, are located in southwestern Uganda. This former kingdom is well known for its long-horned cattle, which were objects of economic significance as well as prestige. The *Mugabe* (King) was an absolute ruler. He claimed all the cattle throughout the country as his own. Chiefs were ranked not by the land that they owned but by the number of cattle that they possessed. Chiefs ruled over pasture lands. Although both chiefs and herdsmen possessed cattle, the ultimate ownership of all cattle was in the hands of the *Mugabe*. Cows were exchanged by chiefs or herdsmen for wives but could not be killed, except for a small number of bulls for sacrifice or food. The Banyankole conform to a pattern of social stratification famous in Uganda and its neighboring countries of Rwanda and Burundi, which is namely, the division of society into a high-ranked pastoral caste and a lower-ranked agricultural caste. The *Bahima* are cattle herders who despise farming and do not marry the *Bairu* farmers who reside on a chief's estates and provide the chief with vegetable foods. The *Bairu* also care for goats and sheep for themselves and for the *Bahima*.

The *Mugabe* regularly held court where he resolved disputes involving more than 50 cows, or cases of wives deserting their husbands. The *Nganzi* was the favorite chief who decided which disputes would be heard by the *Mugabe*. The *Nganzi* alone had the right to enter the *Mugabe*'s rooms at any time. The kingdom was divided into 16 districts headed by a chief appointed directly by the *Mugabe*. At his appointment, a district chief was given several hundred cows as a gift from the *Mugabe*. Ordinary cattle herders were free to settle wherever they chose in search of good pastures and wise leadership. Chiefs regularly held courts to resolve minor conflicts. Every year agents from the *Mugabe* traveled throughout the kingdom in search of taxation in the form of 1 cow per 50 cows in a homestead. Chiefs had no right to levy taxes on those in their districts.

In 1967, the government of Milton Obote, prime minister of Uganda, abolished kingdoms in Uganda, including the Kingdom of Ankole. This policy was intended to promote individualism and socialism in opposition to traditional forms of social stratification. A cash economy and private ownership of land promoted in the colonial era, set in motion by the British in the early 20th century, had earlier served to diminish the authority of chiefs in favor of wealthy farmers or herders. By World War II, the *Bairu* owned as many cattle as the *Bahima*. Nevertheless, cattle are still highly valued among the Banyankole, and the *Bahima* are still held in high regard.

## 2 LOCATION AND HOMELAND

Ankole lies to the southwest of Lake Victoria in southwestern Uganda. Its area equals about 15,540 sq km (6,000 sq mi). It appears that sometime during the 17th century or before, cattle-keeping people migrated from the north into central and western Uganda and mingled with indigenous farming peoples. These migrants adopted the language of the farmers but maintained their separate identity and authority, most notably in the Kingdom of Ankole. The Kingdom of Buganda bordered Ankole on the east, and the Kingdom of Bunyoro constituted its northern border. Lake Edward was a natural border to the west.

The country was well suited for pastoralism, given its large areas of rolling plains covered with abundant grass. The land lies about 1,370 m (4,500 ft) above sea level, with some hills rising to as high as 2,740 m (9,000 ft). Valleys sometimes have papyrus grass or are wooded. Today, nomadic herders prefer to move to those areas of Ankole where fresh grazing land and water supplies are available, although these lands are diminishing because of a high rate of population growth.

## 3 LANGUAGE

The Banyankole speak a Bantu language called Runyankole, which is a member of the Niger-Kordofanian group of language families. In many of these languages, nouns are composed of modifiers known as prefixes, infixes, and suffixes. Word stems alone have no grammatical meaning. For example, the prefix *ba-* signifies plurality; thus, the ethnic group carries the name *Banyankole*. An individual person is a *Munyankole*, with the prefix *mu-* carrying the idea of singularity. Things pertaining to or belonging to the Banyankole are referred to as *Kinyankole*, taking the prefix *ki-*. The pastoral Banyankole are known as *Bahima*; an individual of this group is referred to as a *Muhima*. The agricultural Banyankole are known as *Bairu*; the individual is a *Muiru*.

## 4 FOLKLORE

Morality is primarily a communal concern, for which folklore provides a repertoire of legends and tales constructed to impress upon the young standards for proper behavior through contradictions and dilemmas contained in the stories. Storytelling is a common means of entertainment, with both men and women excelling in this verbal art form. Riddles and proverbs are also emphasized among the Banyankole. Of special significance are legends surrounding the institution of the kingship, details of which provide a historical framework for the Banyankole. The perhaps legendary *Bachwezi*, thought to be forebears to 20th-century kingdoms in central and western Uganda, are credited by the Banyankole for pastoralism, religious cults, and social distinctions found among them. They also established the Banyankole, in Kinyankole terms, as the successors of this large, regional empire. Neighboring societies, such as the Banyoro, have traditions that contest this view in favor of legends more favorable to their own claim to succession.

Folk tales concerning morality contain many examples drawn from royalty, cattle, hunting, and other central concerns of the Banyankole. After work in the evening, parents and grandparents socialize children into the community through stories (*ebyevugo*), proverbs (*efumu*), and riddles (*ebiito*). Animals figure prominently in Kinyankole tales. For example,

one well-known tale concerns the Hare and the Leopard. The Hare and the Leopard were once great friends. When the Hare went to his garden for farming, he rubbed his legs with soil and then went home without doing any work, even though he told Leopard that he was always tired from digging. Hare also stole beans from Leopard's plot and said that they were his own. Eventually, Leopard realized that his crops were being stolen, and he set a trap in which Hare was caught in the act of stealing. While stuck in the trap, Hare called to Fox, who came and set him free. Conniving Hare told Fox to put his own leg into the trap to see how it functioned. Hare then called Leopard, who came and killed Fox, the assumed thief, without asking any questions. The Banyankole recite this story to illustrate that you should not trust easily, as Leopard trusted Hare, nor should you act quickly before contemplation, as Leopard did in killing the innocent Fox.

Folk tales are recounted to teenage Banyankole during the time of courtship in order to provide a moral context for gender relations. The story of the King and the Hyena, for example, illustrates what might be told to young girls who are wasting their time chasing boys instead of learning to resist temptations for future rewards, especially the attainment of a successful marriage. In this story, the King sent a chief to find people or animals who were starving so that he could give from his own abundance. The Hyena accepted the invitation to the King's palace in order to get meat, butter, and milk, although he was warned that he must overcome four temptations on the way there. After resisting other tempting foods along the way, Hyena could not resist big bones and fat meat. When told that

he could not visit the king, Hyena did not worry since he expected to return to eat the foods that he had resisted previously. Unfortunately, the river of milk, the valley full of soup and fat meat, and another valley full of roast beef had all dried up. Hyena, therefore, sadly returned to his cave, where he starved to death.

Another tale for those young people contemplating marriage, called "The Woman Who Stole Locusts," involves a man who went to a far-off country to find a wife. He chose a very beautiful girl, even though he was warned by his friends that she had a reputation for bad manners. Sure enough, while back home, food began to disappear mysteriously, especially the delicacy, cooked locusts. After it was discovered that his new bride was the cause, she was returned home, and he reclaimed the bride-wealth he had given for her.

## 5 RELIGION

The majority of Banyankole today are Christians who belong to major world denominations, including the Roman Catholic Church, or the Church of Uganda that is Anglican. Fundamental Christianity, such as Evangelicalism, is also common. For example, the Balokole are self-identified as "saved" through a rejection of personal sin and an acceptance of Jesus Christ as Lord and Savior. Public confessions of such sins as adultery and drunkenness are common, as well as rejection of many traditional secular and religious practices. The Balokole, for instance, no longer practice extensive milking or bloodletting from cows. They believe that this "sin of greed" deprives the calf of its mother's strength and milk. The Bahima Balokole have, therefore, taken up agriculture to supplement their diet. Bride-wealth and the old customs of blood-brotherhood have been rejected in favor of Christian marriage and unity in the blood of Christ. All indigenous forms of religion are rejected outright.

The element of indigenous Kinyankole religion that survives most directly today is the belief in ancestor spirits. It is still believed that many illnesses result from bad behavior to a dead relative, especially paternal relatives. Through divination it is determined which ancestor has been neglected so that presents of meat or milk and/or changes in behavior can appease the ancestor's spirit in order to address the misfortune spiritually. Banyankole respect ancestors, name children after them, and believe that ancestors communicate with the living in dreams.

Prior to the Christian missionary movement in the 19th century, Banyankole believed that God, known as Ruhanga, lived in the sky. Ruhanga created humanity in the form of a man called Rugabe and his wife Nyamate. Rugabe and Nyamate gave birth to a long line of kings who became deified. These gods had special temples and priests often in the royal compound, and tended to be concerned with helping people to solve special problems. There were, for instance, a god of fertility, a god of thunder, a god concerned with earthquakes, and deities for specific clans and their affairs. The present dynasty of kings is believed to be descendants of previous kings who have become gods. There was a strong belief in the spiritual power of the royal drum, which symbolized the benevolent tendencies of the Mugabe ("The Bountiful"). Requests made to the drum for food were never refused, making hunger quite rare in the old economy.

## 6 MAJOR HOLIDAYS

As the majority of Banyankole are now Christian, they celebrate Christian holidays, such as Christmas and Easter.

## 7 RITES OF PASSAGE

After the birth of a child, the placenta and umbilical cord were traditionally treated with elaborate ritual by the midwife who had assisted in the birth. This was thought necessary to protect the mother and her child from harm. The midwife was also skilled in herbal medicines that were used to lessen the pains of birth and to ease difficult deliveries. The birth of twins was considered catastrophic. Members of the family were confined to the homestead and could not leave until rituals, including the slaughter of a sheep, had been performed. Naming also involved a ritual in which relatives gathered together to "call one of them." Names depended on the alleged wishes of one of the ancestors, the day or season of the child's birth, or other special circumstances.

At about the age of four months, among the Bahima, a boy was placed by his father on the backs of two cows that were dedicated to the boy. After this, a hole was scraped in the floor of the hut into which the child was made to sit while he was given the name of one of his ancestors. Among the Bairu, the naming ritual for boys was similar but did not involve cows. Many East African societies train infants to sit in association with naming ceremonies and may even have special sitting ceremonies once the child has achieved this milestone. The training results in children learning to sit unassisted about one month earlier than Western children do.

In early childhood, children began to learn the colors of cows and how to differentiate their families' cows from those of other homesteads. During this time, boys and girls played together. Young boys built small models of huts; girls made head coverings out of grass. Boys were taught how to make water buckets and knives. Girls were taught how to make milk-pot covers and small clay pots. By later childhood, around seven or eight years of age, boys were expected to be useful and were taught how to water cattle and calves. Girls helped by carrying and feeding babies; they were also expected to learn to wash milk-pots and to churn butter.

Among the Bahima, girls began to prepare for marriage as early as eight years of age. They were kept at home and given large quantities of milk in order to grow fat. They were also encouraged not to exercise and to spend most of their time sitting, talking, and making bead ornaments. Today, heaviness is still valued. Teenage eating disorders, such as anorexia nervosa and bulimia, are not evident. Among the Banyankole, the father's sister (paternal aunt) was (and still is) responsible for the sexual morality of the adolescent girl. Girls were expected to be virgins before marriage, and this aunt attended the rituals and was required to verify the virginity of the bride. Today, schools, peer groups, popular magazines, and other mass media are rapidly replacing family members as sources of moral and family education for teenagers.

Traditionally, adulthood was initially recognized through the establishment of a family by marriage, the acquisition of large herds of cows for Bahima, and of abundant crops for Bairu. Happiness, and also full adult status, was achieved by both men and women through the rearing of a large family. Special occupations, crafts, storytelling, and musical expression in song and dance were some of the pastimes enjoyed.

Presently, death and burial are experienced largely through the ideology of Christian religions. Nevertheless, public weeping and wailing are still practiced, and members of the extended family are expected to attend the burial. People are expected to shave their heads as a symbol of mourning. Among the Bahima, cows are slaughtered for the funeral meal. In the past, all the full-grown bulls of the dead man's herd were slaughtered for consumption at the funeral. Occasionally, widows of a dead man committed suicide by hanging or by poison to express their grief. The Mugabe, too, ended his life by poison if he thought that his powers were waning. At his death, fires in the royal compound were extinguished, and the royal drum was covered. All work stopped throughout the kingdom, and all people had their heads shaved. The Mugabe's dead body was put on a cowskin and later transported to a forest where the royal tombs are located.

## 8 INTERPERSONAL RELATIONS

Social relations among the Banyankole cannot be understood apart from rank. In the wider society, the Mugabe and chiefs had authority over less wealthy herders (Bahima). The Bahima had authority over the Bairu. Within the family, husbands had authority over wives, and older children had authority over younger ones. Brothers were held in higher regard than were their sisters, although siblings of the opposite sex were frequently very close.

The death of the Mugabe symbolically illustrates his power over the kingdom. All work ceased, and any couples engaged to be married had to marry on the day of the Mugabe's death or else the man had to look for another wife. All princes and princesses wore bark-cloth clothing instead of their regular cowhide robes. Accession involved a son (usually the eldest) who had been selected by the Mugabe before his death. This prince was given a royal stool upon which he sat for his installation ceremonies. Not infrequently, however, some of his brothers chose to fight him, and civil war resulted. When the new Mugabe was determined through battle, fires would be lit once again throughout the kingdom. New chiefs were then named to oversee his cattle. The new Mugabe's mother was elevated to the rank of queen mother. She appointed her own chiefs and had her own royal homesteads throughout the kingdom. The Mugabe chose his favorite sister to be the "Munyanya Mukama," and she, too, ruled over royal estates. She frequently married royalty from neighboring kingdoms in order to create political ties with them.

In the ordinary households of both Bahima and Bairu, social relations mirrored the royal social organization. Inheritance typically involved the eldest son of a man's first wife, who succeeded to his office and property. A man might, however, choose a favorite son to be his successor. Thus, relations between fathers and sons and between brothers were formal and not infrequently strained. Mothers and their children, and brothers and their sisters, were often close. Because women could not officially own property, mothers generally expected their sons to care for them in old age. Husbands might have multiple wives, given that polygyny was not uncommon. Daughters were valued because they attracted bride-wealth upon their marriages, and sons were important for carrying on the family name. Brothers respected their sisters who brought wealth into the family when they married and left home. The most marginal person in this system of social relations was the

childless woman because she could not inherit property because of her gender, nor did she have any sons to support her in old age.

Social relations in the community centered around exchanges of wealth, such as cows and agricultural produce, through the system of ranked authority and kinship. Marriage and bride-wealth were, and continue to be, significant also. The ideal person was one who was intensely involved in matters of family and community welfare. A person who was a loner and, therefore, did not involve himself or herself in the ongoing social life of the community was held in ill repute. The most significant way that community solidarity was and still is expressed is through the elaborate exchange of formalized greetings. Not to engage in these rituals is a sign of non-membership in the community. Greetings vary by the age of the participants, the time of day, the relative rank of the participants, and many other factors. Anyone, even the Mugabe, meeting an elder has to wait until the elder acknowledges that person first.

## 9 LIVING CONDITIONS

The Mugabe's homestead was usually constructed on a hill and measured about 0.40 km (0.25 mi) at its broadest part. It was surrounded by a large fence made from basketry. A large space inside the compound was set aside for cattle. There were special places for the houses of the king's wives, and for his numerous palace officials. There was a main gate through which visitors could enter, with several smaller gates for the entrance of family members. Waiting rooms were housed near the main gate, and visitors were announced by a gatekeeper. Covered passages connected houses inside the compound. Special names were given to the homes of the king's pages and to those of his favorite wives. There was also a special home used by the Mugabe before he went to war. Occasionally, the king's compound had over 100 homes reserved for the royal wives and their attendants. A fence set off space for his wives from areas used by servants, pages, and other residents. The royal palace was set among other dwellings occupied by prominent chiefs, brewers of the royal beer, and specialists such as woodcutters and drummers. The Mugabe moved his palace every other year in order to provide for the cows a clean environment that was free of insects. Bahima maintained homes much smaller than the king's, but modeled after it in appearance.

The Bairu traditionally built homes about 4.25 to 5.5 m (14–18 ft) in diameter, 2.75 or 3 m (9 or 10 ft) tall, and in the shape of a beehive. Poles of timber had woven over them a framework of basketry made of millet stems and chords of papyrus fiber. A thick layer of grass frequently covered the entire structure. The ground that served as a floor had on it a fireplace made from large stones. Household possessions included cowskin bedding, water pots, iron hoes, and iron knives. Sometimes goats and sheep were tied inside near the walls of the hut.

Today, housing makes use of indigenous materials such as papyrus, grass, and wood, but homes are now primarily rectangular. Such homes usually are made from wattle and daub with thatched roofs. Cement, brick, and corrugated iron are now common in the construction of homes, particularly by those Banyankole who can afford these relatively expensive materials. Currently, household possessions typically include Western-style chairs, tables, couches, and beds. Radios are commonly present, and a growing number of the affluent pos-

sess televisions. Photographs are especially valued and can be seen displayed prominently inside the house, along with calendars, magazine cutouts, and posters. Teenagers enjoy keeping personal albums containing photographs of themselves and their friends taken on special occasions and trips. The family photo album is kept by the parents. These albums are often shared with visitors as a means of socializing on an initial visit.

In the past, Banyankole traveled primarily by foot. With the exception of married Bahima women, most Banyankole could and did walk distances of many miles on a regular basis. Today, the bicycle is a popular means of transportation used for visiting and for transporting goods to market. In the past, paths through the countryside were maintained by chiefs for ease of portage of materials to the Mugabe's palace and for military security. Today, in addition to dirt roads, tarmac roads are available for public vehicles and private automobiles. Speed taxis are popular as a means for travel between towns such as Mbarara and the major city of Uganda, Kampala.

The Banyankole have enjoyed a relatively high standard of living with a rich food base. Nevertheless, diseases such as sleeping sickness and malaria have been problematic historically. Currently, HIV has inflicted many families in Ankole, but government-sponsored HIV prevention programs are in place. Teenage girls do not suffer from eating disorders that are common in the West, most likely because the culture values plumpness rather than thinness.

## 10 FAMILY LIFE

Among the Bahima, a young girl was prepared for marriage beginning at about the age of 10, though sometimes as early as 8, when she was prevented from having any interaction with men. She was expected to consume much milk and beef so that she could attain a desired plumpness. She was encouraged to give up all forms of exercise, resulting in her having difficulty walking. In contrast to Bahima men, girls were considered attractive by becoming as fat as possible. Marriages often occurred before a girl was sexually mature, or soon after her initial menstruation. For this reason, teenage pregnancies before marriage were uncommon. Polygyny was associated with rank and wealth. Bahima pastoralists who were chiefs typically had more than one wife, and the Mugabe sometimes had over 100. Marriages were alliances between clans and large extended families. On occasion, poor herdsmen, often brothers, pooled their resources so as to share a wife. This practice known as polyandry, or fraternal polyandry when brothers are involved, enabled a poor man not only to pay cows as a marriage fee for his wife, but with his co-husband's help he was in a position to maintain her after marriage as well. The eldest brother went through the marriage ceremony, and all the children were considered to be his for purposes of inheritance. Levirate marriage occurred when a woman became the wife of her deceased husband's brother. This custom served to keep women who had married into the family, and their children, as integral parts of the extended family.

The Bahima and the Bairu did not, as a rule, intermarry. Among both groups, premarital virginity was valued. A marriage fee was required among the Bairu, but this was not as elaborate as among the Bahima. Commonly, 14 goats were given by the prospective groom to his future father-in-law. The goats were then distributed by the father-in-law to his brothers

and to a favorite sister, all members of his extended patrilineal family, as well as to his wife's brother from the extended family from which he had obtained his own wife. The 14 goats were in actuality an exchange for rights to the children who would belong to the prospective husband's family and not to their mother or to her family. Among the Bahima, marriage exchanges were much more elaborate, but the same principals operated. When the bride came to take up residence with her husband, she was received by her future father- and mother-in-law by sitting on their laps. Later, while sitting on a mat, the couple sprinkled each other with grain, then stirred millet flour in boiling water to symbolically illustrate that a new domestic unit had been established. Exchanges of food and gifts occurred thereafter for several days between the two families, to the accompaniment of music, dancing, eating, and beer-drinking.

Today, Christian marriages are common. What has persisted is the value attached to extended families and the importance of having children as a measure of a successful marriage. Polyandry and polygyny have been replaced largely by monogamy, the prescribed form of marriage of Christian religions. Marriages have been delayed, given the attendance at school of both girls and boys. One consequence of this delay has been a rise in teenage pregnancies out of wedlock. Girls who become pregnant are severely punished by being dismissed from school or disciplined by parents; for this reason, infanticide, now more common than in the past, is sometimes practiced by schoolgirls, given that abortion is not legal in Uganda.

### **11 CLOTHING**

Dress differentiates Banyankole by rank and gender. Chiefs traditionally wore long robes of cowskins, compared to ordinary citizens who commonly were attired in a small portion of cowskin over their shoulders. Women of all classes wore cowskins wrapped around their bodies and covered their faces in public also. On a journey or when traveling to visit friends, Bahima women were carried in a cowskin-covered litter for fear that walking would tire them. In more modern times, cotton cloth has come to replace cowskins as a means of draping the body. For special occasions, a man might wear a long white cotton robe with a Western-style sports coat over it. A hat resembling a fez may also be worn. Women cover their bodies, heads, and partially their faces with dark-colored cotton cloth. Today, Banyankole wear Western-style clothing. Dress suitable for agriculture, such as overalls, shirts, and boots, is popular. Teenagers are attracted to international fashions popular in the capital city of Kampala. International business, travel, and education enable the introduction of the latest fashions from abroad, as well as the dissemination of Ugandan clothing, jewelry, handbags, and other crafts to other countries.

### **12 FOOD**

Bahima herders consume milk and butter and drink fresh blood from their cattle. Cereals domesticated in Africa—millet, sorghum, and eleusine—dominate the agricultural Bairu sector. Milking is done by men, while butter-making among the Bahima and the majority of the farming among the Bairu are the responsibility of women. The staple food of a herder is milk. Beef is also very important. When milk or meat are scarce, millet porridge is made from grains obtained from the Bairu. Buttermilk is drunk by women and children only.

When used as a sauce, butter is mixed with salt, and meat or millet porridge is dipped into it. Children can eat rabbit, but men can eat only the meat of the cow or the buffalo. Women consume mainly milk, preferring it to all other foods. The agricultural Bairu keep sheep and goats, which are used primarily by the pastoralists for trade and sacrifice. Unlike the farmers, herders never eat chickens or eggs.

The Mugabe had established times for consuming milk, which was obtained from royal herds and given to him by his pages. He drank milk four times in the morning and four times in the evening. For example, the Mugabe drank milk before going to bed and also was awakened throughout the night to drink milk. He was regularly smeared with fresh butter, especially in the morning, by one of his wives. A bull or fatted cow was killed daily to serve to visitors at the royal compound. Some of these visitors were chiefs who ate at the same time as the Mugabe after sitting with him in court. On these and other occasions, the Mugabe ate alone. Beer made from millet was regularly consumed by the Mugabe, and he commonly had a meal of beef and beer before his nightcap of milk. Beer was also popular throughout the population as an indispensable part of ceremonies such as weddings and funerals.

Today, land and cattle are privately owned in those areas known formerly as the Kingdom of Ankole. This has resulted in migration and resettlement locally and to areas elsewhere in Uganda. Herders have moved to areas where population density is still low and where grazing lands are available. Population growth has also contributed to migration and changes in traditional patterns of subsistence. A cash economy now complicates further the old system of barter and exchange between farmers and herders.

### **13 EDUCATION**

Formal education was introduced into Uganda in the latter part of the 19th century. Today, Ankole has many primary and secondary schools maintained by missionaries or the government. In Uganda, among those aged 15 years and over, about 50% are illiterate. Illiteracy is noticeably higher among girls than among boys. There is a problem of teenage pregnancy among girls that forces them to leave formal education. Schools in Ankole are a significant source of the transmission of national and international values and skills needed for life in modern-day Uganda. At the same time, schools seek to maintain indigenous Ankole cultural values. Runyankole is taught in primary schools.

In the past, girls and boys learned cultural values, household duties, agricultural and pastoral skills, and craft specialization through the process of observation and participation. Instruction was given where necessary by parents, fathers instructing sons, and mothers instructing daughters. Elders, by means of recitation of stories, tales, and legends, were significant teachers also. A girl was instructed by her father's sister on matters of household responsibility and sexual morality.

### **14 CULTURAL HERITAGE**

All schools have regular performances and competitions involving dances, music, and plays that make use of traditional Ankole materials. Where appropriate, instruction also makes use of Ankole folklore and artistic expression through a long-standing process of Africanization of the curriculum.

## 15 WORK

Traditionally, among the Bahima, the major occupation was looking after cattle. Every day, the herder traveled great distances in search of pasture. Young boys were responsible for watering the herd. Teenage boys were expected to milk the cows before they were taken to pasture. Women cooked food, predominantly meat, to be taken daily to their husbands. Girls helped by gathering firewood, caring for babies, and doing household work. Men were responsible for building homes for their families and pens for their cattle.

Among the Bairu, both men and women were involved in agricultural labor, although men cleared the land. Since land was very plentiful, a piece of land could be farmed for several years, then abandoned for a time so it could be replenished. Millet was the main food crop. Secondary crops were plantains, sweet potatoes, beans, and groundnuts. Maize was considered a treat by the children. Children participated in agriculture by chasing birds away from the fields. Frequently, they made scarecrows that resembled people from grass and sticks. On some occasions, they shouted or banged flat boards together. At times, husband and wife slept in a small hut in their fields in order to protect their crops from wild animals. Reaping was done by men and women, and winnowing was done by women. The harvest season was a time in which there was little work and a great deal of free time for parties and marriage ceremonies. Surpluses of food were given to the pastoral chief as a form of taxation.

A notable difference in labor distinguished Bahima women from Bairu women. The former did very little physical labor apart from everyday household routines. They took care of the milk-pots and churned butter. They also spent a great deal of time caring for their personal appearance and were expected to be plump as a sign of beauty. Bairu women worked hard and, in many homes, performed the bulk of agricultural labor. They also spent much labor grinding grain into flour using stone implements.

## 16 SPORTS

Sports, such as track and field and soccer, are very popular in primary and secondary schools. Children play an assortment of games including hide-and-seek, house, farming, wrestling, and ball games such as soccer. Ugandan national sporting events are followed with great interest in Ankole, as are international sporting events.

## 17 ENTERTAINMENT AND RECREATION

Radio and television are important means of entertainment in Ankole. Most homes contain radios that have broadcasts in English, KiSwahili (the two national languages), and Runyankole. Programming includes educational themes involving topics such as nutrition, livestock management, health, and language instruction. Stories, plays, and news are popular. Teens, especially, enjoy musical shows that offer a variety of sounds from Uganda, elsewhere in Africa, and overseas. Books, newspapers, and magazines also are enjoyed by the people. Birthday parties for children are a regular form of entertainment involving birthday cakes, cards, and gifts.

Social events, such as weddings, funerals, and birthday parties, typically involve music and dance. This form of entertainment includes not only modern music, but also traditional forms of songs, dances, and instruments. Drums used to ac-

company dances are water-pots filled with different levels of water. Drumsticks are made of reeds and fiber. Men commonly beat on the drums, and women use rattles about 30 cm (1 ft) long, made from hollow reeds filled with seeds. In one popular dance form, the dancers hold their arms high above their heads in imitation of cattle horns, while hissing and stomping their feet in a rhythmic fashion. Both men and women, particularly among the Bairu, enjoy dancing. It is not uncommon for older Banyankole to congregate together at ceremonies to engage in traditional dance and song. Younger people often gravitate towards the radio or "boom box" to listen to popular, often international, music.

The drinking of alcoholic and nonalcoholic bottled beverages is common at festivities. In the past, the brewing of beer was a major home industry in Ankole, which provided beer for drinking in ceremonies, especially at harvest time. Traditional beer was made from millet, and wine was made from plantains. A large wooden trough was used for fermenting.

## 18 FOLK ART, CRAFTS, AND HOBBIES

The Mugabe assembled at his palace, or arranged for their residence elsewhere, the best artisans in his kingdom. Carpenters, ironworkers, potters, musicians, and others were permanent features of the royal homestead or were in constant contact with it. Carpenters came from the Bairu who had inherited knowledge of their crafts from their fathers. Wooden artifacts commonly used were: stools, milk-pots, meat-dishes, water-pots, and troughs for fermenting beer. Among the commoners, it took as many as six carpenters and dozens of friends to fell a tree and to prepare it for making beer. Ironsmiths also belonged to the Bairu. Smiths obtained their materials locally for the manufacture of spears, knives, and hammers.

Potters obtained clay from swamps that were abundantly distributed throughout the region. The clay was coiled into shape, then fired to become permanent. Every family had a member who specialized in making pots. Some pots were considered very beautiful, particularly those with long, slender necks. Pipes for smoking, however, displayed the finest artistic creativity. All Banyankole of both sexes enjoyed smoking tobacco, and young women particularly enjoyed chewing it. Most homes grew tobacco somewhere near the house. The tobacco leaves were dried in the sun, then rubbed into small pieces for smoking. Small colored beads were used to decorate clay pipes, which came in various shapes and sizes, and walking sticks. There were special guardians at the Mugabe's palace who watched over his tobacco pipes, along with other royal possessions such as spears, stools, and drums. Only the king had wooden drums made from cowhide; others used clay water-pots as a percussion instrument. Graphic art was not common, although rectangular designs did appear on the interior walls of some homes, especially those of royalty.

Traditional industries are not nearly as significant as in the past. Household possessions and artifacts show the many social changes that have occurred in Ankole; nevertheless, one can still observe the use of traditional pipes, water-pots for music, decorated walking sticks exchanged at marriage, and the use of gourds and pottery.

## 19 SOCIAL PROBLEMS

The political culture of Uganda continues to balance tribal, regional, and national interests. The prime minister of Uganda

in 1962 at independence from England was Milton Obote from Northern Uganda. He was hostile to kingdoms in Uganda, considering them to be outdated and incompatible with socialism. In 1966, all kingdoms, including Ankole and the Mugabe, were outlawed. Obote was overthrown by dictator Idi Amin in 1971. During Amin's reign in the 1970s, all Ugandans suffered from political oppression and the loss of life and property. Obote took over once again in 1980 after the overthrow of Amin and ruled oppressively. Currently, Yoweri Museveni, who was elected president in 1986, is credited with leading Uganda in an economic recovery and toward democratic reform. Banyankole take special pride in Museveni's birthplace, which is in Ankole. Nevertheless, resistance to Amin and Obote has resulted in the destruction of towns and villages in Ankole and neighboring villages.

Since the mid-1980s, AIDS has been a source of great sorrow for numerous families who have lost relatives, friends, and other loved ones to this dreaded disease. In Uganda, there has been a strong national effort to educate the public through mass media about AIDS prevention. Orphaned children continue, however, to be a serious problem for those families stricken by AIDS, as well as for the greater society.

Population pressure, in spite of AIDS, remains a threat to adequate pasturage and a pastoral way of life. Warfare in neighboring countries such as Rwanda has contributed to population growth, as refugees have regularly come into the region. Many Rwandans are now fully integrated into the Ankole society and are full citizens of the nation of Uganda.

## 20 GENDER ISSUES

As in all patriarchal societies, gender roles were strictly defined among the Banyankole. These roles were defined to reinforce and perpetuate the relationship of male dominance and female subordination. While women were supposed to do all the agricultural and domestic household chores, they were not allowed to sell the produce of their labor, reserving that right for men. Women were also not allowed to own cattle or land. Even today, through socialization within the family, in educational institutions, and in other social spheres, boys and girls are conditioned to behave in certain ways and to play different roles in society.

In male-headed households, men determine the amount of land to access for farming and type of crops to be grown. Women are not supposed to speak in public. They are supposed to take care of domestic issues, such as raising children and preparing and cooking food, while men dominate the public sphere. Men control the major sources of household income, such as livestock, land, and the sale of crops produced by women. Men control the household budget, dictating what can be bought and how money is to be spent. Rules of inheritance are guided by the cultural context in which land, livestock, and important assets are passed down to men from one generation to the next. However, the fact that the Banyankole continue to recognize sisters and mothers as important people within the family, is an indication that originally they had a matrilineal succession, in which women wielded considerable political and economic power. Also, the importance of princesses among the Banyankole attests to the fact that their societies might have initially been matrilineal.

In recent times, the Museveni government has encouraged women to participate in politics and other aspects of public

life. Today, each of Uganda's districts has a female member of parliament, and one-third of all local council seats are reserved for women. As a result, women make up about 24% of the legislature. There are active women's rights groups, including the Uganda Women Lawyers Association (FIDA-U), Action for Development, and the National Association of Women Judges. However, in spite of these advancements, women are often targets of violence and sexual abuse. Women who reveal their HIV positive status to their spouses are often beaten and sometimes murdered by their husbands.

In terms of human rights, Uganda's past has been checkered with torture and human rights abuses, and, according to some human rights organizations, these abuses continue in present day Uganda. The army has been accused of committing atrocities against the populations in northern Uganda, and security forces allegedly torture suspects and members of the opposition on a routine basis. Homosexuality is illegal under Victorian-era legislation still in force in Uganda and many other English-speaking countries in Africa. The laws reflect a deep aversion among many Africans to homosexuality. But, the truth remains that gays and lesbians exist in Uganda, although they pay a high price for their sexual orientation often facing discrimination, and even torture and imprisonment.

# BEMBA

**PRONUNCIATION:** BEM-bah

**LOCATION:** Northeastern Zambia

**POPULATION:** 3,600,000 Bemba or Bemba-speaking

**LANGUAGE:** Bemba; English

**RELIGION:** Protestantism; traditional beliefs; Roman Catholicism; African Christianity; Islam

**RELATED ARTICLES:** Vol. 1: Chewa; Tonga; Zambians

## 1 INTRODUCTION

The Bemba are a matrilineal group that occupy the northeastern part of Zambia, an area of about 51,800 sq km (20,000 sq mi). The language and culture of the Bemba are very similar to those of other ethnic groups that live around them, for example, the Bisa, the Aushi, the Tabwa, and various subgroups in Luapula Province. The Bemba and the related peoples belong to the wider group usually referred to as the Central Bantu. The Bemba came to their present location from west of the Luapula River in the Congo as offshoots of the great Luba peoples during the great Bantu migrations of the 16th and 17th centuries. Once they were well established in their present habitat, the Bemba organized themselves into an expansive but loosely united state under a paramount chief, known as Chitimukulu (the Great Tree), and subchiefs belonging to the royal Crocodile clan. They were characterized as a warlike and fearsome people by early European travelers and explorers, such as David Livingstone. Zambia was colonized by the British in the early 1890s when the British South African Company, under the direction of the British-born South African business tycoon and politician Cecil Rhodes, began to expand into the area. The former name of Zambia was Northern Rhodesia, named after Cecil Rhodes and his company that won concessions by signing treaties with local chiefs to mine the rich copperbelt area.

Zambia obtained independence in 1964 under the leadership of President Kenneth Kaunda, who ruled Zambia for 27 years under a one-party state. After unrest in 1990, multiparty politics were instituted. President Kenneth Kaunda lost the presidential elections held in 1991 to Frederick Chiluba, a former trade unionist and leader of the Movement for Multiparty Democracy (MMD). By the end of Chiluba's first term as president (1996), the MMD's commitment to political reform had faded in the face of re-election demands. In the presidential and parliamentary elections held in November 1996, Chiluba was re-elected. Kaunda had been barred from running in these elections and his United National Independence Party (UNIP) boycotted them; the elections were also deemed neither fair nor free by non-governmental organizations and international observers. In the elections held in 2001, Chiluba was constitutionally barred from running again although he attempted to change the constitution to allow him to run again for a third term but this failed under pressure from the electorate. The 2001 elections saw the MMD presidential candidate Levy Mwanawasa declared the victor by a narrow margin. During his rule Levy Mwanawasa has been credited with attempting to root out corruption unlike the Chiluba's government, which was largely seen as corrupt. Under Mwanawasa's leadership, Chiluba was arrested and charged with several counts of embezzlement and

corruption, crimes he was said to have committed during his tenure in office as president of Zambia.

## 2 LOCATION AND HOMELAND

The Bemba and related groups live in the northeastern high plateau of Zambia, an area with elevations ranging from 1,200 to 1,500 m (4,000–5,000 ft) above sea level. Although the area is well watered, the soils are generally poor and are covered by bush, scrub, and low trees typical of an African savannah environment. Lakes Mweru and Bangweulu are prominent geographical features on the plateau. Tall grass grows around the lakes, mixed with remarkable patches of dense evergreen thickets, which are eventually replaced by savannah woodlands as one moves away from the lake basins. Because of the presence of dense tree cover and unbroken savannah forest, the Bemba have been described as a forest people. The climate on the central plateau is quite pleasant with temperatures ranging from 13°C to 29°C (55°–84°F), and the area gets an adequate rainfall of about 114 cm (45 in) per year. Although the Bemba proper are a small group, their influence is visible in the numbers that speak the Bemba language and thus make the Bemba appear to be a dominant ethnic group in Zambia. Chibemba is used as a lingua franca in Zambian cities. It is estimated that of the 11.3 million people in Zambia, 32% (or 3,600,000 people) are Bemba or Bemba-speaking, 18% (2,034,000) are Maravi, 15% (1,695,000) are Tonga, 8% (904,000) are Barotze, and the remainder are ethnic groups such as the Mambwe, Tumbuka, and Northwestern peoples.

## 3 LANGUAGE

In Zambia, as in many southern and central African countries, there is a multiplicity of languages belonging mostly to the Bantu family of languages. For example, the name for elephant in Bemba is *nsofu*, in Tonga it is *ndopu*, while in Luyana it is *muzovu*. "To die" in all three languages is *kufwa*, and a child in all three languages is *mwana*. In short, these languages share a similar vocabulary. But in spite of their common origin, many of these languages are distinct from each other, characterized by a loss of mutual comprehensibility. It is therefore quite common for a modern-day Zambian to be multilingual, speaking a maternal or first language as well as several other languages such as Bemba and English. As noted in the preceding section, the Bemba group is the most dominant ethnic group in Zambia, and Bemba as a language is the most commonly spoken maternal language, with 32% of the population (or 3,600,000 people) speaking this language. One of the Bemba dialects has become the lingua franca of the cosmopolitan urban population of major Zambian cities such as Kitwe and Ndola. The prominence of Bemba can be traced back to the days of the powerful paramount chief Chitimukulu and his kingdom that presided over an expansive area. However, in today's Zambia, English plays an important role as the national language, the language of prestige and power spoken by an influential bureaucratic elite. Education from secondary school to university is also taught in English. While English is good as a unifying language since no ethnic group can identify with it, it has its disadvantages in that the majority of the population who are not fluent in English are excluded from the modern economy and development.

#### 4 FOLKLORE

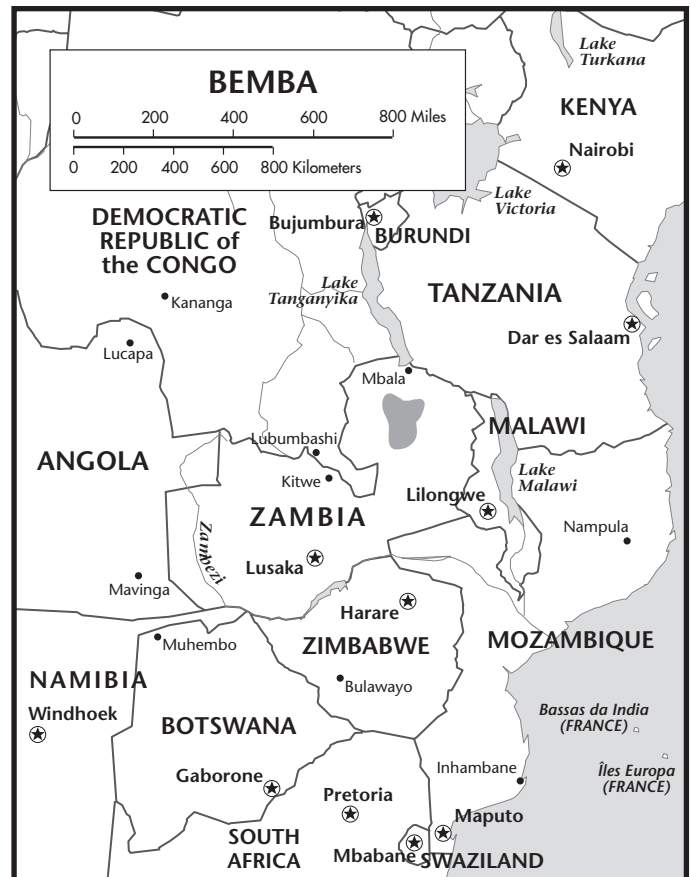

There is one interesting myth in Bemba oral tradition that deals with the origins of the Bemba group. There are many partial and varying oral renditions to this myth. The myth begins by noting that long ago in the land of Kola, there lived White and Black people, but after a quarrel the White people sailed away to get rich in Europe, while the Black people remained under their chief Mukulumpe Mubemba. The name Bemba comes directly from this chief's last name. The chief then had sons with Mumbi Mukasa Liulu, a heavenly queen who had fallen from the sky and who belonged to the "Crocodile clan" *Ng'andu*. Due to internal quarrels within the royal family, the sons fled, taking with them a group of loyal followers. After much traveling and many conquests, the surviving sons and followers settled in present-day Bemba territory and established a centralized form of government with a paramount chief, named Chitimukulu, "The Great Tree," in reference to their original ruler, from whose heavenly mother they all trace descent. By war, they expanded the Bemba control over conquered territories, and internally the Crocodile clan consolidated control and political authority over other rival clans. The full narration and interpretation of the myth, also called the Bemba Charter Myth, reveals a story that is rich in its oral, political, religious, and ritual dimensions. In general, the Bemba rely heavily on folklore, myths, and the oral tradition to pass on vital information about beliefs, customs, and culture from one generation to the next.

#### 5 RELIGION

Similar to other peoples of the Bantu family, the Bemba have their own form of traditional religion in which they believe in the existence of a single high god, Leza, who is far removed from everyday life and lives in the sky. He is omnipotent and controls things such as thunder and both women's and men's fertility, and he is the source of magic power. Christian missionaries of various denominations came to Zambia during the era of colonization in the late 19th century and converted many of the peoples of Zambia, including the Bemba, to Christianity. However, few Zambians as of today have totally abandoned all aspects of traditional belief systems, so much so that the religion of most people in Zambia and among the Bemba can be considered to be a transition from traditional systems to Christianity. Those who strictly adhere to traditional religion have been greatly influenced by Christian teachings and its trappings as well. Due to the similarities in the overall structure of Christianity and indigenous religions, most people do not see any contradictions between the two and are likely to practice both religions simultaneously. In general it is estimated that 34% of Zambia's population are Protestant, 27% hold to traditional beliefs, 26% are Roman Catholic, 8% are African Christian, and the rest follow other Christian sects, Islam, and other faiths.

#### 6 MAJOR HOLIDAYS

The major national holiday in Zambia is Independence Day on 24 October. Zambia obtained its independence from Great Britain in 1964 on 24 October. During this day every year there are celebrations arranged in major urban areas and throughout the country. There is much drinking, dancing, and singing. In the afternoon, people congregate in stadiums to watch a game of soccer between major leagues, or to see the national

team play a friendly match with a national team from a nearby country such as Malawi.

#### 7 RITES OF PASSAGE

Among the Bemba, there is no initiation ceremony for boys. Girls go through an initiation ceremony called *Chisungu*, a puberty rite that initiates girls through the symbols of life and death in order to give social form and meaning to their sexuality. A girl whose breasts have started to develop is secluded for anywhere from six weeks to three months to undergo the *Chisungu* ceremony. A series of rites representing the duties of the girl as cook, gardener, hostess, and mother are carried out in an initiation hut, as well as in the surrounding bush. During the ceremony there is much drumming, dancing, singing, and drama symbolic of the acoustic uproar which the Bemba associate with the whole of cosmic and human forces. One of the worst things that could happen to a girl is to bear a child before she has been initiated. Her child would then be considered a creature of ill-omen and both the father and the mother could be banished. Although still practiced in rural and urban areas, the *Chisungu* ceremony is slowly disappearing because most girls grow up in Christian families and go to modern schools, which have become a new rite of passage. School teachings and subjects such as biology are at variance with the teachings of *Chisungu*, which perpetuates male dominance and the acceptance of rigid inferior sex roles for women. Nevertheless, many people in Zambia in general, and among the Bemba in particular, believe that initiation ceremonies are part of their cultural

and moral heritage and that such initiation ceremonies should continue, or even be incorporated into the school curriculum.

## 8 INTERPERSONAL RELATIONS

Seniority is important among the Bemba and largely determines interpersonal relations. Shaking hands is the normal way of greeting, particularly among members of the same age set. There also exists a joking relationship between members of different clans. Among the Bemba a clan is defined as a descent group whose members trace their descent from a common ancestress, i.e., a grouping of several matrilineal lineages. The Bemba people have about 40 clans, and most clans have a partner clan with which they joke and can intermarry. Marriage of individuals from the same clan is not usually permissible. Most clans are named after living things such as plants and animals. Two clans in partnership usually have names that are associated and show the type of joking relationship. For example, the Crocodile clan is the partner of the Fish clan, because crocodiles eat fish. A member of the Crocodile clan can tease or ridicule a member of the Fish clan by saying, "You are my meal today." A member of the Fish clan can answer back that if it had not been for the fish, the crocodile wouldn't have seen the light of day, and it would have starved to death.

At beer parties it is common for men and women to drink from the same container, usually an earthenware pot with a wide mouth. The beer is poured into the pot and everybody takes a few sips from the pot as it is passed around. It is bad manners to refuse a sip.

## 9 LIVING CONDITIONS

The Bemba live in rural villages built up around a number of matrilineal extended families. Their main occupation is subsistence agriculture in the form of shifting cultivation. Each family grows its own food and is largely self-sufficient. *Chitemene* shifting cultivation is the main agricultural system, a system where crops are grown in the ash from burning the collected, stacked branches that have been lopped and chopped. Early in the dry season, a family selects an area to be cut. The cutting of the trees is solely a man's job; the women and children collect the chopped branches and pile them into heaps which are then burnt. The women are also responsible for selecting the seeds and sowing them on the ash beds, as well as digging and sowing garden mounds around the villages on which vegetables are grown. Finger millet and cassava are the main crops, but sorghum, maize, beans, and peas are also grown. Due to the poor condition of the soils, the field is abandoned after a few years and new gardens are opened. As the population has increased, the system is beginning to break down and vegetation is chopped down before it has fully regenerated. Bemba territory is not urbanized so that many people still live a rural way of life. Disease is very much a part of Bemba society. Tropical diseases such as malaria and bilharzia, as well as malnutrition, are quite common and tend to be very debilitating and sometimes lethal. On average, life expectancy at birth is about 40.3 years for males and 40.6 years for females. Life expectancy has declined during the past decade due to HIV and AIDS which has resulted in increased adult mortality. It is estimated that 16.5% of Zambia's population is HIV positive.

Most people in the Bemba heartland still live in villages of 30–50 huts made of wattle and daub with a grass thatched roof. The village also serves as the basic political unit and is ad-

ministered by a headman to whom the majority of the villagers are related. Once the fertility of the soil around the village has been exhausted, the village may be relocated to some other suitable location. This is a direct consequence of the *chitemene* system of shifting cultivation and necessitates the building of impermanent structures. Material possessions also tend to be minimal. A household might own a bicycle, a radio, and a few other trinkets of modern life. Before the arrival of the Europeans, the Bemba had no form of storable wealth. Today most households are characterized by a limited cash flow to cover basic needs. Consumer goods are rarely bought, and cash income is earned only when there is need for it. There are some households that are progressive and earn a substantial amount of cash through poaching, fishing, and casual labor to enable them to buy goods exceeding basic needs. Transportation is largely by foot, although long-distance travel is by buses that occasionally visit the remotest parts of the rural areas.

## 10 FAMILY LIFE

"Family" among the Bemba refers to the extended family that includes several generations, much like a clan. The extended family serves as the corporate property-holding unit and a cooperative work group that in most instances shares food, gifts, money, and other amenities of life. It is a form of social security for those having less access to wealth. Within the extended family system of classificatory kinship ties, an individual generally has several "mothers," several "fathers," and a host of "sons" and "daughters." Polygamy was permissible and quite common among the Bemba, but statistics to show its current levels are not available. Chiefs once needed additional wives because of their obligations of hospitality which entailed the preparation of large amounts of food, brewing beer, and the cultivation of large fields. But the coming of Christianity and modernization has weakened the practice of polygamy.

Since the Bemba are a matrilineal society, large payments in money or goods are not required at the time of marriage, as is commonly done in patrilineal societies. In order to become engaged to a girl, a young man is expected to offer a small betrothal present to the parents of the girl, in the form of a piece of cloth, a rooster, or something of small value. Once married, the young son-in-law moves to the wife's village and performs tasks for his parents-in-law. In the past, girls were often engaged before puberty and performed chores for their future husband such as sweeping the hut and drawing water. Before puberty, boys and girls are encouraged to play together and can indulge in "puppy love" without any sanctions. However, as soon as girls reach puberty, sexual contacts with men are prohibited until marriage. These days, boys and girls find their own mates either at school or in surrounding villages and then inform their parents about their love. Marriages can be carried out either under modern statutory law patterned along the British system, or under Bemba customary law.

## 11 CLOTHING

Before the arrival of the Europeans, the most common type of cloth was that made from bark, which was worn around the waist by women as a loincloth. Today most Zambians, including the Bemba, wear modern dress. Although the clothing for men is Western (shorts, pants, and shirts), the designs and fashion for women's dresses are typically of Zambian or African origin.

## 12 FOOD

The staple food for the Bemba is finger millet which is ground into flour. A thick porridge is made from the flour and is eaten with a relish, a side dish of vegetables or meat. Two other important staple crops are cassava and maize. Cassava is poor in nutrients but is easy to grow and can stay underground for a number of years before it is harvested. The importance of maize has increased over time, and it is likely to take the place of finger millet as the main staple. Other important crops that comprise the Bemba diet include peanuts, beans, edible gourds or squash, pumpkins, cucumbers, sweet potatoes, bananas, and cowpeas. Due to the presence of the tsetse fly, large livestock such as cattle and goats are not kept. However, the Bemba supplement their diet in numerous ways by hunting small game, fishing, and gathering wild fruits. These activities provide much needed food during certain months and years of famine when food becomes scarce. Honey, insects such as caterpillars and grasshoppers, fruits, and wild plants are collected throughout the year. Fishing also adds much needed protein to the diet. Fishing using fish traps and fish poison is conducted during the months of February, March, and April when the rivers are full of water. Dogs are usually kept not as pets but for hunting purposes, particularly for small game such as bush pig and duiker (a small antelope). All kinds of implements are used for hunting purposes, ranging from old-fashioned guns to spears, nets, pits, traps, and axes.

Food prohibitions and taboos are not common among the Bemba, except in certain circumstances, such as soon after marriage when a son-in-law might be prohibited from eating the food cooked by his mother-in-law, or when a girl undergoing the *chisungu* initiation ceremony might be restricted from eating certain foods.

## 13 EDUCATION

At the time of independence in 1964, the educational infrastructure was underdeveloped in many parts of Zambia due to colonial neglect. Very few people were literate prior to 1964. Since independence, the government of Zambia has devoted substantial amounts of funds to educational development. The educational system in Zambia is similar to the British system in which students spend eight years in primary school, four years in secondary school, and another four years in college. The University of Zambia has a limited capacity of about 4,000 students, and entry into the university is very competitive. Because fees are not charged at any level of the educational system, the only obstacle to education is the availability of schools, particularly in rural areas where full primary schools are rare. The national literacy rate in Zambia has increased dramatically from a low of about 10% in 1964 to a high of 70% today. However, since the Bemba live far from the main centers of development, their literacy rates could be much lower than this.

## 14 CULTURAL HERITAGE

Like many peoples of Africa, the Bemba have a rich cultural heritage that is centered around an oral tradition of conveying information from one generation to the next. Very little of the Bemba's folklore has been written down. Traditional music is part of daily life from initiation rites and marriage ceremonies to hunting parties.

## 15 WORK

In traditional Bemba society, although males are heavily involved in clearing new fields, they are primarily occupied with political affairs and trade. Agriculture is largely the domain of women, who are responsible for most of the food. With the introduction of the modern economy during the era of colonization, men began to migrate for wage opportunities in the copper mines of the copperbelt of Zambia, and further afield to South Africa. As a result of large-scale migration of young men to the mines, the rural areas contain a large proportion of women; agriculture is therefore stagnant because of the lack of male labor to clear trees. Census statistics indicate that Bemba areas are second only to the Eastern Province of Zambia in their shortage of men. The absence of men in rural areas has had a major negative impact on agricultural productivity, the economic standing of women and children, marriage, and family life. In most cases, women have become poorer than in the past when men were present.

## 16 SPORTS

Throughout Zambia, the most popular sport played by children and young men is soccer. The national team of Zambia has had some prominent Bemba soccer players.

## 17 ENTERTAINMENT AND RECREATION

In trading centers throughout the Bemba region, beer pubs are a common part of the landscape, where people gather to drink both traditional and bottled beer. Television is available in Zambia, but few people in rural areas can afford to buy a television set. Like among the Chewa of Malawi, children in Bemba territory keep themselves busy through the many traditional games they have developed. Among the popular games and activities are mice hunting expeditions, hide and seek at night, tug-of-war and the nguli game (which is essentially a spinning top a carved cylindrical piece of wood, about three inches long, with a sharp pin on the bottom). Men often play nsolo, a more demanding game, much like chess, often played under a shady tree at the edge of a village, or at the mphala or insaka (men's meetinghouse). Village children make their own toys such as cars made from dry cornstalks, scrap materials, and discarded wires as well as other innovative playthings. As such children become responsible, self-reliant, and creative given the fact that parents and children rarely have money to spend on expensive (or even cheap) toys. Many of these activities help to improve children's learning and social skills.

## 18 FOLK ART, CRAFTS, AND HOBBIES

The Bemba people are not generally known for having developed a complex folk art culture, although iron-smelting was practiced until the 1940s. A Bemba man has four basic implements: an axe used for clearing the bush and cutting wood; a hoe for farming; a spear for hunting; and, in the past, a bow. Woodcarving is less developed compared to other peoples in the region, and weaving is unknown among the Bemba. Perhaps the best crafts among the Bemba are pottery and baskets, although these also tend to be simple and fragile.

## 19 SOCIAL PROBLEMS

Zambia has been relatively stable during the post-independence era, and inter-ethnic fighting has not been a major prob-

lem. However, due to economic difficulties during the 1970s and 1980s, the government has faced internal unrest from time to time. Shortages and unemployment in the cities, and widespread misery in rural areas, triggered discontent among the top-ranking leaders in government, the political party, the business community, and university students, which culminated in multiparty democracy in the early 1990s and the peaceful removal from power of President Kenneth Kaunda in 1991. Apart from the economic malaise of the rural areas, the Bemba were far removed from the centers of these conflicts, with the exception of those living in the major urban areas.

## 20 GENDER ISSUES

There are pervasive inequalities between women and men in Zambia today, more so among the Bemba where women are supposed to traditionally be subservient to men. These inequalities can be traced to pre-colonial indigenous traditions, the colonial and post-independence eras. During the colonial era the introduction of the labor migration economy where men were allowed to migrate to mining and large scale plantation agricultural areas left women and old people in rural villages in charge of subsistence agriculture. Among the Bemba and other groups in Zambia women are prized for marriage and their access to secondary and tertiary education is much lower than for men and boys. Thus, wage employment in urban centers is regarded as suitable for men. Women tend to be confined to jobs related to their roles as care givers and nurturers—nurses, teachers and secretaries—low wage jobs.

In rural areas women are the backbone of subsistence agriculture producing most of the food while men are away in urban areas. Women take care of child-rearing and house-running. In Bemba subsistence society women do the weeding, sowing, and harvesting. Male activities in rural areas are fewer than female, more spaced out and less repetitive.

Recent statistics from the Human Development Report indicate that women in Zambia are more likely to be poor than men: 65% of women are poor, compared to 52% of men, and child poverty has also increased. In particular, women heads of household were more likely to be poor: 70% of female-headed households are extremely poor compared to 57% of male-headed households. Thus gender inequality in rural and urban areas is well entrenched in Zambia.

Human rights are enshrined in the Zambian constitution. However, with reference to homosexuality, Zambians are divided in how to approach it. Currently Chapter 87 of Zambia's Penal Code Act describes homosexuality as an "offense against morality." The issue of homosexuality in Zambia came to the forefront in 1998 when for the first time in the country's history, the Zambian homosexual community decided to come out in the open, and form an organization called Lesbians, Gays, Bisexual, and Transgender Association (LEGATRA) to champion their cause. This led to an uproar by the Zambian community, both in support and against it with the majority vowing to reject it at all costs. The political and Christian establishments in Zambia have condemned homosexuality as unbiblical and against human nature and pointed out that this abnormality has no right to exist in society or ask for support from the government.

# BENINESE

**PRONUNCIATION:** ben-uh-NEEZ

**ALTERNATE NAMES:** (former) Dahomey

**LOCATION:** Benin

**POPULATION:** 8.3 million

**LANGUAGE:** French (official language); Fon and Yoruba in the south; Bariba and Fulani in the north; over 40 other languages

**RELIGION:** Animism; Christianity (Catholicism); Islam

**RELATED ARTICLES:** Vol. 1: Songhay; Yoruba

## <sup>1</sup> INTRODUCTION

The name Benin comes from an ancient West African kingdom located in present-day southern Nigeria. Until 1972, Benin was called Dahomey, named for the pre-colonial Kingdom of Dan Homey. Benin's history is most easily thought of as pre-colonial, colonial, and independent. Until the French and Portuguese developed ports at Ouidah in 1752 and at Porto Novo in 1894, a succession of kings contested and ruled Benin. European contact consisted mostly of intense slave trading, in which Dahomey's kings engaged for 300 years until it was abolished in 1885.

French domination of the area began in 1863 when France made Porto Novo a protectorate. International pressure had been mounting to end slave traffic from this port, and the French also wanted to counter British influence in neighboring Nigeria. Thus, in the 1880s the French fought a series of battles with the Dahomians, and within 15 years overthrew the last of Dahomey's kings. French missions and schools were less successful in converting Beninese to Christianity, than in graduating thousands of highly qualified students, including several well-known writers and scholars.

Benin gained its independence on 1 August 1960. Ethnic conflict and army insurrections followed leading to six military coups, a socialist revolution, a state-run economy, and near economic disaster. In 1990 however, pro-democracy demonstrations and a national conference ended General Kérékou's 18-year rule. In 1991, Nicéphore Soglo became president through competitive elections, marking Africa's first democratic transfer of power from a dictator. In 1996 and 2001 Kérékou was returned to power at the ballot box, although there were irregularities in the latter election. Student demonstrations and strikes also signaled growing impatience with delayed prosperity. Thomas Boni Yayi succeeded Kérékou in 2006 and earned international attention for his high-profile fight against corruption and his staunch support of free markets.

## <sup>2</sup> LOCATION AND HOMELAND

Benin is a small West African country about the size of Pennsylvania. It is flanked to the north by Niger and Burkina Faso, by Nigeria to the east, and by Togo to the west. It has an Atlantic coastline of 125 km, where the principal cities of Cotonou and the capital of Porto Novo are situated. Benin is about 700 km in length, and 325 km in breadth at its widest point. The flat and sandy coastal plain is interspersed by lagoons. Its warm temperatures (70–85°F) and two rainy seasons contrast with the northern, thinly wooded savannah where there is only one short rainy season and temperatures reach over 110°F.

An important hilly region in the northwest has elevations of up to 2,500 ft, providing Benin with a water reservoir.

In 2008 estimates placed Benin's population at 8.3 million, growing at about 2.6% a year. The population is young, with nearly half of all Beninese under 15 years old, and only 2.4% over 65. If not for the large number of exiles who left the country in the 1970s, the population would be much higher. The semi-desert north is sparsely populated with 12 persons per sq km, while the coastal south supports as many as 240 persons per sq km in urbanized areas. In just 32 years the rate of urbanization increased from 7% in 1960 to 38% in 1992. Nevertheless, three out of four Beninese live in villages. Of the more than 42 ethnic groups, the Fon make up 40%, and four other groups—the Adja, Bariba, Yoruba, and Aizo/Houjda—account for another 40%. The remaining 20% is spread across the Fulani, Kotokoli, Dendi, and other groups.

## <sup>3</sup> LANGUAGE

The peoples of Benin speak 51 languages, making it one of the most linguistically diverse countries in the world for its size. French is the official language, and has served to unify Benin. The two major vernaculars in the south are Fon and Yoruba, while in the north Bariba and Fulani dominate. As many as 18 languages are used in education, adult literacy, the media, and broadcasting. High schools teach English as one of the two foreign languages.

## <sup>4</sup> FOLKLORE

Benin's nickname, "Land of Songs," testifies to the role of singing in daily life. Through singing, people express their feelings and narrate their history. Songs are melodious, controversial, satirical, or dramatic to convey the proper emotion. Each ethnic group has its own songs and dances.

Behanzin, king of Dahomey in the late 19th century, towers above the landscape as a national hero. He became king during a period of challenge and intrigue, and went to war with France over a tributary state, Porto Novo, which France had made a protectorate. His kingdom was no match for the superior firepower of the French, and after many battles—some of them victories—he escaped to the bush. Eventually he surrendered and was exiled, and he died in Algeria of pneumonia in 1906. In 1928 his remains were brought back to Benin, where he was reburied with full military honors.

## <sup>5</sup> RELIGION

The majority of Beninese practice animist religion. Some 42% are considered Christian, with about 27% of these Catholic. Pope John Paul II's first trip to Africa included a visit to Benin in 1980. About 24% of the population subscribes to Islam, introduced by Arab, Hausa, and Songhai-Dendi traders from the north.

Beninese animists recognize some 5,000–6,000 deities among the Fon, Yoruba, Mina and other coastal groups. Cult leaders are fetishers, diviners, and venerated of spirits. One of the most famous cults, the Python Cult, or the Cult of the Great Serpent, reveres a deity native to the pre-colonial kingdom of Ouidah in the south. The main temple is an unprepossessing structure across from the cathedral, but it houses huge defanged pythons. Churchgoers typically worship at both places on Sundays. In earlier times, Catholic priests attempted to eradicate the cult, but the local population resisted, burn-

ing down missions and chasing out the priests. Kérékou also tried to disgrace, imprison, and brand the fetishers as national traitors. The government has since adopted a collaborative approach, and enlisted fetish priests in national development.

## 6 MAJOR HOLIDAYS

Beninese celebrate 12 national holidays, which are an eclectic mix of animist, Muslim, Christian, and secular holidays. The Muslim Tabaski feast and the month long fast of Ramadan, as well as the Christian holidays of Christmas and Easter, have become ecumenical holidays. Formerly, Independence Day, August 1, was celebrated with parades, folkloric dances, and gala evening balls, but 18 years of Kérékou's revolutionary rule gave a certain ambiguity to patriotic celebrations. Difficult financial times also have made it harder to celebrate, and most Beninese spend national holidays quietly with their families, enjoying a good meal.

## 7 RITES OF PASSAGE

Beninese family life, social stability, and tradition depend on rites of passage. The rites are festive occasions and opportunities to restore balance when death occurs. Baptisms are community celebrations. Seven days after birth, a baby's head is shaved completely, the baby receives a name, and family and friends offer prayers for the parents and the child. Friends bring gifts, usually small sums of money, a sheep is butchered, and eating and dancing follow until early in the morning.

Relatives often help choose mates for their nieces and nephews, cousins, and younger sisters and brothers. After a period of engagement, a young man offers gifts of jewelry, clothing, shoes, suitcases, and if his wealth permits, a refrigerator, to his fiancée. This secures the bride-price. Then, a small delegation of the groom's uncles and aunts visits the representatives of the future bride to propose marriage. The groom's side brings money and 40 cola nuts, symbolic of respect and harmony. If their proposal is accepted, the cola nuts are divided among the bride's family and friends, and the date is set.

Weddings are festive and cause for much feasting and celebration. Traditional weddings can last for weeks. The bride is secluded with a few friends and taken care of by elderly women. They apply *enje*, a stain, to the palm of the hands and soles of the feet, which eventually turns black. The night before the wedding, the bride sits upon a wooden mortar and is washed by the women. In the morning prayers are offered, and the groom brings additional gifts of shoes and African cloth. Traditional strips of cloth woven together serve to make the wedding gown. The bride wears special sandals, and sometimes the groom's clothing will match that of the bride.

## 8 INTERPERSONAL RELATIONS

As in much of Africa, people typically greet each other even if they are strangers passing on the street. Upon waking in the morning, children wash their faces, brush their teeth, and then directly greet their parents good morning. In Fon, one greets another person with "Good morning" (AH-FON Ghan-Jee-Ah), "How are you?" (Ah-Doh Ghan-Jee-Ah), "Thank you" (Ah-Wah-Nou), and "Good bye" (OH-Dah-Boh). The Muslim form of greeting involves asking about another's family's well-being, and shaking hands is interrupted each time by touching the right hand to the breast. Visitors always are offered a glass of water and, if it is meal time, are expected to join in sharing some food. In the north, people traditionally do not shake hands, though this is changing. When visiting an older family member or a distinguished member of the community, one kneels before the elder in respect.

## 9 LIVING CONDITIONS

Living standards remain low. Benin ranks 163rd out of 177 countries in human development. In rural areas, one of two households does not have a safe water supply, and only one in three has access to proper toilet facilities. Malaria, acute respiratory infections, diarrhea, measles, and malnutrition are common. Life expectancy is 55.4 years, and 76 of 1,000 children born will not live to reach their first birthday. Many Beninese are food insecure, especially in the north where insufficient rains and locust infestations devastate crops. About one in four children under five are moderately malnourished and approximately 40% of pregnant women are anemic. Nearly half of all Beninese women still give birth at home without professional assistance.

Despite these serious problems, Benin is improving the health and living environment of its youthful population. The constitution of 1990 made special provisions for the survival, protection, and development of children, which included guarantees for their education. Benin ratified the Convention on the Rights of the Child in August 1990, one of the first 22 countries to do so. Benin participates in a comprehensive health plan known as the Bamako Health Initiative, which is

bringing medicines to the vast majority of the approximately 400 rural health clinics. Of all children under one, 73% are fully immunized against diphtheria, polio and tetanus (1992).

The main roads in Benin are paved, and travel from the coast to the north by bush taxi or minivan is easy. Secondary roads can be rugged and cause considerable wear and tear on vehicles. Together, Benin has 600 miles of paved roads and another 5,000 miles of unpaved roads.

## 10 FAMILY LIFE

Beninese place a high value on family and are close-knit. Nuclear families composed of the parents and children may often include a niece or nephew, cousin, grandchild or grandparent. The sense of extended family builds out from this core to include cousins and more distant kin within the clan or lineage. Even these relatives may be referred to as brother and sister.

On average, Beninese women will be expected to have seven pregnancies in their lifetime, but families of 4–6 children are becoming the norm. Typically, the village family—including children if they are not in school—leaves the hut early in the morning only to return late in the day after working the fields, which may be at quite a distance. After the evening meal there may be storytelling around a fire. The institution of family remains resistant to social pressures and most often, if a child is born out of wedlock, the parents will marry so that the child receives a proper upbringing. In polygamous relationships, wives have their own huts in the village, or if in town, apartments in the same house, and share common kitchen and living facilities. Nonetheless, polygamous relationships can lead to quarreling and often add tensions to family life.

## 11 CLOTHING

On the coast, women typically wear African *pagnes* of striking colors and patterns, often with a matching head scarf. Muslim women wear a three-piece cloth outfit, with one piece wrapped around the waist and falling to the ankle, a second wrapped around the chest and reaching around the knee, and a third covering the head. Once married, Muslim women always cover their heads in public. Men traditionally wear *boubou*-style cotton shirts over pants, which may or may not be of matching patterns. Increasing in popularity is the West African embroidered *boubou* for men and women, which requires many hours of skill to sew and embroider. *Boubous* of this quality are very expensive, costing into the hundreds of dollars, and are reserved for special occasions. A cheaper substitute for many people is used clothing (*frippe*) shipped in large bales on container ships from Europe and the United States.

## 12 FOOD

Despite pockets of food scarcity and insecurity, a great variety of foods exist in Benin and diets vary considerably from south to north. Taboos, handed down in the family, may prohibit the consumption of fish, goat, and beef, depending on the taboo. The staple food is *la pate*, made by adding boiling water to corn, millet, cassava, or sorghum flour. The accompanying sauces are cooked for a long time and seasoned with onions, tomatoes, garlic, and peppers. Sauces may be based on vegetables or pounded leaves, and may include fish or meat. As elsewhere in Africa, *la pate* is dipped into the sauce, and is eaten with the right hand. Traditional households eat porridge for breakfast, made from millet, corn, yams, or manioc.

A mother and her two sons at a well. (AP Images)

Other specialties in Benin include *gari*, which is grated manioc, soaked and pressed to remove the natural traces of cyanide, and then cooked in a pot until dried, making a very fine semolina. *Gari* is enjoyed with peanut-cake snacks. To make peanut cakes, the oil is pressed from the peanuts, and then sugar or salt is added depending on the desired taste. Then the paste is fried. If in need of a quick snack, merchants on street corners in southern towns offer deep-fried dumplings made from pounded bananas or beans. Many Beninese enjoy soft drinks and beer, but these require spare cash. Local drinks include natural lemonade and limeade, palm wine (*sodabi*), and beer and gin made from millet (*chapalo*).

## 13 EDUCATION

Benin's former reputation as Africa's "Latin Quarter" was earned for the high number of Beninese college graduates. Today, its education system faces major challenges. High unemployment has led to a reevaluation of the sacrifices required for Western schooling and young women are pressured to marry rather than finish school. Combined primary, secondary, and tertiary school enrollment was only 50% in 2004, but Beninese were making gains in adult literacy. In 2005 the government estimated that about 35% of all adults could read and write, compared with 23% in 1989.

## 14 CULTURAL HERITAGE

Beninese animism, dance, and music have a long and rich history. Perhaps the best known of the traditional dances belong

*The great challenge currently facing Beninese is finding work. Because of the scarcity of decent jobs, as many as 75% of city dwellers work in the informal sector as peddlers, pushcart operators, and the like. In the villages, most Beninese work in agriculture, forestry, and fishing. The current scarcity of work means that men may spend more time away from the home. (Cory Langley)*

to the Fon people of the southern region. These dances may be performed specifically for a ritual, such as the *rada* rite, which is one of the three principal cults of Vodou from the ancient Allada kingdom. Fon dance is becoming modernized, and musical accompaniment is played on a mix of traditional drums and modern instruments such as electric guitars and synthesizers. Beninese musicians depend on skilled craftspeople to produce traditional instruments of high quality, and villages like Adjarra produce over 50 kinds of tam-tams.

Many cultural traditions have roots that can be traced to former kingdoms. In the northeast, Nikki is the capital of a former kingdom whose origins go back to the 15th century. The Baribas, who are wonderful riders, inhabit the area and organize diabolical displays of horsemanship announced by long trumpets that produce unusual noises.

### **15 WORK**

A great challenge facing Beninese is finding gainful employment at a living wage. Because of the scarcity of decent jobs, as many as 75% of city dwellers work in the informal sector as peddlers, hawkers, and pushcart operators. In the villages, most Beninese (62%) work in agriculture, forestry, and fishing. About 60% of women work in agriculture alone. The principal subsistence crops are manioc, maize and yams, and cash crops include oil, coconut palms, and cotton. Fishing, textiles, a soap

factory, and breweries employ less than 7% of the labor force. Nearly a quarter of all children between the ages of 5 and 14 in Benin work. In total, these children number about half a million workers.

Beninese are counting on a recently completed hydroelectric dam on the Mono River to provide power for future industrial projects that will lead to quality jobs. There is some hope that unexplored mineral deposits and offshore oil field development, now underway, will provide additional well-paying jobs.

### **16 SPORTS**

The Beninese national sport of soccer is played and watched by Beninese everywhere the competitive urge strikes. It is played mainly by boys and young men. The national team is nicknamed "The Squirrels," and has qualified once for the Africa Nations Cup (2008), but never the World Cup. There also are national teams for tennis and rugby. While not a sport in the western sense, traditional dancing is also extremely popular. Teamwork is an essential ingredient, and Beninese compare and rate dancers and musicians for their agility, creativity, technical skill, and stamina.

## 17 ENTERTAINMENT AND RECREATION

Entertainment preferences and possibilities vary greatly from urban to rural areas. In the towns and cities where electricity is available, Beninese have the option of watching state-run television. However, many people with the means or savvy are buying and hooking up to satellite dishes. A small proportion of the population has video cassette recorders. Cinemas are always popular. By contrast, electricity has yet to arrive in most villages. There, people make their own fun. Ceremonies, holidays, and traditional feasts constitute the bulk of community recreation. Baptisms, in particular, occur frequently and provide one of the most common forms of entertainment. A village of between 300–400 people may have up to 30 baptisms a year.

## 18 FOLK ART, CRAFTS, AND HOBBIES

The royal history of ancient Dahomey is visible in the work of Beninese artists. The palace museum, which contains royal sepulchres and bas-relief sculpture of great intricacy, offers models of this ancient tradition. Beninese artists produce highly refined weaving and sculptures reminiscent of their ancestors' tradition. Tapestries are woven that use symbols and totems of the royal family. Sculptors fashion masks, tables, boxes, scepters, and armchairs. Much Beninese art is inspired by Benin's royal past, and carries on ancient traditions.

Crafts reflect artistic and practical needs. For example, craftswomen make pots of all sizes for carrying and storing water. Blacksmiths not only produce works of art, but are in great demand as bicycle, motorcycle, and automobile repairmen.

In the north, one finds a wide range of handmade instruments, from twin drums to calabashes that produce various tones and pitches to small Beninese guitars. One unique Beninese creation that mirrors life is the Sombas Dwellings. These are miniature round-tiered huts with turrets, resembling fortified castles. Artists have built these realistic models upon escarpments with deep valleys, waterfalls, lawns, and trees.

## 19 SOCIAL PROBLEMS

Benin's major social problems revolve around lack of economic opportunity, poor law enforcement, and the need for public services. High unemployment, low wages, and overdependence on the informal sector are driving educated people to take manual jobs such as driving motorcycle-taxis. Worse however, is the large number of street children, some of whom become prostitutes to support themselves, and others who are subject to trafficking. While the law prohibits human smuggling, Benin is a source, transit point, and destination for trafficked persons, mostly children who are forced into labor or sexually exploited. Some trafficking occurs as "vidomegon," a form of servitude in which children are forced to work under an arrangement between two families. Benin's central location in West Africa has made it a transshipment point for illicit drugs from Nigeria to Western Europe and the United States.

## 20 GENDER ISSUES

Serious gender issues include discrimination against women, domestic violence, and female genital mutilation (FGM). About 17% of women have undergone FGM. Rape and underage marriage (under 14 years of age) are prohibited, but weakly enforced. In rural areas, a tradition of abduction and rape by a

groom of his prospective bride persists despite efforts by government and nongovernmental organizations (NGOs) to eradicate it. Though not as prevalent as in Ghana, *trokosi* ("wives of the deity") is practiced. *Trokosi* involves sending a young virgin to work at a shrine in hopes that her servitude will atone for a past sin or crime of a family member. These young women are often exploited as sex slaves by traditional priests.

For some time Beninese women have played leading roles in the home and they continue to make many decisions regarding home economics and child care. The husband's job has been to act as the main supporter of the family. Nowadays, the scarcity of work means that men may spend more time away from the home. The consequent demands on Beninese women have forced them to find work outside the home tending small gardens or engaging in small businesses all the while caring for the family. Although women outlive men by 5%, only half as many women can read and write as men, and only about three quarters as many women as men are enrolled in primary, secondary, and university-level schools.

# BERBERS

**PRONUNCIATION:** BUR–bur

**ALTERNATE NAMES:** Imazighen (plural; singular, Amazigh)

**LOCATION:** North Africa (Morocco, Algeria, Tunisia, Libya, and Mauritania)

**POPULATION:** 25–36 million (exact statistics are unavailable)

**LANGUAGE:** Berber (also called Tamazight)

**RELIGION:** Sunni Muslim, Ibadite

## 1 INTRODUCTION

The name Berber may have originated with the Romans. The details of the origins of the Berber people are not known for certain, but the Berbers are generally considered the original population of North Africa. It is likely that the Berbers descended, perhaps thousands of years ago, from people who expanded west from an eastern origin along the southern rim of the Mediterranean Sea.

The Berbers, who inhabit regions across North Africa, have witnessed numerous invasions and occupations. Invaders have included Phoenicians, Romans, Vandals, Byzantines, Arabs, Spanish, Turks, and the French. Despite many attempts by colonizing people to eradicate or absorb the Berbers, their culture survived.

The Berber population is distributed across the countries of North Africa. Generally speaking, it is likely that most north-west African Arabs are of Berber origin. While precise statistics are not available, experts estimate that 35–80% of the all Berbers live in Morocco, with the remainder distributed throughout Algeria, Libya, and Tunisia. In Tunisia, Berbers comprise about 15–33% of the population.

Berber groups inhabiting coastal North Africa identify themselves by the terms Kabyles and Rifs. Others living further inland identify themselves as Chaouis, Siwis, Chleuhs, Mozabites, and Tuaregs.

The Berbers of northern Algeria number approximately 4 million. They have kept their original language and culture. The Berbers of northern Morocco are sometimes called the Rifs or Riffis. In southern Morocco, the Berbers, with a population of about 8 million, are sometimes known as the Chleuhs. Other groups include the Tuareg of the Sahara and the Chaouis of Algeria. There are also about 4 million Berbers living in Europe. Some inhabitants of the Canary Islands are also considered Berber.

Between 642 and 669, the Arabs sent their first military expeditions into the Maghrib region of North Africa, which resulted in the spread of Islam. In 711, Tariq ibn Ziyad, the Berber governor of Tangier, Morocco, crossed into Spain. Later Islamic Spain (Al Andalus) was under the leadership of the caliph of Damascus, Syria. Nevertheless, the largest group of Moors (a general term used to describe Muslim people in Spain and Portugal) was made up of North African Berbers.

The countries of North Africa gained their independence in the 20th century. Tunisia and Morocco became independent in 1956 and Algeria in 1962. The countries then established Arabic as their official language, replacing French and/or Spanish. As a result, most Berbers had to study and know Arabic, with no opportunity to use their own language at schools.

North African states identified themselves as Arab nations, ignoring the existence and the culture of the Berbers. Political tensions arose between Berber groups and governments in North Africa over linguistic and cultural issues in the decades following independence. Berber culture was discriminated against in some cases. For example, giving children Berber names was once prohibited in Morocco.

In response to the demands of the Berbers, Morocco and Algeria modified their policies. Algeria defined itself in the constitution as an Arab, Berber, and Muslim nation. As of 2008, Berber is a national language in Algeria and is taught as a non-compulsory language in the Berber-speaking areas. In Morocco, Berber is now taught as a compulsory language regardless the ethnicity.

The Berbers are ethnically—but far from politically—the dominant part of the populations of Morocco, Algeria, Tunisia, and Mauritania. Isolated Berber-speaking groups are found all over North Africa, from along the Atlantic in the west to Egypt in the east. A colorful nomadic Berber tribe, the Tuaregs, whose male warriors wear blue dresses and indigo-colored veils, still roam the Sahara desert.

Berber authors, from ancient times until today, have gained world recognition. An Oregon State University web site dedicated to Berber studies lists Berber authors Saint Augustine, Tertullian, Apuleius, Arnobius, Franto, Saint Cyprian, Lactantius, Ibn Khaldun, Ibn Battuta, Jean Amrouche, Kateb Yacine, and Mouloud Mammeri. The site notes that, through history, these authors have been identified as Roman, Arab, or French. Many of the authors wrote in a language other than Berber. The Berber language is only recently winning recognition as an official language.

## 2 LOCATION AND HOMELAND

Berber culture is centered in North Africa and the Mediterranean region, although Berber influence is felt as far east as Egypt and even stretches to the Canary Islands in the Atlantic Ocean. The sphere of Berber influence includes the countries of Algeria, Libya, Mali, and Niger, with large pockets in Morocco and smaller ones in Tunisia along the Mediterranean shores of North Africa. Berbers tend to live in desert regions like the Sahara and in the Atlas Mountains. Berbers comprise a clear majority of the population of North Africa in terms of race, but many Berbers deny their identity, choosing to describe themselves as Arab.

The Berbers, whose total population is estimated at 36 million, are principally concentrated in Morocco and Algeria, with significant communities also living in Tunisia, Libya, Mauritania, Mali, and Niger. In addition there are about 4 million Berbers living in Europe, primarily in France. An estimated half of the ethnic Berbers living in Europe describe themselves as Berbers. In terms of race, Berbers represent the majority of the population in Morocco and Algeria and more than half the population in Tunisia and Libya. As Arabization has swept away the indigenous language and the Berber identity from many regions, many people with Berber ancestry are now claiming to be Arabs. In terms of identity, Berbers represent 40% of all Moroccans, 30% of all Algerians, 15–33% of all Tunisians, 10% of all Libyans, and 0.5% of all Egyptians, making up more than 20 million people. Genetic evidence appears to indicate that most North Africans (whether they consider themselves Berber or Arab) are predominantly of Berber ori-

gin and that populations ancestral to the Berbers have been in the area since the Upper Paleolithic era.

Although stereotyped in the West as nomads, most Berbers were traditional farmers, living in the mountains relatively close to the Mediterranean coast or dwelling in the oases found in the desert. The Tuareg of the southern Sahara, however, were nomadic. Some groups, such as the Chaouis, were herders who moved with their herds seasonally. Their various dwelling places included deserts, areas near rivers, plains, and mountain ranges.

Most rivers are not navigable, but they have been a major source of water for irrigation. The plains are cultivated with a variety of crops, such as oranges, figs, olives, almonds, barley, and wheat. The homelands of the Berbers experience a wide variety of weather conditions. The desert is hot and dry, while the coastal plains have mild temperatures. In the summer the mountains are hot and dry, but in the winter they are cold, rainy, and often snowy.

### 3 LANGUAGE

Berber is primarily a spoken language. The Berber languages are mainly spoken in Morocco, Algeria, Mauritania, Tunisia, and Libya. The primary Berber language is known as Berber to Europeans and as Shilha to Arabs. The Berbers themselves call the primary language Amazigh or Tamazight. The language forms a branch of the Afro-Asiatic linguistic family. The wide dispersion geographically of the Berber people has led to the development of as many as 300 different dialects. A number of tribes, including the largest ones (the Rif, Kabyle, and Tuareg) have their own dialects.

Modern Berbers are engaged in ongoing efforts to develop and gain acceptance of a written form of their language. A Berber alphabet has existed several thousand years, but has not enjoyed widespread use.

Berber languages and dialects include Central Atlas Amazigh (Tamazight) and Riffi (in northern Morocco), Kabyle (Algeria), and Tachelhit (or Tashelhiyt, central Morocco). There is a strong movement among speakers of the closely related northern Berber languages to unite them into a single standard language.

Although an alphabet for the Berber language has existed for a few thousand years, the written language has been disrupted through history by invaders and conquests in North Africa. The language was first written in an alphabet still used by the Tuareg; the oldest dated inscription is from about 200 BC. Later, between about AD 1000 and 1500, Berbers, especially those living in Morocco, wrote their language using the Arabic alphabet. Since the 20th century, Berbers, especially the Kabyle, have begun using the Latin alphabet.

In Morocco, approximately 3–4 million speak Tachelhit, a form of Berber; another 3 million speak another Berber dialect known as Central Atlas Amazigh (Tamazight).

After independence, all the North African Maghrib countries pursued a policy of Arabization and tried to eliminate French as the language of education, literacy, and power. A side-effect of these policies was to suppress the use of Berber languages.

In the early 2000s, Berbers were becoming more vocal in their protests over the loss of their language and culture. In Morocco and Algeria—especially Kabyle—the issues was being addressed by the government. Both Morocco and Algeria

are introducing Berber language instruction in some schools. In its 2007 report on Algeria, the US State Department noted that “Access to print and broadcast media for Tamazight and Amazigh culture continued to grow. Tamazight programming also increased on the non-Berber language channels, as did advertisements in Tamazight on all television and radio channels. Beginning in the 2006–2007 scholastic year, the Tamazight language was officially taught in primary schools, starting in the fourth grade in 17 predominantly Berber provinces.”

### 4 FOLKLORE

The folklore traditions of northern Africa have been deeply influenced by Islamic cultural traditions. Most folklore in Muslim countries concerns important figures in religious history, such as the prophet Muhammad. According to the tale, *al-Isra wa al-Mi'raj*, on the 26th day of the Islamic month of Rajab, the Muhammad traveled at night from Mecca (a city in what is now Saudi Arabia, then known as Hijaz) to Jerusalem. From Jerusalem, he rode his wondrous horse, al-Burak, on a nighttime visit to heaven. This legend is celebrated every year throughout the Islamic world.

Berbers have many legends based on the exploits of Muslim leaders known as marabouts. The marabouts resisted the religious Crusaders and the French colonizers of North Africa. They are believed to have had *baraka*, a blessing or divine grace, that allowed them to perform miracles. The burial sites of marabouts are destinations of pilgrimages, and many Berbers regard marabouts as saints.

Other Berbers believe in spiritual beings called *jinn*. Jinn are said to take on the forms of animals. To ward off these spirits, Berber Muslims wear a charm, known as an amulet, with verses from the Quran printed on it, as protection. They also wear the “hand of Fatima,” a charm in the shape of the right hand, to protect against the evil eye.

Often, women in the countryside believe in (and might practice) *sihr*, a type of witchcraft primarily involving the use of potions. A potion might make someone fall in love or it might invoke a curse as revenge.

## 5 RELIGION

Prior to conversion to Islam in the 8th century the Berbers had polytheistic and animistic religious practices. The beliefs of the indigenous Berber people of North Africa were influenced primarily by the beliefs of their Egyptian neighbors, as well as by other people who lived in the area, such as the Phoenicians, Jews, Greeks, and Romans.

Berbers who adhere to a specific religion are outnumbered by those who profess no religion. However, many Berbers are Muslim (mostly of the Sunni sect), but there is also a Christian community (mainly Roman Catholic) and an even smaller Jewish community. Muslim Berbers’ beliefs are exactly the same as those of Sunni Muslims elsewhere. However, Islam practiced in rural North Africa places a strong emphasis on *baraka* (“blessing”) and on a belief that descendants of Muhammad can perform miracles. Shrines to these important figures are scattered throughout the countryside. Living representatives are turned to for mediation of conflicts.

There is no Islamic intermediary between man and God. However, every rural community has a teacher, called a *fqih* who trains boys and young men to recite the Quran. The community hires the *fqih* to lead the prayers in the mosque and to deliver a sermon each Friday.

The *fqih* also prepares the charms that carry verses from the Quran, which many Berbers wear in the belief that the charm will cure disease and prevent bad luck. Elements of witchcraft and sorcery that require Arabic writing are the responsibility of men; any such activities that do not involve writing are believed to be the responsibility of women.

## 6 MAJOR HOLIDAYS

Berbers observe both secular holidays and the Muslim religious festivals of the lunar year. The two major Muslim holidays are Eid al-Fitr and Eid al-Adha. Eid al-Fitr is a three-day celebration that takes place after the month of fasting called Ramadan. Eid al-Adha commemorates the willingness of Abraham to obey God’s command and sacrifice his son, Isaac. This Eid al-Adha feast, where every householder must sacrifice a sheep, occurs in the last month of the Islamic year and coincides with the hajj, the pilgrimage to Mecca. People making a pilgrimage are expected to sacrifice a goat or sheep and offer the meat to the poor. Every Muslim must make this pilgrimage at least once during his or her lifetime.

Muslims celebrate their religious holidays by going to the mosque for group prayers. Afterward, they return home to large meals with family and visiting relatives. They also exchange gifts on religious holidays.

The secular holidays include New Year’s Day (January 1) and Labor Day (May 1). Labor Day commemorates worker solidar-

ity around the world. Berbers might also observe the holidays of their native countries.

## 7 RITES OF PASSAGE

Major Berber ceremonies are related to birth, marriage, and death. In addition, the first haircut and circumcision are rites of passage for boys. Circumcision is practiced by all Muslims. Most Berbers circumcise boys at around two years of age, but a sect that lives in south-central Morocco waits until boys are five or six to perform circumcision. There is no female circumcision.

Marriage ceremonies are the most important and elaborate Berber rituals. Marriage between first cousins is permitted. (This is typically a son marrying his father’s brother’s daughter.) Most marriages are between members of families within the same tribe section. Polygynous marriages are permitted with each co-wife having her separate dwelling or household.

Widows are often considered an inheritance by a male family member. It is not uncommon for two brothers to marry two sisters. Normally only a husband can initiate divorce (except in cases of impotence). A frequent cause for divorce is childlessness.

When death occurs, Berbers may attribute the cause as either natural or supernatural. If the deceased person is a man, his body is washed and enshrouded by a ranking Muslim man. If the deceased person is a woman, the body is attended to by another woman. Every community has a cemetery.

Burial takes place soon after death. A person who dies early in the day is buried later that day; a person who dies during the night is buried the next morning.

For burial, the body is laid with its face turned toward Mecca. An Islamic leader recites from the Quran as the body is placed in the grave. Attendance at funerals is restricted to men. The relatives of the deceased host a feast seven days after the death. Among the Rif group of Berbers, a widow hosts a feast forty days after her husband’s death. Forty days theoretically marks the end of the mourning period for all Berbers, but most widows observe a three-month mourning period. This extended mourning period between widowhood and remarriage helps remove any question of paternity in case of pregnancy.

## 8 INTERPERSONAL RELATIONS

All close relatives, whether patrilineal or matrilineal, are typically addressed by the appropriate kin term. Alternative, they may be addressed by name. If the relative is especially close, he or she may be addressed by the kin term plus the name. The same form of address is also used for elders.

Berbers shake hands during greetings and farewells. It is common for close friends of the same sex to hug and exchange kisses on the cheeks. People of the opposite sex, if they are not religious, may shake hands; religious men and women avoid shaking hands with persons of the opposite sex. The most common greeting is the phrase *Al-salamu alaykum*, which means “May peace be upon you.” The response is *Wa alaykum al-salam*, or “May peace be upon you also.”

Most socializing revolves around the family. Guests are treated with warm hospitality and are served pastries and sweets. At most social gatherings, men socialize with each other and the women socialize with each other; the two groups remain separate. Boys and girls are kept apart through most of childhood. Dating is never permitted, and it is considered

inappropriate and shameful for unmarried males and females to socialize; premarital sex is strictly forbidden. Premarital sex carries especially strong stigma for girls. A girl who loses her virginity outside of marriage brings great shame to her family's reputation. Marriages are arranged, either by the families or with the help of a matchmaker.

## 9 LIVING CONDITIONS

For centuries, Berbers have struggled for power with other Arab groups in North Africa. The Barbary Coast of North Africa was known as a place where Arab and Berber pirates would prey on ships on the Mediterranean Sea.

Many traditional Berbers raise sheep and cattle. However, some Berbers subsist by working at menial jobs, such as grinding flour at a mill, doing woodcarving, quarrying millstones, and making pottery or jewelry. Berber women generally carried out housework and handicrafts, such as weaving and making pottery.

Berbers live a rural lifestyle. Housing is typically a dwelling made of clay or a tent made of goatskin. In some larger Berber settlements, houses may be constructed of stone. Many modern Berbers perform migrant work in Spain or France.

For nomadic peoples, a number of factors, including colonialism, population pressure, and environmental change, has led them to develop permanent settlements. Very few Berber groups still move freely around the desert. Most have created permanent homes, with only some members moving with the herds for seasonal grazing. Permanent settlements have more access to health care and education.

## 10 FAMILY LIFE

Everywhere in North Africa, except among some of the Tuareg groups of the Central Sahara, descent is patrilineal and residence is patrilocal. Over a century of French rule and the long wars for independence led to a breakdown of the traditional extended family unit. A mother and father would live in one home with their children, including grown sons and their wives. The grandparents would usually live with them. All members of the family would take their meals together.

If a daughter became divorced or widowed, she would return home to live with her family. In modern times, many Berber men have traveled to Europe to find work, so their wives are now filling the role of head of the household in rural areas.

In Berber households, it is common for older children to help care for their younger siblings while their mothers do household work. In most families, the grandparents also take an active role in childrearing. Thus grandparents and grandchildren develop a close bond. Segregation of boys and girls begins when children reach six or seven years of age and the boys begin to help manage the family's herd of goats. By the time they reach puberty, which traditionally is not long before the age to marry, the practice of socializing exclusively with others of the same gender is fully ingrained. Land is passed on from father to son.

## 11 CLOTHING

The traditional attire is a one-piece, floor-length, hooded dress, known as a jellaba. It is worn by both men and women. Western attire is often worn under the jellaba. In cold weather, many men cover their jellabas with a hooded cloak called a

burnus. Religious and/or conservative women cover their hair in public.

Berber women wear long, colorful dresses, often covering their heads with straw hats. Berber women historically had tattoos on their foreheads, cheeks, or necks. However, this custom is slowly fading away. Rural men often wear turbans, which they replace with a knitted skullcap when going to a mosque.

## 12 FOOD

Berber cuisine differs from one area to another within North Africa. However, most Berber diets include corn, barley, sheep's milk, goat cheese, butter, honey, meat, and wild game.

The best known and most common food among all Berbers is couscous. In fact, some historians credit the Berbers with inventing couscous, which is made from semolina flour. Couscous has been known as a North African dish since the 11th or 12th century. Berbers have different names for couscous, including *shekshu* and *sishtu*.

In Algeria, couscous is called *kisksu* or *ta'am*, meaning "food" or "nourishment." This gives an indication of the importance of couscous as a daily staple. In Tunisia, couscous may be called *kiskisi* or *kuskisi*. Couscous grains may be large (and are then called *muhammas* or *burkukis*) or very fine. The fine-grained couscous is generally reserved for use in making sweet dishes, often involving almonds, raisins, or apricots.

Couscous and tagine (a type of stew) is the principal dish for special feasts and celebrations. Tagine is prepared in a single pot and requires few utensils for its preparation. The traditional tagine pot is ceramic, with a pointed dome-shaped lid. The tagine is typically simmered for hours, and is based on inexpensive cuts of meat, seasoned with spices. Thus, it is well-suited for preparation by both nomadic and rural cooks.

Preparing and serving couscous symbolizes happiness and abundance. Besides tagine, couscous may be served with meat, fish, vegetables, and spices. For a simple meal, couscous was cooked with sour milk and melted butter. This traditional food of the nomadic Berbers has found many variations among modern, more settled Berbers.

## 13 EDUCATION

After the countries of North Africa gained independence in 1950s and 1960s, most were clear in their language policy: Arabic became the exclusive official language of the country and the role of the languages of previous colonization, namely French and Spanish, was minimized. There was no mention of Berber as a national language or minority language and no prospect for making any room for this language in the national official landscape.

Berber had no place in the educational system in Morocco, especially at the primary and secondary school levels. This forced a whole generation of children to enter school in a language they had never spoken before, contributing to a higher dropout rate among Berber children.

Challenges faced by those who spoke only Tamazight extended from the education system to other official spheres, such as the healthcare system and the legal system. Arabic and French dominated in hospitals and official government agencies.

Berber activists blame Arabization for the high illiteracy rate in Morocco—an estimated 48% of its citizens cannot read—because Berber children often drop out when confront-

*Sheep pack a street in a Berber village in Morocco. The mountain Berbers, isolated in Morocco's High Atlas Range, are proud of their traditional culture, now largely lost to their urban kin. (AP Images/Alexandra Boulat/VII)*

ed with teachers who speak only Arabic. In state schools, the first language taught is standard Arabic, followed by French. At the secondary school level, English, Spanish, or German is introduced. At the university level, a growing number of students are choosing to study the Berber language and culture.

By 1994, the Berber movement had grown strong enough to persuade King Hassan II of Morocco to encourage integration of the Berber language into the public education system. His son, Mohammed IV, succeeded him in July 1999, and continued to support the use and preservation of the Berber language.

Mohammed IV established the Royal Institute of the Amazigh Culture (IRCAM) in 2001. (IRCAM is commonly called the Royal Institute of Berber Culture when referred to in English.) In September 2003 teaching Berber in public schools became a reality. However, this was not a simple undertaking. Teaching Berber involved learning the Tifinagh script, in addition to the Roman and the Arabic scripts already being taught.

In the past Berber children had been educated in the mosque, where they focused on religion and some rudimentary math. This was seen as important work and the *fqih* (religious instructor) is a highly respected member of the community.

However, religious education along was not adequately preparing Berber children for life in contemporary society. Berber activists succeeded in convincing the government of Morocco

to support the preservation of the Berber language and culture through the primary schools.

With improved health care and widespread availability of immunizations, more Berber children survive to adulthood. It is important that they receive an education that prepares them to function as citizens in North African society. It is clear that more a formalized, urban, and modern style of education is needed.

Berber parents acknowledge that their children will not be able to support themselves by herding and farming. It is inevitable that Berber children will give up the rural or nomadic life to find employment in urban areas. Life in the city requires a sort of training beyond what is available through the mosque. Many Berber and especially Tashelhit students move through the traditional (mosque-based) educational system to become religious teachers. Berber students are enrolling in increasing numbers in the religious universities in Morocco, and some eventually join the faculty.

#### **14 CULTURAL HERITAGE**

The Berber culture has its typical art and symbols, as well as its unique music that provides continuity through history. The ancient Berber culture is extraordinarily rich and diverse, with a variety of musical styles. These range from bagpipes and oboe (Celtic style) to pentatonic music (reminiscent of Chi-

nese music)—all combined with African rhythms and a very important stock of authentic oral literature. These traditions have been kept alive by small bands of musicians who travel from village to village, as they have for centuries, to entertain at weddings and other social occasions with their songs, tales, and poetry.

Berber mothers have been largely responsible for the survival of the Berber language and cultural identity. Mothers share traditional stories and beliefs with their children. Women also preserve cultural traditions through the handicrafts such as tapestry, jewelry, tattoos, and pottery. In October 2001, the Royal Institute of the Amazigh Culture (IRCAM) was established in Morocco to preserve Amazigh culture and language.

### 15 WORK

Important traditional Berber crafts were blacksmithing, basketry, and utilitarian woodwork, such as the making of plow handles and yokes. However, blacksmithing was typically considered a low-status occupation for men.

Berber women produced handmade pottery. In some areas, men also produced pottery, but it was considered low-status work. There is strikingly little economic specialization by Berber men. Silversmithing and saddle-making, occupations formerly practiced by rural Jews, were skills learned by some Berbers. Most Jews migrated to Israel when that country became an independent state in 1948, leaving silversmithing and leatherwork to Berbers and Arabs who remained in North Africa.

In pre-colonial times, Berber men were occupied with feuding and warfare. Modern Berber men are occupied with agriculture, herding animals, and, occasionally hunting. Berber women manage the household and perform all housework. However, preparing tea for guests is a special task reserved for the men of the household.

The management of the household engages the entire family. Women do the housework and are called on to help the men with the grain harvest. In addition, women are responsible for carrying the harvested grain in baskets to be threshed.

Men build the houses but women whitewash the walls. Women also smooth and clean the floors. Women are also frequently the ones to haul animal manure to the collective manure pile. Women milk the animals and fetch water for the animals and the household. Gathering firewood also falls to the women.

If a Berber household includes poultry and rabbits, the women care for them. Marketing the family's goods was traditionally the responsibility of the men, but sometimes elderly women, especially in poor families, would work the family's stall at the market. In modern markets, women are as numerous as men, due in part to the absence of some adult men who have migrated to Europe for work.

By around age six, boys (and some girls) herded goats on the slopes. Older girls helped care for the family's younger children. As emphasis on schooling has increased, many boys (and to a lesser degree, girls) enroll in school and are no longer available for household chores.

### 16 SPORTS

Before the French colonized North Africa, some traditional sports were played in the village communities or in the nomadic settlements. After the introduction of modern sports in

accordance with French colonial policy, the traditional sports were threatened.

Modern sports, particularly football (soccer), spread rapidly throughout North Africa. North Africans in general, and Berbers in particular, relished the opportunity to contest against European teams. As a result of the introduction of modern sports, national sports organizations were established. These helped contribute to a sense of national identity among the countries of North Africa.

After independence from France, North African nations introduced policies of modernization and centralization. Through the modern educational system and the process of establishing an independent government, the playing of traditional sports was discouraged. These sports were viewed as primitive and backward and threatening to the development of the modern nation. Along with traditional religious practices, traditional games were criticized for being filled with superstition.

Modern sports, however, were encouraged as the newly-independent nations worked to form a national identity and to find ways to compete internationally.

### 17 ENTERTAINMENT AND RECREATION

Ritual ceremonies serve partly as recreation and entertainment and often include music and dance. Storytelling is another favorite traditional pastime. Small bands of musicians travel from village to village, as they have for centuries, to entertain at weddings and other social occasions with their songs, tales, and poetry.

A traditional equestrian performance is practiced during cultural festivals. A performance on horseback often ends a traditional Berber wedding celebration. This performance is considered a form of martial art, symbolizing the strong bond between men and horses. Groups made up of hundreds or thousands of riders perform during festivals. Sports, television, and radio provide recreation for increasing numbers, especially in the cities.

Nomadic people traditionally enjoyed games involving sticks, stones, and drawing on the sandy desert ground around their settlements. These games are similar to tic-tac-toe, hopscotch, or mancala.

### 18 FOLK ART, CRAFTS, AND HOBBIES

Much Berber art is in the form of jewelry, leather, and finely woven carpets. The forms of Berber artistic expression, at least in the modern period, are primarily linked to utilitarian objects—pottery, weaving, and architecture—and to jewelry. All are characterized by predominantly geometrical, nonrepresentational patterns. Neither the forms and patterns nor the techniques appear to have changed significantly since ancient times, and they can be related directly to forms found in the Mediterranean basin from as early as the Iron Age. These art forms are not original or exclusive to Berbers. Still, the Berber culture has consistently produced artistic works for centuries.

Examples of Berber artistic expression include the massive earth and adobe structures, known as *ksars*, in southern Morocco. These architectural fortifications were constructed from packed earth, with towers and facades decorated with inscribed patterns.

Berbers are also known for Kabyle and Chawia pottery, which are unique in their variety. Designed with elegant forms

and elaborate applied patterns, this style of pottery is easily recognizable.

Berbers are also well known for their silver jewelry, which is embossed with intricate patterns and inlaid with stones. Some examples feature enameled cloisonné as well.

Berbers are also known for textiles produced throughout North Africa, but particularly in southern Tunisia and in central and southern Morocco.

## 19 SOCIAL PROBLEMS

Politicians in North Africa who take strong political stands in support of the Berber cause rarely reach high positions in their governments. Arabization is blamed for the continued poverty of most Berbers. Fifty percent of Moroccans live on less than \$50 a month, and most of the poor are Berbers.

Government jobs are off-limits to those who speak only Berber, and Berber is prohibited in the courts; all legal documents must be translated into Arabic. One government-affiliated channel, 2M, broadcasts a mix of Arabic and French. The other, RTM, broadcasts predominantly in Arabic, with only 5 to 10 minutes a day of news in Berber.

Political tensions have risen between Berber groups and governments in North Africa during the 1980s, 1990s, and into the 2000s. Berber activists argue that the Arabic education system, the lack of programs in Berber on state radio and television, and the absence of an entity in charge of preserving the Berber cultural heritage is threatening what is left of it.

In response to the demands of the Berbers, Morocco and Algeria have modified their policies. Algeria included language in its constitution declaring that the country is an Arab, Berber, and Muslim nation. Currently in Algeria, Berber is a national language and is taught as a non-compulsory language in the Berber speaking areas.

In Morocco, Berber is now taught. Nevertheless, Berber organizations have denounced the Moroccan education charter dealing with language and culture as insufficient. They point out that only two of its 100 articles deal with the question of Berber in school. The first said Berber could be used in primary school only to “facilitate the learning of the official language”—Arabic. The second said that certain universities would have the means to study the Berber language and culture.

## 20 GENDER ISSUES

Islam at its foundation was a liberator of women. For the first time in recorded Arab (and Western) history, women gained part of their father’s inheritance and were given rights in both marriage and divorce—it took centuries for European Christian societies to grant women rights to property, especially in marriage where a woman was considered to be owned by her husband.

Berber women’s lives are changing and dynamic. In urban areas, women are quite similar to Western women in their political rights and economic behaviors. They have more access to education and so tend to have fewer children than rural women and also to work in more formal economic sectors. In rural areas, labor is often divided with women responsible for childcare, food production, and domestic tasks, while men are involved in herding and agricultural production for sale. However, as men migrate to urban areas to look for jobs, more women have to take responsibility for traditionally men’s tasks, as well as their own. This has many implications as women gain access and ex-

perience in public affairs and daughters become more crucial to fulfilling domestic responsibilities. Whether urban or rural, women and girls are usually responsible for bringing water to the house for bathing, cooking, and cleaning.

Berber women, like other Muslim women, are said to live in a male-dominated society with rigid sexual stratification. The seclusion and control of the sexual practices of a woman increase a man’s status and power. This view has become more prevalent with the process of Islamization in Morocco, as elsewhere.

# BURKINABE

**PRONUNCIATION:** bur-kin-ah-BAY

**ALTERNATE NAMES:** (former) Upper Voltans

**LOCATION:** Burkina Faso

**POPULATION:** 15,264,735

**LANGUAGE:** French, Gur Group (Niger-Congo family of languages), Bobo-Dioulasso

**RELIGION:** Islam, traditional religions, Christianity

**RELATED ARTICLES:** Vol. 1: Dyula; Mossi; Tuaregs

## 1 INTRODUCTION

Burkina Faso is one of the economically poorest countries in Africa, and one of the least known to Americans. Known as Upper Volta until 1984, the former French colony has struggled against drought, isolation with respect to transportation for exports, and a general lack of money for development. The new name, Burkina Faso, was adopted as part of the Revolution of 1983 to signify a fresh start for the country, and is a name created from words of three languages in the country to mean “country of upright or incorruptible men.” The shorter form Burkina is commonly used; Burkinabe is the adjectival form of the name and is the singular and plural term for the country’s citizens.

Burkina Faso was one of the last parts of Africa to be conquered by Europeans. The French conquered it in 1896–97, just ahead of expeditions of the British from what is now Ghana and Germans from Togo. The French, much more than the British, intended to assimilate the peoples they ruled to French values and institutions. However, the lack of money to support the colonial regime in Burkina Faso meant that the French had to rely upon the traditional rulers, especially the kings and chiefs of the Mossi, the largest ethnic group, to administer the colony.

The colony went bankrupt during the Great Depression, and from 1933 until 1947 Upper Volta was divided between Soudan (now Mali), Niger, and Côte d’Ivoire. The restoration of the colony was due in part to the postwar alliance of pro-independence African political leaders like Félix Houphouët-Boigny in the latter colony with the French communist party, the only French party willing to even consider such a step. Upper Volta was recreated in order to reduce Houphouët-Boigny’s territory and to reward the leading Mossi king, the Mogho Naba, for his support in turning out unpaid labor to extend the Abidjan railroad, the country’s link to the outside world, from the Western city of Bobo-Dioulasso to the capital, Ouagadougou.

Burkina Faso became independent in 1960, but it remains closely linked to France. In the 1960s and 1970s, three civilian governments were overthrown by the military in bloodless coups-d’état, but series of coups in the 1980s turned Upper Volta from a major recipient of Western foreign aid to a revolutionary government and back again to a country cooperating with the World Bank’s “Structural Adjustment” program to increase free-market economies.

By the early 1900s the French had imposed taxation on the new colony, taxes required to be paid in French francs. This required Burkinabe peoples, who previously had used cowry shells from the Indian Ocean as money, to grow, mine, make, or do something that French were willing to pay for, which was

the intent of the tax program. Because little could be grown for sale in Burkina, many people worked as migrant laborers in the coffee and cocoa farms and mines of the British Gold Coast Colony and the Côte d’Ivoire. For the first two-thirds of the century this migration was largely seasonal, as the agriculturally dead dry season at home in Burkina coincided with the peak demand for farm labor in the coastal countries’ farms.

Since the 1960s, the original, seasonal migration has given way to longer-term settlement in these countries. Burkinabe were 11% of the population of Côte d’Ivoire in the 1988 census. There the Mossi are said to be the second-largest ethnic group. Burkinabe who once worked as laborers on Ivoirien farms now have cocoa or coffee farms of their own, or work in urban trades and professions.

Many Burkinabe, especially Mossi, served the French colonial army. The famous troops known as the “Senegalese Sharpshooters” (*Tirailleurs Sénégalais*) were in fact recruited all over French West Africa, and Burkinabe were especially heavily represented. Mossi and others from Burkina Faso fought for France in both world wars, in Indo-China, and in Algeria. For many years the pensions of these veterans were such an important source of foreign currency to the Burkinabe government that the president would personally hold the cabinet post for veterans’ affairs.

The country gained independence from France in 1960, and Maurice Yameogo became the first president. Yameogo was overthrown in a military coup in 1966 because of rampant corruption in his administration. For two decades, the country continued to experience political instability. In 1983 Thomas Sankara took control of the government and conducted a nationalist and socialist policy that placed priority on the rural population. He came to be seen as a champion of the people. However, he remained unpopular with tribal chiefs and the government elite. In 1987, he was ousted and assassinated by his second in command, Blaise Compaore, who has remained in power since then, in spite of adopting a constitution in 1991 that allows multi-party elections.

## 2 LOCATION AND HOMELAND

Burkina Faso is located in West Africa, in the interior savanna north of Côte d’Ivoire, Ghana, Togo, and Benin. It is bounded to the west and north by Mali and by Niger to the east and north. It is slightly larger than Colorado. Most of the country is gently rolling savanna, with grasslands dotted with trees and areas of scrub brush. The country is infrequently broken by rock outcroppings or small mesas.

The population of Burkina Faso was estimated to be 15.3 million people in 2008. A French sample survey of 10% of the national population in the early 1960s estimated that 48% of the population was Mossi and 10.4% Fulani (Peulh). Other ethnic groups made up 4–7% each; these included the Bisa, who were the original inhabitants of the southern part of the country where the Mossi states formed; Gourmantche, who are related to the Mossi and have traditional states east of them; and Gourounsi, Lobi, and Dagari, peoples on the southern and western edges of the Mossi kingdoms who share a similar way of life and speak related languages, but who do not have political organizations larger than clans defined by kinship relations. The Bobo and Senoufo in western and southwestern Burkina are culturally and linguistically related to the Mandespeaking peoples of Mali.

The 48% figure for the Mossi has been suspected of being a deliberate undercount in order to deny a demographic majority to the people who already dominated the new nation's government. Because ethnicity remained a sensitive subject, the national censuses of 1975 and 1985 did not publish ethnic totals for the whole population. Current estimates are based on those 35 year-old figures. On that basis, roughly 5 million Burkinabe are Mossi. A 1996 United States government figure estimates only 24% for the Mossi, while a 1995 linguistic reference book estimates Mossi at 53% of the population.

### 3 LANGUAGE

French is the official language of the country, of schools, and official publications. Except for the Mande-related languages of Bobo-Dioulasso and the west of the country, most Burkinabe speak languages of the Gur group within the large Niger-Congo family of languages. Gur-speaking peoples in Burkina and adjacent parts of Benin, Togo, and Ghana share a generally similar way of life as millet farmers, with some (like the Mossi and the Dagomba and Mamprussi in Ghana) having kingdoms and chieftaincies, while others are organized only along kinship principles.

### 4 FOLKLORE

The Mossi and Gourmantche peoples of Burkina are notable in the history of the West African savanna in that their ruling elites did not convert to Islam when others did. While there always have been Muslims in Burkina who were literate in

Arabic, the bulk of Burkinabe history, law, and tradition was passed down orally.

### 5 RELIGION

The resistance of the Mossi and Gourmantche to the widespread introduction of Islam to the West African savanna during the 10th–11th centuries was a consequence of the close connection between political power and its validation by traditional religion. For a man to rule others, he must have received the religious right to do so, the *nam*, conferred only on one chosen and installed as a chief or king according to religious tradition. Occasional Mossi kings did convert as individuals but without lasting consequences. Mossi and other Burkinabe cultures, however, have many elements of Islamic origin.

The traditional religion of the peoples of Burkina is similar to that of many African peoples. There is a three-part view of the supernatural. An all-powerful god created the world and remains a force, but is too distant and important to have much interest in the activities of human beings. Less powerful, but more important, are spirits of earth and air that govern rainfall and soil fertility; these are tied to local places and affect local conditions. Offerings and prayers to them are made at natural features like rock outcrops or sacred trees.

Third, and most important in the success of daily life, is the influence of one's ancestors. Burkinabe peoples, again like many African societies, see the family as extending across time, from founding ancestors through those members alive now, to unborn future generations. Living members have a responsibility to their ancestors to maintain family land and to marry and have children to carry the family into the future. The ancestors watch over their living descendents and can reward or punish their behavior.

There has always been Muslim Mossi, especially long-distance traders for whom Islam was a common bond with traders elsewhere in the savanna. There are Mossi farmers who are descended from traders, however, who remained Muslim. The peoples closer to the great Muslim societies north, east, and west of Burkina have experienced proportionately greater Muslim influence. Moreover, when the French conquest suggested that the traditional supernatural powers were insufficient to protect people, there was greater conversion to Islam and Christianity.

Current figures estimate the Muslim population at 50%, with 40% following traditional religions and 10% Christian; the latter are mainly Roman Catholic due to the French colonial history. The first African cardinal, Paul Zoungrana, was the archbishop of Ouagadougou and a Mossi. The Protestant population is around 1% and represents the work of American missionaries.

### 6 MAJOR HOLIDAYS

Originally, the national holidays were December 11, the anniversary of the proclamation of the Republic of Upper Volta in 1958, and August 5, anniversary of the date of full independence in 1960. After the 1983 revolution led by Thomas Sankara, the national holiday became its anniversary, August 4. The government and schools also observe all the major Christian and Muslim holidays, including Easter, Christmas, *'id al-Fitr*, the end of the month's fast of Ramadan, and the festival of Tabaski (*'id al-Kabir*), when Muslim households sacrifice a

ram to honor God's testing of Abraham's faith by asking him to sacrifice his son Isaac.

## 7 RITES OF PASSAGE

There are no rites of passage at the national level, except for universal events like school graduations. The ethnic groups in Burkina Faso do mark the various transitions in a person's life with public rituals. These include the formal naming of a baby and its announcement to the community at a set time after its birth, the circumcision and instruction of pre-adolescent boys and (separately) girls, marriage as the assumption of full adult status, and funerals, which mark the moving of the deceased from living elder to watching ancestor. Burials, necessarily soon after death in a tropical country, are distinct from funerals, although both are public ceremonies. Funerals may come years after a death, when the next of kin (usually the eldest son) is able to be present and to afford the cost of the ceremony and associated feast.

## 8 INTERPERSONAL RELATIONS

While cities and towns always have existed in Burkina, the vast majority of the population has lived in rural farming communities. The 1985 national census showed 12.7% of the population living in towns of 10,000 or greater, up from 4.7% just after independence in 1960. The two biggest cities, Ouagadougou and Bobo-Dioulasso, had estimated populations in 1991 of 634,479 and 268,926; the next largest town in the 1985 census had a population of 38,902. Recent estimates indicate that the two biggest cities, Ouagadougou and Bobo-Dioulasso, had populations of 1,181,702 and 435,543 respectively. The bulk of the population, then, lives in villages surrounded by neighbors who usually are also relatives, since land is allocated by kinship ties. That in turn reinforces a society in which people are conscious of the ongoing family to which they belong, for whose well-being they are responsible, and whose land they farm and live on, but do not individually own and cannot sell. Respect for those older than oneself is a cornerstone of Burkinabe (and most African) societies.

A poor country with limited resources, Burkina offers little in the way of social security payments. This means that even urban wage-earners maintain links to their rural families, where they have an absolute right to land and support in their old age.

## 9 LIVING CONDITIONS

For those who live in rural villages, life has changed little over the centuries, although some modern conveniences have been introduced. Most people live in adobe houses with thatched roofs. Electricity is available only in towns and cities; therefore, radios are battery-powered and lanterns are kerosene or battery-powered. As the population has increased, firewood for cooking is increasingly difficult to find and women must walk greater distances for it. In rural areas water for drinking, cooking, animals, and washing comes from wells; the building of deeper, cement-lined wells has increased the number that do not go dry during the dry season, and made hauling water easier. Water is carried from the well to the house in large pottery containers carried on the heads of women.

Health issues remain significant. Malaria is chronic and widespread; anyone falling ill with another disease most likely already has malarial parasites and is weakened. The cost of im-

ported malaria-suppressing medicines puts them out of reach for most Burkinabe. Measles remains a significant cause of death for children, even though it could be prevented if the resources were available.

During the 1970s, the world's largest public health project was launched by the World Bank and other aid agencies in Burkina to reclaim fertile river-edge land from "river blindness," or onchocerciasis. This disease, caused by a parasite transmitted by black-fly bites, can lead to blindness after heavy exposure and has caused people to abandon villages and fields along the few year-round rivers. The "oncho" project has succeeded in reclaiming the land, but helicopter spraying must continue in order to suppress the black flies.

Major roads increasingly are being paved, which makes van and truck transport faster and less wearing on the imported vehicles. The single railroad, which runs from the sea at Abidjan in Côte d'Ivoire through Bobo-Dioulasso to Ouagadougou, has been extended north to Kaya and eventually will reach another 200 km to valuable manganese deposits. Most individuals cannot afford a private car, but there is a widespread network of vans linking rural communities with cities and towns. There are international airports at Ouagadougou and Bobo-Dioulasso, with flights to other cities in West Africa and to Europe, particularly to France.

Bicycles and motorbikes are the most widely owned transport. Donkeys traditionally were used as pack animals and now are also used to draw carts to haul goods and firewood.

## 10 FAMILY LIFE

Most Burkinabe societies are patrilineally based; communities of men linked through their fathers live with the wives and children on land that in principle their ancestors cleared from uninhabited brush. In the past, married sons and younger brothers were likely to live with their father or older brother; there is a tendency to smaller households as more men have a wider range of economic options beyond the joint sharing of family farming. In the southwestern part of the country where Burkina, Ghana, and Côte d'Ivoire come together, ethnic groups transfer some rights and goods through the male line of kinship, and others through the female. That is, a man's tools, for example, might be inherited by his sons, but his cattle would go to his sister's sons.

Marriage in Burkina, as in much of Africa, is a matter of paramount concern to families because it is the means by which the entire family is perpetuated. The incest taboo means that women to bear children must come from outside the patrilineal family, so bringing in "strangers" is a necessity for the family. Marriages are arranged, therefore, and involve group meetings between both families. While there always have been ways for couples who wanted to marry to do so, by and large most marriages are not the result of individual emotions and desires, but are part of the overall family's way of making the connections needed to bear a next generation.

## 11 CLOTHING

Pre-colonial Burkina grew cotton, which was spun into thread by women and woven into strips of cloth by men; the cloth was exported by donkey caravan in large rolls to other parts of West Africa and was sewn into broader panels to make clothing in Burkina and elsewhere.

*Donkeys traditionally were used as pack animals and now are also used to draw carts to haul goods and firewood. (Corel Corporation)*

Modern Burkina grow increasing amounts of cotton, which is still an important export. It is made into printed cloth panels 1 by 2 m (about 3¼ by 6½ ft) in size in a Burkinabe factory. The factory-made and imported cloth is what most Burkinabe wear. Shoes also are manufactured in Burkina.

Traditionally, women wore a long cotton skirt wrapped around their waists; recently, tops have been added in rural as well as urban areas. Men wore cotton shirts and trousers, or Muslim-influenced embroidered robes. Sewing machines now are used for the intricate embroidery formerly done by hand. Urban residents tend to wear variations on an increasingly worldwide style of dress. Used American cut-off jeans have become the everyday working dress of farmers.

## **12 FOOD**

Throughout Burkina, millet and sorghum are the staple foods. Porridge made from millet flour, called *tô* in West African French, is the main food. A cider-like beer brewed from sorghum is the main drink for all except Muslims and Protestant Christians, who do not drink alcohol.

Millet porridge is boiled to a loaf-like firmness, and pieces are broken off with the right hand, dipped in sauce, and eaten. The stew-like sauce is made from vegetables, leaves, and spices, and also may contain meat, which provides most of the flavor and vitamins to the meal. Meat, especially mutton and beef, is

a luxury item not frequently eaten and even less often eaten by itself as a meal. Chickens and guinea fowl are the main sources of meat. Dried fish is traded down from the Niger River in Mali and Niger; as the lack of lakes and rivers in Burkina limits local fishing.

Corn (maize) is increasingly grown to be roasted and eaten, but it remains a secondary crop because it exhausts soil nutrients more quickly and requires more water than millet. Peanuts are grown and are eaten fresh, boiled, roasted, and ground into sauces. Rice was domesticated long ago in West Africa as well as in Asia and is grown in western Burkina. Rice tends to be a luxury food, served for special events like weddings. Even in rural areas, French-style bread is increasingly available and is, like leftover porridge, a breakfast food. High-quality wheat bread (for which flour must be imported) is eaten daily by everyone in the larger cities and towns.

## **13 EDUCATION**

Except for Muslim Koranic schools and the three-month initiation schools that accompanied the circumcision of pre-adolescent boys, traditional Burkina education came from living with, watching, and assisting one's older family members and neighbors.

The French colonial government, anxious to save money, left education in the hands of Roman Catholic missionaries, who

did not have many schools. Around 1970, only 7% of Burkinabe children of elementary school age attended school. That figure has increased, but access to education is far from universal. A 1995 estimate for the population over age 15 reported an overall literacy rate of 19.2%, 29.5% of men, and 9.2% of women.

Access to post-elementary education is competitive and limited by the smaller number of schools; there is one university, in Ouagadougou. There are a few job opportunities for those who do get a Western education.

#### **14 CULTURAL HERITAGE**

Besides the renowned tradition of wood carving, Burkinabe society has a rich heritage of folk tales and oral tradition. Their music consists of drums, flutes, and stringed instruments. In the western part of the country there are many players of the balophon, a xylophone-like instrument with dried gourds serving as resonators for the vibrating pieces. FESTPACO, the Ouagadougou film festival, is the leading film festival in all of Africa, and one of the major cultural events of any kind for the entire continent.

#### **15 WORK**

Burkina Faso only recently has begun to integrate more modern occupations into its farming tradition. While no one is without exposure to modern conveniences and new technologies, most people still live the sort of lives, doing the same sort of work, as their ancestors have done for centuries.

#### **16 SPORTS**

Soccer and bicycle racing are the major sports; no urban holiday is complete without a bicycle race. Beyond that, there is little in the way of sports. There is a national basketball team, but few are involved in the sport. Hunting is work more than sport, involving either food-seeking or control of agricultural pests.

#### **17 ENTERTAINMENT AND RECREATION**

Radio is the important means of linking people in Burkina to the outside world. Personal, as well as local, national, and world, news is broadcast. Television is minimally present; there is one station each in Ouagadougou and Bobo-Dioulasso, broadcasting only two hours per weekday and five hours on weekends to 12 sets for every 1,000 people in 2000.

Movies are important, although theaters are limited to the larger towns and cities. More importantly, relatively few movies are made in Africa, or in African languages, so that the movies people see usually are from foreign cultures and in foreign languages without dubbing into local languages. Films from India are widely screened in Africa. This is changing, however, and Burkinabe filmmakers are playing a major role. The main film festival in Africa is FESTPACO, the Festival Panafricain du Cinéma d'Ouagadougou. Burkinabe filmmakers like Gaston Kaboré and Idrissa Ouédraogo are making feature-length films that increasingly are seen in Europe and North America, but also, because they are in Moré, are fully accessible to at least half the Burkinabe population.

#### **18 FOLK ART, CRAFTS, AND HOBBIES**

Societies in Burkina, especially in the western part of the country, produce some of the most famous African art, which is carved wooden masks worn by ritual dancers who personify animal or other spirits. Patterned cloth is both woven and tie-dyed, and leather bags, cushions, and hats are widely known.

#### **19 SOCIAL PROBLEMS**

Burkina shares with other countries the problems that come with increasing urbanization and a greater output of students than there are jobs for them to fill. In relative terms, however, neither problem is as advanced as in many other African countries. The overall lack of economic infrastructure also means that Burkina is heavily influenced by economic decisions elsewhere. The country's money is the CFA (African Financial Community) Franc, the currency of most of formerly French West Africa. In 1994 the value of the CFA franc was cut in half relative to the French franc and other currencies. This had a major effect on those earning wages or salaries paid in CFA, but it affected as well the price everyone pays for increasingly necessary imported products like tires or radios or wheat flour for bread.

Burkina Faso was long noted in modern Africa as having more political freedom than most countries, even when (paradoxically) there was a military government. African governments face the task of meeting many demands with few resources, which can lead to an inability to accomplish much, in turn leading to a military seizure of power in the name of honesty and efficiency. Burkina had the distinction of two bloodless military coups, eventually returning power to civilian rule. When younger officers led by Thomas Sankara seized power in 1983, however, there were casualties from fighting and from executions of political rivals. Sankara himself made a strong effort to break the country from its dependence on foreign aid, but in 1987 was killed by his associates, who continue to rule the country. Burkina has multiparty elections, but they have been extensively boycotted by parties that argue that the government is manipulating the political system.

Alcohol and drugs are not major problems. While there is a brewery in the country, the cost of commercially produced alcohol is too expensive for most people to consume in quantity. The traditional millet beer is alcoholic, but it is an established part of both traditional society and household organization and is therefore a culturally controlled substance. Kola nuts, rich in caffeine and the basic ingredient in cola drinks, are widely chewed and are a routine gift to a host. Imported from Ghana to the south, they are the preferred stimulant for Muslims, who do not drink alcohol.

#### **20 GENDER ISSUES**

As in most African countries, traditional practices have kept women in a subordinate position. In the traditional setting, a woman is considered to be property that can be inherited upon the death of her husband. As such, traditional law does not recognize inheritance rights for women. Women suffer from frequent domestic sexual abuse and violence, and no specific laws have been put in place to protect women. Abusive husbands go free, since there are no legal channels to investigate or prosecute their actions. Another problem for girls is that they are married early in life. It is estimated that about 52% of women are married before the age of 18.

However, female excision (commonly known as female genital mutilation) was abolished in 1996. A committee known as The National Committee for the Fight Against Excision was also established in 1996 to work toward the complete eradication of this practice in Burkina Faso. Estimates indicate that up to 70% of girls and women had undergone the procedure before it was abolished in 1996. Since then, incidences of excision have declined by about 40% and more than 400 people have been sentenced for performing the practice.

Women are responsible for subsistence agriculture, and few are involved in the more lucrative private sector. In terms of their representation in parliament, women held only 11.7% of the seats and formed about 25% of the government workforce in 2008. Many of the women in government earn low wages, as they generally hold low paying jobs. In terms of human rights, excessive poverty has many Burkinabe living deplorable lives with no access to basic human rights. Child labor, child trafficking, violence, and discrimination against women and children are quite rampant in the country. People have also been arrested without charge or trial. Excessive force is often used against civilians with official impunity.

# BURUNDIANS

**PRONUNCIATION:** buh-ROON-dee-uhns

**LOCATION:** Burundi

**POPULATION:** 8.7 million

**LANGUAGE:** Kirundi, French, Swahili

**RELIGION:** Christianity, indigenous beliefs

**RELATED ARTICLES:** Vol. 1: Hutu; Tutsi

## <sup>1</sup> INTRODUCTION

Rwanda and Burundi are two African countries whose borders were not arbitrary creations of 19th-century European powers. Both had centuries-old kingdoms before European rule. However, colonial rule did bring separate and competing kingdoms under a central government. Formerly the Tutsi *mwami* (king) occupied the apex of rulership, followed by the princely class. A lower stratum consisted of Tutsi and Hutu masses where much intermarriage occurred. Hutu serfs, obligated to work for the Tutsi elite, were the lowest social class. As of the early 2000s, the Hutu comprised 85% of the population, the Tutsi 14%, and the Twa, a pygmoid group, 1%.

German rule began in 1899, but the victors of World War I gave the colony to the Belgians under a League of Nations mandate in 1916. The Belgians reinforced growing Tutsi political and economic domination by ruling indirectly through them. Since independence in 1962, Hutus have rebelled against exploitation. The Tutsi elite have strongly resisted change in the balance of power. The resulting cleavage has created recurring ethnic violence on a horrendous scale.

Since 1962, some 300,000 Burundians, mostly Hutus, have been killed and nearly a million more displaced. Massacres of thousands of people occurred in April 1972, August 1988, January 1992, and in late 1993. Presidents and prime ministers have come and gone, as if by a revolving door. Though Ndadaye, a Hutu, was elected democratically in June 1993, he was overthrown in an army coup and killed along with several prominent Hutu officials and politicians in October 1993. In 1994 the death of his successor (along with Rwanda's president) in a mysterious airplane crash over Rwanda unleashed renewed fighting that lasted for 12 years.

In late 2000, the Arusha Peace and Reconciliation Agreement, brokered by Nelson Mandela, ushered in a transitional period of power-sharing between Tutsis and Hutus that culminated in free and fair elections in 2005. A new constitution was also adopted that year, and in 2006 the majority Hutu government (under President Pierre Nkurunziza) concluded a cease-fire with a Hutu liberation force, which ended major fighting. In the meantime some 25,000 combatants and child soldiers were demobilized, disarmed, and reintegrated into Burundian society.

Burundi still faces many challenges, not the least of which is to make its unique ethnically-balanced bicameral Parliament consisting of a National Assembly and a Senate work for peace. In the 100+ seat Parliament, 60% of the seats are reserved for Hutus and 40% for Tutsis (with at least 30% being women overall). A National Independent Electoral Commission appoints additional seats to ensure ethnic representation. In the 54-seat Senate, 34 members are elected by indirect vote with the re-

maining seats assigned to ethnic groups and former chiefs of state, all of whom serve five-year terms.

## 2 LOCATION AND HOMELAND

Burundi is somewhat larger than Maryland, but has 8.7 million people (estimate 2008), making it one of Africa's most densely populated countries. Rwanda borders Burundi to the north, the Democratic Republic of the Congo (former Zaire) to the west, and Tanzania to the south and east. Lake Tanganyika and the Ruzizi river on the floor of the Western Rift valley form a stunningly beautiful natural border with the Congo. A breathtaking escarpment towers over the Ruzizi to the west.

Most of Burundi is high plateau of 1,400–1,800 m (4,600–5,900 ft). A range to the east rises to above 1,800 m. In the uplands, temperatures are mild with an occasional frost. The average temperature in the valley is near 27°C (80°F). Most of the population is concentrated on the fertile soils at 1,500–1,800 m (4,900–5,900 ft), which increases competition for scarce lands. The Twa are thought to be the first to inhabit the area. Hutus arrived between the 7th and 14th centuries, while the Tutsi migrated to the region beginning in the 15th century. A few thousand Europeans, Indians, and Pakistanis live in the capital of Bujumbura. The kingdoms of Urundi and Ruanda historically had been adversarial, and their successor republics remain rivals.

## 3 LANGUAGE

Two official languages are spoken in Burundi—Kirundi and French. Many Burundians along the western shore and in Bujumbura also speak the East African trade language of Swahili. A traditional greeting in Kirundi is *Amashyo* (May you have herds [of cattle]). The reply is *Amashongore*, meaning, “I wish you herds of females.” The language is full of references to the virtues of cattle and wishing one herds is metaphoric for health and good fortune.

## 4 FOLKLORE

Folklore is expressed through music, dance, and storytelling. Literature, for example, is passed down to younger generations in spoken forms of poetry, fables, legends, riddles, and proverbs. Many epic poems concern peasants, kings, ancestors, and cattle. In telling these tales, a skilled narrator transforms ordinary Kirundi into very poetic forms. “Whispered singing” transcends simple spoken and musical renditions. Men sing quietly along with the traditional instruments, *inanga*, a zither-like instrument, and *idono*, which resembles a stringed hunting bow (see **Cultural heritage and Folk art, crafts, and hobbies**).

## 5 RELIGION

Most Burundians profess Christianity, with 62% subscribing to the Roman Catholic faith, and 5% to Protestant faiths. Less than 10% of the population is Muslim. Those holding indigenous beliefs account for 28% of the population, though aspects of African traditional religion overlay the non-indigenous faiths. Former Pope John Paul II visited Burundi in September 1990 to support the constitutional transition.

## 6 MAJOR HOLIDAYS

The national holiday of Burundi is Independence Day, July 1 (1962). Hard times have dampened enthusiasm for lavish celebrations. Moreover, Burundi's endemic coups have rendered political holidays meaningless.

Being a predominantly Roman Catholic country, Burundians celebrate the Christian holidays including the Assumption, the Ascension, All Saints' Day, and Christmas. Beginning in 2005, the government also recognized the Islamic holy days of Eid al-Fitr (end of Ramadan), and Eid al-Adha (end of Hadj). On the traditional holiday calendar, *umuco* (or *akaranga*) used to be an occasion for traditional gamesmanship. Men would compete in archery and spear-throwing competitions. Soccer and other imported sports replaced these after the arrival of the Europeans. However, Burundians still enjoy dancing, drinking, and feasting on traditional foods on this day.

Of all the holidays, the most celebrated is Christmas. Christmas is an occasion for buying new clothes and wearing them to church. Women and children especially look forward to showing off their latest acquisitions. After church, people return home to spend the day with family and friends, enjoying a good meal and beer.

## 7 RITES OF PASSAGE

As in much of Africa, rites of passage are important markers in the life cycle. Six days after birth, babies are presented to the family in the *ujusohor* ceremony. The mother receives flowers for her hair and gifts of money and beer are customary. Christian parents and their families generally baptize their children one month after birth. After the child begins to toddle, it receives a name in the *kuvamukiriri* ceremony. The paternal grandfather gives the child a proper name, a clan name, nicknames, and if not already baptized, the child receives baptism if the parents so choose. From an early age to adolescence, children learn family and community values and are expected to assume responsibility in their teenage years. As a result, Burundian children show a maturity rare in American children of the same age.

Initiation rites were once extremely important in Burundian society. Today few Burundian children are initiated, although most of their grandparents were. European missionaries taught that the practice was heathen and pagan and all but eradicated it. The Roman Catholic Church has replaced the initiation rite with the Christian rite of First Communion where groups of children follow a lengthy period of religious instruction that culminates in their induction into the church as adults.

## 8 INTERPERSONAL RELATIONS

Burundians generally are gregarious people and visit each other without announcing it ahead of time. Typically, they greet each other by shaking hands with the right hand. Among friends of the opposite sex, it is acceptable to greet by touching cheeks three times. Friends of the same sex also may greet this way and may offer each other a firm hug, grasping each other's shoulders. In former times, it was common for someone of lesser status to shake hands with a person of higher status by holding his or her right arm with the left hand while shaking hands. This was to show respect for social status. This custom is dying out with the disappearance of servitude.

People have a set of gestures for pointing and calling people that is particular to Central Africa. They point to someone by

holding the arm out with the palm open and upward. Pointing at someone with one's index finger is very rude. Similarly, calling someone to come near is done by extending the arm with the palm turned down and bringing the fingers toward oneself. People, especially women, may give directions by pointing with lips pursed and the face extending toward the direction indicated.

Burundians have proper ways of giving and receiving things. Children learn to offer both hands when receiving an object, especially from an adult. This is a sign of respect and good upbringing.

## 9 LIVING CONDITIONS

After 12 years of civil war (1994–2006), living conditions are showing improvement. Nevertheless by African and world standards, life is extremely difficult for the average person. On the Human Development Index (HDI), which measures chances for good health and longevity, educational opportunities, and decent standard of living, Burundi ranked 167 out of 177 countries worldwide in 2007/08. Twenty-one percent of the population does not have access to clean water; 45% of children aged 0–5 were underweight (2002); 68% of the population lived below the poverty line (2002); and there is a 38% chance of not living past the age of 40. A high population growth rate (3.4% est. 2008) placed additional stress on job creation and basic services.

Bujumbura, the capital, formerly was a jewel-like town on the northeastern tip of Lake Tanganyika. However, like other

towns, its infrastructure deteriorated during the war, leaving many without water, electric, and sanitation systems. Many rural houses are mud brick with thatch or tin roofs. Traditional huts formerly were made from reeds and canes. Some are cylindrical in shape, and mud walls may be whitewashed. In towns, concrete hollow block houses with galvanized iron or clay tile roofs are common. Burundi has many good masons and carpenters, but they tend to be under-paid and under-employed.

About 93% of Burundi's roads are unpaved. Some villages are reached only after hours of bouncing over dirt roads, which are prone to flooding and washing out. Bicycles and motor scooters provide human transportation and carry heavy loads of produce, such as bananas. The Catholic Church often supplies outlying areas with consumable goods through member cooperatives.

## 10 FAMILY LIFE

In Burundian society, the man of the household holds the authority. Women do the housework, raise the children, fetch water, collect firewood, cook the meals, and wash the clothes. They also tend gardens of cassava and sweet potatoes and raise produce for sale at the weekly market. A Kirundi expression says that women are revered for their childbearing and, as such, also make good planters. The girls help with domestic chores and with tending their younger siblings.

Some men have more than one wife, but polygamy is disappearing in modern Burundian life. Christianity and economics have changed attitudes about matrimony. The church strongly discourages polygamous behavior through sanctions and peer pressure. Weddings, bride prices, and wife maintenance are costly. Moreover, land pressures and the costs of educating children have led to smaller families. About 9% of women take modern contraceptives, and most practice traditional methods of family planning.

Correcting children in Burundi is not only the responsibility of parents, but also that of the extended family, friends, and acquaintances. If they do not correct bad behavior, they may be accused of shirking their communal duty.

Burundians rarely keep pets, but their cattle are prized possessions and occupy much of their time. Boys, for example, are often given the responsibility for tending the family's cows and goats. Because cattle give status, wealth, and security, buying a cow puts money in the bank. Some wealthy elites have accumulated as many as 2,000 head.

## 11 CLOTHING

Burundian traditional apparel consists of cloth wraparounds (*pagnes*), which women, girls, and elderly men still wear in the rural areas. The male pastoralists wear two pieces of cloth tied on opposite shoulders with a cord tied around the waist. The shoulders are bare and the cloth reaches the knees. Women wear shirts or blouses, *pagnes*, and scarves over their heads. In cool weather, they wear sweaters over their blouses. When women go out in public they wear a dress with a *pagne* over the top tied around the shoulder and one tied around the waist. Many people go barefoot in the village. Older women might wear a large colorful piece of cloth tied in front, which reaches the feet.

People place great importance on looking their best. Even on low budgets, they keep their clothing washed and pressed. If they wear shoes, they must be shined. Bujumbura at night

or on Sundays has a cosmopolitan feel. Men and women who take great pride in their appearance, known as *sapeurs*, wear the latest fashions with great flair. The men dress up in suits and ties and the women in Western dresses and pumps. Young people are fond of stonewashed jeans and T-shirts.

## 12 FOOD

The staple foods in Burundi are tubers, plantains (*matoke*), and beans. Burundians are most fond of sweet potatoes and cassava served with different types of beans, greens, and cabbage. They also enjoy cassava pounded into flour, boiled in water, and stirred until it produces a thick paste (*ugali*). *Ugali* is sometimes made from maize. Burundians enjoy fresh, dried, and smoked fish from Lake Tanganyika and from rivers such as the Ruzizi.

People occasionally eat meat, though given their reverence for cattle, it should not be their own animal and not a cow. It is taboo to heat or boil milk because that might interfere with their cows' milk production. People also are not supposed to drink milk on the same day that peas or peanuts are eaten. Cattle and people live so close together that the health and fertility of the animals are thought to reflect on that of their owners.

Villagers typically rise early and forego breakfast. They return for a large noonday meal. At night they may eat leftovers or have tea, but tea requires extra cash. Children eat porridge and drink milk in the morning. In the cities, French bread is very popular, and European beverages such as coffee and tea have become common fare.

Burundians produce their own traditional drinks, including banana beer (*urwarwa*) and sorghum beer. Although they are fond of these in the villages, in Bujumbura Primus German-style beer is favored. Anytime someone has extra money, they invite their friends to go out to a streetside or neighborhood bar (*buvette*) for a round. Thus, if you are invited, you do not pay for even one round of drinks, but when you invite, you pay all the rounds until your pockets are empty.

## 13 EDUCATION

Burundians place a high importance on formal schooling, although informal home schooling begins when a child first understands right from wrong. Until 1954, church missions ran all the primary schools, and some of the best schools still are faith-based. The University of Burundi in Bujumbura founded in the 1960s is the only institution of higher learning.

A typical school day begins as early as 7:00 a.m. and finishes at 1:00 p.m. In some cases overcrowding has forced schools to hold two sessions a day, even in the evenings, so that more pupils can be accommodated. Because of the war, however, enrollment rates declined over at least a ten-year period. In 2004, the combined primary, secondary, and tertiary school enrollment was 38% those eligible, with only 83% as many girls as boys enrolled. Most children dropped out of school after reaching grade five. The literacy rate in 2004 was 41% and only 78% as many girls as boys (older than 15) could read and write. In 2005 President Nkurunziza made primary schooling free, and efforts were underway to equalize educational opportunities between Tutsi and Hutu and between the traditionally neglected north and the south, where two-thirds of the schools are located.

## 14 CULTURAL HERITAGE

Burundi maintains its rich cultural heritage based in part upon its past royal families. An example of how people perpetuate tradition in new forms is seen in the "tambourinaires," a folkloric drumming and dance troupe of Gishora, in Gitega province east of Bujumbura. In the past, the king initiated a group of boys from select families whose privilege it was to beat sacred drums. The drums could only be played under specific conditions, mainly for ceremonial purposes.

Today, the drums have become a popular attraction as an incarnation of this sacred heritage. As many as 25 men of all ages play huge drums carved from tree trunks, about three feet tall. They beat the drums with two sticks about 18 inches long. Even boys play. They wear red and white cloths tied in the traditional way, one over each shoulder with a cord around the waist. Dancing is very athletic. It consists of leaping high into the air and spinning around. They tell legends and folktales during the performance. Some dancers use wooden shields and spears and wear headbands and armbands of beads.

Burundians make several traditional instruments that they play during family get togethers (see **Folk Art, Crafts, and Hobbies**).

## 15 WORK

The vast majority of people (93%) work in subsistence agriculture and cattle herding. Subsisting means they produce staple crops such as sweet potatoes, bananas, corn, sorghum and manioc on small plots for their own consumption. A small percentage of the population grows coffee, cotton, and tea or works on larger plantations. The government employs 4% of the population in the civil service. Industry and commerce account for 1.5%, and services account for 1.5%. Those who fall between occupational cracks earn their living in whatever way possible. Some, for example, repair anything from watches to shoes. They set up their repair stands on sidewalks and take them down at the end of the day. Unfortunately, these jobs pay as little as \$1.50 per day, which is not enough for a living wage. Because of underemployment, about 85% of the rural population and 55% of town folk live below the absolute poverty level.

## 16 SPORTS

Burundians are soccer fanatics. Soccer is played wherever space permits and where people have the leisure time to do it. Any kind of ball suffices, and makeshift goals mark parking lots, fields, streets, and any relatively horizontal surface. Schools have introduced other sports, such as basketball, volleyball, and European handball. In villages, the churchyard and adjacent school usually serve as a meeting place for school and community sports. Burundians love their national team, The Swallows, but the team continues to disappoint as it has never reached the World Cup or African Nations' Cup finals.

## 17 ENTERTAINMENT AND RECREATION

Entertainment and recreation are far more modest pursuits in Burundi than in Western countries. Socializing at home or sharing a beer and a meal with friends often passes for entertainment. Most people own portable radios and tune into their favorite FM stations for news, music, and radio dramas. Where electricity is available, people enjoy watching television. How-

*In Burundian society, women are revered for their childbearing and girls help with domestic chores and with tending their younger siblings. (Cynthia Bassett)*

ever, only a small percentage have satellite dishes (which are expensive) and the rest tune into the government station, Burundi's only TV outlet. On weekends, programming generally includes soccer matches. Television is increasingly available in rural areas thanks to solar power. But if one has a large herd to care for, watching the cows may be entertainment enough.

Bujumburans really enjoy nightlife and are fond of a variety of popular music. They dance to all kinds of music—Congolese, Malinke, Zuluka, American, rap, reggae, funk, and other styles. The Internet is gaining popularity. In 2006 it was estimated that some 60,000 people got information, news, and entertainment from this source.

### **18 FOLK ART, CRAFTS, AND HOBBIES**

Burundians produce many crafts of excellent quality. Among the best of these are mats and baskets serving many different purposes. Papyrus roots, banana leaves, and bast (a strong woody fiber) are the raw materials for the baskets. Historically, a well-made basket was a symbol of status, not for sale, although baskets were traded occasionally for cows. Nowadays, skilled women are paid to teach young women the trade. The Twa people are skilled in making pots for their own use and for the tourist market. Wood carving has a long tradition and carvers produce highly intricate bas-relief drums and mortars for the tourist market. While drums formerly were part of religious ceremonies and provided music for social occasions, they now are produced as works of art for sale.

Burundian craftsmen make fine instruments such as the thumb piano (*ikembe*). The *ikembe* has 11 metal bands and the sounding box may have designs burned into the top for decoration. The *indingiti* is a traditional banjo or violin with a single string played with a bow. The *inanga* is an eight-stringed instrument with a large sounding board, played on its side. The musician plays it by crouching behind the instrument and plucking the strings like a harp. The *umuduri* is a musical bow with one string with three calabashes attached to the bow for amplification. Musicians use two sticks with a small calabash on the end to stroke the string.

### **19 SOCIAL PROBLEMS**

Burundi faces several serious environmental and health threats, among them HIV/AIDS, which nationally runs at about 6% of the population. Infection rates are highest in urban areas. Other issues include poverty, school drop-out rates, weak rule of law, public corruption, large refugee populations (31,000 in 2007), and human trafficking. The minority Batwa people are deprived of land, although the government has instituted programs to provide them with free school books, health care, and two acres of land.

The most urgent matter is to find and develop lasting peace between the Hutu and Tutsi. The recent civil war resulted in more than 200,000 deaths, forced more than 48,000 refugees into neighboring Tanzania, and displaced 140,000 people internally. Some 3,000 children were pressed into combat by the

various armed groups. Burundians must continue to redress political imbalance, skewed land ownership, and the disparity in economic wealth between these two ethnic groups. Land pressure, population growth, and a deteriorating environment make conflict resolution even more urgent.

## 20 GENDER ISSUES

Gender presents a mixed picture in Burundi. On the one hand, women face legal and societal discrimination in inheritance laws, property rights, access to credit, jobs, and equal pay for equal work. Traditional practice encourages wife-beating, and it is culturally taboo to discuss it in public. A survey conducted in 2007 indicated that as many as one-third of women in Bujumbura were beaten at home. As a form of terror during the war, rape was widespread. Although it is illegal, prostitution is widely practiced. Many fewer girls attend and complete school than boys. Thus, to be growing up female in Burundi carries with it many serious challenges.

On the other hand, a strong women's voice is emerging for the first time in Burundi. This is exemplified by Marguerite Barankitse, who has given refuge to more than 10,000 orphan children. She affectionately refers to these children—who come from all three ethnicities—as Hutsitwa (a combination of Hutu, Tutsi, and Batwa). Burundian women gained world attention in 2000 when they utilized the Arusha Peace process as a popular public forum to advocate for their interests and rights. Although they fell short in achieving all their goals (for example, the UN refused to declare sex crimes as “crimes against humanity”), they nonetheless won more than 30% of the seats in Parliament in 2005. Women also occupy 17 of 54 Senate seats; the vice president of the republic and president of the Parliament are women. Some 400–500 women's self-help groups now participate in rotating credit schemes, lobby the Parliament to change laws, and help solve women's problems.

# CAMEROONIANS

**PRONUNCIATION:** kam-uh-ROON-ee-uhns

**LOCATION:** Cameroon

**POPULATION:** 18.5 million

**LANGUAGE:** English, French, 24 African languages

**RELIGION:** Islam, Christianity, indigenous beliefs

**RELATED ARTICLES:** Vol. 1: Fulani

## 1 INTRODUCTION

Cameroon's present borders tell the history of European great powers' competition and the results on the battlefields of World War I. What began as a German colony in 1885 was surrendered to the British and French in 1916. These colonizers partitioned the country in 1919 and obtained protectorship of their respective portions from the League of Nations in 1922. Protectorate status changed to official trusteeships in 1946 by the vote of the United Nations. The British administered West Cameroon as part of Nigeria, while the French made East Cameroon part of French Equatorial Africa (along with Chad, Gabon, and Congo).

In 1955 Cameroonian insurgency movements led to internal self-governance, which became full independence in 1960. The UN-sponsored plebiscite in 1961 resulted in northern British Cameroon voting to become part of Nigeria, while southern British Cameroon joined with East Cameroon in a bilingual federal republic. Cameroon's first president, Ahmadou Ahidjo, declared a one-party state in 1966. In 1972 a unitary constitution and a strong presidential government replaced the Federal Republic, and the country's name became United Republic of Cameroon. In 1982, Ahidjo handed power over to his prime minister, Paul Biya. Biya dropped “United” from the country's name in 1983. He remains in power despite allegations that his party rigged the multiparty elections of 1992, and that in the presidential elections of 2004 his party erected substantial barriers to registering voters and allowed fraudulent balloting.

## 2 LOCATION AND HOMELAND

Larger than California, Cameroon is one of Africa's most diverse countries, physically and culturally. Its crossroads location at the lobe of West Africa earned it the nickname, “the hinge of Africa.” When Portuguese explorers first went up the Wouri River in 1472, they found the estuary teeming with shrimp. The *Rio dos Camaroes* (River of Shrimp) as they named it, became “Cameroon.” From Lake Chad at 13°n latitude, Cameroon extends southward to 2°N of the equator. Cameroon borders Nigeria to the west and north, Chad and the Central African Republic to the east, and Equatorial Guinea, Gabon, and Congo to the south.

The climate varies markedly with the latitude and the terrain, from humidly tropical along the coastal plain, to cool in the mountainous west, to semi-arid and hot on the flat and sometimes rolling northern savannah. The vegetation also changes from tropical rain forest in the southwest to semi-desert in the northern reaches. Buttes, inselbergs, and ancient volcanic cores offer picturesque landscapes in the north. To the west lies a long line of rounded mountains of volcanic origin. Mt. Cameroon, an extinct volcano, is the highest point in West Africa at 13,500 ft.

Cameroon's 18.5 million people come from seven major ethnic groups, primarily Fang, Bamiléké, Bamum, Duala, Luanda, Basa, Fulani. However, by some counts, as many as 200 ethnic groups exist within Cameroon's borders. One way of thinking about an ethnic group is to see it as the most extended level of the family. People of the same group usually have origins, history, homeland, language, customs, and name in common. Africans most anywhere identify with their "home" villages, though they may never have lived there.

Since independence, Cameroon has experienced a great rural exodus to the cities. Currently more than 30% of the population is urban. The population is densely concentrated in the south, near the port city of Douala, and in the north-west province around Bamenda. The north, which is primarily land for grazing and cotton production, is sparsely populated. Like most African countries, Cameroon is a country of youth, where 41% of the population is younger than 15 years old.

### 3 LANGUAGE

Cameroonians speak some 24 African languages. In the north, people speak Saharan and Chadic languages, and Bantu languages are spoken in the south. Cameroon is unique in that it has adopted both English and French as its official languages. Though French is dominant and a movement to make French the only official language is alive, northwest and southwest provinces hold tenaciously to English and are unlikely to give in without a major fight.

### 4 FOLKLORE

Cameroonian folklore consists of many intriguing myths and legends from the diverse cultural groups. However, one example from Bamoun recalls how traditional society once treated twins. In former times when a woman gave birth to twins, she presented them directly to the Sultan. A chicken was sacrificed to safeguard them and to ensure their good behavior. The mother then returned home with them and fed them meat. It is said that Bamoun twins have an extraordinary capacity for chewing meat even before teething. At age five, they returned to the palace to stay. The Sultan raised them as his own children, giving them a good education. As they grew older, the Sultan consulted them as his advisors on important decisions. Today, twins still are called *Nji* (chief), but the Sultan no longer raises them and their former power has diminished greatly.

One of Cameroon's foremost heroes of near mythical status is Douala Manga Bell. The people living near Douala chose him to protect their property from German colonizers. The Germans were attempting to expropriate the city of Douala and its surrounding lands, an explicit violation of an 1884 treaty. The Germans responded to organized resistance with armed force and arbitrary arrests. Finally, they captured Douala Manga Bell and tried him for high treason. They condemned him and a companion to death by hanging in 1914. Douala Manga Bell thus became a martyr-king. Cameroonians remember his heroics and the bravery of his companions in songs and theatrical performances, passed down from generation to generation.

### 5 RELIGION

Cameroon is evenly divided between Christians and Muslims each accounting for about 40% of the population. Whereas Christians predominate in the south, Muslims comprise the majority of the population in the north (roughly north of Garoua). As elsewhere in Africa, many people combine aspects of traditional African religion and animist beliefs with their Christian and Muslim faiths. One example of this overlay involves healing. A *marabout* (teacher and diviner) may advise a sick person to write texts from the holy Quran on a prayer board. The patient then prays by reciting the texts. Next, he dilutes the ink from the board and drinks it, in effect, ingesting the holy words.

If Cameroonians are divided by regional differences and language, there is much harmony and little religious strife amongst people of different faiths. Indeed, communal celebration of Muslim and Christian holidays has resulted in much crossing over from one faith to the other (see **Major Holidays**).

### 6 MAJOR HOLIDAYS

Holidays elicit various forms and degrees of celebration, mainly depending on one's region and religious faith. For example, May 20 (National Day), which commemorates the change from a federal to a unitary government in 1972, inspires much greater celebration from Francophones than from Anglophones. The residents of the western provinces increasingly see this holiday as a reminder of the power they gave away to the French-speaking majority when their regional assembly was abolished. The inverse is true of Youth Day, which Anglophones (especially before unification) celebrated for three days. The championship finals for soccer and track and field events highlighted this holiday, formerly called "Empire Day."

*Typical housing in Cameroon. In the villages, most homes are made of mud and thatch, but these gradually are being replaced by concrete hollow block and galvanized iron roofing. Migration and squatting are common near the cities, resulting in shantytowns where people live without basic conveniences. (AP Images)*

Similarly, traditions vary for Christmas and New Year's. The Francophones hold great celebrations for New Year's Day, while Christmas for the Anglophones means pageantry, feasting, and best behavior. On Christmas Eve and Christmas Day, for example, people wear new clothes and go to church. Children put on costumed reenactments of Christ's birth and give poetry recitals. They are judged and the winners perform later at the chief's palace. Near Wum, people form large groups and go from village to village eating, drinking, dancing, and socializing. The feasting is so joyous that Muslims join in the celebrations and go to church. Likewise, for the Ramadan feast, Muslims invite their Christian friends to help them celebrate their main religious holiday.

## 7 RITES OF PASSAGE

Traditional rites of passage are losing the significance they once had in Cameroonian society, especially where communities westernize or Western schooling is becoming dominant. Formerly, circumcision was one of the most important rites. It represented the shedding of youth and embracing of man- or womanhood. The transition occurred swiftly within the time frame of the initiation, which lasted from a few weeks to a few months. Upon completion of the rite, a "new" man would build a home, marry, and start a family. A "new" woman would no longer play as a girl, but she would assume the responsibilities of wife and mother.

Nowadays, Christian beliefs, especially from the Protestant faith, are replacing traditional ways. The strict application of Protestant catechism may not distinguish between the cultural and religious forms of initiation. Dancing with masks, for example, may be mistaken for idolatry. Schooling also interrupts the initiation schedules. Consequently, baptisms, First Communion, and weddings may outshine initiation, even though church ceremonies do not entirely replace traditional ways of celebrating passage.

## 8 INTERPERSONAL RELATIONS

The language of greeting depends on the region, but in French one typically says, *Bonjour, comment ça va?* (Hello, how are you?), and in Pidgin English one says "How na?" People shake hands and some kiss on the cheek according to the French custom, especially younger people in urban areas. People call someone by extending their arms, palm facing down, and bringing the fingers in and out. Pointing is rude, as is crossing legs at the knees or in the presence of someone with higher authority. The right hand is used to pass or accept objects.

Dating between couples is more commonly seen in the capital and big cities, and marriages are still arranged by family and relatives throughout the country. Visitors appear frequently and unannounced, and relatives commonly stay and are fed for lengthy periods.

Two teenage boys standing beside their homemade bikes in Cameroon. (David Johnson)

## **9 LIVING CONDITIONS**

Despite favorable agricultural conditions and offshore oil, Cameroon ranks 144th out of 177 countries in terms of human development. Cameroonians face many of the same challenges as other Africans. Almost 7 children out of 100 do not live until their first birthday. Life expectancy at birth is 53.3 years. Unsanitary practices make waterborne diseases such as diarrhea, dysentery, and parasites very common. Rural health is improving as fewer village women and young people haul water from streams and springs. Instead, thanks to newly developed sealed wells, they can pump water by a foot pedal. In the villages, most homes are still made of mud and thatch, but these gradually are being replaced by concrete hollow block and galvanized iron roofing. In the capital and other cities, electrical power reaches many neighborhoods. Still, migration and squatting are common, resulting in shantytowns where people go without basic conveniences. Bathing and washing clothes in local streams are common.

Most of the main national roads are paved, two-lane highways. An incomplete stretch from east of Yaoundé to Ngaoundéré in the northeast is easily traversed by train. Good train service is also available from Yaoundé to the port of Douala. However, once off the main roads, the terrain can be rugged and some roads are blocked in the rainy season. Most people still travel by taxi bus and bush taxis, which are usually crowded and packed high on top with plastic water containers, sacks of charcoal, and chickens.

## **10 FAMILY LIFE**

Cameroonians typically have large families with at least six children. Families are larger if the head of household has more than one wife. Grandparents and great grandparents generally live in the same compound as their offspring. The elderly command great respect and influence decisions, but the male family head usually leads in important matters. Women shoulder much of the work, tending fields, gathering firewood, and hauling water besides taking care of the children and doing the housework. One practical reason why families are large is that children help at a very early age. As soon as they are old enough, they tend fields with their mothers and siblings. It is common to see a four-year-old girl carrying a baby brother or sister on her back or doing chores around the house.

## **11 CLOTHING**

Traditional dress is found mostly in villages. In the north, Muslim men wear boubous, which are cotton pants over which a waist-, knee- or ankle-length robe is worn. Boubous typically are white, but also are made of other colors. Women wear multicolored flowing robes and cover their heads in public. Although women wear *pagnes* (sarongs) in the north, they are more popular in the south. The *pagne* is multipurpose. Not only does it serve as a wraparound skirt, but a second piece can be used to hold a baby to one's back, provide shade for the head, or give warmth on chilly mornings. A turban, usually from the same fabric, covers the head. Cameroon's high-quality

ity cotton makes excellent cloth of traditional African patterns and designs.

In the towns, people wear these clothes too, but are also likely to wear Western pants and shirts. The younger generation wears jeans and T-shirts. Women typically wear blouses over their sarongs. As in many African countries, market traders also sell used clothing from Europe and the United States, which has been shipped by the bale. Children are likely to wear these as everyday clothes.

## 12 FOOD

The staples are corn, millet, cassava, groundnuts, plantains, and yams. These are made into *fufu*, a stiff paste, which is rolled into small balls and dipped into stews. A favorite is *Jamma Jamma*, spicy greens, served at the large noon meal. Women and the younger children typically eat together near the cooking fire. People eat out of communal bowls with their right hands, taking care to wash their hands before eating. In the cities or among the more “modernized” Cameroonians, people eat with kitchen utensils much like in the United States. Breakfast for the urbanite might include locally grown coffee, cocoa, or tea with milk and lots of sugar, and some freshly baked hot French bread.

Fruit abounds in Cameroon. Because of seasonal climate variation, one finds oranges, grapefruit, limes, bananas, pineapples, and coconuts in abundance. Common beverages include coffee, tea, palm wine, soft drinks, and beer, all of which are produced locally. Cameroonians love beer as evidenced by the number of breweries, the many brands, and the important role that beer plays in social encounters, parties, ceremonies and feasts.

## 13 EDUCATION

In Cameroon, education is bilingual, provided by government, missionary, and private schools. At state schools, education is free of charge. The government subsidizes other schools. Primary school begins at six years of age. Children begin high school at the age of 12 or 13, and continue until 19 or 20. High school has two cycles, which vary from the Anglophone to the Francophone region. In 2005 the combined primary, secondary, and tertiary enrollments were 62%, a fairly high ratio for Africa. Similarly, more than two-thirds of adults were literate. The government has established five regional campuses of the University of Yaoundé, each with a different area of specialization. Approximately one of three adults cannot read or write.

## 14 CULTURAL HERITAGE

The current popularity of Cameroonian modern written literature, film, and *makossa* and *bikutsi* music owes its success to an extremely rich and diverse cultural past. In 1974 the Cameroon government decided to protect this heritage by organizing a national culture festival. For Cameroonians, traditional culture expresses beliefs and tells stories about the physical and supernatural worlds. Therefore, it is impossible completely to separate culture, religion, and art from each other.

In traditional society, people still perform ancient rites with music, dance, masks, and statuettes. Among the Mouktélé in the north, music and dance are closely linked to farming and growing cycles. Young women play flutes (*madij*) when the millet sprouts from the earth. As harvest approaches in October, they are joined by young people playing bark flutes (*talok-*

*wai*). Others stamp rhythmic beats on the earth with their feet. The neighboring Toupouri dance to tam tams, cover their bodies with butter, and apply a red mineral powder to their chests.

The Bamoun of Foumban play dirge music at night to accuse a person of a serious crime. Fortunately, this gruesome procedure occurs rarely. With lifeless voices, singers march deliberately, hitting iron bells, and tapping on buffalo-skin bags. Fang musicians and storytellers dance and play the *mvvet*, a harp-sitar that uses calabashes as acoustical amplifiers. They tell fables and legends, and narrate heroic events. The Pygmies all sing, improvising many parts and hitting sticks together to celebrate after a successful hunt (see **Folk art, crafts, and hobbies**).

## 15 WORK

Most Cameroonians (70%) work in agriculture as subsistence farmers, herders, and plantation workers. The remaining 30% are divided fairly equally between services (17%) and industry (13%). Like much of Africa, formal jobs with regular salaries and benefits in Cameroon are scarce, and tend to be in the public sector. With an unemployment rate of about 30%, most Cameroonians in the service sector make their livings doing informal jobs such as peddling goods on the street, tending market stalls, or providing the odd service. For example, one 70-year-old Cameroonian woman, Noubissi, is a traditional healer. Her profession is semi-formal in that it is protected by a Cameroonian labor union. She casts out evil spirits while burning herbs that she uses to treat her patients. She specializes in gynecology, pediatrics, female sterility, birthing, and infant health. She only prescribes natural medicines made from herbs that she herself gathers in the forest. Her unfading clientele suggests her efficacy. When asked how she cures people she answers, “Only God knows. He guides my hands.”

## 16 SPORTS

Cameroonians are soccer fanatics, and rightly so. Cameroon’s national team, “The Lions,” qualified for the 1982, 1990, 1994, 1998 and 2002 World Cups, and went to the 1990 World Cup quarterfinals. In the 2008 Africa’s Cup of Nations, Cameroon was defeated by Egypt in the championship match. Young men and boys play soccer with any kind of ball on nearly any kind of field, giving Cameroonians a constant source of entertainment. In 2008 Cameroon and China signed agreements to construct multi-million dollar soccer stadiums, Olympic-sized swimming pools and other world-class sports infrastructure in Doula, Yaoundé, Bafoussam, and Limbe. Other popular sports include basketball, tennis, and handball. Some men are fond of chess and checkers.

## 17 ENTERTAINMENT AND RECREATION

Socializing at baptisms, weddings, and parties or going out to night spots where music is played and people dance often passes as entertainment; and at these venues Cameroonian *makossa* music defines much of the popular culture. People play it everywhere: on their transistor radios, at truck stops and taxi stands, in pubs and restaurants, and in nightclubs. Musicians such as Manu Dibango and Sam Fan Thomas became international celebrities. A blind Bamiléké singer, André-Marie Tala, nicknamed Ray Charles, topped the charts in the 1970s. The music is hard-hitting with a tight, fast-paced rhythm that has spawned a number of rivals among them the extremely popu-

lar *bikutsi*. *Bikutsi* comes from the Beti people around Yaoundé and means “to beat the earth.” It is danced at parties, weddings and funerals and has generated controversy for the sexual content of its lyrics and suggestive dancing styles. Current top artists are Patou Bass and Ovasho Bens.

Cameroonian television consists of the government station, which has limited broadcast hours. However, with the coming of satellite dishes, Cameroonian audiences increasingly tune into world culture beamed from outer space.

### 18 FOLK ART, CRAFTS, AND HOBBIES

Cameroonian art is rich and meaningful. Through art, people tell their history, or express their beliefs about nature, procreation, leadership, divinity, and the afterlife. Artists use their natural materials to sculpt, carve, shape, and fashion objects to help them express their understanding of the world to younger generations. Art objects include “elephant” masks; wooden, bronze, and bead-covered statuettes; carved pillars and bed posts; woven baskets; and pottery. The *Tso* dancers of the Kuosi (one Bamiléké community) wear fabulous, intricately beaded elephant masks when a chief or an important dignitary dies. Statuettes with fat cheeks symbolize good eating, while protruding bellies represent fecundity.

Many other crafts have cultural, practical, or monetary value. Craftspeople fashion tam tams and various kinds of flutes. Contemporary artists copy ancient forms and sell their art to tourists who come to visit Cameroon for its cultural heritage, natural beauty, and national parks.

### 19 SOCIAL PROBLEMS

Cameroon’s social problems—unemployment, crime, government corruption, human trafficking, forced child labor and money laundering—are in part due to a stalled political transition from authoritarian one-party rule to multiparty democracy. Newspapers regularly carry stories alleging civil rights abuses, beatings, and even fatalities related to government crackdowns on public protests, demonstrations and strikes. Some of the violence stems from the rivalry between the Anglophone west and the Francophone east. In the 1990s the government sent troops into the western provinces to quell demonstrations.

Cameroonians also face serious economic and social challenges. The population growth rate is nearly 3%, which means by the year 2015 Cameroon will have a population of almost 23 million, most of it younger than 20 years old. The demand for education, health, and jobs will be very great. Moreover, intensive and unsustainable land uses are contributing to deforestation, overgrazing, desertification, poaching, and over fishing. Some reports indicate that Cameroon has become a transshipment point for drugs that formerly transited through Nigeria.

### 20 GENDER ISSUES

Cameroon is a male-dominated society where women face unequal treatment under customary and statutory law, and discrimination in private sector employment, the civil service, political appointments, and in the country’s social hierarchy. Women are expected to raise children, cook and do household chores, work in the fields, fetch water and firewood, and generally do not go out on their own to socialize in public unless it is at the market or running errands. About 20% fewer girls than boys enroll in primary, secondary, and tertiary institutions,

and about 30% fewer women than men are literate. Considered property of their husbands, women generally do not own land or inherit property when their husbands die. Girls are subject to trafficking, early forced marriage, and rape.

Female *Bikutsi* musicians and performing artists like K-Tino, who sees herself as a Cameroonian suffragette, use their music to liberate and emancipate Cameroonian women.

# CAPE VERDEANS

**PRONUNCIATION:** kayp VUHRD-ee-uhns

**LOCATION:** Cape Verde; United States

**POPULATION:** 300,000

**LANGUAGE:** Portuguese (official language), Crioulo

**RELIGION:** Catholicism with *Crioulo* aspects

## 1 INTRODUCTION

It is not improbable that Phoenician sailors sailing from Carthage in the 5th century BC were the first to see the volcano of Fogo as they navigated along the African continent. There is some reason to believe that Arab sailors were aware of the islands by the 10th or 11th centuries. Certainly for seven centuries before Columbus, Arabs and Jews had occupied large regions of Iberia and had made seminal contributions to the related sciences of navigation, astronomy, cartography, and naval design. This was critical input for the Portuguese navigators.

It was sea captains sailing for Prince Henry “The Navigator” during Portugal’s Golden Era of Maritime Exploration who began to sail along the upper West African coast in the early 15th century. Looking for new trade routes, African gold, and a way around the Arab world, they reached modern Senegal in the 1440s, and it was between 1455 and 1462 that the Cape Verdean islands were reached. The Cape Verdean archipelago had no known precolonial inhabitants; its entire history, from 1455 until its independence in 1975, was as a colony of Portugal.

While sailing for the Portuguese, before his New World voyages, Christopher Columbus sailed down the West African coast to Al Mina in coastal Ghana. Because Cape Verde was a normal Portuguese port of call, we may safely assume that he stopped in the islands in the late 1480s. It is certain that he was in Cape Verde on his third trans-Atlantic voyage. Queen Isabella of Spain also wanted him to investigate reports of African ships from the empire of Mali deep in that region of the Atlantic; nothing was found.

Vasco da Gama, hurrying back from his raids in East Africa and India, was also in Cape Verde, but his preoccupation was with his dying brother and avoiding Muslim sailors whom he feared would seize his ships, which he deliberately sank in Cape Verdean waters. Sir Francis Drake, famed for circumnavigating the globe and defeating the Spanish armada, was no friend to Cape Verde after looting and burning its main towns.

Charles Darwin and his ship, the *Beagle*, stopped in Cape Verde on the epic and scientifically pioneering voyage that led to the proof of evolution. Darwin’s voluminous notes and drawings done in Cape Verde record an amazing diversity of animal and plant life and the unique aspects of Cape Verdean volcanic geology. Even the Lindberghs made a brief Cape Verdean stop during their famed air flight around the Atlantic rim.

## 2 LOCATION AND HOMELAND

Although there are tens of thousands of Cape Verdeans residing in New England, many Americans have heard little of Cape Verde and its deep roots in the lands of West Africa. The Republic of Cape Verde is an archipelago nation of nine main

islands, found about 300 mi off the west coast of Senegal. The horseshoe-shaped archipelago has two island groups: The Barlavento (northern, windward) islands include Santo Antão, São Vicente, Santa Luzia (uninhabited), São Nicolau, Sal and Boa Vista. The Sotavento (southern, leeward) islands are composed of Maio, São Tiago, Fogo, and Brava. Some islands are flat and sandy (Boa Vista and Sal), others provide a moonscape terrain (São Nicolau and Santo Antão) and mountains (Fogo) that tower over 9,000 ft above the sea. The capital of Praia is located on the largest island of São Tiago, while Mindelo is the main town of the north on São Vicente.

Located at the same latitude as the Sahara desert, Cape Verde suffers from severe ecological conditions. The hot and dry climate and periodic droughts have made agriculture always marginal. Cape Verdeans long have had to turn to the sea for support from fishing, whaling, and sea salt production. Perhaps above all, Cape Verdeans have a very long pattern of labor emigration to Europe, Brazil, and North America to escape the difficult conditions in the islands and send economic support back home. The Cape Verdean diaspora continues to be critical to the islands’ remittance-based economy, but there has been a great growth in tourism and foreign investment that has brought in considerable funds and important economic development on which the nation now relies.

## 3 LANGUAGE

Although Portuguese is the official language and many other languages are also known, it is *Crioulo* that is most widely spoken in Cape Verdean homes and clubs. Like other Creole languages, the Cape Verdean tongue is unique and follows its own grammar, lexicon, and style. Telephones, televisions, literature, films, press, poetry, and radios all enrich and strengthen *Crioulo* communication. Women often are considered the bedrock of Cape Verdean society, especially when it comes to preserving *Crioulo* linguistic skills.

## 4 FOLKLORE

Cape Verdean folklore is very rich in its intermingling of Portuguese and African sources as well as its own traditions. One popular set of tales relates to *Nho Lobo*, the clever wolf whose folksy wisdom can play an important role in teaching life’s lessons and basic values.

## 5 RELIGION

Most Cape Verdeans are devout Catholics, and very active church life provides for core values and stability in the community. Important saint days are widely recognized; in fact, many of the islands are named for the saint days on which they were discovered. There also are unique *Crioulo* aspects of religion. For example, the *mastro* ceremony involves a post or mast that is colorfully decorated with fruits to honor a saint. Religious carnivals and parades in the islands or in the United States also are common. Aside from floats and marchers, one also may see a Cape Verdean man “wearing” a man-sized boat model in the line of march as his feet provide the locomotion and he appears to be the captain and crew. In recent years, revivalist Protestant sects have made inroads in Cape Verde.

## 6 MAJOR HOLIDAYS

Important holidays include 20 January (the assassination of President Amílcar Cabral) and 5 July (Independence Day). Other religious holidays surround Christmas, Easter, Carnival, and various saints' festivals. The *tabanka* festival incorporates African types of shrines with a Portuguese religious parade, particularly during the celebration of Saint John.

## 7 RITES OF PASSAGE

The main transitions in life are noted after birth with the First Communion, at marriage, and by cemetery burial at death. Farewell parties for migrants and for returning visitors have become so established that they approximate a rite of passage.

## 8 INTERPERSONAL RELATIONS

Within the family and within the wider Cape Verdean community, social networks are reinforced continually. These ties are critical when job-hunting, obtaining loans, seeking marriage partners, and conducting general social life. Cape Verdeans are highly involved in social clubs, voluntary and service associations, and community affairs. The warmth, caring, and sharing within Cape Verdean families and among friends is widely recognized. National and ethnic pride provide a strong social cement for these relations.

## 9 LIVING CONDITIONS

Generally, Cape Verde is strongly influenced by Portuguese culture and architectural styles and is similar to coastal Brazil

in general atmosphere. Piped water and electricity are common in the main towns, but in rural areas may be lacking. Houses showing an African influence feature the round *funco* style from West Africa. They are built with Cape Verdean stone, but still may have an African-style conical thatch roof.

Modern technology now includes water desalinization and even wind-powered generation of electricity, as well as widespread use of televisions and telephones. Most main roads are paved with cobblestones and, although quite narrow, they do allow for a reasonable flow of motor traffic. The main towns have intra-urban bus transport and are connected to other towns by vans and taxis. Inter-island communication is maintained by ferryboats and frequent airplane connections. Relative to Europe or America, the living conditions in Cape Verde have numerous deficiencies. Compared with neighboring West Africa, however, living conditions are far advanced.

A substantial process of urbanization is unfolding in Cape Verde, especially to the cities of Praia and Mindelo. Traffic and parking are sometimes problems along with the high cost of imported fuel for public and private transportation.

## 10 FAMILY LIFE

The warmth and generosity of Cape Verdean family life is deeply rooted in culture and history. Sharing a pot of *cachupa* (stew) with family, neighbors, and drop-ins is normal. A great deal of sacrifice is made to educate children, and academic achievement and employment success are sources of great family pride.

## 11 CLOTHING

Western-style clothing is standard, especially for men and children. Women sometimes incorporate their unique *panos* (a cloth woven on the West African narrow loom). These *panos* are used as sashes for dancing and also can be used as a wrap for carrying babies. At times in early Cape Verdean history, the *panos* were used as currency in a barter economy. Women also have unique styles of tying headcloths. Used clothing from Europe and New England sometimes arrives in metal barrels (*bidon*) to be sorted and resold to meet domestic needs.

## 12 FOOD

Cape Verdean foods include *cachupa* (stew), *conj* (soup), *djagacida* (chicken with rice), *gufong* (cornbread), and other *Crioulo* favorites. Recipes often involve corn, rice, and couscous as a starch base and, if meats are included, the most common are pork, chicken, and fish (especially tuna). A wide variety of tropical fruits is readily available, including mangoes and bananas. Several islands produce Cape Verdean rum (*grog*) from distilled sugar cane. Cape Verde is not self-sufficient in food production and must rely on imported corn and wheat. Historically, droughts have caused famines that have starved 15%–20% of the population and caused others to flee.

## 13 EDUCATION

Cape Verdeans long have prided themselves on a relatively high standard of formal education, especially relative to other West African nations. This is due, in part, to the tradition of seminary education at the seminary in São Nicolau and because of the high degree of out-migration, which gave Cape Verdeans additional access to education. There are higher secondary

*Fishermen drag a small boat up onto the shore on the island of Sao Vicente. The islands of Cape Verde offer visitors mountains for hiking, pristine beaches, and lots of water sports, like wind surfing and scuba diving. (AP Images/Armando Franca)*

schools in the major towns, and elementary schools throughout the islands. Teacher-training and technical schools are also present. Post-secondary and university level education is now advancing in Cape Verde with the foundation of the University of Cape Verde as well as the Jean Piaget University, both in Praia. In Mindelo private colleges are also underway to meet the great demand for modern training and research.

#### **14 CULTURAL HERITAGE**

The roots of Cape Verde's population are found among mainland Portuguese, Azoreans, Sephardic Jews, Moors, political exiles like the *degradados*, and African peoples such as Fula, Balante, Wolof, Mandingo, Manjaco, Papeis, and Bissagos. The diversity of these origins has resulted in a *Crioulo* amalgam of Luso-African traditions. In this sense, one may say that Cape Verde is not only the westernmost extension of Africa, but also the easternmost extension of the Caribbean, and a southern extension of Europe.

Slavery helped to build Cape Verde. It was largely from the islands that the Portuguese crown monopolies based their slave trading economy from the 17th–19th centuries. Coastal middlemen called *lançados* traded with the victorious kingdoms in the slave wars required by the trade. Slaves were not only part of an important economy, but were used on Cape Verdean plantations of sugar cane and tropical products, as well as for general labor and household services.

It was quite ordinary for slave owners to have children with their servants. In fact, that is the original source of the evolution of the *Crioulo* population. Other slaves such as the *badius* fled to remote and interior portions of the larger islands

and developed their communities there. Still other slaves were “seasoned” in Cape Verde and exported to the New World, especially to regions in northern Brazil. While slavery is an undeniable part of Cape Verdean history, the sustained patterns of brutality and racism clearly are more muted than elsewhere, in large measure because of the synthesis of the Luso-African population.

Today, more Cape Verdeans live in faraway diaspora communities than in the homeland. Cape Verdeans are found throughout Africa, Brazil, and Portugal, as well as in Senegal, Italy and Holland, and in southeastern New England. In these places, Cape Verdeans long have been involved in maritime trades, such as fishing, sealing, whaling, and docking, and more recently, as agricultural and industrial workers. Financial assistance from Cape Verdeans living overseas are a critical factor in the present island economy.

The crews of the famed American whaling and sealing ships were heavily represented by Cape Verdeans. As a consequence, American consular interests are among the oldest in Africa. American naval presence in Cape Verde was significant.

#### **15 WORK**

Agriculture and fishing in Cape Verde are conducted at subsistence level or for small scale exports. The most significant export is its workforce, often as contract laborers. Remittances from Cape Verdeans around the world continue to be a very important source of financial stability.

Historically, thousands of Cape Verdeans have found work on ships devoted to whaling, sealing, slaving, and fishing, but it was in the 19th century that more regular numbers began

to arrive in America with the intention of permanent immigration. During these times, a chief source of employment was as longshoremen, or in agricultural work, especially the cranberry industries of Cape Cod. The seasonal nature of this work made factory jobs more attractive and through the 20th century, when not limited by immigration quotas, they arrived seeking jobs in textiles and other manufacturing. Today, Cape Verdeans are found in every walk of life, including education, major sports, medicine, the arts, banking, commerce, and construction.

Youthful unemployment and marginal work is a serious problem in Cape Verde. This is particularly difficult among those Cape Verdeans who have been deported from the US and Europe and arrived with more liabilities than assets to themselves and Cape Verdean society.

## 16 SPORTS

Many sports are popular in Cape Verde, especially soccer. Basketball has shown increasing popularity. Swimming, surfboarding, scuba diving, track and field, and long-distance running also are growing. There is even a golf course and horseback riding stable on São Vicente. A very popular game in Cape Verde is *ouri*, a “pit and capture” game board that can be dated directly back to ancient Egypt.

## 17 ENTERTAINMENT AND RECREATION

Cape Verdean entertainment is centered around the home, where dances, parties, and receptions are very popular. Inside and outside the home there are rich varieties of popular music, both imported from the diaspora communities and synthesized in the Crioulo traditions. These forms range from the European-origin *mazurkas* and *valzas*, to the polyrhythmic *batuko*, and modern popular music of *funana* and *finçon*. Perhaps most famed of all are the *coladeiras* and *mornas*, which capture the painful burdens of the Cape Verdean soul or *saudade*.

Lively post-colonial literature includes poetry, short stories, and novels. Cape Verde even boasts of its own neoclassical *Claridade* literary movement, much of it written in Portuguese and *Crioulo* and increasingly translated to English and French.

## 18 FOLK ART, CRAFTS, AND HOBBIES

A wide array of folk arts are found in Cape Verde, including sewing and crocheting for women and a revived interest in the production of *panos*. Men enjoy building ship models, carving of wood and cow horn, making shell horns, and carving pipes. Modern arts can be found in exhibitions and galleries that show textiles, pottery, wood carving, sculpture, painting, drawing, and photography.

## 19 SOCIAL PROBLEMS

Cape Verde increasingly is suffering from a rising use of illegal drugs and alcohol and an increased incidence of HIV/AIDS. Struggles with self-identity also are common. Apparently the personal use of drugs and alcohol is also linked to a rise in the overseas illicit drug trade and other smuggling activities. With the rise in tourism there are also more reports of the sex trade that could cause increased incidence of HIV/AIDS.

## 20 GENDER ISSUES

The national liberation parties of Cape Verde (the PAIGC and PAICV) had long put forth the full liberation of women as one of their central goals. A number of women were incorporated into leadership positions within the PAIGC’s fighting forces during the nationalist armed struggle. The Party insisted that at least two of the members of *tabanka* (village) committees be women. The Uniao Democratica das Mulheres (UDEMU) was formed by the PAIGC in the mid-1960s. During the armed struggle period (1963–1974) fought in the mainland but led by Cape Verdeans, UDEMU assisted in the mobilization of women for the war effort. UDEMU was replaced by the Comissão Feminina (Women’s Commission) toward the close of the war, and while it has been replaced it belongs in the historical evolution of female empowerment in Cape Verde.

After the 1981 coup in Bissau, the PAIGC changed its name to the PAICV. Similarly, the UDEMU which had represented women in both nations was changed to the Organização de Mulheres de Cabo Verde (OMCV). The OMCV is organized by sectors which contain all “base groups” in a district as well as an administrative body. The OMCV continued much of the work of the former organization, and it functioned as a women’s auxiliary of the single party. The position of women in Cape Verde remains hard with relatively high levels of illiteracy, hard physical work, a high level of machismo, and a relatively low level of participation.

While educational opportunities for women have been expanded since independence, the male-dominated nature of the social and familial structure is in need of further changes in various ways. Certainly the position of women has improved markedly given the traditions based in colonial patriarchy and male supremacy. Now the rights of women are legally protected. For example, children born out of wedlock must legally be supported by their fathers and the status of “illegitimacy” has been abolished.

The numbers of women in industry and tourism are increasing even though the overall numbers of industrial jobs are few. There are now women members in the Assembleia Nacional Popular. Women are commonly found in the health and educational services where such possibilities were limited during colonial rule.

Of particular importance is the male “brain drain” away from Cape Verde leaving the population composed disproportionately of women. Ironically, while their income is thereby reduced or reliant on remittances from absentee husbands, it has made the remaining women more self-reliant and codependent. It is impossible to overlook the hardships that women face, however, the spirit of liberation, social mobility and empowerment is now very significant in Cape Verde. Women are rapidly expanding into new roles and occupations and probably greater numbers of women more than men are seeking higher education that is now available in Cape Verde.

Similarly, new issues such as family planning, birth control, domestic violence, poverty and prostitution, abortion, and AIDS have also entered the picture. OMCV sectors sometimes help to organize *jardins* and pre-school teachers to provide day care and pre-school training for children. There are a number of Cape Verdean women writers, perhaps best known are Orlanda Amarilis and Yolanda Morazzo. The literary works of A. A. Goncalves reveal many of the complexities of the lives of

Cape Verdean women. Since independence, March 8, International Women's Day, has been observed in Cape Verde.

# CENTRAL AFRICANS

**ALTERNATE NAMES:** CAR

**LOCATION:** Central African Republic

**POPULATION:** 4.5 million

**LANGUAGE:** French and Sango (official languages), Ubangian group (Niger-Congo family of languages)

**RELIGION:** Islam, Roman Catholic, Protestant, indigenous religious beliefs

**RELATED ARTICLES:** Vol. 1: Aka

## <sup>1</sup> INTRODUCTION

The Central African Republic (CAR) is a landlocked country the size of Texas in central Africa. The CAR was a French colony (Ubangi-Shari) from 1899 until independence in 1960. Prior to the arrival of the French in the nineteenth century, the peoples of the CAR were divided among numerous small kingdoms and sultanates. Trade in ivory, slaves, iron, and agricultural products along the Upper Ubangi River and across the Sahara to North Africa and the Mediterranean.

While the arrival of colonial forces put an end to the slave trade, the economic system they imposed brought further hardship and misery to the Central African people. Most of what is now the CAR was divided up into “concessions,” large parcels of land turned over to private companies for exploitation. All of the natural wealth of the land—including the rights to the labor of the people—was considered the property of the various concession owners. Rubber, coffee, cotton, diamonds, and labor were among the primary products these companies sought to exploit. Forced labor and relocation along newly built roads caused many people to flee the European colonists just as they had fled Arab slave raiders engaged in the trans-Saharan trade in previous centuries. Famine and disease were the most immediate outcomes of this migration. It was only as the result of a highly publicized visit to the Ubangi-Shari by the famous French novelist André Gide in 1921 that the practice of forced labor and the concession system finally was abolished.

Under the leadership of Barthélemy Boganda, a former priest, schoolteacher, and member of the French National Assembly, Central Africans were finally able to throw off the bonds of French colonial rule in 1960. Unfortunately, Boganda never would see the fruits of his labor, for he died under mysterious circumstances in a plane crash shortly before independence from France was granted. His nephew, David Dacko, became the first president of the CAR but lost power to Jean-Bidel Bokassa after a coup d'état in 1964. Bokassa brought initial prosperity to the CAR, but he quickly became obsessed with power and grew increasingly autocratic. In 1976 he crowned himself emperor of the Central African Empire in a ceremony that cost one-third of the entire annual budget for that year. Embarrassed by the lavish lifestyle and increasingly despotic habits of Bokassa, the French intervened in 1979 and returned Dacko to power. As of 2008 the CAR had a democratically elected president, Ange Félix Patassé. However, the stability of the CAR is threatened by increasing involvement in conflicts in neighboring Chad and Sudan.

## 2 LOCATION AND HOMELAND

The CAR is home to approximately 40 different ethnic groups, most of which speak languages belonging to the Ubangian branch of the Niger-Congo language family. The primary ethnic groups of the CAR are Banda, Gbaya, Ngbaka, Ngbandi, and Zande. A number of smaller Bantu-speaking groups are found along the southern border of the CAR, and a handful of Sahelian groups are found along the northern border. With a population of just 4.5 million in an area of 240,535 sq mi, the CAR is one of the most sparsely populated countries in the world. From east to west, the CAR measures 900 miles; from north to south it varies from 260 to 475 miles. The CAR shares its 2,700-mile border with five countries: the Democratic Republic of the Congo and the Republic of Congo to the south, the Sudan to the northeast, Chad to the north, and Cameroon to the west. The CAR was called Ubangi-Shari in the colonial period since its landmass falls primarily in the watershed of these two rivers.

In terms of geography, the CAR spans all three of Africa's major types of landscape. To the extreme south is the dense equatorial tropical rain forest, which is home to the CAR's earliest inhabitants, the pygmies. The middle portion of the country, where the bulk of the population lives, is woodland savanna. In the northern part of the country the savanna gives way to the Sahel, a semidesert band that separates the Sahara desert from the grasslands. The terrain of the CAR consists primarily of gentle rolling hills with a few small mountains in the northwest and the northeast. In the middle portion of the

country, the savanna is occasionally broken up by rocky outcroppings called *kagas*. As in the rest of the region, there are two seasons: dry and rainy. In the rain forest band, the rainy season lasts nine months, from March until December, tapering off to just three to four months of rain in the northern Sahel region.

## 3 LANGUAGE

The 40 ethnic groups of the CAR are unified by the national lingua franca, Sango. This language is a variety of Ngbandi, which was used along the Ubangi river and into the interior for trading purposes before French colonization. Sango was then spread throughout the colony by the soldiers and workers employed by the colonial government. These hired forces were recruited from the coastal regions of Africa and themselves spoke a variety of African languages. Upon arrival in Ubangi-Shari they adopted Sango, both for communicating with the local population and for speaking among themselves. By the time Protestant missionaries arrived in the colony in the 1920s, Sango was already so widely spoken that Protestant and later Christian missionaries began using it in their work. The association between Christianity and the use of Sango has strongly contributed to its ongoing spread. Today 98% of the population of the CAR speaks Sango at least as a second language. In Bangui, the capital, and other major cities, young people who are not ethnically Sango increasingly learn Sango as their first language.

Another important language spoken in the CAR is French, which is the official language along with Sango. While Sango is the language that most Central Africans speak on a daily basis, French is the language of government and education. Many Central Africans are trilingual: They speak their ethnic language with other members of their ethnic group, especially within the family; they speak Sango in church, the marketplace, and whenever they meet someone from a different ethnic group; and they speak French at school, when dealing with the government, or when speaking to foreigners.

## 4 FOLKLORE

Since each ethnic group has its own language, each also has its own oral tradition, including mythical heroes and storytelling formulas. With the emergence of national identity and culture associated with the common national language, Sango, there has emerged a body of folklore known to Central Africans from all ethnicities. The central figure in this national folklore is *Tere*, a clever and witty man of supernatural powers who outsmarts his opponents with tricks and guile. Though originally a figure from Banda mythology, *Tere* has become such a central figure in Central African oral tradition that in Sango his name is now synonymous with the act of storytelling itself.

Oral tradition plays a very important role in the education of children in the CAR, for it is through these stories that they learn important lessons about the origins of the natural world, morality, traditional healing, and hunting. In days gone by, such stories would be told by the older generation to the younger while sitting around a fire in the evening. Today this tradition continues, with these stories being told over the radio and on television. The storyteller frequently incorporates a song into his story, which the entire audience will sing along with him. The refrain of these songs is frequently the moral of

the story. The catchy tune and clever lyrics help the listener remember the main point of the lesson.

## 5 RELIGION

Most Central Africans are Christian, with 35% of the population being Protestant and 18% being Catholic. The remainder are Muslim or practice indigenous religions. In addition, many Central Africans incorporate indigenous practices of ancestor worship, or animism alongside Christianity or Islam. In local religious systems, each person is assigned a *totem*, which is an animal spirit that is passed on from generation to generation. Some *totems* are sacred to an entire ethnic group, while others are specific to individuals. In both cases, one may never eat the animal associated with one's *totem*. If possible, when a person is dying, he or she will pass on his or her *totem* to a young child, usually a son or grandson. In this way some Central Africans may end up with several *totems* that they believe give them special insights, characteristics, and protection.

Traditional priests, or witch doctors, are called *nganga*. The priest is in communication with the spirits of the ancestors who indicate to him their pleasure and displeasure. If a Central African has a problem, for example a series of bad harvests or poor luck in hunting, he or she may go to the *nganga* if it is suspected that displeased spirits are at the root of the problem. The *nganga* serves as a medium to the spirits and frequently will order a ritual sacrifice (usually a chicken) to placate them. He will bless the fishing nets and hunting spears and may order additional offerings, such as eggs and white chickens, to be left in the sacred spot of the ancestors. These sacred spots usually include an altar on which a figurine of the spirit has been placed.

## 6 MAJOR HOLIDAYS

Independence Day, celebrated December 1 and known locally as *Premier Décembre*, is the major important holiday in the CAR. It honors the day that Barthélemy Boganda declared the independence of the country and is celebrated with parades and much official pomp and circumstance. In many respects this is a day of remembrance of Boganda himself, who is rightfully considered to be the father of the CAR nation. On this day Central Africans show their patriotism and respect by dressing in their finest attire and participating in the activities. Schoolchildren and social organizations of every type assemble to march before local and national dignitaries. Afterwards they feast on roast goat, gazelle, or pork, which few Central Africans can afford to eat on a daily basis. The adults may drink beer or wine, while the children are given the rare treat of soda.

## 7 RITES OF PASSAGE

The most important rite of passage among Central Africans is circumcision, which serves as a symbol of initiation to both adulthood and the various ethnic groups. Many ethnic groups, particularly those in the northern part of the CAR, practice circumcision on both boys and girls just as they are entering puberty, around the age of 13. Historically in rural areas, circumcision takes place over a three-month period when groups of up to 30 boys or girls are taken from the village to live in a secret camp in the forest or savanna. Here they are given intensive training and education in the spiritual beliefs and practices of their ethnic group. They also are taught about sexual reproduction and the responsibilities they will bear as full-

fledged members of society. Young women are instructed to be faithful and obedient to their husbands and young men are instructed to provide for their wives and children. When the initiation period is over, they are marched back into the village where they are greeted with much celebration, dance, and fanfare. The newest members of society are given presents of money and clothing, and special feasts are held in their honor. Once they have completed this rite of passage, they have the right to take a spouse.

With urbanization, male circumcision increasingly takes place in a hospital and the practice of female circumcision is discouraged by the government. Even if circumcision does not actually take place, the removal from society for educational purposes and initiation still takes place, though the period increasingly is only a matter of a few weeks rather than months. Many young people, particularly in the larger urban areas, no longer speak the language of their ethnicity and it is only during circumcision, when they are sent to their ancestral village, that they learn something of their ethnic language and customs.

Honoring the deceased also plays a very important role in Central African society, for it symbolizes the transition from the living to the spiritual world, when a living person passes on to become a venerated ancestor. Depending on the social status of the deceased, periods of mourning may last anywhere from a few days to years. In the first few hours after the death of a close relative, male family members are expected to display their grief by shaving their hair off, and women are expected to abstain from any type of personal grooming and adornment. An all night vigil around the corpse will be held the first night, with much singing and dancing to help coax the spirit into the other world. The body is promptly buried at sunrise the next day, with the head pointing north for men and south for women. Depending on the wealth and status of the deceased, the vigil may continue for up to two weeks. During the mourning period the immediate family maintains proper decorum by refusing to wear brightly colored clothing and to participate in any pleasurable activities. At the end of the mourning period, there is a celebration with dancing, good food, and much gaiety. The day after this celebration the family will symbolize the return to normal life by putting on a new set of clothing.

## 8 INTERPERSONAL RELATIONS

Greeting and leave-taking are very important in Central African society because they are considered not just acts of politeness but also indicators of respect. Central Africans begin each day by greeting the members of their family with a handshake and an inquiry into how they slept. Whenever a new person enters a group of people, the newcomer is expected to first greet the most important person (e.g., oldest person, honored guest, or chief, etc.) with a handshake and then greet each and every person assembled in the same way. Failure to do so would be construed as a great insult. When leaving a group, a second handshake is required of each person. Among close friends, particularly men, a sign of intimacy and friendship is the following of the handshake with a snap of the fingers, produced jointly by both parties. Women and men both shake hands, but increasingly women are adopting the French practice of kissing on both cheeks.

Central Africans have many hand gestures that mean very specific things. For example, the gesture for calling someone

over is very similar to a wave good-bye in the West and is done by outstretching the hand palm toward the person and clasp- ing the hand. Also, when indicating the height of a person, the hand is held vertically at the level of the face, for animals the palm is held horizontally to indicate the top of the head. To refer to a person using the gesture of an animal would be construed as a great insult.

Visiting friends and family play a prominent role in Central African society, with Sunday afternoons and holidays being given over to this practice. On these days many Central Africans will put on their finest clothing and set out to go calling on friends either at home or in public places. Most visits to homes are spontaneous and unannounced, but when a visitor arrives—even a stranger—at the very least a chair in the shade and a drink of cool water is offered. Frequently, a small meal will be offered, which the host and guest will eat together. Sharing food, even if it is just a few boiled peanuts, is an important aspect of Central African culture because it symbolizes the strong emphasis placed on togetherness and community. Even if one is not hungry, in Central African society it is looked down upon to refuse a meal when offered. Instead, one should eat at least a few bites out of politeness.

## 9 LIVING CONDITIONS

The CAR is one of the poorest countries in sub-Saharan Africa and, as a result, it is plagued with a low standard of living and high death rate from disease and malnutrition. Life is particularly difficult for children who are the most vulnerable to disease and parasites. Most Central Africans live in mud-brick huts with grass roofs and without running water and electricity. While such homes are in general clean and comfortable, they offer little protection from malaria-carrying mosquitoes. In addition, most children go barefoot and are thus susceptible to other parasites that are spread through the waste of animals, particularly pigs. In large villages, each home or group of homes has a latrine and children are instructed to use it, which helps ensure that the drinking supply will not be contaminated. All too often, however, these latrines are built too close to the well or stream that supplies the drinking water.

Transportation is a major problem in the CAR. There are few paved roads, most of which are in poor condition. Few Central Africans own cars and most must depend on *trafiques*, or bush taxis, to get from one place to another. These bush taxis are almost always filled well beyond the designed capacity of the vehicle. The roof of the bus or van is piled high with passengers' luggage and goods. On buses heading toward the cities are sacks of food and live goats and chickens; on buses heading out of the city and toward the countryside are new pots and pans and other consumer goods such as soap and cloth. During the rainy season, when many roads turn to mud, it can take weeks to get from one end of the country to the other. All passengers must be prepared to sleep on the ground wherever the bus stops for the night or breaks down.

## 10 FAMILY LIFE

Though there are not normally formal marriage ceremonies, certain social customs are strictly followed to recognize new unions. Before a man and a woman can live together as husband and wife, the family of the man must pay a bride-price to the family of the bride. This payment is viewed as a form of marriage license or as a token of sincerity. The exact sum

and terms of payment are worked out between the families of the two parties and may range anywhere from a few goats and chickens to large sums of money. If the marriage fails due to infertility or infidelity of the woman, the family of the man can demand a return of the money. No marriage is official until a child has been born.

Once a couple starts to produce children, frequently a younger sister or cousin of the wife will come and live with them to help relieve the mother's burden. The young assistant is in many respects an apprentice, learning how to keep house and to care for babies and children. The size of the household also may be further augmented by the temporary adoption of a sibling's children, either so that these children may attend better schools or so that their parents can spend more time working to make a living. It is rare to find a child being raised alone or with just one sibling. The more typical scenario is for five or six children of varying degrees of blood relatedness being raised as brothers and sisters.

## 11 CLOTHING

Traditional Central African cloth is made out of the bark of a certain tree that grows in the rain forest and that becomes soft and pliable when beaten. In the precolonial period, most clothing consisted of a loincloth made out of this barkcloth or of a skirt made from braided raffia, which comes from a type of palm tree. Colonization and trade with Europe brought about the introduction of cotton cloth, which is frequently dyed in bright and colorful patterns. Most women today wear such cloth in a form of dress known as *pagne*, which is tied about the waste like a skirt and worn together with a matching blouse made of the same material. Clothing is a potent symbol of wealth, and genuine European prints from the United Kingdom and the Netherlands are the most sought after.

For casual wear, men may also wear matching shirt and pants made from colorful printed cloth, but for important occasions they wear European-style clothing. Central African men never would wear shorts in public, because they are the attire of children and reminiscent of the clothing of the European colonists. Increasingly, men and women alike are adopting the West African custom of wearing outfits known as *shada* made of colorful batik cloth that has a design in the weave. Outfits made out of this cloth are embellished with elaborate embroidery and may cost hundreds of dollars apiece. Less fortunate Central Africans wear secondhand European and American clothing bought for a few cents apiece at local markets.

## 12 FOOD

The staple food of the Central African diet is cassava, which is a starchy root that originated in Brazil and was introduced in Africa by the Portuguese. Unlike millet, the traditional Central African staple, cassava is a hardy plant that can be grown easily in a variety of climates and even in very poor soil. To prepare the cassava for consumption, it first must be soaked in water for three days to leach out the traces of cyanide that occurs naturally in the plant. After soaking, the roots are peeled and broken into pieces to be dried in the sun. Just before eating, the dried cassava is ground into a fine flour that is used to make the mainstay of Central African cuisine called *gozo*. This is a firm paste made by adding the cassava flour to boiling water.

Most Central African meals consist of *gozo* served with a sauce made with meat, fish, and/or vegetables. One favorite everyday dish, called *ngunja*, is made with the dark green leaves of the cassava plant. Most sauces, including *ngunja*, are thickened with peanut butter, which gives them added protein and flavor. Onions, garlic, tomatoes, and mushrooms are also basic elements of Central African cuisine and are found in many national dishes. On special occasions, goat and chicken are the dishes of choice. In rural areas many people continue to enjoy wild game such as snake, monkey, and elephant.

The communal aspect of eating is reinforced by the fact that everyone eats with their fingers from a central common dish. Men and women, however, do not eat together unless they are related and in private. Women do all the cooking and they serve the food. A Central African meal consists of one bowl of sauce accompanied by one ball of *gozo*, both of which are served covered with intricately decorated gourd shells to keep them warm. Before eating, everyone washes their hands in a basin that is passed from person to person and waits for the oldest person or honored guest to begin. Also, no one may take a piece of meat until this person has done so.

Depending on the size of the household and their financial resources, usually only one meal is cooked per day and served at the noon hour. In the evening and for breakfast the next day, leftovers are eaten. The diet is supplemented with fresh fruit such as oranges, bananas, pineapples, guava, mangoes, and avocados, which grow in abundance in the CAR. French-style bread is available in the larger towns and cities where it is eaten for breakfast or in place of *gozo* with a meal. The CAR produces coffee, which Central Africans of all ages drink sweetened with ample quantities of sugar and softened with condensed or powdered milk.

### 13 EDUCATION

Most Central Africans born since independence in 1960 have attended at least some primary school, but very few have received further education. Only one eighth of all children go on to high school and of these only 1 in 10 will actually finish. To earn a high school diploma, students must take an exam called a *baccalaureate* which very few people are able to pass. All those who pass, and who have the money, are then able to go on to the one university in the country, the Université de Bangui. At all levels, parents are expected to pay a fee for the education of their children. Failure to pay is one of the major reasons why many children leave school at a young age.

In government-sponsored schools, the official language is French and, as a result, most young people today have learned at least a small amount of French. Typically, children begin their education in Sango and gradually make the transition to French so that by the time they reach high school, classes are conducted entirely in French. The ability to read and write in French is directly linked to one's educational level. Because the orthographic system of Sango is closely related to that of French, young people who learn to read and write in French, by virtue of being native speakers of Sango, know how to read and write in this language as well. Older people who never have attended school are often able to at least read Sango, thanks to the many years of literacy projects conducted by the various Christian missionary societies. Recently, the CAR government has begun a secular literacy program aimed at farmers in rural areas.

### 14 CULTURAL HERITAGE

The CAR has a rich tradition in music and dance, which is expressed as part of the celebration of every major holiday and event. In traditional society, music and dance were believed to facilitate communication with the spiritual world and played an important role in the belief system of the people. The primary musical instrument is the conga drum, which is made by stretching a piece of wet leather over a hollowed-out length of log. While these drums come in all shapes and sizes, some stand up to a yard tall and can be heard several miles away. In the early and pre-colonial period, a special type of drum called a *linga* was used for communicating between villages in a specially devised code. Xylophones made with wood and gourds are another common musical instrument. In traditional society, specific songs and dances were associated with different events and would only be performed at this time. For example, certain songs are performed only at funerals and others only during circumcision.

Though music and dance have changed considerably with modernization and exposure to Western culture, they retain great significance in modern Central African society. Music and dance have been incorporated into Christian worship, where services are often punctuated with lively singing and elaborately choreographed dance. Conga drums and xylophones are still popular in rural areas, but today electric guitars, keyboards, and snare drums are increasingly common in urban areas. Popular recorded music sung in Sango is heard all over the country and is very pervasive. In buses, taxis, restaurants, and bars, either the radio or a cassette player is almost always providing background music. Increasingly, African American music such as rap, reggae, and hip hop are also becoming popular.

### 15 WORK

There is, for all intents and purposes, no manufacturing in the CAR. At one time in the 1970s, Central Africans produced their own cloth, shoes, beer, and soap, and even assembled cars. Today only the soap factory and one of the two breweries remain in operation. Timber and diamonds are the most important industries in the CAR, generating between them 75% of the CAR's export earnings. Unfortunately, these industries employ few people. Most Central Africans are subsistence farmers, growing most of the food they consume and just a bit more that they sell to get money to buy the things they cannot grow, such as soap and cloth. A limited number grow cash crops such as coffee or cotton, but demand for these exports on the world market has been falling for the past several years as competition from other parts of the world has increased.

### 16 SPORTS

Central Africans are avid sports enthusiasts, with soccer and basketball among their greatest passions. Athletic clubs in virtually every city and town sponsor soccer teams that compete for regional and national championships. On Saturdays throughout the CAR, makeshift soccer stadiums become a major focus of social life as fans of all ages come together to watch back-to-back matches. Here young men come to court young women, old men come to gather and chat, and children come to frolic on the sidelines. The mayor of the town or chief of the village is usually in attendance, as are all the other local dignitaries. The presence of vendors selling grilled meat, peanuts,

and bananas add a festive air to the occasion. Particularly good soccer players enjoy considerable status and prestige in their hometowns, especially if they go on to play in the national soccer league. Basketball was introduced in the 1970s by American Peace Corps workers, who built courts at high schools throughout the country. There is a national basketball training center in Bangui, and in 1988 the CAR national team astounded the continent by winning the African championship.

### 17 ENTERTAINMENT AND RECREATION

In Bangui, the capital, there is locally produced television in Sango and French. These shows are very popular and in the evening those rare individuals who have both electricity and a television will place the set outside so that all the neighbors can watch. It is not unusual to find 40 or 50 people gathered around a television in the evening watching storytellers, the local news, or an old French movie. In rural areas, where there generally is neither electricity nor television, some people will improvise with generators and video recorders. Usually, such events are by paid admission only and feature American action films or Chinese karate films. There is only one national radio station in the CAR, Radio Centrafrique, which broadcasts news, information, stories, and music. Radio is a major source of entertainment for those fortunate enough to have shortwave radios and batteries to operate them.

One of the most popular activities for Central Africans of all ages is dancing. In even the smallest towns there is usually at least one gathering place with a cemented dance floor and a cassette player. In the evening such places are popular with young adults who come to listen to the latest music from Bangui and the Democratic Republic of the Congo and to dance. In villages and cities of all sizes, there are frequent occasions when drumming and dancing take place. Most notably, funerals and circumcision celebrations typically involve several days of singing and dancing.

### 18 FOLK ART, CRAFTS, AND HOBBIES

Traditional art in the CAR takes a variety of forms including ebony carvings, pottery, weaving, and hair braiding. In the southern part of the country, near the rain forest, skilled artisans produce a host of ebony products that are popular with Central Africans and tourists alike. Statuettes, figurines, and animal carvings are the most common, though they also produce a number of household items such as combs, plates, and pestles. In the past, each ethnic group produced distinctive pottery that could be identified by the patterns and designs found on the outside. Today, however, only a few ethnic groups continue this tradition because most people have switched to aluminum and steel pots which are more durable and last longer. Traditionally, however, all cooking was done in clay earthenware pots that also were used for storing water, grain, or oil.

In the savanna region of the CAR, where the grass can grow 12 feet high and a variety of reeds may be found, the weaving of mats and baskets is a common activity. By dyeing the grasses and reeds different colors, elaborate patterns may be woven into the mats and baskets, giving them greater aesthetic appeal and increasing their value.

Hair braiding and tying is one of the principal social activities of women as well as a major outlet for their artistic talents. Some hair designs are so complex and intricate that they may take up to eight hours to complete. Central Africans are

best known for the “sputnik” design, which involves winding strands of hair very tightly with string so that they stand straight out in all directions.

### 19 SOCIAL PROBLEMS

The post-colonial history of the CAR, like so many African countries, has been characterized by autocratic rule and restriction of basic civil liberties. The first president, David Dacko, was overthrown by his cousin, Jean-Bidel Bokassa, in a coup d'état. Bokassa became infamous for crowning himself emperor and rumors that he killed children. He fashioned himself to be a modern-day Napoleon who had absolute power—including life and death—over his subjects. He was driven from power in 1979, and Dacko was brought back only to be deposed once again in another coup, this time by André Kolingba. Kolingba ruled the CAR with a tight grip until 1993, when the first democratic elections brought Ange Félix Patassé to power. Patassé was Bokassa's prime minister and has proven himself to share many of his former boss's autocratic tendencies. Successive Central African governments have paid lip service to human and civil rights, at the behest of Western donors, but have done very little to ensure that these rights are guaranteed.

Corruption and AIDS are the biggest social problems facing the CAR today. In a country where governmental favors are routinely bought and sold and only the ethnic group associated with the president can succeed in society, it is no wonder that development of the country has been so slow in coming. AIDS is having the effect of wiping out a significant portion of the generation aged 20–40, which is putting a strain on older people who are being forced to care for children orphaned by this tragedy. Further exacerbating this problem is ongoing urbanization and rapid population growth, both of which contribute to declining living standards.

### 20 GENDER ISSUES

Intense poverty has made life difficult for many Central African women. Maternal mortality rates are among the highest in the world and the average life expectancy for women is only 44 years. Nonetheless, women are highly valued in Central African society, particularly for their work as mothers. Mother's Day has grown into a celebration of women in general and it serves to recognize the labor and sacrifice that all women make in CAR society. On this day men do all the cooking and cleaning, while the women sit in the shade and are served by men. Some men add humor and a festive touch to the occasion by wearing women's clothing as they go to the market and carry out other duties normally assumed by women. Often, a few days before the celebration, a son will buy his mother a chicken and some beer, which will assure her that she is loved and appreciated. On Mother's Day, the son will prepare the chicken himself and serve it to his mother.

## CHADIANS

**PRONUNCIATION:** CHAD-ee-uhns

**LOCATION:** Chad

**POPULATION:** 10.1 million

**LANGUAGE:** French, Arabic (official languages); more than 100 local languages

**RELIGION:** traditional African religion, Islam, Christianity

**RELATED ARTICLES:** Vol. 1: Fulani

### <sup>1</sup> INTRODUCTION

The peoples of Chad possess a rich, ancient past dating to pre-historic times. If the mysterious Anasasis of the southwestern United States immortalized themselves in their 14th century rock art at Canyon de Chelly, so too have the unknown peoples of the northern Chadian desert (Ennedi Region), whose rock paintings date to 7,000 BC. This region's claim to be humanity's cradle recently was supported by linguistic research indicating that three of the four sub-Saharan language groups originated between Lake Chad and the Nile Valley. Many more discoveries undoubtedly will be made, because Chadian archeological sites of great potential remain unmapped and unexplored.

An era of empires marked the central Sahelian zone of Chad from around AD 900–1900. Their economic basis was the control of the trans-Saharan trade routes passing through the region. The survival of kingdoms depended on their ability to fight, which they did with cavalry. Two of the strongest and most durable of these were the Kanem-Borno and the Baguirmi and Wadai. The Kanem-Borno was situated to the northeast of Lake Chad and was formed from a confederation of nomadic peoples, who regarded their leaders as divine kings. The influence of Islam in the 10th century caused dissension and factionalism among those who saw the advantages of conversion and those who resisted in favor of their traditional beliefs. Strategically-spaced wells and oases favored the south-to-north trade of natron (sodium carbonate), cotton, kola nuts, ivory, ostrich feathers, perfume, wax, and hides, and foremost, slaves. From the north came salt, horses, silks, glass, muskets, and copper. The kingdom succumbed to invasions from eastern Sudan in the late 19th century.

The demise of Kanem-Borno coincided with the arrival of French dominance in the region, which was secured after considerable effort at the Battle of Kousseri in 1900. Chad was the lowest colonial priority for the French, and they made only halfhearted attempts to unify, administer, or develop it. In fact, the French ruled through sultanates in much of eastern Chad. In the south, where the French established missions and schools, the Sara peoples resisted forced labor, resettlements, and French-imposed prices for cotton. Under lieutenant-governor Félix Eboué, Chad supported the Free French under Charles de Gaulle in World War II. This act gave Chad greater, though still very limited, recognition and resources from France.

Since independence in 1960, ethnic, political, and religious factionalism, mainly between forces of the Muslim north against the Christian and animist south, has created much political and economic turmoil. Under authoritarian President Tombalbaye (1960–75), Chad experienced a general economic downturn and repressive government. Labor policies favored

the more Westernized southerners, leading to ethnic conflict and rebellions in eastern and northern Chad. Mutineers killed Tombalbaye in 1975, which ushered in a period of civil war lasting until 1982. Two of the rebel leaders, Goukouni and Habré, came from competing Toubou clans in the north, and were bitter rivals. In 1980, under the transitional government of national unity (GUNT), units of five separate Chadian armies patrolled the capital of N'Djamena. Habré gained power in 1982, but his government was subjected to Libyan attacks in support of Goukouni. In 1990 a former military commander in chief, Idriss Déby, invaded from Sudan and took tenuous control, fending off several coup attempts and military insurrections. Lawlessness, strikes, and civil disorder have characterized the constitutional transition begun in 1992 and dragging on throughout 1994. In July 1996, Déby was elected president under the new constitution, and formed a government that included several opposition members.

In June 2005, a controversial national referendum removed constitutional term limits and paved the way for a third five-year term for Déby. Subsequently, Déby abolished the "future generations" provision in the oil law, which had been imposed by donors to set aside a percentage of oil revenues for future Chadians. Since 1998, Déby and his ethnic minority have continuously had to stave off rebellions, the most recent of which laid siege to the capital in early 2008.

## <sup>2</sup> LOCATION AND HOMELAND

Nation-building in this country of about 10.1 million has been complicated by factors of geography, religion, ethnicity, and linguistic differences in Chad's diverse population. Some 200 ethnic groups speak more than 100 distinct languages, which has enriched Chad culturally, but made the creation of a national identity and unity virtually impossible. The mainly Muslim populations of the north are nomadic or semisedentary herders and livestock breeders. The sedentary Sara groups in the south traditionally practice animism, but some have adopted Christianity. Population density is extremely low, from 0.15 per sq km in the Saharan zone, to 13 in the southern zone, where 45% of the total population lives. Only 22% of the population lives in towns and cities. N'Djamena, the capital, is by the far the largest city with a population estimated at 721,000 in 2005.

The colonial borders created a landlocked country, far from oceans and seas. Chad borders Libya to the north, Sudan to the east, the Central African Republic to the south, and Cameroon, Nigeria, and Niger to the west. With an area roughly equal to Idaho, Wyoming, Utah, Nevada, and Arizona combined, Chad stretches over 1,100 miles from north to south, and covers three climate and vegetation zones. Rainfall diminishes from 1,200 millimeters in the south to negligible amounts in the northern Sahara. In the middle lies a semidesert band called the Sahel, which has a long dry season and is subject to creeping desertification. Temperatures here regularly exceed 100°F in April and May, the hot season. From Lake Chad, an inland delta and the fourth-largest lake in Africa, the land gradually rises. Magnificent sand dunes cover the land in the north, and great, isolated piles of rocks interrupt the landscape in the eastern and southern regions. Oases with their date palms dot the northern desert. Mountain ranges cover stretches of the southwest, east, and far northwest. Emi Koussi, a dormant volcano, crowns the Sahara, reaching over 10,000 feet in elevation.

## <sup>3</sup> LANGUAGE

French and Arabic are Chad's official languages, but more than 100 local languages are spoken. These fall into 10 major groups belonging to three of Africa's four major language families. Chadian Arabic includes more than 30 dialects, which people throughout the country use to communicate with each other. For example, in a radius of 10 miles around Lake Fianga in the Mayo-Kebbi Region, people speak Toupouri, Moundang, and Fulfulde, which requires them to find a common language of communication.

## <sup>4</sup> FOLKLORE

Given the plethora of ethnic identities in Chad, it is difficult to name a specific national hero or myth without neglecting another. However, many Chadians revere Félix Eboué, in whose memory a magnificent monument in N'Djamena was erected. Many Chadians are familiar with the Sao, the earliest people known to have inhabited the region surrounding N'Djamena. Legends held that the Sao were giants possessing great strength. They could run long distances in just hours, and pull up trees like blades of grass. Sao women could lift huge ceramic granaries holding an entire year's harvest with a single hand. At independence, French history was parodied, when a famous speaker, André Malraux, supposedly declared, "Mister the President, the Saos are your Gauls."

## 5 RELIGION

In Chad, the religious and social spheres are closely intertwined. Nominally, Chadians profess one of three religious traditions: traditional African religion (35%), Islam (55%), or Christianity (10%). In fact, percentages can be misleading because religion seldom exists in pure form. Muslims and Christians tend to incorporate a number of traditional beliefs into their faiths.

Traditional religion, referred to as animism because all things are thought to have life force, focuses on ancestors and place, but is specific to ethnic group. In general, animism holds that a supreme being created the world, then retired from active intervention in it. In order to maintain harmony in the world, recently departed ancestors intervene between the living and their earliest forebears. When misfortune strikes, ritual acts that include prayers, sacrifices, and libations are performed in order to restore balance. Two examples illustrate this concept in Chad. Among the more centralized societies, such as the Moundang, rulers are associated with divine power and therefore intercede with supernatural forces to maintain equilibrium in society. The Mbaye, a Sara cultural group, believes that spirits inhabit places and natural phenomena such as water, lightning, and the sun. Because the sun spirit can render good or cause harm, it must be pacified. Diviners and sorcerers are thought to possess the ability to communicate with spirits, for good and evil purposes respectively.

Islam came to Chad well before the 1300s, and spread throughout the two northern tiers. Islam mixed with traditional African religion, but in some beliefs, Chadian Muslims are very strict. For example, during the holy month of Ramadan, Muslims fast and do not swallow their saliva from sunrise to sunset.

Catholic missionaries arrived in the 1920s and 1930s, and because of French and Italian political differences, the Vatican delayed establishment of a vicariate within Chad. Catholics are mostly concentrated around the Pala diocese in Mayo-Kebbi, whereas Protestants are spread more generally throughout the south.

## 6 MAJOR HOLIDAYS

Secular holidays such as Independence Day hold less interest in general for Chadians than Muslim and Christian holidays. Traditional holidays having to do with seasons and harvesting are festive occasions, too. For example, in the Mayo-Kebbi region, the millet harvest in September–November and the New Year in December are marked by the coming out of the Toupouri chief who, prior to that, is confined to his lodge for an entire month. In his royal dress, the chief marches slowly and regally, accompanied by dignitaries. Musicians playing long calabash horns salute him, as do dancers and a line of bare-breasted maidens. Afterwards, the local hosts serve a sumptuous meal of grilled goat meat, rice and stew, and *boule* to visitors who come from great distances (with cassette recorders and video cameras) to witness this annual event.

## 7 RITES OF PASSAGE

Knowledge of the world and its processes is passed to successive generations by males in Chad's predominantly patrilineal societies. The greatest transformation occurs from childhood to adulthood, and requires that children be prepared to assume social responsibilities. In the south, the Sara *yondo*, a

male initiation ceremony, illustrates the significance of passage rites in Chadian society. Elders gather with boys in designated sites every six or seven years for several weeks during school vacations. Prior to Western schooling, the ritual lasted several months. During the initiation, the elders transfer authority. Having thus assumed manhood, the sons and brothers no longer associate with their mothers and sisters as before, and must eat and live separately. Similar ceremonies for girls teach them household responsibilities and respect for male authority.

## 8 INTERPERSONAL RELATIONS

As in other regions of Africa, greeting and leave-taking are important parts of human relations. Muslims exchange a series of greetings, asking about the other person's well-being, and that of his wife and family, too. After each exchange, one touches a hand to the breast to signal gratitude that it is so. It is an honor to receive visitors and customary to offer a glass of water if not something to eat as a sign of hospitality. In the dusty Sahel, hosts usually offer their visitors water to wash their faces, hands, and feet. In the south, visitors may find themselves welcomed by a large calabash of millet beer, which they must finish before leaving.

## 9 LIVING CONDITIONS

Chad ranks near the bottom (170th out of 177 countries) on the human development index (HDI), which measures living standards, education, and life expectancy. In 2008, life expectancy was estimated to be 47 years. Living conditions are very harsh and rudimentary in most rural areas of the country. Travel is difficult and precarious. In the desert-like regions, sand and dirt tracks crisscross in the thorn trees and scrub brush. Overloaded trucks, sometimes with flatbed trailers, move along these tracks at about 20 miles an hour, carrying passengers and goods to remote areas of the country. Trucks often bog down in mud holes during the rainy season. In 2008, Chad had only about 160 miles of paved roads in the entire country.

Medical care is spotty, especially in the northern zones, and patients must travel great distances for treatment. For lack of transportation or familiarity with modern medical care, many simply do not seek treatment in clinics or hospitals. Many Chadians depend on rain-fed agriculture, but civil war, successive droughts, and infestations of locusts render a large portion of the population food insecure. As a result of these factors, about 37% of children between 0–5 years old are underweight for their age. For every 10 children born, one dies in infancy.

In Sahelian towns, Chadian homes typically are built inside walled compounds and abut to the compound walls. Mud bricks held together with straw and camel dung are used to make the walls and the roofs. Houses consist of one or two rooms and are dark, with one or two small windows. Their primary use is for sleeping in the cooler and rainy seasons, and for storage of household belongings. Kitchen rooms are often separate, although meals often are cooked outside in the compound. In the hot dry season, Chadians sleep outdoors. People enjoy sitting under hangars made of reed mats hung upon tree limb frames. Dry pit latrines are typically located in the remotest corners of the compounds. Huts in small villages are round, and less permanent and consist of stick walls and thatched roofs. In the desert, nomads' homes may be no more than temporary frames covered with tarps.

*The sun, heat, and blowing sand in the north require clothing that covers the entire body except for the face. Men often wear light cotton pants under white cotton robes, and a white or red-and-white scarf, which they wrap around their heads in the form of a turban.*  
(United Nations)

Throughout the Sahel, water must be drawn by ropes and rubber buckets from communal wells over 125 feet deep. In larger villages, water service may be available through local entrepreneurs. Donkeys carry several water buckets per trip in leather saddle bags, one on each side of the donkey's back. The bags open from the bottom to release the water into receptacles in the compound. Unfortunately, about 58% of the population lives without access to an improved water source. Untreated drinking water is a major source of disease and parasites afflicting children and adults.

## <sup>10</sup> FAMILY LIFE

In Chad, nomadic, semisedentary, and sedentary ways of life affect family life and structure. For example, the main social unit of the nomadic Toubou and Daza of the Sahara is the clan. However, individuals often live with people from other clans in groups of around 100 people. In Toubou families, one often finds a male head of household with one or two wives, the children, and a couple of relatives. Women participate in making decisions. In their husbands' absence they manage household operations, including changing pastures, moving tents, and cattle trading. Camps of families form and disband seasonally. Clan relatives are scattered over the region; therefore, individuals usually find kinsmen in most settlements. Families and clans influence, but do not overrule, individual preference for marriage partners. Marriages between blood relatives fewer than four generations apart are forbidden. By contrast, the semisedentary Arabs of the Sahel identify with the *kashimbet*, a unit composed of an elder male or group of males, their wives,

and descendants. Unlike the nomads, Arabs usually remain with their group of kin.

## <sup>11</sup> CLOTHING

Clothing styles vary according to climate zone and ethnic group. The sun, heat, and blowing sand in the north require clothing that covers the entire body except for the face. Men often wear light cotton pants under white cotton robes, and a white or red-and-white scarf, which they wrap around their heads in the form of a turban. Women wear robes that cover the entire body except face, hands, and feet. Boys wear simply cut cloth shirts and pants, while girls may wear cotton shirts with wraparound cloth skirts. Everyday clothing becomes extremely worn from hard use and washing. Many nomads and Arabs wear sandals or go barefoot. In the south, people dress like Central Africans in colorful cotton print shirts and pants for men, and wraparound skirts and tailored shirts for women. Chadian cotton is renowned for its long strands of high quality and can be bought from the local factory.

Chadian women adorn themselves with interesting jewelry. Toubou women wear silver nose rings, while Arab women wear copper and bronze wrist and ankle bracelets, and heavy earrings that cause large openings in the lobes. Many ethnic groups distinguish themselves with decorative facial and body tattoos. Women commonly wear leather amulets to ward off evil spirits. Others wear necklaces containing colonial coins. Among the older Toupourri and Massa women in the south, one finds lip adornments. These are metal or wood plugs that pierce the upper and lower lips to indicate marital status.

Students studying to be instructors at Koukou Angarana in Bahr Azoum, Chad. To get a diploma, students must pass a state exam that has a 36% pass rate. Future elementary-school teachers take four years of general subjects, followed by two years of teacher training. (International Labour Office)

## 12 FOOD

Despite the harsh climate, Chadians grow a large variety of food. The staples are sorghum and millet. They are harvested and stored in huge ceramic or round thatched granaries, with conical thatched roofs, raised a few feet above the ground. The grains are put to versatile culinary uses, including the noon-day meal. The millet is pounded to flour by using a mortar and pestle. Often two girls will share the task, taking alternating strokes. From the flour they make a round, ball-like dough (*boule*) by adding boiling water. It is similar to *gozo* in the Central African Republic and *fufu* in the Democratic Republic of the Congo and is eaten with the right hand. In the Sahel, Chadians are fond of okra and meat sauce. Sauces are flavored with onions, tomatoes, garlic, salt, and hot pepper. Men and women typically eat separately, and men are served first. Millet also makes a delicious porridge, which is sweetened and eaten to break the fast during Ramadan. A fermented version of millet (*bili-bili*) is the most popular item on market days in the south. It is served from large calabash gourds and poured into calabash bowls. The sudsy brew has a sour, smokey flavor. Calabashes must be emptied completely before the drinkers retire. As proof that no beer remains, the calabash is tipped over on its side.

Chadians supplement their diets with many other foods such as squash, beans, peanuts, sesame seeds, and cucumbers. In the north, fruits include limes and dates, whereas one finds guavas, bananas, and mangoes in the south. Travelers find grilled goat meat with dried hot pepper, and freshly squeezed lime at “truck stop” eateries in Sahelian roadside vil-

lages. It is especially delicious when fresh-baked French bread is available. Chadians also enjoy many kinds of fish. Huge river perch, known as *capitain*, are taken from the Chari and Log-one Rivers. They are so named because French officers always demanded the largest of the catch, so naturally they went to the captain.

## 13 EDUCATION

Formal Western schooling only recently came to Chad. Protestant missions began establishing primary schools in the 1920s, followed by Roman Catholic and state schools. Until 1942 Chadian children had to go to Brazzaville (Congo) to attend high school. Nowadays, primary school is compulsory, although only one in four children actually attends. There are far more elementary and high schools in the south than in the north. Students who make it to high school attend either a four-year program (*collège*) or a seven-year program (*lycée*). To get a diploma, students must pass a state exam, the bac, which has a 36% pass rate. Future elementary-school teachers take four years of general subjects, followed by two years of teacher training.

Ten years after independence, Chad opened its first university for the 1971–72 academic year. In 1983–84, the university had an enrollment of 1,643 students with 141 teachers. Unfortunately, civil war disrupted education at all levels, and university archives were looted during battles in N’Djamena in 1979 and 1980. Besides the effects of the war, limited financing, overcrowding, and the classical French curriculum have made it difficult for Chadian children to excel in school. Model schools

now are switching to teaching French as a foreign language. A surprising statistic is that despite a combined primary, secondary, and tertiary enrollment of only 37.5%, almost half of the population can read and write in French or Arabic. This result may be attributed to high attendance at Quranic schools where children learn basic Arabic and recite the Quran.

#### **14 CULTURAL HERITAGE**

Many Chadians express their cultural heritage through ceremonial dress, music, and dance, which link the material and supernatural worlds. The Chadian national folkloric ballet is particularly famous. Chadian craftsmen produce instruments of extremely high quality using materials such as wood, animal gut and horns, and calabashes. Among the principle instruments are tam-tams, pottery drums, goat-horn whistles and flutes, and gourd-calabash horns. The latter often are stained, burned with intricate designs, and decorated with animal hair. Chadians also excel at making five-stringed harps and *balafons*, which are similar to xylophones, and consist of a several resonant wood bars, each sized and sculpted to give the desired pitch, and lashed to a frame. Beneath the wood keys are gourds, which amplify the sound. Village headmen still maintain specially designed drums in their compounds, used to send urgent messages, such as announcing the death of an important person, to the people of the local and neighboring communities.

#### **15 WORK**

By world standards, Chad is one of the most undeveloped countries. More than 80% of Chadians are engaged in subsistence farming, herding, and fishing. Prior to exporting oil, cotton, the biggest cash crop, provided more than 50% of the country's foreign earnings. Most industrial jobs are found in light industries including textiles, meatpacking, beer brewing, and the manufacture of natron, soap, cigarettes, and construction materials. In late 2003, ExxonMobil's consortium began pumping oil in the southern region of Eastern Logone via a 650-mile pipeline through Cameroon to the port of Kribi on the Gulf of Guinea. But owing to corruption and diversion of proceeds to arms instead of infrastructure, Chadians have yet to benefit from the jobs and economic growth that the oil boom was expected to generate. In the foreseeable future, Chadians likely will continue to make their livelihoods mainly in the subsistence sector.

#### **16 SPORTS**

Coping with natural hazards and political upheaval has not given Chadians much time for recreational sports. While hunting and fishing may provide leisure sport activity for foreigners, Chadians hunt and fish out of necessity. Children and young people do play organized soccer, European handball, and basketball. In the cities, soccer club teams compete with one another, and the game is played wherever space permits. Apart from these, horse racing is practiced in makeshift hippodromes in the Sahel, northeast of N'Djamena. Arabs and certain other groups are excellent riders, have fine race horses, and organize races each Sunday throughout the dry season.

#### **17 ENTERTAINMENT AND RECREATION**

In contrast to American teenagers, most Chadian young people never have gone to the movies or watched a movie on a video cassette recorder or DVD player. Many have never seen television. In 2008 there were only six radio stations and one (government) television station in the country. The total number of Internet users was well under 100,000. It is safe to say that with the exception of a small urban elite, Chad remains one of the few places in the world insulated from American and Western pop culture. To the extent that Chadian entertainment exists, it consists of social and cultural events and ceremonies, which include dancing, drumming, and musical performance (see **Cultural heritage**).

#### **18 FOLK ART, CRAFTS, AND HOBBIES**

Traditional folk art in Chad serves aesthetic as well as functional purposes and has a long history dating to the iron age. Artists and craftsmen belong to castes, which are select groups of people who once married only among themselves. They have learned, mastered, and passed on the traditions and techniques of their manual craft to sons and daughters. In ancient times, a mystical, religious quality characterized blacksmithing. Kings wanted to monopolize the magical process of producing weapons such as arrow tips, spears, and daggers. They also recognized the usefulness of iron household, farming, and hunting tools such as knives and hoes. Having descended from this heritage, Chadian artists still produce a wide range of articles of genuine artistic merit and practical utility. These include musical instruments, masks, jewelry, ceramic pots, and bronze statuettes and figurines. Craftspersons spin cotton fabrics and weave strips of cloth that are sewn together to make durable garments. They also fashion leather goods from sandals to amulets. Of particular note are the practical and attractive gourds and pyroengraved calabashes, whose designs can be traced to ancient Babylonia. The gourds serve as kitchen utensils, measures, and food and drink receptacles.

#### **19 SOCIAL PROBLEMS**

Chadians have endured political anarchy, lawlessness, rebellions, and civil war since independence. They now live with the oil resource curse. In 2005, Transparency International ranked Chad along with Bangladesh as the world's most corrupt country. The southern oil fields produce more than 160,000 barrels of oil a day, yet four out of five Chadians live below the poverty line (less than \$2/day).

In addition to coping with poverty, Chadians along the eastern border with Sudan have been subjected to cross-border raids. Refugee children are recruited to fight in rebel groups from both Chad and Sudan, and some 200,000 internally displaced people have been forcibly moved several times owing to inter-ethnic attacks. The violence and disruption have increased the number of orphans and caused additional stress on caregivers. The hosting of some 230,000 refugees from Darfur and more than 40,000 refugees from Central African Republic also has increased pressure on land and local communities, speeding the pace of environmental degradation. Competition with local people for wood, water, grazing land, and goods and services has led to anti-refugee sentiment. Prostitution has become particularly rampant in the southern Dabo oil fields area.

## 20 GENDER ISSUES

While the law prohibits discrimination based on gender, and prohibits rape, prostitution, and domestic violence against women, Chadian customary law and society inherently favors men. Wives traditionally have been considered property of their husbands, and have limited recourse to justice under the law. Husbands may also at any time enter into a polygynous relationship without their wives' consent. Although the first wife has the right to request that her marriage be dissolved, she must pay back the brideprice and other marriage costs. While French code provides for the right of women to own and inherit property, in practice most inheritance cases are adjudicated in favor of men. In rural areas women do most of the agricultural labor, household chores, raise the children, and enjoy little free time. Gender bias will continue to be an issue in the future as only 31% as many females as males are literate, and only 60% as many females as males attend primary, secondary, and tertiary schools.

# CHAGGA

**PRONUNCIATION:** CHAH-guh

**ALTERNATE NAMES:** Chaga, Waschagga, Jagga, or Dschagga

**LOCATION:** Kilimanjaro region in northern Tanzania

**POPULATION:** 1,500,000

**LANGUAGE:** Kichagga, Swahili

**RELIGION:** Christianity, Islam

**RELATED ARTICLES:** Vol. 1: Tanzanians

## 1 INTRODUCTION

On the southern slopes of Mt. Kilimanjaro, Africa's highest mountain, live the Chagga people, also called Chaga, Waschagga, Jagga, or Dschagga. Administratively, the area lies in the Kilimanjaro region in northern Tanzania, south of the border with Kenya. The region is further divided into three districts—Hai to the west, Rombo to the east, and Vunjo in the center.

Traditionally the Chagga people belonged to different clan groups ruled by *mangis* (chiefs). Examples of clan group names include *Moshi*, *Swai*, *Marealle*, *Lvimo*, and *Mrema*. The area was thus divided into independent chiefdoms. The chiefs were known to wage wars against each other and at times to form alliances between themselves in their struggle for power. Thus, the number of chiefdoms declined over the years. By 1968, there existed 17 chiefdoms, namely Machame, Kibosho, Mamba, Mwika, Kibongoto, Uru, Ussemi, Kirua Vunjo, Mkuu, Marangu, Mashati, Arusha Chini, Masama, Kahe, Old Moshi, Kilema, and Keni-Mriti-Mwengwe. The chiefdoms were further divided into subunits called *mitaa*.

After independence, through Nyerere's socialism and integration policies, the rule of Chiefs was diminished and later the system of chiefdoms was abolished in Tanzania. Tanzania obtained independence in December 1961 and Julius Kambarage Nyerere (1922–1999), a socialist leader who led Tanganyika from colonial rule, was elected president in 1962. One of Africa's most respected figures, Julius Nyerere was a politician of principle and intelligence. Known as Mwalimu (teacher), he had a vision of education that was rich with possibility. Nyerere voluntarily relinquished power in 1985, but the legacy of his nation building efforts can be found throughout the country. Beginning in the mid-1980s, under the administration of President Ali Hassan Mwinyi, Tanzania undertook a number of political and economic reforms. In January and February 1992, the government decided to adopt multiparty democracy from single party rule. Legal and constitutional changes led to the registration of 11 political parties. Two parliamentary by-elections (won by the ruling Chama Cha Mapinduzi [CCM] party) in early 1994 were the first-ever multiparty elections in Tanzanian history. In October 2000 Tanzania held its second multi-party general elections. The ruling CCM party's candidate, Benjamin W. Mkapa, defeated his three main rivals, winning the presidential election with 71% of the vote. In 2005 Benjamin Mkapa retired after 10 years in power. During the elections of December 2005 ruling party candidate Jakaya Kikwete was elected president by a decisive margin.

## 2 LOCATION AND HOMELAND

Mount Kilimanjaro has two peaks. Kibo is the main snow-capped peak. Mawenzi is the jagged second peak connected to

Kibo by a saddle. Vegetation on the mountain is varied. The lowest plains form the bushland, and maize, thatch grass, and fodder are grown there. Next lies the coffee and banana belt, where the Chagga have their homesteads. The Chagga people do not live in villages in the rural areas. Instead, each family has its own homestead in the middle of a banana grove. This is known as a *kihamba* (plural *vihamba*). Household plots are next to those of the same clan. With increased population density and division of land holdings, there are hardly any unoccupied areas between the various lineage territories.

The Chagga population has risen steadily from 128,000 in 1921 to 832,420 in 1988 to 1.5 million people in 2003. Overpopulation has forced some Chagga people to move to the lowlands and migrate to urban areas such as Dar es Salaam and Arusha.

### 3 LANGUAGE

The main language spoken by the Chagga people is Kichagga, which differs in dialect between the different Chagga regions. Despite these differences in dialect, the Chagga people can understand one another. The dialectic differences help an individual detect which region another person is from.

Almost all Chagga people also speak Swahili, the national language in Tanzania. Swahili is the medium of instruction in primary schools and is used in the workplace. English is the medium of instruction in secondary schools and institutions of higher learning. Those persons fortunate enough to obtain advanced education have some understanding of English.

### 4 FOLKLORE

Chagga legends center on *Ruwa* and his power and assistance. *Ruwa* is the Chagga name for their god, as well as the Chagga word for "sun." *Ruwa* is not looked upon as the creator of humankind, but rather as a liberator and provider of sustenance. He is known for his mercy and tolerance when sought by his people. He has provided bananas, sweet potatoes, and yams. Some Chagga myths concerning *Ruwa* resemble biblical stories of the Old Testament.

The various chiefdoms have chiefs who have risen to power through war and trading. Some famous past chiefs include Orombo from Kishigonyi, Sina of Kibosho, and Marealle of Marangu.

### 5 RELIGION

Christianity was introduced to the Chagga people about the middle of the 19th century. By the end of the 19th century, both Protestants and Catholics had established missions in the region. Today those regions where the Catholics had established themselves, such as Kilema and Kibosho, are predominantly Catholic, and those regions where Protestants were established, such as Machame, are mainly Protestant. The Christian influence spread both through preaching and through the provision of education. With the adoption of Western religions, traditional Chagga beliefs and practices have been reduced and synchronized to the new Christian beliefs. Prayer books and hymnals have been translated into Kichagga.

Islam was introduced to the Chagga people by early Swahili caravan traders. Islam brought a sense of fellowship not only with the Chagga of different regions, but also with Muslims of other ethnic groups.

### 6 MAJOR HOLIDAYS

Major holidays celebrated by the Chagga people are both secular and religious. The main government holidays presently celebrated are New Year's Day (January 1), Union Day (April 26), Workers Day (May 1), Peasants Day (August 8), and Independence Day (December 9). On government holidays, the public rests and offices and shops are closed. Government rallies are held around the country, with military parades and speeches made by government officials.

The major religious holidays of both Christianity and Islam are celebrated. The major Christian holidays are Easter weekend and Christmas. The major Muslim holidays are *Id-el-Fitre*, *Id-el-Hajji*, and *Maulid*. Religious holidays are a time when family members make an effort to gather. People in urban areas try during these times to visit the rural areas for family gatherings. After the religious ceremonies are over, families gather for celebration and merrymaking. They feast on goat, chickens, and cattle, and drink both local and traditional brews.

### 7 RITES OF PASSAGE

For the Chagga, dying without children means the end of the lineage. A Chagga proverb—"He who leaves a child lives eternally"—illustrates the Chagga belief that people live through their descendents. It is used as a blessing or in congratulation on the birth of a child. After the birth of a child, a Chagga mother remains inactive and indoors for three months, during which time she is taken care of by her husband and in-laws. It is the duty of a woman's husband and family to supply her with milk, fat, blood, and other nourishing food. After three months, a mother may appear in public and resume normal life.

A child may be considered unlucky for several reasons. If a child cut its upper teeth first, it is considered unlucky. A child conceived too soon after the death of another child is also considered unlucky, as are twins. In the past, an unlucky male child was killed; an unlucky female child and her mother were returned to the woman's parents.

Children are taught to do small chores around the homestead as soon as they can walk. Girls' duties include grinding corn and cleaning out cattle stalls. The boys' main duty is to herd cattle. A rite called *Kisusa* is carried out when a child is about 12 years old. This rite is performed to curb unruliness in a child. The youth's relatives attend the ceremony, which is conducted by a female elder and a young man who has already undergone the rite. A goat is slaughtered and divided into portions for consumption and sacrifice. The elder woman and initiated youth sing songs of good morals and talk to the initiate about good behavior. For a month, the youth's behavior is closely watched, and he is often corrected. When the elder woman is satisfied with the initiate's behavior, friends and relatives are invited for a purification ceremony of singing and offering prayers to the ancestors. The same ceremony is repeated a month later.

In the past, both young men and young women were circumcised. *Maseka* is the term used for uncircumcised boys. There was a general circumcision that would take place corresponding with the circumcision of the chief's son. There was no particular age for circumcision, but youth were generally circumcised during the cooler months from June to August. The circumcised youth are called *Mangati*, and they now form a *rika* (generation group) and are given a name referring to

the specific circumcision age group. Examples of *rikas* include *Kimakamaka* (youth), *Mbarinoti* (elders), and *Merisho* (old men). The age classes ended with the German occupation of Tanzania. The circumcision of boys now usually takes place in a hospital, where the conditions are more sterile. Female circumcision is now discouraged.

Traditionally, before young males were allowed to marry, the *Ngasi*, or initiation ceremony, took place. The youth would reside in the forest to keep the initiation process a secret from young women and children. There the youth received instruction on manhood, went hunting and endured various ordeals, especially the cold weather. The female equivalent of the initiation ceremony was called *Shija* and was performed after the young women were circumcised. All initiated young women underwent two months of instruction together in a banana grove, returning to their homes at dusk each day. They were instructed in Chagga rituals, sexuality, procreation, and menstruation. Initiation ceremonies no longer take place, as they were abolished by the Germans.

At death, the old Chagga custom was to bury only those corpses of married persons in huts. Husbands were buried inside their senior wives' huts, under the milk store. After viewing in the cattle stall, the corpse is buried seated or lying facing Kibo (Mount Kilimanjaro). Relatives were chosen to keep watch over the grave until the ceremony of shaving took place. Family members usually shaved their heads on the third day after burial. This was followed by the distribution of the deceased's property. About two years after the burial, amid ceremony, the bones were removed from the hut and moved to a sacred spot in the banana grove. It was against Chagga law to bury childless persons, unmarried persons, and children. Childless adults were deposited in the bush with their belongings. Youth and children were placed in the banana grove. The banana grove is viewed by the Chagga people as the family graveyard. Currently all corpses are buried according to either Christian or Muslim rituals. Wealthier Chagga living in the urban areas may decide to transport a corpse back to the homestead for burial. Most families wear black or drab clothing as a sign of mourning.

## 8 INTERPERSONAL RELATIONS

Greetings are important in Chagga culture. There are different greetings depending upon the time of day. The Machame may greet each other in the morning with *nesindisa*, while the Kibosho use *shimboni*. Greetings are exchanged before any other exchange of words or actions. When joining a group of people, it is customary to greet each person in the group. Elders are usually greeted first by the younger generation; younger people are required to show respect to the older generations. It is believed that the more senior a person is, the closer his or her contact with ancestors. Even when passing a person on the road, greetings are exchanged inquiring after one's journey, with the visitors usually initiating the greetings.

Specific behavioral norms are maintained between various persons in Chagga society. These are based on a show of respect, non-hostility, or distance. A newlywed woman would cover her head and squat in the presence of her father-in-law, thereby showing respect to and distance from him. The father-in-law is similarly required to avoid the daughter-in-law. A friendship ritual is held after the birth of a first child to remove some conditionalities of behavior between the in-laws. A wife

is required to always face her husband on approach lest she be accused of cursing him.

Relationships between men and women were based on social segregation. Publicly, male and female couples do not hold hands. Public show of affection through bodily contact is considered highly inappropriate between the sexes. It is considered acceptable, however, for male companions and female companions to hold hands out of affectionate camaraderie. Traditionally, men and women were socially segregated. Couples did not eat together at home; mothers usually ate with their children, while the father ate by himself. At social gatherings, men and women kept to themselves in separate clusters. Currently, men and women still sit separately at social functions and even in churches.

During celebrations, guests generally drink and dance in separate groups, according to generation. The older, married people make one group, while the younger people make up the other. This is because the older group may get quite rowdy. They prefer to be able to speak freely among themselves without having to worry whether the conversation is appropriate for the younger generation. Married couples, especially of the younger generation, may eat and socialize together at smaller gatherings.

When visiting, one is expected to arrive with a gift for the host family. A visitor staying for some time is expected to help with the family work. Visiting family and friends usually takes place during the late afternoon hours when most of the farm work is done. If a visitor arrives at mealtimes, he or she is invited to partake of the meal. It is considered an insult to refuse; one must at least pretend to eat a little. When departing, a visitor is escorted part of the way by the host and family. Even in urban areas, a visitor may drop in anytime and is always warmly welcomed.

## 9 LIVING CONDITIONS

The traditional Chagga house was conical and grass-thatched. Alternatively, a flatter, curved, banana-leaf-roofed house could be built. Because these houses tended to be large, up to 7.5 meters (25 feet) round and over 6 meters (20 feet) high, they were built with the assistance of other villagers. The doorway formed the only opening in the house's walls.

By the end of the 19th century, Swahili houses were introduced, initially constructed by chiefs. These houses were rectangular, with walls made of wattle (interwoven sticks) and mud, and thatched roofs. Today, these houses are more commonly built with cement walls and corrugated metal roofs. Wealthier Chagga families have built elaborate houses on their property.

The infrastructure in the region is more developed than in most other regions in Tanzania. The major roads are either tarmacked or all-season dirt roads. Buses transport villagers daily to and from Moshi town and other regional locations. Wealthier individuals may even own small trucks and pickups. These provide rides to villagers who may agree to ride in the back in exchange for a small fare. Most villagers, though, prefer to walk when visiting neighboring areas and villages. Piped water is provided through village taps and water pumps. Electricity is provided throughout the Kilimanjaro region at low cost from the 'Nyumba ya Mungu' dam. Phone lines may be seen crisscrossing the area, providing this service to those able to afford it. Many villagers have access to such facilities. Today,

the landlines are being replaced by the ever proliferating cell phone.

The Chagga people are adapting to modern life within a rural setting. Their child mortality rate has fallen due to access to mother and child health services, health education, and immunization services. Small health facilities are available in rural areas, with larger hospital facilities in urban areas.

## 10 FAMILY LIFE

Traditionally, the Chagga marriage ceremony was a long process, starting with the initiation of betrothal proceedings and continuing long after the couple was married. In the past, parents initiated their children's betrothal, subject to the children's agreement. The groom assured himself that the bride consented to the marriage by inviting her and her friends to visit him. A married male relative of the groom was chosen to be the *mkara*, the person who oversaw the marriage transactions and the marriage itself. This man and his wife, also called a *mkara*, were like the best man and matron of honor to the couple. In times of marital conflict, they became mediators and advisors to the couple. Bridal payments were made over the wife's lifetime.

Today, Christian couples are married in churches. In Christian weddings, the young woman is brought to the church by her family and friends, and there she meets the groom. Following the ceremony is a reception given by the groom's family. Later, the couple may leave for a short honeymoon if they reside in an urban area. In rural areas, the couple leaves for the father-in-law's homestead, where a second celebration will take place a few days later. Throughout the marriage negotiations and celebrations, there is much drinking and feasting.

The groom is required to build his own house in which the couple lives together after marriage. After the birth of the first child, the husband moves into a *tenge* (hut), and the mother lives with her children.

Due to the Christian influence, marriages are now often monogamous. Chagga couples have an average of six children. Great importance is placed on having a son to continue the lineage. The first male child and female child are considered to be of the father's side and are named accordingly. The second male child and female child are considered to be of the mother's side and are also named accordingly, and so on with the other children.

Chagga families sometimes keep dogs and cats, but they are not inclined to keep other kinds of animals.

## 11 CLOTHING

Traditionally, Chagga clothing was made of cowhide. With contact with the outside world, the Chagga started to wear imported bead ornaments and imported cloth wraparound garments. These colorful pieces of cloth are used as wrappers around the body and are called *kangas* and *kitenges*. The cloths may be worn over a dress, or may be used to carry babies on the back or hip. Women may purchase cloth from the marketplace or shops and sew their dresses and skirts. Men may also purchase cloth and take it to a tailor to make trousers or a shirt. Elder women still prefer to wrap long cloths over their clothes.

Women and girls do not wear short clothes in public except during sports. Men generally do not wear shorts in public either. Shorts are considered for sports and schoolboys. Sec-

ondhand clothing from overseas (*mitumba*) is sold at the marketplace and is in great demand by the low-income people.

## 12 FOOD

The staple food of the Chagga people is bananas. It is also their main source of drink; they produce beer with the addition of eleusine, a grain. The Chagga plant a variety of food crops, including a variety of bananas, millet, maize (corn), beans, and cassava. They also keep cattle for meat and milk, as well as goats and sheep. Due to limited land holdings and grazing areas, most Chagga people today are forced to purchase meat from butcher shops.

Pregnant women are fed on milk, sweet potatoes, fat, yams, and butter; these are considered female foods. Bananas and beer are considered male and not to be eaten by pregnant women. During the three months after delivery, a lactating mother is fed with a special dish made up of blood and butter, called *mlaso*. *Kitawa*, a special dish of bananas and beans is also prepared for her. *Mtori*, a soup dish prepared from bananas and meat, has spread in popularity in other parts of Tanzania.

## 13 EDUCATION

The initial classroom education available to the Chagga was in the Christian missions. Many Chagga wished for their children to receive this education and paid for it through the sale of their coffee crop. Chagga who could obtain some training rose in status in their local areas. Boys often outnumbered girls in the education facilities, because education was not considered as important for girls as for boys. Many parents also believed that it was a waste of money to educate daughters who would move to other households at marriage.

After Tanzania's independence, all Chagga people were encouraged to attend at least primary level education. By 1971 primary education was provided free by the government, and all children seven years of age and older were required to attend primary level education for at least seven years. This was followed by four years of secondary education for those who passed the national examination at the end of the first seven years. Today many private secondary schools are available in the Kilimanjaro region, providing an alternative for those not lucky enough to continue in government schools. There are also alternative trade and business schools for those students wishing to acquire skills.

Older people are involved in adult literacy programs. Many Chagga can read and write Swahili or Chagga.

## 14 CULTURAL HERITAGE

Wooden flutes, bells, and drums make up traditional Chagga instruments. Dancing and singing are part of almost every celebration. The Chagga have different types of dances depending on the occasion. *Rosi*, the war dance, is performed by males only. The *irirui* dance was danced by everyone at various occasions. With exposure to other ethnic groups and Western culture, the Chagga have shown a liking for various types of music. Swahili songs produced by various Tanzanian bands may be heard frequently over the airwaves in public places such as shops and buses. West and Central African music and dance forms are also gaining in popularity, and it is not uncommon to hear such songs at celebrations such as wedding feasts. Western music and dance such as reggae, pop, and rap are also popular with the youth.

The Chagga have rich oral traditions and have managed to record most of their history. They have many legends and songs, and proverbs are used to guide youth and convey wisdom. "A snail cannot destroy the grove," for example, refers to the fact that a person should aid others in distress without fear of being harmed.

### 15 WORK

Traditionally, Chagga work has been centered on the farm and is divided into men's work and women's work. Men's work includes feeding goats, building and maintaining canals, preparing fields, slaughtering animals, and building houses. Women's work includes firewood and water collection, fodder cutting, cooking, and cleaning of the homestead and stalls. Women are also in charge of trading in the marketplace.

In Kilimanjaro, coffee is still the principal cash crop. With ever diminishing land holdings, Chagga men are forced to seek employment in the urban areas. The wife is usually left to tend the homestead and children, and her husband visits only periodically. Eventually, his wife and family may join him in the urban area.

The more educated a person is, the better his or her chances of finding employment. Many Chagga young people work as clerks, teachers, and administrators, and many engage in small-scale business activities. Quite a few shop owners and street corner vendors all over the country are Chagga. The Chagga are known for their sense of enterprise and strong work ethic.

Women in rural areas are also forming income-generating groups involved in activities such as crafts and tailoring. These groups—promoted by churches, government agencies, non-governmental organizations, donor agencies, and political parties—help to increase their members' respectability and prestige in their communities. The groups offer an additional source of income for women outside their farming activities.

### 16 SPORTS

Chagga children first encounter sporting events at school. Primary school children are encouraged to participate in inter-school competitions that often lead to inter-regional and national championships. Favorite sports at school are soccer, netball, and athletics. At secondary schools, Chagga youth may be exposed to more sports such as basketball, table tennis, and volleyball.

Following the national soccer league is a national pastime greatly enjoyed by the Chagga. On the weekends, proper and makeshift soccer fields are crowded with both spectators and players alike.

### 17 ENTERTAINMENT AND RECREATION

For many years there were no television stations in Tanzania, so radio broadcasts were a major source of entertainment. Many households have transistor radios, and a favorite pastime is listening to radio plays and sports programs. On occasions of major broadcasts and matches, the Chagga often gather around a radio in a public meeting place, usually with a local brew on hand.

In the past, only the wealthy Chagga could afford television sets. They would tune in programs broadcast by neighboring Kenyan stations. Now many Chagga people own televisions and VCRs. This has led to the opening of many video lend-

ing libraries in the town of Moshi. Action movies are the most popular. On weekends, some public meeting places offer video shows for a small fee.

### 18 FOLK ART, CRAFTS, AND HOBBIES

Traditionally, the Chagga made their own utensils, mainly from wood. These items included small bowls, huge beer tubs, spoons, and ladles. Iron items included bells, ornaments, hoes, and spears. The Chagga made their own weapons and animal traps. Chagga musical instruments include wooden flutes, bells, and drums. Basket weaving was also common, although this art is now dying out as more items are bought at local stores.

### 19 SOCIAL PROBLEMS

Like other Tanzanians, the Chagga face the problem of declining standards of living. Tanzania has faced a period of economic hardship that has severely affected the government's ability to provide adequate social services. Schools and health facilities are run down, which affects the quality of service provided. It is not uncommon to find children sitting on a school floor, and hospitalized patients without medicine. The government has been forced to charge nominal fees for some services that were once free; it has also encouraged the establishment of private facilities to provide similar services. In response, many private schools and health facilities have opened in the Kilimanjaro region. The region now has the highest number of private secondary schools in Tanzania, attracting students from around the country.

Lack of adequate farm land is forcing Chagga youth to seek work away from the *kihamba*. Many are now involved in business and trading, which takes them out of the region to places such as Dar es Salaam, Mwanza, and even into Kenya. Sellers come to local markets such as Ndishi with goods such as cooking oil, soap, and sandals. Other traders transport goods such as bananas to outside markets. All this upheaval has led to a breakdown in social values and an increase in sexual promiscuity. This in turn has brought about an increase in the number of children born out of wedlock and an increase in sexually transmitted diseases, especially AIDS. The increase in AIDS cases is believed to be related to this migration to urban areas. AIDS awareness programs have been initiated to help deal with the problem.

Loss of Chagga culture is another consequence of outside contact. Some youth are dropping their Chagga names, and are using Christian or Muslim names that hide their cultural identity. Inter-marriage with other tribal groups is causing the Chagga to bury their cultural identity and adopt a more generalized Tanzanian one that is easily influenced by Western cultures.

The political scene has changed in Tanzania from a single party in 1965 to multi-party politics in 1992. This has encouraged more Chagga to be politically active by forming and joining new political parties. There is an increasing cohesion of the Chagga people along party lines and a renewed sense of cultural identity. However, multi-party politics are still in their infancy, and it is hoped that the country can steer clear of the political confrontation that has plagued neighboring countries.

## 20 GENDER ISSUES

In Tanzania, as in many other African countries, women seeking more rights and gender equity face problems created by traditions and customary laws which often discriminate, oppress, and exploit women. Most often women are deprived of their rights to education, information, technology, the means of production such as land, as well as owning property even where the constitution and some laws provide room for gender equality. In Tanzania for example, inheritance laws marginalize women and girls where women are often seen as less equal in status and stature than men. Most institutions and organizations are structured hierarchically and dominated by males. Women's specific needs and interests are often taken less seriously with little regard for gender equality in spite of the constitution guaranteeing such rights for everyone irrespective of gender. It is in this context that we need to understand and place the rights of women in Chagga society.

In the present-day modernizing cultural context, Chagga women have slowly begun to change their roles in society. The increasing participation of Chagga females in modern secondary school and higher education has resulted in dramatic changes with regard to Chagga women's participation in cultural, social, and economic activities. A common saying among educated Chagga women is "education is my husband." An educated Chagga woman empowered with her western style education might go on to have children without marrying. She can have a modern job as a secretary or a bank clerk to sustain her household without a man being present. Even in traditional Chagga society, married women maintain close ties with their natal families and have a reputation for being strong-willed and stubborn and having "excessive power." There is no question that the growing power Chagga women enjoy in the modern world is a direct result of their schooling, which is used as cultural capital. Today more than half of the graduates of local secondary schools in Chaggaland are girls and a disproportionate number of Chagga women are found in national universities. Thus modern education has become a form of female inheritance, bestowing upon them independence from the male dominated culture. In short, Chagga women have shown that in modernizing society, it is possible for women to wield some power through education, a factor which opens the door to female empowerment.

With reference to homosexuality, sexual acts between males are illegal in Tanzania. Sections 154 to 157 of the Tanzanian penal code criminalize sexual relationships between men. The penalty for a person who is convicted with this offence is a maximum sentence of 14 years in prison. Sexual acts between women are not mentioned in the penal code. This does not mean that female homosexuality was unknown when the laws were enacted. Rather, that it was not considered a threat to society and was thus largely accepted and tolerated. The penal code is applicable on the Tanzanian mainland but not on the semi-autonomous island of Zanzibar. In 2004 Zanzibar enacted a law criminalizing female homosexual acts. In Zanzibar, sexual acts between women are punishable by a maximum prison term of five years; the same prison term also applies to gay men. Gays or lesbians who celebrate their union in a manner that approximates a marriage ceremony or who live together as spouses in Zanzibar can be subjected to seven years imprisonment if convicted. However, with more activism it is

hoped that in the near future restrictions on homosexuality will be eased.

# CHEWA

**PRONUNCIATION:** CHAY-wah

**LOCATION:** Malawi; Zambia; Mozambique

**POPULATION:** 9,300,000 in Maravi group

**LANGUAGE:** Chichewa; English

**RELIGION:** Protestant; Roman Catholic; traditional beliefs; Islam

**RELATED ARTICLES:** Vol. 1: Mozambicans; Zambians

## <sup>1</sup> INTRODUCTION

The Chewa, one of the Bantu peoples, live in central Malawi and spill over into parts of Zambia and Mozambique. Related groups such as the Nyanja and Mang'anja are found in southern Malawi. Together, the Chewa and related peoples are known as the Maravi group. Pushed by wars, disease, and other maladies from their original homeland around the Congo area, the Maravi were the first group of Bantu peoples to move into present-day Malawi during the early part of the 16th century. As a matter of fact, the name Malawi is derived directly from the term Maravi. The Maravi found fertile lands for settlement in the plains and valleys of central Malawi. Other Bantu groups such as the Tumbuka, Tonga, Yao, Lomwe, and Ngoni moved into Malawi long after the Maravi group had successfully established itself.

From their initial settlement at the southern tip of Lake Malawi, the Maravi began to disperse to different parts of the country. The group that migrated westwards into central Malawi and eastern parts of Zambia came to be known as the Chewa. Another splinter group moved into the Lower Shire valley of southern Malawi and became known as the Mang'anja. The era of the European and Arab slave trade during the 18th and 19th centuries ravaged the Mang'anja and the Chewa. Some areas in southern Malawi were completely depopulated. In the latter half of the 19th century, Malawi was colonized by the British and became known as Nyasaland. Malawi gained its independence from the British in 1964 under the leadership of Dr. Kamuzu Banda, a Chewa from central Malawi. Dr. Banda ruled Malawi as a dictator from 1964 to 1994, when democracy was finally restored in a dramatic but peaceful transition. Dr. Banda and his Malawi Congress Party lost the elections to the United Democratic Front (UDF) led by Bakili Muluzi, a former protégé of Dr. Banda.

President Bakili Muluzi ruled Malawi from 1994 until 2004 after two consecutive terms in office when he was replaced by his handpicked successor, Dr. Bingu wa Mutharika, in the general elections that were held in 2004. In 2002 he proposed an unpopular amendment to Malawi's constitution that would have allowed him to run for a third term, but this was abandoned due to demonstrations against him. During Muluzi's tenure as president, his administration was marred by scandal and corruption, particularly due to the sale of Malawi's reserves of maize to other countries shortly before the onset of a drought, which resulted in famine throughout the country. The millions of dollars realized from the sale of Malawi's food reserves have never been turned over, and it is widely suspected that it wound up in foreign accounts belonging to Muluzi and his supporters. Even after relinquishing power as president, Muluzi remains the head of the UDF. Soon after the take-

over of government by Bingu wa Mutharika in 2004 a dispute between Muluzi and Mutharika arose. This resulted in Mutharika leaving the UDF and forming his own party, the Democratic Progressive Party, in February 2005. In contravention of the two term limit as stipulated in the constitution, Muluzi announced in March 2007 that he would seek the party's nomination as its presidential candidate in 2009. The constitution refers to a limit of two consecutive terms of five years per term. Muluzi and his supporters believe that this enables him to run again after being out of office for a term while the majority of the population believe he is barred from running as president for the rest of his life after serving the two consecutive terms. Sentiments are rife in Malawi to amend the constitution so the word "consecutive" is removed.

## <sup>2</sup> LOCATION AND HOMELAND

About the size of North Carolina, Malawi, an elongated landlocked country, is located in east-central Africa. It stretches for about 900 km (560 mi) from north to south and varies in width from 15 km to 160 km (9–100 mi) from east to west. The prominent geographical features include the spectacular Rift Valley occupied by Lake Malawi, Lake Malombe, and the Shire River; high mountains and plateaus; and high plains such as the Lilongwe Plains—the heartland of the Chewa people. Lake Malawi takes up nearly 20% of Malawi's land area.

The presence of mountains, plains, valleys, and plateaus in close proximity results in dramatic variations in climate, soils, rainfall, flora, and fauna. Because of the varied topography, the country experiences moderate and relatively comfortable temperatures throughout the year, ranging from a low of  $-9^{\circ}\text{C}$  ( $15^{\circ}\text{F}$ ) during the cold season in June, to a high of  $29^{\circ}\text{C}$  ( $85^{\circ}\text{F}$ ) during the dry, hot season in October. The highest temperatures are found along Lake Malawi and in the Lower Shire Valley, which is only 70 m (230 ft) above sea level. In these areas temperatures can get as high as  $38^{\circ}\text{C}$  ( $100^{\circ}\text{F}$ ). Climate in the plateaus and high plains such as the Lilongwe Plains is mostly temperate.

Lilongwe, the post-independence capital city of Malawi, is located in Chewa-dominated central Malawi. Established in the early 1970s, Lilongwe has grown rapidly and boasts a population of about 744,400 people. In terms of ethnic composition, Malawi is a conglomeration of 15 different ethnic groups, with the Maravi complex (Chewa and Mang'anja) as the most dominant group. The Maravi account for 58% (or 7,540,000 people) of the total population of Malawi, currently estimated at 13 million people. Other significant ethnic groups include the Lomwe (18% or 2,340,000), the Yao (13% or 1,690,000), and Ngoni (7% or 910,000). However, Chichewa is also spoken in Zambia, Zimbabwe, Mozambique and Tanzania (where it is known as Nyanja or Chinyanja). It is estimated that the total population that speaks this language in these four countries numbers upwards of 9,500,000 with the majority (7.5 million) resident in Malawi. The presence of this language in Zambia, Zimbabwe, Tanzania and Mozambique is testament to the migration of the peoples of Malawi both during the pre-colonial, colonial, and post-independence era. During the pre-colonial era as Malawi began to fill up with people there was a Chewa diaspora into surrounding areas of Zambia and Mozambique. Once colonial rule was established, young Malawian men were encouraged by the British to migrate to Zambia and Zimbabwe to work in the mines and plantations there. The presence of

a sizable population of Chewa or Nyanja speakers in the surrounding countries can be explained by these migrations.

### 3 LANGUAGE

During the colonial era, Nyanja was the unified and standardized language for government and educational purposes in Malawi (then called Nyasaland). It was and remains the main language of all the peoples who have been grouped together as the Maravi for historical and cultural reasons. Two main dialects of Nyanja are clearly identifiable: Chichewa, spoken in the central region of Malawi and extending into Zambia; and Mang'anja, spoken in southern Malawi. Chichewa has risen to become the alternate name for Nyanja; it is understood widely throughout the country and hence qualifies as the lingua franca. English and Chichewa were decreed the national languages of Malawi during Dr. Banda's dictatorial rule. Although few Malawians speak English, it is the main business language and is used for official purposes in government offices and the private sector. English is also taught in schools as a second language. The persistence of English as one of the official languages of Malawi is largely due to the legacy of British colonial rule. In the post-Banda era, other ethnic groups are calling for the promotion of their languages, particularly Tumbuka, Yao, and Lomwe. These languages were suppressed and could not be aired on the only national radio during Dr. Banda's dictatorial rule in favor of Chichewa.

The pre-colonial dispersal of the Chewa peoples in various habitats and environments resulted in several dialects of the

language. The Chewa people who settled along the shores of Lake Malawi and the banks of its outlet, the Shire River, referred to themselves as aNyanja, the "lake people", and their particular variety of Chichewa came to be called Chi-Nyanja, or simply Nyanja, the language of the lake people. The Chichewa word for a large expanse of water is Nyanja. Those who moved into the interior, the area of tall grass, called themselves aChipeta, the dwellers of the savanna land. The word for tall grass (savanna) in Chichewa is chipeta.

### 4 FOLKLORE

The Chewa have a rich set of beliefs, customs, and practices, all of which are central to group cohesion and survival. Much of the folklore among the Chewa dates back to the era before the arrival of European settlers, missionaries, and Christianity, and the stories have survived the pressure from Westernization and Christianity. Central to the customs and beliefs is the rich oral narrative expressed in the form of storytelling and songs about daily conditions of life such as birth, death, growing up, gender roles, polygamy, and marriage. Given the fact that the Chewa are mostly rural and engage in subsistence agriculture for their livelihood, it is no surprise that their folklore also dwells on issues of drought, fire, famine, and rainmaking.

Perhaps one of the central figures in Chewa myths is Mbona, a rainmaker among the Mang'anja of Southern Malawi. The story of this mythical hero runs much like that of Jesus Christ. He was the only son of his mother, conceived without a man, and was persecuted and eventually killed by his own people after performing miracles in the form of successful rainmaking dances in times of persistent drought. The story of Mbona has developed into the Mbona cult, a sacred oral text.

### 5 RELIGION

The main religion among the Chewa is Christianity, which was introduced by both Catholic and Protestant missionaries in the latter half of the 19th century. It is estimated that 34% of Malawi's population is Protestant, while 27% are Catholic, 19% hold to traditional beliefs, and 16% are Muslim. Although many of the Chewa people were converted to Christianity, most concurrently adhere to both traditional beliefs and Christianity. Indigenous religion among the Chewa revolves around a single supreme being, called by various names such as Chiuta, Mphambe, Leza, Mulungu, etc., and the veneration of departed spirits of ancestors, generally termed Mizimu. It was therefore easy for the Chewa and Mang'anja to adopt Christianity, which seemed to have a similar structure to their traditional beliefs.

Traditionally, in times of calamity, the chief would offer sacrifices of beer, goats, fowl, and flour to the spirits of his ancestors at a special shrine, with all his subjects in attendance. It is not uncommon today for a Chewa to consult a traditional diviner, who might order the offering of a sacrifice in the form of a pot of beer or a chicken to avert personal calamity. One key aspect of traditional religion that has survived colonial and Christian prohibition is the all-male Nyau secret society, which performs traditional rites of passage.

### 6 MAJOR HOLIDAYS

One of the major holidays in Malawi is Independence Day on 6 July. Malawi obtained its independence from Great Britain in 1964 after almost 70 years of British rule. On 6 July each year, roads in urban areas are decorated with the Malawian flag.

During the day, political rallies are held with speeches made by prominent politicians. Women are encouraged to wear either the colorful Malawi Congress Party uniform or the current ruling party's colors (blue for the Democratic Progressive Party or yellow of the United Democratic Front), and to perform traditional dances in stadiums for political dignitaries and all to see. It is indeed a joyous occasion followed by a night of feasting and dancing. One other significant secular holiday is 3 March, in remembrance of those who died during the struggle for independence. On this day prayers are offered in churches throughout Malawi and somber music is broadcast on the radio.

## 7 RITES OF PASSAGE

Devout Roman Catholics and/or Protestant Christians follow the Christian code of conduct in terms of baptism, marriage, and death. However, in much of Chewa society, traditional rites of passage are still an integral part of growing up. Generally, Chewa and Mang'anja boys between the ages of 12 and 16 are initiated into a semisecret society called Nyau, "The Great Dance." It is literally an association of masked dancers whose masks come in all types, from wooden masks to basketry-manufactured animal likenesses, and who parade in the villages. The masked dancers portray the spirits of the dead who have returned from the grave to conduct initiation and funeral rituals. If a Chewa man has not been initiated into the all-male Nyau society, he does not command full adult male status. During initiation, boys are secluded in the bush for instruction and discipline for about three days. Each village has its own association, but membership gained at one village is acceptable at other villages.

Girls from age 9 to 16 undergo a series of puberty and initiation rites known as *chinamwali*, which are administered by elderly women instructors called *anankungwi*. In present-day Chewaland, one finds two types of girls' initiation, one that is church-sponsored and the other that is purely traditional. The church-sponsored initiation ceremony instructs girls in a Christian way. The traditional initiation ceremony, which can last as long as two to three weeks, teaches young girls traditional customs as they relate to issues of sexuality and reproduction. Usually the women of the village accompany the young girls into the bush and put them through a course of teasing and instruction, returning each evening to the village for dancing and feasting. Drums are used to create a rhythm for dancing and singing songs, some of which illustratively teach the girls the body movements performed during sexual intercourse. In the bush, the young girls are given advice about cleanliness and politeness. They are admonished not to enter their parents' bedrooms and to avoid their male friends because sexual relationships out of wedlock result in pregnancy and might lead to diseases such as gonorrhea and AIDS. It is only after the initiation that a girl becomes a woman. In traditional Chewa society, women are in charge of issues of reproduction and make a secret of it; men are never allowed to witness births and are never told how a child is born. On the other hand, men make a secret of death through their all-male Nyau secret cult.

## 8 INTERPERSONAL RELATIONS

To greet each other, men and women of the same age group will shake hands vigorously. Hugging is not common in Ma-

lawi. When a man greets his mother-in-law, he has to stay at a distance from her and greet her verbally; no handshaking between the two is allowed since they are in an avoidance relationship. A daughter-in-law, however, has a close relationship with her mother-in-law. When one receives a guest it is customary to prepare food, preferably a chicken, and it is considered rude manners for the guest to decline any food that might be served, even if he or she has already eaten. When an older person is talking to a younger person, it is considered rude for the younger person to look directly into the face of the older person. A younger person is supposed to bow or look to the side, or even squat on the ground, when being addressed by an elder. Kissing in public is frowned upon. It is considered an offense for boys and girls that have gone through initiation ceremonies to enter their parents' bedrooms or huts. When growing up, boys are discouraged from performing tasks that are considered women's business such as entering the kitchen, washing pots and dishes, drawing water from the well, or fetching firewood. Before initiation, girls and boys are encouraged to play together, but after initiation they should stay apart until married. However, in urban areas modern forms of dating are quite common.

## 9 LIVING CONDITIONS

Only 17% of Malawi's population is urban and very few of the urban population are Chewa. The majority of the Chewa live in rural areas in nucleated villages where subsistence farming is the primary economic activity. In rural areas there is little access to modern amenities of life such as health care facilities, schools, and electricity. Among the major debilitating diseases are malaria during the rainy season, bilharzia, intestinal worm infections, tuberculosis, measles, and, recently, the proliferation of the HIV/AIDS pandemic. It is estimated that over 16% of the adult population in Malawi is HIV positive. The general health of the population is poor, and the time spent being sick, attending curative services, looking after the sick, or attending funerals is very great for most of the people. Malnutrition of all forms and anaemia are also quite common. The primary cause of malnutrition is not a lack of food as such, but rather the prevalence of certain traditional customs and beliefs about foods, patterns of eating, food distribution within the family, sources of food for the household, methods of processing, and the general customs and value systems. The result of the poor state of health is manifested in the high rates of early childhood mortality. The mortality rate for children under the age of five currently stands at 178 deaths per 1,000 live births, and the infant mortality rate is estimated at 113 deaths per 1,000 live births. Life expectancy is low, only 46 years for men and 46.7 years for women.

There does not seem to be a particular pattern in the arrangement of huts in any given village. The arrangement of huts and the type of domestic architecture is determined largely by location and the availability of building materials. Generally, the Chewa and Mang'anja live in compact villages, which in the past were essential for defense against attack from other ethnic groups, such as the Ngoni and Yao, and occasionally from lions. The huts are either circular or oblong with wattle walls, plastered outside and inside with mud and roofed with thatch. It is not unusual to find a modern type of house in rural areas, built in a rectangular fashion using bricks, cement, and corrugated iron sheets for the roof, with sawn timber doors

and glass windows. In urban areas such as Lilongwe, housing is in short supply and the majority of people are forced to live in shanty towns and other low-income areas. In the city of Lilongwe, journey to work for the low-income groups is mostly on foot, by minibus, or by bicycle. It is quite common for people to walk 10 miles round-trip to and from work every day.

### **10 FAMILY LIFE**

The Chewa and Mang'anja are matrilineal in their kinship system. Descent and inheritance are passed through the female line. The marriage process is simple and involves the appointment of marriage sureties, called *ankhoswe*, with the maternal uncle as the principal sponsor. Although boys and girls choose their own partners, a marriage cannot be recognized as valid without the approval of maternal uncles. Residence is matrilineal and the husband establishes the household in the wife's village. A father has no control over children born in a marriage, since such children are considered to be members of the mother's matrilineage and are therefore under the guidance of the maternal uncle.

Divorce is also relatively simple and quite common. A man can be divorced on a number of grounds such as failing to perform marital tasks, e.g., hoeing for his mother-in-law. Although rarely practiced these days, a successful son-in-law can be given a second wife if his first dies, or even while the first wife is still alive, as a gesture of gratitude for his satisfactory services. Polygamy, the practice of having more than one wife, used to be common, but its extent is hard to determine in contemporary Chewa society. National-level census estimates indicate that about 33% of Malawi males over the age of 40 have more than one wife.

Girls enter into marriage at a median age of about 17 years. Fertility rates are very high and a woman can expect to bear seven children by the time she goes through the 15–44 year reproductive age range. Having many children is considered to be very desirable since a man or woman with many children is considered rich, as are his relatives both by birth and marriage. More children serve as a means of social security in old age, and they provide much needed labor in herding livestock and farming.

In urban areas and even in rural areas, weddings are increasingly being conducted in churches and receptions usually follow soon thereafter, similar to marriage ceremonies in industrialized countries. For those who can afford it, the bridegroom wears a Western-style suit while the bride wears the typical Western white wedding dress with a veil.

### **11 CLOTHING**

In urban areas, women usually wear a skirt and a blouse or a modern colorful dress. The most common form of dress for women in rural areas is a loincloth tied around the waist, and a blouse. Men wear pants, shirts, shorts, and occasionally a suit. Middle-income professionals are always nicely dressed in Western-style suits. During Dr. Banda's dictatorial rule, there was a strict dress code where women could not wear slacks, shorts, or miniskirts, while men could not wear long hair. This dress code was repealed in 1994 under the democratically elected government of Bakili Muluzi. In spite of the repeal of the dress code, Malawi's clothing continues to be conservative. For women, this means skirts that do not show knees and do

not fit too tightly. Malawians consider women's thighs to be suggestive, therefore they must be covered at all times.

### **12 FOOD**

The Chewa diet consists mainly of *nsima* (thick porridge) made from maize flour that is rich in carbohydrates and poor in protein. To compensate for the lack of protein in maize flour, *nsima* is eaten with a side dish called *ndiwo* made from a variety of leafy vegetables, beans, poultry, eggs, game, meat from livestock, fish, insects, etc. There are a number of beliefs, customs, and taboos that restrict certain categories of people, such as pregnant women and children, from eating certain side dishes. Because of these beliefs, diets may be unbalanced for certain segments of society, resulting in malnutrition. For example, pregnant women are forbidden to eat eggs for fear of bearing bald-headed babies. Like women, children are forbidden to eat eggs and rabbits lest they develop bald heads and twitching noses like rabbits. In most cases, children are fed on gravy and salt water with *nsima*, while the father and other males are given top priority—the best side dishes such as eggs and poultry. Whatever remains goes to the women. The wife is expected to look after her husband first, the children next, and herself last.

*Nsima* with *ndiwo* is sometimes eaten twice a day, at lunch time and at dinner time, but most of the time this main dish is offered only at dinner time since the mother is busy with other chores during the day such as farming, drawing water from the well, fetching firewood, and so on. In the interim, children have to make do with snacks such as roasted cassava, roasted maize, sweet potatoes, sugarcane, wild fruits, or wild insects such as roasted grasshoppers, flying termites, etc. Men, too, sometimes experience food restrictions such as not eating *thelele*, a slimy liquid-like vegetable, since it is believed that they can lose their virility. In urban centers such as Lilongwe, the high-income groups tend to have a diversified diet, while the low-income groups tend to be restricted in what they can afford.

### **13 EDUCATION**

In Malawi there are two major systems of education, namely, the formal and the informal. The informal or traditional system of education (see **Rites of passage**), which is still very much a part of rural society, is encouraged by the government on the basis that it instills respect for tradition and culture. The formal education system is patterned along the British system, which consists of three tiers: primary, secondary, and tertiary. The students who do extremely well in the Malawi Certificate Examination at the end of the four-year secondary school program (and these are few in number) are then selected to attend the five constituent colleges of the University of Malawi. In recent years, adult literacy rates have seen dramatic improvements rising to 54% for females and 75% for males aged 15 years and over who are able to read and write Chichewa, English, or both languages. There is no national service for students in Malawi. Census data in Malawi indicate large gender differentials as well as regional disparities in educational attainment. For example, in 1987, for every 100 females in school there were 152 males. School attendance rates for all age groups are higher for males than for females.

## 14 CULTURAL HERITAGE

There is a rich musical and dance heritage among the Chewa and the Mang'anja of central and southern Malawi. In traditional settings, songs are sung at initiation rites, rituals, marriage ceremonies, or during post-harvest celebrations. There are puberty songs, praise songs, funeral songs, work songs, beer-drinking songs, coronation songs for chiefs, etc. It is not uncommon to see women sing as they go about their daily chores. Women employ sung poetry as a strategy in defining and interpreting gender roles, especially as they concern a negotiation of their standing in society. Several traditional dances are also popular among the Chewa, especially during weddings and other festivals. For example, *mganda* is an all-male dance from central Malawi in which about 15 men form a troupe. Each of the dancers uses some kind of a local saxophone made from a gourd, and they sing and dance in unison following a complex series of steps. The female counterpart of *mganda* is *chimtali*, usually performed at weddings. A group of women dance in a circle with a drum in the center and seductively gyrate their hips, bosoms, and the like. There is also the all-male Nyau masquerade dance at initiation and funerary rituals. The masked dancers are accompanied by several drummers and a women's chorus.

In addition to the traditional dances, there is also the modern popular culture imported from abroad or from regional music centers such as the Democratic Republic of the Congo and South Africa. This type of music includes reggae music, disco, breakdance, rap, etc., currently popular in bars and beer- and dance-halls.

During the post-independence era, Malawi in general has also seen the rise of a few internationally recognized literary scholars such as the famous poet, Jack Mapanje, the veteran historian and fiction writer, Paul Zeleza, and others who include Steve Chimombo, Legson Kayira, Chipasula, Rubadiri, and Felix Munthali.

## 15 WORK

Approximately 90% of the people in Malawi live in rural areas where subsistence farming is the primary economic activity, growing a variety of crops such as maize (the staple food crop), beans, sorghum, peanuts, rice, pumpkins, cassava, and tobacco (the main cash crop). The formal and informal sectors in the major urban centers of Malawi employ only a quarter of the labor force population. Evidently, as population continues to grow rapidly, land resources are becoming scarce and it is unlikely that the subsistence sector will continue to meet the needs of each household.

## 16 SPORTS

During the colonial era, the British introduced soccer to Malawi, and it is still the main sport throughout the country, especially in the urban areas of Lilongwe, Mzuzu, Zomba, and Blantyre. The Malawi national team is quite a force in southern Africa's soccer competitions and has on occasion won a number of regional championships. Soccer clubs compete for a number of prized trophies throughout the year. Every Saturday and Sunday, thousands of people converge on Civo Stadium in Lilongwe, and Chichiri Stadium in Blantyre, to watch various clubs play skillful soccer. Even in rural areas, soccer is the most common sport among school children. Basketball is also a growing major sport.

## 17 ENTERTAINMENT AND RECREATION

In terms of entertainment and other recreation activities, young professionals in urban areas flock to Western-style clubs and bars. In rural areas, girls and boys may perform traditional and modern dances in the moonlight to entertain themselves and other spectators. There is no television in Malawi, but upper- and middle-income families may own a TV and VCR. Individual families may thus be able to treat themselves to a rental movie.

For young boys and girls in rural areas there is a rich repertoire of games which keeps them busy all day and in the evenings. Among the most popular games for rural children are hunting small game such as mice and rabbits, hide-and-seek at night, tug of war, and many others. As one of the most cherished activities, hunting mice is usually a daylong group expedition for boys. This activity provides important skills for the future in terms of instilling hunting skills, building team cooperation, and providing a little food for each boy's household in addition to being fun and exciting. In rural villages hide-and-seek is played at night under bright moonlight. Rules prohibit hiding inside a house, and this adds extra excitement. Outdoors in the dim light offered by the moon, boys and girls in teams scurry and scamper around the village darting from place to place seeking better hiding spots, adding mystery, challenge, and enjoyment to the game for both hidiers and seekers.

## 18 FOLK ART, CRAFTS, AND HOBBIES

In spite of the fact that the Chewa of central Malawi are not known for their art and are rarely mentioned in art history literature, they do exhibit a rich tradition of basketry and carved masks, which includes two large and intricate basketry masks known as *Kasiyamaliro* and *Chimkoko*. These masks are used in initiation rituals for the men's Nyau secret society. In urban areas, one also tends to find a rich variety of wood carvings, oil paintings, and other beautiful works of art depicting various indigenous village scenes and daily ways of living, for sale to tourists.

## 19 SOCIAL PROBLEMS

Malawi has 15 different ethnic groups which live in relative peace and harmony with each other. Inter-ethnic warfare is rare and uncommon. During Dr. Banda's dictatorial rule, human rights violations were quite common. Persons suspected of being critical to Dr. Banda's rule were detained without charge or trial, tortured, and sometimes assassinated. Under the previous government of Bakili Muluzi and the current government of Bingu wa Mutharika, human rights conditions have improved somewhat and people seem to be freer in expressing themselves and in openly criticizing government policies. However, the economic conditions, particularly inflation, have gotten worse because of drought that hit the country hard between 1999 and 2003, economic mismanagement and corruption in government circles under Muluzi's government, and worsening terms of trade. During 2006–2008 the country experienced a bumper crop of maize due to good rains and government subsidized fertilizer distributed to needy small-holder farmers in rural areas.

## 20 GENDER ISSUES

In traditional matrilineal Chewa society women play a central role in cultural and economic activities. The land and the village belong to women. When a man gets married, he traditionally has to leave his village to reside in his wife's village, farm his wife's fields and beget children for his wife's lineage rather than his own. Should the marriage end in divorce or should the woman be widowed the property and children automatically go to the wife and her people and the man leaves his wife's village empty handed. However, since the advent of colonial rule many Chewa traditions with regard to gender issues have undergone transformation resulting in the lowering of women's status. It can be argued that the deterioration in the status of women among the Chewa is not a reflection of "traditional Chewa society" but rather something that came to Malawi via the contact with Europeans in the 16th century and subsequent colonization. The status and power of women during the pre-colonial period was far much healthier than it is today. There is a saying in Malawi that men among the matrilineal societies are forever grateful to the British for liberating them from the tyranny of the matrilineal code of conduct that was often in favor of women than men. In pre-colonial times, women played significant roles in economic, political and spiritual spheres of their communities. Women were often the most powerful spiritual figures, some became very powerful rulers of their territories as queens and paramount chiefs, and even today, they continue to play significant roles in producing food and propelling the Malawian economy.

Modernization and the ensuing social and economic transformation has brought about the erosion of the high status women used to enjoy in traditional settings. In the modernized society of today, they have been relegated to the position of "second class citizens." In an era of HIV/AIDS women have experienced the brunt of the epidemic due in large measure to their deteriorating and unequal status to men. Today, women are often married off early without regard to their potential or actual educational achievement, and are generally not allowed to partake in economically gainful activities that might lend them a semblance of empowerment. Their economic and social vulnerability is often made worse by the lack of formal educational investment in them, which leaves them without access to information vital to their reproductive health and to knowledge and prevention of diseases such as AIDS. The sad truth is that women in Malawi tend to have smaller entitlement bundles than do men because they have lower wages and are not as likely to be highly educated, or to receive government assistance, or benefit from international aid programs. Women are frequently denied education beyond primary levels because they are primed for marriage rather than careers. They are subsequently constrained in their choices of occupation, and the areas of employment offering livable wages are especially scarce.

With reference to sexual activities, the Chewa had a detailed code of conduct that regulated sexual relations between men and women and sex between those of the same gender. Homosexuality, adultery, and bestiality (i.e. sex with animals) were forbidden and sometimes punishable by death. In present day Malawi, homosexuality is illegal under the penal code and considered an "act against the order of nature." Foreigners caught in homosexual acts have been deported. Malawi na-

tionals engaging in homosexual activities can and have been imprisoned or detained without charge or trial.

# COLORED PEOPLE OF SOUTH AFRICA

**ALTERNATE NAMES:** Coloureds, Coloreds, Brown People

**LOCATION:** South Africa (especially Western Cape and Northern Cape Provinces, urban areas)

**POPULATION:** 4.2 million

**LANGUAGE:** Afrikaans, English

**RELIGION:** Christianity, Islam

## <sup>1</sup> INTRODUCTION

The word *colored* in a racial context is considered by many to be pejorative or disparaging, but it is widely used to this day in serious discussions of South Africa's social and economic issues because it describes an important population entity and because nobody has been able to come up with a better or more accurate term for this purpose. It is fairly common for the term *colored* to be preceded by the phrase "so-called" as a demonstration of the speaker's ambiguous feelings. They were categorized as such by means of the Population Registration Act, No 30 of 1950. They number approximately 4.2 million and are the descendants of European settlers from the Netherlands, Germany, France, indigenous people of South Africa, especially the San and Khoekhoen, and slaves from the Dutch East Indies who were brought to the country during the 18th and 19th centuries.

The "Colored" population suffered many indignities under apartheid in terms of education, health care, and basic exclusion of other privileges, like marrying a person of another race. When apartheid laws were introduced after 1948, many communities were forcibly removed from their original residential areas. District Six in Cape Town is an example of such an area where forced eviction of "Colored" families took place because it was earmarked for urban restoration. Many of these families were moved to the Cape Flats areas with its associated problems of gangsterism, vigilante groups, etc. Since democracy in 1994, however, all the people of South Africa have the right to live wherever their economic position and preference permit.

Most coloreds tended to work as domestic servants, farm laborers, and fisher folk, but large numbers were also involved in the skilled trades like masons, tailors, and seamstresses with which craftsmanship they are associated to this day.

Culturally and economically, coloreds were always more closely associated with the dominant white population than were Africans. They spoke the same languages (English and Afrikaans), worshiped in the same churches (mostly Christian Protestant, but also some Catholic), enjoyed the same foods, wore the same kind of clothes and—especially in later years—enjoyed the same sports and pastimes. In spite of this common heritage, they were never fully integrated into white society. Today there is still a fairly widespread sense among coloreds that they continue to be victims of discrimination in South Africa, but this time at the hands of the black majority government. In a recent news report, a colored South African was quoted as protesting: "We weren't white enough in the old regime and now we're not black enough." This perception is based on allegations that, in narrowing the economic gap between whites and blacks, the government is willing to remove many of the

gains achieved by coloreds through their own hard work and sacrifice. It is but one delicate problem among the many difficulties facing the young democracy.

Subgroups were and, often still today, are recognized among the coloreds. The dominant subgroup is the so-called Cape Coloreds who are, as was indicated, descended from various indigenous people and European settlers and are mainly to be found in the Western Cape region and in the Northern Cape. The 1950 Population Registration Act in fact made allowance for six sub-categories of coloreds, and some of these still self-identify as distinct communities. Examples of such communities are the Griquas, Malays, Rehoboth Basters (of Namibia), and the Nama.

The Griqua and Nama, together with people like the Korana, more properly can be identified as Khoekhoen (previously Khoikhoen), who were conventionally grouped with the San (Bushmen) under the term Khoesan (Khoisan) due to the similarity in their click languages. Contemporary identity for communities such as these is a complex matter. The Griqua for example, are still regarded as "Colored"—even the identity documents of many still carry this designation. However, they have a strong sense of identity and number approximately 300,000. As descendants of mostly Khoekhoen and Afrikaner communities, they formed a distinct group as early as the 17th century.

For some Griqua people it has been possible to register as Griqua while others who legitimately trace Griqua descent prefer not to be identified as such. It is also possible to "become" Griqua by, for example, marrying into the Griqua community or by joining the Griqua movement through membership in the Griqua Independent Church. As a group however, they have obtained international recognition and in 1998 already, the United Nations awarded them, one of South Africa's oldest peoples, First Nation status.

The Cape Malay is also a large subgroup, primarily centered in particular neighborhoods of the Western Cape Province and number about 180,000. They are descended from the indigenous Khoekhoen, slaves brought to South Africa by the Dutch East India Company and European settlers. They have retained many cultural elements from their diverse origin but they are recognized as a distinct and close-knit community, mostly because of their Islam religion and location.

The same Act in fact also made allowance for a category "Other Colored" for those who did not obviously qualify for the sub-categories mentioned above. An example of such a group is the Buys community at Buysdorp near Louis Trichardt (Makhado) in Limpopo Province. The settlement has approximately 400 permanent residents, all of whom are related to one another, but many more live and work elsewhere in South Africa. They are the descendants of the well-known Coenraad de Buys (grandson of French Huguenot Jean du Bois) who had married several indigenous women and settled in the area even before the Voortrekkers (Boer pioneers) had established the first settlement of white people in the Limpopo Province at the town of Schoemansdal. They, too, have a fierce sense of identity and prefer not to be categorized as belonging to the general "Brown"/"Colored" grouping.

Those first few of the Karretjie People (see elsewhere in this volume) who eventually obtained identity documents were also classified "Colored," but as itinerant people of the Great Karoo region of South Africa, they also regarded themselves as

distinct, as descendants of a First People of South Africa, the Xam Bushmen.

## 2 LOCATION AND HOMELAND

Most of South Africa's colored people live in both the urban and rural areas of the Western Cape (main city: Cape Town) and Northern Cape Provinces, where they have numerical superiority and constitute influential political and cultural groups. However, they have also migrated to other major centers and significant concentrations can be found around the cities of Johannesburg, Pretoria, Port Elizabeth, East London, and Durban. There are also important groups in the neighboring nations of Namibia (see elsewhere in this volume) and Zimbabwe.

In the Western Cape Province—regarded as their traditional homeland—colored people play a vital role in the economically important agriculture industry (fruit, wine, wheat and dairy products), not only as farm laborers but also as managers, skilled artisans, and increasingly as property-owning entrepreneurs. They are also a dominant group in the fishing industry that has grown up in the rich cold waters of the country's west coast, where the Benguella Current has helped to create excellent trawling and line-fishing conditions. In the cities, many members of the colored community are engaged in trades such as carpentry, plumbing, auto repair, and construction, but they are also prominent in professions such as health care, accounting, law, and education.

## 3 LANGUAGE

Colored South Africans speak two languages, mainly Afrikaans, but also English. Afrikaans is a language found only in South Africa that evolved from the Dutch spoken by the early white settlers with influences from other groups who settled in the country. In an informal setting, such as day-to-day life at home, it is not unusual for coloreds—and to a lesser extent other groups—to combine the two languages in a distinctive local dialect that is very colorful and expressive. This local dialect has little formal written literature, but it is widely popular and accepted as a phenomenon that has given Cape Town its special character. It is particularly effective when used in a humorous context and in the light-hearted songs known as “moppies.” In formal settings, however, colored speakers use either formal English or Afrikaans.

Among the Griqua for example, who were also formally classified colored and are still generally regarded as such, there is a concerted effort to revive their original Khoekhoen/click language. Khoekhoen is a surviving dialect and is taught in a school in the Richtersveld area. Researchers in the Great Karoo region have also found individual Karretjie People who could still speak a “southern” Griqua/Korana dialect.

## 4 FOLKLORE

Because of their historical association with whites, coloreds share the general folklore heritage common to the Western world. However, there are also some (dwindling) legacies that apparently came from the early mingling with slaves from the Dutch East Indies—notably the telling of *goël* (literally, to practice magic) or ghost stories, which are frequently as amusing as they are alarming. One of the features of Cape Town in summer is the strong southeast wind known as the “Cape Doctor.” Sometimes it blows so hard that people can hardly walk in the city and the harbor closes to shipping. Southeaster time, when windows are rattling and doors are creaking, is ideal for the telling of *goël* stories.

## 5 RELIGION

The colored people of Cape Town observe two main religions—Christianity (mostly Protestant, but also some Catholicism) and Islam, which plays an influential role in a large sector of the population. In urban areas where colored people live in large numbers, it is common to hear the faithful being summoned to prayer from mosques. Local leaders of both major religions were prominent during the struggle against apartheid. Some, such as the Reverend Allan Boesak, became familiar figures on the international stage as pressure built up against apartheid. Boesak is still active as a public commentator. Because of the powerful influence of Islam, many colored people take an intense interest in events in the Middle East and other parts of the world where the interests of their fellow Muslims are at stake. Both Christianity and Islam are seen as factors in the emergence of a strong conservative element in the colored community.

Amongst the Griqua, their “Independent Church” has been an important mechanism for mobilization and cultural revival.

## 6 MAJOR HOLIDAYS

For more than 100 years, Cape Town's colored community was associated with an annual New Year's Day "minstrel" parade through the streets of the city and along the main roads leading into town. Neighborhoods formed troops that dressed in colorful satin costumes and marched or danced behind guitar and banjo bands. Each troop had its own combination of colors. When they all arrived at central sports fields, they competed for trophies to the delight of large crowds of spectators. According to historians, the tradition began in the 19th century, when a local baker dressed up a group of people to advertise his breads and cakes. But, it was largely abandoned during the latter days of apartheid because many members of the community felt the name "Coon Carnival," by which it became known, was derogatory. Since democracy the tradition was revived and the citizens of Cape Town are again enjoying the minstrel bands and their humorous songs.

A traditional song is "January, February." Its words consist only of the 12 months of the year, sung to a catchy tune and rhythm. Everyone knows this song, and spectators often join in when the band marches by. There are many other songs—some funny, some sad—but all are unique to the spirit of the Cape and its people. Another well-known traditional song describes the arrival off the Cape of the Confederate raider Alabama during the American Civil War. Thousands of people climbed to the top of Signal Hill overlooking Cape Town to see the warship and witness any battles that might take place with Yankee enemies. The event is remembered in a universally known song called *Daar Kom Die Alabama* ("There Comes The Alabama").

More serious is the annual competition between Malay choirs—choirs made up of the descendants of workers who were brought to the Cape during the days of the Dutch East India Company, which established a replenishment station and vegetable garden at the Cape of Good Hope in 1652. Their songs range from localized versions of modern tunes to traditional ballads and joke songs called "moppies." An especially delightful moppie tells the story of a baboon trying to learn how to swim. He learns very quickly when he sees a crocodile in front of him and a shark behind.

The official public holidays of South Africa of course apply to the coloreds as well and these are: New Year's Day, January 1; Human Rights Day, March 21; Good Friday and Family Day, which vary; Freedom Day, April 27; Worker's Day, May 1; Youth Day, June 16; National Women's Day, August 9; Heritage Day, September 24; Day of Reconciliation, December 16; Christmas Day, December 25; Day of Goodwill, December 26.

## 7 RITES OF PASSAGE

Birthdays are celebrated by parties where the guests bring gifts. Baptism of infants, confirmation, and first communion are celebrated among Christian colored people. On their 21st birthday, many young adults in South Africa receive a symbolic key to adulthood.

However, as part of the revival of Khoekhoen/Griqua culture and a renewed awareness of an own identity, a number of "Kaptyns" or Chiefs are again recognized. The *nâu* inauguration ceremony for such chiefs has been resurrected in some quarters. It involves slaughtering a sheep, the use of its blood for purification, the slow circular movement of the participants whose feet are bathed in the blood, the tasting of bitter *boegoe*

and sweet honey—symbolic of both bad and good times—and finally, an oath of loyalty is taken.

A few other traditions and rituals that still persist include (in Griquastad, an important Griqua town): the *hokmeisie* or girls' initiation ceremony; the *mokwele* or betrothal ceremony; and the marriage ceremony involving a special dance, *stapdans*.

## 8 INTERPERSONAL RELATIONS

Even though there was legal separation of races in South Africa for most of the 20th century, there was always contact between whites and coloreds. Culturally, the two groups shared similar interests and background. They listened to the same music and saw the same movies (even though theaters were segregated), used the same school textbooks and lived in close proximity (although residential areas were largely separate). They met in the workplace, stores, and the street. As a result, close friendships were formed and feelings of mutual respect developed, even though the previous regime did everything possible to keep racial and ethnic groups separate. Until 1986 it was illegal for members of different race groups to have sexual relations, for example, and people were actually prosecuted for breaking this law. Thus, the removal of all race laws has been easy for whites and colored to adjust to in terms of their relations with each other. Relations between coloreds and members of the black majority are tenuous in the new system. There have been some tensions based on the perception by coloreds that the majority regime may not always have colored interests in mind.

## 9 LIVING CONDITIONS

Under apartheid, whites enjoyed most of the advantages and privileges in terms of education, health care, land allocation, and so forth. Next in the pecking order were coloreds, followed by blacks. For example, when the transition to non-racial democracy took place in 1994, the student-to-teacher ratio in white schools was 18 to 1; in colored schools, it was 22 to 1 and in black schools it was 50 to 1. Coloreds lived in close proximity to their white neighbors even though there was a large income gap between the two groups. When most of the apartheid laws were introduced after 1948, many colored people were forcibly moved from their traditional residential areas to segregated suburbs and townships. This development was bitterly resented and resisted, and it resulted in the destruction not only of well-established communities but of families themselves. Forced removals remain one of the worst memories of the old South Africa. It created problems that are still beyond solution in many cases. One of the most resented examples occurred in the center of Cape Town, where an area known as District Six was earmarked for urban renewal. District Six was the traditional home of many colored families, and it certainly needed renewal. But, it was renewed for whites and the original inhabitants were moved to bleak townships on the sandy Cape Flats, where crime, alcoholism, and other social ills soon became rampant. These townships and suburbs still exist (as do many of the problems they created) but colored people can now live wherever their economic status allows and they have increasingly moved into formerly exclusive white suburbs. Some communities of coloreds like the Buyses and the Dunns have preferred to stay in and hang on to their own exclusive pockets of the land—in the far northern Soutpansberg of the Limpopo Province and the Province of KwaZulu-Natal, respectively.

## 10 FAMILY LIFE

Colored families tend to be extended, conservative, and mutually supportive. In fact, it was largely these qualities that enabled the community to survive the difficult earlier years. The sense of interdependence is inclined to translate to neighborhood and community as well.

## 11 CLOTHING

Colored South Africans wear clothing, both formal and casual, similar to that worn by people in major industrial nations anywhere in the world. Young people wear jeans, sneakers, and T-shirts just like their counterparts in the United States and Canada, and baseball caps have become popular too. Jackets and ties are becoming less common in more formal venues, such as the workplace, largely following the trends elsewhere in the world.

## 12 FOOD

Colored people are renowned for their culinary skills and have contributed more to South Africa's heritage in this area than any other group. They are especially famous for wonderful stews—known as *bredies*—which are traditionally made with mutton and lamb and prepared with a base of tomatoes, cabbage, or local plants known as *waterblommetjies*. Also popular are small, triangular pies known as *samoesas*, which contain a curried mince mixture. *Samoesas* are ideal for snacks or lunch and are often served as appetizers or at cocktail parties. The influence of the Dutch East Indies is strong, especially in the lasting popularity of curries that can be served warm or cold, strong or mild. A special favorite is curried fish, which is prepared with local *hake* (known as stock fish) or a local deep-sea fish called *kingklip*, or *snoek*, which looks rather like the familiar barracuda. Among working men, it is common for the mid-day meal to consist of a loaf of bread with the inside hollowed out and the hole filled up with a *bredie*. This substantial meal gives a worker plenty of energy for the rest of the day's labor.

## 13 EDUCATION

Education has long been seized upon as the road to self-improvement among the members of South Africa's colored community. As a result, families will save and sacrifice to send their children to the best available schools and colleges. In the past, colored people were allowed to attend only those institutions designated for their use. While these schools were better equipped than those allocated to black Africans, they were nevertheless inferior to the schools for whites. In the present open society with free access to facilities and institutions, colored students increasingly feature prominently in the best schools and foremost universities.

## 14 CULTURAL HERITAGE

In spite of disadvantages in educational opportunities, the so-called "colored schools" and the University of the Western Cape (originally exclusively for coloreds) have produced notable figures in the fields of medicine, law, government, diplomacy, the arts, engineering, commerce and industry and education itself. Some of South Africa's finest writers and poets, such as the internationally acclaimed Adam Small, come from the colored community. The cultural revival amongst particularly the Griqua people has been instrumental in both a renewed empha-

sis on a nearly forgotten heritage and a revitalized awareness of identity. An important focus of this cultural revival and identity is personified by two women. Krotoa ("mother" of the Khoekhoen) had special musical and linguistic skills but was adopted by Jan and Maria van Riebeeck (who established the first Dutch settlement at the Cape). They changed Krotoa's name to Eva and "polluted" her lifestyle. The other is Saartjie Baardman, who was taken to Europe in 1810 and paraded in front of the British and French public. Her remains were repatriated to South Africa in 2002 and ceremonially buried in the Eastern Cape where she grew up.

In keeping with the above, the Griqua recognize their own *Volksimbole* (National symbols). In addition to their Independent Church, they have a *Volksvlag* (National Flag) with the colors, bottle green (fruitful life), red (Blood of Christ), white (peace), blue (the color of heaven, pure love) and sea green (derived from the Karoo *kanniedood vetplant*—succulent), a *sinnebeeld* (symbol), which is the *kanniedood* (ad finem) because it is so hardy and durable; and finally a *Volkslied* (National Anthem) *God Eewig, Groot en Goed* (God Eternal, Great and Good), which is sung in Dutch.

## 15 WORK

During apartheid coloreds were kept by law out of the best jobs and the best schools and forced to travel long distances each day to low-paying jobs. The result has been a high incidence of crime, alcoholism, and other social ills. Remarkable leaders, however, have emerged from the community to address these problems and turn them around. A focus on education has produced doctors, scientists, lawyers, industrialists, and artists in record numbers for such a small community. Many members of the colored community are now anxious about current government trends, which they fear will lead to their becoming victims of affirmative action for Africans. They do not want to lose what they have gained over the years at such great cost. The community's leaders do recognize, however, the unfairness of the old system, a system in which, as recently as 1990, a colored child was 24 times more likely to be helped by a welfare grant than a black child.

## 16 SPORTS

The most popular sports are soccer, cricket, rugby, and track and field. Now that the community has the opportunity to develop socially and economically, there is increasing interest in the sports of tennis, swimming, golf, yachting, wind- and wave-surfing, and individuals are excelling and gaining national colors in these sports. South Africa has an ideal climate for all outdoor sports and the colored community is as active as any other in the country. Hiking and mountaineering are also extremely popular, especially in the Western Cape, where there are interesting climbs that are easily accessible and the weather is mild for much of the year. On weekends, it is common for families and friends to get together for picnics and barbecues at the beach, alongside a river, or in a backyard.

## 17 ENTERTAINMENT AND RECREATION

For the most part, the colored community's entertainment is the same as that of people in any other industrialized society—pop and classical music, the movies, dances and nightclubs, and radio and television. Some members of the community

have gone on to become entertainers with international reputations as singers and musicians.

### 18 FOLK ART, CRAFTS AND HOBBIES

Colored people enjoy varied hobby activities typical of citizens of an industrialized society.

### 19 SOCIAL PROBLEMS

Many of the community's problems can be directly attributed to the treatment it received when South Africa was governed by a system that separated people according to race. The result was a relatively poor education because schools were not given the same facilities afforded to "white" schools and because many people had to abandon schooling at an early age to help support the family. Compounding this situation were the breakups of communities and even families as people were moved into townships and suburbs defined by the race of their inhabitants. In addition, many coloreds were kept in low-paying jobs because of job-discrimination laws.

It was inevitable that social ills, such as alcoholism, poor health care and a rising crime rate, would result. Not all of these negative factors have been eradicated yet, but under the new democratic system all South Africans—regardless of race—have an equal opportunity to live a better life. The colored community has shown the resilience and character through the years to take full advantage of their new hard-won rights. Some of the community's leaders are anxious to ensure that its people will not be abandoned by the black majority in the effort to provide a completely level playing field; this concern is a hotly debated political issue in South Africa today.

South Africa no longer conventionally issues birth rate, health, mortality rate, and other statistics by community or race, but the HIV/AIDS figures for the country as a whole are much worse for certain sections of the nation, including for example, the colored townships. For South Africa, the HIV/AIDS adult prevalence rate was 21.5% in 2003. That year there were 5.3 million people living with HIV/AIDS. In 2003, HIV/AIDS deaths totaled more than 370,000.

### 20 GENDER ISSUES

The Constitution of the Republic of South Africa (Act 108 of 1996) entrenches individual rights and protection. Chapter 2 [9(3)] specifically indicates that "The State may not unfairly discriminate directly or indirectly against anyone on one or more grounds, including race, gender [and other categories]." But the reality is, particularly in the erstwhile exclusively colored townships and mainly due to social and domestic problems still experienced there, women still bear the brunt of discrimination, particularly alcohol-induced verbal and physical abuse.

For those coloreds who have "graduated" out of such depressed and repressing circumstances gender roles are increasingly changing, as is the case for other South African communities. The leader of one of the prominent opposition political parties, Patricia De Lille, is a case in point. Similar trends are apparent in the academic, arts, and economic spheres of life.

*A group of children enjoy their lunch at the Sparrows Nest, a home run by Sparrow Ministeries, in Roodepoort, South Africa. Sparrow Ministeries cares for adults and children with HIV/AIDS. Researchers have released reports estimating that AIDS could kill as many as 7 million South Africans by 2010. (AP Images/Denis Farrell)*

# COMORIANS

**PRONUNCIATION:** kuh-MAWR-ee-uhns

**LOCATION:** Comoros Islands

**ALTERNATE NAMES:** Mauri or the Mahorais

**POPULATION:** 798,000

**LANGUAGE:** Arabic, French, Comorian (Shikomori)

**RELIGION:** Islam (Sunni), Catholicism

## 1 INTRODUCTION

The Comoros Archipelago—comprising Grande Comore (Njazidja), Anjouan (Nzwani), Mayotte (Mahore), and Mohéli (Mwali)—was originally named by Arab sailors who visited the islands in the late 6th century. They called them *Juzu el Kumar* (“islands of the moon” in Arabic) because of their brightness during the full moon. Before the arrival of the Arabs, Africans of the Wamakuwa and Bantu tribes had been living on the islands, organized in clans, and had originated the Comorian language, which is still spoken today. The Comoros was also visited by sailors from East Asia, Persia, and Israel. More Arabs arrived on the islands between the 12th and 17th centuries, transforming their social structures and introducing sultanates. The Comorians are a blend of settlers from the past: Iranian traders, mainland Africans, Arabs, and Malagasy.

In the early 15th century, Portuguese visited the region. (In 1527, the Comoros islands appeared on a world map designed by Portuguese cartographer Diego Roberso.) Sailors from the Netherlands, France, and other European countries, all attracted by the islands’ geographically strategic position eventually followed them. In the early 17th century, pirates used the Comoros as a base from which to attack and rob merchant vessels. In 1841, King Andrianantsuli of Madagascar, having previously declared himself sultan of Mayotte, sold the island to the French. Later in the 19th century, Ramonetaka, another Malagasy king, formed a relationship with the local authorities on Mohéli, modifying its system of local rule and establishing another sultanate. The Comoros became a French protectorate in 1886. They were placed under the authority of the French governor general of Madagascar in 1908 and given their own internal administration in 1912.

In 1958, the political status of the islands was modified by a referendum, which gave them the status of a self-governing French overseas territory. Said Mohammed Cheik became the president of the Council of Government. In a December 1974 referendum, a majority of the Comorians of the four islands voted for independence from France. Dissatisfied with the prospect of losing all four islands, the French scheduled another election in July 1975 that permitted each island to choose its own political status.

Opposing this French move to divide the islands, Ahmed Abdallah, president of the Council of Government, unilaterally declared independence for all the islands on 6 July 1975 and was installed as the nation’s first president. Less than a month after the Comoros’ independence, France established a military presence on Mayotte, and while the former colonial power was affirming its control of Mayotte, European mercenaries, led by the notorious French soldier of fortune Bob Denard, destabilized the other three independent islands by overthrowing the governments and killing the presidents. Since its indepen-

dence, Comorians have requested the reintegration of the island of Mayotte through a United Nations resolution.

A state-owned newspaper, *Al Watwany*, began operations in July 1985, first as a monthly and soon afterward as a weekly. An independent weekly, *L’Archipel*, began publishing in 1988. A news agency, *Agence Comores Presse*, is now based in Moroni, and France has provided funds for establishing a national television service. In 1989 Comoros had an estimated 61,000 radios and 200 television sets.

In addition to national broadcasts on FM in Comoran Swahili and French, Radio Comoros in 1993 broadcast internationally on the shortwave band in Swahili, Arabic, and French. An independent commercial FM radio station, Radio Tropique FM, began broadcasting in 1991, although it and its director, political activist Ali Bakar Cassim, were both the object of government ire over the station’s readiness to criticize the Djohar regime.

On 3 August 1975 Ali Soilihi, assisted by French mercenaries, overthrew Abdallah’s government, implementing a socialist-inspired self-sufficiency policy that boosted the Comorian economy. On 12 November 1975 the Comoros was admitted to the United Nations as a nation composed of four islands—Grande Comore, Anjouan, Mohéli, and Mayotte. In May 1978 European mercenaries once again led by Denard, who had placed Soilihi in power, overthrew the government and assassinated him. Denard took control of the Comoros and restored Ahmed Abdallah to power. For more than a decade Abdallah ruled the country, backed by Denard and his mercenaries. He changed the name of the country to the Federal Islamic Republic of the Comoros.

In November 1989, when President Abdallah anticipated negotiating with France on the question of the Comorian island of Mayotte and planned to expel the mercenaries, they assassinated him and seized control of the country for several weeks. France and South Africa arranged their surrender and subsequent departure. Five months later, Said Mohammed Djohar the former head of the supreme court, was elected president. A few months before the end of President Djohar’s five-year term, history repeated itself when Bob Denard, supposedly on parole in France, seized President Djohar and forced him into exile to Réunion, a French Overseas Department island. Once again Denard took control of the country for several weeks. Pressured by the Comorian government and the international community, France sent its marines to withdraw Denard and his mercenaries.

In March 1996 Mohammed Taki Abdoukarim was elected president. A year later, because of the incomplete independence of the Comoros and chronic political instabilities conceived by some Europeans, on 3 August 1997 the residents of Anjouan and Mohéli declared an unrecognized independence and requested to return under French administration, which France denied.

In 1997, the islands of Anjouan and Mohéli declared their independence from the Union of Comoros. However, the islands were reunified as the Comoros again in 2002, a new constitution mandated the election of a president of Anjouan along with presidents for the other two islands and a federal president. Mohamed Bacar, who had led the separatist government since 2001, was elected for a five-year term as President of Anjouan. His term expired on 14 April 2007, and the President

of the Assembly, Houmadi Caambi, became acting president from April 2007 to 10 May 2007.

Comorian federal troops tried unsuccessfully to take control of buildings in Anjouan and install a replacement president as mandated by a court in May 2007. The Union government delayed the holding of an election on Anjouan due to alleged irregularities and intimidation, but Bacar nevertheless printed ballots and held a sham election in June, claiming a landslide victory of 90%.

In October 2007, the African Union (AU) imposed travel sanctions on Anjouan's President Mohamed Bacar and other government officials and froze their foreign assets while calling for fresh elections. In February 2008 the Comoros rejected the AU's extended sanctions against Anjouan and instead opted for a military solution.

In March 2008 hundreds of Union government troops began assembling on Mohéli, which is closer to Anjouan than the larger island, Grande Comore. Foreign troops from Sudan, Senegal, Libya, Tanzania, and France arrived to offer support for the operation to invade and secure the Comoros. Anjouan promised to hold new elections in May 2008, which the South African president supported as a way to resolve the crisis. The proposal and the invasion went ahead.

## 2 LOCATION AND HOMELAND

The Comoros Islands, located between Madagascar and the east coast of Africa, cover 2,170 sq km (838 sq mi). The national capital, Moroni, located on Grande Comore, has over 30,000 inhabitants. The climate of the Comoros is tropical, with a warm rainy season from November to April and a mild dry season from April to October. The total population is approximately 530,000 people, of whom more than 30% live in urban areas. The population increases about 3.5% per year, with an annual birthrate of 50 births per 1,000 population and an annual death rate of more than 10 per 1,000 population. The age structure of the population of Comoros is similar to that of many developing countries, in that the republic has a very large proportion of young people.

Grande Comore (Njazidja) covers a total area of 1,145 sq km (442 sq mi). Geologically speaking, it is the youngest island in the archipelago and is dominated by an active volcano, Mt. Khartala (7,900 ft/2,408 m), with the world's largest crater. Its last eruption was in 1977. The island of Anjouan (Nzwani) is triangular, roughly 97 km (60 mi) on each side, and a total area of 424 sq km (164 sq mi). It is the most densely populated island in the archipelago, with 210,000 people. Mayotte (Mahore) is the westernmost island in the archipelago, with an area of 374 sq km (144 sq mi). As the first island to be settled by Europeans, Mayotte was the most resistant to the establishment of a strong Islamic culture by Arab inhabitants. Mohéli (Mwali) is the smallest of the four islands, with an area of 290 sq km (112 sq mi).

## 3 LANGUAGE

Arabic, French, and Comorian are the official languages of Comoros. The Comorian language, *Shikomori*, is derived from the Bantu culture and related to Swahili and Arabic. A different dialect of *Shikomori* is spoken on each of the four islands of the Comoros: *Shinjazidja* on Grande Comore, *Shindzuani* on Anjouan, *Shimwali* on Mwali, and *Shimaore* on Mayotte. De-

spite some phonetic and semantic differences among the dialects, its speakers understand each other.

Comorians do not have surnames in the Western sense. Instead their proper names are followed by those of their fathers, as in Sofia Muhammad-Sofia, the daughter of Muhammad. Most Comorian proper names have specific meanings. For example, the name *Mdahoma* means "long life," *Karihila* means "fearless," and *Shujai* means "hero." Departing from the traditional Comorian names, some Comorians today use Arabic or Christian names. The Comoran people are a blend of African, Arab, and MalayoIndonesian elements. A few small communities, primarily in Mahoré, speak Kibushi, a Malagasy dialect. The principal Comoran Swahili dialect, written in Arabic script, is related to the Swahili spoken in East Africa but is not easily intelligible to East African Swahili speakers. Classical Arabic is significant for religious reasons, and French remains the principal language with which the Republic of the Comoros communicates with the rest of the world.

Comorian, or *Shikomor* is a descendant of Swahili with Arabic influences. About 57% of the population is literate in the Latin alphabet, more with the Arabic alphabet; total literacy is estimated at 62.5%. Comorian has no native script, but both Arabic and Latin scripts have been used.

## 4 FOLKLORE

Comorian folklore is dominated by both African and Islamic traditions. Like some other Muslims, there is a widespread belief among Comorians that events occur according to Al-

lah's will, and that human beings cannot control their destinies. Certain local myths are related to Islam. In the north of Grande Comore, for example, it is believed that at the present site of Lac Salé ("salted lake"), a village was flooded because its inhabitants refused to give water to a sharif (supposedly a direct descendant of the prophet Muhammad).

Some widespread beliefs are related to African divinities, such as the belief that a diviner (*mwalmim*) or *jinn* (spirits) should be consulted before any social activity or ceremony. Such consultations may require special rites, financial outlays, and animal sacrifices.

Mt. Khartala on Grande Comore is said to have been created by the shock that occurred when King Solomon's ring fell on the island while he was being chased by *jinn*s from Saba (present-day Ethiopia). It is said that when the ring sank in the Indian Ocean, it was eaten by a fish.

## 5 RELIGION

Islam is the state religion; some 98% of Comorians are Sunni Muslims. About 2% are Catholic, and evangelical believers represent only 0.1% of the population. There is at least one Catholic church in the capital of each island. Surprisingly, however, mosque attendance is very low. Mixed with their Islamic practices, there is a strong involvement in occultism and spirit possession.

## 6 MAJOR HOLIDAYS

The Comoros have two types of holidays: religious and national holidays, the latter include New Year's Day (January 1); a holiday commemorating the death of President Said Mohammed Cheik, the first president of the self-governing Council government (March 16); Labor Day (May 1); and Independence Day (July 6). Religious holidays include the celebration of the prophet Mohammed's birth; *Miraj*, the day when the latter went to visit paradise; *Idd el Fitri*, which marks the end of Ramadan; and *Idd el Adha*, primarily a day to remember one's ancestors. Religious holidays conform to a lunar calendar.

## 7 RITES OF PASSAGE

In the Comoros, each stage of human life is celebrated by a specific ceremony. Newborn babies and their mothers are kept secluded to avoid the "evil eye" of possible enemies for the first seven days after birth. During this period several religious rituals take place, and only very close relatives are permitted to visit them. After the seven days, friends can see them. Some bring gifts, which may range from a ring to a cow to a tree.

At the age of six, children are sent to a Quranic school, where they learn the Islamic code of conduct, and later to a Western-style primary school. Four to five years later, when they are able to read the entire Quran, a special ceremony called the *Hitimiya* is organized. This ritual is simultaneously a ceremony of a personal recognition and a rite of passage to adolescence. At this time, boys are circumcised.

Traditionally, the eldest daughter in a family does not leave her house after the *Hitimiya* unless she is escorted by a member of her family and covered with a *shirmani* or *lesso* (colorful local shawls). At present, this tradition is only practiced in some rural areas.

At the age of 15, boys traditionally leave their families and build huts where they sleep and socialize with their friends. Yet they still participate in family activities and play a role in

public events in their villages. When this phase is over, they are ready to marry, once they have the approval of their families. They can celebrate with either a simple marriage or the *anda* (grand marriage).

For Grand Comorians, the *anda* is not only a wedding festivity; it is also a social, economic, and cultural rite. Several stages and ceremonies should be accomplished before a man becomes a "respectful man." The grand marriage is cost prohibitive and associates the whole community. On the other islands, the structure is similar but less expensive.

*Anda* promotes a man to a personal social achievement and hierarchy and/or validates his political status. It also provides prestigious status to a woman and her family. In order to access the highest social hierarchy grade and personal prestige, one should celebrate one's own *anda* and also have one for a daughter or niece. Thus, it is not uncommon for someone to marry at the age of 20 and celebrate a grand marriage 30 years later.

Depending upon the family (either rich or socially well-integrated), the grand marriage can begin at the day of someone's birth, reach its peak during the marriage celebration, and continue even after the person's death. However, a simple marriage is reserved for marginal families and those who choose not to celebrate a grand marriage.

Birthday parties are celebrated only in urban areas, yet those born during the month of Maulid (the month corresponding to the Prophet Mohammad's birth) celebrate with a religious ceremony.

## 8 INTERPERSONAL RELATIONS

Comorians are known for their politeness, humor, hospitality, and harmony. Sharing and helping others are considered mandatory in all circumstances, to the point where the very notion of thanking someone is considered odd, because help is always expected and even taken for granted.

The Comorian greeting is very lengthy and may even include inquiries about one's neighbors, pets, or cattle. In public, men shake hands, and some young people slap each others' hands. Older women greet each other verbally or grasp each others' hands. *Kwezi*, either preceding or succeeding a sentence, is a common term of respect used when addressing a person older than oneself. It is considered impolite to address people by their family names. When addressing an older person with whom one is not familiar, proper forms of address are *mjomba* (uncle), *mbaba* (father), or *mdzade* (mother). If one knows the person's child, niece, or nephew, these appellations are followed by the name of the younger relative (e.g. *mbaba* Ali if the son's name is Ali, or *mjomba* Nema if the nephew's name is Nema).

It is considered rude to lose contact with close family or friends, and regular visits are the norm. When someone intends to travel abroad, everyone in the community is informed, and gifts are given by friends and close family members before a trip. The traveler is also expected to bring gifts for those at home upon returning.

Officially, dating is forbidden, as Islam forbids relationships between unmarried couples.

## 9 LIVING CONDITIONS

Comoros is among the world's least developed countries, with high birth and death rates, and a population growth rate that

is roughly twice the world average. In the 1980s, a large proportion of all housing still consisted of the traditional straw huts with roofs made from cocoa leaves, although there were also dwellings made from brick, stone, or concrete.

About 60% of the Comorians live in cities; but whether in rural or urban areas, housing on the island is generally poor. The average life expectancy was 56 years in 1992, when it was estimated that nearly one-third of all children died before the age of five. Leading health problems include malaria, tuberculosis, and leprosy. By 2005, life expectancy was 62.2 years.

There is a ring road on each island. Many of the smaller roads are usable only for part of the year. Grande Comore has an international airport at Hahaia, and there are airfields on the other islands.

## 10 FAMILY LIFE

Despite the intrusion of foreign customs, Comorian culture retains a strong traditional concept of the family, whose members are linked by blood, marriage, or adoption. Friends may also be considered family. The coherence provided by this tradition has played a tremendous role in social and daily life, fostering solidarity and preventing delinquency and crime. Polygamy is an acceptable practice among the Comorians. Among men who can afford it, the preferred form of marriage appears to be polygyny with matrilineal residence. The first marriage is formally initiated with the grand marriage when possible, subsequent unions involve much simpler ceremonies. The result is that a man will establish two or even more households and will alternate residence between them, a reflection, most likely, of the trading origins of the Shirazi elite who maintained wives at different trading posts. Said Mohamed Djohar, elected president in 1990, had two wives, one in Njazidja and the other in Nzwani, an arrangement said to have broadened his appeal to voters. For men, divorce is easy, although by custom a divorced wife retains the family home. Children are expected to help with family duties such as farming, fishing, and caring for the animals. Each family is affiliated with a political party, a bond based on personal relationships rather than on the party's policies or actions.

## 11 CLOTHING

French colonization modified the Comorian mode of dress. Although young people wear Western style clothing, traditional clothing is still common among the adults. Traditional clothing, still worn by older women, is very colorful. They either wear a long dress and cover themselves with a *lesso* or *shiromani* (traditional shawls), or they wear a *chador*, a combination head covering, veil, and shawl worn by women in many Muslim countries. Younger women wear Western clothes but still cover themselves with a *lesso*. Only women in cities wear pants. While in town, a Comorian man will typically wear a white cotton garment and a knee-length shirt, sometimes with a white jacket and white skull cap. Out of town, a long cloth sarong (colorful skirt) is worn. Most women wear long, colorful cotton dresses with bright shawls as face coverings. Others prefer wearing black robes that cover their heads. Older men wear a traditional cloth called an *ikoi* covering their lower body, a long white robe called a *kandu*, and a *kofia*, an embroidered hat.

## 12 FOOD

Comorian food reflects a combination of influences, mostly African but also Arab and Indian. The main fare in the Comorian diet consists of products cultivated on the islands, except rice, which is imported from Asia. Most Comorian cuisine is spicy. The basic diet of the Comorians consists of rice, potatoes, corn, fish, coconuts, and bananas. Other crops that are grown are sweet potatoes, citrus fruits, and pineapples.

Breakfast varies from one island to the next. On Grande Comore, people drink hot tea with bread, grilled breadfruit, or leftovers. On Anjouan and Mayotte they drink a hot soup made from leftover rice. The residents of Mohéli drink hot tea and eat grilled cassava or breadfruit with fish. Lunch is similar on all four islands and may include cassava, tarot, green bananas, potatoes, breadfruit (grilled, fried, or boiled) or rice with *madaba* (cassava leaves), fish, and imported meat. Rice is the main dish for dinner. The most common beverages are fresh water and fruit juice. Alcohol and pork are forbidden by the Muslim religion. On Anjouan and Mayotte, a local beer, *trembo*, made from coconut juice is tolerated. The Comoros islands have an abundance of fruit, including mangoes, papayas, oranges, coconuts, and pineapples, varying with the specific season and region.

Before exposure to Western influences, Comorians ate on a mat placed on the floor using their right hands, a practice still followed in rural areas. In urban areas, people eat at tables with Western utensils.

## 13 EDUCATION

The Comorian educational system is based on both Islamic teachings and the French model. All education is free. Each village has several Quranic schools and at least one French primary school. However, due to economic problems, the majority of students find it hard to finish primary school.

There is a *collège* (junior primary) and three to five *lycées* (secondary schools) on each island, as well as a couple of technical training schools and a teacher training college. For higher education, since the 1990s many private primary and secondary schools have emerged.

## 14 CULTURAL HERITAGE

Comorian music and dance are based on African, Arabic, Malagasy, European, and southern Indian traditions. Comorian society and culture reflect the influences of Islam and the traditions of East Africa. The former provides the basis for religion and law; the East African influence is evident in the language, a Swahili dialect, and in a number of pre-Islamic customs. Western, primarily French, influences are also prevalent, particularly in the modern educational sector, the civil service, and cultural affairs. Lavish wedding ceremonies are common and highly regarded. This wedding ceremony, which can cost as much as the equivalent of \$20,000 to \$30,000, involves an exchange of expensive gifts between the couple's families and feasts for an entire village. The gift giving and dancing that accompany the grand marriage have helped perpetuate indigenous arts in silversmithing, goldsmithing, folk song, and folk dance.

## 15 WORK

Subsistence agriculture and fishing are the Comorians' chief sources of income, employing roughly 80% of the labor force, with a smaller number engaged in trade. In families engaged in farming or fishing, children generally work alongside their parents, although the legal minimum age for employment is 15. In the 1990s, teachers and other government employees, as well as dock workers, began to unionize. Most of the islanders work as farmers or fishermen, while a few breed cattle, sheep, goats, and donkeys. A small number work in industry or in jobs relating to tourism. The island of Mayotte is very poor and undeveloped. Due to the shortage of good farmland, much of the food must be imported.

## 16 SPORTS

Soccer (known as football) is a popular male sport in the Comoros. Each village has at least two football teams. Women only participate as spectators. Volleyball and basketball are also common in urban areas, where some women are involved in sports. Comoros participated in its first Olympic games in Atlanta in 1996.

## 17 ENTERTAINMENT AND RECREATION

Public conversation is a very common form of male entertainment in the Comoros. Each village has several public places called *bangwe* where men of the same generation or social and cultural background meet every day, particularly from 4 to 6 pm and from 8 pm until midnight. All social games and activities take place at the *bangwe*. *Mrengé*, a mixture of boxing and wrestling, was once a popular game on the islands and is still occasionally played on Anjouan and Mayotte. The influence of Western culture has dominated Comorian society, and some Comorian games are unfortunately now disappearing or are considered uncivilized, such as *mbio za ngalawa* (boat racing) and *ngome za ngombe* (cattle wrestling). For recreation they enjoy dancing, singing, and playing instruments, especially horns and drums.

Older men enjoy playing dominoes, cards, and *mraha*, a seed-and-board game well known in Africa and the Pacific Islands. Movie theaters have declined since the introduction of the VCR. On weekends, young people organize picnics or barbecues on the beach. In each major city there are a couple of nightclubs. Young people also commonly surf the Internet.

## 18 FOLK ART, CRAFTS, AND HOBBIES

The Comoros, especially Anjouan, are known for their woodcarvings and dolls. Other traditional crafts include the brightly colored red and orange cloth worn by Comorian women, as well as jewelry and embroidered Muslim hats.

## 19 SOCIAL PROBLEMS

Comorians have no real ethnic or racial divisions. Nevertheless, there are traditional hostilities between urban and rural dwellers and between fishermen and peasants. Yet since the illegal occupation of Mayotte by France in 1975, divisions have emerged between residents of Mayotte and other Comorians of the independent three islands. Political instability is a major problem facing the Comorians. More than a dozen coups d'état conducted by Western mercenaries in the years since 1975 have led to political instability on the islands.

The physical needs of the Comorians are numerous. Major problems in Mayotte include poverty, disease, and hunger. Educational levels are low and only 68% of the population is literate. The economy is struggling and unemployment levels are very high. There is a shortage of hospitals and doctors, and many suffer from illnesses and chronic malnutrition. Hygiene is poor due to the fact that the Comorians have a poor water supply. Such problems contribute to a high death rate, especially among young children.

## 20 GENDER ISSUES

Among the men who can afford it, the preferred form of marriage appears to be polygyny with matrilocal residence. The result is that a man will establish two or even more households and will alternate residence between them, a reflection, most likely, of the trading origins of the Shirazi elite who maintained wives at different trading posts. Women have to contend with an alternating husband. For men, divorce is easy, although by custom a divorced wife retains the family home.

Although women play a limited role in Comorian culture, in which polygamy is legal, their matriarchal tradition gives Comorian women the last word on important issues pertaining to household affairs. Also, atypically for an Islamic society, they may leave their husbands without any official notice or legal decision.

Despite their lower economic status, women married to farmers or laborers often move about more freely than their counterparts among the social elite, managing market stands or working in the fields. On Mwali, where traditional Islamic values are less dominant, women generally are not as strictly secluded.

Islamic law recognizes only male ownership and inheritance of land. In Comoros, however, certain landholdings called *magnahouli* are controlled by women and inherited through the female line, apparently in observance of a surviving matriarchal African tradition.

Girls are somewhat less likely than boys to attend school in Comoros.

Although the 1992 constitution recognizes their right to suffrage, as did the 1978 constitution, women otherwise play a limited role in politics in Comoros. By contrast, in Mahoré female merchants sparked the movement for continued association with France, and later, for continued separation from the Republic of the Comoros.

Due to restricted religious and political beliefs, women cannot plan their own families. The use of contraceptives is irreligious in the largely Islamic community.

## CONGOLESE (BRAZZAVILLANS)

**PRONUNCIATION:** kahn-go-LEEZ

**ALTERNATE NAMES:** Congo-Brazzavillans

**LOCATION:** Republic of the Congo

Population: 3,903,318

**LANGUAGE:** French, Lingala, Kikongo, Sangha, Bateke, 60 others

**RELIGION:** Christianity (Catholic), animism

**RELATED ARTICLES:** Vol. 1: Bakongo

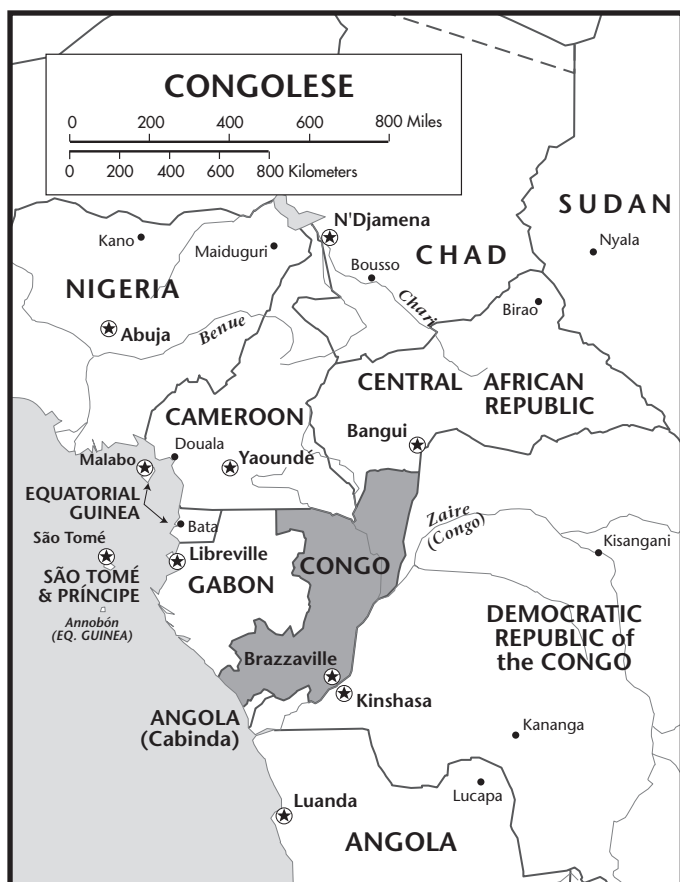

### <sup>1</sup> INTRODUCTION

In October 1997, the Republic of the Congo swore in a new president after waging a four-month civil war that killed thousands and left Brazzaville, once one of the most peaceful and smoothly run capitals in Central Africa, in ruins. Five years after the first democratic elections, private militias installed an unelected government. The civil war was partially fueled by the prize of the country's offshore oil wealth, which motivated many of the warlords. The army split along ethnic lines, with most northern officers joining President Denis Sassou-Nguesso's side and most southerners backing the rebels. By the end of 1999, the government, which was backed by Angolan forces, had taken most of the key positions, and the rebels agreed to a ceasefire. However, remnants of the civil war militias, known as Ninjas, have remained active in the southern Pool region.

The Republic of Congo is one of sub-Saharan Africa's main oil producers, though 70% of the total population of about 3.9 million lives in poverty. In 2004 the country was expelled from the Kimberley Process, which is supposed to prevent conflict diamonds from entering the world supply market. This followed investigations that found that the Republic of Congo could not account for the origin of large quantities of rough diamonds that it was officially exporting. However, reports of battle and corruption do not do justice to the Republic of the Congo. It has long been the education and banking center of the Central African region. During World War II, it was the capital of the Free French movement led by Charles de Gaulle against the Nazis and France's Vichy government. Its leaders were unabashedly Communist during the latter half of the Cold War, trading vigorously with China and the Soviet Union.

Mention "The Congo," and many people think of the jungles made famous by the writings of Joseph Conrad in *The Heart of Darkness*. The Republic of the Congo is located directly across the Congo (or Zaire) River from the Democratic Republic of the Congo (known as Zaire until mid-1997), the setting for Conrad's novel. The river that divides the two Congos is the second longest in Africa, after the Nile, and carries the largest potential supply of hydroelectric power in the world.

Brazzaville is Congo's capital, sitting directly across the great river from Zaire's pulsating capital, Kinshasa. But, Kinshasa seems a world away from the sleepier city on the opposite bank. Brazzaville is calm and orderly, boasting relatively reliable transportation links and utilities, and a crime rate significantly lower than that of Kinshasa and indeed many other African cities. Pointe-Noire, the Congo's industrial and

petroleum center, is located on the Atlantic coast and boasts a dredged harbor that can accommodate oil tankers from around the world.

The Portuguese discovered the mouth of the Congo River in 1482 and began trading with the Kongo kingdom, which had been consolidated in the 14th century. Slaves and ivory attracted the interest of other European countries, and in 1883, explorer Savorgnan de Brazza signed treaties with the Bateke, a tribe located to the north, ceding the entire region to France.

Today, the Congo continues its close relationship with France, despite achieving independence in 1960. Its currency is tied directly to the French franc, and France remains its chief trading partner.

## 2 LOCATION AND HOMELAND

The Congo straddles the equator, most of the land covered by dense tropical forest. It is hot, very humid, and rains an average of 178 cm (70 in) per year. Wooded savanna, river valleys, and a small coastal plain make up less than half of the total land area, which is 342,000 sq km (132,000 sq mi), about the size of Montana. The Congo's entire eastern and southern borders are washed by the Congo River. The magnitude of this river in the lives of Congolese, past and present, cannot be underestimated. Over 1,600 km (1,000 mi) of unbroken navigable water serves as a veritable highway for huge barges and dugout canoes, carting people and produce through Central Africa. People eat from it, live on it in houses built high on stilts, take

electric power from it, and hand pieces of it down through the generations, in the form of inheritable fishing rights.

Inland, there are many lakes and marshes, one of which is the legendary home of a water-dwelling dinosaur known locally as Mokele-Mbembe, considered somewhat of a national treasure, and hunted, but never seen, by groups of eccentric Western scientists. Better documented are elephant, hippo, lowland gorilla, lion, chimpanzee, pangolin, bushpig, dozens of ungulates, crocodile, and tropical birds. The two major environments that comprise the Congo, forest and savanna, are pure contrasts. In most of the forest, one cannot see more than a few yards. On the savanna-covered plateaus, one can see for miles. In the dry season, miles of fire, set by lightning or the game-hunter, ring the horizons.

## 3 LANGUAGE

French is the administrative language of the Congo, with Lingala, Kikongo, Sangha, and Bateke the most widely spoken native languages. There are 60 other languages in the Congo, crisscrossing national boundaries. There is another kind of Congolese language though, and that is the language of the talking drum. For generations, messages have been sent from village to village by the regulated beat of special drums, usually situated near the compound of the village chief. In the past, everyone within earshot understood the meaning of the various rhythms. There were rhythms for death, birth, marriage, or the impending arrival of a dignitary. Talking drums still are used, but they are losing their original relevancy in lieu of radio, shortwave, and television.

## 4 FOLKLORE

The Congo is rich in folkloric tradition, and generalizations are difficult in a country with dozens of ethnic groups. Typically, however, heroes and personalities tend to take the form of animals. Each family, or sometimes an entire village or clan, will have its own totem, an animal whose spirit and characteristics represent the group's unity. These animals are imbued with mystical powers, are responsible for the creation of the ancestral lineage, and revered through storytelling and surrounding ritual and taboo.

## 5 RELIGION

The vast majority of the population identifies itself as Christian, primarily Catholic. Many continue to hold animist beliefs and do not consider them contrary to monotheism. Local animists long believed in one supreme god before the arrival of European missionaries. Its name is Nzambi and can best be described as the omnipotent spirit of nature. One of the Congo's creation myths tells of Nzambi's great illness, back when the Earth was still completely covered with water. In his fits of coughing, he spat up the sun, moon, stars, animals, and people. So, the world was born by opportune accident.

## 6 MAJOR HOLIDAYS

The Congo's national holiday is celebrated on August 15 and commemorates the country's independence from France begun on that day in 1960. Independence Day is celebrated in streets, courtyards, houses, and bars. Beer and palm wine are consumed in large quantities, and the preferred dish on this special occasion is chicken and rice. Chicken, or any form of

animal protein, for that matter, often marks a special occasion. Less than 1% of the land in the Congo is used for animal husbandry, and most meat is either hunted or imported at great expense.

Other holidays include Christmas and New Year's, Easter, All Saints Day, and June 10 (National Reconciliation Day).

## 7 RITES OF PASSAGE

Because many Africans believe in the spirit life of their ancestors after death, funeral and mourning rituals are accorded great importance. But, the ritual life of the Congo is changing quickly with urban migration fueled by wage labor. For traditionalists, the period of mourning can be very involved and intensely onerous. Widows typically shave their heads, dress in rags, and bathe infrequently. They sometimes are required to live by themselves in a house far removed from the center of the village, forbidden to talk with anyone or look a person in the eye. Their only food might be leftovers from their in-laws' table, never to include meat or fish. This state of affairs can last anywhere from one month to the rest of a widow's life, depending on the ethnic group, village, and piety of the family. Widowers, understood to have important work to do outside the home, including fathering more children, might be expected to wait a year before remarrying, as a sign of respect to the dead wife.

A ritual surrounding marriage, practiced less now than in the past, attests to the traditional importance of premarital virginity for girls. It is interesting to note that this ritual appears in different forms throughout the world, particularly the Near East.

Once a couple has decided to marry, both the man and the woman undergo a course in "domestic education," taught by the elders of their own gender within the family. It is assumed that the woman is a virgin, and she must receive some sexual instruction in order to contribute to a successful union. On the morning after the wedding night, the women from both sides of the family arrive early, while the couple is still in bed, to inquire pointedly about the previous night's events. Was consummation successful? Were all parties satisfied? Was there blood evident to prove the virginity of the bride? If the answer to any of these questions is no, then the husband has the right to ask for his bride-price back and annul the marriage.

## 8 INTERPERSONAL RELATIONS

Different cultures express greetings in different ways and so it is in the Congo, with its many cultural heritages. Common for some groups is to greet close relatives not seen for a long time with a bear hug. Among friends and acquaintances, there is the two-handed shake. While in neighboring Gabon, kissing alternate cheeks three to four times is prevalent even in the villages, it is a Western custom seen in the Congo almost exclusively in the modern cities.

There is a marked formality in communication among Congolese, a style that is shared throughout Central Africa. Even a business meeting should begin with a polite inquiry into the other person's well-being, that of their family, and an indication of the honor that their presence bestows. Public recognition of social hierarchy is very important, and agreement with an elder, boss, or anyone of higher status is valued above directness.

## 9 LIVING CONDITIONS

The Congo is a poor country by Western standards. It is far from the poorest country in Africa, however. It currently ranks 16 out of 52 on the United Nations Human Development Index for Africa, which ranks countries according to quality of life based on income levels, literacy, and other criteria. This relative wealth is primarily due to the existence of petroleum.

Outside of the cities, houses commonly are built out of mud brick and are in constant need of repair. Many can afford corrugated zinc roofs on their homes, and those who cannot use thatch. Buildings in urban areas are usually made out of concrete blocks, and there are several steel and glass office towers in Brazzaville, though they have been severely damaged by the war.

Whether poor or wealthy, Congolese take immense pride in their homes. Mud-brick houses are ringed with handmade, well-maintained fencing. Decorative flowers and bushes are planted in a front yard that is scrupulously cleared of weeds and grasses in an effort to keep away snakes, rats, and insects. Cooking often takes place in the front of the house over an open fire, where the women prepare the food, and everyone else gathers. Small villages are arranged with straight, perpendicular streets of dirt and a wide boulevard through the center.

Larger towns and cities are relatively clean and well-planned. Utilities, such as electricity and water, are available, if not affordable to everyone. This is not the case throughout the interior. Villages not on the power grid often use gas powered generators for communal purposes during restricted hours. Watching a wrestling match on a television placed in front of the local bar is but one example.

Although nearly two-thirds of the Congo's citizens live in or between the two major cities of Brazzaville and Pointe-Noire, making it one of the most urbanized populations in Africa, there is ample room for small farms and gardens, and most Congolese are engaged in some type of subsistence farming. They know how to farm and produce just enough food to feed their families and perhaps fill a stall at the vegetable market.

## 10 FAMILY LIFE

The average Congolese woman bears six children during her lifetime. Still, the Congo has one of the lowest population densities on the continent. In the past, most marriages were arranged by family members. Today, this is much less common. Often, a man proposes to a woman with a gift of money. Then, once both families are in agreement, a "dot," or bride-price, is paid by the groom to the bride's parents. While this custom has no legal status, it is ancient and taken quite seriously. If a couple divorces, in many instances, the husband can demand his money back.

A visitor to the Congo might remark that women do most of the work it takes to run a family and a household. They are responsible for planting, harvesting, food preparation, water fetching, child care, and housework (which can include putting on a new roof or erecting a fence). Men traditionally are responsible for hunting, clearing the forest for gardens, or, in the city, engaging in wage-labor.

The word "family" has a somewhat different meaning in the Congo than in the West. The nuclear family is not necessarily the standard unit. Family means an extensive network of relatives, including aunts, uncles, cousins, grandparents,

*While the government, by its own admission, has ignored the rural economy for decades, there is, in spite of this, a relatively high density of rural primary schools.  
(International Labour Office)*

nieces, and nephews. Matrilineal cultures, such as many in the Congo, identify the older brother of one's mother as the prime male role model and caretaker. Cousins on one's mother's side are considered brothers and sisters. If each woman has six children, there are many siblings.

The extended family plays the role in society that the state has taken over in many Western countries. Indigent, sick, or disabled people are rarely sent to institutions, such as nursing homes, left to live on the street, or live on welfare. Their care is the family's responsibility, and the burdens of this responsibility can be spread among the dozens of people that constitute a family.

### 11 CLOTHING

Central Africans take care in their dress in general, and Congolese are no exception. Whether a person has means or not, people in the street, the market, and in offices can be seen in pressed, colorful, hand-tailored garb. *Bous-Bous*, the colorful strips of cotton cloth essential to any Central or West African wardrobe, can be dressed up or down. They also are used as head wraps and turbans by Congolese women. Office workers and bureaucrats dress much the same as they do in the West.

### 12 FOOD

While a visitor to the Congo will marvel at the abundance of greenery, this does not mean that agriculture is flourishing.

Rain forest soil is very nutrient-poor and, despite additional areas of savanna and river valley, only 2.5% of the Congo's soil is under cultivation. Foodstuffs commonly grown on this percentage include bananas, manioc, peanuts, coffee, cocoa, taro, and pineapples. Some livestock is raised, but over 90% of the country's meat is imported.

Congolese cultures abound with food taboos, many related to village, family, or even individual totemistic beliefs. It is strictly taboo for anyone to eat the meat from an animal that is his or her totem.

### 13 EDUCATION

For a long time, Brazzaville was considered the educational capital of Central Africa. Many educated people over the age of 50 in neighboring Gabon, for instance, who did not study in Europe, went to school in the Congo. While the government, by its own admission, has ignored the rural economy for decades, there is, in spite of this, a relatively high density of rural primary schools. Brazzaville has one university and a regionally famous painting school called L'École de Poto-Poto. Murals by Poto-Poto students can be found throughout the streets of Brazzaville. The literacy rate is estimated at 75% for adults.

### 14 CULTURAL HERITAGE

"Every Congolese learns to sing," so it is said. Singing has long been used to alleviate the tedium of work. There are songs about fishing, planting, and how to use a hoe, paddle a canoe, or pound manioc with a giant mortar and pestle. Musical instruments include myriad drums, guitar, and the *sanzi*, a small wooden box with metal teeth that are plucked by the thumbs, like a hand-held piano.

Congolese are also prolific storytellers. Passing tradition to other generations orally kept ethnic histories and the arts alive before the advent of literacy. Since the introduction of French and written language, however, the Congolese penchant for storytelling has found a new outlet, and its novelists, playwrights, and poets have gained celebrity throughout Francophone Africa. Jean Malonga, Henri Lopes, Soni Laboue Tansi, Marie Leontine Tsibinda, and Guy Menga are some of the best known.

There is a pre-modern pharmacological wisdom of rain forest-dwellers that now is beginning to be tapped by modern scientists. A deep knowledge of the forest is a rich, yet vanishing part of the Congo's cultural heritage, and while the average life expectancy of a Congolese has never been over 54 years, people in this region long have found local solutions to their health problems.

### 15 WORK

During the Communist regime, all land was officially state-owned, meaning by extension that all work on it was work for the state. This may have had something to do with the resulting underdevelopment of the agricultural sector over the decades. Conversely, the urban bureaucratic class exploded during this time. Between independence and 1970, after seven years of Communist rule, the civil service grew by 636%. Salaries for state workers ate up almost 75% of the national budget. These expenditures were paid for by oil revenues and foreign subsidies. With the change of governments, and the pressing need to reduce foreign debt, the Congo has significantly reduced the size of its bureaucracy.

## 16 SPORTS

As all over Africa, soccer is the most passionately followed sport. Also popular are karate, handball, basketball, and volleyball, as both participant and spectator sports. Television devotes a lot of time to sports coverage. Now, with satellite capability, one can follow the French Open tennis tournament in a thatched bar deep in the bush.

## 17 ENTERTAINMENT AND RECREATION

Sports, singing, dancing, music, storytelling, and visiting relatives are pastimes everywhere in the Congo. In the city, there are movies, some theater, and discotheques. Fishing is also considered recreational, as well as work. There is always sitting down to a cold Primus beer or glass of palm wine to pass the afternoon in gossip.

## 18 FOLK ART, CRAFTS, AND HOBBIES

Traditionally, Congolesse art was created to serve religious or ceremonial functions, rather than for pure aesthetic reasons. Masks, weaving, pottery, and ironwork were often abstract, depicting the human head or animals. Much of the local expertise in crafts has been lost, although a government agency and an ethnicity museum in Brazzaville are trying to preserve what knowledge and artifacts are left. With an active painting and literary community in the Congo, new forms continue to emerge.

## 19 SOCIAL PROBLEMS

The Congo suffered four months of war in a battle to overthrow the president of its very tenuous democracy. Violent death, dislocation, and general social breakdown are among the immediate problems the Congolesse face. HIV and AIDS are also a major worry for the people of the Congo. Although infection rates are not as bad as elsewhere in eastern and southern Africa, it is estimated that at least 5.3% of the population between the ages of 15 and 49 years is HIV-positive. The prevalence rates range from 1.3% in the north to 10.3% in the south, where civil unrest still lingers.

There are tens of thousands of indigenous Pygmies in the Congo, considered to be the first inhabitants in the area. While equal rights are officially protected in the Congolesse constitution, Pygmies are heavily discriminated against. They have been turned away from public hospitals when seeking medical care and are not represented in government. Those working in the formal sector, such as the logging industry, do not receive equal pay for equal work. Pygmy slavery used to be institutionalized in what is now the Congo, and while it is technically illegal, a form of indentured servitude is said to still exist. Discrimination against Pygmies is not exclusive to the Congo, but it exists all over Central Africa.

## 20 GENDER ISSUES

Women in the Republic of the Congo are underrepresented in positions of influence. For example, they control only 11.1% of the seats in parliament, attaining this figure in 2005 when President Sassou-Nguesso increased the number of women in the cabinet to 5 from an original 2 out of 35. The insecurity and displacement that occurred because of the fighting in the southern parts of the country have increased the vulnerability of women and adolescent girls to HIV/AIDS. Women under

the age of 35 are twice as affected as men, with 61,000 women over the age of 15 living with HIV, out of about 100,000 adults aged 15 and above who are living with HIV. Human rights violations are quite common. Opponents to the government are routinely arrested and remain in custody without charge or trial.

There is no law against homosexual behavior in the penal code. However, there is no legal protection against discrimination based on sexual orientation, nor is there legal recognition of same-sex couples. The government stand on homosexuality is that it does not exist in the Congo.

# CONGOLESE (ZAIRIANS)

**PRONUNCIATION:** kahn-go-LEEZ

**ALTERNATE NAMES:** Congo-Kinshasans

**LOCATION:** Democratic Republic of the Congo (DRC—the former Zaire)

**POPULATION:** 66 million

**LANGUAGE:** Lingala; Swahili; Ciluba; Kikongo; French (language of government)

**RELIGION:** Christianity (Catholicism, Protestantism, African Christianity)

**RELATED ARTICLES:** Vol. 1: Azande; Bakongo; Efe and Mbuti

## 1 INTRODUCTION

The Democratic Republic of the Congo (DRC—the former Zaire) is Africa's third-largest country roughly equal in size to the United States east of the Mississippi River. Its boundaries were drawn arbitrarily at the Conference of Berlin in 1884–85. More than 300 ethnic groups, who speak between 300–600 dialects and languages live within those boundaries.

Archeological evidence from the Shaba, Kasai, and the Lower Congo regions indicates that this part of the world is one of the oldest cradles of human habitation. Prior to European colonization, the peoples of the DRC were part of empires, kingdoms, and small forest village communities. Perhaps the most renowned kingdom was the Kongo, established as early as the 15th century. This Christian kingdom had diplomatic relations with Portugal, Spain, and the Vatican. To the east, the emperor of the Lunda Empire maintained relations with the Portuguese and traded with Arabs on the coast of the Indian Ocean. The legendary prosperity of the Kongo Kingdom and the Luba Empire was cut short by slave trafficking, which eventually caused them to collapse.

The DRC has gone through several name changes, from "The Independent State of the Congo," to "The Belgian Congo," to "The Democratic Republic of the Congo" in 1960, to "Zaire" in 1971, and back to "The Democratic Republic of the Congo" in 1997. At the Berlin Conference, the European powers gave King Leopold II of Belgium sole proprietorship of the territory. Leopold ruled it as his personal fief through ruthless agents, who coerced local populations to meet quotas for red rubber and ivory. Those failing to meet quotas had their hands chopped off. Forced labor killed some 10 million Congolese between 1880 and 1910. When these atrocities became public, the Belgian state took over the colony to avoid further embarrassment. However, oppression and exploitation continued.

In the 1960s and 1970s, rebellions and secessions threatened the sovereignty of the country, but were beaten back with the assistance of the United Nations and foreign troops. Imminent revolt forced the Belgians to grant independence to the territory in 1960. Prime Minister Lumumba, who had socialist tendencies, was killed in February 1961. CIA and Belgian involvement brought Mobutu to power in 1965. Mobutu Sese Seko, whose name means "the one who will last forever," plundered the country's resources and impoverished his fellow citizens. His fortune, once estimated at over \$8 billion, made him one of the richest men in the world. Mobutu had been Africa's longest-ruling leader when he was forced into exile in May 1997. He died in Morocco in September 1997.

In April 1997, with the backing of Rwanda and Uganda, rebel forces under Laurent Kabila marched on and captured Kinshasa, the capital. Laurent Kabila was assassinated in January 2001 and succeeded by his son, Joseph, who headed a transitional government in 2003, and was elected president in 2006. An elected national assembly was installed in September 2006, and provincial assemblies in early 2007, which in turn elected senators as well as provincial governors.

## 2 LOCATION AND HOMELAND

The DRC extends from the Atlantic Ocean in the west to the snow-capped Ruwenzori Mountains (the "Mountains of the Moon") in the east. Straddling the equator, the DROC shares borders with nine states: the Republic of Congo, Central African Republic, Sudan, Uganda, Rwanda, Burundi, Tanzania, Zambia, and Angola. The mostly highland plateau is broken up by hilly and mountainous terrain, and a vast central basin drains into the Congo River. A chain of deep-water lakes formed by the Great Rift Valley fault line lie on the eastern border. Moving away from the equator, a rainy and a dry season begin to alternate. In the drier highlands, temperatures can drop to 5°C (40°F) at night.

The DRC claims the second-largest remaining rain forest in the world, and some of the world's largest deposits of minerals and precious metals. It is rich in copper, tin, manganese, coltan, and cobalt. Industrial diamonds abound in the Kasai Regions. Gold deposits have been identified in Orientale Province. The Inga Dam on the lower Congo River harnesses energy from the world's second-largest flowing volume of water. However, commercial logging threatens fragile ecosystems in the central basin and along the fertile eastern corridor.

The DRC's population is growing at about 3.2% yearly. By the year 2020, it is expected to reach 90 million people. Population density varies greatly from extremely dense urban centers to the sparsely populated central basin. The rural eastern corridor, bordering on Uganda, Rwanda, and Burundi contains about 29 persons per sq km (76 persons per sq mi). Six ethnic groups account for more than 69% of the population, but no single group dominates the others numerically or politically. The Luba make up 18%; the Kongo, 16%; the Mongo, 13.5%; Rwandese, 10%; Azande, 6%; and Bangi and Ngale, 6%.

## 3 LANGUAGE

In spite of the many dialects spoken throughout the DRC, four national languages predominate. Foremost among these is Lingala, which is spoken in the equatorial region, in the capital, and along the Congo River. Lingala is the main lingua franca (common language) thanks in part to former President Mobutu, who made speeches in Lingala and popularized it in the civil service. It also became the language of preference in the army and in Congolese music.

Swahili is the second lingua franca, spoken throughout the northeast, eastern, and southeast parts of the country. Tshiluba is spoken in the two Kasai regions, and Kikongo is spoken in Bas-Congo. French is officially used in government, and in education at university and high school levels. In public elementary schools, French is often taught as a second language. It is common to find people speaking a national language at the market, French in school, and their mother tongue at home.

#### 4 FOLKLORE

Folklore is communicated in many ways, including literature, art, music, and dance. It is a means of carrying on tradition from generation to generation. Each ethnic group has its own legends and folk tales, though similarities exist. Animals figure importantly in these. For example, the rabbit is identified with intelligence and cunning, while the crocodile is associated with something bad, such as an unforgiving traffic cop, or an overzealous ticket-taker on the bus.

A deep appreciation for Congo's rich past is seen through a former popular television figure, *Grandpère* (grandfather), who told folk tales in a village setting, recalling former times when this tradition took place around an evening fire. Since the purpose of the tales was to teach while entertaining, Grandpère frequently expounded on the morals of these stories and of their application to daily life. Children, as well as adults, now watch a similar program in four of the national languages. In Swahili the program is called, "Hadisi Njo," and in Lingala "Lisapo Nge." These titles are actually the way storytelling begins with the storyteller saying "Lisapo Nge!" and the audience replying "Onge!" Children considered it a great honor to appear on the Grandpère show.

#### 5 RELIGION

Nearly half of all Congolese practice Catholicism, and another third are Protestant, yet Christian and traditional beliefs are blended together. For example, at holy Mass, protection of the ancestors is often implored. People also dance in the liturgy and offer in-kind gifts, including goat, cassava, fish, fruits, and vegetables. In 1921, Simon Kimbangu, claiming to be a prophet of Jesus Christ, led a religious revival against colonialism. Some 17% of the population now profess a form of African Christianity. In recent years Protestant sects led by charismatic preachers have gained large followings in towns and cities. The popularity of these churches is based in part on the hope they hold out to their parishioners, for whom survival has become a daily challenge. It also reflects the failure of institutionalized churches to respond to people's everyday needs.

Traditional belief holds that all things have life and deserve respect, even inanimate objects like rocks. Life never ends, and no separation exists between the living and the dead. Offering the ancestors a drink by pouring some beer on the ground is symbolic of this belief. Nzambe, assisted by the spirits of ancestors, is the supreme being from whom all things derive. The *Nganga-Nzambe*, the "doctor of God," is called upon in times of need to intercede with sacrifices and prayers. When evil befalls someone, it is assumed that a person or a bad spirit is responsible. It is up to the *Nganga* to find the cause and appease the person or spirit who is displeased.

#### 6 MAJOR HOLIDAYS

The increasingly difficult political and economic climate in the DRC has dampened popular celebrations of secular holidays. June 30, Independence Day, is celebrated in the capital with speeches, parades and folk dancing, but political holidays such as May 20, the day that Mobutu's Popular Revolutionary Movement Party (MPR) was founded, have been taken off the calendar. Christmas, New Year's Day, and Easter are festive occasions for family visiting, and if means permit, are celebrated with roast goat or cow.

Parent's Day, August 1, is a unique holiday. In the morning Congolese celebrate the dead, and in the afternoon, the living. Residents of Kinshasa, for example, go to the cemeteries early to clear and spruce up family graves. Fires are set to burn away the tall weeds and elephant grass, which at the end of the rainy season are very dry but so thick as to be impenetrable. As the grasses burn, tomb stones, grave markers, and crosses appear through the smoke and flames. Visitors dodge these uncontrolled fires to sweep off their ancestors' graves and perhaps enjoy a meal at the site with them. Adults then return home to eat again together with the children.

#### 7 RITES OF PASSAGE

In the DRC, children are a symbol of wealth, and all births are celebrated with joy. However, in the dominant patriarchal system, boys are more desired because they perpetuate the family name. *Kobota elingi*, the joy of giving birth, is celebrated with friends, who bring gifts, food, and drinks to the parents. They also help out with household chores and caring for the baby. The more respected the parents are, the more help they are likely to receive.

Prior to colonization, boys and girls passed to adulthood through initiation rites. Boys were circumcised and taught the elders' wisdom and the values of their culture. Girls were never circumcised, but they were brought to a secret place and taught how to succeed in marriage and to raise a family. Nowadays, male circumcision occurs soon after birth. Because of social changes in the cities, young men and women are usually

*Zairian families traditionally tended to be large, with 10 or more children. The number of children per family is shrinking, especially in urban centers. (Jason Laure)*

taught about life and their culture by a family member such as an uncle or aunt.

Congolese believe in life after death, but death still remains a mystery, especially in the case of a child, young person, or young adult. Blame or responsibility must be assigned so that their spirits may rest. When an elderly person dies, however, it is believed that their spirits watch over family members. Funeral ceremonies, *matanga*, vary according to ethnic group. In the villages, the corpse is washed and kept in the house until burial. In the cities, it is taken out and laid in a bed underneath a canopy of palm branches. Mourners comfort the family by bringing gifts, and by sitting on the ground with the family and praying.

## 8 INTERPERSONAL RELATIONS

Congolese are extremely gregarious and commonly stop to greet friends, and even strangers, on the street. When socializing, they typically walk around in small groups of two or three. It is customary to shake hands when meeting people, and when taking leave of them. When greeting an older person, one waits for the elder person to offer his or her hand. If the hand is not offered, one gives a slight bow with the head. If the hand is offered, the younger person reaches out with the right hand and rests the left hand on the right arm near the wrist. Children should receive objects from adults, even from each other, with both hands.

During the Mobutu era, strangers greeted each other with the title, "Citoyen" (Citizen). They now use the French "Monsieur," "Madame," or "Mademoiselle." However, a less formal and popular address is simply "Papa" or "Mama." There are several ways to greet people depending on time of day and the

nature of the relationship. In the morning a Lingala-speaker greets by asking, "Hello, is that you? (*Mbote, Yo wana?*), Are you awake? (*Olamuki?*), How did you sleep?" (*Olalaki malamu?*). Asking someone how they are consists of literally asking, "What news?" (*Sango nini?*). The typical reply would be, "No news!" (*Sango te*) meaning, "Fine." It is not considered impolite to drop in on someone without giving prior notice. In fact, announcing a visit signals something important, like a marriage request, in which case the visitor brings along a sack of rice, a goat, and several cases of beer.

Congolese place great importance on family and social relations. A grandparent affectionately refers to his or her grandchild as "little husband or wife," and the grandchild refers to the grandparent in the same way. A woman light-heartedly addresses a neighbor as "father-in-law" (*bokilo*) because she likes his young son, whom she calls her "little husband." Many people call friends and even strangers "brother-in-law" or "sister-in-law," which is a way of building friendships and avoiding conflict.

## 9 LIVING CONDITIONS

The majority of Congolese find it challenging to send their children to school, pay for health care, and even to eat one or two meals a day. Many middle-class urbanites who once had dependable salaries and were people of means now eat once a day or less. Half-finished houses take years to complete. Many goods are priced in US dollars to hedge against inflation. The Human Development Index (HDI), which measures general well-being according to life expectancy, education, and standard of living rates the DRC 168 out of 177 countries.

Health care is generally available in cities and town centers, but unless patients can afford to pay for bandages, medications, and other basic supplies, they will not receive treatment. Before the outbreak of AIDS, clinics and hospitals routinely reused needles. Some 54% of the population does not have access to improved water sources, 31% of children aged 0–5 are underweight for their age, and the probability of not surviving past age 40 is about 41%.

Homes in the village are often made from mud brick, and thatch or galvanized-iron roofing. They are clean, but not mosquito-proof. People use kerosene lamps, and women and children haul water from nearby springs, rivers, or common wells. It is difficult in these conditions to avoid bacteria and children often suffer from a variety of air- and water-borne diseases such as diarrhea and dysentery. In the towns, some houses have electricity, running water, and flush toilets. However, large sections of Kinshasa that once enjoyed 24-hour electricity now receive on average six hours of power a day.

The most common form of transportation in the DRC is on foot. People walk everywhere, and women and girls balance huge loads on their heads—anything from wash basins full of fruit to buckets of water. The extremely poor condition of DRC's once vast road network makes it impossible to travel easily from one region to another. Air travel, which is risky and expensive, is practically the only way to travel from Kinshasa to Lumbumbashi or to Goma and Bukavu in the east. River travel is the other most dependable means of reaching the hinterlands. River boats and dug-out canoes are perhaps the best way to bring goods to market and to travel especially in the central Congo basin.

## 10 FAMILY LIFE

Children are a blessing, a sign of wealth and a social safety net for parents in their old age. Families of 10 or more children are not unusual though family size shrinks with education and affluence. The financial difficulties associated with paying bride prices, housing, and other costs delays marriage. Many couples now either co-habit or marry in their thirties. Polygyny is practiced, but since second wives are not recognized by church or state, men tend to keep a second wife or girlfriend (*deuxième bureau*—second office) at another location.

In the extended family, marriages may be seen as alliances among families, clans, and ethnic groups with similar interests, and therefore parents and older siblings will search for a suitable spouse for their children and younger brothers and sisters from among members of the same ethnic group. A couple often participates in separate traditional, civil, and religious ceremonies. The traditional ceremony consists of exchanging gifts between the two families. The bride-price, which includes money, clothing, a Coleman lantern, or cattle, has been paid long before the wedding. The bride-price creates an alliance between the two families and the couple, and it represents the wealth that women bring to African society as mothers and workers. The civil ceremony consists of exchanging wedding vows before a government representative. The official reminds the couple of their family and civic responsibilities, and also confirms that the bride-price has been accepted. The bride and groom are expected to furnish cases of beer and soft drinks for the official. Finally, at the church, the bride might wear a Western-style wedding dress. In rural areas, wedding celebrations can last weeks, punctuated with singing, dancing, and feasting.

## 11 CLOTHING

In the DRC, people dress up in public. If they cannot afford fancy clothes, they wear washed and neatly pressed second-hand clothing. Sloppiness is not considered a virtue. In the 1970s, under Mobutu's "authenticity program," the government banned westernized business suits for men, and replaced them with collarless suits, or *abacost*, meaning "down with suits." Neckties and bow ties were also replaced by scarves and matching handkerchiefs in the front pockets.

Similarly, women were not permitted to wear wigs, Western pants, jeans, or miniskirts. Even today as those rules no longer apply, women prefer African wraparounds (*pagnes*), tailored in creative styles with bright, colorful African patterns. Highly trained and skilled tailors and dressmakers have made an art form of styling the *pagne* and blouse, and many fabrics are given names. In addition, made-to-order bracelets, rings, earrings, and necklaces of ivory, malachite, gold, silver, copper, and diamonds are prized. In inflationary times, quality fashionable clothing and jewelry are investments that hold value. Congolesse styles have caught on elsewhere in Africa, and have given the DRC a leading reputation for African dress.

## 12 FOOD

Congolesse love to eat, but have increasingly had to tighten their belts because of the economy. Breakfast may be no more than sweet *café au lait* (coffee with milk) with a baguette of French bread that can be dunked in the coffee. The noon meal is the most important and requires considerable time to prepare, including a trip to the market to buy ingredients. The staples are

cassava, rice, potatoes, plantains, and sweet potatoes or yams, accompanied by a sauce of greens, fish, or meat depending on the region. Typically, a family eats from the same bowl of sauce, and from a large dough-like ball of cassava flour or corn flour (*fufu*) or a mixture of the two. Before eating, hands are washed (a basin of warm water, a bar of soap, and a towel may be passed around). Supper consists of leftovers or tea and bread. In rural areas men and women tend to eat separately, particularly at parties and ceremonies. People eat with one hand, usually the right. Congolesse would normally cook more than they can eat because one never knows when visitors might drop in. Under normal circumstances it would be extremely rude not to offer, or not to accept, food and drink.

A favorite sauce is made from cassava leaves (*saka saka*), which are pounded and cooked. Fish is often added to *saka saka*. Other traditional foods include pounded sesame seeds (*wangila*), squash seeds (*mbika*), steamed chicken or fish (*maboke*), shiskabobs (*kamundele*), and plantain dough (*lituma*). In some regions, people consider caterpillars, grubs, roasted crickets, and termites to be delicacies. In the Equatorial region, wild game such as elephant, monkey, hippopotamus, and crocodile are enjoyed. The DRC is perhaps best known for *mwamba*, a sauce made of palm-nut paste, in which chicken, meat, and fish are cooked. *Mwamba* is cooked over a low fire, and is eaten with rice, *fufu*, or *chikwange* (cassava prepared in banana leaves).

As for drink, fondness for beer is legendary, but in the village, palm-wine is the favorite. This drink is fermented after being tapped from the top of the coconut palm, drawn into a gourd overnight, and collected early the next morning. On Saturday and Sunday afternoons, people sit in the shade of a mango tree, consuming the milky, tangy substance. Bananabeer, sugarcane-wine, fruit wines, homemade gin, and passion fruit juice are some of the other drinks produced throughout the country. Pouring a small amount of drink on the ground for the thirsty ancestors is customary before drinking.

## 13 EDUCATION

Education is not required by law, and many children drop out of school to work when parents are unable to pay fees, book rentals, and buy school uniforms, copybooks, pencils, and other supplies. In 2005 the combined primary, secondary, and tertiary gross enrolment ratio was 33.7%. The adult literacy rate for people aged 15 years and older was 67%.

Secondary school begins with a two-year middle school program (*cycle d'orientation*). The main goal is to evaluate student strengths and weaknesses, and orient students for future study and career choices. The four-year high school program includes the following general options, depending on the school: Literature, Science, Business, Nursing, and Education. A high school diploma must be earned by passing a rigorous state exam, and for many it becomes the final degree. Public university, plagued by strikes and overcrowding, closes frequently. Consequently, many private universities have opened over the past few years. Parents with means or connections send their children to private boarding schools for high school, and to university in South Africa or Europe.

Because pay is low and erratic, teaching is no longer a prestigious vocation. Teachers supplement their income by working on the side. Inability to make a living wage has also led to bribes for grades. Many public school classrooms lack basic supplies

such as blackboards and chalk. In some schools, children must take their own stools. A unique Congolese institution that puts responsibility on the pupils to keep up their schools is *salongo*. *Salongo* brings the students together to spruce up school buildings, clean school yards, and remove overgrowth from school grounds and sports fields.

#### 14 CULTURAL HERITAGE

Congolese dance music, referred to as “Sukus” in the United States, has been popular throughout sub-Saharan Africa since the 1950s and continues to gain international popularity. It is a combination of jazz, traditional music, and Latin-influenced rhythms. The instrumentation consists of electric guitars, keyboards, trumpets, saxophones, conga drums, and Western-style drum sets. Lyrics in Lingala comment on society, give advice, make political statements, criticize behavior, or simply relate love stories. Songs typically are divided in half. They begin with a slow section, and end with a fast-paced beat. One song can last for as long as 20 minutes.

Congolese are imaginative dancers, constantly inventing new dances which come and go almost monthly. Colorful names depict the dance movements and gestures, such as *dindon* (the turkey), *caneton* (the duckling), *volant* (the steering wheel), and Apollo (astronauts’ space-walking on the moon). Music is heard just about anywhere even on domestic flights. Drumming and dancing are part of any festive occasion, be it greeting the president at the airport, frolicking in the village under a full moon, or performing at a cultural event. The national folkloric ballet has gained an international reputation.

From ancient times, Congolese peoples have used their oral literature to carry on traditions, customs, and social values. Modern written literature has been built on this oral foundation. It varies widely from classical to popular forms and is written in French as well as in national languages. Drama is one of the most popular forms of literature today.

#### 15 WORK

One of the greatest challenges facing the Congo is to create work opportunities for its citizens. Industry employs only 10% of the work force, mainly in mining, timber extraction, oil palm processing, textiles, chemicals, and food processing. Services employ about 12% of the labor force. The rest of the work force is either without work or employed in the informal sector in subsistence agriculture and petty trades. Informal work provides no regular salary, health insurance, pensions, or other benefits. Since the closure of Gecamines, the national mining company, some 20,000 skilled jobs with benefit packages have been lost. The impact of these closures on mining cities like Kolwezi has been devastating to infrastructure and the local economy. While industrial mining is beginning to return, some 2 million miners labor under harsh conditions panning for diamonds, copper, gold, and coltan, which is used in making cell phones, DVD players, and computers.

#### 16 SPORTS

Soccer is the national pastime, played or watched virtually throughout the country. Competition with African national teams is so intense that when the national team defeated the Moroccans for the Africa Cup in the 1970s, the returning players were welcomed like royalty and given houses, cars, and

large sums of money. Congolese (then Zairians) were treated to a national holiday.

People love playing cards, chess, checkers, and board games. A traditional board game called *Mangula* is played mainly in rural areas by men. One version consists of a carved wooden board with two rows of shallow pockets separated by a divider. The game begins with some small stones in each pocket. Player One moves and continues according to the number of stones he picks up. Each time he lands, he picks up his opponent’s stones in the pocket opposite him across the divider, and uses these stones to continue his play. When he fails to pick up any stones, his opponent takes his turn. The first person to displace all his opponent’s stones to his side of the board wins.

#### 17 ENTERTAINMENT AND RECREATION

Most people do not have disposable income to go to cinemas, to eat out, to go to night clubs, or to pay for entertainment. Their entertainment is restricted to socializing with family and friends, watching TV (in towns and cities), and telling stories or dancing in the village square on special occasions. Video houses hooked to satellite TV have gained in popularity for watching soccer tournaments and movies. In the cities young people and adults enjoy going out on Saturday night to socialize, listen to music at outdoor pubs, dance at night clubs, and watch theatrical events.

#### 18 FOLK ART, CRAFTS, AND HOBBIES

The DRC is famous for its traditional folk arts and crafts. Artists and craftspeople produce ceramic pots, reed mats, woven baskets, woodcarvings, chess games, sand paintings, hand-made clothing, and jewelry. Children are very inventive, recycling tomato cans and metal hangers to design cars that are steerable, and airplanes with hatches that open.

In general, African art is functional, but increasingly tourist art generates income. Formerly, masks were assigned power to intercede with the divine. Some are still only brought out on very specific occasions for initiations and for solving community problems. The Bakuba people from the Kasai regions still produce wood sculptures, masks, and statuettes that may be used to enhance fertility, and to chase away evil spirits. In recent times, a distinct genre of oil paintings, found in many Zairian homes, wryly reflects the magnitude of contemporary social challenges. In these paintings, snakes or lions within striking distance of unsuspecting human prey depict impending doom.

#### 19 SOCIAL PROBLEMS

Congolese must conquer hunger, political repression, and political and economic instability, and meet their basic daily needs. People work hard for very little. Many people resort to “*Article 15*” or “*debrouillez-vous*,” which means, “make do in whatever way possible.” Kids leave school early, girls prostitute themselves, civil servants steal, police officers extort, and military personnel loot and pillage. Enormous human losses caused by HIV/AIDS and the Ebola virus challenge Congolese to care for the sick and orphaned. A hidden tragedy is that generations of Congolese children may be growing up undernourished on a basic diet of cassava, which is extremely poor in nutrition.

Nonetheless, Congolese are learning to cope with these scourges. Compared to the United States, drug use is uncommon, and serious crimes as Americans know them are rare.

For all their problems, Congolese are resilient people, who are making do with “*Article 15.*”

## 20 GENDER ISSUES

The value of women and girls to Congolese society is recognized through the bride price (*la dotte*), which is payable by the groom’s family to the bride’s family in order for marriage to proceed, and it can be quite considerable involving both in-kind and cash payments. However, women and girls are subservient to men and boys in social, economic and political spheres of life, and under the law women do not possess the same rights as men. For example, a woman must obtain her husband’s permission before opening a bank account, conducting a real estate transaction, and applying for a passport.

A woman found guilty of adultery could be sentenced up to one year in prison while a man would unlikely be subject to a penalty. Women are not permitted by law to work at night or to accept employment without their husband’s consent. They typically do most of the household work, fetch water and firewood in the village, and in the public and private workplace they receive less pay for doing the same job. They rarely occupy political posts or positions of high authority and responsibility. As noted (see **Social Problems**) women and girls are subjected to trafficking, forced labor, prostitution, and rape, but the government is either unable or unwilling to protect them and to provide justice for them under the law.

# COPTIC CHRISTIANS

**ALTERNATE NAMES:** Copts

**LOCATION:** Egypt

**POPULATION:** 6.8 million-8.3 million (2007 estimate/includes 1.2 million Coptic Christians who reside outside Egypt)

**LANGUAGE:** Arabic, Coptic

**RELIGION:** Coptic Orthodox Christianity

## 1 INTRODUCTION

The Coptic Christians are a distinct religious community in Egypt and the Coptic Orthodox Church is the largest Christian institution in the Middle East. The origin of the community dates to the childhood of Jesus, who was said to have traveled to Egypt with his father, Joseph, and mother, Mary. The apostle Mark, a follower of Jesus, brought Christianity to Egypt during the rule of the Roman emperor Nero in the 1st century AD, and Copts regard Mark as the first patriarch of their church. Mark’s proselytizing helped spread Christianity from the city of Alexandria throughout Egypt. Writings from the New Testament that date to AD 200 have been found in Bahnasa. A fragment of a document found in upper Egypt contains a portion of the Gospel of St. John in the Coptic language.

Copt scholars and writers played an important role in the formation of early Christian theology. The Catechetical School of Alexandria was founded in AD 190 and soon became the most important site for religious instruction among Christians. The school also taught science, mathematics, and the humanities. Monasticism, or the practice of renouncing worldly pursuits in order to pursue a spiritual path, began in Egypt in AD 300 and influenced Coptic beliefs in submission and humbleness. A Copt known as St. Anthony was the world’s first Christian monk. By the end of the 4th century AD, hundreds of monasteries had formed in the hills of Egypt.

Coptic Christians were part of the Byzantine family of Christians until the universal Christian church split following the Council of Chalcedon (the Fourth Ecumenical Council) in AD 451. The council, based in Rome, ruled that Jesus was both fully human and fully divine, or of two complete natures. This ruling diverged from beliefs of the Coptic Christians and other followers of what has come to be known as the Eastern Orthodox Churches. Eastern Orthodox followers believe that the humanity and divinity of Jesus are united and that the son of God has one, not two, natures. As the universal church split, Copts suffered a great deal of persecution from other Christians, and their strength as a religious community weakened. Arabs invaded Egypt in AD 649 and were able to use the weakness in the community to convince hundreds of thousands of former Christians to convert to Islam. By the end of the 12th century, Egypt had become a predominantly Muslim country. Muhammad the Prophet, the founder of Islam, however, had an Egyptian wife and emphasized the need for new converts to practice kindness toward Copts. Coptic Christians were allowed to practice their faith freely and suffered little discrimination as long as they paid a special tax to the Arab regime. The Copts suffered periodically from Muslim hostility and were at times prohibited from building new churches, testifying in court, or practicing their religion in public.

The position of Copts improved in the early 19th century under the rule of Muhammad Ali. The Egyptian state lifted tax rules imposed on the community and no longer separated Copts from Muslims administratively. By 1855 Copts were serving the Egyptian army and joined with Muslims in asserting a sense of a national Egyptian identity during the 1919 revolution in Egypt. The Coptic church has enjoyed a remarkable revival since the middle of the 20th century. The church is strongest in Egypt, with approximately 9 million followers. However, missionary efforts and the emigration of Copts from Egypt have led to the establishment of Coptic Christian communities throughout the world.

## 2 LOCATION AND HOMELAND

Copts live throughout Egypt, and traces of their cultural, historical, and spiritual influence can be found in every province. Egypt is located in northern Africa. It is bordered by the Mediterranean Sea, between Libya and the Gaza Strip, and the Red Sea north of Sudan. Egypt's land also includes the Sinai Peninsula.

With an area of 1,001,447 sq km (686,622 sq mi), Egypt is slightly bigger than the states of New Mexico and Texas combined. That land area is largely desert, with small oases scattered throughout the land. All but about 5% of the country's land is uninhabitable. More than 97% of the population lives in the Nile Valley, which runs the length of the country. The Nile faced seasonal flooding until the Aswan Dam was built in southeastern Egypt. The dam has allowed for a small agricultural area to thrive. Most residents, however, live in cities along the Nile, particularly around Cairo. Overcrowding has prompted the government to reclaim desert areas through the pumping of water from Lake Nasser. Southern Egypt is largely rural and Copts who inhabit these areas are generally poorer and less well educated than those who reside in the more prosperous north.

Part of the Sahara Desert lies in Egypt. Coptic monasticism historically has brought men to Egypt's deserts to practice asceticism for periods of time. As a result, a rich array of Coptic culture can be found near the Khargo oasis. Living conditions in the deserts are extremely harsh. The climate throughout Egypt is generally hot and dry in the summer with temperatures reaching 21 to 36°C (69 to 97°F) in July and more moderate in the winters. Temperatures in December average from 8 to 18°C (46 to 64°F). Egypt receives only 5 mm (0.20 in) of rainfall per year on average although as much as 203 mm (8 in) might fall in the Nile Delta. A hot, dusty wind known as *khamasiin* blows in Egypt through the spring.

## 3 LANGUAGE

The word Copt is derived from *Gibt*, which was an Arabic form of the Greek term of *Agyptos*. The Greek term was derived from *Hikaptah*, which was the ancient Egyptian name for the first capital city of Memphis. The Coptic language shares a philological affinity with the ancient tongue of Egypt's pharaohs and continues to be used in liturgical rituals. However, most Copts speak Egypt's official language of Arabic. Some also use English and French for business or social affairs. Coptic language and literature courses are offered at a few European universities, a Coptic Studies program at American University–Cairo, and some Coptic Orthodox Churches.

Coptic Christians often define their affiliation to their religion through the naming of babies. It is customary to choose a Coptic name over a more common Egyptian name that might be associated with Islam.

## 4 FOLKLORE

Copt stories from the medieval period remind humans of the importance of prayer, fasting, and doing good works in the name of God. Many of the stories contain both Coptic Christian and Egyptian Muslim influences. Some were first written in Arabic, but used in Christian homilies throughout Egypt.

One such story relates to a figure named Luqman the Wise, a Christian preacher. In one story, Luqman the Wise chastises those who neglect such practices by telling them that they risk allowing a rooster to become better than them.

Luqman the Wise says:

“O my son, don't let the rooster be better than you!

For it, when the night is half spent, beats

its wings and cries out to God in praise.

So if a lowly bird that has no value praises God, how can it be that a

noble human being, whom God has set above all the creatures, does not

praise God and ascribe him holiness at all times?”

In another story, Luqman the Wise's words emphasize the freedom and strength of the Copts in preserving their religious practice amid the threat of persecution from Muslims:

Also, Luqman the Wise says:

“God has humbled the people of the world

with two traits: death and poverty.

Were it not for death, no stubborn tyrant would submit.

Were it not for poverty, no free people would serve slaves.”

## 5 RELIGION

The Book of Isaiah in the Old Testament contains a prophecy of the formation of a Christian community in Egypt. In chapter 19, verse 19, Isaiah writes, “In that day there will be an altar to the lord in the midst of the land of Egypt, and a pillar to the lord at its border.” In line with that prophecy, many Biblical figures saw Egypt as a refuge from famine and persecution. Mary and Joseph, the parents of Jesus, also are believed to have spent time in Egypt when Jesus was a small child. Many churches have been built at sites where the Holy Family was believed to have sought shelter, and other landscape features, such as caves and trees, are known as resting points for the family.

Coptic Christianity leans toward the mystic and spiritual. Religious instruction continues at the Catechetical School of Alexandria, where scholars use allegorical and spiritual methods to interpret and teach scripture. Numerous saints and ascetics are associated with the Coptic Orthodox Church. Many of these individuals attained martyrdom during the centuries of persecution that Copts suffered under Byzantine rule.

*A young Coptic Christian boy at church services in the St. Maximus Church, Alexandria, Egypt. (AP Images/Ben Curtis)*

One of the most prominent symbols of the Coptic Church is the Coptic cross. The most common Coptic cross consists of two bars of equal length that are crossed perpendicularly at the center. There are three points at the end of each bar, symbolizing the Trinity. The total of 12 points on the cross further symbolizes the 12 Apostles. In some forms, the cross will contain a circle, either at the center or at the top. Copts adapted the cross soon after the apostle Mark brought Christianity to Egypt. The Copt use of this cross continues a belief among pre-Christian Egyptians that the symbol represented eternal life.

Many Coptic Christians regard asceticism as a way of life. The level to which asceticism is practiced among Coptic Christians varies considerably. Nevertheless, most believe that the path to enjoyment of the divine spirit lies in a minimizing or full renouncing of worldly pursuits. This belief leads some to practice celibacy. Women traditionally would live together in a single house in the cities to assist each other spiritually, while men who chose to be celibate would live in simple huts in villages. Others would go to Egypt's deserts. Nearly a dozen monasteries still exist in Egypt's deserts, and at least six convents for Copts are still operating in Egyptian cities.

The Coptic Christian worship service is lengthy and rich with ritual. Worship includes the singing of hymns, the reciting of liturgies, fasting, and numerous feasts throughout the

year. The full congregation, including children, participate in the service.

## **6 MAJOR HOLIDAYS**

Egypt established Coptic Christmas as a national holiday in 2003. The celebration of Christmas generally falls around January 6 or 7 and ends with a 45-day fast that some Copts observe. Shops and government services for both Muslims and Christians are closed in Egypt on that day. Other major holidays include Epiphany, Palm Sunday, Easter, Pentecost, Ascension, and Annunciation. These holidays, along with Christmas, are known in the Coptic Christian world as the Seven Major Feasts. A series of fasts precede the major feasts. The church also celebrates what are known as the Seven Minor Feasts: the Circumcision of the Lord, Entrance into the Temple, Entrance into Egypt, Transfiguration, Holy Thursday, Thomas Sunday, and Great Lent.

## **7 RITES OF PASSAGE**

Copt babies are traditionally washed during a special service eight days after their birth and baptized in the church. A special liturgy is recited in the new child's honor. The death of a congregation member results in two services—a funeral that takes place at the church and a special prayer three days after the death at the home of the deceased.

## 8 INTERPERSONAL RELATIONS

Most Egyptians take a relaxed, patient approach to life. The term *ma'alesh* translates to mean “don't worry” or “never mind.” The phrase is used when conflicts arise, as a way of pointing out that the concerns are not serious and will soon pass. A sense of community and the importance of generosity are emphasized among all Egyptians and personal needs at times are dismissed as secondary to community needs. Social relationships between Coptic Christians and Muslims are generally cordial, and Copts in Egypt follow the prevailing Egyptian attitude toward life.

Copt families historically lived separately from Muslims in Egypt. Cities contained certain quarters where Copts would congregate, and some villages were inhabited entirely by Copts. That practice of separation has declined considerably since the modern Egyptian nationalistic movement of the early twentieth century, and most Copts are fully integrated into modern Egypt's Islamic-based society. The Coptic Orthodox Church, however, bans marriage between Coptic Christians and Muslims and will excommunicate those who marry outside the church. The church also prohibits intermarriage between Copts and Jehovah's Witnesses, although Copts are allowed to marry people of other Christian denominations.

## 9 LIVING CONDITIONS

Living conditions have been improving in Egypt since the mid 1960s. The death rate has fallen from 19 deaths for every 1,000 births in 1965 to approximately 5 deaths for every 1,000 births as of mid-2007. Life expectancy in mid-2007 was estimated at 74.2 years for women and 69 years for men.

Medical facilities still are limited in rural areas. As a result, diseases such as typhoid and bilharzia continue to be problems. Doctors and volunteers visit villages with medical caravans, and the government has established a daily four-hour satellite television program on health topics. Although every city has a hospital, it is only the private, most expensive hospitals that are equipped with state-of-the-art technology.

A large gap between the wealthy and poor continues to exist in Egypt. This is reflected in housing found in the country. Housing conditions range from the spacious, elegant villas for the wealthy to dirty, slum-like dwellings for the poor. Many people live in apartment buildings in Egypt's crowded cities. While the buildings are often unattractive and dirty on the outside, the interiors are well maintained and clean. As more people crowd into cities, shanty towns have sprung up. Conditions in these areas are unclean and unsafe. Huge cemeteries surround Cairo, and some of the poorest residents have begun to inhabit old tombs illegally.

Rural homes tend to be small and built as closely to each other as possible so that Egypt's sparse agricultural land can be used for farming.

## 10 FAMILY LIFE

Egyptians value both the nuclear and extended family. Brothers are required to protect their sisters and often accompany them in public. While extended families traditionally lived in one household, the increased urbanization in Egypt's cities is making the nuclear household more common. Marriages often are arranged between cousins, and many young adults will care for their parents in old age. Coptic Christians share similar family values.

Coptic life also centers around the church. An entire family customarily will choose a priest as a family counselor and will make regular personal confessions to that priest. Worship is family oriented, with both male and female adults as well as children participating actively in the service.

## 11 CLOTHING

Copt weavers developed many fabrics that contained ornately designed patterns in pre-Islamic Egypt. The patterns often contained images of landscape scenery, animals, and religious iconography. Long, loose-fitting tunics displayed the intricate, colorful work.

Today, most Coptic Christians dress as Muslims and others in Egypt do. The traditional dress of men in Egypt is the *gallabeyya*, which is a long robe. Males continue to wear the traditional dress in cities but also will wear Western business suits and more casual Western attire. Copt women usually follow the tradition in Islamic countries of covering the body in public, although they will wear Western styles of clothing occasionally in cities. Copt women in rural areas particularly will wear black headscarves and long, loose-fitting dresses that drape the entire body. In churches, it is common for worshippers to remove their shoes before entering.

## 12 FOOD

Foods among Coptic Christians are flavored with spices such as cumin, garlic, onion, and allspice, and many vegetarian dishes have emerged in the Coptic Christian cuisine because of the fasting rules that the church observes. In the Coptic tradition, a partial fast and abstinence from meat are recommended on nearly 200 days out of each year. Meals during these fasting periods often include fava beans, lentils, grape leaves, tomatoes, and potatoes.

During non-fasting periods, Copts, like other Egyptians, eat rice, bread, fish, lamb, chicken, and turkey.

It also is customary to pray before and after a meal. Even when the meal does not contain meat, menus are quite elaborate. It is customary throughout Egypt not to eat everything placed on a plate as a way of complimenting the host for providing such an abundance of food. Foods are generally eaten with the fingers of the right hand, although Western utensils are used for eating occasionally in cities.

## 13 EDUCATION

Copt children attend schools in Egypt, which are free through the university level. The UN Development Program estimated that 91% of all Egyptian children were enrolled in primary schools in 2003 and that 88% were enrolled in secondary schools. In addition, Egypt has twelve public universities and 8,674 privately funded schools and universities. The country also has 125 technical and vocational schools. As of 2005, about 1.76 million students were enrolled in higher educational institutions. Class sizes in Egypt are quite large with as many as forty-three to sixty-two students being taught by a single instructor. The government plans to build 2,000 additional schools by 2012 and has initiated a program for teacher training.

Instruction in Egyptian schools is primarily in Arabic, although English and French also are taught. The role of the Coptic Christian community in Egypt is largely ignored in primary and secondary schools. As a result, Copt children learn

about their language and culture primarily at home or through the church. Some steps are being taken to change that situation. The American University-Cairo recently established a Coptic Studies program in which the language, literature, and culture of the Copt community is taught.

The Copt's ancient school, the Catechetical School of Alexandria, was destroyed in the early Islamic era. It was re-established, however, in 1893 and currently has campuses in Alexandria and Cairo in Egypt and in New Jersey and California in the United States.

#### **14 CULTURAL HERITAGE**

There is a rich heritage of Coptic Christian chants, music, iconography, and tapestry associated with the Coptic Orthodox Church. Much of this heritage has been ignored by Egypt's Muslim-majority community until recently. Now, efforts are underway to revive and restore Coptic arts. Many churches are receiving money from the government and international aid groups to restore the distinctive architecture of their sites. Paintings on the walls of the churches and in monasteries in Egypt's deserts also are being restored. A Coptic museum in Cairo also is being renovated, and religious sites have been added to a governmental list for restorations.

Much of the cultural revival of Coptic arts, language, and literature has resulted from the growth of Copt communities overseas.

#### **15 WORK**

Egypt's educational system emphasizes rote learning over critical thinking. That style of education, coupled with a lack of trained teachers, has not prepared young Egyptian adults well for the labor market of the early 21st century. The adult literacy rate was 55.6% in 2003, which is extremely high relative to other countries.

Most Egyptians work in the government, and many, including many Coptic Christian men, are conscripted to complete a term of service in Egypt's military. Approximately one-third of Egyptians works in agriculture and grows corn, wheat, cotton, rice, barley, and fruits. Others work in tourism or at ports along the Suez Canal, an important source of income for Egypt. Much of the population lives below the poverty line. Women account for only one-fourth of Egypt's income.

#### **16 SPORTS**

Soccer is Egypt's national sport. Besides playing soccer, Egyptians enjoy playing tennis, swimming and horseback riding. Although a tradition of playing sports does not exist in Copt communities, Coptic Christians also take part in similar activities.

#### **17 ENTERTAINMENT AND RECREATION**

Egyptian cities have a number of cinemas where Egyptian and foreign films are shown. Egypt's film-making and television programming have received acclaim throughout the Middle East. Television plays a big part in daily leisure lives, even in the rural areas. Men often gather at coffee shops to play backgammon and dominoes and to converse with friends. Women tend to socialize primarily in the home or at places such as markets.

For Copts, the church is a center of social life. Churches organize summer camps for youth, pilgrimages to holy sites within Egypt as well as the rest of the Middle East, and offer many opportunities for socializing before or after services. The rise of Islamic fundamentalism in Egypt and resulting attacks on Copts has prompted many Copts to turn inward and isolate themselves from the Muslim mainstream. Many have turned to their churches for protection and solace.

#### **18 FOLK ART, CRAFTS, AND HOBBIES**

The Coptic tradition of pattern weaving in the early Christian era led to the creation of many elaborately designed bed sheets and covers, towels, napkins, tablecloths, curtains, and wall hangings. Much of this textile work continues today, and is marketed in tourist centers. An "s-twist" of thread characterizes the Coptic textiles. Flax fibers used to make thread are washed and then spun into thread in a counter-clockwise direction. Many Coptic crafts developed in monasteries, and practices of weaving, leather binding, painting, and woodwork continue into the present day.

#### **19 SOCIAL PROBLEMS**

Egypt revised its constitution in 1981 so that legislative principles would draw their source from the Islamic Sharia. About 90% of Egyptians are Sunni Muslim and look to Islam to govern decisions on marriage, divorce and inheritance. However, tensions are growing between secularists and fundamentalist Muslims in Egypt. While secularists support a state that allows for religious difference, a free press, and cultural diversity to flourish, some religious fundamentalists within Islam would like the government to enforce a great adherence to Islamic principles in schools, public policies, and the arts. Egypt's growing population, limited natural resources, and reliance on the Nile River for water are straining the country's resources. Nearly one out of five Egyptians lives below the poverty line, and even though less than 3% of the country's land is usable for agriculture, nearly one-third of the people draw their income from agriculture. Islamic fundamentalists believe that more compliance with Islamic law could help alleviate Egypt's problems.

The fight over secularism has generated some hostilities against Coptic Christians since the 11 September 2001 terrorist attacks on the United States and the wars in Afghanistan and Iraq. U.S. president George W. Bush has referred to the war against terror as a "crusade." The term "crusade" evoked memories of the centuries of bitter warfare between Muslims and Christians for some fundamentalists who have responded by looting Copt businesses, attacking churches, and harassing Copt individuals. Coptic Church leaders have tried to quell the hostility by appealing to the Quran and its calls for compassion. Pope Shenouda III is the present head of the Coptic Orthodox Church. He frequently infuses his prayers with references to Arab poetry and Muslim religious messages. His goal is to press for national unity in which Copts will remain free to practice their faith under a benevolent Islamic state.

#### **20 GENDER ISSUES**

Egypt enacted a family reform law in 2000 that allowed for women to initiate divorce from a spouse. Although the law made it possible for a woman to leave an abusive spouse, it does not allow for the woman to collect alimony and requires

that she return any money that was given to her or her family at the time of her marriage.

Rules against divorce are even more prohibitive in the Coptic Christian community. The Coptic Orthodox Church prohibits divorce and strictly forbids women to have abortions. In recent years, some women have converted to Islam in order to divorce their husbands. These conversions have presented difficulties in the Coptic community because Egypt's Islamic code often forces children of a parent who converts to Islam to abandon the church and become Muslim. The Coptic Orthodox Church also has condemned marriage between gays and lesbians.

# CREOLES OF SIERRA LEONE

**PRONUNCIATION:** CREE-uhls of see-AIR-a lee-OWN

**LOCATION:** Sierra Leone

**POPULATION:** 150,000–190,000

**LANGUAGE:** Krio

**RELIGION:** Christianity with remnants of traditional African religion

## <sup>1</sup> INTRODUCTION

The Creoles are a culturally distinct people of Sierra Leone. Their ancestors were liberated slaves from London, Nova Scotia, Jamaica, and parts of West Africa. They were brought as immigrants to the coast of Sierra Leone, where Britain established a haven for liberated slaves in 1787 and a colony in 1807. After passage of the Anti-Slavery Act in 1807, the British navy patrolled the West African coast, intercepted slave ships bound for the Americas, and released their captives in Freetown. From 1808 to 1863 thousands of liberated Africans came to Freetown, and by 1830 the crown colony had become home to more than 10,000 people, who by virtue of adoption and intermarriage became the Creoles.

By the late 1800s, the Creoles had become prosperous through trade and aspired to emulate the culture and manners of Victorian England. Trade grew between the Creoles and the peoples of the interior. In 1895, the British and French signed a treaty, establishing the current boundaries of present-day Sierra Leone, and the following year the British proclaimed the interior a protectorate.

In the 20th century, the racial stratification of the British Empire hurt the Creoles. Many were restricted to low-level civil service posts. Political reform in 1951 created new opportunities for the Creoles. In 1967, Dr. Siaka Stevens, a Creole and former Freetown mayor, was elected prime minister, a post he held until 1985, when violent strikes and demonstrations forced him to step down in favor of General Joseph Saidu Momoh, a Limbe. Overall, Creole political dominance diminished in the post-independence period as elections based on one-man one vote took root and new parties favored the numerically superior Temne and Mende peoples.

Momoh's rule ushered in twenty years of great political and social upheaval. The period was marked by four coups, brutal executions, and 11 years of rebellion and civil war fueled mainly by illegal diamond trading (1991–2002). Foreign troops and UN peacekeepers eventually restored peace and order, but not before thousands were killed and maimed, and more than two million people left homeless.

In 1999 the assault on Freetown by the Revolutionary United Front (RUF), and its campaign "operation no living thing" targeted the Creoles. Importantly, it made clear for all to see the dangers of long-term privilege and the horrific power of envy and discontent. By the end of 2005, most of the peacekeepers had left the country, and free and fair presidential elections occurred in 2007. As of the mid-2000s, a fresh urgency for balanced and equitable development throughout the country seemed to be prevailing.

## 2 LOCATION AND HOMELAND

The Creole homeland is a mountainous, narrow peninsula on the coast of West Africa, about 32 km (20 mi) long and 16 km (10 mi) wide. At its northern tip lies Freetown, the Sierra Leonean capital. The mountains towering above Freetown and its harbor inspired the Portuguese explorer Pedro de Cinta to name them “*Sierra Lyoa*” (“Lion Mountains”), which later became Sierra Leone. The local African name was “Romaron”—“place of the mountain.” Town and location names such as Aberdeen Bay, Murray Town, Hill Station, Gloucester, Wellington, Hastings, York, and Kent testify to subsequent British influence.

The whole of Sierra Leone covers some 72,500 sq km (28,000 sq mi), roughly the size of South Carolina. The nation is bounded by Guinea to the north and east, and Liberia to the south. At 10° to 13° north latitude, Sierra Leone lies roughly at the same latitude as Panama.

The peninsula’s mountain range is covered by tropical rain forests split by deep valleys and adorned with impressive waterfalls. White sand beaches line the Atlantic coast. During the rainy months, from May to November, monsoons dump as much as 15 cm (6 in) of rain in one hour. The mountains receive more than 500 cm (200 in) of rain annually.

All together, Sierra Leone is home to at least a dozen major ethnic groups, including the Koranko, the Mende, the Temne, the Fula (Peul), and the non-Muslim Vai. Groups that arrived before the end of the 18th century are known as “early settlers”; all others, including the Creoles, are the “later settlers.”

## 3 LANGUAGE

Krio, a language distinct from West African pidgin, is the mother tongue of the Creoles, less than 15% of whom are literate in English. It is widely spoken throughout the country at markets and in the workplace where it is understood by as much as 95% of the population. However, it is only the first language of about 10% of the population. The fear that Krio is becoming polluted by English (which is popular among youth) has prompted a movement to teach it more systematically in the schools.

In addition to adapting many English words into its vocabulary, Krio incorporates syntactic, semantic, and phonologic elements of West African languages and bears similarities to Gullah and Jamaican Creole. But Krio also has been influenced by other European languages. For example, “sabi” is of Portuguese origin, and “boku” is of French origin. In its pure form, Krio is practically unintelligible to the outsider.

## 4 FOLKLORE

Creoles have inherited a diverse array of tales from their ancestors. Especially popular with children, they amuse and provide instruction in Creole morals, values, and traditions. Among the best loved are stories about the spider. Children delight in his cleverness and grow nervous when his tricks get him into trouble. The following is a typical spider tale:

Once the spider was fat. He loved eating, but detested work and had not planted or fished all season. One day the villagers were preparing a feast. From his forest web, he could smell the mouth-watering cooking. He knew that if he visited friends, they would feed him as was the custom. So he called his two sons and told both of them

to tie a rope around his waist and set off in opposite directions for the two closest villages, each holding one end of the rope. They were to pull on the rope when the food was ready. But both villages began eating at the same time, and when the sons began pulling the rope, it grew tighter and tighter, squeezing the greedy spider. When the feasting was over and the sons came to look for him, they found a big head, a big body, and a very thin waist!

## 5 RELIGION

While most Sierra Leoneans (60%) subscribe to Islam, Creoles are deeply proud of their Christianity, which blends with remnants of traditional African religion (see **Rites of Passage**). The early immigrants either brought their Christian faith with them or were schooled by missionaries. In 1827, the English Church Missionary Society established the first college in West Africa, Fourah Bay College (now the University College of Sierra Leone), to train missionaries. Samuel Ajai Crowther, a liberated African and the first pupil to attend the college, became the first African bishop of the Church of England in 1864. Presently, there are some 15 different faiths and more than 70 churches in Freetown.

## 6 MAJOR HOLIDAYS

Coups, dictatorial rule, war, and financially hard times have dampened enthusiasm for Independence Day and other secular holidays. However, Creoles celebrate Christmas and Easter with much feasting. Children receive new clothes and gifts of money from their parents and relatives on these occasions. One popular holiday in Freetown is the end of the Muslim Ramadan fast. On this night, young boys carry thin paper lanterns attached to wooden frames. The parade begins at 11:00 pm, and parties with singing and dancing are held throughout the night.

## 7 RITES OF PASSAGE

Despite their outwardly Western ways, Creoles practice certain African rituals in connection with rites of passage. One such ceremony is the *awujoh* feast. Of Yoruba origin, *awujoh* is held to win the protection of ancestral spirits for newborns and newlyweds and gain wisdom regarding death. *Awujoh* is believed to appease angry ancestors and attain their guidance when someone dies.

At death, the pillows and blankets of the deceased are stripped off the bed because they are associated with the death struggle. Pictures are turned toward the wall. At the wake, relatives and friends sing spirituals and church hymns. (Aku Creoles sing songs in Yoruba: “This world, this world, is not ours.”) People clap loudly to make sure the corpse is not merely in a trance. The next day the body is washed, placed in expensive shrouds, and laid on a bed for a final viewing. Then, it is placed in a coffin and taken to the church for the service and then to the cemetery for burial.

The mourning period lasts one year. On the third, seventh, and fortieth day, *awujoh* feasts are held. The feast on the fortieth day marks the spirit’s last day on earth. The family and guests eat a big meal. At a certain point, everyone is called to witness as portions of the meal, including beverages and kola nuts, are placed into a hole for the dead. The family and friends may talk into the hole to discuss their problems with the dead. They throw kola nuts on the ground to determine whether they

have been heard and to see whether foul play was involved in the death. At the end of the year, the family holds another awujoh followed by the *pull mohning* day—the end of mourning. The mourners wear white, visit the cemetery, and then return home for refreshments.

## 8 INTERPERSONAL RELATIONS

The Creoles are a sociable people, given to joking and teasing. Their gregarious nature is often expressed in gestures, such as hand slapping and handshaking. A common greeting in the morning is “Ow de body?” Historically Creoles have been united by their privileged social status, enjoying membership in many elite social clubs. In Sierra Leone, the Masons have traditionally been dominated by Creole men.

Traditional attitudes are still noticeable in Creole dating and marriage customs. For example, marriage is still viewed as a contract between two families. Therefore, parents or other family members seek out prospective mates for their kin from hardworking, well-to-do families. Dating ends when a mate has been chosen and the groom’s parents set a “put stop” day, after which the girl can no longer entertain other beaux. “Put stop” has a scripted ceremony in which each family plays a part. Out of several possibilities, the groom’s family indicates the young lady of its choice, who is always the last to enter the room. On the evening before the wedding, the groom’s friends treat him to “bachelor’s eve,” a rowdy last fling before marriage.

## 9 LIVING CONDITIONS

Creole families typically live in two-story wooden houses reminiscent of those found in the West Indies or Louisiana. Despite their dilapidated appearance, they have a distinctive air, with dormers, box windows, shutters, glass panes, and balconies. Several of them were burned or destroyed during the war, yet it is surprising how many of them have survived for over 200 years. The elite live in attractive neighborhoods like Hill Station, above Freetown. A large dam in the mountains once supplied reliable water and electricity, but in the aftermath of the war tanker trucks and pickups with makeshift tanks deliver water to the neighborhoods. People light their houses with kerosene lamps and cook on gas- or wood-fired stoves.

At rush hour, downtown Freetown is congested with Landcruisers, Volkswagens, and Japanese cars. Broken-down cars are abandoned and left to rust in the “car cemeteries” of Freetown’s back streets. Most people travel by taxi. Fares are negotiated before the ride, with the passenger usually offering half of what the driver demands. Pickup trucks (lorries) with wooden benches in the back provide rural transportation. These are efficient but overcrowded and carry rice bags, cassava, bushels of fruit, and chickens, as well as people, and sport a variety of colorful graffiti. Buses ply the main roads between provincial cities but are more expensive.

Freetown once had a reputation for being the “white man’s grave” because of its endemic malaria. Large, deep drainage canals now carry off much of the monsoon rain, reducing the number of flies and mosquitoes. But social and physical infrastructure destroyed during the war will take many years to restore. Health care is still not available to many Sierra Leoneans, the HIV/AIDS rate hovers around 7%, and life expectancy is 41 years. In 2007 Sierra Leone received the lowest Human Development Index (HDI) rating in the world, placing 177th

out of 177 countries (measuring standard of living, health, and education).

## 10 FAMILY LIFE

Creoles live in exogamous nuclear families, but the extended family is important to them. Family members who do well are expected to help those who are less fortunate, assisting poorer relatives with school fees and business or job opportunities. Women typically shoulder the greatest domestic burdens, unless the family has hired helpers. In families with limited means, the women care for the children, clean house, do the marketing, cook meals, wash dishes and clothes, and carry wood and water.

## 11 CLOTHING

In the 19th century, Creoles wore European dress to imitate upper-class English manners and find acceptance in the higher ranks of society. Early settlers arrived dressed in European clothes, and the liberated slaves who came later were given English clothing. Woolen suits, bowler hats, stiff upright collars, white gloves, and cigars were the most obvious outward signs of a gentleman’s acculturation. For her part, the civilized lady spent lavishly on the fashions of the day, usually imitating styles seen in magazines. Manual laborers acquired suits, which they wore on Sundays and holidays, and for weddings and funerals. In the fields, men wore pantaloons and vests, while at home women wore the traditional African wrap-arounds (*lappa*). Children often ran naked in the streets.

Today, pop fashions—jeans, T-shirts, and sneakers—are very much de rigueur for young people. However, the older set still dresses conservatively in European suits and dresses. On Sunday mornings, the Anglican and Catholic elites of Freetown turn out in their Sunday finery at the Regent Church service high above the capital. For every day, women wear simpler Western dresses, skirts and blouses, or the *lappa* with an African blouse.

## 12 FOOD

Creoles typically eat three meals a day, the largest enjoyed in the morning or near midday. The staple noonday meal is *foo-foo*, a dough-like paste made of cassava tubers pounded into flour. Foo-foo is always eaten with a “palaver sauce” or “*pl-assas*,” which is a spicy dish consisting of leafy greens embellished with tripe, fish, beef, salt pork, and chicken. Red palm oil heated to a near boil forms the base of the sauce. Foo-foo and sauce must be eaten with the fingers of the right hand. A West African specialty, jollof rice, is also popular. This is a one-pot meal, most likely of Wolof origin. Other favorites include rice with various sauces, rice bread, and salad. Unless they are teetotalers, Creoles enjoy alcoholic drinks such as beer, gin, and palm wine. Fruit juices are made from pineapples, mangoes, and oranges.

## 13 EDUCATION

In the 19th century, the European notion of “bringing civilization to the heathen” provided a rationale to educate Creoles and hold them up as models for their pagan brethren. Indeed, the British made more public funds available per capita in Sierra Leone than in Britain itself in the early part of the century. Since a proper education assured upward mobility, Creoles

sent their children to Fourah Bay College or to a British university. Now the University of Sierra Leone, Fourah Bay College, founded by missionaries in 1827, was once the “Athens of West Africa.” Based on this educational privilege, Creoles supplied the colony with lawyers, doctors, clergy, upper-level civil servants, and businessmen.

In the 20th century, schooling in Sierra Leone became universal. In 1987, tuition fees were abolished for government-funded primary and secondary schools making schooling more accessible than before. However, the war forced many schools outside Freetown to close. Though Creole children—by virtue of living in Freetown—fared better than most during the war, they also suffered school closures, teacher shortages, and substandard facilities. Sierra Leone lags behind much of the world with a literacy rate of 35% and a combined school enrollment of 45%.

#### 14 CULTURAL HERITAGE

In the late 1800s, the Creole upper class was far more concerned with literary societies, public lectures, piano recitals, and dignity balls than with African drumming and dancing. They thought that Gumbay and Shakee-shakee dances were unseemly and unfit for civilized people. Creole attitudes toward indigenous dance have changed, and Creoles participate in Sierra Leone’s internationally famous National Dance Troupe, which has members from all ethnic groups. In 1992, the troupe included sixty singers, dancers, and musicians.

The Creoles are still known for their intellectual and literary contributions. Creole educators, theologians, authors, dramatists, and poets have pioneered a burgeoning literature in the Krio language. The following stanza from a poem by Thomas Decker offers a glimpse into this body of work:

“Slip Gud”

Slip gud, o, bedi-gial!	Sleep well, my “baby-girl!”
opin yai lilibit	Open your eyes a little bit
en luk mi wan minit	Look, just for one minute
bifo you slip.	Ere you fall asleep.

#### 15 WORK

Creoles are found in all occupations and vocations. They farm, fish, trade, teach, and sell artwork and handicrafts. Many have left manual jobs for office work and other status jobs, only to find that these do not pay enough to support large families. Both men and women operate small businesses, such as food stands and restaurants. A growing number of Creoles have found employment in start-up non-governmental organizations (NGOs) many of which provide social and civil rights services in post-conflict Sierra Leone.

#### 16 SPORTS

The favorite Sierra Leonean sport is soccer, called football in West Africa. Schools of all sizes have teams, and in even the smallest villages, games are played every evening. Although children may play without soccer shoes, they usually have uniforms. Though inspiring, the Leone Stars—the national team—have never qualified for World Cup finals.

#### 17 ENTERTAINMENT AND RECREATION

Creoles enjoy going to movies, watching television, listening to the radio, and following soccer. Radio Sierra Leone was estab-

lished in 1934 and is the oldest broadcasting service in English-speaking West Africa. Now transistor radios with shortwave and FM capabilities are found in even the smallest villages. With the growth of satellite television, the number of channels and the service area have expanded dramatically from Freetown to the hinterlands. Programs from the United States and England are very popular.

Recreational opportunities abound in and around Freetown. On weekends, especially Sundays, the beaches at Aberdeen are filled with soccer players, swimmers, joggers and casual strollers who come to see the fisherman bring in their catches, or who simply enjoy people-watching. Kabobs and cold drinks can be found in the many beach cabanas, seaside restaurants, and informal refreshment stands.

A favorite pastime for girls is hair braiding, which can take an entire weekend. Boys enjoy checkers and other games, while adults like to exchange visits with their friends. One of the regular forms of entertainment both in Freetown and in rural areas is the central market. In the villages of Kent, Sussex, and York, there is a designated market day every week. People come from miles around not only to buy and sell, but to dress up and exchange the latest news and gossip, with the added stimulation of fresh palm wine or beer.

#### 18 FOLK ART, CRAFTS, AND HOBBIES

In the 19th century, the Creole elites favored “high-brow” hobbies, such as reading, playing instruments, and writing poetry, over crafts and folk art. Nowadays, small-scale arts and crafts centers flourish in Freetown, catering mainly to foreign tourists. Miranda Burney Nicol (Olayinka) and Phoebe Ageh Jones are two artists whose works have been distributed internationally. Cloth dyeing (*batik*) is a traditional craft that has recently been revived.

#### 19 SOCIAL PROBLEMS

The Creoles’ problems are inseparable from those of other Sierra Leoneans. There are few jobs for school graduates and dropouts alike, which has increased the number of beggars and hawkers. The weak economy has encouraged other social problems like prostitution. Families that have taken in relatives must deal with the added stress that comes from belt-tightening and overcrowding. In Freetown, relentless migration from the provinces has increased congestion, pollution, and crime. Basic services barely function, and the government, businesses, and civil society need to do a much better job of controlling corruption. There is a genuine concern about the effects of almost a generation that has largely missed formal education.

While these problems seem daunting, the country is now in an intensive rebuilding phase, as is its neighbor to the south and east, Liberia. If handled properly, the next decade could present Creoles and their neighbors new opportunities to put the past behind and to find a common way forward. Young Creoles and their friends face a difficult future, but they also represent a generation with new ideas and potential solutions to old problems.

#### 20 GENDER ISSUES

Creole women are the backbone of their families and of society. They manage the household and rear the children; many work outside the home. Virtually all Creole girls receive at least primary formal schooling, and the vast majority complete

secondary school and beyond. The first Creole girl graduated from Fourah Bay College in 1938. The Church Mission Society founded the Annie Walsh Memorial School for girls in 1849, and many of its graduates in turn founded schools of their own. Hannah Benka-Coker has had a statue erected in her honor at the Freetown Secondary School for girls.

As a result of educational opportunity, many Creole women became influential in the women's movement in the early 1900s that culminated in the right to vote (for women of status) in 1930. Constance Horton, later Mrs. Cummings-Jones, became the first woman elected to a municipal council in Africa in 1938. Having been active in church associations, Creole women used their organizing skills to advocate for women's rights in the 1950s. Subsequently, many of them attained high positions in their respective professions. For example, Mrs. Constance Cummings-John was mayor of Freetown in 1966. In 2008 the executive directors of the Sierra Leone NGO association and of the Center for Good Governance were Creole women.

Nonetheless, Creoles and Sierra Leonean women face gender discrimination in the workplace. They also face inheritance laws and property rights laws that favor men over women. Rape and domestic violence are not uncommon, but are surrounded by a culture of silence. Although it is difficult to know how many of the victims are Creole, it is safe to assume that Creoles are affected. The Ministry of Social Welfare, Gender and Children's Affairs is poorly funded, relies mainly on donor assistance, and has few programs to support efforts to further the rights and progress of women in Sierra Leone.

# DINKA

**PRONUNCIATION:** DEEN-kuh

**LOCATION:** Sudan

**POPULATION:** 500,000 to 1 million

**LANGUAGE:** Dinka

**RELIGION:** Monotheistic-worship of Nhialic

**RELATED ARTICLES:** Vol. 1: Nuer; Shilluk; Sudanese

## <sup>1</sup> INTRODUCTION

Numbering between 500,000 and 1 million people, the Dinka are one of the largest ethnic groups in the republic of Sudan. Their presence in this region of Africa was noted thousands of years ago by Egyptian and later Greek travelers and geographers. The Dinka belong to a larger group of historically related cultures that anthropologists have referred to as the Nilotic peoples of Africa—Dinka, Nuer, Atuot, Shilluk, and Anuak—all of whom live in the upper Nile region of southern Sudan. General observations about the Dinka and related Nilotic peoples figure in the narratives written by Arab slave traders who entered their country in the 16th, 17th, and 18th centuries. Perhaps their reputation as fierce warriors was earned during this period, as the Dinka successfully resisted Arab presence. In the middle of the last century (c. 1840–1880), the Dinka also resisted efforts on the part of a Turkish administration in the northern Sudan to administer, tax, and otherwise harass them. In 1898, a condominium (joint) form of government was created between Egypt and Great Britain, and from this time until the Sudan gained independence from Great Britain in 1956, the Dinka were only marginally affected by British colonial presence. In 1983, a civil war erupted in the Sudan, pitting the largely Arab and Muslim northern Sudan against the black African peoples of the south. Lasting into the 1990s, the war has had dire consequences for the Dinka and other Nilotic peoples. Tens of thousands of Dinka have died, and countless others have become refugees in either the northern Sudan or the many countries bordering the Sudan. Rebel groups and international human rights organizations have accused the Sudanese government of attempting genocide against the Dinka.

## <sup>2</sup> LOCATION AND HOMELAND

A careful census of the Dinka has not been attempted since the mid 1950s, at which time it was estimated that the Dinka numbered more than 1 million; in 2008 estimates place the Dinka population at somewhere between 500,000 and 1 million. Dinka country extends from 6° to 10°N latitude and from 26° to 32°E longitude. This vast region forms a seasonal swampland as the Nile floods from its high ground in Uganda into the flat, saucer-like geography of the southern Sudan. The extreme differences between the wet and dry seasons have a dramatic effect on many aspects of Dinka life. During the season of rains, human population densities increase as people are forced to settle in areas that are higher than the Nile floodwaters.

Because of civil war, large numbers of Dinka have migrated from southern Sudan to the northern Sudanese capital of Khartoum, as well as to Kenya, Uganda, Europe, and the United States. There are no precise data on the actual number of Dinka now living elsewhere. As of the mid-2000s, thousands

of internally displaced Dinka were beginning to return to their home villages in southern Sudan.

### 3 LANGUAGE

Linguists classify Dinka as a major language family in the Nilotic category of African languages. Historically, it is most closely related to Nuer and Atuot, languages spoken by peoples living in close proximity to the Dinka. The Nuer and Atuot languages, however, are more closely related to each other than they are to Dinka.

ENGLISH TERM	ATUOT /NUER	DINKA
cow	<i>yang</i>	<i>weng</i>
beer	<i>kung</i>	<i>mou</i>
incest	<i>rual</i>	<i>akeeth</i>
husband	<i>cou</i>	<i>nwc</i>
wife	<i>cek</i>	<i>tieng</i>
child	<i>gat</i>	<i>mieth</i>
war spear	<i>mut</i>	<i>tong</i>

The Dinka have a diverse lexicon with which to describe their world. It is estimated that the Dinka language has more than 400 words to refer to cattle alone—their movements, their diseases, and their variety in color and form. The Dinka's very perception of color, light, and shade in the world around them is in these ways inextricably connected with their recognition of the color configurations in their cattle. Without their cattle color vocabulary, they would have scarcely any way of describing visual experience in terms of color, light, and darkness.

### 4 FOLKLORE

The Dinka tradition of oral literature is extensive and a considerable amount has been recorded. In this tradition, two figures stand out prominently, a legendary figure known as Col Muong, and another known as Awiel Longar. Col Muong figures in many stories as a man who has an enormous appetite for all things in life. When he is hungry, he is said to eat an entire herd of cattle or an entire field of grain. Stories about him seem to indicate that people should do the best they can with what they have rather than focus on their own individual needs. Awiel Longar figures as the common ancestor of all Dinka peoples. Awiel is thought of as a culture hero who showed people how to live and, indeed, brought them life. Dinka folklore is also rich in “just so” stories about the origins of customs, the behavior of animals, and everyday life.

### 5 RELIGION

Dinka religious beliefs have been described and analyzed in detail by the late British anthropologist R. G. Lienhardt in his book, *Divinity and Experience: The Religion of the Dinka*. The Dinka term *Nhialic*, Lienhardt suggests, is best translated as “creator” and in this regard Dinka religion may be regarded as monotheistic. Ultimately, *Nhialic* is thought to be the source of all life and death. Mediating this distant, though approachable, image are a series of lesser manifestations of the creator's power. These are known to the Dinka by a series of “refractions” or manifestations of divinity to which Dinka dedicate ritual sacrifices and libations. Rituals are performed at births, deaths, to cure disease, and in times of crises.

### 6 MAJOR HOLIDAYS

Celebrations take place in the autumn, when the whole tribe is together. Religious sacrifices may be made on special occasions. To honor their traditional spiritual and political leaders—called “masters of the fishing spear”—the Dinka enacted day-long ceremonies marked by large public gatherings and the sacrifice of many cattle. By ritually “killing” these men, Dinka collectively asserted their power to control the spiritual powers governing human life.

### 7 RITES OF PASSAGE

Like other cattle-keeping people of southern Sudan and eastern Africa, the Dinka mark significant life-passage events with informal but significant ritual occasions. Thus, birth, marriage, and death are all marked by standardized customs involving public ceremonies, and are typically accompanied by animal sacrifice. In the passage to adult status, young men, rather more than young women, are publicly recognized. Adult males decorate initiates' heads with a series of deep gashes that form scars that last a lifetime, publicly proclaiming their newly attained adult status.

### 8 INTERPERSONAL RELATIONS

When men become adults, they no longer refer to themselves by their birth names, but instead adopt “ox-names”—derived from characteristics of their favorite cattle, typically with complex metaphorical reference. Thus, a man may be known as Thiecdeng (“club of divinity”) or Acinbaai (“a man who never

*Sudanese refugees from the Ngok Dinka tribe wait in the village of Dokra in central Sudan. (AP Images/Alfred de Montesquiou)*

leaves his herd of cattle”). Children’s names are often chosen to reflect circumstances of their birth. Thus, one may be called Kueric (“born in the middle of a path in the forest”), Amoum (“the one who survives his dead brothers”), or Ayumpuo (“the one who cools the heart”).

Meals are generally eaten in an informal manner. The only explicit strictures involving eating are that unmarried people of similar age who have no close kinship cannot eat in each other’s company.

### **9 LIVING CONDITIONS**

Round huts, approximately 4.5 m (15 ft) in diameter, were formed with clay, with 1.5- to 2-m (5- to 6-ft) walls, covered with conical thatched roofs. Homesteads such as these were typically surrounded by a garden and separated one from another by an open expanse of savannah forest. Garden soil would typically maintain its fertility for 10 to 12 years. Following this, the area would be set afire and a new homestead erected nearby, in a manner anthropologists call “slash and burn” horticulture.

Because the Dinka population is fairly dispersed (though less so in the season of rains), communicable diseases have traditionally been uncommon. On the other hand, given its subtropical location, Dinkaland is subject to a fair number of

endemic diseases, including malaria, dysentery, and other waterborne diseases.

### **10 FAMILY LIFE**

Polygamy (the practice of marrying more than one person) is common among the Dinka, although many marriages are monogamous. Men of high social standing may have as many as 50 to 100 wives. In polygamous marriages, wives cooperate in performing household duties, although each is responsible for rearing her own children. Upon marriage, a man pays his wife’s family a certain number of cattle, usually between 30 and 40. The Dinka consider it extremely important to have children, which they regard as assuring their immortality.

Traditionally, following marriage a man established a homestead near his father. Around her homestead, a woman would cultivate a garden in a plot ranging from one to two acres, raising sufficient food to feed her family throughout the year. Cash was not a factor in traditional food production, so kinship relations provided a means to assure that if some relatives’ gardens failed in a particular year, food could be shared by all.

Even though much of Dinka public life is dominated by men (e.g., ritual and political leaders are male; sacrifices are always led by men), women play a very significant and even powerful

role in local life. Many important myths and rituals have powerful feminine symbolism.

### 11 CLOTHING

The Dinka wear very little clothing and no shoes. The men go naked, and the women may wear goatskin skirts. Both men and women wear strings of beads around their necks. Women also wear bangles on their arms and legs, and they may also wear elaborate jewelry in their ears.

### 12 FOOD

In the rainy season, milk from cows is plentiful, and this supplements the horticultural diet based primarily on millet. During the dry season, Dinka subsist mainly on fish and other freshwater resources, supplemented by reserves of millet.

Dinka have traditionally produced all the material resources needed to sustain their livelihood via a mode of production that combined horticulture with pastoralism, fishing and occasional hunting. The staple horticultural crop was millet. Ground nuts were introduced in the 1930s and added an additional source of protein to the Dinka diet. Women usually provide a morning meal of millet, sometimes mixed with milk or beef broth. A second meal is prepared as evening approaches. Depending on the season, the millet staple will be supplemented with fish, meat, or other domesticated crops such as beans, tomatoes or rice (now purchased from small rural markets). Cooking oil is produced by crushing the nuts of shea trees and pounding the pulp into oil. A number of species of chili peppers provide condiments. Women cook all meals with the help of their daughters. Women grow a variety of gourds to make containers for cooking and preparing food, and they also use earthenware pots for storing and boiling water.

On ritual occasions, cattle were sacrificed and slaughtered, although cattle (cows) were kept mostly for their milk rather than meat. In the dry season, cattle were occasionally bled by tying a cord around the animal's neck, pulling it tight, then piercing a vein in the animal's neck. The blood was collected in a gourd, mixed with milk, and then boiled, producing a high-protein "pudding." When milk was plentiful, particularly in the rainy season, it was also preserved in a cheese form by mixing a quantity of fresh milk with a smaller portion of hot cow urine. Milk prepared in this form could be stored for as long as three months.

### 13 EDUCATION

The Dinka lacked any formal system of education until literacy was introduced via mission schools beginning in the late 1930s. Even today, most Dinka lack literacy skills. Indeed, to some, writing is suspected to be a form of political control, and thus many people have never sought to become literate. During the Colonial period in the southern Sudan, English was the only acknowledged language of mission education and administration. During the course of the first civil war in Sudan, in 1964 the government expelled missionaries from the southern Sudan and declared Arabic to be the national language. Regional dialects of Arabic have since emerged in Dinka country. At the time of this writing, very few Dinka have received a formal education because the educational system, along with the majority of social services, has disappeared due to war.

### 14 CULTURAL HERITAGE

Like many other semi-nomadic peoples throughout the world, the Dinka do not have a substantial heritage of plastic arts; song and dance, however, play an important role in their culture. A set of drums for dancing is found in every Dinka settlement. Like many other aspects of Dinka life, artistic expression is associated with cattle, which they often imitate in their songs and dances. Because the Dinka identify so closely with their herds, when a tribesman sings a song praising his cattle, he is, in effect, praising himself. Songs serve many other functions as well. There are battle songs, songs of initiation, and songs celebrating the tribe's ancestors. In symbolic "song battles," singing can also defuse tensions and avert bloodshed among this highly volatile people.

Following is a typical Dinka song:

O Creator who created me in my mother's womb  
Do not confront me with a bad thing  
Show me the place of cattle,  
So that I may grow my crops  
And keep my herd.

### 15 WORK

Tending herds of cattle and growing millet form the basis of the livelihood and economy of the Dinka. As the main channel and hundreds of tributaries of the Nile begin to flood during the season of rains (roughly April to September), people move with their herds of cattle to higher ground. Here, during the season of rains, the millet and other crops are planted. With the coming of the dry season and abating flood waters, people drive their herds back toward rivers and tributaries where the cattle are pastured. Labor among the Dinka is clearly divided along gender lines, with men in their 20s and 30s devoting their time to cattle-herding. Women are responsible for growing crops (although men perform the heavy work of clearing new fields for planting). Women also cook and draw water from wells and rivers. Each homestead normally plants two millet crops every year, as well as okra, sesame, pumpkins, and cassava. One of the ways that Dinka boys are prepared for adulthood is by being given a small flock of sheep and goats to tend.

Although many Dinka want to preserve their traditional way of life, they find that, because of the consequences of civil war and the need to participate in "modern" as well as "traditional" society, the past they once knew may be gone forever.

### 16 SPORTS

Dinka men engage in mock sparring, using spears or sticks and shields, in order to develop their fighting skills.

### 17 ENTERTAINMENT AND RECREATION

Because much of the Dinka population disperses to follow the herds during the dry season, important social events such as marriages are more common during the rainy season. People live in more compact settlements at that time, and milk and millet are plentiful. Seasons during which there are droughts or unusually heavy rains likewise have a dramatic impact on local social life. Dinka social life is also closely tied to religion.

## 18 FOLK ART, CRAFTS, AND HOBBIES

Dinka men make spears and fishing hooks. The women make cooking pots using coils of clay, which are formed into the desired shape and then smoothed over. Sharp tools are used to etch patterns in the clay, and color is applied with a stone, after which the pot is fired in a hole in the ground that is covered with burning straw and dung. Besides making pots, which are also essential for carrying water, Dinka women weave baskets and sleeping mats.

## 19 SOCIAL PROBLEMS

Since the civil war that began in the 1980s pitting the northern and southern regions of Sudan against each other, numerous Dinka villages have been destroyed by burning or bombing. Thousands of Dinka women have been raped and their husbands castrated in their presence. Young girls have been found brutally murdered. Many Dinka have been abducted and sold as slaves in the northern Sudan. Violence against the Dinka is now on a level that has no precedent in their remembered past.

## 20 GENDER ISSUES

As the late Godfrey Lienhardt noted in an article he wrote on the relations between the sexes among the Dinka, vis-à-vis many other African cultures, Dinka women and men have equivalent status. Indeed, early on in their socialization, young boys recognize their utter dependence on their sisters and mothers, who provide for their basic subsistence. As adults, men likewise recognize that their aspirations to become founders of lineages are entirely dependent on the birth careers of their wives. In the contemporary world and in the aftermath of two civil wars and immigration to a wide variety of countries, much has changed in all of Dinka culture, including gender relations.

# DJIBOUTIANS

**PRONUNCIATION:** juh-BOOT-ee-uhns

**ALTERNATE NAMES:** Jibouti

**LOCATION:** Djibouti (Horn of Africa)

**POPULATION:** approximately 833,000

**LANGUAGE:** Afar, Somali

**RELIGION:** Islam

**RELATED ARTICLES:** Vol. 1: Eritreans; Somalis

## 1 INTRODUCTION

Djibouti (also Jibouti) is the name of both a small country and its seaport capital. This land's former name was the French Territory of the Afars and Issas and, before that, French Somaliland. Occupying an area roughly the size of New Jersey, tiny Djibouti, sandwiched between Ethiopia, Somalia, and Eritrea on the east coast of Africa, was the last French colony in Africa.

The area that today is Djibouti was populated for centuries by two groups of once entirely nomadic herders, the Afar and a branch of the Somali people known as the Issa. The French opening of the Suez Canal in 1869 and later British control of this strategic artery of global commerce resulted in intervention across the Horn of Africa by European powers, changing this area from a global backwater to a strategic point in world commercial and naval movements. The canal became the pivot for European domination of most of Asia, the eastern half of Africa, and the Indo-Pacific seas. As European powers competed for strategic advantage, coaling stations for merchant and war fleets became essential. In 1892 France abandoned its commercial center in the city of Obock and transferred it southward, across the Gulf of Tadjoura, to the city of Djibouti, which possessed a better harbor. By 1899 the newly prosperous port city had 10,000 inhabitants, as it drained trade from nearby older ports. Planning began for a French railroad to Addis Abeba, capital of Ethiopia, recently unified and expanded under the Amhara. Meanwhile, in 1894, France had merged its protectorates in the area into French Somaliland (present-day Djibouti). Djibouti's strategic global location remains its chief commercial and military importance.

Commerce grew in the city during the early part of the 20th century, while in the colony's hinterland, the Afars and Issas, the two main ethnic groups, engaged in continued fighting. By 1935 France had ended most open fighting between the two peoples and, occasionally, against French troops. France proclaimed its neutrality during the Italian conquest of Ethiopia in 1935–1936, but tilted toward the Ethiopians, eventually using its base in Djibouti to aid the Ethiopian resistance against their fascist occupiers. On 23 December 1942 Vichy forces in French Somaliland surrendered to British and Free French forces.

French Somaliland became an Overseas Territory of France in 1946. In part because of pressures from pan-Somali nationalists, President Charles de Gaulle of France in 1966 announced a referendum, held in 1967, to determine the future of the colony. This referendum reaffirmed the desire of the majority of the population to remain part of the French community. The colony was renamed the French Territory of the Afars and Issas. Movements for independence continued, nevertheless,

and the territory became independent, as Djibouti, on 27 June 1977. The Issa control the government.

President Hassan Gouled Aptidon became and remains head of state. In 1981 Djibouti formally became a one-party state headed by a directly elected president. Aptidon was re-elected in 1981 and 1987. The Afar minority felt excluded in this political process. In 1991 an Afar-based armed rebellion began with the Afar gaining control of much of the countryside. Accordingly, in 1992, President Aptidon presented a multiparty constitution that was ratified by the citizenry. However, Aptidon's dominant political party, the People's Rally for Progress, has no effective opposition. In 1993 Aptidon achieved a fourth term, in Djibouti's first "multiparty" presidential election. The Afar opposition largely boycotted the election, and unrest continues. Some fighting continued through 2000. Ismael Omar Guelleh won his first term as president in 1999 and his second term in 2005, with 100% of the vote. The legal code is based on French civil law, with local Islamic additions.

During the first Gulf War, the French military used Djibouti as its staging base of operations and continues a presence in that country, with ships, aircraft, and armored vehicles. In 2001 Djibouti leased a former French Foreign Legion base to the U.S. It is now shared with France and is part of the U.S. Central Command. Since 2002 a U.S. task force combining all of the armed services and the State Department provides, from the base, humanitarian and development aid to Djibouti. Besides the French military presence, which contributes to the Djibouti economy, the U.S. bases several hundred troops as part of its campaign against regional "terrorism." Djibouti is America's sole base in Africa. From there the U.S. launched its attacks during 2007–2008 against fundamentalist Islamic forces in Somalia. The Djibouti economy centers mainly on the country's strategic location for transshipment of freight and refueling of ships. Ethiopian exports and imports comprise about 85% of port enterprise.

## 2 LOCATION AND HOMELAND

With a territory of some 23,200 sq km (8,950 sq mi), Djibouti has a population, in 2007, estimated by the UN at 833,000 but the real number could be nearer half as many. About two-thirds of Djiboutians live in Djibouti city, the capital. The country of Djibouti extends inland about 88 km (55 mi), from the north and south shores of the Gulf of Tadjoura, a narrow inlet of the Gulf of Aden. It lies on the western shore of the Bab el-Mandeb (Arabic for "gate of tears"), a strategic strait 27-km (17-mi) wide joining the Gulf of Aden to the Red Sea, and thus, via Suez, Atlantic to Indo-Pacific commerce. Besides the sea, Somalia, Ethiopia, and Eritrea border Djibouti. The country's Red Sea coast stretches some 800 km (500 mi).

The land of Djibouti comprises arid, rugged highlands often 900 m (3,000 ft) or more in elevation, with peaks at 1,620 m (5,400 ft) and 1,980 m (6,600 ft), and basaltic steppe and desert plains having salt lakes and normally dry streams. Lake Assal is the lowest point in Africa, at 155 m (508 ft) below sea level. Once called by Europeans "the valley of hell," Djibouti is a land of permanent intense heat and drought. The Somalis call the terrain *guban* (burnt land). In its northeastern third, the land is tropical desert; the remainder is tropical steppe with a coastal desert fringe. Grass and herbaceous plants, such as thornbush, grow singly and in patches, awaiting seasonal rainfall, about 50 cm (20 in) in the mountain heights and 13 cm (5

in) in the deserts. Only a few mountain peaks sport continuous vegetative cover. When the briefly seasonal flow in watercourses ends, herds of livestock depend on permanent wells. No surface streams from the Ethiopian highlands penetrate as far as Djibouti.

Djibouti contains two indigenous ethno-linguistic groups, the Afar (sometimes also called the Danakil) and the Somali. (Djibouti Somalis primarily belong to the Issa clan of the Dir clan-family, which covers two-thirds of Djibouti and extends into adjacent Somalia and Ethiopia.) Each group's links of language, culture, patrilineal kinship, and Islam provides internal unity. Such multiple bonds do not prevent intra-ethnic strife, especially among the Somalis. Besides the Afar, who make up perhaps 35% of the population, and Somalis, who account for as much as 65%, there are also small Arab, French, Ethiopian, and Italian minorities. Periodically, large numbers of refugees displaced by warfare have crossed the border into Djibouti from Ethiopia and Somalia.

## 3 LANGUAGE

The official languages of Djibouti are French and Arabic, but the everyday languages of most of the people are the Eastern Cushitic languages, Afar and Somali, of the two main ethnic groups. Educated Afars and Somalis speak French. The Somali tongue of Djibouti belongs to the "common dialect" group, found in much of Somalia and used in broadcasts.

A young Djiboutian woman and her father. City dwellers wear Western-style clothing, while those in rural areas wear the loose clothing typical of desert dwellers. (Jason Laure)

#### 4 FOLKLORE

The Somali Issa have a myth of origin that portrays their common ancestor—named 'Aqil Abuu Taalib—as a holy man from Arabia. They have hymns (*qasiidas*) in his honor, and his shrine (*maqam*) is in Djibouti, where he is said to have appeared miraculously. The Somali's oral tradition also includes storytelling and poetry. Poetry traditionally recited in the villages by special readers called *gabaye* was a way of recording the community's history and customs, as well as current events. The Somali tradition of oral poetry may be in danger as nomadic Somalis have begun learning to read and write.

The Afar maintain some lore that dates back to their original, pre-Islam religion, including a belief in the powers retained by the spirits of the dead, and a belief in the existence of groves and trees with sacred powers. One traditional practice part of this belief system is anointing one's body with butter or *ghee* (a clarified butter commonly used for food and other purposes). Another is the annual celebration of a feast of the dead called *Rabena*.

#### 5 RELIGION

Whether among the Afars, Somalis, or Arabs, the religion of Djibouti is Islam. Somalis generally follow the Sunni sect, while Afars are Sufi Muslims, with the former people more devout than the latter. As elsewhere in the world, Islam accommodates local practices. For the orthodox, religious and

community activities are governed by the *shari'a*, the canon law of Islam. The greater the orthodoxy, the more the control of women by men. Pilgrimage and scheduled prayer and fasting, such as during Ramadan, are expected. Islam does not transcend ethnicity and thus does not impose a unity on different Muslim peoples, such as the Afars and Somalis. Among the Afars, survivals from the pre-Islamic cosmology of their sky-father deity, Wak, are evident, including days for animal sacrifice and rainmaking ceremonies. (For more about religion in the Horn of Africa, see Eritreans section 5.)

#### 6 MAJOR HOLIDAYS

Local Muslim saints' days associated with the Afar and the Issa are popular among their respective groups. Among the Somalis, various devout dervish orders have their own particular and universal observances, such as the Prophet Muhammad's birthday. Many Afars and Somalis are uninformed about the symbolic, mystical content of their own holidays. In Djibouti most urbanites and town residents attend Friday prayer at their mosque.

#### 7 RITES OF PASSAGE

As among most of the peoples of the Horn, adult status for the Afars and Somalis requires a genital operation, with or without ceremony, usually in childhood. For Afars and Somalis,

boys are circumcised and girls undergo clitoridectomy, a practice intended to ensure their chastity. See section 20.

## 8 INTERPERSONAL RELATIONS

Djiboutians show great respect to their elders and, in general, for the dignity of others. With their nomadic tradition, Djiboutians historically have not had the chance to forge strong relationships with neighbors, and clan membership plays a prominent role in an individual's social relationships and social standing, which is also determined (for men) by courage in combat. Clan solidarity is reflected in the following Somali saying: "I against my brother; I and my brother against my cousin; I, my brother, and my cousin against the world." (In recent decades, the Somali clans of Djibouti and neighboring Somaliland have been dormant from time to time. However, Somali clan solidarity is important in warfare, both against other clans and against the U.S.)

Among the pastoral Afar, accepting a drink of milk signifies the formation of a bond between a guest and host that includes a responsibility to protect the guest should trouble arise and to avenge his death if he is killed.

Djiboutis, Eritreans, and most Ethiopians share a strong taboo, common among Islamic peoples, involving the left side. The left hand is regarded as unclean and is supposed to be used only for personal hygiene purposes and never for such activities as eating, accepting a present, or shaking another person's hand (which would be considered an unforgivable insult).

## 9 LIVING CONDITIONS

Living conditions vary greatly, from affluent upper-class Arab businessmen and the educated Afars and Somalis of the country's elite, to undernourished herders with scant possessions and scrawny livestock. Government and Catholic organizations provide some humanitarian aid to the impoverished. Life for women is arduous, as it is generally among nomadic peoples across Africa. Major health threats include severe malnutrition, malaria, and tuberculosis. In 2003 the estimated number of people having an HIV infection was 9,100. Estimated in 2007 as having one of the world's lowest average life expectancies, of 55 years, and an infant mortality rate of 100 per 1,000 live births, Djibouti has a health crisis.

A paved road links Djibouti to the heavy-duty Aseb-Addis Abeba highway, but the road into Northern Somalia is barely usable. A meter-gauge railroad operates to Addis Abeba. Djibouti city has international airline and ship services to the outside world. The city has contained a free port, since 1949. The harbor is enclosed by land, dredged to depths of 12–20 m (40–65 ft). Modern fueling facilities and a floating dry dock round out the facilities of this strategic port.

## 10 FAMILY LIFE

The Djiboutian family averages six or seven children. A marriage is considered as much a union of two families as of two individuals. Divorce is an accepted and common part of the culture. Practicing polygyny, Muslim men traditionally can marry as many as four women. Each wife raises her own children, and her household is in charge of a specific task, such as agricultural work or tending to livestock. Although polygyny is common among the Somali people, Afar men usually have only one wife. Among the Afar, girls were traditionally eligible for marriage when they turned ten; boys when they had killed

their first man (a feat often attested to by the castration of the victim).

## 11 CLOTHING

Unlike women in many other Muslim countries, women in Djibouti do not wear veils, although married Afar women wear a black head scarf. City dwellers wear Western-style clothing, while those in rural areas wear the loose clothing typical of desert dwellers. The traditional outfit of the Afar is a garment called a *sanafil*, consisting of a cloth tied around the waist and reaching to the calves (with a knot at the right hip for men and at the left for women). The wealthier Afar wear another piece of cloth, the *harayto*, slung over their shoulders. Afar men are known for the long, sharp, double-edged dagger, called a *jile*, which they wear at their waists. Among the nomadic Somali in rural areas, the men wear a garment similar to the *sanafil* of the Afar, while the women wear a long, brightly colored cloth called a *guntina*, wound around their torsos and knotted at the right shoulder.

## 12 FOOD

Among the nomadic herders of Djibouti, their livestock (goats, sheep, camels, and cattle) provides the main dietary staples—milk and meat. They also may obtain grain or vegetables through barter. Sheep and goats provide common fare, while beef is reserved for special occasions. Grain is typically roasted and eaten one grain at a time. A favorite delicacy is a thick flatbread made from wheat and eaten with a sauce made from *ghee* (clarified butter) and red pepper. A papyrus root called *burri*, which grows in some areas, is combined with milk to make porridge.

Most Djiboutians observe Islamic dietary laws, which include a ban on eating pork and consuming alcohol. Smoking hashish and chewing chat leaves, both narcotics, are as moral as alcohol is immoral.

## 13 EDUCATION

Until after World War II, Catholic missions provided the infrequent formal education, outside of Koranic schools. A French-style curriculum is used in the growing number of government schools. Practical training of a limited kind is given to many pastoralists, who frequently must round out earning a livelihood with seasonal work in the city or on the railroad. The estimated literacy rate in 2003 for those 15 and older was 68%.

## 14 CULTURAL HERITAGE

The Afar have a traditional type of dance, called *jenile*, which is associated with their ancient pre-Islamic religion.

The Somali have a venerable tradition of oral poetry and song. Their poetry makes heavy use of alliteration.

The visual fine arts of the Somalis have been strongly influenced by Islam, which, for example, does not allow humans or animals to be represented in artwork. Popular motifs are flowers and imaginary creatures.

## 15 WORK

Labor other than the traditional herding of the nomads in rural areas is concentrated in the city of Djibouti. Major employers include the food and beverage industry, shipping, con-

struction, and shipbuilding, as well as the national railway. High rates of unemployment and underemployment exist.

## 16 SPORTS

Few Djiboutians engage in games or sports activities in the Western sense. Some enjoy playing and watching soccer games.

## 17 ENTERTAINMENT AND RECREATION

In rural areas, Djiboutian women enjoy spending their free time visiting with each other. Often, they engage in crafts such as weaving or needlework during these social sessions. Men enjoy congregating and drinking coffee. In villages, towns, and cities, the market serves as an important place for people to socialize. City dwellers enjoy movies and other urban pursuits. Television and radio broadcasts are in French, Afar, Somali, and Arabic. The government owns the television station and the principal newspaper. Voice of America and BBC transmitters supplement the state controlled radio.

## 18 FOLK ART, CRAFTS, AND HOBBIES

Somali women use natural fibers to weave rugs, mats, and other objects. Ornamental jewelry, popular with both men and women, is made from silver, and glass, stone, or wooden beads. Pottery is made without a wheel by hollowing out a ball of clay and molding it into the desired shape. Other popular craft items include decorative wooden cups and spoons.

## 19 SOCIAL PROBLEMS

Three of the five points of the single star of nationalism on the flag of Somalia symbolize the Somali-inhabited territories in Kenya, Ethiopia, and Djibouti. This star signifies that all Somalis should be unified under one flag. Such reunification may never be realized in the Horn of Africa, but the view continues to cause strife. Pan-Somaliism has been especially curtailed following the protracted civil wars in Somalia, and the breaking away of (formerly British) Somaliland in the north from the warring south. At the base of broad social problems are almost no cultivable land and scant freshwater resources.

The Afars were almost continuously in arms against the government of President Aptidon, and have sought greater autonomy. This so-called Afar problem crosses state boundaries into Eritrea. If the Afars of Djibouti succeed in their quest for greater autonomy, some observers speculate that the next step would be a drive for unification with the Afars of Eritrea. So long as the French military remains in Djibouti, the partitioning of the country along ethnic lines remains unlikely.

## 20 GENDER ISSUES

Throughout the Horn of Africa and across a wider span of the continent, male and female "circumcision" is part of gender socialization and reinforced in the core aspects of a cosmology. The "circumcision" operation on females does a permanent anatomical and physiological damage and a psychological limiting of natural human development. Regarding the female circumcision only, from their own socialization, Westerners report mutilation and barbarous treatment. However, a relativistic native view also exists. (For more about cosmologies of the Horn, see Eritreans, sections 5 and 20.)

In the Horn—as among the Somalis, Afar, Tigrayans, Amhara, Kunama, Nara, Beja, and variably among the Oromo, etc.—values and norms regarding women include that their sensuality must be controlled and diminished, permanently. To this end, the clitoris of a female infant or child is unsanctarily excised (amputated), thus insuring, it is said, that she will not be overly active sexually. Among the Afar, this rite is marked with song. No men are present during or may in any way observe the operation, performed by an old, experienced woman. By the operation, which a few do not survive, the female will make a good and true wife for one of god's chosen, a male. No male would marry a female not having undergone this clitoridectomy. For that matter, no woman desires to marry a man "uncircumcised like a dog." Female "circumcision" is not a communal rite of intensification but an individual rite of passage in society. For a male, circumcision can be either, depending on the particular culture.

Among the Somali, Afar, and other peoples of northeastern Africa, especially Muslims, the surgery for clitoridectomy is extended to include excision of part or all of the labia majora and labia minora of the vulva and, then, infibulation. Infibulation has the paired wounds from the surgery fastened for healing together as one unbroken line of flesh. A slender reed or stick is placed in the wound to allow a small opening for urination and menses. Upon the happy day of marriage, the young bride is "uninfibulated" by an experienced woman but the inexperienced groom could do so. Some reports of "reinfibulation" of a wife given particular circumstances exist. The practice of infibulation goes back at least to Pharaonic Egypt.

Infibulation controls that a female is a virgin before marriage to her husband, preventing consensual and forced coitus. In the Horn, both female clitoridectomy (and any infibulation) and ordinary male circumcision are marks of gender membership, and usually eligibility for marriage, in a particular society.

## DYULA

**PRONUNCIATION:** Joo-lah

**LOCATION:** Mali, Burkina Faso, and Côte d'Ivoire (Ivory Coast)

**POPULATION:** 300,000

**LANGUAGE:** Mande; Arabic; French

**RELIGION:** Islam

**RELATED ARTICLES:** Vol. 1: Burkinabe; Ivoirians; Malians

### <sup>1</sup> INTRODUCTION

In many dialects of the Mande language, the word *dyula* means “trader.” Most Dyula people trace their origins back to the land of Manden, the heartland of the great medieval empire of Mali, along what is now the border of the modern nations of Guinea and Mali. Gold from Mali was transported across the Sahara Desert in exchange for rock salt mined in the Sahara. It was the search for new sources of gold that first led traders from Mali to what is now northern Ghana. Along with gold, they also began exporting kola nuts, which only grow in the rain forest region along the Atlantic Coast, but which became a prized item of luxury consumption in the interior of West Africa. Even after the decline of the Mali empire, these trade links between the desert, the grasslands, and the forest were maintained. Traders continued to move southwards towards the forest, settling in communities along the trade routes.

Some of these trading communities established themselves as minority groups among peoples such as the Senufo, the Kulango, and the Abron, with very different languages and cultures from their own. These minority groups came to call themselves, very simply, *Dyula*—“traders.” Here, they continued to participate in the long-distance trade between the forest and the desert. Indeed, their words for “north” and “south” are *kogodugu*, literally, “the land of salt,” and *worodugu*, “the land of kola nuts.” However, they also specialized in producing and selling various luxury items, especially woven cloths, to their neighbors. Even nowadays, a Dyula village or neighborhood is easily identified by the number of its looms.

For the most part, the Dyula lived peacefully under the rule of kings or chiefs from other groups. However, around AD 1700, a Dyula named Sekou Wattara seized power in the large trading town of Kong, in northern Ivory Coast. Under Sekou's rule, Kong became a major military power, sending out raiding parties as far north as the Niger River, and staving off the armies of the mighty empire of Asante to the southeast. Kong's military might was short-lived, but it continued to be a major trading center until its destruction at the end of the 19th century.

At the end of the 19th and the beginning of the 20th centuries, most Dyula communities were incorporated into various parts of French West Africa. Many Dyula were active in the movement for independence, rallying to the Rassemblement Démocratique Africain (RDA) party.

### <sup>2</sup> LOCATION AND HOMELAND

The Dyula homelands are now divided between several African nations: Mali, Burkina Faso, and Ivory Coast, between roughly 8° and 12° north latitudes and 2° and 7° west longitudes. This is an area of savanna, with one annual rainy season. Since

this is in the southern stretches of the grasslands, towards the tropical rain forests to the south, rainfall is relatively plentiful compared to drier regions of the Sahel, to the north. In any case, from their arrival in their present homeland, migration has been a fundamental feature of the existence of this people of traders. Consequently, during the colonial period, Dyula readily migrated to the large towns and cities that sprang up in southern Ivory Coast, in search of better prospects. Nowadays, there are at least as many Dyula living in southern Ivory Coast as there are in their home communities. It is very difficult to estimate their total population, not least because many migrants from other regions to the cities of Ivory Coast are also now called “Dyula.” The total Dyula population probably numbers about 300,000 people.

### 3 LANGUAGE

The Dyula speak a dialect of the Mande language, which is very widely spoken over much of West Africa, in Mali, Senegal, Guinea, Gambia, Sierra Leone, Liberia, Ivory Coast, and Burkina Faso. The Dyula can easily understand many other dialects (Bamana, Malinke) of the language. Mande is a tone language, though there are only two tones. As traders, the Dyula are quite skillful at understanding others—Africans as well as Europeans—who mispronounce their language. Perhaps because this is a trade language, which many Africans speak as a second language, the grammar is relatively simple. There are no genders or noun classes, plurals are formed regularly, verbs are not conjugated, and verb tenses are easy to learn. However, the Dyula dialect has a rich and idiomatic vocabu-

lary, augmented by numerous loan words, both from French (e.g., *mobilis* for “automobile”; *montoro* for “watch”; and *setadir*, “that’s to say”) and from Arabic (e.g., *hakili*, “intelligence”; *wakati*, “time”; and the days of the week).

Because the Dyula are Muslim, many given names (*togo*) are also of Arabic origin: Mammadou, Saidou, Khadija, Fatoumata. Dyula often give their first-born children the name of their own father or mother. Often a man will not, for example, call a son he has named after his own father by the child’s proper name, just as many Americans hesitate to call their own parents by their first names; rather, he will call him *ba*, “father,” *gbema*, “grandfather,” *cekoroba*, “old man,” or some equivalent term.

Many Dyula clan or family names (*jamu*)—Coulibaly, Kone, Wattara, Cisse, Saganogo, Toure—are widespread throughout much of West Africa, linking Dyula families with distant “cousins” far away.

### 4 FOLKLORE

Women and children sometimes recite folk tales in the evening. Speakers will vie with one another to see who can recite stories the most dramatically and rapidly, without hesitating. Typically, such stories are about clever heroes who use their wits to escape danger, or about jealousy within the polygynous family between co-wives and between children of different mothers.

Dyula men will more likely tell religious stories; since they are Muslim, these are typically about prophets—not only Muhammad, but also Jesus as well as Old Testament prophets. They also have a deep concern for their own history and relate accounts of events in their communities or about the deeds of their family ancestors.

### 5 RELIGION

The Dyula are all Muslim and have been ever since their arrival in their present location. Indeed, Islam and trade were (and still are) closely associated throughout much of West Africa, especially in the savanna. However, in the past, Dyula communities included two different hereditary categories of Muslims: “Scholars” (*mori*) and “Warriors” (*tun tigi*, or *sonongi* in Kong). Members of “Scholar” clans were expected to conform fairly rigorously to Muslim codes of religious behavior: praying five times a day; fasting in the daytime during the month of Ramadan; and abstaining from alcoholic beverages. “Warriors,” on the other hand, might drink beer, and pray and fast irregularly. Adolescent “Warrior” boys were initiated into secret societies called *lo*. The initiation process took seven years, during which the boys underwent various ordeals and were taught the *lo* secrets, for example, about powerful spirits embodied in the *lo* masks, some of which were considered so dangerous that only initiates were allowed to see them. Certain “Scholar” families, on the other hand, were known far and wide for their Islamic learning. Kong, for example, was widely known as a center for scholarship as well as trade. About 50 years ago, the initiation societies were abolished, as many Dyula came to feel that such practices were not proper for Muslims.

### 6 MAJOR HOLIDAYS

Dyula holidays are all associated with the Muslim ritual calendar. Because the Muslim year is lunar and not solar, these holidays take place at a different time each year according to

Western reckoning and cannot be associated with any particular season. *Tabaski* celebrates the annual time of the Hajj, the pilgrimage to Mecca. Everyone dresses in their best finery, and all men pray together at the mosque. When they come home, each family that can afford it sacrifices a ram and distributes part of its meat to friends and relatives. *Sunkalo* (the Dyula name for Ramadan) is a month of fasting, but only during the daytime. Throughout the month, at sundown, people prepare elaborate meals. While older men observe the month with additional prayer, young girls perform special dances (*kurubi don*) where they beat the rhythm on special long, thin gourds painted for the occasion. *Donba* (literally “big dance”) is the celebration of the Prophet Muhammad’s birthday, and, as its name suggests, is a particularly joyous occasion.

## 7 RITES OF PASSAGE

Seven days after the birth of a child, there is a relatively informal naming ceremony, where the infant is given its Muslim name. In the past, there were elaborate rituals to mark the passage into adolescence: initiation into *lo* societies for “Warrior” boys, excision (female circumcision) for girls. Both of these rituals have been abolished on the grounds that they are improper for Muslims.

Weddings are very elaborate affairs, involving several types of ceremonies. Older men formalize the marriage arrangements in the *furu* ceremony, in which a bundle of kola nuts previously wrapped in string is ceremonially untied, marriage gifts are officially presented, and all present witness the transaction and bless the marriage. During this time, in the *konyo mina* ceremony, the bride dances around the village, proud to be the center of attention but also sad to renounce the freedom of adolescence. The festivities often last a week, while the bride and groom remain secluded in a hut. Usually, in any year, all weddings in a single village take place on the same day, so that this is a festival for the entire community and not just the families of the bride and groom.

Funerals are more or less elaborate depending on the age and status of the deceased. The corpse is washed and buried as quickly as possible in an unmarked grave, after it has been prayed over, in accordance with strict Islamic rules. However, commemorative ceremonies may be held on the third, seventh, and fortieth days after burial, as well as one year afterwards. Such ceremonies may involve the reading of prayers, sermons delivered by local scholars, and the distribution of ritual gifts (*saraka*) to a wide variety of individuals and groups. Funerals of very old and important people may indeed be festive occasions, marked with singing and dancing, to commemorate the rich and full life of the deceased.

## 8 INTERPERSONAL RELATIONS

As traders, the Dyula were always accustomed to traveling far and wide. When visiting any community, an individual always needed an established host (*diatigi*), who was responsible for taking proper care of the “stranger” (*lunan*) for as long as he or she chose to stay. Indeed, a “stranger” might decide, or even be asked, to stay for life, settling down in the new community.

The Dyula, as also befits traders, are very sociable, and elaborate greetings are an important part of everyday life. People will routinely inquire about each others’ health and about their family. Greetings also include Muslim blessings (*duaw*), which

are usually fairly routine but, in some circumstances, can be quite elaborate.

In the past, young unmarried men and women were allowed to take official boy- or girlfriends (*teri*) with the knowledge and consent of their parents. Sex play, but not full sexual intercourse, was permitted for such lovers. Marriages, however, were arranged by parents, and it was very rare that boy- and girlfriends would marry one another. This practice of taking an official, publicly recognized lover before marriage has been discontinued.

## 9 LIVING CONDITIONS

Because of their involvement in trade, the Dyula have always enjoyed a relatively high standard of living compared to many of their neighbors. They enjoy dressing well, eating well, and, when they can afford them, owning luxuries such as radios, cassette recorders, televisions, and automobiles. Old-fashioned mud huts with thatched roofs have been almost everywhere replaced by concrete houses with corrugated iron roofing. These modern houses are less likely to burn down and are easier to maintain, though in fact they are less comfortable than thatched huts. In larger towns, modern houses often also have running water; electricity is available, not only in town, but in many villages nowadays.

## 10 FAMILY LIFE

All the families in any village who belong to one clan and who descend from a common ancestor live together in a neighborhood called a *kabila*. A large village can contain as many as 20 such neighborhoods. The group has a chief and resolves disputes in a meeting where all adult men in the clan can air their grievances. Traditionally, Dyula preferred to marry cousins within their own clan neighborhood. The proportion of such marriages is declining, but they are still common, especially in rural areas.

As Muslims, Dyula men are allowed up to four wives. Indeed, about half of all married men have more than one wife—a very high proportion, even for West Africa. However, some of these wives are widows who have remarried men their own age late in life. Islam dictates that husbands should treat all wives equally. Indeed, Dyula women enjoy considerable freedom. The stereotypical notion that Islam inevitably leads to the oppression of women certainly does not hold true with the Dyula. Women often actively earn money of their own outside the home, for example, by trading in the market.

## 11 CLOTHING

As weavers and traders, the Dyula enjoy fine clothing. Cloths are traditionally woven in narrow strips, which are then sewn together to make a rectangular blanket. Elaborate patterns require great skill. For example, weavers have to be very careful when weaving a checkerboard pattern that the squares on each strip of cloth will match with those on the next strip. Women would tie one such blanket around their waist, and another over their shoulders, with a third used to carry a baby. Men would dress in elaborate robes, often delicately embroidered.

Nowadays, men usually wear Western-style clothing on ordinary occasions, reserving fine robes for special occasions. Women generally buy machine-produced cloths, which are much cheaper than the handwoven variety, and so the Dyula tradition of weaving is in decline.

## 12 FOOD

Dyula usually eat three meals a day, supplemented by snacks, which can be obtained from street vendors. Breakfast consists of porridge made from corn, rice, or millet. The midday meal is usually the most elaborate. Rice or pounded yams are supplemented with a sauce or a stew, such as meat cooked in peanut sauce. These sauces are generally quite spicy. The evening meal often consists of a spongy pudding called *to*, made from corn or millet flour, typically accompanied by an okra sauce.

Eating is invariably a social activity. Any friend or relative, even a casual acquaintance, who happens to drop by when a person is eating will be asked to partake of the meal. It is extremely rude not to invite someone to share one's meal, although the invitation can be politely declined by saying, "I'm full."

## 13 EDUCATION

As Muslims, the Dyula have a long tradition of literacy in Arabic. Boys from "Scholar" families would begin from the age of seven to learn to read and write Arabic script. Initially, such education stressed the ability to be able to recite any written passage, without necessarily understanding its meaning. A special ceremony called *Kurana jigi*, "putting down the Quran," was held when a boy was able to recite the entire Quran. Some boys, and indeed adult men, would decide to pursue their studies further, and most communities contained individuals with considerable skill at reading and writing Arabic. Large Dyula towns like Kong were great centers of learning, attracting students from far and wide.

Dyula parents were initially reluctant to allow their children to pursue a Western-style education, which they feared would undermine their religious values. Nowadays, however, most boys and girls are sent to school, where they learn to read and write French. Recently, modern Muslim schools have been established in larger towns, where Dyula children can follow a combined curriculum in Arabic and in French; however, such schools are not always officially recognized by the government.

## 14 CULTURAL HERITAGE

Unlike some other Mande peoples, the Dyula have no professional "bards" or *griots* as they are sometimes called (*jeli* in Dyula). Singing and music-making are not in any way professional occupations. On holidays, at weddings, or on other special occasions, groups of young men and women, as well as older women, will sing (sometimes improvising as they go along) and dance through the community. Such activities, however, are generally considered improper for older men.

## 15 WORK

As traders, the Dyula have always valued occupations linked in one way or another to the marketplace. Even as farmers, they tend to treat agriculture as a business, growing cash crops like tobacco (in the past) or (nowadays) cotton, or planting coffee and cocoa in southern Ivory Coast, rather than simply growing food to feed their own family. Weaving was formerly the most widespread occupation. When sewing machines were introduced, many Dyula eagerly adopted the profession of tailor.

In the past, work was intimately tied to the family. Sons would work under the authority of their father, and young-

er brothers would work for their older brothers, at least until they were married and had families of their own. In this way, a group of weavers in the same family would be able to pool their work and sell it more profitably. Nowadays, work is more individualized. Parents, uncles, or older brothers no longer control the salaries of their younger relatives. Tailors, for example, rely on the labor of apprentices, rather than on family members.

## 16 SPORTS

Until about 40 years ago, wrestling was the most popular sport among Dyula boys. Individuals and teams from each clan neighborhood would regularly compete with one another. However, the sport has lapsed. Now, soccer is undoubtedly the favorite sport, as is true in much of Africa.

## 17 ENTERTAINMENT AND RECREATION

Radios are very common among the Dyula. Radio Mali regularly broadcasts in the Bamana language, which Dyula can understand effortlessly, although young people often listen to other stations that broadcast in French. Cassette recorders are also very popular. Young people listen to tapes of pop stars, sometimes from America but also from Africa: Alpha Blondy, a leading reggae musician from Ivory Coast, sings in English and French as well as Dyula. Homemade cassettes of traditional African music are also available in the marketplace, alongside cassettes of Muslim sermons, to which pious Muslims will listen for entertainment as well as for their religious content. In larger towns, televisions are commonplace, even in comparatively modest homes. In the evening, television is particularly popular with women and adolescents, who will cluster around the set of a relative, friend, or neighbor if they have none of their own.

## 18 FOLK ART, CRAFTS, AND HOBBIES

Although the demand for elaborate, handwoven cloths has fallen off a great deal, there are still many Dyula weavers. A few Dyula villages have developed successful cooperatives, where they produce tablecloths and napkins and other items explicitly aimed at the tourist market.

## 19 SOCIAL PROBLEMS

Handwoven cloth, once the mainstay of the Dyula economy, can no longer compete with machine-produced textiles. It remains a luxury item, but its value and the size of the market have plummeted. Finding employment or a source of dependable income is a problem for the Dyula, as it is with all other peoples in the region. The recent devaluation of the CFA, the unit of currency in much of French-speaking West Africa, has made prospects for young people even bleaker, at least in the short run.

These economic strains have put increasing pressure on family units. Extended families no longer pool their resources, and fathers no longer can rely on the labor of their sons, or older brothers on their younger brothers. This increased independence expresses itself in other ways, too; young men and women now generally marry partners of their own choice, and women are not married off in early adolescence. However, such freedom has also led to rapidly rising rates of childbirth outside of wedlock.

During the colonial period and throughout the 1970s and 1980s, many Dyula settled in the southern part of Côte

d'Ivoire, one of the most prosperous regions in West Africa due to coffee and cocoa plantations. Beginning in the 1980s, the economic bubble began to burst, and immigrant Dyula became the targets of increasing xenophobic sentiments. The situation deteriorated after the death in 1993 of President Félix Houphouët-Boigny, who had ruled the country for over thirty years. The political turmoil led to riots in which Dyula and other Muslims were often targeted. After a failed military coup, a rebel government established itself in the north of the country, in the heart of the Dyula homeland. By 2008, the two sides had come to an agreement, although the situation remains tense in much of the country.

## 20 GENDER ISSUES

In principle, Dyula women were supposed to remain under the authority of men—fathers, brothers, or husbands. However, they were never secluded, and in fact, enjoyed a considerable degree of autonomy. In particular, women were often allowed (if not encouraged) to engage in independent economic activities, such as trading produce in the market. While wives had a claim on their husbands' income and could sue for divorce for lack of support, men had no right to any of their wives' earnings.

As Muslims, Dyula men could marry up to four wives, although it was unusual for men to have more than two wives. In the past, Dyula women were married in early adolescence while men married much later. Adolescent girls had little or no say in their choice of husbands. However, once they were widowed or divorced, they were relatively free to marry whom they pleased. As of the 21st century, young women are usually allowed to choose their husbands and are not pressured to marry so young. According to Islamic law, men do not have to specify their reasons for divorce, whereas women have to sue for divorce on specified grounds. In fact, women are far more likely than men to seek divorce.

## 1 INTRODUCTION

Researchers believe that hunters and gatherers have lived in the rainforests of central Africa for more than 6,000 years. Because of their relative isolation, misconceptions about them abound. Their small stature has led to the use of the term "pygmy," and in some instances they are mistakenly referred to as dwarfs. Indeed, some of their African neighbors thought of them (and still do) as less than human.

The name *pygmy* itself inadequately describes these peoples, as it emphasizes physical size to the detriment of other characteristics. Pygmies are indeed short of stature: men are about four and half feet tall and women are about an inch shorter. More importantly, however, pygmies are forest dwellers who share cultural traits with similar peoples living in the forests of equatorial Africa. They have a unique culture, set of values, and lifestyle that are all undergoing great change. Their adaptation to change may teach other cultures how to cope with radical disruptions to their societies.

In many respects, pygmies represent the antithesis of modernity. Just 30 years ago they possessed only the bare essentials for their livelihoods. They did not seek to create surpluses in goods, and they had no use for money. Government was simple: decisions for a particular band were made by common consent, and dissenters were free to leave and join another community if they wished. The forest, their "mother," had the capacity to supply their every need.

Traditional values of interdependence and sociality are being replaced by independence and individuality. Today, under environmental challenges and pressures to acculturate, pygmy society is changing rapidly. Political rebellions in the Ituri area following Congolese independence in 1960 hastened some of these changes. But efforts by former President Mobutu's government to remove pygmies from their forest habitat and to assimilate them into Congolese society wreaked the greatest physical and social havoc on them. The experiment with "emancipation" nearly drove them to extinction and had to be called off.

Since 1997, pygmy survival has been threatened further by wars, which have drawn as many as eight countries into conflict in Eastern Congo. Of the more than five million people that have died of war-related and humanitarian causes in the east, thousands have been pygmies. They have been the primary victims of the scramble for 'conflict' and 'blood' diamonds, gold, and other resources. By 2008, peace in the forested region was not yet guaranteed, as major armed groups had yet to disarm.

In spite of the political and natural threats to their survival, pygmies have proven resilient to adversity. They currently en-

gage in more sustained and deeper contacts than before with African village communities on the fringes of the forest. A long-time student of the Mbuti pygmies, Colin Turnbull, believes that should the equatorial forest be destroyed, the pygmy devotion to “forestness” will help them adapt “and find a new source of sanctity in the here and now.” Turnbull feels that by studying the pygmies, Western populations can learn to rethink what is “backward” and what is “advanced.” Seeing how the pygmies adapt to change may help us reassess our own social contexts.

## 2 LOCATION AND HOMELAND

Pygmy peoples live in scattered groups throughout the equatorial band of Africa, primarily in an area within five degrees on either side of the equator. However, pygmy units range as far north and west as Benin and as far east as the Great Lakes of the Rift Valley. This discussion focuses on the groups of the Ituri forest in northeast Democratic Republic of the Congo (formerly Zaire), including the Efe and their close relations to the south. Although they differ by language and hunting strategies, they share a core culture. Collectively, the Efe and three other groups of the Ituri are called the *Bambuti*. While there are as many as 35,000 Bambuti, researchers estimate that no more than 20,000 pure-blooded Bambuti remain in the world.

The Bambuti live within a 130,000-sq-km (50,000-sq-mi) tract of the huge 648,000-sq-km (250,000-sq-mi) Ituri forest. The Ituri lies on the equator in the northeastern part of the Congo River basin, between 0° to 3°N, and 27° to 30°E. Elevations in this area range from 700 to 1,000 m (2,300 to 3,300 ft). The terrain is rolling, covered by primary rainforest.

Trees reach heights of 30–60 m (100–200 ft) before their canopies spread out, allowing only filtered sunlight to reach the understory below. In areas where the forest has been cleared and allowed to grow back, thick tangled underbrush impedes movement. Rain falls nearly every afternoon except during the dry season of January and February. Many small streams only a few miles apart run continuously, and several large, fast rivers intersect the forest. Temperatures are fairly constant, ranging from 20°C (70°F) at night to highs of 27°C (80°F) during the day, unless the sky is overcast.

The pygmy populations of the Ituri occupy specific territories within the forest, and they generally do not hunt or gather on another’s territory. Each unit also trades with various African ethnic groups (referred to as “Negroes” or “villagers”) living on the fringes of the forest. Although not the most numerous, the Efe occupy the largest territory across the northern and eastern parts of the Ituri. Their trading partners are the Sudanic-speaking Mamvu and Walese Africans. Pygmies trade forest products such as honey, meat, rattan, and thatch leaves in exchange for the Walese’s plantains (see *Interpersonal Relations*).

## 3 LANGUAGE

Sustained contact with African groups over long periods has all but led to the extinction of Bambuti languages. Nevertheless, researchers distinguish three linguistic groups that speak dialects of three major African languages. Some tonal patterns remain as well. Efe pygmies have retained their language to a recognizable extent.

## 4 FOLKLORE

Pygmies anthropomorphize animals, meaning that they give forest animals attributes of people. Certain animals represent clans, sexes, and individuals and they become very real people. Both pygmies and their village hosts have invented stories about these animals, and they assign special attributes to Mr. Turtle, Mr. Gray Antelope, or Mr. Chimpanzee. For example, Mr. Turtle is a wise and tricky individual, whereas the smallest antelope is king of the beasts. Animal stories thus serve to teach about human behavior and relationships.

## 5 RELIGION

Religion in pygmy life increasingly reflects borrowings from neighboring African groups. The Bambuti attribute the wealth and goodness of the forest to Muungu, a high deity, the greatest of forest gods, who supplies all of their needs. The forest is like a mother and father to them, providing food, clothing, shelter, warmth, and affection. Pygmies believe in totemic spirits (*sitana*), who live in rock piles, hollow trees, and holes in the ground, and they stay clear of these places if possible. They also believe in a water animal called *nyama ya mai* in Swahili, who is responsible for any serious water mishaps. If someone drowns or a canoe tips over, they will say the water animal did it. If sickness strikes that cannot be cured by pygmy remedies, pygmies will seek treatment from a village witch doctor to suck out “disease objects” with herbs or by cupping with animal horns.

Pygmies also practice certain magical rituals called *anjo* to help control the weather and enhance hunting. Their main concern is to delay rain and storms until the hunt is over. For example, the Efe may burn leaves of the wild pepper plant to

Mbuti pygmies at a forest hunting camp in the Democratic Republic of the Congo. (National Geographic/Getty Images)

stop storms. Other weather superstitions have to do with picking certain flowers or dropping stones into streams, which they see as causes of rain. Before hunting, Bambuti groups light fires in the morning during hunting season to “warm the forest” for good luck. Efe women sometimes light smoky fires at mid-day to keep the weather clear for hunting. Mbuti children light smoky fires to purify the hunters who will cause bloodshed in the sacred forest. Pygmies tie the leaves of the species that their prey enjoys on their bows, and they sometimes burn these leaves and rub the ashes on their bodies. When dividing the catch, the elder cuts a small piece off of the heart of an animal and tosses it into the forest for good luck.

The most important ritual ceremony is the *molimo*, which is held whenever hunting becomes unproductive or a special problem demands resolution within the band. Traditionally, this ritual was very secret and kept hidden from women and children, although more recently the *molimo* has been performed in villages. The ceremony begins with a long, mournful cry from the forest, goes to a birdcall, then to a growl, and back to a birdcall again. The men at the campfire answer the call, which is made with a wooden trumpet, but represents the voice of the forest. After the main ceremony is over, the women and children join the men, circling the campfire in one direction, while the men circle in the other. The ceremony may last several days, until it is felt that the *molimo* has answered their request.

## 6 MAJOR HOLIDAYS

Holidays hold little meaning for the Bambuti other than as opportunities for parties. The end of *Nkumbi*, the honey feast dance, and other ceremonial activities may be thought of as

traditional pygmy holidays (see *Rites of Passage and Cultural Heritage*).

## 7 RITES OF PASSAGE

The Bambuti have gradually been assimilating village rituals, but birth in pygmy society is treated without any ritual. In former times, girls went through initiation, the *elima*, but this practice has fallen away. Boys increasingly attend a village circumcision school (*nkumbi*), which is held every three or four years depending on the number of boys between the ages of 9 and 14 who are ready for circumcision. The boys leave their parents for several months and live in close association with the village boys, who are their hosts. They learn the secrets and are circumcised together. At the end of the ceremonies, their parents come to dance and get drunk with the village boys' parents. Thus, each group of boys belongs to an age-grade, much as American high school students identify with their graduating class or college students identify with a fraternity. When strangers meet, they ask, “What class do you belong to?” Because each class acquires a name from a significant event during its initiation, they reply, “I’m a hurricane,” or “I’m a great army worm,” or something similar. These ceremonies bond boys of the same age together and also cement relationships between villagers and pygmies.

Marriage takes place soon after puberty, leaving little time for courtship. Nevertheless, at puberty, youthful chivalry at the hunt gets publicized, and much flirtation back in the camps occurs. Inter-band visits offer occasions for youth to get acquainted and to engage in marital prospecting.

When a Mbuti dies, members of the deceased's family mourn by covering themselves with white clay. The women organize weeping and wailing sessions, which last for several

days. Funerals also offer occasions for wine drinking. Once a wake is over, the band usually moves camp.

## 8 INTERPERSONAL RELATIONS

Pygmies place great importance on respect for each other, and children learn this early. In principle, children of the same age group remain on equal footing throughout their lives and call each other *apua'i*. Their games teach them to be social, interdependent, and synergistic in problem-solving. Evening campfires offer adults daily opportunities to discuss and resolve disputes. Anyone who speaks from the center of the camp must be listened to. Members of a band gang up on wayward members to enforce rules and maintain harmony in the group. Individuals and families visit other pygmy camps for months at a time to socialize with family members and to prospect for marriage. These visits break up the monotony of daily life.

Relations between the Bambuti and villagers are also very important. Researchers have disagreed on whether this relationship is essentially dependent, independent, or interdependent. The first view sees pygmies as vassals of the villager overlords. The second sees them as fully independent if they so choose because the forest supplies them with everything they need. Contact with villagers offers an agreeable change of pace, but is voluntary and temporary. The third view finds a mutual interdependence between pygmies and villagers with neither side holding an advantage. Each has something the other wants and needs.

Villager-Pygmy relationships are based on the claim of villagers to about 100 square miles of forest. Villagers thus act as hosts to pygmy families living within their territory. Each supplies the other with necessities the other is unable to get on his own. For the pygmy in pre-colonial days, this included scouting in the forest for enemies of a village. A visitor to a village will often see bunches of plantains lying on the ground waiting to be picked up by pygmies at their convenience. The relationship is interfamilial and is inherited on both sides from father to son. If a pygmy leaves a villager to ally with someone else, it is regarded as "divorce." In former times, inter-village warfare sometimes erupted when villagers attempted to woo pygmies away from each other.

## 9 LIVING CONDITIONS

Living conditions have deteriorated dramatically since 1998 due to the fighting. Traditionally, material comfort, wealth, and security were the least of the pygmies' concerns. They trusted the forest to provide their needs, which, by most standards, were extremely minimal. The Bambuti needed spears, bows and arrows, and nets for hunting; pots to cook in; huts to sleep under; and loin cloths to wear. They traded forest products to villagers for items difficult to obtain such as salt, knives, and metal tips for their weapons. However, at the dawn of the 21st century, the forest people were very much engaged in a struggle for survival.

Pygmy settlements are rustic, temporary camps situated within 50 yards of a stream suitable for drinking. Their igloo-shaped huts have open doors. Huts are made of bent saplings that form a frame onto which large *mongongo* leaves are tied. Mats or leaves generally serve as beds and cooking is done on open fires near the huts. People simply relieve themselves in the forest near the camp.

After one to three months in one place, animals, fruit, and honey become scarce, and the stench of refuse and human waste becomes unbearable. The community packs up and moves to another site, but never to an abandoned camp site. The women pack their pots, axes, and whatever they own into baskets, which they strap to their backs; babies travel on top of the packs. The men carry their weapons, elephant spears, and bows and arrows.

From April to June, if the rainy season is particularly severe, preventing hunting, widespread hunger may sometimes occur, as it did in 1980. People's resistance to infectious diseases lowers, and conflicts over food are more frequent. When pygmies fall ill, they treat themselves with medicinal herbs and bark. They give each other enemas for diarrhea and intestinal disorders, which are frequent. Dysentery is common; pneumonia is less common, but deadly. Pygmies are quite resistant to disease overall, and the most frequent cause of premature death is falling from trees or being hit by a falling tree limb during a storm. Pygmies go everywhere on foot and cover great distances in little time. Their size allows them to pass under low limbs and tangles. Villagers and other outsiders seem very clumsy in the forest by comparison. The Bambuti use their hands to grasp branches and remove fallen clutter and tangles from trails as they go, tossing dead wood into the nearby understory. The noise created by this tactic also serves to mislead and distract game during a hunt.

National Park set-asides like that of Kahuzi-Biega in South Kivu pose new threats to way of life. Bambuti increasingly live near or alongside a forest area they can no longer access because it has been designated as a protected area or a national park. In one case, Pygmies confined to living on an island in miserable circumstances have complained that they are dying of hunger while they are not allowed to fish, which is one of their traditional sources of food.

## 10 FAMILY LIFE

Family life among the Bambuti is much different from that in the West. The Bambuti learn the value of interdependence and sociality as children. Children call all women in the camp *Em*a (mother) because they are all mothers to pygmy children. Nursing goes on long after a child can walk and talk, and mothers often swap and adopt children of their sisters and close friends.

Efe pygmies live in small camps of fewer than 50 residents. Mbuti pygmy camps usually have two to three times as many people because net-hunting requires communal participation. Individual households are nuclear families (*endu*) consisting of a husband, a wife, and their children. Families are patrilineal, meaning that they trace their lineage through the male line to a common male ancestor. Pygmies are exogamous and may not marry anyone to whom they know they are related.

Marriages are exchanges between families. Mutual affection and chivalry can play a part, but generally a man offers a sister, niece, or cousin to his wife's brother or male relative. Divorce is common, and if a marriage does not last, this often also causes the divorce of the couple who arranged the marriage. A woman often initiates divorce simply by packing her things (including small children) and moving back to her family's camp. If she has boys, they return to their father when they are old enough to hunt. The typical marriage is monogamous because pygmy women are scarce.

## 11 CLOTHING

Villagers like to joke that when they first encountered pygmies, the pygmies wore no clothes at all. Pygmies deny this and insist that they have always worn loin cloths. Traditional cloth is made from the inner bark of vines. Men generally process it, which involves pounding, wetting, and working it until it is soft and pliable. Acculturation has increased the use of cotton fabrics in pygmy dress. Used clothing has also become more common. The Bambuti enhance their appearance by scarification (scarring) on the face. Some women also wear bead necklaces. Both men and women improve their appearance by filing their teeth to a point.

## 12 FOOD

The Efe diet is seasonal depending on the rains. From late June to mid-September, honey, fruits, and nuts are most abundant in the forest. At this time, pygmies move their camps into the forest, but they return to the villages often to trade for peanuts, plantains, and other foods. By late September, rivers have overflowed, and forest conditions are extremely wet for hunting. The Efe move back to the edge of the forest, where the women help with village gardens while the men hunt. During the dry months up to February, men spend time helping villagers clear garden areas, while women assist with rice harvesting. In February and March, the forest has dried sufficiently to permit good hunting conditions. The Efe move back into the forest and then emerge again in April or May to forage in abandoned gardens for cassava and sweet potato tubers. Pygmies feel obliged to hand over all honey and elephant meat to their hosts, but they will eat all they can first. They do not store or preserve game.

Pygmies typically eat two to three meals a day, one in the morning before the hunt, possibly one at noon, and one in the late afternoon after the hunt. They enjoy many forest delicacies, ranging from *pangolins* (an armadillo-like animal) to reptiles and insects. They have a favorite recipe for fried caterpillars. They wrap a caterpillar in a piece of leaf and place it next to the fire. Toasting it as one would a marshmallow, it is then dropped into a pot of boiling palm oil and cooked. When finished, the caterpillars look something like fried shrimp.

Food taboos are associated with clan, sex, or individuals. Pygmy clans identify with animals that performed a kind deed or may have helped an ancestor through a crisis. They make these animals their totems and are not allowed to hunt, eat, or even be around them. If they encounter one in the forest, they will run the other way. For men, the taboo will usually be a species of a hunted animal such as an antelope or monkey; for women, the totem is usually a slow-moving animal such as a porcupine or snake. Women and children may eat frogs and toads, but men abstain from these. Chimpanzees and leopards are rarely hunted and eaten, and they may be totems for some clans. The totems are not their ancestors, but they do represent very real people. To violate the taboo would bring sickness, misfortune, and even death. To respect it binds the clan members sharing the totem, even though they may be separated by great distances.

## 13 EDUCATION

The Bambuti have evaded formal education. In camp, children learn basic skills, such as tree-climbing, before they walk. Boys practice shooting bows and arrows at the age of three. As they

grow older, boys accompany men on the hunt, while girls learn to gather food, cook, and make huts. This basic education is complete by the age of six or seven.

## 14 CULTURAL HERITAGE

The Bambuti have not developed a written literature and do not create graphic arts. Perhaps their most important cultural legacy is their sense of family, their community reliance, and their belief in the forest. Some pygmies are accomplished storytellers and tell folktales about forest spirits and legends about ancestors. Pygmies enjoy singing and dancing, especially on moonlit nights. They stamp on the ground or on hollow logs and, if they can, they borrow drums from their villager hosts.

One of the gayest and happiest dances occurs during the honey feast. Pygmies celebrate the honey dance after days of feasting on honey. Women form an inner ring and circle around a bonfire, while men form an outer ring and circle in the opposite direction. The men pretend to seek honey and come near the women. The women play the role of bees, humming and droning. They pick up burning branches from the fire, with which they menace the men to remind them of the dangers of bee stings.

## 15 WORK

Formerly, pygmies worked just enough to supply their basic needs. Principally the men hunted and the women gathered. When they had surpluses, they traded them for articles and food from African villagers. The forest products they traded were generally meat, honey, fruits, and building materials. In exchange, they received plantains, yams, corn, cloth, and iron tools. Women also tended villager gardens and men occasionally helped villagers clear land. While the Bambuti continue to trade, today they are more concerned with having cash, so they seek surpluses in their hunting and have become more competitive with each other. The unfortunate reality, however, is that exposure to villagers has increased their visibility and therefore their vulnerability to exploitation by combatants, who rape the women and utilize the men as free labor.

Hunting and gathering still form the core of the Bambuti's livelihood in the forest. Mbuti hunting is a group affair done with nets. Each net is owned by one to four men, and a minimum of seven nets are required for a successful hunt. Women and children scream, shout, and beat bushes to frighten animals toward the nets, which are strung over bushes about four feet high. The animals become entangled in the nets behind which the men are hiding. Once netted, large game such as hogs, bushbucks, and an occasional okapi must be killed with spears. The Efe men often hunt alone either for monkeys with poison-tipped arrows or for duikers, small African antelope, by perching in fruiting trees. They obtain the poison from the juice of the kilabo plant. A mere scratch with this poison can cause death.

## 16 SPORTS

Forest people do not play sports in the Western sense. They do, however, learn basic skills through mock hunts and other games. For example, every camp has a designated play area for children next to streams (*bopi*) that is off limits to adults. Here children play games similar to sports that teach them about group dynamics and personal achievement. Of similar importance, the elders teach children the strategies and techniques

of hunting by pretending to be animals and by showing children how to drive them into a piece of old net.

The adults also play a game (more ritual than sport) resembling our tug-of-war. The purpose is to remind the community that cooperation can solve conflicts between the sexes. The tug-of-war begins with all the men on one side and the women on the other. If the women begin to prevail, one of them leaves to help out the men and assumes a deep male voice to ridicule manhood. As the men begin to win, one of them joins the women and mocks them in high-pitched tones. The battle continues in this way until the participants have switched sides and have had an opportunity to both help and ridicule the opposition. Then both sides collapse, laughing over the point that neither side gains in beating the other.

## 17 ENTERTAINMENT AND RECREATION

The Ituri forest is one of the world's last refuges from cinemas, televisions, videos, IPODs and internet. The Bambuti relax after a day's hunt by sitting on home-made four-legged stools in front of their huts, talking and smoking. Conversation may be directed at everybody or may be between two people, but it is audible to all. People talk about what they did that day or what they are going to do the next. They may joke about someone's clumsiness, and they often get up in the night to urinate or smoke and continue their conversations. Pygmies also celebrate a good hunt, especially an elephant kill, with feasting and dancing. An elephant kill is an act of courage, and they know the meat and ivory will trade well.

When they move to village outskirts, pygmies socialize with villagers while bartering their game. On moonlit nights, they stay late to drink wine and dance. The pygmies put on outlandish performances to entertain villagers in exchange for beverages. A few elderly men stay behind in the camp to smoke hashish and stand guard against thieves.

## 18 FOLK ART, CRAFTS, AND HOBBIES

Pygmies have little time and interest for crafts and hobbies. If they need a tool such as a mortar and pestle to prepare food or medicine, they often wheedle it from their villager hosts. Pygmies fashion their own nets from *lianas* (vines) and make belt pouches, baskets, and mats from grasses. They craft stools and chairs from sticks and branches.

## 19 SOCIAL PROBLEMS

Prior to independence, pygmies remained outside the mainstream of society and politics. An internal system of camp debate and consensus allowed every adult to express his or her opinion. No chief or formal council imposed rules. Instead, an informal oligarchy of leaders led decision-making and maintenance of law and order.

However, post-independence wars, nation-building, and national park set-asides have disrupted customary ways. Logging, illegal mining, road-building, and commerce have further eroded the isolation of the forest peoples. Indeed, the plunder and smuggling of coltan into Rwanda has wreaked havoc on the environment and has been the cause of many pygmy deaths in Ituri. Ironically, coltan is a natural resource for chips used in cell phones, computers and other electronics. Pygmy values, beliefs, and way of life are increasingly jeopardized by uncontrolled illegal exploitation of resources for which they have no use.

Even more devastating to the pygmies is the presence of various armed groups all of which have exploited the forest people as cheap (or free) labor, raped pygmy women, and retaliated against pygmy communities for allegedly cooperating with enemy groups. The armies and militias have used them as hunters and guides for their special knowledge of forest trails. In addition to rape, one human rights group found evidence of mass killings and cannibalism by armed combatants against the forest people. Sexual exploitation has resulted in a high rate of gonorrhoea among Bambuti, which researchers believe accounts for a low birth rate among pygmy women.

## 20 GENDER ISSUES

Pygmy society is relatively egalitarian for its lack of the typical gender issues stemming from societal discrimination, marginalization of girls, unfair inheritance laws, disputed abortion rights, and workplace inequality. The critical role women play in survival no doubt accounts for this consideration. However, one of the forest people's key gender problems is inter-clan disputes over women and children. Pygmies lose about 14% of their women to marriage with villagers. Reciprocal marriage exchanges are therefore difficult to fulfill because families often have uneven numbers of females. Patricians and younger males harass, capture, and come into armed conflict with each other over "sister exchange." Thus, many males must live well past puberty while waiting for a wife. These bachelors can cause serious problems when they tryst with married women or with girls in their endogamous clan.

# EGYPTIANS

**PRONUNCIATION:** ih-JIP-shuhns

**LOCATION:** Egypt (northeastern Africa)

**POPULATION:** 80 million

**LANGUAGE:** Arabic

**RELIGION:** Islam (Primarily Sunni; minorities of Shia and Sufi); Coptic Christian; other Christian denominations. [Fewer than 1,000 Jews.]

## 1 INTRODUCTION

The Arab Republic of Egypt is more commonly known as Egypt. Throughout Egypt's 6,000-year history, it was the focus of ambitions of many foreign powers, who wished to dominate this country that occupies a strategic position linking the continents of Africa and Asia. Conquerors of Egypt have included the Ptolemies, Romans, Greeks, Arabs, Fatimids, Mamluks, Ottomans, French, and British. Britain was the last colonial power to conquer Egypt. British forces withdrew in 1954, leaving Egypt independent under the leadership of President Jamal 'Abd al-Nasir.

A key event in the ancient history of Egypt was the unification of Upper (southern) and Lower (northern) Egypt, by the legendary King Menes, in the third millennium BC. This began the famous Pharaonic Age, in which a god-king, or pharaoh, held power over all of Egypt. The legacy of the pharaohs is preserved in the pyramids and in the stories etched in stone in hieroglyphic symbols across the face of Egypt.

A second key event, one of the most influential in the development of modern Egypt, was the Arab Muslim conquest in AD 641 by 'Amr Ibn al-'As. This conquest led to the spread of the Arabic language and Islamic religion across Egypt. This was not affected by the absorption of Egypt into the Ottoman Empire in 1517, since the Ottomans were themselves also Muslim, and Islamic institutions were maintained. An attempt to free Egypt from Ottoman rule, led by Muhammad 'Ali in the first half of the 19th century, failed. The British occupied Egypt in 1882 in order to control the Suez Canal and safeguard the British route to India. Egypt never became a British colony, but it did become part of the British Empire, with Egyptian King Faruk as ruler.

In 1952, a group of Egyptians called the Free Officers, led by Lieutenant Colonel Jamal 'Abd al-Nasir, overthrew King Faruk. 'Abd al-Nasir became President of Egypt in 1954 and immediately began a series of nationalizations, including the nationalization of the Suez Canal in 1956, a move that infuriated the countries that depended on safe passage through the canal. This led to the 1956 Tripartite Invasion of Egypt by Britain, France, and Israel. Following threats that the Soviet Union would attack Britain and France if they did not withdraw from Egypt and pressure by the United States on Britain and France, by the end of the year, the three forces had all withdrawn. As Israel withdrew from the Sinai, it destroyed roads, railroads, and military installations. During Nasir's presidency, Egypt was also embroiled in the June 1967 Arab-Israeli War, in which Israel occupied Egypt's Sinai peninsula.

Upon Nasir's death in 1970, Anwar Sadat became president of Egypt. During his term, Egypt launched the 1973 Arab-Israeli War across the Suez Canal, hoping to recapture the Si-

nai from Israel and liberate Palestinian territories that had also been occupied by Israel in 1967. Although the goals of the war were not achieved, Sadat nevertheless felt victorious because his forces had inflicted heavy damage on the Israeli forces.

In 1977, in a move that took the world by surprise, Sadat visited Israel in preparation for peace negotiations. By 1979, President Anwar Sadat of Egypt and Prime Minister Menachem Begin of Israel had signed the Camp David Peace Accords, ending the progression of Egyptian-Israeli wars and returning the Sinai to Egyptian sovereignty in 1982. There have been no Egyptian-Israeli wars since Camp David and, following a period in which Egypt was shunned by the Arab world for forging a separate peace with Israel, Egypt now plays the role of mediator between Israel and other Arab nations, working to promote a comprehensive peace in the region.

President Sadat was criticized in some domestic circles for his peace overtures toward Israel. He was also increasingly criticized for the economic program he introduced in 1974, known as *Infitah*, or "the opening." Infitah focused on cutting back the size of the huge public sector by reducing government spending and restricting the hiring of new employees by the government. Previously, every university graduate was guaranteed a job in the public sector. Under Sadat, this promise of employment was curtailed, leaving thousands of university graduates without jobs. Infitah also had an adverse effect on the cost of living, by removing many subsidies on food and thus leading to rampant inflation. Sadat grew increasingly frustrated as he tried to deal with increasing opposition to his political and economic reforms, and he enacted new laws meant to give himself more power and curtail public criticism. As the opposition became more intense, Sadat reacted by arresting at least 1,500 opponents in September 1981. One month later, on 6 October 1981, Sadat was assassinated by a member of an Islamic opposition group, known as the *Jihad* (holy struggle) organization.

Husni Mubarak succeeded Sadat and has been president of Egypt since October 1981. Mubarak has followed Sadat's lead by continuing to pursue Infitah and by upholding the peace with Israel. He has allowed political parties to operate but maintains a ban on Islamic parties and the state of emergency imposed after the death of Sadat remains in force more than one-quarter century later. When the Islamic opposition gets out of line, as it has increasingly done in the 1980s and 1990s, Mubarak authorizes hundreds and thousands of arrests. There are at least three Islamic trends in Egypt. Many in the general population tend to be religiously observant—fasting, praying, and dressing conservatively, but seeing no need to make Islam into a political force. Second, a mainstream, politically active Islamic opposition group, known as the Muslim Brotherhood, seeks to change the Egyptian legal system by basing it on Islamic *shari'a*, or law. The Brotherhood, or *Ikhwan* as they are known in Egypt, have renounced the use of violence against the government and seek to impose Islamic law by working from within the political system. The third Islamic trend is militant and is represented by the Jihad organization. This group seeks to impose Islamic law on the country by overthrowing the current government. Battles between Jihad members and Egyptian security forces have become frequent, causing President Mubarak to crack down on Islamic political opposition, even against members of the Ikhwan.

## 2 LOCATION AND HOMELAND

Egypt has a population of about 80 million, with 99% of its people living along the banks of the Nile River. Population density in the Nile Valley is one of the highest in the world, exceeding 1,500 persons per sq km. The population grows by 1.7% per year. Sixty percent of Egypt's population is under the age of 25.

The country occupies approximately 1 million sq km in north-eastern Africa. Of this, only 35,000 sq km (the Nile Valley and Delta) are cultivated. The rest of the land consists of the Western (Libyan) Desert, the Eastern (Arabian) Desert, and the Sinai Peninsula. Egypt is bordered on the west by Libya, on the south by the Sudan, on the east by the Red Sea, on the northeast by southern Israel, and on the north by the Mediterranean Sea. The Nile River runs through Egypt from Sudan, flowing from south to north and ending at the Mediterranean Sea. Three central African rivers flow into the Nile. These are the White Nile, originating in Uganda; the Blue Nile, originating in Ethiopia; and the Atbarah, also originating in Ethiopia. Along the banks of the Nile lies the Nile Valley and Delta, an extensive oasis on which 99% of Egypt's population lives.

## 3 LANGUAGE

All Egyptians speak Arabic, the national language. Arabic is a highly evolved Semitic language related to Hebrew and Aramaic. Written Arabic is in the form of classical Arabic or a simpler version called "modern standard," which is the form taught in schools throughout the Arab world and originally

based on the Quran. This Arabic is used in the media, government, and literature throughout the Arab world, tying the Arab world together culturally. Egyptians speak two major dialects of Arabic. In Cairo and most other urban centers, to mention just one of the many differences between colloquial Egyptian Arabic and the Arabic spoken in most of the rest of the Arab world, the sound *j* is pronounced as *g* (as in the word "girl"). Thus, a boy whose name is pronounced "Jalal" in most of the Arab world is known as "Galal" in Cairo. In most of the countryside, however, the *j* sound is maintained. In Cairo, the word for carrot is *gazar*. In the countryside, and in most of the Arab world, it is *जार*. A mountain in Cairo is *gabal*, and in the countryside and most of the Arab world it is *jabal*.

Common boys' names are *Ramadan* and *Sha'ban*, which are also the names of Islamic months. Other common names are *Gamal*, *Mohammad*, and *Ahmad*. Common girls' names are *Mona*, *Su'ad*, *Magda*, *Fatima*, and *Lobna*. Egyptians often use nicknames for friends and relatives. Very common nicknames are *Mimi* for Mohammad, and *Fifi* for Fatima.

## 4 FOLKLORE

Some of Egypt's most popular legends are stories of liberation from foreign rule and domination. Ahmad Arabi is famous for his opposition to British and French interference in Egypt's finances in the late 19th century, and Sa'ad Zaghlul is famous for his opposition to British domination during the early 20th century.

Most folklore in Muslim countries tells stories of important figures in religious history. One such story that is also cause for annual commemoration throughout the Islamic world is that of *al-Isra' wa al-Mi'raj*. According to legend, on the 26th day of the Islamic month of Rajab, the Prophet Muhammad traveled at night from Mecca, Saudi Arabia (then Hijaz) to Jerusalem. From Jerusalem, he rode his wondrous horse, al-Burak, on a nocturnal visit to heaven.

Another item of folklore commonly believed in some Islamic communities, including Egypt, is that evil spirits, called *jinn*s, live in haunted places. Jinn are demons that are believed to take on the form of an animal or human. Some Egyptians also believe in the "evil eye" and take measures to prevent being inflicted by it.

## 5 RELIGION

About 90% of Egyptians are Sunni Muslims, 8.5% are Coptic Christians, and 1.5% are other Christian denominations—Greek Orthodox, Eastern and Latin Rite Catholics, and Protestants. There are fewer than 1,000 Jews in Egypt. Christianity came to Egypt during Roman rule in the 1st century AD. The Copts have been a significant minority in Egypt since medieval times. They are led by a patriarch based in Alexandria, Egypt—Pope Shenudah III—and he is known as the pope of the Coptic Church worldwide.

Islam, Egypt's national religion, teaches that Allah (the Arabic word for God) regularly sent guidance to humans in the form of prophets. Islam accepts the earlier Semitic prophets, including Abraham, Moses, and Jesus. Muslims also believe that Muhammad was the last in the line of prophets sent with the message and that there is only one God. Muslims believe in heaven and hell, the day of Judgment, and angels. The Quran is the holy book of Muslims, and it teaches that, in order to get to heaven, men and women must believe in God and do good

works by struggling in God's way. Belief and good deeds are tightly bound together in Muslim literature.

The Islamic religion has five pillars: (1) Muslims must pray five times a day; (2) Muslims must give alms, or *zakat*, to the poor; (3) Muslims must fast during the month of Ramadan; (4) Muslims must make the pilgrimage, or *hajj*, to Mecca; and (5) each Muslim must recite the *shahada*—*ashhadu an la illah ila Allah wa ashhadu an Muhammadu rasul Allah*—which means “I witness that there is no god but Allah and that Muhammad is the prophet of Allah.”

## 6 MAJOR HOLIDAYS

Egypt commemorates Muslim religious, secular, Coptic, and Roman Catholic holidays. One major Muslim holiday is *Eid al-Fitr*, which comes at the end of the month of fasting, *Ramadan*. During Ramadan, Muslims refrain from eating, drinking, or having sex during daylight hours, in order to reflect on God and on the plight of the unfortunate who do not have enough food. At the end of the month, Muslims celebrate *Eid al-Fitr* for three days. The other major Muslim holiday is *Eid al-Adha*, which commemorates the willingness of the Prophet Abraham, as well as his son, to obey God's command in all things, even when Abraham was told to sacrifice his son.

It is traditional to buy new clothing for these two holidays, and the shops of Cairo and other urban centers stay open later than usual before the holidays. Swarms of people fill the streets, shopping for clothing for these exciting events. The religious holidays are celebrated by going to the mosque for group morning prayers and then coming home to large meals with family and visiting relatives. Part of the feast is normally given to relatives and to the poor. Egyptian children are given small amounts of money by visiting relatives. Other Islamic holidays that are celebrated to a lesser degree are the Islamic New Year, the Prophet Muhammad's birthday, and the Tenth of Muharram. The latter is the tenth day of the Muslim month of Muharram, commemorated because Moses led the Israelites out of Egyptian slavery on this day. The Prophet Muhammad instructed all Muslims to fast on this day.

Orthodox Christians celebrate Christmas on 7 January and Easter on a different date each year. All Egyptians celebrate *Sham al-Nisim*, a Coptic holiday with Pharaonic origins, on the first Monday after Easter.

Secular holidays include New Year's Day (1 January); Sinai Liberation Day (25 April); Labor Day (1 May); Mother's Day (31 March); Evacuation Day, commemorating the withdrawal of the British (18 June); Revolution Day (23 July); National Day (6 October); and Victory Day (23 December).

## 7 RITES OF PASSAGE

Egyptian boys are circumcised, usually at birth, but often later in the child's youth. The birth of a baby is an important event, and the baby's first week of life is commemorated on the seventh day with a celebration called the *subu'*. Graduation from high school is also important, although many of Egypt's children do not finish 12 years of school because they drop out to help their families earn a living. A 2005 study by UNICEF reports that primary school attendance is above 90% for both boys and girls.

Marriage is an important rite of passage, but increasingly Egyptian men and women are getting married in their late 20s and 30s. This is based more on financial ability to sup-

port a family than on a preference for delayed marriage. In order to get married, a man must typically provide a furnished apartment at the very least and also have an expensive wedding ceremony. Millions of Egyptian men simply cannot afford this considerable expense. Some charitable organizations are attempting to help by providing weddings free of charge, but this serious social issue is a cause of great concern to the government.

All adults hope to conduct the Islamic *hajj*, or pilgrimage to Mecca, sometime before their death. Those who do so are thereafter given the title *Hajj* preceding their name, such as *Hajj Mustafa* (man) or *Hajjah Fatima* (woman). Upon a loved one's death, the burial is carried out as soon as possible, preferably on the same day. The condolence period lasts for three days, during which mourners recite passages from the Quran. If the deceased was a public-sector employee, his or her family receives a death benefit from the government to help it deal with the loss.

## 8 INTERPERSONAL RELATIONS

Egyptians are very friendly people, and even the poorest among them will show hospitality to a stranger. The Egyptian greeting is typically “*as-salamu `alaykum*,” or “peace be with you,” and the response is “*wa `alaykum as-salam*,” or “and peace be with you as well.” Egyptians shake hands upon greeting, although two men or two women who have not seen each other for a while might kiss on the cheek. An unmarried man and woman, however, would not kiss due to Muslim and social mores, and a very pious man and woman might not even shake hands. In formal situations, a man is referred to as *sayyid* (Mr.), a married woman as *sayyida* (Mrs.), and a single woman as *anisa* (Miss). Anyone with a doctorate or Ph.D. or a medical degree is referred to respectfully as “Doctor,” even in informal settings. Children must show respect for their elders and can never refer to an adult by his or her first name without attaching “aunt” or “uncle” to the name. Thus, a child would address a female adult acquaintance as “*Amti* (Aunt) Fatima,” and a male adult acquaintance as “*Amo* (Uncle) Muhammad.” The same words are used to address a child's actual aunt and uncle.

Dating in the Western sense between the sexes is a social taboo because Islamic values prohibit an unmarried man and woman to be alone together. Public ritualized socializing is widespread, however, and the parklands built along the Nile are crowded with young couples sitting on benches, sharing meals or tea, and even exchanging flowers. Marriage tends to be arranged by matchmakers, although a man and woman who are interested in each other may declare their intentions to their families, formally (publicly) announce their intention, and then see each other in the presence of a third party, usually a family member. Such careful measures are the society's way of preserving the dignity and honor of their children and making sure that girls remain virgins until they are married. Premarital and extramarital sex are strictly forbidden.

## 9 LIVING CONDITIONS

The government increased spending on health care after the 1952 Revolution, and the result has been a decrease in the infant mortality rate and an increase in life expectancy. Diarrhea and the dehydration that sometimes accompanies it account for many deaths among infants and children. One reason for this is the lack of safe water for drinking and cooking among

*Egyptian children are taught to show respect for their parents and other adults, and children are given responsibilities at a young age.*  
(Cory Langley)

25% of the population. Among adults, the main causes of death are respiratory and digestive ailments. In 2003, there was about one physician per 835 inhabitants, and almost as many certified nurses. The country has public, government-run hospitals and clinics as well as more expensive, private hospitals and clinics. There are also numerous low-cost clinics located in neighborhood mosques and run by Islamic charitable organizations. These are frequented by both Christian and Muslim patients and are often considered to be better providers of health care than government clinics.

The rapidly growing population of Egypt is a challenge to authorities responsible for meeting the housing needs of the country. Population size, coupled with a shortage of skilled laborers and construction materials, has resulted in a shortage of affordable housing. Nowhere is this more evident than in the mausoleums of Cairo's cemeteries, where more than 500,000 poor people have set up their homes. The cemeteries are so populated that they are now called "The City of the Dead." One fifth of all Egyptians live in the 400 slums that surround Cairo. The majority of Egyptians live in crowded apartment buildings in very densely populated communities. Some people have built semi-legal housing of wood, cardboard, and metal on the flat rooftops of apartment buildings. There is little space for single-family houses, although these can be found in a few areas. The government has been trying to deal with the urban crowding by building new cities on the outskirts of Cairo. These include *Madinat Nasr* and *The Tenth of Ramadan* towns. While some families have been eager to move to these new towns, Cairo is

still more attractive to most people because of the lack of employment in the new areas.

One of the most prosperous established sections of Cairo is Zamalek, a small island in the Nile River, where the per-capita income is \$15,000 per year, in contrast to the \$150 per-capita income in some of the slums.

## 10 FAMILY LIFE

The family is the center of social organization. Every Egyptian is expected to get married and produce children in order to continue the family lineage. When a child is born, the parents' new roles are acknowledged with new titles: The father becomes *Abu* ("father of") the new child, and the mother becomes *Ummu* ("mother of") the new child. Thus, the parents of a child named *Ahmad* are known as *Abu Ahmad* and *Ummu Ahmad*. The father is the head of the household, and he is responsible for providing for the family. The mother manages the household and is the primary caregiver and child rearer. Many wives now work to help support the family, but they are still responsible for maintenance of the home. Today's families tend to be primarily nuclear (parents and their unmarried children), whereas not long ago most Egyptians lived in extended families. Urbanization and migration in search of employment have split up extended families. Upon marriage, a son tries to arrange for housing near his parents, and it is common to find a family trying to add apartment units to its dwelling in order to prepare housing for its sons. Sons who cannot afford to live independently might bring their brides to their parents' home and live with the family until independent living arrangements

can be made. A daughter who gets married moves into her new husband's home, and the best "catch" is a man who already has his own apartment and doesn't have to rely on his parents. Single sons and daughters, for the most part, stay at home until they are married.

Children are taught to show respect for their parents and other adults, and children are given responsibilities at a young age. Girls help their mothers with housework and take care of their younger siblings. Boys in poorer families are expected to learn a trade early on, often interrupting their chances to attend school. It is not uncommon to find poor children selling merchandise on street corners in order to contribute to the family income. Children of wealthier families have the luxury of focusing most of their attention on school. Enrollment of girls in rural areas lags behind that of boys, and girls drop out of primary school more frequently than boys.

## 11 CLOTHING

Walking through Egypt's cities, one finds a myriad of clothing types, ranging from the traditional *galabiyya* worn by men and *milaya* worn by women to the Islamic *shari'a* worn by women to Western-style business suits and dresses. The *galabiyya*, Egypt's national attire for men, is a long, robe-like garment with long sleeves and trim around the neckline. The *galabiyya* tends to be light in color, with gray, beige, and white being the most common colors. The *galabiyya* is worn over a shirt and slacks, and is worn mainly by traditional older Egyptian men. The *milaya*, worn by Egypt's traditional older women, is usually black, and is also a long robe-like garment with long sleeves. It is worn over a light dress. Women wearing the *milaya* also wrap their heads in a black scarf or shawl.

The Islamic *shari'a* attire is worn by religious women, usually women who are younger than those who wear the *milaya*. *Shari'a* dresses are common in university settings and in the work place. This dress is also long, with long sleeves and buttons down the front, resembling a long jacket. Some religious women also wear long skirts and dresses that differ from Western wear only by virtue of their length and full-body coverage. Any woman wearing the *shari'a* dress or the long dress-like religious attire will also don a long scarf that she wraps around her head. Some of these scarves are quite beautiful, with hand-stitched sequins and/or beads. Fashion-conscious religious women might also wear fancy little hats over their scarves. Scarves, hats, and religious attire are color-coordinated, with the long dresses and skirts being much more brightly colored than the *shari'a* attire, which usually has a solid neutral tone.

Many Egyptians wear typical Western attire, and Western clothing shops abound in the city. Women wear dresses and skirts—usually below the knee in length. Women also wear slacks and suits. These women generally do not cover their heads. Men wear Western business suits, slacks, jeans, and so on. In the cities, the Western look is the most common, although Islamic attire is becoming increasingly popular for women, particularly in universities.

## 12 FOOD

Most of the population consumes bread, rice, beans, fruits, and vegetables on a daily basis. Those who can afford to also eat red meat, poultry, and fish.

The typical Egyptian breakfast consists of *ful mudammas* (fava bean dip) with pita bread, hard-boiled or scrambled eggs,

and a cup of hot tea with boiled milk. There are two major variations of *ful mudammas*, and recipes for them follow.

### Ful mudammas with tomato

1 15-ounce-can cooked fava beans  
 ¼ cup olive oil  
 1 small onion, chopped  
 4 ounces tomato sauce  
 ½ teaspoon salt  
 ¼ teaspoon black pepper  
 ¼ teaspoon paprika  
 A few sprigs of fresh parsley  
 pita bread

In a skillet, sauté the chopped onion in the olive oil until the onion is transparent. Add salt, pepper, and tomato sauce. Drain and rinse the fava beans, and add to the tomato mixture. Cook over medium heat 5 to 7 minutes, stirring occasionally. Pour into serving dish, and garnish with paprika, parsley, and olive oil. Eat with pita bread.

### Ful mudammas with lemon and garlic

1 15-ounce-can cooked fava beans  
 ½ cup water  
 2 tablespoons fresh lemon juice  
 ¼ teaspoon garlic powder  
 ¼ teaspoon salt  
 ¼ teaspoon black pepper  
 ¼ cup olive oil  
 ¼ teaspoon paprika  
 a few sprigs of fresh parsley  
 pita bread

Drain and rinse fava beans. Place beans in a skillet, and add 1/2 cup water. Heat over medium heat, allowing water to evaporate. Add lemon juice, garlic, salt, and pepper and cook 3 to 5 minutes, stirring occasionally. Pour into serving dish, and garnish with paprika, parsley, and olive oil. Eat with pita bread.

*Ful mudammas* is available in carryout restaurants in almost every neighborhood in Egypt and is an inexpensive yet nutritious meal. The same restaurants that serve *ful* also serve *ta'miyya*, known as *falafil* in most of the Arab world and in the West. *Ta'miyya* is a deep-fried patty made of a dough-like paste that consists of fava beans, onions, garlic, cumin, coriander and parsley. The patties are served in sandwiches with pickles, and are often a quick meal at lunch time.

Egypt's national dinner is a spinach-like vegetable known as *mulukhiyya*. This leafy vegetable is a member of the hibiscus family and is grown in abundance in Egypt. When in season, Egyptians pick the leaves off the stems and cook them fresh. Out of season, *mulukhiyya* is available dried. Middle Eastern and Greek stores in the United States sell dried and/or frozen *mulukhiyya*. A recipe for *mulukhiyya* follows.

### Mulukhiyya

1/3 pound dried *mulukhiyya*  
 1 whole chicken, cut into pieces  
 1 quart water  
 1 teaspoon salt  
 ¼ teaspoon black pepper

Egyptian social worker Sahar Rabie gives a demonstration about bird flu at the Community Development Association in the village of Tawfiqiya at the outskirts of Fayyoun, Egypt. In an area where chickens used to roam freely, as the local population has become aware of, and frightened by, the disease, chickens have been slaughtered or locked away. (AP Images/Nasser Nasser)

6 to 7 cloves of garlic, mashed or finely chopped  
2 tablespoons olive oil  
1 tablespoon dried coriander

Boil the chicken pieces in water, skimming off and discarding the froth that appears during the boiling process. Add salt and pepper, and cook chicken until tender (about 30 minutes). Add mulukhiyya and simmer for 20 minutes, stirring occasionally. Meanwhile, sauté garlic in olive oil. Add coriander to garlic and stir well. When mulukhiyya soup is finished cooking, pour garlic mixture into soup and simmer another 2 minutes. Serve mulukhiyya over a bed of rice or eat with pita bread.

Ful, ta'miyya, and mulukhiyya are Egypt's most popular foods. Other common foods include stuffed cabbage leaves, stuffed grape leaves, *musaqqa'a* (eggplant and tomato casserole), macaroni baked with béchamel sauce, shish kebab, and *shawirma* (gyro) sandwiches.

Common desserts include *kunafa*, a baked pastry made of layers of shredded wheat dough and nuts and covered with syrup; *baqlawa* (baklava), a baked pastry made of layers of filo dough and nuts and covered with syrup; and *basbusa*, a baked cake made of semolina flour and soaked in syrup.

Common drinks include hot tea with mint, Turkish coffee, a licorice root drink known as *'irk sus*, and fresh fruit juice—including carrot juice and sugar cane juice squeezed fresh by street-side vendors.

Because they are predominantly Muslim, Egyptians do not consume pork and are prohibited from drinking alcoholic beverages. The latter, however, are served in expensive restaurants, hotels, and a few pubs and drinking establishments, even in relatively poorer areas of Cairo.

### 13 EDUCATION

Before the 19th century, most education in Egypt was religious and for boys only. Theological seminaries, mosques, and churches taught males to read and write Arabic and to memorize religious texts. Secular education was established in the early 19th century by Egypt's ruler, Muhammad 'Ali. In 1873, the first school for girls was built. When Egypt was under British administration, between 1882 and 1922, public education was not expanded, but many private schools were established. And, although education for all children was proclaimed a national goal after the British withdrawal from Egypt, by 1952 some 75% of the population over 10 years of age was still illiterate, with 90% of females over 10 years of age were illiterate.

After the Free Officers Revolution in 1952, educational opportunity was expanded, and government spending on education increased. Enrollment in schools doubled in the first decade after the revolution and doubled again in the following decade. Enrollment rates continued to increase after 1975, although not at such dramatic rates. In 1981, the government decreed that all children must complete the first 9 years of school—6 years of compulsory primary school and 3 years of

compulsory preparatory school. By 2005, 88% of children between the ages of 7 and 12 were enrolled in primary school. Attendance rates in secondary schools dropped off dramatically in rural areas, where in 2005 only 6% were in regular attendance. Despite these disparities in educational opportunities 2005 reports from the US government say 71% of the population above 15 is literate.

Education at all levels is free, from primary school through university education. The school system, however, is greatly overpopulated with students and has a chronic shortage of teachers. In 2005 the ratio of students to teachers was 86 to 1 and 99 to 1 for female teachers. In recent years, some schools have operated two shifts per day to cut down on class size. Many teachers find it more lucrative to work abroad in other Arab countries, where class sizes are much smaller and the salaries are much higher. Many teachers offer private tutoring in order to bring home extra income. This means that many children spend time outside school trying to improve their education. The cost of tutoring is often too high for the poor, who frequently complain that their children are being forced, by an inadequate educational system, into private lessons which they cannot afford.

Students are required to pass a series of end-of-the-year exams in order to make it from one level in the school system to the next. This is particularly important at the end of middle school, when grades determine the type of high school a student will attend. Those who do well in middle school attend an academic, college-prep secondary school. Others might attend a technical or vocational school or, if their grades are very discouraging, they might simply drop out.

At the end of high school, students take another set of exams. Secondary school students whose grades merit have the option of enrolling in a university. Egypt's leading universities are Cairo University, Alexandria University, 'Ein Shams University, Asyut University, and the American University at Cairo. The first four of these are public universities, and the last is private. In addition, there are a number of smaller universities throughout the country. There are a variety of technical institutes of higher learning available for those who do not make it into college. These schools offer training in such fields as hotel management and secretarial services.

#### 14 CULTURAL HERITAGE

Ancient Egyptians left behind a rich artistic heritage in the form of pyramids, pharaonic painting and sculpture, hieroglyphics, and architecture. The Egyptian pharaohs believed in life after death and built 75 pyramids that would serve as their dwellings after death. The best known of these, The Great Pyramid, was built about 2690 BC at Giza. (Earlier pyramids were constructed in Saqara) It contains more than 2 million blocks of limestone, some weighing up to 15 tons. Pyramids and wall sculptures are found in Giza, in Upper Egypt (the south), in the Valley of the Kings, in Luxor and Karnak, and on Philae Island. The Cairo Museum houses a large collection of antiquities. The museum displays about 100,000 exhibits, including some of the coffins excavated from the pyramids and treasures from the tomb of Pharaoh Tutankhamun (King Tut).

Literature is greatly enjoyed in Egypt, and Cairo's publishing companies generate an abundant supply and variety of literary works. The Cairo Book Fair is a major annual event in which recent international publications are featured with great

fanfare. A variety of literary forms are enjoyed in Egypt, with short stories, poetry, and novels being quite popular.

One of Egypt's most famous authors was a blind essayist named Taha Husayn (d.1973), whose literary output was immense. Some of his writing has been translated into English, including *Tales from Egyptian Life* and *An Egyptian Childhood* (an autobiography). The modern Egyptian novelist best known in the Western world is probably Naguib Mahfouz, (d. 2006) winner of the 1988 Nobel Prize for Literature. Virtually of his Mahfouz's work has now been translated, the better known of which include such classics as *Midaq Alley* and *The Cairo Trilogy*. Mahfouz had a penchant for writing about the lives of ordinary Egyptians, particularly the poor and middle classes. His stories feature observations of the socio-economic and political conditions of Egyptian society, with direct and indirect commentary on issues such as women's emancipation, polygamy, the British occupation of Egypt, and the Egyptian response to that occupation.

#### 15 WORK

Agriculture is the largest source of employment in Egypt—32 percent of Egyptians work in this sector. Farmers plant *berseem* (clover) for livestock feed, as well as corn, wheat, vegetables, rice, cotton, and fruit. Since 1974, when the government announced economic reforms that would include industrialization, rural residents have flocked to greater Cairo in search of employment. Cairo's population grew from 7 million in 1976 to 20 million in 2006. Those who find work with the manufacturing sector work in industries such as iron and steel, aluminum, and cement. Some work in oil production, and others produce consumer goods.

Despite the industrialization that has taken place, Egypt's cities do not offer enough employment opportunities to the migrant masses. Urban residents thus end up depending on the government for jobs, and the waiting period can be as long as 10 years. When attempts to find work fail, the unemployed migrate to neighboring countries in search of employment. From the late 1970s to the early 1980s, 90% of new jobs were either provided by the public sector or were in neighboring oil states. In 2005 the government introduced some free market reforms, taking tentative steps away from the state dominated economic model championed by Egypt's still revered President Nasir. As a result of these reforms there was a large rise in the stock market, GDP grew at approximately 6–7% a year for 2005–2007. Little of this increased wealth saw its way to the poor of the Cairo or the rural areas.

The unemployment rate in 2007 was 10.1%. After agriculture, Egypt's major employment sectors are industry (17%) and services (51%). Twenty percent of Egyptians live below the poverty line. The per capita GDP is 5,400 US dollars per year.

Many who do work hold more than one job to make ends meet. This is particularly true for public sector employees. It is common to find a man (seldom a woman) working at a government-run factory during the day and moonlighting in a second job at night.

#### 16 SPORTS

Egyptians take soccer, which they, like the rest of the non-American the world, call football, very seriously. Competitions are held among the many teams nationwide and are broadcast on radio and television with great enthusiasm. National soc-

cer teams also compete in regional soccer competitions with other Arab and African states. The national team has won the African Cup of Nations a record six times and won its second consecutive title in 2008 in an upset victory over favored Cameroon. FIFA currently ranks the team as the 29th best in the world. Swimming and scuba diving are enjoyed along the beaches of the Mediterranean Sea and the Red Sea. The Red Sea in particular is considered one of the great diving locations in the world. Indoor swimming pools and tennis courts are located in sports clubs, but generally only the middle class and wealthy can afford these.

### 17 ENTERTAINMENT AND RECREATION

There are more than 100 cinemas in Cairo, some run by the government and others privately owned. There are also many cinemas in Port Sa'id and Alexandria. Egyptian-made movies range from comedy to drama and often attempt to convey a political message relevant to contemporary political and economic conditions. One famous actor, 'Adil Imam, is renowned for his comedic movies, but has recently ventured onto political turf in his movies, *Terrorism and Kebab* and *The Terrorist*. In both films, Imam plays the lead role of a young Egyptian inadvertently caught in a web of poverty and anti-state terrorism.

Cairo has about 17 theaters, and Alexandria has about 6. Egyptian theaters host a variety of shows, including opera, orchestra, folk art, and choral troupe performances.

Egypt has been the home of many musical performers known throughout the Arabic-speaking world. Solo singers Um Kalthum, Farid al-Atrash, and 'Abd al-Halim Hafiz (all now deceased) were classical performers whose songs were known to last up to two hours each. While the classical style is still popular, there is now a new style of Egyptian music that blends the classical with more Western-sounding music. Muhammad Munir and "Four M" are samples of this new sound, which is very popular with the younger generation. Music cassettes are sold by street vendors. These are very popular and cost about \$1 to \$2 each.

Television entered the lives of Egyptians in the mid-1960s, and by the 1980s had become quite common. Televisions are even common among the residents of the cemeteries. Egyptian TV has a wide variety of programming, including comedy, music and dance shows, cartoons, and soap operas. Families are glued to their TV sets in the evening when the nightly soap operas come on. With the proliferation of satellite television, Egyptians can now watch American and European television entertainment and news channels as well.

Egyptian children generally play in the many open fields in their neighborhoods, but new parks have also been built. There are a limited number of amusement parks, the main one called "Sinbad" and located in Cairo. Toys are not very common and did not arrive in Egypt in significant number until the mid-1980s, when fathers returned from jobs in the oil countries, gifts in hand. Although many stores now have ample supplies of toys for children, most people do not spend their money on such luxuries. Children who are fortunate enough to get toys often go out of their way to take care of them, even if this means placing the toy out of reach to keep it from being damaged.

### 18 FOLK ART, CRAFTS, AND HOBBIES

The stores of Khan al-Khalili in Cairo cater predominantly to tourists and feature the hand-made crafts of local artisans. Me-

dia such as wood, brass, copper, glass, mother-of-pearl, leather, silver, and gold are cut, shaped, and engraved to form a multitude of items. Some of the most creative handicrafts for which the Egyptians are noted include wooden jewelry boxes covered with mother-of-pearl, engraved silver and hand-painted serving trays, and leather ottomans with intricate designs. Jewelry stores sell handcrafted bracelets, necklaces, rings, and earrings made of silver and gold. In the small village of Kirdasa, in addition to these handicrafts, the stores specialize in hand-made women's dresses that feature embroidery, sequins, and beads.

One of the most unique forms of folk art in Egypt is *hajj* painting. As a Muslim completes his or her pilgrimage to Mecca, a local artist paints the new pilgrim's front door with a mural symbolizing the hajj. Most hajj paintings are found in the villages.

### 19 SOCIAL PROBLEMS

One of Egypt's biggest problems is socio-economic frustration. Unemployment and underemployment have resulted in a high level of poverty and despair. Among the many effects of this situation is a growing attraction to religion: in 1986, according to government accounting, there was one mosque for every 6,000 Egyptians; by 2005 there was one mosque for every 745 people. A lack of affordable housing has forced hundreds of thousands of Egyptians to live in the mausoleums of Cairo's cemeteries. There are now 400 slums around the capital city. Shanty towns and slums continue to appear all over the metropolitan Cairo area. Housing is poorly constructed, services are few, and basic needs such as drinkable water and sewage are non-existent. The growth of slums has correlated with an increase in crime, violence, and religious militancy. Thefts such as pickpocketing and purse-snatching are common in metropolitan Cairo. Although violence rarely accompanies thefts, there are acts of violence within families and between religious militants and state security forces. White-collar crime is commonplace and includes embezzlement, diversion of subsidized goods, tax evasion, and bribes to officials. Another major problem is the illegal use of drugs. Although hashish has been smoked in Egypt for centuries, recently there has been an increase in the use of "hard" drugs such as heroin and cocaine.

Egyptian prisons are overcrowded. This is due in part to the arrest of criminals, but also to an ongoing political conflict between the government and the opposition. Clashes between government forces and religious opponents to the government periodically take place, sometimes resulting in hundreds of political opponents being arrested. The casualty list during clashes is sometimes quite high. One study found that total casualties (killed and wounded) during state-militants confrontations in the periods of heaviest demonstration in the late 1980s and 1990s went from 322 in 1992 to 1,106 in 1993. (The 1994 figure was 659, and the 1995 figure was 620.) International human rights organizations, such as Human Rights Watch and Amnesty International, have been critical of the Egyptian government's handling of militant opponents to the regime. The major criticism is that not only violent opponents, but also nonviolent political opponents, are being denied their political and civil rights in the state's attempt to maintain control over opposition forces. Political protests of even the most benign sort are regularly put down with brutality and overwhelming force. Human Rights Watch also reports regular, arbitrary arrest of street children in Cairo and Alexandria. The authorities

subject them to beatings, sexual abuse, and deny them access to basic human amenities.

## 20 GENDER ISSUES

Egyptian society is marked with sexual inequality in myriad forms. The streets of Cairo are world renowned among female travelers as being rife with sexual harassing behavior. Men routinely follow, whistle at, and in other ways humiliate women, both Egyptians and tourists. Human Rights Watch reports that both family and criminal law continue to discriminate against women. Criminal law is lax in legislating against violence against women and where laws do exist, they are routinely ignored. A well documented incident occurred in October 2006 in a busy downtown area in which gangs of men, celebrating the end of holy month of Ramadan, attacked scores of women on the streets as police looked on doing nothing. Several women were set upon by dozens of crazed men who stripped them naked. Much of this violence was captured on mobile phone videos and distributed around the world via the Internet.

Small steps in improving the rights of women have been taken in very recent times. In 2007, the Egyptian judiciary received its first female judges and in June 2007, the government banned female genital mutilation.

# EMBU

**PRONUNCIATION:** EM-bo

**LOCATION:** Embu in the Eastern Province of Kenya

**POPULATION:** About 450,000

**LANGUAGE:** Kiembu

**RELIGION:** Christianity; indigenous Embu religion

**RELATED ARTICLES:** Vol. 1: Kenyans

## 1 INTRODUCTION

The Embu are a Bantu-speaking people who are closely related to the Gikuyu of Ndia and Gicugu to the west, the Mbeere and the Kamba to the southeast, and the Chuka and the Meru to the north. As the Embu proverb goes, *Mwana ti wa mucuari umwe*—a child does not belong to one parent. These communities share common ancestry and origins. Despite speaking a Bantu language (Bantu came from central Africa), the agricultural Embu and Mbeere are one of the few Kenyan peoples whose oral traditions seem to locate their origins within Kenya, in fact very close to their present location to the southeast of Kirinyaga (Mount Kenya). Tradition also speaks of a time when they were hunter-gatherers and used to live in "caves," meaning rock shelters or hollow trees in forests, much as the indigenous Kenyan groups of hunter-gathers such as the Okiek ("Ndorobo") did until the 20th century. Tradition further states that the Ndorobo interacted with the Embu a long time ago before the Ndorobo were either displaced or left when the forests began to be converted to farmland.

The origin of the Embu is still unclear, but there are two explanations. From historical accounts, the Embu are believed to have migrated from the Congo Basin together with their close relatives, the Kikuyu and Meru People. This migration was perhaps due to conflicts like slavery. It is believed that they migrated as far as the Kenyan Coast, since the Meru elders refer to Mpwa (Pwani or Coast) as their origin. The conflicts there, perhaps slave trade by Arabs, forced them to retreat northeast to the interior of Kenya, and they settled by the slopes of Mt. Kenya. They refer to this location as the place of the Lord, the owner of the snow ("Nyaga") or ("Njeru" meaning white)—hence the name "Mwenenyaga" or "Mwenenjeru."

Oral history on the other hand traces the Embu to the Northeastern Bantu who came from a dispersed area in the Taita hills near Mount Kilimanjaro. From here, this Bantu group migrated to the coast, then turned northward to a mythical place called Shungwaya between the Tana and Juba rivers in Somalia. Shungwaya became the second dispersal area from which various Bantu groups started moving out about AD 1200-1300. One such group, known as the Nyika, migrated northeast and then southward to the region of Mount Kenya. During the migration, the Nyika broke up into other smaller groups that are now known as the Kamba, Gikuyu, Meru, Chuka, Embu, and Mbeere. It is likely that the Embu arrived in their present home by AD 1425. They fought and expelled a people known as the Gumba, who were the original inhabitants of the territory.

On the contrary, the Embu ancestral origin myth goes on to indicate that the Embu have been on their land since the beginning of time. Embu mythology claims that the Embu people originated from Mbue Njeru in the interior of Embu, close

to Runyenjes town. The mythology claims that God (Ngai) created Mwenendega and gave him a beautiful wife by the famous Mbui Njeru waterfall—hence her name “Ciurunji.” The couple was blessed with wealth, and their descendants populated the rest of Embu. The Embu believe that they descended from Mwenendega who lived in a small grove, which now bears his name, near the present location of the town of Runyenjes. This grove is still protected as a sacred place. One day Mwenendega saw a very beautiful woman bathing in a stream nearby. Her name was Nveta, and it is said that she was not an earthly woman. After much persuasion and praises of her beauty, she agreed to live with him and not return to her people. They had many children. Their first two children were a boy called Kembu and a girl called Werimba. When Kembu impregnated Werimba, the two were expelled from home. They founded their new home elsewhere and bore children who also married each other and bore more children. All these children came to be known popularly as “children of Kembu,” and later, Embu, in short.

Since Mount Kenya lies within the lands of this cluster, these groups collectively are known as the Mount Kenya Bantu. Although over the years they have traded with each other, there are also many accounts of the wars that they have fought with each other either to capture livestock (cattle, sheep, and goats) or gain territory belonging to the other. Two of the more famous battles occurred around 1870 and 1890 when the celebrated war hero, Njeru Karuku, led the Embu successfully against the Chuka. In 1900 the Embu defeated the attacking Kamba and drove them back across the Tana River into their

own territory. The Embu also fought with the Maasai, who came from the south to raid for cattle, and the British, who colonized Kenya in 1920.

The battles against the British were ideologically different from the previous ones. In 1900, the British built the first administrative post at Fort Hall to control the rebellious Gikuyu. By 1904, the Gikuyu of Ndia and Gicugu, Embu’s neighbors, had been conquered by the British. From here, the British organized military expeditions against the Embu who had refused to accept British rule peacefully. With the help of the Mbeere and the Gikuyu of Ndia, the British conquered the Embu around 1906. However, Embu resistance against foreign rule continued, more in the form of passive rather than armed resistance. To maintain order, Embu Station was established, first as a military station, and then as an administrative center. The last time the Embu fought against British rule was in the 1950s during the Mau Mau rebellion, which lasted for almost 10 years. This time the Embu and the Meru joined the Gikuyu to fight for Kenya’s independence, which came on 12 December 1963.

The Embu were traditionally organized into a patrilineal system through which descent was traced and inheritance handed down. Embu society was first divided into moieties (two major social groups), which consisted of numerous clans. In turn, each clan was made up of various lineages, with a lineage consisting of a number of minor lineages or extended families. Within this system of social organization, Embu males were also divided into age-groups which represented different levels of authority, status, and responsibility. Along with the age-group system existed an administrative ruling structure with the father as the senior authority within a household, above which came the ridge council serving as a minor lineage in a particular area. Above the ridge council were the clan council and the warrior leaders’ council. The warrior council executed the decisions or rules made by the clan council. The warrior leaders’ council also made and executed decisions regarding war, the protection of people and property, and the execution of justice. Above all was a council known as Kiama Kia Ngome, a type of supreme court which dealt with civil and criminal justice for the entire Embu country. It heard and made decisions on the most serious cases such as murder and sorcery. All of these (mostly judicial) councils were made up of elders who were highly regarded for their wisdom, fairness, and religious/medical knowledge. These elders, regardless of the council level, were known as *athamaki* (rulers), and they ruled the Embu. There were no chiefs in Embu until the British “invented” them.

Today, the Embu participate in the democratic political process. Initially, the Embu people never aligned themselves with a single political outfit. They spread out across the ruling party (for instance KANU) and even the opposition (for instance the Democratic Party and FORD-Asili) in the 1990s. Embu politics would not be complete without the mention of the Nyaga family that has dominated local politics since pre-colonial Kenya. However, in the 2000s the Embu have largely aligned with and overwhelmingly voted alongside their Agikuyu cousins in what is commonly known as the Mt. Kenya caucus or otherwise the Gikuyu, Embu, Meru Association (GEMA or MEGA). Most of the Embu as of 2008 belonged to the Party of National Unity (PNU) which was one of the partners in Kenya’s Grand Coalition government.

## 2 LOCATION AND HOMELAND

Embu is located on the southeastern slopes of Mount Kenya, where the altitude ranges from 1,100 m to 2,100 m (3,500–7,000 ft) above sea level. It is situated between longitudes 37°E and 38°E and latitudes 0°s. The most important geographical feature is Mount Kenya, which stands at 5,199 m (17,058 ft) above sea level. On a clear day, the permanent ice on the mountain shines very brightly, projecting unimaginable beauty and power, while the twin peaks, Lenana and Batian, stand out majestically. The total area is about 714 sq km (276 sq mi). Embu is part of the Eastern Province of Kenya. The capital town is also called Embu and serves as the district and provincial administrative center. To the south of Embu are to be found their cousins, the Mbeere people, in Mbeere District. Previously, the Embu and Mbeere were in one district, Embu District, and just referred to as the Embu people. To the west, Embu neighbors are the Kikuyu in Kirinyaga and Nyeri districts. The Meru people in Meru South District border Embu to the Southeast.

The numerically smaller Mbeere (around 100,000, as compared with an Embu population of around 450,000) live to the south of the Embu in the lower Kiangombe Hills. Despite their proximity to the British during the colonial period (Embu town was a major colonial center), the Mbeere have always kept themselves apart (and have been kept apart) from the Kenyan mainstream. The Kiangombe Hills are only barely fertile and poorly watered, dominated by thorn scrub and dust, which meant that the British had little interest in the area or the tribe, who were consequently left to themselves. As a result, some aspects of traditional culture lingered longer in Mbeere than they did in Embu, although nowadays they are both pretty much part of modern Kenya.

In 1918, the population of the Embu was estimated at 53,000 people. This population reached 85,177 people by 1962; 101,770 by 1969; and 180,400 by 1979. The Embu constitute roughly 2% of the Kenyan population. Some 17% of the Embu live in major urban centers like Nairobi, Mombasa, and Nakuru. By 1989, the population of Embu was projected to reach 228,144 people, increasing to 265,769 by 1993. In 2008 the Embu population was about 450,000. The population estimate may include Chuka and Mwimbi-Muthambi. Between 1969 and 1993, the Embu population growth rate ranged from 4.1% to 3.1% per year. This, coupled with a lack of employment opportunities in the rural areas, is causing many people, especially males, to migrate to the urban centers. However, most Embu, like many Africans, are culturally and economically tied to the land, and most of those who move to the cities maintain strong links to the rural homeland to which they eventually return, die, and are buried. The urban residents are also the ones who introduce elements of modernization to the rural areas.

## 3 LANGUAGE

Kiembu (the language of the Embu) belongs to a large cluster of languages known as Bantu. It is a language that is rich with proverbs and idioms. Although not emphasized today, mastery of proverbs and idioms once demonstrated intelligence and brought a person honor and respect. By using proverbs, people could talk about a particular subject or person without being specific or openly ridiculing a person, thereby avoiding social antagonism. But the greatest mastery in the use of proverbs and idioms was the choice of context in which the intended message was conveyed without ambiguity. For instance, the

proverb, “Hungry stomachs have no ears,” can mean many things, but if it is invoked in the context of a case hearing, it means the council needs a fee from both parties, usually in the form of a goat, to be eaten by the elders as they continue to listen to the case. In the context of widespread civil disobedience, the meaning is that hungry people are poor listeners to the advice or rule of their rulers.

One can also learn a great deal about the Embu traditions, social norms, and individual behavior from the names given to people. Traditionally the Embu derived most of their names from animals, such as Njiru or Mbogo (buffalo), Nthia (antelope), Njoka (snake), Ndwiga (giraffe), Njuki (bee), Njogu (elephant), Nyaga or Kivuti (ostrich), Ngoroi (columbus monkey), or Munyi (rhinoceros). The reason for this is unclear, but one explanation is that Embu parents, who lost many children in infancy, wanted to ensure that their children would grow to maturity, just as the young of wild animals did, without much care. Other Embu names came from natural phenomena such as Mbura (rain), Riua (sun), Nduma (darkness), etc. Some other names were, and still are, derived from behaviors associated with certain well-known individuals. For instance, a mother might name her son Kinyua (one who drinks much) after a grandfather who drank too much porridge or beer. A daughter may be named Marigu after a female relative who had the habit of carrying food wherever she went, or Maitha if she were a cruel or harsh woman.

Kiembu or Kimbeere are dialects of the same language, with 85% lexical similarity between them. Also closely related are the languages of their geographical neighbors, the Kikuyu and Chuka (73% similarity), Kamba (66%), and Meru (63–65%). Up to 70% also speak Swahili.

## 4 FOLKLORE

To the Embu, the myth about their origins from Mwenendega and Nveta remains the most important of all their myths and folk tales. However, the most fascinating part of the myth, and one that draws fear and reverence, concerns Nveta's real identity and clan membership. One day, as Nveta and Mwenendega were drinking beer, the latter asked her why no beer or any other gift had ever been sent to them from her people. Mwenendega also wanted to know who her people really were and where they resided. All of a sudden, Nveta became very angry and ordered the children into the house. She looked up to heaven as if she were praying and within a short moment there was lightning and thunder that had not been heard before in the land of the Embu. Very heavy rain fell that completely flooded their home, covering their house and their livestock. After that, Mwenendega and Nveta disappeared and could only be seen by good fortune.

Other heroes of the Embu include famous prophets, medicine men, and warriors. Ireri wa Irugi (*wa* stands for “son of”) was perhaps the most famous of all the prophets. It is said that he was able to communicate with Mwene Njeru (God), and that is why he was able to prophecy future events. One such event, and the most famous, was the coming of the white people. He warned people that he had seen strangers coming from the east towards Kirinyaga (Mt. Kenya). They had with them an iron-mouthed animal that would be used to collect all nations (ethnic groups) to one place where they would be helpless. The coming of the British soldiers from the eastern side of

Embu land, and the subsequent conquest of the Embu, is seen as the fulfillment of the prophecy.

Gacogo wa Karaini was regarded as the highest religious leader of the Embu. He was also a skilled medicine man and circumciser. Being a religious leader, people from all over Embu and beyond sought his blessings and advice. His medicine and charms had the reputation of being very effective in curing various ailments and in protecting one from any harm, such as sorcery. He was so revered that people addressed him as Mutia, or “the respected one.”

Mwoca wa Minano is remembered as one of the greatest Embu warriors ever to live. His courage and skill in planning war tactics and raids won him much respect among all the people. He is credited for maintaining a very strong defense on the eastern border with the Gikuyu. He is most remembered for leading Embu warriors in a fierce battle against the British in about 1903. During this battle he killed a white soldier and took away his gun. When it was realized that the dead white soldier was uncircumcised, Mwoca was very disappointed because he thought all along he had fought with a “man,” and not a “child.”

## 5 RELIGION

The origins of the Embu religion are not known, but by the time the white people came, the Embu had a very well-established religion.

The Embu worshipped one God whom they called Mwene Njeru, meaning “the owner of the sun.” Despite the spread of Christianity, some people, particularly very old men and women, still believe in Mwene Njeru, who is omnipresent. When Mwene Njeru visits Embu, he has favorite places, of which the most important is Kirinyaga. From the mountaintop he can see the whole of Embu and what the people are doing. Other places include all the sacred groves, *matiiri* (sacred places of age-groups), and very big trees. Mwene Njeru is believed to be the source of all goodness, but he also punishes the people when they disobey him or do wrong to one another. People, led by the most sacred elders, sacrifice a goat that is all one color to Mwene Njeru to ask or thank him for his blessings, to end a catastrophe (e.g., drought, epidemics), and for his protection. The concern for long life is at the heart of the Embu religion. To live into very old age, and therefore to enjoy the respect and privileges accorded to the elders, is a clear demonstration of how much one is blessed by Mwene Njeru.

The Embu also believe in the spirits or *ngoma*. However, they distinguish between two kinds of spirits: the “evil spirits,” and the “ancestral spirits.” Evil spirits are malevolent—they bring misery to the people without provocation. Even when seen, they are not easily recognizable, and sometimes they may be heard singings but are not visible. They are not offered sacrifices but rather are bribed with some meat or animal blood. Ancestral spirits, on the other hand, are good spirits who protect people from evil spirits and other misfortune. But they also discipline people when they are disobedient. People appease them with sacrifices but do not worship them as they worship Mwene Njeru. When seen, they are easily recognizable as deceased relatives. It is believed that they form families, raise children, cultivate, and keep animals, just as they used to when they were alive.

The Embu have a saying that “no one dies a natural death.” Death is always attributed to some evil magic or sorcery.

Events that are beyond human explanation are often attributed to the power of magic and sorcery. For instance, why should a tree fall and kill only one of the two people standing by it? To the Embu, this is not a question of chance but rather of somebody using magic to kill another person. There is also the belief that some people have the skill to use magic and sorcery to turn others into “fools,” cats, dogs, snakes, etc. Faced by such powerful forces, people turn to diviners and medicine men for protection.

No accurate figures are available on Embu subscription to the Christian and other foreign religions: a recent estimate was two-thirds traditional religion, one-third Christian, though it seems much more likely that the reverse is true, and that Christians are in the majority.

## 6 MAJOR HOLIDAYS

The only holidays that the Embu celebrate are the national holidays such as Independence Day, Labor Day, Christmas Day, and New Year’s Day. These holidays are marked by celebrations, which involve eating and beer-drinking, and of course, those formally employed do not have to show up for work. The most important national holiday is Independence Day, which is celebrated on December 12 every year. This is the day on which Kenya gained its independence from Britain in 1963, ending nearly 100 years of colonial rule. There are marches in major urban centers by school children, administrative police, and various other organized groups. In the capital city of Nairobi, celebrations include parades by various units of armed forces, an air show by the Kenyan Air Force, traditional dances by various ethnic groups, performances by school choirs, and lastly, a speech by the president of Kenya. Various dignitaries from overseas and from other African countries are also invited to attend.

## 7 RITES OF PASSAGE

In the old days among the Embu, the birth of a child was celebrated as a special event because a child was viewed as the “wealth” of a lineage or clan and also brought recognition and respect to both parents. Failure to bear a child was, and still is, viewed as a misfortune on both parents or as the result of a curse or sorcery. This could result in a man either marrying a second wife or the dissolution of the marriage. The birth of a boy was announced with five ululations (*ngemi*) and the birth of a girl with four. After ululations, the baby was given a name. Four days (for a girl) or five days (for a boy) after birth, a ritual known as *kuumagarua*, or “to be taken out” (to be introduced to the outside world), was performed. An older girl presented the baby girl with a tiny bundle of firewood, similar to that carried by adult women, and an older boy presented the baby boy with a small bow and arrow. This symbolized the lifetime chores, and the different worlds, of the two sexes. Today this ritual is not performed. Most children are born in hospitals and, instead of going through the ritual of being “taken out,” they are baptized in church in accordance with the teachings of the parents’ denomination. Immediately after birth, the mother gives the baby an Embu name and during baptism the baby receives a Christian name.

After birth, circumcision for boys and clitoridectomy for girls were the most crucial rituals in a person’s life-cycle. A boy’s first instruction in tribal knowledge came from his father around the homestead’s fireplace, but a man’s life as a

full member of the tribe began in earnest at his circumcision shortly after puberty. His readiness to be circumcised was indicated by the payment of a goat called *mburi ya nduo*, the “goat of circumcision.” Another goat was paid when the time for circumcision came, which entitled him to get married. This goat was called *mburi ya nthumbi* (the “goat of the cap”), and was named after a cap made for him by recently circumcised men to indicate his newly acquired status. Traditionally, boys were circumcised between the ages of 18 and 22, while the girls underwent clitoridectomy between the ages of 14 and 18. The ritual initiated both girls and boys into adulthood. The girls had to be initiated before their first menstruation; otherwise, they could only marry a married man.

During the ceremony both boys and girls were expected to prove their courage, and thereby their readiness to accept adult responsibilities, by withstanding much pain without crying or moving. In Kenya, clitoridectomy is now illegal and the practice has almost disappeared. However, the circumcision of boys is still viewed as very important among the Embu. Currently, the circumcision ritual has been transformed from that of a public ceremony to a very private affair carried out in the hospital with the initiate under general anesthesia. But regardless, it is still associated with courage and responsibility. Today, one does not immediately assume the responsibilities of marriage but may go on with schooling, get a job, and then prepare to marry. Marriage, whether in the old days or at present, is considered very important and everybody is expected to marry and have children. It is by bearing children that the Embu think of a person as “complete.”

On matters of death, the Embu did not bury their dead before the 1920s. They believed that the burying of the dead body was like burying “fertility.” Rather, they left the dead bodies in the forest under a tree. Those who handled the dead body underwent a cleansing ritual to rid them of “pollution.” But most significantly, the Embu believed in life after death, that the body’s spirit did not die but lived on and, depending on the behavior of the living relatives, could be benevolent or malevolent. Today, the Embu inter their dead through a religious burial. There are no public cemeteries. A person is buried on the land owned by the family. Usually only the members of the family know where the grave is because it is marked with just a few stones or some planted flowers. The relatives of the deceased are exempted from work on the day of death, and this custom is still observed today. Death, as the last stage in the life cycle, is one event that the Embu do not celebrate.

## **8 INTERPERSONAL RELATIONS**

Greetings, as a sign of politeness, well-wishing, and good behavior, constitute one of the most important aspects of Embu culture. Failing to greet somebody is always taken as an insult, immediately creates tension between the parties involved, and almost always results in a harsh criticism or rebuke by the person not greeted. The common and formal greeting begins by asking a person about his or her health. After the appropriate response, the two parties shake hands. One should not, under any circumstance, refuse to shake another person’s hand. People of generally the same age or status let their eyes meet as they greet each other and shake hands. Young people greeting elderly people usually avoid eye contact, as a sign of respect, by looking either down or sideways. Among the Embu there is no such thing as times for visiting or not visiting. A household not

visited regularly is said to lack hospitality. A visitor is always offered food or something to drink, like tea. If it is during a mealtime, a visitor joins in sharing whatever food is available. There is an Embu saying that “a mother cooks more than her family can finish” so that there is always some for a visitor. Refusing an offer of food, without an appropriate explanation, is considered an insult to the person offering the food. More seriously, the refusal may be taken to imply that the food is poisoned or bewitched.

Dating practice has changed from a very strict code of behavior to a more relaxed and less culturally structured practice. When a boy meets a girl that he likes, he may straight away express his love for her, or send another boy or girl to convey his love message. He may also write to the girl asking her to be his girlfriend. If the girl’s response is favorable, then the two start seeing each other regularly and in public. The boy may also start visiting her in her home more openly. However, dating is not expected to lead to marriage until the boy’s father goes to visit (at the son’s request) the girl’s father to seek permission for marriage and to initiate marriage plans.

For a long time men from neighboring communities like the Gikuyu, Meru, and Kamba have come to get brides from the Embu, while the Embu men enjoy high regard from marriageable girls in the same tribes. With the advent of Kenya nationalism, this high regard has permeated to the entire nation, and now the Embu form one respected unit of the Kenyan social fabric.

Value is also attached to the extended family and Embu nomenclature enhances this relationship. Embu parents name each of their children after one of their relatives on either side, but never after themselves. Those relatives, to use Western terms, may be the child’s grandparents, aunts, uncles, and even distant relatives. The main significance of this naming practice is that: (1) it gives honor or recognition to the person after whom the child is named; (2) it creates a special relationship between the child and the person she or he is named after; and (3) creates a particular bond between the parents and the child and the person after whom the child is named. All this influences and dictates the behavior between all the individuals involved.

On intercommunity relations, the Mbeere are closely allied to the Embu, to whom they are related. In times of famine—which strikes the Mbeere more frequently than the Embu—the Embu would supply staple food like maize and beans in return for goats, skins, sorghum, and pigeon peas. Historically, the Embu also fought for the Mbeere, on a famous occasion in which the Kamba tried to oust the Mbeere from their land. The Embu and Mbeere jointly own sacred groves (*matiiri*) in Mwea, which is one of their traditional places of origin.

The Embu were fierce warriors who, although rarely raiding other tribes, always stood firm in defense of their territory and people. Many occasions are on record where the Embu had to fiercely repulse Kamba and even the dreaded Maasai invasions. They also rose against the British in the Mau Mau fight for Kenya’s independence. The fact that the tribe was and continues to be considerably small explains the relatively small impact on the history of Kenya.

## **9 LIVING CONDITIONS**

The standard of living is very low because of very low income and lack of economic opportunities. Like many other people

in the rural areas of Kenya, the Embu live under very difficult health conditions. Most families use pit latrines, obtain water from the rivers, and very rarely get good medical care. The Ruvingazi and Kapingazi Rivers border Embu town to the west and the east respectively and are a key source of domestic water to many Embu families. Health services, mostly provided by the government, are inadequate and very poor. In order to treat less serious ailments, people buy medicine from retail shops or rely on herbalists.

Until the "Emergency" of the 1950s, when the Mau Mau began their fight for freedom, five or six family homesteads constituted a typical settlement. The "Emergency" however led to the creation of larger villages, both for protection, and under pressure from the British who wanted tighter control over the area. People built their own houses using locally available materials. Houses were traditionally the classic thatched cone roofs on a circular base, but are nowadays mostly rectangular buildings covered with corrugated or flat metal sheets, although the traditional round houses are more common among the Mbeere. The walls are generally still constructed in the traditional way, with narrow spaces between upright poles stuffed with leaves and mud. Apart from the family house, the other homestead structures were a kitchen (sometimes part of the family house), the man's house, a grain store, and millet store. However, some wealthier people are beginning to build stone houses with ceramic tile roofs. In most houses there is no electricity or telephone. Fire and kerosene lamps are the primary source of light.

Most families make their living through small-scale agriculture. Coffee and tea are the main cash crops. Traveling is mainly by *matatu* (privately operated small van/truck-like vehicles), bicycles, and walking. People walk as much as 32 km (20 mi) in a single day.

## **10 FAMILY LIFE**

The Embu are a patrilineal society in which women are subordinate to men. Women are assigned all the domestic chores of child care, food preparation and storage, family care, firewood collection, fetching water, and growing food. Women are also involved in the marketing and buying of small amounts of food crops. This labor burden increases if the husband is away on wage employment. Women who have attained higher education and have formal employment are able to escape this labor burden.

Families generally live on small farms in compounds. Family size among the Embu varies widely depending on the family type. Families are predominantly nuclear. On average there are about seven people per household. There is also the extended family consisting of parents, married sons and their families, and unmarried daughters. In this type of family, there may be as many as over 25 people living together. Polygyny is common. A man can take several wives if he can afford it, although nowadays this is becoming rare.

The Embu people practice exogamous marriage. Marrying within one's clan is taboo as incest because all clan members are relatives. However, with the breakdown of the clan system, clan affiliation is becoming less significant and the rule of exogamy is almost forgotten. Consequently, marriages are taking place between clan relatives. Marriage involves the payment of bride-wealth to the bride's family. In the old days, bride-wealth used to be in the form of livestock, i.e., cattle and goats, but at

present, it is paid in the form of money. Contrary to popular misconception, people do not think of the bride-wealth practice as "buying" a wife. It is thought of as a way to thank the parents for bearing and bringing up a daughter to maturity and thereby making it possible for a man to have a wife. Bride-wealth payment is also a measure of a man's commitment to his wife and responsibility for his family. However, like many other traditional practices, bride-wealth is also disappearing, especially among the highly educated. A mother and her children lived in the main family house where the household goods were stored. Marriageable girls lived with their mothers, and suitors were entertained there. The father would sometimes share his house with his uncircumcised sons, but once circumcised but not yet married they would build their own dwelling or live in the grain store.

Family size was an indicator of a man's social and economic success. A man's riches were formerly judged by how many wives and children he had; that is, family size was an indicator of the social and economic status of a person. For example, Senior Chief Muruatetu, probably one of the most famous Embuans, not only had 16 wives and many children, but he was also a respected administration officer for the colonial government and independent Kenya. An entire village bears his name, and a school is named after him.

## **11 CLOTHING**

The Embu used to wear clothes made of animal (sheep, goat, cattle) skins. These clothes gave way to cotton clothes and Western-style clothing introduced in the early 1900s. Today, clothing is just as modern as in any other modern society. Women's clothing is more colorful than men's, which is usually one solid color. Women do not wear pants, as men do. Very little jewelry is worn (e.g., earrings), and only young women wear it. Before the changes brought by modernization, both men and women wore jewelry (necklaces, bracelets, earrings, ankle and knee bracelets), though women wore more than men. Both men and women also decorated their bodies in the same fashion, e.g., scarification, filed teeth, V-shaped fillings between the upper two incisors, and pierced and extended ear lobes. The youth of both sexes wore long hair, while the elderly had clean-shaven heads. Because of all these changes, there is really no traditional dress. The dress code now tends towards the Western mode.

## **12 FOOD**

A wide variety of food crops are cultivated in Embu. These include maize, beans, bananas, potatoes, yams, arrowroots, cassava, and sugar cane. In addition, a few animals, e.g., cattle, sheep, goats, and chickens, are raised. It is primarily from these food sources that the Embu make their dishes. There are three main foods that are made: *nyenyi*, *kithere*, and *ngima*. *Nyenyi* is the most traditional of the Embu dishes. It is a mixture of maize, beans, bananas, and green vegetables. It is cooked in a big clay pot. Once cooked, the ingredients are mashed together until well mixed. *Kithere* is basically a mixture of maize and beans. Today, people add to this mixture some vegetables, potatoes, and meat, but the ingredients are not mashed together. *Ngima*, popularly known as *ugali* in Kiswahili (also described as thick porridge), has become very popular, especially in urban centers. It is simply a mixture of white corn flour (*mutu wa mbembe*) and water. Water is boiled in a pot, then corn flour

is added until the thickness required is reached. The mixture is cooked for 10–15 minutes while turning it with a wooden spatula (*mwiko*). It is then eaten with meat stew, bean stew, or even roasted meat.

Today the most special foods are *mucere* (rice) and *chapati* (unleavened flat bread). These are expensive foods that have to be purchased from shops and are therefore only served on special occasions, such as when entertaining important guests, or on holidays such as Christmas. The traditional special food that is still popular is roasted goat meat. The slaughter of a goat and the roasting of the meat is a practice done on very special occasions. To slaughter a goat for a person is a demonstration of high respect for that person or the importance of the friendship that exists between the two people. Tea has replaced millet and sorghum porridge as the common daily beverage. It is taken any time of the day, unlike other foods that are eaten as midday and evening meals.

Household utensils are rare in most homes. The most important are modern cooking pots, plates, cups, and silverware. Although clay pots are still in use, they are not regularly used. The wooden *mwiko* has remained unchanged and has actually grown in popularity. Most of the utensils in many households are imports and have for the most part replaced the traditional ones.

Also gone are most of the food taboos that were once observed by the people. For instance, it was taboo for: (1) men and women who had drunk cattle blood to eat the meat of wild game; (2) circumcised men and women to eat chicken, for it was considered children's food; (3) women to eat eggs; (4) men to drink milk after eating the meat of wild game; and (5) women to eat the meat of a cow that had died in labor. The only taboos that are still observed are those that prohibit the eating of monkeys, clawed animals, and snakes.

Food is very central to Embu customs, particularly those that govern people's behaviors and attitudes towards others. Food is something to be shared, and to be accused of being a selfish person (*mundu muthunu*) is not only a terrible insult but also labels a person as unworthy to receive other people's assistance, including food. When there is no food to be offered to a visitor or a person passing by, an explanation is usually offered. The Embu have many stories and proverbs that teach the morality of food-sharing. Also related to the moral significance of sharing is the belief that it is very bad manners to try to eat more than others, particularly if the people are eating from the same bowl.

### 13 EDUCATION

With the free primary and secondary education programs undertaken by the Kenyan government since 2003, the literacy rate in Kenya in 2008 stood at about 49%. Among the Embu, literacy is very high because of an overwhelming enthusiasm by parents to send their children to school. Good education is viewed as the path to a better life both for the children and the parents. Children are the social security of their parents in old age, and as such, parents invest as much as they can in the education of their children.

Under the current educational system, children start school at the age of six. They spend eight years in primary education, four in secondary (high school) education, and four in university education. Most children now finish primary and secondary levels, but few get into the university. It is the dream of

every parent to have a child go to the university because of the increased opportunities for a better-paying job upon graduation. The cost of education and the rate of unemployment are both increasing, and these factors could lower the level of literacy in Kenya.

### 14 CULTURAL HERITAGE

Among the Embu, as in many African cultures, music and dancing are inseparable. Once the musical instruments set the rhythm, people begin to sing and dance. Today, most of the dancing and singing is performed in churches and in elementary and secondary schools. School children practice various traditional dances for competition with other schools. There are also dance troupes that entertain visiting leaders and dignitaries with traditional songs and dances. Through traditional dances and songs, as well as stories, riddles, and proverbs, the Embu traditions, folklore, social norms, and history are passed from one generation to the next. The publication of the book *Ndai, Nthimo, Na Ng'ano Iri Ukua Wa Aembu* in Kiambu has become an invaluable record of Embu riddles, proverbs, and stories for future generations.

The rich local cultural and natural heritage also feeds the tourism industry. Much abounds to entertain tourists and visitors, not least the Embu people themselves who carry about their daily life with a deep sense of filial attachment to each other. They are a hospitable people, almost always welcoming visitors and eager to help. This has endeared them to their neighbors and to strangers from afar. The district plays host to the renowned Mt. Kenya to the north. Mountaineering therefore preoccupies most locals and visitors. Mt. Kenya remains a unique tourist attraction with hordes of foreigners and local people flocking to its slopes to savor the allure of its beauty and majesty. Numerous expeditions set out each year to scale the slopes to the mountain top. It is an enthralling experience, especially watching the sun rise in the horizons in the early morning from the highest Batian mountain peak. This climb is a real achievement; it calls for great stamina and resilience.

Other attractions in the region are the huge Karue hill towering high along the Embu-Meru highway. It is a magnificent view, made of a huge crested rock, at the top of which has grown two unique eucalyptus trees. From such a bird's eye view, one can see the entire of Embu. Nearby this hill are two magnificent waterfalls in close proximity which color the sky in white as their waters fall down, then converge to form one big Ena river that then meanders downstream to encircle the Karue hill. Completing the scenery is the Kirimiri hill nearby. Though not open for tourism, it is home to a diverse array of wildlife.

Generally, it seems likely that the last hallmarks of Embu culture may disappear over the next few decades as Western culture and Christianity continue to erode traditional values. Already, much if not all of the traditional music has vanished, and the relevance of traditional forms of government, such as the Nthuke Age-Sets, are becoming increasingly obscure.

### 15 WORK

The Embu are an industrious lot regarding the wide variety of economic activities they are engaged in. They value hard work and scorn laziness. Hard work, as the Embu say, builds character and prosperity. Hard work also makes a person highly eligible for marriage. Every healthy person is expected to work

to benefit oneself and others. There is a very clear division of labor by gender. The Embu have successfully taken up modern lifestyles, as shown by excellence both in academia and the overall national growth. Numerous schools and colleges train hundreds of youth each year to become well equipped not just for agricultural work but also for formal employment and entrepreneurship.

The Embu traditionally rely on agriculture, though a large number have become traders. The Embu are farmers who also rear cows, goats, and sheep. With the advent of colonialism, many cash crops were introduced. For long these have offered a lucrative alternative source of livelihood for the people. The most widespread cash crops to date are coffee, tea, and macadamia nuts. These are mainly grown for sale with little being processed for domestic consumption.

In the formal sector there are areas of employment that tend to be dominated by males (e.g., administration and management) and by females (e.g., nursing, secretarial work, and primary-level teaching). The same work ethic is expected of students by their parents. A man's riches were formerly judged by how many wives and children he had.

## 16 SPORTS

For almost everybody, both children and adults, soccer is the most important sport. To boys, anything that is round, regardless of size, is a soccer ball. One of the most popular radio programs is the broadcast of national and international soccer tournaments. Although soccer is mostly a school-organized sport, the spectators are local people. For girls, netball (somewhat similar to basketball) is very popular and is also a school-organized sport. Track and field sports, or "athletics," are also very popular in schools at every level and are highly encouraged by the government. In addition to all these popular sports, there are many other games that children play, such as jumping rope, to entertain themselves.

## 17 ENTERTAINMENT AND RECREATION

In the whole of Embu there is only one movie theater, in Embu town. This provides entertainment mostly to urban residents and people with higher incomes. Once in a while there is a mobile cinema vehicle which moves through the rural areas showing films, most of which are educational documentaries. Wealthy families with access to electricity have television sets. Others who can afford television sets but have no electricity run them using solar-energy panels or car batteries. Until recently, people could only see one channel, which was government-controlled. Now there are over eight channels, one of which is CNN. Television shows include those produced locally and those imported from various countries. Old and young men would normally congregate in pubs and homes where DSTV is connected, to watch European soccer and other games.

As mentioned earlier, church choirs and dancing, in some religious sects, also provide some entertainment. Spectator sports such as soccer and athletics provide much needed entertainment. Pop music by Kenyan, African (especially Zairian), and Western artists is very popular with young people.

## 18 FOLK ART, CRAFTS, AND HOBBIES

The Embu are known for bee-keeping. Beehives are made from a tree trunk and are then hung on a tree for the bees to build honeycombs inside. Women are skilled weavers, particularly

using fiber strings to make baskets (*ciondo*). Fiber strings are stained with vegetable dyes to produce multicolored bands on the baskets. Today, commercially produced strings of different colors are also being used to make very beautifully decorated baskets. Following the reform of the education system, other Embu arts and crafts, such as leatherwork and woodcarving, are being reintroduced to Embu children.

## 19 SOCIAL PROBLEMS

Over the years, Embu society has experienced rapid population growth. This has resulted in widespread land fragmentation whereby a man has to subdivide his land among his sons. Taken to the third generation, this has resulted in land ownership being fragmented to small strips of land not conducive to economic activity. In lieu of this, landlessness and the subdivision of family land into small plots for the purpose of inheritance are already major social and economic problems. This is creating much tension among family members as well as within the whole society. It has also resulted in food shortages and the inability to raise livestock because of the lack of grazing lands.

Alcoholism, a national problem, is not yet a serious problem in Embu, but conditions are developing that could turn it into a very serious socioeconomic and health problem soon. Following the liberalization of the economy, new and cheap alcoholic drinks commonly known as *Keg*, high in alcohol content, have been introduced to Embu. They are very popular compared to the high-priced, low-alcohol, bottled beers. The fact that there is very little social stigma attached to alcoholism, and that alcoholism is not viewed as a health problem or disease but rather as an indication of personal weakness and lack of control, may help to increase the problem. There is also a complete absence of any education regarding the consequences of alcoholism. The drinking of alcohol in the rural areas of Embu is primarily a male activity. Women who drink alcohol in public places are looked down upon. But in general, alcoholism among women is also increasing.

## 20 GENDER ISSUES

Although it appears that Embu society was originally matriarchal, a woman's role today is largely restricted to her functions as wife, mother, and farm worker. There was one woman at the time of the colonial conquest who managed to become chief, but was subsequently betrayed by jealous men. Her name is Cierume. Among the Embu, a woman's life is literally marked by her circumcision at adolescence, which allows her to become married and bear children. It is during this initiation that she begins to acquire knowledge about the realities and responsibilities of life, and the cultural values that surround her. The practice of clitoridectomy is becoming rarer today.

Nonetheless, uncircumcised girls still face stigmatization, and women in that position will usually have to leave their homeland (through choice or by force), for an uncertain future in the slum towns of Nairobi and elsewhere. Change, however, may be in the offing if a recent nongovernmental organization (NGO) report on gender roles among the Embu is correct: as a response to rapid population growth and overcrowding, many respondents declared that roles were no longer gender-based since changing circumstances had led to the disintegration of the indigenous social matrix.

## THE ENGLISH IN SOUTH AFRICA

**LOCATION:** South Africa  
**POPULATION:** About 3.6 million  
**LANGUAGE:** English  
**RELIGION:** Christianity; Judaism  
**RELATED ARTICLES:** Vol. 5: English

**1 INTRODUCTION**

Though whites of English-speaking descent make up only about 8% of South Africa's population of 44 million, their culture and their language are powerful influences in a country where more than three-quarters of the people are blacks. English is one of 11 official languages in South Africa (the others are Afrikaans, Ndebele, Pedi, Sotho, Swazi, Tsonga, Tswana, Venda, Xhosa and Zulu) but it is one of the most widely spoken. A foreign visitor to South Africa who speaks only English will have no difficulties at all getting about and being understood. English is the principal language of business and tourism, English-language newspapers are published daily and can be obtained everywhere. Public signs and notices are always posted in English.

With South Africa's economy expanding rapidly into the global market place and with computerized personal communications becoming a feature of the workplace as well as schools and colleges, a good working knowledge of English is regarded as an essential requirement for young South Africans of all communities who want successful careers in business and the professions. English is taught in all the schools, is the medium of instruction (sometimes in addition to Afrikaans) in all universities, and is continuing to be a dominant force in South Africa's young democracy even though the constitution requires recognition of all the official languages.

The international status of English as the language of many of the world's leading countries is one of the reasons for its continued dominance in South Africa. Books, magazines, movies, TV shows and musical recordings flood into the country from the English-speaking world—mostly from the United States and Britain but also to a lesser extent from Canada, Australia, and New Zealand—and are popular and influential. The pop stars and cultural icons of America and England are popular in South Africa too and going to the movies is a regular pastime. South Africa has vibrant media and entertainment industries of its own and, while a local African flavor often adds spice and a special character to these activities and Afrikaans music is undergoing a popular resurgence, the impact of the international English-speaking world is seen clearly in tastes and trends.

Throughout most of the 20th century, South Africa's political life was dominated largely by white Afrikaners, descendants of settlers who began to arrive in the 17th century, mostly from the Netherlands but also from France and Germany. After April 1994, when South Africa became a non-racial democracy and Nelson Mandela was elected the first black president, control of the country passed into the hands of the black majority and apartheid was finally abandoned. Although they were never in political control in the 20th century, Eng-

lish-speaking South Africans were prominent in commerce and industry and the professions throughout much of this period—and remain influential as one of the best-educated and most affluent sectors of the population.

## 2 LOCATION AND HOMETLAND

White English-speaking South Africans have historic and language ties to Britain but they do not regard themselves as British expatriates. They see themselves as South Africans, an important sector of a racially and culturally diverse nation. They live throughout the country but are concentrated mostly in and around the cities and urban areas—the coastal cities of Cape Town, Port Elizabeth, East London and Durban, and the inland cities and towns of Johannesburg, Pretoria, Bloemfontein, Grahamstown, and Kimberley.

South Africa has an estimated 44 million people and about 9.6%, or 4.2 million, are whites. English South Africans make up less than half of that group. Their presence in the country goes back to the end of the 18th century when Britain seized control of the Cape of Good Hope, the first white settlement area in Cape Town, during the Napoleonic Wars. The British government encouraged its citizens to emigrate to the Cape—mostly to establish a buffer between African tribesmen and farming colonists on the eastern frontier—and the first sizable group of 4,000 began to arrive in 1820. These 1820 settlers faced enormous day-to-day difficulties in making their new lives in the wilderness, but they prevailed and brought much needed skills to the colony. Their legacy is still strong, espe-

cially in the eastern Cape around Port Elizabeth, East London, and the university town of Grahamstown.

Their presence also contributed to a major event in South African history—the Great Trek during which Afrikaner farmers migrated inland to escape British rule. The Great Trek, roughly equivalent to America's western migration of the 19th century, brought the Afrikaners (known as the Boers) into conflict with African tribes, notably the Zulus in what is today the province of KwaZulu-Natal. Eventually, the British government went to war with the Zulus, defeating them after a number of bloody battles and establishing the British colony of Natal. At the turn of the century, British forces defeated two republics founded by the migrating Boers in the Anglo-Boer War (now known as the South African War) and the whole of the country was incorporated into the British Empire. In 1910 South Africa became a self-governing dominion within the British Empire. Throughout this turbulent history, English-speaking South Africans settled widely.

## 3 LANGUAGE

English was established as a mother tongue in South Africa in the 19th century. It is little different from the English spoken elsewhere in the world but has a distinct flavor, accent, and character and has absorbed, informally, a number of words and sentence structures from other ethnic and racial groups. Some of these words have crept into usage abroad—such as “trek” for a journey and “veld” for the prairie. In an analysis of South African English pronunciation, the *Collins English Dictionary* cites the words “yes,” “kettle,” and “axle,” which are commonly pronounced “yis,” “kittle,” and “eksel.” South African English slang has borrowed some structures from Afrikaans, such as: “She threw him with a stone” and “I am going to the shop, will you come with?” It has also taken some words from African languages, such as “indaba,” which means a gathering. Some phrases are unique to South African English, such as “just now,” which means “soon but not right at this time.”

## 4 FOLKLORE

Since they share their language with English-speaking peoples around the world, English South Africans also share in the special anniversaries, legends, and myths that are part of the international culture of the language. They celebrate Christmas in the traditional way with gifts, family gatherings, and dinner and get together for parties and celebrations on New Year's Eve when the midnight hour is greeted with hugs and kisses and the singing of *Auld Lang Syne*—a familiar scene around the world. In coastal ports like Cape Town it is common for ships to sound their sirens to greet the New Year.

The community has nothing like Halloween but, until fairly recently, they marked Guy Fawkes Day (November 5) with fireworks and bonfires. Guy Fawkes Day recalls an unsuccessful attempt to blow up the British Houses of Parliament. Today, however, private use of fireworks is banned in many areas because of the danger to lives and property and the event is rapidly passing out of memory. Apart from that, there is little folklore uniquely associated with English South Africans.

## 5 RELIGION

Religious beliefs are an important part of the daily life of many South Africans. The major faiths are Christianity, Hinduism, Islam, and Judaism. Religion has played a key role in the his-

tory of the country, especially in its opposition to racial discrimination known as apartheid. Religious leaders, such as Archbishop Desmond Tutu of the Anglican Church in South Africa, became politically prominent in their campaigns for equality and democracy. Nearly all of the denominations were involved in the anti-apartheid struggle—Catholics, Methodists, Lutherans, Baptists, Presbyterians and others. Most English South Africans belong to protestant Christian denominations with a lesser number but significant number adhering to the Catholic Church.

A small number—about 200,000—are Jews who tend to live mainly in the affluent areas of Johannesburg and Cape Town. Jewish influence in South Africa is much larger than the community's numbers would indicate. English-speaking Jewish South Africans have leadership positions in medicine and law, commerce and industry, and education and politics, and many have excelled in sport and the arts. The first South African to be posted to Washington as the country's ambassador during the transition away from apartheid was Jewish.

## 6 MAJOR HOLIDAYS

The English of South Africa observe the country's national and religious holidays. These include Human Rights Day (March 21), Good Friday (changes yearly), Family Day (changes yearly), Freedom Day (April 27), Worker's Day (May 1), Day of Reconciliation (December 16) and Christmas Day (December 25).

## 7 RITES OF PASSAGE

The rites of passage for English South Africans would be familiar to their counterparts in other parts of the world. One of the earliest events is kindergarten at age five or younger, followed by primary school at age six. Junior school starts at age eight and high school at age 13. After graduation from high school—known as matriculation in South Africa—it is common to go on to a technical college or to a university. Colleges and universities are seldom referred to as “schools” in South Africa, except in some instances as “school of medicine” or “school of law.”

Reaching the age of 18 when it becomes legal to drive, to vote, and to drink alcohol is an important rite of passage. The 21st birthday is the most important rite of passage when it is usual to present the celebrant with a silver key to adulthood.

After university graduation—and sometimes before—it is common for young English South Africans to travel abroad. Typically, they travel to Britain and the European continent (11 or 12 hours away by air) but increasing numbers are traveling to the United States, Asia, Australia and New Zealand. Because of the expense involved, many try to get work during their travels, and it is not uncommon to find them working as farm laborers, maids, nannies and in other casual jobs before moving on to the next stage of their journey. There are currently for example, thousands of young South Africans working in London and this has become a kind of rite of passage in itself.

## 8 INTERPERSONAL RELATIONS

In the past, English South Africans—like other communities in the country—tended to keep to themselves with most social contacts confined to members of their own group. Several social and political trends have changed that situation. The most dramatic change was the transition to democratic government,

which began by stages in the 1980s and was consummated in 1994. This has brought whites and blacks together in schools, colleges, the workplace, and on sports fields with an intimacy that did not exist before. As a result, different communities are being exposed to customs and personal practices that may be different from their own. For instance, in some rural African areas it is still considered polite to sit down and not to speak first when a prominent person or someone elderly enters a room. English South Africans have been taught traditionally that younger people should stand up as a mark of respect and greet a more senior person first. They are learning that their own way is not necessarily the only or correct way for everyone. All communities serve in a volunteer defense force and this development has further demolished past barriers. Previously, this was by conscription for white and “coloured” 18 year old males only.

Another major influence was the introduction of television in South Africa in 1975. Before that time, there was only radio with separate language channels. TV programs sometimes alternate the languages or have subtitles, which means that, for the first time, English-speaking South Africans were being exposed to other tongues and cultures, also from abroad, under the powerful influence of entertainment.

All these trends have tended to break down the barriers between social groups in South Africa. One of the most memorable examples of this was the nationwide celebration when South Africa won the Rugby World Cup in 1995 and again in 2007. Rugby is still played mainly by whites and particularly by Afrikaans-speakers. However, the whole nation reacted joyously when the national team won these tournaments. All the games had been broadcast live. In 2010 South Africa is hosting the FIFA World Cup (soccer/football), which is also providing South Africans with a common focus.

## 9 LIVING CONDITIONS

Transition to democracy has opened up equal opportunities for everyone, and there are no longer legal barriers to communities living in each other's previously restricted areas. However, political change has come much faster than economic change and many blacks still live in poverty while many English South Africans continue to live the relatively privileged life-style that was once considered their right. The typical successful white South African lives in a style similar to his or her counterpart in the United States—in single-family houses on wide suburban streets or in apartments or semidetached row houses with neighborhood playgrounds, shopping centers, and cinemas. As the economy grows and blacks take advantage of new employment and educational opportunities, they are increasingly achieving a similar comfortable standard of living. There is some concern, however, that this applies mostly to a new black elite.

## 10 FAMILY LIFE

The social stability provided by the family unit is recognized by the government, which has a policy of supporting family cohesion. In English South African families it is not unusual for both parents to work during the day and for younger schoolchildren to be cared for by live-in domestic workers when they come home in the afternoon. Marriage nowadays usually occurs in the late twenties to early thirties. With high interest rates and sharply rising property prices, it has become

more common for older children to continue to live at home for longer than they would have in the past and even—if the property is large enough—for families to build separate structures that allow either the children or the elderly parents to live nearby but separately for privacy. It is a case, perhaps, of a tight economy contributing to family cohesion. English South African families celebrate the traditional events such as birthdays, anniversaries, special achievements in school or in sports, and often take vacations together, renting cottages or apartments at the seaside. These days it is common for family members who live apart to communicate daily with each other by computer e-mail or cellular/mobile telephone. Family pets are popular with one or two dogs and cats being the norm.

### 11 CLOTHING

Day-to-day clothing is similar to that worn by middle-class people throughout the world. Increasingly, however, it is common to find men shedding jackets and ties in the work environment, following a trend set by the previous president Nelson Mandela who made colorful open-neck shirts fashionable, even at formal meetings. Schoolchildren are required at most schools to wear school uniforms. Sometimes, these uniforms are still the traditional blazer and tie for both boys and girls, which can be hot and uncomfortable during the summer, but many schools have opted for open-neck clothes. Jeans, shorts, and T-shirts are popular on weekends. Young English South Africans spend much of their money on leisure clothes. They strive to conform to current fashion trends.

### 12 FOOD

The meal associated traditionally with English South Africans is the English-style roast beef or lamb with roast potatoes and Yorkshire pudding prepared on Sunday morning and eaten at a family lunch—followed by a nap. That may be turning into a myth, or at least a memory, as life-styles permit less time in the kitchen and a desire to eat lighter and less costly food. Similarly, the traditional breakfast of bacon and eggs often gives way today to coffee or tea and toast or one of the many breakfast cereals familiar to Americans. Fruit is also a popular first meal of the day. There are usually three meals each day—breakfast, a sandwich at lunch, and dinner in the evenings. Dinner could consist of grilled steak with fried or baked potatoes, or fried or baked fish, which is especially popular in coastal cities, washed down with beer or wine or plain water. In winter, stews are popular. Known as *bredies*, they can be made with mutton or beef and any kind of vegetable. English South Africans like to garnish their food with a pickled relish called chutney, and many enjoy a bread spread called Marmite, a dark-colored yeast extract with a salty taste. Fast foods are gaining in popularity, and hamburgers are frequently eaten—to the concern of some diet specialists.

### 13 EDUCATION

South Africa has a literacy rate of some 86.4 percent for those over 15 in the nation at large, but for the English-speaking community the rate is almost universal. Education is compulsory to the age of 16 and it generally takes 12 years to obtain a high school diploma or senior certificate, which is required to continue studies at a technical college or university. University undergraduate degrees generally take three years to complete with longer academic years than are usual in the United States.

An additional year of study after a bachelor's degree can lead to an honors degree, followed by further work for master's degrees or doctorates. These days, it is becoming more difficult to get a good job without at least a bachelor's degree or a technical college diploma. Many families devote a great deal of time, energy and resources to education and will sacrifice to ensure that their children are well prepared for a future in which advanced technology will play a key role in everyday life. In a tight economy many find it hard to keep their children in the classroom for extended periods.

### 14 CULTURAL HERITAGE

English South Africans have inherited a rich local cultural heritage, mostly in the area of literature in which writers have achieved international renown for their depiction of dramatic events against a South African background. Probably the best-known such writer is Alan Paton whose novel *Cry the Beloved Country* explores the impact of racism on whites as well as blacks. It has been made twice into American movies. An extremely popular author is Herman Charles Bosman who, writing in English with an Afrikaans flavor, takes a humorous look at daily life in a rural community. Other writers who have achieved international fame include Nadine Gordimer and J. M. Coetzee while other South African writers, such as André Brink (Afrikaans) and Njabulo Ndebele, have made major contributions to English literature in South Africa. Playwright Athol Fugard has also achieved international fame with his dramatic portrayals of life through South Africa's race-tinged prism. Western classical and pop music is popular but many English South Africans have developed a taste for African music, such as the close harmonies found in the singing of groups like Ladysmith Black Mambazo. American musician and entertainer, Paul Simon, has done much to bring the charms of this kind of music to an international audience.

### 15 WORK

A typical work week ranges from 40–46 hours, and a legally mandated minimum wage is adjusted from time to time. Until 1979, special classes of labor were reserved for workers by race. However, in the late 1990s, this situation started changing. Some English-speaking South Africans expressed concern over black economic empowerment (BEE) programs, in which special consideration is given to employing and promoting blacks. Some claim now that this has led to a new kind of apartheid in which whites are unable to get jobs and promotions because of their skin color. Few disagree with the need for affirmative action, but many argue with the way in which it has been implemented, given that South Africa is some 14 years into democracy with a post-apartheid generation now at school. Policymakers hope that the problem will ease and disappear eventually as a growing economy opens up job opportunities for all.

### 16 SPORTS

Because of the country's generally benign climate throughout the year, outdoor sports are very popular. The most popular sports are rugby, soccer, and field hockey played in winter, and cricket in summer. Tennis, golf, track and field athletics, competitive cycling, and swimming are also extremely popular. Lawn bowls, played mostly by older folk but also by a growing number of young people, has a large following. American-

style baseball has a few adherents but is not nearly as popular as cricket, which—in the view of some—has joined rugby as a national obsession. Wind-surfing, surfboard riding, and both fresh- and salt-water yachting are enjoyed all year long while hiking and mountaineering have many adherents. Sports events that attract the largest crowds in the country's many fine stadiums are rugby, soccer, and cricket. Events that attract thousands of spectators as well as participants include annual road marathon races in Cape Town and Natal. Professional horse racing also has a large following and two races in particular—the Cape Metropolitan handicap and the Durban July—are major media events where the fashions worn by the race goers get as much attention as the horses. South Africa has produced world and Olympic champion individuals and teams in many of its sports.

### 17 ENTERTAINMENT AND RECREATION

Popular recreation attractions in South Africa include Kruger National Park and several game reserves. Entertainment facilities include symphony halls, theaters, movies, nightclubs, and discos. The annual National Arts Festival held in Grahamstown is a major event featuring mainly English plays, music, and arts, and also crafts stalls.

### 18 FOLK ART, CRAFTS, AND HOBBIES

The English in South Africa enjoy the varied hobbies of citizens of an industrialized nation.

### 19 SOCIAL PROBLEMS

South Africa's transition to democracy in 1994 brought equal rights and new opportunities to the disadvantaged sectors of the population. Unfortunately, it also sparked a dramatic increase in the rate of crime and violence—an inevitable by-product of poverty and high unemployment in the context of a new political system where social expectations are unrealistically high. Burglaries, muggings, car-jackings, rapes, and murders all increased since the late 1990s. English-speaking South Africans are as much the victims of this crime rate as any other sector of the population and it has led to demands for tough action by the government as well as a return to capital punishment, which is banned in South Africa. One result has been a growing rate of emigration. Another has been the growth of private security-related services and the development of gated communities.

South Africa's transition also made it a target for foreign narcotics traffickers who saw the opportunities in newly opened borders for a major international transshipment point. Illicit drugs are now being shipped through South Africa to North America and Europe in a network that has made it hard to trace their origins. Nations with more experience in dealing with this cruel trade are helping South Africa address the problem, but drug trafficking has boosted crime within the country and is a major societal concern.

HIV/AIDS is also a major problem, with the adult prevalence rate at 21.5% (2003 est.). The number of people living with HIV/AIDS was estimated at 5.3 million (2003) and the number of deaths caused by the disease was estimated at 370,000 deaths in 2003.

### 20 GENDER ISSUES

The Constitution of the Republic of South Africa (Act 108 of 1996) specifies individual rights and their protection. Chapter 2[9(3)] specifically indicates that “the State may not unfairly discriminate directly or indirectly against anyone on one or more grounds, including race, gender,...etc.”. This is observed in practice by all government agencies. For example, the Department of Education runs a program, the Girls Education Movement (GEM), launched in 2003. It is a key program supporting and fostering education for girls and was implemented in partnership with the United Nations' (UN) Children's Fund.

This program aims to ensure that girls not only have access to education, but that they stay in school and succeed. GEM was founded on three pillars: career mentorship, skills development, and advocacy.

Through GEM, girls are placed in partner companies during their Easter, winter, and spring school breaks, to discover first-hand how skills acquired in school and the skills-development program relate to the workplace.

They are exposed to a structured job-shadowing program and to new and exciting career paths in the fields of mathematics, science, and commerce. The GEM Skills Development Program aims to address gender disparities through education and advocacy.

Compared to many other communities in South Africa, the English in the country, even in rural areas, are much farther along the road of gender parity. Much like their counterparts in other industrialized nations, English women in South Africa are career-oriented and fill prominent positions in virtually every sector of society.

# EQUATORIAL GUINEANS

**PRONUNCIATION:** ee-kwuh-TOR-ee-uhl GHIN-ee-uhns

**ALTERNATE NAMES:** Equatoguineans

**LOCATION:** Equatorial Guinea (island of Bioko, mainland of Rio Muni, several small islands)

**POPULATION:** 616,000

**LANGUAGE:** Spanish (official); Fang; languages of the coastal peoples; Bubi, pidgin English and Ibo (from Nigeria); Portuguese Creole.

**RELIGION:** Christianity, African-based sects and cults

## 1 INTRODUCTION

Equatorial Guinea has recently gained prominence around the world as one of the smallest African states now awash in oil. Prior to this discovery, it was one of the least-known African countries comprising the rectangular-shaped island of Bioko (formerly Fernando Po) and the mainland, Rio Muni. Portuguese explorers landed on Fernando Po in 1471–72 and made it part of the commercial sphere of Sao Tomé. The islanders strongly resisted the slave trade and attempts to occupy their homeland. The Portuguese gave the island and parts of the mainland to Spain in a treaty in 1787. However, Spanish administration of Fernando Po only began in 1858. Nevertheless, Equatorial Guinea is the only sub-Saharan country that uses Spanish as its official language.

In the latter 19th century, European missionaries and descendants of Liberians, Sierra Leonians, Nigerians, and liberated slaves (Fernandinos) developed large cacao, coffee, and tobacco plantations on Fernando Po. Cameroonians, Fang (from Rio Muni), more Nigerians, and Liberians immigrated to the island to work the plantations. However, in 1976, the island was greatly depopulated when the government expelled 25,000 Nigerians. After the coup in 1979, Obiang Nguema renamed the island, Bioko, but the residents have resisted this name. Since 1979, Nguema has resided as head of state on the island, protected by his praetorian guard of 600 Moroccan soldiers.

Since independence in 1968, the country has been ruled by the despotic Nguema family. Equatorial Guinea's first head of state, Francisco Macias Nguema, Obiang's uncle, was Africa's worst despot. A Fang from the Esangui clan on the mainland, he dissolved the country's multiparty system in 1970 and replaced it with a single party, the *Partido Unico Nacional de los Trabajadores* (PUNT). Macias murdered politicians and government administrators, executed members of the opposition, and exiled most of Equatorial Guinea's educated and skilled workforce. One-quarter to one-third of the population was murdered or exiled during his tenure.

In 1979 defense minister Obiang Nguema Mbasogo, Macias' nephew, overthrew his uncle in a coup and eventually executed him. Obiang has ruled since with members of the Esangui clan dominating the government. He has won a series of fraudulent elections, the last in 2002. Legislative elections in 1999 and 2004 also were dismissed as highly flawed, and in May 2008 legislative and local elections of a similar ilk confirmed Obiang's firm grip on power.

Since 1981 at least seven real or imagined coups have been attempted. The most recent occurred in 2004, implicating Mark

Thatcher, son of the former British Prime Minister, for having bankrolled the coup attempt. Rumors in 2008 reported Obiang as suffering from cancer and perhaps willing to step down in favor of his son Teodorín, who served as Forestry Minister. Despite a thriving economy fueled by oil, Equatorial Guinean exiles have been hesitant to return to the country because of persistent human rights abuses, corruption, and crime.

## 2 LOCATION AND HOMELAND

Besides Bioko island and the mainland, Equatorial Guinea comprises several small islands. A cluster of small islands—Elobeyes and de Corisco—lies just south of the mainland. Rio Muni is situated between Gabon to the south and east and Cameroon to the north. Bioko is part of a geologic fault line extending from the island of Annobon (Equatorial Guinea), some 700 miles to the southwest, all the way to Tibesti in northern Chad. A range of volcanic relief is apparent along this line including Mt. Cameroon (13,000 feet), only 32 kilometers from Bioko and visible from there on a clear day.

Both the mainland and the islands receive abundant rainfall—more than eight ft annually. Three extinct volcanoes form the backbone of Bioko, giving the island fertile soils and lush vegetation. The Pico de Basile rises to more than 10,000 feet above sea level. The mainland coast is a long beach with no natural harbor. A narrow coastal plain rises sharply to a forested plateau, and small ranges of low mountains reach nearly 4,000 feet in elevation.

Equatorial Guinea's population is about 616,000 (est. 2008), one-fourth of which lives on Bioko. For its physical size, the ethnic composition of Equatorial Guinea is unusually complex. The Ntumu Fang occupy the mainland north of the Mbini river and the Okak Fang live to the south of it. Together, the Fang peoples form the majority (80–90%) of Mbini, and the Kombe, Balengue, and Bujeba tribes occupy the coastal areas. Bioko's population is a mixture of the Bubi, its original inhabitants, the Fernandino, long-settled immigrants from nearby West Africa, and Fang migrants, who now dominate the military and civil service. Malabo (formerly Sta. Isabel) on the island of Bioko is the administrative capital for the entire country. Bata is an important regional capital on the mainland and was periodically the site of the national government for three or four months each year in the 1980s.

## 3 LANGUAGE

Spanish is the official language. Well-educated Equatorial Guineans speak Spanish Castilian with a proper lisp. Inhabitants of Rio Muni speak Fang and languages of the coastal peoples. On Bioko, the islanders speak mainly Bubi, although many island people use pidgin English and Ibo (from Nigeria). The 1,500 residents of the island of Annobon speak Portuguese Creole.

## 4 FOLKLORE

The Fang tell many stories and folktales through the personage of animals. These tales serve to illustrate lessons of life. One animal in these fables is as clever as the fox, wise as the owl, and diplomatic as the rabbit. The islanders call him *ku* or *kulu*, the turtle. One tale concerns a divorce and child custody case between a tiger and a tigress. Each animal of the forest opines on who should get possession of the child. In the tradition of male dominance, they believe the tiger deserves parentage, but

before rendering a verdict, they want to consult the *ku*. The *ku* hears each side of the case and asks them to return the following day at lunchtime. When they are assembled the next day, he appears in no hurry to give his opinion and instead bathes in a large mud puddle. Then he cries as if overcome with grief. The animals are mystified and ask him to explain. He replies, "My father-in-law died while giving birth." The tiger finally interrupts with disgust, "Why listen to such rubbish? We all know a man cannot give birth. Only a woman has that ability. A man's relationship to a child is different." The *ku* replies, "Aha! You yourself have determined her relationship with the child to be special. Custody should be with the tigress." The tiger was unsatisfied, but the other animals agreed that the *ku* ruled correctly.

## 5 RELIGION

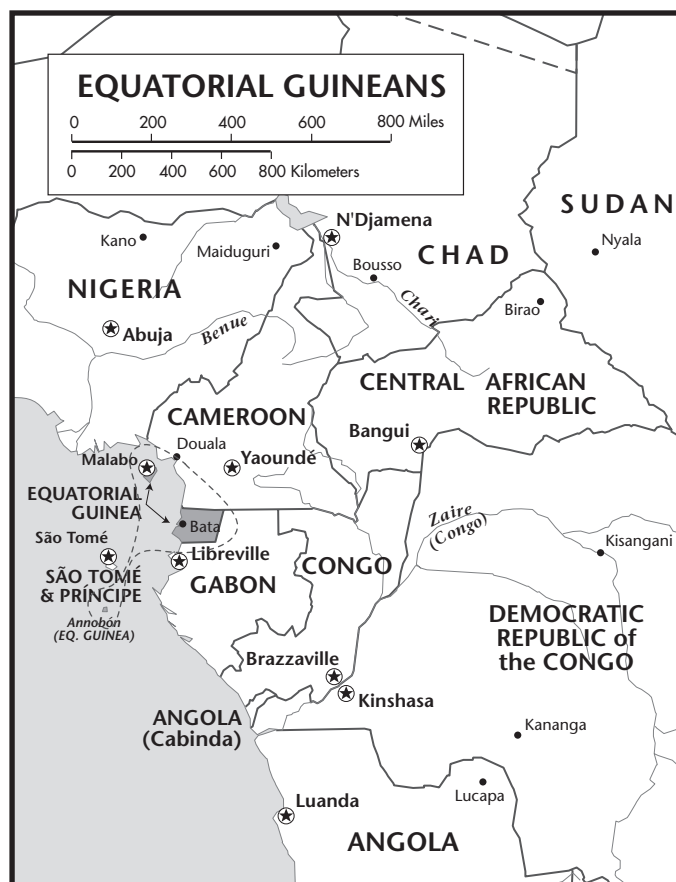

Most Equatorial Guineans profess some form of Christianity, but many African-based sects and cults persist. For example, the Bubi practice a syncretic religion where indigenous beliefs and Christianity have been joined in a monotheistic religion.

Though not a religion per se, Macias invented his own personality cult, which he attempted to inculcate through the Catholic church. In 1974 he ordered priests to read the following message during the mass: "Never without Macias, always with Macias. Down with colonialism and with ambition." He decreed that churches hang his portrait in their sanctuaries. Inscribed was the message: "Only and unceasing miracle of Equatorial Guinea. God created Equatorial Guinea thanks to Macias. Without Macias, Equatorial Guinea would not exist." He recruited youth spies to report on "subversive" clergy and expelled, imprisoned, and executed bishops, priests, and pastors suspected of resisting. In 1975, he closed all mission schools. Obiang has permitted freedom of worship, but surveillance and repression of the clergy continues.

Equatorial Guinean religions are similar to African religions elsewhere in that they revolve around a supreme being and lower-level deities in the spirit world that may assist or bring misfortune to people. To guard against misfortune, the Fang invoke guidance and protection from ancestors who held leadership positions when they were living. The Fang carry their skulls and bones with them as relics for communicating with the ancestors' spirits.

Equatorial Guinean sects are infamous for their alleged human sacrifices and necrophagy. A report in 1926 claims that the Fang tore out the hearts and genitals of their victims, sometimes eating them. In 1946 one observer claimed that Fang sorcerers practiced cannibalism during ceremonies. Reports on one sect claimed that members had to take turns bringing in cadavers, or if one was not available, to kill a victim or otherwise be killed. The rationale for necrophagy is that one acquires the attributes and the power of the person ingested.

The earliest European accounts of necrophagy date from the mid-19th century. It is not clear however, the extent to which the slaving middle men, the Ndowe, invented stories to scare the Fang and the Europeans, both of whom came to depend on the Ndowe for slaves. Moreover, European explorers may have misunderstood the significance of human skulls and body parts found stored in and near Fang homes. It is possible that what Europeans saw was earlier evidence of a modern Fang cult. The Fang still conserve skulls and body parts as relics to which prayers are addressed and transmitted by the ancestor

to God. The remains also scare away evil spirits, but they are now hidden in secret places out of public view.

## 6 MAJOR HOLIDAYS

Equatorial Guineans recognize 12 public holidays. Independence Day is October 12, but a special celebration is reserved for Armed Forces Day, August 3, which also is known as the *golpe de libertad* (the freedom coup that overthrew President Macias). On that day, in the main square of Malabo, the president's motorcade passes flanked by motorcycles and elite Moroccan guards on foot. They run to keep pace carrying walkie-talkies as they go. After the government ministers have passed, delegations of singers, dancers, and musicians from the barrios of Malabo and the villages take their turn. Guitarists, drummers, and women in grass skirts are among them. Perhaps the most outrageous characters in the parade are the "lucifers," dancers in tennis shoes wearing looping horns, colored streamers, pompons, leopard-skin cloth, a pillow stuffed in the pants, and seven rear-view mirrors taped to the nape of the neck. Cuban laborers of African descent from the 19th century imported the costume and the tradition.

## 7 RITES OF PASSAGE

Equatorial Guineans of various ethnic groups mark life's passages—birth, puberty, marriage, and death with rites and rituals because these bridge present generations to the ancestors, who may be invoked for assistance, guidance in decision-making, and protection. The Fang communicate with ancestors via

rites performed in secret societies. Elders initiate new members into secret societies to which outsiders may never belong, nor even observe. The Bubi of Bioko offer sacrifices of buffaloes, sheep, goats, chickens, and ducks and sometimes saltwater fish on rites of passage occasions.

The elaborate funeral rites of Bubi show their belief in the hereafter and in reincarnation. Villagers announce a death by drumming on a hollow log. The drums at dawn and at dusk sound while the community observes a moment of silence. Someone reads the most important acts of the defunct. Only the most basic tasks such as digging yams for the daily meal may be performed until the funeral is over. A designated elder of the village chooses women who will wash the corpse and embalm it with a red creme, *Ntola*. All community members except pregnant women and children participate in ceremonies of singing and dancing and accompany the corpse to the grave site. Before taking the corpse from the house to the cemetery, the mourners sacrifice a male goat and pour its blood over the corpse. This is repeated several times on the way to the cemetery. The corpse is then placed in the fetal position in the grave so that it may be born again. Family members leave personal objects with the defunct, which will serve in the hereafter for daily labor. Grave robbery is punished by amputation of hands. After burial, mourners plant a branch of the sacred tree, *Iko*, on the tomb.

## 8 INTERPERSONAL RELATIONS

Equatorial Guineans love to tell stories and to joke around, but they also show respect for people of a certain status. For example, they reserve the title of “Don” or “Dona” for people of high education, wealth, and class. This might be a government minister, a plantation owner, or an important businessman. Equatorial Guineans are very ebullient people. They readily shake hands and greet each other. The typical morning greeting is the Spanish, *buenos dias*.

## 9 LIVING CONDITIONS

Living conditions in Equatorial Guinea have fluctuated greatly over the years. Prior to independence in 1968, the country was a showcase for exports of cocoa, coffee, timber foodstuffs, palm oil, and fish. Then President Macias’ corrupt regime systematically impoverished the country through political repression and neglect. By 1990 the country had to import staple foods such as palm oil and fish. About four-fifths of the population reverted to making its living in subsistence agriculture in the jungles and highland forests. Average income by the late 1990s was less than \$300 per year, and life expectancy was only 45 years. Many children died of preventable diseases like measles.

All this began to change in the mid-1990s with the discovery of off-shore oil. In 2008 with a current daily production of some 400,000 barrels a day, Equatorial Guinea boasted the fourth-highest per capita income in the world. Its gross domestic product (GDP) per capita was \$44,000, putting it ahead of Switzerland, Canada, and Britain. Life expectancy rose to over 60 years. However, because a few senior government officials own most of the businesses and control most of the country’s wealth, oil dividends do not reach the vast majority of Equatorial Guineans.

About 50% of the population lives in poverty without access to potable water and sanitation. On the main island, small rectangular wood plank or palm thatch houses lack electricity

and indoor plumbing. Simple beds are made out of polished bamboo slats lashed together and mounted on larger bamboo posts. On the mainland, huts are made of cane and mud walls with tin or thatch roofs. In some villages, the cane walls are only chest high so that the men can watch the goings-on of the village. Women and girls wash clothes at streams or wells and usually hang them up or lay them out on a clean section of the yard to dry. Children are expected to help carry water, collect firewood, and run errands for their mothers.

## 10 FAMILY LIFE

The family and the clan are critical institutions in Equatorial Guinean life. It is important that people know their ancestry and family life is geared toward perpetuating the lineage. Marriage in Fang society is exogamous and descentance is patrilinear. Families are polygynous and men may have several wives, mainly for prestige and for economic reasons. Bubi society is primarily endogamous, meaning that people marry within the same lineage. Bubi society also is matriarchal—people trace their lineage by their mother’s line. In ancient times, Bubi were allowed to marry a sibling as long as he or she did not have the same mother. Bubi therefore place great importance on having girls because they perpetuate the family. A family without girls would risk extinction. Thus, Bubi consider girls to be the eyes of the home, *que nobo e chobo*, the paper that perpetuates the family. The boys are thought of as the pillars of the house because they sustain the household.

No reliable statistics exist on the percentage of households headed by women or how many women work in different sectors of the workforce. Nonetheless, women typically do the housework and bear five to six children. Men customarily assume authority in the household because, as one Bubi proverb says, “a chicken never will crow at dawn.”

## 11 CLOTHING

Equatorial Guineans do their best to look sharp in public. For those who can afford them, Western-style suits and dresses are de rigueur for any professional or business activities. Businessmen wear three-piece pinstriped suits with vests and neckties, even in the extremely hot, muggy weather of the island. Women and girls go out neatly dressed, wearing pleated skirts, starched blouses, and polished shoes.

Children in the villages wear shorts, jeans, and T-shirts, though tailored cloth dresses are popular for girls. The women wear bright, colorful loose-fitting sarongs with African patterns. They usually wear head scarves too. Older women may wear a large, simply cut piece of cotton cloth over a blouse and sarong. People with little money often make do with secondhand American T-shirts and other clothing. The wearer is usually oblivious to what a T-shirt says, including sometimes very bawdy messages. Many people go barefoot, or wear flip-flops and plastic sandals.

## 12 FOOD

The staple food of Equatorial Guinea is coco yams (*malanga*), plantains, and rice. The island coco yams are among the tastiest in Africa and grow well in Bioko’s rich soils where rainfall is plentiful. People eat little meat other than porcupine and forest antelope, a large rodent-like animal with small antlers. Equatorial Guineans typically supplement their diets with vegetables from their home gardens and with eggs or an occa-

sional chicken or duck on special occasions. Fish are abundant in the coastal waters and provide an important protein source in an otherwise starchy diet. Many people cook on open wood fires, either on the floor of their houses or in the open yard.

### 13 EDUCATION

Formal education at all levels has suffered much under the Nguemas. In the 1970s, many teachers and administrators were liquidated. Many Spanish teachers, most of them priests, left the country in 1978 to return later. Cuban and UNESCO-funded teachers also left the country because of assassinations and ministerial paralysis. In the 1980s, only two public high schools existed, one in Malabo and the other in Bata. In 1987, a UNESCO mission found that of 17 schools visited on Bioko, not one had blackboards, pencils, or textbooks. Children learned by rote hearing and repetition. In 1990 the World Bank estimated that 50% of the population was illiterate. But in 1993, no one could provide statistics on basic indicators such as primary-school enrollment and number of schoolteachers. Fortunately, there has been some windfall from oil revenues, and modest investments in education have improved school infrastructure, teacher capacity, and quality of curricula.

### 14 CULTURAL HERITAGE

The cultural heritage of Bioko dates to Paleolithic and Neolithic periods. Archaeologists have discovered stone tools such as axes and hoes. At this time, stone mortars and pestles also were in use. People made jewelry from snake vertebrae woven with raffia to make armbands and bracelets. The precolonial period was unproductive in cultural growth because of the severe depopulation of Rio Muni and the islands during the slave trade.

Fang art and magical beliefs are closely linked. The main traditional instrument of the Fang, the Mvett, typifies this relationship. The name "Mvett" also applies to the Fang sagas. The religious-mystic order of the Bebom-Mvett is the caretaker of the "Cycle of Legends of Engong." The "Cycle" is for the Fang nation what the Old Testament is for Christians and Jews. The Mvett instrument is a harp-zither made of three gourds, the stem of a leaf of the raffia plant, and cord of vegetable fibers. Mvett players are highly respected by Equatorial Guineans of Fang background.

### 15 WORK

Bubi society is divided by function: farmers, hunters, fishermen, palm-wine collectors, and, in former times, the royal police of the supreme chief. A supreme priest blessed the yam plantations and protected the sacred fire. Bubis traditionally refused contact with Europeans and refused forced plantation labor in coffee and cocoa.

In rural areas, most Equatorial Guineans still practice subsistence farming. They grow tubers, bush peppers, cola nuts, and fruits. Women do four-fifths of the work. Men clear the land, and women do the rest, including carrying 187-pound baskets of yams on their backs to market. Along with the oil industry has come a variety of new jobs at the ports and in services such as bars, restaurants, and domestic work. However, because oil production is off-shore, the number and types of good-paying jobs are limited, and most of job creation has been in low-paying unskilled work.

*Equatorial Guinean children in the villages wear shorts, jeans, and T-shirts, though tailored cloth dresses are popular for girls.*  
(United Nations)

### 16 SPORTS

Equatorial Guineans are avid soccer players. They also maintain a keen interest in table tennis which they got from Chinese aid workers. The assassination of the minister of youth and sports in 1976 greatly paralyzed organized sports in Equatorial Guinea. At independence, there were some 40 soccer fields in the country, which were rebuilt in the late 1970s and early 1980s by the Spanish. The Spanish also sent professionals to retrain players at a level required for international competition. Equatorial Guinea participated for the first time in the Olympics in 1984 at the Los Angeles games.

### 17 ENTERTAINMENT AND RECREATION

Like Africans on the continent, Equatorial Guineans enjoy socializing with family and friends and do not need invitations to visit each other. It is common to see them playing cards, checkers, and chess with friends. Almost any occasion will spark dancing and singing. No formal party is needed. Men especially go to pubs to socialize and drink. Various African musical styles from Makossa of Cameroon to Congolese music are popular with youth.

Part of the reason for this vibrant socializing had to do with restrictions on electronic media. Until 1981 the country had only two radio stations, one on the mainland and the other on Bioko that broadcasted propaganda and personality cultism for the Nguemas. Since then, the Chinese built new installations that include broadcasting in Spanish and local languages. The stations also play music from Cameroon and Nigeria. Today, the BBC and Radio France International are available on FM broadcasts from Malabo and are popular.

Television has remained under strict government control for fear that it could become a democracy tool. In 1982 most of the 200 color televisions in the country were owned by Spanish technical assistants. By 1984 the number of televisions had risen to 1,500. In the late 1980s, Malabo had two non-functioning movie theaters used for government events. In 1990, the entire island of Bioko had no functioning cinemas, bookstores, or newsstands. Today, to get information and entertainment that otherwise would be available on TV, Equatoguineans spend hours in dozens of Internet cafés in Bata and Malabo listening to music, reading news and opinions on websites of exiles (which are critical of the government), and generally accessing a window on the outside world.

## 18 FOLK ART, CRAFTS, AND HOBBIES

Folk art is rich and varies according to ethnic group. On Bioko, the Bubi people are known for their colorful wooden bells. The makers of the bells embellish them with intricate designs, engravings, and shapes. Musicians ring these bells by turn or in combinations during the folkloric dances of the *Kacha*.

In Ebolova, women weave baskets more than two feet high and two feet across to which they attach straps. They use these to haul produce from their fields and garden tools. Equatorial Guineans make many hats and other objects, especially baskets of all kinds, from raffia and palm leaves. Some baskets are so finely woven that they hold liquids such as palm oil.

## 19 SOCIAL PROBLEMS

The oil boom has created new jobs, but along with the influx of wealth has come a number of social problems. Equatorial Guinea is ranked as the tenth-most corrupt country in the world and is a staging point for drug trafficking between South America and Europe and a destination for trafficked children. Trafficked persons come from neighboring Benin, Nigeria, Gabon, and Cameroon, and work as farmhands and household servants. Girls are particularly vulnerable to sexual exploitation either as domestic servants or in the commercial sex trade. By 2008 the government had taken steps to get children off the streets and to control trafficking, but the lack of hard data made it impossible to determine the extent of the problem.

## 20 GENDER ISSUES

The status of women is improving gradually. However, in rural areas women still perform most of the household and agricultural work, and excessive drinking by men, wife beating, and female sexual abuse are reported frequently with little will on the part of the police and courts to prosecute the perpetrators. These problems have reached the attention of the president's wife, who led a campaign in 2007 to raise public awareness on spouse abuse. The government also launched a major crackdown against prostitution to curb trafficking.

Progress in education for girls is being made. By 2008 women and girls had a literacy rate of 78% (compared to 93% of males), and girls' enrollment rates were climbing with 81% as many girls as boys enrolled in primary, secondary, and tertiary education. Also in 2008 there were 20 women in the 100-member parliament and six women in the cabinet including the Ministers of Labor and Women's Issues.

# ERITREANS

**PRONUNCIATION:** eh-rih-TRAY-uhns

**ALTERNATE NAMES:** Ertra

**LOCATION:** Eritrea (Horn of Africa)

**POPULATION:** 4.9 million

**LANGUAGE:** Ethio-Semitic Tigrinya, Tigre, and Amharic (Amharinya); Eastern Cushitic Afar and Saho; Central Cushitic Bilin Agaw; Nilo-Saharan, Kunama, Nara; Beja (Bedawi); Indo-European English and Italian, spoken by some; Arabic, spoken in the coastal cities and by the Rashaida.

**RELIGION:** Sunni Islam, Orthodox Christianity

**RELATED ARTICLES:** Vol. 1: Tigray; Djiboutians

## <sup>1</sup> INTRODUCTION

Modern Eritrea was born in the crucible of a large-scale, devastating, 30-year civil war during which more ammunition was exploded than in all of the North African campaigns of World War II. A number of separate Eritrean guerrilla movements, nearly destroyed from feuding with each other, gradually united. By 1991, they had won a war against combined Ethiopian, Cuban, and Soviet forces. These forces at times numbered 150,000–200,000 troops backed by at least \$5 billion in direct Soviet and inadvertent U. S. military aid.

Eritrea's history intertwines with that of Ethiopia of which it had long been a northern frontier. Italians established a commercial foothold in Mitsiwa (Massawa) and Aseb in 1869, and took control of the ports from the Egyptians during the period 1882–85. Thus, Italy gained its first bases in the strategic Horn of Africa. In 1887 at Dogali, Ethiopian Emperor Yohannes, a Tigrayan, turned back Italian thrusts into the interior of Eritrea from Mitsiwa but the Italian army eventually took control of Eritrea. To facilitate Italy's expansion in the Horn, construction of the Eritrean Railway began at Mitsiwa in 1888 as a military line for the planned enlargement of what became the colony of Eritrea on 1 January 1890.

A little known continental catastrophe of the Italian invasion of Eritrea began in 1889 when the Italian army imported Indian cattle into the colony. The cattle carried the virus for rinderpest (from the German cattle-plague), then unknown in Africa. By 1897 the plague had spread to South Africa, killing about 90% of all African cattle, while decimating populations of buffalo, giraffe, wildebeest, and other wild herbivore game. Mass starvation began for humans across Africa. Without plow oxen, about a third of the Eritreans died.

In March 1896, the Ethiopian's decisively defeated at Adwa the Italian army, pushing it back into Eritrea and forcing Italy to turn its resources to developing this colony. From Eritrea, Italy successfully invaded Ethiopia in 1935–36. In 1941, British forces from Sudan quickly defeated the long-entrenched Italians in Eritrea. Through 1952, a British military administration controlled Eritrea, while the government in London considered whether to annex the western part of Eritrea to the Anglo-Egyptian Sudan. In 1952 the United Nations voted to make Eritrea a semi-autonomous federated unit of Ethiopia. In 1953, a former Italian communications base just west of Asmara, Eritrea became one of the largest U.S.-intelligence-gathering facilities, monitoring communications from the Eastern

Bloc and Middle East. During the 1950s, then strategic Ethiopia was the largest recipient in Africa of U.S. economic and military aid.

In 1962, Emperor Haile Selassie I, an Amhara, forcibly annexed Eritrea as a province in his Ethiopian empire, thereby kindling rebellion. During this period, U.S.-supplied planes buzzed low over Asmara and the countryside to monitor the terrain and to stifle Eritrean insurgency. By the 1970s, U.S. intelligence turned to satellites to gather global electronic transmissions and no longer required land facilities. Ethiopia thus gradually became less strategic, and U.S. aid to the country declined. Suppression of the Eritrean insurgency became increasingly less acceptable to the Americans. The U.S. began to rebuff Haile Selassie's requests for more arms to counter Communist influences in the Horn and Red Sea regions.

In 1974, Haile Selassie was overthrown by a faction known as the *Derg* (Amharic for committee). A provisional government was formed under Lt. General Aman Andom, an Eritrean who was later executed by the *Derg*. Next, Brigadier General Teferi Benti headed a new government, and the *Derg* proclaimed a socialist state of Ethiopia. In 1975, the rival Eritrean Liberation Front and Eritrean People's Liberation Front ended most of their differences and overran all of Eritrea, except for Asmara, Mitsiwa, and Berentu. In 1976, socialist Ethiopia broke ties with the U.S. and signed a military compact with the USSR. The next year, the *Derg* executed General Teferi and his colleagues and installed Lt. Colonel Mengistu Haile Mariam as head of state. With Soviet support, in 1977, Cuban and Ethiopian forces repelled a Somali invasion of the Ogaden in southeastern Ethiopia. During 1978–1981, the civil war against the *Derg* raged in Eritrea province and a parallel insurgency grew in Tegré province on the southern border of Eritrea. In both provinces, the insurgent fronts espoused Marxist ideas and were dominated by the Tigrayan ethnic group. It is not often remembered that Marxist ideology fired the Eritrean rebel groups. In 1978, additional Ethiopian forces, now freed from combat in the Ogaden, entered Eritrea and retook most of the countryside.

To secure Eritrea politically and economically, the Communist government of Ethiopia in 1982 mounted large-scale military campaigns against both the Eritrean People's Liberation Front (EPLF) and the Tigrayan People's Liberation Front (TPLF). Trained by the Eritreans, the Tigrayans eventually formed the core of the Ethiopian People's Revolutionary Democratic Front, which eventually defeated Ethiopia's Communist government.

From 1983–84, the all-important rains failed and a drought ensued. With climatic aridity across northeastern Africa, the military policies and Stalinist central planning of Ethiopia's *Derg* created catastrophic famine in 1984–85. Western nations sent massive food aid to the beleaguered Communist government in Ethiopia, thereby aiding some seven million under the threat of starvation. At the same time, with this food, the West helped the *Derg* implement its plan of forced resettlement of peasants out of the north and away from the influence of the liberation fronts.

During 1985, the *Derg's* offensives against the Eritreans and Tigrayans continued. Owing to poor economic planning, the famine persisted in Eritrea and northern Ethiopia. The insurgent fronts gradually captured large amounts of Soviet tanks, artillery, other ordnance, and even Soviet advisors.

By 1989, the Ethiopian government's largely conscripted military forces lost battles across Eritrea and Tigre provinces, died by the thousands, and surrendered in droves. Ethiopia, accordingly, began peace negotiations with the Eritreans. During 1991, the peace talks continued in Washington, while the insurgents' hold on Eritrea broadened. With U.S. prodding, on 21 May 1991 President Mengistu Haile Mariam resigned and fled Ethiopia, while the victorious Tigrayans, under Meles Zenawi, encircled the country's capital, Addis Abeba. The Stalinist Marxist government of Ethiopia surrendered on 27 May 1991. The Eritreans now completely controlled Eritrea, under Issaias Afwerki, who received military training in China during 1966. Outside of Asmara, near Kagnaw, a Soviet "elephants' graveyard" grew: many hundreds of T-54 tanks, armored personnel carriers, and army trucks. De facto independence now existed for Eritrea.

Sovereignty became a reality for Eritrea on 27 April 1993, when virtually everyone in this land voted in a UN-certified referendum calling for independence from Ethiopia. On 24 May 1993 the Tigrayans controlling Ethiopia granted independence to the Tigrayans controlling Eritrea. Eritrea became the 52nd independent state in Africa and joined the United Nations and the Organization of African Unity (OAU) within the same week. Consequently landlocked Ethiopia, then a country of about 54 million, had its two seaports, Aseb and Mitsiwa, inside the sovereign country of Eritrea. At first, Eritrea was a friendly ally but then became a warring enemy and now is a hostile neighbor of Ethiopia. The same can be said of Ethiopia's relations with Eritrea.

During 1998–2000, Eritrea and Ethiopia fought another war with each other having heavy casualties and great loss of treasure for the two impoverished countries. After a truce, the United Nations has peace-keeping forces along the border of the two hostile countries, in a seemingly permanent Temporary Security Zone. In December 2006, Ethiopia invaded Somalia as a U.S. surrogate to suppress the Islamic Courts Union then controlling and stabilizing Somalia and befriended by Eritrea. In 2007 Ethiopia accused Eritrea of aiding militarily the fundamentalist Somalis opposing Ethiopia and the U.S. The Bush administration contemplated labeling Eritrea a rogue state, along with North Korea and Iran. In September 2007 the Eritrean government denied accusations that it aids terrorists in the Horn of Africa. The Eritrean Mufti (Jurist of Islamic Law), Sheik Al Amin Osman, announced in March 2008 that the peaceful relations among Eritrean Christians and Muslims were commendable.

The Eritrean People's Liberation Front reorganized into the People's Front for Democracy and Justice (PFDJ). Habte Selassie Bereket headed a Constitutional Commission providing a constitution in 1997, in time for national elections for a permanent government, but it is a charter still not fully implemented. Eritrea thereby became a presidential republic with a unicameral parliament. Issaias Afwerki became Eritrea's president and head of state. Eritrea is a one-party state governed by the PFDJ. Nongovernmental publishing ceased in September 2001. The government controls TV and radio stations. A private press is forbidden for matters of national security. In 2007 the activist organization Reporters without Borders placed Eritrea last on their world list regarding freedom of the press. Eritrea's legal system is based on the imperial Ethiopian legal code of 1957, with amendments and additions.

Fundamentalist Islamic groups in Sudan, a former ally of the Eritreans, aiding the fundamentalist Eritrean Islamic Jihad, strove to overthrow the secular government of Eritrea, which guarantees the freedom of all religions. Consequently, in 1995, Eritrea announced that it would support opposition groups bent on overthrowing the government of President Omar Hassan al Bashir in Sudan. Eritrea's undemarcated border with Sudan has been a concern of tension between the two countries but the tension now subsides.

## 2 LOCATION AND HOMELAND

Eritrea (official name, Ertra) is named for the Red Sea (Latin, *Mare Erythraeum*). About the size of Pennsylvania, some 117,600 sq km (45,400 sq mi), Eritrea had a population, in 2007, of about 4.9 million people. Nine ethnic groups make up Eritrea. Almost a million Eritreans are scattered across the globe, because they fled the ravishes of civil war. The highland capital of Asmara (pop. about 400,000) is a pleasant, Italianate city, with broad, palm-lined boulevards as well as narrower, packed streets, and sunny, mild weather year-round. Using the Ethiopian calendar, the city boasts thirteen months of springtime.

Just north of the strait of Bab el-Mandeb, Eritrea's Red Sea coast stretches 1,014 km (630 mi), from Ras Kasar to Ras Dumeira. Besides the sea, Sudan, Djibouti, and Ethiopia bound Eritrea. The country comprises savanna, rugged highlands, and semidesert and desert plains. Scattered acacias and junipers dot the savanna, and almost all original forest cover long has been cleared, after some 3,000 years of plow agriculture. From east to west, topographically, Eritrea consists of a low

coastal desert plain, some 16 to 89 km (10 to 55 mi) wide and including the Kobar Depression, descending to 116 m (380 ft) below sea level. A steep ascent of the northeastern escarpment of the Abyssinian Plateau reaches a level of almost 2,440 m (8,000 ft); descends gradually through Asmara, at 2,345 m (7,694 ft); slopes to Keren, at 1,390 m (4,560 ft); declines to Akordat, at 621 m (2,038 ft); and ends, as a steppe plain, on the Sudan border, at about 430 m (1,400 ft). Aridity increases the further west one travels from Asmara, which has 53 cm (21 in) of rain per year and an annual average temperature of 16.7°C (62°F).

### 3 LANGUAGE

Eritrea contains at least nine indigenous ethnic-linguistic groups. Native Eritrean languages include Ethio-Semitic—of the South Semitic branch of the Semitic family—Tigrinya and Tigre; Beja (Bedawi); Eastern Cushitic Afar and Saho; Central Cushitic Bilin Agaw; and Chari-Nile—of the Nilo-Saharan superfamily—Kunama and Nara. The related Eritrean languages, Tigrinya, and Tigre, the last of which is the language of no single ethnic group, are often confused. Perhaps 200,000 people largely in semi-pastoral groups, in the lower plains and on islands off the coast north of the Tigrayans, speak Tigre. Tigre-speakers include the eastern Beni Amirs; the western Beni Amirs speak Beja. Ethio-Semitic Amharic (Amharinya); Central Semitic modern Arabic; and Indo-European English and Italian are also spoken by some Eritreans. Arabic, a local language, is spoken in the coastal cities, along the Sudan border, and by the Rashaida pastoralists; English is the language of instruction in the secondary schools and higher education; and Italian is known by some in Asmara and other cities. The Semitic, Cushitic, and Omotic language families found in the Horn of Africa all belong to the Afro-Asiatic superfamily, including also Chadic, Berber, and ancient Egyptian families.

### 4 FOLKLORE

There is no folklore common to all nine ethnic groups of Eritrea. Religious folklore—Orthodox Christian, Muslim, Roman Catholic, and various pagan faiths—is shared among the respective adherents of each faith and is part of the cosmology of each of the nine cultures. (For cosmology, see sections 5 and 20 and section 20 of Djiboutians.)

### 5 RELIGION

Eritreans are, roughly, half Christians and half Sunni Muslims. Some Protestantism is found and Roman Catholicism exists, centering on Our Lady of the Rosary Cathedral in downtown Asmara. Enda Mariam is the principal Orthodox house of worship in Asmara, and the impressive Jamie el-Khulafa'e el-Rashidin Mosque is near the city hall. Roman Catholicism was introduced with Italian colonialism. Tigrayans who are Muslim have the designation Jebarti, thus setting them apart from Christians.

The native Ethiopian Orthodox Christianity is often mistakenly labeled as Coptic; however, it has the Alexandrian rite under the aegis of the Patriarch of Alexandria. Adherents of this Ethiopian Christianity consider themselves the legitimate heirs of the Israelites of the Old Testament. According to the traditional *Kebra Nagast*, written in the ancient Ethio-Semitic liturgical language, Ge'ez, the God of Israel transferred His abode on earth from Jerusalem to Aksum, Ethiopia. Indeed,

the religion of the Ethiopian Christianity is *be-orit* (by the Old Testament), and the central room of every church, the holy of holies, contains not an altar with the host, but a replica of the Ark of the Covenant (*tabot*). According to local beliefs, the original ark and the remnants of the true cross are hidden under separate mountains in Eritrea-Ethiopia, considered the holiest of lands. Another belief has the Ark secluded in a church of Aksum, Ethiopia.

Orthodox Christian priests both sing and dance in their ceremonies. Services are in Ge'ez, ancestral to Tigrinya, Tigre, and Amharic. The monarchs, of which Haile Selassie (whose name means "Power of the Holy Trinity" in Amharic) was the last, purportedly descend from King Solomon and the Queen of Sheba. Ethiopian Orthodox believers are monophy-site Christians, that is, they do not subscribe to the creed that Christ has two natures, human and divine. Rather, they believe that Christ has only a unified nature.

Religion is more than a body of rituals and creeds. For most of the world's peoples it is the core of their particular cosmology. Religious cosmology is a worldview providing the unifying, overarching ethos of a society and its culture, for example, of Tigrayans, Kunama, Afar, Beja, Bilin, etc. Such cosmology is grounded in supernaturalism and human social relations with a spirit realm. It has values and practices fostered by supernaturalistic interpretations of the world, as it is concomitantly conceived. The ever-changing religious cosmology of each Eritrean society is a body of socially learned belief collectively carried by the members of that people. It is handed down from generation to generation. The cosmology of a society provides satisfying answers to the underlying "how's," "why's," "where's" questions of life. It is a people's conceptualization about how their universe functions; why it functions in particular ways; and where their conceived universe is situated in space and time. A religious cosmology, then, answers humankind's age-old questions of existence. (See **Gender Issues** below and **Djibouti Gender Issues** for further discussion of cosmology in the Horn of Africa.)

### 6 MAJOR HOLIDAYS

The religious holidays of Eritrea are those of Islam and the Ethiopian Orthodox Church. The Ethiopian Orthodox holidays, *Fasika* and *Timkat*, and the Muslim holidays are geared to a lunar rather than solar calendar; thus, their dates vary. Major Muslim holidays include Eid el-Fitr in the spring, Eid el-Fahta in the summer, and Eid el-Nabi (the Prophet's birthday) in the summer.

Religious days of the Orthodox Church accord with the Ethiopian Calendar, which differs from the Gregorian one commonly used in Western countries (and now Eritrea's standard calendar as well). Thus, for example, Christmas falls on 7 January. Easter (*Fasika*), Epiphany (*Timkat*), and *Meskel* (Finding of the True Cross on 27 September), are the major Christian holidays. Christian congregations also have their own localized holidays, for a particular saint or angel.

Secular Eritrean holidays exist as well. These include New Year's Day on January 1, Women's Day on March 8, Labor Day on May 1, Independence Day on May 24, Martyrs' Day on June 20, Beginning of Armed Resistance Day on September 1, and (Western) Christmas on December 25.

Officially, nowadays, a 24-hour clock exists; Eritrean Time is GMT plus 3 hours. Traditional folk in the country and many

townspeople, however, keep the ancient mode of time reckoning, with a cosmology reflecting nature. They determine approximate time from the position of the sun during daytime. Here the first hour of the day begins at dawn and the twelfth hour ends at dusk. A second 12-hour demi-cycle follows, until dawn.

## 7 RITES OF PASSAGE

Eritreans mark major life events within the religious traditions of either Christianity or Islam. Major Christian rituals include baptism, weddings, funerals, and second funerals forty days after death. As among most of the peoples of the Horn, adult status for the various Eritrean ethnic groups requires a genital operation, with or without ceremony, usually in childhood. Boys are circumcised and girls undergo clitoridectomy, a practice controlling their sexuality. The vast majority of women of Eritrea have undergone this ritual. (For more on clitoridectomy, see Djiboutians section 20.)

## 8 INTERPERSONAL RELATIONS

There are no common greetings shared by all nine Eritrean ethnic groups. However, it is not uncommon for people to hold hands while talking, and to kiss twice on each cheek when greeting. Respect for one's elders is paramount in all behavior.

## 9 LIVING CONDITIONS

Eritrea is one of the world's poorest countries. During 1993 per capita per year income was estimated at between \$70 and \$150, compared to \$330 for most of sub-Saharan Africa. For 2007 this income was questionably estimated at about \$1,000. During the devastating civil war perhaps 200,000 Eritreans were killed; facilities for wage employment—factories, mines, and plantations—were destroyed; and roads, railroads, and port structures were torn apart. At the end of the war, 80% of Eritreans were dependent on foreign food aid. Thus jobs for the multitudes of displaced persons are necessary, but the required development capital is almost nonexistent. Until 1995 the former guerrilla fighters working for the new government collected only a basic living allowance rather than a salary. Additionally, with tens of thousands of returning refugees and the war's desolation, an acute housing shortage exists.

The average life expectancy of Eritreans at birth is 60 years. In 2007 the infant mortality rate was estimated at 45 deaths for every 1,000 live births. In 2003, the incidence of adult HIV infection was an estimated 2.7%

A highway network connects all the cities of Eritrea with Ethiopia and Sudan. The 95-cm-gauge Eritrean Railway, destroyed during the civil war, is reconstructed from Mitsiwa (Massawa) to Asmara, but not yet from Asmara to Akordat. Asmara and Aseb provide air service to the outside world. Both Mitsiwa and Aseb have recently improved deep-water ports with cargo-hoisting capabilities and covered storage but which Ethiopia no longer uses. A rebuilt highway from Mitsiwa to Asmara and a new coastal one from Mitsiwa to Aseb enhance foreign trade.

## 10 FAMILY LIFE

Arranged marriages are the rule in Eritrea. Among the Tigray, the contracts governing arranged marriages included provisions for divorce, and it is not unusual for both men and wom-

en to marry more than once. Women in Eritrea have formed the National Union of Eritrean Women, which has some 200,000 members.

## 11 CLOTHING

Eritreans in urban areas wear Western-style clothing. A common traditional costume of men and women in both Eritrea and Ethiopia is the *shamma*, which consists of a large piece of cotton cloth wrapped around the body to form a dress-like garment, with a smaller piece of the same fabric used for headgear, either a scarf or hood. The cloth has a brightly colored, decorated border, sometimes including silk in the weave, which is arranged at the hemline. Plastic sandals are the most common footwear among Eritreans. In some areas of Eritrea, men and women wrap a piece of cloth around their waists and knot it to form a skirt-like garment; this may be worn with or without a shirt or other top. In the torrid Danakil region of the Afar, women are nude from the waist up. A typical hairstyle among Eritrean women is the *shiburba*, in which the hair is worn braided across the top and sides of the head and loose at the back. Many Christian Eritreans have crosses tattooed on their foreheads. In rural areas, some married women wear gold bands in their noses.

## 12 FOOD

Among the main dietary staples in Eritrea is a flatbread made from a native cereal grain (called *teff* in Amharic and Tigrinya) and eaten with a spicy pepper-laden stew. Other grain staples include barley and wheat. There are many varieties of barley and wheat cultivated, with different ethnic groups growing different types. Tigrayan varieties of wheat include *desaleny* and *ayiquertem*, and of barley, *saida* and *saisa*. Sorghum and coffee are both common ancient crops; safflower, a native oil seed, and an ancient form of flax are both cultivated for oil and food. Chick peas (known as *shimbra* to Tigrayans) are an important food staple. Goats, sheep, cattle, and even camel meats are relished, depending on the ethnic group. Coffee is drunk, with a pinch of salt, often in elaborate ceremonies of coffee preparation for honored guests. During the course of a fragrant half-hour, red coffee berries could be plucked from the tree and roasted on a griddle. The blackened beans are then ground in a mortar, and the grounds are boiled in a pot. Finally, the black liquid is poured into cups and enjoyed as a social occasion.

## 13 EDUCATION

The estimated literacy rate in 2003 for Eritreans was about 59%. Islamic Koranic and church schools traditionally have instructed a few males in literacy. Those becoming Islamic or Christian clergymen received advanced education in religious schools. Some of the monastery sites of higher education date to the beginnings of Christianity. Since 1941, secular government schools were developed somewhat and then curtailed by the civil war. By 1964, as the civil war began its intensity, about 200 elementary and 9 secondary schools had some 44,000 pupils. In 1973 Eritrea possessed 17 secondary schools. As of 1994, about 42% of children were enrolled in elementary school. There were 37 pupils for every teacher and 68 for every textbook. In the early 21st century, over 800 schools provide instruction, with a university and a technical institute providing post-secondary education.

*A common traditional costume of men and women in both Eritrea and Ethiopia is the shamma, which consists of a large piece of cotton cloth wrapped around the body to form a dress-like garment, with a smaller piece of the same fabric used for head-gear, either a scarf or hood. (Cory Langley)*

#### **14 CULTURAL HERITAGE**

Tigrayans have a 3,000-year-old literary tradition, and have practiced iron metallurgy for over 2,500 years. Traditional musical instruments of the Eritreans include pipes, harmonicas, and the *kirir*, which resembles a guitar. The Tigre people have a sacred artistic tradition within Christianity that includes music (directed by monastically trained men) as well as Biblical illumination, scroll making, and icon painting.

#### **15 WORK**

About 85% of all work resides in the traditional agricultural sector, comprising cultivation of crops and husbandry of livestock. The average Eritrean remains a ruralist, unaccustomed to the demands of working in the modern cash economy. A few large-scale commercial farming enterprises exist, producing cattle, cotton, sisal, tomatoes for canning, and garden vegetables. Modern industries providing wage employment include textiles, tanning, leather and plastic shoes, fishing, and salt production. In addition, small enterprises abound, such as oil-seed pressing, flour milling, soap making, plastic container fabricating, and tire retreading. Eritrea smelts steel from the many Soviet military vehicles littering the countryside, thus beating swords into plowshares.

The rebuilding of the Eritrean Railway is developing groups of skilled craftspeople—machinists, boilermakers, black-

smiths, pipe fitters, sheet-metal workers, welders, electricians, timber sawyers, stone masons, and carpenters. These skilled workers comprise a body of instructors for training the unskilled, unemployed segment of the workforce. Additionally, the schedule and safety demands of railroading help workers develop discipline and work habits they need to be successful in industrial settings.

#### **16 SPORTS**

The majority of Eritreans are traditional rural cultivators and pastoralists with little opportunity for sports. Among those who enjoy sports, soccer is the most popular. During the war for independence, rebel fighters would gather to watch matches. A traditional game among the Afar is *kwosso*, in which the goal is to keep a ball made of rolled goatskins (resembling a soccer ball) away from the opposing team. Eritrean athletes compete in international track and field events and become national heroes. Bicycle racing is a popular spectator sport centering on the killing Tour of Eritrea, from the coastal desert up the steep escarpment almost 2,440 m (8,000 ft) to the summit and, then, downgrade to Asmara.

#### **17 ENTERTAINMENT AND RECREATION**

Urban dwellers, especially teens, enjoy dancing at clubs. Today the main boulevard of the capital city, Asmara, is lined with

*The Tigrayan people weave coarse grasses into baskets. (Cory Langley)*

open-air cafes, bars, and patisseries. Television is available in Eritrea, with broadcasting in Tigrinya and Arabic. There are also radio broadcasts, as well as government controlled newspapers. These print media are mainly enjoyed by the educated elite, however. The majority of Eritreans do not participate in recreational activities in the Western sense.

### **18 FOLK ART, CRAFTS, AND HOBBIES**

Among the typical Tigrayans, little exists in the way of arts and crafts, except for weaving coarse grass mats. Church art and written music among priests and monks are exceptions. The concept of a hobby is unknown and not applicable to these people.

The Tigrayans practice *Qene*, an intellectually challenging spoken duel using especially composed poetry verses. At wedding and other occasions, Tigrayan men perform a dance that includes jumping rhythmically up and down while singing. Songs may be traditional, or newer, such as “Addis Abeba” (“New Flower”), after the capital of Ethiopia founded in the 1880s.

### **19 SOCIAL PROBLEMS**

To minimize ethnic divisiveness, the Organization of African Unity resisted all separatist movements on the continent until the 1990s. The separation of Eritrea from Ethiopia marks the first redrawing of borders in Africa, a continent with over 1,300 ethnic groups, some of which at times are fratricidal. The leadership of Eritrea faces the challenge of marshalling the

country’s diverse peoples to build an economically viable and politically secure state, with almost no financial and material resources.

In the wake of its devastating civil war and the war of 1998–2000, Eritrea faces the challenges of continuing to repair its damaged infrastructure, finding employment for the former rebel fighters, and providing services for the many thousands of people disabled in the fighting. Other social problems include a low per capita income, lack of medical facilities, a housing shortage, and a large part of the population in the armed forces.

### **20 GENDER ISSUES**

Cosmology is a view of the ordering of the world, a blueprint of the way things are. With their religious cosmologies, humans reduce the seeming chaos in the experiential world to a purported, often logically circular, meaningfulness. Cosmology allows an apparent certainty for action and thought and an apparent guide for rational behavior, including gender relations. Throughout the Horn of Africa, socialization into the male and female genders is reinforced in the core aspects of a cosmology such as its values, norms, statuses and roles, and etiquette. Gender is the socially learned cultural overlay a society places on biological sex, either of the two categories in which humans are divided regarding reproductive functions. In other words, gender means what it is to be male or female and just how “male” or “female” one should be.

For Eritreans of various ethnic groups, the creator god of each people is a male. For the Christian Tigrayans and Muslims, he is the God of Abraham (named, respectively, Egziabher [Lord of the Sky] and Allah [the God]); for the Afar, he is Wak; and for the Kunama, he is Anna.) In each religious cosmology, he intends males to dominate women, deemed to be the lesser of the two sexes. Women were created by god for the purposes of obeying and serving their husbands, including by rendering domestic services and bearing and nurturing children for them. Males have a monopoly on controlling religious knowledge. Men alone become religious practitioners who interpret the cosmology providing the matrix of a culture.

In Islamic societies the low status of women stems largely from pre-Islamic patriarchal (control by males) traditions rather than directly from the more recent Quran. However, in Islam and Eritrea’s pre-Islamic religions, blood from menses is believed ritually polluted. Whatever the root source, in Islam women’s rights are constricted. Accordingly, in these cosmologies, women are viewed as potential ritual polluters of humans and nature. Such views help rationalize the holding of religious and political power exclusively by men.

Religious cosmology contains myth, or an explanatory “history” of supernatural and human beings who were or are important actors in a particular cosmic concept of the universe. Myths are sacred tales, passed from generation to generation, with dogmatic rather than verifiable content. Myth not only explains cosmological states and processes, it justifies the orders of things in the world. For example, Eve is the originator of sin; therefore, women are punished in childbirth by labor pains. In some accounts Eve (woman) is a mere derivative of Adam (man). Especially in its mythic aspect, cosmology supports and either realistically or symbolically exemplifies the core values and norms in a culture. In turn, cosmology and its

related values are reflected in and reinforced by ritual, for example, a father giving a bride to the groom.

As they relate to values and norms, most cosmologies contain moralisms, or ideals of conformities with generally accepted standards of goodness in character and behavior. Myths often reinforce charters or explanatory rationales for the reason why things are the way they are. In this way the institutions and social order of a society are vindicated. Given the existence of a particular background cosmology for a society, a monocultural person rarely looks beyond the “proofs” engendered by the elements of this worldview, including for gender. Socialized to a particular cosmology, a person consciously and unconsciously selects, rejects, and fits information to fashion a satisfying consistency regarding his or her world vision. Accordingly, males and females in patriarchal and other societies, such as those in Eritrea, do not believe but, instead, know the social and ritual superiority of men over women. (For some thought-provoking gender issues, see Djibouti, section 20.)

# ETHIOPIANS

**PRONUNCIATION:** ee-thee-OH-pee-uhns

**ALTERNATE NAMES:** Abyssinians

**LOCATION:** Ethiopia

**POPULATION:** 52 million

**LANGUAGE:** Amharic; English; French; Italian; Arabic; various tribal dialects

**RELIGION:** Coptic Monophysite Christianity; Islam; indigenous religions

**RELATED ARTICLES:** Vol. 1: Afar; Amhara; Fulani; Oromos; Tigray

## <sup>1</sup> INTRODUCTION

Evidence of Ethiopia's past reaches back to the dawn of human existence. The 1974 discoveries of paleoanthropologist Dr. Donald Johanson and his team first revealed an ancient female ancestor of humanity that he named Lucy. She was found in the northeast quadrant of Ethiopia in the Awash river valley at a site called Hadar. She was dated at about 3.5 million years old and was a member of a prehuman species called *Australopithecus*. The casts of her bones now reside in the Cleveland Museum of Natural History. Her actual bones are locked in a large vault in the National Museum in Addis Ababa, the capital city of Ethiopia. Subsequently, many other bones were found of the same age and were called Lucy's family. In 1992–94, paleoanthropologist Dr. Tim White and his team found even older bones, discovered 45 miles southwest of Hadar, which now has brought our ancestry back to possibly 4.5 million years ago. More recently, paleoanthropologist Dr. Yohannis Haile Sellassie and his team, also working in the Afar region discovered remains that reach back more than 5 million years to the chimpanzee-hominid species boundary. These exciting discoveries teach us much about not only how old our prehuman ancestors are, but also that we all emerged from a common ancestral family. Ethiopia is the homeland of us all.

For millennia primitive peoples hunted and gathered their subsistence in the resourceful valleys and highlands of what we now know as Ethiopia. The word "Etyopya" is from the ancient Greek meaning "The land of people with burnt faces." It was an area of continuous population movement. Peoples from the Saudi Arabian mainland crossed the narrow straits of the Bab el Mandeb at the southeastern extremity of the Red Sea bringing their culture and technology with them and settled into the northern reaches of Ethiopia. Peoples of the Sudan to the west and the peoples of the desert to the east were also in a state of migration and many found Ethiopia to be hospitable and they settled among and mixed with populations who originally came from other lands. A major factor encouraging these movements and settlement was trade. Food items and spices, salt bars used as currency, gold and precious stones, domestic animals and wild animal skins, and slaves; material goods found in one area and not in other areas became sought after and stimulated the migrations of traders and their families and the growth of market towns. This activity has persisted for 2,000 years and continues into the present.

Peoples of the vast rolling highland plateau, commonly known as Abyssinia, found rich volcanic soils to grow their crops in an abundance that permitted large aggregates of peo-

ple to live together. With such large groups of people complex political organizations formed. Centralized kingships became a dominant type of institution, which to the observer, looked something like the feudal systems of the European middle ages. Until the 19th century these autonomous fiefdoms were dominant in the highlands. Then in the mid-19th century, Emperor Menelik consolidated these fiefdoms and many other tribal groups into one empire. This consolidated empire was a continuation of a long line of Abyssinian emperors that lasted until 1974, when Emperor Haile Sellassie I was overthrown in a bloody revolution that persisted until 1991, when two major northern peoples swept down and took power and formed what the new government calls a "democratic" revolution.

## <sup>2</sup> LOCATION AND HOMELAND

Ethiopia is situated on the eastern "horn" of the African continent. It is bound by the Red Sea to the northeast, Sudan to the west, Kenya to the south, and Somalia to the east. A great cleavage in the African continental plate runs south from the Red Sea all the way into the Indian Ocean. This major geological formation is known as the Great Rift Valley. In Ethiopia, the Great Rift Escarpment forms what is considered to be one of the more spectacular regions on earth—at 14,000 ft one can look straight down into an abyss of fog and clouds and hear the eagles, hawks, antelope, ibex, monkeys, and hyenas calling in the distance below. Looking out onto the valley's lowlands, when the afternoon winds have blown the fog and clouds away and before the rains come in the late afternoon, one can see the desert lowlands with vast, steep-walled mountains rising from the valley floor some 3,000–6,000 ft. These are called *amba* and are the remains of extinct volcanoes that accumulated gradually over a period of thousands of years.

To the south in the Great Rift Valley, one finds steaming thermal lakes where underground water broke free with quaking earth and came to the surface, creating a series of lakes extending down through sub-Saharan east Africa. The lush forests of southern Ethiopia, its rich alluvial river and lake soils, and the plentitude of fish and land animals and birds, provided ample food resources for numerous tribal peoples who still inhabit this region and sustain cultural traditions that reach back 10,000 years. Today, within the national boundaries of Ethiopia some 52 million people reside, comprising more than 80 separate cultures and languages.

## <sup>3</sup> LANGUAGE

Since it was the Amhara people who dominated vast regions of Ethiopia for some 2,000 years and maintained a line of kings governing Abyssinia, their language, Amharic, has become the dominant language of the country. It is a Semitic language, having similarities to both Arabic and Hebrew. Because of the significant influence of Great Britain from the 19th century onward, and because of the presence and influence of America in the 20th century, English has become the second dominant language of this country. Generally, both Amharic and English are the languages of business, medicine, and the academic disciplines. But language and culture in Ethiopia are very complex because of the many other linguistic and cultural influences. One finds a family of northern languages in Eritrea. The Cushitic family of languages are spoken by a majority population of Oromo peoples in the central regions of Ethiopia. The desert-dwelling peoples of the southeast speak dialects of

Somali. In the south and southwest we find the Omotic family of languages spoken by numerous smaller tribal groups. Many of these languages, especially those spoken by the minority tribal groups, have no written traditions, and the cultures of these peoples are carried on by oral traditions. They are called nonliterate cultures, but there is no devaluing of these peoples because they exist without writing. One language of Ethiopia is not spoken by any cultural population at all. It is called Geez, an ancient Ethiopic language used in Coptic Christian religious contexts by the clergy. Scriptures are written in Geez, and prayers, chants, and songs are uttered in Geez within the Ethiopian Christian Church. Geez functions something like Latin in the Catholic religion.

Languages from the West are also well recognized: French because of French enterprises in the early part of the 20th century, building a railroad and establishing schools, and Italian because of the Italian occupation during World War II. Today most automobile and refrigerator parts have Italian names. Arabic is a dominant language of business among people dealing in commerce with Arabia and the Middle East.

#### 4 FOLKLORE

Every culture has its own body of folklore, myths, legends, song, poetry, stories, and parables, all revealing the identity of the culture and the common sense of morality and tradition among the people of that culture. It would take an encyclopedia of folklore to illustrate the examples from the many cultures of Ethiopia. Here, one myth, the Abyssinian story of Solomon and Sheba, may serve as an example of the usefulness and significance of myth and folklore in one particular culture.

Meqdes, Queen of the land of Sheba (in Amharic she is also known as Saba), knew of King Solomon's great wisdom and wished to visit him in the land of Israel. So she summoned a businessman, a trader who traveled far and wide and knew the paths to Israel. She gave him delicate perfumes and scents from a variety of barks and flowers and sent him to offer these to King Solomon, who accepted them with curiosity and anticipation, wondering about this new queen from the land of Ethiopia. The trader returned with the good news that King Solomon would be interested in meeting her. She gathered her retinue of handmaidens, cooks, body guards, and slaves and set off to the land of Israel by boat up the Nile and by camel across the great deserts.

King Solomon personally greeted Saba at his gate and they introduced themselves. Solomon invited Saba and her retinue to a great feast. Then the King invited Saba to sleep with him. The Queen refused politely but with resolution. That night, King Solomon took Saba's maidservant to bed with him and they sleep together. The next evening King Solomon and Saba dined together. The King had instructed his cooks to make the food very spicy and salty. Then that night, the King invited Saba to sleep with him, promising not to touch her so long as she does not take anything belonging to the King—if she did, he could have her. Saba agreed to this and went to bed with King Solomon. That night Saba awoke with a great thirst and drank some of Solomon's water. He caught her and reminded her of their agreement. They slept together and he impregnated her with new life.

The Queen of Sheba returns to her land and in time bears a child, whom she names Menelik. As Menelik grows through

childhood, Saba, also known as Meqdes, teaches him about his father, King Solomon, and he draws a picture of his father to keep near as a remembrance. As a young man, Menelik travels back to the land of Israel to meet and know his father. Menelik, who will succeed his mother to the throne of Sheba in the land of Abyssinia, remembers the great ark and the tablets that were handed down by God to Moses on Sinai. He arranges with his retinue to have the Ark of the Covenant taken from its place and brought back to the land of Sheba without the knowledge or consent of the Israelites. Back in his native land, Menelik installs the Great Ark in the Church of St. Mary at Axum, thereby sanctifying the land of Sheba and legitimating the origin and royal line of the Solomonic dynasty.

This myth exists to this day. It is a very important myth because it gives the Abyssinian peoples a sense of historical identity. It also legitimated or justified the emperor's right to rule by linking the Abyssinian people with God, Moses, and the Holy Ark of the Covenant—the critical link being Menelik, sired by King Solomon, who was of the royal line of kings sanctioned and blessed by God. And, if you read closely, you can get a bit of the flavor of Abyssinian culture: the sending of sentient gifts to beg an invitation, Solomon's craftiness at having conjugal relations with Meqdes, the Queen of Sheba, and Menelik's absconding with the Ark from Israel and installing it at Axum, thereby transferring that great power to his own land. And, as with any culture one studies, folklore is an expression of a people about themselves and how they see and feel about the world in which they live.

## 5 RELIGION

Religious belief and ritual vary with each culture existing within the boundaries of Ethiopia. With over 80 languages spoken, one can find over 80 cultures and over 80 religions. Yet one finds commonalities and overlaps in religious belief and ritual. In general, there are three major religions practiced by Ethiopian populations: Coptic Monophysite Christianity, Islam, and indigenous (or what some people used to call pagan) religion. Ethiopian Coptic Christianity was adopted by the Abyssinian peoples (north central highland populations) in the 4th century. This religion has not changed very much in the almost 2,000 years it has been practiced by Ethiopians of the highlands. This form of Christianity still contains many of the Hebraic and pagan elements that one would expect to find during the time when Christ's disciples were preaching to the villagers of Galilee. If you traveled into the highland countryside today and mingled with the peasantry and came to know their way of life, you would feel as though you were walking into the times of the Old Testament. Ethiopian Christianity is a museum of early Christian life, and for that reason is a very important area of study.

Whereas Ethiopian Christianity is practiced by a minority of the total Ethiopian population, Islam is practiced by the great majority of the Ethiopian population. It must be stressed that each culture practices their religion in their own way and makes many distinctive interpretations that other cultures do not share. So one finds many different cultures of Ethiopia practicing Islam, each interpreting the Koran a bit differently, and each with a slightly different nuance of practice from the other. One notable ritual practice is the chewing of *qat*, or *tchat*. This is a plant that grows in proliferation and is a multi-million dollar industry in Ethiopia with exports to several Middle Eastern countries. The leaves are most often bitter to the taste and provide a mild stimulant that can keep one awake through the night. Often these people will work very hard at their jobs of trading or farming through the morning, and then at noon they will cease their work and chew for the rest of the day, socializing, praying, and attending to nonessential business.

The third major category of Ethiopian religion is indigenous religion. This is a generic term for the ancient religions practiced often by tribal peoples who live by 10,000 year old traditions. Sometimes one finds the overlay of a Protestant religion taught by missionaries living amongst a particular people, or a thin appearance of Islam which came as an outside influence. But, these ancient religions have served the people well, adapting them to the world and allowing them to survive with vitality and spirit to this day.

One cannot leave issues of religion without mention of the Falasha, or Bete Yisroel, the Hebraic people of Ethiopia who practice an ancient, pre-Talmudic form of Judaism. From the 11th through the 13th centuries these people formed a powerful political entity in the very high reaches of the Semien Mountains and for a period of time controlled the Abyssinian population. Because they were vanquished by the Abyssinians at the end of the 13th century, they became landless and made their living working in metal, clay, cloth, and tanning hides. They existed as a despised caste group that other peoples were, nevertheless, dependent upon because of their fine crafting skills. Because of the upheavals of famine and civil war—at one point they were caught in the crossfire of that war—and

because of high-level political manipulations, two massive Israeli airlifts brought the majority of these people to Israel, their promised land.

## 6 MAJOR HOLIDAYS

Although the majority of holidays are of a religious nature—and they are numerous—there are some secular holidays recognized by all Ethiopians alike. The Ethiopian New Year is celebrated in September because they use the Julian calendar, which contains 12 months of 30 days, plus a 6-day “month” which ends their year. New Year's Day is a time of celebration, during which the people slaughter chickens, goats, and sheep, and sometimes a steer. They welcome the New Year with singing and dancing. The other major holiday today can be translated as “Freedom Day” or “Independence Day,” and celebrates the northern fighters sweeping down into Addis Ababa and ousting the former dictatorship after a 30-year civil war. During both holidays there are parades, feasts, and dancing to the traditional Ethiopian music.

## 7 RITES OF PASSAGE

Birth is not a very significant time for rites of passage in Ethiopia, because the family is anxious about the survival of the newborn and does not know whether their god will take the infant or let it gain strength through childhood. Infant mortality may vary between 20% and 40% depending on the particular people and where they live. For the Christian and Islamic groups, genital cutting marks a rite of passage into the religious world and provides cultural identity for the boys and girls involved. For the boys it is a simple circumcision ceremony. For the girls, depending on the cultural group, her operation may vary from an excision of the labia minor or clitoral hood, to a more radical clitoridectomy. For many groups in Ethiopia, marriage is a significant event in which the couple assumes the full responsibilities which include work roles and the rearing of children who will carry on the family name and maintain the family estate.

Among the highland Ethiopians, the virginity of a bride is considered extremely important, and her virginal blood must be in evidence upon the marital bed sheets before this first marriage is legitimated. The funeral ritual is the other major rite of passage in which the community grieves and celebrates the passing of the spiritual body into the realm of God.

## 8 INTERPERSONAL RELATIONS

Throughout Ethiopia one finds both formal and informal ways of relating to others. The formal method of communication and relation lubricates the busy comings and goings and business of everyday living, prevents potential conflicts from coming to the surface, and provides a threshold through which people may enter into more informal conversation if they wish. Among the Amharic speakers in Ethiopia (most people speak Amharic even if it isn't their mother tongue, because it is the national language), when greeting an acquaintance, one will say *tenayistilign* (“may God give you health for me”), and the other will answer in kind. Then the first speaker will say *dehna neh?* (“you are fine?”) if he or she is speaking to someone familiar. The other will answer, *awon, dehna negn* (“Yes I am fine”). They will question each other about their wives, children, and other close relatives. This can be repeated over and over again several times before they lapse into conversation.

Then, if they are close and wish more of each others' company, there will be an invitation to one's home. It is an honor to be invited because it means you will feast with them and drink beer and liquor, spending hours in warm conversation telling all the news one can remember. Normally, if one is invited to another's home, one should bring a gift. The traditional visiting gifts in Ethiopia include coffee or sugar, a bottle of liquor or honey wine, or fruit or eggs. The giving of food and drink is practically a sacred act.

## 9 LIVING CONDITIONS

Many Americans and Europeans have learned of the drought and famine in Ethiopia which has left parts of that country devastated. However, this is just one part of Ethiopia—the north central region—that has been affected, aggravated by a civil war that persisted until 1991. There are really four major ecological zones that determine particular living conditions for Ethiopians. To the east are the desert nomads, whom *National Geographic* considers to be one of the toughest and most ferocious peoples on earth. They live with their camel and cattle herds in one of the most hostile places on earth, the Afar Desert and Danakil Depression, where temperatures can climb to 140°F. Salt bars are still mined here and sold as currency. In contrast, the great highland plateau rises from 9,000 to 14,000 ft, with fertile soils allowing rich harvests for large populations of Abyssinians living in a fairly complex political system.

Work roles are distinctive among men and women. Women start the day at dawn, get the water, make the coffee, prepare the grains for the day's meals, and care for the children. Men get up a bit later and, depending on the season, will till the soil with plowshare and oxen, allow the animals to fertilize it with dung, harvest the grain crops, and defend the homestead in times of strife. Men usually have much more leisure time than the women. But through the day there is always time for coffee parties and much gossip and lively conversation. Adults and children tell stories by the hearth fires at night and retire between 10:00 pm and midnight. To the south, one finds tribal peoples living in a horticultural ecology, cultivating food-giving plants around the homestead, and whose daily rounds are not too different from the peasant farmers in the highland. The fourth way of life is the urban life, mostly in small towns. Even Addis Ababa, the capital city, is more a conglomeration of villages or neighborhoods with straight-sided, mud-walled houses topped by corrugated iron roofs. The city is teeming with automobiles and large Italian trucks. The presence of preformed concrete buildings marks the establishment of government and big business and a few palaces mark the royalty of an earlier era.

Health is the major problem in the cities, where many diseases flourish in a dense population with very little access to modern medicine because of the poverty and shortage of cash to purchase antibiotics. By World Bank standards, Ethiopia is one of the poorest countries in the world, yet one finds traces of a growing middle class. What is striking to the observer is the contrast between the majority of very poor, many living on the street under plastic, and a noticeable chosen few living sumptuous lives in palatial homes with satellite dishes on their roof tops.

## 10 FAMILY LIFE

Among the Christian population monogamy is the rule, allowing one spouse. Among the Muslim population a man may have up to four wives if he can afford them, but normally one finds men with one wife. Ethiopians love to have large families because children are considered wealth: they are a source of labor; they are social and emotional support; and they are an old couple's social security. Peasant farmer families often live in large extended families in homesteads where each house serves as a room with a special function, such as the kitchen house, the bedroom house, the party house, the toilet house (although most rural people go in the trees), and the guest house; all are surrounded by walls of stone and thornbush to keep out the wild animals, such as leopard, hyena, and wild dog. One will normally find three generations of family living together, sharing the work and the pleasures of family life. Most families have one or more dogs that they keep tied on a short rope (to make them vicious) in order to intimidate intruders who might consider stealing a goat or a chicken or two.

Grandparents are highly valued because they are the teachers of the young. They tell their grandchildren stories of their history, their religion, and the best way to gain power and influence in the community. Women are considered inferior to men, as both men and women will attest. Women are reminded of their inferiority by the physical superiority of their husbands and by God, who has cursed them by shedding their blood every month—shedding their blood the way a warrior vanquishes his enemy.

## 11 CLOTHING

A great variety of clothing can be found in Ethiopia, from the elaborate and colorfully embroidered white dresses of women and the tailored white shirts and jodhpur trousers of men, to the naked tribal peoples of the southwest whose only clothing in the past was iron bracelets, beads, gypsum and ocher paints, and elaborate designs of scars. Today more and more of these peoples have donned clothing, but only as a decoration.

## 12 FOOD

The traditional Abyssinian cuisine is a complex of a variety of foods. The *berebere* is a hot sauce primarily of cayenne pepper but which also includes 12 other spices. It is heavy and rich, cooked with a good deal of butter. The meat that goes with this sauce includes chicken, sheep meat, goat meat, and beef. Pigs are not eaten anywhere in Ethiopia except by the Europeans and Americans. Pork is considered disgusting and is taboo, according to the ancient Hebraic custom. No meal is complete without a variety of fresh vegetables, both cooked and raw. Cheese, like a dry cottage cheese, is eaten, but not to a great extent. Fish is also eaten, though it is not a popular dish among the native Ethiopians. People sit around a tall circular basket (*mesob*) with a flat top, where the large round sourdough bread is laid and the various foods put down upon it. Food is eaten with the fingers—no finger-licking please! At the beginning and at the end of the meal, the hostess will come around with hot steaming towlettes to clean one's fingers. The meal is finished with coffee brewed from locally grown beans. Some of the richest coffee beans found anywhere in the world are produced in Ethiopia and, while some are exported, much are grown for one's own personal consumption and enjoyment.

*In traditional Abyssinian cuisine, people sit around a tall circular basket (mesob) with a flat top, where a large disk of flat sourdough bread is laid and the various foods put down upon it. Food is eaten with the fingers by pinching it and picking it up with a piece of the bread. (Camille Killens)*

### 13 EDUCATION

Traditionally, in the rural regions, which is most of Ethiopia, education was primarily for boys and young men and was accomplished within the domain of the church. Today, government schools dot the countryside and teachers from the capital city and the larger towns go out and take up their professional roles in these schools. In the city and larger towns, schools have always played an important role in the secular education of the children. Today in the city, girls and young women are fighting to be educated. More and more opportunities are opening up for women with the help of international enterprises which are boosting the faltering economy.

### 14 CULTURAL HERITAGE

Traditional Ethiopia boasts distinctive genres of music, dance, and among the Abyssinians, a literature predominantly religious in nature. Its millennia of relative isolation has allowed a unique tradition of music, similar to Indian or Arabic styles, as well as painting which is largely religious and akin to the Byzantine, where we find highly stylized features of people with very large eyes. But today, a growing number of artists are creating powerful images of their times with oil and watercolor and in sculptural forms.

### 15 WORK

In the rural countryside the traditional work of boys and girls and men and women has continued relatively unchanged for 1,000 years. It is the work of farming in the highlands. In the deserts it is nomadic herding of camels, goats, and cattle, traveling from water place to water place in an annual circuit. In the Rift Valley and the surrounding regions of the south and southwest, it is the gardening of horticulturalists, cultivating the *ensete* plant that looks like a banana tree, but whose trunk pulp is prepared and eaten. It is only in the towns and the city that industry and business have proliferated. Most work involves independent shops selling fabric goods, hardware, food, drinks, and numerous coffee and pastry shops, mostly run by women.

### 16 SPORTS

Many Ethiopians are crazy about soccer, normally called “football” as the American version of football is unknown. Ethiopians of the towns and cities are also very conscious of the great talents of Ethiopian athletes in the Olympic sports. The marathon is the forte of Ethiopians. Long-distance running is a very popular sport even at the local level, and Ethiopians, both men and women, are very health- and sport-conscious. But, of course, there are numerous traditional sports that persist: the wrestlers and stick fighters in the tribal south, the whipping battles of the northern would-be warriors, and a variety of children’s ball and stick games found among most peoples of Ethiopia. But, the women are the dancers. They rarely compete in sports. Sport is the arena of young men. Women cheer the men and encourage them to be fierce so they can be proud of them and consider them worthy partners in marriage.

### 17 ENTERTAINMENT AND RECREATION

In the rural countryside children play spontaneously, making animals, dolls, balls, toy weapons, automobiles, and such out of the available resources at their disposal—mud, clay, rags, sticks, tin can scraps, and the like. Male youth engage in competitive sports. Adults drink and talk and dance, especially during holiday celebrations which occur almost weekly in Abyssinian culture.

There are also traveling minstrels—men and women who travel from village to village, town to town, singing bawdy songs and the gossip of the day or week. With their music they invite spectators to sing with them and dance and joke. And in return they “beg” for money, which they receive un begrudgingly, especially from their slightly inebriated audience. In the city of Addis Ababa and a few northern towns one can find movie houses showing B-grade films from America, Italy, and India. Bars and night clubs proliferate, complete with music and dance. Although there is only one television station, video tape rental and VCRs are a booming business.

### 18 FOLK ART, CRAFTS, AND HOBBIES

Throughout Ethiopia, artisans ply their trades, serving both the aesthetic and practical interests of their customers. Workers in clay make biblical figurines, coffee and cooking pots, water jugs, and plates to set food on (but not to eat off). Blacksmiths forge plowshares, iron rings for bracelets, neck ornaments, and items to attach leather thongs to—bullets, cartridge casings, spear heads and knives. Woodcarvers craft chairs, tables,

*Crowded marketplace in Harrar, Ethiopia. Most urban work involves independent shops selling fabric goods, hardware, food, drinks, and numerous coffee and pastry shops. (United Nations)*

goblets, and statuary. Painters paint oil on canvas, traditionally religious images for which Ethiopians are widely known. Modern painters incorporate the traditional art of their culture with their own interpretations of their world today, sometimes with spectacular results. Weavers hand-spin their own cotton thread and weave it into intricately designed cloth and embellish it with highly detailed and colorful embroidery. This is then used in clothing, including scarves, shirts, dresses, and capes.

## **19 SOCIAL PROBLEMS**

Of social problems there are many, so numerous it can be daunting and discouraging for those European national agencies who wish to help. Many Westerners know of the thirty years of civil war in the north, unrelenting drought, widespread famine, and massive loss of life. Add to this the inaccessibility of modern medicine, except for the urban upper class, rampant diseases like tuberculosis, intestinal bacterial infections, and HIV in an overcrowded capital city, unrelieving and ubiquitous urban poverty, widespread prostitution, and homelessness. Crack cocaine has found its way into the capital city. Corruption is present in the commercial bank and other major national institutions. There are uncontrolled violations of human rights in the countryside and in the capital city including politically motivated arbitrary imprisonment without trial, detention and torture, and summary executions.

The Derg regime, which overthrew Emperor Haile Selassie I in 1974, was itself overthrown in 1991 after a 17 year reign ending a 30 year war waged by the northern provinces of Eritrea and Tigray. In 1993 the new ruling government of Ethiopia recognized the sovereignty of Eritrea, sanctioned by the United Nations. Henceforth, a series of military confrontations occurred setting off the Ethiopian-Eritrean War whose precipitating circumstances were disputes over the Ethiopian-Eritrean boundaries in an area of barren, noncultivable land around a few remote towns. Skirmishes continued into 2008 and this continuous warfare is compounded by the Ethiopian Army's incursions into Somalia attempting to bolster the existing government against Islamic rebel fighters. The fighting over national boundaries in the eastern desert Ogaden has strained the Ethiopian Army's forces on all fronts.

As military campaigns continue other agencies are beginning to address these massive social problems. A small group of American Peace Corps volunteers have been installed, small private clinics, funded by Ethiopians, staffed often by doctors from Europe and America, are springing up like mushrooms in the capital city and in larger towns. Faint incursions of foreign businesses are being established and developed in the capital city, which could help pump the Ethiopian economy to some degree. Several reservoirs are planned, some are now being built, and many small dam projects are under construction, especially in the drought-ravaged north. There are several

tree-planting projects under way to begin addressing the problem of a thousand years of wanton tree cutting. There are only faint glimmerings of hope in a country which has been all but forgotten by the wealthiest nations in the world. But the Ethiopian spirit is strong and the children of Ethiopia are vibrant and enthusiastic, nurtured by loving relatives who do what they can to engender promise for the next generation.

## 20 GENDER ISSUES

Since the establishment and stabilization of the new government in 1994 and the subsequent writing of a new constitution, women's rights has been a target issue of government and nongovernmental agencies at all levels. At present there are no less than 15 government agencies dedicated to addressing women's rights issues. There are eight United Nations agencies focused on gender issues and women's affairs. There are 37 international nongovernmental organizations (NGOs) whose projects include the rights of women and the securing of economic stability in women's affairs. Furthermore, there are 47 local NGOs around the country addressing a variety of gender issues involved with economic development, political participation, and health problems which include female genital excision customs.

A group of locally organized agencies under the umbrella title HUNDEE is dedicated to a variety of local concerns including female empowerment, women's rights, food shortage vulnerability, and the integration of a number of agencies for a greater efficiency of operation. A notable influence in Ethiopian affairs is the Women's Affairs Association, or Setoch Guday in Amharic. These women are dedicated to actualizing the newly established Articles of the Constitution declaring equality and empowerment of women in modern Ethiopian society. Their general objectives are to raise the consciousness of women regarding their rights, to inform a variety of agencies as to women's rights, conduct research into the status of women, conduct training groups teaching strategies for asserting the rights of women, build economic cooperatives to provide economic independence in the hopes of diminishing the incidence of prostitution, and to extend the reach of women's associations in order to implement women's constitutional rights.

# EWE

**ALTERNATE NAMES:** Eibe, Ebwe, Ehwe, Efe, Eve, Eue, Gbe, Vhe, Krepe, Krepi, Popo

**LOCATION:** Ghana, Togo, Benin

**POPULATION:** 3.1 million people

**LANGUAGE:** Ewe

**DIALECTS:** Anglo (Anlo, Awlan), Awuna, Hudu, Kotafoa,

Adan, Agu, Aveno, Be, Gbin, Ho, Kpelen, Togo, Vlin, Vo.

**RELIGION:** Christian and traditional religion

## <sup>1</sup> INTRODUCTION

The Ewe are a people found primarily in three countries of West Africa, namely Ghana, Togo, and Benin. They are concentrated in southeastern Ghana east of the Volta River, in southern Togo and the southwestern portion of Benin. They are a collection of a group of people who speak Ewe as the main language, but with different dialects. Each group is also known by a different name, such as Anglo (Anlo, Awlan), Awuna, Hudu, Kotafoa, Adan, Agu, Aveno, Be, Gbin, Ho, Kpelen, Togo, Vlin, Vo, and so on. Other slightly different cultures that are closely related to the Ewe include the Adja, Oatchi, Peda, and Fon. Even though these other groups speak languages that are incomprehensible to Ewe, they are considered to be part of the Ewe cultural group.

Although the Ewe people are said to have originated from present-day southern Togo in the Tado region, it is thought that the original group of Ewe migrated south from Nigeria to their present area at some time in the 13th century. The Adja Kingdom of Tado in southern Togo, situated along the Mono River, is an area that has been constantly populated since prehistory and is well known for its metalworking and other crafts. Most Adja people today still live in and around Tado. The Ewe and Fon are considered to be the descendants of the Adja people who migrated from Tado and intermarried with other groups as they moved in different directions towards southeastern Ghana and Benin.

In the 18th century, as Europeans began to explore West Africa, the Ewe came into contact with this new group, who instituted a new type of trade: slavery. The Ewe homeland was strategically located for the Atlantic slave trade. The Dutch, English, and the Danes all traded in slaves from this region, making it a center for the Atlantic slave trade. Some Ewe groups were middlemen in capturing other unfortunate ethnic groups, including some of their own, to be sold into slavery to the Europeans, who transported them to the New World in North America. Once slavery came to an end, the Ewe people fell under British colonial rule in Ghana and German rule in Togoland, on the Togolese side. When the Germans lost World War I, Togoland was given over to the French as a protectorate. Thus, the Ewe people, as is the case in most African countries, find themselves split into two: the Ewe of Ghana and the Ewe of Togo. The Ewe people of Ghana are aligned with the British while those of Togo are aligned with the French.

## <sup>2</sup> LOCATION AND HOMELAND

As noted above, the Ewe people are located in three different countries, with the majority found in Ghana and Togo and a few in Benin. They are located between the Volta River in

Ghana and the Mono River (to the east) in Togo. The Atlantic Ocean forms the southern boundary. The northern boundary is just past Ho in Ghana and Danyi on the western Togolese border all the way to Tado on the eastern Togolese border. The Fon and other related ethnic groups are concentrated in the southeastern part of Benin. As such, extended families may find themselves in two different countries.

In terms of climate and geography, the Ewe homeland has several distinct features as one moves from the coast into the interior of these three countries. The coastal zone is generally flat with many palm trees, from which palm oil and palm wine are obtained. Immediately inland there is swampland, lagoons, and small lakes, which provide much needed aquatic resources, such as fish. Immediately after this zone of lagoons there is a rolling plain, characterized by red lateritic and sandy soils, followed by the forest zone at an elevation of about 700 meters above sea level. Temperatures are quite high along the coastal zone as well as inland, ranging from 20–35° C (68–95° F) throughout the year. There are mainly two seasons: the dry and rainy season. The dry season runs through November to March while April through May and September through October are characterized by heavy rains.

## <sup>3</sup> LANGUAGE

The language of the Ewe people is also known by the name Ewe. It is a Niger-Congo language spoken in Ghana, Togo, and Benin by approximately five million people. It is a national language in Togo and Ghana. Ewe is an umbrella term of a collection of dialects and/or related languages referred to as Gbe languages, which are spoken from the eastern portion of Ghana all the way to the western part of Nigeria. In addition to Ewe, Fon and Aja are two other principal languages of the Gbe cluster. There is no question that the Ewe, Adja, Guin, and Fon languages are very closely related, all originating centuries ago with the people of the royal city of Tado. Numerous dialects exist inside the family of Ewe proper, such as Anlo, Kpelle, Danyi, and Be. Adja dialects include Tado, Hweno, and Dogbo. Fon, the language of the Kingdom of Dahomey, includes the Abomey, Xweda, and Wemenu dialects.

In linguistic terms, Ewe is a tone language much like other Gbe languages. When the first missionaries came to Ewe homeland during the 18th century, they transformed Ewe into a written language, using the Latin alphabet with some extra letters derived from the International Phonetic Alphabet to represent certain sounds. In terms of tone and nasalization, an *n* is placed after vowels. Tone is generally unmarked, except in some common cases, which require disambiguation, e.g. the first person plural pronoun *mi*, “we,” is marked high to distinguish it from the second person plural *mi*, “you,” and the second person singular pronoun *wò*, “you” is marked low to distinguish it from the third person plural pronoun *wo*, “they/them.”

## <sup>4</sup> FOLKLORE

Ewe culture and tradition is rich in folklore, poetry, myths, and songs. The Ewe groups in present day Ghana note of their escape from their original homeland in Togo to establish themselves in their present location. The escape, which happened in the 15th century, is commemorated in an annual festival known as the Hogbetsotso Za. Today, many of the stories told in folklore recite the impact of the Atlantic slave trade on their

society. The frequent raids for slaves by European slave traders, who would navigate their ships easily to the shores of the ocean for their human cargos, left an indelible mark on the memory of the Ewe people. Thus, oral tradition, such as folklore, myths, and songs, recant the loss of entire settlement populations.

Folklore and poems teach society about the virtues of valor, hard work, and a common purpose and destiny. For example, a poet or storyteller might refer to the leopard, an animal used throughout Africa to symbolize skill, cunning, and physical strength. It may also be used to indicate royal, political, and spiritual power. Another story talks of the headless crab, a narrative that establishes the crab's origin and its moral significance for the present. Narrated to children, it is a cautionary story that suggests to the children the need to know how to manage relationships with friends. The story of the jealous twins shows the perils of competition within the family and, more specifically, betrayal among brothers. It explores the contradiction inherent to peer-relationships in the family. Siblings from the same mother/parentage (here epitomized by twins) are expected to feel the strongest bond and to take care of each other and their family, but at the same time, each brother has to assert himself individually.

Other stories use the omnipresent *kente* textile, a specialty weaving skill of the Ewe people. Furthermore, names of settlements in Ewe folklore might refer to the rich natural resource base and beauty of the landscape in the Ewe homeland. For example, Keta, one of the early settlements of the Ewe in Ghana, means "the head of the sand," referring to the fertile, sandy soils around the settlement. Denu, which means "the begin-

ning of palm trees," is an important plant that provides palm oil and palm wine.

## 5 RELIGION

In their traditional religion, the Ewe believe in the existence of a supreme being called Mawu, who created everything in the world. Associated with the sky, Mawu is remote from the daily affairs of man, leaving that to lesser deities. For example, one of the lesser gods is Torgbi-nyigbla, the head of the nature gods (*tro*) associated with war and thunder. They also practice Afa divination and the Legba cult, which include deities such as *dulegba* (settlement protector) and *alegba* (individual protective deity). There are other deities who come from outside Eweland, such as *vodu* and *dzo* (amulets). More importantly, the Ewe people denote Se as the word for law, order, and harmony, and see the deity Se as the maker and keeper of human souls. Se is also considered to embody destiny.

As noted earlier, Eweland was at the heart of the trans-Atlantic slave trade, in which thousands of Ewe and Fon people were taken to the New World. The slaves took many aspects of their religion with them, so much so that they have transformed Catholicism to reflect this heritage. For example, aspects of Fon and Ewe religion are imbedded in Christian cults in Haiti, Brazil, Cuba, and Jamaica, where voodoo (vodoun) and the cult of Shango are practiced, just to mention a couple of examples. In Eweland itself, the arrival of Christian missionaries introduced a new religion: Christianity. Today, the majority of Ewe people declare themselves to be Christian, although most Ewe are concurrently involved in both Christian and traditional religious practices.

## 6 MAJOR HOLIDAYS

In addition to national and/or Christian holidays, the Ewe people have had their own traditional holidays, some of which are still observed today. Examples of these holidays include the Yam Festival, their own New Year celebration that falls in September, and other remembrance days for the dead. The annual festival of Hogbetsotso Za commemorates the day the Ewe fled from their homeland in Togo because of the harsh rule they endured at the hand of one of the kings. Government sanctioned national holidays in Ghana include January 1 (New Year's Day), March 6 (Independence Day), May 1 (Workers' Day), July 1 (Republic Day), December 25 (Christmas Day), and December 26 (Boxing Day). There are other Christian and Muslim holidays that are also observed by the adherents of each religion.

## 7 RITES OF PASSAGE

Many African cultures have initiation ceremonies that mark the rite of passage into adulthood. The Ewe people are no exception in this regard. Among the Ewe, initiation ceremonies for men and women or boys and girls are in line with their beliefs in a supreme being and lesser deities. Boys are circumcised and named on the seventh day after birth, while infant girls are named and welcomed into society by having their ears pierced on the seventh day after birth. Men and women are initiated into the many traditional cults (the most famous of which is voodoo or vodoun) as members or as priests and priestesses of the many deities in Ewe religion. Some individuals are initiated into the various guilds, for example, the weaver's guild.

The pantheon of lesser deities in Ewe religion includes Yewe, Afa, Eda, Nana, and Mamiwota, with the first two as the most popular. Individuals are also initiated into a specific cult under a specific deity, to whom they will then direct their worship. If one is initiated under Yewe (the god of thunder and lightning), that individual is given a new Yewe name, and the old name is discarded and can never be used again. However, those who pledge their allegiance to Afa (the god of divination) keep their original names after being initiated into the Afa cult. Music and dance are at the heart of all the initiation ceremonies, with much jubilation and festivities at the end of the initiation. Some of the initiation rituals of Ewe cults are elaborate and extremely painful. For example, an initiate into the voodoo cult can be isolated for a minimum of two months and a maximum of nine months. The initiate is sequestered in an initiation hut, where he or she remains physically, socially, and psychologically isolated from the community at large. During the period of seclusion, they learn the culture of their cult, including its songs and dances while speaking only the language of the cult. Scarification is another aspect of the initiation process, where detailed cuts are made on the initiate's back, as well as on the forehead and cheeks.

There are several ways in which an individual can be selected for initiation into some of these cults. In many instances, young females are given to the cult by their families. Should an individual be unwilling to be initiated, she can forcibly be abducted into the cult as directed by the deities and/or spirits of the dead. The view is that the young female initiate is an incarnation of a deceased member of the cult. Women have also been abducted into the cult as a result of transgressions committed against the cult, such as breaking into a cult house or insulting a cult member. Often these cases are resolved through the payment of a fine, but if the person is unable to pay the fine, the cult will sometimes forcibly take the person into the cult. Sometimes individuals are initiated into the cult when they fall ill and are diagnosed as "wanted by the cult." In order to cure the sickness, the person must submit himself or herself to the cult.

## 8 INTERPERSONAL RELATIONS

Interpersonal relations are an important aspect of Ewe society. These are geared toward maintaining a level of communal solidarity and general stability in the village. Conflicts, although sometimes violent, can be resolved peacefully between two feuding groups without the intervention of a third party. Dance and drumming are seen as the fabric that ties the community together in the pursuit of a collective destiny and in the essence of their shared experience. Every member of society is expected to participate in the dance and drumming. Those who refuse to participate in the festivities of music and dance are viewed as excommunicating themselves from society. Punishment of such noncompliance behavior may come in the form of denial for a proper burial.

## 9 LIVING CONDITIONS

Ewe people live mostly in villages and towns and survive on subsistence agriculture and trading activities. Many of the houses are built of mud bricks in a rectangular fashion with grass-thatched walls and roofs. Some houses are built of concrete brick with corrugated iron sheets for roofing material. Along the coastal zone there are numerous huts built of palm-

fronds, with grass or palm-thatch for the roofs. Members of an extended family often live in one compound with a cluster of huts surrounded by a mud wall or palm-frond fence. In both Ghana and Togo, some Ewe people live in large towns and cities, such as Tema and Aflao in Ghana and Lome, Kpalime, and Tsévié in Togo. In rural areas, a large village may have a central market, where on certain designated days people from surrounding settlements may come to trade agricultural produce and other goods.

## 10 FAMILY LIFE

The Ewe people follow the patrilineal system of tracing descent. Members of a clan can trace their descent to a male ancestor. Furthermore, clans can be divided into lineages that are branches in which individuals can trace their descent back to a common male ancestor. Each lineage is led by a male head, who is usually the oldest surviving member of the group. He is in charge of the lineage and its affairs, often having a final say in all decisions and settling any disputes that might arise among the members of the lineage. He is also responsible for the maintenance of ancestral shrines, often acting as the chief priest for the lineage with duties of leading ceremonies, acting as the link between the living and the dead, pouring libations and lifting prayers to the ancestors, and managing common property for the benefit of all members.

The nuclear family, composed of husband, wife, and children, is an integral part of the Ewe lineage even though it is the smallest part. Marriage is considered to be an extended family affair rather than simply between man and woman. Polygamy, the act of a man marrying several wives, is also allowed, although many men prefer to have only one wife. Elders are given a lot of respect and power in Ewe culture, so much so that sons, even when married and occupying the position of head of their respective households, are expected to abide by the decrees of their fathers.

## 11 CLOTHING

The Ewe people are master weavers of the cloths known worldwide as *kente*. The Ewe have a long history of weaving Kente cloth and legend has it that in the Asante wars against the Kpetoe area, weavers were captured who as prisoners of war taught the Asante how to weave. On the other hand the Asante people have their own legend that holds that they learned weaving from a spider.

Kente is the main form of clothing for the Ewe. It can be made into dresses for women or shirts and pants for men. The chiefs often wrap themselves in a large and beautifully embroidered kente cloth. In modern times, Ewe weavers make kente cloth primarily for sale through markets drawing buyers from all over Ghana and surrounding countries. Some of their cloth finds its way to markets in North America and Europe.

Ewe weavers utilize the narrow-strip loom, similar to that used by the Asante, which serves as evidence of mutual influence between the weavers of the two groups. One distinctive type of Ewe cloth features a rich variety of weft float inlaid pictures (in a zig-zag pattern across the width of the fabric) on a cotton background. Often a rich variety of objects, ranging from animals such as cows, sheep, and horses to human figures, ceremonial stools, hats, trees, and flowers, and household objects such as dining forks, are depicted on these cloths.

*Ewe women perform a traditional dance during a funeral in Woe, Ghana. (AP Images/Madison J. Gray)*

## **12 FOOD**

Among the Ewe, forest crops, such as plantain, cassava, cocoyam, and tropical yams, form the basis of the staple food. The starchy foods are pounded into flour to make the staple *akple*, a thick porridge that is taken with okra soup or stew made of common vegetables and some animal protein, such as fish, chicken, and goat meat with palm oil and hot peppers. Palm nut and peanut soups are considered a delicacy. Corn is increasingly becoming an important food crop among the Ewe. In urban areas, rice and bread have become the foods of choice for those who can afford them. Palm wine made from the fermented sap of the oil palm is the preferred drink among the Ewe while those who reside in urban areas feast on bottled European-style beer.

## **13 EDUCATION**

In traditional Ewe society, children are socialized according to the customs and culture of the Ewe as they grow up. The cultural emphasis is on community and individual destiny as dictated by the gods and the spirits. Moral values through stories, myths, and legends are inculcated in the children by storytellers. The arrival of the German missionaries in the 1840s, and later the British and French, added a new layer of modern education among the Ewe. Over the years, Western education has been well entrenched in Ewe society with over 60% of eligible school aged children attending schools from primary through secondary school education to college or university level.

Today, Ewe people are among the highest educated groups in both Ghana and Togo. They consider themselves to be the human resource basket of these countries providing intellectual material at the University level as well as white collar jobs in the civil and private sectors of the economy. In addition to obtaining a modern education, many are naturally gifted in handicrafts, such as tinsmithing, iron smelting, building and construction, carpentry and joinery, weaving kente textiles, and so on. They also pride themselves on their music and for adhering to certain core values, such as honesty and hard work. These skills are a testament to their high levels of attainment of a modern and western oriented education with literacy rates of as high as 60% of the population with the ability to read and write a language.

## **14 CULTURAL HERITAGE**

Music and dance is one of the most enduring aspects of Ewe cultural heritage. The Ewe express their emotions through songs, drumming, and dancing. Songs are an integral part of funerals, festivals, weddings, storytelling, and other happy or sad occasions. When women are pounding yams or cassava into flour to make *fufu* (a hard porridge), they will often sing songs. Fishermen pull their nets with music and farmers will sing while tending to their gardens. Weaving of kente cloth is also an important aspect of Ewe culture that dates back to their origins in this region.

## 15 WORK

Ewe who still reside in rural areas or on the coast and the many lagoons immediately after the Atlantic Ocean still practice a subsistence form of livelihood. Many are still peasant farmers who cultivate crops such as corn, cassava, and yams with some livestock, such as goats and chickens. Those on the coast and in the inland lagoons and lakes engage in artisanal fishing. There is also a great deal of trading that goes on in rural areas largely carried out by women. The highly educated Ewe residing in the big towns and cities, such as Accra and Lome, are employed in the modern as well as the informal economy.

## 16 SPORTS

One of the most enduring sports in traditional Ewe society was wrestling between men. In the modern era, soccer has become the premier sports for the peoples of Ghana, in addition to other European introduced sports, such as tennis, cricket, and basketball.

## 17 ENTERTAINMENT AND RECREATION

To pass time, the Ewe people devised all kinds of activities, which included an assortment of games, dances, and music. The games were and still are enacted with songs, which make them interesting and enjoyable. Many of these games are done during a full moon at night.

## 18 FOLK ART, CRAFTS, AND HOBBIES

Ewe people have a long-standing tradition of arts and crafts. The most important is the weaving of kente cloth, mostly done by men. Pottery is another craft that is done by women. The beautiful pots are used for storing water and cooking purposes. They also have the tradition of iron smelting and smithing to produce various implements.

## 19 SOCIAL PROBLEMS

Social problems among the Ewe are similar to the ones prevalent throughout Ghana. Although the government established the Ministry of Women and Children's Affairs to promote the welfare and rights of children and protect them from defilement, incest, underage marriage, and sexual abuse against minors, violations of these rights continue to take place throughout the Ewe region in Ghana and Togo. The most widespread problem is the use of child labor. Children are used in market centers, for fishing, stone quarrying, and food vending. Female child laborers are particularly vulnerable, as they are sometimes forced into prostitution or are sexually exploited. Underage and forced marriage for girls continues to be a main human rights abuse in some parts of Ghana. HIV/AIDS is another intractable problem for the country of Ghana as a whole in spite of the fact that HIV/AIDS rates have stabilized at 2.7%.

## 20 GENDER ISSUES

Among the Ewe, traditional patriarchal views continue to hinder the advancement of women's rights. Traditional religion, culture, and marriage customs continue to reinforce the low status of women in Ewe society. Women are often denied the right to inherit property or land and many become destitute once the husband dies or once they are divorced. Early and forced marriages for girls are often justified by parents claim-

ing that the girl had been promised to the man when she was young and that the man had spent money looking after her while she was growing up. Women also frequently experience domestic violence. The custom of *trokosi* among the Ewe puts young girls in a constant vulnerable position. Among the Ewe cult system young girls, usually virgins, are offered to shrines to atone for a crime committed by a family member. While in bondage, the girls become not only free labor, but also sex objects for the fetish priest. If the *trokosi* bears a child while enslaved, the child becomes the property of the shrine.

# FULANI

**PRONUNCIATION:** foo-LAH-nee

**ALTERNATE NAMES:** Fulbe; Peuls, Fula, Fulah, Foulah and Fellata (Sudan) and Futa Toro, Futa Jallon or Fulas Pretos (in Guinea and Senegambia), or Bororo in some parts of Nigeria.

**LOCATION:** From the western part of West Africa (Senegambia) to Chad in the east (some groups reaching as far as the Nile river in the countries of Sudan and Ethiopia); largest concentrations in Nigeria, Senegal, and Guinea

**POPULATION:** 12 million

**LANGUAGE:** Fulfulde, Arabic, French, or English

**RELIGION:** Islam

**RELATED ARTICLES:** Vol. 1: Beninese; Chadians; Ethiopians; Guineans; Nigerians; Senegalese; Sudanese

## <sup>1</sup> INTRODUCTION

The Fulani peoples (also known as *Fulbe* or *Peuls*) of West Africa are among the most widely dispersed and culturally diverse peoples in all of Africa. They have a population of more than six million. Many Fulani trace their beginnings to the Senegambia area where, as early as 1000 years ago, they adopted a pastoral livelihood and began moving about with their herds of cattle. By the eighteenth century some had migrated as far east as the Niger and Benue Rivers (now in Nigeria). In the eighteenth and nineteenth centuries, some Fulani populations, which had become devoted to Islam, initiated *jihads* (Islamic holy wars) in several West Africa locales, seeking to spread or purify the Islamic religion. These events figure prominently in the histories of most Fulani groups, especially among those who emerged as religious and political leaders in the new kingdoms that resulted from the wars.

Fulani, a name that originated in northern Nigeria, is the most popular name currently used for these people. The terminology and sayings included in this section are from the Adamawa dialect, spoken in northeastern Nigeria and northern Cameroon.

Today, one finds both nomadic, pastoral Fulani (*mbororo'en*) and settled Fulani (*Fulbe wuro*). The pastoral Fulani (full-time cattle keepers) move about with their cattle for much of the year, while the settled Fulani live permanently in villages and cities. Although these two “types” of Fulani share a common language, origin, and some cultural features, they regard themselves as only distantly related. The settled Fulani are mostly concerned with the Islamic religion, whereas the pastoralists’ concerns are more with their cattle.

The present population of Fulani might be about 12 million, with another wider regional population of various bilingual speakers of Fulani and other local languages. The Kano Chronicle provides a significant historical record to the Fulani and Hausa people they came to dominate in the 18th and 19th centuries during the Fulani jihads. This is most particularly the case of the Fulani jihad of Uthman dan Fodio as well as regional jihads in the Guinea highlands.

## <sup>2</sup> LOCATION AND HOMELAND

Questions of Fulani origins are disputed by scholars, but a solution is that a primordial intrusion took place from the east and then a westward spread, but during the time of the greatest Fulani jihads, return migrations from Senegal also took place. This was especially true with their horse cavalry for conquest periods and with extensive trade networks in periods of consolidation.

The Fulani populations are now found all over the savanna and semi-arid zones of West Africa to the south of the Sahara desert. This area, which has only a short rainy season, is particularly suitable for pastoralism or a combination of pastoralism and agriculture. The general distribution of these people ranges from the western part of West Africa (Senegambia) to Chad in the east, with some groups reaching as far as the Nile River in the countries of Sudan and Ethiopia. The dispersal across the continent occurred while herdsman and their families sought to find better pasture land, to escape conflicts with settled peoples in several West African kingdoms, or to visit the Islamic holy land in the Arabian Peninsula. The largest concentrations of Fulani are in the countries of Nigeria, Senegal, and Guinea, where Fulani were involved in the holy wars and settled down, became the ruling class, and intermarried with the local populations.

## <sup>3</sup> LANGUAGE

Fulani belongs to the sub-branch of Atlantic language family, but there are many loan words from Berber and Arabic. Despite their wide geographical distribution, the Fulani peoples believe they generally belong to the same ethnic group, but with sub-groups and different dialects. The language is known as Fulfulde (or Fula or Pulaar). There are similarities in the grammar and vocabulary of the different groups, but communication among Fulani from different regions is difficult (although not impossible). There are at least five major dialects of this language (Futa Toro, Futa Jallon, and Masina in the west and Central Nigeria; and Sokoto and Adamawa in the east). Thus, for example, a Fulani from Adamawa in Nigeria would only understand a few words when speaking with a Fulani from Senegal. As Muslims, many Fulani can read and write Arabic. Nowadays, many can also speak either French or English, depending on which European country colonized their region.

## <sup>4</sup> FOLKLORE

Because most Fulani are Muslims, much of their history and worldview derives from Islam. Local groups recognize important historical figures who helped spread Islam in their land and acquired additional spiritual and magical powers due to their religious devotion. Moreover, as many communities have lengthy genealogies, recollections (sometimes exaggerated) of important religious and historical figures abound in terms of their wealth, success in battle, devotion to Islam, and superhuman deeds. Despite the significance of Islam, some modern-day Fulani recount traditions of the pre-Islamic origin of the Fulani. These traditions state that cattle, as well as the first Fulani family, emerged from a river, began the migrations across Africa, and gave birth to children who founded the various Fulani groups.

Fictional stories or folktales (*taali*) are popular among all Fulani. Adults or storytellers gather children before bedtime

to recite the stories, which usually have a moral. Among the pastoralists are many stories pertaining to their cattle and migrations. Among all Fulani, stories discuss the adventures of animals such as squirrels, snakes, hyenas, and rabbits, some of which are extremely clever. Some discuss men and women, Islamic teachers, and children. All Fulani groups have riddles, proverbs, and sayings which, together with the stories, are used to help educate children about the culture and practices of the society as well as to entertain them.

An example of a saying in Fulfulde is: *Tid' d'o yod'ad' d'o* ("Work hard and succeed"). An example of a Fulani proverb is: *Hab'b'ere buri ginawol* ("Actions should be judged according to intention" or literally, "Deliberate acts could be worse than insanity").

## 5 RELIGION

As the Fulani adopted Islam, they acquired a set of beliefs about the world and their new faith. They also have obligations as Muslims, such as praying five times a day, learning to recite the holy scriptures (*Quran*) by heart, fasting in the daytime for one lunar month each year, making the pilgrimage (*hajj*) to the Islamic holy land in Mecca, and giving alms to the needy. The most important duty is to declare one's true faith in Islam and that Mohammed was a prophet sent by Allah.

One should note that the Fulani are Sunni Muslims, but are also influenced by the Muslim brotherhoods that are widespread across the Sahel as well as other syncretic beliefs and practices. The intensity of religious belief among the Fulani

varies by membership in those who are more actively engaged in pastoralism and less inclined to be devout and are more syncretic versus those settled Fulani who are more devout and more inclined to be engaged in religious activism and jihads.

## 6 MAJOR HOLIDAYS

All Fulani participate in Islamic holidays (*Id*), namely the feast after the fasting period and the feast of the birth of the Prophet Mohammed. On these days, people pray in thanksgiving to Allah, visit their relatives, prepare special meals, and exchange gifts such as gowns or cloth. Fulani also observe the national holidays of various African nations in which they reside.

## 7 RITES OF PASSAGE

Islam has influenced many Fulani holidays and ceremonies. Shortly after a child is born, a naming ceremony is held in which the child is given a name following Islamic law and practice. Around the age of seven, boys are circumcised, followed by a small ceremony or gathering in their household. Shortly after this time, they begin performing herding or farming activities, sometimes on their own. At this age, girls help their mothers. Also around this time, most children begin attending school. When they are close to puberty, the children socialize in the markets or other communities. Girls are usually betrothed in marriage during their early to mid-teens, while boys remain as *sukaa'be* (handsome young men) until around the age of 20. At that time, they start a herd or obtain a farm and marry with the intent to start a family. Following ceremo-

nies in which the bride and groom are prepared for marriage, the families of the betrothed contract the marriage under Islam. By middle age, a man may be known as a *ndottijo* (elder, old man) who has acquired wisdom over the years.

## 8 INTERPERSONAL RELATIONS

All Fulani have an elaborate code for interacting among themselves and with other people. The code, known as *pulaaku*, prescribes certain morals and etiquette which the Fulani believe distinguish them from other people; some regard it as sacred. *Pulaaku* prescribes *semteende* (modesty and reserve), together with *munyaal* (patience) and *hakkiilo* (common sense, care), which must be shown in public, among one's in-laws, and with one's spouse, all as a sign of respect for the others and for one's own dignity. Fulani thus tend to avoid showing off with people outside their group, although they are supposed to demonstrate kindness (*end'am*) among their kin. The pastoral Fulani may have developed *pulaaku* to help them preserve their economic independence and their identity and to avoid being assimilated into other groups. Nowadays, all Fulani throughout West Africa strongly adhere to this code of behavior. Islam, which also prescribes modesty and reserve, has tended to reinforce this code.

## 9 LIVING CONDITIONS

Among the pastoral Fulani, life can be extremely harsh. They often live in small, temporary camps, which they quickly dismantle as they often move in search of pasture and water. Some move mainly between wet and dry season camps or small villages. Transportation is often on foot, although some families have donkeys, horses, and camels. Because of the settlements' distance from towns, modern health care is not readily available. Traditional healers, whose medicines and practices have been perfected over the centuries, are more commonly consulted.

Fulani who have settled in towns are more inclined to visit modern health-care facilities such as clinics and hospitals than are the pastoral Fulani. In the cities they also have access to modern transportation, including cars and buses, and they usually reside in large family houses or compounds.

The Sahel in general is relatively underdeveloped so that Fulani are facing various difficulties of finding adequate employment in the modern sectors of the economy that require new educational and technical skills.

## 10 FAMILY LIFE

Among the Fulani, life centers around the family. This includes one's immediate kin, such as parents and siblings, but it also includes the extended family (cousins, aunts and uncles, and distant relatives), whose members are all treated as close kin. In the rural areas, these groups tend to live close together and join in work efforts; in the towns and cities, they tend to be more dispersed. Each kin group (*lenyol*) normally recognizes a common male ancestor who lived several generations ago and founded the family.

In the towns, women manage the very large Fulani households and families. Many women are in seclusion due to the Islamic prescription for the extreme modesty of women. Among the pastoralists, the women help support their families through the trade or sale of milk, and they often walk miles each day to the markets or towns to do so.

Marriage is a very important institution among the Fulani. Male family members usually choose a spouse for a child, usually among relatives (particularly cousins) and social equals. This practice helps to keep wealth (cattle and land) in the family and to maintain the moral and physical purity of each group. Polygyny (multiple wives) is not uncommon in Fulani society, as a man's wives all help with domestic work and can bear him many children. They also bring him prestige, particularly if they are modest in behavior and dress.

All Fulani communities have leaders of sorts, known as *ardo'en*, who influence or guide their peoples in an informal manner. Beginning with the holy wars and the settlement of Fulani populations, some individuals have acquired formal power and authority over their peoples and have become chiefs (*laamb'e*). Some of the larger Fulani communities have had emirs (*laamiib'e*) who reigned over their court and subjects in royal fashion.

Fulani traditionally prefer endogamous marriage with parallel cousins, especially patrilineal and they follow patrilineal descent with patrilocal post-marital residence.

## 11 CLOTHING

There are a great variety of dress codes and styles among the different Fulani groups, but all are proud of their beauty and physical features, which in some respects resemble those of North Africans. Typical Fulani features include tall stature, long limbs, light skin, and relatively long and soft hair. In a broad sense, the married men and women follow the Islamic dress code in which modesty is prescribed. The men wear large gowns and trousers and caps, and women wear wrappers and blouses. As a sign of modesty, married Muslim women wear veils when they leave their household.

Pastoral men also wear Islamic dress, but it is not as elaborate as among the settled Fulani men. Women wear blouses and wrappers but not veils. Among the pastoralists, younger men and women adorn themselves with jewelry and headdresses, and they plait their hair. During certain festivals, young pastoral men wear makeup to accentuate their features, including their eyes, their pointed noses, and their lips, which they line with white paint. They dance for the women and sometimes choose a marital partner.

## 12 FOOD

Most Fulani value cattle and their diet usually includes milk products such as yogurt, milk, and butter. They prefer not to slaughter their cattle for food, but purchase basic foodstuffs, including meat, in the market. Each morning they drink milk or gruel (*gari*) made with sorghum. Their main meals consist of a staple food or heavy porridge (*nyiiri*), made of flour from such grains as millet, sorghum, or corn, which they eat with soup (*takai, haako*) made from tomatoes, onions, spices, and peppers, and other vegetables such as okra, spinach, or baobab leaves.

## 13 EDUCATION

From birth, Fulani children receive a rigid education to socialize them into the customs and identity of their society and prepare them for the harsh environment in which they live. All adults and senior children help educate the younger children through scolding, reciting sayings and proverbs, and telling them stories. Children also learn through imitation. In many

A Fulani woman cooks outside her house in the village of Daruga, Nigeria. (AP Images/George Osodi)

communities, children from about the age of six attend Islamic (*Qu'ranic*) school, where they study and recite the scriptures and learn about the practices, teachings, and morals of Islam. Nowadays, settled Fulani children attend primary and secondary school, and some eventually enroll in universities. It is more difficult for the children of pastoral families to attend school, as they are often on the move. In some countries, however, special efforts are being made to place these children in school or to build mobile schools that follow them during their migrations.

#### 14 CULTURE

Among the Fulani, music and art are part of daily life. Work music—with song, drums, or flutes—is found among those in rural areas working in the pasture, the fields, or the market. Court music (drumming, horns, flutes) and praise-singing are found among those in towns, especially in the palace or during festivals. The praise singers discuss community histories, leaders, and prominent individuals, whereas religious singers may cite Islamic scriptures. Most commonly, art occurs in the form of personal adornments such as jewelry, hats, and clothing, and of architecture.

For many Fulani, however, their most important cultural feature is their character or *pulaaku* (as discussed in the section on interpersonal relations). Fulani should be reserved and demonstrate a strong sense of shame (*semteende*) in all their dealings outside their household, with strangers, and with cer-

tain kinds of kin. For example, it is considered shameful if a Fulani eats outside his household. A proverb thus states, *Pullo nastan luumo wade, nastatta luumo semteende* (“It is better to die than be shamed in public”). These behavioral norms, in the Fulani view, distinguish them from members of other tribes or ethnic groups. Among the pastoral Fulani, herdsmanship (*ngainaaka*) is also a very important aspect of their culture. The settled Fulani still value cattle, and many of them own herds, but they lack the extreme enthusiasm for cattle as found among the true pastoralists.

With such an extensive multinational African distribution of the Fulani, they are found in all walks of life, in sports, military, commerce, arts, and politics. Among the most prominent personages of Fulani origin are three heads of state of Nigeria, including the President Umaru Yar'Adua. In Guinea-Conakry those with family names such as Balde and Diallo, or Alfa Yaya, or Alfa Molo were prominent leaders of Fulani origin, and the first president of Cameroon, Ahmadu Ahidjo, also shares this ethnicity.

#### 15 WORK

All Fulani communities have a relatively rigid division of labor according to age and sex. Men's and women's domains are highly segregated, and children assist their parents, but they also have their own chores around the house, on the farm, or in the pasture.

Men tend the cattle, work in the fields, or have formal employment in the city. They also play an important part in decision-making about farming, herding, migrating, and other family matters. Many men are either full or part-time Islamic scholars or teachers. In the settled communities, Fulani men pursue a variety of occupations such as work in the government, as Islamic teachers and scholars, in education, in business, or, to a lesser extent, as traders.

Women's primary role is managing the household (cooking, cleaning) and caring for the children. Among the pastoralists, the women also set up and dismantle camps, tend the small animals (sheep and goats), and trade or exchange milk products in nearby towns and markets to obtain the foodstuffs they themselves do not produce. Most married women in the towns are housewives, but a few work as teachers, nurses, or secretaries. A few supplement their own or their husband's income with trading items such as jewelry, clothing, spices, cigarettes, or beverages—often from within their own household.

## 16 SPORTS

Young pastoral men participate in a kind of sport known as *sharro*. This is a test of endurance and bravery in which young men lash each other to the point of intolerance. They do so as they enter manhood, but some continue to participate in the practice until they become elders. Among the settled Fulani, there are a great variety of traditional local sports and games, including wrestling and boxing. Western sports such as soccer and track and field are now found in communities and schools. Wealthy Fulani also participate in horseracing and polo.

## 17 ENTERTAINMENT AND RECREATION

Among the pastoral Fulani, children participate in different kinds of dances—among their immediate friends and kin, when they meet in the market, or when kin groups gather during the rainy season. Among the settled people, musicians and praise-singers perform at festivities such as weddings, naming ceremonies, and parties and Islamic holidays. Today, most Fulani appreciate Western music and own radios. Among the settled Fulani, one commonly finds stereos, televisions, and VCRs.

## 18 FOLK ART, CRAFTS, AND HOBBIES

Fulani women make handicrafts in their spare time, including engraved calabashes or gourds, weavings, knitting, and baskets. Some of these items are used or displayed in the household, and many are given as gifts to other women or kept as part of a woman's or her daughter's dowry for marriage. In contrast with some of their neighboring peoples, Fulani men are less involved in the production of crafts such as pottery, iron-working, and dyeing. They believe that these activities, which are undertaken in the public, may bring shame upon them, and they prefer to purchase such wares from the craftsmen among other peoples.

## 19 SOCIAL PROBLEMS

The pastoral Fulani are currently facing many problems. Drought often reduces their water supply and pasture, and disease may also strike the herds. As the population of West Africa has grown, there is less land available for herding, and conflicts with settled people have increased. The modern gov-

ernments are also curtailing the Fulanis' movements or trying to force them to settle down. The result is that Fulani herds have declined dramatically, seriously threatening the pastoral Fulani livelihood, although many still find a way to survive. Some settled Fulani are also faced with relative poverty, as most of the countries they live in simply do not have enough resources and funds. Nevertheless, all Fulani find comfort in the fact that their kin are always willing to help those facing hardship. In addition to regional drought, desertification and unemployment are severe issues faced by modern Fulani.

## 20 GENDER ISSUES

Common with African Islamic societies in general the social position of women is structured with the culture-religious organization of society in which patriarchy, patrilineality, possible but limited polygyny, and patrilocal residence provides for specific domestic roles for women. Within the domestic framework there are some options open to women in the informal economy, particularly in gendered spaces that focus on food and clothing production. At the same time, this is being contested by new social movements and forces that empower women in terms of legal, economic, and human rights, as well as the necessity to bring more women into economic production along with more males moving out of the traditional compounds in search of work and opportunity. Thus, gender roles in modern Fulani society are both steadfast and traditional, while being contested by the powerful forces of change. This gender contestation is particularly acute in Nigeria whereby the federal state seeks centralization on one hand, while empowering the various states to solve their own problems. For Fulani regions which are seeking a post-colonial strengthening of Islamic law the torque between these counterforces has been problematic.

# GABONESE

**PRONUNCIATION:** gab-uh-NEEZ

**LOCATION:** Gabon (western Central Africa)

**POPULATION:** About 1,485,832

**LANGUAGE:** French; 45 local Niger-Congo languages

**RELIGION:** Roman Catholicism; Protestantism; Islam; animism

## <sup>1</sup> INTRODUCTION

Gabon's stability keeps it in the shadows. An African country that has not been afflicted by wars, drought, or chronic uprisings, it tends to stay out of the press and has long held an unchallenged position in the "French sphere of influence."

The peopling of what is now Gabon was a slow and steady process. Pygmies and other forest dwellers have been living there for millennia. Around 1500 bc, Bantu people from the northwest began to migrate into the area, slowly spreading out over the next 2,500 years, differentiating into the more than 40 ethno-linguistic groups that exist today. Later migrations during the period of the slave trade, and again in the 19th century, have further enriched the mix. The southern kingdom of Loango grew in the years before European contact, but most people led simple lives of autonomy, living in villages among extended family. For many centuries, people kept small plots where they grew yams, greens, and later, bananas. Horticulture was supplemented, and often overshadowed, by hunting meat and gathering wild plants from the forests or savannas. Archaeological evidence suggests the existence of iron smelting in Gabon since the 4th century bc.

Europeans arrived in the 15th century. First came the Portuguese, then the Dutch, British, and French. Rarely did they venture beyond the coast. Their interests were slaves and ivory, and trade increased dramatically in the 18th century. Loango became a center for a vigorous trade in slaves, who were captured farther inland and sold to Europeans at the coast by members of more powerful tribes. It is estimated that by 1840, 2.5 million slaves had been taken from West Central Africa.

In the late 19th century, France became the colonial power in Gabon and continued to be heavily involved in political and economic affairs after Gabon's independence in 1960. There are more French expatriates living in Gabon now than during the colonial period.

## <sup>2</sup> LOCATION AND HOMELAND

Gabon covers 103,347 square kilometers. It is slightly smaller than the state of Colorado. Gabon is on the West Coast of Africa, centered on the Equator. It borders Equatorial Guinea and Cameroon to the North, and the Republic of Congo to the East and South. The capital, Libreville, is on the West Coast in the North. Libreville ("Free town") was the landing place for a ship of freed slaves in the 1800s and later became the capital.

Over 80% of Gabon is tropical rain forest, with a plateau region in the South. There are nine provinces named after the rivers that separate them. There are roughly 1,485,832 Gabonese (2008). There are equal numbers of men and women. The original inhabitants were the Pygmies, but only a few thousand remain. Of the total population, 60% live in the cities while 40% inhabit the villages. There is also a large population of Africans from other countries who have come to Gabon to

find work. Gabon retains its colonial frontiers as drawn by the Europeans in 1885.

Tropical forest covers 80% of the country, the rest consisting of grassy savannah and high plateau. There are two dry seasons and two rainy seasons, but the equatorial climate is very hot and humid year-round. The major geographical feature is the Ogooue River, which flows east to west, splitting the country into two. It is the largest river between the great Niger and Congo rivers, and its watershed drains the whole of Gabon.

Gabon is becoming a country of urbanites. The major cities besides Libreville are Port Gentil, with its oil reserves; Oyem, with its vital trade with Cameroon to the north; Franceville, gateway to the Bateke Plateau; and Lambarene, made famous by Albert Schweitzer and his hospital. This riverine port, 125 miles from the capital, accessible by paved road only in 1996, still has one of the best hospitals in Central Africa.

## <sup>3</sup> LANGUAGE

The national language is French, mandatory in school. It is spoken by the majority of the population under the age of 50. The use of a common language is extremely helpful in the cities, where Gabonese from all of the different ethnic groups come together to live. Most Gabonese speak at least two languages, as each ethnic group has its own language as well. The educated Gabonese speak Parisian French, while the rest of the country speaks a version of French that has absorbed the rhythm and accent of their local language.

There are 45 local languages in Gabon, many of them shared with neighboring countries. Some of the larger ethno-linguistic groups are Fang, Punu, Nzebi, Myene, and Obambe/Teke. These languages are mutually unintelligible—but as with other languages in the Niger-Congo family, deploy consonant groupings, like in *Ndjole* (*n-jolay*), as well as open, rounded vowel pairs, as in *antsia ama* (*anchiama*). Because of this linguistic diversity, French has become the true lingua franca (common language) and is the official national language. The business of government, education, marketing, publishing, and socializing is conducted in French. Unfortunately, as a result, many young Gabonese cannot speak the language of their grandparents.

## <sup>4</sup> FOLKLORE

Because Gabonese languages were not written down until the 19th century, storytelling has long been the way to teach children and to transmit tradition to people of all ages. Each ethnic group has its own stories, but common are morality tales involving animals like the wasp that loses the affections of a mate due to excessive pride in his slim waist and lovely striped coat.

With nationalization have come national folk heroes. One is Charles Tchorere, a soldier who fought as a captain in the French army against the Germans in World War II. He is remembered for bravery in distant battles and for the honor he bestowed upon his nation.

## <sup>5</sup> RELIGION

There are several different belief systems in Gabon. About 75% of Gabonese identify themselves as Roman Catholic, 20% as Protestants, less than 1% as Muslim, and the rest as animist. In reality, however, many Gabonese hold animist beliefs while at the same time practicing Christianity or Islam. Animism, a body of beliefs held by tribal and pre-industrial people the

world over for thousands of years, generally does not identify a human-like god that is concerned with activities on Earth. Animist gods are abstract and amorphous, and inanimate objects can hold spiritual power. It is the spirits of ancestors who aid or obstruct human endeavor. These beliefs are simultaneously held with Bwiti, an ancestral worship. There are also several thousand Muslims, most of whom have immigrated from other African countries.

Several rituals and holy places exist. The Bwiti ceremonies, performed to worship the ancestors, are led by *ngangas* (medicine men). There are special wooden temples for these ceremonies, and participants dress in bright costumes, paint their faces white, remove their shoes, and cover their heads.

Witchcraft is also an element of animism which exists in Gabon; belief in evil spirits and sorcerers who can conjure them is quite common. Among traditionalists, death itself is not a natural phenomenon, but can only be explained as the work of a malevolent spirit or the malfesance of a neighbor skilled in casting spells.

Wines are made from palm trees and sugarcane. The palm wine, in conjunction with a hallucinogenic root called *iboga*, is used during ceremonies for death, healing, and initiation. In small doses, *iboga* acts as a stimulant, making it useful for all-night ceremonies. In larger quantities, it is hallucinogenic, allowing participants to “see their ancestors.” Food and wine are offered to the ancestors during the ceremonies, and both men and women partake in these rituals, which are full of drumming, singing and dancing

## 6 MAJOR HOLIDAYS

Because of the ethnic diversity of such a small population, national holidays take on universal significance. The most important is August 17, commemorating Gabonese independence from France. Towns, large and small, have a central square called “Place de l’Independence” where the Gabonese flag is flown, and speeches and traditional dancing take place. In the capital there is a military parade. While most Gabonese are Christian, New Year’s Day sees more celebration than Christmas or Easter.

## 7 RITES OF PASSAGE

The passage from life to death is considered the most important rite of passage in Africa due to the importance of spirit ancestors. In Gabon, funerals are elaborate affairs at which mourners close to the deceased stay awake for days, attending to the body. What used to be quite common in the past, though much less so now, is the remarriage of a widow to a close relative of her departed husband, usually a younger brother. This custom is logical when one considers the traditional practice of paying *dot* (bride-price), wherein a husband or his family pay a woman’s family for the privilege of marrying her. After *dot* is paid, the marriage and resulting children are considered legitimate, and the woman’s labor then belongs directly to her husband’s family. If the husband dies, it is his family who still has rights to her labor and future fertility, and hence the responsibility for her welfare and that of her children.

There are few universal rituals in multi-ethnic Gabon, but those surrounding *Bwiti* are remarkable for their adoption from the Fang by other groups. The *Bwiti* cult grew out of a demographic crisis at the turn of the last century, when sexually transmitted disease caused infertility among women and a declining birth rate throughout the country. *Bwiti* began as a set of rituals performed by women to ensure fertility. It is now described by Gabonese as a secret society of both men and women who perform these rites in an attempt to purify the body and spirit for many reasons. While the *Bwiti* rituals combine dancing, singing, and drinking, as in many Gabonese celebrations, the central element is the ingestion of *iboga*, a wild plant found only in Gabon. *iboga* is a hallucinogen, and if enough is taken, subjects will go into a trance, perhaps entering a spirit world where the ancestors reign. Once in this world, questions are asked of the dead about how to arrange matters here in the world of human habitation. After death, bodies are rubbed and embalmed to remove rigor mortis. Because of the tropical climate, the bodies are interred within two days. They are buried in a wooden coffin. The deceased then joins the ancestors who are to be worshipped in *Bwiti* ceremonies. They can be asked for advice, about remedies to diseases, etc. There is a *retraite de deuil* ceremony one year after death to end the mourning period.

## 8 INTERPERSONAL RELATIONS

Gabonese greetings among strangers are reserved, and a quick handshake is standard for both social and business occasions. A foreigner visiting a private home for the first time will be offered beer, but conversation may not begin immediately. It is often said by Gabonese that chattering too much with a new guest assumes a familiarity that may be disrespectful. It does not take long, however, to get to know people, and those introduced through family are soon greeted with flourish. Friends

meet each other with a series of four kisses, two on each cheek, as in parts of France. Sometimes just a touching of cheeks will do. Men often walk holding hands, a sign of filial affection. Among older Gabonese, separation of the sexes is the norm at social gatherings.

The expression of young love has changed over the years. Young couples in the city go to movies, dance, and visit as in the West. But traditionally, marriages were often arranged, usually between a young girl and older man, so the opportunity for dating within one's age group was limited.

## 9 LIVING CONDITIONS

Living conditions in Gabon are generally better than in the rest of Africa. Two reasons for this are the abundance of oil and exportable timber and the low population.

While there are no Gabonese starving from drought or living in squalid refugee camps across borders, there are many who live in impermanent huts, lack electricity and plumbing, don't have access to schools or medical facilities, and have little hope of entering the formal economy.

Health facilities are inadequate. Hospitals are ill-equipped, and patients buy their own medications from pharmacies before treatment can begin. Malaria, tuberculosis, syphilis, AIDS, and other infectious diseases are widespread and virtually untreated. Many villagers also turn to the *ngangas* for remedies, as modern health care is expensive and far from their residences.

As in the rest of Africa, there is a drastic difference between rural and urban living conditions. Downtown Libreville and Port Gentil boast luxury apartments with satellite dishes, Mercedes, and supermarkets. Cities are then ringed by shanties, filled with immigrant workers from other African countries. Rural areas are decidedly poorer. There are few jobs and little farming beyond what can feed a family. One reason for this is the lack of investment by the Gabonese government, like many African governments, in agriculture-related infrastructure. Although most Gabonese know how to farm, almost all of the nation's food is imported.

As a building material, cement is seen as a sign of wealth. All of the government buildings are constructed in cement. In the capital, it is easy to differentiate between buildings that were styled by Gabonese and those done by outside architects. In the villages, the architecture is different. The structures are impermanent. The most economical houses are made from mud and covered in palm fronds. There are houses built from wood, bark, and brick. The brick houses are often plastered with a thin layer of cement with roofs made from corrugated tin. A wealthy family might build with cinder blocks. In addition to the houses, both men and women have distinctive gathering places. The women each have a *cuisine*, a kitchen hut filled with pots and pans, wood for fire, and bamboo beds set against the walls for sitting and resting. The men have open structures called *corps de guards*, or gatherings of men. The walls are waist high and open to the roof. They are lined in benches with a central fire.

## 10 FAMILY LIFE

Families in Gabon tend to be large, and women have an average of five children. Some ethnic groups are matrilineal; immediate family includes not only parents and siblings, but also the mother's parents and siblings. The government is actively

encouraging births due to a belief that the population is simply too small. As a result of this policy, as well as a generally lax cultural attitude toward sex, many young Gabonese women become pregnant with no husband. Families stay together. When a couple is wed, they move to the husband's village which holds his extended family including brothers, sisters, parents, aunts, uncles, grandparents, children, nieces, and nephews. It is common for families to share a home with their parents and extended relatives. Everyone is welcome and there is always room for one more.

Polygyny—the taking of more than one wife—is legal in Gabon, although it is required for couples entering state-sanctioned marriage contracts to register as either “polygamous” or “monogamous.”

Women's property rights are difficult to protect without a legal marriage certificate, but there are many couples that don't have this. Interestingly, the French word for “woman” is also used to signify “wife.” *Ma femme* is how many women in couples are identified. This may or may not imply legal marriage, but her betrothal to a man is understood—she will often already have his children and will consider his family her in-laws.

## 11 CLOTHING

Today, most Gabonese wear Western-style clothing. Men wear suits and ties to the office, and blue jeans and T-shirts during the weekend. Women wear dresses and skirts of a Western cut, with material of a colorful African print and the detailed embroidery work done by tailors all over West and Central Africa. A more traditional item is the *boubou*, a flowing top that varies in length from knee to floor. Ceremonial occasions call for elaborate boubous with loose-fitting matching pants underneath for men and double-wrapped *pagnes* for women. A *pagne* is a colorful strip of African cloth used for everything from casual wraparounds to slings for tying a baby to its mother's back. Earlier, raffia was the most commonly used cloth. It is made out of a kind of grass, woven tightly to form a stiff but malleable material.

## 12 FOOD

The cat is eaten on special occasions among the Fang. It is traditionally eaten by men and is reputed to bestow longevity, as the cat is notoriously hard to kill. The staple of most Gabonese, however, is manioc root. It is ground, soaked, and fermented in a labor-intensive process that can take weeks and appears in the markets resembling a block of cheese wrapped in a banana leaf. Manioc leaves are also eaten and look like spinach when cooked. Another common source of carbohydrates is the banana. These are not small, sweet bananas, which also exist, but larger, harder bananas known in the Americas as plantains.

The staples vary little among the groups in Gabon. The groups share a landscape and climate and thus are able to produce the same kinds of things. Bananas, papayas, pineapples, guavas, mangoes, bushbutter, avocado, and coconuts are the fruits. Eggplants, bitter eggplants, feed corn, sugarcane, peanuts, plantains, and tomatoes are also found. Cassava is the main starch. It is a tuber with little nutritional value, but fills the stomach. Its young leaves are picked and used as a vegetable. Protein comes from the sea and rivers, as well as from bush meat hunted by the men.

*Dancers from a traditional Gabonese dance group perform during the Fete des Cultures in Franceville, Gabon. (Desirey Minkoh/AFP/Getty Images)*

Favorite meats include wild monkey, bushpig, pangolin (a small armored mammal resembling an armadillo), and gazelle. Shrimp, crab, and a variety of fish are harvested from the ocean, carp from the Ogooue River, and tilapia from rural fish farms. Most rural households keep chickens, and while there are a few pig and cattle enterprises in Gabon, most domesticated meat is imported from countries with less humid environments more conducive to stockraising. With a year-round growing season, trees produce a vast array of fruit and nuts. The palm nut is used to make palm oil, a necessity in every kitchen. Coconuts, pineapples, mangos, and lemons are sold on practically every street corner.

The Gabonese habit is to eat the largest meal in the middle of the day. Schools, offices, and businesses shut down between noon and 3:00 pm, and people can go home for lunch. Leftovers are usually served in the evening, unless there is a special occasion, when the main meal is eaten later, accompanied by lots of beer, palm wine, and Coca-Cola.

### **13 EDUCATION**

In theory, Gabon offers free universal education. In reality, many villages don't have schools, and some children have to travel long distances or relocate to attend. The adult literacy rate is 63%. Schools use the French system, which allows for 13 years of formal education, and a final state exam called the

*Baccalaureate*. Public schools tend to be crowded, with 30–100 students to a classroom. In rural areas, schools often lack essential materials like books and chalkboards. The children begin school at age five or six. When there is no money for books and supplies the children will not attend school. Sometimes a wealthy relative will be called upon to provide these essentials. Both boys and girls attend school until they are 16 by law. Girls may drop out of school due to pregnancy and the boys continue with school or begin to work.

The Omar Bongo University in Libreville offers two to three year programs in many subjects, as well as advanced studies in select fields. The University of Science and Technology in the south is relatively new and diversifies the options. These schools are dominated by upper-class men. Women have a difficult time excelling in academics, as the subjects and standards are structured for men. Some Gabonese study abroad in other African countries or in France, at both undergraduate and graduate levels.

### **14 CULTURAL HERITAGE**

With over 40 distinct cultures in Gabon, national heritage becomes important. While Gabon has changed more rapidly than perhaps any other African country, there is an acute sense of an ancestral "Africanness" that spans ethnicities. The first stanza from the Gabonese national anthem is suggestive:

United in concord and brotherhood  
 Wake up, Gabon, dawn is upon us.  
 Stir up the spirit that thrills and inspires us!  
 At last we rise up to attain happiness.

The International Center for Bantu Civilizations was created in Libreville in 1983, and there is a Gabonese Museum featuring Gabon's history and artistic relics. There is also a French Cultural Center in the capital that displays artistic creations and features dance groups and chorales. There is an annual cultural celebration as well, with performances by musicians and dancers from many different groups in celebration of Gabon's diversity.

Much of Gabon's literature is strongly influenced by France, as many authors received their schooling there. Writers use French, newspapers are in French, and television is broadcast in French. Radio programs use both French and local languages, however, and there is mounting interest in the history of Gabon's peoples.

The Fang make masks, baskets, carvings, and sculptures. Organized clarity and distinct lines and shapes characterize Fang art. *Bieri*, boxes to hold the remains of ancestors, are carved with protective figures. Masks are worn in ceremonies and during hunting sessions. The faces are painted with white and black features. Myene art centers around Myene rituals for death. The female ancestors are represented by white painted masks, which are worn by their male relatives. The Bexota on the other hand use brass and copper to cover their carvings. They use baskets to hold ancestral remains.

## 15 WORK

A relatively large percentage of the Gabonese population works directly for the state, living in a provincial capital or a large town. One salaried worker will support several to dozens of other people on his or her salary. Many more work in the informal sector selling produce, driving unregistered taxis, or tailoring. Income is supplemented by family plantations, often kept by members living in rural areas, but also kept in small plots around the cities.

Work in Gabon stops between the hours of noon and 3:00 pm because of the heat. Most buildings outside of downtown Libreville are not air conditioned.

## 16 SPORTS

As in most of Africa, soccer is the national sport. Basketball, for both men and women, and martial arts are very popular. The most common game played by all ages is checkers—every bar and café has a board and pieces fashioned out of soda pop or beer bottle tops.

## 17 ENTERTAINMENT AND RECREATION

Gabon borrows heavily from Western popular culture. Traditional pastimes fight an uphill battle with American and French television, music, and the antics of sports heroes. Central African music is also very popular.

The most common form of entertainment, for old and young alike, is visiting. Neighbors, friends, and relatives from the same village stroll in the evening, make unannounced social calls, and gossip. While television and radio have made inroads into even the most remote villages, oral culture and

face-to-face interaction is an integral part of Gabonese life to a much greater extent than in the West.

## 18 FOLK ART, CRAFTS, AND HOBBIES

Gabon is known for some of the world's most outstanding masks and statuary, particularly those produced by the Fang in the north, where a high level of artistic abstraction of the human face and figure influenced artists such as Pablo Picasso. Particular to southern Gabon are soapstone carvings of female heads called *Pierre de M'bigou*. These heads are now considered somewhat of a national symbol and can be seen on stamps and business logos. However, with the drastic changes brought by modernity, most of Gabon's craft traditions have been lost.

## 19 SOCIAL PROBLEMS

In 1990 Gabon made the transition from a one-party state to multi-party democracy. People on the street, in bars, and in the classroom feel freer now to criticize their government and the president. Gabonese like politics, and spirited debates often ensue. Labor, student, and women's groups request permits to hold rallies and protest marches, and usually receive them.

Women's rights are of particular interest in Africa, where traditional gender roles are quite strong. In Gabon women can own property, sue for divorce, and hold public office, but family law recognizes only female—not male—infidelity as grounds for divorce. Domestic violence and absentee fatherhood is prevalent, and, as in America, they are problems that often remain behind closed doors.

A problem that doesn't remain behind closed doors is alcoholism. With a bar on nearly every corner, no regulation of consumption, and a traditional taste for homemade beer and wine, Gabonese are copious drinkers. While many Gabonese believe that drugs are a serious problem in their country, it is nothing compared to the alcoholism.

Despite these problems most Gabonese are proud of their country, with its abundant natural resources, relative wealth, and incredible natural beauty. The PNL (National Program to Fight Against AIDS) has an office in every major city. It sells condoms and educates women on family planning and pregnancy. There is also a Forests and Waters office in every city, working to protect the environment and wildlife from exploitation, though its effectiveness is questioned. The World Wildlife Fund has ecological and sociological research and wildlife preservation projects in the north and on the coast, and the United Nations supports agricultural advancements in the north by sponsoring extensionists and providing training and mopeds. The United Nations Children's Fund (UNICEF) is also present, working against child prostitution and infant mortality. A German organization, GTZ, funds the organization of the Gabonese National Forestry School. The Peace Corps is active in Gabon as well, with programs in construction, health, agriculture, fisheries, women in development, and environmental education.

## 20 GENDER ISSUES

In general Gabonese men assume a dominant role over Gabonese women. Men make the financial decisions and control the activities of the family; however, Gabonese women are known to be outspoken and frequently influence family decisions. In the government, the military, and the schools, men hold the vast majority of positions of responsibility and power. Alterna-

tively, women do the majority of the manual labor for the family. Gabonese women typically assume a role of homemaker; few work or engage in activities outside the home.

Gabonese families are generally large. Women are responsible for raising their many children, farming, preparing food, and carrying out various household chores.

Men assume responsibility for housing. Most men build a house for the family and construct a separate area for each wife to use for food preparation. Men also handle the business transactions related to any cash crops the family may produce. In addition, men may fish, work in construction, or take menial office jobs in the cities. Women may also work in the cities, typically in the service sector. A few exceptional women have risen to positions of responsibility, but most positions of power in the workplace are held by men. Children may help with such chores as laundry, kitchen clean-up, and housecleaning.

# GAMBIANS

**PRONUNCIATION:** GAM-bee-uhns

**LOCATION:** The Gambia

**POPULATION:** 1.7 million

**LANGUAGE:** English, Wolof, Mandinka, Jola, Fula

**RELIGION:** Christianity, Islam, traditional African beliefs

**RELATED ARTICLES:** Vol. 1: Malinke

## <sup>1</sup> INTRODUCTION

The Gambia (the name is written with a capital T) is a country of about 4,000 sq mi (10,000 sq km) occupying both banks of the River Gambia for a distance of about 200 mi (320 km). It is surrounded, except for the coastal region, by Senegal.

Around AD 750, a people who made stone circles and who were associated with iron working came from the north and occupied the middle zone of the north bank.

In later centuries, the most important migrants were the Mandinka from Mali in the east, coming as hunters, warriors, and farmers. From the north came the Wolof with their powerful cavalry forces, who conquered the Serer on the north bank. South of the Bintang Creek and in the Kombo region were the Jola and the Bainunka, the latter now largely absorbed into other groups. Later groups of cattle-keeping Fulbe (known in Nigeria as Fulani) arrived. They came from the north on the Senegal River, from Masina in the east, and Firdu in the south. Sometimes they lived beside Mandinka communities, at other times they remained separate, moving frequently in search of water and pasture. The most recent migration is that of the Serahuli (known as Soninke in Senegal), though some families had undoubtedly come centuries earlier. Their major migration took place at the end of the 19th and beginning of the 20th century. They are agriculturalists who also specialize in long distance trade.

The river was visited by early Portuguese explorers, such as Cadamosto in 1455, whose traders gradually settled at various points on the river, seeking gold, ivory, and hides. The English began exploration in the early 17th century, searching for sources of gold, especially in the upper river. An early attempt at colonization in the lower river was made by the small Baltic state of Kurland in 1651. But they were dispossessed by the English who captured a fort they had built on what is now James Island. The French, moving along the coast, claimed the right to trade at Albreda on the north bank.

The accounts of early writers show that the present-day peoples had already settled in the areas they occupy today prior to colonization. After the establishment of colonies in the West Indies and in America, slaves began to be exported from the region. Some were criminals being sold as a form of punishment, but most were war captives brought from the interior. Occasionally individuals were kidnapped by the slave traders trying to fill up their cargo. With the English law against international slave trading in 1807, the town of Bathurst was built on the island of Banjul (later renamed St. Mary's) to control the mouth of the river. Wolof from Gorée in Senegal, who were traders and artisans, formed a major part of the new town. People freed from slave ships captured at sea and refugees from local wars were also settled in the area. Bathurst was renamed Banjul after independence. Another island, MacCarthy Island,

was acquired upriver in 1823 as a base from which to protect traders and as a refuge for escaped slaves.

In the middle of the 19th century it was realized that groundnuts (peanuts), which grew well, provided an oil much in demand in Europe. These became the major export of the country. The land, however, was torn apart by religious wars set off by a militant Muslim element known as the Marabouts, who sought to convert nonbelievers (locally known as Soninkes). From time to time, the English tried to bring about peace, as constant warfare destroyed both trade and agriculture. Sometimes they reached an accommodation with the Muslims, while at other times they supported the non-Muslims.

While British possessions were limited to land near the mouth of the river and a few upriver sites used for trading, the French began moving south in Senegal. The Treaty of Versailles of 1783 had granted the British exclusive rights to the river but said nothing about land. Eventually, in 1888 an agreement was reached with France, granting the British 10 kilometers on each bank. The boundary did not take into account natural features or existing political divisions. Surveying to determine the boundaries took place from 1891 to 1896.

Once the boundary was established, the English created a protectorate system of government, signing agreements and governing through local rulers supervised by British "Traveling Commissioners." Many of the traditional ruling families had, however, been wiped out during the Soninke/Marabout wars, and Muslim rulers had taken their place. Tension between the groups was still strong, and many small districts had to be created to relieve the tensions. But local warfare ceased, slave trading was abolished, and a system of local government developed.

The Gambia became independent in 1965 under D. K. Jawara. A republic was declared in 1970, Jawara becoming the nation's first president. He continued to be reelected, surviving an attempted coup in 1981 led by a left-wing extremist. Senegalese forces helped restore him to power. As a result, a Senegambian Confederation was created to bring the countries closer together, but the agreement had collapsed by 1989. The main cause of friction was the fact that Gambians imported vast quantities of goods for sale across the border, often managing to avoid paying customs duties.

Gambia currently has a multiparty political system. The Constitution of the Second Republic of Gambia provides for elections by universal suffrage for adults 18 and older. The ballot is a secret one, and elections must be held every five years. The country's National Assembly includes 45 elected members and four nominated members. The president, popularly elected for a five-year term, is both the chief of state and head of government.

The country's administration is divided into the capital territory (the seat of government), the adjoining Kombo Saint Mary area, and the provinces. Each province has five divisions, each one headed by a commissioner. These divisions are further subdivided into districts locally administered by head chiefs.

The judicial system resembles that of other common law jurisdictions. There is a single system of courts, forming a hierarchy. The subordinate courts consist of Khadis courts, district tribunals, and magistrate courts. At the higher level are the Supreme Court, the Court of Appeal, and the Privy Council. The latter is the highest court of appeal for The Gambia.

In 1994 a military coup was led by four army lieutenants headed by Lt. Yayha A. J. Jammeh. President Jawara fled the country. The coup was said to be prompted by the widespread corruption of politicians. The constitution was suspended, political activity forbidden, and the press restricted. A period of rule by decree followed. In 1996 a new constitution, largely determined by the military, was written. Lt. Jammeh, then at the rank of colonel, resigned to stand in presidential elections, all former politicians being prohibited from taking part. Consequently, he was elected in September 1996. Jammeh was reelected in 2006, and the next elections were scheduled for 2011.

With the exception of the Fulani, ethnic groups are highly stratified. This stratification is a remnant of the great empires that once ruled the country. In each group, status was essentially inherited from the father. The rulers also inherited their status and administered a feudal domain.

## 2 LOCATION AND HOMELAND

The Gambia is a multiethnic country; major ethnic groups include the Fula, Jola, Mandinka, Serahule, and Wolof. There is no part of The Gambia that is inhabited by one single ethnic group. This close dwelling has led to a sharing of many cultural traits among the groups, which has led to a movement toward a Gambian national culture. There has been a concentrated effort to represent the various minority ethnic groups in government. In addition to indigenous ethnic groups, there has also been an annual migration from Senegal, Guinea, and Mali.

Many people from those countries come to trade in groundnuts (peanuts) and stay to settle.

The Wolof and the Mandinka are the major ethnic groups. The Wolof live mainly in the capital, Banjul. The Mandinka are the largest single ethnic group in the country. These groups represent the former Empire of the Wolof in the Senegambian region and the Mandingo Empires of Mali and Songhai. Creoles form a large element within the local elite. Additionally, there are Mauritians, Moroccans, and Lebanese in the country. These groups are mainly traders and shopkeepers. English is commonly spoken by members of all ethnic groups since it is the official language of the country. Each ethnic group speaks its own language as well. Harmony among ethnic groups is the general rule, so much so that The Gambia is considered to be a melting pot of West African ethnic groups.

With a population growth rate of 2.72% per year and fertility rate of 5.13 children per woman, the population in 2008 was estimated at more than 1.7 million, making it the most densely populated country in West Africa. The majority of the country's population belongs to eight indigenous tribes. These are: the Mandinka (about 41% of the population); the Wolof (15%); the Fula (19%); the Jola (10%); the Serahuli (8%); the Serer (2.5%); the Aku (0.8%); and the Manjago (1.7%). The ethnic groups were all affected by the Atlantic slave trade and domestic slavery.

The River Gambia is affected by tides on its eastern boundary. Owing to low rainfall in recent years, the intrusion of salt water has now extended far upriver, hindering rice cultivation in areas previously used for agriculture. In its lower section the river is broad and bordered by extensive mangroves. Inland is a low sandy plateau where the villages are built and farm land cultivated. In the middle section the mangroves fade out, and the banks are bordered by grasslands and palms. Ocean-going vessels, which once went as far as Kuntaur (150 mi upstream), now stop at Kau-ur (120 mi upstream) due to increasing silting. In the past, silting created many islands in the middle section, but only one is inhabited—MacCarthy Island. In the upper river the banks become higher and are backed by low-lying land, which floods during the rainy season. The largest town is Basse, a major trade center and administrative headquarters for the Upper River Division.

Beyond the boundary, in Senegal, the Barrakunda Falls are found—really a rocky ledge, which hinders navigation. The river continues in a southeasterly direction, with much twisting and turning, another 400 miles to its source in Guinea. Owing to rocks, sandbanks, and narrow channels, the river cannot be used except for an occasional canoe.

### 3 LANGUAGE

Mandinka is spoken throughout the country. Wolof is the language of the capital, Banjul, and the middle river area, though the dialects differ. Wolof is also the language of commerce. Because the Fulbe people migrated from different regions, a number of dialects can be heard.

The most common variety of Jola spoken is that of Fonyi (Foñi). The language of government and education is English, though local languages may be used in the lower grades of provincial schools.

All the languages have rich vocabularies. There are numerous proverbs and a wide range of traditional idioms. Children

have word games, such as riddles, tongue twisters, and sometimes secret languages of their own.

There are grammars and dictionaries for Wolof, Mandinka, and Fula. Religious and instructional materials have been translated into these languages. Traditional tales and legends have been recorded and translated into written form.

### 4 FOLKLORE

All groups have rich heritages. Legends, mostly relating to events in Mali, Guinea, and Senegal, are related by professional entertainers, who are known locally as *griots*. The Wolof call them *gewel*, and the Mandinka, *jalolu*. The narration is accompanied by a musical instrument and the listeners are expected to respond to the narrator with appropriate interjections.

Folktales are abundant. One group tells of the adventures of Hare and Hyena, the precursor to the Brer Rabbit and Brer Fox tales in English. Hare is seen by the Wolof as a *gewel*, who is able to talk his way out of any trouble. Non-*gewel* regard Hare as a trickster. Usually tales are told after dark by mothers to small children. A common folktale is one in which an unjust situation occurs. The situation is remedied by a son or daughter, often with the help of a spirit or an old woman who has been courteously treated. Those who caused the trouble are punished, and the sufferers end up rich and happy again. A whole series of family values is reinforced in the tales. Trouble comes to those who break taboos—for example, a daughter should be obedient and polite, a son should be brave, the old should be treated courteously, strangers should be received hospitably, etc.

Proverbs are used in everyday speech; for example, “However long a stick is in the river, it cannot become a crocodile,” means that a stranger can never become a true native, and “The best medicine for a person is another person,” stresses the importance of human relations.

### 5 RELIGION

The majority of people are Muslim (90%). Christians (9%) are found mainly in the urban areas. Only a few hold on to traditional beliefs. In the Jola area there are still a few shrines where offerings are made to spirits believed to influence human destiny.

From an early age, children are taught to recite and copy verses from the Quran. Discipline in Quranic schools is strict. Most stop after learning the essentials, but a few go on to more advanced Arabic studies. The main tenets of Islam are the observation of the month of fasting (Ramadan), when food and drink are prohibited during daylight hours; saying the five daily prayers; if possible, going on the pilgrimage to Mecca; giving alms to the needy; and belief in Allah as the only God. The major religious festivals are occasions of celebrations—the Muslim New Year, Muhammad's birthday, the feast at the end of Ramadan, and *Tabaski* (*Id el kabir*), commemorating Abraham's sacrifice of a sheep in place of his son.

Christian missions—the Roman Catholic Mission, the Methodist Mission, and the Anglican Church—established churches, built schools, and played a major part in education. Mission work outside the capital is limited and is primarily associated with education and social development.

There are a number of traditional religious practitioners as well as Muslim imams, Catholic priests, and Protestant ministers. Each traditional group has its own practitioners.

There are no places that are sacred to all peoples; each ethnic group has its own particular local shrines. Muslims go to Mecca on pilgrimage, and Catholics increasingly travel to Rome and other Catholic holy places.

Each group has its own particular beliefs concerning the afterlife and death. Catholics and Muslims tend to combine the particular traditional beliefs of their ethnic group with more universal Catholic or Muslim beliefs.

## 6 MAJOR HOLIDAYS

Official holidays are New Year's Day (January 1), Independence Day (February 18), and Liberation Day (July 22), commemorating the military coup. Christmas is also observed by all. It is marked by special watchnight services at the Christian church and children singing carols. From Christmas week to the New Year, large lanterns (*fanal*) in the form of ships and houses, lit by candles or batteries, are paraded around the streets, accompanied by drumming. During this period many traditional masked figures—the *kankurang*, with a dress of leaves and red bark (Mandinka), and *kumpo* (Jola), like a revolving haystack—join in the festivities.

Christians in Sanjul celebrate the feast of St. Mary (August 15), the patron saint of the island. Easter is also observed. The Muslim festivals, listed in the section on religion, depend on the lunar calendar, so dates vary from year to year when judged by the Western calendar.

## 7 RITES OF PASSAGE

The major stages of life are marked by special rites. After birth a child remains indoors for seven days, and various protective devices are made. Then, the baby is brought out for naming. Its head is shaved, which marks a change in status. The name is bestowed, prayers said, and an animal, usually a fowl but sometimes a sheep, is sacrificed. The meat is eaten later in the day. The child is then regarded as a Muslim.

In childhood there are initiation ceremonies for boys, which involve circumcision and a period of training "in the bush." They learn to endure hardship, obey orders, respect their elders, and understand traditional wisdom. Some boys are circumcised early in life at hospitals or clinics, but still have to undergo the training later. Girls, except for the Wolof, have a similar period of training. Wolof girls often have a ceremony of lip tattooing, which is regarded as a test of courage.

Marriage for women also represents a rite of passage—separation from their family of birth and incorporation into their husband's community. Marriage is a long process. An engagement may take place while the girl is still young. The husband performs services for his in-laws and has visiting rights. At a later date the marriage is formally arranged at a mosque ceremony attended by representatives of the families concerned. Marriage money to be paid is discussed. Later ceremonies involve the formal transfer of the bride to her husband.

Death also represents a transition. A service is held at the mosque before the body is taken to the burial ground. A "charity" (alms) is made on the third and the 40th day, the last marking the final separation when the deceased is considered to have joined the ancestors. Traditional Jola ceremonies involve the slaughter of many cattle and the firing of guns.

Food is important at ceremonial occasions, such as naming ceremonies, betrothals, marriages, and deaths. At these occa-

sions, meat is served along with Jollof rice and fruit. The more food, the more successful the occasion.

## 8 INTERPERSONAL RELATIONS

In general, Gambian ethnic groups prize tranquility of life, and their manners tend to ease the attainment of that goal. Gambians tend to be soft-spoken and gentle in demeanor, seeking to avoid noisy conflicts and striving toward quiet settlement of disputes. People ask about one another's families.

The exchange of greetings is an important social skill. Greetings differ according to the time of day, the place, whether within the family or in a formal social occasion or a passing situation, and on the age and relative social status of the participants.

The initial greeting is the Arabic *salaam aleekum* ("Peace unto you"), to which the reply is *maleekum salaam*. The general greetings follow, such as "Have you spent the day in peace?" or "Have you spent the night in peace?" depending on the time. The reply is always "Peace only." Surnames are exchanged. If one does not know a person's surname it is appropriate to ask. This is to honor the clan of the person spoken to. One can ask where the person has come from, so that one can ask about the people there too, either in general terms ("How is your father?," or "How is your wife?") or by name. Upon leaving one says "I am going," and one is asked to convey information about their destination.

When visiting, the person who arrives initiates the greetings. If one reaches a door where knocking would not make a sound one says "*kong, kong*" instead. A person should greet one of higher rank, or superior position, such as a village head, chief, or religious teacher. People of equal rank often address each other at the same time. The code of greetings must be followed before any other business is raised.

## 9 LIVING CONDITIONS

The Gambia is beset by a host of diseases, of which malaria is the most prevalent. Because of the vast areas of swamp it is impossible to control the mosquitoes that carry the disease. On the other hand, smallpox has been eradicated, sleeping sickness has become rare, and polio and leprosy are under control. But infant mortality is high. Diseases, such as measles, whooping cough, and pneumonia, are often fatal to small children. A program of immunization is helping matters. Poor waste disposal and contaminated water lead to intestinal infections. HIV/AIDS has also increased in recent years.

Modern health care is found in urban centers and sporadically in villages. Medicines are in short supply and are expensive. Hospitals and clinics are unable to meet the needs of the people. To receive attention requires a wait of many hours. In 2008 the ratio of doctors to the population was 1:15,000. The infant mortality rate was 65.24 deaths/1,000 live births. The death rate was 11.81 deaths/1,000 population. Life expectancy at birth was about 55.64 years. The HIV/AIDS adult prevalence rate was 1.2% and the number of people living with HIV/AIDS was 6,800.

Supermarkets and stores have a wide range of products, but most are too expensive for the ordinary person to afford. Among young people there is a great demand for cassette players and transistor radios. Businessmen, politicians, senior civil servants, professionals, such as lawyers and doctors, and those

employed by international bodies maintain a high standard of living with cars and Western-style furnishings.

In rural areas most houses are built with mud walls. The outside and floors may be cemented. The roof is thatched when circular houses are made, but corrugated sheeting is used with square and rectangular houses. In some villages bamboo matting and reeds are used to form walls. In the hot climate these are quite comfortable.

An inadequate water supply now presents problems. With a shortage of rain in recent years, and with the intensive clearing of vegetation for cultivation, streams have dried up and the general water table has fallen. Deeper wells have had to be dug. Where pumps have been installed, their maintenance has often proven difficult.

At one time there were river steamers, which went up and down the river. Now there are only a few small vessels used by tourists for short trips. People generally travel by road, using converted trucks, which carry goods and passengers, small buses, "bush taxis" (ramshackle old vehicles), and a few large government buses, which are always extremely overcrowded. Crossing the river is a slow business. Most vehicle owners prefer not to cross, but let their passengers off at the ferries to find alternative transport on the other side.

In Banjul, a large influx of motor vehicle traffic conveys people from suburban areas to work and school. In the evening there is a rush hour out of town. With heavy road traffic and overloaded vehicles roads rapidly deteriorate and are difficult to maintain. Where earth roads still exist they become corrugated and develop potholes from the rains.

## **10 FAMILY LIFE**

In rural communities people live in compounds consisting of a series of houses around an open courtyard. These are inhabited by a group tracing descent in the male line. There are distinct men's and women's sections. Small children stay in their mother's house. Adolescent boys have a house of their own. At night a woman goes to join her husband.

The oldest man of the lineage settles disputes and allocates land. Each man farms on his own land and contributes to a common millet farm. Women have their own rice fields and cultivate gardens in the dry season. An enormous amount of labor, cooking, drawing water, washing clothes, caring for small children, gathering wild products, farming, and gardening falls on their shoulders, though daughters are expected to help as much as they can. A man can marry up to four wives. Most marriages tend to be arrangements between families, but a young man may state a preference that he would like his family to follow. If a girl has her mother's support, she may refuse a marriage she dislikes. In urban situations there is greater freedom of choice. A husband can divorce his wife by pronouncement in front of witnesses; a woman must go to the chief's court. A divorced woman can marry again by her own choice. A widow may also remarry after a period of mourning, though if she has children, she normally marries someone in her husband's lineage so that the children continue to be brought up in the same compound. In the villages, age groups unite people. The young men perform communal labor and organize entertainment. There are corresponding groups for youths and girls.

All societies except for the Jola and some Fulbe have a strongly stratified social system that includes an old-ruling

family from which the chief was chosen, high-ranking powerful families, and ordinary peasant farmers. Smiths, musicians, and leatherworkers formed special castes, each marrying within their own category. In the old days there were also slaves, those born as slaves, and more recent captives. Consciousness of social status is still important when it comes to marriage, but the drift of people to urban centers and education have tended to obscure many of the old distinctions.

Each ethnic group has its own marriage, residence, and kinship patterns. Additionally, Islam and Christianity have their own regulations. Any particular marriage pattern, kinship system, or residence pattern depends upon a confluence of variables.

Marriage in The Gambia is regulated by either customary, Shariah (Muslim), or general law. Customary law is reserved for all non-Muslims and covers inheritance, land tenure, tribal, and clan leadership, as well as other relationships. Shariah law is primarily for Muslims and covers marriage and divorce. General law is based on British law. Rape is illegal in the case of both married and unmarried women and, along with assault, is a crime. The law does not differentiate between married and unmarried women in this regard. Any person who has carnal knowledge of a girl under the age of 16 is guilty of a felony (except in the case of marriage); incest is also illegal. These laws are generally enforced.

Infant care generally follows West African patterns. Women have general responsibility for child care. Young girls carry their siblings around with them.

There are variations in the domestic units of the various ethnic groups of The Gambia. The social structure of the pastoral Fulani is egalitarian, in marked contrast to that of other Muslim groups, such as the Hausa, and to most sedentary Fulani. The influence of Islam on kinship patterns is evident in the general preference for cousin and other intralineaage marriages. Most men are polygynous, the typical household unit comprising the family head, his wives, and unmarried children. Other Islamic groups, such as the Soninke, follow the same general pattern. The Wolof are noted for their double descent kinship system. A household unit usually has a nuclear family or a polygynous unit. There may also be other close kin living together. The vast majority of The Gambia's ethnic groups are patrilineal and patrilocal. This tendency toward male groups is strengthened through Islamic affiliation, as 90% of the population is Muslim. Even the Soninke, who practice double descent, have developed a bias toward the patriline.

## **11 CLOTHING**

Clothing of locally made cloth is worn by rural people when working on their farms. Herdsmen also wear the traditional type of dress. Children who go to school wear uniforms made of imported cloth, each school having its own colors. Boys wear shorts and shirts, and girls wear skirts and tops.

Women wear a long skirt, generally of local cloth, with a loose upper garment of imported cloth. Another cloth is used to carry a child on the back. Women always wear "a head tie," a large square of material that can be tied in a variety of fashions. Hairstyles are elaborate and show both age differences and changing trends in fashion. On festive occasions women, particularly the Wolof, wear many layers of clothing.

Males wear elaborate robes for religious ceremonies and special festivals. In offices Western-style clothing is generally

worn. There is a large trade in second-hand clothes from the United States. Young men like to copy American fashions with jeans, T-shirts, and baseball caps.

## 12 FOOD

Two hundred years of British colonialism added Western food to the diet available in The Gambia. In addition, each ethnic group has its own cuisine.

The Jola prepare a dish, *caldu*, that is made from fish (typically rock bass) and served with rice. Because the Jola live in a forested zone, they make use of many leaves and fruits in their diet. They are skilled at collecting, processing, and preserving plant materials for cooking.

Some people in Banjul are fond of dishes prepared with palm oil, such as *fufu*, which is made from mashed cassava. The Mandika have a dish called *domoda*, which is rice served with a rich sauce of vegetables (sometimes supplemented with meat or chicken) stewed in groundnut (peanut) paste. Sauce ingredients may include tomato puree, peppers, onions, limes, and okra.

The Wolof use *chere* (steamed millet flour), which requires skillful preparation. Dried baobab leaf powder is added to the millet flour, and the mixture is formed into balls that are served with sauce. A favorite dish is *benachin* (literally “one pot”), which requires much attention to prepare. Ingredients must be added in the proper order and cooked for the right length of time, before adding them all to rice for the final stage. *Yassa* is grilled chicken that has been marinated in lemon juice, vinegar, onions, pepper, and oil. The marinade then becomes the sauce for serving with rice. In urban areas a popular dish is fish with rice (*cheb u jen*), flavored with garlic, lemon, bay leaf, pepper, and tomatoes.

The Mandinka eat rice as their main food, though some millet is used. The Jola are also rice cultivators. The upriver Wolof depend on millet and sorghum, but urban Wolof use rice. The Fulbe and Serahuli use millet and sorghum. Roots crops, like cassava and yams, are used sparingly.

In general, a small snack is taken in the morning, such as pap, fruit, or leftovers from the previous day. A light meal is taken in the middle of the day, and the main meal eaten in the evening. Men eat from a common calabash, or bowl. If several families are present in a compound, each household may contribute a dish. Women and children eat separately. When a boy matures and develops good manners he joins the adult men. Eating is done with the right hand, the hands being washed before a meal. The left hand is used only for unclean tasks.

The staple food, boiled or steamed, is served with a sauce of leaves, flavored with dried fish or shellfish, and vegetables. In the rainy season many varieties of leaf are available. In the dry season garden products, such as tomatoes, eggplant, okra, bitter tomato, shallots, onions, are grown. Children eat wild fruits. Mango trees are abundant in most villages, as are papaya (pawpaw). In the western zone, oranges, limes, and bananas are cultivated.

Meat is rarely eaten except for major festivals, though boys sometimes hunt small animals. Chickens are kept for such occasions as naming or marriage celebrations, or to honor an important visitor. Near the coast there is always fresh fish, but most fish consumed is sun-dried or smoked. Where cattle are kept, curdled milk is used with millet.

Gambian women wear a long skirt, generally of local cloth, with a loose upper garment of imported cloth. Another cloth is used to carry a child on the back. (AP Images)

## 13 EDUCATION

In 1990 the literacy rate for adults (aged 15 and over) was estimated at 27%. But there was a marked difference between men and women, the rate for men being 39%, for women 16%. School enrollment has been increasing. In 1991–92 the rate of enrollment in primary schools (the first 6 years) was 59% for boys and 48% for girls. For secondary schools the rate was 16% in 1987. Literacy in Gambia is defined as those 15 and older who can read and write. In the total population, the literacy rate was 40.1% in 2003; 47.8% for males and 32.8% for females.

Socialization is generally through imitation and proverbs. Older children, especially girls, care for their younger siblings. Generally, male children accompany their fathers, while girls follow their mothers. Segregation by sex is common, and children tend to follow their parents' example and occupations. Males tend to be dominant over females. Religion plays its role in supporting the established order. European missionaries have helped bring in Western ideas and modern employment options to the country.

Any community member can correct any child. Folktales and proverbs illustrate moral ideas.

Education, in theory, is free and universal for primary school. In practice, that is not always the case. Urban areas tend to have better schools and more reliable attendance.

In urban areas a higher proportion of children attend school. In rural areas children are expected to help their parents in daily work, so they are reluctant to send their children

About 75% of Gambians are engaged in agricultural crop pro-

off to school. In some communities there is a conflict between Islamic schools and Western schools. Islamic instruction is generally held in the very early morning, or by firelight after dark, and does not conflict with daytime work.

Relatively few of The Gambia's people advance to higher education. In fact, there are no universities in The Gambia, but in the late 1990s, university extension programs were offered for the first time. There is a teachers' training college where instruction is provided in the fields of education, agriculture, health, and domestic science, but there is no university. For advanced level instruction Gambians go overseas to universities in Europe or America. Once they have obtained a degree they may be reluctant to return to low-paying jobs in The Gambia. Many have found work with international organizations, such as the United Nations Development Program (UNDP) and the World Health Organization (WHO), and have gone to work elsewhere in Africa.

#### **14 CULTURAL HERITAGE**

Music and song are important in Gambian culture and can be divided into two types: personal music and group music. First, there is personal (individual) music. A man sings as he weeds or paddles a canoe. A Fula plays a one-stringed fiddle when herding cattle and sings to sooth restless animals at night. A

woman or girl sings a lullaby to a small child. A young man plays a flute when guarding a millet field. A watchman plays a musical bow at night. Blacksmith's apprentices play rhythms as they pump their bellows.

Second, there is group music. In many cases dancing is also involved. The group repeats a chorus or claps hands while a lead singer or drummer sets the pace. Children play singing games. There is singing when groups work in the fields, so that they hoe in unison. Traditional warriors' songs are sung to give boys courage as they go for circumcision. Wedding ceremonies have a variety of songs sung at different stages.

Finally there is music performed by professionals to an audience, either to patron families or at a formal concert. The Mandinka *kora*, a 21-stringed instrument, the xylophone, and the Wolof *xalam* (an ancestor of the guitar), are played by professionals who undergo a long apprenticeship and belong to a special caste.

Songs are also sung for special ceremonies, to bring rain, or to effect a cure. Historical songs about former kings and wars and many praise songs are sung mainly in the context of honoring rulers. Praise songs may be sung when a griot feels he can demand a reward and at naming or wedding ceremonies. There are special hunters' songs (now rare) played on a stringed instrument known as the *simbongo*, designed to attract and charm dangerous animals and commemorate major hunting achievements. Challenge songs are sung at wrestling matches.

Broadcasting has provided a new outlet for musicians, and traditional music of all types can be found on records, cassettes, and compact discs.

Dancing takes place at most ceremonies and also serves as general recreation in the evening. In the latter instance it is young people who participate. Girls and young women dance as individuals in response to a drummer. In urban situations a variety of dances derived from elsewhere in Africa, the West Indies, and America may be found.

There are a variety of works in English by Gambian authors, including plays by Gabriel Roberts; poetry by Lenrie Peters, Malick Faal, Tijan Sallah, Swaebou Conateh, and Kahadija Saho; novels by Lenrie Peters and Ebou Diba, and short stories by Tijan Sallah and Nana Humasi (Nana Grey-Johnson).

There is some government support but The Gambia is a poor country and can spare little for the arts. Increasingly, there are collections of folk tales, poetry accompanied by the Kora, a lute-like instrument, and novels. No Gambian novelist has reached the stature of other Africans, such as Chinua Achebe or Wole Soyinka, but there are promising young Gambian authors.

In Graphic arts, the masks of The Gambia are well known and appreciated. In performing arts, the Kora, a lute-like instrument, accompanies much singing and dancing. There are many collections of these performances on audio and videotape.

#### **15 WORK**

About three-quarters of the people are engaged in agricultural crop production and livestock raising. About 80% of the population is comprised of subsistence farmers. A majority of these subsistence farmers are women. Groundnuts make up the majority of export products. Millet is also grown widely in the country. There is very little manufacturing in the country. The

Fulani specialize in dairy products and trade them for grain and other products.

There is limited small-scale manufacturing, such as processing groundnuts, smoking fish, and preparing hides. The fact that there is very little manufacturing in The Gambia has resulted in liberal trade policies and the encouragement of tourism. The rapidly growing population of 1.7 million is divided between a rural majority and a growing urban minority. The private sector of the economy is led by tourism, trading, and fishing. The Gambia's high population growth rate has diluted the positive effects of economic expansion. The Gambia's per capita gross domestic product (GDP) was about \$1,300 in 2007.

A number of people are employed in service occupations, such as house building and furniture making. Many are engaged in trade, both full-time in shops and markets in urban centers, and others part-time, when farming has ceased. Smuggling constitutes a substantial economic activity. A number of people are engaged in the tourist industry in hotels, as guides, selling arts and crafts, transportation, etc.

In agriculture there is a division of labor, the women being concerned with rice cultivation and dry-season gardening, the men with millet and groundnut farming. Farm work using traditional hoes for ridging and weeding was extremely arduous, but the introduction of animal traction—ox plows, weeding machines pulled by donkeys, and carts for transportation of crops—has eased the burden. At the same time, it has necessitated more thorough clearing of the land, resulting in soil depletion.

## 16 SPORTS

Soccer is the main field sport. International matches are played in a major stadium built by the Chinese. Basketball is becoming an increasingly popular activity among teenagers. Tennis and golf are played mainly by those who have lived abroad or by expatriates.

## 17 ENTERTAINMENT AND RECREATION

Radio Gambia broadcasts the early morning call to prayer, followed by readings from the Quran. News is broadcast in English and the major Gambian languages (Mandinka, Wolof, Fula, Jola, and Serahuli). There are occasional programs in other tongues. There are broadcasts for schools in the mornings and early afternoons.

A television station was opened in 1995. Video cassettes are available. Businessmen run a number of small movie theaters, many films coming from India.

The National Dance Troupe performs primarily for tourists. Wrestling competitions are popular during the weekends.

Board games include a form of checkers played with black and white counters on a board, *ludo* (Parcheesi), and *wori*, in which counters are moved around a board with six cups on each side, the aim being to outnumber and capture the opponent's counters at the end of each move. Among young men card games are popular.

## 18 FOLK ART, CRAFTS, AND HOBBIES

Wood carving, traditionally limited to the making of implements and utensils, such as bowls, mortars, pestles, and canoes, is now geared towards the tourist market. Carvings of animals,

decorative masks, model canoes, and drums are made for sale to tourists.

Goldsmiths and silversmiths make earrings, brooches, bracelets, etc., and are especially noted for their filigree work.

Pottery is primarily utilitarian. Water jars, cooking pots, and bowls are made, the best work coming from the upper river region.

Leatherworkers make sandals and covers for charms, which are worn by nearly everybody.

Weaving is a traditional art, the cloth being woven on narrow looms. The strips are sewn together to make cloths worn by women as skirts. Locally made cloth is worn in most traditional ceremonies. Formerly *pagnes* were dyed with indigo, but now imported dyes are used.

Dyeing has reached a high standard, Serahuli women being noted for their skill. Imported textiles are often used as a base, and artistic batik works are produced for the tourist market. Tie-dye and "resist" techniques are used to make a great variety of designs.

Basket work such as winnowing and storage baskets is primarily utilitarian.

A special art is the making of lanterns in the shape of ships or houses from paper fastened to a wooden framework, which are lit by candles or batteries and paraded around town during Christmas week.

## 19 SOCIAL PROBLEMS

In the constitution of 1970 a major section was devoted to human rights. The Gambia became the location of the African Center for Democracy and Human Rights Studies. Various local support groups were formed. Discussions on the rights of women, the rights of children, and police procedures were free and open. This was changed by the military government in 1994. The old constitution was abolished, and it was held that human rights were now irrelevant. Political activity was forbidden, freedom of the press restricted, and criticism of the government forbidden. Arrests for political reasons became common. The death penalty, abolished in 1993, was reinstated. The official party line that was expressed was that health, education, and improved agriculture were all that mattered. Democracy could not be expected to flourish under conditions of poverty. The right to development was placed above civil and political rights.

Though the country is Muslim, alcohol has always been freely available. In urban areas there are some cases of alcoholism. Marijuana grows easily in the country, and a number of youths have become addicted. Severe drug laws are now in effect.

## 20 GENDER ISSUES

Most women are engaged in subsistence farming. As in much of West Africa, men clear the land for cultivation and women do the work of planting, tending, and harvesting the crops. Men control tree crops in The Gambia, while women control subsistence gardens.

Women's income from subsistence farming at one time exceeded men's incomes from other activities. Landowners, most of whom were men, felt their authority was undermined by this circumstance and began to try to curtail women's farming activity. They used the county's new interest in environmental

preservation to restrict women's ability to farm (and therefore limited women's earning power).

Traditionally Gambian women are subordinate to men. Polygyny is prevalent, even in groups without traditional patrilineal descent. The growth of Islam has strengthened men's roles and their ability to control women in their family.

According to law, women have equal rights in employment. However, most Gambian women are engaged in subsistence farming where the laws are neither relevant nor observed.

All ethnic groups have traditional patterns of inheritance in which priority is given to the male survivors. Islam, however, under Shariah law, provides a portion of a men's estates for widows.

# GHANA IANS

**PRONUNCIATION:** gah-NAY-uhns

**LOCATION:** Ghana

**POPULATION:** About 23 million

**LANGUAGE:** English, Akan, Hausa, more than 25 African languages

**RELIGION:** Islam, Christianity

## **1 INTRODUCTION**

Modern Ghana was established in 1957, when colonial subjects of the Gold Coast ended more than 75 years of British rule. Ten years prior to independence, these colonial subjects conducted a non-violent movement consisting of boycotts, demonstrations, and mass strikes against the British. One of the leaders of this anti-colonial movement, Kwame Nkrumah, became the first elected head of state. As the first independent nation south of the Sahara, the country was named for the ancient empire of Ghana, a thriving commercial center known to Arabs and Europeans in the 10th century as the "land of gold." Ethnic groups in the northern part of modern Ghana such as the Mamprussi claim a historical connection to ancient Ghana, which was located in present-day Mali.

In the 50 years since independence, Ghana has witnessed four military coups, the first in 1966 and the most recent in 1981. Presently, Ghana is a constitutional democracy with a multi-party system. The executive branch of government consists of 20 cabinet-level ministers and 10 regional ministers. The legislative branch of government, the National Parliament, consists of 230 members. Ghana is divided into 10 administrative units referred to as regions, which are subdivided into districts. Thus, members of parliament are elected representatives from these districts. National elections for the presidency and the parliament are held every four years. Women hold 10% percent of the seats in parliament.

## **2 LOCATION AND HOMELAND**

Today about 23 million Ghanaians inhabit a rectangular shaped country consisting of 239,460 sq km. Roughly the size of the state of Oregon, Ghana is bound to the south by the Atlantic Ocean and has a coastline stretching more than 350 mi. Otherwise Ghana is surrounded by French-speaking countries: Burkina Faso on its northern border, on the east by the Republic of Togo, and on the West by La Cote d'Ivoire. Major rivers of Ghana include the Ankobra, the Ofin, the Pra, the Tano, and the famous Black and White Volta.

Although it is a small tropical country located just north of the equator, the geographical terrain and climatic zones of Ghana are varied. The humid southern regions, marked by coastal plains and rain forest, receive upward of 200 cm of rainfall annually. Faced with harmattan (dust-laden) winds four months out of the year, the savannah lands of the northern regions only receive about 100 cm of rainfall annually. The country's central regions are marked by plateaus and escarpments which extend for over 200 km and where the annual rainfall is about 150 cm. As is the case with all tropical countries, Ghana has two seasons: the wet season begins in April and ends in October, and the dry season lasts from November to March.

In the mid-nineteenth century, Horatio Bridge, captain of an American ship, was so impressed with the city of Accra that he declared, “My impressions of Accra are more favorable than of any other place which I have seen in Africa...Accra is the land of plenty in Africa. Beef, mutton, turkey, and chickens abound; and its supply of European necessities and luxuries is unequalled.” Currently the nation’s capital, Accra is still a bustling international city with a population just over two million. A cultural center for the Asante, Kumasi is another large historical city, with a population of 1.5 million. Four other cities in Ghana have populations ranging between 200,000 and 300,000. The larger cities tend to be the capitals of Ghana’s 10 administrative regions. For instance, Tamale, a city of 300,000, is the capital of the Northern Region. However, the majority of Ghanaians, about 60%, live in small towns and villages.

While there are distinct regional differences in the architectural styles of Ghanaian houses, this is not the case in the urban centers. Most urban houses are single- or two-story family units made of cement. Apartment buildings over 10 stories are rare in most urban centers. However, towering office buildings dot the landscape in cities such as Accra and Kumasi. The pre-colonial central city is often composed of mud and cement houses with corrugated zinc roofs. Exclusive suburbs have the large two-story houses surrounded by compound walls and shaded by palm and fruit trees.

The indigenous architectural styles are found in the rural communities. In the southern and central regions of Ghana, one finds the rectangular-shaped adobe or wattle house with a thatched roof. In the northern regions, one finds the circular adobe house with a concentric thatched roof or the rectangular adobe houses with the flat roof. Among the Gurensi of northern Ghana, women paint the beautiful geometric designs found in their circular adobe homes.

### 3 LANGUAGE

Although English is the official language of government and business, Ghanaians speak more than 25 distinct African languages belonging to the Niger-Kongo language family. Akan is the first language of more than 50% of Ghanaians; speakers of this language include the well known Asante and Fante, as well as eight other ethnic groups. Other languages spoken by large numbers of Ghanaians include Ewe, Ga, Guan, and Gur. Most Ghanaian speak two or more African languages. Multilingualism has always been a feature of African societies, stimulated to a large degree by regional and long distance trade. About 200 years ago Muslim merchants introduced Hausa, a Nigerian language, into commercial centers such as Accra. Today, Hausa has become a lingua franca facilitating intergroup communication throughout Ghana. A weekly show is broadcast in Hausa on the national radio station.

Upon arriving at the international airport in Accra, travelers may observe colorful billboards with the word “Akwaaba,” or *welcome*, written in bold letters. To welcome passengers in the Akan language seems reasonable since it is the first language of half of Ghana’s population. Below are typical Akan greetings one may hear in southern Ghana:

Eti Sen	Hello!
Wo ho ti sen	How are you?
Me ho ye	I am fine.
Me ho wo ekylene	See you later!

As a result of the Trans-Atlantic slave trade, Ghanaian personal names are found in various parts of the Americas. Among the Fante and most ethnic groups in the southern regions of Ghana, at least one of the names given to a newborn designates the day of birth. In the Carolinas, for example, “Esie” and “Effie” are the shortened forms of Fante “day names” given to females born on Wednesday and Friday. The Akan day name “Kudjoe” is commonly given to males among the people of Jamaica, Surinam, and the Sea Islands off the coast of South Carolina and Georgia.

### 4 FOLKLORE

In pre-colonial times, the history of most Ghanaians was preserved by oral historians. In the case of the highly centralized Akan kingdoms, trained court historians preserved the history. The oral traditions of a state society are “fixed texts” and must be recited in a precise manner, word for word. In addition to preserving group history, among the Tallensi of northern Ghana, the legend of Mosuor serves as a charter for the political and ceremonial relationships which exist between chiefs. Today, many of the great leaders of Ghana’s different ethnic groups are also included in school history books. A grade-school pupil does not have to be Asante to learn of Yaa Asantewa, the queen mother who declared war on the British in 1900.

Storytelling is one of the most important recreational activities found among Ghanaians, especially in rural villages. While stories are used to teach children morals, social norms,

and history, they are also used as a form of social control among the adults. Such stories may allude to the improper behavior of local adults without revealing their names. Just as storytelling is a crucial element of primary curriculum in the American school system, Friday afternoons are set aside as a time for storytelling in Ghanaian schools. Students are encouraged to share with the class stories which they have been told by their parents and grandparents.

Among the Akan- and Guan-speaking peoples, folktale characters include the tortoise, hare, vulture, and crow. However, Anansi the spider is the most popular animal character. Anansi defeats his larger foes through intelligence, humor, and cunning rather than through the use of physical force. Some of these spider tales, referred to as "Anancy tales" by Jamaicans, were introduced into the Caribbean by enslaved Akans forced to work on plantations in the 18th century.

## 5 RELIGION

Prior to the introduction of Islam and Christianity in Ghana, the concept of a supreme being was common in the majority of the indigenous religious systems. It was a belief in the power of intermediary mystical beings such as ancestral spirits and lesser deities that made these religions the target of 19th-century Christian missionaries. Islam was introduced into northern regions of Ghana as early as the 14th century among people such as the Mossi. The Larabanga Mosque south of Tamale was built as early as the 15th century.

Whether an individual is Christian or Muslim, he or she is reluctant to totally divorce themselves from certain aspects of the indigenous religions, especially community-wide festivals commemorating the ancestors. In Cape Coast, each August the Fante sponsor the Oguaa-Afahye Festival, an agricultural festival. It attracts Fante from all over the Central Region and family and friends from various parts of the country. Although ancestral reverence is central to this festival, the participants may represent a variety of Christian denominations including Anglicans, Baptists, Catholics, A.M.E. Zion, and members of various independent churches.

During the 1930s, some African Christians became dissatisfied with mission churches controlled by white missionaries. They left to create independent Christian sects, sensitive to both the spiritual needs and cultural values of Africans. For instance, the Harrist Church, which was founded in La Cote d'Ivoire in 1913, spread to southwestern Ghana within a few years. The first Harrist church was established in Ghana by Maame Tani, a healer, and Papa Kwesi Nackabah, a preacher. Not only does the Harrist Church give women a greater role in religious affairs, it sanctions polygyny. The Harrist Church also incorporates African dance and song into devotional services.

## 6 MAJOR HOLIDAYS

Ghanaians celebrate Independence Day on March 6 and Republic Day on July 1. The government often sponsors major parades in the large cities on national holidays. On such occasions, teenagers and young adults enjoy beach parties. The two religious holidays recognized by all are Christmas and Damba, which marks the birth of the Islamic prophet Mohammed.

Every month of the year, one or more festivals are held in some part of Ghana. For instance, during the month of August, while people of the Northern Region celebrate the Damba Festival, the Ga people of Accra sponsor the Homowo Festival,

a celebration of female puberty rites. While most festivals may have political or economic significance, Ghanaians use festivals to express their appreciation to the divinities for good health, prosperity, and a bountiful harvest.

## 7 RITES OF PASSAGE

The cycle of life from birth to death is marked by some type of celebration in Ghana. Throughout southern Ghana, ethnic groups carry out special naming ceremonies for the newborn. The Ga host a naming ceremony for the newborn infant eight days after birth. Family members and friends may sponsor numerous small ceremonies to mark the child's growth. For instance, among the Adkye-Ga, a newborn's mother or female relatives will dress the infant in waist beads, believed to protect the baby from disease and evil spirits. On a practical level, this string of beads adorning the baby's waist holds the diaper. Once a boy is toilet trained he no longer wears waist beads. A female, however, may wear her waist beads for the duration of her life, simply lengthening the string and adding beads to accommodate changes in her body.

Many ethnic groups in Ghana sponsor events which mark adolescence. Among the Ashanti and other Akan groups, nubility rites are held for a female once her menstrual cycle is regularized. The nubility rite lasts for several days and is conducted by the Queen Mother and elderly members of the girl's matrilineage. As a series of life-affirming spiritual and religious activities, this ritual does not involve any type of genital mutilation. The adolescent female is educated in the moral standard and behavior necessary for her to become a successful mother, wife, and member of her community.

The nubility rite includes activities such as a stool ceremony, a ritual bath, dancing, and pouring libation to thank God, the earth, the ancestors, and the community for having protected the girl. Other ceremonial activities include the presentation of gifts from guests, distribution of food on behalf of the girl, a hair-cutting ceremony, the ceremonial dressing of the girl, and the eating of a ritual meal.

## 8 INTERPERSONAL RELATIONS

Among Ghana's diverse groups, custom stipulates how greetings should be delivered and received. Among the Akan peoples, one can not initiate a conversation without first extending the proper greeting. To do otherwise, one risks being labeled as rude and uncivilized.

## 9 LIVING CONDITIONS

There is an average of five people living in each house in Ghana. In towns and cities, some housing has been built by the government or by organizations and companies to provide housing for their employees.

## 10 FAMILY LIFE

The dominant family structure in Ghana is the extended family, and the influence of descent groups is still very strong. From birth to death, Ghanaians are members of either a matrilineal or patrilineal descent group. The Fante of the Central Region, like all Akan-speaking groups, trace descent through the female line; children belong to their mother's lineage. The Talensi of the Northern Region reckon descent through the male line and children are members of their father's lineages. These

*A Ghanaian rural family compound. The dominant family structure in Ghana is the extended family, and the influence of descent groups is still very strong. From birth to death, Ghanians are members of either a matrilineal or patrilineal descent group.*  
(Corel Corporation)

unilineal descent groups regulate marriage, hold property jointly, perform important religious activities, and provide members with the security of a mutual aid system. Members of a Tallensi patrilineage are obliged to participate in certain ceremonies which revere and pacify their ancestors. Adult members of a Fante matrilineage will be expected to offer financial assistance to children other than their offspring.

Most Ghanaians believe that marriage is a family matter rather than a contract between two individuals. In both urban and rural communities, marriage requires the approval of the family and involves some type of bridal payment (a prescribed set of gifts given by the potential groom to his fiancée's family). Today, young adults wishing to marry may choose one or a combination of wedding ceremonies: the traditional, civil, Christian, or Islamic wedding ceremony.

## **11 CLOTHING**

On a daily basis Ghanaians may choose to dress in either African or Western-style clothes. A woman who chooses to wear the "kaba and slit," a matching blouse and long skirt made from African cloth, is considered to be as appropriately dressed as one wearing a Western business suit.

While certain types of woven cloth and clothing designs may be associated with a specific ethnic group, they are becoming a part of the national dress. For instance, although the

*fugu* is a shirt worn traditionally by elderly men on ceremonial occasions, among the northern peoples such as the Dagomba and the Kasena, it is now worn by men all over the country. In fact, this striped cotton shirt was often worn by the former head of state President Rawlings.

All students attending elementary, secondary schools and college wear uniforms; however, it is not uncommon to see urban teenage boys dressed in the fashionable blue jeans worn in American cities. On special occasions, custom dictates that people wear traditional clothing. For instance, the Ashanti must wear the hand-stamped *Adrinkra* cloth at funerals. Throughout Ghana, men and women holding traditional political titles have specific clothes worn only on ceremonial events. Among the Ga, on ceremonial occasions chiefs must wear the expensive machine-made *bazin* cloth, draped in the toga style. In addition to dictating clothing to be worn by nobility, there are rules regarding hairstyles, makeup, jewelry, and footwear. The Fante Queen Mother must wear a natural hairstyle and the traditional hand-made sandals associated with nobility at all public ceremonies.

## **12 FOOD**

Ghanaian cuisine is very savory, and the use of cayenne, all-spice, curry, ginger, garlic, and onions is common in most dishes. Stews are some of the nation's most popular dishes;

the national dish is groundnut peanut stew, which may include chicken or beef. Another common dish is *palava* sauce, a spinach stew which may use fish or chicken. A spicy rice dish cooked in tomato sauce and meat, Jollof Rice, is eaten by many Ghanaians, and is the antecedent to the red rice dish eaten by African-Americans in the coastal Carolinas. Ghanaians also eat black-eyed peas; the dish "red-red" is black-eyed peas cooked in palm oil and served with rice and fish.

While urban dwellers may include bread, oatmeal, and ice cream in their diet, most rural folk rarely eat Western food. For breakfast, Fante villagers may eat fish and kenkey, a fermented corn dish. The first meal of the day for an Ewe family living in Accra may include an egg and large bowl of oatmeal sweetened with local honey. The main staples served with Ghanaian meals are rice, millet, corn, cassava, yams, and plantains. The latter four may be fried, roasted, or boiled.

Some of the fast foods sold by urban street vendors include roasted plantain or peanuts, corn on the cob with pieces of coco nuts, and beef kebabs. In all of the cities, there are hundreds of small restaurants, referred to as *chop bars*, serving indigenous cuisine at reasonable prices. Women tend to be the owners and employees of these small chop bars.

### 13 EDUCATION

After independence in 1957, the Ghanaian government introduced free education, assuming all educational expenses for students from the time they entered primary school until they completed university. Still today, after introducing nominal tuition fees in the 1980s, educational expenditures represent more than 25% of the national budget. Unlike Western countries, the Ghanaian government assumes the bulk of the operational cost for secondary boarding schools, both public and private. While public boarding schools are located in all 10 regions of the country, private institutions tend to be located in or near the major urban centers. Achimota School is an example of a public coeducational facility located in Accra and Sammo Secondary Technical School, located in Cape Coast, is an example of a private boarding school.

Competition to the nation's secondary schools and institutions of higher education is very intense. Two entrance examinations, one for secondary school and the other for the university, weed out all but the most exceptional students. As is the case throughout the continent, the number of female students decreases drastically at the upper levels of the educational system.

Government guaranteed loans have been introduced to help students finance their education at public universities and professional and technical colleges. Four of Ghana's public universities are located in the southern and central areas of the nation: the University of Ghana, the University of Cape Coast, the University of Science and Technology, and the University College of Education. More recently, the government established the University of Development Studies at Tamale in the Northern Region. In the past 10 years, several private universities have been established. Several of the private universities were established by religious bodies such as the Seventh Day Adventists who own the Valley View University in Accra, and Central University College which was established by the Central Gospel Church. The first tertiary institution in Ghana modeled on the American liberal arts college is Ashesi University. There are also several public institutions of higher

education similar to American community colleges which offer training in fields such as nursing, teaching, fashion design, and computer programming. Such institutions include polytechnics and nursing training and teacher training colleges which are located in all the country's regions.

### 14 CULTURAL HERITAGE

Music and dance are intimately interwoven in most parts of African. Ghanaian choreographer A. M. Ipoku asserts, "...one can see the music and hear the dance." When attending night clubs or house parties, Ghanaians dance to high life, reggae, or rhythm and blues. When attending Christian churches, Ghanaians sing Western-style hymns or gospel music. It is not unusual to hear gospel music at the funeral of some Christians.

Traditional music and dance are performed at all coronations, festivals, and the funerals of high-ranking members of a community. Among the Ga of southern Ghana, during the Homowo Festival which introduces adolescent girls to the public, musicians play the traditional drum music, *Kpanlogo*. In the north, the final funeral ceremony of a beloved person of high status among the Dagomba may include musical performances by more than six groups, each playing a distinct musical style. The dances performed also vary, the most important dance being the *Baamaya*. These dancers have bells tied to their feet and waists, wear headdresses, and wave fans while they perform fascinating and strenuous movements.

The drum is by far the most important musical instrument among southern ethnic groups; however, the xylophone dominates the music of northern groups. Both instruments are made in a variety of sizes. Other traditional instruments include various types of rattles such as the *shekere*; clapperless bells; and wind instruments such as the bamboo flute and single-note trumpet made from animal horns, ivory, or wood. Popular music using Western instruments does not pose a threat to Ghana's rich musical heritage. For instance, the installation ceremony of a new paramount Asante chief requires a new pair of *atumpan drum*, also known as the talking drum. As is the case with many African languages, the Ashanti language is tonal. Following the high-low pitches of the Akan language, the *atumpan* recites proverbs and poems recounting the valor of warriors and singing the praises of chiefs. Presently, the *atumpan* is played at the opening session of the National Assembly in Accra and is used in radio broadcasts to announce the news.

One of West Africa's most renowned composers and ethnomusicologists is the Ghanaian J. H. Kwabena Nketia, a professor at the University of Ghana. He translates the traditional elements of Ghanaian music into contemporary idioms, and some of his best known compositions include *Bolga Sonata for Violin and Piano* and *Canzona for the Flute, Oboe, and Piano*.

Prior to independence from the British, the literary arts were very limited. For instance, the works of only two playwrights were published prior to independence. The first Ghanaian to publish a play was Kobina Sekyi in 1913; Sekyi's *The Blinkards* is a satirical comedy that questions the increasing Anglicization of indigenous culture. Also during the colonial period, Ferdinand Kwasi Fiwoo, an Ewe of eastern Ghana, wrote three plays in Ewe which were well received by readers and audiences.

The first Ghanaian to publish a novel was Joseph Ephraim Casely-Hayford, *Ethiopian Unbound* in 1911. It was over 30

years later before another Ghanaian writer would be published—*Eighteenpence* by R. E. Obeng in 1943.

After independence, the literary arts began to flourish; literary journals such as *Drum* and *Okyeame* published the short stories and poetry of such writers as Ama Ata Aidoo, Efua Sutherland, Kwesi Brew, and Kojo Kyei. Unfortunately, during the nine years that Kwame Nkrumah served as head of state, the creativity of Ghanaian writers was seriously censored. In 1960, Nkrumah shut down the *Drum*. Only poets concerned with patriotic or nationalist issues, such as Michael Dei-Anang and Yaw Warren, escaped the scrutiny of the government.

After the overthrow of Nkrumah's government in 1966, an impressive group of writers emerged. Well known playwrights include Kofi Awoonor, Efua Sutherland, and Joe Graft. Novelists include Kofi Awoonor, Ayi Kwei Armah, and Ama Ata Aidoo. Ghanaian poets who are recognized by an international audience include Atukwei Okai, Kofi Awoonor, and Vincent Odamtten. Poets as well as other creative writers do recognize the impact of their respective oral heritage on the literary arts. Ewe oral poetry, *halo*, has been a major influence on the poetry of Kofi Awoonor in terms of structure and rhythm.

## 15 WORK

Ghana has a diversified economy consisting of light manufacturing, mineral production, and agricultural production. Gold is one of the country's most abundant mineral resources, and in recent years it has superseded cocoa as the leading foreign exchange earner. Other minerals mined and exported include diamonds, manganese, and bauxite. In 2008 offshore oil was discovered in commercial quantities in Cape Three Points, which is located in the Western Region. It is expected that this discovery will boost the economy and provide more jobs.

In the last 25 years there has been a boom in the timber industry. Although tracks of virgin rain forest such as the Kakum National Park in the Central Region are protected by the government, community groups throughout the country are concerned about the adverse effects of deforestation. Various women's and youth groups sponsor tree-planting projects. Ghanaian farmers are keenly aware that deforestation causes erosion, gradually decreasing agricultural yields.

A large proportion of the population is engaged in subsistence farming. In most groups, men carry out the heavy work associated with preparing the fields, but women and children plant, weed, and harvest most food crops. Principal food crops produced for domestic consumption include cassava, maize, millet, plantains, peanuts, rice, yams, leafy vegetables, beans, and fruits. Many women sell their surplus food crops to urban traders in order to earn cash.

Introduced during the colonial era, cocoa is still Ghana's leading export crop and is processed by Europeans to make chocolate. In most farm communities cocoa cultivation is dominated by the men. Among the Ewe, women own only 4% of the total cocoa acreage. Women farm the food crops and must be involved in the petty retail trade, food processing, or artisan work in order to earn money.

Although farmers raise chickens, cows, goats, sheep, and pigs, fish is indeed the staple protein food among Ghanaians. Fishing is an important economic activity, connecting communities from the farthest extremes of the country. There are hundreds of fishing villages located along the Atlantic coastline. During the fishing season, small crews of men in brightly

*Ghanaians drying peanuts. Ghana's national dish is peanut stew, which may include chicken or beef. (Corel Corporation)*

painted canoes cast their nets into the Atlantic Ocean. Most fishermen have mastered both lagoon and deep sea fishing. The fish they catch is processed and marketed by their wives or female relatives. Women are responsible for the selling of fresh, smoked, salted, and fried fish in the Makola Market and other smaller markets in Accra. Some Ga women travel hundreds of miles to sell their product in the markets of cities such as Kumasi, Ho, and Tamale. Historically, and still today, the fish trade is a major economic resource open to Ga women.

Processing foods for Western markets is a slowly developing but lucrative business venture in Ghana. Commercial fishing companies with expensive boats and high-tech equipment supply an increasingly large number of American and European supermarkets and restaurants with tuna and lobster. Some women's cooperatives have begun raising and processing snails, known as escargots in metropolitan restaurants in European cities.

Women are well represented in the labor force, but also tend to work in the informal sector of the economy, mainly as petty traders in sales and retail. Professional women cluster in occupations such as nursing and teaching. In the corporate world, women are underrepresented in managerial positions and dominate the clerical positions. Lack of capital is the main reason why few women have been able to establish independent businesses; banks and loaning institutions discriminate against them.

The manufacturing sector of the economy is growing at a slower pace and includes wood processing, food processing, textile, brewing, and distilling. Few of these products are exported outside of the African continent. However, the handicraft industry is thriving and exports are increasing. Traditionally woven clothes, leather bags, bead necklaces, and beautifully carved masks and stools are sold in many large American cities. Currently, many African-American secondary and college graduates adorn their robes with *kente* scarves produced by Asante weavers.

## 16 SPORTS

The most popular spectator sport in Ghana is soccer. Every major city supports one or more professional teams and a stadium—Asante Kotoko in Kumasi, the Venomous Vipers in Cape Coast, and the Hearts of Oak in Accra. The Black Stars, Ghana's national team, is made up of the best players from these various teams. Ghanaians playing abroad, such as Michael Essien, who plays for the English soccer team Chelsea, return home to play with the Black Stars during international matches such as the Africa Cup or the World Cup. On any given weekend it is not uncommon to find teenage boys or men competing in soccer matches. Soccer for females is gaining in importance, and a female soccer league was launched in April 2008.

While soccer is the sport of the masses, basketball and tennis are replacing cricket in popularity among the elite. Females attending secondary schools and institutions of higher education tend to excel in sports such as track and handball.

## 17 ENTERTAINMENT AND RECREATION

After World War II, the concert party, a type of comic opera performed in the Akan language, became the most popular form of entertainment in the coastal towns. This folk theater is a fusion of Akan performing arts, especially masquerade and Anansi stories, influenced by Western musical and dramatic traditions. While the theatrical form used is similar to slapstick humor, there are both moral and political overtones in the performance. Today, there are over 50 concert party troupes who perform in both urban and rural areas. The events open at nine o'clock with a dance and live band playing popular tunes. Two hours later, the troupe performs a comical play which lasts until two or three o'clock in the morning. Generally, the band ends the concert with a selection of music.

## 18 FOLK ARTS, CRAFTS, AND HOBBIES

Although the British manufactured goods introduced during the colonial period decreased certain cottage industries, Ghana has maintained a rich art and craft tradition. While certain crafts such as batik were introduced in the 1960s, others such as pottery have been practiced for thousands of years. In pre-colonial times, those ethnic groups that were organized in kingdoms boasted many full-time artisans. Weavers and smiths were full-time artisans in Kumasi, capital of the Ashanti kingdom. Today, Asante smiths still produce the incredible beautiful gold jewelry for the monarch, and the weavers produce the *kente* clothe worn by royalty.

Pottery, the country's oldest craft, dates back to 4000 bc, and women still throw pots of various sizes without the wheel. The perfectly round clay pots produced by Shai women, known throughout southern and central Ghana, are used for stor-

age and cooking. Akan women are some of the few female sculptors in Africa; their clay figures are idealized portraits of deceased chiefs or important elders in their society. Beads commonly found in markets throughout Ghana are also produced by women. Among the Krobo people in the eastern part of Ghana, beads are used in several socio-religious ceremonies, including puberty rites for adolescent girls.

As mentioned above, many Ghanaian groups continue to use traditionally woven cloth for special occasions. Throughout Ghana, men are the weavers. Men in northern societies such as the Dagomba make leather products and weave the fugu shirt described earlier.

## 19 SOCIAL PROBLEMS

The minimum working age is 15, but custom and economic necessities often force children to work at a younger age. The government has established agencies to help protect children. Ethnic tensions in the northern parts of Ghana eased somewhat in the 1990s, although they have not completely disappeared.

## 20 GENDER ISSUES

Any visitor to Ghana will notice the high visibility and dynamism of women in commercial and social life. They are found on the streets carrying their wares on their heads, selling in shops, in the markets, or from tables set up on pavements. Women in Ghana also play important roles managing church, home, and community activities. Among the matrilineal communities, some royal women become queen-mothers, and perform political and ritual functions. However, despite their high visibility in daily life, few women occupy positions of authority in formal power structures. After elections in 2000, only 19 women were elected to a parliament of 200. In 2004, although 100 women contested the parliamentary elections, only 25 were elected.

Women in Ghana are faced by constraints such as a lack of education, training and skills, low rates of utilization of productive resources such as land, and poor literacy rates in comparison with men. According to a major social survey, the Ghana Living Standards Survey (GLSS 4) for 2000, 44.1% of women as compared to 21.1% of men had no formal education.

This has a direct effect on women's capacity to take up formal sector jobs and leadership positions. Thus the majority of women in Ghana are self-employed. Their main activities are petty trading, food processing, and marketing food crops. Although this makes them highly visible, their businesses tend to be small-scale, home-based and loosely structured with limited management expertise and weak infrastructural support.

Due to their low levels of literacy and skills, women tend not to be able to improve their opportunities, and they remain in low-skilled, low-status and low-paid jobs.

The underlying causes of the constraints are deep-seated traditional social attitudes and socio-cultural practices and beliefs which are slow to change. Also, the Judeo-Christian traditions tend to reinforce patriarchal cultural practices and beliefs, and this makes Ghanaians adopt conservative attitudes toward issues such as homosexuality and fashions and fads which are thought to be "Western."

Efforts have been made by both the state as well as civil society organizations to bridge the inequalities that persist between men and women. In 1975 the National Council for Women and Development was established as the national

machinery to promote the advancement of women, following from the first United Nations Conference on Women. Since January 2001 the national machinery has been transformed and elevated to a full ministry, the Ministry for Women's and Children's Affairs (MOWAC), headed by a minister of state who has cabinet status. MOWAC has worked with academia, NGOs and members of legislative bodies to research and review aspects of Ghanaian laws which do not promote the advancement of women. Ghanaian women have a long history of organization and association and many belong to groups with a variety of interests. Such groups could have any of the following interests: religious, professional or occupational, micro-finance, self-help, politics, women's rights, or charity.

Feminist groups such as Abantu for Development and Ne-tright have been at the forefront of activities to support the empowerment of women, and also to support them when they venture into formal power structures and take up public office. Since the 1980s, the collective efforts of the state and civil society have brought about a number of achievements for gender issues in Ghana. Notable examples are the establishment of the passing of PNDC Law 111 or the Intestate Succession Law, the establishment of the Girls' Education Unit of the Ministry of Education, the passing of The Children's Act, the amendment of the Criminal Code to suppress trafficking in women, the establishment of a Domestic Violence and Victims Support Unit within the Ghana Police Service, and the passing of a Domestic Violence Bill. Particularly since 2000 some women's rights groups have begun to form networks. One such network was very instrumental in mobilizing the public to support the passing of the Domestic Violence Bill in 2007. Another network had earlier mobilized the public to support a Women's Manifesto which was presented to President Kufour in 2005.

In spite of the activities by both the state and civil society to improve the status of women in Ghana, and the increasing levels of awareness of women's and gender issues in the country, challenges to women's empowerment and leadership still persist. Although the status of women in Ghana has improved greatly during the last 25 years, there is still room for more progress.

# GIKUYU

**PRONUNCIATION:** kee-KOO-yoo

**ALTERNATE NAMES:** Kikuyu; Gekoyo

**LOCATION:** Kenya

**POPULATION:** 6.8 million

**LANGUAGE:** Gikuyu; English and KiSwahili (national languages)

**RELIGION:** Christianity (Roman Catholicism, Anglicanism, fundamentalist groups, African Separatist Churches); ancestor spirits (Mungiki etc)

**RELATED ARTICLES:** Vol. 1: Kenyans

## <sup>1</sup> INTRODUCTION

The Gikuyu, like the white settlers in the early 20th century, were attracted to the highlands because of cool temperatures, fertile soils, and abundant rainfall. Prior to the arrival of the Gikuyu, hunters and gatherers known as the Dorobo occupied the area. Although the exact date when the Gikuyu began to occupy the central highlands is not known, their oral history refers to a cycle of famines, which helps to tie their presence to a point in history. For example, the “Famine of Sweeping the Courtyard” occurred probably before 1637 and the “Famine of Small Bones” occurred later, sometime in the mid-18th century. It is known, therefore, that by the early 1600s (well before the arrival of Europeans), the Gikuyu were concentrated at Ithanga, 80 km (50 mi) southeast of the mountains that rise near the confluence of the Thika and Sagana rivers.

Oral traditions of all the tribes of Kenya agree that people began to migrate in different directions, eventually becoming the separate groups that exist today. The Gikuyu themselves moved west, from where the Gikuyu creation myth picks up the story.

The history of the Gikuyu becomes further complicated for historians and anthropologists with the inevitable intermarriage and interaction that occurred (and still occurs) between the various tribes and groups.

Having migrated to their current location about four centuries ago (in the 1600s), the Gikuyu make up Kenya’s largest ethnic group. The Gikuyu attribute their origins to sacred intervention by their god Ngai who sometimes resides on Mt. Kenya, which, for the Gikuyu, is a sacred place.

The Gikuyu have featured very significantly in the development of contemporary Kenyan political, cultural, and social life. The Land and Freedom Movement (referred to pejoratively as the “Mau Mau” Movement) during the 1950s was primarily a Gikuyu guerrilla war in response to British imperialism, which had alienated Gikuyu from their farming lands in favor of white settlers. Many of these settlers owned farms bigger than the states of Rhode Island or Delaware. On these farms Gikuyu were required to do forced labor, especially providing labor for cash crops such as coffee and tea. A “hut tax” in 1901 was imposed on every Gikuyu household so that men were forced to migrate into the growing city of Nairobi or on to the white-owned farms to earn money so as to pay taxes. The Gikuyu nationalist Jomo Kenyatta became the first president of Kenya at its independence in 1963. He is revered amongst the Gikuyu for his leadership against colonialism and for his status as the father of his country.

Today, the Gikuyu, like other Kenyan ethnic groups, participate in a democratic political system. Political participation is primarily through election to a parliamentary seat (of which there are 210 in Kenya) or through direct election to the national presidency. Most of the Gikuyu belong to one major political party, the Party of National Unity (PNU), one of the major partners in Kenya’s “Grand Coalition” government as of 2008. The other major partner in the coalition government is the Orange Democratic Movement (ODM).

The Grand Coalition government was the culmination of a peace deal brokered by former UN Secretary General Kofi Annan when violence broke out among Kenya’s ethnic groups following the announcement of the disputed December 2007 presidential election results. Members of the Gikuyu community (from which the incumbent President Mwai Kibaki hailed) suffered most of the violence where over 1,000 people were killed and over 500,000 displaced from their own homes.

As of 2008 the Gikuyu were as much part of the ruling coalition government as other Kenyan citizens. Mwai Kibaki was the second Gikuyu to become the president of Kenya since 1964 when Kenya became a republic. He was elected for a renewable five-year term in 2002 after former African strongman Daniel Moi retired from office and active politics. Other outstanding Gikuyu personalities in history include Jomo Kenyatta, the first president of Kenya; Dedan Kimathi, the celebrated leader of the “Mau Mau” Movement; and Wangu wa Makeri, a legendary woman who ruled Gikuyuland.

## <sup>2</sup> LOCATION AND HOMELAND

Official figures released in January 2007 estimated the population of Kenya at 36.1 million. The Gikuyu are the largest ethnic group in Kenya numbering about 6.8 million of this population. The overall population growth rate for Kenya, however, dropped from 2.82% in 2005 to 2.75% in 2006. This drop can be attributed to disease and to more effective methods of family planning.

Although the Gikuyu live throughout Kenya, they are primarily located in two of Kenya’s eight provinces. These two provinces, Nairobi Province and the Central Province, are in the central area of the country. Due to their numerical superiority and early 20th century colonial association with British settlers in the highlands, the Gikuyu have been well positioned to occupy a central position in Kenyan social life.

The capital city of Nairobi lies just on the southern boundary of the area traditionally occupied by the Gikuyu people. Thus, many Gikuyu now are counted among this city’s inhabitants of about 3 million people. Ancestral homes are to the north of Nairobi in the towns of Murang’a, Nyeri, and Kiambu. Gikuyuland is a dissected plateau of about 160 km (100 mi) from north to south and 48 km (30 mi) from east to west. Its elevation ranges from about 900 m (3,000 ft) to over 2,300 m (7,500 ft) above sea level. The plateau features deep gorges and parallel ridges. Rainfall due to the high altitude is very plentiful. On the eastern side of the plateau, the ecology is comparatively arid dominated by a grassland zone. To the west of this area, the elevation increases giving rise to more rainfall and woodlands with good potential for agriculture. The largest ecological area is characterized by high altitude and rainfall where foliage is abundant and population is heaviest. Since the Gikuyu rely heavily on agriculture, this is the area of significant cash crops such as pyrethrum, coffee, and tea. Soils are

deep and red here providing a fertile ecology for the growth of traditional crops such as sweet potatoes, bananas, millet, sorghum, arum lily, yams, cowpeas, and maize, which is the staple throughout Gikuyuland.

Gikuyu also raise cattle, sheep, and goats. They use the hides from the cattle to make bedding, sandals, and carrying straps and they raise the goats and sheep to use for religious sacrifices and purification.

### 3 LANGUAGE

“Kikuyu” is the Anglicized form of the proper name and pronunciation of Gikuyu. The Gikuyu refer to themselves as the Agikuyu people. The Gikuyu are generally fluent in three languages: Gikuyu, Kiswahili, and English. The official language and the medium of instruction at all education tiers in Kenya is English. All children receive instruction in this language in school beginning with primary school and continuing through university. Kiswahili is a national language that is widely used as a language of trade and commerce especially by those for whom formal education has not been possible. Kiswahili is also taught in the schools from primary through secondary school. When traveling outside the central highlands, the Gikuyu use either English or Kiswahili. Radio, television and mass media publications are richly available in these two languages throughout Kenya.

The Gikuyu language, however, can be thought of as the language of preference in home and community and is spoken by, and passed on to, children at home. Gikuyu is taught in primary schools throughout Gikuyuland. Gikuyu is classified as a member of the Benue-Congo family of languages. It is grouped among the Bantu languages within this system of classification. These languages are widespread throughout central and southern Africa, which indicates a common culture history stretching over and uniting ethnic groups over a vast geographical area. Bantu languages have a common grammatical structure and cognate words shared as a language heritage. For example, in Gikuyu, as in other Bantu languages, nouns are grouped into classes and are modified by variations in prefixes, infixes, and suffixes to signify attributes such as plurality, singularity, size, human versus non-human status, and tense to name but a few. For instance, the stem “ndo” has no meaning except when modified. For example, the word “mondo” means man and the word “ando” means men. In Kiswahili, also a Bantu language, the stem “tu” is modified in the word man as “mtu” and “watu” as men or people. The term Bantu, which is used for the language family of which Gikuyu is a member, therefore, means “the people” while “muntu” means “a person.”

There are varieties within the Gikuyu language. There is the Southern Gikuyu (Kiambu, Southern Murang’a), Ndia (Southern Kirinyaga), Gichugu (Northern Kirinyaga), Mathira (Karatina), Northern Gikuyu (Northern Murang’a, Nyeri) dialects. Lexical similarity of Gikuyu is about 73% with Embu language, 70% with Chuka language, 67% with Kamba language and 63% with Meru.

If technological advancement is any guide, the Gikuyu language has a bright future. With the liberalization and growth of technology in Kenya, the Gikuyu language is claiming its place on the airwaves through such FM stations as Kameme FM, Inooro FM, and Coro FM. It is also establishing itself on the Internet where members interact in the Gikuyu language. Various writers, including Ngugi wa Thiong’o, the celebrat-

ed Kenyan novelist, have come out to promote the Gikuyu language.

### 4 FOLKLORE

The origin myth of the Gikuyu teaches that Ngai (“God”) carried the first man, Gikuyu, atop Mt. Kenya, also known as *Kiri-nyaga*, which is translated as the “Shining Mountain” or “Mountain of the Light.” Ngai showed him the bountiful land spread out below the mountain. He was told that his sons and daughters would inherit the land and multiply. They would enjoy all of the abundance provided by the land. Gikuyu was given a wife named Mumbi meaning “Creator” or “Molder,” and together they had nine daughters. Ngai said that whenever problems arose, the people should make a sacrifice and gaze at Mt. Kenya so as to be assisted. One day, Gikuyu was unhappy at not having a male heir so he pleaded with Ngai to provide a son for him. After appropriate rituals, Gikuyu went to a sacred tree where he found nine men waiting to greet him. He arranged for these men to marry his daughters provided they agreed to live under his roof and abide by a matrilineal system of inheritance. In time, many grand and great-grandchildren were born. Still later, each daughter came to head her own clan, thus giving rise to the nine clans of the Gikuyu people. The legend continues that in time the kinship system changed from a matrilineal to a patrilineal one. It is believed this happened because the women became excessive in their domination over men. Polygyny (one man and several wives) from then on replaced polyandry (one woman and several hus-

bands) as a marital practice. Nevertheless, the women were able to maintain their names for the main clans. There was actually a 10th daughter but the Gikuyu considered it to be bad luck to say the number 10. When counting they used to say “full nine” instead of 10. To this day, most women carry one of these names. The names are Wanjiru, Wambui, Wanjiku, Wangari, Waceera, Wairimu, Wangui, Wangechi, Wambura, and Wamuyu.

The Gikuyu origin myth validates their system of kinship and gender relations. Spiritual life centered around belief in a high god and sacred places such as Mt. Kenya. Solidarity for family and community in naming practices and family inheritance is made sacred. Above all, land which continues to be the primary value for Gikuyu and which was contested during the colonial era against the British settlers can be understood to have far more than economic utility. Land is indeed a gift from God.

There are a number of other important legends that provide “cultural heroes” who performed great feats in the past. Among these are Karuri who was a past ruler of legendary proportions. Another is Wamugumo who was a noted giant believed to have been able to eat an entire goat by himself. He could clear land that took many men a long time to accomplish, and he was able to kill lions, buffalo, and leopards with ease. A famous woman called Wangu wa Makeri ruled during the period of the matriarchy. During this time, it is believed that women were allowed to have many husbands, especially young men, and the old men did all of the work.

Folktales and riddles combined with myths to provide for young people a strong sense of values recognized by the community as making up Gikuyu culture. Grandmothers were excellent storytellers and devoted a great deal of time to the telling of stories. Some common riddles include “A man who never sleeps hungry?”=fire (which is lit throughout the night); “My son lives between spears”=the tongue; and “My child travels without rest”=the river (always flowing). Proverbs are numerous and constantly changing to reflect current times. For example, one proverb teaches that “A good mortar does not correspond to a good pestle,” to show that successfully matching a husband and a wife may be difficult. Another proverb widely heard is “When the hyenas come, nobody will give shelter” which shows that in periods of panic, “it is every man for himself.” Common sense is taught by most proverbs such as “When one goes on a journey, he does not leave his bananas cooking in the fire.”

Children enjoy telling and listening to a wide assortment of folktales all of which serve to instill values in them. These tales involve stories about animals and people with such titles as “The Hyena at the Crossroads,” “The Poor Woman and the Hog,” “Two Girls and Their Gourds,” and “The Woman and the Bird.” Games are played involving speech acts such as competitive riddling and tongue twisters. One tongue twister refers to a child who saw a tadpole and ran away and when the tadpole saw the child, it also ran away. In Gikuyu, one says “Kaana ka Nikora kona kora kora, nako kora kona kaana ka Nikora kora.”

## 5 RELIGION

The Gikuyu today are prominently represented in a variety of Christian churches which include Roman Catholicism, Anglicanism, fundamentalist groups, and African Separat-

ist Churches. The significance of belief in a high god, Ngai, is maintained or was transferred to the Christian-centered belief in monotheism. Ngai created everything. He lives in the sky and is invisible. Sometimes he lives on Mt. Kenya which in Gikuyu is called *Kiri-nyaga* meaning the “Mountain of the Light” or “Shining Mountain.” He should only be approached when problems are serious such as involving life and death questions. During periods of famine or epidemic diseases, the elders on behalf of the entire community approached him.

Other spiritual realms in addition to monotheism have also persisted into contemporary life. Important among these are the ancestors. These departed relatives were concerned with all matters especially those considered to be not important enough to seek Ngai’s attention. Matters of everyday health, for example, deeply involve the ancestors who intervened to cause sickness when their interests were not upheld. “Traditional doctors” were popular as resources for diagnosing which ancestor had been responsible for a particular disease and for information as to how the ancestor may be appeased.

Religious ceremonies were commonly included in public prayer. Invoking through prayer the blessings of Ngai or the ancestors generally started these ceremonies. One common prayer includes the following supplications: “Praise ye Ngai. Peace be with us. Say ye, that the elders may have wisdom and speak with one voice. Say ye, that the people may continue to increase. Say ye, that sheep and cattle may be free of illness. Say ye, peace be with us.” Significantly, the elders led public prayers that served to validate their authority over affairs of the community by establishing a direct line to the high god that ran directly through them. Renowned elders stood out as prophets who were in a position to provide insights as to the wishes of Ngai. Some prophets are venerated in tribal history as most helpful during community crises concerning epidemics and drought. Currently, one can observe on occasion farmers thanking Ngai at harvest time for a plentiful bounty.

Prophets and seers cut a significant niche in Gikuyu religion. Examples included Mwathi wa Mugo and Mugo wa Kibiru. These prophets are believed to have predicted the coming of the White settlers, the struggle for freedom and the role of the Gikuyu in the political leadership of postcolonial Kenya. They gave religious and political guidance to the community.

In the past, religious values emphasized community solidarity and discouraged what may be referred to as “rugged individualism.” Gikuyu learned that family and community welfare was paramount over their individual interests. Authority was vested in those individuals such as elders and prophets who were believed to know what was best for all people. Expressions of individuality and solitary life were not encouraged. Someone perceived to be outside the group might be accused of being a witch and could be killed by the elders. At the same time, considerable security and important meaning in life was provided in this Gikuyu system of social/spiritual culture. That was so because all human life was spiritual and communal. The landscape itself that made up the environment was composed of “sacred” places and objects. For example, the fig tree still has important symbolic significance harkening back to the period when Ngai sent Gikuyu forth to take up residence near Mt. Kenya. Many rituals were performed in the vicinity of a fig tree.

It is clear that the Gikuyu religious system provided a set of answers and solutions to problems of everyday life and mis-

fortune. At the same time, successful experiences were also accounted for by emphasizing conformity to religious values. The ancestors as both kinsmen and spiritual entities are especially well positioned to give a strong sense of family values as reinforced by religious belief. They can be reincarnated in the form of names so that as long as there is a Gikuyu society, the ancestors will live on. The body itself was far less significant than the name or memory of a dead person. In fact, frequently bodies after death were simply discarded in the bush perhaps to be eaten by wild animals such as the hyena.

Today members of the outlawed, quasi-political/religious Mungiki sect are attempting to bring back traditional rituals. Their members claim they are a group of traditionalists interested in re-introducing and promoting traditional way of life among the Gikuyu ethnic group. They pray as they face Mount Kenya, which they believe to be the home of their god Ngai. The Mungiki have adopted the dreadlocks worn in the 1950s by members of the Mau Mau Movement.

## 7 RITES OF PASSAGE

The Gikuyu are well known for the emphasis that they placed on rituals, which occurred at the time of adolescence. Prior to the arrival of the Europeans, there was a custom known as Ngweko. Periodically, elders supervised, in a special location, occasions where young people would gather together and spend private time with each other for the purpose of getting to know members of the opposite sex. At this time, young people paired off according to mutual attraction and, for most couples, experimental lovemaking was practiced. Such lovemaking did not always result in sexual intercourse. Should a young girl become pregnant however, the boy responsible was held accountable and was expected, in time, to marry the girl that he had impregnated. The Gikuyu considered Ngweko to be a form of indigenous education in sexual knowledge. It is said that Ngweko (fondling), since it was associated with sexual reproduction, was considered by the society to be a sacred act of carrying out the orders of their God to reproduce. Many elder Gikuyu believe that the missionaries made a mistake when they labeled Ngweko as sinful. The schools that were established to educate the people in modern culture did not include anything about sexual education. Perhaps for this reason, since the co-educational boarding school became a common place where young people often experimented with their sexuality without any education, teenage pregnancies have become a major social problem in Kenya including the Gikuyu. It is important to note that in the Ngweko system, supervised sex was permitted but self-control for both boys and girls was emphasized.

Both boys and girls, prior to participating in Ngweko, undergo numerous rituals including operations on their genital organs. The purpose of these rituals is to enable young people to bond into groups and to develop a sense of peer group solidarity with those people with whom they have undergone painful experiences together. Clitoridectomy was, and to some extent still is, practiced by the Gikuyu and is the topic of much debate by Africans and others. A middle ground position appears to be emerging that grants the social significance of adolescent ritual while wanting to eliminate clitoridectomy even under hospital conditions where it still occurs. The boys continue to be circumcised, a practice widespread in Africa (unlike clitoridectomy) and commonly found in many other parts

of the world as well. Supporters of initiation note that the Gikuyu recognize the equal significance of boys and girls by subjecting each to initiation ceremonies together.

The Gikuyu word for circumcision of either sex is *irua*. There are many dances and songs which take place during initiation ceremonies and these are called *mambura* (rituals or divine services). During initiation ceremonies, the Gikuyu history is publicly rehearsed so as to impart a sense of community solidarity. Each *irua* group is given its own special name according to events of the day, such as war or famine. Initiation ceremonies involve special foods, and the selection of a sponsor to impart knowledge and to supervise the young person. After several days of instruction, boys and girls are taken together to a compound for their circumcision. Numerous friends and relatives gather for singing and dancing throughout the night. A special feast is made for the parents of the children. The day before the operation, there is a ceremonial dance known as *matuuro*. The girl has her head shaved, but does not participate in a race undertaken by boys. The winner is thought to have been favored by Ngai (God). In another ceremony, boys and girls are organized into lines according to seniority. They take an oath never to reveal Gikuyu secrets to outsiders. Senior warriors then take boys and girls to a special place where they participate in more ceremonies involving being sprayed with medicines that are thought to enhance bravery and endurance. Songs sung on these occasions emphasize community solidarity and bravery.

The next day the physical operations occur. The girls are operated on by a woman considered to be an expert and the boys by a man also considered to be experienced in these matters. In the operation, the girls sit together on a cowhide rug. Female friends and relatives cluster around in a circle. Males are not permitted anywhere near this event. The girls are held by their sponsors and are doused with cold water to reduce pain. While the *moruitha* performs the clitoridectomy, each girl is expected to remain stoic so as not to be seen a coward by the onlookers. After the girl is covered with a new dress, applause and cheering burst forth from the onlookers. The girls retire to a special place for several days where their wounds heal. During this time, close relatives and friends bring special foods and treats for the girls. For several months, the girls do not do any work. Their parents now may wear brass earrings as a sign of their seniority. This symbolizes that their child has now been reborn, not as their child, but as a child of the whole community. Boys' circumcisions mirror that of girls' clitoridectomy ceremonies in most details.

The Gikuyu organized their experience of adolescence very differently from modern life in Kenya. While many elder Gikuyu people still maintain strong relationships with others with whom they were initiated, younger teens are not receiving community socialization comparable to their parental and grandparental generations. While mandatory painful initiation ceremonies may well be best thought of as a vestige of the past, many Kenyans lament what they perceive to be a rising tide of individualism and lack of peer group solidarity among the young. One of the most interesting challenges for young people in Kenya is to work out for themselves what is most appropriate for them to emphasize in choosing to combine old customs with modern ones. This issue is a prominent theme among Kenyan intellectuals and the mass media and is the

subject of stories, plays, and other programs on Kenyan radio and television.

## 8 INTERPERSONAL RELATIONS

Social relations in contemporary Gikuyu society are played out primarily in the context of the local community, school, and church. Dating, courtship, friendship, and family life are significant concerns around which people construct their social lives. There is more evidence today for individual choice in these matters than in the past where very strong principles of age stratification and gender distinction dominated social life.

In the past, boys were organized into sets consisting of groupings of local boys initiating at one time. These sets were grouped into larger groupings, called regiments, made up of boys from elsewhere and from one's local area that had been initiated at the same time. Boys in a common set or regiment proceeded through life together and exercised authority over sets and regiments coming after them. Tribal political authority was vested in one of two older generations that were responsible for governmental decisions involving war and peace and daily conflict resolution. Every generation inherits the name of that generation to which the grandfather belongs. Thus, there is a constant alternating of two generational names, an older and younger. The principle of age determined whom a man or a woman might marry or have sexual relationships with. For instance, a man could have no sexual relations with a girl who was a member of his own set generation. They were considered to be initiation "brothers" and "sisters." The men's regimental organization served as a police force. The older regiments basically interpreted tribal law and made significant decisions while the younger regiments enforced their decisions. Warrior regiments were active in defending communities from raids from neighboring societies or for carrying out raids elsewhere. Thus, the structure of Gikuyu age stratification provided a workable framework for the functioning of society around social needs for procreation, defense, and social regulation.

Within this framework, every Gikuyu knew precisely how best to relate to other people. Social relations such as dating, visiting, and greeting others properly were all prescribed by age (and gender) according to an ubiquitous principle of stratification.

## 9 LIVING CONDITIONS

The Gikuyu enjoy an abundant resource base arising from their vantage position in the central highlands of Kenya. Much of the region was, therefore, free of malarial mosquitoes and the tse tse and other flies as sources for human and animal disease. Gikuyuland was in the past, and many ways still is, a granary for the Gikuyu and their neighbors. The Gikuyu have experienced success in commercial farming and many other businesses that have been a significant source of revenue for those Gikuyu now in a position to own and maintain large estates and an affluent life-style. Still, many other Gikuyu reside in slums that have grown rapidly in urban areas, especially Nairobi. In this city, many of the thousands of street children, now homeless, come from Gikuyu towns where they have suffered from family dislocation and poverty due, in part, to the uneven income distribution in Kenya. The globalization of the world's economy has been particularly hard on poorer nations such as Kenya. Additionally, many Gikuyu, like some other Kenyans, have lost their sense of community responsibility so

cherished in the past. This is a constant theme in the writing of Ngugi wa Thiong'o as well as other Kenyan writers.

In the past, all Gikuyu had sufficient access to food, housing, and other materials even though successful people had more than others. Gikuyu houses were round with wooden walls and grass thatched roofs. Neighbors generally helped in the construction of a home in exchange for beer and meat. Building materials were collected from local materials. Women were considered responsible for thatching, and a carefully thatched house was highly valued. Good thatching provided protection from the rains and the sun during the dry season. Homes were made according to plan with the man's home being much simpler than the woman's. A husband and wife typically lived in separate houses although the woman's house had spaces for her children and her sheep and goats. The better-built homes sometimes lasted for more than 10 years, but re-thatching was an annual event.

## 10 FAMILY LIFE

Marriage and family life revealed the Gikuyu preference for large families and big compounds. It was considered a religious obligation to have children in response to the command of God to multiply. Four children, two boys and two girls, was the ideal. Boys were desirable because they carried on the family name, which was passed on through the male line. Girls were desired to attract bride wealth in cows and goats which could be, in turn, used to obtain wives for their brothers, and later to have children for those families in which they married. When a girl married and bore children for her new family, she began a family journey that saw her become more powerful as she bore children affiliated to her husband's family. Her children stayed with her in her home separate from their father. Polygyny (one man and more than one wife at a time) was valued as a means to provide large families. Women, too, often preferred polygyny to monogamy (one man and one woman) and, not infrequently, assisted their husbands in finding younger wives. Elder wives had clear lines of authority over younger wives and supervised them in affairs of the compound. Given the importance of age stratification in Gikuyu social organization, it may be said, too, that a woman actually married into an age set as well as the extended family of her husband. When her husband entertained his age set friends, it was considered appropriate for them to sleep with his own wife. This was not considered adultery unlike clandestine affairs held in secrecy, a practice that was severely punished. Thus, in married life, one also sees the basic value of sharing and communalism so significant in all areas of Gikuyu life.

The marriage ceremonies were lengthy and involved stages of progression which first included the initial meeting of the aspiring son-in-law with his prospective parents-in-law. The girl's assent was needed at this meeting before events could proceed to later stages. These events included parental visits, exchanges of goods as bride price spread out over time, and eventual movement of the girl herself into the home of her husband. The marriage itself is finalized when, prior to her movement to her new family, the boy and his relatives come to the girl's house bearing numerous gifts all specifically earmarked for her relatives who were most responsible for her upbringing. The actual movement, not infrequently, took on a rather dramatic public capturing of the girl at some point when she was unaware. Girls arrived in their new homes quite willingly on

the whole even though they might have been “captured” to get there. For a period of many weeks after establishing residence in her new compound, rituals and exchanges continued to occur to symbolize the girl’s transitional stage between her old and new families. She was frequently visited by her girlfriends, and had her own special places in the compound where she could retire alone for private reflection.

Nowadays, marriage no longer involves all of the rituals and exchanges previously emphasized. Nevertheless, there is still bride wealth, significant involvement of parents in the choice of their children’s spouses, and the very high value attached to having children. Marital ceremonies no longer involve Gikuyu religious beliefs which have given way to Christianity, both mainstream and independent churches, and Islam.

Gikuyu family identity is carried on through nomenclature. This is executed by naming the first boy after the father’s father and the second after the mother’s father. The same goes for the girls; the first is named after the father’s mother and the second after the mother’s mother. Following children are named after the brothers and sisters of the grandparents, starting with the oldest and working to the youngest. Along with the naming of the children was the belief that the deceased grandparent’s spirit that the child was named after, would come in to the new child. This belief was lost with the increase in life-span because generally the grandparents are now still alive when the children are born.

### **11 CLOTHING**

In the past, Gikuyu adults dressed in animal skins, especially sheep and goatskins. Skin tanning was a vital industry for which many men were renowned as specialists. Women’s attire includes three pieces, an upper garment, a skirt, and an apron. Men wore a single garment covering the entire body. Young men preferred bare legs made possible by wearing short skirts, especially those made from a kid because of its smooth hairs. Elders wore more elaborate skins often made of fur and, sometimes, aprons worn in ceremonial dances. European clothing is now commonplace throughout Gikuyuland.

Although in rural areas women nowadays wear multi-colored cotton dresses and skirts and blouses, it is common to find girls wearing Western style trousers and even miniskirts. Men generally wear Western style trousers and shirts with jackets and ties for formal occasions. Casual and trendy clothes like jeans and T-shirts are common on weekends and holidays across the gender divide. Women who wish to emphasize an African look can be seen wearing long pieces of colorful cloth worn in skirt-like fashion wrapped around a shorter dress.

### **12 FOOD**

Farm produce and meat were abundant in the past and presently provide Gikuyu with an excellent nutritional resource. Maize, made into a thick porridge called *ugali*, is the national dish of Kenya. *Ugali* is eaten with meat, stews, *mandondo*, *njaha* or traditional greens known as *sukuma wiki*. *Ugali* and *irio* are popular on a daily basis in Gikuyuland. *Irio*, a specifically Gikuyu dish, is a mixture of the kernels from cooked green corn boiled with beans, potatoes, and chopped greens. In the past, the Gikuyu had a regular and intense ceremonial calendar involving considerable feasting. Boiled and roasted meat were constantly being consumed along with beer on these occasions. In the past, the brewing of beer was a cooperative

activity between men and women. Beer was made from sugar cane, maize, and millet. Gourds were used to contain the strained juices for fermenting.

Today, bottled beverages have generally replaced traditional beer on daily and social occasions. Distilleries in Kenya provide an assortment of beer and soft drinks. Eating meat is a mainstay today on all ceremonial occasions. A major form of recreation, especially on Sundays, is visiting special places for *nyama choma* (roast meat). Goat meat is the most popular choice although it is more expensive than beef. Chicken, as in the past, is also a regular treat. Bottled beverages and meat are integral parts of the *nyama choma* recreational event. Although the traditional ceremonial calendar is largely a thing of the past, Gikuyu maintain an intensely social existence involving regular attendance at funerals and weddings. These events would be unthinkable without an abundant supply of meat and bottled beverages.

### **13 EDUCATION**

Traditionally, Children were imparted knowledge through a socialization process that began very early in the life cycle. Infants were sung lullabies emphasizing tribal values and, as the child grew, he listened intently to tales, riddles, and proverbs, which had moral messages. Even after the coming of formal schools in the colonial era, a special time was set aside for the telling of folktales to test students’ memories and knowledge. In the past, boys, prior to initiation, played games that emphasized leadership roles and involved bows and arrows, spears, and slings to instill skills in marksmanship. Little girls cooked imaginary dishes and played at making pots and grinding grains. Dolls were also made with local clay and grass. As children matured, boys were trained by their adult male relatives, and girls by their mothers, grandmothers, and older sisters. For example, boys were taught how to differentiate large herds of cattle or goats by their color, size, and horn texture. Fathers and grandfathers also taught youngsters boundaries of their land, clearing techniques for land prior to farming, and extensive information about the family genealogy. In a society where kinship operated as a principle for the exchange of food and labor, family genealogy was as crucial to know as knowledge about plants and animals. Mothers taught girls knowledge of crops, soils, weather and other significant details of food production.

Today, the traditional informal educational system has been, by and large, replaced by formal education. In Kenya, including Gikuyuland, there has been an attempt to make formal education more sensitive to traditional values and knowledge than was the case during the pre-independence colonial era. One of the disadvantages of emphasizing only knowledge relevant for life in the modern world, such as literacy and world geography, is that, for example, elder women who were the “teachers” no longer teach knowledge about wild plants potentially edible during famine as it was in the past. Sex education is no longer taught as in the past. Reaching a reasonable balance between the old and the new in the current school curriculum is a constant challenge faced by Gikuyu educators. The idea that education is closely linked to the community still persists. Harambee (“let’s pull together”) primary and secondary schools are constantly being built throughout Gikuyuland and elsewhere in Kenya. Nevertheless, young people now have excellent opportunities for schooling even though it is too costly

for many families. Money is raised for these schools by individual donations, but those wishing to show solidarity with the community often give it publicly at feasts. The illiteracy rate in Kenya is approaching 50%, but it is lower in Gikuyuland.

#### **14 CULTURAL HERITAGE**

Music and dance, along with storytelling, were all emphasized in the past. Dancing by men and women was mandatory at initiation ceremonies, weddings, and other public events. People of all ages enjoyed dancing. There were three basic kinds of musical instruments in the past: drums, flutes, and rattles. The last were used for private pleasure while drums and flutes were significant at dances. Song was woven into the fabric of everyday life. There were songs for babies; songs sung by girls while threshing millet and by boys while practicing archery; songs sung by families and community members during weddings and funerals; songs sung by community members and initiates during initiation ceremonies; songs concerning everyday problems of life and love that were sung around the campfire; songs for drinking; songs that concerned cultural heroes both past and present; and songs sung in praise of ancestors and the high god, Ngai. In brief, Gikuyu life was unthinkable without the joy of singing, dancing, and musical expression, participated in by all members of the community.

Much remains of the older patterns of musical and dance appreciation. Although the traditional instruments and dance steps are now rarely seen, attendance at school dances and nightclubs is a major form of recreation by old and young alike. Gikuyu songs composed to meet everyday challenges can still be heard on the radio. Storytelling is now supplemented by a very impressive written literature. This printed material includes children's literature where tribal stories and tales are made available to youngsters. One such book entitled *Nyumba ya Mumbi* graphically illustrates the Gikuyu creation myth. Novelists, journalists, poets, and other writers are numerous in Kenya including many from Gikuyuland. Perhaps the most famous of these writers is Ngugi wa Thiong'o, whose many stories, plays, and novels have catalogued the Gikuyu struggle for national identity throughout the 20th century. His work includes material about the land and freedom movement, the impact of Europeanization on traditional Kenya society, and increasingly the alienation experienced by many Kenyans as the traditional ethic of communalism gives way to modern forms of excessive capitalism and greed. Ngugi wa Thiong'o has written world famous literature in both English and Gikuyu. Some of his work is performed in theater in rural areas in Gikuyuland.

#### **15 WORK**

There was, in the past, a very strong division of labor by gender. Nevertheless, men and women worked together as well as separately in tasks that complemented each other. Gikuyu parents raise boys and girls very differently. The girls are raised to work in farming and the boys usually work with the animals. The girls also have the responsibility of taking care of a baby brother or sister and also helping the mother out with household chores.

Each woman had her own plots of land where she cultivated the crops such as sweet potatoes, millet, maize, and beans. A woman cultivated her land and had the freedom to do as she pleased with its produce beyond providing food for her chil-

dren and husband. Men were responsible for heavy labor such as clearing the land and cutting down trees. Household tasks for women involved maintaining her own granary and supervising the feeding of sheep, goats, and cows that were kept at the homestead. A polygamous husband had his own hut apart from his wives where he ate with friends or his children and was served food by his wives. On a daily basis, women, together with their children, collected firewood, water, and produce from the garden. There was also a division of labor by gender concerning industries. Some men were ironsmiths, manufacturing for the community such things as knives, arrowheads, bracelets, axes, hammers, spears, and other utilitarian tools. Only women were potters. Pottery provided for household needs and, for the better potters, was the source of marketing exchanges to obtain foods and material objects. There is a well-known proverb that characterizes the best potters who may be in a good position for valued exchanges as "the good potter cooks with broken pots." Women also excelled in making baskets, and men tended to specialize in skin tanning.

The informal educational system of the Gikuyu involved children and young people learning economic tasks from adults and specialists through direct observation and often apprenticeship. Work-related education frequently involved storytelling that highlighted environmental factors such as crops, weather, and ecology. Elder women sometimes told these stories as a form of entertainment. In one story entitled "Ngiciri and Madam," a man wants to get married to a girl who is being pursued by many other men. To help him, he enlists the assistance of birds to which he gives millet. Doves are given sorghum so as to enlist their aid in his competitive strategies to get the girl. They help him pass a test given to him by the girl's family. In this test, he must demonstrate his knowledge by separating into piles millet, sorghum, maize, and castor oil seeds that have been mixed together. His other test requires that he eat an entire bull in one night to show his power. Because he knows not only what seeds birds enjoy, but that hyenas like cattle bones, his friend, the hyena, helps him secretly to consume the bull just as the birds had helped him separate the seeds into separate piles. The hero of this story wins because he knows his environment and understands that animals and humankind have fates that are intertwined.

The Gikuyu remain intensely agricultural and devoted to their land. Cash crops are now significant, but still the traditional division of agricultural labor is very much in place. Modernization of the economy has made social and class differences more evident than in the past. Though they are traditionally agricultural people and have a reputation as industrious people, many Gikuyus are now involved in business. Most Gikuyu still live on small family plots but many of them have also seen the opportunities in business and have moved to cities and different areas to work. They have a desire for knowledge and they believe that all children should receive a full education. Gikuyu have a strong reputation for money management and it is common for them to have many enterprises at one time. The majority of those in hawking businesses in urban centers in Kenya are the Gikuyu.

Since they also practice animal husbandry, the Gikuyu use the hides from the cattle to make bedding, sandals, and carrying straps and they raise the goats and sheep to use for religious sacrifices and purification

Through formal education and accumulation of private capital, many Gikuyu are now very wealthy and enjoy affluent lifestyles. Professional occupations, as well as employment in factories and other working class jobs, now differentiate the Gikuyu into social categories based upon income. Nevertheless, among most Gikuyu, there is still a strong sense of ethnic solidarity and heritage in cultural values. In Kenya's multi-party democratic system, for example, Gikuyu of various economic classes primarily belong to one of two political parties, both of which are overwhelmingly Gikuyu in membership.

## 16 SPORTS

Sports are popular throughout Gikuyuland where schools sponsor competitive games for boys and girls. Spectators enjoy soccer (football) and track and field events. One can see people of all ages playing a board game known as *bao* in which players attempt to capture the seeds of their opponents. The game involves a wooden board containing holes in which seeds are placed. A player seeks to capture his opponent's seeds using a complex strategy whereby his opponent's seeds end up on his side of the board. This indigenous African game of strategy known as *bao* in Kiswahili is widespread in Africa and is now played elsewhere in the world. In the past, the Gikuyu boys enjoyed games such as wrestling, weightlifting, and club throwing. There were district mock fights pitting young boys from each area against their counterparts from elsewhere. Wrestling produced stars who were widely praised throughout the country. Girls played hide and seek and jumping games while still young, but became increasingly more involved with household responsibilities and marriage as they approached mid-teen age.

## 17 ENTERTAINMENT AND RECREATION

The Bomas of Kenya is a prominent, national dance troupe in which Gikuyu dances are prominently featured. Schools have regular dance and singing competitions where traditional art forms are preserved.

Gikuyu, like other Kenyans, enjoy watching television, listening to the radio, and going to movie theatres. Radio and television regularly feature content derived from Gikuyu tradition. As mentioned above, there are radio stations and internet communication that offer a wide range of entertainment in Gikuyu genre. Such entertainment includes comedies, folk music and oral narratives to name a few. The radio stations that broadcast their entertainment content exclusively in Gikuyu language include: Inooro FM, Kameme FM, and Coro FM among others. There are books and magazines published in Gikuyu language e.g. *Matigari*, by Wa Thion'go. There are also comedies, music, and movies produced in Gikuyu and available in tape, video, and Internet formats.

Traditionally, Gikuyu would also attend dances as a form of entertainment. There were dances for men alone, women alone, and men and women together.

## 18 FOLK ARTS, CRAFTS, AND HOBBIES

Traditional industries and crafts have been largely replaced by tourist and commercial markets. The most notable persistence is in basket making, which is in the hands of women. The Gikuyu *keondo* (basket) is now popular in Europe and America where it is a widely used handbag or bookbag used by students. The keondo is a knitted basket made in various shapes, col-

ors and sizes. These baskets are knitted from strings gathered from shrubs and sometimes have Gikuyu geometric designs. The folk arts promoted basketry and the manufacture of clay figurines. The figurines are made from local materials such as clay, discarded wire, and grass. Manufactured objects depict solitary or communal daily life such as children playing, elders in various kinds of clothing, people dancing, bicycling, singing, and so on. Adornment, hairstyles, and clothing are featured on figurines to describe various mixtures of the old and new stylistic preferences.

## 19 SOCIAL PROBLEMS

Perhaps the primary social problem of the Gikuyu is how best to manage their comparative success in the context of Kenyan commerce and politics. The political opposition sometimes focuses on the Gikuyu, aiming at offsetting their numerical and commercial power. The Gikuyu have expanded into regions outside of their central highlands homeland. Many Gikuyu, therefore, are now wealthy immigrants, as it were, who are often seen by local groups elsewhere in Kenya as interlopers and landgrabbers. Hence, the Gikuyu have Gikuyophobia as a major challenge to contend within the modern Kenya. As mentioned previously, members of the Gikuyu in the diaspora bore most of the brunt of post-election violence in 2007–2008, and in politically-instigated clashes in 2002, 1997, and 1992.

Management of current social problems in Kenya, such as alcoholism and HIV, sometimes poses difficult challenges for Gikuyu families. On alcoholism, it is noteworthy that prior to the arrival of the Europeans, distilling was unknown. In the past, traditional beers and wines were made by fermentation only. Such drinks were not likely to produce alcoholism and often had nutritional value. Today, consumption of distilled beverages is common, and driving of automobiles on poorly maintained roads has contributed to what is among the highest rate of accidental death due to driving anywhere in the world.

The issue of land ownership is still a thorn in the flesh for most members of the Gikuyu. They have to reckon with displacement in the diaspora due to political violence and tribal hatred. Most of the land in the Gikuyu ancestral area is in the hands of the few, leaving many others to live as squatters.

There is also the security issue posed by the Mungiki sect (see section one, *Introduction*). The activities of the sect involving groups of suspicious looking youths, many donning dreadlocks, assaulting women, taking unusual oaths, and engaging in strange prayers and ritual beheadings among other practices have led to violent confrontations with authorities. In the wake of such a confrontation, many youth have been killed, arrested, or have been forced to flee their homes and villages.

## 20 GENDER ISSUES

Through the process of socialization within the family, in educational institutions and other social spheres, boys and girls are conditioned to behave in certain ways and to play different roles in society. They are encouraged to conform to established cultural norms through a reward-punishment system.

The role and status of women in Gikuyu society is changing for the better compared to many other Kenyan or African societies. There is a tendency towards a matrilineal system of family among the Gikuyu. Clearly, the Gikuyu were originally a matriarchal society. This could be traced back to the Gikuyu leadership, folk literature, and the Gikuyu nomenclature sys-

tems among others. It was rare in traditional Africa to have women as rulers in society.

Gikuyu folklore acknowledges women's leadership in their history. A notable legendary figure is Wangu wa Makeri, a woman famous for her cruelty. She would literally sit on men at public functions, which caused Gikuyu men to plot her overthrow. According to folklore, the men conspired to impregnate all Gikuyu women on one night. The resulting pregnancies would incapacitate the women, allowing the men to assume power easily.

Gikuyu clans are named to honor the legendary nine daughters of Mumbi, reflecting the importance of women's influence in Gikuyu history.

Indeed, in Gikuyu nomenclature, it is possible to find a son of a single mother bearing the maiden name of his mother as his surname. This underlines the significance that the Gikuyu society attaches to the mother.

Among the Gikuyu, in the case of divorce or separation, children typically stay with their mother, and not their father, as would be expected in most patriarchal societies.

Modern Gikuyu women in the 21st century are not restricted to the functions of wife, mother, and farm worker. Many Gikuyu families secure formal education for their girls starting from the kindergarten through post-high school. Thus, women in Gikuyuland have been able to compete successfully with men in the workforce. Modern Gikuyu women have found careers in politics, law, religion, and healthcare, spheres traditionally dominated by men.

Although in many subsistence economies women work on the farm and are intricately connected with their land, they do not have ownership over the land they work. Traditionally among the Gikuyu, if a man had more than one wife, he was responsible for clearing bushes to create a farm plot for each wife. Each wife's plot was close to her own hut, away from the other co-wives. The woman's younger son would inherit this plot after his mother's death. They usually allowed an unmarried daughter to have a plot of her own on which she could build a house. It is significant that daughters could hope to have the right to land ownership.

# GUINEANS

**PRONUNCIATION:** GHIN-ee-uhns

**LOCATION:** Guinea

**POPULATION:** 10.2 million

**LANGUAGE:** French, Pulaar (Fulfulde), Susu, 30 African languages

**RELIGION:** Islam, Christianity, traditional religions

**RELATED ARTICLES:** Vol. 1: Fulani; Malinke

## 1 INTRODUCTION

People have inhabited the territory now known as Guinea since the stone age. Ancestors of the coastal and forest peoples lived in Guinea before the birth of Christ. They hunted and gathered or grew rice in small communities. Early peoples of the savannah and central plateau were part of larger empires and kingdoms. The Malinkes of Upper Guinea trace their ancestry to the founders of the great Mali Empire (AD 1200–1350). Songhay rulers transformed Mali into a still greater empire which flourished into the 16th century. Ancestors of the Peuhl group began migrating to the central plateau in AD 600.

Portuguese explorers first visited the Guinean coast in the 15th century, but sustained European contact came from slave traders. In the early 1800s the French moved south from Senegal to establish trading posts along the coastal estuaries. These inlets and estuaries offered hiding places for slavers, allowing trade to continue until the end of the American civil war. European powers fixed Guinea's modern political boundaries during the scramble for Africa in the 1880s. From 1850–1900, the Peul and the Malinke fought a series of battles with the French. Eventually, Samory Touré, now a national hero, surrendered to the French in 1898. For the next 60 years, the French ruled Guinea through canton chiefs who collected taxes, maintained order, and raised armies for the colonizer.

Guinea set a precedent for many African countries when it rejected President DeGaulle's offer in 1958 to become part of a greater French world community. Led by Sékou Touré, the Guinean "revolution" deteriorated into totalitarian rule and dictatorship. A period of isolation and persecution reigned during which two million Guineans fled their country for personal safety and economic survival. In 1984, Sékou Touré died during heart surgery in Cleveland. A 10-year period of free market liberalization and democratic change led by General Lansana Conté followed.

In 1993 General Conté entered civilian life and won Guinea's first multi-party presidential elections. However, widespread manipulation and vote-rigging occurred, raising questions of Conté's legitimacy. Flawed presidential elections in 1998 and again in 2003 (which were boycotted) consolidated his power even if they did not legitimate it in the eyes of his opposition. A contentious national referendum in 2003 cleared the way for Conté to run for a third consecutive term, removing age restraints on the presidency, and essentially making him "president for life." But an attempt on his life in 2005 signaled his widespread unpopularity.

In 2006–7, national strikes led by trade union and civil society activists turned violent, resulting in the deaths of hundreds of civilians. However, the protests forced major political concessions, including one that reestablished the post of prime

minister with extensive powers, and the right of civil society to approve the designee to that position.

## 2 LOCATION AND HOMELAND

Guinea is somewhat smaller than the state of Oregon. It shares borders with Guinea-Bissau and Senegal to the north; with Mali and Cote d'Ivoire to the east; and with Liberia and Sierra Leone to the south. In all, Guinea spans 450 miles from east to west, and about 350 miles from north to south, curving southeast from the Atlantic. Guinea's population is young—44% is 14 years old or younger—but it is growing slower than most African countries at just under 2%. Estimates place the total population over 10 million. Another 2 million Guineans live abroad having fled persecution under Sékou Touré. Density is highest in the capital of Conakry, in parts of the Fouta Djallon plateau, and in areas of the Forest Region.

Guinea has four distinct geographical regions: Maritime Guinea, Middle Guinea, Upper Guinea, and the Forest Region. Each of these regions is home to one of four major ethnic groups. On the monsoonal coastal plain live the Susu (15%). This region receives up to 4 meters of rain yearly, two-thirds of it in July and August. During those months it rains hard nearly every night and sometimes for days on end. Brackish estuaries reaching many miles inland make rich fishing grounds. The region produces rice and many fruits, including pineapples.

To the east on the Fouta Djallon plateau live the Peul (36%). Also called Fulani, these people make their livelihoods herding cattle on the sandy highlands and farming in the fertile valleys that wind far below. This picturesque region includes buttes, escarpments, waterfalls, and rock faces 2,000–5,000 feet in elevation. Some forested portions are home to antelopes and monkeys. Further east and southeast lies the western frontier of a great savannah, which spreads eastward at 1,000 feet in elevation into the Ivory Coast and Mali. This is the home of the Malinke (23%) and the headwaters of the Niger River. The region is sparsely wooded and interrupted by rocky spurs. Farmers grow wet rice, *fonio*, peanuts, and sweet potatoes in the river valleys, and herders raise cattle on the high plains.

To the south is the humid Forest Region, which ranges from 1,500 to over 4,000 feet. Mt. Nimba, Guinea's tallest point (5,748 feet) lies in the extreme southeast. The rainfall is more balanced, and the highlands produce rice, maize, cassava, kola, oil palms, bananas, and coffee. The major ethnic groups are the Guérézé, Kissi, Toma, and Mano. They also have members living in Sierra Leone, Liberia, and Cote d'Ivoire (Ivory Coast). These groups share some cultural characteristics and together make up 15% of the national population.

## 3 LANGUAGE

The peoples of Guinea speak 30 languages, including the colonial language, French. French is used widely in government and is the language of instruction in high schools and universities. Aside from French, the languages in widest use are Pulaar (Fulfulde), which is spoken by the largest ethnic group, the Peul. Susu is gaining converts because it is the lingua franca (common language) of the capital.

## 4 FOLKLORE

Each ethnic group has its own myths, legends, and folktales. Of these, the Sundiata epic of the Malinke group has had a great impact on Malinke cultural, social, and political iden-

tity. It also has gained international literary fame as an epic poem. In 1960, a history professor published the poem in written form for the first time. The epic tells the story of a crippled boy, Sundiata, who rises to lead armies and saves his people from an evil warrior-king, Soumaro Kanté. Sundiata wins the Battle of Karina in AD 1206 and establishes the Mali Empire. Historically, we know that the battle occurred and that the victors drew up a charter to govern the kingdoms of the new empire. The charter has codified behavior and social relations for 800 years.

## 5 RELIGION

The vast majority of Guineans (80%) profess Islam. Christians, mainly Catholic, make up 10% of the population. Traditional indigenous African religion overlays these outside faiths and accounts for the rest. Islam came into West Africa via North African Muslim traders beginning in the 8th century AD. By AD 1000 ruling groups had adopted it as their faith too. The Peul established Islam in Guinea through a series of jihads (holy wars), notably that of El Hadj Oumar around 1850. Samory Touré, an anticolonial warrior and empire ruler, also imposed Islam by jihad around 1880 in Upper Guinea. Islam sustained itself because of its compatibility with traditional customs and family structure. It also allowed former slaves or their descendants in the Fouta Djallon to improve their social and economic standing in Peul society. The Friday work day ends at 1:00 pm so that Guineans may pray at the mosque.

Guineans rely strongly upon their traditional spirit beliefs and resort to marabouts (dervishes believed to have supernatural powers) and fetishers in times of trouble. The least Islamicized region is the Forest Region, where males continue to practice secret rites in the “sacred forest.” The Coastal Region has the largest number of Christians, where the missionary presence since the 19th century was strongest.

## 6 MAJOR HOLIDAYS

Besides the month-long Ramadan fast, one of the most celebrated holidays in the country is the Muslim feast of *Tabaski*. Tabaski celebrates the sparing of Abraham’s son, who was saved when God provided a lamb for sacrifice. Trucks bring thousands of sheep and goats from upcountry to the capital for sale. By Islamic custom, butchers must slaughter animals by cutting the throat and allowing the blood to flow. On the morning of the feast, people colorfully dressed in their new clothes fill the streets and carry their prayer mats to mosque. The remainder of the day is spent greeting friends and feasting with the family.

On August 17, people remember the day in 1977 when women protested the market police and the laws that forbade private trade. Sékou Touré gave in to the demands and abolished the restrictions. Nowadays, everybody celebrates the day as a national holiday. Government officials honor women in ceremonies throughout the week. On the morning of the holiday, women sweep the streets of the capital.

## 7 RITES OF PASSAGE

Whatever their commitment to Islam, most Guineans still hold to some traditional beliefs and combine the two in everyday life and ritual. One example is circumcision. In both religions circumcision is a necessary rite. In Islam it suggests purification, while in traditional beliefs it has a supernatural quality. Islam advises that circumcision take place on the seventh day, the fortieth day, or when a child reaches the age of seven. Mystery cults and secret societies that worship animal or nature spirits initiate new members at puberty. In both cases, circumcision takes place and satisfies both religions.

Rites of passage remain important to Guineans of all ethnic groups and are cause for family and community celebration or observance. At baptisms, the father whispers the baby’s name into its ear so that the child alone knows its name. Names tell about the family, its caste, and ancestors. Weddings, too, are cause for celebration. After the ceremony at the mosque, couples are married civilly at a government office. When the magistrate asks if anyone objects to the marriage, a friend accuses the couple in jest of having broken their vows. The accusation lightens the ceremony with humor and amusement. Then the groom offers a symbolic sum of about 50 cents to the magistrate. In the evening, the family closes off the street where the reception of music and dancing take place. Women come up to the musicians in small groups, waving the equivalent of \$5 and \$10 bills high above their heads and putting these on the musicians’ heads.

Muslims bury their dead on the day after death and hold eulogy ceremonies 40 days after death. At Malinke ceremonies, family and friends gather to pray and recite the Quran. Mourners help the family pay expenses by giving offerings to the prayer leaders. They throw wadded up bills into the circle where the reciters are sitting. A praise-singer and his assistant,

masters of ceremony, mention by name those who contribute and the amount they give.

## 8 INTERPERSONAL RELATIONS

Greetings are an important part of everyday life. Guineans call this custom *salaam alekum*, meaning offering the “peace of God.” People would consider it rude not to greet their friends, officemates, or co-workers first before assuming the tasks of the day. Greetings involve asking each other questions about the well-being of the family. People touch their right hand to their heart to show respect, sincerity, and thanks to God. Men and women usually do not shake hands with the opposite sex. Friends who have not seen each other recently place their hands on the other’s shoulders and touch cheeks three times.

In urban settings, Western-style dating is common. In rural areas, a young man might come to visit a fiancée at her home. Friends go out together to parties in towns or meet at community gatherings in the villages. Visiting is usually spontaneous, and it is customary to offer a glass of water to the visitor.

## 9 LIVING CONDITIONS

Nearly half of the population lives below the official poverty line, but living standards are gradually improving. Since the 1990s, life expectancy at birth has increased from 45 to 50 years, and the infant mortality rate declined from 13.4 (1996) to 8.7 babies out of 100 (2008 est.) that did not live to reach their first birthday.

Houses typically are made of mud brick with thatched roofs in round or rectangular form. Those who can afford more durable structures build with concrete and galvanized iron roofing. Running water is uncommon, even in the cities, where several families might share a common stand pipe. Latrines are usually dry pits, but as many as one-third of households in Conakry lack toilet facilities. Inadequate garbage collection in the capital allows enormous trash piles to litter the streets. Despite the construction of two major dams on the Konkouré River, electricity remains sporadic in the capital, with neighborhoods taking turns to receive power under “load-shedding” arrangements.

To compensate for poor landline telephones, most urbanites use cell phones while in rural areas messages are still commonly sent via friends and family by word of mouth. People are used to walking great distances, whether in the country or city. In the cities, most people commute to work and travel to market in crowded minivans. The fare costs about 10 cents. Conakry also has many taxis, usually worn-out Toyotas that fit two passengers up front and squeeze four into the back.

## 10 FAMILY LIFE

If they have the means, men may take up to four wives by Muslim law. Among the Peul, it is not unusual to find men aged 60 and above who have wives in their teens. Their wives may be younger than their children and even their grandchildren. Such families often number well over 20 children, with ages varying 40 or more years. Wives of the same husband usually live in separate houses apart from each other, or in separate huts within the same compound. Children refer to their “step mothers” as co-mothers (*co-mères*). Women play important income-generating roles in some families by trading, selling at the market, and working small businesses.

Among some groups, endogamy is widespread, meaning that individuals marry within their own clan. In these cases, family members may be related in two or three ways, as cousins and as nieces or nephews, or aunts and uncles simultaneously.

## 11 CLOTHING

Guineans have made an artform of *boubous*, which they slip over their heads and wear over matching pants. Their color and quality speak about the owner’s wealth. Tailors make stylish boubous from *bazin* cloth, which has intricate designs in the weave. Women’s outfits may be white or a single bright color, upon which tailors sew elaborate embroidered designs. The embroidery thread comes in all colors. If a tailor is unfamiliar with a design, Guineans bring a picture or a model to copy. Both men and women’s boubous are open at the side for style and to allow air circulation in hot and humid climates. Women generally wear matching turbans or head scarves, while men often wear a Muslim skull cap or stylish white or blue wool cap. Guineans usually reserve these for special occasions or Friday prayers, as the complete outfit costs a few hundred dollars. Cheaper versions feature simpler designs and less expensive cloth for use at home and work. The Peul are famous for their indigo dyes and batik patterns. Women, especially of the Forest and Coastal regions, also wear African-style wrap-arounds (*pagnes*) with matching blouses or European blouses. European shirts and trousers are popular too, but it is less common to see men in Western suits and ties.

## 12 FOOD

The menu boards of local Guinean restaurants in towns and cities typically announce three offerings: greens, peanut, and meat stews. Invariably, white rice accompanies the stew. Some coastal people enjoy palm nut stew, which is eaten like soup. Most Guineans eat these sauces for the midday meal between 10:00 and 1:00. At night families eat leftovers or may have porridge, bread, and tea.

Ethnic groups usually have their own specialties. The Peul, for example, are fond of thick sour milk poured over a fine grain, called *fonio*. Families and friends may share this mixture together, each with a soup spoon, reaching into the calabash bowl. For supper, the Susu prepare an Ivorian dish called *achecké*, which is finely graded manioc cooked briefly in oil and eaten with grilled fish or chicken. A popular dish from Senegal is *riz gras*, literally “fat rice.” People order this dish with fish or meat mixed with cabbage, carrots, squash, and cassava heaped over rice cooked in oil. In the Fouta Djallon, people drink a beverage similar to coffee which comes from the forest and contains antimalarial properties. In the Forest Region, palm wine is a favorite drink. Fruits are abundant in Guinea; citrus, pineapples, bananas, and mangoes are common. Guinea’s variable climate allows for oranges the year-round.

Some taboos exist. Certain coastal peoples do not eat monkeys because they believe them to be people who once did not observe Friday prayers. Most Muslims refuse to eat pork, and if strict in their practice, do not drink alcohol or smoke.

## 13 EDUCATION

Literacy rates are improving, but only 30% of the population over 15 years old is literate in French. Parents want their children to attend school, but high levels of unemployed graduates raise questions about the usefulness of schooling. Many

obstacles prevent children from completing primary school. In the rural areas, parents often need extra help in the fields or with household chores. School fees are high for many families, and sometimes children must walk distances up to six miles to attend school. Crowding and low standards are common in public elementary and high schools; therefore, parents with the means usually send their children to private schools. Drop-out rates are high, and less than 25% of children go on to high school. In the 1970s the government “Africanized” the textbooks and the curricula to make learning more relevant. The government used civics classes to teach students party propaganda and doctrine.

In the 1970s and 80s, technical schools with low standards graduated thousands of agricultural extension agents, to whom the government guaranteed employment. These guarantees no longer exist leaving most university graduates unemployed and looking for work. Through technical assistance, foreign donors help the government build schools, train teachers, develop curricula, and manage education, but enormous challenges remain especially in rural areas.

#### 14 CULTURAL HERITAGE

Guineans have a rich cultural heritage. Performances of music and dance mark special occasions and holidays. Traditionally, music and dance served ritual purposes at birth, initiation, and death, or seasonal cycles of planting and harvesting. People danced on their way to harvest a field. Peul musicians typically play handcrafted flutes, drums, and stringed instruments, and use calabashes to beat out rhythms. Malinke traditional music currently is blending with traditional forms. The men drum and play *balafons* (xylophones) while women wearing elaborate boubous dance with graceful arm movements, suggesting butterflies. In the Forest, one popular hunter’s dance consists of masked dancers in bark, raffia, and animal skin costumes walking swiftly on stilts. Forester drummers are highly accomplished and send messages with their drum beats to neighboring communities. Drumming is a major Guinean art form, and apprentices learn from the masters over a period of years. During Sékou Touré’s time, the government supported the arts, and Guineans produced some of Africa’s finest theater and folkloric ballets in international competitions.

Guineans excel in literature. Malinke and Peul traditional *griots*, or praise-singers, are bards who narrate past traditions through story and song, often with musical accompaniment. They are skilled professionals trained in their art by members of their family and profession. Authors such as the Malinke Camara Laye have produced written work of international acclaim in French. His novel, *The African Child (L’Enfant Noir)* tells of a child growing up in the Malinke homeland. The child’s father is a goldsmith, and he learns about spirits and taboos from his parents. The novel is often used in the American university classroom in French and literature courses.

#### 15 WORK

The lack of jobs continues to plague the country. Following structural adjustment in 1984, more than 50,000 Guineans lost their civil service jobs, and since then the ranks of university graduates and skilled workers looking for work has continued to swell. Guinea’s economy is dependent on bauxite exports for 85% of its foreign earnings, but almost no processing of the ore occurs in the country. Therefore, few Guineans benefit from

this major industry, and of the nearly 3.7 million people in the labor force, approximately three out of four work in subsistence or plantation agriculture, which accounts for only 24% of the gross domestic product.

#### 16 SPORTS

Guineans are avid soccer players and during the 1970s produced some of Africa’s most competitive teams. Basketball is also popular, and schools arrange competitions. In the towns, children and young men play soccer wherever space allows. In Conakry, this means placing four large rocks as goal posts in the street. Since few people own cars, streets make convenient playing fields. Girls play versions of hopscotch. A less popular game that men play is the French game of “bocci ball.”

#### 17 ENTERTAINMENT AND RECREATION

Entertainment and recreation revolve mostly around socializing, rites of passage, and sporting events. The few city parks found in Conakry like Ignace Deen and the 2nd of October are not well kept, are unsafe at night, and aside from joggers, are not generally frequented. Conakryites wishing to get away from it all on weekends may spend Sundays at small resorts outside of town such as the *Chien qui Fume*, named for its rock formations resembling Snoopy the Dog lying on his doghouse smoking his pipe. Marriages often are held on weekends and the wedding parties provide entertainment and recreation at hotels or in the street.

Few Guineans can afford televisions or satellite dishes, and those who do must cope with electrical outages. When the power is on, neighbors gather round on the sidewalk to watch popular regional theatrical productions broadcast on Guinea’s government station. Similar to American serials, these plays in the local languages are about daily life and teach about human foibles, solving community problems, and coping with social challenges.

Guineans also go to the movies and to musical performances featuring musicians from around Africa. Miriam Makeba, who once was married to the late Kwamé Touré (Stokely Carmichael), lived in Guinea and gives performances on her return visits. The discos play a variety of Guinean, Cuban, Zairian, Senegalese, and American music. In rural areas, teenagers are no longer shut off from international popular culture. It is becoming more common to find generators, solar panels, and satellite dishes in remote villages where a night’s entertainment can be had for a small admission fee.

#### 18 FOLK ART, CRAFTS, AND HOBBIES

Besides modern tourist art, Guineans still produce significant folk art and crafts. Some ethnic groups excel in painting pottery, masks, house walls, and tombs. The Kissi people have made stone sculpture statuettes for 500 years for rituals and to communicate with ancestors. The Baga people on the coast make wooden busts of females, the *Nimba*. These fecund images have become the national symbol of art.

Guineans are reviving their handicrafts industries. For example, the Peul make leather sandals of very high quality, and women weave decorative raffia place mats and baskets. In cooperatives, women dye fabric for making clothing, tablecloths, and napkins. Local weavers still produce cloth strips for traditional garments, and tailoring and embroidery have remarkable artistic merit.

## **19 SOCIAL PROBLEMS**

Guinea has not fully recovered from the persecutions, tortures, and starvation of thousands of political prisoners in the 1960s and 70s. Reforms in the political system have improved civil and human rights, but the government remains highly intolerant of dissent. In 1985, 50 Malinke officers were shot after an alleged coup attempt, and more than 100 people died in ethnic-related conflict during the 1993 elections. In 2006–07, nationwide strikes and protests over depressed wages, the lack of jobs, and a growing discontent with pace of political reform turned violent and resulted in the deaths and injuries of hundreds of youths. In Guinea, people aged 15–40 are considered to be the youth of the country. It is this group that is becoming especially impatient with the lack of services, poor governance, and few work opportunities. Corruption is seemingly everywhere and has widened the gap between the haves and the have-nots.

## **20 GENDER ISSUES**

Gender presents a paradox in Guinea. On the one hand women are strong and assertive, but on the other they are subject to societal discrimination, prostitution, and female genital mutilation. In 1977 it was a women's march that forced Sékou Touré to abandon his failed economic policies. Yet in 2008 women are weakly represented in politics with 20 of 114 parliamen-

tary seats, 1 governor and 2 prefects, 3 cabinet members, and 5 of 26 Supreme Court justices. Though the Ministry of Social Affairs and Women's and Children's Issues has created greater awareness of gender discrimination, in general women have fewer rights than men, are easily divorced under Muslim law, are disadvantaged by inheritance laws, and in rural areas are subject to the heavy demands of childbearing, childrearing, and subsistence farming. There is a national women's empowerment plan (2007–11), but it is slow to get off the ground.

## <sup>1</sup> INTRODUCTION

Guinea-Bissau has been inhabited since the Stone Age. Early peoples in this coastal area hunted and gathered or grew rice in small communities. These communities were swept into the kingdom of Gabu, which became part of the great Mali Empire in AD 1200–1350, and then within the orbit of the Songhay Empire that flourished into the 16th century. In 1546, as the unifying power of Songhay declined, Gabu exerted its independence and gradually became semi-autonomous. Portions of this ancient kingdom existed until 1867.

Portuguese explorers first visited the coastal islands and mainland in the 15th century. Nuno Tristao is credited with exploring and mapping the area in 1446. Portuguese colonists soon followed and gained trading rights from the Portuguese government. The most valuable commodity soon became human slaves, and Guinea-Bissau became a center for the Portuguese slave trade in Africa. In the early 1800s, the French moved south from Senegal to establish trading posts along the coastal estuaries. These estuaries and other inlets offered hiding places for slave traders, allowing the trade to continue until the end of the American civil war. In 1879, Portugal changed Guinea-Bissau's status from a possession to a separate colony, which provided greater autonomy for the European settler community. Soon after, the Conference of Berlin (1885–86) reaffirmed the colonial boundaries in West Africa, giving the Portuguese undisputed control over the Cape Verde islands, the offshore islands of Bissagos, and the Guinea-Bissau mainland between the French possessions of Senegal and Guinea.

In 1951, Portugal attempted to reassert control from the metropole by designating its African colonies, including Guinea-Bissau, as overseas provinces. Five years later, dissidents founded the African Party for the Independence of Guinea-Bissau and Cape Verde (PAIGC) and began to wage a guerrilla war against the Portuguese. Its leader, Amilcar Cabral, was assassinated in 1973, but the overthrow of the Salazar government in Portugal paved the way for independence of Portuguese Africa. An agreement in August 1974 led to independence on September 10 with Cabral's brother, Luis de Almeida Cabral, as president. Cape Verde gained its independence a year later, and for five years the two countries shared the PAIGC as a common party. However, Guinea-Bissau remained a single party state because of fears of a return to Portuguese rule.

Nearly 30 years of political upheaval followed. Joao Bernardo Veira deposed Cabral in a military coup in November 1980 and established a government of crony capitalists. Agricultural production increased overall, but Veira's government was deposed by rebels in May 1999. Malam Bacai Sanha, the former

head of the parliament, became the interim president. In 2000, Kumba Yala, a former teacher and populist leader of the independence movement, was elected president in the country's first multi-party elections. However, an army rebellion that year threatened the fledgling democracy and led to the death of General Ansumane Mane. In September 2003, Yala was deposed in a military coup, and Henrique Rosa was appointed president of a transitional government. In March 2004, parliamentary elections returned a plurality to the PAIGC and Carlos Gomes Junior became prime minister. However, in October the chief of the armed forces was killed in a mutiny over back pay. In 2005 Veira returned from exile in Portugal to stand for elections. The second national round of multi-party elections was held in June 2005 and returned Veira to the presidency. The contest was fought bitterly by Uala and Sanha resulting in a run-off between Sanha and Veira. Veira eventually was declared the winner, but Sanha and his PAIGC party alleged fraud. Sanha finally accepted the results in September. In April 2007, Prime Minister Aristides Gomes resigned after being censured by parliament. A no confidence vote for his government paved the way for Martinho N'dafa Kabi to be appointed his successor.

Internationally, Guinea-Bissau has maintained good relations with Senegal and Guinea. Both neighbors sent troops to support Veira in the late 1990s to repel insurgents. In return, Veira's government attempted to dislodge Casamance rebels who established bases in Guinea-Bissau in order to launch cross-border attacks on Senegalese government troops.

## <sup>2</sup> LOCATION AND HOMELAND

Guinea-Bissau is one of Africa's smallest countries. It is approximately the size of Switzerland or slightly under three times the size of Connecticut. It is wedged between Guinea to the south and east and Senegal to the north. Its coastline spans 299 km (186 mi), and it encompasses an archipelago of islands about 48 km (30 mi) off the coast. In all, Guinea-Bissau counts 36,120 sq km (13, 946 sq mi).

Guinea's eight regions reach from a swampy coast to gradually rising savanna in the east. Mangroves and winding estuaries provide rich fishing grounds along the highly indented coastline. Sparsely wooded savanna dominates the eastern reaches. The highest point of the country is in the northeast about 305 m (1,000 ft) above sea level. This area joins the northern reaches of the Guinean Fouta Djallon plateau. From June to November, monsoonal rains pound the coast, where up to 4 m (13 ft) of water falls annually. Two-thirds of this rain falls in July and August. The reverse is true for the rest of the year when cooler dry winds blow off the deserts of north central Africa.

Guinea-Bissau's population is young. About 41% is 14 years old or younger and population growth is at about 2% per year. The population consists of four main ethnic groups and several smaller groups. The largest group is the Balanta (30%), followed by the Fula (20%), Manjaca (14%), Mandinga (13%), and the Pepel (7%). The Balanta occupy the central region and the Fula the north, while the Manjaca, Mandinga, and Pepel have settled mostly in the coastal areas. In addition, Cape Verdean expatriates, Syrian Lebanese, and some Portuguese are found in the capital of Bissau and in secondary towns. Two of the groups—the Fula and the Mandinga—form part of greater

transboundary ethnic groups living in Senegal, Mali, Guinea, and beyond. The Mandinga trace their ancestry directly to the founders and rulers of the Mali Empire.

### 3 LANGUAGE

The peoples of Guinea-Bissau speak Portuguese, Crioulo, and several African languages. Portuguese is used widely in government and is the language of instruction in high schools and universities. Aside from Portuguese, the languages spoke regionally are Pulaar (Fulfulde), which is spoken by the Fula, and Mandinka, which is spoken by the Mandinga group. Guinea-Bissau is a member of the Lusophone states of Africa, which include Mozambique, Angola, Sao Tomé and Príncipe, and Cape Verde.

### 4 FOLKLORE

Guinea-Bissau, like most African countries is rich in folklore. Elders and professional storytellers recall myths, legends, and tales handed down over generations. Their stories often feature animals whose cleverness, foibles, and personalities illustrate human character and experience. The glories of past empires, such as the Mali and Songhai Empires of the 13th and the 15th centuries AD, also serve as backdrops for folkloric exposition. In the retelling of such stories, Guineans become part of the peoples of greater West Africa who share ancient cultural traditions.

Some folklore, having emerged from the decolonization period, is more recent. It recalls a colonial past of repression, servitude, and humiliation broken by revolutionary struggle. For Guinea-Bissau's youthful population, the revolutionary war of the 1950s seems like ancient history. Leaders of the liberation struggle, like Amílcar Cabral, born in 1924, are now revered national heroes and have entered the pantheon of national folklore. Through their poems, speeches, and armed struggle, they have become larger than life.

### 5 RELIGION

Nearly half (45%) of the population is Muslim. The Muslim community dominates the commercial sector and, increasingly, the government. Despite centuries of Catholic missions, dating to the Portuguese explorations along the Atlantic coast, Christians account for only 5% of the population. African indigenous religion overlays these faiths with at least 50% of the population practicing some form of African traditional religion.

In African traditional religion, ancestors exercise power over their living descendants through spirits. Spirits may be evoked through offerings at household shrines or at shrines staffed by priests, witches, and traditional doctors. In coastal villages, one finds many such shrines, to which animals are sacrificed, and local alcohol and food are offered. People mainly visit the shrines to seek advice and protection or to make special requests. Guineans abroad often return to visit the shrines. However, if they are unable to do so in person, they send remittances to relatives to make sacrifices and say prayers on their behalf.

### 6 MAJOR HOLIDAYS

Guineans celebrate nine holidays per year, including Christmas, New Year's, International Women's Day, and Labor Day. Two holidays are dedicated to Muslim feasts: Korité, which celebrates the end of Ramadan, and Tabaski, the Feast of the Sacrifice (of Abraham's son). The Anniversary of the Killing of Pidjiguoiti, National Day or Independence Day (September 24), and the Anniversary of the Movement of Readjustment (November 14) are also commemorated.

The biggest holidays are faith-related. Carnival was once identified with Catholic Crioulo culture, but is now a popular multi-ethnic festival. In a sense, the entire month of Ramadan has become a holiday, as fasting during the day and feasting at night slow the pace of work. Korité celebrations of special meals and gatherings with family and friends may last from two to ten days. Tabaski begins with prayer at the mosque, followed by feasting and gift giving among families and friends.

### 7 RITES OF PASSAGE

Rites of passage vary by ethnic group and by religion, but uniformly celebrate birth, puberty, adulthood (marriage), old age, and death. Muslims traditionally name their children at baptisms, when the father whispers the baby's name into its ear. Names are significant because they normally have meanings that tell about the family, its caste, and its ancestors.

Circumcision marks the attainment of puberty, suggesting purification in Islam, and also a mystical supernatural dimension for traditionalists. For girls and boys, this ritual is the most important because it is the gateway to adulthood and full participation in society. In some cases, a child may be circumcised at a younger age. Islam advises that circumcision take place on the seventh day, the fortieth day, or when a child reaches the age of seven, but depending on the beliefs of the family, it may be carried out in peer groups and conducted as part of a week-long rite of initiation. Girls, however, may be circumcised as infants.

Weddings are cause for festive celebrations. For Muslims, after the religious celebration at the mosque, couples will also need to be officially married by a civil administrator at a government office. These ceremonies may be held on the same day. In some areas, the passage to death is the most celebrated event as it marks the afterlife, and still more importantly, ancestorhood (see Religion). At funerals, wealthy families may have hundreds of people in attendance and will slaughter several cattle for feasting. Non-Muslims may make gifts of food and local palm wine as ritual offerings. The deceased will be wrapped in several layers of expensive cloth. Muslims bury their dead on the day after death and hold eulogy ceremonies 40 days after death.

### 8 INTERPERSONAL RELATIONS

Guineans are extremely social people and spend considerable time greeting friends and maintaining relationships. The Muslim greeting, *salaam alekum*, meaning the "peace of God," is commonly shared not only among practicing Muslims, but also by people who may be greeting each other in a Muslim neighborhood or region. The common reply is *alekum salaam*, meaning "and peace with you." It is considered rude not to acknowledge someone by offering a verbal greeting, by bringing

one's right hand to one's chest, or by shaking hands (only with the right hand) in most company. However, it is unusual for men and women to shake hands with each other, especially in the village. Greetings often involve asking questions about one's well-being and that of their family.

Guinea-Bissau is an affective society where relationships largely are determined by birth. The strongest link is to the nuclear family, which may include mother, father, and siblings, and in polygamous households, a co-mother and her children. Cousins usually are thought of as brothers and sisters. The strength of this bond gradually weakens as the relationship widens to the clan or lineage and ethnic group. But, the power of these relations is seen in the importance people attach to membership in various associations that include peer groups, hometown associations, secret societies, and intertribal relationships.

In rural areas, rights to land are determined locally. Rules vary according to tribe, but generally land is passed down in the family through males. Among the Manjaco and Papel, rice fields are inherited by a sister's sons, who as caretakers and custodians of the trust, determine which family members receive which portion of land. In any case, it is expected that members of a kinship group help each other till and harvest their fields. Not to do so would be to invite ostracism, a punishment of the worst kind.

Affective relationships are often hierarchical and demand proper respect. A child must show deference to his parents and older siblings, while adults and young adults must defer to their elders. Again, not to do so would be seen as disrespectful. Because of the hierarchy of these relationships, people are used to authority figures, secrecy, and limited decision-making.

Affective relationships have economic dimensions. The Mandingo are born into castes, which historically have promoted skills, trades, and vocations. Blacksmiths, storytellers, pastoralists, agriculturalists, doctors, and herbalists are determined by caste, and these societies have established long traditions and rules that govern relations between members of different castes. The Fula know who among them descended from a slave or free family. Social mores are changing, but it is a gradual process.

## 9 LIVING CONDITIONS

Living conditions for most people are difficult. On the Human Development Index (HDI), which measures chances to live long, be educated, and have a decent standard of living, Guinea-Bissau ranks third to the last out of 177 countries. Wealth is concentrated in the hands of a few elites distinguished by their Mercedes Benz cars, fancy suits, and the latest electronic gadgets.

In contrast, most people live in small rectangular houses with galvanized iron roofs, or cylindrical huts made of dried mud and thatched roofs. These homes typically have no windows or chimneys to vent smoke. Cooking may be done outside with firewood and large stones, on which a kettle is placed. Malaria, tuberculosis, and other life-threatening diseases are rampant. Most people cannot afford western medicines, and those that can, may find them beyond their expiration date. Affordable health care means seeking out local healers and diviners and making sacrifices at shrines. Fewer than 60% of people have

access to potable water and 40% will not live past the age of 40.

## 10 FAMILY LIFE

For the subsistence farmer, family life revolves around seasonal work in the fields, supplemented with weekly markets and punctuated by visiting with family and friends. Families rise early, usually at dawn, have a meal of porridge or stew, and walk long distances to their fields. If the children are not in school, they will accompany the adults to help with weeding, harvesting, or tending babies and small children. Girls help their mothers fetch water, carry firewood, and wash clothes at the river or stream. Despite the heavy work, children find time to play, and boys will be seen kicking a soccer ball in the village squares. Evenings are a time for eating the large meal of the day. Depending on the tribe, men may eat separately from the rest of the family. Evenings also are a time for relaxing and storytelling, and during full moons, dancing and drumming may take place. In town and country, baptisms, weddings, funerals, and holidays are times for getting together to celebrate, to grieve, and to share experiences. City children may have better chances for schooling, but many of them must peddle wares and do domestic chores to help generate income for the family.

## 11 CLOTHING

By and large, Guineans have little discretionary income for expensive clothing. Hence, everyday work clothing consists of hand-me-downs and used clothing purchased at local markets. Western clothes, t-shirts, and sports jerseys from American universities and professional sports teams have found their way to Africa in bulk shipments of used clothing. People are conscientious about how they look though, and if at all possible, they dress up to go out in public.

In coastal areas it is common to see women wearing brightly colored pieces of cloth (wraps or lappas) with matching blouses and headscarves, although these are found throughout the country. Men may wear eye-catching prints that have been made into shirts and trousers. Children wear these as well. Many men wear *boubous*, which are flowing cotton robes with open sides, worn over matching pants. Their color and quality speak to the owner's wealth. The higher the quality of cloth and the more exquisite the tailoring, the greater one's wealth. They may wear matching skullcaps. Women wear a version of these that comes in three pieces: a wrap that ties around the waist and a matching blouse and headscarf. Friday prayers and holidays are the best times to observe and appreciate fine clothing.

## 12 FOOD

Guineans are fond of white rice, which is a staple for coastal people and also imported to feed urbanites. In the interior, millet is the staple crop. Both are enjoyed with a variety of sauces typically cooked in a base of palm oil, onions, and tomatoes, supplemented with meat, fish, chicken, pounded seeds, greens, or peanut pastes. These stews vary somewhat by tribe and region, but they are cooked in large kettles over wood fires. For lack of refrigeration, mothers or their helpers will buy produce daily at the local market. Millet, peanuts, seeds, and other ingredients are pounded in a mortar and pestle. The coast

is known for its fresh fish, while upcountry, guinea hens, and beef are popular. On ceremonial occasions, people eat large quantities of meat and, unless proscribed by religion, consume large quantities of palm wine, rum, or other local beverages.

### 13 EDUCATION

The government has made education universal, but in practice only one in three children actually attends school. Schools are often built in or near villages in three- to five-classroom structures. Children are not unaccustomed to walking a few miles to school. Pencils, textbooks, and chalk—materials taken for granted elsewhere—are in short supply, and families may need to pay extra for them. But, the greatest challenge at the primary and secondary levels is teachers. Teachers prefer to live and teach in towns where quality of life is higher. Low pay and erratic salaries hurt motivation.

At the university level, the few Guineans who obtain scholarships study abroad. In colonial times, only a few students—primarily of Cape Verdean ancestry—received higher education. They went to Portugal. In the 1970s, those with the right connections went to East Germany, the Soviet Union, Cuba, and China for their degrees. During the revolutionary era, the government embarked upon an ambitious literacy program led by the well-known educator-activist, Paolo Freire. The program was meant to be universal, but given the extreme challenges facing the country, it failed to have lasting effect.

### 14 CULTURAL HERITAGE

Like most of Africa, Guinea-Bissau's cultural heritage is embodied in sculpture, music, dance, and theater. The national media support the performing arts in telecasts and radio broadcasts, which are extremely popular. Guineans have passed down their history and literature orally through storytelling and song. Only recently have these been the subject of written accounts. One notable example is the writings of Amílcar Cabral, who led the armed struggle for independence. Cabral's influence is still felt through his masterful speeches on national liberation. Crioulo fiction has also gained popularity thanks to Guinean writers of Cape Verdean ancestry, such as Fausto Duarte and Joao Alves da Neves. Duarte, a government employee educated in the Portuguese *assimilação* (assimilation) program, distinguished himself as one of the earliest African novelists, first writing in Portuguese and later in Crioulo. He died in 1953.

### 15 WORK

Guineans start working early in their lives as children. Many of them are subsistence farmers and artisanal fisher folk, living off their own produce. Women and children also perform domestic tasks. Children herd goats and cattle. Market trade is usually conducted by women. Those lucky enough to find employment in the public sector have steady work, but barely make a living wage. As elsewhere in Africa, many people count on remittances from friends and relatives abroad. Trade and commerce are mostly of the petty variety and relatively unimportant for the GDP. In Bissau, men drive taxis or load and unload ships at the docks. *Pontas*, former colonial concessions now owned by members of government, are worked by landless peasants who receive farm implements from the landowners

so they can grow cash crops. However, the sharecroppers must give a portion of their harvests or profits to the landowner.

### 16 SPORTS

Either as spectators or players, Guineans love soccer. All other sports, such as basketball, though played by schoolchildren, pale in comparison. One bi-annual tournament in West Africa is named for Guinea-Bissau's national hero, Amílcar Cabral. The Amílcar Cabral Cup has never been won by, but has been hosted by, Guinea-Bissau three times since it began in 1979.

### 17 ENTERTAINMENT AND RECREATION

Most forms of entertainment and recreation are fairly simple and do not depend on electricity. In the village, swapping tales around a fire in the evening, a boys' game of soccer with an undersized plastic ball, or a game of checkers in front of a market stall may be all there is for entertainment. One popular game that is played throughout West Africa is *Ouri* (also called *Wari*), which is played on a wooden board with seeds and six pockets. The object of the game is to capture more seeds than one's opponent. Since the game has only 48 seeds, capturing 25 is sufficient to win. Ceremonies and feasts provide opportunities to socialize and to meet members of the opposite sex.

In the towns, small bars and coffee shops, internet cafés, TV, and DVDs provide ready forms of entertainment. Soccer fans watch matches on TV, at clubs with satellite dishes, or at the national stadium. At night, discotheques attract people of all stripes. Guineans love to dance the *passada*, a highly suggestive Portuguese-African dance with lots of pelvic motion and rhythm. The local music beat is called *gumbe*. Men tap out the rhythms to *gumbe* on giant gourds cut in half, which they float upside down in a basin of water. Lyrics to *gumbe* music are in Crioulo and are sung throughout the country. *Gumbe* artists from the 1980s and 1990s used their songs to protest against the dictator-president, Joao Bernardo Vieira. *Gumbe* has borrowed heavily from Congolese soukous, French Antillean zouk, and rap, reggae, and salsa. Cover charges at most discos are high, but in reality almost anyone can get in to forget about their problems in their music and dance.

### 18 FOLK ART, CRAFTS, AND HOBBIES

Art generally has a religious, mystical, and otherworldly significance. Each ethnic group has its own arts and crafts, and some, like the Baga of the southwestern coast, have achieved world recognition for their woodcarvings. The Baga, who number perhaps only 60,000 people, are divided between Guinea-Bissau and the Republic of Guinea to the south. They make wooden busts of females, the *Nimba*, which are fecund images. Owing to their distinctiveness, *Nimba* have become internationally renowned as superior works of art. In addition to finer forms of art, Guineans also make tourist art and crafts, such as animal carvings, rattan baskets, jewelry, and toys made from tin cans, but there is limited demand for such items.

### 19 SOCIAL PROBLEMS

Guinea-Bissau has many social problems stemming from cultural, social, economic, and political causes. Women face discrimination, and most children do not finish primary school. Schoolgirls often face sexual advances from teachers and older

students. Extreme poverty has forced many girls and women into prostitution, and a growing number of boys living on the streets of Bissau have become part of gangs. Some children are trafficked, especially to Senegal, where boys are sold to work for religious leaders (marabouts), and forced to beg on the streets to pay for their upkeep and schooling. Buying and selling of child brides is a reality, and child labor is common.

Government corruption and neglect is part of the problem. Government posts are seen as opportunities for self-enrichment, and officials do little to enforce laws or regulate behavior. Judges and policemen are poorly trained and paid and commonly take bribes, and prisons fail to measure up to minimum standards of decency. While the personal use of illicit drugs is not the problem it is in Westernized countries, Guinea-Bissau has become a transit point for international narco-traffickers smuggling Columbian cocaine to European markets. Journalists who report on the drug trade have received death threats. In the absence of strong checks and balances, Guinea-Bissau has a powerful executive and a system that has encouraged military coups and counter coups. Political instability, coupled with crime and unemployment, has encouraged many of the best-educated Guineans, who are most needed in leadership positions, to leave the country. This brain drain has deepened poverty and social injustice for most people.

## **20 GENDER ISSUES**

As elsewhere in sub-Saharan Africa, gender issues are prominent on the social agenda, and a number of human rights organizations have mobilized—usually with foreign donor assistance—to defend women's rights and bring balance to gender roles in Guinea-Bissau. Women and girls have less job mobility, complete fewer years of schooling, do most of the subsistence farming, and enjoy far less protection under the law than men. There is, for example, no law against wife beating, and many women are subjected to violence as a means of settling disputes in the home. While the law prohibits rape and prostitution, the government provides little enforcement, and women are harassed sexually. Certain ethnic groups do not allow women to own or inherit property.

Girls are also subject to female genital mutilation (FGM), which is practiced widely throughout the country. Known as *Fanado*, it is estimated that 45% of women aged 15–49 are excised. As many as 2,000 girls (including infants) undergo this procedure annually, often under unhygienic conditions. *Fanado* is steeped in religious and cultural tradition, and the cutters, who are women, often learn the practice from their mothers and grandmothers, and earn their livelihoods from it. Families pay between \$10–\$15, not including gifts, to have their girls circumcised. Even non-Muslim women who marry Muslim men will undergo *Fanado*, because during the holy month of Ramadan, Muslim men will refuse to take food from an uncircumcised woman. Uncircumcised women are also not allowed to pray in the mosque. In June 2008, government launched a program to ban the practice, but it is likely to take years before it is stopped.

# GUSII

**PRONUNCIATION:** goo-SEE

**ALTERNATE NAMES:** Kisii, Kosova, Guzii, Ekegusii Gisii,

Abagusii, Kissii, Kisi

**LOCATION:** Western Kenya

**POPULATION:** 2.1 Million

**LANGUAGE:** Ekegusii

**RELIGION:** Christianity mixed with ancestor cult beliefs

**RELATED ARTICLES:** Vol. 1: Kenyans

## <sup>1</sup> INTRODUCTION

At the end of the 1700s, Bantu-speaking populations were dispersed in small pockets at the northern, southern, and eastern margins of the Kisii highlands and in the Lake Victoria basin. Around 1800, the highlands above 1,515 meters (4,970 feet) were probably uninhabited from the northern part of the Manga escarpment south to the river Kuja. At that time, the lowland savanna was being settled by large numbers of agropastoralist peoples ancestral to present-day Luo and Kipsigis, dislodging the smaller Bantu groups from their territories on the savanna. The Gusii settled in the Kisii highlands, while other culturally and linguistically related groups remained along the Lake Victoria Basin or, as the Kuria, settled in the lower savanna region at the Kenya-Tanzania border. The establishment of British colonial administration in 1907 was initially met by armed resistance that ceased after World War I.

Contrary to other highland areas in Kenya, the Gusii were not subject to land alienation. The seven subdivisions of Gusiiland were converted into administrative units under government-appointed chiefs. The first missions established were Roman Catholic in 1911 and the Seventh Day Adventist in 1913. The mission activity was not initially very successful, and several stations were looted. After Kenyan independence in 1963, schools were built throughout the area; roads were improved; and electricity, piped water, and telephones were extended to many areas. By the 1970s, the land shortage had begun to make farming unprofitable, and education of children for off-farm employment has since become important.

The Gusii's strong clan affiliations began to break down in the mid-1800s. As of the 21st century, Gusii chiefs represent clans in the local Kenyan administration and participate actively in Kenya's multiparty politics. In the 2007 general elections Gusii voters supported both the opposition and the ruling party. As a result, Gusii representatives are divided between the two major political parties that make up Kenya's ruling "Grand Coalition" government. Many members of the Gusii community were victims of the post election violence that swept through Kenya in January 2008. Thousands were displaced and hundreds killed.

## <sup>2</sup> LOCATION AND HOMELAND

Gusiiland is located in western Kenya, 50 kilometers (31 miles) east of Lake Victoria. Since pre-colonial times, abundant rainfall and very fertile soils have made Gusiiland one of the most productive agricultural areas in Kenya. Between 70% and 80% of the land is arable. The region is bounded by latitudes 0°30' and 1°00's and longitudes 34°30' and 35°00'E. Since 1989, the Gusii have occupied as a single ethnic group Kisii and Nyami-

ra Districts. The area is a rolling, hilly landscape on a deeply dissected plain at altitudes of 1,190 m (3,900 ft) in the far northwestern corner of the territory to 2,130 m (6,990 ft) in the central highlands.

The mean maximum temperatures range from 28.4°C (83°F) at the lowest altitudes to 22.8°C (73°F) at the highest elevations. The mean minimum temperatures are 16.4°C (61.5°F) and 9.8°C (50°F) respectively. Rain falls throughout the year with an annual average of 1,500 to 2,000 millimeters (60 to 80 inches). There are two peak seasons of rainfall: March to May is the major rainy season; September to November is the minor rainy season. In the 19th century, much of present-day Gusiiland was covered by moist montane forest. Today, all forest has been cleared, very little indigenous vegetation remains, and no large mammals are found.

The Gusii population is estimated at 1.65 million as of 2007, up from 1.3 million in 1989. The Gusii are among the most rapidly growing populations in the world, increasing by 3% to 4% per year. The region where the Gusii live is one of the most densely populated in Kenya. The Gusii population is also young, with around 50% of the population being under the age of 15 years. The high population growth rate is due to the cultural attitude that having many children ensures security in old age. This has led to low use of family planning methods.

The average woman bears approximately nine children; infant mortality is relatively low (about 80 per 1,000 live births), especially in comparison to other areas of sub-Saharan Africa.

Most Gusii live in rural areas, although many have left the traditional tribal lands for urban centers (in Kenya and elsewhere around the world) to seek education, employment opportunities. Outside the tribal area, the group's language, Ekegusii (and materials in Ekegusii), is little used and may be in danger of being lost.

## <sup>3</sup> LANGUAGE

Ekegusii is a Western Bantu language. Naming customs include naming a child after a recent event such as the weather at the time of the child's birth. Most common is to use the name of a dead person from the father's clan for the first name and one from the mother's clan for the second name. Some common names refer to the time of migrations. For example, the woman's name *Kwamboka* means "crossing a river." Another aspect of the language is its close relationship to Gusii culture, where talking about personal emotional states is not condoned. Hence, questions about a person's mental state are answered with statements about physical health or economic situation.

There is little literature available for teaching Ekegusii, except for some elementary works in form of folktales, short stories, songs, and proverbs. To date, the Holy Bible and Christian hymnals remain the major translations and only rich source of written Ekegusii. Ekegusii is dependent on tone differentiation. Ekegusii has not developed specialized vocabulary and everyday words for new and emerging globalized experiences, such as hip hop music, information technology, commerce, communications, and travel. This makes the language ill-equipped for modern communication. Ekegusii speakers find that their language lacks words for such everyday items in modern society as radio, television, video, and computer. To the disadvantage of would-be speakers and learners of Ekegusii, Kenya's country's education system does not place much emphasis on the learning of various tribal languages and tribal languages

are not included in national examinations. Therefore, young people have little motivation to develop proficiency in tribal languages.

#### 4 FOLKLORE

Gusii oral traditions contain a number of prominent persons who are linked to historical events, notably the period of migrations into the current homeland and the coming of the British. These figures are usually men, but a few women are also remembered. There are two historical figures linked to the establishment of the most populous section, the Kitutu. These are Nyakanethi and her stepson Nyakundi, who fortified themselves in the highland to the north and gave shelter to families who fled from attacks by neighboring peoples. These people were given a home in Kitutu with Nyakundi as their chief.

Other “heroes” are related to the establishment of the colonial administration. The prophet Sakawa, who was born in the 1840s and died around 1902, is reputed to have foretold the arrival of the British in 1907 and the building of the district capital Kisii Town.

In 1907–08, a prophetess called Mora a tried to incite rebellion against the British. In 1908 she gave her stepson, Otenyo, magical medicines that would protect him from bullets and sent him to kill the British officer, G.A.S. Northcote. Although Otenyo wounded Northcote with his spear, the British District Officer survived and later became the governor of Hong Kong.

#### 5 RELIGION

Before the advent of Christianity, the Gusii believed in the existence of one God who was the originator of the world but did not directly interfere in human affairs. Instead, it was the ancestor cult, together with ideas about witchcraft, sorcery, and impersonal forces that provided a complex of belief in supra-human agency. The ancestor spirits (*ebirecha*) existed both as a collective and as ancestors and ancestresses of the living members of a lineage. They were not appropriated until there was tangible evidence of their displeasure such as disease, death of people and livestock, and the destruction of crops.

The community is about 82% Christian and 18% traditional religion. Most Gusii today claim to be adherents of some Christian church. There are four major denominations in Gusiiland: Roman Catholic, Seventh-Day Adventist, Swedish Lutheran, and the Pentecostal Assemblies of God. Active Seventh-Day Adventist members are oriented toward European family ideals and practice a form of protestant ethic. Although churches are very active, aspects of non-Christian beliefs continue to permeate the life of most Gusii. Afflicted by misfortune, many Gusii visit a diviner (*omoragori*) who may point to displeased spirits of the dead and prescribe sacrifice.

Diviners (*abaragori*), who are usually women, determine the cause of various misfortunes. A variety of healers also exist. *Abanyamoriogi* (herbalists) use a variety of mixtures of plants for medicines. Indigenous surgeons (*ababari*) set fractures and treat backaches and headaches through trepanation (needles). Professional sorcerers (*abanyamosira*) are normally hired to protect against witchcraft and to retaliate against witches. *Omori*, the witch smeller, ferrets out witchcraft articles buried in a house. Witches (*omorogi*) can be men or women but are usually the latter. They are believed to operate in groups who dig up recently buried corpses and use body parts as magical paraphernalia and eat the inner organs. Witches usually kill their victims through the use of poisons, parts of corpses, and people’s exuvia (skin). Witchcraft among the Gusii is believed to be an acquired art handed down from parent to child.

#### 6 MAJOR HOLIDAYS

Only the national holidays of Kenya are celebrated.

#### 7 RITES OF PASSAGE

Mothers have the ultimate responsibility for the care and socialization of children, but they delegate a great deal of care taking and training to other children in the homestead. Mothers seldom show physical or verbal affection for children and fathers take very little part in child rearing. Gusii infants are raised to understand and behave according to the codes of shame and respect that apply to their relationships to persons in adjacent generations. Children cease sleeping in their mother’s house when they are still very young. Grandparents play a supportive role and are supposed to inform grandchildren about proper behavior and sexual matters.

The most elaborate and socially important ceremonies are associated with initiation and marriage. Initiation involves clitoridectomy for girls and circumcision for boys. The ceremony is supposed to prepare children as social beings who know rules of shame (*chinsoni*) and respect (*ogosika*). Girls are initiated at the age of seven or eight, and boys a few years later. Initiations are gender-segregated, and female and male specialists

perform the operations. Afterward, there is a period of seclusion for both genders.

The traditional Gusii wedding is no longer performed. It was an extremely elaborate ritual that lasted several days. The rituals emphasized the incorporation of the bride into the groom's lineage and the primacy of male fertility. Among wealthier people, it has been replaced by a wedding in a church or before an administration official.

Funerals take place at the deceased's homestead, and a large gathering is a sign of prestige. Women are buried beyond the yard on the left side of the house, and men are buried beyond the cattle pen on the right side of the house. Christian elements such as catechism-reading and hymn-singing are combined with the traditional practices of wailing, head-shaving, and animal sacrifices to the dead. The preferred person to dig the grave is the deceased's son's son. Before burial, the corpse is dissected in order to ascertain whether death was caused by witchcraft. After burial, the widow or widower is restricted to the homestead for a few weeks to two months, when ritual activities, including a sacrifice, are performed. One basic funeral theme is fear of the dead person's spirit. The deceased, enraged for having died, may blame the survivors and must therefore be placated with sacrifices.

## 8 INTERPERSONAL RELATIONS

Daily interactions follow strict rules of polite behavior, which can be translated as rules for avoiding sexual shame (*chinsoni*) and rules governing respect (*ogosika*). These rules are many and complicated. They regulate proper behavior between women and men, between generations, and between different kinds of kin. For example, although brothers and sisters and anyone within the same generation may joke with each other and talk about sexual matters, this is prohibited between adjacent generations. A father may not set foot in his son's house; a son-in-law has to avoid his mother-in-law; a daughter-in-law must not come too close to her father-in-law (she cannot even cook a meal for him). In everyday interaction, the expected behavior is one of respect and deference by young people toward older people as well as by women toward men. The Gusii are very decorous and careful about personal appearance and avoid showing themselves even partially naked. Similarly, bodily functions must not be mentioned or implied between adjacent generations or between women and men. Going to the lavatory is a laborious undertaking because one must avoid being seen on the way there.

A Gusii person distinguishes her or his own father and mother by specific terms: *tata* ("own father") and *baba* ("own mother"). Likewise, parents distinguish their children as *momura one* ("own son") and *mosubati one* ("own daughter"). However, all women and men of the same generation are considered "brothers" and "sisters." All women and men in one's parents' generation are called *tatamoke* ("small father") and *makomoke* (small mother). All members of the next generation are *omwana one* ("my child"), grandchildren's generation are *omochokoro* ("my grandchild"), and grandparents' generation are *sokoro* ("grandfather") and *magokoro* ("grandmother").

Hospitality and respectful treatment toward strangers is common, but the Gusii are also very reserved, polite, and in many ways suspicious about others' intentions. Although interpersonal conflicts are common, people should not show outwards signs of anger. Instead, aggression emerges as witch-

craft accusations and attempts at sorcery toward enemies. The strong emphasis on outward peace and emotional control results in explosions of violent behavior under the influence of alcohol.

One always greets strangers met on the footpaths between the farms, as well as acquaintances of one's own generation, with a simple phrase similar to our "Hi, how are you?" ("*Naki ogendererete*"). However, if one visits a homestead or meets a relative, a more complete greeting ritual is necessary, which includes inquiring about each other's homes, children, and spouses. Unannounced visiting is not considered polite; a message should be delivered beforehand. A visitor enters a reception area, and a child comes and gives him or her a chair and takes anything he or she may be carrying. Neighbors or other visitors may come and engage in casual conversation, but the hosts usually do not appear until something to drink, usually tea, has been brought forward.

Body language is reserved and gesturing is kept to a minimum. Between persons of unequal status, such as young and old or man and woman, the person of lower status should not look directly into the other's eyes.

Interactions between unmarried youth were once strictly regulated, but young men and women today meet and socialize in many places outside the home. Premarital sex is common, and many girls end up as single mothers. Western ideas of love are common, and youth write love letters to each other and visit friends' houses where they dance and talk.

Today, intermarriage does occur between Gusii and people of other ethnic groups.

## 9 LIVING CONDITIONS

Before colonialism, the extended polygynous family was spatially divided into two components: the homestead (*omochie*), where married men and women and their unmarried daughters and uncircumcised sons lived, and the cattle camps (*ebisarate*) in the grazing areas where resident male warriors protected most of the cattle. The British abolished the cattle camps in 1913. In the late 19th century, most Gusii were settled in dispersed farmsteads, although in North Mugirango fortified villages were built for protection against Kipsigis raids. A homestead consisted of wives' houses, houses for circumcised boys, and possibly a small day hut for the husband. Married men did not have any separate houses for sleeping but alternated between their wives' houses. A compound had several elevated granaries for millet. The traditional Gusii house (*enyomba*) was a round, windowless structure made of a framework of thin branches with dried mud walls and a conical thatched roof. Today, the Gusii continue to live in dispersed homesteads in the middle of farm holdings. Modern houses are rectangular, with thatched or corrugated iron roofs, and cooking has been moved from the house to a separate kitchen structure.

The hilly nature of the district leads to serious soil erosion and makes road communication difficult, especially in the rainy season when many roads (only 10% of which are paved) become impassable.

Health facilities are inadequate, unevenly distributed and lacking in essential medicines. There are a number of hospitals—including the government-run facility in Kisii town and the Mission Hospital in Tabaka—but the bed occupancy rate is 160.3%. The major diseases in Kisii are malaria, anemia, pneu-

monia, meningitis, tuberculosis, measles, and gastroenteritis. The first AIDS cases in Kenya were recognized in 1984 (1987 in Kisii district), but it is now believed that 1 in every 18 adults is infected with HIV in all areas. Over 70% of AIDS cases are aged 20–49 years, the most economically active age group and also the best educated and skilled.

Infant mortality has been declining for several years and the acceptance of immunization programs is increasing, but a large proportion of children are believed stunted due to poor nutrition. Water is easily available from rivers, wells, springs, roof catchments and boreholes, although the only treated water supply is found in Kisii Municipality. In recent years Kisii highland has had new water treatment stations among others one at Birongo serving parts of Nyaribari central and Chache and also Kitutu Masaba.

Intensive farming in hilly regions has increased the rate of soil degradation and erosion, while the application of farm chemicals has polluted surface and groundwater sources. More than 90% of rural household energy needs come from wood, but the district is no longer self-reliant and other sources such as biogas are being encouraged.

## **10 FAMILY LIFE**

During the pre-colonial period, the exogamous, patrilineal clan (*eamaate*) provided the largest unit for cooperation. Clans were part of clan clusters with a bird or a mammal as totem but without any common organization. At the lineage level (*riiga*), patrilineal descent and marriage defined commonly recognized access to land and provided the rationale for corporate action. During the colonial period, indigenous political and social organization became conceptualized as a segmentary lineage system where units from the clan cluster, clans, and clan segments became defined according to a genealogical grid with an eponymous ancestor at the top.

Today, all land is registered in individual men's names, but the land market is still limited, and sales are uncommon. Men have ultimate rights to the management and use of land through inheritance. Women still have no birthrights to their parents' land. The vast majority of women can only obtain access to land through marriage. However, a few employed women buy land in other districts. Since the initial registration in the 1960s, land has not been surveyed, and much land is still registered in the name of dead fathers or grandfathers. A man usually transfers land to his wife and sons when the eldest son marries. Land is ideally divided equally between wives under the supervision and witness of local male elders. After division, the husband often retains a small plot (*emonga*) for personal use.

Marriage can be established through the payment of bride wealth, in the form of livestock and money, by the husband to the wife's family. This act establishes a socially sanctioned marriage through which a woman and a man become defined mothers and fathers. Residence is at the husband's home. Divorce is rare and entails the return of the bride wealth. At the death of a husband, a widow chooses a husband among the deceased's brothers. Until the 1960s, everyone got married as soon as possible after puberty. However, at the end of the 1960s, elopements started to increase in number, and the period between the inception of a cohabiting union and payment of bride wealth has become progressively more and more extended. In 1985 at least 75% of all new unions between women

and men were established without the payment of bride wealth. The lack of bride wealth means that a union is without social and legal sanction, and this has resulted in the formation of a socially and economically marginalized stratum of single mothers without access to land. This has been accompanied by a decline in the value of bride wealth payments for peasant women from about 13 adult Zebu cows in the first half of the 1950s to about three adult Zebu cows in 1985. Employed women, such as nurses and lawyers, fetch high bridewealth—15 to 45 Zebu cows (although their bride wealth is frequently paid in cash and European cows).

Households are based on nuclear or polygynous (multiple-wife) families. Each wife maintains her own household and there is little cooperation between co-wives. With the decline in polygyny, a domestic unit typically consists of a wife and husband and their unmarried children. It may also include the husband's mother, and for shorter periods, younger siblings of the wife. Until the birth of the first or second child, a wife and her mother-in-law may cook together and cooperate in farming. Married sons and their wives and children usually maintain their own households and resources.

## **11 CLOTHING**

Western-style clothing is always worn.

## **12 FOOD**

The staple vegetable food is corn, which is ground into flour. Corn flour is mixed into boiling water to form a thick dough-like paste (*obokima*) that is eaten with all meals. A meal usually consists of fried cabbage, tomatoes, and some potatoes. Depending on how well-off the family is, meat in the form of chicken or goat may be served. The meat is eaten with one's fingers, forming the *obokima* into a spoon, with which other food is scooped up and eaten. Other popular foods are sour milk, goat intestines, and millet porridge. Finger millet was the traditional staple before the introduction of corn and is considered an extremely nourishing food, which is necessary for pregnant women. It is a kind of "power food" that is believed to strengthen a person's physical and mental power and increase a man's sexual prowess.

## **13 EDUCATION**

Education is in high demand, and there are about 200 high schools, the majority of which are community-supported. There are also a number of private schools. With the introduction of free primary and free secondary education in Kenya, enrollment at these levels has shot up. Most well-to-do families, however, send their children to private schools, where the cost is prohibitive for many but quality of learning is high. Although primary and now secondary schools are free, there are other costs involved such as books, building fees, and so on. A majority of Gusii between 6 and 24 years old have attended school. By the 1980s, fewer than 50% of all Gusii children attended secondary school, but all attended primary school. Female enrollment in secondary school is at 45%, while adult literacy is 56% (high in relation to much of Kenya). However, fees for secondary school are in excess of KSh5000 per year. The government has only scrapped the tuition fees for public secondary schools, for most children primary school is the highest level of education open to them. Private schools have

grown in number in the district. They often do better in the region.

#### 14 CULTURAL HERITAGE

Older people know many traditional songs, and the favorite instrument is a lyre (*obokhano*). Most cultural rites and practices such as the naming of children, rites of passage, traditional marriage, dance, burial customs, and cultural institutions have been ignored with many adopting aspects of foreign cultures largely due to lack of understanding and knowledge. This unfortunate scenario has resulted in a generation that shuns Ekegusii and Abagusii culture.

#### 15 WORK

The pre-colonial staple crop was finger millet, which was grown together with sorghum, beans, and sweet potatoes. Plant food was complemented by meat and milk from livestock and wild vegetables. At the end of the 19th century, the cultivation period was two years, with a fallow period of three to six years. By the 1920s maize had overtaken finger millet as a staple food crop and cash crop. Other important contemporary crops include cassava, pigeon peas, onions, bananas, potatoes, and tomatoes. In the 1930s, coffee was already being grown on a limited basis, and by the 1950s Gusiiland had become established as a producer of coffee and tea. Cultivation takes place with iron hoes and ox-drawn plows. Livestock was formerly more numerous, but farmers still keep cattle (both local Zebu and European stock), goats, sheep, and chickens. High population density has forced the Gusii to utilize every available space for agriculture, and families today are unable to produce enough food for subsistence needs. In addition to farming, many Gusii engage in outside employment, either locally or in the large urban centers.

In the late 19th century, women were primarily responsible for cultivation, food processing, cooking, brewing, fetching water and fuel, and housecleaning. Population density has led to pressure on land as almost all land in Kisii district is put to maximum agricultural use. Tea and coffee processing and soda bottling constitute Kisii area's manufacturing industry, but retail and wholesale businesses exist in market centers despite the lack of cooling facilities for preserving perishables. Men were concerned with warfare, house- and fence-building, clearing of new fields, and herding. Although women performed most of the cultivation, men participated to a much higher degree than is the case today. Young unmarried men and boys undertook herding in the cattle villages. Initiated, unmarried daughters assisted in cultivation. Since the early colonial period, the division of labor has gradually changed to the detriment of women. As men have withdrawn from cultivation, women are obliged to perform most of the same tasks as they did in the precolonial era in addition to most tasks involving men's cash crops.

The annual growth rate in paid employment is 3.5%, but this is barely keeping up with the current population growth rate. There are many societies such as savings and credit cooperatives (SACCOS) concentrated in Kisii Town according to members' occupations or primary cash crop as well. The informal sector is involved in repair, metal fabrication, furniture making, and the sale of secondhand clothes, while the soapstone that is found in the area of Tabaka provides a reasonable resource for the carving industry.

Income is largely unevenly distributed, with an average income per capita of KSh2000 (approximately us\$30 in 2006), although most appear to earn KSh1000–1500. Many are severely impoverished.

#### 16 SPORTS

Wrestling used to be a popular sport for men but has declined. Various Western athletic activities have been introduced. The most popular sport among boys is soccer, and most schools have a soccer field. Other sports include table tennis, netball, and cycling.

#### 17 ENTERTAINMENT AND RECREATION

Traditional dancing and music were once popular, but there exist few outlets in the countryside today for such entertainments. Much recreation, especially among men, consists of drinking beer, either indigenous or bottled. Watching soccer on television and listening to the Gusii FM Radio station also form large part of modern Abagusii entertainment.

#### 18 FOLK ART, CRAFTS, AND HOBBIES

In pre-colonial Gusiiland, a variety of goods were manufactured—iron tools, weapons, decorations, wooden implements, small baskets for porridge, and poisons. Pottery-making was limited, and most ware was imported from the Luo. The most notable in terms of technical complexity and product value among the Gusii industries was the smelting of locally obtained ore and the manufacture of iron implements. Blacksmiths did not form a special caste as is so often the case in African societies. Smithing was a remunerative industry reserved for men, and blacksmiths became wealthy and influential.

The Gusii soapstone carvings have received international distribution and fame. The stone is mined and carved in Tabaka, South Mugirango, where several families specialize in this art. The craft is bringing a sizable income to the area through the tourist trade. In 2007 the master carvers and classic soapstone carvers of Kisii Tabaka were awarded an exclusive license to produce hand carved stone caricatures of characters from "The Simpsons" cartoon, via 20th Century Fox and Craft Village UK.

#### 19 SOCIAL PROBLEMS

Alcoholism and violence toward women are the most severe social problems. Traditionally, only older people were allowed to drink large amounts of indigenous beer (*amarua*). Today, social control over drinking has broken down, and traditional beer and home-distilled spirits are served in huts all over the district. Probably close to 50% of the young adult and middle age population are regular drinkers, with a larger proportion of men than women. This heavy drinking leads to violence, neglect of children, and poverty. The Gusii also have high murder rates compared to the rest of Kenya. Although violence toward women (such as rape and regular beating) has been part of Gusii culture since earlier in this century, alcohol-influenced behavior is probably involved in its increase.

Until the ravages of AIDS hit western Kenya, the Gusii also had one of the fastest growing populations in the world. The effect of all this, not surprisingly, has been far from pacific. Kisii town is now Kenya's second most violent place, after Nairobi; instances of mob justice in the form of lynching suspected

witches, for example, surged in the 1990s, and the unemployment rate remains one of the country's highest. Witchcraft and perception of witchcraft has also been a major problem among the Gusii lately. In a recent incident about 15 people suspected to be sorcerers were lynched.

The Gusii have long fled from stronger and more aggressive enemies such as the Luo and Maasai. Yet somehow, despite centuries of having been scattered about western Kenya through force of arms, their identity and their social cohesion has remained intact. There have been many disputes with other ethnic groups over the years. Land is the main reason tensions have existed between various ethnic groups, such as the Maasai, Kalenjin and Kipsigis. Shifting boundaries between ethnic groups have created tensions.

## 20 GENDER ISSUES

The exploitation of women in Gusii society is a serious human-rights problem. According to customary law, which is usually followed in the countryside, women cannot inherit or own land, cattle, or other resources. This makes them completely dependent on men for survival and attainment of any future security. Until a woman has adult sons, she is under the authority of her husband and has to ask permission from him to leave the homestead.

Women do most of the work in feeding their families, and many husbands spend time drinking and visiting friends while their wives work in the fields and take care of the household. Although not all husbands beat their wives, such behavior is considered acceptable and is not uncommon.

Finally, the Gusii practice female genital mutilation, which, although prohibited by national law, still flourishes. At the age of 8 or 9, girls are brought together by their mothers in August for collective circumcision ceremonies. The practice is almost universal among the Kisii. However, according to one source there has been a shift from "traditional" to "sanitized" methods, whereby parents are now paying large sums of money to medical professionals to perform the rite on their daughters.

# HAUSA

**PRONUNCIATION:** HOW-suh

**LOCATION:** Hausaland in West Africa (northwestern Nigeria and in adjoining southern Niger)

**POPULATION:** 22 million

**LANGUAGE:** Hausa, Arabic, French or English

**RELIGION:** Islam, small native cults

**RELATED ARTICLES:** Vol. 1: Nigerians; Nigeriens

## 1 INTRODUCTION

The Hausa are the largest ethnic group of West Africa, with a population of some 22 million, with another wider regional 15 million bilingual speakers of Hausa from northern Cameroon to northern Ivory Coast. Because of their wide geographical distribution and intermarriage and interaction with different peoples, the Hausa are a heterogeneous people, with a variety of cultural and physical features as well as diverse histories.

The Hausa generally recognize a common origin. They acknowledge a common mythical ancestor (Bayajidda) who, according to tradition, migrated from Baghdad in the 9th or 10th century ad. Along the way, he stopped at the kingdom of Bornu (now in northeast Nigeria) and married the daughter of the king, but was forced to leave her behind. He then fled west and helped the king of Daura slay a snake that was depriving his people of water, and he was given the Queen of Daura in marriage as a reward. Bayajidda succeeded as the king of Daura, and his son, Bawo, who founded the city of Biram, had six sons who became the rulers of other Hausa city-states. Collectively, these are known as the *Hausa bakwai* ("Hausa seven") and include Kano, Katsina, Rano, Zazzau, Daura, Gobir, and Biram. Bayajidda is said to have borne another son with a concubine, and this son fathered seven other children. Each established city-states far away from Daura, which became known as the *banza bakwai* ("bastard seven"). They include Kebbi, Zamfara, Gwari, Jukun, Yoruba, Nupe, and Yauri. Thus, by the 15th century, a number of relatively independent city states had emerged, which competed with each other for control of trans-Saharan trade, slaves, and natural resources. From that point, the various city-states trace their history independently of each other, each with its lists of kings who have ruled since that time.

During the 19th century, Hausaland was unified during an Islamic holy war (*jihad*) led by a Fulani scholar, Usman d'an Fodio. (Islam had arrived in the area by the 14th century.) The *jihad* sought to correct the impure ways of the Hausa Muslims and convert those who were still "pagans." All of the land of the Hausa (*k'asar Hausa*) and some other territories were united under the rule of d'an Fodio, and later his sons. They directed political and religious affairs in the land from the capital at Sokoto until the British arrived and colonized the area in about 1900. Even during colonial times, the city-states and their leaders maintained some authority and autonomy, and many Hausa traditions and customs have been preserved until recently.

Among the Hausa origin myths, the snake, water, and western migration themes have been alleged to link the Hausa with ancient Meroe on the Nile. Hausa communities outside of Hausaland are commonly known as zongos. Hausa communities in

the 15th and 16th centuries found themselves in a regional power vacuum with the decline of Bornu-Kanem to the east, Songhai to the west, and being restrained by the northerly Berbers and the long-standing southward migration of the Sahara. The Kano Chronicle provides a significant historical record to the Hausa and Fulani people. While there are important aspects of collaboration between these two groups, generally one can say that the 18th century Fulani jihads put the Hausa in a relatively subordinate position.

## 2 LOCATION AND HOMELAND

Hausa peoples are concentrated mainly in north central Nigeria and in adjoining southern Niger, an area that is predominantly semi-arid grassland or savanna. Hausaland consists of a number of large cities surrounded by rural agrarian communities that grow mainly millet, maize, and sorghum during the region's 4- to 5-month rainy season. The cities are among the greatest commercial centers of sub-Saharan Africa. Hausa peoples are found dispersed throughout West Africa, Cameroon, Togo, Chad, Benin, Burkina Fasso, and Ghana. Some are found as far away as Sudan and Congo Republic. They have settled permanently or temporarily in these locations as traders.

## 3 LANGUAGE

Hausa is the most widely spoken language in West Africa. It is spoken by an estimated 22 million native speakers, plus an additional 17 million second-language speakers. The Hausa language, from which these people take their name, belongs to the Chadic sub-branch of Afro-Asiatic language family of Africa, which has strong affinities to Arabic in the north. Perhaps one-fourth of the Hausa vocabulary derives from Arabic, and more recently terms from Fulfulde (see **Fulani**) and Kanuri languages, as well as English, have been incorporated. Many Hausa can read and write Arabic, and many can also speak either French or English. There are five main dialects of Hausa in northern Nigeria, in addition to variations on the language in the Hausa diaspora in such places as Ghana, Benin, and Togo.

## 4 FOLKLORE

The Hausa have a rich system of folklore, some of which has been influenced by the Islamic religion. The system includes stories (*tatsunya*)—of animals, men and women, young men and maidens, and heroes and villains—which usually have a moral. Many include proverbs and riddles to help convey a message to the audience, which is often comprised of children. The stories sometimes involve a trickster who appears as a spider and demonstrates both cunning and greed. Hausa folklore also includes exaggerated stories or traditions (*labaru*) of important figures or events in the Hausa past (such as battles or notable rulers). In these, folklore merges with history. The Hausa origin myth includes Bayajidda the serpent slayer who was rewarded by marriage the Queen of Daura, who, in turn, had the founding sons of the Hausa's seven original towns.

## 5 RELIGION

Since the penetration of Islam into Hausaland in the mid-14th century, most Hausa have become extremely devoted to the Islamic faith. Muslims believe in Allah and Mohammed as his prophet. They pray five times each day, read the holy scriptures, fast during the month of Ramadan, give alms to the poor, and

aspire to make the pilgrimage (*hajj*) to the Muslim holyland in Mecca. The religion affects nearly all aspects of Hausa behavior, including their dress, art, house types, rites of passage, and laws. In the rural areas, there are still a few communities of peoples who do not follow Islam. These people are referred to as *Maguzawa*, and they worship nature spirits known as *bori* or *iskoki*.

The Hausa are Sunni Muslims, but are also influenced by the Muslim brotherhoods that are widespread across the Sahel as well as other syncretic African beliefs and practices. Some Hausa, known as *maguzawa*, tend more toward non-Islamic African beliefs. *Bori* cults are built around spirit possession and exorcism and are especially attractive to women and marginalized peoples.

## 6 MAJOR HOLIDAYS

The Hausa annual cycle follows the Islamic calendar. Feast days (*Id*) take place following the month of fasting (*Ramadan*), following the pilgrimage to Mecca (*hajj*), and on the birthday of the prophet Mohammed. At this time, families usually sacrifice a ram in thanksgiving, celebrate with their relatives and friends, and give each other gifts. Hausa also observe the national holidays of Nigeria.

## 7 RITES OF PASSAGE

About a week after a child is born, it achieves personhood when it is given a name during an Islamic naming ceremony. Boys are usually circumcised at around the age of seven, although

there is no rite of passage associated with this. At around this same age, both boys and girls study the Qu'ranic scripture, which they must learn by the age of 13.

In their mid- to late teens, young men and women may become betrothed in marriage. The marriage ceremony may take place over several days, first among the bride and her family and friends, when she is prepared for marriage. Male representatives of the bride's and the groom's families contract the marriage according to Islamic law, usually at the mosque. Shortly thereafter, the couple will be brought together, often with a small celebration.

Upon the death of an individual, Islamic principles for burial are always followed. The deceased is washed, prepared for burial, wrapped in a shroud, and buried facing eastward toward the Islamic holyland of Mecca. Prayers are recited, and family members receive condolences. Wives mourn their deceased husbands for about three months.

## 8 INTERPERSONAL RELATIONS

In contrast to some other Nigerian peoples, Hausa tend to be quiet and reserved. This may be due to the influence of Islam and their close association with Fulani (Fulbe) peoples, who are known for extreme reserve and shyness. Thus, when Hausa interact with other, unrelated peoples or strangers, they tend to exercise restraint and not show emotions. Likewise, when a Hausa interacts with certain kin (such as senior siblings, in-laws, or one's spouse or parents), reserve and respect must be shown. This may entail, for instance, not uttering the name of one's spouse or parents or talking quietly. In-laws or co-wives may be avoided altogether. To the Hausa, this is a demonstration of respect. By contrast, relaxed, lively, affectionate, and at times playful relations exist among certain other kin such as junior siblings, grandparents, and grandchildren, or among cousins.

There are no formal age groups among the Hausa. From an early age, however, children develop friendships with their neighbors that may last a lifetime. In some towns, youths may form associations whose members play or dance together until they marry.

## 9 LIVING CONDITIONS

Hausa reside in both rural and urban areas. In the rural villages, they usually live in large households (*gidaje*), which are inhabited by a man, his wives, his sons, and their wives and children.

In large cities, such as Kano or Katsina, most Hausa live in the old sections of town or in newer quarters built for civil servants. Many non-Hausa (particularly Yoruba, Igbo, Nupe, and Kanuri) have moved to these cities and occupy what are called "stranger quarters" (*sabon gari*). Hausa housing ranges from traditional extended family compounds (inhabited by a male, his wives, and his sons and their families) to relatively modern, single-family houses in new sections of cities or government residential areas.

In rural areas, most people get around on foot or bicycle, but they use public transport (buses, taxis) when traveling long distances. Hausa cities have public transportation, and many residents have cars.

Modern health care is available throughout Hausaland, except in remote villages. People can seek medical help in clinics and hospitals, although there is sometimes a shortage of

medicine. Some people also consult traditional healers who administer local remedies (*magani*), many of which prove very effective.

Northern Nigeria is relatively underdeveloped; the Hausa are facing various difficulties of finding adequate employment in the modern sectors of the economy that require new educational and technical skills.

## 10 FAMILY LIFE

As throughout Africa, family life is extremely important among the Hausa. Ties of kinship are elaborate, particularly through the male line, and relatives cooperate in economic activities such as farming and trading in the rural areas or in business activities in the urban areas. Kin aspire to live near each other to socialize and provide mutual support. They also contract marriages for junior members, who ideally are related (i.e., cousins). Under Islamic law, a man may marry up to four wives. Principles of kinship and descent are most elaborate among the aristocratic Hausa of Fulani descent, who trace their ancestry back to the time of the *jihad* in the 19th century. These people are known as Hausa-Fulani.

Most married Hausa women observe seclusion; they stay in the home and only go out for ceremonies or to seek medical treatment. A few can go out to their place of work. When they do go out, they should be modestly dressed (i.e., with a veil) and are often escorted by children.

Hausa generally do not recognize themselves politically as one unit but rather identify with the individual Hausa "states" that have persisted from earlier times. Each state has an emir (*Sarki*) who is flanked by a council (*majalisa*). States as territories are divided into districts, which are administered by government and local officials. Lastly, village chiefs and ward heads control affairs of villages or sections of cities.

## 11 CLOTHING

Hausa men are recognizable throughout West Africa by their elaborate dress. Many wear large, flowing gowns (*gare*, *babban gida*) with elaborate embroidery around the neck and sometimes down the front. They also wear colorful embroidered caps (*huluna*). Hausa women, like women of neighboring groups, wear a wrapper made of colorful cloth with a matching blouse, head tie, and shawl. Some of these cloths are extremely expensive, and women collect them, together with gold jewelry, as a sign of status and wealth.

## 12 FOOD

The Hausa eat a variety of foods that derive from their predominantly agricultural livelihood. Their staples consist of grains, namely sorghum and millet, together with maize, which are ground into flour for a variety of foods. Rice may also be used as a staple. Breakfast often consists of porridge and sometimes cakes made of fried beans (*kosai*) or wheat flour (*funkaso*). Lunch and dinner usually include a heavy porridge (*tuwo*) that is served with a soup or stew (*miya*), and dinner is the main meal. Most soups are made with a base of ground or chopped tomatoes, onions, and peppers. To this are added other vegetables such as spinach, pumpkin, okra, and other leafy vegetables, and spices that are found locally. Small quantities of meat are used, and beans, peanuts, and milk may also add protein to Hausa diets. Milk products are obtained from the pastoral Fulani (Fulbe) peoples. Nowadays, as many Hausa women engage

A Hausa father and son in their work clothes. Many Hausa men have more than one occupation. In rural areas, they farm and also engage in trade or craftsmanship. In the towns and cities, they may have formal jobs that they may supplement with trade. (Jason Laure)

in the trade of cooked foodstuff, many families or individuals purchase snacks or meals outside the household as needed.

### 13 EDUCATION

From birth, Hausa children are socialized in the household by their relatives, especially women, through imitation, scolding, reciting sayings and proverbs, and storytelling. From about the age of six, they attend Islamic (*Qu'ranic*) school and learn to recite the scriptures and learn about the practices, teachings, and morals of Islam. By the time they reach adulthood, many achieve high levels of Islamic scholarship.

Western education was established in Hausaland during the early 20th century. Children began attending schools built by the British Colonial government, first at the primary level, and then at the secondary level. One of the first and finest universities in all of Africa, Ahmadu Bello University, was founded in Zaria in the 1940s. Since Nigeria received its independence in 1960, many schools and universities have been built by the Nigerian government, and a majority of Hausa children, especially in urban areas, are now able to attend school, at least to the primary level.

### 14 CULTURAL HERITAGE

Culture (*al-ada*) is one of several features that distinguish a Hausa person from members of other ethnic groups, in addition to his origin (*asali*), his adherence to the Islamic religion (*addini*), and his mastering the Hausa tongue (*yare*). Hausa culture includes the Hausa mode of dressing, particularly the

big gown and cap, along with several other customs, such as dancing and marriage ceremonies. The Hausa also identify closely with their music, particularly that of the praise-singers who sing about community histories, leaders, and prominent individuals. Hausa culture also includes individual character, known as *mutumci* or *hali*. In their personal dealings, Hausa seek to strike a balance between being assertive and being thrifty, which benefits them in their business dealings, and having a strong sense of shame (*kunya*) and respect among strangers as well as kin.

### 15 WORK

Hausa society has a strong division of labor according to age and sex. The predominant activities are trade, especially in the towns, and agriculture in the rural areas. Hausa women, although they are usually secluded (except at harvest time in the rural areas), have occupational specialties, including processing, cooking, and selling foods. They also sell cloth weavings, pots, medicines, vegetable oils, and other small items. They do so with the help of their children or servants, who go to other houses or the market on their behalf.

Male children help their fathers with farming; young girls help their mothers around the house, care for the younger children, or go out and trade. Recently, some of the women's trading activities have declined as children have been enrolling in school during the hours their mothers need help.

Many Hausa men have more than one occupation. In rural areas, they farm and also engage in trade or craftsmanship.

They grow food crops and cash crops such as cotton and peanuts. In the towns and cities, they may have formal jobs, such as teaching or government work, which they may supplement with trade. Some individuals are full-time traders with shops or market stalls, while others engage in long-distance trade of cattle and skins to other parts of Nigeria or to neighboring countries. Many Hausa are full-time Islamic scholars.

## 16 SPORTS

Both wrestling (*kokawa*) and boxing (*dambe*) have been popular sports among the Hausa. Wrestlers and boxers form distinct groups in Hausa communities, until recently being defined by distinctive dress and hairstyles. Children at a young age become apprentices of more experienced individuals. Eventually they participate in the competitions. For entertainment or on religious holidays, people are summoned to arenas or markets for the matches. Music, particularly drumming, accompanies the competition. Magical potions or charms (*magani*) are used to enhance the performance. Both boxers and wrestlers wear special loincloths during the competitions, and the boxers also wear special bracelets and a cloth wrapped around one hand, which serves as a boxing glove. During a match, a wrestler will choose an opponent and the two will wrestle until one is thrown to the ground. Boxers fight until one is either brought to his knees or falls flat on the ground.

More recently, other sports have been introduced into Hausaland. In particular, horseracing and polo are found among the nobility. Soccer is popular among practically everyone, and it is now considered Nigeria's national sport.

## 17 ENTERTAINMENT AND RECREATION

From a young age, Hausa children participate in dances, particularly when they meet in the market. Storytelling, local dramas, and musical performances have also been common forms of entertainment until recently. Musicians perform at various festivities such as weddings, naming ceremonies, and parties, as well as during Islamic holidays. Today, Western forms of entertainment are popular. Western music, including rap and reggae, are common, as are television programs imported from the United States and England. Nowadays, one often finds stereos, televisions, and VCRs in the homes of Hausa people, airing a mix of traditional Hausa entertainment and that of the West.

## 18 FOLK ART, CRAFTS, AND HOBBIES

Among the Hausa, music and art form an important part of culture and everyday life. Work songs often accompany activities in the rural areas or in the markets. Court music (drumming, horns, flutes) and praise-singing are found among those in towns, especially among the nobility. Some of the Hausa praise-singers (*marok'i*) have achieved national prominence.

Hausa are well-known for their craftsmanship. There are tanners, leatherworkers, weavers, carvers and sculptors, ironworkers and blacksmiths, silver workers, potters, tailors, embroiderers, and so on. Their wares (such as jewelry, hats, cloth, and utensils) are sold in the markets throughout Hausaland and in much of West Africa. North African, Islamic forms and motifs have influenced much of Hausa art, design, and architecture, which includes Arabic characters and geometric designs.

## 19 SOCIAL PROBLEMS

Problems and hardships among the Hausa today are caused by the physical and political environment in which they live. Geographically, most of Hausaland is in the northern savanna and Sahel zones near the Sahara desert, which are prone to drought. Crops fail if rainfall is not timely or sufficient. Most people do not have the means to purchase the necessary foodstuffs and may suffer during harsh weather. Some must migrate to the cities in search of work.

Since gaining its independence, Nigeria has also witnessed a host of problems associated with managing the new country and its government. Political instability, military dictatorships, corruption, and lack of unity among Nigeria's more than 200 ethnic groups are among the many problems that have plagued the country. Even though Nigeria is one of the world's largest suppliers of oil, much of the wealth has not been properly invested in economic and social development.

Consequently, among the Hausa, as among all other peoples of Nigeria, poverty is widespread. Its manifestations include poor nutrition and diet, illness and insufficient health care, inadequate educational opportunities, and a relatively low standard of living in contrast with much of the Western world. Nevertheless, the richness of Hausa culture and society offsets many of these hardships, and there is reason for optimism that living conditions will gradually improve as the people of Nigeria gain more experience as citizens of the new nation.

In short, the central problems in Hausaland remain practical issues of employment and social services, while the main cultural and religious issues rest in the torque between conservative Islamic values in a modern federal African nation.

## 20 GENDER ISSUES

In all Islamic societies the position of women has certain specific cultural and religious expectations requiring modesty and domestic functions. In this context the stresses of modern life have caused both changes and threats to this long established cultural order. In northern Nigeria in particular the tension between a secular federal state and local provincial autonomy has been very contentious at times. Among the issues was the case of Amina Lawal who was charged with adultery and was sentenced to death by stoning according to a harsh interpretation of Islamic law. This was never carried out but was a difficult issue of the federal government along with parallel cultural issues regarding a Nigerian beauty contest. On the other hand the legendary Hausa Queen Aminatu is noted for her military prowess and is much celebrated, but even her role is disputed by some theologians and historians.

# HUTU

**PRONUNCIATION:** HOO-too

**LOCATION:** Rwanda, Burundi

**POPULATION:** Approximately 16–17 million

**LANGUAGE:** Kinyarwanda, Kirundi, Swahili, French, English  
Christianity with aspects of traditional belief, spirit cults

**RELATED ARTICLES:** Vol. 1: Burundians; Rwandans

## 1 INTRODUCTION

The term *Hutu* refers to the majority of people who live in the African countries of Rwanda and Burundi. The Hutu people share cultural traditions with the other inhabitants of these countries, the Tutsi and the Twa, and all three groups speak the same Bantu language. The contemporary social situation in Rwanda and Burundi is the result of a complex history that brought these diverse peoples together.

Scholars, as well as the people of the two countries themselves, disagree over the precise meaning of the label *Hutu*. In practice, there are two senses of the name. First, *Hutu* may be used to refer to ethnic origins. In this sense, it refers to people of Bantu origins who share a common history as farmers. In its second sense, it indicates social status, referring to the fact that the Hutu traditionally belonged to a low-ranking social category, similar to a caste, and were subordinate to the higher-ranking Tutsi, who formed an aristocracy. Lowest in the status system were the Twa, a group of hunters and foragers known more commonly as “pygmies.”

Like the two different meanings of the name *Hutu*, there are two prevalent interpretations of the group’s history, both of which have assumed mythic proportions and are often used for political purposes.

The first myth of history has the effect of justifying Hutu hatred of the Tutsi. It overemphasizes the ethnic divisions of the past. It suggests that the Tutsi are a distinct race of conquerors who have enslaved the Hutu and Twa for hundreds of years, making use of the widely accepted belief that the Hutu and the Twa were the first settlers of the region, only later to be followed by the Tutsi in the 15th or 16th century.

The second mythical version of history has been used to deny the legitimacy of Hutu claims to political representation. It depicts the inhabitants of Rwanda and Burundi as a single ethnic group whose divisions have arisen solely as a result of economics and colonialism. This version de-emphasizes the physical differences among these groups, claiming they are too ambiguous to matter. The peaceful and cooperative quality of Hutu-Tutsi relations are overemphasized, and any contemporary ethnic problems are blamed on foreigners. This myth, at its most extreme, rules out any mention whatsoever of ethnicity.

Both these versions of history are oversimplifications, but they are made believable because they have some evidence in their support. For example, the first version’s emphasis on ethnic divisions is supported by studies that have found the Tutsi to be on average four to five inches taller than the Hutu. This ethnic emphasis is also supported by the fact that many Tutsi can also drink large quantities of milk without suffering the indigestion associated with the genetic condition called lactose intolerance, a finding in accord with the view that the

Tutsi were at one time nomadic cattle herders related to other tall and lean people of East Africa such as the Maasai and the Nuer.

In spite of such support, the mythical features of these contrasting historical accounts can be countered by considering the historical record, whose details are much more complex and ambiguous than the myths allow. For example, the *mwami*, the Tutsi king who ruled over Rwanda-Burundi, enjoyed some popular support from both the Hutu and the Twa. Furthermore, even in central Rwanda, where the king was strongest and most identified with Tutsi control, royal power was only solidified in the 19th century. In fact, Hutu regions of northern Rwanda remained free of his rule until the 20th century. As for the situation in Burundi, Hutu leaders were able to rise to positions of power and influence within the king’s court while some whose roots were Tutsi were quite poor.

The history of the Hutu and the Tutsi is complicated still further by the fact that social relations in Rwanda and Burundi were modified by European rule. Both countries were occupied by foreign powers in the period from 1890 to 1962. Germany clearly favored the Tutsi elites during their period of military occupation, from 1890 until the end of World War I. The Belgian administrators who followed the Germans also favored the Tutsi initially, but their position became more ambiguous over time. By the 1950s, Belgian administrators and missionaries were actively encouraging Hutu leaders in their attempts to gain political control.

Rwanda and Burundi took dramatically different paths to independence in 1962. During the local run-off elections in Rwanda in 1959, open rebellion against the Tutsi broke out. Ultimately, this led Hutu leaders to abolish the kingship and take power by force. In Burundi, there was a more peaceful transition to independence, with the *mwami* initially acting as an intermediary between Tutsi and Hutu sides. This peace, however, was fragile, and Hutu efforts to gain power by force were crushed, culminating in a ruthless campaign of repression against them in 1972.

The end result of the independence process was that opposite sides controlled the two countries. In Rwanda, the Hutu established a period of rule that was to last until 1994. In Burundi, the state came to be controlled by a branch of the Tutsi. More recently, there have been attempts to reconcile the two groups, but conflicts over political power continue.

## 2 LOCATION AND HOMELAND

Rwanda and Burundi are mountainous countries in east-central Africa. They share a common border, with Rwanda located to the north. Rwanda’s northern border is with Uganda. Both countries are bounded by the Democratic Republic of the Congo (formerly Zaire) to the west and Tanzania to the east. Rwanda and Burundi are both quite small. Their total area combined is approximately 54,100 sq km (20,900 sq mi), or roughly the combined size of Maryland and New Jersey.

Population densities in the region are among the highest in Africa and have been high for many years. Burundi had an estimated 312 people per square kilometer of land in 2008, and Rwanda an estimated 407 people per square kilometer of land. The combined total population of Rwanda and Burundi was approximately 19 million in 2008. Crises in Burundi and Rwanda have produced large numbers of refugees, including thousands of Tutsis fleeing Rwanda in the early 1960s and thousands of

Hutu fleeing Burundi in 1972, as well as the refugees generated in Rwanda in 1994. Many people of both groups have lived in refugee camps in neighboring countries, although many Tutsi have returned to Rwanda since 1994. The traditional ethnic distribution figures are usually given as 85% Hutu, 14% Tutsi, and 1% Twa. However, given the history of conflict in the region, ethnic census data should be treated with caution.

### 3 LANGUAGE

The Hutu, Tutsi, and Twa speak variants of a language called *Kinyarwanda* in Rwanda and *Kirundi* in Burundi. These are best thought of as two dialects of a single language that falls into the Central Bantu family. They are mutually intelligible but vary in terms of pronunciation and vocabulary.

Because of the long association of Rwanda and Burundi with Belgium, and the use of French in schools, many Rwandese and Burundians speak French and have French first names. Swahili is also spoken in the region, especially along the border with Tanzania and among those who have been refugees there. English is increasingly important in Rwanda.

Personal names seem lengthy, but their meanings make them simple to native speakers. For example, the name *Mutarambirwa* means “the one who never gets tired.” Individual names can also be derived from well-known events or borrowed from praise poetry.

Traditionally, the ability to express oneself well orally was highly valued. Metaphorical references to cattle and crop cultivation were commonly used in everyday speech. In re-

gions where social relations were most caste-like, with farmers expected to act deferentially toward aristocrats, status was marked in language by polite forms of address. For example, *murakoze* is the respectful form for “thank you” while *urakoze* is the informal form.

### 4 FOLKLORE

Verbal arts of the region include praise poetry, proverbs, folktales, riddles, and myths. Traditionally, these were vibrant parts of everyday life. For example, riddle-like descriptions could be worked into everyday speech: a poor person wearing a pair of ragged shoes held roughly together with a safety pin might evoke empathy by describing his shoes as a “poor broken-down old man with a spear stuck in his body.” Similarly, proverbs were used in defense of an opinion or to provide a moral lesson.

Tales of the legendary figure Samadari were popular among Hutu and lower-ranking Tutsi. Samadari is a kind of trickster who was free to violate the ordinary rules of social conduct. He could openly mock the rich and the powerful and heap scorn upon wealthy cattle owners.

### 5 RELIGION

Today most Hutu are Christians, particularly Catholics, with a small percentage of Muslims. Nonetheless, African religion continues to be important for the majority as well. In the Hutus’ traditional religion, the creator is envisioned as having many human characteristics. The word for creator, *Imaana*, signifies both God and God’s power to create and ensure prosperity and fertility. *Imaana* was essentially benevolent but somewhat removed from the affairs of ordinary people. Perhaps because of his remoteness, elaborate tales of the creation of the universe are lacking.

Non-Christian religious expression is not uniform but one unifying factor is belief in the power of the *abazima*. These are the spirits of the dead, particularly ancestral spirits. They may bring misfortune to those who do not respect them but they may also provide spiritual aid. Offerings are made to *abazima*, and diviners may be consulted to interpret their wishes. Two of the most important spirits among the Hutu are Ryangombe and Nyabingi. In northern Rwanda, Nyabingi is associated with fertility. During ritual occasions individuals may feel they are possessed by the spirit of Ryangombe.

One mythical account of the origin of the Burundians and Rwandans—promoted by the Tutsi elites and rejected by most contemporary Hutu—legitimizes the rule of the Tutsi over the Hutu and Twa by cloaking it in the authority of religious tradition. According to this account, the first inhabitants of the region were said to be the three sons of a king: Little Twa, Little Hutu, and Little Tutsi. The story tells how the king appointed Little Tutsi (“Gatutsi”) to rule over the other two as a result of their personal failings.

A variety of distinct spirit cults exist, with separate forms of worship, some including elaborate initiation procedures.

### 6 MAJOR HOLIDAYS

Holidays observed by the Hutu include the Rwandan and Burundian independence days, May Day, New Year’s Day, and the major Christian holidays. Royal rituals—now no longer observed—were elaborate national affairs that included specially trained dancers and the use of giant sacred drums. Rwanda has

several new holidays. These include February 1 (National Heroes Day); April 7 (Genocide Memorial Day); July 4 (National Liberation Day); and October 1 (Patriotism Day).

## 7 RITES OF PASSAGE

An individual's first rite of passage is the naming ceremony, which takes place seven days after a child's birth. For the first week, both the baby and the mother are secluded inside the house, but on the seventh day the child is brought out for the first time. Food and drink are prepared, and children from the area are invited to participate in the ceremony.

Marriages are legitimated by the transfer of bridewealth, a kind of compensation for the loss of the woman's labor paid by the family of the groom to the family of the bride. Bridewealth is paid in cattle, goats, and homebrewed beer. The traditional marriage ceremony itself is complex, and the details vary from region to region. Commonly, the bride's body is purified by being smeared with herbs and milk.

Upon marriage, the bride may be secluded at the father-in-law's house for several days. Her transition to full marital status is signified by the end of this seclusion. Except for marriage, there is no formal initiation process to mark the transition from adolescence to adulthood.

Death is marked by prayers, speeches, purification rituals, and restrictions on many everyday activities. Close family members are expected to refrain from sexual relations and to avoid working in the fields during the period of mourning. At the end of the mourning period, the family hosts a ritual feast.

## 8 INTERPERSONAL RELATIONS

Differences in social status, traditionally conveyed by posture, body language, and speaking style, figured prominently in social relations among the Hutu. Individuals of lower status were expected to show deference to those superior in rank by kneeling. However, a certain casualness of bearing and emotional expression was permissible among lower-status Hutu when they were among equals. Women were expected to defer to men, and idle conversation was frowned upon.

Customarily, relationships in Rwanda and Burundi were regulated by the movement of cattle. In a system similar to sharecropping, patrons (*bashebuja*), who were frequently Tutsi, lent cattle to clients, who were often Hutu. In exchange, the client (*bagerewa* or *bagaragu*) owed allegiance to the patron. Such relationships were called *buhake* in Rwanda and *bugabire* in Burundi.

The Hutu have separate greetings for morning, afternoon, and evening. The morning greeting—"Warumutse ho?"—is answered "Waaramutse." The afternoon greeting—"Wiiriwe ho?"—is met by the return, "Wiiriwe." Men take leave at the end of a visit by directly offering thanks for the hospitality provided them. Women are often expected to be less direct in ending a visit, perhaps making excuses about household obligations.

Traditionally, romantic relationships between young men and women were expected to occur within the same caste group. Socializing through such group activities as dances and church events was common, as opposed to individual dating. Today, Western-style dating is practiced in urban areas among some of the elite.

Anita Nizigama, a Tutsi, poses for a portrait with her husband, a Hutu, and their child. Nizigama's mother initially protested the marriage. In 1994, Hutu murdered about one million Tutsis. (Melanie Stetson Freeman/Christian Science Monitor/Getty Images)

## 9 LIVING CONDITIONS

Despite the high population density in Rwanda and Burundi, the population remains rural. Society is organized not in villages, but as family housing units spread across the terrain. Houses were traditionally beehive-shaped huts of wood, reeds, and straw, surrounded by a high hedge that served as a fence. More recently, modern building materials and styles have been introduced.

High rates of disease and malnutrition make life difficult for the Hutu. Even before the political violence of the 1990s, the average life expectancy of a person in Rwanda and Burundi was only about 40 to 50 years. In 2008, roughly 5% of Hutu and Tutsi adults were said to be living with AIDS, with the percentage of those living with HIV much higher. Rwanda and Burundi have in the past been healthy and prosperous places, benefitting from the high elevation that offered protection from tropical maladies. Life expectancy is low not only because of extreme levels of political violence but also because of inadequate nutrition, health care, and the spread of diseases

of crowding. Particularly problematic diseases include bacterial diarrhea, hepatitis A, and typhoid fever.

Although Rwanda in particular has experienced economic growth since 1994, the infrastructure in the region is not well developed. Roads are often unpaved or poorly maintained. There is no railway service.

### **10 FAMILY LIFE**

Historically, the women of the family are responsible for the maintenance of the home and for planting, hoeing, and weeding the crops. Men and boys are responsible for pasturing the livestock and for clearing the fields; women of reproductive age are forbidden to take care of cattle.

Although love matches were not unknown, and elopements occurred, marriage in Rwanda and Burundi was often about power and relationships between families. These days, however, marriage is more often a matter of personal choice. The goal for both Hutu and Tutsi men was to have a large family with many children. Men, therefore, frequently sought to have more than one wife. Although the majority of men could not afford to be polygynous, a substantial minority did succeed in marrying more than once. Because the society was patrilineal, a woman's children belonged to the father's lineage. Hutu men were not forbidden to court Tutsi women, but marriages were rare. More common in the modern period, but still rare, are marriages between urban Tutsi and Hutu. Twa men and women were traditionally looked down upon by both Hutu and Tutsi and not generally considered acceptable mates.

### **11 CLOTHING**

Among Hutu in rural areas of Rwanda and Burundi, modesty was traditionally not considered an issue until late childhood, so children were permitted to go about without clothing until sometime between the ages of eight and eleven years. For adults, the handmade bark-cloth skirts and hide cloaks of the past have long since given way to Western-style clothing. Handmade beaded necklaces and bracelets continue to be worn, however.

### **12 FOOD**

The staple foods of the Hutu include beans, corn, millet, sorghum, sweet potatoes, and cassava. Milk is highly valued as a food source, as is cattle meat. Because of the social and religious value of cattle, however, people do not often butcher a cow without some ritual justification. Goat meat and goat milk are consumed as well, but they are considered proper food only for persons of low social status. Meal times are flexible, often revolving around work obligations.

Bananas and sorghum grain are fermented to make alcoholic drinks, which are consumed on social occasions and during ritual events such as ceremonies in honor of the dead.

### **13 EDUCATION**

Literacy rates have been at times lower than 50% in Rwanda and Burundi in the vernacular (native language), and still lower in French, but seem to be improving. Rwanda currently reports a literacy rate of about 70%. In Burundi, literate Hutu were targeted for death in 1972, but education began to be encouraged again in the 1980s. There are teacher-training schools and at least one university in both Rwanda and Burundi. How-

ever, Rwanda's educational structures were disrupted by the 1994 genocide. Prior to that time, the Rwandese school system was moving toward an emphasis on education in French, but there is now a new emphasis on English, with a goal of trilingual education. The government also has the goal of providing free primary and secondary school education for all.

Quality education continues to be associated with the ability to speak a European language.

Perhaps because it is so difficult to attain, education is highly valued among the Hutu. Education, especially quality education, is considered a matter of central importance.

### **14 CULTURAL HERITAGE**

The kings of Rwanda and Burundi maintained elaborate dance and drum ensembles, which were associated with royal power. On ritual occasions in Burundi two dozen drums were arranged in a semicircle around a large central drum. The musicians moved in a circle around the drums, each taking a turn beating the central drum. This style of drumming has survived the demise of the kingship, and the music has been recorded commercially.

Music, dancing, and drumming are still important in rural life. There are separate men's and women's dances, and both groups' styles are highly expressive. Dance movements often include rapid movements of the upper arms and body, leaping, and rhythmic foot stomping. Vocal music may be performed solo or in choral groups. Many different types of popular song are composed, including hunting songs, lullabies, and songs in praise of cattle (*ibicuba*). In some areas, in the past, a minstrel traveled from area to area singing the news and accompanying himself with a seven-stringed zither.

Rural literature takes the form of legendary tales, myths, and praise-poetry. At one time the Hutu composed poetry for the king and nobility, but praises were also sung to honor the everyday aspects of agricultural life.

### **15 WORK**

Agricultural labor was traditionally predominant among the Hutu, with work related to cattle raising and herding more highly valued than cultivation of the soil. People of Tutsi background who cultivated the soil were often considered poor and could lose their status as nobles. In this way some Tutsi "became" Hutu. Today, a majority of Hutu are still farmers. Coffee and tea are the primary cash crops. People also seek opportunities for cash employment. In major cities industrial development has been hampered by the years of political conflict.

### **16 SPORTS**

One of the most popular traditional forms of entertainment for both young people and adults is a variant of the game known as *mancala* in other parts of Africa and played with a wooden board that has rows of hollowed-out holes for holding beans. The beans are moved rapidly from hole to hole; the object of the game is to line up one's pieces in rows in such a way as to systematically eliminate the pieces of one's opponent. The main spectator sport in Burundi is soccer.

### **17 ENTERTAINMENT AND RECREATION**

The capital cities of Rwanda and Burundi have movie theaters that show European and American films. The television indus-

try itself is still under development. Television in Rwanda fosters multilingualism by broadcasting in many languages. This is in stark contrast to the genocide period during which one radio and television station used locally produced music and entertainment to broadcast hateful anti-Tutsi messages.

Music similar in style to that of the Congo and other neighboring countries is popular. Communities may also form neo-traditional drum and dance troupes for local people. Today a number of musicians from Rwanda and Burundi have achieved international recognition. Burundian musician Khadja Nin is particularly well-known for her multicultural style.

## 18 FOLK ART, CRAFTS, AND HOBBIES

The Hutu have traditions of basketwork, pottery, woodwork, metal work, and jewelry making. Traditionally, wood carving was not highly developed, consisting mainly of drums, quivers, shields, and stools. Metal work included such objects as copper bracelets and rings, and iron spear points. The Gisaka region of Rwanda was also known for its elaborately painted house interiors. Today, many handicrafts are being produced for the international market. In Rwanda, reconciliation between Hutu and Tutsi women has been facilitated by groups who work together to weave "peace baskets." These have been offered for sale in the United States by a major department store.

## 19 SOCIAL PROBLEMS

An estimated 100,000 educated Hutu in Burundi were hunted down and killed in 1972, following an invasion by rebel Tutsis. In 1993, violence at that level was once again reported. This was followed by more than a decade of intermittent conflict between the Tutsi dominated army and Hutu rebels. There was no major progress toward peace until an agreement was made in 2003. Areas of conflict and dispute continue, although a democratically elected government with a Hutu president was established in 2005.

In Rwanda, the opposite situation has occurred: the Tutsi have suffered at the hands of the Hutu. In 1962, Hutus massacred thousands of people they defined as Tutsi. Victimization of Tutsis began again in the 1990s after Tutsi rebels launched an invasion from neighboring Uganda. More than 800,000 people labeled Tutsi or Tutsi supporters were killed in the 1994 genocide. Many Hutu opposition leaders were also victims.

It cannot be stressed enough that labeling political violence in Rwanda and Burundi simply as Hutu versus Tutsi is an oversimplification. In practice the killings are not so well defined. Victims have frequently been targeted because of their political beliefs regardless of their purported ethnic classification.

In 1996 thousands of Hutu civilians who had fled to the former Zaire (now the Democratic Republic of Congo) in the wake of the 1994 genocide were caught up in a civil war. This was mainly due to the fact that the civilians had fled Rwanda together with a mass of armed Hutu soldiers. The fleeing Hutu military forces from Rwanda in turn got involved in clashes with the ethnic Tutsi of Zaire (*Banyamulenge*). Subsequently, the Banyamulenge allied with the rebel leader Laurent Kabila and helped depose Zaire's infamous dictator Mobutu Sese Seko.

## 20 GENDER ISSUES

According to custom, women were expected to be subordinate to their husbands; those who disobeyed could be punished se-

verely. The use of violence was considered an acceptable way for a man to discipline his wife. However, a woman might also find support from her kin to prevent the severest of abuses. While the Hutu woman might suffer indignities from an abusive husband, her status was even lower in relationship to elite Tutsi men. A Tutsi man could take a Hutu woman as a concubine, for example, and refuse her the status of a wife, depriving her and her children of legitimacy in the kinship system. The man's wives also had authority over the concubine.

More recently, moves toward gender equality have been promoted. Both Burundi and Rwanda now require that a significant percentage of its elected representatives be women. In Rwanda, the government has enacted other legislation to support women's economic and political rights as well.

Violence against women remains a problem in the area. In the lead up to the 1994 genocide in Rwanda, propaganda was particularly directed against Tutsi women, and they were frequently raped before being killed. One harmful stereotype was that Tutsi women were dangerous because they beguiled Hutu men with their beauty and seductive charms. Particularly as a consequence of the ongoing civil conflict in Burundi, women continue to be subjected to high rates of sexual violence there.

Homosexuality is rarely openly acknowledged by Tutsi or Hutu. This is also something that many people find sinful according to the doctrines of the Catholic church. In 2007 the government of Rwanda began considering a provision to the penal code that that would penalize homosexual behavior. It is already illegal in Burundi.

**PRONUNCIATION:** EE-bo

**LOCATION:** Igboland (Southern Nigeria)

**POPULATION:** 18 million

**LANGUAGE:** Igbo (Kwa subfamily of the Niger-Congo language family)

**RELIGION:** Tribal religion

**RELATED ARTICLES:** Vol. 1: Nigerians

## <sup>1</sup> INTRODUCTION

The Igbo make up the second largest group of people in southern Nigeria. They are a socially and culturally diverse population, living in the southeastern part of the country. The Igbo consist of many subgroups, all speaking one language, and live in scattered groups of villages, lacking the cities and centralized kingdoms that characterize other major groups in Nigeria, such as the Yoruba and the Hausa.

When, and from what area, the Igbo came into their present territory is not known. Their origin is a subject of much speculation. The people have no common traditional story of their origins. Nor do the local traditions of the various Igbo groups provide clues. It is for this reason that some Western writers on the colonial era treated the Igbo as “a people without history.” While this view is no longer considered valid, the Igbo culture historian is handicapped because there is little archaeological data from which to draw. On the basis of cultural data and fragmentary oral traditions, historians have proposed two interrelated hypotheses of Igbo origins: one, that there exists a core area that may be called the “nuclear” Igboland, and two, that waves of immigrant communities from the north and the west planted themselves on the border of this nucleus as early as the 14th and 15th centuries.

The belt formed by the Owerri, Awka, Orlu and Okigwi divisions constitutes the “nuclear” area: its people have no tradition of coming from anywhere else. It is a densely populated area, from which people migrated to the Nsukka area in the north, and into Ikwerri, Etche, Asa, and Ndokki in the south. From these areas, a secondary wave of migration took people farther to the north, south, east, and west. This was a movement that tended to homogenize Igbo culture. The main reasons for migration were population pressure in certain areas and natural disasters.

In addition to this pattern of migration from the nuclear area, there are traditions, confirmed by culture traits, of peoples that entered Igbo territory in about the 14th or 15th century. Of these, three are the Nri, the Nzam, and Anam. Some of these people claim descent from the Bini people of the Benin Kingdom to the west.

European contact with the Igbo-speaking peoples dates back to the arrival of the Portuguese in the middle of the 15th century. For nearly four centuries, the Niger Coast formed a “contact community” between European and African traders. It was a period of trade on the coast rather than one of conquest or empire building in the hinterland, or interior. The main item of commerce provided by the Igbo was slaves, many of whom came to the New World. After the abolition of the slave trade in 1807, a new trading epoch opened, with a shift to traffic in raw materials for industry: palm products, timber,

elephant tusks, and spices. With this shift, the European traders could no longer be confined to the coast. In the struggle to establish a “free trade” hinterland between 1807 and 1885, the British companies played a decisive role for Britain through their joint program, combining aggressive trading with aggressive imperialism. When, in 1900, the Protectorate of Southern Nigeria was created from the former British Niger Company’s administrative area and the Niger Coast Protectorate, Igboland was already being treated as a British colony. Between 1902 and 1914, there were 21 British military expeditions into Igboland. Until 1960, Nigeria was a British colony and the Igbo were British subjects. On 1 October 1960, Nigeria became an independent nation with the political structure of a federation of states.

## <sup>2</sup> LOCATION AND HOMELAND

An accurate census has been difficult to achieve in Nigeria, and the same is true for the Igbo. According to the 1963 census, the Igbo number about five and a half million. This population is very unevenly distributed, with most of it concentrated in a line, or axis, formed by Onitsha, Orlu, Okigwi, and Mbaise areas. Along this line, the density of population exceeds 1,000 persons per sq mi in many places, resulting in one of the world’s most densely populated rural areas where people subsist on root crops raised through hoe cultivation. In all directions from this main population axis, the density of the population falls below the Igbo average of 350 per sq mi but remains well above Nigeria’s average of 85 per sq mi.

Igboland is located in southeastern Nigeria between 5° and 6° N latitude and between 6° and 8° E longitude. The total land area is about 41,000 sq km (about 15,800 sq mi). Before it enters the Atlantic Ocean through a network of tributaries that make up its delta, the Niger River divides Igbo country into two unequal parts. The greater portion lies east of the river, the smaller one to the west. The western Igbo are territorially marked off from the Bini and Warri, their non-Igbo neighbors. On the left bank of the Niger, the eastern Igbo extend from the Niger Delta, where the Ijo and the Ogoni are their southern neighbors, to the north, where the Igala and the Tiv mark the boundary. On the eastern boundary are the Ibibio. Although separated by the Niger, the western and eastern Igbo have retained their cultural and ethnic unity. In modern times, their attitude toward political questions and their identification with their own leaders have revealed the solidarity between the Igbo on both sides of the Niger.

The Igbo country exhibits a wide variety of physical features. The Niger River contributes to this diversity. The most important rivers—Niger, Imo, Anambra, and Urasí—flow from north to south, indicating a steep northward gradient. Four distinct areas may be distinguished: the riverine, delta, central, and northeastern belts. The riverine and delta belts are low-lying, are heavily inundated during the rainy season, and are very fertile. The headwaters of the Imo and Urasí rivers serve the central belt, a relatively high plain that gradually fades into the Okigwi-Awgu plateau. The Udi highlands, which contain coal deposits, are the only coal-mining area in West Africa.

Igboland has a tropical climate. The average annual temperature is about 27°C (80°F), with an annual range of 5 to 10 degrees. The rainy and dry seasons are well marked. The former begins in April and lasts until October, when the dry season starts. Rainfall is heavier in the south than in the north. Im-

portant in the seasonal cycle are the southwest monsoon winds that bring rain and the northeast winds that are dry, dusty, and cold. These dry winds are known as the “harmattan.”

### 3 LANGUAGE

The Igbo language is one of the speech communities in the Kwa subfamily of the Niger-Congo language family. It is marked by a complicated system of high and low tones that are used to indicate differences in meaning and grammatical relationships and a wide range of dialectal variations. Using a longitudinal dialectal profile, communities at the center and those at the poles can understand one another’s dialects; but between communities at the poles, mutual understanding varies from partial to almost none. These polar dialects are the result of greater isolation.

Here are a few Igbo expressions:

English	Igbo
Hello, how are you?	Keku ka imelo?
What is your name?	Kedu ahagi?
Thank you.	Ndewo

### 4 FOLKLORE

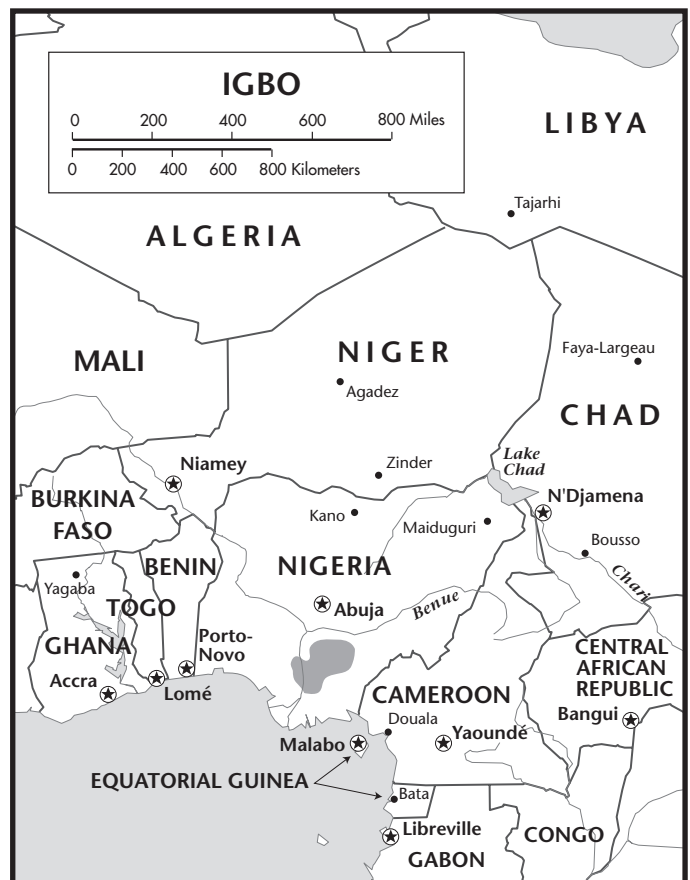

The Igbo world in all its aspects is made comprehensible to the people by their cosmology, which explains how everything in the world, including material, spiritual, and social entities, came into being. Through it, the Igbo know what functions the heavenly and earthly bodies have and how to behave with reference to the gods, the spirits, and their ancestors. In their conception, not only is cosmology an explanatory device and a guide to conduct or ethics; it is also an action system that defines what they should do.

The Igbo world is a world peopled by invisible and visible forces, by the living, the dead, and those yet to be born. All these forces interact and affect and modify behavior. The survival of this world requires some form of cooperation among its members, although this cooperation may be hostile in nature. It is a world in which others can be manipulated for the sake of an individual’s advancement in status, which is the goal of Igbo life. Reincarnation is seen as not only the bridge between the living and the dead, but a necessary factor in the transaction and transfer of social status from the world of the living to the world of the dead. It is a world of constant struggle that recognizes that conflicts exist and requires that people be able to adjust to changes in their lives—being “good citizens” and cooperating for the good of the group. The leader in this world is given minimal power and yet is expected to give maximum service in return, to fulfill the common goal of progress and “making the town get up.”

### 5 RELIGION

Igbo religion is a tribal religion in the sense that its major tenets are shared by all Igbo-speaking people, but in matters of participation, it remains locally organized, with the most effective unit of religious worship being the extended family. Periodic rituals and ceremonies may activate the lineage (larger kinship unit) or the village, which is the widest political community.

While the Igbo religion is polytheistic—having many gods—the idea of a creator of all things is basic to Igbo theology. The Igbo believe in a supreme god, a high god who is all good. This god is a “withdrawn” god, who has finished all ac-

tive works of creation and keeps watch over his creatures from a distance. He is not worshiped directly: there is no shrine or priest dedicated to his service. He gets no direct sacrifice from the living but is seen as the ultimate receiver of all sacrifices made to the minor gods. He seldom interferes in the affairs of human beings, a characteristic that sets him apart from all the other deities, spirits, and ancestors. Although he may be distant and withdrawn, he is not completely separated from human affairs. He is still the great father, the source of all good. The high god is conceived of in different roles. In his creative role, he is called Chinook or Chi-Okike. To distinguish him from the minor gods he is called Chukwu—the great or the high god. As the creator of everything, he is called Chukwu Abiama.

Besides the high god, there are other minor gods called nature gods, sometimes described as kind, hospitable, and industrious; at other times they are conceived of as fraudulent, treacherous, unmerciful, and envious. They are, in general, subject to human passions and weaknesses. But, they can be controlled, manipulated, and used to further human interests. Of these minor gods, Ala, the earth goddess, is considered nearest to the people. She is a great mother, the spirit of fertility of both human beings and the land. Anyanwu is the sun god. He makes crops and trees grow. Igwe is the sky god, the source of rain.

The organization and power structure of these nature gods mirror Igbo social structure. Like the latter, the gods are seen as forming a hierarchy. But, it is usual Igbo practice to appeal

to one god or to a number of gods simultaneously without any consideration of their rank or status.

In addition to the important deities, the Igbo believe in other spirits that may be either personal or impersonal, benevolent or wicked, according to the circumstances. People can keep their goodwill by treating them well. Only the wicked need fear them. Among the principal spirits are Agbara and Alosi. Forests and rivers lying on the fringes of cultivated land are said to be occupied by these spirits. Important personal spirits include Mbataku and Agwo (both of whom are spirits of wealth), Aha njoku (the yam spirit), and Ikoro (the drum spirit).

These deities and spirits have anthropomorphic characteristics (human traits). The Igbo attitude toward them is not one of fear but one of friendship, a friendship that lasts as long as the reciprocal obligations are kept.

## 6 MAJOR HOLIDAYS

The Igbo celebrate the major national holidays of Nigeria, including the following: New Year's Day (January 1), Easter (March or April), Nigerian Independence Day (October 1), and Christmas (December 24–26).

In addition, each town has its own local festivals. Those in the spring or summer are held to welcome the new agricultural cycle. In the fall, harvest festivals are held to mark the end of the cycle. The timing of these festivals varies from town to town.

## 7 RITES OF PASSAGE

Circumcision takes place about eight days after the birth of a boy and is performed by a skilled woman in the village. At this time the umbilical cord is buried. This is not marked by an elaborate ritual but its social significance is great: a child whose navel cord is not buried is denied citizenship. The child's mother selects the most fruitful oil palm tree from those that her husband shows her; the umbilical cord is buried at the foot of this tree.

Receiving a name is an important event in a child's life, for the child is socially accepted as soon as he or she is given a name. The name-giving ceremony is a formal occasion celebrated by feasting and drinking. A child may be given many names. The parents' choice of names may be dictated by the kind of birthmarks on the child's skin and by the opinion of the diviner, or seer. *Njoku* and *Mmaji*, the male and female figures of the yam deity, are conferred by divination. Other names may be given to indicate the market day on which the child was born, or a preference for male children, or a certain concern for the future of the child. The name *Nwanyimeole* ("What can a woman do?") means that a father is in need of a male child. *Onwubiko* ("May death forgive") expresses the fact that parents have lost many of their children by death and pray that this child may survive. *Chukwuemeka* ("God has done well") is a thanksgiving name for the favor received.

Before the advent of Western schooling, adolescent boys passed through a formal initiation known as *ima agwo*. Girls passed through *mgbede*, a ceremonial seclusion known as the "fat house." In southern Igbo communities this was followed by clitoridectomy, or female circumcision.

The process of betrothing and marrying an Igbo young woman is a long, ceremonious one that often takes years and is rarely accomplished in less than a year. Marriage is so impor-

tant to the Igbo that nothing concerned with it is taken lightly. The process falls into four interrelated stages: asking the young woman's consent, working through a middleman, testing the bride's character, and paying the bridewealth, a kind of dowry.

Death in old age is accepted as a blessing. It is the desire of every Igbo man and woman to die in his or her own town or to be buried within its boundaries. If death occurs at a distance, the relatives bring the body home for burial. After death, the body is clothed in its finest garments, and the corpse is placed on a stool in a sitting posture, propped against the wall. In front of the corpse are placed the deceased's special treasures and the implements of his or her work. Lying or sitting in state lasts for a few hours, during which old friends and relatives come and pay their last respects to the dead. When due time has elapsed, young men wrap the corpse in grass mats, carry it out to the burial ground, and bury it. When the head of a family dies, he is buried in a deep grave beneath the floor of his house. As a general rule, burial follows within 24 hours of death.

## 8 INTERPERSONAL RELATIONS

The Igbo are often depicted as an egalitarian society in which almost everybody is equal. This obscures some of the regional differences in Igbo social structure. But, in spite of these differences, all Igbo share the same egalitarian ideology: the right of the individual to climb to the top and faith in the individual's ability to do so.

Within this egalitarian ideology, two criteria shape interpersonal relations: age and gender. Precedence is given to males and to seniors by birth order. This latter is the normal basis for headship of an extended family. The behavior between kinsmen and nonkinsmen is similarly regulated by this senior-junior principle. Seniors are considered the moral agents of the young. It is the duty of the children to greet their seniors first in the morning or whenever they meet. In children's play groups, leadership and authority are informally given to the older boys and girls.

The women members of an Igbo village are of two categories: the women who belong to the village by descent, who may be unmarried, married, divorced, or widowed and the women who belong to it by marriage. The Igbo woman in general enjoys a high socioeconomic and legal status. She can leave her husband at will and summon him to a tribunal where she will get a fair hearing. She marries in her own right and manages her trading capital and her profits herself. Although land rights do not normally descend through the female line, and although living in their husband's compounds makes it impossible for them to play important social and ritual roles in their own family's natal village, women can take titles and can practice medicine.

Social stratification is based on wealth. It does not matter what occupation a person engages in to provide for his old age and for his family. With this ideological approach, the Igbo distinguish between *obgenye* or *mbi*, the poor, from *dinkpa*, the moderately prosperous, and the latter from *nukwu madu* or *ogaranya*, the rich.

## 9 LIVING CONDITIONS

The Igbo live in compact villages, each built around a central square, which is a clearing with a thatch-roofed mud resthouse of the village men's society and a large open space where meet-

ings and ceremonies are held. Extending from the village, sometimes for several miles, is a wide band of farmland, divided into sections, one or two of which are cultivated each year while the others lie fallow. At the edges of the villages and along the roads and bush paths connecting them are scattered groves of oil and raffia palms.

Most villages are divided into wards, and each ward is divided into compounds. The physical structure of the compounds consists of houses crowded wall-to-wall along narrow alleyways. The entrance to a compound is usually through an ornamental gateway leading from the square. The back of the compound, at the edge of the village, is devoted to garden land where certain crops not planted on the farms are grown.

Village life has changed considerably since the discovery of oil in Nigeria. Villages became connected by roadways to urban centers, which exerted considerable influence even on the most remote areas. The government has also supported development in the rural areas. Electricity was introduced; television sets and radios are now commonplace. The houses, which were formerly made of mud walls and thatched roofs, are now constructed of cement blocks with corrugated iron roofs. Villages have running water, although it is not connected to every house.

Another important development is the network of health centers and hospitals that now dot the rural areas. Almost all villages have a health center and a nurse practitioner or a resident doctor.

## 10 FAMILY LIFE

There is no Igbo word for “family.” The term “family” as used by English-speaking Igbo may apply to several different sorts of groups. On the simplest level is the elementary family, composed of a father and a mother and their children, that is, the nuclear family in the usual Western sense of the word. But, under the practice of polygyny, many Igbo men have more than one wife, so there is also the polygynous family, made up of a father and his wives and all their children—father, mothers, and a group of full and half-siblings. Residence is patrilocal; a woman goes to live with her husband when she marries, and sons, when they marry, do not traditionally leave home and set up separate homes their own. Thus, there is, in addition, the extended family: a father and his sons—or a group of brothers if the father is dead—their wives, sons, and unmarried daughters. The extended family usually has about 5 to 30 members.

Ideally, all of the members of the extended family live in one large compound. The ideal of Igbo family life is a big compound. Establishing a big compound depends on the abilities of the head of the compound. It is the demonstration of his personal achievement and his social status. A successful man marries as many wives as he can support, which involves providing farm plots to help the women and their dependents make a living. Polygyny is seen as imposing social and economic obligations that can be fulfilled only by a man of substantial wealth.

The compound consists of a number of economically independent households, each with a man or a woman as the head. All the heads and their dependents recognize the authority of the compound head and would not make a major political decision without first consulting with him. The compound head has numerous ritual, moral, and legal rights and obligations. In Igbo idiom, he is the “eyes of his compound members as they

are his ears.” In return, he receives respect, obedience, and material tokens of goodwill.

In recent years, many changes have taken place that contradicts this ideal. Christian marriage and marriage by ordinance (law) are important innovations. Both have given women legal protection and property rights not recognized by the traditional system. This has not, however, completely eliminated polygyny. A legal limit has also been imposed on the amount of bride-price a woman’s family may demand. There has been an opposite trend, however. As more women have become educated, their families have raised their expectations of bride-wealth, demanding higher and higher amounts.

Among Igbo professional people, the trend is toward a nuclear family, establishment of a separate residence, and marriage based on love. Tension still exists around the issue of the amount of support that should be given to the members of the extended family, creating conflict between generations.

## 11 CLOTHING

The everyday clothing in urban areas is not different from that of Westerners. Traditional clothing is still worn on important occasions in the cities and every day in rural areas. There are both formal and informal attire for both men and women. For everyday use men wear a cotton wrapper, a shirt, and sandals. For formal occasions they wear a long shirt, often decorated with tucks and embroidery, over a better-quality wrapper, shoes, and a hat. Women wear wrappers for both informal and formal occasions; the major difference between these is the quality of fabric. For everyday use, the preferred material is cheap cotton that is dyed locally. For formal wear, the wrapper is either woven or batik-dyed, often imported from Holland.

The blouse for formal wear is made of lace or is embroidered. Women also wear a head tie, a rectangular piece of cloth that can be tied around the head in a number of different ways.

Both men and women have distinctive facial markings, although this is becoming less common. For women, the marking is performed as a preliminary to marriage and is called *mbubu*. The *mbubu* consists of a series of small slits made in the flesh with a pointed razor. Into these slits, pellets of tightly compressed cotton or palm leaf are inserted, and the whole is smeared with charcoal. The end result is a regular pattern of black oval blobs that stand out on the skin.

The tribal markings of the men, called *ichi*, are more elaborate and diverse. Some of the Igbo groups use them only on the face, others on the body as well. The latter is often part of the initiation ceremony. The work is done by women; the flesh is cut in a series of lines and soot from a cooking pot is rubbed into them to produce an intensely black effect.

## 12 FOOD

The yam is the staple food of the Igbo. To be deprived of yams creates a condition of acute distress. Whatever substitute may be offered, it cannot satisfy the Igbo palate. There are many varieties, which differ greatly in size, appearance, and flavor. Other starchy foods include rice, cassava, taro, maize and plantains.

Traditionally, the yam was the choice of food for ceremonial occasions. Nowadays, it has been replaced by rice.

A usual meal includes a starch and a soup or stew, prepared with a vegetable, such as okra or bitter leaves, to which piec-

An Igbo Maiden Spirit mask, which men would wear to mimic activities of women for magical purposes. The masks would be worn during certain rituals, especially at funerals and festivities. (*The Image Works*)

es of fish, chicken, beef, or goat meat are added. The following recipes are very popular.

### Shrimp Jollof Rice

Jollof rice of various types is popular throughout Nigeria, and among the Igbo who live near waterways it is often prepared with shrimp. Elsewhere, the protein may be chicken.

The dish is cooked until the rice grains are soft and separate, but never until they become mushy.

Ingredients:

500 g (17.5 oz) shrimp  
 300 g (10.5 oz) fresh tomato  
 20 g (0.7 oz) tomato paste  
 75 g (2.6 oz) onion  
 fresh red pepper  
 dry ground pepper  
 peanut oil  
 200 g (7 oz) rice  
 salt  
 300 ml (11 oz) water

Shell the shrimp. Grind the tomato, peppers, onion, and 6 to 8 shrimp together. Wash, clean, and drain the rice. Heat

the oil until it smokes slightly. Add the ground ingredients and cook for 5 minutes. Add 300 ml water and tomato paste. Bring to a boil, and add the rice, salt, and remaining shrimp. Replace cover and bring back to a boil. Heat oven to 120°C (250°F), pour rice mixture into an ovenproof dish, and place in oven. Cook until the liquid is absorbed completely. Stir to loosen the rice grains, replace the cover and allow to sit in warm oven for a few hours with the heat off and door ajar to blend the flavors.

### Thin Goat Meat Pepper Soup

This dish may be served with simple shrimp stew and a salad.

480 g (17 oz) goat meat  
 salt  
 dry ground red pepper  
 100 g (3.5 oz) onion  
 20 g (0.7 oz) tea leaves  
 enge, crushed  
 20 g (0.7 oz) dried crayfish, ground  
 100 g (3.5 oz) dried fish (optional)

Wash the goat meat and cut into pieces. Place in a pot and add water to cover. Add salt, pepper, thinly sliced onion and crushed enge. Boil on low heat until the meat is tender. Top up water to cover and add coarsely chopped tea leaves, ground dried crayfish and dried fish. Boil for 10 minutes. Allow to stand for 30 minutes for flavors to blend well.

## 13 EDUCATION

When Nigeria gained independence from Britain in 1960, its new parliamentary government immediately set out to transform the country into a highly developed, modern nation. It set a priority on education and poured its resources into schooling its people. Universal primary education soon became the norm in southern Nigeria, where the Igbo live. Secondary education also developed rapidly. The Igbo were much involved in these efforts since education had had a long tradition among them, and they saw it as a way of moving forward. One of the first universities in the country, modeled on the American system, was established in Nsukka. This university serves the population of the entire country; however, the majority of students at Nsukka are Igbo. A sign of enthusiasm for education is the fact that in any major city of the country, the majority of civil servants are of Igbo origin.

## 14 CULTURAL HERITAGE

In addition to the visual arts, the Igbo cultural heritage includes music and dancing. For music making there are a number of wind and stringed instruments. These include the *ugene*, a kind of whistle made of baked clay, round in form, and about the size of a billiard ball. Chiefs are entitled to carry an ivory horn for sending out messages by powerful blasts of dot-and-dash notes. The horn is blown like a flute, and the note can be varied in length but not in pitch. Probably the most interesting of the Igbo instruments is the *ubaw-akwala*, a sort of guitar. It has a triangular body formed by three pieces of soft wood sewn together. This instrument is the favorite for accompanying songs and chants and is used by strolling singers in the evenings. Singers are much appreciated, and they must possess not only a gift for music, but poetic ability as well. They impro-

wise their themes as the song proceeds and show great ingenuity in fitting words to tempo and tune.

Dancing is a great Igbo pastime, and it is practiced by everybody capable of movement. There are many forms—for boys, for girls, for men, for women, and for mixed groups, group dancing is associated with religious observances and festivals.

## 15 WORK

The traditional Igbo economy depends on root-crop farming. Yams, cassava, and many varieties of cocoyam (taro) are the chief staples and provide the majority of the population with its subsistence needs. There are other occupations besides farming, but land is considered the most important asset.

The Igbo system of land tenure is based on four principles:

1. All land is owned. There is no concept of abandonment of land or unowned land. Whether the land is cultivated or not, it belongs to somebody.

2. Land ultimately belongs to the lineage, or kinship group, and cannot be separated from it.

3. Within his lineage, the individual has security of tenure for the land he needs for his house and his farm.

4. No member of the lineage is without land.

There is a division of labor according to gender. Men clear all bushes and plant the yams with the help of the women and the children, collectively. Following the planting of yams, the main crop, plots are allocated to the women individually. Each woman plants crops, such as maize, melon, and okra, on the slopes of the hills, and plants pumpkins, beans, cassava, and taro in the spaces between the yam hills.

Trading has become an important source of livelihood for the Igbo. It is no longer possible for them to maintain the desired standard of living by depending entirely on agriculture. There are some Igbo communities where trading has surpassed farming in importance. Trading is an old occupation among the Igbo, and the marketplace has occupied an important place in their economy and life for a long time.

Many Igbo are now engaged in wage labor, with the number of people increasing constantly. The incidence of migrant labor is heaviest in the most densely populated areas. Migration is of three types: villagers seeking paid labor in more urbanized areas within Igboland, those who work in Nigeria but outside Igboland, and those who work outside Nigeria. The opportunities offered to labor, skilled and unskilled, by the economic developments of Nigeria in the past few decades have been grasped by the Igbo. The growing cities, expanding road construction, building boom, new industries, and oil explorations are creating job opportunities demanding varying kinds and degrees of skill; the Igbo are found at every level.

## 16 SPORTS

Wrestling is universal among boys and young men, and it is the most popular sport. Every youth who is physically capable practices it and continues to do so until he marries. There are great yearly contests in every part of Igbo country.

The other popular sport is soccer, played traditionally only by boys, but more recently introduced through the school system to girls.

## 17 ENTERTAINMENT AND RECREATION

In addition to rituals, dances, and traditional music, modern forms of entertainment include watching television and going

to the movies and discos. Most households own radios, and there are several television sets in each village. The tradition of storytelling continues. As in the past, the Igbo also play games, including card games and checkers. Among the younger people American youth culture is popular, and most young people listen to rap and rock music.

## 18 FOLK ARTS, CRAFTS, AND HOBBIES

The Igbo practice a number of crafts, some engaged in by men only and some by women.

Carving is a skilled occupation and is confined to professional men. They manufacture doors and panels for houses, as well as stools, dancing masks, and boxes for kola and snuff. Tom-toms, or drums, are also the work of specialists. These are hollow blocks of wood and mostly intended not as musical instruments but for spreading information about ceremonies, festivals, and meetings. Another valued craft is that of the blacksmith. It is only practiced by people in certain towns, who are able to control production. The Awka smiths hold the leading place in the profession throughout Igbo country and beyond. They also travel to such distant parts as Bonny, Calabar, and even Lagos, plying their craft. They manufacture items of personal adornment as well as practical items such as hoes and axes. Nowadays, manufactured goods are replacing these implements.

The arts and crafts in the hands of the women include pottery making, spinning, weaving, basketry, and grass plaiting. Earthen pottery is manufactured by women skilled in the art throughout Igbo country. The pottery is limited to vessels designed for utilitarian purposes, and decoration is not developed to any great extent. Spinning of cotton is done by means of a bobbin that revolves by its own weight. Since this equipment is portable, a woman can do her spinning while trading in the market or sitting in her compound. The thread is then woven on hand looms into strips of cloth from 12 in to 15 in wide. The strips are then sewn together and can be used for a variety of purposes. Mat weaving is another of the women's crafts. The craft work of each area is distinguished by its own regional characteristics. One other art practiced by women is artistic abilities in the adornment of their persons by means of stains.

## 19 SOCIAL PROBLEMS

The problems that beset the state of Nigeria in postcolonial times, ranging from a civil war in which the Igbo were principal players to a series of military coups, have affected the Igbo profoundly. Among them there is a continuing distrust of the peoples of the North (primarily the Hausa) and the West (primarily the Yoruba). Although Nigeria is party to several international human rights treaties, the current government's human-rights record is poor.

The crime rate in Nigeria is high, especially in larger urban centers, but rural areas are also affected. Crimes against property generally account for more than half of the offenses. The crime wave was exacerbated by the worsening economic conditions of the 1980s.

Drug-related crime emerged as a major problem in the 1980s. Igboland has so far escaped the worst of this, but young people even here are reputedly now smoking marijuana.

## 20 GENDER ISSUES

A woman in modern Igbo culture is no longer just a consumer of wealth; she is also a maker of wealth. The traditional values and expectations of the patriarchal Igbo society have changed with the breakdown of the traditional norms, the influence of other cultures, and formal education for women. Igbo women now occupy senior positions in the society just like their male counterparts.

In the past, there were a number of clear-cut expectations for both men and women exerted on the members of the community. For example in the traditional Igbo culture, a boy was expected to display masculinity and stiffness. Femininity in a boy was scorned and a boy would be scolded and beaten to discourage womanish traits. Boys were groomed by their fathers to be brave, bold, adventurous, and audacious. Girls on the other hand were brought up to be soft, subservient, and gentle. Both men and women played their gender roles in a complementary manner. These roles were so deeply indoctrinated into their everyday lives that there was little conflict between the sexes. The gender roles were so clear that a member of either gender doing the opposite of what was expected of him or her would be considered as an abomination. For example, if a girl held her father's gun, that would be an abomination. On the other hand, a girl could stay with the older women in the kitchen as they cooked and told jokes, but the same behavior would be considered unacceptable for a boy.

In traditional Igbo society, the birth of a boy was considered a more joyful occasion than the birth of a girl. For the father, the birth of a son meant the continuation of the family line and a clear path of inheritance. For a mother, the birth of a son brought acceptance in society and a sense of greater acceptance into the husband's family. The birth of a daughter, however, would be welcomed with mixed feelings, especially if she was coming after a line of other girls without a son in-between. Without a son, the father would lose hope of having someone to continue with his lineage, since the girls would grow and be married off, thus leaving the home.

In traditional Igbo society, there was clear division of labor based on one's gender. From an early age, the boy, for example, knew that his duties would include staying close to his father, washing his father's clothing, taking care of the livestock, maintaining farming implements, and gathering yam seedlings for planting. He was expected to protect the girls of the community. He would be allowed to participate in "manly" sports, such as wrestling, and he would accompany his father to social meetings and ceremonies. He was expected to establish himself as a skilled member of the society, perhaps as a farmer, blacksmith, or a shepherd. The man's movements were not restricted.

Girls, however, were taught from childhood that their world began and ended with marriage, childbirth, and caring for the needs of her husband. She was taught that the kitchen would be her primary domain and headquarters.

# IJO

**PRONUNCIATION:** EE-jo

**ALTERNATE NAMES:** Ijaw, Izo

**LOCATION:** Niger River delta (coastal region of southern Nigeria)

**POPULATION:** 2 million or more

**LANGUAGE:** Ijo; other African languages; English for traveling, trading

**RELIGION:** Traditional tribal religion and Christianity

## 1 INTRODUCTION

The Ijo, the fourth largest ethnic group in Nigeria, are a socially and culturally diverse people, living in the coastal region of southern Nigeria, principally in the states of Bayelsa and Rivers. Linguistic and archaeological analysis indicates that they migrated to the Niger Delta as long as 7,000 years ago. It is not known whether they were seeking refuge from mainland attackers or were attracted by the abundance of fish and the supply of salt.

The delta at first must have seemed like an isolated and easily protected area, with its maze of waterways, but later it became a major point of contact with European travelers and traders. Beginning with the Portuguese explorers in the 15th century, the region became more and more closely tied to the world economy as demands for its resources increased: first human resources—slaves—then palm oil, and most recently, petroleum. European missionaries also had a major impact as the Ijo were converted to Christianity, became missionaries themselves, and introduced schools to villages throughout the delta.

The effects of these changes varied widely, however. The Ijo were divided into 43 *ibe*, an Ijo word roughly translated as “clan(s),” and were never politically unified in the form of a kingdom or state. Those living on islands in the eastern delta formed “city-states” and monopolized the trade for slaves and palm oil; the political organization of the central delta was primarily village-based. In fact, when speaking of the Ijo it is important to keep in mind that the Ijo, like many other African peoples, never formed a neatly bounded society. For each general statement, there is usually an exception. For example, the Ijo and their language have the same name (*Ijo*, often spelled *Ijaw*), but the great range of dialects prevents Ijo speakers in the eastern and western fringes of the region from understanding one another. Only the Ijo living in the central part of the delta can understand both. But the Ijo now see themselves as a distinct people with reference to their mainland neighbors (the Igbo, Yoruba, Isoko, Beni, and others), even though the cultural differences within the Ijo-speaking population are sometimes greater than those between Ijo and non-Ijo.

The Ijo political identity took shape during the colonial period, as early as the 1940s as part of nationalist movements throughout the continent. Later, the creation of the Delta state in the 1960s responded to Ijo demands for recognition, and 30 years later the Bayelsa state was carved away from the Delta state. Political identity has been sharpened both through conflicts with the federal government and with neighboring peoples, particularly the Itsekiri and Urhobo living in the Warri area.

## 2 LOCATION AND HOMELAND

An accurate census has been difficult to achieve in Nigeria as a whole. Estimates range from two million Ijo speakers to more than seven million of Ijo descent. The communities they occupy in the Niger Delta vary in size from several thousand to a few hundred persons, or fewer. The population size is tied closely to the topography of the delta.

There are three broad ecological zones in the delta of the Niger River. The first is fairly narrow, only a few hundred yards in places, and consists of a sandy stretch of land that marks the edge of the delta as it meets the Bight of Benin. The villages located here are small. The second zone is the area of mangrove trees and tidal floods that lies behind the beaches. Mostly seasonal fishing camps are found here, although in the eastern delta the trading organizations formed by the Ijo middlemen developed into communities with denser populations. The third zone includes the dry land that rises above the mangroves. The communities here are located along the banks of the rivers that crisscross the delta.

The waterways were the only means of transportation in the delta until a highway and bridges were built in the 1980s that crossed the northern part of the delta connecting Lagos in the east (the former capital of Nigeria) with Port Harcourt, a major city in the west. In the past the Ijo traveled extensively along the coastal waterways that extend from Cameroon to Ghana, and settled along them to work as fishermen, government employees, missionaries, and tradesmen. The Ijo are found today living throughout Nigeria and have entered numerous other occupations. During the Christmas holiday, many Ijo return to their delta communities. The high-speed motorboats that have replaced canoes reduce the trip home to a few hours' journey from the mainland, when formerly it took several days.

## 3 LANGUAGE

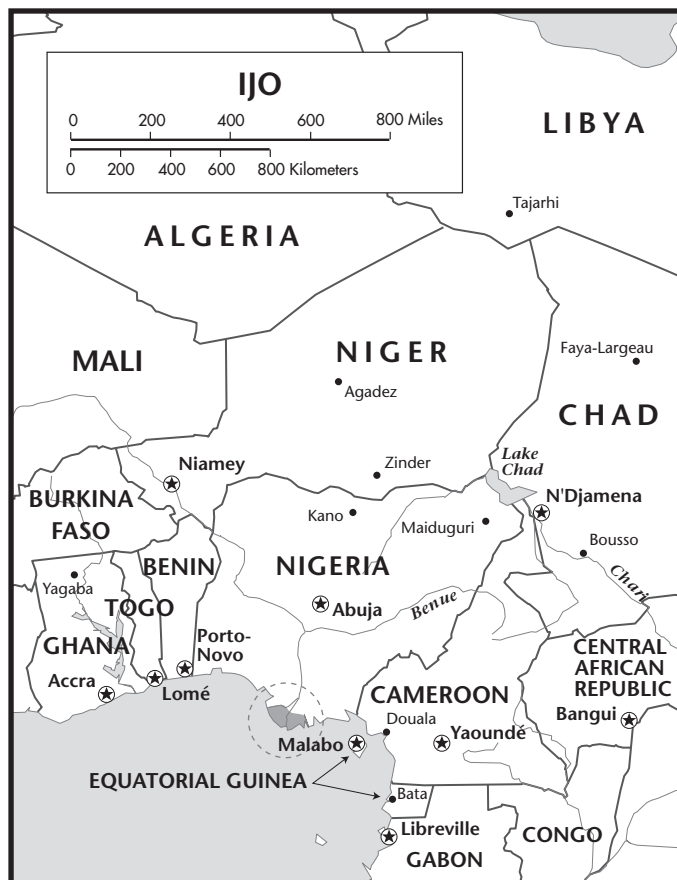

The languages spoken by the Ijo belong to the Ijoid or Benue-Congo subgroups of the Niger-Congo language family. The Igbo and Yoruba languages are also members of the latter subgroup. Because of the demands of travel and trading, it is not unusual for an Ijo to speak several African languages, as well as English or pidgin English. Beginning in primary school, English is the official language of instruction.

Ijo names usually involve a personality trait or an event. A girl might be named Oweizighe (“a male has not yet been born”) because her parents had wanted a boy. The process of naming is as fluid as the names themselves. Anyone can name a newly born child, or no name will be assigned until it seems clear that the infant will survive beyond the first few months. A young person can decide to change his or her own name. For family names people use their father's first name, or his father's name, depending on factors such as the social standing of the grandfather or the place where the person lives while growing up.

## 4 FOLKLORE

The Ijo do not have a category of beliefs that can easily be called folklore. At best they have some unproven stories of how they came to move from one place to another, or how a particular custom was started. In one frequently told example, disputes among brothers over the distribution of wild game led to the splitting up of a community and the formation of a new *ibe*. In another example, some Ijo claimed that a water spirit con-

vinced them to stop female circumcision in their *ibe* after seven young women died.

Similarly, with regard to religious beliefs, those who converted to Christianity came to see traditional Ijo notions about spirits and magical powers as examples of superstitious beliefs. In contrast, they believe their own faith in a major world religion is based only on truth.

## 5 RELIGION

The traditional Ijo believe in a High God, called Wonyingi (“our mother”), who created and controls the destiny of everything on earth. An individual’s spirit is believed to meet with Wonyingi before birth to make an agreement or contract for the person to live a particular life. This belief is tied in with a philosophy that requires each person to work hard to achieve the good fortune that may be in his or her contract. When the person’s best efforts come to nothing and a person is beset by misfortune, the Ijo rationalize that it must have been part of the contract. There are several kinds of spiritual agents, however, who can help to shape a person’s destiny: spirits of the dead, spirits of the bush and water, and witches.

Although the spirits of the dead are believed to go back to their own villages, it is necessary to bury the dead properly and to appease the spirits with food and drink. Before consuming a beverage, an Ijo will pour a little of it onto the ground for dead relatives to “drink.” It is believed that if the spirits are unhappy, they will make a person ill, infertile, or even cause that person’s death.

Spirits of the bush and water are believed to be the most common and conspicuous supernatural agents influencing the course of daily life. The Ijo appeal to the water spirits in particular by wearing elaborately carved wooden masks, decorated with chalk and feathers, on their heads. When a particularly powerful spirit is thought to be residing in a mask, people will travel long distances to ask the spirit for help with their economic, health, or other problems. Spirits may also be asked to punish a thief or protect a person from evil witches. Spirits can respond to these requests through supernatural messages (perhaps explaining why a person died) interpreted by dancers who, with shielded faces, imitate the dances the spirits were said to have performed on the sand banks. In the eastern part of the delta, elaborate masquerade dances are performed on a cyclical basis to honor village heroes.

Not all witches are thought to be bad, but they are believed to be dangerous. They may even be children, who might just as easily kill a clan member as a neighbor. At the same time, if a witch chooses to do so, he or she can protect family members from the attacks of others. The most direct way of identifying a witch comes during funerals, when the spirit of a dead person sometimes confesses to having been one. A witch discovered in this way is buried quickly, without a coffin, at the side of the river.

## 6 MAJOR HOLIDAYS

In recent times, the period from Christmas to New Year’s Day has become a time of celebration as many Ijo working on the mainland try to return to their home villages for their annual vacations at that time. The Ijo in the western delta also have a spring festival that lasts 12 days. They welcome the new agricultural cycle with special dances for women who have been circumcised and with libations for the ancestral spirits. They also perform rituals to cast out evil spirits to symbolically cleanse the community.

## 7 RITES OF PASSAGE

The central Ijo have relatively few rituals to mark a person’s milestones. Differing from those areas where female circumcision is practiced, the females of the central Ijo go from birth to death without any ritual to signify their first menstrual period, marriage, pregnancy, or menopause.

Similarly, rituals rarely are attached to the development of males, even at the time when they are circumcised, usually within a week after birth. In the past, when the main male occupation was collecting palm berries to produce palm oil, a boy was pelted with berries after he had climbed his first tree and cut down his first bunch of berries.

For both men and women, the most significant rite of passage is at the time of death. The status of a person is measured by the type of funeral he or she receives. The more generations of living descendants a person has, the more elaborate the funeral will be. In general, elderly persons with grandchildren would be honored with an all-night wake, a masquerade dance, drumming and dancing, and food for visitors. Those who died a “bad death”—the result of an accident, or if the person was revealed to be a witch, are buried quickly, without ceremony or coffin, on the river bank.

## 8 INTERPERSONAL RELATIONS

Two main criteria influence interpersonal relations among the Ijo: age and gender. Otherwise, they are remarkably egalitarian in their economic and political outlook and activities. Everyone is expected to work, even young children (from the time they are able to clean up around the compound), as well as, the most elderly members of the group. Priests of the cult houses and chiefs are also expected to help with the work, which includes farming, fishing, canoe carving, and weaving thatch for roof repairs.

The standard greeting is *noaho* ("hello"). Although the Ijo do not celebrate birthdays, they are very conscious of relative age distinctions. Younger people are expected to bow slightly at the knee when meeting someone older, and to express their respect by offering the oldest person present the opportunity to speak or to eat and drink first. Women, however, usually defer to men unless they are considerably older than the men.

At political gatherings, whether family or village meetings, men make decisions based on consensus. Although people defer to the oldest men, agreement is reached through the ability of a speaker, regardless of age, to persuade the others to accept his views.

Another form of greeting is to ask anyone passing by to "come and eat." Since Ijo villages are not subdivided by walled compounds, the open space allows people to see all those who pass by. As with the American greeting, "How are you?", the offer to join in the meal is not taken literally and is not usually accepted.

## 9 LIVING CONDITIONS

Village life changed considerably after oil exports became a major source of income to the Nigerian government. Closer ties to international markets created more opportunities for paid work on the mainland and in government-supported developments in the delta. Health clinics became more common, and some illnesses, such as yaws, which afflicted many children, were almost eliminated. Malaria, however, and other illnesses endemic to the tropics remain prevalent.

Since the introduction of electricity, television sets can now be found even in the most isolated of villages. The houses of thatched roofs and mud walls typical in the past have been mainly replaced by cement-block houses, some having two stories.

The change to more permanent housing is perceived by the Ijo as an improvement in their standard of living, and not simply as a status marker. Those who cannot afford to build a cement-block house are seen as being very poor. The old-style houses require constant maintenance, and thatched roofs let in both rain and snakes.

It is much more difficult to assess the benefits of the new economy to households generally. While the Ijo had been relatively independent in their ability to produce most of what they used and consumed, the post-oil era placed them in the position of having to purchase most of their household needs.

Because of the topology of the delta, villages are essentially located on islands. In the past, canoes were the main form of transportation to work on farms, to fish, and to visit neighbors on the mainland. At one time, outboard motors were used to power large canoes to ferry passengers and goods throughout the delta. More recently, high-powered motor boats have become the main means of transportation. Despite the topology,

a highway was constructed across the delta, linking Warri in the west and Port Harcourt in the east, via Yenagoa. The maintenance of this highway and bridges in this tropical environment has been a major challenge.

## 10 FAMILY LIFE

Women are considered to be equal to men. They provide the food for the household, by farming or fishing, and many engage in business activities to earn money to buy what they cannot produce. Although husbands are expected to contribute as well, especially in paying school expenses for their children, it is not unusual for women to pay household expenses. Women who become wage earners, working in the schools or on palm oil plantations, still maintain farms.

The Ijo family is an extended family type. Polygyny, in which one man has two or more wives, is the preferred form of marriage. Each wife has her own bedroom and kitchen, usually in a single house. Since women are expected to live near their husbands' families, and men to live near their fathers, the number of persons residing near each other in an extended family can typically be 15 or even more.

The Ijo practice two forms of marriage, both involving "bridewealth," or what the Ijo colloquially call "dowry." The small-dowry marriage requires the husband to pay a certain amount to his wife's parents and kinspeople. In the past, the payment was made in cases of gin; later it was in cash. The large-dowry marriage involves a larger payment, and only a few marriages are of this type; usually wives in these cases are not local women.

The essential difference between the two types of marriage, especially for the central Ijo, is in the lines of inheritance. The children of a small-dowry marriage trace their line of inheritance through their mother to her brother and other kinsmen. In the large-dowry marriage, the children "belong" to the father. What this means in practice is that small-dowry children have more choices of places to live when they reach adulthood: they can continue to live in their father's residence or they can move to any place where they can trace a connection through their mother's line of descent. In practice, however, other factors sometimes intervene to restrict such choices. Children are often sent to live with relatives, either because of divorce or a parent's death, or to help care for an infant when there is no older sibling in, for instance, the mother's sister's family.

Unlike many other African societies, among the Ijo, wives are not ranked within a marriage. Each is treated equally and each has equal access to her husband. This does not prevent women from becoming jealous if they see their husband favoring one of their co-wives. For some women, this is enough of a reason to make them want to be a single wife. Others claim there are advantages to having co-wives, in that they provide companionship to each other, help in feeding the husband, and aid in caring for sick children.

The inability of co-wives to live peacefully together can lead to chronic conflicts and divorce. However, the most important and acceptable reason for divorce is infertility. If a woman does not become pregnant within a reasonable time after marriage, she can divorce her husband and return the dowry. On the other hand, if the man has children with other wives and it appears that the woman is barren, the husband does not have grounds for divorcing her. If she commits adultery or refus-

es to fulfill a wife's role, such as cooking for him, then he can send her away and still claim a repayment of the dowry.

The Ijo do not have pets as such. Dogs have to forage for food, and rarely are petted.

### **11 CLOTHING**

There is both formal and informal clothing for men and women. During the work day men wear shorts, often under a cloth sarong, a shirt, and sandals (some also go barefoot). For formal occasions they wear a long shirt covering a good-quality sarong, a hat, and shoes, and they often carry canes. Women also wear cloth sarongs with blouses when working during the day, and sandals (some also go barefoot). Their formal clothes consist of expensive, colorful sarongs, blouses, and head wraps. They wear shoes or sandals, and strands of beads around their waists under their sarongs and around their necks.

If clothing is seen as decorative art for the body, it should also be noted that Ijo women spend much time weaving their hair into attractive forms, and tattooing their bodies and faces by cutting designs with a razor and then rubbing charcoal into them.

### **12 FOOD**

Fish and cassava are the "meat and potatoes" of the Ijo diet. When fish is plentiful, it is eaten at every meal. When fresh fish is expensive and scarce, so-called "ice fish"—imported frozen fish—is substituted. The Ijo plant maize (corn), plantains, and bananas, as well as many leafy vegetables and peppers. In some areas they also grow yams. Varying with the seasons, clams are found in the river, and fruits such as mangoes grow in the forest. Because of disease spread by the tsetse fly, there are few large animals in the delta. Chickens and goats are the main domesticated animals and are usually reserved for special meals when visitors arrive or a ceremony is performed. Men sometimes hunt for animals, such as deer or wild pigs. Palm wine, tapped from palm trees, offers a nutritious drink at meals and on special occasions.

Ijo generally eat three meals a day. The morning and noon meals are small; the main one is in the evening after work. Men eat together, rolling cassava into a ball—with the right hand only—and dipping it into a shared pot containing a stew of fish and vegetables. Cooked plantains or yams are added when available. Women and children eat in the same fashion from their own plate.

The Ijo wash their hands before eating, but no one eats with the left hand, which they consider "unclean." The left hand is used to wash oneself after using the toilet, and to engage in sexual activity. By holding a drink in the left hand, a person signifies that he or she has killed someone in the past.

### **13 EDUCATION**

Two forms of education have been closely related since the advent of missionary schools in the last century: formal schooling and informal instruction in culture and livelihood. The schools themselves are accessible to Ijo throughout the delta, eventually through college level. Girls now attend school in equal numbers with boys, and the literacy rate has increased steadily. Schooling is seen as a necessary step to finding a job, and the spectacular increase in the number of schools following Nigerian independence has made teaching positions the primary kind of job available. With the advent of schooling,

however, came a rising expectation—on the part of both parents and students—that literacy would bring with it higher wages. This expectation affects the other form of education, the cultural learning that defines being an Ijo. Learning to farm and fish is still part of growing up, but these jobs are often rejected as not being suitable occupations for graduates of secondary schools. The alternative is to migrate to urban areas to look for employment, especially since teaching assignments have become more competitive because of the increasing number of graduates. Since employment opportunities are often no better in the city than in the countryside, the government has established oil palm plantations, rice farms, and other development projects to encourage Ijo people to seek jobs in their home areas.

### **14 CULTURAL HERITAGE**

Ijo dance and music are typical of the rhythmic complexity generally found in West African music. Drums of various sorts provide music at all events. Special dances are performed to distinguish, for example, between a funeral for a person of high status and a masquerade dance honoring a water spirit. The Ijo readily add songs and dances from other ethnic groups to their own repertoire. This has continued with youths forming bands using electric guitars and other Western instruments to blast out the latest Nigerian popular songs.

Although the Ijo have no tradition of literacy, they tell stories in the evenings or when receiving guests, for instance, after a funeral. These stories often have a moral lesson and, while seemingly of a mythical nature, they are told as though they had actually happened.

### **15 WORK**

Like the Western concept of the "Protestant Ethic," which emphasizes the inherent value of work, the Ijo similarly stress the importance of everyone's engaging in productive work. In practice, this ideological emphasis means that the Ijo do not recognize a hierarchy based on occupational status in which a political leader or religious dignitary might expect to be supported by the community. Instead, they, too, must engage in some form of productive work. With widespread education, however, as noted above, the introduction of white-collar jobs has broadened the definition of work to include more than physical labor alone.

### **16 SPORTS**

Wrestling and soccer are two of the most popular sports for boys and young men. Soccer, also for girls, has been introduced as part of the school program, but is no longer confined to the school day.

Men's wrestling appears to have a long history. Preparations for a wrestling match in the villages against a team from another village often take on the appearance of preparations for war. In a village, a particular bush spirit that has been associated with protection in battle can be approached for similar protection in a wrestling match. In other places, wrestling matches are just a sport, and like soccer games, they draw large audiences.

Since Ijo villages are usually located near a river, most Ijo can swim. Children often compete with each other in swimming races.

## 17 ENTERTAINMENT AND RECREATION

With electricity came the radio and, much more recently, television. The main forms of entertainment, however, remain similar—in form, if not in content—to the way children and adults occupied their leisure time in the past. Storytelling now includes events, real or imagined, that resemble the sensationalistic “news” in Western tabloid newspapers. As in the past, the Ijo also play games, such as card games and checkers.

## 18 FOLK ART, CRAFTS, AND HOBBIES

Ijo masks and woodcarvings, usually depicting fish and made to be worn on top of the head, are found in museums throughout the world, and are treated as serious art by viewers and scholars. While the Ijo are not unconcerned with the beauty of their carvings, their main concern is with the utility of the object: whether a spirit is satisfied to reside there. Wood carvers, like those who carve canoes, see themselves as craftsmen, possessing a certain talent, whose aim was to satisfy public needs.

Similarly, women weave colorful and decorative sleeping mats. While their main aim is to sell the mats, like craftspeople everywhere, the Ijo recognize and appreciate the difference in quality and beauty between one mat and another.

## 19 SOCIAL PROBLEMS

The problems that beset the state of Nigeria in postcolonial times, ranging from a civil war to a series of military coups, affected even the most isolated villages in the Niger Delta. Nigeria's national regimes' reputation for allowing bribery to become a way of life and for abusing human rights has been well publicized. There is an irony in seeing the Ijo tradition of democratic relations at the local level being frustrated by a modernized national government that has voiced much enthusiasm for achieving democracy but appears, at times, to evolve in the opposite direction.

The pollution caused by oil extraction eliminated, for the most part, fresh fish, the most fundamental part of the Ijo diet. By the early 1990s this ecological degradation was compounded by a general loss of economic well being, lack of employment, and a growing frustration over the inequitable distribution of wealth. Ijo attacks on the oil facilities and theft of the oil itself have caused problems worldwide, particularly in the United States, which relies on Nigeria as one of its top five importing countries for most of its oil needs.

## 20 GENDER ISSUES

Gender has been touched upon in several sections above, and, as with the other topics, emphasis must be placed on the variations found among the Ijo. From the women in the central delta whose associations extend no further than the extended family to those living on the delta borders who belong to powerful female marketing organizations, the differences are profound. At the same time, the division of labor marked by age and gender is recognized by the Ijo themselves as being inherently balanced. Consistent with a general ethos of egalitarianism, Ijo ideology does not hold one sex to be innately superior to another. Although women never occupied political roles, this did not mean they were not political. A wife could, on occasion, rely on women in her community to forcefully punish a man who repeatedly and without reason mistreated her. Men claimed, not entirely joking, that it was prudent to marry an

odd number of women to avoid them pairing up against him. In their view the odd numbered one could be counted on to cook when the others went on strike.

As in many other African societies, women play a major role in the trading economy, whether in the market place or in moving provisions and goods between markets. Their ability to accumulate wealth was not seen as unusual.

In a reflection of the role women played at critical times in the past, as when there was resistance to colonial tax impositions, Ijo women have attempted to impose their own presence by holding sit-ins at oil facilities to make the oil companies more responsive to demands for jobs and local community development.

# IVOIRIANS

**PRONUNCIATION:** ih-VWAHR-ee-uhns

**ALTERNATE NAMES:** Ivorians

**LOCATION:** West Africa (Côte d'Ivoire)

**POPULATION:** 18,373,600 (2008)

**LANGUAGE:** Approximately 60 ethnic languages, including Akan; Mandé; Gur (Voltaic); Kru; Dioula (the most widely spoken); Baoulé (Akan); Sénoufo (Voltaic); Yacouba (south Mandé); French (official language)

**RELIGION:** Islam; Christianity (both incorporate traditional indigenous beliefs)

**RELATED ARTICLES:** Vol 1: Aka; Dyula; Malinke

## 1 INTRODUCTION

Côte d'Ivoire is a French-speaking country in West Africa. A number of important kingdoms existed in the area from early times. In the 14th century the Mali empire extended into part of Côte d'Ivoire; later empires included the Kong and the Baoulé kingdom of Sakasso. Many different ethnic groups migrated over the centuries into what became known as Côte d'Ivoire.

Early trade with Europe was based on ivory, which gave the country its name—Ivory Coast (although in 1986 the government decided that the country should be known only by its French name, Côte d'Ivoire). However, the trade in ivory led to such a decline in the elephant population that the trade virtually disappeared by the beginning of the 18th century. An elephant's head, however, still is portrayed on the country's crest. The Portuguese were the first Europeans to reach the coast of Côte d'Ivoire. The earliest recorded French voyage took place in 1483, but it was only in the mid-nineteenth century that the French firmly established themselves in the region. At first, trade was governed by treaties; later, French exploration and occupation intensified. In 1893, Côte d'Ivoire became a French colony.

The best known recent figure is the first president, Félix Houphouët-Boigny. Houphouët-Boigny came from a wealthy Baoulé chief's family. Born around 1905, he grew up to study medicine in Dakar (Senegal) and became a medical assistant, a prosperous cocoa farmer, and a local chief. He campaigned for fairer cocoa prices for African farmers and founded the country's first agricultural trade union for African planters. This trade union was quickly converted into the Parti Démocratique de Côte d'Ivoire, which is still the dominant political party. Houphouët-Boigny became a deputy to the French National Assembly (parliament) in Paris, and the first African to serve as a cabinet minister in a European government. At independence in 1960, he became the country's first president, favoring a continued close relationship with France. He promoted agriculture and led Côte d'Ivoire's economy to great success until the beginning of the 1980s, when prices for Côte d'Ivoire's two major export crops, cocoa and coffee, crashed. The drought of 1983–84 compounded the problem, as did excessive borrowing and the steep rise in oil prices. Côte d'Ivoire's economy declined dramatically as its per capita income fell from \$1,290 in 1978 to \$510 in 1995. Despite good harvests in 1985–86, a fall in coffee and cocoa prices, the outflow of capital, and too much government spending led to serious indebtedness. Re-

sulting austerity measures were met with protests, strikes, and riots. However, despite charges of corruption and a lavish lifestyle, Houphouët-Boigny still was revered and honored until his death in December 1993, when he was succeeded by Henri Konan Bedié.

Côte d'Ivoire was the richest of the French colonies by the late 1940s, based on the export of timber and forest products, such as palm oil and cocoa. Since independence, the strength of the economy has varied considerably, attaining average annual growth rates of 6.7% in the first two decades, then declining significantly between the beginning of the 1980s and 1994; it finally began to improve again after a 50% devaluation of the French-backed Communauté Financière Africaine (CFA) franc in January 1994.

In December 1999, a military coup—the first ever in Cote d'Ivoire's history—overthrew the government. Junta leader Robert Guei blatantly rigged elections held in late 2000 and declared himself the winner. Popular protest forced him to step aside and brought Laurent Gbagbo into power. Ivorian dissidents and disaffected members of the military launched a failed coup attempt in September 2002. Rebel forces claimed the northern half of the country, and in January 2003 were granted ministerial positions in a unity government under the auspices of the Linas-Marcoussis Peace Accord. President Gbagbo and rebel forces resumed implementation of the peace accord in December 2003 after a three-month stalemate, but issues that sparked the civil war, such as land reform and grounds for citizenship, remained unresolved. In March 2007 President Gbagbo and former New Force rebel leader Guillaume Soro signed the Ouagadougou Political Agreement. As a result of the agreement, Soro joined Gbagbo's government as prime minister and the two agreed to reunite the country by dismantling the zone of confidence separating North from South, integrate rebel forces into the national armed forces, and hold elections. Several thousand French and United Nations (UN) troops remain in Cote d'Ivoire to help the parties implement their commitments and to support the peace process.

## 2 LOCATION AND HOMELAND

Côte d'Ivoire, a roughly square-shaped country, is located on the Gulf of Guinea. It is bordered by Liberia and Guinea to the west, by Ghana to the east, and by Mali and Burkina Faso to the north. It lies between 4° to 11°N and 3° to 8°W and covers 322,000 sq km (124,500 sq mi—slightly larger than New Mexico) and has a 530-km (330-mi) coastline along the Gulf of Guinea.

Most of the country consists of a low plateau, sloping gradually southward to the Gulf of Guinea. The plateau is broken by hills in the north and by the Man Mountains in the west, which are about 4000 ft in altitude. Much of the landscape is monotonous, although in places granite domes (inselbergs) rise out of the otherwise flat surface. The heavy surf and strong currents along the coastline have deterred traders throughout history; only in the eastern half of the country was access easier because of a narrow belt of lagoons, sandy islands, and sandbars. Côte d'Ivoire has no natural, sheltered deepwater harbors; Abidjan became the largest port in West Africa only after 1950, when the Vridi Canal was constructed to give Abidjan deepwater access from the ocean.

Climate differences have led to different types of vegetation. The southern part of the country has an equatorial climate with high temperatures and humidity. Tropical rain forest traditionally occupied this region; although much now has been cut down to provide timber for export and land for plantations of cocoa, coffee, oil palms, bananas, rubber, and other crops. In the north it is drier, with almost all the rain falling within a three-month period in the late summer. The rain forest changes into savanna woodlands characterized by increasingly shorter grasses and isolated stands of trees. Vegetation becomes increasingly sparse toward the Burkina Faso border where there is less rainfall. Four rivers, the Cavally, Sassandra, Bandama, and Comoé flow from the north into the Gulf of Guinea to the south. None of the rivers is fully navigable because of rapids and large differences in the levels of the water between the seasons.

The population of Côte d'Ivoire in 2008 was estimated at 18,373,600; it has been growing very quickly since 1975 when it was 6.7 million. The population growth rate in 2008 was 1.96%. About 40.4% are under 15 years of age; and life expectancy is a low 49 years. Abidjan's population is about 3 million and has been growing very rapidly. Grand-Bassam was the original capital of Côte d'Ivoire; it was replaced by Bingerville in 1900 and by Abidjan in 1934. Since 1983, Yamoussoukro, Houphouët-Boigny's village, has been the official administrative capital, although the government has remained in Abidjan and that city remains by far the largest and most dynamic economically.

More than 60 ethnic groups make up the population of Côte d'Ivoire, each with its own distinct language or dialect and customs. The four largest ethnic groups all have their major centers outside Côte d'Ivoire—the Akan to the east, the Mandé and Voltaic to the north, and the Kru to the west. Thus Côte d'Ivoire does not have a single dominant culture. In the past people had more in common with the people of surrounding countries than with their fellow Ivoirians. Indeed, one of the challenges of the country has been to develop a national identity, so that people consider themselves Ivoirians first and members of their particular ethnic group second. The Akan and Voltaic groups form matrilineal societies while the Mandé and Kru are patrilineal. The largest group, the Akan, includes the Abron, Agni, and Baoulé people. The Mandé are among the oldest settlers of Côte d'Ivoire and are found in the forest region; this group includes the Dan or Yacouba, the Malinké, and the Dioula. The most important peoples in the Voltaic group are the Sénoufo. The Kru or Krou group consists of a number of small ethnic groups, including the Godié, Bété, and Wè. Most live in small farming villages or as fishers along the coast.

Although these ethnic groups existed as distinct entities in the past, especially in rural areas, modernization and urbanization have led to mixing, so that ethnic lines have become far less distinct, especially in the towns and cities in the south, which are more cosmopolitan. A large percentage of the population living in the country are non-Ivoirians, having come to seek work. Most are from Burkina Faso, Mali, and Guinea, with smaller numbers from Mauritania and Senegal. In addition, there are significant Lebanese and French populations.

### 3 LANGUAGE

Although all of its approximately 60 ethnic languages belong to the Niger-Congo family, no one language is spoken by more than about a quarter of the population. Four of the eight major branches of the Niger-Congo language family are represented in Côte d'Ivoire: Akan, Mandé, Gur or Voltaic, and Kru. Dioula (pronounced Jou-lah), a north Mandé language, is the most widely spoken African language in Côte d'Ivoire, used all over the country as a market language. Other major African languages are Baoulé (Akan), Sénoufo (Voltaic), and Yacouba (south Mandé).

The official language of the country is French, which is spoken especially in the urban areas and in higher education. However, it is not spoken by the masses of the people, who prefer popular (pidgin) French or Dioula.

### 4 FOLKLORE

Each ethnic group has its own traditions and heroes. One of the most famous legends tells the story of how the Baoulé people arrived in Côte d'Ivoire. In their original homeland, Ghana, they wisely had stored grain in case of famine, but then were attacked by other groups when famine came. Rather than forfeit their food, their queen, Abla Pokou, led her people west into Côte d'Ivoire. Finding it impossible to cross the Comoé river, the queen sacrificed her own child to the genies of the river; they in turn, in recognition of the gift, caused the trees to bend over the river and form a bridge to a land of peace and safety. The word *baoulé* means "the little one dies."

## 5 RELIGION

Most people in Côte d'Ivoire follow traditional religions, revering the ancestors and believing in the spirits of nature. Even those who profess to follow one of the two major universal religions, Islam and Christianity, generally incorporate traditional practices into their religious observances and daily lives. Many follow syncretic cults loosely based on Islam or Christianity. Sorcery and witchcraft have a strong impact on people, especially in the rural areas but even in the cities. Belief in fetishes is widespread. Traditional ceremonies, dances, and funerals are all related to religious beliefs; they often involve wearing masks. Animal and other sacrifices also may play an important role.

Islam was brought to Côte d'Ivoire by Malinké immigrants from the Mali Empire of the 13th to 18th centuries and is particularly strong in the northern savannah area of the country, although the spiritual center is Abidjan, where one-third of the population is Muslim. About 40% of the population is currently considered Muslim.

Christianity was brought by the Europeans. The French established their first missionary work in the 17th century. About one-fourth of the population, mostly in southern cities, belongs to either the Roman Catholic (the majority) or Protestant churches. Some Ivoirians are followers of the Liberian prophet, William Wade Harris, who spread his version of Christianity along the coast in the early part of the 20th century; the Harist church continues to gain adherents in urban areas.

## 6 MAJOR HOLIDAYS

August 7 is Independence Day. Both Christian and Muslim holidays are celebrated: Christmas, Easter, and Pentecost; and Idul Fitri (the feast at the end of the fasting month of Ramadan) and Labaski, 70 days after the end of Ramadan. The Ivoirian government recognizes the following holidays: New Year's Day (January 1), Labor Day (May 1), Assumption (August 15), All Saints' Day (November 1), and Ascension Day.

## 7 RITES OF PASSAGE

Each ethnic group has its own traditions (*see Aka, Malinke, and Dyula*). The major transitions of life—birth, puberty, marriage, and death—all are marked with ceremonies and rituals. Among the most important are initiation rites. The Sénoufo, for example, pass their values and traditions down the generations through *poro*, an ethnic educational system that spans twenty-one years. During the initiation participants undergo endurance tests and other secret ceremonies in the sacred forest adjacent to the village. Traditionally excision festivals occurred, but these have been severely limited by the government, as have some other initiation practices.

Marriage is basically family, not individually, based. Many marriages are arranged, although in the towns and cities more young people now choose their own spouse. Marriage generally takes place early, particularly for women and especially for those in rural areas. Motherhood thus starts young. By age 14 almost one-half of the girls are married. Divorce and separation are uncommon.

Funerals are central to several ethnic groups. Among the Akan, all villagers shaving their heads mark death in a village. Among the Baoulé, burial is secret, even for someone as illustrious as the first president, Houphouët-Boigny.

## 8 INTERPERSONAL RELATIONS

Men clearly dominate relationships. Much respect is traditionally accorded to the elders in the village.

## 9 LIVING CONDITIONS

Living conditions vary enormously according to whether people live in urban or rural surroundings and according to their wealth.

More than 40% of the population lives in towns and cities. Those who are well off live in nice two- or three-story homes or in air-conditioned skyscrapers, with all the modern conveniences of electricity, running water, sanitation, paved roads, etc. They shop in well-stocked stores and at sophisticated malls. The majority who are poor, however, live mostly in overcrowded slums with none of these facilities and obtain their necessities from open-air markets and roadside stalls.

Most people still live in villages, generally with dirt roads. Although increasing numbers have electricity, many still live in simple, traditional ways, in conical, thatched roof homes, collecting their own water and firewood. Frequently children have to walk to a neighboring village to go to school or to find a clinic staffed by a nurse. Official figures indicate that there is only one doctor for about every 10,000 people in the country and they are overwhelmingly located in the cities. Most land tenure systems are based on the concept of communal ownership. Each family is granted the right to cultivate particular areas, rights that can be handed down through the generations. Almost all city office workers keep alive their ties with their agricultural villages and their links with their native ethnic group.

## 10 FAMILY LIFE

Households characteristically are made up of the extended family, with parents and children, grandparents, uncles, aunts, and cousins all sharing the same facilities. The family is very strong and children are much wanted. Indeed, the average Ivoirian woman has more than seven children. Women have the responsibility for taking care of the children. Babies are carried on their mothers' backs while the women work in the fields, fetch firewood or water, cook, and undertake other household chores.

This extended family system, together with ethnic and village loyalties, provides a form of social security. It also provides a mechanism for income to be redistributed. Hospitality and solidarity are a way of life; this spirit of hospitality and brotherhood is expressed clearly in these lines from the Ivoirian national anthem: "land of hospitality.... the homeland of genuine brotherhood."

Customs regarding family life vary from one ethnic group to another. For example, among the Beng (one of the south Mandé group) menstruating women may not work in the forests or the fields, touch a corpse, or cook for their husbands.

Although the law in Côte d'Ivoire allows only one wife, in practice almost one-fourth of men in the country have two or more.

## 11 CLOTHING

As in most of the developing world, both traditional and Western clothes are worn. Particularly in the urban areas, most people wear Western clothing—pants, or blue jeans, and shirts,

although many women wear traditional brightly colored dresses (*pagnes*) with matching head scarves. In the rural areas, traditional clothing is most common. Women wear *pagnes* or blouses with long pieces of cloth that wrap around. Men wear shorts or wrap short pieces of cloth around their bodies. Many men have long, beautiful robes for ceremonial occasions.

## 12 FOOD

Yams, plantains, rice, millet, corn, and peanuts are staple foods in Côte d'Ivoire, although each region has its specialties. For example, in the northern savanna area, a common dish is rice with a peppery peanut sauce. Closer to the coast, fish with fried plantain is popular.

The national dish is *fufu*, made by pounding plantains, cassava, or yams into a sticky dough that then is served with a highly seasoned meat or vegetable sauce, called *kedjenou*. *Fufu* is eaten by hand with each person taking a fingerful of dough and dipping it in the sauce. The sauce, prepared from different bases, such as peanut, eggplant, okra, or tomato, can be made with chicken, beef, fish, or other meats; it is simmered like a stew in a *canari* or oven or over a wood fire. Wood is still the most common fuel except in the towns and cities.

Traditionally people grew their own food and sold the surplus. As in almost all of West Africa, markets play an important role in people's lives. In the cities and large towns, markets are periodic, held every 3, 4, 5, 8 or even 16 days. Merchants are clustered according to the product sold—kola nuts, salt, cloth, animals, leather, baskets, etc. Women are very active in the markets, selling their produce, and purchasing needed goods.

## 13 EDUCATION

The Ivoirian educational system is an adaptation of the French system. Very few received an education during colonial days, but after independence far more children had the opportunity to attend school. By 2008 Côte d'Ivoire had a literacy rate of about 50.9% , with 57.9% literate males and 43.6% literate females.

Primary school, which is officially compulsory, lasts for six years and secondary school for seven. Children start school generally at age seven. Secondary education is divided into two cycles, the first four years, which culminate in a certificate of the lower cycle of secondary study (the *brevet d'étude du premier cycle*—the *BEPC*), and the second cycle, whose graduates earn the *baccalauréat*, a level of learning roughly equivalent to one or two years of university study in the United States. About two-thirds of primary-school-age children attend school. About 20% continue on to secondary school. Higher education includes the university in Abidjan and a large number of technical and teacher-training institutes. School is free, although students pay an entrance fee at public schools. The public school system is supplemented by Catholic and Quranic schools. However, lack of trained teachers and inadequate equipment and supplies make it hard for most children to obtain a good education.

## 14 CULTURAL HERITAGE

Music, dance, and storytelling are all important in the lives of Ivoirians. Rhythm is an important part of music in Côte d'Ivoire as in almost all of West Africa. Songs are about typi-

Two women in Côte d'Ivoire stand at a well to fill buckets with water. Government education efforts, supported by the World Health Organization and Global 2000, teach villagers how to protect themselves from Guinea worm and other water-borne diseases. (*The Image Works*)

cal topics—love, money, friendship, peace, death, and national heroes.

There is great variety in dance in the different regions of the country. It is associated with physical, spiritual, and social benefits. In Côte d'Ivoire there are three types of traditional dancing: the royal dance performed only by a king or tribal chief; the fetish dance, danced by male initiates who have undergone initiation rites in the sacred forest; and the popular dance, open to all, including women. Mask dancing, which belongs to the second category, includes performing a wide variety of twists, turns, twirls, and handstands, sometimes on tall stilts; the dancer's identity remains unknown throughout the ceremony.

## 15 WORK

In 2007 close to 68% of the population worked in agriculture, far less than the 84% who were farmers in 1960. In general, men clear the land and also take most of the responsibility for the cash or export crops that are grown, such as cocoa, coffee,

and pineapples. Women frequently plant and tend the crops and also have the responsibility for growing food crops, such as yams, cassava, plantains, corn, and rice.

A much smaller proportion of the labor force works in industry, concerned largely with processing foods and other raw materials, and producing items such as textiles and machinery. About one-third of the population works in the service sector—more than double the proportion in 1960. Non-Africans dominate the managerial and professional ranks, and work also as mechanics, technicians, and storekeepers. Non-Ivoirian Africans mostly are employed as rural unskilled labor.

## 16 SPORTS

By far the most important sport in Côte d'Ivoire is football (soccer), which is played throughout the country.

## 17 ENTERTAINMENT AND RECREATION

Ritual ceremonies serve partly as recreation and entertainment and often include music and dance. Storytelling is another favorite traditional pastime. Griots, or bards, may sing or tell folk stories, riddles, and proverbs way into the night. Several ethnic groups have stories that revolve around a scoundrel or trickster, who is always ready to pull a fast one on his partners. Many stories relate to family relationships, such as those between son-in-law and mother-in-law.

Cinema and theater are also important. Movies are made in Côte d'Ivoire for both the cinema and television. Theater includes works by playwrights such as Bernard Dadié, Côte d'Ivoire's most famous writer, and François-Joseph Amon d'Aby. Television and radio provide recreation for increasing numbers, especially in the cities.

## 18 FOLK ART, CRAFTS, AND HOBBIES

The art of Côte d'Ivoire is among the most outstanding in West Africa. Weaving, woodworking, and sculpture flourish. The wooden carvings, and especially the masks, of the Dan and Baoulé people are particularly famous for their beauty and intricate designs. The masks vary considerably from region to region in their designs and purposes. Dan (Yacouba) masks, for example, generally have a somewhat abstract human face while Baoulé masks typically represent an animal or stylized human face. Some may represent antelope or buffalo with large open mouths, intended to represent evil spirits; others may be humorous as with a *kplekple*, or horned mask, representing a disobedient child. The most famous mask is often considered to be the "fire-spitter" helmet mask, said to represent the chaotic state of things in primeval times; it is a combination of hyena, warthog, and antelope.

Art works are produced not only for ceremonies, but also for enjoyment in non-ceremonial environments; carved doors and furniture, statues, and other decorative objects form an integral part of people's lives. Painted, tie-dyed, and woven textiles, pottery, worked gold and brass, and beautiful jewelry all form a vital part of Côte d'Ivoire's rich artistic heritage. Musical instruments, such as percussion instruments, drums, stringed instruments, and various transverse horns in wood, metal, or animal horn also are made. Images are made of bush spirits, pythons, chameleons, in Sénoufo art, in cast brass ornaments and in mudcloth paintings.

## 19 SOCIAL PROBLEMS

Côte d'Ivoire is a country of great social contrasts. Many of its current social problems arise from its difficult economic conditions. The declining standard of living and the economic austerity that occurred between 1980 and 1994 led to social upheavals, political dissension, and repression.

Poverty, exacerbated by fast population growth and rapid urbanization, underlies the lack of adequate facilities, ranging from inadequate schools and housing to inadequate access to health care, clean water, electricity, and other important elements of infrastructure. Poverty also underlies the increasing amount of crime, including violent crime, found especially in swollen urban areas like Abidjan. Urban unemployment is acute, by 2008 registering at some 40% to 50% as a result of the civil war. Yet along with the decline of real per capita income, there are those who are rich—some commercial farmers, landowners, business executives, and others whose extravagance stands in stark contrast to the misery and squalor the poor experience. Growing inequality between rich and poor exacerbates social tensions. Corruption among government officials reduces the effectiveness of government and its ability to help the country develop, and causes deep resentment among ordinary people. It is widely felt that government officials do what is good for themselves and not what is best for the country.

Côte d'Ivoire also suffers from having one of the highest incidences of AIDS and HIV infection in the continent.

Tensions also exist among ethnic groups and between political parties, tensions that become particularly apparent at election time.

## 20 GENDER ISSUES

In rural areas, women and men divide the labor, with men clearing the land and harvesting cash crops like cocoa and coffee, while women grow vegetables and other staples and perform most household tasks. Women also collect water and fuel, care for their families, spin and weave, and produce handicrafts and pottery to sell. In general, men hold most prominent civic and government positions, as well as the role of tribal chief in the villages. Religious roles, from shamans to Catholic priests to Muslim imams, are dominated by men.

Men dominate inheritance practices in traditional societies. Both Baoule and Senufo people belong to their mother's family group; power and land are passed down through a mother's family line to her sister's sons. In the Bete and Nyula groups, inheritance is passed down through the father's line to the sons. In most traditional societies in Côte d'Ivoire, women do not have the right to inherit land, but only to use that of their husbands or families. Legislation was enacted in 1983 to allow women greater control of their property after marriage.

Government policy encourages full participation by women in business, but generally there is a bias among employers to hiring women, whom they consider less dependable because of their potential pregnancy. Women are underrepresented in most professions and in the managerial sector as a whole. Some women also encounter difficulty in obtaining loans, as they cannot meet the lending criteria mandated by banks, including title to a house and production of profitable cash crops, specifically coffee and cocoa. However, women are paid on an equal scale with men in the formal business sector. Men continue to dominate managerial positions and enjoy the most ca-

reer mobility, usually due to a higher level of education and connections with other businessmen.

# JOLA

**ALTERNATIVE NAMES:** Jola-Fogny, Jola-Fonyi, Diola (French)

**LOCATION:** Casamance Region of Southern Senegal, The Gambia, and Guinea Bissau

**POPULATION:** 702,000

**LANGUAGE:** Jola or Diola; dialects: Banjaal, Bayot, Ejamat, Fonyi, Gusilay, Karon, Kasa, Kuwatay and Mlomp

**RELIGION:** Islam (primary), Traditional (Indigenous) Religions and Christianity

## 1 INTRODUCTION

The Jola (also known as Diola in French) are a heterogenous ethnic group found in Senegal, The Gambia, and Guinea-Bissau. They comprise 10% of the population in The Gambia and 6% of the population in Senegal. In The Gambia they are concentrated in the Foni area of southwest The Gambia; hence, another name for them is Jola-Foni. In Senegal they are concentrated in the southern region of Casamance. The Casamance region is separated from the rest of Senegal by the territory of the former British colony of The Gambia. Jola people have long claimed that they are marginalized by their government that is dominated by ethnic Wolof, a majority group in Senegal. In 1982, a few years after Senegal obtained independence from France, Jola people, who form the majority in Casamance, rose up against their government demanding independence from Senegal on the basis that they were isolated geographically from Senegal proper. Since then, there have been sporadic fights between the rebel movement in the Jola homeland and the government of Senegal.

Although little is known about the origins of the Jola, it is believed that the ancestors of the present Jola people settled this region long before the 13th century, predating other groups, such as the Mande and Fula peoples. Archeology of the mouth of the Casamance River shows evidence that by AD 200 there were groups of people who were well-adapted to coastal habitats and who had spread out to the islands bordering the mouth of the Casamance River. There were advanced hunter-gatherers, as well as groups who subsisted on shellfish from the mangrove flats and fish from the ocean. Some of them practiced advanced agriculture and raised livestock, notably cattle. They also worked metal, from which they forged spears and agricultural implements.

By the time the Portuguese arrived in the middle of the 15th century, the Jola were well established and largely isolated from other groups, with very few contacts with other people in the region. When the Europeans came to the region, they instituted slavery. While the Jola fiercely resisted both enslavement and participation as middle men in the trade, other groups, such as the Manding, located along the Lower and Upper Gambia River and inland along the Middle Casamance and Geba Rivers, were involved in trade with the Europeans in slaves and gold. The Jola, located on the coastal zone, did not engage in any trade with outsiders, nor did they have any chiefs to rule, preferring rather to be acephalous societies (those without a ruling chief or head). They resisted any intrusions into the homeland by their neighbors and the new arrivals, the Europeans. As such they were considered to be a dangerous group and were bypassed by the Portuguese, who sailed past them at the

mouth of the Casamance and Cacheu rivers in order to trade with other people further upriver.

Even when colonial rule was imposed by the British in The Gambia and the French in Senegal, the colonial rulers had great difficulty in subjugating them. Although the Jola had appeared weak and fragmented, they maintained strong stockades and an attitude of fierce independence. Over time, however, the Jola began to accept the new reality of colonialism; by 1905 they had begun to pay taxes to the new European masters.

## **2** LOCATION AND HOMELAND

The Jola are found mainly in Senegal, The Gambia, and Guinea-Bissau although a small number exist in other countries in this region of West Africa. The largest numbers are located in the Casamance region of Southern Senegal. It is a strip of forested and river bottom land between The Gambia and Guinea-Bissau. A substantial number of Jola live along the south bank of the Gambia River, where they farm different types of crops, particularly rice. While Senegal was colonized by the French, the British claimed the area around the Gambia River as their territory. Awkwardly, The Gambia, a small sliver of territory on both sides of the Gambia River, sticks deep into Senegal, cutting off the Casamance region from the rest of Senegal. The Jola thus feel isolated from the rest of Senegal and have, since 1982, demanded independence from Senegal. The Casamance region has seen fighting since then, between a breakaway rebel movement and government forces, making the region unstable and dangerous. A smaller number of Jola are found in the

northern part of Guinea-Bissau, just to the south of the Casamance region of Senegal.

The Casamance region is regarded as the most beautiful area of Senegal. The region receives a greater amount of rainfall than the rest of Senegal. It is characterized by hot temperatures with a low-lying geography and a few hills to the southeast. It is well endowed with fertile soils that are suitable for agriculture, but it does not have high-value minerals. The regional economy is heavily dependent on the cultivation of rice and other crops. Pristine beaches along its coastline have seen an increase in the tourist industry.

Close to the coast there are thick mangroves and forests that are very compact and difficult to access. They offered protection to the Jola during times of slavery and colonization. There are a few large deer and several species of monkeys. But, what the region lacks in fauna, it makes up for in the rich variety of bird species. The turtle-doves with their characteristic songs, the francolins that fly away as soon as they see you, the calaas perched at the top of the large cheesemonger trees, the black-birds with their shiny plumes and pretty bluish reflections, the black and white corbels, vultures, and many others are all present in the Casamance region.

## **3** LANGUAGE

The language for the Jola is referred to as Jola or Diola. There are many dialects of this language, some of which are unintelligible to each other. Jola belongs to the Bak group of the Atlantic branch of the Niger-Congo language family. Banjaal is spoken in a small area south of the Casamance River, while Bayot is spoken around Ziguinchor, the capital city of Casamance. Other dialects are spoken in a handful of villages, such as Ejabat, Fonyi, Gusilay, Karon, Kasa, Kuwatay, and Mlomp. The multiplicity of dialects in the Jola homeland is testament to the isolation of the Jola from the rest of the peoples in this region and often from each other.

## **4** FOLKLORE

Like most African societies, the Jola have a rich tradition of legends, folktales, and myths, which serve as a means of handing down traditions and customs from one generation to the next. Folktales impart moral values and prepare young people for life, as there are many lessons to be learned from the tales. There are many stories of legendary heroes who led their people into battle against other hostile ethnic groups and races. Other legends trace the origins of the Jola. For example, one folktale talks about two sisters traveling on the Senegal River. Their boat hit an object and was split in half. One sister, Ague, drifted south to become the mother of the Jola, while the other sister, Anecho, drifted north to become the mother of the Serer people.

The use of natural surroundings and the animals that abound in these environments are omnipresent in African folktales, and the Jola are no exception to this rule. Consequently, the monkey, the hare, the lizard, the bird, the deer, the snake, the hyena, and other animals take on human characteristics of greed, jealousy, honesty, loneliness, and so on. It is through the behavior of these animals that important lessons are imparted to children. For example, one folktale tells of the adventures of Hare and Hyena. Hare is seen by the Jola as a cunning individual that is able to talk his way out of any trouble. Others see Hare as a trickster.

Many of the folktales feature an unjust situation that is remedied by a child, often with the help of a benevolent spirit or some old woman who has been treated courteously. The troublemakers end up being severely punished, while the victims end up rich and live happily thereafter. It is through folklore that family values and interpersonal relations are reinforced. If one breaks a tradition or any of the prescribed taboos, then one can expect to be punished by the supernatural world. It is expected that sons and daughters should be obedient and subservient to their elders, treating them with dignity. Strangers from afar should be treated with hospitality, and sons should be brave and help protect their homeland.

There is also a rich tradition of proverbs among the Jola and related ethnic groups. For example, "However long a stick is in the river, it cannot become a crocodile." This proverb implies that a stranger can never become a true citizen of Jola homeland. Another proverb talks about the importance of interpersonal relations and the interdependent nature of Jola people: "The best medicine for a person is another person." On nurturing independence in children: "A tree that grows in the shade of another one will die small." On learning to occupy one's position of humility and lie low when necessary: "If the dog is not at home, he barks not."

## 5 RELIGION

The traditional Jola believe in the existence of a supreme being called Emit, or Ata Emit, the one who resides in the sky. They associate this entity with natural phenomena of the sky, rain, and the seasons. Similar to other indigenous religions in Africa, the Jola have shrines, charms, sacred forests, sacred lands, and secret masquerades, all of which play a central role in Jola cosmology. They worship and pray to these entities to protect their families and villages and to offer generous providence for the well-being of Jola society.

Christianity came among the Jola with the arrival of the Portuguese and other European powers, who introduced Catholicism to many converts. However, during the 20th century, there has been a shift from Christianity to Islam, because of strong influences from the northern part of the country, which is largely Muslim. Today, over 90% claim to be Muslim, with about 3% claiming to be Christians. However, the majority practice their traditional beliefs concurrently with Islam or Christianity. It is not unusual for a Jola individual to seek Western medical help for treatment and, at the same time, consult the traditional healer for herbs and amulets.

## 6 MAJOR HOLIDAYS

In traditional Jola society there were indigenous celebrations for the initiation ceremonies of boys and girls. Other holidays included a celebration immediately after the rice harvest. Today, the Jola also celebrate holidays that are mandated by the modern government and those that are associated with Islam and Christianity. Official holidays in Senegal include New Year's Day (January 1), Independence Day (February 18), and Liberation Day (July 22). Christmas is also observed by all. It is marked by special watch night services at the Christian church, with children singing carols. Easter is also observed. In The Gambia, the major state holidays include New Year's Day (1 January), Independence Day (4 April), and International Workers' Day (1 May). During the holidays, people cook ceremonial food and dress up in bright traditional outfits. Other

religious holidays include Good Friday, Easter Monday, Eid-al-Fitr, Eid-al-Adha, the Islamic New Year, and Muhammad's birthday.

## 7 RITES OF PASSAGE

The Jola have several initiation ceremonies for boys and girls; however, in the modern era, the introduction of Islam and Christianity has brought modifications in these traditions. Initiation ceremonies are secret affairs not to be divulged to the opposite sex. Male initiation ceremonies take place in the sacred forests. The boys undergoing initiation (which includes circumcision) are secluded for substantial periods of time, undergoing tests of endurance and training sessions in the morals and customs of Jola society. Circumcision for boys generally occurs at some time between the ages of 6 and 8. Girls also undergo an initiation ceremony at some time between the ages of 13 and 25. Girls are secluded in an initiation hut. Men are not allowed in the female initiation ceremony just as the females are not allowed in the boys' ceremony. However, in both ceremonies, boys and girls learn to endure hardship, obey orders, respect their elders, be courageous, and understand traditional wisdom.

When a baby boy is born, it is secluded for up to seven days and then brought out for naming according to the dictates of the Islamic religion. There is an animal sacrifice, usually a chicken or a goat. At this ceremony, the child becomes a Muslim. For women, marriage is an important rite of passage.

Among the Jola, death is considered a rite of passage into the afterworld. Every Jola wishes for a good funeral, which is often accompanied by rituals and rites. Traditional funeral ceremonies among the Jola require a huge feast in which many cattle are slaughtered and offered as a send off sacrifice for the dead. In addition, guns are fired to honor the departed.

## 8 INTERPERSONAL RELATIONS

The Jola pride themselves on their fierce loyalty to their group. They prefer an acephalous, rather than a hierarchical, political system. With a classless system in their social institutions, they are unlike their neighbors, who have *griots* (history keepers and tellers), slaves, nobles, leather workers, and so on. Because they are a classless society, all individuals are considered to be equals, although elders are to be respected by the young people. The old are respected as the repository of traditional wisdom. Extended families are loyal to one another, which results in a sense of community and interdependence.

## 9 LIVING CONDITIONS

The Jola live in large villages and depend on the cultivation of crops, such as rice, peanuts, millet, some vegetables, as well as the tapping of palm wine. Peanuts (known as groundnuts) are grown as a cash crop. Usually, a village is composed of two large extended families, which intermarry as a tightly integrated community. Within the villages, the Jola live in simple homes made of mud walls and grass thatched roofs. Sometimes, bamboo matting and reeds are used to form the walls. This type of construction offers great relief in the hot climate. Those who are well off are able to construct modern rectangular homes, with corrugated iron sheets as roofing material and cement for outside and inside floors.

The village is often organized in the form of a series of compounds. A compound consists of a series of houses around an

*About 75% of Gambians are engaged in agricultural crop production and raising livestock. (United Nations)*

open courtyard. A grass or reed fence might enclose the houses from the outside. Members of a compound might all be related, tracing their descent to a common male ancestor. Men and women have their own huts and separate sections within the compound. At night, women may go to join their husbands in the husband's huts. Within the compound disputes are settled by the oldest man of the lineage.

The Casamance region, the homeland of the Jola, has fertile soils, which offer an excellent opportunity for subsistence farming. As a hardworking people, they produce enough food for themselves, with the excess sold to others. However, malaria is an ever-present threat because it is hard to control mosquitoes in such a swampy environment. Other diseases, such as measles, whooping cough, and pneumonia, result in high infant deaths. HIV/AIDS also poses a new threat to the Jola way of life.

### **10 FAMILY LIFE**

For women, marriage is a second rite of passage as they often have to leave their homes to join that of their husband. Polygamy is allowed, and one can have as many as four wives. Co-wives often share household chores and responsibilities for gardening, cultivating rice, food preparation, and care of the

children. Men are responsible for cash crops, such as peanuts, citrus fruits, and mangoes, which are sold to provide resources for the family. Families help each other economically and otherwise. A son might be educated by the extended family. In turn, he is expected to contribute to the extended family, should he become gainfully employed in one of the distant cities, such as Dakar. Thus, each relative is seen as a form of social safety valve in times of trouble. The entire community is also expected to gather at times of important life events, such as birth, circumcision, weddings, and funerals.

Marriage itself is a family affair, rather than an individual affair between two people. It is often a protracted process, in which girls are betrothed to a future husband while they are still young and the future husband is expected to work for his in-laws while waiting for the girl to become of age. Marriages are often blessed in a mosque, following the Islamic tradition. The marriage celebration generally involves the entire village.

### **11 CLOTHING**

The Jola wear colorful dresses, shirts, and pants fashioned from locally made cloth. Women generally wear long skirts with a loose blouse. For religious festivals, men wear long robes of different colors, as dictated by Islam. For those who work in urban areas, suits, ties, and other Western fashioned clothes are often worn by both men and women.

### **12 FOOD**

The main staple food for the Jola is rice. Fishing communities will usually take their rice with fish. Those in more forested areas gather and preserve various edible leaves and fruits. The Jola also like to prepare their dishes with palm oil. Cassava is another important food crop, which is pounded into flour to make a hard porridge called fufu. Fufu is usually served with stew made from beef, goat, sheep, or chicken. Yassa is a favorite dish from Casamance. It is made of chicken or fish marinated in lemon juice, pepper, and onions, and then baked. It is usually served with plain rice.

### **13 EDUCATION**

In rural areas, modern education is not seen as important. It is often considered a nuisance that hinders children from fully participating in the daily chores of farming and raising livestock. Parents prefer to send their children to Islamic schools, where instruction takes place either very early in the morning or late in the evening leaving the children to help out with farming and raising livestock during the day. It is mostly in urban areas and towns that a modern education is valued.

### **14 CULTURAL HERITAGE**

The Jola have a rich cultural heritage and love their many festivals throughout the year. Perhaps their most enduring legacy is their famous musical instrument, the *akonting* (or *ekonting*) or folk lute. It is a banjo-like instrument with a skin-headed gourd body, two long melody strings, and one short drone string. Some believe that it was a precursor to the Western banjo. Thus, music, song, and dance are an important aspect of Jola culture. Men and women sing as they go about their daily chores of gardening or while paddling canoes. During festivals, there is much drumming, singing, and dancing. At night or during the day, children may sing and dance in groups.

When boys are taken into the secret forest for circumcision, they are accompanied by the singing of war songs to give them courage.

### 15 WORK

Most Jola are engaged in agricultural production and the raising of livestock. They are a very hardworking people. Women tend to the rice fields and vegetable cultivation while men concentrate on millet and peanut farms. They use traditional implements, such as hoes for ridging and weeding. Those who can afford ox plows use donkeys or cattle to do the cultivation. Occupations among the Jola include rice cultivation, honey collecting, palm wine tapping, fishing, oyster collecting, and other agricultural activities. Some of the women may be employed as housemaids in the households of rich Gambians. Wealth among the Jola, particularly for women, is measured in terms of how much rice she owns.

### 16 SPORTS

Traditionally, wrestling was an important part of Jola society. It prepared young men for the prowess of war and other conflicts. Today, the most important sporting activity is soccer. In urban areas basketball and tennis are also played.

### 17 ENTERTAINMENT AND RECREATION

The most common form of entertainment among the Jola is music and dancing. The Jola enjoy listening to music and dancing to the *ankonting*, as well as drumming. The many festivals and ceremonies are often accompanied by much feasting and dancing.

### 18 FOLK ART, CRAFTS, AND HOBBIES

The Jola have a secret society of masked dancers that often play at important events, such as funerals and initiation ceremonies. Elaborate masks are made in the form of animals, such as the large deer found in their environment. They also carve from wood many implements used in their day-to-day lives, such as drums, bowls, mortars, pestles, and canoes for fishing. With the budding tourist industry in the Casamance region, some Jola have begun to specialize in the carving of animals, drums, and decorative masks for sale to visitors.

### 19 SOCIAL PROBLEMS

Since the early 1980s, the Casamance region has witnessed political instability. Some factions among the Jola took up arms to free the region from Senegal and obtain independence or autonomous rule. Over three thousand people have been killed in the skirmishes between the rebel groups and government forces since 1982. However, in recent years tensions between the two forces appear to have eased somewhat.

### 20 GENDER ISSUES

There is a clear division of labor by gender in Jola society. Women are expected to do household chores, such as cooking, cleaning, and child rearing. Furthermore, women have a lower status in comparison to men as they are considered to be dependent on male relatives. Men have the rights to what their women produce. Islamic and traditional customs, including the custom of polygamy, place women in an inferior role. Women are discriminated against when it comes to issues con-

cerning marriage, divorce, and devolution of property upon the death of a husband.

In the modern legal systems of The Gambia and Senegal, there exist policies that attempt to promote gender equality; however, disparities by gender continue to widen. It has also been noted that female genital mutilation/cutting is practiced by about 15% of Jola. Although many programs, policies, projects, and plans have been geared towards the elimination of all forms of harmful traditional practices, especially female genital mutilation, the lack of general commitment and will on the part of government authorities has hindered their successful implementation. Domestic violence against women is also an ever-present problem, as there are no specific laws against it.

# KALENJIN

**PRONUNCIATION:** KAH-len-jeen

**LOCATION:** Kenya

**POPULATION:** About 4.4 million

**LANGUAGE:** Kalenjin; Swahili; English

**RELIGION:** Christianity (Africa Inland Church [AIC], the Church of the Province of Kenya [CPK], Roman Catholic Church); Islam

**RELATED ARTICLES:** Vol. 1: Keiyo; Kenyans

## <sup>1</sup> INTRODUCTION

The Kalenjin live primarily in Kenya, East Africa. A living illustration of the complex nature of ethnic identity in Sub-Saharan Africa, they are not a tribe. Rather, the Kalenjin are an ethnic grouping of eight culturally and linguistically related groups or “tribes”: the Kipsigis, Nandi, Tugen, Keiyo, Marakwet, Pokot (sometimes called the Suk), Sabaot (who live in the Mount Elgon region, overlapping the Kenya/Uganda border), and the Terik.

Earlier, the Kalenjin were known collectively as the “Nandi-Speaking Peoples” or, alternatively, the “Southern Nilo-Hamites.” The name “*Kalenjin*” translates roughly as “I tell you.” It has played a crucial role in the construction of this relatively new ethnic identity among these formerly autonomous, but culturally and linguistically similar, tribes. The origin of the name “*Kalenjin*” and the Kalenjin ethnic identity can be traced to the 1940s. It represents a clear desire to draw political strength from the greater numbers of such an association.

Beginning in the 1940s, individuals from these groups who were going off to fight in World War II used the term *kale* or *kole* (the process of scarring the breast or arm of a warrior who had killed an enemy in battle) to refer to themselves. During wartime radio broadcasts, an announcer, John Chemallan, used the phrase *kalenjok* (“I tell you,” plural). Later, individuals from these groups who were attending Alliance High School formed a “Kalenjin” club. Fourteen in number, they constituted a distinct minority in this prestigious school in a Kikuyu area. This affected their desire for some sort of outward manifestation of identity and solidarity, as the Kikuyu are not only much more numerous but also culturally and linguistically very different from the Kalenjin. These young high school students would form the future Kalenjin elite. The next step in the consolidation of Kalenjin identity was the founding of a Kalenjin Union in Eldoret in 1948, and the publication of a monthly magazine called *Kalenjin* in the 1950s.

However, throughout this process the growing sense of pan-Kalenjin identity was not forming in a vacuum; instead, it should be seen in relation to colonialism and to anti-Kikuyu feelings. The British colonial government sponsored the *Kalenjin* monthly magazine out of a desire to foster anti-Kikuyu sentiments during the Mau Mau Emergency. The latter was a mostly Kikuyu-led, anti-colonial insurgency that provoked an official state of emergency lasting from October 1952 to January 1960. Clouded in emotional arguments coming from both sides, the causes of this movement have been reanalyzed. One of the most striking elements is the tension that existed between the numerically dominant Bantu Kikuyu and the less numerous Nilotic and Nilo-Hamitic Maasai and Kalenjin.

Considering this, and the desire of the colonial government to suppress the Mau Mau movement, a policy of encouraging pan-Kalenjin identity, which was still local in character rather than a truly nationalistic movement, made sense. Benjamin Kipkorir, a prominent Kenyan scholar, stated that “the term *Kalenjin* and the concept of ethnic solidarity that later came to be associated with it . . . had its roots in the Mau Mau emergency. It may thus be said to have been a by-product of Mau Mau” (Kipkorir 1973, 74).

Kalenjin language and culture probably began forming 1,000 years ago as a result of the intermingling of Highland Nilotic migrants with ancestral Southern Cushitic speakers. The length of time the Kalenjin have been living in Kenya’s Western Highlands and the Rift Valley, their homeland, is open for debate. While an earlier view claimed that these peoples have only been living in western Kenya for about 400 years, more recently a number of others have argued that the Kalenjin have occupied these parts of Kenya for 2,000 years or more.

One of the most famous aspects of Kalenjin history involves the *Sirikwa* holes. These are hollows that measure from 4.5 m to 9 m (15–30 ft) in diameter made in hillsides. Kalenjin legend has it that the Sirikwa people used these as cattle pens to guard their animals at night. Archaeological excavation at several Sirikwa holes reinforces this image: houses were built on the outside fence with the door facing inward toward the stock enclosure. There would have been only one way to enter the entire complex, and that would have been closely watched and heavily guarded.

The basic unit of indigenous political organization among the Kalenjin was the *koret* (“chor-ette”) or parish. This was not a nucleated village in any sense but rather a collection of anywhere from 20 to 100 scattered homesteads. It was administered by a council of adult males known collectively as the *kokwet* (“coke-wet”) and was led by a spokesman called *poi-yot ap kokwet* (“poy-ought ab coke-wet”). This spokesman was not a hereditary or elected leader in the sense of a chief. He was, rather, someone who was recognized for his knowledge of tribal laws, oratorical abilities, forceful personality, wealth, and social position. At public proceedings, although the *poi-yot ap kokwet* was the first to speak, all of the elders were given the opportunity to state their opinions. Rather than making decisions himself, the *poi-yot ap kokwet* expressed the consensus of opinion, always phrased in terms of a group decision.

A number of *koret* formed the next level of political organization, the *pororiet* (“poor-or-e-et”). Each was led by a council, the *kiruokwet ap pororiet* (“kee-roo-oh-kwet ab poor-or-e-et”). This council consisted of the spokesmen of the individual *koret*, over whom presided two reasonably active old men called *kiruokik* (“kee-roo-oh-keek”), the “councillors.” In addition, among the Nandi, there were two representatives of the *orkoiyot* (“or-coe-ee-yot”); a Nandi prophet, called *maotik* (“mah-oh-teek”); and two senior military commanders of the *pororiet’s* warriors, *kiptaienik ap murenik* (“kip-ta-eneek ab mur-eh-neeek”).

Today, traditional Kalenjin political/territorial organization has been largely replaced with one based upon the units imposed by the British colonial structure—villages are included in sublocations, which are included in locations, which are included in divisions, districts, and provinces. Each village has a village elder, who may be seen as the equivalent of a modern *poi-yot ap kokwet* and who tries to settle minor disputes and

handle routine affairs. Assistant chiefs are in charge of sub-locations, while chiefs administer locations. District officers oversee divisions, and district commissioners are the highest authority in each district. Finally, provincial commissioners are the highest authorities in each of Kenya's eight provinces and are directly under the president's authority.

## 2 LOCATION AND HOMELAND

Figures released in January 2007 estimated the population of Kenya to be 36,913,721. Of that 12% are thought to be Kalenjin, approximately 4.4 million people. Together, the Kalenjin peoples comprise Kenya's fourth-largest ethnic group. Most Kalenjin are concentrated in the Western Rift Valley and the Western Highlands.

## 3 LANGUAGE

The first language of the Kalenjin peoples is Kalenjin, a language of the southern section of the Nilotic branch, and part of the Chari-Nile language group of Africa. Three Kalenjin dialect clusters have been identified: one consists of the Sabaot, along with the Sebei and Kony; another is made up of Pokot, northern Marakwet, and northern Tugen; while the third dialect includes the Nandi, Kipsigis, Keiyo, Terik, and southern Tugen and Marakwet. Although these dialects are all supposedly mutually intelligible, speakers of one dialect often have difficulty understanding speakers of another. In addition to Kalenjin, most people speak Swahili and English, since both are official national languages and are taught in school, beginning with primary school education. Today it is only very old persons who do not speak at least some English.

## 4 FOLKLORE

Oral tradition was, and still is to some degree, very important among the Kalenjin. Prior to the introduction of writing, folk tales served to convey a sense of cultural history. Kalenjin oral tradition has four main genres: narratives (stories), songs, proverbs, and riddles. Stories usually contain both people and animals, and certain animals have acquired attributes that are concrete representations of character traits, e.g., hare is a trickster figure whose cleverness can be self-defeating; lion is courageous and wise; and hyena is greedy and destructive. Songs accompany both work and play, as well as ceremonial occasions such as births, initiations, and weddings. Proverbs convey important messages in very concise ways and are often used when elders settle disputes or advise younger persons. Riddles involve word play and are especially popular with children.

## 5 RELIGION

Traditional Kalenjin religion is based upon a concept of a supreme god, *Asis* ("Ah-sees") or *Cheptalel* ("Chep-ta-lell"), who is represented in the form of the sun, although this is not God himself. Beneath *Asis* is *Elat* ("Ay-lot"), who controls thunder and lightning. Spirits of the dead, *oyik* ("oh-yeek"), can also intervene in the affairs of humans, and sacrifices of meat and/or beer, *koros* ("chorus"), can be made to placate them. Diviners, *orkoik* ("or-coe-eeek") have magical powers and help in appeals for rain or to end floods.

Currently, nearly everyone professes to being a member of some organized religion—either Christianity or Islam. Major Christian sects include the Africa Inland Church (AIC), the

Church of the Province of Kenya (CPK), and the Roman Catholic Church. Muslims are relatively few in number among the Kalenjin. Generally speaking, only older people can recall details of traditional religious beliefs.

## 6 MAJOR HOLIDAYS

The major holidays observed by the Kalenjin are mostly those associated with Christianity (i.e., Christmas and Easter), and national holidays such as Jamhuri (Republic) Day, Madaraka (Responsibility) Day, Moi (the second president) Day, and Kenyatta (the first president) Day. At Christmas it is common for people who still live in traditional mud-walled houses with thatched roofs to give the outer walls a new coat of clay white-wash and paint them with holiday greetings (such as "Merry Christmas" and "Happy New Year").

Three one-month-long school holidays occur in April, August, and December. The first two coincide with peak periods in the agricultural cycle and allow children of various ages to assist their families during these busy times. The December holiday corresponds with both Christmas and the traditional initiation ceremonies, *tumdo* ("toom-doe").

## 7 RITES OF PASSAGE

Age is a fundamental organizing principle in all Kalenjin societies, as it across much of Africa. The status a person occupies and the roles he or she performs are still to a large degree ordained by age. For both males and females, becoming an adult in Kalenjin society is a matter of undergoing an ini-

tiation ceremony. Traditionally, these were held about every seven years. Everyone undergoing initiation, or *tumdo* (“toom-doe”), thereby becomes a member of a named age-set, or *ip-inda* (“e-pin-da”). Age-sets were traditionally “open” for about 15 years. There are eight male age-sets and they are cyclical, repeating approximately every 100 years. The *sakobei* (“sah-coe-bay”) ceremony marked the closing of an age-set about every 15 years, and the elevation of a new age-set to the warrior age-grade.

These age-sets and the age-grades (e.g., warrior, junior elder, senior elder) through which individuals passed provided an important basis for traditional social structure. Among the Kalenjin, indigenous political organization was based upon the combination of cross-cutting principles of age-sets and small territorial units called *korotinwek* (singular *koret*) and larger ones called *pororisiek* (singular *pororiet*). No Kalenjin societies possessed any kind of centralized leaders such as chiefs; instead, councils of elders made all decisions.

After male youths were circumcised, they were secluded for lengthy periods of time during which they were instructed in the skills necessary for adulthood. Afterwards, they would begin a phase of warriorhood during which they acted as the military force of the tribe. Elders provided guidance and wisdom. Today age-sets have lost their politico-military function, but this principle still creates bonds between men who are members of the same set, and feelings of respect for those who are older. Female age-sets have long since lost much of their importance, and most people are hard-pressed even to remember the names of the age-sets.

In the past, only people who had borne children would be buried after death; the others would be taken out to the bush and left to be eaten by hyenas. Today at every person's death, he or she is buried, but not in a cemetery as in the United States. People are returned to their farm, or *shamba* (“sha-mbaa”), for burial. There is usually no grave marker, but invariably family members, friends, and neighbors know where people are laid to rest.

## 8 INTERPERSONAL RELATIONS

*Chamge* (“chaam-gay”) or *chamuge* (“chaam-moo-gay”) is the standard greeting among Kalenjin. If the encounter is face-to-face, the spoken greeting is almost always accompanied by a hearty handshake, and people often clasp their own right elbow with their left hand. The response is the same—*chamge*, sometimes repeated several times. It may be emphasized with *missing* (“me-sing”), which can mean either “very much” or “close friend,” depending upon the context. As a sign of respect, a younger person will greet someone of their grandparents' generation by saying, *chamge kogo* (grandmother—“chaam-gay coe-go”) or *chamge kugo* (grandfather—“chaam-gay coo-go”).

Americans are likely to find several aspects of Kalenjin body language to be unusual. First, holding hands after greeting is very common for people of the same sex. Even when walking, these people may hold hands or lock little fingers. But it is readily apparent that there is absolutely no sexual connotation to this behavior. Furthermore, people of opposite sexes are strongly discouraged from these and other public displays of affection. Second, in their conversations Kalenjin do not point out objects or people with their fingers. Instead, they point by turning their head in the proper direction and then puckering their lips briefly.

Taking leave of someone is accompanied by the farewell, *sait sere* (“sah-eat sarey”—meaning literally, “blessing time”), and hearty handshakes. Often people will walk with their visitor(s) a distance in order to continue the conversation and to give their friend(s) “a push.” Once again, these people often hold hands, especially if they are members of the same sex.

In the past, dating and courtship were almost entirely matters of family concern. Clans were usually exogamous, i.e., one had to marry outside of one's own (and father's) clan. Today young men and women are more free to exercise their own free will, especially those who live away from home at boarding schools. They will meet and socialize at dances in town, discos, and in cafes called *hoteli* (“hotel-e”) in KiSwahili. Still, when a young man decides on a wife, he and his father's family must gather together a suitable bride-price payment (often erroneously referred to as a “dowry”) to be given to the bride's family. In the past this consisted almost entirely of livestock, but today it is becoming more and more common to use money in place of, or in addition to, livestock.

## 9 LIVING CONDITIONS

Considerable variation exists in the way that members of various Kalenjin groups make a living. For most groups, subsistence is agropastoral in orientation, based upon a combination of cultivation of grains such as sorghum and millet (and more recently maize), and livestock husbandry of cattle, goats, and sheep. Typical of East African groups, there tends to be little integration between the two activities since grazing land is usually located some distance from the fields and homesteads. Livestock are not used for traction, nor are they fed on the stubble of grain or other crop products. Often, such groups live on the face of a hillside or escarpment and cultivate nearby, as do the Keiyo and Marakwet. Among the Pokot there are two different subsistence patterns: one consists of pastoralism, involving the keeping of, and primary dependence upon, cattle, sheep, goats, donkeys, and a few camels; the other consists of agricultural production, mostly of corn today, but in the past, indigenous grains such as sorghum and millet. The pastoralists comprise approximately 75% of the Pokot.

Previously, when game populations were at higher levels and before the government ban, hunting sometimes supplemented the diet, but only among the so-called “Dorobo” or “Okiek” did it provide a major staple. The latter were forest hunter-gatherers who often resided near the Kalenjin groups.

Traditionally Kalenjin houses were round, with walls constructed of bent saplings anchored to larger posts and covered with a mixture of mud and cow dung, while roofs were thatched with local grasses. While these kinds of houses are still common, there is a growing trend towards the construction of square or rectangular houses that are built with timber walls and roofs of corrugated sheet metal, *mabati* (“ma-baatee”).

Most Kalenjin are rural dwellers and do not have electricity or indoor plumbing in their houses. Radio/cassette players; kerosene lamps and stoves; charcoal stoves; aluminum cooking pots; plastic dishes, plates, and cups; and bicycles are the most common consumer items. Those people who do not have electricity but who do have televisions use car batteries for power.

## 10 FAMILY LIFE

Traditionally, like in most African societies, the family was central in the daily life of the Kalenjin. But by family what

was meant was the extended family, not the nuclear family in the Western sense. Kalenjin residence patterns were, and still are, mostly patrilocal. That is, typically after marriage a man brings his wife to live with him in, or very near to, his father's homestead. Marriage of one man to multiple wives (polygyny) was and is permitted, although most men cannot afford the expense of such unions because of the burden of bride-price. Regardless of the type of marriage, children were traditionally seen as a blessing from God and, as a result of this, until very recently Kenya had the highest population growth rate in the world.

Slowly these patterns are changing as monogamous marriages now prevail and nuclear families are becoming more frequent. Moreover, younger people are now expressing a desire to have fewer children when they get married. This is due to the increasing expense of having large numbers of children who not only must be fed but also educated to cope in today's world. To some degree, young women are also changing their aspirations to go beyond motherhood alone and include a career as well.

### 11 CLOTHING

The Kalenjin were not renowned for their traditional clothing, which essentially consisted of animal skins, either domesticated or wild. Earrings were common for both sexes in the past, including heavy brass coils that tended to make the earlobe stretch downward almost to the shoulder. This is generally not practiced today, when the Western-style dress of most Kalenjin, even in rural areas, is scarcely different from that of people in nearby towns. The buying of secondhand clothes is quite common. Thus, men wear trousers and shirts, usually along with a suit jacket or sport coat, while women wear skirts and blouses, dresses, and/or *khangas* ("khan-gaaz")—locally made commercial textiles that are used as wraps (one for the top and one for the bottom). Youths of both sexes covet T-shirts with logos, especially those of American sports teams or bearing the likeness of famous entertainers.

### 12 FOOD

The staple Kalenjin food is *ugali* ("oo-golly"). This is a cake-like, starchy food that is made from white cornmeal mixed with boiling water and stirred vigorously while cooking. It is eaten with the hands and is often served with cooked green vegetables such as kale, called *sukuma wiki* ("sue-cooma weekly") in KiSwahili, meaning literally, "to push the week." Less frequently it is served with roasted goat meat, beef, or chicken. Before the introduction and widespread diffusion of corn in recent times, millet and sorghum—indigenous African grains—were staple cereals. All of these grains were, and still are, used to make a very thick beer that has a relatively low alcohol content. Another popular Keiyo beverage is *mursik* ("more-seek"). This consists of fermented whole milk that has been stored in a special gourd called a *sotet* (pronounced just as it appears, with the accent on the second syllable) that has been cleaned using a burning stick. The result is that the milk is infused with tiny bits of charcoal.

Lunch and dinner are the big meals of the day. Breakfast usually consists of tea (made with a lot of milk and sugar) and remains from the previous night's meal, or perhaps some store-bought bread. Mealtimes, as well as the habit of tea-drinking, were adopted from the British colonial period. Lunch is eaten

at 1:00 pm rather than at noon, and dinner is often eaten later in the evening at 8:00 or 9:00 pm. In addition to bread, people routinely buy foodstuffs such as sugar, tea leaves, cooking fat, sodas (most often Orange Fanta and Coca-Cola), and other items they do not produce themselves.

### 13 EDUCATION

Traditionally, education among the Kalenjin was provided during the seclusion of initiates following circumcision. This transitional phase of the rite of passage provided an opportunity to instill in young men and women all the requisite knowledge necessary to be a functioning and productive adult member of society. It was, in essence, a "crash" course in the intricacies of their culture. Nowadays, after initiation young men and women are still secluded but for shorter periods of time (one month as compared with three months in the past). The timing of the December school holiday coincides with the practice of initiation and seclusion.

In 2003 free primary school education became universal in Kenya. "Free" must be qualified however, because parents must provide their children with uniforms, books, pens and pencils, and paper, as well as contribute to frequent fund raising activities for their children's school(s). This constitutes a tremendous financial burden for families in a country where the average per capita income is about \$360 per year. Post-primary school education is relatively expensive, even at the cheaper secondary schools, and entry is competitive. Tuition at the more prestigious high schools, where students must board, is very expensive. Typically, parents rely on contributions from a wide range of family, neighbors, and friends to meet the high tuition costs. Tuition at Kenya's universities is rather nominal, but the selection process is grueling and relatively few students who want to attend can do so.

### 14 CULTURAL HERITAGE

Traditional music and dance had many different functions. Songs would accompany many work-related activities, including, for men, herding livestock and digging the fields, and, for women, grinding corn, washing clothes, and putting babies to sleep (with lullabies). Music would also be an integral part of ceremonial occasions such as births, initiations, and weddings. Dances to punctuate these occasions would be performed while wearing ankle bells and would be accompanied by traditional instruments such as flutes, horns, and drums. Oral stories, proverbs, and riddles all convey important messages to be passed from generation to generation.

### 15 WORK

In Kalenjin societies, much of the work, at least traditionally speaking, is divided along gender lines. Men are expected to do the heavy work of initially clearing the fields that are to be used for planting, as well as turning over the soil. Women take over the bulk of the farming work from there on, including planting, several weeding, harvesting (although here men tend to pitch in), and processing crops. Among the Kalenjin, tradition holds that men are supposedly more concerned with herding livestock than with other pursuits. Recent evidence suggests that women, children (especially boys), and even older people are equally as likely to be engaged in animal care as men, especially in those situations where men are likely to be away from home engaged in wage work.

*A leader of the Kalenjin tribe speaks to a group of warriors near the western Kenyan town of Chebilat. (Roberto Schmidt/AFP/Getty Images)*

In addition to all of their other tasks, women are expected to perform nearly all of the domestic work that is involved in keeping a household running. In doing so, they often enlist the help of young girls, who are expected to assist their mothers and other female relatives in chores such as fetching water from wells or streams, and collecting the firewood that most families use for cooking. Young boys will sometimes perform these same tasks but more often do things such as grazing and/or watering livestock.

### **16 SPORTS**

Soccer is a major sports interest of the Kalenjin, especially the youth, as it is with many other Kenyans. Nonetheless, running (especially middle and longer distances) is the sport that made the Kalenjin peoples famous in world athletic circles. St. Patrick's High School in Iten has turned out a phenomenal number of world-class runners.

### **17 ENTERTAINMENT AND RECREATION**

In rural areas without electricity, the radio is still the main form of entertainment. KBC (Kenya Broadcasting Corporation) programs are attentively monitored, as are shortwave radio transmissions by the BBC (British Broadcasting Corporation) and the VOA (Voice of America). A small number of

people have televisions, and the only programming available is from KBC. In towns and trading centers, video parlors are becoming common, and action films are especially popular.

### **18 FOLK ART, CRAFTS, AND HOBBIES**

In other parts of Kenya, the famous sisal bags (called *kiondo* in KiSwahili and pronounced "key-on-doe") are manufactured and marketed worldwide. Although the Kalenjin are not well known for their handicrafts, women do make and locally sell decorated calabashes (*sotet* in Kalenjin and pronounced just as it appears) from gourds. These are rubbed with oil and adorned with small colored beads and are essentially the same type of calabashes that are used for storing fermented milk.

### **19 SOCIAL PROBLEMS**

Politically, Kalenjin fared extremely well under the presidency of Daniel arap Moi, from 1978 to 2002. Moi, a Tugen, was very generous with resource distribution in Kalenjin areas during his rule. In 2002 Moi was constitutionally obligated to step down. However he did select a successor, Uhuru Kenyatta, in hopes of continuing his influence in the ruling party, the Kenya African National Union (KANU). Unfortunately for Moi the various opposition parties united behind Mwai Kibaki, who won the presidency with approximately 65% of the vote.

Since that time KANU's influence has waned but Moi has remained an active, albeit backstage, political force. The return of the presidency to a member of the Kikuyu ethnic group resurrected a great deal of animosity among Kalenjin.

In the election of December 2007, Kalenjin overwhelmingly sided with the opposition candidate, Raila Odinga of the Orange Democratic Movement (ODM). Sadly, the disputed results of that election saw a great deal of violence, considerable loss of life and the displacement of hundreds of thousands of people. Although most of the international attention was on Nairobi, regrettably many of these actions took place in the Rift Valley Province, Kalenjin heartland, especially in and around the highlands town of Eldoret and to some extent in the Rift Valley town of Nakuru. Unsavory elements of society used the occasion to once again resurrect the idea that this part of Kenya is only for Kalenjin and that others, particularly Kikuyu, must leave. Approximately 1,500 people died in the post election violence and at least 350,000 internally displaced people are living in camps around the country.

Tobacco usage and alcohol consumption continue to be common among men but not women. For decades the Kenyan government has banned the brewing and distillation of traditional homemade alcoholic beverages, including *busaa* ("boosaah"), a beer made from fried, fermented corn and millet, and *chang'aa* ("chaan-gah"), a liquor distilled from *busaa*. Nevertheless, these beverages continue to be popular with people, especially men, and provide some individuals, mostly women, with supplementary income. *Chang'aa* especially can be lethal since there is no way to control the high alcohol content (unlike that of *busaa*, which tends to have a very low alcohol content), and there are many opportunities for contamination. It is not uncommon to read stories of men dying after attending drinking parties in the Kenyan daily newspapers.

Raiding for livestock has always been part of Kalenjin culture and this continues to be true, especially among the Pokot. Now, instead of spears and bows and arrows, raiders use semiautomatic weapons like AK 47 rifles. The Marakwet in particular have continued to suffer at the hands of armed cattle rustlers, often from the Pokot. Because of their marginal status both geographically and politically Marakwet complaints to the government do very little. Poverty and a general lack of concern on the part of government continue to fuel the situation.

As is true all over Africa and Kenya, HIV/AIDS is arguably the major issue confronting Kalenjin today. Fortunately, prevalence rates in the country as a whole have dropped dramatically from 14% in 2002 to 5.1% in 2008. Moreover the HIV prevalence rate in urban areas is much higher, at 9.6% whereas in rural areas it is 4.6%. Most Kalenjin live in rural areas. Also, a link between male circumcision and susceptibility to HIV infection has been posited, whereby circumcision significantly decreases the risk of HIV infection. One study among agricultural employees in Rift Valley Province found that Luo men, from a tribe that does not circumcise, had a significantly higher HIV prevalence (24.8%) than Kalenjin men (4.5%).

## 20 GENDER ISSUES

Traditionally Kalenjin culture is, like most others in Africa, heavily divided on gender lines. Along with age, gender is a fundamental organizing principle in African societies. In the past leadership was always the prerogative of adult males but

recently this has begun to change. With the growth of multiparty politics Kenyan women have increasingly entered the political sphere. However, unlike other ethnic groups, such as Kikuyu or Kamba, Kalenjin women have not participated in politics to the same degree.

As part of traditional rites of passage, circumcision of both boys and girls was practiced. In the academic world the female variant has come to be known female genital mutilation (FGM) and is a very controversial subject. Although technically illegal in Kenya since 1990 it is still widely practiced by members of many ethnic groups. Among the Kalenjin its prevalence rate has recently been estimated at 47% compared with rates as high as 97% for the Somali. In several areas of Kenya, some especially progressive women have recently been promoting alternatives to traditional circumcision and instead advocating what has come to be known as "circumcision with words." An example from Keiyo District is the Tumndo Ne Leel Support Group, which started in 2003 as a community based organization. One of the unique features of this approach is that it retains the very important ceremonial and symbolic role of a rite of passage while doing away with the act of "cutting." In the process this community based organization addresses the larger issue of female empowerment in this traditionally male-dominated society.

Homosexuality is not a subject of open discussion in Kalenjin society, nor in most other Kenyan societies. Reliable data on prevalence would be nearly impossible to elicit. An institution in which two women would marry was traditionally found among the Nandi. It was usually found in circumstances where an older woman had no male heirs and thus needed a son because women cannot inherit property. The older woman became the "husband" of the younger woman and was treated for all intents and purposes as a man. The younger "wife" may have already had children with other men who had left her or died or she may already be pregnant with the child of a man who did not want to marry her. Both parties benefited from the union, which was domestic and economic rather than sexual in nature. The female husband gains descendants and promotion to male status, after spending years in the unenviable status of a barren or sonless wife. The wife is likely to be a girl for whom getting married has been difficult. If she already has children, she gains inheritance and clan status for them (Oboler 1980).

## KARRETJIE PEOPLE

**PRONUNCIATION:** KAH-ri-ki

**LOCATION:** The Great Karoo in South Africa

**POPULATION:** Several thousand

**LANGUAGE:** Afrikaans

**RELIGION:** None

### <sup>1</sup> INTRODUCTION

Travelers who journey between the interior of South Africa and the coast cross the vast arid scrublands of the central plateau. This is the Great Karoo (derived from a Khoekhoen or "Hottentot"—a pejorative term—word for desert), and this is where the Karretjie People (*karretjie* means "donkey cart"), can usually be seen criss-crossing the plains in their donkey carts.

Most of the Karretjie People are descendants of the earliest inhabitants of the area, the hunting-gathering Xam San (also known as "Bushmen," a term that in some quarters is regarded as pejorative but is still sometimes used by such people themselves) and the nomadic-pastoral Khoekhoen ("Hottentots"). Archaeological evidence, DNA analyses, the historical record, local folklore, and oral tradition not only confirm the early presence of the Xam San and Khoekhoen in the area, but also the changing nature of their interaction with the more recently arrived pioneer white farming community from the south. The first sporadic contacts in the 1770s were followed by extended periods of conflict, intermittent times of peace, increased competition for resources, and eventually the powerful impact of a burgeoning agricultural economy and commercialization in the rapidly developing towns. The competition for resources, at least initially, centered around two issues. First, the farmers hunted the game in the hunting grounds that the Xam San regarded as their own. When they then began slaughtering the more easily accessible domesticated stock of the farmers, they themselves became the hunted. Second, the farmers and the Khoekhoen were in competition for the same grazing lands for their stock.

Eventually though, the lifestyle of both the Xam San and the Khoekhoen were transformed. In the case of the Xam San, for example, they changed from nomadic hunters to become so-called "tame Bushmen" farm laborers. They retained, at least initially, their nomadic ways, first on foot, later with the help of pack animals, and eventually with donkey carts. A few of those who were not hunted or who had not died of some foreign disease, like the smallpox epidemic early in the 18th century, still sought refuge in remote areas or rock shelters. Finally, though, most of the Xam San squatted near towns or were drawn into the agricultural economy by becoming laborers on the white farms. Like their parents and grandparents, most of the adult Karretjie People were born on a farm and, in spite of their present truly nomadic existence, many of them have a history of having lived at least semipermanently on a farm. It was on the farms that their ancestors first learned the skill of shearing. When wool-farming as an enterprise expanded, the Karretjie People, with the help of the mobility afforded by the donkey cart, developed an itinerant lifestyle in order to exploit shearing opportunities on farms spread over a wide area.

## 2 LOCATION AND HOMELAND

The Great Karoo, the region frequented by the Karretjie People, is a semidesert some 260,000 sq km (100,000 sq mi) in extent and 900 m to 1,200 m (3,000–4,000 ft) above sea level. It is a summer-rainfall area with extreme temperatures in both the summer and the winter. Strong winds and dust storms characterize the months of August and September and occasionally blow for the duration of the summer. The summer rains begin with light showers in October, but temperatures remain quite low. In fact, light snowfalls are known to have occurred as late as September. Temperatures increase quite dramatically during November, and temperatures above 40°C (105°F), during the summer months until February are not unusual. Rain during the summer is sporadic and often occurs in the form of thunderstorms, when 2.5 cm (1 in) or more of rain may fall in a short time, only to be followed by a long dry period. Temperatures decrease by April, and this usually also marks the end of the rainy season.

Topographically the region consists of vast plains dotted with flat-topped hills. In the valleys and on the plains the soil layer is thin, resulting in vegetation consisting mainly of Karoo scrub and grasses, much favored by both sheep and the remaining wild game, mainly a variety of antelope and smaller animals. The Karoo has become famous for Merino sheep and, hence, wool-farming, although Angora goats for mohair, and cattle and horse-breeding, and more recently game-farming, are also to be found. None of this land is owned by the Karretjie People, but as itinerant sheep-shearers this is the area that they roam, and they certainly regard these open spaces as their domain. It is difficult to obtain accurate census figures on a moving population, but Great Karoo-wide the Karretjie People probably number several thousand although many of them have recently become sedentary and hence no longer truly itinerant Karretjie People.

## 3 LANGUAGE

Virtually all the Karretjie People are unilingually Afrikaans-speaking. The few exceptions include isolated elderly individuals who still speak a Khoesan dialect or a language like Griqua or Korana, the language of their forbears. The Afrikaans that most of them speak was brought to the Great Karoo by the 18th-century Afrikaner hunters and pioneer farmers. Because most of the ancestors of the Karretjie People became farm laborers and were often, at least relatively and temporarily, isolated from their own wider social network and intensively exposed to Afrikaner culture, their own language gradually lost its currency.

While mostly intelligible to Afrikaans-speakers in general, the Afrikaans that the Karretjie People speak is peculiar to them and is enriched by characteristic words and sayings, such as *skêrbestuurdere*, literally, “sheep-shear managers or drivers,” i.e., sheep-shearers; *klipbrille*, literally, “with stone spectacles” or “glasses,” i.e., being illiterate; and *hulle regeer al weer*, literally, “they are governing again,” i.e., they are arguing again.

Most personal names derive from an Afrikaner tradition, although many are peculiar to the Karretjie People. Some names follow the names of animals that are, or were, found in the area. Some common names are Mieta Arnoster (the last name is from the Afrikaans *renoster*, “rhinoceros”); Hendrik Sors, Katjie Geduld, Plaatjie Januarie (the last name literally means “January”); Meitjies Verrooi (the first name literally

means “little maid,” the “little” indicated by the diminutive “-tjie”); and Struis Maneswil (the first name is an abbreviation of the Afrikaans *volstruis*, “ostrich”). Karretjie children also have what is known as a *kleinnaampie* (literally, “small name” or nickname). For instance, the little girl Marie Jacobs is also known as Rökkies (literally, “little dress”), and her twin brother Simon Jacobs is known as Outjie (literally, “little guy”).

## 4 FOLKLORE

The relative isolation, as individuals on farms, of the forbears of the Karretjie People resulted in them “losing” much of their early traditions and beliefs. Their relative isolation today as a community has prevented them from significantly adopting the myths and folklore of the sedentary communities in their area. Thus, there is only a vague awareness of being descendants of the earliest inhabitants of the region, and many of the few stories and folktales that the Karretjie adults do relate to their children are derived from the Afrikaners or from the teachers at the farm schools that a few of these children started attending.

A story that is told, and which serves to discipline young girls, is that of the Oranatan (probably derived from *Orang-oetang*, Afrikaans for “orangutan”). The Oranatan lives in a cave and moves around at night. He captures any young girl who ventures outside her *karretjie* shelter at night, takes her to his cave, and keeps her there for himself forever.

## 5 RELIGION

Although some of the Karretjie People were married in a church or by a magistrate, it is more common for such a union to be sanctioned simply by virtue of its recognition by the Karretjie community. Children from the former type of marriage take the last name of the father, while in the case of the latter type of union, they take the last name of the mother.

Very few of the Karretjie People are members of a church or a religious organization or have ever, for that matter, been exposed to religious activities. A few have been baptized by a minister of the Dutch Reformed Mission church, either in a church or by virtue of a minister visiting the farm where their parents worked. Those couples who have had a church marriage (*referred to as ge-eg, "properly" married*) are the exception, and those who live together are regarded as having an appropriately sanctioned union.

## 6 MAJOR HOLIDAYS

Neither religious nor secular holidays have any particular significance for the Karretjie People. The unpredictability of their employment as itinerant shearers is such that they are idle almost as many days as they are shearing. The selective observance of the national holidays of South Africa by the farmers for whom they work in large part guides the activities of the Karretjie People on such days. The Christmas–New Year period, when there is no shearing activity in any event, is a time for celebration and efforts are made to have more to eat and drink available, their meager resources permitting.

## 7 RITES OF PASSAGE

The passage of a Karretjie person from one social role to another is marked by very little ceremony. The transformation of a person from childhood to adulthood is probably the most significant. Boys, for example, learn to shear by helping their fathers from an early age. They “graduate” from at first shearing the less important wool from the same sheep to eventually, when they are strong and skilled enough, shearing independently. Birthdays are not marked by any ceremony, but when boys are old enough and are shearing on their own, they obtain their own *karretjie* (cart) and donkeys and are no longer regarded as children.

## 8 INTERPERSONAL RELATIONS

Even after a long absence, greetings between spouses, siblings, and between parents and children are often noticeably unemotional, undemonstrative, and occasionally even totally absent. When they do greet each other or others, it might be by means of a handshake. When asked, “Hoe gaan dit?” (“How are things going?”), the response may be, “Darem opgestaan” (“At least I got up [this morning]”) or “Nee, die oë blink” (“No, the eyes are shining”).

The small Karretjie family may share meals together and may ride together in the donkey cart to visit family or friends at a neighboring farm or another outspan (a “neutral” site or place next to the road where they erect their overnight shelters and unyoke or outspan the donkeys), but the adult males are then inclined to drink, chat, and joke with each other in a group. The women drink and socialize in their own group while the children play together. Such visiting takes place over

weekends and often results in long drinking sessions, which sometimes result in arguing and even fighting.

Karretjie children play together as a group well into adolescence, although there is an increasing tendency for girls’ and boys’ activities to separate as they become older. A special relationship between a boy and a girl is not always clearly apparent in the sense of them sharing time and activities apart from the rest. The itinerant lifestyle, and the small and close-knit Karretjie community at a particular outspan, precludes this.

## 9 LIVING CONDITIONS

It is a useful rule of thumb to regard a *karretjie* (cart) as the focus for a Karretjie unit because it provides transport for each family and becomes part of the overnight shelter. A Karretjie unit does not necessarily replicate a household, however. For domestic purposes like cooking, eating, and child care the *karretjies* of parents and married children, or of married siblings, may function together as a unit. Each Karretjie family constructs its own shelter, normally in the *gang* (corridor) next to the road. Sheets of corrugated iron, plastic, and hessian are normally used to construct such a shelter, which consists of a single space with no divisions. The number of people at an outspan is relatively small, and an average of 2 to 14 Karretjie units occupy a particular outspan.

The Karretjie People suffer from the harsh extremes of temperature in this part of South Africa during winter and summer. During winter they are constantly suffering from coughs and colds. They are, however, generally in relatively good health. Adults normally seek medical treatment only in absolute emergencies, such as in the case of a difficult childbirth, chronic illness, or serious accident. In case of illness, people far from town are largely dependent on the compassion of neighboring farmers, although a mobile clinic is now reaching some of those on the outspans and farms. Although pregnant women are now advised to go to town to give birth at a hospital, most are still assisted by older women at the outspan because of the practical difficulties involved in getting to town, especially in case of an emergency.

Most of the outspans have neither clean water nor toilet facilities, and this creates extremely unhealthy conditions for the people living there. Water has to be fetched from nearby taps, windmills, or a river in one instance. The Karretjie People’s health is closely related to their environmental conditions and circumstances. High infant mortality rates, low birth weight, poor diet, undernutrition, and diarrhea are significant factors that determine the quality of these people’s state of health.

Although the Karretjie People tend to use plants from the natural environment for the treatment of common ailments such as colds, a mobile medical unit nowadays alleviates some of these problems. Its activities are mostly directed to preventive care, in particular family planning, and curative tasks. Mobile clinics have a regular visiting schedule and consist of medical teams with separate units. The medicines provided are fairly inexpensive, but children under six years old receive free medical treatment. In some areas, feeding schemes have been initiated by social workers, and teams try to reach people at outspans twice a week.

## 10 FAMILY LIFE

Karretjie families on the outspans are relatively small. Although there are a few single-parent families, most families

consist of a mother, father, and from one to six children, with three children being roughly the average. Some of the families are extended by virtue of a grandchild, grandparent, or a sibling of one of the parents living with them. As soon as boys are skilled enough, they start shearing independently and, as a result, often form an independent Karretjie unit. The composition of the Karretjie unit also frequently changes by virtue of children or grandparents temporarily joining other units in order to take advantage of available resources.

Women play a significant role in the family structure but remain in a subordinate position because decision-making is done mostly by the head of the Karretjie unit, in this case the senior male and shearer. Adult women and older girls assist in packing and unpacking the donkey cart before and after traveling, they wash clothes and prepare food for the family, and they are the primary caretakers of young children.

Most Karretjie families keep pets, of which dogs and cats are the most popular. Dogs are also used for hunting purposes. When the Karretjie moves as a unit, the dogs are tied behind the cart and run along, while cats are placed on top of the load of the cart together with the old people, children, chickens, and accessories.

### 11 CLOTHING

The Karretjie People seldom have money to buy items such as clothes. The clothing that they own is mostly secondhand. Men wear shirts and trousers and are fond of caps, while women wear dresses and sometimes head cloths. The decorations that the Karretjie People wear are not of much value and are usually used handouts from the surrounding sedentary communities. Rings of copper and safety pins are popular.

### 12 FOOD

The staple ingredient of the Karretjie diet is mealie-meal (cornmeal), at least when times are "good." When shearing on a farm they buy supplies, mainly mealie-meal, sugar, coffee, and tobacco, "on the book" (on credit) from the farmer's store. With any extra money from a shearing assignment, the Karretjie People may undertake a pilgrimage to town before returning to their "home" outspan. At other times, the "not-so-good" or "in between shearing" times, the *krummelpap* (crumbly-thick porridge) becomes *slappap* (soft porridge) and eventually *dunpap* (thin or watery porridge).

The Karretjie people do not eat at regular times. Depending on the availability of food, they normally have two meals a day, i.e., breakfast and supper. They own only the necessary utensils, such as a pot for cooking porridge, a few cans to fetch water, and sometimes only two or three spoons that a family shares during a meal.

Found on the fringe of a gravel road, the occasional carcass of a rabbit is a welcome addition to the usually depleted Karretjie menu. Snare traps are also set in the veld for rabbits, or antelope like steenbok and duiker. Young boys also set traps and try to entice birds into them by sprinkling a trail of porridge crumbs. The environment does not present much in terms of edible wild roots and berries, although some use is made of the Karoo vegetation for medicinal purposes. Some of the outspans offer alternative resources, such as a river for fish, including yellowfish, carp, and modderbek (literally, "muddy mouth," this fish feeds on the river bed), or prickly pears, which ensure

a juicy, vitamin-rich option during their brief bearing season in the summer.

### 13 EDUCATION

Until 1992 almost all the Karretjie People were illiterate, having never had the benefit of schooling or even access to a school. Since then the children have started attending farm schools in the area. The farmers or farmers' wives who run these schools fetch the children at the outspans, provide board and lodging for them by means of a government subsidy, and return them to their Karretjie homes on Friday afternoons or, depending on the particular school, only for school holidays.

Because of an adult education program, which was started in 1995, adults at some of the outspans received literacy training, as well as practical and skills training. Some of the children drop out of the farm schools for practical reasons (or because other children discriminate against them) but then participated in this adult education program.

As formal education is a recent and limited development for these communities, the process through which children are prepared for full participation in their community is still an essential function of the Karretjie unit. Informal education is part of everyday life, and the children learn by observing and imitating their parents, other adults, and siblings' activities. The experience of moving to an outspan or farm in itself is educational because they cover vast distances and frequently encounter new regions and different sets of people.

Most of the parents are anxious for their children to attend school and want them especially to learn the skills of reading and writing so that they can get a *sit* job (sitting down, e.g., clerical work) instead of a *staan* job (standing up, e.g., shearing). Some, however, admit that the schooling of their children may interfere with their mobile way of life, and that the children who do attend school are changed by the experience and often become critical of certain aspects of the nomadic way of life, and even of their own parents' behavior.

### 14 CULTURAL HERITAGE

With their long history of illiteracy, the Karretjie People have no recorded cultural heritage and, obviously, no literature. The Karretjie People have also lost virtually all of their oral tradition, and that which they have is quite "shallow," or relatively recent. The songs that they sing, and the music with which they identify, have all been taken over from surrounding sedentary peoples. This also applies to dancing, although here there is some measure of innovation, much of which is apparent during weekends of socializing.

### 15 WORK

Virtually all the males of the Karretjie People are, or will eventually become, sheep-shearers. To supplement their meager income, or to tide them over from one shearing season or assignment to another, they do odd jobs on the farms: they hoe burweed, dig irrigation furrows, erect or repair fencing, and build windbreaks for sheep *kraals* (corrals). They may also get temporary employment in a town as painters or gardeners. When the men are shearing, the women may get part-time work at the farmhouse as assistants to the domestic workers or in the garden. They may also help in the shearing shed, sorting the wool locks, extracting foreign matter like burrs from

the wool, or sweeping up the wool off-cuts on the floor (young children also do this) where the shearing is in progress.

The Karretjie People are generally recognized as the best shearers in the region. Although as hand-shearers they are slower (a shearer averages approximately 30 sheep a day) than the professional teams shearing with electric machines, many farmers prefer to use them because: (1) unlike the other teams they are not unionized and hence do not drive as hard a bargain; (2) their shearing is neater; (3) the farmers claim to get along better with them because they can converse with them in Afrikaans (as opposed to many of the organized shearers, who are Xhosa-speaking); and (4) farmers do not want or have to have them permanently, or even semipermanently, on the farm.

A farmer intending to shear stops at an outspan (often one with which he has a long-standing arrangement) and informs the spokesperson of the Karretjie shearing team that he intends to start shearing on a given day. He tells them how many sheep or goats there are to shear and how many shearers he needs. A price is tentatively negotiated, and the shearers either get a prepayment there and then or receive it as soon as they arrive on the farm. This confirms the arrangement, although the contract remains verbal at all times.

The price paid per sheep shorn depends largely on the farmer, from as little as R1.00 (approximately \$0.13) for the short-wooled Dorper sheep (mainly kept for the meat), to perhaps starting at R2.00 (about \$0.26) for Merino sheep. Additionally, each shearing team is given one sheep for slaughter for every 1,000 sheep shorn. The shearers buy their shears, which last them for “three or four farms,” from the farmer for about R40.00 (\$5.10). Rations are usually bought on credit from the farmer’s food store—these prices are often higher than those in town. After shearing for two to three weeks, and after deductions, the shearers may receive a net payment of as little as R40.00 (\$5.10). Odd jobs pay R10.00 to R20.00 (\$1.28–2.56), and women who work as temporary domestics in town have been known to be paid only R5.00 (\$0.65) a day. Some farmers allow the whole Karretjie unit, i.e., not just the shearers, onto their property and occasionally even make housing available for the shearers, but most shearers claim that they do not want to stay in a proper house and prefer their own Karretjie shacks.

Outside observers often perceive the Karretjie People as trekking around haphazardly because of an eager desire or fondness for traveling. Their movements are directed, however, by an intricate interplay of seasonal, social, economic, and ideological factors that result in discernible, though flexible, regularities. Geographical mobility is a reaction to adapt to the scarcity of resources and to optimize the precarious access to available resources. The key to such survival strategies has been the ingenuity of the Karretjie People and the mobility that their donkey carts afford them.

## 16 SPORTS

The strenuous itinerant lifestyle of the Karretjie People, the fact that they hardly ever find themselves in the same location for any length of time, and the fact that they have been removed from the mainstream of the surrounding society for so long have together resulted in a complete lack of participation, and even an awareness of, or an interest in, organized sports activities. It is only much more recently, with the advent of limited

schooling, that some of the Karretjie children have become exposed to such activities. The small boys do however kick a ball around, if they managed to get hold of one, otherwise an empty plastic bottle serves the purpose.

## 17 ENTERTAINMENT AND RECREATION

The Karretjie People mostly entertain themselves. They have no access to electricity and hence have no television, but a few have decrepit portable radios, to which they listen when they have enough money for batteries. For the most part, they socialize, go visiting, go hunting (illegally) with their dogs or with snares, and, when near a river, they fish.

## 18 FOLK ART, CRAFTS, AND HOBBIES

Karretjie women can usually be seen mending or altering clothes and making *lappies komberse* (patchwork blankets). Men busy themselves fixing donkey harnesses and carts and repairing shoes. Little boys make *ketties* (slingshots) for hunting birds, and clay animals when their overnight shelters are near water. Little girls make their own *stokpoppe* (stick and rag dolls).

## 19 SOCIAL PROBLEMS

The farmers who employ the Karretjie People as shearers are not contractually bound, as the undertaking to shear and the price are both determined by verbal arrangement. These shearers are the most unprotected source of labor in one of the most protected economic sectors in South Africa. A shearer can be quite arbitrarily dismissed, often works long hours or not at all, has no insurance or guarantee of assistance in unemployment, disability, old age, or on leave, and has extremely tenuous access to medical and educational facilities.

South Africa’s first democratic election on 27 April 1994 provided the Karretjie People with their first-ever opportunity to cast a vote. Although most of them were not in possession of the required identity documents or voter cards, temporary arrangements were made for many of them. But the ability to vote and the new government now in power have not changed their lives and circumstances at all. Subsequent elections have come and gone, but if anything, the Karretjie People are worse off now than they were before the first. They have, through a series of historical external interventions, progressively been denied access to the resources of the area, most significantly the main resource, land. The process that was set in motion with the arrival in the area of the first white farmers in the 1700s has produced a hierarchical and rigidly ordered social system. The process has furthermore produced in most of the residents in the area (not least of whom, the Karretjie People themselves) a collective, conditioned mind-set of tacit acceptance of the status quo—a status quo of inequity and intolerance, and a monopoly of resources that transcends the statutory transformations brought about by the election of a democratic government. The advent and expansion of game farming in the Merino-wool farming districts frequented by the Karretjie People, increased professional sheep-shearing competition and general changes in the agricultural economy of the area, have resulted in dwindling shearing opportunities. This has further forced the Karretjie People into a downward spiral of poverty. Sooner or later they have to sell their donkeys and *karretjie*, hence lose their mobility and have even less access to shearing assignments. They end up in informal settle-

ments or squatting on the fringes of the towns in their region, scrounging to keep life and limb together.

Although in going about their daily activities the Karretjie People are cheerful, humorous, and ostensibly even optimistic, they are realistically aware of the hardships of their way of life and only too mindful of how little the future seems to hold for them. As marginal people, they not only occupy the lowest rung of the socioeconomic ladder, but in a wider community of divisions and opposition, the particular sociocultural, political, and economic niche in which they find themselves is now even more precarious and vulnerable in the extreme. The hardship and uncertainty tends to translate into feelings of helplessness and frustration, which are regularly manifested in weekend-long bouts of drinking and fighting that, on some occasions, resulted in the deaths of family members and friends.

## 20 GENDER ISSUES

The pattern of gender roles and relations amongst the Karretjie People have been transmitted and enculturated over generations. This is a matter both of a conditioned continuation of an inherent value system and practical considerations. The foraging Xam San, forbears of the Karretjie People, roamed the Great Karoo for centuries, the men hunting the game and fending off intruders or aggressors, the women collecting wild roots and berries and taking responsibility for the small children and domestic chores. When the Xam San themselves became the hunted with the arrival of European farmers, many of them became “tame Bushmen” on the farms. The physically stronger males became farmhands learning the requisite skills, including shearing when Merino sheep were introduced into the area. The females were employed as domestic help in the homestead. The descendants of these people retained their mobility, first on foot, then by means of pack animals and finally with the donkey cart. They adapted to the niche livelihood of becoming a floating community of shearers providing this specialist service in a burgeoning wool-farming economy. The male, as shearer was, and still is, the provider for the Karretjie domestic unit and he controls the finances. The female, as mother, generally stayed at their shelter tending to their offspring and domestic matters. Although all the Karretjie People are of small stature, the males are physically stronger and even should the possibility of females, as shearers, have been contemplated by the farmers and the Karretjie People themselves, they would have been hard put to master and sustain such strenuous activity over continuous 12-hour working days.

Although Karretjie children play together at an early age, their play and other activities separate as they become older. They learn by observing and imitating their parents' roles and responsibilities. The boys make slingshots to shoot birds, help with the donkeys and aspire to become shearers as soon as they are old, and strong, enough—in fact they join their fathers in the shearing shed at an early age and are gradually initiated into shearing. The girls make and play with dolls and help their mothers with domestic duties, fetch water and tend to those children even smaller than themselves.

So the Karretjie male as main wage-earner is also the decision-maker e.g. in terms of when to break camp, what the next destination is to be, etc. This also translates into the domestic context and husband/wife interpersonal relations. Despite the fact that women play a significant role in the family and domestic organization and situation, they remain in a sub-

ordinate position in every respect—even to the extent that a husband would reprimand, castigate, and even manhandle his partner or wife if, according to him, she has been disobedient. This is of course, exacerbated when there is drinking involved over weekends.

All of this flies in the face of the fact that individual rights and particularly discrimination on the grounds of gender are protected in the Bill of Rights of the South African constitution. The circumstances of the Karretjie People are such though, that much as the benefits of citizenship are not accorded them, so too are they often essentially beyond the reach of the cornerstones of democracy.

# KEIYO

**PRONUNCIATION:** KAY-oh

**ALTERNATE NAMES:** Kalenjin

**LOCATION:** Kenya

**POPULATION:** 110,000

**LANGUAGE:** Dialect of Kalenjin; Swahili; English

**RELIGION:** Christianity (Africa Inland Church [AIC], the Church of the Province of Kenya [CPK], Roman Catholic Church); Islam

**RELATED ARTICLES:** Vol. 1: Kalenjin; Kenyans

## 1 INTRODUCTION

The Keiyo live in the Republic of Kenya, East Africa. One of Kenya's lesser-known groups, they were known earlier as Elgeyo ("El-gay-o"), a Maasai term. The Keiyo are part of a larger ethnic grouping of eight culturally and linguistically related tribes known as the Kalenjin. The length of time the Keiyo and other Kalenjin groups have been living in the Western Highlands and the Rift Valley, their homeland, is open for debate. Some scholars claim that these peoples have only been living in western Kenya for about 400 years, while others argue that such groups have occupied these parts for 2,000 years or more.

## 2 LOCATION AND HOMELAND

Figures released in January 2007 estimated the population of Kenya to be 36,913,721. Of that 12% are thought to be Kalenjin, approximately 4.4 million people. Collectively the Kalenjin comprise Kenya's fourth-largest ethnic group, with the Keiyo numbering about 144,000 people.

The Keiyo live in the western section of Africa's Great Rift Valley in an administrative district bearing the same name—Keiyo District. Until recently, most Keiyo lived along the slopes of the Elgeyo Escarpment, a spectacular geological feature that drops in elevation from 2,590 m (8,500 ft) in the highlands to 1,070 m (3,500 ft) in the Kerio River Valley. Shortly before, and continuing after, the end of British colonial rule in 1963, many Keiyo moved up into the highlands of the fertile Uasin Gishu plateau to take up farming of cash crops.

## 3 LANGUAGE

As their first language, or mother tongue, the Keiyo speak a dialect of Kalenjin, a language of the southern section of the Nilotic branch, which is part of the Chari-Nile language group of Africa. There are three Kalenjin dialect clusters: one consists of the Sabaot, along with the Sebei and Kony; another is made up of Pokot, northern Marakwet, and northern Tugen; and the third includes the Nandi, Kipsigis, Keiyo, Terik, and southern Tugen and Marakwet. Although these dialects are all supposedly mutually intelligible, speakers of one dialect often have difficulty understanding speakers of another. In addition to Kalenjin, most people speak Swahili and English, since both are official national languages and are taught in school, beginning with primary school education. Today it is only very old persons who do not speak at least some English.

Most young people today have a Western or Biblical name (for example, Mary, Rose, David, or Paul) as well as a traditional Kalenjin name (for example, Kipkemoi, Kipchoge, Che-

mutai, or Jebet). Traditionally, names for males begin with the prefix "Ki," while those for females begin with "Che" or "Je." In addition, traditional names often refer to some circumstance when the child was born. For example: Kipchoge (a boy born near the granary), Kibet (a boy born during the day), Cherutich (a girl born as the cows were coming back home), and Jepkemoi (a girl born at night).

## 4 FOLKLORE

Oral tradition was, and still is to some degree, very important among the Keiyo. Prior to the introduction of writing, folk tales served to convey a sense of cultural history. Keiyo oral tradition has four main genres: narratives (stories), songs, proverbs, and riddles. Stories usually contain both people and animals, and certain animals have acquired attributes that are concrete representations of character traits, e.g., hare is a trickster figure whose cleverness can be self-defeating; lion is courageous and wise; and hyena is greedy and destructive. Songs accompany both work and play, as well as ceremonial occasions such as births, initiations, and weddings. Proverbs convey important messages in very concise ways and are often used when elders settle disputes or advise younger persons. Riddles involve word play and are especially popular with children.

## 5 RELIGION

Traditional Keiyo religion is based upon a concept of a supreme god, *Asis* ("Ah-sees"), who is represented in the form of the sun, although this is not God himself. Beneath *Asis* is *Elat* ("Ay-lot"), who controls thunder and lightning. Spirits of the dead, *oyik* ("oh-yeek"), can also intervene in the affairs of humans, and sacrifices of meat and/or beer, *koros* ("chorus"), can be made to placate them. Diviners, *orkoik* ("or-coe-eek"), have magical powers and help in appeals for rain or to end floods.

Currently, nearly everyone professes membership in some organized religion—either Christianity or Islam. Major Christian sects include the Africa Inland Church (AIC), the Church of the Province of Kenya (CPK), and the Roman Catholic Church. Muslims are relatively few in number among the Keiyo. Generally speaking, today only older people can recall details of traditional religious beliefs.

## 6 MAJOR HOLIDAYS

The major holidays observed by the Keiyo are mostly those associated with Christianity (i.e., Christmas and Easter), and national holidays such as Jamhuri (Republic) Day, Madaraka (Responsibility) Day, Moi (the current president) Day, and Kenyatta (the first president) Day. At Christmas it is common for people who still live in traditional mud-walled houses with thatched roofs to give the outer walls a new coat of clay white-wash and paint them with holiday greetings (such as "Merry Christmas" and "Happy New Year").

There are three month-long school holidays in April, August, and December. The first two coincide with peak periods in the agricultural cycle and allow children of various ages to assist their families during these busy times. The December holiday corresponds with both Christmas and the traditional initiation ceremonies, *tumdo* ("toom-doe").

## 7 RITES OF PASSAGE

Age is a fundamental organizing principle in Keiyo society, as it is across much of Africa. Thus, the status occupied and the roles performed by a Keiyo individual are still to a large degree ordained by age. Shortly after a child is born, it is given a name. Friends and family are invited for a ceremony called *chai ya mtoto* (“cha-eye ya m toto”), meaning literally, “the child’s tea.” This designation derives from the slang use of the KiSwahili word for tea, *chai* (“cha-eye”), to mean payment, often in the form of bribes paid to government officials. Guests give presents and contribute money to the parents to help defer the costs of the party. In the past, the two lower incisor teeth of both boys and girls would be removed at a later age both for cosmetic reasons and to toughen the children for later initiation rites.

For both males and females, becoming an adult involves undergoing an initiation ceremony. Traditionally, these were held about every seven years. Everyone undergoing initiation, or *tumdo* (“toom-doe”), becomes a member of a named age-set, or *ipinda* (“e-pin-da”). Age-sets were traditionally “open” for about 15 years. There are eight male age-sets and they are cyclical, repeating approximately every 100 years. The *sakobei* (“sah-coe-bay”) ceremony marked the closing of an age-set about every 15 years, and the elevation of a new age-set to the warrior age-grade. These age-sets and the age-grades (e.g., warrior, junior elder, senior elder) through which individuals passed provided part of the basis for traditional social structure.

After circumcision, male youths were secluded for lengthy periods of time during which they were instructed in the skills necessary for adulthood. Afterwards, they began a phase of warriorhood during which they acted as the military force of the tribe. Elders provided guidance and wisdom. Today age-sets have lost their military function, but this principle still creates bonds between men who are members of the same set, and feelings of respect for those who are older. Female age-sets have long since lost much of their importance. Among the Keiyo today, females are known by the age-set of their husband, and very few women can even recall the names of the female age-sets.

In the past, only people who had borne children would be buried after death; the others would be taken out to the bush and left to be eaten by hyenas. Today at every person’s death, he or she is buried, but not in a cemetery as in the United States. People are returned to their farm, or *shamba* (“sha-mbaa”), for burial. There is usually no grave marker, but invariably family members, friends, and neighbors know where people are laid to rest.

## 8 INTERPERSONAL RELATIONS

*Chamge* (“chaam-gay”) or *chamuge* (“chaa-moo-gay”) is the standard greeting among the Keiyo. If the encounter is face-to-face, the spoken greeting is almost always accompanied by a hearty handshake, and people often clasp their own right elbow with their left hand. The response is the same—*chamge*, sometimes repeated several times. It may be emphasized with *mis-ing* (“me-sing”), which can mean either “very much” or “close friend,” depending upon the context. As a sign of respect, a younger person will greet someone of their grandparents’ generation by saying, *chamge kogo* (grandmother—“chaam-gay coe-go”) or *chamge kugo* (grandfather—“chaam-gay coo-go”).

Americans are likely to find several aspects of Keiyo body language to be unusual. First, holding hands after greeting is very common for people of the same sex. Even when walking, these people may hold hands or lock little fingers. But it is readily apparent that there is absolutely no sexual connotation to this behavior. Furthermore, people of opposite sexes are strongly discouraged from these and other public displays of affection. Second, in their conversations Keiyo do not point out objects or people with their fingers. Instead, they point by turning their head in the proper direction and then puckering their lips briefly.

Taking leave of someone is accompanied by the farewell, *sait sere* (“sah-eat sarey”—meaning literally, “blessing time”), and hearty handshakes. Often people will walk with their visitor(s) a distance in order to continue the conversation and to give their friend(s) “a push.” Once again, these people often hold hands, especially if they are members of the same sex.

In the past, dating and courtship were almost entirely matters of family concern. Clans were exogamous, i.e., one had to marry outside of one’s own (and father’s) clan. Today young men and women are more free to exercise their own free will, especially those who live away from home at boarding schools. They will meet and socialize at dances in town discos and in cafes called *hoteli* (“hotel-e”) in KiSwahili. Still, when a young man decides on a wife, he and his father’s family must gather together a suitable bride-price payment (often erroneously referred to as a “dowry”) to be given to the bride’s family. In the past this consisted almost entirely of livestock, but today it is

becoming more and more common to use money in place of, or in addition to, livestock.

## 9 LIVING CONDITIONS

Most Keiyo live on relatively small family farms averaging less than 2 hectares (5 acres). They grow many different staple food crops such as corn, beans, millet, sorghum, kale, and cowpeas, as well as a variety of cash crops like coffee (small amounts), pyrethrum (related to the chrysanthemum and used in manufacture of insecticides), potatoes, and tomatoes. Most people also keep livestock in the form of cattle, sheep, and goats, and a few donkeys that are used for transport.

Before the British arrived, the Keiyo lived on the face of the Elgeyo Escarpment, while grazing their cattle in the forests at the top of the escarpment and cultivating on the escarpment shelf around their homes. Disease-resistant goats would be sent to the valley during the day, and hunting would also be carried out there. Residence on the Elgeyo Escarpment enabled productive use of multiple ecological zones and protected the Keiyo from diseases like malaria in the valley and, in the past, raids by Maasai and Nandi warriors on the Uasin Gishu plateau. Furthermore, the climate on the escarpment shelf is very moderate. The highlands can become extremely wet and cool during the rainy season, while the valley becomes devastatingly hot in the dry season. However, the escarpment provides relief from both extremes for most of the year.

Traditionally, Keiyo houses were round, with walls constructed of bent saplings anchored to larger posts and covered with a mixture of mud and cow dung, while roofs were thatched with local grasses. While these kinds of houses are still common, there is a growing trend towards the construction of square or rectangular houses that are built with timber walls and roofs of corrugated sheet metal, *mabati* (“ma-baatee”).

Most Keiyo people still do not have electricity or indoor plumbing in their houses. Radios and/or cassette players; kerosene lamps and stoves; charcoal stoves; aluminum cooking pots; plastic dishes, plates, and cups; and bicycles are the most common consumer items. Those few people who do not have electricity but who do have televisions use car batteries for power.

## 10 FAMILY LIFE

Traditionally, like in most African societies, the family was central in the daily life of the Keiyo people. But by family what was meant was the extended family, not the nuclear family in the Western sense. Keiyo residence patterns were, and still are, largely patrilocal. That is, typically after marriage a man brings his wife to live with him in, or very near to, his father's homestead. Marriage of one man to multiple wives (polygyny) was and is permitted, although most men cannot afford the expense of such unions because of the burden of bride-price. Regardless of the type of marriage, children were traditionally seen as a blessing from God and, as a result of this, until very recently Kenya had the highest population growth rate in the world.

Slowly these patterns are changing as monogamous marriages now prevail and nuclear families are becoming more frequent. Moreover, younger people are now expressing a desire to have fewer children when they get married. This is due to the increasing expense of having large numbers of children who not only must be fed but also educated to cope in today's

world. To some degree, young women are also changing their aspirations to go beyond motherhood alone and include a career as well.

## 11 CLOTHING

The Keiyo were not renowned for their traditional clothing, which essentially consisted of animal skins, either domesticated or wild. Earrings were common for both sexes in the past, including heavy brass coils which tended to make the earlobe stretch downward almost to the shoulder. This is generally not practiced today, when the Western-style dress of most Keiyo, even in rural areas, is scarcely different from that of people in nearby towns. The buying of secondhand clothes is quite common. Thus, men wear trousers and shirts, usually along with a suit jacket or sport coat, while women wear skirts and blouses, dresses, and/or *khangas* (“khan-gaaz”)—locally made commercial textiles that are used as wraps (one for the top and one for the bottom). Youths of both sexes covet tee-shirts with logos, especially those of American sports teams or bearing the likeness of popular American entertainers.

## 12 FOOD

The staple food of the Keiyo is *ugali* (“oo-golly”). This is a cake-like, starchy food that is made from white cornmeal mixed with boiling water and stirred vigorously while cooking. It is eaten with the hands and is often served with cooked green vegetables such as kale, called *sukuma wiki* (“sue-cooma weeky”) in KiSwahili, and meaning literally, “to push the week.” Less frequently it is served with roasted goat meat, beef, or chicken. Before the introduction and widespread diffusion of corn in recent times, millet and sorghum—indigenous African grains—were staple cereals. All of these grains were, and still are, used to make a very thick beer that has a relatively low alcohol content. Another popular Keiyo beverage is *mursik* (“more-seek”). This consists of fermented whole milk that has been stored in a special gourd called a *sotet* (pronounced just as it appears, with the accent on the second syllable) that has been cleaned using a burning stick. The result is that the milk is infused with tiny bits of charcoal.

Lunch and dinner are the big meals of the day. Breakfast usually consists of tea (made with a lot of milk and sugar) and any leftovers from the previous night's meal, or perhaps some store-bought bread. Mealtimes, as well as the habit of tea-drinking, were adopted from the British colonial period. Lunch is eaten at 1:00 pm rather than at noon, and dinner is often eaten later in the evening at 8:00 or 9:00 pm. In addition to bread, people routinely buy foodstuffs such as sugar, tea leaves, cooking fat, sodas (most often Orange Fanta and Coca-Cola), and other items they do not produce themselves.

## 13 EDUCATION

Traditionally, Keiyo education was provided during the seclusion of initiates following circumcision. This transitional phase of the rite of passage provided an opportunity to instill in these young men and women all the requisite knowledge necessary to be a functioning and productive adult member of their society. It was, in essence, a “crash” course in the intricacies of their own culture. Nowadays, after initiation young men and women are still secluded but for briefer periods of time (one month as compared with three months in the past). The timing

of the December school holiday coincides with the practice of initiation and seclusion.

In 2003 free primary school education became universal in Kenya. "Free" must be qualified however, because parents must provide their children with uniforms, books, pens and pencils, and paper, as well as contribute to frequent fund raising activities for their children's school(s). This constitutes a tremendous financial burden for families in a country where the average per capita income is about \$360 per year. Post-primary school education is relatively expensive, even at the cheaper secondary schools, and entry is competitive. Tuition at the more prestigious high schools, where students must board, is very expensive. Typically, parents rely on contributions from a wide range of family, neighbors, and friends to meet the high tuition costs. Tuition at Kenya's universities is rather nominal, but the selection process is grueling and relatively few students who want to attend can do so.

#### 14 CULTURAL HERITAGE

Traditional music and dance had many different functions. Songs would accompany many work-related activities, including, for men, herding livestock and digging the fields, and, for women, grinding corn, washing clothes, and putting babies to sleep (with lullabies). Music would also be an integral part of ceremonial occasions such as births, initiations, and weddings. Dances to punctuate these occasions would be performed while wearing ankle bells and would be accompanied by traditional instruments such as flutes, horns, and drums. Oral stories, proverbs, and riddles all convey important messages to be passed from generation to generation.

#### 15 WORK

In Keiyo society, much of the work, at least traditionally speaking, is divided along gender lines. Men are expected to do the heavy work of initially clearing the fields that are to be used for planting, as well as turning over the soil. Women take over the bulk of the farming work from there on, including planting, several weeding, harvesting (although here men tend to pitch in), and processing crops. Among the Keiyo, tradition holds that men are supposedly more concerned with herding livestock than with other pursuits. Recent evidence suggests that women, children (especially boys), and even older people are equally as likely to be engaged in animal care as men, especially in those situations where men are likely to be away from home engaged in wage work.

In addition to all of their other tasks, women are expected to perform nearly all of the domestic work that is involved in keeping a household running. In doing so, they often enlist the help of young girls, who are expected to assist their mothers and other female relatives in chores such as fetching water from wells or streams, and collecting the firewood that most families use for cooking. Young boys will sometimes perform these same tasks but more often do things such as grazing and/or watering livestock.

#### 16 SPORTS

Soccer is a major sports interest of the Keiyo as it is with other Kenyans. Nonetheless, running (especially middle and longer distances) is the sport that has made the Keiyo and other Kalenjin peoples famous in world athletic circles. St. Patrick's

High School in Iten has turned out a phenomenal number of world-class runners.

#### 17 ENTERTAINMENT AND RECREATION

In rural areas, the radio is still the main form of entertainment. KBC (Kenya Broadcasting Corporation) programs are attentively monitored, as are shortwave radio transmissions by the BBC (British Broadcasting Corporation) and the VOA (Voice of America). A relatively small number of people have televisions, and the only programming available is from KBC. In towns and trading centers, video parlors are becoming common, and action films (e.g., those starring Chuck Norris, Sylvester Stallone, Bruce and Brandon Lee) are especially popular.

#### 18 FOLK ART, CRAFTS, AND HOBBIES

In other parts of Kenya, the famous sisal bags (called *kiondo* in Kiswahili and pronounced "key-on-doe") are manufactured and marketed worldwide. Although the Keiyo are not well known for their handicrafts, women do make and locally sell decorated calabashes (*sotet* in Kalenjin and pronounced just as it appears) from gourds. These are rubbed with oil and adorned with small colored beads and are essentially the same type of calabashes that are used for storing fermented milk.

#### 19 SOCIAL PROBLEMS

Tobacco usage and alcohol consumption continue to be common among men but not women. For decades the Kenyan government has banned the brewing and distillation of traditional homemade alcoholic beverages, including *busaa* ("boosaah"), a beer made from fried, fermented corn and millet, and *chang'aa* ("chaan-gah"), a liquor distilled from *busaa*. Nevertheless, these beverages continue to be popular with people, especially men, and provide some individuals, mostly women, with supplementary income. *Chang'aa* especially can be lethal since there is no way to control the high alcohol content (unlike that of *busaa* which tends to have a very low alcohol content), and there are many opportunities for contamination. It is not uncommon to read stories of men dying after attending drinking parties in the Kenyan daily newspapers.

Considerable variation in levels of economic and social development exists in Keiyo District. The Kenyan government estimates the percentage of people living in absolute poverty is 47.82%, or about 75,000 persons. For various reasons, some of which are geographic in nature, there is much more poverty in the valley and much less on the escarpment and even less in the highlands. Considerable food insecurity exists especially in the lower areas of Keiyo, where people are being supported through famine relief. Cattle-raiding is also a major security concern in the valley area of the district. Paved (tarmac) roads are still in short supply and during the rainy season the earth roads become virtually impassable. This problem is true in all three regions of the district.

As is true all over Africa and Kenya, HIV/AIDS is arguably the major issue confronting Keiyo today. Fortunately, prevalence rates in the country as a whole have dropped dramatically from 14% in 2002 to 5.1% in 2008. Moreover the HIV prevalence rate in urban areas is much higher, at 9.6% whereas in rural areas it is 4.6%. Most Keiyo live in rural areas. Also, a link between male circumcision and susceptibility to HIV infection has been posited, whereby circumcision significantly

decreases the risk of HIV infection. One study among agricultural employees in Rift Valley Province found that Luo men, from a tribe that does not circumcise, had a significantly higher HIV prevalence (24.8%) than Kalenjin men (4.5%).

## 20 GENDER ISSUES

Traditionally Keiyo culture, like most others in Africa, is heavily divided on gender lines. Along with age gender is a fundamental organizing principle in African societies. In the past leadership was always the prerogative of adult males but recently this has begun to change. With the growth of multiparty politics Kenyan women have increasingly entered the political sphere. However, unlike other ethnic groups, such as Kikuyu or Kamba, Keiyo women have not participated in politics to the same degree. One exception is Tabitha Seii, who, since 1992, has repeatedly and bravely challenged the strongman of Keiyo politics, Nicholas Biwott. Although Mrs. Seii, a former headmistress, has never succeeded, she was appointed Kenya's High Commissioner to South Africa in 2003. In 2007 she resigned in protest and joined the opposition Orange Democratic Movement (ODM). Mrs. Seii was also a founding member of the Education Center for Women in Democracy (ECWD), a group whose mission is to increase the presence of women in leadership and decision-making positions

As part of traditional rites of passage, circumcision of both boys and girls was practiced. In the academic world the female variant has come to be known female genital mutilation (FGM) and is a very controversial subject. Although technically illegal in Kenya since 1990 it is still widely practiced by members of many ethnic groups. Among the Kalenjin its prevalence rate has recently been estimated at 47% compared with rates as high as 97% for the Somali. In several areas of Kenya, some especially progressive women have recently been promoting alternatives to traditional circumcision and instead advocating what has come to be known as "circumcision with words." An example from Keiyo District is the Tumndo Ne Leel Support Group which started in 2003 as a community based organization. One of the unique features of this approach is that it retains the very important ceremonial and symbolic role of a rite of passage while doing away with the act of "cutting." In the process this community based organization addresses the larger issue of female empowerment in this traditionally male dominated society.

# KENYANS

**PRONUNCIATION:** KEN-yuhns

**LOCATION:** Kenya

**POPULATION:** 36.9 million

**LANGUAGE:** Kiswahili; English; regional ethnic languages

**RELIGION:** Christianity; Muslim; traditional indigenous beliefs; independent Christian churches; small numbers of Hindus, Sikhs, Parsees, Bahais, followers of Judaism

**RELATED ARTICLES:** Vol. 1: Embu; Gikuyu; Gusii; Kalenjin; Keiyo; Luhya; Maasai; Oromos

## <sup>1</sup> INTRODUCTION

Kenya is a multi-racial society of about 36.9 million people, the overwhelming majority comprising indigenous ethnic groups with the rest being Asian, Arab, and European. Arabs have, for many centuries, had historical connections with coastal Kenya, where the dominant language is Kiswahili and the major religion is Islam. Asians, mainly of Indian descent, who are significant in the professional and commercial sectors, were originally railway construction workers taken from India to Kenya by the British colonialists about 100 years ago. Europeans are primarily of British origin, having come to Kenya in search of commercial and agricultural opportunities. The “White Highlands” commonly included large, commercial farms so that indigenous Africans were displaced from their own extremely fertile land. The Land and Freedom Movement (Mau Mau) contributed, through armed resistance in the 1950s, to eventual independence from Britain. Under the leadership of President Jomo Kenyatta, Kenya became a republic in 1964, a year after winning its independence. Kenya currently is a multi-party democracy. Its government consists of a president and a legislative assembly composed of 12 members nominated by the president, 210 elected members, the attorney general, and a speaker. Kenya is divided into eight provinces under the authority of the president.

## <sup>2</sup> LOCATION AND HOMELAND

The Republic of Kenya, which is 583,000 sq km, is located in East Africa on and near the Equator. The Indian Ocean is on its east coast; the neighboring countries of Ethiopia and Sudan are to the north; Somalia is to the northeast; Tanzania is to the south; and Uganda is to the west. There is considerable landform variation, ranging from the permanent snow of Mts. Kenya and Kilimanjaro, to palm-treed, tropical shores. Some areas are desert, but most land is forested or composed of rolling grassland. The major geological feature, the Rift Valley, stretches from Zimbabwe to the south to the Red Sea to the north, and is 50 mi wide and 9000 ft above sea level in some places. Numerous lakes are found along its base. Kenya's Lake Victoria is the second largest fresh water lake in the world.

Because of altitude extremes and seasonal rainfall, Kenya has regional climatic variation. Typically, there are two rainy seasons, with highest rainfall in April and lowest rainfall in January. Evenings can become quite chilly in the Central Highlands, and the coastal areas are characteristically hot and humid. Kenya's capital, Nairobi, although close to the Equator, is almost 1700 m above sea level, making it comfortably warm or cool most of the year.

Location and geological and climatic conditions combine to make Kenya a diverse and attractive place for everyday life as well as for visiting. Tourism is a major industry. Large numbers of international visitors come to witness spectacular game parks, the beautiful Rift Valley, and elaborate ocean resorts. One unforgettable sight is that of Lake Nakuru, covered with an unimaginable number of pink flamingoes. For even more excitement, one can visit the Masai Mara National Reserve with its varied wild life including thousands of wildebeest running over the land.

## <sup>3</sup> LANGUAGE

The official national languages of Kenya are Kiswahili and English. English is spoken in government, courts, universities, and secondary schools. National mass media such as newspapers and magazines, as well as radio and television, are overwhelmingly in English. Nevertheless, Kiswahili is widely spoken in everyday life as a lingua franca (common language), especially in commerce and by those who do not know English. It is the dominant language along the coast, particularly in the major port city of Mombasa. Nowadays, Kiswahili is usually taught along with English in schools throughout Kenya. Regional ethnic languages spoken at home are typically used for elementary school teaching along with English and Kiswahili. Major ethnic languages in Kenya include Kikuyu, Luo, Kiluyia, Kikamba, Samburu, and Masai, although there are numerous others. Major Asian languages are Hindi and Gujarati. A pronounced linguistic characteristic of Kenya is the multilingualism of its residents.

## <sup>4</sup> FOLKLORE

Prior to the modern era and before the introduction of literacy in English and Kiswahili, indigenous ethnic groups had developed a sophisticated folklore that embodied their ethnic history, as well as wisdom concerning everyday mysteries and dilemmas. In legends, the movements of people throughout East Africa, from river and lake to highland and plain, and the exploits of past leaders, were recounted in oratory. Riddles, proverbs, and sayings are still richly represented in daily speech to indicate morality and proper behavior for young and old alike. Puzzling questions such as, “Why do cats like to stay by the fireplace? Why do hyenas limp? How did circumcision come to be practiced? What is the origin of death?” are answered in folktales. Proverbs contain much wisdom, as the following examples from the Luo attest: “The eye you have treated will look at you contemptuously”; “A cowardly hyena lives for many years”; “The swimmer who races alone, praises the winner.” Riddles are also commonly heard. For example: “A lake with reeds all around? The eye.” Another is: “A snake that breathes out smoke? A train.”

The Gikuyu people account for the origins of their customary way of life as farmers and herders in the following way. The first tribal parents, Gikuyu and Mumbi, begot their own children, who then begot children who dispersed around Mt. Kenya. These children began diverse economic activities. The story goes as follows: One grandchild's knee started swelling one day. When he opened his knee, three little boys emerged, who became his sons. In time, one of them became a hunter; one enjoyed collecting fruits and plants; and the third made fire for cooking. In time, the hunter domesticated some animals, and the collector grew some crops such as bananas, cas-

sava, and sweet potatoes. The third son applied fire to stones and metals and became a blacksmith. In this way, Gikuyu culture originated.

Traditionally, word games were commonly played by children who spent a great deal of time in the evenings listening to grandparents telling stories and legends. Tongue twisters such as the following might be heard among the Gikuyu: *Kaanaka Nikora kona kora kora, nako kora kona kaanaka Nikora kora* (refers to a child and a tadpole scaring each other when they come upon the other suddenly).

Coastal Kenya, particularly the city of Mombasa, had a rich Kiswahili folklore tradition, especially tales, legends, and stories of Islamic origin. The 19th century had a number of poets renowned for their popular Kiswahili poetry. Topics included advice about not being tempted by present fortune, in that misfortune could come at any time and the inability to explain strange events, such as a hyena and a goat walking arm in arm. There is also praise as well as scorn for public figures.

Although indigenous folklore is still plentiful throughout Kenya, it has been supplemented with English literary traditions in schools and universities. Modern movies, television, and radio, with their global subject matters, are popular forms of entertainment among young Kenyans. Nevertheless, radio and television regularly feature traditional folklore as part of their programming.

## 5 RELIGION

Kenya's religious heritage mirrors its ethnic history described previously. The majority religion is Christianity, with about 37% Protestant (including Quakers) and 25% Roman Catholic; about 4% are Muslim. The remainder practice traditional indigenous beliefs or are members of independent Christian churches that have broken away from Protestant and Catholic denominations, often over indigenous beliefs that are found incompatible with European dogma. Smaller numbers of Kenyans are Hindus, Sikhs, Parsees, Bahais, and followers of Judaism. Traditional religions generally believed in a high God, spiritual forces such as venerated ancestors, and malevolent forces such as witches. The creator God was known by different names, but was everywhere thought to be benevolent and forgiving. For example, the Abaluyia people believed that God was known as Were when he created Heaven first, then the earth. He created mankind so that the sun could have someone on whom to shine. Animals, plants, and birds were created by Were as food for mankind.

The first independent church in Kenya, and currently one of Kenya's largest, was called the Nomiya Luo Church. Its founder, Johana Owalo, was one of the early converts to Christianity around the year 1900. In 1906, he was baptized a Roman Catholic. In 1907, he had a vision and was taken to Heaven by the Angel Gabriel. Although he could enter Heaven, Europeans and Asians could not, suggesting that he was rebelling against colonialism. The Pope had also been banished because he permitted adoration of Mary and the saints. After this and other instructional visions, he left Catholicism for Anglicanism. Subsequent to this, he learned to speak Arabic and converted to the Islamic faith. In time, he began to teach that mission churches were contrary to African traditions and began to attract many followers. His beliefs are a mixture of Anglican and Catholic practices; in addition, they include a preference for traditional marital customs such as inheritance of widows by their deceased brothers, which was accepted in the Old Testament but not by Christians.

Missionary churches, while still present, are now largely in the control of a Kenyan hierarchy. For example, there is a Kenyan Roman Catholic Cardinal and a Church Province of Kenya (Anglican) Archbishop, each with numerous subordinate Kenyan bishops. Kenyan languages, music, and dance are integral aspects of religious ritual in these and other Christian communities.

## 6 MAJOR HOLIDAYS

Kenya celebrates as public holidays the religious holidays of Good Friday, Easter Monday, Christmas Day, and the Muslim festival *Idd-ul-fitr* (which depends on the sighting of the new moon after Ramadan). Secular holidays include New Year's Day and Labor Day (May 1). The most significant secular holidays unique to Kenya are related to their colonial struggle and subsequent independence. *Madaraka* (June 1) celebrates internal self government day, and independence day is celebrated on December 12. Jomo Kenyatta, a major leader during the struggle for independence, was detained on 20 October 1952 for a period of seven years by the colonial government; Kenyatta Day (October 20) is celebrated annually in honor of Kenya's first president and patriot. During all holidays in Kenya, schools and businesses are closed. Many residents of cities return home to rural areas for family gatherings and visiting.

Celebrations include festivities such as eating, drinking, and dancing in homes, bars, and night clubs. On such occasions, *Nyama Choma* (roasted meat) is a common treat. Goat or beef are consumed, although goat is considered the greater delicacy. On secular holidays, the Kenyan military is on parade, and politicians give speeches in public and on radio and television. Newspapers typically carry honorific testimonials to past and present political leaders.

## 7 RITES OF PASSAGE

Kenyans generally are raised in the context of a strong family and community ideology. Birth is typically a welcome event in all the ethnic groups of Kenya. Most births take place in hospitals or small rural clinics under the care of a midwife. Infants are commonly breast-fed and carried on the back or side in a sling of cloth. Mothers are assisted in the care of their infants and toddlers by young caretakers, who are often older siblings. For this reason, a special bond prevails between a caretaker and his “follower” in the birth order. If no girl is available, a boy can also be a caretaker. Parents desire to have both boys and girls. Boys are valued because in most societies in Kenya descent is traced through males (patrilineal), who then inherit land. The families of girls receive gifts from their future in-laws on the occasion of marriage into their family, a custom known as bride wealth. Although women may now own land, bride wealth is still common and a sign of prestige for highly educated women.

Puberty is marked in many societies by initiation rites such as male circumcision or female clitoridectomy. Circumcision serves to tie together young males into a common social group who will bond for life as they make the transition from childhood to manhood. Among the Bukusu, for example, circumcision ceremonies are held every four years. Young initiates of 12 or 13 years of age are carried on the shoulders of their male and female relatives in celebration of their new public identity. It is considered shameful to express pain while being publicly circumcised. Bukusu men from all walks of life and from all over the world return to Bukusu land to witness the circumcision of their relatives. There are, however, many societies in Kenya that do not circumcise such as the Luo, Kenya’s second largest ethnic group. Most ethnic groups do not practice clitoridectomy, although it is found among the Gusii, Pokot, Kikuyu, and a few other societies. Unlike circumcision, this practice is very controversial and the subject of considerable national and international debate, even when it is undertaken with modern medical precautions. Many folk explanations for its existence, such as the control of female sexuality or the enhancement of female solidarity, are now largely discredited in contemporary Kenya.

Marriage and parenthood are still very significant events in the life cycle. Kenyans of all ethnic groups live out their lives with a strong sense of identity to their families and to their ethnic groups. Land is a strong symbol in this ideology, so that regardless of where a person lives in Kenya, there is a strong pull to return “home” whenever possible. Burial of a person of any age is a matter for not only the individual and his family and church, but not uncommonly for the person’s ethnic group as well. The continued importance of being buried in one’s homeland came to a dramatic conclusion in a much publicized case in Kenya known as the Otieno affair. Mr. Otieno, a Luo lawyer, had been married to a Kikuyu woman. They lived in Nairo-

bi. Mrs. Otieno, on the occasion of his death, ordered that her husband be buried in that city. Members of Mr. Otieno’s clan, however, insisted that he be buried in the Western Province, the homeland of his clan. This would insure that he would be buried properly in communal clan land, according to rituals necessary to the respectful repose of his body and spirit. Public cemeteries with individual grave sites are rare in Kenya. After many months of agonizing public debate throughout Kenya by all social strata over individual rights vs. clan rights, it was determined in the High Court of Kenya that he would be buried in the clan lands.

## 8 INTERPERSONAL RELATIONS

Kenyans can be characterized as very gregarious and very much involved in the social lives of their families, in such a way that “rugged individualism” is not valued. Ethnic groups contain very elaborate greeting patterns that are extended ritualistically and vigorously in rural areas. The simplest and most common Kiswahili greeting is *Jambo* (“hello”) to which a person replies likewise. *Jambo* or *Hujambo*, *Bwana* is said to a man (“You have nothing the matter, Sir?”) while a woman is addressed *Jambo, mama*. If addressing more than one person, the greeting would become *Hamjambo*. The reply to this is *Sijambo*, or *Hatujambo* if with others. These greetings are usually followed by additional salutations depending on social context, time of day, weather, and so forth.

Politicians frequently seek to mobilize Kenyans for development projects by encouraging a national slogan that has interpersonal content. The late President Kenyatta initiated *Harambee* (“Let’s pull together”) as a national symbol, around which individuals and communities mobilized to raise money for such things as the construction of schools, hospitals, and other public works. Individuals are sponsored to attend school or to obtain medical treatment or other necessities through harambee. Today, political leaders and other prominent people attend harambee functions and give large sums of money, which are sometimes announced in newspapers or on the radio. Many Kenyans carry on their person a harambee card on which to note the amount given by a donor. Some Kenyans do not approve of this custom, although it is difficult to say no since requests may be made in public. Also, it is thought that some unscrupulous politicians may misuse the system for their own gain as a way to purchase votes.

Young people have many opportunities for social interaction, especially in the cities. Rural areas tend to have dating patterns that are supervised by family members. Attendance at funerals, where several days of rituals culminate in feasting and dancing, is a favorite venue for courtship. Secondary schools and churches in the town and country also sponsor social events where teenagers may interact. Dating in Nairobi is more elaborate and may involve nightclubs, restaurants, movie theaters, malls, and drive-in movie theaters. One club known as “The Carnivore” is very popular among secondary and university students, especially those returning from schooling in Europe and America during their holidays. The Carnivore, which is located in a Nairobi suburb, is a disco but also has an attached restaurant frequented by tourists in pursuit of zebra, antelope, and other meats.

Various ethnic groups in Kenya have their own traditional dress. (Cory Langley)

## 9 LIVING CONDITIONS

The majority of Kenyans live in rural areas where electricity and running water are often not available, and roads are not paved. Homes are constructed of wattle and daub and thatch, although wealthier people do have access to more elaborately constructed homes of stone or brick and live near towns where electricity and running water are available. A growing number of Kenyans (about 25%) live in cities. Large cities in Kenya include Naivasha, Nakuru, Mombasa, and Kisumu, although Nairobi is by far the largest city. Nairobi originated at the time of the construction of the Uganda Railway in 1899. Population grew to 250,000 at the time of independence. By 1990, there were 1.5 million inhabitants residing in numerous estates and suburban areas around the city center, where businesses are clustered. In 2007 Nairobi boasted a total population of 2.8 million people in comparison to Mombasa, the second largest city with a total population of 828,500 people. A significant portion of Kenyans are middle class or richer and live in comfortable houses or even mansions in suburban areas. Nevertheless, Nairobi has many shanty towns such as Kibera or Mathare Valley, in which homes are little more than shacks built out of wood packing cases, flattened tin cans, cardboard, or other discarded items. Many who reside in these shanty towns are squatters with no ownership rights, so they can be forcibly evicted at a moment's notice. Many residents do pay rent to local landlords. Very small-scale commercial activities such as vegetable stalls, food stores, carpentry, and tailoring abound in these shanty towns. Numerous illegal activities such as ille-

gal brewing of beer, prostitution, and petty theft are common. Notwithstanding, fear of entry into the shanty towns is greatly exaggerated in more affluent parts of town where homes are fenced or walled in and typically have house guards known as *Askaris*. Their fear of robbery is not always without foundation, in that it appears to be rising in these suburban areas. The majority of residents in these shanty towns are, however, hard-working people who must face difficult obstacles to survive in situations of meager resources.

Health problems in shanty towns are generally more severe and include gastrointestinal problems and diarrhea for children, and for all people respiratory infections, occasionally cholera, typhoid, and typhus, and a growing problem of HIV infection. Most Kenyans experience periodic bouts with malaria, although this disease is generally contracted when visiting areas outside of Nairobi where malaria-carrying mosquitoes are common. Hospitals are both public and private throughout the country. No fees are charged for visits to public hospitals and for medication, although extended waiting is required and medicines are often not available.

Transportation in Nairobi includes a Kenya bus service for the city and its environs. The *matatu* (van) is an alternative form of transportation operated along bus routes and frequently in competition with them. These vans, like the buses, are severely overcrowded, especially during rush hour, so that passengers are oppressively cramped and may even get injured. The *matatu* driver employs a "tout," a teenager or young adult male, to yell out for passengers to board the van, to pack in as many as possible, and to collect the fare. These touts can be seen leaning from speeding *matatus* in a show of bravado matched only by their quick-witted tongues. *Matatus* are a frequent source of accidents in cities and in rural areas, where they are also common. Taxis are available for those who can afford this expensive means of transportation. The affluent frequently have their Mercedes as a show of prestige. More Kenyans now own cars than ever before, although the bicycle is a popular means of transportation in rural areas. For those traveling between cities or between town and country, Kenya rail service, Kenya airways, and a growing number of bus companies provide excellent service. International travel is available from many international carriers including Kenya Airways, from airports in Nairobi, Mombasa, and Eldoret. Those wishing to travel by sea can do so from the seaport of Mombasa.

## 10 FAMILY LIFE

Marriage and family are closely associated in all ethnic groups. The extended family is more important than the nuclear, monogamous family. It is not uncommon to see several generations living in the same compound or neighborhood. Nevertheless, national marriage laws recognize cultural variation. The European heritage is recognized in one legal code that privileges conjugal marriage, while prohibiting plural marriages such as polygyny and wife inheritance. These and other practices are permissible under customary law, where recognition is given to indigenous marital customs. Religiously contracted marriages are recognized for Muslim and Hindu unions under separate codes. Wife inheritance is very controversial, with traditionalists arguing that this practice ensures that widows and their children will be cared for within their husbands' extended families. The new husband assumes all of the rights and obligations of his deceased brother. National Christian churches,

unlike some independent Christian churches, are generally opposed to this practice.

Bride-price, unlike widow inheritance, still continues to be a common practice and has been augmented by premarital rituals such as the engagement party, where members of the extended families of the future bride and groom formally meet each other. Families are quite large. Kenya's current total fertility rate of 4.82 children born per woman is among the highest in the world. A significant feature of family life is the obligation of extended family members to assist their kinsmen. Homes will typically have an extended family member in residence. School fees and other necessities are expected to be offered with the understanding that reciprocity will be forthcoming. Many Kenyans, even a majority in some parts of the country, experience their family life within the home of a relative. This practice occurs, in part, because it is thought unfortunate for any home not to have children, and because children are placed whenever possible in the home of a prosperous relative. Kinship terminology is also routinely extended so that one's mother's sister is called "mother," and one's father's brother is called "father." The term brother or sister is often extended to what would be called "cousin" elsewhere.

## **11 CLOTHING**

Various ethnic groups in Kenya have their own traditional dress. Maasai men, for instance, can be seen wearing red tunics and sandals as well as elaborate bracelets, necklaces, and large earrings dangling from their much-elongated earlobes. Their hair may be shaved or elaborately braided and covered with red ochre. Feathers may be worn on certain occasions. Women wear long, plain cotton dresses decorated with elaborate belts, huge necklaces, and wear long earrings. On their arms are many copper bangles. Their hair is typically shaved or quite short. A person's status in Maasai society is indicated by the size and various combinations of adornment.

European and Arabic garb are now commonplace throughout the country, even among urban Maasai. In rural areas, for example, women wear multicolored cotton dresses or skirts and blouses. Large shawl-like cloths are worn commonly as protection from rain, sun, and cold. Babies can be seen carried on the back or on the side in a sling. Scarves are worn on the head. Flat shoes or bare feet are standard. Men generally wear Western-style trousers and shirts with jackets and ties for special occasions. Dress in urban areas reflects social class differences. The most stylish and expensive clothes in the latest international styles are available for those who can afford them. Long pieces of colorful cloth are often worn as skirts, wrapped around shorter dresses or by themselves along with matching headpieces. Arabic influences are strong, especially along the coast where the fez and turban are commonplace. Asian dress is the sari for women, and white cotton shirts and pants are prevalent for men. Secondary school children usually wear uniforms to school, but dress very much like American and European youth at home and for leisure. Nevertheless, ethnic or religious variations are also apparent.

## **12 FOOD**

Pre-colonial food production included both agriculture and animal husbandry. Archaeological research has demonstrated that indigenous African crops included sorghum and finger millet. Later, some 2,000 years ago, crops such as bananas,

*The major staple throughout much of Kenya is maize, which is made into a thick porridge and eaten with meat, stews, or indigenous greens. (David Johnson)*

yams, rice, and coconuts reached East Africa from Southeast Asia. About 400 years ago, crops from the Americas such as maize and cassava spread to East Africa from West Africa. Today, the major staple throughout Kenya is maize, which is also an important cash crop as well. Pastoralism, or cattle keeping, has a long history in Kenya. By the 17th century, for example, groups like the Maasai and Turkana subsisted exclusively on cattle, which were originally domesticated and developed through breeding in the Horn of Africa and East Africa. Cattle provide meat, milk, butter, and blood. Livestock includes poultry, sheep, and goats. Many societies in Kenya combine agriculture with livestock raising.

Currently, crops and livestock raised in Kenya also include those imported from Europe during the colonial era. Examples of crops are white potatoes, cucumbers, tomatoes, and many others. Indigenous fruits such as papaya and mangoes are especially favored throughout the country. Agriculture is the major component of Kenya's economy, employing about three-fourths of the population and generating a significant amount of export earnings. Coffee and tea are the main exports. A major staple throughout much of Kenya is maize, which is made into a thick porridge called *Ugali* and is eaten with meat, stews, or indigenous greens (*sukuma wiki*). Many Kenyans eat this combination on a daily basis. It takes much practice to cook the mixture of maize meal and boiling water to the right consistency without burning it. *Sukuma wiki* is a combination of chopped spinach or kale that is fried with onions, tomatoes,

perhaps a green pepper, and any leftover meat if it is available. This is seasoned with a good bit of salt and some pepper. The main staple for the Gikuyu is *Irio*, a mixture of kernels from cooked green corn and beans, potatoes, and chopped greens.

Present-day Kenyans enjoy eating in a variety of international restaurants and fast food chains. Asian restaurants are also very popular. In rural areas, children can be seen snacking on roasted maize and sugar cane. Manufactured candy and bottled drinks such as Fanta (orange soda) and colas are very popular at birthday parties and other festive occasions. Bottled beer brewed in Kenya has largely replaced traditional beers made from millet, or maize, although coconut wine is popular on the coast. Modern eating utensils are common; nevertheless, most Kenyans prefer eating their *Ugali* with their right hand.

### **13 EDUCATION**

There are many schools throughout the country servicing young people from nursery school through university and professional training. Primary and secondary schools vary in size and quality, and education can be costly. Both secular and religious schools operate on a daily or boarding basis. Harambee schools often do not have the same resources as those with international connections through church or the state. Scholarships are available on a competitive basis for both boys and girls. Competitive sports such as football (soccer), swimming, and track and field are common. A system similar to that in the United States (8 years of elementary school, 4 years of secondary school, and 4 years of university) recently replaced a British system based on Ordinary and Advanced levels of secondary and advanced education following the primary years. The American system now includes more attention to practical subjects and local culture than did the British system, which emphasized comparatively more European historical and literary content.

Post-secondary education includes a wide variety of vocational and technical schools and a growing number of national universities and teacher training institutions. Post-graduate education includes academic subjects, law school, and medical school. There is much competition in Kenya for limited places in educational institutions, requiring many students to go abroad to the United States, Europe, and Asia for their education.

### **14 CULTURAL HERITAGE**

A cultural mosaic characterizes Kenya's rich cultural heritage. The Muslim tradition is embodied in archaeological and written sources from the coastal region. The historical monument at Gedi, located between Malindi and Mombasa, was founded in the late 13th century. From a study of its tombs, monuments, and shards, it is clear that an urban Muslim civilization, combining indigenous African practices with those from Arabia and India, prevailed for many centuries at Gedi and elsewhere along the coast. Music, dance, and literature were associated here with a literate civilization.

The European (primarily British) heritage in Kenya is notable in Nairobi and some of its suburban areas such as Karen. The Norfolk Hotel in Nairobi opened in 1904 and was soon after nicknamed "The House of Lords" because of its predominantly European, titled visitors. President Theodore Roosevelt, among other prominent Americans, visited there also, espe-

cially to hunt big game. During the colonial era, Africans were not allowed to stay there. Today, the Norfolk retains some of its original architecture and caters to wealthy Kenyans and an international clientele. Movie viewers may remember seeing this hotel in the film *Out of Africa*, an account of the life of its author, Isak Dinesen, on a coffee farm in Kenya during the colonial period. Elspeth Huxley in her books (e.g., *Flame Trees of Thika*) gives another account of Kenya's social life and customs from the perspective of a European living at that time.

Kenya's greatest contemporary writers are world-renowned for their short stories and novels. Ngugi wa Thiong'o, the author of such books as *Petals of Blood* and *Devil on the Cross*, writes in his traditional Gikuyu language rather than English to stress the importance of communicating with all members of his society in a language that the colonialists had suppressed. His novels contain a continuing critique of social inequality in Kenya today. Grace Ogot, in books such as *The Other Woman*, has developed the short story to a high standard.

Music and dance competitions are held frequently in the schools. These cultural expressions are heavily influenced by indigenous forms. Regularly, the National Theatre hosts final competitions among students who come from all over Kenya to display their skills in indigenous dance and song. The Bomas of Kenya is a professional dance troupe that holds regular performances of traditional dance, primarily for tourists. Radio and television shows commonly have programs that feature ethnic music and songs as a popular form of entertainment. Music from the United States is popular today, especially among teenagers. Zairian music is popular among Kenyans of all ages.

### **15 WORK**

Although Kenya has a very significant industrial base that includes processed foods, textiles, glass, and chemicals, agriculture is the mainstay of the economy. Women are engaged as subsistence farmers in those ethnic groups where agriculture is significant. Typically, men, however, clear the land and help in harvesting. In the rural economy, women also collect wood for charcoal, attend markets, and carry heavy loads. Men and women work on coffee and tea estates, these being important cash crops. Tourism is the principal source of foreign exchange and provides jobs for men and women in the hotel and game park industries. Men work as bus drivers, taxi drivers, and factory workers and play important roles in agriculture, primarily with cash crops.

Graduates of secondary schools in Kenya who do not go on to university or teacher training colleges seek technical or secretarial schooling. Training in computer technology is of growing importance, although use of e-mail and the Internet are still quite rare. All young people, however, experience difficulty in gaining employment because Kenya's infrastructure and industrial base is not large compared to its agricultural base. This is not attractive to many students, because young people do not wish to live in rural areas where social life is less varied. Government and industry have not successfully developed rural areas to guard against urban migration and a strong preference by young people to live in cities rather than in small towns or the countryside.

## 16 SPORTS

Clubs where sports can be practiced by members and their guests are very important in the urban areas. These clubs commonly have billiards, squash, swimming, and tennis available. Golf is available at some clubs and hotels. Cricket is also a popular sport. Automobile races are common. Over the Easter weekend, the Malboro/Epson Safari Rally attracts an international audience. At the Ngong Road Race Course, on many Sunday afternoons, horse racing is held with legalized gambling. Football (soccer) is a national pastime, with some ethnic groups comprising teams that compete against teams from industries, armed forces, and the police. Boxing is another spectator sport enjoyed periodically. Schools sponsor competitive sports for boys and girls, including soccer and track and field. In rural areas, there is a widespread game of strategy known as *Bao* in Kiswahili. This game involves a wooden board containing a varying number of holes or divisions and seeds. A player attempts to capture the seeds of an opponent through a series of complex plays whereby the opponent's seeds end up on his side of the board. National *Bao* competitions are held to determine the best players. Children play a simplified version of this game, much to the amusement of adult spectators.

## 17 ENTERTAINMENT AND RECREATION

Sports, theater, television, and cultural activities such as reading, dancing, and music are popular forms of entertainment and recreation. Going to movie theaters is a particularly popular amusement for younger people. International films can be seen in theaters in Nairobi and other cities. Popular films include adventure stories, martial arts, and romances. Asian moviegoers also have the choice of seeing the latest Asian films in their own languages.

Sunday is a special day, particularly for Asian families, to dine out, buy treats such as ice cream, and to walk throughout the city. Jamhuri Park, a large open area with a lake for boating and places to purchase ice cream and candy treats, is popular with other ethnic groups. On weekends and in the evenings, walking, window shopping, and shopping in malls is a frequent pastime for all Kenyans. The most popular form of entertainment, however, is visiting with friends and relatives. Much food, drink, news, and joviality are exchanged, mixing people of all ages. Visiting between rural and urban relatives is an occasion for the exchange of food from the rural area for money and material goods from the urban area.

## 18 FOLK ART, CRAFTS, AND HOBBIES

Carvings, batiks, basketry, jewelry, ceramics, and other indigenous crafts are made largely for tourist consumption. Masai artifacts are very popular with tourists. Development projects stimulate local cooperative groups by encouraging them to manufacture baskets, women's purses, and mats for sale. *Kiondos* are particularly popular in the United States among college students for carrying books. These are multicolored, tightly woven straw bags with leather straps. Soap stone bowls, carved animals, and other artifacts from western Kenya are also popular abroad.

Until recently, craft objects were made of various animal products, including skins and hides from zebras, giraffes, bushbuck, civet cats, and crocodiles. Such articles as shoes, purses, wallets, and musical instruments were sources of ma-

ior international attraction. Jewelry, carvings, and other products made from ivory were especially valued.

## 19 SOCIAL PROBLEMS

Wildlife management and conservation are major concerns of the Kenya government and tourist industry. For this reason, commercial artifacts made from wild animals that are considered endangered or are living on game reserves have been banned. Tourists are now limited to photographic rather than hunting safaris. In spite of these limitations, poaching continues to be a problem. Some conservationists have expressed concerns that the elephant population (the source of valuable ivory) has grown too large in certain regions, where farmers have been killed by elephants on rampage rummaging for food in their gardens. Meeting a happy balance between animal and human environmental needs remains an elusive goal at present.

Street children can be seen in cities and large towns of Kenya. These children come from poor families in rural areas where the alcoholism of one or both parents is a contributing factor. They earn money by begging, collecting waste products for sale to wholesalers, who resell them to recyclers. Street girls often earn money through prostitution or begging. Glue-sniffing is a widespread addiction among the younger street children.

Because of the large volume of tourists and the relatively poor quality of Kenya's highways, death by motor vehicle accidents has become a major problem in the country. Alcohol use is a contributing factor, although also significant are the unavailability of spare parts and the age of most vehicles in a country where all vehicles and parts are imported. Crashes with wild and domesticated animals are not uncommon in rural areas.

From its independence until the early 1990s, Kenya had a one-party democratic system. It is now experiencing a transition to multi-party democracy, where members of the opposition parties feel that their political rights are not respected. Members of the ruling party, however, claim that political parties tend to be coterminous with ethnic groups, and that multi-party democracy promotes tribalism. Young people commonly complain that all political parties are led by primarily very old men, leaving little visible leadership by the young or by women. Patriarchal leadership (at least in public) was a strong value in traditional political systems within Kenya. Nevertheless, there are now women judges and members of parliament in the Kenya government.

In 2007 and 2008 political turmoil in Kenya testified to the tensions and mistrust brought about by a long history of a one party system followed by a multiparty system of government that is seen as being controlled by a few greedy politicians. The country erupted in violence when the incumbent President Mwai Kibaki was controversially declared the winner of the presidential election held on 27 December 2007, which was widely believed to have been won by Raila Odinga of the Orange Democratic Movement. Hon. Raila Odinga had led in most opinion polls prior to the elections and was leading by significant margins in the earlier presidential vote returns, until the surprise announcement of Kibaki as the eventual winner. Many Kenyans were angered by allegations of electoral manipulation and went on a violent rampage in many parts of the country. Police fatally shot hundreds of civilian demon-

strators, causing more violence directed toward the police and eventually degenerating into inter-ethnic conflicts. Initial targets of violence included some Kikuyu people—the community of which Kibaki is a member—living outside their traditional settlement areas, especially in the Rift Valley Province. Some of the Kikuyu also engaged in retributive violence against groups supportive of Odinga, primarily Luos and Kalenjin.

Many deaths were recorded with large numbers of homes and private properties destroyed, resulting in significant internal displacement of people. By 28 January 2008 the death toll from the violence was around 800 and by the end of March 2008 it had reached 1,600. The largest single loss of life occurred when a church providing shelter from the violence to 200 people was set alight by rioters, burning 35 people to death. The people who were sheltering there were members of President Kibaki's tribe, the Kikuyu. Another 16 people from Odinga's tribe, the Luo, were also burned to death by Kibaki supporters while sheltering in a house in Naivasha. As of April 2008, up to 600,000 people were internally displaced in Kenya due to the political turmoil.

The violence in Kenya has had serious economic ramifications not only for Kenya, but throughout East Africa, particularly for the landlocked countries of the Great Lakes region (Uganda, Rwanda, Burundi, and eastern parts of the Democratic Republic of Congo). These countries depend upon Kenyan infrastructure links (particularly the port at Mombasa) for important import and export routes. Significant shortages of gasoline were reported in Uganda as well as Zanzibar following the 2007 elections. Kenya's tourism industry came to a standstill that resulted in a loss of millions of dollars to the Kenyan economy. As of 28 February 2008 Kibaki and Odinga had signed a power-sharing and peace deal called the National Accord and Reconciliation Act, which constitutionally establishes the office of prime minister and creates a coalition government with Raila Odinga designated to be prime minister.

## 20 GENDER ISSUES

The recent riots and violence following the December 2007 presidential elections brought to the fore the widening gender gap in Kenya. Numerous instances of women being raped and sexual violence against women were reported in the 2008 post-election period. The gender gap can easily be illustrated in the political arena. With respect to political representation, 2.7% of elected representatives on country, urban, and municipal councils are women. In the judicial service establishment, women only account for 17.6%. Indeed, gender representation statistics from the World Economic Forum's Gender Gap Index for the year 2007 for Kenya are abysmal. Out of 128 countries Kenya is ranked 83 in terms of inequality between the sexes, and is scored at 0.651 on the gender gap index, where 0.00 equals inequality and 1.00 equals equality. On the same scale, the existence of legislation punishing acts of violence against women is scored at 0.17. In other words, violence against women largely goes unpunished. Women and girls continue to suffer from violence in the home, the community and in state custody.

During the Moi regime violations against human rights were commonplace. People were imprisoned or detained without charge or trial. Political assassinations were also a common occurrence. However, when Mwai Kibaki replaced Moi some progress was made in addressing human rights. With the recent post-election violence the little progress that had

been made in fostering human rights seems to have been shattered. Human Rights Watch (HRW) has charged that the government in 2008 was implementing a "shoot-to-kill" policy. Evidence indicates the excessive use of force, torture, and arbitrary shootings by the police. Prison conditions are also deplorable and life threatening.

With reference to homosexuality, it remains illegal in Kenya. However, lifestyles are a slowly changing in Kenya. Male homosexuality is becoming fashionable among young men and is practiced in prisons, boarding schools, colleges, and in tourist resorts along the coast. In spite of its illegality nobody gets imprisoned for homosexual acts in Kenya. Many homosexuals adopt heterosexual lifestyles in an attempt to fit into a society that finds homosexuality repugnant.

## 1 INTRODUCTION

Libya is located in a region of North Africa known as the Maghrib (the Arabic word referring to the direction of the sunset). It is bordered to the east by Egypt, to the west by Algeria and Tunisia, and to the south by Chad, Niger, and Sudan. The name “*Libya*” comes from an ancient Egyptian name for a Berber tribe that was applied by the Greeks to most of North Africa, and the term “*Libyan*” to all of its Berber inhabitants. It was not until Libya achieved independence in 1951 that its history changed from one of cities and regions to that of a modern nation-state.

Geography was the principal determinant in the separate historical development of Libya’s three traditional regions: Tripolitania, Cyrenaica, and Fezzan. Until the late 1960s, each of these regions held on to its own identity, as they were separated by formidable deserts.

The history of Libya can be traced as far back as the eighth millennium bc. Archeological evidence indicates that Libya’s coastal plain was home to a Neolithic culture whose peoples were skilled in the domestication of cattle and the cultivation of crops. Farther to the south, nomadic hunters and herders roamed a vast savannah rich in game. This civilization flourished until 2000 bc, when the land began to desiccate, eventually becoming what is today the Sahara desert.

The peoples who settled in the area were called Berbers. Although the origins of these nomadic tribes remain largely a mystery, evidence suggests that they migrated from the steppe regions of southwest Asia. Roman, Greek, Phoenician, and Arab conquerors all attempted to defeat or assimilate the Berbers into their cultures, with varying degrees of success. Phoenician traders arrived in the area around 900 bc and established the city of Carthage in approximately 800 bc in what is today neighboring Tunisia. The Carthaginians spread Phoenician hegemony across most of North Africa, where a distinctive “Punic” civilization came into being, and established several towns along the Libyan coast. The Berbers were either enslaved by the Phoenicians or forced to pay tribute.

While the Phoenicians were busy on the western coast of Libya, the Greeks established control in the east. By 631 bc, Greek settlers had established the city of Cyrene on a fertile highland about 32 km (20 mi) inland. Within 200 years, four more Greek cities had been established, constantly resisting encroachments by the Egyptians to the east and the Carthaginians to the west. Eventually, the Greek settlement was overrun by Persia, later to be returned to Greek control by Alexander the Great in 331 bc. However, the city-states constantly vied with each other for power, leaving them vulnerable to the expanding Roman Empire. In 74 bc, Ptolemy Apion, the last Greek ruler, bequeathed the area, collectively known as Cyrenaica, to Rome, which formally annexed the area by ad 74.

In spite of the political strife, there was much cultural and economic development in the area. The region grew rich from grain, wine, wool, and stock breeding and from the cultivation of silphium, an herb widely regarded as an aphrodisiac. A school of intellectuals known as the Cyrenaics, who expounded a doctrine that defined happiness as the sum of all human pleasures, developed in the area.

The Roman conquest of the region would prove disastrous for the Berbers. Tribes were forced to become settled or leave the area. For this reason, the Berbers resisted Roman rule. The Romans began their occupation by controlling the coastal lands and cultivating the area. It is estimated that North Africa produced 1 million tons of cereal each year for the Roman Empire, as well as fruits, figs, grapes, beans, and olive oil.

Along with the Roman presence, Judaism and Christianity began to influence the Berbers. Many Jews who had been expelled from Palestine by the Romans settled in the area, and some of the Berber tribes converted to Judaism. Christianity arrived in the area in the 2nd century ad and was especially attractive to slaves. By the end of the 4th century, many of the settled areas had become Christian, along with some of the Berber tribes.

In ad 429, the German king Gaiseric, backed by 80,000 Vandals (a German tribe), invaded North Africa from Spain, eventually weakening Roman control. With the decline of Roman power, the Berber tribes began to return to their traditional lands. Meanwhile, the Byzantine emperor Justinian sent his army to North Africa in ad 533 and within a year conquered the German forces.

The most influential conquest of the area was the invasion of Arab Muslims beginning in ad 642. By ad 644, the Muslims had established control over Cyrenaica in the east and Tripolitania in the west. The nomadic Berbers quickly converted en masse to Islam and joined the Arab forces. By ad 663, the Arabs had spread their influence to the south in Fezzan with the help of Berber troops. The Arabs used the region as a launching pad for operations against Carthage. In ad 670, the Arabs established the town of al-Qayrawan, south of modern-day Tunis, and continued to spread their influence to the west.

The ruling Arabs viewed Islam primarily as a religion for Arabs and therefore treated non-Arab converts as second-class citizens. Political sentiment developed among Muslims on the Arabian Peninsula, however, that rejected the Arabism of the ruling Umayyid dynasty in favor of strict equality for all Muslims. Followers of this movement, called Kharajites, spread to North Africa, and many Berbers became attracted to their message of Islamic equality. They eventually rebelled against the Arab caliphate’s control of the area and established a number of independent kingdoms.

In ad 750, the Abbasids, successors to the Umayyid dynasty, spread their rule to the area and appointed Ibrahim ibn al-Aghlab as governor in al-Qayrawan.

In the last decade of the 9th century, missionaries from the Ismaili sect (Shia Muslims with a more esoteric and mystical interpretation of Islam) converted the Kutama Berbers to Islam and led them in opposition against the established Aghlabi kingdom. Al-Qayrawan fell in ad 909, and the next year the Kutama installed the Ismaili grandmaster from Syria, ‘Ubaidallah Sa’id, as *imam* (leader) of their movement and ruler of the territory they had conquered, which included Tripolitania, the

northwestern section of Libya. This imam founded the Fatimid dynasty.

The Fatimids turned their attention to the east, and by ad 969 they had conquered Egypt and moved its capital to the new city of Cairo. From there, the Fatimid dynasty established a caliphate rivaling that of Baghdad. Tripolitania was left to Berber rule, and considering the diverse loyalties of the different tribes, conflict became inevitable. In the 11th century, the Fatimids sent Arab Bedouins to North Africa to assist their forces against other Berbers. Eventually, the influx of Arabs into the region promoted the arabization of the entire area.

Nevertheless, independent kingdoms managed to establish themselves. The greatest of these were the Almoravids, the Almohads, the Hafsiids, and the Zayanids. The kingdoms were all led by Muslim leaders who greatly encouraged learning and arts.

Meanwhile, the Catholics of Spain sought to reclaim southern Spain from the Muslims. Spain had become a cosmopolitan and pluralistic center of learning under Muslim rule. The Spanish conquest in 1492, however, fundamentally changed the character of the area. The new rulers forced all Muslims and Jews to convert to Christianity. Many fled to North Africa, and a sizable community of Jews settled in the area from Morocco to Libya.

As Europe experienced a slow economic revival and Spanish power began to increase, the Mediterranean became a battleground for supremacy among the Hapsburg Empire, the Spanish, and the Ottoman Turks. By 1510, Spanish forces had captured Tripoli, but Spain was more concerned with lands further west and entrusted the protection of Tripoli to Malta.

By this time, piracy had become prevalent along the North African coast. Because Muslim vessels were not allowed to enter European ports, Muslim pirates began raiding European ships. The most famous of these pirates was Khayr ad-Din, known to Europeans as Barbarossa, or Red Beard. Khayr ad-Din captured several European ports, recognizing the sovereignty of the Ottoman sultan over the territory he had conquered. In 1551, the Maltese were driven out of Tripoli by the Turks. It took until the 1580s, however, for the Turks to extend their power south into Fezzan. In actuality, however, they exercised little control there.

By 1815, the European states combined forces against the North African states. Spain, the Netherlands, Prussia, Denmark, Russia, and Naples declared war on Morocco, Algiers, Tunis, and Tripoli.

Deprived of the basis of its economy, Tripoli was unable to pay for basic imports or service its foreign debt. When France and Britain pressed for payment on behalf of Tripoli's creditors, the regional ruler authorized extraordinary taxes to provide the needed revenue. The imposition of these taxes led to an outcry in the town and among the tribes that quickly developed into civil war. Eventually, the sultan sent troops from Turkey and regained control of the region.

By the early 1800s, Muhammad ibn 'Ali al-Sanusi had begun to have a profound influence on the region. Largely influenced by Sufism, a mystical branch of Islam, he incorporated teachings from both orthodox Sunni Islam and Sufism to create an austere reform movement that proved very popular among the Berbers. In Tripolitania and Fezzan, al-Sanusi gained such popularity that he was called the "Grand Sanusi." The Bedouins revered him as a saint. After his death in 1859,

his son, Muhammad, brought the Sanusi order to its peak of influence, and he was widely regarded as the *Mahdi* (a popular messianic leader in Islamic tradition).

Meanwhile, Italy turned its attention to North Africa. Becoming a unified state only in 1860, Italy had a late start in the European race for colonies, and it viewed Libya as compensation for its acquiescence to the establishment of a French colony in Tunisia. Toward this end, Italy engineered a crisis with Turkey in 1911. When Turkey refused to allow Italian military occupation, Italy declared war on Turkey. With Turkey facing troubles in the Balkans, it was forced to sue for peace with Italy, essentially turning over control of Tripolitania and Cyrenaica in October 1912.

Italian control over the area, however, was slow to consolidate because of organized resistance among the remaining Sanusi orders, especially in the south. When Italy joined the Allied powers in 1915, the first Italo-Sanusi war became a battle of World War I. At war's end, the Allied powers recognized Italy's sovereignty in Libya.

Several nationalist movements began to take shape in Libya, although there was little cooperation among them. A pan-Arabian nationalist, 'Abd ar-Rahman 'Azzam, persuaded local leaders to demand Italian recognition of the region as an independent republic. After this attempt failed, Tripolitanian nationalists met with the Sanusis in 1922 and offered to accept Idris as emir of Tripolitania. Although initially hesitant to draw the anger of the Italians, Idris accepted the emirate over all of Libya and then fled to Egypt to avoid capture, sparking the second Italo-Sanusi war.

With the ascension of Benito Mussolini's Fascist government in 1922, Italy's position on Libya quickly changed to one of brutal military pacification. The final dissolution of the Ottoman Empire by the 1923 Treaty of Lausanne opened the door for Italy's annexation of Libya.

The greatest resistance to the Italian occupation in the early 1920s was led by a religious leader, 'Umar al-Mukhtar. A veteran of many campaigns, Mukhtar was a master of desert guerrilla tactics. Leading small, mobile bands, he attacked outposts, ambushed troop columns, and cut supply and communication lines before fading back into the desert. Unable to defeat Mukhtar in a direct confrontation, the Italians resorted to a war of attrition, herding people into concentration camps, burning crops, blocking wells, and slaughtering livestock throughout Libya. Mukhtar, however, held out until his capture at al-Kufrah, the last Sanusi stronghold, in 1931. He was hanged before a crowd of 20,000 Arabs assembled to witness the event. With his death, the pacification of Libya was complete.

Libya became known as the "fourth shore" of Italy. Its annexation was seen as a way to provide resources for and to relieve overcrowding in Italy. To this end, the infrastructure of Libya was greatly improved, but only to the benefit of the Italian settlers. Most arable land was confiscated from the local tribes and given to Italian colonists, who by 1940 numbered about 110,000, or 10% of the population. Education for the Arabs during this time was completely ignored, as evidenced by a literacy rate of less than 10%. This lack of education created a dearth of skilled workers and professionals, a problem that would plague Libya for decades.

Most Libyan leaders realized that their best hope for independence lay in the defeat of Italy in a larger conflict, and

World War II (1939–45) provided them with such an opportunity. When Italy officially entered the war on the side of Germany, the Libyan leaders, including Idris, immediately threw their support, both physical and verbal, behind Great Britain. Although Britain welcomed the Sanusi support, it made no coherent statement or promise to secure Libyan independence.

In late October 1942, British troops broke through Axis lines at Alamein in a massive offensive that sent the Germans and Italians into retreat. Cyrenaica was taken in November, followed by Tripolitania in January 1943. The road to Libyan independence was long and protracted. Britain took control of Libya until the end of the war. Italy's claim to Libya was officially renounced in 1947. During this time, nationalist movements formed in Libya, and in November 1950, Idris was accepted as the leader of a unified Libya. A constitution was drafted and adopted in October 1951. On 24 December 1951, King Idris I proclaimed the independence of the United Kingdom of Libya as a sovereign state.

The vast majority of power in the Libyan government lay in the hands of the newly appointed monarch, and after the first general election in February 1952, Idris abolished all political parties. In his foreign policy, Idris maintained a strongly pro-Western stance, even agreeing to allow the United States to maintain a military base there. Although diplomatic relations were established with the Soviet Union in 1955, economic aid was refused in deference to the United States and Britain.

In spite of foreign aid, Libya remained a relatively poor and underdeveloped country until the discovery of oil in 1959, which turned Libya into an independently wealthy country in short order. The vast majority of Libyans, however, did not see much improvement in their standard of living as a result of the corruption and inefficiency of the monarchy and the unfavorable contracts of the Western oil companies. This fact, along with Libya's continued pro-Western foreign policy, led to an increasingly volatile situation among the populace and, more importantly, among an increasingly pan-Arabist army.

On 1 September 1969, in a daring coup d'état, a group of about 70 young army officers and enlisted men seized control of the government and abolished the monarchy. The army quickly rallied behind the coup and, within a few days, had control of the entire country. Popular reception of the coup, especially among young urbanites, was enthusiastic. The coup was headed by the Revolutionary Command Council (RCC), of which Captain Muammar Qadhafi was a member.

The RCC adopted a socialist philosophy but rejected communism because of its atheistic stance. The council reaffirmed Libya as an independent Arab and Muslim nation and enacted many social, economic, and political reforms. Overnight, Libya shifted from a traditionalist Arab state to an idealistic nationalist state.

As the RCC fought off initial challenges to its power, more and more authority was transferred to the RCC and, ultimately, to the hands of Qadhafi. However, Qadhafi was a highly idealistic pan-Arabist influenced by Jamal 'Abd al-Nasir of Egypt. In this light, Qadhafi turned his attention to foreign affairs, leaving administrative tasks to Major Abdel Salam Jallud.

The change that Qadhafi envisioned for Libyan society began in 1973 with the so-called Cultural Revolution. The idea was to combat inefficiency and apathy in the government bureaucracy by involving large numbers of the populace in political affairs. On the economic front, the main task was the

redistribution of wealth from oil revenues. A property law was passed that forbade ownership of more than one private dwelling per family. Retail and wholesale trade operations were replaced by "people's supermarkets" that were heavily subsidized by the government. While these moves were popular among poor Libyans, they created resentment among the traditional aristocracy, which led an attempt at sedition from abroad. As retaliation, a series of opposition figures were assassinated.

Libya continued to increase the amount of revenue it obtained from the sale of petroleum. Toward this end, Qadhafi suggested that the production of oil be controlled, and he strongly supported the establishment of the Organization of Petroleum Exporting Countries (OPEC). There, he expounded his policy of using oil as leverage against the Western states and Israel. As a consequence of these policies, oil production in Libya dropped by half between 1970 and 1974, even as revenues from the sale of oil quadrupled.

On the political front, Qadhafi continued to agitate for Arab unity. While many Arab leaders gave lip service to the idea of a pan-Arab state at some "time in the future," Qadhafi considered it an achievable goal in the immediate future. As such, Qadhafi eventually tried to form a federation with Egypt and Syria. Egypt, however, proved quite apathetic on this front, and the federation was struck a fatal blow in 1973 when Egypt and Syria attacked Israel without informing Qadhafi.

Relations with Western states remained troubled for some time. The major Western powers accused Libya of sponsoring terrorism in support of the Palestine Liberation Organization's aspirations to statehood. Libya was also accused of supporting the Irish Republican Army (though no credible evidence of this has ever been produced), Lebanese leftists, and left-wing movements in Europe and Japan. As a result, relations with the United States and Britain steadily deteriorated. The low point in these relations occurred in 1988, when a Pan Am airliner was blown up in mid-flight over the Scottish town of Lockerbie, killing 270 people. Libyan operatives were widely believed to be behind the attack, a fact the country officially acknowledged in 2003. After an investigation and trial lasting until 2001, a Libyan intelligence agent was sentenced to life in prison for his role in the attack. After the U.S. invasion of Iraq in 2003, Libya began a process of greater cooperation with Western powers and declared an end to what was then a secret nuclear weapons program.

## 2 LOCATION AND HOMELAND

Libya has a population of about 6.1 million people, more than half of whom are under the age of 22. The population grows by approximately 2.3% per year, partly a result of general improvement in health conditions, which has led to a decrease in both the infant mortality rate and the death rate. More than 90% of the population identifies itself as Arab; most of the remaining minority is composed of Berbers and black Africans. Approximately 76% of the population now lives in urban areas concentrated along the coast. There are also small numbers of Greeks, Maltese, Pakistanis, Indians, and Egyptians.

Libya is located in North Africa on the Mediterranean Sea. It has an area of 1,760,000 sq km (679,536 sq mi) and a coastline of 1,800 km (1,119 mi), making it the fifteenth largest country in the world. There are some fertile highlands in the north but no true mountain ranges except in the largely empty southern desert. In all, more than 80% of Libya is covered by

the Sahara desert. There are no rivers; a few saltwater lakes are located near the Mediterranean coast.

### 3 LANGUAGE

Arabic is the national language of Libya. Although the government officially discourages the use of other languages, English is the most popular second language, and it is regularly taught in school. Because the Italians failed to assimilate or educate the population during its occupation, the Italian language never caught on in Libya as French did in Tunisia, Algeria, and Morocco.

Arabic, a highly evolved Semitic language related to Hebrew and Aramaic, is spoken by nearly the entire population of Libya. Written Arabic has two forms: Modern Standard Arabic is taught in schools throughout the Arab world, while classical Arabic is an older version of the language derived from the Quran. Libyans also speak their own dialectical Arabic, which includes many slang terms, some from Berber and Italian.

In greeting, a Libyan says *as-salamu 'alaykum*, which means "peace be with you." The response is *wa 'alaykum as-salam*, which means "and peace be with you as well."

Common Libyan female names include *'Aysha*, *Fatima*, *Amna*, *Khadija*, and *Asma*. Male names are *Muhammad*, *'Ali*, *Yusif*, *Ibrahim*, and *Mukhtar*.

### 4 FOLKLORE

Libya has many legends based on the exploits of Muslim leaders who resisted the Crusaders or the Italian colonizers. These

leaders, such as 'Umar al-Mukhtar, often come from highly religious backgrounds and are considered well learned. They are called *marabouts*, or holy men, and they are believed to have *baraka*, or divine grace, which allows them to perform miracles. Though the government discourages such practice, their burial sites are often destinations for pilgrimages, and some of these leaders have become saints in the popular mind. Many people visit their graves to ask for intercession.

Most folklore in Muslim countries tells stories of important figures in religious history. One such story, which is commemorated annually throughout the Islamic world, is that of *al-Isra' wa al-Mi'raj*. According to legend, on the twenty-sixth day of the Islamic month of Rajab, the Prophet Muhammad traveled at night from Mecca, Saudi Arabia (then Hijaz), to Jerusalem. From Jerusalem, he rode his wondrous horse, al-Burak, on a nocturnal visit to heaven. This legend partly explains the importance of Jerusalem to people of the Islamic faith.

Another folk belief that is common in Islamic communities, including Libya, is that evil spirits, called *jinn*s, live in haunted places. Jinn are demons that are believed to take on animal or human form.

### 5 RELIGION

The overwhelming majority of Libyans (97%) are Muslims, although a Catholic church has been built in Benghazi, Libya's second largest city. The practice of Islam varies from individual to individual. Civil law is based on religious code, or *Shari'a*. Most Libyans belong to the Sunni sect of Islam, which was introduced by the conquering Arabs. However, there are still remnants of the Sanusi order, which was influenced by Shia doctrine through the Fatimids.

Islam teaches that God (Allah) sends guidance to humans in the form of prophets, and it accepts the earlier Semitic prophets, including Abraham, Moses, and Jesus. Muslims believe that Muhammad was the last in a line of prophets who were sent with the message that there is only one God. Muslims believe in heaven and hell, the Day of Judgment, and angels. The Quran is the holy book of Muslims; it teaches that in order to get to heaven, men and women must believe in God and do good works by struggling in God's way. Belief and action are tightly bound together in Muslim literature.

The Islamic religion has five pillars: (1) Muslims must pray five times a day; (2) Muslims must give alms, or *zakat*, to the poor; (3) Muslims must fast during the month of Ramadan; (4) Muslims must make the pilgrimage, or *hajj*, to Mecca; and (5) each Muslim must recite the *shahada*—*ashhadu an la illah ila Allah wa ashadu in Muhammadu rasul Allah*—which means, "I witness that there is no god but Allah and that Muhammad is the prophet of Allah."

### 6 MAJOR HOLIDAYS

Libya commemorates both secular and Muslim religious holidays. One major Muslim holiday is *Eid al-Fitr*, which comes at the end of the month of fasting called Ramadan. During Ramadan, Muslims refrain from eating, drinking, or having sex during daylight hours in order to reflect on God and on the plight of the unfortunate who do not have enough food. At the end of the month, Muslims celebrate for three days. The other major Muslim holiday is *Eid al-Adha*, which commemorates the willingness of Abraham, as well as his son, to obey God's

command in all things, even when Abraham was told to sacrifice his son.

Religious holidays are celebrated by going to the mosque for group prayers and then returning home to share large meals with family and visiting relatives. Part of the feast is normally given to relatives and part to the poor. Libyan children enjoy visiting carnivals on holidays. Other Islamic holidays, celebrated to a lesser degree, are the Islamic New Year, the Prophet Muhammad's birthday, and the Tenth of *Muharram* (the tenth day of the Muslim month of Muharram, commemorated because Moses led the Israelites out of Egyptian slavery on this day; the Prophet Muhammad instructed all Muslims to fast on this day).

Secular holidays include Independence Day (December 24) and Evacuation Day (June 11), a commemoration of the U.S. withdrawal from Wheeling Air Force base in Libya in 1970. Army Day is celebrated on August 9 and Proclamation Day on November 21.

## 7 RITES OF PASSAGE

Male babies are usually circumcised at birth, although some families wait until the boy reaches the age of 10 or 11. Children of both sexes are expected to help with household chores.

All children between the ages of 6 and 15 are required to attend nine years of school or vocational training. Afterward, they may attend three years of secondary school. Young boys and girls attend school together, but beginning at age 10 or 11, they attend separate schools. After school, young boys may attend schools specializing in religious training, where they learn to recite the Quran from memory.

Desert Bedouins are expected to marry and produce children in order to increase the size and power of the extended family and/or tribe. The majority of Libyan marriages are arranged by families, and even those who marry for love must have the approval of their families. Weddings take place either in a mosque or in the bride's home, with the ceremony administered by an *imam* (Muslim prayer leader). A marriage contract is signed during the wedding ceremony.

Elderly family members are cared for by their children, and none are put in retirement or old-age homes. Upon death, the deceased's body is washed, clothed in clean linen, and buried with his or her right side facing Mecca. Only men attend the funeral; women express their grief at the deceased's home by wailing.

## 8 INTERPERSONAL RELATIONS

Islam is central to the Libyan way of life, and this fact is reflected in Libyans' social mores and use of language. Daily life revolves around the five daily prayers that Muslims are obliged to perform. Many Libyan men attend the mosque regularly, in keeping with the five prayer times; Libyan women predominantly pray in the home. As in all Muslim countries, Friday is Libya's holy day, and the noon prayer is almost always attended at the local mosque.

The practice of Islam has also influenced the Libyan use of language. The typical Libyan greeting is an Islamic one: *as-salamu 'alaykum*, which means "peace be with you." The response is *wa 'alaykum as-salam*, "and peace be with you as well." God's name is always invoked in conversation. A Libyan will usually say *in-sha' Allah*, which means "if God wills it," when asked whether he or she plans to do something. This might appear

to be indecisive, but it is actually an acknowledgment of God's role in everything one does.

A Libyan always greets guests with a cup of coffee or tea, and desert tradition requires that a guest be offered food. Hospitality is part of the Libyan code of honor. Travelers often find it difficult to navigate cities without being repeatedly asked into strangers' homes for tea and cakes.

Libya has no bars or night clubs, but there are many sidewalk cafés where men drink coffee or tea and socialize. In the evenings, most Libyans can be found at home. In keeping with Islamic teaching, alcohol is illegal in Libya, even at high-end hotels in the major cities.

It is considered disrespectful to openly criticize anyone, and courtesy must always be shown when in public. Children must respect adults. Libyans of tribal background give great importance to tribal loyalty, and strangers arouse tribal suspicion—not surprising in light of the country's history of foreign colonization. Urban dwellers, particularly in larger cities such as Tripoli and Benghazi, are more open to outside influences and ideas. Most Libyans treasure their privacy. This has been particularly true since the 1980s, when outspoken political opposition to the current regime became a punishable offense. Thus, Libyans avoid making any public comments that might be interpreted as political criticism.

## 9 LIVING CONDITIONS

Living conditions for most Libyans improved dramatically in the years following the 1969 coup. By the 1980s, the welfare system provided work injury and sickness compensation, as well as disability, retirement, and survivors' pensions. Workers employed by foreign firms were also guaranteed the same social security benefits as workers employed by Libyan firms. The government subsidized the underemployed and the unemployed and provided nurseries to care for the children of working mothers. As oil production in the country increased in the 1990s and 2000s, such government subsidized health care greatly improved.

A major problem for Libyans during the 1970s was the country's health care system. The Italian colonization left little infrastructure, and the lack of education provided to the Libyans meant there were few trained health care professionals, a problem that went largely unaddressed by the Idris monarchy. The RCC socialized health care in 1970, making it free for all Libyans. The first medical and dental schools were established in 1970 and 1974, respectively. Health care expenditures increased tremendously beginning in 1970. In 2001, the government spent \$343 per capita on health care. From 1990 to 2004, the number of hospital beds increased from 3.5 to 5.8 per 1,000 citizens. Life expectancy at birth is 77 years, a figure similar to or higher than that of many developed nations.

Housing has proved to be a more intractable problem for the Libyan government. A 1969 survey indicated that there was a shortage of nearly 180,000 dwellings. As a consequence, the revolutionary regime invested several million dollars between 1970 and 1995, building some 277,000 houses and apartments. There is still, however, a housing shortage caused by a continued influx of population into the cities from the countryside and by a high birth rate. As a result of the growing population, shantytowns can be found on the outskirts of major metropolitan centers. These are in stark contrast to the European-style villas inhabited by the urban middle class.

The typical Libyan family lives in a state-built apartment building. Those who can afford them hang Persian carpets on the walls for decor. It is common to have at least one sofa and a few embroidered floor cushions for seating. In 2006, there were 4 million mobile phones in use. Combined land line and mobile phones provide telecommunications service to 75% of the population. There were 16 AM radio, 3 FM radio, and 3 short-wave radio stations in operation in 2005. That year, there were 12 broadcast television stations and 24 Internet hosts. Libya's internet code is .ly.

In 2002, Libya had about 83,200 km (51,670 mi) of roadways, of which more than half were paved. The main road is a 1,769-km (1,100-mi) coastal highway running from Tunisia to Egypt. An old railway, the Benghazi line, was abandoned in 1964. There are plans for a new railway system, and a railroad between Benghazi and Egypt began construction in 1993, with plans for service to begin in 2010. Tripoli and Benghazi (a city on the Mediterranean coast) both have international airports, and Libya has a national airline, Jamahiriyya Libyan Arab Airlines. A private airline, Afriqiyah Airways, connects Libya with much of Europe and Africa.

## 10 FAMILY LIFE

Libyan family life operated along traditional tribal, or *qabilah*, lines, until well after independence. Libyans live with their extended families in tightly knit communities. A typical household consists of a man, his wife, his sons and their wives and children, his unmarried daughters, and perhaps other relatives, such as a widowed or divorced mother or sister. At the death of the father, each son establishes his own household and repeats the cycle. Marriages are typically arranged by negotiation between the families of the bride and groom, as men and women generally are not allowed to mix socially.

The traditional roles of men and women changed noticeably after the coup in 1969. Women were granted the right to vote in the early 1960s, but they were actively encouraged to vote after 1970, in part because of the regime's hope for an expanded political base. The new regime encouraged women to pursue education and provided them with incentives to work. Working mothers were offered cash bonuses, and day care was institutionalized in the 1970s. The retirement age for women was set at 55, and laws were passed ensuring equal pay for equal work.

In spite of the government's efforts, some traditional views have been slow to change. For example, women were disproportionately represented in jobs as secretaries or clerks because of deep-seated cultural biases against the intermingling of men and women. However, by the mid-1980s, women had broken into several professional fields, most notably health care. Since 2001, the government has tried to further redefine the role of women and expand its armed forces by making military service mandatory for both sexes.

## 11 CLOTHING

Two styles of clothing are visible in Libya. In the cities, there is a mixture of Western and traditional garb. Girls commonly wear brightly colored dresses, and boys wear jeans and shirts. Young men and women wear predominantly modern clothing, though most women continue to cover their hair, in keeping with Islamic tradition. The traditional attire for men is a long white gown worn over a shirt and pants. Some men wear

a black or white Muslim hat on their heads. Traditional women also wear long gowns and hair coverings. Most women's gowns cover both the head and body.

In rural areas, traditional dress predominates. Men of the Tuareg tribe in the Libyan desert wear black or dark blue cloaks. Tuareg men also cover their faces and hair with blue veils historically dyed with indigo, leaving only their eyes visible. The latter attire has earned them the title "People of the Blue Veil." This practice developed out of the need for protection from the desert sun and sand. Styles of dress in the cities often fall along generational lines, and it is not unusual to see people walking side by side wearing different styles of garments. Unlike in other parts of North Africa, in Libya, traditional versus modern dress has not become a charged political issue.

## 12 FOOD

Before every meal, a Libyan recites the Muslim expression *bismillah*, or "in the name of God." After finishing the meal, he or she then says *al-hamdu lillah*, which means "thank God."

As in other regions of North Africa, couscous is a very popular food. Couscous is semolina wheat sprinkled with oil and water and rolled into tiny grains. The grains are then steamed and ready for use in a favorite recipe. The couscous can be mixed with a number of sauces and then combined with a variety of meats and/or vegetables. Couscous is also combined with honey and milk and served for breakfast. The main meat eaten by Libyans is lamb.

Most Libyan meals are eaten with *kasrah*, a flat, round, non-yeast bread. *Kasrah* is often eaten with dips, such as *babaghannuj*, a dip made of mashed, roasted eggplant mixed with lemon, tahina (sesame seed) paste, and a pinch of salt.

Dates are a favorite snack, known for their abundance. Palm trees are hardy plants that grow in groups by the sea and in oases. Dates from palm trees are used in many forms by Libyans. The fruit can be eaten fresh or squeezed to make juice or date honey. Dried dates can be ground into date flour. And date pits can be roasted and ground to make date coffee.

Coffee and mint tea are popular drinks, served throughout the day. Alcoholic beverages and pork are forbidden by Islamic law.

## 13 EDUCATION

Before World War II (1939–45), few schools existed in Libya, resulting in a literacy rate of less than 10%. After the discovery of oil in the country in 1959, Libya invested in new schools, vocational training centers, and universities. Another education boom took place in the 1970s, following the installation of the new regime in 1969. Libya adopted a Western-style system that includes six years of primary school, three years of preparatory school, and three years of secondary school. Schooling is mandatory for both boys and girls until the age of 15. After completion of secondary school, Libyans may attend either vocational schools or universities. Libya's first university was established in 1955 in Benghazi. This was followed by universities in Tripoli, Mersa Brega, and Sabha. All schooling, including that at the university level, is free. This includes books, school supplies, uniforms, and meals. As a result of these educational programs, the literacy rate in Libya rose from an abysmal 10% during the Italian occupation to more than 92% as of early 2003.

*A family walks through the Roman ruins of Leptis Magna, the largest city of the ancient region of Tripolitania. Leptis was designated a UNESCO World Heritage site in 1982 and contains some of the world's best preserved remains of Roman architecture.*  
(Reza/Getty Images)

Problems facing the educational system stem from a lack of qualified teachers. As a result, the vast majority of teachers in Libya are expatriates. In addition, some confusion resulted when the government tried to integrate secular and religious schooling. Military training is a mandatory part of education in the school system, for both men and women, from the secondary through the university level.

#### **14 CULTURAL HERITAGE**

Traditional Libyan folk dance is a strenuous and lively form of entertainment. Music and dance troupes often perform together at festivals. Line dancing is popular, with dancers linking arms while swaying, hopping, and gliding across the stage. Singers are often accompanied by musicians who play the violin, the tambourines, the *'ud* (a windpipe made of cane), the *tablah* (a hand-beaten drum), and the lyre.

The Libyan government maintains strict control over the production and distribution of printed matter, and all printing presses are government owned. Libraries, also government owned, have abundant collections of old religious writings but far less modern literature. Printed material that is critical of the regime or of Islam is censored.

Muammar Qadhafi spelled out the goals and ideals of his 1969 revolution in a three-volume collection, *The Green Book*,

which he produced between 1976 and 1979. The books emphasize the centrality of Islamic values to the governing of the Libyan nation, but they also stress the importance of the then-fashionable socialist ideologies of the emerging postcolonial countries, and for that they have been criticized by Muslim leaders.

Libya has produced few internationally renowned artists, though Ali Omar Ermes is a notable exception. He lives in the United Kingdom and produces paintings featuring Arabic calligraphy done with a modernist, Western sensibility. His works are in the permanent collection of the British Museum in London and the Smithsonian Institution in Washington, DC, and are collected by world-renowned private collectors such as the Prince of Wales.

#### **15 WORK**

Most workers are employed in the oil industry, the largest sector of the Libyan economy. Others work in the state-owned manufacturing firms that produce machinery, appliances, cement and construction equipment, cigarettes, clothing, leather goods, textiles, shoes, fertilizers, and industrial chemicals, as well as processed foods such as olive oil, citrus fruits, tomato paste, tuna, and beverages. Many people who were once employed in agriculture moved to the cities during the oil boom

and subsequent industrial development. Agricultural workers made up about 17% of the workforce in 2004. These workers grow citrus fruits, barley, wheat, millet, olives, almonds, dates, onions, potatoes, tomatoes, and tobacco. Many farmers raise sheep, goats, cattle, camels, and poultry and produce dairy products and honey. Fishermen operating out of Tripoli bring in tuna, sardines, and mullet.

There is a shortage of unskilled laborers, attributable in large part to a high military conscription rate, but also to the increased education level of Libya's young people, which makes them look down on menial jobs. Thus, Libya has many unskilled foreign workers from neighboring countries. Libya also has hundreds of thousands of foreign technical workers, who are needed to advise on petroleum extraction and design and to construct irrigation projects.

## 16 SPORTS

Libyan sporting events tend to be very strenuous and spirited. Popular spectator sports are camel racing and horse racing, with competitions held on racetracks in rural areas. Football—known to Americans as soccer—is also a popular spectator sport. In 2008, Libya's national football team was ranked eighty-fifth by FIFA (International Federation of Association Football), the world football governing body. Although the Libyan team has never played in the World Cup, it came within one game of qualifying in 1986 in Mexico City. Other popular sports are basketball and track and field events.

## 17 ENTERTAINMENT AND RECREATION

Radio and television, with state-sponsored news, religious, and musical programming, are popular forms of entertainment in Libya. In 2004, there were 18 AM radio stations, 3 FM radio stations, and 3 shortwave stations. There are 16 officially sanctioned broadcast television stations, but satellite receivers are as ubiquitous in Libya as they are in most developing countries. In 2007, al-Libiyah, the nation's first officially sanctioned nongovernment television station, began broadcasting. There are stations in Benghazi and Tripoli that broadcast in French, English, and Italian. The movie theaters show imported foreign films. The news media is tightly controlled, and government censorship is widespread. In the Worldwide Press Freedom Index of 2007, Libya was ranked the one-hundred-fifty-fifth least free media in the world.

Libya has nine museums housing archeological, religious, and historical exhibits. Chess and dominoes are enthusiastically played, both in cafés and in homes. The country is also home to some of the best preserved archeological sites of the classical world, including the Phoenician ruins of Leptis Magna and world-famous Greek ruins at Cyrene.

## 18 FOLK ART, CRAFTS, AND HOBBIES

Libyan art, in keeping with Islamic beliefs, refrains from realistic depictions of people or animals. Instead, artists have a unique style known as *arabesque*, in which designs are complex, geometric, and abstract. Libyan artisans use intricate lines and geometric shapes in their carpets, embroidered goods, jewelry, leather goods, tiles, and pottery. Islamic words and passages from the Quran are often etched in elaborate calligraphy. Libyan architecture has the same restrictions, and therefore lifelike statues and adornments are not found on buildings.

Small craft shops once sold domestic artwork such as metalwork, pottery, tiles, leatherwork, and handwoven and embroidered goods, but many such shops have closed down because of the nationalization of businesses under Qadhafi, which discouraged artisans from practicing their crafts.

## 19 SOCIAL PROBLEMS

The greatest problems facing Libya today stem from the lack of political freedom and fluctuations in economic well-being. In the 1970s, the average income of Libyans was twice that of their Italian colonizers. Since then, however, fluctuations in oil prices have led to variations in economic well-being in Libya, causing some social distress. The steep rise in oil prices since 2003, however, has brought renewed prosperity. Seeking a share of this new wealth, workers from impoverished Asian and African countries have migrated to Libya, where they often face exploitation. Libya is also a transit country for the trafficking of humans and narcotics.

Islam in Libya has not experienced the sort of radicalization seen in neighboring Egypt and Algeria, for example. It remains, among the nations of the Maghrib (the western part of North Africa bordering the Mediterranean), a moderately religious nation, although there were relatively short-lived Islamist uprisings in the late 1990s in the nation's eastern provinces.

In 2003, Libya officially announced that its intelligence services had planned and carried out the 1988 bombing of a Pan Am airliner over Lockerbie, Scotland. Since then, many Western nations have resumed diplomatic and economic relations with the once-isolated country. United Nation sanctions against the country were lifted in 2003. The country also announced that year that it was abandoning its nuclear weapons program, which until then had only been suspected.

It is widely believed that Qadhafi's son—and, many believe, heir apparent—Sayf al-Islam Qadhafi, is the force behind Libya's recent reconciliation with the Western powers and its reintegration into the world community.

## 20 GENDER ISSUES

Libya is one of only a few Islamic nations that have signed and ratified the 1979 Convention on the Elimination of All Forms of Discrimination Against Women. It did so, however, subject to reservations made in deference to its interpretations of Shari'a (Quranic law).

Human Rights Watch reports that Libya maintains prisons for women and girls who have committed no crime, who have served their sentences for crimes committed, or, in some cases, who are simply seeking refuge from domestic abuse, as there are no shelters for such victims in the country. The government of Libya has rejected the report, saying these are not prisons or detention facilities but are instead "social rehabilitation facilities." Documented testimonials from women held in such facilities question this assertion.

Libya has no domestic violence laws. Rape cases of extreme violence can be and sometimes are prosecuted, but judges are given the discretion to force the woman to marry her rapist as a form of social remedy. Rape victims can also be prosecuted for adultery if they are married at the time of their rape.

## LUHYA

**PRONUNCIATION:** LOO-ee-ah

**ALTERNATE NAMES:** Luyia, Abaluhya

**LOCATION:** Western Kenya

**POPULATION:** 5.3 million

**LANGUAGE:** Several Bantu dialects

**RELIGION:** Christianity (Catholicism, Protestantism); Islam; some indigenous beliefs

**RELATED ARTICLES:** Vol. 1: Kenyans

### <sup>1</sup> INTRODUCTION

The Luhya, Luyia, or Abaluhya, as they are interchangeably called, are the second-largest ethnic group in Kenya, after the Kikuyu. The Luhya belong to the larger linguistic stock known as the Bantu. The Luhya comprise several subgroups with different but mutually intelligible linguistic dialects. Some of these subgroups are Ababukusu, Abanyala, Abatachoni, Avalogoli, Abamarama, Abaidakho, Abaisukha, Abatiriki, Abakisa, Abamarachi, and Abasamia.

Migration into their present Western Kenya location goes back to as early as the second half of the 15th century ad. Immigrants into present-day Luhyaland came mainly from eastern and western Uganda and trace their ancestry mainly to several Bantu groups, and to other non-Bantu groups such as the Kalenjin, Luo, and Maasai. Early migration was probably due to the search for more and better land, and escape from local conflicts, tsetse flies, and mosquitoes. By about 1850, migration into Luhyaland was largely complete, and only minor internal movements took place after that due to food shortages, disease, and domestic conflicts. Despite their diverse ethnic ancestry, a history of intermarriage, local trade, and shared social and cultural practices have combined to form the present Luhya ethnic group, which still displays variations in dialects and customs reflecting this diverse ancestry.

The Luhya have been subjected to the political forces that have affected most of the other ethnic groups in Kenya. Colonization of Kenya by the British from the 1890s to 1963 forced many communities, including the Luhya, into migrant labor on settler plantations and in urban centers. Because of their numeric strength, the Luhya are considered a potent political force and have always been active in political activities in Kenya. For example, veteran politicians Michael Wamalwa Kijana and Musalia Mudavadi rose to become vice presidents of the Kenyan Government though for brief periods of time. Others have gone on to become influential members of the Kenyan society such as medical doctors, professors, educators, economists, lawyers and so on.

### <sup>2</sup> LOCATION AND HOMELAND

The Luhya people make their home mainly in the western part of Kenya. Administratively, they occupy mostly Western Province, and the west-central part of Rift Valley Province. Luhya migration into the Rift Valley is relatively recent, only dating back to the first few years after independence in 1963, when farms formerly occupied by colonial white settlers were bought by, or given back to, indigenous Africans.

According to the latest population estimates of Kenya, the Luhya people number 5.3 million people, making up 14% of

Kenya's total population of 36.9 million people. The Luhya are the second-largest ethnic group in Kenya, after the Kikuyu. Whereas the majority of the Luhya live in western Kenya, especially in the rural areas, there is an increasingly large number of Luhya who have migrated into major urban centers such as Nairobi in search of employment and educational opportunities. About 1,500,000 Luhya people live outside of Western Province. This is about 28.3% of the total Luhya population.

### 3 LANGUAGE

There is no single Luhya language as such. Rather, there are several mutually intelligible dialects which are principally Bantu. Perhaps the most identifying linguistic feature of the different Luhya dialects is the use of the prefix *aba-* or *ava-*, meaning "of" or "belonging to." Thus, for example, *Abalogoli* or *Avalogoli* means "people of *logoli*."

Luhya names have specific meanings or connotations. Children are named after natural climatic seasons, and also after their ancestors, normally their deceased grandparents or great-grandparents. Among the Ababukusu, the name Wafula (for a boy) and Nafula (for a girl) would mean "born during heavy rains," while Wekesa (for a boy) and Nekesa (for a girl) would mean "born in the harvest season." With European contact and the introduction of Christianity at the turn of the 20th century, Christian and Western European names began to be given as first names, followed by traditional Luhya names. Thus, for example, a boy might be named Joseph Wafula, and a girl, Grace Nekesa.

### 4 FOLKLORE

One of the most common myths among the Luhya group is the one regarding the origin of the earth and human beings. The myth holds that *Were* (God) first created heaven, then earth. The earth created by *Were* had three types of soil: top soil, which was black; intermediate soil, which was red; and bottom soil, which was white. From the black soil, *Were* created a black man; from the red soil, he created a brown man; and from the white soil, he created a white man.

### 5 RELIGION

The Luhya people traditionally believed in and worshipped one God, *Were* (also known as *Nyasaye*). *Were* was worshipped through intermediaries, usually spirits of dead relatives. The spirits had a lot of benevolent as well as malevolent power and thus had to be appeased through animal sacrifices, such as goats, chickens, and cattle.

At the turn of the 20th century, Christianity was introduced to Luhya land as it was to the rest of the country. An extensive spread of Christianity occurred during the colonial period. The overwhelming majority of Luhya people now consider themselves Christians. Both Catholicism and Protestantism are practiced. Among the Abawanga, Islam is also practiced.

Despite conversion to Christianity, belief in spirits and witchcraft is still common, and it is not unusual to find people offering prayers in church and at the same time consulting witch doctors or medicine men for the same or different problems.

### 6 MAJOR HOLIDAYS

There are no specific holidays that are uniquely Luhya, or that celebrate Luhya achievements or culture. Rather, the Luhya people celebrate the national holidays of Kenya with the rest of the nation. Among the Abalogoli and Abanyole, an annual cultural festival has recently been initiated, but it is not yet widely adopted. The festival is held on December 31.

### 7 RITES OF PASSAGE

As is true in many African societies, having many children is considered a virtue, and childlessness is a great misfortune. Many births take place in the home, but increasingly women are urged to give birth in hospitals or other health facilities. Deliveries that take place at home are managed by older neighboring women who have experience in assisting in deliveries. Men are normally not expected at the place of delivery. The placenta (*engori*) and the umbilical cord (*olulera*) are buried behind the hut at a secret spot so they will not be found and tampered with by a witch (*omulogi*). For births that take place in hospitals or other places outside of home, these rituals are not observed.

Until the last 10 to 20 years, initiation ceremonies to mark the transition from childhood to adulthood were elaborately performed for both boys and girls. Among other things, these rites included circumcision for boys. Uncircumcised boys (*avasinde*) would not be allowed to marry or join in many other adult activities. Nowadays circumcision still takes place, but only among the Ababukusu and the Abatiriki are the ceremonies still elaborate and largely public.

Death and funeral rites involve not only the bereaved family, but also the community and other kin. While it is known

that many deaths occur through illnesses like malaria and tuberculosis, as well as road accidents, quite a few deaths are still believed to occur from witchcraft. Burial often takes place in the homestead of the deceased. Among the Luhya, funerals and burials are public and open events. Animals are slaughtered and food and drinks brought to feed the mourners. Because many people nowadays profess Christianity, many burial ceremonies, even though largely traditional in terms of observance of certain rites, do involve prayers in church and at the deceased's home. Music and dance also take place, mostly at night. Music and dance are a mixture of both traditional Luhya performances and contemporary Western-style music involving modern stereos and "boom boxes."

## 8 INTERPERSONAL RELATIONS

Greetings among the Luhya take various forms. The essence of any form of greeting is not just to salute the person, but to inquire of their well-being and that of their families. People take a keen interest in one another's affairs, and people are often willing to share their concerns with others. Shaking hands is a very common form of greeting, and for people who are meeting for the first time in a long while, the handshake will involve not just the clasping of hands, but also a vigorous jerking of the arm. Shaking hands between a man and his mother-in-law is not allowed among some Luhya communities. Hugging is not very common. Women may hug each other, but cross-gender hugging is rare.

Women are expected to defer to men, especially to their husbands, fathers-in-law, and the older brothers of their husband. Thus, in a conversation with any of these men, women will tend (or are expected) to lower their heads, fold their hands, and look down.

Visits are very common among the Luhya people. Most visits are casual and unannounced. Families strive to provide food for their visitors, especially tea. Dating among the Luhya is informal and is often not publicly displayed, especially among teenagers. Unless a marriage is seriously intended and planned, a man or a woman may not formally invite their date to their parents' home and introduce him or her as such.

## 9 LIVING CONDITIONS

The living conditions of the Luhya are not much different from those of other communities in Kenya. Major health concerns among the Luhya include the prevalence of diseases such as scabies, diarrhea, malaria, malnutrition, and, lately, AIDS. These illnesses are prevalent mainly due to poor sanitation and inadequate access to clean water and health facilities, and also because they frequently do not practice safe sex.

In the rural areas, the Luhya live in homesteads called *mugitsi* by the Avalogoli, comprising an extended family. The houses are mostly made of grass-thatched roofs and mud walls, but increasingly people construct houses with corrugated iron roofs, and in some cases, walls made of concrete blocks. The houses tend to be round or square. Because of the general poverty in rural areas, people own very few material goods, and items such as transistor radios and bicycles are considered prime possessions. Items like cars and TVs are largely lacking among the majority of these people.

People rely on public transportation, consisting of buses and vans, but travel on foot and on bicycles is also very com-

mon. Roads in the rural hinterland are not paved and tend to be impassable during heavy rains.

## 10 FAMILY LIFE

In the rural areas among the Luhya, people live in homesteads or compounds, with each homestead comprising several houses. In one homestead may live an old man (the patriarch), his married sons and their wives and children, his unmarried sons and daughters, and sometimes other relatives. Even though each household may independently run its own affairs, there is a lot of obligatory sharing within the homestead. Family sizes tend to be large, with the average number of children per woman reaching eight.

Women are expected to defer to men in this patriarchal society. Acts of supposed lack of deference or insubordination by women towards their husbands, father-in-laws, or other senior male relatives can result in beatings from the male relatives, especially the husband. Women do most of the domestic chores such as fetching firewood, cooking, taking care of children, and also farm work.

Marriage among the Luhya is exogamous. One cannot marry those belonging to his or her parents' clans or lineages. Polygyny (the act of a man marrying more than one wife) is not as widely practiced these days among the Luhya, but it is still fairly common among the Ababukusu subgroup. Traditionally, a request for marriage is made between the parents of the man and the woman. If the marriage is agreed upon, bride-wealth of cattle and cash, called *uvukwi* among the Avalogoli subgroup, is paid. Nowadays, however, young people increasingly get married on their own accord with little parental input. Civil and church (Christian) marriages are also becoming common. Bride-wealth is still being paid, but amounts differ widely, and payment schedules are not strictly adhered to.

Pets are kept, especially dogs and cats. Often, however, these pets are kept for utilitarian purposes. Dogs provide security, while cats catch mice. Often the dogs will have their kennels outside of the house, but cats may sleep in the house.

## 11 CLOTHING

Ordinarily the Luhya people wear clothes just like those of their fellow Kenyans—locally manufactured and imported dresses, pants, shirts, shoes, etc. Elementary and high school students wear uniforms to school as a national policy. Women almost never wear either short or long pants. Those who dare to do so are considered aberrant and may even be verbally assaulted by men. It is particularly inappropriate for a married woman to wear pants or a short skirt or dress in the presence of her father-in-law. Earrings, necklaces, and bangles are commonly worn by women. Men generally do not wear earrings.

Traditional clothing is worn mostly during specific occasions by certain people. In cultural dances, performers may put on feathered hats and skirts made of sisal strands. For the Luhya groups that still maintain the traditional circumcision rites (especially the Ababukusu), the initiates will often put on clothing made of skins and paint themselves with red ochre or ash.

## 12 FOOD

The meal regime among the Luhya involves breakfast, lunch, and dinner. Breakfast mainly consists of tea. The preferred tea is made with plenty of milk and sugar. However, milk may

*Itionyi, a five-year old bull, walks through the streets of Khayega, Kenya, after defeating another bull at the Ilala ground in Kakamega. Bullfighting is a traditional pastime of the Luhya people and features heavily in their festivities. (AP Images/Sayyid Azim)*

not be available all the time, and tea may very often be taken without it. Tea without milk is called *itulungi*. For those that can afford it, wheat bread bought from the stores is consumed with tea. Tea and bread, however, are too expensive for many families to eat on a regular basis, so porridge, made of maize, millet, or finger millet flour, is consumed instead. Lunch and supper often consist of *ovukima*—maize flour added to boiling water and thoroughly mixed until cooked into a thick paste more or less like grits in the US. *Ovukima* is eaten with various vegetables like kale and collard greens, and for those who can afford it, beef or chicken. Chicken is a delicacy and is the food prepared for important guests or on important occasions.

Other foods that are consumed include traditional vegetables like *mrera* and *nderema*. Many traditional food taboos have broken down. Women, for example, were not allowed to eat chicken and eggs in the past, but this taboo has largely been abandoned. The chicken gizzard, however, is still for the most part considered men's food (particularly the male head of the household), and in many homes women will not eat it.

The main cooking utensils are pots made of steel or other metals. These are mass-manufactured in the country, as well as imported, and are bought from the stores. Clay pots are also still used by many families for preparing and storing traditional beer, and also for cooking traditional vegetables. Plates

and cups are made of either metals, plastic, or china, and are bought from the stores, as are spoons, knives, and forks.

### **13 EDUCATION**

The literacy level among the Luhya is close to that of the country as a whole. The literacy level for the total population of Western Province where the majority of the Luhya live is 67.3%. This is slightly lower than the national average of 69.4%. Literacy among women is slightly lower than among men. Typically, most people (about 75% of the population) drop out of school after primary school education, which (since the mid-1980s) lasts eight years. The main reasons for the high drop-out rates are the stringent qualifying examinations to enter high school, and the very expensive school fees required in high school.

Parents spend a large portion of their income on their children's education in school fees, uniforms, school supplies, transportation to and from school, and pocket money. Often the family will deny itself many of life's necessities and comforts, like better housing, food, and clothing, in order to put the children through school. Expectations are consequently placed on those going to school to finish and assist with the education of their younger siblings, and to care for their parents in old age. Because very few students are able to get a university education, parents and the community are very proud of those that manage to attain this level of education.

## 14 CULTURAL HERITAGE

Music and dance are an integral part of the life of the Luhya people. There is a wide variety of songs and dances. Children sing songs and dance for play and (especially boys) when herding livestock. Occasions like weddings, funerals, and circumcision ceremonies all call for singing and dancing. Musical instruments include drums, jingles, flutes, and accordions. The Luhya are nationally renowned for their very energetic and vibrant *isukuti* dance, a celebratory performance involving rapid squatting and rising accompanied by thunderous, rhythmic drumbeats.

Proverbs, stories, and songs are commonly used not only for entertainment, but also for education (especially of the young), conflict resolution, and adding flavor or weight to conversations.

## 15 WORK

The majority of Luhya families are agriculturalists. Because of the high population density (about 900 people per sq km, or 2,450 people per sq mi) in Luyaland, most families own only very small pieces of land of less than 0.4 hectares (1 acre) which are very intensively cultivated. Crops grown include various species of vegetables such as kale, collard greens, carrots, maize, beans, potatoes, bananas, and cassava. Beverage crops like tea, coffee, and sugarcane are grown in some parts of Luyaland. Livestock, especially cattle and sheep, are also kept. Tending the farm is often a family affair. Because the family farm is rarely sufficient to meet all of the family's needs for food, school fees and supplies, clothing, and medical care, often some members of the family will seek employment opportunities in various urban centers in the country and remit money back to the rural homes.

## 16 SPORTS

There are numerous games and sports played by children among the Luhya. For girls, jumping rope is very common. The jumping is counted and sometimes accompanied by rhythmic songs. Hide-and-seek games are common among both boys and girls. Soccer is the most popular game with boys. Any open ground can serve as a playing field. Adult sports include soccer for men, and to a lesser extent, netball for women. Netball is somewhat like basketball, only the ball is not bounced on the ground. School-based sports also include track-and-field events.

The most popular spectator sport is soccer, and the Luhya are known for producing some of the best soccer players in the country. The AFC Leopards soccer team, largely comprised of Luhya players, is one of the best teams in the country. Bullfighting is also a popular spectator sport.

## 17 ENTERTAINMENT AND RECREATION

Television sets are too expensive for the majority of Luhya families to afford, especially in the rural areas. This is further hampered by the lack of electricity in many of the rural areas. Radios and cassette players, however, are affordable, and these provide musical entertainment for many people. Local bars and shops also have radios, cassette players, juke boxes, and other music systems, and thus many men congregate in these places to drink, play games, and listen and dance to music. Music is mainly of local, Swahili, and Lingala (Democratic Re-

public of the Congo) origin, but western European and American music are also common.

## 18 FOLK ART, CRAFTS, AND HOBBIES

Pottery and basket-weaving are quite common among the Luhya, especially in the rural areas. Most of these are either used in the home or sold in the markets for cash. Pots are often used for brewing local beer, cooking food, and storing water. The pots are made of clay. Baskets are made from the leaves of date palms (called *kamakhendu* among the Ababukusu) that grow on river banks. Increasingly, sisal is used. The baskets are sold and are also used at home for carrying and keeping foodstuffs. Body ornaments like bangles, necklaces, and earrings are commercially mass-produced in the country or imported, and thus are not in any way uniquely Luhya in form. Among the Ababukusu subgroup, however, parents of twins wear a traditional bangle called *imwana*.

## 19 SOCIAL PROBLEMS

There are no human and civil rights problems that are unique to the Luhya people. Violations of human rights and civil liberties that the Kenya government has been accused of generally apply across most ethnic groups. Problems of alcoholism exist among the Luhya, but problems that are considered particularly pressing are those to do with the high population density and high population growth rate. Health problems arising from diseases endemic in Luhya areas is also of concern. The drug problem has not caught up with the Luhya to any significant degree.

## 20 GENDER ISSUES

Among the Luhya gender roles are assigned to men and women culturally in ways which create, reinforce, and perpetuate relationships in which males are viewed as superior and women are in a subordinate position. As already noted earlier, women are supposed to be in deference to men. When talking to her husband or male in-laws, a wife is supposed to kneel down with her head bowed and arms folded on her chest in deference to the man. Luhya boys and girls are conditioned to behave in certain ways and to play different roles in society. For example, women are supposed to do most of the domestic chores such as fetching firewood, cooking, taking care of children, and also farm work. As such the Luhya people have distinct cultural practices, especially governing the gender division of labor, marriage and women's access to resources. Due to the high rate of male out-migration, an estimated 30–60% of households are female-headed and they have to single-handedly farm their fields in the absence of men. Thus gender empowerment and equality constitute the major gender issues among the Luhya.

With reference to homosexuality, certain types of same-sex activity were tolerated in tribal tradition, but only as childish behaviors unworthy of an initiate. But in general homosexuality is not tolerated in Luhya society. In the larger Kenyan society, homosexuality continues to be illegal as a "crime against nature" under the Kenyan penal code inherited from the British colonial legal system. Homosexuality is regarded with disdain and disgust by the majority of the population, and persons arrested for homosexual activity are treated harshly by the police. In some ethnic groups of Kenya, homosexuality can be punished by death. All religious groups abhor ho-

mosexuality and condone its complete suppression. In spite of this suppression, Kenyan male prostitutes are readily available on the streets of Nairobi and Mombasa, usually catering to international tourists. They are well dressed in order to be able to enter international hotels. In most instances the prostitutes themselves are probably bisexual, many having girlfriends or wives, and consider themselves heterosexual.

# LUO

**PRONUNCIATION:** luh-WO

**LOCATION:** Western Province and Nyanza Province in Kenya; Tanzania

**POPULATION:** Over 3 million

**LANGUAGE:** Dholuo; English (official); KiSwahili

**RELIGION:** Christianity combined with indigenous practices (Anglican church [CPK], Roman Catholicism, and independent Christian churches)

**RELATED ARTICLES:** Vol. 1: Kenyans; Tanzanians

## <sup>1</sup> INTRODUCTION

Throughout the 19th century, the Luo undertook the last phase in their migrations into their present area in Kenya, moving slowly out of lower savanna grasslands into higher and cooler regions with reliable rainfall. In this migration, cattle, while still valued, were supplemented by farming and an ever increasing importance of crops in their economy. Bantu agriculturalists, with whom the Nilotic Luo began to interact, exchanged many customs with them. Some Bantu borrowed the Luo practice of knocking out the lower incisor teeth as a sign of beauty. The Luo, however, did not adopt circumcision for men, as practiced in some neighboring Bantu groups. The Luo are now found throughout Kenya, especially in Nairobi where they live in large numbers. Nevertheless, most Luo maintain strong economic, cultural, and social links to Western Kenya, which is considered by them to be their "home."

## <sup>2</sup> LOCATION AND HOMELAND

The Luo number over 3 million people, or about 13% of the total population of Kenya (nearly 25 million people). They are, along with the Luhya, the second-largest ethnic group in the country, behind the Gikuyu. Most Luo live in western Kenya in Western Province or adjacent Nyanza Province, two of the eight provinces in Kenya. Some Luo live in Tanzania to the south of Kenya. Over the past 500 years, the Luo have migrated slowly from the Sudan to their present location around the eastern shore of Lake Victoria. This area changes from low, dry landscape around the lake to more lush, hilly areas to the east. The provincial capital of Kisumu is the third-largest city in Kenya and is a major center for Luo activities and interests.

## <sup>3</sup> LANGUAGE

The Luo, like other Kenyans, are typically conversant in at least three languages. The two national languages of Kenya are English and KiSwahili. English, derived from the British colonial era before Kenya's independence in 1963, is the official language of government, international business, university instruction, banks, and commerce. It is taught throughout Kenya in primary and secondary schools. KiSwahili is the primary language of many coastal populations in Kenya and has spread from there throughout East Africa, including Luoland. Today, this language serves as a significant means of communication across ethnic boundaries and is most evident as a language of trade and commerce in urban markets and rural towns. Nowadays, KiSwahili is also taught in Kenyan primary and secondary schools. Both English and KiSwahili, therefore,

are widely available to the Luo as a means of communication and for consumption of radio, television, and newspaper materials available in these two languages. Nevertheless, the indigenous language of the Luo, referred to as Dholuo, is for most people their language of preference in the home and daily conversation. Dholuo is taught in the primary schools throughout Luoland such that these days Luo young people are fluent in at least three languages. This is impressive when one takes into account that English, KiSwahili, and Dholuo are from three very different language families with drastically different grammatical principles and vocabulary.

Dholuo is a Nilotic language classified as a Nilo-Saharan language. This language family is spoken by Africans living in an area between the western Sudan and the middle Niger River area to the north and west of Kenya and also in Uganda where the Nilotes most closely related to the Kenya Luo reside. Dholuo is a tonal language: words differ by their pitch, resulting in an aesthetically pleasing musical quality.

Children enjoy playing language games in Dholuo. Among these is a “tongue twister” game. For example, children try to say without difficulty, “*Atud tond atonga, tond atonga chodi,*” which means, “I tie the rope of the basket, the rope of the basket breaks.” “*Acham tap chotna malando chotna cham tapa malando*” means, “I eat from the red dish of my lover and my lover eats from my red dish.” Most Luo, irrespective of educational attainment and occupation, prefer to speak Dholuo at home and continue to teach this language to their children. Even young Luo teenagers, who nowadays live in Nairobi and rarely visit Luoland, nevertheless have learned to speak excellent Dholuo among Luo.

Names are given corresponding to places where an individual is born, the time of day, or the day of the week. Even the kind of weather that prevailed at the time of a child’s birth is noted. For example, one born during a rain storm is called Akoth (male) or Okoth (female). Cold days or those with strong winds are also significant for naming. Just about every Luo also has a “praise name,” which is used among close friends.

#### 4 FOLKLORE

The spoken word is richly elaborated among the Luo. Stories, legends, riddles, and proverbs are traditionally recited in the *siwindhe*, which is the home of a widowed grandmother. In this place, Luo boys and girls gather in the evenings to be taught the traditions of their culture. Boys, by their teens, sleep in the *siwindhe* lest they be teased as one who still sleeps in his mother’s house. In the evening after people have returned from their gardens, they gather around the hearth to tell stories and to listen to them. In the *siwindhe*, however, grandmothers preside over storytelling and verbal games. Riddles, for instance, take the form of competitive exchanges where winners are rewarded by “marrying” girls in a kind of mock marriage situation. Often, friendly arguments erupt over interpretations of riddles. One riddle, for example, asks the question, “My house has no door,” which is answered by “an egg.” Another riddle is, “What is a lake with reeds all around?” The answer is, “an eye.” Clever answers are frequently given as alternatives to these standard answers. Proverbs also enter prominently into the *siwindhe* discussions and are common in everyday use as well. Some examples are, “The eye you have treated will look at you contemptuously,” “A hare is small but gives birth to twins,” and “A cowardly hyena lives for many years.”

Morality tales are told both in the *siwindhe* and in other homes not only for entertainment but also to impress upon all listeners the proper way to cope with life’s circumstances. Such questions as, “Why do people die?”, “What is the value of a deformed child?”, “What qualities make an appropriate spouse?”, “What is friendship?”, “Who is responsible for a bad child?”, “Why do some people suffer?”, and many others are the subject of folklore. For example, the story known as “Opondo’s Children” is about a man called Opondo whose wife continuously gave birth to monitor lizards instead of human babies. These lizard babies were thrown away to die because they were hideous. Once, however, the parents decided to keep such a child, and he grew to adolescence. This child, as a teenager, loved to bathe alone in a river. Before swimming he would take off his monitor skin, and while swimming he mysteriously became a normal human being. His skin was in fact only a superficial covering. One day a passerby saw him swimming and told his parents that he was a normal human being. Secretly, his parents went to watch him swim and discovered that he was in fact normal. They destroyed his skin and thereafter, as the Luo say when measuring time, “when days more numerous than hairs on a sheep” had passed, the boy became accepted and loved by all in his community. For this reason, Opondo and his wife deeply regretted that they had thrown away all of their many monitor children. This tale constitutes a lesson teaching that compassion should be displayed towards children with physical defects.

An origin tale concerns the origin of Lake Victoria, entitled “Victoria Nyanza.” For the Luo, Lake Victoria is the most

significant feature of their landscape. Women are known as “daughters of the lake,” and a man is known as “a lake man.” In the tale there was once a time when a giant called Lowle (Lake Victoria) lived in the sky, and whenever he urinated great ponds of water were formed. This is how Lake Victoria came to be.

In another origin tale concerning death, it is told that humans and chameleons are responsible for this calamity. *Were* (God) wanted to put an end to death, which strikes “young and old, boys and girls, men and women, strangers and kinsmen, and the wise and the foolish.” He requested that an offering be made to him of white fat from a goat. A chameleon was commissioned to carry the offering up to the sky where *Were* lives. Along the way, the fat became dirty and was angrily rejected by *Were*. He declared that death would continue because of this insult. The chameleon became cursed by the Luo, and ever since it must always walk on all fours and take slow steps.

Suicide and the love between brother and sister are emphasized in a tale concerning orphans. Obong’o was killed in battle with a neighboring society. This happened after his sister, Awuor, a fellow orphan, had pleaded with him not to risk his life. In her deep sorrow, after burying her brother, she committed suicide by setting her house on fire with herself and all their possessions inside. This tale reinforces the theme of love between a brother and sister, a sentiment enhanced by a system of bride-wealth. It is commonly the case that when a young man’s family gives cattle and other goods to another family in exchange for his wife (and her future children who will be members of his family), it is wealth acquired from his sister’s marriage that contributes to his own bride-wealth. After marriage, throughout life, brothers and sisters remain very close.

## 5 RELIGION

Christianity has had a major impact on Luo religious beliefs and practices. Today, there are a variety of religious communities drawing on beliefs from indigenous practices and Christianity. The Anglican Church, known as the CPK, and the Roman Catholic Church are very significant among the Luo. The offices of bishops from these two faiths are located in Kisumu. Many people, however, do not draw sharp distinctions between religious practices that have European origins and those with African origins. Mainstream churches draw on a rich Luo musical and dance tradition in their liturgies. For many Christians, the ancestors continue to play a significant role in their lives. In traditional belief, the ancestors reside in the sky or underground, from where they may be reincarnated in human or animal form. Ritual ceremonies are sometimes performed when naming a baby to determine if a particular spirit has been reincarnated. The spirits of ancestors communicate with the living in their dreams.

In the Luo religion, troublesome spirits may cause misfortunes if they are not remembered or revered. Luo refer to spirits by the term *juok*, or “shadow.” Spirits in the male line are especially venerated. The Luo high god has now fused with the Judeo-Christian god. The Luo refer to God by many names that reveal his power and Christian influence. For example, *Were* means “one certain to grant requests”; *Nyasaye*, “he who is begged”; *Ruoth*, “the king”; *Jachwech*, “the molder”; *Wuon koth*, “the rain-giver”; and *Nyakalaga*, “the one who flows ev-

erywhere.” Prayers and petitions are addressed to God by those in need of his assistance.

Christianity has fused most notably with traditional religious notions and customs in “independent Christian churches,” which have attracted large followings. For example, the Nomiya Luo Church, which started in 1912, was the first independent church in Kenya. The founder of this church, Johanwa Owalo, is believed to be a prophet like Jesus Christ and Mohammed. Owalo was originally a student at a Roman Catholic Mission Station where he was baptized. Soon after, he began to have visions. In one of these, he was taken to heaven by the angel Gabriel. He began to question Catholic doctrine when he observed that Europeans were not permitted to enter heaven. Owalo then began to question the colonial order of his day in which the British controlled Kenya. Later, he joined with a Catholic priest and began to teach a new theology that included rejection of the pope and the doctrine of the trinity. Owalo eventually joined the Anglican church, so that presently the Nomiya Hymnal contains both Catholic and Anglican hymns. Some traditional practices rejected by some mainstream Christian churches are retained by the Nomiya church, such as levirate marriage, in which a widow marries the brother of her deceased husband. The Legio Maria is another prominent Luo independent church, with 250,000 members. This church practices the Latin Roman Catholic Mass. The Legio Maria is also tolerant of the levirate. Compared to mainstream churches, women play an important role in this church, and there is a pronounced devotion to Mary, the mother of Jesus.

## 6 MAJOR HOLIDAYS

The Luo recognize national holidays of Kenya and Tanzania, depending on the country where they reside. In addition, Luo celebrate the Christian religious holidays.

## 7 RITES OF PASSAGE

People are discouraged from noting when someone is pregnant for fear that problems might result from jealous ancestors or neighbors. Older women and midwives assist the woman throughout her pregnancy and in childbirth. The birth of twins is treated with special attention, requiring taboos on the part of the parents. Only obscene dancing and foul language by neighbors lifts the burden of giving birth to twins, which is believed to be the result of evil spirits. Babies and children are considered to be vulnerable to the “evil eye” and frequently wear amulets to protect them from evil glances.

Adolescence is a time of preparation for marriage and family life. Traditionally, girls obtained tattoos for their backs and had their ears pierced for earrings. Adornment also included armlets and bands for the waist, wrist, and ankles. Girls spent time in peer groups where considerable conversation was centered around boys and their personal attributes. Sex education was in the hands of older women, who gave advice in a communal sleeping hut used by teenage girls. Lovers sometimes made secret arrangements to meet near these huts, although premarital pregnancy was strictly forbidden. Nowadays, for education, neighborhood and boarding schools have replaced communal sleeping huts and elders, although sex education is not taught in these schools. Perhaps for this reason, teenage pregnancies are thought to be a major social problem in contemporary Luoland by most elder Luo. Now, as previously, adolescent boys enjoy more freedom from adult supervision than

girls. Consequently, responsibility for teenage pregnancy falls entirely on the shoulders of girls, who generally leave school should they become pregnant.

Adults wishing to contribute to the continuation of Luo traditions maintain a rigorous involvement in the social life of their communities. For this reason, there is hearty attendance at ritual occasions, such as weddings or funerals of members of the family. Since there are no initiation ceremonies in earlier stages of the life cycle, the funeral serves as the most important symbol for family and community identity. Burials must take place in Luoland, irrespective of where a person may have lived during his or her adult years. Several years ago, a national event in Kenya centered around the death and burial of a prominent Luo man. Although he was an attorney and was married to a non-Luo woman in Nairobi, Mr. Otieno was buried in his home area against the wishes of his wife. She wanted him to be buried in Nairobi where they had lived. Mr. Otieno's clan elders, however, claimed his body for burial in Luoland because it was believed that only there could the proper rituals be performed so that his ancestor spirit could rest in peace. For example, the directional orientation of the body in the grave pertains to clan origins and migrations. The grave must be dug by a male adult related to the deceased by blood. The Otieno matter received serious discussion in the Kenya national media as it worked its way through the court system. The Kenya Supreme Court decided that the clan elders had prior rights over Mr. Otieno's body and ruled that he must be buried in Luoland. This case symbolizes the significance of sacred land, community membership, and spiritual continuity after death with clan and family.

## 8 INTERPERSONAL RELATIONS
