The Gurungs follow Tibetan Buddhism, a form of *Mahāyāna* Buddhism that has been strongly influenced by the ancient pre-Buddhist religion of Tibet. They have also come into close contact with Hindu peoples and have adopted many Hindu religious traits. Gurung religion is thus a mix of Buddhism, Hinduism, and local animistic practices. It clearly reflects the group's tribal origins, as well as its transitional location between the Hindu and Buddhist cultural worlds.

Gurungs believe in concepts such as *karma* (the belief that actions in this life determine the nature of one's next incarnation), and worship Buddha and the *bodhisattvas* (the Savior Buddhas). Buddhist *lāmās* (priests) preside at life-cycle ceremonies such as purification rites for newborn babies, and funerals. The Gurungs also revere the major gods of Hinduism, celebrate Hindu festivals, and sometimes use Brahman priests to cast horoscopes and perform certain rituals. In addition, their world is inhabited by numerous local godlings, village deities, supernatural creatures of the forest, and spirits who have to be worshiped and appeased. Local animist shamans (priests) called *panju* and *klihbri* have the responsibility of dealing with this aspect of Gurung religion. They perform exorcisms, animal sacrifice, and other animistic rites. They help trap and expel witches. They also participate with *lāmās* in many Gurung life-cycle rituals.

### 6 MAJOR HOLIDAYS

Among the Hindu festivals celebrated by the Gurungs are Tihar, Dasain (the Nepali form of Dasahara), and Baisakh (Vaisakh) Purnima. In many instances, however, the Hindu festivals coincide with local Gurung festivals in their timing. This is clearly a part of the process of "Hinduization," by which non-Hindu tribal peoples are absorbed into Hindu society. It lends a degree of legitimacy to tribal celebrations by giving them a "Hindu" form.

One festival that is not of Hindu origin is the Gurung New Year, or *losar*. This is really the Tibetan New Year, but it is observed in late December or early January on a date different

from the Tibetan and Sherpa festival. The Hindu Saraswati Pūjā, which falls in early February, marks the beginning of the dance called *ghāntu*, which is unique to the Gurungs and the neighboring Magar tribe. Ghāntu, which has both religious and social aspects, continues to be performed until the full moon that occurs in late April or early May, which marks the Baisakh Purnima festival. *Jātrās*, or fairs, are occasions on which Gurungs meet to socialize, and the sexes mingle with a considerable degree of freedom. The events usually last all night and are accompanied by dancing, singing, and the drinking of copious amounts of liquor.

## 7 RITES OF PASSAGE

Numerous rituals mark birth and childhood in the Gurung community. Brahman astrologers are consulted before the child is named at the *nahurān* (bathing) ceremony. Held on the 9th day after birth (7 for a girl-child), the *nahurān* involves the ritual purification of the mother and announcing of the baby's name. The rice-feeding (*pasni*) ceremony, when the baby begins to be fed solid food, is held 5 to 6 months after birth. The ritual first cutting of the hair (*Chhaewar*) is performed when a Gurung boy is 5 or 6 years old. This is done by the boy's maternal uncle, with a lama or Brahman priest present. After this ceremony, the boy can take part in all religious and social activities of the tribe. All these ceremonies are accompanied by feasting and drinking.

Death is of great symbolic significance among Gurungs, and the funeral ritual (*Pai* or *Arghun*) is the most important observed in Gurung society. Immediately after a death, a white banner is raised on the roof of the house to inform the community of the death. Before rigor mortis (stiffening of the muscles) sets in, the body is placed into a seated posture in a box or a copper vessel. Both *lāmās* and the animist priests are called on to perform various funeral rites. The *klihbri* sacrifices a goat so that a blood offering may be made to buy passage of the deceased to heaven. When the rites have been completed and family, relatives, and neighbors have paid their last respects to the deceased, the body is carried in procession to its last resting place. Corpses are disposed of by cremation, burial, or water burial. On their return journey, members of the funeral procession have to step over a fire burning in the road to prevent evil spirits from following them home.

The funeral ritual is completed by an elaborate, and expensive, ceremony held a year after the death occurred. Astrologers determine an auspicious time for the ceremony, which lasts for 3 days and 2 nights. During this time, numerous rituals in which both *lāmās* and shamans take part are performed for the deceased. Activities include singing and dancing, the chasing away of devils with weapons such as *khukhrīs* (curved Gurkha knives), and sacrifice of animals. An effigy (*pla*) of the deceased is made and dressed in clothes and ornaments. On the last day of the ceremony, the effigy is taken to the edge of the jungle, where the deceased is told that he or she should leave the living and depart to the land of his or her ancestors. The effigy is broken up and thrown away in the jungle. A purification ceremony and a feast mark the end of the funeral rites.

## 8 INTERPERSONAL RELATIONS

It is considered slightly odd by Gurungs to greet people by their proper names (even if they are known). When address-

ing someone who is not a relative, one calls them grandmother or grandfather, mother or father, sister or brother, depending on their age. A husband or wife is never referred to directly by name.

## 9 LIVING CONDITIONS

Gurungs live in villages of around 150 to 200 houses, sited high on ridges and hillsides. The entrance may be indicated by a string of flowers across the path. On the outskirts of the village, there are often temples or shrines to the local gods, with flowers or the remains of sacrifices in front of them. The village itself is a maze of narrow, twisting lanes, though a small shop or a tea-stall may provide gathering places for the inhabitants.

Gurung houses are quite small and may be round, oval, or rectangular in shape. They are built of stone, cemented and plastered with mud. The roofs may be thatched or made of slate. Gurung houses are commonly two-storied, with a veranda running along one side. The upper level is used for storage, while the downstairs room is used for living and sleeping. The walls are lined with shelves to hold pots, dishes, and other household utensils. There is little furniture, and one sits or squats on the floor. People sleep on hard wooden beds or on mats on the floor. Cooking is done over a wood fire in a pit sunk into the floor, with a tripod for hanging pots over it. Few houses have latrines, and villagers go the outskirts of the village to relieve themselves. Although many villages now have piped water, in the past carrying water to the house was a time-consuming household chore.

By Nepali standards, Gurungs are fairly well off. This is largely the result of money sent home by soldiers serving in the British and Indian Gurkha regiments. This extra income, along with military pensions, allows families to accumulate cash surpluses. Many Gurungs in this position migrate from their ancestral villages to towns such as Pokhara where they have access to urban amenities and better economic opportunities.

## 10 FAMILY LIFE

The division of Gurung society into the Chār Jāt and the Solah Jāt subtribes is explained in the Gurung myth of origin. The two groups are endogamous (i.e., they marry only within the group). The clans within each group are exogamous, marriage partners having to be sought from outside one's own clan. Cross-cousin marriages (i.e., with the father's sister's daughter or the mother's brother's daughter) are preferred, and among some Gurungs a fine is imposed if an available cross-cousin partner is not chosen.

Marriages among the Gurungs are usually arranged, although young men and women are given full opportunity to make their own choices. After a partner has been selected, friends or male relatives are sent to the girl's house with gifts and a bottle of liquor. These are accepted and the intermediaries entertained with food and drink if the girl's family agrees to the proposed match. If the girl's family does not agree, the visitors are turned away and the matter is closed. Once the arrangements for the marriage are complete and the astrologer is consulted over the time and date of the event, the bride is brought to the groom's house for a few days. A feast is given for relatives and the villagers. Within a few days, the bride returns to her parent's home. For the next several years, the couple visits each other in their respective parents' homes. It is only after the girl gives birth to a child that she moves into her husband's

A Gurung woman carries goods in a basket, near Muktinath, Nepal. (Marco Simoni/Getty Images)

home permanently. At this time she receives a dowry from her family. This consists of copper and brass utensils, clothes, ornaments, and livestock.

Gurung family structure and size vary over time. A nuclear family expands as sons marry, bring their wives into the household, and have children. But, as their families grow, sons leave the household and build their own houses nearby. Inheritance is shared equally between sons.

Divorce is permitted in Gurung society and is quite common. There is no social stigma associated with divorce, and remarriage by divorcees and widows is readily accepted.

## 11 CLOTHING

Traditional dress of Gurung men consists of a blouse-type shirt (*bhoto*) fastened with ties across the front of the body and a kilt-like garment (*jama*) that wraps around the waist and reaches to mid-thigh. A long piece of cloth is tied around the waist like a belt (into which a khukhri may be slipped). The typical Nepali cap (*topi*) completes the dress. A sheep's-wool blanket is used in winter or in wet weather to keep the wearer warm and dry. Western-style clothes are commonly worn by

the younger generation, especially young men who have served in the military.

Gurung women wear a cotton or velvet blouse (*cholo*) that ties at the front, over a long pleated skirt (*phariyā*) that is usually dark red in color. A sash is wrapped around the waist, and a head cloth completes the outfit. The *ghalek* is a cloth hung across from one shoulder to the opposite waist, forming a bag for carrying things. Ornaments include large, heavy, silver earrings that stretch the earlobes, nose rings, and square amulets hung on a string of glass beads called *pote* necklaces. Bangles and anklets are also worn. Many women are now wearing the *sārī*.

## 12 FOOD

Gurungs start their day by drinking sweetened tea. This may be as early as 4:00 or 5:00 am during the summer and around 6:00 am in the winter months. The morning meal is eaten between 9:00 and 10:00 am and consists of rice, or a dough made from millet or maize called *pengo*, with *dāl* (lentils) and vegetables. Although they may snack during the day, they will not eat again until evening, when another meal similar to the morning's is taken. In poorer households, the diet might consist of *jand*, a fermented liquid made from millet or maize, and vegetables.

Sheep are slaughtered and eaten at festival time, but meat is eaten infrequently by most people. Gurungs will not eat pork. The origin of this taboo is uncertain. Some higher-status clans, e.g., the Ghale, observe many high-caste Hindu food prohibitions and will not eat chicken, goat, or buffalo meat. Rice is considered a prestigious food, to be served to visitors and presented as offerings to the gods.

Tea is drunk throughout the day. Gurungs, both men and women, consume large quantities of beer (*chāng*) and liquor (*raksi*) made from maize, millet, or rice. Drinking is common at festivals, fairs, and social gatherings.

## 13 EDUCATION

Education has traditionally been seen by the Gurungs as the means to a desirable career in military service. Long before the Nepalese government assumed responsibility for education at the national level, the Gurung community provided strong support for village schools that prepared young men to join the Gurkhas. Once in the armed services, recruits were required to continue their education. As a consequence, literacy rates among Gurung men are among the highest in South Asia. Studies in Gurung villages place literacy rates at over 72% for the male population and even higher among servicemen and ex-servicemen. Women do not share in this advantage, however, with the corresponding value for females being only around 42.5%.

## 14 CULTURAL HERITAGE

Artistic expression among the Gurungs reaches its highest forms in music and folk dances. The Gurungs and the Magars of the Gandaki Zone of Nepal have a unique dance-drama called Ghāntu. The dancers are required to be virgin girls (the ghāntu), and they must abstain from eating garlic and drinking alcohol during the period of the dance. During the dance, they are believed to become possessed by the ancestor spirits. There are two forms of the dance. One can be staged at any time of the year, but the other (*Satī Ghāntu*) can be performed only be-

tween Saraswati Pūjā and Baisakh Purnima. Satī Ghāntu tells of various events in the lives of a legendary king and queen of Gorkha, of the death of the king, and of the *satī* (burning on the funeral pyre) and resurrection of the queen. When the last performance of the season is complete, the dancers and the audience go to a nearby shrine, usually that of the mother-goddess Chandi. There they offer the dance regalia to the goddess, along with the sacrifice of a chicken.

The *Sorathī* is another Gurung dance that reenacts an ancient Gurung legend. The story, set in verse, tells of a king who had seven wives but no children. When his youngest queen bore him a daughter, the other wives were filled with jealousy and cast the baby daughter into a river. The baby was rescued by a fisherman and brought up as his own daughter. The tale ends happily as the true identity of the young princess is revealed and she is reunited with her family.

## 15 WORK

The Gurungs have traditionally been peasant farmers, growing hardy crops in fields terraced into hillsides. Millet and maize form their staple cereals. Wheat, buckwheat, barley, and potatoes are also grown, as are pulses, string beans, and other vegetables. Rice is becoming more important in Gurung agriculture. In the higher elevations, sheep are reared for meat and wool. Every Gurung family has a few sheep, and villages employ shepherds to tend the village flocks. The shepherds, who use mastiffs as sheep dogs, migrate with the flocks to alpine pastures in the summer. They return to the villages in time to celebrate the Dasain festival. Every family slaughters a sheep at Dasain and holds a big feast. After Dasain, the sheep are taken down to the warmth of the lower valleys.

Gurungs who do not leave their villages to serve in the Gurkha regiments of Britain and India often engage in the trans-Himalayan trade that historically has been important in Nepal's economy. Salt, wool, and livestock from Tibet are exchanged for food grains and manufactured goods from India. The surplus of cash generated from overseas employment has led many Gurungs to leave their fields and villages to live in the local towns such as Pokhara. There, they invest in property, buy shops, and operate transport companies and other businesses.

## 16 SPORTS

Young children play variations of draughts, hopscotch, and marbles, using stones, nuts, berries, or whatever else is close at hand. They make swings, balls from animal's bladders or old cloth, and hoops to be rolled down the road, propelled by a stick. Older boys race each other and play team games such as soccer and basketball.

## 17 ENTERTAINMENT AND RECREATION

Gurungs living in towns have access to urban amenities such as the cinema, but in rural areas the population is restricted to traditional forms of entertainment and recreation. These include the festivities associated with religious celebrations and the formal dance dramas such as the Ghāntu. Jātrās are occasions for socializing and merrymaking. The singing of traditional love songs and duets between young men and women are popular at such gatherings, as is dancing and beer-drinking. Nepali "pop" songs heard on the radio are popular among teenagers.

The *rodī* is an interesting Gurung institution. It is more or less a social club for boys or girls. Unlike the permanent dormitory of Indian tribes such as the Oraons or the Maria Gonds of central India, 10 or 15 young people of the same sex gather under the supervision of an adult. They sleep at the adult's house and work and play as an informal unit through their teen years. Eventually the members marry, and the *rodī* dissolves. Not all children in a village join a *rodī*, and there may be more than one such group in the larger settlements.

## 18 FOLK ART, CRAFTS, AND HOBBIES

Other than their traditions of music and dance, the Gurungs are not known for their folk arts and crafts. Items such as woven baskets and woolen blankets made by women, and bamboo goods fashioned by men, are essentially functional in design. Gurungs rely on local service castes for metal goods, carpentry, and tailoring.

## 19 SOCIAL PROBLEMS

Like many tribal societies in South Asia, the Gurungs are faced with social and economic changes that threaten their sense of community identity. Traditional Gurung society is rooted in the rhythms and rituals of a rural, agricultural society. Today, population pressure and environmental degradation is reflected in declining agricultural production and increasing poverty in rural areas. Even the tradition of service in foreign armies offers declining opportunities, as Britain is eliminating many of its Gurkha regiments. The relative affluence associated with military service and army pensions has resulted in the migration of Gurungs to towns and cities, where they lose much of their traditional culture. This process is hastened by the relatively high levels of education among Gurungs, who prefer the attractions of urban life over the village. Many Gurung children brought up in towns cannot even speak the Gurung language. As two writers put it, "What does it mean to be 'Gurung,' if one no longer practices Gurung agriculture, uses the language, or employs the Gurung priests?" (Macfarlane and Gurung 1990: 36). Whatever happens in the future, it will be many years before old men proudly sporting the crossed khukhri insignia of their Gurkha regiments disappear from the streets of towns and villages in west-central Nepal.

One feature of change, and a source of conflict among Gurungs, is the relative status of the Char Jat and the Sora Jat. The introduction of universal suffrage and the village panchayat system (local self-governing councils) has raised the aspiration of the formerly servile Sora Jat *vis-à-vis* the Char Jat.

## 20 GENDER ISSUES

Although some Gurung groups have adopted aspects of Hindu social values, Gurung women are much freer than their Hindu sisters. Even though marriages are arranged, they have a much greater say in marriage partners, virtually being able to choose their mate (even though cross-cousin marriage is preferred) and no stigma is attached to divorce, which is easy to obtain. Widows are allowed to remarry.

Substantial differences in gender roles exist among ethnic groups in Nepal. Gurung women are still expected to handle household chores and have little say over crop land, livestock and daily wages, but unlike in the Brahman/Chhetri and Tharu communities, Gurung women participate in community meetings and have participated in agricultural training scheme.

Literacy among Gurung women is 42.5% (almost 20 points lower than their Newar counterparts) and this limits their access to health care and inhibits upwards mobility. However, the need for literacy and self-help has been recognized and organizations such as the Nepal Gurung (Tamu) Women's Association (NGWA) (or the Nepal Gurung [Tamu] Mahila Sangh) have been established as independent, social and non-profit making organizations, to serve as a common meeting place for all Gurung women. Set up by the Gurung women themselves, the NGWA serves to promote the interests, welfare and rights of all Gurungs, and helps conserve and preserve the socio-cultural traditions, language and religion of the Gurung people.

The role of women in overall Gurung development cannot be understated. It first started when Gurung women established *Ama Samuhas* ("Mother's Groups") in the villages. The Ama Samuhas played important roles in bringing about social reforms and they have been successful in controlling and eradicating such social evils as gambling and alcohol drinking. They are also involved in the building of roads, schools, conducting literacy classes, sanitation, drinking water awareness programs, and building resting places. The concept of Ama Samuhas has now even spread to major cities such as Kathmandu, Pokhara, and Butwal Chitwan. Women's roles, initially limited to Ama Samuhas, have now taken a major step forward with the creation of the NGWA. Gurung men have been very supportive of the initiatives and endeavors of Gurung women to improve their literacy and socio-economic status.

Gurung women are aware that in terms of development, they lag far behind the rest of South Asia. Awareness of Gurung culture does not mean just wearing the Gurung dress or singing *dohori* songs (a genre of Nepali folk song). There remains the issue of improving literacy. Newari women in Nepal are far ahead in terms of education and business is dominated by Thakali women. It seems that the majority of Gurung women are contented and do not see any need to come out of their homes to seek any rights. Reasons may be that they are generally economically well taken care of by their husband's and other family members' overseas earnings or that they are simply unaware of the opportunities that they are being deprived of as they remain cocooned in their own homes. One of the main aims of the NGWA remains bringing Gurung women out of their homes and exposing them to society at large. It focuses on developing their intellectual capacity, encourages social interaction at a wider societal level, helps them become better educated, and helps to bring about a sense of self confidence. Being aware and informed will help Gurung women to guide their children properly in education, social norms and behavior.

# HAKKA

**PRONUNCIATION:** HAHK-uh

**ALTERNATE NAMES:** Han Chinese

**LOCATION:** China; Taiwan; Malaysia; Singapore; Thailand; Indonesia.

**POPULATION:** 40 million

**LANGUAGE:** Hakka (southern China dialect)

**RELIGION:** Combination of Buddhist and Daoist beliefs; ancestor worship; Christianity.

**RELATED ARTICLES:** Vol. 3: Han

## 1 INTRODUCTION

The Hakka are ethnic Chinese (Han) who have a distinct history, language and identity. The name Hakka means “guest people,” or sojourner, as if the Hakka were guests in their own land. Hakka is the Cantonese (Yue) pronunciation; the word is pronounced “Kejia” in Mandarin Chinese.

The ancient Hakka homeland was the cradle of Chinese civilization in north-central China (Shanxi and Henan provinces). The people who became known as the Hakka originated in this area and have a very long history of migration toward southern China. The first migration was to south-central China (Hubei and Jiangxi provinces) and occurred in the 4th century AD. A second migration occurred between the 9th and 10th centuries, when the Hakka reached south China (Fujian and Guangdong). Hakka dominated northern Guangdong by the end of the 13th century. The last major migration in China occurred between the 17th and 19th centuries, pushing deeper into southeast China into Fujian, Guangdong, Sichuan, and Guangxi provinces. The name Hakka was first applied by the local people (*bendi*) in this last migration.

The last period of migration included waves of Hakka who migrated from mainland China primarily to Taiwan and South East Asia. The Hakka first arrived on Taiwan in the 17th century during the Dutch occupation of the island. Migration to Taiwan continued until Japan took over the island in 1895. The colonization of South East Asia by European powers opened the region to Chinese immigrants, most of whom originated from southeastern coastal China, including Hakka regions in Fujian and Guangdong provinces. The modern states of Indonesia, Malaysia, Thailand, Brunei, and Singapore saw a large influx of Hakka migrants, numbering in the hundreds of thousands, who worked as miners, laborers, and shop keepers. Hakka make up a sizable minority in those countries and individual wealthy Hakka have amassed substantial financial holdings, which has led to resentment against Hakka by the non-Chinese majority. The Hakka also migrated in large numbers in the 19th and early 20th centuries to the British colony of Jamaica and French-controlled Mauritius, as well as the United States, Canada, and parts of Latin America.

Although the Hakka are a distinct ethnic group, they are considered to be Han Chinese by the mainland Chinese and, therefore, have no special minority status in the People’s Republic of China. Hakka are full citizens and receive the same treatment accorded all citizens. In Taiwan and South East Asia, Hakka have developed a greater communal identity, separate from other Chinese migrant populations, and efforts

to define the Hakka as distinct from Han Chinese have been made by overseas Hakka scholars.

Despite their small numbers, many Hakka have become prominent national leaders on the mainland and abroad. In the 19th century many Hakka played prominent roles in the anti-Qing Dynasty Taiping Rebellion (1850–1864), including the movements leader, Hong Xiuquan. Hakka regions in Guangdong and Fujian province were hotbeds for Communist insurgents from the 1920s to 1940s. In Taiwan in the 1940s and 1950s, the Hakka were prominent in the anti-Kuomintang resistance, and many Hakka were killed in the anti-Communist crackdown on that island. Modern important Hakka leaders include Deng Xiaoping, the former leader of the People’s Republic of China; Lee Teng-hui, the former president of Taiwan; Lee Kwan Yew, the former president of Singapore; and former Thai prime minister Thaksin Shinawatra. The global Hakka diaspora has sparked a keen interest in Hakka history and culture and, in 1971, the first World Hakka Conference was inaugurated. Three decades later more than 20 World Hakka Conferences have been held and “Hakkaology,” or the study of Hakka history and culture, is studied across the world.

## 2 LOCATION AND HOMELAND

Of a population of 1.3 billion in the People’s Republic of China, the 30 million Hakka are little more than 3% of the total population. Taiwan, with a population of about 22 million, is the home of approximately 2 million Hakka. Large populations of Hakka also live in Southeast Asian countries, including Malaysia, Indonesia, Singapore, and Thailand. Significant numbers of Hakka have also migrated to India, Europe, and the Americas.

Hakka traditionally migrated to rugged, mountainous districts of south China and Taiwan on land that other Chinese found too poor for agriculture. This settlement pattern developed because the best land was occupied by the time the Hakka migrants arrived in south China. The climate is hot in the summer and mild in the winter; rice, tea, citrus fruits, and vegetables all grow well. Although winter frost is uncommon, Hakka areas are subject to the devastating winds, flooding, and typhoons.

## 3 LANGUAGE

Hakka speak a language that linguists classify as a south China dialect. Many Hakka, however, believe that their language is closely related to Mandarin, a major northern Chinese dialect, and that they speak a purer form of Chinese than other dialects because their origin lay in the cradle of Chinese civilization. Language is the most important way that Hakka distinguish themselves from other Chinese. Unlike standard Mandarin Chinese, which has four spoken tones, Hakka has six tones.

Hakka family names (surnames) are transmitted through the father’s line (patrilineally). Individuals have a personal name consisting of two syllables. When addressing someone, the surname is spoken first and the personal name follows. In families keeping a genealogy by generation, boys are often given a “generation” name as part of their personal names. The personal name can thus be used to identify the generation to which he belongs.

#### 4 FOLKLORE

Many traditional Hakka believe in geomancy (*fengshui*), the belief that natural forces in the land and water can affect one's fortune and well being. People can take advantage of these forces by orienting houses, tombs, doorways, and other structures in the proper direction. Hakka also employ the ideas of yin and yang to describe the essential qualities of things. "Yin" things are thought to be chilly and wet, while objects with the "yang" quality are warm and dry. Bringing these qualities into internal balance is thought to benefit personal health. Spirit mediums (shamans) are employed to communicate with ancestors and ghosts; not all Hakka believe this practice is valid.

#### 5 RELIGION

Hakka religion combines Buddhist and Daoist beliefs; no unifying beliefs define a distinct Hakka religion. Hakka practice a form of domestic religion called ancestor worship. They believe that the spirits of their ancestors (*zuxian*) persist and that they require care from the living. Hakka appease the ancestors by lighting incense and offering sacrifices on ritual occasions.

A local god worshipped in many Hakka village temples is the "King of the Three Mountains" (Sanshan Guowang). The legend associated with this god is that spirits inhabiting three mountains in the Hakka region of Guangdong became protectors and saved the people from disasters. People began worshipping these spirits and built temples in their honor.

Outside of mainland China many Hakka are Christian, particularly in Taiwan. In Malaysian and Indonesia a sizable percentage are Muslim.

#### 6 MAJOR HOLIDAYS

The most important holiday in Hakka society is the lunar New Year. People return to their natal homes, and work stops for three or more days. Houses receive a thorough cleaning, and rhyming couplets with lucky phrases may be pasted on doorways. Families eat an elaborate meal featuring traditional dishes on New Year's Eve. New Year's Day is devoted to visiting other relatives, especially those in senior generations. In traditional society children received new clothes for the coming year.

Tomb-sweeping day (*qingming jie*) in April is an important holiday that is dedicated to the ancestors in the father's line (patrilineal ancestors). People prepare sacrificial foods (rice, meats, sweet rolls, and wine) and visit the family tombs as a group. The spirits of the ancestors are invited to feast on the food, strings of firecrackers are lit, and the graves are thoroughly cleaned. This ceremony emphasizes the strong bond between the living and their ancestors.

#### 7 RITES OF PASSAGE

Mothers who have just given birth are confined to their beds for 30 days and are not allowed to wash their hair. Hakka believe that a woman's joints are prone to damage after childbirth. Newborns are tightly swaddled and are placed on their backs to sleep. The birth of a male infant may be announced to the ancestors as evidence that the family line will continue. Hakka do not mark the teenage years with any special coming-of-age ceremonies.

Hakka practice double burial. When a relative dies, a funeral is performed, and the deceased is buried in a temporary grave. After five to seven years, the skeleton is exhumed, purified, and carefully arranged in a large ceramic vessel. The vessel is then interred in a permanent site. It is not unusual in Taiwan to find large family mausoleums containing the remains of many family members. These tombs are elaborately decorated and are a central focus of family pride.

#### 8 INTERPERSONAL RELATIONS

Hakka value family and friends very highly. The Hakka have a reputation for being reserved and stoic in their interactions with strangers or acquaintances. The standard greeting—"Have you eaten yet?"—is a polite way of inquiring after one's comfort; it is equivalent to "hello." People whose relationship is not close or whose social status is different politely greet each other by using the person's title (Mr., Miss, Teacher, or Dr.) and surname. Because of their reputation for reserve, Hakka body language is not demonstrative.

Etiquette is important. For a formal visit—as on the occasion of a senior relative's birthday, after a long absence, or to discuss personal business—a guest prepares a small gift of fruit, candy, or a local delicacy for the host. The host in turn offers tea and fruit or other light refreshment. Guests are also offered cigarettes.

Western-style dating was unknown in traditional Hakka society. Parents arranged meetings between boys and girls with the intent of finding suitable mates. Courtship was managed by parents to such an extent that the children seldom met

more than a handful of times before marrying. The meetings were arranged as formal visits rather than as dates. As Chinese society changed during the last half of the 20th century, this practice has declined greatly. Young people may now date as members of a school group. This practice allows them to mix freely and gives them opportunities to identify special people. In the cities, seeing a movie, strolling in a park, or buying a small treat are popular places to go on a date.

## **9 LIVING CONDITIONS**

Living conditions vary greatly depending on location. Most Hakka in China are rural dwellers. Until recently running water and public sewers did not exist in many locations, so people depended on wells and streams for water and on outhouses for toilets. Bottled water is now widely available, and modern bathrooms are common even in rural areas. Electricity is ubiquitous, but people still cook with wood and charcoal. Taiwan's economy is more developed; most rural Hakka have running water, public sewage, electricity and, increasingly, natural gas for cooking and hot water.

Hakka go to both traditional Chinese physicians and Western-style doctors. Herbalists operating Chinese-style pharmacies exist alongside Western drug stores. Other types of medical treatments include acupuncture, massage, folk remedies, and dietary changes.

Hakka live in modern, consumer societies and increasingly purchase the many goods that economic development and larger incomes have made possible. In the People's Republic of China, bicycles, televisions, air conditioners, washing machines, electric fans, and motorcycles are common household items. While most Hakka in rural areas cannot afford to own a car, the streets are crowded with vehicles, and many people have access to cars through their employment. In rural Taiwan, cars and air conditioners are common possessions. Living standards are rising for many, especially those who live in the cities, but daily life is not as comfortable as it is for many in the West. Houses are often not heated, so people must wear heavy clothing indoors in the winter. Increased income in China and Taiwan means a greater choice of diet in both rural and urban areas, as well as access to before unheard of luxuries, such as travel to distant domestic destinations and abroad.

A traditional Hakka farmhouse had three connected wings forming a U shape. A courtyard in the middle was used for processing harvests and other tasks. The central wing had a large room in the middle, used for eating, visiting, and household chores. The wings on the sides contained bedrooms, kitchens, storage areas, toilets, granaries, and animal pens. In areas of Guangdong and Fujian where Hakka clashed with other Chinese, an unusual type of house developed called a tulou, or earthen building. Tulou can either be rectangular or square shaped and are three to five stories high. Traditionally, the homes were built of compacted earth with very thick walls, while today the tulou are made of granite or fired bricks. Dozens of rooms built inside the walls of the structure can house as many as 80 families, and the central area functions as a courtyard. On the ground level, animals live side by side with the occupants, and families conduct daily tasks of cooking food and cleaning clothes in a common area. In Fujian province, more than 20,000 tulous have been constructed, often in clusters. Multiple generations and branches of a family often occupy a single tulou. It is thought that the unique architecture

of the tulou, which includes a single entrance and gun holes, developed as a defense against banditry.

Transportation is efficient in Taiwan. Paved roads run throughout the countryside and all areas are served by public bus lines. Many rural Hakka commute to work by bus and motorcycle. Elementary, middle, and high school students also ride these buses to school.

## **10 FAMILY LIFE**

Family life emphasizes cooperation within a hierarchy based on age and sex. Although fathers make major decisions outside the home, the relationship between the parents is more democratic in the family. Before marriage all major decisions affecting children are made by the parents. Sons are obliged to care for their parents in old age; parents usually live in the home of a married son.

Unlike other Chinese, Hakka never practiced the traditional custom of binding women's feet. Foot binding was a procedure using strips of cloth that forced the feet into small shapes. Women with bound feet were effectively crippled. Hakka women have a reputation for industry and stamina and contribute great amounts of labor on family farms.

Ideal family size among Hakka depends greatly on the social context. The population policy of the People's Republic of China allows parents to have only one or two children per family, depending on their location and economic status; abortions are common, and people generally practice birth control. Hakka outside China may have larger families, especially in agricultural communities. However, as economies industrialize and the demand for farm labor decreases, family sizes are also decreasing. A preference for male children exists; boys inherit the family name and have special obligations to the family's ancestors. Girls, it is thought, are lost to the family when they marry.

Hakka marry in their twenties. The bride and groom should have different last names (surname exogamy). Grooms are typically 2 to 10 years older than brides. Ceremonies are elaborate and focus on a sumptuous feast to which relatives and friends are invited. Large wedding feasts may have 300–500 guests. In southern China, young Hakka are allowed to date before marriage and the mass migration of millions of youth for work and school means that many Hakka marry outside of their community.

Urban families consist of parents and children (nuclear family), but parents usually live with one son (extended family). Rural family structure can be very complex, with parents sharing a compound with their married sons' families and unmarried children. Hakka also organize larger kinship groups based on the principle of descent from a common ancestor in the male line (patrilineal lineages). These kinship groups are not co-residential units but do assemble for ceremonial occasions.

## **11 CLOTHING**

Modern Hakka do not wear distinctive clothing. Western-style pants, dresses, shirts and outerwear have replaced older Chinese styles that did not use zippers and buttons. However, women traditionally embroidered intricate, colorful patterns on strips of cloth used to fasten round hats. This style of dress is not seen in Taiwan but occurs occasionally in the People's Republic of China.

*A Hakka woman smoking a pipe in Hong Kong. (Jean-Marc Truchet/Stone/Getty Images)*

## **12 FOOD**

White rice is the Hakka staple. Sweet potatoes are important where the land is not suited to wet rice. The Hakka also consume noodles made from rice, wheat, and green mung beans. Rice is steamed for lunch and supper to accompany stir-fried, steamed, and braised dishes using vegetables, meats, and fish. Rice is consumed in the morning as a thin gruel; it accompanies both pickled and fresh foods. In comparison to other regional Chinese cuisines, Hakka food is plain and not spicy. Soy sauce, salt, rice vinegar, ginger, sugar, and flavors from various preserved and pickled foods are used extensively in cooking. If there is a drink at the meal it is usually a hot soup, either a broth or a meat and vegetable combination. Like other Chinese, the Hakka do not drink tea with their meals.

Hakka have no food taboos, although some women are pious Buddhists who eat a vegetarian diet. In general, Hakka prefer a diet with high proportions of vegetables and moderate to small amounts of meat. Some Hakka will not eat beef because they believe it is morally wrong to consume animals that work in the fields to provide people with food.

## **13 EDUCATION**

The Hakka traditionally emphasized educating boys. Before the 20th century, boys studied the Confucian teachings and

other classics to cultivate the virtues associated with literacy. Exceptional students took examinations that could lead to high prestige civil service careers. Before the 20th century, Hakka girls seldom attended school; a bias against girls existed in traditional Chinese society. Modern Hakka live in societies where education is highly prized for both girls and boys; children work very hard to do well in school. In mainland China, Hakka have access to education in some of the top universities in the nation, located in Fujian and Guangdong provinces. Parents often invest heavily in their children's education, and both boys and girls in rural areas receive education through high school. Often parents send their children to distant schools, thus many Hakka youth may spend their teen years separated from their family. Children in Taiwan finish 12 years of education, and many go to college. Both students and parents know that economic opportunities increase with advanced education. Literacy rates are very high among people born within the last 40 to 50 years. Many Hakka migrate to Western countries to pursue educations in technical and scientific fields.

## **14 CULTURAL HERITAGE**

Hakka are famous for folk songs called "mountain songs" (*shan ge*). Romantic mountain songs were sung to each other by women and men working in the fields. Local produc-

tions of famous historical stories presented by itinerant opera troupes also entertained people. Opera performances were often scheduled to coincide with the summer harvest and drew large crowds.

### 15 WORK

Hakka have the reputation of being hard workers who can persevere in the face of adversity. Most Hakka in mainland China are rural farmers living in small villages and towns. In the 19th century, female agricultural labor was especially important in locations from which men migrated to find work. Several examples of occupational specialization exist. In 19th-century Hong Kong many Hakka specialized in stone cutting. People who migrated to Calcutta, India, in the first years of the 20th century became leather tanners. In the present, most Hakka who live in Taiwan work in manufacturing, business, and government. On the mainland, most Hakka are raised in agricultural communities, but a large number of Hakka youth have migrated to urban areas, particularly in Guangdong and Fujian province, to work in manufacturing plants and in low-wage service jobs.

### 16 SPORTS

In school and during their free time, Hakka youth often play table tennis, badminton, and basketball. Soccer is a popular spectator sport, but not often played. Shadow boxing (*taiqi*) is very popular among older people as a form of relaxation and exercise.

### 17 ENTERTAINMENT AND RECREATION

On the mainland, Chinese movies and television programs are popular among Hakka of all ages, but few are presented in the Hakka dialect. Notable Hakka musicians and performers outside of the mainland perform almost exclusively in the language or dialect of their home country or region, usually Mandarin or Cantonese. Well known Hakka artists include Hong Kong actor and musician Jordan Chan, Hong Kong actors Chow Yun-Fat and Leslie Cheung, Hong Kong actress Cherie Chung, Taiwanese film director Hou Hsiao-Hsien, Hong Kong singers Deanie Ip and Leon Lai, Malaysian pop stars Penny Tai and Eric Moo, Hong Kong actor and director Eric Tsang, Taiwanese singer Cyndi Wang, and Singaporean actress and singer Fann Wong.

### 18 FOLK ART, CRAFTS, AND HOBBIES

Friends often gather in the evenings and on weekends to play mahjong (*majiang*); children are introduced to this game in their teens. Many people take an interest in growing rare orchids and in practicing Chinese calligraphy as an art form.

### 19 SOCIAL PROBLEMS

Hakka are recognized in China and Taiwan as Han Chinese. The social problems that Hakka face are the same as the ones faced by other citizens. An active ethnic movement in Taiwan promotes using the Hakka language in radio and television broadcasts and supports including Hakka in public affairs. Human rights issues do not often arise in the People's Republic of China. Because of their status as an ethnic minority in non-Chinese Southeast Asian nations, Hakka may be the target of economic and political discrimination. Periodic anti-Chinese

riots in South East Asia have targeted Hakka communities, including deadly riots in Jakarta in 1998.

Drugs (opium and its derivatives) are not widely abused in Hakka society, but alcoholism is recognized as a potential problem. Excessive gambling is a problem that concerns many.

### 20 GENDER ISSUES

Since the economic liberalization of mainland China began under Deng Xiaoping in 1978, Hakka women have enjoyed expanded social freedoms and fallen victim to increasingly common vices. Young women from rural areas, such as the Hakka homeland, have flocked to big cities in search of employment. Often these women find low paying jobs in factories or in the service industry. The meager wages they earn at these jobs allows them to provide for their family and pursue entrepreneurial ambitions. In recent years divorce has become both legally more accessible and socially accepted, resulting in an increased number of single mothers. One of the dark sides of Chinese economic liberalization has been a marked increase in prostitution, in particular in the southern provinces where the Hakka reside. Poor young women from the countryside work in brothels for a few hundred dollars a month, exposing themselves to sexual disease and social stigmatization.

In mainland China gay rights are limited and until recently the government classified homosexuality as a mental disease. Among Hakka living outside of the mainland, the most notable gay or lesbian in recent times has been Hong Kong actor Leslie Cheung, who reached international fame before taking his life in 2003.

# HAN

**PRONUNCIATION:** HAHN

**ALTERNATE NAMES:** None

**LOCATION:** China; Taiwan; (as Overseas Chinese: Southeast Asia, Japan, North America, Oceania, and Europe)

**POPULATION:** 1 billion in mainland China

**LANGUAGE:** Mandarin Chinese

**RELIGION:** Taoism, Confucianism, and Buddhism

**RELATED ARTICLES:** Vol. 2: Chinese Americans. Vol. 3: China and Her National Minorities; Hakka.

## <sup>1</sup>INTRODUCTION

The Han are the main body of the Chinese nation, having a long history and an age-old tradition. In remote antiquity, the ancestors of the Han lived in the basin of the middle and lower reaches of the Yellow River. During long centuries of contact, conflict, and assimilation with the neighboring tribes, they formed in that area a community called Huaxia, which expanded gradually to areas along the Yangzi River. The first Emperor of Qin (r. 221 BC–AD 211) conquered the other princes of the Zhou Kingdom (1122–222 BC) and unified China in 221 BC. Shortly after, Qin was replaced by the Han Dynasty (206 BC–AD 220).

It is generally believed that the Chinese, as a unified nationality (with Huaxia as its core), came into being during the period of Han Dynasty. It was due to the political and cultural importance of this dynasty that the Chinese came to be known as the “people of Han” or simply “Han.”

In the long history of China, there were several large-scale migrations of the Han Chinese to south China (south of the Yangzi River), where the population eventually exceeded that of the north about 600 years ago. Lasting for 2,000 years and more, the imperial state was finally overthrown in 1911. Since 1949, two different political systems have existed simultaneously in mainland China and Taiwan.

## <sup>2</sup>LOCATION AND HOMELAND

According to the 2000 census, the Han in mainland China amount to over 1.2 billion people. They are mainly concentrated in cities and large river valleys where agriculture is most flourishing. The vast majority of people in Taiwan are also Han. In addition, quite a large population of Han ethnics have moved their residence abroad over the years as foreign citizens of Chinese origin or overseas Chinese. Most of them live in Southeast Asia, Japan, North America, Oceania, and Europe.

## <sup>3</sup>LANGUAGE

Han language, usually called Chinese, has been adopted by the United Nations as an official international language. Although there are seven dialects, the written script, invented more than 3,000 years ago, is compatible with all of them.

The popularization of the northern dialect (sometimes called Mandarin Chinese), which has become the common spoken language (*putonghua*) of China, has contributed to better communication and understanding among the various peoples, nationalities, and regions of China.

## <sup>4</sup>FOLKLORE

The ancient books of the Han people recorded thousands of myths that have been further enriched by folk tales among the people. Pangu is the god who created the world; Nüwa, the goddess who fashioned human beings; Ji, the god of all crops; Shennong, the god of herbs. Suirensi invented the method to produce fire; Yu drained the flood; Cangjie created Han characters; Huang Di was the legendary ancestor of the Han people. The *Sanhaijing*, a book written 2,000 years ago, records the legends, folk customs, and geographical features of faraway places, blending together fact and fancy.

## <sup>5</sup>RELIGION

Since the concept of patriarchal clan is deeply rooted in Han society, the continuity of patrilineal family is a matter of prime importance, having a great impact on attitudes and behavior even at the present. Another cultural trait deriving from the remote past is the Han belief in the idea of God’s will.

The Han have historically accommodated religions of diverse origins. The first historical writings, the recently discovered inscriptions on “Oracle Bones,” dating from the 14th century BC, testify to the belief of the ruling class in the deified ancestor, ancestor worship, and bone divination (to know the ancestor’s will). Earlier popular oral traditions reflect beliefs in a plurality of nature gods (terrestrial and heavenly) and deified heroes.

The Han Dynasty (206 BC–AD 220), saw the formation of three religious traditions: Taoism, Confucianism, and Buddhism (based on the respective teachings of Lao zi, Confucius, and the Buddha). Buddhism, a foreign religion, exerted the greatest influence. But most Han paid homage to all three religions, thus avoiding religious conflict.

The inclusive religious attitude of the Han may perhaps be explained by the fact that the three religions were mutually complementary, Taoism centering on man’s relation to nature and the cosmos, Confucianism on man’s relation to society, and Buddhism on man’s relation to the beyond. Islam and Christianity only came to China under the Tang Dynasty (AD 618–907) and never occupied a prominent position.

## <sup>6</sup>MAJOR HOLIDAYS

The Han celebrate many major holidays. Among them, the most important is the Spring Festival (lunar calendar; Western calendar, between January 21 and February 20). Almost everybody travels back home, even from faraway places inside or outside China; it is estimated that hundreds of millions travel during that festive period. Generations of family members get together to share a dinner party on the eve of the lunar New Year. Fireworks and firecrackers are kindled everywhere (but have been forbidden recently in some urban districts). People dress up and have a good time for days in the cities and for weeks in the rural areas.

October 15 (lunar calendar; Western calendar, between November 6 and December 4) is the second most important day of the year for the Han people. People enjoy contemplating the full moon and eating moon cakes (originally an offering to the Moon Goddess), symbolizing the union and reunion of the family. The Lion Dance, Dragon Dance, and Dragon Boat Regatta are performed on this festival.

*A Han funeral procession winds along a country road in Pingtang, China. (© Christophe Boisvieux/Corbis)*

## **7 RITES OF PASSAGE**

Since 1980, each Han couple of reproductive age in mainland China has been encouraged to have no more than one child. Childbirth, therefore, is often regarded as a major event in the family. Following the old custom, eggs cooked and dyed red are often sent to relatives and friends for celebration. Quite a number of people will have a dinner party to celebrate their baby's completion of the first month of life.

In the past, burial of the dead underground was the general practice throughout the country. Today, it has been replaced in the cities by cremation. The Qingming Festival, a day of commemorating dead relatives and paying respects to their tombs, is held on April 4, 5, or 6.

## **8 INTERPERSONAL RELATIONS**

Paying a New Year call is a very popular tradition on the Spring Festival. The guests usually bring gifts, such as fruits, candies, cigarettes, or a bottle of wine. They can expect a warm welcome. However, greeting on the phone during festivals is becoming more and more popular in large cities today. Under the influence of Western culture, sending Christmas and New Year greeting cards is becoming a trend.

Although most young people think that the best way to find a partner is through their own efforts, there are still a number

of them who are helped by their parents, relatives, or friends. On most occasions, the males take the initiative. The response of a girl invited for the first time in her life for a date is usually to postpone it until later, unless she is well acquainted with the inviter. Mutual attraction is of utmost importance in selecting a partner. Position and wealth are also important considerations.

## **9 LIVING CONDITIONS**

Being poor and less technologically advanced, the Han for a long time exerted great efforts to guarantee and improve their means of subsistence. Following the economic development of Taiwan, mainland China adopted in 1978 the policies of reform and opening to the outside world that speeded up its own economic development and increased its gross national product (GNP) twofold and fourfold in the 1980s and mid-1990s, respectively. This ensured a relatively comfortable lifestyle for the Han, especially those living in the coastal areas.

The average life expectancy for the Han has increased to more than 70 years of age, while the mortality rate has dropped to about 7 per 1,000 in 2008. Mortality and morbidity due to infectious disease have dropped significantly. Schistosomiasis has been eliminated in the vast majority of rural areas in south China. On the contrary, sexually transmitted diseases,

especially gonorrhea, have increased markedly since the 1980s. What merits attention is the high incidence of induced abortions (due to contraceptive failure or to sex-selection of the baby), which has had an inevitable negative impact on women's health.

With improved rural and urban incomes, Han consumer demand has turned from basic subsistence needs to various household electrical appliances, upholstery, and jewelry. However, consumers are frustrated by inflation and by the increasing number of counterfeit goods in the marketplace.

#### <sup>10</sup> FAMILY LIFE

The roles of men and women in Han society of mainland China are not clearly prescribed. Han are monogamous. Men

and women marry the partners of their own choice. Although marriages are mostly stable, the incidence of divorce has been on the rise. An average Han family in urban areas will consist of a man, his wife, and their only child. In rural areas, three or more generations living together under the same roof is not uncommon. Cats and dogs are popular pets in the countryside, but they are usually forbidden in the cities. Birds are beloved pets everywhere.

#### <sup>11</sup> CLOTHING

Just two decades ago, city streets were uniformly grey and dark; men and women, young and old, wore clothes of the same style and the same color. Today, in the frozen north, down jackets, woolens, and fur overcoats in red, yellow, or-

ange, and other bright colors liven the bleak winter scene. In the south, where the climate is milder, people choose Western suits, jeans, jackets, sweaters, and other fashionable clothing to wear year-round. Famous brand names and fashions are a common sight in large cities, and they sell quite well. Cheaper and more practical clothing is also available. Similar changes also have occurred in rural areas, especially among the new class of well-to-do farmers. However, in less advanced rural areas, Han peasants still wear their “Mao suits” (the plain, two-pieced utilitarian attire named after the former Chinese leader).

## **12 FOOD**

The main foods of the Han are rice, flour, vegetables, pork, eggs, and freshwater fish. The Han have always laid much stress on cooking skills, making Chinese cuisine (basically Han) well known throughout the world. Dumplings, wonton, spring rolls, rice, noodles, and roast Beijing duck are just examples of traditional foods.

## **13 EDUCATION**

The Han, who invented an original system of writing more than 3,000 years ago, and the university more than 2,000 years ago, always prized education and literacy. The rate of illiteracy and semi-illiteracy in Han society is under 10%. Chinese law mandates children receive 9 years of formal education. About 98% of children enroll in school when they reach school age. More than 80% of the students who graduate from primary school and 45% of those who graduate from junior middle school continue to higher levels.

There are more than 1,000 universities and colleges and 800,000 primary and middle schools at different levels, with a total enrollment of 180 million, including 2.6 million college students and graduate students. In addition, 800,000 students are now taking home undergraduate training courses, while 14 million adult students attend classes of different levels in adult schools.

Despite progress in education, about five million school-age children do not enter school or have dropped out, and the college entrance rate is only 1.8%, below the average for developing countries. Underfunding is the primary reason for this status, and enrollment in the countryside is much lower than that in cities.

## **14 CULTURAL HERITAGE**

The variety of traditional Han musical instruments is sufficient to form an orchestra. The most popular include the two-string violin (*erhu*), the lute (*zheng*), and the *pipa*. Institutions of traditional music and dance were established early in the 1950s.

The ancient literature of the Han, including poems, drama and novels, history, philosophy, and rituals, is a great world treasure. Many works have been translated into other languages and introduced into many countries. The great poets Li Bai and Du Fu, who flourished in the golden age of Chinese poetry (Tang Dynasty, 618–907), have produced works that belong to world literature. The monumental Chinese novels, starting in the 14th century with the epic *Water Margin*, also include *Pilgrim to the West*, *Golden Lotus*, and *Dream of the Red Chamber*. One should also mention philosophical masterpieces written

around the 5th century BC, namely Confucius' *Analects* and Lao-zi's *The Way and Its Power*.

The Han have also contributed greatly to world civilization by inventing paper (2nd century BC), ceramics (7th century), gunpowder (10th century), porcelain (11th century), movable printing (11th century), and the compass (12th century).

## **15 WORK**

The economic disequilibrium of Han society is very prominent. On the one hand, scientists are engaged in nuclear power plants, while peasants in rural areas cultivate the land with primitive farming techniques. Almost all kinds of work present in both developed and developing countries can be found in China. Among them, three kinds of work go back thousands of years. Porcelain production lent the name “China,” from its birthplace; China is also the homeland of sericulture (the production of raw silk), filature (reeling of silk), and silk knitting; doctors of traditional Chinese medicine prescribe herbs and acupuncture, making a great contribution to the health and population growth of the Chinese nation.

## **16 SPORTS**

As the main ethnic body of the Chinese nation, the Han have participated in almost all the athletic contests of the Olympic Games and performed brilliantly in many sporting events. Soccer, volleyball, basketball, table tennis, badminton, jogging, and swimming are popular sports played by children and adults. *Wushu* and *Taijiquan* are two kinds of traditional shadow-boxing of the Han, which have become world-famous as methods of gymnastics and meditation.

The Chinese Government has set up a Federation of Chinese Sports to train Chinese athletes for world Olympics and for Asian Olympics. Athletes from China have performed brilliantly in many sports, especially swimming, diving, gymnastics, ping-pong, and volleyball.

## **17 ENTERTAINMENT AND RECREATION**

Watching television is almost a daily entertainment of the Han family in the evenings. In addition, the video cassette recorder is now very popular in urban areas. The Han go to the movies just on occasion. Youngsters are often enthusiastic about dancing, karaoke, and rock music, while the aged are likely to be enchanted by Beijing opera, local drama, classical music, and mahjong tiles. Travel has become a new entertainment since the five-day work week was adopted in 1995.

## **18 FOLK ART, CRAFTS, AND HOBBIES**

Calligraphy and traditional Chinese painting are the most popular folk arts of the Han. Paper cutting, embroidery, brocade, cloisonné, colored glaze, jade ware, clay sculpture, and dough figurines meticulously made by craftsmen are famous around the world. Chess, kite flying, and potted landscapes are hobbies among people of various ages.

## **19 SOCIAL PROBLEMS**

China is in a period of transition, moving from a traditional to a modern society. The coexistence of the old social structure and the new, immature social system produces a number of contradictions. The widening gap of living standards between

rural and urban areas draws a surplus rural labor force of 100 million and more into the coastal areas looking for jobs. This situation, which favors mobility and exchange, entails serious social disturbances. The disequilibrium of the economic development between the coastal areas and the inland, the irrational income for different occupations, the widening gap between the rich and the poor, the inflation year after year, bribery becoming more serious day by day, and the reappearance of other ugly phenomena such as gambling, drugs, prostitution, and abduction of women, are all worrisome and perplexing to the public.

## 20 GENDER ISSUES

The Chinese states that women have equal rights with men in all areas of life, and most legislation is gender neutral. However, there are continued reports of discrimination, sexual harassment, wage discrepancies, and other gender related problems. The gap in educational level between women and men is narrowing with women making up 47.1% of college students in 2005, but only 32.6% of doctoral students. China has strict family planning laws, and it is illegal for women to marry before 20 years of age (22 for men), and it is illegal for single women to give birth. The Family Planning Bureau can require women to take periodic pregnancy tests and enforce laws that often leave women with no real options other than abortion or sterilization.

Prostitution and the sex trade is a significant problem in China involving between 1.7 and 5 million women. It involved organized crime, businessmen, the police, and government workers, so prosecution against prostitution has limited success. In 2002, the nation removed homosexuality from its official list of mental illnesses, and though it is still a taboo topic, homosexuality is increasingly accepted, especially in large, international cities.

# HANI

**ALTERNATE NAMES:** Huoyi

**LOCATION:** China (Yunnan)

**POPULATION:** 1.5 million

**LANGUAGE:** Hani

**RELIGION:** Polytheism; ancestor worship; some Christianity

**RELATED ARTICLES:** Vol. 3: China and Her National Minorities

## 1 INTRODUCTION

The Huoyi tribe inhabiting the south of Dadu River (in north-west Sichuan) in the 3rd century BC was probably the ancestor of the current Hani. The Huoyi were a branch of the southward-migrating ancient Qiang. From the 4th to the 8th century, they reached southward to areas in Yunnan Province between the Lanchang Jiang River and the Yuan Jiang River where they now dwell. Since the Tang Dynasty (618–907), they paid tribute to their own elected officials. In the 18th century, the chiefs of the Hani tribes lost their authority and were replaced by Manchu or Chinese officers appointed directly by the Qing Dynasty (1644–1911).

## 2 LOCATION AND HOMELAND

The Hani are mainly distributed in the southwest of Yunnan, between the Lanchang Jiang River and the Yuan Jiang River. There are four autonomous Hani counties; there are also large Hani populations in the Dai districts of Xishuangbanna. These areas are located in the subtropical zone, with fertile land and abundant rainfall, suitable for growing rice and other wet crops. The Hani population was 1.5 million in 2000.

## 3 LANGUAGE

Hani language belongs to the Sino-Tibetan family, Tibeto-Burman group, Yi branch. There are three dialects and no written language. In 1957, a writing system based on Latin was created. Hani is a self-given name. The other branches have self-given names of their own. Hani is the general designation of the whole group.

## 4 FOLKLORE

According to Hani mythology, there was a chaotic fog in the universe in remote antiquity. It seethed silently for a long period of time and ultimately turned into a vast expanse of water. A big fish grew up, but its head and tail were not clearly visible. The fish swung its right fin up, which turned into the sky. It swung its left fin down, which turned into the earth. When it swayed its body, 14 gods and goddesses, as well as two human beings, were sent out from its back. The man and the woman married. Later on, the woman gave birth to 21 children. The eldest was a tiger, the second an eagle, the third a dragon. The rest were men and women. The dragon brought three big bamboo tubes to its mother as gifts for her loving kindness. The first tube contained gold, silver, copper, iron, and jewelry, which she ordered to stay underground. The second contained rice, corn, cotton, grass, and trees, which she ordered to grow on earth. The third contained oxen, horses, pigs, poultry, and other animals. She ordered all the animals, except the oxen, to

be led into the forest. The oxen were to be reserved as sacrificial offerings to the gods.

The Hani believed that seeds of the food crops were taken from the gods by a hero called Mamai, who had to pay with his own life to obtain them. That is why the Hani hold a commemorative ceremony in honor of Mamai in May or June of each year.

## 5 RELIGION

The Hani are polytheistic. They believe that there is a Heaven God, an Earth God, a Tree God, as well as a Village God and a House God to protect them. They offer sacrifices to obtain their blessing and protection. Ancestor worship is also an important form of religious belief and practice. The Hani believe that some ghosts and gods bring about misfortunes; they seek the mediation of the shaman to ward off their influence and to expel them.

In Xishuangbanna District, the Hani offer sacrifices to the Village Gate, asking for the protection from the Village Gate God. There are public trees in the village as well as family trees. The shaman is usually mandated to perform the sacrificial rite for the Tree God in the context of a festive celebration of the community under the trees; on that occasion, members of the community express their best wishes for the future.

Since the beginning of the 20th century, a number of Hani have converted to Christianity.

## 6 MAJOR HOLIDAYS

For the Hani, just as for the Chinese, the Spring Festival and Mid-Autumn Festival are the most important celebrations of the year. They regard the month of October (lunar calendar; Western calendar, between October 24 and November 23) as the beginning of the year. The October Festival, therefore, is their New Year. It lasts from 5 to 15 days, depending on local custom. All members of the local community participate, each household providing a course for the lively communal dinner party.

The June Festival (lunar calendar; Western calendar, between June 23 and August 20) lasts for three to five days. On the last day of the festival, in addition to sacrificial offerings, a dinner party, and recreational activities, every family lights a torch and chases the ghosts out of the home; the torches are then taken in a procession to the limits of the village so as to drive out the evil spirits from the community.

## 7 RITES OF PASSAGE

A rite of joint naming of the newborn son or daughter is held on the fourth day after the infant's birth. The parents prepare rice rolls covered with cooked beans and a little piece of chicken and put them on a table for the villagers. If the infant is a male, a boy will be invited to carry a bamboo tube of glutinous rice and a hoe; he should hoe the ground three times in front of the mother and the son. If the infant is a female, a girl should be invited to hold a chopper and carry a bamboo tube of glutinous rice; she chops the firewood three times in front of the mother and the daughter. These gestures show that the boy will be good in farming and the girl good in household work when they grow up. The ritual is completed by asking for the village elder to name the baby.

The girls comb their hair into braids before marriage, but coil the braid into a bun on the top of the head after the wedding; after childbearing, they wrap their head with a turban.

They dispose of the dead by cremation.

## 8 INTERPERSONAL RELATIONS

When receiving a guest, the host usually holds out a bowl of wine with both hands and offers a toast. He then takes the teapot from the firepool and pours a cup of strong tea for the guest. The guest is not free to refuse.

There are quite a few ways for boys and girls to seek each other. During breaks from manual labor, boys and girls sit in two different rows, face to face, and throw small pine twigs at each other for fun. In this playful atmosphere, they may throw the pine twigs intentionally to their preferred partner. There is then formal dating. In some areas, when a young man reaches marriage age, he will carry his knapsack and journey to different villages to look for a spouse. If he has found someone, he will have a heart-to-heart talk (mostly about love) with the girl in a public house specially provided by the village for this purpose. They might even sleep there together if they wish. If they find each other congenial, they will agree on a wedding day. When the time comes, the boy's friends will help him to steal the girl to his house and get married. In some areas, if he takes a fancy to a girl, he will snatch away her small hat from her head. The hat is made of black handwoven cloth, silver ornamented, six angles in shape. If she agrees, they will start dating. If not, she might ask him to return the hat.

## 9 LIVING CONDITIONS

Most of the Hani live half-way up in the mountains. Some villages are small, with dozens of households, while others are composed of hundreds of families. Hani houses are usually made of wood and adobes, thatched with straw and built on stone foundations. Most of them have three stories: the uppermost is for storing groceries and vegetables; the second, for living and food storage; and the first, for livestock. There are variations in building styles from region to region. For instance, in the Muojiang area, houses are flat-roofed and built on adobes; but in the Xishuangbanna area, they are made of wood and bamboo and provided with a balcony. Men and women live in separate rooms; the man's is in the front, which is also the place for guest entertaining.

Different districts are connected by highways, but people have to walk in mountainous areas. Fully equipped hospitals have been established in the counties and medical clinics in the small towns.

## 10 FAMILY LIFE

The Hani family is patrilineal. They practice the "joint name system," by which they can trace back dozens of generations along the patrilineal family tree. The last one or two syllables of the father's name are the beginnings of the sons' and daughters' names.

By tradition, the Hani family is monogamous. However, the strength of the custom varies from region to region; for instance, in Xishuangbanna District, monogamy is stringent. A man abandoning his wife and marrying again will be condemned by public opinion. In general, a concubine is allowed, though illegal, if the legal wife has had no son. Young people have full freedom to date, but marriage should be agreed to by the parents. For instance, in the Mujiang area, there is a custom called "stepping on the road." When the boy and the girl find each other congenial, their parents must walk a certain distance on the road. If they do not come across a rabbit, wolf, or some other animal, the girl is betrothed to the boy. Two or three days after the wedding, she should return to her parents and live there until the time of rice transplanting in the spring.

## 11 CLOTHING

The Hani usually wear clothes made of dark navy cloth that they weave and dye themselves. Wrapping a black or white cloth on the head, the men usually wear long pants and a garment with buttons down the front. The women's clothes vary in different districts, but usually consist of long pants and a petticoat made of a single piece of cloth and opened at the right side without any collar. The sleeve openings and the bottoms of the pants are all piped and laced. In Xishuangbanna District, the women wear barrel-like long skirts, multi-pleated skirts, or pants reaching over the knees. Earrings, necklaces, and bracelets are daily ornaments. The marital status of women can be judged by the design and color of their waistband, as well as by their hairstyle. For example, single or double braids hanging down means the girl is unmarried, while a bun made of coiled braids indicates a married woman. In some areas, when a girl becomes 17, she may wear an ornament called *ouqiuqiu* behind her head. After 18, she may keep her hair on the temples, which denotes that she is "marriageable." Married women must cover the *ouqiuqiu* with a black cloth.

Three women from the Hani dine in Yunnan Province, China. (Yann Layma/Getty Images)

## <sup>12</sup>FOOD

The staple foods of the Hani include rice and corn. Proteins are obtained from chicken, duck, eggs, pigs, and oxen. Glutinous rice and *baba* (a cake made of cooked black rice with pestle) are indispensable during festivals. Edible wild herbs and wild fowls are taken on holidays. In the second part of June (lunar calendar; Western calendar, between July 7 and August 20), the Hani celebrate the Locust Festival; all the villagers go to the fields to catch locusts, which are a delicacy for the Hani. They like sour and spicy dishes. In some areas, they pulverize brown sugar, glutinous rice, potatoes, and sophora (nut of the sophora japonica, or “scholar’s tree”) into a powder. They then add water to obtain a thick dough and form the mixture into balls or shapes of animals; these are fried until crispy. This delicacy is served during the New Year Festival.

## <sup>13</sup>EDUCATION

Illiteracy was prevalent in the past. Since the 1950s, many primary schools have been established in the larger villages. There are middle schools and technical schools in the small towns. The great majority of children reaching school age are enrolled in school. Although education among the Hani has developed quickly, their educational level is still below average among the national minorities.

## <sup>14</sup>CULTURAL HERITAGE

Among the traditional musical instruments of the Hani, the *bawu* is unique. It is a bamboo pipe with eight openings on the shaft and a copper reed at one end. The deep notes of this oboe-like instrument are beautiful in timbre and very pleasant to the ear.

The “Wooden Sparrow Dance” was created in a village at Yuanyang in Yunnan. According to legend, a sparrow cured a boy who was seriously ill. Thereafter, whenever a boy was born, the villagers would perform a special dance to celebrate the occasion; the dancers are usually four to six males holding a sparrow carved in wood. There is another bird dance, called the “Silvery Pheasant Dance,” performed in the Hani District along the Honghe River. The silvery pheasant has been regarded as a symbol of peace and liberty by the Hani. The dancers, wearing white, with feather fans in both hands, move softly and gracefully, imitating the bird’s movement in the air.

In addition to myths, legends, poems, folk tales, fables, children’s folk rhymes, proverbs, and riddles, the Hani have preserved an ancient epic narrating their migrations called “Hani Ancestors crossing the River,” which is the common heritage of most Hani communities.

## <sup>15</sup>WORK

The Hani are good at building terraced fields. They are able to build them in line with the local topography and the soil tex-

ture. The uninterrupted water from the streams and ravines is channeled into the terraced fields. In Hani districts, tiers upon tiers of terraced fields greet the eye on every side. Some terraces are made of hundreds of tiers, like a huge ladder stretching to the sky.

## 16 SPORTS

The traditional sport of the Hani is to play on the swing. It is not an ordinary swing but rather like a small windmill. Serving as a swing seat, a board is fixed at each end of the rotating arms. Four youngsters, sitting on the boards, rotate the arms in a full swing, rising and falling with each rotation.

## 17 ENTERTAINMENT AND RECREATION

Listening to the “Drinking Song” is a traditional entertainment. The song, performed by an old singer, is about stories of their ancestors.

The Hani of Muojiang in Yunnan enjoy a special recreational dance: The participants dance while beating a drum; the young men swing their arms with a rolling gait, while the girls shake their handkerchiefs and swing their legs. They often interrupt their dance to propose a toast to the surrounding people.

## 18 FOLK ART, CRAFTS, AND HOBBIES

Hani girls are adept at embroidery. Various figures and flowers are embroidered on hats, clothes, leg wrappings, and waistbands. Silver ornaments, such as earrings, eardrops, necklaces, and large bracelets are carved exquisitely.

## 19 SOCIAL PROBLEMS

The Hani’s cultural and educational level is below the average of the national minorities of China. This is due to the low starting point, to the little attention paid to education, and to the very low income of the teachers as a result of underfunding.

## 20 GENDER ISSUES

The Chinese constitution states that women have equal rights with men in all areas of life, and most legislation is gender neutral. The Hani have not achieved the same levels of education as the majority population in urban areas, but as of 2008, most Hani children were enrolled in school as of 2008. There is no significant gap in education between boys and girls.

China has strict family planning laws. It is illegal for women to marry before 20 years of age (22 for men), and it is illegal for single women to give birth. Though minority populations were previously exempt from family planning regulations, policy has changed in recent years to limit minority population growth. As of 2008 urban minority couples may have two children while rural couples may have three or four.

# HAZARAS

**PRONUNCIATION:** huh-ZAH-ruhzh

**LOCATION:** Afghanistan

**POPULATION:** 6–7 million

**LANGUAGE:** Dari (Khorasani Persian); Pastu; Baluchi; Turkic

**RELIGION:** Islam (Shia Muslim)

## 1 INTRODUCTION

The Hazaras are one of the many different ethnolinguistic communities living in Afghanistan. Some of the other major ethnic groups include the Tajik, Pashtun (or Pushtun), Uzbek, Turkmen, Baluch, and Nuristani. The Hazaras, with strong Mongoloid features, consider themselves to be Moghuls (descendants of the Turko-Mongol tribes of Inner Asia). Local legends and some native historians trace their ancestry to the biblical figure Yafith (or Japheth), the son of Noah. Their ethnic origins and the exact time and historical circumstances of their appearance in Afghanistan, however, remain little understood.

Although there appears to have been considerable curiosity about the Hazaras among foreign researchers, especially during the decades preceding Soviet intervention and the civil war, a systemic and comprehensive study of their history and ethnography is yet to be attempted. For political reasons, most historians writing about Afghanistan have left out any discussion of the Hazaras in their works. Similarly, the government of Afghanistan has neglected the Hazara regions as targets for economic development and social change. It is important to note that Hazaras (excluding those in central Afghanistan) live amid a variety of different ethnolinguistic communities in the country. Hence, their cultures display some variations reflecting adaptation to local conditions and ways of living.

The Hazaras are for the most part a tribally organized society. The names of some of their major tribes and tribal units are Shaikh All, Turkuman, Qarluq, Kahgadai, Qarabatur, Daymirdad, Behsood, Jaghoori, Daychoopan, Daykhita, Aymaq, Khawjameri, Nayman, Chaichka, Daykandi, Dayzangi, Tatar, and Fooladi Hazaras.

## 2 LOCATION AND HOMELAND

The exact number of Hazaras, like other ethnic communities in Afghanistan, is not known due to the fact that no complete national census has ever been taken in that country. The estimates of Hazara population in Afghanistan range from about 7% (or 1,519,000 people) to well over 20% (or 6,000,000–7,000,000 people) of the total Afghani population of 31 million people. Spatially, the Hazaras are more concentrated in central mountainous regions of Afghanistan, but they are also found in smaller numbers scattered in other areas of the country. In addition, a population of Hazaras dwell in Baluchistan, Pakistan. Many Hazaras have also moved to Kabul to seek a better life and today comprise about half of the population of that city.

The central portion of Afghanistan in which a high population of Hazaras live is called Hazarajat. Hazaras can be found in many different provinces. Major locations of the Hazaras include Bamyan, Ghazni, Uruzgan, Ghoor, and Zabul. Other major areas with somewhat lower Hazara populations include

Kabul, Badghees, Logar, Parwan, and Samangan. Helmand, Qandahar, Baghlan, and Joozjan are also populated with Hazaras to a lesser degree. Small populations of Hazaras can also be found in other provinces of the country. The location of the Hazaras can be found in a geographical circle in central Afghanistan and an area extending west of the circle as well. The territories inhabited by the Hazaras lie completely within Afghanistan and do not share borders with any neighboring countries.

Hazarajat generally has a cold climate, and snow lasts long on the mountains. Because Hazaras raise animals, they must prepare and store food during the summer to meet their necessities for the cold winters. Until recently, the major means of transportation among Hazaras were donkeys and horses. Motor vehicles have only recently become common in their region.

## 3 LANGUAGE

Most Hazaras today speak Persian (known as Dari in Afghanistan). Because of the importance of Persian for communication, economic, and educational reasons in Afghanistan, Hazaras were influenced by the language and began speaking it. In addition to Persian, some Hazaras also speak Pashtu (or Pushtu) and Baluchi. The traditional Turkic language is also used in some areas. Professor Shah Ali Akbar Shahrustani, a well-known scholar of Hazaras, wrote a book comparing Turkic and Mongolian languages. He found 1,400 Turkic and Mongolian words that were used in Hazaran Persian. Of these,

*A Hazaras family in their cave in Bamiyan, Afghanistan. They were displaced from their home by the Taliban and were on the move for three years. (Tyler Hicks/Getty Images)*

more than 1,000 were pure Turkic words. The Persian spoken by Hazaras is known as Khorasani Persian.

#### **4 FOLKLORE**

Hazaras historically have less formal education than people from other parts of the country. Hazaras believe in the superstitions that are common in the country. Some beliefs include the evil eye, ghosts, and several other superstitions about animals and nighttime.

Storytelling is a traditional Hazara habit. They tell stories of their history, their ancestors, and their heroes. Music is commonly used with poetry, epics, and love stories. The *dambura* is used to provide music. This is a bowl lute with a long neck and two strings that are plucked.

Hazaras' customs and traditions are unique. They have many different *dubaitis* (which are sung). An example of a *dubaiti* is:

The stars shone and I lay awake  
I was behind the broken wall  
As the damned cock began to crow  
I was still waiting for my love.

Hazaras also have many proverbs. Examples include:

If your father owns the mill, you still must wait your turn to grind your flour.

Mirrors are not necessary at a meeting of the blind.  
Don't make plans for your life on the advice of false astrologers.

The sons of wolves will be wolves.

Two people are afraid of an empty rifle: the one with the rifle, and the one without it.

#### **5 RELIGION**

The Islamic religion has two major sects, the Sunni and the Shia sects. Sunnis recognize the four khalifs that followed Prophet Muhammad and believe in four imams: Abu Hanifa, Malik, Shafi, and Hanbal. The Shias give more significance to the fourth khalif, Ali, and his family. The Hazaras are Shia Muslims. During the beginning of Islam in Afghanistan, the Shias were divided into three different groups: the followers of the 12 imams, the Ismaili Shias, and the Zaidi Shias. Because the Zaidi Shias were very close to the Sunni sect of Islam, they are no longer present in modern-day Afghanistan. The Shias following the 12 imams exist throughout the country.

In the past, the Sunnis and Shias of Afghanistan had very good relations with each other, including marriages between sects. Recently, however, politics have stressed their differences

and have divided the two to a greater extent. During Afghanistan's civil war years (1992–1996) and the preceding years of the Soviet invasion, Hazara resistance groups were generally not allied with those of Sunni background. Hazaras were supported by Shia Iran while other Sunni groups were supported by Sunni Pakistan, and the politics involved served to further drive apart Shia Hazara and Sunni groups in Afghanistan. The majority of Muslims in the world are Sunnis, considerably outnumbering the number of Shias.

## 6 MAJOR HOLIDAYS

As Shia Muslims, Hazaras celebrate the two major Islamic holidays: *Ayd-Al-Fitr*, a three day holiday following Ramadan, the month of fasting; and *Ayd-Al-Adha*, a festival (at the time of pilgrimage) in which animals (usually goats, sheep, cattle, or camels) are sacrificed in the name of God. 'Ashura celebrations also take place among the Hazaras. One other holiday celebrated among Hazaras is Nawruz, the Afghani New Year traditionally celebrated throughout most of the Turkic-Persian world. This holiday has developed into a religious one since the advent of Islam in the country. For example, people in Mazar-i-Sharif celebrate Nawruz at the place in which the tomb of Ali is believed to be located. In Kabul, the celebration takes place around an area called Sakhi. Trees are also planted on this day.

## 7 RITES OF PASSAGE

Little girls wear bright colors and are free to go outside while they are young, but as they mature and reach puberty, they are required to cover their hair with scarves. They are also required to stay in the house more often. There are also special celebrations and practices during weddings, times of circumcision for young boys, and funerals.

## 8 INTERPERSONAL RELATIONS

The Hazara people are very hospitable and friendly to guests. They prepare special food for their guests, and the guests are honored with the best place to sit. Most of the Hazaras in Kabul and the countryside eat with their hands, rarely using utensils such as forks and knives.

Hazara women perform many household tasks, including sewing, cooking, milking animals, cleaning, and raising children. They also perform some outside tasks with the husband as well. Women are respected among men and the Hazara community, and the men are respected by Hazara women.

## 9 LIVING CONDITIONS

The living conditions of Hazaras vary considerably depending on their locations. Those living in cold climates have more difficulties than those living in warm areas. In cold areas, more clothing is necessary, there is more of a need for wood to keep warm, travel is more difficult, and agriculture is poor. (Fruits are not common in some parts of Hazarajat. They also lack vegetables as well.) Generally speaking, Hazaras are poor people, and there is little business interaction among them. In Kabul, they usually have low-paying, menial jobs such as janitorial work and are relegated to living on the outskirts of the city, with less access to clean water and electricity and other amenities than other groups.

## 10 FAMILY LIFE

It is customary for entire Hazara families to live together in one house. This includes grandparents and women married to the sons of the household. Daughters-in-law contribute to the household work when they move in, easing the workload of their mothers-in-law. Newborn babies are usually named by the older people of the household. Grandparents show much interest in the raising of their grandchildren. Fathers and grandfathers teach boys male tasks, while mothers and grandmothers teach girls the tasks assigned to females. Marriages are arranged, and when a daughter is married, she moves in with her husband's family. After the death of the grandparents, especially the grandfather, the sons usually begin living independently.

## 11 CLOTHING

The most common clothing among the Hazaras is *perahan-u-tunban*, a type of clothing somewhat resembling the Western world's pajamas. Women's designs differ from those of the men. Men wear turbans, vests, overcoats, and sweaters over their *perahan-u-tunbans*. Their clothing is usually made from wool and/or cotton. Unlike the men, who wear simply colored clothes, the women usually wear clothes with varying bright colors and designs. The women usually wear lighter-weight clothes because they remain indoors more often. Hazaras do not have a large quantity of clothes.

## 12 FOOD

The Hazaras' diet includes a large proportion of high-protein food such as meat and dairy products. They use plenty of oil when cooking. They usually eat only one type of food during a meal, not having wide selections of food at once. Exceptions are among the wealthy and at times when guests are visiting.

## 13 EDUCATION

Hazaras have two systems of education. The first one is the traditional system, which includes religious studies at mosques, education by family members at home in gender-appropriate tasks, and learning basic reading and writing skills from the local religious leaders of the villages. The second system is official education, in which the schools are administered by the Ministry of Education (from the capital of the country). After the sixth grade, only the best students are sent to Kabul to continue their education. Afghanistan has a centralized system of education.

In the years of rebuilding Afghanistan since 2001, Hazaras are often more likely to take advantage of educational opportunities than other groups in Afghanistan. Nearly all Hazaras attend school, including girls, and the literacy rate among this group is growing and is thought to be higher than the national average. Bamian State University is operating in Hazarajat, after being closed until 2004. However, marginalization does continue to exist and entrance to esteemed universities such as Kabul State University is difficult and uncommon for Hazaras.

## 14 CULTURAL HERITAGE

In times of celebration, Hazaras have social gatherings during which music is played and dancing takes place. Women and men dance separately, each having different styles. Poetry is read and *damburas* (lutes) are played.

Many Hazaras are proud of their cultural links to Mongols and Genghis Khan. In fact, the word Hazara comes from the Persian meaning “one thousand” and is thought to be derived from Genghis Khan’s division of troops into groupings of this number. However this same heritage also creates some tensions with other Afghans of different background.

One of the most notable features of Hazarajat were the giant Buddha statues located at Bamian, constructed 1,500 years ago by the Kushan Empire. Although the Hazara of today may not be direct descendents of those that created the Buddhas, the Buddhas for many years dominated the landscape of the homeland of the Hazaras. In 2001 the Buddhas were destroyed by the Taliban due to the fundamental Islamist proscription against idols in the human form.

### 15 WORK

Excluding housework, men are held responsible for managing and financially supporting the household. They work in the fields growing crops. Because of their low standard of living, Hazaras are required to perform more laborious jobs to support their families. This is apparent in Kabul, where many Hazaras have migrated and taken up menial jobs. It is common for Hazara labor migrants also to migrate to nearby countries such as Pakistan and Iran and send remittances home to support their families.

### 16 SPORTS

In some Hazara areas such as Bamyan, Samangan, and the northern parts of Afghanistan, *buzkashi* takes place. This is a game in which horse-riders attempt to carry a dead goat into the opposing team’s goal, a marked circle on the ground. Hunting, wrestling, archery, horse-races, and a variety of children’s games also take place in some areas. Because of little spare time from work, Hazaras do not spend a great deal of time playing sports.

### 17 ENTERTAINMENT AND RECREATION

During the winters, when they do not have as much work to do, Hazaras have some time for entertainment and recreation. They tell stories, visit with each other, and drink tea in the evenings.

### 18 FOLK ART, CRAFTS, AND HOBBIES

Hazaras are very well known for making handicrafts such as coats, overcoats, sweaters, jackets, shoes, hats, gloves, and scarves. Embroidery is common. These are mostly made by the women and are sold in shops in Kabul and other cities.

### 19 SOCIAL PROBLEMS

Despite being very social among themselves, Hazaras have many social problems in the country. Because of the level of marginalization experienced by Hazaras, they are generally not socially involved with other groups. Despite being a native group of Afghanistan, Hazaras have some differences from the other ethnic groups of the country. As Shia Muslims, they are in the minority in the largely Sunni population of Afghanistan. The Hazaras are also generally poorer and less educated than other Afghans. These differences create tensions between the Hazaras and other Afghans, and also limit the progress Hazaras can make in improving their standard of living. During

the years the Taliban controlled most of Afghanistan (1996–2001), Hazaras were victims of ethnic cleansing and by some accounts, genocide. A fictionalized portrayal of the relationship between a Hazara boy and an Afghan boy of the upper class can be found in Khaled Hosseini’s *The Kite Runner* (2003) and the movie of the same name (2007).

Hazarajat has, comparatively, avoided the large opium poppy production endemic in much of Afghanistan. However, many development projects are also not introduced to this region as to other parts of Afghanistan.

## 20 GENDER ISSUES

In many ways, Hazara women are able to achieve many more rights than women in other parts of Afghanistan. While nationwide numbers of girls who attend school remains low, among Hazaras the number is as high as 80%. Hazara women are not subject to the strict social mores of Pashtun and other ethnicities, and are not required to practice seclusion. As a result, they have been more likely to join the workforce and to take up farming. The first female governor in Afghanistan, Habiba Sarobi, was a Hazara and was appointed in 2005.

## <sup>1</sup>INTRODUCTION

In 1569, the Spanish conquistador Legaspi transferred his headquarters from food-poor Cebu to Panay, where rice was available in abundance. Long before this time, the island's fertility permitted the Hiligaynon people to develop one of the archipelago's most advanced societies, one that engaged in international trade (as evidenced by large finds of Chinese porcelain) and that created fine work in gold and semiprecious stones. The textiles of Panay remained in high demand throughout the archipelago into the 19th century; the industry thrived until overwhelmed by cheaper British manufactures.

Among Christianized regions, the Western Visayas has been noteworthy for the persistence of pre-Christian systems of belief; here, it was *baylan*, leaders in the indigenous religion, who led revolts against the Spanish (rather than of Christian millenarian sects as in the Tagalog and other regions). Nonetheless, the church-adorned city of Iloilo on Panay became one of the great centers of Hispanicized culture in the colony (in 1993 Iloilo's baroque Miag-ao church was recognized as a UNESCO World Heritage site). Large-scale sugar production for the world market created a small, initially largely *mestizo*, elite who enjoyed an opulent lifestyle on vast plantations (and who may have provided the basis for the stereotype of Hiligaynon hedonism, also attributable to the natural bounty of the land). At the same time, economic dislocations (such as the demise of the textile industry) forced a flood of landless Hiligaynon to take ill-paid, backbreaking labor on these plantations of the formerly under populated island of Negros to the immediate east of Panay.

With the recent decades' drop in the price of sugar, much of the region has entered a steep economic decline; Negros has become one of the most impoverished regions in the country and particularly ripe for communist insurgency. Though to a lesser extent than Ilocanos and Cebuanos, Hiligaynon have settled in more sparsely populated parts of the country, such as Mindoro and Mindanao. Economic growth since the 1990s has benefited Iloilo as it has other comparable cities in the country, and one of the country's preeminent destinations for domestic and foreign tourists has developed on Boracay off Panay.

## <sup>2</sup>LOCATION AND HOMELAND

Panay is one of the major rice-producing areas of the Philippines (and the most important one by far in the Visayan islands). The landscape consists of broad plains stretching between mountain ranges. Large rivers deposit the volcanic sediments that make the lowlands so fertile. The island of Guimaras in the strait between Panay and Negros is an exception; it is a coral platform.

The Western Visayas region of the Philippines includes the provinces of Iloilo, Aklan, Capiz, Antique (all on Panay island), Negros Occidental, and Romblon; it includes two of the country's largest cities, Iloilo in eastern Panay and Bacolod on western Negros. The region's population numbered 6.2 million in 2000 (up from 5.4 million in 1990 and 3.6 million in 1970), of which 61.57% were speakers of Hiligaynon, concentrated on the facing coasts of Panay and Negros (72% of population of Iloilo province and 77.68% of Negros Occidental province).

According to the 2000 census, Hiligaynon speakers constituted 7.6% of the national population (5.8 million people). Beyond the Western Visayas, they can also be found in southern

Mindoro and (as recent migrants) on Palawan (13% in 2000) and Mindanao (11% of the Caraga region and 10.83% of Southern Mindanao—more than half [52%] of South Cotabato's population was Hiligaynon-speaking, and almost half [46.92%] of Sultan Kudarat's).

### **3 LANGUAGE**

The Hiligaynon language is the language of Iloilo province, which has come to be spoken throughout the Western Visayas region. Hiligaynon (as the name of both a language and an ethnic group) is also called "Ilonggo," though this generally refers specifically to the dialect and people of Iloilo. Hiligaynon intonation is noted for its gentle lilt under which, it is said, a curse may go unrecognized.

Other regions of Panay have their own distinct languages, including Capizeño, Aklanon, and Kiniray-a. Narrow straits link Panay and western Negros, and Hiligaynon is spoken on both shores. Mountains separate western from eastern Negros, whose inhabitants speak Cebuano, a language that Hiligaynon cannot readily understand.

### **4 FOLKLORE**

The *Maragtas* epic, an imaginative 19th century reworking of Panay folk memories, tells of the migration to the Philippines in 1250 of the Bornean *datus* (chiefs) Puti, Sumakwel, Bangkaya, Balakasusa, Paiburong, Dumangsil, Lubay, and Dumalogdog. They had led their followers there to escape the tyranny of the Srivijayan empire. The *datus* bought the coastal lands of Panay from the indigenous Negritos with gold, pearls, and other ornaments (the Negritos then withdrew to the interior). The meeting of the Negritos and the Borneans is commemorated in many carnival-like local festivals, foremost of which is the Ati-Atihan of Kalibo in Aklan province.

### **5 RELIGION**

Among the Hiligaynon, a pre-Christian belief system coexists with the Catholic one brought by the Spaniards. The two exert mutual influence on each other, as when the Santo Niño, the image of the Child Jesus as World Sovereign, is bathed to summon rain or attract good luck. The indigenous cosmogony divides the universe into three parts. The upper world houses at its zenith (*ibabaw*) the *udtohanon*, i.e., God and his favorite angels who will pass the final judgment but are otherwise remote from human affairs. Lower down in the upper world reside the *langitnon*, angelic beings that live above the clouds. In the *awan-awan* (between the clouds and the earth) live the spirits of the wind, rain, thunder, lightning, typhoons, and whirlwinds; supreme among them is the *tagurising* who lives where the sun rises. The middle world (the earth) is the home to the *dutan-on*, spirits expelled from the upper world for rebelling against God; they differentiated according to where they first landed, for example, in trees, the river, or the sea. The underworld includes hell, in front of whose gate is a hollow pit where the *engkanto*, the malevolent spirits, live with their reptilian pets; the nether regions are connected to the middle world through a tunnel called the *bungalow*.

Each community has specialists who are able to communicate with spirits and heal diseases thought to be caused by spirits, for lack of any other explanation; they also recover lost objects, predict the future, and discover the causes of misfortunes. The most important of these is the *baylan*, a medium

whom a spirit has befriended and granted powers; to augment the potency of his rituals, the *baylan* often adds Latin prayers and Catholic sacred objects.

### **6 MAJOR HOLIDAYS**

See the article entitled *Filipinos*.

### **7 RITES OF PASSAGE**

Persons wanting to marry consult with their siblings and other relatives before approaching their parents for consent and support. The boy's kin arrange a meeting with the girl's kin to discover if the girl has already been promised to another; this serves as a public announcement to discourage other suitors. The boy's kin employ a spokesperson using allegorical language to ascertain whether the girl's parents have accepted the proposal. If they have, the arrangements, including the prospective groom's term of bride-service, are arranged at another meeting, the *padul-ong*, after which the wedding becomes binding and the girl is no longer to be seen in the company of other boys.

On the night before the wedding, both sides attend a party at the bride's parents' house. The church ceremony itself includes ritual acts that are meant to ensure the wife's subservience and fertility. Formerly, a *sinulang* (a machete dance) accompanied the couple out of the church. Arriving at the house, the couple proceeds straight to the family altar to ensure future prosperity; a feast follows. The marriage is not consummated until the second night at the groom's parents' house; on the third day, the couple returns to the bride's parents' house.

When a person is dying, relatives say prayers for the deliverance of his or her soul and to ward off evil spirits (men wave machetes in the yard). The body is washed with water mixed with ginger or bark juice to prevent odor and is laid out in the house next to an improvised altar and a tin can, in which mourners put contributions. The deceased's family refrains from making excessive noise, fighting, combing their hair, and bathing until three days after the burial. Only unmarried men may take the body out of the house; water is thrown on the threshold so that another death will not follow. The entire funeral procession must return to the deceased's house and wash their hands and feet.

Nine days of prayer follow the burial; as many as nine more days may be added, depending on the family's wealth (as all attending must be served food and drink). At a midnight ceremony on the ninth night, all family members must be awake to bid farewell to the deceased's spirit. On the death anniversary, nine days of prayer again take place. On the ninth night, a *patay-patay* (a dummy of the dead) is set up, consisting of pillows laid on a wooden trunk upon which the deceased's clothes are laid.

See also *Filipinos*.

### **8 INTERPERSONAL RELATIONS**

Hiligaynon share the general Filipino behavioral values, such as *hiya* (*huya* in the Hiligaynon language). Violating norms (such as insulting mediums) will earn *gaba*, supernatural punishment. Those who humiliate others will suffer the same amount of humiliation in turn, a principle called *ulin*.

## 9 LIVING CONDITIONS

Houses are raised 3 to 4 m (9–13 ft) off the ground; walls are of plaited bamboo, and roofs are of nipa or coconut palm leaves or cogon grass. *Sulay*, bamboo, or timber props, are placed against all sides of a house to keep it from being blown away by typhoons. The room for receiving guests is separated from the rest of the house by a wall; a sofa and two side chairs occupy the space immediately inside the front door. Small children of both sexes sleep together, but once they are older, boys sleep near the door and girls sleep in a bedroom at the back. Animals are kept under the house, and rice is stored there (if not in a separate granary structure). The house lot is enclosed with a bamboo fence or a hedge of ornamental plants; fruit tree groves and gardens are nearby.

Average family income in the Western Visayas region amounted to 130,000 pesos (us\$2,549) in 2006, relatively low for the Philippines (ranking 10th out of 17 regions), cf. the national average of ₱173,000, the National Capital Region's ₱311,000, Southern Tagalog's ₱198,000, and Central Visayas' regions, ₱144,000.

According to the 2000 census, the proportion of houses in Negros Occidental province with a roof of galvanized iron/aluminum reached 61% (up from 26.1% in 1990), with a roof of grass or palm thatch 30%; 24.2% of houses had wooden outer walls, 40% outer walls of bamboo or thatch, and 12.9% outer walls of concrete, brick, or stone (5.21% in 1990). In 2000, 13.8% of households in the Western Visayas had access to a community faucet, 14% to a faucet of their own, 22% to a shared deep well, and 17.3% to a dug shallow well, while 9.8% obtained their water from springs, lakes, rivers, or rain. Well over half of households (57.9%) disposed of their garbage by burning it, 10.9% by dumping it into a household pit, and 7.8% by feeding it to their animals; only 14.4% had it picked up by a collection truck. 57% of houses were lit with electricity, 37.8% with kerosene lamps, and 4.2% with firewood. 725.5% possessed a radio, 42.2% a television, 23.8% a refrigerator, 15.5% a VCR, 9.2% a telephone or cell phone, 9.4% a washing machine, and 8.5% a motorized vehicle.

## 10 FAMILY LIFE

Hiligaynon family structure conforms to the general Filipino pattern [See the article entitled **Filipinos** in this volume]. In wealthier families, the Spanish terms *papa* and *mama*, or even the English *mommy* and *daddy*, are preferred over the native *tatay* and *nanay*. Educated people may address their spouses with such English expressions as *honey* or *darling* (often shortened to *ling*) rather than the native *nonoy* (for the husband) or *neneng* (for the wife). Uncles and aunts are addressed as “*tay* + [name]” (“Papa \_\_\_\_\_”) and “*nay* + [name]” (“Mama \_\_\_\_\_”), respectively.

A peasant couple share work responsibilities, e.g., a husband plows while the wife plants; he fishes but she sells the catch. Husbands are the dominant partner outside the house (i.e., in public or in the fields), whereas wives reign supreme within the house. Spouses refrain from showing affection publicly, exchanging only casual greetings. While village people disapprove of a man taking a mistress, saying it will bring bad luck, elite men take mistresses for the sake of prestige.

Family members lavish much attention on a child but also discipline him or her from an early age. Children will gang up on a sibling to whom the parents show favoritism. As they

get older, sons become more formal with their mothers and daughters with their fathers (but with puberty, daughters become closer to their mothers). At the age of seven, a boy will start to help his father with farming or fishing.

Parents discipline children by telling them frightening tales (mentioning the *aswang* or names of old people) or by spanking or whipping them with a stick. When children misbehave, all are punished, even if only one initiates the misbehavior.

## 11 CLOTHING

For fieldwork, men wear worn-out short pants and often go shirtless. On formal occasions, however, they wear long pants, shirts, and shoes (otherwise they go barefoot).

Married women wear either a *bestida* (dress), or a *patadyong* (tube skirt) with a blouse. Traditional weaving is nearly extinct, having been a thriving industry before the 19th-century import of British manufactured cloth. For *pangalap* (magical protection), many older men wear tattoos (a crucifix, initials, or female figures). At the time of the Spanish arrival, all Visayans wore elaborate tattoos, earning them the name *Pintados*, “the painted ones,” from their conquerors.

## 12 FOOD

The eating pattern is either three meals a day or two meals (at 10:00–11:00 am and 4:00–5:00 pm). Between-meal snacks consist of rice cakes, boiled roots, or bananas. Family members eat at their own convenience but are encouraged to eat together. Ordinarily, people eat with their hands while sitting on the floor; silverware and tables are reserved for the use of guests. Men do not eat breakfast unless, as a gesture of hospitality, they are joining visitors who are being served breakfast.

Around 6:00 pm, men gather for *tuba* (palm wine) drinking sessions in the tree groves between houses (some women may also join) them.

## 13 EDUCATION

The literacy level (population 10 years and older) in the Western Visayas was 93.02%, close to the national figure. See the article entitled **Filipinos**.

## 14 CULTURAL HERITAGE

The Hiligaynon have an epic, the *Hinilawod*. (See also **Filipinos** in this volume).

## 15 WORK

The Western Visayas region is dominated by two very different types of agriculture: rice cultivation by small holders, and sugar cultivation in large plantations. Swidden (shifting-cultivation) farming is still practiced in the highlands.

Tobacco has been growing in importance. Other crops grown include maize, bananas, coconuts, sweet potato, cassava, *singkamas* (jicama, similar to turnips), squash, tomatoes, beans, and red peppers. Fishing is an alternative means of livelihood. Some Hiligaynon engage in various forms of petty trade: *libod*, making the rounds of one's village, selling a product; *pahumay*, selling from one's house; *tinda*, selling at fiestas and other local events; and *tiyanggi*, operating a small variety store (*sari-sari* in Tagalog-Pilipino).

## 16 SPORTS

*Tumbang patis*, popular with both boys and girls, involves two or more children throwing rocks at a tin can while someone who is “it” watches the can, putting it back in place when hit; if a player is caught retrieving the stone he or she has thrown, he or she becomes “it.” Other popular games include: “gunfighting” with bamboo popguns; beetle- and spider-fighting; and *huyup-huyup*, blowing rubber bands out of a circle for bets. Young children catch dragonflies, dig holes in the ground, pile sticks, measure sand with bottle caps, and pull empty coconut shells or sardine cans.

See the article entitled *Filipinos*.

## 18 FOLK ART, CRAFTS, AND HOBBIES

See the article entitled *Filipinos*.

## 19 SOCIAL PROBLEMS

See the article entitled *Filipinos*.

## 20 GENDER ISSUES

According to the 2000 census, in the Western Visayas, the ratio of men to women was 102 to 100. Literacy was higher for women than for men (93.58% vs. 92.45%). While, overall, more overseas workers from the Western Visayas were men than women, 63% of those aged 10-24 were female.

In the past four centuries, Hiligaynon notions of gender differences have been influenced by Spanish Catholic and, later, American and modernizing national secular norms. Urban elite women, especially Spanish and Chinese mestizas, have more closely imitated foreign ideals than women of the rural lower classes. Women and men are recognized as having different characteristics, but in contrast to the case in Mediterranean gender ideologies, these differences are viewed as complementary, not as associating men with good and women with evil, nor as automatically conferring superior power to men or. Men feel no shame in deferring to an elder sister or to a strong-willed and capable wife. In colonial times, Hiligaynon men often sent their wives to discuss community issues with male Spanish officials, showing none of the concern to keep women in seclusion for the sake of family honor that was so important in Spanish culture. Hiligaynon culture generally regards women as innately more reliable and industrious than men, and there is no cultural preference for having a boy over a girl.

Female virginity is valued, but losing it does not condemn a young woman to permanent exclusion from respectable society, nor does having been a man’s mistress (*kerida*) at one time. Premarital pregnancy is common and, if the couple marries, hardly any stigma is attached to it. Tolerance of this has been a characteristic of Hiligaynon society from earlier times, not a modern development. Modernization has brought both the model of the “liberated woman,” new employment opportunities for educated women, and the removal of Spanish patriarchal legal restrictions and disabilities. However, it has also brought the realities of women being objectified in diverse contexts: U.S. military prostitution (a major phenomenon until the end of the 1980s); international mass-tourism; global consumer culture; and overseas labor recruitment, especially

of domestic workers and entertainers. Government-led development programs have sought to mobilize women, highlighting the crucial role women play in society while emphasizing women’s roles in the domestic sphere.

## 1 INTRODUCTION

Hindus are followers of a religion that has its origins on the Punjab plains in northwestern India over 3,000 years ago. The western boundary of early Aryan settlements in the region was the river called Sindhu, an Indo-European word meaning “river.” The Persians pronounced the word as “Hindu,” a term that came to be applied to the peoples of the area. “Hinduism” described the religion of these peoples. “Hindu” passed into Greek usage as “Indos,” from which is derived the names of the Indus River and India itself.

Hindus themselves have no specific name for their religion. One of its designations is *sanātana dharma*, which can be loosely translated as “eternal truth.” Hinduism has no founder, no common set of beliefs or practices, no established “church,” and no uniformity of worship. Over the centuries, Hinduism has absorbed beliefs ranging from primitive animism to the most sophisticated abstract philosophy. It is less of a religion than a collection of faiths linked by some common traits. Yet there are certain broad, distinguishing characteristics that set Hinduism apart from other religions. These include reverence for the *Vedas*, acceptance of the existence of God, belief in reincarnation and related doctrines, an emphasis on ritual, and the caste system.

For many years, India was under the rule of first, the Muslim Mughals, who established themselves in northern India (Delhi and Agra) and then the British, but the masses remained true to Hinduism. There were conversions of Hindus, mainly from the lower and untouchable castes to Islam, Buddhism, and Christianity, largely to escape the inequities of the Hindu caste system, but even then Hinduism retained its tolerance for other religions. When the British left India in 1947, they had hoped to leave a successor state that encompassed all British possessions in mainland South Asia. However, the intransigence of Muhammad Ali Jinnah and the Muslim League in demanding a homeland for Indian Muslims and the haste of the British withdrawal from the region meant that the subcontinent was partitioned, on the basis of religion, between a Muslim Pakistan and a predominantly Hindu India. Regions of the subcontinent with a Muslim majority fell to Pakistan, which was made up of a West and East Wing (now Bangladesh), separated by hundreds of miles of Indian territory, areas with a Hindu majority were to become India, and the rulers of the numerous princely states that were scattered across British India were to decide which country they would join (the problem of Kashmir dates from this time). The migration of Hindus and Muslims between India and Pakistan that accompanied this partition is estimated to have numbered around 10 million people and is thought to be the largest the world has ever known. Partition in 1947 was also accompanied by an es-

timated one million deaths of both Muslims and Hindus. Pakistan was established specifically as a homeland for Muslims in the South Asian subcontinent. On the other hand, India, even though it was essentially a Hindu land, remained steadfast in its objective of remaining a secular state. Under the Nehru dynasty and, after Indira Gandhi's assassination in 1984, under her son Rajiv Gandhi, India, even though it contained most of the world's Hindus, remained a strongly secular democracy.

However, the rise within the last couple of decades of national political parties committed to “Hindutva” has changed the situation. Hindutva means “Hinduness” and the word was first coined in 1923 by Vinayak Damodar Savarkar in his pamphlet entitled *Hindutva: Who is a Hindu?* There have been political parties and groups, such as the Rashtriya Swayamsevak Sangh (RSS), Bajrang Dal and the Vishwa Hindu Parishad (VHP), that have espoused Hindutva but, prior to the 1990s, these never had power on a national scale. However, two events that occurred towards the end of the 20th century attracted a large number of mainstream Hindus to the Hindutva movement. The first of these was the Shah Bano case (1986) in which Rajiv Gandhi's government, under pressure from conservative Muslims, used its large parliamentary majority to overturn a Supreme Court verdict granting alimony to an old Muslim woman that had angered many Muslims. (Muslims in India are subject to “The Muslim Personal Law (Sharia) Application Act, 1937,” whereas Hindus are subject to Hindu Law.) The second was the dispute over the 16th century Mughal Babri Masjid (Mosque) in Ayodhya—built by Babur after his

*Indian Hindu devotees wait in line to make offerings to Shiva as part of Maha Shivaratri, a Hindu festival, in Amritsar, India. Hindus mark the festival by fasting and offering special prayers to Shiva, the lord of destruction. (AFP/Getty Images)*

first major victory in India. Many Hindus saw it as a sacrilege that a mosque should stand on the site of the birthplace of Ram (Ram Janmabhoomi), the Hindu deity seen by many Hindus as an incarnation of Vishnu. For centuries, the mosque was a cause of tension between the Muslim and Hindu communities, with legal actions over the mosque dating back to the 19th century. In 1990, however, Lal Kriskna Advani, a leader of the Bharatiya Janata Party (BJP) (Indian People's Party, founded in 1980), undertook a *rāth yātrā* with the professed objective of building a Ram temple at the disputed site in Ayodhya. (Technically, Rath Yatra [*rāth* means "carriage" and *yātrā* means "journey"] is a Hindu festival associated with Jagannath [origin of the English word "juggernaut"] of Puri in Orissa involving a procession of towering raths being pulled through the streets of Puri by devotees, but in this case it refers to a "symbolic religious caravan" across the country) The yatra, which was accompanied by violence and bloodshed and is estimated to have been responsible for 3,000 Muslim deaths across India, failed in its avowed objectives, but in late 1992 a huge number of nationalist Hindus from all parts of India razed the mosque to the ground. The destruction of the mosque and subsequent conflict arguably lifted the BJP and Hindutva to national and international prominence. The 2002 Godhra violence in Gujarat, which pitted Hindu vs. Muslim, originated largely from the communal feelings raised by the Babri mosque issue.

The BJP was briefly in power in New Delhi during May 1996, but, having gained widespread support in the country for its political platform as a result of the events of the preceding two decades, formed the Union government between 1998 and 2004, with Atal Bihari Vajpayee as prime minister. The deputy prime minister, LK Advani, the same Advani who supported the destruction of the Babri Masjid and led the 1990 rath yatra, attributed the BJP's shocking loss of the general election in 2004 to the party straying from its platform of Hindutva.

## **2 LOCATION AND HOMELAND**

Hinduism is one of the world's major religions, with over 1.1 billion people among its followers. Hindus make up 80% (approximately 905 million people according to the 2001 Census) of India's population. Nepal has another 22.5 million Hindus (80.2% of the population). Elsewhere in South Asia, Hindus number 11.4 million in Bangladesh (2001 Census), 1.5 million in Sri Lanka (according to government sources, though this may be a serious undercount) 30 million in Pakistan (c. 2%), and 0.25 million (25%) in Bhutan. All the preceding figures are based on 2001 census data, so allowing for population growth at the rate of national averages, and including Hindus overseas, the estimate of 1.1 billion is realistic.

Hindus have taken their religion to other parts of the world as well. Following the beginning of the Christian era, Indian

colonists spread into Southeast Asia, where Hinduism strongly influenced local cultures. Although later replaced by Buddhism and Islam, Hinduism still survives in the Indonesian island of Bali. In the colonial period, the British introduced Indian labor (and thus Hinduism) into the Caribbean and Fiji. Indians also emigrated to South Africa, East Africa, and other British possessions. The later decades of the 20th century have seen a sizable immigration of Indians into Britain, Canada, and the United States.

### 3 LANGUAGE

Sanskrit (*samskrta*, “refined”) is the sacred language of the Hindus. It is a later form of Vedic, the tongue in which the sacred literature of the Āryans was composed. Sanskrit dates to about 300 BC. It belongs to the Indo-Āryan branch of the Indo-European family of languages. There is a vast literature in Sanskrit, ranging from the early Vedic hymns to the numerous works (religious treatises, dramas, stories, poetry, etc.) associated with the flowering of Classical Sanskrit from the 3rd and 4th centuries AD onward. The script used today for writing Sanskrit is Nagari or Devanagari.

### 4 FOLKLORE

Hindus have an immensely rich tradition of myth and legend, ranging from the creation myths of the Vedas to the animistic beliefs surrounding local godlings. Of this vast treasury of material, only two works can be mentioned here. The *Mahābhārata*, composed probably sometime after 200 BC, is the world’s longest epic poem. It tells of a great civil war in the region of modern Delhi and of the struggle between the Pandavas and the Kauravas for control of the kingdom. The centerpiece of the epic is the battle of Kurukshetra, but interwoven with the main story is a collection of myths, folk tales, and legends of Vedic gods mingled with discussions of statecraft, the science of war, and philosophy. One of the most famous sections of the epic is the *Bhagavad Gītā* (“Song of the Lord”). On the eve of the conflict, Arjuna, one of the Pandava princes, is surveying the opposing armies drawn up ready for battle. Distraught at the thought of killing his kinsmen, he seeks guidance from his charioteer, who is the god Krishna (Kṛṣṇa). Krishna replies that it is his duty as a *ksatriya* (warrior) to fight his foes, and that this duty comes above all else.

The *Rāmāyana*, the second great Indian Hindu epic, relates the story of Rama and his wife, Sita. Sita is abducted by Ravana, who carries her off to his kingdom of Lanka (Ceylon). Rama and his brother Lakshman set out for Lanka to rescue Sita. There, with the aid of Hanuman, the monkey king, and his monkey people, they burn Lanka and free Sita. However, Sita has been associated with another man and Rama refuses to have her back as his queen, despite her protestations of innocence. After many years, Rama and Sita are reconciled. Rama is viewed as a god and his worship is universal in India. Sita is upheld as the ideal of the faithful wife.

Of all the heroes and myths of India, none are more deeply embedded in the Hindu mind than those of the *Mahābhārata* and the *Rāmāyana*. During recent broadcasts of the epics as long-running serials on Indian television, the entire country came to a standstill. Villagers even turned their television sets into shrines, performing *pūjā* (worship) before their ancient gods and heroes.

## 5 RELIGION

Central to Hindu philosophy is the concept of the soul (*ātman*). Each individual has a soul, which is a fragment of the Supreme Soul, Brahma. As such, it is the only part of human beings that is eternal and indestructible. It is, however, bound by the physical body and further surrounded by illusion (*māyā*). Furthermore, the soul is caught up in an endless cycle of rebirths (*samsāra*). The nature of each birth or incarnation is determined by actions in one’s last existence (the law of *karma*). Bad deeds hinder the progress of the soul on its journey and result in rebirth as a lower form of life—perhaps as a member of an untouchable caste or as an animal. On the other hand, if one pursues righteous behavior (*dharma*), the soul returns as a higher life form, moving up the ladder of existence towards the obliteration of the physical self. Practicing noninjury to living things (*ahimsā*) is a means to this end. The ultimate aim of the Hindu is total release (*mokṣa*) of the soul from the physical world and its merging with the universal soul.

Such beliefs are uniquely Indian, yet other aspects of Hinduism have their origins among the Indo-European peoples who entered South Asia around 1700 BC. These invaders called themselves *Āryas* and were part of the great migrations of people that carried Indo-European culture over much of the Old World. In India, the urban civilization of the Indus Valley gave way before the simpler—though no less vigorous—Āryan culture. The Āryans were seminomadic pastoralists, depending largely on the herding of cattle. They brought with them the horse and the chariot and spoke a language that was Indo-European in origin. Their gods were male, rather than the female deities of the Harappans. But most important of all, they had a class of priests who had developed poetic techniques for composing hymns in praise of their gods. Over the centuries, these hymns were collected to form the *Veda* (literally “knowledge”), the most sacred scriptures of the Hindus.

There are four Vedas: the *Rg Veda*, the *Atharva Veda*, the *Sāma Veda*, and the *Yajur Veda*. The earliest and most important of these is the *Rg Veda*, composed between 1200 and 900 BC. Vedic religion was based on a primitive animism in which forces of nature were seen as divine and personified as gods. Thus Indra was the great war-god, riding in his chariot at the head of the Āryans against their enemies. He was a slayer of dragons, the god of thunder, and maker of rain. (Indra had replaced the original Indo-European father god Dyaus Pitr, the Zeus of the Greeks and Jupiter of the Romans.) The Vedic pantheon included Agni, god of fire; Surya, the sun god; and Soma, god of the intoxicant *soma*. Animal sacrifice was central to the Vedic religion.

Modern Hinduism, although it embraces Āryans gods and sacrifice, differs from the religion of the Vedas. The worship of mother-goddesses and tree-worship, for example, are non-Āryans and come from the Harappan cultural tradition. Some Hindu concepts appear much later than the Vedic period. But one feature of modern Hinduism can be traced directly to the Vedas, namely the division of society into distinct classes. The Sanskrit word for these categories was *varna*, or “color.” The highest ranked class were priests (*brāhmana*), followed by warriors (*ksatriya*), peasants (*vaiśya*), and serfs (*sūdra*). *Varna* form the basis of the caste system in India today, and many Hindus see caste as divinely ordained because of its Vedic origins.

The historical development of Hinduism is far too complex to be presented here in more than its barest outlines. By the

7th and 6th centuries BC, popular discontent with Vedic religion was widespread. This was a period of religious ferment that saw old ideas reexamined and new ones emerge. Wandering ascetics rejected the authority of the Brahmans and began reexamining the spiritual values of the Vedas. Many concepts fundamental to modern Hinduism (e.g., *samsāra*, karma, and *ahimsā*) first appear at this time in philosophical works known as the *Upanisads*.

This was also the time when Buddhism, which came to challenge Hinduism for supremacy in the Indian subcontinent, had its origins. Buddhism gained the upper hand when the Emperor Ashoka made it the state religion in the 3rd century BC, and the next millennium was one of continual struggle between Hinduism and Buddhism. It was during this period that the sanctity of the cow, a fundamental belief of modern Hinduism, came to be accepted as Hindu doctrine. There is no evidence that the cow was viewed as sacred in the Vedas. Cattle were an important economic asset in Vedic society, they were sacrificed, and their meat was eaten. Some scholars have argued that the Brahmans took the general principle of *ahimsā* from Buddhism and applied it specifically to the cow in their struggle to win over the mass of the population to Hinduism. By the 5th century AD, the sanctity of the cow was firmly established in Hinduism. The cow later came to be a symbol of Hindu religion and culture in the face of challenges from Islam and the Europeans.

The fortunes of Hinduism rose in the early centuries of the Christian era with what has been called the “Brahmanical revival.” This was a period that saw the Brahmans assert themselves as the dominant class in Hindu society. Buddhism entered a period of decline and was to receive its death blow with the arrival of the Muslims after the 12th century AD. A reinvigorated Hinduism, however, was able to face the challenge of five and a half centuries of Muslim rule. It was also able to withstand nearly five centuries of European colonization and remain essentially unaffected by its contact with Christianity.

## 6 MAJOR HOLIDAYS

Holi, which is identified as the worship of Krishna, is one of the more important festivals in India. A spring celebration that falls in February–March, it clearly incorporates pre-Hindu fertility rites into its observances. The three-day festival is a time for drinking and the singing of lewd songs. Men dance in the streets, singing and carrying phallic emblems. Men and women squirt each other with colored water and red powder. The usual rules of caste behavior are relaxed, and the festival is seen by some sociologists as a “safety-valve” by which people in the rigid caste structure of Hindu society can let off steam. Bonfires are lit to celebrate the burning of the demoness Holika.

Divali, another major festival, is celebrated in the fall (October–November). The name comes from the Sanskrit *Dīpāvalī*, meaning “cluster of lights.” Houses are decorated with hundreds of oil lamps (nowadays electric lights are often used). In some parts of the country, Divali marks the beginning of the New Year. It is particularly important among the mercantile castes (Jains, Vaiśyas) of western India, who worship Lakshmi, the goddess of wealth, at this time. They close their accounts for the year, begin a new set of books, redecorate their houses, and send gifts of sweets to friends and relatives. In Bengal, it is believed that the lights are intended to guide the souls of the departed ancestors. Other regions have their own legends as-

sociated with Divali. Divali is an auspicious time for gambling, and even the most respectable of women will gamble at this time.

Among other major festivals celebrated by Hindus all over India are Dasahara or Durga Pūjā (called Dasain in Nepal), Shivratri (dedicated to Shiva), and Janamashtami (Krishna’s birthday). The Pongal festival of the Tamils and Kerala’s Onam festival, with its snake-boat races, are important regional celebrations. In Rajasthan, the Teej festival honors the goddess Parvati.

Every Hindu temple in India has an annual festival honoring its presiding deity. Some are local events, but others are of regional, and even national, significance. One such festival is held at the Jagannath Temple at Puri in Orissa. Every year, the temple images, including that of Jagannath (“Lord of the Universe”), a form of Krishna, are taken to a “country house” some two miles away. The images are placed in cars or chariots and pulled by pilgrims. Jagannath’s car is as tall as a three-storied building (roughly 14 m or 45 ft high), with wheels over 2 m (7 ft) in diameter. The English word “juggernaut” comes from Jagannath and refers to the (incorrect) belief that devotees would allow themselves to be crushed beneath the wheels of Jagannath’s chariot.

Periodic fairs (*melās*) and festivals are an integral part of Hindu religious life. The most important of these is the Kumbha Mela, held every three years in turn at Nasik, Ujjain, Hardwar, and Prayag (near Allahabad). An estimated 20 million pilgrims attended the *melā* held at Prayag in 1995. Pilgrimage is one of the main religious duties of the Hindu. There are thousands of holy places in India, each sanctified by association with a deity, saint, or legend. Some may just be local shrines. Others may be sacred to specific Hindu sects (there are six major ones) such as the Vaishnavas, followers of Vishnu, or Shaivites, devotees of Shiva. Still others are of importance to all Hindus. Major sacred centers include Varanasi (Banaras), Mathura, Dwarka, and Rameshwaram. Certain rivers are considered sacred, the most important being the Ganga (River Ganges).

## 7 RITES OF PASSAGE

The ancient Hindu law-givers prescribed 12 important rites, from conception to marriage. Though not all of these are observed today, the name-giving ceremony is still usually performed on the tenth or twelfth day after birth. The infant’s name is suggested by the family astrologer. Boys are often named after gods (e.g., Krishna, Rama, Ganesh), and girls after goddesses (Parvati, Lakshmi), flowers (Padma, meaning “lotus”) or precious stones (Moti, or “pearl”). Among some groups, the ears are pierced (and, for girls, the left nostril) at this time. Other important rites at this stage of life are the first feeding of solid food and the first cutting of the hair and shaving of the head. High-caste Hindus may leave a single lock of hair uncut.

One of the most important of all Hindu rituals is the sacred-thread ceremony (*upanayana*). Usually performed between the ages of 7 and 10, it is the initiation ceremony for males of the three higher varnas (caste-groups). The donning of the sacred thread is viewed as a symbolic rebirth, and members of the three higher caste groups are referred to as the “twice-born.” The ceremony is performed by a Brahman, who consecrates the thread before placing it on the boy. The sacred thread is made of three white cotton threads, each made up of three in-

tertwined strands of cotton (the number three is symbolic of the Hindu trinity of Brahma, Vishnu, and Shiva). It is draped over the left shoulder and tied under the right arm in a sacred knot.

Ceremonies connected with death also hold great significance for Hindus. The corpse is washed, wrapped in a shroud, garlanded with flowers, and carried in procession on a bamboo stretcher to the cremation ground. In North India, the people who accompany the body chant “Ram Nam Satya Hai,” meaning “The name of [the god] Ram is truth itself.” At the cremation ground, a Brahman performs certain rituals before the body is placed on the funeral pyre. The chief mourner, usually the eldest son, lights the pyre. Relatives and friends remain until the corpse is consumed. If the skull does not burst during the burning, it is broken open so that the soul can escape the body. A purificatory bath is taken by the mourners before their return home.

On the third day after the funeral, the pieces of bone are collected from the remains of the funeral pyre. Ideally, these should be taken to the sacred Ganges River, but they may be placed in any nearby stream. Sometime between the tenth and thirty-first day after the cremation, the *śrāddha* is held. This is an important (and often expensive) ceremony involving numerous rituals, a feast for relatives and friends, and the giving of gifts to Brahmans in the name of the deceased. It is believed that if the funeral rites are not performed properly, the soul of the departed will be adversely affected. As some funeral rituals have to be performed by a son, it is important for a Hindu to have male offspring.

## 8 INTERPERSONAL RELATIONS

Hindus greet each other by saying “Namaste” (“Greetings to you”) while joining hands, palms together and held upright, in front of the body. In parts of India, “Namaskar” is used instead. In northern India, especially in rural areas, people commonly say, “Ram, Ram” (the name of the god Rama repeated twice), when they meet. Children may greet parents, or pupils their teachers, by bowing down and touching the feet. Hindus make the same gesture when meeting their *gurus* or important religious figures. It is usual for the person being honored in this manner to interrupt the gesture before it is complete, implying that he or she is not worthy of such homage.

## 9 LIVING CONDITIONS

Hindus mirror the living standards of Indian society at large. At one extreme, the wealthy (e.g., millionaire industrialists or some former princely ruling families) have lifestyles as luxurious as any in the world. In stark contrast is the life of the poverty-ridden rural peasant, or the destitute who live and die in the streets and slums of Calcutta or Bombay. These, of course, far outnumber the rich. An estimated 25% of India’s population live below the poverty level.

## 10 FAMILY LIFE

A unique feature of Hindu society is the caste system, the division of the population into a hierarchy of ranked social categories. The term “caste” is a European word, derived from the Portuguese *casta*, meaning “breed” or “race.” Hindus have several terms describing the same social structures. *Varna* refers to the broad division of society into four classes identified in the Vedas. *Jāti* (“birth”) and the South Indian *kulam* are also

used to refer to caste. In its most restricted sense, caste refers to a kin group from which marriage partners must be selected (i.e., an endogamous kin group). There are some 3,000 castes and over 25,000 subcastes found in India.

Castes are ranked according to the number of ritually pure practices they observe. The concepts of ritual purity and pollution are important in understanding Hindu society. One is born into a caste and acquires the ritual status of that caste. This is often determined by the caste’s traditional occupation. Brahmans are priests and are ritually pure, but even Brahman castes are ranked. For example, Brahmans who perform death rituals at cremations are among the lowest of the Brahman castes (but above all other castes because they still are Brahmans). Sweepers who handle human waste, or Chamars who remove animal carcasses, are ritually polluted by their occupations. They rank at the bottom of the caste hierarchy. Whether or not sweepers or Chamars follow their traditional occupation, in Hindu eyes they still partake of the pollution of their caste. If they should touch a Brahman or member of a higher caste, their touch is considered polluting. The higher-caste individual would then have to undergo a ritual purification to remove this pollution. This, of course, is the origin of the term “untouchables.” Concepts of purity and pollution thus underlie many aspects of caste behavior. The higher the caste, the greater the restrictions on social activity. Among other things, caste limits the nature of social and physical contact with other peoples; it restricts the food one can eat; it limits the people one can dine with; and it defines the marriage pool from which spouses are drawn.

A Hindu marries within his or her caste or subcaste. There are, however, important differences in the selection of spouses between north and south, reflecting the Āryans-Dravidian division in India. In North India, one marries outside one’s clan (*gotra*), and there is a required degree of separation in blood relations for a spouse. In South India, however, the preferred partner is one’s eldest sister’s daughter, or a cross-cousin (i.e., father’s sister’s daughter, or mother’s brother’s daughter). Such unions are viewed as incestuous in North India.

Hindu marriages are arranged. Though now prohibited, child marriage was common in traditional Hindu society. Once the horoscopes of the boy and girl are cast and deemed suitable, negotiations concerning details of the dowry, date of betrothal, etc., are pursued. A date and time for the marriage is determined by astrologers. There are certain “seasons” when marriages are performed, with spring being considered the most auspicious time for the ceremony. Rituals are performed at the houses of both families, followed by the *barāt*, or procession of the groom to the bride’s house. Among some castes, the groom arrives on a horse (Rajputs may ride an elephant). Both bride and groom are elaborately dressed, with the bride wearing red and gold and bedecked with jewelry. The actual wedding ceremony is performed in the presence of the sacred fire by a Brahman, who recites the appropriate passages from the Vedas. In the central marriage ritual, a cloth is tied to the clothes of the bride and groom, and the groom leads the bride in the “Seven Steps” around the sacred fire. A marriage is a time of feasting and entertaining, and among the rich the ceremonies may last as long as 10 days. For the less fortunate, the marriage of a daughter may result in considerable debt (this is one reason why male children are preferred over females).

Life for the new bride may start out as anything but rosy. She moves into a new household as part of an extended joint family. She is the most junior woman in the household, which is overseen by the mother-in-law. Unless the family is wealthy enough to have servants, she is assigned household chores. The power of the mother-in-law in traditional households was such that she even determined when her married children could have sexual relations (men and women lived in different parts of the house). A woman's status in the family changes only when she gives birth to children, preferably sons. The dearest wish of a Hindu woman is to bear her husband male heirs. Divorce was rare in traditional Hindu society, though failure to bear children was one reason for returning a wife to her family, the ultimate disgrace for a woman. Modern legislation concerning Hindu marriage and divorce contains a more liberal provision for divorce.

## 11 CLOTHING

Traditional dress for Hindus is the *dhoti* for men and the *sāri* for women. The *dhoti* is a single piece of cotton, wrapped around the waist for half its length and then drawn between the legs and tucked into the waist behind. In southern India, the torso is usually left bare, although in the north a shirt may be worn. Southern Indians tend to go bareheaded, while in the north turbans are common. The style of the turban often identifies the wearer as a member of a particular community (e.g., Pathan or Sikh) or from a particular region or village. The *kurtā*, a long tunic-like shirt, and the *pyjāmā*, loose baggy trousers, are common in northern India, especially in urban areas. Men in the countryside areas often wear a variety of gold or silver ornaments.

The *sāri* is a length of cotton or silk cloth measuring up to 10 m (approximately 30 ft) in length. It is wrapped around the waist, with one end left free and thrown over the right shoulder. This end can be drawn across the head and used to cover the face when necessary. A *choli* a tight bodice that leaves the midriff bare, is worn under the *sari*. There are regional variations in the way the *sāri* is worn. In Maharashtra, for example, rural women draw one end of the *sāri* through the legs and tuck it into the waist at the small of the back. In some rural areas, women do not wear the bodice, using just the end of the *sāri* to cover the upper body. A married woman wears a stripe of red coloring along the parting in her hair and a *tikā* or red dot in the center of the forehead. Nowadays, the *tikā* is often worn as decoration. Women are fond of jewelry and wear a variety of earrings, bracelets, bangles, anklets, and other ornaments such as a jewel inserted in the nostril.

## 12 FOOD

Hindus follow the dietary patterns of Indians as determined by broad agricultural and ecological factors. The staple in northern and western areas is cereals (wheat, millet, barley) made into flat, unleavened bread called *roti*. This is eaten with pulses (*dāl*) and spiced dishes called “curries” (from the Tamil *karī*). In the wetter south and east, rice (*chāwal*) replaces the breads.

For Hindus, however, food is more than mere nourishment. It has ritual and symbolic meaning. The cow, for example, is considered sacred by Hindus, as are its five products (milk, curd, *ghī* or clarified butter, dung, and urine). The cow is worshipped, and its products are used in Hindu rituals. It is considered a sin to kill a cow, and the devout Hindu will avoid

beef. In fact, strict adherence to *ahimsā* means that all animal flesh should be avoided. Yet there are Hindus such as *Chamārs* and other untouchable castes who eat beef, chicken, and pork. Such behavior brings ritual impurity on several counts: eating beef violates the sanctity of the cow; killing animals for food violates *ahimsā*; and animals such as chickens and pigs are regarded as unclean by many Hindus.

Food habits among Hindus are thus closely linked to social status and standing in the caste hierarchy. As a rule, the higher the caste, the stricter are the food taboos one must follow. Brahmins form the highest castes and are strict vegetarians, eating no animal flesh and even avoiding eggs. But they also shun foods such as onions and garlic that grow in the ground and are viewed as unclean. Some will not even eat off plates on which proscribed food has been served at some time. Alcohol is also forbidden. One outcome of this concern of the higher castes for ritual purity is strict rules of commensality (i.e., rules concerning dining with other castes).

Another dimension of food in Hindu society is the concept of “hot” and “cold” in Ayurvedic medicine, the system of medicine found in the Vedas. Foods (and diseases) are classified as possessing varying degrees of heat or cold. Hot foods (e.g., apples, radishes, or honey) are prescribed to treat diseases that are cold, and vice versa.

## 13 EDUCATION

Hindus follow the general educational and literacy patterns of India, with social and economic factors being important in determining access to modern education. In traditional Hindu society, however, formal education was limited to the Brahman male. The nature and stages of this education, which focused on the study of the Vedas, are set out in the Sanskrit texts.

## 14 CULTURAL HERITAGE

Sanskrit literature includes sacred texts such as the Vedas, and the various works attached to them that are called the *Brāhmanas* and *Upanisads*. Later works of importance are the epic *Mahābhārata* and *Rāmāyana*. The 18 *Purānas* dating from the 6th to 16th century AD are non-Vedic works that have exerted a strong influence on present-day Hinduism. *Dharma Śāstras* is the collective name of various works setting out laws governing the political, social, and religious life of the Hindus. In the tradition of secular Sanskrit literature, Kalidasa is considered to the greatest of all playwrights and poets.

Classical Hindu music and dance derive from temple performances. A 3rd century AD work called *Nāṭya Ūstra* is the ancient authority for these art forms. Today, the main classical dance in India is Bharata Natyam, while Kathakali is a less formal dance from southern India. Stylized hand and facial gestures are an important aspect of both dance types. Kathak and Manipuri are other dance forms. Classical Indian music attaches more importance to melody than to harmony. The “raga” is a basic melodic pattern that provides a framework within which the musician improvises. Instruments used include the *sitār* (a long-necked lute), *vinai* (a South Indian stringed instrument), *śahnāi* (a wind instrument similar to the oboe), and *tabalā* (double hand-drums).

Architecture and sculpture in the Hindu tradition are religiously inspired art forms. The soaring towers of the North Indian temple style represent the peaks of the Himalayas, the abode of the gods. South Indian temples, with their elaborate

gateways (*gopuram*), are pyramidal in shape and covered with elaborately carved figures from Hindu mythology. Famous examples of Hindu temple are the temples complex at Mahabalipuram (Tamil Nadu), the Khajuraho temples (Madhya Pradesh) with their erotic carvings, and the Sun Temple at Konarak (Orissa). The rock-cut temple at Ellora (Maharashtra) and the cave temple at Elephanta, near Bombay, are also worthy of note.

Rajput painting is the only body of Hindu painting surviving today. It covers a period from the mid-16th to the early 19th centuries and is comprised of works painted in Rajasthan and the western Himalayas under Rajput patronage. Most of the paintings are “miniatures,” presenting religious and epic themes, episodes from the life of Krishna, hunting scenes, and portraits. Last, but by no means least, is an accomplishment of Hindu science. Although the matter is still debated, it is accepted by many that the concept of zero is a Hindu contribution to mathematics.

## 15 WORK

Hindus participate in all areas of the modern Indian economy. In traditional Hindu village society, however, castes were integrated into an economic system known as the *jajmānī* system. The focus of this system was the *jajmān* or patron, one of the landholders in the village. The patron was involved in relationships with specific families of the service castes in the village. A Brahman priest provided his services for religious ceremonies and rituals. A potter made earthenware pots and jars for the *jajmān*'s household; a carpenter mended his carts and agricultural equipment; a Chamar removed and skinned his dead animals; and a sweeper would remove the refuse from his house. In return, they received as payment grain, food, or cash. The relationship between the patron and the service-provider (*kamīn*) was a hereditary one, passing from generation to generation. It was, moreover, more than just an economic one. The patron, for example, would be obliged to assist the *kamīn* at times of crisis such as sickness or death.

The *jajmānī* system required few cash transactions, integrated occupational castes in the village, and contributed to stability in traditional village life. The breakdown of the system and the emergence of a cash economy is one of the changes that has affected Indian village communities in modern times.

With India's economy growing at over 9% a year, many Hindus are participating in and experiencing the material benefits of this growth. While Hindus are still primarily agricultural, urban Hindus—and especially middle class urban Hindus—have access to a range of conveniences such as automobiles, refrigerators, computers and mobile telephones. This “development,” however, is being achieved at a cost—air pollution is bad in Delhi and throughout northern India, while traffic congestion and environmental degradation remain major issues.

## 16 SPORTS

Children amuse themselves with hide-and-seek, marbles, kite-flying, and other games common among Indian children. Dice and card-playing are popular with adults, and chess is thought to have originated in India. Other pastimes include cock-fighting, camel-racing, wrestling, gambling, and hunting. Hindus, of course, participate in modern sports such as cricket, soccer, and field hockey that are popular in Indian society.

## 17 ENTERTAINMENT AND RECREATION

Hindus today have access to modern forms of entertainment such as radio, television, and movies.

In traditional society, entertainment was derived to a considerable degree from participation in religious fairs and festivals and in folk traditions of music and dance.

## 18 FOLK ART, CRAFTS, AND HOBBIES

The Hindu tradition identifies nine basic handicrafts believed to have been originated by the divine artisan Vishvakarman. These were gold working and jewelry-making; carving (of ivory, shell, and animal bones); pottery; weaving textiles; garland-making and weaving reeds and rushes; leatherworking; painting and sculpture; carpentry; and metalworking. Many of these crafts are associated with the occupational castes of India. In addition, there is a rich heritage of arts and crafts rooted in the folk traditions and regional cultures of the Hindu peoples.

## 19 SOCIAL PROBLEMS

Hindus, who make up the bulk of the Indian population, face the usual problems of poverty, low standards of living, and unemployment associated with developing countries. There are, however, economic and social problems that are specifically religious in origin. Hindu attitudes towards the cow and reluctance to kill cattle, even nonproductive animals, are seen by some economists as an inefficient use of resources. The fatalism associated with Hindu philosophy, it has been argued, has also been a hindrance to initiative and economic enterprise. But perhaps the most serious problems facing Hindus today are the social divisiveness of caste and the rise of Hindu fundamentalism. Caste has been made illegal in India, but it still provides the context in which Hindu society functions. With the breakdown of traditional social structures and pressure on resources as population increases, conflict (usually between higher and lower castes) has led to violent confrontation. This situation is made worse by rising Hindu fundamentalism and the increasing political strength of fundamentalist parties that would like to see India become a Hindu state. While such an achievement—though unlikely—would be a triumph for some Hindus, it goes against the longstanding tradition of Hindu tolerance for other peoples.

The rise of Hindu nationalism and Hindu nationalist political parties, such as the BJP, which specifically promote Hindu values, has introduced an element of conflict into modern India. “Hindutva” has raised tensions between Hindus and Muslims, as evidenced by the Godhra killings in 2002. The issue of fundamental Islamic terrorism remains, with Muslim groups apparently claiming responsibility for the 13 May 2008 bombings in Jaipur, the capital of Rajasthan state, which killed 63 people and injured several hundred more. Two days after the blasts, a previously unknown Islamic militant group known as the Indian Mujahideen sent an e-mail to the Indian media in which they claimed responsibility for the attacks and said they would “demolish the faith (Hinduism)” of the “infidels of India.” However, Indian Home Ministry sources said that a Bangladesh-based organization, *Harkat-ul-Jihad-al-Islami* (HuJI) or “Islamic Holy War Movement,” was suspected of being behind the attack. The bombings were only the latest in a series of periodic acts of violence apparently committed by Muslims against Hindus (though the indiscriminate nature of the blasts

have killed Muslims as well as Hindus), *viz.* the Bombay Stock Exchange bombings (1993), the Delhi market bombings in 2005, the Bombay train bombings (2006) and the 2007 blast at the dargah of Khwaja Moinuddin Chishti in Ajmer in Rajasthan. In Kashmir, of course, where India is basically fighting a Muslim insurgency, conflict between Muslims and Hindus is commonplace.

Concerns also exist regarding the intentions of a nuclear-armed Pakistan. Muslim Pakistan, after losing the 1971 war with India, embarked on a program of developing nuclear weapons. Under the direction of Dr. Abdul Qadeer Khan, it acquired the ability to carry out a nuclear explosion in 1987. India had already tested a nuclear “device” in 1974. Of major concern is the relatively short distance between the two capitals, Islamabad and New Delhi, which are about 450 miles from each other, a distance that could easily lead to a nuclear mistake. Unlike the United States and the Soviet Union during the Cold War who had enough weapons to destroy the opposing nation several times over after surviving a nuclear strike, India and Pakistan have relatively few nuclear weapons. Pakistan is generally estimated to have between 25 and 50 nuclear weapons, with some designated for delivery by its F-16s and some outfitted for its missiles. India likely has between 30 and 60 nuclear weapons, also available for planes and missiles. The leaders of each country, despite public assurances to the contrary, may worry that the other nation could destroy its nuclear arsenal with a surprise first strike, necessitating quick trigger fingers. This problem is of greater concern for Pakistan, because without its nuclear weapons, the weaker Pakistani army might be at India’s mercy. In 1999, when Pakistani freedom fighters crossed the Line of Control into Indian-held Kargil, in Kashmir and were repulsed by the Indian Army, Pakistan is thought to have prepared its intermediate-range missiles for nuclear strikes, perhaps to deter India from attacking Pakistani territory. U.S. diplomacy helped persuade then-Pakistani Prime Minister Nawaz Sharif to pull his troops out of India and temporarily head off full-scale war. Experts estimate at least 12 million dead in a nuclear exchange between the two countries and that this would result in a humanitarian crisis so great that every medical facility in the Middle East and Southwest Asia would be quickly overwhelmed.

## 20 GENDER ISSUES

It is difficult to generalize about the status of Hindu women, because they belong to a variety of groups, in different levels of society and each having their own customs and practices. Thus, the life of the high-caste urban Brahman woman is likely to be quite different to that of the rural untouchable. Nonetheless, Hinduism traditionally tends to treat women as second-class citizens, whose main purpose in life is to marry and have male children.

In the past, Hindu women were subject to child marriage, arranged marriages, which were often arranged by families with brides never meeting their husbands before the nuptials, the payment of dowries, the custom of *sati*, and bans on widow remarriage. Except in matriarchies, Hindu women do not inherit property, which remains in the name of male relatives.

Many traditional practices have been made illegal by state and national governments. Child marriage has, for instance, been illegal in India since the passing of the Child Marriage Restraint Act of 1929 and, in an effort to curb the practice of

child marriages, the states of Rajasthan, Gujarat, Maharashtra, Karnataka, and Himachal Pradesh have passed laws that mandate the registration of all marriages in order to make them valid. But child marriage still occurs in India, mainly in rural villages and areas that usually have little legal supervision. According to the “National Plan of Action for Children 2005,” published by the Department of Women and Child Development of India, a goal has been set to eliminate child marriage completely by 2010, but it is very difficult to monitor all children due to the sheer size of the Indian subcontinent and one only has to read the press on Akha Teej, a time that is favored for child marriages—some brides are as young as one year old—to see that it still goes on. A recent report by UNICEF revealed that 82% of girls in Rajasthan are married before they are 18, 15% of girls in rural areas across the country are married before 13 and a majority 52% of girls have their first pregnancy between 15 and 19. (According to the Prohibition of Child Marriage Act of 2006, it is illegal to allow or facilitate marriage of a boy under 21 and a girl under 18.) Consequences of child marriage include anemia, sacrifice of education, domestic violence, and early pregnancies, which weaken the mother and lead to higher mortality in children during their first year of life. Even though the Supreme Court of India has upheld the government’s 1994 Prenatal Determination Act, which bans the use of technology, such as ultrasounds and sonograms, for the purpose of sex-selective abortion, females fetuses are still aborted, resulting in male-dominated sex ratios among Hindus in India.

Though “love” marriages do occur, marriages in India are still generally arranged by the families involved, such marriages often being as much business alliances between families as marriages between a boy and a girl. One only has to read the marriage ads in the Indian Sunday papers to see the extent to which this practice continues. It is customary for the bride’s family to provide a dowry, even though this is banned by law (The 1961 Dowry Prohibition Act). It is not uncommon for the husband or husband’s family to be unhappy with the amount of the dowry (demands often include items such as automobiles, scooters, and refrigerators) resulting in “dowry deaths,” whereby a women’s clothing “accidentally” catches fire in the kitchen. Some estimates place the number of “dowry deaths” in the country as high as 25,000 women with numerous more maimed or scarred for life as a result of attempts to kill them.

The custom of *sati*, when a widow burns herself on her dead husband’s funeral pyre, is a thing of the past, although a *sati* in Rajasthan in 1987 resulted in the state government passing the Rajasthan Sati Prevention Ordinance of 1987, which makes the glorification of *sati* a crime.

Many groups now permit widows to remarry, but the general treatment of women in Hindu society and laws of inheritance make the lot of women in Hindu society unenviable.

Attempts to improve the lot of women have made an impact on the place of women in Hindu society. Many of the ancient customs affecting them are now illegal, women have been making strides in accessing education (studies have shown that, because more women are remaining longer in the educational system, they are delaying the age at which they marry), and among the more educated, Western concepts such as feminism and women’s rights are taking root. More and more Hindu women are out in the workplace and are becoming financially more independent. But rural Hindu women still have

to face problems of poverty, illiteracy, and casteism, while even in the cities women exist in a male dominated society, have to face “Eve teasers” (Eve teasing is a euphemism used for sexual harassment or molestation of women by men) and still have to prove themselves by bearing sons when they marry.

**PRONUNCIATION:** (H)MAWNG

**ALTERNATE NAMES:** Meo, Miao

**LOCATION:** Southern China; Viet Nam; Laos; Thailand

**POPULATION:** About 4 to 6 million worldwide

**LANGUAGE:** Hmong

**RELIGION:** Animism; some fundamentalist Protestant Christianity

**RELATED ARTICLES:** Vol. 2: Hmong Americans

## <sup>1</sup> INTRODUCTION

The Hmong (sometimes called Meo or Miao, terms the Hmong consider pejorative) are an aboriginal people of southern China. They are mentioned in Chinese records as early as 2500 BC. Traditionally they were paddy (wet rice) farmers in China. In the past two centuries, groups of Hmong have begun to filter into the mountainous north of Vietnam, Laos, and Thailand to escape the persecution and pacification campaigns of the Chinese. In Southeast Asia they settled in higher elevations, usually above 1000 m (3,280 ft), often on mountain tops where they practiced shifting slash-and-burn (swidden) agriculture—clearcutting and burning off an area of the forest, planting crops until the soil was depleted, and then shifting to a new area after a few years. The Hmong usually grow dry rice, corn, vegetables, and opium poppies. Although they traditionally grew opium poppies for their own ritual and medicinal use, they were encouraged by French colonial authorities in Vietnam and Laos to increase production for sale to the colonial opium monopoly and as payment for head taxes. Thus, opium became an important cash crop for the Hmong.

The Hmong are often at odds with the governments of the states in which they reside because of their independence, opium growing, and shifting slash-and-burn agriculture that is destructive to the environment. They are being encouraged to settle in lowland areas where they can be more easily controlled and can practice more productive wet rice agriculture. Mutual suspicion exists, however, between the Hmong and the majority populations, who tend to consider them ignorant and uncivilized.

The Hmong face a special burden in Laos, for they were divided during the Lao civil war, which was in many ways an extension of the Vietnam War. Some joined the Communist Pathet Lao while others served in the CIA-sponsored mercenary army under General Vang Pao, supporting the Royal Lao Government. The Hmong were considered fierce fighters, skillful in guerrilla warfare in mountainous terrain. Thousands of Hmong fled Laos when the Communists came to power in Laos in 1975, seeking refuge in Thailand and China. A small Hmong insurgency continued, and when Lao and Vietnamese forces were unable to secure Hmong villages with regular forces, they turned to chemical and biological warfare. New waves of Hmong refugees fled the country. Perhaps as many as 200,000 Hmong left Laos. Most were resettled in other countries, but the thousands remaining in Thai refugee camps are being unwillingly repatriated to Laos. The Thai government's hard line toward remaining Hmong is based in part on the perception that the remaining refugees are “economic migrants” rather than people fleeing in fear of their lives.

## **<sup>2</sup> LOCATION AND HOMELAND**

Estimates of the Hmong population vary, but there are probably 4–6 million worldwide. An estimated 3–5 million continue to live in southern China, mostly in Yunnan. There are about 350,000 in north Vietnam, 230,000 in north and central Laos, and around 100,000 in northern Thailand, plus a few Hmong settlements in Burma (Myanmar).

The Hmong tend to live in mountainous border regions of southern China and northern Southeast Asia. They resist government controls and have paid little attention to borders, often trekking from one country to another. This makes the Hmong population a sensitive issue for governments that seek to control their peoples and their borders.

In Laos, the Hmong and others living in the higher elevations like the Akha, Phu Noi, and Mien (Yao), are called Lao Sung, or upland Lao. The Hmong make up two-thirds of the upland Lao population and about 5% of the total population of Laos, the only country where they are a significant minority. The government of the Lao People's Democratic Republic (LPDR) has tried to include the upland peoples and extend services like health and education to them. By using terms like lowland Lao (basically ethnic Lao), midland Lao (Kammu and others), and upland Lao, the LPDR has tried to de-emphasize ethnicity.

There are about 150,000 Hmong in the United States. There are 30,000 Hmong living in Fresno, California, and significant Hmong communities in other parts of California and in Minnesota, Wisconsin, and Rhode Island. The change from an illiterate agricultural life in remote mountain villages to an urban setting in the U.S. has been immense. Clan organizations have remained fairly strong and mutual help has eased the transition for many. However, the Hmong-American community is also highly factionalized, and there is a widening gap between the older generation, which tends to cling to Cold War values, and the younger generation, which is more inclined toward reconciliation with the Lao People's Democratic Republic. Some Hmong have also settled in Canada, Australia, France, and even in Argentina and mountainous areas of Surinam.

In keeping with its policy to promote stronger relations with Southeast Asia, China is reaching out to the Hmong diaspora with international conferences and other activities. This has had the effect of strengthening the Hmong sense of identity, but it has also alarmed some countries with Hmong populations, particularly in Southeast Asia.

## **<sup>3</sup> LANGUAGE**

The Hmong language belongs to the Sino-Tibetan group of languages. There are two major dialect and cultural groups — the Green Hmong (sometimes called the Blue Hmong) and the

White Hmong. The colors refer to women's traditional dress. The two dialects are mutually intelligible. In the past there was little intermarriage between the two dialect groups, but it has become common. One's last name is a clan name. About 18 clans have been identified in Thailand and Laos. In Laos, the government supports a Hmong radio news broadcast, the only broadcast in a minority language.

The Hmong did not have an alphabet or writing. Missionary groups have developed a romanized script for the language, but relatively few Hmong are literate in it. However, the first Hmong studies program was established in the United States in 2006 and seeks to promote literature and other works in the Hmong language. The script looks somewhat peculiar: The word "Hmong," for example, is written "Hmoob." The double letter signals a nasalized vowel, and the last consonant is an unpronounced tone marker. There are eight tones in Hmong. Here is a Hmong proverb in romanized script:

*Niam-txiv piv tam lub ntuj*      Parents are like the sky,  
*Tub-ki piv lub tem.*                Children are like the earth.

The Hmong language contains many words borrowed from Chinese, Thai, Lao, French, and English. The Hmong are being educated and becoming literate in the languages of the countries where they reside.

#### 4 FOLKLORE

Lacking a writing system, the Hmong have passed down their legends and ritual ceremonies orally and in crafts (especially textiles) from one generation to another.

They have many short rhyming expressions with messages of wisdom and show their outlook on the world. Here are a few examples:

You don't have to sharpen a thorn;  
You don't have to explain to a smart person.

See a tiger, you will die;  
See an official, you will be poor.

Tangled hair, use a comb to unsnarl it;  
Complicated dispute, use an elder to solve it.

Able to weave, don't waste thread;  
Able to speak, don't waste words.

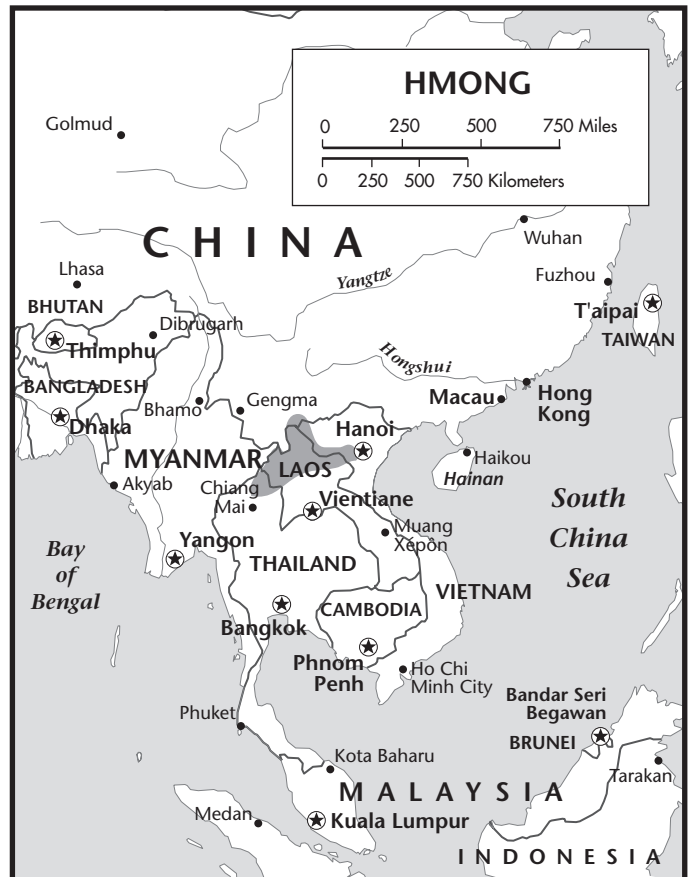

The mouth tastes food;  
The heart tastes words.

If the crops aren't good, you lose only one year;  
If your wife isn't good, you lose a whole lifetime.

#### 5 RELIGION

Most Hmong are animists and believe in a variety of spirits. The spirit of the house provides protection for the family and helps bring prosperity. An altar to this spirit is placed on the wall opposite the front door, and on the first day of the new year, a pig is sacrificed to it. The eldest male in the family conducts the ritual.

Special spirit practitioners deal with the spirits of medicine and conduct magic rituals to exorcise the spirits that cause ill-

ness. Herbal specialists may also treat the patient with herbs and massage.

The spirits of nature are always on the lookout for lost or straying souls. Like the Lao, the Hmong believe that the body has many souls that sometimes stray. The *hu plig* ritual, similar to the Lao *baci*, calls the souls back to the body. The ritual is performed for someone who is sick, for a newborn on its third day of life (when body and soul are believed to come together), and for a new bride three days after marriage (to tie her soul to her husband's clan).

A shaman might be called in cases of illness that don't respond to other curing rituals. The shaman is one who can fall into trance and communicate with spirits in the sky and bargain with them for the soul of the sick person. One or more pigs are sacrificed so the shaman can trade with the spirits for the soul of the person.

At funerals, cattle are sacrificed so the deceased will have wealth in the spirit world. The Hmong believe that the well-being of the living depends on the well-being of the ancestors in the spirit world.

In Thailand and Laos, 10–20% of the Hmong have responded to missionaries and adopted fundamentalist Protestant Christianity. This is seen by other Hmong as a threat to clan solidarity, since Christians destroy their spirit altars, refuse to sacrifice at funerals, and feel less bound by clan ties.

#### 6 MAJOR HOLIDAYS

The Hmong New Year is the biggest Hmong holiday, a celebration for 7–10 days in December after the harvest. It is a time for new clothes, sacrificing a pig to the ancestors, calling on

the elders for blessings, eating good food, relaxing, and playing games. The household altar has been cleaned and redecorated. On the eve of the new year, the eldest male in the household calls the spirits home—the father's spirit, the mother's spirit, the children's spirits, the animals' spirits, and the spirits of the crops. The elder throws away the evil and bad words of the old year. The new year is welcomed and named after the first animal they hear cry out. The young men visit the elders, taking whiskey and food; they kneel and wish good fortune to the elders, who bless them in return.

On New Year's Day the young unmarried men and women line up opposite each other and toss a cloth ball back and forth while singing. Each person tries to throw the ball to the person who interests him or her, so it is a kind of flirting. Marriages often take place soon after the New Year.

## 7 RITES OF PASSAGE

The main rite of passage is marriage. Hmong marry young, usually in their teens. The girl is usually 15–17, the boy 17–20. Traditionally marriage, often between cousins, was arranged by the fathers of the couple. In more recent generations, young people generally choose for themselves. The boy sends a go-between to the girl's parents with a silver coin to ask for her hand and negotiate a bride-price. Should the girl's parents object, the traditional alternative was a mock abduction to the boy's parents' house, which is in effect an elopement. Marriage negotiations would then begin after three days. In the past, it was common for the bride-price to be 3–10 silver bars, each worth about \$100. Communist governments have opposed spending much money on ceremonial and ritual expenses and the Lao government limits the payment to two silver bars. The bride-price recompenses the bride's family for the loss of her productive and reproductive capacity.

## 8 INTERPERSONAL RELATIONS

The household and the clan are the key units of Hmong life. Primary loyalty is to them, not to a village or region. Hmong like to live near their clan relatives, whom they can call on for social, economic, and emotional support.

Young men and women mix freely, and premarital sex is accepted as the norm, much to the horror of the dominant populations where they reside; women are expected to be chaste even if the men are promiscuous. Pregnancy usually leads to marriage. Men must marry out of their clan. Marriage outside the Hmong community is extremely rare.

Ethnic prejudice against the Hmong complicates their relations with lowland people.

## 9 LIVING CONDITIONS

In Laos, living conditions for Hmong are rather poor. Village houses cluster together on barren mountain tops. The house is set directly on the ground with a beaten earth floor. The walls are usually made of split bamboo and the roof of thatch. Usually 6–8 people live in a house measuring 6 x 8 m. Furnishings are minimal—a couple of stools and a table. A sleeping alcove is set a foot or two above the floor. There may be a walled-off bedroom for a couple. Much of the house may be used for storage, with a granary, tools, etc. An open hearth is used for cooking. The pigs and chickens may be brought into the house at night but wander freely in the daytime. There is usually no electricity, no running water, and no sanitary facilities. The

pigs keep the village clear of edible refuse and human waste. Access to health care is limited. Travel is usually by foot, although wealthier families may have pack horses. There are few roads. Each family tries to be as self-sufficient as possible.

Despite these conditions, Hmong villages are often more prosperous than those of surrounding minorities. This is due in part to remittances from overseas Hmong. In some cases, the income discrepancies between Hmong and their poorer ethnic neighbors creates tension, particularly when Hmong are able to buy the ancestral lands of other groups.

## 10 FAMILY LIFE

The Hmong have large extended patrilineal families. The household can include parents, children, wives and children of married sons, and other relatives. As married sons establish their own households, the youngest son is left to care for parents and inherit their property. Polygyny, the practice of having more than one wife, is allowed by the Hmong, though governments discourage the practice. In principle, the first wife must consent and, traditionally, an additional wife is taken only if the first wife is barren or produces only female children. The daughter-in-law rises early and works hard, and new brides sometimes register their unhappiness by returning to their parents temporarily. Divorce is possible but discouraged.

The family works together to provide food. Gender roles tend to be fairly strongly differentiated. Women care for the home, cooking, water and firewood, husking rice, grinding corn, care of pigs and poultry, and weeding the fields. Men cut trees, burn the fields, hunt, care for buffalo and cows, and plow. Men punch holes for seed, which the woman puts in and covers over. Both sexes harvest and thresh and carry the crop from fields to village. Children help from an early age, netting small fish, catching edible insects, helping with the animals and gardens, and caring for younger siblings.

Men are accorded greater respect than women. The husband typically walks ahead of the wife, and if there is only one burden to carry, it is hers. But relations between spouses are generally amiable and husbands are advised to consult with their wives.

## 11 CLOTHING

Hmong are identified by their clothing, which indicates dialect and regional group. The Green Hmong, the White Hmong, and the smaller group of Striped Hmong are known by the traditional dress of their women. Women of the Green Hmong, sometimes called Blue Hmong, wear short, blue, indigo-dyed skirts, each done in intricate batik patterns and containing hundreds of tiny pleats. The skirts usually have cross-stitch embroidery and appliqué as well. The skirt is worn with a black long-sleeved blouse, leggings, and a black apron. An outfit takes about one year to make in one's spare time. Women also wear large silver neck rings. The men wear short, baggy black pants and black shirts, sometimes with embroidery, a long sash around the waist, and a Chinese-style black cap decorated with embroidery.

The White Hmong women wear black pants or white pleated skirts and a black blouse with an elaborately decorated collar piece at the back of the neck. Accessories include embroidered sashes, coin belts, and aprons. The men's pants are not as short and baggy as the Green Hmong outfit. The Striped Hmong women wear blouses with striped sleeves. Women's

headaddresses may be very elaborate and indicate regional differences. Younger people are more likely to dress like the majority population, in T-shirts and sarongs or pants.

## 12 FOOD

The Hmong prefer white rice to sticky rice, but grow both kinds. Sometimes they have to buy additional rice. Other food comes from their fields and gardens, supplemented by hunting, fishing, and gathering. Corn is always grown along with squash, melons, and greens of various kinds. Tubers, shoots, mushrooms, and other wild plants are found in the forest. Various rodents and insects are also eaten. Most foods are boiled and seasoned with salt and chilies. Meat is rarely part of the diet, although occasionally a hunter gets lucky. The pigs and cattle they raise are largely for sacrifices to the spirits, but they are eaten on ceremonial occasions once the offering has been made. There are usually bananas and other fruit trees and often some sugar cane. Wild foods and fish are abundant during the rainy season, but little grows in the hot dry season.

## 13 EDUCATION

Schools have been extended to Hmong areas only in recent years in Thailand and Laos. Many Hmong settlements are still remote from schools. Most Hmong in Laos attend school only for a year or two. Males are more likely to attend school and study longer than females. Most Hmong men can speak the national language to some extent and may have gained some literacy in it. Females are more likely to be illiterate. Education occasionally is an issue in Hmong families in the United States. Sometimes traditional parents want their teenage daughters to leave school and enter an arranged marriage, while their more Americanized daughters rebel.

## 14 CULTURAL HERITAGE

Because the Hmong were not a literate people, their cultural heritage had to be handed down in other ways. They are noted for their sung poetry and their story cloths. Hmong songs are poems that the singer makes up as the song is sung using rhyme and clever wordplay. Older songs may be memorized, but the singer adds his own lines to them. There are ritual songs, courting songs, and teaching songs. Songs are passed from one generation to another. Many still contain references to life in China, although the Hmong may have left there generations ago. A skilled singer gains great renown among the Hmong.

The Hmong are known in the West for the exquisite appliqué and embroidery of their story cloths, cloth panels with detailed scenes of daily village life for the Hmong: growing corn, caring for pigs and chickens, hauling rice from the fields, etc. Some have a story line that meanders across the cloth. More recent story cloths tell of war, exile, and going to America.

## 15 WORK

Work revolves around the agricultural calendar of planting rice, corn, vegetables, and opium poppies. Opium was once the biggest cash crop for many Hmong. It is small in volume, high in price, readily portable, and grows well at high altitudes in monsoon climates. However, opium eradication efforts in both Thailand and Laos have unsettled many Hmong communities, despite crop substitution projects. Poverty has forced some

Hmong into wage labor, which is generally frowned upon since the Hmong are used to being self-sufficient. Hmong women have been selling their needlework, and their small embroidered squares are sometimes incorporated by Western fashion designers into stylish modern clothes.

## 16 SPORTS

The Hmong have no time for organized sports. Even young children may work long hours and have little time for recreation. Hmong boys like to play at spinning tops. Fishing is largely a task left to children and can combine elements of work and play.

## 17 ENTERTAINMENT AND RECREATION

Hmong sung poetry is a favorite form of entertainment. Often the songs deal with loss—of one's family, one's love, or one's homeland.

## 18 FOLK ART, CRAFTS, AND HOBBIES

Besides the story cloths mentioned above, the Hmong are famous for their traditional needlework squares with intricate appliquéd designs. Traditionally these were presented by a young couple to their parents and parents-in-law with a blessing. These pieces are placed in the coffin with a person after death. This type of needlework has been incorporated into modern handicraft items made for sale.

## 19 SOCIAL PROBLEMS

As governments have extended their control of border regions, the Hmong are under great pressure to give up their traditional way of life and settle down. Settled agriculture, wage labor, and the cash economy are replacing traditional self-sufficiency and have led to more emphasis on the individual and less on clan ties. Children exposed to lowland life are assimilating the dominant culture. Generational contrast and conflict is particularly acute for refugee families living in modern cities in the United States. It is a challenge to maintain Hmong culture and language while adapting to modern life.

## 20 GENDER ISSUES

Although societal discrimination against women exists in Hmong culture, several Hmong women have achieved positions of high rank in the Lao government and the Communist Party. The economic dislocation caused by opium eradication in Laos has pushed some Hmong women into prostitution, but the majority of Laotian women that are trafficked are actually lowland Lao. Nevertheless, the Hmong are suspicious of the intentions of overseas Hmong in this regard and popular folklore tends to view "rich" Hmong in the West as potential traffickers.

## HUI

**PRONUNCIATION:** HOO-ee

**ALTERNATE NAMES:** Huihui

**LOCATION:** China

**POPULATION:** 9.8 million

**LANGUAGE:** Chinese dialect of the area in which they live

**RELIGION:** Islam

**RELATED ARTICLES:** Vol. 3: China and Her National Minorities

### <sup>1</sup>INTRODUCTION

The Hui are the most widely distributed of all the national minorities of China. Early in the 7th century, a great number of Arabic and Persian merchants came to China through the sea route. Setting down in Guangzhou, Quanzhou, Hangzhou, Yangzhou, and Xi'an (formerly Chang'an), quite a number of them married and multiplied in this land. They built up the first mosques and established the Muslims' graveyard.

In the 13th century, a great number of Muslims from Persia, Arabia, and Central Asia immigrated through the land route and established themselves in various parts of China, in the northwest, the Central Plains, Yunnan and the lower reaches of the Yangzi River. It was at this time that they received the name Huihui.

From the Yuan Dynasty (1271—1368) to the Ming Dynasty (1368—1644), many people of Uighur, Mongolian, and Chinese origin were assimilated to the Huihui due to intermarriage and religious affiliation. In the meantime, there were also many Huihui assimilated to the Chinese for the same reasons. A new Hui nationality gradually came into being from the reunion of Huihui of different origins. The Hui, therefore, are a nationality that took shape in China, but whose history is very different from the aboriginal nationalities living in China from time immemorial.

### <sup>2</sup>LOCATION AND HOMELAND

The Hui are widely distributed throughout the country but are mainly concentrated in Ningxia Hui Autonomous Region; one also finds Hui in Gansu, Qinghai, Henan, Hebei, Shandong, and Yunnan provinces. Hui population was estimated at 9.8 million in 2000, representing the third-largest national minority of China after the Zhuang and the Manchus.

### <sup>3</sup>LANGUAGE

The Hui spoke Arabic, Persian, and/or Chinese in the past. They have no specific language of their own. Today, they use the Chinese language and writing. Retaining some words of Arabic and Persian origin, they speak exactly the same Chinese dialects as the peoples among whom they live.

### <sup>4</sup>FOLKLORE

Most of the Hui myths are related to Allah. The story of "Human Ancestor Adang" described how Hanwu married Haowa, who had 72 successive childbirths. Each time she gave birth to a boy and a girl. At the seventy-third childbearing, however, only a boy was born. Since he had no woman, he went to heaven and asked for the decree of Allah. He was kept in heaven,

while 144 brothers and sisters were carried by a strong wind to all parts of the world. Human beings thus multiplied.

Another myth narrates how the goddess Duor Tea in remote antiquity was banished from Heaven by Allah because she did not fulfill her duty. She was ordered to do philanthropic works to atone for her crime. So she transformed herself into a tea tree, gave a gold axe to a poor man, and ordered him to cut the tea leaves with the axe and use them to treat various illnesses of the villagers. Finally, she returned to Heaven with her axe but not before the Hui had developed the good habit of drinking tea.

The myth of “Adang and Haowa” relates a story similar to that of “Adam and Eve.” There are many other myths dealing with the origin of social and religious customs (for instance, “Adang in search of kindling material,” “The Dragon Plate,” and “Mohammed,” are all connected with Hui belief).

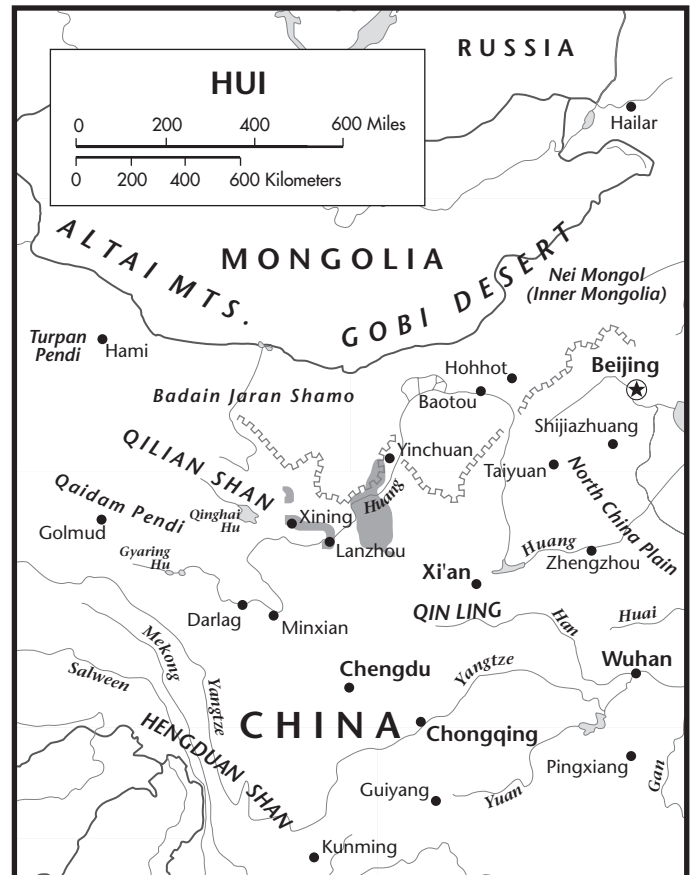

## 5 RELIGION

The Hui believe in Islam (also called Hui religion). The word “Islam” means obedience—to be obedient to the orders of Allah and to be the messenger of Allah. The believers are called Muslims. Islam was created by Mohammed, the messenger of Allah in Arabia in the 7th century. The Koran is the scripture of Islam. It stipulates that Muslims should recite the scripture frequently, hold the Corban Festival, fast in the daytime during September (Islamic calendar), hand in dues and go once to the Holy City Mecca to pay respects. In China, the man who takes charge of religious matters and teaches the Islamic scriptures is called *Ahung* (teacher). He is invited to preside over the ceremonies connected with birth, marriage, and death. The mosque is the place where Muslims recite the scriptures. Because of the shortage of qualified personnel of Hui religion, students have been enrolled in Shanxi and in Shandong provinces to learn the scriptures. Now, there are special universities for students learning Islamic scriptures and doing research in Islamic theology.

## 6 MAJOR HOLIDAYS

In addition to the Spring Festival and the Mid-Autumn Festival of China, the Hui have three important holidays: the Fast-Breaking Festival (Lesser Bairam), the Corban Festival, and the Shengji Festival. All adult Muslims should fast during September, abstaining from food and drink from daybreak to sunset. During this period, smoking is also prohibited. Everybody restrains one's selfish desires and sincerely believes in Allah. The beginning and the end of the month of fast (Ramadan) depend on the visibility of the new moon. If the moon is not visible, the Fast-Breaking Festival should be postponed until the next day. At the end of the one-month fast, the celebration among the Hui is at its peak.

December 10 (Islamic calendar) is the Corban (sacrifice offering) Festival. Every family must clean the house, kill oxen and/or sheep, pay visits to relatives and friends, and entertain guests for dinner. The Shenji Festival is on March 12 (Islamic calendar), a memorial to Mohammed. The Hui will go to the mosque to greet each other and to participate in religious activities. There will be food and drink in the mosque for the Muslims.

## 7 RITES OF PASSAGE

At birth, the infant receives from the *Ahung* an Arabic name usually corresponding to the name of a sage or saint of the Koran. This name is called the “scripture name.” To conform to the brevity of Chinese names (one or two syllables), the polysyllabic Arabic name is usually simplified, adding the Chinese suffix *zi* to the name. This custom is most prevalent in north-west China. Again following the Chinese naming system, the given Arabic name is preceded by the Chinese surname. When the child has gone through the name-giving ritual, he becomes a Muslim. The *Ahung* also presides at the wedding ceremony and at the funeral rites of the Hui.

Funeral rites last no more than three days. The body should be washed and wrapped with white cloth (five layers for the woman and three for the man). The Hui practice burial in the ground without a coffin. They dig a perpendicular hollow, more than 12 ft in depth, then make a pit for the body on the west wall of the hollow. The head of the body points toward the north. The body lies on its side, facing west, the direction of Mecca. The *Ahung* will be invited to recite scriptures during the burying and on the seventh and fortieth day after the death.

The Hui are fond of cleanliness. They take a bath or at least wash their face, mouth, nose, hands, and feet before each religious service.

*Hui Muslim men rest on a roadside in Gongmachuang village, Zhengzhou, China. (AP Images/Greg Baker)*

## <sup>8</sup>INTERPERSONAL RELATIONS

When a Hui family entertains guests for dinner, the host will continue pressing more rice into the guests' bowls, even after they have eaten to satiety. The guest should receive the dish or bowl with both hands.

The Hui avoid pork; they also refrain from ox or sheep meat that has not been butchered by the Ahung. Their customs and religious beliefs discourage their young ones from dating and marrying non-Hui people. However, a growing number of young people are becoming indifferent to religious beliefs and customs and tend to adopt the way of life of the Chinese majority. Dating and intermarriage between them are on the increase.

## <sup>9</sup>LIVING CONDITIONS

Because of their wide and scattered distribution, the living conditions of the Hui vary a great deal. They are engaged in farming in the rural areas, while in the urban areas, they engage in various trades and professions. Their living standards are similar to those of the majority Chinese. Their housing varies in the different districts.

The Hui have their own traditional prescriptions for illness. They resort both to Chinese traditional medicine and to modern medicine. There are Hui hospitals established in Hui districts and in large cities (modern facilities); these usually take the Hui religious life and customs into consideration.

## <sup>10</sup>FAMILY LIFE

The Hui family is patrilineal and monogamous. The position of women in the family is usually lower than that of men. In families where both spouses work, the position of the man and the woman is the same. The aged are esteemed. There are many large families in which the parents live with their sons and daughters-in-law.

Women who work as professionals in urban areas have full freedom to choose their mate. Arranged marriage, however, is still prevalent in rural areas. Chinese law stipulates that to be legal, a marriage must be registered with the proper state authorities; however, according to Islamic customary law, a man can take a wife only if the ceremony is witnessed by the Ahung. The Hui must therefore perform a double (civil and religious) marriage ceremony.

## <sup>11</sup>CLOTHING

The Hui scattered in various parts of China usually wear the same clothes as those of the Chinese. Most of the men wear a white or black hat (or turban) in religious services. Some of them, such as those living in Gansu and Qinghai provinces, wear the hat every day. Hui women wear a special *gaitou* (head cover), a folded cloth (only partly sewn) covering her hair, neck, and back, leaving only her face uncovered. These kerchiefs are mainly black. Girls prefer them in green and aged women, white. Hui clothes tend to be fashionable.

## 12 FOOD

The Hui take three meals a day. Their staple foods include rice, flour, corn, millet, and yams. Quite a variety of foods are taboo, mainly the flesh of animals, such as pigs, donkeys, and mules. Furthermore, the Hui do not eat the flesh of ox, sheep, or poultry that died of illness, nor flesh of ox and sheep that were not butchered by the Ahung or other Muslims. They are not allowed to eat in ordinary canteens or restaurants. Therefore, almost all schools, factories, and organizations have established particular canteens for the Hui. Also, cities have a number of Muslim restaurants. The cooks, waitresses, and ordinary workers of the Hui canteens or restaurants are exclusively Muslims.

The Hui like salted beef. They add salt and spice to fresh beef, massage it vigorously, put it in a large earthen container, cover it with a lid, and seal it. Two weeks later, they take it out and let it sit in the open air. The meat may then be fried, stewed, or cooked with rice. This is considered a high-grade dish with which to entertain guests.

The Hui like tea and usually do not indulge themselves in smoking and drinking. They also like a gruel of sweetened, fried flour. They mix flour of wheat, buckwheat, and rice together and fry, then add butter, fry again, and put the mixture in a pot to cool it down. They serve it by adding boiling water and sugar to two or three spoonfuls of fried flour in a glass.

## 13 EDUCATION

The educational level of the Hui in northwest China is lower than that of the Hui living in Yunnan Province and in the cities. Quite a number of Hui professors, scientists, writers, artists, medical doctors, and lawyers are doing well. Some of them are known at home and abroad. The parents fully support the education of their children. Hui middle (junior and senior) schools, even for girls, are established in the urban areas. The Scripture College trains specialists of Islamic teachings. As a result, the educational level of the Hui is, by and large, higher than the average of national minorities in China.

## 14 CULTURAL HERITAGE

Again, due to the broad regional dissemination of the Hui, their traditional culture has been integrated with that of the local nationalities. On the other hand, some of the Hui cultural traits have been adopted by the nationalities that share a common territory with the Hui. For example, the Huar folk songs, loud and clear, bold and restrained, are nowadays a common favorite of many nationalities of northwest regions. The Hui writers have produced a number of fine works, which, however, failed to attain national prominence on account of their particular features.

## 15 WORK

Hui production is very similar to that of the local people with whom they share a common territory. A number of daily necessities of Hui tradition have been produced by enamel factories managed by Hui people in Ningxia Province. Also, a variety of light refreshments for Muslims appears in the markets of many cities. Muslim cooks and butchers serve their own constituencies, but are sought after by other nationalities because of their professional competence.

## 16 SPORTS

The Hui generally practice the same sports as the Chinese. However, the "Wooden Ball" game is a tradition specific to the Hui of Ningxia. The ball is round or elliptic. The length of the stick is 2 ft, shaped like an ice hockey stick. The court, provided with a center line and two goals, is about 33 yds long and 22 yds wide. Each team has five players. The game lasts half an hour, divided into two periods.

## 17 ENTERTAINMENT AND RECREATION

Movies and television are rapidly becoming very popular. The adults like to sing Huar songs to express their dreams about the future and their romantic feelings. The lyrics are mostly impromptu. Some are solos and some are sung in antiphonal style. The Hui often sing while dancing. There used to be gatherings of thousands of Huar fans every year in the northwest region. In recent years, the number of such gatherings has increased, other nationalities joining in for large musical and singsong events.

## 18 FOLK ART, CRAFTS, AND HOBBIES

The mosque buildings have different styles, usually consisting of a main hall, a hall for scriptures, and one for bathrooms, sometimes with subsidiary buildings. The roof ridge of the main hall is usually high. The interior walls are decorated with Arabic writings of artistic quality. There is a shallow cave on the central portion of the west wall, indicating the direction of their religious homage (toward Mecca).

## 19 SOCIAL PROBLEMS

The living conditions of the Hui are very diverse and depend essentially on their specific environment. Those who live in the underdeveloped northwest (Gansu, Xinjiang, Qinghai) share with their immediate neighbors the same need to catch up with the economic development of the coastal areas and areas along the Yangzi River.

## 20 GENDER ISSUES

The Chinese constitution states that women have equal rights with men in all areas of life, and most legislation is gender neutral. The gap in educational level between women and men is narrowing with women making up 47.1% of college students in 2005, but only 32.6% of doctoral students.

China has strict family planning laws, and it is illegal for women to marry before 20 years of age, 22 for men, and it is illegal for single women to give birth. Though minority populations were previously exempt from family planning regulations, policy has changed in recent years to limit minority population growth. Today, urban minority couples may have two children while rural couples may have three or four.

## IATMUL

**PRONUNCIATION:** YAHT-mool

**ALTERNATE NAMES:** Nyara

**LOCATION:** Papua New Guinea

**POPULATION:** Approximately 12,000

**LANGUAGE:** Iatmul (Nyara); Tok Pisin; some English

**RELIGION:** Traditional Iatmul; Christianity

### <sup>1</sup> INTRODUCTION

The art of Iatmul people is the most well represented of all the indigenous peoples of Papua New Guinea. Few people have much knowledge or understanding of the complex culture that produced such appealing sculptures, carvings, and masks. The Iatmul were cannibals and headhunters in the times before pacification in the 1930s. Although attempts had been made to bring a halt to the violence that was integral to the attainment of status among males in Iatmul society, it was not until public executions of "murderers" took place that men decided to forego those traditions.

### <sup>2</sup> LOCATION AND HOMELAND

The total Iatmul population is around 12,000 people. The homeland of the Iatmul is along the middle course of the Sepik River, in the East Sepik Province of the country of Papua New Guinea. There are approximately 25 Iatmul villages scattered through this portion of the Sepik River. The Sepik is a river that changes face with the change in seasons. During the rainy season that lasts for around five months, the river may rise by 12 to 18 ft and flood the surrounding lowlands. Iatmul villages become a cluster of houses perched on stilts situated within a body of muddy water. All movement has to be done by canoe during this time.

The Iatmul's location in the middle reaches of the vast river has been advantageous to them, since it enabled them to serve as middle men in the extensive trade networks that existed in the Sepik River Basin prior to the arrival of Europeans. It still serves them well, as they are able to attract a large number of tourists to their villages due to the relative ease with which the area can be reached.

A large number of Iatmul have left the Sepik region and now live in other parts of Papua New Guinea. Quite a few Iatmul live in a fishing camp on the edge of a town called Wewak in the East Sepik Province. Some estimates are as high as 50% emigration from Iatmul villages.

### <sup>3</sup> LANGUAGE

The Iatmul refer to their language by the word *nyara*. There are two mutually comprehensible dialects of the Iatmul language, which is classified by linguists as a Papuan, or non-Austronesian language that belongs to the Ndu language family. The name of this language family drives from the common word for "man," which is *ndu* in all of the related languages. The Papuan languages are spoken throughout the island of New Guinea and on a few smaller islands neighboring New Guinea in Indonesia. There is very little information on the Iatmul language, although the New Testament has been translated into Iatmul by missionary linguists. Iatmul children and many

adults are fluent in Tok Pisin, one of the national languages of Papua New Guinea.

#### 4 FOLKLORE

Iatmul mythology states that they originated from a hole in the mud in the present-day territory of the neighboring Sawos

people. Some groups recount stories of a great flood. The survivors floated down the river (the Sepik) on rafts or pieces of grass-covered ground that lodged itself and became the place of the first men's house for the Iatmul ancestors. The present-day men's houses are supposed to be representations of the original piece of earth that was to become the Iatmul world. Other myths recount the formation of the heavens and earth from the great ancestral crocodile that split in two, with his upper jaw becoming the heavens and his lower jaw becoming the terrestrial realms.

#### 5 RELIGION

Traditional religious beliefs of the Iatmul people centered on the spirits of the rivers, forest, and swamps. There was also a concern for the ghosts of the dead and the havoc they could wreck on the living. There is a large body of myth which explains the natural and supernatural world for the Iatmul. Important in these myths are the actors and places where events took place in the mythological past. The names of the actors and places have become important items for the Iatmul and different clans have secret knowledge of the names of the actors and events in their body of myths. Clans would try to obtain the secret names of other clans. To do so was to gain power over the other group. Missionaries have been active among the Iatmul since the 1930s, and there are many converts to Christianity along the Sepik River. Some missionaries went as far as to burn the men's house and the artifacts and art that it contained. A great deal of cultural information was lost in the process.

#### 6 MAJOR HOLIDAYS

Christian holidays are celebrated by converted Iatmul, although holidays like Christmas and Easter do not have the degree of commercial emphasis found in the United States. Santa Claus and the Easter Bunny do not visit Iatmul children. National holidays of the country are recognized, but since there are no banks or post offices in the area, most people are not directly affected by public holidays.

#### 7 RITES OF PASSAGE

Male initiation was a common practice among the Iatmul. It involved extensive ceremonial activities that culminated in the scarification of the upper back and chest of the young initiate. Very few men still undergo this practice, not because of the pain involved, but because of the expense. It costs a few hundred dollars and several pigs to hire the older man to do the scarification. The patterns that are made are said to resemble the skin of the crocodile, the most important animal in Iatmul folklore and mythology. The Iatmul also celebrated important events in the lives of males and females, such as the first time a girl makes a sago pancake or the first time a boy carves a canoe. These celebrations were called *naven*. Naven ceremonies have all but disappeared from Iatmul culture today.

#### 8 INTERPERSONAL RELATIONS

The Iatmul have been exposed to Western culture since the 1920s and, as a result, have adopted some of its aspects. Greetings are westernized and consist of the use of stock phrases and handshakes. Traditional greetings that took place between men of different villages who visited each other to trade con-

sisted of formalized ceremonial dialogues where men had well-defined interactional roles. The interactional styles of adult Iatmul men are often described as being aggressive, and tourists are often perplexed because when Iatmul men pose for pictures they do not smile, but instead put on a very fierce face. Iatmul women were in charge of the trade that took place with the Sawos and Chambri, two neighboring groups. The Iatmul women exchanged fish for the sago produced by the women from these neighboring groups. While men were aggressive, combative, and quick to anger, Iatmul women were the ones who maintained the cohesiveness of the community and relations with outside communities.

## 9 LIVING CONDITIONS

Iatmul villages vary in size from 300 to 1,200 persons. Villages traditionally centered on a men's house, which is the architectural centerpiece of the village. These buildings are massive structures and were elaborately decorated with carvings and paintings. They also house the majority of the important items of religious paraphernalia including drums, flutes, and sacred sculptures. The role of the men's house has changed over time in Iatmul villages. At the present time, most men's houses are warehouses for the storage of artifacts that are sold to tourists and art collectors, as well as being a meeting place for adult men.

Electricity and running water are not available in Iatmul villages. Without plumbing, dishes are washed in the Sepik, as are clothes and bodies. When the river is swollen but not flooded, bathing is a challenge. A person will walk upstream about 100 yards and then get in the river and wash while the current carries them to the place where they started from. Getting out of the river and staying clean is also a challenge, since the banks of the river are mounds of knee-deep mud.

## 10 FAMILY LIFE

Women play important roles in Iatmul daily life. Women are responsible for catching fish to trade with the neighboring villages to obtain the sago flour to make sago pancakes. Women are also the primary caregivers.

Marriage partners were determined strictly by rules in traditional Iatmul society. The marriage partners for a man included his father's mother's brother's son's daughter (a cousin), his father's sister's daughter (a cousin), or a woman that he would get in exchange for a sister he would give to another man. Anthropologists refer to this last type of marriage as "sister exchange." A married couple will take up residence in the husband's father's house. The house will also be occupied by the father's other sons and their families. Each nuclear family has its own space within the large house. Each family also has its own hearth for cooking. Husbands often sleep in the men's house.

Pet birds are kept by some people. When parrots and lorikeets are kept as pets they are not taught to talk, as most Americans try to do with pet parrots. The wings are clipped and the birds often just sit outside the house. Children sometimes play with the pet birds.

## 11 CLOTHING

Most Iatmul men dress in Western-style clothes consisting of athletic shorts and a T-shirt. Shoes are rarely worn. Women's dress is more varied, ranging from Western-style dresses to

the use of the wrap-around *laplap* to cover the body from the waist down. Women's dress depends on what type of activity they are engaged in and who is around at the time. Children tend to dress like adults but small children go naked.

## 12 FOOD

The Iatmul diet consists primarily of fish and the edible palm tree called "sago." The typical Iatmul meal is not like what most Americans are used to. It is not usually the case that an entire family sits down together to eat at the dinner or kitchen table. Iatmul houses do not have tables and everyone sits on the floor. The midday meal is likely to be the only meal where everyone is together. At other times of day, people eat whenever they get hungry. The food for the day is stored in a woven basket that hangs from a carved and decorated hook near each person's sleeping area. Dried fish and sago pancakes are placed in the basket in the morning. Fruit and greens are sometimes collected from the forest. Canned curry from Indonesia and Malaysia has now become popular, as well as rice and tinned fish. These products are expensive and sometimes difficult to come by.

## 13 EDUCATION

Traditional education is still important to the Iatmul. Boys and girls are trained to become competent adults, able to perform the tasks that men and women do to keep the village functioning. Western school is an option for children whose parents want to send them; however, very few communities have their own school and typically children have to travel to other villages.

## 14 CULTURAL HERITAGE

Music in Iatmul culture was an important part of ceremonial life. Men played sacred flutes during parts of initiation rituals. These bamboo flutes were stored in the rafters of houses or in the men's house itself. The sound produced was supposed to be the voices of the ancestral spirits. Women and children were forbidden to see the flutes. The sacred flutes were also played after the death of an important man in the village. A pair of flutists would play during the night under the house of the deceased. During the day, the female relatives would also perform a kind of ritual lament that had a definite musical quality.

## 15 WORK

The traditional pattern of work was divided along lines of sex and age. Adult women were responsible for fishing and gardening. Women also prepared the fish that they caught, preserving a great deal of it by smoking it. Men were responsible for hunting, building, and performing most religious rituals. Boys and girls would help their mothers with her chores, but boys would not long consider performing women's work after they had passed through initiation. During initiation, boys would learn aspects of male work and ceremonial life. In the present, these patterns have remained the same, with the exception that very few boys undergo initiation. Men often seek wage labor outside the village. Some men rent their canoes and their expertise and run individual tours along the Sepik, arranging for tourists to stay with their friends and relatives in villages along the river. In many Iatmul villages, tourism is fast becoming the primary source of income. The manufacture of items for sale to tourists is an avenue for many villagers to secure cash.

## 16 SPORTS

For the Iatmul who still live along the Sepik River, sports are relatively unimportant. Young children play games of various sorts and boys make sling shots and propel hard, dried mud balls at birds and other living targets. Men who live in other parts of the country in towns and cities are more likely to follow rugby and soccer teams.

## 17 ENTERTAINMENT AND RECREATION

In an area without access to electricity, television, videos, and movies are virtually unknown. Those people who live in towns and cities with electricity go to movies and some houses have television. Traditional entertainment consisted of storytelling, ritual performances, and music.

## 18 FOLK ART, CRAFTS, AND HOBBIES

Artistic expression in traditional Iatmul society was completely utilitarian, and every item of daily use was decorated with carving, incision, or painting. Tourism has changed art production and appreciation in Iatmul society. Tourist art is an important money-making endeavor for the present-day Iatmul. Masks and sculpture are the most sought after item in the tourist art market.

In men's houses in Iatmul villages, there was an important ceremonial item referred to as a "debating stool." This was a free-standing sculpture with an oversized, stylized human head supported by a small body. On the back of the sculpture was a ledge that looked somewhat like a stool. The stool was used in debates which functioned to settle disputes that might otherwise end in bloodshed. The debaters from each clan would beat a bunch of specially chosen leaves while they made important points in the debate. These objects are now produced for outsiders. While a debating stool purchased in an Iatmul village on the Sepik River might cost around \$100, a stool purchased from a dealer in Australia would cost around \$1,500. Iatmul art has become a lucrative business for dealers in foreign countries.

## 19 SOCIAL PROBLEMS

Cultural change and emigration are major problems for the Iatmul today. Young people are the most likely to emigrate, and, as a result, they do not learn about the culture. They move to cities and towns and begin using Tok Pisin as their primary language. Tourism has brought major changes to the Iatmul traditional way of life. Wage earning has become important and Western items such as tennis shoes and toothpaste are becoming important cultural items for the modern Iatmul.

## 20 GENDER ISSUES

The Iatmul recognize two genders: *ndu* meaning 'male' and *tagwa* meaning 'female'. There are clearly defined roles and actions for men and women. It is the Iatmul men who fish with spears, who stand while in canoes, who engage in wood carving, and who, in the past, took heads and received homicide honors. On the other hand, Iatmul women fish with traps, sit while in canoes, and weave knotless net bags called *bilum* in Tok Pisin. Men and women are differentiated in Iatmul society through dress, bodily decoration, and even ways of speaking.

Iatmul boys and girls are socialized very similarly until they attain puberty. At that time, gender differentiated socialization

becomes more important and boys and girls begin to separate themselves from each other. As mentioned previously, Iatmul boys were initiated into adult status through a painful set of rites involving scarification. Adult status in Iatmul society is signaled through marriage and the birth of children. Adult activities for males and females in Iatmul continue to be gender segregated.

For all members of Iatmul society, there is an idealization of motherhood, especially in its procreative and nurturing aspects. Fathers are not the primary male socializers or role model for boys. Instead, it is a boy's mother's brother (his maternal aunt) who will socialize him and provide emotional support for him. Fathers build longhouses that their sons will inherit before the fathers' deaths. It is interesting to note that upon inheriting the longhouse, a son will banish his father from continuing to live there. Fathers often live out their final years in a small, poorly constructed hut.

# IBAN

**LOCATION:** Malaysia (Sarawak state)

**POPULATION:** 657, 700 (2004)

**LANGUAGE:** Iban; Malay

**RELIGION:** Christianity; Islam; traditional beliefs

## 1 INTRODUCTION

The state of Sarawak, or the Land of the Hornbills, is the largest state in Malaysia. Sarawak was a British colony from 1946 until the formation of Malaysia in 1963. Before 1841, Sarawak and its people were under the rule of the kingdom of Brunei. On 24 September 1841, the government of Sarawak was given to James Brooke as a reward for helping Brunei pacify a local revolt against the oppression by its representative in Sarawak. Sarawak was then ruled by a member of the Brooke family, commonly known as the White Rajah, until the Japanese occupation from December 1941 to August 1945. On 1 July 1946, Sarawak became a British Crown Colony. In 1963, Sarawak became one of the 13 states in the Federation of Malaysia.

As a democratic state, Sarawak ran its first general election on 7 July 1970. Since then, a general election has been called every five years to elect the state's assembly from which the state's cabinet is formed, and the chief minister is appointed as the head of the government.

## 2 LOCATION AND HOMELAND

Sarawak occupies the northwestern coast of the island of Borneo, the third-largest island in the world after Greenland and New Guinea. The diversity of Sarawak's terrain, the variation of its soil types, and its consistently high rainfall and temperature throughout the year have resulted in the development of the most complex and luxuriant rain forests in the world. The forest is the second-most-important economic resource of Sarawak. Originally, it covered about three-quarters of the land area. Sarawak also has an intense network of meandering rivers that were the main channel of communication for its population in the past. Even though Sarawak about 124,967 sq km (48,250 sq mi) of land, it has a population of only 2.3 million people.

The Land of the Hornbills is home to at least 25 different ethnic communities. These communities can be categorized into four groups: the coastal communities, which include the Malays, Melanau, Selakau, and others; the lowland communities, which include the Iban, Bidayuh, Kayan, and Kenyah; the upland communities, which comprise the Kelabit, Penan, Lun Bawang, and many other smaller communities; and, lastly, the Chinese community.

The Iban are the largest ethnic group in Sarawak and the single-most-populous indigenous group in Malaysia, aside from the Malays. The Iban account for 29% of Sarawak's total population, while the Chinese make up 25.6%; Malays, 23.4%; Bidayuh, 8%; Melanau, 5.4%; other indigenous groups, 5.7%; and others, 0.2%; Indian, 0.2%; Non-Malaysian citizens 3.4%. The Iban mostly inhabit the lowlands of Sarawak, building their longhouses along the main rivers and smaller streams of the interior of Sarawak. The word *Iban* has various meanings, one of which is "wanderer." The Iban are a very mobile and vigorous people, moving through the hills of Borneo, farming

dry-rice, fishing, gathering, and hunting, expanding in territory and numbers. They are originally from the Batang Lupar and Saribas river system of Sarawak, and from the adjoining Kapuas region of Western Kalimantan. They have gradually moved in through the Rejang Valley, traveling northward and eastward, until today they are present in every district and division of Sarawak, both in urban areas and the countryside.

### SARAWAK'S POPULATION 2004

ETHNIC GROUPS	POPULATION ('000)	%
Iban	657.7	29.0
Chinese	578.7	25.6
Malay	505.8	23.4

Other Indigenous Groups*	128.8	5.7
Melanau	124.3	5.4
Others	4.6	0.2
Indian	4.3	0.2
Non-Malaysian Citizens	77.0	3.4
<b>Total</b>	<b>2,262.7</b>	<b>100</b>

Source: Department of Statistics, 2004

Note: \* Includes the Orang Ulu communities

## 3 LANGUAGE

The Iban speak their own language called "Iban." However, there was no written form of the language until education was introduced into Sarawak. Formerly, all information was handed down orally from one generation to the next. The Iban had to recall important events through memory, and one of the common ways used to narrate important events was through *berenong* (singing songs).

The Iban language is widely spoken in Sarawak, alongside the Malay language that has been the *lingua franca*, or common language, of the archipelago for centuries. There are significant similarities between the two languages. Although the Iban language is widely used, there are existing vernacular differences between regions or districts. For example, Iban spoken in the Miri-Bintulu region has a different accent than the Iban language spoken in the Kuching-Bau region. Despite the variations in dialects, all speakers of Iban understand each other's speech quite well.

Among the Iban, as among many other natives in Borneo, names consist of two parts: the given name, and the father's name. However, it is common practice among the Iban to insert the word *anak*, meaning "the child of," in between the given name and the father's name, for example, Ugat (given name) anak (child of) Muli (the father's name).

## 4 FOLKLORE

Although a relatively large number of Iban are now Christian, most of their beliefs, traditions, and practices are based on their native beliefs and customs. Their myths, fables, legends, and stories tell of headhunting raids, though these practices have ceased to exist. They also tell of Iban augury, a divination system in which divine guidance is sought in natural events, particularly in the behavior of birds and other natural species. Even though the Iban did not practice human sacrifice, many of them were headhunters. It was believed that the possession of an enemy's head was a sign of bravery, boldness, courage, and leadership qualities. Therefore, Iban folklore includes sto-

ries of great exploits, the opening of new land settlements, and success in warfare and/or headhunting raids. The heroes and heroines of these exploits were respected during their lifetimes and have been remembered for generations in ritual invocations, legends, fables, and stories.

## 5 RELIGION

Over the years, many Iban became Christian, while some others became Muslim. However, a large percentage still keeps their traditional beliefs of animism, in which all beings possess a soul. This understanding underlies various rituals of the Iban. They revere mythical and legendary heroes and deities. In the past, as with many other native groups in Sarawak, the Iban relied on dreams and bird augury, particularly through the banded kingfisher, rufous piculet, and maroon woodpecker, as guidance before commencing any undertakings. For instance, they would observe the behavior of these birds and other animals, reptiles, and insects before farming, hunting, or becoming involved in a trading deal. They would not proceed with any of those undertakings if these natural events were thought to be bad omens.

## 6 MAJOR HOLIDAYS

Besides celebrating other Malaysian major holidays, Christmas, Hari Raya, and Chinese New Year, the Iban in Sarawak celebrate various religious festivals known as *gawai*. There are a number of *gawais* that are very important in the Iban society. These are the *gawai batu* and *gawai memali umai* (rice culti-

vation), *gawai nyintu orang sakit* (health and longevity), *gawai kenyalang* (warfare and bravery), and *gawai antu* (festival for the dead). The rituals for these festivals include *miring* (offering of food), *biau* (chanting), and *timang* (incantations) by *lemambang* (ritualists). The Sarawak government has set aside two or three days each year to observe the most important and interesting festival—the *gawai dayak*. It is a thanksgiving celebration to end the harvest season and to mark the beginning of the next farming cycle. It is an occasion to seek the blessing of the gods and spirits for the New Year. Besides observing certain rituals, this festival involves much merriment and the drinking of *tuak* (locally brewed rice-wine), as well as the display of elaborate traditional costumes.

## 7 RITES OF PASSAGE

A child is not immediately named when born, but will be called *ulat* (baby). A baby is normally named after his or her grandparents and/or grandparent's cousins. The bathing ceremony is performed at the river after a name is given. A girl reaches puberty when she is 10 years old and is expected to sleep by herself until she is married. Meanwhile, a boy at the same age will move to sleep in the gallery with the other bachelors. In the past, a boy had to undergo circumcision, although it is not a ceremonial event. Girls are taught to cook, pound, or unhusk rice when they attain the age of seven, while boys are expected to accompany their fathers on hunting trips. At the age of 13, girls learn to weave and boys learn to gather and split firewood with an axe. This training prepares them for marriage.

The birth of a first child marks the transition from adolescence to adulthood and signifies a change in status. The new parents cease to be called by their personal names, but are now known by relational names, that is, *apai*, “the father of,” and *indai*, “the mother of,” so-and-so.

When an Iban dies, she or he is said to become a spirit (*antu*). Complicated death rites are observed after a death, to ensure the harmony of the temporary presence of the spirit among the living, and also for the future welfare of the living and the dead. Many series of rites are observed. The final rite, the *gawai antu*, is the most important of them all. At this rite, a tomb house is erected over the grave of the deceased, as a house for the dead.

## 8 INTERPERSONAL RELATIONS

Social interactions in the Iban community, like other communities in Sarawak, are governed by *adat*. *Adat* includes a variety of customs, practices, basic values, and the religious system that governs life in the longhouse, shapes relations between people and their environment, and forges a path between humans and the spirit world. It also governs interpersonal relations between individuals. Among the Iban, it is considered indecent to blow one's nose, or to spit, or even to mention something dirty while someone else is eating. When walking in front of someone who is seated in the longhouse, it is considered polite to bow one's head, place one's hands between one's knees, and say, “Please excuse me. I wish to walk in front of you.” The Iban have great respect for visitors. It is polite to ask a visitor, who happens to pass the longhouse or landing place, to come up into the house and be served a snack of betel nuts. Offering betel nuts is the traditional welcome that the Iban accord to visitors in the gallery. If the visitor has not dined, she

A local Iban tribesman looks over a smouldering forest, cleared and burned for new plantation, near Balaiberkau, West Kalimantan, Indonesia. (AP Images/Mark Fallander)

or he is served food. An Iban who does not take care of visitors is considered greedy.

### **9 LIVING CONDITIONS**

Many natives in the interior of Sarawak, including the Iban, live in longhouses. However, today there are significant differences in living conditions between Iban who live in urban areas and Iban who still live in longhouses in the interior of Sarawak. A longhouse is much like a row of terraced apartments, except that the longhouse is erected on wooden pillars, 1.2 m to 2 m (4–7 ft) above the ground, for safety's sake. It consists of a series of family *bilek* (apartments) joined laterally and connected by a communicating passageway, gallery, and *ruai* (open-air veranda). Each apartment is separately owned and maintained by a single family unit, including its gallery section and the veranda. Each longhouse is governed by a *tuai rumah* (longhouse elder), who has to be a man of skill and prestige.

Even though many longhouses are supplied with tap water and electricity, some do not have these basic amenities, and have to get water from the nearest river and burn kerosene for light in the night.

From childhood, the longhouse provides a sense of belonging for the Iban. Therefore, most still owe loyalty to their longhouses after allegiance to the family unit.

### **10 FAMILY LIFE**

An Iban family is normally small, very similar to those in European and American society. However, an Iban family is organized as an enduring group. Continuation of the Iban family or *bilek* (section of the longhouse) is highly regarded. Thus, in each generation, a son or daughter is to remain after marriage in possession of the *bilek*. This is to continue the family unit and to take over the temporary management of its ritual and economic estate. The family is a basic social and economic unit. It is also a very close unit, with the head of the family (normally the father) responsible for defending its interests against any encroachment. He also represents its members, should they be involved in litigation with members of other families. If any family members are found guilty of an offense, fines are usually paid out of family resources. This is because individuals have interrelated interests and are bound by kinship connection. As such, each member of the family bears the responsibility to uphold family honor.

Keeping animals as pets is very uncommon, not only among the Iban but also among many other natives on Borneo. Animals such as pigs and chicken are reared for meat, while dogs are kept for hunting. Even cats are reared as work animals, to keep mice away from the farm and the longhouse.

## 11 CLOTHING

Today, most Iban men and women wear Western- or Malay-style clothing. The men wear shirts and pants, while the women wear blouses, skirts, or *baju kurung* and *kebaya* [see “Malaysian Malays”]. These current and daily dressing codes are very different from their traditional costumes.

The Iban prefer earthy colors of brown and brick-red, with accents of indigo-blue color pigments obtained from tree roots and leaves, as can be seen in their famous weaving of *pua kumbu* (a handspun cotton textile).

A traditional Iban woman's costume includes the *bidang* (tubular sarong-type skirt), *kain pandak* (short skirt), or *kain tating* (weighted short skirt). She may also wear a *rawai* (corset made from rattan or brass), a *sugu tinggi* (headdress made of silver), a *marik empani* (a beaded collar), a *selampai* (sash or shawl), and silver necklaces, bracelets, and anklets. The man's costume includes a *kelambi* or *baju burung* (woven cotton jacket with decorative designs) and the *sirat* (loincloth). Other accessories include the *labong* (a turban of embroidered cloth) or a rattan cap with feathers, the *dangdong* (shoulder shawl), a sword, silver bracelets, and ivory armllets.

At the *Gawai Dayak* festival, one can witness the full display of Iban traditional costume. Several young women and men are dressed in all their finery for the costume parade. A *kumang gawai* (festival princess) and a *keling gawai* (festival prince) are chosen during the parade.

The traditional woman's *rawai* is a closely fitting corset made of a series of cane hoops covered with tiny silver or brass rings, pinned together with brass wire. This encased the hips, waist, and abdomen, thus limiting body movement so that the body remained stiff and rigid. However, it was considered extremely elegant, particularly when the silver was well-polished.

## 12 FOOD

As in many other Asian communities, rice is the staple food among the Iban in Sarawak and is eaten three times a day. It is normally served and eaten with wild vegetables or wild meat from the jungle. While the women collect vegetables, such as mushrooms, fern tops, and/or other young leaves of edible wild vegetation, the men are responsible for bringing back any form of meat, either from hunting or fishing activities.

The family normally gathers for dinner in the evening. They will sit together in a circle on a mat, and the dishes, which include at least a vegetable dish and a meat or fish dish, are placed in the center. The rice can be served on a plate or in leaves and can be taken by hand or spoon. The vegetable and meat dishes are served with a communal spoon from which nobody eats. Water is served and drunk after the meal. Normally, it is the women's responsibility to wash up and clean the kitchen after every meal.

Besides using brassware as cooking utensils, the Iban use bamboo and leaves to cook and serve their traditional food. Cooking meat or vegetables in bamboo is one of their exotic cuisines. The meat is marinated with salt, ginger, and lemon grass before being stuffed into a bamboo pipe 38 cm (15 in) long. The end is covered with young tapioca leaves to give a special aroma to the meat inside. The meat in the bamboo is placed on the fire and has to be constantly and consistently turned in order to avoid being burned. This dish is served with rice.

## 13 EDUCATION

The Iban know the importance of education as a means to excel in the modern world. Education is seen as a means for social security and mobility. In line with Malaysian government educational policy, the Iban children are required to go school when they are six years old, and both male and female children are deeply encouraged to attend school. As a result, the literacy rate among the Iban has increased from 3% in 1947 to 35% in 1980 and to 48.7% in 1990. Today, many Iban are literate and have obtained degrees both from local and overseas universities. With these qualifications, many Iban today are holding high positions in the public and corporate sectors. They are policy makers, corporate managers, professors, lecturers, doctors, and lawyers.

## 14 CULTURAL HERITAGE

Many of the musical instruments of nearly all indigenous peoples in Sarawak are made from bamboo, rattan, and woods native to the local area. However, the bronze-knobbed *gong* is widely used by the Iban and other indigenous communities in Sarawak. It is an ancient instrument appearing in many sizes and styles and used in a variety of ways at both musical and nonmusical events. The *ketebong* is another musical instrument popularly used by some Iban communities in Sarawak. It is a slightly hourglass-shaped single drumhead that is carved from the trunk of a tree. Various dances are performed to *gong* and *ketebong* music. These include the *ngajat* (performed by women), warrior dances, and the sword dance.

The Iban do not have a strong literary tradition. Most of their stories, legends, and myths are passed down orally from one generation to the next. Only quite recently have efforts been made to document and compile these stories.

## 15 WORK

Most Iban who live in town areas are involved in formal paid employment. This is partly as a result of Iban traditional custom known as *bejalai*, which encourages young Iban to leave their longhouses in search of prestige and new experiences. As a result, many have become professional workers and some are factory workers in places like Singapore and Johor. There are others who work on offshore oil platforms, not only in Malaysia and Brunei, but also in the Middle East and other parts of the world. This is quite different from those who still live in longhouses in the interior; they cultivate hill rice, gather wild vegetables, and fish and hunt for meat. They also rear chickens and pigs for home consumption. They are self-sufficient and self-reliant. However, some do take their produce to the market to be sold.

## 16 SPORTS

Various native sports and games include cock-fighting and spinning tops. Other games are played too, particularly soccer, which is becoming very popular. Individual tug-of-war (*batak lampong*), team tug-of-war, arm-wrestling, and long-jumping, are played in the open space in front of longhouses and are also staged during festivals.

## 17 ENTERTAINMENT AND RECREATION

As there are no televisions or movie theatres in the villages, Iban normally entertain themselves with traditional music

and dance. After working under the hot sun the whole day, the longhouse is filled with the sound of *gong*. This is very common, except during mourning periods. Women and men, old and young, dance to the music. Various dances are performed, such as sword dancing, dancing with castanets, saucer dances, war dances, and shield dances. It is considered a time to display one's dancing talents.

Among the Iban, cock-fighting is not only a sport but a form of recreation and entertainment. An annual cock-fighting season was held in the past, until it was banned because it had become a place to gamble money. Cock-fighting also has some symbolic connotations. It is a symbolic form of supernatural fights between two rivals.

### 18 FOLK ART, CRAFTS, AND HOBBIES

A pride of Iban cultural heritage is the *pua kumbu*. The *pua kumbu* is a handspun textile that is made from a locally grown cotton plant called *taya*. The weaving of *pua kumbu* is an art that requires great skill, technique, and rich and complex ideas. Thus, Iban women are considered to be Borneo's most-skilled weavers, producing artistic masterpieces on simple backstrap looms. The secrets of making *pua kumbu* are passed down from mother to daughter. Producing a *pua kumbu* requires skill at every stage, from the preparation of the cotton yarn to the tying of threads, the dyeing process, and the selection of design. *Pua kumbu* is used for the women's *bidang*, the men's *kelambi*, and also as blankets.

The Iban also spend their spare time making pottery, producing clay pots for cooking. They also produce other important handicraft items such as baskets, mats, and caps from rattan, bamboo, nipah palm, bemban, screw-pine, and many other plants native to their area.

### 19 SOCIAL PROBLEMS

The issue of land rights is one of the most crucial social problems faced by the Iban in Sarawak. The rapid economic development currently taking place in Sarawak, which requires the Iban to give up their land for land development, has put the Iban and the other ethnic communities in a dilemma. To be involved in "progress" and "development" requires them to give up their land to be developed into agricultural plantations. This is exacerbated by a high rate of rural-urban migration among the Iban. Many longhouses are often left empty, except during the festive seasons of *gawai dayak* and Christmas. Many Iban return to their longhouses on special occasions.

### 20 GENDER ISSUES

Egalitarianism is one of the most central values among the Iban. It permeates almost all social relations, including relationships between men and women in the society. Therefore, as with the men, Iban women play a major role in preserving the family as a unit. Their main duties and responsibilities are to nurture the family, which includes looking after the children when they are young. Besides managing the home, Iban women are also required to work in the fields, particularly during the planting season and the harvesting season. They manage their farms together with their husbands.

# IFUGAO

**PRONUNCIATION:** EE-foo-gow

**ALTERNATE NAMES:** Igorots, Kiangan

**LOCATION:** Philippines (northern Luzon)

**POPULATION:** Over 133,000

**LANGUAGE:** Ifugao

**RELIGION:** Native beliefs

**RELATED ARTICLES:** Vol. 3: Filipinos; Kalinga

## <sup>1</sup>INTRODUCTION

Among highland peoples of the insular Southeast Asia, the Ifugao enjoy the rare distinction of becoming widely known not under some originally generic term for “[savage] mountaineer,” but under their own name for themselves as mispronounced by their Christianized Gaddang neighbors: *i-pugaw*, “the people of the known earth.” The Ifugao belong to a group of peoples inhabiting northern Luzon’s Cordillera Central who are collectively known among Filipino lowlanders as “Igorots,” a term that first appears in Spanish records as a label for mountaineers who came down to Pangasinan to trade gold. As these Igorots resisted Spanish colonial rule, acculturation, and Christianization for three centuries, the Spanish referred to them as infidels and fierce and independent tribes, distinguishing them from the *indios*, the tribute-paying, trouser- and dress-wearing, and church-going lowlanders.

Including the Ilongot of the Caraballo range and Sierra Madre, the Igorots are far from homogeneous, dividing into eight linguistic groups and four broad cultural types. The southern group includes the Ibaloi and the Kankanai, whose gold mines attracted more concerted Spanish attention and exposed them to more lowland influences, such as upper garments for their women; elsewhere in the highlands women traditionally went bare-chested. The northern group includes the swidden-farming (shifting-cultivation) and relatively egalitarian societies of the northern Kalinga [see **Kalinga**], Isneg (or Apayao), and Tinggianes (meaning “highlanders,” a name that used to apply far more broadly). The Ilongot (“forest people,” [see **Ilongot**]) comprise the Southeast group and are known for their extreme conservatism and isolationism.

Known to their mountain neighbors as “Kiangan” after their ancestral locality, the Ifugao themselves belong to the Central group along with the Bontok (“mountain”), northern Kankanai, and southern Kalinga, peoples who are world-renowned for their mountainside rice terraces. Even within this group, there are significant variations. For example, whereas Bontok society uses a village-ward (*ato*) system to subordinate individual and kin-group interests to those of the wider community, Ifugao society gives free play to competition among individuals of forceful personality and great wealth; this contentious spirit has even precluded the emergence of a Kalinga-style interregional peace-pact system [see **Kalinga**]. Ifugao culture (like Cordillera and non-Christian cultures more generally) has contributed key icons to the national identity of the predominantly Christian and Hispanized Philippines: in 1995 the rice terraces of the Cordillera (the most renowned of which are those built by the Ifugao at Banaue) were declared UNESCO World Heritage sites and in 2001 the Hudhud chants of the

Ifugao were put on the UNESCO list of the Masterpieces of the Oral and Intangible Heritage of Humanity.

The Cordillera peoples hardly lived in absolute isolation. Spanish military expeditions seeking gold or punishing lowland-raiding Igorots, as well as Catholic missionaries, penetrated the highlands from time to time, generally making little lasting impression. Of greater regularity and significance was the circulation of Ilocano traders; in the 18th century, this vigorous highland–lowland trade subverted the colonial tobacco monopoly. Ilocano towns often contracted peace-pacts with highland groups. Lowlanders and highlanders killed each other in blood feud cycles much as went on among highlanders themselves.

Possessing no gold mines and notoriously “unmanageable,” the Ifugao largely escaped Spanish attention until 19th-century scholars disclosed the wonders of the rice terraces to the wider world. The Ifugao’s main outside conflict was not with the Spanish directly but with the Gaddang over control of the upper Magat valley; the latter retained slave-holding chiefs for half a century after accepting Catholicism and allying with the Spanish against the Ifugao.

It was American colonial troops, followed by American schoolteachers and Protestant missionaries, who began the “integration” of the Cordillera peoples into the wider Filipino nation, though at the same time institutionalizing their status as cultural minorities. During the Japanese occupation during World War II, many Ifugao suffered from violence, hunger, and displacement; fighting extended into the Ifugao highlands. The Japanese general Yamashita surrendered to U.S. troops at Kiangan in 1945. In 1966, in recognition of highland diversity, the central government broke up the American-created Mountain Province into four separate provinces: Benguet, Mountain (Bontok), Kalinga-Apayao (now two separate provinces), and Ifugao. Currently, grouped together as the Cordillera Administrative Region, these provinces (now including Abra) enjoy a measure of autonomy that may increase to the level of that of the Autonomous Region in Muslim Mindanao.

The highland peoples face diverse and increasing pressures from lowland society. Most threatening (through the early 1990s) have been dam projects that intend to flood ancestral valleys and the spread of fighting between NPA (communist) guerrillas and the Philippine government; these have been less of an issue since the early 1990s. Agrarian reform has affected few Ifugao because landholdings tend to be very small, but the government has begun to recognize highland peoples’ rights to their ancestral lands. In the past 87% of land in the Cordillera region was classified as state property and much was awarded by politicians to logging companies. International tourism, as elsewhere, has been a mixed blessing, eroding much of traditional culture at the same time as promoting certain aspects of it. In some areas, the rice terraces are falling into neglect as young people, attracted by work in cities or abroad, become less and less willing to stay in their home villages to do the arduous work of maintaining them.

## <sup>2</sup>LOCATION AND HOMELAND

The Ifugao inhabit 1,940 sq km (750 sq mi) of rugged uplands in northern Luzon’s Cordillera Central (which includes peaks of 2,440 m or 8,000 ft), an area drained by tributaries of the Magat River, which in turn joins the upper course of the Cagayan River. Supporting themselves on rice grown on terraces

carved into the steep mountainsides, the Ifugao constituted 67.9% of the population of the province of Ifugao in 2000, numbering almost 110,000 (Ilocanos were 13.7%). Over 23,000 Ifugao lived in Nueva Vizcaya province. Estimates for the various Ifugao dialect-groups are as follows: Amganad, 27,000 (1987); Batad, 43,000 (1987); Mayoyao, 40,000 (1998); and Tawali (Kiangan), 50,786 (1990). Population density is as high as 155 persons per sq km (400 per sq mi) in some locales.

### 3 LANGUAGE

The Ifugao language is an Austronesian language, belonging to the Northern Philippine branch whose most numerically

important member is Ilocano. Ifugao's immediate relations, however, are with the neighboring Cordillera languages Bontok and Kankanay from which, linguists estimate, it began to diverge 1,000 years ago.

### 4 FOLKLORE

The Ifugao have a verse epic, the *Hudhud*; individual episodes are sung to relieve the tedium of harvesting, a female soloist leading and the other harvesters answering in chorus. The heroes of the epic are *kadangyan* (wealthy, high-status people), such as Bugan, a female *kadangyan* who fights as bravely as her brother Dinulawan and who seeks for her mate only the man who can fit her brother's sword belt. Daulayan, a poor man, fits the sword belt and eventually turns out to be of *kadangyan* lineage after all.

Part of the Ifugao marriage ceremony is the myth of Balitok and Bugan of Kiangan, a brother-sister couple who survive the great flood and become the ancestors of the Ifugao. In one variant, Bugan is so ashamed of becoming pregnant by her brother that she goes downstream (*lagod*) to seek destruction from the spirits there; the spirits, however, teach her how to sacrifice a male and female pig from the same litter in order to lift the curse for incest. According to another variant, Bugan is so distraught from childlessness that she goes downstream to seek death, encountering in turn Fire, a crocodile, and a shark, all of whom she impresses with her boldness and beauty. The shark passes her on to Umbumabakal, who lives in a terrifying house covered with gigantic ferns. There Bugan offers herself for Umbumabakal to devour. Umbumabakal, too, takes pity on her and takes her to Ngilin and the gods of Animal Fertility; they all return to Kiangan where they teach the priests there how to perform the *bubun* ceremony in which sacrificial meat is divided between Ambahing, the spirit who steals semen from the womb, and Komiwa, the spirit who stirs semen up in the womb.

### 5 RELIGION

The Ifugao traditional religion recognizes as many as 1,500 named gods, divided into 35 categories associated with, to name the most prominent, hero ancestors, celestial bodies, natural phenomena, diseases, and agriculture. Each possesses specific attributes and powers. All are immortal, can change form, become invisible, and travel through space. They inhabit all of the five divisions of the Ifugao universe: *kabunian* (the sky world); *dalum* (the underworld); *pugao* (the "known earth," the land of the Ifugao); *daiya* (the upstream region); and *lagod* (the downstream region). Particularly exalted is the sky world deity Lidum; the uncle of Balitok, ancestor of the Ifugao, Lidum is their great teacher and lawgiver. One example of minor deities is the class of *halupe*. A person may send a *halupe* to harass another person by forcing an idea constantly on the latter's mind, e.g., a creditor may send a *halupe* to a debtor in hopes of making the latter respond peacefully to a request for repayment, or a youth may commission a *halupe* to make a pretty girl more receptive to his romantic overtures.

Being a priest (adult males only) is not a full-time occupation but rather a voluntary vocation learned through apprenticeship, during which one must memorize the names and characteristics of the 1,500 gods. Since the American colonial period, priests can practice beyond the circle of their kindred to which they had formerly been confined. In exchange

for their services, priests receive meat and rice wine but more importantly enjoy the reputation of having a “good voice.” Because ritual chanting provides an opportunity for masculine exhibitionism, as many as 15 priests can participate in a ceremony, as compared to only one or two among the Bontok.

Rituals fulfill a wide range of functions. Omens are read by examining the bile sac or livers of pigs or chickens or by interpreting birdcalls. Some rituals are used to ensure the success of hunting, farming, headhunting, peacemaking, and debt-collection, and rituals accompany prestige feasts, divorce proceedings, and sorcery. Performed under a house or granary (less commonly in a field or forest), rituals involve several hours of chanting in a fixed protocol: invoking the deities; praying to the deities; inviting the deities to possess the priests; having the deities possess the priests; and exhorting the deities to action. Priests gain power over particular deities by reciting a myth that mentions them. Invocation entails “pushing” (*tulud*) deities from their homes in kabonian, dalum, daiya, and lagod to the village where the ritual is taking place; this requires a long time as each locality (as many as 40) through which the deities must pass is named in turn. Offerings range from a little betel or a chicken claw to sacrifices of pigs or chickens; in the course of a ritual, spirits (through the drinking priests) constantly consume rice wine.

Priests also perform curing rites. Disease can be caused by sorcery or the displeasure of ancestral spirits who may allow malevolent deities to inflict suffering on offending descendants.

According to the 2000 census, 17.6% of the population of the Cordillera Administrative Region, of which Ifugao province is a part, is classified as “Other” in religious affiliation, meaning adherents of indigenous religion. The rest followed a form of Christianity: 65.8% of the region’s population is Roman Catholic (much lower than the national percentage of 83%), 8.9% Evangelical, 2.9% Iglesia ni Cristo, 1.6% Jehovah’s Witness, 0.8% Philippine Independent Church (Aglipayan). In the early 1990s, 54% of ethnic Ifugao identified themselves as Roman Catholic.

Thanks in particular to Christian churches’ establishing schools in the Ifugao region, Ifugao associate Christianity with modern civilization and especially with the education that confers high status (and even upward mobility for some non-elite Ifugao) as well as equality with the nationally dominant lowland Filipinos. Elite, educated Ifugao identify themselves as Christian even though they continue to perform or participate in traditional Ifugao rituals (*baki* or *bfuni*), from those for healing to those for earning higher social status. Though there were Christians in all social levels among the Ifugao, those who practiced traditional religion exclusively belonged to the non-elite strata. Fundamentalist Protestant churches tended to be more condemnatory of traditional Ifugao culture than the Catholic Church. For instance, Protestant leaders strongly oppose the performance of traditional Ifugao healing rites; local Catholic Church authorities are ambivalent towards such practices, with some priests even encouraging people for whom modern medical treatments are ineffective to sponsor traditional healing rites at their homes.

## 6 MAJOR HOLIDAYS

See the article entitled **Filipinos**.

## 7 RITES OF PASSAGE

An adolescent boy is free to visit an adolescent girl in her *agamang* dormitory and have sex with her (a girl is not supposed to have more than one lover at a time). An individual usually experiences several “trial marriages” before committing to a permanent union. Employing *monbaga* (go-betweens), wealthy families are more careful to arrange their children’s marriages with partners of equal status and to determine inheritance beforehand. The betrothal ceremony involves the exchange of pigs and gifts and initiates a close liaison. The marriage bond is formalized over a series of four wedding ceremonies including pig and chicken sacrifices, feasting, bile sac augury, and, in the last ceremony, the presentation of jars, cloth, and knives by the groom’s family to the bride’s. Fines for breaking off the marriage are higher after each successive wedding ceremony.

Deities may take a person’s soul, causing the body to fall ill; if they do not return the soul, the person dies. With all its orifices plugged, the corpse of a person who has died a natural death is seated, tied to an honorary death chair, and guarded by fire and an undertaker. The deceased remains there for as many days (up to 13) as the family can afford to hold a nighttime wake and then is either carried by the undertaker to a hillside family sepulcher (a chamber at the end of a tunnel cut into soft rock) or put into a sealed coffin beneath the house or in a granary-like mausoleum. Children are buried in jars. Three to five years later, a second burial may be performed if the deceased is unhappy and is disturbing or harming the living. In case of wrongful death, the corpse is seated, bound to a house post, and neglected so that its spirit will seek revenge.

## 8 INTERPERSONAL RELATIONS

Ifugao society looks to no chiefs, councils, or other supravillage political institutions but rather governs itself through a highly complex system of customary law. An individual identifies with the kinship group and “local area,” corresponding more or less to the *himpuntona’an* (traditional agricultural district) to which he or she belongs; this core circle of trust and mutual dependence shades off gradually through areas of less and less affiliation until reaching “enemy territory,” from whose alien populations heads traditionally could be taken. Wider regional solidarities began to form only with the American occupation of the highlands.

Wealth constitutes the base of status and influence in Ifugao society. The following categories are distinguished: *kadangan*, the rich or those inheriting large areas of irrigated rice fields and prestigious heirlooms; *tumuk*, those who have sufficient rice year-round but have yet to earn the status of *kadangan*; the *namatuk* or *mabitol*, poorer people, “those who may hunger” and be forced to incur debts with the wealthy; *nawatwat*, the “disinherited” or “passed by,” who become servants or tenants of the wealthy; and, formerly, slaves, generally children sold by poor families to lowlanders to discharge debts. If bought by fellow Ifugao, they eventually were freed and their children were in any case born free.

In recent times, a new category of wealthy has emerged. The *bacnang*, a loanword from Ilocano meaning “rich,” are people who have become rich in non-traditional ways, primarily in commercial or agricultural ventures, such as owning hotels or restaurants, by which they amass large amounts of cash. According to government statistics on family income from 1988,

*A group of Ifugao women take a break from planting rice, Banaue, Philippines. (AP Images/Pat Roque)*

4% of the population of Ifugao province fell into the upper-class category (earning over 60,000 pesos) and 75% in the lower-class category (earning under 30,000 pesos).

An individual qualifies for *kadangyan* status by amassing wealth in the form of rice lands and water buffalo (in the past also slaves). Rice lands must be of an extent sufficient to produce a surplus that can be loaned to *namatuk* families at high rates of interest, so high the debtors can never reach *kadangyan* status themselves. While hornbill headdresses, gold beads, swords, gongs, and antique Chinese jars are all signs of distinction, the essential mark of having become a *kadangyan* is the *hagabi*, a massive lounging bench carved from a hardwood trunk, sitting beside the house. The *kadangyan-to-be* must provide food and rice wine to the makers of the *hagabi* for the duration of the work and must hold a lengthy and expensive *uyawe* feast to install it.

*Kadangyan* compete in the number and quality of ritual feasts they can hold. *Kadangyan* status confers no formal political power, but the wealth inherent in it earns considerable influence. Community decision-making requires a consensus among all the *kadangyan*; this consensus is only reached after the personalities of the *kadangyan* have had the chance to contend in public debate.

Since there is no higher traditional authority to whom an Ifugao can appeal for redress of grievances, each must obtain his or her own justice, or rather kin-groups of injured parties seek compensation from the kin-groups of injuring parties. For instance, a kin-group could traditionally avenge the murder of one of its own by killing any member of the murderer's kin-group. To witness transactions, resolve disputes, and punish crimes, Ifugao rely on *monbaga* (go-betweens), individuals knowledgeable in genealogy and customary law who can moreover call on a large kin-group to enforce the decisions they make. Fines consist of valued goods, such as livestock (e.g., water buffalo for sacrifice at the victim's funeral), blankets, kettles, knives, and clothing and are divided between the injured party, his or her kin, and the *monbaga*. Fines are assessed according to the status of the parties as well as the crime's nature and intentionality. For example, a *kadangyan* who has committed a crime against a fellow *kadangyan* pays a higher fine than if the two parties are *tumatuk* and higher still than in a case between two *nawatwat*. If a *kadangyan* commits a crime against a person of lesser status, he or she pays a lower fine than for injuring a peer, while a *nawatwat* wronging a social superior will pay a higher fine than if he or she had wronged an equal.

Cases between inhabitants of the same “local area” were usually settled by imposing fines, but crimes committed by one party against a party from a different “local area” generally led to feuding on the principle that “might makes right.” Warfare entailed hunting for heads by ambushing a member of an enemy group found walking alone at the edge of his or her territory; raiding for women and child slaves was also common.

## <sup>9</sup>LIVING CONDITIONS

Ifugao live in small, named hamlets of 8 to 12 houses sitting on several levels of terracing amid hillside rice fields. Hamlets may also cluster to form more extensive communities of hundreds of houses. Toward the northern edge of Ifugao territory, a village’s houses are scattered over broad valley bottoms, separated by fields.

With some variation in size reflecting the wealth of the owner, houses are square, raised on four posts (with cylindrical fenders to block climbing rats), accessible by ladder, and have pyramidal roofs of thatch. The well-built wooden structures last for generations. They have few furnishings or decoration other than occasional human figures carved on the doors and, formerly, a shelf for displaying skulls of enemies and sacrificial animals. Larger communities may have stone platforms at their center on which communal celebrations are held and prestigious houses are raised. Less permanent structures, such as the *agamang*, dormitories for girls and unmarried women, are built on the ground.

Average family income in the Cordillera Administrative Region, of which Ifugao province is a part, amounted to 192,000 pesos (us\$3,765) in 2006, among the highest in the country, cf. the national average of ₱173,000, the National Capital Region’s ₱311,000, Southern Tagalog’s ₱198,000, and those of the neighboring Cagayan Valley and Ilocos regions, ₱143,000 and ₱142,000 respectively. In 2000, Ifugao province, however, had the fourth lowest Human Development Index, 0.351 (combining measures of health, education, and income) in the country (above provinces in the Sulu archipelago, cf. the Philippines’ national HDI of 0.656).

According to the 2000 census, 35.2% of households in Ifugao province had access to a community faucet, 11.5% to a faucet of their own, and 8.2% to a shared deep well, while 17.4% obtained their water from springs, lakes, rivers, or rain. Almost half of households (46.3%) disposed of their garbage by burning it, 30.2% by burying it in a pit, and 9.1% by feeding it to their animals; only 6.5% had it picked up by a collection truck. 58.5% of houses were lit with kerosene lamps, 36.8% with electricity, and 3.5% with firewood. While 34% of households lacked basic appliances of any kind, 64% possessed a radio, 15.4% a television, 10% a refrigerator, 5.4% a VCR, 1.5% a telephone or cell phone, 17.4% a washing machine, and 6.3% a motorized vehicle.

## <sup>10</sup>FAMILY LIFE

An individual’s kin-group extends as far as great-great-grandparents and third cousins on both the mother’s and father’s sides. In theory, marriage within this group is taboo, although second and third cousins can marry after the payment of fines in livestock and the performance of propitiatory sacrifices. The kin-group also assumes collective responsibility for wrongs committed by its members and is obliged to avenge wrongs done to its members.

Rice lands, forestlands, and heirlooms (e.g., jewelry, gongs, Chinese jars) are held by individuals only in “trust”; such property formally belongs to a group of persons who can claim, through either maternal or paternal lines, descent from a common ancestor. Such property can only be sold under extreme circumstances, as when needed to obtain water buffalo to sacrifice for the cure of the gravely ill or the sustenance of the deceased in the afterlife; it can only be sold, however, with the consent of other relevant kinfolk and with the performance of an *ibuy* ceremony. Houses, valuable trees, and crops of sweet potatoes are regarded as personal property whose sale demands no *ibuy* ceremony. Untilled grassland and forests distant from any settlement belong to anyone from the local area who clears and tills them; sweet potato swidden fields revert to the “public domain” after falling fallow.

Showing no preference for residence with or near either the wife’s or husband’s family, a couple sets up house near the largest concentration of inherited rice fields. In a house dwell the couple and their young children; children old enough to care for themselves live in an *agamang* (same-sex dormitory). Because of the severity of the incest taboo, siblings of the opposite sex deliberately avoid each other, being careful to sleep and even be buried apart, as well as refraining from making sexual jokes in each other’s presence.

As marriage is considered to be a union of indefinite duration, a couple may agree to divorce at any time, although this is rare after the birth of the first child. Motives may be bad omens, childlessness, cruelty, desertion, adultery, or change of affection. Upon divorce, if there are no children, partners retain property inherited from their respective kin. If there are children, the property is assigned to the children. In the case of minors, the parent who takes the children, usually the mother, manages the property until the child marries.

Children may receive inheritances, including debt obligations, from either parent. A widow or widower may remarry after paying his or her original parents-in-law a *gibu*, the fine for extramarital relations.

## <sup>11</sup>CLOTHING

Traditional attire for men is the G-string, a loincloth that leaves the side of the thigh bare but hangs down in front. Women wear a short sarong (waist to knees) and formerly went bare-chested. Men who had yet to avenge the murder of their father let their hair grow long. Tattoos were also common.

*Kadangyan* (the wealthy) display their status in clothes and accessories restricted to their class: for men, an elaborate G-string, a tasseled hip-bag, kidney-shaped gold earrings, and a headdress consisting of a turban-like cloth, hornbill skull, and water buffalo horns; for women, an elegant skirt, a tasseled belt, golden earrings, four bead necklaces, strings of white and red beads to secure their long hair, and a little brass statuette.

## <sup>12</sup>FOOD

Agricultural products provide 84% of the Ifugao diet. Rice and sweet potatoes are the staple foods, although rice is by far the more highly regarded. Ground into meal, maize (grown on the sweet potato swidden fields) is also important. Ifugao consume a wide variety of vegetables and fruits: beans, radishes, cabbage, lettuce, peas, taro, yams, cowpeas, lima beans, okra, greengrams, and other legumes, jackfruit, grapefruit, citrus, coconut, and banana. About 10% of the diet is animal protein

from flooded rice fields: tilapia minnows, frogs, snails, and especially *ginga*, a kind of water clam. Sources of meat include domesticated pigs, goats, chickens, and the occasional water buffalo sacrificed in rituals, as well as wild game such as deer, buffalo, pig, civet cat, wild cat, python, iguana, cobra, and bat (only the monkey is hunted for sport alone). People also eat locusts, crickets, and ants.

The heroes of the *Hudhud* epic are often described as staggering, for the ability to withstand heavy intoxication is rare and much admired. Alcohol consumption is integral to feasts and rituals. While only the poor dilute rice wine (*bayah*) with water, the rich *kadangyan* mix *bayah* with sugarcane juice to make *bahi*. A press extracts the juice from the cane.

### 13 EDUCATION

In 2000, literacy stood at 90.5% for the Cordillera Administrative Region, of which Ifugao province is a part. Of the population of Ifugao province over the age of five, 46.2% had attended elementary school, 21.9% high school, and 8.9% college or university (see also the article entitled *Filipinos* in this volume).

### 14 CULTURAL HERITAGE

Cordillera peoples play a wide range of instruments: nose-flutes (*kalleleng*), lip-flutes (*paldong*), whistle-flutes (*olimong*), panpipes (*diwas-diwas*), buzzers (*balingbing*), tube zithers (*kolitong*), half-tube percussion (*palangug*), stamping tubes (*tongatong*), and jaws harps (*giwong*). Reflecting the primacy of Chinese over Southeast Asian trade contacts, gongs (*gangsa*) are flat rather than knobbed (strokes, slaps, and slides produce the different tones).

One important male dance is the cockfight dance performed before battle. Other male dances feature the men banging gongs as they move in circles. Female dances emphasize a rigid posture and raising outstretched hands.

### 15 WORK

Although modern education, administration, commerce, and tourism offer some Ifugao the opportunity for nontraditional occupations, most remain farmers. The wet-rice terraces built by the Ifugao and the neighboring peoples, such as the Bontok, are engineering marvels, climbing 300 m (1,000 ft) up steep mountainsides and held up by walls of earth and stone sometimes as high as 15 m (50 ft). A grouping of adjacent fields forms a *himpuntona'an*, a traditional agricultural district (as many as 25 in a 104-sq-km or 40-sq-mi area) that is named and includes a ritual plot that is the first to be planted and harvested. Several *himpuntona'an* share a single water-catchment area and cooperate in regulating irrigation and land use.

Rice is the high-prestige staple, and possession of rice fields is the prime measure of status (all the more so since the end of headhunting). When flooded, rice fields also provide animal protein in the form of small minnows, frogs, etc. After the harvest, cotton, beans, radishes, cabbage, lettuce, and peas are grown on the soggy rice stalks.

In addition, Ifugao cultivate sweet potatoes, the low-prestige staple, on hillside swidden fields that also support a wide variety of vegetables as well as sugarcane and tobacco. Tree crops complete the picture: coffee, jackfruit, grapefruit, rattan, citrus, areca, coconut, and banana. Ifugao raise pigs, goats, and chickens, keeping the last in baskets under the house at night; they also import water buffalo from the lowlands to sacrifice

to their ancestors (never to use as draft animals). Hunting and the gathering of wild plants make only a minor contribution to subsistence.

Many men go down into the lowlands to trade. Coffee is the main export while imported goods include livestock, cotton, brass wire, cloth, beads, crude steel, and Chinese jars and gongs. Ifugao trade knives, pots, spears, and salt among themselves. Market gardening is increasing in importance. While in the city of Baguio (50 km [30 mi] southwest of Ifugao territory), lowlanders, including tourists from as far away as Manila, make a point of buying vegetables grown by mountain peoples.

### 16 SPORTS

See the article entitled *Filipinos*.

### 17 ENTERTAINMENT AND RECREATION

See the article entitled *Filipinos*.

### 18 FOLK ART, CRAFTS, AND HOBBIES

The Ifugao practice metallurgy (using the lost-wax process), basketry, weaving, and *ikat* (tie-dyeing). Their woodcarving traditions are noted for *bulol*, cowrie-shell-eyed images of male and female gods in fighting position, weapons ready, or squatting with bowls in their outstretched hands. Other noteworthy products are canes with intricately carved handles, polished dining bowls with side compartments for condiments, chests with handles in the shape of pigs' heads, and shelves with crocodile snouts and tails worked in the design. Today, craftsmen produce objects specifically for tourist tastes (Western, generic Filipino, Chinese, Japanese), e.g. ashtrays and cell phone holders.

### 19 SOCIAL PROBLEMS

See the article entitled *Filipinos*.

### 20 GENDER ISSUES

In 2000, the literacy level was slightly lower for women (90%) than for men (90.8%) in the Cordillera Administrative Region, of which Ifugao province is a part. In Ifugao province itself, males comprised 55.5% of those attending elementary school but only 51% of the population at large; women, however, were more numerous than men in all levels above high school; 55% of those attending college or university and 64% of academic degree holders were women.

Women's roles in Ifugao society are not conceived of as limited to that of mother; women's labor is understood as complementary to the labor of men (as in the different, but equally essential, tasks each sex takes in rice cultivation); even financially secure elite women work outside the home, and elderly women continue to do farm work, not only out of necessity but also out of love for it. Industriousness in a woman is valued over beauty. At the same time, women are considered the "weaker" sex, whose work is "lighter" than men's work and deserves less pay. In the early 1990s, the wage for a woman's agricultural labor was half that for a man's and thus well below the minimum wage. Women control family finances but feel less free to spend on themselves than do their husbands, who often spend money on drinking sessions with their male friends or on gambling, for which their wives freely criticize them.

Traditional leadership positions are monopolized by elite men. Men are believed to be inherently superior at the oratory believed necessary for leadership, and most high-ranking government officials are men. Women do serve on local community councils but are in the minority. An individual women's status is determined by more than her gender; a female *kadangyan* or an older woman is perceived as having more power than a man of a lower class and younger age. The influence of Christianity is reinforcing the inferior status accorded to women by traditional culture, and the spread of a cash economy where men have more opportunities to earn wages, or at least to earn higher wages, outside the home is devaluing further the unpaid work women do in the house and on family plots.

**PRONUNCIATION:** ee-lo-KAH-nohs

**LOCATION:** Philippines (northern Luzon)

**POPULATION:** 6.89 million (2000)

**LANGUAGE:** Ilocano

**RELIGION:** Roman Catholicism; Philippine Independent

Church; Iglesia ni Kristo (Church of Christ); Protestantism

**RELATED ARTICLES:** Vol. 3: Filipinos

## <sup>1</sup>INTRODUCTION

When the Spanish first encountered them in 1572, the inhabitants of Ilocos (then called "Samtoy") were living in large villages at sheltered coves or river mouths and were trading with the Chinese and Japanese. Although massive churches in a distinctive style give evidence of Spanish-Ilocano collaboration, the colonial period was marked by frequent revolts; the most famous of these was that led by Diego and Gabriela Silang during the British occupation of Manila in 1762–63.

Ilocanos were prominent in the nationalist movement, and many have risen to high office in the central government. The greatest of these Ilocano success stories was President Ferdinand Marcos, who ruled for 20 years. During this time, development funds poured into the Ilocos region.

## <sup>2</sup>LOCATION AND HOMELAND

The three provinces of the Ilocano homeland (Ilocos Norte, Ilocos Sur, and La Union) stretch from Cape Bojeador at the northwestern tip of Luzon down to the Gulf of Lingayen. Most of the population is concentrated along a narrow coastal plain that has only a few good harbors. This environment yields sustenance only with difficulty, forcing Ilocanos to be hard working and thrifty and very often compelling them to seek employment outside from their homeland.

According to the 2000 census, Ilocanos numbered 6.89 million (9% of the national population). Among all Filipino ethnolinguistic groups, the Ilocanos are the most famed as migrants, settling since the 19th century in sparsely populated expanses of the northern Central Plain of Luzon (provinces of Pangasinan, Tarlac, and Nueva Ecija) and of the Cagayan Valley in the northeast. In addition, many Ilocanos have established themselves in Manila and other major cities of the country, as well as in frontier lands on Mindanao. In 2000, Ilocanos were the majority group in the Ilocos region at 66.36%. They were the largest single ethnic group in the Cordillera Administrative Region, 39.83% of the population, twice the largest indigenous group, the Kankanay, and formed 11.48% of the population of Central Luzon, with 40.9% in Tarlac, almost as numerous there as Kapampangan, and 19.3% in Nueva Ecija. In Southern Mindanao, Ilocanos formed 11.48% of the population (as high as 17.7% in Sultan Kudarat).

Working as migrant laborers on sugar plantations in Hawaii and Guam and on farms in California since the first decades of the 20th century, Ilocano males constituted the first major influx of Filipinos into the United States; every Ilocano town has its "Hawaiianos," returned migrants who set up households with wives from their native place whom they have often courted by letter. Out-migration continues, though now

women working as domestic servants in Hong Kong, Singapore, and the Gulf States are a significant component as well.

### <sup>3</sup> LANGUAGE

The Ilocanos speak a Western Austronesian language of the Northern Philippine group, whose closest relatives are the languages of neighboring mountain peoples. Ilocano has become the lingua franca of northern Luzon, with as many as 2.3 million second-language speakers, as Ilocano traders have long provided highland peoples with their primary link to the commerce of the outside world.

### <sup>4</sup> FOLKLORE

According to one Ilocano origin myth, a giant named Aran built the sky and hung the sun, moon, and stars in it. Under their light, Aran's companion, the giant Angalo, could see the land, which he then molded into mountains and valleys. The giants found the world they had created windswept and desolate. Angalo spat on the earth, and from his spit emerged the first man and woman. He placed them in a bamboo tube that he tossed into the sea. The bamboo washed up on the shore of the Ilocos region, and from this couple came the Ilocano people.

Like other Filipinos, Ilocanos recognize an array of supernatural beings [see **Filipinos**], such as the *katawtaw-an* (the spirits of infants, who died unbaptized and who in turn victimize newborns). The *karkarma*, the souls of living persons, leave the body at death but linger in the house until after the post-funerary offerings of food are made to the deceased; sensed as a scent of perfume, the odor of a burning candle, or a strange draft of wind, they visit relatives who have failed to come to the sickbed of the deceased. The *al-alia*, the spirit doubles of humans, appear at their human doubles' death as the groaning of the dying, the cracking of glass, the rattling of beds, and the banging of doors, or in the form (at night) of a grunting pig, howling dog, or a crowing chicken. These signs remind the living to pray to God for the forgiveness of the deceased's sins (otherwise, the *al-alia* may visit misfortunes upon them).

### <sup>5</sup> RELIGION

See the article entitled **Filipinos**.

### <sup>6</sup> MAJOR HOLIDAYS

See the article entitled **Filipinos**.

### <sup>7</sup> RITES OF PASSAGE

Although today they are free to choose their own marriage partners, young people seek to secure the approval of both sets of parents. After gaining the consent of his own parents, who are to pay the dowry and finance the wedding, the boy makes a formal announcement (*panagpudno*) to the girl's parents of his and their daughter's intention to marry. The next stage is for the boy's parents to visit the girl's parents in order to set the date for the wedding with the aid of a *planetario*, an almanac identifying auspicious days. At a further meeting (*palalian* or *ringpas*), the boy and his kin come to the girl's house to finalize the wedding arrangements; each party employs a spokesperson who negotiates for his or her side in formal, metaphorical language. The families set the choice of wedding sponsors (an equal number [10–50] for each side), the dowry (land for the

couple, or the money to buy such land), the *sagut* (the wedding dress, jewelry, and accessories, which the groom is to provide for the bride), and the *parawad* (cash that the groom gives the bride's mother as a reward for raising his bride).

The wedding feast (following the church ceremony) includes a ritual where the groom offers the bride a plate of mung beans (symbolizing fertility). The bride refuses the dish several times before finally accepting it. Then the bride offers the beans to the groom who in turn refuses the dish until an old man calls an end to the ritual (the pleadings and feigned refusals greatly amuse the onlookers). Another highlight is the *bitor*: guests contribute cash to the newlyweds either by dropping money

onto plates held by two men seated on a mat (representing the bride and groom, respectively) or by pinning bills to the couple's clothing while the two dance (groom's kin on the bride and the bride's kin on the groom). After the wedding, offerings of rice cakes are made to the spirits of departed family members.

To announce a death formally, a piece of wood (*atong*) is lit in front of the deceased's house and kept burning until after burial, at which time it is extinguished with rice wine. The corpse (kept in the house) is dressed in its best clothes and a kerchief is tied around the jaw to prevent the tongue from showing; a basin of water mixed with vinegar is placed under the bed to remove the odor of death. Money is placed in the coffin to pay the "ferry man" who brings the soul to the other world. In the days before burial, relatives keep vigil over the body, wailing and recounting the deceased's good deeds. Sometimes, professional mourners perform the lamentation (*dung-aw*).

Before the funeral itself, each of the relatives pays their last respects by kissing the deceased's hand or raising it to his or her forehead. Extreme care is taken in bringing the body from the house to the church; any mishap or faux pas could cause premature death. After the church ceremony, the relatives pose as a group for souvenir photos with the coffin. Everyone in the procession to the cemetery must return to the deceased's home by a different route from the one taken there. Upon arrival, they must wash their faces and hands in order to remove the power of death.

See also the article entitled **Filipinos**.

## **8** INTERPERSONAL RELATIONS

Ilocanos share the same basic values as other Filipinos [see **Filipinos**], such as *bain*, which corresponds to *hiya* or *amor propio* ("face" or "sense of shame"). The fear of gossip and the desire to avoid the envy of others serve as strong pressures for conformity. Before pushing through with his or her own plans, a person feels *alumiim*, the need to figure out how others will react first in order to avoid embarrassment. It is essential to show *panagdayaw*, proper respect for the sensitivities of others; this requires that individuals speak about themselves only in the humblest of terms. Although Ilocanos are group-oriented, they also value a certain individualism (*agwayas*): one should not reveal his or her inner intentions to others, since it is unwise to be too trusting. A person is expected to overcome life's challenges through his or her own hard work, limiting his or her dependence on others to obtaining aid from close kin. However, Ilocanos do form savings associations (including as many as 50 women in a neighborhood), mutual-aid associations (financing members' major celebrations), and labor-exchange arrangements.

Life-passage parties and fiestas provide teenage boys and girls their main opportunity to chat and joke, as girls are confined to work in the house rather than the fields. For a boy to initiate a courtship is a serious matter, as the only proper end is marriage. On his first visit to the house of the girl of his interest, the boy brings one or two companions so that he can get their opinion of the girl later. During the second visit, the companions excuse themselves to allow the boy to confess his feelings to the girl (afterwards, he visits her alone). Love notes are also an important means of courtship. A girl is careful to

preserve her chastity in case the courtship does not end in marriage.

## **9** LIVING CONDITIONS

Raised 0.6 m to 1 m (2–3 ft) off the ground, houses have beams of wood, walls of bamboo, and roofs of rice straw or cogon grass. Sometimes, newly married children may live in roofed extensions. On the *bangsál*, a landing on the staircase, guests wait before being admitted and wash or wipe their feet before entering the receiving room. Curtains or bamboo partitions separate the living room from the bedroom areas (most have beds but prefer sleeping mats). A separate storage room also serves for a place to change clothes. In traditional dwellings, outhouses provide toilet facilities.

Average family income in the Ilocos region was 142,000 pesos (us\$2,784), while that in the Cagayan valley, the other region with an Ilocano majority, was ₱143,000 (us\$2,804). These ranked respectively eighth highest in the country out of 17 regions and sixth (tied with Northern Mindanao), cf. the national average of ₱173,000, the National Capital Region's ₱311,000, Southern Tagalog's ₱198,000, and SOCCSKARGEN's (Southern Mindanao)'s ₱114,000. In 2000, Ilocos Norte province in the Ilocos region and Isabela province in the Cagayan Valley had Human Development Indices (combining measures of health, education, and income) that were among the top ten in the country. Ilocos Norte ranked seventh at 0.689, higher than the national HDI of 0.656, and Isabela ranked tenth, slightly lower.

According to the 2000 census, in Ilocos Norte province (Ilocos Sur and La Union provinces have similar statistics), the proportion of houses with a roof of galvanized iron/aluminum reached 86.3% and with a roof of grass or palm thatch 10.12% (cf. 76.3% and 20.6% respectively in 1990). Over half of houses (52%, up from 27.1% in 1990) had outer walls entirely of concrete, brick, or stone, 22.9% of houses had outer walls that were half wood and half concrete, brick, or stone, 7.3% of houses had wooden outer walls, and 15.3% outer walls of bamboo or thatch.

In 2000, 8.9% of households in the Ilocos region had access to a community faucet, 16.8% to a faucet of their own, 25.7% to a shared deep well, and 23.3% to a household deep well, while 2.3% obtained their water from springs, lakes, rivers, or rain. A third of households (66.4%) disposed of their garbage by burning it, 12.5% by dumping it in a household pit, and 4.9% by composting it; only 11% had it picked up by a collection truck. 17.1% of houses were lit with kerosene lamps, 79.3% with electricity, and 2.5% with firewood. Four out of five households (79.9%) possessed a radio, over three out of five (62.3%) a television, over one out of three (34.4%) a refrigerator, one out of five (20.4%) a VCR, nearly one out of seven (13.9%) a telephone or cell phone, and one out of six a washing machine (16.5%) and a motorized vehicle (16.9%).

## **10** FAMILY LIFE

The structure of the Ilocano family conforms to the general Filipino pattern [see **Filipinos**]. The father is the formal head of family, backing up the mother who disciplines the children and manages the house finances. The eldest child divides the chores equally among siblings. Grandparents tend to be more indulgent of grandchildren than the parents themselves.

## 11 CLOTHING

Dress inappropriate for one's age or perceived wealth or status attracts gossip: "mabiag ti ruar ngem matay ti uneg" ("outwardly alive, but inwardly dying"); "uray napintas no inutang" ("even if it is nice, it is acquired through credit"). Still, one should dress well for special celebrations. Everyday wear, especially at home, consists of short pants for boys, and dusters, loose skirts, shirts, and short pants for girls. Those working in the fields wear long-sleeved shirts, long pants, and a wide-brimmed hat as protection against the sun and mud.

During the rainy season, people wear a headdress of labig *leaves* extending well down the back. Older women wear their hair long and knotted in a bun, while men keep it short and apply pomade on special occasions.

See also the article entitled **Filipinos**.

## 12 FOOD

Ilocano food essentially resembles that elsewhere in the country [see **Filipinos**], but Ilocanos are especially fond of *bagoong* (a salty shrimp or fish paste). One regional specialty that has entered national cuisine is *pinakbet*, which is eggplant, bitter melon, okra, and green beans cooked with bagoong, tomatoes, and a little water (dried or broiled fish, meat, or shrimps can be added to enhance taste).

Other favorites are *dinardaraan* (cooked pig's blood, called *dinuguan* in Tagalog-Pilipino) and *kilawen* (the lean meat and intestines of water buffalo, cow, sheep, or goat, eaten raw or partially cooked with a sauce of vinegar, salt, hot pepper, and pig's bile).

Eating with their hands, family members squat around the food laid out on the floor or take food and eat in different parts of the main room. As food is regarded as a symbol of God's grace, there should be no noise, laughing, singing, or harsh words (including parents scolding children) while eating is going on. One should not drop food on the table or floor, or the food "will be angered and leave the household." Similarly, no one should leave the house while someone is still eating, for God's grace will go with him or her, out of the home.

## 13 EDUCATION

In the Ilocos region, the literacy level was 95.23% in 2000, higher than the national figure; in the Cagayan Valley, it was 91.75%. See the article entitled **Filipinos**.

## 14 CULTURAL HERITAGE

The Ilocanos have an epic, the *Biag ni Lam-ang* ("The Life of Lam-ang"), which, however, exists only in the form of a highly Hispanicized metrical romance composed in the 19th century. Ilocos is also the only place in the country where the *zarzuela* (operetta) is still performed.

See also the article entitled **Filipinos**.

## 15 WORK

Almost all farmers (the major occupation) own the land they till, except for those who are tenants of owners who are urban professionals. The staple crop is rice, though poorer people must mix cheaper maize with their rice. Root crops are also grown both as a supplement to the diet and for sale. Watered by wet-season rains or irrigation, wet-rice fields range from small plots that can only be worked with a hoe or dibble stick

to those large enough for a water-buffalo-drawn plow; dry-rice agriculture is also practiced in the hilly areas between the flatlands. Crops grown for market include tobacco, garlic (both Ilocos specialties), onions, and vegetables. Petty traders may travel as far as Manila to sell such products.

Farmers fish during the lull between planting and harvesting, usually in close offshore waters, rivers, or fishponds. An important part of the catch are *ipon*, small fish for *bagoong* (fish paste).

Cottage industries include salt making, *basi*-making (alcohol from molasses), pottery making (20 different types are produced in San Nicolas), weaving, basket- and mat-weaving, woodworking, and silversmithing.

## 16 SPORTS

One uniquely Ilocano game is *kukudisi*. A stick (the *an-anak*) is placed on a baseline scratched into the ground. One player makes the stick jump in the air; the other player tries to catch it before it hits the ground. If the latter cannot do so, a second, longer stick (the *in-ina*) is laid across the baseline; the player then tries to hit it with the *an-anak*. The next two phases of the game involve competing to see who can hit the *an-anak* (which has been tossed in the air and stuck into the baseline, respectively) with the *in-ina* the furthest.

## 17 ENTERTAINMENT AND RECREATION

Children enjoy such games as *balay-balay* (playing house), hide-and-seek, team-tag, jumping "hurdles" (sticks or outstretched arms or legs), and jacks.

## 18 FOLK ART, CRAFTS, HOBBIES

See the article entitled **Filipinos**.

## 19 SOCIAL PROBLEMS

See the article entitled **Filipinos**.

## 20 GENDER ISSUES

According to the 2000 census, in the Ilocos region, the ratio of men to women was 100.76; in the Cagayan Valley, the ratio was 104.98 (possibly reflecting the latter area being one of in-migration that has been more male than female). In Ilocos, overall literacy rates were nearly as high for women (95.04%) as for men (95.41%). In a major change from the pattern from the beginning of the 20th century until the 1980s of male sojourning abroad for work, the majority of overseas workers from Ilocos in 2000 were women (61.75%); in the age bracket 20-24, 71.8% were women. Women, including female migrants from Ilocos, also heavily predominate in the work force of multinational corporations' factories in export-processing zones in other regions of the Philippines itself. With drops in the prices of the region's cash crops such as garlic and tobacco and in the demand for construction workers in the Gulf States and the continuing failure of the Philippine economy to generate sufficient urban jobs, unemployment among young men has been high in recent decades: many joke about becoming mail-order "house husbands" for Filipinas in the United States.

There is no cultural preference for having boys instead of girls. Indeed, families prefer girls because one can marry them off to other families, thereby expanding their networks of in-

fluence and assistance, without incurring the burden of paying the “male dowry” (sab-ong) for sons. Traditional Ilocano ideals of manly and womanly behavior do not entirely fit stereotypes of machismo/hyper masculinity and femininity seen in many other societies. In courtship, women appraise men’s physical characteristics as freely and frankly as women do men’s. Women are thought of as no less vulnerable to the seductions of male beauty and charm as men are to women’s. For Ilocanos, ideal manliness includes the possession of verbal grace, used to woo a potential bride or displayed to keep an appearance of good humor when provoked in public. Young boys, who are competitive with each other, are not allowed to act aggressively towards girls. Masculinity is defined by emotional availability, rather than distance and coldness, even towards other men. It is common for groups of unmarried men in their twenties and thirties to sleep together without this thought of as homoerotic. Women share in agricultural chores, and men in household chores, including sweeping, cooking, and childcare. Women’s entrepreneurship, to which women are trained from when they are little girls playing managerial games, contributes indispensably to most households, and some families are even supported primarily by the wife/mother’s earnings with the husband/father staying at home to performing most of the domestic tasks.

# I LONG OT

**PRONUNCIATION:** ee-LAWN-goht

**ALTERNATE NAMES:** Bugkalut

**LOCATION:** Philippines (northern Luzon)

**POPULATION:** 50,786 (1990)

**LANGUAGE:** Ilongot

**RELIGION:** Native beliefs; Protestantism

**RELATED ARTICLES:** Vol. 3: Filipinos; Kalinga; Ifugao

## <sup>1</sup> INTRODUCTION

Although sharing certain affinities with the swidden-farming (shifting-cultivation) Northern group of Cordillera peoples [see **Kalinga** and **Ifugao**], the Ilongot stand apart even from them in their extreme egalitarianism and relative cultural simplicity (in some ways comparable to the Dumagat Negritos with whom some of them have mixed). The question remains whether the culture of the “Bugkalut” (as they call themselves; the lowlander name “Ilongot” comes from *irungut*, “forest people”) is actually a largely unchanged survival of ancient north Luzon, culture or rather a version of a more complex culture pared down to the essentials in the process of the people’s self-isolation.

Although Spanish soldiers and missionaries had penetrated the upper Cagayan valley by the beginning of the 17th century, they had little impact on the Ilongot whose reputation as a fierce, wild, and unsubjected people endured well into the American period and the Japanese occupation, when a third of the group are said to have perished in fighting the new invaders. The Ilongot even avoided the trade relations with lowlanders that other independent tribes deemed indispensable.

The latter relationship is very concisely reflected in an Ilongot creation myth recorded by Laurence Wilson in the 1940s. According to this myth, the creators and guardians of all things are two quarreling brothers, Caín and Abál (the biblical Cain and Abel in Spanish). Caín is the ancestor of the Ilongot, who like him are killers and headhunters. Abál, on the other hand, is the ancestor of the lowlanders, who have inherited his mastery of water buffalo and other domesticated animals. In the Ilongot telling, Abál is the stronger of the two brothers, which explains the superior power of the lowlanders.

The arrival in recent decades of the lumbering industry and the airstrips of the New Tribes Mission (Protestant) have ended Ilongot isolation. In any case, farmers of Christian ethnic groups are encroaching inexorably upon Ilongot territory. Violent confrontations between Ilongot and settlers have been frequent and even reached the notice of the national press in the 1960s. In Nueva Vizcaya province, the Ilongot now comprise a tiny proportion of the population, less than one half of one percent in 2000 if one counts only those self-identifying as Bugkalut; though that year’s census’ category of “Other,” largely composed of groups indigenous to the province itself, amounted to 8.2%.

## <sup>2</sup> LOCATION AND HOMELAND

The Ilongot (numbering 50,786 in 1990) inhabit an 840-sq-km (325-sq-mi) area of rolling hills 0.3 m to 900 m (1–3,000 ft) above sea level in southern Nueva Vizcaya province at the point where the Cordillera Central through the Caraballo

Range connects to the Sierra Madre running down Luzon's east coast; these lands are drained by the headwaters of the Cagayan. A group of modernized Ilongot live along Baler Bay. Christian Gaddang, Isinai, Tagalog, and Ilocanos have settled the surrounding lowlands.

1970s figures estimated the number of Ilongot at around 2,500. According to the 2000 census, 1,180 inhabitants of Nueva Vizcaya province identified themselves as Bugkalut (i.e. as Ilongot). Another 2000 estimate counted 50,786 Ilongot (the discrepancy among the figures may be attributed to different criteria for defining an Ilongot—almost 30,000 people in Nueva Vizcaya province and over 14,000 in Quezon province were classified as “Other” [indigenous ethnicity] and not as Tagalogs, Ilocanos, Ifugao, Ibaloi, Ayangan, or Bugkalut, suggesting that people who might be classified as Ilongot did not identify themselves as Bugkalut).

### 3 LANGUAGE

By linguists' estimates, the Ilongot language has developed separately from other Philippine languages for over 3,000 years (in comparison, Bontok and Ifugao were a single tongue only 1,000 years ago). Among its peculiarities is its numeral system that counts thus: numbers one through five are each expressed by distinct words, but six through nine are expressed as “five and one,” etc. Higher numbers are composed along similar lines: 49, for example, is “fifty and five and four,” 60 is “fifty and ten.”

### 4 FOLKLORE

Folktales (*dimolot*) are the principal entertainment of the Ilongot, either in a short form told by individuals taking a short rest together or otherwise meeting each other by chance, or in a long form reserved to pass long evenings or periods of torrential rains. The long form involves an old woman or man with a wealth of lore at her or his disposal singing tales that freely mix supernatural, human, and animal characters and highlight practical jokes. The storytellers embroider the basic plot with repetitions and minor happenings (often for comic relief) and draw out final syllables or add meaningless words to conform to the fixed melody; listeners enjoy the style of presentation rather than the mere content.

### 5 RELIGION

Ilongot recognize a range of supernatural beings including a creator-overseer deity associated with the sun, as well as ancestral spirits. They are most concerned, however, with nature spirits and illness-giving spirits. The most powerful and feared is 'Agimeng, the “companion of the forest,” guardian of hunting and headhunting but also a giver of disease; his female counterpart holds dominion over cultivated fields. Usually associated with geographical features, disease-giving spirits are identified with typical symptoms and the plants that cure them, and, as familiars, may develop an association with particular individuals.

While dreams may lead a person to health or hunting charms, visions and illness itself introduce many people to such spiritual familiars. Only a few such people become shamans qualified to perform diagnostic and curing rites, preside over special chants, and summon the souls of future headhunting victims. Those cured by a shaman can share in the power of the spiritual familiar and thus can conduct minor

rituals themselves. Other supernatural skills that individuals may possess are sucking out disease and using a bow to tell the future.

Disease usually arises from spirits licking or urinating on a victim, although harm may also come from deceased ancestors who long for the company of the living, or from guardian spirits of field and forest who feel abused by humans in some way. Healing rites first invoke the spirits and then expel them by manipulating plants (of which 700 kinds are in use); they may also entail threatening the spirits, blowing them away, steaming them out, bathing to wash them out, beating them out, or drinking to purge them out. One can also burn or beat a conta-

gious plant in order to eliminate the symptom. Rites may also turn a sickness back on the spirit that had caused it.

Since the 1950s, Protestant missionaries have been making conversions among the Ilongot.

## 6 MAJOR HOLIDAYS

Harvest rituals are the only regular communal rites. Others include occasional headhunting and peacemaking rites.

## 7 RITES OF PASSAGE

A first ear-piercing takes place for girls when they are babies and for boys before their teens. At age 15, boys and girls may choose to have their teeth filed and blackened; one has this done only to beautify oneself, although feasting and oath-taking accompany the operation. As headhunters, all young men should succeed in taking a head, preferably before marrying.

Adolescents of the opposite sex may exchange betel and sleep together before being recognized as couples. An informal association involving casual field help (from the male), gifts, and sex is the prelude to formal wedding negotiations. A pregnancy generates tensions between the families, leading to both gift-giving and threats of violence, which are usually only resolved through marriage.

The *langu* or bride-price is meant to quell the anger of the woman's kinfolk and may include payments to members of distant *behrtan* that can claim a connection to her. The negotiation of *langu* and the protracted period of paying it gives kinfolk a chance to air grievances and settle them by mollifying the aggrieved parties with *langu* goods. Beginning with a *pu'rut*, an initial (often hostile) confrontation between the man's and the woman's parties, *langu* installments include guns, bullets, metal pots, cloth, jewelry, and knives. At a series of *pi'yat* meetings, the man's side presents meat and goods to the in-laws and finally "buys the woman." The woman's side then returns this by an *arakad*, bringing pounded rice and liquor to the man's kin.

Each person possesses a spirit that roams away from the body during sleep and survives death as an entity dangerous to the living. Funerary rites aim to banish the deceased's spirit through ritual sweeping, smoking, bathing, and invocation.

The corpse is wrapped in bark or put in a box to be buried near the home in a sitting position or curled on its right side; valuable goods are hung on a post at the foot of the grave. The corpses of young children are enshrouded in bark and placed high in trees, for proximity to the earth is thought to be painful and perilous for them.

## 8 INTERPERSONAL RELATIONS

Ilongot society has been described as an ordered anarchy where all persons are equal and recognize no authority figures. In practice, leadership in a community tends to come from a set of brothers who are skilled in oratory (*purung*) and possess knowledge of genealogy and customary law. There is no organization encompassing more than an individual community, although several settlements may recognize a common *behrtan* (local community) allegiance; in all, there are 13 such *behrtan*, each with its own name and dialect.

As Ilongot society has no hierarchy in which superiors command the obedience of inferiors, each man must rely on his personal eloquence to persuade his fellows to follow a course of action that he desires. At public gatherings, a man attempts to

move those present toward a consensus, one to which they may individually already be inclined, as he finds out in prior discussions with each one; consensus is essential since no sanctions can be applied to compel anyone to do anything. Such discussions are exclusively a male affair, as women claim not to understand *purung*, much less to be capable of it.

The settling of disputes or grievances involves the exchange of betel, swearing by salt, and animal sacrifices. The victim of petty theft may demand that the accused submit to trial by ordeal.

In conferences between settlements (such as for peacemaking), those most adept at *purung* in one settlement pit themselves against their counterparts in the other. Bride-price negotiations provide an occasion for parties to demand redress of past grievances or recompense for contributing to previous bride-prices.

Among the Ilongot, every male is expected to headhunt, preferably before marrying, and most contemporary men have done so. Unlike in other headhunting cultures, the Ilongot do not take heads as magic to increase the fertility of the soil, to gain personal spiritual potency, to gain social distinction, nor exclusively to pursue a vendetta. A man takes heads in order to "relieve his heart" from an anxiety, the source of which may be a death in his own household or an unsettled feud. Often, a man makes a *binatan*, an oath of personal sacrifice, e.g., not to eat rice from the granary or to avoid sex until taking a head. Taking a head gives a young man the right to wear prestigious cowrie shells, feathers, and red hornbill ornaments. The act does significantly raise the young man's status, but as all males have experienced it, this merely maintains the egalitarianism of society as a whole.

Men may headhunt solo or in raiding parties of up to 40 individuals. Prior to setting out, the men gather in front of a house, and a shaman summons the souls of the victims into a bamboo receptacle. In the forest, the men listen for bird omens and may play the death-associated violin or reed flute. Distinctions to be sought include being the first to strike or shoot, to reach a felled body, to cut a head, and/or to fling the head away. The heads are not kept as in cultures where the skulls would be preserved as a status symbol or source of spiritual power, although the men may bring victims' hands back for the children to chop up. The return of the headhunters to the settlement is celebrated with singing, dancing, and slaughtering a pig.

Peace between warring parties is achieved through a series of debates and exchanges, after which members of the two groups may visit each other, enter into marriage with each other, or even go on joint raids on other groups. However, if no intermarriage takes place, hostilities resume within two generations.

## 9 LIVING CONDITIONS

A settlement consists of four to nine households (five to nine nuclear families, totaling 40 to 70 persons). Initially, the houses are rarely adjacent but always within calling distance of each other. Over time, as each household abandons old fields and opens new ones, the houses relocate nearer the new fields, until the settlement becomes more and more dispersed (by the same token, as long-fallow fields are reclaimed, the houses may approach each other again). The only instance of concentrated

settlements is the clusters of houses near the New Tribes Mission's airstrips.

A house (*kamari*) has a square floor plan, is raised 2 m to 5 m (6–15 ft) off the ground, and has walls of woven grass or bamboo and a pyramidal or single-ridged roof. An unpartitioned central space is edged by a slightly raised wooden platform where the hearths are located (up to three hearths, one for each resident nuclear family). The Ilongot also build smaller, temporary field houses (*'abun*).

*Nueva Vizcaya province is poor compared to other provinces of the Cagayan Valley region, itself tied with Northern Mindanao for sixth highest in average annual family income. According to the 2000 census, 50.8% of houses were lit with electricity, compared to 70% in neighboring Isabela province. 15.3% of households obtained water from springs, lakes, or rivers, compared to 1.9% in Isabela.*

### **10 FAMILY LIFE**

Marriage between second cousins is the preferred pattern. As it is usual for a particular set of brothers to offer leadership in a community, marrying that set of brothers with a set of sisters (also their close cousins) is also common.

Peculiarities of Ilongot kinship terminology include a single term covering grandparents, parents-in-law, and children-in-law (*'apu*) and a single term for a sibling's spouse and a spouse's sibling (*'aum*). One must not refer to one's 'aum by name and must treat her or him with particular respect. Although sex with one's 'aum is forbidden, a surviving spouse often weds a sibling of the deceased spouse.

One to three nuclear families live under a single roof, each with its own hearth and sleeping area. These nuclear families tend to consist of the parents' family and the families of the youngest married daughters. Sons leave home when they marry, but daughters stay in the parental home, leaving only when younger daughters marry and bring in their husbands. A married couple can only return to the man's birth community when he has paid up the bride-price.

In situations such as attempting to make persuasive arguments in public debates (e.g., bride-price negotiations), an individual finds it useful to claim affiliation with one or more *behrtan*. At its simplest, the *behrtan* is a grouping of several settlements that has a collective name, usually referring to a landmark, a plant, a color, or a place, and its own dialect; it is the local group within which one tends to marry and upon whose members revenge (head-taking) can be taken for the crime of one of its members. An individual inherits the right to claim connection to a *behrtan* from either parent and may claim as many as four such connections (via the four grandparents). A woman prefers to take her mother's *behrtan*, while a man prefers not only to take his father's *behrtan* but also to pass it on to his children, which is only possible after he has paid up the bride-price. The *behrtan*, it should be stressed, is not a corporate group of any kind; very often it is merely a way of defining an interest group of the moment (such as the two parties in bride-price negotiations), and a stranger entering a discussion and asserting solidarity with one of the parties may claim a *behrtan* connection that no genealogy grants him or her.

### **11 CLOTHING**

Traditional Ilongot clothing consists of lengths of bark pounded to the consistency of soft leather. Men wear a length of cloth passed between the legs and secured with a belt of rattan or brass wire. Women wear a short sarong (waist to knees) along with earrings, bead necklaces, and brass wire spiraling over the arms. Children go naked.

### **12 FOOD**

The staple food is rice eaten with vegetables (root crops are a secondary source of starch). Wild plants, such as fruits, ferns, and hearts of palm, are also gathered for food.

For animal protein, Ilongot eat wild pigs, deer, and fish but do not eat the meat of the pigs and chickens that they raise for sale to lowlanders; domestic animals are said to eat excrement and thus should not be consumed. Essential to hunting, dogs live inside the house and are never eaten.

While eating with the hands from flat lengths of leaf is found widely in Southeast Asia, the Ilongot also fashion disposable cups for vegetable broth from the *anahao* leaf.

Ilongot make *basi*, alcohol from sugarcane, and the men often get together to have drinking sessions.

### **13 EDUCATION**

The Ilongot isolation has meant that modern education has not reached them as it has most other Filipinos, lowlanders, and highlanders, Christian and non-Christian alike, although Protestant missions are offering some Ilongot exposure to it.

### **14 CULTURAL HERITAGE**

Musical instruments include the bamboo flute, brass gongs, a bamboo-tube zither, and a kind of violin with a body of bark and animal skin and strings of women's hair. Young men play such instruments while courting young women. Gatherings feature singing with alternating groups (antiphonal) and dances of which there are many kinds, e.g., female group dances, a male solo, or men dancing while beating hand-held gongs.

### **15 WORK**

Ilongot cultivate dry-rice, maize, and cassava side by side on swidden fields. After the harvest, they plant such fields with tobacco and vegetables. When the field is about to be abandoned, it is given over to sweet potatoes, bananas, and sugarcane. A given field may be worked from one to five years, depending on its fertility. When its fertility is exhausted, the farmer moves on to clear another plot out of the forest, going as far as 32 km (20 mi) away and returning to the first spot only after 8 to 10 fallow years. Land belongs to the individual who clears it for use and may be reopened and cultivated by anyone else at a later date. In general having little inherited property, Ilongot do not bequeath agricultural lands. Because of low population density in their territory, wild land is always available. Gathering forest plants also contributes to the diet.

Twice a week, groups of men hunt game with dogs, dividing the meat equally among the householders. The meat obtained in three- to five-day hunting expeditions without dogs is the personal property of the hunter and is dried in strips to be sold or traded. Fishing ranges from individuals using nets, traps, and spears to groups of up to 250 men cooperating to catch

fish by damming streams or employing poisons. The catch is divided equally.

The Ilongot trade baskets and metalwork among themselves, but most such wares circulate as part of bride-prices or inter-kin gifts. Ilongot barter dried meat, captured fawns, pigs, and chickens for bullets, liquor, cloth, salt, and knives from lowlanders. To conduct these exchanges, Ilocano or Tagalog traders come to the borders of Ilongot territory, and Ilongot go down to the lowland towns.

## 16 SPORTS

While girls play with rag dolls, boys enjoy shooting contests with miniature bows and arrows made by their father for them when they reach the age of four. Boys also like to climb trees and play tag in them.

Adult Ilongot are known to use a 12-m (40-ft) length of rattan with a hook at one end and a loop at the other to move through the trees. Clinging to one tree, they cast this flexible "rope" to catch on to another tree. In this way, Ilongot can travel through dense forest very rapidly. This, however, is not a sport so much as an efficient way of working (as when a man wants to cut branches from trees that will later be felled to open a field).

## 17 ENTERTAINMENT AND RECREATION

Ilongot entertain themselves primarily by telling folktales.

## 18 FOLK ART, CRAFTS, AND HOBBIES

Among the Ilongot, there are no specializations: each man forges his own knives, hoes, and picks and weaves his own rattan baskets; each woman weaves and sews clothing for her own family.

## 19 SOCIAL PROBLEMS

The increasing invasion of Ilongot territory by other ethnic groups sparks violent confrontations between the Ilongot and the new settlers. This violence is bound to continue for some time to come.

## 20 GENDER ISSUES

Discussions that seek to build consensus on a common course of action are regarded as exclusively a male affair, since women claim not to understand, much less be capable of, the purung (oratory) necessary to persuade other.

According to the 2000 census, among the Ilongot self-identifying as Bugkalut, men slightly (51.7%) outnumbered women. In the Nueva Vizcaya population as a whole, more women had a college undergraduate education or higher and received more academic degrees than men by a substantial margin; elementary school completion, a measure likely more relevant to the Bugkalut, was lower for girls than for boys (53.3% of elementary school graduates were male while only 51% of the population was male). Women tend to invoke connections with their mother's behrtan, men with their father's (see "Interpersonal Relationships").

## <sup>1</sup> INTRODUCTION

Indians are citizens of the Republic of India, the largest country in South Asia. In the past, however, the name was used for inhabitants of the entire Indian subcontinent. The word “Indian” comes from *Sindhu*, the local name for the Indus River (now in Pakistan). The Persians called the river *Hindu*, which passed to the Greeks as *Indos*. “India” was thus the region of the Indos, and “Indian” came to describe the peoples of the area. The words *Hindu* and *Hinduism* are also derived from this source. The ancient Indians called their land *Bharat* or *Bharatavarsa* (“Land of the sons of Bharata,” a legendary emperor). *Bharat* is now the official Hindi name of modern India.

The peoples of India have a long and complex history that extends over 5,000 years. They are successors to the advanced urban civilization that flourished along the Indus Valley during the 3rd millennium BC. This Harappan civilization disappeared in the years following 1700 BC when nomadic tribes from Central Asia settled in northwestern India. These groups, referred to (somewhat loosely) as the Aryans, evolved religious, social, and economic structures that give Hindu civilization its distinctive character.

The subsequent history of India is one of waves of invaders sweeping through the northwestern mountains onto the Indo-Gangetic plains. The Persians, Greeks, Parthians, Kushans, and White Huns were some of the groups that left their imprint on the region. At times, powerful Indian states such as the Mauryan (321–181 BC) and Gupta (AD 319–c. 500) empires stemmed the flow of invaders. When they weakened, however,

their frontiers again came under threat from the northwest. It was through these same mountains that Muslim conquerors entered India at the beginning of the 11th century AD. The earliest of these incursions were merely raids led by Mahmoud of Gazni, a Turkish leader who invaded India no less than 17 times, to pillage the wealth of the Indian plains, but under Mahmoud of Ghuri, the Muslims sought to establish themselves in India. Resisted at first by the Chauhan Rajputs who controlled the northwestern India, the Ghurids eventually defeated Prithviraj Chauhan at the 2nd Battle of Tarain in 1192 and captured Delhi. For almost eight centuries from this date, Muslims ruled in north India, with their capital in Delhi. Invasions of various peoples continued through the northwest passes until 1526, when Babur captured Delhi from the Lodis and founded the Mughal dynasty. Although they were based in Delhi, the Mughals made Agra their capital from 1526 to 1685 with nearby Fatehpur Sikri, later abandoned largely because of lack of water, being Akbar’s capital from 1571 to 1585. Mughals reigned in northern India until the last Mughal emperor, Bahadur Shah II, was deposed in 1857 by the British and sent into exile in Burma (Myanmar). Under the Mughals, and particularly Akbar (reigned 1556–1605), Islam made important contributions to South Asian civilization. The Taj Mahal in Agra, perhaps the finest architectural achievement of the Muslims in India and named a World Heritage Site in 1982, was completed by the Mughal Emperor Shah Jahan in 1648. India achieved an imperial greatness under Mughal rule virtually unmatched in the country’s history.

The Europeans reached South Asia by sea in 1498 when the Portuguese landed at Calicut on the southwest coast of India. Their prime motivation was trade, and within the next two centuries the maritime nations of Europe (Portugal, Holland, Britain, and France) had established trading posts or “factories” on India’s coasts. By the middle of the 18th century, the British East India Company had gained the upper hand over the French in India, but French (Pondicherry) and Portuguese (Goa, Daman & Diu) colonies survived on the subcontinent until the mid-20th century. Britain ultimately gained control of the entire region, either by directly administering Indian territory or by being recognized by independent native rulers as the paramount power in the region.

The political map of the Indian subcontinent, and many of its problems, originates in the country’s colonial past. The inability of the British, Hindu, and Muslim leaders to reach agreement on the nature of the successor state to the British Indian Empire resulted in the partition of the subcontinent into the separate nations of India and Pakistan in 1947. A direct consequence of this has been several wars between the two countries and the ongoing problem of Kashmir. The princely states of India, of which there were several hundred in 1947, were to decide at Partition to which country they would accede. Most Hindu states joined India and Muslim states joined Pakistan. But, while the population of Kashmir was primarily Muslim, its ruler was a Hindu Rajput. The Maharaja of Kashmir, one of the largest and most powerful of the Indian princely states, wished to remain independent and delayed signing the instrument of accession as long as possible. In October 1947, however, the newly constituted nation of Pakistan sent irregular Pathan tribesmen into Kashmiri territory, at which the Maharaja appealed to Lord Louis Mountbatten for help. The Governor-General of India agreed to provide help if Kash-

mir acceded to India, which the Maharaja did. Once the papers of accession to India were signed, Indian soldiers entered Kashmir with the order just to stop any further occupation by Pakistan but they were not allowed to drive out the invaders (by now the regular Pakistan army was involved) from the state. India took the matter to the United Nations. A UN resolution asked Pakistan to vacate the areas it had occupied and requested India to assist the UN Plebiscite Commission to organize a plebiscite (vote of the people) to determine the will of the people. Pakistan has refused to vacate the occupied areas and India has never held a plebiscite (understandably, since the majority of the Kashmiri population is Muslim). The Line of Control (LoC) divides the areas of Kashmir occupied by the two countries, with India controlling most of the former princely state of Jammu and Kashmir and Pakistan controlling some 30% of western areas of the region, in addition to what is known as the Northern Areas and Azad Kashmir (Free Kashmir). For intermittent periods between 1957, when the state approved its own Constitution, to the death of Sheikh Abdullah (Chief Minister of the State of Jammu and Kashmir) in 1982, the state had alternating spells of stability and discontent. In the late 1980s however, simmering discontent over the high-handed policies of the Indian government and allegations of the rigging of the 1987 assembly elections triggered a violent uprising that was backed by Pakistan. Since then, the region has seen a prolonged, bloody conflict between Islamist militants and the Indian army. Both the militants and the army have been accused of widespread human rights abuse, includ-

ing abductions, massacres, rape, and looting. In 1999 Pakistani troops and Kashmiri militants infiltrated across the Line of Control in Kargil, resulting in conflict between India and Pakistan. U.S. diplomacy, and perhaps the threat of Pakistan's nuclear weapons, kept the conflict from expanding beyond Kargil.

A similar situation developed in central India in 1947. Hyderabad was an important Muslim state in central India and its ruler, the Nizam, wanted to either remain independent or to join Pakistan, neither of which the new Indian government could allow. In 1948, India sent its military into Hyderabad and integrated the state into the Republic of India.

Regular Indian and Pakistani troops fought wars in 1947–48, 1965, 1971 (when Bangladesh was created from East Pakistan) and the Kargil conflict in 1999.

## 2 LOCATION AND HOMELAND

The modern Republic of India occupies the greater part of the Indian subcontinent. Its area (3,166,414 sq km or 1,222,559 sq mi) is just over one-third the size of the United States. India's population of 1.32 billion people (2007 estimate) is the second largest in the world, behind China. The population of India is expected to exceed that of China by the year 2030.

India stretches from close to the equator to subtropical latitudes. Cape Comorin, the Indian peninsula's southern tip, lies at 8° N latitude. From there, the country extends northwards for 3,000 km (1,900 mi) to its border with China in the Himalayas and Karakoram Mountains. Pakistan lies to the west, with the international border running from the Arabian Sea through the Thar (Great Indian) Desert to the northern mountains. Some 2,900 km (1,800 mi) to the east, India shares borders with China and Myanmar (Burma). India also controls Lakshadweep and the Andaman and Nicobar islands, island groups lying in the Indian Ocean.

India falls into three broad geographical zones. In the north lie the majestic mountain ranges of the Himalayas. They run northwest to southeast for more than 2,400 km (1,500 mi) and contain many of the highest peaks in the world. Mt. Everest (on the Nepal-China border) is the world's highest mountain at 8,848 m (29,028 ft). The Himalayas are a transitional zone where the cultures of India and Central Asia meet. South of the mountains lie the Indo-Gangetic plains. With elevations mostly below 300 m (1,000 ft), these lands run in a broad arc from the Arabian Sea to the Bay of Bengal, along the valleys of the Indus and Ganges rivers. Except for the Thar Desert in the northwest, the plains are well watered and support the bulk of India's agriculture and population. The plains continue southwards along the coastal lowlands of the Indian peninsula and also eastwards along the valley of the Brahmaputra River. The third geographical region is formed by the Deccan Plateau, the uplands bordered by the Eastern and Western Ghats (mountains) that make up the interior of the Indian peninsula.

Every aspect of life in India is dominated by the seasonal rhythm of the monsoon. The winter sees bright, pleasant weather in most of the region. Mean monthly temperatures in northern areas drop below 21°C (70°F). Beginning in late February, temperatures rise steadily until May and June, when daily maximums in the northwestern plains exceed 46°C (115°F). The hot season ends with the onset of the rains. The monsoon reaches southwest India in late June and sweeps northwards, bringing torrential rains to much of the country. Cherrapun-

ji, in the northeast, is on record as the wettest place on earth, averaging nearly 1,150 cm (450 in) of rain annually. For three months, water is plentiful and the land is green with crops and vegetation. As September comes to a close, the rains die out and temperatures begin to drop with the approach of the cold season.

India's diverse environments are matched by the ethnic and cultural diversity of its peoples. All of the major physical types of the human race are present in the country's population. The Negritos, Negroids of small stature, are represented by the Andaman Islanders. The Proto-Australoid strain is seen in the tribal populations of southern and central India (e.g., the Mundas, the Oraons, and the Santals). The tribal peoples of the mountain belt show distinct Mongoloid features, as seen among the Bhutias of the Himalayas or the Nagas of the northeastern hills. By far the largest element in the population, however, is the Caucasoid group. The earliest Caucasoids to reach the subcontinent were moderate in stature and relatively dark complexioned. They are associated with the Dravidian languages and Dravidian culture of South India. The tall, fair, pastoralists who entered the subcontinent during the 2nd millennium BC and brought the Aryan languages with them are later Caucasoid elements in the population. They settled in northern India and are responsible for the Aryan culture of the north. Considerable mixing of peoples has occurred throughout the centuries and few "pure" racial types are found among the Indian population today.

India's ethnic diversity is accompanied by a complexity of culture that is unmatched anywhere in the world. India is less a country than a collection of countries, in the sense that there are many groups whose commitment to a regional cultural tradition is as great as, if not greater than, their identification with the nation. Thus one is a Bengali, a Tamil, a Punjabi, or a Gujarati. One speaks Bengali, Tamil, Punjabi, or Gujarati and shares in the literary, cultural, and historical traditions of the region. Each region has its own particular mix of religion, religious sects, castes, and economic and social relations that extends back over centuries.

Sizable Indian communities are found today in Nepal, Malaysia, Sri Lanka, and the Middle Eastern countries. Further afield, Indians have emigrated to South Africa, Fiji, the West Indies, the United States, Canada, and the United Kingdom.

### 3 LANGUAGE

Linguistic complexity is a distinguishing characteristic of Indian society. According to a Hindi proverb, "Every two miles the water doth change, and every four the dialect." The 2001 Census counted several hundred "mother-tongues." Even though this figure may include variants of the same dialect, or tongues spoken by only a small number of people, it does give some sense of the linguistic diversity of the region. Some 29 languages in India are each spoken by more than a million people.

Indian languages belong to four major linguistic families (i.e., groups of related languages that have a common ancestor). Austro-Asiatic languages (e.g., Munda, Ho, and Khasi) are spoken by tribal groups in central India and the northeastern hills. Bhotia and other languages in the mountain belt belong to the Sino-Tibetan linguistic family. Most Indians speak tongues belonging to the Aryan branch of the Indo-European family (e.g., Hindi and Bengali) or the Dravidian linguistic

family (Telugu, Kannada, Tamil, and Malayalam). The Aryan languages are found in northern India, while the Dravidian tongues are spoken in the South. Strictly speaking, "Aryan" and "Dravidian" are linguistic terms, though they are sometimes loosely used in the context of peoples or culture.

Hindi is the national language and primary tongue of 41.03% of the population. English has associate official language status and is widely used for national, political, and business purposes. In addition, India has 21 other official languages: Assamese, spoken by 1.28% of the population, Bengali (8.11%), Bodo (0.013%), Dogri (0.22%), Gujarati (4.48%), Kannada (3.69%), Kashmiri (0.24%), Konkani (0.24%), Maithili (1.18%), Malayalam (3.21%), Manipuri (0.14%), Marathi (6.99%), Nepali (0.28%), Oriya (3.21%), Punjabi (2.83), Sanskrit (0%), Santhali (0.63%), Sindhi (0.25%), Tamil (5.91%), Telugu (7.19%), and Urdu (5.01). Sanskrit is listed in the 2001 Census as the mother tongue of only 14,000 people, but it is widely studied as the classical language of North India. Tamil has recently been classified as a classical language. Urdu, while written in the Arabic script, when spoken sounds the same as Hindustani, a bazaar dialect of standard Hindi-Urdu developed in northern India.

Hindi is written in the Deva Nagari script that is the same as that used for Sanskrit. Many other languages, e.g., Gujarati and Punjabi, have their own scripts and alphabets, some derived from Deva Nagari (mainly in north India) and others, such as Tamil and Kannada, using the cursive scripts more common in the south.

### 4 FOLKLORE

The myths and folk heroes of the Indian peoples tend to be associated with specific religions or regional cultural traditions. Thus Hindus have the elaborate mythology and folklore associated with their deities and epic literature. Muslims revere their Sufi mystics, and the Sikhs have their martyred Gurus. Tribal groups have their own myths and legends. Many folk heroes are identified with specific regional folk traditions. A few historical figures such as Shivaji, the 17th-century Maratha leader who challenged Mughal power and carved out the last important Hindu empire in India, have achieved the status of heroes among Indian nationalists.

The freedom fighters involved in the struggle against British imperialism in India are viewed by many Indians as national heroes. Subhas Chandra Bose led the Indian National Army (INA), made up of Indian soldiers captured by the Japanese, against the British during World War II. Others, many of whom were jailed by the British, were supporters of Gandhi's civil disobedience movement. Mohandas Karamchand Gandhi, known as Mahatma ("Great Soul"), is surely one of the most influential world figures of the 20th century. Jawaharlal Nehru, the first prime minister of India, and his daughter Indira Gandhi (no relation to Mahatma Gandhi) are also among the most important Indian national leaders in the post-Independence era.

### 5 RELIGION

Few regions in the world show the religious diversity of India. Some 80.5% of Indians are Hindus, and certain Hindu values such as cow-protection are addressed in the Indian Constitution (Article 48). India, however, is a secular nation. Despite a rising tide of Hindutva (Hindu nationalism) that would like

*Indian models display wedding dresses during a press conference in Calcutta. (Deshakalyan Chowdhury/AFP/Getty Images)*

to see Hinduism become the state religion, the country prides itself on the freedom of religion guaranteed by its constitution. Religious minorities include Muslims (13.4%), Christians (2.3%), Sikhs (1.9%), Buddhists (1.5%), and Jains (0.5%). Among the remaining religious groups are Jews, Parsis (Zoroastrians), and animistic tribal peoples.

## **6 MAJOR HOLIDAYS**

India officially celebrates the holidays of all the major religious communities present in the country. Thus Hindu festivals observed as holidays include Shivratri (dedicated to the god Shiva), Holi (the spring festival), Janamashtami (birthday of the god Krishna), Dasahara (the festival of the goddess Durga), and Divali (the Festival of Lights). The Muslim Id festivals (Id-ul-Fitr and Bakr-Id) and Muharram are holidays. The Christian holy days of Good Friday and Christmas are also observed, as are the birthdays of the founders of Buddhism, Jainism, and Sikhism.

Two national holidays mark the recent emergence of India as an independent nation. Independence Day on 15 August, commemorates the day in 1947 that India achieved its freedom from colonial rule. Republic Day, held on 26 January, marks the inauguration of India as a Republic in 1950. Although the holiday is celebrated throughout the country, the most spectacular festivities occur in New Delhi, with an impressive military parade and cultural performances.

The birthday of India's greatest leader of modern times, Mahatma Gandhi, is observed as a national holiday. Born on 2 October, 1869, Gandhi became a leading figure in India's independence movement and saw his ambitions realized before his assassination by a Hindu extremist in 1948. People gather at the Samadhi (cremation site) of Gandhi in Delhi to offer wreaths of flowers, pay homage to his memory, and offer prayers in his name.

## **7 RITES OF PASSAGE**

Rites of passage for Indians are determined in broad outline by religion and in detail by caste, community, and region. As a predominantly Hindu population, most Indians are subject to customs and rites prescribed by the Hindu religion. For example, all Hindu groups have some form of naming and head-shaving ceremonies. Hindu males belonging to the higher castes undergo the important "Sacred Thread Ceremony" initiating them as a full member of their community. For Muslims, the circumcision of male children is the symbol of commitment to their religion, while for Christians it is baptism. Sikhs and Parsis have their own initiation ceremonies, and even tribal groups mark the passage from childhood to adulthood with certain rituals. Marriage customs conform to the norms of each community, as do methods for disposal of the dead. Hindus, Sikhs, and Buddhists cremate their dead, whereas Muslims and Christians inter their dead in cemeter-

ies. Parsis and some Buddhist groups in the Himalayas expose their corpses to vultures. Tribal funeral customs include both cremation and burial.

## **8 INTERPERSONAL RELATIONS**

Methods of greeting among Indians vary according to religion, social status, and the particular context of the meeting. A common greeting among Hindus is the “Namaste.” This means “Greetings to you” and is said while joining one’s own hands, palms together and held upright, in front of one’s body. In parts of India, the word “Namaste” is replaced with “Namaskar.” This form of greeting has the advantage that the persons meeting do not touch each other, which is important for Hindus. In the caste system, the mere touch of someone of a lower caste can cause one to become ritually polluted and require purification ceremonies to be undertaken. The Namaste allows one to greet a person without necessarily knowing his or her caste. It also allows one to greet a woman without touching her hand, which is considered impolite under certain circumstances. Nowadays, of course, shaking hands in the Western manner is becoming increasingly acceptable.

Another form of greeting is common between persons of unequal social standing. Children may greet their parents by bowing down and touching their feet. Pupils greet teachers in the same manner, and so do people meeting important religious figures. The person being greeted usually interrupts

the gesture before it is complete, implying that he or she is not worthy of such homage.

“Salaam” or “Salaam alaikum” (Peace be with you) is the typical greeting among Muslims, while the Sikh form of salutation is “Sat Sri Akal” (God is Truth).

## **9 LIVING CONDITIONS**

The general health of the Indian population has improved dramatically over the last half-century. Medical advances, immunization, and public health programs have raised the average life expectancy of the Indian to 64 years. However, this still lags behind the United States, where people can expect to live to 78 years of age. Leading causes of death in India include diseases of the circulatory system, infectious and parasitic diseases, respiratory diseases, and childhood diseases (measles, diphtheria, whooping cough). Some 125,000 cases of full-blown AIDS were reported from India in 2006, though this number is probably much higher, many cases being misdiagnosed or not reported at all. Inadequate sewage disposal, contaminated drinking water, and poor nutrition contribute to the health problems. Infant mortality rates are high, numbering 58 deaths per 1,000 live births (compared to 6.5 for the United States). The total fertility rate (i.e., the average births per woman of childbearing age in the population) is 2.9. The rate of natural increase of population is 1.6% per year. The last two demographic indices have been declining in recent years,

an encouraging sign that the rate of India's population growth is slowing. However, the country's large base population means that the number of new mouths to feed increases by roughly the number of residents of New York State (approximately 18 million people) every year.

Although nearly three-fourths (72.2%) of Indians live in rural areas, India contains some of the largest cities in the world. Greater Bombay [Mumbai] (over 18 million people), Delhi (over 15 million) and Calcutta [Kolkata] (c. 14.5 million) rank among the top 20 urban centers of the world. Yet India is essentially a country of villages. Rural house types, settlement patterns, construction materials, furnishings, and creature comforts vary greatly according to region and economic status.

Indian standards of living range from the most luxurious to the poorest in the world. Although the world of the ruling *Mahārājās*, with their lavish lifestyles, palaces, servants, and tiger hunts, is a thing of the past, the wealthy in India still live very comfortable lives. A growing middle class is sharing in this prosperity, with access to cars, televisions, VCRs, refrigerators, and other modern conveniences. By contrast, Indians are living and dying in the streets and slums of cities such as Bombay and Calcutta (where the late Mother Teresa, winner of the Nobel Peace Prize, was known for her work with the poor). Estimates of the percentage of the population living in poverty range from 25% to 40%, although this figure is dropping. Per capita income stands at us\$3,800 per year (2007). Ever since Rajiv Gandhi, with current Prime Minister Manmohan Singh as his Finance Minister, abandoned Nehru's socialist economic policies and "liberalized" India's economy in 1991, India's economy has been growing at a remarkable rate, averaging 8.5% from 2004–08. Economists have estimated 300 million Indians now belong to the middle class, one-third of them having emerged from poverty in the last 10 years, and if such growth rate can be sustained, the numbers of Indians living in poverty will decrease dramatically. At the current rate of growth, a majority of Indians will be middle-class by 2025. Nonetheless, poverty is still an issue for many Indians, especially in rural areas: a 2007 government report found that 25% of Indians lived on less than 20 rupees per day (c. \$0.50) with most working in "the informal labor sector with no job or social security."

India has 3,383,344 km (2,114,600 mi) of road, 54% of it paved. Construction of the "Golden Quadrilateral," when complete, will link India's four major cities, Delhi, Calcutta, Madras, and Bombay with high-speed, divided highways. Roads around Delhi are being improved for the Commonwealth Games, which are being held in that city in 2010. State-run and private bus services provide access to most parts of the country. The railway system, inherited from the British and further developed in the last 60 years, is a common means of long-distance travel today and, along with trucks, a major means of moving goods across the country. India's rail network is one of the densest outside of Europe. Since liberalization, a number of private airlines such as Jet Airways and Kingfisher Airlines are providing competition for the state-owned airlines, Air India and Indian Airlines. The government of India is undertaking a program of modernization of its major airports in conjunction with private companies.

## 10 FAMILY LIFE

Despite recent modernizing influences, the traditional joint family remains the norm among Indians. However, distinct differences in family structure and kinship patterns exist between northern and southern India. In the north, the family is patriarchal. A household consists of two or three generations of males and their dependents. In southern India, the joint family is matriarchal. It consists of one's grandmother and her brothers and sisters, one's mother and her brothers and sisters, and one's own brothers and sisters. The children of one's mother's sisters and the offspring of one's own sisters live in the household. The husbands of the women in the family live in the houses of their mothers, visiting their wives and children on occasion.

The first criterion in the selection of a marriage partner is caste. Although caste is Hindu in origin, virtually all South Asian groups (including Muslims and Christians) show its influence. Castes are endogamous groups, and as a rule one must marry within one's caste. After this, however, differences again appear between northern and southern Indians. In the north, marriage partners are usually unrelated and there are specific rules determining how close a blood-relationship is permitted. In southern India, however, cross-cousin marriage is the norm. The preferred match for a man is his maternal cross-cousin—his mother's brother's daughter. Virtually all Indian marriages are arranged and, although child marriage is prohibited by the Indian government, marriage at a young age is not uncommon. Marriages are performed according to the customs of one's community and invariably include payment of a dowry or bride-price. Marriage is essential for a woman, and any girl who is not married by a reasonable age is thought to have something wrong with her. A woman's role in Indian society is incomplete until she bears children, preferably sons. Traditionally, women have occupied an inferior social position in Indian society, although this is slowly changing as the country modernizes.

## 11 CLOTHING

The common dress for Indian men is the *dhoti*. This is a long piece of white cotton wrapped around the waist for half its length and then drawn between the legs and tucked into the waist at the back. In southern India, the chest is usually left bare, while in the north a shirt may be worn. Turbans or some form of headdress are common in northern India. The style of the turban often identifies the wearer as a member of a particular community (e.g., Pathan or Sikh) or as being from a particular region or village. The *kurtā*, a long tunic-like shirt, and the *pyjāmā*, loose baggy trousers, are also commonly worn, especially in urban areas. People wear leather sandals, a variety of locally made shoes, or even go barefoot. Because leather is considered unclean, shoes are always taken off before entering a temple. It is also polite to take off one's shoes before entering an Indian home.

Women typically wear the *sārī*, a length of cotton or silk cloth (nowadays synthetic fabrics are also used) wrapped around the waist, with one end left free and thrown over the right shoulder. The *choli*, a tight bodice that leaves the midriff bare, is worn under the *sārī*. Regional variations exist in their manner of wearing the *sārī*. In Maharashtra, for example, rural women draw one end of the *sārī* through the legs and tuck it into the waist at the small of the back. In some rural areas,

women do not wear the bodice, using just the end of the sārī to cover their upper body.

Regional variations in dress occur throughout India, reflecting differences in caste, community, and locality. In urban areas, however, Western-style clothing has become the norm, especially for males. Although women in cities, especially the younger generation, wear Western fashions, the sārī is still the preferred form of dress for most females.

## 12 FOOD

A typical Indian meal consists of around five or six dishes, served all at once on a *thālī*. This is a round metal tray or plate with a rim on it, on which are placed several little bowls (*katorīs*) to hold each individual dish. In some areas, food is served on banana leaves. No utensils are used. Food is eaten with the right hand, the left hand being used for personal hygiene and considered unclean.

Westerners tend to think of Indian food as “curry and rice,” but this does not do justice to the rich and varied cuisine of India. The term “curry” was used by Europeans to describe the spicy dishes they found in India, but curries do not necessarily have to be hot. The “heat” in Indian food comes from chilies, which were introduced into Asia by the Portuguese in the 16th century. Other spices commonly used include cumin, coriander, turmeric, black pepper, cardamom, and cloves. Curries can be made of meat, eggs, poultry, or vegetables and are eaten with lentils (*dāl*) and an assortment of pickles and chutneys. In northern and western areas, meals are taken with flat breads (*rotī*). These breads are replaced by rice (*chāwal*) in the wetter east and south. Yogurt (*dahī*) may be taken with the meal, which often ends with a variety of sweets (*mithāi*). Milk and milk products are an important part of the Indian diet. *Pān* or betel nut served with lime and wrapped in a betel leaf is commonly taken after a meal.

Regional cuisines are as diverse as the peoples and cultures of India. Mughal-style cooking is found in the north, while *dosās* (thin pancakes of rice-flour) and *idlis* (steamed rice-bread) are popular southern dishes. Madras is known for its fiery curries, while Bengal is famous for its fish dishes. Goan cooking shows the influence of its Portuguese past. Among Indians, food is as much a part of regional culture as dress and language.

As well as being a means of sustenance, food in India acquires ritual, religious, and even social dimensions. The Hindu view of the sanctity of the cow leads to an avoidance of beef, and many Hindus are totally vegetarian. Those Hindus who do eat meat are regarded as socially inferior, and low-caste groups try to raise their social status by abandoning meat-eating. Muslims, though meat-eaters, do not eat pork. Tribal groups avoid the flesh of animals that are their clan totems.

## 13 EDUCATION

The literacy rate among Indians seven years of age and over is 65.38% (2005). However, this figure masks considerable variations between males and females, urban and rural populations, and among different social groups. Primary education is free and, in most Indian states, compulsory. The poor quality of state-run secondary schools has led to an expansion of private (often English-language) schools that serve as feeders to institutions of higher education. There are numerous colleges and universities in India, some with excellent reputations.

Many of the graduates of the Indian Institutes of Technology (IITs) and Indian Institutes of Management (IIMs) are viewed as better trained than their contemporaries in the West and are highly sought after overseas.

## 14 CULTURAL HERITAGE

Indians are heirs to one of the oldest continuous cultural traditions in the world. South Asian civilization has its roots in the complex urban society that flourished along the Indus Valley some 5,000 years ago. Harappan traits such as worship of mother-goddesses or trees survive in modern India, especially in the Dravidian cultures of South India. However, much of India's cultural heritage is linked in some way to the later religions of India. It is to these, and especially to Hinduism, that one must turn to see the full flowering of the Indian artistic genius.

Hindu literature written in Sanskrit includes sacred texts such as the *Vedas*: the two great epics known as the *Mahābhārata* and the *Rāmāyana*; political treatises such as the *Laws of Manu*; and the works of the greatest Sanskrit playwright and poet, Kalidasa. Music and dancing are the subjects of a 3rd century AD work called *Nāṭya Śāstra*, which is the ancient authority for these art forms. Today, the main form of classical dance in India is Bharata Natyam, while Kathakali is a less formal dance from southern India. The Raga forms the basis of classical Indian music.

Indian architecture and sculpture are monuments to Hinduism and the other religious traditions of India. North Indian temples replicate the peaks of the Himalayas in their soaring towers. South Indian temples on the other hand, are pyramidal in shape and covered with elaborately carved figures from Hindu mythology. Famous examples of Hindu temples are the temple complex at Mahabalipuram (Tamil Nadu), the Khajuraho temples (Madhya Pradesh) with their erotic carvings, and the Sun Temple at Konarak (Orissa). Buddhists have their own religious monuments, with the cave paintings at Ajanta being among the most impressive. The temple city of Palitana in Gujarat and the white marble temples at Dilwara (Mt. Abu) in Rajasthan are examples of Jain temple-building in India. Although Islam's contributions are seen more in miniature painting than in architecture, the distinctive blend of styles known as Indo-Islamic or Indo-Saracenic architecture can be seen throughout northern India. The Taj Mahal, built as a mausoleum by the emperor Shah Jehan for his wife, stands as the greatest architectural achievement of Islam in India.

Not all of India's artistic accomplishments lie in the distant past. Rabindranath Tagore (1861–1941), a Bengali whose work was highly regarded in Western literary circles in the early decades of the 20th century, was awarded the Nobel Prize for literature in 1913.

## 15 WORK

Some 61% of India's labor force is engaged in agriculture, with many farmers being subsistence cultivators. Despite this, India inherited most of the subcontinent's industrial resources and ranks among the leaders of the world's developing countries in industrial output. India's industries range from nuclear power production and nuclear research to manufacturing garments for export. Economic growth in the first 40 years after independence was slow, hampered by restrictive government economic policies and an unwieldy bureaucracy. Liberaliza-

tion of the economy since 1991 under Manmohan Singh, Rajiv Gandhi's Finance Minister at the time, has seen faster growth, greater foreign investment, and expanding trade, although the direction and pace of economic change remains a matter of internal debate. The current rate of economic growth is 8.5% during the year ending March 2008, and at this rate a serious dent is being made in poverty in India. Economists estimate that, if this rate of growth can be sustained, poverty will be all but eliminated by the year 2025.

India's economy is diverse, encompassing agriculture, handicrafts, textile, manufacturing, and a multitude of services. Although nearly two-thirds of the Indian workforce still earn their livelihood directly or indirectly through agriculture, services are a growing sector and play an increasingly important role of India's economy. The advent of the digital age, and the large number of young and educated populace fluent in English, is gradually transforming India into an important "back office" destination for global outsourcing of customer services and technical support. There are many call centers in India, in locations such as Bangalore (Bengaluru) and Noida (near Delhi). Indian "techies" from the West are returning to tech centers such as Bangalore where, despite lower wages, they can live a life-style unattainable in the West.

But India still remains a major exporter of highly-skilled workers in software and financial services, and software engineering. Other sectors like manufacturing, pharmaceuticals, biotechnology, nanotechnology, telecommunication, shipbuilding, aviation, tourism, and retailing are showing strong potentials with high growth rates.

## 16 SPORTS

Chess is thought to have originated in India, and dice and card-playing are of considerable antiquity. Traditional sports include pastimes such as cock-fighting, camel-racing, and wrestling. Hunting (*shikār*) was a favorite sport among the upper classes. Kabaddī, team wrestling, is very popular. Children's games include kite-flying, spinning tops, yo-yos, and hobby-horses. Indians have enthusiastically adopted modern sports, with cricket and field hockey being the most popular. India participates in cricket at the international level, and although its field hockey team has recently fallen on hard times, for years it was a power in international competitions. Games such as soccer, tennis, badminton, squash, table tennis, and golf are also widely played.

## 17 ENTERTAINMENT AND RECREATION

Until recently, all radio and television in India was controlled by the government. Programming was limited largely to Indian productions and often described as "drab and unimaginative." One smash hit, however, was the serialization of the epic *Maharabharata* on television. The whole country stopped to watch the program. There are reports that trains would interrupt their schedules to stop at a station so that passengers and crew could watch the latest episode. The advent of satellite TV and availability of VCRs and videotapes have led to a change in viewing habits. Soap operas, sports events, and movies are the most popular television programs today.

India has the world's largest film industry. Regional language films are produced in centers such as Calcutta and Madras, but the center of the industry is Bombay. "Bollywood," as it is known, produces Hindi films that fill movie theaters in

cities all across India. The films tend to be melodramas, with much action, singing, dancing, and predictable plots. Film music is immensely popular. Film actors and actresses are pop idols and trend-setters, and their lives are followed with much interest. Few Indian filmmakers have achieved recognition outside of India, except for the late Satyajit Ray, who gained an international reputation.

India has a thriving, and relatively free, press, with newspapers and magazines published in Hindi and English as well as regional languages.

## 18 FOLK ART, CRAFTS, AND HOBBIES

Folk arts in India range from wall-painting to puppetry to regional music and dance forms. India is well known for its textiles, rugs and carpets, metalwork, bronzes, copper- and brassware, ivory and hard stone carving, pottery, woodwork, gemstones, and gold and silver jewelry.

## 19 SOCIAL PROBLEMS

Many of India's social problems are related to population. Despite efforts at population control, India will be the world's most populous nation sometime early in the 21st century. Existing problems such as poverty, high unemployment, illiteracy, and malnutrition can be expected to worsen, especially as over a third of the population (35.2%) is still under 15 years of age. Failure of the monsoon rains can cause famine and hardship for millions of people. An as yet unacknowledged problem is that of AIDS in India. Conservative estimates predict 1 million AIDS cases and 10 million people infected with HIV in India by the year 2000. The potential scope of the epidemic and its cost in resources and human suffering is staggering.

Another set of problems originates in the diversity of Indian society. Communal and sectarian unrest is common and ongoing. Groups in Assam, Kashmir, Punjab, Tamil Nadu, and other areas have been involved in armed conflict with the Union government, with demands varying from a greater degree of regional autonomy to outright secession from the Republic. The rise of Hindu fundamentalism on the political scene is seen by Muslims as a threat to India's commitment to secularism. It has resulted in violence between Hindus and Muslims and contains the seeds of further conflict. There is also conflict based on class distinctions. At independence, the Indian Constitution created three categories of disadvantaged groups that needed special representation and assistance. These were the Scheduled Tribes, the Scheduled Castes (mostly "untouchables"), and the Other Backward Classes (OBCs), underprivileged groups that did not fit into the first two categories. Attempts in 1990 to implement the recommendation of the Mandal Commission that 27% of central government jobs be set aside for the OBCs led to widespread unrest among caste Hindus. This "reservations policy" is as controversial in India as affirmative action policies are now in the United States. Demonstrations continue to occur both for and against, such policies. For example, in May 2008, an agitation, called by All India Gujjar Mahasabha, in support of the community's demand for Scheduled Tribe status in Rajasthan, resulted in violence, some deaths and disruption of traffic in Jaipur, Rajasthan State's capital, in the nation's capital, New Delhi, and in neighboring areas of northwestern India that have a strong Gujjar presence.

The BJP formed the national government from 1998 to 2004, with Atal Bihari Vajpayee as prime minister, when it shockingly lost a general election, some say by abandoning the principles of Hindutva or Hindu nationalism. The central government in 2008, with Manmohan Singh as prime minister, is formed by the United Progressive Alliance (UPA), a coalition of 12 political parties, led by the Indian Congress, but which only retains power with the support of the Left Front (which is not a part of the coalition), a group of Indian Communist parties. This has caused problems. For three decades, India has been under a nuclear trade embargo by the United States, primarily because it is not a signatory to the Nuclear Non-Proliferation Treaty. The United States has tended to favor General Pervez Musharraf and Pakistan as a result of their help in the War on Terror. In early 2006, however, President George W. Bush visited India and negotiated a treaty, highly favorable to India, which would allow for U.S. nuclear trade with India and co-operation in the areas of domestic nuclear development. However this treaty has to be ratified by the Indian Parliament, and the Left Front has threatened to withdraw its support from the government if the UPA were to bring the treaty to a vote. So, it seems that the treaty will die a natural death when Bush leaves office at the end of 2008.

Despite the problems of a weak central government and current charges of corruption in high places, Indians can approach the future with confidence. The country has survived the early decades of nationhood intact and, above all, with a continued commitment to the principles of democratic government. India is still a parliamentary democracy (the largest in the world), it has brought its birth rate under control, there is rapidly expanding middle class, its economy is flourishing, and, largely because of this, poverty is being rapidly eliminated.

## 20 GENDER ISSUES

Gender issues among the peoples of India arise largely from the nature of the societies found in the South Asian subcontinent. Buddhists and Christians espouse equality between men and women but, unfortunately, many adherents of these religions are of low caste converted from Hinduism and are treated very much as if they still belong to Hindu society. Even tribal societies, in which women have much greater equality and freedom than their counterparts in Hindu and Muslim societies, have been influenced by the societies amongst which they live.

Shariah (Islamic law), under which Muslims in India live, provides for differences between women's and men's roles, rights, and obligations. Muslim-majority countries give women varying degrees of rights with regards to marriage, divorce, civil rights, legal status, dress code, and education, but as a secular state, the Republic of India promotes the equality of men and women. The Constitution of India promotes equal rights and opportunities for men and women in the political, economic and social sphere, prohibits discrimination on the grounds of sex, religion, caste, or gender, empowers the State to take affirmative measures for women and provides for equality of opportunities in the matter of public appointments.

Despite this legal protection, women are generally powerless in the face of prevailing patriarchal traditions. Women lack power to decide who they will marry and are often married off as children. Legal loopholes are used to deny women inheritance rights. Women receive less health care than males.

Many women die in childbirth of easily prevented complications. Working conditions and environmental pollution further impairs women's health. In recent years, there has been an alarming rise in atrocities against women in India, in terms of rapes, assaults, and dowry-related murders. Fear of violence suppresses the aspirations of all women. Female infanticide and sex-selective abortions are additional forms of violence that reflect the devaluing of females in Indian society. Families are far less likely to educate girls than boys, and far more likely to pull them out of school, mainly to help out at home or in the fields. Women work longer hours and their work, usually as unskilled labor in agriculture, is more arduous than men's, yet their work is unrecognized. And, in 2006, a UN survey reported malnutrition among children in India is increasingly becoming a problem because tradition requires that women eat last, even when pregnant and lactating. Malnourished women give birth to malnourished children, thus perpetuating the cycle.

India has a long history of activism for women's welfare and rights, which has increasingly focused on women's economic rights. A range of government programs have been launched to increase economic opportunity for women. For instance, the National Commission for Women was set up as a statutory body in January 1992 under the National Commission for Women Act of 1990 to review the constitutional and legal safeguards for women, to recommend remedial legislative measures, to facilitate the redressing of grievances and to advise the government on all policy matters affecting women. However, there appear to be no existing programs to address the cultural and traditional discrimination against women in India.

# INDO-FIJIANS

**PRONUNCIATION:** in-do-FEE-jee-uhns

**LOCATION:** Fiji

**POPULATION:** 311,591 (38% of total Fijian population) in 2007

**LANGUAGE:** Fiji Hindustani (Fiji Hindi); Tamil; Punjabi; Gujarati; English

**RELIGION:** Hinduism; Islam; Christianity

## 1 INTRODUCTION

The majority of the present-day Indo-Fijians are the descendants of indentured laborers who were brought to Fiji during the 19th century. The Indian indenture system was established to provide labor for British colonies after the abolition of slavery in Britain and her colonies in 1833. The first indentured laborers from India arrived in Fiji in 1879 and the indenture system in Fiji lasted until 1916. Other immigrants from India arrived in Fiji in the early 20th century, although they were not indentured laborers. Most of these immigrants were Punjabi or Gujarati, from northwestern India, while a number of the indentured laborers had been from southern India. The Gujaratis and Punjabis opened small shops in the coastal towns of colonial Fiji. The Indo-Fijians are part of the South Asian Diaspora that includes the Indian Ocean island of Mauritius, Trinidad in the Caribbean, Guyana in South America, South Africa, and North America.

## 2 LOCATION AND HOMELAND

The Fijian archipelago is located in the western Pacific Ocean. The climate of Fiji is tropical with plenty of rainfall, sunshine, and high humidity. The largest islands within the 800-island group are Viti Levu and Vanua Levu. These two islands account for about 85% of the total land mass of Fiji. Around 100 of the islands in the Fijian chain are either inhabited or inhabitable. The vast majority of Indo-Fijians reside on Viti Levu.

According to the most recent population statistics, Indo-Fijians make up around 37% of the total population in Fiji. At the time before the military coup of 1987, Indo-Fijians made up close to 48% of the total population: a significant portion of the decrease is attributable to immigration to Australia, Canada, and the United States. It has been estimated that over 100,000 Indo-Fijians have left the country since the first Fijian-backed coup in 1987. In the 1960s, Indo-Fijians outnumbered the indigenous Fijians.

## 3 LANGUAGE

The overwhelming majority of Indo-Fijians speak a language referred to as Fiji Hindustani, or Fiji Hindi. A very small number speak other south Asian languages such as Tamil, Gujarati, Punjabi, Malayalam, and Telugu. Fiji Hindustani developed out of contact between speakers of different dialects of Hindi/Urdu and their overseers on the colonial-era sugar plantations. Although the Indian laborers could communicate fairly well across dialect boundaries, they still encountered some idiosyncratic problems. Over time, a unified dialect emerged that became the language of Indo-Fijian identity. There have been several academic studies of Fiji Hindi, and there are existing course materials available in many university libraries. Some Chinese and Fijians speak a simplified form of Fiji Hindi that

differs from that spoken by the Indo-Fijians themselves. Indo-Fijians also speak English, and many older Indo-Fijians also spoke Pidgin Fijian when they were younger.

## 4 FOLKLORE

The folklore of the Indo-Fijians derives from traditional Indian folklore. Important cultural epics such as the *Râmâyana* and the *Mahâbahârata* are read, chanted, and recounted by Indo-Fijians at ceremonies and celebrations. The epic drama of Rama and Sita is performed at most religious festivals.

## 5 RELIGION

The Indian laborers brought their religions with them to Fiji. Hinduism and Islam both exist on Fiji today, alongside Christianity and indigenous forms of Fijian religious practice. The majority of indentured laborers were Hindu, and as a result, Hinduism is the major religion among Indo-Fijians. A total of approximately 77% of all Indo-Fijians follow Hinduism. The caste system is an important component of Hinduism as it is practiced in India. The caste system is one of ascribed status, whereby an individual is born into a particular socio-occupational grouping. There are restrictions on the interactions between certain groups, especially in the areas of marriage, touching, and the sharing of food. The system of indenture fundamentally modified the Hindu caste system in Fiji. Restrictions were relaxed and Indo-Fijians were able to interact more as a group. The caste component of their religion was almost completely obliterated. Temples and mosques have been constructed for religious gatherings and rituals.

Hinduism is a polytheistic religion. Hindus believe in a variety of deities, each with specific attributes, domains, functions, and powers. There are sects that are devoted to the worship of a particular deity, and shrines are created to provide offerings for the deity. These practices continue among the Indo-Fijian communities in Fiji and abroad. Although there has been considerable Christian influence in Fiji in terms of missions and mission schools, the Indo-Fijian population has not been very receptive to conversion. Less than 5% of the Indo-Fijian population is Christian.

## 6 MAJOR HOLIDAYS

Major holidays for Indo-Fijians center on the religious calendars. Hindus celebrate Diwali (the festival of lights) in early November and Holi (a festival of singing and light-hearted play). Families also sponsor *pujas*, which are ceremonies that include prayers, offerings, and feasts. Pujas take place on birthdays and other special occasions when it is appropriate to give thanks for good fortune and blessings. Muslim Indo-Fijians observe the fasting and prayer practices during the month of Ramadan. Other secular holidays include the Queen's Birthday, Boxing Day, and Fiji Day.

## 7 RITES OF PASSAGE

Indo-Fijians perform rituals at important transitional stages of the life cycle: birth, marriage, and death. The exact nature of these rituals is dictated by the religious faith of the families involved.

## 8 INTERPERSONAL RELATIONS

The standard greeting in Fiji Hindi is *namaste*. This greeting derives directly from Hindi as spoken in India.

Dating was unknown among unmarried Indo-Fijians until late in this century. Marriages were always arranged, as they are in most Indian communities throughout the world. Arranged marriages still continue now, but dating is seen as a means to create a marriage. Interracial dating among Indo-Fijians and Fijians is disapproved of by both groups, though Indo-Fijians do have dating relationships with other non-Fijians.

## 9 LIVING CONDITIONS

Fijian law dictated that non-Fijians could not live in Fijian villages. This established a precedent for segregation between the Fijians and Indo-Fijians in Fiji. Indo-Fijians established their own communities or moved to the coastal towns, which would later become the centers of commerce and trade that would provide for the economic prosperity of the Indo-Fijians.

Western-style housing made from concrete blocks or wood is the preferred style of housing for Indo-Fijians. Wattle and daub houses were built by the first waves of indentured laborers to Fiji.

## 10 FAMILY LIFE

In most traditional societies of India, marriages are arranged by the parents of the prospective bride and groom. In the most extreme cases, the couple had no say in the matter whatsoever. Caste distinctions and restrictions guided the arranged choices in most cases. In colonial Fiji, caste distinctions were broken down and became much less of a factor in marriage negotiations. Men greatly outnumbered women in the colonial period. In the present day, couples have more choice in their selection of mates. Male offspring generally inherit the majority of their parents' property and are expected to divide it among themselves.

## 11 CLOTHING

Indo-Fijians men have adopted Western-style trousers and shirts for some time now. Some women, however, still wear the traditional saris (a garment of draped cloth). Older women in particular only wear saris. Indo-Fijian women, like Indian women almost everywhere, are adorned with jewelry.

## 12 FOOD

Indentured Indian workers brought their styles of cooking and some of their food crops with them to Fiji in the 19th century. Roti, a staple bread served with every meal, and rice and curry dishes form the basis of Indo-Fijian cuisine. The traditional eating utensils are the hands. Pollution taboos require that only the right hand be used when eating; the left hand remains in the person's lap. Roti is used like an eating utensil to scoop up pieces of food and rice.

Indo-Fijian immigrants to Australia have opened restaurants that are popular with Indians, Australians, and Indo-Fijians alike. The spices and the use of coconut products in many of the curries belie the south Indian ancestry of many of the Indo-Fijians.

## 13 EDUCATION

Formal education for the children of indentured Indian laborers in Fiji did not begin until 1898. These schools were opened by the Catholic and Methodist missionaries who had also opened mission schools for the Fijian children much earlier. Indo-Fijians stress the importance of education with their children and many go on to complete advanced degrees at universities and colleges abroad.

## 14 CULTURAL HERITAGE

Traditional music and film music are both important in Fiji among Indo-Fijians. Almost all of the cultural entertainment that Indo-Fijians consume is produced outside of Fiji. The importation of Indian film music provides the latest hits from the most popular film stars of India. Most shops carry a wide selection of cassettes and videos, along with imported Indian foods. Traditional music and dance are also performed in certain contexts.

## 15 WORK

After the period of indenture, Indo-Fijians began to specialize in certain occupations in Fiji. They grew sugar cane, which was and still is an important cash crop, controlled transportation, and also were in charge of most of the craft and retail trade. Although they held little land, the Indo-Fijian population acquired control of the Fijian economy. This situation did not please the traditional Fijian chiefs and ultimately led to the 1987 military coup. The majority of those Indo-Fijians that left following the coup were shop owners and other retail merchants and bankers.

## 16 SPORTS

Cricket is a popular spectator and participant sport among Indo-Fijians. Other sports that have large followings in Fiji, like rugby, are not as important to Indo-Fijians.

## 17 ENTERTAINMENT AND RECREATION

Traditional south Asian forms of entertainment, including classical forms of music and dance, are enjoyed and practiced within the Indo-Fijian community. Music and dance academies have also been established by the Indo-Fijians that have left Fiji and moved to Sydney, Australia.

## 18 FOLK ART, CRAFTS, AND HOBBIES

Rural folk arts accompanied those south Asians that came to Fiji as indentured laborers. Artistic specialization was caste-associated in India and few ascribed artists were present in the early society. On the plantations, there was little time for the production of painting and sculpture. Pottery production and the painting and sculpting of religious images for local consumption were minimal during the early stages of Indo-Fijian settlement history. Nowadays, religious images and other Indian products are imported directly from India.

## 19 SOCIAL PROBLEMS

Indo-Fijians still face difficulties living in Fiji. Although relations between the Indo-Fijians and Fijians have improved considerably since 1988, there is still resentment and anger on both sides. The coup adversely affected the tourist industry, which has to yet regain the ground it had prior to the coups.

The exodus of Indo-Fijians resulted in loss of over one-third of the nation's doctors, one-half of its lawyers, and a great number of teachers and nurses.

## <sup>20</sup> GENDER ISSUES

Many occupations in Indo-Fijian society are traditionally held by males only. Musicians, religious functionaries, and cooks for public functions like weddings and pujas are typically male. There is a marked preference for male offspring since daughters incur more costs at marriage, and also leave the family at marriage to live with their husbands. Male children are also usually given much more freedom and independence than are female children. Like the societies in India from which Indo-Fijian society sprang, descent is traced through the father's line and offspring become members of the patriline.

The cultural construction of gender in Indo-Fijian society is influenced by the conceptualization of gender in Hinduism. While in Indo-Fijian society there are two recognized gender categories, male and female, in the Hindu pantheon these two categories are mixed and transformed. In Hindu myths, there are several accounts of deities who transformed genders, who are bisexual, and who are transsexual and transgendered.

The onset of menstruation marks puberty for females in Indo-Fijian society. Depending on the family and the sect of Hinduism that the family follows, rituals may follow a girl's first menstruation and a set of restrictions will be placed upon her during her menstrual periods. Many of the strict observances that were part of rural life in India have been relaxed in Indo-Fijian society. However, for rural families, the observances can still greatly restrict the movement and actions of menstruating women.

For both males and females, adulthood is symbolized by marriage. The state of marriage is characterized by increasing responsibilities to family and work. By middle age, children should be grown and married, with married sons perpetuating the father's lineage.

# INDONESIANS

**PRONUNCIATION:** in-do-NEE-zhuns

**LOCATION:** Indonesia

**POPULATION:** 238 million

**LANGUAGE:** Bahasa Indonesia (official language); otherwise, the languages spoken by the various ethnic groups

**RELIGION:** Islam (88%); Protestantism (5%); Catholicism (3%); Hinduism (2%); Buddhism (1%)

**RELATED ARTICLES:** Vol. 3: Achenese; Ambonese; Balinese; Banjarese; Batak; Bugis, Makassarrese, and Mandarese; Javanese; Vol. Madurese; Malays in Indonesia; Minahasans; Minangkabaus; Ngaju Dayaks; Niasans; Sasak; Sumbanese; Sumbawans

## <sup>1</sup> INTRODUCTION

Who are the Indonesians? This is no easier a question than "Who are the Americans?" Although administration and mass education have made all but the most isolated peoples of Indonesia aware of being "Indonesian," it is still true that as one moves outwards from the national capital, Jakarta, into the rural areas where almost 55% of Indonesians still live, an individual's ethnic group (*suku bangsa* in the national language) determines more and more his or her identity and way of life. By one estimate, there are more than 250 distinct cultural groups (*sukus*), speaking as many as 700 mutually unintelligible languages, and representing a wide range of physical types. Striving to maintain a delicate balance between preserving each *suku's* distinctive heritage and propagating a modern, development-oriented national culture, the republic takes as its motto, "*Bhinneka Tunggal Ika*," an Old Javanese expression meaning "The Many Are One."

In addition to being crossed by the world's prime trade routes, the archipelago was itself the source of the world's most coveted commodities: spices. Beginning as early as the 2nd century AD, leaders who controlled the flow of trade goods and the production of rice (especially in Java and Bali) established kingdoms whose civilizations freely integrated foreign influences with indigenous traditions. For the antecedents of their nation, Indonesians look beyond Dutch colonialism to the greatest of those Hindu-Buddhist states, the empires of Srivijaya (South Sumatra, 7th–12th centuries) and Majapahit (East Java, late 13th–late 15th centuries), which stood as overlords of many lesser kingdoms in the archipelago.

In time, these same trade routes also introduced Islam and Arabo-Persian culture. From the late 13th century until the early 17th century, kingdom after kingdom converted to Islam. Beginning in the early 16th century, the spices of the Moluccas and the stranglehold the Malayan port of Malacca, Srivijaya's successor, held on international commerce attracted first the Portuguese and Spaniards and later the Dutch and English. The modern state of Indonesia had its beginnings in a scattering of fortified outposts established by the Holland-based VOC (Dutch East India Company) in the early 17th century. The VOC eventually succeeded in excluding European competitors from the spice trade and in dominating native rulers, but not without getting mired in a territorial expansion, which would bankrupt it by the end of the 18th century.

By the 1830s, the modern Dutch colonial state was founded, initially as a royal monopoly intent on squeezing as much prof-

it as possible out of Java's peasants under the infamous Cultivation System. Over the next century, the power of this state and of a global capitalism hungry for the Indies' sugar, oil, rubber, and other natural riches expanded throughout the archipelago and penetrated deeper into the lives of more and more indigenes. It was within the framework of a common Dutch administration and European-style education that in the early years of the 20th century a small but rapidly growing group of "natives" began to imagine a community encompassing all the archipelago's peoples and to struggle to free an "Indonesian nation."

In early 1942, the Japanese, fresh from defeating the Americans and British elsewhere in Southeast Asia, took the Netherlands Indies with hardly any resistance from the Dutch; while brutally exploiting the colony for the resources needed by its own war effort, the new occupier gave Indonesian nationalist leaders, suppressed under the Dutch since the 1920s, opportunities to mobilize the population. On 17 August 1945, after the atomic bombings of Hiroshima and Nagasaki, the two most prominent, Sukarno and Hatta, proclaimed Indonesian independence. It would take years of bloody struggle before the re-

turned Dutch formally recognized the Indonesian republic on 17 December 1949.

In the 1950s, an experiment with parliamentary democracy failed amid the economic chaos produced in the previous two decades by world depression, world war, anti-colonial revolution, and post-revolutionary rebellions. President Sukarno attempted to restore stability through "Guided Democracy," a highly personalized style of rule wherein Sukarno's charisma was supposed to reconcile the differences among increasingly antagonistic political parties (Muslim, secular nationalist, and Communist) and a politicized army. As hyperinflation drove millions to the edge of starvation by the mid-1960s, this political competition intensified, sharpening rural conflicts over land. On the night of 30 September 1965, leftist junior officers abducted and killed six prominent generals. Major General Suharto stepped in to save the nation from what the military termed a "Communist coup," eventually forcing the left-leaning Sukarno to hand supreme power over to him on 11 March 1966. A nationwide bloodletting followed the coup and counter-coup, one of the 20th century's worst: local vigilantes under army sponsorship massacred as many as 400,000 Communists,

leftist nationalists, and the victims of local mass “settling of scores.”

By 1997, after more than 30 years of Suharto’s “New Order,” Indonesia had gone from being an economic “basket case” and diplomatic “renegade”/“pariah” to becoming a favored destination for foreign investment and a regional power whose voice carried ever more weight. However, social changes generated by rapid development were already threatening the stability of the very authoritarian system that had fostered economic growth. Despite massive corruption (most notoriously that of Suharto’s own children) and pervasive repression of labor activism and other opposition, the general population seemed willing to recognize the regime’s legitimacy as long as it delivered rising standards of living. When the Asian/global emerging markets financial crisis of 1997–98 threw millions of Indonesians into poverty, massive popular protests forced Suharto to resign. The sudden end of the New Order regime unleashed interethnic and interreligious conflicts that government suppression (as well as manipulation) had only intensified (riots against ethnic Chinese, including murder and rape, drove many to emigrate). In many parts of Indonesia, as the nation began experimenting with shifting more power into the hands of local governments, Christianized indigenous communities and Muslim transmigrants shed each other’s blood, the latter often at the instigation of military factions and of international radical Islamist networks.

Since 1998, economic growth has resumed. The unemployment level, however, has not been substantially reduced and food and fuel prices are rising, making the lot of the poor even harder. Corruption, moreover, remains a massive problem: according to Transparency International, in 2007 Indonesia ranked 143 in a scale of 179, the same as Russia and only slightly better than Angola and Nigeria. Nonetheless, democracy has taken root, with free parliamentary elections held for the first time in almost four decades in 1999 and free direct presidential elections in 2004 (with an impeachment in between). The sequence of Indonesia’s post-Suharto presidents represents the contemporary political spectrum: Muslim technocrats (B. J. Habibie), moderate Islamic parties (Abdurrahman Wahid), Sukarnoist secular nationalists (Megawati Sukarnoputri), and the military (ex-general Bambang Yudhoyono). Tensions persist, inherent in the discrepancies between Indonesia’s realities and the ideals embodied in the Pancasila (the Five Principles), the state ideology: (1) belief in one Supreme God; (2) a noble and civilized humanity; (3) the unity of Indonesia; (4) democracy guided by the principles of consensus and representation; and (5) social justice for the entire Indonesian people.

## **2 LOCATION AND HOMELAND**

In the Indonesian national language, the usual expression for the “homeland,” *Tanah Air Kita*, translates as “Our Land and Water.” This phrase expresses most succinctly the central fact of Indonesia’s geography: the country consists of more than 17,000 islands, of which 6,000 are permanently inhabited (the total land area equals that of Mexico). The principal islands and island groups are Sumatra, Java, Bali, the Lesser Sundas (in Indonesian, *Nusa Tenggara*, the “Southeastern Islands,” including Lombok, Sumbawa, Flores, Roti, and Timor), Irian Jaya (Indonesian New Guinea), the Moluccas (including Ambon and Halmahera), Sulawesi, and Kalimantan (Indonesian Borneo).

The extraordinary fertility of much of the country’s soil derives from the fact that the archipelago belongs to the “Ring of Fire,” which circles the Pacific Ocean with a chain of insular and continental volcanoes. Indonesia’s islands straddle the equator in a broad belt, which is actually longer than the east-west span of Europe or the continental United States. Proximity to warm water ensures that the overall climatic temperature varies little, remaining hot and humid all year round. Most of Indonesia experiences only two seasons: a dry season and a wet season. In January and February for western Indonesia, and April to July in the Moluccas, the monsoon winds bring torrential rains.

Indonesia, with its 238,000,000 inhabitants (September 2008 estimate), is the fourth-most populous country in the world (after China, India, and the United States). The most striking characteristic of Indonesia’s population is its radically uneven distribution: Java, whose area (about that of New York State) amounts to no more than 7% of the Indonesian total, possesses nearly 60% of the population, and population densities overall vary from 980 people per sq km (1,550 per sq mi) in Central Java to less than 12 in Central Kalimantan and 6 in Papua. Because of the government’s vigorous promotion of contraception over the past three decades, the population growth rate has been reduced to 1.18% per year. Nonetheless, the population (33.6% under age of 18) is still predicted to increase by nearly a quarter in the next four decades, reaching 294 million by the year 2050. The population, moreover, is becoming increasingly urbanized: the proportion of Indonesians living in cities rose from only 30% in 1990 to 45.6% in 2003 and is estimated to increase to 67.7% by 2030. Teeming with 15.1 million people (12,635 people per sq km [2000]) and sprawling over a vast stretch of coastal northwestern Java, the urban agglomeration centered on Jakarta, Indonesia’s capital, ranks as the world’s 14th most populous megacity, ahead of Beijing and London. Indonesia possesses seven other cities with populations of over a million; of these cities, Surabaya, Medan, and Makassar (Ujung Pandang) serve as regional centers for east Java/eastern Indonesia, Sumatra, and eastern Indonesia respectively.

Throughout Indonesia, rapid population growth has increased human demands on land and water, resulting in severe ecological problems: deforestation (with its inevitable companions, soil erosion, river siltation, reef death, and massive wildfires spewing heavy smog that affects not only western Indonesia but also Malaysia and Singapore); water pollution from sewage, pesticides, and offshore drilling; and depletion of fishing stocks. Ironically, “transmigration,” the government-organized transfer of landless peasants from Java and Bali to sparsely peopled regions of Sumatra, Kalimantan, Sulawesi, and Indonesian (western) New Guinea (Papua, formerly Irian Jaya) has all too often introduced a method of agriculture that is ruinous of the local soils.

## **3 LANGUAGE**

Although Indonesians speak between 250 and 700 distinct mother languages, there is only one official language of government, commerce, education, and mass media: Bahasa Indonesia (literally, the “Indonesian language”), a dialect of Malay. Although Malay is the mother tongue of less than 10% of the population, forms of Malay had long been in use throughout the archipelago as a medium of interethnic communica-

tion, a fact recognized by the Dutch colonial administration and by Indonesian nationalists' 1928 "Youth Oath" (*Sumpah Pemuda*).

For the majority of Indonesians, Bahasa Indonesia is the language of the public sphere, while a regional language is used for private, family, and local community life. Outside of Jakarta, where 90% of households report Bahasa Indonesia as the primary language of the home, monolingualism in Bahasa Indonesia is growing rapidly in the major multiethnic cities of the archipelago, such as Medan and Ujung Pandang, as well as in regions of traditionally great linguistic diversity, such as the Minahasa area of North Sulawesi and many islands in the Moluccas.

While Malay was and (to a limited extent) still is written in Arabic script, Bahasa Indonesia uses a Latin script. In 1972, a spelling reform was promulgated to unify the orthographies of Bahasa Indonesia and Bahasa Malaysia.

Except for several separate families of Papuan languages spoken in Irian Jaya and some other eastern islands, the tongues spoken in Indonesia belong to several branches of the Austronesian language family. This language family includes the closely related languages of Madagascar, Malaysia, and the Philippines, as well as the more distant tongues of Melanesia, Micronesia, Polynesia, and aboriginal Taiwan. Austronesian languages were brought by Southern Mongoloid farming and seafaring peoples who entered Indonesia from the Philippines beginning 5,000 to 4,000 years ago. However, the farther east one travels in the Moluccas and the Lesser Sundas, the more pronounced becomes the Papuan genetic and linguistic legacy.

The major ethnolinguistic groups in Indonesia were as follows (population figures from the 2000 census, whose criterion for membership in an ethnicity was self-identification, supplemented by estimates from the 1990s if these are significantly different):

*Java:* Javanese (83.9 million people, in the center and east, 41.7% of the national population, the first largest ethnic group, western Java's 4.1 million Bantenese and 1.9 million Cirebonese, who speak dialects of Javanese, were counted as separate ethnicities in the 2000 census); Sundanese (31 million, in the west, 15.4% of the national population, the second largest ethnic group); Madurese (6.7–14 million in the east and on the nearby island of Madura); and Betawi (5 million), the "indigenous" people of Jakarta ("Batavia" under the Dutch), descended from slaves settled there by the VOC.

*Sumatra:* Acehese (3 million, on the far northern tip); Gayo (in the highlands immediately south of the Acehese); Toba Batak and Dairi Batak (respectively, 2 million and 1.2 million, in the highlands of the north, other Batak subgroups are the Karo, Mandailing, Angkola, and Simalungan, all groups total 6.1 million); Minangkabau (5.5–7.5 in the west); Nias and Mentawai (on islands off the west coast); Rejang and Lampung (respectively, 1 million and 1.5 million in southernmost Sumatra); and Malay (7–10 million, the third largest ethnic classification, scattered from the east coast of Sumatra through the Riau archipelago and on to the coasts of Kalimantan; also the dominant population of West Malaysia and present on the coasts of East Malaysia

and in Brunei and Singapore; the Riau-Johor dialect is the basis of Bahasa Indonesia and Bahasa Malaysia).

*Kalimantan:* Banjarese (3.9–5 million people in southeastern Kalimantan); and a great diversity of inland, animist peoples generally known as "Dayak" but who can be subdivided into such distinct groupings as the Ngaju, Maanyan, Ot Danum, Penan, and Kenyah.

*Sulawesi:* on the southwestern peninsula, Bugis (5 million in South Sulawesi), Makassarese (2 million), and Mandar; in the central highlands, a great diversity of groups, of which the best known are the Sa'dan Toraja and Pamona; on the northern peninsula, the Tomini, Gorontalo, Bolaang Mongondow, and the nationally prominent Minahasa; and in the east and on offshore islands, the Mori, Bungku, Muna, and Butonese.

*The Lesser Sundas* (only the better-known groups, names roughly corresponding to islands except as noted): Balinese (3–4 million people); Sasak (2.6 million, on Lombok); Sumbawans; Bimanese; Sumbanese; Savunese; on Flores, Manggarai, Ngada, Endenese, Sikanese; and on Timor, Tetum, Atoni, Helong; Rotinese.

*The Moluccas:* Non-Austronesian, Ternatans; Tidorese; and in northern Halmahera, Tobelorese, Galelarese, and other small groups; Austronesian, in southern Halmahera, small language groups such as Sawai; in the southern islands, Tanimbarese, Aru, and Kei; and the most important culture in the central islands, Ambonese.

*Papua (Irian Jaya):* although this province is home to less than 1% of the national population, the number of mutually unintelligible speech forms there may well approach the number in all the rest of the archipelago. Austronesian languages are spoken along the north and west coasts, while Papuan languages are spoken elsewhere (e.g., Asmat and Dani).

*Chinese:* numbering 1.7–7.5 million, they form the most important "nonindigenous" group (though most have resided in Indonesia for generations). The great majority are urban, although there are sizable rural populations in West Kalimantan and in the Riau Archipelago. Chinese-Indonesians are far from homogeneous, divided between the nonindigenized and the indigenized (i.e., acculturated to various local societies, the most prominent example being the *peranakan* of Java) as well as among home-region language groups (Hokkien, Teochiu, Cantonese, and Hakka). Under both colonial and post-colonial regimes, the Chinese have been set apart from the indigenous population. They are both granted privileges and subjected to discrimination and controls. Their economic prominence and cultural distinctiveness have long been the target of popular resentment; the 2000 census likely under-reports the number of Chinese because many Chinese were reluctant to identify themselves as such.

#### Names

Practices of naming vary from ethnic group to ethnic group as well as across class and religious lines. The most commonly encountered type of name is an Arabic one associated with Islam.

*Indonesian workers paint traditional Javanese textile, batik, in central Java. (AP Images/Tatan Syuflana)*

On Java, however, names of Sanskrit origin are favored, either alone or in combination with Arabic ones. Similarly, throughout the country, Christians add European names to names from their own ethnic languages. Outside of a few suku, such as the Batak and the Minahasa, family names are not used. In recent decades, Chinese have been under pressure to adopt “Indonesian” names for official purposes; in keeping with their own traditions, Chinese often pass on these adopted names as surnames to their children.

In general, Indonesians are fond of nicknames, usually based on the last syllable of the full name, e.g., the male name “Hermawan” becomes “Wawan,” or the female name “Hermawati” becomes “Titi.” On the other hand, etiquette requires that titles be used at all times to indicate respect. In Bahasa Indonesia, one addresses persons of greater age or status with the word “Bapak” for men and “Ibu” for women (literally, “Father” and “Mother,” but meaning “Sir” and “Madam,” and used instead of words for “you,” which imply the speaker’s equal or superior rank). The shortened forms “Pak” and “Bu” precede names and nicknames.

#### 4 FOLKLORE

The nationalist movement and, later, the central government have honored a long list of “national heroes,” who are commemorated not only in monuments but also in pictures hung in elementary school classrooms and in the names of streets, airports, universities, and other public institutions. Below are a few of the best-known figures:

Gajah Mada, the 14th-century Majapahit prime minister who is reputed to have prefigured Indonesian nationalism by vowing not to rest until he united the entire archipelago; the Javanese prince Diponegoro (1785–1855) and the Minangkabau cleric Imam Bonjol (1772–1864) who led an armed resistance to Dutch power; and Raden Ajeng Kartini (1879–1905), a Central Javanese noblewoman who advocated modern education and women’s emancipation, and who is revered as a pioneer of Indonesian nationalism.

#### 5 RELIGION

Religion plays a central role in defining individual identity and community life throughout Indonesia. One’s religious affiliation is an essential fact noted on all official documents, including identity cards. All Indonesians must register as adherents of one of five recognized religions: Islam, Protestantism, Catholicism, Hinduism, or Buddhism. Atheism, associated with the banned Communist movement, is not an option. An elaborate bureaucracy oversees the operations of each of the five religious communities. No Indonesian Muslim may leave for the pilgrimage to Mecca (*Hajj*) without joining an official travel group (to avoid this constraint, some Indonesian Muslims depart for Mecca from other countries, such as Egypt). Legislation discourages marriage between members of different religious communities: one of the prospective partners must officially convert to the religion of the other. In the interests of confessional harmony, religious communities are forbidden to seek converts from each other’s memberships, though they are

welcome to proselytize among peoples “who do not yet have religion,” e.g., animist tribespeople or many ethnic Chinese.

The vast majority (88%) of the population adheres to Islam, making Indonesia the largest Muslim nation on earth, with more Muslims than all the Arab countries put together. Practice ranges from “purist” (conforming to the standards of Middle Eastern orthodoxy) to “syncretist,” including a wide range of pre-Islamic beliefs, especially characteristic of much Javanese Islam (for *kebatinan*, Javanese mystical sects, which often distinguish themselves from Islam, see **Javanese**). Among purists, there is a further distinction between “traditionalists” and “modernists,” the former supporting and the latter rejecting local Muslim practices, as well as being open to techniques of Western education and organization.

Protestantism claims 5% of the population. Although the VOC was by no means a missionary enterprise, some populations associated with the Dutch converted to Calvinism: Minahasa, Ambonese, and Indos (Eurasians). In the 19th century, the colonial government permitted Protestant proselytization among the remaining non-Muslim peoples, with the most significant successes among the Batak of North Sumatra and peoples of Central Sulawesi. Catholicism (3%) was first introduced by the Portuguese in the 16th century; Flores and Timor are surviving enclaves. Missionary work in the 19th–20th century has propagated the religion in West Kalimantan and Papua. Especially in the last few decades, great numbers of Chinese have converted to either Protestantism or Catholicism.

Hinduism (2% of the population) in Indonesia means almost exclusively the religion of Bali, which is not a direct transplant of the Indian religion but rather a synthesis of indigenous and Indian elements. In addition, some ethnic groups have succeeded in legitimizing their own animist religions by having them reclassified as “Hinduism,” e.g., the Aluk To Dolo of the Sa’dan Toraja, and the Kaharingan of the Dayak. Buddhism (no more than 1% of the population) claims mostly Chinese adherents, whose traditional practices combine Mahayana Buddhism with Taoism and Confucianism.

## 6 MAJOR HOLIDAYS

The Department of Religion authorizes a list of 12 public holidays (on which government offices and schools are closed). Two are purely secular: New Year’s Day and Independence Day (August 17). The others are feasts observed by the five recognized religions: Nyepi, the Hindu-Balinese New Year; Waisak, the birth of the Buddha; Christmas, Good Friday, and Ascension Thursday for Christians; and five Muslim holidays, including the Islamic New Year, the Birth of Muhammad, the Night of the Ascent (Muhammad’s visit to heaven), Idul Fitri (the end of the fasting month of Ramadan), and Idul Adha (recalling Abraham’s willingness to sacrifice his son Ishmael at God’s command).

Every year, Independence Day is celebrated with great fanfare. Each village and city neighborhood is decorated with red and white national flags, ceremonial gateways, and colorful paintings commemorating the Revolution. Parades, speeches, and performances of traditional music, dance, and theater also mark the day.

During the month of Ramadan, Muslims may not eat, drink, or smoke during the daylight hours. The end of these four weeks of self-denial is marked by a great celebration, called variously Idul Fitri, Lebaran, or Hari Raya. Through-

out Indonesia, special feasts are prepared, heralded by the mass weaving of *ketupat*, small palm-leaf containers for rice cooked in the previous days. Idul Fitri is the occasion for family reunions: migrants return to their hometowns (all intercity roads and the buses on them are packed at this time) to clean ancestral graves and sprinkle them with flower petals. Even non-Muslims observe the custom of making calls on family members, friends, neighbors, colleagues, and superiors to ask forgiveness for the offenses of the past year.

## 7 RITES OF PASSAGE

Life cycle rituals differ greatly according to ethnic group, religion, and social class. Although for many, particularly the urban poor, modernization in everyday life has simplified the rites of passage, the trend, beginning during the New Order, has been for affluent families to display their status by holding traditional rituals as elaborately as they can afford, often reviving forgotten customs with the help of ritual experts. Celebrations are public affairs to which the extended family (who often assist the hosts), friends, workmates, professional associates, and local officials are invited; indeed, they are generally open to the entire neighborhood or village, all of whom must be fed. The most important celebrations accompany births, circumcisions (for Muslim boys), weddings, and funerals. Weddings usually consist of the legally required religious ceremony (usually Muslim or Christian) and rites following ethnic custom, followed by a large reception held in a family home, a hotel, or a rented hall. Among the Muslim majority, funerals tend to be somewhat more uniform from ethnic group to ethnic group, including washing and enshrouding of the body and burial within 24 hours. Mourners in truckloads accompany the body to the cemetery and, after collective prayer, each mourner tosses a handful of earth into the grave.

## 8 INTERPERSONAL RELATIONS

Although traditional codes of behavior differ considerably from ethnic group to ethnic group (and group stereotypes exaggerate these differences), interpersonal relations throughout Indonesia are governed by a concern to preserve social harmony and personal honor (“face”); respect for hierarchy is considered essential to both. In their interactions with others, Indonesians take great care to show deference to those of higher status, whether from greater age, nobler ancestry, superior educational attainment, or higher organizational rank.

In general, Indonesian life tends to be group, rather than individual oriented. In a society where individuals have little personal space, rarely having even a bed to themselves, privacy is largely an alien concept; solitude is most commonly associated with defenselessness. Subordinating one’s interests to the group’s interest is a village value that has been carried over into many aspects of modern urban life. Great care (more in some regions, like Java, than in others) is taken to avoid the overt expression of disagreement within the group. Fear of bringing shame upon one’s family and other groups to which one belongs in the face of outsiders powerfully conditions personal decisions. Indonesian etiquette stresses the interdependence of individuals, not their independence of one another.

### Greetings and body language

The Islamic greeting, “*Wassalamu alaikum (warakhmatullahi wabarakatuh)*,” which means “Peace upon you (and God’s

A vendor cooks traditional snacks in downtown Jakarta. (Bay Ismoyo/AFP/Getty Images)

blessings),” has become the standard greeting in public life, even for non-Muslims, often accompanied by the shaking of hands, concluded by bringing the right palm to one’s own chest. The most common informal greeting is “*Dari mana?*” (“Where are you coming from?”) which is a question that is not felt to be intrusive and that no one is obliged to answer in specifics. Even in relatively informal situations, great importance is placed on asking leave to depart (a common phrase is the Dutch-derived “*Permisi?*”).

In offering or receiving things, one extends the right hand, showing particular deference by placing the left hand under the right elbow while doing so. While passing in front of older or higher-status people, it is customary to bow low, extend the right hand in front of oneself, and walk forward slowly. The left hand, used with water for cleaning oneself after defecation, is taboo for the above purposes; when one is forced to use the left hand in front of others, one excuses oneself (“*Ma’af kiri,*” “Forgive, the left.”). Especially in Java, the index finger is taboo; pointing is done with the right thumb, and one beckons others to come with a downward, inward movement of the right palm. Similarly, it is offensive to point the soles of one’s feet at others while sitting, a situation avoided by traditional modes of sitting cross-legged (*bersila*, men) or with legs folded to one side (*bersimpuh*, women). Folding one’s arms over one’s chest or holding them akimbo while speaking can appear to be aggressive.

#### Visiting and dating customs

Unannounced visits may be made in the late afternoon between siesta and dinnertime (4:00–6:00 PM). Visitors are served tea and snacks; one leaves a little food on the plate to show one wants no more. Indonesian attitudes toward punctuality are reflected in the expression “*jam karet*” (“rubber time”). Lateness to appointments is the norm; however, Indonesians tend to rise early, as well as retire early, perhaps as a function of the tropical climate.

Although there is considerable variation in this regard, interaction between members of the opposite sex tends to be closely monitored by elders and peers: dating and premarital sex are not condoned (early marriage is the traditional outlet). In many regions, the honor of the family is invested in its women’s reputation for chastity (which may entail the women avoiding any eye contact with males who are not their relatives), and the family’s men take quite seriously their responsibility to protect that honor. Public displays of affection between the sexes (such as holding hands or kissing) are taboo. Physical contact between members of the same sex, however, (such as walking arm in arm) is common, not being considered homosexual. One common way teenagers meet is for the boy to loiter by the front gate of the girl’s house, hoping to be admitted by a servant or family member who will chaperone the ensuing conversation.

## 9 LIVING CONDITIONS

At US\$3,843 per year, Indonesia's per capita GDP (adjusted for Purchasing Power Parity, all figures are from 2005, unless otherwise noted) places it in the category of lower middle income nations. Its ranking in the United Nations Human Development Index is 107 (out of 177 countries ranked). Countries with similar HDIs are Vietnam, Syria, the Occupied Palestinian Territories, Turkmenistan, and Nicaragua. Its HDI ranking is six places higher than its ranking according to GNP per capita (PPP), indicating that its population is somewhat better off in terms of health and education than per capita income alone would provide for (South Africa's per capita GDP, adjusted for PPP, is almost three times that of Indonesia's, yet South Africa's HDI index is slightly lower).

More than half the population (52.4%) lives on less than two dollars equivalent a day, and 7.5% on less than a dollar a day. The proportion of the population living below the national poverty line (earning less than the amount needed to provide oneself a daily intake of 2,100 calories and other basic needs) has declined dramatically over the years, from 40.1% in 1976 to 16.58% in 2007. As measured by its Gini coefficient of 34.3, income inequality in Indonesia is not particularly severe by world standards. It is greater in the United States (40.8), far greater in Brazil (57), and not much less in Japan (29.9). Still, the richest 20% earns 5.2 times as much as the poorest 20%. (a slight improvement over seven times in the 1990s). Moreover, there is wide variation in the standard of living from region to region and between urban and rural areas. For instance, on average, rural people spend more of their income on food than urbanites do, despite higher food prices in cities (in 2005 residents of the national capital region spent 37.72% of their income on food, while residents of heavily rural Nusa Tenggara Timur spent 62.24% (the national average had been 54.59% in 2004).

Given the high average family size, Indonesian houses tend to be crowded; in 2006, 44.9% of houses were under 50 sq m in size, 21.3% under 9 sq m (1990s figures record 6% of houses as having no separate bedroom). Some 37.78% had walls of materials other than brick (down from 51.77% in 1990). Roofs are of tile (66% of all houses according to 1990s figures), zinc, or thatch (4.65%, down from 8.75% in 1990). About 16% of houses had an earthen floor in 2006 (down from 24% in 1990). The layout of a well-off family's house does not differ from that of Western houses, having separate rooms for receiving guests, eating dinner, etc. About 60% of houses had their own toilet in 2006, up from 47% in 1990. Most bathrooms, however, differ from Western ones in having squat toilets and an open tank to scoop water out of for bathing and flushing. Many poorer Indonesian homes lack such facilities, forcing their owners to use public areas such as riversides. While nearly all houses in Jakarta have electricity, the national figure is only 54% (47.3% in the 1990s). 28.5% of households use biomass (firewood, etc) or waste material for fuel. Overall, per capita carbon dioxide emissions are still low, at 1.7 tons in 2004 (up from 1.2 in 1990).

In the early 1990s, just over 11% of houses had their garbage picked up by sanitation workers. The rest disposed of it themselves by burning or piling it in their yards, or throwing it in public dumps, gutters, canals, or rivers. Only 13% of houses (mostly urban) enjoyed running water (not generally drinkable); most people obtained water from streams, canals, ponds,

and wells that were usually polluted to some degree (in 1990, only 16.37% received piped or bottled water). By 2006, 46.6% had access to safe drinking water from pump, well, or spring.

Life expectancy (according to 2008 figures) has been rising: 67.98 years for men and 73.07 years for women; 58.4 years for men and 62 years for women in 1990, up from 51.1 years for men and 54.4 years for women in 1980. Infant mortality is also falling: 31.04 from 105 deaths per 1,000 live births in 1980 to 75.2 deaths in 1990. Modern pharmaceuticals and physicians are expensive, so most people use traditional herbal remedies (*jamu*, much of which are now mass-manufactured) and consult traditional healers (*dukun*) more frequently. As part of an extensive public clinic system stressing preventative care (immunization, contraception, and natal care), doctors make weekly visits to villages.

Ownership of an automobile (25 per 1,000 people in 2005) or motorcycle (130 per 1,000 people) is a luxury unavailable to all but upper class and some middle-class families (up from 1990s figures of 5 and 30 respectively). Most people rely on buses for travel within and between cities; Java also has a well-used rail network. Minivans run within cities and through the countryside (where horse-drawn carriages are still common). Except in Jakarta where *bajaj* (motorcycle cabs) are used instead, *becak* (tricycles with a seating carriage in front of the peddler) carry people and goods through side streets and roads. As an alternative to expensive airplanes, large passenger ships provide the principal means of interisland travel for most people; sailing ships are still in wide use for fishing and carrying merchandise.

Telephone access is spreading rapidly; the number of telephone landlines per 1,000 people rose from 6 in 1990 to 213 in 2005. More than 1 out of 5 people had a cell phone subscription in 2005. The number of Internet users is growing fast, tripling from 11.2 million in 2004 to 33.2 million in 2008 (UN figures estimated 73 Internet users for every 1000 people in 2005).

## 10 FAMILY LIFE

The family is the central institution of Indonesian society, and the model for other social relations. Although kinship patterns differ from ethnic group to ethnic group, some common features can be seen throughout the country. The family household includes not only parents and children but also grandparents, other unmarried relatives, and servants. Child care responsibilities are shared among mothers, grandmothers, older daughters, and others. The father is often the ultimate authority figure, though often a distant one, while the mother manages the family money. Remaining at home, children remain dependent on their parents until, and often well into, marriage. Children are duty-bound to take care of their parents in old age, and older siblings likewise help their juniors, even going as far as financing the latter's education.

Indonesians keep cats and dogs as well as songbirds as pets.

## 11 CLOTHING

Context and class determine the choice between modern and traditional clothes. For instance, while a male office worker wears a Western-style shirt and trousers to work, he often relaxes at home, does his prayers, or is wed in some kind of sarong. Shorts are not worn by adults, except by *becak* drivers and other low-status laborers. In their everyday clothing, members of the elite follow Western fashions closely. For ex-

ample, young people commonly wear jeans and t-shirts. For ceremonial purposes, however, they lavish great expense on traditional costumes. A small number of Muslim women wear a head covering in public (i.e., in the presence of men who are not their kin or very close friends): this may be either a more traditional scarf (*kudung*) or, the modernist preference, a full veil exposing only the face (*jilbab*) and often worn with items of Western-style clothing like jeans.

Under the New Order, a standard “national costume” came into vogue for use on formal occasions. For men, the black felt *peci* cap, originally associated with Muslims, was first popularized as a symbol of nationalism by Sukarno in the 1920s. In current practice, this is worn with a batik shirt (untucked) and trousers. Women wear a sarong and a *kebaya* (tight-sleeved, collarless shirt) and put their hair up into a bun (or tuck it under a wig of the required shape). For work, many jobs require a uniform: soldiers, elementary school students, and civil servants all wear uniforms.

## 12 FOOD

Indonesian cuisine has been influenced by Indian, Middle Eastern, Chinese, Portuguese, and even Dutch cooking.

Throughout the country (with the partial exception of dry eastern islands where maize, cassava, taro, and sago are important, if not esteemed, starch sources), rice is the staple, the definition of a “full meal” being “cooked rice (*nasi*) with side dishes (*lauk-pauk*).” Depending on one’s budget, these side dishes can range from the most modest (some boiled vegetables with or without a piece of dried fish) to the most extravagant (several fried and stewed dishes including meat curries, heavily spiced, especially with chilies). Outside of well-off families, meat (goat, mutton, beef for Muslims, also pork and in some regions dog for non-Muslims) is consumed only on special occasions. Chicken, seafood, and soybean products provide a cheaper protein source acceptable to all.

The traditional mode of eating for all ethnic groups has been to scoop up food from flat dishes with the fingers of the right hand (the left hand being reserved exclusively for washing oneself after defecation). An alternative associated with sitting at a Western-style table is to use a spoon and fork (i.e., using the fork in the left hand to push food on to the spoon in the right hand). Individual portions are not separated; rather, everyone takes from common dishes laid out at once in the center of the table or dining mat. Ordinary meals are usually consumed quickly without conversation.

Most Indonesians do not eat a distinct breakfast, apart from leftovers of the previous evening’s meal, should there be any. Middle-class people will eat bread with coffee or tea; this bread is usually bought from men sent around neighborhoods by bakeries at dawn. For lunch and dinner, upper- and middle-class people eat rice and side dishes prepared by their maids. For lunch, office workers and students will either go to *warung* or *kedai* (small food stalls) or buy dishes like *bakso* (meatball soup) from mobile street vendors. For those who can afford them, afternoon snacks (e.g., *rujak*, a fresh fruit salad) are also common. In city neighborhoods, a great variety of street vendors make the rounds well into the night. Especially popular are stalls that set up for the evening around plazas or along major thoroughfares, closing up after midnight. Throughout the country, Chinese restaurants can be found, as well as those

serving Padang food (that of the far-migrating Minangkabau of West Sumatra).

Outside animist and Christian areas, because of Islamic strictures, the consumption of alcohol (mostly beer) is limited to some particularly Westernized members of the elite. As untreated water is usually unsafe, tea and coffee are drunk in great quantities, usually with sugar and sometimes milk. Soft drinks, including bottled tea and bottled water, are also popular. 58% of men and 3% of women smokes (up from 30% in the 1990s); Indonesians favor cigarettes (*kretek*) flavored with cloves.

## 13 EDUCATION

Literacy (2004 estimate) stands at 90.4 % overall, 94% for males, and 86.8% for females, a substantial increase from 1990s figures of 77%, 84%, and 68% respectively. Schooling is free of charge and compulsory for ages 7 to 15. About 81% of the age-eligible students are enrolled in all levels of education; 94% of age-eligible students are enrolled in elementary education, and 61% in secondary education (2005). About 75% of students reach fifth grade (2004). Between 1980 and 1990, the proportion of the population that had graduated from senior high school doubled, reaching 13.7%.

Curriculum in primary and secondary schools is determined by the central government. Major goals of the educational system include teaching the national language, instilling the state ideology of Pancasila, and supplying religious instruction. Teaching methodology stresses rote memorization. For poorer families, sending a child to a public school is often a financial burden because of supplementary fees and other costs, such as textbooks and uniforms (a uniform costs Rp10,000 or us\$9, almost one-eighth of the average monthly industrial wage).

Over 2.58 million were enrolled in tertiary education in 2007. Only one in five applicants to state institutions is admitted (a decrease from one in four in the 1990s). The requirement of a written thesis (*skripsi*) prevents most students from earning their degrees on time. Many must interrupt their study in order to work to support themselves and finance further coursework.

While only about 7.6% of students enrolled in primary education attends private (mostly Islamic schools), about 40% of students enrolled in secondary education does (2007). At *pesantren* (Islamic schools of the traditional type), students learn the Arabic language, scripture, and religious law but without specific graduation requirements; students who live at the usually rural schools may leave study at any time.

## 14 CULTURAL HERITAGE

No dance styles can be said to be truly national, but three urban-based music genres have won nationwide popularity. *Kroncong*, a melancholy music for voice and strings, ultimately of Portuguese origin via the Eurasians of the VOC towns, is still widely heard though considered old-fashioned (during the Revolution, it was the medium for patriotic songs). Favored by the self-consciously “cosmopolitan” upper and middle classes is *pop Indonesia*, modeled on American-European pop music. *Dangdut*, characterized by high-pitch vocals and an insistent beat derived from Indian film music, on the other hand, has its base in the urban poor. Holiday fairs will feature large tents

where hundreds of young people crush together gyrating to live *dangdut* singing.

Literature in Bahasa Indonesia (as distinct from writing in Classical Malay) had its beginnings in late 19th-century “penny dreadfuls” produced for the Sino-Indonesian and Eurasian urban market. More substantial novels, such as Marah Roesidi’s *Sitti Noerbaja* (1922), as well as poetry, have been written since the early years of the 20th century, often published by Balai Pustaka, a still extant printing house established by the Dutch government in 1908. Indonesia’s internationally famous writer has been Pramoedya Ananta Toer (1925–2006), a leftist author, imprisoned for years under the New Order, whose tetralogy, “This Earth of Mankind,” “Child of All Nations,” “Footsteps,” and “House of Glass,” explores the birth of Indonesian nationalism.

### 15 WORK

With more than 70% of the population living in rural areas, agriculture employed more than half of Indonesia’s workforce. Only 13% of cultivated land belongs to large plantations, the rest divided among tens of millions of smallholders. Although the high economic growth of recent years has benefited many rural families, many peasants do not own enough land to survive, or have none at all and are forced to work others’ land. One out of four rural families has at least one member working in the cities.

Rice grown in irrigated fields (*sawah*) is by far the most important food crop, particularly in Java and Bali, but maize, cassava, taro, sago, soybeans, peanuts, and coconuts are also widely grown. Sugar, coffee, tea, cloves (for domestic cigarettes), and rubber are important cash crops. Cattle, goats, chickens, and, in non-Muslim areas, pigs are the main livestock species. In the Outer Islands, a decreasing number of people still practice slash-and-burn agriculture (*ladang*). Fishing employed 1.5 million in the 1990s.

Official figures put the unemployment rate at 8.46% in 2008, but many of the “working” can be classified as “underemployed,” engaged in small tasks for minimal pay. In 2005–2006, the nominal monthly wage in a manufacturing job ranged between Rp 876,600 to Rp1,029,200, in a hotel job between Rp 723,900 and Rp 931,700 (at an average of Rp10,800 per US\$1). Over 43% of the work force works in the “informal sector,” at jobs requiring little skill or capital. In the 1990s, petty traders, including half of all non-farming women, make up most of the 16% of the work force then engaged in commerce. In 2005, 44% of the population was employed in agriculture. Industry employed 18% (up from 11% in the 1990s), including great numbers of young women who work in textile factories. 38% work in the service sector (compared to only 13% in the previous decade); these include those employed in the bureaucracy and the military. With only a little over 300,000 active duty personnel, this is a relatively low proportion by world standards. Indonesia, though the fourth largest country by population, only has the fourteenth largest military, approximately the same size as Thailand’s, a country only one-fifth as populous.

According to government figures from 2006, 2.7 million Indonesians were working legally abroad (only 2.8% of the labor force), mostly in the Middle East but also increasingly in neighboring Asian countries with labor shortages, such as Singapore and Taiwan. The world’s second largest flow of illegal

workers (after that from Mexico into the United States) is from Indonesia into Malaysia.

### 16 SPORTS

Part of the Dutch colonial heritage, the most popular modern sport is soccer, which is played on large open spaces in towns throughout the country. In 1994, the whole nation stayed up night after night to watch live telecasts of the World Cup being played in Atlanta. The other two most widely played sports are basketball and badminton, the latter often played in the middle of the street without a net.

Martial arts are also widely practiced, be they the indigenous *silat* or imported East Asian forms, such as *kung fu* or *taekwando*. With the government stressing calisthenics, many people can be seen jogging or otherwise exercising in streets and public squares and parks, particularly on Sunday morning. A common excursion for young people is to go hiking in large groups through mountain areas.

### 17 ENTERTAINMENT AND RECREATION

There were 130 radios and 57 televisions for every 1,000 people. Numerous radio stations broadcast programs in the national and regional languages and play regional (traditional), national, and foreign music (Heavy Metal, for instance, appeals to a wide teenage audience). Until 1989, only one government-run channel was available, beamed in by Indonesia’s own Palapa satellite, but at present there are 11 national broadcast channels (all but two are private) and many more local ones. Programming includes the government-produced news, comedies set in middle-class Jakarta homes, historical dramas, music concerts, and old movies; dubbed or subtitled foreign imports consist of American series, Japanese anime and melodramas, and Latin American soap operas. Many well-to-do households receive a wide selection of foreign channels through a satellite dish (*parabola*) or *cable* and often allow neighbors to pay to tap in. In the countryside, families wealthy enough to purchase a television set regularly invite fellow villagers to watch.

In cinemas, elite audiences prefer to watch subtitled American movies, or dubbed or subtitled Hong Kong kung fu films (all censored of sexually explicit footage). The masses watch Indonesian, Hong Kong, and Indian movies. Films produced by the declining Indonesian film industry resort to predictable plots, violence, and as much exposed flesh as the censors will allow.

Other popular urban pastimes include window-shopping in malls and department stores, browsing in night markets, and eating at evening-only food stalls.

### 18 FOLK ART, CRAFTS, AND HOBBIES

A variety of crafts are practiced by individual Indonesian ethnic groups, including woodcarving, weaving textiles, baskets, and mats, metalworking (gold, silver, copper, and iron), pottery and stone carving, leatherworking, tie-dyeing and batik-ing, glass painting, boat building, and gardening.

### 19 SOCIAL PROBLEMS

Rapid development has not brought comparable benefits to all sectors of the population. Despite the success of contraception programs, the large and growing population continues to strain national resources. Although living standards have

risen, economic growth has widened the gap between the rich and the poor, especially the rural landless. The security net provided by traditional social networks is weakening, exposing many people to exploitation. The conflict between traditional values and those of modernity, both as defined by the national state and by international consumer culture, is intensifying, leading many to espouse religious fundamentalism as an alternative.

Political liberalization since the end of the New Order has given an opening to groups seeking to impose Sharia (Islamic law) on many localities. In October 2008, a national anti-pornography bill was passed in the face of strong opposition, including from women's groups and from non-Muslim ethnic groups, such as the Balinese (who felt their religious images might be threatened); the legislation's targets include public displays of affection, such as kissing relatives in greeting and public performances that "excite sexual desire," as well as pop concerts where dangdut stars' dancing involve gyrating on stage. Many feared that the law would legitimize violent actions taken by radical Islamist vigilante groups against places deemed "immoral," such as brothels and pool halls.

## 20 GENDER ISSUES

The country's Gender Related Development Index (2005) is 0.721, slightly less than its Human Development Index of 0.728. In comparison with their counterparts in Middle Eastern Muslim societies, Indonesian women play a more prominent public role, from petty trading to the professions. Under bilateral kinship, the mother's line is potentially as important as the father's line in channeling inheritance and status. Women are active in organizations, such as those for the wives of civil servants or army officers. In Indonesian Islam, women are not segregated from men in the mosque. Indonesians are currently debating the legality of polygamy (allowed by Islam but not common and even forbidden to civil servants).

Life expectancy for women is higher (71.6 years) than for men (67.8). Adult literacy, however, is lower for women (86.8%) than for men (94%), as is enrollment in all levels of education (67% vs. 70%, there are about 8 women for every 10 men in university and other tertiary educational institutions). The country has had a woman president (Megawati Sukarnoputri, the daughter of Indonesia's first president), and women hold 11.3% of the seats in parliament. On average, women earn 46% of the income that men do. 1 million women are employed as domestic workers overseas, most commonly in Saudi Arabia or Malaysia, and are vulnerable to exploitation and abuse from their employers.

Abortion is prohibited except in the case of danger to the life of the mother. In 2000–2005, the fertility rate stood at 2.4 births per woman (down from 5.3 three decades earlier). 89% of women from the richest 20% of society were attended by a skilled health professional while giving birth; the proportion was only 21% for the poorest 20% of society. During 1990–2004, 310 women died in childbirth for every 100,000 live births. For the richest 20% of society, infant mortality ran to 23 per 1,000 live births and under five mortality to 29 per 1,000 live births; for the poorest 20% of society, the figures were respectively 78 and 109 (population overall, 28 and 36).

The government's approach towards prostitution is ambivalent. On the one hand, prostitutes (officially termed "WTS," short for "wanita tuna susila," "women without morals") are

concentrated in government-supervised "lokalisasi," brothel districts; on the other, these lokalisasi are subject to being shut down by the same government, and the prostitutes are subject to harassment. Enforcing anti-prostitution regulations, however, very often means that police detain non-prostitutes simply for being out on city streets at night. The trafficking of women and children within the country and to foreign countries is a major problem (entertainers and mail order brides often suffer abuse). Underage marriage is common (the legal age for marriage is 16 but exceptions can be made with parental consent, 33% of marriages in rural areas and 15% in urban areas are underage). High rates of underage marriage and of divorce leave many women with few options other than going into prostitution or falling prey to human traffickers holding forth promises of jobs in cities or abroad.

Human Rights Watch regards Indonesia as failing to back up fully its rhetoric in promoting women's rights.

# IRANIANS

**PRONUNCIATION:** i-RAHN-ee-uhns

**LOCATION:** Iran

**POPULATION:** 69,400,000 (2005 estimate)

**LANGUAGE:** Farsi (Persian)

**RELIGION:** Islam (Shia Muslim)

## <sup>1</sup> INTRODUCTION

Iran, known since ancient times as Persia, has had a long and turbulent history. Iran's location at the crossroads of Europe and Asia resulted in many invasions and migrations. Cultural influences have thus been great, with Afghans, Arabs, Chinese, Greeks, Indians, Russians, and Turks all leaving behind traces of themselves.

Archaeologists have determined that Iran was inhabited as far back as 100,000 BC. Knowledge about this era is sparse, however. There is evidence that Iran played a role in the emergence of civilization 10,000 years ago. It is known that settled communities and villages had engaged in farming, pottery, metalworking, and other activities on the Iranian plateau around 6000 BC. A kingdom known as Elam dominated southwest Iran around 3000 BC, establishing a very advanced culture. This culture could write, and had a system of kingship and an organized priesthood. During the Iron Age, around 1500 BC, members of the Aryan (Indo-European) peoples began migrating in waves through the Caucasus Mountains across Central Asia into Iran. Around 1000–900 BC, the forerunners of present-day Iranians began arriving in the country. These included the Bactrians, Medes, and Parthians. A group settled in the southern area then known as Parsa. They were given the name of Persians, and Persia then became the name of the entire region of Iran. In 553 BC, the leader of the Achaemenid clan of Parsa, Cyrus the Great, established the first Persian Empire, which extended to Egypt, Greece, and Russia. Under the Achaemenids, Persia extended the realm of civilization, giving distant countries the opportunity to learn art and culture from one another and to trade goods.

The Achaemenids were overthrown in 336–330 BC by Alexander the Great, of Greece. Persia became part of the Greek Empire and, for several centuries, was the focus of much fighting between the Greeks and Romans. Upon Alexander's death in 323 BC, control of Persia was seized by General Seleucus, who established Seleucid rule for almost a century. In the 3rd century BC, a group known as the Parni (immigrants from Central Asia) assumed power and set up the Parthian Empire, which later collapsed in the 3rd century AD. From AD 226 until 641, Iran was ruled by the Sassanids, a dynasty of local rulers who encouraged Persian art and literature to flourish. Sculptures commemorating Sassanid military victories still adorn hills and cliffs in Iran.

From the 7th through the 9th centuries AD, Iran was conquered by Muslims from Arabia whose goal was the spread of the Muslim religion. They were successful in converting many Persians from their native religion of Zoroastrianism (which dated from the 7th–6th centuries BC) to Islam. Most of the Zoroastrians who did not convert to Islam left the country and settled in India. The Arab rulers were followed by various Turkish Muslim rulers. Then, in the 13th to 14th centuries,

Mongol leader Genghis Khan and his army subjected Persia to fierce destruction and killing. Between 1220 and 1258, one-fourth of Iran's population died as a result of the Mongol conquest. In 1380, Tamerlane (Timur the Lame), one of the last Mongol leaders, established the Timurid dynasty over Iran and Afghanistan. This was replaced centuries later, during the 16th century, by the Safavids, a local clan who were finally able to rid Iran of outside control. Under the rulership of these native Iranians, the arts once again flourished. Mosques and palaces built by the Safavids in their capital city, Esfahan, still stand in Iran. The Safavids were then conquered by Afghan invaders in 1722. An Iranian named Nadir Shah drove them out and established the Afshar dynasty in 1736. Another Turkish tribe, the Qajars, took power in the late 18th century.

The periodic foreign rule ended in 1921, when Reza Khan, an Iranian army officer, deposed the Qajars and established the Pahlavi dynasty. He became the emperor or *shah*, with the name Reza Shah Pahlavi. In 1935, the Shah changed the country's name to Iran, a variation on "Ariana," which means "country of the Aryan people." During World War II (1939–45), Shah Pahlavi, angered by British and Russian troop deployments in Iran, sided with Germany instead of with the Allied powers. In 1941, the Allied powers forced him to abdicate his throne. Pahlavi's son, Muhammad Reza Shah Pahlavi, then ruled Iran until the Islamic Revolution of 1979. Under the Pahlavis, Western cultural influences grew, and Persia's oil industry was developed. By the 1950s, Iran was a world leader in petroleum production.

Muhammad Reza Shah Pahlavi was a staunch advocate of Westernization. In the 1960s he introduced Iran to the "White Revolution," which replaced many of Iran's traditions with Western influences. He tried to propel Iran out of its traditions of agriculture and Islam into modern industrialization and Western culture. While the Shah enacted many measures for the benefit of Iranians, he also became increasingly dictatorial and restricted many freedoms. In 1975, the Shah outlawed all political parties except his own. His secret police force (SAVAK) became increasingly repressive and cruel. People who opposed the government, such as religious opponents, were jailed and tortured.

In 1978, Islamic opposition forces and Communist forces acted together to demonstrate and riot for political change in Iran. Their rebellion grew into a major revolution against the Westernization and oppression inflicted on Iran by the Shah. Shah Pahlavi fled the country and abdicated his throne under pressure. After a stay in the United States, he sought refuge in Egypt, where he and his wife were welcomed by President Anwar Sadat. The ailing Shah later died in July 1980 in Egypt. The Islamic Revolution of 1979 was organized under the leadership of Ayatollah Ruhollah Khomeini, a prominent religious leader who returned from exile in Paris. On 11 February 1979, the twenty-second day of the Muslim month of *Bahman*, Khomeini and his supporters succeeded in replacing the secular government of the Shah with an Islamic republic. Symbolically, the words "God is Great" are repeated 22 times on the Iranian flag.

The Islamic Revolution targeted Western influences for having corrupted Iranian Islamic traditions. The United States, in particular, was seen as the evil nation whose culture was pervading Iran. In November 1979, revolutionary students seized control of the U.S. embassy in Tehran and held 53 Americans

*Iranians play ball in a park to mark the 13th day of Norouz, commencing the start of spring, in Tehran, Iran. Norouz is the first day of the new year according to the Persian calendar and is a Zoroastrian tradition, still celebrated by Iranians even after Islam.*

hostage. In response to the hostage crisis, the United States froze Iranian assets that were banked or invested in the United States. The hostages were held for 14 months, and the crisis created extreme hostility between the two countries. The hostages were released in January 1981 following an agreement negotiated by Algeria, as the United States' leadership was changing hands from President Jimmy Carter to President Ronald Reagan.

Under the leadership of Ayatollah Khomeini, Iran became a theocracy with the name of the Islamic Republic of Iran. Religious standards thus became the guiding principles for the government and society, and religious leaders known as *mullahs* led Iran along the Islamization route. Many Iranians holding secular views saw the strict religious system as an infringement on their personal liberties. Those who wanted to protect their Western ways of life left Iran and went to Europe and the United States. Khomeini was ruthlessly intolerant of those who opposed his theocracy, and thousands of his opponents were assassinated or arrested during his 10-year reign. Most Jews and Christians, fearing religious persecution, fled the country during the 1980s.

From 1980 until 1988, Iran fought a severe and costly war with its neighbor Iraq. The war began when Iraq invaded Khuzistan, in southwestern Iran, to resolve a longstanding dispute over control of the Shatt al-Arab waterway. Iraqi forces

seized southwestern Iranian territory and an oil refinery along the Shatt al-Arab, resulting in a full-scale war between the two countries. More than 500,000 Iraqis and Iranians died, and, although Iran was able to expel Iraq from Khuzistan, neither side could really claim a victory. International access to Middle Eastern oil was adversely affected, as both Iran and Iraq attacked one another's oil freighters in the Persian Gulf. The United States and the Soviet Union, in the mid-1980s, arranged for Kuwaiti oil freighters to operate in the Gulf under protection of the American and Soviet flags, with both countries' naval forces positioned in the Gulf. The United States got involved in the battle in the late 1980s. First, an Iraqi bomber accidentally attacked a U.S. ship in 1987. Then, a floating mine damaged an American tanker, and an Iranian passenger plane was accidentally shot down by a U.S. warship in 1988. The war ended in the summer of 1988, with Iran and Iraq signing a cease-fire agreement arranged by the United Nations.

In June 1989, spiritual leader and head-of-state Ayatollah Khomeini died. Some 2 million Iranians attended Khomeini's funeral in Tehran. Thousands of mourners were injured, and several died in the chaos and hysteria that filled the streets. Shortly after Khomeini's death, Ali Khamenei replaced him as spiritual leader, and Ali Akbar Hashemi Rafsanjani became president. Rafsanjani was reelected to the presidency in June 1993 and remained in office until 1997.

Struggles for power between reformists and conservatives in Iran grew increasingly bitter during Rafsanjani's presidency. Rafsanjani favored economic and political reforms, but conservatives in Iran's legislature, known as the Majlis, often prevented his policies from taking effect. In Iran, the president, prime minister, and cabinet ministers do not make decisions on their own. They answer to the *faqih*, or spiritual leader, and to a group of religious scholars and judicial authorities whom the *faqih* appoints. In addition, the Majlis, which is elected by the people every four years, enacts laws that must be in keeping with the Islamic faith. A council made up of six clergy and six lawyers oversees the work of the Majlis. The power of religious leaders in Iran's government slowed the effort to introduce reforms through the mid 1990s.

Conservatives suffered a defeat in 1997 when reformist Muhammad Khatami won a landslide victory in the presidential election and when his supporters gained a majority in the Majlis in 2000. Khatami was then re-elected in 2001, despite conservative clerics who used their power to bring many of the reformists to trial on alleged political charges. Clerics then began a concerted effort to stop reforms. Nearly 100 reform proposals were blocked between 2000 and early 2004. Conservatives regained control of the Majlis in 2003, and Iranian voters began to regard the reformists as individuals who could not effectively create change.

While reformists and conservatives battled for political power in Iran, U.S. president George W. Bush began to accuse Iran of developing nuclear weapons. The American president labeled Iran as a member of an "axis of evil," a statement that turned many of the conservatives in Iran against the United States. Rafsanjani ran for president in July 2005 in an effort to regain support for the reformist movement. However, he was defeated by a hardline conservative Mahmoud Ahmadinejad. Soon after taking office, Ahmadinejad assumed a strident anti-American stance and announced in April 2007 that he was enriching uranium, a process that often leads to the building of nuclear weapons. The United Nations has responded by imposing sanctions on Iran. The election in August 2007 of Rafsanjani to the Assembly of Experts ensures that the reformist movement has not died out entirely because the Assembly of Experts has the power to dismiss Iran's highest authority. However, Ahmadinejad remains popular among Iranians who have embraced the conservative stance of their president.

## 2 LOCATION AND HOMELAND

Iran is located in southwest Asia. It is bordered to the north by Azerbaijan, Turkmenistan, and the Caspian Sea, by Turkey to the northwest, Iraq to the west, and by Afghanistan and Pakistan to the east. Kuwait, Saudi Arabia, Bahrain, Qatar, and the United Arab Emirates are to Iran's south and southwest, separated from Iran by the Persian (or Arabian) Gulf. Oman is to the southeast, separated from Iran by the Gulf of Oman and the Arabian Sea. Iran's location led to invasions and cultural influences by many ethnic and national communities. One of the major influences was a direct result of Iran's proximity to Saudi Arabia, known in the 7th century AD as the Hejaz. After the death of the Prophet Muhammad, Arab Muslims from the Hejaz spread their new Islamic religion to Iran, converting most Iranian Zoroastrians to Islam by the 9th century AD.

With an area of 1,647,063 sq km (635,932 sq mi), Iran is slightly larger than the U.S. state of Alaska. Iran's geography

has three types of terrain. A vast, dry plateau in the center of the country is encircled by a ring of snow-topped mountain ranges that cover about half of Iran's area. Outside of the mountains to the north and south is coastal lowland. The rocky central plateau is a high plain with an average height of 1,200 m (4,000 ft) above sea level, covered with low hills. In northwest Iran, streams flowing down the slopes of mountains have facilitated the establishment of large cities. This region is the location of the capital city, Tehran, and Isfahan and Qom.

To the south and east of Tehran, on the plateau, lie two deserts: the Dasht-e-Kavir (Great Salt Desert), and the Dasht-e-Lut. The deserts, which make up about 25% of Iran's total land area, consist of very salty soil. Following rain, the soil dries into a white crust of salt crystals. Below the surface is salty quicksand, making travel over the desert dangerous. The Dasht-e-Lut has been described as a hostile wasteland, whereas the Dasht-e-Kavir has an occasional oasis. Iran has three major mountain ranges. The Zagros Mountains in the west have a height of up to 4,242 m (14,000 ft). The Elburz Mountains in the north have the highest peaks, with Mount Damavand reaching 5,736 m (18,934 ft). The Khorasan Mountains in the east have productive farmland and grasslands. Small mountain ranges are located in the south and southeast.

The climate of northern and eastern Iran is generally more moderate than in the southern and western parts. While the summers get very hot nationwide, in the areas of high elevation the evenings are cool and breezy, and even the days are comfortable. In the lower elevations, the climate is hot in the summer. It is hottest around the Persian Gulf, where temperatures

reach 60°C (140°F) in the summer. In the winter, the Persian Gulf region sees high temperatures of 20°C to 30°C (70°–85°F).

Iran, considered an arid country, has several creeks, rivers, and lakes, many of which fill up with rain and melted snow in the spring, and then dry up during the summer. Even the Caspian Sea loses much of its water to evaporation. Lake Urmia in the northwest, Iran's largest inland body of water, covers an area of 5,200 sq km (2,000 sq mi). The three principal rivers are the Karun, the Atrek, and the Safid. Of these, only the Karun is navigable. It travels from the Zagros Mountains to the Shatt al-Arab, and then into the Persian Gulf. The lakes are salty and thus of little use for irrigation or drinking, but the rivers provide usable water. Underground irrigation tunnels carry water from springs, streams, and snow-topped hills. These canals are critical to this country with a water scarcity.

The name "Persian" is now used to refer to all Iranians (with a total population of about 69,400,000 people). Only 51% (or 35,954,000) of Iranians, however, are actually Persians, i.e., descendants of the Aryans who emigrated from Central Asia. Persians, the largest ethnic group, live either in the developed farm areas or in the large cities of the northern and western plateau. Another large ethnic group is the Azerbaijanis, descendants of Turkish settlers from the 10th century AD. They live in the northwest part of Iran and make up 24% of the population (or 16,600,000 people). The Zagros Mountains are home to several ethnic groups, such as the Kurds, who make up 7% of the total population (or 4,848,000 people), and the Lurs and the Bakhtiari, each of whom makes up 2% of the population (or 1,380,000 people).

The Kurds are a nomadic people whose origins are located in territory that extends into parts of Iraq, Syria, and Turkey, with 33% of the Middle East's Kurdish population residing in Iran. They are also part of a political dilemma involving all of these states, because they wish to establish their own state of Kurdistan over Kurdish-populated territories. In fact, the Kurds, who are Sunni Muslims, demanded independence from Iran following the Shia Islamic Revolution of 1979. Relations between the Kurds and the government have gotten better.

The Lurs (or Luri) live in an area known as Luristan, and the Bakhtiari live west of Shiraz, in the mountains. Both are nomadic peoples, although the Iranian government since the 1960s has tried to modernize their lifestyle by settling them in farming villages. Another 2% of the population (or 1,380,000 people) are of the Baluchi tribe—farmers living in the Baluchistan region in southeastern Iran. Arabs make up 3% of the population (or 2,082,000 people). They live in Iranian islands in the Persian Gulf and in Khuzistan. Other ethnic groups include the Qashqai, Turkomans, Khamshah, Mamasani, Shahsevan, Armenians, Brahui, Syrians, Afghans, and Pakistanis. The overwhelming majority of Iranians are Muslims, belonging to the Shia school of Islam. However, there are a significant number of minority religious groups in Iran, including Sunni Muslims, Zoroastrians, Armenian and Chaldean Christians, and Jews. The 1979 constitution guarantees religious freedom, and is widely respected.

Iran had as many as 3 million refugees residing within its borders in the 1990s, as a result of the civil war in Afghanistan. The total number was less than 1 million in 2007. This drop in the refugee population resulted from the government's effort to return refugees from Afghanistan, following the fall of the Taliban regime in 2002 in that country. Other refugees were

Shia Muslims from Iraq, who began returning to Iraq after the fall of Iraqi leader Saddam Hussein, who was Sunni. Refugees from southeastern Turkey and Azerbaijan also have entered Iran.

### 3 LANGUAGE

Iran's official language is Farsi, which is also known as Persian. Farsi, also spoken in parts of Turkey and Afghanistan, was brought to Iran when the Aryan people of Central Asia migrated across Iran's northern border. Farsi has since been influenced by other languages, predominantly Arabic. The Farsi alphabet is very similar to the Arabic alphabet and, like the latter, is written from right to left. Many Iranians understand Arabic, an important language since the Quran, the holy book of Muslims, is written in Arabic. The Azerbaijanis speak a Turkish dialect known as Azeri. The Lurs and Bakhtiari both speak the Luri language. The Baluchis speak an Indo-European language, and the Kurds speak a language known as Kurdish.

### 4 FOLKLORE

Many Muslims believe in *jinns*, spirits who can change shape and be either visible or invisible. Muslims sometimes wear amulets around their necks to protect them from jinns. Stories of jinns are often told at night, like ghost stories around a campfire.

### 5 RELIGION

Shia Islam is the state religion of Iran. Shia is one of the two schools of Islam. Sunni Islam is the major school, with a far greater number of adherents worldwide. Followers of the Prophet Muhammad in the 7th century AD engaged in a dispute, after his death, as to who the rightful successor to the Prophet's leadership was. Those who believed that the Prophet's son-in-law 'Ali should become *khalifa* (caliph), the Islamic leader, formed the Shia school, which took root in Iran and has dominated religious thinking there through the present day.

The overwhelming majority of Iranians (about 98%) are Muslims. Most Iranians (about 89%) belong to the Shia school of Islam, while the remaining population is Sunni Muslim (9%) or Zoroastrian, Armenian and Chaldean Christian, or Jewish. The latter groups make up about 2% of the population. The 1979 constitution guarantees religious freedom and is widely respected. However, non-Muslims must follow civil laws in Iran that are formed on the basis of Islamic principles.

Before the advent of Islam, most Iranians were Zoroastrians. The Zoroastrian faith developed in Iran around the 7th to 6th centuries BC. Zoroastrians followed a teacher named Zoroaster or Zarathustra. They worshiped a god of good known as Ahura Mazda and believed in a god of evil known as Ahriman. Most Zoroastrians converted to Islam starting in the 7th century AD. Over the centuries, most of the remaining Zoroastrians fled Iran and resettled in India.

### 6 MAJOR HOLIDAYS

The major secular holiday is Now Ruz (or Nawruz), the ancient Persian New Year. The festival begins on March 21, which is also the first day of spring, and continues through March 24. Much socializing takes place on this very festive day. A gong is sounded or a cannon is fired in the cities to signal the begin-

ning of the new year. Children are given money and gifts, and dancers perform at festivals. Oil Nationalization Day (March 20) commemorates the day in 1951 when Iran assumed ownership of the Iranian oil industry, which had been controlled principally by Great Britain. Other national holidays include Islamic Republic Day (April 1) and Revolution Day (June 5).

Iran is on the lunar Islamic calendar, so the dates of religious holidays change every year. Some of Iran's major religious holidays commemorate the birthdays of imams, or religious leaders, who were famous in history. One of these is the birthday celebration of an imam of particular importance to Iranians, known as the Twelfth Imam.

One major Muslim holiday comes at the end of Ramadan, the month of fasting. During the month, Muslims refrain from eating, drinking, or having sexual relations during the daytime in order to reflect on God and on the plight of the unfortunate who do not have enough food. Another major Muslim holiday commemorates the willingness of the Prophet Abraham, as well as his son, to obey God's command in all things, even when Abraham was about to sacrifice his son. This holiday signals the end of the Muslim pilgrimage to Mecca, or *hajj*, which every Muslim must undertake at least once during his or her lifetime.

Another significant month, particularly to the Shia Muslims of Iran, is the Islamic month of Muharram. During this month, the grandsons of the Prophet Muhammad, Husayn and Hasan, were killed. Iranians mourn their death throughout the month, sometimes mourning in street processions in which they beat themselves. Those who can afford to do so give money, food, and goods to the poor. No weddings or parties can be held during the month of Muharram.

## 7 RITES OF PASSAGE

Marriage is the most important stage in a person's life, marking the official transition to adulthood. In the Islamic Republic, a woman traditionally could have been betrothed at age nine and a man at age fourteen. Iran's present day Civil Law sets the minimum age of marriage at fifteen for women and at eighteen for men. However, the law also allows for earlier marriage if a woman's legal guardian, and a judge or medical doctor felt that she was mature enough for marriage. For these reasons, most Iranian men and women marry between the ages of eighteen and twenty-five. Although dating is not common in rural areas, college students and other couples who live in cities often will get to know a future spouse by going to movies, eating out in restaurants, or socializing together before marriage. Iranian laws also allow for couples to have a *sigheh* or temporary marriage in which men and women are able to test whether they wish to remain together. Many women enter such marriages for the sake of financial support.

There are two ceremonies in the marital tradition: the *agd*, and the *arusi*. The engagement is the *arusi* and is usually a very intimate and private affair among the families involved. The actual ceremony is the *agd*, which can involve the entire community. Iranian society is built on the importance of the family, and marriage is often arranged among families that have long-established ties. A potential suitor must seek the approval of the father before even speaking to his prospective wife. Women and men are raised to see marriage as their social and religious obligation, and it is valued as such.

The birth of a child is an important event. Relatives and friends typically will bring a gift. Children's birthday parties are attended mostly by adults, and children gather to eat and play traditional games. Girls traditionally will have a party at school at age nine and fifteen.

Respect toward the deceased is also an important ritual. Loved ones gather at the home of the recently deceased to sit and quietly pray or reflect. Those who knew the deceased casually pay their respects at the mosque. The death of a community member in urban areas is announced in the local paper. Mourning lasts for 40 days, and special dark attire is worn to show grief for the deceased.

## 8 INTERPERSONAL RELATIONS

It is customary to greet others with a handshake and slight bow of the head in Iran. Men, however, will not shake the hand of a woman unless the woman offers her hand first. It is also customary to stand when an elder individual or prominent person enters the room.

Most people in Iran employ an elaborate system of courtesy, known in Farsi as *taarof*. Polite and complimentary phrases are used to create an atmosphere of trust and mutual respect. For example, when an Iranian finds he or she has had their back to someone, which is considered offensive body language, he or she will apologize. The other person will usually reply, "A flower has neither back nor front." At times, *taarof* can complicate or delay things, such as when two people each insist that the other should proceed first through a door. Since it brings honor to the one who insists, there could be a long struggle before one person finally gives in.

Another aspect of *taarof* is the elaborate display of courtesy when one entertains a guest. For example, a host will always offer a guest food or other treats, even on a brief visit. Hungry or not, a guest will most often take the offering in order to please the host. A host will make sure to make the guest feel comfortable and well-liked. The host will go to great lengths to please the guest, but the guest also must behave with the utmost courtesy and politeness toward the host.

Iranians, like many people of the Middle East, are very hospitable. They serve their guests as much as they can afford. Iranians typically place a large basket of fruit on their table for guests and family to consume. This display symbolizes abundance and mirth, which all Iranians want to share. Women in the family cook for the enjoyment of their guests. Tea is boiled in a metal (usually copper) urn known as a *samovar* and is served to guests in small glasses with lots of sugar. Visitors return the courtesy by removing their shoes when they enter the carpeted areas of a home.

Iranians are very demonstrative with their facial and hand gestures. Some gestures that have specific meanings in the United States are interpreted differently in Iran. For example, the American hand gesture meaning "come here," with the forefinger pointed outward and waved toward one's body, in Iran is a gesture used by men to beckon suggestively to women. The American "thumbs up" gesture, indicating something well done, in Iran is an aggressive gesture that can create ill feeling.

## 9 LIVING CONDITIONS

Almost 70% of Iran is uninhabited because of the harshness of the deserts and mountains. The population density is about 148 persons per sq km (92 per sq mi). Most of the population

lives in the western and northern parts of the country, with the highest concentration of people in Tehran, the capital city, which has a population of 7,315,000. The second-largest city is Mashhad, with a population of 2,150,000. The third-largest cities are Tabriz and Isfahan, each with a population of about 1,350,000. Other highly populated areas are in Azerbaijan in the northwest and along the coast of the Caspian Sea in the north. The population of more than 69,400,000 is highly urban. About 67.5% of Iranians lived in cities in 2007 compared with about 31% in 1951. The cities, however, are finding it difficult to keep up with the needs of the migrants. Sanitation and housing in the cities are thus inadequate.

A rise in the number of young Iranians has accompanied the migration of people from rural to urban areas. The average life expectancy at birth for Iranians was 70.7 years in 2004 compared with 55.3 years in the early 1970s. As a result, nearly one-third (29.8%) of the population was under age 15 in 2004. This large percentage of youth has created a large workforce, with 23.1 million workers as of March 2007. About 600,000 new job-seekers enter the labor market each year. Although Iran's economy is rich with oil reserves, the country is finding it difficult to employ its young people. As a result, more than 200,000 Iranians leave the country each year in search of better work opportunities in Europe and the United States.

The cities of Iran are very spacious, and the streets are lined with trees. Despite the space, city streets are often very congested with automobiles. Larger cities have many high-rise apartments built during the Shah's renovations, and some have modern supermarket complexes that are several stories high. Tehran underwent extensive modernization during the 20th century, resulting in modern skyscrapers overlooking ancient mosques. Tehran is the industrial and cultural center of Iran. Cities also have marketplaces, or bazaars. Tehran's bazaar has more than 6,000 businesses. Wooden houses are common along the Caspian coast and square houses made of mud brick are found on the slopes in the mountain villages. Nomadic tribes in the Zagros Mountains live in round black tents made of goat hair. The people of Baluchistan, in the southeast, are farmers who live in huts.

Although Iran exports oil, fuel for use in homes is not always available. Appliances used for cooking include grill-like charcoal heaters and coal stoves. Hydroelectric power has increasingly been made available in the country.

## 10 FAMILY LIFE

In the cities, the family unit is the extended family, including one's aunts, uncles, cousins, and grandparents. The concerns of all members of the extended family have a bearing on the nuclear family, consisting of the mother, father, and children. Although large families were traditionally prized, the Iranian government has been taking steps to reduce the country's population. Couples must now attend a family planning course before they marry, and men are only allowed more than one wife if they are able to provide for each spouse equally. Government policies have helped reduce the average size of the nuclear family to about six children per family.

The tribe ruled by a tribal chief is the basic social unit among nomads. Tribes have elaborate customs that govern individuals' behavior. In the villages, clans and families are the most important social units. This creates a strong sense of belonging in the villages, as all the families share much in common.

The father is the head of the Iranian household, yet there is a tacit recognition of the mother's role and preeminence. There is a respect within the family for males and a ranking by age, with the young showing respect toward older siblings. Respect, especially toward one's elders, is an integral part of the family structure. However, Iranians extend their respect beyond their immediate and extended families. For instance, an Iranian is expected to rise to her or his feet when any person of equal or greater age or status enters the room.

There is no pension system and little state welfare for the elderly. Aging parents are taken care of by their children until death. The elderly are venerated for their wisdom and place at the head of the family. Thus, taking care of them is seen as their children's responsibility.

Because most workers and students take two-hour lunch breaks, families are able to spend time together in the afternoons, as well as in the evenings. They also see much of each other on Fridays, the Muslim day of rest and prayer. It is typical on Fridays for families to go on an outing, usually to the park to watch children play, talk about current events, and eat prepared food. Schools and government offices close early on Thursdays to honor this tradition.

## 11 CLOTHING

Iranians value personal cleanliness, a value that is reflected in how they dress. Western clothing for both men and women was popular until the Islamic Revolution of 1979. Since then, women have been forced to cover their hair and wear the Iranian *chador*, a long cloak, when in public. Although the chador most often seen in Western images of Iran is black, many Iranian women wear very colorful chadors. Some women wear only a head-covering or use the chador to cover more fashionable, Western-style clothing. It also is common for Iranian women to wear make-up.

Most men wear slacks, shirts, and jackets. Most usually do not wear ties, because religious leaders have condemned the accessory as a symbol of Western influence. Some men, especially religious leaders, wear floor-length, jacket-like garments, and cover their heads with turbans.

Mountain-dwellers continue to wear their traditional clothing. For Kurdish men, this consists of a long-sleeved cotton shirt over baggy pants that taper down to fit tightly at the ankles. A thick belt of cloth, much like a cummerbund, is wrapped around the waist, and a turban adorns the head. Some tribal women wear long, embroidered vests, and skirts or dresses adorned with beads. They wear an elaborate head covering with coin trimming. In general, great importance is placed on one's presentability. This being the case, both women and men dress in their best clothing to create a good impression.

## 12 FOOD

There is no doubt that the multitude of invasions and migrations by foreign peoples contributed to Iranian cuisine. The influence of Turkey, Greece, India, and Arab countries is seen, respectively, in shish kabob, stuffed grape leaves, spicy curry stews, and dishes made of lamb, dates, and figs. Iranian bread and rice are a must at the table. Breads come in a wide variety of shapes and sizes. *Sang-gak* is made of whole meal flour and baked over hot stones. *Nan* is a round, flat bread that can either be baked or cooked over a bed of small stones. Iranians make a popular skewered kabob known as *chelo kebab*. Boneless cubes

of lamb are marinated in spicy yogurt and arranged with vegetables on metal skewers. These are then grilled over hot coals and served on a bed of rice.

One of Iran's most popular dishes is sweet orange-peel rice, also known as "wedding rice." The color and taste of the rice make it an appropriate dish to serve to wedding guests. The cook prepares a sauce made of orange peel, shelled almonds and pistachios, sugar, butter, saffron, cinnamon, nutmeg, and orange juice. The sauce is cooked for about five minutes and then added to partially cooked (steamed) rice. The rice is then cooked for another 30 minutes.

Yogurt is a main part of the Iranian diet. It is rich and creamy and is used in many different ways. It can be used to marinate meats, it is added to salads, it is used in soups, and it is enjoyed as a cool drink in the summer. Tea, the national beverage, is grown in the Caspian region and on the slopes of mountains. Tea is made in metal urns called *samovars*. It is served in glasses. Iranians have a particular tea-drinking method: they place a cube of sugar on the tongue and sip the tea through the sugar. Pork and alcoholic beverages are forbidden in Islam.

### 13 EDUCATION

Iran underwent large-scale educational reform in the 1960s, building many schools and colleges. Emphasis was placed on training teachers, and by 1968, some 35,000 Literacy Corps teachers had been trained to teach adults and young children. Illiteracy has dropped from 70% in the 1960s to about 33% as of 2002. There is a gender gap in literacy rates, with only about 70.4% of women able to read and write, compared to 83.5% of men. Iran's younger children enjoy much higher literacy rates than adults, with 96.5% of those between ages six and twenty-nine able to read and write as of 2005.

The school year begins in September and ends in June. There is a two-week holiday in March. July and August are the months of summer vacation. Students attend school from Saturday morning until Thursday at noon. Elementary schooling lasts five years and is required for children between the ages of seven and twelve. Schools are operated by the state. Elementary schools are free, with pupils also receiving free textbooks.

After the compulsory period ends, students take a major qualifying examination to determine if they qualify to attend secondary school. These schools are free except for small fees. Secondary schools are academically demanding, and students take a major examination at the end of each school year. Failing one of the subjects could mean repeating the whole year. About three-fourths of all children enter secondary school, which consists of three years of general education and three years of high school. After completing the six years of school, students have the option to take a seventh year of "pre-college" schooling.

Universities in Iran also are free. After the 1979 Islamic revolution, two Islamic universities were built: the Free Islamic University, and the International University of Islamic Studies. The universities have suffered from financial problems, and many wealthy Iranian families send their children overseas for education.

### 14 CULTURAL HERITAGE

Iran is known for its magnificent mosques and architecture commissioned by rulers throughout history. One of the most

beautiful of these buildings is a mosque located in the city of Mashhad that was built by Tamerlane's daughter-in-law. The mosaics of tile that embellish the mosque are brilliantly colored. The city of Isfahan is known for the blue tiles of some of its historic buildings, such as the mosque named Masjid-i-Shah. This 17th-century mosque has an intricately patterned domed ceiling that is intensely geometric in design.

Iran also has palaces and monuments built centuries ago that document both the tremendous influences of foreigners and the power of the ancient Persian Empire. Carved stone structures depict various aspects of Persian life and history. The ruins of Persepolis, the capital city of the Persian Empire that was built in 520 BC, are located near Shiraz in south-central Iran. The ruins consist of rock slabs and pillars with elaborate carvings. One stone pillar is topped with a large sculpture of an animal's head. Carved soldiers and courtiers bedeck some of the stone remains, providing much information about the ancient customs of Persia.

One of the most fascinating items of Iranian artwork is the *Peacock Throne*, on which all Iran's kings since the 18th century have sat. It is part of the priceless crown jewels collection, which is now the property of the state. The throne bears more than 20,000 precious gems and serves as the backing for Iran's currency.

Many writers known around the world have contributed to a very rich literary tradition among Iranians, and Iranian music is often inspired by the country's rich heritage of poetry. By far the most famous of Iranian poets was a man named Firdawsi (AD 940–1020), who wrote Iran's national epic, the *Shahnameh* (Book of Kings). A fictional poem based on facts, the 120,000-line story relates the adventures of four ancient Iranian dynasties. Many of the copies made of this epic are illustrated with miniature art. Another internationally known Iranian poet was Omar Khayyam (11th century AD), who was also a mathematician and astronomer. His four-line rhyming verses, known as *rubai's*, became famous when Edward Fitzgerald, a British writer, translated 101 of the poems in his volume *The Rubaiyat of Omar Khayyam*. One of the more famous of the translated verses is:

The Moving Finger writes; and, having writ,  
Moves on; nor all the Piety nor Wit  
Shall lure it back to cancel half a Line,  
Nor all thy Tears wash out a Word of it.

The city of Shiraz was home to two other great poets: Sadi (13th century AD) and Hafez (14th century AD). Sadi's poems were among the first examples of Persian literature introduced to Europe. Hafez wrote a collection of about 700 poems, which is known as the *Divan*.

### 15 WORK

About one-fourth of Iran's work force is composed of industrial employees. They engage in petroleum extraction and refinery; mineral mining (coal, chromite, copper, iron ore, lead, manganese, salt, sulfur, and zinc); production of steel; food processing; and many other industries. One of the most important industries is cement production.

About one-third of the work force is employed in agriculture. This category includes farming, raising livestock, forestry, and fishing. Fishers off the Caspian coast provide about 20% of the world's supply of caviar. Iran's major cultivated crops in-

clude barley, cotton, dates, raisins, rice, sugar beets, tea, tobacco, and wheat.

The remainder of Iran's work force is engaged in the service sector. The typical Iranian urban work-day is eight hours long, often starting at 7:00 am. Workers commonly take a two-hour lunch break. During the hot summer months, workers might take longer lunch breaks and then work later into the evening when it is not so hot. Farmers and herders work from sunrise to sunset. They rely predominantly on manual labor; modern mechanical equipment is uncommon. While some farmers have the luxury of animals to assist in plowing and other fieldwork, in some regions such animals are unavailable, so the farmer relies on his own and his family's efforts.

## 16 SPORTS

Iran's most popular sports are wrestling, weight lifting, soccer, martial arts, basketball, volleyball, table tennis, and horse-racing. The *Zur Khaneh*, or House of Strength, is a physical training and wrestling center where young men undergo vigorous training with heavy clubs and perform in wrestling matches for spectators. Tennis and squash are popular, especially among urban Iranians. Gymnastics is encouraged in schools and is becoming popular. Camel- and horse-racing are popular in rural areas.

## 17 ENTERTAINMENT AND RECREATION

In rural areas, people are entertained by traveling groups of actors who recite poetry and perform plays. Generally, the plays tell stories about Iran's history, reliving important episodes and highlighting the lives of famous Iranians.

In urban areas, men enjoy spending their leisure time in teahouses, socializing and smoking the *hookah*, or water pipe. Going to movies also is becoming more popular. Women enjoy entertaining family and friends in the home. They often spend time engaged in leisurely craftwork. Iranians enjoy the game of chess, and many argue that chess was invented in their country. Many Iranians attend the mosque every Friday, both for prayer and to socialize with friends.

## 18 FOLK ART, CRAFTS, AND HOBBIES

Iranians have long been recognized as a people of artistic distinction, renowned for the crafts made by their goldsmiths during the Sassanid dynasty of the 3rd to 7th centuries AD. The city of Isfahan is famous for its abundance of artists and craftspeople. The cities of Shiraz and Tabriz are famous for their rugs. Iran's handwoven carpets and rugs are made of either silk or wool and use special knots dating from the Middle Ages. They come with many designs and patterns that vary from region to region, with geometric shapes being the most common. Persian carpets are sold in all parts of the world. Shiraz and Isfahan are famous also for their tradition of crafting metal, such as silver and copper, into ornamental plates, cups, vases, trays, and jewelry. Picture frames and jewelry boxes are embellished with a form of art known as *khatam*. This involves the use of ivory, bone, and pieces of wood to create geometric patterns.

Calligraphy (ornate writing) is also a fine art in Iran, as it is in much of the Islamic world. Verses from the Quran are skillfully handwritten and painted in beautifully flowing lettering. The calligraphy has adorned many books and manuscripts produced in Iran through the centuries. Iranians, influenced

by a Chinese art style, developed an art of painting very detailed small images on their manuscripts. Known as "miniature painting," this art form was especially prized during the 15th century. Masterpieces created at that time by an artist named Bihzad are now prized the world over.

## 19 SOCIAL PROBLEMS

Iran's development has fluctuated considerably since the Islamic Revolution of 1979. In the early 21st century, the government's opposition to the United States and its war against Islamic terrorists has led to many reactionary practices. The 2008 Amnesty International report on the state of the world's human rights noted that Iranian authorities shut down media outlets critical of the Islamic regime, jailed journalists, and closed many non-governmental organizations operating in Iraq. Nearly 350 people were executed in 2007 and harsh punishments of flogging, stoning, and amputation were handed down by the courts.

One of Iran's greatest challenges in the early 21st century has been balancing the country's older cultural and social traditions against the attitudes of its younger citizens who are more influenced by Western ideas and globalization. Nearly one-third of Iran's population is under age 25. Young people often challenge the Islamic clergy's rules on attire and socialization between the sexes by wearing Western clothing and gathering together in streets, particularly in Tehran. The government has responded by arresting those who defy Islamic based laws.

The war in Iraq (begun in 2003) has made Iranians vulnerable to external threats, as well as to threats from militants who are said to be hiding in Iran. Despite a modest increase in per capita GNP, unemployment is a severe problem, swelling the numbers of urban and rural poor. Women in rural areas particularly have suffered from the economy, where handicrafts and other commodities are given a small market value and where they have to compete with men for work. In addition, U.S. pressure on Iran's economy (through sanctions) has curbed Iran's potential for investment and growth. Overall efforts are being made by the Iranian government to compensate for this loss of revenue.

The state of the Iranian press and intellectuals in Iran today is a source of concern for human-rights activists both within and abroad. Members of the Iranian intelligentsia are frequently arrested and tortured for their so-called "un-Islamic" writings, and most live in fear for their lives. In spite of this, visitors to Iran have observed the active efforts within the intellectual community to solve various problems in the Islamic Republic, and to contribute to a lively discourse.

## 20 GENDER ISSUES

Information on the status of women in Iran can often be colored by Western prejudice against the Islamic Revolution. However, numerous accounts documented the repression of women accused of such things as improper veiling. The condition of women in Iranian society began to improve in the 1990s and women have gained more educational opportunities, employment options, and rights to seek compensation from their former husbands in the event of divorce. In addition, rules on the dress code for women began to relax in the 1990s. In 1995, a journalist asked President Rajsanjani why women's veils had to be black. The president suggested that women could wear

veils in any color of their choice. Iranian women responded by donning veils of numerous colors, including light blue and pink. The example illustrates how many women are willing to push for more social freedoms while still remaining respectful of Islamic traditions.

The advances have been pushed back with the new dominance of conservatives loyal to fundamentalist Islamic clerics in Iran. Amnesty International reported that thousands of women were arrested in 2007 for not complying with the Islamic dress code. In early 2008, the Iranian government shut down the feminist magazine *Zanan* for publishing articles that the government found detrimental to Iranian society. The magazine had been in circulation for 16 years and was among 42 publications that the government had suspended since 2005.

Iranian women continue to seek an end to legalized discrimination through the Campaign for Equality. The activist group has been trying to collect a million signatures in Iran in support for their cause. The government responded in 2007 by arresting several women working with the campaign.

# IRAQIS

**PRONUNCIATION:** i-RAH-keez

**LOCATION:** Iraq

**POPULATION:** 28,221,180 (2008 estimate)

**LANGUAGE:** Arabic; Kurdish; Turkoman (a Turkish dialect); Assyrian; Armenian

**RELIGION:** Islam (Shi'ite, 60-65%; Sunni, 32-37%); Christianity

## 1 INTRODUCTION

Iraqis are among the world's most economically devastated peoples. Iraqis have lived under conditions of war nearly continuously since 1980. Nevertheless, the people have a long and proud history and some of the world's oldest civilizations originated in what is present-day Iraq.

Iraq (the Arabic word for “cliff”) contains the ancient land of Mesopotamia, or “the land between the rivers.” The rivers are the Tigris and the Euphrates, which originate in the mountains of Turkey and flow southward through Syria into Iraq. Between these two rivers lies a fertile plain where, as far as is known, the first human civilization flourished. By 4000 BC, the Sumerians had established cities and government institutions, the earliest known on the planet. Writing, mathematics, and science also began in Sumer. The Akkadians conquered Sumer in 2334 BC, but a mere 200 years later, the Sumerians regained control of the region. From then on, a series of peoples invaded and conquered this fertile land. The Babylonians gained control in 1900 BC and ruled for 300 years, during which King Hammurabi developed his famous law code. The Assyrians followed the Babylonians, then the Chaldeans took over in the 7th century BC. Perhaps the best-remembered Chaldean leader was Nebuchadnezzar II, who reigned from 605 to 562 BC from the capital city of Babylon. The Persians invaded in 550 BC, then Alexander the Great conquered the Persians and claimed Mesopotamia for the Greeks in 331 BC. The Greeks introduced metropolitan cities and scientific rationalism and improved irrigation methods, trade, and commerce. In 126 BC, the Persian Parthians took command and ruled for about 300 years. The Romans occupied the land briefly two different times: once from AD 98–117 and again from AD 193–211. The next conquerors were the Iranian Sasanids, who took charge in AD 227, and then Islamic troops, who entered the country in AD 636. Arab tribes, some of whom were Christian, lived in the area at that time and often acted as paid armies for the Persians. The Arab tribes from the Arabian Peninsula, having recently converted to Islam, were sent to invade the area now known as Iraq. The Christian Arab tribes and others switched allegiances en masse and “converted” to Islam. They then joined the Arab troops from the Arabian Peninsula in attacking the Persians. By AD 650, Iraq was an Islamic state.

The Golden Age of Iraq occurred during the reign of the Abbasid Caliphate, from AD 750 to 1258. In 762, Baghdad became the capital and the center of political power and culture in the Middle East. The Abbasids, however, tried to control more territory than their resources would allow. This problem was further complicated by the inherent problems of hereditary rule. By the time of the Mongol invasion of the Middle East, the Abbasid empire had fragmented into many small realms that showed allegiance to Baghdad in name only. This

made it easy for the superior military forces of the Mongols to formally bring to an end the Abbasid Caliphate with the sacking of Baghdad in 1258. The Ottoman Turks eventually added Iraq to their empire in the 16th century. Iraq remained part of the Ottoman Empire until World War I, when Britain invaded and conquered it in 1917–18. In 1920, at the end of the war, an Iraqi Arab state under British mandate was created. Twelve years later, in October 1932, Iraq was recognized as an independent monarchy.

Independence did not spell the end of Iraq's troubles, however. Beset by internal conflicts and plagued by foreign powers, the monarchy finally fell to a military coup on 14 July 1958. A series of coups followed over the next 10 years, until the Ba'ath Party seized control in 1968. Saddam Hussein, named vice-president in 1968, became president of what was renamed the socialist Republic of Iraq in 1979. Iran and Iraq were at war from 1980–1988. Although Iraq declared itself the victor, the war destroyed the country's economy, heavily militarized the society, and spurred rebellion among Kurds living in the country's northern mountains. Hussein responded to the Kurdish rebellion with a chemical weapons attack that killed several thousand Kurdish civilians.

Iraq invaded Kuwait in August 1990, but a U.S.-led coalition acting under United Nations (UN) resolutions launched an invasion of Iraq in January 1991 and expelled Iraqi troops from Kuwait by February 1991. After the war, known as the 1991 Persian Gulf War, Kurds in the north and Shia Muslims in the south rebelled against Hussein's government. Hussein responded with a brutal military assault. Over the next decade, Hussein ruled Iraq as a dictator, and repressed both Shia Muslims as well as Kurds. His Ba'ath government also enacted several damaging environmental and agricultural policies that resulted in a draining of Iraq's southern marshes and extinction of a people known as the Ma'dan (or Marsh Arabs). Hussein's actions caused the United States, Great Britain, and France to set up no-fly zones over the country and requirements from the United Nations' Security Council to surrender weapons of mass destruction. Hussein refused to cooperate with the U.N. orders, and international sanctions were imposed against the country. These measures led to a U.S.-led invasion of the country in March 2003, and removal of the Ba'ath regime from power. Hussein went into hiding but was captured in December 2003 and was brought to trial and executed in late 2006. A U.S.-led coalition established an occupational government in 2003 known as the Coalition Provisional Authority and established what was initially an interim Iraqi government and, as of 2008, a transitional government. A new constitution was approved in 2006, but U.S. troops continue to occupy Iraq and war-like conditions continue to plague Iraq. Serious conflicts between the country's Shi'ite majority, Sunni minority, and Kurds threaten Iraq's long-term stability and as of 2008 the country remained at risk of falling into civil war.

## 2 LOCATION AND HOMELAND

Iraq is located in southwestern Asia, in the heart of the Middle East. It is bounded by Turkey to the north, Syria and Jordan to the west, Iran to the east, and Kuwait and Saudi Arabia to the south. There is a short coastline in the southeast on the Arabian (or Persian) Gulf. The total land area is about 437,072 sq km (168,754 sq mi), including half of a neutral zone that Iraq administers with Saudi Arabia to make it easier for the no-

madic Bedu to move between the two countries. For comparison's sake, Iraq is just a little larger than the state of California. Within Iraq are four distinct regions. The Delta region of the southeast is a broad alluvial plain. West of the Delta are the Steppe-Desert Plains, part of the dry Syrian Desert, made up of sand and stony plains. The northern foothills between the Tigris and Euphrates rivers contain a fertile area of grassy flatlands and rolling hills. In the Kurdish Country of the northeast, the land rises steeply into the Zagros Mountains where the Kurds live.

The climate varies from region to region. In the north it is temperate in the summer and freezing in the winter. The east and southeast have a tropical climate with high humidity. The west is dry and desert-like. Temperatures also vary by region, with summer highs ranging from 22°C (72°F) in the north to 43°C (110°F) in the south and west, and winter lows of 0°C (32°F) or less in the north to 15.5°C (60°F) in the south and west. Iraq has two seasons. Summer lasts from May to October and is generally hot and dry, and winter stretches from November to April and is cooler and wetter. About 90% of the yearly rainfall occurs during the winter. On average, Iraq is a dry country. In most regions, the annual rainfall averages only 10–18 cm (4–7 in), although up to 101 cm (40 in) can fall in the mountains. Even the fertile lands between the rivers receive only 38–63.5 cm (15–25 in) of rain per year. In the summer, a dry, dusty northwesterly wind known as the *shamal* frequently blasts the landscape, lasting for several days at a time, and it is often accompanied by fierce dust storms. A winter wind called

the *sharqi* comes from the south and southeast, bringing cool, moist air from the sea, which is a welcome change.

Plant and animal life differs by region. For its size, Iraq has very little wildlife. The most common tree is the date palm. Before the 1980–88 Iran-Iraq war, Iraq had more than 30 million date palms, each of which produced about 1,000 dates per year, and more than 80% of the world's date supply was grown in Iraq. Two decades of war have harmed the country's date industry seriously, and fewer than 3 million date palms are estimated to remain in the country.

The people who live in Iraq include a number of ethnic groups, physical types, and languages. According to 2008 estimates, the total population of Iraq was 28,221,180. About 75% to 80% of the population is Arab, and Kurds make up the largest ethnic minority at 15% to 20% of the population. Other ethnic groups in Iraq include Turkoman and Assyrian peoples. About 40% of the total population of Iraq is under the age of 15. Most Iraqis (75%) live in cities. Baghdad, the capital and largest city, has a population of 6 million people. The next largest cities, in descending order, are Basra, Mosul, and Kirkuk.

A distinct subgroup of Iraqi Arabs called the Ma'dan, or Marsh Arabs, once inhabited 15,540 sq km (6,000 sq mi) of marshy area just above the point at which the Tigris and Euphrates rivers flow together. Their lifestyle, however, has become virtually extinct as a result of the wars and Iraqi government programs to drain the marshlands.

### 3 LANGUAGE

The official languages of Iraq are Arabic and Kurdish. Kurdish is spoken primarily in the mountainous regions of the north. Other languages spoken in Iraq are Turkoman, Assyrian, and Armenian. Arabic has two different forms, spoken and written. Spoken Arabic has developed many dialects that often differ from one country to another, and those who speak different dialects may not always be able to understand each other. The written form of Arabic is called Classical Arabic or, for today's literature and press, Modern Standard Arabic. It is the same for all literate Arabs, regardless of how different their spoken forms are. Arabic is written from right to left in a unique alphabet that has no distinction between upper and lower cases. It is not necessary for the letters to be written on a straight line, as English letters must be. Punctuation conventions are also quite different from English. Kurdish uses an Arabic-based alphabet, but it is an Indo-European language in origin.

Arabic speakers tend to use emotional appeal, exaggeration, repetition, and words instead of action (for example, making threats with no intention to follow through on them). They are more interested in the poetry of the language than in communicating cold, hard facts. "Hello" in Arabic is *marhaba* or *ahlan*, to which one replies, *marhabtayn* or *ahlayn*. Other common greetings are *As-salam alaykum*, "Peace be with you," with the reply of *Walaykum as-salam*, "and to you peace." *Ma'assalama* means "goodbye." "Thank you" is *Shukran* and "You're welcome" is *Afwan*; "yes" is *na'am* and "no" is *la'a*. The numbers one to ten in Arabic are: *wahad*, *itnin*, *talata*, *arba'a*, *khamsa*, *sitta*, *saba'a*, *tamania*, *tisa'a*, and *ashara*.

Iraqi Arabs have very long names, consisting of their first name, their father's name, their paternal grandfather's name, and finally their family name. Following Islamic custom, a woman does not take her husband's name when she marries, but maintains her family identity. First names usually indicate

an Iraqi's religious affiliation. Muslims use names with Islamic religious significance, such as *Muhammad* and *Fatima*.

### 4 FOLKLORE

The most famous collection of Arab folktales, *The Thousand and One Nights*, was probably put together in Iraq sometime around AD 1000–1500, during the reign of the Abbasid Caliphate. The premise of the collection is that a king keeps killing his wives until the beautiful woman Scheherazade marries him. She tells him a story each night with a cliffhanger ending so that he must keep her alive to find out the ending. This goes on for one thousand and one nights, until finally the king decides to let her stay alive forever as his wife. Among the stories she tells are the well-known tales of "Ali Baba and the Forty Thieves," "Aladdin and the Magic Lamp," and "The Voyages of Sinbad the Sailor."

Another famous story originating in ancient Iraq (then known as Mesopotamia) is the Akkadian hero-tale, the *Epic of Gilgamesh*. Gilgamesh was the name of a ruler of Erech, but it is unknown whether this is the same Gilgamesh as the one in the epic poem. The poem tells of Gilgamesh's struggles to achieve immortality.

Some common superstitions in Iraq are beliefs in omens and signs. For example, it is considered good luck if a stork chooses to build its nest on the roof of your home. Also, precautions are taken at birth celebrations to ensure the protection of the child from bad luck, such as not allowing women who have had no children or people with blue eyes to attend.

### 5 RELIGION

The majority of Iraqis, about 95%, are Muslim. Of these, 60% to 65% are Shi'ite, and the remainder is Sunni. Most Kurds are Sunni Muslim but consider themselves distinct from Iraq's Sunni Arab population. Orthodox Christians, Catholic Christians, Mandaean, and Yazaidis also live in Iraq. Ancient Mesopotamia was originally a Jewish region, and the Jews actually left and returned to Mesopotamia many times with various conquering armies, including the Greeks and the Persians. The few Jews who stayed on in Mesopotamia created a small band of descendants in Iraq, most of whom migrated to Israel when it became an independent Jewish state in 1948. Iraqi Christians are mostly Catholic. They consider themselves the original Iraqis since they were there before the Islamic invasion. When Islam arrived in the 7th century AD, many gods and goddesses were being worshipped by the people of present-day Iraq. The Islamic conquerors brought most of the people together under one god, Allah.

The difference between Sunni and Shi'ite Muslims, which has played such an important part in Iraqi history, has to do with the early history of the religion. After Muhammad's death, the entire Muslim community was divided over who should become the first political successor, or caliph. A strong minority believed that Ali, Muhammad's cousin and son-in-law, should be caliph. The rest accepted Abu Baker as the first caliph. Abu Baker assumed the caliphate and eventually obtained the allegiance of Ali.

Ali did not become caliph until after the death of Uthman, the third caliph. At that time, Mu'awiyah, the governor of Syria and a relative of Uthman, challenged Ali for the caliphate using Syrian troops personally loyal to him. The battles between the caliph and Mu'awiyah were inconclusive, and Ali remained

in control over most areas except Greater Syria until his death. At that time, Mu'awiyah was able to defeat a number of challenges from Muslims of Muhammad's family and friends to firmly establish himself as caliph. He instituted a system of hereditary rule for his family, thus establishing the Umayyad dynasty. Those Muslims who continued to refuse to recognize the legitimacy of Mu'awiyah's caliphate and the Umayyad dynasty were called the followers of Ali, or *Shi'iat Ali*. The supporters of the Umayyads were known as *Shi'iat Uthman*. Eventually the followers of Ali became known as the Shi'ites.

Although there are doctrinal differences, the fundamental difference between the sects is an argument about authority, not doctrine. The Shi'ites believe that the successors of Muhammad should have been from his close family (or *Ahl al-Bayt*) and that Ali should have been first caliph. The Sunnis believe that, although Ali was justified in defending the caliphate from Mu'awiyah, once the Umayyads took control, it was more important to maintain political stability than to risk the chaos that might have resulted from a civil war. These political differences have developed into substantial theological differences over the centuries.

## 6 MAJOR HOLIDAYS

Iraqi Muslims celebrate Muslim holidays, and Christians celebrate Christian holidays. Because Iraq is not officially an Islamic state, Muslim holidays are not official state holidays. But, since the overwhelming majority of Iraqis are Muslim, their holidays become essentially state holidays. Friday is the Islamic day of rest, so most businesses and services are closed on Fridays. Muslim holidays follow the lunar calendar, moving back by 11 days each year, so their dates are not fixed on the standard Gregorian calendar.

The main Muslim holidays are: *Ramadan*, the ninth month of the Muslim year, during which Muhammad received his first revelations—celebrated by complete fasting from dawn until dusk each day of the entire month; *Ayd Al-Fitr*, a three-day festival at the end of *Ramadan*; *Ayd Al-Adha*, a three-day feast of sacrifice at the end of the month of pilgrimage to Mecca (known as the *Hajj*)—families who can afford it slaughter a lamb and share the meat with poorer Muslims; the First of *Muharram*, or the Muslim New Year; *Mawoulid An-Nabawi*, the prophet Muhammad's birthday; and *Ayd Al-Isra wa Al-Miraj*, a feast celebrating the nocturnal visit of Muhammad to heaven.

*Ahura*, which is only commemorated by Shi'ites, is a formal day of mourning for the anniversary of when Muhammad's grandson, Husayn, and a small band of loyal followers were massacred by Yazid, the son of Mu'awiyah, who was named caliph by the Umayyads after Mu'awiyah's death. Yazid was almost universally despised by the Muslims for his impiety and oppression but maintained a strong army personally loyal to him. The massacre occurred at Karbala' in Iraq. The Muslims who had asked Husayn to oppose Yazid failed to show up at Karbala' to help him against Yazid's army. Today, the holiday has political overtones as Shi'ites cry and lament the failure of the Muslims to defend Muhammad's family and celebrate the bravery of Husayn in opposing an unjust ruler despite terrible odds. For this reason, Iraq's former leader Saddam Hussein had outlawed the commemoration of this important Shi'ite holiday.

Christian holidays center on Christmas (December 25) and Easter (depending on the lunar cycle, occurring sometime in late March or early April). Several secular holidays that were celebrated under Saddam Hussein's regime are no longer officially observed, and the government of Iraq had not established new national holidays as of 2008.

## 7 RITES OF PASSAGE

The birth of a child is an occasion for a big celebration, especially if the child is a boy. Boys are usually circumcised at birth. Three days after the birth, family members and friends come to visit and bring gifts for the child. Sometime between 9 and 13 years old, children begin the *al'Khatma*, or the "reading of the Quran." A child studies for a year or more to prepare for this difficult task. When ready, boys read to men and girls read to women. Those who read without an error earn the title of *hafiz*. After a successful reading, the family holds a celebration in the child's honor, usually a luncheon or a tea. Relatives give the child gifts and money, and everyone wears colorful clothes.

After children reach puberty, they generally are segregated by gender. Young men and young women attend separate schools and are rarely seen together in public. Early marriage is encouraged, and marriage is considered the start of adulthood. Unmarried daughters and sisters are carefully protected by the male members of their families, and marriages are often arranged. Marriage is considered a contract between families. Dating is relatively rare. In all circumstances, the groom is required to pay a large dowry to the bride's family, but this money is often used to buy furniture for the new couple. Weddings consist of a brief ceremony and several days of parties. After the parties, guests escort the newlywed couple to their new home or to a hotel. Cars following in a procession, honking horns, and in rural areas, bullets are sometimes fired into the air.

Islamic law allows men to have up to four wives, but most Iraqi men have only one wife. Divorce is rare.

Young Iraqi adults expect to take care of parents as they age. As a result, few retirement homes exist in Iraq. When an Iraqi Muslim dies, the body is buried in a grave facing Mecca. After burial, a collective prayer seeking forgiveness for the deceased is offered.

## 8 INTERPERSONAL RELATIONS

Iraqis are very generous and loyal, and very polite to their friends. If a friend asks for a favor, it is considered very rude to say no. It is taboo to wish bad luck on someone because it might come true. While having a conversation, it is rude to turn one's foot out so that the sole is facing the other person. The left hand is considered "unclean" so it is never used when eating. If someone praises one of an Iraqi's possessions, he or she will insist that the other take it; therefore, it is rude to praise another's things too much.

When talking, Iraqis touch each other much more often and stand much closer together than Westerners do. People of the same sex will often hold hands while talking, even if they are virtual strangers. (Members of the opposite sex, even married couples, never touch in public.) Iraqis talk a lot, talk loudly, repeat themselves often, and interrupt each other constantly. Conversations are highly emotional and full of gestures. Some common Iraqi gestures are:

eyebrows raised and head tilted back = “No.”  
 clicking the tongue = “No.”  
 right forefinger moving right-to-left repeatedly = “No.”  
 right hand moving up and down with the palm facing down = “Be quiet!”  
 right hand moving away from the body with the palm down = “Go away!”  
 right hand out while opening and closing the hand = “Come here!”  
 right hand on heart after shaking hands = show of sincerity  
 fist with thumb pointing upwards = sign of victory

## 9 LIVING CONDITIONS

Living conditions among Iraqis are in disarray as a result of nearly three decades of war. Iraqi society typically consisted of three classes: the upper class, composed of well-known, influential families and government officials; the middle class, composed of government employees, professionals, merchants, small landowners, etc.; and the lower class, comprising the peasants and laborers, rural farmers, and the unemployed. The middle and upper classes traditionally have lived in much better conditions than the lower class. The lower class, mostly rural people, lived in reed and mud huts, generally without electricity or running water. However, all classes have suffered greatly from the war.

Most Iraqis still decorate their homes with religious art, including Quranic verses written in Arabic calligraphy, religious icons, and pictures of the holy Islamic cities of Mecca and Medina in Saudi Arabia. Homes usually are set up so that a husband and wife occupy one bedroom, and so that girls and boys each sleep in separate quarters. Homes are built of stone and fired bricks. In more peaceful times, Iraqis would sleep on their roofs on hot nights.

Before the 2003 U.S.-led invasion, about 60% of Iraqis relied on the United Nations’ “oil-for-food” program for basic nutrition. This program allowed Iraq to bypass economic sanctions that had been imposed against Saddam Hussein’s government in order to sell oil to purchase food, medicine, and other basic supplies. Since the beginning of the 2003 war, much of that relief has come from humanitarian aid agencies. The country’s hospitals are understaffed, and many basic medications are in short supply. Drinking water has been contaminated, and diseases, such as typhoid and cholera, are common. Widespread poverty, malnutrition, and pollution have caused infant mortality to rise in recent years. The infant mortality rate was estimated at 45.43 deaths for every 1,000 live births in 2008, with males less likely to survive childhood than females. Iraqi life expectancy rates also are lower than that of much of the world. The average life expectancy is 68 years for men and 71 years for women. These factors have produced a very young population of Iraqis, with a median age of 20.2 years.

## 10 FAMILY LIFE

The family is the most important social unit in Iraq, and family loyalty is one of the most important values. Honor, both personal and family, is also very important. It is considered a disgrace to speak badly about a family member, or tell non-family members about bad things that have happened in the family. A “family” consists of all related kin and can include hundreds of people. Rural families live with or near each other.

Although urban families do not always live together, they are always willing to help out a family member in need. The traditional household of a typical man in his 40s consists of himself, his wife, their unmarried sons and daughters, their married sons with their wives and children, the man’s mother if she is still alive, and frequently his unmarried sisters, if he has any. Very probably, the most powerful force in the household is the man’s mother: her sons revere her, and her daughters-in-law must do her bidding. The structure of Arab society is such that financial power is in the hands of the husband, although his wife is not completely without influence. Women have a great deal of power at home and over their children, including their grown sons. Sex roles are very clearly defined in Iraq. Men wield public authority and are the stern disciplinarians at home, whereas women rule in domestic affairs and are the loving, nurturing force at home (often to the point of spoiling their children). In rural areas, this strict division of labor and sex roles causes the sexes to be almost completely segregated except when eating and sleeping.

Most marriages are still arranged by families, but a couple must approve a match. Traditionally, first or second cousins are preferred for marriage partners. Divorce is fairly easy under Islamic law and has no stigma attached to it; even so, it rarely occurs. Children belong to their father’s family, and in the case of divorce the father is automatically awarded custody.

Young children are adored and indulged, though they are strictly punished for misbehavior. Older boys are allowed to attend the gatherings of the men, and by listening they absorb many of the cultural values and attitudes that will shape their public behavior. Older girls are very carefully protected. They learn domestic skills through participation. Children are expected to obey their parents and grandparents. Iraqis believe that wisdom increases with age, so the elderly are deeply revered.

## 11 CLOTHING

Urban Iraqis, for the most part, wear Western-style clothing, although there is a resurgence of fundamentalism that has led some to return to more traditional Arab dress (such as veils for women). Most rural Iraqis wear traditional clothing. Traditional dress for women consists of a veil, which girls begin to wear after their first menstrual period, and a dark robe called an *abaaya*, which is an outer cloak that covers the body from head to ankle. Under the *abaaya*, they wear brightly colored dresses. Veils are only removed at home or in female-only groups. For men, traditional dress consists of a caftan and a head cloth. A caftan is an ankle-length robe with long sleeves. Caftans used to be colorful but are plain-colored now. Light cotton caftans are worn in summer, and heavy woolen ones in winter. Head cloths are either wrapped around the head like a turban (rural men) or draped over the head and held in place with a cord (urban men). Kurdish women wear pants under their dresses, while men wear baggy trousers tied with sashes.

## 12 FOOD

Staple foods in Iraq are wheat, barley, rice, and dates. Iraqis cook almost every part of an animal, including the kidneys, liver, brain, feet, eyes, and ears. The meat is usually cut into strips and cooked with onions and garlic, or it is minced for a stew served with rice. Sheep and goats are the most common meat animals, although cows, chickens, fish, and camels are

also eaten. Islam forbids the eating of pork. Lamb and mutton are traditionally used for special feasts.

Coffee is prepared in a unique way in Iraq. The beans are ground, then the drink is heated and cooled nine times before it is served. It is believed that this process removes all impurities from the imported product. Iraqis usually drink their coffee with sugar and cream or milk. Coffee and tea are the favorite drinks, served before and after (not during) meals. Ice water is drunk frequently in the summer, and Western soft drinks are popular in the cities. Islam forbids the consumption of alcohol.

An Iraqi meal has several courses, starting with appetizers, such as *kebabs*, which are cubes of marinated meat cooked on skewers, and soups, which are drunk from the bowl and not eaten with a spoon. A simple main course follows, such as lamb with rice, and ends with a salad and *khubaz*, which is a flat wheat bread served buttered with fruit jelly spread on top. Iraqis love desserts, especially one called *ma'mounia*, dating from the 9th century. A recipe for ma'mounia follows.

### Ma'mounia

3 cups water  
2 cups sugar  
1 teaspoon lemon juice  
½ cup sweet butter  
1 cup semolina  
whipped cream  
1 teaspoon ground cinnamon

Put sugar and water in a large saucepan over low heat, and stir constantly until sugar dissolves. Bring mixture to a boil while adding lemon juice. After the syrup boils, reduce heat and let simmer until syrup thickens slightly (about 10 minutes). In another saucepan, melt butter and add semolina. Stir until semolina is lightly fried. Then add the syrup from the other pan, and let the mixture simmer another 10 minutes, stirring constantly. Remove from heat and let cool 20 minutes. Spoon ma'mounia into individual serving bowls, top with whipped cream, and sprinkle with cinnamon.

Makes 4 servings.

(Adapted from Susan M. Hassig, *Cultures of the World: Iraq*, p.119.)

### 13 EDUCATION

Before the 1991 Gulf War, the government invested heavily in Iraqi education. Literacy rates increased substantially and more Iraqis had access to higher education. Since then, schools have fallen into disrepair and teachers have been forced to leave jobs that often pay only a few dollars a month. When schools have been able to operate, students sit in overcrowded classrooms and share books. In addition, security concerns have prompted many families to keep their children at home. About one in six students who are eligible to receive free public education are able to do so under the war-like conditions. As of 2000, about one-quarter of the adult population was illiterate.

### 14 CULTURAL HERITAGE

Iraq has a rich cultural history dating back to the Sumerians, thought to be the first advanced civilization on Earth. Story-telling has been important since the very beginning. Mesopo-

*Iraqi Shiite pilgrims march to the holy Shiite city of Karbala, Baghdad, Iraq. (Wathiq Khuzaie/Getty Images)*

tamian stories have influenced other literature and art in the world, including Biblical stories, such as Adam and Eve, the Song of Songs, and the Psalms, and Greek epics and myths, such as *The Iliad* and *Aesop's Fables*. The most famous literary works to emerge from this vast cultural history are the *Epic of Gilgamesh* (an Akkadian hero-tale) and *The Thousand and One Nights* (a collection of Arab folktales). Modern Iraqi literature is becoming Westernized in its form and content, turning from the romantic, poetic epics of traditional Arabic literature to short stories about everyday life and non-rhyming poetry on personal subjects.

Visual art in Iraq has been greatly influenced since the 7th century AD by the Islamic prohibition against depicting human or animal forms. Iraqi visual art has, therefore, focused on intricate geometric and floral patterns, as well as calligraphy. The rich legacy of Islamic architecture can be seen particularly in Iraq's mosques, with their detailed mosaics, graceful lines, and beautifully carved golden domes and minarets. Iraq is also famous for its carpets, woven from fine threads in brilliant colors. Painting and sculpture have traditionally been the favored visual arts in Iraq, with television and film-making gaining popularity in recent years.

### 15 WORK

Iraq was once an agricultural nation, but after oil was discovered it quickly grew to become the principal industry. More

than 90% of Iraq's exports are now in the form of crude oil. By 1986, only 30% of Iraqis were still farmers. Wheat, barley, tobacco, and dates are the major crops. Only 10% of the population works in small manufacturing. These industries include textiles, cement, paper products, food processing, and leather. Rural children usually follow in their parents' footsteps. The son of a blacksmith, for example, will become a blacksmith.

## 16 SPORTS

Soccer is the favorite sport in Iraq. Besides soccer, there is growing interest in boating, basketball, volleyball, weightlifting, and boxing. The continual warfare of the past few decades has prevented Iraq from developing competitive international sports teams.

## 17 ENTERTAINMENT AND RECREATION

Outdoor activities are popular in the mountains of the north, and swimming and fishing are favorite recreations in the Tigris and Euphrates rivers during the summer. Rural men hunt and fish with friends and shop together for food and drinks at the markets and bazaars of the towns. Rural women visit with each other and talk, cook, or make handicrafts. In the cities, people visit museums, haggle over prices in the bazaars, or shop in large shopping complexes with their families and friends. Men frequent teahouses, and everyone enjoys watching television. The most noteworthy fact about Iraqi entertainment and recreation is that it is nearly always done in the company of others. Iraqis are extremely social people.

## 18 FOLK ART, CRAFTS, AND HOBBIES

Handicrafts are very popular in Iraq, and there are hundreds of arts and crafts fairs each year to handle the volume of handicrafts produced. Most crafts are in the form of jewelry, rugs, blankets, leather, and pottery. Village women love to make handicrafts in their leisure time. Several households may chip in together to buy a pottery wheel and share the use of it.

## 19 SOCIAL PROBLEMS

The 1980–88 Iran-Iraq war, the 1991 Gulf War, and the 2003 U.S.-led invasion have produced poverty and social upheaval for Iraqis. It remains to be seen whether the country will recover and thrive under its 2005 constitution or whether internal strife between Sunni, Shi'ite, and Kurdish factions will force Iraqi society to crumble under civil war. Since 1991, the Iraqi middle class has virtually collapsed.

Violence continues in Iraq. The human rights group Amnesty International noted in its 2008 *Human Rights Watch Report* that thousands of civilians, including many children, were killed in sectarian fighting. Human rights violations were committed by armed militias, Iraq's military forces, and U.S.-led forces. An estimated 2 million Iraqis are believed to have been killed in war-related violence, and about 2.8 million Iraqis are living as refugees within the country. An additional 2.2 million have fled the country in search of safer living conditions abroad. Among those who have stayed, unemployment rates are approximately 40%.

## 20 GENDER ISSUES

Ongoing violence in Iraq has made conditions in the country increasingly unsafe for women. Although Islamic principles

have long enforced such practices as public segregation of individuals by gender, many Iraqi women worked outside the home and enjoyed a great deal of authority in the running of households. This independence has been hampered by death threats, domestic violence, and "honor killings." Many women have been forced to leave jobs or seek refuge abroad. Early marriage continues to be encouraged for women, especially in rural areas, and women who marry outside their religious sect face an increasing threat of violence.

# ISRAELIS

**PRONUNCIATION:** iz-RAY-leez

**LOCATION:** Israel

**POPULATION:** 7.2 million (2007 estimate, includes approximately 350,000 settlers living in Palestinian territories of Gaza Strip and the West Bank, as well as in the Israeli-occupied territories of East Jerusalem and Golan Heights)

**LANGUAGE:** Hebrew; Arabic; English

**RELIGION:** Judaism; Islam; Christianity; Druze

**RELATED ARTICLES:** Vol. 3 Palestinians; Vol. 4: Traditional Orthodox Jews

## 1 INTRODUCTION

The history of the land of Israel and the Jewish people spans 35 centuries, although the state of Israel is only a few decades old. The modern state of Israel was established in 1948 as a homeland for the Jewish people, who had been living in exile for 2,000 years. Jews from all over the world have been encouraged to immigrate to Israel in what is known as the “ingathering of exiles,” thus creating a very diverse society. The population of Israel more than doubled in the first four years of its existence (1948–1952) as Jews from Eastern and Western Europe flocked to a land where they would no longer be persecuted. From 1989 to 1992, some 500,000 new immigrants arrived, mostly from the former Soviet Union, plus almost the entire population of Ethiopian Jews. In terms of percentage of population, this would be the equivalent of the United States taking in 25 million more people.

Israel also has a sizable population of non-Jews to integrate into its society, most of whom are Arabs: Muslim, Druze, and Christian. The world center for the Baha’i faith is in Israel, and there is also a small but significant population of Bedouin Arabs (former nomadic herders who are now trying to make the transition to a settled life). Arabs in Israel are challenged to create and maintain a sense of identity. They are Israeli, but they have family, cultural, and religious ties to Arabs (especially to West Bank Palestinians) in other Middle East states. Yet, Arabs in other states are sometimes wary of Israeli Arabs because they are citizens of Israel, a country with which neighboring Arab states have been at war for many, many years. Muslim and Christian Arabs feel that they also have claims to the land of Israel, as it is the historical and spiritual center of their religions as well, and struggles for statehood and land rights have dominated Israeli politics through the early 21st century. These struggles have created tremendous tensions within Israeli society. Many programs are in place to try to reduce these tensions by breaking down stereotypes, encouraging cooperation among different elements of the Israeli population, and improving conditions for disadvantaged minorities.

The Holy Land, of which the present-day state of Israel is a part, has a long history of rule by different powers. A Hebrew kingdom was established from 12 tribes of Israel that left Egypt with Moses. King David ruled this kingdom some three thousand years ago. After his son Solomon’s reign, the kingdom split into two states: Israel and Judah. These states were subsequently destroyed by Assyria and Babylonia. At this point, the peoples living in the area were forced to disperse. Jews re-

turned to the Holy Land after the Persian conquest of the Middle East but suffered great persecution under Greek, Roman, Byzantine, and eventually Muslim rule until World War I.

In the 1890s, a Hungarian named Theodor Herzl founded Zionism. The ideology grew into an international movement to restore the Land of Palestine to the Jews. The British gained control of the territory after World War I when the Ottoman Empire collapsed. During World War II, as Jews suffered genocide in Germany, many immigrated to Palestine, seeking safety. Some 600,000 Arabs also resided in the territory, and when the war ended, the international community faced the task of trying to reconcile claims for statehood by the Jews with the traditional practices of Arabs living in the area. In 1947, the United Nations voted to divide the area into two states, one Arab and one Jewish. In May 1948, Israel was proclaimed an independent state. Neighboring Arab nations almost immediately declared war and attacked the new nation. Subsequent wars were fought in 1956, 1967, and 1973. Israel occupied territories conquered in the 1967 War: the Sinai Peninsula and the Gaza Strip from Egypt, the Golan Heights from Syria, and the West Bank and East Jerusalem from Jordan. A series of peace agreements have resulted in Israel giving up some of those lands. Israel returned Sinai to Egypt in 1982 surrendered much of the Gaza Strip and West Bank to Palestinians through a withdrawal process that began in 1993, and withdrew troops from southern Lebanon in 2000.

Treaties with Egypt and Lebanon have helped restore some relationships between Israel and its neighbors. However, relationships between the two groups who reside in Israel, the

*Israeli ultra-Orthodox Jews wear sac cloth in order to appear humble before God during a religious ritual at the Wailing Wall in east Jerusalem. (Yoav Lemmer/AFP/Getty Images)*

mostly Jewish Israelis and the mostly Muslim Palestinians, remain tense. Much of the tension stems from the establishment of the Jewish state of Israel itself. The state was created through international treaties that paid little attention to the Arab communities, who now are known as Palestinians, living in the land. Palestinians often have experienced discrimination in educational and workplace facilities in Israel and began a long, often violent movement known as *intifada* in 1982 to establish a permanent state. As part of that effort, U.S. President George W. Bush and other diplomatic leaders created a treaty that called for the eventual creation of a Palestinian state within Israeli territories. As part of that process, Israel withdrew from the Gaza Strip in 2005, and that area, along with parts of the West Bank, has been known more recently as the Palestinian territories. However, the efforts to achieve peace between Israelis and Palestinians have been stalled through the first decade of the 21st century.

Israelis have regarded their nation-state as a place of refuge for diasporic Jews, and Israeli law allows all Jews to immigrate to Israel, provided that they can prove that they either were born into a Jewish family or have been recognized as converts to the religion. However, for the first time in 2,000 years, a generation of Jews is growing up as the majority in their homeland. Known as *Sabras* (native-born Israelis), this new generation is developing a very different understanding of themselves than that of their parents and grandparents. Many *Sabras* think of themselves not as Jews, but as Israelis. Their nationalistic identity has further fueled tensions between Jews residing in Israel and their Palestinian counterparts. That identity also has be-

gun to make more Jews outside of Israel regard the nation as spiritually uninviting.

## **<sup>2</sup> LOCATION AND HOMELAND**

Israel is a small, narrow country, and its continually disputed borders are constantly subject to change. As of 2008, Israel is approximately 20,770 sq km (8,020 sq mi) in size, which makes it slightly smaller than the U.S. state of New Jersey. The tiny country shares borders with Egypt, Lebanon, Syria, Jordan, and the Palestinian territories of Gaza Strip and the West Bank. The area, despite its size, contains an amazing diversity of landscape, from mountains (Golan Heights) to desert (Negev) to a fertile river valley (Jordan). The lowest point on Earth is in Israel; the Dead Sea is 400 m (1,300 ft) below sea level. The waters of the Dead Sea are the saltiest and densest in the world. (It is almost impossible to sink in the Dead Sea.) Located at the junction of three continents—Europe, Asia, and Africa—and their natural life zones, Israel has a tremendous variety of plants and animals for its small size. The rainy season, from November to March, does not provide enough moisture to last through the dry season, from April to October, so lack of water is always a problem. Sophisticated irrigation and water-transportation and conservation techniques have been developed, highlighted by the National Water Carrier—a huge system of pipes, aqueducts, canals, reservoirs, dams, and so on—to carry water from the fertile north to the drier south. Through these sophisticated techniques, Israel has managed to create enough arable land to grow almost all the food needed by its people.

Approximately 7.2 million people live in Israel, the Israeli-occupied territories, and the Palestinian territories. Within the current boundaries of Israel, more than 90% of residents live in cities. The other 10% live in *kibbutzim* and *moshavim* (communal farms) or in small villages. There are about 110,000 Bedouin Arabs (former nomadic herders who now live mostly settled lives) scattered throughout the Negev desert, living in tents and cooking over open fires. The median age in Israel is about 28 years old. About 82% of the population is Jewish and 16% is Arab. The largest cities are Jerusalem, a mixture of ancient and modern; Tel Aviv–Yafo, the commercial and financial center, located on the Mediterranean coast; and Haifa, a busy Mediterranean port city.

### 3 LANGUAGE

The official languages of Israel are Hebrew and Arabic. English is widely used in commerce. Hebrew is the language of the majority, and more Arabs speak Hebrew than Jews speak Arabic. Most Israelis also speak English, particularly in business dealings.

Both Arabic and English are taught in schools, beginning in the fifth grade. The Israeli government sponsors classes for immigrants to Israel to learn Hebrew. However, proficiency in the language is no longer considered crucial for survival in Israel. Most Israelis speak at least two languages, often because they or their parents emigrated after 1948, and languages such as Russian often appear on food labels and in ads.

Modern Hebrew is a very young language, born only about 100 years ago. After the Exile of the Jews from ancient Israel, Hebrew was used only for religious writings and liturgical purposes for 2,000 years. For everyday use, Jews learned to speak the language of whatever country they ended up in. In the late 19th century, Eliezer Ben Yehuda (1858–1922) moved to the Holy Land with his family and decided that they would never speak a word in any language but Hebrew again. This forced them to coin many new words, and modern Hebrew was born. Yehuda compiled the first modern Hebrew dictionary and is considered to be the “father” of modern Hebrew. The Orthodox Jewish community of his time excommunicated Yehuda for “defiling” the holy language by bringing it into everyday use, and some ultra-Orthodox Israelis still refuse to speak modern Hebrew. Other Hebrew purists are frustrated by the Israeli people’s persistence in using cognates from other languages, such as *democratia*, *sveder* (“sweater”), and *breks* (“brakes”). But in a language that was used for two millennia solely for religious communication, a great deal of borrowing from other languages for modern and technological terms is to be expected.

Hebrew uses a unique alphabet with no vowels. It is read from right to left, except for numerals, which are read from left to right. Some common words in Hebrew are *toda*, (“thank you”), *ken*, (“yes”), and *lo* (“no”). The numbers from one to ten in Hebrew are: *ehad*, *shtayim*, *shalosh*, *arba*, *hamesh*, *shesh*, *sheva*, *shmoney*, *taysha*, and *esser*. Common male names are *Menahem*, *Avraham*, *Moshe*, *Benyamin*, and *Shlomo*. Common female names are *Esther*, *Hannah*, *Sareh*, *Rachel*, and *Galit*.

### 4 FOLKLORE

Most of Israeli folklore and legend reflects their history of exile in other lands, their return to the land of their ancestors, and the modern-day battles over establishing and maintaining

statehood. The traditional stories, rooted in the Jewish faith, give prominence to the Jews as God’s Chosen People and to their yearning for the Promised Land.

For example, the story of Passover, or *Pesach*, is a reference to the deliverance of the children of Israel from over two centuries of bondage in Egypt. It refers to the Jewish exodus from Egypt more than 3,000 years ago. Exodus (chapters 1–15) recounts the story of the Israelites’ oppressive servitude to the Pharaoh of Egypt and their escape with the help of Moses and his brother, Aaron. The Torah calls Passover the “season of our freedom,” for it is the time when the plague that struck Egypt passed over the Israelites without destroying them.

Another important event in the history of Judaism is the *zman matan Torateinu*, “the season of the giving of our Torah.” This commemorates the Revelation of the Ten Commandments, seven weeks after the Israelites escaped from Egypt, as they camped at the foot of Mount Sinai. The exact nature of God’s communication with Moses has been subject to various opinions, but the event itself is considered to have given the Jews their unique character.

Some modern-day Israeli heroes include Theodor Herzl, who convened the first Zionist Congress, held in Basel, Switzerland, in 1897, and the author of *The Jewish State*; Chaim Weizmann, Israel’s first president; and David Ben-Gurion, Israel’s first prime minister, who announced the independence of Israel in 1948.

### 5 RELIGION

The modern state of Israel was established in 1948 as a homeland for Jews, so it is not surprising that 82% of the population is Jewish. Nevertheless, the city of Jerusalem and many other areas in Israel played an important role in the development of three of the world’s major religions: Judaism, Christianity, and Islam. Jerusalem is holy to all three religions and is a source of conflict among them. Of the 18% who are non-Jews, 77% (or 13.8% of the Israeli population) are Muslim Arabs, most of them Sunni Muslims. About 130,000 Israelis (2.6% of the population) are Christian, most of them Arab, and the other 1.6% (or 80,000 people) are Druze. The Baha’i world center is also located in Israel, in the Mediterranean coastal city of Haifa. The Baha’i religion developed out of the mystical Islamic movement around AD 1850. Religious freedom is guaranteed by the state, but there is little separation between “church and state,” as the Jewish faith and rabbinical law are intricately entwined with the political and public spheres. Consequently, there is constant tension between the religious and secular worlds in Israel.

Jews, Muslims, and Christians all view the land of Israel as their birthplace and the first five books of the Bible as holy scripture. Despite this common foundation, these three religions have developed in very different and often contradictory ways that bring them into almost constant conflict with each other. For example, the Muslim day of rest is on Friday, the Jewish on Saturday, and the Christian on Sunday. Muslim men and women pray separately, Jewish men and women sit separately while praying, and Christian men and women sit and pray together. Jews worship in a synagogue, where a quorum (*minyan*) of 10 adult males is needed to begin. All heads are covered, and prayers happen three times daily. In contrast, at a Muslim mosque, prayers occur five times a day, facing Mecca, with shoes removed. During prayer, men bare their heads,

while women cover theirs. In contrast to traditional Christian services at a church, which have music and choral singing, Jewish and Muslim worship (while it similarly includes a sermon) features unaccompanied chanting. Holy days for the three religions differ, although some occur at similar times of the year (such as the Jewish Hanukkah and Christian Christmas). Because Muslim holy days follow a lunar calendar, sometimes they occur around Hanukkah and Christmas, and sometimes they do not.

## 6 MAJOR HOLIDAYS

Because the majority of the Israeli population is Jewish, Jewish holidays become, in effect, state holidays. During the Jewish *shabbat*, or Sabbath, from sunset Friday to sunset Saturday each week, almost all public and commercial enterprise stops. On *Yom Kippur*, the Day of Atonement, which occurs ten days after *Rosh Hashana*, the Jewish New Year, the whole country comes to a standstill while observant Jews complete 25 hours of total fasting and prayer. No Jewish hotels or restaurants will serve bread or fermented foods during the week of *Pesach*, or Passover, which commemorates the exodus of the Jews from Egypt during Biblical times.

At *kibbutzim* and *moshavim* (communal farms), a distinctive cultural life has developed with celebrations based on traditional Jewish holidays combined with ancient earth-cycle customs, such as first fruits and harvest feasts.

Independence Day is observed on May 15.

## 7 RITES OF PASSAGE

Most Israelis observe Jewish rituals and traditions. Boys are named after eight days, at the time of circumcision. The *brit milah* (circumcision ritual) is both a Jewish and Muslim ritual that has been performed for 4,000 years, since the days of the prophet Abraham. The ritual Jewish circumcision, performed eight days after birth, involves prayers, is performed by a Jew, and expresses the intent of bringing the son into the covenant with God. The son is named at circumcision. Muslim circumcisions take place either at birth or during the boy's youth. They are followed by a feast in celebration. Girls are generally named three days after birth and are given their names in a synagogue.

Both boys and girls celebrate the onset of adolescence with a formal ceremony. For girls, the celebration is known as the Bat Mitzvah (literally, "daughter of the commandments") and generally takes place at age 12. For boys, a Bar Mitzvah ("son of the commandments") takes place at age 13. Bar Mitzvah also means "he who is subject to the commandments" and signifies a boy's attainment of maturity. During the service, the boy reads from the Torah and speaks on a Biblical theme from memory. Both ceremonies are festive affairs attended by many extended family members and friends. All Israeli youth, regardless of their gender, serve in the military for two to three years. Although the mandatory military service is required of Israeli Jews, Israeli Arabs also are encouraged to volunteer for military service.

Dating is quite common among Israelis, but marriage is a highly religious matter. No civil marriages are permitted in Israel; all couples must be married by an authority within their religious faith. For Jews, the religious authority performing marriages is a rabbi. Muslim marriages are performed by a khadi and Christian marriages are performed by members

of their clergy. A Jewish bride remains veiled until after the wedding ceremony. During the first part of the ceremony, the sanctification or *kiddushin*, the groom places a ring upon the bride's finger and recites, "Be sanctified to me with this ring in accordance with the law of Moses and Israel." The bride gives her consent in the presence of two witnesses and thus becomes the man's wife. At weddings, a glass is broken to symbolize the destruction of the ancient Temple in Jerusalem (AD 70) by the Romans. A wedding contract requires a husband to support his wife. Both men and women attend the ceremony, but during the feast and afterwards, the two sexes are separated by a *mehitzah*, or dividing wall. Muslim marriages in Israel are similar to those among the Palestinians. They consist of a religious ceremony and a wedding reception at which guests and family eat, sing, and dance.

When a Jew dies, the body must be cleansed and then dressed in white robes. Males are also wrapped in a *tallit*. Embalming is forbidden because blood must be buried as part of the dead individual. Burial must take place as soon as possible following death, but Jews cannot be buried on the Sabbath. The deceased is mourned during three consecutive periods. The first period, the *shiva*, lasts seven days. At its end comes the *shloshim*, a 30-day period. The *avelut* period of mourning then begins, and it ends after the conclusion of 12 months from the day of death. To comfort a bereaved family, Jews recall the loss of Jerusalem with the following prayer: "May the Lord comfort you, together with all who mourn for Zion and Jerusalem." A son must recite the *Kaddish* prayer each day for an 11-month period after a parent's death. Sons and daughters are expected to contribute to charity in memory of a deceased parent.

Muslims also bury their dead as soon as possible. Generally, only the men attend the funeral procession. There is a three-day mourning period, during which condolences are given and Quranic verses are recited. This is followed by another Quranic recitation after 40 days. Black (unsweetened) Turkish coffee is traditionally served during mourning.

## 8 INTERPERSONAL RELATIONS

Given the extremely diverse population of Israel, it is difficult to define any standard Israeli ways of relating to one another. Native-born Israelis (known as Sabras), however, tend to be very straightforward, plain-talking people, even to the point of rudeness. They detest sentimentality of any kind and love a good argument. They are fierce and articulate, friendly and hospitable, self-confident, ambitious, and proud. Sabras are high-achievers. "Creative" drivers, Sabras make their way through the seriously congested streets of Haifa and Tel Aviv-Yafo by using their horns frequently. Because Sabras love to argue and drink coffee so much, it is considered perfectly acceptable to sit at a streetside caf  (the center of Israeli social life) and talk for hours over just a cup of coffee and a piece of cake.

Other Israelis are known for showing respect toward each other and taking an active role in their communities. The early years of Israel's existence as a nation-state focused on the cooperative spirit of nation building through *kibbutzim* development. The *kibbutzim* are communities where land and the means of production are commonly owned. Decisions are made by a general assembly of members, meals are prepared and served in a common dining hall, and children live, eat, and study together. About 3% of Israelis live in *kibbutzim* today, but the community spirit lingers even in urban apartment

An Orthodox Jewish mother and daughter swim in the Mediterranean Sea at the religious beach for women in Tel Aviv, Israel. The beach has a separate area for men and women, which is required by the Orthodox Jewish religion. (Paula Bronstein/Getty Images)

complexes. All residents are likely to know the other inhabitants by name. Most Israelis view the family and community as more important than its individual members. Most Israelis view material possessions as less important than a strong family.

The common greeting is “*Shalom*,” which means both “hello” and “goodbye” as well as “peace” and “good health.” For the Arabs of Israel, “*Salam*” also means “peace and good health,” and “*as-salamu ‘alaykum*” means “peace be with you,” also used as a common greeting. “*Toda*” means “thanks,” to which the reply is usually “*bevakasha*” (“please”) or “*alo davar*” (“it’s nothing”). “*Lehitra’ot*” is “See you!”

## 9 LIVING CONDITIONS

The Israeli government oversaw construction between 1948 and 1970 as vast numbers of Jews immigrated to Israel. Most government housing was of low quality, and today, most homes are built by private companies. A typical home has so-

lar heating panels, large windows, and a *merpeset* (balcony or patio) on which people often relax in the late afternoon and evening. In the crowded urban corridor between Tel Aviv and Haifa, most people own or rent apartments in low-rise buildings. Houses are generally covered with ceramic tiles or plastered and painted white or a pastel color. A law that dates back to Ottoman rule requires that the front of all buildings in Jerusalem be made of white, cream, or rose-pink limestone.

About 3% of the population lives in some 270 *kibbutzim*. *Kibbutzim* were traditionally the backbone of Israeli agriculture, but they are now branching out into some light industry as well. Another rural communal arrangement is the *moshav*, where about 60 individually owned family farms cooperate in purchasing, marketing, and community services. There are some 450 *moshavim* in Israel, totaling about 3.5% of the population. These supply much of Israel’s farm produce.

Small villages in Israel are mostly inhabited by Arabs. In northern Israel, there are a few villages of Druze. Bedouin Arabs live in tent communities in the Negev desert, cooking over open fires and tending sheep and goats. Bedouins used to be nomadic but are now making the shift to a more settled lifestyle.

The quality of health care in Israel is high, with high-tech medical equipment and facilities. About 95% of the population has health insurance, and there are clinics for the disadvantaged. Health problems are basically the same as in the Western world: cancer and heart disease cause 66% of the deaths in Israel. Water pollution is a serious problem, with efforts underway to rehabilitate the waterways, but the water is drinkable. Air pollution is not a major problem because most of Israel’s heavy industry was initiated after the awakening of environmental awareness. Life expectancy for Israelis is comparable to most industrialized nations, about 79 years for men and 80 years for women.

Almost all areas of Israel, even the most remote, are accessible by roadways, and most people drive wherever they want to go. Highways are very congested in the major cities, however, so many people use public transport there. Haifa has the only subway system, which is a line with only six stops that takes nine minutes to travel from one end to the other.

## 10 FAMILY LIFE

Religious and cultural traditions shape family relationships. There are four types of Jews in Israel: ultra-Orthodox, national religious, traditional, and nonobservant. Each of these four types follows rabbinical law to a different degree and interprets religious and cultural traditions in a different way. The ultra-Orthodox family lives in a separate neighborhood with other ultra-Orthodox families, follows religious law and tradition strictly, sends its children to a school run by ultra-Orthodox Jews, dresses in traditional clothing, and has well-defined, separate roles for men and women. National religious Jews follow rabbinical law closely as well, but they are fully active in the public life of the state (political, economic, and social), rather than living separately as the ultra-Orthodox do. The majority of Jewish Israelis are traditional Jews who follow rabbinical law to a greater or lesser extent and treat women and men as equals in all areas of life. Nonobservant Jews live an essentially liberal Western way of life with varying degrees of respect for religious ideas.

Traditional Arab families have been exposed to huge changes since the establishment of the Israeli state in 1948. New laws protecting the rights of women and prohibiting polygamy and child marriage, plus compulsory education, have ripped into the age-old cultural practices of many Arabs and created turmoil in their families. New participation in the economic and political life of the state, and the shift from an agricultural way of life to one based on employment in industry, business, and the professional sector, have also upset the former balance of Arab families. The new generation is growing up very different from the old, and this puts tremendous pressure on the family.

Generally, the family is highly important to Israeli life, and children receive much care and attention. Parents work hard to prepare and provide for a child's future, and married children often expect to care for elderly parents. Families come together on holidays, especially Passover, and for big celebrations.

### **11 CLOTHING**

Daily wear in Israel is generally informal and Western-style. Few men wear suit jackets and ties in the summer, except for important business occasions. Ultra-Orthodox Jews wear traditional clothing every day. Some Orthodox males wear their hair in sidelocks called *payes*. It is an Orthodox custom to give a boy his first haircut at the age of three. Married Orthodox women often wear a wig called a *shitel* and a scarf tied to the back. Men wear long black or gray coats over a shirt and pants and a black hat on their heads.

Muslim men and women dress similarly to Palestinians, with the *kaffiyeh* (scarf-like headdress) worn by many of the more traditional and elderly men. The *kaffiyeh* is folded in a triangle, laid over the head, and then secured to the head with a double-coiled rope called an *Igal*. Most Muslim women in Israel no longer wear the traditional *thob* of the Palestinians, choosing Western attire instead.

### **12 FOOD**

Because of the great diversity in the Israeli population, there is no such thing as Israeli cuisine. The meeting of cultures in Israel has brought about some interesting food combinations, such as felafel (or falafel) and chips, goulash and *couscous*, or chicken soup and *kubbe*. Israelis love to eat and do it often, starting the day with a huge breakfast and continuing to eat frequently throughout the day. Because of kosher restrictions, Jewish Israelis tend to eat a main "meat" meal at midday and a lighter "dairy" meal in the evening, since meat and dairy cannot be eaten together. Eggplant is eaten in many different ways by all Israelis, and pita bread (a flat bread with an air pocket in the middle) has become a favorite. The dietary restrictions of Judaism, known as *kashrut* ("right" or "fit"), are considered a personal matter in modern Israel. Meat and dairy products cannot be consumed at the same meal or from the same utensils. Camels, pigs, and hares are forbidden in the Jewish diet. Animals that have cloven hoofs and chew cud are permitted, such as sheep, cattle, and deer. Similarly, lobsters, oysters, shrimp, clams, and crabs are forbidden. Only fish with both fins and scales are permitted.

By far the most widely popular food in Israel is *felafel*, which is deep-fried balls of ground chickpeas. All along city streets, one finds felafel stands (not unlike hot dog stands in the United States) where a large variety of things to put with felafel in pita bread are available. The best-known felafel center is Tel Aviv's

Shuk Betzalel, where there is an entire street of felafel vendors, offering the largest selection of salads east of the Mediterranean. Other popular foods include pizza, open sandwiches, hamburgers, *kebab* (skewered meats and vegetables), and Russian borscht (beet soup). A vegetable salad, often mixed with olive oil, lemon juice, or spices, is usually eaten daily. Poultry and fish are eaten more frequently than beef. Fruits and vegetables are plentiful, and fruit juices are often part of lunch or dinner. Milk products, such as yogurt and cheese, are eaten with breakfast or dinner.

### **13 EDUCATION**

Israel is a land of the educated. Schooling is highly valued, and Israeli students are high achievers. According to 2004 estimates, 97.1% of Israelis were literate, and most complete at least 15 years of schooling prior to attending college. The government of Israel provides both religious and secular school systems, and Israelis are allowed to choose between schools where the instruction is in Hebrew and where the instruction is in Arabic. Many schools hold classes six days a week, and education is free through the 10th grade. Israel has eight colleges and universities, which enroll approximately 350,000 students. Most Israelis are over 21 when they begin college because of the compulsory military service required of them after high school.

### **14 CULTURAL HERITAGE**

Israel has become one of the most active music centers in the world, with a dynamic and unique folk-music scene stemming from the diverse backgrounds of its various immigrant groups. Israeli folk dance is also a unique blend of Jewish and non-Jewish folk dances from around the world. Classical "art" dance was not introduced in Israel until the 1920s, when Moscow-trained ballerina Rina Nikova moved there. Classical music did not appear as a professional activity until the 1930s, when it arrived with European immigrants fleeing Nazism. Now, it is an extremely popular pastime, with subscriptions to the Israeli Philharmonic Orchestra handed down from parents to children as a coveted inheritance.

Visual artists struggle to define an Israeli style, although the content of their artwork is often based on the Israeli environment. Israeli cinema is also struggling to define itself and move beyond the local market to a more global involvement. Poetry and literature, on the other hand, are vibrant and vital expressions of the Israeli spirit, despite the fact that modern Hebrew is such a new language that only 4 to 5 million people speak it and even fewer read it. An estimated 10,000 new poems are published each year in Israel. In 1966, Shmuel Yosef Agnon (1888–1970) was the first author writing in modern Hebrew to win the Nobel Prize for Literature. Amos Oz, the author of *Perfect Peace*, *The Slopes of Lebanon*, and *In the Land of Israel*, and other Hebrew writers have become known worldwide. A number of Arab Israeli authors have also achieved success.

### **15 WORK**

Working conditions have minimum requirements established by law, such as a 47-hour maximum work week, minimum wages, overtime compensation, severance pay, and paid vacation and work leave. Laws also exist to protect working women, particularly those with children or giving birth. Women are legally entitled to equal pay as men, but in practice it does not

always work out that way. Wages for everyone are determined through negotiations between the government (Israel's largest employer), the Histadrut (a federation of trade unions—Israel's largest nongovernment employer), and the Bureau of Economic Organizations (representing all other employers). At the end of 1991, the average monthly wage was NIS (New Israeli Shekels) 2,911, or about us\$1,200.

## 16 SPORTS

Soccer and basketball are Israel's most popular sports. Training takes place mostly at sports organizations, such as Maccabi, Betar, Hapoel, and Elizur. The Tel Aviv Maccabi basketball team has won the European championship twice. Mass sporting events, such as the Jerusalem March, the swim across Lake Kinneret (Sea of Galilee), and various marathons are also very popular. Jewish athletes from around the world compete in the Maccabiah Games (also known as the "Jewish Olympics"), which have been held in what is now Israel every four years since 1932. Israel sent its first delegation to the International Olympic Games in 1952. Twenty years later, at the 1972 Munich Games, eleven Israeli athletes were killed by PLO (Palestine Liberation Organization) terrorists. Despite this tragedy, Israeli athletes continue to compete in the Olympic Games.

## 17 ENTERTAINMENT AND RECREATION

Many of Israel's urban centers, most notably Tel Aviv, are home to dozens of art galleries, theatrical companies, movie theaters, and concert halls. The Mann Auditorium in Tel Aviv is the home of the Israel Philharmonic Orchestra (IPA). The IPA has more subscribers and supporters per capita than any other orchestra in the world. Classical music is a favorite in Israel, and Israelis take pride in their native musicians, such as violinists Yitzhak Perlman and Pinchas Zukerman. Hebrew pop music is also popular. In it, one senses a merging of the many Israeli ethnic backgrounds, including Arabic, Latin, and North American.

One of the favorite Israeli pastimes is eating out. Outdoor vendors and sit-down restaurants offer a wide range of food choices, from Middle Eastern *felafel* to pizza and McDonald's. Israelis of all cultures enjoy strolling through the streets of Jerusalem and Tel Aviv, cracking the shells of sunflower seeds and watermelon seeds between their teeth.

Reflecting the diversity of the Israeli population is the diversity of sporting activities. European soccer is one of the most popular sports, and the population gets quite excited over national tournaments. Basketball has been brought to Israel by North American immigrants, and cricket arrived with Australians, English, and Indians.

Israelis are beachgoers, enjoying swimming in Eilat in southern Israel and at Tel Aviv's beach, as well as floating on the salty waters of the Dead Sea, where the concentration of salt helps even non-swimmers remain buoyant.

## 18 FOLK ART, CRAFTS, AND HOBBIES

Not surprisingly, Israel is the world center for the production of Judaica, crafts relating to Jewish religious life. There are no design restrictions in Jewish law on these objects, so artists can exercise their own creativity. Hanukkah lamps, wine cups, candlesticks, and spice boxes for the Sabbath and other holidays, and *mezuzot* (parchment scrolls hung on every Jew-

ish doorpost) cases, are found in abundance in Israeli craft and folk-art shops.

The national hobby is archaeology. With more than 3,500 archeological sites in an area the size of the state of Maryland, there is plenty of opportunity for amateur and professional archaeologists. Finds date back as far as 150,000 BC. Many Israelis are amateur archaeologists, and all have an opinion about it.

## 19 SOCIAL PROBLEMS

Israel's social problems stem primarily from the newness of the state (60 years old, as of 2008), the tensions between the Jewish and Palestinian residents, and the tremendous diversity of its population. The huge, ongoing influx of immigrants creates overcrowding, unemployment, and cultural confusion. Schools constantly have to accommodate more and more students who speak different languages and come from different backgrounds. Some of the immigrant groups come from illiterate, subsistence-farming communities and have a very difficult time adapting to a fast-paced technological society. Ashkenazi (European) Jews founded the modern state of Israel and so have traditionally occupied the top positions in society. When the Sephardic ("Oriental") Jews arrived in the 1950s, they were ghettoized and finally rebelled in the 1960s. Since then, programs have been put in place to improve conditions for Sephardic Jews, and they are now becoming a more integrated part of Israeli society. The Ethiopian Jews who were brought in during the 1980s are still marginalized due to their nontechnological background and the continuing debates among the rabbinical authorities as to whether or not they are "true" Jews.

The other major problem in Israel is the lack of resolution over Palestinian statehood. The human rights group Amnesty International notes that the Israeli government continues to use military force in the Palestinian territories, even as the two groups attempt to negotiate a path to peace. In 2007 alone, Amnesty International reports that Israeli forces killed more than 370 Palestinians and destroyed more than 100 Palestinian homes. A blockade on the Gaza Strip prevented 1.5 million Palestinians living in the territory from leaving, even in search of urgent medical treatment. In the West Bank territory, Israeli authorities are building a wall separating Palestinian land from Israel, despite protests that the measure violates international law. Israeli jails also held approximately 9,000 Palestinians, some who had not been charged with a crime or brought to trial for years. Despite efforts to promote Jewish-Arab friendliness, many Israeli children grow up with the same prejudices that their parents held toward Arabs. Overcoming these prejudices in all sectors of society is the biggest challenge facing Israelis in the early 21st century.

## 20 GENDER ISSUES

The equality of women is protected under law in Israel, but in some cases, religious and cultural traditions constrain how much power women have. The traditional *kibbutzim* placed a great deal of emphasis on the equality of all individuals, and cooperation among all to build a strong nation. That spirit of equality and cooperative effort continues to exist among Israeli Jews today. Women make up about 35% of the labor force. Women also are required to serve two years in the Israeli military alongside men. Although the head of the Israeli family is

considered to be the father, women make many decisions on family matters.

In November 2005, an Israeli court ruled that a lesbian spouse could officially adopt a child born to her current partner by artificial insemination from an anonymous sperm donor. Although Israel has not yet sanctioned gay marriage, it does recognize same-sex marriages that have been performed elsewhere.

Judaism does allow for divorce, but a civil court divorce is not enough to dissolve a religious marriage. If one remarries without having attained a religious divorce performed by three rabbis, the new relationship is considered adulterous, and any children born of the second marriage are considered illegitimate.

# JAINS

**PRONUNCIATION:** JINES

**LOCATION:** India

**POPULATION:** 4,225,043 (Census of India 2001)

**LANGUAGE:** Language of the region in which they live

**RELIGION:** Jainism

**RELATED ARTICLES:** Vol. 3: Hindus; People of India

## <sup>1</sup> INTRODUCTION

Jains are followers of Jainism, a South Asian religion that predates Christianity by over five centuries or more. The Jains derive their name from *Jina* (conqueror), or “one who conquers worldly passions.” Although it has much in common with Hinduism, Jainism emerged during the 6th century BC as a reaction against the Hindu religion as practiced at the time. The geographical origins of Jainism lie in the Indian state of Bihar and southern Nepal, a region that also saw the emergence of Buddhism at about the same time. Unlike Buddhism, however, which has spread around the world, Jainism is an ethnic religion. Ethnic religions have little appeal outside their immediate cultures, and most remain localized in the lands of their birth. Jainism remains today a religion of India.

Over the centuries, the center of Jainism gradually shifted from eastern India, first to Mathura and Ujjain to the west, and then southwards. With the patronage of kings and ruling houses, Jainism firmly established itself throughout much of the Indian peninsula (Andhra, Tamil Nadu, Karnataka, and Maharashtra). For over a thousand years, it was the principal religion among the Kannada-speaking peoples of Mysore. Western areas such as Rajasthan and Gujarat also became strongholds of Jaina beliefs.

Jainism reached its greatest geographical extent, as well as its highest levels of scholarship and intellectual activity, in the period from roughly the 8th to the 10th centuries AD. The impact of Jaina thinking and the Jain way of life was felt in all parts of the country at this time. Thereafter, the religion entered a period of decline, especially in the south. Jains gave ground before a strong Hindu revival movement in what are now Tamil Nadu, Andhra Pradesh, and parts of Karnataka, even facing persecution from Brahmans. But Jainism continued to make gains in the west. Kumarapala, King of Gujarat in the 12th century, is said to have established Jainism as the state religion and to have promoted Jaina values. The end of the 13th century, however, saw western India invaded by Muslim powers from the north. Gujarat was conquered by Ala-uddin Khalji around 1298, and Jainism, its followers persecuted and its temples destroyed by the Muslims, was never to regain its former prominence.

Jainism accounts for only 0.5% of India's total population (2001 Census of India). Mere numbers, however, reveal little of Jainism's influence on the philosophy, art, history, and culture of India.

## <sup>2</sup> LOCATION AND HOMELAND

There are problems in determining the exact number of Jains in India today. The Census of India reports a population of c. 4.2 million people in 2001 and if that figure is accurate, the population of Jains in India is either declining or has been

enumerated inaccurately. However, if Jains account for 0.05% of India's population, as reported by the Census, the numbers for 2008 would be around 6.5 million. Some estimates place the population at 10 million, which one suspects is too high. A realistic estimate of the current Jain population in India would be between around 5 million, assuming growth rates reflect the national average, or, at most, just less than 6 million people. Jains have a strong presence in Gujarat and Rajasthan and are also found in the northern region of Madhya Pradesh around Ujjain. Another area of high population concentration is the region of Mysore (the modern Karnataka State) that has historically been a Jain stronghold. The city of Bombay has a large Jain community, and Jains are found throughout much of the rest of Maharashtra State. It is interesting to note that today there are few Jains in eastern India, where Jainism had its beginnings.

During the last century, a number of Jains have migrated to East Africa, Great Britain, and the United States. They are mostly Gujarati in origin and are engaged in business and commercial ventures. Jains living in the West are often quite successful, and in many areas they have set up temples and associations to promote Jain culture.

### 3 LANGUAGE

There is no specific language associated with the Jain religion. Jains use the language and script of their region.

### 4 FOLKLORE

Jainism holds that the universe has existed through all eternity and will continue to exist forever. Thus, there is no need for a creator-god, or a creation myth. Indeed, in its original form Jainism had no gods and did not worship idols (in direct contrast to Hindu practices). The 24 Jain *Tirthankaras* ("fordmakers") were to be revered, but they were men, not gods. They had attained perfect knowledge, and their appearance in the world was tied to the moral and religious decay of the people and the need for a reawakening and revival of religious values.

Lacking gods, the Jains soon raised the Tirthankaras to deified status, and their literature describes the mythological lives of these saints (only two are known to be historical personages). Today, many Jains have even adopted gods from the Hindu pantheon, although they are ranked lower than the Tirthankaras. The Jaina world of myth and legend is perhaps best illustrated by a display in an imposing two-story hall behind the Jain temple (the Lal Mandir or "Red Temple") in Ajmer in Rajasthan. The hall shows scenes of the birth and death of Rishabdeva, the first Tirthankara. Included in this display, which takes up the entire hall, is the sacred city of Ayodhya, with its palaces and mansions for the nobles. The Tribeni, the sacred confluence of three rivers at Allahabad, is also shown, with the sacred banyan tree, and Rishabdeva in contemplation. Suspended from the ceiling are gods sailing the skies in brightly colored airships. This is, in fact, a huge model of the mythological world of the Jains.

### 5 RELIGION

The founder of Jainism is generally regarded to be Mahavira, who was born in Vaisali (in Basarh in northern Bihar) in the 6th century BC. *Mahavira* literally means "great victor" and is the name given by Jains to Vardhamana, the son of a *ksatriya* (warrior-caste) chieftain. Mahavira most likely lived from

599 to 527 BC, although some sources give 549–477 BC as his dates. The Jains claim that rather than being the founder of their religion, he was but the twenty-fourth in a line of prophets and teachers stretching back through time. There is historical evidence for the existence of Parsvanatha, the twenty-third Tirthankara, who lived in the 8th century BC. Some Jain scholars even claim that Jainism was present in the Harappan civilization, a thousand years earlier (the swastika, a religious symbol of the Jains, is found in Harappan culture).

As his parents were followers of Parsvanatha, it seems certain that Mahavira was brought up in the Jain tradition. Even though he married and had a daughter, at the age of thirty he became an ascetic. He gave up his family, his high caste status, and all his worldly possessions, and for 12 years he wandered the countryside, naked, meditating, and searching for the truth. Mahavira was a contemporary of Buddha, who was born and lived in the same region, but as far as is known the two never met. At the age of 42, Mahavira achieved a state of perfect knowledge. One who attains this level is certain to achieve the state of ultimate perfection (*moksa*) upon death. Mahavira continued to travel through parts of what are now northern Bihar, West Bengal, and Uttar Pradesh, preaching his message. He died at the age of 72 in Pavapuri in Bihar.

In the years following its appearance, Jainism experienced the divisions that are so common in the history of any religion. One, dating to the very beginning of the 3rd century BC, continues to divide the Jain community today. During a 12-year famine, a prominent Jain teacher led a migration of Jains to southern India, eventually reaching the hills of Shravana Bel-

gola in Mysore. This site remains a holy place for Jains today. On their return to their homeland, the migrants found that the monks they had left behind had abandoned the rule of nudity and other observances taught by Mahavira. They regarded this as heretical, and the subsequent dispute led to the division of the Jains into the *Svetambara* (“white-clad”) and *Digambara* (“sky-clad”) sects. The Svetambara sect are the descendants of those who remained behind during the great migration south and took to wearing clothes. They are found today mostly in northern India. The Digambara continue to go naked, although in practice only ascetics adhere strictly to the rule of nudity. The Digambaras, who are found mainly in South India, also hold that women can never achieve sainthood. They are not allowed to become nuns or even enter Digambara temples.

The central themes of Mahavira’s teachings were truth, non-violence, and nonattachment to the material world. For the Jain, all living things (and even some inanimate objects) have an immortal soul (*jiva*). This soul passes through a never-ending cycle of rebirths, acquiring a spiritual and even material presence because of the accumulation of *karma*. Karma is envisaged as a form of atomic matter that is attracted to the soul in this and past lives through desires and actions. To free the soul from this endless cycle of reincarnations, one has to eliminate existing karma by following an austere lifestyle. The accumulation of new karma can be avoided by nonattachment and lack of desires. Only then can the state of ultimate perfection be reached.

Nonviolence (*ahimsa*) is a means by which Jains can avoid the accumulation of karma. Technically, ahimsa means the “negation of the desire to injure any living thing,” and the concept is found in Hinduism and Buddhism as well as in Jainism. But it is in Jainism that ahimsa has its greatest impact. The philosophy underpins almost all aspects of Jaina life and society. The first of 12 vows taken by the Jain layperson is that of ahimsa. This and the vows taken against falsehood, dishonesty, unchaste behavior, and covetousness form the code by which the Jain lives.

The “Five Great Vows” taken by Jaina ascetics, though similar to those of the laity, hold them to much stricter standards of behavior. For instance, even the accidental death of an insect caused by inhaling it is a sin. To prevent this, Jain monks (or nuns) wear a mask over their mouth and nose. They must not eat after dark in case they accidentally eat an insect. They should not travel after dark in case they tread on an insect they cannot see. When traveling, monks and nuns often sweep their path to avoid violating ahimsa. Hair is pulled out rather than cut, to avoid accidentally harming life. Jains are, of course, vegetarians, but the dietary restrictions on ascetics can extend beyond the eating of animal flesh. In Jaina belief, even plants have life and many vegetables are forbidden them as well. Though rare, strict adherence to ahimsa has led monks and nuns to suicide through starvation, an act that is seen as meritorious.

Jainism in its original form was a sect of wandering holy ascetics. It had no temples or idols. Today, however, Jains worship in temples that contain images of the Tirthankaras (in Digambara temples the idols are nude, while in Svetambara temples they are adorned with loincloths). Temple rituals are similar in form to those of the Hindus and include *puja* (worship), ritual bathing of the idols, anointing of the idols with colored powder, and the offering of special foods. *Arati*, or the

ritual waving of lamps around the idols, is performed during evening worship. Unlike Hindus, Jains have no priestly caste to officiate at religious ceremonies, though some groups employ Brahmans (Hindu priests) for this purpose. One modern sect, the Sthanakavasis, continues the traditional Jain ideal of having no temples or idols.

## 6 MAJOR HOLIDAYS

Jainism is a religion with a strong element of asceticism and it is therefore not surprising that Jain festivals often lack the gaiety, color, and elaborate rituals characteristic of many Hindu celebrations. Jains observe their religious holy days with fasting, offerings of prayer, pilgrimages, and sober feasting.

Pajjusana, which is celebrated in August and closes the Jain year, is an important Jain festival. It is observed by fasting and meditation for a period of 8 to 10 days. On the last day, Jains ask forgiveness of all living things for any harm that they might have done them in thought, word, and deed. It is customary for Jains to seek forgiveness from neighbors and friends, for family elders to ask pardon from younger members, and for employers to seek the forgiveness of their workers. Alms and food are distributed to the poor, and Jain idols are taken through the streets in elaborately decorated *rathas* or processional carts.

Mahavira Jayanti celebrates the birth of Mahavira. Jains offer prayers at temples, worship the Tirthankaras, and make pilgrimages to sacred places. Images of Mahavira are carried through the streets in processions. The death of Mahavira is celebrated at Deva Divali, which falls soon after the Hindu Divali festival. One unusual ceremony is Jnana-Panchami, when all the Jain sacred texts are dusted, cleaned, and worshipped.

An aspect of Jain religious observances that is often undertaken to coincide with major festival days is pilgrimage to Jaina sacred sites. These include Vaisali (Mahavira’s birthplace), the Hill of Parsvanatha in Bihar, Mt. Abu in Rajasthan, Girnar and Mt. Shatrunjaya in Gujarat, and the ancient Karnatak site at Shravana Belgola. At Shatrunjaya, with its temple-city built on top of a hill, the most meritorious pilgrimage involves climbing the thousands of steps to the summit, circling a temple, and descending again, 99 times. This takes about three months to complete. Every 15 years, a major ritual takes place at Shravana Belgola involving the anointing of the head of a statue of Gomatesvara, a Jain saint. The statue is over 17 m (57 ft) in height, or nearly as tall as a six-story building. Jains from all over the country make the journey to be present at the ceremony. Pilgrimages are not undertaken during the monsoon months, however, as the Jains believe that traveling might result in harm to the abundant insect life that flourishes during the rainy season.

## 7 RITES OF PASSAGE

Jains follow regional customs; thus, rituals associated with birth, marriage, and death vary around the country. There are broad similarities—for instance, Jains cremate their dead, and their death ceremonies in general follow Hindu patterns—but in detail their death rites differ from region to region. Similarly, in some areas no special ceremonies mark the attaining of adulthood, but in others boys undergo the sacred thread ritual as would a high-caste Hindu. Essentially, Jains in Gujarat follow Gujarati practices, those in Rajasthan follow Rajasthani customs, and so on.

## 8 INTERPERSONAL RELATIONS

Jains follow regional patterns in matters of interpersonal relations, greetings, and visiting customs. They are enjoined by their religion to be truthful and compassionate in social and business dealings, not to lie, and to live chaste, humble lives.

## 9 LIVING CONDITIONS

Jains, as a prosperous urban community, generally enjoy much higher standards of living and greater material comforts than the average Indian. They have access to all the amenities available in modern Indian towns and cities. They also have a strong tradition of involvement in charitable giving, supporting welfare organizations, educational institutions, and even homes and hospitals for animals (*pinjrapols*).

## 10 FAMILY LIFE

Although it originated, in part, as a reaction against the Hindu caste system, modern Jainism has its own castes. They are social rather than religious divisions, however, and lack the hierarchy of the Hindu caste system, yet they are still important in matters of marriage. The Agrawala, Oswala, Srimali, Chaturtha, and Panchama are some of the more important Jain castes. Some castes such as the Oswala are divided into major endogamous groups such as Bisa and Dasa, and these are even further divided into exogamous clans or *gotras*, and over 500 subclans. In marriage patterns, family size, and family structure, Jain communities tend to follow regional patterns and practices.

## 11 CLOTHING

Jains dress according to local customs and are hardly distinguishable from local peoples of similar social standing. However, they are still subject to the restrictions of the ahimsa philosophy. Jains do not wear furs, feathers, silk, or wool because the obtaining of these products causes harm to insects, animals, and birds. They are required to restrict the use of leather goods to a minimum, and to ensure that such leather they do use comes from animals that died a natural death and not from slaughtered animals. There are no restrictions on the wearing of ornaments, however. Given the Jains' involvement in the jewelry business, women usually wear quite spectacular gems and gold ornaments when dressed for formal occasions.

It is the custom of Digambara ("sky-clad") monks to go naked, while Jain monks and nuns often wear masks to prevent the accidental inhalation of insects and use brooms with which to sweep the road, so they do not tread on insects and thus accidentally do harm to living things.

## 12 FOOD

As a consequence of the vow of ahimsa, Jains are strict vegetarians and avoid all animal flesh, eggs, and even certain types of root vegetables (e.g., potatoes, carrots, onions, and beetroots) and fruits. They are enjoined to drink strained water and are prohibited from using intoxicants and stimulants. Honey is not eaten because bees are killed when it is collected.

Fasting, though an ascetic practice, is also popular among the Jaina laity, especially women. It is undertaken as a vow rather than a penance and is a means of demonstrating one's piety and commitment to Jain ideals. It is common at the time of festivals, on full-moon days, and during the four-month rainy season.

## 13 EDUCATION

Jains have a tradition of education and have schools (*gurukuls*) that provide both a religious and a secular education for Jains. Jains are also open to modern education and have achieved great prominence in areas of business and industry, finance, scholarship, and government service.

## 14 CULTURAL HERITAGE

Mahavira preached his message in Ardhamagadhi, the language of the area of his birth (which was called Magadha). The Jain scriptures originally were written in this language so that the common people could have access to their sacred texts without the need for a class of priests or scholars to interpret them. Jain scriptures are called *Sutras* and the most important of these, the *Kalpasutra*, contains the life and teachings of Mahavira. Jain sacred texts have been written in other vernacular languages and also in Sanskrit, the classical language of North India. The Jains have some of the oldest libraries of ancient manuscripts in India. Jain writings have also enriched regional literary traditions such as those of Gujarat and Karnataka.

Architecture is another area where Jains have left their imprint on India. The past commercial success of the Jain merchant community in western India is reflected in the numerous *havelis* (mansions) and temples they constructed. The intricately carved white marble temples of Dilwara and Ranakpur in Rajasthan, the temple complex of Girnar, and the walled, temple-city atop Mt. Shatrunjaya are part of a Jain tradition of temple-building that goes back to the 11th century AD. The earliest surviving examples of a Jaina school of palm-leaf painting in western India also date to this time.

## 15 WORK

The Jains' commitment to ahimsa effectively bars them from activities that might result in injury or death to living creatures. Thus, occupations such as butcher, leatherworker, or flour-miller are prohibited. Pastoralism violates ahimsa, since it takes sustenance out of the mouth of calves. Agriculture is prohibited, because ploughing the land could result in harm to insects and other creatures living in the soil (although the Chaturthas of southern India are an agricultural community). Similarly, the operating of machinery could result in harm to insects and flying creatures, so manufacturing industries are avoided.

As a result of such occupational restrictions, Jains have devoted their energies to business, trade, and similar urban professions. They are typically an important and prosperous element in the "Bania," or business community, of any Indian city. They are mainly bankers, moneylenders, jewelers, traders, cloth-merchants, and, more recently, highly successful industrialists. They have entered the legal, medical, teaching, and engineering professions and also hold important positions in state and central governments.

## 16 SPORTS

There are no sports uniquely associated with the Jains.

## 17 ENTERTAINMENT AND RECREATION

There are no forms of entertainment or recreation identified specifically with the Jain community.

## 18 FOLK ART, CRAFTS, AND HOBBIES

Given their emphasis on commercial activities, the Jains are not engaged in folk arts and crafts.

## 19 SOCIAL PROBLEMS

The Jain community in Delhi, where there are almost 500,000 adherents to the religion, is currently agitating for minority status on par with the Buddhists, Christians, Sikhs, Muslims, and Parsis, listed as notified minority groups under the Delhi Minorities Commission Act, 1999. Members of the community say they want minority status primarily because they want to incorporate Jainism, the religion of the community, as a subject in Jain schools. The capital and its adjoining areas have eight Jain schools. They are not able to teach Jainism to their children because most of the Jain schools in Delhi are partially funded by the government, which doesn't allow the teaching of any particular religion at schools unless it belongs to a minority community. Delhi is one of the few states in India where the Jain community has not been granted official minority status. According to Article 30 of the Indian Constitution, non-Hindu groups are entitled to certain benefits that Hindus are not. The most important of these is the exclusive right to run state funded educational institutions free of governmental interference. In light of this, many religious sects that are typically classified as Hindu have tried to obtain the non-Hindu status in order to be able to obtain state funding for their private institutions. "Hindu," as defined in the Constitution, originally included Jains, and there has been a debate in the Jain community as to whether or not to seek minority status.

As a relatively small, affluent, urban community, the Jains do not face the social and economic problems so typical of many groups in India. Rather, the problem—if it can be called a problem—is one of identity. As an offshoot of Hinduism, Jainism has retained many Hindu characteristics and Jains are often seen as just another caste of Hindus. Some observers argue that Jainism, as a small minority religion, is rapidly losing its separate identity. Others see in Jain religion and society a distinctiveness that will ensure its continued survival. For the Jains, however, there is no question. Mahavira gave Jainism its current existence. Mahapadma, the next Tirthankara or ford-maker to come, will ensure that it lives forever.

## 20 GENDER ISSUES

Theoretically, in Mahavira's Jainism, there was no distinction of caste, color, creed, or sex. Thus, for some, Jainism is a religion of equality, but for others, a woman's very femaleness creates spiritual inequality. The Digambara Jain sect believes that women cannot achieve liberation without being reborn as men first. Digambara Jains hold this view because they believe that nakedness is an essential element of the road to liberation. Since women are not allowed to be naked in public they cannot achieve liberation directly and so are seen as second-class citizens. This ban on female nakedness is partly intended to protect both men and women: if women went around naked it would cause men to experience sexual desire and the desire produced would hinder the man's progress to liberation. Digambaras also believe that women are inherently *himsic* (which is best translated as harmful). This comes partly from a belief that menstrual blood kills micro-organisms living in the female body. The killing of the micro-organisms is said to show that a female body is less non-violent than a male body—

although that idea doesn't have any scientific support and isn't found in modern Jain thinking.

Some Jain texts say that menstrual blood is a sign of impurity (this view is mirrored in Hinduism also), but the idea that women are spiritually impure because of menstruation is a rather odd basis for a Jain argument, since Jainism usually concerns itself with thinking, speaking, and acting rightly—there isn't any other area where Jainism says that involuntary bodily functions are a spiritual obstacle.

Another argument is that because a woman's nature is to care for children and other dependents, she will find it much more difficult to break free from these earthly attachments, and unless she does this, she cannot achieve liberation.

The Svetambaras have a different view of women, and indeed, there are famous nuns in both the Svetambara and Digambara traditions. Sadhvi, for instance, is a modern Svetambara nun well known for social reform and for her charitable works.

Jains exist in a specific social context, however, and, especially away from areas of Jain concentrations, have come to be influenced by local (usually Hindu) societies. When this author was talking to Jain families in the Brahmaputra River Valley of Assam, where Jains are few in number, they expressed the view that they were but another caste of Hinduism, whereas in Rajasthan and Gujarat, Jains saw their religion as quite distinct from Hinduism.

As one author observes, Jain women in India have legal and constitutional protection and that, whereas in the majority of Jain families in Uttar Pradesh the status of women used to be inferior to that of men, the impact of education, western culture, and the breakdown of the joint family have tended to loosen the stranglehold that "outmoded social mores" exerted over the freedom of Jain women. Literacy rates among Jain women at 90.6% are the highest of any religion, but female work participation (9.2%) is the lowest of any group, suggesting that education is a means of attracting good husbands, and that the primary role of Jain women in society remains, in general, taking care of the home and their husbands, and raising male children.

## <sup>1</sup> INTRODUCTION

The Japanese islands have been inhabited by humans since Paleolithic times and archaeologists have discovered there some of the oldest pottery known; below is a summary of Japan's centuries of history.

### Neolithic Japan

10,000 BC–300 BC: Jomon Period

300 BC–AD 300: Yayoi Period

### Early Japan

300–710: Yamato Period: Political consolidation; Chinese cultural influence; Literacy and Buddhism introduced.

### Civilian Court Rule

710–794: Nara Period: Emperor-centered court at the first permanent capital city, Nara. Buddhist influence is strong.

794–1185: Heian Period: Court at the new capital, Heian-kyo (Kyoto), dominated by Fujiwara clan, which legitimizes power by intermarriage with the imperial family. There is great production of literature.

### Warrior (samurai) Rule

1185–1333: Kamakura Period: After Gempei War (1180–85) between rival warrior clans, head of victorious Minamoto Clan claims the title Shogun, which implies he is an agent of the emperor, and establishes a military government (bakufu) in Kamakura. Power shifts to warriors. Zen is introduced and two Mongol invasions are repelled (1274, 1281).

1333–1336: Kemmu Restoration: Emperor Go-Daigo attempts to reclaim political power for the emperor.

1336–1568: Muromachi Period: Warrior Ashikaga Takauji forces abdication of Go-Daigo and replaces him with a new emperor. Takauji becomes Shogun and bases bakufu in the Muromachi section of Kyoto. This era is also called the "Ashikaga Period," for the family of shoguns. Art (ink painting) and literature (Noh theater) flourish. Bakufu loses control of the warriors. Protracted civil war called "Warring States Period" (1467–1573). The first Europeans reach Japan in the 1540s.

1568–1600: Reunification: Three warriors, Oda Nobunaga (d. 1582), Toyotomi Hideyoshi (d. 1598), and Tokugawa Ieyasu (d. 1616) reunify Japan. Hideyoshi launches an invasion of Korea (1592–98).

1600–1868: Edo Period: Tokugawa Ieyasu is victorious at the Battle of Sekigahara (1600). Ieyasu becomes Shogun and founds bakufu at Edo (now Tokyo). This era is also called the "Tokugawa Period," for family of the shoguns. Severe laws imposed to prevent relapse into anarchy include secluding Japan from contact with outside world, ferocious suppression of Christianity, and division of society into four classes (samurai, peasant, artisan, merchant). Peace allows rapid economic growth and the spread of literacy. Merchants dominate culture, producing haiku, novels, theater (kabuki, puppet drama), and art (woodblock prints).

### Modern Period

1868–1912: Meiji Period: Matthew Perry reopens Japan to the outside world (1853–54). The ensuing crisis over Japanese response to the challenge of Western powers leads to the overthrow of Tokugawa bakufu and a return to emperor-centered government (Meiji Restoration, 1868), although the actual political role of the emperor is limited. The teenage emperor Mutsuhito (d.1912) moves the imperial capital from Kyoto to Tokyo, takes the title "Meiji." The government launches a modernization campaign to master Western technology, military developments, education system, business practices, and governmental structures. The samurai class and institutions are swept away, Japan creates a cabinet style government, promulgates its constitution (1889), holds its

first national election (1890) of representatives to a new national parliament (Diet). Japan defeats China (1894–95) and Russia (1904–05) and takes Taiwan and Korea as colonies.

1912–1926: Taisho Period: During the reign of the son of the Meiji Emperor, Japan experiments with relatively liberal concepts of democracy but suffers a post-World War I economic crisis. Tokyo and Yokohama are devastated by earthquake (1923).

1926–1989: Showa Period: Here begins the reign of the Showa Emperor, Hirohito (d.1989). In 1926–40 economic depression and reaction against liberalism lead to a repressive political climate. Military aggression in China leads to war. Japan attacks the United States and Great Britain in 1941. Defeat in World War II (1941–45) strips Japan of its overseas empire and military, devastates its economy and most of its large cities, including Hiroshima and Nagasaki, which were destroyed by atomic bombs. Allied (overwhelmingly American) military forces occupy Japan (1945–52) and impose sweeping reforms to democratize and demilitarize Japan. A new constitution (1947) declares the emperor as the symbol of Japanese unity, vests sovereignty in the people, and gives women the right to vote. After the occupation Japan rebuilds and rejoins the family of nations. The Tokyo Olympics (1964) are viewed by the Japanese as the end of post-war recovery. Japan grows dramatically as an economic force, its gross national product (GNP) now the world's second largest and its standard of living very high. In the 1980s Japan becomes the world's leading creditor nation and the biggest donor of foreign aid. Much of the Japanese economic success involves large-scale exporting, often disrupting importing nations' industries, embroiling Japan in trade confrontations. Japan's Asian neighbors benefit from massive Japanese investment, but worry about great Japanese influence. Despite rejecting military power, Japan is once again a major power due to its economic impact abroad.

1989–present: Heisei Period: Akihito becomes emperor in 1989. Economic stagnation begins in 1990, which, combined with scandals, undermine confidence in the government. In 1993 the Liberal Democratic Party (LDP) loses its majority in the Diet's lower house after 38 years. In 1995 mismanagement of relief efforts for the Kobe earthquake and poison gas attacks on the Tokyo subway by the Aum Shinrikyo cult further unsettle Japanese self-confidence. Beginning in the early 1990s the Japanese economy has been mired in a period of slow growth, recession, and occasional deflation, while facing with a resurgent China, which threatens to eclipse Japan as the economic and military regional power. While social order and high standards of living remain intact, Japan is undergoing a major self examination, seeking answers to domestic problems and a new role in the world at large.

Migration has not been a major feature in Japan's history. Since the dawn of history the Japanese have been a mixture of northeast Asians with others from the China coast, Southeast Asia, and Polynesia. By the Heian Period the dominant

Japanese population extended control over northern Honshu, displacing the indigenous Ainu. Hokkaido was settled by the majority Japanese in the 19th century.

Politically, Japan is a parliamentary democracy modeled on the British system. Representatives are elected to the Diet, a parliament with two legislative chambers. The majority party in the lower house, the House of Representatives, elects its Prime Minister, who forms a cabinet. The conservative Liberal Democratic Party (LDP) is the largest party. In 1993 the Social Democratic Party broke the LDP's longstanding monopoly on power and ruled under a coalition government. In 1996 the LDP regained control of the government and today holds the largest number of seats in the Diet. An elite career bureaucracy manages most of the operations of the government and has considerable influence over policy in their ministries' fields of competence.

Mythology says that the imperial line descended from the Shinto sun goddess; since the late Yamato Period, one family has occupied the throne—the world's oldest dynasty. During most of that time the emperor exercised no political power but served to validate the rule of others who claimed to act in his name. The Meiji government created a state cult around the emperor to rally popular support and focus nationalist sentiment. This culminated in the excesses of emperor worship in the wartime 1930s and 1940s. Since World War II the emperor has publicly denied his divinity, mythology has been removed from school history texts, and the emperor is defined as the symbol of Japanese unity in the 1947 constitution. The current crown prince is Naruhito, son of Emperor Akihito, who is anticipated to succeed his father to the throne.

## 2 LOCATION AND HOMELAND

Japan's population is about 127 million. Practically all Japanese speakers live in Japan. Small communities have emigrated to Hawaii and North and South America, but most of their descendants no longer speak Japanese.

Japan is an archipelago of approximately 3,000 islands off the eastern coast of Asia. Throughout history the main islands of Honshu, Kyushu, and Shikoku have been the homeland of the Japanese. During the 17th century political influence was extended southward over the Ryukyu Islands, including Okinawa. These are occupied by a closely related population that speaks a variant of Japanese. The Ryukyus became part of Japan in the 19th century. Hokkaido was fully annexed in the 19th century.

Approximately two-thirds of the land area is too mountainous for development. This compresses the population into a few large plains, the Kanto (around Tokyo), the Kansai (around Osaka), and the Nobi (around Nagoya), mountain basins, and coastal strips. The population is overwhelmingly urban, drawn by jobs and city life.

Japan suffers great seismic activity. It has many active volcanoes and experiences numerous earthquakes. Most earthquakes cannot be felt but major quakes can be deadly. A huge earthquake on 1 September 1923 destroyed Tokyo and Yokohama and killed approximately 130,000 people. Kobe was devastated by an earthquake on 17 January 1995, which took over 5,000 lives. In 2007 a 6.8 magnitude earthquake triggered a fire at the Kashiwazaki nuclear power plant; though the fire did not lead to a leakage of nuclear radiation, it sparked fears of a nuclear disaster in a nation that is still haunted by the Hi-

roshima and Nagasaki atomic bombings that ended WWII. Earthquakes off the coast of Japan and in the Pacific Rim occasionally result in tsunamis that can devastate coastal communities and cause massive loss of life. The deadliest tsunami in the history of Japan occurred on 15 June 1896 when an earthquake off the coast of Sanriku triggered a tsunami that destroyed 10,000 homes and killed more than 20,000. Japan also endures seasonal typhoons. While often destructive, these storms cause little loss of life.

### 3 LANGUAGE

The Japanese language is essentially limited to Japan. It is an Altaic language and its nearest relative is Korean. It is not related to Chinese.

Japanese words are polysyllabic and agglutinative—that is, they are composed of many syllables, and endings are attached to change tense, form a negative, or otherwise modify meaning. The standard sentence order is subject, object, verb. Grammatical particles are placed after words to indicate the topic (*wa*), subject (*ga*), and object (*wo*), or to serve like prepositions in English (*kara* = from; *ni* = in and on). Modifiers precede the words they modify.

Writing was learned from China, and Chinese characters (*kanji*), each with a meaning and multiple pronunciations, are part of the writing system. Two phonetic syllabaries (characters representing syllables) of 48 characters each allow particles, inflections, and words not well represented by kanji to be written. These syllabaries are called *kana*, and include fluid *hiragana* and angular *katakana*. They are two duplicate systems that represent the same sounds. Katakana is used for borrowed words and proper names from foreign languages. Written Japanese is a mixture of kanji and the two kana systems.

#### STANDARD PHRASES AND WORDS

<i>Ohayoo-gozaimasu</i>	good morning
<i>Kon-nichi wa</i>	good day
<i>Kon-ban wa</i>	good evening
<i>O genki desu-ka</i>	How are you?
<i>O-kagesama de</i>	I'm well, thank you.
<i>Sayoonara</i>	goodbye (formal)
<i>Doozo</i>	please (when offering something)
<i>Onegaishimasu</i>	please (when requesting something)
<i>Arigatoo-gozaimasu</i>	thank you
<i>Doo itashimashite</i>	you are welcome

Family names come first and given names second. Hence, Tanaka Junko is a female name for Junko of the Tanaka family. Titles of respect follow a name. *San* is a universal title of respect equal to Mr., Miss, Mrs.; therefore Tanaka-san could mean Mr. Tanaka, Ms. Tanaka, Miss Tanaka, or Mrs. Tanaka.

The Ainu language is spoken by the indigenous Ainu people of Hokkaido Island. Ainu is considered a *language isolate* that has no proven affiliation with other extant languages. During the Meiji period the use of Ainu was actively discouraged as part of an official policy to assimilate the Ainu and the language was gradually replaced by Japanese. Standard Ainu vocabulary includes words that are distinct from Japanese, including *habo*, or mother, and *ihabo*, father. In recent decades, Ainu language and culture have experienced a revival, reinforced by Ainu language schools, and the Ainu population speaks both Japanese and Ainu.

A father takes photos of his wife and children in kimono as they visit Tokyo's Hie Shrine on Culture Day. Japanese families mark the day by visiting shrines and offering prayer for the healthy growth of their children. (AP Images/Koji Sasahara)

### 4 FOLKLORE

Japanese folklore combines Shinto religious myths, stories of nature spirits, Buddhist tales, and historical figures to whom mythical deeds are attributed. For example, Minamoto Yoshitsune helped his half brother, Minamoto Yoritomo, win the Gempei War (1180–85). He was a brilliant general, who supposedly learned warrior skills as a boy from *tengu*, half-man, half-bird figures that live in mountain forests. Later, Yoshitsune used these skills to defeat a giant Buddhist warrior-monk, Benkei, in a duel on the Go-jo Bridge in Kyoto. Benkei, overwhelmed by Yoshitsune's skill, surrendered and became his loyal follower. Benkei has become a paragon of loyalty. They died in a battle against Yoritomo, who became jealous of Yoshitsune and turned against him.

Japanese folklore is rich in strange beings that inhabit nature. *Tengu* were mentioned above. *Kappa* are water demons about three feet tall, which have bird beaks and turtle shells on their backs. They often lure people into the water to drown. They love cucumbers, and you can protect yourself from kappa by carving your name on a cucumber and tossing it into the local stream. When out of the water, kappa carry water in a depression on their heads. If you encounter one, bow, and it

will return your bow, spilling the water, becoming too weak to harm you.

Myths include Shinto tales collected in the oldest surviving Japanese book, the *Kojiki* (712). These describe the creation of the world and the Japanese islands by Izanagi and Izanami, a pair of male and female deities. The primary deity is the sun goddess, Amaterasu. Upon her descendant's departure to rule Japan, she gave him three sacred treasures: a bronze mirror, a sword, and a string of comma-shaped jewels called *magatama*. These imperial regalia are still associated with the imperial family. Amaterasu is honored at the Ise Grand Shrine, where the original mirror is supposedly enshrined.

## 5 RELIGION

Traditional Japanese religion includes Shinto, Buddhism, and Confucianism.

Shinto (“The Way of the Gods”) is the name given to religious practices that were indigenous to Japan before Buddhism was introduced. It is not a systematic body of beliefs, but includes nature worship, animism, shamanism, fertility cults, ancestor worship, and creation myths. It is concerned with humanity's relationship to nature, to agriculture, and to society. Prayers and offerings petition deities (*kami*) for health, a good crop, children, and safety. Harvest festivals are Shinto events. Shinto also concerns itself with community relationships; hence, marriages are usually Shinto ceremonies.

Shinto is more concerned with pollution than morals. For this reason Shinto offerings are free of blood and include rice wine (*sake*), rice cakes (*mochi*), and entertainments such as dances and wrestling. Shinto shrines are marked by a *torii* gateway. The deity is usually represented at a shrine by a symbol such as a mirror.

The richness of Buddhism and its ties to Chinese culture helped it gain support at the Japanese court. Buddhism also answered spiritual needs that Shinto neglected, such as questions of morals and life after death. By the Nara Period, the court supported the spread of Buddhism and sought to link secular government to the grandeur of institutional Buddhism. Thus the emperor, who claimed descent from the Shinto goddess, also supported the spread of Buddhism. This was possible because these religions were not seen as mutually exclusive. Shinto deities were explained as being local manifestations in Japan of the universal beings represented by the many Buddhas. In addition, while Shinto dealt with issues of this world (crops, social relations, clan ancestors), Buddhism concentrated on ethical and metaphysical issues. This division still works for many Japanese. Weddings may be Shinto ceremonies, but Buddhism deals with morality, funerals, and questions about the future life of the human soul.

Confucianism is a social ethic imported from China. The Tokugawa bakufu based its social order on Confucianism. There is little institutional evidence of Confucianism in Japan, but its values have powerfully influenced Japanese society. Confucianism emphasizes the need for one to find one's place within the greater social order, starting with one's own family, and to be a responsible member of the social units to which one belongs. Confucianism is hierarchical: in social relations one party is superior, the other inferior. It is the duty of the superior to teach, protect, and nurture the inferior. The inferior should respect and learn from the superior. Ideally, Con-

fucianism leads to a highly ethical, supportive social order. It also stresses study, a value widely accepted in Japan.

Christianity was introduced to Japan by St. Francis Xavier in 1549. Catholic missionaries had considerable success for nearly one century before the bakufu expelled them in 1587, slaughtered the local Christian population, and made Christianity a crime punishable by death. Christianity was again made legal in the 1870s. At that time Catholic, Protestant, and Orthodox missions were established, and they are active throughout the country today, especially in education and charity work. Only 1% of Japanese are Christians, but Christian teachings, especially its social ethics, have influenced Japanese thinking.

Many new religious cults have arisen in the past century. Most are devotional cults centered around a charismatic figure and blend ideas from Shinto and Buddhism with features inspired by Christianity, Hinduism, and other faiths. They attract devoted followers and are appealing, in part, because of the sense of dislocation suffered by many people in Japan's urban society. In 1995 the cult movement Aum Shinrikyo carried out a sarin gas attack on the Tokyo subway that resulted in a dozen deaths and hundreds of injuries. The movement incorporated aspects of Yoga, Buddhism, and Christianity as interpreted by its leader, Shoko Asahara, who in 2004 received a death sentence for the attack. At the time of the attack the movement claimed a global following that numbered in the tens of thousands and today Aum Shinrikyo is estimated to have several thousand members.

## 6 MAJOR HOLIDAYS

Holidays celebrated by the Japanese include the following:

1 January, New Year's Day: The major holiday of the year with three days off from work. Buddhist temple bells are rung 108 times at midnight. People eat noodles for long life and visit Shinto shrines, friends, relations.

15 January, Coming of Age Day: Honors all who have become legal adults at age 20.

11 February, National Foundation Day: Anniversary of the enthronement of the mythical first emperor, Jimmu Tenno.

3 March, Hina Matsuri: Not a legal holiday, but girls display elaborate sets of dolls representing a prince, princess, and their court.

21 March, the Vernal Equinox: Has Buddhist origins, is used to visit and tend family graves.

29 April, Greenery Day: Previously marked the Showa Emperor's birthday; later it was changed to foster appreciation of nature after his death.

3 May, Constitution Day: Commemorates the 1947 Constitution.

5 May, Children's Day: Celebrates Japan's children. Families with children fly carp-shaped streamers. Many companies take off 1 May. This concentration of holidays, 29 April through 5 May, is called “Golden Week.”

13–15 July (13–15 August in some areas), Bon Festival: Not a legal holiday but traditionally considered second only to New Year's Day. This Buddhist festival honors de-

*A vendor checks crabs at Nijo Ichiba market in downtown Sapporo, Japan. Local residents and tourists can buy fresh seafood and vegetables in the market. (Toru Yamanaka/AFP/Getty Images)*

ceased family, and visits to the ancestral home, tending family graves, and prayer services are part of the celebrations. Publicly there is the bonodori, communal dancing during the three evenings of the festival.

15 September, Respect the Aged Day: Honors Japan's elderly.

23 September, The Autumnal Equinox: Similar to 21 March.

10 October, Sports Day: Commemorates the 1964 Tokyo Olympics and encourages good health through sports.

3 November, Culture Day: Fosters cultural activities.

23 November, Labor Thanksgiving Day: Commemorates those who work and expresses thanks for the fruits of their effort.

23 December, the Emperor's Birthday: Current emperor's birthday.

In this non-Christian country Christmas is celebrated as a gift-giving holiday for children, though it has no religious sig-

nificance for the majority of the population. In the Japanese version of Valentine's Day (February 14) women give presents, usually chocolate, to men. On March 14 men in turn give gifts to women on "White Day," the male equivalent of Valentine's Day.

## **7 RITES OF PASSAGE**

One hundred days after birth an infant is presented at a local Shinto shrine for blessing.

15 November is "Shichi-Go-San," or "7, 5, 3," on which children of those ages are taken to a Shinto shrine to be blessed. Originally this was for girls three or seven years old and boys five years old.

The beginning of formal schooling is celebrated. The child is presented with a leather backpack for books and may receive a private study desk. School entrance ceremonies are attended by formally dressed parents. Graduations are also celebrated and considered significant social events. University entrance examinations are a major turning point in a teenager's life. Admission to a good university can be critical to an individual's future, and much is made of preparation, the exam, and the results.

15 January is “Coming of Age Day.” All who have turned 20 are recognized as legal adults. Fancy dress, usually a kimono for young women, is worn to ceremonies that are often followed by celebration parties. The new adult usually receives significant gifts.

Most people join a company as employees on 1 April following high school or university graduation. Formal company ceremonies induct new employees.

Marriage is usually celebrated at a commercial wedding hall that orchestrates the event. Shinto ceremonies are conducted in private with the couple, priest, witnesses, and parents. In place of vows, cups of sake are exchanged and drunk. Christian church weddings strike many Japanese as romantic, and many wedding halls have an imitation church in which a church-style ceremony can be enacted before guests. The ceremony is followed by an elaborate dinner with multiple speeches and the formal cutting of a Western-style wedding cake.

Retirement is usually marked with some ceremony, and 15 September is a holiday honoring the elderly.

Death is usually associated with Buddhist rituals. Visitors honor the dead at a wake, in which guests dressed in white burn incense in front of a photo of the deceased. The body is cremated. Ashes are placed in a family grave, which has space for numerous urns under a single tombstone. A plaque bearing the posthumous Buddhist name of the deceased is added to the family Buddhist altar, and memorial ceremonies are held over several years to pray for the person.

## 8 INTERPERSONAL RELATIONS

Japan is more ceremonial and formal than in Western countries, and phrases and forms of polite exchange are more fixed. Manners require that the speaker use honorific language to elevate the other party, while being self-denigrating. Japanese society pays great attention to who is superior to whom in any relationship. This is reflected in language and gestures.

Japanese bow to greet each other. The person of lower status bows lower and should initiate the greeting. Shaking hands is rare among Japanese, who usually do not engage in physical contact. Distinctive gestures include pointing to one’s nose to indicate oneself. Women cover their mouths with their hands when laughing. Men, when embarrassed, scratch the back of their heads.

Because houses are very small, Japanese usually entertain outside the home. Home visits are usually confined to a brief meeting over tea. The guest brings some gift such as flowers, fruit, or pastries. Such gifts are used to reinforce relationships with relatives, friends, teachers, doctors, business contacts, etc. Two gift-giving seasons, New Year and midsummer, are marked by a large-scale buying and giving of gift packages.

Dating is usually confined to high school students and young adults. Schools actively discourage it. Group dating is common and takes the form of outings, picnics, karaoke parties, or visits to amusement parks. Japanese students rarely work (many schools forbid it) and often have limited disposable incomes. This and busy study schedules restrict dating options. Dating among working adults is common. Most marriages today are based on romantic attachments rather than the arranged marriages that were the norm in the past.

## 9 LIVING CONDITIONS

Japanese generally enjoy good health and have the greatest life expectancy in the world—77 years for men and 82 for women. Medical care is generally good and includes both modern scientific and traditional Chinese-style herbal medicines. A national health insurance system supports low-cost care but labors under massive debt.

Ninety-five percent of the Japanese population is urban and housing is a major problem in the country’s crowded cities. While Japanese prefer independent houses, the enormous cost of land prevents them from having any real yard; as many as 40 houses are built on one acre. Small apartments are very common. The average dwelling space for a middle-class household in 2001 was just above 350 sq ft. Traditional housing was furnished with wall-to-wall straw mats (*tatami*), but recent trends are toward carpet or wooden floors and Western-style furniture.

The country’s aging population and low number of births had led to wide predictions that Japan will experience a demographic decline by the middle of the 21st century. In 2006 Japan’s fertility rate was only 1.29, far below the 2.1 needed to prevent a population drop. The Japanese ministry of health has forecasted that the country’s population could fall below 90 million by 2050, at which time more than 40% of Japanese are expected to be older than 65 years of age.

The Japanese standard of living is very high. Material possessions are comparable to those in the United States and the general safety of Japanese city streets adds a sense of well-being. The major problems are the restricted living space and the limited personal time left by demanding work and study hours. Japanese consumers are conscious of fads and fashions and major Japanese cities host large shopping districts.

Japan has excellent public transportation, which most people use for commuting to work and school in the major cities. Trains and subways are very crowded but reliable. Long distance travel is dominated by the Bullet Trains and other expresses, and there is a network of domestic air routes. Most Japanese households own a car and many have two, but roads are often heavily congested.

## 10 FAMILY LIFE

Traditionally, Japanese families have conformed to the nuclear family structure, but in recent decades, as Japan has modernized, family trends have followed patterns similar to Western nations. Economic prosperity has led to couples marrying at later ages, fewer children per couple, and a higher divorce rate, all of which have contributed to a decline in traditional Japanese social mores.

In the last century Japanese family size has dramatically declined, due in part to Japanese couples marrying at a later age and thus having fewer children. In 2004 the average age of first marriage in Japan was 29.6 years for husbands and 27.8 for wives, compared with 28.9 and 27.5 respectively in 1995, and there were only 5.7 marriages per 1,000 people, the lowest on record. The practice of the eldest son’s family living with his parents in a three-generation household is rapidly declining.

Women traditionally played a subservient role in the family, but modern Japanese wives have increasingly sought independence from their husbands. The divorce rate in Japan has nearly doubled since 1990 to 27%. This is due in part to the increased freedom Japanese have obtained. As women have en-

rolled in the workforce in greater numbers, they have resisted the role of housewife, leading them to marry at a later age and leave their husbands at an increased rate.

Some Japanese have pet dogs and cats, but many are prevented from having them by small living space. Goldfish and birds are popular. Some keep crickets for their song.

## 11 CLOTHING

Traditional clothing is the kimono, a robe that is wrapped around the body, left side over right, for men and women, and tied with a sash (*obi*). Women's kimonos vary from the simple everyday designs preferred by older women, to the elaborate painted silk robes worn for ceremonial occasions. Traditionally Japanese kimonos were made of fine silk and included embroideries of gold and silver thread. A kimono style known as *junihitoe*, or a "twelve-layer robe" with elegant and complex designs, was worn by court ladies in historic times. Men rarely wear kimonos except for formal occasions and when performing traditional arts. The light summer cotton style (*yukata*) remains very popular for relaxing at home, resorts, and summer festivals.

Traditional footwear is sandals (*zori*) or wooden clogs (*geta*) with a thong that passes between the big toe and the second toe. *Tabi*, a split-toed sock that accommodates the thong, is worn with these. In the past, the standard footwear of the common people of Japan was the *waraji*, or sandals made from straw rope, which today are mostly worn by monks.

Most Japanese wear Western clothing for daily use. Japanese tend to dress more formally and neatly than Americans. Jeans are popular with the young. Middle and high school students wear dark blue or black uniforms with badges that indicate their school and grade.

## 12 FOOD

Japanese eat a wide range of foods, including imports from China and the West, as well as traditional Japanese cuisine. The staple of their diet is rice, which is usually eaten plain from a bowl without seasoning, butter, etc. Rice (*gohan*) is complemented with other dishes: fish, meat, vegetables, various pickled vegetables, and soup. Japanese eat much seafood. Some fresh fish is eaten raw with soy sauce as *sashimi*, or combined raw with rice in *sushi*. However, most fish is cooked, often grilled or deep fried in batter (*tempura*).

Buddhism discouraged the eating of meat, but this taboo has largely disappeared. Japanese eat chicken, pork, and beef, but servings are small. Soup is made from fermented soy bean paste (*miso*) or dried bonito shavings (*katsuobushi*). *Men-rui* (noodles) in various forms are a common main dish. Traditional dishes derived from Buddhist cuisine are known as *kaiseki* and only include salt as seasoning.

Popular styles of cuisine include *teppan-yaki*, or frying beefsteaks and a variety of seafoods and vegetables prepared on a large hot-plate in front of the diners; *teriyaki*, foods broiled or grilled in a sweet soy sauce marinade; and *oden*, traditional stew that consists of chunks of seafood and vegetables cooked in soy-based soup stock.

Japanese food is served in numerous small dishes. Pieces are cut to be eaten with chopsticks. Soup is drunk from the bowl and often takes the place of beverages during meals. It is very impolite to stick chopsticks upright in your rice bowl or pass food from one pair of chopsticks to another as these are

gestures associated with cremation ceremonies. The national beverage is green tea, and there are elaborate ceremonial tea traditions developed in accordance with Shinto and Buddhist practices. *Sake*, or wine made from fermented rice, is consumed along with *sakana* side dishes, which consist of grilled skewered meats and vegetables and pickled dishes.

Sweets are served separately with tea or coffee. Japanese sweets are often based on sweet bean paste. Western baked goods are widely available. Milk and dairy products, a recent addition to the Japanese diet, are ubiquitous, as are other western imports, such as soda, coffee and beer.

Most Western foods can be found in Japan. Hamburgers and pizza are popular and many American restaurant chains are well represented. Meals do not include desserts. Japanese brand fast-food restaurants are numerous, including Ajisen Ramen, which specializes in ramen noodle soup dishes, and Yoshinoya, which is popular for its *gyudon*, or rice bowl topped with beef and onion. Many of these chain restaurants have opened branches overseas.

## 13 EDUCATION

Japanese place great value on education and see it as the major path toward self-improvement and launching a successful career. This reflects Confucian values and the degree to which education has created a true meritocracy in Japanese society. Japan claims a 100% literacy rate.

The academic year begins in April and ends in March. Japanese children begin kindergarten at age four and elementary school at age six. Compulsory education covers only elementary school (six grades) and middle school (three grades), but 94% go on to high school (three grades). Most schools are co-educational. Elementary education stresses basic skills, especially reading and math, and seeks to develop the individual into a socially responsible group member. Elementary school teachers establish strong ties with their students, and children often find early education an enjoyable experience.

Middle and high school becomes increasingly rigorous as emphasis shifts to intensive study with limited electives. For a white-collar career a university degree is essential, but university entry is by competitive examination. Preparation for these exams, called "examination hell," drives much of Japanese middle and high school education. Students often supplement regular classes by attending a "juku" (cram school) after hours. Parents, particularly mothers, support their children's educational endeavors. Critics rightly charge that Japanese education stresses memorization for university examinations, but Japanese schools also cultivate problem-solving and group work skills more than is usually recognized.

One-third of high school graduates enter college or university and most of those graduate. Two-year colleges are common for women and for studying vocational subjects. Four-year universities are similar to those in the United States, but many students arrive burned out by "examination hell" and exert minimal effort. Graduate study is not as common as in the United States. English language classes are common in Japan and native-English speakers are often recruited to teach in schools and language training centers. Though Japanese students begin English instruction in elementary school, English language proficiency remains low.

## 14 CULTURAL HERITAGE

Japan is part of the Chinese sphere of cultural influence; its traditional culture includes many areas in which a Chinese model has been adopted and adapted to suit Japanese tastes. There is also a dynamic folk tradition that has its origins in Japan.

Classical musical instruments include the *koto* (13 string, horizontal harp), the *shakuhachi* (vertical bamboo flute), and the *shamisen* (three-stringed banjo-like instrument). The *shakuhachi* usually plays solo or with the *koto*. The *koto* is frequently played solo or in group ensembles. The *shamisen* is a popular folk instrument that is played solo, accompanies vocalists, appears in ensembles, and accompanies theater performances.

Western instruments such as the piano, violin, or guitar are more popular now than traditional instruments. Modern popular music reflects strong Western influences and Western classical music is well known in Japan.

In dance, stately classical forms continue to be studied, while a dynamic folk tradition preserves lively dances, including recent additions to the repertoire. The annual Bon Festival includes communal dancing open to all.

Japan's literary heritage is very rich. The oldest surviving text, *Kojiki*, blends Shinto myth and history. Poetry anthologies date back to the Nara Period *Manyoshu*. The Heian Period produced a rich outpouring of literature, especially by court women. Sei Shonagon wrote a lively compilation of miscellaneous observations, the *Pillow Book*; her contemporary, Murasaki Shikibu, wrote the Heian masterpiece novel, the *Tale of Genji*. During the Middle Ages military tales were popular, the greatest being the *Tale of the Heike*. The Muromachi Period produced poetic Noh play texts that often reflect Buddhist values. Most poetry was written in the *tanka* form, five lines of 5-7-5-7-7 syllables. The first three lines of the *tanka* gave rise to the 17-syllable haiku, the most famous author of which was Basho. The Tokugawa Period gave rise to the *bunraku* puppet drama and kabuki theater, for which Chikamatsu wrote tragedies. In the 19th century, Western influences inspired many autobiographical novels. Natsume Soseki's *Kokoro* is an early 20th-century favorite. Japanese writers are read overseas in translation and Kawabata Yasunari and Oe Kenzaburo have won Nobel Prizes for literature.

## 15 WORK

Traditionally, most men joined a company directly after graduating from high school (for blue-collar jobs) or college (for white-collar work) and were expected to remain with one firm until retirement at about 60. In return for loyalty and long hours of work, the company made a commitment to preserve the jobs of their employees. This "lifetime employment" ideal has become increasingly uncommon as Japanese companies have adjusted to stagnant economic growth and have begun to lay off workers. In addition, many younger Japanese question the lack of mobility required by lifetime employment and seek more risky and potentially rewarding career paths over security.

The work environment in Japan is group-oriented, and employers expect employees to put company interests before personal concerns. Long hours are characteristic of office workers and it is not uncommon for employees to be expected to work six days a week and excessively long hours. Underlings must demonstrate a great deal of respect for superiors in the work

place and it is common for workers to bow to their boss. The workplace is a male-dominated atmosphere. Popular forms of entertainment for businessmen include karaoke and golf.

Wages start very low and rise with longevity; the average per capita income in Japan is higher than in America, but many things, especially housing, are more costly than in the United States. Japan has seen increased unemployment as companies have moved manufacturing facilities overseas, mostly to China and South East Asia.

## 16 SPORTS

The Japanese are great sports enthusiasts. High school physical education classes include an elective in one of Japan's traditional martial arts such as judo, karate, and archery. Baseball is extremely popular, and the annual national high school baseball tournament in August is followed throughout Japan. The teams of Japan's universities compete in baseball, rugby, martial arts, and other sports.

The most popular professional sport in Japan is baseball. Games in the two leagues, the Pacific and the Central, draw large crowds including noisy but well-organized fan clubs. In the past decade some of Japan's top baseball stars have joined Major League Baseball teams in the United States. Noted Japanese baseball stars in America include Hideki Matsui of the New York Yankees, Daisuke Matsuzaka of the Boston Red Sox, and Ichiro Suzuki of the Seattle Mariners.

Sumo wrestling is a native sport centered upon six annual fifteen-day tournaments. Two wrestlers seek to force each other out of a circle or to touch the ground with some part of their bodies (other than the soles of their feet). A striking feature is the huge size of the wrestlers; top ranked wrestlers usually exceed 300 pounds and can weigh over 500 pounds. In recent decades foreigners have risen to the top ranks in Sumo and in 2007 the grand champion was a Mongolian. Judo, translated as "gentle way," is a martial art developed in the 19th century from traditional Samurai defense techniques. Judo practitioners wear a white uniform called a *judogi*. In a match Judo competitors attempt to throw or trip a player to the ground and use grappling and choking to force an opponent to concede victory.

Popular participatory sports include golf, tennis, skiing, hiking, swimming, and fishing. Gateball, similar to croquet, is popular with elderly Japanese.

## 17 ENTERTAINMENT AND RECREATION

The Japanese are fans of television and have more television sets per capita than the United States. Song and variety shows and celebrity quiz shows are popular, and there are extensive sports and news broadcasts. Movies are a popular entertainment form, but depend heavily upon imports. Japan's own movie industry is productive but has faded since it achieved international fame for its art and sophistication in the 1950s and '60s. The director Akira Kurosawa made a lasting international impression with films such as *Rashomon* and *Seven Samurai*.

Traditional live theater forms survive. Stately Noh drama has a small but dedicated following. The Bunraku puppet plays and live kabuki theater attract a broader audience and mix traditional fare with more current experimentation. The Japanese also attend concerts, including classical Western music and pop groups.

A popular form of participatory entertainment is karaoke. This form of singing along with recorded orchestral accompaniment to popular songs began as entertainment in bars and has since spread overseas. Japanese children are prolific fans of computer video games and the companies Sony and Nintendo dominate the video game industry in Japan and abroad.

Major festivals attract huge crowds, and famous sites for admiring plum and cherry blossoms, irises, azaleas, chrysanthemums, and the bright leaves of fall draw many visitors who come to view the sights and to party outdoors among the flowers.

### **18 FOLK ART, CRAFTS, AND HOBBIES**

Japan is a land in which many handicrafts have been raised to the level of arts. Japan has many regional variations on pottery. While some fine pottery is noted for delicate form and finely detailed decoration, there is also a strong tradition of heavier folk pottery that aspires to a rustic simplicity of color and shape. The aesthetic values of "*wabi cha*" (poverty tea) of the Tea Ceremony encourages this style of pottery.

Handmade paper, produced from mulberry bark, remains a popular art form, and special papers with distinct textures and patterns are prized for letter writing, calligraphy, and wrapping. Decorating the panels of silk used for women's kimonos has produced a variety of dyeing, painting, and decorative styles and methods. Tie-dyeing is also employed.

In the late 19th century, as Japanese rapidly modernized, traditional craftsmen were forced to adapt their skills to develop new art forms. Many smiths and artisans were traditionally employed in producing swords and armor for the Samurai class. These artisans turned their skills towards making elaborate bronzes inlaid with gold and silver that were sold for export and today are prized by collectors around the globe. Japanese ceramics have a long tradition and range in design from *satsuma* ware, earthenware pottery with highly decorative motifs, to *bizen* ware, noted for its reddish brown color and coarse surface.

The Japanese government cherishes these arts, recognizing masters as "National Living Treasures" to honor and support their work.

### **19 SOCIAL PROBLEMS**

Social problems in Japan mostly stem from the fact that Japanese society is largely homogenous and governed by strong social mores that encourage conformity. Civil rights are a problem for some small minority groups. Resident aliens (less than 1% of the population), primarily Koreans, may have been born and raised in Japan but are required to register as foreign residents and have been excluded from certain jobs. A campaign to remove these barriers is gradually moderating restrictions.

Another minority group (about 2% of the population) is the *burakumin* (hamlet people). Physically indistinguishable from the majority Japanese, these are descendants of outcasts who suffered severe discrimination in pre-modern times. Despite attempts to legislate equality, they are subject to widespread discrimination. The tiny population of Ainu on Hokkaido are an indigenous people who were swamped by the majority Japanese population. Most have intermarried with the majority Japanese.

The resident Koreans, *burakumin*, and Ainu have formed groups to end discrimination and promote pride. Though

progress has been made, these groups are small, relatively invisible in Japanese society, and not given much attention by the national press.

Japanese society tolerates and even encourages considerable drinking, and alcoholism is a problem. Relieving stress and renewing personal bonds over a drink after work is common in Japan, and leads to heavy drinking. Japan's island geography has helped to restrict the inflow of hard drugs and firearms to very low levels, but there are signs that these problems may be on the rise.

Suicide remains a stubbornly lethal problem that takes more than 30,000 Japanese lives each year. In 2003 Japan's suicide rate was the second highest in the industrialized world, at 25.5 per 100,000. The high profile suicide of Japan's farm minister in 2007 prompted government officials to call for more measures to curb Japan's suicide crisis. Japan has long had a tradition of taking one's life, which was seen as an acceptable method of responding to public shame. As Japan's economic crisis worsened in the 1990s, suicides grew to record rates and the trend has yet to abate. The advent of the Internet has led to a problem of "suicide clubs," websites where those contemplating suicide can find a pact partner who will agree to take their lives together.

### **20 GENDER ISSUES**

In traditional Japanese society women are relegated to a secondary status, but even in families that conform to customary mores, women enjoy considerable autonomy and power. Japanese schooling treats boys and girls equally, guaranteeing well educated women. Traditionally the wife has charge of the house and oversees the children. This is her full-time job and includes two important responsibilities, money and education. The wife keeps the family's budget, manages savings and large purchases, and even gives her husband his weekly allowance. She also monitors the children's education. Most Japanese children have few household chores, but devote regular time to study under their mother's watchful eye.

In modern Japanese society most women work outside of the home in retail, service, or clerical jobs. They are expected to quit work upon marrying or when their first child is due. These women represent an affluent portion of the Japanese public and many enjoy their status prior to marriage. After raising children, many return to work. Until recently, true career options were not open to many women in corporations. Teaching and some government offices provided careers, but corporations only began to recruit women executives seriously in the 1980s and they are still rare in many industries.

Legally, Japanese women enjoy considerable protection. However, Japanese society discourages confrontational litigation and this restricts the use of the law as a tool for force social change. Social values tend to emphasize gender-based career paths. While many Japanese women appear content with their status, those who wish to pursue careers previously limited to men find the door only partially open.

In Japan there are no laws that prohibit homosexual activity. Historically homosexuals have not been socially ostracized, and same-sex relationships have been depicted in art and literature. Civil rights laws have not been extended to gays and lesbians at the national level, but some local governments have banned discrimination based on sexual orientation.

# JATS

**PRONUNCIATION:** JAHTS

**ALTERNATE NAMES:** Baluch; Pathan; Rajput

**LOCATION:** India; Pakistan

**POPULATION:** About between 33 and 43 million (estimate)

**LANGUAGE:** Language of the region in which they live

**RELIGION:** Hinduism; Islam; Sikhism

## 1 INTRODUCTION

The Jats (Jâts) are a peasant caste widely distributed throughout northern India and Pakistan. They form geographically separate endogamous groups that have become integrated into the local community as distinct castes. These groups are possibly of differing origins and go by various names. In some regions they call themselves Baluch, Pathan, or Rajput, rather than Jat. They are, however, quite separate from the communities of peddlers, artisans, and entertainers of Afghanistan who are also designated by the name Jat.

The origin of the Jats is a matter of much conjecture. Some authorities see them as being of Aryan stock and entering the subcontinent as part of the great Aryan migrations of the past. Others hold that they are Indo-Scythians who arrived from their home along the Oxus River during the 2nd and 1st centuries BC. Still others argue that they are a Rajput tribe. Whatever their origins, they spread across a wide area of the northern plains and rapidly emerged as the dominant cultivators in the regions they settled.

In 1699, the Jats around Mathura, in Uttar Pradesh, rebelled against the powerful Mughal rulers in Delhi, essentially as a result of political provocation aggravated by the economic discontent, and further aggravated by religious persecution and discrimination. Although defeated by the Mughals, Jat resistance resumed in 1707 in the disorder following Aurangzeb's death. The Jats under Badan Singh (1722–1756) established a kingdom centered at Deeg, from which Jat rule was extended over Agra and Mathura and much of the neighboring area of the Ganges plain. Suraj Mal, described as one of the greatest Jat rulers, moved his capital from Deeg to Bharatpur in 1733 and Rustam, a Jat king of the Sogariya clan, laid the foundation of the modern city of Bharatpur. Bharatpur has the distinction of being one of the few states in India to defeat the British, who unsuccessfully besieged the city under Lord Lake in 1805. During the British Raj, the princely state of Bharatpur covered an area of 5,123 square kilometers, and its rulers enjoyed a salute of 17 guns. The state of Bharatpur, now a part of Rajasthan State and site of the famous Keoladeo Ghana Bird Sanctuary, which was designated a World Heritage Site in 1985, acceded unto the dominion of India in 1947.

## 2 LOCATION AND HOMELAND

There is no accurate data available concerning the number of Jats in South Asia. In the late 1980s, the Jat populations of India and Pakistan were estimated at 8 million and 13 million, respectively. Assuming these initial estimates are accurate, and that growth rates for the Jat communities has approximated that for their respective countries, Jats in India must number around 12 million, and in Pakistan over 21 million, for a total Jat population of over 33 million. However, some es-

imates place the Jat population in 1988 at 31 million, which would place their current population at around 43 million. At best, these are crude estimates.

Jats are distributed across the northern and western plains of the Indian subcontinent in a belt extending from the middle Ganges valley to Sind. They form the bulk of the population in the Punjab (both Indian and Pakistani), in the land between the Ganges (Ganga) and Jumna (Yamuna) rivers, and in a belt extending through the western and central districts of Uttar Pradesh. They are the most-numerous caste over much of the western half of Rajasthan. Significant Jat communities are also found in northern Kashmir and in Sind (in Pakistan). The physical environments occupied by the Jats consist mostly of the alluvial plains and *doab* (land between rivers) of the Indus, Ganges, and Jumna rivers, or the semiarid and desert regions of Rajasthan and Sind. Climate and vegetation conform to the broad patterns found in these areas of the subcontinent. In recent years, increasing population pressure has led to significant emigration of Jats to North America, the United Kingdom, Malaysia, and the Middle East.

### 3 LANGUAGE

Jats speak the languages and dialects that are current in the regions where they live. Thus, Jats in Sind speak Sindhi, an Indo-Aryan tongue with a large number of Persian and Arabic words, written in a script similar to that used for Urdu. In Pakistan's Punjab Province, they speak Punjabi and use the Perso-Arabic script introduced to the region during the Muslim conquests. Jats in the Indian Punjab speak Punjabi but write in the Lahnda script, which is related to Devanagari, or the Gurmukhi script in which the Sikh sacred books are written. In Rajasthan, local Rajasthani dialects are spoken and written with the Devanagari (Hindi) script.

### 4 FOLKLORE

Tejaji is a local folk hero revered by Jats in Rajasthan. Tejaji, it is said, was a Jat who lived about 900 years ago. One day he noticed that a Brahman's cow was in the habit of going into the jungle, where milk from her udder fell into the hole of a snake. Tejaji undertook to supply the snake with milk every day so that the Brahman would not suffer a loss. One day, when Tejaji was preparing to visit his father-in-law, he forgot to give the snake any milk. The snake appeared to Tejaji and declared he would have to bite him. Tejaji asked for permission to complete his visit, to which the snake agreed. On his journey, Tejaji rescued the village cattle from a gang of robbers but was desperately wounded in the encounter. With much difficulty he presented himself to the snake, as he had promised. However, he was so badly wounded that the snake could not find a spot on his body to bite. Tejaji put out his tongue for the snake to bite, which he did, and Tejaji subsequently died. Today, Tejaji is worshiped as a protector against snake-bite. He is represented as a man on horseback with a snake biting his tongue, and this image is common on local shrines throughout the region. Tejaji is revered not only by Jats but by the local population as well.

### 5 RELIGION

Jats may be Hindu, Muslim, or Sikh by religion. Hindu Jats (47% of all Jats) know and worship the gods of the Sanskrit tradition and, like all Hindus, hold the cow in high regard. But

they also follow many local religious practices and observances, and worship local deities. Ancestor worship is also an important part of Jat religious life. The Jats of western Uttar Pradesh pay homage to their ancestors during the festival of Kanagat (September-October). At this time, offerings of water are made to the spirits of the deceased. The head of the family, assisted by a Brahman priest who performs rituals and recites Sanskrit hymns, presents offerings (*pindas*) to the clan ancestors, who are believed to look after the welfare of their descendants. Jats in the Indian Punjab are mostly Sikh (c. 20% of Jats), though they preserve many Hindu elements in their ritual life. The tradition of *pir* (saint) worship is widespread among Muslim Jats (c. 33%), who belong mainly to the Sunni sect of Islam.

### 6 MAJOR HOLIDAYS

Jats throughout South Asia observe the holidays and festivals of their respective religious communities. Thus, Muslims celebrate the two great religious festivals of Id ul-Fitr, celebrating the end of Ramadan, and Bakr-Id, the Feast of Sacrifice. Sikh festivals include Vaisakhi, which marks the beginning of the new year in the Punjab, and the gurburbs, holidays related to events from the life of the gurus. Hindu Jats keep Holi, Divali, and other festivals of the Hindu calendar. In addition, many regional festivals such as the Urs of Sufi saints are celebrated at the saints' shrines. These local festivals are often celebrated by the community at large. Sakhi Sarwar, for instance, is a Jat saint worshiped in the Punjab, but he is revered by Hindus and Sikhs as well.

## 7 RITES OF PASSAGE

Rites of passage conform to the customs of the community to which each Jat belongs. Thus, male babies among Muslim Jats are circumcised, Sikhs are baptized into their religion, and Brahmans officiate at Hindu rituals. However, many ceremonies are common to all Jats, whatever their religion. Many Sikhs, for example, follow Hindu marriage rites and even use Brahmans for some of their ceremonies. Sikhs and Hindus cremate their dead, while Muslims resort to burial.

## 8 INTERPERSONAL RELATIONS

Jats use greetings such as “Salaam,” “Sat Sri Akal,” or “Ram Ram,” according to their religious affiliations and local customs.

## 9 LIVING CONDITIONS

Jat settlements and house-types conform to broad regional patterns. Over much of the northern plains, villages are compact clusters of houses situated in the middle of agricultural land. In Pakistan’s Punjab, grid-patterned “canal colony” villages are added to the mix. Houses are *kacca* (built of mud or unfired brick) or *pukka* (made with fired brick), reflecting the economic standing of their owners. In mixed villages, the houses of different castes (including Jats) are segregated into distinct neighborhoods. A Jat house in the *doab* (land between rivers) of the Sutlej and Jumna (Yamuna) rivers typically consists of a courtyard around which are the women’s quarters, a room used exclusively by men, and cattle sheds. The more-prosperous villagers may have two-story houses and refinements such as studded wooden doors and Moorish-style arches. By contrast, nomadic Jats in Sind live in tents or flimsy, easily collapsible structures built of reed mats. Household furnishings vary according to the resources of the individual.

## 10 FAMILY LIFE

Jats are organized into clans, with clan members living in villages in a fairly compact area. Each clan has a hereditary leader called a *Chaudhry*. Clans are divided into lineages (*thok*), sub-lineages, and minimal lineages (*khandan*). The minimal lineage comprises the families of living brothers whose father is deceased. The Jat family may be an independent nuclear family or an extended joint family. Among Sikh and Hindu Jats, one cannot marry a woman if any of her four grandparents comes from the same clan as oneself. Muslims Jats, however, are not subject to such restrictive rules of exogamy. Until recently, Jats practiced polygyny (i.e., a man could have more than one wife at the same time), but in India this has been declared illegal. Under Islamic law, however, a man may have up to four wives. Today, most Jats are monogamous. Marriage ceremonies follow Muslim, Sikh, or Hindu patterns. Divorce is not common and often leads to conflict between the two lineages involved. Widow remarriage is permitted by all Jat groups.

## 11 CLOTHING

Jat clothing reflects regional dress-styles. Punjabi men wear tight-legged trousers covered by a long shirt (*kurta*) worn hanging down outside the trousers. This is accompanied by a turban, the style of which is determined by where one comes from and whether one is a Sikh, Muslim, or Hindu. Women of all denominations wear trousers and a tunic (*salwar-kamiz*),

accompanied by a scarf (*dupatta*) thrown over their shoulders or around their heads. In Uttar Pradesh, men wear Western-type shirts over trousers or a cotton *dhoti* (a long piece of cloth wrapped around the waist, then drawn between the legs). Women in Uttar Pradesh dress in full, wide, colorful skirts (*ghaghri*), a kurta or a bodice, and a shawl. Their clothes are sometimes decorated with rhinestones and mirrors.

## 12 FOOD

The Jat diet is determined in part by agricultural ecology, and in part by culture. As Jat populations are found in the drier wheat-growing areas of the subcontinent, wheat and other cereals form their staple starch. *Roti* (flat bread made from wheat or millet) is eaten every day, along with a vegetable curry, lentils, curds, and—for those who can afford it—*ghi* (clarified butter). Hindu Jats are usually vegetarian, while Sikhs and Muslims eat meat. Many Sikhs, however, share Hindu attitudes towards beef-eating, while pork is banned by the Muslim religion.

## 13 EDUCATION

Attitudes toward education vary among Jat populations. A study in a village near Delhi, for example, showed 92% of Jat boys between 6 and 15 years of age attend school. The percentage dropped to 40% for girls, this difference reflecting the relative positions of males and females in Jat society, and indeed in South Asian society in general. Yet even the figure for Jat girls compares favorably with those of the Bhangis (0%), Kumhars (10%), and other castes in the village. Access to educational facilities for groups such as the nomadic Jats of Sind in Pakistan is clearly limited.

## 14 CULTURAL HERITAGE

Hinduism, Islam, and Sikhism all have ancient traditions of music, dance, and literature. Jat communities share in this cultural heritage. They also share in the folk culture of the regions in which they live. Thus, Hindu Jats living in the middle Ganges valley are familiar with the great traditions of Brahmanical Hinduism. But in regions such as Braj, southeast of Delhi, where folk culture is closely tied to the life of Krishna, they also participate in Krishna-related rituals and practices that are localized in nature. Similarly, the writings of the Sikh gurus, Sikh sacred music, and Sufi mysticism are part of the heritage of the Punjabi Jats—as are dances such as the Bhangra, and the Punjabi folk tunes that are popular in the region. Muslim Jats are the successors to centuries of Islamic cultural dominance in northwestern India. This is seen not only in religious practices and social customs, but in areas such as the Indo-Islamic style of architecture, and the poetry and music of the Sufis. Music forms such as the *qawwali* and *ghazal* continue to be popular among the Muslim population today.

## 15 WORK

Jats are known throughout northern India and Pakistan as skilled and industrious agriculturalists. They are the dominant landowning caste in many areas. Jats make up the bulk of the farming community in the Punjab, one of the most agriculturally productive regions in the entire subcontinent. They are open to change and receptive to innovation in farming techniques. It is no accident that the advances in agriculture of the

*A Jat girl smiles at the camera in Orissa, India. (© Tiziana and Gianni Baldizzone/Corbis)*

late 1960s and early 1970s known as the Green Revolution were implemented in the Punjab. Some Jats are pastoralists, raising water buffaloes and camels for sale. The Jats were viewed by the British as one of the martial races of northern India, and many served in Jat regiments in the British Indian Army. This tradition of military service has carried over into the armed forces and police forces of India and Pakistan. Today, many Sikh Jats are heavily involved in the trucking business.

In Pakistan, the word “Jat” is used as an occupational term for “landlord,” so the Sikh and Muslim Jats in Pakistan who originate from the Punjab may be different in appearance from “Jats” in the rest of the country, who belong to local communities.

## **16 SPORTS**

Games played by children are typical of those found throughout India. These include hide-and-seek, various games of tag, marbles, kite-flying, spinning tops, and *gulli-danda* (Indian cricket). Wrestling and team wrestling (*kabaddi*) are popular among youth and young adults. Traditional rural pastimes among men include gambling, cockfighting, partridge-fighting, and camel-racing. Hunting (*shikar*) is a favorite sport among the well-to-do classes. Young people have taken enthusiastically to modern sports such as cricket, field hockey, and soccer.

## **17 ENTERTAINMENT AND RECREATION**

With the advent of the mass media, Jats throughout northern and western India are able to receive radio and television broadcasts. Moreover, with the advent of cable and satellite television, those who can afford it can access overseas networks such as CNN. Movies and sports events are the most commonly watched programming. Movie theaters are found in almost all towns of any size. It is only the most isolated and economically depressed Jat groups, such as the nomadic pastoralists of Sind, who have to rely heavily on traditional pastimes for their entertainment.

## **18 FOLK ART, CRAFTS, AND HOBBIES**

Folk arts and crafts vary from region to region. The nomadic Jats of the delta region of the Indus are known for their elaborate embroidery work and mirrored textiles.

## **19 SOCIAL PROBLEMS**

Problems facing the Jats vary according to location and the specific communities involved. Relatively affluent landowning Jats in Uttar Pradesh, for example, do not face the problems of economic hardship, illiteracy, and lack of access to schools and other amenities that confront the nomadic Jat pastoralists in Sind. In such communities, internal factions and caste relations are often of greater concern than social ills. In Sind,

expansion of agriculture has reduced grazing areas, and many pastoral Jats have had to turn to other occupations. Sikh Jats in the Punjab, on the other hand, have had to live through the unrest, violence, and political instability generated by the Sikh separatist movement over the last two decades (many Sikh Jats actively supported the movement, as well).

As agriculturalists, Jats in India, especially in the upper Ganges plains where they are concentrated, were negatively affected by Prime Minister Jawarhala Nehru's agricultural policies. Chaudhary Charan Singh opposed Nehru's socialistic and collectivist land use policies. A politician from Uttar Pradesh, Singh was born into a Jat family in 1902 and served as India's sixth prime minister from 28 July 1979 until 14 January 1980, leading the Bharatiya Lok Dal party. His association with the causes dear to farming communities in the North caused his memorial in New Delhi to be named Kisan Ghat (in Hindi, Kisan is the word for farmer).

The Jat people have a discrete and distinct cultural history that can be historically traced back to ancient times. However, to a large extent, because of their diversity, the question of a Jat identity remains an issue. Several religious traditions played an important role in shaping Jat identity. The Jats had no patience for the intricate symbols and elaborate practices of orthodox Hinduism. They described their religion as "kachha mazhab"—simple and earthy—as contrasted with the "pukka mazhab" of the high castes. Second, the reformist tradition in the Jat community had a pronounced non-Brahmanical orientation. There was nothing sacred about the Ganga or the Yamuna for them. Idols and temples were emblems of superstition, and the Brahmans had no role to play in their rituals and ceremonies. The Naths, followers of Gorakhnath, an 8th century Hindu sage, who are well-represented among the Jats in some areas, eat meat and drink alcohol. Such practices resulted in Jats being placed on the lower rung of the Hindu social order and they had no illusion of belonging to the twice-born Hindu varnas till the advent of the Arya Samaj (Ārya Samāj), which tried to engineer a basic shift in the Jat psyche. Whatever the current notions about the superiority of the Jat "quom" (community), Jats were stigmatized by the higher castes. The Brahmans treated the Jats as Shudras and denied them the right to wear the sacred thread. The Jats were largely free from the Brahmanical orthodoxy and caste rigidity. The Arya Samaj's attack on Brahmanical rituals, orthodoxy, superstitions, and caste rigidity had a natural appeal for the Jats and they easily took to it.

The Arya Samaj is a Hindu reform movement, dating back to the late 19th century, that denies traditional Brahmanical dominance in Hindu society, but that also promotes Hindu values. For instance, cow-protection societies form a major plank of the Arya Samaj movement in north India and the cow-slaughter theory is specifically used to justify violence against the Dalits and Muslims by Jats. The brutal lynching in 2002 of five Dalits in Jhajjar in Haryana State by Jats reflects the growing success of the Hindutva forces in the State. The "cow" has suddenly emerged as the principal symbol for the mobilization of dominant caste groups into the Hindutva fold. The Dalit victims have become the culprits; the Jats have emerged as warriors, like the Rajputs, defending the cow against the depredation of non-Hindus or low caste Hindus. Popular ballads and stories abound, highlighting the virtues of kshatriya values embodied in acts of saving the cow from the

assaults of Muslim butchers, who were allegedly supplied cows by Chuhras and Chamars (low caste Hindu groups). One of the most powerful images in the Jat belt is that of a gaurakshak (cow-protector), who is venerated for protecting the community through an act of saving the cow, and killing the "culprits" and "infidels." Protection of the cow has become a centerpiece of the emerging Jat identity.

Many Jats see themselves as equal to the martial Rajputs and some regard themselves as belong to the "twice-born" castes, i.e. the three upper levels of the Hindu caste system, but in general they are looked down upon by the higher castes in India. In fact, in 1999 the Vajpayee government in New Delhi included Jats in the Center's list of Other Backward Castes (OBCs) and they are also classed as OBCs in the states of Haryana, Uttar Pradesh, Rajasthan, and Madhya Pradesh. Designation as an OBC indicates a caste needs assistance in the sphere of socio-economic development and gives a group access to reserved quotas (27%) in public sector employment and places in educational institutions, as well as special political representation. Such as designation is, of course, subject to political patronage and causes much resentment in the community at large, other castes having to compete with the Jats, whom they see as successful and economically prosperous. The agitation in 2008 amongst Gujars in Rajasthan for classification as a Scheduled Tribe stems, in part, from Jats being classed as an OBC in the state and the Gujars having to compete with them in the areas of employment and access to education.

In general, while there are some who live in poverty and are economically disadvantaged, Jats are a prosperous farming caste who form the backbone of the rural communities where they are found.

## 20 GENDER ISSUES

Gender issues among Jat depend to a large extent on the community to which women belong. Thus among Hindu Jats, traditional Hindu constraints prevail. A recent study in Shahargaoon, an urbanizing Jat village just south of Delhi in Haryana State, found that sex-selective abortion was practiced within a system of patriarchy, manifested in terms of preference for sons over daughters. Although the overall impact has been a decrease in family size, the sex ratio in the village increasingly favors males. Even among Sikhs, whose *gurus* preached gender equality, there is a preference for sons. In Nanowli village, part of Fategarh Sahib district in Punjab State, in which 70% of the families are landed Jat Sikhs, 18 boys and six girls were born in 2003, the latter all belonging to the Scheduled Castes. According to the 2001 census, Fategarh Sahib district recorded the country's lowest sex ratio of 754 girls per 1,000 boys in the age group of 0–6 years. The State of Punjab has legislation preventing ultrasound sex-determination being used for sex-selective abortion, although clearly this does occur.

Literacy among Hindu Jat women is only 27.5 % though it is even less for Sikh Jats (20%) and Muslim Jats (14%). In Pakistan, of course, Muslim Jat women are subject to *pardah* and wearing the *burqa* in public. While many Jat communities are quite prosperous, poverty and illiteracy are problems among rural groups of lower socio-economic standing, where women tend to be actively involved in agricultural activities.

# JAVANESE

**PRONUNCIATION:** JAHV-uh-neeZ

**LOCATION:** Indonesia (Java)

**POPULATION:** 100 million

**LANGUAGE:** Javanese

**RELIGION:** Islam; Protestantism: Catholicism; folk religion

**RELATED ARTICLES:** Vol 3: Indonesians

## 1 INTRODUCTION

To medieval geographers, the name “Java” was virtually synonymous with the entire sweep of islands between China and India. From Mecca’s viewpoint, every Muslim from “below the winds,” that is, Southeast Asia, was “*jawi*.” While Bali might monopolize Indonesia’s tourist brochure image, Java and the Javanese in many ways dominate Indonesia’s reality. Non-Javanese Indonesians often complain of a Javanese “colonialism” having replaced the Dutch version, but, from the viewpoint of a multiethnic Jakarta elite oriented towards development and modernity, Javanese culture is just another regional culture, albeit one with far greater power than others to influence national culture in its turn. More importantly, Javanese culture is riven (and enlivened) by the same tensions that obsess Indonesian society as a whole. Javanese Muslim purists find kindred spirits more easily among Malays, Minang, or Bugis than among fellow Javanese whose secularism or syncretism allies them rather to the Balinese, Dayak, or Torajan.

The Austronesian ancestors of the Javanese arrived perhaps as early as 3000 BC from the Kalimantan coast. The name “Java” may have itself originally meant “outlying island,” from the point of view of Borneo or Sulawesi. Having acquired metallurgical skills about 2,000 years ago, the Javanese developed complex supra-village polities before choosing to adopt (and recombine and transform) elements of Indian religion, art, and statecraft. From the 7th century, inscriptions and Chinese annals record kingdoms in central Java (two centuries later than in west Java). Despite the value of maritime trade, Mataram, the first great kingdom on Java, emerged in the agrarian interior of central Java, powerful and wealthy enough to raise the “holy mountains” of Borobudur (Mahayana Buddhist) and Prambanan (Sivaite Hindu), monuments surpassing in scale any in India itself. By this time, Java’s influence radiated as far as Indochina; the Khmer prince who founded the Angkorean empire had been a captive in Java.

In the 10th century, the vital political and cultural heart of Hindu-Javanese civilization shifted to the Brantas valley in eastern Java, driven from central Java by some unknown (volcanic?) calamity, as well as drawn by greater access to maritime trade. By the end of the 13th century, centered not far inland from modern Surabaya, rose Majapahit, a kingdom whose glorious memory inspired not only Javanese of later centuries but also the Balinese and other peoples of the archipelago. Since Majapahit, like all native Javanese states before and after, was a fragile coalition of regional lords under a paramount dynasty often embroiled in bloody succession struggles, its effective authority could hardly have extended as far as its propaganda claimed. Nonetheless, the list of its far-flung “tributaries” indicates that Majapahit at its height was at the center of a trading network that the Dutch East India Company (VOC), the

direct forerunner of modern Indonesia, would later enter and colonize.

In the 15th century, Java's north coast ports fell into the orbit of Muslim Malacca (then the center of international commerce) and under the rule of the descendants of non-Javanese Muslim merchants. These Islamized states, led by Demak, vanquished the remnants of a by then already declining Majapahit and propagated the new religion in the interior. By the following century, in central Java, a new Mataram emerged with a hybrid culture that integrated Islam with the legacy of the old Hindu-Buddhist civilization.

The greatest Mataram ruler, Sultan Agung, might have achieved the unification of Java had it not been for the opposition of the VOC, newly established on the coast. After Agung's death in 1646, Mataram slipped into over a century of civil wars and foreign invasions. The only long-term beneficiary was the ever-intervening VOC, which acquired the north coast and finally oversaw the permanent division of the remaining realm into two equally subjected courts at Surakarta (Solo) and Yogyakarta (Yogya) in 1755.

After the over-extended VOC declared bankruptcy in 1799, the Dutch government took firm control of Java only in the 1830s, after taking half a decade to subdue a rebellion led by the Javanese prince, Diponegoro. Colonial pacification deprived Javanese rulers of political power, leaving them the arts as the only theater in which to express authority. Under the Cultivation System, the Dutch, utilizing the native aristocracy and Chinese intermediaries, forced peasants to discharge their tax obligations by growing cash crops (especially sugar) on a portion of their rice lands. Coupled with a population explosion that turned 3 million Javanese in 1800 to 28.4 million by 1900, these exactions impoverished the peasantry.

Resistance took diverse forms: the elite retreated into a world fashioned of arts and etiquette where Javanese refinement remained superior to Dutch "brutishness"; peasants in the Samin movement practiced nonviolent noncooperation, recognizing no obligation to pay taxes. In time, however, the steamship, the railroad, the telegraph, the newspaper, and European racism created an arena for struggle stretching far beyond Java, even beyond the Netherlands Indies. Javanese took the lead in the Islamic, communist, and nationalist movements that challenged colonialism from early in the 20th century. Surakarta was the birthplace in 1911 of Sarekat Islam, the first mass political organization in the Dutch East Indies, and Surabaya was the site of a communist revolt in 1917 among the soldiers and sailors at the naval base there and of fierce resistance in 1945 to British forces come to reimpose Dutch rule after the Japanese occupation. Under the new republic, Yogyakarta, out of recognition for its sultan's support for the struggle for independence, was not integrated into the province of Central Java but rather was granted province-level status in its own right. All but one of Indonesia's presidents have been Javanese, the exception being B. J. Habibie, a Bugis. Sukarno was a partial exception, being half-Balinese.

Java, along with Bali, suffered the great majority of the killings during the anti-leftist massacres of 1965-1966; one of the most important factors leading to the bloodshed was conflict over land in rural Java between landowning peasants aligned with Islamic parties and landless peasants aligned with the Communist party. In promoting the growth of export industries in Java's cities, development under Suharto's New Order

regime increased the importance of Java in Indonesia's overall economy, long heavily dependent on the export of petroleum and other natural resources from the Outer Islands. Despite much small-scale, "routine" collective violence (including vigilante exercises of "popular justice" against "immoral elements," attacks on black-magic practitioners [dukun santet], and church burnings), more than in other parts of Indonesia, Java has not seen episodes of ferocious ethnic/religious conflict resulting in thousands of dead and tens of thousands displaced as have occurred in the Moluccas and Kalimantan, though Surakarta was the site of major anti-Chinese rioting in May 1998.

## **2** LOCATION AND HOMELAND

The Britain-sized island of Java formed eons ago along the line where the Indo-Australian plate meets the continental shelf of Asia. Their collision folded Java along two parallel east-west lines of plateaus and hills. Along the intervening trough, a series of volcanoes broke through; well-spaced, their peaks slope gradually down to broad plains, ideal for rice terraces. Some 63% of the island is cultivated (as compared to 10–20% of the other Indonesian islands); 25% of the surface is devoted to wet-rice paddies. Fragmented into rice-fields that give way to fish-ponds and salt pans and dotted with ports, the northern coastal plain faces the shallow and busy Java Sea. Along the southern shore, in contrast, plateaus fall sharply down to a deep and desolate Indian Ocean.

According to the 2000 census, Javanese comprised 41.7% of Indonesia's total population, thus numbering 83.9 million. No other Southeast Asian national population and no European one outnumbers them. Speaking dialects of Javanese but counted separately were the Bantenese (4.1 million) and Cirebonese (1.9 million) of western Java. Java's population density ranges from 850 persons per sq km (2,200 per sq mi) to as high as 2,000 persons per sq km (5,180 per sq mi) in the countryside around Yogyakarta. According to 2005 figures, Central Java's population density stood as high as 982 per sq km, East Java's at 757, far higher than West Sumatra's 106 for West Sumatra and Central Kalimantan's 12. Urban crowding is even more striking, given that single-story housing rather than high-rises is the norm.

The Javanese homeland consists of the provinces of Central Java and East Java, minus the island of Madura, and the Special Region of Yogyakarta. Javanese have also settled for centuries along the northern coast of West Java, particularly in the area of Cirebon and Banten. Javanese perceive several regional subcultures. The major division is between the *kejawen* and the *pesisir*. Extending over the north coast and including distinct centers, such as Cirebon, Demak-Kudus, and Surabaya, the *pesisir* is more oriented towards maritime commerce and partakes more directly in Islamo-Malay civilization. Centered on the old royal cities of Surakarta (Solo) and Yogyakarta (Yogya), the *kejawen* of the interior, on the other hand, emphasizes an indigenous synthesis of Islamic and the older Hindu-Buddhist cultures. This subculture includes the "outlying territories" (*mancanegara*) of the Bengawan Solo and Brantas valleys, as well as the Banyumas area bordering the Sundanese cultural zone. Depopulated by Mataram's wars, much of contemporary East Java presents a highly mixed landscape, including Madurese, "Westerners" (*tiyang kilenan*, migrants from cen-

tral Java), Hindu-Buddhist Tenggerese, and the Balinese-influenced *tiyang Osing* of the eastern salient.

Migration from Java is a longstanding phenomenon. Javanese, from merchant princes to artisans and servants, filled 15th-century Malacca. Since the 19th century, the land scarcity attendant upon overpopulation has driven tens of thousands to emigrate, first as coolies, later as transmigrants, to the southern and eastern coasts of Sumatra, to Kalimantan, and to Sulawesi. For instance, Javanese comprise 62% of the population in Lampung province (on Sumatra across the Sunda Strait from Java), 32% in North Sumatra, 30% in East Kalimantan, and 12% in Papua; more than one in three residents of the national capital Jakarta is Javanese. Transmigration is in part responsible for the reduction in the proportion of Indonesia's population living on Java and Madura—from 68.5% in 1960 to 58.7% in 2005. In the late 19th century, different colonial powers imported Javanese labor (like Chinese and Indian) to work in Malaya, South Africa, Suriname, Curaçao, and New Caledonia. About 15% of Suriname's current population is Javanese. After more than a century, some of these communities retain their ancestor's language and culture.

### 3 LANGUAGE

The Javanese language is Austronesian, most similar to neighboring Sundanese and Madurese (less so to Malay). It divides into several regional dialects. The people of Solo and Yogya regard their own speech as the most refined and view other dialects as corruptions (other Javanese often agree).

To a level comparable only to Japanese and Korean among major languages, every exchange in the Javanese language systematically defines the hierarchical relations between the speakers. A speaker must adjust his or her “speech level” according to the status of the person addressed, expecting the same courtesy in return. Although there are many fine gradations between them, there are basically two “speech levels”: *ngoko* and *kromo*. *Ngoko* is the language in which a person thinks and, thus, is only appropriately used with people of equal status whom one knows intimately and with social inferiors. *Kromo* is spoken to older people, people of higher status, and those whose status relative to one is not yet known.

While the great majority of vocabulary items do not change between levels, the ones that do are the most common. Thus, the most basic sentences differ completely, e.g., “where [are you] coming from?” is “*Soko ngendi?*” in *ngoko* and “*Saking pundi?*” in *kromo*. “I cannot do [it]” translates as either “*Aku*

Two Indonesians ride a bicycle past an abandoned old Dutch-era building in Jakarta's Old Town, Jakarta, Indonesia.  
(Dimas Ardian/Getty Images)

*ora iso*” or “*Kulo mboten saged.*” Moreover, the very texture of the two levels contrasts: *ngoko* can sound rough, even harsh, and is very precise (as in numerous onomatopoeic words, such as *gregel*, “nervous to the point of quivering and dropping things”); *kromo*, on the other hand, is always spoken softly and slowly and is deliberately vague.

Mastering *kromo* is an acquired skill; in the past, peasants with little *kromo* kept silent in front of aristocrats or communicated to them through *kromo*-fluent intermediaries. Today, when unable to speak *kromo* or unwilling to elevate other people over themselves, all but the most uneducated and village-confined Javanese can avoid clearly insulting others by resorting to Indonesian (which takes on the character of a new *kromo*).

Although Islamo-Arabic names are common (e.g. Abdurrahman Wahid, the name of a recent Indonesian president), Javanese just as typically takes names of Sanskrit origin. Javanese do not use surnames and, as with Sukarno and Suharto, go only by a single personal name. Many Muslims combine Arabic and Sanskrit names, and the Christian minority generally combines Latin names with Sanskrit ones, e.g. the name of the head of the Roman Catholic Church in Indonesia, Yulius Riyadi Dharmaatmaja (Latin-Arabic-Sanskrit).

#### 4 FOLKLORE

Javanese recognize several classes of supernaturals. *Memedis* are frightening spirits, such as *sundal bolong* [see **Banjarese**] and the playful *gendruwo*. The latter appear to people as familiar relatives in order to abduct them, making them invisible; if the victim accepts food from the *gendruwo*, he or she will remain invisible forever. *Lelembut* are possessing spirits. *Tuyul* are spirit familiars one can enlist through fasting and meditation. *Demit* are the spirits of spooky spots, and *danyang* are the guardian spirits of villages, palaces, and other places. The greatest spirit is Ratu Kidul, the Queen of the South Sea, believed to be the mystical bride of Java’s rulers; her favorite color is green, so young men should avoid wearing this color while at the Indian Ocean shore, otherwise, they may be pulled down into Ratu Kidul’s underwater realm.

In the past, parents inculcated values in their children through tales from the *wayang* shadow play. The characters provided a wide range of personality types and behavioral models and anti-models: e.g., the pure king Yudistira who has a gambling problem; the refined Arjuna, the perfect warrior and lover; the mighty and irreverent Bima; and the headstrong Sri-kandi and the retiring Sumbadra, both female paragons. The more laughable human follies appear in the clown-servants (not part of the original Indian epic) Petruk, Gareng, Bagong,

and their father Semar. The last is an ugly and rotund old man, who is actually the supreme god in disguise (as well as *danyang* of all Java). There are also two female clown-servants, the tall and thin Cangik and her short and fat daughter, Limbuk.

Another set of legendary figures are the *wali songo*, the nine holy men (variously of Arab, Egyptian, Persian, Uzbek, and Chinese origin) who brought Islam to Java (from Malacca, Champa, and the Middle East); they are credited with magical powers, such as flying and with developing ways to propagate Islam to the Javanese through their own cultural forms, such as Sunan Bonang who used Javanese sung poetry and the music of the Javanese gamelan orchestra to communicate Islamic teaching. To this day, their graves, located in cities all along Java's north coast, are popular sites of pilgrimage, especially those of Sunan Giri at Gresik near Surabaya, of Sunan Kudus in Kudus, and Sunan Gunung Jati in Cirebon. Another Muslim figure who attracts pilgrims to his shrine is the spirit of Sam Po Kong (Zheng He), the Yunnan-born admiral of the massive Ming Chinese fleets that made seven voyages to lands around the Indian Ocean in the early 15th century; both non-Muslim Chinese and Muslim Javanese visit his temple in Semarang, the great port on the north coast of Central Java.

## 5 RELIGION

All but a fraction of Javanese are Muslim. However, only a portion regularly follow the "five pillars of Islam" and other practices of orthodox, Middle Eastern Islam; they have come to be called *santri*, a term originally referring only to those taking formal instruction from Islamic teachers. These "purist" Muslims divide further into conservatives, those who keep to orthodox Islam as it has been practiced in Java for centuries; and modernists, who reject local traditions and espouse a more scriptural faith supported by Western-style educational institutions. Both groups have strong organizations (once functioning as official political parties), Nahdatul Ulama and Muhammadiyah, respectively.

Non-santri Javanese Muslims, popularly termed *abangan* or *Islam kejawan*, revere Gusti Allah and Kangjeng Nabi ("the Venerable Prophet," Muhammad) but do not perform the five daily prayers, fast during the month of Ramadan, or go or want to go on the pilgrimage to Mecca. Their religious life focuses not on communal prayer in the mosque but on *slametan*, ritual meals held during rites of passage, village "spiritual cleansings" and harvest festivals, Islamic holidays, and special occasions, such as the inauguration of a new house or rites to protect an only child from the ogre Batara Kala (*ruwatan*). They also leave offerings, such as flowers, incense, coins, and rice cakes on a bamboo tray or banana leaf, for the spirits at crossroads, under bridges, in big trees, and elsewhere. They respect the spiritual potency (*kesakten*) residing in respected heirloom objects, such as gongs, *kris* swords, and royal carriages. *Abangan* believe paying homage to rulers and other exceptional people of the past at their tombs will confer spiritual and material benefits. These notions and practices are, however, widespread among *santri* as well. For example, conservatives regularly make pilgrimages to the graves of Islamic "saints" (legendary holy men), something modernists denounce as "idolatrous." Both *abangan* and *santri* consult *dukun*, diverse magical specialists, including spirit mediums, masseurs, acupuncturists, herbalists, midwives, sorcerers, and numerologists.

Fatalism suffuses much of Javanese thinking. One must be accepting (*nerimo*), have fortitude (*sabar*), and free oneself from emotions and desires to reach serenity (*ikhlas*). Earthly life is but a moment in eternity, the soul "stopping to have a drink" (*mampir ngombe*). Mystical practices, such as meditation in a secluded place, are common ways to accumulate spiritual power and a major preoccupation of the aristocracy. Explicitly distancing themselves from conventional Islam, numerous mystical sects command a considerable following and have sought unsuccessfully to have the government recognize their beliefs (called *kebatinan*, "innerness") as an official religion.

As much as 12% of the population of the island of Java (including Chinese and migrants from other islands) adhere to religions other than Islam. There are several hundred thousand Christians. Roman Catholics are particularly numerous; their church has used *gamelan* in the mass and taught biblical stories through *wayang*, and Javanese make the traditional sign of homage, palms placed together over the forehead, at the moment of Eucharistic consecration.

On the slopes of the east Javanese volcano Bromo live the Tenggerese, an archaic Javanese subgroup, who practice a folk religion derived from Majapahit Hinduism and highlighting the honoring of Joko Seger, Bromo's guardian spirit.

## 6 MAJOR HOLIDAYS

Javanese combine the seven-day Islamic-Western week (Saturday to Friday: *Sabtu, Minggu, Senin, Selasa, Rebo, Kamis, Jum'at*) with a five-day indigenous week (*Legi, Paing, Pon, Wage, Kliwon*). Each day is identified by its place in both weeks (e.g., *Selasa Pon* or *Rebo Legi*), a conjunction that recurs every 35 days; birthdays, rituals, and performances are celebrated every time a particular day-pair returns.

The first day (beginning at sunset) of the Islamic year (1 Sura) is regarded as mystically charged. On this night, people stay up all night, watching processions, such as the *kirab pusaka* (parading the royal heirlooms) in Solo or meditating on mountains or beaches (one means of gaining spiritual potency is to stand in the cold water of a stream all night). The birthday of Muhammad (12 Mulud) is celebrated in Yogyakarta and Solo by the holding of the Sekaten fair (the whole preceding week), the playing of ancient *gamelans* brought out only for the festival, and, on the day itself, a procession of three or more glutinous rice "mountains" ("male," "female," and "baby").

See also the article entitled **Indonesians**.

## 7 RITES OF PASSAGE

Arranged marriages still occur in villages, but most people choose their own partners. The process begins with the man making a formal inquiry of the father or the *wali*, a paternal relative who can take a dead father's place, as to whether or not the woman is spoken for, followed later by the presentation of the gifts to the woman's side. On the night before the wedding (*midadareni*, when heavenly nymphs descend to bless the marriage), the woman's kin visit the graves of their ancestors to ask for their blessing, and the woman's kin, neighbors, and friends come for a *slametan* feast; the kin stay up all night, making palm-leaf decorations (*janur*). A *dukun manten* dresses and adorns the bride for the ceremony.

The wedding ceremony itself is the conclusion of the Islamic marriage contract between the groom and the bride's father or

*wali*. The groom, with his party, proceeds to the bride's house, meets the bride, and is seated on the bridal dais. The groom's parents then arrive to the sound of the *gamelan* piece "Kebo Giro" (nowadays usually from a cassette). The couple bows (*sungkem*) to their parents and to other older relatives. The guests then eat and watch dancing by young female relatives of the couple. The groom can take the bride away only after five days; then, they can visit his kin and neighbors for a simpler reception (*ngunduh temanten*). Immediately after Indonesian independence, the move was to simplify wedding ceremonies, but under the New Order the trend reversed, with wealthy families displaying status through reviving the more elaborate traditional ceremonies (including rich costumes).

Javanese hold *slametan* for the repose of the deceased on the third, seventh, fortieth, 100th, and 1,000th day after death. On every Selasa Kliwon and Jum'at Kliwon, offerings (flower petals in a half-full water glass) are made to the spirits of the dead. On Ramadan, people go to strew flowers on the graves of their departed.

## **8** INTERPERSONAL RELATIONS

In the old Javanese kingdoms, descendants of rulers formed the elite (*ningrat* or *priyayi*). During the colonial period, *priyayi* came to refer to all educated people, generally those employed in white-collar jobs, whatever their descent. This term distinguished them from the *wong cilik* ("little people"), peasants and laborers. *Ulama* (Islamic scholars), their students, and merchants formed a distinct *santri* elite of their own.

Peasants recognized their own hierarchy with *wong baku* (house-owners and the descendants of village founders) at the top, followed by *kuli gandok* (married men continuing to live with their parents) and *joko* or *sinoman* (unmarried men living with parents or others). Heading each village is a *lurah* (also called *petinggi*, *bekel*, or *glondong*), elected by the villagers, and receiving the right to use communal land to support himself and his staff. The villagers cooperate on common works, such as the construction and upkeep of roads, bridges, and public buildings, and the village spiritual (*bersih desa*) cleansing rites.

Javanese say of children who have not yet learned to control their emotions and to behave in a dignified and respectful way that they are *durung jawa*, "not yet Javanese." The ideal condition of the individual and society is an uneventful tranquility. Thus, Javanese avoid confrontation at all costs, reacting even to disturbing news with a resigned smile and soft words and never giving any request a direct refusal (Javanese are adept at giving and taking hints). In addition to polite speech, proper respect requires appropriate body language: bowing and slow, graceful movements.

## **9** LIVING CONDITIONS

Javanese villages (*desa*) may cluster amid fields (in the highlands) or stretch out along roads (in the lowlands), the individual houses and yards enclosed by bamboo fences. Paths no wider than 2 m (6.5 ft) connect the *dukuh* (its various constituent hamlets). Each village has a *balai desa* (community meeting hall), several *langgar* (prayer halls) or a mosque, and a school. Entrance gates are seen everywhere, also defining city wards. There are open areas for a weekly market, stops for buses, and parking for minivans (*bemo*, *kol*, *daihatsu*) and pedicabs (*bekak*) waiting for passengers.

Village houses sit on the ground and have earthen floors. They have a framework of bamboo, palm trunks, or teak; walls of plaited bamboo (*gedek*), wood planks, or bricks; and roofs of dried palm leaves (*blarak*) or tiles. Inside, rooms are made with movable *gedek* partitions. Traditional houses have no windows, light and air entering through chinks in the wall or holes in the roof. Roof shape was used to reflect social status. Ordinary villagers had a *serotong* roof with two slopes on two sides only. Descendants of the village founders possessed a *limasan* roof with a double slope on four sides. Marking an aristocratic house was the *joglo* roof with three slopes on four sides; such residences also had a large pavilion (*pendopo*) in front for receiving guests and petitioners.

Central Java has a Human Development Index (combining measures of income, health, and education) of 69.8 (2005 score), just above Indonesia's national HDI 69.6, while East Java's HDI is significantly lower, 68.5 as is Banten's, 68.8. However, the Special Region of Yogyakarta (province-level status) had among the highest HDI's in the country, 73.5. Central Java's GDP per capita is us\$6,293, relatively low for Indonesia (for instance, below West Sumatra's us\$9,784 and North Sulawesi's us\$8,360, though above East Nusa Tenggara's us\$3,427). East Java's GDP per capita, however, is relatively high, us\$ 11,090. The level of infant mortality (2000 figures) in East Java, 47.69 deaths out of 1,000 live births, is almost twice that in Jakarta; Central Java's figure is a little better, at 43.69, and Yogyakarta's is the same as the national capital's (compare all these with 88.55 for West Nusa Tenggara).

## **10** FAMILY LIFE

The nuclear family (*kuluwarga* or *somah*) is the basic unit of Javanese society, including a couple, their unmarried children, and sometimes other relatives and married children and their families. Javanese recognize kin obligations on both the mother's and father's sides. Descendants of a common great-grandparent form a *golongan* or *sanak-sadulur*, whose members help each other hold major celebrations and gather on Islamic holidays. Larger still is the *alurwaris*, a kinship group directed towards the care of the graves of a common ancestor seven generations back; a descendant living in the village where the grave is located is responsible for mobilizing the scattered kin for this work.

Marriages between first cousins, especially the children of two brothers, and between a man of a younger generation than the woman's, are taboo. A married couple prefers to set up a separate household if they can afford to; otherwise, they usually move in with the wife's parents. Taking more than one wife is rare (kings and other aristocrats formerly kept harems). The divorce rate is high among village folk and poorer city folk; after divorce, children follow the mother or, if she marries again, they may go to live with other relatives. An inheritance may be divided through *perdamaian*, by deliberation among the children and close kin with the object of providing for those who have the least. The child who has remained in the family home to take care of the parents may also inherit the bulk of the property.

While Javanese mothers continue to provide direct emotional support to their children throughout life, fathers become more distant after children reach the age of four. They become the first "public authority" figures to whom individuals must be reserved and respectful. Although fathers are regarded as

the heads of the house, the mother exercises more real control, being able, as a woman, to be more direct; the inevitable display of emotion would compromise a man's image of dignity, the source of his power. Two-thirds of Javanese are reported as speaking *kromo* (the language of respect) to their parents while greeting or asking for help, and half use *kromo* even during relaxed conversation with them.

While parents are supposed to be constantly correcting and advising their children, however old the child is, children never criticize or correct their parents except in the most indirect ways.

## **11 CLOTHING**

For everyday wear, Javanese follow the Indonesian style of dress; men and women wearing sarongs in public are also common. Ceremonial clothing for men includes a sarong, high-collared shirt, jacket, and a *blangkon*, a head cloth wrapped to resemble a skullcap. Women wear the sarong, *kebaya* (long-sleeved blouse), *selendang* (sash over the shoulder), and *sanggul* (long hair in a thick, flat bun at the back, often achieved with a wig addition); handbags have become obligatory. One variation for both sexes is to wear a short sarong over pajama-like trousers (men add a high fez). Traditional dance costumes and wedding attire leave the chest bare for men and the shoulders bare for women.

## **12 FOOD**

Meals consist of rice and, at their simplest, stir-fried vegetables, dried salted fish, *tahu* (tofu), *tempe* (a bar of preserved whole soybeans), *krupuk* (fish or shrimp crackers), and *sambel* (chili sauce). Common dishes include *gado-gado* (a salad of parboiled vegetables eaten with a peanut sauce), *sayur lodeh* (a vegetable and coconut milk stew), *pergedel* (fat potato fritters), and *soto* (soup with chicken, noodle, and other ingredients). Regional specialties include Yogya's *gudeg* (chicken and young jackfruit stewed in coconut milk), Solo's *nasi liwet* (rice cooked in coconut milk), and *nasi rawon* (rice with a rich beef soup). Dishes of Chinese origin are very popular, such as *bakso* (meatball soup), *bakmi* (fried noodles), and *cap cay* (stir-fried meat and vegetables). Snack foods include crackers: *emping* (from the *mlinjo* nut) and *rempeyek* (from peanut). Common desserts are *gethuk* (cassava that is steamed, mashed, mixed with coconut milk and sugar, and colored pink, green, or white) and various glutinous rice preparations (*jenang*, *dodol*, *klepon*, and *wajik*). Javanese often buy prepared food from peddlers making the rounds of neighborhoods and enjoy *lesehan*, late-night dining on mats provided by sidewalk food vendors.

## **13 EDUCATION**

In 2005, the level of literacy in Central Java stood at 87.41%, in East Java at 85.84%, and in Yogyakarta at 86.72%, low by Indonesian national standards (the national level is 90.4% according to 2004 figures) but comparable with other provinces with large numbers of poor, such as Bali and South Sulawesi (see also the article entitled **Indonesians** in this volume).

## **14 CULTURAL HERITAGE**

An integral part of traditional rituals, festivities, and theater, the classical Javanese orchestra (*gamelan*) consists of bronze gongs, keyed metallophones, drums, a flute, a spike-fiddle (*re-*

*bab*), and a zither (*celempung*), along with male and female vocalists. Making little use of recently invented notation systems, the music (either loud or soft styles) includes hundreds of named compositions (*gending*) in diverse forms. Street performers can also play *gamelan* music with a bamboo-tube gong and box-and-rubber-band zither. *Kroncong* ensembles can also interpret *langgam jawa*, folk and contemporary songs in the Javanese scale. Finally, there is also *pop* and *dangdut* in the Javanese language [see **Indonesians**].

Traditional dance emphasizes precise and measured control of the body, particularly in exquisitely graceful hand movements. Once confined to the palaces but now widely taught outside, the most revered dances are the *bedoyo* and *srimpi* in which young women enact unrecognizably stylized combat. Other female dances are the coquettish *golek* and *gambyong*, which are refinements of the dances of *taledek* or *ronggeng* (itinerant performers, generally regarded as little different from prostitutes). The latter consist of flirtation dances (*tayub*) in which the performer dances in front of a male audience, coaxing individual men to join her. Male dancing includes the *tari topeng* in which solo performers portray refined as well as violent characters from the Panji tales. A very common popular dance form (and mini-drama) is the trancelike *kuda lumping* (*jarang kepong*), which highlights hobby-horse dancers.

Although Javanese today use the Latin alphabet to write their language, some use is still made of *hanacaraka*, an Indian-derived script that can be traced back to the 8th century, and *pegon*, a modified Arabic script. Javanese literature goes back to the 11th century, beginning with adaptations in Kawi, the Old Javanese language, of the Hindu epics *Ramayana* and *Mahabharata*. By the 14th century, original masterpieces, such as the *Nagarkrtagama*, describing a royal tour of Majapahit, were being produced. The earliest surviving literature in modern Javanese (though still impossibly archaic to modern ears) dates from well into the Islamic period and includes *babad*, semi-mythical poetic chronicles, such as the *Babad Tanah Jawi* on Java's history. Once commonly heard, the singing of verse (*tembang macapat*) is a dying art. Novels and short stories are produced in Javanese but must compete with more widely marketable works in Indonesian.

## **15 WORK**

Some 60% of Javanese earn a living from agriculture, growing wet-rice and dry-field (*tegalan*) crops (cassava, maize, yams, peanuts, and soybeans); in mountain areas, many peasants engage in market gardening (vegetables and fruits, including temperate-zone species like carrots).

Traditionally, Javanese disdain manual labor and commercial occupations, preferring white-collar jobs and, most of all, aspiring to bureaucratic service. However, most nonfarming Javanese work as artisans or as petty traders (most of the latter are women). Although on Java, the bigger business owners tend to be Chinese or sometimes Arab, in much of the rest of Indonesia not only the civil servants and soldiers but also the merchants tend to be Javanese. With Indonesia's recent rapid economic development, more Javanese (especially young women from the villages) are taking factory or service jobs. Landlessness and underemployment have compelled many Javanese to take low-status work, such as being a maid, prostitute, beggar, street-peddler, *kenek* (fare-collector on a minivan or bus, usually young men or boys), "parking attendant" (men, usually

old, who help people parallel park their cars on Java's crowded streets), or *ngamen* (street musicians who play on sidewalks or on buses between stops).

## 16 SPORTS

See the article entitled **Indonesians**.

## 17 ENTERTAINMENT AND RECREATION

On the whole, urban middle-class Javanese prefer to spend their leisure time enjoying the products of international and national pop culture rather than the traditional performing arts, which many have only glimpsed on television. Court circles (and those wishing to connect themselves to them, members of the new elite and the Indonesian state as a whole) and the peasantry (and by extension many of the urban poor), however, are still attached to the traditional performing arts

Java's master art form is the *wayang kulit* shadow-puppet play, an adjunct to life-passage ceremonies as well as either ritual or entertainment in itself. In it, a *dalang* manipulates flat, highly stylized puppets against a screen lit by a lamp or electric bulb over his head. Sitting from mid-evening until near daybreak without getting up, he speaks all the parts, intones narration, sings, and conducts the *gamelan* orchestra that provides background and accompaniment. Based on the Hindu epics *Mahabharata* and *Ramayana* and improvised within set frameworks, the plays encompass intrigues, romance, philosophizing, comic interludes, subtle social commentary, pitched combat, and heartbreaking tragedy. Watching either the puppets or their shadows, spectators are free to come and go according to their taste in scenes. Today, wayang is broadcast on the radio, blaring from open-air eateries, and people giving celebrations can play recorded wayang (several cassettes) to approximate the atmosphere.

The most traditional of Java's theater forms is *wayang orang*, which substitutes human actors or dancers for the puppets. Far more popular today is central Javanese *ketoprak*, which emphasizes spoken comedy and melodrama over music and dance and draws stories from Javanese history, Chinese, and Arab tales. Employing male performers for female as well as male parts, the east Javanese *ludruk* is even earthier and more contemporary.

## 18 FOLK ART, CRAFTS, AND HOBBIES

Alongside *gamelan* and *wayang*, batik textiles are the signature art of Java. The intricate designs are created in several dyeings, with the space not to be dyed in a particular color covered with wax. The wax can be applied with copper stamps or, far more laboriously and beautifully, with a *canting* dipper. Batik styles differ radically between the *kejawen* (Yogya-Solo) and the *pe-sisir* (Pekalongan), the former emphasizing dense geometric patterns in brown, indigo, and white, while the latter prefer delicate floral patterns in red and other bright colors.

Other important or noteworthy crafts are leatherwork (wayang puppets), woodcarving (dance masks, furniture, and screens), pottery, glass-painting, and ironsmithing (*kris* swords).

## 19 SOCIAL PROBLEMS

With the clearing long ago of the last virgin land, an equal inheritance system has meant that Javanese peasants must sup-

port themselves on small landholdings. Many lose their land altogether and must enter tenancy, sharecropping, or wage-labor arrangements with richer peasants who can afford fertilizers and some machinery. Customs, such as permitting the poorest to glean grains that remain in fields after reaping, are being abandoned. During the New Order period (1966-1998), the government pushed ahead with dams and other development projects despite the opposition of the peasants who would be displaced by them. Similarly, the military assisted industrialists in suppressing labor unrest in the factories multiplying in Java's crowded cities.

## 20 GENDER ISSUES

Central Java's Gender-Related Development Index (combining measures of women's health, education, and income relative to men's) is 58.7, East Java's 56.3, and Banten's 54.9, significantly below Indonesia's national GDI of 59.2. Yogyakarta's, however, was higher, at 65.2, a little lower than Jakarta's. Gender Empowerment Measures (reflecting women's participation and power in political and economic life relative to men's) are 51 for Central Java, 54.9 for East Java, 48.6 for Banten, and 56.1 for Yogyakarta (cf. the national GEM of 54.6).

Javanese notions of gender difference are complex. Men, particularly *priyayi* (elite) men, on the one hand, are regarded as more capable of the emotional and behavioral self-control (including the intricacies of Javanese linguistic etiquette) so valued in Javanese culture, self-control that grants the individual the spiritual potency to attract the deference and submission of others without overt coercion. At the same time, men on the other hand are regarded as far less capable of controlling their desires, especially for sex and money, than women are, thus, for instance, making women more successful as traders in the marketplace and in financial matters in general (for this reason, husbands hand over most or all of their earnings to their wives who single-handedly manage the household). Javanese women have available to them contrasting, but equally legitimate, models for behavior, both a submissive and demure one (epitomized by Sumbadra, a wife of the wayang hero Arjuna) and an aggressive and bold one (epitomized by Srikandi, another of his wives). Differences between women and men are often described as a contrast between women as *kasar* (coarse) and men as *halus* (refined), and, yet, the male ideal (as represented by heroes like Arjuna) is characterized by the same grace and gentleness that the female ideal projects; both are the fruits of inner discipline and can in no way be confused with mere passivity.

## JEW S OF COCHIN

**PRONUNCIATION:** Jews of KOH-chin

**LOCATION:** India (state of Kerala)

**POPULATION:** FEWER THAN 5 (2008 estimate)

**LANGUAGE:** Malayalam; Hebrew for religious purposes

**RELIGION:** Judaism

### 1 INTRODUCTION

South Asia is home to several distinct communities of Jews. Some, such as the Baghdadi Jews, are relative latecomers, arriving in the late 18th century. They came mostly from Iraq, but also from Syria and Iran. They spoke Arabic and Persian, and reflected a continuation of Jewish interests in trade between the Middle East and South Asia. Baghdadi Jews settled mainly in the great port cities of the subcontinent. Two other Jewish communities, however, are of greater antiquity. The Bene Israel are descended from immigrants whose arrival is dated anywhere between 800 BC and AD 1300. They settled in the Konkan region around Bombay (Mumbai), spoke Marathi, and integrated with the local village populations. The other Jewish community of South Asia is found in Cochin in Kerala, on the Arabian coast of the Indian peninsula.

The Cochin Jews have differing traditions concerning the date of their arrival in India. One view suggests that Jewish merchants reached there during the reign of King Solomon (10th century BC) and took back ivory, monkeys, apes, and peacocks for his temple. Some Hebrew words for these objects appear to be derived from Sanskrit or Tamil. For example, the Hebrew for "ivory" is *shenhabbim*, or "elephant's tooth," a literal translation of the Sanskrit *ibhadanta*. Another account suggests the Cochin Jews were descendants of Jews taken captive by Nebuchadnezzar in the 6th century BC. The most likely theory, however, holds that the Jews reached the Malabar coast sometime in the 1st century AD, following the destruction of Jerusalem by the Romans.

The earliest certain reference to the Cochin Jews is found on the famous "Jewish copperplates" that are now in the care of the Paradeshi synagogue in Cochin. The Jewish community traditionally assigns them to AD 379, although recent scholarship dates them to around AD 1000. Written in Tamil and inscribed on sheets of copper, they record various privileges granted by the local ruler to Joseph Rabban, leader of the Cochin Jews and "proprietor of the Anjuvannam." This last name is taken to identify a trading corporation or a Jewish guild. The copperplates gave Joseph Rabban and his heirs numerous rights, including exemption from certain taxes and the right to collect tolls from boats and other vehicles.

The Cochin Jews existed as a thriving community until the middle of the 20th century. Deteriorating economic conditions in India after 1947, however, combined with the creation of a Jewish homeland in Palestine, led to the mass migration of Cochin Jews to Israel. In 1953–54, some 2,400 Cochin Jews—almost the entire population—left India, leaving only about 100 Jews behind. In Israel, Cochin Jews settled in several *moshavim* (agricultural settlements). Nevatim, Mesillat Zion, Ta'oz, Aviezer, and Kfar Yuval are still primarily Cochin population. At first, adjustment to an agricultural life was difficult, but the Jews from Kerala soon prospered in Is-

rael, Nevatim even constructing its synagogue in the Kerala style. But Cochinitis, originally being part of the Sephardic diaspora, stated that they could more easily follow their religion in India than in Ashkenazi-dominated Israel. This view was also expressed by Jews who remained behind in India, even though dwindling numbers have precluded them from holding daily prayers and more recently, most Shabbat services, in the synagogue. Although exact numbers are not available, it is estimated some 4,000 Cochinitis live in Israel today. Cochin neighborhoods are found in Rishon LeZion, Ashdod, Beer-sheeba, and Jerusalem, and in some of these neighborhoods there are synagogues in which the traditional Cochin liturgy is followed. Cochin Jews in Israel get together to celebrate Simhat Torah and other holidays that are Cochin in character. Some feel that even though the Jewish community in Cochin is disappearing, the Cochin community is thriving in Israel.

In Kerala, the 2001 Census estimated around 8,000 Jews in the population, but this included “Black” and “Brown” Jews, as well as “White” Jews. The ancient Jewish community of Cochin, the “White” Jews, has all but died out today, with at most five members of the community left.

## 2 LOCATION AND HOMETLAND

In 1948, there were about 2,500 members of the Jewish community of Cochin. They lived mainly in coastal towns, such as Ernakulam, Mallah, Mattancheri, and Parur. Jews in the city of Cochin, the so-called “White Jews,” lived in an area called “Jew Town.” By the early 1990s, the population had fallen to 22

people, and today, Jews have all but disappeared from Cochin (Kochi).

The Cochin Jews are traditionally divided into two castes. The “White” Jews (also called Paradeshi or “foreign” Jews) are descendants of immigrants who arrived from the Middle East and Europe from the 16th century on. The “Black” Jews, or Malabar Jews, are converts from the local population, or the offspring of marriages between the Jews and the local people (“Brown” Jews). Ironically, virtually all of the Black Jews emigrated to Israel, where their numbers are increasing. They continue to preserve the traditional religious customs they took with them from Cochin. The few White Jews who remained in India are rapidly disappearing as a community.

Cochin Jews live on the Malabar coast, the lush, fertile, tropical lowlands that lie along the shores of the Arabian Sea in India’s southern state of Kerala. The coastal plains are well watered, with inland lagoons, backwaters, and canals forming a network of waterways that crisscross the area. Inland, the Western Ghats form a barrier to eastward movement, so Malabar has always looked west to the sea. The monsoon wind patterns across the Arabian Sea were “discovered” by the Greek Hippalus in the 2nd century BC, but must have been known to experienced navigators in the region long before this. Ships could sail from Africa to India on the southwest monsoon and return on the northeast monsoon. Known in ancient times for its spices (cinnamon, cardamom, ginger, and especially pepper), sandalwood, and teak, the Malabar coast has long attracted merchants and traders seeking to share in the country’s riches. Arab, Greek, Roman, Portuguese, Dutch, French, and British are among the many peoples who have trod the shores of Malabar. The Jews of Cochin are one of these communities that stayed and made India its home.

## 3 LANGUAGE

The Cochin Jews speak Malayalam, the Dravidian language that is the native tongue of the peoples of Kerala. Hebrew is used for religious purposes.

## 4 FOLKLORE

A series of 10 paintings were commissioned for the celebrations in 1968 of the 400th anniversary of the founding of the Cochin synagogue. In essence, they are a record of the myths, legends, and history of the Jews of Cochin. The first painting shows a bazaar filled with spices and ivory, a trading port of the ancient world. It is the Jews’ ancestral home in Kerala, known to them as Shingly and actually the modern port of Cranganur. It establishes a link between the Jews of India and the splendor of King Solomon’s Palestine. The next 3 paintings capture the birth of the Cochin Jewish community—Herod’s Temple ablaze in AD 70, a ship full of Biblical-looking Jews about to land at Shingly, and the Raja of Cranganur waiting to greet them. The fifth painting shows Joseph Rabban receiving the “Jewish copperplates” from the Maharaja of Cochin.

The sixth painting addresses internal strife in the Jewish community. According to tradition, two of the original silver trumpets used in the Second Temple at Jerusalem had been brought to Shingly. They were blown by Levites on the eve of the Sabbath. On one occasion the Levites were late, and non-Levites blew the trumpets. In the ensuing quarrel the trumpets were destroyed. This may well be an allegory for the loss of Shingly as a result of internal conflict among the Jews and

Rabbi Leah Novick, leader of the Jewish Renewal Movement, lights a traditional lamp as part of the inauguration ceremony of an Interfaith Conference at the venue of the Amritavarsham 50 festival in Cochin. (AFP/Getty Images)

the move of some of the Jewish community to Cochin. The remaining paintings show the building of the Cochin synagogue, the sack of Shingly by the Portuguese in 1524, and various audiences between the Jews and the Cochin *Maharajas*.

## 5 RELIGION

The religious beliefs of the Jews of Cochin conform in every way with the norms of the Jewish faith as set out in the *Halakha* or Jewish Legal Code. They accept the concept of one true deity, Yahweh, whose will is revealed in the Torah, and who exists in a special relationship with his “chosen people.” They observe the Sabbath, worship in synagogues, and observe the Jewish dietary codes. The community maintained its Jewish identity through frequent contact with the main centers of Judaism over the centuries. However, the Cochin Jews adopted certain features of local society that make them as much Indian as Jewish. At least one of these traits, the acceptance of a caste structure, violates and even defies the standards of the Halakha.

The life of the Cochin Jews centers around their synagogues. Each synagogue—known in Malayalam as *Juta-palli*, “gather-

ing-place for Jewish worship”—has three functions. It is a legal body that owns common property; it is the place where the Beit Din, the religious authority in matters of marriage, inheritance, etc., is convened; and it is a place of worship. The Cochin Jews have no rabbis; each synagogue is run by the elders of the community. Each community has its cantor, scribe, Hebrew teacher, and ritual slaughterer.

## 6 MAJOR HOLIDAYS

The Cochin Jews observe all the festivals of the Jewish calendar, from Rosh Hashanah (the New Year) to Tisha be-Av (the Fast of Av). However, in Cochin there are festivals that are found only in India, or that are celebrated in a manner unique to the country. Simchat Kohen, for example, is a little-known Sephardic holiday that may be kept only in India. It is explained as a celebratory feast of the priests (*kohanim*) at the time of the Temple after their arduous ritual activities of Kippur. It is the custom of the Cochin kohanim to host a party for their friends on the day after Kippur. In days past, when the Jewish community was at full strength, Simchat Torah, a non-Biblical celebration of the end of the yearly cycle of Torah reading and the beginning of the new cycle, was celebrated with great style. Perhaps one of the most distinctive Jewish celebrations in Cochin, Simchat Torah was observed by one Sassoon Hallegua in a unique way. People recall he mixed up a “milk punch,” which, of course, was not milk at all but arrack and a mixture of other spirits. Then, early in the morning of the day of Simchat Torah, he would visit his friends on Synagogue Lane, insisting they partake of the “punch.”

For the Cochin Jews, Passover or *Pesah* has the usual Jewish meaning, i.e., the celebration of the Exodus from Egypt. Jews in Cochin would also incur great expense at this time in the annual repainting or whitewashing of their homes, the stripping and repolishing of their furniture and draining and scrubbing of their wells and water tanks. However, *Pesah* also has meaning in the context of the community’s integration into broader Indian society. Passover practices throughout the Jewish world involve avoiding leaven (any substance such as yeast that causes dough to rise). But Cochin customs concerning food taboos and ritual concerns for purity at this time go far beyond normal Jewish practices. This has been interpreted as a Jewish co-option of Indian concerns for caste status. By displaying the same restrictive dietary practices as high-caste Hindus, the Cochin Jews periodically reassert their high-caste status in the local community.

## 7 RITES OF PASSAGE

Birth rituals of the Jews of Cochin are the same as for any Jewish community. A male undergoes circumcision and passes through the usual stages in the life of a young Jewish boy. His education begins at the age of 3. His first public reading takes place at the age of 5 or 6, unlike in most Jewish communities where this occurs at the boy’s *bar mitzvah* around 13 years of age. This provides another example of the role of South Indian belief and custom in the life of the Cochin Jews. In Hindu thought, 5 years is a complete cycle and by this age a child is seen to have passed infancy and the dangers associated with it. The *bar mitzvah* (known in Cochin as the *bar minyan*) and ordination as a lay cantor complete the rituals of childhood.

Burial practices among the Cochin Jews closely follow those of the Middle Eastern Sephardic community. The body

is washed and dressed in fine clothes, and lit candles are placed around it. Members of the family gather for the funeral, which takes place within a few hours. After a second washing, bits of earth from Jerusalem and Cranganur (Shingly) are placed in the eyes and mouth of the corpse. The body is then dressed in a white linen shroud, sprinkled with rose water, and placed in a wooden coffin. The coffin is carried to the cemetery, to the accompaniment of dirges and Psalm 91. Following the burial, the family begins a seven-day period of mourning called *sheva*.

## 8 INTERPERSONAL RELATIONS

Cochin Jews use typical Jewish greetings (e.g., “Shalom”) among themselves, and Malayalam forms in their dealings with others.

## 9 LIVING CONDITIONS

Cochin Jews are urban-dwellers, often residing together in a particular neighborhood near their synagogue. In Cochin’s Jew Town, the Paradeshi synagogue lies at the end of a narrow cul-de-sac known as Synagogue Lane. The street is lined with large, Dutch-style colonial homes, a throwback to medieval times. At one time, higher-class White Jews lived at the end of the street closest to the synagogue, while the socially inferior Malabar or Black Jews had their homes at the other end. Today, most of these buildings are no longer occupied by Jews but are used as warehouses or for other purposes.

## 10 FAMILY LIFE

The system of local observances (*minhag*) of the Cochin Jews contains many borrowings from their Hindu neighbors. Like most of the other non-Hindu communities that have survived for any length of time in India, the Cochin Jews evolved a social structure that mirrors the caste system of Hinduism. The White Jews and Black Jews function very much like castes—they do not enter each other’s synagogues, they do not inter-dine, and they do not intermarry. Even the subgroups that exist within the White and Black Jews, the *meyuschasim* (the “privileged”) and non-*meyuschasim* (“non-privileged”) do not intermarry. There are separate cemeteries for White and Black Jews.

Marriage is perhaps the most important social occasion for the Cochin Jews. In the past, marriages were arranged, with the typical South Indian pattern of cross-cousin marriage being favored. The actual marriage ceremony follows the Jewish rite, but the celebrations accompanying marriage show a definite Hindu influence. This ranges from the lavish scale of the event (in the past, it often involved the entire Jewish community and lasted as long as 15 days) to the singing of traditional Malayalam wedding songs by women. The Jewish tradition of smashing a glass is conspicuous by its absence, the bridal couple having ashes smeared on their forehead instead. This is interpreted as a sign of mourning for the Temple, but it also mirrors the Hindu custom of wearing sacred ash on the forehead. The Cochin wedding, an occasion for much joy, revelry, singing, dancing, feasting, and drinking, continues for a week.

## 11 CLOTHING

Everyday dress for both men and women is the *mundu*, a long piece of cloth wrapped around the waist and reaching to the ankles. Men put on a shirt with this, while women wear a

blouse or jacket. For festive occasions, women wear colorful and elaborately embroidered mundus, often of silk and worked with silver or gold thread. In the synagogue, men wear prayer shawls and skullcaps (*yarmulkas*) known in Cochin as *kippa*. Western-style dress is commonly worn by men, and women may adopt the Indian *sari* for formal occasions.

## 12 FOOD

Cochin Jews observe the normal Jewish dietary taboos, avoiding pork and eating kosher foods. Otherwise, they are nonvegetarian, eating meat, poultry, and fish (to ensure such food is kosher, however, it is eaten only in the home or at community gatherings). The food is prepared in curries and eaten with seasonal vegetables and dishes such as yellow rice and *biryani* (rice mixed with meat or vegetables). Fish, a symbol of fertility, is often served at wedding banquets. Sweet dishes and fruits such as pineapples, bananas, guavas, melons, and pomegranates complete the meal. Cutlery and napkins may be placed on the table before a meal, but they are removed before the meal starts. The diners eat with their hands, as is the local custom. *Arrack* (a local liquor), beer, rum, brandy, and whiskey are popular drinks, especially on festive occasions.

There are many special foods prepared for ritual occasions. Specialties at Rosh Hashanah, for example, include rich “wedding cakes” and baked goods made from semolina. *Massa* (matzoh) is prepared at Passover. *Pastels*, a pastry filled with chicken or egg, are a special Sabbath treat. Eggs, a symbol of rebirth, are eaten at the feast celebrating the rite of circumcision, as well as during the period of mourning following a death.

## 13 EDUCATION

Education was always part of the Jewish tradition in Kerala. Girls as well as boys were registered in Jewish schools in Cochin as early as 1821, and most learned English as a second language.

Children become proficient in Hebrew at an early age, taught by a Hebrew teacher supported by the community. In general, Cochin Jews are open to secular education and take advantage of the opportunities available to them. Literacy among the community is high, and in modern times many individuals have obtained university degrees or professional qualifications.

## 14 CULTURAL HERITAGE

The heritage of Cochin Jews reflects a unique blend of Jewish tradition and Indian culture. The community’s memories and legends, tales of antique origins, and symbolic identification with the ancient Jewish homeland are combined with customs that clearly assign the Jews the status of a high caste in Kerala society. This is exemplified by the theme of royalty that underlies the Jew Town wedding observances, a theme that is borrowed from the Hindus. Certain unique Hebrew prayers and hymns, known as “Shingly tunes,” hark back to the community’s early home and perhaps even to Mesopotamia. At the same time, folk songs are sung in Malayalam at weddings and other festive occasions. It is in large part their adaptation to local society that has allowed the Cochin Jews to maintain their identity for almost 2,000 years. It is also the longstanding memory of the community’s origins that has led to their emigration to Israel.

Some community elders privately hold the view that the “curse” of Jew Town is responsible for the exodus of Jews from Cochin. After all, they argue, with no experience of ill-will or persecution in India, what else can explain the Jews’ departure from the land they loved?

Cochin Jews adopted many Hindu practices, yet scrupulously ensured that their religious patterns did not violate any Jewish legal or ethical principles. In doing so, they did what Jews around the world have done—adapted to their cultural milieu while maintaining a distinct identity. Some of their customs, such as dietary codes, the existence of a sacred language, concern for family purity and the avoidance of menstruating women, are found in both the Hindu and Jewish tradition, but some customs have clearly been borrowed from the Nambudiris, Kerala’s Brahman caste. Jew Town mimics the various “Brahman Towns” found in Kerala, with houses aligned in a particular way and the houses interconnected on the second story. Jews, like the Nambuduris, placed great emphasis on purity of descent, the corporate identity of the community and the importance of networks.

### 15 WORK

Many Cochin Jews engage in trade, keeping small shops in front of their houses and selling foodstuffs, dry goods, and other wares. Some work as artisans—carpenters, masons, and the like. A few have become successful and prosperous merchants. During the early decades of the 20th century, for example, the Koder family emerged as the owners of a leading business house, providing employment for a considerable number of Cochin Jews. They also were one of the leading families in the Jewish community.

### 16 SPORTS

A unique custom of Tisha be-Av is a board game for men, played with colored cowry shells. Known as “the royal game of Ur,” it is believed to date to the Babylonian captivity.

### 17 ENTERTAINMENT AND RECREATION

The social life of the Cochin Jews centers on their synagogues and on the celebrations accompanying religious festivals and life-cycle events.

### 18 FOLK ART, CRAFTS, AND HOBBIES

There are no arts, crafts, or hobbies found specifically among the Cochin Jews.

### 19 SOCIAL PROBLEMS

The Cochin Jews, like other foreign communities in Kerala, were received cordially by the local *rajās*. They enjoyed royal patronage and lived as a high-caste community among the local people. There is no record of anti-Semitism in their relations with their Hindu neighbors. However, internal differences between White and Black Jews often led to discord and bitter disputes within the community. Though never very numerous, the Cochin Jewish community has existed in India for nearly 2,000 years. Mass emigration to Israel, however, has reduced the numbers of the “White” Jews to a handful of elderly people. It is doubtful that the community will survive long into the 21st century.

### 20 GENDER ISSUES

The major problem with the White Jew community of Cochin is one of numbers rather than of gender. The community has sunk below the population level that makes it viable. In the recent past, an issue for females has clearly been finding suitable husbands within the community with the result that women have been marrying local Indian males and leaving the Jewish community for others. The remaining few (less than five) people are quite elderly and are mainly women, so one suspects that the White Jews, despite their long and storied history in Kerala, will be extinct within the next few years. Jew Town and the Jewish synagogue in Cochin will become just another tourist attraction.

# JORDANIANS

**PRONUNCIATION:** jawr-DAY-nee-uhns

**LOCATION:** Jordan

**POPULATION:** 6.1 million

**LANGUAGE:** Arabic; English

**RELIGION:** Islam (majority Sunni Muslim)

## 1 INTRODUCTION

The land of Jordan lies along an ancient and well-used trade route, making it very valuable geographically. Many powers have ruled the land, under many different names. The modern Hashemite Kingdom of Jordan, however, was established relatively recently, on 25 May 1946, when it finally reached full independence and King Abdullah Hussein, of the Hashemite line descended from the prophet Muhammad, took the throne. The current King Abdulla is Abdullah's great grandson and has reigned since his father's death in 1999. His father King Hussein's rule lasted 46 years and began when he was barely 18 years old. King Hussein survived many near-disasters and threats to his rule to create a fairly stable, growing nation based on a constitutional monarchy with a democratically elected parliament. Both King Hussein and King Abdulla have pushed for further strides toward democracy because they know that long-term stability and progress for Jordan depend on the participation of its people, not on military strength, foreign aid, or the personal and political contacts of its monarch.

## 2 LOCATION AND HOMELAND

Jordan is located on the East Bank of the Jordan River, with the Palestinians as its neighbors on the West Bank. South of the West Bank, Jordan shares a border with Israel. To the north lies Syria, and to the east and south lies Saudi Arabia. Iraq shares a northeastern border with Jordan. Jordan has three distinct natural zones: the Jordan River valley, which is green and fertile; mountainous regions in the north and south, which have a cool, Mediterranean climate; and the main bulk of the country, which is an arid desert. Among the 6 million people who populate Jordan, there is a centuries-old distinction between the peoples of the desert (descended from fiercely independent desert tribes who strictly controlled and protected their territories) and the people who live in the Jordan River valley, the "valley people" (taller and more heavily built than the desert people, believed to be descended from the ancient Canaanites with a blending of other cultures). The desert people are believed to be "pure" lineage, thought to be indistinguishable from the desert populations of Syria and Saudi Arabia. This difference of "blended" versus "pure" extends also to the local national culture: the valley people have absorbed aspects of the surrounding cultures, whereas the desert people have remained firmly committed to their own traditions. Those considered the "truest" Jordanians are the Bedouins (see *Bedu*), the nomadic sheep and goat herders of the desert, who are regarded as Jordan's indigenous people. In addition to this native Jordanian segment of the population, there is a large population of Palestinians in Jordan. Tens of thousands of Palestinian refugees were either forcibly exiled or fled to Jordan following the establishment of the state of Israel in 1948, during the ensuing war and again following the Israel annexation of the

West Bank in 1967. They lived in tent camps that were eventually replaced by homes of galvanized steel, aluminum, and asbestos. Most of the refugee camps are located in northwestern Jordan near major cities.

The land of Jordan was not always so arid, but serious deforestation has led to desertification. During the 7th century AD, the Omayyad caliphs (who ruled from 638–658) built castles in the midst of the forest as big-game hunting lodges. Now, those castles stand in barren desert. The severe water shortage became even worse after a drought of the 1970s. Surface water, wells, and streams are extremely scarce. A new environmental awareness is beginning to take hold in Jordan, and it has declared a National Environment Strategy, the first Middle East country to do so. The Royal Society for the Conservation of Nature puts a high priority on reforestation and saving what woodlands are left, and a severe shortage of water has led to urgent studies on water conservation and preservation. Jordan has also played a key part in saving the Arabian oryx from extinction through a program of captive breeding and reintroduction to the wild.

## 3 LANGUAGE

The official and most commonly spoken language of Jordan is Arabic, a language spoken by up to 422 million people worldwide, both as native and non-native speakers. Arabic has many distinct dialects, so that people living as few as 500 km (about 310 mi) apart may not be able to entirely understand one another. The written form of Arabic is called Classical Arabic, or, for today's literature and press, Modern Standard Arabic. It is the same for all literate Arabs, regardless of how different their spoken dialects are. Arabic is written from right to left in a unique alphabet that makes no distinction between capital and lower-case letters. It is not necessary for the letters to be written in a straight line, as English letters must be. Punctuation rules are also quite different from those of English.

Many Jordanians also speak English. "Hello" in Arabic is "*marhaba*" or "*ahlan*," to which one replies, "*marhabtayn*" or "*ahlayn*." Other common greetings are "*As-salam alaykum*" ("Peace be with you"), with the reply of "*Walaykum as-salam*" ("and to you peace"). "*Ma'assalama*" means "Goodbye." "Thank you" is "*Shukran*," and "You're welcome" is "*Afwan*." "Yes" is "*na'am*" and "no" is "*la'a*." The numbers one to ten in Arabic are: *wahad*, *itnin*, *talata*, *arba'a*, *khamisa*, *sitta*, *saba'a*, *tamania*, *tisa'a*, and *ashara*.

Common names for boys are *Talal*, *Muhammad*, and *'Abdullah*. Common names for girls are: *Fadwa*, *Leila*, *Fatima*, *Noor*, and *Reem*. The queen's name is *Rania*.

## 4 FOLKLORE

Jordanians are superstitious people and firm believers in fate and omens. When someone is sick or injured, it may be attributed to *ghire* (jealousy) and *hassad* (envy). "Coffee ladies" read fortunes in the dregs of a cup of coffee, and to ward off the "evil eye," incense is burned, a lamb is offered to the poor, and a blue eye-shaped amulet medallion is worn around the neck. This is also common to many Middle Eastern cultures. To fend off *hassad*, some families guard their homes by stamping the exterior walls or doors with a palm of lamb blood.

Jordanian folk tales, particularly those of the Bedouin (Bedu), often feature themes of honor, generosity, and hospitality, all considered important Arab attributes. One folk story

revolves around the legendary Hatim al-Ta'i, whose name is synonymous with generosity. Before Hatim's birth, when his mother was newly married, she dreamt that she was offered a choice: She could either bear ten brave sons or she could have one son, Hatim, who would possess superior generosity. She chose to have Hatim, and indeed he proved to be highly generous. When Hatim was sent to take the family's camels to pasture, Hatim proudly returned to tell his dismayed father that he had given away every one of the camels, and that this no doubt would bring fame to the family name. This story typifies the importance that Jordanians place on generosity.

There are several dances and musical genres specific to Jordan, most of which are adaptations of the *dabke* (a group line dance that involves stomping and jumping in unison) and various tribal dance sequences that incorporate the sword. The bagpipe has quickly become a symbol of the Jordanian army's regalia and is often played at ceremonies to indigenous and folkloric tunes.

Also much of the Jordanian folklore of the past several decades has been greatly influenced by the large Palestinian population in the country.

## 5 RELIGION

More than 90% of Jordanians are Sunni Muslim, the majority sect of Islam, whose followers believe that the caliph (ruler) must be a member of the Koreish, the tribe of Muhammad. The remaining minority belong to a wide range of Muslim and Christian sects.

Islam is the youngest of the world's main monotheist religions, having begun in the early seventh century AD when the prophet Muhammad received his revelations from Allah, the one true God (according to Islam). Within just a few years of Muhammad's death in AD 632, Islam had spread throughout the entire Middle East, gaining converts at a dynamic rate.

Born into the Koreish tribe of Mecca (c. AD 570), Muhammad was later driven from the city because of his outspoken denunciation of the pagan idols worshipped there (idols that attracted a lucrative pilgrim trade). The year of Muhammad's flight from Mecca, called the *Hegira*, is counted as Year One in the Muslim calendar. Eventually, Muhammad returned to Mecca as a triumphant religious and political leader, destroyed the idols (saving the Black Stone, an ancient meteorite housed in the *Kaaba*, or Cube, building, which has become a focal point of Muslim worship), and established Mecca as the spiritual center of Islam. All prayers are said facing Mecca, and each Muslim is expected, and greatly desires, to make a pilgrimage there (called a *Haj* or *Hadj*) at least once in his or her lifetime.

Islam is a simple, straightforward faith with clear rules for correct living. It is a total way of life, inseparable from the rest of one's daily concerns. Therefore, religion and politics and faith and culture, are one and the same for Muslims. There is no such thing as the "separation of church and state" or any distinction between private religious values and public cultural norms in an Islamic country such as Jordan. The Hashemite family of King Hussein traces its descent from the prophet Muhammad himself and, in the Muslim mind, it is this lineage that makes the Hashemites qualified to rule.

The lack of separation of religion and politics is exemplified by the recent inclusion of the Muslim Brotherhood party in parliamentary elections. The Brotherhood wishes to see more Islamic legislation enacted in Jordan. Members of the party have won parliamentary seats and have been placed in political positions within which they can influence national policy on education and social matters.

## 6 MAJOR HOLIDAYS

Friday is the Islamic day of rest, so most businesses and services are closed on Fridays. Muslim holidays follow the lunar calendar, moving back 11 days each year, so their dates are not fixed on the standard Gregorian calendar. The main Muslim holidays are: *Ramadan*, the ninth month of the Muslim year, during which Muhammad received his first revelations, celebrated by complete fasting from dawn until dusk each day of the entire month; *Ayd Al-Fitr*, a three-day festival at the end of *Ramadan*; *Ayd Al-Adha*, a three-day feast of sacrifice at the end of the month of pilgrimage to Mecca (known as the *Haj*)—families who can afford it slaughter a lamb and share the meat with poorer Muslims; the First of *Muharram*, or the Muslim New Year; *Mawoulid An-Nabawi*, the prophet Muhammad's birthday; and *Ayd Al-Isra wa Al-Miraj*, a feast celebrating the nocturnal visit of Muhammad to heaven.

Fixed public holidays in Jordan include the secular New Year on January 1, Tree Day (January 15), Arab League Day (March 22), Labor Day (May 1), Independence Day (May 25), Arab Renaissance Day (commemorating the Arab Revolt) and Army Day (both on June 10), King Hussein's accession to the throne (August 11); King Hussein's birthday (November 14); and Christmas (December 25).

Members of the camel corps stand in front of the archaeological site of Petra in Arabah, Jordan. Petra has been a World Heritage Site since 1985 and was named in 2007 as one of the New Seven Wonders of the World by the New Open World Corporation.

## 7 RITES OF PASSAGE

Weddings are the most important event in a Jordanian's lifetime, and the cost of the celebration is second only to that of buying a home. The guest list can number anywhere from 200 to 2,000 people. Even though social and religious customs encourage people to marry when they are in their 20s, many men from middle- and low-income families must wait until they are in their 30s because they cannot afford the cost of a wedding until then. Births are also joyfully celebrated, with the mother's family providing the child's first wardrobe and furniture. The circumcision of males used to be part of the rite of passage into adulthood, performed by a local barber when a boy was 13 years old, followed by a huge party. Now, it is usually done in a hospital shortly after birth.

The *aza*, or condolence period, following a death is a very important ritual in Jordanian society. It is essential to attend the *aza* of a neighbor or colleague, or even the relative of a neighbor or colleague. During the *aza*, men and women sit in separate rooms in the house of the deceased or a mosque and drink black, unsweetened Arabic coffee. For 40 days after the death, the *aza* is reopened every Monday and Thursday at the deceased's home. Jordanians wear black for mourning, contrary to the Islamic custom of white or beige.

## 8 INTERPERSONAL RELATIONS

Jordanians may appear to foreigners as introverted and conservative, yet they are extremely hospitable. *Marhaba* and *Ahlan wa-sahlan*, words for "welcome," are a constant refrain. When invited to a Jordanian home, a guest is not expected to bring a house gift. In personal encounters, Jordanians are formal and polite. Saltis (people from the city of Salt) are the frequent butt of jokes because of their unique mannerisms, as are the people of Tafilie, who have a similar reputation.

## 9 LIVING CONDITIONS

Before 1979, few houses had piped water. Most houses have home storage tanks and rely on water deliveries by truck. Because of a severe water shortage, rationing is in effect. A major water and sewage improvement project was initiated in 1979 with an emphasis on long-term needs.

Today, Jordan has a good highway network. Most roads are paved, and international roadways connect Jordan to Iraq, Syria, and Saudi Arabia. Bridges connect Jordan with the West Bank. Most Jordanians live in stone masonry houses called "villas" or cement-based apartments. Most of the villas are modest in appearance, but many are large and luxurious and reflect the wealth of their owners. Hotels, including Marriott

and Sheraton, are plentiful throughout Jordan, catering to the tourists who come to see the Dead Sea, Petra (Biblical Sela that is now one of the modern world wonders), and the Gulf of al-'Aqaba on the Red Sea, and to ease their aches and pains in the spas and springs of the Ma'in Spa Village resort area, located southwest of Amman.

Although it is a relatively young country, Jordan has managed to develop quickly into a technological society with decent housing, excellent roadways, efficient postal and communications services, and good health care. About 70% of Jordanians live in urban areas, most of them in the capital city of Amman (considered one of the cleanest and most efficient cities of the Arab world). Jordan is among the top 10 countries of the world in reducing infant mortality, and life expectancies are fairly high: 67 years for men and 71 years for women.

However, unemployment and poverty are widespread problems, and many Jordanians must struggle for a living. Because of the difficulty in finding employment in Jordan, particularly for skilled workers, many Jordanians go abroad in search of work. The majority go to the Gulf oil states, whose small populations require them to import laborers from neighboring states. Working in the Gulf allows Jordanians to earn steady incomes, which are sent in the form of remittances to family members in Jordan, thus helping the Jordanian economy. Similarly, Jordan allows laborers from neighboring states such as Egypt, to seek employment in Jordan. It has been found that the income derived from remittances sent to Jordan far exceeds that sent out by foreign workers; thus, the exchange has been favorable for Jordan. Jordan is a technologically advanced country.

## 10 FAMILY LIFE

Family values are of top priority to Jordanians, leading to a strict moral code that ensures a low crime rate. Prostitution is illegal (and the law is strongly enforced), public drunkenness is not tolerated, gambling is illegal, and even belly dancing is restricted to a few large hotels. Very few nightclubs exist, and a "good family" would never allow a daughter to marry a man seen frequenting them. Marriages usually result from family introductions, if not outright matches, but couples are almost never forced to marry against their will. Upper-middle-class couples court each other in the Western style. Suitable brides and grooms must be from proper families with a respectable lineage, have decent wealth and education, be of the same religion, and never have been married before. Brides also must be "virtuous" (never had sexual intercourse), although this restriction may not apply as rigorously to the grooms. Less than 1% of marriages today are polygamous, largely because of the prohibitive cost of weddings.

One out of five marriages ends in divorce, and divorced women are faced with the uphill battle of combating the stigma of a failed marriage to go into wedlock again. The average Jordanian family has seven children, giving Jordan one of the highest birth rates in the world. Because sons are often more spoiled than daughters, girls tend to grow up and become independent more quickly than boys. Women are guaranteed equal rights in the Jordanian constitution, but social custom and religious interpretation often undermine this. There are a few women in the Jordanian Parliament, suggesting their improved status.

Two men chat outside their shops at a market in central Amman, Jordan. Poverty, unemployment, and inflation are fundamental problems in Jordan, but King Abdallah has undertaken some broad economic reforms in a long-term effort to improve living standards. (Jewel Samad/AFP/Getty Images)

Homes are built so that floors can be added when sons marry; the son brings his bride home and they raise their family there. Most Jordanians live in three- or four-story homes containing extended families that eat together. Daughters-in-law are expected to do most of the cooking. Until recently men were not expected to cook or share in the household labor.

## 11 CLOTHING

The tradition of women covering their faces with veils is being revived as a result of a spiritual quest for identity on the part of Arab women and as a rejection of Western values. Everyday Jordanian dress is generally conservative, particularly for women, who do not wear tight clothes, sleeveless blouses, shorts, short skirts, or low-cut backs on shirts or dresses.

There are basically three styles of clothing for women in Jordan. "Westernized" women, of whom there are many, dress in the typical Western style with dresses, skirts, and slacks, while avoiding overly revealing or suggestive clothing. Very religious women (increasingly more common in Jordan), wear an outfit called the *libis shar'i* or *jilbab*. This is a floor-length, long-sleeved, button-front dress worn with the hair covered by a scarf. Stores catering to religious women have sprouted up all

over Jordan, and women from other parts of the Middle East, particularly from the West Bank, purchase *shar'i* clothing while visiting Jordan. The third type of attire is the traditional dress or national costume. This is a hand-made dress with embroidered and cross-stitched patterns that vary from region to region. In northern Jordan (around Irbid and Ramtha), women wear a black cotton dress whose bodice is stitched with triangular, multicolored borders. In central Jordan (i.e., in Salt), women's traditional dresses are made of 16 m (52 ft) of fabric, with sleeves measuring 3 m (10 ft) in length. Around the sleeves and the hem, blue panels are stitched. The costume of southern Jordan is made from a variety of silk fabrics in a combination of colors. A silk cloak, called a *'abaya*, is draped over the head.

Jordanian men dress in basically Western clothing, with suits and ties being the preferred attire for the office, and casual slacks and shirts worn for informal socializing. Some men wear a Jordanian *kaffiyyeh*, or scarf-like headpiece. The Jordanian *kaffiyyeh* is red and white, in contrast to the black and white Palestinian *kaffiyyeh*. The *kaffiyyeh* is folded in a triangle and laid over the head. It is secured to the head with a double-coiled rope called an *i gal*.

## 12 FOOD

Jordan has one of the world's most elaborate and sophisticated cuisines, largely borrowed from its neighbors. Few dishes are unique to Jordan; one unique dish is *mansaf*, chunks of stewed lamb in a yogurt-based sauce served with rice. *Mansaf*, also called *fatiyyeh*, is the traditional Jordanian meal served for special occasions. *Jameed* is required for the preparation of *mansaf*. *Jameed* is made of yogurt seasoned with salt. The yogurt is drained, molded or shaped into balls that fit into the palm of a hand, and then allowed to dry until the balls harden into rocks. A recipe for *mansaf* follows.

### Mansaf

- 3 balls jameed
- 3 pounds lamb chunks
- 2 quarts water
- 1 large onion, finely chopped
- 4 loaves pita bread, or 2 loaves shraj bread
- 3 cups cooked white rice
- ½ cup sautéed pine nuts
- ¼ teaspoon black pepper
- 1 teaspoon ground allspice
- dash of salt

Soak balls of jameed overnight to soften; purée them in a blender with a quart of water and a dash of salt. Cook lamb chunks in a quart of water. Once the water boils, add chopped onion to the water and meat. Add black pepper and ground allspice. When the lamb chunks are tender (about 1 hour), add the puréed jameed to the stewed lamb and water. Cook for another hour.

In the meantime, cut up pieces of thin pita bread (or, if available, shraj, a paper-thin bread). Spread the bread in 2 layers in a large round pan until the bottom is covered. Cover the bread with about 2 cups of the cooked jameed sauce, and allow to soak 10 minutes. Spread rice over the soaked bread. Sprinkle another cup of jameed sauce over the entire pan, and cover the rice with all of the lamb

chunks. Sprinkle pine nuts over the lamb.

At home, all courses are served together, but in restaurants, *mezze* or *muqabalat* (appetizers) are brought first. Typical *mezze* are *hummus* (puréed chickpeas with tahina [sesame paste], lemon juice, and garlic), *baba ghanouj* (puréed eggplant mixed with tahina, lemon, garlic, and salt), and *taboula* (a salad of chopped fresh parsley, tomatoes, green onions, and fresh mint mixed with soaked bulgur wheat and lemon juice). Then, a meat or fish course is served. The meal usually ends with seasonal fruit.

Jordanians love sweets and eat lots of them. A favorite kind of sweet is layers of filo pastry filled with nuts or creams, similar to *baklava*.

## 13 EDUCATION

Jordanians are very well educated, and their country has the highest number of university graduates per capita in the Arab world. Its main export is skilled labor and professionals to other Arab countries. At 82% (with a target of 95% by the year 2005), Jordan also has one of the highest literacy rates in the Arab world. One-third of Jordan's population is students, partly due to the fact that more than half of Jordan's population is under the age of 16. Education is free and compulsory from grades one through ten, and then it continues to be free for another two years. Literacy training is free to all Jordanian residents. To make sure that Jordan keeps pace with the rest of the world, computer studies are mandatory in the 10th grade and optional in the 11th and 12th grades. Girls must attend school through the 10th grade and are encouraged to finish secondary and even higher education. More than half of the 39,000 students at the University of Jordan in Amman are women, whom enroll in 18 faculties.

## 14 CULTURAL HERITAGE

The Islamic prohibition against the depiction of the human figure has significantly shaped Jordanian art. Western-style fine arts became popular in the late 20th century as more Jordanians traveled abroad. Recently, however, there has been a revival of more traditional Jordanian art forms, especially stylized Islamic calligraphy.

The traditional dance of Jordan is the *dabkeh*, a group dance performed by both men and women, either together or separately. Traditional musical instruments include the *qassaba* and *nay*, woodwinds; the *rababa*, a one-stringed instrument; the *kamanja*, resembling a violin; the *oud* (lute), with five double strings; the *qanun*, a zither-like instrument with 26 strings; and the *daff* and *durbakkeh*, percussion instruments.

Arabic literature abounds with stories of love, honor, generosity, hospitality, exile, political turmoil, war, lost lands, and lost identities. The Arabic word for poet is *sha'ir*, which translates literally into "he who feels."

## 15 WORK

Working conditions are regulated by law, including minimum wages, minimum age for employment, vacation and sick leave, maternity leave, health benefits, social security and retirement pensions, maximum hours and overtime compensation, advance notice before firing or layoffs and severance pay, worker's compensation for job-related injuries, and labor disputes. There is no compulsory retirement age. Unions are legal.

Although women are guaranteed equal rights in Jordan's constitution and are just as well educated as men, women make up only 12.5% of the labor force due to the traditional belief that a woman's job is to marry well and have many children (particularly sons). Unemployment has become a serious problem since about 300,000 expatriates returning from Kuwait in 1991 (after the Gulf War) glutted the labor pool. Many Jordanians now take jobs for which they are overqualified simply to survive.

## 16 SPORTS

The most popular sports in Jordan are soccer and basketball. Also enjoyed are horse and camel racing. The Royal Jordanian State Stud is a stable devoted to maintaining the purity of the Arabian breed of horse. Stud services are offered worldwide in a highly regulated way in order to prevent the breed from being lost through crossbreeding.

In the 1950s, car rallying was begun as a weekend sport attracting a few spectators. It has since developed into one of Jordan's major sporting events. The royal family strongly supports the car races, with King Hussein himself having raced in the rallies. King Hussein's eldest son, Prince 'Abdullah, also competes in the national rallies. Competitions are international, with most racers representing countries of the Middle East, such as Qatar, Kuwait, Oman, and the United Arab Emirates.

## 17 ENTERTAINMENT AND RECREATION

All films in Jordan, both in cinemas and in video form, are censored for kissing and sex scenes. Martial arts and low-grade action movies are popular among Jordanian youth.

Jordan has two domestic television stations, one providing Arabic entertainment and news, and the other providing foreign-language programming. The latter features predominantly English-language programming, but also provides French cartoons, dramas, and news broadcasts. Jordanians film many of their own shows. A particular favorite is a soap-opera-like drama, called a *musalsal*, which is shown in sequels every night. Often, the theme of the drama is love and honor among the Bedouins, and the stories take place in Bedouin tents. Jordanians also produce dramatic shows with religious themes, which are predominantly nonfiction representations of prominent figures and stories in Islamic history. Jordan is also a major hub for the production and translation of Arabic language children's programs. Most animations from Japan and the United States are translated in Jordanian studios and then broadcast to all 22 Arab countries.

English-language programming includes domestically produced news and a myriad of American and British shows. These include *Dynasty*, *Murder She Wrote*, *The Benny Hill Show*, *90210*, *24*, *The Bill Cosby Show*, *Fresh Prince of Bel Air*. Cartoons, including Disney productions and classics, such as *Tom and Jerry*, remain popular among Jordanian children.

Jordan receives Arabic radio broadcasts from around the Middle East and also has its own domestic stations. A favorite among young people is the English-language Jordanian station, for it plays all of the latest music that is enjoyed in the West. "Radio Monte Carlo" and U.S.-based Radio Sawa also play Western music. Jordanians listen more to European-based pop music than American, but the billboard top hits remain popular among teenagers. Today, Jordanians have access to hun-

dreds of satellite stations from around the world that makes their options for entertainment television virtually unlimited.

## 18 FOLK ART, CRAFTS, AND HOBBIES

There are many traditional folk arts and crafts in Jordan, among them pottery, silver and gold jewelry making, glass blowing, and basket weaving. Textile arts are women's crafts, particularly embroidery and cloth weaving. As young girls learn embroidery stitches from older women, they are initiated into the culture. Patterns, colors, and fabrics show the village, tribe, social status, wealth, and period in which the woman lives (or lived). Until very recently, almost every Jordanian girl embroidered her own trousseau, consisting of six to twelve loosely cut robes to be worn over a lifetime, her bridal dress (which would also serve for other special occasions), cushions and pillows for bed and sofa, and often even her burial shroud. It is often said of Jordanian women that they are never idle, their hands ever busy stitching and sewing while chatting with each other.

## 19 SOCIAL PROBLEMS

Jordan's economy is struggling due to a lack of resources, the sudden influx of expatriates and refugees after both the 1967 war with Israel (in which Jordan lost the West Bank territory) and the Gulf War in 1990–91, and massive foreign debt. Almost one-third of the population lives below the poverty level, and the percentage is increasing. A severe water shortage also causes difficulties in both the public and private sectors.

There is an ongoing conflict between the government's desire to maintain ties with Western powers and popular support for the Palestinians and Iraq. Support for the Palestinians is necessary because more than 60% of the population is Palestinian, about 2.7 million inhabitants of Jordan. Palestinians serve on the parliament, thus exerting an influence over political policies. Because Jordan is on the East Bank of the Jordan River and Palestine is on the West Bank, there is a strong emotional bond that makes Jordanians particularly sensitive to the plight of the Palestinians. This makes the forging of peace between Israel and Jordan a sensitive matter to Jordanians, who wish to see justice for the Palestinians enacted in any peace agreement. Jordan has now signed a peace agreement with Israel and, generally speaking, this has gone smoothly. Some emotionally sensitive matters, such as whether or not Jordan should permit Israelis to purchase Jordanian land while Palestinian land remains under Israeli control, lead to fervent debate in the parliament. The king's father, Hussein, also found himself in a complicated situation with the Palestinian population in his country. In his opposition to the growing Palestinian resistance within his country, he took several drastic measures to eliminate this presence. The outcome led to the killing of many Palestinian Liberation Organization (PLO) members and militias by the Jordanian army, often described as "Black September," which drove the organization out of Jordan and into Lebanon.

The U.S.-led war in Iraq, which commenced in March 2003, is similarly important to Jordanians. Iraq has been home to thousands of Jordanian and Palestinian expatriates, providing jobs that have been vital to the Jordanian and Palestinian economies. Historically, Iraq has also been a major source of oil for Jordan. Thus, when Iraq invaded Kuwait in 1990, the Jordanian government announced its opposition to the invasion and refused to participate in Operation Desert Storm, which was

organized by the United States. Jordan wished—and wishes—to maintain its good ties with Iraq, and this has caused tension between Jordan and the United States, an important ally.

## 20 GENDER ISSUES

Jordanian women have received much media attention in the last two decades for several notable examples of honor killings, which were strongly condemned by the human rights groups and the international community. This topic has since subsided as several high profile campaigns against honor killings have been launched nationwide.

Today, the public visibility of women in the Jordanian royal family has changed the tone of discussion about Jordanian women. Queen Noor, the wife of the late King Hussein, and Queen Rania, the wife of King Abdullah, both have very public portfolios and are extremely vocal and involved in issues pertaining to women's rights domestically, regionally, and globally. They serve on the board of advisors of many organizations working in the area of public awareness and advocacy for women's issues. Queen Rania recently created her own online video channel, allowing people worldwide to post videos responding to her questions or allowing her to respond to the world's questions. This is thought to be a unique way of bridging the intercultural divide.

# KACHINS

**PRONUNCIATION:** KAH-CHINS

**LOCATION:** Northern Myanmar (Burma); China; India; Thailand

**POPULATION:** 1.5 million

**LANGUAGE:** Kachin

**RELIGION:** Christianity (Baptist and Catholicism); Buddhism; Animism

## 1 INTRODUCTION

The people known collectively as Kachins, who live in mountainous northern Burma (renamed Myanmar by the military government in 1989), are a group of seven tribes: the Atsi, Jinghpaw, Lashi, Lisu, Maru, Nung, and Rawang.

The tribes share similar Tibeto-Burman languages, a clan system, and many customs. They migrated into Burma from China to the northwest and established highland settlements governed by independent chieftains. The Kachins were fierce warriors who never acknowledged the dominance of Burma's various empires until the arrival of the British. Initially the Kachins fought the colonizers, but then joined Britain's Imperial Army. Kachin guerrillas proved indispensable to the Allied forces in the Second World War, fighting in their native forests against the Japanese invasion.

Some rebellion, aimed at establishing an independent Kachin nation, occurred soon after Burmese independence, but it was after the military takeover of Burma's government in 1962 that large-scale Kachin insurgency occurred. One of Burma's biggest anti-government armies was recruited from the hill people and financed by trade in locally-mined jade and gold. Called the Kachin Independence Organization, it continues to hold considerable territory, although it has observed a ceasefire with government forces since 1994. A much smaller militia called the Kachin Defense Army also has a ceasefire agreement with the Myanmar government.

The Kachin Independence Organization (KIO) was allowed to participate in constitutional conventions held by Myanmar's military government. KIO participation in the conventions was seen as a political compromise by many former supporters in Kachin State and overseas exiles. The KIO issued statements supporting the Myanmar government's policies and engaged in commercial joint ventures in logging and gold mining, which gave the KIO the image of having abandoned its original revolutionary goals. A few small Kachin underground or exile political and environmental groups have emerged in recent years as potential alternatives to the KIO.

## 2 LOCATION AND HOMELAND

The Kachin State of Myanmar borders China, Tibet, and India. Myanmar has an estimated 1.5 million Kachins, about 100,000 of whom live in the Shan State. Kachin-related indigenous people also live in China, India, and Thailand.

The huge Irrawaddy River flows south from Tibet through Kachin State, past the main cities of Myitkyina and Bhamo. Ranges of Himalayan foothills rise as high as snowcapped Hkakabo Razi (19,314 ft), Southeast Asia's highest mountain, near the border with Tibet.

A Kachin couple look out from a hut during the celebration of Myanmar's national festival of Shapawng Yawng Manau Poit near Gauhati, India. Kachins from Myanmar joined Kachins from India for the two-day festival. (AP Images/Anupam Nath)

### 3 LANGUAGE

Kachins speak a Tibeto-Burman language, in seven main dialects, and with many regional variations. A written version of Kachin using the Roman alphabet (without F, Q, V, and X) was devised by American missionary Olaf Hansen in 1895. The writing system is hard to use because of the lack of accents showing the different tones of voice that alter the meanings of words in Kachin.

The typical greeting in Kachin's Jinghpaw dialect is "*Kaja ai I?*" meaning "Are you well?" Another common greeting expression is "*Shatsa sa ni?*" (Have you eaten?). To take leave, you say, "*Naw wa sa na*" (I am going), and the reply is "*Angwi sha wa u*" (go back slowly).

### 4 FOLKLORE

Kachins traditionally believed that the original ancestor of their tribes was a blacksmith. They thought that the moon was the spirit of a young girl, and some girls are thought to be able to foretell the future by communicating with the moon. Particularly among Animist Kachins, there is a belief in malicious witches called *phi*, including the *Yu Phi*, who disguise themselves as animals or insects to harm people or animals.

### 5 RELIGION

About two-thirds of the Kachins are Christians, mostly Baptists and Catholics. The rest are Buddhists or Animists, who worship the spirits in nature. Spirits are always present in the Kachins' mountain homeland, and even Christian or Buddhist Kachins often believe in a group of spirits called *Nats*. There are good and bad Nats: the good ones include a merciful spirit called *Hpan wa ningsan chye wa ning san*, who (known as *Karai Kasang*) is also the god worshipped by Christians. This Nat accepts only live offerings that the worshippers set free, such as birds. There are also good Nats of the earth and heaven, and household Nats. A series of bad Nats bring harm to hunters, fishermen, or women in labor and cause accidents or other misfortune.

The Kachins have intermediaries to the world of the Nats, such as high priests who know a special vocabulary and take part only in major ceremonies, including weddings; priests who conduct ceremonies with offerings; and assistants who perform animal sacrifices. There are also interpreters of the Nats' wishes, spirit mediums, and interpreters of the natural world, who function like Chinese *Feng Shui* specialists.

Missionaries from the United States and Europe introduced the Kachins to Christianity during the British colonial days, and Kachin evangelists then spread the new religion through the hills. Christianity was adopted without discarding Kachin traditions such as the clan system. Actual churches are rare outside of the few cities and towns, so church services are held on Sundays and holidays in village meeting halls or homes. Kachin Christians sometimes have difficulties holding large meetings or conventions, as those need to be approved by the military government, which is suspicious of Christian gatherings.

### 6 MAJOR HOLIDAYS

In traditional Kachin society, ceremonies were held in connection with the planting of rice and other crops. Before planting the fields, offerings were made to the spirits of the earth, and the farmers rested for a few days. Harvest ceremonies were also held. Because Christianity is now so widespread among the Kachins, holidays such as Christmas and Easter are important celebrations, with music, community feasts, and church services in cities, towns, and villages.

### 7 RITES OF PASSAGE

Many Kachin mothers now give birth to a clinic or hospital, if there is one nearby; otherwise, their babies are born at home. Infant and child mortality rates are high in most areas of the Kachin State, mainly due to malaria, except where the elevation and cold temperatures prevent malaria-carrying mosquitoes.

Young people help their parents in the fields or shops. In the towns and cities, it is common for teenagers to be active in church groups, and some even travel to other parts of Burma for church meetings and to seek converts to Christianity.

Traditionally, Kachins are buried a week after death. For Animists, special ceremonies are performed to make sure that the spirit of the dead person goes away from the living. Funeral music may be played on slightly broken instruments. Christians hold a prayer service and often mark graves with a cross.

## 8 INTERPERSONAL RELATIONS

Kachins shake hands when introduced and when greeting or saying goodbye. They are generous hosts and always offer food, or at least tea, to visitors. The guest is expected to politely refuse the refreshments at least once—perhaps several times to be “overcome” by the hosts’ insistence. Then they will please the hosts if they eat large amounts of the food offered. Particularly honored guests, such as those who have endured great difficulty to travel from far away, may be given a special welcoming ceremony. They are presented with bamboo cups of rice wine and a basket containing cooked chicken and rice wrapped in leaf packets, to be shared, and may be given a sword and shoulder bag (if male) or Kachin clothing (if female).

Kachins are raised to value cooperation and an uncomplaining spirit. Children are discouraged from fighting with each other and encouraged to share their possessions and food. Although they have been known as brave, tough warriors in battle, adult Kachins rarely seem to argue among themselves.

## 9 LIVING CONDITIONS

The Kachins are living in an ongoing health crisis. They have been subject to unchecked epidemics of cholera, plague, and HIV/AIDS. Malaria, including the deadly blackwater fever, is rife in low-lying areas, as are tuberculosis and other lung diseases throughout the Kachin State. With very few trained doctors available, fake “injection doctors” roam the hills in their place, giving malnourished people vitamin shots with dirty needles, thereby spreading the HIV/AIDS virus and other ailments among unknowing people. Traditional healers can be more beneficial, and the many medicinal plants of the Kachin State provide the hope of cures for many diseases—if logging does not destroy the forests before they can be properly studied.

A massive increase in logging in recent decades has decimated the great temperate rainforests of the Kachin State in all but the most remote regions of the far north. Logging trucks move back and forth, day and night, carrying hardwood logs from Kachin forests for sale in neighboring China and India. Environmental concerns have also been raised about gold mining by companies from China that enter Kachin State in joint ventures with Myanmar’s military government or the KIO. The gold miners use highly toxic mercury when processing ore dredged from the rivers, and gold mining also erodes river banks.

Most Kachins live in houses built of bamboo and wood, up on stilts or low to the ground with dirt floors. The hills are cold and foggy, sometimes even snowy, so houses have wood stoves or open hearths inside them. In stilt houses, people sit and sleep on the floor; in the single-level houses, they sit on wood or rattan chairs and sleep on bamboo platforms. Much of what is used by the Kachins is crafted by them of bamboo or wood, but trade goods do enter from China and India. The Kachin State has few road, railway, or air links. Heavy trucks, motorcycles, elephants, ponies, and mules are typical modes of transportation over the many hills and mountain passes.

What wealth Kachins manage to acquire is usually in the form of jewelry, which is easily portable. A family’s “bank account” takes the form of rings or earrings made of the gold and colorful jade or amber found in Kachin State, and sometimes elaborate silver wedding jewelry. In general, the Kachins place more value on friendships and kinship than on material pos-

sessions, and even small children would usually rather play games with other children than play with toys.

## 10 FAMILY LIFE

Marriage usually occurs in the late teens or early twenties. Few Kachins remain single and large families—six or more children—are the norm. Some Kachins believe that since their ethnic group is few in numbers, having many children is important to their survival as a culture. The clan system determines who marries whom. With everyone belonging to one of the main clans, it is common knowledge which clans a girl or boy can marry into, and which are taboo. When outsiders are adopted as Kachins, they are assigned to one of the clans and given a Kachin name that, in part, comes from their birth-order in their family.

Some Kachin families own pack-ponies or even elephants, and they take good care of them. Many keep dogs for hunting and as pets.

## 11 CLOTHING

The Kachin tribes traditionally wear homespun thick cotton jackets with baggy trousers for men and wrap-around sarongs for women. The special occasion outfit for Jinghpaw women, which is nowadays worn for weddings and dance performances, is highly ornamented. Large silver disks decorate a black velvet jacket, worn with an embroidered red sarong and leggings, many silver necklaces and bracelets, and rattan wrapped around the waist and hips. These heirloom costumes are becoming quite rare.

For everyday wear, most Kachin men now wear shirts, trousers or sarongs, and often sweaters or heavy jackets, as the climate can be quite cold. Kachin women in most areas wear sarongs with blouses or T-shirts. They often knit their own sweaters with yarn imported from China, and also knit warm outfits for children and babies. Children often wear several layers of clothing to school in the mountains because the buildings are unheated. Girls wear lipstick and either cut their hair short or style it in intricate French braids. A type of Kachin sarong with traditional embroidery on a black cotton background became a symbol of democracy throughout Myanmar when opposition leader Aung San Suu Kyi wore it.

## 12 FOOD

The Kachins grow some cold-climate foods such as potatoes, which are not so common elsewhere in Myanmar. These crops are combined in Kachin cooking with wild game such as boar and venison, domestically raised chicken and goat, and edible plants gathered in the forest. Rice is grown in hillside fields or brought as a trade commodity from China. The Kachins are known for eating large quantities of rice and whatever accompanying curry they can afford. If they can afford it, they typically eat a few bowls of rice with their late-morning breakfast and a few more with the late-afternoon supper. Tea or coffee (a luxury) is served with fruit, crackers, or cookies during the rest of the day.

## 13 EDUCATION

Educational opportunities are few in the Kachin State. There is a severe shortage of schools, teachers, and educational materials, especially in rural areas. There is discrimination against

Kachin students in Myanmar's educational system, and few opportunities for higher education exist in the Kachin State. Some high school graduates attend Bible study academies in the cities. Little is written in the Kachin language, so most of the school texts are in Burmese and very outdated. Kachin parents often express the hope that their children will get more of an education than they were able to. In 2008 Kachin students in Myitkyina were active campaigners for a "No" vote on a national constitutional referendum held by Myanmar's military government, which was pressuring the population to vote "Yes."

#### 14 CULTURAL HERITAGE

Kachin traditional music, using the repetitive rhythms of metal gongs, is played mostly for dancing. The best-known dance is the *ton-kha*, in which lines of men and women form a circle and step in and out holding kerchiefs in their hands. Western-influenced hymns are sung at Christian church services. Some churches have electronic keyboards, and guitars may accompany the hymn-singing. International pop and rock songs are also well-liked by many Kachins. The Kachin rebel forces had small marching bands with bagpipes, like those of Scottish troops who served in Burma in the days of the British Empire.

The centerpiece of traditional Kachin culture is the *Manau* ceremony, which combines religion, dance, and visual arts. This elaborate celebration is usually sponsored by a *duwa*, a member of the traditional aristocracy. They hold a Manau for various reasons: celebrating prosperity or warding off ill-health or evil spirits, and inviting a good *Nat* to a new community. The Manau involves all members of society from throughout a district and provides a place for young people to meet and for distant relatives to reunite. It is an expensive production and takes a year to prepare (and a year to recover from it, say the Kachins).

The Manau is led by high-ranking Animist priests who make offerings for the good of the community. The priests wear elaborate robes of brightly-colored embroidered silk and woven rattan headdresses topped with tall peacock and pheasant feathers. Offerings, prayers, music, and dance take place in an open ground. The area is decorated with pennants and streamers, and Manau poles are set up where the priests preside. The poles, 10 ft tall or higher, are painted in bright colors with abstract patterns of triangles, diamonds, and spirals.

#### 15 WORK

The Kachins are mostly farmers. The mountainous climate and rocky soil make agriculture hard work in most areas, although a variety of cold-climate crops could profitably be introduced in the future. In Putao's valley (warm although far in the north) oranges and other fruits are grown.

Joining the military has long been a favored occupation for young Kachins. In the colonial period they joined the British Army, and at independence, the Burmese Army. Thousands still are enrolled in the Kachin Independence Organization's armed forces, although a ceasefire is in effect. For those less interested in the military life, religious studies are popular.

Jade is very important to the Kachins. Jadeite, the most precious kind of jade, is found in large quantities only in Kachin State. The bright green jade is best known, but it also comes in white, lavender, blue, and honey-colored shades. Huge boulders and tiny pieces of jade are brought out through govern-

ment controlled areas, for sale around the world. Kachins working at the big jade mines have often been mistreated and are especially susceptible to drug and alcohol abuse.

#### 16 SPORTS

Kachins enjoy playing and watching soccer, volleyball, and badminton. Some study martial arts such as kung fu. Children run races and play jump-rope games, making their own ropes by looping together collections of rubber bands.

#### 17 ENTERTAINMENT AND RECREATION

In some areas people have DVD players and karaoke machines, which are usually powered by a small generator, as electricity is in short supply in Kachin State. They often show "homemade" DVD dramas produced and acted by people in Myitkyina or Bhamo. In some places satellite dishes have been rigged up, so Kachins can watch international television such as the BBC World News and Asian MTV. Otherwise, short-wave radios are relied on for information on the outside world, as well as word on developments in Myanmar. There is very little Internet access in Kachin State, but the cities have some cafes where computer games can be played. Kachins also enjoy getting together to sing hymns or pop songs, accompanied by guitar players. Sometimes church youth groups will travel from village to village presenting Christian music shows.

#### 18 FOLK ART, CRAFTS, AND HOBBIES

Kachins are talented jewelers, making ornaments from the local gold, silver, amber, and jade. They also make traditional swords with embossed silver scabbards, baskets, and bamboo drinking cups. Kachin embroidery, often using diamond-shaped designs that symbolize the mountains, is distinctive, and different patterns can identify tribes or regions.

#### 19 SOCIAL PROBLEMS

During the late 20th century, widespread human rights violations by Myanmar's military, including massacres, village burnings, rape, torture, and forced labor, uprooted tens of thousands of Kachins. While these abuses have been less widespread since the KIO 1994 ceasefire ended open warfare, they do continue in many parts of Kachin State, and refugees still flee to other countries.

In the cities and jade mining region, many have turned to heroin abuse. The HIV/AIDS epidemic has spread through the most remote parts of the Kachin State, largely from injections of heroin and other drugs with shared needles. The Kachin Independence Organization responded in 1991 by banning opium growing and heroin trading; they successfully substituted food crops for opium poppies, but in the Burmese government-controlled areas, the drug trade is still carried on openly. There is little educational material about AIDS in the Kachin language, and the whole population of the ethnic group is under threat from the epidemic.

#### 20 GENDER ISSUES

In old Kachin society, women's status was considerably lower than men's, but this is changing as women seek more education and stand up for themselves. Kachin women often own small shops or restaurants, and in KIO-controlled areas they are particularly active in education and healthcare, as well as

serving as soldiers. In those areas they have formed a women's organization that runs kindergartens and promotes good nutrition and economic empowerment. In the cities and towns, women are active in church activities and some are in popular Christian singing groups. Kachin society tends to be conservative and somewhat disapproving of gender identities other than heterosexuality.

# KADAZAN

**PRONUNCIATION:** kah-tah-CHAN

**ALTERNATE NAMES:** Dusun

**LOCATION:** Malaysia (Sabah state)

**POPULATION:** 514,400 (2004)

**LANGUAGE:** Kadazandusun

**RELIGION:** Christianity; Islam; animistic beliefs

## <sup>1</sup> INTRODUCTION

Sabah, known as "The Land Below the Wind," is the second-largest state in Malaysia. It is situated on the northern tip of the island of Borneo, bordered by Sarawak on its southwestern side and by Kalimantan to the south. Archeological findings show that Sabah was inhabited by people as early as 28,000 years ago. Certain scholars believe that about 5,000 years ago Sabah was settled by Mongoloid-type peoples, and by the 1st millennium BC, Malayic and other related Mongoloid groups migrated from mainland Asia.

It is believed that Sabah's early inhabitants settled in the coastal areas but were slowly driven inland by the later arrival of other settlers. These later settlers were mainly from Malaya and neighboring islands, settling along the coast and along the banks of rivers when they arrived. The descendants of the displaced groups are believed to be today's Kadazan of Sabah, sometimes known as the Dusun. These displaced peoples over the years remained isolated and insulated from outside influences until the late 17th century.

Prior to the formation of the North Borneo Company in 1877, by an Austrian baron in partnership with a British firm, Sabah was divided under the influences of sultans of Brunei and Sulu. In 1881 the North Borneo Company was upgraded into a Chartered Company, giving it official recognition to rule the 73,300 sq km (28,300 sq mi) of North Borneo until the Japanese invasion in 1942. After the war, Sabah became a British Crown Colony until 31 August 1963, when it obtained self-government from the British. On the 16 September 1963, Sabah, together with Sarawak, Singapore, and Malaya, became the Federation of Malaysia.

## <sup>2</sup> LOCATION AND HOMELAND

Sabah is not only rich in natural beauty and resources, but also in the cultural heritage of its people. It is endowed with a heterogeneous population and is considered to be a melting pot of many indigenous and immigrant groups. It is estimated that there are some 30 indigenous communities using more than 50 indigenous languages and not less than 80 dialects in Sabah. The largest ethnic group is the Kadazandusun, numbering about 514,400 in 2004, who make up 25% of Sabah's population. The group consists of both Kadazan and Dusun and other subgroups. The other main ethnic groups are the Muruts, Bajau, Paitan, and Chinese. The largest non-indigenous group is the Chinese. They dominate trade and commerce. Nonetheless, many of these ethnic groups share similar oral histories, languages, and traditions.

The Kadazandusun are a collection of ethnic groups who speak similar languages and dialects known as Dusunic family, as well as share a common belief system with variations in customs and practices. Within this group exist at least 10 dis-

tinct languages with possibly 30 or more dialects. This includes the various subgroups such as the Kadazan of Penampang and Papar, the Lotud, Dusun, Kwijau, Bisaya, Dumpas, Mankaak, Minokok, Maragang, Tangaah, Liwan, Tatanah, Sino-Natives, the Rungus, and other subgroups from Tempusuk, Tambunan, Ranau, and other districts. The Kadazandusun can be found in all districts, but they are mainly in the western half of Sabah.

#### POPULATION OF SABAH 2004

ETHNIC SUBGROUPS	('000)
Kadazandusun	514.4
Other Bumiputera	421.7
Bajau	381.5
Malay	330.6
Chinese	277.3
Others	127.4
Murut	94.0
Indian	10.7
Non-Malaysian citizens	704.8
<b>Total</b>	<b>2862.3</b>

Source: Department of Statistics, 2004

### 3 LANGUAGE

The various subgroups of Kadazan are speakers of the Dusunic languages with dialectical differences in pronunciation and description of words. The differences are a result of poor communication facilities and environmental evolution in the past. Like most other indigenous groups on the island of Borneo, the Kadazan did not possess a written language until the introduction of formal education in the 18th century, therefore oral traditions were very important among the Kadazan. Most of their knowledge was passed down by oral tradition from generation to generation.

The structure of a Kadazan's name is divided into two parts: the first name is the child's name, and the second is the father's first name. Some common male names are Gimbang, Kunul, Kerupang, Galumau, Gantoung, Empurut, Ampingan, and Sangan. Typical female names are Semitah, Rangkumas, Ansayu, Baimin, Salud, Amin, Halimah, Nani, and Mainah.

### 4 FOLKLORE

As is true with many other indigenous people on the island of Borneo, Kadazan folklore plays a major role in Kadazan traditions, customs, and worldviews. One of their most popular folk tales is the myth of their origin. According to legend, all the tribes are believed to have come from one common place called Nunuk Ragang, meaning "Red Casuarina Tree," a fig tree located at the confluence of the Liwagu and Kogibangan rivers in the heart of Sabah. Nunuk Ragang grew in plenty at the Liwagu River in Ranau. It is believed that their ancestors used to swim in the river and climb on the branches of the Nunuk Ragang to sun themselves. Red sap from the Nunuk Ragang roots was thought to have curative elements for different kinds of diseases. The Kadazan lived in abundance at Nunuk Ragang, and as their numbers increased, it became difficult to find enough food for every family within the limited area. In order to solve the problem, the leaders exhorted their followers to move and spread out in search of land and space.

### 5 RELIGION

Today, the majority of the Kadazan peoples are Christian, though some profess Islam, while others are followers of their ancestors' animistic beliefs. Even though a large number have converted to Christianity and Islam, many Kadazans still have ritual specialists to perform certain ceremonies. This is particularly true during the Harvest Festival. On the other hand, many of the old customs and traditions, such as headhunting, have ceased among the Kadazan.

According to the Kadazan's traditional beliefs, the spiritual universe is presided over by two supreme deities: *kinohorangan* (male/husband) and *umunsumundu* (female/wife). They are husband and wife. Under the command of these two deities are the lesser good and evil spirits that dwell within all objects and the natural environment—the forest, mountains, rivers, caves, and the earth itself—that need to be respected. These spirits must be appeased by means of ceremonial observances. Otherwise, the *rogon* (evil spirit) will inflict sickness and disease on the people or interfere and withhold blessings in secular world. Therefore, the spirits are presented with offerings and are called to attend the feast. These spirits can be encountered in the forest or sought in sacred places, and they also can be contacted in dreams and through mediums, ritual specialists, or priestesses who are called *Babalian* or *Bobohizan* (depending on dialect).

Bobolians or bobohizans play a major role in Kadazan ceremonial rituals. Incantations, prayers, singing, trances and animal sacrifices are common practices at these rituals, some of which can last for days. A bobolian plays a variety of roles. As medium, she beseeches spirits to stay away from newborn babies. As healer, she is engaged to exorcize sicknesses brought by evil spirits. At funerals, she heads the rites that guide the deceased spirit towards its final journey up Mount Kinabalu, which stands at 4,101 m (13,455 ft). It is one of the highest mountains in Southeast Asia. It is believed to be the resting place of the souls of the departed Kadazan peoples.

### 6 MAJOR HOLIDAYS

The Harvest Festival, known as *Magavau* among the Kadazan of Sabah, is celebrated annually on May 13 and 14. In 1960, the festival was proclaimed as a public holiday by the state government. It is a festival of celebration in honor of the spirit of rice called "Bambaazon," giving thanks to the spirit for the good harvest. It is both a public and private celebration that involves huge parties, traditional dancing, and beauty contests in various parts of town. However, it is important to note that the celebration of Magavau varies in accordance with the different dialects and districts of the state.

### 7 RITES OF PASSAGE

In the past, childbirth was usually done at home with the help of a local midwife or experienced elder. Today, many Kadazan babies are born in hospitals or clinics, though there are others who are still delivered in the traditional method. It is a common practice that when a child is born, a *bobolian* (priestess) will invoke the spirits and pray over the child for its well-being. This is particularly true among those who still practice the traditional religion. When the newborn child is about a month old, the hair-cutting (*momuga*) ceremony takes place. It is an announcement of the arrival of a new member in the commu-

nity. Goats, pigs, and chickens are always slaughtered for this occasion.

Traditionally, there are three stages to a marriage. A marriage enquiry known as *monohuku* is made when the boy is only 12 years old and the girl is 11. The second stage is *momuaboi* (engagement) when the proposal is accepted. The final stage is called as *matod* by the Kadazan. When the parents think that the time has come for their children to be married, normally when the girl is 16 and the boy is 17, the wedding date is fixed mutually between both sets of parents and the couple. During the engagement period, the couple stays with their respective parents. During this time, the boy is obliged to help in his future mother-in-law's house, doing chores, such as collecting firewood, plowing the field, etc. Similarly, the girl is expected to help her future mother-in-law in the kitchen and in planting rice in the fields. This is done to prepare the couple for their life together.

A death in a family or village is announced to relatives and neighbors by the monotonous, fast beat of the gong, or by firing a carbide or kerosene bamboo cannon at frequent intervals. The corpse is draped in a clean white cloth and laid on a mat on the floor in a convenient place in the house. Relatives, neighbors, and friends are expected to pay their last respects to the dead person. Usually, a buffalo is killed and portions of the meat are distributed to visiting mourners, or it is cooked to be served with rice to those present at the funeral.

## 8 INTERPERSONAL RELATIONS

It is considered impolite to walk upright in front of those who are seated in the house or longhouses. The usual way is to walk with knees slightly bent, holding both hands stiffly at the sides to avoid one's clothes touching other people, or to put both hands palm-to-palm between your knees, and wedge yourself in.

Visitors and friends are always welcome in a Kadazan home. There is no fixed time for visiting, especially among relatives and friends. Upon arrival at the house, a visitor is expected to take off his or her shoes unless told otherwise. He or she will then be offered betel nut, tobacco, or a cigarette. A visitor is usually asked to stay for the night, even if the visitor does not indicate his or her intention to stay. It is to be noted, however, that when a male visitor pays frequent visits to a house where the house owner has a daughter, it may be taken to mean he is interested in marrying the daughter.

Dating among the Kadazan differs from dating in the West. Even when they are engaged, a boy and a girl are "supervised" or observed by their parents and older siblings. A boy may visit his fiancée's house whenever he likes. The girl may do likewise, but she has to be accompanied by her mother, an aunt or an elder sister. If the boy has an elder sister, the boy is allowed to invite his fiancée to stay a night or two at his parents' house. At the same time if either one of them breaks the rules, a penalty will be exacted. However, it is important to note that many of these customs have changed over the years.

## 9 LIVING CONDITIONS

Modernization, education, and improved infrastructure have begun to have impact on Sabah's population. Nonetheless, living standards and conditions among the Kadazandusun vary according to their location. Many continue to live in their traditional areas and maintain a longhouse lifestyle, whereby sev-

eral families live together under one roof. Meanwhile, those who live in suburban areas have living standards comparable to those found in suburban areas in the United States. They have access to modern health services, tap water, electricity, good public transportation services, and other modern amenities. Most Kadazandusun who live in villages, however, have yet to experience a high standard of living. They still rely on the river for water, kerosene for light, and their feet to get from place to place.

Except for Kadazan and Rungus in Kudat, most have long abandoned their longhouses for individual homes, although the houses are still built of wood, bamboo, and thatch. In recent years, a growing affluence is changing this, replacing thatch with tiles and zinc. However, in places where bamboo is in abundance, some houses are made entirely from bamboo, including the pillars, the roof, the walls, and the floor. This is true in the Tambunan District.

## 10 FAMILY LIFE

The nuclear family generally provides the basic social unit of Kadazan society and the basis of the household. It is close-knit in terms of personal obligation and responsibility toward one another. The misfortune or disgrace of one member of the family is deeply felt by all kin; likewise, the good luck and prosperity of one are shared by all. Nonetheless, the high rate of rural-urban migration has led to more intermarriage with other non Kadazandusun groups.

A family consists of a husband, a wife, and their children. Sometimes a household includes other members of the extended family, such as grandparents, uncles, and aunts. A woman's primary role is to raise her children and to see daily that the family has enough food to eat. She is responsible for collecting jungle vegetables like fern tops, mushrooms, and young leaves for the evening, while her husband contributes fish or meat to the pot. Every evening the wife is responsible for preparing a good meal for her family.

Like most other native marriage customs in Borneo, the Kadazan marriage is fiercely monogamous. Adultery committed by either the husband or wife is severely punished.

A family may rear chickens, pigs, dogs, and cats not as house pets but for other purposes. Pigs, ducks, and chicken are reared for domestic consumption, while dogs are reared for hunting and cats to chase or kill rats and mice in the house and farms.

## 11 CLOTHING

Most of the traditional costumes worn by Kadazan men and women are predominantly dark or black in color. However, today a modern adaptation to the original attire is rich decoration done with colorful embroidery, glittering sequins, and imported gold lace trimming, as well as handmade lace from imported gold thread or yarn. The women's skirts reach down 5 cm (2 in) above the kneecap, with red embroidery running down the sides. Silver coin belts, rattan or beaded waist bands, beaded necklaces, and other silver ornaments and accessories are worn with these costumes. The color of the rattan waist band worn around the waist holds special meaning. Red denotes that the wearer is not a mother, while black denotes that she is, and white signifies that the wearer is a grandmother.

For their headgear, the women wear hats and/or scarves, while the men wear a head cloth called *sigah* or *kain dasar*, a

piece of cloth draped, folded, and tied according to the style and pattern of the district. It is important to note that dress codes vary from one district to another.

Today, Kadazan women and men wear Western-style clothing for everyday use. This includes skirts, blouses, shirts, pants, tank tops, etc.

## 12 FOOD

As in most societies in Asia, rice forms the staple food of the Kadazandusun diet. Rice is eaten at every meal, with meat and/or vegetable dishes. In the village the woman is responsible for collecting vegetables such as young ferns, mushrooms, bamboo shoots, etc., for breakfast, lunch, and dinner. The man is responsible for bringing meat or fish for the meals. Young ferns are one of the Kadazan's traditional foods. There are normally stir-fried with garlic, onion, and shrimp paste, and are served with steamed rice. Nowadays, most Kadazan's kitchen utensils include pans, pots, plates, forks, spoons, etc., which are available in department stores. In the old days, most of their utensils were made from bamboo, wood, and rattan.

## 13 EDUCATION

The Kadazan have responded positively to the Malaysian government's effort to encourage education. This is because education can raise living standards by creating wider job opportunities. Consequently, many are able to read and write in both Malay and English. Children at the age of six are required to go to elementary school, and continue on to lower and upper secondary schools. Many obtain the Malaysian Education Certificate, which is equal to a high school diploma in the United States, and some go on to obtain degrees from local or foreign universities or other higher learning institutions. Parental support and encouragement have been driving forces behind the academic success of many Kadazan. Formal education is seen as an avenue toward success in the modern world.

## 14 CULTURAL HERITAGE

Music and dance are closely related among the Kadazan. Both are vital parts of nearly every social event, particularly at the village level. Music is played during wedding celebrations, engagement parties, harvest festivals, first birthday parties and animistic religious ceremonies. A Kadazan wedding sees a rare airing of traditional instruments such as the bronze *kulintang* (gongs) and *gendang* (drums made from wood and leather or calfskin). The *sompotan*, a mouth organ, is another instrument that is popular among the Kadazan. Made from a dried bitter melon, it is produced in Tambunan and traded throughout Sabah. Sumazan is a dance between a male and female performed by couples or a group of couples to a symphony of *kulintang*.

Since the Kadazan did not have a written language in the past, their stories, songs, history, legends, and myths were passed down orally. Only in recent years have measures been taken to document these stories in books, articles, and journals.

## 15 WORK

Although the Kadazan were originally farmers or agriculturists, many have migrated to urban centers and have become prominent figures in the civil service and other professions.

In the interior, rice planting is the most common occupation, although, with the introduction of other cash crops such as rubber and coffee, this is likely to change. In hilly areas, some Kadazan still practice shifting rice cultivation. However, this is gradually dying out. Government efforts to modernize and improve socioeconomic status have enabled the Kadazandusun to become part of mainstream society. As a result, a number of them are now political leaders, entrepreneurs, and professionals.

## 16 SPORTS

In the past, swimming in the river and climbing trees were the popular sports among the children. Today, both children and adults are becoming more acquainted with sports such as soccer, volleyball, and basketball. In the evening, after they return home from their farms, they get together to play a game in the yard.

## 17 ENTERTAINMENT AND RECREATION

The type of entertainment or recreation that Kadazan enjoy depends on their locality. Kadazan in urban areas have easy access to movies, television, etc., comparable to residents of major cities in the United States or United Kingdom, and their forms of entertainment are very different from those Kadazan who still live in the village. Traditional music, songs, and dance are some forms of entertainment that are still very popular in the village. However, television and videos are becoming an increasingly widespread form of entertainment.

## 18 FOLK ART, CRAFTS, AND HOBBIES

The availability of local materials, such as bamboo and wood, has greatly influenced the nature of handicrafts of the Kadazan. Bamboo is used for making different kinds of household utensils, baskets, and mats. It is also widely used to build houses and fences. Wood and rattan are two durable materials widely used by the interior people for making huts, baskets, and decorative wall hangings. Rattan is also useful for tying pieces of wood or bamboo together. The weaving of baskets, mats, and other household utensils is done mostly by women during their free time.

## 19 SOCIAL PROBLEMS

The Kadazan and most natives of Borneo are facing one common problem: obtaining legal rights over their ancestral lands. They are faced with the dilemma of having to give up their rights to the land in favor of land development programs, usually initiated by the state or federal government. Although the socioeconomic status of the Kadazandusun has improved in recent years, they have to cope with changes to their traditional values. For instance, extended families with several generations staying together are being replaced by nuclear families. This has implications on traditional social and support network.

## 20 GENDER ISSUES

Like the Iban of Sarawak, the Kadazandusun maintain an egalitarian society with a bilateral descent system. In this sense, men and women has equal standing in the society. However, there is a clear sense of division of labor between men and women. In the village, for instance, the woman is responsible

for collecting vegetables, such as young ferns, mushrooms, bamboo shoots, etc., for breakfast, lunch, and dinner. The man is responsible for bringing meat or fish for the meals.

# KALINGA

**PRONUNCIATION:** kuh-LING-uh

**LOCATION:** Philippines (northern Luzon)

**POPULATION:** 112,000 (2000)

**LANGUAGE:** Kalinga

**RELIGION:** Native spirit beliefs

**RELATED ARTICLES:** Vol. 3: Filipinos; Ifugao; Vol. 4: Manuvu'

## <sup>1</sup>INTRODUCTION

Although at present speaking mutually intelligible dialects and possessing a strong sense of ethnic identity nurtured by a peace-pact system, the Kalinga display much cultural diversity among themselves. This is because of their division into small endogamous territories (*boboloy*) and perhaps also to their disparate origins as relatively recent refugees from the lower Abra valley to the west and the Cagayan valley to the east. The name Kalinga itself is a negative marker. It comes from the word for "enemy" in Ibanag, the language of Christianized Cagayan lowlanders. Major differences exist between the Kalinga north and south of the Pacil River; the southerners grow wet-rice on terraces and share many cultural elements with the Bontok and Ifugao, who depend on the same type of agriculture.

Substantial external influence commenced only in the 19th century with the opening of a Spanish trail between Abra and Cagayan through Kalinga territory; this trail introduced Tinggianes (fellow highlanders) and lowland Ilocano traders. Replacing spears, machetes, and axes, guns obtained from these increased contacts made the endemic feuding infinitely more murderous and threatened to annihilate Kalinga society. This fear motivated the emergence of the peace-pact system that the American colonial regime, intent on abolishing head-hunting, was to endorse.

The Americans introduced sanitation and schools, and educated Kalinga were soon able to fill the local administrative positions initially occupied by lowland Filipinos; the Kalinga passion for individual distinction predisposed them to enthusiastic participation in Filipino electoral politics. World War II flooded the highlands (as it did the Philippine countryside in general) with firearms, and since then "mutually assured destruction" has kept the peace between well-armed Kalinga groups. As a substitute for headhunting, private revenge continues to be part of everyday life. With some of their lands threatened by government dam projects, the Kalinga, along with the Bontok, have been among the most assertive of what are currently termed "cultural communities" (formerly "cultural minorities" or "non-Christian tribes").

See also the article entitled *Ifugao*.

## <sup>2</sup>LOCATION AND HOMELAND

The Kalinga occupy a northern section of northern Luzon's Cordillera Central, which is drained by the middle Chico River and its tributaries. The territory of the Isneg people of the Apayao basin intervenes between the Kalinga and the sea. Towards the southern edge of Kalinga territory, ridges rise to 1,830 m (6,000 ft), while the mountains are lower in the northern area. Pine trees crown the ridge tops, cogon grass blankets the steep slopes, and dense semitropical vegetation covers the

valley bottoms where settlements are located (still 610 m or 2,000 ft above sea level).

In the 1970s, the Kalinga numbered 40,000, with the heaviest concentration in the south where wet-rice is grown. According to the 2000 census, the population of Kalinga province stood at 174,023, of which 64.4% (or nearly 112,000) identified themselves as Kalinga (24% identified themselves as Ilocanos, 2.5% as Kankanay). Estimates for various Kalinga dialect groups are as follows: Limos, 20,000 (1977); Mandukayang, 1,500 (1990); Butbut, 8,000 (1998); Lower Tanudan (1998); Upper Tanudan (1998); Lubuagan, 14,003 (2000); Southern Kalinga, 13,000 (2000).

### <sup>3</sup> LANGUAGE

The Kalinga speak mutually intelligible dialects of the same Austronesian language; Kalinga is more closely related to Tinggian, Isneg, Gaddang, Ibanag, and Ilocano than to Bontok, Kankanai, and Ifugao. The dialects may currently be converging under the influence of a phonetically simplified, heavily Ilocano-influenced form of Kalinga. In fact, Ilocano is so widely understood that it is used to record the terms of peace-pacts between Kalinga groups (instead of or along with English, a language in which a few people in the larger communities are literate).

Children are given the name of a dead or living grandparent, in order to receive qualities of that person.

### <sup>4</sup> FOLKLORE

Among supernaturals, Kalinga believe in the *ngilin*, a malevolent water spirit in the form of a human pigmy who prevents women from conceiving; it also victimizes newborns. Also feared are the *alan* or *kotmo*, giant ghouls who feed on corpses.

### <sup>5</sup> RELIGION

*Anito* are supernatural beings in general. The Kalinga recognize a creator god, Kaboniyán, but invoke him only in moments of extreme and sudden crisis, such as an accidental death or the destruction of the rice crop by a storm. They take for granted the good will of the *mandodwa* (benevolent spirits) and focus their prayers, chants, and sacrifices on appeasing malevolent spirits who, if neglected, bring illness and misfortune on humans by capturing their souls. Kalinga must also show respect to their village guardian spirit, *sangasang*, who resides in a *podayan* shelter housing sacred *bayog* stones. In addition, they make offerings to deceased ancestors at funeral ceremonies, which are more elaborate among the southerners who follow the Ifugao and Bontok in emphasizing the ancestral cult. While fear of witchcraft is weak, that of poisoning is widespread and often attributed as the work of old childless women, who are believed to be vindictive because of their misfortune.

Formerly, male priests officiated at headhunting rites, but now female mediums (*mangalisig* in southern Kalinga and *mandadawak* or *manganito* in northern Kalinga) are more prominent, leading rites for curing, community welfare, and the life-cycle. Before receiving instruction from a practicing medium, a future medium must be called first to her vocation (by disturbing dreams, trembling fits, or nausea after eating certain foods like eel or dog). A medium possesses spirit helpers (familiar), a repertoire of chants, and standard paraphernalia, which includes a *bayobong* turban, a Chinese plate and a bamboo stick to beat it with during rituals, and a basket to contain everything.

In the 1990s, Christian conversion (mostly to Catholicism) remained limited because of the daunting geographical barriers to missionary penetration. According to the 2000 census, 17.6% of the population of the Cordillera Administrative Region, of which Kalinga province is a part, was classified as "Other" in religious affiliation, meaning adherents of indigenous religion. The rest followed a form of Christianity: 65.8% of the region's population is Roman Catholic (much lower than the national percentage of 83%), 8.9% Evangelical, 2.9% Iglesia

ni Cristo, 1.6% Jehovah's Witness, 0.8% Philippine Independent Church (Aglipayan).

## <sup>6</sup> MAJOR HOLIDAYS

See the article entitled **Filipinos**.

## <sup>7</sup> RITES OF PASSAGE

For a month after a birth, the family refrains from eating beef, cow's milk, eel, frogs, taro, and dog meat; the father may not leave the village; and no one who does not habitually sleep in the house may enter it. At the end of the month, a medium sweeps the house with an *anaao* (a palm-frond raincoat) and removes the four reeds that have been placed at the four corners of the house as a sign of the taboo period. Over the first year and a half of its life, six *kontad* ceremonies are held for the child, involving pig and chicken sacrifices, chanting, the taking of pig's liver omens, and the erecting of a spirit house or platform.

Now that free-choice matches are more prevalent, the traditional contract marriage proceeds in the following stages. In some regions soon after a boy's birth, his parents pick a suitable girl and commission go-betweens to take omens and present valuable beads to her family at a *banat* feast. The go-betweens return with gifts for the boy's parents and for themselves (henceforth, the two families invite each other to their respective feasts and give each other a share of the meat). At the age of 12, the boy may begin light bride-service for the girl's family. At the age of 17, the boy's uncles and aunts escort him to the girl's house because for the parents to do so would appear to be indifference toward the boy and would invite victimization by malevolent spirits, i.e., illness. The girl's side prepares a feast and gives the escorts meat to take back to the boy's kin. Two weeks later, after the boy's family gives the girl's family Chinese beads and plates, the couple begins to sleep together. The Kalinga apply less pressure on the couple to consummate the union than other highlanders, such as the Ibaloi go-betweens, who strip an unwilling pair, bind them together, and wrap them in a water buffalo hide. Five months later, a feast to which both kin groups are invited seals the marriage contract; this includes competitive gift-giving between the sides and the handing over of a portion of the inheritances coming to the newlyweds.

After death, the deceased is seated on a death chair for up to 10 days, with the surviving spouse guarding it and relatives preparing rice wine for the wake, which also requires the slaughter of pigs and water buffalo. While children are buried near the house or under the granary, adults are interred in graves faced with small stones smoothed over with lime plaster; big stone slabs are laid over the body, the slabs are then covered with dirt, and a thatch arbor is then erected on top of the dirt for offerings (rice bread hung for the dead, and betel, charcoal, and lemon leaves to repel malevolent spirits). Today, wealthy southerners raise concrete family mausoleums. Nine days later, in some areas, personal belongings are placed on the grave. A year of mourning follows an adult's death, during which relatives may neither sing nor dance, must wear a black or brown strip, and let their hair grow long and unoiled. A surviving spouse may not remarry during this period and may eat only fruits and greens and may neither gather food nor cook. A morning-to-morning *kolias* feast concludes the mourning; singing, dancing, and boasting keep the mood fes-

A Kalinga couple wear traditional dress in Luzon, Philippines. The Kalinga are known for their bright colors and accessories. (© Paul Almasy/Corbis)

tive, for weeping would attract another death. If individuals cannot stop grieving, they restore themselves to normal life by exhuming the bones and reburying them or by taking a long journey that includes crossing a wide river.

## <sup>8</sup> INTERPERSONAL RELATIONS

Beyond the immediate kin, an individual traditionally identified only with the *boboloy*, the area inhabited by overlapping kin-groups, within which one generally married and outside of which no one could be trusted. In recent times, peace-pacts have weakened this localism to a considerable extent but have far from eliminated it. Northern *boboloy* consist of 10 to 12 hamlets (500–700 people), while southern ones encompass even larger numbers.

In former times, authority gravitated towards *mangngol*, renowned warrior-headhunters (also wealthy and well-spoken) who avenged wrongs done to their kinfolk [see **Manuvu**]. Currently, regional power issues from the ability to arbitrate disputes (imposing fines that take into consideration public opinion and the kin-groups involved) and serve as a pact-holder; individuals with the required wealth, wisdom, and charisma are called *pangngat* (*lakay* in the north). Despite distinguishing poor (*kapos*) from rich (*baknang*; in the south, also *kadangyang*), Kalinga culture stresses equal treatment for all individuals irrespective of status (e.g., servants are treated as well as adopted children and may even appeal to *pangngat* if mistreated by their masters). At the same time, Kalinga exhibit a strong drive towards personal distinction, as expressed in the boasting sessions that are integral to all gatherings (though rice-land and livestock wealth have replaced headhunting exploits as the source of pride).

Within the *boboloy*, *pangngat* arbitrate disputes. Between *boboloy*, however, conflicts generally escalated in the past to

reciprocal headhunting raids (feuding for blood vengeance). Since the colonial abolition of headhunting, pitched battles (*botad*) now provide the outlet for revenge-taking; their firearm-increased murderousness has led to the peace-pact (*bodong*) system.

A *bodong* is contracted between two individuals (generally *pangngat*) but is binding on both *boboloy*. The first stage is a “tasting” (*simsim* or *singlip*) where the sides gather, review grievances, and settle disputes. After this, at a large gathering (*lonok*) the *pagta* or provisions of the *bodong* are written out, detailing how to punish crimes committed by a member of one *boboloy* against a member of the other, e.g., punishing killings or woundings by fines, counter-killing, or symbolic counter-injury. Also set down are rules of courting, the return of lost or stolen articles, and hospitality, including how to handle the death, accident, or illness within one’s territory of a person from the other *boboloy*. Renewed at *dolnat* gatherings and transferable to new pact-holders, peace-pacts permit trade and even migration between *boboloy* territories.

The southern Kalinga follow the Bontok-Ifugao practice of having children from the age of six or seven sleep in a unisex dormitory (girls sleep in a widow’s house and boys in a vacant house [*obog*]). Boys may visit the girls at night, but only engaged couples may have sex. The northern Kalinga, on the other hand, expect their adolescent children to stay in the home of a close relative; sexual contact must be kept secret from parents. A girl who has sex with a boy with whom she is not contracted to marry, or a man who is already married, will be whipped (the male, unless he raped the girl, is only fined).

Courting procedures leading to love-match unions have long coexisted with contract marriages. A boy may intercept a girl on her way to fetch water. As talking to each other would violate etiquette, they exchange signals, the girl expressing approval with a subtle wink, a raised eyebrow, or a sudden lowering of her eyes. Thus encouraged, the boy presents himself at her house in the evening, serenading her with courting songs or flute-playing in the presence of her parents. Afterwards, the girl arranges to meet the boy while parents are away.

## 9 LIVING CONDITIONS

Kalinga live in hamlets of 6–30 houses in the north and of over 200 in the south. The wood-plank or bamboo-plaiting houses are on piles, are entered by stairs or a ladder, and have thatched grass or reed roofs. The floor plan is rectangular or square in the north, and octagonal in the south, with a single room. In more traditional homes, floors consist of split-bamboo mats over a grating of slender beams; the mats are removed and washed in a stream every two or three days. A bit off-center in the single room is a fire pit enclosed in a 10–15-cm-high (4–6-in-high) wooden box full of sand and ash; above it hangs a rack for drying wood, food, and clothing. Today, each village has at least one or two houses of hewn-wood planks with galvanized iron roofs. These are more prestigious, but hotter than a thatched one. A traditional house may be kept alongside for use as a kitchen; this new house-type will eventually dominate.

Average family income in the Cordillera Administrative Region, of which Kalinga province is a part, amounted to 192,000 pesos (us\$3,765) in 2006, among the highest in the country, cf. the national average of ₱173,000, the National Capital Region’s ₱311,000, Southern Tagalog’s ₱198,000, and those of the neighboring Cagayan Valley and Ilocos regions, ₱143,000 and

₱142,000 respectively. In 2000, 32% of households in Kalinga had access to a community faucet, 12% to a faucet of their own, and 21.6% to a shared deep well, while 11.7% obtained their water from springs, lakes, rivers, or rain. Almost half of households (48.6%) disposed of their garbage by burning it, 21.9% by burying it in a pit, and 11.7% by feeding it to their animals; only 6.3% had it picked up by a collection truck. 50% of houses were lit with kerosene lamps, 44.3% with electricity, and 3.5% with firewood. While 29% of households lacked basic appliances of any kind, 68.9% possessed a radio, 21.9% a television, 12.9% a refrigerator, 7% a VCR, 2% a telephone or cell phone, 6.6% a washing machine, and 8.2% a motorized vehicle.

## 10 FAMILY LIFE

Each individual recognizes his or her personal kindred as including the descendants of both paternal and maternal great-grandparents (i.e., counting second cousins) among the northern Kalinga. In the more densely populated south, kindred includes only grandparents and first cousins, although the wealthy there may recognize bilateral descent groups [*see Ifugao*].

The nuclear family includes a married couple, their younger children, and occasionally grandparents and, among the wealthy, servants. Adolescents live together in same-sex dormitories. Two to four related nuclear families work together in agriculture and other economic activities; this extended household is actually emphasized more than its components. Face-to-face interaction among more distant kin is diminishing with the greater mobility of modern times. In the south where larger towns offer individuals greater economic independence from kin, people tend to address relatives with personal names rather than with kinship terms such as are still regularly used in the north.

Formerly, it was a strongly enforced rule for an individual to marry within his or her *boboloy* (*barrio*); third-cousin marriage was permitted, but second-cousin marriage met with disapproval. Marriage by contract between the parents while the children are still young was the norm but is now giving way to free-choice matches. The ideal, still followed in the south, is for a new couple to join the wife’s parents’ extended household. Wealthy men might take concubines (*dagdagas*), especially in order to seal peace-pacts with other localities. Half of the marriages in north Kalinga end in divorce. The primary reason for the divorce is childlessness (and occasionally the poor hospitality or laziness of the wife).

Relations between parents and children are markedly less prolonged and intense among the Kalinga than among other highland peoples, but grandparents and grandchildren are very close, often given to mildly teasing each other. The grandparents act as babysitters while the parents are working away from the house (a still strong grandfather will carry his grandchild in a sling to roam about watching the activities in village and field). Grandchildren also learn ritual procedures from grandparents and take care of them as well as their own parents in old age and, via offerings, in the afterlife. Parents regard safeguarding inheritance and making a good match for them as their main duties to their children. Children tend to be indulged; adults rarely resort to whipping and prefer to scare children into behaving with stories about “strangers” (indeed, inflicting corporal punishment on another’s child would incur fines from the incensed relatives).

## 11 CLOTHING

Northern Kalinga traditional male clothing is of brightly colored cotton and consists of a G-string with beads or buttons, a short jacket with beads and tassels, a tube sarong worn over one shoulder, a turban with blossoms and feathers stuck in it, earplugs, an agate-bead choker, and an ornamental betel-bag. Women's traditional clothing includes sarongs, shirts, agate-bead necklaces, and brass and mother-of-pearl earrings, and hair grown long (augmented with switches of hair from departed or living relatives).

Today, northern Kalinga men wear lowland-style trousers and cut-offs with or without an old shirt, and the women wear cotton dresses. Traditional clothing is still commonly worn in the south, where colors are more subdued and accessories are kept to a minimum [for southern women's attire, *see Ifugao*].

## 12 FOOD

The staple food is rice supplemented by vegetables and some meat.

## 13 EDUCATION

*In 2000, literacy stood at 90.5% for the Cordillera Administrative Region, of which Kalinga province is a part. In Kalinga province itself, of people five years or older 45.79% had attended elementary school, 23% high school, and 11.19% college; 4% held academic degrees. (see also the article entitled **Filipinos** in this volume).*

## 14 CULTURAL HERITAGE

*See the article entitled **Ifugao**.*

## 15 WORK

Although some Kalinga receive enough modern education to become schoolteachers (a most esteemed profession among them), municipal employees, or Baguio or Manila office workers, most Kalinga remain subsistence farmers. Only in the southern area adjacent to the Bontok has wet-rice cultivation on terraces been the dominant form (though now it is spreading in the north); Kalinga terraces slope gently at an angle and are not held back by stone walls as are those of the Bontok or Ifugao. The northern Kalinga grow dry-rice on swidden (shifting-cultivation) fields along with beans, sweet potatoes, maize, sugarcane, taro, betel, tobacco, and coffee.

Animal protein comes from a variety of sources: wild pig, deer, fowl, dogs, birds, fish, mussels, and eels. Livestock includes a few horses and cattle as well as pigs and chickens for sacrifice and meat distribution at ritual celebrations. Kept for slaughter, water buffalo are also important as a measure of wealth and the means to buy rice-land.

Guaranteed by highly formalized and ritualized pacts (*abuyog*) between potentially warring regions, traditional trade patterns resembled those of the Ifugao [*see Ifugao*].

## 16 SPORTS

Children between the ages of 3 and 10 play at the riverside bathing place while their older female relatives wash and do other chores. A common game for single- or mixed-sex groups is hide-and-seek. Boys between 7 and 15 enjoy spinning tops.

## 17 ENTERTAINMENT AND RECREATION

Kalinga are fond of putting on plays or skits at public gatherings; the source material derives from school lessons, such as the life of Filipino national hero Jose Rizal. Parents teach their children to perform public recitations of pieces that they themselves learned in school.

## 18 FOLK ART, CRAFTS, AND HOBBIES

*See the article entitled **Ifugao**.*

## 19 SOCIAL PROBLEMS

*See the article entitled **Filipinos**.*

## 20 GENDER ISSUES

Although Kalinga couples do not automatically prefer boys over girls, not to have any sons at all is regarded as a great misfortune, because men, through combat, can defend the family and win it prestige. From an early age, girls assume the heavier tasks, such as taking care of younger children, pounding and winnowing rice, scrubbing mats, toting water, and helping in the fields. By contrast, when boys are not fetching firewood from the potentially dangerous forest, they just sit around and gossip. A boy already promised in marriage, however, may also help around his in-laws' house. In the past, this was so that the young men could be ready to defend the community at any time, but in these relatively peaceful times, they have little to do and fall into insulting relatives, quarreling, vandalizing, and theft. As adults, women work year-round all day and into the night, whereas men work only in the daytime, clearing and plowing fields, and in the dry season, they travel to increase the family's wealth and prestige.

In 2000, the literacy level was slightly lower for women (90%) than for men (90.8%) in the Cordillera Administrative Region, of which Kalinga province is a part. Of those who had attended elementary school, 54.03% were males, slightly higher than their proportion of the population, 52.8%. Of those who had attended college and those who held post-baccalaureate degrees, the majority were women.

# KAMMU

**PRONUNCIATION:** kah-MOO

**ALTERNATE NAMES:** Khamu; Khmu

**LOCATION:** Laos, Thailand, Vietnam, and China.

**POPULATION:** About 500,000

**LANGUAGE:** Kammu

**RELIGION:** Animism; some Buddhism and Christianity

## 1 INTRODUCTION

The Kammu (also written Khamu, Khmu, and Kmhmu), who make up the largest minority group in Laos, are believed to be the original inhabitants of the country. They are an Austro-Asiatic people who moved north from the area of Indonesia in prehistoric times. The Kammu practiced paddy rice agriculture in the valleys along the Mekong River until they were displaced around the 14th century by the Lao moving southward from what is today southern China. Pushed out of the fertile river valleys where wet rice agriculture was possible, the Kammu settled on mountain slopes and in small, narrow upland valleys in northern and central Laos and in northern Thailand. There they practiced swidden (slash-and-burn) agriculture, clear cutting and burning off areas of the forest, farming the fields for a few years until the soil was depleted, and then burning off a new area and letting the old fields lie fallow. Sometimes they relocated their villages to find suitable land.

The Kammu have traditionally been at the bottom of Laotian society. Members of the ethnic Lao majority frequently refer to the Kammu with contemptuous terminology, including the word *kha*, or slaves. Ethnic Kammu regions of the country have historically received less funding for roads, schools, and government services than Lao majority areas. Many Kammu joined the Communist Pathet Lao (Lao Nation) movement and the Lao People's Liberation Army in the 1960s and 1970s, during the Lao civil war because the Communists promised them respect and education and technical training in Vietnam if they joined the cause. During the war years some Kammu areas were heavily bombed by the United States as the Laotian civil war was linked to the Vietnam War, which was also being fought in Laos. After the Pathet Lao won control of the country in 1975, some Kammu Communist cadres gained positions of prestige within the government. However, the majority of ethnic Kammu have remained impoverished and have had few opportunities for economic or social advancement.

The Lao People's Democratic Republic (LPDR), established in 1975, has tried to do away with ethnic labels and now refers to "lowland Lao," "midland Lao," and "upland Lao." The Kammu are classified as midland Lao because they tend to live on the mountain slopes. The LPDR government has tried to end slash-and-burn agriculture and has encouraged the Kammu to resettle in lowland areas. Some Kammu had already relocated to escape war related violence. The Kammu, like other midland Lao, are among the poorest people in what is already a very poor country. Their low levels of education and geographic isolation, together with continued prejudice from the ethnic Lao, have been barriers to their integration.

## 2 LOCATION AND HOMELAND

The Kammu are considered as one of the indigenous populations of Laos and represent the country's largest minority group. There are roughly 500,000 Kammu in Laos and smaller numbers of Kammu in northern Thailand, northern Vietnam, and southern China. A few thousand Kammu fled as refugees after the Communists came to power in 1975, and they have resettled mostly in the United States.

The Kammu live in scattered villages in mountainous areas of north and central Laos and in border regions of neighboring countries. Often villages are small, with only 20–30 families, but some villages can include several hundred households. Neighboring villages may belong to different ethnic groups lumped together with the Kammu as midland Lao, but with their own cultures and languages that are mutually incomprehensible. Young Kammu men often leave their mountain homes to find unskilled jobs in towns and cities for a few years to earn money for a bride-price. During the Lao civil war, many young men went to Thailand to escape forced conscription into the Laotian armed forces. The government has pressured Kammu to switch to settled lowland farming rather than shifting slash-and-burn cultivation, but the land offered to Kammu farmers has often been poor for agricultural cultivation.

## 3 LANGUAGE

The Kammu have their own language, which belongs to the Mon-Khmer family of languages, but it is not a written language. Kammu words are mostly monosyllabic, though disyllabic words are still numerous. The normal word order in Kammu is subject-verb-object, though the object may appear at the beginning of a phrase for emphasis. Kammu contains many Laotian and Thai loan words, and Kammu who live in Thai urban areas often adopt the more simplistic syntax of Thai.

The Laotian government's efforts to reclassify Kammu as "midland Lao" has resulted in few references to Kammu in Laotian historical texts and, until recent decades, there were few significant works about the Kammu in Western literature. Variation in the Kammu language is common, as the Kammu are spaced over a wide area with limited contact with more distant settlements. The language includes an increasing number of loan words from Lao.

The majority of Kammu are illiterate, as few have had access to education. Agreements are oral and are made before village elders, who memorize the terms and will arbitrate any disputes. Children use their father's first name as their last name, so last names change every generation. Once a person becomes a parent, he or she is referred to as the father or mother of their child.

## 4 FOLKLORE

The Kammu have a rich folklore that has been transmitted orally. They are well regarded by other groups for their knowledge of folk medicines made from plants gathered in the forest.

The Kammu consider Luang Prabang, which served as the Lao royal capital, as their city, and they have a legend that explains how the city was founded by a Kammu.

The old people say that long, long ago people wished to build the city of Luang Prabang, but an enormous tree grew on the site that nobody was able to cut down. Each

man that tried fell ill and fled. Then a man by the name of Wang said, "I will cut the tree if you will taboo the day of my death forever." The people promised and Wang cut the tree, but he dropped dead when the tree fell. Once they buried Wang, the Kammu began to build the city of Luang Prabang.

When the city was finished, they looked for a man to be their king. They all went to a cliff overlooking the place where the Ou River flows into the Mekong River, and the people said, "Any man brave enough to jump off this cliff, we will elect king."

The people boarded seven boats and seven rafts in the waters below the cliff and called for the men who wished to be king to jump. Looking down from the dizzying heights, one man after another was afraid and ran away. Finally just one man remained, a relative of Wang, who had cut the tree. This man had tucked a quiver into his belt, and as he leaned over to look down from the top of the cliff, his quiver struck against something and he lost his balance and fell into the river. The people hurried to help him get in a boat, and they praised his courage and elected him king. To this day the Kammu taboo the day Wang cut the tree and the day Wang was buried, and on these days no work is undertaken.

The Kammu played a significant role in annual ceremonies in the Lao court of Luang Prabang until fairly recent times. The ceremonies indicated the Kammu's prior claim to the land through a symbolic payment to the Kammu representatives, who in turn acknowledged the legitimacy of the King of Luang Prabang.

## 5 RELIGION

The majority of Kammu are animists, with smaller numbers of Buddhists and Christians. The Kammu believe there are hundreds of different spirits, helpful and harmful, that reside in natural settings. An important aspect of Kammu spiritual beliefs is the notion of reincarnation based upon merit. Individuals are engaged in a struggle between good and evil forces that plays itself out through the interaction of spirits.

Each village has its own shaman to propitiate the spirits that cause illness and accidents, and a priest (*lkuun*) to perform the village ceremony for the ancestor spirits. A shaman can be either male or female, but the priest holds a hereditary office passed on to the eldest son of the priestly family, even if the individual is only a child at the time. One becomes a shaman by apprenticing to a shaman and learning the magic formulas to be recited on different occasions. The shaman must also be a person of good character who follows many specific rules or the magic formulas will not work to drive away evil spirits.

Living far from health centers and access to modern medicine, the Kammu often attribute illness to evil spirits and call on a shaman to exorcise them and bring back the soul of the patient. Minor diseases are treated by a medicine man, an expert in herbal remedies. It is believed that conception of a child is determined by the ancestors of the wife. If a woman does not become pregnant after marriage, then her father will sacrifice a pig as an offering to his ancestors.

Rituals and taboos are a common part of Kammu spirituality and daily life. The Kammu have a calendar that operates on a 60-day cycle that includes many taboo days when various

kinds of work cannot be done and strangers cannot enter the village. During special ceremonies, woven wicker squares and bamboo arrows are placed along paths and trails leading to the village to warn outsiders not to enter. The Kammu also believe that spirits in important places must be placated. For example, before setting out traps or beginning to hunt, a man must perform a ceremony to ask permission from the spirits that reside in the hunting grounds.

## 6 MAJOR HOLIDAYS

The most important holiday for the Kammu is the three-day series of ceremonies once a year to sacrifice to the village ancestor spirits, remake the village common house where the spirits reside, and ritually renew the village. The village spirits are considered benign, helping people lead good and happy lives so long as proper rituals are observed. There is no set day to sacrifice to the village spirits, but the ceremony is usually performed just after sowing the rice so the spirits will bring rain, or just before harvest, so they will chase away evil spirits like the spirits of accidents or the spirits of waste. The house where the spirits reside is cleaned and remade with a new thatched roof, then a black pig is killed and its blood smeared on the altar. The spirits are offered pork, rice, and rice wine, and then the whole village eats and drinks.

The next day a sacrifice is made to the water spirits. Villagers dress up and parade to the village well with drums and gongs. There is a ritual cleaning of the well, and fresh water is fetched

from the well in a decorated water container and placed in the house of the spirits.

On the third day each family places a basket under the water container, which the priest shoots with an arrow from a crossbow. Those baskets sprinkled with a lot of water are a sign of luck and a good harvest, while those baskets the water does not reach presage a poor harvest. There is then a procession to a stream to float away the bad spirits. The young people engage in horseplay with mud fights and pushing each other in the water. A communal meal is eaten at noon, and in the evening the villagers parade home and celebrate with lots of food and rice wine.

## 7 RITES OF PASSAGE

For most men the main rite of passage is preparing for marriage, usually by leaving home to work as a laborer for a few years to get money for a bride-price. Each family has a totem and is grouped by totems (plants, birds, four-legged creatures) into a system of marriage alliances. There are three such groups in each village, with a circular pattern of one group taking wives from a second group and giving wives to a third group. The man can choose a bride only from the wife-giving group in his marriage alliance system, or it is believed dire misfortune will result. Ideally there is matrilineal cross-cousin marriage, in which a man marries his mother's brother's daughter (the brother might be a real brother or a clan brother). Within the constraints of the marriage alliance system, the bride and groom are free to choose, but their parents will negotiate the bride-price. Sometimes a man can work for his bride's parents for a few years in lieu of a bride-price.

## 8 INTERPERSONAL RELATIONS

Kammu interpersonal relations are based on family lineage. The eldest man in the family is treated with great respect. The marriage alliance system also involves patterns of respect. For example, the father of the bride has a higher ritual status than the father of the groom because the wife brings children to the family. A father-in-law must be treated with great respect. It is even common to call an elderly man father-in-law as a term of respect.

Living in isolated villages, the Kammu must depend upon their neighbors for mutual help—so relations are relatively egalitarian. Although most families farm individually owned plots, in some Kammu villages the land was owned collectively. After the rise to power in 1975 of the communist LPDR government, numerous Kammu communities were successfully converted to collectivized farms, while communal agriculture proved a failure in many other Kammu villages. The closure of all stores resulted in the development of a barter system among the Kammu for trading foodstuffs.

## 9 LIVING CONDITIONS

Laos is one of the poorest nations in East Asia and living conditions are harsh for most Kammu. The Kammu tend to be among the most impoverished people in the country and Kammu communities in Thailand, Vietnam, and China live far below the national economic average. Governments have been slow to extend roads, education, and health services to the hill areas. In the aftermath of the Communist takeover of Laos, diseases like malaria, dysentery, and pneumonia were common, and there were high rates of infant mortality and

malnutrition. Most Kammu are subsistence farmers, and each day is spent farming, hunting, or fishing. People don't go into the forest alone, however, because they worry about wild animals, snakes, and accidents.

Kammu houses are built close together on pilings in the villages, located on a hilltop or halfway up a mountain at elevations near 1,000 ft. The village is usually surrounded by a thick band of old forest, which separates homes from the fields. The large old trees are believed to have souls, and they serve to protect the village from storms and from fire when the fields are burned off. Houses are built on piles 1–2 m (3–7 ft) above the ground, usually with frame and floors of wood, walls of bamboo matting, and a roof of thatch. There is an open porch on one side of the house and a kitchen hearth built over a box of dirt toward the back. Domestic animals, including chickens, ducks, and pigs, are raised underneath the house in fenced areas. Buffalo are highly valued for plowing fields, as food, and for sacrifice, though few Kammu can afford to own them. Dogs are commonly kept as pets. In most Kammu villages there is no running water or electricity, nor are there any sanitary facilities.

## 10 FAMILY LIFE

A household usually numbers 6–7 people but can be much larger. A single dwelling may include parents, children, daughters-in-law, and grandchildren. Much of the work of the household is gender-specific, with women working longer hours than men and responsible for the hard work of hauling water and firewood and husking the rice. Traditionally, young boys left the family home between age six and eight, to live in the nearest village common house with older boys, unmarried men, and male guests in the village. However, newer villages set up in lowland areas have dispensed with common houses for men. Children are engaged in helping the family get enough food from an early age. Boys learn to fish and make snares to catch rodents and small game. Girls help their mothers garden and go in a group to the forest to look for edible shoots, tubers, and other plants. It is the responsibility of the women in the household to ensure there is enough water and firewood, while men provide for the family's meat and fish. The family could not function without the labor of all, so there is mutual respect for the contribution each person makes to the household.

## 11 CLOTHING

In the past, clothing was most often rough homespun cloth made from their own cotton that the women spun and wove, but today manufactured fabric or store-bought clothes are increasingly common. Women wear a long-sleeved blouse that fastens to one side and a sarong, while men wear a shirt and pants. Rubber sandals serve as shoes. Both sexes may carry woven or knit bags. In addition, there are special clothes for ritual occasions.

## 12 FOOD

The staple food of the Kammu is sticky (glutinous) rice, which is eaten at every meal. The Kammu generally do not purchase food, but grow or hunt what they eat. Besides rice, Kammu farmers grow corn, tobacco, maize, sugarcane, and occasionally cotton and opium. The men fish, hunt small game with rifles and crossbows, and set snares for rodents and other small animals. Frogs and various insects are also eaten. Fish and

meat are smoked and dried over the fires that are continuously maintained in common houses reserved for men. Large game is usually shared within the community. The women gather bamboo shoots, mushrooms, and other wild plants in the forest. Deforestation has made supplementing the daily diet through hunting and gathering more difficult. Although most families have a water buffalo or cow, these animals are rarely eaten except on ceremonial occasions, when an animal is sacrificed to propitiate the spirits. Fruit trees, including bananas, citrus, and jackfruit, are planted around the village. Eggs are considered a special food, and gifts of eggs are given to a bride's family. Black sticky rice is used for traditional ceremonial meals. It represents safety, so a small packet of black sticky rice is always carried by people when they travel. Kammu meals tend to be rather simple and are seasoned with salt and chilies.

### 13 EDUCATION

Few Kammu have had any formal education in a classroom. Although schools are being extended into Kammu areas, schools remain scarce and tend to have very low standards. Lessons are conducted in Lao, a foreign tongue to many of the pupils. Teachers sent to Kammu areas often consider the assignment a hardship. Compulsory school attendance laws, such as those in Thailand, are rarely enforced and do not apply in any case to children living at a great distance from a school. More than half of the Kammu never attend school. Kammu boys are more likely to be sent to school than girls. Few Kammu are able to afford the cost of sending their children to schools in urban areas.

In villages Kammu receive practical education in daily chores from their parents and older siblings. Boys learn from older male residents, while girls hone their skills with the family's females. Because of the pattern of males leaving the village to work in cities or in northern Thailand for a few years, men are more likely to speak a national language like Thai or Lao.

### 14 CULTURAL HERITAGE

The Kammu have a musical tradition, but instruments are usually played for ceremonial purposes in conjunction with prayer and sacrifice. Their instruments include long wooden drums, kettlegongs, knobbed gongs, cymbals, bamboo beaters, flutes, and buffalo horns. Musical instruments are often ritual gifts. Bamboo clappers are a gift from the bride's family to the family of the groom, while the highly valued long wooden drum is usually a gift given by the groom's family to that of the bride.

There are songs appropriate to various ritual occasions, and different types of music for every season of the farming year. Music thus plays a ritual role in securing a sufficient supply of food.

### 15 WORK

The majority of Kammu are subsistence farmers and fishermen who reside in villages in mountainous regions. While Kammu are unable to accumulate great wealth, most villagers are able to provide for their daily needs, and some villagers are capable of keeping dozens of animals, including highly prized water buffalo. Within the villages, men tend the fields, hunt, and fish, while the women raise children and sew clothes. Children help their parents and both boys and girls may help with the care of young siblings. When the rice develops ears in the autumn, young people stay in small field huts for days to scare away the

birds and wild animals that come to eat the rice. Teenagers enjoy this period away from the village and grownups. Grandparents help with cooking, childcare, and small chores near the house.

In recent decades, Kammu men from Laos have increasingly migrated to Thailand in search of work. Young Kammu men find employment in Thai factories and shops, as well as in the logging industry. During the war years, many youths fled to Thailand to avoid military conscription. Traditionally, men would work abroad until they saved sufficient money for a bride price and then return to their home village, but now many Kammu men have married Thai women and have become Thai citizens.

### 16 SPORTS

The regions of South East Asia that the Kammu reside in are impoverished, and there are no traditions of organized sports among the Kammu. For children, play typically involves preparation for adult tasks. Thus, boys are often found fishing, catching insects, and practicing with bows and arrows, and children of both sexes often swim in rivers and streams.

### 17 ENTERTAINMENT AND RECREATION

Singing and storytelling are popular forms of entertainment. Folk tales include creation stories, tales of magic and the supernatural, stories of plants and animals, and tales of mischief and trickery.

Music plays an important role in Kammu ceremonies. During the ritual calling of spirits by shamans, chanting and the playing of gongs are used to communicate with the deceased and natural spirits. Songs and the playing of musical instruments often accompany weddings, the building of new houses, harvests and New Year celebrations. When Kammu entertain guests in their home, grain alcohol is consumed, songs are sung, and musical instruments are played. Bronze drums are often played during ceremonies, especially for summoning rain.

Kammu in urban areas have access to the kinds of entertainment enjoyed by the majority population, including theater, bars, and festivals.

### 18 FOLK ART, CRAFTS, AND HOBBIES

The Kammu are very skillful in the use of bamboo, which they use to make a wide variety of objects ranging from baskets, musical instruments, water containers, and snares to a complete house. Traditional Kammu musical instruments (constructed by Kammu villagers) include two kinds of bamboo flutes (pii and tot), lutes (saw), Jew's harps, bamboo beaters (klt), clappers (taaw taaw), gongs, and bronze drums.

### 19 SOCIAL PROBLEMS

Lack of education and geographic isolation has resulted in economic and social stagnation in Kammu populated regions. While the economies of Laos, Thailand, Vietnam, and China have experienced double digit growth in the last two decades, the Kammu villages situated in the rural mountains remain underdeveloped and have seen a lack of government investment in infrastructure. The Kammu tradition of slash-and-burn agriculture has fallen out of favor for environmental reasons, and local governments have pressured the Kammu to

resettle in lowland areas. In addition, illegal loggers and corrupt local officials have colluded to expel Kammu villagers from the forests adjoining their villages that have traditionally been used for hunting and gathering. The Kammu still face prejudice and discrimination. Many ethnic Lao still casually use the pejorative term “slave” in speaking of the Kammu and other midland minorities, despite the efforts of the LPDR government to call all people “Lao” and to stress the multiethnic nature of Lao society.

The Kammu who have settled in lowland areas are threatened by cultural assimilation by the majority culture. Kammu children in these regions are educated in the national language and gradually adopt the culture of the dominant group. Acculturation and assimilation are common among Kammu migrants in towns in northern Thailand who work and marry local women. Their children are raised as Thai, and the Kammu migrants adopt the language and culture of the Thai.

## **20 GENDER ISSUES**

In Kammu villages work tends to be gender-specific. Men clear and burn the swidden fields, weave baskets, repair farm tools, care for large animals, trap, and hunt. They are also more likely to be involved in trade, selling livestock, forest products, and, more recently, scrap metal left over from the war. Men often migrate to find work as farmhands on Lao-own farms and as laborers in urban areas. Many Kammu men find work in Thailand, where they can earn comparatively higher wages and purchase goods otherwise unavailable in their home villages. Women cook, care for children, husk rice, haul water, and firewood, care for gardens and pigs and poultry, gather edible plants, weave cloth, and sew. They may engage in small trade with vegetables and chickens. One area of labor where men and women work together is in the planting of crops. Men poke holes in the field to plant seeds, and women follow after to drop in the seed and cover it over. Both sexes weed, although this hard and fairly continuous chore is more likely to be done by women. Both sexes also harvest.

Sexuality is overtly expressed in Kammu folk tale traditions. In the Kammu language, sexual imagery does not elicit shame and folk story tellers freely mention the sexual lives of characters in stories. In one folk tale recorded in Thailand, *The Orphan Makes a Field*, the hero succeeds in successfully tricking his seven wives into going to bed with him. Despite sex not being a taboo subject, Kammu folk tales lack explicit and graphic sexual descriptions.

# KARAKALPAKS

**PRONUNCIATION:** kar-uh-kuhl-PAKS

**ALTERNATE NAMES:** Qoraqolpoqlar

**LOCATION:** Uzbekistan (territory of Karakalpakistan);  
Kazakhstan; Russia; Turkmenistan

**POPULATION:** 350,000

**LANGUAGES:** Karakalpak; Russian  
Religion: Islam (Sunni Muslim)

## 1 INTRODUCTION

*Karakalpak* means "black hat" in the Karakalpak language. When the ancestors of present-day Karakalpaks (who call themselves *Qoraqolpoqlar*) settled in the area during the 10th and 11th centuries ad, they came upon Turkic Qipchoq (sometimes spelled Kipchak) people, who referred to the newcomers from the Irtysh River areas in southern Siberia as "Karakalpaks," supposedly because they wore black wool or high felt hats. From that time onward, the development of Karakalpak language, religion, and cultural practices has been influenced by the extremes of harsh desert and steppe existence as well as by military attacks by invading peoples such as the Mongols, Timurids, Kalmyks, Khorezmian Uzbeks, and Russians. With the exception of the Russians, who colonized the Karakalpak during the latter half of the 19th century, the other invaders were all Central Asian peoples of similar ethnic and cultural backgrounds who had formed themselves into diverse political states and conquering armies.

Various historical records prove that a Karakalpak people living essentially in today's Karakalpak lands existed by the 16th and 17th centuries. These people became a part of the Noghai horde ("Army" or "Confederacy" in Mongol), whose forefathers had come into the area with Genghis Khan's forces from Mongolia. Scholars today acknowledge that the Karakalpaks are a composite of three cultural-geographical areas: the Khorezm oasis of southern Karakalpakistan; the Qipchoq desert steppe along the lower course of the Syr River, which is a part of Kazakhstan today; and the east European cultural areas including parts of the Ural mountains, the Volga river area, and the North Caucasus mountains.

## 2 LOCATION AND HOMELAND

The Karakalpak are a people of Central Asia, who lived within the Uzbek Soviet Socialist Republic of the USSR until it was dissolved in 1991. Today their territory is under the rule of independent Uzbekistan. Approximately 2.3 million people reside in Karakalpakistan, of whom approximately 350,000 are Karakalpaks. Most Karakalpaks live concentrated in the southern part of their republic in the Amu River delta. Other Karakalpak people live in the surrounding countries of Uzbekistan, Kazakhstan, Russia, and Turkmenistan. Karakalpak territory occupies nearly 40% of Uzbekistan's overall territory. Karakalpakistan (*Qoraqolpoqiston*) lies in the northwestern part of Uzbekistan and is bordered by Kazakhstan to the north and Turkmenistan to the southwest. Much of its geography was dominated until recently by the Aral Sea, which took up a large portion of north-central and northeastern Karakalpakistan. Today, however, the Aral is drying up at a very fast rate.

The Aral Sea desiccation (evaporation) has become an international tragedy, so much so that any mention of the Karakalpaks immediately causes people to ask about the Aral. Indeed, the death of the Aral has destroyed the lives and livelihoods of tens of thousands of Karakalpaks, who depended both directly and indirectly on the sea. Its degradation has affected the lives of nearly 2 million people in both the Karakalpak and Kazak areas. Agricultural chemicals that were transported to the Aral via the Amu and Syr Rivers now blow across the land. Much of the fertilizer, pesticides, and defoliants used in agricultural production for decades eventually washed into the artificial network of canals that has served much of the primary farming lands of Central Asia, and those chemicals were deposited into the Aral Sea. In addition, salts from the sea have blown across farm lands and into local drinking supplies. Although many international agencies and experts have researched and attempted to solve the problem of the slow death of the Aral Sea, no real solution has been found, and health problems and economic decline continue to plague the region.

## 3 LANGUAGE

The Karakalpak language is part of the Turkic linguistic family, so it shares structural and grammatical similarities, as well as a vocabulary, with modern languages such as Turkish, Kazak, Kyrgyz, Turkmen, and Uzbek. However, the Turkic family of languages is quite varied, and differences between them may be as pronounced as differences between the Romance languages. Therefore, there are further linguistic subdivisions. Karakalpak is part of the Western branch of this family and is considered a part of the Noghai-Qipchoq subgroup, so that its roots are found in the languages spoken by much earlier inhabitants of the Karakalpak area. Modern Karakalpak most closely resembles modern Kazak in the north and Khorezmian Uzbek in the south. Although there was no written Karakalpak language until the 1920s, the contemporary language is written in a modified Cyrillic alphabet (the alphabet used by Russians, Serbians, and Bulgarians).

Because language was always learned and passed on orally, literacy among Karakalpaks included a developed knowledge of songs, poems, and tales. Through such artistic oral expression, Karakalpak people were able to preserve their history and customs from generation to generation. This was not merely a matter of repetition and memorization. Those who learned well were able to engage and excite others as they spoke of the subjects and events important to their own people.

Nearly all adult Karakalpaks can read and write their language, and most people learned some Russian in school as part of the Soviet educational legacy. Newspapers, journals, and books are printed in the Karakalpak language. Although Russian remains an important second language for educated Karakalpak people, many young people are now studying other foreign languages such as English, French, and Arabic because they are international languages of commerce and diplomacy.

## 4 FOLKLORE

Folklore is divided into the lyrical tales and epics (*zhyr* and *dostan*), and Karakalpaks consider themselves among the first poets and singers of the steppe. Most folkloric tales deal with realistic matters. In the famous tales of Tarzshi, a bald orphan with few impressive qualities is able to pull the wool over the eyes of greedy and arrogant landlords and corrupt leaders. A

similar set of stories make up the tales of Aldarkose, who is another boy everybody tries to outsmart, but who always comes out on top. There are also allegorical tales about animals such as the cunning fox, who can trick just about anyone and anything. Other tales involve wolves, tigers, and occasionally even God himself.

What makes the epics different from the tales is not only their length and poetic construction, but also the fact that they almost always concern historical events and heroic figures—political leaders and rulers—as well as the mythical origins of Karakalpak triumphs over invaders. The most famous examples of these epics are *Kyrk Qiz*, *Er-Shora*, *Koblan*, and *Maspatsha*. Epic heroes often turn out to be women. In *Kyrk Qiz* (The Forty Maidens), the heroine Gulaim defends her homeland from invading Kalmyks. *Maspatsha* is the story of Aiparshir, a woman of rich beauty and unparalleled courage. Themes and values from Karakalpak life, such as love of one's homeland, defense of one's people, and a willingness to sacrifice on behalf of others, are all emphasized. An epic is typically composed of more than 20,000 lines of verse.

## 5 RELIGION

The religion of the Karakalpaks is Sunni Islam, which is the dominant school of Islamic belief throughout the world. As early as the 7th century, Arabs entered Central Asia to spread and propagate Islam, to which they had converted themselves only a century earlier. The first large-scale conversions in Central Asia were concentrated in cities and oasis areas, and the

process was relatively rapid in comparison to the conversion of Central Asian peoples who lived in more remote or inaccessible areas. Deserts, mountains, and the steppes of Central Asia, historically home to nomadic pastoralist and semi-nomadic peoples such as the Karakalpaks, converted to Islam gradually. Among the Karakalpak, most conversions probably occurred from the 10th to the 13th centuries.

The Karakalpaks observe disciplined piety and have long been influenced by Sufism, which is a very tolerant and ecstatic branch of Islam. Universal Muslim holidays such as Ramadan (the month of fasting) and *Kurban Bayram* (The Feast of the Sacrifice based on Abraham) have long been among the most important. Until the collapse of the USSR and the economic and health consequences associated with the Aral Sea destruction, one could argue that religious practice and teaching played a minor role in the lives of most Karakalpaks. This has begun to change, however, as people search for answers, solutions, and comfort during a terrible period of deprivation and illness. Faith in Soviet Communist ideals is being supplanted by faith in the Muslim religion.

Many Karakalpak beliefs relate to the natural world. These are not a part of the Muslim religion, but rather connect to cults of saints or patrons who watch out for herds, fisherman, farmers, and so on. Many people believe that each type of herd or flock has its own patron. For cattle, the patron is Zangibaba, and people concerned for their herd may visit his grave outside Nukus to pray for help. Another example of a traditional belief here concerns the time at which shepherds release their flocks onto open meadows to graze for the summer. Many will not do so until they have been blessed by women who bring them yellow sashes to tie around their overcoats. They believe this provides protection for their flocks.

## 6 MAJOR HOLIDAYS

Four major nonreligious or state holidays are celebrated by the Karakalpaks and Uzbeks together. *Novruz* (New Day), celebrated throughout Iran, the Caucasus, and Central Asia, coincides with the beginning of spring on March 20 or 21. Although many Central Asians believe *Novruz* to be a Muslim holiday, its origins date back more than 2,000 years, long before there was a Muslim religion. The holiday is marked by festivals, contests, game playing, and especially eating. Schoolchildren celebrate with their teachers and put on a variety of skits. Afterwards, communities gather in the central square of their towns to continue the celebration. People dress in their very best clothing. Speeches commemorate the cultural heritage of the Central Asian peoples who are linked through this holiday. The favorite food of this holiday is *sumalak*, which is made from young wheat plants that are boiled communally in huge cauldrons. It takes about 24 hours to prepare this sweet, tasty pudding. Each year, one family will take on the responsibility of preparing enough *sumalak* for several families, and members of each family gather where the *sumalak* is being prepared, to take turns stirring the thick, bubbling mass and feeding the enormous fire needed to keep it boiling for so many hours. *Sumalak* parties are a standard part of the *Novruz* festivities. This particular food is considered vitamin-rich and portends the coming of all the new agricultural foods that warmer weather will bring.

Victory Day celebrations commemorating World War II take place on May 9. This day is associated with both solemn

nity and merriment. Parades of military personnel and World War II veterans take place. Later, people go off with family and friends to celebrations of their own. Victory Day is celebrated by all the former Soviet peoples because of the enormous sacrifices and suffering they endured in their defeat of Nazi Germany.

Uzbekistan Independence Day, September 1, has been celebrated since 1991. This day features parades and carnival-like events in all cities and towns throughout Uzbekistan. Political speeches, poems, songs, dances, and games are featured. Everyone in the community participates in the town square and outside municipal administrative buildings. Food is served to all, and most people dress in fine clothes out of respect for and pride in the new independent status of their nation.

Constitution Day, December 8, is another holiday that commemorates the creation of the Uzbekistan constitution in 1992. Most people treat this day simply as one to relax, and most workplaces and businesses are closed.

## 7 RITES OF PASSAGE

Parents with newborns visit relatives constantly for the first few months as they introduce the infant far and wide. Boys undergo circumcision at approximately age five, and a big celebration known as the *sunnat toi* occurs.

The most major event of adulthood is one's wedding. Called the *kelin toi*, this is the biggest celebration and rite of passage an individual ordinarily experiences. Marking the joining of families and the continuation of family lines, the *kelin toi* is marked by feasts, dances, music, and speeches that continue for days at various locations of both the groom and bride's families.

Death and funerals are marked by ritual wailings and outpourings of grief at the home of the deceased. Mourners come and cry purposely to empathize and commiserate with the bereaved. Afterward a local clergyman called a *molla* leads a procession of men or women (depending upon the sex of the deceased) to the local cemetery, where the closest relatives perform the actual burial after prayers are said.

## 8 INTERPERSONAL RELATIONS

It is customary for one person approaching another at rest or in a stationary position to offer the first greeting. This practice is typical of Karakalpaks and other Central Asian semi-nomads. Typically, the greeting is "*Assalomu alaikum!*" (Arabic for "May peace be upon you!"). The person being greeted responds with, "*Valaikum assalom!*" ("And may peace be upon you, too!") Then men will shake hands, using either one or two hands, depending upon their personal closeness or the respect they have for one another. Women typically hug one another after greeting. Ordinarily, men and women may exchange greetings, but there will be no further physical contact between them. A rapid succession of questions concerning health and family usually follows. A younger person typically bows slightly and may cover the lower part of the chest with the right hand to show reverence for an older person. Respect for older people, even those who are only a few years older, is an extremely serious matter in Central Asia. Another common gesture, associated with leave-taking, is for the person leaving to wrap his arms around himself as he nods to the person exiting. This is a gesture of deference and respect.

Visiting neighbors, friends, and family members is an essential part of Karakalpak life. It expands the concept of the home. Karakalpaks enjoy guests and, like other Central Asians, are always ready to welcome any number of guests into their homes. When visiting, Karakalpaks always bring presents or food. Neighbors constantly visit with one another to chat and snack, and sometimes to borrow food or bring food to families who may be in need. Dating, especially among teenagers and young adults, is rare among the Karakalpaks, save for in large cities such as Nukus. Ordinarily, parents keep a careful watch over the children's outside activities.

The health of the Karakalpak population began a steady decline more than 30 years ago. All of the problems have been associated with the drying of the Aral Sea, intensive irrigation for cotton, and the use of pesticides such as DDT and defoliants. The residues from these chemicals, along with the salts from the evaporating sea, have led to a variety of cancers, eye illnesses, internal organ poisonings, and so on. Hospital facilities are poorly staffed and stocked, and neonatal care is practically nonexistent. The major result of the ecological devastation is that Karakalpaks have moved away from the worst zones, especially near the sea, to other cities in Uzbekistan, including the capital Tashkent.

## 9 LIVING CONDITIONS

The economic deterioration of post-Soviet Karakalpak life has affected nearly everyone, and few people are able to afford more than the bare essentials such as tea, rice, vegetables, occasional meat, and the most necessary housewares and clothing. It used to be that people spent a great deal on wedding parties, but even those elaborate celebrations have become a thing of the past. Today most of the monies are spent on foodstuffs, and the diet is heavy in carbohydrates, including rice, bread, pasta, and potatoes.

The people of Karakalpakistan suffer from acute health problems due to the spread of fertilizers, pesticides, and defoliants that have been blown about from the dry parts of the Aral Sea bed. These chemicals were transported to the Aral via the Amu and Syr Rivers, the main sources for artificial irrigation throughout much of Central Asia. Diseases such as tuberculosis, hepatitis, and leprosy have increased at unprecedented rates among the Karakalpak compared to other peoples of the former Soviet Union. The latest statistics show that more than 70% of Karakalpaks suffer poor health and illnesses. Karakalpakistan once had the highest growth rate of any Soviet territory, but it now has the highest death rate.

Traditionally, Karakalpaks lived in flat, clay homes resembling those of southwestern Native Americans. Most homes had two or three central rooms with an attached kitchen area. The house would be surrounded by a wall of mud that enclosed a small garden plot. Within the enclosure, there was also space for the dome-shaped felt tent, known as a *yurt*. Yurts contain a wooden-lattice frame over which huge pieces of felt are thrown and then carefully arranged. They are ideal for summer living, because they keep people cool indoors and they keep mosquitoes away. The felt acts as a good insulator. Inside Karakalpak homes, some European-style furniture is found, but most people relax and sleep on thick, dense quilts called *kurpas*. Kurpas are often placed on raised platforms built into the home, and this is where a family will take its meals, listen to music, and watch television. Kurpas are easily moved and stored. Large

wooden cabinets known as *sandal* are used as storage chests. Sometimes the sandals are decorated with carvings or painted designs.

Buses have served as the chief means for traveling from village to village as well as between cities and villages. Developed rail travel also exists, but it is more expensive, less frequent, and does not make nearly the number of stops as buses do. Uzbekiston Havo Yolari is the new national airline company, and flights from major Uzbekistani cities such as Tashkent, Andijon, and Samarqand to Nukus are available, although they are too expensive for the average citizen. During a period when gasoline and spare parts are increasingly expensive and hard to come by, many Karakalpak people are turning to bicycles, piling into friends' cars, or riding on the backs of motorcycles.

## **10 FAMILY LIFE**

Karakalpak families are generally large, with anywhere from 4 to 10 children; however, most women prefer to have 4 or 5 children. Extended family living is common, and a family of four generations may reside in a single home. Beyond the extended family is the *koshe*, a loose organization uniting a number of families who claim descent from a common male ancestor four or five generations ago. The *koshe* enables people to claim a common territory. Several *koshe* make up an *uru*, a kind of

clan. One finds these formations on modern Karakalpak collective farms today. More than 20 clans claim origins to ancient tribes that are among the ethnographic groups of today's Karakalpaks. People marry exogamously, which means to people outside of their own clans. This may be very difficult for the brides, who often are treated as servants initially by their new in-laws.

The residence patterns after marriage are uxorilocal, which means that the bride moves in with her husband's family. This often makes the situation for young wives difficult as the husband's mother often rules her life with a strong hand. In the domestic sphere, women do most of the work that deals with cooking, cleaning, and rearing children. Women work outside of the home, too, in agricultural fields and as teachers, doctors, accountants, and so on. The working sphere for men is in agriculture and administration, but men are also usually responsible for most market shopping, the preparation of certain feast dishes, and fixing up or repair work that needs to be done around the house, especially electrical or carpentry work.

Girls marry early, usually from the age of 16, and these marriages are arranged through consenting sets of parents. Women are given dowries by their parents and are presented with all sorts of bride gifts by the groom's parents, including clothing, porcelain tea sets, jewelry, and household wares. Boys

and men are usually of the same age or a bit older than the girls they marry. Although polygyny (the practice of marrying more than one woman) is illegal, some men do it secretly. On the whole, this is rare because it costs a great deal. A second wife entails a great deal of extra economic support.

Karakalpaks may keep dogs or cats, but they don't treat them as pets. They are instead working domestic animals, serving the purposes of guard duty and pest control. Some men train eagles to hunt rabbits and other birds on the steppe and in the Kyzyl Kum (Red Sand) desert.

## 11 CLOTHING

Karakalpaks often wear a mix of traditional and European-style clothing. Boys do not wear shorts, even in the hottest weather. Girls never wear dresses cut much above their knees; nor will they wear sleeveless dresses. Some sort of headwear for both men and women is almost always essential due to the extreme temperatures and merciless sun. Men wear silk or cotton embroidered skullcaps (*duppi*) or thick sheep hair hats (the namesake *karakalpak*). Women wear long cotton or woolen scarves (*rumol*) that cover their heads, ears, backs, and shoulders. The usual foot coverings for older people are leather boots and rubbers (*etik va kalosh*), whereas younger people wear more fashionable sandals, sneakers, and dress shoes.

*Koilek* (a long, loose white shirt with an open collar and no buttons) and loose trousers tucked into boots compose the man's typical summer outfit. If men spend a great deal of time outdoors during the winter months watching cattle or flocks of sheep, they wear an enormously heavy *pustin*, which is a sheepskin and sheep hair overcoat with extremely long sleeves. Lighter, long quilted coats known as *sholpan* are worn around the home and outdoors when the weather is not quite so cold. These come in numerous colors and patterns.

Women wear the *kiimeshek*—white is worn by older women and red by the younger. This is a long dress with a head covering but no sleeves whatsoever. It has a cape-like quality and is made of wool with geometrical patterns. Tunic-like shirts and baggy trousers are also typical women's garments. Many Karakalpak women today wear the famously colorful *atlas* tie-dyed silk dresses in summer. These patterns and styles come from the Uzbeks.

## 12 FOOD

Historically, the Karakalpak diet is quite varied. People have tended to rely on grains, especially rice, sorghum, barley, and millet. From these grains, wonderful breads, noodles, and dumplings are made. Bread-baking (*Nan-iapish*) is done in the *tandir*, the ubiquitous outdoor, spherical oven that is used throughout Central and South Asia. Women stick bread dough on the internal curved clay walls of the fiery ovens, and when the bread is ready, it practically falls off the sides of the oven.

Fruits and vegetables, while not quite as plentiful in other oases areas of Uzbekistan, still include onions, carrots, plums, pears, grapes, apricots, and all kinds of melons and squashes. Pumpkin is often included in turnovers prepared in the *tandir*, and they are known as *samsa*. Milk products include yogurt, butter, cream, and curd cheeses. Cow's milk is the preferred type.

Meats have never been a part of ordinary daily fare but were eaten in honor of guests or during wedding and male circumcision parties. Boiled beef, mutton, and smoked horsemeat are

among the favorites. Beef and mutton are also ingredients in *palov*, which is the favorite dish of millions of Central Asians. The best *palov* recipes consist of rice, meat, carrots, garlic, steamed quinces, and mutton tail fat (*dumba*) (The fat ranks as a real delicacy.) In the past, Aral fish were very popular, and fried dishes included bream, grey mullet, wild pike, and sheat fish. Today breakfast is an important meal, but it is often very simple. Children often head off to school with tea and bread in their stomachs and occasionally cream, raisins, grapes, or a few almonds. Summer and fall breakfasts feature a richer variety.

Following is a recipe for *durama* (shredded mutton):

Use sorghum groats and mutton and boil separately. Next, the men begin carefully shredding the meat. Then carefully shred the boiled dumplings separately. After that, carefully combine your shredded foods. You are now ready to add a bit of broth to the top, and for extra flavor add *duzlyk*, a mix of chopped green onions and boiled fat.

As Muslims, Karakalpaks do not eat certain foods, with pork being one of the most prominent dietary restrictions. Other food taboos have little to do with religion, but more to do with customs. For example, a pregnant woman must not eat a rabbit's head for fear her newborn will have a harelip, and the consumption of camel meat for a pregnant woman may result in a longer than normal term pregnancy. Children must not use large spoons for eating liquids, as the result may be marriage to someone with a large and unattractive nose.

Karakalpaks eat most meals with their hands, so ritual washing beforehand is imperative. After three washings, one must use one's own hands to wipe off the excess water. To shake off the excess is a sign that one's hands are dirty and one is spreading uncleanness. No one should begin to eat until the eldest person at table begins.

## 13 EDUCATION

The Soviet educational system remains in place, so almost all children receive a high school education. Some then go on for technical and university training. Karakalpakistan has only one university, located in Nukus. Recently, *medresses*, schools for higher religious instruction, have opened. Most parents want both boys and girls to obtain higher education, or receive some technical training, if possible. A small percentage of parents would rather their girls get married and start a family directly after finishing high school. In recent years, Karakalpaks have received less and less education in Russian and more in English as their primary foreign language. However, the overall education decline since the Soviet period has led many to speak only Karakalpak or Karakalpak and some Uzbek.

## 14 CULTURAL HERITAGE

For a people who had no literacy until relatively recently, the Karakalpaks have a rich oral tradition of folktales and epic poems. Select and talented individuals would roam from village to village as bards, reciting stories and verses to music performed on the stringed instruments such as the two-stringed *dutar*, and the *qobyz* and *ghypzhek*, which were played with bows. In fact, music, singing, and storytelling were usually one in the same thing.

Two of the greatest traditional Karakalpak literary figures—Azhiniaz Kosybai uly and Berdakh Kargabai uly—have been

ranked among the greatest Central Asian litterateurs. Both poets lived during the 19th century. Azhiniyaz's famous work is *Boz-Atau*, a poem that recalls the capture and enslavement of the Karakalpak people at the hands of Khivan (of the Khivan Khanate or Kingdom, located in Khorezm) and Turkmen invaders. Berdakh-shair wrote many verses dedicated to the dark side of life that affected poor people. Modern writers have adopted Western literary genres such as novels, short stories, and plays.

Dance was never a part of Karakalpak cultural heritage, although the Soviets created a dance for them.

## 15 WORK

Prior to the Soviet period, the economy of the Karakalpaks was characterized primarily by agriculture, cattle herding, and fishing, depending on the terrain and climate of a particular area. Those living in the oases near the Amu river in the south practiced agriculture, which included cultivation of grains and fruits, such as rice, sorghum, wheat, millet, melons, and squashes. Those living out on the steppe and in desert regions kept herds of sheep, goats, camels, and cattle. Those living in the Aral region fished.

The majority of work in Karakalpakistan is agricultural, and almost 70% of the population is rural. The only real industrial jobs are centered around the cotton industry, and these jobs include ginning, baling, and pressing cotton seeds for their oil.

Silk manufacture also plays a significant role in the local agricultural economy. Farming people feed silkworms mulberry leaves from nearby trees. The worms in turn create cocoons, which people then bring to regional cocoon collection centers. Profits, depend on the quality of the cocoons. Silkworm feeding is very arduous. The insects require constant attention, and most people would rather not spend the long hours this work requires, but in today's economy every extra bit of income is vital. Death of the fisheries industry has led to rising unemployment.

Agricultural workers work 12 to 15 hours a day at harvest time. They will work seven days a week, no matter how inclement the weather. Work for the Karakalpaks is cyclical: during late fall, winter, and part of spring, work is minimal and takes place primarily around the household. Professionals and administrative workers work year-round and receive about six weeks paid vacation each year taken during July and August.

## 16 SPORTS

Sports for the young are similar to those of Westerners. Volleyball and soccer are popular at school, and boys also test their strength at a kind of wrestling that involves grabbing one another around the back of the neck and thigh. The object is to force one's opponent to lose his grip, and thus his balance. This is known as *Qurash*. Unfortunately, girls and women are rarely if ever encouraged in sports.

## 17 ENTERTAINMENT AND RECREATION

Movies and television are popular and have become dominated by imports from the West, especially action movies and Latin American soap operas. Karakalpak television tends toward the lackluster, with much in the way of folk, music, documentaries about refining cotton planting techniques, and long-winded talk shows with camera-shy scientific guests. Theatrical plays

on humorous or historical themes that are Karakalpak-centric are popular and well-attended.

Adults entertain themselves by getting together with friends at rap sessions known as *gap*, which means Ötalk. Ö Here men and women meet separately, perhaps twice monthly, to eat, play games, sing songs, catch up on community happenings, and offer advice to one another.

Pop music is as important to Karakalpak young people as it is throughout the world. Both international and local stars are widely appreciated. Iulduz Usmanova is one of the most popular young singers, and many of her songs deal with the human condition in contemporary society.

Children enjoy an elaborate game of riddles called *askiia*. Two children try to outsmart one another with a series of questions about a particular thing. One child starts with a description, and the other must ask relevant questions about what is being described or else be quickly lead astray by the describer.

## 18 FOLK ART, CRAFTS, AND HOBBIES

Some of the greatest traditional representations of Karakalpak folk arts are in the applied arts, especially in rug-making and jewelry production. Most rug materials are used to adorn yurts. A number of geometrical and antler-horn motifs reflect regional styles that in some way parallel the development of famous Turkmen tribal rugs. Karakalpak rugs are narrow and not usually used as floor coverings. They are hung as doors to the entrance of yurts and used as wall coverings or saddlebags. Vibrant blues, yellows, and greens are common colors.

Jewelry is mostly silver, consisting of various plaited or mesh patterns from which baubles dangle. Muted blue and red stones, such as lapis lazuli, are often inlaid. Necklaces, earrings, and bracelets are most common. Men never wear jewelry.

Men specialize as smiths, woodworkers (especially carvers), and shoemakers. Hat makers may be either men or women, but almost all sewn skullcaps are made by women. Some of the most revered craftsmanship goes into the woodcarving of house doors and on the top and bottom of building support beams. Central Asian wood carving distinguishes itself by unique floral and geometric patterns that require incredible dexterity and concentration on the part of the craftsmen.

Hobbies are common among Karakalpaks as they are among Westerners. Stamps, coins, pop star photos, and tape and CD collections are the stuff of young people's hobbies. Some young people have pen pals.

## 19 SOCIAL PROBLEMS

During the Soviet period, agriculture and fisheries were developed and emphasized to the detriment of cattle rearing and the raising of food crops. In agriculture, cotton became a major industrial cash crop at the expense of food crops and the area's water supply, much of which was used for the intensive irrigation required for cotton growing. During the 1950s, the Aral Sea provided about 7% of all the fish consumed in the USSR. Unfortunately, a non-diversified economy, combined with the intensity of the effort, has left Karakalpakistan in a ruined state. Few people have safe drinking water, and local food production is inadequate. Not only do people suffer from acute health problems associated with their poisoned environment and inadequately balanced diet, but alcoholism and drug addiction (primarily heroin) are growing problems for the middle aged and young, many of whom suffer from depres-

sion. Criminal activity—from petty theft to organized drug smuggling and mafia-style murders—is dramatically higher than it was before the breakup of the Soviet Union.

The Uzbekistani state is itself a police state, and the government is authoritarian. There is little tolerance for dissent with official views or for independent political activity. Since 2001 the Uzbek government has become increasingly repressive toward any expressions of economic or religious expression, and minority groups, such as the Karakalpak, face discrimination. For this reason, when Karakalpaks are among Uzbeks they often try to hide their identity. For the tens of thousands of impoverished Karakalpaks, the only real relief from the stagnation of the economy in Uzbekistan has been to seek work abroad; labor migration is the latest social phenomenon in this area. Unconfirmed reports indicate that more than half of the able-bodied population spends at least some part of the year working abroad, in countries such as Kazakhstan and Russia. The future of the population of Karakalpakistan—especially its cultural continuity—hangs in the balance now, and the near future does not seem to be particularly positive. The government of Uzbekistan has shown very little inclination to maintain the distinctiveness and territorial integrity of these people.

## 20 GENDER ISSUES

Because Karakalpak culture is similar to the Kazakhs, there historically has been slightly greater gender equity among Karakalpak men and women than one finds, say, among the Uzbeks. Nevertheless, older girls and women are hardly treated as equals by men. Domestic chores still remain the purview of women, and, as mentioned above, Karakalpak women fare poorly when first married, especially as they no longer live among their own clansmen. While most girls receive an education just as boys do, there is little expectation that girls should go on to university or enter professions, although one certainly finds more professional women in the capital Nukus as opposed to the countryside.

The historical and Soviet gender relations have given way of late because of the mass exodus of Karakalpak owing to labor migration. This process causes the breakdown of gender relations to some extent as women necessarily are more in control of what they do if they decide to go abroad for work. While migration gives women greater autonomy as well as wealth, its effects also can cause havoc within families, especially when children have to do without a mother and father for lengthy periods of time.

One phenomenon that has been on the increase since the late 1990s, and that we also see among the Kazakhs and Kyrgyz, is bride kidnapping. Just as the term implies, young women are taken by men in order to marry with no courtship or formal family arrangements. To some degree, this is due to the terrible financial predicament most people find themselves in. Weddings are costly affairs, and by kidnapping a young woman many of the expenses of traditional weddings can be avoided, and a family gets a new member for its own workforce. Still, young women can and do successfully resist these efforts. If the value of education continues to wane, it is unlikely to see any gains in gender equity soon.

# KARENS

**PRONUNCIATION:** kuh-RENS

**LOCATION:** Southern and eastern Myanmar (Burma); Thailand

**POPULATION:** 5 to 7 million

**LANGUAGE:** Pwo and Sgaw dialects of Karen; Burmese

**RELIGION:** Buddhism; animism; Christianity (Baptist, Catholicism)

## 1 INTRODUCTION

The Karens are a large and dispersed ethnic group of Southeast Asia. They trace their origins to the Gobi Desert, Mongolia, or Tibet. Karens settled, perhaps as far back as the 8th century, in Myanmar's southern Irrawaddy Delta area and in the hills along the Salween River in eastern Myanmar. In the 1700s, Karens also began living in neighboring Siam (now called Thailand).

There are numerous Karen sub-groups: the Pwo Karens (mostly delta rice-growers), the Sgaw Karens of the mountains; and the Kayahs (also called Karennis), Pa-Os, and Kayans (also called Padaungs), who live in the Karenni and Shan States of Myanmar. These varied people lived mainly in tribal societies, governed by chiefs or princes. They sometimes came into conflict with the Burmese (Burman) dynastic rulers, or with other ethnic groups inclined to wage war.

The advent of British colonization in the mid-to-late 19th century brought a new sense of security to the Karens. Contact with American and European Christian missionaries, and associated literacy and education, was welcomed. The British administrators recruited many Karens into their police and armed forces. When the Second World War came to Myanmar, those Karens became loyal guerrilla fighters for the Allies against Japanese occupiers.

As Britain granted Myanmar independence after the war, Karen politicians hoped for their own nation. Karennis, who had never ceded authority, enjoying "protectorate" status with the British Empire, also expected their nationhood to be recognized. Instead Karens, along with other ethnic populations, were to be absorbed into the new Union of Burma (renamed Union of Myanmar in 1989.) Problems began almost immediately, when troops of the predominantly Burmese (Burman) government killed Karen villagers. A Karen insurgency sprang up and rapidly gained momentum until it threatened to seize control of the capital, Rangoon. The Karen rebels were driven back by the government troops, and the military came to dominate the country, eventually taking over power in 1962, pledging to quell rebellion and unify the country by force.

Counter-insurgency tactics intended to subdue the rebellion by denying it support from civilians actually drove more Karens into joining the rebel Karen National Union, and other Karen peoples such as the Karennis and Pa-Os took up arms against the central military government as well. A consistent pattern of deliberate human rights violations by the government forces against the ethnic minority civilians has continued to this day, driving tens of thousands of Karens to Thailand as refugees and making the Karen conflict the world's longest running insurgency. Sporadic attempts to broker a ceasefire arrangement between the Karen National Union and Myanmar government never bore results, and low-intensity rural guer-

rilla warfare continued into the 21st century. General Bo Mya, the longtime chairman of the Karen National Union died at age 79 in 2006. In 2008 Padoe Mahn Sha, the rebel group's Secretary General was assassinated near the Thailand/Myanmar border.

## 2 LOCATION AND HOMELAND

Estimates of the Karen population of Myanmar vary greatly, as there has been no census in decades. Perhaps as many as 6 million Pwo and Sgaw Karens live there, along with some 150,000 Kayahs, 600,000 Pa-Os, 80,000 Kayans, and other related groups. Another 400,000 Karen-ethnic peoples have roots in Thailand, and thousands of others live there as refugees. In the early 21st century, Karen refugees have increasingly settled in the United States, with a large community coming to live in and around St. Paul, Minnesota.

Karen people live in several parts of southern and eastern Myanmar. The largest Karen population is in the Irrawaddy Delta area, a vast agricultural lowland whose main city is Bassein. On 2 May 2008, Cyclone Nargis devastated the Irrawaddy Delta region, killing tens of thousands of people, making over a million homeless, and flooding rice-growing land with saltwater. Myanmar's government delayed aid delivery after the cyclone, and there were reports that Karen villagers in the Delta were discriminated against in relief distribution.

Another significant region for the Karens is the eastern border with Thailand, where the Dawna Mountain Range stretches down to the Tenasserim River. The area along the Salween also is inhabited by Karens. Thaton, Papun and Pa-an are towns with major Karen populations. Kayahs and Kayans

live in a rugged, mountainous area where the main city is Loi-kaw. The Pa-Os live on the plateau of the southern Shan State. According to international human rights organizations, as many as 3,000 villages in predominantly Karen areas of eastern Myanmar were destroyed by Myanmar government forces between 1996 and 2006, with the civilian inhabitants hiding as internally displaced people or fleeing as refugees to neighboring Thailand.

### 3 LANGUAGE

The languages of the Karens are generally considered to be of the Tibeto-Burman family, and the main dialects are Pwo and Sgaw. Many Karen people in isolated hill areas remain illiterate, and those in the Delta region often can speak only Burmese. Their language does, however, remain a feature of Karen cultural pride. Baptist missionaries developed scripts based on Burmese for Pwo Karen (with 25 letters) and for other Karen languages. An old Pwo script known as “chicken scratch,” because of the shapes of its letters, was devised by Karen Buddhists as well.

In Sgaw Karen, an informal greeting (“How’s it going?”) is “*Madee leh?*” and a farewell is “*Leh mu mu*” (“Go pleasantly”). “Thank you” in Sgaw Karen is “*Dah bluet.*”

### 4 FOLKLORE

Karen folklore impressed early Christian missionaries with its similarity to the Book of Genesis in the Bible. The tribal mythology also told of the Karen language being kept in a book, which was lost in the mass migration south from “the river of sand.” There is a sense in their old stories of being preyed upon by other ethnic groups, and of wishing to regain some past glories through miracles or supernaturally gifted leaders. Sometimes Karens have become cult followers of messianic leaders who assure them that special clothing or tattoos will make them impervious from harm. In traditional animist, spirit-worshipping belief systems, the Karens must make offerings to natural forces such as “the Lord of Land and Water.” Even Christian Karens still have their skin adorned with tattoos as a form of magical protection. Buddhist Karens often wear amulets (small metal, stone, or clay Buddha images) around their necks.

The Kayan people are known for the neck rings made of brass worn by girls and women. Over time, more and more coils are added to the rings, which pushes the collarbones down, giving the appearance of an elongated neck (hence their Burmese name, Padaung, meaning “long-neck”). Kayan society is traditionally a matriarchy and the rings around necks, arms, and knees are sometimes explained as a traditional protection against tiger bites. Many Kayans have become refugees in recent years, and women with neck rings have been exploited as “freak show” tourist attractions in Thailand and Myanmar.

### 5 RELIGION

Most of the Pwo and Sgaw Karens are Buddhists or animists. There are also significant populations of Christians, mainly Baptists, and the Karen National Union leadership is largely Christian. Many Kayahs and Kayans are Catholic, and most of the Pa-Os are Buddhists.

There is considerable interplay between animist rituals and Buddhist practices among the Karens. Animists believe

in helpful female guardian spirits called “*ther myng khae,*” the “lord of land and water,” and local spirits, as well as beneficial and malicious ghosts. The Christians emphasize Bible study and prayer services with hymn singing. Villages tend to be predominantly one or the other of the three religions, while there is a mixture of faiths and houses of worship in the towns. Christian Karens have tried to convert the Buddhists and animists, and Myanmar’s military government has encouraged conflict between Buddhist Karens and the Christian-led Karen National Union.

### 6 MAJOR HOLIDAYS

The Karen New Year in January is celebrated as a national holiday in Myanmar and is often the occasion for traditional dances and music. Christian Karens celebrate Christmas with parties and caroling trips from village to village. Buddhist Karens hold festivals to mark their religious New Year (mid-spring) and the end of Lent (post-monsoon). Animists hold crop-protection festivals during the monsoon and after harvest.

### 7 RITES OF PASSAGE

Traditional Karen society has various taboos for pregnant women, such as not drinking liquor and not going to funerals. Births usually take place at home, assisted by family members or a village “midwife” (often a man). After the birth, the mother eats a special diet of rice and chicken, and the baby has strings tied around its wrists to protect it from evil spirits. Deaths in childhood and infant mortality are very common among the Karens. In rural areas there is little understanding of hygiene and mother-child nutrition, but Karen medical practitioners are working to spread information that can save lives.

Among Buddhist Karens, young boys often become novice monks for a short period of time. Teenaged Karen boys sometimes get tattooed with magical symbols to show their bravery and protect them from harm. Kayan girls may begin to wear coils of brass around their necks as young as six years old, and keep adding to the coils during their teenage years until the neck piece stretches as long as 10 in.

Karens have a variety of funeral customs, according to their religions. The animist Karens believe in an afterlife and dress the corpse to be accepted in the land of *Khu See-du*, the Lord of the Dead. The body may be cremated or buried. Buddhist Karens hold cremation ceremonies with prayers to ease the deceased person into the next incarnation. Christian Karens hold a funeral prayer service and bury the body, usually with a wooden cross to mark the grave.

### 8 INTERPERSONAL RELATIONS

For a polite greeting, a Karen holds his or her right elbow in their left hand, and shakes hands with the right. They use the same gesture to give or offer objects to other people. Introductions will include the honorifics Karens use with their names, usually “Saw” for men and “Naw” for women.

Karens are very hospitable and will expect any guests to eat with them and, if possible, stay overnight or longer at their house. In traditional Karen bamboo houses, sleeping quarters for guests are on the verandah.

Boys and girls usually meet in school, at Buddhist festivals, or in Christian youth groups. In traditional animist villages, funerals have been the scene of much boy-girl socializing.

*A Karen family, refugees from Burma, came to Thailand to escape the civil war and now reside in Thailand. (AP Images/Ben Bohane)*

When a young couple gets involved, love letters and secret messages are often exchanged. Sometimes a game is played between groups of boys and girls, with the boys asking poetic questions and the girls replying with a rhyming answer. The questions and answers are about romance, but are subtle and symbolic.

## **9 LIVING CONDITIONS**

Warfare and forced relocation campaigns by the Myanmar government have displaced much of Myanmar's Karen population. Villagers are compelled to leave their family homes and move to resettlement camps near government army bases (where they are used for forced labor), or they flee to forest areas or across the border to Thailand. As they leave their towns and villages, the rate of infection with malaria, typhoid, cholera, hepatitis, dysentery, and other diseases increases. Many Karens, especially children, die from such infectious illnesses. Several foreign non-governmental aid agencies assist Karen refugees in Thailand's camps, and some aid groups of Karen exiles and foreigners risk crossing the Thailand/Myanmar border to try to help displaced Karens hiding out inside Myanmar. Also, a few foreign aid organizations have attempted to reduce diseases such as malaria among Karens in the Delta region.

Malnutrition is widespread among the Karens, many of whom subsist on rice with chili pepper, and perhaps some fish

sauce and greens gathered from the forests. Anemia and vitamin deficiency are common. In addition to forced relocation, the widespread taking of farmers for forced labor by the government military has made it hard for them to grow their crops. Rampant deforestation as the Myanmar government sold off frontier teak forests to Thai logging firms has decreased the Karens' sources of wild game and edible and medicinal plants, as well as causing climate changes and landslides.

For many generations, the Karen people had lived in harmony with the forest. Only if teak trees reached a certain size could they be harvested. They were replanted and the logs were transported by elephants and river rafts. Forest-dwelling Karens built their houses from bamboo with some wood, on stilts with a thatched roof. The stilts are said to be especially high if it is the house of an elephant-owning family, so that the verandah can be used for loading and unloading the animal. In the bamboo houses, the family will sit and sleep on woven mats on the floor. In larger houses of teak or other wood, they sit on benches at tables and sleep on raised wooden beds with mosquito netting. Baths are taken, wearing sarongs, in a river or by pouring water from a village pump or an urn of rainwater. Sections of bamboo or plastic buckets are used to carry water from nearby streams for cooking and washing. Toilets are usually small pit latrines with a bamboo shelter.

The ox-cart is still the usual means of transport for goods and people, along with motorized river long-boats, motor-

bikes, and elephants. The Karens are well known for their work with elephants, which they capture, train, and use for hauling and transport. Pa-Os and Kayahs often raise ponies or mules for transportation.

### **10 FAMILY LIFE**

Traditionally, either a boy or girl can propose marriage, and the whole village is allowed a say in whether their marriage would be appropriate and not offensive to any spirits. Weddings are festive occasions when both the bride's and groom's villages come together. The bride changes from her unmarried woman's long dress to a married woman's two-part outfit. Marriage is considered to be for life, and among Karens of all faiths, adultery is considered extremely taboo—as an unnatural act that can bring catastrophe on the whole village. Karens have an average of four or five children, but infant and child mortality rates are very high.

Karen families keep dogs for hunting and as pets. Sometimes they have birds or baby forest animals such as squirrels or gibbons. Karen elephant tamers “adopt” one elephant, train it, and take care of it for life.

### **11 CLOTHING**

Many Karen men now wear mass-produced shirts and T-shirts with trousers, and women wear sarongs of factory-woven batik cloth. Younger women sometimes wear blue jeans or long skirts, especially if they are in a town or city. However, traditional Karen clothing is still popular, especially in mountain areas and for special occasions. Traditionally, Pwo and Sgaw Karens wear tunics and sarongs of homespun cotton, dyed red, blue, and black. Men and married women wear a loose tunic over a wrapped sarong. The women's tunics are often elaborately embroidered with colored thread and seed-beads. The men's are plainer with fringed hems. Unmarried girls wear simple long white dresses called “*hsay mo htoo*” in Sgaw Karen. Men and women often wear turbans, and Pwo men sometimes have very long hair worn in side swept ponytails or loose. Pwo and Sgaw women wear masses of bead necklaces and a great many silver bracelets on their wrists and upper arms.

The Kayans wear similar clothing to the Pwo Karens, but usually in natural off-white homespun, and the Pa-O people dress in black cotton tunics with trousers or sarongs. Kayahs are often known as Karennis (“red Karens”) because of their predominantly red homespun clothing. The women wear a short sarong wrapped up over one shoulder with a belt or sash and cords of thin black rattan wrapped around their legs.

### **12 FOOD**

Karens are known for eating a huge variety of foods, including jungle products such as snake, bat, monkey, grubs, bee larvae, ants, palm sugar, wild honey, forest herbs, frog, and lizard. Many types of birds and fish are consumed, and Karens raise chickens, ducks, pigs, cattle, corn, and pumpkins for food. A favorite dish for Karens in the forest is *takataw*, made by adding a handful of rice and some shreds of dried meat (such as venison or wild boar) to boiling water, letting it cook until the meat and rice are soft like porridge, and then adding some chopped vegetables.

Because of deforestation, crop confiscation, and rural displacement, nowadays many Karens have trouble obtaining enough nutrition for their families. Karen refugees and poor villagers

typically live on rice, chili peppers, some fish paste, and whatever greens they can gather. The Karens normally eat several helpings of rice at meals and for snacks. They eat mostly polished white rice now, which is less nutritious than red or brown rice. For flavoring, many people use monosodium glutamate powder, which comes from Thailand.

Karens often chew betel nut, which comes from a species of palm and is combined with leaves and lime paste; it is a mild stimulant and stains the mouth bright red.

### **13 EDUCATION**

During the British colonial period, missionaries in Bassein and elsewhere helped the Karens to start Christian-staffed village schools, which were supported by Buddhist and animist parents as well. Myanmar's military government took over those schools in the 1960s, changing to a national rather than Karen curriculum. In Karen National Union-held areas, a series of schools up to the secondary level was established, but most of these are gone now, as the rebels have lost most of their territory to the government. Even in refugee camps, the Karens try to have formal education for their children, but those makeshift schools, like the refugee health clinics, have mostly been destroyed in cross-border raids. Textbooks, often decades old, and school materials are in very short supply, and what schools there are tend to be understaffed. Another difficulty in Karen education is that the schoolchildren are often traumatized by their experience of human rights abuse and are malnourished and beset by malaria and other diseases. In recent years, some young people have been able to receive “backpack medical” or alternative technology training while in refugee camps.

### **14 CULTURAL HERITAGE**

Karen music includes traditional songs (many of which were love songs) and Western-influenced Christian hymns. In the rebel areas there are also political songs and military marching music played by drum and flute corps. Music that uses the repetitive beat of metal gongs accompanies such dances as the rice-planting dance and the bamboo dance, as well as wedding processions. In the bamboo dance, sets of 8 to 12 long bamboo poles are placed in a grid. Participants kneel on the ground and bang the poles together in time to the music, while dancers step in and out of the openings in the grid.

The Karens have several musical instruments of importance. The Karen drum is a symbol of the people's culture. It is round and made of cast bronze, often with figures of frogs and elephants decorating it. The Karens play a harp called the *t'na*, which has five or six strings and is tuned with pegs along the neck. Another stringed instrument is the large, wooden guitar-like *haw tu*. The *pa ku* is a bamboo xylophone played with hammers, and there are bamboo panpipes and mouth-harps of various sizes. Karens also use imported instruments such as guitars and electric keyboards, especially for Christian church music.

The Karen literary tradition is mostly in oral form. Folktales abound, often about a poor orphan boy who falls in love with a girl of a wealthy family. Books by Karens written since World War II include *Memoirs of the Four-Foot Colonel* by Smith Dun, a high ranking officer in the British Army, and *The Golden Book*, a Christian interpretation of ancient Karen prophetic poems. Kayan writer Pascal Khoo Thwe's *From the Land of Green Ghosts*, a memoir of his childhood and life

as a refugee won acclaim when it was published in Britain in 2003. Foreign aid workers have also written about their experiences with the Karens. Sylvester Stallone's 2008 movie *Rambo* was a fictional depiction of the war and human rights abuse affecting Karen villages. A 2002 Thai movie, *Blissfully Yours*, directed by Apichatpong Weerasethakul, featured a Karen refugee protagonist. *Total Denial*, a 2006 film documented the efforts of Karen environmental activist Ka Hsaw Wa, founder of EarthRights International, and his group's lawsuit against Unocal, a petroleum company doing business in Myanmar.

### 15 WORK

The Karens have long been rice farmers in wet, irrigated fields in the Delta or in hill fields in the mountains. To cultivate rice in the highlands, villagers burn down plots of forest. This system, called "swidden cultivation," worked well when populations were small and stable, and forests were hardly touched by logging. Now, with the forest size drastically decreased by voracious timber companies and large segments of the Karen population involuntarily on the move, this slash-and-burn method contributes to erosion and loss of wildlife habitat.

Karens also make their living through fishing in coastal areas, working in tin or wolfram mines, and gathering forest products like rattan and honey. There are some educated professionals among the Karens, but many of them live overseas as exiles. When they reach other countries, they often have to take any job available, in spite of their education.

### 16 SPORTS

Soccer, volleyball, and a type of kickball called *chinlone* are popular with Karen young people. Even in mountainous areas, Karen villages often have one flat open space where such sports can be played. Karens sometimes play a game they call *mahket* in which the large seeds from a vine are rolled to knock over other seeds. In places where television is available, soccer is the favorite spectator sport.

### 17 ENTERTAINMENT AND RECREATION

In their free time, Karens enjoy musical activities, movies and DVD shows, and taking walks around their town or village in the evening when the air cools down. People rise at or before dawn and often take an afternoon siesta.

### 18 FOLK ART, CRAFTS, AND HOBBIES

Karen women are known for their fine cotton weaving of clothing, blankets and shoulder bags. The weaving is usually done on a small loom set up with a strap that wraps around the waist at one end, but in some areas there are large wooden frame looms as well. The thread is dyed with natural or artificial colors, sometimes with a pattern tie-dyed in. Some woven items are now produced for overseas sale as a means for refugee women to support their families. The Karens also produce etched silver jewelry, baskets, and embroidery.

### 19 SOCIAL PROBLEMS

The Karens feel particularly persecuted after several decades of widespread abuse by military forces of the Myanmar government. The consistent pattern of human rights violations includes forced labor as army equipment porters, human mine-sweepers, human shields, and road and railway builders;

destruction of entire villagers; torture of civilians suspected of rebel sympathies; and massacres and executions without trial. Government military abuse of Karen women, particularly rape of village girls by troops, is especially common. These events have made the usually stable Karens into terrified nomads and have turned many into stubborn rebel fighters. Some are third or fourth generation guerrilla soldiers who have grown up knowing nothing but war. For many Karens, the highest priority has become finding a way to escape Myanmar as a refugee, and then obtaining resettlement from Thailand's camps to a third country, in order to start a new life with hopes of peace and education for their children. For others, staying close to their homeland is the goal, even if that means hiding in the forest and moving from place to place to avoid the Myanmar government's soldiers.

### 20 GENDER ISSUES

In Karen societies, other than the Kayan matriarchy, women have been considered inferior or subservient to men. Women did a great deal of difficult farm work, but had little status or decision-making power. This has been changing since World War II, as more Karen women have become educated and have taken noteworthy roles in fields such as teaching and health. Dr. Cynthia Maung, a Karen physician, is admired for her brave work in bringing medical care to remote, war-torn regions. Many older women have become village leaders when men have been taken away for forced labor. Refugee women's groups have been formed, emphasizing self-help programs and economic empowerment through the sale of weaving and other crafts. Although Karen society is rather conservative, some individuals who look or behave in ways unconventional to their gender behavior have been tolerated and accepted.

# KASHMIRIS

**LOCATION:** Kashmir in the northwest of the Indian subcontinent

**POPULATION:** Greater Kashmir c. 15 million (estimate)

**LANGUAGE:** Kashmiri (including the Dardi, Shrinaya and Khowar dialects)

**RELIGION:** Islam, Hinduism, Buddhism

## <sup>1</sup> INTRODUCTION

Kashmiris occupy the northwestern region of the Indian subcontinent. Until the mid-19th century, the term “Kashmir” referred only to the Vale of Kashmir lying between the Great Himalayas and the Pir Panjal range. Since then, however, it has been used to refer to a larger area that includes the Indian-administered state of Jammu and Kashmir (consisting of the Kashmir valley, Jammu, and Ladakh), the Pakistani-administered provinces of the Northern Areas (including Gilgit and Baltistan) and Azad Kashmir (“Free Kashmir”), and the Chinese-administered region Aksai Chin.

In the Indian Epic (15th-10th centuries BC), Kashmir is mentioned as a focus of Sanskrit learning and, by the first half of the first millennium BC, Kashmir was an important center of Hinduism. However, the Indian Emperor Ashoka, who converted to Buddhism, is credited with having founded the city of Srinagar, and Kashmir became a seat of Buddhist learning, with the Sarvāstivādan school dominating. East and Central Asian Buddhist monks are recorded as having visited the kingdom. In the late 4th century AD, the famous monk Kumārajīva, who helped take Buddhism to China, studied in Kashmir.

Islam was introduced into Kashmir in the 8th century AD, when Muslims started gaining high positions in the Kashmiri army. The Hindu ruler Chandrapida gave territory to the Arab military commander Muhammad Alafi to live along with his hundreds of followers. The employment of hundreds of Muslim captains in the armies of the Kashmiri Kings at the turn of the 11th century alludes to the presence of a sizeable Muslim population in Kashmir more than 200 years before the establishment of Muslim rule. By the beginning of the 13th century Muslims formed an important section of the Kashmiri population and had made great strides. However, the conversion of Buddhist ruler Rinchana Sadr-ud-Din (AD 1320–1323) to Islam marked a turning point in the history of Kashmir. He converted after having discussions with Hindu, Buddhist, and Muslim religious personages of the period. His conversion was followed by that of a large number of people including the prime minister, Rawanchandra.

During the 14th century, Islam was the dominant religion in Kashmir. The Muslims and Hindus of Kashmir lived in relative harmony, since the Sufi-Islamic way of life of ordinary Muslims in Kashmir complemented the Rishi tradition of the Hindu Kashmiri Pandits. This led to a syncretic culture where Hindus and Muslims revered the same local saints and prayed at the same shrines. However, some Muslim Kashmiri rulers were intolerant of Hinduism. For instance, the *Tarikh-i-Firish-ta* records that Sultan Sikandar Butshikan of Kashmir (AD 1389–1413) persecuted Hindus and issued orders proscribing the residence of any other than Muslims in Kashmir.

The Princely State of Kashmir and Jammu (as it was then called) was constituted between 1820 and 1858 and was “somewhat artificial in composition and it did not develop a fully coherent identity, partly as a result of its disparate origins and partly as a result of the autocratic rule which it experienced on the fringes of Empire.” It combined disparate regions, religions, and ethnicities: to the east, Ladakh was ethnically and culturally Tibetan, and its inhabitants practiced Buddhism; to the south, Jammu had a mixed population of Hindus, Muslims, and Sikhs. In the heavily populated central Kashmir valley, the population was overwhelmingly Sunni Muslim, however, and there was also a small but influential Hindu minority, the Kashmiri Brahmans or Pandits. To the northeast, sparsely populated Baltistan had a population ethnically related to Ladakh, but which practiced Shia Islam, while to the north, also sparsely populated, Gilgit Agency, was an area of diverse, mostly Shia groups. In the west, Punch was Muslim, but of different ethnicity than Muslims in the Kashmir valley.

The British acquired Kashmir from the Sikhs (who had annexed the state in 1820) in 1846 following the First Anglo-Sikh War and allowed the Dogra (Rajput) Maharaja Gulab Singh, ruler of Jammu, to purchase the state for a large sum of money. So, the princely state of Jammu and Kashmir, in which the majority of the population was Muslim, came to be ruled by a Hindu maharaja.

At the time of Independence in 1947 the princely states of India were to accede to either Muslim Pakistan or India. It was anticipated that, with a Muslim population of some 77% and a common border with Pakistan, the ruler of Jammu and Kashmir would accede to Pakistan, but when Maharaja Hari Singh, ruler of one of the most powerful princely states in India, hesitated, perhaps trying to attain an independent status, Pakistan sent Pathan and Pashto tribesmen into Kashmir in a guerrilla onslaught meant to frighten its ruler into submission. Instead, the Maharaja appealed to Louis Mountbatten for assistance and the Governor-General of British India agreed to provide this on the condition that the ruler accede to India. Once the Maharaja signed the Instrument of Accession, Indian soldiers entered Kashmir (only one road from Jammu provided access to the Vale of Kashmir) and drove the Pakistani-sponsored irregulars from all but a small section of the state. Pakistan responded by sending in its regular army, and a full scale war was fought between India and Pakistan (fortunately it did not spread beyond Kashmir). India approached the United Nations Security Council to mediate the quarrel. In a UN-sponsored cease fire, the opposing forces stopped in 1949 at what is now called the Line of Control, which is today the de facto border between Pakistan and India in Kashmir. Thus, although there was a clear Muslim majority in Kashmir before the 1947 partition and its economic, cultural, and geographic contiguity with the Muslim-majority area of the Punjab (in Pakistan) could be convincingly demonstrated, Pakistan was left with territory that, although basically Muslim in character, was thinly populated, relatively inaccessible, and economically underdeveloped. The largest Muslim group, situated in the Vale of Kashmir and estimated to number more than half the population of the entire region, lay in Indian-administered territory, with its former outlets to the Punjab, via the Jhelum valley route, blocked. The Indian Prime Minister Jawaharlal Nehru promised a plebiscite under UN supervision, which never happened because one of the pre-conditions for this was that Paki-

stan should withdraw all military forces from the region of Kashmir.

Every time India and Pakistan have fought a war since 1949 (i.e. in 1965, 1971), Kashmir has remained a focal point of the conflicts. Most recently, in 1999, Indian and Pakistani forces fought each other in Kargil, India, claiming that regular Pakistani troops and Kashmiri militants, in a plan devised by the then Pakistani Army Commander, General Pervez Musharraf, entered Indian territory in Kargil. Later in 1999, Musharraf seized power in Pakistan in a military coup and became president.

## 2 LOCATION AND HOMELAND

The heart of Kashmir is the Vale of Kashmir, an ancient lake bed lying between the Pir Panjal mountain range and the main Himalayas to the northeast. The valley is 85 mi (140 km) long, 20 mi wide, and set at an altitude of 1,620 m (5,300 ft) high. Drained by the upper Jhelum River, the valley is lined by 3,600–5,000 meters-high mountains (c. 12,000–16,000 ft) that help shelter it from the wet southwest monsoon. It is the centre of population for Kashmir. The main city in the Vale, Srinagar, is the capital of the Indian state of Jammu and Kashmir. The fertile alluvial soil yields rice, corn (maize), fruit, and vegetables, and the scenic mountains and lakes (notably Wular and Dal) used to attract many tourists to the region.

To the east lie the mountains of Ladakh and still further to the east is the Aksai Chin, physically a part of the Tibetan Plateau claimed by India but, since the 1962 Indo-Chinese War,

occupied and administered by China. To the south of the Pir Panjal range lie the lowlands of Jammu, an extension of the Indo-Gangetic plains to the foot of the mountains.

To the west of the Vale is Azad Kashmir (“Free Kashmir”), Pakistani-occupied territory separated from Indian-controlled Kashmir by the Line of Control. To the north lies the Northern Areas of Pakistan, Baltistan and Gilgit, mountainous terrain crossed by the Karakoram Mountains and containing some of the highest mountains in the world (K-2, at 6,811 m [28,251 ft] second only to Everest, and Nanga Parbat, 8,125 m [26,658 ft]), ranked the 9th highest peak in the world.

Kashmir occupies a region where Pakistan, India, Afghanistan, and China come together and thus has been strategically important in the history of the subcontinent. The 2001 Census of India reports the population of Jammu and Kashmir as 10,143,700 persons. Add to this perhaps 3 million people in Azad Kashmir, the population of the other areas of Pakistan that fall into “greater Kashmir” and factor in natural increase, and the population of greater Kashmir is close to 15 million people.

## 3 LANGUAGE

Kashmiri is a Dardic language, a linguistic sub-grouping belonging to the Indo-European Language Family. It is spoken primarily in the valley of Kashmir and has about 5 million speakers in India. The 105,000 or so speakers of Kashmiri in Pakistan are mostly immigrants from the Kashmir Valley to Pakistan. Traditionally, Kashmiri was written in the Perso-Arabic script but today is written in either the Perso-Arabic script (with some modifications) or the Devanagari script. It is the official state language of Jammu and Kashmir and is also one of India’s 23 national languages. Some Kashmiri speakers use English or Urdu as a second language, though in the past few decades Kashmiri has been introduced as a subject at the university and the colleges of the valley. At present, attempts are underway for inclusion of Kashmiri in the school curriculum.

Kashmiri has a literary tradition that dates back to the 14th century AD. Kashmiri literature consists largely of poetry particularly rich in the lyrics of life and nature, besides compositions in the mystic vein of both the Brahmanical (Shaivite) and Islamic (Sufi) traditions. There are works of modern Kashmiri literature, with Ghulam Ahmed Mahjoor (1885–1952) considered to be one of the greatest of modern Kashmiri poets, short story writers such as Akhtar Mohi-ud-Din, Hari Krishnan Kaul, and Amin Kamil, and contributions in the area of non-fiction by the likes of Jawaharlal Nehru.

## 4 FOLKLORE

As is to be expected, the diverse regions of “Kashmir” each have their own traditions of folklore. Thus, areas like Baltistan and Ladakh have their own folklore, with the former having a veneer of Islamization and the latter reflecting its Buddhist character. Similarly, the folklore in southern areas shows the influence of the Pakistani Punjab, with variants of the epic *Heera Ranjha*, in addition to ballads, folktales, folk music, and dance

In Kashmir proper, however, perhaps Hatim’s Tales are in a class by themselves in the folklore tradition. A spell-binding story-teller, Hatim Talawon was a legend in his lifetime. He recited, intoned, sang, and talked to his listeners in the towns and villages of the picturesque Kashmir valley. His tales were

drawn from history, mythology, traditional narratives, and original stories devised by Hatim himself. They were part of the Kashmir's oral tradition that survived in memory and by word of the mouth and were gathered and published by Sir Aurel Stein in 1918.

## 5 RELIGION

Over three quarters of Kashmir's population is Muslim, mainly following the Sufi customs commonly found in India. Kashmiri Muslims fall into four groups: the Sheikh, the Sayed, the Mughal, and the Pathan. The Sheikhs are by far the most numerous and are thought to be descended from Hindus. They have clans, which are called *krāms*. There appear to be few marriage restrictions according to *krām*, though many scholars suggest that the *krām* are descended from Hindu groups and, indeed, in some ways there appears to be a kind of hierarchical structure not unlike the Hindu caste system. The Dar boatmen and the Dums, gardeners and butchers by trade, are, for instance, viewed as being socially inferior. But, as some writers observe, the social system is very plastic, and prosperity and a little wealth soon erase humble origins. The Sayeds tend to marry among themselves. They are either holy men, in which case they are given the title *Mir*, or (and this includes the bulk of the Sayeds) they are agriculturalists, in which case the name *Mir* is used as a suffix. There are a few Mughals, who settled Kashmir at the time of Mughal rule and the Pathans, found in the southwest of the valley, and date to Durrani rule (18th century), or who were brought in to Kashmir by Maharajah Gulab Singh (1846–1857) for service on the frontier. The Pathans tend to speak Pashto, maintain their own dress, and carry weapons, although they are now rapidly assimilating into Kashmiri society.

Numerous Hindu groups are found in Kashmir, the most important of which are the Kashmiri Pandits (the first Prime Minister of an independent India, Jawaharlal Nehru, belonged to this community). Of the Brahman caste, the Pandits have played a long and important role in the history of Kashmir. Even though they follow Hindu rituals, the Pandits, for many years, co-existed with the Kashmiri Muslims in the spirit of *Kashmiriyat* (Kashmiri tolerance). Other Hindu castes, who tend to be found mainly in Jammu, include the Dogra Rajputs, the Gaddis (sheep and goat herders), Khatris (traders), and Thakkars.

It is often difficult to distinguish, from a religious perspective, between Kashmiri Muslims and Hindus. They respect the same saints and worship at the same shrines. However, another distinctive element in the population is Buddhism. The religion was introduced into the Vale of Kashmir when Ashoka conquered the region in the 3rd century BC and even though today Buddhists make up only just over 1% of Kashmir's population, the region has, in the past, been an important center for the development and spread of the religion. Numerous Buddhist monks from Kashmir were responsible for carrying Buddhism north of the Himalayas and into China and Tibet.

## 6 MAJOR HOLIDAYS

Major festivals in Kashmir reflect the mix of Islamic, Hindu, and Sikh peoples found in the region. Thus, typical Hindu festivals include Navaratra, or New Year's Day, which is celebrated on the first day of the new moon in the month of Chaitra (March/April). In every Hindu home, it begins with an invoca-

tion to Lakshmi, the goddess of wealth. In all families, a young lady lays a large plate with paddy, sugar, curds, fruits, walnut, coins, a mirror, ink-holder, and the New Year scroll and shows it to every family member, thus seeking the blessings of the goddess for moral and material development of members of the family. In April, Durga Ashtami, Ramnavami (Rama's birthday), and Baisakhi (the Spring festival) are observed. Holi, Diwali, and Dussehra, major festivals on the Hindu calendar, are also kept in Kashmir. Some festivals are observed by both Hindus and Muslims. For instance, the anniversary of Rishi Pir, a Hindu saint, held on the fifth day of the full moon of Baisakhi at his home in Srinagar is attended by Muslims also.

The Navroz festival of the Shia Muslims falls a week after the Hindu New Year's Day. The Urs (or Ziarats) is a typical Kashmiri festival. It is held annually at the shrines of Muslim saints on their death anniversaries. There is a saying that goes, "It snows when the Urs of Meesha Sahib is held, it is windy when the Urs of Batamol Sahib takes place, it rains on the occasion of the Urs of Bahauddin." These Urs are popular despite the rigors of weather. They are celebrated in different parts of Srinagar, not only by Muslims but also by Hindus and Sikhs. An interesting feature of the Urs celebrations at Batamalo (the locality in Srinagar named after the saint Batamol Sahib) and in Anantag (Rishi Mol's anniversary) is that both Muslims and Hindus abstain from taking meat during the course of the festival.

Muslim festivals that are celebrated nationally include Shab-i Mairaj, which is followed by Shab-i-Barat, Muharram, the month of Ramadan, and the Ids. The dates of these festivals change in accordance with the appearance of the moon and shift by 10 days each year. During the night of Shab-i-Barat the Muslims keep vigil. Legend goes that on this night the Holy Prophet visits each house and relieves the pains of suffering humanity.

The Birthday of Guru Nanak Dev in November is a very auspicious day for the Sikhs of Kashmir. They visit Chati Patshahi near Hari Parbat. Epistles from the Granth Sahib (the Sikh scripture) are recited throughout the day.

A typically Kashmiri festival known as Khichri Amavasya falls in the month of Posh (December/January). Kashmir is believed to have been the abode of Yakshas in ancient times. The Yaksha spirit is invited to relish *khichri* (rice cooked with dal and ghee). Kashmiris leave *khichri* out along with a fish, and it is believed that during the night the yaksha comes and tastes the food.

The festival cycle in other parts of Kashmir differ slightly. Thus, in Jammu, in addition to the usual festivals celebrated by Hindus throughout India (e.g. Holi, Diwali, Dussehra), the Lohri festival, marking the culmination of the cold season, is celebrated with zest every where. The Gurupubs, birthdays of the Sikh saints, are celebrated in the region, as is the anniversary of the birth of Buddha. In Ladakh, the festival calendar is, naturally, dominated by Buddhist festivals, such as the one held at Hemis, near Leh.

## 7 RITES OF PASSAGE

The rites of passage of the Kashmiris follow those of the specific community to which an individual belongs. Thus, Muslims, whether in Pakistani or Indian Kashmir, follow the outlines of ritual prescribed by Islamic law (the *Shariah*), but they often combine these rites with local customs. Newborns are sancti-

Kashmiri Muslims row on the waters of Dal Lake in Srinagar, Kashmir. (Rouf Bhat/AFP/Getty Images)

fied by prayer and undergo head-shaving and naming ceremonies. All males undergo the ritual of circumcision (*sunnat*). Among some Muslims, a ceremony known as *Bismillah* marks the beginning of a child's education in religious matters. Ceremonies associated with death and burial combine practices from the *Shariah* with local customs. The body is ritually bathed and wrapped in a white shroud in preparation for burial. The body is brought out of the house and the face of the deceased person is shown to relatives and neighbors. Mourners, led by a priest, say prayers over the body, which is then taken in procession to the graveyard and buried facing Mecca.

Hindus follow Hindu practices. Thus, for the Kashmiri Pandit, life is ruled by the Hindu concept of *dharma* (known locally as *bhattil*). In the name-giving ceremony, the donning of the sacred thread, the marriage ceremony and the various stages of a householder's life, the Pandit is governed by the Hindu scriptures. At the time of death, the body is washed with water to which some Ganges water has been added, cotton balls are inserted into the ears and nostrils, and a coin is placed at the lips. The corpse is placed in a white shroud, which is tied with a thread, and the body taken in procession, led by the eldest son, to the cremation grounds to be burned. Various rituals are performed on certain days after the death.

## 8 INTERPERSONAL RELATIONS

Again, greetings in Kashmir are determined by the ethnic communities to which the individuals involved belong and

whether the context is formal or informal. In the former case, the response is virtually pre-determined. Thus, a Hindu greeting a Hindu would, as elsewhere in India, say "namaste" or "namaskar," while bringing the palms together in front of the body and making a slight bow. The reply would be the same. A Hindu meeting a Muslim, and *vice versa*, would say "ādāb" ("brother") and expect the same response. A Muslim greeting a Muslim would use the traditional greeting "Salaam Aleikum" ("Peace be with you"), to which the response should be "Vailaikum Salaam" ("And unto you be peace").

But in an informal context, the usual greeting is "vāray chivā" ("Are you fine?"), which indicates concern about the health and prosperity of the individual. It can elicit a variety of responses, which, from elders, usually involves the invocation of blessings from the Almighty, gods and goddesses, and saints.

## 9 LIVING CONDITIONS

Living conditions vary according to where in Kashmir one lives. In Ladakh, for instance, houses are built of mud brick and are similar in appearance to houses in Tibet, reflecting the strong Tibetan cultural influence in the region. In Baltistan, the villages are in clusters of huts, usually located where-ever flat land exists near sources of water and built of stone and wood. In many hamlets, there is a tower three stories high. Most of the huts are diminutive, with rooms only eight or ten feet in diameter and an entrance door two feet wide and two-

and-a-half feet high. In the lower rooms one can barely stand up, but there is a notched pole used as a ladder to an upper room, which is less cave-like. Many of the upper rooms are made in wattle, sometimes plastered over with clay.

In the Kashmir Valley, however, the typical dwelling in a village is a two or three-storey house made of wood and unburned brick with a thatched roof (the region is relatively dry, so keeping out rain is a minor issue). In Srinagar and in urban areas, modern construction uses fired brick and corrugated iron for roofs. The dimensions, decoration, and quality of materials used in the construction of the rooms vary according to socio-economic status. People generally prefer to keep cattle in the lower rooms at night (as protection against the weather), though it is not uncommon, where large numbers of the animals are involved, to see cattle sheds and stables scattered around the landscape. The room in which cattle and other livestock are kept is called *gan*. People live on the upper floors, but generally do not make use of furniture and sit and sleep on the floor, which is covered with rugs or carpets. Houses are not heated, but Kashmiris use a *kangra* (firepot filled with burning charcoal) for individual heating. This is worn under one's clothes and, as might be expected, the potential for accidental burns is considerable.

## 10 FAMILY LIFE

Customs regarding family life also vary according to one's community. Thus, the life of most Kashmiris is governed by Muslim law, while Kashmiri Pandits are ruled by Hindu law, and Sikhs, Buddhists, and Christians follow the dictates of their religion. Traditionally, the joint extended family was the norm, but the situation is changing, with the nuclear family becoming more common. The majority of the people in the valley are Muslims, many of them being converted Hindus, and while they have no formal caste system, the custom of the payment of a dowry (*mehar*) is common. It is usual among the Muslim peasants to marry a daughter to a near relative (this keeps property within the family) but, if this is not possible, a go-between, or *Manzimyur*, is used. Muslim (and Hindu) laws of inheritance do not allow women to inherit land or property.

## 11 CLOTHING

The traditional dress of Kashmiris is simple, and there is not much difference between that of a man or a woman. Both wear a *phiran*, a kind of gown that is made of wool during the winter and of cotton during the summer. Muslim and Pandit men wear the gown differently, while the *phirans* of Muslim women may be brocaded on the chest with attractive designs. Hindu women wear a cotton *lungi* around the waist over the top of the *phiran* and the outfit is completed by headgear, a brocaded cap (*qasaba*) in the case of Muslim women, or a woolen *taranga* by Hindu women. Men often wear a brocaded cap, though typical headwear for the modern Kashmiri male is the *qaraguli* (karakal) cap made of lamb's wool, the kind often sported by Jawaharlal Nehru. A *kurta*, *pyjama*, or *shilwar* is worn by all under the *phiran*. In winter, the personal *kangra* is worn under the *phiran* for warmth. Of course, modern western clothes are becoming quite popular and are commonly seen in urban areas and amongst the young.

## 12 FOOD

Kashmiri cuisine is famous for its vegetarian as well as non-vegetarian dishes. There are also variants between Hindu and Muslim cooking. Traditional Kashmiri food includes *dum aloo* (boiled potatoes with heavy amounts of spice), *tzaman* (a solid cottage cheese), *rogan josh* (lamb cooked in heavy spices), *zaam dod* (curd), *yakhayn* (lamb cooked in curd with mild spices), *hakh* (a spinach-like leaf), *rista-gushtava* (minced meat balls in tomato and curd curry), and, of course, the signature rice that is particular to Asian cultures. Even Kashmiri Pandits, who are Brahmans, enjoy mutton and fish. Muslim cooking makes heavy use of onions and garlic, though this was traditionally avoided by the Kashmiri Pandits. Meat is almost always cooked in curd. The traditional *wazwan* feast involves cooking meat or vegetables, usually mutton, in several different ways.

Alcohol is not widely drunk in Kashmir. There are two famous teas from the region: *nun chai*, or salt tea, which is pink in color and popular with locals and *kahwah*, a green tea made with spices (cinnamon, cardamom, and saffron), nuts, such as almonds or pistachios, sweetened by sugar or honey, and presented without milk.

## 13 EDUCATION

Educational standards vary throughout Kashmir. In Pakistani areas, distance, the lack of quality schools, and the dominant socio-cultural ethos of the tribal peoples in the area result in low levels of literacy and generally poor levels of education. Some authors have suggested the influence of Islamic fundamentalism has had a negative effect on education, especially for women. In the Indian state of Jammu and Kashmir, where the 2001 census return was notoriously unreliable, only 60% of the men were recorded as being literate, with the corresponding value for women being 45%. This, of course, is not only below the average for India as a whole, but it also masks considerable variations between urban areas and the more remote outlying districts.

## 14 CULTURAL HERITAGE

Communities in the different regions of broader Kashmir have their own cultural heritage. Thus, for Ladakhis, the devil dance, performed by monks dressed up in elaborate costumes at the time of Buddhist festivals to drive away evil spirits, is part of the heritage of Tibetan, or *Mahāyāna*, Buddhism. Muslims living in Baltistan or Gilgit share the views of honor and proper behavior that are held by tribal peoples in the north west of the Indian subcontinent.

However, in Kashmir proper, i.e. the Vale of Kashmir, history tends to shape the cultural heritage of the people. Thus, up to the 14th century, Buddhism and Shaivism dominated the Kashmir region and strongly influenced the region's early cultural history. The role of Buddhist monks from Kashmir in carrying the religion to China has already been noted. Kashmir has a rich architectural tradition that dates to this time, as well as having its scholars contribute to Sanskrit manuscripts (e.g. Kalhana's *Rajatarangini* and Somadeva's collection of stories called *Kathasaritsagar*). Even today, Shaivism *bhakti* (devotionalism) and *Tantrism* form a distinct undercurrent in the ritualistic worship of the Pandit community. The arrival of the Muslims in the early 14th century and the conquest by the Sikhs in the 19th century also added distinctive elements

to the cultural heritage of Kashmir. Though some writers see *Kashmiriyat* as a myth, the peaceful co-existence of four of the world's great religions (Buddhism, Hinduism, Islam, and Sikhism), at least until the communal troubles that followed Partition, is seen by many as one of the great achievements of Kashmiri culture.

The existence of branches of the Silk Road across Kashmir is another aspect of the region's history. Not only did silk, ivory, gold, and gems move along this great Trans-Asian highway linking Rome with distant China, so did art, culture, and religion. Buddhist and Christian missionaries traveled along the Silk Road into Central Asia, as did aspects of Kashmiri art and sculpture. Many centuries later, Kashmir played a significant role in the "Great Game," that reflected British concerns that Russia would move into the region. The modern version of the Great Game, reflecting Kashmir's strategic location, is seen, perhaps, in the continued confrontation of India and Pakistan in Kashmir.

## 15 WORK

The traditional occupations of the Kashmiri were agriculture, tourism, and handicrafts. However, overseas tourism has virtually dried up since the communal troubles began in Kashmir in the 1980s and even though tourists from India still visit the region, the arts and crafts industry has basically been eliminated from Kashmir. Foreign tourists used to stay on houseboats on Lake Dal, but no longer. One consequence is that now Kashmir's economy is centered around agriculture. Traditionally, the staple crop of the valley is rice, which forms the chief food of the people. In addition, Indian corn (maize), wheat, barley, and oats were also grown. Given its temperate climate, Kashmir is suited for crops like asparagus, artichoke, broad beans, beetroot, cauliflower, and cabbage. Fruit trees are common in the valley and the cultivated orchards yield pears, apples, peaches, and cherries, and a variety of nuts.

Agriculture in Kashmir faces many problems, not the least of which is the average size of land-holdings. One result of the inheritance system is extreme fragmentation of the land with the average land holding in Indian-administered Jammu and Kashmir amounting to 0.66 hectares (just over 1.6 acres), a figure that has declined in recent decades. According to the 2001 Census of India, 49% of the labor force in Kashmir is either a cultivator or agricultural laborer, even though only 5% of the land in Kashmir can be farmed.

In Pakistani Kashmir, virtually the entire population is engaged in subsistence agriculture, cultivating whatever flat land is found near in the river valleys, or terracing the land along the lower portion of the valleys and bringing water from the slopes to the fields using small scale, home-built irrigation systems. With the land in most of Pakistani Kashmir occurring at higher altitudes, the crops grown (and the length of the growing season) reflect the climatic environment. These include maize, barley, potato, buck wheat, and millet, while the mainstay of the livestock population are goats, sheep, and types of cattle such as the yak or dzo that are adapted to high altitudes.

In Ladakh, subsistence irrigated agriculture similar to that of Tibet is practiced, while agriculture in Jammu mirrors that found on the nearby Indo-Gangetic plains.

## 16 SPORTS

Although polo is popular in Baltistan, and Gilgit and Ladakh have their devil dances, there is no sport that is unique to Kashmir.

## 17 ENTERTAINMENT AND RECREATION

Before hunting was banned throughout India by the government, hunting (*shikar*) was popular in Kashmir, with groups coming in from around the world to shoot local wildlife. In the Vale of Kashmir, the Bhands or minstrels are professional actors and singers (and beggars), who entertain the people, and they even travel as far afield as the Punjab to perform before Kashmiri audiences. Religious festivals are a main source of entertainment among the different Kashmiri communities. For instance, in Ladakh, the Buddhist devil dances performed at various festivals are popular. During the summer, young children in Kashmir play *Zangtār* and *Guti*, the latter involving tossing coins or nuts into a shallow hole in the ground (the *guti*) from a distance of 10–12 feet. Kite-flying is a popular pastime during certain seasons of the year while, as everywhere in India, Hindi movies are popular in urban areas.

## 18 FOLK ART, CRAFTS, AND HOBBIES

Kashmir is renowned for its arts and crafts the world over. It is known for its textiles, carpets made from silk or wool, which take families months to make. It is also known for its lacquered *paper maché* work and painting on paper maché goods or on wood. Kashmiris are also known for their delicate wood carvings. An entirely indigenous form of woodwork, known as *khatam bandi*, is used for the decoration of ceilings and is usually done in panels of pinewood in various geometrical designs fitted together in grooves. Wicker objects, *pashmina* shawls (made from fine cashmere wool that comes from the *pashmina* goat), embroidery, wooden boxes and toys, metalwork, and fine woolen goods round out the handicrafts for which Kashmiris are famous.

One problem facing traditional craftsmen in Kashmir is that with the decline of tourism due to the unrest in the state, they have difficulty accessing markets, and many have had to abandon their traditional occupations. Some have adjusted by moving to places such as Delhi where they do have access to tourists and continue in their traditional activities, but clearly this is not an ideal solution.

## 19 SOCIAL PROBLEMS

An ongoing problem in Kashmir is the continued conflict between Muslim and Hindu and the partition of Kashmir into Pakistani and Indian territory. With a majority Muslim population, any plebiscite would see Kashmir opt for Pakistan, but India cannot afford to see Kashmir accede to Pakistan. However, elections held in Indian Jammu and Kashmir brought to power the popular Muslim leader Sheikh Abdullah Muhammad, who with his party, the National Conference, by and large supported India. The elected Constituent Assembly met for the first time in 1954 and confirmed the accession of the state to the Union of India. The state's own Constitution came into force on 26 January 1957 under which the elections to the State Legislative Assembly were held for the first time on the basis of adult franchise the same year. This Constitution also ratified the state's accession to India. However, this was not recognized

by Pakistan, which has continued to press for a plebiscite to ascertain the wishes of the people.

Though sporadic violence occurred before this, 1989 is usually the year assigned the beginning of the insurgency in Kashmir. This coincides with the end of the Afghan-Russian conflict and saw Afghan *mujahideen* fighters enter Kashmir (India claims with active Pakistani support). Since then violence has increased significantly in strength and separatists have carried out attacks on Indian civilians and Indian army installations in response to what they see as an Indian army of occupation. Estimates of deaths during the conflict vary from 35,000 to more than 85,000, with 1994 representing a peak in militancy and over 6,000 incidents in that year. Nongovernmental organizations (NGOs) have reported numerous human rights violations by both sides in the conflict. Some groups, such as the All Parties Hurriyat Conference and the Jammu and Kashmir Liberation Front, demand an independent Kashmir. Other militant groups, such as Lashkar-e-Toiba and Jaish-e-Muhammad (organizations that no longer operate under these names after they were banned by the Indian and Pakistani government) favor a Pakistani Kashmir. Of the larger militant groups, the Hizbul Mujahideen, a militant organization based in Indian-administered Kashmir, is believed to number thousands rather than hundreds. Several new separatist organizations have also emerged.

In 2005 a 7.6-magnitude earthquake hit northern parts of Pakistan and India and left an estimated 80,000 people dead and more than 3 million homeless. The epicenter was located near the city of Muzaffarabad in the Pakistani region of Azad Kashmir. Areas of Pakistan's North-West Frontier Province (NWFP) and India's Jammu and Kashmir state were also heavily damaged by the quake. Many countries, international organizations, and nongovernmental organizations offered relief aid to the region, in the form of donations as well as supplies of food, medicines, tents, and blankets, and rescue and relief workers were sent to the region, along with their equipment, including helicopters and rescue dogs, from different parts of the world. However, the remoteness of many areas affected by the earthquake and the onset of winter in the mountains (the earthquake occurred in early October) hampered relief efforts and no doubt led to even more casualties, who were not able to access aid or medical supplies.

Violence continued in Kashmir in 2008. Commentators saw the pitched battles between civilians and the police in the Kashmir Valley in June 2008 and the paralysis of the administration as a throwback to the turbulent 1990s, when Kashmiri resentment against the Indian government's policies led to a virtual civil war in Kashmir. The immediate cause of this violence was the transference of some forest land to a Hindu shrine by the Kashmiri government.

The civil unrest in Kashmir has virtually seen an end to Kashmiri tourism and has impacted the market for the sale of arts and crafts.

## 20 GENDER ISSUES

Kashmiri women, in addition to having to face restrictions imposed by their own Hindu and Muslim communities, have had to deal with the civil and communal unrest that has affected the state since the 1980s. Militant Islamic separatist guerrillas have tried to ban beauty parlors, cinema halls, and wine shops and demanded that Muslim women follow the Islamic dress

code and wear *burqas* or the veil. The Indian Army is viewed by many in Kashmir as an army of occupation, and it has been accused of numerous violations of human rights. In fact, an Islamic women's separatist group said it would begin training Muslim women in martial arts and called on them to carry daggers to fend off sexual attacks by Indian soldiers. More and more Kashmiri women are being seen as *mukhbirs*, or informers, and becoming targets of the militants.

Thus, not only do women in Kashmir have to live in dominant patriarchal social systems, they have to face poverty, illiteracy, arranged marriages, dowry deaths, a lack of inheritance, and economic discrimination. In addition, they have to live with the depredations of both soldiers of the Indian army and the militants in Kashmir in the context of the ongoing civil unrest.

# KAZAKH CHINESE

**PRONUNCIATION:** kuh-ZAHK chigh-NEEZ

**ALTERNATE NAMES:** Wusun, Turks, Geluolo, Huihu, Kerei, Naiman

**LOCATION:** China; Kazakstan; Uzbekistan; Turkmenistan; Kyrgyzstan; Tajikistan

**POPULATION:** 1.25 million

**LANGUAGE:** Kazakh

**RELIGION:** Islam

**RELATED ARTICLES:** Vol. 3: China and Her National Minorities; Kazaks

## <sup>1</sup>INTRODUCTION

The Kazakh have common historical origins with the ancient tribes of the Wusun (2nd century BC–2nd century AD), Turks (mid-6th century), Geluolo and Huihu (10th-12th century), and Kerei and Naiman (12th-13th century). They all lived in the Ili River Valley and areas around the Lake Issyk, which had been governed in the past by the central government of China. Up to the present, there are still tribes of Kazakh that retain the ancient tribal names. In the 13th century, conquering a number of countries in central and west Asia, Genghis Khan had established quite a few Khan dependencies. Later on, some of the tribes moved to the Talas River Valley and established there a Kazakh Khan. After the 17th century, a part of the Kazakh was conquered by Russia. The other part became one of the national minorities of China.

## <sup>2</sup>LOCATION AND HOMELAND

The Kazakh live in the northern part of Xinjiang Uighur Autonomous Region, including Ili Kazakh Autonomous Prefecture, Mori and Burqin Kazakh Autonomous County. The rest of them are distributed in Aksay Kazakh Autonomous County. The population was 1.25 million in 2000.

## <sup>3</sup>LANGUAGE

The Kazakh language belongs to the Altaic family, Turkic group. There is not much difference among the various dialects. The Kazakh living in the above-mentioned countries could have a lively conversation without any serious language problems. The name Kazakh was self-given, meaning “free man,” “refugee,” and “separator.” Kazakh writing, based on Arabic characters, has been used since the last century. Owing to the difference between the phonetic systems of Arabic script and Kazakh language, the People’s Republic of Kazakh of the former USSR reformed the writing system quite a few times, based on Arabic (1917 and 1924), based on Latin (1929), and based on Russian (1940). In China, a new writing system based on Latin was designed in 1959, but it proved unsuccessful. In 1982, they reverted to their original writing system.

## <sup>4</sup>FOLKLORE

The folklore of the “White Swan” has been so widespread that some believe that it was created by the Kazakh. It was said that there was an orphan shepherd who dreamed one night of a white swan coming from the sky singing and dancing before him. The next day, his dream came true. Unfortunately,

a windstorm appeared from nowhere and dispersed all his sheep. With the help of the swan, he finally found them. In fact, he was also rescued by the swan. To his surprise, the swan turned into a beautiful lady, who married the shepherd and gave birth to a number of children, the Kazakh. A similar story states that a general was rescued by a white swan from the desert. It turned into a beautiful lady. They married and had a son who grew up, married, and had three sons—the ancestors of the three largest tribes of Kazakh.

In addition, a myth describes how the Kazakh God of Creation made a man and a woman from mud. But, a demon thwarted their marriage. The God shot the demon with his bow and arrow, thunder being the sound of his shooting and lightning being the sparks flying from the arrows. The God planted the Tree of Life. Every leaf represented a soul. A new leaf appeared on somebody’s birth, and a fallen leaf indicated somebody’s death.

## <sup>5</sup>RELIGION

The Kazakh believe in Islam, although remnants of primitive shamanistic beliefs and reverence for the fire and sun still exist. In pastoral areas mosques are few, but the Muslim priest, called *mulla*, should be invited to recite scriptures on festivals, weddings, and funerals, or in case of illness. Of course, he will be paid.

## <sup>6</sup>MAJOR HOLIDAYS

The main holidays of the Kazakh are related to their religion. According to Islamic stipulations, December 10 (Islamic calendar) is the Corban Festival. The word *corban* in Arabic means sacrificial offering. When the day comes, the Kazakh kill oxen or sheep as sacrifice. They all dress up, extend greetings to each other, entertain guests, and present gifts to their friends or relatives. A variety of traditional sports will be held. The Festival of Fast-Breaking (Lesser Bairam) is the day ending the Ramadan. In September (Islamic calendar) every year, every adult Kazakh abstains from food and drink from daybreak to sunset. The beginning and the end of the month of fast depend on the new moon being visible. On the next day, all festive activities will be held in a lively atmosphere. The Nuoluzi Festival in January (lunar calendar; Western calendar, between January 21 and March 19) is also ceremonious. It is similar to the Spring Festival of the Chinese. To ring out the old year and ring in the new, every family will take *kuji*, a meal made of seven ingredients including beef, barley, wheat, and milk products.

## <sup>7</sup>RITEs OF PASSAGE

The birth of a baby is a particularly happy event for the Kazakh and a reason to entertain guests at dinner. The Kazakh, men and women, are adept in horsemanship; horsemanship, therefore, plays an important role in their festivals. One particular festival, extremely popular with the young people, is called “Women’s Pursuit.” Young men and women, each mounting his or her own horse, stride slowly in pairs toward a designated place; the lad is allowed to tease the girl whom he likes, and she should not get angry. But, as soon as they arrive at the designated place and start to get back, the girl pursues the lad in mock revenge. The game is designed to foster love between the two.

The Kazakh funeral follows Islamic stipulations. The body should be washed with clean water, wrapped in white cloth,

and buried three days after death. On the seventh day and the fortieth day after the funeral, sacrificial offerings are mandatory. The horse used by the deceased during his or her lifetime is not allowed to be mounted any longer. The horse tail should be cut after the master's death. The horse should be killed one year later for sacrifice. When Kazakh migrate to new pasture lands, the hat and clothes of the deceased should be put on horseback and moved with the family. The women of the household sing a mournful song when they pass each nomadic colony.

## **8 INTERPERSONAL RELATIONS**

Long-separated friends usually embrace when meeting again. Usually, they talk about their livestock first, then the families greet each other. The Kazakh are warm, sincere, and straightforward. They will spare no effort to assist a member of the clan who is in trouble. A traveler, no matter what his nationality may be, will be put up for the night in any Kazakh's *yurt*. On account of Kazakh hospitality, one finds no beggars among them. "As long as there are Kazakh on the way, you may travel for a year without a cent or a grain in your bag," goes a saying. Another proverb states: "One could never wipe out the disgrace of letting guests leave at sunset." They offer their best food to the guests; for distinguished ones, they will kill a live sheep with yellow head and white body. Respectfully, the host will offer a tray containing the sheep head. The guest receives it, cuts a slice of meat from its right cheek and puts it on his own plate. He should then cut an ear, give it to the youngest one at the banquet, and return the sheep head to the host. The guests sit cross-legged on the felt rug. They must not straighten their legs. It is very impolite to take off one's shoes and point the sole of the foot to people.

## **9 LIVING CONDITIONS**

The great majority of the Kazakh engage in nomadic animal husbandry; only a small number engage in agriculture and settle down. The herdsmen move from place to place in search of water and grass. In spring, summer, and autumn, they live in a *yu*, a round-shaped yurt that may be dismantled and carried on horseback when they migrate. The framework of the yurt is made from locally grown Chinese tamarisk. They enclose the paling (fence-like framework) with splendid achnatherum, a kind of grass with long, narrow leaves, grown in grassy shoals. Then, they cover the side with a layer of felt rug. There is a skylight for ventilation at the top of the conic roof of the yurt. The yurt usually opens to the east. Inside the yurt, the horse gear, hunting gear, food and cooking utensils are placed on each side of the door, with the plank beds overhead. Opposite the door are the suitcases, covered with sitting cushions.

After the fall, they move to their adobe house for the winter pasture.

## **10 FAMILY LIFE**

Before 1950, the well-to-do and the nobles were polygamous. Now, they practice monogamy. The man is the person of authority in the family. The wife must obey her husband. Sons and daughters must obey their father. The women have neither power nor property. The marriage of children and the distribution of property are all decided by the father. As soon as a male has grown up and married, he leaves his parents, builds his own yurt, and receives a part of the property from his fa-

ther. The family property will ultimately be inherited by the youngest son.

In the past, a wedding required betrothal gifts from the bridegroom to the bride's family—in particular, dozens of heads of livestock. As a result, poor families would exchange their daughters, thus canceling the need for betrothal gifts. A widow had to marry her brother-in-law or another member of the clan. Although a married woman had no right to ask for divorce, a man was allowed to abandon his wife any time at will. Nowadays, according to the new dispositions of the law, Kazakh women are free to marry and to divorce.

## **11 CLOTHING**

The herdsmen's clothes are mainly made of fur, usually loose for the convenience of horse-riding. In winter, the men usually wear a durable, single-layered, sheepskin overcoat or camel's wool waded topcoat. They have a leather belt with figures on the waist and wear a sword on the right. Their trousers are mostly made of sheepskin. The women wear dresses, mostly red. In winter, they add a cotton-padded overcoat. Young girls like to wear silver ornaments or coins and embroidered cotton trousers. Men in different districts wear different hats. Married women almost always wear a long scarf with colored figures. All Kazakh like to wear boots, with a pair of felt stockings in winter.

## **12 FOOD**

Most foodstuffs come from livestock. There are a variety of milk products, including cheese, butter, and skin on boiled milk. In spring or summer, the herdsmen pour a mare's milk into a leather bag, stir frequently, and wait for fermentation. The final product is a semi-transparent sour mare's milk wine, a favorite beverage in summer. Another popular beverage is a special hot milk tea made of tea, butter, salt, and cow or camel milk. Food made of rice and flour includes crusty *nang* (shaped like bagels and pancakes), "rice taken by hand" (cooked and steamed rice with raisins, sliced onions and carrots, and small cubes of fried beef), fried dough, etc. The Kazakh eat a lot of mutton, mostly cooked in water and taken by hand. They make smoked meat in the late fall. Sausage made of mare's meat has a special flavor and can be preserved for a long time. The herdsmen eat fewer vegetables and fruits.

## **13 EDUCATION**

Because of the nomadic way of life of the Kazakh, there are many mobile primary schools. The teacher visits the yurt and teaches the children on the spot. This explains the high rate of illiteracy in pastoral areas. In farming areas close to the cities, there are many schools for formal education. High schools and universities have been established in Tacheng, Altay, and Ili. Overall, the cultural and educational level of the Kazakh is higher than the average level of the national minorities in China.

## **14 CULTURAL HERITAGE**

Kazakh music and dance have distinctive features and are noticeable by the large number of participants in each performance. The Kazakh are good at singing and dancing. A two-stringed, guitar-like instrument, the *dongbula*, is very popular with the men. Because of illiteracy in the past, the ancient po-

ems, stories, proverbs, and fables were all handed down orally. A group of folksingers, called *aken*, visit the grazing lands to collect and collate oral literature. Kazakh writers have begun the publication of their ancient literature.

### 15 WORK

For centuries the Kazakh have led a nomadic life, their main occupation being animal husbandry (ox, sheep, horses, and camel). Only a small number of them engaged in farming. There were very few craftsmen and very little handicraft industry. Almost all productive tools and daily necessities were fashioned by family members at home or purchased through barter for grains, tea, cloth, and household utensils. In the last few decades, the Kazakh have begun to combine agriculture and stockraising, gradually settling down and abandoning their nomadic ways. Small-scaled tannery, wool mill, and oil press factories have been established. The mode of production of the Kazakh is now in transition.

### 16 SPORTS

Wrestling and "Snatching the Lamb" (*diaoyang*) are popular sports that attract large crowds; they are part of every festival. In the game of "Snatching the Lamb," a venerable elder puts a headless lamb on the grass. At a full gallop, five to eight horsemen try to grab the lamb with one hand. The winner is the first horseman who brings the lamb to a designated place.

### 17 ENTERTAINMENT AND RECREATION

With the gradual introduction of movies and television into Kazakh colonies, villages, and towns, their traditional singing and dancing have become more and more restricted to festive occasions. Film projection teams frequently visit the herdsman's colonies, thus enabling them to enjoy the modern entertainment of movies.

### 18 FOLK ART, CRAFTS, AND HOBBIES

Kazakh artisans are well-known for the quality of their felt products (hats, shoes, and boots) and embroideries (especially women's clothes and hats). Folk art also includes wooden articles, ironware, bone implements, and ornaments made of gold, silver, and jade.

### 19 SOCIAL PROBLEMS

The grassland environment of the Kazakh does not favor a diversified economy. The combination of agriculture and stockraising has already improved the living conditions of the Kazakh. One promising avenue for further development is border trade with the Kazakh on the other side of the Chinese border.

### 20 GENDER ISSUES

The Chinese constitution states that women have equal rights with men in all areas of life, and most legislation is gender neutral. However, among the Kazakhs certain traditions persist to deny women equal rights in practice.

Since 1950, the practice of polygamy has been discontinued, but the man of the household retains ultimate authority and all family members, including the wife, must obey him. While according to law, women have equal rights, in Kazakh society women traditionally hold no property and the family property

is inherited by the youngest son. As China modernizes, these traditions are changing slowly. In the past, married women had no access to divorce, while a man was free to abandon his wife. With the guarantees afforded by Chinese law, Kazakh women are increasingly taking action to marry and to divorce according to their own interests.

China has strict family planning laws. It is illegal for women to marry before 20 years of age (22 for men), and it is illegal for single women to give birth. Though minority populations were previously exempt from family planning regulations, policy has changed in recent years to limit minority population growth. Today, urban minority couples may have two children while rural couples may have three or four.

# KAZAKHS

**PRONUNCIATION:** kuh-ZAKS

**LOCATION:** Kazakhstan

**POPULATION:** 10.8 million

**LANGUAGES:** Kazakh; Russian

**RELIGION:** Islam (Sunni Muslim)

**RELATED ARTICLES:** Vol. 3: Kazakh Chinese

## <sup>1</sup> INTRODUCTION

At the foundation of traditional Kazakh culture was the nomadic way of life, which was typical until the early 20th century. The Kazakhs are closely related to the Kyrgyz in ethnicity, culture, and language. The Kazakhs traditionally divided themselves into three territorial *zhüz* (tribal unions, or hordes): Greater, Central, and Lesser. The Greater Horde occupied much of what is now southern Kazakhstan and consisted of the Sary Uisin, Kangli, Dulat, Alban, Suan, Zhalayir, and other smaller tribes. The Central Horde occupied the northern and eastern parts of modern Kazakhstan and consisted of the Argyn, Naiman, Kerei, and Kongrat tribes. The Lesser Horde was composed of three united tribes—Zheti Ru, Alim Uly, and Bai Uly—who migrated in 1801 to the land between the Ural and Volga Rivers. Since the Kazakhs were nomads, during the 1800s it was possible for large numbers of Slavic settlers to move into and seize the land inhabited by the Kazakhs.

## <sup>2</sup> LOCATION AND HOMELAND

The Kazakh homeland, although covering 2.6 million sq km (more than 1 million sq mi) is not topographically diverse. Approximately 80% of the area consists of lowlands, plains, and plateaus, and strong winds often sweep through these flat lands. The only mountains are the Tien Shan and Altai ranges in the east and southeast. The climate within Kazakhstan varies significantly, which means that the types of plants and animals found in Kazakhstan also vary significantly from region to region. Parts of Kazakhstan become bitterly cold in the winter and intensely hot during the summer. The massive Kara Kum Desert occupies much of central Kazakhstan. The Kara Kum (“black sand”) is the world’s fourth largest desert, and much of it extends into other nations of Central Asia. There are two large inland seas, the Caspian Sea and the Aral Sea. Both of these great seas, however, contain significantly less water than in the recent past because of heavy irrigation use during the Soviet era. From 1960 to 1975, the shores of the Aral Sea moved more than 100 km (60 mi) inward as the total volume of water shrank (and became more salty). The Aral Sea today is only one-third of its original size and is divided into two parts. The larger part lies in Uzbekistan and is considered a dead sea; there is some hope for revitalizing the smaller part that lies in Kazakhstan, and efforts have been made to separate the two. As of 2008, these efforts had not been successful.

There are currently more than 10 million Kazakhs, 80% of whom live in Kazakhstan. The Kazakhs were for many years a minority within their own homeland, accounting for only 42% of the population as recently as the mid 1990s. Today the Kazakh government has been successful in creating policies to encourage growth of ethnic Kazakh population, including policies to encourage ethnic Kazakhs to move to Kazakhstan.

This combined with out-migration of Russians and other non-titular nationalities has contributed to an increase in the Kazakh population, to 60%. Ethnic Russians have been settling in the Kazakh homeland since the 18th century and presently account for about 30% of the population in the Kazakh homeland. Approximately 100 other nationalities account for the remainder of the population; many of them were deported to Kazakhstan during World War II. The birth rate of Kazakhs is higher than that of Russians in Kazakhstan, which means that the percentage of Kazakhs should continue to rise. There are approximately one million ethnic Kazakhs living in the Sinkiang-Uygur Autonomous Region of China.

## <sup>3</sup> LANGUAGE

Kazakh is a central Turkic language. More specifically, it belongs to the Nogai group in the Kipchak division of the Turkic branch of Ural-Altai languages. Modern Kazakh has many words borrowed from Russian, Arabic, Persian, Mongol, Chinese, Tatar, and Uzbek. There are three primary dialects that correspond to the three historic Kazakh hordes. Written Kazakh, which dates back only to the late 19th century, is based on the dialect of the Central Horde.

The Kazakh language was originally influenced by a nomadic way of life. A person who did not migrate, such as a *balykshi* (fisherman) or a *eginshi* (grain-grower) was atypical. Livestock, such as the *at* or *jilqi* (horse), *qazaqi qoy* (fat-tailed sheep), *ayir tüye* (Bactrian camel), and *yeshki* (goat) also played a central role in the development of the Kazakh language, with numerous terms and idioms focusing on livestock and their breeding. A traditional Kazakh greeting that is still sometimes used in rural areas literally translates as: “Are your livestock and your soul still healthy?” A traditional Kazakh wish for good fortune is literally translated as: “May God give you one thousand sheep with lambs, eighty camels, and eight married sons.”

The Kazakh language used Arabic script until 1930, when the Soviet government replaced it with the Latin alphabet. Just before World War II, the government switched from the Latin to the Cyrillic alphabet, which is used for the Russian language. With the Cyrillic alphabet came the large-scale incorporation of Russian terms and Russian-sounding place-names among the Kazakhs. Today, approximately 40% of all ethnic Kazakhs speak Russian as a second language. Approximately 70% of Kazakhstan’s population regularly speaks Russian. Since independence, the government of Kazakhstan has declared in the constitution that Kazakh was the state language and Russian the official language. The government has begun to change the Russian names of some places back to the original Kazakh names.

## <sup>4</sup> FOLKLORE

As with the folklore of other nomadic peoples, the oral tradition forms the basis of Kazakh folklore. Over the centuries, sagas were passed down by memory from one generation to the next. Most of the stories are heroic epics where the *batir* (warrior) and his trusty horse save the clan and its livestock from danger. There are also stories about Alash, the legendary first Kazakh. The most famous heroic stories are *Koblandy-Batir*, *Er Sain*, and *Er Targyn*, all of which are from the 15th or 16th century and involve clashes between the Kazakhs and the Kalmyks. The most famous lyric epics are *Kozy Korpesh–Bain Sulu* and *Aiman–Sholpan*. The most famous Kazakh love story

in the lyric tradition is *Kiz-Jhibek*, which contains historic information about Kazakh betrothal and marriage customs and ceremonies.

## 5 RELIGION

Most Kazakhs are Sunni Muslims. Islam, however, has not historically been as centralized among the Kazakhs as it has among other Central Asian peoples. Even though Islam had been adopted by the Kazakhs as early as 1043, it was not until the late 1700s that many of the popular Islamic religious practices became common among Kazakhs. Islam was historically most popular in the cities and towns of Central Asia, where there were mosques and seminaries. However, since the Kazakhs were primarily nomads and had minor contact with urban areas, many of them had little knowledge of the religion. The Kazakhs were introduced to Islam through contact with the Tatars, who traditionally were not as conservative as other Muslim peoples in Central Asia. For this reason, the imperial Russian government preferred that the Kazakhs associate with the Tatars.

Because the Kazakhs were wanderers who depended on livestock for their survival, animals were at the core of the ancient Kazakh religion. Until the mid-1800s, elements of this ancient animist belief system (including shamanism and ancestor worship) were still widely practiced among many Kazakh Muslims. This historical background, together with the fusion of Russian and other cultures, means that the Kazakh society of today is perhaps more secular than elsewhere in

Central Asia, although there has recently been a religious revival among young Kazakhs.

## 6 MAJOR HOLIDAYS

The Republic of Kazakhstan celebrates the following national holidays: New Year's Day (January 1), celebrated in the Russian fashion with the decorating of the tree and a visit from a Santa Claus-like *Ded Moroz*; International Women's Day (March 8), *Nauryz* (the day of the vernal equinox), the traditional Persian-Turkic new year; May Day or Unity Day of the Kazakh Nation (May 1), Victory Day (May 9), celebrating the Soviet Union's defeat of Nazi Germany in World War II, Capital Day (May 10), Constitution Day (August 30), Independence Day (October 25), and Democracy Day (December 16). Additionally, Muslim Kazakhs celebrate the traditional Muslim holidays Eid al Fitr and Eid al Adha (Kurban Eid in the Kazakh language) and many choose to observe Ramadan as well.

## 7 RITES OF PASSAGE

Kazakhs typically have large birthday parties with many relatives and friends, and several Kazakh festivities mark various rites of passage during a person's life. Celebrations are held for a birth, a baby's fortieth day of life, the first day of school, and graduation. Voting and driving privileges come at 18 years of age.

Weddings are very important in Kazakh society, not only for honoring the married couple, but also as an event to assemble an extended family or clan together. The traditional wedding festival ceremonial is called the *toi*. In the past, arranged marriages were common, and the payment of *kalym* (a dowry) was expected upon betrothal.

## 8 INTERPERSONAL RELATIONS

Hospitality is an important part of Kazakh culture. A Kazakh host will be quite offended if the guest does not have some refreshments or at least a cup of traditional tea. Asking a guest lots of questions is considered bad manners. Guests in a Kazakh home are customarily allowed to rest after their journey and given some fermented mare's milk to drink. When a Kazakh host has finished attending to the guest, cordial conversation can then begin.

When a Kazakh greets an elderly person, both hands are used in a handshake as a sign of respect. It is considered impolite for a young person to shake hands with an elder using only one hand. Cohabitation without marriage is considered a dishonor to both families. Women and men are expected to stay chaste until marriage, but a double standard is common, with women held more accountable than men.

## 9 LIVING CONDITIONS

During the Soviet era, medical care was provided by the government. The medical system now is in a state of transition.

At one time, the nomadic Kazakhs lived in *yurts*, cone-shaped tents of white felt stretched over a framework of wooden poles. Yurts are light and easy to assemble, dismantle, and transport. Today, yurts are only used as temporary shelters by shepherds in remote, seasonal pastures. The modern Kazakh home is typically an apartment in the city or a permanent single dwelling in rural areas. Kazakh interior design emphasizes

es the use of stucco artwork and wall facings as well as ornate carpets.

The main means of transportation is public bus. In larger towns and cities, people often use trolleys and streetcars. However, in villages and rural areas it is not unheard of for people to travel short distances by horse. People commonly take trains when traveling long distances within Kazakhstan. Kazakhs have international air service from their homeland through foreign airlines such as Lufthansa, Aeroflot, and Turkish Airlines.

## 10 FAMILY LIFE

Women play a significant role in economic, social, and cultural life in Kazakhstan. Most married women work outside the home. Within the family, Kazakh women have equal rights with men, but they usually consider the husband the head of the family. In Kazakh custom, women prepare and serve the meals and watch over the children. The husband's role in assisting with housework varies from family to family.

The average urban Kazakh family has two children, and the typical rural one has three or four. By tradition, every Kazakh is supposed to know the names of his or her ancestors going back seven generations. Many Kazakhs today might not know all seven generations, but they are sure to know from which tribe and *zhüz* (tribal union) they are descended.

Before the Soviet period, there were several possible ways for Kazakhs to get married. One of the most famous was the tradition of a man to "steal" the girl from her parents. This type of elopement is still practiced in some of the southern regions of Kazakhstan. Another traditional method of marriage was for parents to seek a fixed marriage when they thought their son was an adult. The parents of the bride usually tried to find a bachelor who came from a family with a financial position similar to their own. According to custom, a Kazakh girl is supposed to compose her own wedding song before getting married. A popular tradition at weddings, anniversaries, and holidays is the *kız-kuu* (girl chase). A *kız-kuu* is a light-hearted social event involving a man and wife or a boyfriend and girlfriend. A man on horseback chases a woman on horseback and tries to catch her in order to steal a kiss. The woman tries to flee, and even uses a small horsewhip to keep the man or his horse away from her.

Extended families are common in the country, less so in the cities. Children, regardless of age, typically live with their parents until marriage. Elderly parents usually move in with children, as it is considered dishonorable to permit one's parents to live in a nursing home. Men who reach their thirties without having married are often looked upon with suspicion, and may even suffer from discrimination in society and the workplace.

## 11 CLOTHING

In the past, women typically wore long dresses with stiff collars and loose baggy pants cinched at the ankles. Men traditionally wore robes made of wool or cotton over large white shirts and broad trousers. Today, some women in rural areas wear the traditional dress, but most young women and men wear European-style clothes. The clothes worn today are often brightly colored and very stylish, with a greater emphasis on form than on function.

## 12 FOOD

*Kymyz* is a fermented beverage made from mare's milk and served in a *piala* (Oriental teacup). Other Kazakh drinks include *boza*, an alcoholic beverage made from millet, and *mus-alla*, a nonalcoholic type of grape juice. Fruit is mainly grown in *mewäzar bagh* (orchards). *Orik* (apricots), *shäftali* (peaches), *qawun* (melons), and *uzum* (grapes) are the most popular fruits. *Almä* (apples) are not as popular a fruit among Kazakhs as they are for export. (The name of the former capital and largest city of Kazakhstan, Almaty derives from its previous name Alma Ata or Alma Aty, means "mountain of apples.") A unique Kazakh culinary custom is the *dastarkhan*, a feast for special occasions consisting primarily of meat dishes and dairy products. For a *dastarkhan*, an entire animal (usually a sheep) is slaughtered, and the oldest member of the family gets the honor of carving the head and serving the family. The various parts of the animal symbolize desired traits for those eating them. For example, children are often served the ears as a symbol to be better listeners. Someone who is served the tongue should be more eloquent, and the person who receives the eye should seek wisdom.

Horse meat and mutton are popular items, because those animals were historically raised when the Kazakhs were nomadic herders. Examples of Kazakh dishes include *shuzhuk* (a type of kielbasa made from fresh or smoked horse meat); other horse meat dishes such as *kazy*, *karta*, *zhaya*, and *zhal*. *Kuir-dak* is prepared from a freshly slaughtered horse, sheep, or cow and consists of the animal's liver, heart, kidneys, and other organs cut into pieces, boiled in oil, and served with onions and pepper. *Beshbarmak* is a type of boiled dough. The dough is rolled into thin strips and cooked in the broth that is left over from boiled mutton. It is served with mutton on top, and is garnished with garlic and onions. *Beshbarmak* is a light dish that many Kazakhs eat when they are sick.

## 13 EDUCATION

The Kazakh educational system consists of the following stages: kindergarten (not required), secondary school (11 years), higher education institute (4–5 years), graduate research program (2 years), and post-graduate program (3 years). There also is a system of professional three-year colleges. Kazakhstan has more than 60 higher education institutions, including the Kazakh National University, Almaty State University, the Kazakh University of World Languages, Polytechnical University, and others. In the early 1990s, approximately 1,000 Kazakhs were studying abroad, and this number has grown, as the Kazakh government promotes study overseas through a program that provides scholarships. Higher education carries much prestige, and parents strongly encourage children to earn their diplomas. In Kazakhstan, 90% of boys and girls attend primary school, and nearly that many attend secondary school. Over 99% of the population is literate. The Kazakh educational system is currently in a state of transition, because the values of society have drastically changed since Kazakhstan became a democratic state. Many schools' language of instruction is Russian; however, Kazakh is becoming more prevalent.

## 14 CULTURAL HERITAGE

The ancient Kazakh homeland has produced numerous talented musicians and singers. Music is a part of everyday Kazakh life from birth to death. Music is played for military expedi-

tions, weddings, funerals, parties, and games. Almost every Kazakh knows how to sing and play a musical instrument by ear. A traditional form of Kazakh music is the *sazgen*, a folk music quintet that includes traditional string and percussion instruments. The most popular folk instrument is the *dombra*, which has two strings and is played by plucking. Other traditional instruments include the *sybyzgy* and *uran* (wind instruments), the *dangyra* and *dabyl* (percussion instruments), and the *sherter* and *kobyz* (other stringed instruments). The *aitys* is a musical tradition in which two poet/composers duel with each other. This tradition remains very popular in Kazakhstan. The most popular contemporary Kazakh singers are Bibigul Tulegenova, Vermek Serkebaev, Alibek Dnishev, R. Bapov, and Roza Rymbaeva.

The 15th-century poetry of Asan Kaigy, and the 17th-century poems of Zhyrau and Dosmambet are highly revered among the Kazakh people. The founder of modern Kazakh literature was the humanist and poet Abai Ibragim Kunanbayev (1845–1904), who wrote the famous *Teachings* during 1890–98 as a collection of philosophical thoughts and proverbs. Prominent Kazakh writers during the Soviet years included Zhambyl Zhabaev, Saken Seifullin, Mailin, Ilias Dzansugurov, Sabit Mukanov, and Mukhtar Auezov, who wrote *Abbay*, a famous novel about 19th-century Kazakh life on the steppe. During the Soviet era, however, the names of many talented dissident writers, poets, and scientists (such as Ahmed Baitursunov, Makzhan Zhumabaev, and Zhusibek Aimaurov) were buried in oblivion. Contemporary writers who have enriched Kazakh literature since the 1960s include I. Esenberlin, M. Makataev, O. Suleimenov, K. Myrzaliev, and F. Ongarsynova.

## 15 WORK

During the Soviet years, many Kazakhs worked on large state-run farms growing *maqta* (cotton). A very high birth rate among the Kazakhs during the 1980s has led to a large rate of unemployment in the late 1990s, creating a large labor force of young Kazakhs but not enough entry-level jobs for them. Since 2000 the unemployment rate in Kazakhstan, while still high, dropped considerably, and in 2006 was at 7%. This may be in part due to an economy stimulated by oil revenues, although this wealth is not shared by the entire population. However, by 2008, the worldwide economic downturn was causing a new rise in the numbers of unemployed in Kazakhstan.

## 16 SPORTS

Soccer is a popular sport to play in the warmer months, and hockey is popular during the winter. The national sport of Kazakhstan is Kazakh-style wrestling, which is similar to judo. In the country, horse racing and equine events are common. Although the risk of an avalanche is fairly high, skiing in the Tien Shan Mountains is becoming popular. Recently, the slopes have received international attention as a future site for expert and world-class skiing. Skiers are flown by helicopter to the tops of slopes.

## 17 ENTERTAINMENT AND RECREATION

City dwellers often spend the weekends with their families in recreational parks, which can be found in almost any Kazakh town. Urban Kazakhs frequently go to the movies or watch videos. (Pirated videotapes of current movies are popular as well.) A popular Kazakh event for entertainment is the *itys*, a

A young Kazakh boy waits for customers on the Tianshan Mountain, Xinjiang, China. Kazakh herdsmen in Xinjiang make money by offering their services to tourists.  
(AP Images/Xinhua)

formal or informal competition of wit between two singers of either gender. During the *itys*, each singer plays the *dombra* (a two-stringed instrument) and cleverly makes up the lyrics as he or she sings, which requires a rich knowledge of the Kazakh language. Usually the singer will brag about aspects of his or her hometown or region (e.g., the fattest sheep, the best milk, the most beautiful people), and make fun of the other person's. The loser is the first person who can't sing a comeback quickly enough. Rural and city Kazakhs often visit in order to relax. Kazakhs enjoy drinking tea with neighbors or family.

## 18 FOLK ART, CRAFTS, AND HOBBIES

In recent years, there has been a revival in Kazakh folk art and crafts, including carpet and jewelry making. Jewelry with traditional Kazakh symbols and designs is popular among women, especially silver jewelry. Collecting stamps and small pins are also popular hobbies.

## 19 SOCIAL PROBLEMS

Since the 1970s, nationalist attitudes among the Kazakhs have been on the rise, leading many times to violence. In 1979, Kazakhs rioted in Tselinograd because there were rumors that the government was going to set aside land for local Germans who wanted to create their own autonomous region. Suspicion and antagonism against ethnic Russians increased during the late 1980s because the Soviet Union had often given them preference in leadership positions. Today, the situation is in many ways reversed and ethnic Russians resent new Kazakh language policies.

Atomic testing in northern Kazakhstan in the 1950s weakened the health of many residents. These people and their descendants are often born with deficient immune systems, a condition similar to AIDS. Some researchers have estimated that it will take another 50 years for the condition to reverse through intermarriage with people from unaffected families.

Narcotics use has become a serious social problem for Kazakhstan since independence. This is in part because of its location between the major producer of the world's heroin, Afghanistan, and the markets in Russia and the rest of Europe. As Kazakhstan became a trafficking route, the number of drug users increased. In 2006 there were 53,172 registered drug users, with the actual numbers of drug users projected to be as much as four times as high. Along with the increased numbers of drug users has come an increased number of HIV/AIDS infections. In 2003 as many as 23,000 people were thought to be living with HIV, although because there is a strong stigma against those with the disease, actual numbers are difficult to confirm.

## 20 GENDER ISSUES

In many ways the situation of women in Kazakhstan is better than that in many parts of the world, and especially better than that in some other Central Asian countries. Women are active in the workplace, they hold government positions, and they can be successful in business. This is possibly due to the traditionally nomadic lifestyle of the Kazakhs, which required that women be more active in everyday life for survival of the family. The introduction of Soviet values also encouraged women to join the workforce alongside men. The Kazakh constitution prohibits discrimination based on sex. However, women generally do not hold the highest government positions. Women are often victims of domestic violence, and there are few resources for these women to turn to for help. Bride kidnapping is practiced in some rural areas. Women are more likely to be unemployed than their male counterparts in the workforce, despite the fact that women tend to be better educated than men.

Gays and lesbians should also be protected under the Kazakh constitution's prohibition of discrimination on the basis of sexuality, but in practice this is not the case. While there is a small gay community in large cities such as Almaty, homosexuality is still very much stigmatized by relatively traditional Kazakh society. Reports have surfaced of gay men being fired from their jobs. The community is so secretive that it is difficult to make contact with members to obtain information about the community.

# KELABIT

**PRONUNCIATION:** kuh-LAH-buht [biht]

**LOCATION:** Malaysia (Sarawak state)

**POPULATION:** About 5,200 (in 2000)

**LANGUAGE:** Kelabit

**RELIGION:** Christianity

**RELATED ARTICLES:** Vol. 3: Iban

## 1 INTRODUCTION

See the article entitled **Iban**.

## 2 LOCATION AND HOMELAND

The Kelabit, with a population of approximately 5,200 people in 2000, is one of the smallest ethnic groups in Sarawak. They are highland people that inhabit the Kelabit Highlands area, which is located at the farthest reaches of the Baram and Limbang rivers in the remote interior of northern Sarawak. The unofficial capital of the Kelabit Highlands is Bario with 16 villages in the area. This includes Pa'Umur, Pa' Ukat, Pa' Lungan, (located along the Depbur basin), Long Dano, Pa Dalih, Ramudu (located along Kelapang basin), and Pa Ramapuh Benah, Pa Ramapuh Dita, Pa Derung, Ulung Palang Dita, Ulung Palang Benah, Padang Pasir, Kampung Baru, Arur Layun, Bario Asal, and Arur Dalan, in the Merariu river basin. There are four other Kelabit settlements located further down the tributaries of the Baram River: Long Peluan, Long Seridan, Long Lellang, and Long Napir.

Like many other indigenous communities in Sarawak, the Kelabit used to live in longhouses in the highlands of Central Borneo. However, due to economic and social factors, many have migrated to live in urban areas since the 1980s. It is estimated that only about 1,200 Kelabit are still living on the highlands. Many of the younger generation have moved out, mostly to get further education and to get jobs that suit their qualifications in towns and cities like Miri, Kuching, Sibul, Bintulu, Kuala Lumpur, and other places overseas.

## 3 LANGUAGE

The Kelabit speak their own language, which is called "Kelabit." Today, many have learned to speak English and Malay languages. Unfortunately, this has affected the usage of the Kelabit language very badly. It is decreasingly used, particularly by the younger generations. The Kelabit did not have a written form of their language until education was introduced on the highlands in the 1950s and 1960s. A recent effort was made to document the language in a dictionary, partly to preserve the language.

Basically, a Kelabit name has two parts: the given name, and the father's name. Some common male Kelabit names are Lian, Agan, Giak, and Apui. Some common female names are Supang, Sigang, Rinai, Dayang, and Ruran. A common Kelabit name would be Supang (given name) Lian (father's name).

The Kelabit practice an elaborate and fascinating relational-name system, thus distinguishing them from the other tribes in Sarawak. This practice requires new parents and new grandparents to change their names completely and permanently, making their old names redundant. These new sets of names

have to be announced to the community at the *Irau Mekaa Ngadan* (Changing Name Ceremony).

## 4 FOLKLORE

Over a century ago, the Kelabit were involved in headhunting raids, not so much for ritual purposes but as a means to prove one's courage, bravery, or valiancy, and to get even with an enemy. Thus, a person who succeeded in headhunting exploits was hailed as a hero and looked upon as a role model. Stories of successful exploits are narrated in various forms of oral stories. One of these heroes is Agan Tadun. His fame and achievement are recounted in legends, myths, and traditional songs.

One popular myth among the Kelabit is that all humans were originally from the highlands, until a big flood covered the whole earth. Many people had to build rafts to survive and were brought to the coastal areas by the water. However, some had built big and heavy rafts and were therefore stranded on the highlands. That is why and how the Kelabit remained on the highlands.

## 5 RELIGION

Most Kelabit are fervent Christians. A spiritual revival arose among them in 1973, causing the whole tribe to embrace Christianity. As a consequence, they have abandoned most of their traditional beliefs. They believe that Christianity has brought them freedom from the old religion which restricted their activities.

Formerly, the Kelabit had to rely on bird augury and dreams as guidance before beginning an important journey or starting the agriculture cycle. Certain rituals and practices were observed before commencing any undertaking. Sometimes these rituals required them to abandon a field that had been cleared for farming, or to leave their ripened rice to rot. With their conversion to Christianity, these rituals ceased to be observed by the Kelabit. Instead of these rituals, today many Kelabit say (Christian) prayers before embarking on major tasks on their farms.

## 6 MAJOR HOLIDAYS

Two major holidays for the Kelabit are Christmas and Easter. They celebrate both occasions as a community, not merely as a family affairs. Opening one's home to visitors is one of the main features of Christmas. Visitors are served with a variety of cakes, cookies, and drinks. Longhouse communities also get together for a meal either on Christmas Eve or for Christmas lunch, or both, after Christmas services.

The Easter celebration lasts for four days at least. The whole community will get together at the central church to worship and socialize together. Special speakers are invited to give sermons. It is an occasion most people look forward to attending. In addition to Christian holidays, and like other Malaysians, the Kelabit also observe other national public holidays or festivals which include New Year's Day, Hari Raya Puasa or Hari Raya Aidil Fitri (end of Ramadan), Thaipusam (celebrated by Hindus on the 10th month of the Hindu calendar), Chinese New Year (celebrated over 15 days beginning on the first day of Chinese Lunar Calendar), Wesak Day, Gawai Dayak (harvest festival), Deepavali, and Christmas.

## 7 RITES OF PASSAGE

An infant is normally delivered by a midwife or an experienced older woman. In the past, a child was required to go through different stages of ceremonies or rituals as she or he grew to be a teenager. One of these ceremonies was the Initiation of the Child. It involved the slaughtering of one or more pigs, and the examinations of the livers and gall bladders to discern the fate and fortune of the child concerned. Today, these ceremonies are not observed at all, except for the *Irau Mekaa Ngadan* (Name Changing Ceremony).

As a teenager, a child is trained by her or his parents, grandparents, aunts, and uncles to do chores. While a girl is trained by her mother, grandmother, and aunts about cooking, washing, and working on the field, a boy is trained by his father, grandfather, and uncles how to hunt, fish, collect firewood, and build huts or houses.

The birth of the first child among the Kelabit signifies a transition in an individual's life. This is marked by the *Irau Mekaa Ngadan*, which is held to affirm one's transition to parenthood and grandparenthood. The new parents and grandparents are required to take up new names to mark their new status. These new names are chosen and announced at the *Irau Mekaa Ngadan* which involves the whole community. Guests at the ceremony are served a big feast by the hosts (the new parents and grandparents).

A death among the Kelabit is often followed by a lot of mourning and weeping. Relatives and friends come from all over to pay their last respects. A dead person is normally buried within 24 hours.

## 8 INTERPERSONAL RELATIONS

A hospitable and friendly person is highly respected and valued by the Kelabit. It is considered rude not to offer hospitality to any visitors at the longhouse. Everybody is expected to greet one another by shaking hands and asking simple questions like "Where are you going?" "Where are you from?" "Who came with you?" and "How are you?" A person who does not greet others, particularly elderly people, is considered rude, unfriendly, and, to a certain extent, bad-mannered.

It is considered improper to wear shoes or slippers in the house. Helping the host or hostess with cooking or cleaning up is most welcomed. Taking gifts when visiting a friend or relative is highly favored.

## 9 LIVING CONDITIONS

The Kelabit, like many other ethnic groups on the island of Borneo, used to live in longhouses. This situation has changed and continues to change since more and more Kelabit in the Highlands are residing in detached-single houses. Furthermore, many Kelabit have migrated to live in towns and cities. The longhouses and houses in the villages are always kept clean. This is encouraged by constant inspections by the health officers. All the longhouses have tap water, and some longhouses have generators to give light in the night, while the others have to depend on kerosene lamps or candles. In order to be safe to drink, the tap water must be boiled.

Most Kelabit in the highlands are free of common diseases that can be found elsewhere in the tropical interior. Their constant involvement in vigorous work on the farm keeps most of them physically fit. The consistent supply of fresh fruit, vegetables, meat, and fish keeps them healthy. They buy or barter these goods from each other. This said, it is important to note that there is increasing dependence on foodstuff from nearby cities and towns. These groceries are air-flown to Bario on a daily basis.

A government clinic with a hospital assistant is stationed in the highlands. The villagers have a constant supply of medication, except for major or serious illnesses and accidents. In these cases, the patients are sent down by aircraft to the nearest town for better medical care.

## 10 FAMILY LIFE

Family life is highly valued among the Kelabit. The family is not only a social unit, but also an economic one. A large family consists of 6 to 12 children. Often the grandparents will live with the family, and sometimes other members of the extended family live with the family as well. Consequently, there are cases where a family consists of 12 to 15 members. However, this has changed over the years, as many children have migrated to urban areas.

The husband is considered the head of the household. He is responsible for making political or leadership decisions for the family. This involves being the spokesman for the family. If any members of the family have problems, e.g., misunderstandings with other members of the community, the father is responsible for making peace. The wife, however, makes most of the economic decisions. She decides when to start the farming each year. While the husband is responsible for bringing back meat and fish for the family meals, it is the wife's job to collect vegetables and mushrooms for the meals. Their children are trained from a young age to help carry out these tasks. A

*A young girl of the Kelabit tribe of Sarawak dances at the 6th Rainforest World Music Festival in Malaysia. The festival brings together renowned world musicians from all continents and indigenous musicians from the interiors of Borneo. (© Reuters/Corbis)*

son will help his father, and a daughter is expected to help her mother.

Not many families keep animals as pets. Some raise cats to keep pests away, and some raise dogs for hunting. Poultry such as chicken and ducks are kept for their meat and eggs. Water buffalo are kept to prepare the fields for farming and also to carry heavy loads.

### **11 CLOTHING**

Traditionally the Kelabit wore very simple clothing. A man used to wear a loincloth and a jacket made from tree bark. A woman used to wear a knee-length skirt, and adorned herself with bead necklaces and a bead cap. However, today the Western style of dress is very common among the Kelabit.

### **12 FOOD**

The Kelabit always have a supply of fresh meat and vegetables from the jungle or garden. They collect wild vegetables from the jungle and hunt or fish for their protein. Each family also has farms for growing their own rice, not only for domestic consumption, but also for sale. Poultry such as chicken and ducks are reared for domestic consumption. The encroachment of urbanization is changing the food supply chains among the

Kelabit. With easier access to cash and modern transportation, the Kelabit in Bario are also getting their daily food supplies from nearby towns like Miri and Marudi.

The Kelabit also produce their own salt, called Kelabit or Bario salt. This salt is obtained by evaporating salty water from salt springs which are found in the highlands. The salty water is boiled until all the water is evaporated, leaving the salt at the bottom of the *kawang* (big cooking utensil). The remaining water is completely dripped from the salt before it is put in bamboo pipes to be burnt in the fire. This is to harden the salt, which is later wrapped in big leaves to be kept in dry and safe places. The salt is used in cooking and also to preserve meat.

Traditionally the Kelabit used clay pots, made locally by women, to cook or prepare their food. However, today most of their kitchen utensils, such as spoons, forks, plates, and metal cooking pots, are obtained from urban areas.

*Labo Belatuh* (smoked meat) is a traditional Kelabit food. Meat, particularly wild boar and venison, is salted and smoked over an open fire. The meat will later be boiled and pounded into small strips and eaten with rice.

### 13 EDUCATION

The first school was opened in the highlands in 1946 by Tom Harrison, a former British soldier who lived with the Kelabit for two years after World War II. He was assisted by Paul Kouhan who was originally from the island of Roti but later married and settled in Bario. There were only 46 students in the school when it first started. A few other schools were opened later on to cater to the needs of the Kelabit, who were coming to see the importance of formal education. Both sons and daughters were encouraged to go to school. Some students had to walk five to seven days through the thick rain forest to get to the nearest school. Access to education is one of the main reasons why many young people have migrated to urban areas.

The literacy rate among the Kelabit is quite high, particularly among the younger generations. Many of them have at least obtained a Malaysian Education Certificate. Of the 5,200 Kelabit, about 250 have obtained university degrees locally and abroad. Many others have attended professional courses and are working with governmental and private sectors across the country. In other words, the Kelabit, considering the difficult terrain of the highlands and the fact that they must leave their homes as soon as they go to school, have been very successful in their quest for formal education. Many have had to leave their home at the age of six or seven to attend boarding school.

Kelabit parents have played a crucial role in promoting formal education for their children. They see education as the means to improve their children's social condition. As a result, many highly educated Kelabit attribute their success to the encouragement of their parents.

### 14 CULTURAL HERITAGE

Even though the Kelabit have gone through rapid social and economic changes within the very short span of 50 years, they have managed to maintain certain aspects of their culture which are still very unique, particularly their music and dance. A traditional musical instrument is the *sape*, a plucked lute instrument. It is carved from a tree trunk in an elongated rectangular shape, with a neck extending from one end of the body. Formerly, its three or four strings were made from finely split rattan, but today they are made of wire.

The Kelabit also play the *pagang* (tube zither), which is made from a length of bamboo tube, closed at both ends by its natural bamboo nodes. The strings are finely cut strips from the surface of the bamboo tube itself, which are still attached to the tube at either end.

The Kelabit use the *sape* and *pagang* music to dance their lovely hornbill and warrior dances, long dances, and single dances. The hornbill dance is performed in imitation of the hornbill bird. Hornbill birds are beautiful, shy, and very gracious. Many natives in Sarawak adore them, so they try to imitate their movements.

The Kelabit, like many other indigenous people in the Borneo island, do not have a written language. So most of their stories were passed down orally. However, recent efforts have been made by the local people to record this invaluable knowledge.

### 15 WORK

Most Kelabit in the highlands are rice cultivators. Historically, the Kelabit permanent wet-rice cultivation has distinguished them from the other natives in Sarawak, except for the Lun Bawang. They cultivate the famous Bario rice, which is well

known for its sweet aroma and pleasant taste. Besides cultivating rice, they also grow citrus fruits for domestic consumption. Unlike those who remain in the highlands, Kelabit migrants to cities and towns are professionals, religious leaders, and intellectuals who play important roles in the wider Malaysian society.

### 16 SPORTS

Most Kelabits' traditional games and sports are slowly being abandoned by the younger generation. They have learned new games like basketball, volleyball, and soccer. In recent years, these sports have been promoted within the Kelabit community through and during the annual Highlanders Games Carnival. During the carnival, game competitions are carried out to ensure participation by Kelabit from different cities, towns, and villages. In the past, children spent most of their time swimming in the river, or playing in the shrubs surrounding the longhouses. Unfortunately, today most of these games are abandoned.

Soccer as a sport has become very popular among the Kelabit. Most Kelabit young men and boys are enthralled with the game. Another sport which has become popular among the Kelabit is golf. Tournaments are often organized to promote and maintain interests in the sport among urban Kelabit.

### 17 ENTERTAINMENT AND RECREATION

Since the highlands are quite isolated in the interior of Sarawak, television and movies were unknown in the highlands until recently. The installation of generators in most Kelabit longhouses has enabled them to watch movies on television and video. Some families do have satellite dishes, which make it possible for them to receive television channels from all over the world.

Occasionally, the Kelabit get together in the night to sing, dance, and talk, after working hard in the rice field during the day. Various dances are danced to the *sape* music. The women sometimes get together to sing Christian songs, or traditional songs. These occasions are always joyous and delightful.

### 18 FOLK ART, CRAFTS, AND HOBBIES

The Kelabit make many handicraft items, many of them for everyday use. Most of these items, however, are made with little ornamentation and no carving. Nonetheless, many of them are beautifully made, with great skill.

Bamboo and rattan are the two common materials used to make Kelabit crafts. Rattan is easily obtained from the primary forest, and bamboo is acquired from the secondary forest, i.e., from areas which have at some time in the past been used for agriculture. Many cooking utensils, tools in the kitchen, baskets for storage and carrying, fish traps, and rice winnowing trays are some items that are made of these materials.

The Kelabit also use other materials like grass, bark, or other plant materials to make mats, brooms, sun hats, knife sheaths, and rain capes. Nylon cord and thread are sometimes used together with the other materials.

### 19 SOCIAL PROBLEMS

One of the acute social problems faced by the Kelabit in the highlands is the increasing and rapid migration of the younger generations into urban areas. This inevitable trend has left

the old people to tend the rice fields. In order to overcome the shortage of labor to work in the rice fields, the Kelabit are hiring laborers from their neighboring communities.

The rapid economic progress in Sarawak has benefited the Kelabit in many ways. However, the increasing encroachment of commercial logging and demand for agricultural land development has put the Kelabit in a dilemma. They have to decide whether to give up their land for large-scale land development and timber concessions, or to maintain their traditional farming system.

## 20 GENDER ISSUES

The Kelabit stress the fundamental equality of the sexes and the complementarities of their work. Nonetheless there are differences between men and women. This is especially with regards to their roles, responsibilities, functions and activities in the society. Female's functions and feminine roles include nurturing the family through cooking, cleaning, and working on the household farm, activities which reflect and at the same time reinforce feminine qualities such as motherliness, gentleness, friendliness and kindness. In contrast, activities which demand greater physical prowess, such as hunting, travelling and headhunting, are deemed to be men's activities. They involve and develop qualities that are considered to be masculine traits, such as strength industriousness, and physical ability and prowess. In its essence, the Kelabit gender system reflects a pattern, in which roles and activities are assigned for the purposes of accomplishing particular tasks and with a view to each individual's differing abilities and opportunities in performing them. Social differences between men and women in this case are defined by and based on the activities that they are engaged in. Nowadays gender roles have changed as a result of high rate of rural-urban migration and the arrival of formal education which facilitated women's increased labor force participation.

# KHASI

**PRONUNCIATION:** KAH-zee

**ALTERNATE NAMES:** Ki Khasi; Ri Lum

**LOCATION:** India (Meghalaya state)

**POPULATION:** 1.34 million (estimate)

**LANGUAGE:** Khasi

**RELIGION:** Christianity; native animist beliefs

**RELATED ARTICLES:** Vol. 3: People of India

## 1 INTRODUCTION

The name *Khasi* identifies a group of tribes and subtribes presently inhabiting the Khasi and Jaintia Hills in Meghalaya State in northeastern India. The Khasi call themselves Ki Khasi or Ri Lum. The name *Khasi* was probably given to them by the people of the surrounding plains. In its broad sense, Khasi includes several neighboring groups such as the Jaintia, Pnar, Lyngam, Bhoi, War, and Khyntiam. In Bangladesh, in the hills of Sylhet, Khasis sometimes refer to themselves as the Hyniewtrep, the "Seven Huts," which refers to the original seven families from which all Khasi believe they are descended.

Early Khasi history remains a mystery, although linguistic and other evidence suggests a probable Southeast Asian origin. By the mid-16th century, numerous small Khasi chiefdoms existed in the Khasi and Jaintia hills. British expansion into Assam in the early 19th century led to contact with the Khasi tribes. Periodic conflict with the Khasi eventually led to the British extending their control into the Khasi and Jaintia Hills. Between 1826 and 1835, the 25 Khasi states in the region accepted British protection. Relations were formalized in 1862, when treaties were signed between the British and the Khasi, granting the latter autonomy and freedom from British taxation. Shillong was made the capital of the British province of Assam in 1874, exposing the Khasi to significant Western cultural influences. At India's independence in 1947, the Khasi and Jaintia Hills were designated an autonomous tribal area under the administration of the government of Assam. The region achieved full statehood as Meghalaya State in 1972.

The majority of the Khasi population live in Meghalaya State, although there is a significant minority (c. 29,000) found in Assam. Small numbers of Khasi are also found in Bangladesh and in the Indian states of West Bengal, Mizoram, Tripura, Maharashtra, Tamil Nadu, Aunachal Pradesh and the Andaman and Nicobar Islands.

## 2 LOCATION AND HOMELAND

According to census returns, the Khasi population in Meghalaya numbered 1.12 million in 2001. The current estimated total population of the Khasi is around 1.34 million. The homeland of the Khasi lies on the Assam or Meghalaya plateau, an upland area some 240 km by 100 km (150 mi by 60 mi) located between the Brahmaputra Valley to the north and the alluvial plains of Bangladesh to the south. With summit levels at 1,370–1,830 m (4,500–6,000 ft), the region experiences a temperate climate. Maximum temperatures during the hottest month average around 27°C (80°F), while during the winter months temperatures rarely drop below 5°C (40°F). The plateau stands right in the path of monsoon winds blowing in from the Bay of Bengal, and the region experiences heavy rainfall dur-

ing the summer months. Cherrapunji, southwest of Shillong and on the south-facing slope of the hills, is on record as the wettest place on earth, averaging nearly 1,150 cm (450 in) of rain annually. As a result of the heavy rains, much of the plateau is deeply dissected and is also covered with dense forests.

### 3 LANGUAGE

The Khasi language and its dialects belong to the Mon-Khmer branch of the Austro-Asiatic language family. Mon-Khmer languages are widely spoken in Cambodia, Vietnam, and Burma, indicating possible Southeast Asian origins for the Khasi tribes. Khasi represents the westernmost occurrence of the Mon-Khmer group. Some scholars see it as a link between the Southeast Asian languages and those of central India belonging to the Munda branch of the Austro-Asiatic family, spoken by the Munda, Santals, and other tribes.

### 4 FOLKLORE

The Khasi possess a rich and varied folklore. The dog is considered the friend of humans and, unlike some of their neighbors, the Khasi do not eat dog flesh. One tale tells of how the dog came to live with humans. Many, many years ago, when the world was very young, so the legend goes, all the beasts lived happily together. They bought and sold goods at a market located at Luri-Lura in the territory of the Bhoi Khasi, in the northeastern part of the region. One day a dog came to the market to sell rotten peas. The animals around the dog's stall objected to the unpleasant odor of his wares, knocking over

the stall and trampling on his goods. The dog complained to the principal beasts at the market and also to the tiger, who was priest of the market. He was told he would be fined for selling such foul-smelling goods in the market, and they, also, kicked and trampled his wares. The dog eventually went to a human, who said, "Come and live with me, and I will arise with you to seek revenge on all the animals who have wronged you." Since that day, humans have hunted with the assistance of the dog. Dogs know how to track animals because they can scent in their footprints the rotten peas that they trampled at the market at Lura-Luri.

### 5 RELIGION

Khasi religion may be described as animistic, focusing on the propitiation of spirits—both good and evil—especially in times of trouble. The particular spirit to be appeased is identified through an egg-breaking ritual, and the appropriate sacrifice is performed. Fowl and goats are the principal sacrificial victims, although human sacrifice was not unknown in the past. The priest (*lyngdoh*), who is appointed from a special priestly clan, is the principal person responsible for performing ritual functions. However, the presence of a female priest (*ka-soh-blei* or *ka-lyngdoh*) is necessary at all sacrifices. This is, perhaps, a reflection of the matriarchal nature of Khasi society, as is the assigning of a feminine gender to the Khasi creator goddess. Other religious practitioners, such as diviners and elders skilled in sorcery, play a role in Khasi religious life. Family ceremonies are performed by the head of the family or clan. Ancestor worship and the worship of natural forces and gods and goddesses of nature form an integral part of Khasi religious practices.

Although many aspects of traditional Khasi religion survive, the majority of Khasi have adopted Christianity. Missionary work began in the region during the late 19th century and has been so successful that today over 80% of Khasi profess to be Christian, belonging mostly to the Presbyterian or Roman Catholic churches, although there are a few Unitarians in the mix. There are a few Hindus and Muslims among the Khasi, the latter coming primarily as traders from other parts of India and intermarrying with local Khasi women.

### 6 MAJOR HOLIDAYS

The most important of the many festivals celebrated by the Khasi is the Nongkrem Dance. This is held in late spring (usually in May) and is part of a ceremony performed by the Syiem (chief) of Khyrim State (one of the former Khasi states) and his priests. Goats are sacrificed to Ka Blei Synshar, the ruling goddess of the Khasi, for an abundance of crops and for the prosperity of the people. Various ritual dances, some performed by the chief and his entourage, are part of the ceremonies. This is followed by the great dance by Khasi girls and men before the house of the high priestess. People come from all over the region to participate in the festival and its activities.

### 7 RITES OF PASSAGE

The naming ceremony for a child is held the day after its birth. Several names are suggested to the elderly man who is called to perform the naming *puja* (ceremony). He recites the names while pouring liquor from a gourd onto the ground. The name on his lips when the last drop of liquor adheres to the spout of the gourd is the one selected. Certain other rituals complete

the naming ceremony, including the placing of the placenta in a pot and hanging it on a tree outside the village. Among some groups, egg-breaking forms part of the naming ritual. Traditional rituals associated with birth are not observed by Christians.

Death rituals of the Khasi are quite elaborate and involve the sacrifice of several types of animals. At death, the body is washed, dressed in white cloth, and laid out with an egg placed on the stomach. A cock is sacrificed to scratch a path for the spirit to the next world. A bull is then sacrificed for a man, or a cow for a woman. On the day of the funeral, pigs are sacrificed by relatives and friends of the deceased. The dead are cremated, with pieces of bone collected from the funeral pyre and placed in the clan bone repository (along with some bones from the sacrificed animals). For three days after cremation, the family is in mourning and under various taboos. After a month, a pig or fowl is sacrificed to complete the funeral rites. Among Christian Khasi, the dead are buried according to the rites of the Christian Church.

An unusual feature of the Khasi is their custom of erecting memorial stones. These are huge, upright stone monoliths, some as high as 8 m (27 ft), that may be seen standing in groups throughout the Khasi and Jaintia Hills. They serve as memorials to the dead or to mark places of particular importance or sanctity to the Khasi.

## 8 INTERPERSONAL RELATIONS

Khasi are a cheerful people by nature. They seem to thoroughly appreciate a joke, and even women are not reluctant to indulge in lighthearted exchanges with total strangers. It is customary not to mention names of immediate relations, perhaps for fear of attracting the attention of evil spirits. A person may be addressed as the “mother of so and so” or the “father of so and so” rather than by their real name. Actual names may eventually be entirely forgotten through lack of use.

## 9 LIVING CONDITIONS

Khasi villages are built a little below the summits of hills to protect them from the elements. A marketplace and a sacred grove of trees may be found outside the village, along with numerous Khasi memorial stones. The village itself may contain schools and Christian churches, as well as homes. The Khasi house is an oval-shaped, thatched structure, with walls of timber or stone. It is usually divided into three rooms: a porch, a living room, and sleeping quarters. Furnishings are a mixture of traditional and modern, reflecting the strong influence of the British in the region. Wealthier families have more substantial houses, with comfortable European-style furniture.

## 10 FAMILY LIFE

The Khasi are divided into a number of clans, each of which trace their descent from an ancestress known as *kiaw* (grandmother). The clans are exogamous, with marriage within a clan strictly prohibited. Members of a clan are bound together by ties of religion, ancestor worship, and funeral rites, and even Christian Khasi preserve their clan structure. Descent is traced through the female line. Marriage is by choice and usually takes place during early adulthood. Omens are read and an auspicious day fixed for the marriage ceremony. The ceremony itself is performed by a priest and is accompanied by animal sacrifice, feasting, and much drinking. In the Christian

community, the marriage ceremony is performed according to the rites of the Church.

The newlyweds usually reside with the bride’s mother until children are born, when they set up their own household. The Khasi are monogamous in their marriage relationships. However, divorce is frequent and easily obtained, and remarriage of divorcées is permitted. The youngest daughter inherits ancestral property, and daughters receive preference in any division of property.

Women enjoy a high social status and play a significant role in managing the household’s social and economic affairs.

## 11 CLOTHING

The traditional dress of a Khasi man consists of a sleeveless coat (*jymphong*) that leaves the arms and neck bare. It fastens across the front with frogs (braided loops that slip over buttons) and has tassels on the chest and a fringe at the bottom. This is worn over a loincloth that wraps around the waist and is drawn through the legs, with one end hanging down in front like an apron. A black cap completes the outfit. Elderly men sometimes replace the cap with a white turban. Males wear earrings, armlets, and necklaces made of gold, silver, and semi-precious stones.

For women, typical clothing is a short piece of cloth wrapped around the waist that hangs to the knees. Over this is worn a long piece of cloth, knotted at the shoulders, that hangs down to the ankles. Another long piece of cloth, often striped or brightly colored, is thrown around the shoulders like a cloak and tied at the front. A wrap is worn over the head and shoulders. Women wear a variety of jewelry made from gold, silver, and stones such as coral and carnelian.

## 12 FOOD

Khasi usually take two meals a day, one in the early morning and the other in the evening. They are nonvegetarians, eating pork, beef, and chicken, as well as the flesh of many wild animals. They are said to enjoy a curry made from a particular kind of green frog. Dried fish with rice is a staple of the Khasi diet. When rice is not available, millet or Job’s tears (the seeds of the grass *Coix lacryma-jobi*) is used instead. The inner bark of the wild sago palm is dried and made into a sweet, reddish flour and mixed with rice or eaten in the form of cakes. Milk and milk products are not used, a trait common among peoples of Mongoloid descent. This no doubt reflects the high incidence of lactose malabsorption (the inability of the body to use milk) that is found among peoples of this ethnic background. Beer made from rice or millet is widely consumed by the Khasi, as well as being used for ritual purposes. Some clans among the Khasi have specific food taboos originating, most likely, from totemic considerations.

## 13 EDUCATION

Compared to other tribal peoples in the Indian subcontinent, the Khasi have made good progress in the field of education, partly, perhaps, a result of the influence of missionaries in the past. Nearly two-thirds of the population is literate (66.1% in 2001), with women having a slightly higher literacy than men (the reverse of the norm in South Asia) and participating more in the educational process, although their involvement in higher education declines relative to men.

A Khasi woman and her child waits for customers to sell fruits in Nongpoh, Gauhati, India. (AP Images/Anupam Nath)

#### 14 CULTURAL HERITAGE

Having no written script until 1842, when the Roman alphabet was introduced by a missionary, the Khasi lack any significant body of literature. However, this is more than made up for by their oral folk traditions. Singing and dancing are of particular importance, accompanied by music played on drums, pipes, flutes, and stringed instruments like guitars. Dancing accompanies all Khasi festivities and plays a role in some of their religious ceremonies. Only unmarried girls participate in the dance of the women. They don spectacular costumes, dressing in rich silk clothes that extend from their neck to the ground. They are laden with a profusion of jewelry, bead necklaces, silver and gold chains, bracelets, and earrings. On their heads, they wear a gold or silver crown. The girls dance in a circle, taking tiny steps to the beat of the music, barely lifting their feet off the ground. The hands are held straight down at the sides, with the eyes downcast. The men dance around the circle of girls, waving fly-whisks and prancing around with huge, ungainly steps. There are also dances performed only by men.

#### 15 WORK

Although many Khasi have entered other occupations, agriculture remains the main economic activity among the community. A variety of crops, produced by methods ranging from

intensive paddy cultivation to shifting agriculture (*jhum*), are cultivated for consumption and sale. Crops grown by the Khasi include rice, maize (corn), millet, pulses, chilies, potatoes, vegetables (e.g., eggplants, pumpkins, and gourds) and fruits (pineapples and oranges). Agricultural produce is sold at weekly markets and through marketing societies. The Khasi raise livestock for economic and ritual purposes (goats, pigs, and chickens are important sacrificial animals), and also engage in hunting and fishing. Bees are kept for larvae, wax, and honey.

#### 16 SPORTS

Games played by children include spinning tops, a kind of hopscotch, kite-flying, marbles using stone pebbles, and wrestling. The principal sport of Khasi men is archery. The Khasi believe that archery originated at the creation of the world, when the first Khasi woman taught her two sons to shoot arrows. Villages challenge each other to archery meets, and archery competitions accompany many festivals. Betting on the outcome of a contest is commonplace.

#### 17 ENTERTAINMENT AND RECREATION

The Khasi enjoy pastimes such as hunting and archery, as well as their folk traditions of singing and dancing. Modern mass media such as radio and television are becoming increasingly popular.

#### 18 FOLK ART, CRAFTS, AND HOBBIES

Although they manufacture items ranging from simple metal agricultural implements to cane baskets and sieves, Khasi can hardly be said to have any distinctive arts or crafts. They are skilled in basketry, net-making, carpentry, weaving cotton and silk cloth, and the manufacture of various utilitarian goods.

#### 19 SOCIAL PROBLEMS

The Khasi, like many other tribes in India, are undergoing changes that have led to internal social stresses as well as to problems in relations with other ethnic groups. The community is designated as a Scheduled Tribe and is entitled to the benefits that accompany this status under the Indian Constitution. The predominantly "tribal" nature of Meghalaya, however, has led to problems with nontribal groups. Aggressive organizations such as the Khasi Students Union (KSU) and the Federation of Khasi, Jaintia, and Garo Peoples (FKJGP) actively support policies that are aimed at preventing nontribal peoples from living and working in the state. The need to present a united tribal front, however, has to some degree clouded internal social tensions. The undifferentiated Khasi society of former times has now become stratified, with new classes of landlords, white-collar professionals, and agriculturalists all competing for limited resources. There is particular resentment by traditional Khasi against the Christian Khasi, who are seen as becoming increasingly dominant in the political, economic, and social arenas. This accounts for the rise of movements such as Seng Khasi, aimed at preserving the traditional Khasi religion.

#### 20 GENDER ISSUES

Khasi society is matrilineal and so women enjoy many advantages they lack in other South Asian societies. A 2007 study from Germany concluded that the tribes of Meghalaya, such

as the Khasi, whose societies are organized on matrilineal and matrifocal principles have obtained much greater gender equality than the other societies of South Asia (e.g. Hindu and Muslim) that are organized on the patriarchal principles. Khasi women enjoy a high social status and play a significant role in socio-economic matters and household management. Many Khasi women have taken up professions in the civil service and in industries besides agriculture.

Khasi women are divided into several matrilineal clans such as Mawlong, Khongweer and Symley. The youngest daughter inherits the ancestral property and daughters are given preference in the division of property while males can own only self-acquired property. Even Christians are known to pass down their ancestral property through the female line.

Even so, there are many male heads of families among the Khasi and women tend to lag behind in terms of socio-economic standing. It is possible for males who have no living female relatives to adopt a female as a younger daughter (a Khasi custom known as *Rap-iing*) to ensure property passes down from generation to generation (viz. Khasi Hills Autonomous District [Khasi Social Custom of Lineage] Act of 1997).

Though females in Meghalaya are aware of their rights and position in society, hardly any Khasi women actively participate in the world of politics. Khasi society does not even allow women to participate in political decision-making. Few women are heads of a *dorbar* (the equivalent of a panchayat in the plains) and only recently, despite their status in society, have women been allowed to participate much in a *dorbar* meeting. The *dorbar* continues to be dominated by males.

Though women in Khasi society are relatively free, with authority, title, inheritance, the right to maintain matrilineal residence after marriage and succession traced through the female line, still there is discrimination (for instance, many Khasi women wait to eat until after their husbands have eaten) and in rural areas many Khasi women feel that the reservation of a seat for them in a *dorbar* is not beneficial to them. Of course most females exercise their franchise in the elections and that percentage increases with the rise in educational levels.

However, in general, women in Khasi society enjoy an enviable freedom and equality vis-à-vis males compared to other women in South Asia.

# KHMER

**PRONUNCIATION:** kuh-MER

**ALTERNATE NAMES:** Cambodians

**LOCATION:** Cambodia

**POPULATION:** About 8 million

**LANGUAGE:** Cambodian

**RELIGION:** Theravada Buddhism; Islam; Roman Catholicism; traditional beliefs; Taoism

## <sup>1</sup> INTRODUCTION

For much of the past century, the State of Cambodia has been largely unknown to most of the world except as the home of Angkor Wat, one of the wonders of the world. Not until the Vietnam War did Cambodia come to the world's attention, when its strategic location to the west of Vietnam, where it shared a border hundreds of miles long, brought it unwanted involvement in the War.

Cambodians are called Khmer and their language, culture, and appearance reflect many centuries of Hindu influence from India, Chinese from China, and other groups from prehistoric Cambodia, Malaysia, and Europe.

Cambodians value tradition, as revealed in a common proverb that states, "Don't choose a straight path and don't reject a winding one. Choose the path your ancestors followed." Cambodians eat rice and fish, raise pigs and water buffalo, and live in stilt houses, as have their ancestors for millennia. It is also probable that present-day Cambodian practices, such as wearing tattoos for protection, chewing betel, and games played at the New Year, have been part of daily life for centuries, perhaps for thousands of years. Some beliefs, such as believing in water spirits, associating ancestor spirits with the lunar calendar, and natural phenomena like rocks and soil, may be thousands of years old.

Cambodians are quick to note that their nation was once the heart of a great empire that stretched over much of Southeast Asia. In the late 1800s the French colonized Cambodia in an effort to protect its holdings in Vietnam, which it considered potentially more lucrative than Cambodia. France was also interested in having Cambodia serve as a buffer between France's possessions and Thailand, also interested in the resources of Cambodia.

In 1953 Cambodia gained independence with King Norodom Sihanouk as head of state. For the next decade and a half, Sihanouk tried to keep his country neutral and out of the war that was spreading in neighboring Vietnam. He was unsuccessful and was overthrown in 1970. Cambodia has been ruled by four governments since 1953, each having gained power by overthrowing the previous one until the 1993 election, supervised by the United Nations. The first government was run by General Lon Nol, who allowed the United States to fight the Vietnam War from Cambodia. As the war continued, corruption, bombing, economic disruption, and the displacement of over half the population from their homes destroyed much of Cambodia and facilitated the overthrow of the country in 1975 by Communist rebels.

The Communists or "Khmer Rouge" attempted to remake society. Intent on a Maoist "cultural revolution," they evacuated the cities, turned everyone into laborers, dissolved banks, the

postal service, the airlines, and other institutions. They closed schools and hospitals and tore down temples and churches. In three and a half years of Khmer Rouge rule, at least one million Cambodians died from execution, starvation, torture, and disease, and the numbers are still being revised upward as new gravesites are uncovered with the help of satellite mapping.

In December 1978, Vietnam invaded and chased the Khmer Rouge to the Thai border. For the next decade the country was ruled by a government installed by the Vietnamese. Resistance armies including the Khmer Rouge—one led by Sihanouk and another led by non-Communists—attempted to take over the country. In 1993 the United Nations oversaw reconciliation between resistance groups and the government and held elections. Cambodians are now experiencing more peace, security, and prosperity than most have since at least 1970.

## <sup>2</sup> LOCATION AND HOMELAND

The population of Cambodia in 2008 was approximately 8 million people, although the continued war between government troops and the Khmer Rouge make a complete census of the country impossible.

Approximately 90% of the Cambodian population is ethnic Khmer. Another 5% of the population is Chinese-Cambodians.

There is also a significant Vietnamese minority, although observers differ on the number. This is because virtually all birth records were destroyed during the Khmer Rouge era and, in the post-KR years, ethnic Vietnamese have been reluctant to come forward and identify themselves. Most Vietnamese live

in the capital of Phnom Penh or near the border with Vietnam. They are still subject to considerable discrimination, particularly during Cambodian election campaigns, when politicians seem all too willing to play the “racist card.”

Hill people, called “Khmer Loeu” by other Cambodians, also live in Cambodia. These are scattered tribes who live in remote plateaus and mountainous areas on the Western, northern, and eastern periphery of Cambodia. There are also Cham, the descendants of a once-great empire that dominated from central Vietnam. The Cham speak their own language and practice Islam. Most are fishermen or rice farmers.

Cambodia is a small country, about the size of Oregon, hugged between the two larger, more populous countries of Vietnam and Thailand. Physically, three-quarters of Cambodia lie in a flat basin that forms the center of the country, surrounded by plateaus and mountains.

This central plain is Cambodia’s “rice bowl.” The rice bowl has fed Cambodians for millennia, for it is home to rice fields in the flooded areas and vegetables and fruit in the drier areas.

Cambodia is a monsoon country with two seasons. The monsoons from the southwest bring the rainy season from May to October. During the wet season, there are torrential downpours almost every day. The rest of the time is generally cloudy and humid.

From November to April, the monsoons come from the opposite direction, the northeast, bringing sunshine and little rain. The weather is dry and hot, with the heat increasing into April making the coming of the rainy season a welcome event.

During the rainy season, Cambodia is home to a truly amazing phenomenon. Tonle Sap Lake is a long narrow lake located in west central Cambodia connected to the Mekong River by the Tonle Sap River. During the rainy season, the Mekong swells with flood waters as it travels over 4,023 km (2,500 mi) from its source in China. The surplus water is pushed up the Tonle Sap River, reversing its normal southward rush to the sea and pushing it back into the Tonle Sap Lake. However, this pattern has been disrupted by changes to the Mekong as the upper riparian nations—especially China—construct dams in keeping with their economic development plans. The Cambodian government and environmental groups are beginning to express concern. Fish from the lake provide Cambodians with a quarter of their protein.

Cambodia’s population of wild animals includes spotted leopards, tiger, black panthers, bears, boar, and many species of monkeys. These animals frequent the forests, which are avoided by most Cambodians. Snakes abound. Three of the world’s most dangerous—the cobra, king cobra, and banded krait—also live in Cambodia but are rarer. Numerous species of birds also reside in Cambodia. These include peacocks, wild duck, and pheasant. A land of water, Cambodia is also home to fish-eating birds, such as cormorants, egrets, and pelicans.

Between 500,000 and 700,000 Khmer live in southern Vietnam, where most continue to speak their language and practice Cambodian Buddhism. Most are rice farmers, as were their ancestors when southern Vietnam was part of the large Khmer kingdom. Another quarter-to-half-million live in Thailand just across the border from west and northwest Cambodia.

In addition, Cambodian migrants now live in more than 20 countries throughout the world. This diaspora of the Khmer people began before the Khmer Rouge takeover in 1975 as Cambodians fled to Vietnam and Thailand. Most fled in 1979,

after the Vietnamese chased the Khmer Rouge from power. Approximately 150,000 Cambodians have been resettled in the United States. In contrast to the Vietnamese and Laotian diasporas, which are hampered by political tensions born in the Cold War, many overseas Cambodians are involved in Cambodia's recovery and development, and some have returned to work in the country. This is due in part to policies by the United Nations and Western donors to try to use overseas Khmer as consultants and project managers whenever possible.

### 3 LANGUAGE

The official language of the State of Cambodia is Cambodian. It is probable that 2,000 years ago the inhabitants of Cambodia were speaking a language related to the modern Cambodian language that the Khmer speak. Pockets of people speaking languages related to Cambodian exist all over Southeast Asia and probably represent an older linguistic and cultural tradition that was eventually pushed into the highlands by invading lowlanders.

Cambodian has borrowed extensively from the administrative, military, and literary vocabulary of Sanskrit. Theravada Buddhism brought additional Pali words. In addition, Cambodians have borrowed words from Thai, French, Chinese, and Vietnamese. English words are becoming more common.

The Cambodian language is atonal in contrast to both Vietnamese and Thai. Cambodian also has a number of disyllabic words, adding prefixes and infixes to modify the basic syllable.

The Cambodian script is quite exotic looking to Westerners and is based on an ancient Brahmi script from South India. The earliest evidence of this script comes from the 2nd or 3rd century. The widespread destruction of books and other documents during the Khmer Rouge period created a great deficit in available Cambodian literature, but international projects to return materials in Khmer that had been held overseas have helped to address this deficit.

### 4 FOLKLORE

The first hero of Cambodia was Kaundinya, who is also the legendary first Cambodian. Cambodians trace their origin to the marriage of a handsome prince who traveled to Cambodia with a magical bow. When a dragon princess rowed out to meet him, he shot an arrow at her boat. Frightened, she agreed to marry him. In exchange for the clothes he gave the naked princess, her father drank up the water that covered the land that became Cambodia.

It has been more difficult for Cambodians to admire present-day leaders, especially for any length of period. Undoubtedly the most important and most revered Cambodian in recent times has been Norodom Sihanouk. Appointed King by the French in the 1940s, he later became Prince so that he could continue to act as a political rather than a monarchical leader. In 1970 he was deposed and continued until 1993 as a leader around whom opposition groups of various persuasions collected. After the United Nations-sponsored elections, he returned to Cambodia as its figurehead leader. Especially honored by older peasants, Sihanouk continues to be a pivotal figure in his country.

### 5 RELIGION

Most Cambodians are Theravada Buddhists. Theravada Buddhism is one of the two main Buddhist sects and is practiced

also in Thailand and Laos. Cambodians are so Buddhist that they often say, "To be Cambodian is to be Buddhist." Khmer Buddhists believe in karma and reincarnation. They believe that the acts they do today will affect their lives in the future, either in this or future lives. The Buddhist religion allows Cambodians a way to gain merit so they may be reborn to a better life. They gain merit by a myriad of good acts and religious deeds, which include acting properly, celebrating holy days, and taking food to the monks at the temple. No one can earn as much merit as a man who becomes a monk, whose merit accrues to him and his relatives, primarily his parents. Both Buddhism and some Hindu influences, which continue to be seen in Cambodia, originated in India and were brought into Cambodia at the beginning of the Christian era.

Most Cambodians also follow the traditional practices of their forefathers, which have probably been practiced in Cambodia for millennia. Most believe in a wide pantheon of spirits. These spirits must be fed, placated, and informed of family events; thus, every wedding includes a ceremony to notify family spirits that a new member is joining the family.

Cambodian Cham are Muslims, many Vietnamese are Roman Catholic, the hill tribes are primarily traditionalists, and the Chinese Cambodians are Taoist or Buddhists.

### 6 MAJOR HOLIDAYS

All holidays in Cambodia are both religious and secular events. The most important festivals are Buddhist festivals. Among them are the celebration of the birth, enlightenment, and death of the Buddha, the monks' entry into and exit from the rainy season retreat; the Festival of the Dead; and offerings to the monks, called Kathin.

One of the most important holidays of the Cambodian year is New Year, which is celebrated at the beginning of the lunar month, usually in April. This is the time when most Cambodians begin preparing their rice fields for planting and sowing their rice seedbeds. The New Year celebration lasts several days and is an extremely joyous time. There are religious ceremonies, dancing, music, and games.

The Festival of the Dead, or Prachum Ben, occurs in the fall. During the fortnight of celebration, offerings are made to the ancestors in the hope they will protect their descendants.

### 7 RITES OF PASSAGE

The birth of a child is a wonderful and dangerous time for Cambodian families. While they welcome the coming of a new member of the family, they worry about spirits who are especially threatening to pregnant women, women in childbirth, and newborn babies. Women, and often their husbands, especially in rural areas, observe a number of rules to protect their family. After the birth, the woman drinks a special concoction of herbs, water, and alcohol to help her regain her physical equilibrium, while bracelets and anklets blessed by the monks or healers are placed on their babies.

Toddlers are nursed until two to four years of age and are treated with considerable lenience. At about four, children are expected to feed, bathe, and control themselves, and shortly thereafter to care for their younger siblings.

For many Cambodian children, parents continue to exert almost complete control over them until they are married. Even then, the influence of their parents is heavy. Children are expected to show great respect to their parents and elders and

are severely punished for any lapse. While the Khmer Rouge loosened the traditional control of parents over their children, and modernization in urban areas continues to threaten traditional respect and obedience toward parents, most Cambodians continue to observe traditional family behavior. Children become full adults when they have jobs and their own households, spouses, and children. Even then, they are expected to follow the advice of their elders.

Most Cambodians are cremated at death and their ashes are put in a repository, or *stupa*, at the local Buddhist temple. If initially buried, the body is exhumed after several years, and the bones are taken to a stupa. In addition to having a funeral, Cambodians celebrate anniversary ceremonies after the death of a family member.

## 8 INTERPERSONAL RELATIONS

When Cambodians meet, they greet each other with the *sampeah*: joining their palms together, their fingers pointing up or slightly tilted toward the other person, they bring their hands up to their chest or forehead. The higher the status of the person they are greeting, the higher their hands go. They may also bow their head as they *sampeah*.

Cambodians place great importance on hierarchy and proper behavior. Women must respect men, children must respect their elders, and everyone must respect their superiors, which includes anyone with higher status, greater wealth, or a more important job. Inferiors greet their superiors with greater respect, a deeper bow, or greater stoop when offering food or passing by. Cambodians thus tend to be more reserved before those they consider their superiors, or with strangers. Visitors, both familiar and strange, are treated to the best the household has to offer.

Few young people date. Virginity remains highly valued for brides, although premarital sex is becoming more accepted in urban areas, especially among young professional Cambodians. Girls and boys have the opportunity to talk and flirt only on special occasions, surrounded by relatives and neighbors.

Most men marry between 19 and 25 years of age; women are slightly younger, usually between 16 and 22. Most young people continue to court as did their parents. It remains much more common for a young man to ask his parents' permission and assistance in obtaining a wife than to do so on his own. His parents, or a matchmaker, approach the young woman's family to see if they are interested in a match. If the response is positive, the families negotiate the terms and time of the marriage.

After an exchange of gifts, the young couple marry. It is still common for many young couples to spend the first year of marriage in the home of the woman's parents. After the parents are assured of their son-in-law's stability, or after the birth of the first child, the young couple commonly moves into a new house built for them by their families.

## 9 LIVING CONDITIONS

Health care in the country has been devastated by the events of the past decades. Unable to obtain health care during the second half of the 1970s, the inadequate food, cruelty, and horrors of those years has had dreadful consequences on Cambodians, both physically and mentally. One legacy from this period is the high level of personal violence seen in Cambodia, which runs the gamut from spousal relations to politics. The

subsequent isolation of Cambodia from much of the international community and the embargo against most imports and aid meant that Cambodians went another decade without even reaching minimum standards of modern health care.

International health assistance has improved services to many people, but much of this aid has been cut back in recent years. Cambodians continue to patronize local healers and spiritual leaders for most health needs. Modern medicine is expensive, with patients having to pay before being seen for services and medicines supposedly offered without fee.

While Cambodians long for the amenities of modern culture, with which they are becoming increasingly familiar through television and periodic visits or work trips to the larger cities, most cannot afford these items. The most important and frequently seen consumer items are imported from Vietnam, Thailand, and other Southeast Asian countries and are generally inexpensive. Most Cambodians own few objects they have not made themselves, while a tiny percentage of the urban population enjoy luxuries, including expensive villas, furnishings, cars, servants, clothing, and liquors.

Most rural Cambodians live in small villages of 200 or 300 people. Their houses are typically aligned along a river, stream, canal, or road. Houses are built on stilts to keep them above the floods of the rainy season. Poorer Cambodians live in single-room dwellings with thatched roofs and walls. With additional money, Cambodians add wooden walls, another room or two, windows, and tile roofs. Newer houses may have sheet metal roofs. The kitchen is attached to the side of the house.

Furniture is simple. Beds are woven plastic or thatch mats, rolled up and stored leaning against the wall or up in the rafters during the day. There may be a small desk, a chair or two, and a storage cabinet. Most families have little furniture, instead sporting baskets, water jugs, kitchen utensils, and a book or two. An altar to the spirits and ancestors, also high on the wall, may have a small glass of alcohol or water, a dish of fruit or sticky rice, a candle, and incense sticks.

Much living occurs under the house, where platforms provide sitting and siesta space. Both humans and animals benefit from the shade during the hot season and protection from the rain during the rainy season. Cambodians work, visit, eat, and sleep under the house during the daytime and retreat to their houses in the cool and darkness of the evening.

In the cities, Cambodians live in houses ranging from villas to a rag on the sidewalk. Wealthier Cambodians live in two- and three-story houses and apartments with electricity and running water. Less affluent Cambodians live in smaller apartments, often with many family members to a room.

The vast majority of Cambodians have never ridden in an airplane, car, bus, or motorized boat. Most, however, have paddled a boat. Many consider themselves lucky if their family owns a bicycle, and the dream of most youth and adults is to be able to purchase a motorbike. It is not unusual in the cities to see a whole family out for a ride, all on one motorbike: the father driving, a child sandwiched between him and his wife behind him, another on the handlebars, another in his wife's arms, and yet another in his lap. Everywhere in Cambodia, however, the commonest form of transport continues to be by foot.

## 10 FAMILY LIFE

The husband is the head of the family and its public spokesperson. He is responsible for providing the family's shelter and food. In the countryside, his duties include plowing and harrowing the rice field, threshing rice, caring for animals and household tools, and working at additional jobs if necessary to support the family. In the city, he generally works outside the house.

The Cambodian wife controls her family's purse strings, handling money and determining income and expenditures. In the countryside, her duties include caring for children and home, transplanting, harvesting and winnowing the rice, and caring for the garden. In the city, she may work out of the home, most commonly as a tradesperson. The Khmer wife is also considered the ethical and religious heart of her family. Cambodians say as she acts, so do her children.

Cambodian families have traditionally been smaller than Chinese or Vietnamese families, with the ideal of most being to have about five children. Cambodians value children and rely on them for assistance with supporting the family when they are young and their parents when they are old. Women especially, however, appreciate birth control information and contraceptive technology, if only to better control the timing of their family's growth.

Like the first Cambodian, Kaundinya, in much of Cambodia a young man is expected to gain the approval of his future parents-in-law by living and working with them before or after his marriage to their daughter. The traditional wedding is long and elaborate; Cambodians complain that expenses now cause weddings to be much shorter, cut from three to one or one-and-a-half days. The ceremony, which includes a blessing by the local healer, monks, family elders, and neighbors, is followed by a banquet as elegant as the family can afford.

In the past, both divorce and multiple wives were the luxury of rich people. Now, however, divorce is more common. It continues to be easier for men than women, and, since the relative number of women is higher than men, men are able not only to abandon a wife, they may have multiple wives.

The primary economic, cooperative, and emotional unit is a husband, wife, and their children. The nuclear family is surrounded by the personal kindred of the husband and wife, which extends back two or three generations. Beyond that are the *nek ta*, or family spirits, who continue to watch over their descendants. Cambodians form close relationships also with neighbors and hold monks and healers in high regard.

Few Cambodian children have pets; instead, animals, like people, have jobs. Domesticated animals, such as water buffalo, oxen, pigs, and fowl, are used to support the family, and children are thus discouraged from treating them as pets. Even cats and dogs have jobs: dogs to guard the home, cats to kill the rats. Only a few of the wealthier people in the cities view animals as pets.

## 11 CLOTHING

Many Cambodians continue to wear traditional clothing. Women wear a sampot and men a sarong. Both are wrap-around cotton or silk skirts that fall to the knee. With the sampot Khmer women wear a white blouse or shirt, while men go bare-chested or wear a light-colored shirt over their sarong.

Many Cambodians, especially men, prefer to wear Western trousers and shirts, usually short-sleeved. Women also, es-

pecially in urban areas, are shifting to Western-style dresses, trousers, and tops.

The quintessential Cambodian piece of clothing is a *krama*, a long slender scarf worn in a multitude of ways. *Krama* is most commonly worn around the neck, but also as a head turban or scarf, a skirt, blouse, purse, or baby sling. The everyday *krama* is usually checkered, but fancier ones may be made of silk and come in a variety of colors and styles. Nearly every Cambodian owns a *krama* and many Western visitors as well.

Since the terrible Khmer Rouge years, when people were forced to wear dark clothes and were punished or killed for wearing colors or jewelry, and the years following, when they were too poor to buy what they wanted, Cambodians have delighted in the return of a prospering economy and brightly-colored and printed fabric and clothing in the marketplaces. Still, poverty is widespread, and most Cambodians can purchase only imported second-hand clothing.

Most Cambodian children wear Western-style clothing: their best shorts or skirts and shirts for school, old ones for home and work. Children go barefoot, while their parents wear rubber thongs or sandals.

## 12 FOOD

Rice is the most important Cambodian food. Eaten at virtually every meal, it forms the basis of most Khmer dishes. Cambodians distinguish rice by species, taste, area, and growing season.

Fish is almost as important and is eaten fresh, dried, and salted. Cambodians fish for lake chub, carp, eels, and numerous other species. The Tonle Sap itself is one of the richest freshwater fisheries in the world. Fish abound in these waters and can be easily taken, especially when the waters begin to recede, and the fish are left literally high and dry. When the Tonle Sap River again begins to flow to the sea, tens of thousands of fishermen rush to the Lake. With dams and traps, they capture the millions of fish caught in the area of decreasing water. As noted above, however, recent changes to the lake threaten this important source of food and livelihood for Cambodia.

Vegetables are a vital part of the Cambodian diet. Cambodians grow a number of crops in their gardens, including onions, peppers, eggplant, tomatoes, and potatoes. Many homes are also surrounded by coconut and banana trees and numerous other plants. An especially loved treat is the durian fruit, horrid-smelling but delicious in taste. Other fruits include mangoes, papayas, jack fruit, and palm fruit. The sugar palm also yields syrup, which is used in cooking.

A typical traditional meal that continues to be part of Cambodians' main diet is a bowl of steamed rice eaten with a sauce containing bits of fish, fowl or meat, eggs, vegetables, and spices, such as onions, chilies, garlic, mint, ginger, or lemon grass. On special occasions Cambodians eat fried rice, noodles, Vietnamese pou soup, chicken curry, barbecued shrimp, duck eggs served with the almost-hatched ducklings still inside, roasted sunflower seeds, and rice cakes containing beans or banana. Tea is served by everyone who can afford it, although soft drinks and beer are becoming more common, especially in urban areas.

The most traditional of Cambodian foods is *prahok*, fermented fish, which is used as a thick sauce condiment with other dishes. Betel nut is another favorite, a seed that is wrapped in leaves and chewed for its mild narcotic effect. Chewers, pri-

marily older women, are obvious from the dark red juice they spit, which stains their gums and teeth.

Cambodians usually eat an early meal of left-over rice, cakes, or fruit either at home or in the field. The big meal of the day is lunch around midday, followed by supper at twilight.

Cambodians eat together, usually with the family seated in a circle on the floor of their house. Each has a bowl of rice, and all take bites of food from several dishes sitting in the middle of the group. When eating on the job, away from the house, or under the house, Cambodians may eat sitting in a squatting position, their feet flat on the ground, their knees bent sharply, and their bottoms hanging almost to the ground. Whether squatting or sitting on the ground, the men cross-legged or, like the women, with their legs folding back to one side, Cambodians can sit for hours in positions that are uncomfortable for Westerners after just a few minutes.

Most Cambodians eat with two basic eating utensils, a spoon and a fork. Others, however, including some urban Cambodians, Chinese Cambodians, and Vietnamese living in Cambodia, use chopsticks. Many urban Khmer use spoons and forks at home, and chopsticks at restaurants and at Vietnamese soup shops on the street.

Cambodians seldom fail to share a bit of their meal with the spirits, putting a small amount of food, fruit, or liquid in a receptacle before the indoor altar or outdoor spirit house.

### 13 EDUCATION

Traditionally, education was provided primarily to boys at temple schools. There they were taught religion and the religious language of Pali by Buddhist monks. After independence and before the 1970s, Cambodia developed an educational system built on the French model. Elementary and secondary schooling was expanded enormously for both boys and girls throughout the country. Colleges and technical schools were built in large numbers and attendance increased from a mere handful to over 9,000. Most boys and some girls learned to read and write a little Khmer.

During the war of the early 1970s and Khmer Rouge rule, traditional and Western-style education came to a virtual standstill. Schools were destroyed, and those who had been teachers or students and those caught attempting to teach or learn religious or Western knowledge were severely punished or killed. Cambodia had to begin again to build a system of education.

Most children begin school at age seven or eight and receive some schooling for at least several years. While parents want their children to become educated, seeing education as the path to better employment and freedom from poverty, families can ill afford to pay their children's school fees, books, or clothing, or to free their children from household chores.

### 14 CULTURAL HERITAGE

During the Khmer Rouge regime of the late 1970s, Cambodians were not allowed to sing or dance on pain of death. It was a loss that hurt them deeply, for Cambodians say that to dance and to listen to Cambodian music is one of life's sweetest pleasures. Most Cambodians sing, and traditional orchestras, with their various kinds of guitars, xylophones, violins, gongs, and drums, are greatly appreciated.

Traditional dance has been the pride of Cambodians for a thousand years. Children undergo years of training in order to

execute the intricate moves of court and classical dance. Their costumes are elaborate and expensive, so tightly fitted that the dancers must be dressed, even sewn into their outfits of silk and velvet. Their hand gestures and body movements mirror those seen on buildings of Angkor built over 800 years ago.

In the villages, troupes of costumed young men and women perform various folk dances. Everywhere throughout the country on special occasions, Cambodians dance the traditional circle dance, moving slowly several steps forward, then back, all the time twirling their arms and hands in the air.

Cambodian plays, which include both dance and music, tell ancient stories of Hindu gods and heroes, folktales about beautiful and wealthy royalty, greedy merchants, and noble youth, and comic stories that delight everyone.

Cambodian literature begins with inscriptions from the 7th century and continues through the classical work of the 16 and 17th centuries. Traditional texts were memorized by professional storytellers, who traveled from place to place performing. Many of these oral traditions were written down in the mid-20th century and used as textbooks in classrooms. Cambodian literature also includes tales of the Buddha's lives, verses that contain advice for daily life called *chbap*, and folktales.

Traditional Cambodian literature is being overshadowed by modern radio and movies, and especially by television and videos. From city-dwellers to inhabitants of the more remote villages, most Cambodian youth would rather watch a martial arts video from Hong Kong than listen to a storyteller relate ancient stories.

Cambodian pride in ancient heritage has resulted in sharp tension with neighbors in recent years. A remark by a Thai soap opera actress impugning the origins of Angkor Wat resulted in anti-Thai riots in Phnom Penh that ultimately resulted in the destruction of the Thai embassy and led the Thai government to evacuate Thai citizens from the city. Cambodia and Thailand have also taken a dispute over ownership of an ancient temple to an international court.

### 15 WORK

Most Cambodians are rice farmers who also grow vegetables and fruit in family gardens around the house. Others cultivate cash crops, either on a small scale or on large plantations. Most Cambodian farmers also raise domestic animals, most commonly water buffalo or oxen, which are used to plow the fields, pigs, ducks, and chickens.

Cambodians spend much of the slack season from cultivating rice in crafting items they will use to support their family in the coming seasons: stringing fish nets, twisting vines into string or rope, and making pots for carrying water or cooking.

As the economy improves, however, more Cambodians are buying plastic or metal tools and utensils in the marketplace rather than making them for themselves from the vines and wood around them. Thus, colorful plastic utensils and enduring metal tools are replacing the handicrafts Cambodians have practiced for centuries. A village that has "since long ago" made earthenware pots is now selling them for pennies to tourists because, as the people say, Cambodians can buy modern pots imported from Thailand and Vietnam cheaper in the market.

In the cities, Cambodians hold all the jobs seen in most cities of the world: government officials, construction workers, taxi cab drivers, waiters and maids, retailers. However, in contrast to some Southeast Asian countries, there are few Cambo-

dian financiers. This is because the financial sector had been dominated by ethnic Chinese prior to 1975. Many Cambodians are soldiers, many coming from former resistance armies. Demobilization of the armed forces only began in earnest in the late 1990s and reintegrating soldiers into Cambodian society has proved to be a complex undertaking. This has been made more difficult by political struggles between Cambodian politicians, all of whom are reluctant to give up the forces that had been pledged to them during the decades of civil war.

## 16 SPORTS

In Cambodian villages, children spend a few years of their lives in school. The rest of their time is spent helping their families make a living. Even the smallest children help their parents fish, cook, gather firewood, and do a variety of chores. Both boys and girls help with younger children, and it is not uncommon to see boys carrying a baby sister for hours at a time.

Children are often responsible for caring for the animals. Boys herd the water buffalo and oxen when they are not being used for plowing, and girls feed the pigs and chickens. Boys climb up sugar palm or coconut trees seeking syrup or coconuts. In some parts of the country they hunt for rats, lizards, snakes, small fish, and crabs to supplement the family diet.

Children usually turn these subsistence activities into play and games. In addition, they enjoy swimming and running. A popular village game is played with rubber thongs. The boys draw a line in the dirt, then stand back and throw their sandals at the line. The boy who gets the closest is the winner. Girls and smaller children play a similar game with rubber bands, and the winner wears his captured bands around his wrist. Girls also play hopscotch.

The most popular spectator and participant sport is soccer. Volleyball is also a favorite and both are seen frequently in rural and urban Cambodia. Other sports include boxing, basketball, and bicycle races. A few Cambodians in urban areas also play tennis and swim. Kite-flying and canoe-racing, although not as popular as before the Khmer Rouge period, remain desirable activities, and communities not yet able to afford either look forward to the day when they can.

## 17 ENTERTAINMENT AND RECREATION

Movies, television, and videos are extremely popular in both the urban and rural areas, although they are more accessible in the cities where people have more money and there are numerous theaters. Televisions are becoming more common in the villages, most battery-operated since electricity in rural areas is nonexistent or rare. Villagers carry their batteries to a recharging store with a generator and pick them up again in the early evening so the family may watch television together at night.

Also popular are videos, which circulate from family to family. Village cafes and bars charge patrons to watch videos. These draw large crowds, many including children standing outside and into the roadway hoping to catch a glimpse of martial arts films made in Hong Kong, Singapore, and other neighboring countries.

Karaoke is popular and can be found in the fanciest clubs in the capital of Phnom Penh to the humblest village. For the price of a beer, Cambodians, usually men, sing along to the music and lyrics printed on the video and played over the television set.

In the villages, local festivals remain the most common and popular leisure activity. Eating, music by local or traveling bands, videos, games, drinking, and dancing fill the hours.

Government officials estimated that by 1967 almost every Cambodian home had a transistor radio. This vastly increased the contact Cambodians had with their government and their sense of being one nation. The Khmer Rouge destroyed virtually all of these radios, and it has taken some time for Cambodia to regain the communication network it had prior to the 1970s. This process was given a boost by the United Nations in the early 1990s as the UN relied upon radio to communicate with the population in the lead-up to the 1993 election. As of 2008 television and radio link most Cambodians to their government, popular culture, and imported entertainment.

## 18 FOLK ART, CRAFTS, AND HOBBIES

The greatest handiwork of Cambodians was crafted during the Angkorean Period, from the 9th to the 14th centuries, when Angkorian rule spread from Vietnam to Burma. During those centuries, Cambodian architects designed and Cambodian slaves built a number of temples and palaces in the Angkor region of northwest Cambodia. Included in these is what most consider to be the grandest of all, a priceless jewel of artistic work, the temple mausoleum of Angkor Wat.

Traditional crafts include carvings in stone and wood, jewelry-making, and gold-and-silver working. Artists often copy ancient religious designs: statues of the Buddha, Hindu gods, scenes from the Ramayana, an ancient Hindu epic, and designs from the ancient temples of Angkor. Silk weaving is another craft practiced by many Cambodians, who weave gorgeous and colorful fabric for *sampot* and *karma*, which are sold in the marketplace to both Cambodians and tourists.

## 19 SOCIAL PROBLEMS

Members of a hierarchical Buddhist society, Cambodians have always viewed their lot in life as the consequence of activities in previous lives. Thus, Cambodians have traditionally accepted their position in life with more equanimity than non-Buddhists.

During the Khmer Rouge regime, human and civil rights in Cambodia were nonexistent. Most nations consider the Democratic Kampuchean government to have been one of the cruelest of modern times. With the end of the Khmer Rouge as a political force and efforts by the United Nations to bring the remaining KR to a war crimes tribunal, Cambodians have found themselves reliving some of the Khmer Rouge era days—at least psychologically—as the trials go forward.

Most Cambodians view politicians as venal and rapacious and often take a resigned approach to corruption. The dominant party, which dates back to the Vietnamese occupation of the 1980s, has managed to regain almost total control. This is due not only to the party's own authoritarian practices but also to the weaknesses of other parties. Although human and civil rights are still under siege in Cambodia, the legacy of the United Nations period is still seen in terms of human rights advocacy groups, the press, and the overall non-governmental sector, all of which compare favorably to some other states in the region. Apart from these issues, however, Cambodians are experiencing more peace than they have for decades and value that highly. In 2003 a public opinion survey showed that

a majority of Cambodians associate peace with the concept of democracy, rather than electoral politics.

## 20 GENDER ISSUES

There are two distinct problems involving gender issues in Cambodia. First, despite the influence of Western donors and the fact that decades of war have made Cambodia a female-majority country, in comparison to neighboring countries, Cambodian women have not achieved high positions in government, commerce, or education. This implies a lack of social mobility in the country as a whole. Secondly, although both domestic violence and human trafficking are illegal, Cambodia suffers from high levels of both problems. Rape is more common than in other Southeast Asian countries. Although trafficking of women has been a serious problem since the 1990s, many accounts of this problem do not reflect that fact that more ethnic Vietnamese women in Cambodia are forced into prostitution than ethnic Khmer.

# KOLIS

**PRONUNCIATION:** KOH-leez

**LOCATION:** India (primarily Maharashtra and Gujarat states)

**POPULATION:** About 12 million

**LANGUAGE:** Dialects of Marathi or Gujarati, or the language of the region of India in which they live

**RELIGION:** Hindu; small numbers of Muslims

**RELATED ARTICLES:** Vol. 3: Hindus; People of India; Vol. 4: Muslims in South Asia

## 1 INTRODUCTION

*Koli* is a vague term covering the tribal populations living in parts of western India. Although traditionally classed as a tribe inferior in status to the Kunbis, the cultivating caste of the region, Kolis have now been designated as a Hindu caste in some areas. It is possible that the name of the tribe is derived from the Sanskrit *kula*, meaning "clan." There are numerous groupings and sub-groupings among the Kolis, who tend to be endogamous, i.e. they do not intermarry with the Kolis of other regions. Kolis are thus a group of tribes or castes, rather than a monolithic entity. Some writers suggest that the English word *coolie*, meaning porter or hired laborer, comes from *Koli*.

The origin of the Kolis remains a matter of debate. One view holds that they entered the region from Sindh and were part of the White Huns. Another theory links them to the Kol and Munda tribes of east-central India. One branch of the Kolis, the Son Kolis or Sea Kolis, are thought to have settled in the region of Bombay (Mumbai) during the 12th century ad, where, today, they are usually fishermen. The other branch of the Kolis, the Hill Kolis, acquired a widespread reputation as "hill robbers." Kolis are generally held to be of low social status and are classified either as Dalits ("Untouchables"), Sudras or as a Scheduled Tribe. In some localities, however, Kolis claim Rajput blood, follow Rajput customs, and have a relatively high social position. Thus the Khant, Bariya, and Thakore Kolis of Gujarat give brides to Rajputs, converted Rajputs, and Muslims, but never give their daughters to lower caste Kolis such as the Pagis and Kotwals.

## 2 LOCATION AND HOMELAND

The Kolis form one of the largest tribal groups in the western part of India. A current estimate of total Koli population is about 12 million, though this figure may well include groups that once were Koli but are now considered as other castes. Kolis are spread through the states of Maharashtra and Gujarat, with small communities also found in Rajasthan, Madhya Pradesh, and Orissa. The Son Kolis are concentrated in the coastal areas around Bombay. Other Koli groups are found in the interior of Gujarat and the upland regions of Maharashtra and Madhya Pradesh. Kolis are also found in Sindh and areas of the Thar Desert east of the river in the lower Indus Valley in Pakistan. They are primarily Hindu, a relic of pre-Partition days, and culturally and linguistically they are very similar to the nomadic Rabari and other peoples in the region. Kolis in that region of Pakistan include the Parkari Koachchi, the Wadiyara Koli, the Kutchhi Kohli (or Lohar), and the Tharadari Koli. Koli communities in Pakistan also view their social standing somewhat differently. Thus the Kutchhi Kohli,

even though they are classed as a Scheduled Tribe in Gujarat State, consider themselves to be superior to other Hindus, and at least equal with Brahmans.

### 3 LANGUAGE

Kolis speak the language of their localities. Thus, most speak one of the numerous dialects of Marathi or Gujarati, both of which belong to the Indo-Aryan language family. These languages are written in the Devanagari and Gujarati scripts, respectively.

### 4 FOLKLORE

According to legend, the Kolis are the descendants of the black dwarf who is believed to have emerged from the body of King Vena. The *Mahabharata* and other ancient texts tell that Vena was a wise and just king who ruled many tribes and peoples in eastern India. However, he became corrupted and abandoned the true faith, prohibiting all worship and sacrifice, except to himself. His religious advisers tried in vain to reason with him, but to no avail. Finally, in exasperation, they killed him with blades of the sacred *kusa* grass that miraculously became swords in their hands. To secure a successor to rule the country, the rishis rubbed Vena's thigh and there emerged a dark, dwarfish man, representing the evil nature of the King. This dwarf is said to be the ancestor of the Kolis.

### 5 RELIGION

Except for a small number of converts to Islam, Kolis are Hindu and their religious practices conform to Hindu norms. They retain, however, many aspects of their former animism. For instance, the Talapada Kolis of Gujarat worship numerous *devi* or goddesses who appear tribal rather than Hindu in origin. These goddesses protect against various kinds of diseases and ailments, and their help is sought in making decisions in daily life. Goddess-worship has acquired aspects of the *sakti* cult, and every household has its family goddess or *Mata*. These family goddesses may be known by different names, but they are all represented by terra-cotta figures that are basically triangular in shape and smeared with red coloring. Swords kept alongside the figure are supposed to belong to the goddess, being used by her to drive away evil. In Gujarat, individuals known as *bhua* go into a trance and are thought to communicate directly with the goddess, answering questions put to her by the gathered audience. The *bhua* are also consulted in the case of sickness, as the Kolis believe that disease is caused by malevolent spirits.

Regional deities are of some importance. The Son Kolis of Maharashtra, for instance, worship the god Khandoba, who is believed to be an incarnation of Shiva. The Kolis of Nimar in Madhya Pradesh worship the goddess Bhawani, and every family has a silver image of the deity in the house.

### 6 MAJOR HOLIDAYS

Kolis celebrate the important festivals of the Hindu calendar cycle. In addition, they observe various festivals that are agricultural in nature. There are, however, festivals that are exclusively Koli. Among the Talapada Kolis of central Gujarat, for instance, Attam is the occasion when special foods and prayers are offered to the family goddess. People gather at the family *math* or shrine, which is redecorated for the event. Special food

(molasses, rice, lentils, wheat, and peanut oil) are offered to the deity and then cooked for a family feast. Coconuts are broken open to ensure health and prosperity for the family. Other Koli celebrations, such as Hutasni, are Hindu festivals to which the Kolis have attached their own beliefs and rituals.

### 7 RITES OF PASSAGE

No special diet or restrictions are imposed on Koli women in Gujarat during pregnancy. The child is delivered with the aid of the village midwife. After delivery, the umbilical cord is cut with a sickle, and the afterbirth is buried in the courtyard of the house along with some salt. Mother and child are subject to a period of ritual pollution (*sutak*) lasting 37 days, after which various purification ceremonies are undertaken. Subsequently, the child undergoes the naming ceremony and the ear- and nose-piercing ceremony. It is common for both boys and girls to be tattooed, usually between the ages of 8 and 12, but definitely before marriage.

After death, the corpse is bathed. A sacred *tulsi* (basil) leaf and a piece of silver are placed in the mouth to purify the body. The body is dressed in white clothes and, if the deceased was unmarried, anointed with turmeric as a ritual of marriage. Marriage is necessary for the departed to be a full-fledged member of the community. Those who have not achieved this status are symbolically married as part of the funeral rites. The body is carried to the cremation grounds and placed on the funeral pyre facing north, the direction in which Paradise is believed to lie. On the eleventh or thirteenth day after death,

the final rites of *karj* are performed. This expensive ceremony requires that various goods such as food, cooking utensils, clothes, and household items be offered to the deceased through a Brahman priest. It is through the Brahman, the purist of caste, that these goods will reach the dead. The funeral rites are completed by a lavish feast for friends and relations. The eldest son feeds a crowd of delicacies prepared on this occasion. It is thought that this bird is the only creature that can reach the city of the dead.

## 8 INTERPERSONAL RELATIONS

Although Kolis are often forced to leave their native villages in search of employment, they exhibit strong kinship ties with deep roots in the worship of family deities. It is usual for family members to return to the family home at the time of festivals honoring the family goddesses.

## 9 LIVING CONDITIONS

The typical Koli house is enclosed by four high walls, with access from the street through a wooden door that opens into a courtyard. Along one side of the yard is a shed for cattle and other livestock, and areas for storing fodder and the cowdung cakes used for fuel. On the opposite side of the courtyard from the cattle sheds, steps lead up to the family's living quarters. The focus of this is the *math*, the shrine where the family gods and household idols are kept. In addition, there are the kitchen and rooms used for living and sleeping. Most rooms in Koli houses are lined with shelves holding household utensils. Wooden cots (*charpai*) are used for sleeping and resting. Women are not segregated to any particular part of the house, and married men sleep with their wives and children in the same room. Daughters-in-law maintain *pardah* (seclusion) from male members of the family by covering their face.

## 10 FAMILY LIFE

Kolis are divided into numerous branches such as the Talapada Kolis, the Mahadeo Kolis, and the Dhor Kolis. These are essentially regional groupings that are endogamous and do not intermarry. Each endogamous group, however, is organized into exogamous clans. One does not marry within one's clan, and before a marriage Kolis ascertain that the families are unrelated up to four ascending generations. Marriages are arranged, and girls marry at a young age. The actual ceremony is performed by a Brahman and in general follows Hindu rites. A bride-price is commonly paid to the family of the girl. Sometimes a wealthy father refuses to accept the bride price, an action that raises his social standing in the community. The new bride enters the household of her husband, where she assumes her role as the dutiful daughter-in-law.

## 11 CLOTHING

Koli clothing reflects regional patterns in dress. In the Saurashtra region of Gujarat, for example, Koli men wear pants like pajamas that are skintight from the knee downwards and loose and baggy above. A sleeveless waistcoat called a *bandi* is worn in the summer. In the winter, however, this is replaced by a full-sleeved, high-necked blouse. This is fitted under the armpits but then flares out to the waist in pleats. This dress, which is typically Gujarati, is invariably white in color. A white

turban or *pagri* is worn on the head. Men wear heavy leather shoes, with pointed toes, that are heavily sequined with brass.

Traditional dress for Koli women consists of a blouse and a full-length, slitted skirt with an embroidered edge. A length of cloth 2.5 m (8 ft) long known as *odhni* is tucked in at the waist and drawn over the head. Sometimes women wear the traditional Indian *choli* and *sari*. Koli women are fond of jewelry and cosmetics and wear an assortment of ornaments in the ear and nose and bangles on the arms and legs. The most prominent feature of Koli personal adornment is tattooing, although this is more extensive on women than on men. The motifs vary from flowers, birds, and figures of gods and goddesses to geometric designs. A girl who is not tattooed before marriage reflects poorly on her family.

## 12 FOOD

Kolis in Gujarat eat a light breakfast and two meals during the day. Breakfast, taken in the early morning, consists of *bajra-kirroti* (unleavened millet bread) left over from the previous evening's meal and tea. Goat's milk is used for the tea because it is cheaper than cow's milk. The afternoon meal consists of millet bread and vegetables. Poorer families eat a paste of garlic and chilies with the bread rather than vegetables. In the evening, *khichri* (a dish of lentils and rice boiled together) is eaten with the bread. If available, buttermilk is taken with both meals. For festive occasions, *puris*—deep-fried bread made with wheat flour and stuffed with potato curry—are prepared. In Gujarat, most Kolis are vegetarian, but elsewhere they eat meat. Kolis eat chicken and pork but usually abstain from beef. The Dhor Kolis, however, eat beef and carrion. Fish is a significant element in the diet of the Son Kolis. Fermented liquor and opium are used by Koli men.

## 13 EDUCATION

The traditional concept of education among Kolis was essentially functionally oriented. Boys were given full freedom to play until they were about five years, at which time they were sent to school—assuming the village had a school and the parents wanted a formal education for their child. Even then, boys were allotted domestic duties, which taught them the basics of cultivation. When farm work became heavy, they used to leave school and work in the fields. As girls were to be married, education for them was deemed superfluous. They used to stay at home, carrying out domestic chores.

Educational levels vary among the Koli tribes, depending on their location and their status. For example, even though literacy among the Dhor Koli (or Kholi Dhor) group in Dadra and Nagar Haveli, a Union Territory on India's west coast, has improved over the last few decades, it is still quite low, especially among females. The Koli in Dadra are classed as a Scheduled Tribe and female literacy among Scheduled Tribes is only 27%. By contrast, literacy among the Mahadeo Koli in Maharashtra is 62.8%, and among females, the 52.9% literacy recorded by the 2001 Census is the highest among the Scheduled Tribes in the State.

Figures for attendance at school are generally quite low for Kolis—in Gujarat State this is 33.4%, the lowest value for any of the Scheduled Tribes. Even though free schooling is provided by the state through the secondary level, for many Koli it is more important to have children help in the field. In Gujarat literacy levels among Kolis are also very low according

to the 2001 Census (38.4% and 12.8% for males and females, respectively).

#### 14 CULTURAL HERITAGE

The Kolís have their own traditions of song and dance and also share in regional cultural traditions. The Kolís of Gujarat, for instance, have incorporated the Gujarati *garba* and *dandya ras* dances into their religious and social ceremonies. Unmarried girls participate in the *garba*, dancing in a circle while balancing a lighted oil lamp on their heads and singing *garba* songs. *Dandya ras* is a stick dance usually performed by men.

#### 15 WORK

The Kolís fall into two main groups: the Son Kolís, who are skilled fishers, and the Hill Kolís, who engage in numerous occupations. The Chunvalia Kolís were once known for their criminal activities but today are mainly engaged in cultivation or work as agricultural laborers. The traditional occupation of the Dhor Kolís is the tanning of animal hides. Some Kolís have taken to occupations as domestic servants, village watchmen, baggage-handlers, and porters. A few, who have some education, work in government offices and schools.

#### 16 SPORTS

Games played by children include blind-man's bluff, skipping, and "jacks" played with pebbles or stones. Boys enjoy fighting with bamboo sticks. Males play various board games with cowry shells as game tokens. The "boards" are often just drawn with the fingers on the ground. Hockey and cricket are popular games learned by children in school.

#### 17 ENTERTAINMENT AND RECREATION

Mass media such as radio, television, and movies are available throughout India. However, access to this entertainment is often limited by economic resources. For many of the poorer classes, and especially those living in more isolated areas, the main forms of recreation are still to be found in festivals, folk traditions, and social events such as marriages.

#### 18 FOLK ART, CRAFTS, AND HOBBIES

KolÍ women are particularly adept at embroidery. Girls are taught various types of stitching at a young age. They decorate clothes and make mirrored wall hangings. They also engage in decorative beadwork.

#### 19 SOCIAL PROBLEMS

While some Koli groups are successful peasant cultivators, many suffer the problems of the depressed classes in any developing society—landlessness, poverty, malnutrition, illiteracy, the burden of rural debt, and lack of the means to escape their situation. Some have left their villages and joined the migration of the rural poor to cities such as Bombay, where they swell the ranks of the urban underclasses. However, a recent study in Pune in Maharashtra State suggests that some Kolís have bettered themselves by moving to the city. The sample Koli population studied in Pune was characterized by a higher standard of living, effective use of birth control, better educational levels, and better nutrition than other groups. While this suggests that for some the flight to the city may be a positive move, it remains to be seen whether this is the exception

to rule. The Kolís remain a tribal community ranked near the lowest economic and social levels of Hindu society.

Although Kolís are primarily agricultural, in Bombay the fishing Kolís face competition from other fishing groups. Thus in the spring of 2004 several fish vendors from the north of India brought a legal suit in the Bombay high court claiming that Koli women did not allow them to enter Bombay's wholesale fish market and that the police had failed to redress their grievances. The Koli Mahila Sangharsha Samiti, a Koli women's organization, had launched an agitation in Mumbai demanding the boycott of North Indian fish vendors at the city's wholesale fish markets. Koli women observed a day-long strike and held several meetings to protest against the entry of the North Indians into the trade.

#### 20 GENDER ISSUES

The relative position of Koli women varies from place to place. In states where Kolís are classified as Scheduled Tribes (Gujarat, Maharashtra, Karnataka, Rajasthan, and the Union Territory of Dadra & Nagar Haveli), Koli women are better off than amongst groups that have been Hinduized. They reap the benefits of being classed as a Scheduled Tribe for which they are eligible (whether or not they take advantage of this) and are generally much freer in their personal lives than their Hindu counterparts.

Even so, marriages among the Koli are usually arranged and the females are often legally children, being married below the age of 18 years (the traditional age for Koli marriage was 5 to 10 years for the girl). Since a bride price is paid to the girl's family it is important that the girl is appropriate and that her family is in good economic standing. In Pakistan even Hindu Kolís adopt *purdah*, and there is considerable friction between the Muslim and Hindu communities.

Hinduized Kolís tend to show patterns of behavior that reflect society at large. Thus there have been reports of bride burning amongst the Kolís, often for failing to bear male children. In 2005 the press reported a case of a pregnant Koli woman who was burned to death because her unborn fetus would have been her third girl child. The husband and mother-in-law were subsequently arrested for murder. Even among Christian Kolís, bigamy—for the purpose of having a son—is not uncommon.

The central government passed the Pre-Natal Diagnostic Techniques (Regulation and Prevention of Misuse) Act in 1996, but abortion of females is still a major issue amongst Kolís. The 2001 Census of India show the Koli Mahadeo to have the lowest sex ratio for over 6 year-olds (964 women to 1000 males) of all the Scheduled Tribes in Maharashtra State, this despite the state passing legislation in 1988 banning selective sex abortion.

Poverty, illiteracy, low socio-economic standing, and cultural norms remain the main obstacles facing Koli women in their attempts to better themselves.

## KOLIS

**PRONUNCIATION:** KOHLS

**LOCATION:** India (Madhya Pradesh region)

**POPULATION:** c. 200,000 (estimate)

**LANGUAGE:** Local dialect of Hindi; Kol

**RELIGION:** Hindu; small numbers of Muslims

**RELATED ARTICLES:** Vol. 3: Hindus; People of India; Vol. 4: Muslims in South Asia

### 1 INTRODUCTION

At one time, the name "Kol" was used to identify a group of primitive aboriginal tribes thought to be descended from Negro and Australoid peoples who had entered India in prehistoric times. These tribes are concentrated in central India and the northeastern regions of the Deccan plateau. They speak related languages described as "Kolarian," which are known today as the Munda languages. The tribes include the Santal, Munda, and Ho. But in modern usage, the term "Kol" is used in a more restricted sense to identify a specific tribe among these Munda-speaking peoples.

The name "Kol" may come from the Mundari word *ko*, meaning "they." Alternatively, it may be derived from *koro* or *horo* (meaning "men,"), a term the Kol use to identify themselves. In legend, the Kol trace their origins to a Sheori or Savari, calling her the "Mother of all Kols." Some try to relate the name "Savari" to the Savaras mentioned in the *Mahabharata* epic, but the name most likely comes from the *Ramayana*. There once was a woman named Sheori, so the story goes. Some people called her "Kolni" (*-ni* is a feminine suffix, so "Kolni" means "a Kol woman") and others called her "Bhilni." Sheori was a devotee of Bhagwan ("God"), gathering jungle plums for him. Pleased with her devotion, one day Bhagwan offered Sheori favor: she could have a kingdom or a family. Sheori chose a family and gave birth to five sons. The sons eventually went away to various regions and founded the various subdivisions of the Kol. It is interesting to note that some Kol believe they once inhabited the hills of Rajasthan where, with the Bhils, they helped Rana Pratap Singh in his struggle with the Moguls (Mughals).

### 2 LOCATION AND HOMELAND

Reliable data on the Kol population is unavailable. The 1981 census reported a population of 132,232 persons. The current population would be approximately about 200,000, assuming growth rates that mirror the national average. The Kol are concentrated in the northern districts of Madhya Pradesh around Jabbalpur and Rewa. Small Kol populations are also found in Orissa and Maharashtra. The region of Madhya Pradesh occupied by the Kol lies in the highlands that define the northern edge of the Indian peninsula. It includes the eastern Vindhya Range, the Bhandar Plateau, and the Kaimur Range. The plateaus and escarpments of the region are crossed by the upper reaches of rivers such as the Narmada, the Son, and the lesser streams draining north to the Ganges. Rainfall averages around 120 cm (47 in). Because the area lies in the interior of the subcontinent, temperatures reach extremes of both heat and cold. Maximum temperatures in May, the hottest month, average over 40°C (104°F), and winter minimums drop below

10°C (50°F). Before roads were built, the terrain and the heavy forest cover made travel to the region difficult. Because of this, it has served as a refuge where some of the oldest peoples in India have survived relatively undisturbed until modern times.

### 3 LANGUAGE

The Kol language belongs to the Munda languages. However, few Kol speak the Kol language today. In the 2001 census, only some 12,200 persons were identified as Kol speakers, and this total had probably dropped considerably by 2008. The Kol speak local dialects of Hindi and use the Devanagari script for writing. A few Kol are bilingual, speaking Kol and another language such as Hindi or Oriya.

### 4 FOLKLORE

The Kol have a myth that explains how the cat became a household pet. Once upon a time, so the story goes, Mahadeo (the god Shiva) sent a cat to spy on a certain home. He wanted to know if there was a fire in the house at that time. The cat, which had been staying with Mahadeo for a long time, went to the house. There, she found a fire burning and milk warming beside it and butter on the floor. Eating the butter and drinking the milk, the cat curled up by the fire and went to sleep. She never left the home; she preferred it to the treatment she had received while living with Mahadeo. Since that time, the cat has been a household animal. It is considered a great sin to kill a cat, since it came directly from the god Mahadeo.

### 5 RELIGION

The Kol identify themselves as Hindus, although their religion has little in common with the higher forms of Hinduism. The Kol believe in a Supreme Deity, Bhagwan, but he is seen as a passive, distant entity. On the rare occasions when he must be approached, the Kol employ Brahmans to intercede on their behalf. Worship of Hindu deities and even of forces of nature is secondary to the worship of village and household gods (*deotas*) and goddesses (*devis*). These deities are believed to influence every aspect of life, and they are central to Kol religious life. They are too numerous to mention by name, but the one most frequently worshipped by the Kol is Khermai. She protects the village, wards off evil spirits, guards against disease, and helps the Kol in their business ventures. Other Kol deities include Shitalamai, the goddess of smallpox, Shardamai and her six sisters, and Gwalbansa Baba, a household god. Each village has its priest (*panda*), who officiates at religious ceremonies, performs sacrifices, and when possessed by the goddess becomes her mouthpiece. Animals (chickens, pigs, goats, and occasionally sheep) are offered as sacrifices to village and household deities. The Kol believe in magic and witchcraft, spirits and ghosts, and the evil eye.

### 6 MAJOR HOLIDAYS

The Kol observe Hindu festivals such as Holi, Dasahara, and Divali. The Jawara festival, however, appears to be an ancient Kol agricultural festival that later acquired some Hindu characteristics. The name is derived from the *juari* plant, a type of millet. Jawara is held twice a year, in the fall just before the sowing of the winter crop, and in the spring after it has been harvested. The festival lasts for nine days and is celebrated with feasting, singing, and dancing. People worship the village gods

and sacrifice animals at their shrines. Jawara is a time when, it is believed, possession by spirits is common. The focus of the fall festival is the ritual growing of seedlings in the house, partly to predict the coming harvest and possibly as magic to ensure a good one.

### 7 RITES OF PASSAGE

The Kol have adopted Hindu life-cycle rituals, although older traditions are often apparent in their actual customs and practices. For instance, the Kol take precautions to protect mother and child from the influences of evil spirits. The Kol greatly fear the nightjar, a bird they believe drinks milk from the nursing mother's breast, sometimes causing the death of both baby and mother. Doors are kept closed and branches of the *nim* (*margosa*) tree are hung over the doorway to protect against the bird. The Chhatthi, or Sixth Day, ceremony marks the end of the period of impurity believed to follow childbirth. Other childhood ceremonies include the naming ceremony, the hair-cutting ceremony, and the first feeding ceremony. Girls have their ears and nose pierced and they are tattooed when they are between the ages of ten and twelve. No particular initiation rites mark the reaching of puberty, although girls are kept in seclusion during their first menstruation.

When a person is dying, he or she is usually placed on the ground so there is close contact with Mother Earth. The Kol utilize both burial and cremation in their funeral rites, which take place as soon as possible after a death. The body is carried to the burial ground or burning ghat in a procession. Lamen-

tation and weeping are expected to occur, but there should be no singing, chanting, or music of any kind. Once at the place of burial, the body is washed, anointed with oil, and dressed in new white clothes. The grave is dug in a north-south direction, and the body is buried with its head toward the north. The feet point south because that is the direction in which the soul must travel to the land of the dead. If it is cremated, the body is aligned in the same direction on the funeral pyre. The ashes are to be scattered in a sacred river such as the Ganges or the Narmada. If this is not possible, they are placed in a "tank" (reservoir) or a stream, with a small amount kept to be taken to one of the holy rivers in the future. Various purification and mourning rites are carried out. These include the custom of "feeding the dead" for ten days, during which the spirit of the dead person is believed to return to familiar places. A feast on the tenth day (the ninth for a woman) ends the funeral observances.

## 8 INTERPERSONAL RELATIONS

The Kol greeting takes the form of an embrace. When two men meet, they put their arms around each other and touch the left shoulder to the left shoulder, and then the right to the right. Next they touch each other's knees, first the left and then the right, usually using both hands. As a final gesture, they grasp each other's right hand. Because their houses are small, the Kol do not entertain frequently. A visiting relative is given a place to sleep, eats with the family, and is made as comfortable as possible. Hospitality is usually not extended to or expected by strangers.

## 9 LIVING CONDITIONS

The traditional Kol village is set in a clearing in the forest and consists of a few houses built on either side of a winding pathway. Each village has its central shrine, an open platform built around the base of a tree, preferably a nim tree. There may also be shrines to other deities in other places in the village. The graveyard is located on the south side of the settlement. The boundaries of the village are usually not clearly defined.

Situated immediately in the front of each house, facing the path, is a small courtyard plastered with mud and cow dung. The houses themselves are rectangular and small, usually no more than a single room in which as many as five or six people may live. The walls are of grass or mud and the roof is thatched, although the better-off people have tiled roofs. There may be a small veranda, or porch, and a shed for cattle. One enters the house through a single door, and there are no windows. Inside the house, there is an area set aside for cooking, with a hearth, a stone mill, and a few cooking utensils. A large earthen jar holds grain, and baskets and discarded cans and bottles are used for storing other things. Furnishings are sparse. The Kol do not use beds and chairs, and they sleep on the floor on mattresses. One corner of the room is devoted to the household's shrine.

## 10 FAMILY LIFE

The Kol are divided into numerous subgroups called *kurhis*, which form the basic divisions of the tribe; people must marry within their own *kurhi*. There is little agreement on exactly how many *kurhis* there are, and the marriage rules are not always strictly observed. The Rautiya consider themselves to be the highest ranking *kurhi*. Some groups, such as the Rautiya,

who are married by Brahman priests, are more Hinduized than others. Marriages are arranged (although elopement is possible), and brides usually come from outside the village. A bride-price is paid, although the dowry is now becoming common. Many of the rituals related to marriage appear to be borrowed from the Hindus. A man who can afford it may keep more than one wife. The nuclear family appears to be the norm among the Kol, with households averaging four persons. The main duties of the wife are caring for the house, cooking food, and raising the children. In addition, she is expected to contribute to the family income by working for wages, gathering wood and so forth. Kol society permits divorce and the remarriage of widows.

## 11 CLOTHING

Although in the past they may have worn little in the way of clothing, today Kol resemble their Hindu neighbors in dress. Men wear the *dhoti*, sometimes going bare-chested, sometimes with a *kurta*, or shirt. They sometimes wear a turban. The sari, worn with or without a bodice, or blouse, is the standard dress for women. Among the more Hinduized Kol, the end of the sari is used to cover the head. Women wear whatever necklaces, earrings and other jewelry as they can afford. They also often have tattoos on their bodies as another form of ornamentation. This is said to have some religious significance.

## 12 FOOD

Like most villagers in India, the Kol have two meals a day, one around noon and the other late at night. Early in the morning, they may eat leftover chapatis or rice. There is little variation in the menu. A meal consist of rice or of chapatis made from wheat or millet, whichever is cheaper, with a small amount of vegetable curry and some *dal*. The vegetables include *sag* (leafy greens such as spinach), eggplant, pumpkin, potatoes, and certain roots and leaves gathered in the jungle. The Kol are not vegetarians, but the high cost of meat means that it is rarely eaten. Almost any animal flesh is consumed, although the Kola avoid beef in deference to Hindus and avoid carrion, because it is a food of the untouchable castes. Although the more Hinduized Kol avoid pork, a pig is sometimes sacrificed to the goddess at Kol festivals and then eaten ceremonially. The parrot, crow, sparrow, and kite (a hawklike bird) are never killed or eaten. The Kol use liquor at feasts and festivals; they buy it rather than distill it themselves.

## 13 EDUCATION

In recent years, the Kol have begun to send their male children to school. However, dropout rates after the middle-school level are very high, and around half the Kol population (47.9%) do not have any formal schooling at all. Only 6.6% of Kols complete high school. The 2001 census showed a literacy rate for the Kol in Madhya Pradesh of only 35.9%. Literacy among males is considerably higher than for females (the census reports literacy among females to be 22.2%).

## 14 CULTURAL HERITAGE

The Kol have a legacy of legend and tribal lore. But the highlight of Kol culture is a passion for music, song, and dance. The Kol use mainly percussion instruments such as drums and cymbals. Their songs include songs of worship (*bhagats* and

*bhajans*), obscene songs performed at the Holi festivals, love songs, and songs to be sung at the time of childbirth, marriage, or other festive occasions. Dancing is also important at social events and festivals. Among the Kol, only the women dance, while the men play instruments and sing along with them. The *dadra*, accompanied by the appropriate songs, is the most popular of the Kol dances.

### **15 WORK**

The Kol are mostly a landless people, and nearly three-quarters of them (70.4%) work as agricultural laborers for local landowning castes. Some work in factories, mines, quarries, and construction. A 2004 report by the International Labor Office in Geneva indicates that some Kols have lost their land, are in debt and serve as bonded labor. A few make a living by gathering forest products and wood for fuel. Rather than purchasing wood from forest department depots, merchants from Jabalpur recruited Kol tribals as suppliers of cheap illegal timber. Kol tribals, who are adept at cutting timber, responded to this new economic activity with enthusiasm. Some members of Kol Lohar, a small Kol community in Orissa, follow their traditional occupation as blacksmiths.

### **16 SPORTS**

No sports or games are known to be identified with the Kol community.

### **17 ENTERTAINMENT AND RECREATION**

The main source of entertainment for the Kol is their festivals and the music, song, and dance that accompany religious and social celebrations.

### **18 FOLK ARTS, CRAFTS, AND HOBBIES**

Arts and crafts are poorly developed among the Kol. Their houses are occasionally decorated with crude paintings of peacocks and other figures, but these are also found on the houses of non-Kol peoples. There are no taboos associated with the peacock, and the designs appear to be purely decorative. The Kol seem to be lacking handicrafts of any sort: they make no baskets, cloth, ornaments, or musical instruments.

### **19 SOCIAL PROBLEMS**

The Kol are designated a Scheduled Tribe, that is, a disadvantaged community recognized as needing special representation and assistance in the context of modern India. The greatest challenge facing the Kol is poverty and its related problems. The Kol possess little land, and the land they do own is relatively unproductive. Many live in conditions of near-starvation. The forests, once a major resource for the Kol, are increasingly subject to government restrictions on their use. Debt is widespread, and once they are in the hands of moneylenders, it is hard for the Kol to get out of debt. The attitude of caste Hindus toward the Kol has traditionally been a desire to dominate and exploit them. Many Kol have no health care facilities, or even basic amenities such as safe drinking water. Illiteracy and a lack of education make it extremely difficult for the Kol to break out of the vicious cycle of poverty in which they live.

Many Kols are landless. The government of India allows landless tribals who have been "squatting" on land for a period of time to be regularized under the new Recognition of Forest

Rights Act of 2006. However, on 19 April 2008, in the remote Ghateha village in the Rewa district of the Madhya Pradesh, a large contingent of police and forest department personnel descended on some 1,500 landless tribal families who had settled on a stretch of land near the village and evicted them using firing and tear gas. The local group Birsa Munda Bhumi Adhikar Manch and activists of the National Forum of Forest People and Forest Workers claimed that the settlers had been on this land since 2003, but local forest officials have denied this point, stating that the settlers had moved on the land only a month earlier. Landlessness and poverty, as well as lack of social assistance (such as welfare) and political representation, remain issues for the Kols.

### **20 GENDER ISSUES**

As is the case with most tribal women in South Asia, Kol women are, except where they have been Hinduized, considerably freer than women in the Hindu societies amongst which they live. Although they are responsible for the household, experience arranged marriages, and suffer sometimes from child marriage, Kol society allows divorce and widow remarriage. Payment of a bride price, which is usually quite low, is more common than the dowry system found among Hindus.

However, partly as a result of the areas where they live and partly because women are expected to contribute to the household income, women have a low literacy rate and are generally limited access to education and health facilities.

Tribal women are specifically targeted by the Madhya Pradesh Government's District Poverty Initiatives Project (DPIP). The DPIP takes affirmative action in favor of tribal people within project structures and processes at the village, district, and state levels, focuses on activities of immediate relevance and importance to the income security and livelihood portfolios of tribal people in villages and makes strategic linkages with development organizations working with tribals and development programs or opportunities specifically addressing the needs of tribal men and women. Kols are one of the major tribes represented in Rewa, Panna, and Sidhi Districts, which fall under the DPIP scheme.

The critical role women play in collecting and processing forest products and the contribution of their activities to the household economy means that local governments are becoming increasingly aware of the need for their participation in the success of forest management projects. The government of Madhya Pradesh, for instance, has made provisions for women's representation on certain executive committees. However, many of the activities under joint forest management (JFM) in Jabalpur District, in Madhya Pradesh State, actually operate against women. (Joint forest management [JFM] is a system adopted by the government of India in 1990, in which forestry departments and local communities share both responsibilities related to forest management and benefits in terms of the proceeds.) Most non-timber forest products (NTFP) collection is conducted by women, but their efforts are disproportionately taxed under the JFM scheme.

Part of the proceeds of JFM are placed in a collective fund that is used as a source of credit to villagers, lending money to them at up to 5% lower interest than the local money lenders. The fund is a source of pride for many villagers and is used to construct temples and make purchases, such as musical instruments, for the community as a whole. But as yet the collec-

tive fund has not provided any specific benefits to Kol women, and the purchase of cooking utensils for providing meals for community gatherings has in fact increased their costs. Although gender inequity may not endanger the JFM process in the short term, if the concerns of women—and in particular Kol women—are not addressed, this could lead to disproportionate costs being shouldered by this segment of the community and consequently the creation of a dynamic that facilitates the rejection of both conservation and equity goals.

# KONDS

**PRONUNCIATION:** KAHNDS

**ALTERNATE NAMES:** Khond; Kondh; Kandha; Ku (self-reference)

**LOCATION:** India (Orissa region)

**POPULATION:** 1.8 million (estimate)

**LANGUAGE:** Kui; Kuvi

**RELIGION:** Animism; small number of Christians

**RELATED ARTICLES:** Vol. 3: People of India

## 1 INTRODUCTION

The Konds are a tribal group found in the hills and jungles of Orissa in eastern India. The name *Kond* (also *Khond*, *Kondh*, or *Kandha*) translates as "mountaineer" and probably comes from the Dravidian word *konda* meaning "hill." The Konds refer to themselves in their own tongue as *Ku*.

Several theories have been put forward to explain the origins of the Konds. The Konds themselves believe they originated in Orissa and have always lived in their present location. Based on this, some scholars have argued that the Konds are remnants of the pre-Dravidian aboriginal population of the subcontinent who have survived subsequent Dravidian and Aryan invasions because of their physical isolation. Another theory sees the Konds as Dravidians who were pushed back into the hills by Aryan invaders as they occupied the fertile coastal plains of eastern India. Still another view proposes that the Konds were a Dravidian tribe from South India who were expelled by superior agricultural peoples and settled in their current locale around 500 BC.

Today, Konds fall into two broad divisions. The Hill or Maliah Konds, who are numerically the dominant group, inhabit the interior uplands and have retained much of their original tribal culture. The Plains Konds have had extended contact with the Oriya-speaking peoples of the lowlands and have adopted many aspects of Hindu religion and culture. The Kond tribe has a number of sub-tribes, for instance, the Dongria, Kovi, Kuttia, Languli, Penga, and Jharnia. Raj Konds are virtually a caste or sub-caste of Konds who are landowners.

## 2 LOCATION AND HOMELAND

The 2001 Census of India records just over 1.4 million Konds in Orissa. Currently this figure is closer to 1.5 million of the nearly 1.8 million Konds in the country. The Kond population is concentrated in the southern hills of the state and the Mahanadi River basin, and some are also found in the Srikakulam, Vizianagaram, and Visakhapatnam districts of the neighboring Andhra Pradesh State. The Eastern Ghats in southern Orissa form a hilly tract up to 200 km (125 mi) wide. The land varies between 450 m and 900 m (1,500–3,000 ft) in altitude, with a maximum elevation of 1,515 m (4,970 ft) near the headwaters of the Nagavali River. The rugged hills, expanses of trackless jungle, forests, and deep water courses of the region provided a safe refuge in which the Konds were able to preserve their traditional way of life relatively untouched by outsiders (until recently). The climate is typical of India, with a winter cold season, summer hot season, and monsoonal rains from mid-June to September. Higher altitudes experience low-

er temperatures than do the neighboring coastal plains. Annual rainfall varies between 120 cm and 160 cm (47–63 in).

### 3 LANGUAGE

Konds speak a language called Kui and its southern dialect, Kuvi. These belong to the Dravidian language family and have strong similarities to Telugu, Tamil, and Kannada. The language has no script of its own, with the Oriya script used for writing Kui, and the Telugu script used for Kuvi. Some Konds speak only Oriya, having lost all knowledge of their mother tongue. Other Konds are bilingual, speaking Oriya or other regional languages in addition to the Kond language. In more remote areas, people may speak only Kui or Kuvi.

### 4 FOLKLORE

A mythical account of Kond origins relates that, once upon a time, the ground was all wet, and there were only two females on earth. They were named Karaboodi and Tharthaboodi, and each was blessed with a single male child. The two children were named Kasarodi and Singarodi. All of these individuals had sprung up from the interior of the earth. They depended for their existence on two plants, called nangakoocha and badokoocha, which had also sprung up from the earth's interior. Subsequently, the wet soil dried up, and from it all kinds of animals and trees came into existence. Kasarodi and Singarodi were given in marriage to the two daughters of Buru Pennu, the supreme being and Creator God of the Konds. The Konds believe that they are the children resulting from this union.

### 5 RELIGION

Kond religion is animistic in nature. The Sun is worshiped as Bura Pennu, the chief of the Kond deities and the source of all good in the world. Tari Pennu, the Earth-Goddess, is his consort, though she later became the source of all evil. All the Kond deities (*Pennu*) are said to be descended from Bura Pennu and Tari Pennu, who are also responsible for creating the universe and all that is in it. The gods and goddesses are believed to be very sensitive to neglect, disobedience, and violation of taboos. They react by ruining a crop, sending a tiger to attack cattle, or making the offender sick. They have to be propitiated by blood-offerings, and so sacrifice is an integral part of Kond religion. Priests officiate at sacrificial rituals, which in former times included human victims as well as animal ones. The Meriah or human sacrifice was stamped out by the British in the late 19th century.

Worship of the spirits of dead ancestors is also an important aspect of traditional Kond religion. Contact with Hindu peoples has led the Konds to adopt Hindu deities into their pantheon. For instance, Kali and Durga are worshiped in a variety of guises, but always with the sacrifice of buffaloes, goats, or fowl. Christian missionary activity among the Konds is reflected in the roughly 3% of the population who claim the Christian faith.

### 6 MAJOR HOLIDAYS

Important festivals (*jatras*) are celebrated to mark events such as the gathering of the new bean crop in November (Semi Jatra) or the beginning of the rice harvest in September (Chawal Dhuba Jatra). All important festivals are accompanied by animal sacrifice. Following the suppression of the Meriah human

sacrifice, the Konds accepted buffaloes as substitute victims. Thus the Meriah festival, which is held between March and May, is still celebrated with buffaloes sacrificed as an offering to the Earth Goddess.

### 7 RITES OF PASSAGE

Rites of passage are occasions of ceremony and solemnity among the Konds. The birth of a child is cause for celebration (although some Kond groups practiced infanticide until this was suppressed by the British). A few days before the expected delivery date, husband and wife leave the house and move to a separate room specially built for the purpose. In the case of a first confinement, the husband or his father sacrifices a pig and offers rice and strong drinks to the spirits of the ancestors so that nothing goes wrong. After birth, the cord is cut and the placenta buried near the house. Among the Kuttia Konds of the interior hills, the head of an arrow is used to cut the cord of a male child. Birth rituals include smearing the infant with paste made from oil and turmeric until she or he reaches one month old. Many Konds name children after one of their ancestors, although how the name is selected varies from group to group. In the Kuttia Kond ritual, the father or a priest holds a bunch of leaves while reciting the name of the child's ancestors. When the baby touches the leaves, it is felt that the soul of the ancestor whose name is being spoken at the time enters the child's body, and the infant takes on that name.

The Konds feel that death is not the direct responsibility of Bura Pennu, but rather is caused by Jomereri Pennu, evil spir-

its, or through a person's sorcery and witchcraft. Corpses are burnt, although infants, women who died in childbirth, and those who die of smallpox or cholera are usually buried. Funeral rites include the sacrifice of buffaloes and pigs, dancing, feasting, and drinking.

## 8 INTERPERSONAL RELATIONS

The Konds believe that the first duty imposed on them by the gods was hospitality. Any neglect of this duty, violation of an oath, or denial of a debt is seen as sinful and likely to bring down divine retribution through poverty, disease, and even death.

## 9 LIVING CONDITIONS

Konds build their villages on the slopes of valleys, overlooking their cultivated fields. The houses usually form two rows, built along a curved road and closed at both ends by strong wooden barriers for defense. At the center of the village is a cotton tree, planted by the priest and dedicated to the village. Houses or huts are rectangular in shape, with the walls made of timber and plastered over with mud. The floor is of hardened dirt, and the low roof is built of bamboo thatched with grass. The huts are small, consisting mostly of one room, which is shared with the livestock. Furnishings are sparse, with the occupants sleeping on wooden cots or reed mats. Only the father, mother, and younger children sleep in the house. Around the age of eight or so, Kond girls and boys leave home to live in segregated village dormitories under the supervision of an elderly female. As in many tribal societies, the dormitory system lends itself to a somewhat casual attitude to premarital sex among Kond youth.

## 10 FAMILY LIFE

Konds are divided into exogamous clans, each of which claim descent from a common ancestor. As a rule, these groups inhabit villages in a limited geographical area. All the families in a village may be members of a subclan, which are commonly named after their totems. These may be plants, animals, or natural objects. Typical names of subclans are Hikoka (horse), Kelka (kingfisher), and Kadam (a tree). The Konds are a warlike people, and in the past clans were continually fighting one another. Conflicts were usually over land or women. Various eyewitness accounts are available of Kond battles in the 19th century.

The Kond family is typically patrilineal and nuclear in structure. Women are highly respected and are entitled to almost the same privileges as are men. Women manage the household, plant and weed the rice paddies, and raise the young, but they are also consulted before decisions are made in domestic affairs. Women attend the village council, where they can voice their opinion on matters relating to community affairs. Wives are acquired in several ways—by mutual consent, by purchase, by elopement, by capture, or through an arranged marriage to which both parties consent. Kond marriage rituals show the assimilation of many Hindu customs into traditional tribal practices. Both divorce and widow remarriage are permitted.

## 11 CLOTHING

The traditional dress of Kond men is a long cloth, a few inches wide, that is wrapped around the waist and drawn between the

legs. The ends of the garment are brightly colored, and hang down at the back like a tail. Although the head is left bare, the hair is oiled and combed and tied into an elaborate knot. The feathers of the peacock, blue jay, or white crane, colored combs, and ornamental hairpins are used to adorn the hair. Women wear a short skirt reaching from the waist to the knee, leaving the breasts bare. Married women have their ears pierced in 8 to 10 places and wear the corresponding number of earrings. A variety of necklaces, bangles, and anklets complete the ensemble. Men also wear jewelry. Girls of marriageable age have designs tattooed on the face, arms, and legs.

## 12 FOOD

Rice is the staple food of the Konds. It is eaten with lentils and with wild leafy vegetables gathered in the jungle. The diet is rather bland compared to the spicy curries eaten by other peoples in India. Konds are nonvegetarian, eating eggs, chicken, buffalo, goat, pork, and even beef. The Konds do not use milk. Wild game is hunted in the forest to supplement the diet. Konds enjoy alcohol, drinking rice-beer, sago palm toddy, or liquor made from *mahua* flowers (*Bassia latifolia*).

## 13 EDUCATION

Access to educational facilities has always been a problem for Konds living in the remote interior of the Eastern Ghats. Although some 30% of Kond children attend government schools today, many drop out because of economic hardship and the need to help support their families. The drop-out rate by Grade 5 is close to 80%. Literacy among Konds is low, with the rates (2001) among the Dongria Konds, who live in the Niyamgiri ranges of Orissa, being 29% for men and 14% for women, respectively. Yet, as noted elsewhere, many Kond are bilingual, speaking the local dialect as well as Kui.

## 14 CULTURAL HERITAGE

Music, song, and dance play an important role in traditional Kond culture. Instruments include trumpets, drums, and the shepherd's pipe. The *deka*, a two-stringed violin made with a bamboo stick and gourd, provides the musical accompaniment as the poet sings, or rather chants, the verses. There are songs for every occasion—love songs, songs to be sung on the eve of the Meriah sacrifice, at marriages, at the time of plowing, and at the time of death. Of greater importance is the Kond dance. Every village has a place set aside for dancing. In a dance of the Kuttia Konds, boys and girls stand in a row facing each other. They link arms and shuffle back and forth in time to the music, getting more agitated and excited as the tempo of the dance quickens. Konds arm themselves with weapons for the war dance, in which they mimic a battle scene. In a hunting dance, a man wearing the horns and skin of a wild animal is chased and captured by a party of "hunters." Dancing accompanies festivals, marriages, and other important events and may continue day and night until the dancers are exhausted.

## 15 WORK

Although originally hunters and gatherers, most Konds are now engaged in agriculture. They practice shifting cultivation, as well as settled cultivation and animal husbandry. Rice, maize (corn), and pulses are important food crops, while turmeric, mustard seed, and legumes are grown as cash crops.

Many Konds work as agricultural laborers, while some still hunt or gather forest products such as teak. Of particular interest are the relationships of the Konds with the Panas and Doms. These are peoples who live in the Kond hill country, sometimes even in Kond villages, who act as traders, money-lenders, and intermediaries between the Konds and the Hindus. They also carry out certain ritual functions, which the Konds are forbidden to perform themselves.

In the past, Konds sacrificed humans for the good of the crops, though today buffalo are substituted for humans in this blood sacrifice. The practice of human sacrifice, which occurred until the middle of the nineteenth century, was stamped out by the British.

## 16 SPORTS

The Konds are fond of hunting, using bows and arrows and battle-axes as their weapons. They are skilled at tracking and pursuing deer and other large game.

## 17 ENTERTAINMENT AND RECREATION

Konds find their entertainment in their festivals and the singing, dancing, and revelry that accompanies their celebration of social occasions.

## 18 FOLK ART, CRAFTS, AND HOBBIES

Kond folk arts include tattooing, the carving of hairpins and similar objects out of animal bone, and jewelry-making. Konds are known for their skill in creating figures of animals and people out of brass and bronze. Other examples of Kond art are masks carved out of wood or gourds, elaborately carved wooden pillars formerly used in the Meriah sacrifice, and carvings on the doors of Kond houses.

## 19 SOCIAL PROBLEMS

As a tribal people inhabiting some of the more isolated hills and jungles of eastern India, the Konds are typical of the country's many underdeveloped communities. They are classified by the governments of Orissa and other states as a Scheduled Tribe and as such are deemed in need of special help in overcoming their economic and social problems. While social evils of the past, e.g., infanticide and human sacrifice, have long been abandoned, other tribal customs have survived. Today, many Konds are landless and locked in a cycle of poverty and illiteracy from which escape is difficult. The community remains socially marginalized and essentially isolated from the social and economic gains that Indian society in general has achieved since the time of independence.

Orissa has abundant mineral resources, and a major social issue for the Dongria Konds in the Niyamgiri ranges is the intrusion of mining companies into traditional Kond territory. Even though construction of refineries creates jobs and advances the local economy, Konds object to the accompanying pollution and destruction of their pristine, and sometimes, sacred lands (the Konds worship the Nyamgiri Mountains as a living deity). Thus, in 2004, in anticipation of official permission being granted by the Indian government, a bauxite company constructed a refinery in the Niyamgiri hills, which contains an estimated 73 million tons of bauxite. The 10,000 tribal Konds who live in the area view the plan to mine bauxite in their territory as a threat to their way of life. Conserva-

tionists predict the bauxite mine will pollute the eco-sensitive Niyamgiri hills, causing mass displacement and the end of a traditional livelihood based on farming millet and beans, hunting and gathering fruits. In the past decade, more than 1.4 million Indians have been removed from 10 million acres of land in four states to pave the way for industry and infrastructure projects, according to a recent report by ActionAid, an international anti-poverty agency. Kond tribals made the trip to Orissa's state capital, Bhubaneswar, in eastern Orissa to lobby state officials. The establishment of the refinery was taken all the way to the usually business-friendly Supreme Court of India, which rejected the mining company's proposal and fined it for "blatant violation" of the law, but also invited it submit another proposal, which included environmental safeguards and channeling some of the operation's profits into tribal welfare. NGOs are skeptical of this, saying similar safeguards have been enacted before, but are rarely implemented. Vedanta, the company involved, says that it is giving tribals more generous compensation than the law requires, has built rehabilitation camps for the displaced villagers, and that much of the area's water sources and rare plants and animals will be protected.

Vedanta Alumina's plans hit another snag at the end of 2007 when environmentalists filed an intervener petition with the Supreme Court, highlighting the plight of the local Dongria Konds. However, even though a ban on mining has been sought in view of social, cultural, religious, and ethnic rights of Dongria Kondhs and also their livelihood, which protected under Article 21 and other provisions of the Constitution, related laws and international conventions to preserve tribal communities, the project has commenced "trial production," although it is yet to be granted a mining lease in Kalahandi, pending decision in the Supreme Court. The state-owned Orissa Mining Corporation intends to mine 3 million tons of bauxite annually to sell the same to Vedanta, its joint venture partner, for its alumina refinery at Lanjigarh and smelter plant at Jharsuguda. In September 2004 the ministry of environment and forests had granted environmental clearance for the refinery, but the Central Empowered Committee (CEC), appointed by the Supreme Court, noted that the clearance was obtained by concealing material particulars, principally that no forest land was involved in the project whereas about 660 hectares of forest land was involved.

Similar situations arise elsewhere in Orissa and also in neighboring mineral-rich Chhattisgarh, Jharkhand and Bihar, with protests by tribals often turning violent and involving fatalities.

Local agencies such as the Dongria Kond Development Agency (DKDA) and the Kutia Kond Development Agency are involved in representing the Konds on local tribal and environmental issues.

## 20 GENDER ISSUES

As with many tribal groups, women among the Kond are respected and are virtually on an equal footing with men, even though Kond society is patriarchal. Divorce is allowed, as is widow remarriage. Even with arranged marriages, both parties must give their consent. Kond girls are tattooed on their face at 10 years of age—if they do not submit to this, they are viewed as unsuitable for marriage. Although child marriage was common among some Kond groups, real gender issues are to be found among plains groups that have come into close

contact with their Hindu neighbors and adopted many of their customs, such as demanding dowries at the time of marriage.

Another problem for Kond women arises from displacement and loss of traditional land due to mining activities. Not only have there been deaths among the menfolk, but in the post-displacement landscape, women and girls often end up working for daily wages or as domestic helps or prostitutes. The women also have to cope with alcoholism and domestic violence.

# KOREAN CHINESE

**PRONUNCIATION:** kaw-REE-uhn chigh-NEEZ

**ALTERNATE NAMES:** None

**LOCATION:** China (Jilin province)

**POPULATION:** 2 million

**LANGUAGE:** Korean

**RELIGION:** Shamanism, Buddhism, Confucianism, and Christianity

**RELATED ARTICLES:** Vol. 3: China and Her National Minorities; Vol. 4: South Koreans

## <sup>1</sup> INTRODUCTION

The immigration of Koreans into China began at the end of the 17th century. At that time, they were limited in number. In the mid-19th century, due to widespread famine in north Korea, a sizable Korean population crossed the border and settled in Yanbian and adjacent areas of northeast China, mixing with the native Manchu and Chinese residents. Later on, new waves of Korean immigrants settled in the same area. Under the Qing Dynasty (1644–1911), the Koreans in Yanbian district amounted to more than 10,000 and those who dwelled in Jian, Linjiang, and Xinbin counties numbered more than 37,000. In 1885, the Qing Dynasty allotted to the Korean immigrants an area of about 3,500 sq mi along the north bank of the Tumen River. After the annexation of the Korean peninsula by Japan in 1910, vast numbers of Koreans entered China, reaching more than 360,000 by 1918. At first, the Qing Dynasty imposed restrictions on their immigration, but changed to a policy of "recruiting for land reclamation" shortly after. Land reclamation bureaus were set up in cities and counties near the border; Korean immigrants recruited to reclaim wastelands were recognized as Chinese. From then on, they opened up virgin soil and built up large Korean communities in northeastern Manchuria. This policy continued under the Republican government after the demise of the Qing Empire in 1911.

## <sup>2</sup> LOCATION AND HOMELAND

The Koreans dwelled mainly in Jilin province. They also scattered in Heilongjiang and Liaoning provinces, Inner Mongolia Autonomous Region, and some inland cities of north and northeast China. Yanbian Korean Autonomous Prefecture of Jilin Province is the most populated area among the compact Korean communities. It is located in hilly land around Baitou, the highest peak in Changbai Mountains, which dominate one of China's largest forest reserves. The forest, covering 494,000 acres, is divided into a semiprotected area and an area off-limits to both guns and axes. More than 300 species of medicinal herbs, including ginseng, grow in habitats that range from alpine to heath. Ethnic Korean population in the People's Republic of China reached 2 million in 2002.

## <sup>3</sup> LANGUAGE

The Korean language belongs to the Ural-Altai family, Tungusic branch. With the spread of Confucianism and Buddhism, Koreans began using Chinese characters as a writing system from the 4th century AD. Scholars estimate that about 70% of present-day Korean vocabulary is of Chinese origin. From the

10th century onward, the Koreans devised their own phonetic alphabet and syllabary and gradually abandoned the use of the Chinese ideographic characters. The official alphabet used in the Korean Peninsula, called Hangul, was developed in the 15th century and consists of 24 phonetic signs; these are sometimes combined with Chinese characters. However, Koreans living in China use a 40-character phonetic alphabet and have completely abandoned Chinese characters.

#### 4 FOLKLORE

The Tanjun myth, narrating the origin of the Korean people, is widespread among the Koreans living in China. The youngest son of the Emperor of Heaven wished to move down to the earth. His father acquiesced and awarded him a blessed parcel of land. The gods of winds, rain, and clouds ensured the prosperity of all living things on this parcel of land. Now, there was a tiger and a bear living together in a cavern. The son sent the two animals each *lingzhi* (glossy ganoderma—a type of fungus) and 20 bulbs of garlic and told them that whichever had eaten them within 100 days would become a human being. A few days later, the tiger, unable to eat anymore, abandoned the contest, while the bear continued and ultimately turned into a girl. She prayed to the gods to give her a man. The son of the Emperor of Heaven changed himself into a man and married the girl. From this union Tanjun was born and, thereafter, human beings multiplied. Tanjun built up a country called Korea and made Pyongyang the capital. He lived to be 1,908 years of age and was finally transformed into a mountain god.

#### 5 RELIGION

There have been four major religions among the Koreans of the Korean Peninsula: Shamanism, Buddhism, Confucianism, and Christianity. Most Koreans who migrated to China in the 19th and early 20th centuries shared in the beliefs of one or more of these religious traditions, but since the Communist takeover many have abandoned religious beliefs and practices. Large segments of Koreans living in rural areas still hold the Christian faith, while the older generations still believe in Confucianism; geomantic beliefs (divination by means of geographic features) related to the location of a house or a tomb are widespread among the ethnic Koreans living in China.

#### 6 MAJOR HOLIDAYS

On the Spring Festival (lunar New Year; Western calendar, between January 21 and February 20), in addition to singing, dancing, and dinner parties at home, people add to the fun by kindling bonfires in the fields and engaging in outdoor activities.

The fifteenth of January (lunar calendar; Western calendar, between February 6 and March 6), the Chinese Lantern Festival is also an important holiday for the Koreans, especially in the rural areas. Each household cooks five kinds of rice, barley, red beans, and husked sorghum and puts a small quantity of each before an ox to see which one is eaten first; this will indicate which variety of grain will have a bumper crop this year. An important activity will be held in the evening: “greeting the moon.” More than 10 oak rods, each 12 ft in length, tied up at one end, are erected in the form of a circular cone before the village. Pine branches are piled up at the bottom. As soon as the moon appears, they kindle the cone. In a moment, a deafening sound of gongs and drums welcomes the

full moon. Children have long, thin bags filled with charcoal, made by their parents beforehand. At this moment they light them up and hang them on the trees. The girls move around holding odd-shaped paper lanterns.

September 3 is the anniversary of the founding of the Yanbian Korean Autonomous Prefecture. Families dress up, call on their relatives' homes, and participate in various recreational activities.

#### 7 RITES OF PASSAGE

On a child's first birthday, relatives and friends are invited to dinner. A rite of “putting on the hat” will be held when a boy comes of age at 20. According to Korean custom, the rite should be held three times within a few days. During the first rite, the boy should take off his clothes and wear a garment made of white linen trimmed with black silk. Then, his hair is combed into a bun, covered by a hairnet, and finally by a hat. During the second rite, his hat and garment should be changed again. During the third rite, a kerchief is added to the hat. The boy should go to the ancestral hall and salute the elder members of his family.

A family will hold a special celebration on a person's sixtieth birthday because of the symbolism of the 60-year cycle obtained by combining the 12 “Heavenly Stems” and the 10 “Earthly Branches.” This computing system was invented by the Chinese in the second millennium bc. For the same reason, the sixtieth wedding anniversary is an important family festival. On this occasion children, grandchildren, relatives,

friends, and neighbors all come to celebrate, usually for two days.

When a senior person dies, family members should wear mourning dress and abstain from eating cooked rice, haircutting, and face washing for three days. Paying homage to the dead, the visitor should kowtow twice, then exchange kowtow twice with the family members. The burial should be held within three days and strictly on odd days. New clothes should be put on and the old ones burned. The location of the tomb is usually selected by a geomancer, often on the sunny side of a slope. After the funeral, the memorial ceremony should be held for three successive days and repeated on the deceased's birthday, on the anniversary of the death, the Festival for the Dead (*Qingming*), and the Mid-Autumn Festival. Most of the customs surrounding funerary rites were borrowed by the Koreans from the Chinese long before they migrated into China.

## **8 INTERPERSONAL RELATIONS**

The Koreans are very warm and courteous. When celebrating at home, all the family members sing and dance, making for very lively entertainment. On June 20 (lunar calendar; Western calendar, between July 13 and August 12), everybody dresses up in the Korean national costume and crowds gather on the square. They express good wishes to the aged, commend parents-in-law who live in harmony with their daughters-in-law, and vice versa. This festival shows the attention and importance the Koreans pay to interpersonal relations among the generations. Young people have full freedom to choose their spouses. They find many opportunities to meet each other during social meetings.

## **9 LIVING CONDITIONS**

Ethnic Korean villages are usually located on the flatlands below mountain slopes. Villages, a few kilometers from each other, are usually rather small, comprising a few dozen households. Houses have no courtyard, face south, southeast, or southwest, and are whitewashed both inside and outside. The roof, covered with straw or tiles, slopes down on all four sides. There are four doors at the front that also serve as windows. The house usually consists of a bedroom, a living room, a kitchen and a storeroom. The platform bed, made of adobe bricks and stones covered by wooden boards, also serves as a table. The interior is usually tastefully furnished. Koreans are particular about tidiness and cleanliness. When entering the house, everybody takes off his or her shoes at the door. The chief modes of transportation are bicycle, motorcycle, car, or train. Highways and railways crisscross in all directions from the districts inhabited by the Koreans.

## **10 FAMILY LIFE**

Families may be as small as three or four or as many as a dozen. Men engage in agriculture, while women take care of household chores. Usually, it is the responsibility of the eldest son to live with the parents, even after marriage. The younger sons live apart after marriage. The eldest son inherits the legacy, but a part is reserved for the younger sons, while the daughters have none. Korean families are monogamous. According to their customs, marriage is not allowed between people of the same clan, the same surname, or between close relatives. Marrying too early is still a problem. Following age-old traditions, women rarely ask for divorce and widows rarely remarry.

## **11 CLOTHING**

The Koreans are fond of white or plain-color clothes. Women's blouses are very short. Adult women wear long, multi-pleated skirts or a sari-like cloth winding down their bodies; young girls wear short skirts cut well over the knees. Both men and women like their traditional boat-like shoes all made of rubber. Men wear loose pants, short tops, and vests. They usually wear a long overcoat outdoors. "Mao's suits" and Western-style clothes are popular today.

## **12 FOOD**

The Koreans' staple foods include rice and millet. They are fond of rice, glutinous rice cakes, cold noodles in sauce, soup made from soya beans and flour, pickled vegetables, and dog flesh. They like sour and spicy dishes. Meals are seldom without pickles and the soup mentioned above; the pickles are made of Chinese cabbage, radish, garlic, pepper, ginger, and salt. Cold noodles are made of buckwheat and sweet potato powder, together with beef, chicken, pork, eggs, pepper, sesame and its oil, pears, and apples. They like tea and wine.

## **13 EDUCATION**

Because of their long-standing Confucian tradition, the Koreans value education very highly. Since the 1930s many schools have been established. Yanbian University was set up in 1949. Currently, there are six universities and five adult colleges in Yanbian Korean Autonomous Prefecture. Education in primary school and middle (junior and senior) school is practically universal. There are newspapers and broadcasting in the Korean language. The educational and cultural level of the Koreans is first among all nationalities in China, including the Chinese, and compares favorably with the world average, being lower only than that of North America and Europe.

## **14 CULTURAL HERITAGE**

*Jiayeqin* is a traditional plucked stringed instrument, said to have been prevalent in a small country called Jiaye as early as the 6th century. The player (usually a woman) puts the left end of the instrument on her knee and the right end on the ground. It may be used for solos as well as for accompanying songs. *Changgu* is a long drum, narrowing toward the middle, usually hung over the front of the chest. The player beats the drum with his left hand and with four bamboo twigs held in the right hand.

Koreans make it a point of honor to master their traditional dances. They dance on every happy occasion. For example, a Korean wedding begins with feasting and ends hours later with prolonged dancing. There are quite a few unique dance styles for specific occasions.

## **15 WORK**

The area of northeast China inhabited by the Koreans is in the "cold belt." The frost-free period lasts only about one-third of the year. Rice and other grains must be grown and harvested during this short period. So, the Koreans developed special irrigation techniques, which are very productive. The rice they produce is white, tasty, and nutritious; it is famous throughout China. Another important contribution of the Chinese Koreans is the raising of sika deer, whose pilose antlers (covered

with soft hair) are sought for their curative and strengthening virtues.

## 16 SPORTS

Korean men are fond of soccer and wrestling. The former is the most popular sport of men. From primary school to university, each class organizes a team of its own. Soccer games held on every festival and holiday attract large numbers of people, sometimes living dozens of kilometers away. The favorite sport of women is the springboard game. Five meters in length, the board is about one meter above the ground. Two girls standing on each end of the board jump alternately, propelling the each other higher and higher in the air. The highest jumper is the winner.

## 17 ENTERTAINMENT AND RECREATION

The Korean community has been very active in producing Korean-language movies and television programs. Chinese and foreign films and television programs dubbed into Korean are also popular. The Koreans like to actively participate in many forms of entertainment. For instance, during breaks in their manual work, as soon as a person sings or beats the drum, fellow workers will spontaneously join in the singing or dancing.

## 18 FOLK ART, CRAFTS, AND HOBBIES

One of the most sophisticated crafts of the Chinese Koreans is the handmade musical instrument *jiayeqin*. There were originally two types. The standard instrument was 67 in long and 12 in wide with 12 strings. The popular instrument was shorter and narrower. Both instruments had some limitations, including weak volume and incomplete scales. After 1949, a new version of the *jiayeqin* with 18 strings corrected these limitations.

## 19 SOCIAL PROBLEMS

The success of Chinese Korean education and economic development is in sharp contrast with the low position of Korean women. Chinese Korean society is male-oriented both in public and at home. The revolution does not seem to have modified in a significant way the traditional social values based on patriarchal structures and Confucianism.

## 20 GENDER ISSUES

The Chinese constitution states that women have equal rights with men in all areas of life, and most legislation is gender neutral. While Chinese Koreans rank first in educational attainment among all Chinese ethnic groups, a gap in educational level persists between women and men. Though the statistics for ethnic Korean women are above the average, they still face significant gender stereotypes in their private and professional life.

China has strict family planning laws. It is illegal for women to marry before 20 years of age (22 for men), and it is illegal for single women to give birth. The Family Planning Bureau can require women to take periodic pregnancy tests and enforce laws that often leave women with no real options other than abortion or sterilization. Though minority populations were previously exempt from family planning regulations, policy has changed in recent years to limit minority population growth. Today, urban minority couples may have two children while rural couples may have three or four.

# KURDS

**PRONUNCIATION:** KURDS

**LOCATION:** Turkey, Iraq, Iran, Armenia, and Syria

**POPULATION:** 30 million to 35 million (2008 estimate)

**LANGUAGE:** Kurdish

**RELIGION:** Islam

## 1 INTRODUCTION

The Kurds are an Indo-European people and constitute the fourth largest ethnic group in the Middle East. However, they have never had their own nation. The traditional life of Kurds was nomadic. Tribes would move throughout the Mesopotamian plains and Turkish and Iranian highlands on a seasonal basis, herding sheep and goats. The end of World War I and the breakup of the Ottoman Empire led to the development of nation-states in the Middle East. This geo-political change forced the Kurds to abandon their traditional ways.

Although Kurds called the land they traveled through Kurdistan, they historically have been incorporated into either the old Islamic empires or the new Middle Eastern nation states. In AD 1514, their lands were divided between the Ottoman Turkish and Shi'ite Persian Empires, who kept control of them for the next 400 years. After World War I, the Kurds had a brief taste of self-rule. The Treaty of Sèvres, signed on 10 August 1920, recognized an independent Kurdistan. Unfortunately, the European powers dividing the Middle East after the defeat of the Ottoman Empire decided to divide the area known as Kurdistan among various states, in which Kurds would be the minority. The Kurds were forced to rely on foreign European support for protection, which guaranteed the promotion of European policies. Thus, three years later, on 24 July 1923, the Treaty of Lausanne was signed, once again dividing Kurdistan between the Turks and Persians in the states now known as Turkey and Iraq. The Kurds had another taste of independence after World War II when they were allowed a small homeland in western Iran in 1946, with the capital at Mahabad. The Shah of Iran soon came into power, however, and crushed the Kurdish state less than a year after it was established. Once again, the Kurds were without a land to call their own.

Kurdish history since 1946 has been a continuation of the struggle to maintain their cultural identity in the face of persecution and pressure to assimilate in every country where they live. Guerrilla fighters called *peshmerga* ("one who faces death") hide in the hills and fight for Kurdistan. A peshmerga uprising in Iraq in 1991 led to a disastrous defeat, and many Kurds fled to Iran. The long years of war and hostility between Iran and Iraq have put the Kurds in a very difficult position, because they live in both countries, and are constantly caught in the middle of the fighting. Kurdish resistance fighters have sometimes tried to use the hostilities between the two countries to their own advantage, so far without success. In Turkey, the Kurdistan Workers Party (PKK) is a radical communist paramilitary group campaigning for Kurdish independence. Not all Kurds agree with the methods and political aims of the peshmerga or PKK, but all want to have homes where they are safe and free to be themselves. Nearly 44,000 people had died in activities related to the PKK.

Kurds generally have had more national rights in Iraq than in the other modern nation-states in which they currently reside. Iraqi governments beginning in the 1930s allowed the use of Kurdish in schools, recognized the existence of a distinct Kurdish ethnic identity, and allowed for some political autonomy in the Kurdish regions of northern Iraq. Kurds suffered brutal repression under the Ba'ath political regime led by Iraqi leader Saddam Hussein. The overthrow of Hussein's government in 2003, however, has created a sort of "nation within a nation" for Kurds in three northern provinces. The Kurdistan Regional Government allows for Kurd leaders to make decisions for the provinces with limited interference from Iraq's new government. Kurds also have been given equal voice in Iraq's central government with the country's Arab Sunnis and Arab Shi'ite populations. In addition, Iraq recognizes Kurdish as one of its two official national languages.

## 2 LOCATION AND HOMELAND

Population estimates for the Kurds range from 30 million to 35 million. It is difficult to get an accurate count because the Kurds live in remote mountain areas, many are refugees and flee from one place to another to escape persecution, and governments want to downplay their numbers and significance. The largest numbers of Kurds live in Turkey (approximately 15 million to 20 million, according to estimates from the *CIA World Factbook*). Large numbers of Kurds also live in Iran (8.5 million), Iraq (5.5 million), Pakistan (2.6 million to 3.9 million), and Syria (1.6 million to 1.9 million). Kurds are the second-largest ethnic group in Turkey, Iraq, and Syria. They are the third-largest group (after Azerbaijanis) in Iran. Kurds also live in Lebanon, Armenia, and Azerbaijan, as well as Germany (about 400,000) and other places across Europe, the United States, Canada, Australia, and elsewhere. Although they live among them, Kurds are unrelated to Turks, Arabs, and Iranians.

"Kurdistan" is generally thought of as the mountainous area at the junction of the Iraqi, Iranian, Turkish, Syrian, and Armenian borders. The average altitude is 6,000 ft and much of the territory is so convoluted that it is inaccessible. The climate is severe: temperatures can range from  $-29^{\circ}\text{C}$  ( $-20^{\circ}\text{F}$ ) in winter to  $38^{\circ}\text{C}$  ( $100^{\circ}\text{F}$ ) in summer. What little precipitation there is usually falls in winter in the form of snow. The mostly barren hillsides are seriously overgrazed and, as political restrictions on the Kurds' traditional nomadic herding increase, the problem only worsens. River valleys in the Kurdish lands are fertile, supporting fruit orchards and vineyards.

## 3 LANGUAGE

The Kurdish language is related to Persian (or Farsi), the language spoken in Iran. The main Kurdish dialects are the northern Kurmanji, spoken in Turkey, Syria, and the Caucasus region (of the former Soviet Union); and the southern Sorani, spoken in Iraq and Iran. Kurmanji is more widely used than Sorani. Kurdish, like Persian, has also borrowed many words from the Arabic language. Written Kurdish differs from region to region: Iraqi Kurds use a written form of Sorani; Syrian and Turkish Kurds write Kurmanji with the Latin alphabet; and Kurds of the Caucasus region finally settled on Kurmanji written with the Cyrillic alphabet, after trying Arabic, Armenian, and Latin alphabets. Kurdish has no "th" sounds; they are considered very un-Kurdish.

Most Kurds also speak the official language of the nation-state in which they happen to live. Arabic, Turkish, and Persian are two of the most common second languages used.

The skillful use of language is highly valued by Kurds. Witty repartee and a command of poetry are considered important social assets. In Turkey, however, it was illegal to speak Kurdish, except at home, until 1991. It is not illegal to speak Kurdish in Iran or Iraq. Iraq, until recently, allowed the Kurds a greater range of cultural autonomy than did Turkey or Iran. At school and in public, Kurds must use the language of the country where they live. So they can only practice their Kurdish language arts at home.

Modern Kurdish names are mostly Arabic with Islamic significance, or Persian names of heroes of Persian history and legend. There are very few uniquely Kurdish names. A mother usually names a child. Kurds did not traditionally use surnames, so most modern surnames are tribal designations or geographic locations.

#### 4 FOLKLORE

Modern-day Kurds are descendants of ancient Indo-European peoples known as the Medes who moved into the Middle East 4,000 years ago. The Medes were fierce warriors, and the Kurds continue in that tradition. The Muslim hero Saladin (Salah Ad-Din Yusuf Ibn Ayyub, AD 1137–93) was a Kurd, as were many of his soldiers. Saladin and his army fought against the Crusaders, and Saladin became the sultan of Egypt and Syria in 1174.

#### 5 RELIGION

The Kurds at first resisted the Islamic invasion during the 7th century AD. But they eventually gave in after the Islamic victory near the modern-day Iraqi city of Sulaimaniya in AD 643. Most Kurds are now Sunni Muslims. About one-fifth is Shi'ite, especially in Iran. Many Kurds also belong to Sufi (Islam mystic) brotherhoods and meet to chant and dance together to worship Allah. The Sufi brotherhoods are very important in Kurdish village life. There are a million or so Kurdish Alevis in Turkey, and 40,000–70,000 Yazidis (an independent sect combining aspects of Islam, Judaism, and Christianity), mostly in Armenia and Azerbaijan. A very few Kurds are Christian.

#### 6 MAJOR HOLIDAYS

The most important Kurdish holiday is the *nwerroz*, or Persian New Year, at the time of the spring equinox (21 March). There are special foods, fireworks, dancing, singing, and poetry recitations, all with an emphasis on Kurdish ethnicity. Even though many Kurds no longer live the nomadic life of herders, Kurds continue to have seasonal celebrations at lambing time, before moving the herds to summer pastures, shearing time, and the time of return to the village in the fall. Islamic holidays vary in importance among individual Kurds, although the Prophet Muhammad's birthday is the most important.

#### 7 RITES OF PASSAGE

The greatest occasion for celebration in a Kurd's life is marriage. Kurds marry at a relatively early age (17 or 18). The bride is decked in gold bracelets, earrings, and necklaces, with new dresses and shoes. The highlight of the wedding is the public procession from the home of the bride to the home of the

groom. Everyone joins in the parade, with lots of fanfare. After they reach the groom's home, the bride enters the house and sits quietly veiled in a corner of the room while the guests feast and dance outside. In some areas, there are horse-riding displays.

Parents and relatives hold a feast for the birth of a child, especially the birth of a first son. Boys are circumcised by the local religious leader during the first week after birth. In some more traditional Kurdish communities, boys are circumcised at age 10, followed by a huge party.

#### 8 INTERPERSONAL RELATIONS

The Kurds are a patrilineal society whose various lineages have been preserved over the generations by a high degree of endogamy resulting from the frequent marriage of first cousins (a man generally marries the daughter of a paternal uncle). This practice promotes unity among kin but allows distance to develop between different lineages.

While tribal leadership among the Kurds is inherited, local leaders are chosen for their personal qualities, including integrity, generosity, and skill at dealing with government officials.

#### 9 LIVING CONDITIONS

Most Kurds live in small villages in remote mountain regions. Some live in the valleys or on the plains. A typical Kurdish house is made of mud-brick with a wooden roof. In the summer, Kurds sleep on the roof where it is cooler. In some mountain villages, the houses are built so close together that those

Kurdish children in the village of Sierye, Iraq. (Safin Hamed/AFP/Getty Images)

on higher elevations use their lower neighbors' roofs for extra living space. Some homes have underground rooms to use in the winter to escape the cold. There is rarely indoor plumbing; water is carried into the house in jars and cans from a central village well. There is no central heating. The few remaining nomadic Kurds live in tents made of blackened hides, and extended family members cluster their tents together in small communities.

Kurds are generally sheep- and goat-herders. Breeding horses used to be important, with the horses used for transportation, but mules and donkeys have become more common now. Families grow wheat and barley for subsistence, or rice in some areas, and raise chickens for eggs and meat. There are only a few Kurdish towns: Diyarbakir (a sort of capital for Kurds) and Van in Turkey; Erbil and Kirkuk in Iraq; and Mahabad in Iran.

#### **10 FAMILY LIFE**

Kurds marry fairly young and choose their own marriage partners. Few Kurds marry non-Kurds. Couples may continue to live with one or the other's family after marrying, but they have rooms of their own and separate housekeeping arrangements. Men and women both work in the fields, and boys and girls start helping at an early age. Kurdish women were traditionally not veiled except during parts of the marriage ceremony. They freely associated with men in most social interactions.

If there was no qualified male heir, a woman assumed tribal leadership. Even today, when Kurdish women have had to bow to the more conservative Islamic conventions of the countries where they live, many Kurdish women fight alongside the men as *peshmerga* (guerrilla fighters). More than 1,000 *peshmerga* are women. The radical Kurdistan Workers Party (PKK) encourages freedom for women.

#### **11 CLOTHING**

Traditionally, Kurdish women wear colorful skirts and blouses, and men wear baggy pants, vests, a red sash around the waist, and a blue silk turban on the head. Men also like to wear daggers. The typical Kurdish hat used to be a conical shape made of white felt, but today it is usually only worn by children. Nomadic Kurdish men shave their heads and wear long moustaches.

Traditional dress is becoming rarer as Kurds choose to dress like the people of the countries where they are living. In Iran, they must obey the laws of the Muslim government, so women must wear the black *chador*—a cloth covering their hair and clothes. In contrast, the government of Turkey has banned women from covering their hair in universities and public jobs, and so women are forced to wear more Western-style clothing. In Iraq, men wear woolen coats and vests, checkered headscarves, and baggy pants. Women wear the Muslim-style dress, often with baggy trousers underneath.

## 12 FOOD

Bulghur (cracked wheat) used to be the staple food for Kurds, but rice is becoming more popular where it is available. The Kurdish diet includes a wide variety of fruits and vegetables (cucumbers are especially common). In the valleys where grapes are grown, raisins and grape jam are common. Meat is only eaten on special occasions. The usual beverage is tea. Particular Kurdish specialties are a type of wafer bread eaten for breakfast and any kind of grain cooked in whey. A recipe for Bulghur Bread follows.

### Nane Casoki (Bulghur Bread)

2 cups bulghur  
1 teaspoon salt  
½ cup minced onion  
2 cups boiling water  
approximately 2 cups unbleached white flour

In a medium-sized bowl, combine the bulghur, salt, and onion. Pour the boiling water over the mixture and let stand for 30 minutes. Put in a food processor and process for about 20 seconds. Add 1 cup of flour and process again until it is a smooth texture. (You can also work the flour in by hand, if you do not have a food processor.) Turn the mixture out onto a well-floured surface and knead it, adding flour as necessary to keep the dough from sticking, for about 3 to 4 minutes. Cover the dough and let it rest for at least 15 minutes, or up to 3 hours.

Place a large baking sheet (or two small ones) on the bottom rack of the oven, leaving an inch of space between the sheet and the walls of the oven. Preheat the oven to 450°F. After the dough has rested, divide it into 8 pieces and flatten each piece on the well-floured surface. With a rolling pin, roll out a piece of dough to a very thin round about 8 to 10 inches in diameter. Place the bread on a baking sheet and bake for 1½ to 2 minutes. Turn the bread over and bake for another minute, or until the bread begins to brown around the edges. (If you like a crispier bread, you may bake it longer, until it is spotted with brown all over.) Stack the baked bread and wrap in a clean kitchen towel to keep warm while you roll out and bake the rest of the dough. Serve warm or at room temperature.

Makes 8 breads.

(Adapted from Alford & Duguid, *Flatbreads & Flavors*, p. 175–6.)

## 13 EDUCATION

Schools are not widely available in most of the Kurdish territory. Where they are available, they are not much help. Because classes are taught in the official language of the Kurds' countries of residence, not in Kurdish, many Kurdish children find school very difficult and drop out. The Kurdish literacy rate is therefore very low. Girls often do not attend school at all because tradition holds that they are needed at home.

## 14 CULTURAL HERITAGE

Kurdish culture has a rich oral tradition, especially in epic poetry called *lawj*, which often tells of adventure in love or battle. Kurdish literature first appeared in the 7th century AD. In 1596, Sharaf Khan, Emir of Bitlis, composed a history of the

Kurds in Persian called the *Sharafnama*. Almost 100 years later, in 1695, a great national epic called the *Memozin* was written in Kurdish by Ahmed Khani.

A Kurd named Ibrahim Mawsili founded the first Muslim Conservatory of Music after introducing Kurdish music to the ruler's court in the 8th century AD.

## 15 WORK

Most Kurds are farmers and sheep- and goat-herders. They sell products from their flocks such as leather, goat cheese, and wool. Women make crafts to sell such as carpets and cloth. Some Kurds grow tobacco to sell, and Turkish Kurds grow cotton for the market. A few mountain Kurds are still nomadic herders.

In towns, Kurds work as shopkeepers, plumbers, teachers, bankers, and so on. Kurds work as unskilled laborers in large Turkish cities, as well as in Baghdad and Mosul in Iraq, and Tehran in Iran. Some urban Kurds build on their traditional skills and specialize as bricklayers, butchers, cattle dealers, and small traders. The oil fields in Turkey and Iraq have attracted many Kurdish workers in recent times. Those Kurds who are able to go abroad find a variety of jobs and send the money back home.

## 16 SPORTS

See articles entitled **Armenians**, **Iraqis**, **Syrians**, and **Turks**.

## 17 ENTERTAINMENT AND RECREATION

Only men go out at night. They often sit at teahouses and cafés and play backgammon or dominoes. A favorite pastime is to listen to tapes or live singers at cafés. Singers have only recently been allowed to sing publicly in Kurdish.

## 18 FOLK ART, CRAFTS, AND HOBBIES

Carpet weaving is by far the most significant Kurdish folk art. Other crafts are embroidery, silk-weaving, leather-working, and metal ornamentation (especially copper inlay).

## 19 SOCIAL PROBLEMS

The greatest problem for the Kurds is the unwillingness of nations in which they live to allow them cultural autonomy. Although some Kurdish groups continue to fight for an independent Kurdistan, most Kurds wish only to be allowed to maintain their own language and culture within the states in which they live. Persecution of the Kurds has been especially traumatic in the age of nation-states. The concept of one nation with one people and one language has been adopted by the governments of Turkey, and this has led to great oppression of the Kurds in an attempt to make them conform. In Iraq, Kurds also faced persecution, although the Iraqi government did recognize their cultural autonomy. During the Iran–Iraq War (1980–88), the government engaged in systematic genocide to stop the Kurds from allying with Iran. Thousands of villages were destroyed and tens of thousands of Kurds were murdered and buried in mass graves. The Iraqi government also used nerve gas purchased from European governments against Kurdish civilians and Iranian troops, killing thousands more. One of the worst massacres occurred in the Iraqi Kurd town of Halabja, in which the entire population was killed by nerve gas. Because most countries tacitly supported

Iraq against Iran, no substantial pressure was placed on the Iraqi government to stop its offensive. After the Gulf War and the unsuccessful Kurdish and Iraqi rebellion against Saddam Hussein's power, thousands more Kurds were forced into refugee camps, although part of the Kurdish territory in northern Iraq has been declared off limits by Western countries. Since 1991, Turkey has attacked Kurdish civilian centers inside the "safe haven" zone in Iraq to punish Kurds for supporting the Kurdistan Workers Party (PKK). Because Turkey is needed to enforce the embargo against Iraq, little pressure has been placed on its government to stop these invasions. Many thousands of Kurds have now fled to Iran, and the government there is hard-pressed to provide support to literally millions of refugees from Iraq, Azerbaijan, and Afghanistan. Compounding the humanitarian tragedy is the fact that Kurdish leaders remain politically divided and unsure of a common strategy to demand their rights.

At least 44,000 people, mostly Kurds, had died in clashes between Kurdish rebels and the Turkish government as of 2008, and Turkey had spent \$300 billion battling the terrorists. Kurds in Syria are not allowed to assert a sense of identity. Legal restrictions in Syria prohibit them from using their language in public, while the Iranian government continues to arrest Kurd journalists and activists for asserting rights for independence. The situation for Kurds has improved considerably in northern Iraq, where Kurds are building a regional government and encouraging tourism. Despite the instability in the rest of Iraq, the Kurdish regions are peaceful and offer hope for a future Kurdistan.

## 20 GENDER ISSUES

An international conference on Kurdish women in 2007 raised many issues that challenge Kurdish women in the early 21st century. Most of the conference attendees emphasized that equalizing relationships between men and women was an important aspect of the international struggle for Kurdish independence.

Kurdish women lack educational opportunities and often face discrimination in workplaces. Because most Kurds are Muslim, religious practices also constrain women from working independently and from expressing themselves in the literary and creative arts. Kurdish women often face domestic abuse and suffer the risk of honor killings not only in the Middle East but also in the European countries that many have migrated to. The conference established a steering committee to organize future activities, passed resolutions to urge the Kurdish Regional Government in Iraq to make services for domestic violence available, and to work to increase social and political rights for women.

# KUWAITIS

**PRONUNCIATION:** koo-WAIT-eez

**LOCATION:** Kuwait

**POPULATION:** 3.2 million (30% of whom are Kuwaiti citizens)

**LANGUAGE:** Arabic (official); English

**RELIGION:** Islam (Sunni, 70%; Shi'ite, 30%)

## <sup>1</sup> INTRODUCTION

Kuwait has one of the world's largest proven oil fields, an oil field that the Iraqis did their best to control and later attempted to destroy in their 1990-91 invasion and occupation of Kuwait. One of the wealthiest nations in the world before the invasion, Kuwait has undergone a significant recovery from the widespread infrastructural and cultural destruction inflicted on the country by six months of Iraqi occupation.

Archaeological study shows evidence of human settlements in Kuwait dating back to 5000 bc. The Dilmun civilization occupied the area from 4000 to 2000 bc, controlling the trade route to India. The Babylonians took over, then the Persians; after this, the Greeks established a colony on Falaika Island and then expanded inland around 300 bc. Greek rule lasted about 200 years, after which the Romans entered. The Islamic revolution swept through the area during the 7th century AD. Not much is known about Kuwait from the time of the Islamic revolution until the 18th century.

Modern-day Kuwait was founded in 1722 by the Utub tribe of Arabs, who moved there to flee the drought across the inland Arabian Peninsula at that time. The name Kuwait is the diminutive form of the Arabic word *kut*, meaning "a fortress built near water." The few native inhabitants already there mingled with the Utub, and they all made their living by trading, fishing, and pearling. Sabah bin Jabir was elected sheikh (leader) of the Kuwaiti Utub in 1756, and the Sabah family has ruled Kuwait ever since.

Kuwait has a history of friendly relations with Britain, and it became a British-protected state in 1899. Kuwait was granted self-rule in 1914, but it remained a British protectorate until 19 June 1961, when it became officially independent. The Kuwaiti government is a constitutional monarchy that has a provision for an elected parliamentary body, the National Assembly, but the monarchy has rarely allowed it to exist. In 1992, elections were held for a new Assembly, and a majority of those elected are considered to be in opposition to the monarchy.

A small but wealthy state, Kuwait has suffered continual conflicts with its larger neighbors, Iraq and Iran. On 2 August 1990, Saddam Hussein led an Iraqi invasion of Kuwait, occupying the country until 26 February 1991. Relations between the two nations had soured some months prior to the invasion over disputed border oilfields and growing Iraqi discontentment with an economically-crippling military debt to Kuwait and Saudi Arabia amassed during Iraq's eight-year war with Iran. During the occupation, Iraqi soldiers ravaged the country, and much of the nation's wealth was looted and transferred to Iraq. There are conflicting accounts regarding the extent of the human rights violations committed by the Iraqi military invasion, with Kuwait claiming that the arbitrary arrest, beating, torture, rape, and murder of Kuwaiti citizens was widespread. Iraqis have contested this and argued

that these claims were exaggerated by the Kuwaiti regime in exile to make a more compelling and emotionally-appealing case for UN-backed military intervention. Following the passing of a landmark resolution in the Security Council, a United Nations coalition force from 38 nations (including eight Arab countries) came to Kuwait's defense on 16 January 1991 and drove out the Iraqis a month later. On their way out, the Iraqis conducted a scorched earth campaign, bombing and burning Kuwait's oil wells, roads, buildings—virtually everything in their path. Most of Kuwait's oilfields were set ablaze and took months to extinguish. This has had a severe toll on the Kuwaiti environmental conditions, both marine and terrestrial. Since the invasion, Kuwait has made a significant leap forward and recovered from all but one of the traumas of the invasion—the emotional one. Kuwait's currency stands unrivaled as one of the strongest in the world, the nation's population has swelled to twice its size two decades ago, and with souring oil prices, the country has been experiencing an economic renaissance.

## <sup>2</sup> LOCATION AND HOMELAND

Kuwait is located in the desert on the northwestern coast of the Arabian (or Persian) Gulf. It is bordered to the north and west by Iraq, to the south and southwest by Saudi Arabia, and to the east by the Gulf. Directly across the Gulf is Iran. Kuwait's total land area is about 17,820 sq km (6,880 sq mi), just slightly smaller than that of the U.S. state of New Jersey. Several islands are included within Kuwait's borders; the island of Failaka is the most densely populated. The largest island is Bubiyan, but it is uninhabited because it is low-lying and marshy. Kuwait Bay is a protected harbor on the Gulf that has been much used for millennia. Kuwait's capital city, Al-Kuwait, is located at the harbor. The rest of Kuwait is flat desert, with a couple of low ridges (about 122 m, or 400 ft above sea level) where the oil is located. Because the oil is in ground that is higher than the rest of the country, it does not have to be pumped, but simply flows with the force of gravity into collecting tanks.

What little plant and animal life there was before the Iraqi invasion is now almost totally destroyed. Military vehicles churned up the delicate desert soil, and oil flooding from bombed wells and spreading in a slick on the Gulf waters has killed most wild sea, land, and air life. Recovery efforts are slow, and some damage may never be repaired. Oil spills, significant percentages of acid precipitation, widespread ordinances, and residues of the war arms continue to pose significant threats for the revival of the country's terrestrial and marine flora and fauna.

The climate in Kuwait is hot and humid, with summer temperatures reaching as high as 49°C (120°F) or more. Frequent sandstorms occur from May to July, and August and September are extremely humid. Winters are cooler, with temperatures ranging from 10° to 16°C (50°–60°F). Average rainfall is only 2.5 to 18 cm (1–7 in) yearly, all of which falls during the winter months, from October through April.

Kuwait's total population, based on a 1999 census, is 2,273,842 persons, of whom only 792,000 are Kuwaiti citizens. The rest are foreign workers in the oil, medical, educational, and construction industries, as well as significant numbers in skilled labor. Foreign workers are not allowed citizenship, even if they work in Kuwait all their adult lives. Even children born in Kuwait to foreign workers are not granted Kuwaiti citizenship. After a career of service in Kuwait, a foreign

worker is asked to leave the country immediately after retiring or upon the expiration of their work permits. Of the foreigners, about 35% are Arab; 10% are Iranian; 10% are Indian; 15% are Bangladeshi and Pakistani; and 10% are Egyptian, 10% are Palestinian (numbers halved following the liberation due to political reasons); and the remaining 10% are from a variety of countries. In May 1991, following liberation from the Iraqi invasion, it was reported that 900 persons were being investigated for their activities during the Iraqi invasion. The Kuwaiti prime minister acknowledged that non-Kuwaitis had been abducted and tortured. Some were arrested and tried as collaborators with the Iraqis; many were forced to leave the country.

Most of the Kuwaiti population is urban, with estimates reaching 96%. According to the 1999 census, 30,958 people live in the capital, Kuwait City. The largest town is Salmiyya, with a population of 150,452. Jalib al-Shuyukh has 160,289 persons, and Hawalli has 93,000. Before the Iraqi occupation, new towns were being built to house the growing population. Since the liberation, reconstruction has rebuilt much of the country's destroyed areas and new residential areas, both urban and suburban enclaves have emerged throughout. The demographic distribution of the country shows a geographic and socioeconomic disparity between residential areas for Kuwaitis and those for expatriates, with the latter occupying smaller urban apartments whilst the prior live in luxurious suburban property.

### 3 LANGUAGE

Arabic is the official language of Kuwait and is the language spoken by all Kuwaiti citizens. Kuwaiti students are taught English as a second language. Arabic, spoken by 422 million people worldwide, has many distinct dialects, so that people living as few as 500 km (about 310 mi) apart may not be able to understand one another. The written form of Arabic is called Classical Arabic, or, for today's literature and press, Modern Standard Arabic. It is the same for all literate Arabs, regardless of how different their spoken dialects are. Arabic is written from right to left in a unique alphabet that makes no distinction between capital and lower-case letters. It is not necessary for the letters to be written in a straight line, as English letters must be. Punctuation rules are also quite different from those of English.

"Hello" in Arabic is *marhaba* or *ahlan*, to which one replies, *marhabtayn* or *ahlayn*. Other common greetings are *As-salam 'alaykum*, "Peace be with you," with the reply of *Wa 'alaykum as-salam*, "and to you peace." *Ma'assalama* means "Goodbye." "Thank you" is *Shukran*, and "You're welcome" is 'Afwan; "yes" is *na'am* and "no" is *la'a*. The numbers one to ten in Arabic are *wahad*, *ithnayn*, *thalatha*, *arba'a*, *khamasa*, *sitta*, *saba'a*, *thamanyā*, *tisa'a*, and 'ashara.

Arab names consist of their first name, their father's name, and their paternal grandfather's name. Women do not take their husband's name when they marry but rather keep their father's family name as a sign of respect for their family of origin. First names usually indicate an Arab's religious affiliation: Muslims often use names with Islamic religious significance, such as Muhammad and Fatima, while Christians often use Western names, as well as Arabic Christian names, such as Elias and Butrus.

Kuwaitis speak a dialect of Arabic known as Khaleeji (Gulf Arabic) that is spoken with some variation throughout the Gulf countries including Iraq, Saudi Arabia, Qatar, Bahrain, United Arab Emirates, and Oman. Khaleeji dialects are comprehensible to all their speakers but may not be understood completely in other regions of the Arab world, such as the Levant (Syria, Lebanon, Jordan and Palestine) or the North Africa region. These dialects are spoken rather than written although there is a move towards textually documenting these oral languages in the form of literature and poetry for fear of their loss due increased reliance on foreign-produced media content.

### 4 FOLKLORE

Kuwaiti folk beliefs and rituals are strongly linked to Islam, to which Kuwaitis turn for daily guidance, as well as explanations for many aspects of their current lives and past history. Prior to the discovery of oil, the people of Kuwait relied primarily on desert herding and fishing for sustenance. These have had a substantial impact on the country's folklore and culture with many songs, theatrical performance, literature, and poetry and musical compositions and often serve as inspiration for the stories in these artistic expressions. Bedouin and desert nomadic culture has also left its mark in the traditional garb worn by men and women both casually and on special occasions including weddings, funerals, ceremonies, celebrations and formal meetings.

## 5 RELIGION

The original inhabitants of Kuwait were pantheistic, worshipping various goddesses and gods. A temple to Artemis, the Greek virgin moon goddess of the hunt, was located on the island of Falaika. In AD 313, the emperor Constantine made Christianity the official religion of the Roman Empire, of which Kuwait was then a part, so Kuwait became a Christian state. When the Islamic revolution swept through the area in the 7th century AD, virtually all Kuwaitis converted to Islam. Today, about 70% of Kuwaiti citizens are Sunni Muslims, while 30% are Shi'ite Muslims.

Islam is the youngest of the world's three Abrahamic religions, having begun in the early 7th century AD when the prophet Muhammad received his revelations from Allah (God). Within just a few years of Muhammad's death in AD 632, Islam had spread through the entire Middle East, gaining converts at a dynamic rate.

Born into the Koreish tribe of Mecca (c. AD 570), in what is now Saudi Arabia, Muhammad was later driven from the city because of his vigorous denunciation of the pagan idols worshiped there (idols that attracted a profitable pilgrim trade). The year of Muhammad's flight from Mecca, AD 622 (July 16), called the *Hijra*, is counted as the year one in the Muslim calendar. Muhammad fled to the city now known as Medina, another of the holy sites of modern-day Saudi Arabia. Eventually, Muhammad returned to Mecca as a triumphant religious and political leader, destroyed the idols (saving the Black Stone, an ancient meteorite housed in the Kaaba, or Cube, building, which has become a focal point of Muslim worship), and established Mecca as the spiritual center of Islam.

The Islamic religion has five so-called "pillars": (1) Muslims must pray five times a day; (2) Muslims must give alms, or *zakat*, to the poor; (3) Muslims must fast during the month of Ramadan; (4) Muslims must make the pilgrimage, or *hajj*, to Mecca; and (5) each Muslim must recite the *shahada*: "*ashhadu an la illah ila Allah wa ashhadu an Muhammadu rasul Allah*," which means "I witness that there is no god but Allah and that Muhammad is the prophet of Allah." Muslims say all their prayers facing in the direction of Mecca. Both men and women are expected, and greatly desire, to make the pilgrimage at least once in their lifetime. Ramadan, the ninth month of the Muslim year, during which Muhammad received his first revelations, is observed by complete fasting from dusk until dawn each day of the entire month.

Islam is a simple, straightforward faith with clear rules for correct living; it is a total way of life, inseparable from the rest of one's daily concerns. Therefore, religion and politics and faith and culture, are one and the same for Muslims. There is no such thing as the separation of church and state. In theory, there should be no distinction between private religious values and public cultural norms in an Islamic country; in actuality, history, geography, and daily life have influenced the cultures of Islamic countries, resulting in standards of social behavior and interaction that are not always in agreement with religious codes of conduct.

The difference between the Sunni and Shi'ite Muslims, which has played such an important part in Arab history, has to do with the early history of the religion. After Muhammad's death, the entire Muslim community recognized the legitimacy of the next three successors, or caliphs. The fourth caliph was 'Ali, Muhammad's cousin and son-in-law. His legitimacy was

challenged by Mu'awiyah, the governor of Syria, and after the Battle of Siffin in 657, 'Ali was forced to withdraw. He moved his capital to Iraq and was murdered shortly thereafter. His followers refused to recognize the legitimacy of Mu'awiyah's caliphate and established the Shi'ite sect. Although there are doctrinal differences, the fundamental difference between the sects, therefore, is an argument about authority, not doctrine: the Shi'ites believe that caliphs must be direct descendants of Muhammad and that 'Ali was the legitimate fourth successor, while the Sunnis believe that caliphs should be elected by the people and therefore that Mu'awiyah and his successors were legitimate. Because there are more Sunnis than Shi'ites worldwide, the Sunnis refer to themselves as the orthodox sect.

## 6 MAJOR HOLIDAYS

Secular holidays in Kuwait include New Year's Day (January 1) and National Day (February 25). Liberation Day (February 26), commemorating the expulsion of Iraqi forces from Kuwait, is not recognized as an official holiday, but Kuwaitis seem to treat it as one. In deference to Kuwaitis still missing in Iraq after the occupation and to their families, no ceremonies or celebrations are held to mark the National Day or the Liberation Day.

Because Kuwait is an Islamic state, its official religious holidays are Muslim ones. Muslim holidays follow the lunar calendar, moving back by eleven days each Western year, so their dates are not fixed on the standard Gregorian calendar. The main Muslim holidays are *Eid Al-Fitr*, a three-day festival at the end of Ramadan; *Eid Al-Adha*, a three-day feast of sacrifice at the end of the month of pilgrimage to Mecca, during which families who can afford it slaughter a lamb and share the meat with poorer Muslims; the First of *Muharram*, or the Muslim New Year; *al-Mawlid An Nabawi*, the prophet Muhammad's birthday; and *Eid Al-Isra' wa Al-Mi'raj*, a feast celebrating Muhammad's nocturnal visit to heaven. Friday is the Islamic day of rest, so most businesses and services are closed on Fridays. All government offices, private businesses, and schools are closed also during *Eid Al-Fitr* and *Eid Al-Adha*.

## 7 RITES OF PASSAGE

Births are the occasion for celebration, particularly if the child is a boy. Kuwaiti boys are circumcised on the seventh day after their birth. This is usually accompanied by a banquet (*Aqiq*), for which sheep are slaughtered and relatives and friends are invited in for a festive meal. After giving birth, a mother is expected to stay in bed for 40 days (*nifas*), to recuperate and regain her strength.

Weddings are perhaps the most elaborately celebrated occasions, with great feasts and dancing. In the past, girls could be betrothed at the age of 14. Today, the average age for marriage is 20 to 25. There are two rituals in the marital tradition, the *milka*, or marriage contract, and the *'urs*, or marriage ceremony. Kuwaiti society is built on the importance of the family, and marriages are often arranged between families with long-established ties.

Respect toward the dead is also an important ritual. The burial takes place on the same day as the death. The body is washed and wrapped in a white shroud and then taken to a nearby mosque, where special prayers (*Salat al-Janaza*) are recited. After the burial, the relatives, friends, and acquaintances gather at the home of the grieving family to pay their respects

and read aloud parts of the Quran. Mourning lasts for three days.

## 8 INTERPERSONAL RELATIONS

During the Iraqi invasion and occupation (1990–91), the usual social barriers and divisions, such as age, religious differences, and gender segregation, disappeared as Kuwaitis banded together to resist and/or survive. During more peaceful times, men and women do not mix socially, except in family groups, and Shi'ite and Sunni Muslims keep their distance from each other.

The *diwanias*, private clubs for men, played an important role during the Iraqi occupation. Traditionally, functioning as meeting places where men sit and talk over coffee or tea, making business contacts, discussing government policy with influential persons who can then make the suggested changes, and making deals with each other, the *diwanias* became the hub of the resistance movement. Men gathered there (as well as in mosques) and organized their resistance efforts against the Iraqis. In post-liberation Kuwait, these congregations have become a forum for political organizing that has led to recent crackdowns on some of the *diwanias* that reflect opposition to the Al-Sabah family rule.

In general, Arab hospitality reigns in Kuwait. When talking, Arabs touch each other much more often, and stand much closer together, than Westerners do. People of the same sex will often hold hands while talking or walking. (In earlier days, members of the opposite sex, even married couples, never touched in public; this is changing today.) Arabs tend to be social, gregarious, highly conversant, and insistent and have different conversational and interpersonal rules than Westerners. Interrupting a person speaking is not seen as offensive, and speaking with a high volume is acceptable. Most conversations appear to involve emotion and are replete with non-verbal gestures.

With a new generation of Kuwaiti youth being influenced by foreign travel and exposure to international media, there is greater mixing between males and females, with a growing number of private co-ed British and American schools and universities setting the standards in education and creating an environment where popular cultural youth trends are explored. Large shopping centers have become a place where youth meet, congregate, or simply people watch and now serve as some of the most public spaces for socialization.

Given the high income levels in Kuwait, the country has a very hierarchical system of socioeconomic classes, which affects interpersonal relations. Interactions between Kuwaiti and other nationalities are governed by this hierarchy. Domestic workers are common in Kuwait, and most citizens have several employees in the household who are expatriate laborers sponsored by the host/employer family. Most such workers are citizens of countries in South Asia, East and North Africa, or the Philippines. With more than half the population of the country being comprised of non-Kuwaitis, communication between various ethnic, national, and racial communities makes for an intriguing intercultural interpersonal environment.

## 9 LIVING CONDITIONS

During the Iraqi invasion and occupation (1990–91), conditions in Kuwait were horrendous. During the incredibly hot summer months, most of Kuwait's citizen population is given extended

leaves from work and permitted to travel to more temperate climates. With a high GDP, most Kuwaiti citizens own property or second homes outside of their country that serve as places of summer vacation. The Iraqi invasion occurred during the summer of 1990 when the population of Kuwait had shrunk to half its size. For the small numbers of Kuwaitis and the remaining expatriate population that remained and had not fled, life was extremely difficult and dangerous. There was little food and no running water. Utilities (electricity, gas, water, and so forth) were cut off and other services closed down. The Iraqis stole everything that could be hauled away—from homes, stores, offices, even hospitals. Kuwaitis and anyone deemed suspicious were arrested arbitrarily with many cases of rape, torture, or murder reported. When the UN forces drove the Iraqis out of Kuwait, the Iraqis conducted a scorched earth campaign: they bombed and/or burned everything in their path as they were leaving. Kuwait was left in flaming rubble. In the years since, a massive rebuilding effort has brought Kuwait back to its modern, well-developed, pre-invasion state.

Health care and education through the university level are free to all Kuwaiti citizens. Foreign workers are entitled to most of the benefits but are restricted from admission to some programs. The infant mortality rate is low; life expectancy is high: 73 years for men, and 77 years for women. Modern health-care centers are conveniently located throughout the country and tend to be of high quality. Several exceptional medical research and service facilities have emerged in the last quarter century including a world-class medical genetics center, a top cancer treatment center, and a network of rehabilitation and support agencies for those with mental and physical disabilities. The government sponsors social welfare programs for disabled persons, the elderly, students' families, widows, unmarried women over 18, orphans, the poor, and prisoners' families. Housing is subsidized, as are utilities. Telephone services are free. TV broadcasting began in 1961, with satellite communications established in 1969.

Kuwaitis' per capita (per person) income is one of the highest in the world. About one-fourth of all Kuwaitis own a car, usually an expensive one. On the other end of the economic scale, some laborers receive small earnings and live in dormitory-like apartments, sending most of their incomes as remittances to their families in their home countries.

Kuwait has an advanced highway system that connects all corners of the country but tends to be dangerous with high frequencies of accidents due to reckless driving. However, as the population of Kuwait continues to swell, the government is considering building a rail system within the capital city of Al-Kuwait and its suburbs to alleviate traffic congestion.

The press is censored less in Kuwait than in other Arab countries, but it is still controlled by the government. Kuwait has a ministry of information that monitors, advises and occasionally censors all forms of media in the country although the print press tends to be independent both in ownership and in coverage with several daily newspapers espousing clear oppositional views to the government. Recently, Kuwait was ranked the freest of all Arab media systems but remains hopelessly behind many countries in the world. Nonetheless, Kuwait has made a name for itself in the Arab digital and video media industry, producing several cutting-edge animation television series, producing high-end children's programming and leading the dubbing industry along with Jordan and Lebanon.

A Kuwaiti woman buys straw baskets and trays at a shop in downtown Kuwait. Kuwaitis use baskets to distribute sweets during the holy month of Ramadan. (Yasser Al-Zayyat/AFP/Getty Images)

## <sup>10</sup> FAMILY LIFE

The family unit is more important to Kuwaitis than the individual, the larger community, or the state. Families tend to be large; the government encourages large families in its effort to increase the percentage of native Kuwaitis in the overall population. The government even pays over \$7,000.00 to each couple at the time of their marriage and offers child support to families for every child born, with a sliding scale if the child has a disability or is in need of special medical care.

Extended families usually live together, except in some urban areas where the houses are too small. In this case, relatives live near each other. A typical Kuwaiti household consists of a husband, his parents, his wife, his sons and their wives and children, and his unmarried sons and daughters. Parents arrange marriages, usually between extended-family members. First cousins are an acceptable match among urban Kuwaitis and preferred among Bedouin Kuwaitis. Marrying and having children, particularly sons, increases a woman's status in society. Most girls marry young; 29% of Kuwaiti women are married by the time they are 20 years old.

## <sup>11</sup> CLOTHING

In Kuwait's urban centers, Western-style clothing is becoming popular, particularly with young people. However, many

Kuwaitis still wear traditional Arab clothing, such as the *dish-dasha* (ankle-length robe) with a *ghutra* (head scarf), usually white, worn over a skull cap and held in place with an *'aqal* (wool rope) for men. Women are veiled according to Islamic law, with the covering being of varying degrees, from hair-covering, to the *niqab* (showing only the eyes), to the *burqa'* (full face and head-cover). Kuwaiti men and women are very fond of luxury products and commodities, often preferring the most expensive western designer accessories for watches, sunglasses, perfume, etc. Today, Kuwaitis comfortably and delicately balance the complexities of traditional attire with high-end western style in an often unique amalgam.

## <sup>12</sup> FOOD

As a wealthy country, Kuwait is able to import foods from all over the world. Their desert climate supports almost no agriculture, making importation absolutely necessary. As Muslims, Kuwaitis cannot eat pork or drink alcohol, and all meats must be slaughtered according to Islamic tradition to ensure purity and cleanliness, which is known as *halal* (meaning permitted). Coffee and tea are the most popular beverages and are often mixed with spices, coffee with cardamom and tea with saffron or mint. Food and drink are always taken with the right hand. Etiquette of hospitality requires that hosts continue offering refills on drinks and food regardless of the guest's wishes.

The Kuwaiti cuisine offers a variety of dishes that reflect the country's Bedouin traditions and long history of contacts with other cultures, such as those of India, Iraq, and Iran. In addition to the simple Bedouin meals of dates and yogurt, Kuwaitis favor meat, fish, and rice. Spices are an essential part of the Kuwaiti cuisine. Among the most commonly used spices are coriander, cardamom, saffron, and turmeric. Most Kuwaitis eat in large groups and enjoy entertaining others including neighbors, extended families and clans. In the household and for traditional meals, Kuwaitis share food from a colossal single serving plate and customarily prefer using their bare hands over utensils.

When it comes to non-traditional foods, Kuwaitis' hefty budgets have led to discerning palates. As they prefer only the best of world fare, restaurants in Kuwait are exceptional compared to their counterparts elsewhere in the world.

### **13 EDUCATION**

Education is a primary focus of the Kuwaiti government. It puts a tremendous amount of money into providing good, free education for all its citizens. Because of this emphasis, the literacy rate in Kuwait is quite high compared to those of other Arab countries: 74% of Kuwaitis are literate. The percentage is significantly lower for older women who grew up during a time when girls were not encouraged to obtain a formal education. The literacy rate is higher for young Kuwaitis: 87% of Kuwaiti children age 10 to 14 can read and write.

Education is compulsory for all Kuwaiti children 6 to 14 years of age. Schools teach in Arabic, and English is taught as a second language to all students 10 years of age and older. Boys and girls attend separate schools. Every child is trained to become computer-literate in primary and early secondary school. Since the mid 1970s the number of English language private all-grade schools has grown exponentially. These institutions differ from public schools in being co-ed and multinational in composition as they attract many children of expatriates. They also follow the British or American school curricula rather than that of the state's Ministry of Education.

Education is free through the university level; the government also pays for students to study abroad. All expenses, including books, tuition, transportation, uniforms, and meals, are paid by the government. The government also pays families of students an allowance to help cover any other education-related expenses. This has led to an explosion in the number of Kuwaitis with graduate degrees and upper-level qualifications in all industries and supported the government's campaign of *takweet* (Kuwaitization) of all sectors to ensure that reliance on expatriate expertise declines.

A law passed in 1981 in Kuwait requires all adults who cannot read to attend literacy classes. To round out Kuwaitis' education, the government has put in place a strong arts program.

### **14 CULTURAL HERITAGE**

To help promote and encourage the arts in Kuwait, the Kuwaiti government founded the National Council for Culture, Arts, and Letters in 1974. Painting and sculpture are relatively recent developments on Kuwait's cultural scene. The National Museum building formerly contained the Al-Sabah Collection, which was considered one of the most important collections of Islamic arts in the world. During the Iraqi invasion, however, the entire museum was looted by the occupying forces.

The Sadu House is a cultural foundation and a museum that is entirely dedicated to the preservation of Bedouin art heritage, particularly weaving. In all other respects, Kuwait shares the cultural heritage of other Arab countries generally.

Arab music is rich and diverse. The oud, a popular instrument, is an ancient stringed instrument that is the ancestor of the European lute. Another traditional instrument originally from southern Egypt is the *rebaba*, a one-stringed instrument. The sea chantey is the most distinctive Kuwaiti folk song; chan-teys were traditionally sung as work songs on pearling ships.

A traditional Arab dance is the *ardha*, or men's sword dance. Men carrying swords stand shoulder to shoulder and move forward and to the sides together to the rhythm of drums, while verses are sung by a poet. From among them a poet sings verses while drummers beat out a rhythm. Traditional Bedouin dances performed by men and women in national attire incorporate sheep and camel-skin drums, elaborate rhythmic clapping, various unique dance movements including the swinging of Kuwaiti women's long black hair from side to side to the beat of the music. Most nationalistic songs proclaim reverence to the ancestors of Kuwait and their minimalistic lifestyle, love and commitment to the nation and its sovereignty, and loyalty to its royal family, while proclaiming a desire to develop and progress.

Compared to that of other Gulf states, the Kuwaiti theater is highly professional.

Islam forbids the depiction of the human form, so Kuwaiti Islamic art is based on geometric and abstract shapes. Contemporary art in Kuwait has recently flourished with a growing faculty of fine arts at the country's national university. Traditional Islamic calligraphy is a sacred art, with passages from the Quran being the primary subject matter. Muslim visual art finds its greatest expression in the adornment of mosques.

The Islamic reverence for poetry and the poetic richness of the Arabic language inform much of Kuwait's cultural heritage.

### **15 WORK**

The main source of employment and income in Kuwait is the oil industry. At the current rate of production, proven reserves are expected to last another 250 years. Kuwait was the first OPEC (Organization of Petroleum Exporting Countries) nation to explore outside its national boundaries for oil. Along with the oil are huge reserves of natural gas.

Even with these sources of substantial guaranteed income for perhaps another two centuries, Kuwait is trying to encourage the development of other industries so that it will not remain entirely dependent on oil and natural gas. The government offers low-interest loans, tax breaks, and subsidies for electricity and water to businesses that are starting out. Other industries remain small, however. Fishing is one of the oldest industries in Kuwait, as are pearling and shipbuilding.

Trade unions are not permitted in Kuwait, and the oil industry is totally government-run. In the 1990s over 43% of non-Kuwaiti women in Kuwait worked outside the home, while fewer than 14% of native Kuwaiti women did. Recent changes in Kuwaiti society have transformed these numbers completely and now qualified Kuwaiti women are represented in almost every industry.

## 16 SPORTS

Soccer is the most popular sport in Kuwait. The National Soccer Team has won both Arab and international competitions including a notable appearance in the 1982 World Cup in Spain. Kuwait has also had international success in the traditional sport of horse racing. Other traditional sports include falconry and camel racing. Water sports are popular in the Arabian (or Persian) Gulf, although jellyfish prevent swimming there. Kuwaitis tend to enjoy summer months by the many pools in their homes or public clubs. These government-run sports clubs have facilities for swimming, tennis, equestrian and other sports.

## 17 ENTERTAINMENT AND RECREATION

Kuwaitis, as well as tourists to Kuwait, spend a great deal of time relaxing on the beaches along the Gulf coast. Water sports are a popular form of recreation. One of the biggest attractions in Kuwait is Entertainment City, modeled after Disneyland in the United States and several other theme parks of comparable quality service every part of the country. These tend to house recreational and educational facilities as well as exhibits. There are several movie theaters in Kuwait cities, which show Arab, Indian, Pakistani, and English-language films, although most of these Hollywood and Bollywood films are heavily edited for anything deemed offensive to Islam or local culture by the state's censorship office.

## 18 FOLK ART, CRAFTS, AND HOBBIES

The best-known folk art in Kuwait is that of the Bedu (or Bedouins—see **Bedu**), particularly weavings done with brightly colored wool on a loom called a *sadu*. Other popular artifacts, ornaments and gifts include the argila (waterpipe used to smoke flavored tobacco), traditional engraved incense burners, miniatures of wooden fishing boats (boom), and elaborate fragrant and scented extracts forms of herbs and plants.

## 19 SOCIAL PROBLEMS

Even before the massive, widespread destruction caused by the Iraqi invasion and occupation (1990–91), Kuwait suffered from severe ecological problems caused by human population growth, industrialization, and especially the oil industry, which has leaked about 250,000 barrels' worth of oil into the Gulf each year. Only 3 out of 27 species of mammals in Kuwait are not endangered. They are the house rat, brown rat, and house mouse.

Following the scorched earth campaign accompanying the Iraqi retreat from Kuwait in 1991, the ecological catastrophe has worsened greatly. The Iraqis deliberately spilled four to six million barrels of oil into the Gulf, creating the largest oil slick ever on the planet. The slick covered about 1,550 sq km (about 600 sq mi) of sea surface and coated about 480 km (about 300 mi) of coastline. The Iraqis also bombed 749 oil wells, many of which caught fire. It took almost a year to put out the flames. The plume of oil smoke from the burning wells rose over 6,700 m (about 22,000 ft) into the air and spread for more than 2,400 km (1,500 mi), dropping soot and oil in its path. When the fires were still burning, everything in Kuwait was covered with oil and soot, including the people. Children who played outside became black with grime. It was impossible to keep clean.

The sulfur dioxide released in the smoke is a major component of acid rain. The blasted wells also leaked oil into lakes on the desert surface. At least 20,000 wild birds were killed by the oily lakes and the oil slick on the Gulf (when birds become coated with oil, they cannot fly and are no longer able to take care of themselves). The lakes of oil also killed all plant and animal life beneath them, and it is feared the oil may have seeped into the groundwater, allowing toxic metals to enter the food chain. These toxic metals can cause brain damage, cancer, and cardiac problems in humans and other animals. Medical research in Kuwait's centers has confirmed a significant and alarming rise in all these conditions in the past 17 years.

Another casualty of the war with Iraq was the fragile desert soil, churned up by the heavy military vehicles. It may take centuries for the soil structure to repair itself—if it can. This damage may lead to drifting sand dunes and more severe sandstorms. What little agriculture the desert land could support before the war has been made nearly impossible now. In other places, oil and soot dropped by the plume of smoke from the burning oil wells turned the desert surface into a blackened, brittle crust. Where the oil slick washed ashore, entire beaches turned black and grimy.

Before the Iraqi invasion, there was a sharp division between Kuwaiti citizens (the minority) and foreign workers (the majority). After the war, those tensions increased. The Kuwaiti government rounded up many foreign workers and forced them to leave the country. Those who remain still cannot become citizens, even children born in Kuwait to foreign workers. After a lifetime of working in Kuwait, a foreigner is asked to leave the country immediately upon retiring. This creates a great deal of ill will among the long-term foreign workers in Kuwait.

Since the Iraqi invasion, another division has occurred in Kuwaiti society, between the “insiders”—those who stayed in Kuwait during the occupation—and the “outsiders”—those who fled the country and have since returned. Insiders feel that they should have more say in the running of the country now, since they stayed to defend their homes. Outsiders include the royal family and ruling members of the government, who hesitate to give up much of their power. The government did finally allow elections for a new National Assembly in 1992, giving the people a greater say in their governance.

One of the most difficult social problems in Kuwait is the emotional and psychological scarring from the horrors of the Iraqi invasion and occupation. At least 100,000 persons—Kuwaitis and others—died in the war, and another 300,000 were wounded. Many Kuwaitis were kidnapped and taken to Iraq. Others were arrested, tortured, raped, killed, or forced to watch members of their family being raped or killed. Some Kuwaitis simply “disappeared,” never to be seen again. Most of the reconstruction effort in Kuwait has focused on physical and industrial reconstruction, ignoring people's emotional wounds. These wounds will take far longer to heal, and no amount of money will cure them.

However, the most complicated of all social problems in Kuwait has been the perennial condition of a subset of Kuwaitis who have been denied citizenship. Known commonly as the Bidoon (the withouts), they are descendents of tribes that have lived and roamed the land that is Kuwait for decades, if not centuries. While numbers vary, estimates are often listed around 120,000 persons. The Bidoon receive few of the privi-

leges afforded to citizens and have been increasingly vocal in their protests of this disparity. During the Iraqi invasion, their loyalty to the sovereignty of the Kuwaiti state and its independence was called into question as some chose to align themselves with the Iraqis at the expense of the Kuwaiti royal family, which they hold reservations about. In the post-liberation period, the government has adopted various measures to try and integrate this population and allowed a small proportion to become citizens. Despite this, the issue remains a sore often aggravated by various issues.

## <sup>20</sup> GENDER ISSUES

For decades, girls received training in home and child care as well as vocational training for jobs considered acceptable for women: secretary, receptionist, teacher, and so forth. If they continued through to a college education, they were not encouraged to take engineering courses and other vocations perceived as masculine, but they were able to become medical doctors. This resulted in an upsurge of women doctors, with about one-third of all Kuwaiti doctors being women. Interestingly, Kuwaiti women exceed men in every faculty at Kuwait University and at several new private accredited American and British universities. Women have attained some of the top professional positions in the country including judges, deans, engineers, and notable literary figures.

Women are more independent in Kuwait than in most other Arab countries, but they are still usually segregated from men and were not allowed to vote until 2005. In a recent upsurge of gender equality, suffrage and candidacy were decreed universal for all able eligible Kuwaiti citizens of age. This resulted in several Kuwaiti women running in the first parliamentary elections in 2008. Although none secured a seat in the all-male parliament, it led to wide-ranging debates in the country about the role of women in a rapidly-modernizing Kuwait, with support from progressive citizens and sharp criticism from traditionalists and Islamists. Today, women have also built networks of solidarity in the form of diwanias, which are increasingly popular and common given the growing influence of women in the Gulf emirate. Recently, the emir of Kuwait appointed to his cabinet two women ministers, which was considered a significant move towards incorporating women into the political system.

# KYRGYZ

**PRONUNCIATION:** KIR-ghiz

**LOCATION:** Kyrgyzstan; China

**POPULATION:** 5.3 million

**LANGUAGES:** Kyrgyz; Russian; English

**RELIGION:** Islam (Sunni Muslim)

## 1 INTRODUCTION

Tracing the origins and history of the Kyrgyz people is difficult because, until recently, they used no written language. Therefore, much of what is known about the early Kyrgyz is based on archeological discoveries and oral stories passed down over the generations. The Kyrgyz people were nomads throughout much of their history, initially living in the region of south-central Russia between the Yenesei River and Lake Baikal about 2,000 years ago. The ancestors of the modern Kyrgyz were probably not Turks at all, but either Yeniseyans (ancestors of the modern Kets) or South Samoyedic peoples, and they exhibited European-like features (such as fair skin, green eyes, and red hair). During the 6th through 9th centuries, the Kyrgyz mixed with the various invading Mongol and Turkic tribes. At some time between the 12th and 16th centuries, they settled in the Tien Shan Mountains.

During the era of Mongol rule, the Kyrgyz were loosely governed until the Kokand Khanate lost control in about 1850. At that time, imperial Russia was expanding its control in Central Asia by moving Russian colonists into the area. The Russians finally gained control over the Kyrgyz in 1876. The new Russian settlers staked claims on the most fertile land, and the nomadic Kyrgyz were given minimal attention by the Russian government. In 1916, ethnic Kyrgyz inhabitants revolted against this practice, but the rebellion was crushed by Russian forces.

After the Russian Revolution of 1917, the area inhabited by the Kyrgyz was made part of Soviet Turkistan. In 1921, its status changed by becoming part of the Turkistan Autonomous Soviet Socialist Republic. In 1924, the region was split away from the Turkistan ASSR and assigned as an autonomous area (*oblast*) within the Russian Soviet Federated Socialist Republic (RSFSR). In 1924, the region became the Kirghiz Autonomous Soviet Socialist Republic of the RSFSR. In 1936, the territory finally became a full-fledged republic of the USSR.

During the Soviet era, from 1917 to 1991, the way of life for the Kyrgyz people as residents of the Kirghiz Soviet Socialist Republic (KSSR) changed significantly. Forced collectivization of farming quickly ended nomadic life. Mechanization, irrigation, and mining were introduced, but many Kyrgyz wanted to keep farming or raising livestock. As a result, the Kyrgyz became ethnic minorities within the industrial and urban areas of the KSSR. The economic and political restructuring that occurred in the Soviet Union during the late 1980s under Soviet leader Gorbachev never made it to the KSSR. In 1990, ethnic tensions along the border with Uzbekistan resulted in 200-400 deaths. The chaos created by that event caused the ruling Kyrgyz Communist Party (KCP) to lose any credibility that it had with the people. During the attempted Soviet coup of August 1991 in Moscow, there was a similar coup taking place in the KSSR. When the attempted coup failed, the KCP voted itself

out of existence. When the Soviet Union dissolved in 1991, the KSSR became independent Kyrgyzstan.

Since 1991, Kyrgyzstan has been led by an elected president and parliamentary form of government. The government has concentrated on elevating the status of Kyrgyz culture in Kyrgyzstan without alienating persons of other ethnic backgrounds. Unlike in some of the other former Soviet republics, a citizen of Kyrgyzstan does not need to be Kyrgyz. In 2005 Kyrgyzstan experienced its "Tulip Revolution," which resulted in the mainly peaceful ouster of the former president, Askar Akayev and the parliament elected during his rule. Today it is somewhat politically stable, but faces a very dissatisfied population because of its very poor economy.

## 2 LOCATION AND HOMELAND

There are approximately 5.3 million Kyrgyz living throughout the former Soviet Union, with about 88% of them in Kyrgyzstan. Ethnic Kyrgyz constitute slightly more than half of the population of Kyrgyzstan. There are also about 80,000 Kyrgyz living in the Sinkiang-Uygur Autonomous Region of China and a few tens of thousands in Afghanistan.

Kyrgyzstan is located in Central Asia along the western range of the Tien Shan Mountains. This area was known as the Kirghiz Soviet Socialist Republic during the Soviet era. The boundaries with neighboring countries (Kazakhstan, China, Tajikistan, and Uzbekistan) run along mountain ranges, and about 85% of Kyrgyzstan itself is mountainous. In the southwest, the Fergana River Valley is the largest expanse of lowlands in the country. The only other lowland areas are in the north, along the Chu and Talas valleys. Most of the lowland area occupied by Kyrgyz people is arid, receiving less than seven inches of rainfall per year. Although the climate is dry where the land is cultivated, mountain lakes and streams provide ample water through irrigation.

The largest mountain lake, Issyk-Kul, is located high in the mountains of eastern Kyrgyzstan, and many Kyrgyz fishing villages are located around the edge of the lake.

## 3 LANGUAGE

Most Kyrgyz people speak the Kyrgyz language, which is a distinct Turkic language with Mongolian influences. The Kyrgyz language is a member of the Nogai group of the Kypchak division of the Turkic branch of Ural-Altai languages. Until 1926 the Kyrgyz and Kazak languages were considered as one. The Kyrgyz literary language was therefore heavily shaped by Kazak, with some Mongolian influences in the vocabulary. Although the Kyrgyz language is spoken in the home, most Kyrgyz also speak Russian, which is the language of business and commerce. English is the third language of communication. The Kyrgyz government had begun a program to gradually switch over to the Kyrgyz language for all state institutions and educational establishments by 1998, but this has been delayed because of its impracticality. The written language originally used Arabic script, but the Roman alphabet was introduced after World War I. The written Kyrgyz language was formally organized in 1923 and was modeled after the northern dialects. In 1940, Stalin forced all Central Asian republics to switch to the Cyrillic alphabet (which is used by the Russian language). Since independence, there has been discussion of switching back to the Roman alphabet.

The Kyrgyz people have many proverbs and sayings related to horses, such as: “A horse is a man’s wind.” Some proverbs deal specifically with pacers. Two examples of such are: “Don’t let your horse run beside a pacer” and “If you have only one day left to live, you should spend half of it riding a pacer.”

#### 4 FOLKLORE

The telling of traditional oral tales dates back about 1,000 years among the Kyrgyz people. One of the most famous epics tells the saga of *Manas*, the father of the Kyrgyz people, his son Semetey, and his grandson Seytek. The entire poem is about a million lines long is (twice as long as the *Iliad* and the *Odyssey* combined) can take up to three weeks to recite, and went unwritten until the 1920s. Here is a translated example of some of the epic’s verse: “The mighty *Manas* resembles a tower built of silver. His snow-white steed *Ak-Kula* carries him swiftly over the mountain tops. The horse looks like a bird hovering over the sharp peaks of mountains.” In the epic, the 40 Kyrgyz tribes strive for freedom and unity. Under the leadership of *Manas*, the people, who were the slaves of various tribes, are gathered as a nation. *Manas* is believed to be interred at a small mausoleum near the town of *Talas*, in western Kyrgyzstan near the border with Kazakhstan. Throughout the 1990s and into the 2000s, the *Manaschi* (reciters of the *Manas*) have made tours with Central Asian artistic groups all over the world, including many performances in the United States.

#### 5 RELIGION

Horses figured prominently in the traditional spiritual beliefs of the early Kyrgyz. It was believed that a horse carried the spirit of a dead person to a higher spiritual world. Most Kyrgyz today are Sunni Muslims, but many ancient shamanist and animist traditions persist.

Since the 8th century, Islam has been the dominant religion in the Fergana Valley. By the 10th and 11th centuries, the Kyrgyz had built many beautiful mosques and mausoleums in that region. During the 13th and 14th centuries, however, the development of Islam among the Kyrgyz slowed considerably, due to the conquest by the Mongols. Islam extended to the nomads of the northern regions over the next few centuries at first by force, but later through Islamic missionaries. Therefore, Islam did not gain a strong presence among all the Kyrgyz until the 19th century.

The Kyrgyz are generally more secular in daily life than some of the other Islamic peoples of Central Asia. This is probably because the religion was only firmly established in some areas of the country in the last century. Kyrgyzstan also has a large proportion of non-Muslims, and the government is not oriented toward incorporating any religion into the political structure. Outside Islamic influences from the Middle East and South Asia have featured in the creation of some radical Muslim movements in Kyrgyzstan, especially in the Osh and Jalalabad provinces, located in the southern part of Kyrgyzstan—its Fergana valley region. Some of these mainly younger people are part of the Hizb-ut-Tahrir radical international movement. They wish to establish a theocratic government throughout the entire Muslim world. Overall, radical or extremist Islam is not a major threat to Kyrgyz sovereignty at the moment.

#### 6 MAJOR HOLIDAYS

New Year’s Day (January 1) and Christmas (January 7) are official holidays in Kyrgyzstan. Holidays with their origins to the Soviet era include Women’s Holiday (March 8), International Day of Solidarity Among Workers (May 1), and the Day of Victory over Fascism (May 9). The vernal equinox (around March 21) is called *Nooruz* and is an important holiday among the Kyrgyz people as it marks the start of the Muslim new year. *Kurban Ait* (Remembrance Day, June 13) and Independence Day (August 31) are also official Kyrgyzstan holidays. Generally speaking, people do tend to celebrate religious holidays, especially the Muslim days of remembrance more now than during the Soviet period.

#### 7 RITES OF PASSAGE

Kyrgyz rites of passage are similar to those of other Turkic-influenced peoples of Central Asia. Large birthday parties with many friends and relatives are important social occasions, and these feasts often last five or six hours. Celebrations are held for a birth, for a baby’s 40th day of life, for the first day of school, and for graduations. A wedding serves to honor the married couple and assemble together an extended family or clan. In the past, arranged marriages were common, and a dowry payment was expected upon betrothal.

#### 8 INTERPERSONAL RELATIONS

Kyrgyz people typically greet one another with handshakes or hugs if they are women, and then proceed to ask a series

of questions about one another's lives. Male-female relations among the Kyrgyz are far less formal and rigid than, say, among the Uzbeks or Tajiks. Men and women eat together and share many work burdens together. Like many other peoples of Central Asia, the Kyrgyz are very hospitable, although more reserved and low-key than the Uzbeks or Tajiks. If you were invited to have tea in Kyrgyz *yurta*, you would not feel yourself quite the focus of attention as would be true in the case of an Uzbek village home. Kyrgyz often honor their guests by serving them a cooked sheep's head.

## **9 LIVING CONDITIONS**

The traditional Kyrgyz home is a *yurta*—a round, felt-covered structure built upon a collapsible wooden frame. Most Kyrgyz today live in individual permanent homes, but about 40,000 Kyrgyzstani citizens still live in *yurtas*. The arched opening of a *yurta* is called the *tundruk*. The flag of the Republic of Kyrgyzstan features a *tundruk*.

One legacy of the Soviet era is a chronic lack of urban housing in Kyrgyzstan. In the late 1980s, housing space was equivalent to 12 sq m (129 sq ft) per person.

Irregular service with public transportation occurs frequently. In Bishkek, for example, evening bus service is erratic. There are a sufficient number of taxis in the city, but people looking for a ride will often stop a private car and pay the driver because it is cheaper than using a taxi.

Since the mid- to late-1990s, it has become increasingly common to find shanty-town type dwellings in major cities, such as Bishkek and Osh, because poverty has caused many people to take up urban residence in hopes of making a more prosperous life.

## **10 FAMILY LIFE**

Women in Kyrgyz society still perform the bulk of household chores, but there is far more egalitarianism practiced between the sexes among the Kyrgyz than among nearby peoples such as the Uzbeks or Tajiks. The Kyrgyz and Kazaks are very similar in this regard. Women hold all manner of professional jobs and are encouraged to be professionals as well as mothers. Both forms of polygamy are legal in Kyrgyzstan, and the custom is not limited to ethnic Kyrgyz but is practiced by ethnic Russians and other residents in Kyrgyzstan. Polygyny (one man having multiple wives) is most common, and a husband must financially provide each wife with her own separate household as well as provide for all the children each wife bears. In order for a woman to have multiple husbands (polyandry), she must have substantial wealth or influence.

Kyrgyz families are large, with an average of four to six children, although they are slightly smaller in the capital city of Bishkek. In the countryside, it is common for three generations to live together in a patrilocal residence, which means that a married woman moves in with her husband's family). Thus, 10 to 12 people may share a home during the cold months and a yurt when the people go to the *zhailovs* (summer pastures) with their animals in the summer. Genealogical knowledge is very important to the Kyrgyz, and some older people are able to recount their ancestors stretching back as far as seven generations or two centuries.

*A Kyrgyz girl in traditional attire offers tourists snacks near Bishkek, Kyrgyzstan. (AP Images/Xinhua, Wei Zhongjie)*

## **11 CLOTHING**

One of Kyrgyzstan's oldest cities, Osh, was once an important trading point along the historic Silk Roads—the ancient overland trade route of commerce between China and the Middle East. Osh is the center of Kyrgyzstan's silk industry.

Traditional everyday clothes were made of wool, felt, and fur. Ornate silks were, and still are, used for special occasions and ceremonies. Since the Soviet era, cotton denim and other fabrics have become popular for everyday wear. Headgear figures prominently in Kyrgyz culture, although during the Soviet era women were prohibited from wearing their large traditional hats, which were a symbol of Kyrgyz culture. There is also a traditional hat proudly worn by men as a symbol of Kyrgyz culture, the *ak-kalpak* ("white hat"). This is a dome-shaped white felt hat with a black brim, black piping, abstract curved stitching, and a black tassel on top. The basic design of the *ak-kalpak* has been the same for generations.

## **12 FOOD**

Because many Kyrgyz live in areas with little precipitation, the variety of crops grown depends on irrigation from the mountains. Sugar beets and cereal grains are the main crops. Livestock is an important source of food, with sheep, goats, cattle, and horses most common. Pigs, bees, and rabbits are also raised in the uplands.

Examples of traditional Kyrgyz fare include *manti* (mutton dumplings), *irikat* (a type of pasta salad made with noodles, carrots, and radishes), and *koumiss* (fermented mare's milk). A great Kyrgyz delicacy reserved especially for guests is a combination plate of fresh sliced sheep liver and slices of sheep tail fat. It is often boiled and salted and tastes far more delicious than it sounds. At the breakfast table, one often finds bountiful amounts of yogurt, heavy cream, butter, and wonderful honey along with bread and tea. Dairy products are an essential part of Kyrgyz life.

Along with traditional cooking, the Kyrgyz also enjoy Russian, Korean, Ukrainian, German, and Chinese cuisine. The dishes of both local and European cooking dominate the menus in Bishkek's restaurants and cafés.

### 13 EDUCATION

For the most part, Kyrgyz people have poor native language proficiency except in the remote *auls* (villages). Kyrgyzstan has been heavily Russified, and most high school and university instruction is in Russian. Although this is slowly beginning to change, rural Kyrgyz are often ill-equipped to compete at the national level on university entrance exams. The whole educational system requires overhauling. Parents tend to favor a broad educational development for their children, but it is impossible for many parents to send their children to universities and technical schools because education has become privatized and the costs are prohibitively expensive. Today, along with the Kazakhs, more and more Kyrgyz speak competent English than people in any of the other Central Asian countries. This is partly due to American influence and teaching in Kyrgyzstan as well as the people's own desire to add English as a part of their international focus, especially as a means toward increasing one's chances in the professional world.

### 14 CULTURAL HERITAGE

The *kyiak* and *komuz* are traditional musical instruments used by the Kyrgyz. The *kyiak* resembles a violin and is played with a bow but has only two strings. The three-stringed *komuz* is the favorite folk instrument among the Kyrgyz and is played by strumming. The Kyrgyz have several titles of honor that are given to various musical performers. A *jirchiü* is a singer-poet, whereas an *akin* is a professional poet and musician-composer. The *jirchiü* is primarily a performer of known music, while the *akin* is a composer who plays original compositions as well as traditional music. A special performer called a *manaschi* performs the famous saga of *Manas*. There are also several types of Kyrgyz songs, such as *maktoo* (eulogies), *sanat* and *nasiyat* (songs with a moral), and *kordoo* (social protest tunes).

### 15 WORK

Work hours vary depending on the type of business and state institution. As a rule, people work between seven and eight hours a day. Most often work runs from 8:00 am to 5:00 pm, with lunch taken sometime between noon and 2:00 pm. Mills and factories operate on a relay system, with shifts set up by the management. Retail shops are usually open from 7:00 am to 8:00 pm, with an afternoon lunch period. Department stores, book stores, and other shops usually open according to state institution hours. Bazaars are open from 6:00 am until 7:00 or 8:00 pm.

### 16 SPORTS

Equestrian sports are very popular among the Kyrgyz. Racing and wrestling on horseback are especially enjoyed. Wrestling on horseback for a goat's carcass, called *ulak tartysh* or *kok boru*, is a common game among the Kyrgyz. (*Kok boru* means "gray wolf"). The game may have its origin in ancient times, when herds of cattle grazed in the steppes and mountains and were exposed to the threat of attack by wolves. Shepherds would chase after a wolf on horseback and beat it with sticks and whips and then try to snatch the dead carcass away from each other for fun. *Kok boru* was later replaced with *ulak tartysh*, played with a goat's carcass on a field measuring 300 meters by 150 meters (about 328 yards by 164 yards). The opposite ends of the field are the two goals. A goat's carcass, usually weighing 30 to 40 kilograms (66–88 pounds), is placed in the center of the field. Each game lasts 15 minutes, and the object is to seize the goat's carcass while on horseback and get it to the goal of the other team. Players are allowed to pick up the carcass from any place within the limits of the field, take it from opponents, pass or toss it to teammates, carry it on the horse's side, or suspend it between the horse's legs. Players are not allowed to ram other horses, take an opponent's horse by the bridle or remove its reins, whip another's horse, or talk with the opponent.

Falconry (the sport of hunting with trained falcons) while on horseback is another part of Kyrgyz culture that has been practiced for centuries. In addition to falcons, sakers and golden eagles are also trained for the sport. *Jumby atmai* is a game that involves shooting at a target while galloping on horseback. *Tyin enmei* is a contest to pick up coins from the ground while riding at full speed on horseback.

### 17 ENTERTAINMENT AND RECREATION

Bishkek has large parks, public gardens, shady avenues, and botanical gardens enjoyed by people traveling on foot. Opera, ballet, and national folklore groups are also popular forms of entertainment. The most popular form of relaxation for city dwellers is to spend a weekend in a country cottage. Tens of thousands of these cottages are located on the outskirts of Bishkek, the capital. In recent years, Bishkek and other cities have added many taverns, restaurants, and casinos, so city life has become nocturnally raucous, and part of these businesses cater to the tastes of expatriates from China, Europe, and the United States.

### 18 FOLK ART, CRAFTS, AND HOBBIES

The Kyrgyz are best known for crafting utensils, clothes, equipment and other items used in everyday life and making them beautiful. Many articles are made of felt: carpets (*shirdak* and *alakiyiz*), bags for keeping dishes (*alk-kup*), and woven patterned strips of carpet sewn together into bags or rugs (*bashtyk*). Ornate leather dishes called *keter* are also made.

### 19 SOCIAL PROBLEMS

After years of life under the Soviet system of central planning and socialism, the transition to a market-oriented economy is a difficult undertaking for the Kyrgyz. The poor service and uninspired work ethic that were results of the Soviet era will take a long time to change. Alcoholism and public drunkenness are now a visible social problem, partly because of rising

unemployment. Even though Kyrgyzstan was supposed to have developed a large tourism industry, its development has been slow and not very lucrative; getting to Kyrgyzstan remains difficult and expensive.

From 2000–2005, Kyrgyzstan's economy stagnated and allegations of sizable political corruption brought down the government that had been in power since 1991. The much heralded "Tulip Revolution" did little to improve the politics or economics of the country, and since then the population has only become more disgruntled as most people become more impoverished. This has raised crime rate in urban areas and led to a more oppressive political environment than was true of the 1990s. The new government is perceived to be weak in the face of more powerful Central Asian states, such as Kazakhstan and Uzbekistan. Close to one million Kyrgyz now seek at least temporary housing and employment abroad to help bolster their household budgets, and this has led to very trying conditions for many families. With the exception of Kazakhstan, labor migration is the social problem as well as "social solution" story to emerge from contemporary Central Asia.

## **20 GENDER ISSUES**

Along with the Kazakhs, the Kyrgyz long have featured a high degree of gender equity. Many scholars attribute this to their pastoral nomadic heritage. While there naturally is a division of labor between the sexes, many men and women do many things together, such as yurt erection and packing up as well as cooperative milking and food production activities. Men consider women to be their literal fellow travelers (*yoldash*) rather than simply the "wife" or the "mother of their kids." When it comes to education, Kyrgyz girls long have been seen almost as the equal of boys, but again with the exception that boys will be seen favorably to pursue higher education and advanced professional degrees. However, this is definitely not the rule in all families.

Since the early 2000s, gender issues have changed because of the increase in bride kidnapping, which is more and more common among the Kyrgyz, Karakalpaks, and Kazakhs. This relieves pressures on young men to make a bride wealth payment or *qalym*, just as it obviates the need for in-law arrangements in the first place, but it puts young women in a terrible position because they rarely can exercise their own free will once kidnapped. However, divorces often ensue shortly after these unhappy marriages take place. Still, it is a kind of traditional social institution that shows up as one very unfair aspect of gender relations.

Moreover, labor migration is changing the nature of gender relations as many men and women now work abroad to try and increase family wealth. While it provides young women with opportunities and a kind of freedom, it puts great pressure on mothers and wives who sometimes go abroad despite the disapproval they face from other family members, including husbands. Labor migration, generally speaking, puts huge pressure and stress on people willing to take what they consider to be a crucial step in making a better life for themselves and their families.

# LAO

**PRONUNCIATION:** LAH-OO

**LOCATION:** Laos; Thailand

**POPULATION:** About 23 million

**LANGUAGE:** Lao

**RELIGION:** Theravada Buddhism; animism

**RELATED ARTICLES:** Vol. 3: Kammu

## <sup>1</sup> INTRODUCTION

The Lao originated in southern China and moved southward into present-day Laos, forming a kingdom in the Mekong River valley in the 14th century and pushing the earlier inhabitants of the area, the Kammu, into more mountainous areas. After three centuries, however, disputes over succession to the throne and foreign invasions split the country into three rival kingdoms in the north, center, and south. Caught between the growing power of the Siamese and the Vietnamese, the Lao lost power and territory so that most Lao people now live in Thailand (formerly Siam).

Laos was colonized by the French in the 1890s and treated as the hinterland to their colonies in Vietnam. The French preferred to work with the Vietnamese and used many of them as officials in Laos. Laos was unified after World War II and achieved independence within the French Union in 1949 and full independence in 1953. However, regional divisions were replaced by political ones. The Lao were divided into three factions: a right-wing group backed by the United States; Thailand, a neutralist group; and a Communist group backed by Vietnam, the Soviet Union, and China. After a devastating civil war fought with heavy American bombing on behalf of the right, and with Vietnamese troops on behalf of the left, the Communist Pathet Lao (Lao Nation) took control of the country in 1975, abolished the monarchy, and established the Lao People's Democratic Republic (LPDR). In the political, economic, and social upheavals that followed, about 10% of the population fled as refugees, draining the country of skilled and educated people. Although the aging Lao leadership maintains one-party control and continues to assert Communist ideology, it has loosened social and economic controls and now invites foreign investment and tourism.

## <sup>2</sup> LOCATION AND HOMELAND

Laos is a small landlocked country in Southeast Asia bordering on Thailand, Myanmar (Burma), China, Vietnam, and Cambodia. Laos has an area of about 236,800 sq km (91,400 sq mi), roughly the size of Idaho. It runs about 1,126 km (700 mi) from N to S and averages about 240–320 km (150–200 mi) across. The country is extremely mountainous, with only about 4% of the land suitable for farming. Different ethnic groups tend to be located at different altitudes. It has a tropical monsoon climate, and most people engage in subsistence rice agriculture. The Lao (usually referred to as “lowland Lao”) make up two-thirds of the population, or somewhat over 3 million of the population of 4.8 million. They occupy the most desirable land in the river valleys and live clustered along the Mekong River across from northeast Thailand, most of whose people are Lao, and in the southern plateau. The Lao of northeast Thailand, together with Lao groups in northern Thailand, represent one-third

of the whole population of Thailand, or about 20 million people—many times the number of Lao in Laos itself. The Mekong River has always been a cultural bridge, not a barrier. However, the Thai government has tried hard to assimilate the “north-east Thai” (it never uses the term “Lao”) to central Thai culture and language, a process that is occurring rapidly through education, mass media, and greater geographic mobility. Both the Lao and the Thai belong to the Tai linguistic group, have related languages, and share many cultural features. The two cultures have distinctive features, however, and the Thai have tended to consider themselves superior to the Lao.

After the Communists seized power in Laos in 1975, about 360,000 refugees left the country. Refugees were predominantly Lao, but included many Hmong and smaller numbers of other minority groups. Many of the French-speaking elite went to France, but most Lao came to the United States and live scattered across the country, although southern California is a favorite location because of the warmer climate. Canada and Australia also took thousands of Lao refugees, and thousands of others stayed illegally in Thailand, blending in with the Lao population of northeast Thailand.

## <sup>3</sup> LANGUAGE

Lao belongs to the Tai family of languages and is related to Thai, but Lao has its own alphabet and numbers. Many words have Sanskrit and Pali roots, especially terms relating to religion, royalty, and government. Most Lao words have one syllable and the grammar is very easy. However, Lao is difficult for Westerners to speak because it is a tonal language. There are six tones, and words that sound similar to a Western ear may be very different depending on the tone. For example, the word *ma* in mid tone means come; *ma* in a high tone means horse; and *ma* in a rising tone means dog.

Lao is written from left to right, but no space is left between words, only between phrases or sentences. You have to know where one word ends and the next word starts. Vowels can appear before, after, above, or below the consonants they go with, or in various combinations thereof. Relatively few people, probably only just over two million people, can read Lao. While the Lao in Thailand speak Lao, their education is in Thai, so they are literate in that language.

Girls are often given names of flowers or gems, while boys might be given names that suggest strength. However, many have simple names like Daeng (red) or Dam (black), or might be called by nicknames like Ling (monkey). Family names were made compulsory in 1943 but aren't as important as first names. The phone book is alphabetized by first names, and a man named Sitha Sisana would be addressed as Mr. Sitha.

Some common expressions are: *sabai dee* (greeting), *la kon* (goodbye); *khob jai* (thank you); *kin khaw* (eat—literally, eat rice, the most important food); *bo pen nyang* (it doesn't matter, never mind, it's nothing).

## <sup>4</sup> FOLKLORE

A Lao legend explains the origins of the Lao and Kammu, the original inhabitants of the land:

Once upon a time three chiefs settled the earth and began rice farming with their water buffalo. After a few years the water buffalo died, and from his nostrils grew a creeping plant that bore three gourds that grew to enor-

mous size. Hearing a loud noise from inside the gourds, one of the chiefs took a red hot iron and pierced each gourd. Crowds of men came squeezing out of the narrow openings. The chief then used a chisel to carve out new openings for the men. This is the origin of the different people in Laos. The Kammu, a dark skinned people who wore their hair in chignons, came out the holes made with the red hot iron; and the Lao, a lighter skinned people who wore their hair short, came out the openings made by the chisel.

Lao proverbs give us an idea of their cultural attitudes.

To judge an elephant, look at its tail;  
To judge a girl, look at her mother.

If you love your cow, tie it up;  
If you love your child, beat him.  
(In fact, the Lao are very indulgent towards their children, but they like to threaten them with this proverb.)

Flee from the elephant and meet the tiger;  
Flee from the tiger and meet a crocodile.  
(Their version of “out of the frying pan into the fire.”)

When the water level falls, the ants eat the fish;  
When the water level rises, the fish eat the ants.

When the buffalo fight, it is the grass that suffers.

## 5 RELIGION

The first Lao king, Fa Ngum, made Buddhism the state religion in the 14th century, and almost all Lao are Theravada Buddhists. Buddha is regarded as a great teacher—not a god, a creator, or a savior. He taught that suffering is caused by desire, anger, and illusion. Each person is responsible for his own salvation. A person’s karma, the balance of good and bad deeds, will affect this life and future reincarnations.

When the Communists took over in 1975, they did not dare do away with something so central to Lao identity as Buddhism. Rather, they continued state control of the Buddhist hierarchy and tried to manipulate religion for political purposes. Many monks fled as refugees or disobeyed rather than promote government policies. In recent years government controls have eased and there has been a revival of Buddhism. This revival is due not only to changes in government policy but also to the infusion of funds from foreign tourists—primarily Thais who share the Buddhist religion—for the restoration of Buddhist temples.

Animism, a belief in spirits, co-exists with Buddhism for the Lao. Ancestor spirits, the local guardian spirits of each village, are appealed to at the beginning of the agricultural year for successful crops. These spirits should also be informed of major changes in a person’s life—sickness, a move, a marriage.

The Lao believe the body contains 32 spirits, and illness can result if a spirit leaves the body. A *baci* ceremony is held to call the spirits back to the body in order to cure illness, to protect someone about to make a major life change, or to bring health, happiness, and prosperity. A beautifully decorated tray filled with ritual offerings is presented to the spirits. Cotton strings are tied around the wrists of the person who is sick or who is

being honored, and blessings are recited when the strings are tied.

## 6 MAJOR HOLIDAYS

The most important Lao holiday is Songkarn, the Lao New Year, which is celebrated April 13–15. After several months of drought, the first rains of the year begin in April, bringing the start of the agricultural year. Water is poured over Buddha images and elders as a blessing. After this is done very decorously, Songkarn turns into one big water fight, with water splashed on everyone in sight. Since the temperature is over 32°C (90°F) at that time of year, the water feels good. People try to return to their home villages for Songkarn to visit friends and relatives and to join in the fun.

The Rocket Festival is a popular traditional Lao holiday, although not an official holiday. It is celebrated on Wisakha Bucha, the day celebrating the birth, enlightenment, and death of Buddha; but the Rocket Festival is based on a fertility rite that predates Buddhism in the area. Village men build bamboo rockets packed with gunpowder, and villages compete to see whose rocket can fly the highest. The men hold boat races on the rivers, and the village women hold folk dance contests. This holiday is based on a lunar calendar and falls sometime in May.

Independence Day on July 19 celebrates the granting of autonomy, or independence, within the French Union in 1949.

National Day on December 2 celebrates the proclamation of the Lao People’s Democratic Republic in 1975, a one-party Communist state.

*Lao women pray at Pha That Luang during the Wai Thatluang festival in Vientiane, Laos. Hundred of thousands of Laotians visit Vientiane to pay homage to a Buddha relic they believe is kept inside a pagoda. (AP Images/David Longstreath)*

The That Luang Festival occurs on the day of the full moon in the twelfth lunar month and celebrates the most sacred Buddhist monument in Laos.

## **7 RITES OF PASSAGE**

The main rite of passage for a Lao man is ordination as a Buddhist monk. In the past most Lao men spent at least one three-month period of Buddhist Lent as a monk, learning about religion, chanting Pali texts, and practicing self-control and meditation. The man to be ordained reenacts the life of Prince Gautama, who renounced the world and became Buddha, the Enlightened One. He is dressed in finery and escorted with pomp to the monastery, where his head and eyebrows are shaved. Then, he changes into a simple robe, renounces the world, and takes his vows as a monk. There is no set period for ordination, so a monk can disrobe and return to lay life at any time. Fewer men become ordained today and often for shorter periods, but it is believed that a man gains maturity by doing so, and women consider it desirable for a male. There is no ordination for women.

## **8 INTERPERSONAL RELATIONS**

The Lao tend to be warm, personable, friendly, and have a nice sense of humor. They enjoy having people around and are quick to invite people to share a meal or sit and talk for a bit. They try to avoid confrontation and appreciate a person with self-control.

It is considered improper for men and women to touch in public. However, if men hold hands with each other or women

hold hands with other women, it is considered friendly, and there are no sexual connotations.

In the past both the spoken language and body language showed relative social position, with the inferior person bowing to the superior person, but the Communist government insisted on more egalitarian relations, at least overtly. Still, a Buddhist will prostrate himself and bow his head to the floor three times in front of a Buddha image or a monk as a sign of respect.

## **9 LIVING CONDITIONS**

Laos is one of the poorest countries in the world with an estimated per capita income in 1996 of \$325, or the equivalent United States purchasing power of \$2,071 per person. The population is overwhelmingly rural with 85% depending on agriculture, mostly subsistence rice cultivation. The Lao are largely engaged in wet rice agriculture, depending on seasonal rains to flood their fields.

Water buffalo are used to plow, and agricultural practices have changed little over the centuries. Mechanization in the form of water pumps and small tractors is just beginning.

Rural homes are built on stilts to avoid flooding. They are made of wood or bamboo, often with walls of bamboo matting and roofs of thatch or corrugated tin. Lao houses generally have little or no furniture. One sits and eats on the floor and sleeps on a mat on the floor. Village houses are built close together, and farmers walk to their fields outside the village. There are no secrets in a small village, and gossip is a potent weapon to keep people in line.

Villages rarely have electricity or running water. Laos has great potential for hydroelectric power and currently exports electricity to Thailand. But the Lao buy electricity back from the Thai for their cities across the Mekong River from north-east Thailand, as Laos has no national power grid.

There are few roads, and some of these are impassable quagmires in the rainy season. Much transportation is by boat along the rivers. Ox carts are still common.

Health facilities are limited. Malaria, dysentery, malnutrition, and parasites are major problems. In Laos there is one doctor for every 23,000 people (compared to one per every 3,000 people in Vietnam and one per every 300 people in the United States). Life expectancy is about 50 for men and 53 for women in the country. The Lao undoubtedly do better than minority populations, as they are more likely to live in or near the cities or along transportation routes, and they continue to favor themselves at the expense of minorities. In addition, the construction of a bridge across the Mekong, linking the Lao capital Vientiane to the northeastern Thai city of Nongkhai, gives urban Lao access to the Thai medical system, which is decidedly superior to Laos.

## 10 FAMILY LIFE

Lao families are close and children are welcome. The LPDR government had banned birth control devices until fairly recently, but few people have access to birth control services. Women have many children but there is high infant and child mortality.

There is no dating, but groups of young men in the village go from house to house in the evening to call on families with young women and engage in banter with them and their parents. Traditionally, the young man is expected to pay a bride-price and move in with the wife's family on marriage. When the next daughter marries, the couple might set up housekeeping on their own with help from the wife's parents. Ultimately, the youngest daughter is left to take care of the parents and inherit the family home and remaining farm plot.

Women are responsible for much heavy work—hauling water for the household and pounding the rice in big mortars of hollowed out logs to husk it where rice mills aren't available. The men plow and deal with draft animals, while women tend to be responsible for pigs and poultry and vegetable gardens. The animals usually live under the house. Everyone, including the children, helps with transplanting and harvesting rice.

Children rarely have toys but enjoy catching fish, frogs, insects, etc., to supplement the family diet. Boys are skillful with slingshots and blowguns in bagging small birds. Young girls help with child care and often carry a younger sibling astride a hip while they play with their friends.

## 11 CLOTHING

When the Communist government came to power in 1975, it tried to ban blue jeans, calling them bourgeois Western decadence. It even tried to do away with the *sin*, the traditional sarong-like women's lower garment, but the government soon had to back down. The *sin* is a very practical garment—one size fits all. It is a tube of cloth folded with a pleat to fit the waist and secured with a belt or a tuck in the waist. Worn above the breasts, it makes a modest garment for bathing in public at the stream or well, necessary as few village homes have bathrooms. A dry garment is slipped over the wet garment that is

then dropped without any loss of modesty. Lao women continue to wear the *sin*, sometimes adapted into a skirt, with a blouse. On special occasions women wear handwoven silk *sin* with beautiful tie-dyed patterns and a colorful woven and embroidered strip added to the hem.

Lao men wear shirt and pants, but bathe and relax around the house in a *phakhawma*, a length of cloth about 1.8 m (6 ft) long and 76 cm (30 in) wide that can be worn as a skirt-like garment or wrapped into shorts. Little children often go naked or wear only a shirt. It is common for people to go barefoot or wear rubber sandals. In the cities, of course, Western dress is common.

## 12 FOOD

The Lao love to eat. Their staple food is sticky rice, also known as glutinous rice or sweet rice. The rice must be soaked for several hours before being steamed in a basket over a pot of boiling water. It is then put in another basket that serves as a serving dish or lunch pail. Sticky rice is eaten with the fingers, so one doesn't need dishes or silverware. One takes a bit of rice from the basket and shapes it into a small ball and dips it into the serving dish for whatever other food is offered, most likely a hot sauce of chilies, garlic, fish sauce, and lime. The Lao have two categories of food—rice and “with rice.” Foods other than rice are limited and serve more as condiments, something to add flavor, so they tend to be very hot or very salty so that one will eat a lot of rice with them.

Dried salty beef is a favorite dish if meat is available. Beef is sliced thin and liberally doused with fish sauce (a salty liquid made from salt and fish) or salt and placed on a tray to dry in the sun to preserve it. You can deep-fry the meat to cook it and drive out most of the moisture. If the meat is very, very salty, you can eat a lot of sticky rice with it.

Papaya salad is a common dish. Shred a green papaya (lacking that, shredded cabbage or rutabaga, sliced green beans, or grated carrots can substitute). Pound two or three cloves of garlic with two or three fresh, small, hot Thai chilies in a mortar. Gradually add about 3 cups of shredded vegetables and a few cherry tomatoes and pound together. Add fresh lime and fish sauce (or salt) to taste and a teaspoon of sugar. Lao salad is hot, sour, salty, and sweet all at once. Serve with lots of sticky rice.

## 13 EDUCATION

Literacy in Laos is estimated at 45%. The Lao are much more likely to be literate than minority peoples, and men are more likely to be literate than women. The LPDR government is the first to make a serious effort to extend education beyond the Lao areas to minorities. However, with the loss of about 90% of its most educated population as refugees, education has perhaps been set back a generation, and already low standards have declined further. Universal primary education has been declared a goal by several leaders but remains elusive. Many village schools have only one or two grades and little in the way of books, paper, or school supplies. Teachers are paid little and often infrequently, so they often have to farm or hold a second job to support their families. School sessions, therefore, tend to be sporadic.

There are five years of primary school, but probably only half of primary school children finish fifth grade. This is followed by three years of lower secondary school and three years

of upper secondary school. Secondary schools are few in number and located in cities and provincial capitals. One must pass a test to enter secondary school. School uniforms and supplies are too expensive, the distance to schools too great, and village education too rudimentary for many village children to continue their education. There are a few colleges and technical institutes in Vientiane, the capital.

In the early days of the LPDR, teenagers from “bad” family backgrounds, as defined by the Communists (children of officials from the old regime or of shopkeepers), were often denied entrance to secondary education. Some teens fled the country on their own, risking shooting or drowning as they swam the Mekong River to Thailand. They were hoping to be resettled abroad and have a chance to continue their education.

Private schools have been allowed and are preferred to public schools by parents who can afford school fees. Lack of financial resources and trained teachers remains a problem for Laos. The government has cobbled together a basic university system—the National University of Laos—formed by consolidating teacher training colleges. This university has attracted foreign assistance and attempts to keep pace with Laos’s economic reform program. Because of its proximity to Laos and the linguistic similarities, Thailand is a popular venue for overseas study, along with Vietnam, which has provided scholarships for Lao students since 1975.

#### 14 CULTURAL HERITAGE

The most distinctive Lao instrument is the *khaen*. According to a popular saying, those who eat sticky rice, live in dwellings mounted on piles, and listen to the music of the *khaen* are Lao. The *khaen* is a collection of bamboo pipes of different lengths, each with a small hole for fingering and a metal reed, preferably of silver, all attached to a mouthpiece. There are 6-hole, 14-hole, and 16-hole instruments. A *khaen* musician accompanies a *mohlam* performance, a traditional Lao entertainment that usually involves two singers, a man and a woman, and offers courting poetry, suggestive repartee, and dance. The songs and poetry represent oral literature passed on to performers by their teachers. Relatively few have been written down. Ability to add witty and rhyming repartee on the spot is valued. Males and females never touch in Lao dance.

A great work of Lao literature is *Sin Xay*, an epic poem. Sin Xay (he who triumphs through his merits), the hero, is rejected by his father, the king. He sets out to rescue his aunt, the beautiful Sumontha, from a giant who has carried her off. After many trials and combat with giants, demons, monstrous beasts, and magical beings, plus treacherous attacks by six half-brothers, Sin Xay rescues his aunt and reunites her with her brother, Sin Xay’s father. The king regrets his previous rejection of Sin Xay and now recognizes his nobility of character.

#### 15 WORK

The vast majority of people are engaged in agriculture, especially subsistence rice farming on small family plots. Children help with farm chores from an early age, and most are engaged full-time in farming after leaving primary school. There is little industry. With the New Economic Mechanism, a loosening of controls by the LPDR government, some people have gone into business and there is increasing interest in developing tourism and handicraft. Major foreign investment in Laos—in mining and hydroelectric power—does not lend itself to wide-

spread job creation. The Lao predominate in the government bureaucracy.

#### 16 SPORTS

Few Lao have time for sports, but those that do enjoy soccer, volleyball, and *takraw*, a Southeast Asian sport that involves keeping a rattan ball in the air without touching it with the hands. The feet and head are used as in soccer. Nevertheless, with its increasing participation in the international community, Laos aspires to participate in international and regional sporting competitions and receives some assistance from neighboring countries for this purpose.

#### 17 ENTERTAINMENT AND RECREATION

The biggest entertainment for the Lao in Laos, especially in the cities, is tuning in to Thai radio and television stations from across the Mekong River. However, with the advent of Star TV, which is relatively inexpensive, many urban Lao have access to television programs beyond the region. Even some Buddhist temples in Vientiane have satellite dishes on their rooftops. The Lao government worries that Lao language and culture is being corrupted by the popularity of these programs and that youth are learning the wrong values from the commercialism of Thailand. Mass media in Laos are under tight Communist party control and tend toward heavy-handed propaganda. They have nowhere near the influence of Thai mass media on the Lao. In Thailand itself, mass media are spreading Thai language and culture to Lao-speaking areas.

#### 18 FOLK ART, CRAFTS, AND HOBBIES

The Lao are becoming increasingly better known for their exquisite hand-woven textiles in cotton and silk with intricate tie-dyed designs. Basketry is another Lao specialty.

#### 19 SOCIAL PROBLEMS

Discrimination by the Lao against the minority groups that make up one-third of the population of Laos remains a problem. In Thailand, on the other hand, the central Thai feel superior to the Lao of the Northeast. Human rights are an issue as the LPDR government will not tolerate criticism of the one-party Communist control. Disaffection is widespread with the aging ideologues who hold power and an increasingly corrupt bureaucracy and military. The youth seem particularly disaffected and attracted to the alternate vision of society offered by Thai television. Even the Communist leadership of Laos is now calling for a return to Buddhist values, and leaders of the early Communist regime that took power after 1975 are often cremated in high-profile Buddhist ceremonies. Poverty and lack of health and education will continue to hamper development and make life difficult, especially in the rural areas.

Although the Lao monarchy was abolished, the government is increasingly aware that it lingers on as a social institution, albeit a lost one. Many urban Lao express admiration for the Thai monarchy and visits by members of the Thai royal family—especially the king—draw a great deal of attention. To counter this, the government has attempted to revive interest in Laos’s ancient monarchs—particularly the kings of the Lan Xuan era—with new monuments and celebrations.

## 20 GENDER ISSUES

The Lao constitution forbids discrimination on the basis of gender, but social dynamics and tradition, particularly in some of the poorer ethnic groups, often place women at a disadvantage. Although rape meets with strong disapproval from both society and the law, spousal battery is widespread. Nevertheless, Laos has a higher proportion of women in positions of authority—in government, education, and commerce—than in neighboring Vietnam or Cambodia. Several factors may account for this. Laos is highly donor-dependent, and Western aid agencies tend to emphasize income generation and leadership training for women. In addition, women tend to dominate handicraft and textile production, which attract foreign investment and the tourist trade, giving them an advantage in the commercial sector.

On the other side of the coin, Laos is increasingly plagued by trafficking of women, particularly into Thailand. The eradication of opium production has left some areas with resulting deficits in income and the short-term response has been to sell or otherwise push women into prostitution. In addition, the influx of foreign business—particularly Chinese investment—and new infrastructure projects (especially new transnational roads) have unfortunately provided new markets for trafficking.

## 1 INTRODUCTION

Lebanon is a small country on the east coast of the Mediterranean Sea. Throughout its history, Lebanon has been the stage for conflicts between city-states, world powers, and local tribespeople. Located in what is known as the Fertile Crescent (a curved band of green, fertile lands along the eastern Mediterranean coast, bordered by the Arabian and African deserts) and at the juncture of three continents—Africa, Asia, and Europe—Lebanon is a valuable and highly desired territory.

Historically, Lebanon has been known as the home of the Phoenicians. The Phoenicians were Semitic traders whose maritime culture flourished in the Fertile Crescent for more than 2,000 years (c.2700–450 BC). Lebanon's mountains also served as a refuge for Christians during the early years of Christianity. During the Crusades, Christian warriors established strongholds in the mountains. One area, known as Mount Lebanon, continued to be a Maronite Christian enclave within the Ottoman Empire, which ruled much of the Middle East from the 16th century until the end of World War I.

After World War I, Britain and France divided the Middle East between them. Mount Lebanon and several surrounding areas became known as Greater Lebanon and was organized as a French protectorate. The rest of the Fertile Crescent became known as Syria and fell under British control. Although Lebanon became a republic in 1926, French troops remained in the country until 1946. At the time, Christians made up a slight majority of the population, but other religious groups also had a strong presence. In an effort to make sure that all of the major religious groups had representation, a power-sharing arrangement was established for the Lebanese government. The president was to be a Maronite Christian, the prime minister a Sunni Muslim, and the president of parliament a Shia Muslim. All religious groups were to receive representation in the National Assembly according to their numbers. In many ways, this power-sharing arrangement created the tensions that culminated in the long and brutal civil war that Lebanon endured from 1975 to 1990.

Tensions between religious groups began in 1932 when Christians refused to acknowledge the results of a census that showed Christians holding a majority but significant numbers of Muslim Lebanese. Then, Palestinians who were pushed out of present-day Israel with the formation of the Jewish state in 1948 began settling in Lebanon. By 1967, more than 500,000 Palestinians lived in the country. Many Muslim and Christian Lebanese protested the arrival of Palestinians and accused Israel of trying to displace the native Lebanese populations with Palestinians who had long lived in Israel.

Civil war erupted in 1975, and Syrian troops entered Lebanon in 1976, largely to protect Christian interests. A cease-fire that year maintained partial peace until 1982, when Israel invaded Lebanon and occupied the area south of Beirut. During

a siege of Beirut, a multinational peacekeeping force (MNF) evacuated members of the Palestine Liberation Organization (PLO) from the city. The MNF remained in Lebanon until 1984. Then, civil war broke out again, and continued until 1990. Elections were put on hold, although a Maronite leader, Michel Aoun, took control of the government in 1988 and dissolved the parliament. Muslim groups aligned against Aoun, defeated his troops in 1990, and forced him into exile in Paris, where he remained until 2005.

Aoun's departure from Lebanon allowed for a peace treaty to be signed. The Taif Accord reorganized Lebanon's government so that representation in the parliament was divided equally between Christians and Muslims. It also left intact the dictate that the president of Lebanon be a Maronite Christian, the prime minister a Sunni Muslim, and the speaker of parliament a Shi'ah Muslim. Fighting ceased in 1990. At that point, it was estimated that 100,000 Lebanese had been killed, 100,000 were permanently maimed, and nearly 1 million had been forced to leave their homes to settle abroad.

Efforts to rebuild Lebanon's economy and restore political stability to the country have preoccupied the country through the 1990s and the early years of the 21st century. Syria formally withdrew its troops in 2005 and Israel pulled out in 2006. Lebanon, however, remains vulnerable to attack from both countries, as of 2008. It also has been a target of violence by militant groups fighting for Palestinian rights.

## <sup>2</sup> LOCATION AND HOMELAND

Lebanon is a tiny country, with an area of only a little more than 10,400 sq km (4,000 sq mi)—about the size of the state of Connecticut. It lies on the east coast of the Mediterranean Sea, north of Israel, south of Turkey, south and west of Syria, and southeast of Cyprus. Although it is only about 200 km (124 mi) from north to south and averages only 50 km (30 mi) east to west, Lebanon has two mountain ranges (Mount Lebanon and Anti-Lebanon), a coastal strip, an inland plain, dozens of rivers (the two major ones being the al-Assi and the al-Litani), and four lakes. Lebanon was famous in previous times for its cedars, but due to centuries of cutting and herds of goats eating the seedlings, less than 5% of its land contains the trees. Those that remain are now protected.

The rainy season lasts from mid-November through March, with very heavy rains at times causing flooding due to poor drainage. Summers on the coast are hot and humid; the mountains are somewhat cooler and breezier. Plant and animal life is quite varied because of the diverse terrain. Because Lebanon is located at the juncture of Europe, Asia, and Africa, it is home to species from all three zones. The most important cultivated crops are citrus fruits, apples, grapes, potatoes, sugar cane, tomatoes, wheat, vegetables, tobacco, oats, and olives. The biggest cash crop in the Beqa'a valley is hashish, which is illegal.

The human population of Lebanon is as varied as its terrain. So many different peoples have lived in and traveled through the land of Lebanon over its turbulent history that the current population contains quite a mix of cultures. In 2008, the population of Lebanon was just under 4 million. Most Lebanese (95%) are Arab, and about 58% of the population consists of Muslims of various sects. The rest are Christian, also of various sects. The vast majority (85%) of Lebanese are urban dwellers, with about one-third of the population living in the Beirut area. Beirut has a population of approximately 1.5 million. The three next largest cities are Tripoli (population 210,000), Zahle (60,000), and Sidon (50,000). The Bekaa Valley still contains many rural villages.

## <sup>3</sup> LANGUAGE

The first language spoken in the area that is now Lebanon was Canaanite. Since then, the common languages have been, in succession, Aramaic, Greek, Latin, Arabic, and French during the French mandate years. Upon independence, Arabic became the official language, but many Lebanese also speak English, and some still consider French to be the more "sophisticated" language. Armenians who live in Lebanon speak Arabic as well as Armenian and Turkish. It is not uncommon for Lebanese to speak three or more languages fluently.

"Hello" in Arabic is "*marhaba*" or "*ahlan*," to which one replies, "*marhabtayn*" or "*ahlayn*." Other common greetings are "*As-salam alaykum*" ("Peace be with you"), with the reply of "*Walaykum as-salam*" ("and to you peace"). "*Ma'assalama*" means "Goodbye." "Thank you" is "*Shukran*," and "You're welcome" is "*Afwan*." "Yes" is "*na'am*" and "no" is "*la'a*." The numbers one to ten in Arabic are: *wahad*, *itnin*, *talata*, *arba'a*, *khamsa*, *sitta*, *saba'a*, *tamania*, *tisa'a*, and *ashara*.

## <sup>4</sup> FOLKLORE

One of the most popular characters in Arab folklore is Jeha the Fool, who figures in many stories, from teaching tales to purely humorous anecdotes. Also popular are the real-life lovers,

Ablah and Antar. Antar was a 6th century Arab who was born a slave but became a heroic warrior. He was also a poet (poetry is considered the highest art in Arab culture). Antar fell in love with Ablah, the daughter of the chief, and she fell in love with him; but, of course, a slave could not marry the chief's daughter. Eventually, after many tragic and star-crossed struggles, Antar was given his freedom, and he and Ablah married.

Other Lebanese folktales that Westerners usually do not associate with Lebanon are the story of the Greek hero Adonis and the Christian legend of Saint George and the Dragon. In Greek mythology, Adonis was a handsome young man loved by Aphrodite, the goddess of love and beauty. Adonis was later killed by a wild boar. The story of Adonis takes place at Byblos, in Lebanon. Also Saint George, who later became the patron saint of England, lived in Lebanon and fought the famous sea-dragon at the mouth of a river near Beirut. Most likely, the Christian Crusaders brought Saint George's tale back with them to the West.

The Lebanese are very fond of proverbs and can quote one for almost any situation. Proverbs usually teach a lesson or give a nugget of wisdom in just a few words, such as, "Better blind eyes than a closed mind," and "The one who took the donkey up to the roof should be the one who brings it down."

## 5 RELIGION

The original inhabitants of the land now called Lebanon were worshippers of the fertility goddess known as Asherah, Astarte, or Anat. Christianity arrived during the Byzantine Roman era (AD 4–636), and its followers in Lebanon have since become divided into a variety of sects including Maronite, Roman Catholic, Greek Catholic, Greek Orthodox, Armenian Catholic, Armenian Orthodox, and Protestant. The Islamic revolution of the 7th century ad took hold in the land of Lebanon as in other Arab countries. Muslims are now divided into Sunnis, several types of Shi'ites (including Ismaeli), and Sufis (Muslim mystics). Other religious sects in Lebanon include the Alawis and Druze, as well as the Baha'is. A total of 17 religious sects are recognized in Lebanon today.

The Lebanese government practices a system called "confessionalism" in which it keeps a record of every citizen's religious affiliation. A person may belong to any religion, but each person *must* belong to one. No Lebanese can be religiously unaffiliated. As of 2008, about six out of 10 Lebanese were Muslim, and about three out of 10 were Christian. Because seats in the government are based on religious representation, the number of followers each faith commands is of significance. When the 1932 census was taken, Christians were in the majority, so they were given greater representation (and, therefore, authority) in the government. Now that it is becoming apparent that Muslims are the majority, they are demanding more representation. In 1995, Lebanon conducted its first census in more than 20 years.

## 6 MAJOR HOLIDAYS

The Lebanese love a good party, so they all celebrate all of the holy days—both Christian (including Greek Orthodox who have different dates for the festivals than other Christians) and Muslim—plus a couple of secular public holidays. Islam uses a lunar calendar, so Muslim holidays occur on a different date of the Gregorian calendar each year. The major Muslim holidays are *Ramadan*, the ninth month of the Muslim year, dur-

ing which Muhammad received his first revelations, celebrated by complete fasting from dawn until dusk each day of the entire month; *Ayd Al-Fitr*, the end of Ramadan, a three-day festival; *Ayd Al-Adha*, a feast at the end of the *Hadj* (the pilgrimage month to Mecca); the First of *Muharram*, the Muslim New Year; *Ashura*, a Shi'ite commemoration and day of mourning; and the prophet Muhammad's birthday.

The Christian holiday of Easter is also movable. Being calculated on a lunar basis, it always occurs sometime during March or early April. Two Easters are celebrated in Lebanon: the Greek Orthodox date and the date for the rest of the Christian population. Other Christian holidays are: New Year's Day (January 1); St. Maroun's Day (the patron saint of Maronite Christians, February 9); the Day of the Ascension (May 15); the Feast of the Assumption (August 15); and Christmas and Boxing Day (December 25 and 26). Three secular public holidays in Lebanon are: Labor Day (May 1); Martyr's Day, which honors patriots killed by the Turks during World War I (May 6); and Independence Day (November 22).

The Christian New Year's Day (January 1) is celebrated in Beirut by shooting tracer bullets out over the Mediterranean Sea. Since tracer bullets are multicolored, they look like fireworks but are much louder. It is also customary to go "strolling" along the coast road in one's car after midnight on New Year's. Such "strolling" is a Lebanese tradition for almost any festival.

Both Muslim and Christian children play a game with colored (hard-boiled) eggs at Easter time. One child taps the tip of his or her egg against the tip of another child's egg. One shell will crack; the other will not. The child whose egg stays intact while cracking everyone else's eggs wins the game. The children then eat their eggs. On Lebanese television, films that re-enact the crucifixion and resurrection of Jesus are played throughout Easter weekend, interspersed with live coverage (by satellite) of the Pope's festivities in Rome.

## 7 RITES OF PASSAGE

Most Lebanese mark major life events, such as birth, marriage, and death, within the Islamic or Christian religious traditions. Regardless of religion, Lebanese parents celebrate the birth of a child by cooking *meghli* (a spiced rice pudding, topped with nuts and coconut). The family serves the sweet dish to visitors who come to the household to congratulate the family. At birth, it is common to bring gifts of clothing and gold for the new baby. Boys born to Muslim and Druze families are circumcised at the hospital just after the birth. Christian babies are dressed in white and baptized. A major event for a Christian child (usually before age nine) is First Communion.

Lebanese in cities typically date, but families in rural areas continue to arrange marriages. Lebanese men place a great deal of importance on being financially independent and often wait until their late twenties or early thirties to marry. Women, however, marry in their early twenties. Christian weddings generally take place in churches and Muslims are wed before a cleric and two witnesses. Lebanese of all faiths celebrate weddings with a first dance between the bride and groom, a belly dancing performance, and a dinner buffet. The bride and groom, however, cut the wedding cake and have a toast before the meal.

Funeral rituals for the deceased vary by religion. Muslims typically bury the deceased before sunset on the day that the

person has died. Christians often wait several days. Followers of both religions set aside the fortieth day after the death for prayer and an offering of condolences to the family of the deceased.

## 8 INTERPERSONAL RELATIONS

Most Lebanese people are very hospitable, generous, and polite, although Arab politeness sometimes means saying what one thinks the other person wants to hear. Most Lebanese will greet each other with handshakes and will inquire about a person's family and health. Formal titles, such as "Dr." or "professor" are used when appropriate.

The Lebanese lifestyle is relaxed, but by no means lazy. The Lebanese are typically entrepreneurs; men and women have a "get ahead" attitude and lots of ambition to go with it. Opinions are strongly held and fiercely defended with vigorous gestures in heated discussions. At the market, the same vigor is used to haggle prices, something the average Lebanese is quite good at. The same attitude prevails on the road, where there are few (if any) traffic signals or stop signs, and drivers simply "get ahead" as they need to. Fortunately, the Lebanese do not generally drive at high speeds, so few accidents occur. Pedestrians also cross the road whenever and wherever they choose, leaving it to drivers to stop for them.

Traditional Arab hospitality reigns in Lebanon, where hosts provide feasts for their guests and then smoke the *nargile* after dinner. The *nargile* is a pipe in which Persian tobacco called *tumbak* is filtered through water before being inhaled, like a hookah or "hubble-bubble" pipe. Smoking from a *nargile* varies as a fad, but smoking in general remains a strong constant. Visits are not planned in advance but rather happen spontaneously, usually between the hours of 4:00 and 8:00 pm. An Arab will never ask personal questions, as that is considered rude. However, exactly what is considered personal in Lebanese culture varies somewhat from in Western culture. For example, asking how much rent someone pays is not normally considered a personal question but asking about a marital dispute is. A person is expected to say what he or she wishes without being asked. Lebanese are very affectionate with friends and family, touching each other often, holding hands, and men even kiss each other on the cheeks.

## 9 LIVING CONDITIONS

Lebanon has been rebuilding its economic infrastructure by borrowing heavily from banks. The rebuilding effort has drawn many Lebanese to cities such as Beirut, Tripoli, and Sidon, where educational and employment opportunities abound. Most of those who live in cities reside in apartments in concrete buildings. Free standing houses are rare. Electricity remains unreliable, and water often is scarce. Many families have access to water for only a few hours per day, so they pump enough for their daily needs into rooftop storage tanks. Although most Lebanese have migrated to cities, the people remain proud of their village heritage. Some families still own a dwelling in their ancestral village and will use it for vacationing and other activities. Rural homes generally are much larger than the urban apartments, with rooms for hosting guests, living areas, and bedrooms.

Even though Lebanon is covered by an extensive system of roadways, most of which are in fair condition, traffic is highly congested in major cities and along popular travel routes

(such as the coast road or roads heading to mountain resorts on weekends). Buses and taxis are the primary means of public transport. Lebanon's rail system became unusable during the war and still has not been rebuilt.

Health care in Lebanon is modern and fairly accessible. Although public facilities exist, those who can afford to pay for higher quality care in private clinics generally do so. Malaria is prevalent but native Lebanese have generally built up a resistance to it, so it is not a serious problem for them; only visitors have difficulty with it. In addition, water shortages often mean that not all water is drinkable. As a result, most families have two water systems. One contains water that has been chlorinated and is safe to drink, and the other contains untreated water. The average life expectancy for Lebanese men is 71 years, which has increased from 65 years in the mid-1990s; for Lebanese women, the average life expectancy is 76 years, compared with 70 years in the mid-1990s.

## 10 FAMILY LIFE

Strong family ties are the rule in Lebanon. Most businesses are family-owned and run, and the revenue sent back by family members working abroad has kept the Lebanese economy afloat during the difficult war years. That revenue reached \$5.5 billion in 2007 and has increased steadily each year, according to the World Bank. City dwellers in Lebanon have a fairly Western lifestyle, although with a very high cost of living. Most city families are small, averaging two children each. Children are cherished in Arab families and are treated well. Most children live with their parents until they get married, and it is not unusual for more than one generation to live in the same household. Cousins are considered to be as close as brothers and sisters, and children grow up understanding that if they do not show respect for their elders, they will be disciplined.

Mothers play an important role in caring for home and family. Although many women work outside of the home, that work often is done out of necessity rather than choice. Lebanon also contains many class distinctions, which limit opportunities for advancement to the wealthier. In the past, Maronite Christians were the most privileged class, but other Christian and Muslim groups have gained more economic power and social status in recent years.

Rural families generally live on small family farms and have many more children—usually between 10 and 15—to provide help with the farm work. Farmhouses are made of stone or concrete with tile floors, have only a few necessary pieces of furniture and use a small wood-burning or kerosene stove for heat in the winter. Most rural houses have running water. The social center of rural life is the *foorn*, the village bakery where the women bake their loaves of bread. Women on the farms have a very busy life; they do all the cooking, cleaning, and laundry (in old-fashioned washtubs, with no electric dryers), plus they work in the fields when needed. Men work in the fields.

## 11 CLOTHING

Western-style fashions are popular in Lebanon's cities. Urban women are very fashion-conscious and want to wear the latest styles from the West. More traditional clothes are still worn in some villages. Women wear long dresses for and men wear black pants and jackets. Men's pants are full and baggy from the waist to the knee and tightly fitted from the knee to the

ankle. Their jackets have fancy, brightly colored, embroidered trim. Traditionally, Lebanese men wore a short, rounded, cone-shaped brown felt hat, which some older rural men continue to wear. Most modern Lebanese men, however, have traded it in for a *keffiyah*, the common Arab headscarf.

## 12 FOOD

Lunch is the big meal in Lebanon, and almost everything is eaten with bread. Two types of unleavened Lebanese bread are *khub*, which resembles pita bread, and *marqouq*, which is paper thin. Lebanese do not eat fish and dairy in the same meal, and restaurants do not serve sweets. The usual dessert in a Lebanese restaurant is *fawakeh*, a huge bowl of whatever fresh fruit is in season. *Mezze* are widespread in the Middle East, including Lebanon; the closest Western equivalent is appetizers, though this hardly does them justice. Often a whole meal is made of *mezze*, which really just means any food served in small portions. Dinners are not served in set courses as in the West, but rather are put out all at once on the table for people to pick and choose from as they wish. *Kibbeh* (or *kibbe*) is the “national dish” of Lebanon—a concoction made of either lamb or beef and cracked wheat (bulghur, or *birghol*), of which there are as many variations as there are Lebanese cooks.

Lebanese pantries generally stock allspice, anise, Arabic coffee, cracked wheat, chickpeas, cinnamon, cloves, coriander, cumin, various dried beans, grape leaves (which are served stuffed with various things, such as rice or meat), *laban* (homemade yogurt), lentils, mint, nutmeg, olive oil, orange blossom water, oregano, parsley, pine nuts, pistachios, ghee (clarified butter), rice, rose water, sesame seeds, and tahini (sesame paste). These are the most common ingredients in Lebanese cooking.

Wine has been made in Lebanon for thousands of years. A unique Lebanese alcoholic creation is *arak*, a colorless, 100%-alcohol beverage flavored with anise. (Anise seed is used quite a bit in Lebanese cooking; it has a licorice-like flavor.) *Arak* turns white when diluted with water, which is how it is served; the Lebanese call it “lion’s milk.” The other popular beverages are coffee served very thick, tea with lots of sugar and no milk, and local spring water from the mountains, which the Lebanese drink from special spouted decanters (pouring it into their mouths from a short distance away—a skill which must be developed).

## 13 EDUCATION

Lebanon’s educational system is still undergoing reconstruction following the civil war. Education is highly valued in Lebanon, so parents send their children to private schools when they can afford to do so. Schools usually teach a combination of Lebanese, French, and U.S. curricula, and all children are required to attend at least eight years of school. Lebanon’s literacy rate was 87.4% in 2003, a significant improvement from 75% in the mid-1990s. Children are strongly encouraged to prepare for college, and Lebanon has six major universities and several technical institutions.

## 14 CULTURAL HERITAGE

Lebanon was known as a center for Arabic culture before the civil war. The country is slowly regaining that reputation. Each year, international artists gather at the Baalbek International

Festival (popularized by the Lebanese superstar Fairuz), at the ruins of Roman temples in the Bekaa Valley.

Lebanon also has long been known for its high-quality book publishing, and a flourishing film industry produces high-quality films. There is some serious dramatic theater, but most of the energy in the last two to three decades has gone into a folk art and music and dance revival that began in the late 1960s. The national folk dance of Lebanon is the *debki*, a line dance in which people hold hands and step and stamp to the beat of a small drum called a *derbekki*. Classical belly dancing also plays an important role at weddings, and instrumental music is experiencing a revival. Lebanese craftsmen also are known for their glassmaking, weaving, pottery, embroidery, and brass and copper work. Many authors write in French, English, and Arabic, and celebrate a coming together of cultures through a form of poetry known as *zajal*, in which several poets sing in an improvised dialogue.

## 15 WORK

Lebanon traditionally has had a higher proportion of skilled labor than other Arab countries, but the civil war caused many of those skilled workers to seek better opportunities abroad. Those who have remained in the country often have difficulty finding work that is equal to their skills. The Lebanese economy relies on services, but agriculture and industry are important contributors, as well.

Many educated Lebanese do not take their government seriously. Government workers, as a result, tend to keep erratic hours. Remittances from Lebanese abroad contribute substantially to the economy, but the country’s long-term progress depends on whether it is able to attain long-term political stability. Post-war rebuilding also has widened the economic divide between Lebanon’s rich and poor. A strong middle class has yet to emerge.

## 16 SPORTS

Sports are taken very seriously by the Lebanese. The war made it difficult to pursue organized or professional sports in recent years, but soccer, basketball, and volleyball are popular. Horseback riding was popular before the war closed the clubs, and horse-racing still occurs in the Beirut hippodrome. Cross-country running, particularly in the mountains, and the martial arts are widely practiced. Skiing, rock-climbing, and caving are also enjoyed in the mountains. Many Lebanese go swimming and fishing in the lakes, rivers, or visit beaches along the Mediterranean coast.

## 17 ENTERTAINMENT AND RECREATION

Lebanon has numerous television stations, and television is a more common media source than newspapers. Some of the television stations devote their time completely to Christian programming, while others emphasize Muslim programming or offer a mix. Lebanese cinemas tend to show violent and/or sexy American and European films, although Lebanon itself also has a vital filmmaking industry. Dramatic theater, particularly comedies that poke fun at government leaders and Lebanese society is popular, as are nightclubs and pubs. At home, besides watching television, Lebanese enjoy playing board games (especially *Monopoly*), chess, checkers, card games, and backgammon, which is called *tawleh* (translating literally as “table”). The national pastime in Lebanon, however, is talking.

## **18 FOLK ART, CRAFTS, AND HOBBIES**

Traditional Lebanese crafts include basketry, carpet-weaving, ceramics and pottery, copper and metalworking, embroidery, glass-blowing, and gold- and silver-smithing. Lebanon is also known for its finely crafted church bells. Wine-making can also be considered an art, dating back for thousands of years in Lebanon.

## **19 SOCIAL PROBLEMS**

Lebanon's civil war caused widespread destruction and a huge social upheaval. It will take several decades for the country to recover from its effects. At least 120,000 people were killed and 300,000 wounded in the fighting, most of them civilians. Another 800,000 or so left the country, mostly the wealthy and well-educated. As many as 1,200,000 Lebanese—almost half the population—had to move from their homes and neighborhoods during the war. Those who remain face a future of high unemployment and a widening gap between the very rich and the poor.

Unrest in the Middle East continues to leave Lebanon vulnerable to attack, even with the end of the civil war. A 2006 eruption of violence between Israeli troops and Hizbullah militants in Lebanon offers ample evidence of the outside threats

that face Lebanon. Although most Lebanese Christians and Muslims maintain cordial relations with each other, some hostility from the war still lingers. Each religion maintains a separate court system under Lebanese law to handle matters of marriage, divorce, and inheritance, and marriage between persons of different religions is strictly forbidden.

Lebanon also faces the question of how to handle Palestinian refugees who fled Israel in 1967. Several hundred thousand refugees still reside in decaying and overcrowded camps in Lebanon, and many of them have lived without adequate healthcare, education, housing, or opportunities for employment for their entire lives. The Lebanese government restricts Palestinians from seeking economic and social aid. In addition to the long-time Palestinian refugee community, Lebanon now faces growing numbers of Iraqis fleeing their war-torn country.

## **20 GENDER ISSUES**

Lebanese laws and court systems do little to help women. As a result, women face widespread discrimination in both public and private life. Lebanese laws allow for each religion to have a separate court system to handle matters of marriage, divorce, and inheritance. Frequently, the religious customs fail

to protect women from domestic violence. The human rights organization Amnesty International reported in its 2008 Human Rights Watch report that female domestic workers who had migrated from other countries also face violence in Lebanese households. At least six female migrant workers died in 2007 under suspicious circumstances, according to Amnesty International.

# LEPCHAS

**PRONUNCIATION:** LEP-chuhz

**ALTERNATE NAMES:** Rong

**LOCATION:** Nepal; Bhutan (Mt. Kanchenjunga in the Eastern Himalayas)

**POPULATION:** 75,000 (estimate)

**LANGUAGE:** Lepcha; Nepali

**RELIGION:** Animism and Buddhism

## <sup>1</sup> INTRODUCTION

Lepchas are the original inhabitants of Sikkim, formerly an independent kingdom situated in the Himalayas between Nepal and Bhutan. *Lepcha* is the name given to this group by their Nepali neighbors and is interpreted by some as a derogatory word meaning "nonsense talkers." The Lepchas call themselves *Rong*.

The Lepchas are of Mongoloid stock, and some anthropologists trace their origins to Mongolia or Tibet. However, the people themselves have no traditions of past migrations and place the home of their ancestors (Mayel) near Mt. Kanchenjunga. The early history of the Lepchas is obscure, their isolation no doubt limiting contacts with the outside world. The Bhutias began moving into the region from Tibet in the 14th century AD. Sometime before the beginning of the 17th century, Sikkim became subject to Tibet. Internal upheavals in Tibet early in the 17th century led to three "Red Hat" lamas (monks) fleeing to Sikkim, where they converted the population to Buddhism and created a Sikkimese Tibetan king. For the next three centuries, the Lepchas of Sikkim were dominated by the Bhutias, the Nepalese, and later the British. In 1950, although it remained independent under its ruling *chogyal* (king), Sikkim became a protectorate of India. Following a plebiscite in which Hindu immigrants from India made the difference in the voting, Sikkim became the twenty-second state of the Indian union in 1975.

## <sup>2</sup> LOCATION AND HOMELAND

Lepchas occupy the southern and eastern slopes of Mt. Kanchenjunga, in the eastern Himalayas, and parts of neighboring western Bhutan and of Nepal. Population estimates for the Lepcha vary wildly. Some sources claim a total Lepcha population of around 50,000, while others see 85,000 in western Bhutan alone. Given the fact that the Lepchas are known as the "Vanishing Tribe," 50,000 to 75,000 seems a reasonable estimate for the current Lepcha population. The region Lepchas inhabit varies in elevation from 230 m (750 ft) in the Sikkim basin to the summit of Kanchenjunga at 8,586 m (28,168 ft) above sea level. The land has been dissected by the River Tista (Tista) and its tributaries into a jumble of steep-sided valleys separated by precipitous hills that rise northwards to the majestic peaks of the Himalayas.

Most settlements and cultivated land lie between 1,070 m and 2,285 m (3,500–7,500 ft) above the hot, steamy river valleys. Above this zone, fields give way to forests and mountain pastures. Mean temperatures range from 4.4°C to 30°C (40°F–86°F). Rain is almost continuous from June to September, with snow lying on the ground throughout the year above 2,440 m (8,000 ft).

### 3 LANGUAGE

The Lepcha language, known as *Rongring* to the Lepchas, is classified as a Tibeto-Burman tongue. It is placed by some in the Naga group of this language family. Rongring is written in an alphabet that was derived from a Tibetan script by King Chador of Sikkim sometime at the end of the 17th or beginning of the 18th centuries. The purpose of this was apparently to enable the Lepchas to read the Buddhist scriptures. Today, few Lepchas speak the language or are familiar with the Lepcha script. Most Lepchas, instead, speak and write Nepali.

### 4 FOLKLORE

The Lepcha myth of origin tells that Itbu-mu, the Mother-Creator, made the earth and the heavens and all that they contained. She shaped the mountains and the lakes and the animals that inhabit the earth. Last of all, she took pure snow from the top of Mt. Kanchenjunga, shaped it into a human form, and infused it with life. This first man was known as Fudong-thing. Perceiving his state of loneliness, the goddess took marrow from his bones and created a partner for him, a woman called Nuzong Nyu. The first two humans lived in Ne Mayel Kyong, the ancestral home of the Lepchas that supposedly lies in an inaccessible valley near Kanchenjunga. Though commanded by Itbu-mu to live as brother and sister, the two commenced having sexual relations. The offspring of this forbidden union were devils and evil spirits that plague the Lepchas even today. When the gods discovered the transgression, they punished the offenders by casting them out of their idyllic

home and sending them down to the mundane world. There, Fudong-thing and Nuzong Nyu were blessed with children and became the ancestors of the Lepcha people.

### 5 RELIGION

Animism survives today side-by-side with Buddhism in Lepcha society. The older Mun religion, named after the *mun* or male priest, focuses on appeasing or warding off evil spirits (*moong*) who bring sickness and misfortune upon people. The spirits are appeased by the sacrifice of animals, or by the direct intervention of the priest or one of the lesser religious practitioners among the Lepchas. The Lepchas acknowledge the existence of various deities and benevolent spirits, but rarely make regular offerings to them.

Overlying the beliefs and practices of Mun are the formal structures of lamaistic Buddhism. It is said that Buddhism was introduced to the region from Tibet around 1641, with the first monasteries founded towards the end of the 17th century. While the Lepchas have accepted certain aspects of Tibetan Buddhism (e.g., the ritual, the mythology, and the hierarchy of lamas), concepts such as asceticism and individual responsibility for one's spiritual welfare are totally alien to them. For the common person, the *mun* is of far greater importance in daily religious life than is the lama. (*Lama* is a Tibetan word; the Lepcha term for a lama is *yook-mun*, literally, "honored Mun.") However, the ceremonies of the two religions are usually performed simultaneously. Some writers have gone so far as to describe the Lepcha religion as "animistic Buddhism."

A small number of Lepchas have converted to Christianity.

### 6 MAJOR HOLIDAYS

Most Mun ceremonies are performed for the benefit of individuals or households, although some important events are communal celebrations. The Cherim ceremony is held twice a year to keep the Lepchas free of illness. Both *mun*s and *lamas* perform various rituals, which include offerings to the devils and the gods, and animal sacrifice. Buddhist *lamas* have to visit the monastery twice a month for festivals held in honor of Guru Rimpoche (the monk Padmasambhava who introduced Buddhism into Tibet) and the god Kanchenjunga. The feasts accompanying these celebrations may last up to 36 hours. The *lamas* also observe regular calendrical festivals such as the exorcism of the quarrel demon or the three-day *Boom koor*.

### 7 RITES OF PASSAGE

During the later months of pregnancy, Lepchas take certain ritual precautions for the safe delivery of the baby. This includes various taboos as well as sacrificing chickens to appease Sor *moong*, the demon who causes miscarriages. The Lepchas believe that on the third day after its birth, a baby is visited by a fairy who writes out its future on its forehead. At this time an animal, preferably an ox, but failing that, a pig or a goat, is sacrificed to mark the birth of a male, though not a female. A horoscope is cast by a *mun* (male priest) or *bonthing* (female priest), and the child is given a temporary name, often the day of the week on which it was born. The "sacred name" of the infant is recorded in the horoscope but never used. Names are unimportant to the Lepchas, and one may grow up with a variety of nicknames or pet names that are liable to change from time to time.

Two Lepcha women stir large pots of potatoes in a village in Sikkim, India. (© Earl and Nazima Kowall/Corbis)

Until a child is old enough to walk, it is carried in a cloth tied to the back of the mother or another adult. Children are treated as “little adults” and expected to behave accordingly. At the age of about four, a child is given a plate, a cup, a set of clothes, and a small haversack to carry objects just like an adult. Life is somewhat difficult and dull for adolescents. Boys farm or hunt with their fathers, while girls share the household chores with their mothers.

For the Lepchas, death is terrifying. All funeral rituals are performed to get rid of the dead and to ensure that they do not return as evil spirits. At the time of death, a lama is consulted to determine what spirits caused the death, how they should be appeased, and what means of disposal of the body should be followed. Ordinary women and men are usually buried, lamas and nuns are cremated, and children are placed in a river. Animal sacrifice and purification ceremonies are performed as deemed necessary. Both muns and lamas are called on to conduct the funeral rites, the former usually outside the house and the latter in the house. The body is then taken to the burial ground where it is placed in a grave, invariably facing north. Following the disposal of the corpse, the *sanglion* ritual or “speeding of the soul” is performed. This is an expensive ceremony involving a feast, distribution of gifts, animal sacrifice, and reading from the scriptures.

## **8 INTERPERSONAL RELATIONS**

Lepchas are identified by many who have had dealings with them as a gentle, unselfish people, who are extremely shy in

their dealings with strangers. They are peaceful in nature, and every effort is made to prevent or stop personal quarrels, which are seen as unsocial behavior. Casual visitors to a Lepcha house are always presented with refreshment. Gift-giving forms an important part of daily life. A guest attending a feast takes a gift with her or him, and also departs with a gift (usually uncooked meat). Any visitor takes a gift for the host, and in turn is given a gift when he or she leaves. Children are taught from an early age that it is good manners when receiving a gift from an elder to accept it with joined hands.

## **9 LIVING CONDITIONS**

Lepcha villages consist of up to 15 or 20 houses, scattered across a hillside or in a forest. One writer notes that it is possible to walk through a village without ever knowing it is there. A Lepcha dwelling (*li*) is rectangular in plan, with a circular or rectangular roof made from straw. The floor is made of wood, raised 1 m or so (3 or 4 ft) above the ground, with the space underneath used to keep domestic animals. Walls are built of thatch covered by clay. The entire structure is built without nails or screws. A house typically contains three rooms: a bedroom, guest room, and kitchen/store room. Furnishings may include low wooden stools, or built-in wooden benches padded for comfort. Water is drawn from streams, waterfalls, or natural reservoirs.

Most villages have a *gompa* or place for Buddhist worship, and Buddhist prayer flags fluttering in the mountain breezes are a common sight in villages throughout the region. Villag-

es are linked by mountain tracks, rather than roads, and the people are adept at crossing the hills and carrying loads over tracks that are often too steep even for mules.

## 10 FAMILY LIFE

Lepchas are divided into patrilineal clans known as *ptso*. There is no ban on marriage within the same clan, although the rules of incest clearly define the closeness of the blood relationship acceptable between spouses. Uncles play an important role in matchmaking and the negotiations preceding a wedding. Marriages are arranged by the parents, and usually occur when the boy is around 16 and the girl 14 years of age. Following the betrothal ceremony, the boy is allowed to remain in the girl's house and little attention is paid if she conceives during this period. The actual wedding takes place anytime from a few days to several months later, on an auspicious day of the month. Both muns and lamas are required to officiate at the marriage ceremony, which is accompanied by the presenting of gifts to the bride's family, feasting, and other rituals. The bride returns to live with her husband's family. Divorce or separation is very rare and when it occurs is usually for incompatibility or the refusal of the wife to work properly.

## 11 CLOTHING

The original dress of both Lepcha men and women consists of knee-length drawers and an undershirt or bodice, over which a long piece of striped material is worn like a cloak. This coarse, homewoven outer garment is fastened at the shoulder by a brooch and is belted at the waist by a sash. The sash of ordinary people is usually red or purple, while that of lamas is yellow. The Lepcha hat (*thaktop*) is loaf-shaped and made of leaves attached to a bamboo frame and decorated with a feather. Men traditionally always carried a long knife slung from the belt in a bamboo scabbard.

Women adorn themselves with a variety of ornaments—silver hoops or rings in the ears; necklaces made from gold, silver, semiprecious stones, or even silver coins; and charm boxes and small idols. Today, many Lepchas, especially women, have given up their indigenous dress in favor of Tibetan-style clothes.

## 12 FOOD

The Lepcha day begins at dawn with a substantial meal of cold rice and any leftover meat or other food from the previous evening's meal. This is taken with Tibetan-style tea (served with salt and butter). Popped corn or cold rice may be carried to the fields for snacks during the day, but the next full meal is taken in the evening when the family returns to the house. The evening meal is invariably accompanied by *chi*, beer made from millet or other grains. Rice is the staple food, though wheat or maize may be eaten if rice is not available. Buckwheat is ground into flour and baked into cakes. Lepchas, despite their Buddhist religion, are nonvegetarians and eat the meat of both domesticated and wild animals. They supplement their diet with vegetables and a variety of forest produce such as wild yams. Lepcha dishes are less spicy than Nepali or Indian food.

## 13 EDUCATION

Levels of literacy among the Lepchas vary according to location, but generally are low. Few speak, let alone read, Rongring. Demands that the language be introduced into the curriculum

have been met with deaf ears by the government of Sikkim. As a consequence, the Lepcha language has all but disappeared. Children are taught Nepali in the schools, and this is the language in which both children and adults conduct their daily affairs. Lepchas favor formal education for both boys and girls, with literacy rates in the Indian state of Sikkim standing at c. 65% (2001), though again, women, with rates of 58.6%, lag far behind men, of whom over 72% are literate. In Sikkim, almost three-quarter of children between the ages of five and fourteen attend school (72.8%), but the discrepancy between male and female becomes very clear at the level of higher education. By contrast, in Nepal literacy varies between 44% for men and 34% for women (2001). Although specific data as regards literacy is not available for Bhutan, one suspects that, with an overall literacy rate of 44% for women in Bhutan, literacy for Lepcha women in Bhutan is closer to the value for Nepal than for Sikkim.

## 14 CULTURAL HERITAGE

Music and dance, as well as oral traditions of myth, legend, and folk songs, form an integral part of Lepcha culture. Instruments such as drums, bamboo flutes, and various stringed instruments are used to accompany songs (*vam*) and dances at various social and ceremonial occasions. Love songs are popular, while other songs focus on themes such as marriage, agriculture, and war. Lepcha dances (*lok*) fall into six categories: nature dances, war dances, agricultural dances, dances on historical themes, the mystic *yaba* dances, and dances presenting incidents from Lepcha mythology.

## 15 WORK

Though originally hunters and gatherers, Lepchas are now primarily engaged in farming and rearing livestock. Their principal food crop is rice, with other cereals and vegetables also grown for consumption. Millet is cultivated for making beer, not for eating. Cardamom is the most important cash crop and an important export of the region. Cattle, goats, pigs, and chickens are raised, as much for ritual sacrifice as for their food value.

## 16 SPORTS

Lepcha children have no toys and do not participate in any organized games. Older boys amuse themselves by snaring small birds and imitating bird calls, or by making and playing bamboo flutes. Adults usually do not engage in organized or spectator sports, although in towns like Darjiling they have access to sports facilities.

## 17 ENTERTAINMENT AND RECREATION

Although festivals and folk traditions remain a major source of entertainment for the Lepchas, radio, television, and the movies have all had their impact on Lepcha life. It is not uncommon to find the walls of Lepcha houses decorated with photographs of Hindi and Western movie stars, with Bruce Lee being among the most popular.

## 18 FOLK ART, CRAFTS, AND HOBBIES

Although Lepchas are skilled in activities such as basketry, weaving, spinning, and carpentry, there are no distinctive arts

or crafts that can be identified specifically with the Lepcha community.

## 19 SOCIAL PROBLEMS

Lepchas are classed as a Scheduled Tribe under the Indian constitution. However, largely as a result of their small numbers and the cultural dominance of the Bhutias and Nepalese, they are clearly in danger of losing their cultural identity. The Lepchas' position as an ethnic minority would become even more tenuous should Nepalese demands for a "Gurkhaland" in the region of Darjiling ever succeed. Some Lepchas see conversions to Christianity as a threat to the traditional character of the community. It is, however, the loss of the Lepcha language—combined with intermarriage and assimilation with the local Nepalese population—that is the most serious threat to the continued survival of traditional Lepcha culture in the eastern Himalayas.

This is further threatened by development projects such as the Tista Valley hydroelectric project Stage V at Dzonghu. All three 170-megawatt power stations involved were commissioned in early 2008, but numerous concerns were expressed during the planning and development stage of the project. Not only have local Lepcha communities lost agricultural land that has been submerged, though one argument put forward for the project was that it was designed to use only 67.75 hectares of land, the project also brought along with it a large number of laborers who were seen to have the potential for an irreversible negative impact on the Lepcha communities residing in the area. It was feared that the influx of large number of laborers would affect the culture and way of life of the community, and cause a "sense of deprivation and loss of ethnic identity" resulting in "dilution of [Lepcha] social customs and practices" and affect the availability of labor for work on the Lepchas' remaining fields. The presence of a large number of people in an area that was earlier sparsely populated, it was also feared, might also result in health problems and outbreak of diseases, including those that may not have occurred in the past within the community. However, the environmental clearance letter that allowed the project to move forward stipulates that the labor camps should be located outside the Lepcha settlements and that when the project is completed, the labor force must not be allowed to settle anywhere in Sikkim. The conditions laid down are easier to put on paper than enforce and may not go very far in protecting local tribal communities from the influx of a large population of migrant workers for a several years. Problems that have occurred in the area since the project commenced include a considerable increase in STDs among the local population as well as the creation of illegal housing on forest lands. Local Lepchas, members of ACT (Affected Citizens of Teesta) went on a hunger strike to protest the Tista Project, which, when complete, envisages 26 dams along the Tista River in Sikkim and is part of a broader government development plan that affects the entire north-east.

This problem is not unique to the Lepchas, but is faced by tribals all across the subcontinent—development projects that threaten to damage what is, in many cases, a fragile ecosystem and disrupt a traditional way of life. It is of special significance, however, in the case of the Lepchas because of the relative small numbers of the community, whose way of life is already under threat. Once traditional Lepcha society is destroyed, it is gone forever and will never be revived. Most Lepchas in Sik-

kim see an uncaring central government in Delhi that places its own developmental needs ahead of the needs and desires of its citizens.

In Bhutan, the threat to Lepchas comes from a different quarter. After centuries of protecting local cultures by limiting contact with the outside world, the Bhutanese government has allowed satellite television to enter the country, and is also trying to encourage tourism, thus exposing its people to Western influences. Experience has shown that wherever the Western way of life comes into contact with more "primitive" cultures, the latter soon lose their character and adopt Western ways.

As minority groups in all three countries in which they live, the Lepcha lack any serious political representation. In Sikkim, they do share 12 seats in the state assembly with the Bhutias, but in general they lack any political voice—this seems to be the fate of minority ethnic groups everywhere. The recent political changes in Nepal and the dominance of the Bhutias in Bhutan, combined with the Lepchas relatively small numbers, leave them out in the political cold.

## 20 GENDER ISSUES

Even though Lepcha society is patriarchal and patrilineal, women are accorded a degree of respect that is the hallmark of tribal societies in the sub-continent. Marriages are arranged by families and marriage customs are strongly influenced by Tibetan practices, but divorce is very rare. This is possibly because Lepchas are highly tolerant of one another's sexual activities, and they feel very little jealousy toward each other. When disputes arise because of an extra-marital liaison to which one partner objects, the causes are blamed on the uncontrollable temperaments of individuals. However, when adultery occurs discretely, the aggrieved spouse will generally not pay attention; only if it is practiced openly and flagrantly will the other spouse appeal to the elected leader of the village.

Lepcha agricultural tasks are not sexually segregated, fathers play an important role in the care of children, the Lepcha give great emphasis to the role of the female in their conceptions of origin, and female deities occupy center stage in Lepcha mythology.

Yet, poverty, involvement in traditional economic activities (i.e. subsistence agriculture), and lack of access to education remain issues facing Lepcha women, who follow a way of life that is disappearing rapidly under the pressures of contact with the outside world.

# LI

**PRONUNCIATION:** LEE

**ALTERNATE NAMES:** Ha, Gei, Zun, Moi-Fau, and Shai

**LOCATION:** China (primarily Hainan Island province)

**POPULATION:** 1.2 million

**LANGUAGE:** Li

**RELIGION:** Ancestor worship

**RELATED ARTICLES:** Vol. 3: China and Her National Minorities

## <sup>1</sup>INTRODUCTION

The ancestors of the Li were included in the ancient “Luoyue,” the general term for the minorities in southern China during the Western Han Dynasty (206 bc–AD 8). The name of Li, however, appeared in the ancient historical documents at the end of the Tang Dynasty (618–907) and has remained unchanged since the Song (960–1279). The Li continuously paid tribute to the imperial dynasties. Entering the Li’s districts rather early, the Chinese developed marketplaces and towns. The development increased significantly under the imperial Tang (618–907), which became interested in trading with countries in the south by way of Hainan Island. At that time, 5 districts and 22 counties were set up. Since the Yuan Dynasty (1271–1368), Li headmen were appointed to rule their people by the imperial government. In the following centuries, the economic development of the Li districts was on par with their Chinese neighbors. They planted “double-harvest rice,” made use of iron farm implements invented by the Chinese, and even learned to set up and operate bamboo-tube waterwheels for irrigation. Country fair trade at regular intervals flourished for centuries. Exports to the Chinese mainland represented an important part of the Li economy; among the main items exported were a local brand of oxen, coconut, and areca. Yet, oppression from the feudal government and native officials was so intense as to arouse quite a few uprisings of the Li in the last centuries. In contrast to the Li farmers, who adopted Chinese methods of agriculture in most Li districts, the rest of the population still lived in abject poverty. A primitive co-cultivation system, *hemu*, had been prevalent in these areas. A piece of land was owned and co-cultivated by several families bound by ties of blood and led by a senior member, the *hemu* “head.” After the payment of common expenses and the reward for the *hemu*, the crops were divided equally.

## <sup>2</sup>LOCATION AND HOMELAND

Li population was 1.2 million in 2000. They live in Hainan Province, dwell together with the Chinese, Miao (Hmong), and Hui in Baoting, Ledong, Dongfang, Qiongzong, Baisha, Wanning, and Danxian counties. Hainan Island is located in the subtropics and boasts abundant rainfall and rich soil. In some areas, the hot climate yields three crops of rice annually. Corn, sweet potato, and cassava can be planted all year round. Coconut, pineapple, mango, cocoa, coffee, rubber, and areca abound in Hainan.

## <sup>3</sup>LANGUAGE

Li language belongs to the Sino-Tibetan family, Zhuang-Dong group, Li Branch. There are five dialects. An alphabetical system of writing based on Latin was created in 1957. The self-

given names of the Li include Ha, Gei, Zun, Moi-Fau, and Shai. Shai has been most popular; however, most now use the term Li, a traditional Chinese given name.

## <sup>4</sup>FOLKLORE

The Li myth of origins is closely linked to the culture of pumpkins and to the history of the flood. A long, long time ago, so the story goes, there were two brothers. Both of their wives were heavy with child for three years already. One day, a white-headed old man advised them to plant a pumpkin in front of the door in order to hasten childbirth. The brothers followed his advice. Subsequently both wives gave birth to a child. The elder brother had a son, the younger a daughter. The pumpkin continued to grow year after year. Then the flood came. The brothers were barely able to put their children inside the huge pumpkin in time to save them from the flood. When they got out of the pumpkin, the flood had already receded, but all the other people had drowned. They made a double-deck bed for the brother and sister. Before long, the sister got pregnant. The god in Heaven angrily cleaved a stone into two and struck a tree down to the ground, saying: “Any brother and sister who marry will be condemned to death.” Thereafter, the brother and sister lived separately. The sister bore a fleshy lump, which was cut into three by the brother. One piece was enclosed in a piece of hemp cloth, put on a board, then driven by the current of the Nandu River. Ten months later, it became a Chinese child. That is why the ancestors of the Chinese wore clothing made of hemp. The second piece was wrapped in four smaller pieces of cloth, put on a leaf of a herbaceous plant, and left to drift about on the Wanqian River. Ten months later, it became a Miao child. That is why the Miao women’s skirts are made of four pieces of cloth. The last piece was bound up in linen, put on a leaf of coconut, and sent adrift along the Changhua River. Ten months later, it became a Li child. That is why Li women wear linen. After the brother and sister gave birth to the Han, the Miao, and the Li in Hainan Island they became the local gods of the land.

## <sup>5</sup>RELIGION

Ancestor worship and belief in ghosts and gods are widespread among the Li. They pay special attention to witchcraft. Witchcraft may cause great harm in the guise of disease or even death. A man practicing witchcraft is called *jingtai*, and a woman *jingpo*. There are two kinds of ancestor spirits, one evil and the other good. The good ensure safety and prosperity, while the evil bring about misfortune. On the death of a senior person, a grand funeral with all the trappings of ancestor worship will be held. Whoever falls sick must invite the shaman, *daogong*, or shamaness, *niangmu*, to exorcise the ghost; the shamans are also adept in divination and play a role of intermediary with the ghosts and gods. The Li have a number of taboos. For example, it is not auspicious to point one’s head toward the door in one’s sleep, because that is the position of the body of the dead before a funeral. If a guest lies in that direction, the host will be most unhappy.

## <sup>6</sup>MAJOR HOLIDAYS

The Li celebrate the Spring Festival from the last day of the old lunar year to January 15 (Western calendar, between January 21 and March 7). The dinner party on the eve of the lunar New Year is the occasion for the whole family to reunite. Songs

of New Year greetings will be sung. On the first and second of lunar January (Western calendar, between January 21 and February 21), the men of a village organize a group hunt. Half of the kill belongs to the hunter who first hits an animal in the hunt. The rest is divided among the villagers. A pregnant woman may have two portions. A traveler who happens to be in the village will also have his share.

## 7 RITES OF PASSAGE

Elaborate funeral rites among the Li are related, as mentioned before, to ancestor worship. People announce a death by firing a shot. In areas bordering on Chinese settlements, the Li practice geomancy (divination by means of geographic features) for location of the tomb. In areas of *hemu*, the coffin is buried underground at a common burial ground. No tumulus or gravestone is set up, nor are there sacrificial offerings or grave sweeping after burial. However, after the funeral the family should receive guests with beef or pork. On the occasion of funerals, family members are allowed to drink and eat as usual, except for rice, which is then taboo. They bury the dead hastily. In general, if a person dies in the morning, the burial will take place in the afternoon; if death occurs in the afternoon, the deceased will be buried the following morning. Because of belief in the "Five Element Theory," burial is never held at noon, lest it lead to disaster. After the date when a person passed away, every twelfth day is celebrated as a commemoration; on "commemorative days" family members are not allowed to work in the field. Such observances last for as long as three years after the death occurred.

## 8 INTERPERSONAL RELATIONS

If a guest calls in, the host will serve him areca; if the guest is not accustomed to areca, he should explain to the host. It would be a very impolite behavior simply to refuse.

Formerly, there was a dating custom called *fangliao*. Reaching adulthood, girls would go in groups to chop wood in the mountain; they carried the wood back to the outskirts of the village or to their family house. Helped by their parents, they built up a house (or an adjacent room) called *liaofang*, where the girls stayed every night from then on. A young man would sing or blow an instrument to express his affection to the girl. If they found each other congenial, a token showing his affection would be given to her. The young man would then be received by the girl in the *fangliao* house or room. The *fangliao* relation did not always lead to marriage. The illegitimate child often born from the *fangliao* relation was not discriminated against by the Li people. Today, the *fangliao* custom is waning and is practiced only in remote Li villages. The vast majority of Li youngsters choose more modern ways of social intercourse.

## 9 LIVING CONDITIONS

In rural areas Li houses are built in the shape of a short-domed cylinder. The frame is laid out with bamboo or wood and is covered with a thatched roof. The walls are built with bamboo poles or branches of trees covered with mud. The floor is made of bamboo or rattan, about 20 inches above the ground. Some of their houses are two-story, provided with a gable roof. People live upstairs, the ground floor serving for livestock and storage. In urban areas, Li houses are the same as the Chinese.

The cities in Hainan Island are modernized. Highways are well developed. A railway makes a circuit around the island.

An integrated bus system links the main towns and villages on the island. Haikou (the capital, in the north) and Sanxia (main tourist resort, in the south) boast fully-equipped international airports.

## 10 FAMILY LIFE

Most families in a village are of the same surname. The family is patrilineal and small. Reaching adulthood, the son or daughter moves to the *fangliao* room beside the house or in the common house. As soon as they marry, they cook separately from their parents. Since the women do a lot of fieldwork with the men, they have a rather high position in their family. According to traditional custom, women mediated conflicts in or among the villages. Even in cases of armed fighting among villages, women intervened in the dispute and helped negotiate a settlement.

## 11 CLOTHING

In mountainous areas, men wear a kerchief over the head, an edge-to-edge buttonless linen top and, instead of pants or shorts, two pieces of linen front and back below the waist (as a skirt). Fewer and fewer men still wear this traditional garment, the majority having adopted Chinese-style dress. Women wear an embroidered kerchief on the head, an edge-to-edge buttonless trimmed top with underwear, and a tight straight skirt woven with multicolored cotton threads and adorned with figures and designs. Some of their straight white skirts may reach down to the ankles. Almost all women like to wear earrings—

sometimes a wide and heavy array—as well as bracelets and necklaces. Tattoos also serve as feminine ornaments. Some women have designs tattooed on their faces, others over their hands, feet, neck, and chest. The designs vary in different areas, ranging from rather simple figures to very intricate ones. A growing number of Li women now wear Chinese clothes and ornamentation. Urban Li women are not different in outward appearance from those of other nationalities. The men are not tattooed, but they like to wear earrings.

## 12 FOOD

Rice, corn, and yams are the staple foods of the Li. They eat three meals a day. Pottery is used for rice cooking. Meat is roasted or preserved in salt with ground rice and edible wild herbs. Vegetables are rare. Men have a passion for hunting, and meat is an important source of dietary protein. Men like drinking and smoking, while women are fond of chewing areca. The eating habits of the urban Li are the same as those of the Chinese.

## 13 EDUCATION

Nearly 1,000 primary schools have been set up in Li areas. Over 90% of children reaching school age are enrolled. Besides formal schooling, literary classes, reading groups, and cultural rooms in the villages contribute to the elimination of illiteracy. Middle school students and college students are quite common. Their cultural and educational level is higher than average for the minorities, but it is still below average for the whole country.

## 14 CULTURAL HERITAGE

The Li are well known for their natural talent for singing. In fact, folk songs are their principal means of expressing their emotions. Lyrics spontaneously flow from their mouths when they are touched by feelings. Folk songs may be performed as solos, as antiphonal singing, in unison, or in chorus. There are quite a few traditional musical instruments. The “Mouth Bow” is made of a thin piece of bamboo or copper, which is played by flicking the fingers. There are at least four kinds of vertical bamboo flutes particular to the Li, one of which is played by nose-blowing. The Li also have a wide array of dances accompanied by music and song, the most popular being the “Cutting Firewood Dance,” the “Rice Husking Dance,” and the “Double Sword Dance,” all of which are colorful and have a rich flavor of life.

Li literature is mainly oral and includes lengthy epics handed down through many generations, all praising their heroes and founders; among the most popular are “Brave God of Unusual Strength,” “Legend of the Five-Finger Mountain,” and “Brother’s Constellation.”

## 15 WORK

The Li mainly engage in rice planting, gathering, and hunting to complement their main economic activity. Li women excel in weaving textiles, especially silk cotton. Early in the Song Dynasty (1127–1279), Li brocade was already famous and was sought after by the Chinese. Tradition has it that the legendary expert of textiles, Lady Huang Daopo, lived in Li areas for 46 years. She dedicated herself to the improvement of textiles. Li women benefited considerably from her teaching.

## 16 SPORTS

“Bamboo Dancing” is very popular among the Li. People sit on the ground in two rows, face to face, in pairs. Each pair holds two bamboo sticks by the ends. They rhythmically separate the bamboos and bring them back together. The dancers, following the rhythm, must jump in and out of the gap before the bamboo sticks are brought back together, or the foot will be caught between the bamboos; it is then almost impossible for the dancer to find his rhythm again and his feet get caught at almost every beat. The competition is open to all participants, young and old, and always attracts large crowds.

“Shooting a buffalo’s leg” is another traditional sport. Each village selects a good archer. The buffalo leg is hung beneath a tree, about 30 m (100 ft) away from the shooters. Whoever hits the leg is allowed to take it back to his village and share it with the villagers.

## 17 ENTERTAINMENT AND RECREATION

Although available, movies and television are not yet popularized among the rural Li. Their entertainment and recreation gravitate toward singing and dancing. In urban areas, however, a wide array of recreation and entertainment is available. Beach activities, especially on the southern shores of the island, have recently begun to attract more and more Li youngsters.

## 18 FOLK ART, CRAFTS, AND HOBBIES

Li brocade is an important craft. Ornaments made of silver and animal bones have a unique style. Some women wear a few earrings in different patterns and also bracelets in different styles.

## 19 SOCIAL PROBLEMS

Since Hainan Province is now the largest special economic zone of China, the social economy has developed rapidly in an integrated way. The current problem among the rural Li is the intense conflict between their traditional agricultural and rural culture and the modern industrial urban culture. The process of modernization seems inevitable, but there is no way to ensure a smooth and peaceful transition between traditional and modern values.

## 20 GENDER ISSUES

The Chinese constitution states that women have equal rights with men in all areas of life, and most legislation is gender neutral. Li women, in traditional household, have a relatively high position. Women were the traditional mediators of community conflicts. As the Li become more urbanized, this tradition is changing somewhat, with men taking stronger roles.

China has strict family planning laws. It is illegal for women to marry before 20 years of age (22 for men), and it is illegal for single women to give birth. Though minority populations were previously exempt from family planning regulations, policy has changed in recent years to limit minority population growth. Today, urban minority couples may have two children while rural couples may have three or four.

## LINGAYATS

**PRONUNCIATION:** lin-GAH-yuhts

**ALTERNATE NAMES:** Virashaivas

**LOCATION:** India (Karnataka state)

**POPULATION:** 15 million (estimate)

**LANGUAGE:** Kannada

**RELIGION:** Lingayat

**RELATED ARTICLES:** Vol. 3: People of India

### 1 INTRODUCTION

Lingayats are members of a religious sect in India that dates from the 12th century ad. The name is derived from *linga* and *ayta* and means "the people who bear the *linga* (phallic symbol)." This is a literal description, as members of the sect wear a small stone phallus somewhere on their body. Men carry it in a silver box suspended on a thread or scarf around the neck, while women wear it on a neck-string under their clothes. The *linga* is the symbol of the god Shiva, and Lingayats are also called Virashaivas because of their passionate devotion to this deity.

The Lingayat movement began as a revolt against Brahmanical Hinduism. It is based on the teachings of Basava (c. 1125–c. 1170), who lived in Kalyana, a small town in central India in what is now northern Karnataka State. A Brahman himself, Basava (also Basavana) rejected the supremacy of Brahman priests, ritualism, concepts of ritual pollution, caste, and many other features of contemporary Hindu society and religion. He preached instead a populist message of equality, fraternity, and individuality. Basava's teachings spread through the region, where they became deeply entrenched among the local population. Even today, over 800 years later, Lingayats form a significant element in Karnataka culture and society.

### 2 LOCATION AND HOMELAND

Lingayats are distributed throughout Karnataka, with their greatest concentrations in the northern regions. Census returns in 2001 indicated that around 20% of the state's population were Lingayats (estimates made early in the 20th century place the percentage of Lingayats between 14% and 20% of the population). Assuming this proportion did not change much by 2008, the number of Lingayats in Karnataka would be close to 12 million. With Lingayats in Maharashtra numbering several million and several hundred thousand in Tamil Nadu and Andhra Pradesh, a current estimate of around 15 million people is reasonable. In the Lingayat heartland, as many as 67% of the people follow the religion. Small Lingayat communities are also found in the states of Goa, Kerala, Madhya Pradesh and West Bengal. A few Lingayat families are to be found among Indian immigrants in the United States and Canada.

The cultural heartland of the Lingayats is located in the interior of the Deccan Plateau. In the north of the region lie the hills and escarpments of the southern edge of the Maharashtra plateaus. These soon give way southwards to the lower lands of the middle valley of the Krishna River and its tributaries (the Bhima and the Tungabhadra). Further south, the terrain begins to rise towards the Mysore Plateau. The western margins of the region are defined by the Western Ghats, but there is no clear physical boundary on the east. Elevations of the plateaus

vary from around 455–760 m (1,500–2,500 ft) in the north to over 1,100 m (3,600 ft) in the south. Climate is of the tropical monsoon type. Mean monthly temperatures at Bellary in eastern Karnataka vary from 23°C (73.4°F) in winter to 33°C (91.4°F) in summer. Annual rainfall averages between 40 cm and 80 cm (16–31 in) throughout the entire region, except for the extreme western areas. Areas not under cultivation carry a poor scrub cover or open deciduous or thorn forest, except for a narrow belt of evergreens in the more humid west.

### 3 LANGUAGE

Lingayats fully identify with Kannada, which may be seen as the language of Lingayat culture. Basava, the founder of the sect, specifically set out his teachings in Kannada rather than in Sanskrit so that he could reach the common people. The boundaries of Karnataka State (called Mysore at the time) were redrawn in 1953 and 1956 to unite the Kannada-speaking peoples in a single administrative division. Kannada is one of the four major languages of the Dravidian language family. It is related to the other Dravidian tongues of South India (Tamil, Telugu, and Malayalam) but is written in its own script.

### 4 FOLKLORE

Basava, the founder of the Lingayat movement, and the other saint-mystics (e.g., Basava's nephew, Cennabasava; and Allama Prabhu) who helped spread its teachings are enshrined in the lore of the sect. Their own sayings and legendary accounts of their lives have entered the folk idiom of the Kannada people. The imagery and ideas presented in these works provide in-

teresting contrasts between Lingayat beliefs and those of the Brahmanical tradition. The crow, for instance, is a messenger of death in Brahmanical Hinduism. Many Hindus feed crows as part of their death rites, believing they are ancestors returned from the dead. In Lingayat culture, by contrast, the crow is an auspicious symbol of fellowship and sociability, known for its deep commitment to its community.

## 5 RELIGION

The Lingayats do not label themselves as Hindu. Their beliefs have been drawn from Tamil Shaivism and other Indian sources, but they have evolved a uniquely Lingayat character. Their doctrines represent a sweeping departure from those of orthodox Hinduism. Lingayats revere the *Vedas* (the sacred texts of Hinduism) but they do not accept the Brahmins' authority to interpret them. They reject the caste system and proclaim all wearers of the *linga* to be equal. They do not believe in rebirth and, consequently, have abandoned the doctrine of *karma* (the principle that actions in one life determine the nature of subsequent incarnations). Lingayats recognize the spiritual power (*śakti*) of Shiva; they worship him as the only god and do not recognize the other deities of Hinduism. In modern practice, however, Lingayats have taken to worshipping many gods in addition to Shiva. The doctrines and ideals of Lingayat religion and society are set out in the eight supportive systems (*ashtavarna*), the five principles of conduct (*pañcha-âchâra*), and the six-stage path (*sat-sthala*).

The Lingayat guru (spiritual leader) and *jangama* (priest) exert a considerable influence in the community. Priests, who can be male or female, officiate at life-cycle rituals. Some are also itinerant healers and astrologers, administering to the needs of the local people. Lingayats have their own temples, and their monasteries (*matha*) are flourishing centers of religious culture and education. Pilgrimages are undertaken to places such as Kalyan and Ulive, which are held sacred because of their association with Basava and other Lingayat saints.

## 6 MAJOR HOLIDAYS

Lingayats celebrate the birthdays of their saints, that of Basava being of particular importance. Two religious processions reported to be unique to the Lingayats are Nandi-kodu (Nandi's horn) and Vyasantol (Vyas' hand). Nandi is the sacred bull of Shiva, and the story goes that Nandi once lost a horn in a fight with a demon. His followers found the horn and triumphantly paraded it around. Lingayats follow the custom of carrying Nandi's horn (a long bamboo pole on which two brass bulls are fixed) through the streets in procession. On another occasion, a cloth hand is made and tied to Nandi's horn and paraded in the streets. This represents the hand of Vyas, reputed to be the author of the *Purânas*. In addition to their own celebrations, Lingayats also observe Hindu festivals such as Holi, Divali, and Ugadi (New Year's Day).

## 7 RITES OF PASSAGE

After birth, the family guru ties a *linga* around the neck of the newborn child, smears the child with ashes, and places on the child a garland of rudra beads (seeds of the tree *Elaeocarpus ganitrus*). These are said to be the tears of Shiva. The guru recites a prayer to Shiva in the baby's ear. The priest is sent for, and when she or he arrives, her or his feet are washed by the child's parents. The water is poured over the *linga* tied to the

baby, who is then presented to Shiva by the priest. The priest is fed, and a small portion of food from the priest's dish is placed in the baby's mouth (this ceremony is known as *prasâd*, i.e., sacred offering). These rituals involve each of the elements in the eight supportive systems and symbols of the Lingayat religion (guru, linga, ashes, rudra beads, prayer, priest, the water that washed the priest's feet, and sacred offerings). Even today, the marks on the forehead (usually in white lime rather than ashes), the strings of rudra beads, and the linga around the neck serve to identify a follower of the Lingayat faith.

Death for the Lingayats is a cause of gladness because the dead person has exchanged the cares of this life for the joys of Shiva's heaven (*kailâs*). The body is bathed and laid out in the home. A priest reads passages from the Lingayat scriptures to help the soul in its flight to heaven. A feast is thrown for *jangams* (priests), and they are given money and clothes. The body is then placed on a gaily decorated chair and carried in procession to the grave. Lingayats always bury their dead, with the corpse seated cross-legged in the grave. Funeral rites end when the mourners return home and take purifying baths.

## 8 INTERPERSONAL RELATIONS

Lingayats conform to the customs of their local communities in their interpersonal relationships. Villagers meet in the streets, at tea shops, and at the *panchâyat* (village council) building to gossip and exchange news. Available leisure time is closely tied to the agricultural cycle.

## 9 LIVING CONDITIONS

Lingayat dwellings reflect regional house-types and rural settlement patterns. Northern Karnataka is an area where North Indian and South Indian patterns meet, with the shapeless, nucleated villages of Maharashtra giving way to the compact, square settlements—often with a tributary hamlet—found in southern areas. Houses are typically built of mud and stone, though cement is becoming more common. The house of a well-to-do Lingayat farmer typically has a roofed veranda in the front, built on a raised platform. This is used for resting and entertaining visitors. A doorway, with carved figures of Basava, leads into the living quarters, which include the kitchen, a room set aside for worship, and stalls for cattle. Hay, cow dung for fuel, and other goods are stored behind the house. Furnishings reflect the occupation, taste, and resources of the occupants.

## 10 FAMILY LIFE

Although Basava preached against caste and proclaimed all persons equal, the Lingayats have a complex system of social stratification that functions very much like a caste system. Women have a higher status than in traditional Hindu society. They exercise equal religious authority with men in household rites and festive ceremonies. In village communities, however, women still tend to occupy a subservient role. Considerable emphasis is placed on having male children, who are seen as essential for security in old age and salvation in the life to come.

The extended family is common in rural areas, but urban Lingayats tend towards the nuclear family. Marriages are arranged, though marriage practices are becoming much less restrictive among Lingayats with the spread of education. Residence is patrilocal (i.e., the bride and groom become part of

the father's household) in rural areas, but newlyweds in urban areas often set up independent households. Divorce is uncommon. Widow remarriage is permitted.

## 11 CLOTHING

Apart from the *ishta-linga* ("personal" linga) worn around the neck, Lingayat dress resembles that of the region where the community lives. Thus, in central Karnataka a Lingayat farmer wears the *dhoti* (Indian loincloth), a long, collarless shirt, and a turban. He may throw a shoulder cloth across one shoulder. Women wear a bodice and *sâri*, with the upper end passed across the front of the body and draped over the head. Ornaments include a variety of necklaces, nose rings, earrings, bangles, and anklets. The wealthy prefer gold, while the poorer classes wear silver. Men, also, are fond of jewelry. In urban areas, men tend to follow the trend of wearing Western-style shirts, pants, and jackets.

## 12 FOOD

Lingayats are strict vegetarians, their staple food being *roti* (flat breads) made from millet, eaten with pulses, vegetables, chilies, onion, garlic, and condiments. Wheat, maize (corn), and rice also form part of the diet, as do milk, curds, and *ghi* (clarified butter). The use of alcohol, tobacco, and drugs such as opium is forbidden. Although theoretically an egalitarian sect, Lingayats have dining restrictions similar to those found among Hindus. For instance, members of the higher castes from which the *jangams* (priests) and leading merchants come do not eat with lower-ranked Lingayats who are primarily from various artisan groups. In the past, if a Maratha, a Muslim, or anyone not wearing the linga came into one's house and saw food, it would have to be thrown away.

## 13 EDUCATION

Education and literacy levels vary considerably among the Lingayats depending to a considerable extent on where they live. Literacy provides access to the professions, and thus the Lingayats appear to be well represented in law in Bombay compared to Lingayats in Karnataka. In a rural context, however, the typical attitude towards formal education among Lingayats is one of indifference or resistance. Although the Indian Constitution makes provision for free and compulsory education—from ages 6 to 14, attendance at school is low. Children, especially in a rural setting, are seen as much more valuable in helping support the family than in learning to read, write, and do arithmetic. A recent study in two villages in northern Karnataka (Dharwar District) dominated by Lingayats showed extremely low literacy rates (30.2% and 25.7% for the two villages, with the rates for women being 18.5% and 12.9%). This is in contrast to the overall literacy rates in Karnataka, reported as 67.4% by the 2001 Census of India (76.29% for males and 57.45% for females). Lingayat monasteries, such as the Manvi Monastery in Belgaum, play an important role in modern education. Found in towns, both large and small, across Karnataka, the monasteries run schools and colleges and have provided many poor people with free board and lodging in urban centers to help them acquire an education and better themselves.

## 14 CULTURAL HERITAGE

Lingayats have a literary tradition that dates back to the 12th century AD. Their sacred literature includes the short lyrical sayings (*vāchanas*) of Basava, as well as the poetry and devotional hymns of over 200 writers. Of particular note is the fact that these are in the Kannada language rather than in Sanskrit and are accessible to the common people without reliance on Brahmanical interpretation. Lingayat literature is thus an important element in the regional culture of Karnataka. Several important Lingayat writers, such as Basava himself, writing in Kannada, have made important contributions to Karnataka culture, while Karnataka folk culture, in turn, forms part of the environment in which Lingayats live and work.

## 15 WORK

Lingayats are involved in a wide range of activities. Many are farmers, living in villages and leading lives not too different from other agriculturalists in northern Karnataka. Others provide the services on which the agricultural economy depends, such as carpentry, blacksmithing, leatherworking, and oil-pressing. Lingayats with the necessary educational background are also represented in government service and the professions, as teachers, doctors, lawyers, and professors. In urban areas in Karnataka, Lingayats dominate small trade, commerce, and the textile industry.

## 16 SPORTS

There are no games or spectator sports associated specifically with the Lingayat faith.

## 17 ENTERTAINMENT AND RECREATION

Lingayats have access to the same entertainment and recreational facilities as the general population of Karnataka. In villages, much of their enjoyment is derived from traditional pastimes (e.g., wrestling, bull-chasing, and folk-singing) associated with periodic fairs, festivals, and folk culture. In urban areas, television, movies, and modern sports activities are also available.

## 18 FOLK ART, CRAFTS, AND HOBBIES

There are no specific arts, crafts, or hobbies identified with the Lingayats. Lingayats share in the broader currents of folk traditions in Karnataka.

## 19 SOCIAL PROBLEMS

Lingayats face many of the problems of the general population of northern Karnataka. In rural areas, there are some Lingayats who have to deal with low living standards, poverty, and debt. Many, however, own land, and Lingayat villages are an integral element in the rural landscape of northern Karnataka. The Lingayat movement originated as a reaction against feudal Brahmanical society and rejected many aspects of traditional Hinduism. Lingayats do not wear the sacred thread and, even though they reject the caste system, they have a social stratification system that is akin to caste and, to all intents and purposes, are placed in the Shudra *varna* by Hindus. Although they have reacquired some aspects of the Hindu religion (a process for which there are many historical precedents), the Lingayats preserve a distinct identity in central India. Their commitment to populist ideals stands in direct contrast to the rigid hier-

archy of traditional Hindu society. This has helped Lingayats modernize and in many ways achieve a status as one of the more progressive religious communities in modern India.

Despite rejecting the Hindu caste system of India, Lingayats have emerged as the dominant caste in many areas of Karnataka. Not only that, but they have managed to obtain political power and representation by getting themselves classified as an OBC (Other Backward Class) in Karnataka and thus gaining the benefits of this status (Lingayats, along with the Vokkaliga, another group classed as an OBC, have cornered the lion's share of seats reserved for the Scheduled Castes and OBCs). It does not matter how wealthy or educated one is, if one is classed as belonging to an OBC, one is entitled to apply for a reserved seat. On 30 May 2008 a Lingayat (B. S. Yeddyurappa) was sworn in as Chief Minister of Karnataka State. Lingayats formed a major voting bloc that put Yeddyurappa's party, the Bharatiya Janata Party (BJP), in power.

## 20 GENDER ISSUES

Lingayat religious ideology encompasses the principles of individuality, equality and fellowship and rejects inequalities based on gender, class or occupation. Therefore, Lingayat women do not occupy the subordinate role in which they tend to be placed in Brahmanical society. Women exercise equal religious authority with men in household rites and festive ceremonies, and can even become priests. Lingayats traditionally do not favor child marriage and widow remarriage is allowed, although divorce is uncommon. In village communities, however, women still tend to occupy a subservient role, with considerable emphasis being placed on bearing male children, who are seen as essential for security in old age and salvation in the life to come. It is not uncommon for a Lingayat woman to wear a gold fertility necklace as a charm for obtaining a son, the necklace having thirty pendants, each with symbolic meaning connected to fertility.

Lingayats follow the Hindu law of inheritance and succession, but if a family does not have a son, a woman can inherit from her mother, whether gold, money or land. If a woman does not have a son, she tends not to adopt a male, as is the custom among Hindus, and passes on her wealth to her daughter.

Given their lack of commitment to Hindu principles of caste, Lingayat women tend to be in the forefront of modernization. However, in rural areas, they are still subject to poverty, low living standards, illiteracy, debt and lack of access to educational facilities—in fact, they suffer from the same problems as low caste Hindus.

# MA'DAN (MARSH ARABS)

**PRONUNCIATION:** mah-DAH-N

**ALTERNATE NAMES:** Marsh Arabs

**LOCATION:** Iraq (marshes at the junction of the Tigris and Euphrates rivers)

**POPULATION:** Fewer than 20,000 (2003 estimate)

**LANGUAGE:** Arabic

**RELIGION:** Islam (Shia Muslim)

## <sup>1</sup> INTRODUCTION

The Ma'dan, or Marsh Arabs, is a distinct group of people who originally inhabited the marshy area at the junction of the Tigris and Euphrates rivers in Iraq before the marshes were destroyed by irrigation projects developed by the Iraqi government. A seminomadic tribal people, the Ma'dan once lived in reed huts built on floating islands of reeds, and made their living by herding water buffalo, fishing, and hunting wild boars and waterfowl. Their houses were elaborately woven with Gothic-like arches made of bundles of reeds tied together at the top. This same kind of house had been built since the 4th millennium BC.

The term, Ma'dan, means "dweller of the plains." The tribal form of the Ma'dan took shape during the 17th century AD. Ma'dan culture is based on the culture of the Bedu (or bedouin, *see Bedu*) nomads of the desert, adapted for life on the watery marshes. Until the late 20th century, the Ma'dan way of life had changed little in thousands of years. However, the Ma'dan people encountered prejudice from other Arabs, and beginning in the 1970s, the marshes they had inhabited for 5,000 years were slowly destroyed for political and economic reasons by the Iraqi government. The waters of the Tigris and Euphrates were diverted in order to irrigate lands converted to agriculture and, after the 1991 Gulf War, Iraqi leader Saddam Hussein systematically drained the waters as a form of punishment for the Shia Muslims who opposed his regime.

The U.S.-led invasion in 2003 removed Saddam from power and efforts to restore the marshes are underway. However, the damage done to the Ma'dan way of life in the 1990s is expected to take several decades to repair. In addition, the marshes have become extremely dangerous to inhabit as fighting among rebel groups in Iraq has intensified and moves the country toward civil war. In 2008, the marshes in a war-torn Iraq were used as a hiding area for criminals and rebels opposing the provisional Iraqi government installed by U.S. occupation forces. Many Ma'dan are believed to have joined insurgent movements in Iraq. Some are followers of the Iraqi Hizbullah organization, while others belong to Moqtada al-Sadr's movement and wield control in provincial areas under the provisional government organized by U.S. forces occupying Iraq.

## <sup>2</sup> LOCATION AND HOMELAND

The marshes where the Ma'dan once lived were created by the annual floods of the Tigris and Euphrates rivers. The marshes covered about 15,540 sq km (6,000 sq mi) and were divided into three parts: the Eastern Marshes east of the Tigris, the Central Marshes west of the Tigris and north of the Euphra-

tes, and the Southern Marshes south of the Euphrates and west of the Shatt al Arab (the river formed by the union of the Tigris and Euphrates). Melting snow on the mountains of Iran and Turkey would cause the waters to rise on the rivers and in the marshes. The annual flood on the Tigris River typically reached its height in May. On the Euphrates River the floods peaked in June. From June on, both rivers would begin to fall, reaching their lowest levels in September and October. The water levels then would begin to rise slightly in November, increasing gradually throughout the winter.

The marshes were covered with rushes and reeds. Qasab, a kind of giant grass that looks like bamboo, covered most of the land and grew as tall as 7.6 m (25 ft). Natural islands, some floating and some anchored, dotted the waters, and the marshes were alive with wildlife, including turtles, frogs, various waterfowl, wild boars, and herds of mosquitoes in the summer. Eagles were a common sight, soaring in the skies above the marshes. Summers were hot and humid; in the winter, the water was icy and the winds were cold. A strong wind, called the "forty days' wind," blew throughout the month of June. Some historians believe the marshes were the Garden of Eden from the Bible.

In the 1970s, the Iraqi government began to expand irrigation projects that disrupted the natural flow of water into the marshes. The efforts were continued more aggressively after the 1991 Gulf War, partly to punish Shia rebels who had risen against Saddam Hussein. By 2003, the marshes had become a desert, villages of Ma'dan had been attacked and burnt, and the water was reportedly poisoned. Most Ma'dan today are believed to live in lower income Shia communities in Baghdad or have emigrated to Iran, with a few thousand believed to have returned to their traditional homeland. Those Ma'dan who have returned to the marshes lack clean drinking water, sanitation, health care, and nutrition.

Some human rights experts have estimated that the Ma'dan population in 2003 was less than 20,000, compared with 500,000 in the 1950s.

## <sup>3</sup> LANGUAGE

The Ma'dan speak a form of Arabic that is generally considered a "lower" form by other Arabic speakers. Arabic, spoken by 422 million people worldwide, has many distinct dialects, so that people living as few as 500 km (about 300 mi) apart may not be able to understand one another. The written form of Arabic is called Classical Arabic, or, for today's literature and press, Modern Standard Arabic. It is the same for all literate Arabs, regardless of how different their spoken dialects are. Arabic is written from right to left in a unique alphabet that makes no distinction between capital and lower-case letters. It is not necessary for the letters to be written in a straight line, as English letters must be. Punctuation rules are also quite different from those of English.

"Hello" in Arabic is *marhaba* or *ahlan*, to which one replies, *marhabtayn* or *ahlayn*. Other common greetings are *As-salam 'alaykum*, "Peace be with you," with the reply of *Wa 'alaykum as-salam*, "and to you peace." *Ma'assalama* means "Goodbye." "Thank you" is *Shukran*, and "You're welcome" is *'Afwan*; "yes" is *na'am* and "no" is *la'a*. The numbers one to ten in Arabic are *wahad*, *ithnayn*, *thalatha*, *arba'a*, *khamasa*, *sitta*, *saba'a*, *thamanya*, *tisa'a*, and *ashara*.

Arab names consist of their first name, their father's name, and their paternal grandfather's name. Women do not take their husband's name when they marry but rather keep their father's family name as a sign of respect for their family of origin. Many Ma'dan have rather unusual names, especially for Muslims. The names Chilaib ("little dog"), Bakur ("sow"), and Khanzir ("pig") are common, even though Muslims consider those animals unclean. Other names include Jahaish ("little donkey"), Jaraizi ("little rat"), Wawi ("jackal"), Dhauba ("hyena"), Kausaj ("shark"), and even Barur ("dung"). Ma'dan often give unattractive names to children to ward off the evil eye, particularly to sons whose brothers died in infancy.

#### 4 FOLKLORE

The traditional Ma'dan believed in *jinn*, bad spirits who could take the form of humans or other animals. Unique to Ma'dan folklore are two marsh monsters: the *anfish*, a giant serpent with hairy skin, and the *afa*, a giant serpent with legs. Both were said to live somewhere in the heart of the marshes, and both were deadly.

The Ma'dan also believed in a place called Hufaidh, an island of paradise located in the southwest part of the marshes, although no one knows exactly where. According to legends, the *jinn* could hide the island from human sight. On this island were palaces, palm trees, pomegranate orchards, and huge water buffalo. It was believed that anyone who saw Hufaidh was bewitched, and no one would be able to understand the person's words afterward.

#### 5 RELIGION

Today, most Ma'dan are Shia Muslims, although they are not strict about following Muslim practices, such as praying five times a day facing Mecca. Karbala and Najaf are the Ma'dan's holy cities: Husain was killed and is buried in Karbala, and Ali the Saint's tomb is in Najaf.

#### 6 MAJOR HOLIDAYS

Most Ma'dan observe Islamic holidays, such as Ramadan, Id al-Adha, and Id al-Fitr, which are based on a lunar calendar and thus fall on slightly different days every year. Most Ma'dan wish to make a pilgrimage to the city of Meshed, where the shrine of the eighth imam, Ali ar Ridha, is located. Anyone who makes this pilgrimage is given the title of *Zair*. Few Ma'dan have the economic resources to make the traditional Islamic pilgrimage to Mecca.

#### 7 RITES OF PASSAGE

Ma'dan boys are traditionally circumcised at puberty, but many boys refuse because of the frequent occurrence of infection afterward.

After a death, some Ma'dan dye their turbans dark blue to signify mourning. Others put mud on their heads and clothes.

#### 8 INTERPERSONAL RELATIONS

Ma'dan follow the traditional Arab code of honor, but with somewhat less dedication than other Arabs. Hospitality is considered a point of honor, and the Ma'dan welcome all guests and provide food and housing without expecting or accepting any payment. It is considered an insult even to thank a host for a meal, let alone pay for it, because it implies that the host is

not considered generous enough to simply offer a meal (or bed, or other hospitality) to a guest. A host also never helps to carry a guest's belongings out of the house (although he or she will help to carry them in) because that would imply that the host wanted the guest to leave.

#### 9 LIVING CONDITIONS

Before the destruction of the marshes, the Ma'dan marsh villages consisted of houses built of reeds, with reed mats covering the floors. These houses were built on artificial islands created by enclosing an area in the water, large enough for the house and a yard in front, with a fence of reeds about 6 m (about 20 ft) high. Reeds and rushes were packed inside of this fence. Then, when the stack of reeds and rushes reached above the level of the water, the original fence reeds were broken and laid across the stack. More rushes were piled on top and packed down tightly. The house was then built on this foundation. This type of house was called a *kibasha*. A more permanent site was produced when mud from the floor of the marsh was used to cover the foundation. The mud was then covered with more layers of rushes. This more permanent type of house was called a *dibin*. If the family that built a *dibin* left it unoccupied for more than a year, they lost their right to it and anyone could take possession of it. Shops within the village were marked by a white cloth fastened like a flag to a reed stuck into the roof of the building.

Traditional Ma'dan marsh houses had no electricity heat, running water, or indoor plumbing. Water was drawn from the marshes around the home. The Ma'dan did not build latrines. People simply squatted among the rushes, or over the side of a canoe, to urinate or defecate. In spite of this lack of sanitary conditions, the Ma'dan were a remarkably healthy people and experienced few occurrences of dysentery or cholera.

Food consisted of the wild boars and birds hunted with the gun, as well as crops, such as rice, that could be grown in the marshes. Personal possessions included a few water buffalo, a gun, some blankets and cooking utensils, and a reed canoe coated with bitumen (tar).

Within the marsh village, there was almost always a guest house, or a *mudhif*. The *mudhif* was usually owned by the village sheikh, or leader, and was often built on a grander scale than the simpler huts of the villagers, although the basic design was the same. No visitor was ever refused hospitality and, as in villagers' homes, no payment was accepted for lodging and meals in the *mudhif*.

All transportation in and around the marsh village was by canoe, either paddled or, more often, punted with a long reed. Called *mashuf*, the canoes were made of reeds covered with bitumen (tar). Children four or five years of age had their own *mashuf* and could pilot them skillfully. The Ma'dan created "roads" in the marshes by driving water buffalo through the reeds when the water was low to make a track. As the water rose, the track was kept open by the coming and going of the *mashuf*.

Unfortunately, these traditional marsh villages were destroyed as the marshes were drained by the government. Most of the Ma'dan who have migrated to Iraqi cities or to Iran now live in more urban dwellings. Some have converted their marsh lifestyle to a more conventional form of agriculture and rural living. A few thousand Ma'dan are believed to have returned to the marshes since 2003. However, many Ma'dan seem to have

*Ma'dan children play in water canals that still are left in what is now mostly dry land in Qurnah, southern Iraq. Saddam Hussein diverted water away from this area, drying up the heart of the Fertile Crescent. (AP Images/Elizabeth Dalziel)*

no wish to return because of the difficulty of the traditional lifestyle.

### **10 FAMILY LIFE**

The traditional Ma'dan way of life was organized as a tribal society made up of various groups of families who shared a common lineage, with each family group headed by a sheikh (leader). Marriages were arranged by parents, although a couple had some choice in the matter. Paternal first cousins had the first claim to a young woman for their bride. Another who wished to marry her must have her paternal first cousin's father's agreement to give up his son's right to her. In traditional Ma'dan homes, men and women did not eat together and all meals were conducted in silence. All talking was done before and after the meal, never during it. Men and women were generally segregated in public life as well, although young children would play together.

Today, very little is known about the family life of the Ma'dan since their displacement from the marshes. It will take time for the marshes to recover and to learn whether or not the Ma'dan traditional way of life will be restored.

### **11 CLOTHING**

Traditionally, men wore a long, thin shirt that reached to their calves or ankles. In the winter, they sometimes wore a jacket

over it. They also wore the traditional Arab head cloth, usually without a rope to hold it in place (they simply tie it around the head). All grown men had short mustaches. Women wore dark robes that covered the entire body. Ma'dan women were generally not veiled, although they did cover the head with a long cloth or shawl. Only children wore colorful clothes; adults always wore plain light or dark clothes. Men usually wore white and women wore black.

Since their displacement from traditional marsh villages, it is not clear whether most Ma'dan prefer the traditional garments of their culture, or if they, perhaps, have fully adopted the styles popular in their new home towns.

### **12 FOOD**

The traditional staple foods were fish and curdled water-buffalo milk. Some Ma'dan also grew rice. Bread was cooked over a fire on round clay platters. Today, Ma'dan diets are most likely linked to what foods are available in their new home towns.

### **13 EDUCATION**

There were no schools in the marshes. While most Ma'dan parents wanted their children to have the advantages of a modern education, not all could afford to send them to the schools in the surrounding cities and towns. At the town and city schools, Ma'dan children were taught that their life in the marshes was

primitive and backward, and some became become discontent at home. Many ended up living marginal lives in the cities and towns, too well educated to be satisfied within the marshes, yet not well enough educated in the ways of town life to be successful there. These prejudices against the Ma'dan way of life have prompted many of the now displaced Ma'dan to integrate more fully with the Arab traditions, including those of formal education, that flourish in the areas to which they have located.

#### 14 CULTURAL HERITAGE

Ma'dan culture was been largely inherited from the Bedu (or bedouin—see **Bedu**). A traditional dance of the Ma'dan is known as the *hausa*. It is a type of war dance performed by men in which they dance in a circle holding their rifles over their heads and firing them.

#### 15 WORK

In the marsh villages, Ma'dan traditionally supported themselves by fishing and by hunting wild boars and birds. They also kept small herds of water buffalo, which they used for milk. Some Ma'dan also grew rice. Fish were traditionally caught with a five-pronged spear thrown from the bow of a canoe. A more modern method was to stun them with poisoned bait, usually shrimp, laced with datura (a member of the nightshade family) that would be tossed onto the surface of the water. Only professional fishers, referred to as *berbera*, used nets. In the traditional marsh villages, collecting the grass used as fodder for the water buffalo was a constant chore, usually assigned to young boys. Weaving reed mats for sale in the surrounding towns was a common source of extra income for the Ma'dan.

#### 16 SPORTS

In the marsh villages, hunting was both a necessity for survival and a favorite sport among the Ma'dan.

#### 17 ENTERTAINMENT AND RECREATION

The Ma'dan love to sing and dance and often entertain each other in this way. They also play a game called *mahaibis*, or "hunt the ring." The players divide into two teams. The team that has the ring sits in a row with their hands under a cloak. One member of the other team stands in front of them and tries to guess who has the ring and in which hand. The game often ends in noisy disputes and accusations of cheating.

#### 18 FOLK ART, CRAFTS, AND HOBBIES

The most common crafts among the traditional Ma'dan are the building and repairing of canoes, the weaving of reed mats, and blacksmithing. Ma'dan blacksmiths make fishing spears, reed splitters, sickles, and nails for the canoes. Some of the Ma'dan weave cloth. They make woolen cloth that both men and women use for cloaks.

#### 19 SOCIAL PROBLEMS

The Ma'dan historically have been despised by other Arabs and suffered much abuse in the course of their history. The marshes are a perfect place to hide out, so soldiers and criminals are constantly invading the Ma'dan's territory. During the Iran-Iraq war (1980–88), many Ma'dan were driven out of

their homes, their few possessions were stolen, and their water buffalo were slaughtered for food by the armies. These practices continued through the 1990s, and much of the Ma'dan way of life has disappeared.

Most Ma'dan are believed to live in lower income Shia communities in Baghdad or have emigrated to Iran, with a few thousand believed to have returned to their traditional homeland. Those Ma'dan who have returned to the marshes lack clean drinking water, sanitation, health care, and nutrition.

#### 20 GENDER ISSUES

The displacement of the Ma'dan from their homeland in the marshes has caused the traditional tribal structure to deteriorate. Little is known about the conditions of Ma'dan women. Nearly 4.2 million Iraqis have fled the war-torn country and an additional 2.2 million have left homelands within the country for cities and urban areas. The Ma'dan are among this group of displaced individuals and, until the situation in Iraq can be stabilized, the survival of both Ma'dan men and women is highly at risk.

Sex roles in many Arab cultures are clearly defined: women manage the household while men tend to affairs outside of the home.

# MADURESE

**PRONUNCIATION:** MAHD-oo-reez

**LOCATION:** Indonesia (islands of Madura and Java)

**POPULATION:** 6.8 million (2000)

**LANGUAGE:** Madurese

**RELIGION:** Islam

**RELATED ARTICLES:** Vol. 3: Indonesians; Javanese

## <sup>1</sup>INTRODUCTION

Despite their ancestral island's proximity to Java (at the closest point, only a short ferry ride from the great Javanese port of Surabaya), the Madurese, Indonesia's fourth-largest ethnolinguistic group, have maintained an identity distinct from their neighbors. Although itself of little economic value, Madura's strategic location guarding the approaches to the deltas of Java's greatest rivers, the Brantas and the Bengawan Solo, ensured an intimate involvement in Javanese history. As early as the 15th century, the kingdom of Arosbaya, a vassal of the east Javanese Majapahit court, united Madura's petty states. Arosbaya adopted Islam in 1528; in later years, a reputation for greater devotion and stricter practice to this religion would set the Madurese apart from the Javanese.

In 1624, Sultan Agung of the central Javanese kingdom of Mataram conquered Madura, which by then had fragmented into five principalities. Forty-eight years later, the Madurese prince Trunojoyo returned the favor by revolting against Mataram, getting as far as destroying the latter's capital with the help of Makassar mercenaries. However, the Dutch East India Company put an end to his venture, eventually overseeing a division of the island into two principalities, the western one placed under the Cakraningrat dynasty.

In 1743, eastern Madura passed from the suzerainty of Mataram into the control of the Dutch East India Company. Well into the 19th century, the Madurese rulers served as virtually independent allies of the Dutch; the last portion of the island to come under direct Dutch rule did so in 1885. While the Dutch never subjected the arid island to the Forced Cultivation System, the Madurese rulers contributed to Dutch imperialism by enlisting from among their subjects recruits for Dutch armies fighting elsewhere in the archipelago.

Under direct colonial rule, Madura's welfare continued to decline. A 1918 report indicated that the economy was poor and famine was widespread, and a heavy tax burden compounded these difficulties. In response, the colonial government established a special fund for Madura relief, maintaining it until 1937. Madura suffered under the Japanese occupation of 1942–45 with peculiar severity. The returning Dutch attempted to establish a client state on Madura, but this was integrated into the Indonesian republic in 1950.

In comparison to many other regions of the country, Madura has continued to suffer from economic stagnation, forcing many Madurese to migrate off-island (for the 1997–2001 Madurese-Dayak conflicts in Kalimantan that killed many Madurese transmigrants and displaced many more, see the article entitled **Ngaju Dayak**). There is some evidence that a certain percentage of the younger generation of Madurese resident in East Java are switching over to the Javanese language as their primary language. Other trends affecting Madurese tradi-

tional culture include: modernization, which has brought the lifestyle of well-to-do urban Madurese into conformity with the Jakartan national model; and Islamic reformism, which seeks to bring Madurese life in general into line with orthodox (often Middle Eastern rather than indigenized) Muslim standards. A bridge connecting Surabaya and Bangkalan on Madura is nearing completion (as of 2008) that will accelerate the integration of Madura's western tip into the Surabaya metropolitan area; already only a short ferry ride away, Bangkalan city has been evolving into a commuter suburb and alternate location for industrial and service firms for Indonesia's second largest city (population, approximately 3 million).

## <sup>2</sup>LOCATION AND HOMELAND

In contrast to much of neighboring Java, the island of Madura offers few areas suitable for the irrigation essential to wet-rice cultivation. Besides depending on rainfall, Madurese farmers must contend with the soil's high calcium content (the island has long been a major source of lime). Because of such limits on agricultural productivity, the island has often failed to sustain its population, many of whom have migrated to the opposite coast of East Java and beyond in search of a livelihood. After the wars of the 17th and 18th centuries decimated the native population of East Java, Madurese (along with Central Javanese) were brought in to repopulate large stretches of it. Already by 1930, there were more Madurese on Java than on Madura itself (2.5 million versus 2 million, respectively). According to the 2000 census, Madurese numbered 6.8 million. 2005 figures put the population of the island of Madura itself at 3.5 million. In many regencies along the north coast of East Java, Madurese are the numerically dominant ethnic group; they constitute 18% of the province's overall population (Javanese are 79%). In addition, Madurese have settled in many of the cities of Java, as well as in transmigrant communities on other islands.

## <sup>3</sup>LANGUAGE

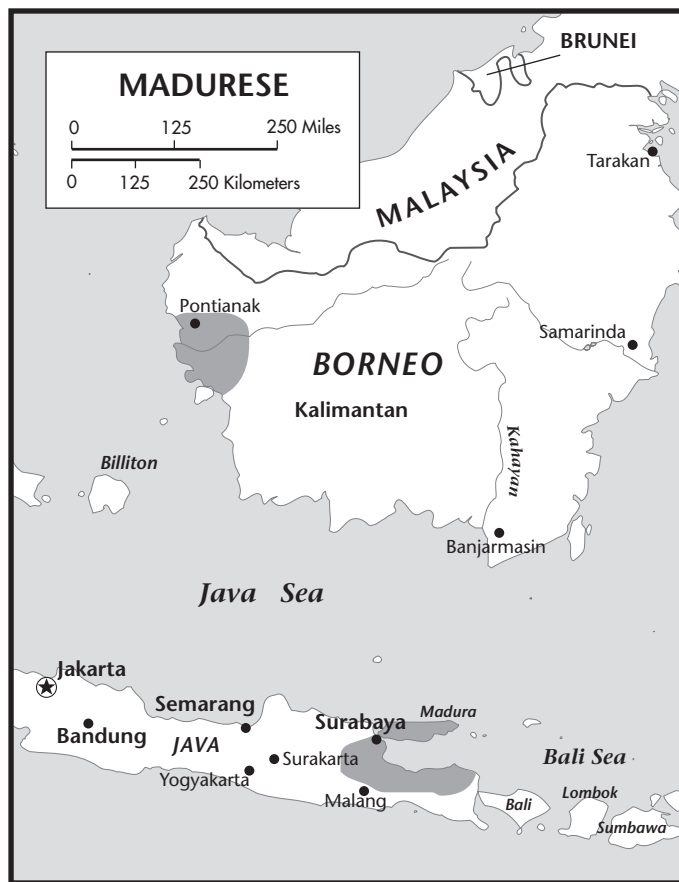

Although closely related to the fellow Austronesian tongues of the Javanese and Sundanese, the Madurese language is far from mutually intelligible with them. It is itself divided into three major dialects, centered respectively from east to west on Bangkalan, Pamekasan, and Sumenep. The language's traditional script, a version of the Javanese, is now in decline in the face of competition from the Latin alphabet used for Bahasa Indonesia. Like Javanese, Madurese possesses three language levels, ranging from the informal (named *Enja'-iya* after the words for "Yes" and "No"), to the polite (*Enghi-enten*), to the highly deferential (*Enghi-bhunten*).

## <sup>4</sup>FOLKLORE

See the article entitled **Indonesians**.

## <sup>5</sup>RELIGION

First introduced with the conversion of the petty kingdom of Arosbaya in 1528, Islam is central to Madurese life. Indeed, the Madurese as a group pride themselves on adhering to the tenets of Muslim orthodoxy (such as the five daily prayers) more strictly than the Javanese, many of whom practice rituals and profess beliefs more compatible with an earlier animist and Hindu-Buddhist heritage. *Pesantren*, Muslim religious schools

[see **Indonesians**], and *tarekat*, Muslim mystical brotherhoods, enjoy a special prominence. *Kyai*, religious scholars, often combine the role of reformist with that of traditional healer.

Nonetheless, the Madurese retain belief in the power of ancestral beings, ghosts, and other spirits who have the power to harm or help humans. Offerings and ritual feasts are prepared for these supernatural beings to ensure village welfare and a bountiful harvest, to celebrate important Islamic festivals, and to obtain success in upcoming business trips or bull races. Ritual feasts, or *kenduri*, that correspond to the Javanese *slametan* and center on huge cones of rice, are dedicated both to Allah and the ancestors. Only men partake in the feast itself, although a man always takes a portion of the dishes home for his wife and children. Other types of ceremonies include rites requesting rain and honoring the spirits of springs and wells (held annually, with *ojhung*), and those honoring sacred swords (*kris*) or spears, a type of chanting called *gumbek* accompanies weapon veneration.

## 6 MAJOR HOLIDAYS

See the article entitled **Indonesians**.

## 7 RITES OF PASSAGE

Important ritual celebrations mark the following life passages: the seventh month of pregnancy, an infant's first contact with the earth (several months after birth), a boy's circumcision, a girl's first menstruation, and the funeral and subsequent commemorative ceremonies. As in other Muslim cultures of Indonesia, a circumcision procedure may also be performed on

girls, ranging from token rubbing of the clitoris to excision in some cases, often combined with their first ear-piercing.

Wedding customs resemble those of the east Javanese, differing for the most part only in terminology. In a first step known as *nyalabar* or *ngembang nyamplong*, the boy or man's family sounds out the possibility of marriage with a prospective girl's or woman's family. Next, the male's family formally asks (*narabas pagar*) whether the female has already been promised to another. If not, the male's parents request the female's hand by offering her food and presents (which for the rich will include jewelry and batik fabric). The engagement is confirmed when the female's family agrees (*balee pagar*). After this, the male's family delivers (*lamaran*, *saseraan*) the bride-price to the female's side; according to tradition, cattle are an indispensable part of the goods to be handed over. Only now can the formal wedding ceremony (*akad nikah*), conducted by a Muslim religious official, take place.

## 8 INTERPERSONAL RELATIONS

In Madura's old principalities, aristocratic lineage provided a small part of the population with claims to deference and obedience from non-aristocrats. In more recent times, position in the colonial and later national bureaucracy has offered similar status. Concentrated in the towns, this highest class of nobles and civil servants patterns its lifestyle on the Javanese *priyayi* elite [see **Javanese**] (although, in accordance with the general Madurese religious orientation, focusing far less on unorthodox forms of mysticism). Similarly, modern well-to-do townspeople follow the lead of the Jakarta middle and upper classes. Far more significant in the perception of the rural population is the elevation above the "ordinary people" (*golongan biasa*) of the "children of the *kyai*" (*golongan bhindara*, including religious scholars, their students [*santre*], village religious officials (*modin*), and others well-versed in Islam [*orang alem*]). In addition to these religious elite, the group to whom "ordinary people" traditionally owed respect included various village authorities: the *kelebun* or village head; the *carek* or village clerk; and the *apel* or neighborhood (subvillage) head.

The Javanese and Sundanese have long applied certain stereotypes to their Madurese neighbors, which Dutch colonial and Indonesian national governments, academia, and popular media have adopted and perpetuated. These stereotypes portray the Madurese as more energetic and less constrained by etiquette than the Javanese or Sundanese and as more hot-tempered and quick to take offense and exact revenge; for this purpose, all Madurese men are said to carry a weapon, either a *kris*, a *celurit* [sickle], a *calo'* or *wadung* [machete], or a crowbar. On the "positive" side, the Madurese are appreciated as hardworking, particularly in the manual jobs left to them by other ethnic groups.

What can be said without exaggeration is that Madurese prize their personal honor. For instance, a man will not go to a party to which he has not been explicitly invited. In working his fields, a man will not ask the assistance of anyone outside his immediate family. Men will not cooperate with each other before fixing the precise division of labor and terms of compensation. They prefer to use go-betweens in conducting negotiations and will have these go-betweens witness any exchange of money. This sense of personal dignity may account for the aloofness many villagers display towards foreigners (isolation also breeds a certain wariness).

Madurese refugees arrive in Kamal, Indonesia. The Madurese were fleeing violence in Borneo after indigenous Dayaks rampaged the area killing nearly 500 people in early 2001. (AP Images/Charles Dharapak)

An important feature of Madurese life is the *aresan*, a regular gathering in which one of the attendants wins by lot the contents of a pot to which all the others have contributed—eventually, previous winners being excluded one after one, every member of the *aresan* association will have his or her turn to receive the pot. Women often have their own *aresan* clubs, called *diba*.

## <sup>9</sup>LIVING CONDITIONS

The average of the 2005 Human Development Indices (combining measures of income, health, and education) for the four regencies of Madura was 59.25, far below that for Indonesia as a whole (69.6) and East Java as a whole (68.5). In Pamekasan regency, GDP per capita stood at us\$2,065, less than a third of East Java's as a whole (us\$7,046), and Sampang regency's Human Poverty Index was 38.3, almost twice that of East Java's as a whole (21.7). Sampang's level of infant mortality (2000 figures) was 89.55 deaths per 1,000 live births, almost twice East Java's as a whole (47.69) and four times that in Jakarta.

The classification of traditional houses distinguishes between houses consisting of a single room (*slodoran* or *malang are*) and those with more than one room (*sedanan*). Furthermore, traditional houses differ according to roof type: a *gadrim* with a two-ridge roof; a *sekodan* with four central pillars supporting the roof; and a *pacenanan* where the gables pro-

jecting from the two ends of the roof are carved in the shape of serpents, a style of Chinese inspiration. Traditional houses are windowless and oriented either north–south or in the direction of the rising sun.

Influences from outside Madurese tradition include the addition of a porch in front for sleeping and a porch in back for sitting and relaxing. Each household has a room or detached structure for praying. In the 1990s, modern utilities were much less common than on Madura than elsewhere in East Java: only 3.5% of households had access to hygienic water, and 15.8% to electricity.

Villages are laid out in no distinct pattern, houses being clustered together in the middle of fields. In upland areas, one type of village, the *kampung meji*, consists of the houses of 20 families related back to five generations. In Sumenep, another type of settlement, the *tanean lanjeng*, consists of five houses facing a common center and inhabited by kin related back to the third generation. Ownership of land in Madura is individual, although some village land falls under communal possession and is used to support the village headman and his aides.

## <sup>10</sup>FAMILY LIFE

For the Madurese, the distinction between kin (*bhala*) and all other people (*oreng*) is a paramount one. Kinship is bilateral, including both paternal and maternal sides, although noble ti-

ties pass exclusively through the male line. Marriage between cousins, which preserves the purity of the lineage, is the preferred match. Solidarity between kin is expressed in one type of extended family, the *koren*, in which the descendants (up to 10 households) of a common great-grandfather occupy a single compound.

Under ideal circumstances, a newly married couple establishes its own household at once; if this is not possible, it is also common for the couple to live with the bride's parents first. According to custom, one of a family's daughters, along with her husband and children, remains in her childhood house to take care of her parents in their old age. Madurese marriages are reputed to end less frequently in divorce than those among the neighboring Javanese and Sundanese.

A family's honor rests heavily on the respectability of its women, something which the family's men will fight to defend. A corollary of this is that men may harass women traveling without male kin escorting them (such as foreign female tourists).

In the old kingdoms, although a woman could not occupy the throne, she could exercise de facto supreme power as the mother or guardian of the heir, particularly if she herself were the daughter of a former ruler.

### **11 CLOTHING**

Women wear a *kebaya* (long-sleeved blouse) and a sarong extending below the knees, along with bracelets and anklets (*bingel*). Men's traditional clothing, generally of dark-colored fabric, consists of: a distinctive headdress (*destar*); an undershirt with horizontal stripes, often red and white; a long-sleeved, collarless overshirt; trousers that end just below the knees; and a wide sash tied around the waist.

### **12 FOOD**

Boiled rice mixed with ground maize is the primary food, supplemented by dried salted fish or side dishes of dried meat and vegetables, all accompanied by chili sauces. Meals are washed down with water or tea (since colonial times, prohibitions have been placed on indulgence in *tuak*, palm wine).

Specialties of the island of Madura include *perkedel jagung* (shrimp and corn fritters), *la'ang* (the regional beverage), *blak-en* (fish paste sold in old handmade jars), yam taffy, and the fruits guava and *salak* (the latter has a dark brown, scaly skin; white, sourish fruit; and a large pit). Famous outside the home island are Madurese chicken dishes, *soto* (a type of soup), and *sate* (barbecued skewers of goat meat, dipped in a mixture of sweet soy sauce and chili before being eaten).

### **13 EDUCATION**

The level of literacy on Madura is low by Indonesian national standards. The average of 2005 figures for literacy for its four regencies stood at 76.19%, considerably lower than that of East Java as a whole (85.84%). One out three people in Sampang was illiterate, a greater proportion than in Papua province where 28.42% was illiterate. According to 1990s figures, elementary school attendance on Madura was at 88.2%, lower than that in southern East Java (whose Madurese-speaking population is not large). See also the article entitled **Indonesians**.

### **14 CULTURAL HERITAGE**

With plots also taken from the Ramayana and Mahabharata epics, *wayang topeng* resembles the Javanese shadow play in that a single narrator (who is also director and musical conductor) performs all the speaking parts, but it replaces the puppets with masked dancers or actors. *Wayang topeng* has come to be regarded as the consummate symbol of Madurese culture, despite the fact that it has declined in popularity. Much more vital is *loddrok*, an earthier dramatic genre in which the actors are unmasked, speak their own parts, and sing Madurese-language songs (*kejhung*); it often replaces *wayang topeng* as an adjunct to village ceremonies. Yet another type of popular theater is *drama* which combines "Islamic" (Arab-Persian) stories with Indian dance numbers; the performances include women and professional transvestites, and admission is charged.

The Madurese have *gamelan* (percussion) orchestras similar to those of the Javanese, although the instruments are more frequently of iron rather than expensive bronze, and the sole singer is often a female impersonator rather than a woman. *Gamelan* accompany *wayang topeng*, *loddrok*, and *tayub* (in which a single female performer dances for a male audience and invites individual men to dance with her). Another, highly sophisticated performing art is *mamaca* or *macapat*, in which one person sings Javanese-language poetic texts while a second translates them into Madurese for the listeners; it is still heard in the old palaces and at village ceremonies and *aresan* meetings.

Many village occasions, such as the various bull contests, are accompanied by the *kenong telo* ensemble (including a drum; one large, vertically hanging gong; two differing sets of smaller, horizontally lying gongs; a rattle of metal plates on a string; and, most characteristically, the *saronen*, a high-pitched oboe). Substitutes for the *kenong telo* ensemble are the *bak beng* (bamboo instruments) and the *ngik-ngok* (a violin and modified brass instruments). On Ramadan nights, village youths stroll about striking wooden slit-gongs (*tuk-tuk* or *tong-tong*).

Stricter adherents of Islam strongly disapprove of traditional music forms, associating them with "idolatrous" rituals, such as the veneration of *bhujju'*, sacred tombs, or with the "morally corrupt" *wayang topeng* or *loddrok*. On the other hand, a number of genres exist whose greater "respectability" derives from clear Middle Eastern origins. The *haddrah* is a type of male group singing that incorporates Madurese songs and martial arts moves. In mosques, men also perform *saman*, which arrived from Yemen via Aceh in 1902; they dance in formation while chanting with dramatic waves of intensity.

### **15 WORK**

On Madura, the dominant crops are nonirrigated, such as maize. The island is also famous for its fruits and for medicinal plants. In recent years, tobacco has become a prime cash crop; Madura contains one-fifth of Indonesia's land planted with tobacco. Traditional exports included lime and salt (from sea water evaporated in pools on the long, sun-scorched beaches). Given the often meager returns from farming, livestock-raising is essential to the Madurese. Goats, horses, water buffalo, and cattle are raised, with cattle as the major export. Fishing is also very important. Madurese outrigger boats with triangular sails do an active business in shipping, particularly of timber from Kalimantan to Surabaya factories.

Many Madurese work as migrant laborers, working seasonally on East Java's plantations. Many also go far afield to conduct petty commerce, for example, in cattle, tobacco, fruits, and coconut palm sugar. In East Java's cities, others make roof tiles, shovel sand, pedal *becak* pedicabs, work in harbors, or sell Madurese specialties, such as *soto* or *sate* on the street. Some of Madura's excess labor is being absorbed by factories in Bangkalan, which is being developed as an annex to the Surabayan industrial area.

## 16 SPORTS

*Penca' silat* (an Indonesian martial art) is practiced in clubs and for competitions (women participate only as amateurs). One sport, now played in secret, is *ojhung*, in which men duel with rattan sticks. Training homing pigeons is also a popular pastime.

During the dry season (September–October), but also at other times for tourists, bull races (*kerapan sapi*) are held. Only village leaders and other rich peasants can afford to maintain a bull-racing team (a skilled jockey, bull-masseurs, and other personnel, not to mention the animals themselves, which are of the best breed and, unlike draught oxen, are pastured everyday). Elaborately carved wooden yokes, painted in bright red and gold, and other racing equipment are often passed down as family heirlooms. Winning a bull race, especially the island championship, is an intensely coveted honor. Competitors resort to spying or black magic to gain an advantage over opponents, while a full contingent of police is present at the races to suppress any outbreaks of violence.

On the days leading up to a race, specialists feed the bulls a special diet of fresh grass, eggs, coffee, and herbal potions. On the preceding night, the racing team holds an all-night vigil accompanied by continual *gamelan* music. Before the race itself, the *tari pecut* is danced, representing the steps in caring for racing bulls. The race itself involves pairs of bulls drawing sleds and jockeys down a 100-m (328-ft) or more racecourse at as much as 36 km (22 mi) per hour.

## 17 ENTERTAINMENT AND RECREATION

Such reading as takes place is of religious works, such as the Qur'an, sung poetry texts, comic books, and booklets of legends (a source for *drama* plots). In comparison with their urban counterparts, rural people listen more frequently to the radio (regional and national music, especially *dangdut* and *pop Indonesia*) and to cassettes of *con-locon* (clown) acts. Villagers watch television at the village head's house or at a *warung* food stall and see movies in outdoor cinemas and traditional performances sponsored by richer fellow villagers.

## 18 FOLK ART, CRAFTS, AND HOBBIES

Woodcarving is highly developed, as seen in bull-racing gear and in locally made furniture (beds, screens, chests, cupboards, and cake-keepers showing Chinese and European influence). Madurese batik cloth is in rich, bold reds, red-brown, and indigo and has designs depicting winged serpents, sharks, airborne houses with fish tails, and other fantastical sea animals. It is also customary for women to wear large silver bracelets; black-coral bracelets are another regional specialty, believed to prevent illness and cure rheumatism.

## 19 SOCIAL PROBLEMS

See the article entitled **Indonesians**.

## 20 GENDER ISSUES

The average Gender-Related Development Index for Madura's four regencies (2002 figures) is 46.43, dramatically lower than that for East Java as a whole (56.3). Gender Empowerment Measures (reflecting women's participation and power in political and economic life relative to men's) for the four regencies average to 35.9, lower by an even greater proportion than 54.9 for both East Java as a whole and for Indonesia as a whole.

# MALAYS IN INDONESIA

**PRONUNCIATION:** muh-LAYZ or MAY-layz

**LOCATION:** Indonesia (Sumatra and its eastern offshore islands; Borneo coast [also outside Indonesia on the Malay Peninsula])

**POPULATION:** 7 million on Sumatra (2000 census). Another estimate runs to over 13 million; the combined total of Malays living in Indonesia, Malaysia, Thailand, Brunei, and Singapore may be over 25 million.

**LANGUAGE:** Malay

**RELIGION:** Islam

**RELATED ARTICLES:** Vol. 3: Indonesians; Vol. 4: Malaysian Chinese; Malaysian Indians; Malaysian Malays

## <sup>1</sup>INTRODUCTION

One possible origin for the term “Malay” (*melayu*) may be a Dravidian (south Indian) expression *mala ur*, “hill people.” It is ironic, therefore, that it should come to refer to a maritime people with a sophisticated urban Islamic tradition (highlanders throughout the archipelago are considered most tenacious in their paganism). Of course, popular usage in English extends Malay’s scope to include all the indigenous inhabitants of Indonesia (other Papuans), Malaysia, and the Philippines, who share, at the very least, Austronesian languages and Southern Mongoloid physical features. This article will focus on the specific ethnic group in western Indonesia known as “Malay.”

Malays have identified, and to a great extent still do identify, more with the diverse small regions (once independent sultanates) to which they are native than with a broader “Malay” ethnicity. For centuries in the archipelago, converting to Islam was known as “*masuk melayu*,” literally “entering Malayness.” Thus, being “Malay” meant sharing in a cosmopolitan culture including as its key ingredients Islam and the maritime lingua franca called *bahasa Melayu*; common ancestry was *not* the decisive factor, as individual Malays might count Batak, Kubu, Javanese, Bugis, and others (as well as Arabs, Indians, Siamese, and Chinese) among their forebears.

According to the latest scholarship, around the time of Christ the ancestors of the Malays and other closely related groups began migrating from Kalimantan to the Sumatra coast, where they absorbed or displaced fellow Austronesian peoples who had settled there centuries before (forerunners of, among others, the Batak). In the early centuries AD, Malay seafarers played the role of the first intermediaries between China on the one hand and India and the Mediterranean on the other. Sumatra itself was famous as Suvarnadvipa (the “Gold Island”) and as the source of camphor and other exotic items. As early as the 5th century, various Sumatran port-kingdoms enjoyed relations with China.

By the late 7th century, one of these states came to overshadow all others and would establish the tradition around which a Malay identity would grow. Centered near the present-day city of Palembang in south Sumatra, the kingdom of Srivijaya dominated the Straits of Malacca region until its decline in the 11th century (partly due to a devastating attack from the south Indian Chola state). In its heyday, Srivijaya was legendary as a center of international trade and of Buddhism.

After shifting to the rival state of Malayu (modern Jambi), leadership of the Malay world came to rest in Malacca on the west coast of the Malay peninsula, founded by a refugee prince from Palembang in 1400. Like Srivijaya, Malacca controlled traffic through the Straits and promoted a universal religion, though it was Islam which it, most successfully, propagated. Meanwhile, Palembang itself became first an enclave of Chinese pirates and then the home of a highly Javanized version of Malay culture.

The Portuguese capture of Malacca in 1509 encouraged the rise throughout the region of small sultanates, often founded by Bugis, Minangkabau, and Arab adventurers, and prospering on the pepper trade until the mid-17th century (first linguistically non-Malay Aceh and then Riau-Johor inherited Malacca’s leadership of the Malay world to a certain extent). In the 18th century, Dutch, British, and even French maritime power began to limit the freedom of the Malay states. In the early 19th century, British and Dutch colonialism split the Malay world into Malayan and a Sumatran halves, a division with cultural consequences that persist to this day despite renewed post-colonial interchange and participation in a common regional economy centered on Singapore, the present-day successor of Srivijaya and Malacca.

Along the east coast of Sumatra by the late 19th century, a flourishing plantation economy (tobacco and rubber) developed under Dutch rule, the product of collaboration between European capitalists and Malay sultans—and thousands upon thousands of Chinese and Javanese coolies. This region experienced considerable upheaval during the Indonesian struggle for independence, which included violence against the native aristocracy, one victim of which was prince Amir Hamzah, the greatest poet in Bahasa Indonesia in the 1930s and 1940s. Since that time, Sumatra’s east coast and adjacent islands have experienced rapid development, fueled by oil and tin wealth as well as proximity to Singapore and Malaysia.

## <sup>2</sup>LOCATION AND HOMELAND

According to the 2000 census, Malays (self-identifying as such) were Indonesia’s third largest ethnic group, constituting 3.4% of the population and numbering almost 7 million. Indonesia’s Malays lived primarily on Sumatra in the provinces of North Sumatra (east coast), Riau (islands and mainland, where they equaled 38% of the population according to the 2000 census), Jambi (38%), South Sumatra (31%), Bangka-Belitung (72%), and Bengkulu; the interior of these provinces is largely inhabited by non-Malays, such as the Kubu and the Rejang. In the coastal regions, non-Malays are also numerous, especially Javanese transmigrants. Figures from the 1990s estimated the number there to be as high as 13 million, obviously based on different criteria than the 2000 census.

In addition, Malays inhabit the Malay Peninsula as well as communities along the Borneo coast (Indonesian Kalimantan, Malaysian Sarawak and Sabah, and Brunei). Half of Malaysia’s 2006 population of 26.6 million, or about 13.3 million, was Malay, while Pattani and three other provinces in southern Thailand were over 80% Malay. A 1998 estimate put the number of speakers of the Pattani Malay dialect at 3.1 million.

## <sup>3</sup>LANGUAGE

Malay is most closely related to Minangkabau, Iban (the “Sea Dayak” of Borneo), and Acehnese, less closely to Sundanese,

Madurese, and Javanese. It is spoken in several divergent dialects; the dialect of Riau-Johor, considered a direct legacy of the Malacca sultanate, is esteemed as the “purest” or “finest” Malay and has become the basis of the official languages of Indonesia, Malaysia, Brunei, and (after English and Mandarin Chinese) of Singapore. The Malay spoken in Sumatra differs from that of Malaya in employing Dutch rather than English loanwords, and it lacks the Javanese and other influences characteristic of the Malay spoken in Jakarta and the cities of Java that is so influential on modern colloquial and written Indonesian.

Long before European colonialism, one could make oneself understood throughout maritime southeast Asia, and as far away as ports in south China and Persia, in Malay. In its own right and as a vehicle for Sanskrit, Arabic, and Portuguese loanwords, Malay has had a profound impact on languages throughout Indonesia and the Philippines.

#### 4 FOLKLORE

Though weaker today under the pressure of modernist Islam, belief in spirits is still widespread. Every spot has its *penunggu* (guardian spirit), *hantu* (ghost), or *jembalang* (gnome). *Penunggu* inhabit graves, houses, or trees, and protect a village from other “outsider” spirits; they manifest themselves as a *harimau tengkis*, a tiger with one short leg. *Puako* (spirits) occupy specific places, such as river mouths, deep spots in streams, or certain parts of the sea; they may appear in animal form as a white crocodile, a snake, or a *gajah meno* (an aquatic elephant).

Upon entering a spirit’s “territory,” one asks permission of the spirit, saying “*Tabek datuk nenek, cucu menumpang lalu*” (literally, “Hello, honored grandparent, your grandchild is passing through”). Offending spirits cause illness (referred to as *ketegow* [*ketegoran*], a “warning”). One asks pardon through making an *ancak*, a basket full of offerings (eggs, turmeric rice, grilled chicken, cigarettes, etc.—as the spirit has requested through a *bomo*); one places this in a tree (for a forest spirit) or floats it on the water (for a water spirit). More orthodox Muslims distinguish *jin* (good spirits) from *setan* (devils), and instead of uttering “*Tabik*” declare in Arabic, “*A’uu zubi’llahi nibasy-syaitoni rrajim*” (“I am under the protection of Allah from cursed devils”).

The power of magic is widely recognized. Amulets (*azimat*) are worn, such as a piece of iron (*tangkal*) hung from a necklace or wristband (children) or worn as a hairpin (women). Weapons, thrones, and banyan trees, and individuals, such as sultans or *ulama* (religious scholars), possess mystical power. For instance, a curse will befall those disloyal to the sultan; only confessing the disloyalty to the sultan and begging him for forgiveness will lift the curse. People ask the aid of the spirits of powerful individuals, visiting their graves and vowing to sacrifice a goat or chicken upon realization of the wish.

#### 5 RELIGION

Islam has been integral to the Malay identity since at least the 14th century, if not as early as the 12th; as such it enters into every aspect of the culture [see **Malaysian Malays**]. Although it is regarded as virtual “idolatry,” *bomo* (shamans) are still known to invoke the Hindu Batara Guru and other figures, not as gods but as powerful supernatural beings.

The chanting of Islamic texts, such as the Quran and the *Barzanji* (tales of the life of Muhammad), often accompanied by the playing of tambourines (*rebana*, *berdah*, or *k[er]lompong*), accompanies ceremonies, such as circumcisions and weddings. At seven years of age, children begin to learn how to read the Quran, mastering the proper pronunciation, emphasis, rhythm, and tone; however, they usually do not understand what they are reading word for word. This is a prized skill, and especially expert readers compete in regional and national contests (*Mushabaqah Tiliwatil Qur’an*) that are televised with “pre-game/intermission shows” of folk dances of an “Islamic spirit” (*bernafaskan Islam*).

#### 6 MAJOR HOLIDAYS

See the article entitled **Indonesians**.

#### 7 RITES OF PASSAGE

To ensure a successful delivery, a ceremony (*tolak due* in Riau, *nuak* in Jambi) is held in the seventh month of the pregnancy. As soon as the child is born, prayers are said over it (*azan* for a boy and *qamat* for a girl; a drop of honey is dabbed on the girl’s tongue, so she will grow up with a personality sweet in its virtue). The placenta is wrapped in a white cloth, placed in a small basket, and buried in the backyard. Some days later, a name-giving ceremony occurs, including the child’s first haircut and the sacrifice of two goats for a boy and one goat for a girl. At three months of age, the child is made to step on the earth for the first time in a *turun tanah* ceremony (for girls, the first ear-piercing precedes this). As their passage to adulthood, boys undergo circumcision (*sunat rasul* or *khitanan*) after learning the

skills of reciting the complete Quran, performing *silat* (martial arts), and dancing the *zapin*.

Getting married involves the following steps. The young man's side (parents usually do the choosing) makes an initial inquiry into the availability of the young woman. If the woman's side signals its openness to an offer, the man's family sends its *sesepuh*, the most senior kinsman and his wife, to deliver the proposal; they bring betel-chewing paraphernalia and use poetic language. The next step is for the man's kin to present the agreed-upon wedding goods to the woman's house. As a sign of the formalization of the engagement, the palms and soles of the betrothed are reddened with henna (*inai*).

In the evening, the *akad nikah* (Islamic wedding ceremony) is held, led by an *ulama*; an odd number (3–11) of relatives line up to bless the couple with a dab of a special flour mixture. On the next afternoon, a procession takes the groom to the bride's house to the playing of *rebana* and the performing of *silat*. The bride's kin greet the groom's group by showering them with yellow-dyed raw rice; the two sides go back and forth declaiming *pantun* (structured poems) to each other. Once on the ceremonial dais (*pelaminan*), the couple enacts a ritual of mutual feeding (*suap-menyuap*); in Riau, they must refuse to eat food from each other's hands as a sign of self-respect. Later, the couple bows before their parents and asks for their blessing. With this, the wedding feast can begin.

Funerals follow the general Islamic form [see **Indonesians**]. Post-funeral prayers (*tahlil*) are held for three days after the burial and on the seventh, twentieth, fortieth, and hundredth day after the death.

## **8** INTERPERSONAL RELATIONS

Originally, a village was composed of people of the same lineage (*suku*), but, as outsiders have come to settle there, the bond of a common living place has taken precedence over lineage ties. These communities are small, such that everyone knows each other well and works together in daily activities, e.g., helps each other in emergencies or in holding each other's major celebrations. Villagers are careful to "weigh" each other's feelings (*timbang rasa*) and appeal to the *imam* or *penghulu* to resolve conflicts quickly. Each individual's internal sense of shame (self-respect, or personal and familial face), rather than external coercion, maintains social harmony. A person endeavors to avoid being marked as a person "who does not know custom," i.e., who offends by appearance, word, and action.

Community leadership includes a *penghulu*, a village head, now selected according to government regulations from among the heads of the various *suku*. An *imam* serves as the head of the mosque; leader of Qur'an recitation and religious education; authority in matters of marriage, divorce, and inheritance; and collector of the tithe (*zakat*). A *datuk* is a *suku* head who has become a territorial chief with power over other *suku* heads.

Since Indonesian independence, social relations have been democratized, with personality, position, and material situation carrying more weight than hereditary rank alone. In the kingdom of Siak (Riau mainland), society was traditionally divided into four classes: the sultan (or *raja*) and his consorts; descendants of the present or former *rajas*: the "good people" (*orang baik-baik*), the heads of prominent *suku*; and commoners. Using Javanese terms, such as *priyayi* (aristocrat), Palembang society distinguished the following upper strata: the

*Raden* (men)/*Raden Ayu* (women), descendants of royal consorts; *Mas Agus/Mas Ayu*, descendants of royal concubines; *Kemas/Nyimas*, descendants of (perhaps less-favored) royal concubines; and *Ki[ai]agus/Nyiayu*, the *ulama* or religious scholars.

## **9** LIVING CONDITIONS

Houses are raised on posts, and their walls are made of wooden planks, their roofs of dried leaves or shingles; the exact plan differs from region to region. In Riau, two kinds are known: the *rumah melintang* or *rumah bubungan Melayu*, with a rectangular plan and a long ridgepole; and the *rumah limas*, with a square plan and a short ridgepole (the four sides of the roof slant towards the top). In the front, often at a lower level than the floor of the main part of the house, is a *selaso*, a veranda that may be enclosed with a low wall of sago palm latticework. A kitchen structure stands behind the main house, connected to it by an intervening chamber (*telo*).

Aristocratic houses in Jambi and Palembang are basically similar but divide into several specialized chambers. At the front of the house is the *jogan*, a veranda where the family relaxes. From front to back, the rooms of a Jambi house have the following respective functions: an area for receiving male guests; the sleeping area for family's older boys; a room for newlyweds; the sleeping room for the family's older girls; and an area for receiving female guests. The interior of a Palembang house divides into sleeping areas for: young male kin who come to help with celebrations; middle-age guests; and older and highly respected guests. The kitchen is at the back. Houses built on stilts over the water are a common sight, for instance, along Palembang's Musi River or at Medan's Belawan port.

In 2005, the provinces with substantial Malay populations had higher Human Development Indices (combining measures of income, health, and education) than Indonesia's national score of 69.6: Riau's, the third highest in the country (after Jakarta and North Sulawesi) was 73.6, the Riau Islands' 72.2, Jambi's 71, Bangka-Belitung 70.7, and South Sumatra's 70.2 (all higher than Java's provinces and Bali). GDP's per capita (even subtracting income from petroleum and natural gas from GDP, important for Riau, Jambi, and South Sumatra) are very high by national standards: us\$29,348 for the Riau Islands, us\$6,982 for Jambi, us\$7,774 for South Sumatra, us\$12,234 for Bangka-Belitung, and us\$17,264 for Riau. Infant mortality rates (2002), however, were not particularly low: 47.66 deaths per 1,000 live births in Riau (islands and mainland) and 52.66 in each of the other three provinces (cf. 35.72 in Bali and 43.69 in Central Java).

## **10** FAMILY LIFE

The nuclear family (*kelamin*) is the basic unit of Malay society, consisting of a husband, a wife, and their unmarried children. Polygamy is permissible under Islam (up to four wives) but it is rare. Newlyweds may live for a time with the bride's parents before establishing their own house nearby. While in the parents' house, the couple obeys the father and contributes their labor or earnings to the larger household. Kinship is reckoned on both the mother's and father's sides, though the male line transmits noble titles. The inhabitants of a village or of neighboring villages may belong to a single clan (*suku*), but these connections have generally lost importance for Malays.

Terms of address distinguish birth order among siblings. In Riau, these are: *long* (from *sulung*, the first-born); *ngah* (*ten-gah*, second); *cik* (*kecik*, third or fourth); *cu* or *ucu* (*bungsu*, the youngest); even an only child is specified, as *nggal* (*tung-gal*, single). These terms also apply to siblings of grandparents (*datuk*) and of parents (*ayah/bapak*, father; and *emak*, mother); thus, the eldest granduncle (or grand-aunt) is called *tuk long*, the second-oldest uncle *yah ngah* or *pak ngah*, and the youngest aunt *mak cu*. In Palembang, the terminology differs: *kak-cak* is the eldest sibling; *kakcek*, the second-born; *kakcik*, third and younger. Uncles (*mamang*) and aunts (*bibi*) are specified as *mangcak*, *mangcek*, *mangcik*, *bicak*, *bicek*, and *bicik*.

Although interactions between elder and younger kin should not be stiff, respect for the former must be palpable; relations between in-laws tend, however, to be rather formal. On the major religious holidays, one pays visits to one's elders and (for the nobility) those kin of higher-ranking lineages. One should always seek the guidance of one's parents; otherwise, one earns a reputation for arrogance. During ritual celebrations, a son-in-law must show his submission to his parents-in-law by obeying any command, however great or small.

### **11 CLOTHING**

For everyday use, men wear pants and a long-sleeved shirt (*baju kurung*, sometimes with a high collar, in which case it is called *cekak musang* or *teluk belanga*); over the pants, with or without the *baju* tucked in, a cloth can be tied around the waist, extending down to the knee. Nowadays men wear a *peci* cap instead of the traditional turban-like headcloth, and Arab-style sandals.

Women wear a long *kebaya* or *baju kurung*, a sarong, a veil, and slippers (or go barefoot). Although Indian fabrics were once popular, now sarongs are made of plaid cloth in Bugis (Sulawesi), Trengganu (Malaya), and Samarinda (Kalimantan) patterns.

Ceremonial clothing for women differs only in the materials: sarongs of silk, decorated with motifs (such as flowers) in gold thread or gold leaf; and *baju* of satin. Men's attire is similar, though the predominant color is black; an additional cloth worn over one side of the torso (*kain samping*) must be of a color contrasting with the other pieces (to wear clothes all of one color, especially yellow, is the privilege of royalty). In addition, men wear a headdress, the style depending on rank, and shoes or sandals.

### **12 FOOD**

Rice is the heart of the meal, accompanied by fish, vegetables, and *sambal* (chili sauce). The fish may be stewed with coconut milk, chili, and spices to make a curry, or boiled with chili and tamarind or most simply coked with salt and garlic; it may also be fried or grilled. Vegetables (amaranth, eggplant, string beans, and squash) are boiled with *terasi* (shrimp paste) or salt fish for flavor. The ubiquitous condiment is *sambal terasi*, red or green chili ground with salt and mixed with roasted *terasi* and tamarind or some other souring agent. Breakfast consists of boiled cassava or sweet potato, eaten with grated coconut and sugar or salt fish and *sambal*.

Foods for special occasions include *lempok* and *emping* [see **Banjarese** *dodol* and *amping*] as well as *wajik*, black sticky rice cooked with coconut milk or palm sugar until dry, then cut into parallelogram shapes. *Asidah* is wheat flour mixed with

water, spices, and sugar, cooked until thick, formed into flower or *candi* (Hindu temple) shapes, and finally bathed in cooking oil and sprinkled with fried garlic. *Roti canai* is Indian-style fried flat bread, eaten with meat or chicken curries. *Nasi minyak* resembles Indian *biryani* rice.

The food of Medan is particularly rich in Indian- and Arab-influenced dishes that use dried seeds and aromatic spices, e.g., the not-very-pungent yet rich goat curries, *gulai kumah* and *gulai bagar*. Specialties of Palembang include: *empek-empek*, fish dumplings (sometimes stuffed with egg), served with a spicy sauce of chili, garlic, dried shrimp, palm sugar, soy sauce, and vinegar; and the local *kerupuk* (fried tapioca crackers flavored with seafood and spices), renowned because of its higher-than-average proportion of fish or shrimp. Palembang drinks include ginger tea, fruit juices, and *air rebusan kumis kucing* (literally, "water boiled with a cat's whiskers"), a diuretic.

### **13 EDUCATION**

In 2005, the level of literacy for provinces with substantial Malay populations was high by Indonesian national standards, standing at 94.54% for Jambi, 95.44% for Bangka-Belitung, 95.63% for South Sumatra, 95.97% for the Riau Islands, and 97.76% for Riau (cf. 87.41% for Central Java and 78.79 for West Nusa Tenggara). (See also the article entitled **Indonesians**.)

### **14 CULTURAL HERITAGE**

As with other aspects of Malay culture, musical traditions reflect ties to the Middle East and Islamized India. The *rebana* (tambourine) is a prominent instrument; a group of rebana players usually accompany various forms of chanting and dancing. In addition, there is a tradition of popular song (*lagu Melayu*) inspired by Arab and Indian models; in a modernized version (*orkes*, "orchestra"), influenced by Indian film music and employing Western instruments, such as the saxophone and accordion, *lagu Melayu* became the basis of the nationally popular *dangdut* [see **Indonesians**].

Malays perform numerous folk dances, the function of many of which is to greet guests. Traditional celebrations include *joget* (also called *ronggeng*): the original form begins with a single female singer-dancer (or several) performing in front of a group of men; if a man wants to dance with a woman, he must pay—this has evolved into a couple dance for young people. Another dance form accompanying rite of passage celebrations is *zapin*, a pair or pairs (formerly only men but nowadays also women and male-female couples) dancing to the accompaniment of the *gambus* (an Arab lute-like instrument), two-headed drums (*marwas*, plural *marawis*), and sometimes violins or accordions. Also popular is *zikir*, in which the performers combine unison chanting of praise to Allah with dynamic arm movements while seated. Until the mid-20th century, several forms of sung theater, some highly eclectic (combining Malay, Javanese, Indian, Middle Eastern, Indian, and Western influences) were popular in the Malay world: *mak yong*, *mendu*, *bangsawan*, and *stamboel*.

While the writings of Hindu-Buddhist Srivijaya have been lost, victims of the tropical climate, the rich literature of the later Islamic courtly tradition has been transmitted down to our time, in manuscripts that have been copied and recopied (and reworked) over the generations. These include verse chronicles of a semi-legendary character, such as the *Hikayat Raja-Raja Pasai*, the *Sejarah Melayu*, the *Hikayat Hang Tuah*,

and the *Tuhfat al-Nafis*. The last great center of classical Malay literary production was the Riau island of Penyengat in the 19th century. The majority of Malays has, however, until very recently been illiterate; memorizing and improvising rhymed poetry in the short *pantun* and *syair* forms is still a common skill.

### **15 WORK**

Living in a region dominated by thick forests and swamplands, Indonesia's Malays have traditionally depended more on the sea than on the land for their livelihood, either as fishers or as traders. In the limited areas where it is feasible, they have also practiced wet-rice as well as swidden (shifting-cultivation) farming. Since the 19th century, the region has become known for plantation crops in high world demand such as tobacco and rubber, as well as for petroleum and tin (the latter has been mined since ancient times). The huge work force required by these enterprises has not for the most part been derived from the local Malays, but rather from Chinese and Javanese immigrants.

### **16 SPORTS**

Malays have long practiced their own form of martial art, called *silat*; it is characterized by graceful arm movements (reminiscent of kung fu or t'ai chi) that lend themselves easily to performance as dance.

### **17 ENTERTAINMENT AND RECREATION**

Spinning tops (*gasing*) is a popular pastime among males of all ages. A game begins with five or six players spinning their tops simultaneously; the player whose top stops spinning first becomes the lowest "slave," the next one to fall becomes the next higher "slave," and so on until the last, who is then named "king." In the next stage, only a player and the next-higher-ranking player spin their tops at a time; the lower-ranking attempts to strike his superior's top with his own, in which case the former gets promoted and the latter demoted.

See also the article entitled **Indonesians**.

### **18 FOLK ART, CRAFTS, AND HOBBIES**

The most developed crafts are woodcarving (motifs decorate a house's pillars and walls) and weaving *songket* (cloth into which dense designs have been woven with gold thread).

### **19 SOCIAL PROBLEMS**

One of the provinces with a substantial Malay population, Riau (including the now separate province of the Riau Islands) was among the provinces experiencing the highest occurrence of collective violence in Indonesia between 1990 and 2004: 100 people died in 165 incidents (cf. West Java with over 11 times the population but only 5 times the number of incidents). Most of the incidents involved intra-village brawling, often provoked by land-grabbing; a few were instances of vigilantes exercising "popular justice." One anomalous incident was the major riot that broke out due to a gambling dispute in the town of Selat Panjang in 2001: many Chinese houses were burned, 16 Chinese were killed, and hundreds of Chinese fled to a nearby island; except for this case, all anti-Chinese violence in Indonesia between 1990 and 2004 was confined to 1997–1998 (see also the article entitled **Indonesians**).

## **20 GENDER ISSUES**

In 2002, despite very high GDP's per capita, the provinces with substantial Malay populations had lower Gender-Related Development Indices (combining measures of women's health, education, and income relative to men's) than Indonesia's national score of 59.2: Bangka-Belitung was 59.2, Riau's 56.9, South Sumatra's 55.5 and Jambi's 53.3 (all lower than North Sulawesi, Bali, Central Java, and Central Kalimantan). Gender Empowerment Measures (reflecting women's participation and power in political and economic life relative to men's) were quite low by national standards: 46.8 for Jambi, 40.4 for Riau, and 38.9 for Bangka-Belitung—only South Sumatra's, 56.9, was higher than the national GEM (54.6).

# MALAYSIAN CHINESE

**PRONUNCIATION:** muh-LAY-zhun chigh-NEEZ

**LOCATION:** Malaysia

**POPULATION:** 5.4 million (in 2000)

**LANGUAGE:** Malay; Chinese; Tamil; English

**RELIGION:** Buddhism; Islam; Christianity

**RELATED ARTICLES:** Vol. 3: China and Her National Minorities

## <sup>1</sup> INTRODUCTION

Ethnically known as Orang Cina or Kaum Cina in Malaysia, the Malaysian Chinese are the descendants of Chinese who arrived between the 14th and mid-20th centuries. The first wave of Chinese emigrants in the 14th century were mostly merchants, who were partly attracted to the economic potential of the country and partly fleeing from the persecution of the Ching government of Chung Kuok (China). The latter waves were mostly poverty-stricken peasants who hoped for a better livelihood for themselves and their families.

It was only in the 19th century, particularly after the 1820s, that a great number of Chinese migrated to Malaya. This was due to colonial occupation, which caused rapid economic and land development in the region. This development included the opening up of large tracts of land, which created opportunities for mercantile expansion, which in turn attracted emigrants from China. Most of these emigrants were from rural villages and small towns of the southeastern provinces of Fujian and Guangdong. Upon arrival in Malaya many worked as indentured laborers known as coolies.

## <sup>2</sup> LOCATION AND HOMELAND

In 2000 it was estimated that there were about 5.4 million Chinese in Malaysia, making up 30% of the entire population. The Malaysian Chinese are made up of eight dialect groups which include Hokkien, Hakka, Cantonese, Teochew, Mandarin, Hainanese, Min Bei, and Foochow.

DIALECT	POPULATION
Hokkien	1,848,211
Hakka	1,679,027
Cantonese	1,355,541
Teochew	974,573
Mandarin	958,467
Hainanese	380,781
Min Bei	373,337
Foochow	249,413

Most Malaysian Chinese live in urban areas, dominating the commercial and business areas of the country. A large number also live in areas called *kampung baru* (new villages). These "new villages" were set up by the government during the Communist insurgency in the 1940s and 1950s in order to keep the Chinese community from getting involved with any subversive movements by the Communists against the government.

Nowadays, the Chinese form the majority of the population in almost all cities and towns throughout Malaysia such as Georgetown, Ipoh, Kuala Lumpur, Kuching, Petaling Jaya, and Klang. Most of them are found on the west coast of Peninsular Malaysia, the most urbanized part of the country, as well as in the major cities and towns of Sabah and Sarawak.

## <sup>3</sup> LANGUAGE

Even though Malay is the national and official language of Malaysia, Chinese, Tamil, and English are also widely spoken. Mandarin is taught in Chinese schools in Malaysia (along with Malay and English). Since most of their ancestors were from southern China, Malaysian Chinese speak Cantonese, Hokkien, and Hakka dialects, which are very similar to each other. Other dialects include Teochiu, Hainanese, Hokchui, and Hinghwa. With this many Chinese in Malaysia are trilingual, speaking and writing in Malay, English, and at least one of the Chinese dialects.

A Chinese name consists of three parts: the family name, the generation name, and the personal name. In contrast with the Western manner of putting the Christian name first, the middle name second, and the surname last, the Chinese put the family name first, the generation name next, and the personal name last. An example of a Chinese name is Foo Sing Choong. However, there are a few Chinese names that consist of only two parts; for example, Chin Peng. In either case, the first part is the family name. Western-educated or Christian Chinese usually add a Christian name to their names. As a result, some of their names consist of four parts; for example, Alex Goh Cheng Leong.

## <sup>4</sup> FOLKLORE

The Chinese have many folk tales and myths. Some of these myths and tales reveal their view of the world, such as their myth of the creation of the universe and the origin of humankind. According to this myth, heaven and earth were created

by *Pan'gu*, the origin man. The existence of humans is made possible by the complementary nature of two opposites: heaven and earth, or *yang* and *yin*. Besides that, the harmony of three—heaven, earth, and humans—makes the fixation of the four cardinal directions possible. Once these four directions are defined, life forms and inanimate objects are derived from the five basic elements of *wuxing*: water, fire, wood, metal, and earth. The ethereal force of the sun and the moon is required to regulate these elements in harmony. It is the true harnessing of elements, and forces of nature, that enables humankind to flourish to the eight polar points, which are only limited by the boundaries of the nine heavens and the 10 hells. The birth of the Chinese cosmos, and with it the subsequent idea and formulation of the soul, are based on this elementary arithmetic.

## 5 RELIGION

A small percentage (9.6%) of Chinese in Malaysia are Christian, while most are Buddhist and Taoist. Some, (0.7%), have converted to Islam through marriages with Malay Muslims. Although Buddhism originated in India, and early Malays in Malaysia were Buddhist, the Buddhism practiced in Malaysia today was brought by the Chinese who migrated to Malaysia in the 19th and early 20th centuries. Once in a new environment, the immigrants adopted a practical approach to religion, embracing pragmatic aspects of Buddhism, Taoism, and ancestor worship. Although the religion was rooted in Chinese tradition, once transplanted it was adapted to the current needs of the immigrants.

By the turn of the 20th century, Buddhist temples in Malaysia had increased in number to cater to the moral needs of the population. Most of these temples today promote a “folk version” of Buddhism, peopled by a multitude of gods and goddesses. These temples are concerned with putting forward the views of special Buddhist scriptures, which are connected with an individual’s salvation. Special problems and requests may be brought before the deities by presenting them with joss sticks, flowers, or fruits. Devotees at Chinese temples usually burn incense to give thanks and to ask for blessings. There are times when wealthy persons may bequeath some of their estate for the upkeep of an old temple or the endowment of a new one. This will help ensure the donor’s blessings in the afterlife and perpetuates her or his descendants’ prosperity.

## 6 MAJOR HOLIDAYS

The Chinese New Year begins on the first day of the lunar calendar and falls anywhere between January 21 and February 19. It is one of the major holidays in Malaysia when schools and offices are closed for two days. The celebrations may go on for 30 days, starting two weeks before New Year’s Eve. It is the most joyous time for the Chinese, a time of new beginning. It is celebrated with feasts, fun, gambling, lion dances, lighting of firecrackers, and “Open House” [see **Malays**]. Friends and relatives visit each other to eat, drink, and wish each other good luck and prosperity during the “Open House.” This is usually done on the first, second, and fourth days of the celebration.

Besides being a time for family reunions, Chinese New Year is a time when one’s debts are paid up, new clothes and shoes are worn, the entire house is cleaned and renewed, and old arguments are forgotten and peace is restored between family and friends. It is also a time to pay one’s respects to the elders and to worship the gods and ancestors. Children pay respect to

their elders and are given *ang pows* (“red packets”) containing money. Various festivities go on until the 15th day, *chap go mei*, at which the time Chinese New Year officially ends. The family will get together again for another reunion dinner. On this day, many unmarried women used to throw oranges into the sea or rivers as prayers to get a good husband. However, this is becoming a very rare practice among the Chinese community today. Besides Chinese-based holidays, Malaysian Chinese also consider other Festivals of Malaysia as major holidays. The list includes New Year’s Day, Hari Raya Puasa or Hari Raya Aidil Fitri (end of Ramadan), Thaipusam (celebrated by Hindus on the 10th month of the Hindu calendar), Chinese New Year (celebrated over 15 days beginning on the first day of Chinese Lunar Calendar), Wesak Day, Gawai Dayak (harvest festival), Deepavali, and Christmas.

## 7 RITES OF PASSAGE

In the past, women gave birth at home with the help of a midwife, whereas today the majority of women give birth in hospitals with the help of a gynecologist. During her confinement, a young mother is prohibited from eating “cold” food such as fruits. Instead, she is encouraged to eat “warm” food, particularly *kachang ma*, a chicken soup stewed in distilled rice-wine and herbs.

The most important occasion on the birth of a baby is the “first-month” celebration. Friends and relatives are invited to celebrate the occasion. A variety of food is served in abundance, and hard-boiled eggs with red-stained shells are distributed. Gifts are given to the baby during this occasion. However, this celebration is only of great importance for the first son and the first daughter. Subsequent children will have some ritual celebration, but not the elaborate affair accorded to the first-born. In the past, at this celebration, the child’s hair was ritually cut off and kept in a jar along with the dried umbilical cord. This was ritually used to stop fights between the child and his or her other siblings.

During their childhood, Chinese children are expected to help their parents at work. Many boys can be found helping their parents in the shops or working on the farms, while girls help their mothers with household chores or take care of younger siblings.

Unlike the Malays and Indians, the Malaysian Chinese do not have a tradition of puberty rituals. Even though dating was never part of their cultural tradition, it is becoming a common practice among the Chinese community in Malaysia. The young people are influenced by practices they see on television, in movies, and in the magazines and novels they read. A Chinese girl starts dating when she is 17 or 18 years old and gets married at least by the age of 24, while a boy would be a few years older. A married man and woman are automatically considered adults and are expected to act accordingly. Since Malaysia does not operate on a welfare system, the children of elderly parents are expected to take care of them until they pass away.

Death among the Chinese is marked by lengthy, colorful, and traditional ceremonies. A departed relative is sent off by his or her relatives with full ceremonial honors, partly to prevent the deceased from coming back to haunt them, and partly to “save face,” that is, to prevent people from talking negatively about the ceremony. Therefore, death is sometimes an expensive affair that can run into thousands of dollars. Funerals are

*A Malaysian Chinese father with his baby visits a shop for colorful Chinese New Year decorations. For decades, Chinese in Malaysia have silently endured government policies giving the country's majority ethnic Malays preference in education and politics. (AP Images/Howe GOH, File)*

sometimes held at home in large open spaces, or in funeral parlors.

The body of a deceased person is ceremonially washed, usually by the eldest son, before being dressed in an odd number of suits of clothing and laid in a coffin. This is followed by an elaborate ritual observation. It is important that the coffin is placed in a prominent position in the house, surrounded by the deceased's favorite possessions and refreshments. Candles are kept burning throughout the period so that the spirit of the deceased can view the surroundings. Offerings, incense, and paper money may be burnt close by. The coffin is never left unattended throughout this period. Relatives are expected to donate money for the occasion in odd denominations of RM10, RM30, or RM50, and never in multiples of RM20.

On the morning of the funeral, mourners come together for one last gathering. Sometimes stilt-dancers may perform before the coffin is taken to the graveyard. The funeral procession leaves the house at a predetermined time, often 2:00 PM. The hearse, usually a truck, is driven slowly from the house. The chief mourner and other relatives of the deceased follow the hearse on foot. Immediate members of the family dress up in shapeless garments of unbleached calico, indigo, or black cotton. Colorful attire and jewelry are unsuitable even for friends

who come to visit. This procession is preceded by trucks carrying banners and wreaths of condolence from associations or sympathizers, the local drums and gongs ensemble, and sometimes also by one or more brass bands. Therefore, a funeral procession can sometimes be heard from quite a distance. Funeral processions of prominent Chinese can be very elaborate and may last a long time.

After the funeral, the family continues to mourn the deceased by wearing black patches or black armbands with their somber clothes. Prayers are read every evening by Buddhist monks until the seventh day after the death. On a set day, the family visits the graveyard bringing a grand house, a car, some temple money, servants, a TV set, and a video player, all made from paper, to be burned at the graveyard for the deceased to receive and use in the other world. Usually the family is in mourning for 100 days.

## **<sup>8</sup>INTERPERSONAL RELATIONS**

The Chinese normally greet each other with "Have you eaten your fill?" or "Have you taken your food?" The response is always "Yes, thank you," even if one is starving. This greeting is similar to the Western "How are you?" "Fine, thank you." In business a polite Chinese will say, "Is your business prosperous?" The response will be, "My business is moderate."

Unlike the Malays and Indians, shaking hands as a form of greeting between a man and a woman is acceptable among the Chinese. Chinese men often greet each other with a friendly pat on the arm, while hugging or kissing is prohibited except in a close relationship.

Even though the Chinese do not have religious restrictions about wearing shoes in homes, it is considered inconsiderate to wear shoes in the house. This is because they may mar or soil the floor. Chinese usually entertain their guests in the living room and seldom show the entire house, particularly the bedrooms. Even family members do not enter each other's rooms without permission. It is proper to bring gifts such as fruit, sweets, or cakes on the third and fourth visit. However, gifts should always be given in an even number, as this is a sign of happiness and good luck.

A Chinese girl does not date until she is about 17 or 18 years old, and a boy would be a few years older. Even though it is not part of their tradition, dating as understood in the West is becoming very common among the Chinese, as compared to the Malay Muslims. One of the reasons is that most Chinese live in urban areas that make them more liberal.

## **<sup>9</sup>LIVING CONDITIONS**

The Malaysian Chinese populate most of the urban areas in the country. This is because most of them are traders and businesspeople who are very much involved in the commercial and professional sectors. In fact, they are considered the richest ethnic group in Malaysia, possessing 40.9% of Malaysia's total wealth.

Many Chinese in urban areas live in shop houses: the second floor is the living quarter, while the first floor is for business. In recent years an increasing number live in housing estates or suburban areas. They either live in condominiums, bungalows, and/or terrace houses. This is also due to the establishment of "new villages" at the fringes of urban areas in the 1940s and 1950s, which forced many rural Chinese to be relocated to urban areas.

Since the standard of living in Malaysia has increased tremendously during the past decade due to an economic boom, most Malaysian homes have consumer items such as cars, a television set, a VCR, and a refrigerator. This is particularly true among the Chinese who are economically better-off than the other ethnic groups. They have easy access to better sanitation, electricity, water supply, and efficient public transportation. Nonetheless, Chinese who live in rural areas do not have access to these basic amenities. They are still burning kerosene for light, and depending on wells and rivers for water.

### **10 FAMILY LIFE**

Marriage and raising a family are vital elements in the life of a Chinese. A basic Chinese household unit includes a husband, a wife, and their children. Since Chinese are expected to take care of close relatives, sometimes a household may include extended members of the family, such as grandparents, aunts, and uncles. Among the upper- and middle-class households, the unit may include a live-in servant or nanny who looks after the young children. A middle-class couple usually has two or three children, while lower-class families have more children.

Female members of a family are expected to know how to cook, clean the house, and take care of elder relatives. However, nowadays many Chinese women have professions that keep them away from their homes; therefore, they have to hire maids to take care of household chores. A husband's main responsibility is to provide shelter and financial support for his family.

Chinese families usually keep dogs and/or cats as pets. Dogs are partly kept to guard homes from burglaries. Sometimes parrots and other "singing birds" are kept as well. These birds are kept for their beautiful sounds and their ability to talk, and also for bird competitions.

### **11 CLOTHING**

*Cheongsam*, a tight-fitting, high-collared, slit-skirted dress, is the traditional Chinese women's dress, while *yi fu* is the traditional Chinese men's dress. However, most Malaysian Chinese nowadays wear ordinary Western clothes, such as t-shirts, pants, skirts, jeans, dresses, shorts, blouses, etc. The color red is considered lucky by Chinese, and they never wear black except to funerals, although nowadays some youngsters dress in deep black at New Year's celebrations. Also, some elderly Chinese women, especially if they are widows, wear black silk clothes for weddings and other ritual occasions. Older men, particularly the "shop houses Chinese" men, often wear long baggy shorts and tank tops.

### **12 FOOD**

The Chinese saying, "Anything that walks with its back to the sky can be eaten," shows that eating and drinking are their favorite pastimes and that they have a way to prepare and make tasty every edible object. Their staple foods include rice and a variety of noodles. While rice is usually eaten with meat and vegetables cooked in various ways, noodles are often prepared in broth or stir-fried. Noodles are usually eaten for breakfast, while rice is eaten for lunch and dinner. Most of these foods can be easily obtained from food stalls and cart vendors selling foods by the roadsides.

The Chinese consider certain foods as "cooling" or "heating." Heating foods such as chocolate, granola, and most meats

make the body feel too hot, too full, and uncomfortable. These foods also cause certain illnesses such as sore throats. While cooling foods are the opposite of heating foods, they can also cause or aggravate illnesses such as colds and coughs. Watermelon, tea, and yogurt are a few examples of cooling foods and are not supposed to be taken on cool days.

Unlike the Malays and Indians, the Chinese eat their food with chopsticks. The Chinese observe certain taboos and manners when eating with chopsticks. Chopsticks are not to be rested on the dinner plate or rice bowl; rather, they are to be placed on a rest stand or a bone plate. Sticking a chopstick in a rice bowl is considered a bad omen as it signifies death, pointing with chopsticks and waving them in the air is considered bad manners.

One Chinese traditional food is *Yee Sang*. It is basically raw fish served with salad and is usually eaten on the third or fourth day of the Chinese New Year's celebration. *Yee Sang* may consist of several types of finely shredded vegetables, colorfully placed in small portions and mixed with different condiments and a few flakes of raw fish.

### **13 EDUCATION**

Malaysia's literacy rate is about 92%. This is because primary and secondary schools are mandatory in Malaysia, which means children from the ages of 6 to 15 have to attend school. The Chinese are noted to be high achievers in education. This is partly due to their tradition that emphasizes education above everything else.

When the Chinese arrived in Malaysia, they brought along with them their schools. The first Chinese school in Malaysia was set up in 1815, and today there are about 1,300 fully and partially government-assisted Chinese primary schools which form an integral part of the Malaysian education system (salaries of teachers in these schools are paid by the government while the upkeep of school buildings and facilities is funded through donations by local communities). Most Chinese parents send their children to Chinese or English primary schools. In 2004, 90% (600,000) of all Malaysian Chinese schoolchildren were enrolled in Chinese schools. It is important to note that the Chinese schools are not solely for the Chinese, but are open to other communities in Malaysia. For instance in 1994 it was estimated that a total of about 32,000 non-Chinese students attended Chinese primary schools.

By the time a Chinese child is 4 or 5 years old, she or he is sent to kindergarten. At age 6, the child continues on to primary school. After the age of 12, some of these children will transfer to Malay and English high schools, while the others remain in Chinese medium secondary schools. However, they are all required to master the national language, Malay, since the national examinations for students at the age of 15 and 18 are conducted in Malay. Outstanding students in the examinations are allowed to go to Form Six or directly into the university. Due to a limited number of universities in Malaysia, many of these students go to universities in the United States, United Kingdom, Australia, and New Zealand.

Parents expect their children to do very well in school and will do whatever is necessary to ensure that their children are able to receive an education. Having said that, it is estimated that about 25% Chinese students usually dropout from school before reaching 18 years old. Many of these leave school to be-

come apprentice as plumber, mechanic, builder, and running family or personal enterprise.

#### **14 CULTURAL HERITAGE**

When the Chinese came to Malaysia, they brought their dance, music, and literature with them. However, due to Malaysia's multiracial society, most ethnic groups in Malaysia, including the Chinese, have adopted or assimilated each other's culture. Today, the Malaysian Chinese do not only speak the Chinese language, eat Chinese food, wear Chinese clothes, and appreciate Chinese classical songs, but they also eat Malay, Indian, and Western food, wear other clothes, and enjoy the music of other communities. Nonetheless, the Malaysian Chinese still keep their many traditional celebrations, which form a large part of Chinese cultural heritage in Malaysia. These celebrations include the Lantern festival, the Dragon Boat festival, the Tomb festival, the Hungry Ghost festival, and the Moon Cake festival.

Chinese traditional music and dance are usually aired and performed during festivities such as the Chinese New Year or when there is a funeral. One of their most popular dances is the Lion Dance, which is usually performed during the Chinese New Year's celebration. Literature such as *The Eight Immortals*, *The Monkey God*, and *Na Cha the Dragon Slayer* are ancient children's stories which are as popular in Malaysia as Mickey Mouse is in the United States.

#### **15 WORK**

Initially the Chinese came to Malaya as traders, shopkeepers, planters, and miners. They worked in tin mines and opened up plantations of pepper, rubber, gambier, coconut, and sugar. But today most Malaysian Chinese are prominent professionals and businesspeople. As a result they make up of the majority middle and upper income classes in Malaysia's multiethnic society. They are economically more progressive—dominating the Malaysian economy—resulting in an economic imbalance between races. This imbalance led to race riots on 13 May 1969. In order to rectify this economic imbalance, particularly between the Malays and Chinese, the New Economic Policy (NEP) was formulated by the government with the twin-pronged objectives of eradicating poverty and restructuring society. This increased the Malays' share of the economic pie by 20% during the period of 1970 to 1990, and the Chinese managed to advance from 28% to 45% over the same period.

#### **16 SPORTS**

Like most other ethnic groups in Malaysia, the Chinese have become acquainted with sports such as soccer, volleyball, basketball, swimming, ping pong, badminton, tennis, squash, etc. Three of the most popular spectator sports among the Chinese are soccer (known as "football"), basketball, and badminton. Some of the top national athletes, both men and women, who represent the country in international competitions or events are Chinese.

#### **17 ENTERTAINMENT AND RECREATION**

Since most Chinese live in urban areas, their forms of entertainment and recreation are very similar to those of residents in suburban or city areas in the US and UK. They attend movies, watch television and videos, listen to radio and music (on

cassettes and compact discs). They watch Western, Chinese and Malay movies, and listen to recordings of both local and imported traditional and modern music, which are available at local music stores. This includes Western, Chinese, Malay, and Indian music. Besides watching movies and listening to music, gambling with *mahjong*, a game similar to playing cards except that it is played with tiles, is a popular form of entertainment among the elderly Chinese.

#### **18 FOLK ART, CRAFTS, AND HOBBIES**

The Malaysian Chinese both in Peninsular Malaysia and Borneo are fine potters. They produce clay vessels, jars, vases, tall narrow jars wired as standard lamps, round containers with and without lids, ashtrays, plates, mugs, etc.

#### **19 SOCIAL PROBLEMS**

Due to the existence of the Internal Security Act (ISA) in Malaysia, the country has received plenty of criticism from human-rights activists in the West. The Act provides for detention without trial for individuals deemed detrimental to the harmony of the nation. Many prominent Chinese leaders have been detained under the Act since its enactment in 1950s.

Even though Islam is the official religion of Malaysia, and Malay is the national language, the basic rights of the Malaysian Chinese to practice their faith, speak their dialects, and keep their traditions and cultures are virtually secured by the constitution.

There is a high rate of school dropouts before the age of 18. The situation has created major concern since there is a tendency among dropouts to also engage in illicit trades and related activities.

#### **20 GENDER ISSUES**

Traditionally, female members of a family are expected to know how to cook, clean the house, and take care of elder relatives. However, nowadays gender roles in domestic realms have changed as a result of women's increased labor force participation. There is a more relaxed attitude in gender issues which can be gauged by the different roles husband and wife play in their duties to one another.

# MALAYSIAN INDIANS

**PRONUNCIATION:** muh-LAY-zhun IN-dee-uhns

**ALTERNATE NAMES:** Tamils

**POPULATION:** 1.8 million (2004)

**LOCATION:** Malaysia

**LANGUAGE:** Tamil; Malay; Chinese; other ethnic Indian languages

**RELIGION:** Hindu (majority); Sikh; Buddhist; Muslim; Christian

**RELATED ARTICLES:** Vol. 3: People of India; Vol. 4: Malaysian Malays; Tamils

## <sup>1</sup>INTRODUCTION

Indian traders came to Malaya as early as the 14th century. Through trading, they introduced Islam to the locals, particularly to the Malays. This was also done by marrying into the various royal families, consequently achieving positions of great influence. It was only in the latter half of the 19th century that an influx of Indian immigrants came to Malaya, due to its rapid economic development. The largest annual flow into Malaya occurred during the period of 1911–30, when more than 90,000 persons landed each year. They were recruited and solicited by the British, mostly as indentured laborers to work on rubber plantations. A large number of clerical workers were also brought in from Ceylon, while a number of professionals, doctors, and teachers were brought in from India, particularly after World War I. Almost every Indian ethnic subgroup is represented in Malaysia. This includes the Tamils, Gujaratis, Malayalis, Punjabi, Sindhis, Pathans, Telegus, Kannarese, and the Sri Lankan Tamil and Singhalese. They came from many parts of India and belonged to different faiths. Nevertheless, Malaysian Indians are mostly Tamils, forming 87.6 per cent of the population in Malaysia.

### INDIAN ETHNIC SUBGROUPS IN MALAYSIA (2000)

Group	Population	%
Indian Tamil	1,396,480	87.6
Malayali	35,809	2.3
Telugu	38,993	2.4
Sikh	33,231	2.1
Punjabi	23,147	1.5
Other Indian	41,477	2.6
Pakistani	11,313	0.7
Bangladeshi	2,951	0.2
Sri Lankan Tamil	8,735	0.5
Singhalese	1,641	0.1
Total	1,593,77	100

Source: R. Rajkrishnan and Manimaran Subramaniam 'The Indians: Classification, origins and social organization,' IN Hood Salleh (ed.) *The Encyclopedia of Malaysia, Peoples and Traditions*. Kuala Lumpur: Editions Didier Millet, 2006 (pg.59)

Even though the number and power of the Indians in Malaysia are far inferior to those of the Malays and Chinese, they are well represented in Malaysia's political arena. The Malaysian Indian Congress (MIC) plays an important role as a vehicle of political representation among the Indian Malaysians. It represents the Indians in the interethnic grouping of political

parties called the Alliance. It was brought in as the third partner of the Alliance after the elections of 1964.

## <sup>2</sup>LOCATION AND HOMELAND

Since most Malaysian Indians were brought in by the British government to work as laborers on the plantations, most of them live in the major plantation states of Selangor, Negri Sembilan, and Johor, with spillover in other states, such as Kedah, Perak, Penang, and Pahang. Even today, plantations still provide employment for most of the Indian population. Gradual urbanization, however, continues among Indians, as with other Malaysians, with many drifting from plantation areas to neighboring cities and towns. This rural-urban migration has increased since the 1980s as a result of a shift in plantation agriculture from rubber to the less labor-intensive oil palm. This is also due to improved education and industrialization. The latter has generated employment opportunities in urban areas. All of this has led to a decrease in the rural population from 65% in 1970 to 30% in 2000.

## <sup>3</sup>LANGUAGE

Besides being able to read, write, and speak in their mother tongue of Tamil, or other Indian languages, almost every Malaysian Indian is also able to speak and write Malay. A large number are able to speak and read Chinese characters as well.

Unlike Western names, the Malaysian Indians do not have surnames. Their names consist of two parts: their given name, and their father's name, with "s/o" ("son of") or "d/o" (daughter of) to append the father's name. For example, Dorai, the son of Sivam s/o Ramesh, is not Dorai Ramesh, but Dorai s/o Sivam. The same principle applies to a daughter's name, except that upon marriage she has to take her husband's name. Therefore, Dorai's wife, Suseela, will be known as Mrs. Dorai or Madam Suseela. There are times when the initial of the father's name is placed in front of a person's given name. For instance, Ramesh s/o Arul will be known as A. Ramesh, "A" being the initial of the father's name, while Ramesh is the person's given name.

While the more traditional families will name a son after a Hindu god and a daughter after a Hindu goddess, the Christian Indians, such as the Thomian Christians in Malaysia, have biblical surnames like Abraham, John, Samuel, or Jacob that are perpetuated in the family. There are others who adopted Portuguese names, such as Rozario, DeSilva, and Santamaria, as family surnames. These are descendents of Indians from Ceylon, Goa, and Malacca, which were colonies of Portugal.

## <sup>4</sup>FOLKLORE

The Malaysian Indians have many folk tales and myths that are closely related to their majority religion, Hinduism. One of their legends is the story behind the celebration of the Festival of Lights, or Deepavali, as a celebration of Nagarasuran's death. Nagarasuran was a Hindu tyrant and an extremely cruel king. As a result, his people appealed to Lord Krishna to remove him from the kingdom. Lord Krishna favored their appeal by having Nagarasuran defeated and fatally wounded in a battle. However, before his death, Nagarasuran repented from his cruelty and begged Lord Krishna for forgiveness. He also asked for a favor from Lord Krishna, that is, to let his people celebrate his death instead of weeping for him. Lord Krishna granted his request by letting them celebrate the Festival of Lights, the Deepavali.

*Malaysian ethnic Indians take part in a hunger strike to protest alleged discrimination against the minorities in Port Klang, Malaysia. (AP Images/Lai Seng Sin)*

## <sup>5</sup>RELIGION

Indian Malaysians are of different faiths. However, most of them are Hindu, while others are Sikh, Buddhist, Muslim, and Christian. For most Indian Malaysians, the Hindu religion is a way of life. They believe in the ultimate reality, which appears in many forms and for different purposes such as for life, creation, energy, and protection. They also believe in reincarnation that one's life and actions will determine one's next life and that the actions of one's previous life have determined one's present life. Since the spiritual goal of a person is to reach a state of perfection and enlightenment, she or he is given an opportunity to make up for any harmful deeds during her or his previous existence by being reborn.

Malaysian Indians have a deep faith, which is woven into their everyday lives. An Indian mother offers prayers and burns incense at the family altar every morning before the sun is up. This is done to greet her god and the new day. She may perform the same ritual at sunset, too.

Friday is a special day for Hindus in Malaysia. This is the day the Malaysian Indians flock to temples to offer prayers. At the temple, they make several different kinds of offerings. One of these offerings is the "banana" offering or "half-coconut" offering. This is done by giving a donation of 30 cents for a banana or 80 cents for half a coconut and by writing their

name on a small slip of paper that will be read out loud by the priests during their formal prayers. After the formal prayers, the devotees are given holy ash to put on their foreheads and betel nuts that can be chewed by the older folks or placed on the altar at home. The blessed banana or coconut is then taken home, either to be eaten or to be placed on the family altar. If the offerings are not eaten, they will not be thrown away, even after they have become rotten. Instead, they will be placed under a tree or into a river.

## <sup>6</sup>MAJOR HOLIDAYS

Two of the Malaysian Indians' major holidays are the Deepavali and Thaipusam. The Deepavali is known as the Festival of Lights and is usually celebrated in October. The exact day of the celebration is, however, determined by astrologers. It is largely a day for family reunions and also a time for non-Hindu friends to come visit during the Open House.

While Deepavali is a family celebration, Thaipusam is a very public celebration and takes place in late January or early February. It is a festival connected with penance, atonement, and thanksgiving for favors granted by the gods. It is dedicated to Lord Murugan, a god personifying the virtues of courage, youth, power, and endurance. At this festival, a person who had received answers to prayers will reciprocate by doing some

sort of penance to show his or her gratitude. This act of gratitude is usually accomplished by carrying a *kavadi* on his or her shoulder on the procession day. Although a *kavadi* can be any form of offering to the gods, it is usually a large semicircular object, almost like half of a bicycle wheel, which is carried on the shoulder. Metal hooks and spikes are attached to the *kavadi*, which are fastened onto the devotee's skin.

Thousands of Hindus take part in the Thaipusam procession, which usually takes place at the Batu Caves in the State of Selangor. As a result, it enhances the social identity of the community and reinforces the spirit of "communitas." It is on this day that every Indian is equal in the sight of every other Indian. Women have equal status with men, lower castes have equal status with higher castes, and there is no distinction made between individuals.

## 7 RITES OF PASSAGE

An Indian couple always hopes for sons, as only sons can perform certain rites during the father's funeral. A mother and her child are considered unclean and in a state of danger for 28 days after the birth of the child. Therefore, many restrictions are placed on the mother throughout this period. The child's birth is celebrated on the twenty-eighth day, with friends and relatives invited to the celebration. The child is dressed up in fancy clothes and jewelry for the occasion. A child will be named on this day by placing the child on the father's lap, or on the lap of some relative, while his or her name is whispered gently into his or her ears. From then on, the child will be known and called by that name.

Like many other communities in Malaysia, the Malaysian Indians increasingly observe their birthdays in the Western way. Some Indians have puberty rituals, particularly for their daughters. The Ceylonese Tamils have a ritual called *Chamati Chadanja*, which is usually carried out at the time of the girl's first menses, though it may be done just before the girl marries. This ceremony is usually held on an odd-numbered date, i.e., the seventh, ninth, or eleventh day of the month. Unlike the girls, Indian boys do not normally go through puberty rituals or circumcision.

Marriage in the Indian community is seen as sacred and eternal, lasting through life and even after. An Indian girl is expected to be married between the ages of 22 to 23, while a boy usually marries between the ages of 25 to 28. Even though young Indians have more freedom to choose their life partners than in the past, arranged marriages are still widely practiced among Malaysian Indians. Normally, two related families would arrange a marriage between their children. However, an Indian boy can only marry his father's sister's daughter or his mother's brother's daughter, but not his father's brother's daughter or his mother's sister's daughter. It is preferable to marry a girl of the same class, caste, and community.

A marriage is arranged by calling a priest from each side of the family to compare the horoscopes of the prospective bride and groom. If all is well, then the marriage is agreed upon. Once a match is made, the dowry is settled. It is important to note, however, that a marriage proposal usually comes from the girl's side. This is because, by tradition, a female has to provide a male with a dowry. The amount of the dowry depends on the eligibility (in terms of affluence and profession) of the young man.

There are certain marriage symbols used by Indian women once they are married. While South Indian women wear *pottu*, a red dot on the forehead, and *thali*, a necklace tied by their husband around their necks at the wedding, North Indian women wear bangles on their arms and red streaks on the parting of their hair.

The sixtieth birthday is the landmark age for an Indian gentleman. A celebration is held to pray for his longevity and good health. Malaysian Indians believe that when a person dies, the soul leaves the vicinity of the house only on the sixteenth or fortieth day, if the soul is very attached to his or her family. In respect for the soul, an oil lamp is left burning in the home day and night throughout that period. Although the soul may linger for a longer period, the body of the deceased is usually removed from the house within 12 hours. While most adults are cremated, children are not. When a woman's husband dies, she has to remove the *thali* from her neck and wipe off the *pottu* from her forehead. This symbolizes the end of her married life.

## 8 INTERPERSONAL RELATIONS

Traditionally, handshaking as a form of greeting is not widely used by the Malaysian Indians. Their usual form of greeting is to put the palms together in the prayer position and raise the hands to chest level in front of their face, with their head slightly bowed. However, today handshaking is an acceptable form of greeting, though it is best to let an Indian woman extend her hand first for a handshake.

When entering an Indian home, it is customary to remove one's shoes, unless told otherwise. Shoes are never to be worn

in kitchen and prayer areas. The right hand should be used for any social purposes, such as to give and receive items. It is considered polite to bow slightly when passing in front of people, saying, "Excuse me, please."

Conversations between members of the opposite sex are normally kept to a minimum. Coarse jokes and sex talk are not to be spoken in the presence of any woman. Even though dating has never been part of their culture, it is becoming a common practice among young Malaysian Indians. They are partly influenced by mass media—television, magazines, novels, etc. It is also a result of young Indians mixing more freely with their friends in schools and universities.

## <sup>9</sup>LIVING CONDITIONS

Among Malaysia's Indians, there is a clear distinction between the urban middle class and the rural poor. While Malaysian Indians in urban areas have easy access to a better standard of living, the Malaysian Indians on the plantations have to cope with a lower living standard. Many children on the plantations do not receive proper nutrition before being sent off to school in the morning. Many families could not afford to buy even the basic necessities for their children's education, such as uniforms, shoes, notebooks, pencils, etc.

Unlike most other industries in the country, the plantation industry has built houses to accommodate its workers. This is because the plantations are usually located far from inhabited centers. Most plantation workers are currently living in "line-site" houses. There are two types of line-site house: the wooden barracks and the raised brick cottage. The wooden barracks are old and are arranged usually in rows of five. The walls are made of planks, and the roof is usually made of aluminum. Each dwelling in a row occupies an area of roughly 3 m by 6 m (10 ft by 19 ft), and is about 3 m (10 ft) high. It has a small veranda, a living room, a bedroom measuring roughly 3 m by 2.5 m (10 ft by 8 ft), and a tiny kitchen of 1 m by 2 m (3 ft by 6 ft). The raised brick cottages have a covered floor of roughly 5 m by 6 m (17 ft by 20 ft) and consist of two living quarters inhabited by different families. The two quarters are partitioned by a brick wall, but share a common tile roof. Each quarter has a living room, two bedrooms, a kitchen, a toilet, and a bath.

Unlike the urban areas, basic amenities, such as water, sanitation, and electricity in the plantations, are seriously below legal standards. The plantations get their water supply either by water piped to each house, stand-pipes shared by a few families, well or pond water, a river, or through the JKR (Department of Public Works) water supply. While some plantations are provided with electricity by an estate generator, others obtain electricity by running their own generators, and others use gas or oil lamps.

## <sup>10</sup>FAMILY LIFE

Like many communities in Malaysia, the Malaysian Indian families are organized in relation to nuclear family units. It is through the family unit that values, culture, and religion are imparted to younger generations. Many of these nuclear families, however, are linked together into extended families. Family size among Malaysian Indians varies according to standards of living, education level, and location. There are households in the plantations that contain as many as 9, 10, 11, or even 12 family members. Living conditions for most people are crowded, but all members of the household benefit from the mutual

support of parents, children, and grandchildren living under the same roof.

Malaysian Indian women in some ways are still highly conservative. This is mainly because of a strong emphasis on male line descent and a patrilineal system. The father is ranked highest in the hierarchy of authority. He commands the family. Although the mother's position is respected, she is expected to be subservient to all of the males in the family.

## <sup>11</sup>CLOTHING

A *sari*, the traditional dress of an Indian woman, is a flowing silk or cotton wrapped dress worn over a short, tight-fitting, elbow-length-sleeved blouse. An Indian girl usually starts wearing a sari when she turns 13 years old. While Indian women wear a sari, Indian men wear a *dhoti*, a wrapped white skirt worn either with or without a shirt or white tunic.

Besides the sari, a Hindu Indian woman may wear a *pottu* (dot) on her forehead. A pottu can be worn in one of three traditional colors: red, yellow or black. These colors have certain significance among Indian women. While red is worn by married women, black is traditionally worn by unmarried women. However, red and yellow can also be used simply as an auspicious color. While these two colors are thought to have a calming effect when put on the forehead after prayers, black is used to counteract the effect of the evil eye. A black dot is able to protect a girl from harm by repelling evil influences, particularly when a young girl receives too many compliments.

Except during festivities and other celebrations, it is very common to see Malaysian Indian women dressed in blouses, jeans, skirts, dresses, or shorts. Malaysian Indian men commonly wear pants, shirts, shorts, and tee-shirts. Even the color of the pottu on the forehead is worn simply to match the color of women's attire these days, regardless of their marital status.

## <sup>12</sup>FOOD

As in most Asian communities, rice is the staple food of the Malaysian Indians. Breads, such as *chapati* (a thin, flat, unleavened wholemeal bread), *naan* (leavened white bread), *puri* (a deep-fried wholemeal bread), and *rothi paratha* (a flaky wholemeal bread), are also staple foods among the Malaysian Indians. While these breads are usually eaten with hot curry gravy, rice is eaten with curries, sauces, vegetables, and other dishes. Since most Indians are Hindu, they tend to be vegetarian. Their foods are usually cooked in coconut milk or yogurt and are seasoned with hot peppers and spices, thus making them very spicy. They normally add colors to their food by adding chili powder for red, curry powder for brown, and turmeric for yellow. This helps enhance the appearance of their food. They also have a variety of snacks. These snacks include *vadai*, deep-fried cakes made with ground lentils, green chilies, and ginger; *muruku*, crispy and crunchy pretzels; *pakhora*, mixed vegetable fritters; and *samosa*, deep fried pastries containing meat, onion, and spices.

Like the Malays, the Tamils traditionally use the fingers of the right hand for eating. A popular traditional style of dining among the Malaysian Indians is by eating off banana leaves. A variety of curries, vegetables, and sauces are placed around a pile of rice on the banana leaves. Even the dessert after the main meal is served on the same banana leaf. The banana leaf is folded in half after the meal, to indicate that one has finished one's meal. Sometimes, foods are served on a *thali*, a metal tray

with several small matching bowls for food. This is particularly true in traditional Indian homes. All the food, including the desserts, is served at the same time, with the rice or bread placed in the center of the tray.

### **13 EDUCATION**

The Indian community is the poorest of the three major communities in Peninsular Malaysia. Because of this, Malaysian Indian youth have relatively low rates of enrollment in schools. Their enrollment rates in both urban and rural areas are lower than those among Malays and Chinese. Furthermore, in comparison with the Malays and Chinese, more Indian youths drop out of school due to low motivation. As a result, the position of the Malaysian Indians in reference to education is comparatively poor in Malaysia.

However, the government has taken impressive measures to uplift the standard of education among the Indian community in Malaysia. Since it is mandatory for Malaysians to attend schools between the ages of 6 and 15, the government has made an effort to build primary and secondary schools on the plantations across the country. After the age of 15, youths are encouraged to attend vocational or technical colleges and other institutions of higher learning. They can obtain loans and scholarship programs from the government, the NUPW (National Union of Plantation Workers), and the MIC (Malaysian Indian Congress). An increasing number of Malaysian Indian parents see education as a means for their children to gain better employment than plantation work. Through and increased emphasis on education, many young adult Malaysian Indians are now working as professionals, managers, and clerical staff in all sectors of modern economy.

### **14 CULTURAL HERITAGE**

Malaysian Indians' dance, music, and literature revolve around their religion, Hinduism. Their dances are greatly influenced by the two great Indian poetic epics, the *Ramayana* and *Mahabhrata*. These two epics do not only influence Indian dances and music, but also the Malays' dance and theater performances, such as the *wayang kulit* and *makyong* (see **Malaysian Malays**).

Since most Malaysian Indians are Hindu, the Vedas (Hindu scriptures) play an important role in the community. They are ancient writings that explain the mystery of life. They contain some simple parables, which are easily understood by the common people, but which can also be read and understood at the highest levels of abstract philosophy.

### **15 WORK**

Even though the majority of Malaysian Indians work on plantations as laborers, there are many who are doctors, lawyers, trade unionists, police and army personnel, small shopkeepers, teachers, etc. Basically, they are found in every strata of the society class structure. As traders, they usually sell textiles, perfumes, and jewelry. Many are successful professionals, traders, and businesspeople. At the other end of the scale, however, the Indian laborers on the rubber estates are among the poorest Malaysians.

### **16 SPORTS**

Like among many other ethnic groups in Malaysia, sports such as soccer, rugby, basketball, badminton, and cricket are becoming very popular among the Malaysian Indians in rural and urban areas. The most popular spectator sport is soccer (known as football in Malaysia), particularly among the youth. Both on the plantations and in the cities, it is not unusual to see Indian youths and adults get together to play soccer on any open field.

### **17 ENTERTAINMENT AND RECREATION**

Forms of entertainment among the Malaysian Indians depend greatly on where they live. Those who live in urban areas have the same forms of entertainment that people have in suburban areas in the United States and the United Kingdom. They have easy access to movies and theater, while those who live on the plantations do not have the same privileges. In urban areas, the Malaysian Indians do not only attend Indian movies and theaters, but also have access to Chinese and Malay movies and theater. They also have access to video arcades, parks, etc., which are popular places for recreation among the youth. Televisions, radios, compact discs, and cassettes players are common forms of entertainment in Malaysian Indian homes in urban areas. Some homes on the plantations do have television sets and video players as forms of entertainment. This is, of course, only true in homes that have access to electricity.

### **18 FOLK ART, CRAFTS, AND HOBBIES**

Like most parts of their cultural heritage, Malaysian Indian arts and crafts are closely related to Hinduism. Their fine art and carvings can be seen in stone carvings and terra-cotta sculptures, inset tile work, and other colorful details in their temples across Malaysia. Their painters have also produced hundreds of paintings (or, in recent times, colored prints) of gods and goddesses. These paintings are usually for devotional use in home shrines.

### **19 SOCIAL PROBLEMS**

The persistent poverty and political powerlessness of rural Indians in Malaysia is one of the country's best-known and most-severe social problems. Even though the plantation industry is a major source of income for Malaysia, low wages and poor working conditions for its plantation laborers have caused the Indians to be one of the poorest communities in Peninsular Malaysia. Most of them, like their contract-laborer ancestors, are rubber workers, though some are now small farmers. Poor budgeting and excessive drinking seem to aggravate the problem of low incomes and savings among the Indian poor. Furthermore, features such as low self-respect, apathy, poor parental responsibility, and weak community cooperation seem to reinforce one another and worsen the economic hardship faced by the Malaysian Indians.

### **20 GENDER ISSUES**

The strong emphasis on the patrilineal system among the Indians shapes gender issues and relations in the community. Women usually do not sit with the men at any function. In some homes, the wife does not even sit down when male guests are present. In some cases a wife is not to call her husband by name nor openly object to his decisions and ideas. This is par-

ticularly true in many traditional homes. A wife may serve the guests, but otherwise she will stay in the kitchen or in some other part of the house. A wife usually stays at home, except for the occasional shopping trip to the department stores. However, these traditional values are changing with modernization, educational opportunities, and equal rights of women. In the plantations, women tap rubber and weed alongside men and receive wages at identical rates.

# MALAYSIAN MALAYS

**PRONUNCIATION:** muh-LAY-zhun MAY-layz

**LOCATION:** Malaysia

**POPULATION:** 12,893,600 (2004)

**LANGUAGE:** Malay; Chinese; Tamil and other Indian languages; tribal languages; English

**RELIGION:** Islam

## <sup>1</sup> INTRODUCTION

Malay is a self referent term used by the people of the Malay Archipelago who have occupied the region since Prehistoric era. They are comprised of various ethnic, linguistic, and cultural variations, but all are speakers of the Austronesian group of languages. In Malaysia today, the term Malay is defined by the federal constitution to specify one who is Muslim and practicing Malay culture. The Malay comprise the largest group of indigenous peoples (bumiputera) and constitute 53% of the country's population. Although a homogenous group, differences exist between Malay subgroups in terms of territorial location, adat (customary) practices, lineage, and the kinship system. Examples of these subgroups are the Javanese, Bugis, Minangkabau, and several other groups who are descendants of interisland migrants of the Malay Archipelago who have settled in the peninsula since the early Malay kingdom.

One of the Malays' foremost successes in the early years in Malaya was the founding of Malacca Sultanate. It thrived in the 15th century as a popular trading port where traders from East (China) and West (India, Middle East, and Europe) met to trade commodities such as spices. Unfortunately, in 1511 Malacca was conquered by the Portuguese. It was then taken over by the Dutch in 1641, and in 1811 it was handed over to the British. The British, from Malacca, gradually expanded their influence to the rest of Malaya. By 1919 the entire Malay Peninsula had been brought under the British administrative system. They eventually occupied Sabah and Sarawak on the island of Borneo by the late 19th century.

The 11 Malay states in the Malay Peninsula only gained independence from the British on 31 August, 1957. In 1963, the Malay Peninsula joined Singapore and Sabah and Sarawak on Borneo Island to form the Federation of Malaysia. However, Singapore left the federation two years later. Currently, Malaysia is made up of 12 states and a federal territory. Sultans rule nine of the states, and three are ruled by governors. While each state government is headed by a chief minister and the state Cabinet members, the Malaysian government is headed by the prime minister and his Cabinet ministers. Malaysia practices a constitutional monarchy similar to what is practiced in England. Unlike in Britain, however, the king is chosen as the head of state by nine Sultans once every five years. Elections are also called every five years to elect members of the parliament, which include the prime minister and his Cabinet ministers; and the state assemblies, which include the chief minister and the state Cabinet. Usually the leader of the victorious party in an election becomes the prime minister or the chief minister.

Malaysia has been ruled continuously since independence by a coalition of political parties—the National Fronts—representing various ethnic groups. This coalition includes the United Malays National Organization (UMNO), representing

the Malays; the Malaysian Chinese Association (MCA), representing the Chinese; and the Malaysian Indian Congress (MIC), representing the Indians; along with a few other political parties representing other ethnic groups in Sabah and Sarawak. The Malays, making up about 53% of the country's population, have the most representatives in the parliament and state assemblies. Other than the Communist insurgency in 1948 through 1960, and the communal riot between the Chinese and the Malays on 13 May, 1969, Malaysia has been a calm and peaceful country.

## <sup>2</sup>LOCATION AND HOMETLAND

Malaysia consists of Peninsular Malaysia, which includes the states of Penang, Perlis, Kedah, Pahang, Kelantan, Terengganu, Perak, Selangor, Negri Sembilan, Malacca, and Johor; the federal territories of Kuala Lumpur and Labuan; and Sabah and Sarawak, which are situated on the island of Borneo. Malaysia has a land area of 329,758 sq km (127,320 sq mi), making it slightly larger than the U.S. State of New Mexico. More than half of its land area is covered with tropical rain forests. Unfortunately, large areas of these rain forests are being depleted by logging. Malaysia's climate is monsoon tropical with an average annual rainfall of about 240 cm (95 in). It is warm, sunny and humid throughout the year with temperatures ranging from 23° to 31°C (73° to 88°F).

The Malays are found in all 13 states of Malaysia. While most Malays live in traditional villages, an increasing number of them have moved to cities, especially since 1970. Malaysia is a multiracial country with a population of over 25 million

people in 2004. Its multiethnic society consists of more than 70 ethnic groups. In Peninsular Malaysia there are four main groups: Malays, Chinese, Indians, and Orang Asli. Others include Eurasians, Chinese Peranakan, Chitties, Nepalese, and Sino-natives. In Sarawak, besides the Chinese and Malays, there are Iban, Bidayuh, Melanau, and the Orang Ulu groups, which include the Kelabit, Lun Bawang, Kayan, Kenyah, Kajang, Bisaya, Penan, Sekapan, Lahanan, Punan Bah, Seping, Bemali, Beketan, Berawan, Buket, Lisum, Punan Busang, Saban, Sihan, Tabun, Tring, Tagal, Tanjong, Kanowit, and Tatau. In Sabah there are Bajau, Murut, Suluk, Iranum, Tidong, Belabak, Bonggi, Kagayan, Ubian, Orang Sungai, and many others. Also included in this ethnic diversity in Malaysia are the Cocos Islanders, Thais, Myanmar, Indonesians, Filipinos, Japanese, Koreans, and Europeans. The Bumiputera, "sons of the soil" who include Malays and various ethnic groups in Sabah and Sarawak, make up 58% of the population. The Chinese account for about 30% of the total population and the Indians account for about 10%. Despite their linguistic, religious, and cultural differences, these ethnic groups live in harmony with one another.

### POPULATION OF MALAYSIA 2004

Malays	12,893,600
Chinese	6,074,700
Other Bumiputera	2,808,100
Indians	1,806,800
Other Malaysians	304,400
Non-Malaysian Citizens	1,693,800
Total	25,581,400

## <sup>3</sup>LANGUAGE

The Malays speak Malay, the Malaysian national language. The language belongs to the Malayo-Polynesian language family. Since Malay is Malaysia's national language, it is widely understood by the other ethnic groups, though other languages such as Chinese, Tamil and other Indian languages, and numerous tribal languages are spoken widely too. Malay as the first language, and English as the second language, are taught in almost every school throughout Malaysia.

Although the Malay language is widely spoken in Malaysia, dialects vary between the states. Generally, words are pronounced the way they are spelled, thus it is a very easy language to learn. Malay also borrows heavily from Sanskrit, Portuguese, Persian, Arabic, and English.

Malay names are basically Arabic names, since Malays are Muslim. Malay names do not have surnames. Instead, a name consists of the person's given name, followed by *bin* (son of) or *binti* (daughter of) and the father's first or full name. For example, Helmy, the son of Ismail Nik Dali, would be Helmy bin Ismail or Helmy bin Ismail Nik Dali. The same principle applies to a woman's name, except that her given name is followed by *binti*. Some common women's names are Fatimah, Lattifah, Zaiton, Aminah, and Zaleha while some common men's names are Ahmad, Sulaiman, Jamalludin, Zakaria, and Ismail.

#### **4 FOLKLORE**

Traditionally, the Malays had a number of folk tales and myths, especially those associated with the Hindu belief that was prevalent before the coming of Islam in the 16th century. Even as late as the 1970s, some of these folk tales were evident in the Malay Muslim society. However, with Islamic revivalism in the late 1970s and the migration of many Malays to urban areas around the same time, these folk tales and myths were gradually abandoned, since they stand in conflict with Islam.

The Malays regard Hang Tuah from the old Malacca sultanate as their traditional hero. He was noted to be a courageous warrior who fought the Siamese attacks on Malacca, and also a symbol of loyalty. His loyalty to the throne was proved when he killed his best friend, Hang Jebat, who rebelled against his sultan.

Another famous folk tale is about Mahsuri, a princess from the island of Langkawai who was wrongly accused of adultery and was executed. Upon her death, Mahsuri spilled white blood and cursed the whole island for seven generations.

#### **5 RELIGION**

In the past, the Malays, like most other ethnic groups in Malaysia, were animists. They believed in the power of natural order. Trees, rivers, and caves were homes to *penunggu* (the vital force residing in a particular location) and the existence of se-

mangat (the vital force in all living things). To respect these spirits, annual rites were performed during foods were offered to them. Important figures like Shamans, ritual specialists (*pawang*), and medicine men (*bomoh*) were the mediators between the spirit world and people. These animistic beliefs and practices have decreased among the Malays, largely because most Malays in Malaysia are now Muslim. This is because the Malaysia Constitution decrees that all Malays are born Muslim. Even though Islam is the official religion of Malaysia, other religions such as Buddhism, Hinduism, Christianity, and Confucianism are given freedom to be practiced. Islam's influence on the Malays goes back to the late 15th century when a sultan of Malacca was converted to Islam. Islam at that time was mostly spread by traders from India and the Middle East.

Malays are devout but tolerant Muslims. Most, especially the elderly and those in villages, pray five times a day, fast in the month of Ramadan, and perform the pilgrimage to Mecca. Muslims believe in only one God, Allah, and in Muhammad as his last messenger. While the basic beliefs are similar to those of Muslims in the Middle East, some Malay culture and Hindu influence has blended with the practices of Islam in Malaysia.

#### **6 MAJOR HOLIDAYS**

Being a multiethnic society, there are various religious and secular holidays celebrated in Malaysia. There are three differ-

ent New Year's celebrations and holidays: Muslim New Year, Christian (Roman) New Year, and the Chinese New Year. The Malaysians celebrate other religious holidays such as *Hari Raya Aidilfitri* (Id ul-Fitr) and *Aidil Adha* (Id ul-Adha) for the Muslims, *Wesak Day* for Buddhists, *Deepavali* for Hindus, and Christmas for Christians. Both government and private offices are closed on these days. All Malaysians also celebrate Independence Day, which falls on August 31, during which large-scale parades are held in cities throughout Malaysia.

Hari Raya Aidilfitri is a celebration to mark the end of the fasting month (Ramadan). Its celebration includes a two-day official holiday for all Malaysians. This is a time for joy and happiness after an exhausting month of fasting. It involves a lot of eating and a variety of special foods are prepared for the occasion. This is also a time for family reunions where children who are working in the cities visit their parents. It is also an occasion where relatives, friends, and acquaintances are invited for a visit during the Open House. The Open House is a time and day that is set aside for a person to invite her or his relatives, friends, and acquaintances to the Hari Raya celebration. Special food and drinks are prepared and served to the visitors. Hari Raya Aidilfitri provides an opportunity for Muslims to ask for forgiveness for all wrongs done the previous year.

While Hari Raya Aidilfitri marks the end of the fasting month, Hari Raya Aidil Adha commemorates the pilgrimage of Muslims to Mecca and is celebrated the same way as Aidilfitri, albeit on a smaller scale.

## 7 RITES OF PASSAGE

There are some important rites of passage in traditional Malay society. After birth, a baby and a mother are in a confinement period (*dalam pantang*) of 44 days. Two common ceremonies during the infant years are *naik buaian*, a ceremony to introduce the baby to his or her cradle; *bercukur jambul*, an event when a seven-day-old boy's head is shaved to "cleanse" him; and *bertindik telinga* (ear-piercing) for a baby girl.

One very important rite of passage for a Malay male is the circumcision ceremony. It is an elaborate event where relatives and villagers are invited to share the occasion. Circumcisions are performed on boys when they reach puberty between the ages of 7 and 12. Circumcisions are performed on girls when they are still infants, but the event is not as elaborate as that for boys. Traditionally, or even today in the villages, the circumcision was performed with a knife by a *mudim*, a person who specializes in performing circumcision ceremonies. A boy is carried around his house to the accompaniment of traditional *kompang* (small drum) music and is then seated on a banana tree trunk where the circumcision is performed. Usually it would take about two to three weeks for the wound to be healed. Unlike the traditional method, circumcisions in urban areas are now performed by physicians in hospitals, and the ceremonies are not as elaborate as those of traditional circumcisions.

Marriage is perhaps the biggest event in a Malay person's life. Although close family friends still arrange marriages, the couple involved must give their full consent. A boy is expected to be married when he reaches the age of 25 to 28, while a girl is a few years younger. Once a couple agrees to get married, a certain amount of preparation has to be done by both families.

In the villages, wedding feasts are usually attended by all the villagers, including friends and relatives. A wedding is usually a two-day affair; on the first day it is held at the bride's home, and the following day at the groom's house. Friends, relatives, and villagers normally help with the preparation. At about noon, the groom and his entourage arrive at the bride's house with a group of *kompang* musicians. A *bersanding* ceremony, which is open to the public, is held in which the bridal couple sit on a raised dais (*pelamin*). Two attendants (equivalent to the bridesmaid and best man) stand next to the bridal couple to attend to their needs. The same ceremony will be held again at night for family members, close friends, and relatives. At this ceremony, the couple receives blessings from their parents and relatives. This is done through the scattering of scented leaves and scented flower petals (*bunga rampai*) onto the open palms of the bride and groom. A similar feast and ceremony is repeated at the groom's house on the second day. Nowadays among the affluent in Malay society, weddings are held in hotels or large community halls.

Death is a very somber and religious affair in a Malay community. Visitors are expected to show respect to the dead and his or her family by dressing appropriately. The time between a death and the funeral is very minimal, since Islam requires the deceased to be buried as soon as possible. Before burial, the body of the deceased is placed in the center of the living room to give everyone a chance to offer prayers and pay their last respects. The deceased is then wrapped in white cloth and carried to the graveyard to be buried. The normal mourning period is 100 days, although special prayers are held only on the first three nights, on the seventh day, the fortieth day, and on the hundredth day.

## 8 INTERPERSONAL RELATIONS

The common Malaysian Malay greeting when meeting friends in public is, "Where are you going?" The answer is, "For a stroll" or "Nowhere of importance." However, many urban Malays greet each other with "How are you?" (*Apa khabar?*)

Shaking hands is the most common way of greeting among Malays, but with some restrictions. It is not customary for men and women to shake hands with each other. Ideally, a Malay woman can only shake hands with a man if she covers her hand with a cloth. A Malay man normally greets another man with a handshake without grasping the hands. He offers both hands to touch lightly the other man's outstretched hands, then brings his hands to his breast, meaning "I greet you from my heart." This is done with both hands to show respect to older people. A Malay woman may use a similar form when greeting another woman.

While pointing at a place, object, or a person with the right forefinger is considered rude among the Malays, pointing with the thumb of the right hand by folding the four fingers into the palm is considered polite. It is also considered polite to bend over slightly from the waist, extend the right hand in front of you, touch the right wrist with the fingers of the left hand, then say "May I please pass," when crossing in front of another person.

Upon arrival at a Malay home, shoes must be removed before entering, for religious purposes. Shoes are considered "unclean" and may soil the living room floor, making it unsuitable for prayers (Muslims pray on a mat laid out on the floor). When

A fisherman loads fish into a container at Kudat Fishing village in Sabah, Malaysia. The rising demand for reef fish from Hong Kong and China has caused the population of the fish to plummet throughout Asia. (AP Images/Vincent Thian)

visiting relatives or friends, it is appropriate to bring food or fruit as gifts.

Public displays of affection between people of the opposite sex are discouraged, even between husbands and wives. This is particularly true among conservative Malay Muslims. In the villages, one can only visit one's lover's house when the parents are around. Unlike in the villages, Malay dating practices in urban areas are quite similar to those in the United States.

## <sup>9</sup>LIVING CONDITIONS

During the 1990s, the standard of living in Malaysia increased tremendously because of an economic boom. Between 1990 and 2002, Malaysia made remarkable progress in eradicating poverty. The number of poor households decreased by 25.6%. This spectacular success was credited to the New Economic Policy (NEP), which aims to reduce the economic gap between different communities in the country and has uplifted the quality of life for all Malaysians. The per capita income increased from RM775 in 1957 to RM7,000 in 1992, and from RM15,819 in 2004 to almost RM22,345 in 2007. Strong economic growth

has reduced the unemployment rate to 4%, a figure considered to signify full employment. Malaysia is now rated as an upper-middle-income country. Much of the infrastructure and many of the services found in developed countries are now common in Malaysia, particularly in urban areas.

Historically, the Chinese dominated the urban areas. However, in the 1970s, many Malays migrated from the *kampungs* (villages) to urban areas, resulting in a better ethnic balance of city residents. In 2000 slightly more than 62% of Malaysia's population lived in urban areas, compared to 51% in 1991 and 34% in 1980. Meanwhile the rural population decreased from 66% of total population in 1980 to 39% in 2000. Both in the urban and rural areas, the *kampung* is the center of Malay life. It is a tightly knit community united by ties of kinship, marriage, or neighborliness, where consensus, compromise, and traditional values reign supreme.

The Malays in urban areas possess consumer items such as cars, television sets, VCRs, and refrigerators. They have access to good, economical, and well-maintained public transportation, such as express buses, trains, and light-rail transits. They also have access to higher standards of basic amenities such as water supply, sanitation, and electricity in comparison to those who live in the villages. In the villages, some Malays still have to rely on kerosene for light, and wells and rivers for water supply.

## <sup>10</sup>FAMILY LIFE

The Malays regard marriage and raising a family (*keluarga*) as the most important aspects of life. The family is an autonomous unit in which the husband-father is the head. The unit promotes responsibility to family, friends, and the community takes precedence over the accumulation of profit and material goods. The average family size of urban Malays is smaller in than that of Malays in rural areas. This is partly because of the nature of professions and occupations, which keep them away from their families. In the past, it was quite common for a couple to have more than six children. Today, the average number of children is four.

In Malaysia, where the welfare system is almost nonexistent except for extreme cases, e.g., extreme poverty or disability, the extended family is still a vital unit of society. Family members are expected to care for each other, particularly those who are poor, sick, and old. Children are expected to look after their parents.

Cats, fish, and sometimes singing birds are reared as pets by Malay families. Dogs are considered "unclean" by Muslims and, therefore, are not usually kept as pets by Malays in Malaysia.

## <sup>11</sup>CLOTHING

Traditional Malay dress for men and women is based on a simple rectangle of batik cloth, wrapped and worn as a skirt. However, the style of wrapping is different for men and women. The women wear the skirt with a long blouse, while the men go shirtless but wear a tied headcloth.

Nowadays, since Malays are Muslim, they have a strict dress code. The women's customary dress covers the whole body, except for their face, hands, and feet. They usually dress in the *baju kurung*, a long-sleeved, loose blouse worn over an ankle-length skirt, and they cover their heads with a scarf as a sign of humility and modesty. A married woman may often

wear a *baju kebaya*, a close-fitting lace blouse over an ankle-length skirt. While Malay women wear *baju krung* or *baju kebaya*, Malay men wear *baju Melayu*, long-sleeved shirts over an ankle-length *sarong* or pants. A Malay man who has made a pilgrimage to Mecca usually wears a white skull-cap, and a woman who has made the pilgrimage wears a white scarf.

Some Malays dress in Western-style clothing. However, they are discouraged from wearing shorts, miniskirts, or strapless or sleeveless tops. This is particularly true for Malay women.

## **12 FOOD**

Rice is the Malaysians' staple food and is eaten at least once a day. Malays eat rice with fish or meat curry and vegetables cooked in various ways. It is absolutely forbidden for Muslims to eat pork in any form as it is considered unclean. Muslims, for religious reasons, are also prohibited from eating any meat that has not been slaughtered by a Muslim.

Malays usually eat with their fingers. Therefore, hands are always washed before and after meals. This is done by using the *kendi*, a water vessel that is either put on the table or passed around from person to person. While meals are always eaten with the right fingers, the serving spoons provided for all the dishes can only be used with the left hand. The left hand is also used for passing dishes of food and for holding a glass.

One of the Malays' popular breakfasts is *nasi lemak*, rice cooked in coconut milk and served with hot and spicy *sambal* (shrimp or anchovy paste), fish, eggs and vegetables.

## **13 EDUCATION**

Malaysia has a literacy rate of 92%. It is mandatory for all Malaysians to attend school until the age of 15. Therefore, many Malaysians have gone to school at least up to Form Three, which is equivalent to the ninth grade in the United States. Because of greater educational opportunities under New Economic Policy, the number of Malays that have obtained degrees from local and foreign universities has increased over the last 30 years. Many of them were sent on government scholarships and loans to universities in the United States, United Kingdom, Australia, New Zealand, and Japan.

Since education is seen as a means to raise a family's reputation, parents always encourage and expect their children to do well in school. They will do whatever is necessary to ensure that their children are able to receive a formal education.

## **14 CULTURAL HERITAGE**

Traditional Malay music is normally aired during special occasions such as the grand annual festival of Hari Raya, wedding celebrations (*bersanding*), and *makan selamat* or *kenduri* (thanksgiving meal). One of their most popular musical ensembles played during such occasions is the *gamelan*. It is an instrumental ensemble or orchestra containing drums, xylophones, metallophones, tuned gongs, and bamboo flutes. An ensemble can be small or large, and its music can cover a wide range of styles, from slow and stately, to sad and haunting, to lively and cheerful. It is played either as an instrumental ensemble purely for listening, or as an accompaniment to dance.

Traditional Malay dances are sometimes performed on festive occasions, accompanied by the *gamelan*. These dances are usually ensemble dances for men only, for women only, and for men and women together. This includes dances such as *Kuda Kepang* (a trance dance), *joget* (a courtship dance), *ghazal* (a

dance based on Middle Eastern music that is performed by young women for the enjoyment of sultans and other members of the royal houses), and *mak yong* (a dance-drama performed by actors and actresses in imitation of heroic tales of sultans and princesses of olden times). Unfortunately, traditional dance is something of a dying art among the Malays in Malaysia. Nevertheless, a number of young choreographers have attempted to revive these dances in order to create Malay modern dances.

Unlike most indigenous people in Malaysia, the Malays have a good collection of literature written about their community going back to the 16th century. The oldest of these literatures is *Sejarah Melayu* (Malay Chronicle), a history of the kingdoms of the Malay Peninsula, with an emphasis on Malacca. Other works include *Hikayat Hang Tuah* (Hang Tuah's Life Story) and *Hikayat Abdullah* (Abdullah's Life Story). These works describe the old Malay society.

## **15 WORK**

Traditionally, the Malays dominated government and agriculture, while playing a relatively small role in commerce and industry. In the rural areas they were likely to be farmers, tending vegetable farms or small holdings of rubber or oil-palm trees. Others were fishers. Since the late 1970s, however, many Malays have migrated to the cities upon completing high school and college in search of jobs in the manufacturing and service sectors. This is a result of direct government economic policies that aim to encourage Malay involvement in business at various professional levels. Consequently, they are often civil servants, laborers, transport workers, or industrial workers. Many also have risen to the national elite, holding high-level posts in the government and military. Many others are holding posts in institutions and corporations like MARA, PERNAS, PETRONAS and HICOM, which have been set up to establish opportunities for the Malays in employment, business, capital accumulation and corporate participation.

## **16 SPORTS**

A large number of Malaysian populations regularly take part, as players or spectators, in both Western and traditional Malay sports and games. One of the Malays' popular native games is *sepaktakraw*, or kickball. It is played with a round ball made of rattan that must be kept in the air as it is kicked around or across a net (like volleyball played with the feet) by a group of players standing in a circle. A point is lost whenever the ball touches the ground.

The most popular spectator sport among Malaysians is soccer, known as football in Malaysia. The country has an annual semiprofessional soccer league, involving a team from each state in Malaysia plus Brunei. This league attracts large crowds for matches in major cities. In addition to that, there are other soccer leagues played at the regional level, and even in the smallest town. It is a common sight everywhere in Malaysia to see youngsters and adults flocking to the soccer fields either to play or to watch a soccer game.

Another popular sport among the Malays is badminton. In fact, badminton is a national passion in Malaysia, where top Malaysian players are usually among the contenders for world badminton championships. Other Western sports such as volleyball, field hockey, basketball, rugby, squash, and cricket are played not only by the Malays, but also by all the other eth-

nic groups in Malaysia. These sports are played both for casual recreation and in organized competitions.

### 17 ENTERTAINMENT AND RECREATION

There is a vast difference between the forms of entertainment and recreation in rural and urban areas in Malaysia. The Malays in rural areas still relish the traditional music such as *gamelan* (musical ensemble), *kompang* (small drums), *serunai* (flute) and others; traditional dances; and traditional pastimes such as kite-flying and *gasing* (spinning tops). Kite-flying is particularly popular among people in coastal villages. Kites are flown mainly as recreation, but sometimes competitions are organized to see who can fly their kites the highest. Spinning tops is a popular pastime, particularly in Kelantan and Trengganu. These tops are made of wood and can spin for hours. The person whose top spins the longest wins.

Unlike rural Malays, in urban areas the Malays watch Western (Hollywood), Hindi, and Chinese movies and theater, besides watching Malay movies that are locally produced. Besides movies and theater, other forms of entertainment and recreation, found in urban areas in the United States can be found in Malaysia's urban areas as well. Malaysia has three basic television channels, which are monitored by the government.

### 18 FOLK ART, CRAFTS, AND HOBBIES

The Malays of Malaysia have various folk arts and crafts. One of their most exotic folk arts is the *wayang kulit*, a traditional shadow-puppet show. These puppets are made of water-buffalo hide, stiffened by a central spine of buffalo horn, and they have movable arms manipulated by a *dalang*, the puppeteer, with thin rods. The puppets are seen only as shadows cast by an oil lamp upon a screen of stretched-cotton cloth. The *dalang* both recites the narrative of the play, and speaks the parts of each character. The show is usually accompanied by a small *gamelan* (musical ensemble).

Malays are renowned for their refined and delicate wood-carvings. These artistic carvings can be seen on their fishing boats and house panels and walls. In the past, the Malays were dependent on the sea for their food and livelihood. Boats were built for fishing and for long sea journeys. These boats were decorated and carved with ornamental embellishments not solely for elegance, but also to fulfill the Malays' aesthetic needs and to equip the boats with spiritual power. Traditional Malay houses have rich decorations and carvings, primarily as decorative pieces on doors, windows, and wall panels.

The weaving of *kain songket* is another fine handicraft made by the Malays. It is made from yarn, formerly silk but now usually cotton, and is woven using a shaft treadle loom made from wood. The loom is about 2.5 m (8 ft) long, and 1.5 m (5 ft) high. The making of *kain songket* involves seven long and complicated stages. These stages are the preparation of the yarn (spooling), warping process, winding of the warp thread on the warping board, inserting the warp thread through the reed, making string loops for the long wooden rods called heddles, making the *songket* pattern, and weaving.

### 19 SOCIAL PROBLEMS

Even though Malaysia is a democratic country, it still retains its Internal Security Act (ISA), which provides for detention without trial for individuals deemed detrimental to the harmony of the nation. Therefore, Malaysia has received criticisms

from human-rights activists for its political actions against individuals who were alleged to be a threat to Malaysia's racial and religious harmony. Other than the ISA, Malaysians basic human and civil rights are virtually secured by the constitution. Women are allowed to vote, work, and hold high positions in the professional field.

Since Islam forbids its followers from drinking alcohol, alcoholism is not a major problem among the Malays.

### 20 GENDER ISSUES

As in most countries, there are more males than females in Malaysia. There is a ratio of 103 men for 100 women of the total population. There are equal opportunities for education and professional careers for men and women in Malaysia. As a result, there are a number of women who hold high positions in professional fields. Nonetheless, certain aspects of the traditions that govern relations between men and women are still maintained among the Malays. For instance, women must sit apart from the men in the main portion of the mosque, and are not allowed to mix casually with men or to eat with them. Women give deference and respect to their husbands, and love and compassion to their children. On the other hand, a Malay husband plays as much of a role in rearing his children as does his wife.

# MAN (MANCHUS)

**PRONUNCIATION:** man-CHOOZ

**ALTERNATE NAMES:** Jurchens, Manzhou, Manchus

**LOCATION:** China

**POPULATION:** 10.68 million

**LANGUAGE:** Chinese, Manchu

**RELIGION:** Some shamanism

**RELATED ARTICLES:** Vol. 3: China and Her National Minorities

## <sup>1</sup>INTRODUCTION

Dwelling mainly in northeast China, the Man, better known as the Manchus, have a long history. In addition to their direct relation with the Jurchens, their historical origins may be traced back to the Mohe of the Sui (581–618) and Tang (618–907) dynasties, to the Wuji of the Han (206 BC&ndash;AD 220) and, more remotely, to the Sushen of the Zhou (c. 12th century–256 BC). Ancient Chinese books began to record the name Jurchens as early as the Five Dynasties (907–960). In the beginning of the 12th century, led by headman Aguda of the Wanyan tribe, the Jurchens established the Jin Dynasty (1115–1234). Before long, they destroyed the Kingdom of Liao (916–1125) and the Northern Song Dynasty (960–1127) and threatened the Southern Song (1127–1279). A great number of the Jurchens came to the Central Plains (the middle and lower reaches of the Yellow River), but they were gradually absorbed into Chinese culture over a long period of time. Following the destruction of the Jin Dynasty, the Jurchens themselves were conquered by the Yuan Dynasty (1271–1368) and later on ruled by the Ming (1368–1644). Since the 15th century, the headmen of various tribes of Jurchens were appointed by the central government. In the 16th century, a hero of the Jurchens, Nurhachi (1559–1626), unified all the tribes by military force. He built up an organization that integrated military function, government administration, and production management, providing a sound basis for the later establishment and consolidation of the Qing Dynasty (1644–1911). His eighth son succeeded to the throne. In 1635, he changed the name of his nationality to Manzhou (origin of the Western term “Manchu”). The name was simplified to Man in 1911, at the end of the last dynasty of China.

## <sup>2</sup>LOCATION AND HOMELAND

The Mans are scattered all over China. The largest concentration is found in Liaoning Province. Smaller communities live in Jilin, Heilongjiang, Hebei, Inner Mongolia, Xinjiang, Gansu, and Shandong provinces or regions, as well as in Beijing, Tianjin, Chengdu, Xi’an, and Guangzhou cities. This wide distribution is related to the dominant position of the Mans in the Qing Dynasty. During the dynasty’s 250 years or so, Mans holding important positions lived in different parts of China, and many members of their families took root and remained there. The Man population was 10.68 million in 2000, second only to the Zhuang among the minorities.

## <sup>3</sup>LANGUAGE

Their language is classified as belonging to the Altaic family, Manchu-Tungusic group, Manchu branch. It has withered since the end of the 18th century and is used only among a limited number of the Mans in a few counties of Heilongjiang.

The written language was created on the basis of the Mongolian writing system and was used extensively under the Qing Dynasty. Now, almost all of the Mans use Chinese characters.

## <sup>4</sup>FOLKLORE

A large part of the rich Man corpus of mythology revolves around ancestors. According to one myth, three fairy maidens descended to take a bath in Tianchi (Heavenly Lake) of the Changbai Mountains. The youngest of them ate a small red fruit carried by a golden bird in its bill. She got pregnant and bore a boy who could speak right after birth. She gave him the surname of Aixinjueluo (the surname of emperors of the Qing Dynasty). When he had grown up, she told him the story of his birth and then ascended to Heaven. Drifting down the streams, the young man arrived at a place where three clans fought fiercely with each other. Taking advantage of his status, he stopped their fight and was selected to be their headman. This place was the hometown of the Jurchens, which means “the root of Man.”

Another myth concerns their god and a hero. It was said that the Man god Abukainduli was very powerful. The rosy clouds were his breath, and the twinkling stars were the droplets from his cough. Unfortunately, he was so lazy that the northern lands froze in a world of snow and ice most of the year. Following an epic combat, the god defeated a demon and flattened him under the weight of a mountain. Not to be outdone, the demon transformed himself into a large elm, which obstructed the head of the river and it dried up. Unwilling to die of thirst, the tribe living there had to offer children in sacrifice to the demon. A young man, Mudan, met the god Abukainduli after innumerable hardships. The god gave him an axe and told him that he should chop down the elm by striking it 81 times with the axe and that Mudan himself would turn into a rock after doing so. To deliver his clan from evil and misery, Mudan lifted the axe and chopped fiercely at the elm. Every nine chops, he suffered a disaster. After the eighty-first chop, the demon fell, and Mudan was transformed into a mountain. At the same time, a vast amount of water sprang from the ground and flowed toward the north. Since then, people have called the river after the name of the hero, Mudan.

## <sup>5</sup>RELIGION

The traditional beliefs of the Mans are rooted in Shamanism. According to the Mans, a shaman means “a wildly dancing man capable of magical feats.” The shaman’s duty is to help women bear children, to cure illness, and to shield them from misfortune. Dancing in a trance is the usual way to cure the diseased. This is done by a professional shaman; each village only employs one. He has a variety of props: a shaman’s hat, clothes, shoes, drum, stick, and sword. When he performs, he wears his special hat, on which hang many long strips of multicolored cloths so that his face and even his whole head is covered. Several copper plates cover his back and the front of his chest. He wears a long skirt and a waistband with small copper bells hung on it. Muttering incantations, he beats a drum while dancing. If the diseased recovers, the family should redeem the vow made beforehand to the gods; if not, the shaman will say, “You did not come with a true heart.” If a family wishes to have a son, the shaman is invited to pray to the god called Fuolifuo-duorhanximama. Another shaman is responsible for sacrificial offerings on religious festivals or when a major event occurs.

Shamanism still exists in traditional Man villages but has disappeared from cities a long time ago.

## 6 MAJOR HOLIDAYS

The Chinese Spring Festival (lunar calendar; Western calendar, between January 21 and February 20) is a major holiday for the Mans. They put on the door red, yellow, blue, or white banners, indicating their “bannerman” status among the “Eight Banners.” Some of their festivals are related to their sacrificial offerings. For example, every family offers sacrifice (usually a black male pig) to their ancestors in autumn. There is a *kang* (a heatable brick bed) in their house. The kang on the west side is the best place to lay offerings to their ancestors. Before the butchery, the butcher should sharpen his knife on that kang. Three pieces of cooked pork are put in front of their ancestors’ memorial tablets. A box containing their family tree is placed on a small, short legged table near the kang. The family members kowtow, one after another, in proper order according to their position in the family hierarchy. Then, the invited shaman begins his dance, asking for protection and blessing for the family. The next day, the family will offer a sacrifice to Heaven. Again, a black pig is killed. The internal organs and neck bone are hung on an outdoor post. If the flesh is all eaten by crows, it is a lucky sign. The pork is chopped and cooked with millet. Relatives, friends, neighbors, and even passers-by are invited to take a bowl of gruel. Three days later, the leftovers, if any, should be buried. The bones are also buried at the foot of the post.

## 7 RITES OF PASSAGE

In order to obtain the gods’ blessings, a small bow and arrow is hung at the gate when a boy is born. The ancestors of the Mans were good at archery, and a bow and arrows were always worn by men in outdoor activities. When a girl was born, three cloth bands, each 1.5 in wide, were tied outside her swaddling clothes. This was regarded as beneficial to horsemanship in the future. For this reason a strip of cloth is still hung when a girl is born. Habitually, they make the baby lie on its back and put a pillow padded with millet under the back of the baby’s head. The flattened back of the head is regarded as pretty.

In the eyes of the Mans, the north kang is for senior persons and the western one is reserved for the ancestors. Therefore, nobody is allowed to die on it. The coffin is brought in and carried out through the window instead of through the door. The funeral must be held on an odd-numbered day, because a funeral on an even-numbered day would mean that two people have died. Before the funeral, a post is erected in the courtyard. A long narrow flag made of red and black pieces of cloth is hung on it. During the funeral, relatives and friends scramble to take pieces of the flag, which they will use to make clothes for their children. The clothes are believed to protect the children from evil and nightmares. After the funerary ceremony, the deceased is buried in the ground.

## 8 INTERPERSONAL RELATIONS

Since it is common knowledge that the west kang is reserved for the ancestors, guests avoid sitting there while visiting. Otherwise, guests are warmly welcomed in a Man home.

When the bride-to-be visits for the first time, a small heart-shaped bag for carrying money and odds and ends is usually offered as a token of love. Actually, it is a combination of two

bags exactly of the same size and figures. The girl would keep one half and give the other half to her boyfriend.

## 9 LIVING CONDITIONS

There is usually a screen wall facing the gate, inside a traditional Man courtyard, where a post is erected for sacrificial offerings. The house is made of wood and adobes. The central room opens to the south. The room in the west part of the house is usually the bedroom, in which the north, west, and south sides are provided with kang. The parents and the senior persons (if any) sleep on the north kang, the children on the south kang. The inside of the kang is connected with the cooking stove and is always warm in winter.

## 10 FAMILY LIFE

The Man family is patrilineal. A house of three or more generations is not uncommon. The Mans have great esteem for their elders. The position of men and women is more or less equal in the family. Men engage in farming. Although women also work in the fields, they usually spend most of their time doing household chores. The family is monogamous. Arranged marriage is prevalent. When young people reach 16 or 17, they are allowed to be engaged. The matchmaker, representing the male side, usually visits the female side three times before getting an answer. Each time she pays a visit, a bottle of wine is presented. As the saying goes: “Just to ask: Is it all right? Is worth three bottles of wine!” If it is all right, the parents of the girl will ask for betrothal gifts (pigs, wine, money, clothes, ornaments),

Manchu women wear traditional Manchu dress during a festival in Fushun, China. (AP Images/Xinhua, Zhang Yanhui)

which will belong to the girl. On the wedding day, the bride is carried to the groom's house on a bridal sedan chair.

### **<sup>11</sup>CLOTHING**

In the past, men's clothing was adapted to the requirements of horsemanship and marksmanship. They shaved the fore part of their hair and combed the latter part into a braid hung on the back. The tight cuffs of the sleeves, the long vents on both sides of the robe, the waistband, the boots, and their long trousers were all designed to facilitate fighting in a cold climate. Women's costumes include a long robe (*cheongsam*), a wooden pad about 2.5 inches high placed under the middle part of the sole, and a flat bun hung behind the neck. These customs intended to stress the nobility of Man women. Except for long robes for both sexes, the other stylized clothes are not worn today. The robes, however, were prevalent in the first half of the 20th century. Then, they gradually disappeared. But, women's robes are still worn on festive occasions, although they are quite different from the originals. Today, Man clothing is not much different from the Chinese.

### **<sup>12</sup>FOOD**

The Mans like to eat millet and glutinous millet. "Cooked mutton held in the hand" is absolutely necessary on the Spring Festival. Mutton is chopped in big pieces with bone and half-

cooked with a little salt. The piece is held with the hand while eating. Sometimes a knife is needed. The most famous light refreshment is *saqima*, a kind of candied fritter. It is made by mixing flour with eggs, cutting the paste into noodles, and frying. It is then taken out, covered with syrup, and stirred. It is finally put into a wooden frame, pressed, cut into squares, and served.

### **<sup>13</sup>EDUCATION**

Because of the need to train large numbers of young people (mainly men) to serve as officials during the Man Qing Dynasty, the Mans have traditionally had a relatively high level of literacy. Even more important for the development of education in the recent past is the advanced urbanization of the Man people. As a result, their educational and cultural level is higher than the average for the whole country and even exceeds the average for the whole world. In China, they are second to the Koreans.

### **<sup>14</sup>CULTURAL HERITAGE**

One of the main traditional art forms of the Mans is dancing. A traditional choreography entitled "Hunting Dance" needs actors with a strong physique. Half of them wear leopard skin, ride on horseback, and pursue and attack prop-animals. The

Man songs are accompanied by a vertical bamboo flute and a drum. The rest of the actors dress as tigers and leopards.

A form of dance still popular in northeast China developed from an ancient wedding ceremony dance; it is still performed during festivals. Both men and women, host and guests, take turns dancing. The dancing movements are simple but quite vigorous.

The Octagon Drum Opera is a traditional Man adaptation of Peking opera. The tune and melody and the musical instruments accompanying the narrative are comparable to the styles used in Tianjin, Tangshan, Beijing, and Shenyang cities. The octagon drum is the leading instrument used by the actors.

Some artists and writers of great achievement and reputation are Man, including the famous writer Lao She, the master of comic dialogue Hou Baolin, and the outstanding actor of Peking Opera, Cheng Yanqiu.

### 15 WORK

In the remote past, the ancestors of the Mans were hunters. Later, under Chinese influence, they turned to agriculture. In the modern era, especially since late 19th century, former Manchuria became the most important base of heavy industry in China and a very large part of the Man population became workers, technicians, and managers in large factories. This has remained so. Heavy metals, coal, hydropower, agriculture, forestry, and stock raising are the main industrial and economic resources of the Mans.

### 16 SPORTS

Ice skating has a long history for the Man people and is linked with their Nordic habitat. Centuries ago, Man warriors tied felled animal bones under their boots to march on ice. Later, they exchanged the bones for iron bars inlaid in the sole. Still later, an iron sheath was fitted on a board, which was then tied beneath the boot. In the 19th century, skating was part of the military training of the "Eight Banners" army. Today, Man people still take advantage of the long, cold winter in northeast China to go skating on rivers and lakes or in skating rinks. Some Man skaters are renowned internationally.

### 17 ENTERTAINMENT AND RECREATION

For urban Mans, watching television is a daily entertainment in the evenings. They go to the movies once or twice a month. Beijing opera, chess, gardening, pet birds, storytelling, comic dialogues, and "clapper talks" are favorite pastimes of the aged and middle-aged persons. Youngsters like dancing, popular songs, and karaoke. Recreational activities are not different in the rural areas; however, access to television programs and movies is more restricted and the style of dancing and popular songs is different.

### 18 FOLK ART, CRAFTS, AND HOBBIES

The Mans excel in jade sculpture, bone carving, clay and dough figurines, and snuff-bottle interior painting. They are also world-renowned for their ice carving and sculptures and have won many international competitions.

### 19 SOCIAL PROBLEMS

Urban Mans have one of the highest economic levels in China, but they have lost much of their cultural identity. Because of

the long and cold winters, rural areas remain economically undeveloped but have preserved many of their traditional ways.

## 20 GENDER ISSUES

The Chinese constitution states that women have equal rights with men in all areas of life, and most legislation is gender neutral. However, there are continued reports of discrimination, sexual harassment, wage discrepancies, and other gender-related problems. The gap in educational level between women and men is narrowing with women making up 47.1% of college students in 2005, but only 32.6% of doctoral students.

China has strict family planning laws. It is illegal for women to marry before 20 years of age (22 for men), and it is illegal for single women to give birth. The Family Planning Bureau can require women to take periodic pregnancy tests and enforce laws that often leave women with no real options other than abortion or sterilization. Though minority populations were previously exempt from family planning regulations, policy has changed in recent years to limit minority population growth. Today, urban minority couples may have two children while rural couples may have three or four.

Prostitution and the sex trade is a significant problem in China involving between 1.7 and 5 million women. It involved organized crime, businessmen, the police, and government workers, so prosecution against prostitution has limited success. In 2002, the nation removed homosexuality from its official list of mental illnesses, and though it is still a taboo topic, homosexuality is increasingly accepted, especially in large, international cities.

# MANGGARAI

**PRONUNCIATION:** mahng-GAH-rai

**LOCATION:** Indonesia (island of Flores)

**POPULATION:** 575,000 (2000)

**LANGUAGE:** Manggarai; Bahasa Indonesia

**RELIGION:** Roman Catholic majority; traditional animism

**RELATED ARTICLES:** Vol. 3: Indonesians

## <sup>1</sup>INTRODUCTION

The Manggarai are the largest ethnic group on Flores, an island whose Catholic majority sets it apart from the rest of Indonesia. Chinese documents record trade for the sandalwood of neighboring Timor as early as the 12th century. Flores itself is mentioned in a 14th century Javanese poem, the “Nagarakrtagama.” The Portuguese founded a fort at Solor in 1566 and a mission school at Larantuka in 1570, both far to the west of the Manggarai lands. Minangkabau immigrants had probably already made some Muslim converts along the coast. In 1666, the Makassarese attempted unsuccessfully to conquer the southern Manggarai coast. From the 17th century on, the sultanate of Bima in eastern Sumbawa dominated the northwest coast of the Manggarai region, organizing villages into *dalū* (regions) and *glarang* (lineages) and establishing the head of the Tolo *dalū* as *raja* (king) of the Manggarai. Early accounts reported that the native kingdom of Cibal existed in the interior.

After the Tambora eruption of 1815 weakened Bima, the Manggarai with Dutch aid, were able to drive out the Bimane, who gave up their last claims only in 1929. In 1859, the Dutch bought the last of the Portuguese claims to the island on the condition that Catholicism would not be threatened. Dutch Jesuits followed in 1862, converting thousands, particularly from the leading families. In 1913, the Society of the Holy Word (SVD) succeeded the Jesuits in this territory and focused on education. Meanwhile, formal colonization by the Dutch commenced in 1907. In 1917, Catholic missionary activity among the Manggarai began in earnest; the strategy stressed similarities between traditional beliefs and the new religion, as well as tolerating indigenous dance and other customs. In 1930, under the advice of the Catholic hierarchy, a Dutch-educated Catholic Manggarai, Alexander Baruk, was appointed as the “first king” of the Manggarai.

In the late 1950s and early 1960s, Dutch and German Catholic organizations sponsored a “Flores-Timor” development plan. The Roman Catholic Church cooperated with the New Order government’s development plans. Nusa Tenggara Timur province, of which Flores is a part, remains one of the poorest regions in the country, largely due to the limitations the dry climate imposes on agriculture.

## <sup>2</sup>LOCATION AND HOMELAND

The mountainous island of Flores is part of the Lesser Sunda chain that stretches from Bali in the west to Timor in the east. Inhabiting the western third of the island, the Manggarai are the largest single ethnic group, numbering 575,000 (8% of the population of East Nusa Tenggara province in 2000—Flores as a whole was estimated to have 1.6 million people in 2003). Among them, Malay-Mongoloid physical features appear with

fewer Melanesian/Papuan traits than among peoples farther east on the island. The Ngada people to the immediate east show many similarities to the Manggarai, while the more distant Endenese, Sikkane, and Solorese show much less resemblance. On the west coast of the Manggarai region, long-standing Bajau and Bugis fishing communities exist; Bimane farmers also pass through to sell produce.

The volcanic origin of the soil and relatively abundant rainfall favor agriculture in the Manggarai region over other parts of Flores. However, recent deforestation has led to erosion and the drying up of streams.

## <sup>3</sup>LANGUAGE

The languages of Flores, like most of Indonesia’s, belong to the Austronesian family, specifically to the Central Malayo-Polynesian sub-branch that includes most of the languages of the archipelago east of Sulawesi and western Sumbawa. The Manggarai language is mutually unintelligible with that of the peoples farther east on the island; in fact, it has more in common with the languages of Bima and Sumba. There are three major dialects, the Western, Central, and Eastern, as well as a number of minor ones. Most Manggarai cannot understand the type of language employed in ritual. Bahasa Indonesia is the language of education, administration, and the Catholic church, but village people prefer to speak Manggarai among themselves. In some coastal regions, the Bugis *lontara*’ script was known.

## <sup>4</sup>FOLKLORE

Ghost stories are numerous. Many folktales focus on Mori Karaeng, the supreme being. Some describe how he created the earth, humanity, the spirit world, animals, and plants like maize and rice. Others tell how he caused wind and earthquakes, punished the moon with an eclipse and the *jin* (evil spirits) with thunder. Yet, others recount how he handled those who transgressed against custom, murdered, committed incest, defied parents, and neglected rituals. Still more show him teaching humans how to weave or make palm wine.

## <sup>5</sup>RELIGION

The island of Flores as a whole is 85% Catholic, an anomaly in the world’s largest Muslim country. Earlier in this century, however, Catholicism, most firmly based in Larantuka and Ende far to the east, dominated only the eastern part of the Manggarai region. Islam was strong in the west due to the influence of the Bima sultanate and the presence of Bugis and Bajau communities. The central Manggarai lands adhered to the traditional animist religion. In recent years, this pattern has changed, with Catholics now the majority throughout the region. The Catholic religion has even become an identity marker in relation to Muslim outsiders, which now include Javanese bureaucrats and merchants in the towns.

In churches, schools, and shrines, Catholicism has transformed the landscape. On Sunday mornings, families on their way to and from Mass fill the streets, church bells ringing overhead. Rosaries, crucifixes, and other religious objects are displayed in homes, shops, and vehicles and are sold in stores alongside consumer goods. On Flores, the Catholic Church works closely with the government and supports its development plans. Townspeople have a lifestyle informed by a Catholic outlook, while rural people tend to incorporate the new religion into their traditional life.

In addition to Mori Karaeng, the traditional religion recognizes several classes of spirits. *Empo* or *andung* are ancestral spirits who inhabit the environs of the village and who are invoked in life-cycle ceremonies. The *darat* or *ata pelesina* (“people of the other world”) are spirits of nature (forests, rivers, springs). Among these, the *naga tana* guard the soil while the *ngara tana* watch gardens, fields, and the crops themselves. Evil spirits are known by the originally Islamic terms *jin* or *setan*. Wooden altars in the shape of traditional houses are erected in gardens.

Leading rituals is a priest, the *ata mbeko* (male or female). One acquires this role not through heredity but through learning by assisting an experienced *ata mbeko*. He or she performs or guides life-cycle rites in the home, as well as public ceremonies, such as the inauguration of a village hall or those for the fertility of the soil. The *ata mbeko* also provide *dukun* services, such as healing, predicting a person’s future, or giving amulets or holy water for people to use against their enemies. Clan members return to their ancestral villages to participate in major ceremonies, which may include ritualized whip fights.

## 6 MAJOR HOLIDAYS

In addition to national holidays [see **Indonesians**], Catholic feasts are an important part of the cycle of the year.

## 7 RITES OF PASSAGE

A *jambat* ceremony, involving the offering of young betel nuts and a chicken with no black feathers, is held in the sixth month

of pregnancy. A *tenda* rite is held if a mother and her daughter-in-law are pregnant at the same time.

Most marriages today result from courtship or dating. The man’s family applies (*cangkang*) for the hand of the woman. The girl’s family asks for a high bride-price (*paca*), which includes water buffalo and horses, but they will also give a large gift to the boy’s family.

Frequently, parents seek their child’s ideal partner in the mother’s brother’s daughter, a type of marriage called *tungku*, which does not require a large bride-price because of the already existing informal relationship between the families. In the past, one family would by custom take wives from a particular family, while that family in turn would take wives from a third family; relations between “wife-taking” families (*anak rona*) and “wife-giving” (*anak wina*) families would be formal, expressing status distinctions.

Elopement (*roko*) is a common alternative if a young man cannot or will not pay the bride-price, or if the young woman’s family does not consent to the match. Both sides can also agree to the elopement beforehand in order to save the face of the man’s family if the bride-price is too high. The man’s family makes a marriage application after the “abduction,” waiting until the girl’s family’s anger has subsided to ask forgiveness. The woman’s family goes through the formality of stating a high bride-price even though their daughter is already living with her new husband and his family.

After finalizing the amount of the bride-price, the woman’s family hosts a feast where they charge the man’s family twice the value of what the latter has consumed. An elder inspects the liver of a sacrificed pig to learn the ancestor’s opinion of the match.

In lieu of a bride-price, the groom may do service for the bride’s family for a specified time. After living with the bride’s family for five days (ending with the *wega mio* ceremony), the new couple moves in with the groom’s family. A man may marry the widow of a deceased brother without paying a bride-price. Aristocrats used to practice polygyny, but this is now banned under Catholicism.

Burial and mourning rituals are complex. Tradition required that bodies be buried with their limbs drawn close to the body. However, a coffin now replaces the former mat. A wake is held for three nights and includes gambling. The person is buried in his or her home village. The burial is held at night because in the other world everything is opposite; thus, night here is day there, and dishes and glasses for the use of the dead are broken because they will be whole in the other world.

At first, the deceased’s spirit (*ase-kae de weki*) roams around the house, especially by where it slept when alive, and then it occupies the well, big trees, house posts, or nearby crossroads (during this period, it can help its kin if they are in danger). Five days after the death, the family holds the *kelas* ritual, sacrificing animals. With this, the spirit becomes a *poti*, who is released from this world and leaves for the other world; there it lives with Mori Karaeng and intercedes for the descendants with him.

## 8 INTERPERSONAL RELATIONS

Manggarai society still preserves traces of the traditional political order. The Manggarai people used to be divided among 39 *dalū*, small regions, most of which were subordinate to either Reo or Patta, the two halves of the Cibal kingdom. Each

dalus were dominated by a single *wa'u*, whose members considered themselves aristocrats. The head of the dalu was a *kraeng* (from the Makassarese word for “king”), and other prominent leaders were *sangaji*. The dalu encompassed several often unrelated *glarang*, lineages that were autonomous from the dalu in matters of land rights (including rights to hunting and fishing grounds). The *glarang* had a *tu'a tenu*, a hereditary specialist on the customary laws on land tenure, who distributed lands to lineage members to use; he was usually from a different family from the lineage head. Each *glarang* was in turn composed of *beo* (villages).

Members of the dominant lineages within dalu and *glarang* territories formed the *kraeng* (aristocratic class). The *ata leke* were the ordinary people: artisans, peasants, and laborers; these commoners controlled small tracts between the lands of aristocrats. Before the Dutch abolished the practice, war captives, debtors, and exiles could become slaves, which were also bought from foreign traders. The stigma of slave descent is still felt today. However, the sharpest distinction today is between townspeople and villagers.

In the past, warfare was endemic; warriors in rattan war helmets and feathered war cloaks fought with spears, knives, and shields. Through marriage, aristocratic clans formed alliances, regarding all other dalus as enemies. Before battle, warriors splattered their swords with the blood of a sacrificed pig, goat, or chicken and marched around the village center.

Among the Manggarai, adolescents of the opposite sex can associate freely, chatting at wells or dancing at feasts.

## <sup>9</sup>LIVING CONDITIONS

Raised on 1-m (3-ft) stilts, the traditional house has a circular floor plan. Made of bundles of rice straw, the conical roof rises from the edge of the floor (i.e., there are no walls as such) to a center post that may be as high as 6 m (20 ft). Inside, a corridor separates the rooms, four to five on either side. The space immediately under the roof is the place for spirits, and heirlooms and food are stored there. The middle space is for human living. The space under the house is for storing tools and keeping animals (pigs, goats, sheep, and chickens). Before Dutch regulations early in the 20th century placed the maximum occupancy to three families, these houses could contain as many as 200 people.

Traditional houses are rare, as Manggarai now prefer houses with walls, modeled on those of other regions of Indonesia; a zinc roof has become a status symbol.

Until the Dutch began pushing for settlement in the plains, villages used to be built on hilltops for defense. In a pattern that can still be seen in modern settlements, a village had three parts: a front (*pa'ang*), a middle (*beo*), and a back (*ngaung*). Formerly, each section of a house had a sacred spot, a pile of big stones where guardian spirits could descend. Still today, the center of each village has a *kota*, a pile of large stones arranged in a step-pyramid with a table of flat stones on the top. A great banyan tree shades the *kota*. In front of the *kota* stands a sacred village hall called *mbaru gendang* (after the large sacred drum inside). Bamboo stockades 2 to 3 m (6.5–10 ft) high once encircled hilltop villages, now replaced by a dense barrier of thorny bushes (but modern villages at the foot of hills lack stockades altogether).

For occupation during the cultivation of swidden (shifting cultivation) fields, small houses called *sekang* are built. A clus-

ter of these may become a new village if it acquires a *kota*, a banyan, and an *mbaru gendang*.

Townspeople with office jobs can afford consumer goods and dinners in restaurants, particularly at the beginning of the month right after salaries are paid. Rural people are generally well-fed but low on cash. When they take their produce to the town market, they may treat themselves to a meal from a food stall, indulge in small-time gambling, and buy cigarettes and bread or candies to take home to relatives.

The Manggarai regency has a Human Development Index (combining measures of income, health, and education) of 65.2 (2005 score), somewhat higher than that of East Nusa Tenggara province as a whole (63.6) but well below that of Indonesia as a whole (69.6). The regency's GDP per capita is us\$2,174, the second lowest in East Nusa Tenggara, which in turn has the second lowest in Indonesia (cf. us\$9,784 for West Sumatra, us\$8,360 for North Sulawesi, and us\$6,293 for Central Java, and us\$3,427 for East Nusa Tenggara as a whole. GDP figures do not include income from petroleum and natural gas production, negligible in any case for these provinces). In 2000, the rate of infant mortality stood at 55.65 deaths per 1,000 live birth, only slightly lower than the rate for the province as a whole (56.65), comparable to much more developed provinces such as South Sulawesi and West Java.

## <sup>10</sup>FAMILY LIFE

The *cak kilo* is the nuclear family. The most important unit, however, is the extended family, the *kilo*, including the parents' sons, their wives, and children. A group of *kilo* with a common patrilineal ancestor five to six generations back is a *panga*; often *panga* that shrink due to death will enter into other larger *panga*. In the past, the *panga* was responsible for mourning rites, the cremation of ancestral remains, and the raising of stone pillars to honor ancestral spirits, but now it serves only to give its members a surname. The *wa'u*, a unit larger still than the *panga*, has lost its functions by now but used to have animal totems and hold rituals that were taboo for outsiders' participation.

Kinship terminology exhibits some peculiarities. *Empo* refers to both grandparents and grandchildren. A father, his brother, and the mother's sister's husband are all *ema*. The mother, her sister, and the father's brother's wife are all *ende*. *Inang* is for the father's sister and the mother's brother's wife while *amang* is for the mother's brother and the father's sister's husband. *Weta* applies to a sister, a father's brother's daughter, and a mother's sister's daughter. *Kae* applies to an elder brother, a father's brother's son, and a mother's sister's son. *Kesah* refers to a father's sister's son and a mother's brother's son. The same word, *wina*, applies to a mother's brother's daughter and to a wife, while *rona* refers both to a father's sister's son and to a husband.

The terminology expresses the patrilineal bias of the kinship system, as when the term for father applies to the father's brother but not to the mother's brother. Moreover, a man who marries a sister of the father, thus taking a wife from the same family as the father, is also called father (*ema*).

## <sup>11</sup>CLOTHING

Traditional women's upper-body clothing resembles the Bugis-Makassar *baju bodo*, a blouse with wide, short sleeves. A rural woman now wears a sarong and a blouse or tee-shirt. A rural

man wears a headcloth, short pants under a sarong, and a machete tied to his waist. Both sexes wear rubber thongs or go barefoot. Going into town, male villagers may carry a *peci* (the national brimless cap of black velvet) with a colorful piece of Manggarai cloth added, a cloth bag for tobacco or betel nut, and occasionally a carved cane. Female villagers wear skirts rather than sarongs into town and carry a handkerchief.

Teenagers wear jeans and tee-shirts, boys adding baseball caps and running shoes. Because of the cost and perhaps out of greater conservatism, rural teenage girls are less likely to wear jeans. Village teenagers dress traditionally at home but adopt modern clothes for visits to town. Townspeople dress like other urban Indonesians.

## 12 FOOD

Roasted whole or made into cakes or porridge, maize is the staple food, eaten with vegetable side dishes. Rice and chicken or pig meat is reserved for special occasions. Ceremonies also require the consumption of great quantities of palm wine. Several decades ago, betel chewing was very popular (though it is much less so now).

## 13 EDUCATION

In 2005, the level of literacy stood at 85.95% in Manggarai regency, slightly higher than that for East Nusa Tenggara as a whole but somewhat low for Indonesia, though comparable to more developed provinces with higher population densities and high numbers of poor, such as South Sulawesi, Bali, and East Java (see also the article entitled **Indonesians**).

## 14 CULTURAL HERITAGE

Oral literature consists of poetry (*renge* and *tudak*), requests to the gods for prosperity. This poetry forms part of nighttime rituals. An *ata molor tudak*, a storyteller, or the *tu'a tenu* of the *glarang* recite folktales.

## 15 WORK

Slash-and-burn agriculture is the major occupation. Fire is used to clear land, and the partially burned trunks are piled up to form borders between fields. Farmers cooperate in clearing land and divide the cleared land according to an agreement. Traditionally, fields were arranged radiating from a center (creating a spider-web-like pattern); these *lingko randang* fields are rare now. The main crops are maize and rice.

In 1918, the Dutch brought Balinese prisoners to establish wet-rice fields; years later, they sent Manggarai to study wet-rice techniques in Bima. The valleys around Ruteng constitute Flores' largest wet-rice area (swidden, or shifting-cultivation, is still the dominant form of farming on the island as a whole).

The Manggarai region is also one of the country's largest coffee areas (grown on permanent hillside farms and in house gardens). The export of oranges, jackfruit, *salak*, cacao, and cashews is just beginning to grow.

Water buffalo are status symbols, slaughtered for consumption at customary ceremonies. Horses are kept for transport and traction and constitute part of the bride-price. Water buffalo and horses are pastured on village common land and kept in a village pen. Alternately, horses are left to roam free in the surrounding grasslands to be caught when needed and later released. Pigs, goats, sheep, and chickens roam about the house

yard by day and are kept under the house at night. Livestock export is another young industry.

Many young Manggarai men work in the towns for cash to be sent back to their families in the village.

## 16 SPORTS

*Caci* are whip fights that accompany ceremonies, but are now also performed to entertain tourists. The whip is of water buffalo hide, as is the shield (the latter can also be of bamboo rods). The whip leaves large scars that are attractive to women. Every young man has a fighting name, e.g., "Wild Boar," "Rearing Horse," "Naughty Rooster," or "Gone Around the World and Have Yet to be Bested."

Cockfighting with intense gambling accompanies many rituals. Despite an official ban, local police do not interfere.

Soccer is the most popular modern sport. The Catholic diocese divides Manggarai into four parts, each of which fields a team for a diocesan tournament.

## 17 ENTERTAINMENT AND RECREATION

See the article entitled **Indonesians**.

## 18 FOLK ART, CRAFTS, AND HOBBIES

*Ikat* (tie-dyed) cloth is produced for family use. Basketry is highly developed: typical pieces are hats and betel- and tobacco-chew holders. For these, young palm leaves are split into fine fibers, dried, and dyed with store-bought colors, often green, red, and yellow.

## 19 SOCIAL PROBLEMS

See the article entitled **Indonesians**.

## 20 GENDER ISSUES

The Gender-Related Development Index (combining measures of women's health, education, and income relative to men's) for Manggarai regency (2002 score) is 59.9, slightly above Indonesia's national GDI of 59.2 and significantly above that of East Nusa Tenggara as a whole (56.3). The residency's average Gender Empowerment Measure (reflecting women's participation and power in political and economic life relative to men's), however, is 33.33, far lower than the national GEM of 54.6 and the provincial GEM of 46.2).

## MANGYAN (HANUNO'O GROUP)

**PRONUNCIATION:** mahng-YAHN (hah-noo-NO-oh)

**LOCATION:** Philippines (island of Mindoro)

**POPULATION:** 7,000-13,000 (2000)

**LANGUAGE:** Hanuno'o

**RELIGION:** Traditional animism; some Catholicism

**RELATED ARTICLES:** Vol. 3: Filipinos

### <sup>1</sup>INTRODUCTION

The Hanuno'o are the best known of the various groups called "Mangyan" living in the interior of the island of Mindoro. To an even greater extent than other such outsider-given names, "Mangyan" covers a wide range of meanings. In the Tagalog, Bikol, and Visayan languages of the central Philippines, the term combines the ideas of "savage," "mountaineer," and "pagan Negro," apparently once referring to Negritos rather than to Mangyan, who physically do not differ from lowland Filipinos. The word even came to mean "servant" or "debt-slave," much as, among the Tausug, captive slaves in general were called *bisaya*. In the usage of most Mindoro highlanders themselves, "Mangyan" equals "a person," a fellow "tribesperson," or "pagan." The exception is the Buhid who use it only to refer to other highland peoples and not to themselves. The Hanuno'o, on the other hand, insist that they are the "authentic" Mangyan (*hanuno'o* means "true" in their language).

Mindoro presents one of the great anomalies of Philippine history. Whereas Cebu, Panay, and, above all, Manila retained and increased their regional importance under Spanish colonial rule, Mindoro lost its pre-Hispanic prominence. Finding mention in Chinese accounts of the 13th century, the island was the first place in the Philippines to enter the historical record under the name Mait (Ma-yi in modern Mandarin pronunciation). To exchange for beeswax, musk, sandalwood, kapok, and the leather of the *tamaraw* (a wild and smaller version of the water buffalo), Chinese traders brought porcelain, metal, cloth, and silver coin; the Mait people themselves carried these goods to other islands and returned with the products the Chinese desired. Shaded by umbrellas, the Southeast Asian emblem of royalty, the chiefs of the coastal towns were powerful enough to deter pirate attacks, to exact customs duties from the Chinese traders, and to vouch for their own people, whom the Chinese regarded as "trustworthy."

Based on Panay and groping towards Manila, the Spanish first came to Mindoro in 1570. They called the coastal people "Moros," noting their connections with Muslim Brunei, which they would discover the Tagalogs farther north also enjoyed. The coastal towns were defended by moats, 4.25 m (14 ft) thick walls, and culverins (small cannons). Their inhabitants were rich in gold and savvy enough to present the greedy Spaniards with fake gold pieces that deceived even the most expert. In addition, the Spaniards also recorded that "Chichimecos" inhabited the interior. This was originally an Aztec term for the nomadic bands who lived far to the north of the Valley of Mexico; here it would generally be applied to Negritos. This is a reversal of the transfer of terminology that named the Aztecs and other American natives *indios*, "Indians." This distinction

between sophisticated coast-dwellers and “primitive” interior peoples would widen through the coming centuries.

Because of its strategic position between Luzon, Panay, and Palawan, coastal Mindoro became a battleground between the Spanish and their Muslim enemies from the far south. From the 17th to the early 19th century, the Muslims controlled the entire west coast of the island, using it as a base from which to conduct piracy and slave-raids throughout Spanish Christian territory. The Spanish themselves attempted with only limited success to extend their control over the rest of the island, exacting tribute, gathering the natives into compact settlements (*reducciones*), and establishing missions. The end result of this conflict was the Spanish evacuation of much of the coastal population to the more securely held province of Batangas on Luzon and the withdrawal to the interior of the rest whom slavers had not taken.

By the 19th century, the island that had been the Philippines’ first recorded window to the outer world gained a reputation as a wild, mysterious, and inhospitable land. When Christian lowlanders (Tagalogs and Hiligaynon) began to settle the coasts, they looked on the natives as alien heathens ripe for exploitation. For a machete, Christians could demand rice crops from Mangyan in payment; Christian men would enter into sexual liaisons with Mangyan women, only to abandon them. The American colonial regime deepened the division by labeling the Mangyan as inferior to other Filipinos and designating Indian-style reservations for them. However, as many Filipinos pointed out, American interest in the Mangyan was inseparable from their desire to exploit the island’s resources. Settling the coasts and penetrating the interior, Christian Filipinos have continued to exert pressure on the Mangyan.

The Mangyan response has been to seclude themselves even further and to avoid entering into any “reciprocal” relations with lowlanders, which they have long learned end up one-sided. They even distrust hierarchy among themselves, preferring egalitarian social structures. These characteristics have left them less able to assert their political rights in the manner that Cordillera and Muslim peoples have done in gaining a measure of autonomy. As the American regime in the end abandoned the policy of isolating the Mangyan, the Filipino government has favored simple integration, which would ultimately end the Mangyan existence as separate peoples. For instance, the Iraya of the northern highlands have been settled by the government in towns and have become wage laborers for Christians.

Although they are the only Mangyan group that traditionally maintained trade relations with lowlanders, re-trading the goods to the other groups, the Hanuno’o still keep to themselves, an all-the-more-striking feat since they live rather close to Hiligaynon settlements. Whereas other groups (particularly to the north), who are hunter-gatherers that grow root-crops only intermittently, may indeed be descended from the Spaniards’ Chichimecos, the Hanuno’o, who not only grow dry-rice, weave cloth, make pottery, and forge metal but also possess a script, probably lived on the coast in earlier times. Many elements of their present culture correspond to those of pre-Christian Visayan culture as described by Spanish writers.

Some Hanuno’o have begun to integrate with wider Filipino society with the assistance of Antoon Postma, a Dutch Catholic priest who began work in 1958. Having failed to attract Hanuno’o to settle near lowland schools, he established a

school-clinic-chapel complex in the mountains. The Hanuno’o living around it have even begun to elect their own leaders (rather than deferring simply to age and experience), a move that will allow them to participate in Filipino politics.

## 2 LOCATION AND HOMELAND

The Hanuno’o live inland from the southernmost tip of Mindoro. In the 1970s, the Hanuno’o numbered 6,000 out of a total of 20–30,000 Mangyan, already a minority on an island inhabited by 300,000 Tagalog and Visayan settlers. One 2000 estimate numbers the Hanuno’o 13,000. According to the 2000 census, 7,702 identified themselves as Hanuno’o in Oriental Mindoro province, 19,001 there identified themselves as simply “Mangyan,” and 13,899 in Occidental Mindoro province identified themselves as “Mangyan.” The other groups include, on the one hand, the Buhid and Batangan of the southern highlands, who with the Hanuno’o form a group linguistically close to Visayan and, on the other, the Iraya, Alangan, and Tadyawan, who speak languages more similar to Tagalog. In 2000, the Mangyan were proportionately an even smaller minority on their ancestral island; its total population surpassed 1 million.

## 3 LANGUAGE

The Mangyan groups speak mutually unintelligible languages. The Hanuno’o language is similar to the Visayan tongues of the central Philippines. Along with the neighboring Buhid and the Tagbanua of central Palawan (see *Tagbanua*), they still use the script, ultimately of Indian origin, that was employed by the

Tagalogs and other Filipino peoples at the time of the Spanish conquest. Incised into lengths of bamboo, this script is used to write messages and courtship verse; only recently has it been used for any other purpose, namely, in election materials.

#### **4 FOLKLORE**

See the following section on religion.

#### **5 RELIGION**

The Hanuno'o recognize certain named deities of creation, but these play only a minor role in everyday life. Ordinarily more significant to them are nature spirits living in mountains, rocks, the forest, etc., who all can be transformed into *labang*, evil spirits who can attack a person's soul, causing illness or death. Benign spirits (such as ancestors) may allow their evil fellows to do harm to humans who have violated custom.

Each person has three *karaduwa* (souls), a good one located to the right of the chest, a neutral one in the center, and an evil one to the left. The center-soul keeps both sides in balance. If the left soul gains the upper hand, the person may lie, steal, or kill. If the right soul fails to return to the body temporarily, this causes illness; if it leaves permanently, death occurs. *Kalag* are guardian spirits, the ghosts of the recently deceased or the souls of the living who have supernatural powers, such as becoming invisible or making others invisible.

Part-time specialists, such as masseurs, herbalists, and mediums (*balyanan*), perform curing rituals. The balyanan send their spirit familiars to combat evil spirits or extract harmful objects from a victim's body. The spirit familiars reside in stones that the balyanan carefully guard. Mediums also wave leaves or other plant parts over the patient's body. Balyanan are present at ceremonies for deceased kinfolk, area spirits, and swidden (shifting-cultivation) fields, especially for rice. Spirit offerings consist of cooked rice, pig's blood, and prepared betel chew, but spirits especially appreciate glass trade-beads.

#### **6 MAJOR HOLIDAYS**

See the sections entitled "Religion" and "Rites of Passage" in this article.

#### **7 RITES OF PASSAGE**

Hanuno'o marry by mutual agreement of the two partners' families; the man must provide some form of bride-service to his in-laws. In contrast to non-Mangyan groups, there is no bride-price, formal ceremony, or exchange of goods between the sides. Elopement is an alternative.

For a year after death, the right soul remains in the underworld, neither dead nor alive. The left soul remains with the body, however, and may bring misfortune to surviving kin. During the first year, the body is buried with its head turned towards the west, so the face will get sunlight. After a year, the bones are exhumed (*kutkutan*) and bundled in two blankets, with two ends tied together to make the "head," while the other two make the "arms." The relatives feed, talk to, and dance with the bones at a large, expensive socioreligious festival called a *panludan*, now also called by the Hispano-Visayan term, *punsiyon*. This is an occasion for merry-making, courting, singing, and dancing. Not being able to use the former house of the deceased, the relatives build a ritual house; upon entering the ritual house, they beat each other with branches

*A pregnant Mangyan tribeswoman with her daughter. (AFP/Getty Images)*

to drive away the center- and left-souls of the deceased. During 24 hours of chanting, a priestly exhumation specialist (*panugkutkutan*) reconstructs the bleached bones in the form of a person and puts clothing on the "body."

Afterwards, the bones are cleaned, and certain valuables are placed in a cave niche with the remains of other relatives. The three souls become one and go towards *agsalim*, the spiritual world, situated on Mt. Aliwliwan. Before passing on to *agsalim*, the unified soul must pass through a checkpoint where a woman judges the soul. One's deeds, character, relations, and debts are believed to continue unchanged into afterlife. If the soul is good, the woman teaches it the way to Aliwliwan. If the soul is bad, the woman keeps silent and a big man with seven dogs appears and drives the soul into a boiling pond. These beliefs reflect the influence of Buddhism.

#### **8 INTERPERSONAL RELATIONS**

The Hanuno'o live in autonomous, named settlements largely corresponding to a kin-group. Society is egalitarian with some prestige accorded to age and special skills, such as weaving, smithing, spirit mediation. Individuals and families possess wealth in the form of ritual glass beads, bronze gongs, porcelain jars, and cattle, but accumulated property does not give

rise to social differentiation. The eldest member of a kinship group acts as a caretaker or consultant. Disputes are settled by the eldest relatives of the disputing parties. Some cases are resolved by ordeal by hot water. Penalties take the form of fines in glass beads. Although the closest relatives of a murder victim will avenge the death, the Hanuno'ο, like other Mangyan groups, have no recent tradition of warfare; their response to attack by outsiders (such as Moro slavers) has been evasion.

At *panludan* funerary feasts, young men and women engage in a highly stylized pattern of courtship involving the exchange of love songs (*ambahan*). The boy starts and the girl answers, both aiming to choose the wittiest or most appropriate verse.

## **<sup>9</sup>LIVING CONDITIONS**

Villages are semipermanent, traditionally autonomous, and consist of five to six single-family houses (50–60 persons maximum). They are generally built on valley slopes or hill spurs overlooking a water source. The sites are identified by a geographical landmark, and the settlement itself by the name of its eldest resident. Settlements within an hour's easy walking distance form a "local area" to which a person maintains a life-long affiliation and ethnocentric attachment, no matter where he or she moves.

Houses are raised on piles, sturdily constructed of wood or bamboo, and roofed with thatch. They include a veranda that may connect to the verandas of other houses, linking several in a chain. Granaries resemble houses but are smaller and lack a veranda. Some Hanuno'ο live in tree houses for protection.

Average family income in the MIMAROPA region (Mindoro, Masbate, Romblon, and Palawan islands) amounted to 109,000 pesos (us\$2,137) in 2006, the second lowest in the country (above the Autonomous Region in Muslim Mindanao), cf. the national average of ₱173,000, the National Capital Region's ₱311,000, and those of the neighboring regions, Southern Tagalog, ₱198,000, and the Western Visayas, ₱130,000.

In Oriental Mindoro province, the proportion of houses with a roof of galvanized iron/aluminum increased from 27% in 1990 to 52% in 2000, with a roof of grass or palm thatch from 67.1% in 1990 to 40.7% in 2000. Houses with outer walls of concrete, brick, or stone reached 27% in 2000 and with wooden outer walls 16.2%; the proportion of houses with outer walls of grass or palm thatch remained high, 33.9% in 2000, though substantially down from the 1990 figure of 54.4%.

## **<sup>10</sup>FAMILY LIFE**

A family consists of a man, his wife or wives, and their unmarried offspring. This may be extended to form a local family group with married daughters, and their families usually live in adjacent houses. Such a group always respects its oldest male member. A single family may move away from the settlement but will always set up its residence near the kin of either the husband or wife.

The Hanuno'ο use the body as a metaphor for the extended family, whose members cannot intermarry without infringing the incest taboo and who do *arawatan*, i.e., aid each other in farming. The husband is equated with the right breast, the wife with the left. The right upper arm represents the husband's siblings, and the left represents the wife's. The forearms are the cousins of the respective spouses, the hands are the second cousins, and the spaces between the thumb and forefinger are the third cousins. The right neck-cheek area signifies the father

and the left symbolizes the mother, while the top of the head indicates the grandparents and all the ancestors. The two sides of the abdomen represent the husband's and wife's siblings, the right thigh represents the children, the left thigh symbolizes the nephews and nieces, the knees are the grandchildren, and the lower legs are great-grandchildren and all other descendants. This imagery parallels the terminology in other Filipino and Indonesian languages, such as the Hiligaynon *apo sa tuhod*, "grandchild at the knee" or great-grandchild; *apo sa umang-umang*, "grandchild at the thumb" or great-great-grandchild; and *apo sa ingay-ingay*, "grandchild at the smallest toe" or great-great-great-grandchild.

As most people marry within their locality, they often have to wed cousins; this is permissible after performing a cleansing ritual. At first, most couples settle with the wife's family, moving on only later. A set of brothers is allowed to marry a set of sisters, and a widow or widower is encouraged to marry the sibling of the deceased spouse.

## **<sup>11</sup>CLOTHING**

Hanuno'ο are noted for long hair, men as well as women. They weave and dye (indigo) their own clothing, which consists of short shirts and short sarongs.

## **<sup>12</sup>FOOD**

Rice is the food of prestige and ritual importance, but half of all calories in the Hanuno'ο diet comes from bananas and tubers (sweet potatoes, yams, and taro). Most animal protein comes from fishing, less from game or livestock.

## **<sup>13</sup>EDUCATION**

With the exception of those attracted by Father Postma, the Dutch Catholic priest who established a school-clinic-chapel complex in the highlands, Hanuno'ο avoid modern schools to a greater extent than do other minority groups.

## **<sup>14</sup>CULTURAL HERITAGE**

Large repertoires of verse (*ambahan*) are incised on bamboo strips. Consisting of seven syllables with rhyming endings, these highly metaphorical verses are in an archaic poetical language that is quite distant from everyday speech. An integral part of courtship, they are chanted with or without the accompaniment of guitars, jaw harps, nose flutes, and *git-git*, a locally produced small wooden fiddle with strings of human hair. One example translates: "The honey-eater bird,/Not yet having left the nest,/A blinking trembler,/Began to be tempted/ By a pretty dear,/In the *ulang* bushes of the *cogon* meadow." Another goes: "Though I love your body,/I love not to intrude on two./If one accompany a married woman/Who shall obey his wink,/His head shall have a nightmare/Up there in the mountains."

Another mood is expressed in an *urukay* song of the neighboring Buhid: "Like a tree overgrown with branches and leaves,/My mind is full of turmoil./Though loaded with pain and grief,/My dreams continually seek for an end,/Let it be known that I am on my way./Perchance you'll catch up with me."

## **<sup>15</sup>WORK**

The Hanuno'ο rely on swidden agriculture. To ensure the success of their efforts, they employ not only astronomical lore,

augury, and dream interpretation but also extensive pragmatic knowledge of soil types, crop rotation, erosion, and a knowledge of plants more precise than a Western botanist's. They recognize 1,625 mutually exclusive plant forms in 890 categories, of which 600 are edible, 406 are medicinal, and the rest have no use but are classified in order to complete their understanding of an ordered environment. By contrast, Western botanists distinguish only 1,100 plant species.

The Hanuno'o practice intercropping—before harvesting one species, they plant another. In this way, they grow maize, rice, beans, sugarcane, bananas, and papayas. They do not acknowledge permanent ownership of land but rather usufruct, the rights of those tilling it at any given time; fallow land may be reopened by another party. Individuals do own trees, spears, and beads, while families own heirloom gongs and porcelain.

For consumption at ritual feasts, the Hanuno'o keep pigs, chickens, and humped cattle (the last are also used as draft animals). Using spears, traps, poisoned arrows, dogs, and formerly fire-surrounds involving 50 or more men, they hunt wild pig, deer, monkeys, and in the past *tamaraw* (small, wild water buffalo). They also catch fish and crustaceans.

The Hanuno'o make occasional trips to the lowlands to trade their surplus rice, maize, bananas, cacao, and tobacco for salt, metal (scrap, needles, kettles), ritually important glass beads (also the standard of value in the south Mindoro pagan interior), red cloth, Moro gongs, and Chinese porcelain (for ancestral offerings). They trade these goods obtained from lowlanders to the neighboring Buhid, their fellow highlanders, for clay cooking pots.

## 16 SPORTS

See the article entitled **Filipinos**.

## 17 ENTERTAINMENT AND RECREATION

Because of their isolation, Hanuno'o have less access to modern entertainment forms than other "minority" groups.

## 18 FOLK ART, CRAFTS, AND HOBBIES

Using double-piston bellows, men forge knives and other articles from scrap metal obtained through trade with lowlanders. Women plant, pick, gin, and weave cotton into clothing and blankets and also grow indigo for dyeing. Basketry is highly developed, using red-dyed rattan and displaying fine geometrical designs.

## 19 SOCIAL PROBLEMS

See the article entitled **Filipinos**.

## 20 GENDER ISSUES

According to the 2000 census, among the Hanuno'o, men and women are nearly equal in number (50.2% vs. 49.8%). In the Oriental Mindoro population as a whole, more women had a college undergraduate education or higher and received academic degrees than men by a substantial margin; elementary school completion, a measure likely more relevant to the Hanuno'o, was lower for girls than for boys; 52.6% of elementary school graduates were male while only 51.5% of the population was male.

# MANUVU' (UPLAND BAGOBO)

**PRONUNCIATION:** man-NOH-bo

**ALTERNATE NAMES:** Bagobo

**LOCATION:** Philippines (island of Mindanao)

**POPULATION:** About 30,000

**LANGUAGE:** Manuvu'/Bagobo

**RELIGION:** Indigenous beliefs

**RELATED ARTICLES:** Vol. 3: Filipinos

## <sup>1</sup>INTRODUCTION

The Manuvu' are one of the many Mindanao groups to whom Visayans, Spanish, and Moros apply the name *Bagobo* (anthropologists specify the Manuvu' as the "Upland Bagobo"). The term is a contraction of *bago*, "new," and *obo*, "man." Originally, the term Bagobo referred to the peoples of coastal southwestern Mindanao who converted to Islam. However, its scope was extended to include unconverted hill tribes such as the Manuvu', whose name means "native people." They are themselves not a homogeneous group, displaying dialectal differences and occupational and artistic specializations.

The Manuvu' *Tuwaang* epic locates their origin in the valley of the Kuaman river (a tributary of the Pulangi). This region's present population speaks a dialect that Manuvu' can understand, and who are otherwise culturally similar. Little Islamic influence (or, rather, the culture of the Islamized lowlanders such as the Maguindanao) can be found in Manuvu' culture. In the 19th century, Moro warriors struck into the uplands, compelling the Manuvu' to ally with their traditional enemies, the Matigsalug, in order to mount a resistance. At the same time, by the middle of that century, external trade was making an impact on Manuvu' life. The Manuvu' received woven clothing from the coastal Attaw in exchange for boar and deer meat. The Attaw also delivered gongs, horses, and water buffalo to the Manuvu' who in turn "reexported" them to the Matigsalug in exchange for long-bladed knives. Another lucrative business for the Manuvu' was the sale of Matigsalug slaves to the Attaw.

Seeking to end the warfare endemic to the region, the American colonial administration (fully imposed on Mindanao only in the 1910s) discouraged the Manuvu' from carrying arms. The Manuvu' gradually abandoned ambush weapons such as the blowgun and the bow and arrow; only individuals willing to pay a special tax were issued with licenses to carry the *palihumas* long-blades (after World War II, one still brought a spear on trips but otherwise left spears stacked in the house). Having adopted the crops from Japanese and American planters, the Attaw introduced abaca and coffee to the Manuvu', many of whom came to rely on them, especially after World War II. During that war, hoping to flush out Filipino guerrillas taking refuge among the Manuvu', the Japanese built the first roads into the uplands. In later years, on these roads and those cut by logging companies, Visayan settlers poured in, displacing Manuvu' from more and more of their ancestral lands.

## <sup>2</sup>LOCATION AND HOMELAND

The Manuvu' (population estimated at about 30,000) inhabit an extensive region between the Pulangi and Davao rivers in

central Mindanao (southern Bukidnon, northeast Cotabato, and northwest Davao provinces). This territory begins as rugged, mountainous terrain in the east, then flattens into gentler slopes and wider valleys towards the west. Although the soil in the western valleys is more suitable for rice, the Manuvu' prefer the eastern hillsides where swidden (shifting-cultivation) farming strains the back less.

## <sup>3</sup>LANGUAGE

The Manuvu'/Bagobo language belongs to the Manobo subgroup of the Southern Philippine branch of the Austronesian family; as such, its closest relatives are other indigenous languages of Mindanao.

Relatives select a name for a child that refers to natural phenomena or memorable events accompanying the birth (e.g., an earthquake or a visitor's arrival); physical peculiarities of the child; or persons known to the relatives personally or by reputation (including Christians such as the Filipino president). Manuvu' do not have surnames, adding their father's name for further identification if necessary.

## <sup>4</sup>FOLKLORE

Consisting of 100 sung episodes, the *Tuwaang* epic recounts the adventures of the hero of that name. *Tuwaang* is a *bahani*', one of whose marks of distinction is the possession of 200 wives. The epic provides the Manuvu' with their mythology as well as behavioral ideals, such as the characteristics of the proper leader; Manuvu' even see in it predictions of the future, e.g., airplanes are believed to have been prefigured in the *sinalimba* boat that carries *Tuwaang* and his followers into heaven. The Manuvu' believe there is a creature in the mountains named the *busao/buso* that eats their children.

## <sup>5</sup>RELIGION

According to Manuvu' belief, there are two parallel universes, one good and the other bad, each divided into a skyworld, an earthworld, and an underworld. While the bad universe is only vaguely delineated, the good universe's skyworld consists of nine layers, at the topmost of which resides *Manama*, the supreme deity. *Manama* is little involved in earthly affairs, although eventually he will take the souls of the good from the underworld to live with him. Lesser gods (*diwata*' and *anitu*) inhabit the lower layers of the skyworld. Some lesser gods are those to which a hunter prays before setting off on the chase: *Timbaong*, god of animals; *Mahumanay*, goddess of the mountains; and *Tahamaling*, goddess of the forest. Another is *Anit*, the deity who punishes incest and inflicts deformities on those who mock dogs, cats, and frogs.

Household heads, artisans, and hunters make offerings to ensure the success of their endeavors. The most common religious specialist is the *walian*, who leads agricultural and healing rituals. More prestigious is the *tumanuron*, who enjoys curative and predictive powers through the patronage of an *anitu*. Most revered of all is the *pohohana*', a diviner who can perform rainmaking and other miracles. *Datus* (chiefs) very often function also as ritual leaders.

## <sup>6</sup>MAJOR HOLIDAYS

There are no holidays as such, but there are regularly held ritual celebrations.

## 7 RITES OF PASSAGE

Nowadays regarded as too painful, tattooing and tooth filing no longer mark the transition to adulthood for boys and girls. Boys, however, still undergo circumcision.

In a young person's life, marriage is the most important rite of passage. The family of the groom is required to pay the bride's family a dowry, which may take years to accumulate. Before the bride-price negotiations, the sides reconstruct their genealogies in order to check whether the union might be incestuous. Once incest is ruled out, the boy's family sends an intermediary to negotiate the bride-price. This consists of the *panamung*, goods for the girl's parents and kin, plus the *pan-tun*, goods for the girl herself. She makes a great show of refusing the proposal, often holding out for a bigger *pantun*—if the boy's kin can't afford it, they have to withdraw.

The wedding celebration opens with the groom's parents presenting a spear to the bride's parents, an act to propitiate Dohanganna Karang, the god of marriage, so that the couple will prosper. The groom's parents then hand over a gong set and a *palihumu'* blade to the bride's parents to appease Kayag and Pamua', gods who will guarantee the success of the couple's farm work. Following is a tedious assessment of each item of the bride-price. After this is a ceremony in which the bride and groom simultaneously feed each other lumps of rice with chicken. Brothers or uncles then perform the rite of knocking the bride's and groom's heads together. Finally, relatives give the couple advice on how to have a happy marriage.

Tree burial was once common, but now the deceased's relatives leave the body in his or her house, then abandon the house. In abaca- and coffee-growing areas, burial is now in the house yard with a thatch hut raised over it (which the relatives leave to rot).

## 8 INTERPERSONAL RELATIONS

Traditional Manuvu' society knew no social classes because the obligation to contribute to the bridewealth and blood money needed by kinfolk prevented individuals' permanent accumulation of wealth. Moreover, the status of slave, acquired through being captured in a raid, was hardly a permanent one, being little more than a prelude to being married into the captor's village.

Nor was there any authority above the village chief or *datu*; larger villages would even have three or more *datu*, none of which was superior to the others. The *datu's* role is to arbitrate disputes within the community and to represent it in dealings with other communities. A *datu* must possess *goro'*, the charisma that wins people's trust and obedience. More concretely, he must be skilled in negotiating, expert in customary law (*batasan*), and have wealth (rice, maize, cloth, gongs, blades, water buffalo, and horses) enough to provide hospitality to his followers who come calling and to underwrite the penalties they may incur. *Datus* train their sons to succeed them, but any individual fulfilling the above criteria can win the status. Since World War II, the threat posed by loggers and Visayan settlers has led the Manuvu' for the first time to recognize a single *datu* as spokesman for their entire ethnic group.

Preserving honor is of paramount concern. Even teasing (*sollog*) can lead to conflict and is permissible only among children and old people; parents can tease younger children but cannot tease adolescents. Feuds arise most often from verbal insults and disputes over bride-wealth. *Datus* judge cases that

conflicting parties themselves cannot settle. He determines which side must compensate which side and by how much (even paying first what the fined party cannot immediately cover) and, in the most serious cases, holds a *pagkitan* (the sharing of ceremonial food by both sides) in his house. In the endemic feuding before World War II, villages sent raiding parties or commissioned a *bahani'*, an independent warrior (and such companions as he might recruit), to exact revenge. Feuds could be concluded with a *pakang*, a peace-making ritual, in which a slave was killed to make the sides "even" in deaths.

## 9 LIVING CONDITIONS

Houses are raised on piles and have windowless walls of bark and a roof of bamboo, grass, or bark. Parents, children up to eight years old, and guests sleep on the *lantawan*, a raised portion of the floor. Unmarried daughters, however, occupy a separate bedroom, the *sinavong*, while boys and unmarried men sleep on boards suspended from and close to the ceiling. An extension may be added for a married daughter. Rice is stored in granaries, which are also raised structures but smaller than houses.

In more violent times, settlements grouped two or three tree houses linked by bamboo bridges. In the mountainous east, villages consist of a few widely scattered ground houses on hill spurs or on the edge of deep ravines; house floors are 6–8 m (20–26 ft) off the ground, beyond the reach of a spear-thrust from below.

Such settlements are impermanent, moving with the opening of new swidden fields (though within a fixed territory). In the broader valleys of the west, permanent villages of as many as 100 families living in low houses is the norm.

## 10 FAMILY LIFE

In raising bride-wealth or blood-money or forming a vengeance-taking party, an individual can rely on the assistance of kin from both paternal and maternal sides.

Strict enforcement of incest taboos (the deity Anit punishes perpetrators and their kin, e.g., by petrification) means that persons marry outside their village of birth, as fellow villagers are nearly always kin. Initially, a new husband lives in his in-laws' house before establishing his own—still within his wife's village. Surrounded by his wife's people, a husband is in effect a hostage, ensuring no feuding breaks out between the two kin groups. In such a position, a husband can never become too dominating a partner (he makes the decisions outside the home, such as for farming, while the wife makes decisions inside the home).

If one spouse dies, a same-sex cousin substitutes, preserving the intergroup relations established by the original union. A few men who can afford it take additional wives to demonstrate their sexual prowess, gain political influence, or even to provide the first wife (who must approve beforehand in any case) with assistance in her work. Either spouse can initiate a divorce by issuing a formal complaint (of infidelity, insult, abuse, nonsupport, etc.) to the *datu* for his judgment.

Manuvu' terminology equates fathers and uncles, mothers and aunts, and siblings and cousins. However, a person addresses a sibling or cousin of the same sex (*suwod*) differently from a sibling or cousin of the opposite sex (*tabbay*).

Aging parents move in with a married daughter, usually the one with the least children. The eldest son inherits the great-

est part of the property (including the heirlooms), but he is obliged to support younger siblings to the extent of providing bride-wealth for his brothers (but he also receives part of the bride-wealth due for his sisters).

Manuvu' keep cats and dogs as pets, and *limukon* doves for predicting the future.

### **11 CLOTHING**

Manuvu's wore bark-cloth until the mid-19th century, when they adopted the costume of their Attaw trading partners. In addition, captured women and children from other groups brought the art of weaving. Traditional clothing consists of tight knee-length trousers and long-sleeved jackets for men, and tube skirts and blouses for women. Family members commonly borrow or exchange clothing and extra clothing is seen as communal property.

### **12 FOOD**

Manuvu's subsist on a basic diet of corn; *salog*, (an indigenous rice); vegetables, and cassavas. Seeds are derived from the farmer's own saved seeds from the previous season that have been dried and stored. Unhusked corn cobs are hung on clotheslines and corn cobs are hung above the cooking area (*abuhun*) after harvest until the following planting season. Threats to Manuvu' agricultural traditions include a rapidly changing environment, depletion of the soil, and the opening of the Manuvu' homelands to commercial markets.

### **13 EDUCATION**

Traditional Manuvu' education takes place in the home. From a young age Manuvu' children stay by their mother's side. Young girls are taught household chores and agricultural tasks reserved for females, while boys assisted their fathers in the fields. After puberty, girls are eligible for marriage. In the 1950s and 1960s government-operated public schools were established, but student enrollment remains low as students drop out of school at a young age.

### **14 CULTURAL HERITAGE**

Dance and music traditions (including gong-playing and the singing of the *Tuwaang* epic, a highlight of most social gatherings) resemble those of other Mindanao-Sulu peoples.

Traditionally tattooing was common. Men wore tattoos on the chest, upper arms, forearms, and fingers, while women had tattoos on the same parts of the body as well as on their calves, where the most elaborate tattoos were done. Tattoo designs mimicked the embroidered patterns on clothing, with the addition of figures of *binuaja* (crocodile), *ginibang* (iguana) and *binuyo* (betel leaf).

Traditionally men carry *bolos*, knives with long blades and a wooden handle that are used to clear vegetation in agricultural land or cutting trails in the forest.

### **15 WORK**

Before World War II, agriculture provided about 75% of food, while hunting, fishing, and gathering provided the remainder. Since then, as commercial logging (by non-Manuvu') depletes game and otherwise upsets the ecology, the proportion of food obtained through hunting, fishing, and gathering has fallen to 5%.

Families own two or more swidden fields, rotating their cultivation in two- to three-year cycles; tools consist of machetes, wooden spades, and digging and dibble sticks. The staples are maize, rice, and sweet potatoes, supplemented by squash, beans, sugarcane, bananas, and tubers. Some areas have begun to grow abaca and coffee as cash crops in recent decades. Families keep chickens for food and sacrifices. Wild boar having once been abundant, Manuvu' had no need to keep domestic pigs and learned hog-raising from Visayans only recently. Horses, water buffalo, and now cattle are obtained from coastal peoples as measures of wealth used in the paying of bride-wealth, debts, and fines. Game includes wild boar and deer (speared or trapped), and monkeys, small game, and birds

(shot with arrows or blowdarts, or trapped). Fishing techniques include damming, poisoning, and piercing with spears and arrows.

Traditional society held blacksmiths, weavers, healers, midwives, and epic singers in high esteem.

## 16 SPORTS

See the article entitled **Filipinos**.

## 17 ENTERTAINMENT AND RECREATION

The Manuvu's practice a subsistence agricultural economy and the chores of daily life leave little time for recreation. A common form of entertainment is music played on traditional instruments, including the *dwagay* (violin-like instrument), *togo* (bamboo guitar), and the *kubing* (harp).

## 18 FOLK ART, CRAFTS, HOBBIES

Though Manuvu' wear modern clothing and have access to mass produced goods, they continue to utilize traditional crafts.

Common ornaments include brass or silver rings, bracelets, anklets, and earrings. In addition, beads, mother of pearl, wild cat's teeth, and the seeds of the *saguya* tree are used in traditional ornaments.

Many Manuvu' crafts are utilized in agriculture. Large containers named *lukong* or *liwit* are made from the bark of the red lauan tree and can store five to six sacks of rice. A single tree can produce three to five pieces of *lukong/liwit*. The bark is sewn together with *uway*, a variety of calamas plant, and the bottom of the *lukong/liwit* is made of *uway* mesh. The *lukong/liwit* are placed in a traditional storage house (*payag sa humay*) constructed of wood or bamboo and covered with a grass roof. The *payag sa humay* is elevated several feet off the ground by four posts that have milk cans or flat, round wooden discs placed on them to prevent rats from climbing into the storage areas. The structures have only one door, no windows, and a removable ladder. The Manuvu' keep separate storage houses for rice and corn.

Another seed container is the *laban* or carrying basket. This is made of *uway* and is used to carry harvested crops or firewood. Other seed containers include the *tabungos*, which can carry two *taros* (45 lbs) of rice seeds, and the *langkap*; both are made of bamboo.

## 19 SOCIAL PROBLEMS

The most pressing social problem for the Manuvu' is the civil war that has taken place on Mindanao since the late 1960s. The local Muslim population of Mindanao rebelled against the central Filipino government because of land distribution inequalities and official corruption. The mountainous homeland of the Manuvu' is ideal terrain for an insurgency, and both the rebels and government have attempted to recruit Manuvu' villagers. In 1993 the government used the military to force the Manuvu' to back down from opposition to a geothermal project on Mount Apo. In the late 1990s the government armed a village of Manuvu' who in 2000 engaged in a battle with insurgent forces from the Moro Islamic Liberation Front (MILF). The civil war has pitted the Manuvu' against their neighbors, and Manuvu' villages have negotiated *dyandi*, or peace pacts, with their neighbors.

## 20 GENDER ISSUES

Manuvu' society is male-dominated and men and women are assigned distinct social roles.

When preparing for marriage, women have little choice in choosing their future husbands. While females may express resistance to an initial marital suggestion, it is the role of the male suitor or the parents to decide a match. Marriages can be arranged in any of the following ways: (1) either the man's or the woman's family makes the proposal (sometimes, a man will hint at his preferred bride); (2) parents arrange the betrothal of a child (or even a fetus); (3) the woman's family holds the man prisoner in their house until the marriage is consummated or the man's family "buys" him back or provides a replacement; (4) the man abducts the woman (sometimes with her consent); (5) the man provides his prospective in-laws with live-in bride service; (6) the man courts the woman (clandestinely, as she is not supposed to talk to men); or (7) a senior wife selects a junior wife for her husband.

New brides are directed by their fathers to not quarrel with their husbands, talk to any male strangers, and to be faithful to their partner until death. In marriage there is a division of labor according to gender. The activities of the wife are centered in the home: house cleaning, cooking, raising children, making clothes, and weaving baskets and mats. Men work in the fields, hunt, and fish. When the family leaves home to visit relatives the woman usually is loaded with a child or goods in her carrying basket, where as the man carries a weapon and is responsible for defending the family against attack. While both men and women may on occasion exchange assigned gender roles, hunting is exclusively assigned to the husband. Women do not even play a part in preparation of the carcass. Historically, wife-stealing took place between villages and tribes. *Datus* who had more than one wife were often the victims, and incidents of wife-stealing could ignite inter-communal warfare.

Women play a large role in the Manuvu' agricultural economy. They tend to rice plants, removing weeds and picking crops. An important task of Manuvu' female farmers is the selection of seeds for the following year's crop. Storing and preserving seed material for the next planting season is exclusively the role of women in the Manuvu' community.

# MAORI

**PRONUNCIATION:** MOW-ree

**LOCATION:** New Zealand

**POPULATION:** 565,329 in 2006 census

**LANGUAGE:** Maori; English

**RELIGION:** Christianity; traditional Maori, based on ancestor worship

**RELATED ARTICLES:** Vol 3: New Zealanders

## <sup>1</sup> INTRODUCTION

The ancestors of the present-day Maori created an outpost of Polynesian culture on the North and South islands of New Zealand. They remained relatively isolated from external contact until 1769, when Captain James Cook initiated a permanent European presence in New Zealand. In less than a century, Maori culture changed dramatically as a result. The Maori have been striving to revive aspects of their traditional culture, reclaim artifacts of their cultural history from foreign museums, and regain their ancestral homelands. As of 2006, the Maori of New Zealand numbered over 565,000, or about 15% of New Zealand's total population. While the overall number of Maori has risen over the past decade, the percentage of the total population has remained the same. The term "Maori" covers a number of different tribal and sub-tribal groups that view themselves and each other as very distinct. The Maori word for each tribal unit is *iwi*, and there are well over one hundred Maori *iwi*. The largest Maori *iwi* is Ngapuhi, which had a total enrollment of 122,211 according to the 2006 census. Not all Maori know their *iwi*; a situation that parallels Americans of American Indian descent who do not know their tribal affiliations.

## <sup>2</sup> LOCATION AND HOMELAND

The islands of New Zealand are the present-day homeland of the Maori. New Zealand consists of two islands, the North Island and the South Island. The topography of the North Island is hilly with areas of flat, rolling terrain. The South Island is larger and more mountainous than the North Island. The vast majority (86%) of present-day Maori live on the North Island. Prior to human habitation of the islands, there were extensive forests. These forests provided a resource for the ancestors of the Maori that ventured there from parts of present-day French Polynesia.

Maori oral history states that the original homeland of the traditional Maori was in the Society Islands of Polynesia, and that the Maori migrants left to escape warfare and the demands of excessive tribute. Archaeologists refer to two branches of Maori, the archaic and the traditional. The archaic Maori were likely the original inhabitants of New Zealand who relied on the moa, a large, flightless bird that they hunted into extinction. The artifacts that remain of this culture can be dated to around AD 1000 and are significantly different from those of the traditional Maori. The traditional Maori are believed to have migrated to the North Island around the 14th century. This is confirmed by archaeological dating techniques as well as the genealogical histories of the Maori.

In 1840, some 500 Maori chiefs signed the so-called Treaty of Waitangi with the British government. The treaty promised

the Maoris that they would keep their lands and property and have equal treatment under the law as British subjects. However, the British later confiscated Maori lands and made the people move to reservations. As a result of war and disease, the Maori population fell to 42,000 by 1896. Since World War II, the government's policies have been more favorable to the Maoris. In recent years, the government of New Zealand has acknowledged its responsibility after a series of protests and court rulings. Since 1991, negotiations over specific claims have been underway. In October 1996, the government agreed to a settlement with the Maoris that included land and cash worth \$117 million, with the Maoris regaining some traditional fishing rights.

## <sup>3</sup> LANGUAGE

Maori belongs to the Tahitic branch of Eastern Polynesian; Eastern Polynesian is, in turn, a branch of the larger Austronesian language family. Maori and Tahitian are very closely related, and earlier European explorers to the region commented on the similarity of the two languages. In fact, these were the first two Polynesian languages to have printed books in the early 19th century.

The Maori of today speak English and Maori. Prior to European colonization of New Zealand, there were two distinct Maori dialects: North Island Maori and South Island Maori, which is now extinct. Preschools that offer instruction in Maori language have sprung up all over the country at a rapid rate

*A Maori warrior with moko (facial tattoo) waits for the coffin of Maori Queen Te Arikiniui Dame Te Atairangikaahu near the sacred Taupiri Mountain near Hamilton, New Zealand. Thousands gathered along the funeral route to bid farewell to the queen. (AP Images/NZPA, Wayne Drought)*

as a result of Maori activism. In 2006, nearly 25% of the Maori population indicated that they could hold a conversation in Maori.

#### **4 FOLKLORE**

Traditional Maori folklore describes an original couple, Rangi (sky) and Papa (earth), who were locked in copulation until the god Tane was able to push them apart and provide for the creation of human life. The god Tane was responsible for the creation of the first woman and the first man. Maori folklore focuses on oppositions between pairs, such as earth and sky, life and death, and male and female.

#### **5 RELIGION**

Like other New Zealanders, many Maori today are Christians (primarily Anglicans, Presbyterians, and Roman Catholics). Precontact Maori religion was based on the important concepts of *mana* and *tapu*. Mana is an impersonal force that can be both inherited and acquired by individuals in the course of their lives. Tapu refers to a sacredness that was ascribed by status at birth. There was a direct relation between the two: chiefs with the most mana were also the most tapu. The English word “taboo” derives from this general Polynesian word and concept. Ancestor worship was important in traditional religion.

#### **6 MAJOR HOLIDAYS**

Christian Maori celebrate the major Christian holidays as do other New Zealanders. Holidays as Westerners view them did not exist in precontact Maori society. Rituals were performed according to the religious calendar and the harvest and collection of foodstuffs.

A controversial New Zealand national holiday for the Maori is Waitangi Day (6 February), which commemorates the 1840 signing of the treaty that was supposed to guarantee their rights and privileges. In 1994, Maori radicals disrupted the Waitangi Day national celebration, forcing the government to cancel the festivities.

#### **7 RITES OF PASSAGE**

Modern Maori rites of passage are similar to those of other New Zealanders, but specific Maori traditions are still practiced at certain events. At weddings, for example, a relative of the groom traditionally challenges the father of the bride to a fight. The bride’s father then approaches the challenger and is welcomed.

The Maori once practiced what anthropologists call “secondary burial.” Secondary burial involves two interments of a corpse or its remains. When a person died, the body would be

laid out on ceremonial mats for viewing by relatives and other members of the village. After a few days, the body was then wrapped in mats and placed in a cave, a tree, or buried in the ground. Different Maori groups had different practices. After one year had passed, the body was removed from the primary burial and the bones were cleaned and painted with red ochre. These remains were taken from village to village for a second period of mourning. Following that, the bones were interred in a sacred place.

## 8 INTERPERSONAL RELATIONS

Maoris today, like other New Zealanders, typically address each other informally and emphasize cordiality in relationships.

Feasting, called *hakari* in the Maori language, was an important aspect of precontact Maori culture. The Maori feasts brought together a number of different families and other social groups where a man of status would provide food and gifts for those who attended. In the end, he and his family would be left with very little in the way of material possessions or reserves of food, but instead would have gained enormous enhancement to his status.

Premarital sexual relationships were considered normal for Maori adolescents. Both males and females were expected to have a series of discreet relationships before they were married. When Maori females became sexually active, they were to publicly acknowledge this so that they could become tattooed. Tattooing marked their ritual and public passage into adulthood. It was also considered extremely attractive and erotic.

## 9 LIVING CONDITIONS

Today, 80% of the Maori live in the urban areas of New Zealand. However, until the 1920s, they lived almost primarily in rural areas. Maori housing today therefore typically reflects that of other urban New Zealanders [see *New Zealanders*].

In coastal areas, Maoris traditionally relied on travel by canoes of various types, including both single-hulled outriggerless canoes as well as large double-hulled canoes. *Waka taua* were large Maori war canoes that were powered by both sail and paddles. As with other New Zealanders, travel today is by modern road, rail, water, and air transport.

## 10 FAMILY LIFE

Since most Maoris live in urban industrialized areas, family life is similar to that of other urban New Zealanders. Inter-marriage between Maoris and Pakehas (the Maori term for whites) is common. Most Maoris have Pakeha cousins or other Pakeha relatives. Maori households may include relatives besides the nuclear family, such as grandparents, uncles, and aunts.

The traditional social unit of Maori society was the *whanau*. The *whanau* included both the nuclear and the extended family, oftentimes including up to four generations within on large social unit. Within the *whanau*, the grandparents were primarily responsible for the cultural socialization of their grandchildren. A special relationship holds between grandparents and grandchildren that is called *mokopuna* in Maori. The concept of *mokopuna* is that when a grandparent looks at a grandchild, the grandparent sees his/her reflection. *Mokopuna* is a powerful concept that guides the care and upbringing of grandchildren by their grandparents.

There were four distinct levels of descent groups in traditional Maori culture. The highest ranking was called *waka*,

meaning “canoe,” referring to a group of people who share descendants on both their mother’s and father’s sides who came on the same canoe in the historical migration to New Zealand recounted in Maori oral history. The lowest level was the *whanau*, which were households that represented as many as four generations of people related through the male line. Individuals chose their spouses from outside this group, but usually from within the village.

The system of naming members of the immediate and extended family in Maori culture differs from that found in American culture. In the Maori system, a person’s brothers, as well as the cousins on both the mother’s and father’s side, would be called by the same term “brother.” A person would call his or her sister, as well as his or her cousins, by the same term “sister.” This lumping of relatives together within a generation continues across the generational divisions. Therefore, a Maori child would have as many mothers as his biological parents had sisters.

## 11 CLOTHING

Maoris typically wear modern Western-style clothing, but still wear their traditional clothing for special occasions. Traditional Maori clothing was some of the most elaborate in Polynesia. Elaborately decorated cloaks were an important item of dress for individuals of high status within Maori society.

## 12 FOOD

Maoris typically eat the same kinds of foods as other New Zealanders [see *New Zealanders*]. The traditional Polynesian foodstuffs of taro, yams, and breadfruit were not well adapted for cultivation on the temperate islands of New Zealand.

## 13 EDUCATION

Public education has now become the norm for most urban Maori, although a number of preschools based on Maori cultural education have been established throughout New Zealand. Education is state-supported and compulsory in New Zealand between the ages of 6 and 15. Students planning to attend one of the country’s six universities continue their secondary education until the age of 17 or 18, when they have to take university qualifying exams.

## 14 CULTURAL HERITAGE

The *haka* dance of the Maori is one of the best-known cultural traditions of Polynesia. These dances are accompanied by song and body percussion created by clapping hands, stamping feet, and slapping thighs. There is a leader and a chorus that responds to his lead vocal line. The dance itself involves energetic postures, which represent warlike and aggressive poses.

Maori chanting follows very strict rules for performance and rhythmic structure and continuity. To break a chant in midstream would be to invite disaster or even death for a community. These chants often recounted genealogies or the exploits of ancestors.

## 15 WORK

Maoris today work at the same types of jobs and professions typical to any urbanized industrial economy, with about two-thirds engaged in services.

Traditional Maori culture developed a high degree of specialization in terms of the division of labor in society. Craftsmen in the form of tattoo artists, canoe builders, house builders, and carvers, were all classified as *tohunga* in Maori—a title that conveys the qualities of sacredness and translates best into English as “priest.” These craftsmen paid homage to the gods of their various occupations and were initiated through a series of rituals into their craft. All craftsmen were descended from chiefly lines in traditional Maori society.

## 16 SPORTS

New Zealand, like its neighbor Australia, has rugby and cricket as national sports. Maori boys and men participate in and follow rugby in New Zealand. New Zealand Maori is the name of a rugby league team that traditionally plays teams touring New Zealand. The prerequisite for being a member of this team is that the player has to be of at least 1/16th Maori descent. New Zealand Maori competes in international competitions and it has participated in the Rugby League World Cup. There were traditional competitions among men in Maori society that stressed aggressiveness and provided practice for real-life conflicts.

## 17 ENTERTAINMENT AND RECREATION

The modern Maori have become not only consumers of video, television, and film, but also producers of their own stories in these media. Traditional storytelling and dance performance have been preserved by the Maori and serve as form of entertainment at the present.

## 18 FOLK ART, CRAFTS, AND HOBBIES

The New Zealand Maori are accomplished artists in a number of media. Collectors and the general public are most familiar with Maori carving and sculpture. However, the Maori also have a tradition of figurative painting dating back to the late 19th century. Each Maori sub-tribe is an art-producing and art-owning unit. Therefore, while there are certain similarities in style in Maori art, there are also a number of differences between the styles of different sub-tribes.

Large meeting houses of the Maori were decorated with elaborately carved facades containing figures of their ancestors. The entire structure was conceived as representation of an ancestor.

## 19 SOCIAL PROBLEMS

The vast majority of all contemporary Maori are urban dwellers. The social problems that accompany urban life in conditions of poverty continue to beset the Maori. In some urban areas, Maori unemployment rates exceed 50%. The critically acclaimed film *Once Were Warriors* (1994) provides a Maori perspective on the social problems of alcoholism, domestic violence, and underemployment/unemployment.

## 20 GENDER ISSUES

Tattooing among the Maori was highly developed and extremely symbolic. Male facial tattooing, called *ta moko*, was done in stages in a male's life through adulthood. Maori facial tattoos were not only created by piercing and pigmentation of the skin with a tattooing comb, but also by creating permanent grooves in the face with a chisel-like instrument. Females were

also tattooed in Maori society and there has been an increasing revival of the art among younger women nowadays. Female facial tattooing was known as *ta ngutu*. Designs were placed on the chin and lips. *Ngutu* means “lips” in Maori and *ta* means “to strike.”

A controversial gender topic in modern Maori society is that of role of homosexuality in precontact times. *Takatapui* is a Maori word that is defined in the earliest dictionary of the Maori language as “an intimate companion of the same sex” (Williams 1834). The word had fallen into disuse following colonization and the impact of Christian missionaries, but in recent times, *takatapui* has become part of the vocabulary of the Lesbian Gay Bisexual Transgender (LGBT) community in New Zealand. The controversy revolves around whether or not homosexuality was part of precontact Maori gender relations. The most current and comprehensive accounts clearly demonstrate the important roles of *takatapui* in precontact Maori society, and their incorporation into *iki* and *whanau*.

# MARANA O

**PRONUNCIATION:** mah-ruh-NOW

**ALTERNATE NAMES:** Meranao or M'ranao

**LOCATION:** Philippines (island of Mindanao)

**POPULATION:** 1.1 million

**LANGUAGE:** Maranao

**RELIGION:** Islam

**RELATED ARTICLES:** Vol. 3: Filipinos

## <sup>1</sup>INTRODUCTION

The Muslim Maranao, the largest non-Christian ethnic group in the Philippines, have lived around Lake Lanao in western Mindanao since at least the 13th century, having separated from kindred coastal people at that time. Some Maranao maintained relations with these Ilanun, joining them in slave-raiding in the Philippine and Indonesian archipelagos. Legends, however, locate Maranao origins in Bembaran, a kingdom that sunk to the bottom of the sea because it rejected Islam. Sarip Kabongsoan of Johore (in Malaya) converted the neighboring Magindanao; his descendants went to the Lanao region and intermarried with descendants of refugees from Bembaran.

In contrast to the Magindanao and Tausugs, the Maranao never established a single state but rather divided into a great number of small "sultanates" in continual warfare with each other. They, however, successfully resisted incorporation into the Spanish colonial state, and only the Americans early in the 20th century managed to subdue them. The influx of Christian Filipino settlers, particularly from the nearby Visayas, has threatened to marginalize the Maranao in much of their ancestral land. The region has been one of the hotbeds of the Muslim (Bangsa Moro) separatist movement since the 1970s. A major episode of that struggle was the 1972 MNLF attack on the Maranao city of Marawi (Dansalan before 1956). Under the Marcos' martial law regime, many traditional activities virtually ceased due to curfews strictly enforced by a government army suspicious of all Maranao gatherings. The influence of the many Maranao educated in the Middle East in recent decades has constituted an even greater challenge to Maranao customs, which often do not conform to standard Islamic practice.

The separatist movement notwithstanding, prominent Maranao participate in Philippine national politics, and, under the Aquino administration, an Autonomous Region in Muslim Mindanao including Lanao del Sur province (but not now Christian-majority Lanao del Norte province) was established in 1989. Maranao culture (like Moro and non-Christian cultures more generally) have contributed key icons to the national identity of the predominantly Christian and Hispanized Philippines: the Maranao epic, the Darangen, was put on the UNESCO list of Masterpieces of the Oral and Intangible Heritage of Humanity in 2005, and the artisan village of Tugaya was nominated as a UNESCO World Heritage Site in 2006.

## <sup>2</sup>LOCATION AND HOMELAND

*Maranao* (in their own pronunciation, *Meranao* or *M'ranao*) means "people of the lake," referring to Lake Lanao, which lies 670 m (2,200 ft) above sea level in western Mindanao. Numbering 776,000 in 1990 and as many as 1.1 million currently

(2008), the Maranao, the largest non-Christian ethnic group in the Philippines, inhabit the lands around the lake, dominating the province of Lanao del Sur (609,000 or 91% of the population in 2000) stretching to its south. However, Visayan immigrants now outnumber Maranao in Lanao del Norte province (169,000 or 35.8% of the population). About 61.8% of the Visayan immigrants are of people speaking closely related Visayan dialects, such as Cebuanos, Binisaya, and Boholanos. The Maranao in turn are moving into the highlands to the south of the lake, which are already inhabited by other peoples. 21.9% of households in the Autonomous Region in Muslim Mindanao (to which Lanao del Sur belongs, but not Lanao del Norte) identified Maranao as their first-language. Small Maranao communities can be found in towns throughout Mindanao and the Sulu Archipelago. In recent years, many Maranao have settled in Manila (as many as 35,000 by 1984).

## <sup>3</sup>LANGUAGE

The Maranao language is an Austronesian language whose closest similarities are to other indigenous languages of Mindanao (though not to the Visayan-type language of their fellow Muslim Tausugs). In the past, a version of the Arabic script was used to preserve genealogies (*salsila*), religious literature, and Islamic tales.

Most names derive from Arabic, but native Maranao words referring to desired traits or lucky objects (e.g., Macacuna, "robust," or Bolawan, "gold") are also chosen (now usually as an addition to an Islamic name). Some Maranao have even named their children after prominent Filipino national leaders (e.g., Marcos). Young people often take American nicknames, e.g., "Mike" for Ismail or Macacuna. Among themselves, Maranao do not use surnames, but in dealing with Philippine educational or bureaucratic systems, individuals use the name of a father, grandfather, brother, or prominent ancestor as a second name. In one community, a person may register under one relative's name as a surname; in another, he or she may register under another. This allows Maranao to vote in different jurisdictions, something they understand not as electoral fraud but as a right of descent.

## <sup>4</sup>FOLKLORE

According to legend, Radia Indarapatra married the water nymph Potri Rainalaut and sired two children: one became the ancestor of the Maranao and the other the ancestor of the *tonong*, invisible beings that protect the Maranao from illness and their crops from pests. Traditional Maranao place offerings of food and betel nuts for the *tonong* in the *lamin*, a 1-m (3-ft-long) long box wrapped in yellow cloth and hung from a house beam. The *tonong* have names (e.g., Tomitay sa Boloto, Apo a Bekong) and inhabit bodies of water, mountains, and especially the *nonok* (a tree that wraps around other trees like a vine). Maranao who have been educated or influenced by Middle Eastern Islamic universities equate appeasing the *tonong* as honoring the offspring of the Devil.

Other spirits include: *saytan*, evil spirits; the *inikadowa*, a person's invisible double; the *malaikat*, an angel who guides a person in his or her work; *arowak*, the souls of the dead who visit their kin on Muslim holidays; *gagamoten*, a human poisoner; *langgam*, a ghoulish creature that eats the insides of fresh corpses; and the *balbal*, one type of which at night splits into a lower

half that stays in the house and an upper half that flies off. Tales abound of people being led off by spirits, never to return.

## <sup>5</sup>RELIGION

The Maranao are Muslim. In recent years, Maranao who have studied in Islamic universities in the Middle East have worked towards the elimination of traditional spirit beliefs and associated rituals. In addition to the religious merit, much social prestige comes from sponsoring the construction of religious buildings, such that every community now has a mosque and *madrasah* (Islamic school). Moreover, large numbers of Maranao make the pilgrimage to Mecca.

In addition to Muslim religious officials, such as the *imam* (prayer leader) and *kali* (judge), there are *pandarpa'an*, usually old women, through whose possessed bodies spirits speak and *pamamantik*, practitioners of magic and counter magic.

## <sup>6</sup>MAJOR HOLIDAYS

On certain Islamic holidays, the souls of the dead visit their kin; the latter offer the souls food, which is later distributed to neighbors or given to the *tuan*, who recite prayers for the dead. At the end of the fasting month of Ramadan, people clean their family graves and at night light them with candles. They also light candles or lamps in their houses so that they might catch a glimpse of the Lailatol Kadr, an angel with a turban and a long white beard who has the power to grant wishes (some enter trances in order to see him). This is the "night of power" when God will answer any prayer.

## <sup>7</sup>RITEs OF PASSAGE

After birth, the umbilical cord is kept to ward off evil spirits. The placenta is buried near the house, as a guardian for the child, or cast into a body of water, where it can save the child from drowning. On the third or seventh day after birth, the child receives his or her name. After this, a boy can be circumcised, although he may be as old as 10 years of age when this takes place; clitoridectomy for girls persists as well.

Many marriages are still arranged by the parents; even if partners select each other, family approval is necessary. The man's side sends an intermediary to initiate the negotiations. If the woman's side's response is positive, the go-between, the man's parents, and the man visit the woman's family. The parents express the proposal in indirect language, and the go-between mentions the *betang* (bride-price) that the man's side is willing to pay. The woman's side defers the decision (perhaps for months) but claims a cash fee for opening the discussion. Subsequently, the man's parents gather the money or convene a meeting where other kin will contribute to the *betang*. On their part, the woman's relatives (who have a right to a portion of the *betang*) gather to decide the amount to be asked, considering also what advantages an alliance could provide their kin-group. They also investigate the man's genealogy; finding an ancestor who was a slave, a *balbal* or *gagamoten* (evil spirits), or a non-Maranao could cancel the wedding. The go-between carries on the bargaining on the *betang* and the setting of the wedding date.

During the engagement period, the man's relatives may give food to the woman's family, which the latter will share with fellow villagers and, if possible, with neighboring villages. The man may now eat with the woman in her house (though someone else will always be somewhere in the house); he may also sleep there (but not with her), using for a blanket a *malong* (a type of sarong), which his prospective in-laws give him. The future bride now must ask her fiancé for permission to go out of the house; he must accompany her and cover her expenses.

Some families hold the wedding ceremony in hotels or rented halls (the richest even use hotels in Manila and invite national figures); most build a stage by their house and decorate it with lots of flags. The groom and his kin may travel to the bride's house in a motorcade filmed on a video camera. The groom wears a *malong* and a shirt (possibly a *barong tagalog* [see **Filipinos**]) or a Western coat and tie (or, following a new fashion, he may adopt Arab or Pakistani clothing). The bride

dresses traditionally or puts on a Western wedding gown. She is not present at the wedding ceremony itself, which does include the groom, the *imam* (prayer leader), and four witnesses, one for each grandparent's lineage. After this, the groom goes to the bride's room and, after paying a fee to the attendant girls, he touches her for the first time. During the ensuing feast, more cash is given out to guests who do not share in the *betang*.

Following Islamic regulations, a dead body cannot stay overnight in the house and is buried as soon as possible. Close kin wash and enshroud the body while other relatives arrive to give monetary aid; the immediate family serves food to the relatives. In the graveyard, the imam asks the deceased the questions that an angel will ask him or her later; this is an unorthodox custom, as is the planting of flowers, laying of stones, or laying of cement to mark the grave. The imam reads a prayer and pours water on the four corners and center of the now-sealed grave to "awaken" the deceased. Relatives may guard the grave so that *balbal* or *langgam* (corpse-eating ghouls) will not defile the body.

The dead soul lingers on earth for 100 days. Mourning rituals last for three (formerly seven) days; these include having *tuan* (the community's religious men) recite prayers for the dead and receiving guests in the evening, who entertain themselves with eating, playing parlor games, or sometimes gambling with cards. *Tuan* offer prayers on every Friday or every 10 days until the 100th day after the death, when a large feast is held where several *tuan* recite prayers.

## <sup>8</sup>INTERPERSONAL RELATIONS

A Maranao's sense of *maratabat* requires that he avenge wrongs done to him, his kin, and his friends. In the past, this led to public combat in spots marked by a red flag, but now ambush is the common method. Maranao will risk their own lives in defense of a sworn friend (quasi-kindred): "Your blood will be on top of mine," i.e. I will die before I let someone lay a hand on you.

Public image is important: a person who spends little on personal comforts will lavish extravagant sums on a family rite-of-passage celebration or the community *madrrasah* building fund. Maranao use euphemistic language or grant concessions in order to avoid embarrassing or humiliating others. Maranao tend to flatter people by addressing them with the highest title associated with their profession (e.g., one might call a schoolteacher "professor").

Each hamlet has two or more descent lines (*bangsa*), one of which claims superior status to the others and is led by a titleholder (often "Sultan"; there are as many as 43 "royal houses"). Hamlets are grouped into ever-larger associations, which culminate in one of the *pat a pangampong a ranao* ("the four encampments of the lake") into which the Maranao people are divided.

Although titles are inherited by descent lines, only the most qualified member can hold the title (by virtue of wealth, knowledge of customary law, and the ability to settle disputes without shaming any parties). Today, individuals win titles by surpassing others in contributing to mosque and *madrrasah* building funds. A title-holder must also be prepared to hold a *kandori* where food is served and cash is distributed. The formal receipt of a title is an occasion of great ceremony preceded by *kalilang* (traditional music), *kambayoka* (singing contests),

*kasipa* (kickball), other games, and the slaughter of cattle or water buffalo for feasting.

Boys and girls are strictly segregated, even in school activities. In the evening, a boy visits a girl he likes at her house, but directly courts her kin rather than her. It is older relatives who entertain the boy; both sides display their skill in delivering short love poems in classical Maranao (*panonoroon* or *tobad-tobad*), though today the former may simply tell stories. The boy, the girl, and often the girl's relatives may play music together. A boy can also send the girl a poetic love letter, which she shows her parents for their advice. It is also common for them to exchange notes secretly at school.

## <sup>9</sup>LIVING CONDITIONS

Houses are made of wood, raised 0.3 m to 2 m (1–7 ft) from the ground and have steep roofs of galvanized iron. From 2 to 20 families reside in a house; each has its own sleeping area, though there are no partitions. Traditional structures included a separate room for unmarried women. A kitchen shed contains a large hearth.

A descent line has a *torogan*, a large house where the senior kin-group lives and gatherings are held. Having names such as Bantog (Honorable), Kompas (Guide), Lumba (Center), or even Malacañang (after the presidential palace in Manila), the *torogan* boasts intricate prow-like carvings on the external beams. However, most traditional *torogan* were destroyed in a 1955 earthquake.

Hamlets include 3 to 30 multifamily homes strung out along a road or river, along with a mosque and at least one *torogan*. Until the American conquest, each hamlet contained a fortress of earthen walls reinforced by thorny plants and trees.

Average family income in the Autonomous Region in Muslim Mindanao, of which Lanao del Sur province is a part, amounted to 89,000 pesos (US\$1,745) in 2006, the lowest in the country, cf. the national average of ₱173,000, the National Capital Region's ₱311,000, Southern Tagalog's ₱198,000, and those of the neighboring Davao and Zamboanga regions, ₱135,000 and ₱125,000 respectively. In 2000, Lanao del Sur had the fifth lowest Human Development Index, 0.464 (combining measures of health, education, and income) in the country (above Ifugao and the provinces in the Sulu archipelago, cf. the Philippines' national HDI of 0.656); Lanao del Norte was ninth lowest (at 0.512).

According to the 2000 census, the proportion of houses in Lanao del Sur with a roof of galvanized iron/aluminum reached 81.1%, with a roof of grass or palm thatch 5.8%; 54.9% of houses had outer wooden walls, and another 11.9% outer walls of bamboo or thatch. In 2000, 11.7% of households in Lanao del Sur had access to a community faucet, 12.7% to a faucet of their own, and 4.8% to a shared deep well, while 53.3% obtained their water from springs, lakes, rivers, or rain. Almost half of households (47%) disposed of their garbage by burning it, 11.9% by composting it, and 10.5% by burying it; only 2.3% had it picked up by a collection truck. 42% of houses were lit with kerosene lamps, 49% with electricity, and 5.9% with firewood. 72.8% possessed a radio, 31% a television, 12.7% a refrigerator, 8.3% a VCR, 7.5% a telephone or cell phone, 4.9% a washing machine, and 5.1% a motorized vehicle.

## **10 FAMILY LIFE**

An individual's kin-group comprises paternal and maternal relatives up to and including third cousins, although the most important relationships do not go beyond the circle of first cousins. For kinship solidarity, marriage is preferred with second and third cousins (but taboo with first cousins). A person can also claim as many as 15 descent lines for the purpose of inheriting titles.

Until the bride-price is paid in full, the groom lives with the bride's family, only later establishing his own house. Within the multifamily dwellings, a single family eats together and has its own sleeping area. At least one married child remains in the house to take care of the parents.

Because fathers are the disciplinarians, children tend to be closer to their mothers. Close relatives may also correct or punish a child. Parents will not physically punish an older child in public. Children learn skills by assisting their parents in work.

Though permitted under Muslim law, taking more than one wife is not common because it would shame the first wife's family. Physical abuse by a husband or an insult from him in public are grounds for divorce. If a husband cannot tolerate his wife's actions, he is supposed to appeal to her relatives or to community leaders. Because families mediate conflicts, and custom stipulates a "cooling off" period before the finalization of divorce, which requires return of the bride-price if the wife has no sufficient grievance, divorce is rare.

## **11 CLOTHING**

In towns, many Maranao wear nontraditional clothing, not just Western clothing but also the Filipino *barong tagalog* [see **Filipinos**], Malay fashions, and most recently Arab and Pakistani garb. The *malong*, a sarong whose edges are often connected by a *langkit*, a second piece of cloth of contrasting design, is the main article of traditional clothing for both sexes. Ceremonial apparel for a *datu* (male title-holder) consists of an embroidered coat and long, tight-fitting pants; a *tobao*, a matching silk cloth; and a dagger tucked into a 12-cm wide (5-in-wide) waist sash. A *bai* (female title-holder) wears a long-sleeved blouse (often embroidered); a *malong* of locally woven silk; a necklace of gold coins; and a *kobong* veil (formerly, a crown and a special coiffure). Colors range from yellow for sultans to red or maroon for other titles. An attendant holds a large umbrella over the title-holder, while others carry a *kris* (sword) and a brass basin, symbols of authority and wealth, respectively.

## **12 FOOD**

With rice as the staple, Maranao food resembles that of other Filipinos, particularly Muslim groups [see **Filipinos**].

## **13 EDUCATION**

A *madrasah*, a school stressing the reading of the Quran, stands in every community, built with community funds, sometimes with additional money from Arab countries. Suspicious of English-language schools as institutions for Christianization, Maranao initially avoided them. Nowadays, however, parents send their children to such schools, often making great sacrifices to do so. Formal education used to be so rare that families celebrated graduations very lavishly. Considerations of family prestige exert high pressure on individuals to obtain degrees. Degree-holders are so numerous that many cannot obtain ap-

propriate employment. Many Maranao have obtained degrees in Middle Eastern Islamic universities, which qualifies them to teach in madrasah.

According to the 2000 census, the literacy level in the Autonomous Region in Muslim Mindanao was 68.9%, very low by national standards. In Lanao del Sur, nearly one in three (32.8%) had completed elementary school, over one in five (21.5%) high school, and nearly one in eight (11.8%) college or university, though the percentage for elementary was somewhat lower, those for secondary and tertiary education were dramatically higher than in fellow ARMM province, Sulu. See *Tausug*

## **14 CULTURAL HERITAGE**

Musical instruments include the *kulintang* (a horizontal series of eight knobbed gongs played with two sticks), a *dabakan* (a wooden drum also played with two sticks), various hanging gongs (*agong*, *pamulsan*, and *babandir*), the *insi* (a bamboo flute), *kobing* (jew's-harp), and *kotyapi* (a two-stringed instrument with a soundbox in the shape of an abstract crocodile). In the *kalilang* ensemble, females play the *kulintang* with its subtle melodies while men strike the hanging gongs. Formerly, all girls and boys learned to play so they would be proficient by the time they were of marriageable age. Girls could display their expertise to boys; a boy would accompany a girl he was courting, considering it a shame if rivals outdid him in skill.

Among Maranao dances, the *singkil* is the most famous, mastering it having once been a requirement for aristocratic girls. Two pairs of bamboo poles are crossed; the dancer, maintaining a grave expression and waving a fan, steps in and out of the poles as they are rapidly clapped together. Another well-known dance is the *sagayan*, a male war dance.

*Kambayoka* are all-night contests in oratorical singing held as part of the celebrations of high-status people. The Maranao also have an epic, the *Darangen*.

## **15 WORK**

Mostly relying on rainfall for irrigation, wet-rice is grown in the lowlands. Other crops are maize and sweet potatoes on marginal lands; taro, squash, cassava, peanuts, and chilies in gardens; and betel nut, papayas, and bananas on trees. Livestock include water buffalo, goats, chickens, and ducks. As lake stocks are now depleted, most fish is obtained from trade with the coast.

Maranao peddlers, particularly of brassware, frequent town markets throughout Mindanao and have long been the commercial link between pagan hill peoples and maritime traders.

Acquiring an aristocratic title or bureaucratic job that frees one from manual labor is greatly esteemed.

## **16 SPORTS**

See the article entitled **Filipinos**.

## **17 ENTERTAINMENT AND RECREATION**

See the article entitled **Filipinos**.

## **18 FOLK ART, CRAFTS, AND HOBBIES**

Of all non-Christian people of the Philippines, the Maranao are the most famous for their crafts. Male artisans produce *okir*, intricate carving for household objects, canoes, and the

projecting beams (*panolong*) of *torogan* (senior kin-group) houses. Emphasizing plant and floral motifs in delicate scrollwork, there are numerous named designs, including the *nia-ganaga* (a stylized dragon) and *pako rabong* (representing a growing fern). The *sari-manok* is a stylized bird situated, among other places, on the top of banner poles. Contemporary artists incorporate “Bugis” (i.e., Bornean or Malay) designs and Arab forms, such as the *borak* (a flying horse with the head of a beautiful woman); they also produce lions, eagles, and peacocks for the tourist market. High-status families will commission famous artists to decorate their *torogan*.

Women weave cloth with complex geometric patterns (which have poetical names), often using *andon*, a tie-dyeing technique (*ikat*). They also produce mats and baskets.

Metalwork is another art, encompassing gold- and silver smithing as well as the production of swords, such as the *son-dang* (a short dagger) and *kampilan* (a long-bladed sword), both of which are longer and larger than their Malay-Indonesian counterparts. Much artistry is lavished on the handles, which may be in the shape of a hornbill beak or a swallow tail.

## <sup>19</sup> SOCIAL PROBLEMS

See the article entitled **Filipinos**.

## <sup>20</sup> GENDER ISSUES

In 2000, in Sulu the ratio between men and women was 94.27 men for every 100 women, though women were more numerous in the age group from birth to 35 years (which may be partly the result of male insurgent casualties). Literacy levels in the Autonomous Region in Muslim Mindanao, low by national standards, were somewhat higher for men (69.8%) than for women (67.7%). In Lanao del Sur, however, more of those completing all levels of education were women than men. In contrast to other parts of the country, such as Southern Tagalog, more overseas workers from the ARMM were female (56%) than male; the median age of those female overseas workers was 24 years (there are hiring quotas for Muslim domestic workers employed in Saudi Arabia and other Muslim Middle Eastern States).

# MARĀTHAS

**PRONUNCIATION:** muh-RAHT-uhz

**ALTERNATE NAMES:** Mahrattas; Mahrattis

**LOCATION:** India (Maharashtra state)

**POPULATION:** c. 70 million (estimate) (50% are of the population of Maharashtra belong to the Marātha and Kunbi castes)

**LANGUAGE:** Marāthi

**RELIGION:** Hinduism

**RELATED ARTICLES:** Vol. 3: People of India

## <sup>1</sup> INTRODUCTION

The Marāthas (also Mahrattas, or Mahrattis) are a people of partly non-Aryan stock inhabiting the Deccan Plateau of western India. Outside the area, the term Marātha loosely identifies the entire regional population who speak the Marāthi language. Within the region, however, it specifically refers to the dominant landowning and cultivating castes, the Marāthas and the Kunbis. The precise distinction between these two groups is unclear, though some believe they are descended from the same stock. All Kunbis are Marāthas, but not all Marāthas are Kunbis. Marāthas typically have *ksatriya* status, that is, they trace their origins to the chieftains and warriors of ancient India and see themselves as superior to the Kunbis. The Kunbis are mainly cultivators and predominantly *sūdras* (the lowest of the four major caste groups) by caste, though some also claim *ksatriya* descent. There is some hypergamy (i.e. intermarriage between the two groups), but this tends to be one-way. Thus a Kunbi female, provided her dowry were large enough, might be married into an impoverished, aristocratic Marātha family, but Marāthas would never give a daughter in marriage to a family of the Kunbi castes.

The Marāthas first rose to prominence in the 17th century. One writer characterizes them as a hardy, capable, and rough-hewn people who lived in a poor country and had achieved little of note prior to that time. This was all changed by the meteoric rise of Shivaji (1627–80), who united the Marātha chieftains against the Muslim rulers of India. By the time of his death, Shivaji had carved out a Marātha kingdom in the Konkan (the coastal and western areas of Maharashtra State) and laid the grounds for further Marātha expansion. During the 18th century a powerful Marātha Confederacy arose. Led by the Peshwas and including the houses of Bonsla, Sindhia, Holkar, and Gaekwar, the Marāthas extended their territories as far as the Punjab in the north and Orissa in the east. Marātha power was greatly weakened by the shattering defeat inflicted on them by the Afghans at the Third Battle of Panipat in 1761. Nonetheless, marauding bands of Marātha horsemen, feared by Muslim and Hindu alike, continued to raid as far afield as the Punjab, Bengal, and southern areas of the Indian peninsula. A series of defeats by the British in the early years of the 19th century led to the final collapse of the Marātha Empire.

The sense of Marātha identity generated during the 17th and 18th centuries survives in modern times. After India's independence, Marāthas were active in promoting the formation of states based on language. Popular sentiment led to the creation of Maharashtra State in 1960 to include the bulk of the Marāthi-speaking peoples within its borders. A major plat-

form of the Shiv Sena, a modern regional political party, is the ouster of non-Marāthas from the state.

## <sup>2</sup>LOCATION AND HOMELAND

The population of Maharashtra in 2001 was 96.9 million people, making it the second-largest state in the Indian Union in terms of population (it is third largest in area). Of this total population, perhaps 50% belong to the Marātha and Kunbi castes. Only 11 countries in the world (including India) have populations greater than Maharashtra's.

The Marātha homeland, i.e., Maharashtra, falls into three broad geographic divisions. The Konkan is the coastal lowland running from just north of Bombay (Mumbai) to Goa. Inland from this are the Western Ghāts, the line of hills that parallels the entire west coast of India. Generally between 760 m and 915 m (2,500–3,000 ft) in elevation in Maharashtra, they reach a height of 1,646 m (5,400 ft) inland from Bombay. These hills are actually a steep escarpment facing west, making access to the interior difficult. Many isolated peaks in the Ghāts are crowned by hill-forts that were strongholds of the Marāthas in their struggle with the Muslims. To the east of the Ghāts lie the plateaus and uplands of the Deccan lava region, at elevations varying between 300 m and 550 m (1,800–1,000 ft). This region is drained by the eastward-flowing Godavari River and tributaries of the Krishna. In the extreme north is the Tapi River, which flows west to the Arabian Sea.

Average monthly temperatures at Bombay range from 24°C to 30°C (75°F – 86°F), with annual precipitation totaling 207.8 cm (82 in). The west-facing Ghāts receive the full force of the summer monsoon, and some hill areas receive as much as 660 cm (260 in) of rainfall. East of the Ghāts, however, there is a rain-shadow effect, and rainfall over much of the plateau region is in the range of 50–100 cm (20–40 in).

## <sup>3</sup>LANGUAGE

Marāthi, the language spoken by Marāthas, is a member of the Indo-Aryan branch of the Indo-European language family. It is derived from Maharashtri, a form of Prakrit (or language spoken by the common people, as opposed to the classical Sanskrit). According to the 2001 Census of India, 62,481,681 people in Maharashtra spoke Marāthi and its dialects, which include Konkani, Varadhi, and Nagpuri. The standard form of Marāthi is spoken in the Pune area. Marāthi is written in the Devanagari script or a cursive form of Devanagari called Modi.

## <sup>4</sup>FOLKLORE

The greatest folk hero of the Marāthas is Shivaji, who is seen as the champion of the Hindu peoples against the oppression of the Muslims. Developing guerrilla warfare to a fine art, Shivaji challenged the might of the Mughal Empire and founded the last of the great Hindu empires in India. Many incidents in his life have entered local lore. A Muslim general, feigning friendship, arranged a meeting with Shivaji in order to kill him. In an incident still remembered by both Hindus and Muslims, Shivaji embraced the general and killed him with steel claws attached to his hands before the Muslim could stab him with a concealed dagger. On another occasion, a prisoner of the Mughal emperor Aurangzeb, Shivaji, escaped by being concealed in a fruit basket. Shivaji's men are reputed to have captured the hill-fort of Singadh (southwest of Pune) from the Muslims by

sending trained lizards up its perpendicular walls, carrying ropes for the attackers to climb.

## <sup>5</sup>RELIGION

The Marāthas and Kunbis are Hindu. Although most worship one or more gods as a “family deity,” Shiva is of particular importance among the group. In villages, Shiva is worshiped in specific incarnations, e.g., as Khandoba, the guardian of the Deccan, or as Bhairav, the protector of the village. Khandoba has an important temple at Jejuri, not far from Pune. Shiva's consort Parvati is also revered by the Marāthas. She is worshiped in the form of Bhavani, Janni Devi, or one of the other local mother-goddesses found throughout the region. It is common for a goat or a cock to be sacrificed as an offering to these deities. Maruti is the monkey god, and no village in the Deccan is without a shrine to this kindly deity who provides protection from evil spirits. The Marāthas believe in witchcraft, the evil eye, and in ghosts and evil spirits, who can harm the living. Mashoba is the most widely feared of the evil spirits and when wronged can bring sickness and ill-fortune to the village. Some Marāthas worship Vishnu as well as Shiva. The temple of Vithoba at Pandharpur, for example, is an important Vishnu shrine and a major pilgrimage center. Though Brahmans officiate at most temples, some deities are served by non-Brahman priests. A Khandoba temple generally has a Marātha or Dhangar priest, while Lingayat or Gurav priests serve at shrines dedicated to Shankar (a form of Shiva).

## 6 MAJOR HOLIDAYS

Although Marāthas observe all the major Hindu festivals, they also have their own regional celebrations. At Divali, for example, they sing hymns in praise of the Asura king Bali and worship cow-dung images of this demon-god. The birthday of Ganesha, the elephant-headed god of the Hindus, is a major event in Bombay. Specially made images of the god are worshiped for the three days of the festival (Ganesha Chaturthi) then carried to the seashore to be immersed in the ocean. Nag Panchami, when snakes are worshiped, is celebrated widely in Maharashtra. Bendur or Pola, a festival at which bulls are decorated, worshiped, and taken in procession through the villages, is popular in the interior of the state. The Marātha hero Shivaji's birthday (Shivaji Jayanti) has been declared a public holiday by the government of Maharashtra.

## 7 RITES OF PASSAGE

Among the rituals of the Marāthas is the birth ceremony (*jātakarma*), held a few days after a child is born. Marāthas believe the fifth and sixth days after birth are particularly dangerous for the newborn child, who may be attacked by evil spirits during this time. Thus, "Mother's Fifth" and "Sixth" are extremely important and are accompanied by rituals to protect the infant. The period of ritual pollution after birth lasts for 10 days, after which a purification ceremony is performed. The first anniversary of the child's birth is celebrated by a feast, at which the hair-cutting ceremony (*chaula karma*) is often held. Marāthas who claim *ksatriya* (warrior) status will perform the sacred-thread ceremony for their sons between the ages of 10 and 12.

The death rites of the Marāthas closely follow those of the Brahmins. The corpse is bathed, wrapped in a white shroud, and placed on a bier. The funeral procession, sometimes led by musicians of the Mahar caste, makes its way to the burning *ghāt* (cremation ground), which is usually on the banks of a river or stream. In the days following the cremation, the ashes are gathered and taken to some holy place or river where they are thrown in the water. A purification ceremony is undergone by the relatives of the deceased on the eleventh day, and the funeral feast (*srāddha*) is held on the thirteenth day following the death.

## 8 INTERPERSONAL RELATIONS

Marāthas use the "Namaste" greeting common among Hindus in India. This is accompanied by the gesture of joining of hands, palms together, in front of the body.

## 9 LIVING CONDITIONS

There are regional variations in settlement patterns and house types between the coastal areas of Maharashtra and the upland plateaus. Plateau villages are tight clusters of houses, with no gardens or compounds. Smaller houses are simply a rectangular block of four walls forming a single room. Larger houses are made of several such blocks arranged so they make a hollow square, with a sun-court (*chowk*) in the middle. Rooms include living quarters, a kitchen, storerooms, and the *devgarh*, a room where images of the family gods are kept. Such village houses are in sharp contrast to the expensive luxury tower apartments that line the oceanfront along Bombay's Marine Drive.

## 10 FAMILY LIFE

Although Marāthas claim to have *gotras* (clans), they are of little importance and appear to have been adopted from north India. The basic kin unit for Marāthas is the *kul*, literally "family," which is a lineage made up of extended families. Members of the *kul* worship a common totemic symbol called *devak*, a term that is also used as an alternative for *kul*. The *devak* symbol is a material object such as a bird, a tree, or an artifact. Examples of *devak* include the cobra, the elephant, and the blade of a sword. One cannot marry someone who worships the same *devak*. Other than *kul* exogamy, Marāthas have few of the marriage restrictions common among Hindus in northern India. They can marry within the village, cross-cousin marriage is allowed, and a man may have more than one wife. Marriages are arranged, and a bride-price is paid to the girl's family. The actual marriage is elaborate, involving 24 separate ceremonies. The most important of these is the installation of the *devak*.

## 11 CLOTHING

Traditional clothing for Marātha men is the turban, a coat, a shoulder cloth, and a *dhotī* (Indian loincloth) or short trousers known as *cholnās*. The coat is distinctive, fitting tightly around the arms and chest. The sleeves are longer than the arms and form numerous small folds between the elbow and wrist. The coat is fastened by tying it in front, below the right shoulder. From the chest, the coat falls in loose folds to the knee. Formerly, a sword was a regular part of the Marātha dress. Women wear the bodice (*choli*) and *sārī*. Peasant women, especially when working in the fields, often draw one end of the *sārī* through their legs and tuck it in at the back of the waist. Marātha women share the characteristic fondness of South Asian women for jewelry and ornaments.

## 12 FOOD

The standard diet of the Marāthas consists of flat, unleavened bread (*rotī*), with pulses and vegetables. Among the poor, a typical meal consists of millet bread eaten with chopped chilies and lentils (*dāl*). Among the more-affluent, bread is made from wheat flour, while rice and a greater variety of vegetables are served at meals, along with condiments and *ghī* (clarified butter). Marāthas are nonvegetarian, eating fish, mutton, and chicken, although only the better-off eat meat on a regular basis. For the poor, meat is a festival food, to be eaten only on special occasions and religious holidays. There are no specific caste rules prohibiting the use of alcohol or narcotics.

## 13 EDUCATION

According to the 2001 Census of India, literacy in the state of Maharashtra is 77.27%. As is to be expected in South Asia, significant differences in literacy rates exist between males and females (86.27% and 67.51% respectively) and between urban and rural populations. In Bombay, for example, literacy is over 86%, but only around 60% of women in rural areas are literate, although among some rural, female Kunbis, this figure drops below 40%. Bombay, with the University of Bombay, the Indian Institute of Technology (IIT), and the Tata Institute of Social Science, is one of the country's major educational centers. Maharashtra State provides free, compulsory education for children between 6 and 14 years, with attendance at the primary level being above 90%. Maharashtra State has numerous universities and institutions of higher learning, though actual partici-

pation in this system is largely a matter of economics and the choice of the population.

#### **14 CULTURAL HERITAGE**

Marāthi regional literature dates from around AD 1000. The devotional poetry and songs of Maharashtrian saints such as Namdev (1270–1350) and Ramdas (1608–81) are among its greatest achievements. The 18th century saw the rise of two other literary forms: the love lyric and the heroic ballad (*powada*), based on the exploits of Shivaji and other Marātha heroes. The 19th-century paintings of the Peshwa period were derived largely from the Rajasthani tradition. It should be remembered that these form part of a regional cultural tradition that the Marāthas did not develop themselves, but adopted from the traditions of others. The poet-saint Ramdev, for example, was of the Brahman caste. Marātha history in western India abounds with the military exploits of the great Marātha dynasties. But the overall Marātha record is more one of destruction than of construction.

#### **15 WORK**

In the past, the chieftains, nobles, and landowners of Maharashtra were drawn from the ranks of the Marāthas. Some were soldiers, and the Marātha cavalry was renowned throughout the subcontinent during the 17th and 18th centuries. Many Marāthas continue this tradition of military service in the armed forces of modern India. The bulk of the Marāthas and Kunbis were cultivators and continue to be so today. Many of the village headmen (*patels*) in the central Deccan are of the Marātha caste. Maharashtra is one of the most heavily urbanized Indian states. Its cities include Bombay, one of the world's major urban centers (with a population of over 18 million people), Pune, and Nagpur in the eastern part of the state. This fact is reflected in the numbers of Marāthas who now live in cities and towns and follow urban occupations, e.g., commerce and government service, and professions such as teaching, medicine, and law.

#### **16 SPORTS**

Marātha children play games that are common in Maharashtra and the rest of India. Young children enjoy role-playing, boys pretending to be horse-drivers, engine-drivers, etc., while girls play with dolls or at housekeeping. Organized games include various versions of tag, blind man's bluff, and hide-and-seek. Traditional Indian games such as *Gullī dandā* (Indian cricket) and *Kabaddī* (team wrestling) are popular. Cricket is perhaps the most important spectator sport, with other modern games such as field hockey, soccer, tennis, and badminton played in cities and towns. Popular indoor games include chess, cards, and *carrom* (a board game in which counters are used to knock one's opponent's counters into pockets).

#### **17 ENTERTAINMENT AND RECREATION**

Many Marāthas depend on local festivals, fairs, and traditional folk entertainment for their recreation. The Nandivala, for example, is a traveling performer who entertains village audiences with sound effects, tricks, soothsaying, and trained-animal shows. The Bahrupi, literally "one with many disguises," is a professional entertainer known for humorous impersonations. Modern forms of entertainment such as radio, television, and

movies are readily available to those who can afford access to them. Bombay, India's equivalent of Hollywood, is one of the world's largest centers of movie-making and produces films in both Hindi and Marāthi. Bombay is also one of India's major intellectual and cultural centers, with museums, performances of modern and classical music, theater, and other cultural activities.

#### **18 FOLK ART, CRAFTS, AND HOBBIES**

As landowners and cultivators, the Marātha and Kunbi castes are not themselves involved in arts and crafts. Within Maharashtra State, however, traditional crafts include weaving and metalwork, as well as local specialties such as Kolhapuri leather sandals, and the Muslim *himsa* (weaving) and *bidri* (metal inlaid with silver) work of Aurangabad.

#### **19 SOCIAL PROBLEMS**

The dominant landowning and cultivating caste in their region, the Marāthas and Kunbis are unified by a shared history and a common culture rooted in the Marāthi language. This sense of identity resulted in agitation for a linguistic state that led to the creation of Maharashtra as a Marāthi-speaking state. Though Marāthas essentially make up the bulk of the rural peasantry in the state, a Marātha elite has risen to positions of political power in Maharashtra. Marātha nationalism has led to anti-foreigner sentiments, with calls for non-Marāthas such as Gujaratis and Tamils to be expelled from the state. The recent renaming of Bombay as Mumbai, the Marāthi name for the city, is another expression of this sense of Marātha consciousness.

When Maharashtra State was created as what was primarily a linguistic state, there was an upwelling of pro-Maharashtrian, anti-foreigner sentiment fuelled largely by the Shiv Sena, a conservative, Hindu, regional political party with strong Marātha support, which was founded in 1966 by Bal Thackeray (a relative of the English writer William Makepeace Thackeray). Feeling against Gujaratis, of whom there were many in Bombay, and the Gujarati language were strong, and between 1956 and 1960, protests, sometimes accompanied by fatalities, occurred in favor of a Marāthi-speaking state. The Samyukta Maharashtra Samiti demanded unification of all Marāthi speaking regions in one state, and on 1 May 1960 the current Maharashtra state was formed from Marāthi-speaking areas of Bombay State, the Deccan states (the Deccan State Agency, an association of princely states, was an administrative unit of British India, which was incorporated into Bombay State at Independence in 1947) and Vidarbha (which was then part of Madhya Pradesh). There are various interpretations as to what the term "Maharashtra" means. Some say it translates as Great (*mahā*) Country (*rashtray*), others that it probably derived from *rathi* meaning "a chariot driver," referring to drivers and builders of chariots who were called "Maharathis" or "fighting force," while still others say it means "Country of the Mahars," an untouchable caste found in the area.

The Shiv Sena gained in strength in Maharashtra in the last decades of the 20th century, and, although the state has traditionally been a stronghold of the Indian National Congress, even formed the State government from 1995–1999. With Bal Thackeray as one of its leaders, it continues to promote its policy of "Maharashtra for Maharashtrians." However, Maharashtra's government remains in the hands of the Indian National

Congress. Vilasrao Deshmukh serves as chief minister, even though the Bharatiya Janata Party (BJP), the Hindu nationalist party committed to Hindutva ("Hinduness"), won 54 out of 288 seats in the Maharashtra Vidhan Sabha (lower house) in the 2004 elections.

The Shiv Sena appears to be in a state of decline, even though it once proudly claimed to be the only genuine Hindutva party in India, and Bal Thackeray even asserted publicly that his boys struck first blow at Babri Masjid. The Shiv Sena came to power by trashing minorities and was responsible for the Bombay riots of 1992-93 that, like the Gujarat riots of 2002 in which numerous Muslims were killed, shook the conscience of the whole nation in the concept of India as a secular state. Bal Thackeray's hold on the Marāthi people, however, has been seriously weakened and his followers, in whom he took great pride, are deserting him. The Shiv Sena vote base is fast being eroded, and it may soon find itself on the margins of Maharashtra politics.

Despite their position as the dominant cultivator caste in Maharashtra, Kunbis are classified as Other Backward Castes (OBCs), whereas other groups such as the Marāthi Brahmins are not. Kunbis reap the benefits of this status and, being upwardly mobile, tend to dominate the other groups, like the Malis and Ahirs, which are accorded the same OBC status. In addition, Kunbis and Marāthas dominate politics in Maharashtra. As recently as June 2008 the Sambhaji Brigade, a militant pro-Marātha organization whose membership consists primarily of Marātha youth from the interior of the state and which is named after a son of the warrior Shivaji, has demanded Other Backward Classes status for Marāthas in Maharashtra. Taking a cue from the Gujjars in Rajasthan, the brigade has warned of a violent agitation if Marāthas are not granted OBC status soon.

## <sup>20</sup>GENDER ISSUES

The status of women in Maharashtra from the rise of the great Marātha hero Shivaji to the present was basically not different from that of women in other parts of India. Here, too, women were dependent on men and had to play a secondary and subordinate role. Yet, in certain respects, the situation in Maharashtra was different from that in other parts of India. Women belonging to aristocratic and ruling families were taught the art of horse-riding. They not merely used swords effectively on the battlefield but also led armies. Englishmen such as Captain Thomas Broughton admired the Marātha women for their bravery and courage. Broughton—in 1809—wrote "At no time is the difference in the treatment of women between the Marāthas and other natives of India more strikingly displayed. Such as can afford it here ride on horse without taking any pain to conceal their faces; they gallop about and make their way through the throng with as much boldness and perseverance as the men. The Marātha women have a bold look that is to be observed in no other women of Hindustan." Though women belonging to the aristocratic families had to observe *pardah* in the presence of strangers, the practice was relatively less rigorous in Maharashtra. The Rani of Jhansi, who, with her armies, opposed the British during the 1857 sepoy uprising, was a Marātha.

Being Hindus, Marātha and Kunbi women, especially in rural contexts, experience the social restraints typical of Hindu society. Thus, arranged marriages are common, child marriage

(once the norm and now illegal) still occurs, and a dowry is often demanded by the groom's family among Marāthas who claim an upper caste status. However, among some low caste groups a *dej* (bride-price) is paid to the girl's father. Except for the Deshmukh families of the Sirole sub-caste, Kunbis allow the remarriage of widows. However, Marāthas do not allow widow remarriage or divorce.

The President of India in 2008, Pratibha Devisingh Patil, is a Maharashtrian. She is the first female President of the country.

# MARONITES

**PRONUNCIATION:** MA-ruh-nites

**LOCATION:** Lebanon

**POPULATION:** 1.5 million (2006 estimate)

**LANGUAGE:** Arabic; French; English

**RELIGION:** Maronite (Uniate Catholicism)

**RELATED ARTICLES:** Vol. 4: Lebanese

## <sup>1</sup> INTRODUCTION

Maronites take their name either from the 5th century AD saint, John Maroun, or the 8th century AD monk who took his name and became the first Patriarch of Antioch. Although their origins are obscure, the Maronites believe that their heritage goes back to the time of Jesus. Their ancestors lived when Jesus did in the land then known as Palestine, heard him preach, and were among the first Christians. Whatever their origins, they were one of the Christian sects in the Middle East to remain intact after the Islamic revolution of the 7th century AD. (For the first 100 years of Islamic rule, Arabs more often than not considered Islam an “Arab” religion and did not expect non-Arabs to convert.) The Maronites were the only Christian sect to use Arabic for their church records right from the start.

To distinguish themselves from “Arabs,” Maronite versions of their history claim that they fled Muslim persecution during the Islamic revolution. Records show, however, that at first the Maronites welcomed the Muslims as saviors from the hated Byzantine rulers of that time, and the Muslims in fact treated the Maronites fairly well. The Maronites ingratiated themselves with these new overlords and set up tax-farming arrangements that provided the Maronites with a decent living. It was not until the European Crusaders sacked Alexandria and the Maronites supported them that the Muslims questioned Maronite loyalty and punished them along with other Christians. The Maronites eventually fled to the hills of Mount Lebanon to escape persecution by the Ottoman Turks in the 15th century. They stubbornly survived there for the centuries to follow.

Maronite support of the Crusaders established ties to the West that became a defining factor for the Maronite community. They entered into partial communion with the Roman Catholic Church in the 12th century AD and came into full communion in 1763. During the Ottoman rule of the mid-19th century, Lebanon had been divided into two states, one Christian and one Druze. The Druze religion dates back to the 11th century and is separate from Christianity or Islam. Its adherents were often persecuted as heretics by Muslims. The French supported the Maronites in their war with the British-supported Druze. After the Druze massacred a large number of Maronites in 1860, an international commission decided to reunite the country under a non-Lebanese governor. The French later allied themselves again with the Maronites during the French mandate years (1920–1943), cementing the Maronite identification with the West, particularly France. This Western identity has led to a sense of separateness from other Arabs on the part of the Maronites and resentment toward them on the part of their Arab-identified neighbors. In the last ten years, however, Maronites have become more comfortable with a Lebanese identity as nationalism has increased among Lebanon’s population.

The Maronites have campaigned for an independent homeland since the 7th century AD, but they are no longer attempting to convert Lebanon into a Maronite state today. Based on the confessional system of government (where political authority is divided up according to population percentages of religious faiths), the Lebanese presidency is designated as a Maronite post because Maronites were in the majority at the time of the 1932 census. A civil war began in Lebanon in April 1975 due to increasing instability of a system of government that allowed Christians majority rule despite the fact that Muslims had become the majority of the population. This was especially true after the influx of Palestinian refugees from Palestine and Jordan in 1948, 1967, and 1970. The unwillingness of the French and the Maronites to consider the concerns of the majority in a period of strong Arab nationalism led to increasing conflict, which was promoted in part by outside players. Initially, the Muslims had the upper hand in the fighting, but Syria, with the support of Israel, the United States, and most Arab states, entered Lebanon with a “peacekeeping” force to maintain the status quo. With Syria’s support, the Maronites were able to preserve their position in Lebanon until a new government was formed at Taif (in Saudi Arabia), which, under Syria’s tutelage, formally ended the civil war. Maronite Christians still retain the presidency position in Lebanon’s governing structure. However, the sect’s political power has diminished considerably since the 1990s as the Druze and Shia Muslims has grown more united.

## <sup>2</sup> LOCATION AND HOMELAND

Most ethnic groups living in the Levant region have intermingled with other groups. The territory known as Lebanon today has a diverse society, due in part to numerous foreign armies passing through over the centuries. Some Maronites claim descent from the European Crusaders, such as the major northern families of Franjehs and Douaihies. The Franjehs say their name means “Franks,” and the Douaihies link their name to the French city of Douai, the home of some of the knights of the Crusades. It appears from what records exist that the Maronite sect began in northern Syria in the valley of the Orontes River, near the present-day city of Hama, in the 6th century AD. The Maronites moved south to the coast of northern Lebanon in the 8th century, then fled into the hills of Mount Lebanon to escape persecution by the Ottoman Turks in the mid- to late-15th century. Hiding up in small, isolated communities, the Maronites became clannish and fiercely self-protective. After surviving in the high mountains of northern Lebanon for many centuries, the Maronites then spread south throughout the mountain range during the 18th and 19th centuries. The Maronite Church acquired a great deal of land and became the largest, most organized, wealthiest institution in the Mount Lebanon area. By the mid-19th century, the Maronite Church owned one-fourth to one-third of all the land in Mount Lebanon. During the 20th century, some Maronites began to move out of the mountains to the cities and coastal plains, especially to Beirut, but they continued to be clannish and isolated from their neighbors in their new locations.

During the Lebanese civil war, more than 600,000 Maronites were driven out of their homes and off their lands. Of the 850,000 inhabitants of the Maronite enclave in Lebanon sometimes called “Marounistan,” 100,000 fled abroad, and 150,000 fled to other parts of Lebanon. As Muslims gain more political

dominance in Lebanon, more Maronites are emigrating from their homeland to Europe and the United States.

### 3 LANGUAGE

Although Arabic is the official language of Lebanon, many Maronites also speak French. Economic and military ties have led most residents of Lebanon to learn French and English in addition to Arabic. Syriac is used for the church liturgy, but Maronites have used Arabic for church records since their beginnings.

### 4 FOLKLORE

The door of the Maronite church in Beit Meri is never locked because it is believed that the hand of any thief there would be miraculously paralyzed.

### 5 RELIGION

The Maronites are Uniate Catholics: they recognize the authority of the Roman Catholic Pope, but they have their own form of worship. Their priests can marry, and monks and nuns are housed in the same building. Even after becoming a Uniate church in AD 1180, the Maronites continued to use the Syriac language for their liturgy instead of Latin (as in the Roman church). Syriac is the Maronite liturgical language to this day. The Maronites did quietly drop their belief in monothelism, branded heresy in AD 680 by the Roman church, after becoming a Uniate church in 1180. Monothelism proposes that Christ has two natures that are so blended with each other that they produce one will. The orthodox view, called dyothelism,

holds that Christ has two natures and two wills, one human and one divine, which are inseparable, yet unconfused: Christ is at one with God in his divine nature and at one with humanity in his human nature. The Qadisha (Holy) valley is the Maronite spiritual center.

### 6 MAJOR HOLIDAYS

The Maronites celebrate the usual Christian holidays, such as Christmas (December 25), Easter (moveable, in March or April), the Feast of the Ascension (40 days after Easter), and the Feast of the Assumption (August 15). On the Festival of the Cross (September 14), Maronites set fires on high places all over Mount Lebanon and light candles at home and in churches. A special Maronite holy day is St. Maroun's Day (February 9), the feast of the Maronite patron saint, St. John Maroun of the 5th century AD.

### 7 RITES OF PASSAGE

The Maronites mark major life events, such as birth, marriage, and death, within the traditions of Christianity.

### 8 INTERPERSONAL RELATIONS

Centuries of life in isolated mountain communities, hiding out from persecution by various attackers, has led to the development of clan loyalties and fierce feuding among the Maronites.

### 9 LIVING CONDITIONS

Maronite villages have a style of architecture common around the Mediterranean area. Homes are small and simple, yet elegant, often with a balcony overlooking the mountains or the Mediterranean Sea. Since the 18th and 19th centuries, the Maronites have been fairly affluent. During the Lebanese civil war, many Maronites fled from the cities (especially Beirut) back to their ancestral homes in Mount Lebanon. As a result, business boomed there, housing construction soared, and the area became quite prosperous.

### 10 FAMILY LIFE

Although modernization has led to an increased emphasis on the nuclear family, the Maronites, like other Arabs in Lebanon, still have a strong sense of extended family. Men spend quite a bit of time at home with the women and children. There is some intermarriage between Maronites and members of other religious groups. Divorce is forbidden by Maronite law.

### 11 CLOTHING

Maronites wear Western-style clothing, as do the Druze, Shiites, Sunnis, Armenians, and Greek Orthodox in Lebanon. The more devout Maronites tend to wear conservative clothing. Apart from slight differences in headgear, even the religious leaders of all the communities in Lebanon tend to dress alike.

### 12 FOOD

Maronites eat typical Middle Eastern and Mediterranean food, with French and European elements blended in. For example, breakfast might consist of either Lebanese flatbread or French croissants with cheese and coffee or tea. Lunches and dinners usually consist of meat (mutton is a favorite) with onion, spices, and rice. Mutton is often ground and served as meatballs or in stews, or mixed with rice and vegetables and rolled in grape

leaves. The Middle Eastern tradition of *mezze* (small portions of a wide variety of foods served all at once for diners to pick and choose from) is popular with Maronites, as is *arak*, the anise-flavored alcohol produced in the region.

### 13 EDUCATION

By the 17th century, European missionaries had established Catholic schools in Lebanon. The Maronites had an initial advantage with the missionary schools established for them, but eventually the schools began accepting Muslims as well. In 1788, a monastery was converted to a secondary school that taught secular subjects, and American Protestant missionaries set up schools for both boys and girls in Lebanon in the 1820s and 1830s. However, the Uniate Catholic Maronites were more inclined toward the schools set up soon after by French Catholic missionaries. Most Maronites today still receive their primary and secondary schooling in French-language schools, then generally go to the University of St. Joseph in Beirut, founded by French Jesuits in 1875 to compete with the Syrian Protestant College (now called the American University of Beirut) established in 1866.

The Lebanese government requires students to have a functional knowledge of Arabic in order to graduate from secondary school but only recently has this been enforced. Many older Maronites speak only French.

### 14 CULTURAL HERITAGE

The poet Maya Angelou published an essay on the Maronites in Lebanon in 1984. At the time, civil war had been raging in Lebanon for nine years and would continue for six more years. Angelou described the Maronites as a people with “a split personality.” “They are Arabs who often look to the West for inspiration and assistance,” Angelou wrote. “A minority that insists it must rule in order to survive and nationalists in a land that is so fracture it can hardly be called a nation.”

Angelou’s words continue to describe the cultural heritage of the Maronites today. Lebanon contains people of many different religious and ethnic backgrounds. Maronite leaders have joined with leaders of other factions within Lebanon to try and unify the country. Yet, the Maronites also wonder where they fit in the Lebanon of the early twenty-first century. They are an Arab people, but they have strong cultural ties to the West, and many have ancestral ties to the West as well. In 1585 a religious school for Maronite men was established in Rome. A short time later, European Catholic missionaries settled in Lebanon and began schools there. To this day, Maronites continue to send their children to French-language private schools in Lebanon [see **Lebanese**]. As former president Camille Chamoun, a Maronite, told Angelou: “We are part of the Arab world, but we are also apart from the Arab world because so much of our identity comes from the West.”

### 15 WORK

Many Maronites are wealthy, and Maronites have long held powerful positions in Lebanese government, business, and education. With the aid of the French, the Maronites developed Mount Lebanon’s greatest money-making venture of the past—the silk industry. The mountainsides are dotted with old silk-reeling factories.

### 16 SPORTS

Maronites enjoy the same sports as other Lebanese. These activities include soccer, basketball, volleyball, horseback-riding, cross-country running, martial arts, skiing, rock-climbing, and caving. Maronites, like other Lebanese, also go swimming and fishing in the lakes, rivers, or visit beaches along the Mediterranean coast.

### 17 ENTERTAINMENT AND RECREATION

Maronites, like other residents of Lebanon, watch television avidly. Many stations emphasize all Christian programming, though others offer a mix. Maronites also watch American, European, and Lebanese films in theaters, and enjoy the dramatic theatre tradition of their home country.

### 18 FOLK ART, CRAFTS, AND HOBBIES

Traditional crafts among Lebanese Maronites include basketry, carpet-weaving, ceramics and pottery, copper and metalworking, embroidery, glass-blowing, and gold- and silver-smithing. Lebanon is also known for its finely crafted church bells. Wine-making can also be considered an art, dating back for thousands of years in Lebanon.

### 19 SOCIAL PROBLEMS

The Maronites suffered under Ottoman rule from the 16th century to the end of World War I. The arrival of European colonizers in the early 20th century worked to their advantage, especially because the Maronites shared the same Christian faith as the Europeans. The privileges that the Maronites acquired under European colonial rule are treated with disdain by other Lebanese who see their acquisition of wealth as a product of their favorable access to Lebanese politics. Although other communities (such as the Sunnis and Shiites) have also benefited from the traditional Lebanese system of government created by the French, there have been tensions as these groups seek more equitable representation in the Lebanese government. Within the Maronite community itself, centuries of clannish mountain life has led to perpetual feuding and in-fighting, continuing today among the different Maronite militias.

The long civil war damaged Lebanon’s economic infrastructure. National output was cut in half, and the country has struggled to rebuild its economy through heavy borrowing from domestic banks and international sources. The economic difficulties have made the plight of the Maronite minority more precarious, especially since many Lebanese Muslims see the Maronites as hostile to their people. The end of the civil war and the end of Maronite political dominance has made many Maronites uncertain about their future place in Lebanon. As a result, many Maronites have begun to migrate out of Lebanon in recent years.

### 20 GENDER ISSUES

Maronite women experience the same kind of discrimination in public and private life that other Lebanese women face. In general, Lebanese laws and court systems do little to help women. Lebanese laws allow for each religion to have a separate court system to handle matters of marriage, divorce, and inheritance. Frequently, these religious customs, whether they

are Christian or Muslim, fail to protect women from domestic violence.

# MELANESIANS

**PRONUNCIATION:** mel-uh-NEE-zhuns

**ALTERNATE NAMES:** Papuans

**LOCATION:** [Papua] New Guinea, Vanuatu (the former New Hebrides), New Caledonia, the Solomon Islands, and some smaller neighboring islands

**POPULATION:** Unknown

**LANGUAGE:** English; Tok Pisin, Hiri Motu (Papua New Guinea); Bislama (Vanuatu); Solomon Islands Pidgin English (Solomon Islands); Bahasa Indonesia (Papua and West Papua provinces of Indonesia); other native languages

**RELIGION:** Christianity; some native religions

## <sup>1</sup> INTRODUCTION

Melanesia is not a socio-political unit, but instead a *culture area*. Culture area is a term used by anthropologists to refer to a geographical region where people share many of the same cultural traits, such as family structure, marriage rules, socio-political organization, or subsistence strategies. Melanesia itself is part of a larger culture area called Oceania which includes Melanesia, Polynesia, Micronesia, and Australia. The native inhabitants of Melanesia, called Melanesians, are characteristically dark-skinned with frizzy hair. They are sometimes referred to as "Papuans," from the Malay word "papua" meaning "frizzy haired."

## <sup>2</sup> LOCATION AND HOMELAND

Melanesia includes the islands of New Guinea, Vanuatu (the former New Hebrides), New Caledonia, the Solomon Islands, and some smaller neighboring islands. The island of New Guinea is divided politically down the middle. The western half of the island is comprised of two provinces of Indonesia called Papua and West Papua, while the eastern half is the independent nation of Papua New Guinea. New Caledonia is a *departement* of France, and Vanuatu became an independent nation in 1980. All of Melanesia lies within the tropics of Cancer and Capricorn and is south of the equator. Melanesians migrate locally to other nearby islands or to Australia. A small percentage does leave the region entirely and take up residence in the United States, Canada, or Europe.

## <sup>3</sup> LANGUAGE

In many of the island nations that comprise Melanesia, there is more than one official, national language. For instance, Papua New Guinea has three official languages: English, Tok Pisin, an English-based pidgin language, and Hiri Motu, an Austronesian-based pidgin language. Tok Pisin has a history based in colonialism and forced plantation labor in the 1800s in the South Pacific. The language ultimately derives from a kind of nautical English that was spread throughout the Pacific by sailors. The structure of the language is somewhat like English and somewhat like the Austronesian languages that were spoken by the plantation laborers. A sample sentence in Tok Pisin looks like this: "Bai mi kaikai wampela kaukau" (translated, "I will eat a yam.").

Within the region of Melanesia, the island of New Guinea alone has over 1,000 different languages. Some of these lan-

guages have as few as 50 speakers, while others, such as Enga, have a few hundred thousand. Many of these languages remain undocumented and undescribed. Melanesia is truly a linguistic frontier.

#### **4 FOLKLORE**

Oral history is important to the peoples of Melanesia since none of these cultures ever developed a native writing system. In the Sepik River region of Papua New Guinea, the origin myth of many groups tells of a mythical crocodile that split in two, with his upper jaw becoming the heavens and his lower jaw becoming the earth. For many of these groups, there was also an original pair of humans that sprang from the mud and are responsible for populating the Earth. In this origin myth, however, the original pair are brothers.

#### **5 RELIGION**

Christianity has spread throughout Melanesia. Missionaries are very active in this region, learning the native languages and translating the New Testament into those languages. Native religions are still practiced, although in modified form, by many groups. In many societies in the Sepik River region of Papua New Guinea, the original belief systems incorporated aspects of both headhunting and cannibalism. The two practices have been illegal in the region since the late 1920s. Most groups believe in a variety of spirits which inhabit the forests, mountains, and swamps. They also believe that the ghosts of their ancestors inhabit the same plane of reality that they do. In fact, in the highlands of Papua New Guinea, when Melanesians saw the first Europeans they believed them to be the ghosts of their dead ancestors returning to the community. Some groups jokingly refer to "white" tourists in the same way.

#### **6 MAJOR HOLIDAYS**

Independence Day is a major holiday for the independent Melanesian nations of Papua New Guinea and Vanuatu. For those that belong to the Commonwealth, British holidays such as the Queen's birthday are celebrated in urban areas. Banks and schools are closed for those holidays, but in areas where there are no banks or schools, these holidays have little meaning.

#### **7 RITES OF PASSAGE**

There are many important rites of passage in Melanesian societies. Puberty is an especially important rite in all Melanesian societies; however, these societies differ in regards to which sex undergoes initiation rites. In the Sepik River region, males used to undergo extreme and elaborate initiation rites. These involved extensive scarification as well as brutal treatment by older males. Scarification has all but disappeared in the Sepik region, except for the few males who can afford to have the process done. It is an expensive proposition to pay the fees of the scarification experts who perform the operations. In some societies, males were expected to commit a homicide and take their first head at puberty. This process was halted by colonial administrators in the 1920s, soon after the first European contacts in the region. Girls generally had less harsh puberty rites, often undergoing only a brief period of seclusion with the onset of menstruation. Funerals were also important rites of passage in Melanesian societies involving much feasting and display of emotion.

#### **8 INTERPERSONAL RELATIONS**

There are extreme differences between urban Melanesians and rural Melanesians in terms of how they greet and take leave of each other. In parts of the highlands of Papua New Guinea, males would greet each other by rubbing each other's groin region. In most of these cultures, the Western handshake has replaced this traditional form of greeting. Since trade was such an important part of daily life in parts of Melanesia, special ceremonial greetings took place when one group went to trade with another. Special languages were used and the participants placed specific roles with each other.

Many groups require that marriages occur between persons who come from different villages. Special courtship rituals still take place between men and women in these instances. Among the Chimbu of Papua New Guinea, men woo women through their ability to sing. They would also decorate their bodies in elaborate ways to look beautiful for the women whom they are trying to court. Marriages, however, have to be negotiated between the families and usually involve the payment of a "bride price" to the bride's father by the prospective son-in-law.

#### **9 LIVING CONDITIONS**

Melanesia is a tropical region and its inhabitants experience the hardships of life in an environment where rain, heat, and mosquitoes are ever-present. Malaria is endemic to the region and most local inhabitants of the low-lying areas are afflicted with this debilitating disease. Healing is a long process in the tropics and, as a result, infection is a serious problem. Most of Melanesia, though, is a relatively healthy region of the world.

Transportation varies from region to region within Melanesia. In areas where flooding is common, roads are of little value in the rainy season. During that time of year almost all transportation is by dugout canoe. Some people are wealthy enough to buy outboard motors for their canoes so that they do not have to paddle. In the cities of Melanesia, automobiles are common, especially taxis and minibuses which transport people as far as the roads will allow. In rural areas there are no posted speed limits, and travel by bus can be considered a dangerous activity. Drivers with a schedule to keep seem to have little regard for hazardous road conditions or the possibility of oncoming traffic. Small propeller aircraft are an important means of travel between the cities and the isolated mountain valleys. It is not uncommon to share a row on a plane with an individual in traditional dress.

#### **10 FAMILY LIFE**

In many Melanesian societies, there is a great deal of antagonism between men and women. It is common in many villages to have men's and women's houses. In the Sepik River region, men's ceremonial houses are off-limits to all women and to uninitiated (non-adult) males. Men would traditionally spend most of their time in this large house where matters of ceremonial importance were often planned. Men would also often take their meals here. There were no real "family meals" in traditional societies along the Sepik. Food for the day is often placed in a woven basket that is suspended from the house rafters. People just eat when they get hungry.

Women are the primary caregivers of children and the primary food producers. Women play important roles in ceremonial and political life in many Melanesian societies. In some

*Melanesian children float on a bamboo pontoon on the Coral Coast, Fiji. (AFP/Getty Images)*

societies, a child's maternal uncle is the most important male figure.

Households vary in size from society to society. In some very small societies, everyone in the group lives in one house. Antagonism between the sexes is not as dramatic among these groups as it is among larger groups. In all societies, however, the domestic space is divided between males and females.

### **<sup>11</sup>CLOTHING**

Traditional clothing in Melanesia was scant by Western European standards. In the highland societies of New Guinea, men went naked except for their "penis sheath" made from the gourd of a vine. Nowadays, in only a few remote societies do men continue to dress in this manner; instead, they wear Western-style shorts or long trousers and shirts. In these societies, women wear skirts made from handmade fiber. An important aspect of adornment in these societies was body decoration, which involved elaborate painting and the use of various headgear, wigs, and other items. The most elaborate adornment took place when exchanges between groups were to occur. These were a time of feasting and boasting and beauty was an important aspect of the event. Some individuals still adorn themselves in this manner at these events, while others choose to refrain from the traditional activity.

In many parts of Melanesia the all-purpose *laplap* has become the standard unisex item of clothing. Laplap refers to a piece of cloth, usually store-bought, which can be wrapped around the waist or up under the armpits to cover the body, somewhat like a sarong. In the lower altitude areas, women still prefer to not wear any covering on their upper body; however, when tourists are in the village, they can adjust the laplap to cover their breasts.

### **<sup>12</sup>FOOD**

Food varies in Melanesia but there are some similarities. In parts of the lowland areas of the region, the sago palm is an important foodstuff. The pith of the palm is processed into a starch which can be made into pancakes or dumplings. A sago pancake has the appearance of a freshly cooked soft tortilla and the consistency and texture of a rubber-soled shoe. They are, however, very filling and taste quite nice with peanut butter. In the higher elevations, yams are the staple diet, with pork being consumed on ceremonial occasions.

### **<sup>13</sup>EDUCATION**

Many parts of Melanesia do not have access to formal, European-style education. Education focuses on traditional ways of life and the values of the society. Schools have reached some remote areas and are part of urban life for Melanesians. Ed-

ucation in schools revolves around literacy in the national language(s) and preparation for urban life, such as civil service careers. In Papua New Guinea, the educational system is based on the Australian model, where formal required education ends at grade 10. Grades 11 and 12 are not mandatory; they are only for those students who have a desire to pursue higher education at the university level. The University of Papua New Guinea offers a variety of degrees in a number of fields. Many of its faculty are indigenous Papuans who trained both in foreign and domestic institutions. Literacy in Tok Pisin is growing among the urban population in particular, while literacy in English is lower. Children who attend school have at least basic proficiency in written English.

#### 14 CULTURAL HERITAGE

There are a number of musical traditions within Melanesia. In the Solomon Islands, there is a tradition of panpipe orchestras that is well-known to ethnomusicologists (scholars who study the role of music in its cultural contexts). These panpipes look and sound very similar to those played by the Aymara and Quechua of the Andean region of South America. Drums are nearly universal in the musical traditions of Melanesia. Melanesian drums are usually hand-held, hourglass-shaped, and single-headed. The Tok Pisin word for this type of drum is *kundu*. In many highland societies of Papua New Guinea, large groups of men play drums together at large ceremonial gatherings called *sing sing*.

Dance is an important part of ritual life in Melanesian societies. Both men and women dance; however, in many societies there are separate men's and women's dances.

Written literature is a recent development in Melanesia. Many pieces of written literature are the transcriptions of folklore and oral history. Nationalism in island Melanesian nations has resulted in the production of modern literatures in the national languages of the countries, such as Tok Pisin and Bislama.

#### 15 WORK

Wage labor was introduced to Melanesia by European colonists. Prior to this, work was often cooperative and reciprocal, and for village-based projects it still remains so to this day. Individuals have certain responsibilities to their relatives and in-laws which typically include working for them on cooperative projects such as house building. In some societies, a son-in-law has to work in his father-in-law's gardens for a fixed period of time after his marriage. This practice is called "bride service" by anthropologists.

#### 16 SPORTS

Soccer, rugby, and cricket are important sports in Melanesia. Some societies have transformed these sports in unique ways or adapted them to meet local conditions. In a well known case in the Trobriand Islands off the coast of Papua New Guinea, cricket is played by local rules which do not allow for a winner. In many other remote villages of the various islands in the region, these sports are no more than names to the people.

#### 17 ENTERTAINMENT AND RECREATION

Electricity does not reach many Melanesian homes, so television is a luxury of the urban folk. There is one television sta-

tion in Papua New Guinea called *Em TV* in Tok Pisin, one of the national languages of the country. *Em* in Tok Pisin means "it, he, or she," so the station's name means something close to "It's TV." Australian, American, and locally produced shows are aired during a restricted viewing schedule. Cable and satellite service are available to the wealthy locals as well as the expatriates of the islands.

Traditional recreation involves storytelling and performances of music, dance, and song. No recreational event is complete without betel nut chewing, a favorite recreation of most Melanesians.

#### 18 FOLK ART, CRAFTS, AND HOBBIES

Art in most Melanesian societies is utilitarian: there is no saying "art for art's sake." In the Sepik River region, there is an extremely well developed tradition of artistic expression involving sculpture and painting. Every item is elaborately decorated with important animals and birds as well as geometric and abstract designs. Masks were an important aspect of ritual performances, but have now become important items of tourist art. Every year, several thousand tourists visit this area of New Guinea to purchase the art and artifacts of these people. It is not an industry that creates any wealthy Papuans, however.

#### 19 SOCIAL PROBLEMS

Like every other group of people, Melanesians are dealing with the modern world. Alcoholism is becoming a more serious problem in parts of Melanesia where males have access to money and find time on their hands. AIDS poses a serious health threat in Papua New Guinea, where condoms were not available until recently, and again, more predominately in the urban areas. The social phenomenon of "rascals" in parts of Papua New Guinea is a cause for concern for locals and visitors alike. Rascals are unemployed, disenfranchised youth who rob people as well as businesses, often assaulting their victims. Guns are rarely used in these robberies since they are difficult to come by and ammunition is illegal by Papua New Guinea law.

#### 20 GENDER ISSUES

The relationships between males and females are highly varied within the Melanesian culture area. While initiation for males certainly dominates the cultural landscape of Melanesia, there are several societies in which female initiation is found. One complaint that has leveled in feminist anthropology is that the male-bias of most modern ethnography has obscured the roles of women in Melanesian societies.

Among the Abelam of the East Sepik Province of Papua New Guinea, there is both male and female initiation. For a female, adulthood is marked through a public ritual that celebrates the girl's first menses. For a period of a month or two after that, the young woman is called *naramtaakwa*, meaning "decorated woman." During this time, she wears particular decorations, follows a set of social restrictions, and avoids work. At the end of the *naramtaakwa* period, a young woman is called *taakwa* and is now eligible for marriage. For a male in Abelam society, on the other hand, adulthood is attained through a gradual social process that does not reach completion until a man is in his forties.

Segregation of the sexes is common throughout Melanesia and recent interpretations of the ethnographic data provide

new insights into the reasons why this pattern is common. Previous explanations focused on the concept that women, and by extension children, were seen as polluting to men. This pollution stemmed from menstruation and fear of male contact with menstrual blood. Recent ethnographic studies in parts of Papua New Guinea have shown that men are believed to be equally polluting to women. Among the Abelam, for instance, virile men are seen as dangerous to certain female activities. The Abelam believe that sexual intercourse is detrimental to the growth of yams, which are their staple crop. During yam growing season, the young men and women are kept apart to insure their adherence to the prohibition on sexual intercourse. The reinterpretation of the ethnographic facts place a dual equality on the “dangerous” aspects of male and female in Abelam society.

Gender differences are also signaled through grammar in some of the languages spoken in Melanesia. The language of the Trobriand Islanders, Kilivila, has a complex system of gender. In Kilivila, every noun—even inanimate nouns—has a defined gender that is signaled by the use of a suffix that is attached to the noun.

In 2005, the Melanesian island nation of Vanuatu instituted a law that girls and women could be fined for wearing trousers or jeans in public. The law stemmed from concerns that traditional dress is being abandoned by ni-Vanuatu girls and women in favor of western styles. A further deterrent is that the family of the female violating the law will have to kill one pig, and pigs are items of wealth for ni-Vanuatu families.

# MELPA

**PRONUNCIATION:** MEL-pah

**ALTERNATE NAMES:** Medlpa; Hageners

**LOCATION:** Papua New Guinea

**POPULATION:** 130,000

**LANGUAGE:** Melpa; Tok Pisin

**RELIGION:** Christianity; native Melpa religion

## **1 INTRODUCTION**

The Melpa (also spelled Medlpa) are some of the first Papuans that tourists and visitors to the island of New Guinea see when they step off the plane in Mount Hagen. “Hageners,” as the Melpa are often called, frequent the airport at Mount Hagen offering modern “stone axes,” colorful string bags, and other artifacts for sale. Some of them also provide taxi and bus service to the local hotels and guesthouses. Historically, the Melpa were the first highlands group to be encountered by Europeans in 1933. Up until this time, the highlands of New Guinea had been unknown to the outside world, and, conversely, the highlanders had never before seen people who lived beyond their mountain valleys and plains. The first contact between these two groups was recorded on film and provides an invaluable and extremely interesting record of this monumental time of discovery for both groups.

## **2 LOCATION AND HOMELAND**

The Melpa live in the Western Highlands Province of the independent Pacific nation of Papua New Guinea. They are highlands-dwelling people with most of the area they inhabit ranging between 1,200 and 2,000 m (4,000–6,500 ft) above sea level. The Melpa occupy the areas north and south of the important town of Mount Hagen. There are about 130,000 Melpa, with the greatest area of population density just outside Mount Hagen in the Wahgi Valley and nearby Ogelbeng Plain. The climate in the area is relatively mild, especially by tropical standards. The temperature rarely exceeds 30°C (86°F) in the summer months and rarely falls below freezing in winter. Rainfall is heaviest between October and March, with a dry period from April until September. Mosquitoes are nonexistent here and malaria is, therefore, not a problem.

## **3 LANGUAGE**

The Melpa speak a Papuan language belonging to the East New Guinea Highlands stock. Melpa is closely related to the well-known Chimbu language spoken by the people of the same name located to the east of the Melpa region. Melpa has over 130,000 speakers and a portion of that population speaks Tok Pisin as a second language. Tok Pisin is one of the official languages of Papua New Guinea. Melpa is not under threat from Tok Pisin, as some other languages in the country are. It is still the case that most Melpa children grow up speaking Melpa as their first language.

## **4 FOLKLORE**

Myths relating the origins of the clans were and still are told within Melpa society. Sacred objects or living beings associated with these myths and clans are called mi. Extended or-

A Melpa tribe member has a head scarf adjusted at a SingSing festival. (Sylvain Grandadam/Getty Images)

atory and epic stories are performed to recount the deeds of clan heroes and ancestors. “Female Spirit”—called *Amb Kor* in Melpa—stories are important and widespread in Melpa oral literature.

## 5 RELIGION

Ghosts are the focal point of non-Christian religious practice among the Melpa. Pork sacrifices are made to placate the ghosts of dead family, lineage, and clan members on the occurrence of illness within the village or prior to the undertaking of any dangerous event. The Melpa have religious experts who are responsible for curing the sick and act as intermediaries between the human world and the spirit world. Women are not allowed to be curers but can be possessed by spirits and can also foretell the future. Christianity has existed in the Melpa region ever since the founding of Mount Hagen as an administrative, trade, and missionary center after the first Leahy expedition in 1933. A number of the Melpa are now practicing Christians and attend the local churches on a regular basis.

## 6 MAJOR HOLIDAYS

The Mount Hagen Show is an important local holiday for Hageners. At the show groups from all over the highlands re-

gion attend to perform traditional songs, music, and dance adorned in ceremonial attire. Body decoration reaches its pinnacle for this event. The Mount Hagen Show takes place every two years. National holidays such as Independence Day are recognized by the Melpa who live and work in Mount Hagen. More rural Melpa do not recognize these events since they do not directly affect their daily lives.

The most important and well known ceremonial event in traditional Melpa society was the *moka*. The *moka* was an exchange process in which an individual male gave an initiatory gift to another male, who in turn gave a gift back to that individual plus something more. Exchange partnerships developed in this way continued through the adult lives of men. Before the introduction of European goods into the highlands, the major items of exchange in the *moka* were pigs, both living and cooked, and pearl shell necklaces. In the post-colonial period, cash, machetes, and even four-wheel drive vehicles were exchanged in increasingly competitive *moka* ceremonies. The goal of the exchange was to gain status and prestige in the eyes of the larger society by giving more than one received. Men who are accomplished at achieving this goal are known as “big-men” in the community and viewed as leaders, and although the traditional *moka* has all but disappeared from Melpa society, “big-manship” is still important. Within the *moka* system, true “big-men” were able to arrange large-scale, multiple *moka* exchanges involving many pairs of exchange partners. Anthropologists refer to this type of exchange as “redistribution.” In redistributive exchange, the goal is not to accumulate goods or wealth for personal use, but instead to accumulate items to redistribute them within the community. Modern-day taxation is also classified as a type of redistribution.

## 7 RITES OF PASSAGE

In most societies in the world, a female’s passage into adulthood is marked by the onset of menstruation. This event is usually recognized by the community through ceremony, seclusion, or a set of initiation/maturation rites. The Melpa people are different in that they did not socially recognize or celebrate a girl’s first menstruation. Most other highland groups from Papua New Guinea have rites centered on a girl’s first menstruation. The Melpa are like other groups in the area that do focus on the necessary segregation of males and females due to the fear of pollution of males by females, especially through menstrual blood.

In the past, the Melpa did have elaborate initiation rites for males, although through contact with the outside world these have been greatly modified and have all but disappeared.

## 8 INTERPERSONAL RELATIONS

In some parts of the highlands, hamlets are separated by valleys and mountain ridges. Especially in the more rural Melpa region, hamlets may be widely separated from each other. In these areas greetings are accomplished long distance via yodeling. Requests, directions, commands, and challenges are often yodeled back and forth by men across a ravine or a ridge, completely out of visual range of each other.

Inheritance is based on patrilineal principles: sons inherit from their fathers. The most important item for inheritance is land. A father’s land is parceled out to his sons at the time of their marriage. His daughters may receive cultivation rights to a parcel of land after they are married.

## 9 LIVING CONDITIONS

There are two main types of traditional Melpa houses: men's and women's houses. Men's houses are round with conical roofs. This is where men and pre-teenage boys live once they have been separated from their mothers around the age of eight years old. Women and their unmarried daughters live in the rectangular-shaped women's house. There are pig stalls built inside the women's house to keep the pigs from wandering off at night or being stolen. A hamlet consists of at least a men's house and a women's house. Members of a clan resided in the same territory, which was near gardening areas and linked together by paths. Missionaries advocated the building of family homes among the Melpa where a husband, a wife, and their children would sleep together. Some Melpa have adopted this new form of residence while others have chosen not to. Roads often link hamlets together and further link these to the Highlands Highway, which bisects the Highlands Range.

## 10 FAMILY LIFE

Marriage involves the exchange of valuables by both families. The majority of the goods are given by the groom's family to the bride's family and constitute what anthropologists refer to as "bride wealth" or "bride price." Traditionally, the groom's family and kinfolk would provide a number of pigs and shells to the father of the bride in compensation for the loss of his daughter. Nowadays, cash payments are included in the calculation. The bride's family provides a number of breeding pigs that their daughter will have control over in her new family. The negotiation of a "bride price" is a significant part of the marriage transaction and can derail a potential marriage.

The Melpa trace their genealogies through the male line. Clans are created through common descent from a shared male ancestor. Individuals choose their spouses from clans outside their own. After marriage, the couple moves into the groom's father's hamlet. Later, they will build a new women's house for the bride near the groom's men's house. Divorce consists of repayment of part of the bride price, especially if the woman is seen to have been at fault.

## 11 CLOTHING

The Melpa that live or work in Mount Hagen wear Western-style clothing. Men usually wear shorts, a T-shirt, shoes if they own them, and a knitted cap, and carry a string bag. Women wear A-line dresses often made of a floral print fabric. They also carry string bags, but much larger than those of the men. Women also wear shoes if they own them, but one is much more likely to see a man with shoes than a woman. Concepts of owning a wardrobe of clothing do not exist for the vast majority of Melpa. In fact, most people own only one change of clothing. It is still possible to see Melpa dressed in traditional attire, including the traditional wig made from human hair that adult Melpa men wear on important occasions. In some cases, Melpa from rural hamlets will take a plane to another highland community traditionally dressed and carrying implements of traditional life, such as stone axes and digging sticks. The airport at Mount Hagen is truly a meeting place of the jet age and the Stone Age.

## 12 FOOD

Like other Highland cultures in Papua New Guinea, the Melpa traditional subsistence was based primarily on sweet potatoes and pork. Sweet potatoes are still an important staple, although Western-style foodstuffs have gained in importance due to their ready availability in trade stores and the central marketplace in Mt. Hagen. There is also a prestige associated with their consumption.

## 13 EDUCATION

Traditional education consisted of socializing young boys and girls to become competent members of adult Melpa society. Although this is still true today, public and parochial educational venues are also open to Hageners. In the highlands region, Western-style education has been integrated with traditional ways of life to create individuals who seem to exist in two very different worlds.

## 14 CULTURAL HERITAGE

Vocal music is especially important in Melpa society. Courtship songs are prevalent in many highland cultures in New Guinea. Men woo their mates by composing and performing songs that have double entendre lyrics. When men go to sing to women in other villages they paint and decorate themselves very elaborately.

Mt. Hagen hosts the annual Mt. Hagen Cultural Show, which has been in existence since 1961. The Mt. Hagen Cultural Show is a form of friendly competition in which performance groups from dozens and dozens of tribes from across the country perform traditional songs.

## 15 WORK

The traditional division of labor was between the sexes. Men are responsible for creating gardens and fencing them. The fences serve to keep out the pigs that graze and root in the area. Women tend the pigs, plant the staple crop of sweet potatoes and other foodstuffs such as greens and taro, and weed and harvest the garden plot. Beyond small-scale subsistence farming, coffee is the primary cash crop for Hageners.

The modern Melpa work in a variety of jobs in the town. Driving taxis and buses, porting baggage at the airport, and working in shops are only a few of the types of employment that the Hageners pursue.

Tourism is one of several areas of economic growth and development that the regional governments within the Melpa traditional homeland targeted after the 2000 national census.

## 16 SPORTS

As in other parts of Papua New Guinea, rugby is an important sport in the area around Mount Hagen. Mount Hagen is the venue for many rugby games involving Hageners and other Papuans from throughout the island.

## 17 ENTERTAINMENT AND RECREATION

Town-dwelling Melpa have access to electricity and many of them enjoy watching television. There are very few locally-produced television shows in the country and only one local television broadcast station, EMTV. Satellite television broadcasts a wide range of Australian, British, and American programs.

## 18 FOLK ART, CRAFTS, AND HOBBIES

Body decoration is the major art form in the Hagen region. The body is painted with paints produced from local dyes mixed with pig fat. Traditional materials such as feathers and shells are used to decorate elaborate headdresses. Relics of the modern world have become part of the traditional headdresses, including the labels of various products and the tops of cans. The American product Liquid Paper has also become a favorite substitute for pigmented white paint; the intensity of whiteness is cited as the reason for the switch. In the past, *moka* exchanges were important times for elaborate decoration to take place.

## 19 SOCIAL PROBLEMS

Revenge was the basis for many violent actions taken by the Melpa in the time before pacification. Revenge murders often pitted the male members of one clan against those of another. This mentality has not completely faded from Melpa culture. Hundreds of men dressed in full war regalia can occasionally be seen running along the Highlands Highway toward a neighboring village to exact revenge for a death or wrongdoing that took place in the past. Events like these alarm tourists and government officials and warnings are sometimes issued regarding travel in the region as a result.

Mortality rates are very high among the Melpa. The infant mortality rate is 57 deaths per 1,000; the child mortality rate is 15 deaths per 1,000; and the maternal mortality rate is 80 deaths per 1,000. The main causes of death among the Melpa are pneumonia, malaria, and typhoid. Life expectancy for the Melpa as derived from the 2000 national census are 53 years for women and 54 years for men.

## 20 GENDER ISSUES

Like many of the groups in Papua New Guinea, Hageners exhibit sexual opposition and separation. Differences between males and females are often exaggerated to the point of ambivalence, antagonism, mistrust, and even fear. Nevertheless, Melpa girls have considerable autonomy in choosing a spouse. Although a girl's family might want her to marry into a particular family, they know that forcing their daughter will only result in unhappiness for everyone. Women control the production in Melpa society, including the cultivation of gardens and the all-important pig husbandry that is the center of the Melpa exchange universe. Men must rely on their wives as producers and as such, women wield considerable political power in Melpa society.

# MIAO IN CHINA

**PRONUNCIATION:** mee-OW

**ALTERNATE NAMES:** Hmong; Hmu; Meo

**LOCATION:** China [also Vietnam, Laos, Kampuchea, Thailand, Myanmar and about 1 million migrants to the West]

**POPULATION:** 8.94 million

**LANGUAGE:** Miao

**RELIGION:** Shamanism; ancestor worship; Catholicism and Protestantism

**RELATED ARTICLES:** Vol. 3: China and Her National Minorities

## 1 INTRODUCTION

The Miao have a very long history. They are mentioned in the most ancient Chinese sources, dating from about the 12th century BC. The events related are even more remote. According to these legends, the Miao lived along the Yellow River Valley and the Yangzi River Valley as early as 5,000 years ago. It was said that they were defeated in a fierce battle by the Yellow Emperor (Huang Di, the legendary ancestor of the Chinese people) and had no alternative but to migrate south of the Yangzi River. Nonetheless, they continued to fight against the rulers. Once they were defeated, they moved again. After tens of centuries, they entered the deep forests and mountainous regions of southwest China, especially Guizhou Province. It was from there that they dispersed, under military pressure during the 18th and 19th centuries, especially into the adjacent provinces of Guangxi, Hunan, Hubei, and Yunnan and even across the Chinese border into Vietnam, Laos, Kampuchea, Thailand, and Burma. From time immemorial, the Miao engaged in primitive farming, practicing slash-and-burn cultivation. Families lived in the same house no more than five years. As the soil of the nearby land became impoverished, families would then move away. This method of cultivation required repeated displacement. The Miao have been famed for their "perpetual motion." However, since the mid-20th century, the great majority of the Miao have settled down.

## 2 LOCATION AND HOMELAND

The Miao are distributed in more than 700 cities and counties of 7 provinces of south China and numbered 8.94 million in 2000. The main characteristic of their inhabitation is "wide distribution and tiny colonies." Their largest area of concentration is the Wuling and Miaoling mountain range in Guangxi Autonomous Region, where nearly one-third of the Miao population of the Peoples' Republic of China lives. "Birds nest in trees, fish swim in rivers, Miao live in mountains," says an adage of the Miao. Generation after generation, the Miao have dwelled in mountainous areas with mild climate and abundant rainfall both in China and in countries on the southwest Chinese border. In the 1970s and '80s, more than 100,000 Miao migrated from Laos to the United States, Canada, Australia, France, and Guyana. The Miao expatriates amount to more than one million.

## 3 LANGUAGE

The Miao language belongs to the Sino-Tibetan system, Miao-Yao family, Miao branch. It is typologically akin to the Thai

language. There are 3 dialects, 7 subdialects, and 18 regional idioms. A written language was created by an English missionary about 100 years ago, but its use was limited to only a few counties. In the 1950s it was revised and another three written scripts were created in correspondence with the three dialects. Today, the Miao use the Chinese *pinyin* phonetic system based on the Western alphabet. Language is an important criterion to distinguish the many Miao groups. Each has its own self-given name, such as Kanao, Mo, Mao, Guoxiong, Daisou, Shuang, and Daji. The ancient Chinese books, identifying these groups by clothes and hairstyles, described them as Red Miao, White Miao, Black Miao, Flower Miao, Blue Miao, Long-skirt Miao, Short-skirt Miao, Red-head Miao, Tip-top Miao, etc.

#### 4 FOLKLORE

The creation of nature, the existence and development of every animal, plant and artifact, the origin of the Miao people, and the battles and migrations they experienced are all illustrated in Miao mythology. For example, the ancient "Maple Song" said that White Maple was an immortal tree that gave birth to Butterfly Mama. She married a water bubble and thereafter laid 12 eggs. The treetop changed into a big bird, which hatched the eggs during a period of 12 years. The eggs finally hatched, giving birth to a Thunder God, a dragon, a buffalo, a tiger, an elephant, a snake, a centipede, a boy called Jiangyang, and his sister. Thus, Butterfly Mama was the mother of God, animals, and human beings. Then the flood came, which destroyed everything. As it receded, Jiangyang and his sister, alone in the world, were confronted with the dilemma of human progeny and incest. To know Heaven's will, they rolled down from the mountain two millstones. Since the millstones laid one on top of the other when they came to rest, the brother and sister were bound to marry. Three years after the marriage, the woman gave birth to a fleshy lump. Her husband cut it into pieces and spread them apart. Every piece of the fleshy lump turned into a man or a woman. Human beings thus multiplied.

The Miao folklore and mythology contains a great wealth of stories. Shelang and Ayi are the hero and heroine of a love story. The woman Naliaowan invented pottery. Meishan is a female hunter. Wumoxi is the heroine of an insurrectionary army. There is an endless stream of tales and songs about heroes and heroines.

#### 5 RELIGION

The Miao believe that there is a supernatural power that exists in everything surrounding them and dominates or influences their destiny. They also believe that everything that moves or grows has its own spirit. They revere the sun, moon, lightning and thunder, fire, rivers, caverns, large trees, huge stones, and some animals, praying for their protection. According to the Miao, the spirit of the dead will become a ghost, which may come to haunt their families and livestock, make them sick, or even cause death. The shamans play the role of intermediary, allowing people to communicate with ghosts; they resort to magic arts, practice divination, treat various illnesses, eliminate personal misfortune, and bring about good luck. The earliest shaman was one of the Miao's ancestors, whose name (Xianggao) was frequently mentioned in the shamans' incantations. The Miao also worship their ancestors because they are deeply grateful for having been granted life; they also pray for protection and for the multiplicity and prosperity of their off-

spring. Since the 19th century, a sizable number of Miao have converted to Catholicism and Protestantism.

#### 6 MAJOR HOLIDAYS

There are dozens of Miao festivals. Among the most important is the offering of sacrifice to ancestors, performed at fixed dates during the year. Other sacrifices are for the purpose of social intercourse and collective celebration after a busy farming and hunting season. Chiguzhang is a grand ceremony held every 13 years in certain Miao districts, accompanied by the sacrificial slaughter of buffalo in honor of the ancestors. The Miao use their own calendar as well as the Gregorian and lunar calendars. The main purpose of the Miao calendar now is to fix the Miao New Year, a very jubilant festival. The Spring Festival (lunar New Year; Western calendar, between January 21 and February 20) is now a major holiday common to all of China's nationalities. There are songs, dances, horse races, reed-pipe wind music, and dating.

#### 7 RITES OF PASSAGE

To the Miao, a huge stone is a symbol of a strong child. As the child grows to three years of age, the parents will bring offerings to a huge stone, burn joss sticks and kowtow, and pray for blessings and protection. This rite is repeated three times annually. If it does not work (for example, if the child is unhealthy), the parents will turn to a large tree or cavern.

There is an ancient custom that right after a boy is born, his father would bury a piece of iron equivalent to the body weight of the baby, forge it every year, and finally hammer it into a

*Miao people in Yunnan, China. ((c) Panorama/The Image Works)*

sword when the child reached the age of puberty. Miao girls learn embroidery early at five or six years of age. When they reach adolescence, they are good enough to brocade, cross-stitch, and tailor clothes and skirts. Thereafter, they begin sewing their embroidered bridal clothes.

Miao boys and girls are allowed to date from 13 or 14 years of age. In some districts, when a girl reaches 12, she is believed to have passed through childhood and thus is allowed to participate formally in any dating activities.

According to custom, the Miao bury the dead underground. The family announces the sad news to all the village people, who spare no effort in the funeral arrangements. A shaman is invited to sing the mournful songs, to lead the soul of the dead back to live with the family, to bless and protect the offspring and, last but not least, to tell the dead how to be reunited with their ancestors in the future.

## **<sup>8</sup>INTERPERSONAL RELATIONS**

The Miao are a very hospitable people, always keeping their house open for guests, who are greeted with wine and song. The host comes outdoors to greet the guests and proposes a toast immediately. Then they sing, drink, and eat, enjoying themselves to the fullest. On the fifteenth of February or March (lunar calendar; Western calendar, between March 8 and April 6 or between April 7 and May 5) each year, the whole

village will receive young males from outside. This so-called Sisters' Feast Festival lasts about three days. The parents prepare meals, which their daughters will offer to the boys. Girls dress up, use makeup and wear a yellow flower in their hair. Blowing the reed-pipe wind instrument (*lüsheng*), peculiar to the Miao, boys come to the village and wait for the girls to come and meet them. The group dating of the Miao is called *youfang* (*yaomalang*), *tianyue*, *zuoyue*, or *caiyueliang* in different Miao districts, but the meaning of the words and the ritual patterns are similar. Singing in antiphonal style and dancing form the initial rite through which a boy and a girl might gradually pay tender regards to each other and fall in love. Group dating is held on many occasions, especially during festivals. During the Sisters' Feast Festival, each girl offers food to the boy of her desire, who sings for his meal. He may find in the rice a token of affection. If he is not the boy chosen by the girl, a little food will be carelessly offered.

## **<sup>9</sup>LIVING CONDITIONS**

Engaged in agriculture, the Miao are self-sufficient for their livelihood. They live in houses of one or two stories, the rear built on the mountain slope and the front resting on stilts. The roof is made of straw. The grain is stored in the ceiling. The bottom of the house is for the livestock and poultry. There are three to five rooms. Sons and daughters are separated. The in-

fants live with their parents. Their furniture includes a bed, cupboard, case, table, and stool, all made of wood. In addition, there are big bamboo baskets for food storage and pottery vessels for water and wine. The living conditions of the Miao residing in urban areas are not very different from their neighbors of other nationalities.

### **10 FAMILY LIFE**

The Miao family is monogamous and patrilineal, consisting of parents and their children. The property is inherited by the man, but the housewife has power in the family. There is enough freedom to allow young people to choose their spouses, and marriage is usually the result of dating and falling in love. Although an old custom favored arranged marriages or cousin marriage, the union took place only when the boy and the girl both agreed. There is a custom that the bride goes back to her own family immediately after the wedding ceremony and will return to live with her husband only during festivals or after the busy season. If she gets pregnant, she will then move to her husband's house. Otherwise, she should move three years after the wedding. A rite will be held for the change of dwelling. The Miao enjoy a healthy demographic growth, and, like the other national minorities in China, are not restrained by the one-child policy of the Chinese state.

The Miao are fond of pets, especially dogs, cats, and birds.

### **11 CLOTHING**

There are a variety of costumes corresponding to the numerous Miao branches (in fact, the difference in costumes and hairstyles is the best symbol to distinguish one branch of Miao from another). As a result, there are hundreds of styles that have no parallel among the other nationalities in China. Brilliant embroideries and silver ornaments are a distinctive national feature. The accordion-pleated skirt is a cultural trait of Miao women.

### **12 FOOD**

The Miao's principal food is rice (glutinous rice during festivals), supplemented by yams, millet, corn, wheat, buckwheat, and sorghum, all cooked in a rice steamer. The Miao like hot pepper. In fact, every dish is spicy. They also like sour condiments. Proteins come from poultry, eggs, beef, veal, pork, frog, fish, snail, eel, snake, crab, and shrimp, but their diet is mainly vegetables. No food is taboo. They use chopsticks and bowls. Wine is made at home with rice. The kitchen is provided with a cooking range, burning firewood, or sometimes coal. Filling the bowl with rice is the duty of the housewife, her unmarried daughter, or a daughter-in-law who lives in the house. Men and guests should not do it. A married daughter still staying at her parents' home can fill the bowl, but not if she has already lived at her husband's house.

### **13 EDUCATION**

All children are able to receive formal education. Miao scholars, professors, and other intellectuals are not uncommon. Some parents, however, hold the traditional view against girls' education: "It would be better to send a girl to a piggery than to send her to study," "Girls eventually marry and leave," etc. Quite a number of girls drop out of school after puberty. That

is why female intellectuals are so few and the rate of illiteracy and semi-illiteracy among Miao women is as high as 95%.

### **14 CULTURAL HERITAGE**

Song and dance are deeply rooted in Miao life. Without them, one is no longer a Miao. In addition to songs sung on specified occasions (love songs, funeral songs, wedding songs, sacrificial offering songs, etc.), a great variety of songs are sung impromptu to express in a touching manner an individual's true feelings. On the occasion of a wedding ceremony, aged persons are invited to sing in antiphonal style, continuing for days and nights. In antiphonal singing during group dating, the appropriate answer, unique metaphor, beautiful voice, and poetic wording of a singer will definitely attract attention from the opposite sex.

Just like their songs, dances also display the distinctive features of Miao culture. Dance is not only an expression of joy, but also of grief. The Miao dance not only for entertainment and recreation, but also for physical health and sentimental expression. Blowing the wind reed-pipe, accompanied by the graceful movement of the performer, is a unique combination of music and dance.

The Miao have a rich tradition of folk tales, represented mainly by ancient songs; an ancient song, *Jia*, sung in ancient Miao language, is considered a gem of ancient Miao culture.

### **15 WORK**

All the work of Miao is dedicated to ensuring a constant supply of food and daily necessities. They are self-sufficient agriculturists, with rice as their staple crop. In addition, they grow corn, yams, millet, sorghum, beans, wheat, buckwheat, fruits, vegetables, cotton, hemp, tobacco, indigo, castor, peanut, sunflower, rapeseed, and sesame. They grow an abundance of hot peppers. In the past, weeding was thought to be women's duty and plowing was left to men. Nowadays, women also work with the plough. Needless to say, many other farm chores are also done by women. Only harrowing and building raised paths through fields are men's duties. In addition, all the housework, including cooking, laundry, spinning and weaving, tailoring, and livestock and poultry raising, is left to the females, while the males sometimes join together for hunting in the off-season.

### **16 SPORTS**

The Miao like horse races, which are usually held on festivals. Teenagers love basketball, table tennis, and Chinese chess. The dragon boat regatta is a traditional competition of the Miao. The participants of a team usually come from the same village. The distance of the race is about 2 km. Other popular sports are kicking the shuttlecock and Chinese shadowboxing (*wushu*).

### **17 ENTERTAINMENT AND RECREATION**

Dancing and singing for nights and days only takes place during festivals and wedding or funeral ceremonies. In normal times, dining together, chatting, calling on relatives, and the visit of a married woman to her parents' home are the joys of life. Movies, television, videos, libraries, and cultural centers are popular in cities, counties, and small towns.

## 18 FOLK ART, CRAFTS, AND HOBBIES

Embroidery, wax printing, brocade, and paper-cuts are four famous crafts of the Miao. Silver ornaments elaborately wrought by craftsmen display their great attainments and sophisticated artistic conceptions.

## 19 SOCIAL PROBLEMS

Because of their mountainous environment, the Miao are still confronted with the problems of poverty and isolation. Migration of Miao youngsters from their villages to urban and coastal areas is a widespread and ambivalent phenomenon. The positive aspect is that the migrants may bring back new knowledge and experience, which is helpful to their native place; the negative aspect is that their migration runs counter to the immediate needs of talent and skills for local development. Today, the trend of migration to the outside world grows stronger and stronger.

## 20 GENDER ISSUES

The Chinese constitution states that women have equal rights with men in all areas of life, and most legislation is gender neutral. However, there are continued reports of discrimination, sexual harassment, wage discrepancies, and other gender related problems. The gap in educational level between women and men is narrowing with women making up 47.1% of college students in 2005, but only 32.6% of doctoral students.

China has strict family planning laws. It is illegal for women to marry before 20 years of age (22 for men), and it is illegal for single women to give birth. The Family Planning Bureau can require women to take periodic pregnancy tests and enforce laws that often leave women with no real options other than abortion or sterilization. Though minority populations were previously exempt from family planning regulations, policy has changed in recent years to limit minority population growth. Today, urban minority couples may have two children while rural couples may have three or four.

Prostitution and the sex trade is a significant problem in China involving between 1.7 and 5 million women. It involved organized crime, businessmen, the police, and government workers, so prosecution against prostitution has limited success. In 2002, the nation removed homosexuality from its official list of mental illnesses, and though it is still a taboo topic, homosexuality is increasingly accepted, especially in large, international cities.

# MICRONESIANS

**PRONUNCIATION:** mye-cro-NEE-zhuns

**LOCATION:** Federated States of Micronesia (comprising Guam, Republic of Belau, Kiribati, Marshall Islands, Republic of Nauru, Chuuk State, the Northern Mariana Islands, and thousands of smaller islands)

**POPULATION:** Approximately 108,000

**LANGUAGE:** Chukese, Pohnpeian, Yapese, Kosrean, Ulithian, Woleaian, Nukuoro, Kapingamarangi, English (official language)

**RELIGION:** Catholicism; Protestant sects

## <sup>1</sup>INTRODUCTION

Most of the nearly 2,500 islands that comprise Micronesia were administered by the United States until 1986, when the Trust Territory of the Pacific Islands was dissolved into four constitutional governments. The Federated States of Micronesia, the Republic of Belau (Palau), the Republic of the Marshall Islands, and Commonwealth of the Northern Mariana Islands all still retain political and economic relationships with the United States, some to a greater degree than others. However, each of these constitutional political units relies economically on the United States almost completely.

The name “Micronesia” comes from the Greek, meaning “small islands.” The culture area of Micronesia is a parallelogram-shaped region in the North Pacific Ocean. Its corners are formed by the Republic of Belau in the southwest; Kiribati, formerly the Gilbert Islands, in the southeast; Guam in the northwest; and the Marshall Islands in the northeast.

The capital of the Federated States of Micronesia was relocated in 1989 from Kolonia, Pohnapei to Palikir, only about six miles west of the former capital.

## <sup>2</sup>LOCATION AND HOMELAND

Volcanic and coral islands make up Micronesia’s islands. The largest of these is Guam, with 225 sq mi and about half of the total population of Micronesia. Only half of Guam’s total population is indigenous; the other half are mostly American military personnel. Guam has been a territorial possession of the United States since 1898, when the island was acquired from Spain.

Almost all of the islands within the region of Micronesia are located north of the equator. As it happens, the richest and poorest islands of the region are the only ones located south of the equator. The Republic of Nauru is one of the smallest countries in the world with a total area of nine sq mi. It is also one of the least populous, with only around 13,500 people, and an island rich in phosphate rocks that provide almost all of the national income for the country. Nauruans have lived in a virtual welfare state with no taxes but an extremely high unemployment rate (nearly 90%).

## <sup>3</sup>LANGUAGE

The languages of the Micronesian region belong to the large family of Austronesian languages that are spread throughout the Pacific Basin. Micronesian languages fall into two types, nuclear and nonnuclear languages. The nonnuclear languages

show close affinities to other Austronesian languages outside of Micronesia such as Philippine languages and languages of Indonesia. The nuclear languages are all closely related to each other and create a chain of languages across the middle of Micronesia. Linguists look at these patterns of relationships to help determine the prehistoric settlement history of the area. From this pattern we can posit that there were at least two migrations into the region: one from the Indonesian archipelago into the western section of the region and a second from the eastern Melanesia. The migrations from eastern Melanesia were later than those from the Philippine and Indonesian regions.

The Pacific and Asian Linguistics Institute of the University of Hawaii administers a program that provides linguistic documentation of the languages of Micronesia in the form of dictionaries and language learning materials. The work of this institute has vastly increased knowledge of the languages of the region.

## <sup>4</sup>FOLKLORE

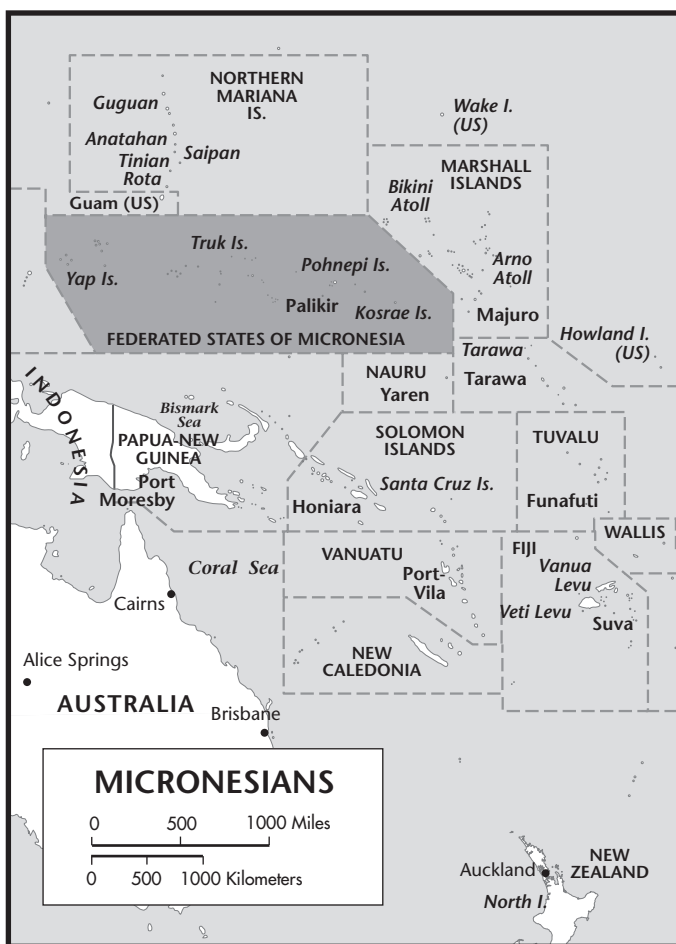

Micronesian mythology reflects concern for the social and natural order of things. One Palauan myth recounts the story of a magical breadfruit tree that the child of sun provides for his mortal mother. In order to provide fish for her to eat, the son cuts a hole in the center of a breadfruit tree that grows outside his mother’s house and next to the sea. Fish were thrown through the hole by the waves of the sea and the mother need only walk out of her doorway to collect fish. Her neighbors became jealous and cut down the breadfruit tree, which caused a catastrophic flood engulfing the whole island. Only the mother was saved by her son, who flew her through the sky on a raft.

## <sup>5</sup>RELIGION

Christian missionaries in Micronesia have converted most of the indigenous population to either Catholicism or Protestant sects. Religion in traditional Micronesian cultures involved beliefs in ghosts, in ancestor worship, and in spirits that inhabit places and natural objects and that are associated with specific activities. Canoe builders, for instance, had patron spirits who would control the outcome of their work on canoe construction. Chants and offerings were directed to these patron spirits to help insure their successful participation in human projects.

## <sup>6</sup>MAJOR HOLIDAYS

Major religious holidays in Micronesia now revolve around the Christian calendar. Many Micronesian states celebrate Christmas, Easter, Ash Wednesday, and All Saints Day. On the Republic of Nauru, Angam Day is held on October 26. Angam Day celebrates the threshold births of the 1,500th Nauruan at two points in the island’s history. The first was in 1932. The population was recovering from two major epidemics that had reduced the population to an all-time low of just over 1,000 in 1920. The second cause for celebration came in 1949, when the 1,500 mark was reached again following a decline in 1941. American secular holidays are all observed in many parts of Micronesia and some islands even recognize American Thanksgiving. Precontact holidays would likely have been occasions of celebrations for auspicious events or the accomplishment of certain feats. A major event for the display of traditional culture is the South Pacific Arts Festival, which rotates

between venues in the Pacific Ocean. At this festival performing groups from a number of Pacific Island nations come together to put on shows for the enjoyment of tourists, the local populations, and the participants themselves.

## 7 RITES OF PASSAGE

Christianity has altered many of the traditional celebrations associated with changes in social status that accompany events like birth, puberty, marriage, and death. Birth on the island of Belau was accompanied by a series of ritual exchanges prior to and following the birth of the first child of a wealthy couple. The attainment of puberty by males on the island of Yap is accompanied by a hair cutting ceremony that has been retained to the present day. In other parts of Micronesia, the passage through puberty was marked only by a change in attire. In Chuuk State (formerly Truk), following puberty both males and females were permitted to engage in sexual relationships. Trial marriages were also permitted. Christian ideology has altered these patterns of sexual relationships considerably, and they do not continue in the present time.

## 8 INTERPERSONAL RELATIONS

Long distance exchange was part of the life of some Micronesian groups. Definite rules of etiquette dictated the behavior of visitors to another island or atoll. However, little is known about precontact behavior in most Micronesian societies. Social class dictated marriage rules and likely influenced pat-

terns of day-to-day social intercourse. In most societies, there were three distinct social classes that individuals were born into; however, in some societies, individuals could “marry up,” while the converse was not possible. Status still determines social etiquette in Micronesian societies. Greetings in many societies translate into English as “welcome.” In the Chamorro language of the Northern Marianas, the greeting is *hafa adai*.

### 9 Living conditions

Micronesian communities are located near the coastline on both the “high” volcanic islands and the “low” atolls. Some islands have several types of houses that served different functions. In the era before European influence on Ponape, where there was a fairly large population and a highly stratified polity, there were guesthouses for visiting dignitaries.

Many Micronesian societies also have canoe sheds where canoes are stored. These structures function as men’s clubhouses where men could congregate and would occasionally sleep. These structures are not like the Melanesian men’s houses where women are prohibited. Western-style housing has become common in Micronesia, although some houses are still constructed out of traditional materials save the corrugated tin roof.

Electricity and running water are present in those Micronesian islands where the European and American presence is most heavily felt. Gasoline-powered generators are also owned by families to run electrical appliances.

Traditional transportation in Micronesia is by canoe and by foot. Automobiles and buses are now common on most islands in the region. Micronesian cultures are famous for their highly specialized and technologically sophisticated outrigger canoes.

## 10 FAMILY LIFE

Families in traditional Micronesian societies are based on a husband, a wife, and their unmarried children. In many societies such as those in precontact Belau, a woman would move away from her traditional land and into a house that her husband had built on land he had inherited from his mother.

In Belau, there are women’s councils and women’s clubs organized in an identical fashion to those of the men. The only difference is that women do not have elaborate ceremonial houses in which to conduct their business. Women’s councils continue to play an important role in village decision-making in Belau.

## 11 CLOTHING

Traditional Micronesian cultures typically made use of some sort of clothing. Early Spanish accounts of the Marianas Islands describe the population there as going naked. Typical attire involved either a loin cloth for men or a type of fiber skirt for women. In the Marshall Islands women wore plaited skirts that resembled mats spanning the waist to the ankles.

A number of items of body adornment were also manufactured in Micronesian societies. Carved combs and flower arrangements often decorated the hairstyles of Micronesian men and women. Coconut oil was also spread on the skin to make it shiny and sweet smelling. A yellow dye made from the root of the turmeric plant was also applied to the skin in some Micronesian cultures. Turmeric, a relative of ginger, is an important ingredient in Indian curry, giving the food its distinctive color.

In parts of Micronesia, tattooing was an important part of body adornment. The most extensive tattooing occurred in the Caroline Islands, now the Federated States of Micronesia.

Colonization has changed clothing patterns among most Micronesian groups. Western-style clothing now predominates on almost every occasion. However, ceremonial occasions often warrant a return to traditional styles of dress.

## **12 FOOD**

Traditional foodstuffs in Micronesia are fairly uniform across the region. There are some local differences due to patterns of rainfall and island topography. Taro root, breadfruit, coconuts, and yams were the most important in precontact times and continue to be staples in many households throughout the region. Since European contact with the region, corn, sweet potato, and manioc (cassava) have also become important staples. Fish is the most important source of protein in all parts of Micronesia. Since animal life was limited on most islands, hunting played a very small role in the subsistence of Micronesian peoples. Although rats and lizards were omnipresent, they were not utilized as a source of food by any groups.

Western foodstuffs have become important, especially to younger people. Prepared and packaged American foods such as breakfast cereals are part of many Micronesian daily meals.

## **13 EDUCATION**

Western-style education has been introduced throughout Micronesia. The American presence in the region has produced a number of American schools where expatriates send their children. Graduation ceremonies often include addresses from high-ranking American military personnel present on the island. Opportunities for higher education must be sought in the United States or in other developed countries.

## **14 CULTURAL HERITAGE**

Micronesian music is dominated by the human voice; there are very few musical instruments produced by Micronesian cultures. The shell trumpet and the nose flute are the most common instruments in the region. The Marshall Islands also made use of the hourglass-shaped drums that were common in most of Melanesia.

Gesture was important in traditional Micronesian vocal music. Dances were often only gestures performed while in a seated posture. In other instances, line dances were performed by a number of individuals in unison.

Musical traditions of other cultural regions of the world have gained importance in Micronesia. Polynesian-style music from Hawaii has become popular in parts of Micronesia. American music and dance has been introduced via television and the resident American population in the islands.

## **15 WORK**

Traditional patterns of work entailed a division of labor along gender lines. In some islands, males engaged in fishing and harvesting the products of trees such as breadfruit, coconuts, and betel nut, while females were responsible for gardening and activities that took place in the household including plaiting mats and making clothing. In some other islands, women provided most of the fish. However, in all parts of Micronesia women were forbidden to fish from canoes.

Wage labor in a variety of industries is now the norm in Micronesia. Both women and men are in the wage-earning workforce in Micronesian society. Many states have set minimum wage standards that are at odds with the U.S. federal minimum wage standards. In the Northern Marianas Islands, the minimum hourly wage for 2007 was \$3.55, which was less than the federal minimum wage of \$5.85.

## **16 SPORTS**

Traditional forms of competition in Nauru consisted of singing and dancing competitions and kite flying. The competing "teams" were organized along lines of genealogical descent. These activities have all but ceased in most parts of Micronesia. Sports introduced from other nations, such as the United States and Japan, have become important.

A traditional sport on the island of Nauru is catching Noddy birds. The Brown or Common Noddy bird (*Anous stolidus*) is a member of the tern family. Noddy birds feed on fish caught out and sea. At sunset, when the birds return to land after feeding at sea, Nauru men stand on the beach ready to throw their lassos on the returning birds. The Nauruan lasso is constructed of supple rope and weighted at one end. When a bird flies over, the lasso is thrown up to knock the bird from the sky. The fallen Noddy birds are then cooked and eaten.

## **17 ENTERTAINMENT AND RECREATION**

Television and videos have become important forms of entertainment in many Micronesian societies. Most of the programming is foreign and often out of date, coming from the United States and, in some cases, Japan. Local programming for news and community information is limited. Television and videos have made an impact on traditional ways of life in Micronesia. Movie theaters in many islands run current American and other foreign releases; however, the runs of these movies are often very short, only a few days in many cases.

## **18 FOLK ART, CRAFTS, AND HOBBIES**

Belau, in western Micronesia, is well known for the elaborately incised and painted facades of the chiefly collective houses, called *bai*. The degree of decoration and ornamentation was directly related to the degree of status and amount of wealth the group possessed. Each plank of the facades at either end of the house was painted with a separate narrative relating aspects of cultural history or mythology. Beginning in the late 1800s, planks were cut away from *bai* to give to foreigners. In the 1930s, the Palauans began to create replicated as well as new "storyboards" for sale to tourists.

Carved bowls of various shapes and sizes were utilitarian in function but decorative in design. These are now produced for the tourist industry in Micronesia. Finely plaited mats for sleeping and sitting were items of status among many Micronesian groups. These items are now also produced primarily for sale to tourists.

The construction of single outrigger canoes was the outstanding technological achievement of Micronesian cultures. Many were over 40 ft long and their hulls were made of hewn planks lashed together with coconut fiber rope. The production of canoes has greatly diminished in post-contact times in Micronesia.

## 19 SOCIAL PROBLEMS

Economic self-sufficiency and cultural survival are two of the major problems facing Micronesian countries. Creating compromises between various factions both within islands and between islands is a challenge that will continue for many years to come. The immense differences that separated the various islands linked together through the weak infrastructure of the Trust Territory of the Pacific Islands have been diminished through the creation of independent socio-political units in the mid-1980s. Success of the islands will be a balancing act between modernization and the maintenance of traditional cultural patterns and institutions.

## 20 GENDER ISSUES

The Micronesian culture area exhibits considerable variation in terms of gender. At the highest level of social organization, eastern Micronesia societies trace descent matrilineally and form clans based on these principles. In western Micronesia, societies are patrilineal both in descent and social organization. Under the social influences of Western societies, the strong principles of matrilineal social organization have been gradually eroding in eastern Micronesia.

Rank and status are important concepts that interact with the cultural construction of gender in Micronesian societies. On Yap, gender is conceptualized as part of the bipartite distinction between “pure” or “sacred” and “polluted” or “profane.” Males and females and members of the nuclear family are placed into this scheme, which exhibits a degree of relativity. In general, males are *tabugul*, “pure” or “sacred,” while females are *ta’ay*, “polluted” or “profane.” Fathers are *tabugul* to their wives and children; women are *ta’ay* to their husbands and post adolescent sons, but *tabugul* to their other children. As in so many other societies in the Pacific, menstrual blood is the source of *ta’ay* in Yap society.

Village space in Yap is also gender specific. Every village has at least one men’s house as well as at least one menstrual house. Menstrual houses are restricted to menstruating women who spend at least one week per month there. Upon a girl’s first menstruation, she enters the menstrual house (*dapal*) for a period of time ranging from six to 18 months. The men’s house is restricted to adult men and the post adolescent boys who reside there and are socialized into the roles of adult males.

# MINAHASANS

**PRONUNCIATION:** mee-nah-HAH-suns

**ALTERNATE NAMES:** Menadonese

**LOCATION:** Indonesia (Sulawesi)

**POPULATION:** 650,000 to 1.25 million

**LANGUAGE:** Malay (Manado dialect and Bahasa Indonesia); various indigenous languages (Bantik, Ponosakan, Tombulu, Tonsawang, Tonsea, Tondano, Tontemboan).

**RELIGION:** Christianity

**RELATED ARTICLES:** Vol. 3: Indonesians

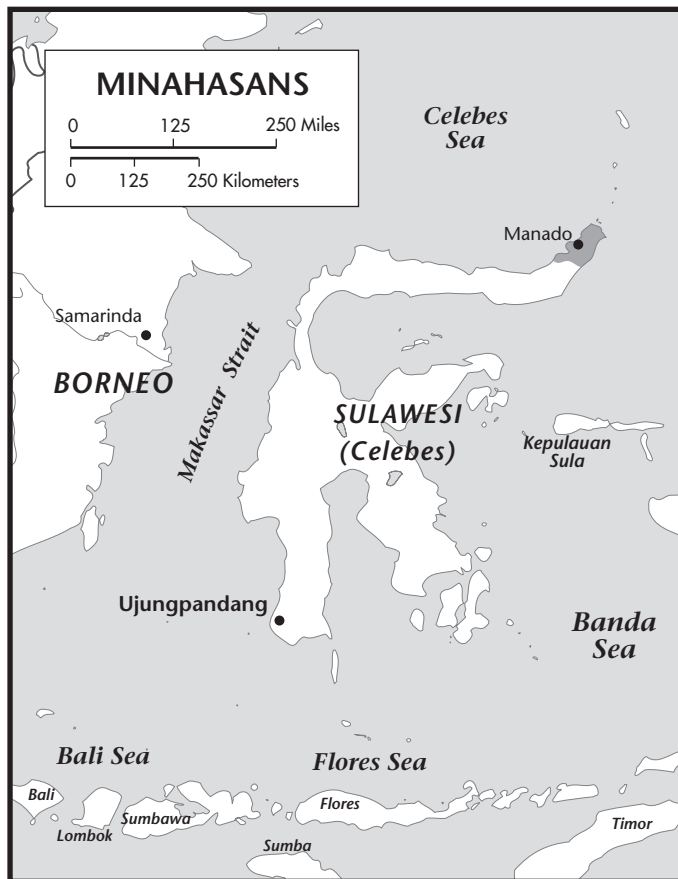

## 1 INTRODUCTION

Although the Minahasans produced no pre-colonial kingdoms, as other Indonesian ethnic groups can boast, since the Dutch period they have enjoyed one of the highest standards of education and economic development in the whole country. The term *Minahasa* itself means “made one,” referring to an early confederation of tribes formed to resist the neighboring Bolaang-Mongondow people. Deriving from these nine tribes are the sub-ethnic groups recognized among the Minahasa today: Tonsea, Tombulu, Tontemboan, Tondano, Tonsawang, Pasan Ratahan, Ponosakan, Babontehu, and Bantik. The people of the regency (*kabupaten*) are also commonly called Manadonese, after the principal city, Manado.

Such as it is known, early Minahasa history is one of constant warfare among clans and villages, marked by headhunting. The Muslim sultanate of Ternate to the east exercised some influence on the Minahasans, though the latter, unlike the Gorontalo farther west, resisted Islamization. In the mid-16th century, the Portuguese, with the first Christian missionary, a Catholic priest, among them, visited the region. From bases in the Philippines, the Spanish also made contacts among the Minahasans, leaving American food crops and horses (the local Malay lingua franca takes its word for the animal from the Castilian *caballo*).

In the 1650s, the Dutch East India Company drove the Spanish out of Minahasa in pursuit of the spice monopoly. They built Fort Amsterdam in 1673, around which would grow the city of Manado. However, it was only in 1808–09 that the Dutch penetrated very far beyond that strategic outpost; in those years, they subjugated the surrounding highlands. This opened up lands for the forced cultivation of coffee and began a cultural transformation, which would include rapid mass conversions to Christianity. While losing a great part of their indigenous culture, the Minahasans took advantage of the opportunities offered by the Dutch colonial government and European missionaries. By 1930, the region had the highest literacy rate in both Malay and Dutch in the whole country. In disproportionately high numbers, Minahasans staffed the bureaucracy throughout the colony. They also served in the colonial military, feeling more solidarity with the Christian Dutch than with their Muslim fellow “natives.”

Indeed, the struggle for independence from Dutch rule in the aftermath of World War II received a far from unanimous welcome in the region. However, despite its reputation as the “twelfth province of Holland,” Jong Minahasa (“Young Minahasa”) was one of the early 20th century regional associations that merged into the Indonesian nationalist movement. Dur-

ing the revolution, Sukarno and Hatta sent a Minahasan, Dr. Sam Ratulangie, to establish a republican administration for all of Sulawesi. Today, the Minahasa region is well integrated into the Indonesian nation, at a distance from the Java and Islam-dominated mainstream but without separatist ambitions. According to one official index, North Sulawesi, of which Minahasa is the most advanced part, ranks only after Jakarta and Yogyakarta in quality of life. Already an increasingly popular tourist destination, particularly for its spectacular venues for scuba-diving, Manado is slated to become one of the principle nodes in a “growth triangle” that will include Malaysian Sabah and Philippine Mindanao.

## <sup>2</sup>LOCATION AND HOMETLAND

The Minahasa region occupies the very tip of the Sulawesi’s northern peninsula (corresponding to Minahasa regency within the province of North Sulawesi). The landscape is mountainous, dominated Mt. Klabat, which is 1,995-m (6,000-ft), and Mt. Soputan (which erupted in 1989). There is also a sizable upland lake, Tondano, along whose shores wet-rice cultivation flourishes. According to the 2000 census, Minahasans made up 33% of the population of Sulawesi Utara (North S.) province, equaling over 650,000; the province’s total population had risen to 2.85 million in 2008. The population density of the Minahasa region, at 750 persons per sq km (1,940 persons per sq mi) is half of Java’s but exceedingly high for the Outer Islands. Many Minahasans have settled in Jakarta and other parts of Indonesia, as well as in the Netherlands.

The region, especially the city of Manado, has long attracted outsiders. The common physical stereotype of the Minahasans is that they are strikingly attractive examples of racial blending, though this may not accurately apply to the generality. There is a small community of mixed European and indigenous descent, the Borgo. Intermarriage with Chinese has also been very frequent with noticeable results; anti-Chinese feeling seems to be much lower in Minahasa than in the rest of the country.

## <sup>3</sup>LANGUAGE

Like most other Indonesian languages, those of North Sulawesi are Austronesian. However, they display closer affinities to the Austronesian languages of the Philippines to the north than to their neighbors farther south on Sulawesi. Despite the Minahasa region’s small size, seven distinct languages are spoken, each associated with a particular district (Bantik, Ponosakan, Tombulu, Tonsawang, Tonsea, Tondano, and Tontemboan).

The regional lingua franca is a localized dialect of Malay called “Manado Malay” after the multiethnic provincial capital. Daily speech in the indigenous languages is freely mixed with Manado Malay and, increasingly, with Bahasa Indonesia. The lingua franca may drive the Minahasan languages into extinction over the course of the next few generations.

In a pattern atypical of Indonesia, Minahasans use family names, with married women placing their maiden names after their husband’s surname.

## <sup>4</sup>FOLKLORE

According to legend, the ancestress of the Minahasans, Lumimuut, was born from foam thrown up by the sea. Lumimuut was impregnated by the wind and bore a son, Toar. Hoping to find mates, the two set out in different directions. After years of wandering, they met again but failed to recognize each other. They married and had many children, among whom Lumimuut divided her realm, the Minahasa land. The sacred stone, Watu Pinawetengan, to which she summoned her offspring for this division, can still be seen, covered with carvings of unknown meaning.

## <sup>5</sup>RELIGION

Some 90% of the population of Minahasa is Christian (the majority subscribe to several Protestant sects led by the [Dutch] Reformed Church; a small minority is Catholic). Catholicism was first introduced in the 16th century by a Portuguese priest, Father Diego Magalhaens. Protestantism arrived with the Dutch in the 17th century but massive conversion occurred only in the 19th century.

Belief persists in a wide range of supernatural beings that are believed to have memory, feeling, and energy: *opu* or *dotu*, ancestral spirits; *murku*, the spirits of the dead, which remain near human dwellings; and *panunggu*, *lulu*, *puntianak*, and *pok-pok*, various categories of demons or ghouls. Good people are believed to become benevolent spirits; evil people, suicides, and accident victims become malevolent ones. Propitiatory rituals attend important life events, times of danger or disease, and the full moon. These rituals are led by mediums (*tonaas* or *walian*) and require offerings of eggs, betel nuts, palm wine, cigarettes, and rice. Mediums heal with potions of water in which magical objects have been soaked; they locate these herbs, stones, or wood pieces in places indicated by

ancestral spirits through visions. Divination is performed by examining an animal's gall bladder. Some shamans specialize as midwives, thief-detectors, and spell-casters; they are often consulted on political strategy.

## <sup>6</sup> MAJOR HOLIDAYS

See the article entitled **Indonesians**.

## <sup>7</sup> RITES OF PASSAGE

Whereas formerly parents arranged their children's marriages, nowadays young people choose their own spouses. Preliminary to the wedding, the man's family sends a representative to meet with an intermediary named by the woman's family. The delivery of the bride-price formalizes the engagement. On the Sunday before the wedding, representatives of both families announce the wedding and reception in church. On the day itself, the groom goes to the bride's house, knocks on the door of her room, and, usually very embarrassed, they kiss each other in front of onlooking family and friends. The groom escorts the bride to the church, where the wedding ceremony takes place, to be followed by a reception at the bride's house. After church the following Sunday, the groom brings his bride for a visit to his parents' house.

## <sup>8</sup> INTERPERSONAL RELATIONS

Since the Minahasans never knew an indigenous kingdom, high status was traditionally not inherited but had to be won by demonstrating excellence to one's fellows (who in turn were always eager to challenge those who had managed to win prominence). In conditions of constant petty warfare, this meant personal prowess in battle and the ability to recruit fighters. Agricultural success was also a sign of divine blessing. A man seeking recognition would mount a great feast; completing a cycle of nine such feasts would qualify a man for a *waruga* stone burial chamber (carved with human figures, whose shape suggests a house with a gable roof). *Waruga* are no longer being built, but modern people still leave coconuts in front of them, said to be a substitute for human heads; replacing these are ostentatious modern mausolea, sometimes in the shape of boats or cars to reflect the source of the deceased's wealth.

According to Minahasan mythology, three status groups were distinguished: the *tonaas* or *walian*, religious specialists; *makatelupitu*, the leaders and warriors; and ordinary people. In addition to respecting *walian* and now Christian ministers, modern Minahasans recognize informal social status based on government office, wealth, inheritance, and education (a basic classification is between *tou siga*, "clever," i.e., educated, people and *tou lengei*, the "still stupid," i.e., uneducated).

A village (*kampung*) headed by a *hukum tua* is traditionally divided into subvillages headed by a *kepala jaga*, which break down further into groups of houses led by a *meweteng* who distributes work duties. Other village officials include a clerk, a land surveyor, an irrigation supervisor, a town-crier, and a police chief.

People belong to mutual aid associations (*mapalus*) that assist their members in holding funerals, weddings, and other major celebrations, as well as with agricultural tasks. Similarly, organizations for kin and people from the same locality play an important role, flourishing among Minahasans in Jakarta and elsewhere outside their homeland. In hotly contested vil-

lage-head elections, these organizations provide support for candidates who must mount large feasts to win votes.

## <sup>9</sup> LIVING CONDITIONS

According to 17th-century European accounts, ancient Minahasan villages were fortified, consisting of dwellings built on massive pillars and housing six to nine related families, each in a separate room with its own kitchen; the eldest, who was the head of the kin group, possessed the largest room.

Modern houses are built on smaller wooden or limestone piles (2.5 m or 8 ft high) and house a single family. An unwallied front room as long as the rest of the house is edged by a simply carved railing. A corridor with rooms on either side runs down the middle of the walled part of the house. The space under the house is walled in for storage or left open for a cart. Roofs are made of palm thatch or zinc; the latter, along with glass windows, expensive woods, and a cemented undercroft floor, is the mark of a richer family's house. Separate outbuildings are used for cooking, bathing, and toilet functions. Reminiscent of Europe, local houses are renowned for their hedged yards, well-tended gardens, and potted plants adorning window sills and porch railings.

As fields may be some distance from the family house, rural Minahasans make use of *sabuwa*, small, simple houses for shelter from the rain, storing produce before taking it to market, and cooking and sleeping when crops need to be guarded from animals for days at a stretch.

Villages (*wanua*) consist of houses arranged along a main road (or also down side roads in larger settlements); the church, market, headman's office, police, shops, and food stalls are concentrated on this axis. Ox- and horse-drawn carts are still common.

The Minahasans' home province, North Sulawesi, has a Human Development Index (combining measures of income, health, and education) of 74.2 (2005 score), far higher than Indonesia's national score of 69.6 and second only to that of the region of the national capital, Jakarta (76.1). North Sulawesi's GDP per capita is US\$8,360, moderately high for Indonesia (cf. US\$10,910 for North Sumatra, US\$6,293 for Central Java, and US\$2,919 for North Maluku). In 2000, the level of infant mortality, at 27.77 deaths per 1,000 live births, was the third lowest in country, after the national capital region of Jakarta and the highly urbanized Yogyakarta region.

## <sup>10</sup> FAMILY LIFE

Kinship is bilateral, with equal emphasis on connection to maternal as well as paternal relatives. The family includes parents and their unmarried children; a daughter and her husband may live with the parents before setting up their own house. A couple, their children, and their children's families constitute the basic kinship unit, the *patuari* or *famili* (a Dutch term), which is exogamous (wider kin-groupings have lost their function in modern times). Divorce is common, governed by modern laws. Inheritance is divided equally among heirs, who may include surviving spouses and biological, adopted, and stepchildren; the eldest son oversees the rotation of non-divisible property.

## <sup>11</sup> CLOTHING

Heavily Europeanized, modern Minahasa is not known for distinctive costumes, because indigenous weaving died out in the 19th century.

## 12 FOOD

Maize is the staple food for most Minahasans. While papaya fruit is fed to pigs, people eat the cooked leaves. Dishes are accompanied by *rica-rica*, a mixture of chili peppers, tomatoes, onions, garlic, and ginger. Regional specialties include pork *sate*, *tinoransak* (another pork dish), *kawaok* (fried forest rat), *kelalawar pangang* (bat stew), *RW (rintek wuuk*, “fine hair,” a euphemism for spiced dog), and cat (*tusuk* or “*eveready*” as in the battery with the cat logo). Fish is common fare, the best-loved preparations being fried carp dipped in *dabu-dabu* sauce (chili, tomato, onion, and lime) and smoked tuna (*cakalang fufu*), fried or cooked in coconut milk. *Tinutuan*, famed throughout Indonesia as *bubur Manado*, is a rice gruel with greens and dried fish. *Milu* is a clear soup with young corn kernels and small shrimp, slightly sour from lime. A common snack is *panada*, Iberian-style meat-and-vegetable turnovers. Desserts include *halwa kenari* (kenari nut with brown sugar), various confections (*bagea* and *wajik*), and fried ice cream.

## 13 EDUCATION

Compared to other ethnic groups, Minahasans have long enjoyed superior access to modern schooling. The Dutch colonial government and Christian churches promoted education; by 1900, there was 1 school for every 1,000 people in Minahasa, while Java's ratio was 1 school for every 50,000 people. Because of this educational advantage, Minahasans have been disproportionately represented in the bureaucracy. Disdaining manual labor and commerce, Minahasans migrate to fill positions in areas with a shortage of civil servants.

In 2005, North Sulawesi's level of literacy stood at 98.87%, high by Indonesian national standards and even higher than in the region of the national capital, Jakarta (see also the article entitled **Indonesians** in this volume).

## 14 CULTURAL HERITAGE

Throughout Indonesia, Minahasans are famous for their singing skills (which they readily display at parties), as well as for the *kolintang*, an orchestra of wooden xylophones; their music, widely available on cassette, is Western in style. A legacy from the Dutch colonial military of which Minahasa, along with Ambonese, formed an important component, marching band music on bamboo versions of brass and other wind instruments (trumpets, trombones, tubas, saxophones, and clarinets) accompanies festivals. Early Spanish influences survive in a tradition of Christmas mumming (masked dance) and *katrili*, a kind of square dancing. For competitions and the reception of important guests, a number of dances of a more indigenous character have been secularized and modernized. Group dancing (*maengket*) includes: the *maowey kamberu*, depicting the rice harvest; the *marambak*, depicting housebuilding; and *lalayaan*, a dance offering the sexes a chance to interact. Also performed in the Moluccas, the *cakalele* (also called *kabasaran* or *mahsasuh*) is a war dance consisting of red-clad men waving swords and shields and emitting fierce cries.

## 15 WORK

Some 76% of the population earns a living from agriculture. Inland valleys with volcanic soils support wet-rice, but swidden (shifting-cultivation) field maize is the staple food, grown along with tubers and peanuts. Cabbage, Chinese cabbage, onions, tomatoes, water spinach, and chili are also grown for

market. Important cash crops are coffee (declining in importance since the 19th century), coconut for copra and oil, and, since the 1970s, cloves. The domestic cigarette industry's demand for cloves has enriched many farming families; the short harvest time pulls in all available labor, closing schools and offices. Most land is owned by individuals (aside from a diminishing amount of land owned by kin-groups), and conflicts over inheritance frequently erupt. Sharecropping is common. Villagers may use communal lands after informing the village head.

Other occupations include livestock-raising and fishing (usually by families, from outrigger and non-outrigger canoes). Each village has a carpenter. *Tibo* brokers sell produce purchased from farmers, transporting it in carts.

## 16 SPORTS

See the article entitled **Indonesians**.

## 17 ENTERTAINMENT AND RECREATION

See the article entitled **Indonesians**.

## 18 FOLK ART, CRAFTS, AND HOBBIES

Gardening is a major leisure activity; roses, hibiscus, bougainvillea, and citrus are grown.

## 19 SOCIAL PROBLEMS

See the article entitled **Indonesians**.

## 20 GENDER ISSUES

Minahasan women enjoy among the highest levels of wellbeing and empowerment in Indonesia. North Sulawesi's Gender-Related Development Index (combining measures of women's health, education, and income relative to men's) is 62.1, higher than Indonesia's national GDI of 59.2. The province's Gender Empowerment Measure (reflecting women's participation and power in political and economic life relative to men's) is 55.1, also higher than the national GEM (54.6).

# MINANGKABAU

**PRONUNCIATION:** mee-NAHNG-kah-BOW (as in “bow down”)

**LOCATION:** Indonesia (Sumatra and other areas)

**POPULATION:** 5.5 million

**LANGUAGE:** Minangkabau

**RELIGION:** Islam

**RELATED ARTICLES:** Vol. 3: Indonesians

## 1 INTRODUCTION

The Minangkabau (also called “Minang”) are one of the few matrilineal cultures surviving into modern times (and the largest currently existing), a distinction even more striking as theirs is virtually the only such society within the Islamic world. Their very name (“victorious [*menang*]” “buffalo [*kabau*]”) reflects their independent spirit. According to legend, for a bullfight held in lieu of battle, the Minangkabau pitted a tiny water buffalo calf against the giant beast representing the Javanese invaders. The Minangkabau secretly affixed blades to the calf’s horns; the calf, taking the larger animal as its mother, knifed it to death while seeking an udder.

Wet-rice agriculture made its earliest debut on Sumatra in the Minangkabau home valleys, but it was the region’s gold that first attracted foreigners. In the 14th century, the half-Javanese, half-Sumatran prince Adityavarman established the first kingdom near the coveted mines. This was probably the distant ancestor of the Pagurruyung monarchy (actually, three co-rulers of limited power) of later centuries.

Increased external trade, with Gujerat (India), Aceh, and Malacca, brought Islam to the Minangkabau by the 16th century. By the end of the 18th century, the new religion had spawned the Paderis, puritanical reformers bent on purging the Minangkabau lands of everything contrary to Islam as they understood it, including the matrilineal Pagurruyung aristocracy. Although, after more than three decades of war (1803–1837), the reformers largely succeeded, the upheaval invited the intervention of the Dutch. The Dutch East India Company had made its first appearance in the Minang region in 1663.

Under Dutch rule, the Minangkabau, to a greater extent than most other Indonesian peoples, pursued modern education. Minangkabau intellectuals were to play key roles in the nationalist movement; one of them, Muhammad Hatta, became Indonesia’s first vice-president. Nonetheless, independence disappointed Minangkabau desirous of regional autonomy and an Islamic state. In 1958, Minangkabau and Toba Batak military leaders backed the establishment of the “Revolutionary Government of the Republic of Indonesia” (PRRI); Jakarta crushed the rebellion swiftly but left Minangkabau feeling no better than a conquered people. Stability and prosperity under Suharto’s New Order reconciled the once-disaffected with the central government.

## 2 LOCATION AND HOMELAND

Numbering 5.5 million (2000 census), the Minangkabau locate their original homeland in the fertile volcanic highlands of West Sumatra, specifically in three valleys, Tanah Datar, Agam, and Limapuluh Kota. From there they spread outward into neighboring mountainous areas, reaching into other Sumatran provinces and down into the swampy western coast-

al plain as far north as Meulaboh in Aceh and as far south as Bengkulu. In addition, Minangkabau can be found in cities throughout the archipelago, particularly Jakarta. Minangkabau constitute 88% of the population of their home province of West Sumatra (3.74 million out of 4.25 million) and are the sixth largest ethnic group in Indonesia; a 1.76 million-strong diaspora lives in other provinces (constituting 15% of the population in North Sumatra, 11% in Riau, and 5% in Jambi). Crossing the Straits of Malacca as early as the 15th century, they founded Negeri Sembilan in the 18th century, now one of Malaysia’s states; 300,000 Minangkabau were estimated to be living in that country in 1981.

This wide distribution results from the *merantau* tradition: because women possess the rights to village lands, men wanting to acquire wealth for themselves have long migrated from the Minangkabau homeland to do so, either temporarily or permanently. Increased land scarcity beginning in the 19th century has led more and more Minangkabau to *merantau*.

## 3 LANGUAGE

The Minangkabau speak a language very close to Malay, but it is readily distinguishable from Malay, e.g., cognates differ usually in the final syllable: Malay *pusaka*, *pasisir*, *perut* versus Minang *pusako*, *pasisie*, *paruik*. The important Malay particle *yang* (“that” or “which”) is *nan* in Minang.

## 4 FOLKLORE

Remote mountain or jungle spots may be *tampek-tampek nan sati*, places charged with supernatural power. Spirits feared by the Minangkabau include *puntianak*, women who from afar suck the blood out of an infant through the soft spot in its skull (the fontanel). *Palasik* are women who have an innate power (which, however, they cannot control) to render children sickly. People may enlist the services of *dukun*, practitioners of magic and herbal medicine, to combat malevolent spirits or to victimize others (as in *menggasing*, sending poison to another’s bloodstream through the air). As a defense, many carry amulets, a particularly potent one being crystallized elephant sperm.

## 5 RELIGION

The Minangkabau are among the peoples most-committed to orthodox Islam in the archipelago. Despite conflicts between that patriarchal religion and their own matrilineal traditions, Minangkabau consider both integral to their culture. Islamic reform movements over the last two centuries have eliminated virtually all traces of pre-Islamic beliefs, although there are Minangkabau who recognize various types of spirits as well as the power of magic.

## 6 MAJOR HOLIDAYS

Minangkabau observe the major Islamic holidays [see *Indonesians*]. One festival, which because of its Shi’ite character has very few counterparts elsewhere in predominantly Sunni Indonesia, is the colorful and lively *tabuik* (*tabut*) of the West Sumatra coast, a celebration in commemoration of the death of the Prophet Muhammad’s kinsmen Hassan and Hussein at the battle of Karbala (AD 680).

## 7 RITES OF PASSAGE

Surrounding birth are several rites (of waning importance nowadays): one at the sixth month of the pregnancy; the playing of the *talempong* (metallophones) to greet the birth; the burial of the placenta; the infant's first touching earth (at 40 days of age); its first haircut; and, at three months of age, a formal visit to its father's family. Corresponding to circumcision for boys, a "doing up the hair" (*menata kondai*) ceremony is held for a girl who has experienced her first menstruation.

Because of matrilineal traditions, the wedding process among the Minangkabau does not conform to the pattern general to Indonesia. Not only men but also women may issue a proposal (via intermediaries, as usual elsewhere). Despite the requirements of Islamic law, a Minangkabau man does not pay a bride-price. On the other hand, the bride's family may pay the groom's an *uang jemputan* (handed over during the ceremony). Of greater importance is the exchange of symbolic goods, such as krisses (short daggers), between the two families.

Funerals follow general Islamic guidelines. Before the deceased is carried to the cemetery, the coffin is raised so the deceased's children may pass under it three times in order to prevent excessive grief (and dreams about the dead) from afflicting them.

See also the article entitled **Indonesians**.

## 8 INTERPERSONAL RELATIONS

Villages (*nagari*) consist of clusters of houses belonging to different matrilineal lineages (local branches of far-flung *suku*). A lineage that descends from the original founders (*urang*

*asa*) of the village possesses rights to more land than other lineages, and its head has the exclusive privilege of bearing a title. Among the lineages that settled later, those (usually related to the *urang asa* line) that enjoyed some status in their native place were eventually able to buy land and gain equality, except for being barred from holding the above title, with the dominant lineage. Other lineages, on the other hand, suffer an inferior status in the village, obliged to serve the dominant lineages in various capacities, and, in the case of those lineages with known slave ancestry, their members may be shunned as marriage partners.

A council composed of the heads (*penghulu*, males) of all the lineages manages village affairs (though under the modern Indonesian state this amounts to little more than dispute arbitration). Traditionally, four groups share leadership responsibilities in the village: *niniek mamak* (heads of *paruik*, the extended matrilineal family); religious officials (*imam* and *khatib*); the *cerdik pandai* (individuals with education); and *bundo kanduang* (senior women). Wealth and education, both secular and religious, have become as or more important than hereditary titles in determining status. Indeed, only some of the Minangkabau traditionally recognized aristocratic principles (those following the Koto-Piliang norms, as well as those in Aceh-influenced Pariaman); others, those adhering to the Bodi-Caniago pattern, preferred egalitarian practices, such as having elected rather than hereditary *penghulu*.

Etiquette requires that one's language and behavior express deference to older people, a careful formality to relatives by marriage, and affectionate patience to those younger; people of the same age, even strangers, should show mutual respect. Parents prefer to correct a child out of the hearing of others, though sometimes they may judge it suitable for these others to hear. Women who are blood relations or on intimate terms may embrace each other after a long separation, but it is not proper for a man to greet even a related woman with an embrace. According to some, a man and a woman should never shake hands. Women should not squat as men do, nor sit unaccompanied on the roadside or elsewhere frequented by men.

Traditionally, young men and women (e.g., a boy and his uncle's daughter) could exchange glances only at large celebrations. One opportunity for interaction (in the Pesisir Selatan area) is afforded at weddings where young men enter a house playing tambourines while the young women, sitting above in the *pagu* (open attic), rain flowers down on them. A young woman lowers a flower and a cigarette on a string down to the young man of her desire; he replies by sending her a ring or other valuable wrapped in a cloth.

## 9 LIVING CONDITIONS

Raised 2 m (6.5 ft) off the ground on numerous pillars, the traditional Minangkabau house, or *rumah gadang* ("big house"), is famous for the ridge beams of its roof sections that sweep up to a sharp point at both ends, evoking water buffalo horns. Stretching out north to south, the house is entered through a roofed staircase to the door on one of the long sides. A room for receiving guests runs the length of the house. Behind it along the back wall are the rooms (*bilik*) for the married sisters of the family (added when each weds); the house pillars, 3 m (10 ft) apart, determine where the partition walls of each *bilik* will be. At one end of some houses, the floor is raised to provide a sitting place (*anjueng*) for those of superior status. Where there

*Minangkabau children play with kites in Belubus, Indonesia. Anthropologist Pegge Reeves Sanday has studied and lived among the Minangkabau people for 16 years. She calls the group the largest and most modern matrilineal society in the world. (AP Images/Peggy Reeves Sanday, File)*

is no anjueng, the spot is occupied by a room for the youngest sister and her husband. The kitchen occupies a small building, usually at the back, accessible by a small bridge.

Nowadays, most people occupy single-family houses; traditional ones are called *tungkuih nasi* (“rice packet,” referring to the hornless roofs).

The village (*nagari*) consists of the *nagari* proper (houses and wet-rice fields) and the *taratak* (forests, dry-crop fields, and sometimes the dwellings of non-owning caretakers). The *nagari* proper includes a mosque, a village council hall, a place for a weekly or twice-weekly market, and *surau*, halls for daily prayer that is also where the community’s unmarried men sleep.

West Sumatra has a Human Development Index (combining measures of income, health, and education) of 71.2 (2005 score), higher than Indonesia’s national score of 69.6 and the ninth highest in the country (out of 33 provinces). West Sumatra’s GDP per capita is us\$9,784, very high for Indonesia (cf. us\$10,910 for North Sumatra, us\$6,293 for Central Java, and us\$2,919 for North Maluku). In 2000, the level of infant mortality, at 52.66 deaths per 1,000 live births, was moderate for Indonesia, worse than provinces on Java but better than most in eastern Indonesia.

## <sup>10</sup>FAMILY LIFE

A Minangkabau belongs to his or her mother’s clan (*suku*) and traditionally lives in an extended family (*paruik*, meaning “[common] stomach or womb”), which consists of all individuals who trace their ancestry back to a common great-grandmother matrilineally.

The 96 named *suku* trace back to an original four: Bodo, Caniago, Koto, and Piliang. One must marry outside one’s *suku*. Custom preferred a man to marry his maternal uncle’s daughter, though he might also choose his paternal aunt’s daughter or the sister of his sister’s husband; today, the choice is not so restricted). Within the *paruik*, children’s interaction with their mother’s siblings is hardly less close than that with their parents.

Formerly, a husband visited his wife only at night, retaining residence in his mother’s village; these days, he moves into her house after the wedding. If a man takes more than one wife (a practice condemned by younger people), he commutes between their houses, which may mean between one house in his native place and another where he has migrated. For children, it was the mother’s eldest brother (*mamak*) who served as the male authority figure; the *mamak*, moreover, managed the affairs of the *paruik* in general. The *mamak*’s relations with his sister’s husband tends to be formal. Parents-in-law, on the other hand,

are known to spoil their children-in-law. If a man migrates with his wife, his parents-in-law may join them, while his own parents will not. After divorce, the husband must move away, leaving the children with his wife.

As the nuclear family increasingly displaces the extended family as the norm, the role of the father and his kin grows proportionately. It has become common for a deceased man's wife and children to challenge his sister's children's traditional claim to his property. Custom traditionally distinguished between *harato pusako*, property (mainly land and heirlooms) retained by the suku or its branches in perpetuity, and *harato pacarian*, (usually moveable) property earned by a man that he could bequeath as he wished.

### **11 CLOTHING**

As everyday wear, men wear shirts, trousers, and a *peci* cap [see **Indonesians**]. Older men still wear *serawa* (long pants with a drawstring) and a *teluk belanga* (tunic) or a "Chinese" shirt and sometimes a head cloth rather than a *peci*. Women wear a sarong and *baju kurung* (long-sleeved *kebaya*) and a *tingkulak* (head wrap covering the hair); urban women who wear modern clothing put on traditional clothing while in the village.

Ceremonial attire for men consists of: a tunic with short sleeves that widen towards the opening; trousers; a *songket* (gold- and silver-embroidered) cloth wrapped around the waist to hang just below the knee; a sash over the shoulder; a *saluak* headdress; and a *kris* (short dagger) tucked in the front. Women wear the *baju kurung*; a *songket* sarong with a matching sash over the shoulder; earrings; several necklaces, one on top of another; and bracelets on both arms. Most distinctive is the women's headwear: the cloth is folded (the precise manner is unique to each village) to look like horns (*tanduk* or *tilakuang*). Brides don elaborate headdresses of gold.

### **12 FOOD**

Rice is the core of the Minangkabau meal. The usual side dishes (*samba*) are (often salted) fish and boiled vegetables, such as cabbage, water spinach, cassava or papaya leaves, eggplant, amaranth, and banana blossom. Less often, Minangkabau eat dishes of meat (except pork) fried in coconut oil or stewed in coconut milk and heavily spiced with lots of chili and such seasonings as garlic, onions, ginger, galangal, pepper, salt, turmeric, and lemon grass. The most renowned Minangkabau dish is *rendang*, chunks of water buffalo meat stewed for hours in coconut milk and spices until the liquid reduces to a thick coating; the meat keeps for a very long time and sustains travelers on long journeys. Other dishes are *gulai kambing* (goat meat in a coconut milk sauce), *dendeng* (spicy dried beef), and *singgang ayam* (fried chicken). Drinks include *kopi daun*, a "tea" of dried coffee leaves.

"Padang" restaurants throughout Indonesia serve Minangkabau food. A waiter lays out several dishes at once on the customer's table; the customer is only charged for the portions that he or she has taken. Their great popularity among non-Minangkabau in Muslim-majority Indonesia is partly due to the assurance that the meat served there is *halal*, prepared in conformity with Islamic dietary regulations.

### **13 EDUCATION**

In 2005, West Sumatra's level of literacy stood at 95.98%, high by Indonesian national standards (see also the article entitled **Indonesians** in this volume).

### **14 CULTURAL HERITAGE**

Vocal music includes *dendang* (singing), *zikir* (Arab-style chanting), and *selawat* (invocations from the Qur'an). Instruments include bamboo flutes (*saluang* and *bansi*), the tambourine (*rebana*), the drum, the *kecapi* (a zither), and the violin.

Dances (all dynamic) include: the fan dance, portraying the interaction of young men and women; the umbrella dance, depicting a couple's love, often danced by a bride and groom; *rantak*, consisting of martial arts moves; and *sauik randai*, representing the happy mood upon finishing a day working in the fields or fishing. *Dabus* is *pencak silat* martial arts movements performed as an artistic expression.

At ceremonies such as weddings, people are quick to improvise poems (*pantun* and *syair*) and aphorisms. Traditional literature includes an epic, *Kaba Cindur Mata*. Although writing in Malay for publication by the Dutch colonial government's Balai Pustaka publishing house, early 20th century Minangkabau writers produced novels depicting conflicts between tradition and modernity within their native Minangkabau society; many of these became the first classics of modern Indonesian literature.

### **15 WORK**

Agriculture provides the majority with a livelihood. Rice from irrigated fields is the main subsistence crop, while dry-field vegetables (peanuts, potatoes, cabbage, tomatoes, and chili) are grown for the market. In outlying hilly areas, Minangkabau open the land with swidden (shifting-cultivation) methods, planting first dry rice, maize, cassava, pumpkins, or the like, then leaving the plots fallow for a couple of years, and finally planting perennials, such as rubber, cloves, cinnamon, pepper, coffee, and coconut, sugar palm, or fruit trees. With these perennials, farmers are able to participate in the cash economy.

Minangkabau raise chickens, ducks, cattle, water buffalo, and goats for meat. Fishing (in the sea, lakes, and artificial ponds) provides farmers with supplementary income.

Lacking sufficient land, or unsatisfied with the limited returns from farming, and, because of the merantau tradition (migration to acquire wealth), open to an itinerant lifestyle, many Minangkabau seek wealth through commerce. Minangkabau business owners, rather than Chinese as elsewhere in Indonesia, dominate the local economy, marketing agricultural products and the craft specialties of individual villages.

### **16 SPORTS**

The local form of martial arts is called *kumango*, a version of the pan-Malay-Indonesian *silat*. One common game played by 5–15 year olds is *galah*, in which one team (variable numbers) attempts to block the members of the other team from running a course from a starting point to the end of the playing field and back to the starting point. Males (very rarely females) of all ages enjoy *catur harimau* ("tiger chess"), a board game with stone playing pieces where one player's "tigers" attempt to eat up the other player's "goats" (the moving and placing of pieces requires skill and strategy).

## 17 ENTERTAINMENT AND RECREATION

See the article entitled **Indonesians**.

## 18 FOLK ART, CRAFTS, AND HOBBIES

Intricate carving, often painted, decorates the pillars and walls of the *rumah gadang* (the traditional Minangkabau house). Particular (usually plant) motifs correspond to different parts of the structure and symbolize virtues (e.g., the *tungguak lamah* design signifies humility and courtesy).

A few villages continue to produce the ceremonially important *songket*, cloth brocaded with gold and silver threads.

## 19 SOCIAL PROBLEMS

See the article entitled **Indonesians**.

## 20 GENDER ISSUES

West Sumatra's Gender-Related Development Index (combining measures of women's health, education, and income relative to men's) is 60.7, higher than Indonesia's national GDI of 59.2. The province's Gender Empowerment Measure (reflecting women's participation and power in political and economic life relative to men's) is 54.2, almost as high as the national GEM (54.6).

Contemporary Minangkabau notions of gender relations are influenced by distinct and often conflicting discourses: Minangkabau matrilineal values and customary law (see *Interpersonal Relations* and *Family Life*) and patriarchal pan-Islamic and Indonesian nation-building/modernizing ideologies. Mothers, for instance, continue to advise and guide their children even when they are adult, and, if they are senior women (*bundo kanduang*) within their lineage, they wield authority beyond their own immediate household (Islamic values, however, do not extend her power into children's adulthood and to households other than her own). As the ultimate controllers of property (most importantly of rice lands), women regularly speak up in kinship group and community decision-making gatherings, as they would not generally in other Indonesian cultures. At the same time, as in many other Indonesian cultures, aggressive verbal self-assertion is looked down upon as displaying powerlessness rather than power, with the result that male elders can have their way simply by saying as little as possible.

The genuinely central place of women and especially of mothers in Minangkabau culture is countered by the authority positions traditionally given to men (a man would have authority over his sister's property but not over his wife's) and by Islamic notions. For example, the idea that women unlike men attain adulthood before learning to master their passions, or that a person gets his or her essential character and status from his father's sperm, and, therefore, family's seek men of "good seed" for their daughters. Dutch colonial and later Indonesian national governments have favored the male lineage head (*penghulu*) over other types of community member traditionally participating in community decision-making processes, including the *bundo kanduang* through whom property was inherited. The Indonesian national government recognizes the father as the head of the household and channels forms of development aid, such as instruction in new agricultural techniques, to men rather than to women. It has applied the title "Bundo Kanduang" to "model mothers" judged according to an Islamic/Western patriarchal framework, shifting it away

from its traditional Minangkabau meaning of a senior woman with great power and authority within her lineage. Women who are junior according to traditional matrilineal lineage hierarchies may raise their status by invoking their husbands' rank within non-traditional hierarchies, such as the Indonesian bureaucracy. Modernization, including increased emigration and the increased value of remittances from migrants, is increasing the importance of the nuclear family as the expense of the extended family and of the lineage and proportionally reducing the power of senior women.

# MINAS

**PRONUNCIATION:** MEE-nuhs

**ALTERNATE NAMES:** Meos; Mewati

**LOCATION:** India (primarily Rajasthan state)

**POPULATION:** 5 million (estimate)

**LANGUAGE:** Various dialects of Rajasthani

**RELIGION:** Hinduism; some Islamic practices

**RELATED ARTICLES:** Vol. 3: People of India

## 1 INTRODUCTION

The Minas, also known as the Meos, or Mewati, are a tribe and caste inhabiting parts of western and northern India. Early views of the Minas held that they were among the oldest inhabitants of the region and represented pre-Dravidian elements in the population. More recently, however, it has been suggested that the Minas may have migrated to this region from inner Asia in the 7th century along with various Rajput groups. Some Minas even claim Rajput descent.

According to Mina tradition, the Minas ruled most of what is now eastern Rajasthan, an area they referred to as “*mind-esh*” (country of the Minas). They subsequently were replaced by Rajput clans, the most recent being the Kachhwaha Rajputs who founded the state of Amber, later known as Jaipur. The last important Mina ruler, the Raja of Naen, was defeated by the Rajputs in the 16th century. However, the Minas continued to play a prominent role in the affairs of the region. Like the Bhils in Mewar (Udaipur) State, it was formerly the custom for a Mina to participate in the *tika* ceremony, placing a ceremonial mark with his own blood on the forehead of a new ruler of Amber State. Minas held important positions in Amber, guarded the person of the prince at night, and were given charge of the women’s quarters.

In the 11th century, when Muslim invaders gained control of northwestern India, some Minas converted from Hinduism to Islam. This branch of the Mina tribe is called the Meos. Further conversions to Islam occurred among the Minas during the 13th and 17th centuries. Despite their conversion, however, Meos continued to follow many of their original Hindu practices, and their culture remains a blend of Hindu and Muslim traits.

Political events since the middle of the 20th century have seen the Meos take on a stronger Muslim identity. British India was partitioned in 1947 and Pakistan was created as a separate country for Muslims. At this time, many Meos migrated from territory that was assigned to the Republic of India to West Pakistan, the western “wing” of the new Islamic state. The Meos who remained in India, a Muslim minority in an overwhelmingly Hindu population, found themselves facing pressures to abandon Hindu traits and conform to traditional Islamic customs.

## 2 LOCATION AND HOMELAND

The Minas, along with their allied groups, number some nearly 5 million people and rank among the largest tribes of South Asia. The current estimate of the Mina population is 4,482,000, of which 3,834,440 are found in Rajasthan. The main concentrations of Minas lie in eastern Rajasthan, in Alwar and Bharatpur Districts, spilling over into the Gurgaon District

of Haryana State. This area is known as Mewat, reflecting the prominence of the Meos in the region. The name Mewati, i.e., a resident of Mewat, is sometimes used as a synonym for Mina and Meo. Considerable numbers of Minas are also found in Madhya Pradesh State.

The Minas of Rajasthan identify 12 *pals* in the state. Pals are historical territorial units settled by Minas who shared a common ancestry and, often, similar cultural and linguistic attributes. Beyond this geographic distinction, there are several divisions among the Minas based on factors such as occupation and status. In addition, all Mina groups are divided into numerous clans (*gotras*), which are exogamous social units.

The Mers, the hill peoples of central Rajasthan, are also considered to be a branch of the Minas. They trace their descent to Rajput chiefs who married Mina women and are known as Rawat Minas. Like the Rajputs, the Mers are divided into clans. Some Mer clans converted to Islam, while others remained Hindu, but in the past all Mers intermarried. It was only with the introduction of communal representation in British India, and the events leading to independence in 1947, that the two groups began to move apart. Significant numbers of Minas also live in southeastern areas of Rajasthan.

In Rajasthan, Minas are second in number only to the Bhils and are classed as a Scheduled Tribe. Mina populations have spread from their Rajasthani homeland to adjacent states, although there they are less numerous, may not be recognized as a tribal group, and are sometimes called by different names. In Uttar Pradesh, the state lying to the northwest of Rajasthan, for

instance, Minas are known as “Pardeshi Rajputs.” This literally means “Rajputs from a foreign land,” and no doubt refers to the claims of Mina groups migrating from Rajasthan to Rajput descent. In Madhya Pradesh, Minas are known as Rawats and are regarded as a Scheduled Caste because they eat meat and consume alcohol. Minas are also found in small numbers in Haryana and Punjab States. The Meos who migrated to Pakistan after partition in 1947 settled in the eastern region of that country’s Punjab Province.

The areas of Rajasthan inhabited by the Minas include the Aravalli Range and the semiarid plains lying to the southeast of these hills. The Aravallis are the most prominent relief feature of Rajasthan, a narrow belt of precipitous hills and ridges running northeast–southwest through the center of the state for a distance of over 600 km (approximately 375 mi). Ridges in the north, in Mewat, scarcely reach 400 m (approximately 1,300 ft). In the south, however, the mountains increase in width and elevation, rising to 1,722 m (5,650 ft) at Mount Abu. The Aravalli Range separates the arid lands of the Thar Desert in northwestern Rajasthan from the slightly more humid regions to the southeast, which are drained by the Banas and Chambal rivers. In the extreme southeast of Rajasthan, rainfall exceeds 80 cm (30 in), but over most of the area it averages around 65 cm (25 in). As is true of all semiarid climates, rainfall is highly variable and the region is prone to frequent droughts and famines. Mean maximum temperatures in May, the hottest month, exceed 40°C (104°F). Natural vegetation, where land has not been cleared for cultivation, is drought-resistant scrub forest.

Minas in Rajasthan are divided into the Mina Zamindar, the landowning Minas, and the Mina Chowkidar. Both groups claim *ksatriya* status, and the 2001 Census of India puts their number at between 2,800,000 and 3,000,000 (the estimate given above includes natural increase since 2001, Bhil Minas, Meos, and related groups). The Zamindar Minas occupy a higher ritual status in the Hindu caste system than the Chowkidar Minas. The Bhil Mina are said to be descendants of Bhils and Rajputs who fled Muslim domination elsewhere in northern India.

### **3 LANGUAGE**

The Mina homeland lies in the “Hindi belt” (the area where Hindi, an Indo-Aryan language descended from Sanskrit, is widely spoken) of northern India. However, linguistic patterns in India are such that people commonly speak the dialect of their immediate locality rather than the “proper” or official form of the regional language. Minas, depending on where they live in Rajasthan, speak various dialects of Rajasthani, which itself is a regional variant of Hindi. The major dialects spoken in the Mina areas are Mewati, Shekhawati, Harauti, Talhati, Dhundari, and Pachwari. Minas living in other states speak the dialect of their local region.

### **4 FOLKLORE**

The derivation of the name Mina is uncertain, but some suggest it means “fish.” The Minas claim an association with *Matsya* or *Minavatar*, the first incarnation of Vishnu in which the Hindu god assumed the form of a fish. According to a legend related in several ancient texts, a *ksatriya* king named Manu was fishing in a river when he caught a small fish. The fish promised to protect Manu from coming misfortunes if he took

it home rather than return it to the river. The king placed the fish in a small earthen vessel, but it started growing and eventually had to be moved to a pond, then to a lake, to the sea, and finally to the ocean. By now, King Manu realized that the fish was an incarnation of a god. The deity warned the king that a devastating flood was coming and that he should build a boat and embark on it with the seeds of all living things. Forewarned, Manu survived the flood. After the waters subsided, Manu performed a sacrifice to the gods. A woman was created from this sacrifice, and the entire human race is descended from the union of this woman and Manu.

The legend of the flood is found in many cultures, but the Mina tradition that they are descendants of King Manu achieves two goals specific to the Indian context. First, it gives a degree of legitimacy to the Mina claim of *ksatriya* status and, therefore, to an advantageous place in the caste structure of Indian society. Thus, where Mina groups have assumed a caste identity, they rank just below the Brahman caste and above the service castes and hill peoples. Second, identification with Vishnu through his Matsya incarnation confirms the Minas as Hindu, an important goal for tribal groups that may have their origins outside Hindu society. Even today, Minavatar remains a major deity for the Minas.

### **5 RELIGION**

The Minas are Hindus, and worship at the temples and shrines of Hindu deities is an important part of everyday life. Most Minas are Shaivites, meaning they are followers of the god Shiva. But, like all Hindus, they also worship other gods and goddesses of the Hindu pantheon. These gods and goddesses include Rama, Sita, Hanuman, and Bhairon. In addition, Minas revere local deities and construct shrines to these lesser gods on the outskirts of their villages. Daily prayers are offered to Balavji, who represents Hanuman and protects the inhabitants of the village. Shitala Mata (the goddess of smallpox), Pipla Mata, and other lesser village goddesses are also worshipped. The Minas pay special attention to the presiding deities of their clans.

Minas are highly superstitious people and place great meaning on omens. For example, the braying of an ass on the left, the hooting of an owl on the left, and the cry of a jackal on the right mean good fortune. Hearing the cry of the Saras crane, or meeting a cat, sheep, or hyena, is unlucky.

The Meos, the Muslim branch of the Minas, follow Muslim practices, such as male circumcision and burial of the dead. They celebrate Muslim festivals, such as Id and Muharram. But in many other aspects, the Meos in India continue to preserve elements of their Hindu past. Meos often worship at the shrines of Hindu gods and goddesses and keep Hindu household deities. Hindu epics, such as the *Mahabharata* and the *Ramayana*, are as well-liked as readings from the Quran. Popular given names for both males and females are often Hindu names, with the Muslim title “Khan” added. Sometimes the Hindu name “Singh” is added to a Muslim name, as in “Fateh Singh.” Until recently, Meos’ dress differed little from their Hindu neighbors. In addition, despite pressures for change, the Meos continue to follow traditional Hindu kinship patterns and marriage rituals. The Meo community is divided into at least 800 exogamous clans, and its clan structure resembles that of the Hindu Minas, Rajputs, Jats, and other Hindu castes.

Meos do not follow *purdah*, the custom of secluding women, which is the practice in Muslim society.

## 6 MAJOR HOLIDAYS

As Hindus, the Minas observe many of the major festivals of the Hindu calendar. The spring festival of Holi is celebrated in typical fashion, with the burning of the demoness Holika and the throwing of colored water and powder. Dasahara is celebrated in October. The Divali festival, the Festival of Lights, occurs in the fall after the summer harvest has been collected. Hundreds of lamps are placed around the houses, which are often newly plastered and decorated with designs. Men indulge in gambling and drinking. Govardhan Puja, a festival dedicated to the welfare of cattle, is celebrated a day or so after Divali. At this time, cattle are bathed in the village pond and decorated with ornaments and colored paint. Women pray to the cattle for wealth and feed the animals special food. Cow dung, a symbol of wealth, is placed on the steps of each house and offerings are made to it.

In addition to these Hindu observances, Minas celebrate certain festivals that are specific to the Mina community. The Minas go to great lengths to appease their ancestors and set aside a special day for ancestor worship. On this day, special foods are cooked in each household, and the village priest is invited to the house to receive an offering. Another day is set aside to honor local village deities.

Two local festivals in Rajasthan—Tej, the Festival of Swings, and Gangaur, which honors the goddess Gauri—are popular events. Fairs held at various religious shrines in eastern Rajasthan are regularly attended by the Minas. The fair of Mata near Rewasa in Sikar district is a Mina fair marked by offerings of liquor and the sacrifice of buffaloes to the Goddess.

## 7 RITES OF PASSAGE

As with other Hindus, the first shaving of a male child's head (*handukadi*) is a major ritual for the Minas. But perhaps the most important Mina ceremony is the funeral feast (*nukta*). As is the custom in Hindu India, the Minas cremate their dead. At the end of a period of mourning after a death, the bereaved family holds a feast for relatives and the entire community. In the Mina tradition, the *nukta* is obligatory, and the scale of the feast a mark of a family's economic status. Thus, in addition to its ritual function, the feast fulfills social and economic obligations. However, the heavy expenditure involved in holding this feast has resulted in many Mina families acquiring a lifelong burden of debt. This has become such a problem that some Mina tribal associations have attempted to ban the ceremony in their communities.

## 8 INTERPERSONAL RELATIONS

The Minas follow the traditions of hospitality that are found throughout rural India. Guests are received cordially and served tea and other refreshments. During events such as marriages and death feasts, however, Minas maintain a social distance between themselves and other non-Mina communities.

## 9 LIVING CONDITIONS

Mina villages are usually comprised of the members of one or more clans or gotras, along with service castes essential to an agricultural settlement. The village is generally unplanned,

with a wide, unpaved main street cutting through its center. Houses of both Minas and other castes are constructed along this street. The village temples are often located in this central area. Minas who own land may build their houses on the edges of the village to be close to their property. In some areas, small hamlets (*dhani*) made up exclusively of the members of one family are scattered around the outskirts of the village. A council or *Panchpatel*, composed of the headmen (*patels*) of the various lineages (*kutumbs*) and settlement groups in the village, looks after community affairs.

The typical Mina house has mud walls and thatched roofs. A thick mud wall with only one entrance encloses a central courtyard around which are found rooms, one for each married male member of the household. These living rooms are used for storing family possessions and food grains and contain a niche for the family deity. On cold winter nights, the men sleep in these rooms, but otherwise they lie in the domain of the women of the household. Kitchen hearths are built under a thatch shed outside each living room. A large room containing a few wooden cots built outside the walls at the entrance to the main courtyard, acts as the men's living quarters. Behind the courtyard, and with a separate entrance, is the cattle shed where animals are kept and fodder and agricultural implements are stored. Fuel, in the form of cow dung cakes, is kept outside the walls of the house near the cattle shed.

Many Mina villages are located off the main communication routes, and transportation in these areas is difficult. A few private buses keep to somewhat unreliable schedules, but even then villagers may have to walk several kilometers to reach a drivable road. Transport is commonly undertaken by bullock cart, camel cart, and bicycle.

## 10 FAMILY LIFE

The basic family unit among the Minas is the extended family. It may include several brothers, often of advanced age, along with their married and unmarried children. As many as three or four generations of a family may be in residence in a single household. Mina society is patrilocal and married daughters reside with the family of their husbands. Child marriage is the norm among the Minas, who believe that the ideal age for marriage is between 6 and 10 years old. A newly married girl remains with her family until she reaches puberty, when she moves to her husband's home. A typical Mina household may also contain divorced and widowed daughters.

Minas are endogamous and marry within the tribal group. Marriage partners have to be found outside one's own clan and thus often come from another village. Most marriages in Mina society are arranged by the parents of the prospective bride and groom. The girl's father negotiates a bride-price to be paid by the family of the husband. This used to consist of a cash sum or a specific number of cows, bullocks, or camels. More recently, however, marriage negotiations in India have expanded to include consumer goods such as watches, radios, and household appliances. In addition to the bride-price, Mina marriage is accompanied by the exchange of gold and silver ornaments between the two families.

Marriage rites as practiced by the Minas are similar to Hindu marriage rites. Brahman priests are used to fix an auspicious day and to officiate at the marriage rites. The groom travels to the village of the bride, accompanied by some elders of his family. The bridal party receives the hospitality of the

bride's family for the one or two days it takes for the marriage rituals to be completed. At the appointed hour, a fire is lit and the bride and groom walk around it in the circumambulation rite. On the following day, the newlywed couple and their party return to the groom's home. Within a few days, the female relatives of the bride visit the groom's family and bring the girl back from her in-laws. The bride stays with her family until she reaches puberty, when she returns to live with her husband permanently.

Widow remarriage is accepted by the Minas. The preferred partner is a deceased husband's brother or paternal cousin. Another type of marriage accepted by Mina society is one in which a woman with a living husband can remarry another man, with the second husband paying compensation to the first husband. Both men and women are allowed to seek divorce on grounds ranging from adultery to the inability to have children.

### **<sup>11</sup>CLOTHING**

The dress of the Minas differs little from that of other Hindu groups in eastern Rajasthan. Men wear a *dhoti*, a single piece of white cloth about 5 m (16 ft) long and 1 m (3–4 ft) wide. About half the length is wrapped around the waist, and the remainder is drawn through the legs and tucked into the waist behind the body. A loose shirt or *kurta* and a turban complete the outfit. Women wear a skirt, a blouse that leaves the midriff bare, and a long wrap that can cover the head and be pulled across the face if necessary. Young children generally go naked, wearing a type of shirt during the colder winter months.

Meos traditionally wore similar dress until relatively recently, when they adopted Muslim style clothes. These are typically loose pants (*salwar*), a long tunic (*kamiz*), and a scarf (*dupatta*) for women, and a kurta and *tahband*, a long piece of cloth wrapped around the waist in the manner of a sarong, for men.

### **<sup>12</sup>FOOD**

Rajasthan lies in that part of India where cereals rather than rice are the main food crops grown, and this is reflected in the food of the Minas. The typical meal consists of unleavened bread (*roti*) made from wheat, or millets called *jowar* and *bajra*. This is eaten with pulses such as lentils, which provide protein in the diet. Locally grown vegetables include onions, potatoes, spinach, and eggplant. The food is seasoned with chilies and other spices. Milk and curds and clarified butter (*ghi*) form part of the diet, although the cost of these products limits their use. Mustard oil is used for cooking. Tea is consumed at all times of the day.

Like all Hindus, especially those who aspire to higher caste status, the Minas are vegetarian and do not eat beef. The killing of a cow is considered by most Minas to be a heinous crime and subject to punishment. But some groups such as the Melia Minas or the Dhedia Minas are said to eat beef. The Padihar Minas received their name because of their supposed practice of eating buffalo meat (*pada* means buffalo calf). Mina groups that eat meat are regarded as socially inferior by other Minas, who will not intermarry with them.

### **<sup>13</sup>EDUCATION**

Despite the availability of state-supported schools, illiteracy and lack of education remain problems among many rural communities, including the Minas, in India. Distance, poor

transportation facilities, inadequate resources in local primary and secondary schools, and a reluctance among many Minas to send their children to school result in low levels of education among the community. The literacy rate for Rajasthan in 2001 was 60.41%. However, this average masks a tremendous variation in literacy in the state. In the Virat Nagar block of Jaipur District (a rural area), for instance, literacy among girls is only 4.6% (2001). Among the Mina community, literacy is 52.2%, while for females, this figure drops to 31.8%, which is higher than the Bhils and most tribal communities in Rajasthan except for the Dhanka. Some Mina community associations have attempted to impose fines on Minas who do not send their children to school. The high costs of sending a child away for higher education is prohibitive for most Mina parents. But 62% of Mina children between the ages of 5 and 14 years attend school, although only around 5% ever graduate from high school.

### **<sup>14</sup>CULTURAL HERITAGE**

The Minas do not have a written literature but share in the regional traditions of Rajasthani folk culture. They participate in local fairs and festivals, and women sing appropriate folk-songs at ceremonies, such as weddings. The Minas are fond of social gatherings and celebrate these events with song and dance. Many of the songs and dances of the Minas are considered to be obscene, and modern reformers have tried to ban these activities.

### **<sup>15</sup>WORK**

The Minas are primarily agriculturalists, depending on cultivation and animal husbandry for their livelihood. The Minas themselves make distinctions between the Zamindari Minas (agriculturalists) and Chowkidari Minas (watchmen), who in the past made their living as village night watchmen. The Chowkidari Minas have traditionally been associated with theft and robbery. Under the British, they were classified as criminals under the Criminal Tribes Act and required to report to the nearest police station every day. Some reportedly continue to follow a life of crime, but the old distinctions between the two communities are blurring. The Zamindari Minas see themselves as socially superior, and in the past the two groups did not intermarry. Such marriages do occur today.

Some Minas, especially those who have large landholdings, are fairly prosperous. They have accepted agricultural innovations and use modern equipment such as tillers, tractors, and irrigation pumps. Many Minas, however, have small, uneconomic holdings and lack modern equipment. Their agricultural efforts are greatly hampered by the frequent droughts of the region, and they often must supplement their income by working as laborers. It is common for all able-bodied men in a village to work at building roads once their seasonal agricultural activities are completed.

Small numbers of Minas are engaged in service and other occupations, but an overwhelming 75% are recorded as cultivators in 2001 census returns.

### **<sup>16</sup>SPORTS**

There are no sports, in the modern sense of the word, associated with traditional Mina society.

## 17 ENTERTAINMENT AND RECREATION

Until recently, many Mina villages lacked electricity, and entertainment and recreation was derived primarily through traditional village festivities. With the development of rural areas and the advent of radio and even satellite television, such entertainment is available to those who can afford it. Urban areas provide access to popular Hindi movies, though again this is a luxury few villagers can afford.

## 18 FOLK ART, CRAFTS, AND HOBBIES

Minas are known for their skill in areas such as basketry, rope-making, embroidery on cloth and leather, and wall-painting. One Mina community living near Agra, in Uttar Pradesh State, makes its living from crafting the brightly colored, embroidered shoes and sandals worn by Rajasthanis. They are known as the Chamaria Minas, the Chamars being the traditional leatherworking castes of India.

## 19 SOCIAL PROBLEMS

The Minas face many problems typical of tribal or conservative rural communities attempting to deal with the modern social and economic environment of India. Until the mid-20th century, the Minas lived under a feudal system that placed little emphasis on the social improvement of the people. Partly due to the indifference of their former rulers and partly due to their own resistance to change, the Minas continue to face problems of illiteracy and lack of education. Alcoholism is a problem among some Minas. Customs such as the paying of the bride-price and the death-feast have resulted in a considerable debt burden for many Minas.

Though they achieved little success, movements for social reform among the Minas date back to the 1920s, when Mina chiefs in Jaipur State founded the Mina Reformist Committee. Since then, many Mina associations aimed at social reform have been started. A summary of the social problems facing the Minas as perceived by the Minas themselves is provided by a list of offenses, to be punished by fines, set out by a Mina association in 1974. These included holding the death feast; distilling, selling, or drinking alcoholic beverages; taking work as a guard; failing to send children to school; and participating in group singing and dancing.

In 1950, when the president of India announced the list of peoples who were to be categorized as "Scheduled Tribes," the Minas were surprised to find they were not on it. However, following representations to the Government of India through the Mina Mahapanchayat and a visit to Mina country by a member of the Backward Caste Commission, the Minas were included on the list, giving them reserved government jobs and places in educational institutions. The Minas have generally made good use of the advantages accorded to them by Scheduled Tribe status and rank among the highest in the state among tribal groups in most socio-economic indicators.

Minas in Rajasthan object to the agitation by Gujars to be reclassified as a Scheduled Tribe (ST), as was promised by the Bharatiya Janata Party (BJP). Such agitation was taking place in 2008. Because of caste politics people vote en bloc as a community and they benefit as a bloc. This is what happened when Jats in Rajasthan were granted Other Backward Classes (OBC) status in 1999. Since they are powerful and generally well off, they cornered the benefits of reservations. The Gujars, who also have OBC status had to compete with the Jats, were later

promised ST status by the BJP. The community voted and BJP came to power in Rajasthan. The Gujars now want the promise fulfilled. Now, if Gujars get included as an ST then the other ST communities, including the Minas, suffer because someone else will come to share the ST reservation pie. Hence they protest to maintain their benefits. "Meenas in Rajasthan are the only Scheduled Tribe and we would not tolerate any inclusion into our community," the president of Rastriya Meena Mahasabha is supposed to have said. However, even though Minas have cornered most of the reservations for Scheduled Tribes in the state, groups such as the Bhils and Garasias are also classed as Scheduled Tribes in the state.

Rajasthan State has reservation quotas of 49% (16% for Scheduled Castes, 12% for STs, and 21% for OBCs). In June 2008 the state legislature was to meet to consider enacting a 14% job and education quota for the Economically Backward Category (EBC), which would make Rajasthan the first state in the country to have this quota. The Rajasthan government offered a 5% special reservation to the Gujar, Banjara, Gadia Lohar, and Raika communities, bringing an end to a nearly month-old stand-off over the Gujar community's demand for inclusion in the Scheduled Tribes category. If enacted, the additional 5% and 14% would bring the total of reservations in Rajasthan to 68%, one of the highest in the country.

The Gujar-Mina confrontation in Rajasthan, which has turned violent at times, has prompted a nationwide rethink of India's policy of reservations based solely on caste. Yet, this is not just a case of Gujars or Minas wanting to gain more reservation privileges. It is also the story of how politicians are attracted to quotas and reservations as vote banks. Once contemplated as a temporary measure to ensure equality for historically disenfranchised communities, reservations have become a permanent tool for vote-bank politics—and have, in the process, been excessively divisive.

## 20 GENDER ISSUES

Women among the Mina have a lower status than their men. A woman has no right to inherit property, though she does have an important role in the socio-economic area. She has a strong influence in family decisions, although the final decision is always made by the head of the family, who is invariably male. Women involved themselves in matters like school enrolment (education is seen by most Minas as a means to better oneself), diarrhea management and campaigning for safe drinking water. Where there is no supply of safe drinking water in a village, it is the women who have to sometimes walk miles to get it, carrying the water in pots on their head—a common scene in Rajasthan. And women do important agricultural work in the fields.

The Minas have been strongly influenced by the Hindu groups amongst whom they live, which leaves them open to the usual abuses (occasionally the press reports the death of a Mina woman, though this is clearly more of a problem among caste Hindus). Thus Mina women observe *purdah* and marriages are arranged, though divorce is rare and usually has to be sanctioned by the local *panchayat*. A woman's family pays a dowry (which is quite high for a suitable match). A widow or widower may remarry, a junior levirate or junior sororate type of union being considered the most appropriate arrangement. Child marriage, though now technically illegal in India, is tra-

ditional among Mina groups, who think the ideal age of marriage for a girl is between 6 and 10 years of age.

Tuberculosis and death during delivery is common in the villages, which often lack adequate medical facilities. As income from agriculture is meager, many Mina women suffer the consequences of poverty and illiteracy. Yet they are open to modernization, seeing education and development as a way out of their situation.

# MONGOLS IN CHINA

**PRONUNCIATION:** MAHN-gohls

**ALTERNATE NAMES:** Mengwushiwei

**LOCATION:** China (primarily Inner Mongolia Autonomous Region)

**POPULATION:** 5.81 million

**LANGUAGE:** Mongol

**RELIGION:** Lamaism

**RELATED ARTICLES:** Vol. 3: China and Her National Minorities

## <sup>1</sup> INTRODUCTION

The expression "Mongol" originated from a tribe called Mengwushiwei in the Chinese book *Jiu Tang Shu* (The Ancient History of the Tang Dynasty), written in the 10th century. It seems the term was transliterated "Mongol" for the first time in the Yuan Dynasty (1271–1368). It gradually became the common name of many tribes. The east bank of the Erguna River (in central Inner Mongolia) was the cradle of the ancient Mongol people. Around the 7th century, they started to move toward the grassland in the west. In the 12th century, they dwelled in the upper reaches of Onon River, Kerulen River, and Tola River, east to the Kente Mountains. They made up a tribal group in which a large number of aristocrats gradually emerged from the nomads. Their leader, Temujin, was a powerful man whose strength came from the loyalty of his army and his own ability to command it. He conquered the other tribes and set up the Mongol empire. He took the title of Genghis Khan, Mongolian writings were created, and laws were codified. From 1211 to 1215, Genghis Khan expanded his territory to Central Asia and to the southern part of Russia. From 1227 to 1241, his successors swept west as far as Vienna. From 1253 to 1258, the Mongolian cavalry pushed deep into the Middle East. Before long, the occupied territory split into independent countries, including the Chinkai Empire, the Chagatai Empire, the Ogedei Empire, and the El Empire. In 1260, Kubilai (grandson of Genghis Khan) became the fifth supreme Khan and founder of the Mongol Yuan Dynasty (1271–1368), which had its capital in China (in present-day Beijing). He destroyed the Southern Song Dynasty in 1279 and established China as the center of his immense empire. After the fall of the Yuan Dynasty in 1368, the Mongols suffered from internal division and conflict for a very long time.

Lamaism, the Tibetan form of Buddhism, entered the Mongolian society in the 16th century. Thereafter, it had a strong impact on the Mongolian culture and socio-economic situation for centuries.

Under the influence of Soviet Russia, a revolutionary government was set up in 1921. Three years later, a large part of the traditional homeland of the Mongols became the People's Republic of Mongolia, established with the support of Soviet Russia, but it did not receive diplomatic recognition from many countries for decades. The other portion of the former Mongolian homeland remained within the Chinese border and was called Inner Mongolia. After 1949, it became the "Inner Mongolia Autonomous Region."

## <sup>2</sup> LOCATION AND HOMELAND

The Mongols living in China numbered 5.81 million in 2000. They are mainly concentrated in Inner Mongolia Autonomous Region, but many also live in autonomous prefectures and counties in Xinjiang, Qinghai, Gansu, Heilongjiang, Jilin, and Liaoning. There are also Mongol communities scattered in Ningxia, Hebei, Sichuan, Yunnan, and Beijing. The territory of Inner Mongolia Autonomous Region covers some 460,000 sq mi, mostly hilly grassland and desert.

## <sup>3</sup> LANGUAGE

The Mongol language belongs to the Altaic family, Mongolian group. There are three dialects. The writing system was created in the 13th century. Kubilai Khan ordered a Buddhist monk from Tibet to reform an ancient writing system, which

had been used to record oral literature but had ultimately been abandoned. The Mongolian writing system was revised several times by native Mongol linguists so as to conform to the spoken language. The Mongols in Xinjiang have used a variant of the Mongolian writing system since the 17th century.

## <sup>4</sup> FOLKLORE

A large number of Mongolian myths are related to the origins of the Mongol people. One of their more important myths describes a tribe called Mongu fighting with other tribes for many years. Finally, the Mongu was defeated and all their people were killed, except two men and two women who escaped death by sheer luck. They went through many hardships and ultimately took refuge in a remote, thickly forested mountain, where only a narrow winding trail led to the outside world.

*Mongolian herders emerge from a polling booth in a yurt (a traditional nomadic tent) at Birjin, Mongolia. The polling station was set up to allow herders in the area to vote without the inconvenience of riding their horses long distances to the nearest city. (AP Images/Greg Baker)*

This was a place with plenty of water and lush grass. They married. Many years later, the population grew to such a size that the land could not produce enough grain to nourish all the people. They had to move but, unfortunately, the narrow trail was obstructed. However, an iron mine was found by surprise. They cut down the trees, killed bulls and horses, and made a number of bellows. Then, they exploited the mine. This way, they not only opened an outlet to the outside world but also got plenty of iron. A vast expanse of grassland awaited them. They are the ancestors of the Mongols. To commemorate their heroic undertakings, the Mongols used to smelt iron at every year-end.

Some myths about the flood and sun-shooting are Mongolian versions of Chinese or Tibetan mythology.

## <sup>5</sup>RELIGION

Originally, the Mongols believed in Shamanism. The shaman is a witch doctor, a dream reader, and an intermediary between the living and the spirit world; he is also skilled in divination and astrology. Up to the present, the remnants of Shamanism, such as sacrificial offerings to ancestors and reverence for the sun, moon, and nature, still exist.

Lamaism brought about a strong influence from Tibet, such as the integration of religion with politics. Built here and there,

Lamaist temples became independent manors possessing land, livestock, and manpower. The Mongols gradually turned to Lamaism. They sought the counsel and help of the *lama* for every aspect of their life: migration, marriage, childbirth, disease, and death. During the Qing Dynasty (1644–1911), the number of lama increased to almost one third of their population. Since the lama were not engaged in material production and not allowed to marry, the economic and demographic development of the society was greatly inhibited. Since 1949, Lamaist beliefs and practices have decreased drastically.

## <sup>6</sup>MAJOR HOLIDAYS

The Spring Festival (lunar calendar; Western calendar, between January 21 and February 20) is an important holiday for the Mongols, as it is for the other nationalities of China. In preparation for this holiday, the Mongols tailor new clothes and store large quantities of mutton, wine, and dairy products. On the eve of the lunar New Year, all members of the family sit cross-legged in the center of the *yurt* and begin their dinner at midnight. They offer toasts to the senior persons, eat and drink extravagantly, and listen to storytelling all night long. Early the next morning, they dress up and call on relatives' and friends' homes. They kowtow to the senior persons. According to their custom, it is the duty of the son-in-law of the host to propose

the toasts, which are never refused. Heated with wine, they dance while singing.

The Feast of Genghis Khan is April 23 (lunar calendar; Western calendar, between May 17 and June 16). On this occasion there are commemorative activities, exchange of commodities, theatrical performances, and sport games.

In June or July of each year, the Mongols celebrate a special ritual, called Aobao, which seems to go back to an ancient shamanistic practice. Aobao is a kind of altar or shrine made of a pile of stone, adobes, and straw, believed to be the dwelling of the gods in shamanism. During the ritual, tree branches are plucked into the Aobao, which is surrounded by lit joss sticks. Wine and horse milk are sprinkled over the mound, and mutton and cheese are placed on it as sacrificial offerings. While performing the ritual, the shaman dances and enters into a trance. Wrestling and horse racing follow the religious ceremony.

The "Nadam Rally" is a traditional holiday of the Mongols. *Nadam* means recreation and play. It is a happy festival of the herdsmen, held annually on a selected day in the summer or in the fall.

## 7 RITES OF PASSAGE

Depending on local custom, the Mongols practice cremation, burial in the ground, or funeral in the wilderness. In the west nomadic area, the last form of burial is the most common. The body of the dead is placed in an open horse-drawn cart and carried over rough terrain until the corpse drops down due to the bumps. Then the body is laid in the wild. It is believed that when it is eaten by wolves or vultures, the soul of the dead rises to heaven. If the body is still there after a week, it is regarded as unlucky: the soul was not accepted in heaven. A lama is then invited to recite the scriptures and pray for the dead. A donation is necessary. In case of the burial in the ground, the deceased is wrapped in white cloth and put in a plank cabinet or in a wicker basket, then buried.

## 8 INTERPERSONAL RELATIONS

There are no inns in the boundless grasslands, but one can always count on the Mongols for help. Their hospitality displays the lavishness that is characteristic of nomadic peoples. The master of a *yurt* will put up a stranger for the night. He offers milk tea, mutton, and wine. Surrounding the guest, the whole family will show its concern by making detailed inquiries. Upon leaving, the guest will be accompanied for quite a distance and then told the direction of his destination. If a herdsman calls at his friend's home, the host will offer his snuff-bottle to the guest, who will offer in turn his bottle for exchange. Each takes a sniff at the bottle of the opposite side and then gives the bottle back.

The Mongols in Yunnan have a special custom called "to meet the firewood-cutter." When it is about the time for someone to return home after cutting firewood for a whole day, one member of the family will go ahead to meet the tired person halfway, showing loving care for the family member engaged in hard labor.

## 9 LIVING CONDITIONS

The *yurt* is the traditional housing of the Mongols. It can be dismantled and transported on horseback, thus being suitable for nomadic life. The *yurt* is like a cylinder covered by an um-

brella. The wall can be split into several pieces. Each is about 2.75 yards long and 1.5 inches high, made of long narrow pieces of wood arranged in networks. To set it up, one connects the separate pieces into a cylinder, which is covered by an umbrella-like roof also made of separate pieces. The wall exterior is covered with large pieces of felt, which are tied together by ropes. Only a round skylight and a doorframe toward the southwest are left open. The *yurt* may be as small as 4 yards in diameter, but the large ones may house hundreds of people. Stationary *yurts* are common in semi-nomadic districts and are mostly made of wood and adobes. In agricultural areas, the Mongols usually dwell in one-story houses like the Chinese, within the confines of a village. The Mongols living in towns and cities have, to a large extent, adopted the Chinese way of life.

The Mongols are adept at horse riding. Whenever they can ride instead of walking, they do so. Recently, however, bicycles, motorcycles, and cars have entered Mongol towns and villages, transforming the mode of transportation.

## 10 FAMILY LIFE

A Mongolian family generally consists of a man, his wife, and their young children. The sons, after wedding, move out of their parents' home. However, their *yurts* are relatively close to each other, so that they may move together with their parents in search of new pastures. In semi-nomadic districts, one finds large families, including parents, sons, and their spouses.

The Mongols are monogamous. The family is dominated by the man, but herdsmen usually consult their wives when matters arise. Furniture, clothes, and ornaments brought to the family by the wife during the wedding ceremony remain her own property.

A custom of "denying entrance on wedding" has been prevalent among the nomadic and semi-nomadic Mongols. The bridegroom, accompanied by relatives, rides to the bride's *yurt*. He finds the door slammed in his face. After repeated requests, the door is finally opened. He presents a *hada* (a ceremonial silk scarf) to his parents-in-law on entering and is given a banquet with a whole lamb. After the meal, the bride sits with her back to the others. The bridegroom kneels behind her and asks her pet name in childhood. He drinks at her house all night long. The following day, the bride leaves the *yurt* first. She rides a horse and circles the *yurt* three times, then speeds along to the bridegroom's house. The bridegroom and his relatives ride after her. The door is also slammed in her face and is only opened after repeated requests.

## 11 CLOTHING

Mongol dress varies with the environment and the seasons. In winter the Mongols living in pastoral areas usually wear a worn-out sheep fur coat with silk or cloth on the outside; in summer, they wear loose robes, usually in red, yellow, or dark navy, with long sleeves and a silk waistband. Knives with beautiful sheaths, snuff-bottles, and flint are worn as pendants at the waist. Long leather boots are often worn. All these items are related to the nomadic style of life. Mongolian peasants wear a cloth shirt, underwear and robes, or cotton-padded clothes and trousers. Felt boots are worn in winter. The old habit of wearing a waistband has been retained. Men like black or brown hats. Some of them wrap their heads with silk.

Women wrap red or blue cloth on their heads and wear a cone-shaped hat in winter.

## **12 FOOD**

The main traditional foods of the Mongols include beef, mutton, and milk products, supplemented by grain and vegetables. Roasted mutton and yogurt are popular. Breakfast usually consists of stir-fried millet with milk tea. Butter and salt are always added to the milk tea. Beef, mutton, and noodle soup are eaten for lunch and dinner. They drink the milk of horses, cows, and sheep, as well as brick tea and wine. Rice and flour are the staple foods of the peasants. Common dishes include dumplings, steamed stuffed buns, and meat pie.

## **13 EDUCATION**

According to data collected in 1978, there were 15 universities and colleges, more than 80 technical schools, about 5,000 middle (junior and senior) schools and 30,000 primary schools in Inner Mongolia. The cultural and educational level of the Mongols is higher than average among the national minorities of China.

## **14 CULTURAL HERITAGE**

There are quite a number of Mongolian folk songs, which may be divided into two different groups. One is prevalent in pastoral areas, slow in tempo and free in rhythm. The other is popular in semi-nomadic districts, with quicker tempo and regular rhythm. Haolibao is a style of singing performance, very popular in Mongolian areas. The melody is rather fixed, but the words are impromptu, usually inspired by a sudden event that touches the singer. Songs are usually sung by two singers in an antiphonal style but sometimes by a single performer. Matouqin ("horse-head stringed instrument") is a traditional instrument of the Mongols. The Chopstick dance and Winecup dance, soft and gentle, are frequently seen during festivities. The Horse dance and Saber dance, bold and generous, reflect well the nomadic styles.

Literature in the Mongolian script includes a heroic epic "Life of Jiangger" written in the 15th century and a "Historical Romance" written in the 19th century.

## **15 WORK**

Most of the Mongols are engaged in livestock husbandry, raising mainly sheep, cows, and horses. Mongolian horses, small and tough, serve the herdsman for transport, as a source of milk, and as subject of dance and songs. The Mongols develop a reverence for horses from childhood. It seems the expression "flying horse" is of Mongolian origin.

## **16 SPORTS**

In addition to horse racing and arrow-shooting, wrestling is one of the favorite pastimes of the Mongolian men. After a day of work, kids, young fellows, and male adults under 50 frequently gather before the yurt and wrestle under the sunset. For a match, they wear a black vest and sing as they wrestle.

## **17 ENTERTAINMENT AND RECREATION**

Movies and television have become popular and widespread over the last decades. Publications, broadcasts, drama, and films in the Mongolian language are flourishing. The Inner

Mongolia Autonomous Region boasts a state-of-the-art film studio. Cultural centers and libraries disseminate the Mongolian language and cultural productions in cities, towns, and even in the pastoral areas.

## **18 FOLK ART, CRAFTS, AND HOBBIES**

Snuff-bottles are treasured among the Mongolians. They are made of gold, silver, copper, agate, jade, coral, or amber, with fine relief of horse, dragon, rare birds, and animals. Another artifact is the pipe bowl, made of five metals, with delicate figures and designs. Supplemented by a sandalwood pole and a red agate holder, it is considered very precious. A Mongolian saying states: "A pipe bowl is worth a sheep."

## **19 SOCIAL PROBLEMS**

One notices a strong trend among the Mongols to engage in trade. An urgent problem facing the Mongols at present is how to stabilize livestock husbandry and how to introduce scientific methods to breed the livestock. As breeding livestock is the mainstay of the Mongolian society, the modernization of their traditional mode of production is one of the keys to economic success.

## **20 GENDER ISSUES**

The Chinese constitution states that women have equal rights with men in all areas of life, and most legislation is gender neutral. However, there are continued reports of discrimination, sexual harassment, wage discrepancies, and other gender-related problems. The gap in educational level between women and men is narrowing with women making up 47.1% of college students in 2005, but only 32.6% of doctoral students. Mongols have achieved higher-than-average levels of education when compared to the national minorities of China.

China has strict family planning laws. It is illegal for women to marry before 20 years of age (22 for men), and it is illegal for single women to give birth. The Family Planning Bureau can require women to take periodic pregnancy tests and enforce laws that often leave women with no real options other than abortion or sterilization. Though minority populations were previously exempt from family planning regulations, policy has changed in recent years to limit minority population growth. Today, urban minority couples may have two children while rural couples may have three or four.

## MONS

**PRONUNCIATION:** MOHNS

**LOCATION:** Myanmar (Burma)

**POPULATION:** Estimated 5 to 8 million in Myanmar

**LANGUAGE:** Mon; Burmese

**RELIGION:** Buddhism; some Animist and Hindu beliefs

### **1**INTRODUCTION

Mons were among the original inhabitants of the lands now known as Thailand (formerly Siam) and Myanmar (called Burma until 1989), migrating south from the Mongolian steppes as far back as the 3rd century BC. The kings and queens of the ancient Mon civilization founded the cities of Thaton, Bassein, and Pegu in Burma. Their empires spread as far as northern Siam (Thailand) and Vietnam, and their trade routes stretched to India and Malaysia. Absorbing cross-currents of Asian culture, the Mons embraced the new Buddhist religion and then spread it to neighboring states. Conflict with those neighbors—Burmese (Burmans), Shans, and Siamese—was always a feature of Mon life. Sometimes expanding their territory, the Mons also endured periods of conquest. When the rulers of Upper Burma vanquished the Mons in the 11th century, Mon craftsmen and scholars were brought north to enhance the Burmese city of Pagan. Lower Burma retained its predominantly Mon character until the Burmese King U Aungzeya conquered it completely and began killing thousands of Mon Buddhist monks and other civilians. Many Mons fled to Thailand, and they became a minority group in central Burma.

The Mons had formed alliances with the French and later with the British against the Burmese, but found themselves increasingly marginalized. After World War II, when Burma gained independence from Britain, Mon dissatisfaction led to Mon nationalist insurgent groups taking up arms. Based in a narrow strip of southern coastline now called the Mon State, those groups fought a guerrilla war for decades, while trying to promote a revival of Mon culture. As human rights abuses of Mon civilians by the Myanmar military government became extremely widespread, the main Mon rebel group, the New Mon State Party entered into a ceasefire agreement in 1995. Many Mon dissident politicians and Buddhist monks have been imprisoned in Myanmar. Prominent Mons born in Thailand have actively supported their cause.

The related tribespeople of the Shan State, the Was and Palaungs have had turbulent histories as well. Buddhist tea growers, the Palaungs have had small insurgent groups, which are now in ceasefire agreements with the government. The Was, notorious for their headhunting in the past, were exploited as troops for the Burmese Communist Party insurgency after World War II. An opium-growing area from the British colonial days, the Wa homeland now produces the biggest share of Myanmar's opium poppies, the raw material for heroin. A large Wa nationalist group, the United Wa State Army (UWSA), involved in the narcotics trade, has a ceasefire agreement with the Myanmar government. The impoverished region controlled by the UWSA has been Southeast Asia's main source of opium refined into heroin as well as methamphetamine production, and casinos there are patronized by Chinese gamblers from across the border.

## 2 LOCATION AND HOMELAND

The Mons are an Austro-Asiatic people, closely related to the Khmers of Cambodia. Estimates of Mon population in Myanmar range from 5 to 8 million (no proper census has been done and many people of Mon ancestry only speak the Burmese language), and as many as 3 million Thais of Mon ancestry, as well as Mon populations in coastal Cambodia, Vietnam, and Malaysia. Thousands of Mons from Myanmar live as refugees or migrant workers in Thailand, Malaysia, and other countries. Other Mon-Khmer ethnic groups include the Palaungs (about 400,000) and the Wa mountain people who number perhaps 1 million, half in Myanmar's Shan State and half in China's Yunnan Province.

While the old Mon empires covered immense areas of Southeast Asia, today Myanmar's Mon State is the only official Mon homeland. Located in Myanmar's southern Tenasserim region, the Mon State has a string of mountains separating it from Thailand, and flat coastal plains with farmland, fruit orchards, and mangrove wetlands. Numerous small islands lie offshore in the Andaman Sea, which has huge reserves of natural gas. The main cities of the Mon State are Thaton, Moulmein, Amherst (Kyaikkami), and Ye, all on or near the sea. Since the 1990s, deforestation has affected the Mon State as rainforest and mangroves have been cleared for timber and agricultural development.

## 3 LANGUAGE

The Mon-Khmer language group is distantly related to some in India and the South Pacific. It is very different from the neigh-

boring Sino-Tai and Tibeto-Burmese groups. As learning Mon is discouraged by the current educational system of Myanmar, many Mons are only Burmese-speakers. To greet each other in their own language, Mons say "*Mange rayaw*," meaning "prosperity." They also ask, "*Mo'ng mip ha?*" ("how are you?"). "Thank you" in Mon is "*Tang kun*."

The Mon alphabet, based on the Sanskrit-related Pali script, has 35 letters. Mons taught their script to the Burmese, who devised an alphabet later adapted by many of Myanmar's ethnic groups.

## 4 FOLKLORE

Mons believe in a supernatural world, inhabited by spirits of the trees and fields, household and village spirits, ghosts of ancestors, and demons such as the "*kalok daik*," a spirit from the sea that devours children. A yearly "spirit dance" may be held to honor village spirits, with trance dancing by women possessed by the ghosts of their ancestors. Mon shamans, witches, and astrologers interpret messages from the spirit world and bad omens such as the cry of an owl. Buddhist monks may be called on to exorcise ghosts or other bad spiritual elements.

## 5 RELIGION

The Mons discovered Buddhism through contact with India. They practice a conservative form of Theravada Buddhism, emphasizing the study and interpretation of scriptures. Meditation, uncluttered ritual, and the merciful rule of law are important features. The monasteries are important centers of learning in Mon villages, and many young men and women become Buddhist monks or nuns for a short period or for life. During the September 2007 "Saffron Revolution" protests by Buddhist monks throughout Myanmar, Mon monks and their supporters marched in the towns and cities. In spite of their faith in a rigorous form of Buddhism, many Mons believe in old Animist or Hindu elements as well, such as possession by ghosts, and astrology.

The Shan State's Mon-Khmer relatives, the Palaungs, practice Buddhism along with the worship of *Nats* (guardian spirits), and the Was are largely animists with some Christians and Buddhists. In past times, the Was cut off the heads of victims who crossed their paths, leaving the skulls on posts leading to their villages. This was thought to protect the village and ensure a good rice crop. Their headhunting gave the Was a reputation as fearsome warriors that has lasted through their service in various insurgent groups and drug-trade militias.

## 6 MAJOR HOLIDAYS

Mons celebrate Buddhist holidays, including the full moons that begin and end Lent (a three-month period of Buddhist prayer and study that coincides with the monsoon season). At the Buddhist New Year in the Spring, Mons enjoy the Water Festival with music, dance, and playful water-throwing. There are also individual festivals held yearly for the temple structures called pagodas. These have all-night dance and theater performances, sports events, and special foods. Overseas Mons celebrate Buddhist holidays and Mon National Day, a commemoration of the founding of the last Mon kingdom.

## 7 RITES OF PASSAGE

Traditionally, after a baby is born, the Mon mother and baby have turmeric, a yellow spice, rubbed on their skin as a healing potion. The mother rests near a fire for three days afterwards. Babies have their ears pierced, and women wear earrings all their lives. Boys stop wearing them at around age 10, when most become novice Buddhist monks for one to three months. At age 20, most Mon men become monks again for a short period. Some choose after age 21 to take vows and remain monks for life. The monks are greatly respected in Mon society for their self-discipline and learning. Some girls and older women become Buddhist nuns. Both monks and nuns keep their heads shaved, wear simple robes, and eat only vegetarian food.

Mons believe that the soul can leave the body, even when someone is asleep. Sometimes, it is said the soul takes the form of a butterfly. The soul leaves for good when someone dies, which is considered a step on the way to rebirth through reincarnation. If they can afford it, Mons prefer large funerals for family members, with music and a feast for guests and the Buddhist monks who chant prayers. The body is usually cremated.

## 8 INTERPERSONAL RELATIONS

Mons use honorifics in front of their names, usually *Nai* for men and *Mi* for women. When they meet, they put their hands together in a “prayer” position and bow slightly. If greeting an older person or a monk, the hands are held up in front of the face and there is more of a bow.

Guests are served tea or at least water. People take their shoes off inside the house. Older people are to be treated with the respect that you would show your own parents or grandparents, and should not be touched on the head or spoken to impolitely.

Boys and girls meet at festivals, and sporting or school events, which they attend in groups. Rather than dating, a boy usually visits a girl at her parents’ house. Once a relationship has begun, love-letters are often exchanged.

## 9 LIVING CONDITIONS

The Mons in rural areas have suffered from efforts by the Myanmar military government to control their region for resource exploitation. Logging companies from neighboring Thailand decimated forests in the Mon State, and a pipeline bringing natural gas from offshore to Thailand traversed the area. Human rights groups accused the Myanmar military of abusing local people while securing the pipeline route, and a lawsuit was filed in the United States on behalf of affected villagers against one of the petroleum companies involved, Unocal. During the 1990s, Mons were moved to new settlements near Myanmar army bases and were used for forced labor as military porters and road/railway builders. Many thousands fled this treatment to Thailand, only to be pushed back across the border. Others have gone to Malaysia and other countries, seeking safety and work. The displaced Mons in rural Myanmar are especially susceptible to tropical diseases such as malaria, typhoid, and dysentery. Even in the cities, there is a severe shortage of medical facilities, personnel, and medicines. Malnutrition has been increasing steadily. In 2007–2008, steep increases in prices of essential commodities including fuel and rice further narrowed the margins of survival for the Mons in Myanmar.

In the countryside, Mon houses are built of wood or bamboo. On short or tall stilts, they are one or two stories high, with a sloping thatched roof and a verandah along the front. In the cities, Mons live in wood, brick, or cement houses, with ornamental carvings and balconies. Families with money now prefer brick or cement houses, as seen by people on trading journeys to Malaysia or Singapore, even though the electricity supply is not reliable enough to keep them cool with fans or air conditioning. Often there is a shop on the first floor and family living quarters upstairs. Mon-related ethnic groups, the Palaungs live in multi-family wood and bamboo longhouses, and the Was live in houses of woven bamboo.

A railway line runs through Mon State as far south as Tavoy. A highway runs parallel to it. Much transport is by shared jeep or truck, small riverboats, or ocean-going vessels. In the countryside, ox-carts and small motorbikes are the main forms of transportation, and travel in the mountains is done on foot.

## 10 FAMILY LIFE

When a Mon couple wants to marry, they usually ask their parents’ permission. A simple ceremony is held in which the couple joins hands. The couple may exchange vows. Buddhist monks often attend, but it is not a religious ritual. Friends give wedding gifts and refreshments are provided.

Mon families are large, especially in the village. Having six or seven children is average. Child mortality is now high because of malnutrition and infectious diseases. Divorce is allowed in Mon society, and any children usually live with the mother.

Mons keep cats in their houses as pets, as well as colorful songbirds in bamboo cages. Dogs are considered very low and dirty animals and so aren’t considered good household pets. Stray dogs sometimes live in the monastery yards.

## 11 CLOTHING

The Mons, living in a tropical climate, wear light-weight cotton clothes. Men dress in shirts with trousers or sarongs called *nein*, often with a checked pattern. Mon women wear short jackets, blouses, or T-shirts with sarongs called *kloit*. For special occasions, they wear silk sarongs embroidered with gold or silver threads and a matching sash that crosses over one shoulder. The sarongs are made by simply sewing the fabric with one seam into a wide tube. Men knot theirs at the waist, and women wrap theirs tightly and then tuck them in at the waist. Mon girls decorate their hair with orchids and other flowers, and use a sunscreen or face powder made from a fragrant wood. Mon men used to have their legs and arms elaborately tattooed with Buddhist inscriptions and symbolic animals, but this practice is now uncommon.

The Mons’ relatives in the mountains of the Shan State, the Palaungs and Was, have their own distinctive styles of dress. Palaung men wear loose trousers and jackets of homespun indigo with bright-colored sashes and turbans. The women wear short cotton jackets with striped sarongs. Rattan, bamboo, and silver hoops circle their waists, and they wear masses of beaded necklaces and large, circular silver earrings. More beads are wound around their turbans. Wa men, when not in olive drab military uniforms, wear dark homespun cotton clothing. The women wear sleeveless jackets, short wraparound sarongs, and bracelets and headbands made of silver.

## **12**FOOD

Mons who can afford to enjoy curries of beef, pork, or chicken served with many dishes of rice, and seafood including crab, lobster, shellfish, prawns, and many varieties of river and ocean fish. *harrok*, a paste made of fermented fish, is a favorite accompaniment to any meal. Fish soup with noodles is a popular breakfast. Plain tea is served with meals, and tea or coffee with sweetened, condensed tinned milk is served between meals. Cookies, small cakes, and orange- or coffee-flavored hard candies can be bought in the shops. Fruits are the most popular snacks, especially mango, durian (a pungent large fruit with a hard spiky shell), pineapple, and watermelon. Mons make a cooling snack by mashing watermelon pulp in a bowl and mixing in sweetened condensed milk. Mon cuisine influenced Burmese cooking in the days of the royal courts and has in turn been influenced by the dishes of India, Thailand, and Malaysia. Mons consider their food spicier than that of the Burmese (Burmans).

## **13**EDUCATION

In villages, Mons rely on the local monasteries to teach their children. There is a shortage of schools, teachers, and educational materials in the government schools, and instruction there is carried out in Burmese. The Mons value literacy and education highly, and resent what they consider to be the deliberate suppression of their language and culture by the predominantly Burmese (Burman) government of Myanmar. The idea that the Mons are an assimilated people who have become absorbed into the Burmese mainstream has been promoted by the government. Mon schools supported by the New Mon State Party following the 1995 ceasefire have been shut down by the Myanmar government. Nonetheless, many Mon people, especially in the Thai border area, still speak and read their ancient language, which is mostly taught at monastery schools. The Mon political underground promotes Mon literacy and the study of ancient history.

## **14**CULTURAL HERITAGE

Mon classical music is played by ensembles of horns and percussion instruments. Two distinctively Mon musical instruments are a U-shaped frame with a series of metal gongs suspended along it, and the *mi-gyaung*, a long zither in the shape of a crocodile. "Mon songs" are one of the categories of Burmese classical music and are usually faster in tempo than other compositions. Mon dance, influenced by Indian classical dance, includes solo forms and the group "candle dance," performed by girls holding lit candles in each hand to reenact a courtly welcome to the Buddha.

Most of Mon literature is Buddhism-related. In centuries past, Mon monks wrote detailed interpretations of Buddhist theory and hid them away when rival ethnic kingdoms were in power. In the 20th century, Mons revived and published these old works. Religious texts in Mon are tolerated by the Myanmar government, but other Mon writing is discouraged. Underground writers, and those in exile, have written essays about Mon history. Exiled journalists formed the Independent Mon News Agency and Kaowao News Group to provide updates online. An exile group, the Human Rights Foundation of Monland, publishes a newsletter called "The Mon Forum."

Mon woodcarvers, metal sculptors (specializing in Buddha images), mural painters and architects deeply influenced Bur-

mese, Shan, and Thai culture. Their work can be seen in the ruins of Myanmar's ancient capital, Pagan, and in art museums around the world. The famous Shwedagon Pagoda, a massive golden spire in Myanmar's largest city, Rangoon, was established by a Mon queen, Shin Saw Bu, in the 15th century.

## **15**WORK

The Mons have traditionally been wetland rice farmers, although forced relocation and demands for crop quotas by the Myanmar military have greatly disrupted their agricultural production. Mons also raise coconut and betel palms and other fruit trees. On the coast, Mons have fished and gathered shellfish, but this occupation has been diminished by overfishing by foreign trawler fleets. Logging of the remaining forests by foreign timber firms has made it difficult for Mons to hunt or gather rattan and other forest products. Mon farmers have had their land confiscated for military-owned plantations and the cultivation of *jatropha*, an introduced bio-fuel crop, which takes away land that was used for food production.

The economy has also been depressed in the cities, where people try to make their living in shops or offices, or through sea trade with Malaysia and Singapore. Many people have to hold more than one job just to buy enough rice for their families. Numerous educated Mon professionals have emigrated to Thailand or elsewhere overseas.

The Palaung people are known for their tea growing and are also hill rice cultivators. The primary cash crop for the Was has long been opium poppies. They gain a minimal profit from raising heroin's raw material, the value of which increases the more it is refined and the further it is transported. A great many Wa men serve in the United Wa State Army (20,000 strong), while the women raise and harvest hillside rice and opium poppies.

## **16**SPORTS

Young Mons enjoy practicing a style of kick-boxing similar to Thai boxing, but even less restrained. Soccer is extremely popular, as is *chinlone* (a game like "hacky-sack" played with a woven rattan ball).

## **17**ENTERTAINMENT AND RECREATION

All-night theater shows, with comedy and musical performances, are a traditional form of entertainment. Cities, towns, and some villages have "video parlors" that show foreign movie DVDs, or homemade productions in the Mon language. Numerous Mon pop music groups make and distribute their own recordings. Songs by some Mon recording artists, like the pop band *Anat Ghae*, have been purchased and released with Burmese-language lyrics by Burmese (Burman) singers for national sales. With satellite television and the Internet severely restricted by the government, shortwave radios are still important sources of news and international music.

## **18**FOLK ART, CRAFTS, AND HOBBIES

Mon woven cotton blankets from the town of Mudon are well-known in Myanmar. Mons in Myanmar and Thailand make pottery, often of a red-orange clay. The Mons are also skilled goldsmiths. The Palaungs craft lacquered baskets, textiles, and silver jewelry.

## 19 SOCIAL PROBLEMS

Heroin addiction is quite widespread among young people in the Mon cities and in the Palaung and Wa regions where opium is refined into heroin. Along with the trafficking of young women to Thailand and China for prostitution, intravenous heroin use has contributed to an extremely high rate of HIV/AIDS infection. There is still not enough educational material available about the disease and not enough medicine to treat those who have contracted it.

The Mon people have long resented the downfall of their ancient civilization and the suppression of their culture at the hands of outsiders, but now, due to Myanmar military government efforts to push them aside and obtain their natural resources, many of the Mons of Myanmar have struggled for their daily survival.

## 20 GENDER ISSUES

Mon society is tolerant of gay and transgender individuals. The status of women among the Mons is traditionally high, and the ancient Mon empires were from time to time ruled by queens. However, warfare and human rights abuse have left many Mon women victimized. Rape by the Myanmar military forces has been common, and Mon refugee girls and women have been forced into prostitution in Thailand.
