Barbadian crafts include pottery, mahogany items, and jewelry. The Barbados Investment and Development Corporation (BIDC) supports the preservation of the island's handicrafts by operating numerous shops where local craftspeople sell their wares, as well as offering workshops for beginners and experts alike.

### 19 SOCIAL PROBLEMS

Some observers have seen a connection between the growth of tourism on Barbados and the rise of such problems as crime, drug use, and prostitution. In addition, tourism has contributed to water pollution and damage to the island's coral reefs, as well as overly rapid development of the coastline. A more traditional indigenous problem is family violence, which however has been decreasing as women have become empowered by increased educational and employment opportunities. There are no laws to prohibit discrimination against persons with disabilities or to compel private businesses to be handicap-accessible. As a result, some disabled persons have faced difficulties in both work and social endeavors. While new public buildings are generally equipped with such features as ramps, reserved parking, and sanitary facilities for the disabled, private establishments and businesses housed in older buildings have not always followed this example. The government has a National Disabilities Unit that offers such programs as call-a-ride, but there are some fees associated with the use of services and some users, particularly parents of disabled children, have complained about the cost.

### 20 GENDER ISSUES

Having gained increased power since the 1960s due to better educational and job opportunities, women have been freed from some of their traditional roles as bearers of children and homemakers, and have become more empowered in their domestic relationships with men. Some problems still exist however. There are no specific laws dealing with sexual harassment in the workplace and many women choose not to report ha-

arrassment for fear of losing their jobs. While there are laws against domestic violence, such abuse still remains a problem, often because many cases go unreported. Women do have the right to vote and to hold public office; however, female candidates often find it difficult to gain financial support for their campaigns. This may be due to the fact that women are still often regarded as the primary domestic caretakers for husbands, children, and the elderly. Taking time away from these duties to participate in politics may prove to be difficult, both financially and emotionally.

Homosexual relations are illegal and there are no laws to prohibit discrimination against any person on the basis of sexual orientation. While the government has made attempts to discourage discrimination against those infected with HIV/AIDS, social discrimination against homosexuals has been reported.

# BELIZEANS

**LOCATION:** Belize

**POPULATION:** 301,270

**LANGUAGE:** English; Spanish; local Creole

**RELIGION:** Roman Catholicism (49%); various Protestant denominations (27%); evangelical groups such as Pentecostals, Jehovah's Witnesses, and Seventh-Day Adventists; Mennonites; Mormons; Baha'is

## 1 INTRODUCTION

Mayan people inhabited for centuries the area now as Belize before the arrival of Europeans. Mayans erected several major centers in Belize around the 1st millennium AD. Many of these constructions are testimony of the existence of rich and diverse pre-Columbian cultures such as Milpa, Xunantuchich, and Caracol. In fact, at 42 m (138 ft), the Sky Palace pyramid at Caracol is still the nation's tallest hand built structure.

Probably at least 400,000 people inhabited the Belize area around AD 900—twice as many as today. Mayan civilization had collapsed by the time Spanish expeditions reached the area in the 16th century, and diseases like smallpox and yellow fever took a heavy toll on the remaining population.

While the Spanish were able, at times, to control the western part of present-day Belize, English buccaneers used the eastern, Caribbean side as a base for their raids and for cutting logwood, which was used in the production of a dye needed by the woolen industry. Mahogany later supplanted logwood as the major export. British settlers forcibly brought in slaves from Africa to do the work. Before slavery ended in 1838, two other groups had made their presence: free Creoles of mixed African and European blood, and Garifuna, descendants of Africans and Carib Amerindians. Soon after, more Maya began fleeing into the colony to escape a war in the Yucatan and forced labor in Guatemala.

Once the Spanish crown lost its leverage in the so-called New World and waves of colonies obtained their independence from European domain, a new and prosperous empire decided to claim the right to administer the region. In 1862 Great Britain declared Belize a British colony, subordinate to Jamaica, and renamed it British Honduras. Immediately, the new colony attracted new capitals. However, as happened in many countries around the world, the Great Depression hit the economy leaving a large part of the population in a dire situation. In addition to the financial situation, the city of Belize was destroyed by a hurricane in 1931. Consequently, a series of strikes and riots, led by the unemployed, exploded and gave birth to a national movement demanding the right to self-determination. In 1950 the People's United Party (PUP) was created and led the independence movement.

British Honduras became the independent Republic of Belize in 1981. The British military, with the support of the United Nations, remained in Belize until 1994 in order to help local authorities in the construction of the new state. Even though Mexico and Guatemala had inherited Spain's claim to the territory, only Mexico dropped its territorial claims (1893). Guatemala, although it did not formally renounce its claim over the country's land, established full diplomatic relations with Belize in 1991. In 2005 Guatemala and Belize agreed that the

conflict could be settled by a supranational organization, and in 2008 both countries submitted their case to the International Court of Justice.

In 2008 Dean Barrow won the general elections and became the first black prime minister in the history of Belize. Barrow promised to end crime and government corruption.

## 2 LOCATION AND HOMELAND

Belize is a little larger than the U.S. state of Massachusetts. It is bordered on the north by Mexico, on the west and south by Guatemala, and on the east by the Caribbean Sea. It is flat and swampy along the coast and mostly level in the north. The southern part has mountains reaching a high point of 1,177 m (3,861 ft). Belize's climate is warm and humid. There are 17 rivers. The longest barrier reef in the Americas (about 290 km or 180 mi) runs parallel to its coastline.

Belize had a population of only slightly more than 300,000 in the mid-2000s. Creoles, of mixed African and European ancestry, had been the largest group, but the 1991 census showed that they accounted for only 25% of the population. Mestizos, of Amerindian and European descent, came to 48%. Another 9% were Mayan people. The Garifuna, or Black Caribs, descended from escaped African slaves and Carib Amerindians from St. Vincent and Dominica, came to 15%. There were also East Indians (descendants from immigrants from present-day India), Arabs, Chinese, and about 6,000 Mennonites from Mexico and Canada.

About 40,000 Mestizos were recent immigrants who either fled fighting in Guatemala and El Salvador during the 1980s or came to Belize seeking work or land to farm. In addition, in the late 1980s as many as 65,000 Belizeans were living in the United States, most of them were Creole or Garifuna.

## 3 LANGUAGE

English is the only official language in Belize and the only language of instruction in public schools. The 1991 census found that at least 80% of the population could speak some English or Belizean Creole, which is a dialect of English difficult for outsiders to understand. For 33% to 50% of the population, English or Creole was the first language, but many of these people could not speak standard English well. Spanish was spoken by about 60% of the people and was the first language of 33% to 50% of the population. Smaller numbers spoke Mayan languages or Garifuna as their first language, and the Mennonites spoke Low German as their language. About 33% of the population can speak two or even three languages.

## 4 FOLKLORE

Belizean folklore is a combination of European, African, and Maya beliefs. Creoles speak of a phantom pirate ship seen at night, its rigging lit by flickering lanterns. It is credited with luring sailors to destruction on the treacherous coastal coral reef. "Greasy Man" lives in abandoned houses, and "Ashi de Pompei" resides in the ashes of burnt houses. They come out at night to frighten people. *Sisimito* or *Sisemite* are great hairy creatures that carry women off to mate. They are impossible to track because they can reverse the position of their feet to heel-first, making it appear that they are walking in the opposite direction.

Of Mayan origin is a belief in four-fingered "little people" of the jungle, the *duende*. When encountered in the jungle they

must be given a four-fingered salute, hiding the thumb. The *duende* can cause disease, but placing gourds of food for them in a doorway will prevent an epidemic. They can capture people and drive them mad, but they can also grant wishes and confer the gift of mastering a musical instrument instantly. Xtabay is a lovely maiden who leads men astray in the forest. Also of Mayan origin is the belief that Saturdays and Mondays are lucky, while Tuesdays and Fridays are unlucky.

Many Creoles and Garifuna believe in *obeah*, or witchcraft. A black doll made from a stocking stuffed with feathers from a dark fowl and buried under the victim's doorstep can cause great harm. Shoes are frequently crossed at bedtime to keep evil spirits from occupying them during the night. A certain species of black butterfly is said to bring early death or at least bad luck to its beholder. To ward off the evil eye, the Garifuna paint an indigo cross on the forehead of an infant.

## 5 RELIGION

In 2008, 49% of Belizeans were Roman Catholic, while 27% belonged to various Protestant denominations, including Anglicans (5.4%) and Methodists (3.5%). Evangelical groups like Pentecostals (7.4%), Jehovah's Witnesses (1.5%), and Seventh-Day Adventists (5.2%) have been gaining on the mainstream Protestant denominations. Other religious groups include Mennonites, Mormons, and Baha'is.

## 6 MAJOR HOLIDAYS

St. George's Caye Day, on September 10, originally celebrated a British victory over the Spanish. It now commemorates local heroes and is celebrated with parades, patriotic speeches, and a pageant. Independence Day is celebrated on September 21. Both days are occasions in Belize City for street parades, floats, and block parties. The birthday of Queen Elizabeth II, April 21, is also a national holiday, as is Commonwealth Day, May 24, and Columbus Day, October 12. Garifuna Settlement Day is on November 19, commemorating the day in 1832 on which a large number of their community reached Belize from Honduras in dugout canoes. The Garifuna also hold a New Year's celebration, called Yancanú, from December 25 through January 6. It is named for a Jamaican folk hero, "John Canoe." Baron Bliss Day is celebrated on March 9 and honors a British resident who died while on vacation in Belize and donated his fortune to the construction of local libraries, schools, and other institutions.

San José Succotz has fiestas on March 19 and May 3. In the south there are traditional fiestas in San Antonio around January 17 and in San Pedro towards the end of June. These fiestas resemble their counterparts in Guatemala.

## 7 RITES OF PASSAGE

Mestizo and Maya customs are similar to those of their counterparts in Guatemala and Mexico's Yucatan Peninsula. Garifuna infants are baptized at the first opportunity. They have already been bathed ritually on their ninth day of age in water steeped with various herbs and leaves. Godfathers are more important than godmothers. Young children are generally indulged, but some are sent to live with another family, usually of a higher economic and social position, in order to obtain an education. Sometimes the Catholic Church acts as the caretaker for such children.

A death in the Creole community is observed with an evening wake in the home of the deceased. Guests bring gifts and take refreshments while praying, singing, dancing, and playing games. Burial is usually the next day. A second wake is held nine days later. Although Catholic, the Garifuna also have a deep belief in the power of the *gudiba*, deceased ancestors, who are honored.

## 8 INTERPERSONAL RELATIONS

Greetings, gestures, body language, visiting customs, and dating among Mestizos and Maya are similar to the customs observed by their counterparts in Guatemala and the Yucatan. Creoles carry Old-World courtesy to the point of being reluctant to declare a negative; thus "maybe" or "possibly" usually means "no." Young people often meet at public dances, but Creole or "Spanish" (Mestizo or Maya) girls are rarely allowed to attend unless there is a special occasion.

## 9 LIVING CONDITIONS

In dollar terms, the national income per person of Belizeans is among the highest in Central America, but the cost of living is also high because so many goods must be imported into this small nation. In 2008, about 30% of the population lived under the poverty line and around 3,000 inhabitants were living with HIV/AIDS. Poor sanitation in rural areas contributed to a high incidence of intestinal parasites, especially among children. Malaria remained the leading health problem, and dengue fever, also carried by mosquitoes, staged a comeback in the

Young Belizean girls stand in a doorway of their house in San Miguel, Belize. (© Atlantide Phototravel/Corbis)

1980s. There were fewer than 100 physicians in Belize in the late 1980s.

The 1980 census found that 70% of Belizean houses were made of wood, 12% of concrete, and 7% of adobe. Creoles generally live in white painted clapboard bungalows, often on stilts and with corrugated-iron roofs. Outside the towns, most Garifuna live in two-room oblong frame houses with palm thatch or iron roofs and leveled mud floors. The kitchen is a separate building of similar construction. Yucatecan Maya mostly live in huts of plastered limestone or palmetto trunks with steep thatched roofs, while the Kekchí Maya have houses of rough-hewn planks topped with palm thatch. In Belize City, elite families live in oceanfront neighborhoods.

#### **10 FAMILY LIFE**

For many ethnic groups and for the lower class generally, a formal marriage ceremony is not necessary, but wider kinship ties are in place, including close links to grandparents, aunts and uncles, and nephews and nieces. Marriage between members of different groups has been widespread. The average number of births per Belizean woman who has completed her child-bearing years, as measured in 2008, was 3.5 children. Single parents, usually women, head many lower-class households in Belize City.

#### **11 CLOTHING**

The business dress for men is a short-sleeved cotton or poplin shirt and trousers of tropical-weight material. Ties are seldom worn. Women generally wear simple cotton dresses.

#### **12 FOOD**

Belizean cuisine reflects ethnicity and international influences. The midday meal is the main one; Creoles call dinner “tea.” Corn tortillas, stewed chicken, and rice and beans are widespread staples. For Mestizos and Mayans, the diet is much like that of Guatemala, with corn tortillas and beans as the staple foods. For members of both cultures, tamales —cornmeal with chicken or vegetable stuffing that is steamed in banana leaves— and Mexican-style chilies and roasts are also traditional dishes amongst their cuisine.

In the interior, wild-game dishes, like roast armadillo and roast *paca*, have a Yucatecan flavor. Among Creoles, rice and red kidney beans are the staples, often accompanied by fried bananas or plantains. A wide variety of stews are another Creole influence, which can include barbecued chicken, beef, and pork. The Creoles and Garifuna consume lots of fish, usually boiling or stewing it in coconut milk or frying it in coconut oil. The Garifuna also make fiery-hot cassava fritters from a gruel prepared by cooking and crushing cassava in coconut milk.

Another Garifuna dish is *hudut*, a stew composed of pounded plantains, fish, and coconut milk. *Nanche* is a sweet liqueur made from *crabou* fruit. Many Belizeans mix the local rums with condensed milk.

### 13 EDUCATION

Belize has, by Central American standards, an enviable educational record. More than 90% of all adults can read and write. Education is free and compulsory between the ages of 5 and 15. In 1992, 96% of all primary-school-age children were in school. However, only 36% of secondary-school-age children were in school. A joint partnership of government and churches manages the school system. The University College of Belize was established in the 1980s. Other institutions of higher learning are Belize Teachers' College, Belize School of Nursing, and Belize College of Agriculture. The Mennonite community owns and administrates its own schools.

Half of primary school graduates receive secondary schooling, and just a small and privileged sector of the elite gets higher education.

### 14 CULTURAL HERITAGE

Among Mestizos, marimba music is popular. A marimba ensemble is made up of half a dozen men playing two large wooden marimbas, which resemble xylophones, perhaps supported by a double bass and a drum kit. The nation's top marimba group in the early 1990s was Alma Belicena. Mexican-style mariachi music is also heard.

*Brukdown* is the name given to Creole music played by guitar, banjo, accordion, steel drums, and the jawbone of an ass. It is accompanied by lyrics that often express social satire. Calypso is sometimes heard but has largely been displaced by reggae. *Cungo* is an offshoot of reggae. In the 1980s, Garifuna players made "*punta rock*" the rage throughout the nation. Its instrumentation includes maracas, drums, and turtle shells. Merengue, salsa, punk, and rap are also popular.

The Yancanu festival of the Garifuna begins with the blowing of a conch shell at midnight on Christmas Eve. Anywhere from 6 to 12 dancers—usually men only—perform in bright long-sleeved shirts, kiltlike skirts, and knee-length stockings, also wearing masks. Strings of seashells make rustling noises as they dance and sing, accompanied by a group of four drummers who keep time with the palm of the hand. Among Creoles, the *punta* is a wake dance in which a couple occupies the center of a ring formed by hand-clapping and chanting onlookers, accompanied by the beat of a drum. Maya dances are still performed at fiestas held in the south and west of the country.

Among Belizean painters are Manuel Carrero and Manuel Villamer, and among sculptors, George Gabb and Frank Lizama. Writers include Zee Edgell, Zoila Ellis, Felicia Hernandez, Sharon Matola, Yasser Musa, Kiren Shoman, and Simone Waight.

### 15 WORK

Although there is a serious labor shortage, the unemployment rate was about 15% in the early 1990s, and the rate was over 40% for youths who had dropped out of school. Many Creoles seek higher-paying work abroad and send remittances home to their families. Garifuna men often venture from their communities for seasonal work, then return to their villages. The labor shortage has been eased by large numbers of migrants

from Central America. In 1994 the minimum wage was \$1.12 an hour, but only \$0.87 for domestic workers. The normal work week, by law, was no more than six days and 45 hours.

Women experience an unemployment rate 2½ times higher than men. Jobs available to women typically have low status and wages, and few women are in top managerial positions. The law mandates equal pay for equal work, but women often are underpaid for work similar to that performed by men.

### 16 SPORTS

Sport culture in Belize has British influence, especially in sports such as soccer and cricket. However, the United States has also influenced Belizeans in the practice of basketball and softball. Soccer is today the most popular sport in Belize, closely followed by basketball. There are a number of horseracing meets around New Year's, and bicycle races are held. Other sports include polo and boxing.

### 17 ENTERTAINMENT AND RECREATION

Among Creoles, all national celebrations are accompanied by open-air dancing, called "jump-up." Almost all villages, particularly those along the Caribbean coast, have their own discos, playing Afro-Caribbean music. There are only two or three cinemas, which mainly show films imported directly from the United States. Dish antennas now receive and rebroadcast more than 50 television channels via satellite signals, offering fare such as CNN News from Atlanta, Cubs baseball games from Chicago, and Spanish-language *telenovelas* (soap operas) from Venezuela.

### 18 FOLK ART, CRAFTS, AND HOBBIES

Souvenirs like straw baskets and carvings in wood, slate, and stone can be found at the National Handicrafts Center in Belize City. Jewelry is made from black coral.

### 19 SOCIAL PROBLEMS

The migration of "Spanish" from Hispanic Central America into Belize is a cause of social tension in what has been until recently a prevalently English-speaking Creole society. A "brain-drain" of educated Creoles taking up residence in the United States has exacerbated the situation. Petty crime is rife in Belize City, and youth gangs have established a foothold there. Imported crack and powdered cocaine can now be found, in addition to a plentiful supply of marijuana. About half the rural population does not have access to pure water. Water pollution, coral removal, and spear fishing threaten the barrier reef and its marine life.

### 20 GENDER ISSUES

Although women constitute over half of secondary school students, achieve higher scores on standardized tests, and have higher graduation rates than male students, they remain seriously underrepresented in skilled and professional positions. The majority of women in Belize are concentrated in traditionally female, low status, and poorly paid occupations, such as manufacturing, tourism, and domestic work. Despite constitutional provisions on equal pay for equal work, women consistently receive less pay than men for the same work and occupy lower level positions even in occupations where they predomi-

nate. In addition, rural women have the highest unemployment rate in the country (20%).

Important factors inhibiting women's opportunities to work include the high incidence of teenage pregnancy, the scarcity of childcare services both in rural and urban areas, and the fact that the government does not support or subsidize childcare. In 1988, nearly 70% of all children were born to single mothers and one of five births was a result of an adolescent pregnancy. In addition, since 1992 Belize has ranked second (after Honduras) in Central America in AIDS incidence. There is no legislation specifically prohibiting trafficking or the exploitation of women. Although the government recognizes the need to promote improved health standards for sex workers, the incidence of HIV/AIDS continues to increase at an alarming rate.

Regarding political participation, few Belizean women hold decision-making positions in the government, although women's representation in political leadership positions is increasing slightly. From 1975 to 1993 there were only three women in the government as heads of departments. In 1998, 6 out of 12 magistrates were women. As of November 1998, women held 4 seats in the 38-member parliament (10.53%), a cabinet of 16 included 1 woman (6.25%), and 10 women (out of 58) served in local government (17.24%).

# **BOLIVIANS**

**LOCATION:** Bolivia

**POPULATION:** 9.8 million

**LANGUAGE:** Spanish; Quechua; Aymara

**RELIGION:** Roman Catholicism; Protestantism

## **1 INTRODUCTION**

There is evidence that the highlands of Bolivia and some of its jungle areas have been inhabited for thousands of years, well before the arrival of Spanish conquerors in the 15th century. Early Amerindian settlers may have been nomadic hunters at first, while later they established agricultural communities. Evidence of this early period, which lasted until about 1400 BC, includes several ceremonial sites. From this time until about 400 BC, an Amerindian culture known as Chavín developed in parts of Bolivia as well as Peru. It was followed by the Tiahuanaco culture, which lasted until about AD 900. An important site was the ceremonial center of Tiahuanaco on the shores of Lake Titicaca in the highlands of the Bolivian Andes. This civilization was prosperous and highly developed, with excellent road and lake transport systems, irrigation systems, and dramatically beautiful building techniques for its settlements and ceremonial sites. Subsequently, Aymara Indians (probably from the region of Coquimbo in Chile) invaded and settled in Bolivia, and finally the mighty Peruvian Incas extended their empire into the present Bolivian territory at the end of the 15th century.

In the 1530s, Spanish conquerors who had initially begun to explore Peru also extended their forays into Bolivia, which they called Alto Peru. Among these men were Diego de Almagro and Francisco Pizarro. During the Spanish colonial period, Bolivia was part of the Viceroyalty of Peru. The town of La Plata, in the Charcas region, was founded in 1538 and was the seat of the Audiencia de Charcas (the most important legal body of Colonial Alto Peru). The city of La Paz, which is Bolivia's political capital today, was founded by Alonso de Mendoza in 1548. General Antonio José de Sucre, who fought with Simón Bolívar, gained Bolivian independence from Spain in 1825 and established the República of Bolívar in honor of the liberator. The new republic was formed with a senate and a house of representatives.

Bolivia has been a mining country. First, it was famous for its silver mines in Potosí, which provided great riches to the Spanish Crown during the 16th and 17th centuries. Subsequently, it was one of the first providers of tin for the world market. Pitiful conditions for miners led to the establishment of a radical workers' party, the National Revolutionary Movement (MNR), which came to power under President Victor Paz Estenssoro in the 1950s, during whose presidency Bolivia nationalized the mines and underwent agricultural, industrial, and social reforms. The new government also established universal suffrage, extending the ability to vote to women and illiterates.

In 1953, the Agrarian Reform Decree was signed and peasants in the Andean region began taking over lands. The radical and popular reform soon started to moderate itself because of the economic crisis that baffled the country in the 1960s, and the increasing pressure of the United States. In 1964, the gov-

ernment was taken over by pro-U.S. General Barrientos who signed the “Military-Peasant Pact,” which promised public works in the countryside in exchange of political support by the peasants.

In 1971, Hugo Banzer, a right-wing general, took power and governed the country for seven years, during which all the efforts of the agrarian reform were reversed and the first drug-trafficking boom began. Even though democracy was reinstated in 1978, Indian demands remained unaddressed. After the New Economic Policy was launched in 1985, trade liberalization flooded Bolivian markets with cheap imported goods, with the consequent closure of many national factories and the increase of unemployment. A decade later, the neoliberal structural adjustment, which brought with it a tremendous social cost, especially for the rural peasants, was complemented by the “second generation reforms” implemented by Sanchez de Lozada. In the 1993 elections, Sanchez de Lozada ran for president in alliance with the Aymara leader Victor Hugo Cardenas as his vice-president.

Parallel to the deepening of economic reforms, Sanchez de Lozada also carried out constitutional reforms that recognized the multicultural nature of Bolivia’s population and implemented a Law on Popular Participation (1994), aimed to decentralize the country’s administrative system. Consequently, the municipality became an important source of regional power that gave indigenous people space for self-rule. In the 1995 municipal elections, 29% of all councilors elected were from peasant-indigenous backgrounds.

In 1999 the government privatized the water supplies of Cochabamba. The contract was immediately criticized because it carried a sharp increase in consumer prices, which were projected to reach 180% for some sectors of the population. A coalition of urban and rural organizations called Coordinadora de Defensa del Agua y de la Vida was created to oppose the project by sponsoring a series of protests. The use of ethnic language and the invocation of indigenous deities and mythology in the so-called Water War proved successful for mobilizing indigenous communities and attracting international attention, which in the end forced the government to comply with the demands. This triumph proved the strength of indigenous groups and demonstrated the diminishing power of the state to repress new social movements. This awareness was furthered in the 2002 elections, the 2003 Gas War, and the victory of the *cocalero* leader Evo Morales as the first indigenous president of Bolivia in 2005.

## 2 LOCATION AND HOMELAND

Bolivia is a landlocked South American country of 9.8 million people, more than 60% of whom are Amerindian, speaking mainly Quechua and Aymara as well as Spanish. The rest of the population is divided between Mestizos (European and Amerindian descent), who comprise 30% of the population, and minorities of whites and people of African descent.

Bolivia shares a border to the north and east with Brazil, to the west with Peru, to the southeast with Chile, to the south with Argentina, and to the southeast with Paraguay. Bolivia has a very diverse climate and territory. In the western part of the country, the Andean Cordillera extends from north to south with some of the highest peaks in South America. The center of the country consists of fertile valleys, and the lowlands extend towards the east to the Amazon rain forest.

## 3 LANGUAGE

Spanish-speaking Bolivians account for only 36% of the total population, while the majority of the people speak one of the two predominant indigenous languages: Quechua, the language spoken originally by the Incas, or Aymara, a language spoken by Amerindians prior to the arrival of the Incas. Spanish names of saints are very popular, as are Catholic names such as Jesús, José and, for girls, María. Many Quechua- and Aymara-speaking people have Amerindian last names and Spanish first names.

## 4 FOLKLORE

A myth of the early Incas and other Amerindians was that a White, bearded teacher, or the Creator God called Viracocha, had come to teach the Indians and would return. When the Spanish conquerors arrived in the 16th century, the Incas, who by then had extended their empire into Bolivia, mistook the white Spanish conquerors for Viracocha and, perhaps, companions of his. This belief was very widespread and existed even as far away as Mexico, where the Aztecs called this figure Quetzalcoatl, and it contributed to the Spaniards’ easy entry into the major Amerindian cities. The Spanish exploited these myths for their own benefit.

## 5 RELIGION

Around 80% of Bolivians are Roman Catholic. However, among the Aymara- and Quechua-speaking Amerindian

groups, certain beliefs and rituals remain that stem from local religions, which pre-date the Spanish conquest. The respect for nature is embodied in the belief in Mother Earth, known as Pachamama.

Among the Aymara, there is a household god known as Ekeko, a god of prosperity who also presides over matchmaking prior to marriage and helps people without homes. An important festival in La Paz, Bolivia's mountain capital, called the Alasitas, is held principally in honor of Ekeko. The artisans sell miniatures of everything imaginable, and people buy them believing that the things they represent will be plentiful in their homes. *Ekeko* means "dwarf," and he is generally a benevolent god.

## 6 MAJOR HOLIDAYS

Bolivians, in common with many other Latin Americans, celebrate the main Catholic holidays such as Easter and Christmas, as well as Corpus Christi. They also celebrate Labor Day and their Independence Day on August 6.

A major festival celebrated in March is *Pookhyái*, celebrated in the Andean town of Tarabuco in the department of Sucre. It was here that the famous heroine Juana Azurduy made her mark, leading her people against the Spanish in the Battle of Jambati on 12 March 1816, liberating the town. *Pookhyái* is a Quechua word meaning "entertainment," and during the festivities dozens of groups in local costume dance and sing, and the whole town, together with thousands of visitors, takes part in a special Quechua Mass and procession. It is a joyful celebration during which Bolivians give thanks for their freedom as a nation.

Carnival is celebrated throughout Bolivia the week before Lent, and the best-known celebration is the colorful *Entrada* in the town of Oruro. The *Diablada*, one of the most representative dances, has elaborate costumes and masks of the devil. Choreographed as a battle between good and evil, the dancers celebrate the triumph of good, in the person of the Archangel Michael, over evil, in the person of Lucifer and his devils. Other groups reenact the Conquest, where the Spanish conquerors such as Francisco Pizarro fight with the Incas, and the feasting and dancing last for several days.

## 7 RITES OF PASSAGE

Most children in Bolivia receive the Catholic sacraments of baptism at birth, First Communion at the age of seven, and confirmation at puberty. Many Bolivian families regard these ceremonies as important events.

During the teenage years, Bolivian boys and girls are still expected to maintain close ties with their families. The poverty of many Bolivians means that young people work, often from a young age, to supplement the family income.

Many Bolivians marry in church, but they have to have a civil marriage as well. When a person dies, the full religious rites of the Catholic Church are often followed. A priest will often attend a dying person, who may wish to offer a final confession. Among many Indian communities, Catholic and Indian beliefs coexist.

## 8 INTERPERSONAL RELATIONS

A formal greeting will include the words "*mucho gusto*," which is the equivalent of the English "pleased to meet you." There is also an informal greeting, "*Qué tal?*" which means, "How are

you?" But Bolivians do not stop there. It is also considered polite to inquire about the welfare of other family members, and the greetings can become quite elaborate.

Men shake hands, but it is customary among urban men and women to greet each other with a kiss.

Visits are considered an important form of social communication and can take a number of forms: many religious festivals and important family events are occasions for reunions of family and friends. When people visit, it is customary to offer a small cup of black coffee. A pre-Columbian drink that still exists in the Andean region is *chicha*. Made from fermented corn, it is consumed by people in towns and villages.

Bolivian society is divided by marked classes, which do not mix easily. In some small cities young people are still very traditional when it comes to dating. Families keep a close watch on their daughters' friends and social contacts. In many places, girls are not expected to date boys who are unknown to their parents. The parents will inquire about the boy's family or may already know his family. A girl is not expected to date boys outside an approved social circle. Many people marry when they are still quite young, and the custom of having a *novio* or steady boyfriend in a serious relationship is seen as appropriate for a girl.

## 9 LIVING CONDITIONS

Bolivia is one of the poorest countries of the Americas, and the people's health suffers accordingly. A serious disease called *chagas*, carried by the bite of the *vinchuca* beetle, which is particularly prevalent in the rural lowlands, has no known cure and eventually affects the heart. One estimate suggests that as many as a quarter of Bolivians are affected by this disease, although precise figures are not obtainable.

Many Bolivians, particularly in some of the Indian communities in rural areas, live outside of the cash economy altogether. They lead a sustainable, simple lifestyle. In the major cities, such as La Paz, which is the capital, or Cochabamba or Sucre—the legal capital, a more modern lifestyle prevails that is similar to that in major towns in other parts of Latin America.

Housing in the countryside often involves simple huts of adobe with thatched roofs. In the towns and cities, brick and cement are used, and red tiles are used for roofs in the traditional Spanish manner.

Many people who do not have access to a car use buses and trucks for local and inter-town travel. Even though practically all towns are connected by extensive bus routes, pack animals are used in the more-remote highland areas.

## 10 FAMILY LIFE

Women in one sense have a lower status than men in Bolivia, yet in another sense they are at the center of family life and are regarded as very important in their role as mother, wife, and member of the extended family unit. In the lower classes, women are the economic support of the family. Since colonial times, Indian women have taken part in commercial activities in the country.

Although the trend is changing, families have traditionally been quite large in Bolivia: six or seven children are not uncommon. Families do not consist only of a father, a mother, and their children, but include many relatives such as grandparents, aunts, uncles, and cousins. The traditional extended family is the main social support system in Bolivia.

## 11 CLOTHING

In the cities, men wear trousers and shirts, or suits, and women wear skirts and blouses or dresses. Bolivian Indian women wear voluminous skirts, shawls, and bowler-shaped hats. This manner of dressing is a hybrid form, since it derives from old-Spanish fashion. Men in the countryside often wear *ponchos*, which are derived from the Spanish cape, particularly in the cooler climate of the Andean highlands, where they are woven from wool and serve to keep out the cold mountain winds. In the countryside many Indians maintain their traditional, distinctive ethnic clothing.

## 12 FOOD

The bedrock of the Bolivian diet in the Andean highlands or *altiplano* is the potato, and many poorer people in this region eat a mainly carbohydrate-based diet. Main meals in the major towns include some meat, but there is also rice, quite often served with potatoes as well as some salad or vegetables. Visitors to Bolivia do not necessarily share the preference for plain and filling food. Instead they enjoy, as many Bolivians do, some of the tasty snacks.

One of these is the turnover or *empanada*, which varies from country to country in Latin America. The flour used to make the turnovers is made from wheat. Empanadas, which are shaped like half moons and are often fluted at the edges, are fried or sometimes baked. The imaginative aspects relate to the wide variety of fillings, which include chicken, cheese, and beef. A typical midmorning Bolivian snack is the *salteña*, a spicy round chicken, meat, or vegetable pie stuffed with olives, onions, hard-boiled eggs, and other ingredients.

In La Paz, the Bolivian capital, pieces of beef heart are grilled on skewers. These are known as *anticuchos*. A hot, peppery sauce called *llajua* is often served with meats. In the lowlands and the Amazon region, exotic meats such as alligator, armadillo, and agouti are also eaten, while fine salmon trout from Lake Titicaca is a delicacy.

## 13 EDUCATION

Primary education is available in principle to all Bolivian children, but it did not really reach the villages until the reforms instituted by the Revolutionary National Movement (MNR) under Victor Paz Estenssoro in the 1950s. Since then, secondary education has also become more accessible. Today, primary education for children 6 to 13 years of age is free and officially compulsory, although school attendance is difficult to enforce in some areas. Secondary education, lasting up to 4 years, is not compulsory. At the end of the 20th century about four-fifths of the primary-age children were attending school. Most education is state-supported, but private institutions are permitted.

The nation's eight state universities are located in each of the departmental capitals except Cobija (capital of Pando department), and there are numerous private schools, including a Roman Catholic university. The largest institutions of higher learning are the University of San Andrés (founded 1930) in La Paz and Major University of San Simón (1832) in Cochabamba.

## 14 CULTURAL HERITAGE

Traditional music in the Bolivian Andes features flutes such as the *quena* and the panpipe, as well as stringed instruments

Young Bolivian woman with llama at Lake Titicaca, Bolivia. Families keep a close watch on their daughters' friends and social contacts. (Anne Kalosh)

derived from the Spanish guitar called *charangos*. To the untutored Western ear, this music can sound mournful, but attention rewards the listener, who marvels at the skill of the musicians and the range of tones and rhythms often suggestive of majestic mountain heights and the freedom of magnificent birds wheeling joyfully in the sky. Mountain dancing is often demure and suggests a mixture of Amerindian and Spanish courtly influences, whereas in the lowlands and in the Tarija region the music of warmer climates is more exuberant.

Bolivia has many fine churches that date from Spanish colonial times. Among painters who excelled in religious themes is Holguín, whose paintings of the birth of Christ and the birth of the Virgin Mary are displayed in the town of Sucre in the exquisite Church of La Merced, built in 1581.

Among Bolivian writers, one of the best known is Alcides Arguedas, who died in 1946. He was also a sociologist and a diplomat and served for a time as Bolivia's Minister for Agriculture. He dealt with major aspects of Bolivian Indian life, and his novels include *Raza de Bronce* (which translates as "The Bronze Race"), *Vida Criolla*, *Pisagua*, and *Wata-wara*. Another important modern writer is Augusto Céspedes, who examined the lives of the immensely wealthy Bolivian tin barons in a novel called *El Metal del Diablo* (which means "The Devil's Metal"). Bolivia has produced several excellent poets, among them Ricardo Jaimes Freire at the beginning of the 20th century. Julio de la Vega is exuberant in his *Poemario de exaltaciones*. Jaime Saenz was the first to use surrealism. Oscar Cerruto is a major Bolivian poet, and among current poets one

of the best is Pedro Shimose, the son of Japanese immigrants to Bolivia. The essayist Fernando Diez de Medina is also worth mentioning.

The poetry and songs of the Quechua language constitute a significant tradition for Quechua-speakers in Bolivia and Peru alike. In this language are included hymns, prayers, songs of love and war, satirical pieces, epic poems, plays, stories, and songs of mourning. A vivid example of the latter, which actually formed part of the mourning rituals upon the death of the last Inca king, Atahualpa, who was murdered by the Spaniards, can be found in the poem *El Llanto de las Nustas*.

Among Bolivian Indians, who form a significant part of Bolivia's population, it is no exaggeration to say that their history has been one of suffering and loss.

## 15 WORK

In rural areas, many Bolivians work as farmers on small landholdings. Miners have a long tradition in Bolivia, beginning with the silver mines of the Potosí region during Spanish colonial times and continuing with the tin mines. When there was an international tin crisis in the 1980s, thousands of tin miners were left destitute and, to avoid starvation, many made their way to the lowlands to grow coca leaves for the illegal cocaine industry. The Bolivian government has embarked on a crop substitution program, encouraging other crops, some of which can be exported. Since so many depend for their livelihood on farming, the government has had to adopt a gradual approach to this ongoing problem, which essentially has its roots in drug consumption in developed countries.

In the towns many people are employed in casual labor, as street vendors and hawkers, in the construction industry, as domestic servants, or as plumbers, electricians, or carpenters. There is also a professional middle class; the traditional professions such as law and medicine are still popular, but there are also increasing numbers of engineers and technicians of various types.

Organized labor had been the most important interest group in the Bolivian economy since 1952. The country's labor unions were some of the strongest in Latin America and were characterized by their activism, militancy, discipline, and political influence. However, the majority of the population works in the informal sector, and are thus not entitled to labor union benefits. Although primarily associated with La Paz, the informal sector also included a rural component and an illegal component linked to the coca industry. The urban and legal informal sector was estimated to contribute about 12% of gross domestic product (GDP) and employ as much as 60% of the labor force in recent years. Most analysts believed that this sector increased in the late 1980s because of public sector layoffs and the depressed mining industry.

The total labor force was 4.79 million in 2006 with 17% employed in manufacturing, 40% in agriculture, and 43% in services. Total unemployment was estimated at 8% in 2006, with a large number of workers underemployed. The law prohibits child labor under age 14, but this is generally ignored. Approximately one in four children between the ages of 7 and 14 are employed in some way. The minimum wage is subject to annual negotiation and in 2002 was set at \$59 per month. This does not provide a decent standard of living for most families, and most workers earn more than the minimum.

## 16 SPORTS

All kinds of modern sports are played by Bolivian youth. There are interschool athletic competitions, as well as professional basketball, volleyball, and soccer teams. Probably the most popular sport is soccer, and major towns have stadiums filled with enthusiastic crowds during matches. Bolivians gained international recognition for soccer, particularly after their national team placed second at the 1997 Copa America (South American Championship). In addition, the cities of La Paz, Cochabamba, and Santa Cruz have professional-quality golf courses. Bolivians have also won Latin American boxing championships.

## 17 ENTERTAINMENT AND RECREATION

As in many other Latin American countries, there are many cinemas in Bolivia and people enjoy going to the movies. There are also theaters in most of the main towns. One of the major theaters is the Teatro Municipal in La Paz, where enthusiasts can see both classical and modern plays as well as dance performances and musical events.

In the town of Santa Cruz, there are modern and popular discos to which many young people enjoy going. There are also good discos in La Paz, Cochabamba, and Sucre.

One of the most enjoyable events in Bolivia is Oruro's Carnival, celebrated everywhere but with interesting variations related to local costumes, dancing, and music.

## 18 FOLK ART, CRAFTS, AND HOBBIES

One of Bolivia's major crafts is weaving. Most young girls in rural areas learn to weave and spin, and it is thought that this ancient craft has been in existence in Bolivia for thousands of years. Patterns and colors vary according to region; quite often the patterns are either geometric or zoomorphic (depicting animals), while occasionally they show aspects of domestic life. Alpaca and llama wool were used traditionally, but sheep's wool is also used today.

Garments woven in the traditional way include warm and practical ponchos as well colorful hats with long ear-coverings, useful in cold mountain weather, known as *chullos*.

Many interesting musical instruments are made in Bolivia, including the armadillo-backed *charango*—a type of guitar—as well as native violins and a wide variety of woodwind instruments.

## 19 SOCIAL PROBLEMS

The serious social problems in Bolivia relate to the continuing poverty of so many of its inhabitants. Despite many efforts to eradicate coca production, hundreds of thousands of people are employed in its growth and distribution. Many peasant farmers who are often desperately poor have attempted to grow other types of crops. The crop substitution programs instigated by the Bolivian government offer replacement crops such as coffee and bananas, which are certainly not as lucrative as coca and which make earning a decent livelihood difficult for many people.

## 20 GENDER ISSUES

The 1998 Bolivian Human Development Report stated that gender inequities were considered very critical, concluding that Bolivian women have lower levels of human development

than men and that their education and income levels are below those of men. However, women's status has been improved since 1992 thanks to the promulgation of the Family Violence Law and the Quota Law, which mandates a 30% quota for women's representation in national and local elections.

In addition to changes in legislation, changes in the economy and employment have meant growing numbers of women are holding entrepreneurial positions. Educational opportunities are also increasing for women. Moreover, new women's political organizations have been created, such as the Political Forum for Women and the Bolivia Town Council Association, which have taken the lead in pushing for gender equality.

**BRAZILIANS**

**LOCATION:** Brazil  
**POPULATION:** 191,908,598  
**LANGUAGE:** Portuguese  
**RELIGION:** Roman Catholicism; Protestantism; Afro-Brazilian religions; other indigenous beliefs

**1 INTRODUCTION**

According to historical accounts, communities of farmers, fishermen, and gatherers occupied and developed in the Amazon lowlands. Between two and six million indigenous people lived in the territory known as Brazil at the time of Portuguese contact at the beginning of the 16th century. As a Portuguese colony, the region was named Vera Cruz (“True Cross”), but it was soon renamed Brazil after the type of tree found there.

In colonial times, Brazil played an important role in the world economy, providing nearly 75% of the world's supply of coffee. After independence from Portugal in 1822, Brazil underwent a period of economic growth and prosperity. A rubber boom led this period of economic growth, which was also fueled by sugar and gold. Brazil has since developed a significant industrial sector and was among the world's ten largest economies as of 2008. However, serious problems of poverty and inequality remain. This elusive economic development gave rise to the saying, “Brazil is the land of the future—and always will be.”

Even though Brazil is considered South America's leading economic power, internal problems such as a high crime rate, corruption, and an unequal income distribution continue to characterize Brazilian society. During the first years of the 21st century, more than 30% of the population lived in poverty.

From 2003 to 2007, Brazil achieved record trade surpluses due to increased productivity and high commodity prices. Many of these achievements were rooted in economic reforms implemented by Fernando Enrique Cardoso, president of Brazil from 1995 to 2003. He was succeeded by the leader of the Worker's Party, Luiz Inacio “Lula” Da Silva, who took office in 2003 and was reelected with more than 60% of the vote in 2006.

**2 LOCATION AND HOMELAND**

Brazil is a large country (the fifth-largest nation in the world), with a landmass equal to that of the continental United States. Brazil has borders with every South American nation except Chile and Ecuador. However, most of Brazil remains sparsely populated. The Amazon basin takes up nearly one-third of Brazil's landmass. Most of the lowland areas in the north and west of Brazil remain populated only by native Amazonian tribes. Major indigenous tribes include the Yanomamo, Xavantae, and the Cayapo. Many land areas are protected as national parks, but the Brazilian government has failed to maintain these zones, giving in to pressure to allow construction of highways and other development projects.

In 2000 three oil spills transpired in Rio de Janeiro's Guanabara Bay and in the Iguazu River. In addition, the Amazon rain forest is under threat as a result of extensive logging and deforestation. Consequently, many indigenous tribes are facing cultural extinction.

The majority of Brazil's population (about 192 million as of 2008) live in the densely populated south and southeast regions, where the major cities of São Paulo, Rio de Janeiro, and Belo Horizonte are located. Brazil is an ethnically diverse country. Its population comprises European migrants, descendants of African slaves, and a variety of indigenous ethnic groups. Although Afro-Brazilians play an important cultural role, problems of racial discrimination exist. While Blacks have the same legal rights as Whites, most Blacks live in poverty in the *favelas* (urban slums) in Brazil.

### 3 LANGUAGE

The official language of Brazil is Portuguese. In pre-colonial times, many different indigenous languages were spoken throughout the country. At that time the *lingua franca* (the

language used by different groups to communicate with each other) was Tupi.

Even though Brazil and Portugal have made efforts to standardize the language, Brazil's geographical closeness to Spanish-speaking countries has deeply modified the Brazilian version of Portuguese. As a result, Portuguese spoken in Brazil has given birth to new words and pronunciations. Words combining Portuguese and Spanish languages, known as *Portuñol*, are common.

### 4 FOLKLORE

Each of the various ethnic groups in Brazil has its own tradition of folktales and myths (see **African Brazilians; Kayapos; Tenetehara; Xavante**).

Members of the Kayapo tribe, wearing traditional dress, from the Amazon River Basin of Brazil with villages that are along the Xingu River partake in a session in homage to the campaign of the brotherhood of the Catholic Church of Brazil in Brasilia, Brazil.

## 5 RELIGION

The beliefs of many Brazilians reflect elements from African, European, and indigenous religions. A wide range of religious traditions and practices coexist in Brazil, from the European religions of Catholicism and Protestantism, to the multitude of spiritual sects of African origin such as *umbanda*.

While many Brazilians claim to be Roman Catholic, these beliefs are often infused by traditional practices. Offerings and gifts are made to saints and protective spirits for favors in this life. Self-sacrifice plays an important role in convincing saints to grant requests. Fervent believers, for example, may crawl on their knees to sites of spiritual significance to demonstrate their faith.

After Catholicism, Afro-Brazilian religions are the most important in Brazilian society. *Umbanda*, for example, is one of the most rapidly growing sects. Attracting both African and non-African Brazilians, *Umbanda* sects use music, dancing, and sometimes alcohol to reach a trance state that enables believers to communicate with spirits. Also significant is *Condomble* of African origin. *Condomble* priestesses also seek to communicate with African spirits. Their ceremonies sometimes include the sacrifice of goats and chickens.

## 6 MAJOR HOLIDAYS

Carnival in Brazil is one of the world's most famous festivals. Celebrated for the five days preceding Ash Wednesday (in February), Carnival virtually brings the country to a halt as

Brazilians take off work to join street festivals, dance contests, and other festive activities. The major Carnival parade takes place in Rio de Janeiro, with elaborate costumes and floats that are the result of many months' preparation. During Carnival, dance balls and samba contests are held. The festivities last well into the morning hours. While other Latin American countries also celebrate Carnival, only in Brazil is it done on such a grand scale.

## 7 RITES OF PASSAGE

Major life transitions (such as birth, marriage, and death) are marked by ceremonies appropriate to each Brazilian's religious tradition.

## 8 INTERPERSONAL RELATIONS

Brazilians speak animatedly and use a variety of hand gestures for emphasis. For example, when a Brazilian speaker moves his or her fingers under the chin, this means "I don't know." Placing the thumb between the index and middle fingers is a sign of good luck.

Brazilians are accustomed to late-night dinners and parties. Many restaurants in the major cities do not open for dinner until 8:00 or 9:00 pm. The people make up for lost sleep during the afternoon *siesta*. Stores and many businesses close for three or four hours during lunch, and many Brazilians go home and have lunch and a short nap before returning to work.

Not surprisingly, Brazilians are also heavy coffee drinkers. In many city plazas, there are roving street vendors selling sweet espresso to passersby.

## 9 LIVING CONDITIONS

Brazil is a land of contrasts. Its cities combine modern skyscrapers, suburban houses, and impoverished slums. Known as *favelas*, Brazil's urban slums have been estimated to be home to as many as 25 million people. The inhabitants of *favelas*, which are built on hillsides surrounding the major cities, live in desperate poverty. Many of the older houses or shacks in the *favelas* now have electricity and running water. However, poor sanitation causes serious health problems. There is no garbage collection or sewer access in the *favelas*. A life of crime is often the only alternative for unemployed youth with no economic opportunities.

In contrast, the upper and middle classes that live relatively near *favelas* have a high standard of living. Brazil's major cities are very modern, with large shopping malls, restaurants, and superhighways. There are many luxury high-rise apartment buildings and large houses with all of the amenities one would expect in the United States. Most of the middle- and upper-class families have servants to assist with housework.

There is a diverse range of housing and living conditions in rural areas. The type of housing depends largely on the weather. Adobe, stone, and wood are all used as housing material. In the Amazon, reeds and palm are used to construct houses.

## 10 FAMILY LIFE

A family in Brazil generally consists of parents and 5 to 7 children, although some families continue to have as many as 15 children. Both the nuclear and extended families play an important social role. It is a widespread cultural institution among the poorest families that inhabit *favelas* to share their shanty houses creating a spontaneous social net to protect their kin. At the same time, most socializing (drinking, dining, gambling, etc.) is conducted with members of the extended family. Godparents remain extremely important in rural areas, but their importance was declining in urban areas in the early 21st century. Godparents of a higher economic class are often chosen, as they have the financial means to take care of the child if a problem arises. However, family ties were losing importance as more and more of the population migrates from rural to urban zones.

Gender differences are clearly marked in Brazilian society and sexism is an ingrained feature of the culture. Limited educational opportunities, especially for lower-class women, keep females tied to traditional roles. Few middle- and upper-class women work outside the home, although this was beginning to change in the late 1990s and 2000s. It is a common custom for middle- and upper-class women to have social "teas" at 4:00 or 5:00 p.m., before returning home for dinner with their husbands.

Female beauty is highly valued and Brazilian society can be considered to be very flirtatious. It is common for young women to wear short skirts or shorts in an attempt to attract the attention of men. This also probably serves to perpetuate machismo among Brazilian men.

Marital infidelity is a serious social problem in Brazil. It is very common for men to take a mistress on a long-term or per-

manent basis. While this behavior is not completely sanctioned in Brazilian society, it is widespread and is tolerated.

## 11 CLOTHING

Brazilian dress in urban areas is very modern. Young people wear jeans and skirts, although among women short skirts and dresses are also very common. Business attire is very similar to that worn in the United States, with men wearing suits and ties.

Dress varies more widely outside of urban areas. In the south plains regions near the border with Argentina, the *gaucho* (cowboy) style is still worn. This includes ponchos, wide straw hats, baggy pants known as *bombachas*, and boots. In the Amazon, native Amerindians wear face paint and traditional tunics. In the predominantly Afro-Brazilian region of Bahia, women wear bright, colorful skirts and head scarves.

## 12 FOOD

Brazilian food reflects the many cultural groups that have settled there. Combining cooking styles and ingredients from the rain forest and the Portuguese and African cultures, Brazil's cuisine is a unique melting pot of influences. The African influences are particularly pronounced in the southeastern region of Bahia, where spicy seafood dishes may be flavored with peanuts, coconut, lime, or other tropical ingredients.

In Brazil it is a longstanding tradition to have *feijoada* for lunch on Saturday afternoons. Considered the national dish, *feijoada* is a stew of black beans with different types of pork—such as sausage, bacon, and salt pork—and an occasional piece of dried beef. A good *feijoada*, it is claimed, will have a minimum of five cuts of pork. This dish was common among the slaves in Brazil, who used discarded cuts of pork, such as the snout, tail, and feet. These cuts are still often used. Rice and/or vegetables such as collards or kale often accompany *feijoada*.

## 13 EDUCATION

Brazilian children are required to attend school for a minimum of eight years. In reality, however, a large percentage of the population fails to receive an adequate education. The overall national literacy rate was nearly 898% as of 2006 (men 88.4% and women 88.8%), although numbers are much lower in some regions. School attendance at the secondary level is low. Brazilian schools are generally underfinanced and overcrowded. In order to cope with the large number of students, children attend classes either in the evening or in the morning.

There are a growing number of universities and technical schools. These higher-level institutions of education, however, tend to be filled by middle- and upper-class students. Places are limited and entrance exams are very difficult.

## 14 CULTURAL HERITAGE

Brazil has a wide variety of folk and modern music. Samba is perhaps the most popular and well-known internationally. Samba, however, is but one of Brazil's many rhythms and musical traditions. In the northeast, Portuguese guitar introduced during colonial times is still popular. African dances and percussion endure in Afro-Brazilian culture and are used in religious ceremonies. African influences are strongly felt in modern music as well.

*Inhabitants and tourists of Rio de Janeiro, Brazil, take to Ipanema Beach to find relief from the high temperatures. In January, the temperatures can reach 36 to 39 degrees Celsius (97 to 102 degrees Fahrenheit). (Vanderlei Almeida/AFP/Getty Images)*

Brazil has been the birthplace of musical forms that have become popular worldwide. In the 1950s, for example, a fusion of American jazz and samba rhythms known as *bossa nova* made international stars of singers such as Sergio Mendes. More recently, the *lambada* topped the charts in the United States and Europe. The *lambada* is in fact a version of *carimbo*, a musical tradition of the northern regions with strong Caribbean influences.

### **15 WORK**

Brazil's economy is diverse. It has an extensive raw material and agricultural sector as well as heavy industry and manufacturing. Brazil continues to be the largest coffee exporter in the world and also produces sugar, soybeans, and corn for the export market. Many people in the northeast work in the sugar plantations and mills, while coffee laborers are found in the south. In addition, harvesting rubber, timber, and nuts provides a way of life for many inhabitants of the Amazon regions.

Of all the South American countries, Brazil has been the most successful in exporting its manufactured products. Brazilian shoes, for example, are now found in stores around the world. Automobiles and steel products are also major exports. While these industries provide formal employment for many, a significant proportion of urban Brazilians rely on small-scale, informal economic activities to survive. Women, for example, might become seamstresses or street vendors. A great many

young women from the *favelas* (urban slums) find employment as servants in middle-class homes.

### **16 SPORTS**

While soccer is popular throughout Latin America, in Brazil it is close to a national obsession. The city of São Paulo, for example, has three soccer stadiums, which hold matches nearly three times a week. The stadium in Rio de Janeiro is also spectacular. It seats 200,000 people and is the largest stadium in the world. Brazil has won more World Cups than any other country. Its most famous soccer player, Pele, is still a popular and highly regarded figure. It has been suggested that he might run for the presidency.

Volleyball is also very popular. The Brazilian women's volleyball team won the gold medal at the Barcelona Olympics in 1988, defeating Peru in overtime.

### **17 ENTERTAINMENT AND RECREATION**

In Rio de Janeiro and other seaside cities, the primary form of recreation is the beach. Brazil is the nation with the largest coastline in the world. This is reflected in Brazilians' love for the beach and sunbathing, which attracts people from all social and economic backgrounds during the summer.

Samba schools are an important source of recreation in the *favelas*. More of a community or neighborhood club, samba schools work virtually all year long to prepare for the Carnival festivities. They teach dancing, create costumes, and write songs for the annual Carnival song competition.

Televised soap operas are extremely popular with Brazilians of all social classes. *Telenovelas*, as they are called, are broadcast in the evenings and attract a huge following. These soap operas are not permanently ongoing, but last from a few months up to a year. Brazilian soap operas are so popular that they are successfully exported to other Latin American countries.

### **18 FOLK ART, CRAFTS, AND HOBBIES**

A rich tradition of folk art and handicrafts arises from different regions in Brazil. In the mining region of Minas Gerais, goldsmithing and jewelry are the local art forms. Gemstones such as diamonds, opals, sapphires, and rubies are produced in Brazil. A popular piece of jewelry throughout Brazil is the *figa*. The *figa* is a pendant of a hand with the thumb between the first and index fingers—the symbol of good luck. In areas where ranching predominates, leather goods are made from cattle- and goatskins. Shoes, handbags, and wallets of high quality are also crafted in these regions. In the Amazon regions, Amerindians produce woven straw baskets, weapons, textiles, and beads.

A unique traditional art form originates from the San Francisco River. This river, once believed to house evil spirits, led 19th-century boaters to carve fierce-looking figureheads, called *carrancas*, on their boats. These carvings of beasts that are half human and half animal were thought to provide protection from spirits and ward off bad luck. While most boaters no longer believe in these superstitions, many boaters still carry *carrancas*.

### **19 SOCIAL PROBLEMS**

A serious social problem in Brazil is the number of homeless children that live on the streets. It has been estimated that as many as 8 to 12 million street children live in desperate poverty. Street children as young as seven and eight years old have often been abandoned by parents who are too poor to be able to provide for them. Street children live a dangerous life. Drug abuse and glue-sniffing are serious problems among street children. They are forced to resort to stealing, pick-pocketing, and prostitution to survive. Although children have full protection under the law, thousands of street children have been murdered by Brazilian police. Shop owners hire “death squads,” believing that the immense problem of street children can only be solved by eliminating them. In response, many community groups and the children themselves have organized to raise awareness of children’s rights.

Another social problem in Brazil is its decreasing population. According to the data collected by the 2000 census, total population growth decreased by 3.3%. The decline in population may be attributed to the high rate of mortality due to an AIDS epidemic that Brazil has face since the late 1980s. At that time, the World Bank predicted that for the year 2000 Brazil would have around 1.2 million cases of AIDS. The government responded quickly and the prediction did not come true; in fact, AIDS cases numbered around 600,000 as of 2000.

### **20 GENDER ISSUES**

Although women had equal access to schools and employment in the early 1900s and suffrage on a national level in 1933, they were not on an equal footing with men in family affairs. Men were automatically heads of households and married women were legally subordinate to their husbands. However, divorce

was legalized in 1977 and the 1988 Constitution granted women and men equal status for all legal purposes. In addition, female participation in the labor force grew dramatically in the 1970s and 1980s, due to the expansion of the services sector and economic pressures on family income. The economic participation of women in Brazil rose from 18% in 1970 to 30% in 1990.

Women’s movements grew in the 1980s, when the National Council on Women’s Rights (Conselho Nacional de Direitos da Mulher, CNDM) was created. Originally the feminist movement was closely connected to human rights movements and resistance to the military regime. In the 1980s and 1990s, attention shifted to violence against women, especially domestic violence and sexual abuse and harassment.

Since the beginning of the 21st century, women’s status in Brazil has been improving on various fronts. As a rule, there are as many females as males in schools, even at the highest levels, and professions that traditionally were dominated by males, such as law, medicine, and engineering, are becoming more balanced in terms of gender. Nevertheless, there are still relatively few women in positions of power. By 2006 women made up only 11% of Congress.

# CAJUNS

**ALTERNATE NAMES:** Acadians

**LOCATION:** United States (Louisiana; Texas)

**POPULATION:** 400,000

**LANGUAGE:** Cajun French; English

**RELIGION:** Roman Catholicism, often mixed with old folk beliefs, pagan superstitions, and African spiritual practices

**RELATED ARTICLES:** Vol. 2: Americans

## 1 INTRODUCTION

The history of the Cajun people is a tale of persecution, displacement, and the struggle to find a permanent homeland. Cajuns are the descendants of exiles from the early French colony of Acadia in Canada, an area that today comprises Nova Scotia and New Brunswick. ("Cajun" is a shortened form of the word "Acadian.") In 1713, after 150 years of control by France, the area was ceded to the British, who demanded that its French settlers swear allegiance to Britain and renounce their Catholicism. After steadfastly refusing to comply with these demands, the Acadians were driven into forced exile by British soldiers in 1755. Some fled to France or other parts of Canada, others to the Eastern Seaboard of the United States, and still others to the West Indies. Eventually a number of Acadians made their way to Louisiana, which already had a strong French presence although it was then under Spanish rule. In 1765, led by Bernard Andry, a Acadian community was established in the bayous of southern Louisiana, an area that came to be known as Acadiana.

Settled in a land very different from the one they had left, with exposure to varied ethnic groups including Spaniards, Native Americans, and Black Creoles, the Cajuns developed a distinctive culture of their own, living a rural lifestyle and relying on farming, fishing, and cattle raising for subsistence. They lived in relative isolation until the 20th century, when improved transportation and communication as well as compulsory education began to break down the barriers between their communities and the mainstream culture. Recent decades have been marked by concern over the preservation of Cajun ethnicity in the face of increasing cultural assimilation, with a particular focal point being the survival of the Cajun language. Meanwhile, certain aspects of Cajun culture have gained recognition and popularity among the general U.S. population, notably Cajun food and music.

## 2 LOCATION AND HOMELAND

By 1790, about 4,000 Acadians occupied the wetlands along the banks of the Mississippi River near New Orleans. This area is full of swamps and bayous, which helped provide a safe haven for the persecuted French settlers. As their numbers grew, the Acadians moved west to settle on the Louisiana prairies. A few continued west into the wide open spaces of Texas, where they became cowboys and cattle ranchers. Today, the total number of Cajuns in the United States is estimated to be around 400,000. It is difficult to estimate the size of the population, however, because the 2000 U.S. Census dropped "Cajun" as a recognized ancestry or ethnic origin, but added "French-Canadian" instead. Modern-day Cajuns do not reject the ways of

the larger society, but they do strive to maintain many of the cultural and occupational traditions of their ancestors.

## 3 LANGUAGE

When the Cajuns first settled in Louisiana, they spoke French. Over time, their language changed as words from German, Spanish, English, and various Indian languages were added to the original French of colonial times to form what is today known as Cajun French, an oral language that does not appear in any written form. In addition to words from other languages, Cajun French is distinguished from standard French by its simplified grammar and use of some archaic forms of pronunciation retained from the 17th century. Today, Cajun French is in decline, and English is spoken in many Cajun homes as well as in public places, although often with a French accent. It is not unusual to find younger Cajuns who speak only English, while older Cajuns tend to speak Cajun French among themselves.

## 4 FOLKLORE

The most important Cajun folk figure is the heroine of Henry Wadsworth Longfellow's poem, "Evangeline." The poem tells the story of how the Acadians were driven out of Canada and wandered for years before reaching their new home in Louisiana. In the poem, Evangeline is separated from her lover, who finally gives her up for dead and marries someone else. When Evangeline reappears and discovers what has happened, she kills herself. Another famous Cajun folk figure is Jean Lafitte, a Cajun adventurer who became both a notorious pirate and a prominent political figure and entered the realm of legend.

## 5 RELIGION

Most Cajuns are members of the Roman Catholic Church. However, since their arrival in Louisiana, their Catholic beliefs have become mixed with a host of other influences, from old folk beliefs and pagan superstitions dating back to the culture of pre-Christian Europe to African spiritual practices transmitted to them by African slaves and their descendants who migrated to Louisiana from the West Indies during the 1800s.

## 6 MAJOR HOLIDAYS

Cajuns celebrate all the major religious holidays that are celebrated by Christians the world over. But for Cajuns, the most important by far is Mardi Gras, a time of celebration that precedes Lent. Cajun Mardi Gras is a much more purposeful celebration than the enormous New Orleans street party that most people associate with the festival. During Cajun Mardi Gras, masked riders go from house to house within the Cajun community urging those inside to come out, join in the fun, and make a contribution of food and drink to the community celebration. This tradition is a time of fun and fellowship for Cajuns, but, more important, it is a way of ensuring that all those in the community have enough food to last until the end of summer, when the new crops can be harvested. The demand that each household contribute to the celebration is actually a way of checking to make sure that every household has enough food to allow it to give some away. Any household that is unable to contribute to the Mardi Gras is likely to be in need of some assistance from the group.

Cajun accordion maker Larry Miller (l) shows Chris Welcker how to properly press the keys on one of his instruments during the Festivals Acadiens in Lafayette, Louisiana. The festival helps show off and preserve the Cajun traditional ways of song, food, and dance. (AP Images/Rogelio Solis)

## 7 RITES OF PASSAGE

Major life events, including birth, marriage, and death, are marked by rituals within the Roman Catholic Church.

## 8 INTERPERSONAL RELATIONS

The Cajuns are an extremely close-knit group and have maintained their unity and their culture by emphasizing loyalty and cooperation. When a member of the community is in need, others give freely, knowing that their goodwill and generosity will be returned if necessary. Traditional Cajun houses are built with a hallway at the front entrance, bounded at one end by a door leading outside, and at the other by a door leading into the house. The outer door is always left unlocked so that anyone needing a place to spend the night can enter and sleep in the hallway without disturbing those inside. In a tradition known as the *boucherie*, neighboring families each bring one animal to the local butcher to be slaughtered. Over several weeks, all the animals are butchered and the meat is shared out equally. The butcher, who does not contribute an animal, receives an equal share in return for his work.

## 9 LIVING CONDITIONS

Most Cajuns today have access to modern health-care facilities, but this was not always so. Isolated in the swamps, bayous and backwoods, they traditionally relied on folk healers, usu-

ally women with a knowledge of the medicinal effects of plants and herbs. The folk healers, whose wisdom has not been entirely lost, are simultaneously feared and admired, since they have the power to harm as well as to heal with their special knowledge.

Traditional Cajun architecture consists of daubed or half-timbered houses with gable roofs, mud chimneys, and outside stairways leading to attics. Spaces between the timbers are filled with a mixture of mud, Spanish moss, and ground clam shells called *bousillage*. This mixture, held together by the lime that is extracted from the clam shells, is strong and fire-resistant, which makes it an excellent material for use in construction. The timbers themselves are often of cypress, a wood that is plentiful; strong and hard; resistant to rot, warping, and insects; and difficult to burn. Cajun landholdings are often surrounded by the characteristic *pieux*, a unique type of rail-and-post fence. Many old Cajun houses are still occupied today, modernized with plumbing, electricity, and corrugated metal roofing.

Cajuns use the meandering waterways of the Mississippi delta as routes of transportation, and the traditional means of getting about is a small boat known as a *pirogue*. Often a pole is used to push the pirogue along although today most are equipped with outboard motors. Swamp boats, which skim the shallow waters and are powered by a large fan mounted at

the rear, are also used by many contemporary Cajun bayou dwellers.

## 10 FAMILY LIFE

The distinguishing characteristic of the Cajun family is its extended network, created through intermarriage, which links each family to all the others in the immediate community—forming, as it were, one single family. In such a network, no one is left out, and institutions such as mental hospitals and retirement homes have never developed, since the aged and the infirm have always been cared for by the community at large. Since marriage is so vital to the unity of the group, Cajun courtships tend to be short, and most Cajuns marry at an early age. Even so, a Cajun young woman is always free to turn down an offer of marriage. Sometimes she does this by sending the suitor a paper-doll cutout of a young man as a symbol of rejection. By the same token, a Cajun father can speed up the marriage process by painting the top of his chimney with whitewash as a sign that there is a girl of marriageable age in the house.

When a wedding does take place, the wedding feast is invariably held outdoors. The entire community joins in the festivities and gives gifts to the newlyweds. In one tradition, called “flocking the bride,” the women from neighboring families each give the new bride one chicken to start her own flock.

When older people get married, or when people whose spouses have died get married for a second time, it is the occasion of a special celebration called a “charivari.” When the older newlyweds return home from their modest, and often secret, wedding ceremony, the neighbors arrive at their house, banging on pots and pans and making a racket outside the house. The noise continues until the secretive newlyweds finally give in and invite the neighbors to come into the house for dancing, feasting, and merrymaking.

When a Cajun child is born, the women in the family begin making towels, blankets, bedspreads, mattresses stuffed with Spanish moss, and other household necessities. These are then saved to be used as a dowry, or wedding gift, when the time comes for the child to get married.

## 11 CLOTHING

Cajuns today generally wear ordinary clothing, sturdy and nonsensical, which is best suited for their outdoor lifestyle. One type of fabric that they traditionally weave is usually dyed blue with dye from the indigo plant. This material may have been the origin of the modern denim used to make blue jeans.

## 12 FOOD

Cajun cooking is spicy and exotic, and increasingly popular among non-Cajuns. The predominant dish is gumbo, in which just about all available food is cooked together in one large pot, heavily flavored with herbs and spices. Bouillabaisse is a traditional French soup made of fish in a tomato broth, while *boulette* is a spicy shrimp croquette. In jambalaya, rice and other foods are cooked together in a spicy mixture. Much of the Cajun diet is made up of seafood and animals that are to be found in the waters and woods of the swamps and bayous. These include the shrimp, oyster, crab, turtle, frog (only the legs are eaten), quail, squirrel, pigeon, rabbit, muskrat, squid, and crayfish—called “crawfish” by the Cajuns (fried crawfish are sometimes called “Cajun popcorn”).

## Jambalaya

1 frying chicken, cut into 8 pieces  
4 tbsp. flour  
4 tbsp. oil  
1 medium onion, chopped  
2 cloves garlic  
½ bell pepper, chopped  
4 oz. sausage or cubed ham  
1 one-pound can tomatoes  
1 tsp. Tabasco or cayenne pepper  
2 cups rice  
2 cups water

Coat chicken with flour and brown in oil. Remove from pan and use drippings to sauté onion, garlic, and pepper. Combine all ingredients and cook on stove top in covered pot for 25 minutes or until rice is tender. (Can also be prepared in an electric frying pan).

## 13 EDUCATION

Living isolated lives deep in the Louisiana backwoods, many Cajuns in the past received little or no formal education. Today, Cajuns attend public schools, and they make the same choices concerning higher education that might be made by similar rural people all over the United States. Some choose to stay at home, work at traditional jobs, and carry on the traditional culture, while others choose to go on to college, often leaving the Cajun community to assimilate themselves into the larger society.

## 14 CULTURAL HERITAGE

There is no specifically Cajun literature, for Cajun French is exclusively a spoken language. The most important Cajun contribution to American cultural life is Cajun music, which preserves much of the archaic folk tradition of the original French Acadians. The basic instruments on which Cajun music is played are the accordion and the fiddle. It is earthy, exciting music, and sometimes very sad. Among the best known Cajun musicians are Dewey Balfa, Dennis McGee, Zachary Richard, and the group Beausoleil, led by Michael Doucet. In the 21st century, a more contemporary style of Cajun music includes influences from rock, R&B, blues, soul, and zydeco. In addition to the accordion, the electric guitar, washboard, and keyboard are used. Since the 1980s musicians such as Wayne Toups, Roddie Romero and the Hub City Allstars, Lee Benoit, Damon Troy, Hunter Hayes, Kevin Naquin, and Steve Riley and the Mamou Playboys have popularized this contemporary form of Cajun music.

## 15 WORK

Traditionally, the Cajuns are a self-sufficient people who fish, hunt, trap, and farm to provide for themselves and their families. Out of the waters of the swamps and bayous they gather fish, shrimp, clams, oysters, and crawfish. They trap and hunt fur-bearing animals such as muskrat, squirrel, and rabbit. Some gather Spanish moss. Farmers raise cotton, corn, or sugarcane. Prairie Cajuns operate cattle ranches and plant rice. In fact, one-fourth of all rice grown in the United States comes from the Louisiana prairie lands. Today, harvesting shrimp and oysters has grown into a major industry. Exploratory drill-

ing for oil in the wetlands and adjacent offshore areas has provided the Cajuns with another source of employment.

## 16 SPORTS

Cajuns enjoy all the sports that are popular among the general population of the United States, but they also enjoy more unusual pastimes such as cockfights and crawfish races. Probably the best-known Cajun athlete is New York Yankees pitcher Ron Guidry, who won the Cy Young award for his performance in the 1978 baseball season.

## 17 ENTERTAINMENT AND RECREATION

The favorite form of recreation for Cajuns is a get-together involving singing, dancing, and food. The *fais-dodo* is a big Saturday night dance party attended by the entire community, young and old alike. Annual festivals are also popular. One of the biggest is Lagniappe on the Bayou, which is held in the town of Chauvin every year. Others include the New Iberia Sugar Festival and the Annual Cajun Rice Festival and Parade.

## 18 FOLK ART, CRAFTS, AND HOBBIES

Cajun folk artists are best known for their skill in weaving just about anything. The favored material is a special kind of brown cotton grown only in Cajun country, which is used to make blankets and clothing. But Cajun weavers can also make baskets and other objects out of palmetto leaves, corn husks, pine needles, and split oak bark. Handmade Cajun chairs are famous, as are the wide variety of items Cajun craftspeople fashion from Spanish moss, which grows on trees everywhere in the swamps and bayous.

## 19 SOCIAL PROBLEMS

The biggest threat to the Cajun way of life is damage to the environment as a result of the increasing presence of the oil industry in the area. Offshore oil rigs often spill oil into the water, and the maze of undersea pipelines changes the migration patterns of the sea creatures that the Cajuns depend upon so heavily for their sustenance. Cajuns also feel pressured by the rise in the number of sportsmen entering the swamps and bayous, who are often granted licenses to hunt and fish in areas that Cajuns have traditionally considered to be their own.

## 20 GENDER ISSUES

Perhaps one of the more interesting developments in gender relations for the Cajun community has been the increasing participation of women in “running” Mardi Gras (the *courir de Mardi Gras*). On Mardi Gras morning, groups of disguised riders on horses or trailers scour the countryside, singing, dancing, clowning, and coaxing homeowners into donating chicken, sausage, onions, rice, or lard to make a gumbo. These riders were invariably men. Women played essential roles in the celebration, but their work was mainly behind the scenes. Wives and mothers designed, cut, and sewed their menfolks’ fringed Mardi Gras suits. Women spent Mardi Gras cleaning chickens, cooking gallons of gumbo and pots of rice, and serving the hungry men at the end of their run. While working together, the women would joke and gossip among themselves, perhaps taking a nip of whiskey, and playing practical jokes on the men when they returned. Young girls and married women alike ended the day by dancing at the Mardi Gras ball—called

the “happy *fais do-do*.” Most women took pride in these supporting roles, but eventually some women decided that they too wanted to mask and run Mardi Gras. In the 1940s, 1950s, and 1960s it would have been unthinkable for men and women to run together. But between 1945 and 1975 women’s Mardi Gras runs began in Pointe Noir, Eunice, Duralde, Basile, and Tee Mamou. In the 1970s and 1980s the women’s runs in Eunice and Basile merged with local men’s runs. In the 21st century, mixed-sex runs take place in at least five other Cajun communities. As well, a growing number of children’s Mardi Gras runs offer young girls a chance to learn the art of running Mardi Gras at an early age.

# CAMBODIAN AMERICANS

For more information on Cambodian history and culture, see **Vol. 3: Khmer**.

## OVERVIEW

Cambodians did not begin migrating to the United States in large numbers until 1979. After the Vietnam War, which also ravaged Cambodia, and the takeover of Cambodia by the brutal Khmer Rouge regime, refugees began fleeing the country, seeking asylum in Thailand. When American journalists sent filmed reports of starving Cambodian refugees back to the United States and other countries in the West, Americans and Europeans responded by opening their doors to these immigrants.

Most Cambodians arrived in the United States in the early 1980s. Voluntary resettlement agencies, many affiliated with churches, were set up to assist the refugees in finding sponsors to help them adjust to life in the United States. Over 34,000 Cambodians immigrated to the United States in 1980 and 1981. From 1982 to 1984, more than 36,000 entered the United States. The influx of refugees began to dwindle after that, with less than 20,000 entering in 1985 and 1986, and less than 12,000 from 1987 to 1990. Cambodians continue to immigrate to the United States, however, with almost one-quarter of the foreign-born population having arrived since 1990.

The 2000 U.S. Census counted 206,052 Cambodian Americans, and by the time of the 2006 American Community Survey, the total had climbed to 238,943. Over one-third (86,700) of all Cambodian Americans live in California, particularly in Los Angeles, San Francisco, and Stockton. Massachusetts also hosts a large number of Cambodian Americans (22,106), as do Washington (13,055) and Texas (11,646). Other states with sizable Cambodian American populations include Minnesota (7,790), Pennsylvania (6,787), Virginia (6,153), New York (5,720), Rhode Island (5,030), and Georgia (4,592).

As a fairly recent refugee population, Cambodian Americans are younger on average than the U.S. population as a whole; the median age of those with Cambodian ancestry in the United States, according to the 2006 American Community Survey, was 26 years, as opposed to 36 years for all U.S. residents. Almost half of the total Cambodian American population in 2000 was under the age of 18.

The Cambodian language, also called Khmer, is related to Vietnamese and other Southeast Asian languages. The Cambodian alphabet is based on that of ancient India, which is quite different from the Roman alphabet used to write English. Therefore, Cambodians have to learn not only a new language but also a new alphabet upon arriving in the United States. Because Cambodian Americans are such recent arrivals to this country, their general level of proficiency in English is still quite low, though most are making rapid progress in their English-language skills. Typical greetings in Cambodian (spelled phonetically) are *Jum-ree-up soouh* ("Good Day") and *Sohm lee-uh hae* ("Goodbye").

Proverbs are an integral part of Cambodian education, and Cambodian Americans continue to revere these expressions

of folk wisdom, such as "The new rice stalk stands erect; the old stalk, full of grain, leans over," and "Losing money is better than wasting words." Anyone can see the sound advice in "Don't let an angry man wash your dishes; don't let a hungry man guard your rice." Cambodian Americans find special guidance in the proverb, "Travel on a river by following its bends; live in a country by following its customs."

Nearly all Cambodian Americans are Buddhist, the traditional religion of Cambodia. Buddhism is divided into the "Northern School," or Mahayana Buddhism, and the "Southern School," or Theravada Buddhism. Cambodians follow the Southern School, which preaches the importance of becoming a monk and reaching Nirvana (eternal bliss) through one's own efforts, rather than with the help of Bodhisattvas (enlightened beings), as is encouraged by the Northern School. This teaching, combined with the law of Karma (or *Kam* in the Cambodian language), which states that good deeds cause the soul to be reincarnated as a higher self, tends to make Cambodians diligent, responsible workers.

Some Cambodian Americans have converted to Christianity, but the majority continue to practice their traditional Buddhism. Whereas in 1979 there were only 3 Cambodian temples in the United States, by 2007 there were 84. Of those 84 temples, 26 are in California, 11 in Massachusetts, and 6 in Texas.

Weddings, a traditional rite of passage, are still celebrated in traditional ways by most Cambodian Americans. Although weddings in Cambodia are usually arranged by the parents, young Cambodian Americans more commonly choose their own partners. The bride wears an elaborately decorated brocade dress called a *kben*, along with many bracelets, anklets, and necklaces. Grooms sometimes still wear the traditional baggy pants and jacket, but many have shifted to Western-style suits and tuxedos. The wedding ceremony consists of a procession, a feast with much toasting of the new couple, rituals performed by a Buddhist monk, and gifts (often money) to the couple from the guests.

The most important Cambodian holiday is the New Year, or *Chaul Chnam*, and it is still celebrated by most Cambodian American communities. Usually occurring in mid-April, Chaul Chnam lasts for three days. Buddhists go to the temple and pray, meditate, and make plans for the coming year. Many Cambodian Americans also play a traditional New Year's game called *bos chhoung*, in which young men and women stand facing each other, about five feet apart. One young man throws a rolled-up scarf to a woman in whom he is interested. She tries to catch it, and if she misses, she must sing and dance for him. If she catches it, she throws it back to him. If he misses it, he must sing and dance for her.

Most Cambodian Americans are relatively poor, having arrived in the United States as refugees so recently. Lack of language skills and cultural understanding creates high unemployment and low income. However, conditions are improving as Cambodian Americans adjust to their new home. While some 42% of Cambodian American families were living below the poverty level in 1990, according to the 2007 American Community Survey that number had dropped to 16%, with less than half as many (22.4%) on public assistance as in 1990 (51%). Cambodian Americans suffer from the typical health problems associated with poverty (anemia and vitamin deficiency diseases related to malnutrition, reduced immunities, etc.) as well as mental and physical health problems specific to

refugees from a war-torn country (depression, insomnia, post-traumatic stress syndrome, and the like).

Traditional Cambodian healing techniques are still practiced by Cambodian Americans. Traditional healers, known as *krou Khmer*, use massage, herbal medicines, and “coining” (*koh khchal*), where a coin dipped in kerosene is pressed against the body at strategic points to relieve pain.

Families are extremely important to Cambodian Americans. So many lost family members to the wars in Cambodia that remaining and future family members are cherished. Cambodian American families tend to be large (averaging 4 members, as opposed to 2.6 members for all Americans), and children are treated with tremendous affection.

Women are generally granted a lower status than men in Cambodia, but their opinions are still respected. Only men may become Buddhist monks, and education is usually reserved for males. Though the ideal woman in Cambodia is an obedient domestic manager, young Cambodian American women are beginning to venture beyond that role and become well-educated professionals, sometimes making significant financial contributions to their families.

Many Cambodian Americans lack formal education. Over 37% of Cambodian Americans over the age of 25 have less than a 9th grade education, according to the 2000 U.S. Census, and over 80% have not graduated from high school. Even those Cambodian Americans who were highly educated in Cambodia before coming to the United States find that their educations are irrelevant to the American work world, and

their lack of English language skills handicaps them further. Foreign-born Cambodian Americans with elite backgrounds in Cambodia often end up working as janitors or other menial laborers in the United States.

Young Cambodian Americans are beginning to do quite well in school, however, and are generally dedicated students. Over 95% of Cambodian American boys and girls between the ages of 5 and 18 were enrolled in school in 2000.

Traditional Cambodian literature is based on models from India and consists largely of poetry, proverbs, and fables. European literary forms, such as the novel, did not become popular in Cambodia until the 1970s. Since the takeover of Cambodia by the Khmer Rouge, many intellectuals have been killed, and almost no literature has been produced.

Cambodian Americans have mostly used literature as a way to tell of the atrocities of the wars in Cambodia. Autobiography is the most prevalent Cambodian American literary form. Many Cambodian American writers have coauthors to help tell their stories in English, but others have become proficient enough in English to write their stories by themselves. One of these independent authors is Someth May, whose autobiography, *Cambodian Witness: The Autobiography of Someth May*, was published in 1986.

Most Cambodian Americans were farmers in Cambodia, but when they came to the United States they settled in cities. Lacking the job and language skills necessary to find employment, many have remained unemployed or are underemployed. Over half of those who do find jobs work in skilled blue-collar

occupations. The unemployment rate for Cambodian Americans continues to drop as they improve their language and job skills.

Poverty, unemployment, language barriers, and cultural dislocation all cause serious difficulties for Cambodian Americans, particularly those who have only recently arrived in the United States. Racial discrimination also affects Cambodian Americans, as it does other racial minorities. The generation gap between foreign-born Cambodian Americans and their American-born children (or children who were so young when they came to the United States that they have no memories of Cambodia) creates tension in Cambodian American families and communities as well. Young Cambodian Americans often discard their Cambodian first names and take on English ones to blend in better with their American peers. Some young Cambodians in tough urban settings have been forced to form gangs for self-protection.

Cambodian Americans also suffer from a stereotype that has developed because of differing cultural values. In Cambodia, courtesy and indirectness are highly valued, causing them to appear passive in the more aggressive American society. Cambodian Americans are far from passive, however, as their survival in the face of great odds proves.

Like many other Asian American women, Cambodian American women tend to have higher rates of reproductive and sexual health problems due to their profound sense of modesty that makes physical examinations by doctors who are strangers and often male extremely difficult. A lack of English language skills also complicates pursuing and receiving treatment. Consequently, about one-quarter of Cambodian American women do not have regular breast cancer screenings, and poor prenatal, natal, and postnatal care leads to one of the highest infant mortality rates among ethnic populations in the United States.

The persistent sexual exploitation and violence perpetrated by the Khmer Rouge against women and children left emotional, psychological, and sometimes physical wounds that Cambodian women (as well as men) carry with them to the United States. The need for survival forced victims of abuse to remain silent in Cambodia, and it takes some time in the safer environs of the United States for those victims to begin to feel able to express and address their hurts. This silence leads to a continuing cycle of abuse among Cambodian American families that is slowly being exposed and healed with treatment.

# CANADIANS

**LOCATION:** Canada

**POPULATION:** 33.1 million (2008)

**LANGUAGE:** English and French (both official); Italian; German; Chinese; Spanish

**RELIGION:** Roman Catholicism and Protestantism (majority); Judaism; Buddhism; Sikhism; Hinduism; Bahaism; traditional religions of native groups

**RELATED ARTICLES:** Vol. 2: French Canadians, Native North Americans

## <sup>1</sup> INTRODUCTION

Canada is the world's second largest country, surpassed in area only by Russia. It is also one of the least densely populated, with most of its population concentrated in a strip 180 miles (290 kilometers) wide along its border with the United States, and vast uninhabited or sparsely populated expanses to the north. The name "Canada" is derived from *kanata*, a Huron-Iroquois term for "village" or "settlement." Amerindian and Inuit peoples first migrated to present-day Canada from Asia across the Bering Straits around 10,000 BC. The native population is thought to have numbered between 10 and 12 million at the time the British and French were establishing their first settlements in the area.

The colonial rivalry between England and France for control of Canada began in the 15th century. In 1497 John Cabot landed on the shores of Newfoundland at the head of an English expedition. Some 40 years later, Jacques Cartier claimed the Gaspé Peninsula for the French and discovered the St. Lawrence River. By the late 17th century, France and Britain were rivals for the region's rich fish and fur trade. Their North American hostilities, reinforced by wars in Europe, were ended by the Treaty of Paris in 1763, giving the British control over what had formerly been New France.

The 19th century saw the creation of the Dominion of Canadian by the British North America Act of 1867. By 1949, with the addition of Newfoundland, the Dominion had grown to include 10 provinces. Since World War II, Canada has played an active role in world affairs as an influential member of the British Commonwealth, a founding member of the United Nations, and a member of the North Atlantic Treaty Organization (NATO).

Domestically, a historic development has been the growth of the French Canadian separatist movement since the 1960s, leading to the establishment of French as Quebec's official language in 1974 and the elevation of the separatist Parti Québécois to power in Quebec in the elections of 1976. In 1995 a referendum for independence was voted down by a very narrow margin, but discussions for independence continued. Then in 2003 the Parti Québécois was defeated in provincial elections. Despite these minor setbacks, in 2006 parliament voted to acknowledge Quebec as a nation within Canada, but since there are no particular constitutional grounds to allow such a relationship, this nation within a nation status remains more or less a symbolic gesture.

In 1992, Canada signed the North American Free Trade Agreement (NAFTA), joining with the United States and Mexico to create a common economic market. The agreement went

into effect in 1994. While the agreement has generally been beneficial for trade in Canada, some tension has arisen over issues that affect Canadian exports. Relations between the United States and Canada have been strained over issues of foreign policy, particularly after the 11 September 2001 terrorist attacks in the United States and the U.S.-initiated War on Terrorism. Canada sent troops to aid in the invasion of Afghanistan but did not support the U.S.-led efforts against Iraq, beginning in 2003. In Afghanistan, Canada by 2006 had begun a major role in the more dangerous southern part of the country for the NATO-led International Security Assistance Force (ISAF). A battle group of more than 2,000 soldiers was based around Kandahar. Fighting was fierce and by mid-January 2008, 77 Canadian military personnel had died in the country. Canadians questioned whether or not troops should be pulled out at the end of the existing commitment in February 2009. In October 2007, Prime Minister Stephen Harper called for an independent panel to study the issue of when troops should leave, and if they were to stay, what their mission should be.

As neighbors, Canada and the United States share many cultural and social aspects. For instance, Canadians are very familiar with many aspects of U.S. culture, such as movies, music, sports, retail stores, and restaurant chains. But this influx of U.S.-based businesses and entertainment has led some Canadians to believe that their own unique cultural heritage is being unnecessarily overshadowed by their neighbors. Citizens and government alike continue to seek ways to promote and preserve their own Canadian brands and cultural heritage.

## <sup>2</sup> LOCATION AND HOMELAND

Canada is a vast country characterized by great geographical variety. Covering about two-fifths of the North American continent, it has an area of 3,849,650 square miles (9,970,594 square kilometers), of which about 90% is land and the rest is fresh water. Canada also has the world's longest coastline, totaling nearly 151,600 miles (243,924 kilometers). The country's dominant topographical feature is the Canadian Shield, a rocky area of forests, lakes, and wilderness that surrounds Hudson Bay and covers roughly half of Canada, separating the eastern and western parts of the country.

The Atlantic provinces, to the east of the Shield, include two islands: Newfoundland and Prince Edward Island. The Great Lakes-St. Lawrence lowlands south and southeast of the Canadian Shield are home to the largest portion of Canada's population and contain the major cities of Toronto and Montreal, as well as the nation's capital, Ottawa. The farmlands and ranching areas of the Western Plains lie west of the Canadian Shield and east of the Rocky Mountains. Still farther west lies the Western Cordillera (mountain range), which includes the Rockies. Canada's western coast is lined with deep fjords and inlets. The northernmost part of Canada includes the tundra that lies north of the tree line and the country's Arctic islands, of which the largest, Baffin Island, covers an area greater than California.

Although Canada is 10% larger than the United States (including Alaska), it has far fewer people—with an estimated population of about 33.1 million in 2008. Many areas of the country are sparsely settled, while nearly two-thirds of all Canadians are concentrated within 100 miles (160.9 kilometers) of the U.S. border. About 80% of the population lives in urban areas. Toronto is the most populous metropolitan area, with

over 5 million persons in 2008, followed by Montreal, with approximately 3.6 million. Canadians of British descent are the country's largest ethnic group, accounting for roughly 28% of the population. French Canadians account for around 23% (with a majority of them in Quebec) and 15% are from other European backgrounds. About 26% are considered to be of mixed heritage. Smaller percentages are represented by a variety of other groups, including, Asians, Africans, and Arabs. Canada's native peoples, including Inuits (Eskimos) and Amerindians, represent only about 2% of the population.

**3 LANGUAGE**

Both English and French are official languages in Canada. Speakers of both languages have the right to publicly funded primary and secondary education in their own language. Although Canada is generally considered a bilingual country, only about 15% of the population is actually bilingual. About 59% speak English only and 23% French only (primarily in Quebec). Other languages spoken as a mother tongue are (in order of importance) Italian, German, Chinese, and Spanish.

In the Prairies, the most common nonofficial language is German; in central Canada, Italian; in British Columbia, Chinese; in the Northwest Territories, Inuktitut; in the Yukon, the Athapaskan languages of the Déné family; and in the Atlantic region, Micmac. Canada's native peoples speak between 50 and 60 different languages belonging to 11 distinct linguistic families.

**4 FOLKLORE**

Canada's folklore tradition is generally divided into four main strains: native, French Canadian, Anglo-Canadian, and other ethnic groups (such as the Ukrainians of the prairie, Manitoba's Icelanders, or the Yiddish-speaking Jews of Montreal). The native tradition includes creation and hero myths, such as the Raven and Thunderbird cycles of the West Coast and the Nanabozo stories of the Algonquian peoples.

The oral tradition of the French Canadians was strengthened by colonial laws against the establishment of presses and by the scarcity of French schools, both of which made it important for French Canadians to transmit their culture orally across the generations. Popular characters in French Canadian

folklore include a hero figure named Ti-Jean (short for *petit Jean* or Little John) and a hunter named Dalbec. Jokes and anecdotes—including “Newfie” jokes about Newfoundlanders—are popular forms of folklore among Anglo-Canadians.

## 5 RELIGION

A majority of Canadians are Christians with about 43% belonging to the Roman Catholic Church. About 23% are Protestants, with the largest denomination being the United Church of Canada (9.6%), followed by Anglicans (6.9%), Baptists (2.5%) and Lutherans (2%). About 4% are members of other Christian denominations. Approximately 2% of the population is Muslim. Other religions include Judaism, Buddhism, Sikhism, Hinduism, the Baha’i faith, and the traditional religions of native groups. About 16% of the population claims no religion at all. Roman Catholics are in the majority in Quebec and New Brunswick, while the other provinces are predominantly Protestant. With larger numbers of immigrants coming from the Middle East and Asia, the numbers of Muslims, Hindus, and Buddhists are growing as well.

The United Church of Canada, the largest Protestant denomination in the country, was established in 1925 through the merger of the Methodist Church, Canada, the Congregational Union of Canada, and a large portion of the Presbyterian Church in Canada.

Freedom of religion is protected by the Canadian Bill of Rights, which has been incorporated into the constitution.

## 6 MAJOR HOLIDAYS

Canada’s most important national holiday is Canada Day (formerly Dominion Day), on 1 July, commemorating the establishment of the Dominion of Canada in 1867. Canadians celebrate their nation’s “birthday,” in much the same way their neighbors in the United States celebrate the Fourth of July: with patriotic ceremonies, picnics, and fireworks. The holiday marking the beginning of summer in Canada is Victoria Day, the Monday preceding May 25 (called Dollard Day by residents of Quebec, who prefer to remember a 17th-century French war hero on that date rather than Britain’s Queen Victoria). Canada’s Labour Day, like that of the United States, occurs at the end of summer (the first Monday in September). Other legal holidays include New Year’s Day, the major holidays of the Christian calendar, and a Thanksgiving holiday similar to that of the United States but held on the second Monday in October.

## 7 RITES OF PASSAGE

Canadians mark births, marriages, and deaths in ways similar to most western nations.

## 8 INTERPERSONAL RELATIONS

Canadian’s reputation for courtesy, tolerance, and cooperation is reflected in the traditional designation of their country as the “peaceable kingdom.”

## 9 LIVING CONDITIONS

The average number of persons per household in 2006 was about 2.5. That year, about 55% of all households lived in single, detached homes and about 65% of all dwellings were owner occupied. About half of all dwellings were built between 1946 and 1990 and a majority of homes were considered to

be in good condition, requiring only minor repairs or regular maintenance. The average value of a private home was about c\$162,709 in 2001.

As a group, Canadians enjoy excellent health. Canada has a fairly low infant mortality rate—at 4.6 deaths out of 1,000 live births it is better than that of the United States. Life expectancy at birth in 2007 was estimated at about 77 years for men and 84 years for women. The Canadian national health plan—which has been a focus of attention in the United States debate about the future of its own health-care system—covers at least three-quarters of all the nation’s health-care expenses. A 1995 survey found that middle-aged Canadians’ risk of stroke and heart disease had increased since 1970 due to higher cholesterol levels, high blood pressure, and lack of regular exercise. Stress and lack of time due to job demands were cited as reasons for bad health habits on the part of the nation’s aging “baby boomers.”

Because of Canada’s vast geographical expanse and scattered settlement patterns, the development of an adequate transportation system has been crucial to its development and survival as a nation. After the United States, Canada has the world’s highest per capita use of motor transportation. Private automobiles are used for four-fifths of urban travel, and there is one passenger car for every two persons. Canada’s severe winters make road maintenance an ongoing and expensive task. The government-owned Canadian Railways (CNR) and privately owned Canadian Pacific provide important all-weather transportation over great distances in large volume. Water transportation is heavily used for both domestic and international shipping, and international air service is provided by government-owned Air Canada and Canadian Airlines.

## 10 FAMILY LIFE

Nuclear families are the norm throughout Canada. The multigenerational extended family, which represented 7% of all households in 1951, now accounts for less than 1%. The Canadian birthrate declined rapidly from an average of 3.2 children per family in 1971 to 1.7 in the late 1980s. In 2007 the fertility rate was 1.6 children per family.

Fewer men and women are marrying in their teens or early twenties, with many waiting to marry until after they have completed college. Many couples are also waiting longer before having their first children. The average age at a first marriage is about 30 for men and 28 for women. In most families, women complete their childbearing within a relatively short time, with children separated from each other by only a few years. The majority of married couples share similar ethnic, religious, and educational backgrounds. In 2003 Ontario and British Columbia became the first two provinces in Canada to legalize same-sex marriages. That year, there were 774 same-sex marriages registered in British Columbia, of which about 54% of the couples were female. Same-sex marriage became legal nationwide in 2005 through the Civil Marriage Act.

Liberalized divorce laws, a variety of social changes, and a decline in religious belief have resulted in a growing divorce rate. Currently, close to half of all Canadian marriages (4 out of 10) end in divorce, with an estimated 38% of all marriages ending in divorce by the 30th wedding anniversary.

## 11 CLOTHING

Canadians wear modern, Western-style clothing. They may wear the traditional costumes of their ethnic groups (Eastern European, Asian, Middle Eastern, and so forth) on special occasions. In the western provinces, American-style cowboy gear is worn for special occasions and festivals, such as the Calgary Exhibition and Stampede in Alberta.

## 12 FOOD

Different foods are found in the different regions of Canada. "Brewis" (cod) is a favorite in Newfoundland, and the Maritime provinces are known for their seafood, including clams, oysters, salmon, lobster, cod, mackerel, and herring. Clambakes are especially popular on Prince Edward Island. In New Brunswick, the unusually shaped ostrich fern sprout, known as the fiddlehead, is considered a delicacy. Quebec has a distinctive French-Canadian cuisine. Popular dishes include the *tourtière*, a meat pie, and *ragoût de boulettes et de pattes de cochon*, a stew made from meatballs and pigs' feet. Quebec is also known for its maple syrup and families enjoy traveling to one of the province's many sugar shacks to sample this local product in candies, cookies, and other foods—even in ham and eggs.

Ontario has a wide variety of produce and cheeses; two of the province's favorite dishes are roast pheasant and pumpkin pie. Big, hearty meals are the rule in the rugged Prairie provinces of Manitoba, Saskatchewan, and Alberta. Alberta is known for the quality of its grain-fed beef, and wild rice is a delicacy in Manitoba. Moose meat and fresh lake fish, including Arctic grayling and char, are widely eaten in the Northwest Territories.

## 13 EDUCATION

Nearly the entire adult population of Canada is literate. Education is administered by each province individually, although in all cases it is compulsory from the age of 6 or 7 to 15 or 16. In spite of some individual differences, the various educational systems are basically similar in all provinces except Quebec, which has two parallel systems, one of which is specifically for French-speaking, Roman Catholic students and the other for non-Catholic English-speaking students. Most higher education is government-funded. Canada's best-known universities are the University of Toronto and McGill University in Montreal. One of the oldest is Laval University in Quebec, which started out as a French Jesuit seminary. The first English-speaking college in Canada was King's College in Halifax, Nova Scotia. Canada's degree-granting institutions (of which there are over 60) also include community and regional colleges, as well as colleges of applied arts and technology. As of 2006 about 23% of all adults between the ages of 25 and 34 had a university degree. About 24% of all adults of the same age group reported having a high school diploma as their highest level of educational attainment.

## 14 CULTURAL HERITAGE

Well-known Canadian authors of the past have included Lucy Maud Montgomery, author of *Anne of Green Gables*, and short-story writer Stephen Leacock. Margaret Atwood, Alice Munro, Robertson Davies, Mordecai Richler, and Margaret Laurence are among the best-known modern writers.

Internationally acclaimed classical musicians have included pianist Glenn Gould and vocal artists Jon Vickers and Maureen Forrester. Well-known popular performers include the bandleader Guy Lombardo, Joni Mitchell, Neil Young, Paul Anka, Celine Dion, and Gordon Lightfoot. There are a number of Canadian born actors that reached their claim to fame in Hollywood. They include Mary Pickford, Lorne Green, Raymond Burr, William Shatner, and Donald Sutherland.

Canada was the native land of many renowned scientists and inventors as well. Sir Sanford Fleming was the inventor of standard time. Sir Frederick Grant Banting and John James Richard Macleod were awarded the Nobel Prize for medicine in 1923 for their discovery of insulin.

Prestigious theatrical events include the Stratford Festival and Shaw Festival, both held every year in Ontario, and the Festival Lennoxville in Quebec.

There are about 2,000 museums, art galleries, and similar institutions in the country. Some of the most prominent museums include the National Arts Center, the National Gallery of Canada, the Canadian Museum of Nature, and the National Museum of Science and Technology, all of which are located in Ottawa.

## 15 WORK

In 2006 about 76% of the labor force was employed in service-sector jobs, 13% in manufacturing, and only 2% in agriculture. That year, about 15% of the total labor force included those who were 55 years old or older. Such a high percentage of older workers is attributed to the aging of the baby boomer generation and to the fact that workers are choosing to remain working, either due to their financial situation or simply to remain active in their professions. Since the early 2000s, there has been a decline in the number of manufacturing jobs while the number of service related jobs has increased. In January 2008 the average weekly earnings for payroll employees was about c\$785. About one-third of Canada's labor force is unionized. About 81% of all employees work in full-time positions.

Like their neighbors in the United States, Canadian workers are increasingly finding themselves working harder for the same pay, as jobs become more competitive and less secure. Longer hours and greater pressure on the job have produced higher levels of dissatisfaction in the workplace, which in turn have led to increased absenteeism, job burnout, and associated family problems. The unemployment rate in March 2008 was estimated at 6%.

## 16 SPORTS

Ice hockey is Canada's national sport and its stars are worshiped as national heroes. Professional games draw thousands of fans on Saturday nights and youngsters often rise as early as 4:00 or 5:00 am on weekends to play on little-league teams that can book space at ice rinks only in off-hours. There are 6 Canadian and 24 U.S. hockey teams that compete in the National Hockey League, which was founded in Montreal, Quebec, in 1917. Canadian teams also compete with U.S. teams in the National Basketball Association and Major League Baseball (American League). The Canadian Football League, with nine teams nationwide, plays the sport similar to American football. The Canadian Soccer League has seven teams. Canada has three teams in the United Soccer League.

*James Dunnigan and his mother walk in the shadow of an iceberg on Alsek Lake in British Columbia, Canada.  
(David McLain/Aurora/Getty Images)*

Other popular winter sports include skiing, ice-skating, snowshoeing, and tobogganing. Favorite summer sports include baseball, volleyball, and soccer. CASCAR, the Canadian Association for Stock Car Racing, was established in 1981. Canadians often perform calisthenics during the seventh-inning stretch of professional baseball games, led from the dugout roof by fitness-minded fans. Among Canada's traditional sports, lacrosse originated with the native population before the arrival of Europeans and curling was adopted from the Scots. Curling was designated as the provincial sport of Saskatchewan.

Canada has been host to the Olympic Games in 1976 (summer) and 1988 (winter). The Canada Games is a national amateur event held once every two years that features about 40 different sporting events. The Arctic Winter Games, held every other year since 1970, is an international amateur event that is hosted in different provinces and territories.

### **17 ENTERTAINMENT AND RECREATION**

Canadians today enjoy more leisure time than ever before and spend it in a variety of sporting and other recreational activities. Like their U.S. counterparts, Canadian families spend much of their evening time watching television. Many are regular newspaper readers. Their scenic native land provides many Canadians with recreation in the form of vacation trips, on which they spend over \$6 billion a year. Many own week-

end and vacation cottages on lakeshores or in wooded areas. There are more than 90 bird sanctuaries and 44 National Wildlife Areas in the country. If they choose, however, Canadians can also spend their entire vacation at the mall; the West Edmonton Mall—the world's largest shopping mall, with over 800 stores—boasts seven amusement parks, a large indoor ice rink, a 14-story-high roller coaster, several aquariums, and its own hotel.

### **18 FOLK ART, CRAFTS, AND HOBBIES**

Amerindian artists produce crafts, including jewelry, beaded moccasins, baskets, and leather goods, as well as stylized artwork that is displayed and sold in galleries and gift shops. The Inuit are known for their soapstone, ivory, and serpentine carvings as well as prints, paintings, drawings, and wall hangings, all in a distinctive native style. Their art shares certain common themes, including the group's traditional lifestyle and survival techniques, the animals native to its homelands, and the myths and spirits of its traditional religions. The arts and crafts of the Dene Indians and the Inuit are displayed in cooperative workshops in the Northwest Territory. A reconstructed Indian village in British Columbia displays the crafts of the North West Coast Indians.

## 19 SOCIAL PROBLEMS

Between 2001 and 2006 the foreign-born population of Canada increased by 13.6% so that nearly 20% of the total population was foreign-born in 2006. While this fairly rapid increase in immigration has generally been viewed as beneficial for the overall economy, there are also problems related to integration (such as language and job placement) and discrimination from native born citizens.

Canada has fewer violent crimes than many other societies. Its cities are generally clean, efficiently run, and relatively free of such common urban problems as homelessness and illegal drug dealing. It has a large national debt and faces growing demands for decentralization from many of its regions.

One of Canada's most serious problems is the threat that Quebec will secede and become a sovereign state, a move with grave political and economic implications for all Canadians. In 2006 the parliament voted to recognize Quebec as a nation within Canada. This, however, seems to have been primarily a symbolic gesture, since there are no constitutional or other legal grounds that define such a relationship.

## 20 GENDER ISSUES

Both women and men are able to participate fully in the labor force and in government; however, reports indicate that the average earnings of women are still substantially lower than that of men. In 2003 the average yearly earnings for a woman working full-time were about 30% less than that of a man. In 2004 about 58% of all women aged 15 and over were part of the paid workforce, accounting for about 47% of the total workforce. However, about 27% of all women in the workforce were in part-time positions. There have been slight gains in the number of women employed in various professional fields, such as medicine and financial services. In senior level managerial positions, however, men continue to outnumber women. The number of single mothers in the workforce has increased dramatically, from 50% in 1976 to 68% in 2004.

Same-sex marriage became legal nationwide in 2005 through the Civil Marriage Act. As of 2008 Canada was one of only five countries in the world to have legalized same-sex marriages. The other four countries were The Netherlands, Belgium, Spain, and South Africa.

## CENTRAL AMERICANS IN THE US

For more information on Central American history and culture, see **Vol. 2: Belizeans, Costa Ricans, Salvadorans, Guatemalans, Hondurans, Nicaraguans, and Panamanians.**

### OVERVIEW

The first officially recorded Central American immigrants entered the United States in 1820. Central Americans continued to immigrate to the United States in small numbers until the mid-20th century. Beginning in 1950, Central American immigration to the United States increased steadily, with a large wave in the 1970s when several Central American countries erupted in civil war. Since then, a number of natural disasters such as hurricanes Mitch (1998) and Stan (2005) and earthquakes have prompted other waves of exodus from Central American countries to the United States.

During the 1950s and 1960s, most Central American immigrants to the United States were middle- and upper-middle-class Panamanians and Hondurans. Many were students pursuing higher education, while others were young professionals in search of advanced career opportunities. In the 1970s, however, the make-up of Central American immigrants changed dramatically. Most were from El Salvador and Nicaragua (where violent civil wars had erupted) and Guatemala (where a repressive military government was in control). The majority were uneducated, illiterate peasant farmers with few, if any, industrialized job skills. For political reasons, these immigrants were rejected as legal immigrants by the United States and were refused refugee status. Those who chose to remain in the United States without official sanction were classified as “illegal aliens.” The preferred term in use today among the Hispanic American community, however, is “undocumented migrant.”

The passage of the Illegal Immigration Reform and Immigrant Responsibility Act in 1996 imposed heavy requirements on Central American immigrants before allowing them legal status in the United States. A year later, the Nicaraguan Adjustment and Central American Relief Act was passed to ease the process of legalization for certain Central Americans.

Refugees from the natural disasters of the 1990s and early 2000s were granted “Temporary Protected Status,” allowing them to work in the United States for a limited period of time without being deported. However, there is no process to apply for citizenship included. So, although some 374,000 Central Americans live in the United States under Temporary Protected Status, they will be expected to return to their countries of origin when their allowable time is up.

Because of strict U.S. immigration policies, Central Americans resort to desperate measures to immigrate. Smugglers and “tour operators,” sometimes called *coyotes*, profit from the situation by transporting refugees across the various borders between Central America and the United States. Coyotes may provide false documents and visas for a very high price. For most Central Americans, illegal immigration to the United States is extremely dangerous. In 1981, retired Arizona rancher Jim Corbett, a Quaker, founded the Sanctuary Movement by

giving aid to Central American refugees crossing the United States-Mexico border. A year later, Reverend John Fife and the congregation of the Southside Presbyterian Church in Tucson, Arizona, declared their church a “Sanctuary church,” sheltering refugees and helping them resettle in the United States. The movement grew throughout the 1980s to include over 500 churches as well as whole cities declaring themselves a “sanctuary city,” with local legislation implemented to assist undocumented migrants, often in defiance of federal laws. By the mid-1990s, the Sanctuary Movement faded from public discourse, although many churches and cities continued to claim “sanctuary” status. In response to recent conflicts over proposed immigration policy reforms, the New Sanctuary Movement was convened in 2007 to give undocumented migrants a public voice in the debates and protect them from abuses.

A large majority of Central American refugees settle in Los Angeles, California, sometimes called the “Central American capital of the United States.” According to the 2000 U.S. Census, over 370,000 Central Americans lived in Los Angeles. There are also large populations of Central Americans in Miami (128,903), New York City (99,099), Houston (60,642), Dallas (29,150), San Francisco (23,367), and Washington, D.C. (15,803). The state of New Jersey is host to over 80,000 Central Americans, and Georgia and North Carolina are each now home to more than 30,000 Central American immigrants.

Determining the exact number of Central Americans living in the United States is impossible because so many are undocumented migrants not included in official population counts. The 2000 U.S. Census counted 1,686,937 Central Americans, of whom 1,372,428 (81%) were foreign-born, but other estimates are as high as 2 million or more. In 2000, Salvadorans (655,165) were the largest Central American group in the United States, followed by Guatemalans (372,487), Hondurans (217,569), Nicaraguans (177,684), Panamanians (91,723), and Costa Ricans (68,588). Other Central Americans accounted for another 103,721 persons.

Most undocumented Central American immigrants in the United States live in overcrowded slum conditions, hardly better than the Central American refugee camps from which some of them started their journey. As many as 20 people may share a one-room apartment where they sleep and eat in shifts. Landlords exploit the fears of undocumented migrants by charging exorbitant rents and threatening to turn the migrants in to the INS if they do not pay.

Employers also exploit undocumented Central Americans. Lack of documentation, along with a lack of language (the majority speak only Spanish) and appropriate job skills, makes it very difficult for most U.S. Central Americans to find employment. Those who are lucky enough to find jobs are often paid less than minimum wage and expected to work long hours in poor work environments. Fear of detection forces the workers to accept these unfair working conditions. Common employment for undocumented U.S. Central Americans includes unskilled day labor, low-level work in the service industry, construction work for men, and domestic service or work in the garment industry for women. Most jobs are only part-time.

The majority of Central American immigrants of the past few decades suffer from serious physical and mental health problems caused by experiences in their homelands and the difficult journey to the United States. Undocumented migrants are often afraid to go to the doctor or hospital, however, for

*Carolina Blanco, originally from El Salvador, and others are sworn in as United States citizens during a naturalization ceremony in Fort Lauderdale, Florida. (Joe Raedle/Getty Images)*

fear of detection by the INS, so many of their ailments go untreated. A number turn to folk remedies prescribed by *sobadores* or *curanderos* (folk healers) or to drink *remedios* (herbal teas). Others may take advantage of clinics set up specifically for Central American immigrants in cities such as Los Angeles. U.S. Central Americans have also banded together to form organizations to help each other, such as the Central American Refugee Center (CARE-CEN), which has branches nationwide.

Prior to 1982, most undocumented U.S. Central Americans were afraid to send their children to school for fear they would be detected by immigration authorities. In 1982, however, the U.S. Supreme Court ruled that children of undocumented migrants are entitled to free public education. Since that time, parents have not had to show evidence of citizenship or legal immigrant status to enroll their children in school. More U.S. Central American children, therefore, now attend school. However, most have had sporadic educations in their homelands and have a difficult time catching up to their age-appropriate grade level. Language barriers also create problems for U.S. Central American students, many of whom speak only Spanish at home. Older students may also feel resentment towards being treated as children, having functioned as adults in Central America.

Despite the obstacles they face, U.S. Central Americans have created a community in their new homeland. Many Central Americans play in major league U.S. sports, especially baseball. Through education and consciousness-raising, U.S. Central Americans have raised other Americans' awareness of conditions in Central America. And despite their struggles to find employment, and the low wages they often receive when they do, almost 80% of Central American immigrants send money back to family members in their country of origin; an estimated \$9.5 billion was remitted in 2007.

Central Americans have traditionally turned to the family for support, but most U.S. Central Americans' families have been torn apart by the violence in their former homelands and separation during immigration. Traditional male and female roles are also disrupted in the United States because finding jobs is often easier for women than for men. In Central America, the man is the undisputed head of the household and chief breadwinner. Some Central American immigrant men who are frustrated and angry at their situation in the United States turn to alcohol and drugs. Some take their frustrations out on the women and children around them, making domestic violence a problem among U.S. Central Americans.

**CHILEANS**

**LOCATION:** Chile

**POPULATION:** 16.5 million

**LANGUAGE:** Spanish, Mapudungun

**RELIGION:** Roman Catholicism; Protestantism; and indigenous religions

**1 INTRODUCTION**

Several Amerindian cultures such as the Atacameño and the Diaguita in the north, and the Mapuche further south thrived in Chile prior to the arrival in the 15th century of Inca invaders from Peru. The Incas extended their empire for a short time as far as Santiago, which is now Chile's capital city.

In 1520 the Portuguese explorer Fernando de Magallanes (or Ferdinand Magellan) sailed through the straits at the southern tip of Chile. In 1536, the Spaniard Diego de Almagro crossed into Chile from Peru, but it was Pedro de Valdivia who established the first Spanish settlement at Santiago in 1541. Spanish colonial rule lasted until the beginning of the 19th century, when conflicts with Spain led the Chilean military leader, Bernardo O'Higgins, to join forces with José de San Martín from Argentina to liberate the Chileans from Spanish rule. O'Higgins became the first ruler of the independent republic of Chile in 1818, and in further struggles this joint Andean army also fought the Spanish royalists as far as Peru.

Chile developed two main political parties, the Conservatives and the Liberals, and Chile's economy developed as a result of trade that flourished with European powers such as England in the 19th century and the United States in the 20th century. First, there was a nitrate boom in the late 19th and early 20th centuries. Copper and silver mining became important sources of income, and farming developed. Initially wheat was an important crop, but gradually a variety of fruits and vegetables gained in importance as they found markets locally and abroad.

In the 20th century Chile experienced dramatic changes of government, including the socialist rule of Salvador Allende (1970–1973), who was the first Marxist Socialist president in the world to be freely elected in 1970. The socialist project of the Popular Unity (UP) ended on 11 September 1973 when the armed forces, with support from the parties of the Right and the Center, attacked the government palace, La Moneda. Immediately after General Augusto Pinochet took power, a group of Chilean economists, who had been trained at the University of Chicago on scholarships, implemented for the first time a package of radical neoliberal reforms. In order to maintain stability, the public sphere was reduced through censorship and repression, social movements were crushed, and people had to endure in silence the hardships caused by economic policies aimed to deregulate and fragment the labor market and to reduce state intervention in the economy. The resulting increase in poverty, from 17% to 38.6% of the total population, and inequality changed the social landscape and exacerbated class divisions.

Even though Pinochet's rule lasted 17 years, his regime ended without bloodshed when Patricio Aylwin, leader of a Center-Left coalition, Concertación de Partidos por la Democracia, was elected president in 1989. The peaceful transition of

leadership was built upon negotiations between the elites and the military and was framed by guidelines introduced in the 1980 Constitution that were aimed to maintain political and economic stability. The Concertación committed to continue the economic model and to respect the self-granted amnesty of the military. Despite the constitutional restraints, economic growth averaged 6.3% a year, and targeted social spending to the poorest sector helped Aylwin's government achieve a 10 point reduction in poverty by the end of his administration in 1994. For the second presidential elections since the return to democratic rule, the economy was growing at a steady rate of 6% and inflation had been cut in half. Chile was in the middle of the so-called "golden decade of growth" and Eduardo Frei, the Concertación's candidate, was rewarded with 57.98% of the national vote.

In July 1997 the Asian financial markets fell and the world experienced the effects of the so-called Asian Crisis. Chile, one of the most open countries to the world market, was strongly hit by the debacle. After 13 years of constant economic growth, Chile's economy began to slow down. For the 1999 presidential elections the support for the incumbent coalition declined and during the 1999 presidential election the Concertación's candidate Ricardo Lagos, a former minister of education and public development, almost lost the election. Nevertheless, Lagos was successful in signing free-trade agreements with the United States and the European Union (EU) and in putting an end to the authoritarian elements still present in the Constitution. By the end of his presidency, Lagos enjoyed a 60% approval rating.

In addition to the popularity of her predecessor, Michelle Bachelet, the fourth president of the Concertación and the first woman to be elected to the highest office, won in 2006 thanks to the support of women. She managed to break the tendency of women to vote for the conservative Right and increased her female vote by almost 5 points over Lagos. As a newcomer to politics, Bachelet represented a new style of participatory democracy. In addition, her biography turned her into a symbol of reconciliation. Her father, a high-ranking army general, died after being tortured by Pinochet's supporters. She and her mother were also tortured and then sent to exile. However, she embraced the idea of reconciliation and focused on renewing the people's trust in the armed forces.

## **2 LOCATION AND HOMELAND**

Chile's Pacific coastline is over 4,000 km (2,485 mi) long. The Andes Mountains run the full length of this immensely long, narrow country, which borders Argentina to the east and Peru and Bolivia to the north. Chile has a varied climate, from the northern Atacama desert, through snow-clad Andean peaks, to farmlands where grapes provide excellent Chilean wine and other fruits, such as apples and cherries are grown for export, to grain and cattle country, as well as fishing zones further south where snow-covered volcanoes and lakes abound. Despite the natural beauty, about 6.5 million people 40% of the total population live in the capital, Santiago.

Chile is a relatively homogeneous country regarding race and ethnicity. About 70% of the population is Mestizo (European and Amerindian descent), one fifth is of European descent (mainly Spanish, but also German, Italian, and British), and around 10% are indigenous. The Mapuche in the Araucanía region are the more numerous with almost a million

people, followed by the Aymara in the north and the Rapanui in Eastern Island.

## **3 LANGUAGE**

The official language of Chile is Spanish. However, there are several indigenous languages such as Aymara, Mapudungun, and Rapanui, which are spoken in indigenous communities in the north, south and Eastern Island, respectively. In addition, English as a second language is currently being taught in public school throughout the country, as well as in almost all private schools.

## **4 FOLKLORE**

One of the important folk heroes of Chile is a Mapuche Indian named Lautaro, who learned Spanish and was at the service of the Spanish conqueror Pedro de Valdivia. He was chosen by his people to lead the resistance against the Spanish. Having

*An older indigenous man from Socoroma waits for the start of the Roosters Race (Corrida de Gallos) during the Ño Carnavalón celebration in Putre, Chile. The celebration takes place in the days leading up to Ash Wednesday. (Francisco Manrique/AFP/Getty Images)*

learned the Spanish ways and arts of war, he proved a formidable opponent, teaching his people to ride horses and developing effective war tactics that gave Mapuches an advantage in known terrain. Lautaro was already at the gates of Santiago, the capital, when he was killed, and the Mapuches retreated southward where they continued to fight the Spanish. Still, many of them continue to resist assimilation.

Another folk hero is Captain Arturo Prat who represents honor and determination during troubled times. Even though his brave resistance aboard the battleship *Esmeralda* during the War of the Pacific in 1879 did not result in victory, the Batalla de Iquique, in which he died, is commemorated every May 21 with a national holiday.

Many myths and legends survive in Chilean folklore. One of the most common comes from the islands of Chiloé in southern Chile. It is the tale of a large phantom ship, the *Caleuche*, which sails the seas around Chiloé at night. It appears as a beautiful sailing ship with the sounds of a party onboard that is crewed by the drowned.

## 5 RELIGION

Even though around 70% of the population identifies itself as Roman Catholic, only 16% are churchgoers. Around 18% are Evangelical, 8% are atheists or agnostics, and some Mapuche Indians continue to practice their own religion. Their beliefs include worship of the creator Ngenechen and the destroyer Wakufu.

Among the religious festivals is the feast of San Sebastian in Yumbel, near the city of Chillán; the Fiesta de Cuasimodo during Easter in the outskirts of Santiago; and the religious festival of La Tirana near the northern city of Iquique, which includes dances representing good and evil forces in the form of maidens and devils. The latter developed out of a mixture of Catholic and Amerindian beliefs.

## 6 MAJOR HOLIDAYS

Aside from the main Catholic holidays, Chileans celebrate Labor Day on May 1, Naval Glories Day on May 21, Independence Day on September 18, Army Glories Day on September 19, and Race Day on October 12, which commemorates the discovery of America by the Spaniards in 1492.

## 7 RITES OF PASSAGE

Many Chilean Catholics consider baptism and First Communion important for the identity of a child. Civil marriage is often accompanied by a church ceremony, which is considered more significant. In some very religious families, when a person dies, nine days of prayers according to Catholic custom are held in the home and attended by the person's family and close friends.

According to popular beliefs still adhered to in the countryside by some *campesinos* or peasants, and among city dwellers known as *pobladores* in poorer neighborhoods, the spirits of people who have died violently will continue to linger in the area where they died, and the living can appeal to them in their prayers, asking them to intercede on their behalf. Little shrines with flowers and candles, known as *animitas* (which means "little spirits") are often set up in the vicinity and sometimes become places of prayer and pilgrimage.

## 8 INTERPERSONAL RELATIONS

Chileans have a relaxed attitude towards time and, on social occasions in particular, people are not expected to arrive on time, but rather to be up to an hour late. This approach is often misunderstood in cultures where the attitude is that "time is money." In Chile, this is occasionally true in some business or professional sectors where the sense of hurry and the virtues of efficiency have been adopted from other cultures, such as European or North American. But in general, this flexibility also has its virtues, enabling people to enjoy themselves with a carefree attitude and to accept the unexpected with greater ease.

One of the best types of gatherings is the typical Chilean *asado* or barbecue, which involves large quantities of meat in large cuts, grilled on open charcoal fires in private yards and gardens or in parks or other public places during festivals. This is an occasion for family and friends to gather.

Formal greetings and introductions involve handshakes, but among friends, both women and men, the usual greeting is a kiss on the cheek.

## 9 LIVING CONDITIONS

About 40% of Chile's population is considered middle class. The majority of Chileans go to semi-private or public schools and live in the new suburban neighborhoods in the capital, Santiago, such as La Florida and Maipú. The richest 20% of the population live in elegant houses in neighborhoods such as Providencia, La Dehesa, or Vitacura Santiago and go to private schools. This elite group continues to deploy strong economic, social, and political influence, and quite often a family in these conditions will have a summer home in the coastal resort area. It is also a landowning class, and many families of this type will also own a ranch.

In 2007, 13.7% of the population was living under the poverty line. Half of them, the *pobladores*, live in crowded shantytowns, particularly in Santiago, where housing is often a type of squatter's home made from every and any material at hand, such as zinc, bits of wood and brick, or any other available building material. Unlike their middle-class counterparts, the *pobladores* do not own cars, but rather use public transportation. In more remote areas, where there are fewer roads, particularly in the south, boats are important means of transport. In the countryside, particularly in rural areas such as the Andes Mountains, pack animals and horses are used as transport for local people.

## 10 FAMILY LIFE

Until recently, most Chileans had large families, although modern urban lifestyles, particularly among the middle classes, have included a change in family size, with modern families tending to have only two children. Even though many poor working women have to leave their children to go to work and middle-class professional women employ servants to help them look after their own families, women everywhere in Chile are considered pillars of family life and are expected to fulfill their maternal roles. This often means that women take up a larger share of chores as well as family duties in addition to work outside the home, since men are not as willing to share household responsibilities as in some European or North American environments. This is particularly true in poorer households, where women have little extra help and often rely on older children to look after the youngsters.

## 11 CLOTHING

Modern, middle-class city dwellers dress in Western-style clothes. Men wear suits, and women in offices are expected to dress quite formally, with suits or dresses, although trousers are also accepted. Good grooming is expected of women, including regular hairstyling and makeup. Given Chile's large middle class and lively cultural life, exceptions to this rule are found, for example, among those involved in the arts.

In the countryside, Chile's *huasos* or cowboys wear the *poncho*, a type of cloak, often with colorful stripes worn for festivities. Regular ponchos worn at other times are usually earth colors. They also wear *chupallas*, broad-brimmed straw hats in summer and felt hats in winter, and boots with finely crafted spurs.

## 12 FOOD

A typical Chilean dish is *pastel de choclo* (baked corn paste). A much-loved soup, a hearty meal in itself, is *porotos granados* or

white bean soup, which also includes pumpkin, peppers, and sweet corn. A delicious and popular snack is a type of turnover made of wheat flour, called *empanada*. Many Latin Americans have interesting variants of fillings for the empanada. In Chile the most typical empanada is oven baked, and it is called *empanada de pino*, which means it is filled with minced meat, onions, a slice of hard-boiled egg, and an olive. Other empanadas are fried and filled with cheese. During popular street festivals, empanadas are often accompanied by fermented fruit juices, such as a thirst-quenching type of apple cider called *chicha de manzana*.

Avocados, called *palta* in Chile, are used in salads or mashed up as a topping for bread (usually eaten for the afternoon snack called *onces*) or as an accompaniment to grilled meat. Native stews called *cazuelas* are made from beef, chicken, or fish, and include potatoes, pumpkins, corn, and green beans.

The range of climates produces an interesting selection of food in Chile, and in the south along the coast excellent varieties of shellfish are often eaten raw with lemon juice or prepared on open charcoal grills. In the more remote islands of Chiloé in southern Chile, stones are heated and placed in a hole to form a type of oven called a *curanto* where fish, beef, pork, and vegetables (mostly potatoes) are wrapped in vegetable leaves and covered with soil, then steamed for hours for special occasions, such as communal house-building. The community helps build a new house and the owners "pay" back the favor with a *curanto*.

## 13 EDUCATION

Primary schooling has been free in Chile since 1860, and literacy rates have been improving steadily since then, with a current estimated 95.7% literacy rate. On 7 May 2003 President Ricardo Lagos issued a law making high-school education mandatory, giving the state responsibility for educating all Chileans younger than 18 years of age. Also, there is a new law being discussed that guarantees full coverage of care and education to children from ages 2 to 5.

Regarding higher education, students can choose between 25 public or private universities. Universidad de Chile was founded in 1843, and since then increasing numbers of Chileans have attended university, forming a rapidly growing middle class. The Catholic Church has also played an important role in developing education with its Pontificia Universidad Católica de Chile, founded in 1888. For admission to public universities, students must do a University Selection Test or PSU, which consists of two mandatory tests on math and literature, plus other specific exams depending on what the student wishes to study. According to official statistics, in 2006 a total of 241,390 students took the PSU. The majority of the schools offer *licenciaturas*, which are equivalent to bachelor's degree, but in a specific area such as architecture, journalism, and physics.

## 14 CULTURAL HERITAGE

Chileans have a rich cultural heritage and a love for the arts, and they enjoy numerous literary, theatrical, and musical activities. The national dance of Chile is the *cueca*, which involves rapid, emphatic steps, reminiscent of the Spanish *zapateado* (*flamenco*) in which the feet tap the beat on the floor.

An important political and artistic protest movement arose during the 1960s, acquiring a special force and meaning later

during the military dictatorship of Augusto Pinochet in the 1970s. Its most famous figure was Violeta Parra, whose passionate voice embodied the yearning of an entire people, and whose style blended folk, classical, and modern influences. Her children Isabel and Angel continued this creative movement, which became known as the New Song Movement (*La Nueva Canción Chilena*). Other groups such as Inti Illimani or Quilapayún also blended folk traditions and instruments from other Latin American countries. While in exile, their members toured the world, sharing their music with young people everywhere.

Chile has a strong literary tradition and has the distinction of having produced two Nobel Prize winners, the poets Gabriela Mistral and Pablo Neruda. Their powerful poetry goes beyond the individual to sing about the condition of humankind. These poets not only conveyed an intensely personal and intimate voice in their work, but also genuine social concerns. An interesting and very modern playwright who also gave expression to the suffering in his country caused by the Pinochet dictatorship is Ariel Dorfman. The work of modern novelists such as José Donoso, Jorge Edwards, Antonio Skármeta, Isabel Allende, and Roberto Bolaño have been translated into various languages including English.

## 15 WORK

Chile has undergone a modern economic experiment that began during the 1980s and that has resulted in many benefits for some sectors of the economy. Growing crops for export, especially fruit and excellent wines, has been one success story. Copper mining continues to be very important. However, working conditions vary sharply according to social class, and economic improvements have not reached marginalized poor people, particularly *pobladores* of the shantytowns, who often work in the informal market. This situation is repeated throughout Latin America, where many people cannot find secure employment and poor people's needs are ignored.

## 16 SPORTS

The most popular sport is soccer, which is played and followed enthusiastically by many Chileans, who mostly support one of the three national teams, Universidad de Chile, Universidad Católica, and Colo Colo.

Rodeos are also popular in Chile. The Chilean *huasos* or cowboys compete in *medialunas* (corrals in the shape of a half moon), parts of which are heavily padded. The steers have to be driven against this padded section by two mounted *huasos*; one drives the steer from behind and the other has to press the steer against the padded wall and bring the steer to a full stop. The technique is difficult and involves unusual movements that demand great agility. Chilean horses, called *corraleros*, are short and stocky and well suited for the rodeo. It is not a violent sport and is popular only in the central valley and in the south of Chile.

Chile has fine beaches, and many people enjoy swimming in beach towns such as Valparaíso and Viña del Mar. Boating and fishing in Chile's beautiful lakes are also popular, and there are several ski resorts near Santiago and in the south (Chilán has the longest ski run in South America), among which is the well-known resort of Portillo, visited by both Chileans and Argentines.

## 17 ENTERTAINMENT AND RECREATION

Chilean town-dwellers enjoy movies, and there is a lively theatrical tradition in Chile. Santiago's Municipal Theater is a well-known venue, but there are many smaller venues for artists, playwrights and poets, actors, and singers to get together. Chileans are distinctive because they enjoy themselves not only as spectators but also as enthusiastic participants in a variety of activities that blend art and popular culture with recreation. In Santiago's main square, the Plaza de Armas, there is open-air evening entertainment with musicians, dancers, and comedians attracting people who are out for a stroll or a leisurely drink or snack. Young people often meet in the evening in cafés or bars and enjoy dancing. People also enjoy shopping, and some neighborhoods have elegant shopping districts and malls.

Chileans enjoy snacking and eating out, and one of the popular venues is the large Mercado Central, a lovely market that includes many small snack bars and informal eateries offering varieties of seafood.

Chileans also enjoy trips. Even though trips to the seaside to places such as Valparaíso and Viña del Mar are very popular, people also enjoy excursions to the rich farmlands of the central valley, to the lake district, and to the southern Andes, enjoying fishing, hiking, boating, white-water rafting, visiting farms, ski resorts, or thermal baths. Chile has over a hundred volcanoes and many beautiful national parks, some of which, in the north, have geysers, and in the south, glaciers.

## 18 FOLK ART, CRAFTS, AND HOBBIES

In Chile, taking part in some kind of artistic activity is not left simply to professionals, because Chileans have a tradition of expressing themselves through a variety of artistic media where historical, social, and political concerns blend with purely artistic ones. Many people combine a career or various types of work with an artistic hobby, which can include playing musical instruments, singing, painting, writing poetry, dancing, or acting. There are many musical groups or *peñas* in towns across Chile, playing a variety of music ranging from folk to *salsa* music from other Latin American countries as well as modern, Western-style pop music.

Weaving, basket making, pottery, woodcarving, and jewelry making are crafts practiced in Amerindian communities such as the Aymara in the north, close to the Bolivian border, or the Mapuches in the south. Leatherworking began as a craft and has continued in a more modern, industrial setting. The town of Pomaire is famous for its pottery. It includes many potters who often make miniature figures that derive from storytelling or religious traditions, and the beautiful clay *pailas* or pots of varying sizes and shapes find their way into many Chilean gardens and kitchens.

A unique feature of Santiago is the large cluster of arts and crafts shops called Los Graneros del Alba (in the back of the church of Los Dominicos) where visitors can watch artisans in the process of making their wares. In a uniquely Chilean way, this is combined on weekends with music and dancing.

## 19 SOCIAL PROBLEMS

Chile's social problems relate directly to the poverty-stricken conditions not only of the surviving Amerindian groups, but also of city dwellers or *pobladores* who do not have enough work or can only find temporary work. Official poverty figures

for 2007 show that nearly 14% of the population lives below the poverty line, however, experts argue that there are more people living in poor conditions because of high unemployment and informal jobs. Currently, 36% of the active population works in the informal economy, thus without rights to social security or protection from the state as workers.

In addition to poverty, extreme socio-economic inequality is a problem that has marked the country since the 1973 Coup. Despite poverty reduction since the return to democracy (from almost 40% of the population in 1990 to 14% in 2007), the participation of lower- and middle-income workers in the economy declined and income inequalities have worsened. While in 1990 the average income of the richest decile (10% of the population) was 27.5 times greater than the poorest decile, six years later this proportion had grown to 29 to 1, and has remained virtually unchanged since then. The wealthy landowners and industrialists possess not only most of the economic wealth but also the greater share of political power and social influence. The growth of a significant and well-educated middle class does not of itself solve the problem of underemployed and undereducated poor people, although it is an important indicator of development.

## 20 GENDER ISSUES

From the beginning of the 20th century to the 1970s, the access of women to formal education increased significantly regarding the amount and diversity of the instruction received. In the early 1930s, men and women had achieved equal access and rates of attendance to elementary school. However, women had to wait two more decades for this same degree of equality to reach higher education. Even though women had been allowed to attend university since 1877, mass admittance to any type of higher education became regularized only in the mid-1960s. Despite access to education, women's inclusion in the job market proceeded at a slower pace. In the 1920s, women constituted only 15% of the formal working force. Fifty years later, this proportion had only risen to nearly 20%.

During the 1970s and 1980s, there was a Latin American feminist line of thought that claimed the "personal is political." With this slogan in mind, women living in poor neighborhoods of Santiago took domestic activities such as cooking, eating, sewing, washing clothes, and looking after children to the public sphere, and organized clubs and cooperatives with the help of the Catholic Church. In 1982 the debt crisis resulted in high unemployment levels and the plummeting of salaries. Unemployment rates rose to almost one third of the active labor force, while wages declined by 20% during the 1980s. This scenario led to more women entering the labor force as part-time and temporary laborers mainly in the fishery, forestry, and agricultural industries and substantially augmented the number of homes with two employed adults. Female workers increased from 19.6% of the formal working force in 1970 to 32.4% in 1987, and constituted nearly 40% of temporary wage-workers in certain productive areas as the fruit industry.

Even though one in three people that worked were women, there was still strong discrimination against female workers regarding the quality of jobs they could aspire to and the amount of money they could expect to be paid. Women had difficulty gaining access to managerial positions and were paid less than men in the same jobs. The average salary paid to women holding a bachelor's degree was only 50% of the wages of men who

had some university studies. This explains why more than half a million families headed by women had severe economic difficulties during this period.

During the first democratic government, women obtained only a 5% average representation in the legislature. Something similar happened in the executive branch where Patricio Aylwin appointed only one woman as minister, three as under-secretaries, and four as governors of the regional administrations, which meant that women's representation in non-elected public posts was only 8.5%. In the general elections of 1993, women's representation in Congress remained extremely low at a meager 7%. While women were largely excluded from legislative power, their incorporation into the state apparatus almost doubled during the same period. The new Christian Democratic president, Eduardo Frei, increased women's presence in the executive branch by appointing three female ministers and four under-secretaries to his cabinet. Consequently, women's presence in non-elected public posts reached 16.8%.

After 10 years of democratic rule, the presence of women in non-electoral public posts increased by six points when Ricardo Lagos appointed five women as ministers of his cabinet. One of them was Michelle Bachelet who, after serving as the minister of health for two years, became the first female minister of defense in Chile and Latin America. Also, during Lagos' administration women achieved one long-denied right: divorce. Because of the strong influence of conservative values on the two dominant coalitions, approval of a divorce law was blocked for 14 years. Finally, President Lagos promulgated the new law in mid-2004.

Following a run-off in January 2006, Michelle Bachelet was elected as Chile's first female president and Latin America's first woman obtaining the highest office due to her own popularity—with 53.3% of the national vote. Her election marked a turning point in the evolution of Chile's political system, not only because a woman president meant a break from a predominantly male-dominated public sphere, but also because she represented a more radical leftist project inside Concertación, a rejection of politics as usual, and the demand for popular political participation in the country. She expanded healthcare coverage and reformed the pension system, policies that have improved women's daily lives.

## CHINESE AMERICANS

For more information on Chinese history and culture, see **Vol. 3: China and Her National Minorities; Han.**

### OVERVIEW

The first Chinese immigrant to the United States arrived in 1820. For the following 30 years, few Chinese immigrated to America. When gold was discovered in California in 1848, however, many Chinese were drawn to what they called Gum San, the “Gold Mountain.” The numbers of Chinese gold-seekers increased rapidly from 450 in 1850 to 2,716 in 1851 to 20,000 in 1852. After that, immigration slowed to an average of 4,000 Chinese per year for the next several years.

Most of these first Chinese Americans were men because a respectable Chinese woman could not leave her parents’ or in-laws’ home. Therefore, the early Chinese American community consisted of bachelor societies governed by a district association. “Chinatowns” developed all along the West Coast, where Chinese American men could find the goods and services they needed in their new American home, such as housing, traditional Chinese groceries and restaurants, laundries, and the like. Most Chinatowns also had gambling rooms, many had temples, and a few had theaters for traveling Chinese opera troupes.

Due to the dramatic lack of women in the early Chinese American community, prostitution was big business. Local societies, known as “tongs,” ran the business, importing young Chinese women (or girls) to act as sexual slaves. “Tong wars” between rival societies made the U.S. national news in the late 1800s.

As the number of Chinese Americans who were willing to work for low wages increased (discrimination prevented them from obtaining high-wage labor), other Americans began to feel threatened by what they termed the “Yellow Peril.” Racist organizations initiated boycotts of Chinese American goods and services. Anti-Chinese gangs stormed Chinatowns and wreaked havoc, destroying homes and property and physically attacking Chinese American residents. Many Chinese Americans fled to larger Chinatowns for safety. By 1876, San Francisco’s Chinatown housed over 30,000 people in an area of nine city blocks.

The California state government joined the anti-Chinese movement by passing discriminatory acts in the 1850s such as the foreign Miners Tax and Alien Poll Tax. In 1854, the state of California ruled that no person of Chinese descent could testify in court, thereby declaring open season on Chinese Americans. European Americans robbed, beat, and even killed Chinese Americans freely, without punishment, because the victims and other Chinese American witnesses could not testify against them.

By 1882, the U.S. government decided the situation had gotten out of hand and passed the Chinese Exclusion Act, barring any more Chinese laborers from entering the United States for the next decade. Other Chinese immigrants were only to be admitted under severe restrictions. Chinese immigrants were also denied U.S. citizenship “hereafter,” relegating them to permanent alien status.

The Asiatic Exclusion League was founded in 1886 to lobby the federal government for further restrictions. In 1892, the Geary Act extended the Chinese Exclusion Act for another 10 years, and in 1902, it was extended indefinitely. Not only was the number of new Chinese arrivals stemmed, but also previous Chinese immigrants decided to leave the increasingly oppressive United States and return to China. The Chinese American population fell from 107,488 in 1890 to 71,531 in 1910.

In 1924, the final blow was delivered. The new Immigration Act passed that year barred any foreigners not eligible for U.S. citizenship from entering the country. This prohibited all future Chinese immigration, including Chinese women married to men who were already U.S. citizens. Chinese Americans in the United States were faced with further discriminatory laws forbidding them to own land, have certain jobs, attend certain schools, or marry European American women.

The situation for Chinese Americans improved when China became an ally of the United States during World War II (1939–45). On 17 December 1943, U.S. Congress repealed the Chinese Exclusion Acts. Chinese immigration to the United States was still limited to 105 persons per year, but it was a step in a more welcoming direction. The McCarran-Walter Act of 1952 removed race as a basis for immigration discrimination, and 10 years later President John F. Kennedy signed legislation allowing over 15,000 refugees from Communist China to enter the United States. Finally, the 1965 Immigration Act eliminated the national origins quota system for immigration entirely and enabled up to 20,000 Chinese to immigrate to the United States each year. The United States continues to be a popular destination for Chinese immigrants—over 13,000 Chinese migrated to the United States between 1990 and 2000—and recent events in Hong Kong, Taiwan, Tibet, and China have prompted more migration. When Hong Kong reverted to Chinese rule from the British in 1997, fears of the future drove some Hong Kong residents to relocate to the United States. The suppression of the Falun Gong spiritual movement in China as well as rising levels of violence in China-occupied Tibet have spurred more Chinese to immigrate to the United States, along with Taiwanese escaping the tenuous political situation of their homeland. Many Chinese Americans are involved in peace and justice activism around political and human rights issues in China, Taiwan, and Tibet.

Although “Chinese” can include immigrants from China, Hong Kong, and Taiwan, the census (as well as most studies of ethnic groups) lump them all together in one category. Numbers are therefore difficult to pin down with absolute accuracy. The number of people who reported themselves as being of Chinese ancestry on the 2000 U.S. Census totaled 2,865,232 or 2,879,636 depending on who is included. Almost two-thirds are foreign-born. Most Chinese Americans live either in California (1,122,187) or New York (451,859), with sizeable populations also in Hawaii (170,803), Texas (121,588), New Jersey (110,263), Massachusetts (92,380), and Illinois (86,095). Washington, Florida, Maryland, and Pennsylvania each host more than 50,000 Chinese Americans as well. The state with the highest percentage of Chinese Americans is Hawaii with 14%. California is second with 3.3%, followed by New York with 2.4%. The numbers of men and women immigrating from China to the United States have been fairly equal in recent years.

The Chinese language is fundamentally different from English in both its spoken and written forms. Therefore, attaining English language proficiency is quite difficult for older foreign-born Chinese Americans. Almost three-fourths (73%) of all Chinese Americans over the age of five speak Chinese at home. American-born Chinese Americans, and those who came to the United States as very young children, naturally grow up fluent in English. Many American-born Chinese American children attend Chinese language schools to maintain their connection with the language and culture of their heritage.

Early Chinese immigrants to the United States retained much of their traditional culture, which includes customs, folklore, and religion, and passed it on to their descendants. Traditional Chinese religion is a mix of Buddhist, Confucian, and Taoist elements. Chinese American communities in the 1800s each had a temple, most of them Taoist. Some of those early temples remain in California, and another was rebuilt in San Jose in 1991. Homes and shops in early Chinese American communities also frequently had altars to various deities. Some restaurants, homes, and shops continue the tradition today. Some Chinese Americans have converted to Christianity, and churches of various denominations can be found in Chinatowns.

Along with American holidays, most Chinese Americans also celebrate traditional Chinese holidays such as the fall Moon Festival, Ching Ming (ritual visits to ancestors' graves) in the spring, and Chinese New Year. Chinese New Year celebrations—with parades, firecrackers, and long, elaborate drag-

on puppets carried by dozens of dancers—have become very popular among the rest of the American population as well. Many visitors to the gold-rush town of Marysville, California enjoy the annual “Bomb Day” festival held there. Early Chinese Americans built a temple there to the water god Bok Kai, and every year since the 1880s they have honored him with a parade, including a huge golden dragon, during the second month of the Chinese lunar calendar.

Although most Chinese Americans make use of Western medicine, they still turn to traditional Chinese remedies for minor ailments. Traditional Chinese health practices have also become more widely accepted by Americans in recent years. Chinese medicinal teas and soups are sold in health food stores, and acupuncturists treat Chinese and non-Chinese Americans alike. The Chinese martial art of tai chi chuan, a form of kung fu, is taught across the United States as a way to improve physical, mental, emotional, and spiritual health. Other forms of kung fu are also popular in the United States.

Although living conditions were often quite desperate for early Chinese Americans who were restricted to low-paying jobs and crowded into Chinatowns for safety from racial violence, most Chinese Americans now live in much better circumstances. The number of Chinatowns has dwindled as the need for them diminished. Networks of already established Chinese Americans help newcomers find housing and employment, and extended family groups provide other needed support.

*Chinese Americans pray at the Quong Ming Buddhist Temple during Chinese New Year in the Chinatown area of San Francisco, California. The Lunar New Year celebration brings families together to share food and pray for good health and prosperity in the coming year. (David Paul Morris/Getty Images)*

The family is central to traditional Chinese culture, and many Chinese Americans still hold to Confucian values that emphasize respect for elders and a clear hierarchy of authority among extended family members. Family loyalty and unity is more important than individual dreams and achievements. All emotional and financial support is expected to be supplied by the family. This very closed and structured system creates tightly bonded families where divorce is rare and children remain enmeshed with their parents throughout life. Younger, American-born Chinese Americans sometimes find this family closeness stifling. It conflicts with the modern American values of independence and autonomy they have learned in school and from other American friends. But it can also serve as an anchor of stability in the ever-changing, often confusing, world of the industrialized United States.

Food is almost as important as family to traditional Chinese. Many Chinese Americans continue to eat traditional foods prepared in traditional ways. Rituals and etiquette surrounding the preparation, serving, and consumption of food are passed on from one generation to the next. Today, Chinese restaurants are located in almost every city in the United States, as well as in smaller towns and villages. There are even Chinese fast-food chains. Chinese food is now one of the most popular ethnic foods in America, and even non-Chi-

nese Americans know how to use chopsticks. Fortune cookies, canned chop suey, and other “Chinese” foods are sold in mainstream supermarkets, and scores of Chinese cookbooks are available in libraries and bookstores throughout the United States.

Although Chinese Americans were barred from attending public schools up through the mid-1800s, they are now well integrated into the American educational system. Confucianism promotes education as the key to a successful life, and Chinese American parents continue to encourage their children to do well in school. Chinese American families place a high value on education and spend a large amount of their time, energy, and money on their children’s schooling. Chinese American children who also attend Chinese language school put in many hours of study each night to keep up with the increased amount of homework.

Chinese Americans have shared much of their traditional culture, as well as their experience as immigrants, with the wider U.S. public through their writings, music, and art. Well-known Chinese American writers include Maxine Hong Kingston, Betty Bao Lord, Amy Tan, Gus Lee, Gish Jen, and David Wong Louie; playwrights C. Y. (Chin-Yang) Lee, Frank Chin, and David Henry Hwang; poets Nellie Wong and Alan

Chong Lau; and journalists Ben Fong-Torres, Helen Zia, and Lisa Ling.

Until recently, Chinese Americans did not find much success in the American art world. Painter Yung Gee, an immigrant from Canton, was the only Chinese American in the modernist art scene in New York City in the 1920s. He was attacked several times in the streets by racist thugs when walking with his European American wife. Dong Kingman became the first Chinese American artist to have his work shown and purchased by the Metropolitan Museum of Art in 1940. Today, however, there are many successful Chinese American artists. Maya Lin, a sculptor and architect, is perhaps the best known. She designed the Vietnam War Memorial in Washington, D. C., and the Civil Rights Memorial in Montgomery, Alabama. Another famous Chinese American architect is I. M. Pei, who has designed many buildings including the John F. Kennedy Memorial Library in Boston, Massachusetts, and the Rock and Roll Hall of Fame and Museum in Cleveland, Ohio.

Chinese American cellist Yo-Yo Ma is known worldwide. He has made over 75 recordings, won more than 15 Grammy awards, and has been given a number of honorary degrees from various universities, including an honorary doctorate from Yale University. In 1998, Yo-Yo Ma founded the Silk Road Project, a nonprofit organization dedicated to multicultural exchanges among Asia, Europe, and North America through music, festivals, and education. Herb Wong, a disc jockey for over 30 years in San Francisco, is also president of the Association of Jazz Educators. He encourages young Chinese Americans to express themselves creatively, especially in music. Two up-and-coming Chinese American musicians are opera singer Hao Jiang Tian and singer-songwriter CoCo Lee.

Chinese American workers have made great contributions to American society. In the 1800s, they worked in factories and sweat shops, coal and quicksilver mines, and on farms in the West. Some 10,000–12,000 Chinese Americans blasted through mountains and laid track for the Transcontinental Railroad from 1865–69. However, they were still faced with discrimination in hiring and were legally forbidden to own land. Eventually, they set up laundries, restaurants, and gambling establishments across the United States, since these were the only businesses open to them.

In the Civil Rights Movement of the 1960s, however, new areas of employment were opened to Chinese Americans. Many were now able to pursue higher education and enter a variety of professions, while others were allowed to join trade unions and become skilled laborers. Some successful Chinese American professionals are several Nobel Prize-winning physicists, including Chen Ning Yang, Tsung Dao Lee, and Daniel C. Tsui; physicist Chien Shing Wu, who received from Princeton in 1958 the first honorary doctorate in science ever given to a woman; Min Chueh Chang, co-developer of the first birth control pill; and David D. Ho, credited with the breakthrough in HIV/AIDS treatment success using a “cocktail” of multiple drugs. Also in the realm of science, astronaut Leroy Chiao served on several shuttle missions as well as on the international space station.

Other significant Chinese American contributors to American culture are electronics specialist An Wang, founder of Wang Laboratories; computer-industry entrepreneurs David Lam, David Lee, and Albert Yu, along with Steve Chen, co-founder of YouTube; U.S. senator Hiram Fong, and for-

mer governor of Washington, Gary Locke; Elaine Chao, former peace corps director and president of the United Way of America, appointed U.S. Secretary of Labor in 2001; Lily Lee, who in 1983 became the first Chinese American woman mayor in the United States; news anchor Connie Chung; actors Anna May Wong, Bruce Lee, Rosalind Chao, Lucy Liu, sisters Jennifer and Meg Tilly, and B. D. Wong; and film director Wayne Wang. Fashion designer Vera Wang is Chinese American, as is Ming Tsai, host of “Simply Ming” cooking show.

In their early history, Chinese Americans were almost completely unrepresented in American sports. Today, however, a growing number of young Chinese Americans are rising to the top of the sports world, particularly in tennis, track and field, gymnastics, and figure skating. In 1989, tennis-player Michael Chang became the youngest man ever to win the French Open. In 1984, Tiffany Chin placed fourth in women’s figure skating at the Olympics, and Michelle Kwan has won numerous medals in Olympics and world competitions. A young Chinese American figure skater, Caroline Zhang, has won junior level competitions and is expected to do the same at the senior level. Amy Chow helped her team win the Olympic gold medal in gymnastics in 1996 and herself won a silver medal. Perhaps the most famous Chinese American sports figure is golfer Tiger Woods, whose multiracial heritage includes one-fourth Chinese.

Despite their widespread success in today’s American society, Chinese Americans still suffer from racial discrimination. One notorious example was the brutal murder in 1982 of Chinese American Vincent Chin by two unemployed European American auto workers in Detroit (who called him a “Jap” and blamed him for their lack of work). The auto workers were convicted only of manslaughter, fined \$3,780 each, and sentenced to three years’ probation. Chinese Americans also face tensions within their own community as well as with the wider American and Chinese communities due to the continuing conflicts in China, Taiwan, and Tibet.

As is true for most Asian immigrants to the United States, as well as those of other origins, conflicts arise between first generation Chinese American parents and their second and third generation children and grandchildren who become increasingly Americanized and resistant to traditional Chinese cultural values. Women and homosexuals have particular difficulty with this in Chinese American families. Women’s problems were especially intense in the late 1940s when Chinese women “war brides” were finally able to join their husbands in the United States. The men, who had either been born in America or had lived there for some time, were frustrated with the traditional, rural behaviors of their newly arrived wives (and children, in some cases). The women, on the other hand, were upset with the lifestyle their husbands had become accustomed to as “bachelors” in the United States, gambling, drinking, staying out late, and doing little to nothing around the house to help care for the home and children.

Traditional Chinese culture has very little concept of homosexuality; most Asian languages do not even have a word for “lesbian.” First generation Chinese Americans consider homosexuality to be a “Western” concept with little bearing in the Asian community. Sexual activity and orientation are not discussed, and women are expected to put family above everything else, marrying and bearing children. For homosexual Chinese Americans to publicly express their identity is seen

as disloyalty to the family honor and open defiance of traditional values. Therefore, many Chinese American homosexuals choose not to “come out” to their families, placing family identity ahead of individual identity.

# CHOCTAW

**PRONUNCIATION:** chok-taw

**LOCATION:** United States (Southeast Oklahoma; Mississippi; Louisiana)

**POPULATION:** 187,000 (worldwide)

**LANGUAGE:** English; Choctaw

**RELIGION:** Traditional Choctaw; Christianity

**RELATED ARTICLES:** Vol. 2: Native North Americans

## <sup>1</sup> INTRODUCTION

The Choctaw, along with the Creek, Chickasaw, Cherokee, and Seminole nations, were called the “Five Civilized Tribes” by European Americans because they had organized systems of government and education, and many of their ways seemed to reflect European culture. The Choctaw had their first encounter with Europeans in the fall of 1540. The Spanish explorer Hernando de Soto was making his way west from Florida when he came upon a Choctaw village. Afraid that de Soto and his forces were going to take them prisoner, the Choctaw attacked. Their bows and arrows did little against the Spaniards’ armor and guns. The Spaniards won the battle, and more than 1,500 Choctaw died. Fortunately, that was the Choctaw’s last encounter with Europeans for more than 150 years.

Throughout the first half of the 18th century, the Choctaw sided with the French in their war with the British over control of the New World. Shifting alliances between the three Choctaw bands and the European forces in the area, however, caused a Choctaw civil war in 1748. One of the bands had decided to side with the British and the nearby Chickasaw tribe. The French helped their Choctaw allies defeat the British and the British-allied Choctaw. The treaty signed at the end of the war made it clear that the Choctaw were never again to ally themselves with the British. They held true to this in the American Revolutionary War (1775–83), when many Choctaws sided and even fought with the American colonists against Britain.

After the United States became an independent country, the Choctaw continued to be on good terms with the government. Often, in exchange for Choctaw land, the U.S. government would agree to pay off Choctaw debts and frequently gave the chiefs gifts. For a large cession of land in 1805, the government agreed to pay the Choctaw an annuity of \$3,000, which immensely helped the tribe, providing it with a stable income. The Choctaw sided with the Confederacy in the Civil War in 1861, greatly influenced by the fact that the states of Texas and Arkansas (bordering the tribal lands) seceded from the union. In addition, the commerce and business routes used by the Choctaws were within the states sympathizing with the south. The Union also withdrew its troops from the Choctaw Nation as war threatened. The U.S. government stopped paying the annuity; the agents of the government were southern men. When the Confederacy approached the Choctaws, they were ready to join. After the war, the U.S. government began paying the annuity again, but further Choctaw land cessions required by the government prevented the Choctaw from climbing out of their poverty.

## 2 LOCATION AND HOMELAND

The Choctaw are originally from what is now the northwestern United States, but after hearing good land was plentiful in the east, they emigrated to present-day Mississippi and Alabama. The climate there is very warm and humid, providing them with good farming conditions in the rich soils near the rivers. The land is home to abundant forests, filled with a great variety of wild game, fish, and berries for food.

Traditionally, there were two distinct Choctaw clans, designated by the Creator. Intermarriages between the two clans were forbidden, and Choctaws followed their mother's clan. Today most Choctaw do not know from which clan they are descended.

In 1820 the Choctaw and the U.S. government signed a treaty at Doak's stand in which the Choctaw agreed to cede the remainder of their land in Mississippi to the U.S. government. An article in the treaty promised a blanket, kettle, rifle gun, bullet molds and nippers, and ammunition sufficient for hunting and defense for one year. The Treaty of 1830, signed at Dancing Rabbit Creek, conveyed to the Choctaw Nation a tract of country west of the Mississippi River, in fee simple to them and their descendants. This treaty also gave them the right of self-governance. Of the nearly 20,000 Choctaw living in Mississippi at that time, about 14,000 moved west to Oklahoma. Many of those who stayed in Mississippi were cheated out of their land by a cruel Bureau of Indian Affairs (BIA) employee who refused them the right to register. The 6,000 Choctaw who had stayed in Mississippi consequently fell into harsh poverty, while their kinsmen in Oklahoma became prosperous. The Oklahoma Choctaw quickly rebuilt their tribal structure and began farming, soon producing a crop surplus which they sold to the U.S. government. By 1855, a generation later, about 6,000 more Choctaw had moved to Oklahoma to escape the rough conditions in Mississippi. This left only some 2,000 in the Choctaw's ancestral homeland.

After the Civil War, however, the Choctaw's prosperity in Oklahoma began to change. The U.S. government informed the Choctaw that European and African Americans would be allowed to live on Choctaw land. By 1890 there were 10,017 Choctaw, 28,345 European Americans, and 4,406 African Americans living on Choctaw land in Indian Territory. The Choctaw had become a minority in their own land.

When the General Allotment Act of 1887 was put into effect for the Choctaw in November 1907, the Oklahoma Choctaw lost their tribal designation and were forced to become Oklahoma citizens. While there are Choctaw communities in Oklahoma, there is no Choctaw reservation. There is a Choctaw reservation in Mississippi. The total population of the Choctaw Nation is over 187,000 worldwide.

## 3 LANGUAGE

The Choctaw language is part of the Muskogean language family and is related to Creek, Chickasaw, Seminole, and Miccosukee. The word "Oklahoma" comes from the Choctaw language. When future Choctaw chief Choctaw Allen Wright was asked what he thought Indian Territory should be named if it were to be controlled under one common government, he replied *okla homma*, meaning "red people" in Choctaw.

The Choctaw have done a good job of preserving their language. In 1819 they requested the assistance of Christian missionaries in translating the Bible and some hymns into the

Choctaw language. In addition, missionaries worked with them to create a Choctaw dictionary, as well as a grammar and spelling book using the Roman alphabet. There are book/tape sets that offer instruction in the Choctaw language, available through the Choctaw Nation of Oklahoma. Many Choctaw still communicate in their native language when English is not necessary.

## 4 FOLKLORE

The Choctaw often tell a story about how they ended up in Mississippi. They began in the northwest and, in their search for good farmland, moved in an easterly direction. Every night the chief stuck a pole in the ground, and every morning it was leaning east. So they continued east until one morning they woke up and the pole was sticking straight up. That was where they decided to stay. To celebrate and to thank the Great Spirit, they built a large mound at that spot: present-day Nanih Waiya, Mississippi, which means "leaning mound."

## 5 RELIGION

While the Choctaw did not believe in any one, highest being, they did believe that there were spirits everywhere and that all things had a soul. Their medicine men, or *alikchi*, were traditionally thought of as prophets. When the *alikchi* saw a good vision, it was considered a good omen for the upcoming battle or raid. A dark vision undoubtedly meant bad luck or even death. Other members of Choctaw society were also seen to

have special powers. These healers or rainmakers, among others, were often consulted by members of the tribe to give aid in their particular area of specialty.

The Choctaw believed that every person had two souls. After a person's body died, one soul stayed among the living Choctaw to frighten them. The other soul went to a good or a bad place, depending on how the deceased had lived his or her life. Most Choctaw's souls went to the good, sunny place. Only the souls of murderers were condemned to the dark place.

Perhaps the most remarkable characteristic of Choctaw religion is its promotion of complete peace and harmony among peoples. The Choctaw almost never attacked anyone throughout their history. They did, however, defend themselves, their loved ones, and their way of life to the death when attacked by others. Today, the majority of Choctaw are Christian.

## 6 MAJOR HOLIDAYS

Every summer since 1949, the Choctaw have hosted the Mississippi Choctaw's Indian Fair in Pearl River, Mississippi. The fair is held on the campus of the Choctaw Central High School and thousands—including both Native North Americans and non-Native North Americans—come every year. The four-day fair promotes tourism in the area and helps the Choctaw maintain their tribal heritage and customs. Another Choctaw festival is held at Tushka Homma, Oklahoma every Labor Day weekend. It is open to the public and free of charge. Close to 100,000 visitors every year enjoy country music concerts in the amphitheater, handmade arts and crafts, sports and children's activities, Choctaw social dancing, stickball exhibitions, a quilt show, War Monument Memorial Services, rides, animal acts, and more. The Chief gives the annual State of the Nation address.

## 7 RITES OF PASSAGE

One of the most elaborate ceremonies the Choctaw traditionally performed was when someone died. The deceased person's corpse was wrapped in animal skins or tree bark and then placed on a platform high above the ground, where it was left until it decomposed. During that time, friends and relatives would come by and mourn. When the body had fully decomposed, the tribal official known as the "bone picker" (usually ornamented with body paint and tattoos) would scrape the remaining flesh from the bones with his long fingernails. Once the bones were cleaned, they were placed in a box and stored in the community bone house. After the bone-picker had finished his unsavory task, he would preside over a feast for family and friends of the deceased—with his unwashed bare hands. Once a year, all the bones that had been collected in the bone house during the past 12 months were buried together in a mound, and a communal funeral was held.

This death ritual was abandoned in the 19th century, however. European Americans and mixed-blood Choctaw did not approve of the ceremony, thinking it uncivilized. Consequently, beginning in the 19th century the Choctaw buried the corpse with many of the deceased's valued possessions to accompany his or her soul to the afterlife. Then, after a mourning period, a tribal feast was held. This custom was changed even further as more Choctaw converted to Christianity and Christian elements were added.

## 8 INTERPERSONAL RELATIONS

Each of the three Choctaw bands was traditionally ruled by a district chief, or *miko*. The mikos were elected by the men of their district, and together the three mikos governed the entire Choctaw nation. Each village had their own council of elders, which had a chief to preside over the meetings. The Choctaw always elected their public officials and were always very democratic about it. Although women were not allowed to vote, they had a great deal of power in that clan membership was inherited through the mother and, therefore, women were at the head of the all-important clan. The eldest woman of each clan was highly respected by all in the community.

Increased contact with the British and French, and later with European Americans, significantly changed parts of Choctaw tribal structure and society. Many Choctaw women married British and French men, producing a large minority of Choctaw mixed-bloods, who later became fairly influential in the tribe. In addition, the tribe's judicial system was changed to be more like that of the United States. Traditionally, Choctaw who committed a crime were punished by the victim's family. But by the late 19th century, the Choctaw had instituted the "light horsemen," a group of sheriffs and judges that traveled from town to town, holding trials.

In the last 100 years the Choctaw have experienced many changes in their tribal structure. Since 1975 the Choctaw in Mississippi have had a tribal constitution stating that the tribal chief is to be elected by all tribe members every four years. The tribal council meets once every quarter and makes the laws for the Choctaw reservation in Mississippi. The state government legally has no power over those Choctaw living on the reservation. In Oklahoma, there is no reservation; it is considered "Indian Country." The Choctaw Nation of Oklahoma has its own constitution in place, with three branches of government: an executive branch, a legislative branch (with 12 council members), and a judicial branch. There is a Tribal Court at Tushka Homma, where the council meets monthly.

## 9 LIVING CONDITIONS

Traditionally, the Choctaw lived in wood-frame houses constructed by fastening wooden poles together with vines. For insulation, the walls were then packed with mud, and the outside was covered with cypress or pine bark. There was one door three or four feet tall, and two small holes were left in the ceiling to allow the smoke from the cooking fire to escape.

When the Choctaw nation split in two in the 1830s, both groups grew accustomed to living in very different ways. The Choctaw in Oklahoma, who received a \$3,000 annuity from the U.S. government, were much better off than the poverty-stricken, landless Mississippi Choctaw. At the beginning of the 20th century, however, their respective conditions began to reverse. In 1907, the General Allotment Act was put into effect for the Oklahoma Choctaw, and many of them were swindled out of their land. In 1918, the U.S. government recognized the severe poverty of the Choctaw living in Mississippi and instituted programs to improve their living conditions.

Recently, efforts have been made to help the Choctaw further improve their housing. In 1965, the Choctaw Housing Authority (CHA) began building modern, sturdy homes for Choctaw living in Mississippi. A few years later, the CHA was established in Hugo, Oklahoma, to improve the standard of living among those of Choctaw descent living in Oklahoma.

## 10 FAMILY LIFE

Choctaw society is matrilineal (lineage is inherited through the mother). Children belong to their mother's clan. Traditionally, a mother raises her daughters while the mother's brothers, as the closest male relatives in her clan, raise her sons. Marriage between two people of the same clan is prohibited.

In the past, women were not allowed to speak their husband's name but would refer to him as "my children's father." They never dared look upon their son-in-law's face but would avert their eyes when he came into the room. This practice is no longer followed.

## 11 CLOTHING

In the days before the Choctaw had contact with Europeans, Choctaw men wore a loincloth and a belt in the summer, and in the winter, they added leather moccasins, leggings, and shirts woven from feathers. Women commonly wore deerskin skirts and added moccasins and a deerskin shawl in the winter.

Today's Choctaw wear modern Western-style clothing for everyday purposes. Traditional clothing is sometimes worn for ceremonies and festivals.

## 12 FOOD

The Choctaw, along with the other peoples of the "Five Civilized Tribes," made many traditional dishes, such as the following:

### Blue Grape Dumplings

½ gallon unsweetened grape juice  
2 cups sugar  
2 tablespoons shortening, melted  
1 teaspoon baking powder  
1 cup water  
Flour

Bring grape juice to a rolling boil with the sugar.

Mix water, shortening, and baking powder. Add enough flour to make stiff dough.

Roll out thin on a floured board and cut into small pieces.

Drop each piece one at a time into the boiling juice. Cook over high heat about 5 minutes, and then simmer for about 10 minutes, covered.

Remove from heat; let stand for 10 minutes, covered, before serving. May be served with cream or plain.

### Wild Onions and Eggs

Wild onions, cut up (any amount you want)  
1 cup water  
1 cup shortening, melted  
6 eggs

Cut up enough wild onions to fill a 6- to 10-inch skillet. Add water and shortening to onions.

Salt to taste, and fry until water is almost gone (15 to 20 minutes).

Break eggs on top of onion in skillet, and stir well. Fry until eggs are scrambled. Serve hot.

[recipes contributed by the Choctaw Nation of Oklahoma]

## 13 EDUCATION

In the 1810s, the Choctaws asked Cyrus Kingsbury, a Presbyterian missionary, to help them set up a school. With Kingsbury in charge, the first Choctaw school opened in 1818 in Elliot, Mississippi. The school was founded with the interest money from a large annuity the U.S. government had promised to pay the Choctaws for their 1816 cession of three million acres of land. When they were relocated to Oklahoma, again they used their annuity funds to build good Choctaw schools. Because of their fairly high level of education (even compared with most European Americans who lived in Indian Territory in the second half of the century), the Choctaw became better off economically.

Although presently most Choctaw children attend public elementary schools, in 1968 Choctaw Central High School was built in Pearl River, Mississippi. There are currently a number of Choctaw- and government-run programs to increase the educational level of the Choctaw. On the Mississippi reservation, there are adult education programs to help strengthen the Choctaw's English reading and writing skills. The Oklahoma Choctaw Council has established nearly a dozen Headstart centers throughout southeastern Oklahoma. The Oklahoma Nation also runs a Higher Education Vocational Development Program, GED programs, job training, and other assistance programs. Near Hartshorne, Oklahoma, there is a boarding school operated by the Choctaw Nation, called Jones Academy. More than 90% of Choctaw teenagers attend high school, and over 70% of the adult population has attained a high school diploma.

## 14 CULTURAL HERITAGE

Dancing used to be a very important part of the Choctaw culture, but over the years the traditional dances were not performed as frequently. In recent years, however, the younger generations have regained an interest in their traditional culture and are reviving the traditional dances. In Broken Bow, Oklahoma, the public school offers a Choctaw dance program. Students learn the dances of their ancestors and they often travel to perform at ceremonies and festivals.

## 15 WORK

Traditionally, the Choctaw farmed and hunted. Choctaw children (mostly boys) hunted with a blow gun, or an *uski thompa*. A hollow piece of swamp cane through which long, sharp darts were blown, it could kill an animal instantly. Other Choctaw boys hunted with rabbit sticks, which are similar to Billy clubs. They would line up in groups of 8 to 10 boys, cross the field together to flush out the rabbits, and then beat them in the heads with their sticks.

After losing nearly all of their land to European American settlers when the General Allotment Act was put into effect at the turn of the century, many Choctaw went to work in the timber and mining industries.

In 1953 the U.S. government instituted a number of vocational training programs in Mississippi to help prepare Choctaw for jobs in the mainstream industrialized job market. The Chata Development Company was created in 1969 by the Choctaw council to help find and create jobs for Choctaw in Mississippi. In 1977 the Chata Wire Harness Enterprise was established near Pearl River. This factory employs many Choctaw, making electrical parts for cars for the General Motors

(GM) company. The GM factory, built in 1973, is located in an industrial park that is also the home of many other industries, such as the Choctaw Greeting Enterprise of the American Greetings Corporation. Despite all these factory openings, however, unemployment on the Mississippi reservation is still at about 20%, well above the national average.

The Oklahoma Choctaw are doing well, though. They have opened bingo parlors in Durant, Pocola, Idabel, and Arrowhead, which has proven to be a very successful business, attracting many tourists. In addition, the Choctaw in Oklahoma run the Arrowhead Resort and Hotel in Canada, Oklahoma, and Travel Plazas in Hugo, Pocola, Idabel, and Durant. The tribe also owns a finishing plant, a trailer manufacturing plant, and tribally-owned and managed day care centers. Profits from all these businesses go to programs for Choctaw assistance.

## 16 SPORTS

A traditional Choctaw sport is *ishtaboli*, or “stick ball,” which is similar to modern-day lacrosse. The small ball is made from deerskin or cowhide that is stitched together. The players use two sticks, or *kapucha*, at the same time. Kapucha are made from hickory wood and are about three feet long. A point is scored when the ball is scooped up in the net of the stick and thrown against the other team’s goal post. Ishtaboli games used to be huge ordeals, typically lasting more than 12 hours (or until one team had scored 100 points), with 75–100 players per team. Traditionally, ishtaboli games were sometimes used to settle differences, but generally the Choctaw play just for fun.

## 17 ENTERTAINMENT AND RECREATION

The Choctaw often held dances and feasts, frequently centered on an ishtaboli match. Before the match, the women would lay out some of their possessions and bet on which team would win. The players then performed a lengthy dance that lasted all night, before starting the game at dawn. When the game was over, the women who had bet on the winning team claimed their prizes, and there was a great celebration with a large feast. Another common way the Choctaw entertained themselves was with bow and arrow competitions, which they still hold at their annual festivals.

## 18 FOLK ART, CRAFTS, AND HOBBIES

Choctaw women have always been master basket-weavers, which is the Choctaw’s most elaborate art. The women make the baskets by cutting sticks of cane from a swamp. They let the sticks dry, and then slice them into thin strips. Different colored strips are created with dyes made from wild berries and roots.

## 19 SOCIAL PROBLEMS

One of the biggest problems of the Choctaw tribe is their lack of unity. While the Choctaw in Mississippi are able to live together and function as a tribe on the reservation, they are separated from their kinfolk in Oklahoma. The Choctaw in Oklahoma, on the other hand, have no reservation and are consequently scattered throughout the state, making it difficult to maintain a sense of unity. However, they keep in touch with a monthly newspaper, *Bishinik*, which means “newsbird” in Choctaw.

In recent years, health has been a serious problem for the Choctaw as well. On the reservation in Mississippi, many die

from tuberculosis and pneumonia. On the reservation, new health service programs teach the Choctaw how to help prevent such diseases by improving their nutrition. In Oklahoma, health clinics have been opened in Hugo, Broken Bow, McAlester, Poteau, and Durant, as well as a hospital in Talihina, to treat those of Choctaw descent. Social assistance programs include a Recover Center for drug and alcohol dependency problems, and Chi Hullo Li, a residential treatment center for women who suffer from addictions as well as abuse. The women in the program may have their children live with them if they wish. More than a dozen sites in Oklahoma serve nutritious lunches, some five days a week. Other Oklahoma programs even offer such necessities as burial assistance.

## 20 GENDER ISSUES

Choctaw ideology links the activities, roles, and responsibilities of men and women together in maintaining the balance of society and nature. On a large level, the Choctaw notion of reciprocal roles of two pairs can be seen in the Choctaw moiety structure. Choctaw society was divided into two halves, which are called moieties by anthropologists. The moieties governed marriage as well as funerary roles and mourning. An individual could not marry someone who belonged to the same moiety as he or she did. When a person died, it was the members of the other moiety who mourned for the person and prepared the body.

The Choctaw view of men’s and women’s roles also followed the reciprocal pattern of moieties. While the participation of men and women might differ, the Choctaw believe that both are necessary for the accomplishment of tasks and goals. For instance, during the final days of a woman’s pregnancy her husband would fast during the daylight hours and would avoid eating pork and salt, in order not to harm the baby. The father’s activities were seen as being as important to the successful delivery of the baby as were those of the mother.

Since the 1960s Choctaw women have moved into more leadership roles in government and church life. At least seven women have served on the Oklahoma Choctaw council since the late 1970s. Only one woman (Harriet Wright James) has run for the office of Chief of the Choctaw Nation (in 1985); although her bid was not successful, it did signal the complete return of Choctaw women to the political arena.

# COLOMBIANS

**LOCATION:** Colombia

**POPULATION:** 45,013,674

**LANGUAGE:** Spanish (official); various Amerindian languages

**RELIGION:** Roman Catholicism

## <sup>1</sup> INTRODUCTION

Aborigine tribes that had migrated from North and Central America originally inhabited the territory known as Colombia, and developed a sophisticated political and economical organization. These tribes implemented a political system known as *cacicazgos*, a pyramidal structure of power headed by caciques, which allowed a fluid trade among different cultures such as the Tayronas in the Caribbean Region, and the Muisca in the highlands around Bogotá.

The Spanish conquered Colombia in the 16th century. In 1538 the colony of New Granada was established with its capital in Bogotá, and up until 1740 the area was within the jurisdiction of the Viceroyalty of Peru. During Spanish colonial rule, many Amerindian tribes were subdued and heavily taxed by the Spanish Crown. Slaves were brought from Africa but were eventually freed during the period of struggle for independence. During an uprising in the capital on 20 July 1810, the local inhabitants threw out their Spanish officials. In that year, a new viceroyalty was established that included modern-day Colombia, Ecuador, Panama, and Venezuela. During the wars of independence against Spain, forces under Simón Bolívar achieved victory over the royalists at the Battle of Boyacá in 1819, and the region gained independence in 1821. This day is commemorated as Independence Day, although the struggles continued for several years. In the War of Independence, the Venezuelan-born leader Simón Bolívar played a key role, joining forces with the Colombian leader Francisco de Paula Santander. Colombia, Venezuela, and Ecuador together became the Republic of Great Colombia, although each became an independent nation not long after.

Colombian political struggle since the 1850s had been characterized by a rivalry between two groups that coalesced into the Liberal and Conservative parties. The Liberal-Conservative struggle led to at least six civil wars, which often ended in inter-party compromise. In the summer of 1957, leaders of the Liberal and Conservative parties reached an agreement on constitutional reform in an attempt to end violence. The agreement, known as the National Front, included provisions for regular alternation of the presidency between the parties, as well as an accord on equal staffing of all political positions by both parties. The Liberal and Conservative parties agreed they alone would monopolize the arena of legitimate political competition for a 16-year period. This led to the present phase of democratically elected presidents, which has continued to this day.

The emergence of terrorist and paramilitary groups on both the right and left—some with ties to the drug trade—in the 1960s and 1970s weakened the two-party power-sharing monopoly. Throughout the 1980s, narco-terrorists murdered government officials, journalists, and innocent bystanders with impunity. There are fears that democracy and independence of major institutions, such as the judiciary and Congress, are

being compromised, thanks to power and money concentrated in the hands of drug traffickers, who also developed private armies in some instances. Equally, many judges as well as members of the press have paid with their lives for attempts to expose the activities of powerful outlaws.

Various left-wing guerrilla factions have also fought army units for decades. An unusual feature of Colombian life is that political and social unrest coexists with stable economic management.

## <sup>2</sup> LOCATION AND HOMELAND

Colombia is the fourth-largest country in South America and it is located in its northwestern corner. Colombia is part of the Pacific Ring of Fire, a region of the world subject to earthquake and volcanic eruptions. The mighty Andes Mountains cross into Colombia from the southern border with Ecuador and divide into three long ranges or *cordilleras*, which run the length of the country. The capital, Bogotá, is located on a high plateau over 2,400 m (8,000 ft) above sea level at the foot of the eastern range of the Andes. To the east, extensive plains run as far as the Orinoco River, which borders Venezuela; to the south, thick jungle extends towards the Amazon River and the borders with Peru and Brazil. These contrasting features contribute to Colombia's natural beauty and variety, as well as to a climate ranging from cool, through temperate, to tropically hot. Because of its privileged geographical location and varied climate, Colombia has one of the highest diversity of birds and amphibians on the planet.

Colombia has a variety of Amerindian tribes, scattered partly in the north in the desert peninsula of La Guajira and high up in the Caribbean coastal ranges of the Sierra Nevada de Santa Marta, as well as in the south, particularly in the Amazon region, with a few tribes in other areas, such as the Tierrentro region.

The majority of the Colombians are mestizo or of mixed Amerindian and white descent, representing 58% of the total population. About 20% of Colombians are white, 14% are mulatto, and about 4% are black.

## <sup>3</sup> LANGUAGE

Although the various Amerindian tribes continue to speak their own languages, Spanish is the official language of Colombia. The accent varies considerably according to the region, but it is generally recognized that the Spanish spoken in the capital, Bogotá, is remarkably clear. In Colombia much care has been taken to preserve the linguistic purity of the official language, Castilian Spanish, and there are close ties between the Spanish and Colombian language academies.

Today, more than fifty different indigenous ethnic groups inhabit Colombia. Most of them speak languages belonging to the Chibchan and Cariban linguistic families. The 1991 constitution established their native languages as official in their territories, and most of them have bilingual education. Some of the largest indigenous groups are the Wayuu, Arhuacos, and Muisca.

People usually use both their father's and their mother's surnames, in that order, as in many other Latin American countries. The strong influence of the Catholic Church has made names like María very popular, usually in combination with another name, such as María Cristina, María Teresa, or María Elena. It is not unusual even for men to use the name María in

combination with masculine names, such as José María, Pedro María, or even Jesus María. The names of the apostles are generally popular for boys.

Among poorer townsfolk there is a tradition of exotic names of famous warriors or unusual kings derived from ancient history, and it is not unusual to find people called Hannibal, Nebuchadnezzar, Mithridates, or Darius.

#### 4 FOLKLORE

Amerindian, African, and Spanish folk customs have combined with beliefs and practices from all three traditions to create a rich culture that expresses itself in a great variety of festivals, which occur throughout the year in Colombia.

Barranquilla, on Colombia's Caribbean coast, and other coastal towns along the Magdalena River celebrate a yearly Carnival, which combines Spanish colonial, Amerindian, and black African influences, colorful costumes and masks, and flutes and African drums. Besides, Colombia has many traditional folk tales about legendary creatures. These legends are transmitted orally and have strong indigenous, African, and Spanish influences.

In colonial times, sedan chairs were a form of transport that is remembered in the city of Medellín. The chairs are decorated with a fabulous array of flowers and paraded through the city streets.

The Feast of St. Francis is celebrated in the Chocó region in the Pacific. He was adopted as the patron saint of the miners in this mainly black, gold-mining region, and this festival

links up with many other celebrations along the rivers where the statues of various saints are paraded in canoes and on rafts. There is also music, singing, and dancing. The miners of the Chocó gave St. Francis the affectionate Spanish nickname of San Pacho, and the festival is also known by this name.

#### 5 RELIGION

As other aspects of Colombian cultural expression, religion has been strongly influenced by its multilayered cultural heritage that includes Spanish, indigenous, and African influences. However, and in spite of these diverse influences, 75% of the population defines itself as Catholic. Colombians have a strong faith, and the Church has played an important role in the life of Colombia. Even the main political parties developed in relation to attitudes towards the church, with the conservatives adopting more favorable attitudes of support, and the liberals adopting an anticlerical role. Women have played a significant role in maintaining a tradition of strong faith.

Some Amerindian groups have adopted Catholicism, but in remote areas they continue to practice their own beliefs, which include various forms of shamanism.

#### 6 MAJOR HOLIDAYS

Colombia celebrates Independence Day on July 20, the discovery of America on October 12, and makes provision for the main Catholic holidays. It also marks Easter with major religious events, such as the Holy Week procession in the town of Popayán during which many statues of Jesus, the Virgin Mary, and saints like St. John the Evangelist are paraded by groups of *cargueros* or carriers along the streets. Others walk alongside carrying lit candles called *alumbrantes*. It is considered a great honor to take part in the processions, which are solemn and have a very Spanish flavor. The people of Popayán are traditionalists who remember their Spanish origins with pride, and various members of the Order of Knights of the Holy Sepulcher of Jerusalem also take part in the procession in formal dress and white capes.

#### 7 RITES OF PASSAGE

All the main Catholic rituals that mark important phases in a person's life are observed by a majority of the population in Colombia. Among these are baptism and First Communion, as well as Catholic marriage and burial rites. Some practices have included a mixture of either Amerindian or black African customs. Even recently in some villages on the Caribbean coast, for example, it was not uncommon when a child died for the child to be "loaned" to neighboring villages so their inhabitants could also participate in the ceremonies.

#### 8 INTERPERSONAL RELATIONS

Colombian customs vary according to region and social class in certain respects. For example, it is generally recognized that in coastal areas, such as Barranquilla, people are more informal, spontaneous, and easygoing, yet in the neighboring town of Cartagena, which has a strong historical sense and many colonial features, people are a bit more formal. The people of the capital, Bogotá, are generally considered more reserved, and it is still the custom there for close family members to address each other using the formal *usted* rather than the informal *tu*. They have also maintained an older, Spanish form of address,

*Su merced*, meaning “Your mercy,” which remains from colonial times in the 16th century.

Women usually greet each other with a kiss; men shake hands, but if they are friendly they shake hands and pat each other on the back several times as well.

It is considered essential to offer the visitor, whether on business or social occasions, a small cup of black coffee called a *tinto*. It is also considered rude to launch directly into a business discussion, or even a social one, without first inquiring after the person’s welfare and that of his or her family.

## 9 LIVING CONDITIONS

Out of a population of 45 million, some 7 million Colombians live in the capital, Bogotá. Other major towns are Medellín, Cali, and Barranquilla. Living conditions vary greatly according to social class.

Colombian class structure is based on a combination of different factors, such as occupation, wealth, and ethnicity. The vast majority of the population belongs to the “marginal” classes, who lack steady employment, and the lower classes, who are mainly physical laborers. Members of these two groups are largely of African, Amerindian, or mixed descent. The middle and upper classes have more skills as a result of a better education. Although the middle classes have good occupations, they lack the wealth and the European heritage of the upper class. At the apex of the upper class is a tiny group of wealthy, traditional families, of which almost all are of pure Spanish background.

All main towns have wealthy suburbs with tasteful, modern housing that includes houses and apartment blocks. In poorer areas there are often large shantytowns and housing can vary from fairly solid constructions to basic shelters built with a variety of materials and corrugated metal roofs. There has been an increase in middle-class housing, but the construction boom has also included rising prices, which have put even modest housing units beyond the reach of many. In mountain villages some houses can still be quite basic, with adobe walls and thatched roofs, although some village housing can include plastered walls and tiled roofs. In poorer areas along the Pacific and Caribbean coasts, especially in more remote villages, the hotter climate allows a type of housing that uses local cane, reeds, and palm branches. In such areas it is not unusual for people to use hammocks rather than beds.

Access to healthcare also varies greatly, and poor people rely on state hospitals, which usually are better equipped in major cities, as well as on nursing care often provided by religious nursing orders of nuns. In other instances, poor people appeal to native healers called *curanderos*, some of whom have genuine healing ability, although there are many charlatans. People with better financial resources have access to modern, well-equipped hospitals and health centers.

It is relatively expensive to run a car, so many people rely on public transport in the form of buses, and this form of transport also is used from one town to another. Because of the mountainous terrain, air transport developed early in Colombia, with even quite remote locations boasting an airstrip, whereas railways are much less developed. Colombians often joke about arriving “either by mule or air.”

## 10 FAMILY LIFE

Close family ties and extended families are an important aspect of Colombian life. Colombians often have large families and often keep in touch through weddings, anniversaries, birthdays, baptisms, and other special occasions, with a family network that extends to second and third cousins. This network is more easily maintained in small to medium-sized towns. The population distribution of Colombia means that there are many towns of this type, in particular along the densely populated foothills of the three ranges of the Andes Mountains, which cross the country in a north–south direction.

The Church has also been influential in stressing the importance of close family ties. Family networks act as a vital support in the absence, for many, of welfare benefits, which are much less developed than those in North America or Europe. Godparents, or *padrinos*, may also play a supportive role, sometimes helping with tuition or gifts to assist a family. Family members are also depended upon to provide jobs wherever possible.

In cases where the stresses of extreme poverty lead to the abandonment of children, who are left to fend for themselves on the street, schemes have been devised where foster mothers are appointed for a whole street and, with state help, provide daytime shelter and meals during the day. Despite these efforts, there are children who are absolutely destitute and have to fend for themselves.

The great variety of animals, due to the range of climates, means that Colombians will often keep exotic animals, such as monkeys and parrots, as pets, as well as the more usual cats and dogs.

## 11 CLOTHING

Clothing varies according to climate in Colombia. Although Western-style clothing is worn everywhere, men on the coast sometimes wear cotton shirts with colorful, bright patterns. In cooler areas of the Andes Mountains, both men and women wear woolen *ruanas*, which evolved originally from Spanish capes. Middle- and upper-class women wear stylish versions of the ruana, which depart from the traditional brown shades of virgin wool and can be striped or plain, using a wide range of colors. Traditional peasant women in mountain areas wear voluminous fringed shawls called *pañolones*.

## 12 FOOD

Colombia has a great variety of fruits and vegetables. The traditional stew, known as the *cocido* in Bogotá, can include 20 different kinds of vegetables as well as various types of potatoes. Another typical dish from Bogotá is the *ajiaco*, which includes a bright yellow potato known as *papa criolla*, as well as chicken and corn, served with a slice of avocado and cream. A typical dessert is made with sweet, stewed figs called *brevas*, served with *arequipe*, which is milk cooked with sugar until it reaches the consistency of toffee.

On the coast a great variety of fish are served fried or sometimes grilled, often with rice flavored with coconut milk. A well-known Caribbean dish is *arroz con chipi-chipi*, or rice with tiny clams. In the Antioquia region and its capital, Medellín, rice and red beans, served with cornmeal cakes known as *arepas*, and often with fried plantains, are part of the staple diet. In the eastern plains known as Los Llanos, which is mainly cattle country, whole roast calf is sometimes served, tradi-

tionally cooked on a spit over a fire and turned manually over and over for about four hours. In other rural areas, roast suckling pig or *lechona* is popular.

Poor people in cities sometimes have a more meager diet than in outlying areas where people can grow their own food. In some cases, the urban poor subsist on diets of bread and potatoes, to which they occasionally add other vegetables.

### 13 EDUCATION

Primary education is free in Colombia, but about 20% of children in cities and 40% in rural areas do not go to school at all. The birth rate remains fairly high, and about half of the population is under 20 years old, so demand for schooling exceeds what the government can provide. However, in recent years education has been at the center of social spending, which has increased literacy among the population. An estimate of 92.8% of the population at the age of 15 is able to read and write.

In addition, there have been significant improvements in some aspects of education, particularly the expansion of college and university education since the 1960s. There are over 20 universities, as well as technical and commercial institutes, and training schools that have helped Colombia improve the skills of factory workers.

Colombia also has a reputation for the quality of its schooling, which is considered high, even if it is not able to provide for all those who need it.

### 14 CULTURAL HERITAGE

The legend of El Dorado (the gilded one), one of the most well-known myths in Latin America, originated in Colombia. According to the popular belief, Zipa, one of the most important tribal chiefs in South America, covered himself with gold and dust and dived into a lake of pure mountain water. According to historic interpretations, different tribes in different regions would have carried out this ritual as a political ceremony to appoint new rulers and recognize them as kings among their people.

In addition, Colombia has a rich musical heritage that blends Amerindian, African, and Spanish elements. In the Andes region, 12-string guitars called *tiples* are often used to sing the courtly and romantic *bambucos*, which derive partly from Spanish and partly from Amerindian music. On the coast, the most famous music is the *cumbia*; the music is part of most festivals there and is played with flutes and drums. The women wear round-necked, lace-edged blouses and wide, flowery skirts. The men hold lit candles, and the dance itself is graceful, suggesting the swaying of palm trees.

Apart from a rich folk culture, the main cities, in particular Bogotá, have theaters, art galleries, bookshops, and many movie theaters, as well as symphony orchestras.

Colombia has produced excellent painters in the 20th century, including Fernando Botero. Some of his portraits of overblown, self-important figures are satirical and have achieved international fame. There are many other Colombian painters, including Alejandro Obregón, whose bright, joyful colors recall the landscapes of his Caribbean homeland.

Colombia developed a strong romantic tradition, which expressed itself in poetry during the 19th century. This tradition continued into the 20th century in the work of José Asunción Silva and many others. Other influences, such as surrealism and existentialism, also affected the development of modern

poetic styles. Thoroughly modern poets in this sense are Leon de Greiff and Jorge Zalamea Borda. A folk tradition that incorporates black African elements played a part in the development of other poets such as Porfirio Barba Jacob. Various other Spanish literary traditions, such as the picaresque, influenced some of the best-known poems of Rafael Pombo, who is loved by many children for his humorous depiction of an elegant and pompous frog in the poem *El Renacuajo Paseador* (*The Strolling Frog*), which most children learn at school.

Colombia's most famous novelist is Gabriel García Márquez, a Nobel Prize-winner. His imaginative novels have been translated into many languages. In his novel *One Hundred Years of Solitude*, the mental realities of people are contrasted with historical events and with time in such a way that a "fabulous" or mythical kind of time is convincingly created. His success encouraged a type of Latin American writing that gives free reign to the imagination. This school of writing has come to be known as "magical realism."

In addition, Colombians have a strong tradition of historical writing; among well-known modern historians are Rafael Núñez and Indalecio Liévano Aguirre, who wrote an interesting biography of Simón Bolívar the Liberator.

### 15 WORK

Colombia's economy has experienced positive growth over the past five years despite serious armed conflict. Policy makers and the private sector have praised 2007 as one of the best economic years in recent history. The economy continues to improve in part because of austere government budgets, focused efforts to reduce public debt levels, an export-oriented growth strategy, improved domestic security, and high commodity prices.

Despite economic growth, about 10% of the population is underemployed in Colombia, and people work as street vendors, in markets, on construction jobs, or in a variety of odd jobs. Poor women often find employment as servants. Skilled workers who work in manufacturing have better conditions and more secure employment. Small commercial traders and shopkeepers form an important part of the economy, and there is a growing class of graduates who find employment in trade, manufacturing, or finance. The traditional preference for careers in medicine or law is supplemented by new careers in various fields of engineering, and in communications and computers.

In rural areas people usually work in the fields, and in many parts of Colombia children add to the family income by working extra hours.

### 16 SPORTS

The most popular sport is soccer, but many other sports are played in Colombia. There are many sporting tournaments that include basketball, volleyball, golf, tennis, and swimming. In cattle-ranching areas there are rodeos. People in river or coastal areas enjoy boating and fishing. Cycling has developed as a competitive sport in which Colombians usually excel because they are used to training in difficult, mountainous terrain.

A game called *tejo* is played among the poorer town dwellers in the Andes region and consists of trying to land a horseshoe over an upright stick fixed some distance away from the thrower. Much of the betting involved in this game includes whole crates of beer.

## 17 ENTERTAINMENT AND RECREATION

Popular culture in Colombia includes folk music and dancing, as well as enthusiastic participation in the many secular and religious *fiestas* around the country. Some towns, such as Manizales and Bogotá, have bullfighting seasons, which draw large crowds, and it is not unusual for *aficionados* or amateurs to try their hand at bullfighting as well.

People also enjoy the movies and festivals that revolve around beauty queen contests. Depending on the festival and the region, the winner is given titles, such as the Queen of Coffee, or the Queen of Sugar, celebrating the importance of particular agricultural products that form part of Colombia's economy.

Another popular pastime is the *paseo* or outing, when a group of friends or family members leave the town or city to visit a place in the countryside. Some town-dwellers have land or a small farm or relatives in rural areas; wealthy people often have large ranches; others simply travel by bus with friends to outlying areas, choosing a small town or village with beautiful scenery or a few amenities such as a river or a good luncheon place where they can relax, have a picnic, and spend the day. Quite often people will take instruments such as guitars along as well.

## 18 FOLK ART, CRAFTS, AND HOBBIES

Colombians are very fine craftspeople, known for beautiful woodwork and metalwork, as well as weaving. When the Spanish conquerors first arrived on the high mountain plateau where they later founded the capital city of Santa Fé de Bogotá, they were astonished at the skill in textile production of the Chibcha Indians, who had developed interesting techniques for dyeing and printing as well as weaving.

The Quimbaya Indians of northwestern Colombia were famous goldsmiths, and during the colonial period there were noted gold- and silversmiths. This tradition of metalworking continues among artisans and jewelry-makers today. Colombians made fine furniture during the colonial period, and wood-working and furniture making are ongoing skills of many independent craftsmen who coexist with more sophisticated furniture manufacturers. Pottery has been made for centuries, both by the Amerindians and by subsequent mestizo craftspeople.

A typical Colombian instrument is the *tiple* or 12-string guitar, which is still made in Colombia. On the coast, the tradition of drum making that originated in Africa was brought to Colombia along with the slave trade and continues to this day. Craftsmen also make reed flutes and rattles. A number of Amerindian tribes weave beautiful bags called *mochilas* that are hung loosely over the shoulder and that city dwellers also find practical to use. Amerindian hammocks in various styles are also purchased, and town-dwellers in the tropical zones of Colombia often hang them up on their front porches or verandas.

## 19 SOCIAL PROBLEMS

Severe social problems in Colombia are caused by the widely differing living standards between rich and poor. Colombians often have a caustic wit, as exemplified in the sharp verse attributed to the Colombian humorist Gabriel Ocampo Giraldo: "Here, thanks to a just sentence, lies a thief who was a beginner, who did not steal enough to prove his innocence!"

Colombian bullfighter Cesar Rincon during a match in the Caaveralejo arena in Cali, Colombia.  
(AP Images/Inaldo Perez)

In addition to socio-economic inequality, there is ongoing conflict between army units and guerrilla armies. Problems continue with the activities of the drug traffickers, who often employ large numbers of people and resort to violence to settle scores with rivals. They have also used bribes to obstruct the course of justice, and some of them have become immensely wealthy. A continuing problem is kidnapping in order to obtain ransom money, a device often used by guerrilla armies or sometimes by drug traffickers who want to threaten people they think are interfering with their activities.

The atmosphere of insecurity has given rise to the increasing use of security guards to guard individual citizens who feel threatened, as well as to protect private homes and public buildings.

## 20 GENDER ISSUES

In the labor market, Colombia's economically active population has risen over the last three decades, due primarily to women's increased labor force participation. Women represent a surprisingly high proportion of workers in professional and managerial positions. Colombia's gender empowerment measure (GEM) shows that even though the women's share of income was still only 75% that of men in 1999, it had significantly increased from the 60% share eight years earlier. Gender wage gaps in Colombia have decreased significantly in

recent decades. In addition, women's life expectancy is seven years higher than men's, while literacy rates are roughly equal.

Even though criminal law penalizes women seeking abortions and those providing them, widespread recourse to abortion and its negative health consequences continue to be a cause for serious concern in Colombia. Approximately 16% of maternal deaths are due to complications brought about by unsafe abortions. In 1993, approximately one in every three women who has ever become pregnant acknowledged having had an induced abortion. Moreover, of every 100 women who have an abortion, 29 suffer complications and 18 arrive at the hospital in an extremely serious condition.

Women's formal political activism in Colombia began in 1954 when the military regime gave them the right to vote. However, their political participation has been thwarted because of guerrilla violence against political activists.

# COMANCHES

**LOCATION:** United States (Oklahoma; Texas)

**POPULATION:** over 19,000 (including those who indicate

Comanche and another racial category in the 2000 census)

**LANGUAGE:** English; Comanche

**RELIGION:** Native American Church

**RELATED ARTICLES:** Vol. 2: Native North Americans

## 1 INTRODUCTION

Originally, the Comanches were part of the Shoshone tribe, who lived in the mountains of what is now northern Wyoming and Montana. Late in the 17th century, they broke into two bands, and those who would later be known as the Comanches moved south. In the Southern Plains, they met the Utes, who introduced them to Spanish traders. In this context, the Comanches assumed a new name, either “Koh-Mahts” or “Kwuma-ci,” rather than their original “Nerm.” The precise meaning of the Ute names are uncertain, but linguists think they mean “one who fights us all the time.” The Spanish transformed the Ute words into “Comanche.”

Once the Comanches had settled into their new home in the Southern Plains, they divided into five major groupings: the Penatekas, who lived the farthest south; the Nokohi of the east; the Kotsoteka of the north, and the Yamparika to their north; and the Quahadi of the west. The main enemies of the Comanches were the Pawnees, Osages, Arapaho, and Apaches. Although the five Comanche bands were independent of one another, they often came together to fight a common enemy (as was the case with many battles against the Apaches, who sought to gain land, horses, and captives).

There were two main European forces that interacted with the Comanches in the 18th century: the French and the Spanish. The French had purely economic interests in the land. They wanted a strong trading post and a steady source of income from the New World for the king. They had neither religious nor social interests in the area and were, therefore, able to maintain healthy relations with the Comanches. The French traded guns, ammunition, and metal goods such as knives and pots. When the French were defeated by the British in the French and Indian War of 1763, however, many French traders left the continent, and the Comanches lost valuable trading partners.

The Spanish, on the other hand, had very different goals. They were eager to convert the Comanches to Catholicism and desperately wanted Comanche land for the mineral wealth it possessed. Angered by the Spanish desire for dominance, the Comanches often raided Spanish pueblos in New Mexico and Texas. The Spanish had brought smallpox to the New World, however, and many Comanches died in a smallpox epidemic in 1780-1781. The tribe was greatly weakened, and they could no longer fight the Spanish. A few of the bands met with the Spanish governor of New Mexico, De Anza, and in 1786 they agreed to peace terms that promised trade and rest to both parties. Due to the autonomy of the different Comanche bands, the southernmost people continued raiding the Spanish pueblos in Texas, believing the treaty did not apply to them since they had not participated in the negotiations. The unstable treaty was maintained until Texas won its independence in 1836.

The Comanches and European American settlers suffered continuous conflict throughout the 19th century. The worst fighting occurred in Texas, where the Comanches had the largest land holdings, referred to as *Comancheria*. In the late 1830s, the Nation of Texas formed a special division of soldiers called the Texas Rangers. They were given the job of fighting the Comanches in *Comancheria* and keeping them out of the settlers' way.

In 1840 leaders of twelve Comanche bands went to the council house in San Antonio to try to reach an agreement with the Texas lawmakers, an agreement that would bring hostilities to an end. At this meeting, the Texans demanded that the Comanches return all European American captives. Because each Comanche band was autonomous, however, it was impossible for the Comanches to make this promise. Acting impulsively, the Texans took the Comanches hostage to better their bargaining position. The Comanches tried to escape, and all twelve of the leaders were killed in what has become the Council House Massacre—one of the most dramatic episodes in the Comanches' struggle to maintain their land. When Texas became a U.S. state in 1845, the Comanches' hostility turned toward the U.S. government. They resisted reservation life until the spring of 1875, when the government declared that any Comanche not living in so-called "Indian Territory" (present-day Oklahoma) would be shot on sight. This finally brought the Comanches to their knees, and they reluctantly became the last Native American tribe to submit to life on a reservation.

## 2 LOCATION AND HOMELAND

When the Comanches arrived on the Southern Plains at the start of the 18th century, they had to fight the Apache (their most challenging enemy) to obtain land. *Comancheria*, as the Spanish called the vast territory the Comanches ruled, incorporated over 24,000 square miles stretching from southeast Colorado to southwest Kansas, and from eastern New Mexico to central Oklahoma and Texas. The climate is mild, and the buffalo were plentiful throughout the year. With buffalo as a staple, the Comanches became a nomadic hunting people who followed the herds and settled along streams for water.

Territory was always important to the Comanches. They were a communal people, and when they were forced onto individual land plots by the General Allotment Act of 1887, they chose their property according to the old patterns of the *Comancheria*. The four remaining bands settled more or less where they had in the old days. The Penteka went to the south, the Quahadi lived in the west, the Nokomi went east, and the Yamparika took the northernmost property. The Comanche population is nearly 20,000. Only 50% live in their old homelands of Oklahoma and Texas.

## 3 LANGUAGE

The Comanche language belongs to the Uto-Aztecan family of Native North American languages. Because many of the Plains people spoke different languages, they developed a form of sign language to communicate with those from different tribes. In this sign language, the Comanches were often referred to by making a side-to-side, snake-like motion in the air with the finger moving backwards. The snake referred to the Shoshone, the Comanche's ancestors; *Shoshone* means "snake people." In this way, the Comanches were always connected to their ancestral heritage. While efforts are being made to pre-

serve this sign language, not many Comanches understand it any more. The few who still understand are those born before 1926. Those born after 1926 were educated in Bureau of Indian Affairs (BIA) schools where indigenous and traditional languages were suppressed.

Today a federal grant is making possible a preschool total language immersion program for 3–4-year-olds in order to ensure the survival of the Comanche language. In addition, a Comanche Language Preservation Committee has been formed. In spite of the rather large number of Comanche tribal members, there are no more than 40 people who can still carry on a conversation in Comanche. The boarding school experience is the direct cause of the demise of the Comanche language.

During World War II, Comanche Code-Talkers, an elite group of 17 young men fluent in the Comanche language, received special communications training from the United States army. They were employed to send critical messages in a special code that confused the enemy.

## 4 FOLKLORE

According to Comanche myth, the Comanches were created by the Great Spirit after it had destroyed another people in a great flood. The former people displeased the Great Spirit, and a fresh start was needed.

Several stories are told concerning the tribe's emigration south, in which they left the Shoshone people. The first states that two bands were camping together and two boys, one from each band, were playing. One boy accidentally kicked the other in the stomach, and he eventually died. His band was irate and would have attacked the other if an elder had not intervened. He told both groups that they were one people and should not fight amongst themselves. Both bands agreed but also understood that they could no longer live together. Thus, the Shoshone stayed in the north and the other, who later became the Comanches, moved south.

The second story also starts with a camping party. Men from both bands went on a hunting expedition. A bear was killed with two arrows, one shot by a man in one band, and one from the bow of a man in the other band. Unable to decide who had shot the fatal arrow, the quarreling bands decided to go their separate ways.

Other legends exist regarding the Comanches' migration. One story tells how the Comanches split from the more peaceful Shoshone and traveled down the "Snake River" to continue their warlike, political, and opinionated way of life. Other sources of the snake image may be rooted in legends about the Comanche settling in an area inhabited by many snakes, and how they were considered to be "as dangerous as snakes."

## 5 RELIGION

Compared to the other Plains Indian tribes, the Comanches held few ceremonies. The night before the men went into battle or on a raid, the War Dance was performed. The Comanches believed that to dance the War Dance during the day would bring bad luck to their side.

Unlike all other Plains tribes, the Comanches do not perform the Sun Dance. In 1874, however, a radical Comanche preacher, Ishatai, claimed to have communicated with the Great Spirit. He told the Comanches that the Great Spirit wanted them to perform the Sun Dance and that if they did, they would win the Spirit's favor and drive away the Europe-

*Carney Saupitty Sr. tours an exhibit honoring code talkers at the Oklahoma History Center. His brother Larry Saupitty was a Comanche Code Talker in World War II, who sent the first message back after landing at Utah beach on D-Day. (AP Images)*

an Americans forever. With assistance from the neighboring Kiowas, the Comanches performed the Sun Dance in 1874. Afterwards, they set out with Kiowa and Cheyenne warriors to attack a European American trading post at Adobe Walls in the Texas panhandle. Although the Native North Americans greatly outnumbered the European Americans, their bows, arrows, and lances were hardly a match for the guns and rifles of the European American settlers. The Comanches lost the battle—and lost their faith in the Sun Dance, which was never performed again.

After being forced onto the reservation, many Comanches began practicing peyotism. In 1918 Comanches helped form

the Native American Church, which combines ideas of Christianity with the sacramental use of peyote.

## **6 MAJOR HOLIDAYS**

The Comanches were unique among the Plains peoples, as they did not hold annual gatherings or assemblies. In fact, the Comanches rarely congregated. Sometimes they hunted or fought together, but almost never did they gather for a formal intertribal meeting.

Today the Comanches hold an annual Comanche Homecoming in Walters, Oklahoma, during the third week in July.

People from many different tribes come together for this huge powwow that celebrates the similarities of Native North American cultures. The Comanche Nation Fair is held yearly at Old Craterville Park, Ft. Sill, Oklahoma on the last weekend in September.

## 7 RITES OF PASSAGE

For the early years of a child's life, he or she is called a variety of nicknames. Later a formal name is given in a public ceremony. This new name is most often based on an important experience in the child's life.

## 8 INTERPERSONAL RELATIONS

The Comanches had an elaborate system of social etiquette. For example, hospitality was sacred, and all invited guests were treated with the utmost respect. This is why the Comanches took such great offense when they were invited to talks with the U.S. government and were later mocked or hurt. Equally important was the prohibition on stealing from friends and allies; to do so would bring severe punishment—although strangers were fair game. Lying was once an important taboo; to call someone a liar, or *e-shop*, was the worst imaginable insult.

Each person belonged to a family hunting band; each band varied in size. Comanche social structure was quite loose, and people changed hunting bands as needed or desired. If a band leader made a decision that was unpopular, people either started a new band or organized a change in leadership. There was no central ruling government, which allowed each band full autonomy.

Within each band there were band councils comprised of adult males. Decisions had to be unanimous, which caused many divisions because Comanches would rather leave than create conflict. A band chief ran each council meeting as long as he retained the support and cooperation of the others. A respected elder acted as a peace chief and brought wisdom and fairness to the mix. Before each battle, raid, or hunt, a war chief was elected. This war chief held power only until the task was completed.

Unlike other Plains tribes, the Comanches were not organized into military societies. While they often joined together for battles, they always returned to their smaller, independent bands when the fighting was over. During the hunt, each man did his own killing, and there was rarely a limit placed on the number of buffaloes taken. This was due to the abundance of buffalo on the Southern Plains throughout the year.

## 9 LIVING CONDITIONS

Because they were a migratory hunting tribe, the Comanches lived in portable tipis. Tipis were made by stretching many buffalo hides sewn together across a cone-shaped frame of four wooden poles tied together at the top. The Comanches, as well as the Blackfeet and Shoshone, used a four-pole tipi construction; most Plains tribes in the same area used a three-pole construction, even today. The Comanches had very little furniture in their tipis. Large piles of buffalo-skin robes served as beds, seats, and tables. The opening of the tipi always faced the rising sun in the east.

During the summer months, the Comanches often slept outside in wooden framework shelters with flat roofs covered with leaves and branches. The shelters had no sides and thus

allowed a breeze to circulate while offering shade during the daytime.

## 10 FAMILY LIFE

In traditional Comanche society, all children were highly valued, but boys were preferred. When they reached courtship age, boys and girls had to follow very strict courting rules. They were forbidden to show interest in each other while in camp, but they frequently arranged secret meetings outside of camp. When a boy decided that he wanted to marry a certain girl, he would give the girl's family a horse as a way to show that he would be able to provide for her. If his proposal was accepted, he would leave his tipi and live with his new wife in her family's tipi. Polygamy was common. Very often, the second and third wives would be sisters of the first wife. It was felt that sisters would get along with each other better and would be less likely to quarrel. The first wife was always considered the boss, however. To avoid conflicts and disharmony, men never spoke directly to their mothers-in-law.

## 11 CLOTHING

Today Comanches wear Western-style clothing for everyday purposes. Traditional clothing is still worn for ceremonials, however.

Traditionally, the Comanches made nearly all their clothing from deer and buffalo skins. Because of the warm climate in which they lived, Comanche boys went naked until they were 8–10 years old, when they would start to wear a breechcloth. A breechcloth is a piece of animal hide passed between the legs then draped over a belt around the waist to hang down in front and back. Girls wore only a breechcloth until they were about 12 years old, when they would begin to wear women's clothing. Women's clothing emphasized modesty. Comanche women wore loose fitting deerskin dresses with long sleeves. They decorated the dresses with fringe, beads, and small pieces of metal (after contact with Europeans, when metal began to be received in trade). Women also wore beaded moccasins made of buffalo skin. All Comanches used shampoo and soap made from yucca plant root.

Comanche men wore a breechcloth made of deerskin. In the summer, they went naked from the waist up. In the winter, they wore warm buffalo-skin robes and high leather boots that covered their legs. Men had pierced ears and long hair worn in two braids, decorated with strips of fur, leather, and feathers. Before battle, men painted their faces black. At other times, they would paint their faces in various colors and designs, none of which had any particular significance. Women often painted yellow or red lines around their eyes. They also painted the insides of their ears red and decorated their cheeks with orange or red triangles or circles. This was simply considered stylish and had no other deep significance.

After the United States forced the Comanches to relocate to Indian Territory in present-day Oklahoma, the government provided them with clothing made of cheap materials in a one-size-fits-all design that was usually too large to fit anyone. Children were not provided with any clothing at all. The women would cut the government clothing down to size for the adults, then use the leftover fabric for children's clothes.

**12 FOOD**

The acquisition of horses (introduced to North America by the Spanish) in the 17th century made buffalo hunting much easier for the Comanches. With more meat available, the Comanches became a healthier, and eventually more numerous, tribe. They ate all edible parts of the buffalo, plus deer, antelope, and black bear meat. When other meat was extremely scarce, they were forced to eat their horses to survive (dog and human meat were strictly forbidden).

Boiled meat called *söp* is made by boiling chunks of lean meat in water until tender. A staple food for the Comanches and other Plains tribes was *pemmican*. Traditionally made from buffalo meat mixed with berries and nuts, “glued” together with boiled buffalo fat, pemmican was extremely healthy and would last for years when stored in leather pouches called *parfleches*.

**Modern Pemmican  
(pie filling)**

1 quart apple cider	2 teaspoon salt
2 cups seedless raisins	2 teaspoons cinnamon
1 cup dried currants	2 teaspoons ground ginger
3 apples, peeled, cored, and chopped	1 teaspoon ground cloves
1 cup chopped suet	1 teaspoon nutmeg
2 pounds ground venison	½ teaspoon allspice

Put the cider, raisins, currants, apples, and suet in a large saucepan. Cover and let simmer over low heat for two hours. Stir in the remaining ingredients, and let simmer uncovered for another two hours, stirring occasionally. Use as pie or pastry filling. Makes 2 quarts.

[Adapted from Kimball and Anderson, *The Art of American Indian Cooking* (Garden City, NY: Doubleday & Co.), 1965, p. 121.]

**13 EDUCATION**

At the Bureau of Indian Affairs (BIA) schools in Indian Territory (present-day Oklahoma) in the late 19th and early 20th centuries, Comanche children were taught European American ways and values. At both boarding schools and day schools on the reservation, boys were taught vocational skills such as bookkeeping, while girls were taught how to iron, set a table, and address party invitations. Both boys and girls were taught to play croquet and baseball.

In 1935, when the U.S. Congress passed the Oklahoma Indian Welfare Act, new schools funded by the U.S. government but run by Native North Americans were opened, replacing the BIA schools. But Native-run schools were short-lived. They were closed after World War II (1941–1945) when the U.S. government reduced its spending. Today there are a few Comanche schools in operation, but the majority of Comanche children attend public schools in Walters and Lawton, Oklahoma. There are several highly educated Comanche who teach at major research universities in the United States. In 2002 Comanche Nation College was established by Tribal Charter. The goal of the newly formed college is to provide educational opportunities for members of the Comanche Nation as well as other neighboring tribes with an American Indian focus, which stresses the maintenance of language and culture in the modern world.

**14 CULTURAL HERITAGE**

In the past, “sweats” were a form of purification or cleansing, but they were not considered a ritual religious ceremony.

**15 WORK**

Comanche work has changed dramatically since the days before the European invasion. When they were masters of the Comancheria, boys learned to ride horses and hunt at a very early age, and girls were taught to cook and tan hides. While men made weapons and hunted, women prepared the food, tanned hides, and made tipis and clothes. When forced to relocate to Indian Territory (present-day Oklahoma), the Comanches had to learn to farm. After the General Allotment Act of 1887 divided their lands into parcels too small to farm successfully, many Comanches found jobs off-reservation, working as herders or farmers for European Americans. These jobs usually paid very low wages.

Many Comanches lost their already marginal jobs during the Depression of the 1930s and fell into even deeper poverty. In 1935, as part of the New Deal, Congress passed the Oklahoma Indian Welfare Act, which allowed Native North Americans to form business-development groups. The Comanches helped reestablish the Comanche, Kiowa, Kiowa-Apache Business Council that had been disbanded in 1887 after the General Allotment Act. In 1966, however, the Comanches broke away and formed their own Comanche Business Council. The Comanche Business Council has since organized the operation of a meat-packing plant as well as a leather-tanning factory on Comanche lands in Oklahoma. Many Comanche men and women still must find work off-reservation, however. A number of young Comanches enlist in the U.S. Armed Services, the modern expression of their traditional warrior identity.

**16 SPORTS**

The Comanches traditionally played a sport called *shinny* that was very similar to modern-day lacrosse. They also played a sport similar to soccer.

**17 ENTERTAINMENT AND RECREATION**

Traditionally, Comanche elders would tell stories around campfires at night to provide entertainment as well as education for the children.

Today Comanches enjoy the same forms of recreation as other Americans. A traditional pastime at tribal powwows is the hand-game, a gambling game for teams in which sticks are hidden in the hands of some team members and the opposing team must guess who the stick holders are.

**18 FOLK ART, CRAFTS, AND HOBBIES**

Comanche crafts represented everyday life with toy versions of real people and objects, much like “playing house”—dolls in cradleboards, miniature tipis, and so on.

In their art, Comanches used certain symbols to represent healing and medicine; for example, a buffalo design on a shield would represent the strength of the buffalo.

**19 SOCIAL PROBLEMS**

The Comanches suffer a great deal from racial discrimination in Oklahoma. A recent study showed that more Comanches are arrested than European Americans for similar offenses and

that more force is used while arresting Comanches than while arresting European Americans.

## 20 GENDER ISSUES

The Comanche, as opposed to almost every other North American Indian tribe, do not recognize third or fourth genders. In other words, there are no *berdaches* in Comanche society. The cultural construction of gender in Comanche culture includes only males and females.

In prereservation Comanche society, that was considerable competition among men for wives. Polygyny was practiced throughout Comancheria. Men would often attempt to seduce the wives of other men and then run off to live separately. Comanche men did not punish the men who stole their wives with harsh brutality or death. Instead, they demanded some sort of recompense or payment.

The highest honor that could be bestowed on a Comanche woman was to be gifted with an otterskin cap. A woman would have to accumulate many good deeds in her lifetime to be bestowed with this honor. Most Comanche women do not receive such an honor until they are fifty or sixty years old. After receiving the otterskin cap, the woman would add her eagle plume that she received during puberty to the back of the cap.

One of the most well-known contemporary Comanche women is LaDonna Harris (b. 1931). A tireless champion of equal rights for peoples of all nationalities and ethnicities, Harris was one of the founding members of “The Group” that fought to desegregate the city of Lawton, Oklahoma in the 1960s. She also fought for Comanche separation from the Kiowa and Apache peoples during the late 1950s and 1960s. The Comanche separation secured independent status for the Comanche.

# COSTA RICANS

**ALTERNATE NAMES:** Ticos

**LOCATION:** Costa Rica

**POPULATION:** 4,195,914

**LANGUAGE:** Spanish; English

**RELIGION:** Roman Catholicism (over 90%)

## 1 INTRODUCTION

Christopher Columbus was the first European to arrive in what is now Costa Rica, in 1502, on his fourth and last voyage. It was probably named “rich coast” because of the gold ornaments worn by Indians, but it was never a source of great wealth for the Spanish. Indeed, when Central America freed itself from Spanish rule in 1821, the population of Costa Rica was under 70,000. San José became the capital of the Central American federation in 1823 and that of Costa Rica when it became an independent nation in 1838. During this period, coffee became an all-important export and source of national wealth; bananas, introduced in 1871, also became a major export crop. Political life was generally tranquil until 1948, when thousands died in a civil war.

After the internal clash that ended with the life of thousands of citizens, a new constitution was promulgated in 1949. This legal body among other innovations abolished the army, limited the power of the executive, and gave women the right to vote. Moreover, the new constitution guaranteed a complete net of social benefits to all Costa Ricans, such as the right to receive education. Today, Costa Rica has a 96% literacy rate, the highest in Central America.

Since the mid 1950s, Costa Rica has held a tradition of orderly democratic rule that has allowed the country to have 12 uninterrupted democratic presidential elections since 1953. In 2006, the Nobel Peace Prize winner, Óscar Arias, was elected president of the country. Internationally, Costa Rica is well known for its high standards of living—it has been ranked 4th in the region and 48th in the world in the Human Development Index—and for its strong commitment to preserve and protect the environment. Honoring this environmental-friendly reputation, Costa Rica declared in 2007 its intention of becoming the first carbon neutral country in the world by 2021.

## 2 LOCATION AND HOMELAND

Costa Rica is about the size of the U.S. state of West Virginia. It is bounded by Nicaragua on the north, Panama on the southeast, the Caribbean Sea to the east, and the Pacific Ocean to the south and west. Mountain ranges run northwest-southeast the length of the country, reaching as high as 3,810 m (12,500 ft) above sea level. Some of the mountains are volcanic. About half the population lives in the small, fertile, central plateau nestled in the highlands. The lowlands along the Pacific and Caribbean coasts are hot and generally rainy, swampy, and heavily forested.

Because of its natural beauty, privileged climate, and the governmental commitment to protect the environment, tourism, especially ecotourism, has become an important source of national income, representing around 15% of the GDP. In addition, its tropical weather has made Costa Rica one of the main producers of coffee in the world. Thanks to the sustain-

able exploitation of its resources and its tax exemption policy for foreign investment, Costa Rica has achieved a GDP close to \$56 billion dollars (2007). However, distribution of wealth has lingered highly unequal with 20% of the population under the poverty line.

About 95% of the 4.1 million Costa Ricans are either of European (generally Spanish) or mixed European and Amerindian ancestry. The rest of its inhabitants are mostly of Amerindian, African, or Chinese descent. The number of refugees fleeing political strife in other Central American countries reached some 200,000 in the 1980s, but fell to about half that number in the 1990s. Costa Ricans call themselves Ticos.

### 3 LANGUAGE

Spanish is the universal language. *Vos* is often used in place of *tu* as the singular familiar pronoun. Costa Rican Spanish is also influenced by Mexican television. There is a peasant country dialect but few regional variations. The 15,000 or so Amerindians belong to six linguistic groups. Some of the 50,000 or so Blacks—mostly descendants of Jamaican immigrants—use English as their principal language. The Amerindian dialects spoken in Costa Rica, such as Boruca, Térraba, and Maléku, are part of the Chibchan language. Among Central Americans, Costa Ricans are known for replacing the diminutive ending *tito* with *tico*, this explains why they are known in Central America as Ticos.

### 4 FOLKLORE

Costa Rican Amerindians see the world as created by God (Sibu) and controlled by good and evil spirits. A few *sukias* (shamans) are credited with curing illness, controlling the weather, and foretelling the future. *Curanderismo* (curing) with herbs and chants is also practiced by non-Amerindians. In Costa Rica these healers, also credited with concocting love potions and casting spells, are called *brujas* (witches); they are always female and at least 50 years old.

Catholic folklore is plentiful. As in all of Latin America, saints—including uncanonized “popular saints”—are prayed to as intermediaries before God, and statues and pictures of saints in the home are believed to confer good luck.

### 5 RELIGION

More than 90% of the population is baptized Roman Catholic. The 1949 Constitution recognizes Catholicism as the national religion and provides for state support of the Church while permitting the free exercise of “other cults not opposed to universal morality or good customs.” Only a Catholic marriage ceremony is recognized by the state without the need of a civil ceremony. Catholic doctrine is part of the public-school curriculum, and only a parental note excuses children from these lessons. However, in general Costa Ricans neither observe nor expect rigid conformity to the doctrines and rules of the Church. In recent years, Costa Rica has received continuous waves of immigrants, mainly from Asia and the Middle East, and as a consequence new religions, such as Buddhism, Islam, and Judaism, have been incorporated in the traditional creeds.

### 6 MAJOR HOLIDAYS

Of Costa Rica’s 15 public holidays, most are religious in character. Some businesses close for Holy Week (late March or early April), which is commemorated with religious processions. Christmas Eve (December 24) is celebrated with visiting, drinking, dancing, and gift-giving, as well as midnight mass. The feast day of Our Lady of the Angeles, Costa Rica’s patron saint, occurs on August 2. On this day, La Negrita, a small black stone image of the Virgin said to have appeared to a poor Indian girl over 300 years ago, is carried in solemn procession from the Basilica in Cartago to the parish church of St. Nicholas. It is returned on the first Saturday in September.

Among secular holidays, the most important is Independence Day, on September 15. This day is commemorated also in the other Central American countries that won their independence from Spain in 1821.

### 7 RITES OF PASSAGE

Parents of newborn children receive gifts from relatives and neighbors, and a man and woman—generally a married couple—are asked to serve as godparents, as in many other Latin American countries. The godparents traditionally take the infant to church to be baptized. A child’s first birthday is also a great occasion. After entering school at age seven, boys and girls play apart. Working-class children may be expected to do chores or supplement the family income as early as age six. A middle- or upper-class girl’s 15th birthday is a special occasion, marked by a party comparable to a debut. No fiesta or dance is complete without a “queen” and “princesses.” No similar

events exist for boys, but they enjoy much greater freedom and are steeped in the ways of *machismo*—assertive masculinity.

Most adult Costa Ricans let their birthdays pass unnoticed. A woman is considered well past her prime by age 40. Higher-status men, however, may celebrate their 50th birthday with a big party, and couples celebrate their silver and golden wedding anniversaries. Old women may spend much of their time in church, while old men gather in parks, cafes, or bars to talk.

Funerals are required by law to be held within 24 hours of death, and few corpses are embalmed. Whenever possible, a church ceremony is held and mourners proceed to the cemetery for the burial. If there is time, a wake may be held first, with the deceased placed in an open coffin in the family living room. A rosary and sometimes a Mass are held on the anniversary of the death for a decade or two. Widows sometimes wear black for the rest of their lives, although this practice is becoming obsolete.

## 8 INTERPERSONAL RELATIONS

Foreign visitors have described Costa Ricans as hospitable and gracious. Strangers are favored with a greeting in small towns. Acquaintances are greeted as *amigo* (friend) and given ritual shoulder-patting embraces. Yet, this is misleading, for many Costa Ricans say they have no real friends other than relatives. They value privacy and rarely invite non-relatives, except for friends from childhood and professional colleagues, to their homes. A great deal of socializing goes on outside the home, in clubs or bars, or at fiestas or other community diversions.

Dating is not common, and in rural areas and among more traditional urban families, girls under 18 must still be chaperoned at night. Movies, dances, and band concerts in the park are among the occasions where young people may get to know one another. If a boy and girl go out on a date even once, they are generally thought to be *novios* (boyfriend and girlfriend) who do not date anyone else.

Costa Ricans love music. They usually listen to rock and roll, pop, and reggaeton, and dance to the rhythm of salsa, merengue, and cumbia. Besides dancing, going to the movies is another of the main social experiences among Costa Ricans.

## 9 LIVING CONDITIONS

Costa Rica enjoys, with Panama, the highest standard of living in Central America. Life expectancy is on a par with the United States, and infant mortality is the lowest in Latin America. Many Costa Ricans credit the social security system, which took over community hospitals, for improved health. However, protein-deficient malnutrition remains common among landless peasants, and there has been an increase in obesity, alcoholism, smoking, and narcotics use. Most Costa Ricans live in small wooden or cement-block houses, with floors of wood or tile and roofs of zinc or corrugated iron. The urban poor, however, generally live in overcrowded, usually rented, slum dwellings. Squatters' shanties can be found on the fringes of the cities. Buses, rather than automobiles, are the main form of public transportation. Both coasts are also linked by rail with the capital, and there are airplane landing strips throughout the country.

## 10 FAMILY LIFE

The extended family group is the basis of Costa Rican society. Brothers, uncles, and cousins are expected to help other family

A Costa Rican boy cleaning fish. In the Costa Rican diet, however, beef or pork is preferred to fish. (Cory Langley)

members in times of need. Much of social life consists of Sunday visits to kin and to their parties, christenings, weddings, and funerals. Several generations may live under the same roof. Desertion and abandonment of children by fathers is common among the poor. It is not uncommon for a grandmother, her daughters, and their children to live together without an adult male present. Family size has dropped sharply since 1960 because of birth control. Women form a growing proportion of the labor force, and sex discrimination in hiring and salary is forbidden. Divorce, once seen as a disgrace, occurs more frequently than in the past, but separation and desertion remain far more common. Many women are also victims of domestic violence.

## 11 CLOTHING

Traditional women's costumes are based on a sheer, low-cut frilled, ruffled, or puffed white blouse and a flounced, flowered, full cotton skirt, which varies in color. A fringed, colored silk or cotton *rebozo* (shawl) is draped around the shoulders or over the head. A cross, medallion, or locket is usually suspended around the neck, and circular golden earrings are worn. Traditional men's costumes generally consist of dark trousers and a long-sleeved white shirt with a red-knotted handkerchief at the neck and a colored sash around the waist. A straw Panama hat is also worn.

Clean, unwrinkled clothing is very important to urban working-class people, and many of them will skimp on food to buy stylish clothing. All but the poorest people dress up on

Costa Ricans perform in a float during the Light Festival Parade. Thousands of people attend the festival to start the Christmas season in the country. (Yuri Cortez/AFP/Getty Images)

Sundays and on special occasions. Conversely, the upper and middle classes, more secure in their status, now dress more informally. Even top government ministers now doff their suit jackets on many occasions, confining themselves to sports shirts or short-sleeved shirts with neckties. Jeans and tee shirts are everyday wear for young people of all classes. Girls wear school uniforms, and older girls are expected to wash and iron the blouses of their uniforms and to press the skirts daily.

## <sup>12</sup> FOOD

The Costa Rican diet is based on rice, beans, tortillas or bread, fried plantains, and strong black coffee, sometimes prepared from home-grown berries, with lots of sugar. Vegetables and fruits, though available year-round, are not especially common. The midday meal is the main one.

Beef or pork is preferred to fish. *Olla de carne*, the traditional stew, is made with beef, potatoes, corn, plantains, squash, yucca, and other vegetables. Other popular entrees include *paella* and *zarzuelas* (spicy seafood stews). These dishes are derived from Spain but adapted to local ingredients. *Pozol*, a corn-based soup in Mexico and other Central American countries, is made with beans in Costa Rica. Rice, chayote (a pear-like fruit), and other ingredients may be added; in Guanacoste Province pozol is made with corn and a pig's head. *Gallopinto*, a popular peasant dish, is basically beans with an egg, although

its name suggests chicken. *Chayotes rellenos* are chayotes par-boiled in salted water, stuffed with cheese, eggs, butter, and breadcrumbs, covered with butter and breadcrumbs, and then baked.

Common drinks called *refrescos* are beverages consisting of liquefied fruits diluted in water and occasionally in milk. The typical flavors are melon, blackberry, strawberry, mango, and watermelon.

## <sup>13</sup> EDUCATION

Costa Rica boasts the highest literacy rate in Central America. Elementary education is compulsory between the ages of 6 and 15, and the central government supervises school attendance and curricula. About 24% of the country's budget is used in education, which has permitted more than 96% of the population over 15 years of age to be able to read and write. However, high school dropout rate remains high, and many graduates enter college unable to read or write acceptably. Well-to-do parents usually send their children to private schools, where instruction is at a higher level.

The main institutions of higher learning are the University of Costa Rica, founded in 1941 and located in a suburb of San José and the National Autonomous University in Heredia. Because of political pressure, almost all applicants are admitted, which has resulted in overcrowding and has hampered qual-

ity. Founded in 1976, the Autonomous University of Central America is a private institution organized into autonomous colleges on the British plan. The Institute of Technology is near Cartago; a San Carlos branch has a school of forestry and agriculture.

#### 14 CULTURAL HERITAGE

Costa Rica has a national orchestra, opera house, and dance company. Alejandro Monastel is a classical composer who employs native folk themes. The marimba and guitar are popular instruments for folk dances. Among popular performers are Los Talolingas, who wrote “La Guaria Morada,” regarded as the nation’s “second national anthem.” Lorenzo (Lencho) Salazar writes popular humorous songs. Some Indians retain their traditional dances and musical instruments, and the calypso is popular among Caribbean Blacks.

A government-subsidized House of the Artist has offered free lessons in painting and sculpture since 1951. The Museum of Costa Rican Art was founded in 1977. Francisco Amighetti and Richard Kliefoth are among the nation’s painters and graphic artists.

Costa Rica’s best writers have been chiefly essayists and poets, including Justo Facio, Roberto Brenes Mesén, and Joaquín García Monge. Carlos Luís Fallas and Alberto Cañas represent social protest, while Alfonso Chase and Carmen Naranjo depict urban life. Ricardo Fernández Guardia was a historian and short-story writer; Moises Vincenzi was a novelist and philosopher.

#### 15 WORK

About three-quarters of all Costa Ricans are members of the working class. These include farm and domestic workers, gardeners, janitors, and vendors. Because of a widespread prejudice against manual labor, young people with middle-class aspirations prefer even poorly paid white-collar occupations, such as secretary or bank clerk. The work ethic and work hours in Costa Rica differ from those in the United States. As in most Latin American societies, work is seen as a necessity but not an end in itself. The workweek is often cut short on Friday afternoon, and there are many holidays.

#### 16 SPORTS

Soccer is the national sport—or even national mania—of Costa Rica, and it is a tradition for young working-class males who began kicking a ball since they learned to walk. Even the smallest hamlet is likely to have at least one team. It is also by far the chief spectator sport. Bicycling also has many working-class participants and spectators. Boxing and wrestling also are popular spectator sports for men of the working class. Basketball, volleyball, and tennis are played chiefly by upper- and upper-middle-class boys, and tennis and golf by their fathers. Baseball is more popular along the Caribbean coast. Among other sports are horseracing and automobile- and motorcycle racing. Once popular, cockfighting is now illegal.

#### 17 ENTERTAINMENT AND RECREATION

Films are extremely popular, but most moviegoers are under 25 years of age. A censorship board, usually for reasons of sexual licentiousness, bans some films. Transistor radios are played everywhere, with popular music predominating. Even the

poorest homes are likely to have television sets. Favorite programs include cartoons and old movies from the United States, and Mexican *telenovelas* (soap operas). There are many other diversions and leisure-time activities, including sports, fiestas, dances, and games of chance. The national lottery, held each week, is a major event. There is a grand prize at Christmas.

#### 18 FOLK ART, CRAFTS, AND HOBBIES

Because it has only a small Indian population, Costa Rica has little in the way of native arts and crafts. A symbol of the nation, although dating back only to about 1900, is the elaborately painted wooden oxcart, typically done in brightly colored geometric patterns or stylized motifs such as flowers. There are a number of folk-dancing groups, and many songs, dances, poems, and stories have Indian and African as well as Spanish roots.

#### 19 SOCIAL PROBLEMS

Costa Rica’s chief social problem is the poverty that grips perhaps one-third of its population. Most farmers have only tiny plots. Slash-and-burn agriculture and the cutting of forests threaten the environment. Politically, Costa Rica has a large, expensive, and relatively unproductive bureaucracy. It has, however, maintained democracy and individual rights and freedoms, avoiding the armed conflicts and dictatorial rule that have gripped other Central American countries. There is no standing army. Crime-control is hampered by the lack of a career police force. Thousands of personnel are fired with each change in national administration; working in the bureaucracy does not guarantee continued employment.

#### 20 GENDER ISSUES

The first step towards Costa Rican women’s economic independence occurred during the late 19th century, when the liberal government considered their education to be essential for the improvement of the country. However, it was not until the first decades of the 20th century that women were allowed more expression and power in political spheres. In 1948 women were given the right to vote.

After ratifying the Convention on the Elimination of All Forms of Discrimination against Women (CEDAW) in 1984, the country instigated the first initiatives aimed at eliminating sexist stereotypes and practices that legitimize gender inequalities in the education system. The 1990 Act for promoting the Social Equality of Women made the central government and educational institutions responsible for guaranteeing equal opportunities for men and women, not only in terms of access to education, but also in terms of the quality of such education. This led to the creation of the Gender Equity Office in the Ministry of Public Education in 2000 and a strategic plan was defined containing measures to speed up gender equality and equity between men and women throughout the system. In 1996 the government introduced a 40% quota in the Electoral Code for all public elections, and political parties were required to change their statutes accordingly. In 1999 the Supreme Electoral Tribunal ruled that women must be placed in electable positions on party lists.

## CREEKS

**ALTERNATE NAMES:** Muskogee

**LOCATION:** United States (Oklahoma; Alabama; Georgia; Florida, California; Texas)

**POPULATION:** Approximately 71,000 (as of 2001)

**LANGUAGE:** English; Muskogee (Creek)

**RELIGION:** Traditional Creek; Muskogee (Creek) Protestant

**RELATED ARTICLES:** Vol. 2: Native North Americans

### 1 INTRODUCTION

In 1670, British traders began referring to part of the group of Native Americans of the Creek Confederation who lived along the Ocmulgee River (in what is today the state of Georgia) as the Ocheese Creek Indians. They made their homes and villages along many rivers and streams in the southeast United States, in what are today the states of Georgia, Alabama, part of South Carolina, part of Tennessee, and northern Florida. Although the Muskogee (Creek) people shared a common language, culture, and history, they did not consider themselves a nation. Instead, the Creek Confederation was more like an alliance between all the different Creek towns.

The first encounter between the Creeks and Europeans, with the Spanish explorer Hernando de Soto in the late 16th century, was brief but devastating. De Soto made captives of some of the natives, disciplining them cruelly. He burned some alive, cut off their hands, hanged, and beheaded them.

Not until the British began trading with the Creeks in the 17th century did the Europeans significantly influence the Creek Confederacy. The British gave guns, ammunition, metal pots and pans, European clothing, and beads in exchange for deer skins and Native American captives for the slave trade. To meet British demands and acquire European goods, the Creeks began overhunting deer, upsetting the balance of nature in the southeast and causing a serious decline in the deer population. They also began making slave raids on neighboring Native American tribes. These activities made them very unpopular among other tribes in the southeast.

Soon the French and Spanish began to compete with the British for control of the southeast. The Creeks, eager to remain on friendly terms with all the European powers, made informal agreements with all three and maintained profitable trade arrangements with each of them. They officially allied themselves with no one until the British began having conflicts with the American colonists. The Creeks then sided with the British and supported them throughout the American Revolutionary War (1775–83). When the colonists won and established the United States of America, the British-allied Creeks were naturally considered untrustworthy by the new government. Over the next few years, the Creeks lost large tracts of land to the U.S. government.

A mixed-blood Creek by the name of Alexander McGillivray (1753–87) decided the Creeks would be more powerful, and therefore less able to be coerced out of their lands, if they were one unified nation. During the late 1700s, McGillivray worked with both the Spanish government officials in Florida and the U.S. government to ensure autonomy for the Creeks. At the same time, he worked with the Creeks to unite them under one government. When McGillivray died at the age of 34

in 1787, the Creeks lost their motivation to unite and became more deeply divided than ever.

The Creeks became known to European Americans as one of the so-called “Five Civilized Tribes” because many of their ways reflected European customs and values. In 1796, U.S. President George Washington sent Benjamin Hawkins, a former Senator from North Carolina, as the chief agent to the Indian tribes in the Southeast. Hawkins administered a “civilization” program that he believed would improve standard of living for the Creeks, Cherokees, Choctaws, Chickasaws, and Seminoles. The program attempted to impose white social, political, and economic values on the tribes and convert them from their traditional ways of life to the agricultural-industrial life of white European Americans. Geographically, there were two groups of Creeks: the Upper Creeks, and the Lower Creeks. Originally, geography was all that divided them. However, as contact with Europeans and European Americans increased, the Upper and Lower Creeks began to diverge more seriously. The Lower Creeks were eager to adopt the ways of Europeans and abandoned many of their Creek traditions. The Upper Creek, on the other hand, were much more wary of the Europeans and remained attached to their Creek way of life. The tension between the Upper and Lower Creeks reached its climax in 1813, when the Upper Creeks attacked a fort housing European Americans and full- and mixed-blood Lower Creeks. Throughout the following year, European Americans and Lower Creeks attacked Upper Creek settlements. In the end, the Lower Creeks, aided by the U.S. government, won the Creek War. The Upper Creeks were forced to cede 25 million acres of their lands in Alabama and Georgia to the U.S. government, without payment.

In 1824, a half-blooded Creek named William McIntosh decided to sell the rest of the Creeks’ lands to the U.S. government. He and his three aides made an offer to agents of the Bureau of Indian Affairs (BIA), at the time a section of the U.S. War Department. When told of the offer, U.S. President Monroe ordered the BIA agents not to accept it on the grounds that it was illegal and unethical because no Creeks but McIntosh and his aides were involved. The agents went against President Monroe’s orders, however, and signed a treaty with McIntosh, giving him a large sum of money for lands that were not his to sell. In fact, the Creek Nation had passed a law stating that “no more land would be sold.” As McIntosh signed the treaty, he was warned by another Creek named Opothle Yoholo that his life was in danger. Six months later, the recently formed Creek National Council (a governing body similar to that which McGillivray had promoted decades earlier) arrested and executed McIntosh and his aides. In 1826, the United States signed a new treaty with the Creeks, nullifying the illegal treaty of 1824. This was the first and last time that the U.S. government ever nullified a treaty.

The McIntosh faction and its followers moved to the west and settled along the Verdigris River in eastern Indian Territory (present-day Oklahoma) around 1828. Under the Indian Removal Act passed by U.S. Congress in 1830, other members of the Five Civilized Tribes, including the Muskogee (Creek) who had not signed McIntosh’s treaty, were forcibly removed from their southeastern homelands and relocated to Indian Territory in 1836 and 1837. On March 25–27, 1836, the Upper Creeks and Lower Creeks held their last general council in Alabama; hostilities broke out soon right before their emigration

to Oklahoma. During the journey, made almost entirely on foot, an estimated 40% of the Creeks died, leaving only 14,000 to create a new life in Oklahoma. The removal of the Five Civilized Tribes is remembered as the “Trail of Tears” because of the tragic number of deaths it caused.

During the American Civil War (1861–65), some of the McIntosh-faction Creeks sided with the Confederate States, but many who came in the Indian removal tried to stay neutral. This caused old wounds to open between the Creek factions. At least four battles in the Civil War pitted Native Americans against each other. When the Confederates lost, the Creeks found themselves in a precarious position. Because some of the Creeks had fought with the Confederates, the whole Muskogee (Creek) nation was forced to cede a large amount of their land in Oklahoma to the victorious Union government. Although the Creeks were allowed to keep about 160 acres of land under the General Allotment Act of 1889, many individuals lost their land to unethical European Americans who tricked them into selling it when oil was discovered in Oklahoma at the turn of the 20th century.

In 1907, Oklahoma became a state, and the Creeks lost their official identity as a separate people. Lands in the former “Indian Territory” were not considered to be “reservations” by the U.S. government, nor were the Native Americans who lived there officially recognized as tribal nations. Native Americans did not become citizens of the United States until 1924. Creeks have struggled to survive on dwindling lands in a European-dominated culture to which they were poorly adapted. Finally, in 1970 the U.S. government made it legal for Native Americans to elect their own chiefs and tribal governments.

## 2 LOCATION AND HOMELAND

The Creeks are descendants of a tribe belonging to the Mississippian Culture, a group of highly civilized Native Americans that lived in the southeast long before the Europeans arrived on the continent. Much of Mississippian culture was similar to that of the Aztecs in Mexico, leading scholars to conclude that a number of Aztecs migrated north and east thousands of years ago, introducing their customs and ways of life to the peoples they met along the way.

When Europeans first encountered the Creeks in the 17th century, the Creeks were split into two subgroups: the Upper Creeks, and the Lower Creeks. The Upper Creeks lived in Alabama along the Coosa, Tallapoosa, and Alabama Rivers, while the Lower Creeks made their homes along the Chattahoochee and Flint Rivers in Georgia. Rich, fertile river valleys and a long growing season made farming both easy and practical for the Creeks. Game animals abounded in the dense forests, and fish were plentiful in the many rivers and streams. In the 1830s, the Creeks were forcibly relocated to a plot of land in eastern Oklahoma, near both the Arkansas and Canadian rivers. The climate in Oklahoma is hot and dry, and the land is much less fertile than that of the southeastern United States. Farming is much more difficult in Oklahoma than in the Creeks’ former homelands.

According to the United States Census, the total Creek population in 2000 was approximately 71,000. More than half live as part of the Muskogee (Creek) Nation in Oklahoma. The only federally recognized group of Creeks remaining in the southeast is the “Poarch Band of Creek Indians,” in Atmore, Alabama. There are some groups remaining in the southeast

that claim to be Creeks but are not recognized by the Creek Nation.

### 3 LANGUAGE

The Creeks, like many other Southeastern tribes, speak Muskogee, or Creek, a member of the Muskogean family of Native North American languages. Scholars believe that the Creeks probably spoke more than six different languages up through the 1600s, when they were still a loosely connected confederation of towns.

Preservation of the Creek (or Muskogee) language began with the Reverend John Fleming, the first Presbyterian missionary to the Creeks in Oklahoma, in 1832. He created a written Creek alphabet and published a children's Creek reader, *Istusi in Naktsoka*, in the 1830s. Fleming later published other books in the Creek language and helped the Creeks translate Christian hymns and parts of the Bible into their native tongue. The first English and Muskogee dictionary was written by the Reverend R. M. Loughridge and Church Elder David M. Hodge (who acted as interpreter) in 1914.

### 4 FOLKLORE

According to traditional legend, the Creek people were born from the earth's navel, located somewhere within the Rocky Mountains. After a time, the earth became angry, opening up and trying to swallow them again. They left this land and began to travel toward the rising sun. Their journey led them to the southeastern region of the United States, where they flourished and created a complex system of social structures to govern themselves.

Within the Creek Confederacy, there are many different clans. The Creek tell the story of how each clan got its name in this way: In the beginning, when This World was first created, it was covered by a thick fog. It was impossible to see anything. When the people went out in search of food, they often got lost. Therefore, each group of people came up with a call so that they could find each other. Because of these calls, the people learned there were other groups in This World in addition to themselves. Eventually, a great wind blew the fog away. The first group of people felt the wind and watched as it blew the fog away; they named themselves the Wind Clan. They are considered the first clan. Every group thereafter named themselves according to the first animal they saw—and so the Deer, Bear, and Turtle Clans came to be.

### 5 RELIGION

The Creeks, like many other Southeastern tribes, are a highly religious and ceremonial people. Christianized Creeks refer to God as the "Master of Breath" (who created all life). The Traditional Ceremonial Creeks refer to the Creator as "The One Above." The Creeks widely and wisely used the healing power of plants. The juices from certain crushed plants provided them with morphine and salicylic acid, the substance from which aspirin is made. The Creeks also brewed teas that relieved indigestion and other stomach ailments from leaves, branches, and roots.

The Creeks' most important formal ceremony has long been the *posketv*, or Green Corn Ceremony. It takes place near the end of the summer and marks the ripening of the corn and the beginning of a new year. It is a time of forgiveness and purification for both the ceremonial grounds and the Creek people.

Every element of the ceremony is in some way symbolic of the purification and cleansing taking place. One major element of the ceremony is the harvest of the New (Green) Corn, usually during July and August. No corn is eaten before then. The celebration of a single crop is not unusual considering its importance as the major food crop, producing even when other crops failed. During the four-day ceremony, there is much prayer, and the people fast. They abstain from eating not only the new corn but also all food. The men drink a tea brewed from holly leaves, which acts as a powerful emetic, causing them to vomit. They view this as a form of purification, readying them to accept the blessings of the new year. Participants in the ceremony are also expected to lay aside ill feelings, forgive wrongs done to them, and forget the conflicts of the previous year. Creek traditionally believe that all people should act with a pure heart and mind.

At the beginning of the Green Corn ceremony, all fires are extinguished. The central fire is then relit by the medicine man. From that central fire, then, all the cooking fires in the ceremonial grounds are rekindled, and the New Year begins. (Each family has a camp where meals are prepared.) These traditions are carried on today by the Traditional Ceremonial people of the Creeks.

A large percentage of Creeks have been converted to Christianity, and there are many Muskogee (Creek) Protestant churches in the Muskogee Nation. Services are conducted in English and the Muskogee language.

### 6 MAJOR HOLIDAYS

Creeks on each of the 17 traditional ceremonial grounds within the Muskogee (Creek) Nation still hold the Green Corn Ceremony every summer. It is a time for worship and thanksgiving.

### 7 RITES OF PASSAGE

In the past, a boy was not traditionally considered a man until he performed a heroic act in battle or on a raid. Once he performed this act, he was given a title describing the feat. At the next Green Corn Ceremony, a naming ceremony was held in which all boys who had performed a brave deed during the previous year were recognized and officially given their new name.

### 8 INTERPERSONAL RELATIONS

The Creeks are a very democratic people among themselves. The Muskogee (Creek) Nation has a central government presided over by the elected Principal Chief and Second Chief. The Nation itself is divided into eight districts. The National Council has 26 representatives elected from these districts, and they make up the legislative branch of the government. The judicial branch consists of six Supreme Court judges and one district judge, who are all appointed by the Principal Chief.

Harmony and balance have traditionally been important concepts among the Creek. The Creek people attempted to balance work and play, religion and politics, and respect for nature.

### 9 LIVING CONDITIONS

The Creeks traditionally lived in villages called *italwas*. In the center of each village was a square where religious and political

*Marian McCormick, principle chief of the Lower Muskogee Creek tribe, holds a gallberry broom at tribal headquarters. Her ancestors hid in a swamp to avoid being deported to an Oklahoma reservation with other American Indians during the early 1800s. (AP Images)*

events took place. The square was surrounded by low buildings with open fronts and seats inside facing the square. During the warm summer months, meetings took place in these buildings. In the winter, public meetings were held in a town house located in the central square. This town house was typically a large *chakofa*, which is a circular structure with a cone-shaped roof. The sacred fire was kept in this town *chakofa*.

The residential homes of the village families surrounded the square and the large town *chakofa*. Each family had a compound that consisted of a smaller *chakofa*; an open-sided,

airy summer home; and two or three storage sheds. The smaller *chakofas*, which served as the Creeks' winter homes, were made by weaving young, flexible saplings between thick, sturdy wooden posts into a cylindrical shape. The walls were then covered with a grass and clay mixture that served as insulation, and the roof was made of cypress bark. Inside, the only items of furniture were sleeping platforms covered with mats made of deerskin and beaver fur.

Today Creeks live in modern, Western-style homes. The Creek Housing Authority provides low-cost housing for low-

income families. These brick homes consist of three-bedrooms, one-and-a-half baths, and one-car garages and are constructed by Creeks. Thus, the housing authority provides jobs as well as housing.

## **10 FAMILY LIFE**

The clan is the central unit of Creek society. Clans comprise all people who are descendants of the same ancestral clan grouping. Loyalty to one's clan traditionally came before anything else, and one's clan membership determined one's place in society. Clans are matrilineal (membership is inherited through the mother). Fathers are important within the family system, but in the clan, the mother's brother (the mother's nearest blood relation) functions as the primary disciplinarian and role model. Clan members consider membership in the clan to define "family"; for example, clan members of approximately the same age consider each other siblings, even if they have never met. Clan ties are strong and serve to unite and empower Creek people even today. The clan system influences marriage choices, personal friendships, and political and economic relations. Killing or eating one's own clan animal is traditionally considered a serious offense.

Marriages were often arranged by older women in the tribe, but the bride-to-be had the final say in the matter. When a young man wished to marry a young woman, he was prohibited from speaking directly to her. Instead, he went to her maternal female relatives to propose the idea. When both families had agreed that the match was a good one, the young woman made the final decision. To do this, the young woman set out a bowl of hot cereal for her suitor on a certain morning agreed upon in advance. The young man then had to request permission to eat the cereal. If the young woman consented, it meant that she agreed to marry him. If she refused his request, it stood as a rejection of his marriage proposal.

The actual wedding ceremony was simple. The man had to kill a deer not only to provide his new wife with food and clothing, but also to prove his merit as a provider. The woman, in turn, had to prove her worth as a domestic manager by preparing corn or some other food and presenting it to her husband. The newlyweds then lived for a year in a house the husband had built for his wife. At the end of the year, the couple could divorce if they wished, as simply as they married. The wife kept all the domestic belongings, including the house.

Children were highly valued in Creek society. Like the house, the children belonged to the mother. The mother was directly involved in the raising of her daughters, while her brothers did most of the parenting of her sons. The children's father was responsible for the upbringing of his sisters' sons.

## **11 CLOTHING**

Today's Creeks wear modern Western-style clothing for everyday purposes. Traditionally, the Creeks in the southeast wore very little clothing at all because the climate was so hot and humid. Early Muskogee people wore clothing made of woven plant material or animal skins, such as buckskin. In the colder winter months, the continual fire burning in the family *chakofa* kept it so warm inside that they rarely had to add any extra clothing, but animal skins and furs were used for warmth when they ventured outside.

In the 1600s, European fashion began to influence Creek clothing styles. Woven cloth was more comfortable and color-

ful than buckskin, and it became a popular trade item in the southeast. Because cloth came in so many colors and patterns, Creeks developed a more individualized style of dress, even using the traders' novelties such as bells, ribbons, beads, and pieces of mirror to decorate their clothing. Men began to wear ruffled cloth shirts with beaded sashes, and jackets with buckskin leggings. Women wore ruffled cloth dresses decorated with novelty trim, and pocketed aprons. Both men and women wore soft deerskin moccasins, often elaborately decorated with beadwork. During traditional ball games, Creek men wore only a breechcloth to make free movement easier. During the Green Corn Ceremony, women wore beautiful dresses covered with flowing ribbons during the Ribbon Dance.

Today, Creek women still wear their ribboned dresses during the Green Corn Ceremony. Men have adopted the common Western outfit of jeans, boots, and fitted shirts.

Creek men traditionally painted and tattooed their bodies. For men, tattoos revealed their war rank and tribal status in the community. Only women who were considered prostitutes tattooed their bodies.

## **12 FOOD**

The Creeks traditionally supplied all of their food through communal efforts in farming, gathering, hunting, and fishing. The women did the farming and gathering, while the men and older boys hunted and fished. Even small children and the elderly tried to help in any way they could. Among the crops the women raised were squash, beans, and corn; they gathered wild nuts and berries. (A typical Creek recipe follows for dumplings made from wild grape juice.) Corn was by far their staple food. "Modern" corn, or maize, and wild seed crops were introduced to the southeast United States from Mexico around AD 200. Bottle gourds and squash had been cultivated by the Muskogee people since approximately 1000 BC. Squash was important as a food source, and gourds were used to make cooking and eating utensils and masks. All food gathering and hunting followed a seasonal cycle.

The men supplemented their diet by catching fish in the many nearby rivers and streams in the spring and, mainly in the winter, by hunting the deer, bears, rabbits, and squirrels that abounded in the dense southern forests.

### **Grape Dumplings**

- 2 quarts possum grapes
- 3 cups water
- 2 cups sugar
- 2 cups flour
- 2 teaspoons baking powder
- 2 tablespoons shortening

Grape juice: Boil grapes and strain the pulp, saving the juice. After adding sugar, set the juice aside to cool. (Frozen grape juice may be substituted for fresh juice.)

Dough: Sift together flour and baking powder, and cut in shortening. Add enough juice to form a soft dough and roll out into a ½-inch-thick sheet, then cut into strips. Boil the strips of dough in the remaining grape juice.

## **13 EDUCATION**

After the Creeks were forcibly relocated to Indian Territory (present-day Oklahoma) in the 1830s, they established their

own tribal schools there. Kendell College was a Muskogee (Creek) institution started in Muskogee, Oklahoma. It was later moved to Tulsa, Oklahoma, and became Tulsa University. Bacone College, which was transferred from the Cherokee Nation, is owned and operated by the American Baptist Association today. At one time, it was exclusively for Native American students, but it is now a multicultural junior college.

The Creeks were always strong supporters of education. They agreed to let Presbyterian missionaries set up boarding schools on their lands in Indian Territory, the first in Coweta Mission in 1843. Creek parents were eager for their children to learn English so that they could be successful in the world of the European American. In 2004 the Muskogee Nation National Council created the College of the Muskogee Nation. The goal is to gain accreditation for the College of Muskogee Nation in order for the college to confer associate's degrees. As of 2008, CMN collaborates with Oklahoma State University in the delivery of courses with Muskogee content, including language.

#### 14 CULTURAL HERITAGE

Two modern Creeks who have been successful in the worlds of literature and art are poet Joy Harjo (1951) and actor/artist Will Sampson (1934–87). Harjo draws on her Creek and Cherokee background to write compelling poetry about the importance of language, memory, and stories in shaping who we are as people. Sampson's first big break in acting came in 1975, when he was chosen to play the role of Jack Nicholson's mute Native American friend in *One Flew Over the Cuckoo's Nest*. Throughout his film career, Sampson insisted on portraying Native Americans honestly, making them multidimensional characters. He was a pioneer in expelling the traditional "savage" or "brave warrior" stereotyped image of Native Americans in Hollywood motion pictures.

Though he was best known as an actor, Will Sampson was also a highly successful visual artist. His paintings have been displayed at many museums nationwide, including the Smithsonian in Washington, D. C.

#### 15 WORK

Since the 1970s, some Creek in Oklahoma have raised cattle with great success. The Creek Nation operates five bingo parlors, which provide a source of income for the Nation. Tulsa Bingo is the second-largest tourist attraction in the state of Oklahoma.

The Muskogee Nation plans to open a truck plaza and Burger King restaurant in Okmulgee, Oklahoma, in 1997, and has plans for another plaza in Muskogee, Oklahoma.

#### 16 SPORTS

The Creeks, like many other southeastern tribes, were masters at a game called "stick ball." Similar to modern-day lacrosse, stick ball was a highly active and violent game. It served as a way to develop warrior skills, as well as providing fun and entertainment. To play the game, each of the members of two teams held two sticks. The players would pass a small ball made of animal hide back and forth down the length of the playing field, which was about the size of today's football fields. The aim was to throw the ball over the other team's goal at the end of the field and score a point. There were no other rules, and the games were often quite violent. Stick ball was sometimes

called "the little brother of war." Rather than fighting, the Creeks would sometimes settle their differences with a game of stick ball.

Another popular Creek sport was "chunkey." Two men each had a long stick with a crook at one end. A flat, smooth stone disk was thrown down a bumpy (or "chunkey") field. The men each then attempted to throw their stick so that the disk would catch in the crook. Whoever threw his stick closest to the disk won. A difficult game of perception and timing, chunkey trained men in the art of throwing spears.

Today Creeks play football, basketball, tennis, golf, baseball, softball, and participate in track-and-field sports. Many young Creek men and women have attended college on athletic scholarships. R. Perry Beaver, principal chief in the late 1990s, is a retired high school football coach.

A well-known Creek athlete is baseball player Allie Reynolds, who pitched for the Cleveland Indians and the New York Yankees. He holds the World Series record at seven wins, two losses, and five saves.

#### 17 ENTERTAINMENT AND RECREATION

Modern Creeks enjoy the same forms of recreation that other American citizens do. Traditional Creek dances are considered sacred and are not used for entertainment.

#### 18 FOLK ART, CRAFTS, AND HOBBIES

Long before the Europeans arrived on the North American continent, Creek women were highly skilled weavers and tailors. They used plant fibers and animal skins to make elaborately decorated clothing and containers. When the Creeks began trading with the Europeans, the women acquired glass beads, European cloth, and new ideas and patterns. By combining traditional Creek and European styles, Creek women greatly enhanced their already beautiful work. Today's Creek women supplement their income with the sale of their traditional arts and crafts.

#### 19 SOCIAL PROBLEMS

The Muskogee Nation has social problems similar to those of other Native American groups. The Nation has its own tribal counselors who deal with specific tribal problems as they occur.

#### 20 GENDER ISSUES

Like the Seminole, the Creek were organized around groups that traced their descent to a common female ancestress. These matrilineages were grouped together into larger social units, clans, which were united through a common ancestry to a long forgotten ancestress. Kinship relations governed all interactions in Creek society, including gendered interactions. The Creek observed strict avoidance rules between a man and his wife's mother as well as between a woman and her husband's father. These individuals were not permitted to communicate with each other directly. Instead, they would use their spouses and intermediaries. These avoidance relations also had to use a special pronoun, the third person dual form, when referring to each other. This would translate something like "those two males/females." English does not have a dual number, which makes an exact translation impossible.

The important role of women in Creek society is celebrated in the Ribbon Dance. The Ribbon Dance is the only Creek dance in which only women participate and where they dance without male accompaniment. The Ribbon Dance is performed on the Friday before the Green Corn ceremony commences.

Men and women are considered separate peoples in the Creek construction of gender. The menstruation of women is a defining feature of the separateness of males and females. During a woman's period, she is supposed to be separated from her husband and the other adult males in her household. She is also supposed to eat separately, and in the past, menstruating Creek women would sit on special woven mats. Menstruating women are also not allowed to attend stomp dances. A modern Creek explanation for diseases such as diabetes, arthritis, cancer, and heart disease is that the traditional prohibitions on menstruating women are no longer being followed. In Creek ideology, menstruating women can cause male sickness.

# CREOLES OF LOUISIANA

**LOCATION:** United States (Louisiana; Texas)

**LANGUAGE:** Continental, or “old Louisiana,” French; )Cajun;

French Creole (Gombo or couri-veni); English

**RELIGION:** Roman Catholicism; some local sects

## 1 INTRODUCTION

There is no single definition for the word Creole. It has been used to refer to people of mixed ancestry or African ancestry as well as people born in the Americas rather than Europe. However, the most common roots of Creoles come from the interaction between speakers of nonstandard European languages and non-European languages.

Starting in the 16th century, it came into use in the Americas to distinguish between residents of European colonies who were born in Europe and those who were born in the colonies to European parents. The Creoles were those born within the colonies. By the early 17th century the word was adopted into French and, to some extent, into English usage. During this century the word Creole was used to refer to people of African or European descent born in the American and Indian Ocean colonies. It was also used as an adjective to characterize plants, animals, and customs typical of the same regions.

In Louisiana, which was once a French possession, the word is used in two distinct ways. It was originally applied to the white descendants of early French or Spanish settlers in the area, who were known for their adherence to the ways and the language of their ancestors. Although this meaning is still in limited use, the word Creole is primarily used today to refer to persons of mixed African, French, and Spanish ancestry.

Blacks first arrived in Louisiana in the 18th century as slaves transported from the Caribbean and West Africa (primarily from the Senegal River basin). Because of the high ratio of blacks to whites in southern Louisiana and the liberal French and Spanish attitudes toward the intermingling of the races, black influence on the culture of the region was unusually strong, and New Orleans and the surrounding plantation region took on an African–West Indian character that was enhanced by the arrival of thousands of additional slaves and free blacks from Haiti at the turn of the 19th century. The relatively high degree of racial tolerance that prevailed in the region was evident in laws (including *Le Doce Noir* and *Las Siete Partidas*) governing master-slave relations that accorded various rights to slaves, including the right to gain their freedom under certain circumstances.

As a result of these laws and the attitudes that spawned them, a greater number of slaves were freed in southern Louisiana before the Civil War than in other parts of the South. Called *gens libres de couleur*, or “free people of color,” these blacks worked in occupations ranging from laborer and craftsman to merchant and planter. The most privileged members of this group, many of them born to white plantation owners and black female slaves or freewomen, formed an elite population, some of whom owned slaves themselves. A number had their children educated in Europe (historical records document the presence of about 2,000 foreign-educated blacks in Louisiana in 1866). However, they generally refused to admit the children of newly freed slaves to their own schools. In addition to

occupation and financial status, racial heritage was an important aspect of social standing, and Creoles of color followed a practice, common among many blacks, of according a higher status to those with lighter skins. A variety of categories, such as *griffe*, *quadroon*, and *octooroon*, existed for classifying people of color according to their racial ancestry.

From the post–Civil War era to the civil rights movement, the Creoles were pressured to conform to rigid racial expectations that were often in conflict with the more fluid notion of race characteristic of their culture and background. The Jim Crow segregation that followed Reconstruction in the South created artificial boundaries between the Creoles and the French-speaking white Cajuns of their region. Traditionally, the two groups had regarded each other as allies, and each group had had a significant cultural impact on the other. The segregationist mentality pitted them against each other by making the Cajuns, often regarded as inferior by other whites, feel that their own social standing could be improved if the Creoles were pushed even farther down the social ladder. To escape from the pervasive racial discrimination of the Deep South, some Creoles migrated to Los Angeles and San Francisco after World War II. Following the civil rights victories of the 1950s and 1960s, Creoles have shown a renewed interest in preserving the special cultural heritage nurtured by the centuries-old intermingling of races and ethnic groups in the bayous of Louisiana. It is believed that the language of the Creoles is now spoken almost only by people over 60 years of age, who are mainly monolingual in Louisiana Creole. In addition, around 2% of the population speaks Louisiana Creole French at home.

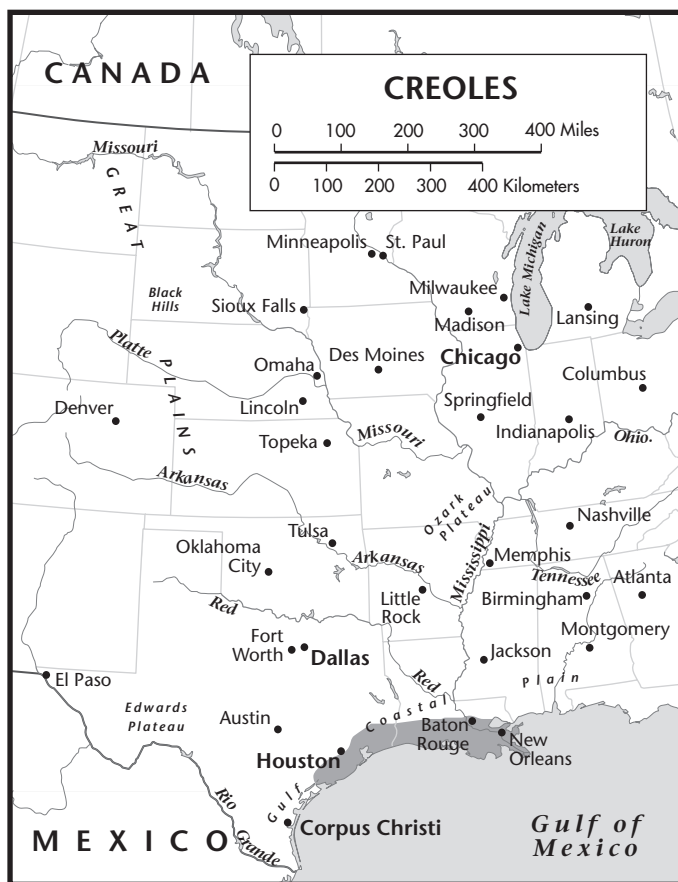

## 2 LOCATION AND HOMELAND

The Creole community originated (and largely remains) in the bayous of southern Louisiana along the Gulf of Mexico. There is a particularly strong Creole presence in downtown New Orleans and in the inland bayou parishes of Bayou Teche, St. Martin, and St. Landry, as well as in the Lafayette, St. Landry, Evangeline, and Calcasieu parishes of the part of southwest Louisiana known as Cajun Country or Acadiana. In the 20th century, Creoles from Louisiana have migrated to Texas, especially Beaumont, Port Arthur, and Houston, and to parts of the West Coast. In Texas, there is a population of 3,500 speakers of Louisiana Creole French. Of that group, just an estimate of 7% has some basic knowledge of English skills.

Modern census surveys do not include Creoles as a distinct demographic group; at one time, they were classified as FMC (free man of color) and *mulâtre* (mulatto). It is thought that approximately a third of the population in the French-speaking parishes (districts) of southern Louisiana is black. However, this figure does not account for the substantial number of English-speaking blacks, both in Louisiana and in Texas and California, who consider themselves part of the Creole community.

## 3 LANGUAGE

Historically, the French language was a major part of the Creole identity, setting the group apart from other southern blacks. However, in recent years, the use of French has declined, especially among people under forty. There are actually several different varieties of French spoken in southern Louisiana. The least common is Continental, or “old Louisiana,” French,

which is closest to the French of the original colonial settlers. This language is still used by a small minority of Creoles in urban and upper-class rural areas, and it also survives in Catholic schools. Creoles in the Acadiana region of southwest Louisiana speak Cajun, the language of the descendants of the Acadians, French Canadians who migrated to the area in the 1760s after being expelled from their homeland by the British. Strictly an oral language, Cajun French is characterized by a simplified grammar and the use of some archaic terms. French Creole, the third language variant of French-speaking Creoles, is a pidgin language related to the pidgins of West Africa and the Caribbean. Its vocabulary is mostly French, and its pronunciation shows African influences, while its grammar is similar to those of other African-European Creole tongues. Often called *Gombo* or *couri-veni*, it is most common in the plantation region of southern Louisiana, where it is also the first language of some whites.

#### 4 FOLKLORE

The mingling of Roman Catholicism with African religious influences in the lives of Creoles has resulted in a body of folk religion traditions that includes home altars and the placement of crosses made of blessed palms or magnolias over the doors of houses, as well as the practice of voodoo. The Creoles are also known for their belief in a variety of healers and spiritualists who make use of both prayers and charms. African religious traditions are also perpetuated by special churches whose services include spirit possession and ecstatic behavior, as well as

prayers to ad hoc saints, including Martin Luther King, Jr., and Chief Blackhawk.

In the city of New Orleans, Creole Mardi Gras celebrations include special traditions handed down over the generations. The Zulu parade mocks white carnival festivities by displaying white stereotypes about blacks. Participants paint their faces black, wear grass skirts and wild, frizzy wigs, and carry spears. As they walk, they throw coconuts to the crowd. In contrast with the primarily middle- and upper-middle-class Zulu parade, the festivities of working-class Creoles feature a parade with a Native American theme whose participants dress up as Plains Indians and engage in call-and-response singing, drumming, and other traditional activities.

#### 5 RELIGION

The majority of Creoles are Catholics, making up the largest per capita black Catholic population in the United States. Besides various local sects, the Josephite Fathers, based in Baltimore, are especially active in the Creole churches of Louisiana. The Catholic religion has played a major role in preserving the social and cultural unity of the Creoles.

#### 6 MAJOR HOLIDAYS

The Creoles observe the national holidays of the United States and the holy days of the Christian calendar. For the Creoles, as for other residents of southern Louisiana, the major celebration of the year is Mardi Gras, the festive holiday observed just before Lent with costumed pageants, feasting, and other forms of merrymaking. All Saints' Day (*Toussaint*) on November 1 is observed as a special occasion for honoring the dead by cleaning and painting their tombs. Candlelight ceremonies may be held as well.

#### 7 RITES OF PASSAGE

Major life events of the Creoles are celebrated within the Catholic Church. Perhaps the most distinctive rites of passage of Creole origin are the jazz funerals held in New Orleans, in which a jazz band follows the body to the cemetery, playing dirges on the way there and parade music on the way back.

#### 8 INTERPERSONAL RELATIONS

Nicknames, often retained from childhood, are popular among the Creoles. Some, such as *Nene*, *Soso*, and *Guinee*, have African origins. Relationships with one's godfather and godmother (*parrain* and *marraine*) hold a special place in Creole culture, as they do in many of the Catholic countries of Europe. In New Orleans, Creole social life is closely associated with social clubs, benevolent societies, and church activities.

#### 9 LIVING CONDITIONS

Creoles, especially in colonial America, were excluded from high office in church and state. Discrimination arose from crown policy. The monarchy, in an attempt to seduce and motivate new expeditions to America, decided to offer lucrative and honorific colonial posts to Spanish subjects while excluding Creoles from those positions. However, during the last decades the majority of countries with Creole populations have made important efforts to include the Creole minorities to their cultures.

*Gracie Beauvais, a Creole evacuated from New Orleans during Hurricane Katrina, sits in a dining hall in Bourne, Massachusetts. Beauvais expressed a desire to settle in Massachusetts instead of returning to New Orleans. (AP Images/Robert E. Klein)*

Today, like their Cajun neighbors, rural Creoles have access to modern medical care but also have a tradition of folk healing by practitioners called *traiteurs*, who are thought to have the power to both heal and harm using their familiarity with herbal medicine and other types of esoteric knowledge.

The traditional Creole cottage, both in New Orleans and in rural plantation areas, is constructed with half-timbering and mud-and-moss plastering called *bousillage*. Two rooms wide, with a central chimney and a continuous-pitch roof, it has porches, elevated construction, and louvered doors and windows that reveal a Caribbean influence. Other characteristic Creole dwellings include shotgun houses with their long corridor of single rooms, bungalows, and mobile homes. Creole houses are typically painted in bright primary and pastel colors.

In addition to modern forms of land transportation, the Creoles, like other residents of the Louisiana bayou, use various types of small boats to navigate the waters of the Mississippi delta.

## **10 FAMILY LIFE**

Creoles usually marry in their teens and early twenties within the Catholic Church, although common-law marriages are also legal in Louisiana. Rural families may give a newly married couple some land to help them start out on their own. Especially in rural areas, families tend to be large, and members of the extended family usually live near each other. Elderly parents often join the households of their grown children, especially after they are widowed. Women are associated traditionally with domestic activities, and family life is closely tied to conservative values, including education, hard work, and participation in the religious life of the community. In contrast with this ethic is the fast street life of bars, dance halls, and social clubs often indulged in by groups of young men, who are still expected to settle down eventually and make a commitment to family life.

## 11 CLOTHING

For the most part, Creoles wear typical modern clothing similar to that of other Americans. However, for dances and other social occasions involving zydeco music, many Creoles favor Western-style cowboy clothing, including Stetson hats, vests, jeans, and cowboy boots. The single most popular item of dance hall clothing is the straw cowboy hat often worn by both men and women.

## 12 FOOD

Cajun and Creole cooking have influenced each other extensively over the years and have many similarities. However, the predominant influence in Cajun cooking is French, while Creole cooking also features elements of Spanish, African, Native American, Italian, and other traditions. In general, there is a stronger gourmet aspect to Creole cooking than to Cajun. Gumbo, a popular dish that is also a Cajun staple, is said to have been created by black slaves who worked for the early French and Spanish settlers in Louisiana. Its name is derived from the African word for okra. It is a stew that can be made from a wide variety of vegetables and fish, meat, or chicken. A common Creole version is gumbo z'herbes, which contains seven different kinds of greens.

Other characteristic Creole dishes include jambalaya, made from rice, sausages, seafood, and spices; étouffé, a stew made with crayfish (locally called crawfish) or shrimp and served over rice; and *grillade*, thickly sliced round steak seared in oil and then braised. Popular ingredients in Creole food include andouille, a spicy country sausage served in gumbo and jambalaya or with red beans; crawfish (shellfish that resemble tiny lobsters and can be eaten either fried or boiled); *filé* (pronounced fee-LAY), a powder made from ground sassafras leaves and used to flavor and thicken gumbos; and roux, a gravy base made with flour and oil that is used in gumbo and a number of other dishes. Beignets, puffy fried squares of sour-dough bread dusted with powdered sugar, are a popular breakfast staple, often accompanied by chicory coffee. Pralines, a brown-sugar candy containing pecans, are a favorite dessert and dessert ingredient, and they can be found in creations such as praline bread pudding, praline crepes, and a variety of desserts served with praline sauce.

One of the most famous dishes is the *muffuletta*. The *muffuletta* is a type of Sicilian bread, as well as a sandwich in New Orleans. The main ingredient is a loaf of bread split horizontally. The bread is covered with olive salad and filled with salami, mortadella, capicola (Italian ham), and provolone. Mayonnaise is never used in this sandwich.

## 13 EDUCATION

The free blacks who were the ancestors of many of today's Creoles placed a high value on education; those who could afford it even sent their children abroad to be educated in Europe. Creoles today take advantage of the educational opportunities available to all Americans, attending both public and Catholic institutions.

## 14 CULTURAL HERITAGE

The Creoles of New Orleans have played a central role in its legendary jazz tradition, from such figures as Sidney Bechet and Jelly Roll Morton to today's Marsalis family. The Cajun-

influenced Creole music of southwestern Louisiana is called zydeco, a word said to be derived from *les haricots* (the snapbeans) and traditionally associated with the phrase *les haricots sont pas salés* ("the snapbeans are not salty"), which refers to hard times when there is no salted meat available. This phrase is also the title of a famous zydeco tune. Zydeco has drawn on several different ethnic traditions, deriving its language and melodies from Cajun folk tunes; syncopated rhythms, improvisation, and blues patterns from African and Caribbean music; singing and drumming styles from the Native Americans; optional use of the guitar from the Spanish; and the accordion from the Germans. Its main instruments are the violin and accordion, with a rhythm section that includes the *frottoir*, a washboard of corrugated metal (strummed with beer bottle caps or other objects) that is either freestanding or made with a sort of collar so that it can be worn like a bib while it is played. Zydeco music, in great demand as dance music, serves as a unifying force for the Creole community, which gathers in crowded dance halls and church social halls for evenings of lively dancing to this music that is often played in strenuous four-hour sets. Zydeco also has a tradition of commercial recordings that dates back to the 1950s.

## 15 WORK

Traditionally, Creoles in rural areas raised sugarcane, rice, and other crops while those in New Orleans and other urban areas worked as craftspeople, artisans, or merchants. Today, Creoles work in many different fields, including the professions, the service sector, construction, and the oil industry.

## 16 SPORTS

Cajuns enjoy the mainstream American sports, such as softball and volleyball, as well as outdoor activities, including swimming, fishing, and horseback riding.

## 17 ENTERTAINMENT AND RECREATION

Focal points of Creole social life include Mardi Gras crews (groups that plan organized participation in the annual Mardi Gras festivities), knights of Peter Klaver (a black Catholic men's society), and social clubs. Dancing to zydeco music is a popular pastime, practiced in church social halls and in roadside dance halls that hold hundreds of people. Dance enthusiasts also enjoy "trail rides," social outings involving groups of people (both men and women) who ride horses to a series of dance events, stopping to dance and visit at every stop along the way, with beer and home-cooked food awaiting them at the last stop. Sometimes musicians or a disc jockey playing recorded music even ride alongside them on a flatbed truck.

## 18 FOLK ART, CRAFTS, AND HOBBIES

Creole artisans are known for their carpentry and wrought-iron work.

## 19 SOCIAL PROBLEMS

Like other African Americans, the Creoles have faced racial discrimination, and many have experienced poverty. For a time, the French culture of the Creoles, like that of the Cajuns, was threatened by laws that banned French from classrooms and even from the schoolyard altogether. Today, Creoles display pride in their unique culture and try to ensure its preser-

vation through events and organizations, such as the Louisiana Zydeco Festival and Creole Inc., a group devoted to promoting recognition of the Creole heritage and lifestyle.

## 20 GENDER ISSUES

Traditionally, Creole men were the heads of their household, while women dedicated their lives to home and family. In addition, Creoles also felt it a duty to take widowed cousins and orphaned children into their families. Unmarried female relatives lived in many households and provided a much-needed extra pair of hands in running the household and rearing the children. Creoles today are still close-knit and tend to marry within the group. However, many are also moving into the greater community and losing their Creole ways.

In the old days, Creoles married within their own class. The young man faced the scrutiny of old aunts and cousins, who were the guardians and authorities of old family trees. The suitor had to ask a woman's father for his daughter's hand. However, most young Creoles were forced to abide by their parents' choices for their spouse, based upon monetary and landed wealth, status, and familial connections. The gift of a ring allowed them to be formally engaged. All meetings of young people were strictly chaperoned, even after the engagement.

Currently, the advances women have made in Louisiana are not experienced equally. Persistent inequalities mean that many Creole women of color experience disparities in their economic, political, social, and health status. Even though 55.5% of Creole women of color are in the labor force, they earn 30% less than white women and 52% less than white men in Louisiana at a full-time, year-round job. In addition, white women surpass Creole women by 13 percentage points in managerial and professional occupations.

Regarding health status, the principal problems of Creole women are infant mortality and AIDS. While the infant mortality rate among Creole women in Louisiana doubles that of white women, the average annual incidence rate of AIDS among Creole women is nine times higher than that of white women.

In the political realm, the participation of women in Louisiana is almost nonexistent. While only one white woman was elected to the U.S. Congress in 2004, there has never been a Creole woman of color in any elected office.

## CUBAN AMERICANS

For more information on Cuban history and culture, see **Vol. 2: Cubans**.

### OVERVIEW

Prior to 1958, only about 40,000 Cubans had immigrated to the United States. Most of them lived in south Florida. These early Cuban Americans were responsible for the development of the U.S. cigar industry. In 1958 members of the Fulgencia Batista government of Cuba became aware that the government was about to fall to Fidel Castro's forces, and some 3,000 fled to the United States. When Castro did in fact take over the government in 1959, the first major wave of Cuban immigration to the United States began. All told, somewhere between 215,000 and 280,000 Cubans immigrated to the United States between 1958 and 1962. Most were white, middle-aged, well educated, and fairly wealthy. When Castro announced that his government would be run on Marxist-Leninist principles and began nationalizing Cuban farming and industry, wealthy landowners and business people escaped to America.

The Cuban Missile Crisis in 1962 severely curtailed Cuban immigration to the United States for the next three years. About 74,000 Cubans managed to enter the United States through clandestine means from 1962–1965, but the next major wave of immigration did not begin until Castro opened Cuban borders in late 1965. Castro then allowed the United States to organize so-called "Freedom Flights" to airlift Cubans who wished to immigrate to the United States. Two flights per day from Cuba to Miami, Florida, from late 1965 to April 1973 brought a total of up to 340,000 or more Cubans to America. The majority continued to be white, well-educated people from the middle class, but a number of working class Cubans also joined the exodus.

Castro closed Cuba's borders again in May 1973, and no Cubans were allowed to emigrate for the next seven years. In May 1980, however, Castro decided to permit Cubans to be boat-lifted to the United States from the Cuban port of Mariel. These "Marielitos," as they came to be called, were quite different from previous waves of Cuban immigrants. As opposed to the predominantly white, middle and upper class, well-educated family immigration of the past, 85% of the Marielitos were men, 65.6% were single, 40% were black, and 86.2% were blue-collar workers.

At the time it was reported that Castro had emptied Cuba's prisons and mental institutions and unloaded all the "undesirables" onto the United States. Estimates are that 16% of the Marielitos were ex-convicts, 4% of which were hard-core criminals. United States police arrested active criminals and sent them to U.S. prisons. A number ended up in the Atlanta Federal Penitentiary, where they staged a rebellion in which they took more than 100 hostages in 1987 when told they were to be sent back to Cuba. Cuban American Catholic Auxiliary Bishop Agustin Román, who had been expelled from Cuba in 1961, convinced the prisoners to release the hostages, and the rebellion was quieted.

The most recent wave of Cuban immigration began in the 1990s, when the Soviet Union collapsed and Soviet aid to Cuba was cut off. The Cuban economy and government began to fal-

ter, and many Cubans decided to flee the potential disaster and look for better opportunities in the United States. Even Fidel Castro's daughter immigrated to America in December 1993. Huge numbers of Cuban refugees crossed the waters between Cuba and Florida on homemade rafts, called *balsas*, made of large inner tubes. These newest immigrants are referred to as *balseros*, after their common mode of transportation. The sudden influx of Cuban immigrants has created stress among Cuban and non-Cuban Americans alike in southern Florida, and the *balseros* continue to come. As the leadership of Cuba passed from Fidel Castro to his brother Rael in 2008, residents of Florida prepare for another possible influx of immigrants from Cuba if borders are opened. If Cuba moves toward democracy, many current Cuban Americans may choose to return to Cuba.

By far the largest Cuban American community is in the Miami, Florida, area. Early Cuban immigrants believed their stay would be temporary, assuming that Castro's regime would not last. Therefore, they chose to live as near to Cuba as possible to facilitate their return. Miami, Florida, is only about 150 miles from Cuba. When Castro maintained his rule and more Cubans fled to the United States, they naturally settled among their compatriots, thereby creating a vibrant Cuban American community in Miami. Also attractive to Cuban immigrants were the U.S. government assistance programs available in the Miami area. The first program was established in 1959.

Cuban Americans are the third-largest Hispanic American group, after Mexicans and Puerto Ricans. The total Cuban American population in 2000, according to the U.S. Census, was 1,241,685. By 2004, the estimated population of Cuban Americans had risen to 1,437,828. Two-thirds of all Cuban Americans live in Florida, with over half the total Cuban American population in the Miami area. One section of Miami that has a large concentration of Cuban Americans has come to be called "Little Havana." The second-largest Cuban American community is in Union City, New Jersey, with over 10,000 Cuban Americans, and more than 77,000 in the whole state. The other largest Cuban American populations in 2000 were in California (72,286) and New York (62,590).

Cuban Americans have been slow to be assimilated into mainstream American culture for two reasons: throughout Cuban immigration to the United States, many immigrants have believed their stay in America was only temporary and that they would soon be returning to Cuba; and the Cuban American community, especially in Miami, Florida, is so strong and tightly knit that the majority of Cuban Americans never have to interact with non-Cuban Americans. Most first-generation Cuban Americans continue to speak Spanish at home and among friends. Many Cuban Americans who work in Cuban American-owned businesses also speak Spanish in the workplace. This means that some Cuban Americans never have to speak English at all.

Due to the large concentration of Spanish-speakers in the Miami, Florida, area, the city has become de facto bilingual, with all signs and public information printed in both English and Spanish. In 1973, Dade County (where Miami is located) commissioners passed an ordinance declaring the county officially bilingual. Only seven years later, however, in 1980, an anti-Cuban American backlash prompted a referendum (that passed easily) reversing the 1973 ordinance and declaring English as the only official language of Dade County. The "anti-

bilingual referendum” spurred an English Only movement in other regions of the United States with large Spanish-speaking populations. Some proponents of English Only want English to be declared the official language of the United States on a national level. Despite the 1980 English Only referendum, however, the use of Spanish has continued to grow in Dade County and elsewhere.

The great majority of Cuban Americans are Catholic. Since Fidel Castro outlawed the practice of religion in Cuba in 1961, many Cubans have become nonpracticing Catholics. Immigrants to the United States, however, found the U.S. Catholic Church very supportive in their relocation efforts, and many Cuban Americans have become active churchgoers once again. There are also a number of Protestant Cuban Americans, as well as thousands of Cuban American Jews. When Fidel Castro took power, 90% of the 15,000 Cuban Jews fled the country, mostly to the United States. Cuban American Jews formed the Cuban Hebrew Circle in 1961 as a means of social, cultural, and religious support. The Afro-Cuban religion Santería also claims some adherents among Cuban Americans.

Baptism and First Communion are especially important rites of passage for Catholic Cuban Americans, as are the holidays of *La Noche Buena* (Christmas Eve) on December 24; *El Día de los Tres Reyes Magos* (Three Kings’ Day, or Epiphany) on January 6; and *La Semana Santa* (Holy Week), Palm Sunday, and Good Friday before Easter. A parade is held each year in Miami on Three Kings’ Day. Other important Cuban American festivals include the Feast of Our Lady of Charity, the pa-

tron saint of Cuba, on September 8; the Feast of Santa Barbara on December 4; and All Saints’ Day on November 1.

Cuban Americans are much better off economically than other Hispanic Americans. This is due partly to the fact that most of the earlier Cuban immigrants were from the middle and upper classes in Cuba and had the education, skills, and financial resources to be successful in the industrialized United States. Also, the average age of Cuban Americans is significantly older than that of other Hispanic American groups, giving them added wisdom and experience to apply to life in America. Cuban Americans also have the highest level of education among Hispanic Americans: 63% are high school graduates, and over 20% have graduated from college.

Cuban Americans are still not as well off as the average American citizen, however. In 2004 the median income for a Cuban American family was \$38,256, as compared to an average of \$44,684 for the total U.S. population; and 15% of Cuban Americans lived below the poverty line, as compared to 13% of the total U.S. population. Educationally, Cuban Americans also lag behind the total U.S. population. Of those over the age of 25 in 2004, 25% of Cuban Americans had less than a high school education, as compared to only 16% of the total U.S. population. However, by the time higher levels of education are reached, the percentage gaps begin to close up, with 25% of Cuban Americans having at least a Bachelor of Arts degree or higher, compared to 27% of the total U.S. population. Cuban Americans also have the highest percentage (over 30%) among all Hispanic Americans of workers in managerial and

*Cuban Americans wave the Cuban flag in the Little Havana area of Miami, Florida in August 2006. The celebration was in response to news that Fidel Castro of Cuba was handing over power to his younger brother Raul Castro while Fidel was undergoing medical treatment. (Chip Somodevilla/Getty Images)*

professional occupations, further evidence of their increasing success in education.

Although Cuban Americans have only been in the United States in large numbers for a few decades, they have made a significant impact on mainstream American culture. As early as the 1930s, Cuban dances such as the rumba, mambo, and chachachá were becoming very popular among the general U.S. population, as were conga dance lines. Cuban music, which is a blend of Spanish, African, and Creole rhythms, is a central element of Cuban American gatherings. In Miami, Latin salsa music combined with American pop music to produce a unique form of music called Miami Sound. The foremost promoter of Miami Sound is Cuban American Gloria Estefan, with her band, the Miami Sound Machine. Estefan also helped launch the career of Afro-Cuban American singer Jon Secada.

Two other Cuban American musicians and bandleaders who became well-known and well-loved in America were Xavier Cugat and Desi Arnaz. Desi Arnaz went on to become an actor on the *I Love Lucy* show with his wife, Lucille Ball. Their children Desi Arnaz, Jr. and Lucie Arnaz also became entertainers. Other successful Cuban American actors and entertainers are Andy Garcia, Cameron Diaz, Elizabeth Pena, and Daisy Fuentes. Cuban Americans in the arts include ballet dancer Fernando Bujones and writers Cristina Garcia and Os-

car Hijuelos. In 1990, Hijuelos became the first Hispanic writer to win the Pulitzer Prize.

Cuban Americans have begun to make their mark in politics and public office, particularly in the state of Florida. Xavier Suarez was elected mayor of Miami in 1985. He was the first Cuban American to fill that post. Earlier, in 1979, Margarita Esquiroz became the first Hispanic woman to be appointed a judge in Florida. Cuban Americans finally broke through to the federal level in 1989 when Ileana Ros-Lehtinen was elected to U.S. Congress from Florida. Four years later, in 1993, Lincoln Diaz-Balart became the second Cuban American to be elected to U.S. Congress. In 2004 Melquiades Rafael Martinez became the first Cuban American to be elected to the U.S. Senate. The Cuban American vote is always sought after and was a determining factor in the 2000 U.S. presidential election where the decision came down to the state of Florida's delegates. Cuban Americans, who traditionally vote Republican in support of hard-liners opposed to the Castro regime, helped George W. Bush claim victory over Democrat Al Gore.

Sports have long been an avenue of success for Cuban Americans. Swimmer Pablo Morales won a gold medal at the 1992 Summer Olympics. Alberto Salazar won both the New York and Boston Marathons in 1982 and was selected for two Olympic marathon teams. The sport with the most representation by Cuban Americans by far, however, is baseball. Among

the many Cuban American major league stars are René Arocha, José Canseco, Mike Cuellar, Mart'n Dihigo, Miguel Angel Gonzales, Orestes Minnie Mi-oso, Tony Oliva, Rafael Palmeiro, Tony Perez and his son Eduardo, José Tartabull and his son Danny, and Luis Tiant. Preston Gomez was the first Hispanic manager in the major leagues.

Because Cuban Americans who came during the first two waves of immigration were mostly white, middle, and upper class professionals, they had fewer difficulties adapting to life in the United States than did other Hispanic Americans. Later Cuban immigrants (the Marielitos and balseros), the majority of whom are black, lower class, blue-collar or unskilled workers, have met with discrimination and rejection from both mainstream Americans and the established Cuban American community.

Largely, the influx of Marielitos and balseros has set off racist paranoia among white, non-Hispanic Americans and has led to the English Only movement and other forms of prejudice against all Cuban and other Hispanic Americans. Established Cuban Americans indulge in their own racism and classism, shutting out the new Cuban immigrants and forcing them to become marginalized. Tensions in the Cuban American community itself, as well as tensions between Cuban and non-Cuban Americans, continue to increase as more and more refugees flock to the United States from Cuba.

Miami, Florida, is a particular hotbed, as most Cuban immigrants still choose to settle there. In November 1999, a young boy named Elián Gonzalez was rescued at sea after his boat overturned on the way from Cuba to the United States. Elián's mother and stepfather both drowned in the accident. With his father's permission, Elián was temporarily placed in the care of his great-uncle in Miami, Florida, until he could be returned to Cuba. The situation quickly became politicized on both Cuban and American fronts, leading to a prolonged dispute over Elián's future. Eventually, U.S. Attorney General Janet Reno ordered the Immigration and Naturalization Service to seize Elián and hold him in federal custody until arrangements could be made for his safe return to his father in Cuba. Both Cuban and non-Cuban Americans were unhappy with the way events played out, and the whole debacle caused a stain on relations that took quite some time to fade.

Cuban culture has a rather complicated perspective on male sexuality, promoting a thoroughly "macho" image of masculinity dependent on sexual prowess with women as well as fathering children. However, there is also an outlet for homosexual activity between men that is regarded as acceptable as long as the man is also married with a woman and takes the "aggressor" role in the homosexual encounter. Men who take the more passive role are considered inferior and referred to as *mariposas*, or "butterflies."

Cuban American men in the Miami, Florida, area find that this macho role fits quite well with the ultramasculine stereotype that is elevated in the Miami gay culture. However, it limits them to playing the aggressive role, making it difficult to realize their full identity. Cuban American homosexuals also find it very difficult to come out to their families because such a high value is placed on marriage and child-bearing in traditional Cuban culture. But family is also too important for Cuban Americans to abandon in order to pursue their homosexual identity freely. So many Cuban American gays and

lesbians live a divided life, remaining discreet about their sexuality when with their families.

# CUBANS

**LOCATION:** Cuba

**POPULATION:** 11.4 million

**LANGUAGE:** Spanish

**RELIGION:** Forbidden by Communism, but Roman Catholicism and Santería are practiced clandestinely

## 1 INTRODUCTION

Cuba was discovered and claimed for Spain by Columbus during his first voyage to the New World in 1492. The island's indigenous population of Arawaks, who had displaced the Ciboneys from most of the island, staged their last significant uprising against the Spanish in the mid-1500s. In the late 1700s, African slaves were brought to Cuba as were Asian indentured laborers in the mid 1800s. Despite several revolutionary movements and a brief period of occupation by the English, Cuba remained a Spanish colony through the late 1800s. Most notable among the rebellions was the Ten Years War that began in 1868. The rebels, known as Mambises, fought mostly with machetes for lack of guns. On 24 February 1895, Jose Martí, Cuba's patriarch, led the War of Independence. Key military figures in the revolution included Antonio Maceo (known as the "Bronze Titan"), Maximo Gomez, and Calixto Garcia. In 1898, the United States intervened in the Cuban war and Spain relinquished Cuba's sovereignty to the United States under the Treaty of Paris. On 20 May 1902 the United States ended its military occupation of Cuba, formally inaugurating the Cuban republic. The United States and Cuba maintained close ties, with the Cubans leasing Guantanamo Bay to the Americans under the Platt Amendment.

Governments in Cuba during the early and mid-1900s were often plagued with corruption and were short lived, for the most part, with the United States stepping in from time to time. Despite an unsettled political climate, Cuba's natural beauty made it a haven for people from all over the world, and a popular vacation spot for Americans. In the 1940s and 1950s, vice and corruption were widespread in Havana, with the government establishing alliances with members of organized crime from the United States.

On 26 July 1953, Fidel Castro began his revolutionary movement with an attack on the army barracks at Moncada. In 1959, Castro's guerrilla movement successfully overthrew the existing government of Fulgencio Batista. Batista supporters were jailed and executed. Castro passed an agrarian reform act (which limited private land ownership), confiscated all foreign-owned investments, and established what would be a long-standing relationship with the Soviet Union. While the peasant class made some quick gains, middle and upper class citizens were stripped of most of their possessions. Over the next few years, approximately 1 million Cubans left home, most fleeing to the United States.

In January of 1961, the United States established an economic blockade of Cuba, halting the import of American goods to the island, and persuading a number of nations also to cease trade with Castro. In April, CIA-trained Cuban exiles staged the Bay of Pigs invasion, a failed attempt to topple the Castro regime. Later that year, Castro proclaimed Cuba a socialist country and declared, "I am a Marxist-Leninist and shall be

until the day I die." The following year, the Cuban Missile Crisis (when the United States discovered Soviet missiles in Cuba) was, perhaps, the most tense period of the Cold War. The crisis ended when the Soviets agreed to remove the missiles and, in exchange, the United States promised never to invade Cuba.

In the 1970s, Cuba made some social and economic strides. Schools and low-rent housing units were built, countryside roads were paved, and health care improved for many. At the same time, however, the government became more controlling and oppressive. By the end of the 1970s, the economy began to slip and, aggravated by political oppression, life on the island became intolerable for many. Since then, numerous Cubans have sought to exile themselves from the island, most notably during the Mariel Boatlift of 1980 when more than 125,000 Cubans made their way to Florida.

Today, Cuba remains the only communist government in the Western hemisphere. After the collapse of the Soviet Union in the early 1990s, an already struggling Cuban economy took a turn for the worse. Facing civil unrest in the wake of an all-but-collapsed economy, the Cuban government has been forced to dabble in capitalism and reverse its position on tourism. Farmers' markets were legalized in 1994 and Fidel Castro opened the doors to foreign investors. Nonetheless, political and economic unrest continued and since 1994 tens of thousands have left Cuba, risking their lives in makeshift rafts in an effort to flee. In July 2006 Fidel Castro delegated his duties as president to his younger brother and first vice-president, Raúl Castro. In February 2008 Fidel Castro announced he was stepping down as president in favor of his brother Raúl. It was the end of an era. Raúl Castro announced some restrictions limiting Cubans' daily lives would be removed, including the lifting of a ban on the purchase of computers, DVD players, microwaves, and cell phones.

## 2 LOCATION AND HOMELAND

A country of approximately 11.4 million people, Cuba is the largest island in the Antilles archipelago in the Caribbean Sea. It is located approximately 145 km (90 mi) south of Florida and is situated at the key approaches to the Atlantic Ocean, the Gulf of Mexico, and the Caribbean Sea. Columbus described Cuba as "The most lovely that eyes have seen." The island's topography is very diverse. Approximately 35% of the total land mass is made up of three extensive mountain systems: the Sierra Maestra (where Castro formulated his guerrilla-style revolution), the Guamuhaya, and the Guaniguanico. Two extensive plains account for 65% of the entire island surface and house almost 95% of the total population. There are nearly 200 rivers, most of which are short, narrow, and shallow. The combination of trade winds, the warm waters of the Gulf Stream, and sea breezes give Cuba a moderate and stable climate. Annual average temperature varies only by about 6°C (10°F); the average winter low is 21°C (70°F) and the average summer high is 27°C (81°F). The island has extensive arable land, accounting for more than half of the island. Other areas are used for cultivating sugar (Cuba's key export), rice, coffee, cocoa, and plantains. Nickel is the principal mineral on the island, and Cuba is the fifth largest producer of nickel in the world. (Cuba has the second largest reserves of nickel in the world.) Cuba is also a major exporter of cobalt.

Cuba is home to a number of rare birds and animals, many found nowhere else. The island's Bee hummingbird is the world's smallest bird, measuring just 5 cm (2 in).

Cuba is not lacking in beaches, with more than 100 in total. The most famous is Varadero, considered one of the finest in the world. The island, like many of its neighbors in the Caribbean, is subject to hurricanes. More than 150 such storms have been recorded since the days of Columbus. Cuba has also experienced a number of earthquakes (about 200 since the 16th century), mostly along the southeast coast.

In the late 1800s, Cuba was organized into 6 provinces: Pinar del Rio, Havana, Matanzas, Santa Clara, Puerto Principe (later known as Camaguey), and Santiago de Cuba. In 1976 the island was reorganized into 14 provinces: Pinar del Rio, Havana, the city of Havana, Matanzas, Cienfuegos, Villa Clara, Sancti Spiritus, Ciego de Avila, Camaguey, Las Tunas, Holguin, Granma, Santiago, and Guantanamo.

Cuba's population consists mostly of whites, blacks and mulattos (a mix of white and black). Additionally, there is a small Asian population on the island. Very few Cubans can trace their ancestry to the indigenous populations.

### 3 LANGUAGE

Cubans speak Spanish. Their names are composed of three parts: first (given) name, father's surname, and mother's maiden name; for example, Jose Garcia Fernandez.

### 4 FOLKLORE

One of the better-known pieces of Cuban folklore is *El Bizarro*, the story of a man who outsmarts the devil. However, most of Cuba's heroes come not from folklore but from real life. Jose Marti is Cuba's undisputed national hero. Marti was the mastermind behind the War of Independence and is noted for his inspiring prose and poetry. The verses of his most famous poem, "The White Rose," have been put to music in what is Cuba's most moving song, "La Guantanamera."

Marti, who was born in 1853, lived in exile in New York City for a period of about 15 years beginning in 1881. Originally enamored with the United States and its freedoms, Marti soon became disenchanted with the United States and its threat of annexation of Latin America. Marti wrote of the United States, "I have lived within the monster and I know its entrails." Marti, being of frail physique, was killed in his first day of battle. For exiles and island-dwellers alike, Marti embodies all that it means to be Cuban.

Fidel Castro is without question a modern-day icon of legendary proportions. He stands for all that is the Revolution, and for this he is revered by some and despised by others. However, none can dispute Castro's ability for delivering long and dramatic speeches. Perhaps the most famous of his discourses was a five-hour marathon at his trial following the Moncada attack where he uttered the famous line, "Condemn me if you will." The Castro era came to an end in 2008 when Fidel stepped down as president, but it will take a very long time—if ever—for his legendary stature and reputation to fade.

Ernesto "Che" Guevara's image, on murals, billboards, and the like, can be found throughout Cuba. Guevara, a key figure in Castro's revolution, has been elevated to a stature usually reserved in other cultures for martyrs and saints. Cuban schoolchildren begin their day by reciting the patriotic slogan, "Pioneers of communism, we shall be like Che." Guevara, a

medical doctor from Argentina, joined Castro and a band of other revolutionaries on board a used yacht named *Granma* by its original owner, after his grandmother (*Granma* later became the name of one of the 14 provinces and of the state-run newspaper). The yacht, which left from Mexico, made its way to Cuba, only to be captured by Batista. Guevara, Castro, and Castro's younger brother, Raúl, headed for the hills, the Sierra Maestra, and from there staged the revolution that culminated with the overthrow of a fleeing Batista on 1 January 1959. After serving as president of the National Bank of Cuba, "Che" resigned his post in 1965 and went to Bolivia to join the revolutionary movement in that country. He was killed by the Bolivian army in 1967. Castro declared a three-day period of national mourning, and to this day the government sponsors campaigns with themes of "Let's Be Like Che."

### 5 RELIGION

As a communist country, religious affiliation is deemed anti-revolutionary in Cuba. Nonetheless, many Cubans maintain a Catholic tradition, although they tend to do so covertly for fear of persecution. Much more openly practiced, Santeria is an African-based religion introduced into Cuba by the slaves. Worshipers would disguise their gods in the images of the Christian saints so as not to be accused of heresy. Our Lady of Charity, for instance, is Ochun. The rough equivalent of a priest or spiritualist in Santeria is known as a *babalao*. When someone is initiated into Santeria, they dress all in white for one year. A small group of Jews live in Cuba and celebrate holi-

In Cuba, handmade cigars are as much a craft as they are an export item. (Cory Langley)

days such as Passover to the best of their ability, given the economic restrictions.

## 6 MAJOR HOLIDAYS

Major holidays in Cuba mark significant points in the revolution (January 1 and July 26). May Day (a communist holiday worldwide) is celebrated, as is October 10, marking the declaration of war against Spain in 1868. Catholics honor Three Kings Day on January 6, Epiphany.

## 7 RITES OF PASSAGE

Young girls in Cuba sometimes celebrate *los quince* (literally, “the 15”), the Latin American version of a sweet 16 party, but one year earlier. At *los quince*, often celebrated with great pageantry not unlike a wedding, the young lady will usually wear an extravagant gown made especially for the occasion.

## 8 INTERPERSONAL RELATIONS

Cubans are known for their warmth, friendliness, sense of humor, wit, and resilience. Cubans greet each other with a handshake and by saying *hola* (“hello”). Like other Latins, Cubans have very expressive body language—wrinkling one’s nose, for instance, means “What?” Commiserating in difficult times is as much a pastime as are sports or television. Traditionally, when young girls dated, they brought along a *chaperona* (chaperone); this has recently gone out of fashion.

## 9 LIVING CONDITIONS

Ever since the collapse of the Soviet Union in 1991, Cuba underwent what it called the “Special Period”—a mandatory belt-tightening way of life. Under the Special Period, energy consumption was drastically reduced, oxen were put to work in the fields, people got around on bicycles, and food rations were slashed to a minimum survival level. Once recognized as one of the best in the Third World, the health care system in Cuba suffered. Black marketeers, known as *macetas*, illegally buy and sell goods such as food, clothes, liquor, medicine, cigarettes, and gas. *Paladares* are illegal private restaurants. However, with inauguration of Raúl Castro as president, restrictions on some household and consumer items were lifted, including those on cell phones, microwave ovens, televisions, DVD players, and computers. It remains to be seen to what extent life for Cubans will become more liberal after the passing of the Castro era.

In ironic contrast to the living conditions of the locals, tourists in Cuba enjoy the best of accommodations, food, and drink. For the tourist, nothing is lacking.

## 10 FAMILY LIFE

Both tradition and economic necessity dictate the structure of the extended family in Cuba. More often than not, one or more of the grandparents live with a married couple and their children. For the same reasons, children tend to live at home until married.

## 11 CLOTHING

The *guayabera*, an embroidered man’s shirt, is considered a traditional, elegant article of clothing and is still worn today in both formal and informal settings. For everyday purposes, however, people tend to wear casual attire. As in so many parts of the world, blue jeans from the United States are a hot commodity.

## 12 FOOD

Like so many other aspects of Cuban culture, traditional Cuban cuisine is rich in both Spanish and African influences. Pork, the meat of choice in a traditional meal, is almost always accompanied by rice and beans. When the white rice and the black beans are cooked together, they are called *arroz con gri* (literally, “rice with gray”). White rice and kidney beans make *moros y cristianos* (“Moors and Christians”). Plantains, which when green are fried up as *tostones* or *mariquitas* (also used as a derogatory term for gays), and when ripe as *maduros*, round out the meal. *Yuca* (cassava), *malanga* (taro), and *boniato* (sweet potato) are also common elements of a traditional meal. *La raspita*, the scrapings from the bottom of a pot of rice, would never make its way onto the plate during an elegant meal but is often enjoyed by the cook in the privacy of the kitchen or is shared in a small informal gathering. Typical fruits include avocados, mangoes, guavas, mamees, and papayas. Traditional beverages include *guarapo* (sugarcane juice) and rum.

Bleak economic conditions have made the traditional meal a thing of the past. The ration under the Special Period of the 1990s consisted of a piece of bread per person per day, three eggs per week, and a portion of fish or chicken per month. A family of four got one small bottle of cooking oil four times a year, and milk was available only for children under the age

*Tourism jobs are highly sought after because of their access to dollars and foreign goods. Here a street vendor prepares to sell flowers to tourists visiting Havana. (Cory Langley)*

of eight. These items were often hard to come by, as were staples such as rice and beans. Many Cubans hadn't had beef or pork in years. A piece of beef on the black market could cost as much as a month's wages. Once the Special Period ended, Cubans were able to afford and obtain food much easier.

### **13 EDUCATION**

In 1961 the government initiated a campaign to wipe out illiteracy. Education is both free and mandatory, and today Cuba has one of the highest literacy rates in all of Latin America (99.8%). Shortages have dictated that textbooks be shared and workbooks be erased and passed along to the next class.

Higher education is also free, but admission is affected by one's political affiliations. Scientific and technical areas are emphasized. The University of Havana, founded in 1728, is the leading institution of higher education on the island.

### **14 CULTURAL HERITAGE**

Music is, perhaps, the single most important aspect of Cuba's popular culture. Cuban music is a combination of Spanish and African influences. Typical styles of music include charanga, son, rumba, mambo, cha-cha-cha, and danzon. From a blend of these rhythms evolved "Salsa" (literally, "sauce"). Celia Cruz (d.2003), who was exiled in the United States, was known throughout the world as the Queen of Salsa. Cruz began her career in Havana in the late 1940s with the group Sonora

Matanzera. Other world-renowned Cuban artists include Beny More, Arsenio Rodriguez, and Israel "Cachao" Lopez. Notable postrevolutionary performers include the groups Los Van Van, Irakere, NG, Dan Den, and Yumuri Y Sus Hermanos. In addition to traditional music, teenagers are also known to enjoy rock and roll—of both the United States and homegrown varieties. In 1997 a group of legendary Cuban musicians, some as old as their nineties, were brought together by American guitarist Ry Cooder to record a CD. They called themselves the "Buena Vista Social Club." In 1999 a documentary film directed by German filmmaker Wim Wenders was made of the group's songs being recorded in Havana. There was also footage from concerts in Amsterdam and New York City's Carnegie Hall. In addition, many of the individual musicians talked about their lives in Cuba and about how they got started in music. Although most of the original members of the band had died by 2008, the group, with younger musicians, was still touring the world.

In Cuba, ballet is to the fine arts as baseball is to sports—it reigns supreme. The Cuban National Ballet Company has performed the world over. Its founder, leader, and star, Alicia Alonso, is considered one of the best dancers of all times. Cuba's film industry saw a period of growth under government control and sponsorship in the early days of the Revolution. One film, produced in the 1990s, *Fresa y Chocolate* (Strawberry & Chocolate) won several international awards and was nominated for an academy award. The film tells of a young,

straight militant who (although reluctant at first) befriends a gay intellectual. The Havana Film Festival, held each December, promotes Latin American filmmakers and films with Latin American themes.

Several Cuban writers and poets, including Jose Marti and Alejo Carpentier, have left their mark upon Latin American literature. Herberto Padilla (d.2000) wrote an award-winning collection of poems, *Out of the Game*, about the myths of revolutionary society. While receiving critical acclaim worldwide, Padilla's work was banned in Cuba and Padilla was arrested.

Painters and sculptors prior to the Revolution demonstrated European influences, while postrevolutionary artists like Manuel Mendive and others have incorporated Afro-Cuban mythology and folklore into their work. Other artists have produced abstract works, and many have produced works with themes of protest. Under Castro's policy set forth in 1962, which states, "Within the Revolution, everything; outside the Revolution, nothing," artists who disagreed with the Revolution and its ideals are silenced. The more outspoken ones were sentenced to labor camps. It remains to be seen to what extent artistic expression will be allowed in the new post-Castro era.

### 15 WORK

The labor force in Cuba is divided almost evenly among services, agriculture, trade, manufacturing and mining, and utilities. Tourism jobs are highly sought after because of their access to dollars and foreign goods. Many teachers, doctors, and engineers have left their professions to work in more lucrative jobs as waiters or bellhops.

### 16 SPORTS

Sports are a very important part of Cuban life and identity. "Sports is a right of the people," reads a banner inside the arena in the athletic complex in Havana. Castro, himself an athlete and enthusiast, was once offered a contract to pitch on a baseball team in the United States. Outstanding young Cuban athletes at the age of eight or nine are selected to attend an EIDE, a boarding school where they take academic courses and play different sports. The next step, at age 15 for those who excel, is to attend an ESPA, a school for athletic improvement and perfection. The top 1,000 athletes end up at a CEAR, a center for high-yield training.

Cuba has been referred to as the "best little sports machine in the world," consistently turning out champion Olympic athletes. In 1992, Cuba won more Olympic medals per capita than any other country. Cubans excel in baseball, boxing, track and field, and volleyball. Unlike the millionaire athletes of the United States, top athletes in Cuba, albeit heroes of society, make very little money.

### 17 ENTERTAINMENT AND RECREATION

State-run television operates anywhere from 6 to 12 hours a day, with mostly sports programming and some recent American movies. Other programming includes *novelas* (short-run soap operas) from Latin America. However, one will rarely find a young Cuban just sitting at home watching TV. Young Cubans, when they are not partaking in sports, will be involved with one or another of many government programs. The Young Communists Union, for instance, operates numerous computer instruction centers. Older Cubans can be found playing dominoes or chess, or sitting at Copelia, the ice cream

parlor featured in the film *Fresa y Chocolate*, or simply strolling El Malecon, the boulevard that runs along the waterfront in Havana.

### 18 FOLK ART, CRAFTS, AND HOBBIES

Handmade cigars are as much a craft as they are an export item. Considered the finest in the world, more than 150 million are produced each year. An experienced worker can make a cigar from start to finish in just two minutes. Cuban cigar sales stood at more than \$400 million in 2007. Cuban cigars comprise 80% of the world cigar market—not counting the United States, which has had a trade embargo banning Cuban products since 1962. Americans obtain their Cuban cigars illegally.

### 19 SOCIAL PROBLEMS

Cuba is often cited as a violator of human rights. Government control is strong. Members of neighborhood watch groups, Committees for the Defense of the Revolution, watch their neighbors and report on all nonconformist behavior to the government. In addition, special brigades of paramilitary agents have been formed to crack down on protesters.

Tourism has brought about what is being called "tourism apartheid" where the locals are not allowed into the resorts unless they are accompanied by foreigners. Additionally, prostitution is on the rise.

### 20 GENDER ISSUES

Machismo is alive and well in Cuba. While women are expected to work outside the home, they are also expected to do the cooking, cleaning, and the like.

Gays and lesbians are openly discriminated against. They are banned from the Communist Party, and AIDS victims are quarantined.

# CUNAS

**ALTERNATE NAMES:** Cuna-Cueva, Kuna

**LOCATION:** San Blas Islands (or Mulatas Archipelago), along the Gulf of Darien from Panama to the Colombian border

**LANGUAGE:** Cuna (Chibchan group of languages)

**RELIGION:** Indigenous spirit-based beliefs

## 1 INTRODUCTION

What is now Panama was inhabited by the Cuna Indians when the Spanish began exploring the Panamanian coastline early in the 16th century. It is believed that the Amerindian peoples, including the Cuna Indians, or Cunas, are descended from Central Asians who migrated across the Bering Straits some 20,000 years ago and gradually moved southwards.

The first Spanish explorer was Rodrigo de Bastidas in 1501, followed by Christopher Columbus on his fourth voyage to America in 1502, and Diego de Nicuesa in 1509. When the expedition led by Vasco Nunez de Balboa in 1511 landed in Panama, the Cuna Indians lived on the main land. None of them was successful in establishing a colony, partly because of the hostility of the Amerindians who lived there. The Cunas were fierce warriors and fought bravely against the conquistador. Finally, Mart'n Fernández de Enciso succeeded in founding the settlement of Santa Mar'a along the western shores of the Gulf of Darién.

During the 18th century, European diseases, mainly malaria, spread among the aborigine people, decimating the Cunas. In a desperate attempt to fight malaria, the remaining population migrated to San Blas. This region is characterized by the lack of freshwater, which is an unfavorable condition for the existence of malaria because this illness is mostly transmitted from mosquitoes to humans where stagnant waters are available. Besides, the archipelago offered natural defenses against the white population.

Cunas still inhabit the 45 largest islands of the San Blas Archipelago and a group of 300 islets located on the Caribbean coast of Panama and Colombia and organize their social structure in three politically autonomous *comarcas* or reservations in Panama. Few Cuna villages exist in Colombia. The region as a whole is governed by the Kuna General Congress.

## 2 LOCATION AND HOMELAND

The Cuna Indians inhabit 30 or 40 islands in an archipelago of some 300 islands strung along the Gulf of Darien from Panama to the Colombian border. Some Cunas also live on Colombia's Pacific coast near the Panamanian border. The dwellers of the archipelago, sometimes referred to as the San Blas Islands or the Mulatas Archipelago, also farm along the shores of the Panamanian coastline proper, which is very close to the islands. The hinterland is jungle and has very few roads. The comparative inaccessibility of the Cuna settlements has helped them preserve their way of life.

## 3 LANGUAGE

The Cuna language is an Amerindian language, and it is classified as belonging to the Chibcha group of languages. Dulegaya is the primary language of daily life in the Cuna communities and the majority of children speak it. Spanish is commonly

used, especially in education and written documents. Cuna is considered an endangered language.

Names are sacred, and naming ceremonies take place when girls and boys become teenagers. These ceremonies have an unusual feature: there is a special chanting of all available names. The parents of a child listen attentively, and when they hear a name they like they interrupt the ceremony and the choice of the name is made immediately.

Many Cunas also have Spanish names and, because the United States has been prominent in the Panama Canal Zone, some have also taken English names.

## 4 FOLKLORE

Among the first and most memorable of the Cuna to be discovered by Spanish explorers were the small population of albinos (estimated to be less than 1% the total population), most of whom lived on one island. The albinos were somewhat of an outcast group in the Cuna society, and many folktales grew up around them. For example, here is a Cuna legend reflecting the historic Cuna practice of Sun worship, which is no longer carried out today:

Inhabiting the fertile Darien region since time immemorial, the Cunas, descendants of the Sun, were blessed by the gods with a beautiful homeland, including magical lakes, rushing rivers, luxuriant jungles filled with exotic fauna and flora, and mountains where gold was stored.

Once upon a time, the Sun wanted to reward the tribe's shaman, called the nele, for his wisdom, goodness, and generosity. Appearing before the nele one afternoon at the hour of the sacrifice, the Sun offered to grant him anything he desired. Although the shaman's humility at first prevented him from making a request, the Sun repeated his offer. The shaman, who was old and did not have long to live, resolved to ask for something that would benefit the entire tribe after he was gone.

He asked the Sun to send his own son to the Cunas, to serve as their leader. Although this was a difficult request, the Sun agreed, and after three days two beautiful blond children—a boy and a girl—appeared in the sky at dawn, surrounded by golden light, and came down to earth. The people were overjoyed and gave thanks to the Sun for this miraculous occurrence. The children were raised in a golden palace with lavish gardens, and, when grown, they were married in a festive ceremony.

Eventually, however, they were unfaithful, both to each other and to their divine origins. As punishment, the Sun turned them from divine beings into mere mortals, condemned to suffer like other human beings. However, from their first union have come the albinos, who, with their blue eyes and nearly white hair, are still considered children of the Sun. It is said that they cannot bear the light of day. The rest of the Cunas, believed to be descended from the subsequent unions of the two original children of the Sun, still consider themselves to be descendants of a god.

Although the albinos comprise a small percentage of the Cuna population, their existence caused early explorers to label the Cuna the "white Indians."

## 5 RELIGION

The Cunas have a close connection with nature and see themselves as a part of it. Every living thing has a spirit counterpart—animals, men, bodies of water, rocks, trees, and plants.

The Cuna believe that what is taken from nature must be replaced in some way. The religious authority, the shaman, is in charge of dominating and controlling the spirit of the world inhabiting rocks and storms, among others. Becoming a shaman is regarded as an important vocation. Shamans may be men or women, and they perform three types of functions: curing illness in individuals, believed to be caused in most cases by the loss of one's soul; curing villages of epidemic illness; and establishing rapport with spirits, leading to the ability to predict the future. The shaman who serves the latter function is typically born into the role, but receives training, usually requiring a period of jungle isolation.

## 6 MAJOR HOLIDAYS

Most Cunas are Panamanian or Colombian citizens. Many continue to resist assimilation and do not celebrate their respective country's major national holidays. However, some Cunas have allowed and even encouraged their young people to go to the town of Colón at the mouth of the Panama Canal and receive a Western-style education. After education, most return to the islands. These Cunas speak Spanish, and in a few cases some have even learned English. While living among non-Cuna people, Cunas take part in the celebration of national holidays. These include Independence Day, celebrated in both Panama (November 5) and Colombia (July 20).

## 7 RITES OF PASSAGE

Women give birth in a special hut set aside for this purpose that men are not permitted to enter. If a girl is born, there is a joyous response on the father's part, because he is then allowed to leave the matrilineal household of his wife's family and set up his home independently with his wife and daughter. If a son is born, the father has to remain in his father-in-law's home. A father is not permitted full authority over his sons in the beginning. The father-in-law has that privilege and duty, until he considers that the young father has learned his parenting skills adequately.

Parents decide on a husband for their daughter when she is young. As she approaches adulthood, parents cut their daughter's hair, and there is a special celebration in honor of this occasion.

When a person dies, he or she is wrapped in a hammock and buried in a lonely place in the rainforest on the mainland. The husband or wife chants a song of praise and lamentation.

The large green iguana plays an important role in the Cunas' existence. According to their beliefs, this animal is in connection with spirits and Cunas use the reptile's tails and feet for making magic filters. As is stated by Cuna traditions, diseases are fought with spells, and it is the shaman of the village the person in charge of helping to cure the sick. During this process, wooden figurines—in a woman or man shape—owned by each Cuna family are pivotal for treating illnesses since the shamanistic spells are applied on them.

## 8 INTERPERSONAL RELATIONS

The Cunas respect the different positions that family members hold and greet each other accordingly. Greetings are different when the Cunas are working or are engaged in trade. On these occasions, the men are in the background and the women are the dominant partners, and they can be very forward and even fierce. When entertaining visitors, the men stay in the background. The women play a more forthright role.

## 9 LIVING CONDITIONS

The Spaniards who first visited the gulf of Darien and the Panamanian coast found the conditions very difficult. The Cunas fiercely resisted the encroachment of Europeans.

Cuna settlements are close to the sea shore. Many of Cuna constructions were erected as *palafitos*—built on posts planted on the sea floor. To ascend into the palafitos, Cuna people used ladders or reed. However, the palafitos constructions were the exceptions, and most of the villages were constructed on the ground. These houses were and are quite long and can accommodate extended family units. The thatched roofs are made out of palm fronds, and the walls out of bamboo or cane. The houses of some villages are very close together, with very little space between one and another.

The Cuna are excellent sailors. They use canoes known as *cayucas* made from a single, hollowed-out tree trunk, usually that of a large tree. The canoes are often fitted out with sails and are well-suited for navigating the waters of the Darien between the Panamanian coast and the islands. In the forests beyond the coast, the men go on hunting expeditions on foot.

A Cuna woman on the beach with a parrot in Panama. Cuna women wear long, narrow skirts that are tightly wrapped around them. They use ankle bands as well as arm bands of many beaded strands. (Cory Langley)

## **10 FAMILY LIFE**

Extended family units and clans are held together by the female line. Many aspects of Cuna family life indicate a matriarchal society in which women play a leading role. A young married couple usually moves into the home of the woman's family until their first children are born. The Cunas are fond of their children and, although respect for elders is expected, they are not harsh in the upbringing of young children.

The Cunas keep dogs as pets.

## **11 CLOTHING**

The Cunas are famous for their techniques in preparing layer upon layer of cloth, cutting out patterns, and sewing pieces on top of each other in colorful geometric patterns and lively colors including red, yellow, and black. They prepare blouses for women using this technique, and these are widely admired in both Colombia and Panama. The women also wear long, narrow skirts that are tightly wrapped around them. They use ankle bands as well as arm bands of many beaded strands. The men wear dark trousers, bright shirts, and straw hats. In many areas, Cunas wear these traditional articles of hand-crafted clothing and jewelry to complement a Western-style wardrobe.

The Cunas have golden-brown skin, almond-shaped eyes, high cheekbones, and shiny, straight black hair. Women wear

striking earrings that are large, thin gold disks, rather like flaming suns.

## **12 FOOD**

The Cunas grow yams, corn, and sugarcane in jungle clearings along the coastline. Their diet also includes a variety of fruits, such as plantains, bananas, and mangoes. They also drink *chicha*, a fermented drink prepared from sugarcane mixed with plantains, corn, and water. In Cuna family homes there are big jars where the *chicha* is stored. A refreshing drink, called *coco de agua*, is provided by the green coconut.

The Cunas also eat fish and a species of iguana. They stew sea turtle and eat rice boiled in coconut milk. Their traditional hunting weapons were spears and blow guns.

## **13 EDUCATION**

The men teach their sons both hunting and fishing skills as well as how to sew their own simple garments, which include a loose-fitting shirt and trousers. The women teach their daughters how to prepare and cook food, some basic farming skills, and the elaborate sewing techniques to make their beautiful blouses, known as *molos*.

Some Cuna men have received a Western-style education on the Panamanian mainland. Generally, the Cunas expect the young men who have been educated to return to their island and mainland settlements.

#### 14 CULTURAL HERITAGE

Music and dance are important for the Cuna. They preserve their strong cultural identity by passing down to their children accounts of their background, history, and values through stories, myths, and legends.

#### 15 WORK

Work is divided in very specific ways among the Cunas. The men hunt and fish and also make their own clothes. The women make their own distinctive clothes; they cook, weave, sew, and make hammocks. The women also work as sailors and traders. For many years, visitors have been able to sail to the San Blas region from the Panamanian town of Colón. Cuna women sail in their canoes to meet tourist and trading boats to sell their goods. They are accompanied by men who do not participate in the actual trading.

The coconut palm is important in this region and was once used as a form of currency. For the modern Cuna, it provides fibers for making clothing, brooms, threads for sewing and weaving, lamp wicks, rope, and hammocks. It provides sweet coconut water for drinking and coconut milk for cooking. The coconut palm is a source of fuel. Dishes are made from coconut shells.

#### 16 SPORTS

Cunas are skillful sailors and fishers, but do not consider these activities sports in the Western sense. They engage in these activities for their livelihood.

#### 17 ENTERTAINMENT AND RECREATION

Important occasions are celebrated with feasts, and it is considered appropriate to mark these occasions with generous amounts of food and drink.

#### 18 FOLK ART, CRAFTS, AND HOBBIES

The Cunas are noted for their skills with textiles. They decorate cloth with bright geometric patterns, dye it in a variety of colors, and cut and sew several layers to make the women's blouses, known as *molás*. The *molás* are prized in Colombia and Panama. They have found their way into exhibitions of Amerindian art. *Molás* may also be framed and hung as works of art, or used to make cushions. These practices are generally found outside the Cuna communities. The Cunas also make beaded necklaces and woodcarvings.

#### 19 SOCIAL PROBLEMS

The Cunas have tried to defend their way of life for centuries, and have energetically resisted assimilation. In the 1920s, the Panamanian government decided that the Cunas were too autonomous and sent a contingent of officers to police the islands of San Blas and the surrounding coastal area in the Gulf of Darien. At that time, the jungles that stretched inland from the coast did not have a single road. The police officers were all killed by the Cunas.

Since that disastrous interaction, a more peaceful climate of coexistence has generally prevailed. There is now a Panamanian governor for the archipelago. The governor's residence is in El Porvenir, a small, clean, whitewashed town on the mainland. A few markets have been established there, where

the Cuna women sell their wares to visitors. Visitors may only come to El Porvenir for the day.

On the Pacific coast of Colombian mainland near the Panamanian border where some Cunas live, there are real worries that policies to develop Colombia's Pacific coast may threaten the way of life of the Cunas there.

#### 20 GENDER ISSUES

Cuna culture is matrilineal (tracing descent through the maternal line). Traditionally, women have held a powerful position in their culture. A wife holds primary decision-making responsibilities within a household. A man cannot trade or sell any article without first seeking his wife's permission. On the other hand, if she wants to sell the perfumed berry beads she has made into necklaces, or garments she has made, it is her right, and she does not have to obtain permission from anyone else. Modern Cuna women appear to have no difficulty in being assertive. This tends to confirm the view of the traditionally powerful position of Cuna women.

# DAKOTA AND LAKHOTA

**ALTERNATE NAMES:** Sioux

**LOCATION:** United States (North and South Dakota, Minnesota, Nebraska, Montana); Canada (Alberta, Saskatchewan, Manitoba)

**POPULATION:** approximately 150,000

**LANGUAGE:** English; Dakota Sioux

**RELIGION:** Traditional

**RELATED ARTICLES:** Vol. 2: Native North Americans

## 1 INTRODUCTION

The term Sioux (a French form of *Nadowi-is-iw*, “little adders,” a name given them by their enemies, the Chippewa) has been used for a large group of bands and tribes who spread historically from Minnesota to the prairies of the Dakotas and as far as Montana. Speaking a common language with dialectical variations, these peoples today, as in the past, refer to themselves as Dakota in the east, Nakota in the central region, and Lakhota in the west. In all three regional dialects, this term means “allies,” and it was extended to affiliated tribes such as the Cheyenne and Arapahoe, both Algonkian speakers who fought alongside them in war. The unity of the Allies is symbolically expressed in the term *oceti sakowin*—the Seven Fireplaces. The easternmost Dakota groups are the *Mdewak’ant’unwan* (“Spirit lake village”), *Wahpek’ute* (“Leaf shooters”) *Sisit’unwan* (“Fish scale village”—although the meaning of this term is debated), and *Wahpet’unwan* (“Leaf village”). These four groups are collectively referred to as the Santee (*Isan t’i*—“Knife dwellers”—referring to the name of a lake). The central groups also call themselves Dakota, which sometimes was pronounced Nakota. These are the *Yankton* (“End dwellers”) and the *Yanktonais* (“Little End Dwellers”). These two groups are classed together as Yankton or “Middle” Sioux. The westernmost groups, known collectively as the Teton Sioux (*Titunwan*, or “Prairie dwellers”) form the third division. They subdivided themselves historically into seven further fireplaces: *Oglala* (“Scatters their own”), *Sicangu* (“Burned thighs”), *Mnikowojou* or *Miniconjou* (“Planters by water”) *Oohenunpa* (“Two kettles”—literally, “Two boilings”), *Itazipco* or *Icazipo* (“Without Bows”), *Sihaspapa* (“Black Feet”), and *Hunkpapa* (“Campers at the opening of the circle”). Today these people use their own language for self-ascertainment, the Tetons calling themselves the Lakhota and the others using Dakota. In 19th-century literature, these groups were collectively called Sioux or Dakota (and thus the Dakota Territory, which is, in fact, occupied in the west by the Lakhota and the east by the Dakota).

The Allies originally kept their own historical records in the form of winter counts. These pictographic documents highlight each “winter” or year with its most significant event. By their reckoning, the Allies have hunted and gathered on this continent since their emergence into this world, and in any case since long before the coming of Europeans. Items of European culture such as horses, cloth and later guns were initially acquired through trade with other Indians and later directly with Europeans through the fur trade (late 1700s until about 1851). Early contact resulted in widespread epidemics of European diseases that ravaged native populations.

The first written mention of the “Naduesiu” by Europeans was by Jean Nicolet in 1639, with the first recorded contact between the Dakota and the explorers Radisson and Grosselier in 1660. The first fur trading post was established on the Mississippi in 1683. The Dakota territory was “claimed” by the King of France in 1689 and later “purchased” by the young nation of the United States in 1803 (the Louisiana Purchase). Louis and Clark visited the Dakota territory in 1804, and the first treaty with the Eastern Allies was signed with Zebulon Pike, ceding two parcels of Dakota land on the Mississippi river for American forts. The Dakota allied with the British in the War of 1812. Fort Snelling, the first military outpost in the country of the Dakota, was built on one of these parcels in 1819. Fort La Framboise (later renamed Ft. Pierre) was built in 1917.

The first large-scale outbreak of hostilities between the military forces of the United States and the western Lakhota took place in 1854 when a Lakhota was jailed for the killing of a cow owned by a Mormon settler. Known as the Mormon Cow incident, Lieutenant Grattan and 29 of his men were killed in retaliation, and this sparked the Sioux War of 1855. A peace treaty was signed with the Lakhota in 1856, and the Lakhota who had killed the cow was released.

As the 19th century went on, the Eastern Dakota were increasingly pressed by settlers wanting their land. The United States government habitually delayed meeting its treaty obligations and did nothing to discourage encroachment of settlers into Dakota territory. In an attempt to maintain their land and resources, Inkpaduta killed 40 settlers and took four captives in 1857, but a year later the Yanktons ceded their eastern lands, retaining only a small parcel on the east bank of the Missouri River. Further pressure from settlers and continued delays in the government’s treaty payments resulted in the Minnesota Dakota conflict of 1862. During this conflict some Dakota fled to Canada and the west. By 1864 the remaining Santee were removed from their homelands to Nebraska.

When gold was discovered in Montana in 1863, settlers traveled to the gold fields by way of the Bozeman trail, disrupting game ecology and splitting the great buffalo herd in two. Hostilities continued with the unceasing expansion of whites through and to the territory of the Lakhota. The first Fort Laramie Treaty was signed with the Lakhota in 1851, but when the U.S. Army failed to fulfill its obligation to keep settlers off of Lakhota land, hostilities erupted, most notably resulting in the death of Captain Fetterman and 80 of his men in the Wagon Box Fight in 1866. In 1868 the Red Cloud War ended with the signing of the second Fort Laramie Treaty. The United States abandoned the forts along the Bozeman Trail, which was closed to white migration, and the Lakhota agreed to allow a railroad to pass through their country. This treaty also established the domain of the Lakhota: the lands to the west of the Missouri River in the present state of South Dakota and parts of its border states, as well as hunting rights in lands contiguous to the territory.

Once again whites abrogated their treaty agreements when gold was discovered during the Custer expedition to the Black Hills in 1874. The United States attempted to acquire the territory legally in 1875 and, when that effort failed, set up a commission in August of 1876, which fraudulently declared the territory was legally ceded according to the terms of the Fort Laramie Treaty. On 31 January, 1876 the United States military announced that all Native Americans must leave their hunting

territories and report to reservations. General George Armstrong Custer and the 7th Cavalry went out to round up the Lakshota who would not follow this order. Custer's command was crushed in the Battle of the Little Big Horn on 26 June, 1876, but only a year later, the Oglala under Crazy Horse came in to Fort Robinson. Crazy Horse was murdered on 5 September while in custody at the Fort. By 1878 the Tetons were all on reservations except for Sitting Bull and his supporters, who had fled to Canada. Homesick and missing their relatives, Sitting Bull and the majority of his people returned to their territory in 1881, taking up residence on the reservation.

The United States hoped to assimilate the Native Americans, making them independent landowners and dissolving both religious and civil authority. U.S. President Ulysses S. Grant instituted the Grant Peace Policy 1869, whereby each reservation was allocated to a single Christian denomination to administer and proselytize (this policy was rescinded in 1882). Land allotment to individuals under the Dawes Act sought to dissolve the vast land holdings of the natives and sell the "excess" lands to white settlers. The first attempt to parcel out the Great Sioux Nation territory was in 1888 and the second in 1889, when the government managed to acquire the  $\frac{3}{4}$  signatures necessary to cede land.

By the late 1880s the status of the Allies had been so drastically reduced that spiritual remedy was sought. The Ghost Dance, begun by the visions of a Paiute Indian named Wovoka (Captain Jack) in Utah, spread throughout the Plains in the late 1880s. This faith taught that through prayer and dancing the earth would roll up and be renewed. The ancestors and the buffalo would return and the Europeans would disappear. Some Lakshota also claimed that sacred shirts would protect them from the bullets of the whites. The Ghost Dance movement gained strength in 1889, a year of drought and famine. The killing of Sitting Bull by Tribal Police on 15 December 1890 further disheartened the people. The Indian Agent at Pine Ridge panicked over this situation and called in troops, which violated an understanding he had with the Lakshota. At the same time, Chief Big Foot and his Miniconjou and Hunkpapa followers traveled down from the Cheyenne River agency to Pine Ridge to meet with Red Cloud and receive horses from him. They were arrested to the west of Pine Ridge and brought to Wounded Knee Creek. While the Lakshota were being disarmed, a shot was heard, and the soldiers began shooting into the encampment, massacring 368 men, women and children.

The Lakshota and Dakota struggled against great odds to preserve their cultural life. In the 1880s some Santee returned to Minnesota and small reservations were granted. In 1905, the first individual allotments were made on the Pine Ridge agency itself. All Native Americans were granted citizenship in 1924. Allotments continued until the United States reversed the policy of forced cultural assimilation and destruction of traditional cultural and political institutions through the Indian Reorganization Act, which allowed Indian tribes to constitute themselves as legal entities and again own and control land communally. The IRA was a mixed blessing; while it gave the tribes some autonomy, it also imposed governmental structures (tribal councils) that are derived from American civil government rather than from traditional forms of authority.

The Lakshota and Dakota continued to struggle for their legal, cultural, religious, and territorial rights, working through extended family governance as well as other traditional forms

of social organization. The United States set up the Indian Claims Commission in 1946 to settle outstanding treaty claims on the part of Native peoples. Although the Supreme Court has recognized the illegality of the seizure of the Black Hills by the United States government, the Lakshota and Dakota people involved in the suit refuse to accept the monetary settlement prescribed by the Federal government and continue to press for a return of the federally controlled regions of the Black Hills to their rightful owners. In the 1970s, Indian groups became more visible as contemporary peoples as they protested their political and cultural plights, particularly with the occupation of Wounded Knee by the American Indian Movement (AIM) (27 February–8 May, 1973), which brought world attention to Native issues. Legislation such as the Indian Self-Determination and Educational Assistance Act (1975), the Indian Child Welfare Act (1978), and the Native American Grave Protection and Repatriation Act (1990) helped bolster Indian rights in the judicial and governmental arenas. Contemporary concerns of the Lakshota and Dakota people include tribal sovereignty, religious rights in general as well as protection of religious rituals from exploitation, return of the Black Hills, jobs, language retention and revival, cultural and political autonomy.

## **2 LOCATION AND HOMELAND**

Some Lakshota claim that their people inhabited the Black Hills since the beginning of time. Others hold that the Allies emerged from a cave or from under a lake to inhabit the upper world. Anthropologists and archaeologists, who believe the inhabitants of this continent migrated from Asia across the Bering Strait, place origin of the Dakota people in the southeastern United States. At earliest European contact, the Dakota and Lakshota occupied the woodlands of a territory centered in what is now known as Minnesota. By the late 1700s the Lakshota spread westward to Montana and Wyoming and were successful on the plains as warriors as well as horsemen and hunters. They fought prolonged wars with the Crows, Pawnees, Shoshones, Omahas and Kiowas, who blocked their westward migrations.

Today Lakshota and Dakota live on a number of reservations: in South Dakota—the Lake Traverse, Standing Rock, Crow Creek, Lower Brule, Yankton, Flandreau, Pine Ridge, and Rosebud Reservations; in Nebraska, the Santee Reservation; in Montana, the Fort Peck Reservation; and in North Dakota, the Fort Totten Reservation. There are also Dakota and Lakshota in present day Canada in Alberta, Saskatchewan, and Manitoba. As many as 85% of Native Americans live in urban areas, so it should be no surprise that there are many Lakshotas and Dakotas in off-reservation cities such as Pierre, Rapid City, Scotts Bluff, Denver, Chicago, Los Angeles and Minneapolis-St. Paul. According to the 1990 United States Census, there are 103,255 Sioux people, making them the fourth largest native group in the United States. Two of the ten largest reservations in the United States are Lakshota: Pine Ridge (28,000 persons), which is ranked second, and Rosebud (over 20,000), which is ranked sixth.

## **3 LANGUAGE**

Lakshota and Dakota are still spoken today and are commonly used during religious ceremonies and traditional social events. Great pains are taken today to preserve and expand the number of speakers of these dialects. Lakshota, Dakota and Nakota

are mutually intelligible dialectical variants of one of many languages of the Siouan family. Formal study and recording of Dakota by Euro-Americans was first carried out by the Pond brothers and Stephen Returns Riggs, all of whom were Protestant missionaries. Fr. Eugene Buechel, S.J., continued this work among the Lakhota, building on a dictionary first started by the Pond brothers and published by Riggs. Native Dakota scholar Ella Deloria and Lakhota scholar George Bushotter also worked on the language, recording native stories in their original dialects.

#### 4 FOLKLORE

The Dakota and Lakhota have a tradition of oral literature that continues into the present. Many stories are shared among the different groups of the seven fireplaces, and some stories have been picked up from the many surrounding cultures. The ability to tell stories well is honored. Many Dakota stories were recorded in Dakota by Stephen Riggs and Ella Deloria. Dakota stories in English were also written by Charles Eastman. Lakhota stories were recorded in the native language by George Bushotter and Eugene Buechel, S.J. Dr. James Walker recorded many stories narrated by George Sword, including stories of the creation of the word and the behaviors of the spirits.

Stories of the trickster Iktomi provide moral lessons by showing how not to behave. There are also many versions of the story of how the White Buffalo Calf Woman brought the Sacred Pipe to the Lakhota. Magical, handsome heroes come to save the people, and still other stories tell of war and peace, love and conflict, and every other human occurrence. Many stories are very funny and are told both to entertain and instruct.

#### 5 RELIGION

The religion of the Dakota teaches various ways to gain assistance from spiritual powers in order to live this life well. Sweat lodge rituals are used to purify an individual for contact with the divine. Individuals pray, make sacrifices, and endure suffering to make themselves pitiful so that the spirits would come to their assistance. The Dakota also adopted the *mdewiwin* ritual from the nearby Ojibway, with several levels of initiation into a healing lodge that helps individuals and the community through life.

The famous Lakhota spiritual leader Black Elk described Lakhota religion as consisting of seven rites: *Wanagi Yuhapi*, the keeping of the soul; *Inipi*, the rite of purification (sweat lodge); *Hanbleceyapi*, the rite of crying for a vision; *Wiwanyag Wacipi*, the sun dance; *Hunkapi*, the making of relatives; *Isnati Awcialowan*, preparing for womanhood, and *Tapa Wanka Yap*, the throwing of the ball. There are also a variety of healing ceremonies called *lowanpi*, "sings," or *yuwipi*, a ceremony in which the spiritual leader is tied and later unbound in the darkness by the spirits. Lakhota and Dakota continue to rely upon a variety of healers who used both prayers and various medicines to help their patients. Smudging and praying and offering food for the departed spirits are also important religious practices, as are acts of generosity and hospitality.

In the 19th century some Dakota and Lakhota became Christian. Traditional spiritual leaders like George Sword and Black Elk also became Christian leaders. While some individuals held exclusive allegiance to one or the other belief, others participated and still participate in both religious forms. Both

the government and the missionaries initially attempted to suppress traditional religious beliefs. Today both groups have a deeper respect for traditional religion. Some Dakota and Lakhota follow what are called the traditional ways, while others belong to one Christian denomination or other, and some, as in the past, pray in both groups. The majority of Lakhota and Dakota today hold that all religions seek to contact the same God and see prayer as a way to unify the people. There is controversy over non-Lakhota or Dakota conducting traditional ceremonies. For example, charging admission for such things as sweat lodges is disrespectful.

Some Lakhota and Dakota belong to the Native American Church, a group that combines Christian and traditional beliefs with the use of peyote as a sacrament that brings wisdom to those who use it. Native American Church congregations vary, based in how much Christianity and tradition they incorporate into their ceremonies. Individuals from other tribes often visit to participate in all-night prayer services.

#### 6 MAJOR HOLIDAYS

In the past different groups came together for the annual Sun Dance, although the Lakhota and Dakota were so far-ranging by the end of the 19th century that it is unlikely they were all ever able to meet as a single body. Buffalo hunts were sometimes occasions for summer gatherings, as were trade fairs with other tribes. Trade with fur traders and at Army forts were also important social occasions. With the official ban on religious ceremonies, traditional religion went underground, and people substituted American civil and religious holidays for their own annual religious and economic gatherings. Thus the 4th of July, Thanksgiving, Christmas, Easter, Veterans Day, and other holidays became important on the reservations. The public Sun Dance was revived on Pine Ridge in 1961 and has become centrally important. Today, there are many Sun Dances in a single season. Powwows are important secular as well as religious events put on by different communities as well as reservations, often with prizes for dancers and singers. Most of these gatherings occur in the summer. The Sisseton Wahpeton Wacipi (*wacipi* means dance) is the oldest continuously celebrated event in the state of South Dakota. Many of the summer powwows are open to whomever wishes to attend in a respectful manner.

#### 7 RITES OF PASSAGE

Dakota and Lakhota children, were and some continue to be, treated ceremonially at birth with traditional naming and ear piercing. Names have never been static, for as individuals achieve social recognition or are healed of a serious illness or are adopted by other extended families, new names are granted. Girls underwent a "sing" and were instructed in arts and manners proper to women when they reached their first menses. Boys would undertake vision quests, although individuals could do this at any time when they needed spiritual aid. Marriage was not ceremonialized in the past. Individual males could be initiated into various societies of curers, dreamers, and healers, and women had special associations for their various arts such as quill work. Leadership also conferred a different status on an individual, although in the past leadership was situational and transitory. For the Dakota, entrance into the *Mdewiwin*, or "Medicine Lodge," was accomplished through a series of ordeals and rites of passage to convey new status.

The most important and extended rite of passage was for the dead. In the past, there would be a long period of mourning during which those close to the deceased would show their sorrow through self-mutilation, such as cutting one's hair. In some instances, the soul would be ceremonially kept in a special bundle by a designated keeper for a period of a year and then released.

Dakota and Lakhotas rites of passage are very much alive today. There has been a revival of the girl's puberty ritual, and many individuals participate in the rites of passage mentioned above. These rites are all public and are accompanied by large feasts and give-aways (a distribution of gifts) to honor those undergoing the rituals. Young boys are taken out on vision quests. Boys and girls will be given a new name after a great achievement such as finishing a military tour of duty. Graduations from high school and college are marked in a traditional way by tying on an eagle feather (for men) or eagle down plume (for women), and giving the graduate a star quilt. There are also prayers and handshakes to mark these sacred events. Both Christians and Traditional people honor the dead with prayers, honoring songs, large feasts and giveaways, both at the time of death and to mark the one-year anniversary of the death. Food is also placed out to feed the spirit of the deceased.

## 8 INTERPERSONAL RELATIONS

The basis of Dakota and Lakhotas life is kinship. Those related by birth and marriage are counted as kin, as are other human beings sometimes formally included through the *hunka* (adoption) ceremony. The extended family remains the focal social unit. Indeed, kinship is projected to the entire universe. Thus Lakhotas end their prayers with the phrase *mitakuye oyas'in*, which means "for all my relatives."

Dakota and Lakhotas society was once based in small roving bands organized by leaders according to needs. This leadership would be extended over larger groups at times of communal hunts and in warfare. Individual freedom was and continues to be highly prized. If a person was not content with how things were done, he or she was free to form another group. The smallest social group was the *tiyospaye*, "residential group or band," and consisted in cooperating families and individuals who attached themselves to that group. A number of these bands would comprise an *oyate*, "people," such as the Sicangu or Oglala.

The coming of the Europeans modified group structures, and a split arose between those who wanted to adopt white ways quickly and those who did not. The native governance of the Dakota and Lakhotas became more centralized and stable to deal with the European incursion into the territory and lives of these people.

In contemporary Lakhotas and Dakota life, personal freedom remains essential, but this is balanced by obligations to one's extended family and tribe. So, too, many Dakota and Lakhotas enter the United States military services and are respected for that; one is expected to sacrifice for the people and to be generous and kind to everyone, but especially to the poor and elderly.

The Lakhotas describe themselves as *ikcey wicasa*, ordinary people, and no one is supposed to be boastful. Even important governmental or religious leaders are expected to act humbly. Dakotas and Lakhotas are wonderfully humorous and enjoy teasing one another as well as making self-deprecating re-

marks. Individuals are expected to excel but never to separate themselves from the group.

Dakotas and Lakhotas today frequently perform the *hunka* (adoption) ceremony to increase the size of their families. Both Lakhotas and Dakotas, as well as outsiders who have grown close to certain families, will be honored in this way. Special songs are sung and a name is given to the adopted, sometimes the name of a deceased relative whom the adopted one resembles in some way. The relationship of a *kola* (Lakhotas) or *koda* (Dakota) is also vital and represents a deep bond of friendship existing between two individuals.

## 9 LIVING CONDITIONS

Before the coming of the Europeans, the Dakota and Lakhotas were mobile peoples. The Dakota who lived in the woodlands had bark houses supported by poles in the summer and skin tents called tipis (*tipi* means "they dwell." Lakhotas generally use the word *tiobleca* for these dwellings) in the winter. These dwellings were comfortable and warm. In winter they were surrounded by wooden windbreaks for added protection from the elements. As the western Lakhotas moved onto the prairie, they used tipis almost exclusively. With the advent of horses, dwellings could be larger and were carried further than when the Lakhotas depended on human and canine transport. In the east and west, life could be difficult with frostbite, snow blindness, and starvation, as well as attacks from enemies or wild animals.

During the reservation period, Lakhotas and Dakotas adopted European-style log cabins, and today they have wooden frame houses. Originally, the Lakhotas settled according to families along creek bottoms, but the government wanted to centralize construction of new dwellings in housing developments. This caused further social disruption. Agency towns tended to hold the largest concentration of people since jobs with the government, schools, and missions were more available there.

In the 1950s the United States government sponsored a relocation program to help people find employment in the cities and to become more assimilated. Many people left the reservation but eventually returned. Today the Dakota and Lakhotas continue to be a highly mobile people; some live far from the reservations but return to renew family bonds. While some of the dwellings look poor, the mark of a prosperous Lakhotas or Dakota is not money or lavish surroundings but good relationships with one's family.

## 10 FAMILY LIFE

Lakhotas and Dakota people stress individual freedom, so each person is expected to make decisions for himself or herself. Children, too, are respected in this way and treated as adults, as they are allowed to make their own decisions and learn from their mistakes. In the past, prosperous men might marry a woman and her sisters and form a household. Extended families continue to be very important, and there were strong kinship obligations in terms of respect and mutual assistance. There was no marriage ceremony, but marriages were sometimes arranged and often sealed with a ritual exchange of property, such as the groom bringing horses to his bride's parents. Once married, one was expected to avoid direct contact with one's in-laws. Children have always been honored as especially sacred beings.

Grandparents have an especially close relationship with their grandchildren. Anyone related to a child who is two generations away is considered a grandparent (rather than a great aunt or great uncle as in Euro-American society).

Women's roles in traditional Dakota and Lakhotas society included gathering food, cooking, and making clothes and tipi covers. Women have traditionally been treated with respect and dignity. Today, women as well as men are active in family and tribal affairs, serving as educators and political leaders. Women are healers and also have important roles in the Sun Dance and in Native American church services.

### 11 CLOTHING

Before the trade for European-manufactured cloth, Dakotas and Lakhotas used tanned and dressed animal skins, such as deer and buffalo, to protect themselves from the weather as well as to indicate their social status. There is a great seasonal variation in the weather of Dakota and Lakhotas territory. In the harsh winters moccasins and leggings were used to protect feet and legs. Mittens and gloves protected hands from frostbite. Early Europeans and Euro-Americans frequently commented on the careful ornamentation and good taste exhibited in native dress. Face paint as well as hair style were done with care by both men and women. There was ordinary clothing for daily life and special dress for social events.

Today Dakota and Lakhotas wear contemporary clothing for everyday purposes. Some men wear cowboy boots and broad brimmed hats. Women wear dresses or pants. For powwows, men and women will wear beautiful dance costumes decorated with intricate beadwork. Women wear leggings, moccasins, buckskin dresses, and shawls. Men wear breechclouts, moccasins, leggings with bells, and different types of headdresses. Individuals wear everyday clothing for most prayer ceremonies, traditional or Christian, but special dress for those dancing the Sun Dance. Men sometimes wear ribbon shirts for special occasions, while women sometimes wear ribbon dresses. Indian-style clothing is having a significant effect on the fashions of non-Indians, as styles are borrowed back and forth.

### 12 FOOD

The buffalo served as the staple food for the Dakota and Lakhotas in their pre-reservation days, but they also ate deer and other game, as well as wild fruits and plants, ducks and geese, and less often, fish. The Dakota harvested wild rice and grew some corn. The Lakhotas traded for corn and other produce. Eating was not only for nutrition but also a social event. This is also true today. When someone is to be honored, the family of that person will feed whoever comes for the ceremony. Food is freely shared and special attention is paid to the poor and the elderly. Early Euro-American observers consistently remarked on and benefited from the generosity of the Lakhotas and Dakota peoples.

At religious and social rituals today, the food served is a mixture of traditional and contemporary items. Dakotas and Lakhotas still serve dried corn, *timpsila* (prairie turnips), *wasna* (pounded dried meat, berries, and fat), *wojapi* (berry pudding), tripe, boiled beef or buffalo and soups when they are available. Fried bread, although made with flour introduced by Euro-Americans, is considered part of traditional fare. This food may be supplemented with fried chicken, soda crackers, store-bought bread, fruit cocktail, potato salad, beans, pies,

and cake. Food is distributed by the providers, and it is always abundant. Those attending feasts bring their own dishes and plenty of containers to carry back food they cannot finish. This extra is called *wateca*, and the mark of a good feed is the overabundance of food that will be used for days thereafter.

#### Venison and Wild Rice Stew

½ pound shoulder of venison, cut into 2-inch cubes  
2 teaspoons salt  
1/8 teaspoon black pepper  
2 quarts water  
1½ cups wild rice, washed in cold water  
2 onions, peeled and quartered

Place the venison, water, and onions in a large kettle, bring to a boil, then turn down the heat and let simmer uncovered for 3 hours until the venison is tender. Add the salt, pepper, and rice. Cover and let simmer another 20 minutes. Stir, then let simmer uncovered for another 20 minutes, or until the rice is tender and most of the liquid is absorbed. Makes 6–8 servings.

(Adapted from Kimball and Anderson, *The Art of American Indian Cooking*. Garden City, New York: Doubleday & Co., 1965, p. 102.)

### 13 EDUCATION

Dakota and Lakhotas children learned from observation and imitation without coercion. They learned from the people around them the practical skills they needed to survive and the artistic and religious dimensions of life to enhance their existence. With the coming of the reservation system, the government and churches insisted that the children enter formal schooling. While the Dakota and Lakhotas were interested in learning European ways, they had already adopted much of this foreign technology. They wanted their children to learn how to deal effectively with the outside world, but they were not in favor of the loss of their own culture that these schools caused. Boarding schools deliberately sought to separate children from their native culture and language, considering both as inferior. Children did learn well in these schools and acquired skills that were helpful to them but at a high psychological and cultural cost. Most damaging was the fact that children were not parented; they were raised for long periods of time in institutions and thus never learned effective parenting skills themselves.

Today there are few boarding schools, and education is largely in the hands of the tribes and reservation communities. Mission schools also have local community school boards to advise them. There are Bureau of Indian Affairs schools on the reservations as well as contract schools (government schools run by the local community) and mission schools. Dakotas and Lakhotas off the reservation attend public or private schools, and local Indian centers set up cultural educational programs. Schools stress education in the local culture and language as well as western education.

In addition to primary and secondary schools, there are a large number of colleges on the reservations chartered and administered by the tribes. Some of these colleges are Oglala Lakhotas College (Pine Ridge Reservation), Sinte Gleska University (Rosebud Reservation), Sitting Bull College (Standing Rock Reservation), Sisseton Wahpeton College (Lake Traverse

Reservation), Fort Peck College (Fort Peck Reservation), Little Hoop College (Fort Totten College), and Nebraska Indian College (Santee Reservation).

Today, nearly 70% of Dakotas and Lakhotas over the age of 25 have at least a high school diploma, and 40% have attended college, though less than 9% have managed to attain a Bachelor of Arts degree or higher.

#### 14 CULTURAL HERITAGE

In literature Charles Eastman is known for his many works on Dakota life and belief, as well as his eye-witness account of the tragedy of Wounded Knee. George Bushotter worked with the Bureau of American Ethnology to record linguistic and cultural data about his people, the Lakhotas. Luther Standing Bear told of his life during the reservation and boarding school periods. Dakota Ella Deloria was an accomplished linguist who worked with Franz Boas and also wrote a novel called *Water Lilly* about the life of the Lakhotas at the time of contact from the perspective of women. Vine Deloria, Jr. is a lawyer, educator, and author. He brought the situation of the contemporary native people to the consciousness of larger American society through such books as *Custer Died for Your Sins* and *God is Red*. Lakhotas such as Oscar Howe, Arthur Amiotte, and Martin Red Bear have excelled in the visual arts. Kevin Locke is an internationally known traditional flute player. Matthew and Nellie Two Bulls are well known for their traditional singing as well as their composition of songs. There are several well-known singing groups that travel around the country. Billy Mills won Olympic gold medals for running. Tim Giago is the Lakhotas publisher of *Indian Country Today*, a national native newspaper.

#### 15 WORK

In the past, men and women had separate spheres of work. Men hunted and acted as warriors. Women dressed skins, cared for children, gathered wild fruits and roots, and ran the household. All worked together when moving the camp. Certain individuals acted as healers and spiritual leaders in addition to their every day roles. Dakotas and Lakhotas excelled in many things but never tried to separate themselves from the group. One's first duty was always to care for one's family.

Today, unemployment is very high on the reservation due to the marginality of the land and its remoteness from urban and industrial centers. Some Dakota and Lakhotas work in tribal government or with the federal government. Some are religious leaders, both traditional and Christian. Others are community or district leaders. Some work as educators, educational administrators, doctors, drug and alcohol counselors, and nurses. Some work as ranchers or farmers. Some Dakota and Lakhotas go off to cities to find employment because of the lack of opportunity on the reservations, but the tribes work hard to bring employment to the reservation that will be culturally appropriate for the people.

#### 16 SPORTS

The Dakota were very fond of a ball game similar to lacrosse. Different bands or villages would oppose one another in these games that were religious in character. It was a game that tested both physical endurance as well as tempers. Women also played a ball game that entailed knocking a ball with clubs on a surface of ice. Foot races as well as target shooting with bow

and arrow were popular. Lakhotas were known for their fondness of horse racing.

Dakotas and Lakhotas also play and excel at Euro-American sports such as basketball, football, and track and field events. High school sports are followed with particular relish on the reservation, especially basketball. Many also follow national sports from couches as do other Americans. Rodeo is also a sport in which many Lakhotas and Dakota participate successfully.

#### 17 ENTERTAINMENT AND RECREATION

Children slid down hills on pieces of bark or using barrel staves. On the prairie they used the ribs of buffalos. Sometimes the boys would "surf" down the hills while standing erect on their sleds. Young men and boys also played at snow skates, glancing sticks off an ice surface so that they traveled great distances.

Dakotas and Lakhotas are traditionally fond of gambling and often bet on ball games. Other betting games involve guessing. One game required the person on the opposite team to guess where an object (a pit or sometimes a bullet) was hidden in a series of four moccasins or mittens. These guessing games were quite lively and were accompanied by singing and drumming, physical movement in rhythm with the music, and psyching out the opposite team. Women gambled using plum stones in a dish that were tossed to reveal certain patterns that individuals would bet on. Betting never interfered with daily life, and individuals had a detachment in losing objects. No one was deprived of food or livelihood in these exchanges.

Today, Dakotas and Lakhotas have revived traditional guessing games. A hand game in which one guesses the position of two marked sticks out of four is played to the accompaniment of singing and drumming. Money may change hands.

Children today ride bikes and horses, go to movies, play on swings and monkey bars, watch television, and play music. They dance both traditional style and like their Euro-American neighbors. Adults attend dances or movies and watch their favorite sports or movies on television.

#### 18 FOLK ART, CRAFTS, HOBBIES

Dakota and Lakhotas have a long tradition of artistry. Daily utensils and containers were decorated with paints and dew claws (parts of a deer's foot). Women used dyed, plaited porcupine quills to decorate household objects, moccasins, and clothing. Hides were also tanned by women and painted by men. Women originally learned quilting from missionaries and favor the star quilt design. Women are experts at sewing, and groups of women can turn out a beautiful finished star quilt in an evening if required for a ceremony or religious event. Some women design beautiful ribbon shirts. European trade goods allowed artistic creativity to be expressed in new media. Glass beads replaced porcupine quills, and ledger books and paper replaced hides for artistic expression. Quilting and beadwork continue the fine artistic achievements of the past. It is not uncommon to see pens, salt shakers, and even sneakers decorated with beadwork. Some families continue to do quillwork, and both men and women make silver jewelry and other crafts. Dakotas and Lakhotas engage in the fine arts as well as musical and dramatic performances. Today both men and women excel at the decorative arts and create their own costumes for traditional dancing.

*Chief Little Finger of the Lakota tribe and People of the Seven Council Fish, addresses indigenous people during the World Parks Congress in 2003. Chief Little Finger told the congress that his tribe is the only indigenous tribe to have beaten Americans in war.

## **19 SOCIAL PROBLEMS**

The incursion of whites into the territories of the Dakota and Lakhota caused widespread social and economic disruption. The buffalo herd was hunted to near extinction, and bands were restricted to smaller and smaller territories that were economically marginal. The Dakota were finally exiled from their own territories after the Minnesota-Dakota Conflict. The government and churches also disrupted cultural and leadership patterns in an attempt to weaken the resolve of these groups and assimilate them into American society. Economically, the reservations continue to be marginal and depressed. Much of the crime on the reservations can be linked to the use of alcohol. Dakotas and Lakhotas have higher rates of suicide (particularly among the youth), alcoholism, diabetes, fetal alcohol syndrome, heart disease, and other maladies than do the neighboring white populations. More and more, the people

themselves are looking at developing culturally appropriate solutions to these problems, and a new generation of leaders is arising.

The Pine Ridge reservation has some of the nation's highest unemployment, with the percentage of unemployment being nearly 50%. Life expectancies for males and females on the Pine Ridge reservation are some of the lowest in the entire Western Hemisphere. Female life expectancy is around 52 years, while male life expectancy is around 48 years. Suicide rates on Pine Ridge are four times the national average.

## **20 GENDER ISSUES**

The Siouan peoples recognize four genders: male, female, two-spirit males, and two-spirit females. There is still debate on the sexual orientation of the fourth two-spirit female gender. Some scholars argue that based on 19th century ethnographic evi-

dence that the two-spirit females were lesbians. Other scholars, including some Lakshota argue that the 19th century accounts are wrong on several counts, and that lesbians did not exist in traditional Siouan societies.

Third and fourth gendered individuals in Siouan societies had received visions. The *koskalaka* is a woman who receives a vision from Anukite. Anukite is a supernatural being who was punished for her beauty through the addition of a second, horrid face. As a result of this vision, the *koskalaka* chooses not marry, develops her skills in traditional arts and crafts, and becomes more sexually active than is the norm for Lakshota women. If a man receives a vision from Anukite, he will have to choose between male and female utensils. If he chooses the latter, he will become a *winkte*, or a woman-man.

There are various attitudes towards *winkte* in Lakshota society. Some accounts of these attitudes indicate fear, disdain, and other negative biases. Other accounts speak of *winkte* as almost holy in status, demanding a high degree of respect. It is likely that the influences of Christianity have impacted these attitudes. It appears that there is a growing attitudinal change whereby *winkte* are now being accepted and valued as important members of Lakshota society.

The most important sacred artifact of the Lakshota is the pipe. White Buffalo Calf Woman, or *Wohpe*, is responsible for bringing this to the Lakshota so that they could carry their prayers to the spirits. *Wohpe* is the daughter of the Great Sky Spirit and is partly responsible for bringing order in the cosmos. She mediates between the Lakshota and their ancestral spirits and is also responsible for refining the important Sun Dance ceremony.

## DOMINICAN AMERICANS

For more information on Dominican history and culture, *see* **Vol. 2: Dominicans.**

### OVERVIEW

Dominicans have been immigrating to the United States in small numbers since the early 20th century, but mass migration did not begin until the end of Generalissimo Trujillo's oppressive reign in the Dominican Republic in 1961. Trujillo had tightly restricted emigration while in power, so few Dominicans were able to leave the country. After Trujillo was assassinated in 1961, however, thousands of Dominicans fled to Puerto Rico and the United States. Political instability and disastrous economic conditions, along with human rights abuses, continue to drive huge numbers of Dominicans from their homeland.

Some emigrants go the "legal" route by applying for visas at the American consulate in Santo Domingo, the capital city of the Dominican Republic. Long lines of applicants form every day, with dozens turned away before they even reach the door. Dominicans already living "legally" in the United States can sponsor family members to immigrate. Most documented Dominican immigrants today are relatives of established Dominican Americans. "Legal" Dominican immigration to the United States is largely a chain migration, begun by an individual who is then followed by up to 80 or more relatives. The Dominican government supports emigration because it relieves some of the pressure on the Dominican economy, both by reducing the population and through the money that Dominican Americans send back to their families in the Dominican Republic. The Dominican economy receives about \$3 billion a year this way. Without these contributions from emigrants, the Dominican economy would suffer.

Acquiring a visa, especially if there are no sponsors, takes a long time, and there are no guarantees that a visa will ever be granted. The United States refuses to grant "refugee" status to Dominicans because the United States supports the Dominican government and cannot admit that its citizens require asylum. Therefore, many Dominicans choose to use "illegal" means of entry into the United States. Middle-class Dominicans who can prove steady employment in the Dominican Republic can get temporary tourist visas to the United States. They then overstay their visit and become instead "illegal aliens," or undocumented migrants (the preferred term in the Hispanic American community).

Those Dominicans who cannot get tourist visas take more desperate measures. They pay smugglers to ferry them across the Mona Passage between the Dominican Republic and Puerto Rico. The Mona Passage is 70 miles of rough, shark-infested water. Most of the smuggler's boats are much too small to make the crossing safely. Hundreds of Dominicans die each year when boats capsize. Despite the dangers, however, thousands of Dominicans continue to risk their lives each year to make it to the United States.

Puerto Rico is a common first stop for undocumented Dominican migrants for two reasons: it is close to the Dominican Republic; and it is a U.S. Commonwealth, meaning that Puerto Ricans are U.S. citizens and can move without restrictions be-

tween the United States and Puerto Rico. Undocumented Dominican migrants make their way to Puerto Rico, where the U.S. Border Patrol is less vigilant than at mainland U.S. borders, and establish themselves with new Puerto Rican identities. As Puerto Ricans, they are then able to enter the United States without question.

Puerto Ricans resent the presence of so many undocumented Dominicans, but stopping the flow of migration is difficult. Smugglers come up with increasingly clever ways of eluding border police, and modern technology makes creating convincing false documents easier. Border police arrest and deport thousands of undocumented Dominican migrants from Puerto Rico every year, but it is only a fraction of those who actually cross the border.

In an attempt to reduce the numbers of "illegal aliens" in the United States, Congress granted amnesty in 1986 to all undocumented migrants who could show that they had been living in the United States for at least five years. Hordes of people applied for amnesty, many of them Dominicans. Those who were granted amnesty were automatically given green cards, making them "legal" immigrants. Newly documented immigrants then rushed to sponsor their family members to immigrate. The U.S. government had to create a new immigration quota category in 1990 to accommodate all the relatives of those who were granted amnesty. A significant number of Dominicans helped fill this new quota.

Of the more than one million Dominicans in the United States today, about half live in New York City, particularly in the Washington Heights district. New York City is not the only destination for Dominican immigrants, however. New Jersey hosts over 100,000, Florida is home to over 70,000, and another 50,000 live in Massachusetts. Smaller numbers of Dominicans now choose to reside in Rhode Island and Illinois (particularly Chicago) as well.

A large number of Dominican Americans are undocumented migrants. Accordingly, the 2000 U.S. Census counted only 764,945 Dominican Americans, of whom 545,262 were foreign-born, while the 2004 American Community Survey brought the total up to 1,051,032 (with 61% foreign born). Nearly two-thirds lived in New York. Census figures show Dominican Americans as the fourth-largest Hispanic group in the United States, after Mexican, Puerto Rican, and Cuban Americans. When undocumented migrants are included, however, the Dominican American population most likely exceeds that of Cuban Americans.

Dominican Americans are Spanish-speaking Catholics. The family is central to Dominican life, and traditional families include a wide range of extended relatives. These extended families provide a tremendous amount of support, both emotional and financial, to their members. That support is sorely missed by Dominican Americans, whose families have typically been torn apart by immigration. Dominican Americans are forced to rely on fractured families, many of which (over 30%) are headed by women alone. To replace the help normally provided by extended families, Dominican Americans have established organizations and associations to assist each other. There are also a great number of Dominican American cultural, recreational, and social clubs.

Although Dominicans have only been in the United States for a short time, they have managed to contribute to mainstream American society in a variety of ways. Uniquely Do-

minican restaurants called *fondas* have become popular in both New York City and Miami. Fondas are constructed like diners, but the tables have tablecloths and flowers on them like a more formal restaurant. They serve “Spanish and American” food to appeal to a wide range of customers.

*Merengue* music, a blend of Spanish and African elements, was developed in the Dominican Republic and is a constant presence in Dominican American communities. It has become popular among other Hispanic Americans as well and is beginning to spread to a wider, mainstream American audience. Rap music boasts a number of Dominican American artists as well. Two well-known Dominican Americans in other arts are writer Julia Alvarez and fashion designer Oscar de la Renta.

Dominican Americans own thousands of small businesses in New York City, including a majority of the *bodegas* (Hispanic grocery stores) and independent “gypsy” cabs. A significant number of “buckeyes,” those who hand-roll cigars, are also Dominican American. Most Dominican Americans are relegated to blue-collar jobs, however, because of a lack of language skills, job skills, or legal immigrant documentation. Over half (55%) of Dominican Americans work in the sales and service industry, and another 21% work in manufacturing and transportation. Only 17% of Dominican Americans are in professional or management positions.

Perhaps the best-known arena for Dominican American contributions to American society is sports, especially baseball. Baseball is extremely popular in the Dominican Republic, and major league teams in the United States regularly recruit

Dominican players. Most Dominican baseball players return to the Dominican Republic in the United States off-season to play in the Dominican league, giving them year-round training and experience. Dominican Americans also sponsor numerous Little League and other amateur teams. Well-known early Dominican players (in the late 1950s and early 1960s) in the U.S. major leagues include Ozzie Virgil, Juan Marichal, and the brothers Felipe, Matty, and Jesus Alou. Some of the more recent Dominican players are Pedro Guerrero, Rafael Santana, George Bell, Joaquín Andújar, Tony Fernández, Mario Soto, Pedro Martínez, Manny Ramírez, Alex Rodríguez, and Sammy Sosa.

Undocumented Dominican Americans suffer the same problems as other undocumented migrants in the United States: poverty, unemployment, and exploitation. Most employers will not hire undocumented migrants, and those who do pay them less than minimum wage and force them to work long hours without a break in miserable working conditions. The workers cannot complain because the employer might turn them in to immigration officials.

Because of the difficulties in finding decent employment, some undocumented Dominican migrants turn to drug-dealing to support themselves. Unfortunately, because the Washington Heights neighborhood of New York City had already developed a reputation as a center of illegal drug activity before Dominican immigrants began to settle there, the Dominicans inherited the reputation whether or not they were involved in the activities themselves. Many non-Dominican

Americans believe the stereotype that “all Dominican Americans are drug-dealers.” Innocent Dominican Americans are subjected to searches, harassment, and even brutality by local police. In 1992 Dominican Americans in Washington Heights rioted after a European American police officer shot and killed a Dominican American youth. The court determined that the shooting was justified, but many Dominican Americans felt otherwise.

Tensions also exist between Dominican and Puerto Rican Americans. Longstanding ill-feeling between Puerto Ricans and Dominicans persists among those in the United States. Also, because Puerto Ricans are U.S. citizens, they are allowed to vote. Those Dominican Americans who are undocumented migrants—half the Dominican American population—are not allowed to vote. Therefore, Dominican Americans must rely on others to represent their interests in the public sphere. The majority of Hispanic American politicians and voters in New York City, where most Dominican Americans live, are Puerto Rican. Dominican Americans generally feel that they are not being adequately represented by Puerto Rican Americans, and they resent Puerto Rican Americans for this. Puerto Rican Americans resent Dominican Americans for threatening their established presence as the Hispanic majority in New York City. Until more Dominicans are able to become “legal” U.S. residents, these tensions will likely continue.

The Catholic emphasis on marriage and family makes life for gay and lesbian Dominican Americans difficult. Gay men must also cope with the traditional Latino understanding of masculinity as “macho,” which paints homosexual men as “effeminate” and weak. Dominican Americans also tend to be overlooked in pan-Latino research and outreach efforts, leaving them at greater risk for HIV/AIDS and other sexually transmitted diseases due to lack of education in prevention methods. Because the macho culture, along with the Catholic Church, discourages the use of condoms, rates of HIV/AIDS and STDs (along with unplanned pregnancy) are high for Dominican American women as well as men.

To combat the HIV/AIDS epidemic and promote public health and welfare among Dominican American gays and lesbians, the Gay and Lesbian Dominican Empowerment Organization (GALDE) was founded in 2001 in New York City. Each year it sponsors a community-based health fair in Fort Washington Park and has participated since 2003 in the Dominican Day Parade in August. GALDE also presents drug awareness and prevention programs at schools and community centers and offers counseling for domestic violence victims.

# DOMINICANS (DOMINICA)

**PRONUNCIATION:** dah-men-EEK-uhns

**LOCATION:** Dominica

**POPULATION:** 72,514

**LANGUAGE:** English; kwéyòl (French-based dialect)

**RELIGION:** Roman Catholicism; small groups of Anglicans, Methodists, Pentecostals, Baptists, and Seventh-Day Adventists, Baha'is, and Rastafarians

## <sup>1</sup> INTRODUCTION

Dominica (pronounced dah-men-EEK-uh) is the most mountainous island in the Lesser Antilles. Historically, its rugged terrain delayed foreign settlement, and more recently it has slowed the pace of modernization on the island. Today, Dominica—popularly referred to as “the nature island of the Caribbean”—remains among the world’s few locations with virtually untouched tropical rain forests. The island is also home to the Lesser Antilles’ largest enclave of the Amerindians from whom the Caribbean takes its name—the Caribs, most of whom live on a reserve on its northeast coast.

The Caribs inhabited the island, which they called *Waitikubuli*, when it was sighted by Christopher Columbus on a Sunday (*dies dominica*) in 1493. The Spanish did not attempt to colonize Dominica, which was the object of a political tug-of-war between the French and British throughout the 17th and 18th centuries, with both nations simultaneously attempting to subdue the Caribs as well. In 1805 the French finally gave up all claims to Dominica, which remained a British colony until it gained its independence in 1978. However, because of the lengthy French presence on the island as well as the proximity of the French islands of Guadeloupe and Martinique, the cultural influence of the French endured.

By 1834, when the British Empire emancipated its slaves, Africans brought to labor on the island’s coffee and sugar plantations made up a majority of the population. In 1902 the once-powerful Caribs, reduced to dire circumstances, sought better land and increased recognition from the British and were granted 3,700 acres in the northeast of the island, where they still live on what is known today as Carib Territory. In spite of economic progress under the direction of colonial administrator Henry Hesketh Bell between 1899 and 1905, Dominica remained relatively poor and undeveloped during the first half of the 20th century, its fragile economy vulnerable to the disruptions of worldwide depression and war.

By the 1950s, however, British government assistance, agricultural expansion, and exploitation of the island’s abundant hydroelectric resources inaugurated a period of development and relative prosperity. In 1951 universal adult suffrage was granted by the British government, followed by a new constitution in 1960 and complete internal autonomy by 1967. The independent Commonwealth of Dominica came into being on 3 November 1978.

In 1980 Dame Mary Eugenia Charles, head of the Democratic Freedom Party, became the first female head of government in the Caribbean. Reelected in 1985 and 1990, Dame

Charles retired in 1995 at the age of 76. Since then, Dominica’s citizens have had regular democratic elections.

In 1995, Mary Eugenia Charles was succeeded as prime minister by Edison James who led an ambitious program of economic diversification allowing the creation of off-shore business. In 2000, Roosevelt Bernard Douglas was elected prime minister, but his mandate was extremely brief. After only eight months in the office, Bernard Douglas was found dead in his house. Douglas was replaced by Pierre Charles, who continued his successor program of government. In 2005, Roosevelt Skerrit became the prime minister of Dominica. During his tenure, Skerrit has tightened the relations with China, Cuba, and Venezuela.

Economically, Dominica depends mainly on agriculture and exports bananas, citrus, mangoes, root crops, coconuts, and cocoa. During the last decades, tourism has increased notably on the island as the government has promoted Dominica as an ecotourism destination. A fundamental aspect in the marketing campaign of Dominica is to sell its image as a natural paradise. Dominica has been nicknamed “Nature Isle of the Caribbean.” One of the principal destinations is the mountainous rainforest where it is possible to find and observe rare species of plants, animals, and birds.

With the objective of attracting foreign investments, Dominica eliminated price controls and privatized the state banana company. The government has been attempting to develop an offshore financial sector and is researching Dominica’s capability to export geothermal energy.

## <sup>2</sup> LOCATION AND HOMELAND

Although usually regarded as the northernmost of the British-speaking Windward Islands, Dominica is actually at the midpoint of the Lesser Antilles and could also be grouped with the Leeward Islands. Facing the Atlantic Ocean to the east and the Caribbean Sea to the west, it is nearly equidistant from Guadeloupe to the north and Martinique to the south. Dominica’s area of 750 sq km (290 sq mi) is slightly more than four times the size of Washington, D.C. Rainfall on Dominica is extremely heavy, and much of the land is covered by dense and largely unexploited rain forests containing rare wildlife species. Hundreds of rivers and streams flow into gorges, forming natural pools and crater lakes. One of the island’s most unusual natural features is the volcanically bubbling Boiling Lake, the second-largest lake of its kind in the world. An egg will supposedly boil within three minutes in its 92°C (198°F) waters.

A central mountain ridge runs from Cape Melville in the north to the island’s southern cliffs. Its highest point, Morne Diablotins, rises to 1,448 m (4,747 ft), the second-highest mountain in the Lesser Antilles. Several national parks surround the mountains, most notably the Morne Trois Pitons National Park in the southern part of the island. One geographical feature that has been of great consequence to Dominica is its location just west of the chief point of origin of the hurricane belt. Hurricanes David and Frederick in 1979 caused more than 40 deaths and 2,500 injuries, leaving two-thirds of the population homeless and causing extensive crop damage.

Estimates of Dominica’s population vary from 72,000 to around 80,000. About one-third of the country’s residents live in the capital city of Roseau and the surrounding area. With a population density of about 37 people per sq km (95 people per sq mi), Dominica is one of the most sparsely populated coun-

tries in the Caribbean region. The majority of Dominicans is of African or mixed descent, with smaller minorities of Carib or European ancestry. The Carib population numbers approximately 3,400, most of whom live on a 3,700-acre reserve in the northeast called the Carib Territory. Bataka is the largest of its eight hamlets, and other settlements include Sinecou and Salybia.

The Caribs, whose language is no longer spoken, are striving to preserve the remaining vestiges of their culture, which has been eroded by intermarriage and the introduction of Western religion and customs to the island. They do not celebrate the nation's November 3rd Independence Day because it also commemorates the date in 1493 when Columbus first sighted the island, an event that ultimately led to their political, economic, and cultural decline. Most of Dominica's remaining Caribs are of mixed ancestry—full-blooded Caribs are said to number 50 or fewer.

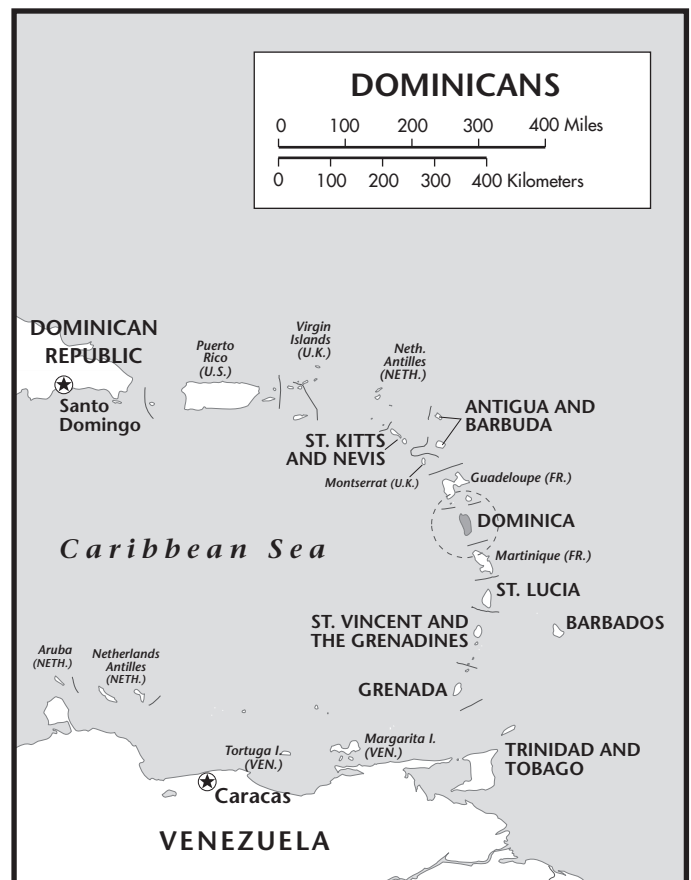

**3 LANGUAGE**

While English is the official language of Dominica, most of the population also speaks a French-based patois, or dialect, called *kwéyòl* (derived from the word “Creole”). While *kwéyòl* is a distinctive language unique to Dominica, it has elements in common with the dialects spoken on St. Lucia and other islands with French-influenced cultures. *Kwéyòl* is a source of pride among Dominicans and is increasingly being used in print. A *kwéyòl* dictionary was published in 1991. *Cocoy*, a type of Pidgin English, is spoken in the villages of Marigot and Wesley in northeastern Dominica, which were originally settled by freed slaves from Antigua.

<b>KWÉYÒL (PRONOUNS)</b>	<b>STANDARD ENGLISH</b>
<i>mwen/mon</i>	I
<i>ou</i>	you (singular)
<i>I</i>	he/she/it
<i>nou</i>	we
<i>zò</i>	you (plural)
<i>yo</i>	they
Simple sentences:	
<i>Sa ki non'w?</i>	What is your name?
<i>Non mwen sé Paul.</i>	My name is Paul
<i>Bon jou, Misyé.</i>	Good day, sir
<i>Bonn apwé midi.</i>	Good afternoon
<i>Bon swé.</i>	Good night
<i>Mon swèf.</i>	I am thirsty
<i>Mon fen.</i>	I am hungry
<i>Mon pa fen.</i>	I am not hungry
<i>Jodi sé yon bèl jou.</i>	Today is a beautiful day
<i>Lapli ka tonbé.</i>	It is raining
<i>Byenvini.</i>	Welcome

**4 FOLKLORE**

According to a Carib legend, a giant boa constrictor called the Master Boa has lived for centuries in a hole on Morne Diablotin. The Escalier Tête-Chien (Master Boa's Staircase), a basalt formation near Sineku, is said to be the spot where the snake crawled onto the island from its original home at the bottom of the sea. Looking at the Master Boa is supposed to be fatal unless a person has abstained from both food and sex for a certain number of days beforehand.

Many Dominicans believe in *obeah*, a collection of quasi-religious beliefs and practices derived from Africa. Obeah is believed to have the power both to heal the sick and harm one's enemies, and its practices include the use of herbal potions. Flying witches called *suquiyas* are the subjects of a number of Dominican proverbs.

**5 RELIGION**

The historical French influence on Dominica left the island's population predominantly Roman Catholic. About 80% of Dominicans belong to the Catholic Church. Smaller groups belong to the Anglican, Methodist, Pentecostal, Baptist, and Seventh-Day Adventist churches, and the Baha'i and Rastafarian religions are represented as well. The Caribs' religious practices combine features of Christianity, such as belief in Jesus, the saints, heaven, and hell, with the nature worship inherited from their ancestors.

**6 MAJOR HOLIDAYS**

Dominica's public holidays are New Year's Day (January 1), Carnival (February 14–15), Good Friday and Easter Monday (late March or early April), May Day (May 1), Whit Monday, August Monday (August 1), National Day—also called Independence Day (November 3), Community Service Day (November 4), and Christmas Day and Boxing Day (December 25 and 26). The main religious holidays are Christmas and Easter. *Tou Saintes* (All Saints' Day) is celebrated on November 1. The country's largest festival is Carnival, which occurs

on the two days preceding Ash Wednesday and is marked by masquerades, calypso contests, feasting, street dancing (“jump ups”), and parties. In keeping with the history of Carnival as an “anything goes” affair, slander and libel laws are suspended for the duration of the festivities.

Independence Day on November 3 commemorates the date in 1978 when Dominica became an independent nation with speeches, parades, and calypso music. On Creole Day, usually the Friday before Independence Day, Dominicans celebrate and display their Creole heritage by wearing traditional costumes; conducting all business in *kwéyòl*, their native dialect; eating distinctly Dominican dishes such as *crapaud* (frogs’ legs); and listening and dancing to Dominican folk music.

## 7 RITES OF PASSAGE

Major life transitions, such as birth, marriage, and death, are marked by religious ceremonies according to each Dominican’s faith community.

## 8 INTERPERSONAL RELATIONS

The majority of Dominicans are of African descent. Some of them have European, Syrian, and Caribbean blood. Dominica is the only island with a distinctive group of Carib Amerindians, descendants of the aborigines that inhabited the territory before the Spanish conquest. Today, this pure-blooded community lives in a Carib Reservation.

Dominicans are known for being more reserved than some of their neighbors in the Caribbean, and they place a high value on good manners. A common greeting is “*Cakafete*,” the equivalent of “How are you?”

## 9 LIVING CONDITIONS

Dominica is one of the poorest nations in the Caribbean. Many Dominicans live in single-story wooden houses with corrugated iron roofs, typically protected from the island’s heavy rainfall by wide overhangs and an absence of porches. Average life expectancy is 74 years for males and 80 years for females, and the infant mortality rate is 9.9 deaths per 1,000 live births. Health care is provided at local clinics, 12 health centers, and the 136-bed Princess Margaret Hospital in Roseau. There are also hospital facilities at Portsmouth, Marigot, and Grand Bay.

Dominica has about 700 km (435 mi) of roads, of which 370 km (230 mi) are paved and much of the rest is blacktopped. In spite of the relatively good condition of the roads following major improvements in 1986, travel can be tortuous on these narrow, winding mountain thoroughfares: it commonly takes up to 40 minutes to travel the 10 km (6 mi) from the capital city of Roseau to the nearby fishing village of Scott’s Head. Roseau is the country’s main port. There are plans for the construction of a new international airport to encourage expansion of the tourist industry.

In 2000, the unemployment rate was about 23% and, two years later, 30% of Dominicans were living under the poverty line.

## 10 FAMILY LIFE

In addition to formal marriages, Dominicans also enter into common-law relationships (living together—with or without children—without being married) and “visiting unions,”

where the man and woman live apart (essentially, female-headed households).

## 11 CLOTHING

The Dominicans wear modern Western-style clothing. However, on Creole Day and other special occasions women still wear the traditional national costume: the brightly colored *jupe* (a skirt with lace petticoats), *la wobe douillette* (a wide blouse), and a madras hat called *tete case*.

## 12 FOOD

Dominican cuisine combines French, English, and African influences. Dietary staples include fish, yams, and other vegetables. The *ti-ti-ri* is a tiny whitefish found in Dominican rivers and served fried with garlic and lime. The most distinctive local food in Dominica is probably mountain chicken, which is not actually chicken but rather the legs of the *crapaud*, a local species of frog. Other regional favorites include crab backs (stuffed crabshells), *boija*, a coconut-cornmeal bread, and *funchi*, a cornmeal-and-okra pudding. Cassava bread is a staple among the Carib population. One popular beverage is a sea-moss drink—made from vanilla, algae, and milk, and resembling a vanilla milkshake—which is also a favorite in Grenada. Another local drink, *Bwa bande* (brewed from the bark of the tree of the same name), is reputed to enhance male sexual potency.

## 13 EDUCATION

The adult literacy rate in Dominica is approximately 94%. Historically, the Catholic Church has played an important role in education. Widespread access to public education was not attained until the 1960s. By the 1980s, all but 2 of the nation’s 66 primary schools were government-operated, and the secondary schools (which currently number 10) were equally divided between the government and the church. Before the 1960s, few students received a secondary education because rural areas had no secondary schools, and the island’s mountainous terrain and precarious roads prohibited traveling to cities or towns to attend school.

Primary and secondary education is based on the British system of grade levels called “forms.” Children attend school from age 5 to 15, at which point they are in the third form (equivalent to eighth grade in the United States). As of the late 1980s, there were no laws making school attendance mandatory. While family circumstances make it necessary for a number of school-age young people to work part- or full-time, families and communities place a strong emphasis on academic achievement as one of the few means of social and economic advancement available on the island.

Most students end their secondary schooling in the fifth form (equivalent to tenth grade), except for a relative few who continue their studies in order to qualify for admission to a university. Dominica has a teacher training college, a nursing school, and a technical college, and the University of the West Indies also offers programs on the island. Many qualified Dominican students have been unable to attend college for financial reasons. The United States, Great Britain, Canada, and France have offered assistance by making scholarships and other forms of financial aid available to Dominican students.

*Political rally in the Carib Territory, Dominica. The majority of Dominicans are of African or mixed descent, with smaller minorities of Carib or European ancestry. The Carib population numbers approximately 3,400, most of whom live on a 3,700 acre-reserve in the north-east called the Carib Territory. (AP Images)*

#### **14 CULTURAL HERITAGE**

Dominican-born novelist Jean Rhys (1894–1979) is mostly associated with Europe, where she spent much of her life. However, West Indian speech patterns figure in several of her short stories, Caribbean scenes appear in her 1934 novel, *Voyage in the Dark*, and her last work, *Wide Sargasso Sea* (1966), is set in the Caribbean. Phyllis Shand Allfrey was a poet and novelist who returned to Dominica in the 1950s after being educated in the United States and England. In addition to writing *The Orchid House*, her only completed novel, she was an editor of two Dominican newspapers and served as a cabinet minister in the short-lived West Indian Federation of the late 1950s and early 1960s. *The Orchard House* was adapted for film by British television in 1990. Lennox Honychurch, author of *The Dominica Story: A History of the Island and Our Island Culture*, is a well-known contemporary Dominican historian, folklorist, and painter.

Alwin Bully, co-author of *Speak Brother Speak*, is a well-known Dominican playwright and founding member of the Peoples' Action Theatre. He has also written radio plays and musicals. Dominica also has a School of Dance and a professional dance troupe, the Waitukubuli Dance Company, whose name is based on the island's original Carib name. The Carib Territory is home to several notable visual artists, including Faustulus Frederick and Jacob Frederick.

#### **15 WORK**

The Dominican labor force totals about 25,000 people, of whom an estimated 40% are employed in agriculture (including food processing), while industry and commerce employ 32%, and the rest work in other sectors of the economy. The standard work day is eight hours long. Officially unemployment is at 10%, but the actual figure is thought to be closer to 15%, and a number of Dominicans have sought work on St. Thomas and other nearby islands.

Per capita income on Dominica is the lowest of any country in the Antilles. Earnings are low for workers in agriculture and commerce alike. The distribution of land on the island favors the operators of large estates, which are located on deep soil near the coast, rather than small farmers, who often have to contend with erosion-prone plots on the steep terrain of the island's interior. They traditionally call these small plots gardens.

#### **16 SPORTS**

The nation's most popular sports are cricket and football (soccer). Major cricket games draw thousands of fans, and the game is especially popular in the Carib Territory. Other favorites include volleyball, basketball, and squash.

## 17 ENTERTAINMENT AND RECREATION

Dominican men, like their counterparts in other parts of the Caribbean, enjoy whiling away their leisure hours playing dominoes in one of the many rum shops on the island. Popular music on the island embraces a number of styles—reggae, zouk, cadance, and others.

## 18 FOLK ART, CRAFTS, AND HOBBIES

Traditional Dominican dances include the quadrille, jing-ping, heel-and-toe, and bélé. The typical jing-ping band consists of an accordion, a bass instrument called a boom-boom, and a percussion instrument called a shak-shak. The Carib Territory has 16 craft shops that turn out intricately woven and colorfully dyed straw hats, baskets, and other woven goods. The Caribs are also known for their carved canoes. Other crafts on Dominica include mats woven from a special grass called *vertivert*.

## 19 SOCIAL PROBLEMS

Dominica's already sparse water supply is further threatened by pollution from agricultural chemicals, untreated sewage, and industrial waste. Dominica has been used by international drug traffickers as a transshipment point for narcotics.

## 20 GENDER ISSUES

Even though the government of Dominica ratified the Convention on the Elimination of all Forms of Discrimination Against Women in 1989, economic resources for accomplishing this task remain minimal. Domestic violence cases are common, but there are no specific laws criminalizing spousal abuse. In addition, the law does not prohibit sexual harassment, which is a significant problem for Dominican women.

While there is little open discrimination against women, cultural instances of discrimination exist. Also, property ownership continued to be deeded to heads of households, who are usually male. When the male head of household dies without a will, the wife may not inherit or sell the property, although she may live in it and pass it to her children.

Regarding labor, the law establishes fixed pay rates for specific civil service jobs, regardless of gender. However, women account for 53% of unemployed in the country, which results partly from the continuing decline of the banana export industry. Although there are some women in managerial or high-level positions, most women work as shopkeepers, nurses, or in education.

Dominican women are underrepresented in positions where they can sufficiently influence the power and decision-making process. This is apparent at all levels, from the highest political level to local government and managerial positions. On an average there is about a 30% female membership in local authority. There are six women who head village councils, and there were only two women in the 30-seat legislature: an elected parliamentary representative who also serves in the cabinet and a senator appointed by the president.

# DOMINICANS (DOMINICAN REPUBLIC)

**LOCATION:** Dominican Republic; United States (primarily New York City)

**POPULATION:** 9,507,133 million in the Dominican Republic; around 1.2 million in New York City

**LANGUAGE:** Spanish

**RELIGION:** Roman Catholicism; Evangelical Protestantism; Voodoo

## <sup>1</sup> INTRODUCTION

The Dominican Republic is one of the islands that make up the West Indies, located in the Caribbean Sea zone that goes from the tip of the Florida peninsula to the north coast of South America. The Dominican Republic occupies the eastern two-thirds of the island of Hispaniola, which it shares with the nation of Haiti. Christopher Columbus sighted Hispaniola in 1492 and, four years later, his brother Bartolomé founded Santo Domingo, the present-day capital of the Dominican Republic and the oldest city in the Western Hemisphere. Because of its strategic location in relation to other trading ports in the Caribbean, the Dominican Republic came under the rule of a succession of foreign powers, including France and Spain. The Dominican Republic has experienced severe political conflicts since achieving its independence under the leadership of national hero Juan Pablo Duarte in 1844. The government has remained unstable with power passing not just from dictator to dictator, but from nation to nation.

When Christopher Columbus landed in Hispaniola, he encountered an indigenous group called Tainos, who lived on hunting, fishing, gathering, and farming. A few years after the arrival of the Europeans, disease and cruelty on behalf of the Europeans dramatically diminished the aborigine population. Once the Spanish crown discovered new and richer territories, such as Mexico and Peru, the Dominican Republic was totally neglected. In this complete state of abandonment, the island became prey for other colonial powers, which depleted the Dominican Republic's natural resources. Consequently, the Spanish crown lost its influence over the island and, in 1697, France claimed one third of Hispaniola, the western territory that would become Haiti. One century later, France came to own the complete island after Spain agreed to sign the Treaty of Basel. However, Napoleon's invasion of Spain in the early 1800s stirred a deep sense of resentment against French rule among the *criollos* (first generation of Spanish born in the island), who with British support recovered the Dominican Republic for Spain in 1808. After Haitians inhabited the island for 20 years, Dominicans struggled for independence and achieved autonomous rule in 1865.

After 50 years of self-rule, the United States occupied the Dominican Republic from 1916 to 1924. In 1930 the 30-year rule of Rafael Trujillo—direct and through handpicked surrogates—began. Although Trujillo expanded industry and introduced economic reforms, his regime ruthlessly suppressed human rights, engaging in blackmail, torture, and murder to ensure its hold on power. Trujillo was assassinated in 1961 and writer Juan Bosch came to power briefly before being ousted

in a 1963 military coup. After a period of instability that included U.S. military intervention in 1965, former Trujillo appointee Joaquin Balaguer was elected president. Even though democratic elections were held every four years, and other candidates were elected in 1978 and 1982, Balaguer remained a powerful figure.

In the 1996 presidential election, the candidate of the Liberation Dominican Party, Leonel Fernández, won the highest office. During Fernández's rule the economy improved significantly with a rate of growth of 7%, the highest in Latin America during that period. Despite economic growth, Hipólito Mejía, the candidate from the Socialist Dominican Revolutionary Party, won the 2000 presidential race. During Mejía's term the economy shrank and poverty increased. As a result of the economic crisis during Mejía's administration and the complex diplomatic relationship with Haiti, the Dominicans decided to rely on a familiar and experienced politician and reelected Leonel Fernández in 2004 with 57% of the votes. Fernández was reelected to a third term in 2008.

Even though the economy gained leverage during Fernández's administration, reaching a growth rate of 8.5% in 2007, the country remained highly unequal, Dominicans living under the poverty line represented more than 40% of the total population, and unemployment affected 15% of the workforce.

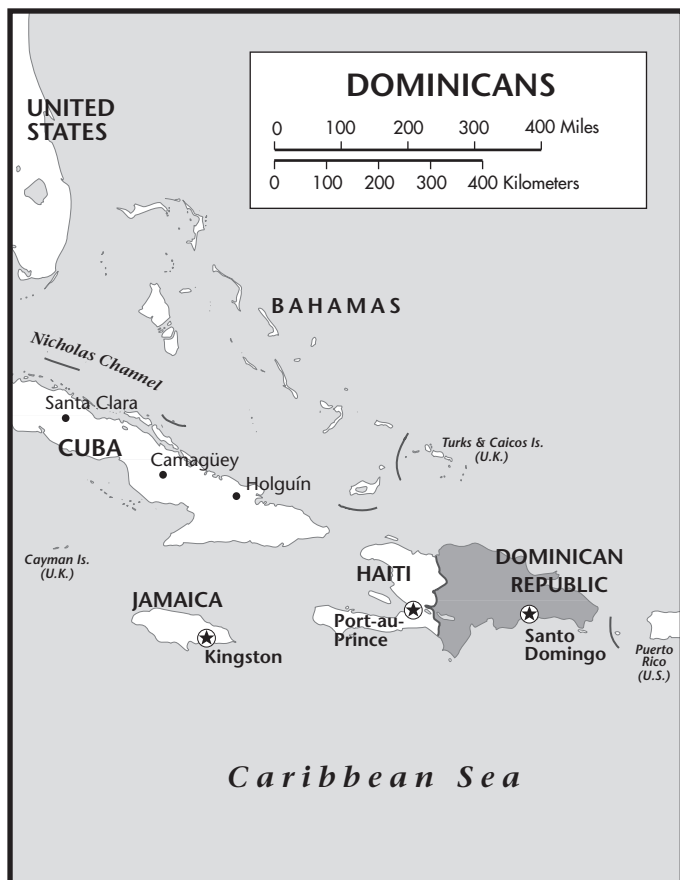

## <sup>2</sup> LOCATION AND HOMELAND

With an area of approximately 48,741 sq km (18,819 sq mi), the Dominican Republic is about the same size as Vermont and New Hampshire combined. It is bounded on the north by the Atlantic Ocean, on the south by the Caribbean Sea, and on the east by the Mona Passage, which separates it from Puerto Rico. The country is very diverse geographically, with terrain ranging from semiarid desert to fertile farmlands and mountain peaks. Both the highest and lowest points in the Caribbean region are found in the Dominican Republic.

About three-fifths of the country's terrain is covered by four mountain ranges. The largest is the Cordillera Central, which runs through the center of the Dominican Republic from east to west and extends into Haiti. It contains the Caribbean's highest peaks, Pico Duarte (3,175 m or 10,417 ft) and Pico la Pelona (3,168 m or 10,393 ft). The Cordillera Septentrional runs from east to west in the northern part of the country, and two lower ranges, the Sierra Neiba and Sierra de Bahoruco, stretch across the country's southwestern region.

The fertile Valle de Cibao, containing the Dominican Republic's richest agricultural land, stretches from east to west between the two northern mountain ranges, covering about 5,180 sq km (2,000 sq mi), or some 10% of the country's terrain. In contrast, the area between the two southern mountain ranges, called the Cul-de-Sac, is the country's most barren and is home to only 10% of the population. It is the lowest terrain in the Dominican Republic and also in the West Indies as a whole. The other major low-lying region is the Caribbean coastal plain in the north. The country's four major rivers are the Yaque del Norte, the Yaque del Sur, the Yuma, and the Artibonito.

The Dominican Republic has tropical temperatures and mild oscillations. The annual mean temperature is 25°C (78°F). As a consequence, staples, such as sugarcane, coffee, and cacao, represent an important source of the national income. Other typical export-oriented goods are bananas, rice, toma-

toes, and tropical fruits. Around one-eighth of the Dominican Republic's GDP is generated by the agricultural sector.

About 9.5 million people live in the Dominican Republic, 60% in the cities and 40% in rural areas. The capital city of Santo Domingo has a population of 2.1 million. The 20th century has been marked by massive rural-to-urban migration: the population of Santo Domingo approximately doubled every 10 years between 1920 and 1970. The second- and third-largest cities, Santiago and La Romana, also experienced dramatic growth, especially in the 1960s and 1970s.

International emigration is also a fact of life in the Dominican Republic, and about one in seven Dominicans now live abroad. New York City has the highest concentration of Dominicans of any city in the world except Santo Domingo. Florida and New Jersey also have substantial populations of Dominican immigrants. Some Dominicans emigrate because they are unemployed or are seeking better-paying jobs. Others leave in order to pursue an education or to join relatives already in the United States. Remittances—money sent home by *dominicanos ausentes* (absent Dominicans)—represents about \$500 million dollars a year and is an important factor in their homeland's economy.

About 70% of the country's population is classified as Mulatto (of mixed Black and White ancestry), 16% as White, and 11% as Black. However, these broad classifications actually encompass a more complex range of racial distinctions. *Blanco* (white) refers to Whites and persons of mixed White and Amerindian descent (Mestizos); *indio claro* (tan) refers to Mulat-

tos, including those with Amerindian ancestry; *indio oscuro* (dark Amerindian) describes anyone who is mostly Black with some White or Amerindian ancestry; and *negro* (which is not a derogatory term in the Dominican Republic) is reserved for persons who are 100% African.

### 3 LANGUAGE

Spanish is the official and universally spoken language of the Dominican Republic. While the Spanish of the Dominicans is considered relatively close to "classical" Castilian Spanish when compared to that of other Latin American countries, it has a distinctive accent and incorporates numerous local idioms as well as many African and Taíno (Amerindian) words and expressions. Some English is spoken in the capital city of Santo Domingo. Because of the closeness to Haiti it is not uncommon in the island to hear French Creole among Haitian migrants.

### 4 FOLKLORE

Combining Catholic beliefs with African customs, *formularios* and *oraciones* are special incantations intended to attract good luck or avoid the evil eye. Many Dominicans also have a quasi-magical belief in the powers of the saints, expressed in *santos* (saints) cults. Images of one or two saints are kept in the house, and goods are offered to them in exchange for carrying out the wishes of the worshipper. On the Night of the Saints (*Noche Vela*), the saints are believed to be called to earth.

### 5 RELIGION

The importance of religion in the Dominican Republic is reflected in the cross and bible at the center of the nation's coat of arms. A significant portion of the money that Dominican emigrants send back home is sent to their churches. While some 93% of the population is Roman Catholic, many do not attend church regularly, and, as in a number of other Catholic countries, the women are generally more observant than the men. Religious customs among observant Catholics include *rosarios*, processions organized to pray for intercession from a patron saint or the Virgin.

Evangelical Protestantism has become increasingly popular in recent years. Its embrace of family values, including strictures against alcohol, prostitution, and wife beating, has made it especially attractive to low-income Dominicans, who traditionally have had unstable family structures. Followers of spirit worship and Voodoo (introduced into the country by Haitian immigrants) are thought to number about 60,000.

### 6 MAJOR HOLIDAYS

Many holidays in the Dominican Republic are religious in nature. In addition to Christmas and Good Friday, they include the Day of Our Lady of Altigracia (January 21), Corpus Christi (June 17), and the Feast of Our Lady of Mercy (September 24). Secular holidays include Día de Duarte, commemorating the birthday of national hero Juan Pablo Duarte (January 26), Independence Day (February 27), Labor Day (May 1), and Dominican Restoration Day (August 16). Every town also holds a festival in honor of its patron saint, combining religious observance with such secular activities as dancing, drinking, and gambling. The Dominican Independence Day (February 27), which falls around the beginning of Lent, is the occasion for a

boisterous Carnival celebration that draws over half a million people annually to festivities in Santo Domingo.

## 7 RITES OF PASSAGE

Major life transitions, such as birth, marriage, and death, are marked by religious ceremonies appropriate to each Dominican's faith community.

## 8 INTERPERSONAL RELATIONS

When addressing each other, Dominicans use the formal pronoun *usted* instead of the familiar form *tu*, unless the relationship is a very close one.

*Compadrazgo*, a relationship resembling that of godparents in the United States, is an important part of the social fabric of the Dominican Republic. The *compadre* (literally, "co-parent") is chosen when a child is baptized, and the special relationship that ensues—with both the child and his or her parents—is a way of strengthening the bond between friends or even reinforcing other types of relationships, such as that between an employee and employer. Exploiting this dynamic, the country's long-time dictator Rafael Trujillo held mass baptisms where he became the *compadre* to thousands of peasant children in order to ensure their parents' loyalty.

## 9 LIVING CONDITIONS

Traditional rural dwellings are made of wood with roofs of thatch or corrugated tin and are often painted in bright colors. To keep the farmhouse cool, cooking is usually done in a separate structure with slotted sides that release smoke and heat. In the 35 years since the end of the Trujillo regime, which prohibited emigration within the country, rural-to-urban migration has created a severe urban housing shortage, and slums and squatter settlements have sprung up in the capital city of Santo Domingo.

The Dominican Republic's average life expectancy was 69 years in 1993. Hospitals and medical personnel are concentrated in Santo Domingo and Santiago, the two largest cities, with a lower quality of health care in rural areas. Health programs are offered through the nation's public welfare department (covering between 70% and 80% of the population) and the social security department (covering 5% of the population, or 13% of the work force). However, the country's economic troubles have resulted in shortages of doctors and nurses, medication, and surgical supplies. Public health care has been described as inadequate, with long treatment delays, and many who can afford it consult private physicians.

There are modern roads in the cities of the Dominican Republic, and a major highway connects Santo Domingo and Santiago. However, few Dominicans own their own cars—most of the nation's passenger cars are driven by either the very wealthy or by tourists. In rural areas, many roads are unpaved. The nation's railways are used mainly for transporting sugarcane.

Dominicans enjoy a better standard of living than their neighbors, the Haitians. However, lack of clean water, deficient housing, and lack of healthcare services has remained unsolved. In addition to these structural problems, deficient diet among the poorest segment of the society has contributed to a high rate of infant mortality: 27 children died per 1,000 births in 2007.

## 10 FAMILY LIFE

Traditionally, the extended-family household with a dominant father figure has been the norm among the middle and upper classes. In contrast, low-income people have less stable family ties, and many of their households consist of either a couple (with or without children) living together in a common-law marriage, or a female-headed household with an absentee father. While women still consider a man the head of the household, they have been able to exert increased authority within the family as they have won greater educational and employment opportunities and an increased measure of control over the number of children they bear.

## 11 CLOTHING

People in the Dominican Republic wear modern Western-style clothing.

## 12 FOOD

The popular Caribbean dish of rice and beans (*arroz con habichuelas*) is a staple in the Dominican Republic, where it is nicknamed "the flag" (*la bandera*) and served with stewed beef. Another favorite dish is *sancocho*, a meat, plantain, and vegetable stew. Plantains, common throughout the Caribbean area, are especially popular in the Dominican Republic. Ripe fried plantains are called *amarillas*, green fried ones are *patacon pisaao*, and they become *tostones* when fried and mashed. Popular snack foods include *chicarrons* (pieces of fried pork) and *empanadillas* (tangy meat tarts). Puddings, including sweet rice, corn, and banana pudding, are a popular dessert.

### Banana Pudding

- 6 overripe bananas, peeled and mashed
- 1 cup sugar
- 3 tablespoons melted butter or margarine
- 3 egg whites, beaten to stiff peaks
- 1 cup orange juice
- 2 tablespoons sweetened shredded coconut for garnish

Preheat oven to 325°F. Combine bananas, melted butter or margarine, orange juice, and sugar with mixing spoon or electric mixer. Carefully fold in stiffly beaten egg whites and transfer mixture to buttered or nonstick casserole or baking pan. Bake for about 40 minutes or until puffy and golden brown. Remove from oven and sprinkle top with shredded coconut.

## 13 EDUCATION

The estimated literacy rate of the Dominican Republic was 83% in 1990. Students must attend school for eight years, but many leave earlier to help support their families. Additional barriers to education include a shortage of teachers, especially in rural areas, and a lack of adequate facilities. Institutions of higher learning include the Autonomous University of Santo Domingo founded in 1538—the oldest institution of higher education in the so-called New World—and four private universities.

## 14 CULTURAL HERITAGE

Historically, the Henriquez-Ureña family has been at the center of the Dominican Republic's literary heritage. Salomé Ureña de Henríquez was a respected 19th-century poet who also established the country's first higher education facility for

*Agriculture has traditionally been the main source of employment in the Dominican Republic, but today a growing number of Dominicans work in service-related jobs, especially in the tourism industry. Most Dominican farmers are sharecroppers or tenant farmers. (AP Images)*

women, the Instituto de Señoritas. In the 20th century, the critic Pedro Henriquez-Ureña was also deeply involved in education. Many consider Gaston Fernando Delingue, who wrote in the late 19th and early 20th centuries, to be the Dominican national poet. The country's best-known writer internationally is undoubtedly novelist, essayist, and short-story writer Juan Bosch, who served briefly as president following the assassination of Rafael Trujillo. The Dominican Republic has a National Symphony Orchestra, and a National School of Fine Arts, located in Santo Domingo.

### **15 WORK**

Agriculture has traditionally been the main source of employment in the Dominican Republic, but today a growing number of Dominicans work in service-related jobs, especially in the tourism industry. Most Dominican farmers are sharecroppers or tenant farmers, and those who do own their own farms generally have fewer than 2 hectares (5 acres) and grow only enough food to feed their families. The country suffers from an extremely high rate of unemployment (an estimated 30% of the work force was unemployed in 1992), which led to widespread emigration. Race has traditionally dominated Dominicans' employment options, with higher-status jobs in business, government, and the professionals held by lighter-skinned persons. In general, the wages of female workers are lower than

those of their male counterparts, their unemployment rate is higher, and many are denied full employment benefits.

### **16 SPORTS**

The Dominican Republic's national sport is baseball, and thousands of fans attend the major games, which are usually held at one of Santo Domingo's stadiums. The United States currently has more Dominicans on its major and minor league baseball teams than players from any other Latin American country or any single state in the United States. The town of San Pedro de Macorís in particular has produced more professional players, including Juan Samuel of the Philadelphia Phillies and Joaquín Andujar of the Oakland A's, than any other locality in the world. Unlike the baseball season in the United States, the season in the Dominican Republic runs from October to February. Other popular Dominican sports include horseracing and cockfighting.

### **17 ENTERTAINMENT AND RECREATION**

Dance is a national passion in the Dominican Republic. Even the smallest towns have a dance hall, and there are annual *merengue* festivals in Santo Domingo, Puerto Plata, and Sosúa. Since the 1970s, local dance rhythms have been influenced by U.S. disco, the steps have become less formal, and the music has gotten faster. Salsa music is also very popular. The major cities, especially Santo Domingo, have an active nightlife, with

numerous nightclubs and gambling casinos, where patrons may (legally) play blackjack, craps, and roulette.

### 18 FOLK ART, CRAFTS, AND HOBBIES

Dominican folk music reflects Spanish, African, and Amerindian influences. A native percussion instrument, the *güira*, is a legacy of the Taíno people who were among the island's original inhabitants. Together with the *maracas* and the *paltos* (also in the percussion family), and the guitar, it is used to accompany Dominican folk songs called *decimas*, which are usually romantic in nature. Other popular folk instruments include the *balsié* (accordion) and *pandero* (tambourine). The national dance of the Dominican Republic is the *merengue*, which features a stiff-legged step that is something like a limp. Other folk dances include the *yuca*, the *sarambo*, the *zapateo*, and the *fandango*.

Local crafts include mahogany woodcarvings, woven goods, pottery, handmade rocking chairs (which have been popular ever since one was given to President John F. Kennedy as a gift), ceramics, macramé, and hand-knit clothing. Dominicans also produce hand-crafted amber jewelry as well as jewelry made with *larimar*, also known as Dominican Turquoise, a light-blue stone unique to the region.

### 19 SOCIAL PROBLEMS

The Dominican Republic suffers from serious economic and social problems, including a 15% unemployment rate, with an additional 20% of the work force underemployed. Migration from rural to urban areas has created a housing shortage and a rise in urban crime. In Santo Domingo, the capital, much housing is substandard and the water quality is poor. In the 1980s international drug traffickers attempted to use the Dominican Republic as a transshipment point for illegal substances, resulting in a rise in narcotics-related crimes.

### 20 GENDER ISSUES

From 1998 to 2001 the country passed seven new laws to strengthen women's rights, with special emphasis on migrants, health, social security, and women's political participation. Regarding education, 51% of school attendees in 1999 were women and the percentage of women with no schooling dropped from 16% to 11% between 1996 and 1999. In addition, women made up 70% of technical and vocational school enrolment.

To stimulate Dominican women's employment, the government has introduced benefits for unemployed single mothers, day-care centers, maternal and child health services, services for older people, survivors' pensions, and breastfeeding subsidies for the poorest women. In addition, to promote gender equity in labor programs and policies, the state created a gender sub-secretariat in the State Ministry of Labor and has developed micro, small- and medium-sized enterprises through credit facilities and technical, managerial, and vocational training. As a result, female workers accounted for 49% of the workforce in 1999, a 2% increase from 1996.

In politics, a growing number of women participate in the sector, thanks partly to a 33% quota for women candidates to congress and a stipulation that women must be nominated as mayoral or deputy mayoral candidates. Consequently, women hold 17.6% of executive posts and 14.3% of seats in congress. Women also comprise 33% of supreme court judges, 9% of

local mayors, 17% of ambassadors, and 15% to 31% of trade union leaders.

## DUTCH AMERICANS

For more information on Dutch history and culture, see **Vol. 4: Netherlanders**.

### OVERVIEW

The first Dutch in America came with the Dutch West India Company to pursue the fur trade. The company established the New Netherland colony along the Hudson River in the early 1620s, and the first settlers arrived in 1624. By 1664, when the English seized the colony and renamed it New York, the Dutch population had grown to 7,000. It was almost 200 years, however, before Dutch migration to the United States began in earnest.

Between 1847 and 1913, there were four major waves of Dutch immigration to the United States. The first wave lasted from 1847 to 1857 and consisted largely of Catholics and Seceders (a conservative Dutch Reformed sect) searching for greater religious freedom. After the American Civil War ended in 1865, a second wave of Dutch immigrants flocked to the United States. Most were farm laborers drawn by offers of free or cheap land in the Midwest. The United States wanted to expand its territory westward and recruited immigrants through programs such as the 1862 Homestead Act, which gave away parcels of land for free to those who agreed to farm it for a certain number of years. Available land was dwindling in the Netherlands, and industrialization was slow to occur, so there were fewer and fewer opportunities for landless peasants. The United States offered a chance to become a landowner, and many jumped at that chance.

The third wave from 1880 to 1893 was prompted by an agricultural crisis in the Netherlands. Bad weather and overworked land caused low crop yields for several years in a row, beginning in 1878. This time, even farm owners chose to leave their homes and search for better opportunities elsewhere, particularly in the American Midwest and West where land was still available at fairly cheap rates.

The fourth major wave of Dutch immigration to the United States occurred in 1903–1913, spurred by an economic slump in the Netherlands. This time the immigrants were mostly urban and settled in major industrial centers in America, such as New York City and Chicago. Some craftspeople and merchants had also immigrated with the farmers of the previous three waves, escaping high taxes and fees in the Netherlands, but the majority of Dutch immigrants to the United States from 1847 to 1913 were farming families.

In the years immediately following World War II (1939–45), another wave of Dutch immigrants came to the United States to escape the war torn conditions in their homeland. About 80,000 Dutch entered the United States during this last major wave of immigration. Some were Jews who had survived the Holocaust.

Although the earliest Dutch settlers lived in what became New York State, along the Hudson River, subsequent immigrants moved west and settled at first almost entirely within a 50-mile radius of the southern shoreline of Lake Michigan. Later, they spread throughout the United States. Most Dutch Americans immigrated in entire family units and settled with others from the same province of the Netherlands. After im-

migrants of the first wave (1847–1857) established themselves in the United States, a pattern of chain migration began where relatives and friends of the original immigrants followed them to America. These newcomers settled near their kin, creating tightly knit rural communities, or urban neighborhoods in later years, of Dutch Americans. Surrounded by compatriots, they were slow to assimilate and remained quite “Dutch” for a number of generations.

Of the 4,541,970 Dutch Americans in 2000 (according to the U.S. Census; 1.6% of the total U.S. population), the majority still lived in the Midwest. A significant number continue to live in the Hudson River area of New York State, as well. The city of Renssalaer, New York, was founded by Dutch patroon Kiliaen van Renssalaer in the 1600s. Patroons were wealthy Dutch who were allowed to create an estate in the New Netherland colony if they attracted at least 50 more settlers to the New World. Renssalaer is the only patroonship that survived. Several other towns and cities in New York State, including Albany, the state capital, were founded by the Dutch. The New York City neighborhood of Harlem, originally established by New Netherland governor Peter Stuyvesant in 1658 as a farming community, was called Nieuw Haarlem.

Michigan is by far the most “Dutch” state in the United States with both the largest number (477,045) as well as the highest percentage (4.8%) of the population declaring Dutch ancestry. New York (265,670) and Pennsylvania (257,902) have the next highest numbers of Dutch Americans (the so-called “Pennsylvania Dutch” are not actually Dutch but German and so are not included in the count) but the overall percentages are much lower (1.4% and 2.1%, respectively) than in the states of South Dakota (4.7%), Iowa (4.6%), Wisconsin (2.8%), and Oregon (2.6%). Pella, Iowa, and Holland, Michigan, were both founded by Dutch immigrants and remain largely Dutch American communities.

Dutch Americans are divided into four major linguistic groups: Hollanders (the majority), who speak Dutch; Frisians, who speak Frisian, a language related to but distinct from Dutch; Flemish-speaking peoples from what is now Belgium (the Flemish language is almost identical to Dutch), and Dutch-speaking Germans from Hanover and Ost Friesland. Some Dutch words that have been adopted into common American usage are “cookie,” “waffle,” “spook,” and perhaps “Yankee” (which may have been a Dutch nickname for Dutch sailors). The American name for “Santa Claus” also comes from the Dutch: Sinterklaas is their word for St. Nicholas.

Dutch Americans maintained their ethnic languages longer than many other ethnic groups due to their clannishness and the conservative nature of the Dutch Reformed Church, to which most Dutch Americans belong. The Dutch Reformed Church is a Protestant Calvinist denomination that has been in existence for hundreds of years. The first Dutch Reformed church in America was founded in 1628 in the New Netherland colony, making Dutch Reformed one of the oldest denominations in the United States. The Christian Reformed Church was established in 1857 in Michigan, after a split in the Dutch Reformed church there.

The Dutch Reformed Church has a history of schisms and separations. The first major wave of Dutch immigration to the United States was made up partly of Seceders, members of a conservative sect that had split off from the parent church in the early 1800s. In the late 1800s and early 1900s, a small

number of Doleantie secessionists, also known as Kuyperians, immigrated to the United States and joined the Christian Reformed Church, quickly becoming its leaders. Today's Dutch Reformed Church in the United States is still split into two branches: the original Reformed Church in America, founded in 1628, and the Christian Reformed Church, founded in 1857.

Dutch Protestants strongly resisted Americanization, especially in their church life. The original settlers of New Netherland intended to create a Dutch colony and therefore zealously guarded and promoted their Dutch identity. The Dutch Reformed Church believed that the Dutch way was the true way and made every effort to keep the Church in America pure. Once the English took over New Netherland and renamed it New York, those Dutch who remained struggled to determine their identity in the now-English colony. As English became the official and common language of New York, second and later generations of Dutch Americans lost their fluency in Dutch. By 1762 the Dutch Reformed Church conceded to Americanization and began holding some services in English to maintain its membership. By the end of the American Revolutionary War (1775–83), all Dutch Reformed Church services were in English.

Later Dutch immigrants to the United States came with the intention of making America their new home and were therefore more interested in adapting to American ways. The Dutch Reformed Church took on a new spirit of assimilation, searching for a way to remain faithful to its Dutch traditions while at the same time being true to its American setting. Though for

the most part a small denomination, one church has grown to over 10,000 members and is now housed in a complex known as the Crystal Cathedral in Los Angeles, CA. Founding minister Rev. Robert H. Schuller began broadcasting his worship services as "the Hour of Power" on television in 1970. Upon his retirement in 2006, Schuller's son, Rev. Robert A. Schuller, became the senior minister.

Dutch Catholics who immigrated to America assimilated much more quickly into mainstream American life. This was due largely to the multicultural aspect of Catholic parishes in the United States. Also, Dutch Catholics tended to be wealthier and more urban than Dutch Protestants (who were mostly farmers), so they had the resources to establish themselves quickly in industrialized U.S. society. Dutch Catholic, and later Jewish, immigrants came to the United States in noticeable numbers, but by far the majority of Dutch Americans were and are members of one or the other sect of the Dutch Reformed Church.

Dutch Americans have made tremendous contributions to American culture, from the colonial era when they founded towns and cities that still exist today, to the very Declaration of Independence, which owes much of its spirit and wording to the Dutch declaration of independence from Spain 200 years earlier. Pancakes, waffles, doughnuts, cookies, coleslaw, and pretzels (though pretzels are also credited to German Americans) were introduced by the Dutch. Rutgers University in New Brunswick, New Jersey, was founded in 1766 (as Rutgers College, in Paterson, New Jersey) by Dutch Americans, as was

Hope College, which in 1866 grew out of Hope Academy, established in 1851 in Holland, Michigan, by the Dutch American founders of that city. Calvin College and the publishing houses of Eerdmans and Zondervan were all founded by Dutch American members of the Reformed Church. Vanderbilt University in Nashville, TN, was founded by entrepreneur Cornelius Vanderbilt, a descendant of early Dutch American settlers and great-great-grandfather of designer Gloria Vanderbilt, whose son, Anderson Cooper, is now a well-known television journalist. Longtime publisher of the *Ladies Home Journal*, Edward Bok, was a Dutch immigrant to the United States.

Other famous Dutch Americans include film directors Cecil B. DeMille and Gus Van Sant, artist Willem de Kooning, poet Mark Van Doren and his brother, writer Carl Van Doren, singer/songwriter Bruce Springsteen (who is half-Italian American, half-Dutch American), and rock musicians Eddie and Alex Van Halen. Hans Kindler, a cellist who emigrated from Holland, founded the National Symphony Orchestra of Washington, D.C., in 1931, at the height of the Great Depression, and served as its conductor for many years. Many well-known American actors are of Dutch ancestry, including Marlon Brando, Henry Fonda, Audrey Hepburn, and Mary Steenburgen. The international distributor, Amway (short for "American Way"), was founded in 1959 by two Dutch Americans, Jay Van Andel and Richard DeVos, and is now run by their sons, Steven Van Andel and Dick DeVos. Walter Percy Chrysler, who introduced the Chrysler automobile and became a leading automobile manufacturer, was Dutch American, as was educator Clarence Dykstra. Len Dykstra is a well-known Dutch American baseball player, and celebrated golfer Tiger Woods is of partial Dutch ancestry. General David Petraeus, commander of the Multi-National Forces in Iraq since February 2007, is also Dutch American.

No fewer than three U.S. presidents claimed Dutch ancestry: Martin Van Buren (president from 1836–1840), Theodore Roosevelt (1901–1908), and Franklin Delano Roosevelt (1932–1945). The Roosevelts traced their heritage back to Klaes Martensen van Roosevelt, who immigrated to the United States in 1644. It is clear that the United States would not be what it is today were it not for the Dutch. Although Dutch Americans are a relatively small group in the total U.S. population, they have played an enormous role in the history and development of America.

Because the majority of Dutch immigrants came to America in whole family units and settled on farms in rural areas, they maintained their traditional family roles in the new land. The strong ties to the Dutch Reformed Church, a conservative Calvinist sect, also supported these traditional roles. Men worked in the fields and women worked in the home. The Dutch historically allowed women a great deal of liberty in terms of earning money for the family, but this was usually done by selling or bartering homemade goods, eggs, butter, etc. A few young women worked as domestic servants in others' homes, but they were the exception to the rule. The Dutch Reformed Church was slow to allow women greater authority in the church. The Reformed Church in America did not ordain women as deacons or elders until 1970; it took another three years before a woman was ordained as a minister. The more conservative Christian Reformed Church still does not ordain women.

# ECUADORANS

**LOCATION:** Ecuador

**POPULATION:** 13,927,650

**LANGUAGE:** Spanish; Quechua

**RELIGION:** Roman Catholicism; some Pentecostal and Protestant churches

## <sup>1</sup> INTRODUCTION

Ecuador, as its name suggests, straddles the equator in South America. Located north of present-day Peru, Ecuador once formed part of the Inca Empire. The Ecuadoran city of Quito, moreover, acted as a secondary capital of the empire. The Incas had built an extensive footpath system that linked Cusco, the capital of the Inca empire in Peru, to Quito, over 1,600 km (1,000 mi) away.

During colonial times Ecuador continued to be ruled from Peru, this time by the Spanish Viceroyalty in Lima. In 1822 Ecuador was led to independence by General Antonio José de Sucre, a lieutenant of famed liberator Simón Bolívar. Independence, however, did not lead to political stability. The 19th century was a time of intense political struggle between pro- and anti-Roman Catholic Church factions. Ecuador succumbed to military rule in the late 1800s and again in the 1960s and 1970s. Ecuador has experienced democratic rule since 1979.

Because of the economic mismanagement of the country's debt during the military regimes, Ecuador has experienced constant deficits and power struggles. Since the 1990s, a weak executive branch has had problems appeasing the ruling classes that are extensively represented in the legislature and judiciary. In fact, all three democratically elected presidents between 1996 and 2006 failed to finish their terms.

Contributing to the country's political volatility is the emergence of indigenous peoples, who account for 25% of the total population, as political actors. The failure of the government to deliver on promises of land reforms, lower unemployment rates, and provision of social services has mobilized indigenous groups and destabilized the executive power. In November 2006, the leftist economist Rafael Correa was elected to the office of president with 56.67% of the national vote. He campaigned on a platform that promised to eliminate the privileges of the traditional ruling elite. Immediately after taking power, Correa called for legislative elections in order to create a National Assembly in charge of writing a new constitution. The new constitution was scheduled to be completed by mid-2008.

## <sup>2</sup> LOCATION AND HOMELAND

Ecuador encompasses many geographical regions and therefore has a rich diversity of plants and animals. Ecuador has three broad geographic areas: the coast, the sierra (mountains), and the jungle lowlands. These varied geographical regions and climatic conditions have created many habitats that allow a rich diversity of wildlife and flora to thrive. Off the Pacific coast of Ecuador, furthermore, are the renowned Galápagos Islands. The Galápagos Islands, which are classified as a protected area by the Ecuadoran government, are scarcely populated by humans. Instead, they are home to sea lions, penguins, flamingos, iguanas, giant tortoises, and a great many other ani-

mals. It is said that Charles Darwin found the inspiration for his theory of evolution when he visited the Galápagos in 1835. The Galápagos Islands are now a popular destination for ecological tours.

As of July 2008, Ecuador's population was estimated at 13,927,650 people. However, since the 1999 economic crisis, nearly 20% of Ecuadorians have migrated to industrialized countries, such as the United States, Spain, and Italy, in search of a better quality of life.

## <sup>3</sup> LANGUAGE

The official language of Ecuador is Spanish. A significant proportion of its Andean population, however, speaks the ancient Inca language of Quechua and a variety of related dialects. Although mainly an Andean language, the Quechua language also spread into the lowland jungle areas at the time of the Spanish conquest as a result of migration and the influence of Quechua-speaking missionaries.

A variety of indigenous tribes still exist in the Ecuadoran Amazon. These native peoples have their own languages that are unrelated to Quechua. These groups include the Jivaro and the Waoroni.

## <sup>4</sup> FOLKLORE

A number of folk beliefs are common among rural dwellers, combining Catholic tradition and indigenous lore, as well as vestiges of medieval Spanish custom. The "in-between" hours of dawn, dusk, noon, and midnight are feared as times when supernatural forces can enter and depart the human world. Many rural folk fear the *huacaisiqui*, which are spirits of abandoned or aborted babies, thought to steal the souls of living infants. A character specific to the Sierra region is the *duende*, a large-eyed sprite with a hat who preys on children. The blacks of Esmeraldas have inherited the folklore of their ancestors, including the figure of the *tunda*, an evil water spirit who takes the shape of a woman with a club foot.

## <sup>5</sup> RELIGION

Ecuador is predominantly a Roman Catholic country. Catholicism was introduced by the Spanish at the time of the conquest. The question of the role of the Church in state and society was one that generated significant political conflict in Ecuador. After independence from Spain, political struggle occurred between the pro-Church conservatives and the liberals, who believed in a more limited Church role. This political struggle ended with a constitution that ensured a separation of Church and State.

In the late 1960s, the Church in Ecuador and elsewhere in Latin America began to defend the poor and argue for social change. The "theology of liberation," as it was called, found religious justification for social change and political reform. Many bishops and priests spoke out against the government in defense of the rural poor.

Despite the strong grip of the Roman Catholic Church on Ecuadorians until the mid-twentieth century, its influence in rural society seems to be in decline. In the 1980s, Pentecostal and Protestant churches have begun to expand their influence in the countryside.

## 6 MAJOR HOLIDAYS

Christmas in many towns in Ecuador is celebrated with a colorful parade. In the town of Cuenca, reputed to have the most festive parade, townspeople decorate and dress up their donkeys and cars for the procession. On New Year's, the festivities include fireworks and the burning of effigies, made by stuffing old clothes. Many Ecuadorians take this opportunity to mock current political figures. These dummies are nicknamed *viejos*, or "old ones," and symbolize the passing year.

*Carnaval*, or Carnival, a major festival preceding Lent, is celebrated with much festivity. During the hot summer month of February, Ecuadorians celebrate Carnival by throwing buckets of water at each other. Even fully clothed passersby are at risk. Sometimes pranksters will add dye or ink to the water to stain clothing. In some towns, throwing water has been banned, but this practice is hard to repress. It is virtually impossible to avoid getting wet during Carnival, and most Ecuadorians accept it with good humor.

## 7 RITES OF PASSAGE

Most Ecuadorians are Roman Catholic and, therefore, this religion marks major life transitions, such as birth, marriage, and death. Protestant, Pentecostal, and Amerindian Ecuadorians celebrate rites of passage with ceremonies appropriate to their particular traditions.

## 8 INTERPERSONAL RELATIONS

In Ecuador, it is customary for most activity in cities to close down between 1:00 pm and 3:00 pm for the afternoon siesta. During this time, many offices and stores are closed. This custom, which exists in many Latin American countries, arose as a way to avoid working during the intense afternoon heat. Most people go home for an extended lunch and even a nap. They return to work in the late afternoon when it is cooler and work until the early evening.

In Ecuador, one is expected to kiss the cheek of anyone to whom one is introduced, except in a business context where it is more appropriate to use a handshake. Female friends will kiss each other on the cheek, while male friends will often greet each other with a full embrace. This practice is very common in most Latin American countries.

## 9 LIVING CONDITIONS

The major cities of Ecuador, such as Quito and Guayaquil, are modern cities with offices and contemporary apartment buildings. The style of housing in these two cities, however, varies as a result of their histories and locations. Quito, in the dry Andean highlands, is characterized by beautiful colonial architecture. The city remains relatively small as a result of its isolated, high-altitude location. Guayaquil, in contrast, is a more modern, bustling port city of over 3 million people. Guayaquil's busy economy has attracted huge waves of migration from the Andean region. Nearly a third of Guayaquil's population live in large sprawling shantytowns with limited electricity and running water. The poor housing and limited availability of clean water create unsanitary conditions that can cause serious health problems. Infectious diseases are, therefore, a problem for many poorer Ecuadorians.

Middle-class homes and apartments in the major cities, however, have modern amenities and conveniences. These cities are densely populated, and few homes have large yards, such as those found in the United States. In most middle-class neighborhoods, in fact, houses are all connected side by side and, in this way, form a city block.

In rural highland areas, most small-scale farmers live in small one-room houses with thatched or tiled roofs. Most often, these homes have been built by the families themselves, with assistance from family and friends. In the jungle areas, housing structures are made of locally available materials, such as bamboo and palm leaves.

The people of the jungle regions face many critical health problems. Parasites and river blindness are problems caused by contaminated water supplies. Malaria also remains a problem in humid jungle areas that attract mosquitoes.

## 10 FAMILY LIFE

An Ecuadorian household typically consists of a nuclear family; that is, a husband, a wife, and their children. It is also common for grandparents or other members of the extended family to join the household. The role of women differs greatly in middle-class urban areas from that in rural village life. In Andean communities, women play an important role in the economic activities of the household. In addition to helping plant gardens and tend animals, many women are involved in petty trading. While there is a clear division between male and female roles in rural areas, both make important contributions to the household income.

An Ecuadorian bride waits for her wedding to begin while townspeople look on in Quito, Ecuador. (© Pablo Corral Vega/Corbis)

In middle- and upper-class households, in contrast, women are less likely to work outside the home. Commonly, women in these social classes devote themselves to managing the household and rearing children. These patterns, however, are beginning to change. There are a growing number of middle- and upper-class women who continue their education and find jobs outside of the home.

### **11 CLOTHING**

Clothing worn in the urban areas of Ecuador is very Western. Men wear trousers and a pressed shirt, or a suit to work. Women wear both pants and skirts. Although jeans and tee-shirts are becoming the clothing of choice for Ecuadorian youth, the use of shorts is still rare.

Clothing outside of the major cities, however, is diverse. Perhaps the most distinctive dress in the Andean region is worn by the Otavalo Indians. The Otavalo are considered a subgroup of the Quechuas, as they speak the Quechua language. Otavalo men are distinctive for their long, black braids and their identical black and white outfits. Otavalo men dress impeccably in white short trousers, white buttoned shirts, and solid black ponchos. They also wear stiff felt hats and sandals. Otavalo women wear delicately embroidered white blouses.

### **12 FOOD**

Ecuador is an Andean country and its population has relied on the potato as a staple crop since pre-Inca times. Over 100 dif-

ferent types of potatoes are still grown throughout the Andes. A traditional Andean specialty is *locro*, a dish of corn and potatoes, topped with a spicy cheese sauce. Seafood also forms an important part of the diet in coastal areas. A common snack item, popular throughout Ecuador, is *empanadas*—little pastries filled with meat, onions, eggs, and olives. Empanadas are sold in bakeries or by street vendors and can be considered the Ecuadorian equivalent of fast food.

Bananas are also an important part of the diet. Some varieties of bananas, such as plantains, are a nonsweet, starchy vegetable like a potato. They need to be cooked and are used in stews or are served grilled. Grilled bananas are often sold by street vendors.

Coffee is also grown in the Andean highlands. Coffee in Ecuador is served in a very concentrated form, called *esencia*. *Esencia* is a very dark, thick coffee that is served in a little container alongside a pot of hot water. Each person serves a small amount of coffee into his or her cup, then dilutes it with hot water. Even diluted, this coffee is very strong.

### **13 EDUCATION**

In Ecuador education is compulsory until age 14. In practice, however, there is a serious problem with illiteracy and a high proportion of students drop out of school. This problem is most severe in rural areas. For many rural families, children can play an important role by working on the landholding. It is difficult for many families to survive without this labor and

many children receive only minimal formal schooling. Currently, more than 100,000 five-year-old children are not able to enter first grade, and more than one million children between the ages of 5 and 18 do not access formal education.

#### 14 CULTURAL HERITAGE

Much of Ecuador's musical tradition has Andean roots. Pre-colonial instruments and musical styles are still popular in Ecuador. Flutelike instruments include the *quena*, an instrument used throughout the Andean countries. However, regional variations do exist. While most panpipes played in Peru or Bolivia comprise two rows of bamboo, the traditional Ecuadorian *rondador* has only one row. Other important wind instruments include the *pinkullo* and *pifano*. The Andean culture has also been influenced by its colonial past. Brass instruments are very popular in the Andes, and many village festivals and parades feature brass bands. String instruments were also introduced by the Spanish and adapted by the Andean peoples.

The coastal tradition draws more from Caribbean and Spanish influences. Colombian *cumbia* and *salsa* music are popular with young people in urban areas. American rock music is also played on the radio and in urban clubs and discos.

Ecuador also has a strong literary tradition. Its most well-known writer is Jorge Icaza, who wrote a moving book about the plight of the Ecuadorian Amerindians. His most famous book, *The Villagers*, describes a brutal takeover of indigenous land. This book raised awareness of the exploitation of indigenous peoples in the Andes by landowners. Although it was written in 1934, it is still widely read in Ecuador today.

#### 15 WORK

Work and lifestyles in Ecuador vary dramatically from region to region. In the mountains, most people are small-scale subsistence farmers. Many male youths find employment as field workers on sugarcane or banana plantations. This work is difficult and laborious and pays extremely poorly.

Ecuador also has a fair-sized manufacturing industry. Food processing, which includes activities such as flour milling and sugar refining, are important to the economy. However, much of the urban population makes a living not from employment, but by creating a small-scale enterprise. Home "cottage" industries include dressmaking, carpentry, and shoemaking, among others. Street vending also provides an economic alternative for many women in both the *sierra* and the urban slums.

Ecuador is also an oil-rich country. In the 1970s, an economic boom was sparked by the extraction of oil, and hundreds of thousands of jobs were created by the growing oil industry. In the 1980s, however, the boom ended with Ecuador's growing debt and declining oil prices. Ecuador still produces oil, but its reserves appear limited.

#### 16 SPORTS

Spectator sports are popular in Ecuador. Soccer, as elsewhere in Latin America, is a national pastime. Bullfighting, a sport introduced by the Spanish, is also popular. Famous bullfighters (known as *matadores*) from Spain or other South American countries come to Ecuador and attract huge crowds. In some rural villages, a nonviolent version of bullfighting provides entertainment at some fiestas. Local men are invited to jump into a pen with a young bull calf to try their skills as *matadors*. Another blood sport that is prevalent throughout Ecuador is

cockfighting. This entails tying a knife to the foot of a rooster (or cock) and having it fight another rooster. These fights usually end up in the death of one of the roosters.

Ecuadorians are also fond of playing different types of paddle ball. One type of paddle ball uses a heavy 1-kg (2-lb) ball and appropriately large paddles with spikes. A variation of this game uses a much smaller ball, which is hit with the hand rather than with a paddle. Standard racquetball is also played, although membership in clubs with courts can be prohibitively expensive.

#### 17 ENTERTAINMENT AND RECREATION

The principal form of entertainment in the Andes is the regular festivals or fiestas that exist to mark the agricultural or religious calendar. These fiestas often last for days and involve music, dancing, and the consumption of alcoholic beverages, such as *chicha*, brewed from corn.

In urban areas, many Ecuadorans go to *peñas* on weekends for a special night out. *Peñas* are clubs that feature traditional music and folklore shows. This is often a family outing, even though these shows often go on until the early morning. When teenagers or young adults go out on their own, they are more likely to go to a club or disco that plays American rock and dance music. However, these clubs only exist in the major urban areas.

#### 18 FOLK ART, CRAFTS, AND HOBBIES

Panama hats actually originated in Ecuador. These woven straw hats were made in the city of Cuenca. They were produced for export to California gold-rushers and were also sold in large quantities to workers building the Panama Canal, thus giving rise to the name. Panama hats became a huge export item for Ecuador in the early to mid-1900s. While Panama hats are still made in Ecuador, they are no longer in great demand overseas. A good Panama hat, it is claimed, can be folded up and passed through a napkin ring, and it will then reshape itself perfectly for use.

Ecuadorans produce a wide variety of handcrafted goods, ranging from woven textiles, to woodcarvings, to ceramic goods. The market at Otavalo, near Quito, is sometimes claimed to be the most extensive and varied market in all of South America. This market was established in pre-Inca times as a major market where goods from the mountains could be exchanged for goods from the lowland jungle areas. Today, the Otavalo market continues to be an outlet for handwoven, vegetable-dyed textiles and tapestries made by the Otavalo Indians.

#### 19 SOCIAL PROBLEMS

Poverty is one of the worst social problems in Ecuador. While almost 30% of the population lives in poor conditions, poverty is more concentrated among indigenous and Afro-Ecuadorian groups who live in rural areas. More than two thirds of poor people are from indigenous descent, and 60% of people living in poverty reside in rural areas and live from agriculture.

#### 20 GENDER ISSUES

Machismo is a serious problem in Ecuador, as it is in other Latin American countries. It is common for men to feel that they should have unquestioned control over their wives, daughters,

or girlfriends. Many Latin American men, in addition, believe in different standards of acceptable male and female sexual behavior. It is common for married men to have one or more long-term mistresses, while their wives are expected to be faithful and monogamous. Improvements in the education of women are beginning to make some impact on this behavior, as women increasingly are demanding greater respect. However, these beliefs are deeply ingrained in the culture and are difficult to change.

The country's civil code was amended in 1989 in order to address the issues of the legal status of women within marriage, the administration of conjugal property, mutual and responsible parenthood, marital rights and obligations of spouses, parental rights, and termination of marriage. Recent legislation also includes the Law to Combat Violence against Women, Children, and the Family; the Employment Protection Act; and the Free Maternity Reform Law. In addition, the government created an autonomous National Council for Women in 1997, aimed to coordinate public policies on gender issues. However, and in spite of laws and institutional machinery for equality, prevailing gender stereotypes still promote multiple forms of discrimination against women in daily life.

Even though Ecuador was the first Latin American country to grant women the right to vote, only 50% of women have voted in recent elections. In order to promote female participation in politics, the electoral law was reformed and quotas for women were established: women must constitute at least 20% of the lists of candidates for multi-person elections. This initiative led to 27% women's representation in local elections. In addition, the government has actively promoted the presence of women in the public sector. Since 1990 there has always been at least one female minister in the cabinet, and women have held the positions of governor and mayor as well. In 1994, 3 of the country's 69 ambassadors were female, and four years later 50% of participants in diplomatic training courses were women.

# ENGLISH AMERICANS

For more information on English history and culture, see **Vol. 4: English**.

## OVERVIEW

The original 13 American colonies, which became the United States, were founded by the English beginning in 1607. The land had been claimed for England long before, in 1497, by Italian sea captain John Cabot and his son, Sebastian. The Cabots were sailing under the commission of English king Henry VII and explored the east coast of North America from what is now Newfoundland to South Carolina. The English neither sponsored nor conducted any further North American exploration for the next 80 years.

Hard times for the peasant class in England from the late 1550s through the 1600s prompted many to look for new opportunities. The tyrannical reign of King James I (r.1603–1625), who levied heavy taxes, refused to call Parliament, and otherwise abused his powers, also drove many English out of the country. King Charles I, who followed King James I, was even more tyrannical. Thus it was that the 13 English colonies were founded in America.

The first colony did not survive. Established in 1587 with funding from Sir Walter Raleigh, the so-called “Lost Colony” on Roanoke Island lasted for only a short time. The sea captain who transported the 150 colonists (25 of them women and children) was supposed to take them to Chesapeake Bay but instead left them on Roanoke Island and promptly abandoned them. When supplies began running low, the colony leader, John White, found passage back to England to request aid but was detained for three or four years by the authorities there. When White was finally able to return to the colony in 1591, it was deserted. Only the word “Croatan,” the name of a nearby Native North American tribe, was found, carved on the trunk of a tree. Some suspect the colonists were killed by the Croatans or other Native North Americans. Others believe the Native North Americans may have been friendly and the colonists joined their community. No one may ever know the true fate of the Lost Colony.

Jamestown, founded in 1607 by the London Company, became the first successful English colony in North America. The second successful colony, Plymouth, was established in 1620 by a group of Puritans (Anglican reformers) who called themselves “Pilgrims.” The Pilgrims came to North America on a ship called Mayflower. Ten years later, a larger group of Puritans founded Massachusetts Bay Colony. Whereas Jamestown was founded purely for economic gain, Plymouth and Massachusetts Bay were created as religious havens for members of a persecuted sect. Likewise, Maryland was later established as a haven for Catholics and Pennsylvania for Quakers, both of whom were not welcomed in England. Georgia was originally intended as a debtors' colony, where those who had been imprisoned for unpaid debts in England could find a new start. But the English government refused to transport many debtors, so the idea never took form.

By 1733, all 13 colonies were established, including New York which had been seized from the Dutch (under whom it had been known as New Amsterdam) in 1664. Though the

initial numbers of settlers were fairly small, immigration increased steadily throughout the colonial period. Some 14,000 colonists settled in Virginia between 1607 and 1624, and Maryland had a population of 8,000 by 1657. The population of Massachusetts Bay Colony grew from 2,000 to 16,000 in just 13 years (1630–1643), and Georgia’s population similarly increased from a mere 100 in 1733 to as many as 9,000 in 1760. Between the years of 1717 and 1760, the number of settlers in North Carolina jumped from 9,000 to 93,000, and in South Carolina in the same period, from 19,000 to 100,000.

Overall, the total population of the 13 original colonies went from 220,000 in 1690 to 1,500,000 in 1760, then soared to 2,750,000 by 1790. Between 80% and 85% of the population was English. English customs, clothing, architecture, language, literature, law, and religion dominated in the colonies and shaped early U.S. culture. Although persons of English descent are now only the third-largest ethnic group in the United States (after German and Irish), English culture still predominates in America.

Once the Revolutionary War (1775–83) began, English immigration to America virtually ceased until about 1790. Then, a shortage of land in England led a number of farmers to take advantage of the new lands being cleared in the United States. Beginning in the late 1790s, thousands of textile workers also began flocking to the United States from England, settling in the mill towns of New England and New Jersey. Immigration was brought to a halt again when England and France went to war in 1803, and all ships were commandeered for military

use. When the war ended in 1815, English immigration to the United States resumed with force, bringing 750,000 English to the shores of America between 1815 and 1860. Most settled in the north.

The American Civil War (1861–65) once again halted immigration, but as soon as the war ended, the largest wave of English immigration to the United States began. A series of crop failures in England, plus a tremendous increase in opportunities available in America because of industrialization and westward expansion, created a high motivation for immigration. From 1865 to 1895, some 2,300,000 English moved to the United States. Some took industrial jobs in the East, while others became farmers or ranchers in the Midwest and West.

One interesting group of English immigrants to the United States were the gentlemen ranchers who set up huge cattle operations in the West in the late 19th century. Most were young aristocrats who had been educated at Eton or Harrow or one of the other elite schools in England. They played tennis and chess, drank tea, and rode with the cowboys during round-up time. Scottish and Irish aristocrats also established cattle ranches, though most of them took the enterprise more seriously than did the English. For the most part, the English gentlemen were drawn to the romance of the “Wild West,” and once real life took over and the free range became overcrowded, harsh winters killed off the cattle, and Native North Americans put up a fight for their dwindling lands, the gentlemen packed up and moved back to England. They did leave behind new cattle breeds to blend with the American stock, and some great stories of the “English cowboys.”

Another notable group of English immigrants were the United Society of Believers in the Second Coming of Christ, more commonly known as the Shakers, who arrived in the late 1700s. Shakers are notable not only for their distinctive religious communes, simple but elegant furniture, and music (“Simple Gifts” has become part of the national songbook), but also because they were led to the United States by a woman, Mother Ann Lee. Ann Lee (c.1736–1784) was born in England and was a member of the Church of England until the age of 22 when she joined the Wardley Society, a group led by James Wardley that split off from the Quakers. The Wardley Society held emotional services filled with body movement and shaking and became known as the “Shaking Quakers,” or later simply “Shakers.” In August 1774, Ann Lee arrived in New York with eight followers to spread their faith in the New World. By the early 1800s, 18 Shaker communities had been established in New York, Massachusetts, Connecticut, New Hampshire, Maine, Ohio, Kentucky, Indiana, Georgia, and Florida, with an estimated 5,000 members total at their peak. Shakers are not opposed to technological innovations (unlike the Amish) and, in fact, are responsible for many improvements in daily life that we now take for granted: the flat broom, clothespin, circular saw, grain harvesters and separators, and the first round barn in America (still standing at Hancock Shaker Village in Berkshire County, Massachusetts). Shakers believe in celibacy and therefore can only add to their membership through proselytizing. Numbers began to decline as members died, and all but one Shaker community either disappeared or was turned into an historic site. The only remaining active Shaker community is Sabbathday Lake in Maine.

Since the late 18th century, most English immigration to the United States has been made up of individuals and indi-

vidual families. There has been no great chain migration of entire communities and no development of “English towns” in the United States. Immigration from England to America steadily dropped off during the 20th century. One exception to that trend were the 70,000 English war brides who came to the United States in the 1940s. “War brides” were English women who met American servicemen stationed in England during World War II and either married them in England or became engaged to them, marrying them later in the United States. English war brides were the largest group of female immigrants to the United States in the 1940s. Because there were so many of them, the U.S. Army and federal government facilitated their immigration. Congress passed the War Brides Act of 1945 and the Alien Fiancées and Fiancés Act of 1946 to allow qualified women (and men) to immigrate. The U.S. Army set up embarkation camps in England to process applicants, then provided free overseas transportation on army ships. The war brides comprised the last significant wave of English immigration so far in U.S. history.

In the 2000 U.S. Census, a total of 24,514,199 persons (8.7% of the total U.S. population) reported having English ancestry. This number is sure to be low given that many English Americans list themselves on the census as “British” (1,085,718), which can also include Welsh, Scottish, and Northern Irish, or as simply “American” (20,625,093), making it impossible to get a fully accurate count of the number of English Americans. Less than 2% of English Americans are foreign born (many of whom are likely to be war brides). Because English Americans have lived in the United States since before it became the United States and currently make up a large percentage of the total U.S. population, they are one of the standards to which other immigrants assimilate.

Today, English Americans live in every state of the Union. The five most “English” states in terms of percentage of English Americans are Utah (29%), where descendants and followers of Joseph Smith, founder of the Mormon sect and himself a descendant of a passenger on the Mayflower, eventually settled; Maine (21.5%); Idaho (29%); Vermont (18.4%); and New Hampshire (18%). Wyoming, where most of the 19th-century gentlemen ranchers congregated, is sixth (15.9%); followed by Oregon (13.2%) and Montana (12.7%). Massachusetts and Virginia, where the original English colonists settled, are now in 12th (11.4%) and 13th (11.1%) places, respectively, after Delaware (12.1%) and Colorado, Washington state, and Rhode Island (all 12%).

English place names pepper the map of the United States. A few examples are Plymouth, Salem, Marblehead, Boston, Albany, New York, New Jersey, Virginia, Maryland, Pennsylvania, Maine, Delaware, and Cape Cod. English surnames are also common in America, such as Williams, Davies, Thomas, Evans, Charles, Morgan, James, Scott, Rivers, Hill, Brooks, Ford, Woods, Young, Black, Brown, Longfellow, Little, Armstrong, Taylor, Wainwright, Carpenter, Miller, Cartwright, Bishop, Masters, Bailey, and Smith (the most common surname in America).

The official church of England is, and has been for some time, the Anglican Church. Anglican immigrants to the United States created the Episcopal Church in America. Other early English immigrants were Puritan, Quaker, Shaker, or members of other Anabaptist sects, who established American denominations including American Friends (Quaker), Congregation-

alist, Unitarian, and American Baptist. Puritan Pilgrims in New England were the first Americans to celebrate Thanksgiving, joining with friendly neighboring Native North American peoples to give thanks for the fruits of the harvest.

English Americans Roger Williams, Increase Mather and his son, Cotton, and Jonathan Edwards were all important colonial religious leaders and writers. Colonial English American artists of note include Benjamin West and Charles Willson Peale. The 19th century saw a flowering of English American literature, with contributions by such writers as Nathaniel Hawthorne, Ralph Waldo Emerson, Oliver Wendell Holmes, Edgar Allan Poe, Walt Whitman, Emily Dickinson, Samuel Clemens (better known as Mark Twain), and three men who were also part French: Henry Wadsworth Longfellow, Henry David Thoreau, and John Greenleaf Whittier. Later English American writers include T. S. Eliot, William Faulkner, and Tennessee Williams.

So many English Americans contributed to American culture in the 20th century it would be impossible to list even a representative sample. A few of the best-known are film director Alfred Hitchcock, architect Frank Lloyd Wright, and actors and entertainers Vanessa Redgrave, Cary Grant, Bob Hope and Will Rogers (who is half Cherokee).

The majority of colonial and Revolutionary leaders were English Americans, among them Benjamin Franklin, Daniel Webster, Samuel Adams, James Otis, George Washington, and John Adams. Forces on both sides of the American Civil War (1861–65) were led by English Americans: Union general Ulysses S. Grant, and Confederate general Robert E. Lee. Besides George Washington, John Adams, and Ulysses S. Grant, a number of other English Americans have served as U.S. president, including James Madison, John Quincy Adams, William Henry Harrison, John Tyler, Zachary Taylor, Millard Fillmore, Franklin Pierce, Abraham Lincoln, Andrew Johnson, James A. Garfield, Grover Cleveland, Benjamin Harrison, William H. Taft, Warren G. Harding, Calvin Coolidge, Harry S. Truman, and Lyndon B. Johnson.

U.S. history is replete with English Americans who have made significant contributions, such as polar explorer Admiral E. Byrd; naval officer Commodore Matthew C. Perry; Army general George C. Marshall, author of the Marshall Plan; and inventors Eli Whitney, Samuel F. Morse, Isaac M. Singer, Thomas A. Edison, and Wilbur and Orville Wright. Samuel Slater founded the American textile industry; Colonel Edwin L. Drake founded the American oil industry; Clara Barton founded the American Red Cross; Dr. William Janes Mayo and his brother, Charles Horace, founded the Mayo Clinic in Rochester, Minnesota; and Marshall Field founded the famous department store of the same name. Railroad tycoon James J. Hill, historian Charles A. Beard, and humanitarian Jane Addams were also English Americans.

Quite a bit of research has been done into the descendants of passengers on the Mayflower. Some notable Americans whose ancestors arrived on that ship include those already mentioned, Ralph Waldo Emerson and Joseph Smith; George Eastman, founder of Eastman Kodak Company; Alan Shepard, Jr, the first American astronaut in space; media personalities Clint Eastwood, Richard Gere, Christopher Reeve, Bing Crosby, Marilyn Monroe, Orson Welles, Humphrey Bogart, Cokie Roberts, and Hugh Hefner; as well as U.S. presidents George H. W. and George W. Bush.

One other significant contribution to American society for which we can thank English Americans is the Independent Order of Odd Fellows, a fraternal organization second only to the Freemasons. The first American Odd Fellows lodge was established in 1819 in Baltimore, MD, by Thomas Wildey, an English ex-patriate. By 1829 there were 31 local lodges in Maryland, Massachusetts, New York, Pennsylvania, and Washington, D.C. An African American member of the England Grand United Order of Odd Fellows was refused recognition by the American Odd Fellows and so began a lodge for people of color under the Grand United Order, which then spread throughout America. Both societies have also created organizations for the women related to male members of the order: the Daughters of Rebekah, and the Daughters of Ruth. Odd Fellows orders have created systems of support for their members, who traditionally come from lower economic classes than Freemasons, including “homes” nationwide for those needing assistance.

The list could go on and on. Although English immigration to the United States was minimal in the 20th century, the English were among the founders of the United States and so had a tremendous impact on American life. Descendants of those early settlers continue to create an English American backdrop to U.S. culture, despite the fact that they are now only the third largest ethnic group in America.

Because English immigrants in colonial times and early years of the United States came mostly in educated, middle class family groups, the role of women traditionally maintained in England traveled with them. Their close ties with their churches, be it Catholic, Congregational, or Quaker, reinforced those traditional roles as well. Women were masters of the home sphere while men worked in the public marketplace. This role became celebrated in the early 1800s after “Yankee,” a derogatory term for English Americans connoting a ruthless and arrogant moneymaker, began to be claimed by New Englanders as a positive definition of self-reliance and enterprise. To curb the ruthless individuality of the men in the marketplace, Yankee women were raised up as models of self-restraint, self-denial, and order. Their job was to instill in their husbands and children these conservative, decorous values. One woman, Lydia Maria Child, capitalized quite successfully on this movement to tame the Yankees with her book, *The American Frugal Housewife*, a compendium of housekeeping tips, advice, and recipes for thrifty living. Her book was so popular it was reprinted 28 times in 13 years after its initial publication. The orderly, economic Yankee matriarch described in Child’s book became the exemplar for American women everywhere.

# FILIPINO AMERICANS

For more information on Filipino history and culture, see **Vol. 3: Filipinos**.

## OVERVIEW

The first Filipinos, people from the Philippines, to set foot in what is now the United States were crew members of the Spanish galleon, *Nuestra Señora de Esperanza* (Our Lady of Hope), which landed on the shore of present-day California on 18 October 1587. Filipinos were conscripted to work on Spanish ships in the Manila Galleon Trade between Mexico and the Philippines from 1565 to 1815. To escape the harsh treatment inflicted on them by their Spanish officers, many Filipinos jumped ship in New Orleans beginning around 1765 and settled there. By 1833, a significant Filipino community had developed in the fishing village of St. Malo in the Mississippi River delta area.

St. Malo was destroyed by a hurricane in 1893, and the survivors founded Manila Village, south of New Orleans. Forty years later, in 1933, Manila Village had a Filipino population of 1,500. The Manila Village Filipinos developed the process of sun drying shrimp to market outside Louisiana. Eventually, this first wave of Filipino immigrants moved on to the present-day states of California, Texas, and New Mexico.

In 1903, after the United States had defeated Spain in the Spanish-American War of 1898, the United States annexed the Philippines, which had been a Spanish colony for nearly 400 years. When the Filipinos revolted against American occupation, American forces crushed them, killing an estimated one million Filipinos. The Filipinos then became the only Asians ever colonized by the United States. As colonists, they were free to immigrate to the United States, and many did. This is considered the second wave of Filipino immigration.

Many Filipino students also came to the United States during this second wave, which lasted from about 1906 to 1934. The U.S. government gave scholarships, or “pensions,” to young Filipinos (male and female) to study at American universities. These students were called *pensionados*. Pensionados were expected to return to the Philippines when they had finished their studies, but many stayed in the United States.

Filipino laborers were also “imported” during the early 1900s to provide cheap labor on the U.S. west coast, particularly in the agricultural industry, although some found work in salmon canning factories. Most of the laborers were young single men, between the ages of 16 and 22, with little formal education. Without family attachments, they were prime candidates for seasonal migrant work. As physically small people (in general), they were considered ideal for “stoop” labor—planting, and picking things that are close to the ground—a very demanding job. The young Filipinos were so eager for employment that they were willing to take jobs that were too harsh for others to consider.

Filipinos were then recruited for the Hawaiian sugar industry, when Japanese immigration was restricted. Between 1907 and 1929, Hawaiian employers imported 71,594 Filipino workers. About 15,000 of them later moved to California. Many stayed in Hawaii, however, eventually making up a significant percentage (18% by 1930) of Hawaii’s resident population.

U.S. immigration laws in the 1920s prevented any Asians except Filipinos from immigrating to the United States. Therefore, Filipinos were in great demand as low-wage workers on the west coast. From 1920 to 1929, 51,875 Filipinos arrived in California, along with the 15,000 who moved there from Hawaii. Filipinos also found their way to the Alaskan salmon canneries, quickly becoming the largest immigrant group employed there. By 1930 the Filipino population on the U.S. mainland had reached 45,200. Thousands more were in Hawaii and Alaska. European Americans began to feel threatened by the Filipino presence, and the U.S. government decided to restrict any further Filipino immigration after 1934.

Those Filipinos already residing in the United States were subjected to brutal attacks and harsh laws restricting their access to government aid. Working at such low-wage, seasonal jobs, many found the winters particularly difficult. Antimiscegenation laws prevented Filipino men from marrying European American women, leaving them with little opportunity for family development, as Filipino men outnumbered Filipino women in the United States by 15 to 1 at that time.

The Third Wave of Filipino immigration occurred after World War II, lasting from 1945 to 1965. This wave was made up of military personnel and their families, students, and exchange workers. Foreign-born Filipinos became eligible for U.S. citizenship during this time, making life in the United States much easier for Filipino immigrants.

The 1965 Immigration Reform Act, which lifted discriminatory restrictions on all Asian immigration, opened up the Fourth Wave of Filipino migration to the United States. In the first two decades after the passage of the Act, 668,870 Filipino immigrants arrived in the United States. From 1960 to 1980, the Filipino population in the United States more than quadrupled from 176,130 to 781,894. Filipinos continue to flow into the United States in this Fourth Wave, many of them well-educated professionals and highly skilled workers, creating what is known as a “brain drain” in the Philippines.

According to the U.S. Census, the Filipino American population was 2,364,815 in 2000. At 18% of all Asians in the United States, Filipino Americans are the second-largest group among Asian/Pacific Americans (Chinese Americans are the largest). About two-thirds of Filipino Americans in 2000 were foreign-born, but the majority are naturalized citizens; Filipino Americans have the lowest percentage (26%) of noncitizens among all Asian American groups.

Most Filipino Americans live in the West; California had the highest number in 2000 at over one million, and Hawaii had the largest concentration at almost one-quarter of the state’s population. Other states with large numbers of Filipino Americans include Illinois, New York, New Jersey, and Washington. Florida and Texas also host large numbers of Filipino Americans, as does Nevada. Although early Filipino immigrants tended to settle in rural agricultural areas, today’s Filipino Americans, generally better educated than earlier immigrants, are choosing large urban centers and suburbs as their homes.

Filipinos speak more than 70 dialects, most of which belong to eight major language groups. The most common of these groups are Tagalog, Visayan, and Ilocano. About two-thirds of Filipino Americans speak a dialect from one of these three groups, with the majority speaking forms of Tagalog. A few Filipino words have become standard in English usage, such as yo-yo and boondocks.

Many Filipinos speak English before arriving in the United States, due to their years as a U.S. colony in the early 20th century. Filipino Americans have a very high rate of English language proficiency (75%), the second-highest of any Asian/Pacific American group after Asian Indian Americans. Despite these promising statistics, however, foreign-born Filipino Americans still experience language barriers. Over 50% of foreign-born Filipino Americans speak a native Filipino language at home, making it more difficult to become truly fluent in English.

Most Filipino Americans are Roman Catholic, the predominant religion of the Philippines, dating to 400 years as a Spanish colony before the United States took over in 1903. A few Filipino Americans are Protestant, and there is a minority Muslim population. Rites of passage celebrations center around Christian (or Muslim) traditions.

Along with Christian or Muslim religious holidays, Filipino Americans continue to celebrate Philippine Independence Day

on June 12 with parades, cultural fairs, folk dances, and traditional foods. Rizal Day on December 30 commemorates the martyrdom of Jose Rizal, a Philippine national hero. Philippine–American Friendship Day is added to the American Independence Day celebration on July 4.

Although early Filipino immigrants to the United States worked at low-paying, seasonal jobs and therefore lived in poor, often harsh conditions, later waves of Filipino immigration have brought well-educated, highly skilled Filipinos who have been fairly successful in the American work world. The majority of Filipino Americans now have comparable incomes to the rest of the U.S. population and enjoy a moderate to high standard of living.

The number of Filipino women migrating to the United States has increased to the point where Filipino American women now outnumber Filipino American men (54% women; 46% men). This fact, combined with the repeal of antimiscegenation laws and the shift from single male to family migration,

has led to a sharp rise in the number of Filipino American family households. Because of their traditional cultural and religious (Roman Catholic) values, most Filipino Americans have large families; in 2000, the average Filipino American family consisted of 4 persons, as compared to 3 persons for all U.S. families.

The large majority of Filipino American families are headed by a married couple. Less than 14% are headed by a woman alone, and less than 5% by a man alone. Though extended family groups are traditional in the Philippines, Filipino Americans generally live in nuclear family units. This lack of available support can prove difficult for those used to turning to other family members for help. Also, because children usually attend public schools, they are exposed to European American culture and values without the balancing force of an extended Filipino community at home. Filipino American parents struggle to keep Filipino traditions alive in their Americanized children.

In keeping with the fact that many Filipinos came to the United States as students, Filipino Americans place a high value on education. In 2000, over 87% of Filipino Americans 25 years old or older were high school graduates, compared to about 80% of all Asian/Pacific Americans and of the total U.S. population. Of the same age group, 43.8% were college graduates, just slightly under the 44.1% rate for all Asian/Pacific Americans, but well above the total U.S. population rate of 24.4%.

Despite their high levels of education, however, Filipino Americans educated outside of the United States often find it difficult to obtain employment in the United States that is in keeping with their educational qualifications. Strict licensing requirements for certain occupations in the United States (such as doctors, lawyers, dentists, and pharmacists) prevent some Filipino Americans from practicing their professions in the United States, even though they may have been fully qualified, practicing professionals in the Philippines.

The rich cultural heritage of Filipinos and Filipino Americans is only recently being made available to the wider public. There are many successful Filipino American writers, including Jessica Tarahata Hagedorn, Jose Garcia Villa, and Carlos Bulosan. Bulosan's autobiography, *American Is in the Heart*, has been named one of the 50 most important American books ever published.

Successful Filipino American singers, actors, and entertainers include Tia Carrere, Lou Diamond Phillips, and Nia Peeples. A well-known Filipino American ballet dancer is Maniya Barredo, who was the first Filipina to give a solo dance concert in the United States at Carnegie Hall in May 1972. Barredo served as the prima ballerina of the Atlanta Ballet and became its dance coach in 1983. Pulitzer Prize winning journalists Alex Tizon and Byron Acohidio are Filipino American, as is the significant innovator and inventor in the computer chip industry, Diosdado Banatao. Among the many Filipino American sports figures are baseball players Benny Agbayani and Bobby Chouinard, and U.S. and World Championship figure skater Tai Babilonia.

Filipino Americans had a higher rate of participation (71%) in the American workforce in 2000 than that of all U.S. citizens (64%). Filipino American women had a higher rate (65%) of participation in the labor force than that of all U.S. citizens and well above the rate of all Asian American women (56%).

*Amado Calimquim, a Filipino American, holds a photograph of himself in uniform when he was a member of the Philippine Scouts. Mr. Calimquim served under the Americans as a soldier in WWII and was granted citizenship through naturalization in the 1990s. (Marvi Lacar/Getty Images)*

Over half of employed Filipino Americans work at white-collar jobs, while the rest work in service, labor, or agricultural (farming, fishing, forestry) occupations.

The medical profession has a particularly high number of Filipino American workers. Nearly every hospital in New York and New Jersey has Filipino American doctors and nurses on staff. Filipino Americans are also well represented in government and military posts, including Benjamin N. Cayetano who served as governor of Hawaii from 1994 to 2002.

Filipino Americans have largely overcome their bleak beginnings in the United States, transforming themselves from a population of uneducated seasonal laborers to one of the more successful ethnic groups in America. Racial prejudice still afflicts these moderately dark-skinned people, and the legacy of discrimination and exclusion from the rest of American society still shows its scars. For the most part, however, Filipino Americans are creating better and better futures for themselves in America.

The strongly Catholic culture, with its emphasis on heterosexuality, of most Filipino Americans makes life for gays and lesbians difficult. The majority wait years before coming out to their families, and many never reveal their sexuality to their families at all. This need for secrecy combined with a gener-

al tendency for Filipino Americans to be overlooked in pan-Asian American outreach efforts has led to a very high rate of HIV/AIDS cases among Filipino American gays. In 2001 HIV/AIDS was the leading cause of death among American-born Filipino American men between the ages of 25 and 34 in California and the second-leading cause of death among all Filipino Americans in California. Filipino Americans also had the highest rate of HIV/AIDS cases among Asian/Pacific Islanders in California.

Filipino American gays and lesbians have begun to band together across the United States to address these and other issues that plague their community. New York City is the home base for Kambal sa Lusog ("Pilipinas Lesbians, Bisexuals, and Gays for Progress") and Kilawin Kolektibo (a group for Filipino lesbian and bisexual women), two groups specifically for Filipinos; and Asian Lesbians of the East Coast (ALOEC) as well as Gay Asian and Pacific Islander Men of New York (GAPIMNY), both of which include Filipinos among their membership. These groups and others work to promote education, justice, and social support for lesbian, gay, bisexual, and transgendered Filipino Americans.

# FRENCH AMERICANS

For more information on French history and culture, see **Vol 4: French**.

## OVERVIEW

The French first arrived on the North American continent in 1523 when Italian explorer Giovanni da Verrazano, sailing under the auspices of the king of France, Francis I, came with his French crew in search of the Northwest Passage. Verrazano was unsuccessful, as was Jacques Cartier, who followed him in 1534. However, Cartier also came with the intention of claiming lands for France and bringing back riches. Cartier sailed up the St. Lawrence River and claimed the surrounding lands as "New France." By the early 1700s, New France had expanded to include all of the territory between what is now northeastern Canada through the American Midwest, south to New Orleans. Virtually all of North America from the Appalachian Mountains to the Missouri River was claimed by France.

Most of France's early dealings with North America involved the fur trade. French fur traders established alliances with many Native North American tribal groups, who supplied them with furs, guides, and transportation in return for European goods (see **Native North Americans**). French explorer and cartographer Samuel de Champlain arrived in 1603 and mapped much of the Northeast, including Lake Champlain, to which he gave his name. Champlain also founded Quebec and Port Royal (now called Annapolis Royal), the first permanent French settlements in North America.

French Jesuit missionaries began to arrive in the 17th century as well, establishing missions along the St. Lawrence River and around the Great Lakes. Other French explorers and traders also came to ply their trades in the 17th and 18th centuries, extending French territory further and further inland. René-Robert Cavelier, Sieur de La Salle traveled down the Mississippi River (thinking it might be the Northwest Passage) and claimed the territory of Louisiana for France, naming it after then-king Louis XIV. The French founded a number of cities during the 17th and 18th centuries that still exist today, including New Rochelle (1688), Detroit (1701), New Orleans (1718), and St. Louis (1764).

The struggle between the British and French for control of North America finally came to a head in 1754 and what is now known as the French and Indian War began. It ended nine years later, in 1763, with the defeat of the French. All of New France was turned over to Britain, except for New Orleans, which the French then ceded to Spain. Most French settlers simply adapted to the change in government, though when the American colonists revolted against British rule a few years later, the French saw their chance to get back at their conquerors and stood with the colonists in support of independence.

Many French immigrants to America in the 16th–18th centuries were Huguenots, French Calvinist Protestants who were fleeing persecution in Catholic France. Most Huguenots were middle-class merchants, skilled laborers, craftspeople, and business entrepreneurs who contributed a great deal to the early development of the American colonies. Priscilla Mullins (Molines), a French Huguenot, came to America on the Mayflower in 1620 and later married John Alden. Her descendants

include John Quincy Adams and Henry Wadsworth Longfellow, who immortalized Priscilla in his poem *The Courtship of Miles Standish*. Many other significant early American figures were descendants of Huguenots, including Paul Revere, Frances Marion (the “Old Swamp Fox”), John Jay, and Alexander Hamilton.

During the 1790s, a number of French aristocrats fled to the United States to escape persecution or even death in the French Revolution. At the same time, a revolution in the French colony of St. Domingue in the Caribbean drove out the French aristocrats there, most of whom also came to the United States. A shift in French politics in 1815 then led French Bonapartists to flee to the United States. Between the 1790s and 1850s, some 10,000–25,000 French immigrated to America.

French immigration has never been substantial. The largest wave occurred in 1841–1850, when 77,262 French immigrants entered the United States. For the most part, conditions in France were and are good enough that few French citizens wish to leave. Those who do immigrate tend to adapt quickly to their new surroundings, assimilating completely into mainstream American culture. The only communities that have remained distinctly French are Quebec, in Canada, and New Orleans, Louisiana, where Acadians from northeastern Canada relocated and became known as Cajuns (see **Cajuns**). The state of Louisiana continues to base its legal system on the Code Napoléon (a code of laws written by Napoleon Bonaparte), the only state to do so; other states use English Common Law. There is also a somewhat less distinct French culture in

New England, made up of immigrants from Quebec, who call themselves Franco-Americans.

The most-French states in the United States are New Hampshire (14.6%), Vermont (14.5%), Maine (14.2%), Louisiana (12.2%), and Rhode Island (10.9%). For the most part, however, French Americans are well distributed throughout the United States. The top five states in terms of numbers of French Americans are California (782,059), Louisiana (545,416), Massachusetts (508,211), Michigan (489,235), and New York (477,673). Texas (463,982) is sixth, followed by Florida (444,162), Ohio (271,423), Illinois (267,076), and Washington (215,097). French immigration since the mid-19th century has been slight, so most French Americans are at least second-generation, if not third-, fourth-, or later-generation. The percentage of foreign-born French Americans is just over 2.5% of the total French American population of 8,309,666, according to the 2000 U.S. Census.

Because the French have been in America for so long, they have contributed a great deal to American culture. French place-names abound, including New Orleans, St. Louis, Detroit, New Rochelle, Cadillac, Vincennes, Eau Claire, Duluth, Sault Ste. Marie, Boise, and numerous others. Many French words have become common in American usage, such as boulevard, avenue, laissez-faire, coup, potpourri, r.s.v.p. (répondez, s’il vous plait, or “respond, please”), chic, déjà vu, à la carte, and cuisine. In the realm of cuisine, Americans have adopted not only a number of French foods, but also their names and terms for their preparation: omelet, mayonnaise, hors

*Franco-American actor and director Jean-Marc Barr.*

d'œuvres, bouillon, consommé, café au lait, canapé, croissant, éclair, vinaigrette, salade nicoise, hollandaise, parfait, coq au vin, filet, julienne, purée, ^ la mode, ^ la king, and au gratin, to name just a few.

Although many early French immigrants were Huguenots, most French Americans are Catholic. They celebrate traditional Christian rites of passage and holidays. The Cajun community in New Orleans is known for its Mardi Gras ("Fat Tuesday") festivities in February, occurring the day before Ash Wednesday, which marks the beginning of Lent. In Lowell, Massachusetts, the Franco-American community takes special notice of the Feast of St. John the Baptist on 24 June with a week-long Franco-American festival, which has been held each year since 1970.

Most French immigrants to America were fairly well educated and they continued to value education highly in their new home. Girard College in Philadelphia and the Julliard School of Music in New York City were both founded by French Americans. The Gallaudet family made significant contributions to education for deaf persons. Thomas Hopkins Gallaudet founded the Hartford School for the Deaf in Connecticut and taught with sign language rather than the mouth movements commonly used at the time. His sons also served the deaf community: Thomas, Jr., established a church where deaf persons could worship; and Edward served as the president of Columbia Institution for the Deaf and the Dumb and the Blind in Washington, D. C., which was later renamed Gallaudet College in honor of Thomas, Sr.

Fanueil Hall in Boston, Massachusetts, was given to the city by Peter (Pierre) Fanueil, a second-generation French American merchant. Perhaps the most famous French contribution to American culture is the Statue of Liberty, designed by French sculptor Frédéric-Auguste Bartholdi. The statue was presented to the United States by France in 1884 to commemorate the French-American alliance begun in the American Revolutionary War (1775–83) and continuing through the French Revolution (1789–93) and beyond. The site chosen for the statue was Bedloe's Island in New York Harbor, where Huguenot immigrant Isaac Bedloe had pastured his cows in the 1650s. The island was renamed Liberty Island.

There have been many successful French American writers, among them Henry David Thoreau (part French, part Scottish), Henry Wadsworth Longfellow, Edna St. Vincent Millay, John Greenleaf Whittier, Kate Chopin, Will Durant, Stephen Vincent Bené, Anaïs Nin, Paul Theroux, Jack Kerouac (born Jean-Louis Lebris de Kerouac), and Annie Proulx. French American visual artists include John James Audubon and John LaFarge (sometimes called the "father of mural painting in America").

Composer Darius Milhaud and orchestral conductor Pierre Monteux are just two of the numerous French American musicians who have added their talents to U.S. society. On stage and screen, French Americans include actors Claudette Colbert, Charles Boyer, Nanette and Shelly Fabares, Robert Goulet, Julie Delpy, Angelina Jolie, Charlize Theron, and Ellen DeGeneres, among others. French American film director Jean Renoir is the son of the famous French Impressionist painter Pierre-Auguste Renoir. Famed Cajun chefs Emeril Lagasse and Paul Prudhomme are also French American.

Four U.S. presidents so far have claimed French ancestry: John Tyler, James Garfield, Theodore Roosevelt, and Franklin Delano Roosevelt (the Roosevelts were also part Dutch). The French American La Follette family of Wisconsin spawned three generations of governors and senators, serving from 1901 into the 1930s. Jacqueline Lee Bouvier Kennedy served as the first lady of the United States from 1960 to 1963 and maintained a high profile in American culture for the rest of her life. The first woman ever to deliver the keynote speech at the Republican National Convention was French American Anne Legendre Armstrong in 1972. Armstrong later served as the U.S. ambassador to Great Britain in 1976–1977.

French Americans have also made significant contributions to the business, science, and intellectual worlds of U.S. society. Pierre Samuel du Pont de Nemours and his son Eleuthere Irénée du Pont de Nemours, founders of the Du Pont chemical manufacturing company, developed nylon, dacron, and teflon. Dr. Edward Trudeau established the world's first sanitarium for tuberculosis sufferers at Saranac Lake, New York, in 1884. More recently, feminist scholar Ti-Grace Atkinson has helped open new doors in Americans' and others' thinking.

Joan Benoit Samuelson, a French American, won the gold medal in the Olympic Women's Marathon in 1984, the first year it was included in the Olympic Games. French Americans Ron Guidry, James Barrett, Lou Boudreau, Jesse Burkett, and Leo Durocher have all made their mark in baseball, as has quarterback Bobby Hebert in football. Hockey is perhaps the favorite sport among French Americans and has seen many French American stars, including Mario Lemieux, Jean Beliveau, Jacques Plante, and Maurice "Rocket" Richard.

French Americans have always adapted well to American life and assimilated easily into mainstream culture. They have met with little serious discrimination and are generally well respected by other Americans. With the long-standing alliance between France and the United States, dating back to the American Revolutionary War, Americans view the French as friends and therefore welcome them into their country.

French Americans are generally so well integrated into mainstream American society that they suffer no unique issues in regards to gender or sexuality issues. French American Catholics, however, tend to be more traditional than other American Catholics, creating an even greater struggle for French American than for other Catholic homosexuals and women to navigate Catholic doctrine prohibiting homosexual activity and limiting women's rights (re: birth control, abortion, ordination to the priesthood, etc).

# FRENCH CANADIANS

**ALTERNATE NAMES:** Cajuns (in the United States)

**LOCATION:** Canada (mainly Quebec); United States (mainly Louisiana and New England)

**POPULATION:** 6.5 million in Canada; 2–5 million in the United States

**LANGUAGE:** French

**RELIGION:** Roman Catholicism

**RELATED ARTICLES:** Vol. 2: Canadians; Vol 4: French.

## 1 INTRODUCTION

French Canadians are descendants of Canada's colonial-era French settlers. Most live in the province of Quebec, where they account for a majority of the population. French Canadians can also be found in other parts of Canada—notably in the Maritime provinces—as well as in the United States. The past 35 years have seen a strong resurgence of the French Canadians' sense of cultural identity. With this has come a political separatist movement with far-reaching implications not only for Quebec, but for all of Canada and the United States as well.

The French presence in Canada began in 1534, when the explorer Jacques Cartier claimed the Gaspé Peninsula for France; the following year, Cartier discovered the St. Lawrence River. Permanent settlement did not start until the beginning of the 17th century, when Samuel de Champlain founded Quebec City in 1608. With the discovery of the Great Lakes, the fur trade flourished and missionaries began to arrive. The French eventually carved out an enormous territory stretching east to the Maritime Provinces, north to the Hudson Bay, west to the Great Lakes, and south to the Gulf of Mexico. Around 10,000 French settlers immigrated to the New World between 1608 and 1756.

By the late 17th century, France and Britain, already at war with each other in Europe, had become rivals for control of the region known as New France. After France's defeat in the French and Indian Wars that began in 1756, Britain won control of New France; and British rule was officially recognized by the Treaty of Paris in 1763. In the region of the present-day Maritime Provinces, the Acadians (French Canadians from the northeast) had already come under British rule by 1713, and roughly 10,000 (out of a total population of about 13,000) were deported in 1755. Many eventually returned to their homeland, while others settled in Quebec and still others, who later became known as Cajuns, settled in Louisiana.

In spite of their British rulers' negative attitudes toward their language and culture, the French Canadians remained a distinct cultural group in Quebec and elsewhere. Contributing factors were the unifying influence of the Catholic Church, the strong tendency to marry within their own community, and the tradition of having large families. When the provinces of Quebec, Ontario, New Brunswick, and Nova Scotia joined to form the Dominion of Canada on 1 July 1867, French Canadians accounted for one-third of the new country's population.

In the 20th century, military service in the two world wars revealed the continuing cultural divisions in Canadian society. British Canadian soldiers mocked the broken English of their French counterparts, and the draft was viewed as an affront to the independent spirit of the French Canadians. After

1945, there were growing demands for political autonomy in Quebec, and, beginning in 1960, the province was swept by the “Quiet Revolution,” a wave of political, educational, religious, and economic reform. The influence of the Catholic Church was greatly reduced, and a more modern and secularized French Canadian society emerged.

The movement was justified by important Quebec intellectuals and labor leaders, who argued that the economic difficulties of Quebec were caused by English Canadian domination of the confederation. According to leaders of the independent movement, the solution to this problem was to modify or to end the ties with other provinces and the central government. The tension would lead into savaged violence in a matter of years. In 1970 terrorist acts by alleged separatists took place in Canada. The turmoil had its climax when Pierre Laporte, Quebec’s minister of labor and immigration, was kidnapped and assassinated. In 1974, French was recognized as Quebec’s official language, and the separatist Parti Québécois came to power in the province in 1976. A proposal for political independence from the rest of Canada was defeated at the polls in 1980, but French Canadian separatism has remained a contentious issue for both the province and the nation as a whole.

In a referendum held in October 1992, voters in Quebec narrowly rejected secession from Canada.

## 2 LOCATION AND HOMELAND

The 6.5 million French Canadians living in Canada represent about a quarter of the country’s total population. The majority—5.1 million—live in Quebec, Canada’s largest province. The French Canadians of the Maritime provinces—New Brunswick, Nova Scotia, and Prince Edward Island—are unified by their distinctive Acadian background and culture; they account for around 15% of the population in those provinces. There are also French Canadian communities in Ontario and the western provinces, with the greatest populations in Manitoba and Alberta. In addition, there were over 2 million persons of French Canadian descent in the United States as of the 1990 census (the actual number may be as high as 5 million). Most live in Louisiana, where they are known as Cajuns, or in New England.

## 3 LANGUAGE

Canada’s constitution established both English and French as official languages. About three-fifths of the population speaks English as their first language and around one-fourth identifies French as their primary language. French Canadians are the largest group of Francophones (French speakers) in North America. The main categories of French spoken by Francophone Canadians are called Québécois (Quebec French), Acadian French, Brayon French, and Newfoundland French. The majority of French Canadians are concentrated in Quebec, where they represent about 80% of that province’s 7,744 million residents. About 15% of the population in the Maritime Provinces (Nova Scotia, New Brunswick, and Prince Edward Island) speaks French, and there are Francophone areas in Manitoba and Ontario. Although French and English both have the status of official languages in Canada, the country is predominantly English-speaking, and Francophones are perennially concerned that their “French island” will be swallowed up in an “ocean of English.” While Canada is generally considered a bilingual country, only 16% of the population is actually bilingual. About 61% speak English only and 24% French only.

The vocabulary and pronunciation of Canadian French differ from those of the language spoken in France. Québécois is based on an archaic form of French and contains many English expressions. Many terms are closer to the English than to the French form of the word. For example, “to marry” is *marier* instead of the French term, *épouser*. Similarly, “appointment” is *appointment* instead of *rendezvous*, and “ignore” is *ignorer* instead of *négliger*. Joual, a special dialect spoken in Montreal, shortens so many words by contracting and dropping syllables that it is incomprehensible to most outsiders. For example, the phrase *Je ne suis capable* is shortened to a single syllable, pronounced “shway.”

The Acadians speak a distinctive form of French characterized by many archaic expressions preserved from the 17th-century dialects of western France. Acadian dialects differ from one region to another, and in Moncton, New Brunswick, contact with English speakers has produced a French-English called Chiac. Such hybrids are also generically known as “franglais.” The Canadian educational system promotes the use of modern, standard French in its French-language schools and discourages the use of both archaic expressions and the mingling of French and English.

#### 4 FOLKLORE

The oral tradition of the French Canadians was strengthened by colonial laws against the establishment of presses and by the scarcity of French schools, both of which made it important for French Canadians to transmit their culture orally across the generations. Popular characters in French Canadian folklore include a hero figure named Ti-Jean (short for *petit Jean*, or Little John) and a hunter named Dalbec.

#### 5 RELIGION

The majority of French Canadians are Roman Catholic, and religion is fundamental in French Canadian life. The influence of the Catholic Church has heavily impacted the French Canadian community through the administration and, on occasion, monopolization of key institutions as health and educational centers. With the Quiet Revolution in the 1960s, the Catholic Church lost important terrain in its social and political influence. Since that time, the French Canadian community has become more secular. Church attendance has declined, and the influence of the Church on daily life has decreased. The Acadians traditionally combined Catholicism with a belief in the supernatural, including sorcery and spirits, but this phenomenon has been on the wane in recent decades. Despite the deep process of secularization experimented by the French Canadian community, a great deal of schools have remained confessional and governments have lost the battle for the complete secularization of the educational system.

#### 6 MAJOR HOLIDAYS

French Canadians call Victoria Day, celebrated on the Monday preceding May 25, Dollard Day, preferring to remember a 17th-century French war hero on that date rather than Britain's Queen Victoria. The most important religious holidays for French Canadians are Christmas and Easter. Many—especially those in rural areas—still observe the traditional Christmas celebration, which includes a large midnight supper (*Réveillon*) of *tourtières* (meat pies), *ragout* (stew), and other dishes, served after the family has returned from midnight mass on Christmas Eve. On St. Jean Baptiste Day (June 24), the Québécois celebrate their patron saint with parties, bonfires, and fireworks. The Acadians' patron saint is Our Lady of the Assumption, and Assumption Day (August 15) is their day of celebration.

#### 7 RITES OF PASSAGE

Most French Canadians observe the major life cycle events, such as birth, marriage, and death, within the traditions of the Roman Catholic Church. The government of Quebec, the home of Canada's largest French-speaking population, recognizes common-law marriage in cases where couples have lived together for two years.

#### 8 INTERPERSONAL RELATIONS

Like their English-speaking neighbors, French Canadians are hospitable, friendly, and polite, and consider good manners important. It is common for men to open doors for women or give up a seat if a woman is standing. French Canadians use the common greeting of *Bonjour* (Good day) for "Hello" and *Au revoir* for "Good-bye." Adults use first names and informal forms of address (such as *tu* rather than *vous*) only with people they know well, such as close friends or relatives. Both

men and women may exchange kisses on both cheeks in a European-style greeting. Close women friends often greet each other by embracing. The American "thumbs down" gesture is considered offensive. French Canadians consider it good manners to keep both hands above the table during a meal. Women rest their wrists against the table, while men lean on their forearms. Elbows, however, are only placed on the table after the meal is over. It is considered bad manners to eat on the street unless one is at a cafe or food stand.

#### 9 LIVING CONDITIONS

Housing in Canada varies from one region to another, depending on the local availability of building materials. Two out of every three Canadians own their own homes. Single homes are the most common type of dwelling although the current trend is toward greater numbers of multifamily structures. The homes of the Acadians, like most of those in the Maritime Provinces, are mostly built of wood.

Overall, Canadians enjoy excellent health. Canada has one of the world's lowest infant mortality rates—1 out of 100 live births, significantly better than that of the United States. Life expectancy is 74 years for men and 80 years for women. The Canadian national health plan, which has been a focus of attention in the U.S. debate about the future of its own health care system, covers at least three-quarters of all the nation's health-care expenses. Acadians still retain some of their traditional belief in folk medicine, including herbal cures and consultation with traditional healers, who are believed to have the power to cure various illnesses or stop bleeding.

After the United States, Canada has the world's highest per capita use of motor transportation. Private automobiles are used for four-fifths of urban travel, and there is one passenger car for every two persons. Canada's severe winters make road maintenance an ongoing and expensive task. Motorists cope with sub-zero winter temperatures by plugging their cars into battery warmers overnight. The government-owned Canadian Railways (CNR) and privately owned Canadian Pacific provide rail transportation. Water transportation is heavily used for both domestic and international shipping, and international air service is provided by government-owned Air Canada and Canadian Airlines.

#### 10 FAMILY LIFE

The family unit is the center of society. As in the majority of western developed societies, both parents commonly work outside the home. Even though traditional norms are still valued, non-traditional households have increased considerably over the last 30 years. Currently, about one third of marriages are expected to end in divorce, a high proportion of children are born out of wedlock, and there are many single-parent families.

Until the 1960s, the family lives of French Canadians were heavily influenced by the Roman Catholic Church. Large families were the norm, because of strictures against birth control and also the desire to bolster the size of the French Canadian community.

Today, the average couple has only two children, and the French Canadian divorce rate is comparable to that among other groups in North America: roughly half of all newly married couples eventually divorce. The increased divorce rate has raised the number of single-parent families.

Traditionally, French Canadian women either performed agricultural labor or worked as teachers, nurses, or factory laborers. Since the 1970s, however, educational and employment opportunities for women have expanded, and women have entered the professions and other traditionally male areas of the economy in increasing numbers. Quebec established an affirmative-action program for women in the early 1980s.

### 11 CLOTHING

French Canadians wear modern Western-style clothing. The traditional costume of the Acadians, which is still worn on special occasions, consists of white bonnets and blouses, black skirts, and white aprons for the women and white shirts, black vests, and knee-length black pants for the men. White stockings and black shoes are worn by both men and women.

### 12 FOOD

Quebec has a rich, distinctive French-Canadian cuisine. Popular dishes include the *tourtière*, a meat pie, and *ragoût de boulettes et de pattes de cochon*, a stew made from meatballs and pigs' feet. Other favorites also include French onion soup, pea soup, and *poutine*, a traditional dish made with French fries or grated potatoes. Quebec is also known for its maple syrup, and in early spring families enjoy traveling to one of the province's many sugar shacks for a "sugaring off," where local manufacturers sell samples of their products. In addition to candies, cookies, and other sweets, even foods such as ham and eggs are served, all cooked in maple syrup. Children enjoy eating *tourquettes*, a natural candy made by pouring boiling maple syrup onto fresh snow. Another typical French Canadian dish is pea soup. It is enjoyed all over Canada, and it is the traditional lunch on Saturday in Newfoundland, usually with dumplings called doughboys floating in it. Its main ingredients are peas, onions, carrots, celery, potato, ham, and bacon.

#### Tourtière

1½ to 2 pounds pork, ground or finely chopped  
 1 clove of garlic, crushed  
 1 medium onion, chopped  
 ½ cup hot water  
 ¼ teaspoon celery salt  
 ¼ teaspoon ground cloves  
 salt and pepper to taste  
 double 9-inch pie crust, homemade or frozen

Mix the water, pork, and seasonings in a saucepan. Cook over a low flame for 20 to 25 minutes and then cool. (Optional: ¼ cup dry bread crumbs may be added at this point.) Cover the bottom of a 9-inch pie pan with bottom layer of pie dough, add pork filling, and cover with top layer of dough. Seal the crust by pinching the edges together. Preheat oven to 350° F and bake pie about 35 minutes, or until browned.

### 13 EDUCATION

Education in Canada is administered by each province individually, although in all cases school attendance is compulsory from the age of 6 or 7 to 15 or 16. Quebec has two parallel systems, one of which is specifically for French-speaking, Catholic students. The Acadian populations of New Brunswick, Nova Scotia, and Prince Edward Island are legally guaranteed access

to French-language schools in predominantly French-speaking areas.

Most higher education in Canada is government-funded. Laval University in Quebec is Canada's oldest university, and McGill in Montreal is one of its most prestigious. The first francophone university outside Quebec, the University of Moncton in New Brunswick, was established in 1963.

### 14 CULTURAL HERITAGE

Canada has an extensive francophone communications network. The Canadian Broadcasting System's Radio Canada broadcasts French-language news programs, dramas, films, and sports events, as well as U.S. programs dubbed into French. French Canadian radio stations must allot 75% of their programming to music by French recording artists. Folk and country music are especially popular with Acadians.

Leading contemporary French Canadian authors include playwright Michel Tremblay and short-story writer Mavis Gallant. Perhaps the most renowned French Canadian author of the 20th century was Gabrielle Roy, whose first novel, *The Tin Flute* (1945), drew a stark portrait that opened the eyes of many in Canada, France, and the United States to the plight of Quebec's urban poor.

### 15 WORK

In 1992, 73% of all civilian employees in Canada worked in service-sector jobs, 27.7% in industry, and only 3.5% in agriculture. In 1990 the average income for full-time employment among Canadians 15 years and older was \$30,274. The unemployment rate in Quebec is higher than that in other provinces, and it reached 15% during the economic slump of the early 1990s.

Before the 1980s, management positions in Quebec tended to be dominated by English speakers. However, after the separatist Parti Québécois came to power in 1976, many English speakers left the province, and those who remained became part of a new social order in which the socioeconomic gap between the two groups has narrowed substantially. Today, there is a French Canadian bourgeoisie with interests in industry, financial institutions, and other economic strongholds. French Canadians work in the government as both managers and lower-level employees. They work in the professions and as small entrepreneurs. The emerging class of French entrepreneurs has traditionally favored businesses such as construction, in which they could overcome barriers posed by a lack of formal education or the need for extensive verbal contact with English-speaking clients. There is still a French-speaking working class in both unionized and nonunionized fields. Many Quebecois have performed hazardous and health-threatening work in the province's asbestos mines.

Before the 20th century, the French-speaking Acadians in the Maritime provinces participated in a subsistence economy that combined farming, fishing, and forestry. Today, many engage in commercial farming and fishing; this has kept rural areas populated in spite of some migration to the cities.

### 16 SPORTS

Hockey, the Canadian national sport, is popular among French Canadians. Every team in the National Hockey League includes French Canadians, and Quebec has had two professional teams since 1972. The Montreal Canadiens—popularly

known as the Habitants or Habs—have won the Stanley Cup, awarded to League champions, over 20 times. The exploits of Maurice Richard, the French Canadian hockey star of the 1940s and 1950s, are legendary. His suspension from the Canadiens before the 1955 Stanley Cup playoffs triggered rioting by fans that resulted in an estimated \$100,000 worth of damage.

### 17 ENTERTAINMENT AND RECREATION

In addition to the French-language radio and television programming broadcast by the Canadian Broadcasting Corporation (CBC), Quebec also has a large audience for English-language television and radio programming and magazines. *Le Journal de Montréal* and *La Presse* are the most widely read French-language newspapers.

Like Canadians of all backgrounds, French Canadians enjoy the beautiful and varied scenery of their native land on vacation trips, one of Canada's most popular forms of recreation. Many families own small cottages in the woods or at a lake shore, which they visit on weekends and during vacations. Others prefer to travel to distant parts of the country for camping or other outdoor activities.

A time-honored pastime among French Canadian families in Quebec is the "sugaring off" ritual. Early in the spring, they head for the woods to tap maple trees for sap that is then boiled down in *cabines à sucre* ("sugar shacks") to make maple syrup and maple sugar.

### 18 FOLK ART, CRAFTS, AND HOBBIES

Traditional crafts among the Acadians include knitting and weaving, and colorful hooked rugs are a specialty.

### 19 SOCIAL PROBLEMS

The global recession of the early 1990s threw Canada into an economic slump that included double-digit unemployment from 1991 through 1994; this reached its highest level in Quebec, where unemployment was as high as 15%. French Canadians have historically occupied a lower socioeconomic position than Anglophones. Traditionally, they have not been as well educated and have suffered widespread discrimination by the English-speaking majority.

A major concern of French Canadians today is the preservation of their culture and language against the threat of assimilation into English-speaking North America, especially in light of Quebec's decreased birth rate and its large number of immigrants from many different cultures (most of them non-francophone). In both Quebec and the Maritimes, the drain of resources caused by emigration to other parts of Canada and to the United States is also a concern.

### 20 GENDER ISSUES

Even though during colonial times French Canadian women were revered for their role as mothers, they were denounced as being intellectual inferiors to their men. Their role was to uphold the culture created by the men of New France, not to have any part in defining that culture. As a consequence, large families were the norm. Between 1850 and 1950, owing to a high fertility rate among French Canadian women, the proportion of Francophones in the Canadian population held at 30%. The fertility of the Francophones then dropped below the

*Local residents and tourists stroll among the flowers in the Place Jacques-Cartier of Old Montreal, Quebec, Canada.*  
(© Dave G. Houser/Corbis)

Canadian average toward the mid 1960s, and today the average couple has only two children.

The transformation of French Canadian society is most clearly seen in the changing role of women. The overwhelming urge to modernize produced a women's movement that has been the most militant in Canada. By the beginning of 2000, over 90% of French Canadian women of childbearing age practiced some form of birth control and abortions became slightly more common in Québec than in the country as a whole. As a consequence, the birthrate in Québec declined sharply from an annual rate of 30 births per 1,000 people in 1951 to 13 per 1,000 in 1991. In addition, during the mid-1990s, almost 44% of all French Canadian infants were born to non-married couples or single mothers, and the divorce rate grew from less than 10% in the late-1960s to over 40% in 1995. Regarding the labor market, from 1961 to 1990 the portion of French Canadian women working outside the home increased from 27% to 44%.

Although Canadian women were given the right to vote in federal elections in 1918 and in the English-speaking provincial elections in the 1920s, it was not until 1940 that Quebec

enfranchised women. French Canadian Jeanne Sauvé was not only Canada's first Canadian woman Governor General in 1984, she was also one of the three first women members of parliament to be elected from Quebec, the first woman federal cabinet minister from Quebec, and the first woman Speaker of the House of Commons in 1980.

# FRENCH GUIANANS

**LOCATION:** French Guiana (French American Dependency)

**POPULATION:** 187,200

**LANGUAGE:** French; Amerindian languages; Taki-Taki

**RELIGION:** Roman Catholicism; traditional Amerindian beliefs

## 1 INTRODUCTION

During the 17th century, explorers began to roam all over South America, enduring terrific hardships, feverishly searching for the famed El Dorado. *El Dorado* means "the golden one" and many Europeans thought they would find a city of gold. The French explorer Daniel de la Ravardiere was no exception, and traveling through previously unexplored territory in 1604 along the Cayenne River, he finally arrived at what is now Cayenne, the capital of French Guiana. Many hardships awaited the explorers and subsequent settlers. Eventually coffee, indigo, and sugarcane were cultivated. The Jesuits, famous in many parts of South America for their work with Amerindians, established several village colonies of Amerindians who had been living for centuries in the thickly forested interior of this tropical land.

In 1763 about 14,000 people disembarked at Kourou on the coast, lured by glittering promises that ended in disaster: some 11,000 people died of tropical fevers and 2,000 returned to France, shaken and disillusioned. After this catastrophe, Malouet, the French administrator, tried to reestablish the colony and by the end of the 18th century there were 1,300 Whites, 400 free Blacks and 10,500 Black slaves. Slavery was finally abolished in 1848, after many struggles and various attempts both to end it and to reintroduce it. While this was socially a progressive move, economically the plantation economy was ruined.

In 1852 French Guiana became a penal colony and the French sent many convicts there, particularly to the notorious Devil's Island. In 1855 gold was discovered, and in the ensuing gold rush, agriculture was neglected once again. Hindus who had arrived to work the land left for neighboring Brazil and Dutch Guiana.

As a penal colony French Guiana proved unproductive, and this type of status was formally abolished in 1940. Convicts who gained their freedom were not allowed to return to their country of origin but had to remain in French Guiana. With no serious attempt made to train them or to find them productive work, they became paupers, eking out a miserable existence as penniless beggars, occasionally managing to do casual work, until their deaths.

Nicol Smith, who visited the colony in the early 1940s, reported that convict labor still existed, and Smith even visited one of the large prison camps in the interior where convicts were engaged in timber logging. The governor of the time, Robert Chot, told Smith that not only were the convicts well-fed, but they were even allowed to fish and to hunt wild game such as deer, wild boar, and agouti on weekends. If this was the case, then it is quite possible that freed convicts fared worse in terms of a basic diet than when they were convicts. For many, however, freedom was preferable under any circumstances.

French Guiana ended its colonial status and became a department of France in 1964. It is governed by a prefect with

the help of an elected council and is represented in the French parliament by a deputy and a senator. French Guianans are, in effect, French citizens.

French Guiana, as part of France, belongs to the European Union. The monetary unit is the euro and the current president of French Guianans is the French president, Nicolas Sarkozy.

Movements for increasing French Guiana's autonomy grew during the 1970s and 1980s. In 1996, 1997, and 2000, all protest demonstrations ended in violence. These outbreaks of street violence, particularly those occurring in the 1990s, were motivated by high levels of youth unemployment and by historical tensions between the region and Paris. Support for greater autonomy and for independence has been tempered by the reliance on French subsidies. Thanks to the economic help received from France, French Guiana enjoys one of the higher standards of living on the South American zone.

The main exports are timber, fish, and gold. In the agriculture realm, rice, corn, sugar, cocoa, vegetables, bananas, and manioc as well as the breeding of cattle and pigs, are the main staples produced in the country.

## 2 LOCATION AND HOMELAND

French Guiana, with an area of 91,000 sq km (35,135 sq mi), is about the size of Ireland. It has an Atlantic coastline stretching 320 km (200 mi) along the north and northeast, a border with Brazil to the south, and a border with Suriname to the west. The Maroni River forms its western border with Suriname, and the Tumuc-Humuc mountains run along the southern border with Brazil. The southeastern part of the border with Brazil is formed by the Oyapock River.

French Guiana is very under-populated for its size. Only about 187,000 people live there permanently, with about 40,000 living in the capital, Cayenne. Despite being sparsely populated, there is a colorful mixture of peoples in French Guiana. About 70% of the population, descended from a mix of French, Black and Asian Indian settlers, are known as Creoles. There are also settlements of people of Indochinese (Vietnamese) origin, since Vietnam was once a French colony. In the interior, there are several Amerindian tribes, including the Oyampi and the Palikour, who farm the tropical forests using traditional slash-and-burn methods and who still live according to their own traditions. The Gualibi Caribs live along the coast and have mingled with the Creoles. There are also black tribes people descended from runaway slaves, known as the Djuka, the Paramaka, and the Boni. They are descended from runaway slaves of African origin who were originally taken to the British West Indies and who escaped to the jungles of French Guiana, where access was difficult and the motivation of the locals to track them down was weak. In this way, after many hardships, they achieved their freedom and partially reverted to a lifestyle that differed from the hard life of a West Indian plantation slave, but was similar to the life their families once had in the African rainforests.

## 3 LANGUAGE

The official language of French Guiana is French, but other languages are spoken, including a variety of Amerindian languages, while the Black tribespeople speak Taki-Taki, which is partly derived from English.

French Guiana is heavily influenced by the culture of mainland France in many ways, and girls and boys are usually given

French names. Popular French boys' names such as Jean, Paul, Pierre, or Daniel are often combined, in the French manner, and become Jean Paul or Jean Pierre. Many girls have names that end in "-ette," a French diminutive that means "little": Yvette, Suzette, Jeanette. Often girls will have combined names that include "Marie" (Mary): Marie Claire, Marie José, Marie Christine, and Marie Therese. In countries with significant Catholic populations, the custom of naming a girl Maria or Marie, often used in combination with another name, is widespread and is found throughout South America. This custom is less widespread in Protestant countries because the emphasis on the Virgin Mary is not as strong as among Catholic populations.

## 4 FOLKLORE

Heroes vary according to the particular cultural mix, but for the historically conscious a very important figure was the abbess Mother Anne Marie Javouhey, the mother superior of St. Joseph of Cluny, who between 1827 and 1846 established a thriving colony for slaves who had been freed.

## 5 RELIGION

Most French Guianans are Roman Catholic, although in the tropical forests in the interior region, some Amerindian tribes follow their own spiritual and religious practices, which probably derive from Central Asia, including shamanic practices. There are also Black tribes descended from runaway slaves in

the interior who have their own religious practices, and settlers from Vietnam, formerly the French colony called Indochina, who have their own religious customs. Although Buddhism was prevalent when Indochina was a colony of France, many Indochinese became Christian, and there were also tribal peoples living in more remote areas who were not Buddhist. There are also some Chinese settlers, and during the 19th century there were large numbers of Hindus who originally came from India to work in agriculture in the Guianas, particularly British Guiana and subsequently French Guiana. A number of Arabs, some of whom are Muslim, also made their way to French Guiana at a time when various countries in the Middle East were colonies of France.

Although French Guiana is mainly Catholic, it shares with some areas of the Caribbean an astonishingly varied cultural and religious background.

## 6 MAJOR HOLIDAYS

Major French holidays, such as Bastille Day, are celebrated, as are Labor Day and major Catholic holidays, such as the Feast of the Assumption, Easter, and Christmas. Carnival is celebrated for the three days preceding Lent (in February) including Ash Wednesday.

## 7 RITES OF PASSAGE

Children are often baptized and also enjoy their First Communion, usually at the age of seven, when according to Catholic custom they receive a special name and are received into the Church. This is usually an important occasion for traditional Catholic families, and for the child it is often a memorable occasion.

Young people in French Guiana, particularly in the capital, Cayenne, are influenced by French culture as well as local customs that have developed out of their own colonial history. They enjoy dating and parties, just as young people do everywhere. Many couples marry in church.

When a person dies, a *novena*, or cycle of prayers, is said according to Catholic custom, and close relatives and friends are expected to visit.

## 8 INTERPERSONAL RELATIONS

A friendly and informal greeting in the French style is "*Salut!*" which means "Hello," whereas formal greetings would include the phrase "*Comment allez vous?*"

People in French Guiana generally enjoy social visits and festive occasions. Family occasions are important. Young people enjoy going out together, and a favorite occasion is an outing to a beach. There are good facilities for swimming just outside Cayenne, but these outings are more than sporting occasions; they are pleasant social occasions and a chance for young people or families to spend time together in a relaxed, informal manner.

## 9 LIVING CONDITIONS

The standard of living in French Guiana is relatively high, although the lifestyle of the Amerindians, who represent about 4% of the population, differs considerably from that of the majority Creole population.

The health of French Guianans has improved considerably over the years. In particular, the work of the Pasteur Institute

has made significant gains in helping to control and reduce serious diseases, such as yellow fever, malaria, and leprosy.

Heavily subsidized by the French government, the economy allows for more consumption than would otherwise be the case if French Guiana were to rely for significant income on its major exports alone. The European Launcher Development Organization's Equatorial Space Range, a rocket-launching base at Kourou usually used by the European Space Agency to launch satellites and for research programs such as weather studies, is pivotal for the economy, accounting for about one-quarter of French Guiana's GDP.

Housing in the interior, particularly in Amerindian settlements, often consists of simple huts with thatched roofs. In Cayenne, many streets have houses built in individual and varied styles, painted in bright colors such as light blue or yellow. The brilliant tropical flowers of many small gardens add to the impression of gaiety so often found in warm climates.

In the interior, rivers are often navigable by canoe or motorboats for long stretches. In towns, people use buses and cars for transport.

## 10 FAMILY LIFE

Family life in French Guiana varies according to the customs of diverse settlers, but in general the family unit is close and family ties are considered very important. The Catholic faith prevalent among a majority of French Guianans also reinforces the importance of close-knit families. Families tended to be large in the past, but now many people have fewer children than in traditional families in many countries in Latin America, following a more modern trend.

## 11 CLOTHING

Western-style shirts and trousers for men, and blouses and skirts or cotton dresses for women, are often worn. One distinctive feature in Cayenne, the capital, is that many women are quite fashion-conscious and tend to follow French styles and tastes in dress, although there are local adaptations because French Guiana has a very warm climate.

## 12 FOOD

There are various types of food eaten in Cayenne because the mix of settlers, including some Chinese and, formerly, settlers from India, have all influenced the local cuisine. However, tasty fish and seafood dishes, including shrimp, are often eaten, sometimes seasoned with different spices and served with rice. The hot pepper known as cayenne, known and used in many parts of the world, takes its name from French Guiana's capital.

It is claimed that even when French Guiana was a notorious convict colony, the convicts ate comparatively well: their diet included meat and fish stews, pork, and shrimp.

## 13 EDUCATION

Education is free and compulsory between the ages of 6 and 16. Nearly all eligible children attend school. University education is available in France or the French Antilles. French Guiana has an 80% literacy rate. Primary schooling has been available to most people for some time, and secondary schools exist in Cayenne and some other smaller towns. Schooling is modeled on the educational system in France.

#### 14 CULTURAL HERITAGE

Music and dance vary according to the diverse traditions of French Guiana. Black tribes people who still live in the interior have percussion-based music and drumming, whereas some Amerindians produce quite different music where woodwind instruments have a central place. The capital, Cayenne, is Westernized to the extent that there are strong influences of more-modern music, including French ballads and pop and rock music.

#### 15 WORK

French Guiana had a long tradition of cheap, convict-based labor, which did not bring prosperity to its inhabitants. The modern economy relies on the export of tropical hardwoods logged in Inini, the inland forested region of the country, and valuable seafoods, such as shrimp. At one time gold was a major export in the mining sector, but people are now employed extracting bauxite, and diamond mining has also provided work. The fishing industry provides some employment.

A unique form of work in French Guiana is that provided by the modern space agencies located on the coast at Kourou. The European and French space agencies are both located there, and it was from Kourou that the *Ariane* rocket was fired in 1996. Unfortunately, this 10-year project failed when the *Ariane* rocket exploded in space, but millions of people around the world probably got their first look at Kourou and French Guiana's beautiful coast and starry skies on television during the rocket's launch. Work continues apace and brings in several thousand extra personnel to work in one of the most advanced industries in the world.

#### 16 SPORTS

Water-based sports are popular with many in French Guiana and include boating, swimming, and fishing. Others enjoy soccer.

#### 17 ENTERTAINMENT AND RECREATION

French Guianans, particularly in Cayenne, enjoy going to the movies, and watching television is also a popular pastime. Young people enjoy going to discos, and along Cayenne's main commercial areas there are now good shops with French imports, as well as cinemas, cafés, dance clubs, and nightclubs.

A favorite pastime is going to the beaches outside Cayenne for picnics and swimming, and families or groups of young people often spend the day there.

#### 18 FOLK ART, CRAFTS, AND HOBBIES

Crafts and folk art in French Guiana derive from Black, Amerindian, and even Vietnamese artisans and include textiles, pottery, and woodcarvings. Some of the early Vietnamese (formerly called Indochinese) groups arrived in French Guiana as convicts and were later freed. Some of these, called the Hmong, live in separate villages; their carvings in wood and their weaving are particularly appreciated.

#### 19 SOCIAL PROBLEMS

French Guiana is a land of astonishing contrasts, with tribes who live only with the basics needed for survival in the jungles of Inini on the one hand, and the most modern space technologies based in Kourou on the other, with a modern,

French-oriented population of Creoles in Cayenne, and many smaller settlements along the coast as well as villages with diverse groups such as the Hmong Vietnamese.

Some people think that despite the legal status of French Guiana as simply another department of France, this is really a colony under a different name. Despite exports of minerals, seafood, and timber, French Guiana is not independent economically, but remains heavily dependent on French government subsidies for its relative prosperity. Were this situation to change, life could become very difficult for French Guianans. It is too soon to tell how the establishment of modern space agencies at Kourou will affect the local population socially and economically in the long run.

#### 20 GENDER ISSUES

Even though there is no systematic discrimination against women, traditional gender roles dominate social life. Women are generally responsible for tending to the children and other household tasks, while the men are in charge of providing financial support. This holds especially true in the rural areas, although there is some variation among the different ethnic groups. Traditional gender roles have prevented women from gaining access to high official positions in government.

As in other Caribbean countries, the fundamental social problems regarding women are teen pregnancy, drug abuse, and AIDS. During the 1990s, approximately 8% of mothers were younger than 18 years of age and in 1992 one third of these teenage mothers suffered from diseases while pregnant. The AIDS epidemic is also affecting teenage women, who represent 11.3% of those who are HIV positive.

# GARIFUNA

**LOCATION:** Eastern coasts of Belize, Guatemala, Honduras, and Nicaragua; United States; Caribbean islands

**POPULATION:** 200,000–500,000

**LANGUAGE:** Spanish; English; Garifuna

**RELIGION:** Catholicism, incorporating aspects of the traditional religion

## 1 INTRODUCTION

The Garifuna make their home along Central America's Caribbean coast in a territory that spreads across the borders of four different nations. They are descendants of the Caribs, an indigenous people of the Lesser Antilles. In the 17th and 18th centuries, Caribs on the island of St. Vincent intermarried with African slaves whom they captured in raids on European settlements or who escaped from their captors. According to some accounts, the resulting people, known as Black Caribs, formed a separate group distinct from other Caribs in the region, later called "Yellow" or "Red." However, other sources claim that the island people themselves recognized no such distinction and that these color designations were later applied solely by Europeans, who arbitrarily divided the native people into different groups based on skin color.

However the distinction came about, the Black Caribs, unsuccessful in their protracted resistance to British colonization of St. Vincent, were deported to the island of Roatan off the coast of Honduras in 1797. The deportees, who represented only about one-fourth of the former Black Carib population, managed to survive and reestablish their culture in an unfamiliar setting. They eventually migrated to the Central American mainland, where they settled mainly in the coastal lowlands of Honduras, Guatemala, Nicaragua, and Belize (then known as British Honduras).

Over the next two centuries, both their population and territory expanded significantly, and they formed a major part of the work force on the Central American coast for over 100 years. In 1823 additional Black Caribs migrated to Belize, forced out of Honduras by a civil war in that country. In spite of their relocation to new territories and their incorporation of other local Black populations, the Garifuna have maintained a distinct cultural identity, preserving both the language and many of the customs, beliefs, and rituals of their island ancestors.

## 2 LOCATION AND HOMELAND

The Garifuna live in a succession of villages and towns along the eastern coasts of Belize, Guatemala, Honduras, and Nicaragua. These Caribbean lowlands have a varied terrain that includes mangrove swamps, tropical rain forests, river valleys, coastal plains, and pine and palm savannas. The Garifuna population that lives between Belize and Nicaragua is distributed in 43 towns and villages. Close to 98,000 Garifuna live in Honduras, most of them concentrated along the North coast from Masca, Cortés to Plaplaya, Gracias a Dios.

Many Garifuna have immigrated to large cities in Central America and the United States. Those in the United States live primarily in enclaves in New York, Chicago, Los Angeles, and

other major cities. There are also small groups of Garifuna on the Caribbean islands of Trinidad, Dominica, and St. Vincent.

Because of their geographic dispersion, it is impossible to arrive at exact demographic figures for the Garifuna population (in addition, only Belize counts them as a distinct ethnic group). Their total numbers have been estimated at anywhere between 200,000 and 500,000. Some estimates place the Garifuna community in the United States alone at around 100,000.

## 3 LANGUAGE

Spanish is the official language of the countries in which the Garifuna live, except for Belize and the United States, where the official language is English. Most Garifuna, besides speaking Spanish, also master the Igñeri dialect that is a combination of Arawaco, French, Swahili, and Bantu.

The native language of the Garifuna (called Garifuna or Garinagu) is derived from the Arawak and Carib languages of their island ancestors.

## 4 FOLKLORE

Although it has long been illegal, *obeah*, the traditional witchcraft or voodoo of the Caribbean, is still practiced in secret by some Garifuna. Its rituals involve dances, drumming, and trances in which the dead are contacted, and it is generally used either to harm one's enemies or to ward off spells one fears from others. A characteristic object used in such spells is the *puchinga* doll made of cloth stuffed with black feathers and buried under the doorstep of the intended victim. Crosses are sometimes painted on children's foreheads to ward off the evil eye.

In 2001 UNESCO proclaimed the language, dance, and music of the Garifuna as a Masterpiece of the Oral and Intangible Heritage of Humanity in Nicaragua, Honduras, and Belize.

## 5 RELIGION

The Garifuna religion is a product of a cultural syncretism. Their religious system is a mixture of African and Amerindian traditions in addition to Catholic elements. The Garifuna practice a version of Catholicism that incorporates many aspects of their traditional religion, mingling a belief in saints with reverence toward *gubida*, the spirits of their ancestors, and faith in shamans or "spirit helpers" (called *buwiyes*). Their religious practices—which encompass dancing, singing, drumming, and alcohol—have long been considered suspect by established churches and surrounding communities, which have accused them of paganism and devil worship. Some *buwiyes* have served as Roman Catholic priests or nuns.

Among the most important traditional religious practices is the *dugu*, a ritual feast held to appease the *gubida* when they are thought to be angry at a living relative (which manifests itself most typically in an illness suffered by that person). A *dugu* lasts from two to four days and is attended by both friends and relatives of the affected person, who sometimes come all the way from the United States in order to attend. Lavish amounts of food are prepared—both traditional dishes that were favored by the *gubida* (such as cassava bread, pork and plantains) and foods that are currently popular (including rice and beans, cheddar cheese, and soda pop). The participants engage in ritual song and dance, led by a *buwiye*, who calls forth the *gubida*. After the contents of the feast, together with rum, have

been ceremonially offered to the ancestral spirit, they are either thrown into the sea or buried underground.

## 6 MAJOR HOLIDAYS

Many Garifuna ritual observances are held on the holy days of the Christian calendar, but some occur on the dates of secular holidays as well. Festivities generally include processions and street dancing, often in masks and costumes. John Canoe (*Yankunu*) dancers perform at Christmastime and receive money, drinks, or homemade candies for their efforts.

On November 19, the Garifuna of Belize celebrate Settlement Day, commemorating the original establishment of a significant Garifuna presence in that country in 1823, when a number of their ancestors, forced out of Honduras, arrived there to join the small band already settled at Stann Creek. In Dangriga, the center of Belize's Garifuna community, there is a ritual reenactment of the settlers' arrival by celebrants who row in from the ocean in dugout canoes. Their cargo duplicates that carried by their ancestors: rudimentary cooking utensils, drums, cassava roots, and banana tree saplings. When they land on the shore, they are joined by hundreds of spectators in a lively procession that winds through the streets of Dangriga to the Catholic church and ends with a special ceremony. Afterwards, the crowd continues the festivities by dancing and feasting on traditional Garifuna foods.

## 7 RITES OF PASSAGE

There are three healing celebrations and rituals in the Garifuna tradition: *chugú*, *lemesi*, and *dugu*. The *chugú* is the offering of food to the dead. Regarding the *lemesi*, there are two types of ceremonies: one is the official taking of the mourning clothes after one year and the second consists of a memorial in church as requested by the ancestors that passed away. However, the most serious of the healing rites is the *dugu*. According to the tradition, every time that there is a problem in the Garifuna family, the effects produced by tension and family struggles are felt among the living and the dead. If the living had been incapable of fixing the problem, then the death ancestors will intervene to solve it. The *dugu* lasts for six or nine days and takes over a year to plan it. The ceremony consists of drumming, singing, dancing, eating, and drinking.

Major life transitions (such as birth, puberty, and death) are marked by religious ceremonies that combine Catholic traditions with ancestral rites.

## 8 INTERPERSONAL RELATIONS

Physical violence is rare among the Garifuna. Aggression is almost always sublimated in such practices as name-calling, cursing, gossip, and satirical songs, and an aggrieved person may even resort to the form of witchcraft known as *obeah* for revenge.

## 9 LIVING CONDITIONS

Houses are typically either wooden or made of wattle and daub with thatch roofs. Wooden houses are raised several feet off the ground on posts and may have porches. Many villages still have no electricity, and in the towns, where it is more common, there are frequent power outages. Garbage is often thrown into the sea or disposed of in open ditches and streams. In some cases, it is tossed out the back door. Garifuna are prey

of poor sanitary conditions. Lack of clinical establishments, adequate infrastructure, illness prevention programs, and nutrition programs are the rule among Garifuna people. Close to 75% of children below 12 years of age suffer some degree of malnutrition, and three out of 10 will die before they are two years old. The growing consumption of "junk food," including many fried foods and foods high in refined sugar, has lowered the nutritional level of the Garifuna diet, and obesity has become common among the women. Protein deficiencies are widespread among preschoolers. The Garifuna use both modern medicine and folk remedies ("bush medicines") but retain their traditional belief that the most important determinant of health is the power wielded by the spirits of their ancestors.

## 10 FAMILY LIFE

It is common for women to bear children without having established a permanent or legal relationship with the father, and legal marriage forms the basis of only a minority of households. Because of the centrality of women to family life, the Garifuna are generally considered a matrilineal society. In the past, households were often made up of three generations of women. Increasingly, however, only the oldest and youngest generations remain, as the adult population of working age emigrates in search of better employment opportunities, leaving the grandparents behind to rear the children. Since the 1960s, many women have emigrated to major cities in Central America or the United States, where they are employed in the textile industry or find work as maids.

Garifuna mothers do not display the same level of physical involvement with their children as do mothers in many comparable cultures, a fact that observers have correlated with a perceived tendency toward independence and individualism in the culture. Mothers wean children early, in some cases do not breastfeed at all, and easily leave them with caregivers for short or long periods of time. In keeping with the generally nonviolent nature of the Garifuna, children are raised with little or no corporal punishment. Fights among children themselves are frowned upon and firmly broken up by adults. The elderly commonly attempt to control the behavior of younger family members by threatening to withhold their inheritance. Domestic violence is also extremely rare among the Garifuna.

## 11 CLOTHING

Most Garifuna wear modern Western-style clothing. Even among the older women, very few still wear the traditional shell-trimmed ethnic costumes. However, the brightly colored full skirts that many wear, together with the kerchiefs worn on their heads, do give them a distinctive appearance compared to the younger women, who wear jeans, tee-shirts, and tight skirts that could be seen in virtually any locale. The men also wear jeans, and the traditional straw hats have been replaced by baseball caps. Young people's attire has been influenced by the emigration patterns of their parents and peers, and in the towns one may see some of them sporting the latest fashions from New York—a favorite emigration destination—paid for with remittances sent by relatives abroad.

## 12 FOOD

Dietary staples include rice, fish, green bananas, plantains, and coconut milk, which is used to prepare many dishes, such as *hudut*, where it is mixed with pounded boiled plantains. The

green bananas are boiled and served as a starchy vegetable. “Boil-up,” or *falmou*, is adapted from the spicy pepperpot of the Garifuna’s island ancestors, and its milder present-day version consists of fish, tubers, and coconut milk. While manioc or cassava plays an especially prominent role in the diet of the Garifuna in Honduras, who eat it boiled as a vegetable, it is important throughout the culture as the basic ingredient of the flatbread called *areba*. This food and the customs surrounding its preparation have long been among the central unifying traditions of the Garifuna, whose very name is based on the term *karifuna*, which means “of the cassava clan.”

Cassava roots were traditionally grated by hand on stone-studded wooden boards, a lengthy and tedious job formerly relieved by group singing and today often avoided altogether by the use of electric graters. The resulting pulp is then strained by hand in 2 m (6 ft) long bags made from woven leaves, which are hung from a tree and weighted at the bottom to squeeze out the starch and juices (which are poisonous). The white meal that remains is left to dry overnight, sifted, and made into the dry flatbread that still connects the Garifuna with their ancestors.

The most popular beverages are coffee and various “bush teas,” sweetened by generous amounts of sugar. Common desserts include cakes and puddings made from sweet potatoes, rice, and bread scraps. An especially popular dessert is the candy called *tableta*, made with grated coconut, ginger root, and brown sugar. The ingredients are boiled until they stick together, poured into a greased pan to cool, and either cut up or broken into squares. Children may be seen selling this confection, which is a favorite among tourists, at bus stops and other public places. In recent years, “junk foods” high in fats and refined sugar have become popular with many Garifuna, and cooking styles for many dishes have changed from boiling and roasting to frying.

### 13 EDUCATION

School attendance is generally low beyond the primary grades. Close to 70% of the population is illiterate or semi-illiterate. One of the main reasons behind this discouraging statistic is the lack of schools in nearby areas. Moreover, the villages that have educational centers do not have enough resources to invest in their staff and, therefore, many of the educators of those schools are only capable of teaching at best to six graders. 10% of Garifuna who finish elementary school continue with their studies, another percentage immigrates to other countries and the rest spend their life in their community and eventually become illiterates again because of the lack of practice. However, rudimentary levels of literacy are valued and most Garifuna do receive sufficient schooling to attain them. Garifuna are also interested in improving their command of either Spanish (in Honduras and Guatemala) or English (in Belize). A higher level of educational achievement is common among the Garifuna of Belize, many of whom have excelled as schoolteachers.

### 14 CULTURAL HERITAGE

The Garifuna have a rich heritage with roots in both African and indigenous cultures. Their traditional music, which includes work songs, hymns, lullabies, ballads, and healing songs, is characterized by African-influenced call-and-response patterns and complex drum rhythms. A number of

songs are typically sung as an accompaniment to daily tasks, such as the baking of cassava bread (*areba*).

The most characteristic Garifuna dance is the *punta*, which has its roots in African courtship dances. It is performed by couples, who compete for attention from spectators and fellow dancers with their fancy and flirtatious moves. The *paranda* is a slow dance performed only by women, who dance in a circle with a shuffling movement and traditional hand movements and sing as they dance. A sacred dance, the *abaimahani*, is performed at the *dugu*, a feast held for the spirit of a deceased ancestor. The dancers—all women—form a long line, linking little fingers, and sing special music for the occasion. The Warraguan or John Canoe dance, typically performed at Christmastime, includes songs lamenting the absence of loved ones.

While maintaining the older cultural traditions, the Garifuna are also forging new ones of their own. Contemporary musicians have transformed the age-old music that accompanies the *punta*, creating the popular “*punta rock*.” The paintings of internationally acclaimed artist Benjamin Nicholas depict aspects of Garifuna history and culture in bold, modern styles. A group of young Garifuna emigrés in Los Angeles created the Walagante Dance Group to perpetuate the traditional dances of their people.

### 15 WORK

The Garifuna have traditionally lived by fishing and small-scale subsistence farming. In the 20th century, the banana industry became a major employer, creating jobs both in the agricultural field itself and in the major ports that sprang up along the coast. Since World War II, many Garifuna have sought employment with the United States merchant marine. Currently, however, the largest segment of the work force consists of underemployed wage laborers, and many Garifuna have emigrated to other countries, especially the United States, in search of better employment opportunities.

In the towns, those Garifuna who still farm often travel 5 to 10 miles to their plots, leaving early in the morning by bus and returning late in the afternoon. The civil service, especially the teaching profession, has been a major employer of Garifuna in Belize. Many children of Garifuna emigrants to the United States enter the professions—including medicine, engineering, and education—some returning home and others remaining abroad permanently.

### 16 SPORTS

Soccer is a popular sport among the Garifuna. Young people organize games on flat open areas in their towns or villages or on the beach.

### 17 ENTERTAINMENT AND RECREATION

*Punta* parties, named for the lively and sexually provocative traditional dance that is performed at them, are a favorite form of entertainment. Pop musicians have developed “*punta rock*,” which combines the beat of traditional *punta* music with the electric guitar sounds of rock music and contemporary Garifuna lyrics. This music, which originated in Belize, is becoming popular throughout the Caribbean. In a reverse development, the Garifuna have adapted the popular West Indian reggae music into a form of their own called *cungo*.

Many Garifuna households in the larger towns have television sets. Television is also a preferred form of recreation

among the Garifuna when they emigrate abroad, and a TV is one of the first purchases of Garifuna emigrants to the United States.

### 18 FOLK ART, CRAFTS, AND HOBBIES

So few of the Garifuna still practice the group's traditional crafts, including hat-making, drum-making, basket-weaving, and the carving of dugout canoes, that the National Garifuna Council of Belize held a workshop in 1987 to teach them to young people to help them preserve the heritage of their ancestors.

### 19 SOCIAL PROBLEMS

The lack of promising employment opportunities in their native regions has led many Garifuna to emigrate to other parts of Central America and to the United States, affecting the structure of both families and communities—it has been estimated that as many as 50% of the men are absent from the average Garifuna community at any given time. With growing numbers of women also emigrating, communities are essentially being depleted of an entire generation of working-age adults. The elderly and very young are left to survive together, often on remittances by absent family members, until the young people are old enough to emigrate as well.

In recent years there has been increased concern about alcoholism among the Garifuna. While alcohol consumption itself has risen—a fact that some have attributed to the social dislocations caused by unemployment and emigration—it is also the case that consumption levels formerly considered acceptable are now regarded as excessive. Marijuana use—mainly by young men—has become common among Garifuna living in towns

### 20 GENDER ISSUES

For more than two centuries, the mother was the focus of the home in Garifuna society. Women raised the children and tended the farm, while men were away to hunt or fish. As the economy changed, men had to accept jobs that took them away from the village—and sometimes out of the country, which placed women as heads of the households. The migratory process in which more men leave natal communities than women has strongly influenced Garifuna society and culture such that women play important roles in the local economy, subsistence activities, and religious practices. Women are also responsible for teaching the language and cultural practices to future generations.

Garifuna women have been most affected by land privatization on the Caribbean. While Garifuna land is held in common, use rights have been historically passed through the matrilineal line. It is, therefore, women who are harassed into abandoning or selling their resources. As the coastal land market expands, Garifuna women have lost their territorial control.

Garifuna women's activities connect them to community territory (land or sea) in a number of important ways. Women sow the land, care for and harvest crops, prepare food, and sell traditional food products. Access to land and sea are required for women to exercise their ancestral religion. There are various rituals that require access to the earth and sea in order to fulfill the requests of ancestors. Women play key roles in these ceremonies, preparing foods, singing, and performing gender-

specific dances for the ancestors. A woman can fill the role of the *buyei* (shaman), who leads such ceremonies.

The HIV/AIDS epidemic along the Caribbean coast has intensified in recent years and become particularly severe in Garifuna communities because of broader risk environment characterized by labor migration and transnational movement. Questions of power, sexuality, and affective expectations about partners complicate the situation for women hoping to prevent infection. Although it is generally expected for women to remain monogamous, men frequently have sexual relations with more than one woman, and it is not unusual for a man to have children by two or more women.

## GERMAN AMERICANS

For more information on German history and culture, see **Vol. 4: Germans**.

### OVERVIEW

Germans began immigrating to America in colonial times. By 1776, the German population in America had reached about 225,000. The founding of Germantown, Pennsylvania, in 1683 is considered to be the birth of the real German presence in America. More and more families came to join the original 34 settlers, and by 1790 the Germantown population had grown as high as 3,000, or 556 families. Most of these early German settlers were farmers or craftspeople. German American farmers introduced diversified farming (planting a variety of crops), crop rotation, and the use of fertilizers (manure, red clover, and gypsum, or lime) to American farming.

Germany did not become a unified nation until 1871, so prior to that time, German-speaking immigrants were not “German” but rather hailed from various regions or small states. In the 1700s, most came from the southern and western areas of today’s Germany, along the Rhine River. The majority were Protestants, such as Mennonites, Amish, Reformed, and other Anabaptist sects, fleeing religious persecution. Many settled in the religiously tolerant colony of Pennsylvania. German immigrants of the 1800s tended to come from northern and eastern regions, such as Prussia, Bavaria, and Saxony. They came not for religious but political freedom. Whether driven by religious or political motives, all German immigrants came to America looking for improved economic opportunities as well.

A small (4,000–10,000) but significant group of Germans came to the United States in 1848, after the failure of a political revolution and social reform movement in Germany. The “forty-eighters,” as they were called, were radical intellectuals who, as the leaders of the failed revolution, needed to escape the consequences of their failure. They were quite different from the farmers and craftspeople who had preceded them to America, and conflicts arose between the old immigrants, called the “Grays,” and the new immigrants, known as the “Greens.” However, the intellectuals’ presence gave a new depth and vitality to the German American community and gave them a more powerful voice in national politics.

Most German Americans were against slavery and many fought with the Union Army in the American Civil War (1861–65). There were also a number of German American soldiers in the Confederate Army, but eventually the German American community fell in fairly solidly behind President Lincoln. The German American vote helped elect Lincoln, and they remained his staunch supporters. The German Americans were also instrumental in the labor union movement of the late 1880s. German American craftspeople had brought their guild system along with them to America. These craft guilds evolved into trade unions, giving rise to the general labor union movement.

Although Germans had been immigrating to the United States in huge numbers since the 1830s (surpassed only by the Irish), they were eclipsed in the Great Migration of 1880–1920 by southern and eastern Europeans who began flocking to America. Compared to these new “foreigners,” German Amer-

icans seemed to be members of the old, settled establishment. Until the outbreak of World War I, when anti-German hysteria erupted, German Americans became part of the status quo in the United States.

All this changed, however, with the start of World War I. German Americans suddenly became the face of the enemy, and they were subjected to violent harassment. Anything remotely “German” was attacked and/or destroyed. Books were burned, street names changed, German businesses boycotted. Music by German composers, such as Beethoven, was removed from public performances. Even hamburgers, sauerkraut, and dachshunds were renamed “liberty burgers,” “liberty cabbage,” and “liberty hounds.” German Americans were physically attacked, tarred and feathered, and even killed. Robert Paul Prager, a German-born coal miner, was lynched by a hyperpatriotic mob in 1918. Prager became the symbol of anti-German violence. On 5 April 1992, the first annual Prager Memorial Day was held in remembrance of all the victims of anti-German hysteria during World War I.

After World War I ended, thousands fled the resulting economic disaster in Germany. Between 1919 and 1933, some 430,000 Germans immigrated to the United States. Many were Jewish (see **Jewish Americans**). As a result of the anti-German sentiment in the United States, German Americans had gone underground, hiding their ethnicity and attempting to blend in as much as possible with mainstream American society. Many Americanized their names. German heritage festivals were suspended for a number of years. The new immigrants joined in the drive to be assimilated, losing their Germanness as quickly as possible.

When Hitler came to power in Germany, another surge of intellectuals, many of them Jewish, fled his regime and came to the United States. A total of 130,000 Germans immigrated to the United States between 1933 and 1945. German Americans already in the United States did not support Hitler, either. Most were decisively anti-Nazi; the rest were indifferent. German Americans made up one-third of U.S. armed forces during World War II. Anti-German sentiment began to wane in America with the German Americans’ obvious show of support for the Allied cause.

It was not until recent decades, however, that German Americans began to reclaim their ethnic heritage. The new climate of multiculturalism and the demise of communist East Germany have lessened people’s fear of German Americans. Cultural festivals have reemerged, and Oktoberfests are now popular among German and non-German Americans alike. German immigrants continue to come to America’s shores. In 1980, the U.S. Census showed that German Americans had surpassed British Americans as the largest ethnic group in America; 2006 estimates counted almost twice as many German Americans (50,764,352) as British Americans (28,290,369). Today, German Americans make up almost 17% of the total U.S. population.

According to the U.S. Census, 42,884,825 Americans claimed some German ancestry in 2000. The number had risen to 50,764,352 by the time of the 2006 American Community Survey. Only a small percentage (less than 2%) are foreign-born. Most German Americans are, therefore, at least second- or third-generation. German Americans are both the largest ethnic group in America and the most widely dispersed. They are spread across the United States, although the highest con-

centrations remain in the middle Atlantic and midwestern states of early German American settlement. North and South Dakota and Wisconsin have the highest percentages of German Americans in their total state populations (over 40% each). Nebraska, Minnesota, and Iowa come close, with over 35% each. According to the 2000 U.S. Census, Pennsylvania, the original German settlement in the American colonies, still boasts the second-largest German American population (3,115,550), surpassed only by California (3,332,350). Other states with large numbers of German Americans include Ohio, Illinois, New York, Michigan, and Texas (all with over 2 million).

Because German Americans have been in the United States for so long and are so numerous, they have made countless contributions to American culture. German words now in common usage in the United States include kindergarten, gesundheit, ouch, delicatessen, blitz, sauerkraut, and wiener. Dozens of cities, towns, and streets are named after German people or places. Many of the Christmas traditions now seen as standard in America, such as Christmas trees (Tannenbaum) and Santa Claus (Kris Kringle), were introduced by German Americans, as were New Year's Eve festivities. Early German settlers also brought with them a much more relaxed attitude toward the Sabbath than that preached by the Puritans. German Americans transformed Sundays in America from days of rigid observances to days of rest and relaxation.

Food is extremely important to German Americans; they love to gather to eat and drink. Beer, a German specialty, has become one of the favorite beverages in America. Most Ameri-

can brewing companies, such as Pabst, Anheuser-Busch, and Schlitz, were founded by German Americans. The Heinz, Hershey, Kraft, and Fleischmann companies were also founded by German Americans. Other foods introduced by German Americans that are now common fare in American diets include frankfurters, hamburgers, sauerkraut (although some credit Polish Americans with this addition), potato salad, bratwurst, liverwurst, and pretzels.

Two German American women also gave us kindergarten. Caroline Louisa Frankenberg and Margarethe Meyer Schurz are both credited with opening the first kindergarten in the United States in the 1850s. By the 1870s, kindergartens had become part of the public education system. German Americans also introduced physical education into the American school system.

So many German Americans have made significant contributions to American arts and letters that it would be impossible to list them all. Germans love music, and German Americans established a multitude of music halls, opera societies, and choral festivals. In 1890, 89 of the 94 performers with the New York Philharmonic Orchestra were German born. One well-known German American visual artist was landscape painter Albert Bierstadt (1830–1902), a member of the Hudson River School of painters. An important architect was Ludwig Mies van der Rohe. Cartoonist Thomas Nast created the political symbols of the Republican elephant and Democratic donkey in the late 1870s, and Charles Schulz created the much-loved Peanuts comic strip.

A few of the better-known German American writers are H. L. Mencken, Theodore Dreiser, John Steinbeck, Kurt Vonnegut, and Louise Erdrich (who is also part Chippewa). Well-known German American figures in the world of film include directors Ernst Lubitsch and Billy Wilder; producer Florenz Ziegfeld of the 1920s' Ziegfeld Follies; playwright and lyricist Kurt Weill; and actors Marlene Dietrich, Grace Kelly, Lotte Lenya, and Rod Steiger. Four very well-known German Americans engaged in a different form of theater—Alfred, Otto, Charles, and John Ringling—created the Ringling Brothers' Circus, and later bought out their competitor, Barnum and Bailey, to become the largest circus enterprise in the United States. The Ringling Brothers' Barnum and Bailey Circus was owned and run by members of the Ringling family until it was sold in 1967, retaining the Ringling name.

German Americans have made countless contributions as well to the worlds of science and industry. Among the most famous are physicists Albert Einstein, J. Robert Oppenheimer, and Wernher Von Braun; anthropologist Franz Boas; millionaire John Jacob Astor; piano manufacturer Henry Engelhard (Steinweg) Steinway; automobile manufacturers Henry and Clement Studebaker; Levi Strauss, inventor of denim blue jeans; presidential advisor and U.S. secretary of state, Henry Kissinger; and U.S. presidents Herbert Hoover and Dwight D. Eisenhower.

Babe Ruth and Lou Gehrig are two of the many successful German American baseball players. Swimmer Johnny Weissmuller gained fame playing the character "Tarzan" in several movies in the 1940s, and Gertrude Ederle became the first woman to swim the English Channel in 1926.

Radical pro-Aryan (neo-Nazi) groups represent only a tiny fraction of German Americans in the United States but create problems for all German Americans as they fuel lingering fears that "all Germans are Nazis." Other German American organizations do whatever they can to offset the negative impression given by neo-Nazi activists. German American Day was officially proclaimed by President Ronald Reagan in 1987 to be forever after celebrated on October 6, the date on which Germantown, Pennsylvania, was founded in 1683. Oktober-fests and other cultural festivals help promote understanding of German American heritage and traditions among German and non-German Americans alike. As German Americans now make up such a large portion of the total U.S. population, anti-German discrimination is mostly a thing of the past.

A great number of German immigrants in the mid-1800s were rural peasant laborers on larger estates who were forced to relocate by strict regulations regarding domiciles. These regulations were put in place by the estate owners to limit the number of peasant families dependent on them and were very successful in that regard. Legal rights were only extended to those with a house, and the number of houses was restricted, so young people had to wait for older residents to die in order to claim a residence and be able to marry, etc. When earlier migrants to the United States wrote to their friends and families in Germany with reports of work and land opportunities in America, huge numbers of men and women chose to emigrate.

Many of these immigrants ended up in urban settings that differed greatly from their former home. Women had always expected to contribute to the family's labor on the peasant farms, but the American culture of the time endorsed the idea that men be the main economic providers and women

take care of the home and children. Most German Americans found that women needed to work to bring in some income as well, and although many did this by taking in boarders so as not to leave the home, others took jobs in domestic service or, later, the clothing industry.

The Lutheran Church, the majority denomination of 19th century German Americans, was a place for women to find some activity and influence outside the home, but even that was limited. Women's groups in the church were only allowed superficial responsibilities, such as decorating the sanctuary, raising money for charity, and serving food at special dinners. Even Lutheran church-based schools only hired women teachers if no men were available, and the women were paid much less, regardless of age or qualifications. As soon as a man could be found to teach, the woman was let go.

But German American women found other ways to join together in the public sphere and create social and arts groups, including choirs, literary societies, and charity organizations. The earliest of these groups was the Women's Auxiliary of the German Society of Pennsylvania. The German Society was founded in 1764; in 1900, 12 women decided to start the Women's Auxiliary. Membership rose quickly, climbing to more than 800 after the auxiliary's official incorporation in 1908. Both the German Society of Pennsylvania and its Women's Auxiliary still exist today.

## GREEK AMERICANS

For more information on Greek history and culture, see **Vol. 4: Greeks**.

### OVERVIEW

Few Greeks immigrated to the United States before the late 1800s, except a small number who fled during the Greek uprising against the Ottoman Empire in the 1820s. Greek war orphans from that uprising were also adopted by Americans. However, most Greek Americans today are descended from immigrants who came to the United States during the Great Migration of about 1880–1920. The majority of Greek immigrants were young men from the southern peninsula of Greece, known as the Peloponnesus region, who hoped to work hard in the United States, save up a sizeable amount of money, and then return to Greece. By 1925, one out of every four Greek men between the ages of 15 and 45 had gone to the United States. About 40% who immigrated between 1908 and 1931 did return to Greece, but the rest stayed in America. A few returned to Greece to marry and then brought their wives back to the United States.

These first Greek immigrants were farmers who suffered from poverty because of disruptions in the Greek economy and a population explosion resulting from improvements in sanitation and medicine. Most were uneducated and illiterate and had few job skills to offer in the industrialized work world of the United States. They took whatever jobs they could find, usually for very low wages. Many were exploited by padroni (contractors who brought primarily Italian immigrants to the United States) but even most of those treated like virtual slaves managed to survive and tuck away bits of money to build up their savings slowly.

Most Greek immigrants eventually opened their own businesses. They tended to specialize in shoeshine stands, florist shops, grocery stores, confectionaries, fruit stands, and restaurants, particularly diners. Many of these businesses still exist today, as a high percentage of Greek Americans continue to own their own businesses.

The Immigration Act of 1924 restricted the numbers of immigrants allowed into the United States from each country, slowing Greek immigration significantly. World War II (1939–45) and the Greek Civil War (1947–49) further reduced Greek immigration until about 1950. In return for its allies' support, the United States passed the Refugee Relief Act to allow refugees from countries devastated by World War II to immigrate to America. Many Greeks took advantage of this opportunity, and the number of Greek immigrants rose dramatically. Another wave of Greek immigration began in the late 1960s when an oppressive regime took over the Greek government and many Greeks decided to flee. Immigration reforms in the United States made entering the United States much easier by removing many of the previous restrictions. Most of the Greek immigrants to the United States since World War II have come to stay, and many are women and professionals.

Greek Americans suffered discrimination at first, which could at times turn violent. But for the most part, Greek Americans had an easier time becoming assimilated because so much of American culture is based on ancient Greek ide-

als. Although the values of modern Greeks differ greatly from those of ancient Greece, the values of democracy, hard work, and independence have remained constant. Among the educated elite of America, a number of Hellenic societies extolled the virtues of Greece and welcomed Greek immigrants to the shores of the United States. Despite some initial difficulties, therefore, Greek Americans have found themselves largely compatible with U.S. society.

The total Greek American population today is uncertain: some 1,153,295 persons reported themselves to be of Greek ancestry on the 2000 U.S. Census (0.4% of the total U.S. population); the U.S. Department of State, however, estimates the Greek American population to be closer to 3 million. Whatever their actual numbers, it is certain that Greek Americans comprise the largest Greek community outside of Greece.

Although Greek Americans are spread across the United States, almost one-third (30%) live in the northeast. Massachusetts (1.2%) and New Hampshire (1.2%) have the highest percentage of Greek Americans in their total state populations. The top five states with the largest numbers of Greek Americans are (in descending order) New York (151,812), California (135,487), Illinois (99,354), Florida (79,912), and Massachusetts (76,189). Greek Americans tend to cluster in cities, particularly New York City, Los Angeles, Chicago, and Boston. Only a few of the original "Greektowns" still exist, including an area in Chicago and one in Detroit. Formerly, Greektowns were located in Lowell, Massachusetts; Salt Lake City, Utah; Tarpon Springs, Florida (where Greek Americans ran a profitable sponge-diving business); St. Louis, Missouri; Chicago, Illinois; and New York City; as well as others on Long Island and across New York State.

The Greek and English languages differ from each other significantly in both spoken and written forms. Most early Greek Americans were illiterate in Greek, however, so the written differences between the languages did not pose a problem for them, since they could not read or write Greek anyway. Many recent Greek immigrants to the United States are well educated and already have some English proficiency when they arrive. Therefore, English language ability has not presented a serious obstacle to Greek Americans for the most part. First-generation Greek Americans worked hard to acquire English language skills, and subsequent generations grew up speaking English as their native language. Most second- and third-generation Greek Americans, in fact, never learned Greek.

Many Greek Americans anglicized or shortened their names, particularly those with long surnames, such as Michael Anagnostopoulos (1837–1906), a Latin and Greek teacher at Perkins Institute for the Blind in Boston, who came to be known simply as Anagnos. (Anagnos was one of Helen Keller's teachers.) Traditionally, Greek children are named after their grandparents, and a large number of Greek Americans continue this tradition.

Greek American community life centers around the church, which serves cultural and social, as well as religious, purposes. One of the first things early Greek American communities did was to raise money to build a church. Greek Americans are almost exclusively Eastern (or Greek) Orthodox. They follow Eastern Orthodox birth and death rituals, such as bringing a baby to church 40 days after birth to be blessed and having the child christened within a year after that. When a Greek American dies, a wake is held, with the funeral the following day.

Easter is the most important holiday for Eastern Orthodox Greek Americans. (So that Easter will always come after the Jewish Passover, the Eastern Orthodox Church sometimes celebrates it one week later than the Western Christian Church. It always occurs sometime in early spring.) Good Friday and Great Saturday services build up to the joyous celebration of Easter Sunday. Christmas (25 December) and Epiphany (6 January) are also important, as is Holy Apostles' Day (29 June), which honors saints Peter and Paul (believed to be the "fathers" of the Christian Church).

Greek Americans also celebrate Greek Independence Day on 25 March, with parades in traditional costumes, speeches, and folk dances. Another secular holiday celebrated by Greek Americans is "No" Day on 28 October, which commemorates the day when the Greek government refused to give in to the Fascists during World War II (1939–45).

To provide a sense of community and mutual support, early Greek Americans formed cultural associations. Many of these associations exist in the United States today. One of the largest is the American Hellenic Educational Progressive Association (AHEPA) and its subsidiaries: Daughters of Penelope (for adult women), Sons of Pericles (for male youths), and Maids of Athena (for female youths). There are also numerous day schools and afterschool programs to teach Greek culture and language; the Greek Orthodox Church alone sponsors 50 of these schools. Early Greek American college students formed intellectual societies, such as the Plato Society founded in Boston in the early 1900s. The first university club in the United States

was Helicon, established at Harvard in 1911 by Greek American students. These students were members of an elite minority, however. Most Greek Americans were not well educated and did not encourage their children to pursue secondary or higher education. Attendance rates for Greek Americans at all levels of education are improving tremendously, however, with 85% of those over 18 having a high school diploma and 35% a bachelor's degree or higher.

Greek Americans take marriage and family very seriously. Although recently on the rise, the divorce rate among Greek Americans is still quite low compared with that of other ethnic groups. First- and second-generation Greek Americans usually marry other Greek Americans, but later generations have begun to marry outside their ethnic boundaries to an increasing degree. The 2002 film "My Big Fat Greek Wedding" presented a comic view of an intermarriage between a Greek American woman and a non-Greek man. Produced for just \$5 million, the film eventually grossed over \$200 million dollars at the box office.

Greek food has become quite popular among the general population of the United States. Gyro sandwiches, pita bread, feta cheese, and baklava are enjoyed by Greek and non-Greek Americans alike. Many American cooks are learning the art of baking with phyllo dough (paper-thin sheets of pastry dough). Greek restaurants and diners serve traditional Greek foods (which emphasize lamb and goat meats) with the addition of beef, which is more plentiful in the United States and more familiar to American palates than goat meat.

Food is important to Greek Americans and symbolizes friendship, love, and human connection. It is considered an insult to the host if a guest does not eat. The refusal to accept someone's offer of food is seen as a rejection of that person's friendship.

Greek architecture, with its massive simplicity and soaring columns, has greatly influenced American building construction. The wings of the U.S. Capitol building in Washington, D.C. were designed in the Greek Revival style by Thomas Walter in 1865. Greek American artist Constantino Brumidi (1805–1880) then painted Greek-style frescoes on the ceilings and walls of the Capitol building.

Many other Greek Americans have contributed to American culture, including opera diva Maria Callas (1923–1977); writer Nicholas Gage; Academy Award-winning director Elia Kazan; actor/director John Cassavetes (1929–1989); and actors Telly Savalas (1926–1994), best known as TV detective “Kojak”; and Olympia Dukakis, the cousin of Massachusetts governor and one-time U.S. presidential candidate Michael Dukakis (b.1933). Other well-known Greek Americans in the arts include actors Michael Chiklis, John Stamos, and Melina Kanakaredes; magician Criss Angel; and writer Jeffrey Eugenides (2003 Pulitzer Prize winner).

The world of U.S. politics has attracted a number of other Greek Americans in recent decades. Spiro T. Agnew (1918–1996) served as U.S. vice-president until forced to resign on 10 October 1973 because of his involvement in criminal activities. Paul Tsongas (1941–1996) became the youngest-ever member of the U.S. Senate in 1978 at age 37, and Olympia Bouchles Snow (b.1947) became the youngest-ever woman to be elected U.S. Representative, in 1978 at age 31. Snow was also the first-ever Greek American woman in the U.S. House of Representatives. George Stephanopoulos served as White House Communications Director during the first term of Bill Clinton's presidency (1993–1997) before becoming a political commentator. Arianna Huffington, also a political commentator, was born in Greece and is now a naturalized U.S. citizen.

Greek Americans who have made significant contributions to the worlds of science and industry include Dr. George Nicholas Papanicolaou (1908–1962), inventor of the Pap smear used to detect cervical and uterine cancers; and Spyros P. Skouras, a Hollywood movie mogul. Skouras began a chain of movie theaters, initiated “Cinemascope” technology, and eventually became the president of 20th Century-Fox Film Corporation. He was the first to allow African Americans into theaters in Missouri, and he always deleted racial or ethnic slurs from any film he financed. Skouras discovered and/or promoted a

number of successful movie stars, including Marilyn Monroe, Elizabeth Taylor, Gregory Peck, and Henry Fonda. Greek American Christos Cotsakos served as the CEO of E\*Trade, a financial services company, from 1996 until 2003.

Ancient Greece was the site of the first Olympic Games, and Greek Americans continue to excel in sports. Successful Greek American athletes include Gus Triandos, Milt Pappas, Bill George, and Alex Karras (who moved on to become a broadcaster and television actor). Popular sports commentator Bob Costas is also of Greek ancestry.

Dancing is a favorite pastime for Greek Americans. Although in Greece girls are not allowed to lead or to perform the more difficult, fast folk dances, Greek American girls can both lead and perform any Greek folk dance, fast or slow. Folk dances are performed at cultural festivals as well as at outdoor parties called *glendi*. Traditional Greek foods and music are also enjoyed at *glendi*.

Early Greek Americans spent much of their leisure time in coffeehouses, which were given names like Acropolis or Parthenon. These coffeehouses sometimes had live entertainment and almost always offered different forms of gambling. The gambling got so out of hand in Chicago in the early 20th century that the mayor closed down the coffeehouses. From then on, Greek American coffeehouses had to be much more circumspect about their activities.

Conflicts in the Greek American community between earlier and more recent immigrants (typical of any immigrant group) came to a head in 1967 when the U.S. government backed a military takeover in Greece and supported the resulting oppressive dictatorship for seven more years. The U.S. government also supported Turkey's invasion of Cyprus in 1974. Those Greek Americans who had lived in the United States for generations and considered themselves more American than Greek did not question U.S. policy. More recent immigrants, however, who had only lately arrived from Greece, opposed U.S. support of the military dictatorship and Turkish invasion of Cyprus. Either they themselves, or their family and friends, had direct experience of the oppressions in Greece and Cyprus that were being carried out with U.S. support.

Political shifts in Greece since then have perpetuated the discord among Greek Americans. Conflicts between those who emphasize the "Greek" and those who emphasize "American" in the Greek American community continue to create tension and disharmony today.

Greek culture is traditionally very patriarchal, and Greek society today continues in that tradition. Women did not receive the right to vote in Greece until 1952, and their representation in professional and political life is still quite small. Greek American women, however, began to organize themselves into a progressive public force as early as the 1920s. The Daughters of Penelope, one of the largest Greek American women's organizations today, was founded in 1929, and the corresponding organization for female youth, Maids of Athena, began in 1930. These and other Greek American organizations for women have promoted equal rights for women in education, politics, and family life in the United States, as well as supporting efforts to improve women's conditions in Greece. Becoming a member of the European Union in 1981 has propelled Greece to move forward on the issues of women's rights.

The importance of marriage and family in traditional Greek culture excludes homosexuals from social acceptance, in con-

trast to the myth of sexual freedom in ancient Greece. The Greek language does not even have words for "gay" or "lesbian" except for derogatory terms for gay men. Accordingly, most Greek American gays and lesbians remain closeted within the Greek community, although they may be very public about their identity in other settings.

# GRENADIANS

**PRONUNCIATION:** Gre-NAY-dee-uns

**LOCATION:** Grenada

**POPULATION:** 90,343

**LANGUAGE:** English; French-African-English dialect

**RELIGION:** Roman Catholicism; Protestantism; Hinduism;  
Christian-African sects

## <sup>1</sup> INTRODUCTION

Grenada (pronounced Gre-NAY-duh), located in the Windward Islands, is known for the beauty of its lush, fertile land, and for the spices it produces. The nutmeg grown there (one-third of the world's supply in the 1980s), as well as cloves, mace, and other flavorings, have given the island its nickname, "the Isle of Spice." Grenada was first sighted by Christopher Columbus on his third voyage in 1498, although he never landed there. The Caribs who inhabited the island drove off all would-be settlers, both English and French, for over 150 years. In 1650 a French party headed by Marie Bonnard du Parquet, the governor of neighboring Martinique, succeeded in acquiring the island from the Caribs in exchange for knives, trinkets, and brandy. Having gained a foothold, they soon proceeded to exterminate the native population. Forty of the last Caribs left on the island leaped to their death in a mass suicide at La Morne des Sauteurs (Leapers' Hill). The island remained in French hands until it was ceded to the British at the close of the Seven Years War in 1763. After 20 years of alternating French and British rule, Grenada became a British possession under the Treaty of Versailles in 1783.

During the 18th century the British brought in African slaves to work on the island's sugar and tobacco plantations. When these slaves were freed through a proclamation by the British government in 1834, the sugar industry declined, despite the arrival of East Indian indentured laborers to replace them. By the beginning of the 20th century, cocoa and nutmeg had replaced sugar as the island's main sources of income. The new century brought with it a growing desire for greater political autonomy among the people of Grenada, which had been officially declared a British colony in 1877. These nationalistic feelings supported the rise to power of Grenada's first national leader, Eric Gairy, who in 1951 was elected to head an autonomous government under British rule. Remaining at the center of the political stage for over 20 years, Gairy became the nation's first prime minister after independence was granted by Great Britain in 1974.

In 1979 the increasingly autocratic and eccentric leader was overthrown in a coup d'état—the first to occur in an English speaking Caribbean nation. The new Prime Minister, Maurice Bishop, formed a Marxist government that established close ties with Cuba and other communist countries, from which they received aid and technical assistance. However, the government's political alignment caused fears among tourists and the international business community, and the country's economy suffered.

In October 1983 a faction of the revolutionary government ousted Bishop, who was placed under house arrest leading to spontaneous and massive street demonstrations. Bishop was soon released, but he was captured and killed along with sev-

eral of his associates. Days later, U.S. forces invaded the island and seized power, removing the national opposition as well as the Cuban military presence from the island. The People's Revolutionary Army formed a new government led by general Hudson Austin. This invasion of Grenada became part of the rivalry between the United States and Cuba during the 1980s. The United Nations condemned the military intervention as a violation of international law.

Since the 1983 invasion, Grenada has moved closer politically to the United States, which provided the nation with both disaster relief and a substantial package of long-term economic aid and technical assistance. The international airport at Point Salines, begun under the Bishop government, was completed with U.S. aid and much of the country's infrastructure was repaired and modernized. As part of the Commonwealth, Queen Elizabeth II is Queen of Grenada and head of state. The Crown is represented by a governor-general, who in 2008 was Sir Daniel Williams.

Economically, Grenada's main source of foreign exchange is tourism, especially since the construction of an international airport in 1985. In 2003, the service sector represented 76% of its GDP, followed by industry (18%) and agriculture (5.4%). Some of its most important crop products are banana, cocoa, nutmeg, mace, citrus, avocado, root crops, sugarcane, and corn. Even though the economy has shown signs of recovery, in 2000 people living under the poverty line accounted for 32% of the population. Grenada has also been a recovering from the devastating effects caused by hurricanes Ivan (2004) and Emily (2005).

## <sup>2</sup> LOCATION AND HOMELAND

Grenada is the most southerly of the Windward Islands. In addition to its main island, the country consists of two dependencies in the Grenadines—Petit Martinique and Carriacou—and a number of smaller islets. Grenada is one of the smallest independent nations in the Western Hemisphere; its three main islands have a total area of 344 sq km (133 sq mi), a little less than twice the size of Washington, D.C.

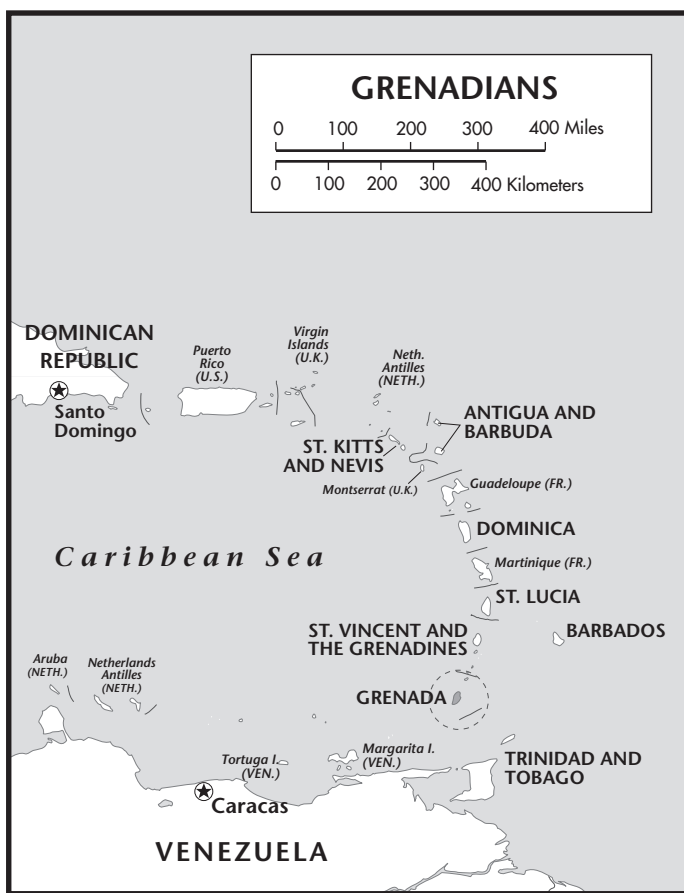

The island of Grenada itself is green and hilly. A central mountain range runs lengthwise through the island, dividing it in half. The interior also contains rain forests, waterfalls, crater lakes, and many rivers and streams. The coastal land includes swamps and woodlands, as well as fertile plains where fruits, vegetables, and the spices for which the island is famous are grown. Carriacou, the largest of all the Grenadines, has a small central mountain range, rolling hills, and sandy beaches. Petit Martinique is distinguished by one central hill that is 152 m (500 ft) high.

Grenada's total population is estimated at 90,343 people, of which about 9,000 live on the main island, with between 6,000 and 7,000 on Carriacou and under 1,000 on Petit Martinique. The population is predominantly rural, with about 33% living in urban areas. About 85% of Grenada's population is of African descent, while 11% have mixed Black and White ancestry. The rest of the population is divided between Asians (mostly East Indians) and Whites.

## <sup>3</sup> LANGUAGE

English is the official language of Grenada, but many Grenadians speak a patois, or dialect, that combines English words and grammatical structures with elements of French and Af-

rican words and rhythms. Many place names are French, such as Grand Anse Bay, Morne Rouge, Sans Souci, and L'Anse aux Epines.

#### 4 FOLKLORE

Animals from the jungles of Africa play a prominent role in the anancy tales that are popular in Grenada. In these stories, beasts often frighten or trick their enemies, sometimes by taking on the shapes of human beings, and sometimes through other stratagems. One example is the story "King Cat," in which rats are invited to a party to celebrate the feigned death of a famous rat-catching cat, who suddenly pounces on them and eats them all except for a pregnant female who lives on to perpetuate the "rat race."

While belief in the supernatural creatures of African legend is less prevalent in Grenada today than in the past, they live on in the region's Carnival figures and still appear as characters in bedtime stories. The name of one such creature—the zombie, or walking dead—has become a commonly used word in the United States, although removed from its original context. In African lore, zombies were dead people brought back to life to do the bidding of Voodoo priests.

Popular folk remedies include a tea made from lime bush leaves that is taken for an upset stomach and a preparation made of mango leaves that is used for rheumatism. Compresses made from the leaves of certain plants may be applied to the forehead to treat fevers.

#### 5 RELIGION

About 53% of Grenadians are Roman Catholic. Most of the rest belong to Protestant denominations (33.2%), including Anglican (13.8%), Methodist, Seventh-Day Adventist, and Baptist. Most of Grenada's small East Indian population is Hindu. Shango, a traditional African religion, is still practiced, generally in combination with Christian beliefs. African religious practices are especially prominent on Carriacou, and the mingling of Christian and African traditions can be seen in the island's boat-christening ceremonies, which combine holy water, sacrificial goats, and African-derived Big Drum music.

#### 6 MAJOR HOLIDAYS

Grenada's public holidays are New Year's Day (January 1); Independence Day (February 7); Good Friday and Easter Monday; Labor Day (May 1); Whit Monday (May or June); Corpus Christi (June); the August holidays (the first Monday and Tuesday of August); Carnival (in mid-August); Thanksgiving (October 25); and Christmas (December 25 and 26).

The country's most important festival is Carnival, celebrated in August instead of during the traditional pre-Lenten season in order to avoid conflicts with the Grenadian Independence Day, which occurs in February. The opening rounds of calypso and steel band competitions and other preliminary events begin at the end of July. Carnival itself begins with a Sunday night celebration leading into the Jouvert (jour ouvert) festivities at dawn on Monday, which feature Djab Djab Molassi, who represent devils (Djab Djab is derived from diable, the French word for "devil"). These revelers streak their faces and bodies with grease or molasses, which they delight in smearing on bystanders.

The main events in the two-day Carnival festival include a pageant by costumed masqueraders, steel band and calypso competitions, and a parade of bands through the streets of St. George's to the market square. Another popular Grenadian Carnival character, called Short Knee, reflects the tumultuous history of the Carnival tradition on the island. The character's costume of knee-length, colorful, baggy trousers was created in the 19th century after the government outlawed the loose, flowing "Pierrot" costumes under which weapons could be hidden.

Another traditional festival is Fisherman's Birthday, celebrated on the feast day of Saints Peter and Paul at the end of June. It is marked by a ritual blessing of nets and boats followed by boat races, all accompanied by food and dancing. The major celebration of this festival takes place at Gouyave.

#### 7 RITES OF PASSAGE

Major life transitions, such as birth, marriage, and death, are marked by religious ceremonies appropriate to each Grenadian's particular faith community.

#### 8 INTERPERSONAL RELATIONS

Grenada's history of British colonization is reflected in many of its customs, such as driving on the left side of the road and the occasional tea party, which is usually a social fundraising event for a needy cause.

## 9 LIVING CONDITIONS

While poverty exists on Grenada, few of its people go hungry, thanks to its fertile farmlands. Most Grenadians own land on which they can grow crops to feed their families, selling the remainder at the market. Housing ranges from wooden shacks with tin or corrugated iron roofs among the poorer villagers to the attractive, brightly painted bungalows of those who are better-off financially. Signs of urban poverty common to other developing countries, such as shantytowns, are rarely seen.

Average life expectancy in Grenada is 65 years, and infant mortality is 13 deaths per 1,000 births. In 1990 there was 1 physician for every 1,617 people. There is no railroad on Grenada, and its residents depend on 1,000 km (620 mi) of narrow, winding mountain roads for transportation. In the mid-1980s many of these roads were in poor condition, but major repairs have since been made. The main roads have been resurfaced, and others have been modified for easier access. Still, however, only 600 kilometers of roadway on the island are paved. Most Grenadians do not own cars, and the majority depend on bus transportation.

The opening of the Point Salines International Airport in 1984 was a milestone in Grenadian history, making it possible for major airlines to establish direct service to the island. Begun with Cuban aid under the Marxist regime that was in power at the time of the 1983 invasion, it was completed with U.S. assistance. The capital city of St. George's is Grenada's major port.

## 10 FAMILY LIFE

Many Grenadians live in extended-family households, which may include up to three generations of family members. Grandparents commonly assist with child care, although day-care facilities are available for working mothers. Elderly family members, when not actually part of the household, usually live only a short distance from their children, to whom they turn when they are in need of care themselves.

Within the past generation, the size of Grenadian families has declined dramatically. Formerly, it was common for a family to have as many as 10 children. However, with greater use of birth control and more women working outside the home, the average number of children dropped to 4 or 5 in the 1980s, and the country actually had a negative population growth rate (-0.2%) between 1985 and 1992, although this was partly due to emigration.

## 11 CLOTHING

Grenadians wear modern Western-style clothing. Women often wear straw or cloth hats for protection from the sun.

## 12 FOOD

Grenadian cooks may choose from among a rich and abundant variety of fruits, vegetables, and spices. Items commonly found at the market include yams, avocados, callaloo greens (similar to spinach), oranges, papayas (called "paw-paws"), plantains (which resemble bananas), mangoes, and coconuts. Many fruits are available year-round. The cuisine of Grenada reflects a variety of influences: Amerindian, African, French, British, and East Indian.

About 20 different kinds of fish are caught off the coasts, and both fish and chicken dishes are served at many meals.

Popular Caribbean staples eaten on Grenada include pigeon peas and rice, and callaloo, made from callaloo greens, okra, salted pork, crab, and fresh fish. The local dish most closely identified with Grenada is oildown, a mixture of salted pork and breadfruit steamed in coconut milk. Another favorite is turtle toes, a combination of ground lobster, conch, and other seafood shaped into balls and deep fried.

Popular beverages include locally brewed Carib Lager beer; rum punch spiced with lime juice, syrup, and grated nutmeg; mauby, made from the bark of the maubi tree and downed as a soft drink; and cocoa tea (cocoa beans and spices steeped in hot milk).

## 13 EDUCATION

The adult literacy rate in Grenada is over 96%, and all children are required to attend school for 12 years. The average primary school has 1 teacher for every 28 pupils, a figure that compares favorably with those in other developing nations. Post-secondary education is offered at the T. A. Marryshow Community College and University Center (a branch of the University of the West Indies) and more recently at the St. George's University, which is offering baccalaureate degree programs at its school of arts and sciences.

## 14 CULTURAL HERITAGE

Grenadian authors first came to public attention in the 1920s and 1930s. One of the nation's best-known contemporary writers is Wilfred Redhead, author of one-act plays and short stories. The visual arts reflect a high degree of African influence, and Grenada's artists are mostly self-taught. Canute Caliste, who lives on Carriacou, is one of the most prominent. His paintings depict aspects of traditional life on the island, including Carnival bands, boat-launchings, dance festivals, and Big Drum performances. Many of his works include hand-printed texts.

Another well-known artist is Elinus Cato, whose brightly painted renderings of town and rural life in Grenada have been exhibited in London and Washington, D.C. One of his paintings, *People at Work*, was presented to Queen Elizabeth II when she toured Grenada in 1985. The wooden frame for Cato's painting was crafted by renowned Grenadian woodcarver Stanley Coutain, one of the country's leading sculptors. Other recognized masters at transforming the island's mahogany, teak, and cedar into works of art include Alexander Alexis and John Pivott.

## 15 WORK

Between 30% and 40% of Grenadians are employed in government or other service sector jobs and about the same percentage earn a living through some type of agricultural employment, often in the food processing industry. Typical food processing jobs include peeling nutmeg shells and sorting the seeds and washing bananas and other produce in large vats. The remainder of jobs in Grenada are mostly in construction and manufacturing. The country has a standard eight-hour work day. Grenada had a high rate of unemployment in the 1990s; in 1994 it was reported at 25% of the work force. However, thanks to governmental efforts, in 2000 this percentage was reduced to 12.5%.

*A Grenadian boy carries water through St. George's, Grenada, after Hurricane Ivan devastated Grenada, Barbados, and other southern Caribbean islands in September 2004. (AP Images/Andres Leighton)*

## 16 SPORTS

Cricket is Grenada's most popular sport, and there is a large stadium at Queen's Park, outside the capital city of St. George's. Grenada and several other Caribbean nations hosted the 2007 Cricket World Cup. Grenadians will start a game on any flat area that is available, and they even play cricket at the beach. Soccer is another favorite sport.

## 17 ENTERTAINMENT AND RECREATION

Calypso and steel drum music are both popular forms of entertainment in Grenada. The nation's television station, a division of Grenada Broadcasting Corporation (GBC), airs local news, sports, and local entertainment (including coverage of Carnival), as well as programs from the United States. There are also a number of privately owned and operated radio and television stations on the island.

## 18 FOLK ART, CRAFTS, AND HOBBIES

While calypso music is popular in Grenada, as it is throughout the Caribbean, the truly indigenous music of the Windward Islands, to which Grenada belongs, is Big Drum music. Derived from the African call-and-response tradition, it consists of song, dance, and drumming. Although its roots are similar to those of calypso and reggae, it retains a more authentic African character. The Big Drum is actually a set of three drums, originally carved from trees and later made of rum kegs. The skin of male goats is used for the two side drums and the skin

of a female goat for the middle one. The middle drum, which has pins threaded across its surface, produces the most complex rhythms.

The singers are usually women, and the lead singer is called a chantwell. The songs—in either English or French patois (dialect)—resemble those of other Caribbean traditions, such as calypso, in their reliance on satire and social commentary. The dancing is performed inside a ring of people by dancers wearing full skirts and headdresses and who interact with the musicians. On Carriacou, Big Drum music is performed at religious ceremonies including weddings and burial rites.

Woven handicrafts include hats, purses, baskets, placemats, and other items made from straw, bamboo, and wicker. Salad bowls, kitchen utensils, furniture, and other items are fashioned from mahogany and red cedar, and jewelry is made from black coral and turtle shells.

## 19 SOCIAL PROBLEMS

Poverty in Grenada increased in the 1980s due to the worldwide recession. Unemployment is high (12% of the work force). There was an increase in labor disputes in 1995. In 2000, people living below the poverty line represented 32% of the total population.

## 20 GENDER ISSUES

Even though there is no evidence of official discrimination in health care, employment, or education, women frequently earn

less than men performing the same work. Violence against women in Grenada is common and most cases of spousal abuse go unreported to police authorities. In addition, lesbians, transgender persons, and others who live outside of heterosexual and gender conventions are often at risk of violence, rape, and other forms of discrimination, harassment, and abuse.

In 2005 the Department of Women's Affairs put forward legislation on equal opportunity and treatment in employment that seeks to provide remedies against discrimination on the grounds of sex, marital status, and pregnancy in employment, education, and the provision of goods, services, and facilities. The Department of Women's Affairs also began a gender education program to better the welfare of women through economic and self-improvement programs.

Educational data for Grenada indicates that at the secondary and tertiary levels the ratio of girls to boys is greater than one, which is feeding a large number of female professionals into the workforce. Women are now occupying senior managerial, administrative, and professional positions in all sectors of the economy.

The proportion of seats in Parliament held by women has risen to 28.5% in 2005, up from 17% in 2001. In 2008, the president of the Senate was a woman, while 8 of the 13 permanent secretaries in government ministries were female. On the issue of gender equality, there continues to be concern about inequality of pay, and under-representation at decision-making levels of the society.

# GUAJIROS

**LOCATION:** Venezuela and Colombia (Guajira peninsula, which borders the Caribbean to the north and east, and Venezuela and the Gulf of Maracaibo to the west)

**LANGUAGE:** Guajiro

**RELIGION:** Mixture of Roman Catholicism and indigenous religious traditions

## <sup>1</sup> INTRODUCTION

The Guajiro Indians are a distinctive and individualistic tribe from northeastern Colombia and northwestern Venezuela who have been seminomadic for hundreds of years. Their existence pre-dates the arrival of the Spanish conquerors, although their precise origins and migrations prior to the arrival of the Spanish are uncertain. The conqueror Rodrigo de Bastidas surveyed the coastal areas of the Guajira peninsula along the Caribbean as early as 1500-1501. The Guajiro tribe is divided into clans that are made up of several family groups, with leaders who are recognized as princes. Guajiros are a warrior culture, in fact, they were never subjugated by the Spanish conquerors.

## <sup>2</sup> LOCATION AND HOMELAND

The Guajiros live in the dry lands and coastal areas of the Guajira peninsula, which borders the Caribbean to the north and east, and Venezuela and the Gulf of Maracaibo to the west. This territory has equatorial weather seasons. First, there is a rainy season that goes from September to December called Juyapu. The second season goes from December to April, and its main feature is its dryness. This time of the year is known as Jemial among Guajiros. A second rainy season called Iwa goes from April to May followed by another long second dry period from May to September.

Traditionally the Guajiros have ignored the border that divides Venezuela and Colombia, roaming freely in and out of both countries. Their nomadic habits were recognized and respected by both countries, which accorded them the privilege of citizenship and did not demand from them the formalities that normally have to be observed when crossing from one country to another.

This reluctance to recognize national borders persists to this day, since currently members of the same extended families and clans may live either in remote desert areas or in cities such as Riohacha, the capital of the Guajira, or in a neighborhood of the Venezuelan city of Maracaibo where some have migrated to find work, or in smaller settlements, such as Puerto López at the mouth of the oil-rich Gulf of Maracaibo. Many move from one location to another in indefinite patterns that do not conform easily to modern diplomatic requirements.

## <sup>3</sup> LANGUAGE

Guajiro language is a branch of Arawak, a linguistic language predominant within the Caribbean. Even though the new generations are able to speak Spanish fluently, there is a real concern among Guajiro people of maintaining their mother tongue. This concern has been shared by the Colombian and Venezuelan government, states that have supported bilingual education policies among Guajiros to preserve the aboriginal language. This stand helps to explain why although many

Guajiros have had continuous contact with the Spanish language for many years, they continue to speak their own language. In this sense it seems noteworthy to acknowledge that among Guajiros people it is common to have three names: a Guajiro name, a Catholic name given to them at birth, and another Spanish name that they usually use when in contact with White people. The Guajiro name is often kept secret, since it is used only by close members of the family on the mother's side.

Despite the difficulty of discovering the Guajiro names, the Colombian writer Eduardo Zalamea Borda, who wrote a novel about the Guajira region, records the names of three girls: Anashka, Ingua, and Pankai. He also records the name of a young boy: Nipaj. The language sounds more guttural than Spanish, and the story of Guajiro lives, their work, their loves and sorrows, and the landscape of sand and boat and sea is often recorded in poetic songs that, according to Zalamea Borda, are often quite melancholy. For example, in a song that refers to a boat and an anchor, the following line is repeated over and over again in a lengthy, sad tone, like the repetitive whistle of a bird:

*Eeeeeeeee guarapáin tanai, eeeeeeeee guarapáin tanai.*  
Then this sad lament changes into a joyful song.

#### 4 FOLKLORE

Although the Guajiro Indians were gradually converted to Catholicism, in particular through the efforts of Capuchin monks who learned the Guajiro language and established some of the

first primary schools in the Guajira, beliefs and practices from earlier times persist, in particular because clan identities still form part of the Guajiro identity.

Each clan has a symbol, usually drawn from the animal world, which stands for certain virtues and characteristics with which the clan identifies. This symbol is usually understood by outsiders as a totem. What this means is the power, the aspirations, and the virtues that the clan regards as valuable are expressed by their choice of symbol. Sometimes this symbol or totemic sign is tattooed on the arm.

#### 5 RELIGION

Religious life for the Guajiros is a mix of the Catholic beliefs brought to them by the Spaniards who conquered the New World, and the older belief system that includes a different view of the afterlife. The cape at the head of the Guajira peninsula, called the Cabo de la Vela (the Cape of the Sail) is called Jepira by the Guajiros. It is regarded as a sacred place because they believe that Guajiros who have passed away still wander there.

One important figure in the Guajiro cosmovision is the Mareiwa, considered the god creator and founder of their society. Another important character in the Guajiro vision of the world and universe is a married deity. In the one hand, there is Pulowi, a character that represents life, and in the other hand, there is Juya, the male hunter that symbolizes male power.

Guajiro culture states that life does not end with death and, therefore, burials play an important role in their traditions. After someone passes away, the cadaver is buried with personal belongings and, after two years, the rest are exhumed and incinerated, stored in a ceramic vessel, and buried again.

The Wayœu clan records its origin with this poetic myth: "We were born of the Wind of the Northeast and the Goddess of the Rains." Winter itself is thought of as the brother of the Goddess of the Rains and represents the Guajiro Indians as a whole. Whereas in other cultures with different climates winter might represent hardship, in an arid area such as the Guajira, whatever brings water or rain also brings fertility and abundance.

#### 6 MAJOR HOLIDAYS

Guajiros who have migrated to towns have become more involved in the celebrations and religious festivals of Catholicism. Even comparatively small towns, such as Puerto López, have developed a mixed population, including traders of Arab origin who migrated to the Americas in search of a better life, black people whose ancestors came to these shores originally as slaves, white people of Spanish origin, and people who are a mix of all of these. As Guajiros intermingle during religious feast days, they partake of the music, dance, and customs that evolve out of this rich and colorful brew.

The Guajiros also continue to mark special events in their lives according to their own traditions, particularly the Guajiro ceremonial dance known as the *Chichimaya*. This dance is a fertility dance and often takes place when a young girl reaches puberty and is considered able to marry.

The Festival of Uribia in the Guajira intermingles the dances, songs, and music of African, Spanish colonial, and Guajiro Indian origins, such as the *vallenato* music of the neighboring Magdalena region, with its mix of ballad-like songs and Afri-

can drums, as well as the Guajiro *maraca* or rattle, the Guajiro drum, and the Guajiro flute known as the *maasi*.

## 7 RITES OF PASSAGE

Many Guajiro infants are not only baptized into the Catholic Church but also have a Guajiro naming ceremony that is conducted in a private manner, usually among the Guajiros themselves. The Guajiro name is always associated with a special family intimacy. Clan identity comes to the infant not through its father, but through its mother. Similarly, the Guajiro name is uttered usually only by close family members on the mother's side. Maternal uncles have a special authority and importance.

When Guajiros females become teenagers and start menstruating, they are separated for a time to remain secluded and cared for by their maternal aunts. This seclusion, it is thought, helps girls to prepare for married life. For months the girls have to drink specially brewed herbal teas that are expected to help them get rid of their childish attitudes and become more mature. They also improve their knowledge of various crafts, such as weaving and sewing, during this time. There are several rituals that take place during this time. For example, girls are obligated to shave their heads and to rest in hammocks hung near the house. Moreover, they are fed with a special vegetarian diet called *Jaguapi* and are bathed with frequency. During this training period Guajiro girls will learn about other aspects of becoming a woman, such as birth control, pregnancy, and erotic techniques. This time of seclusion is regarded as a rebirth, and the girls are each given a new name. They are then ready to go out into the world again, to meet the boys among whom they will eventually find a husband.

At this stage the girls have a coming-out party with the *Chichimaya*, the Guajiro ritual fertility dance. During the *Chichimaya* ceremonial dance, which takes place at dusk, a boy will take his hat off and wave it, dancing backwards in a circle, daring the girl to catch him. The girl has to dance and chase him, trying to step on his feet so that he will lose his balance and fall.

Traditionally, when a Guajiro dies he or she is buried wrapped in a hammock. At a later date, the bones are placed in a clay urn and buried in a tomb near others belonging to the same clan.

## 8 INTERPERSONAL RELATIONS

Greetings can be very friendly and enthusiastic. If someone has arrived, pleasure is expressed, and, in a simple shelter with a roof made of dry branches but open on two sides, the welcoming hosts will hang up some hammocks so that the visitor will be able to spend some time with them and spend the night there if necessary. Then the hosts will ask the visitor, "What news do you bring, *waré*?" The *waré*, or friend, is expected to relate news about relatives and friends.

## 9 LIVING CONDITIONS

A common Guajiro settlement is comprised of five or six houses that form a *ranchería*. Each ranchería has a name that is usually of a plant, animal, or geographic location. The traditional home is a small rectangle house (*piichi* or *miichi*), generally divided into two rooms where Guajiros hang hammocks and cotton-woven bags in which they keep valuables. Children are born at home, assisted by the mother-in-law or female relatives.

The health of the Guajiros depends to a great extent on where they live. The people as a whole are in a state of transition. Some have migrated to towns. In larger cities, such as Maracaibo in Venezuela, there is a Guajiro quarter. In other towns they are less settled but might stay for a shorter time to visit friends or relatives or to work for a short time. Even those who do not live permanently in towns increasingly seek the services of town doctors at times.

Guajiros who have not migrated to various towns in Colombia and Venezuela still live in simple circular huts. Traditional house-building is undertaken communally, and the whole family lives under one roof, often in hamlets with others of their clan. This simplicity is well-suited to a seminomadic life because as goat herders they often move about with their flocks, seeking higher ground among the low-lying hill ranges on the Guajira peninsula where they can feed their animals. They sometimes keep pigs and hens.

In remote areas, paths are very basic and sometimes pack animals, such as donkeys, are used, although Guajiros also use trucks or catch rides with traders or visitors. Guajiros are fine weavers and make excellent hammocks that can be hung in the huts to provide simple sleeping quarters. Hammocks are easily carried from place to place.

## 10 FAMILY LIFE

The base of Guajiro social organization is the matrilineal clan, where kin is traced through the maternal side. Therefore, the role of the woman is very important among the Guajiros. The society is matrilineal, which means that the identity of the clan is passed on from the mother to her children. The mother's relatives are very important, particularly the maternal uncle and the maternal aunt, who are important figures of authority for the children.

If a boy wishes to marry, his family has to offer a generous bride-price, which may include as many as 30 or more goats. In an area where many forms of agriculture are difficult, the Guajiros regard goats as hardy and extremely valuable assets. The Guajiros also value gold jewelry, such as necklaces and bracelets, and these are usually included as offerings in exchange for a bride.

Guajiros usually look for wives from a different clan. If a wife is unfaithful, the husband can return her to her family and her family has to return the gifts received. If a husband has been unfaithful, he has to pay with a gift that equals the original bride-price.

When a woman is expecting a child, her husband is expected to protect her in specific ways. For instance, he has to ride before her to search out dangerous snakes that might harm her or the unborn child.

## 11 CLOTHING

Traditional clothes are striking and distinctive, particularly for women, who wear long, flowing, flowery dresses down to the ankles. They are loose-fitting and therefore cool in a hot climate, and they also protect the woman from the sun. The men are often lean and tall, with strong limbs. Their traditional loincloths are adorned sometimes with bright tassels and pompoms. They also wear pompoms on their sandals as a sign that may indicate their rank as a prince. When they go to towns, they wear simple cotton shirts and trousers, as do other town-dwellers in hot climates in South America.

## 12 FOOD

Corn and food products made from corn meal are part of the basic diet, but protein is also obtained from fish caught in the coastal waters of the peninsula. Turtles sometimes provide a source of necessary protein in the diet and are considered a delicacy. On festive occasions, meat (usually goat meat) is grilled on simple, open charcoal fires. Some Guajiros also keep pigs and hens, which provide valuable supplements to the basic diet.

## 13 EDUCATION

The first educational efforts to provide formal schooling for the Guajiros were begun by missionaries. Initially the rate of literacy was very low, but in the last few decades the picture has been changing rapidly as more Guajiros have migrated to towns. In the long run, this will have an important effect on the youngsters as schools in towns become more accessible. Part of the difficulty for the Guajiros is that the lifestyle of some is still quite nomadic, and for others the wives and children are left behind in more remote areas while the men go out in search of seasonal or occasional work. This pattern affects the schooling of many young people.

Many young Guajiros do not progress beyond primary school; others may have just a few years in primary school without completing it; and some, whose lifestyle has changed rapidly due to a move into towns, are able to complete high school.

While parents who remain in remote hamlets feel it is more important for young people to survive in that environment by learning to herd, hunt, or fish, to build simple shelters, and to weave, in towns these expectations change as parents try to help their children adapt to new environments.

## 14 CULTURAL HERITAGE

By a mixture of independence on the one hand and accommodation on the other, the Guajiros have preserved important elements of their own culture while absorbing belief systems and attitudes from the surrounding Latino culture. Their own music can be plaintive and melancholy. The ritual dance of the *Chichimaya* is a ceremonial dance that has been preserved, and their instruments, such as flutes, rattles, and drums, are still in use. Their myths, which often deal with their origins, are preserved in storytelling and song.

## 15 WORK

For centuries the Guajiros have dived for pearls around the Cabo de la Vela. They also worked in the salt-pans that traditionally belonged to them, many of which were subsequently taken over by the Colombian government, which then hired the Guajiros as paid labor. The Guajiros did not like the long, regimented working hours, since they were used to working in a freer pattern, and just enough for their basic needs. Often they would co-opt relatives to make up the full quota of hours. These attitudes still persist among those whose basic needs remain simple and who have not migrated.

Some Guajiros have found work in coal mines, since Colombia has rich coal deposits in the region, and others work in the oil-rich area of Maracaibo in Venezuela.

## 16 SPORTS

Loren McIntyre, who traveled for 17 years around Latin America and spent some time in the 1960s in the Guajira, records that the Capuchin monks who founded a school for Guajiro orphans tried to teach them basketball, unsuccessfully. Apparently, the monks thought they were "too individualistic" to develop the team mentality necessary for the game. This anecdote reveals that what the dominant Latino culture thought of as sport was not interesting enough for the Guajiros.

Children who are adapting to town life are also beginning to enjoy Western-style sports. In the traditional way of life, spectator sports do not exist as such, but sporting elements are included in dances and rituals during festivals, or in aspects of daily working life.

## 17 ENTERTAINMENT AND RECREATION

Town-dwellers have access to local radio and television, and to movie theaters. But, the aspect of popular culture that people living along the Caribbean most enjoy is the carnival, and Guajiros enjoy fiestas and carnivals as much as everyone else. The best-known fiesta in the Guajira is the yearly event in Uribia. The Guajiros come in all their finery, the women wearing their jewelry and colorful flowered dresses, their faces dramatically made up with ceremonial paint. They mingle with other peoples who live along the coast and who come to Uribia to listen to the music, enjoy the dancing, and admire the ceremonial elegance of the Guajiros.

## 18 FOLK ART, CRAFTS, AND HOBBIES

Weaving, jewelry-making, and crafting musical instruments, such as flutes and drums, form part of Guajiro life. Their hammocks are well-known and are now sold in coastal towns. The women make their own dresses, and the specific cut and colorful choice of flowery prints is much admired. Dugout canoes, and the basic fishing crafts, such as the weaving of nets and the fashioning of rods and fishing spears, are all part of the Guajiro skills.

Generally, whoever was particularly good at a skill was accorded specific recognition and, if customs allowed it, the skill became an aspect of the person's work with and for the community, rather than a separate hobby.

## 19 SOCIAL PROBLEMS

In the early 1990s, constitutional reform in Colombia meant that representatives of the indigenous peoples of Colombia entered Congress for the first time. The various groups initially had to organize themselves and to communicate across their own barriers before they could demand and obtain this type of representation. This is an important step forward, but it is still too early to tell what effect this will have on the Guajiros and their problems, which have to do with changing lifestyles and growing differences between those who live in towns and experience specific types of urban poverty, such as overcrowding, poor sanitation, etc., and those who suffer from rural poverty with lack of access to health care and education.

## 20 GENDER ISSUES

Guajiros are a matrilineal people, which means that name, place in society, and property passes through the mother. Moreover, in the case of marriages with *alijuna* (non-Guajiro),

the child is only Guajiro if the mother is. Guajiro women are the center of the family and their presence in the household symbolizes respect and unity. In addition, community duties follow gender lines. Women are responsible for the household and child rearing, for weaving *süi* (hammocks) and *susu* (bags), and for fetching water, while the men are responsible for the fishing and goat herding, for weaving *womu* (hats) and *waireñas* (sandals), and for collecting firewood.

Matrimony represents a contractual agreement of economic basis as well as sometimes a political one between two families. A dowry of cattle, horses, and jewelry is taken by the man to the parents of his proposed wife to be. Women give birth in their home with assistance of their mother or a close female relative. During this period the entire household tends to stick to a strictly reduced diet to help ensure the child's survival.

The youngest daughter inherits property, as she is the nearest to life. The eldest daughter, being the closest to death, is responsible for funerary rituals. At puberty, only females have a rite of passage. This traditionally entails over a year of isolation from the community, during which time she learns the customs of being a woman, songs and dances, and to weave. Because of modern-day demands of school attendance, this ritual is now often done in two or three months.

# GUARANÍS

**LOCATION:** Paraguay; Brazil

**LANGUAGE:** Guaraní

**POPULATION:** 5 million (estimate)

**RELIGION:** Traditional indigenous religions

## <sup>1</sup> INTRODUCTION

The Guaranís were once one of the most influential Amerindian peoples in the southern part of South America. Eventually they established their settlements in the tropical forests of Paraguay and southern Brazil and also extended their settlements into northern Argentina. Before the Spanish conquest, during the 15th century, the Guaranís warred with Amerindians as far as the southern limits of the vast Inca Empire, bringing back gold, which they wore as ornaments. In the 16th century the Spanish conquerors found Guaraní settlements over a very wide area, including the islands of the Plata River, parts of the Paraná River delta, along the Uruguayan coast, and along the Paraguay River. Large concentrations of Guaranís lived in the Province of Guairá in Paraguay, where some of them still live today.

When the Spanish first arrived, many Guaranís were friendly and assisted the Spanish in waging war against other Amerindian groups and in establishing new settlements. The approach between Spanish and Guaraní people was the search for gold and silver conducted by the Europeans. The Spaniards established small ranches around Asunción, many of them known for their harems of Guaraní women. Many Spanish men, attracted by the beauty of the Guaraní women, married them, and in this way the Guaranís entered into a direct relation with newly found Spanish relatives whom they supported in these early encounters. This was the beginning of the long process of intermarriage that produced the Paraguayans of today. In the countryside, the descendants of Spaniards and Guaranís are still called simply Guaranís, and the language is spoken by many, not just in rural areas but also in towns, including the Paraguayan capital, Asunción.

Other Guaraní groups turned against the Spanish and waged war against them, trying to protect their freedom and their own way of life. This process continued into the 19th century. Some Guaraní groups fell under the control of the Spanish in the cruel *encomienda* system, where they worked for landowners, and others and paid a tribute (effectively a type of tax) to them. It was a harsh, exploitative system.

Other Guaranís entered into a complex relationship with the Jesuits, who became very powerful in this part of South America, establishing many missions where Guaranís settled, sometimes with inducements and promises of an easier life, sometimes with threats of punishment. The early Jesuit missions educated the Guaranís, Christianized them, taught them music, and persuaded them to adapt to a different, if dependent, way of life in the missions where they grew crops and kept cattle. Not only were the missions self-sufficient in food, but eventually the mission Guaranís were taught to use modern weapons and became, in effect, a powerful armed branch of the Jesuits, who as a result encountered the opposition of other powerful interest groups, such as wealthy landowners. The Spanish Crown ordered the expulsion of the Jesuits from

South America in 1767. Guaranís at the missions were dispersed, and many returned to their old way of life in the forests. Those who remained had to fight raids on the missions by colonists who stole land from the Guaranís and destroyed both cattle and plantations.

This aspect of the Guaraní story forms the main part of the film *The Mission*, starring Jeremy Irons. He plays the part of a Spanish priest who agonizes over the choice between becoming a man of action and fighting the harsher aspects of the Spanish colonial regime, or remaining a pacifist priest.

In 1848 the Paraguayan dictator Carlos Antonio López decreed that the remaining Guaranís still living in missions should live in ordinary villages like everyone else.

The Guaranís also participated, as Paraguayan citizens, in the war against Brazil, Uruguay, and Argentina (1864–70) and in the devastating War of the Chaco against Bolivia (1932–35), in which so many Paraguayan men lost their lives.

## 2 LOCATION AND HOMELAND

Today, the Guaranís who have retained their traditional way of life live in scattered settlements in Paraguay and in southern Brazil. Over the centuries, they migrated over vast areas, sometimes undertaking long journeys that led them to settle in widely diverse regions: forests and coastal areas, near sierras, and in river deltas. It is thought that the Brazilian settlements date from the 19th century. They also made their way into northern Argentina, particularly the province of Misiones.

## 3 LANGUAGE

Little is known about the Guaraní culture before the European explorers arrived to their lands. The reason is that Guaranís did not have written language, which would have allowed them to register their history. This Amerindian people relied on oral tradition and were a politically decentralized nomadic tribe, which made it even more difficult to confirm the information transmitted from one generation to another.

The Guaraní language is part of the Tupí-Guaraní language family, a family that includes many indigenous languages south of the Amazon. The two predominant branches of this family, Tupí and Guaraní, would have probably come from a common proto-language nearly 2000 years ago.

The Guaraní language is still widely spoken in Paraguay, a legacy of the influence this distinctive Amerindian people once wielded. However, the wide usage of the language is complemented by two other Guaraní languages that are both secret and sacred. In effect, the Guaranís have a “secular,” a “secret,” and a “sacred” language. The sacred language is used exclusively by male and female elders of the tribe, who receive divine messages and transmit them to the rest of the tribe. The secret language is a priestly language used only by initiates and shamans and is called *Ñe'e pará*, meaning “the words of our fathers.”

Guaranís often have a Spanish name for everyday use, as well as a secret Guaraní name. It is the task of the tribal leader to find the origin of the child’s soul and bestow a sacred name.

## 4 FOLKLORE

Guaraní folklore is very rich, and many myths hint at their origin in a very poetic way. According to the foundational myth, it was Tupã the god responsible for the world’s creation. To accomplish this titanic task, Tupã would have descended to the earth in the region known as Paraguay with the objective of creating the oceans, forests, stars, and animals. Then, using clay, Tupã would have sculpted statues of man and woman breathing life into the human forms. Guaraní myths stated that their race was the first race of people in the cosmos.

Among the *mbyás*, a group of Guaranís who have preserved much of their original literature, the Creator, called by them *Ñande Ru*, gave birth to his son, *Pa’í Reté Kuaray*, whose body was like the sun, and he is the father of the Guaraní race. *Pa’í* taught his people not only sacred dances and songs, but also agricultural skills and ethics. He is the destroyer of evil beings and created the honey bee as a sweet offering to humankind. He entrusted to four gods the care of his creation. After the Creator *Ñande Ru* created the first earth, it was destroyed by a great flood through the will of the gods. Then, the Creator asked the son of *Jakaira*, the God of Spring, to create another earth. Since then, the four gods send the souls of boys to earth, and the wives of the gods send the souls of girls to earth.

The Guaranís are a very religious, even mystical, people, and during a long history of suffering they have had messianic, heroic figures who have led them in a quest for a better life and a search for Paradise, which they call the Land Without Evil. Sometimes these quests have taken physical form in long treks or river journeys.

A famous Guaraní hero is the chief *Aropoty Yu*. The Paraguayan president sent a military expedition in 1844 against the Guaranís, and in 1876 it was still the case that no one could enter Guaraní territory without the consent of *Aropoty Yu*.

## 5 RELIGION

Not all Guaranís profess identical beliefs. Among the three major groups that remain today, known as the Chiripás, the Mbayás, and the Pai-Kaiová's, there are some interesting differences. Generally, they believe that every person has an earthly soul and a divine one. Dreams come from the divine soul and are the source of inspiration for the shamans, who mediate between the divine and earthly realms and who also have the task of identifying evildoers and protecting the tribe as well as curing illness. Some Guaranís believe in reincarnation; others, who have had more Christian influences, believe that evildoers go to a land of darkness, whereas good people go to the Land Without Evil.

Shamans often isolate themselves for periods of time in jungles or forests and live austerely, with a basic vegetarian diet. Among the Guaranís, it is thought that every man and woman eventually receives a protective chant from a dead relative, which is divinely inspired. It is then taught to the rest of the community. Powerful shamans sometimes receive many chants or songs. They are called to their vocation in this manner.

The Guaraní also believe that all living things, including plants, animals, and water, have protective spirits, and that malevolent spirits also exist.

## 6 MAJOR HOLIDAYS

The Guaranís do not make clear-cut divisions between secular and religious occasions. Most feasts and celebrations have a religious character, and even harvest festivals include sacred rituals.

## 7 RITES OF PASSAGE

It is thought that the moment of conception of a child is revealed to the parents in dreams. The Guaranís who believe in reincarnation think that a person who has died can reveal that he or she will reincarnate in a particular body. A pregnant woman follows strict dietary rules, eating some special foods and avoiding others.

After a child is born, both the father and the mother are in a critical state known as *aku*. The father participates sympathetically in the birth pains of the mother, expressing his suffering, and after the child is born the father retires to his hammock for a time, avoiding all magic rites that might be considered harmful to the child, because it is his duty to protect the child. He has to maintain a strict diet and avoid hunting. The mother of the child avoids all heavy work for a time. Among some Guaranís, the shaman has to determine from what part of the sky the child's soul originated and give the child a special name.

When a boy becomes an adolescent he undergoes initiation rites in seclusion with a group, under the direction of the shaman. His lower lip is perforated with a piece of wood. He follows a strict diet based on corn for several days. Afterwards he can use adult words and adult ways of addressing people. During the initiation rites, the boy is instructed in appropriate behavior, which includes guidance on working hard, refraining from harming others, being moderate in his habits, not drinking excessively, and never beating his wife.

When a girl reaches adolescence she is secluded for a time under the care of female relatives. Her mother gives her guidance on her future marriage.

Guaranís are allowed informal marriages that are, in effect, a trial period. The young man takes the girl to his par-

ents' house to live there for a time, without formal marriage ceremonies. If he wishes to marry her, he approaches his future father-in-law for permission. The father of the girl is mainly an intermediary, but it is the mother who can object if she feels the match is unsuitable. When a couple forms a family, they are expected to raise their children with kindness and tolerance, and not to hit the children.

Burial rites still include aspects that are closely guarded secrets. Traditionally, the Guaraní were buried in large pottery jars that were then covered with a bowl. The funeral urns were then buried. Today, they are buried in a folded position directly in the ground or they are laid out in a hollowed-out tree trunk with their possessions. Some are buried under the ground inside the hut itself, which is then immediately abandoned. It is thought by some Guaranís that the earthly soul wanders, whereas the divine soul goes either to the land of darkness or to the Land Without Evil. Many Paraguayan Guaranís bury their dead in the bush. Then, the dead person's house is burned. The mention of his or her name becomes taboo.

## 8 INTERPERSONAL RELATIONS

Traditional greetings to visitors obliged the female hosts to wail and mourn, reciting the admirable deeds of the visitor's dead relatives. The guest had to cover his or her face with the hands and show appropriate expressions of sorrow, such as crying. Some of these traditional greetings have fallen into disuse.

There are particular celebrations among some groups, particularly the Chiripás, which offer young people a way of getting to know each other and that constitute dating rituals. These celebrations are known as *kotyú*. These are ritual dances that allude to important myths, but at the same time allow young men to dance with young women and to express their love. During the *kotyú* dances, both formal and friendly or even romantic greetings are exchanged. León Cadogan and Alfredo López Austin, who made a special study of Guaraní songs and literature, report that an official who came to investigate the condition of a particular Guaraní group was greeted in this way during the dance:

An inhabitant from faraway lands do I see. Oh bird!  
In truth, I see, oh bird, an inhabitant  
from faraway lands!

This was a greeting to girls during a *kotyú* described by Cadogan and López Austin:

Let us, my sisters, give a brotherly greeting,  
Oh spotless maidens,  
around the Great House  
near the Golden Grasses.

## 9 LIVING CONDITIONS

War and conquest decimated the Guaranís, and the process of intermarriage over centuries also created the modern Paraguayan nation. Even after the end of the Spanish colonial period, smallpox proved a deadly disease that wiped out many communities. The various transition periods from one type of lifestyle to another, with painful phases of adaptation, have never been particularly orderly but rather cruel and often sudden; therefore, many hardships have affected the health of the Guaranís. In general, those living in traditional ways in remote forest or jungle areas have knowledge of medicinal plants that

*A Guaraní Indian child peeks out of the prayer house at the Morro da Saudade Indian village near São Paulo, Brazil. The Guaraní Indians struggle to keep their culture alive as the metropolis encroaches on their land. (AP Images/Dario Lopez-Mills)*

are effective in a wide range of conditions, such as certain infections, stomach conditions, and snakebites.

At the time of the European arrival, Guaraní inhabited villages formed by communal houses going from 10 to 15 families. These people were united by their common interest and language. Because of their kinship structure, Guaraní tended to form tribal groups developing a particular dialect. It is estimated that they numbered 400,000 people when they were first encountered by Europeans.

The more traditional groups continue to live a sustainable lifestyle that satisfies their simple and basic needs, such as food and shelter. Some live mainly apart from a cash economy and without surpluses. In some cases there is an active trade in basic implements for hunting, fishing, or cooking. This has led to the disappearance of clay pots, which are now replaced by aluminum ones that have been exchanged for other items. Fishing hooks, which the Guaraní used to make for themselves out of wood, have been replaced by metal ones.

The traditional extended family unit, which was part of a clan of as many as 50 or 60 families, required the construction of large houses with screened-off sections inside the house and a large communal area. During the Spanish colonial period, disapproval of this method of living on the part of state and religious authorities gradually compelled the Guaraní to abandon this mode of living, and single family huts with thatched roofs began to replace the traditional spacious houses.

The Guaraní in Paraguay live along streams and use bamboo rafts or occasionally canoes for transport. In some jungle areas they can trek for long distances on foot, especially during hunting expeditions. The Guaraní in parts of Brazil use dug-out canoes for transport.

## **10 FAMILY LIFE**

The traditional extended family unit demanded a cooperative style of living under the authority of the head of the clan. Generally, Guaraní lived in small groups of large rectangular houses built around a square plaza or courtyard. Today in many areas these houses have been replaced by small individual family units. Even traditional hammocks have been replaced by sleeping mats or platform beds, which are probably less comfortable and practical. Although the Guaraní have never recognized a central authority, the disappearance of their traditional large clan houses in most areas has also undermined the family structure with its shared tasks and support systems.

Some marriage customs are changing, with young people having more say in the choice of marriage partners. In earlier times, child betrothals were sometimes practiced. Chiefs also had several wives in earlier times, although this is no longer the case.

Some Guaraní keep dogs that are prized as hunting companions, particularly in jungle areas where the jaguar is still hunted. They keep chickens and other farm animals in some areas.

## 11 CLOTHING

Guaranís who live on protected reservations in parts of northern Argentina and Paraguay have adopted the clothing of the rural Mestizo peasant farmers, with plain shirts and trousers, and a cloak or poncho. In remote areas of Brazil, some of the Guaranís still wear traditional ornaments and very little else. Originally they wore no clothing but used strands of women's hair around their legs in bands as protective ornaments; the lower lip was pierced. In some cases, a type of loincloth was worn by men. In remote areas, the women still wear black body paint and the men wear black and red body paint. Ear ornaments of shell or gold are still worn by some Guaranís.

## 12 FOOD

The whole community participates in clearing land to grow crops in communities that still live in the traditional style. When the soil is exhausted, the community moves on. While this traditional method is still in use in some areas, in other places the Guaranís have become more settled. The staple foods are cassava and corn. Sweet potatoes and beans, pumpkins, and tropical fruits, such as bananas and papayas, are also grown. Peanuts provide protein, and sugarcane is a delicacy. In the forests, wild honey is sometimes collected.

*Chipas* are corn-flour cakes, and the Guaranís also wrap corn dough in leaves and cook the parcels under ashes; this is called *auimi atucupé*. Cassava is often roasted or boiled.

## 13 EDUCATION

The Jesuits provided the first schools for the Guaranís. After the demise of the Jesuit missions, many Guaranís became *monteses*, taking refuge in remote areas and reverting to earlier lifestyles. Others went to work as salaried peasants on plantations; some went into the towns to find work and continued the process of assimilation. Those that remain today in remote areas, such as some of the Brazilian Guaranís, do not wish to adapt to the prevailing Western lifestyle, nor to provide their children with the schooling that will eventually mean the end of their independent existence.

## 14 CULTURAL HERITAGE

Much of the music, dancing, songs, and poems of the Guaranís, as well as some of their prayers, legends, and myths, are the means by which they have managed to preserve important aspects of their culture. Some of their songs and poems have made their way into the popular culture of the Paraguayans. Some groups, such as the Mbayás, have preserved many of their legends and stories. All of these, for the Guaranís who still live a more traditional life, form part of an integral whole and are woven into their daily life and activities. Traditional instruments include drums, rattles, and flutes. Sometimes important ethical and social instructions are given in the form of short plays that are performed in front of children in a village.

## 15 WORK

Guaranís farm, hunt, and fish. Some Guaranís are also beekeepers. In areas where there is still game, they hunt the tapir, the anteater, and the jaguar, as well as the agouti. They do not hunt birds with blowpipes and darts, as do many other tribes who live in the tropical rainforests. Instead, they capture par-

rots by lassoing them with a small noose attached to the end of a pole.

The Guaranís are able fishers and still shoot fish with bows and arrows in some areas. They also use traps in the form of baskets or nets made of fiber. Fish provides an important source of protein in their diet.

## 16 SPORTS

Sports really begin as the games that children play. Guaraní children especially enjoy wrestling and racing. They also play variations of tug-of-war. Some studies report that the ancient Itat'n group of Guaranís played games with rubber balls. Adults still play a game with a shuttlecock made out of corn. The aim is to throw it at each other and try to keep it in the air as long as possible.

## 17 ENTERTAINMENT AND RECREATION

Guaranís have always enjoyed celebrations and feasting on those happy occasions, such as the return from a successful hunt, that call for them. Usually, they will celebrate with generous quantities of a fermented drink called *chicha*, often made from corn. A good harvest and a good fishing expedition are also occasions for celebration.

## 18 FOLK ART, CRAFTS, AND HOBBIES

Baskets are woven from pindo palm fibers, and some are made out of twilled fabrics made of *tacuaembó*. Much of the fine pottery that archaeologists have found in various ancient Guaraní settlements is no longer made by the Guaranís. Some of the Paraguayan Guaranís make skin bags from leather. Some still make their own bows and arrows and carve dugout canoes from a single trunk of wood. They also spin cotton using a vertical loom with a circular warp. The cloth is usually white, with brown and black stripes. They also make their own flutes, sometimes from bamboo. They make beads and thread them into necklaces.

## 19 SOCIAL PROBLEMS

The social problems of the Guaranís differ, depending on whether they live on the few remaining reservations or reductions in Paraguay and northern Argentina, or whether they live in the tropical forests of the Brazilian-Paraguayan border areas. In the latter case, they resent the incursions of the Europeans and cling to their traditional way of life. To maintain their simple, sustainable lifestyle, they need to live in small, scattered settlements, often ranging over a wide area to make use of the slash-and-burn agricultural methods that require them to move on when the soil has been exhausted, to find good hunting grounds, and to move on after burials. This lifestyle clashes with the needs of ranchers and poor farmers hungry for land, and with prospectors who want to try their luck in areas that have not previously been settled by non-Indians.

On the reservations, the problems relate to economic limitations and poor prospects for sustaining cultural and economic independence.

## 20 GENDER ISSUES

With the loss of territory, Guaraní women have lost their space to plant, rear domestic animals, and produce medicinal plants. The disappearance of the forest has also caused a lack of raw

materials used in making utensils and crafts, which in the case of the Guaraní people is an activity mainly carried out by women. The loss of biodiversity has meant the loss of a considerable number of medicines derived from forest plants, roots, and animals. Guaraní women, who had previously used herbs to stimulate or to reduce fertility, have lost of their right to family planning as the necessary plants are harder to find and grow. Without the ecosystems that ensured the continuation of the way of life for these traditional peoples, the masculine role, within the family and the community, has been undermined. Some Guaraní men have turned to alcoholism and domestic violence.

Even though Guaraní society was polygamist when the Spaniards arrived to the Amazonian jungle, today marriages tend to be monogamous. Divorce is a right of Guaraní women, who has only to communicate to his partner that she is leaving him to end the marriage.

Guaraní women currently live in poor conditions, reflected in their high illiteracy rates, low school enrollment rates, poor access to health care, and significant levels of poverty, which have led them to migrate to urban centers to become maids, daily workers, nannies, and cooks, where they are even more vulnerable to multiple forms of discrimination. However, Guaraní women that have chosen to stay in their villages have recently begun to form organizations, devoted to the production of crafts and recovering knowledge and use of medicinal herbs, in order to resist the white man's invasion of their territory and culture.

# GUATEMALANS

**LOCATION:** Guatemala

**POPULATION:** 13,002,206

**LANGUAGE:** Spanish and several Amerindian languages.

**RELIGION:** Roman Catholicism with ancient Mayan beliefs; Protestantism

## <sup>1</sup> INTRODUCTION

More than 1,000 years before the coming of the Spanish, the Mayas established a number of city-states in what is now Guatemala. The largest of these, Tikal, covered 26 sq km (10 sq mi) and included some 200 major stone structures, including high-rise temples and palaces. By AD 1000, however, the Mayan cities had been abandoned, and it is said the majority of the indigenous population had moved to the highlands. Soon after Spanish troops conquered Mexico in 1521, they moved south and subdued the native inhabitants. For the next three centuries the captaincy-general of Guatemala was the center of government for most of Central America. The captaincy-general won its independence from Spain in 1821. Guatemala seceded from the resulting federation of the United Provinces of Central America in 1839.

José Rafael Carrera, a conservative, ruled Guatemala from 1838 to 1871. Carrera first appointed himself as the military arbiter of the state and then, in 1854, the presidency was conferred to him for life. However, in 1871 Miguel García Granados and Justo Rufino Barrios ended the conservative regime imposed by Carrera and inaugurated a prolonged liberal period in Guatemalan history.

Justo Rufino Barrios, a liberal, ruled from 1873 to 1885. During his term many indigenous communities lost their lands, which were developed into coffee and banana plantations. During Barrios's administration and later after the Guatemalan aristocracy lost power, the Roman Catholic Church was brought under civil control, and heavy investment in national infrastructure yielded roads, railways, and telegraph lines. In addition, Barrios opened the country to foreign capitals and fomented the cultivation of coffee, a commodity that became the principal export of Guatemala.

In 1898, Manuel Estrada Cabrera became provisional president and, after repeated reelections, maintained himself in power until 1920. Estrada Cabrera continued Barrios's developmental policies, and the country enjoyed economy growth. However, the first decades of the 20th century were marked by political and social instability because of the unequal distribution of wealth. In this dire context, the army decided to intervene. In 1931, General Jorge Ubico —known among Guatemalans as “the father”—seized power. Even though the economy improved during Ubico's term, socio-economic inequality remained unsolved. In 1944, social discontent led to a general strike forcing Ubico to resign. The social crisis experienced by the Guatemalan society opened political space for the reorganization of political parties and other social movements. In this context, Juan José Arévalo, who was elected president in 1944, came to represent popular claims for social justice and reform.

Jacobo Arbenz, another social-oriented military officer, was elected in 1951 to succeed Arévalo. In 1954 the Arbenz's gov-

ernment, considered pro-Communist by the United States, was overthrown with help from the Central Intelligence Agency (CIA). Leftist guerrilla groups organized to oppose the right-wing military-dominated and U.S.-backed governments that subsequently ruled the country. In this context, a violent conflict broke in Guatemala in the 1960s and lasted until 1996, when the peace agreements were signed. The death toll of the civil war has been estimated to be between 130,000 and 200,000. Political violence also resulted in 50,000 “disappearances,” 1 million internally displaced persons, 100,000 refugees, and 200,000 orphaned children. The root causes of the conflict can be traced to economic policies that marginalized the impoverished indigenous population, especially by restricting their access to land. These policies were implemented by a series of authoritarian and military regimes that were run by the nation’s economic elites.

One of the strongest voices calling to end the war came from inside the country. A Quiché woman, Rigoberta Menchú, who had lost her father in the civil war, campaigned internationally against national reconciliation and for the respect for indigenous rights. In 1993 Menchú was awarded the Nobel Peace Prize, becoming an icon for ending violence in Guatemala. When the peace agreements were signed, with the participation of the United Nations, the Comisión para el Esclarecimiento Histórico (CEH) was established to shed light on human rights violations related to the armed conflict. In 1999, the CEH’s report acknowledged that between the years 1981 and 1983, the army identified Mayans as the internal enemy and concluded that the acts of the Guatemalan state against the Mayan people amounted to genocide.

In 2006 Guatemala entered into the Dominican Republic–Central America Free Trade Agreement (DR-CAFTA) with the United States. A year later, Álvaro Colom, representing the National Union for Hope won the elections, campaigning to improve public education and healthcare, especially in rural areas. Despite national and international efforts to improve Guatemalans’ living standards, distribution of income has remained highly unequal with about 56% of the population below the poverty line.

## 2 LOCATION AND HOMELAND

Guatemala is slightly larger than the U.S. state of Tennessee. It is bounded by Mexico on the north and west, by the Pacific Ocean on the south, and by Belize, Honduras, and El Salvador on the east. Eastern Guatemala also has a small Caribbean Sea coastline. The southern half of the country is mountainous, except along the Pacific coast. Some 33 mountains are volcanic, and the area is also subject to earthquakes. The northern third of the country consists of lowland rain forest.

Guatemala had a population of about 13 million people in 2007, making it the most populous country in Central America. The population was divided about evenly between Amerindians and *ladinos*, a term applied to those who have adopted the Spanish language, dress, and lifestyle, regardless of race. *Ladinos* may be of pure Amerindian ancestry but are more often *mestizos*, people of mixed Amerindian and European descent. About 1% of the populations are of purely European ancestry. Blacks, along the Caribbean coast, make up perhaps another 1% of the population.

## 3 LANGUAGE

Spanish is the official language of Guatemala. Guatemalan Spanish is carefully enunciated and formal, even old-fashioned at times, with an emphasis on politeness and respect. Some words are of Amerindian origin. Many Amerindians speak Spanish poorly or not at all. Indigenous men are more likely to know Spanish than are women, and younger people more often speak Spanish than do older ones. There are 21 Mayan languages spoken in Guatemala, the principal ones being Quiché, Cakchiquel, Kekchí, and Mam. Carib is spoken along the Caribbean coast by the Garifunas, or Black Caribs, the descendants of fugitive slaves and Carib Amerindians. Because of this idiomatic diversity, many official documents, such as those related to the peace agreement of 1996 that ended the civil war, were written in Spanish as well as in more than 20 types of Mayan dialects.

## 4 FOLKLORE

Guatemala’s folklore is based on Amerindian cultural beliefs as well as old traditions brought by the Spanish conquerors. According to Quiché legend, for example, the first four humans were made of corn paste into which the Heart of Heaven breathed life. To assure good growing weather before spring planting, the seed is blessed at a special planting. The night before the planting, the men burn incense in the fields and sprinkle the ground with a brew made from fermented sugarcane, while the women pray at home before lighted candles. In the

morning, women go to the fields with food for the sowers and place their candles at points representing the four winds.

The shaman (Mayan priest) is a man or woman credited with being able to mediate with the unknown forces that govern human destiny, to predict the future, and to cast spells. He or she is also a healer (*curandero*) who practices herbal medicine.

The Amerindians of Central America believe that every person has an animal counterpart called the *nagual* who shares his or her destiny. Tecún Umán, a heroic Quiché warrior who, according to legend, was slain by Pedro de Alvarado, the Spanish leader, had for his nagual the colorful quetzal, Guatemala's increasingly rare national bird.

Particular places serve as shrines for particular gods. The Amerindians of Alta Verapaz, for example, are careful when approaching a hot spring to leave kindling beside it for the god who boils the water. In return, it is hoped, the god will not cause fever by heating the Amerindian's blood.

## 5 RELIGION

Some 67% to 80% of all Guatemalans are Roman Catholic. Within this faith, however, the Amerindians have preserved ancient Mayan beliefs. Their gods, who govern aspects of life like weather and crops, are worshipped under the guise of saints; Jesus and Mary, for example, are identified with the Sun God and Moon Goddess, and the cross is associated with the Four Winds of Heaven. *Cofradías* (brotherhoods), rather than Catholic priests, are in charge of the religious life of an Amerindian community. Fiestas are the major form of public worship and sometimes conform to the 260-day Mayan religious calendar. Worship is orthodox among ladinos, but routine church attendance is often not possible because of a shortage of priests. Most priests in Guatemala are foreigners.

Perhaps 25% to 33% of the population is Protestant. Protestant missionaries, generally with ties to organizations in the United States, have been very active in Guatemala since the 1880s. Both mainline denominations and evangelical or fundamentalist groups are represented. Protestants are critical of folk Christianity and especially deplore the drunkenness that accompanies fiestas.

## 6 MAJOR HOLIDAYS

Pilgrims from all over Central America come to Esquipulas on January 15 to worship at the shrine of the Black Christ, a sculpted balsam-wood image, 1.5 m (5 ft) high, whose dark color resembled the complexion of the Amerindians before smoke generated by candles and incense turned it black. A temple, completed in 1758, houses the effigy, which is girdled in white satin, embroidered with gold, and laden with jewels. Also important is the pilgrimage on February 2 to the village church in Chiantla, famous for its silver image of the Virgin Mary.

For size and scope, Antigua's Holy Week (late March or early April) pageantry is unrivaled in Latin America. Events reach a climax with a Passion procession on the morning of Good Friday. A bright carpet of flowers and dyed sawdust lines the route. Chichicastenango celebrates December 21, the day of St. Thomas, with a weeklong fiesta marked by ritual dances of the Quiché and the *Palo Volador*, in which costumed men dangle by ropes from an 18-m-high (60-ft-high) maypole.

The Garifuna of the Caribbean celebrate their arrival in Guatemala with Yuriman, a simulation of the first farm plant-

ings, in Livingston each May 13–15. Singing, dancing, and hand clapping accompany this festival. Like the other nations of Central America (except Panama), Guatemala celebrates September 15 as Independence Day to commemorate the region's declaration of independence from Spain in 1821.

## 7 RITES OF PASSAGE

In Guatemala's villages, both a midwife and a *brujo* attend a child's birth, the latter to pray for long life and good health and protection against the evil eye, which can be cast on children by a stranger or a blue-eyed person. A breech delivery or one with an umbilical cord around the neck is considered a sign of good fortune. Baptism is the only Church sacrament in which Amerindians normally partake. An attendant godmother and godfather are essential to the ceremony. Amerindian babies are carried on their mother's back and breast-fed whenever hungry. Children wear clothing identical to their parents and are put to work at an early age.

In conservative ladino society, group boy-girl activities begin at about age 14, but real dating does not begin until later. A girl's 15th birthday indicates that she has come of age and calls for a special celebration. A boy's coming of age is recognized when he turns 18. A young man still asks a girl's father for her hand in marriage. Engagements of several years are common.

Although actual arranged marriages, with no say by the prospective partners, are rare among Amerindians, a youth's father may seek out a *tertulero*, or matchmaker, to find him a suitable bride—a girl under 16. Once an arrangement is reached, the young man provides a dowry. There is a betrothal feast, and there may be a marriage ceremony performed by a village priest if available, followed by a feast.

At Amerindian funerals the Mayan priest spins the coffin at the grave to fool the devil and point the deceased's spirit toward heaven. Yellow is the color of mourning, so yellow blossoms are hung in the form of a cross on the grave, with accompanying candles burning. Food is placed at the head of the grave for the spirit of the departed. Amerindians toll church bells for the dead to acquire merit with the gods.

## 8 INTERPERSONAL RELATIONS

In Hispanic countries, when people stop to greet each other there will probably be some physical contact as well as words exchanged. Both acquaintances and friends generally shake hands when meeting and parting. Men may pat each other on the back, and women often embrace and kiss each other on one or both cheeks. Men and women will generally do so only if they are relatives. When talking or simply standing or sitting in a public place, people tend to come closer to one another than in the United States. When talking, people may gesture more than in the United States and even touch the other person on the arm or shoulder for emphasis. Family and friends will drop in on each other, especially on Sundays and holidays. These are brief, informal stops.

## 9 LIVING CONDITIONS

In 1990 it was estimated that the poorer half of the population was receiving only 60% of its daily minimum caloric requirements. Infant mortality is high with 27 children out of 1,000 births dying during the first month of life. Gastrointestinal and respiratory ailments take a heavy toll because of poor

sanitation as well as poor nutrition. In rural areas, few people have access to drinkable water.

Perhaps the main feature that characterizes Guatemalan society is the economic and social gap among its inhabitants. Guatemalan urban elites have access to a good quality of life, having access to e-mails, cell phones, beepers, and computers, while in the rural areas indigenous inhabitants still conserve pre-Colombian patterns of daily life.

Because of rural overpopulation, the urban areas have swelled with migrants, many of them in illegal squatter settlements. Peasants mostly live in two-room, dirt-floor adobe structures or ones that use poles for walls. The roofs are made of palm leaves, straw, or tiles. Their small farm plots may be several hours' walk away.

Guatemala's road network is not extensive and, especially in mountainous areas, the roads are seldom paved. Most people rely on secondhand buses—formerly U.S. school buses—for more than purely local transportation. Automobiles range from old, patched-up Japanese models to the luxury cars of the elite.

## **10 FAMILY LIFE**

Guatemala's families are close-knit and generally the only dependable source of help in a society where church and state have a limited impact on daily life. Among ladinos, the nuclear family of father, mother, and children is most common, but a moderately prosperous household often includes other relatives and servants or orphaned children. The extended family forms the basis of the Amerindian community. Amerindians rarely take mates outside their own linguistic group and village. Recently married couples typically live with the husband's parents.

Despite Guatemala's rapid population growth and the resulting division of land into ever-smaller plots, children are greatly desired, especially among Amerindians. During the late 1980s, the average number of births per woman completing her childbearing years was almost six. Ideally, a ladino woman does not work outside the home, but economic necessity has forced many to do so. Amerindian women tend gardens and household animals. Many earn cash by handicrafts or, in the city, domestic work.

## **11 CLOTHING**

The clothing of many ladinos is similar to that of modern Westerners, but almost every Amerindian community has its own style of dress. Indeed, an individual's village can be identified by the design of the cloth. It is estimated that there are at least 325 major patterns in the traditional dress that is still everyday garb—particularly among women—in Amerindian villages. These are hand-woven articles made on pre-Spanish looms or foot-powered treadle looms introduced by the Spanish.

However, traditional clothing is worn more frequently by women than men, and more often by poorer Guatemalans in general. Western-style dress is more frequent among people with a higher standing in their communities. Lately, second-hand clothing from the United States, sold at bargain prices, has become popular. It is not uncommon to see traditional garments worn together with a college tee shirt.

The typical dress of Amerindian women usually includes a *huipil*, which is a smock-style blouse; a skirt with a belt; a *tzute* (scarf or headdress); and a *rebozo* (shawl). Men may wear

*Despite Guatemala's rapid population growth and the resulting division of land into ever-smaller plots, children are greatly desired. During the late 1980s, the average number of births per woman completing her childbearing years was almost six. (Cory Langley)*

brightly colored trousers and a shirt with a belt or sash, a tunic or vest, a jacket, a straw hat, a shoulder bag called a *morral*, and sandals (Amerindian women normally go barefoot). Most Amerindian men, however, now wear manufactured clothing largely indistinguishable from their ladino counterparts.

## **12 FOOD**

Guatemalan food is generally simple and not highly spiced. Corn tortillas, rice, beans, tamales, and plantains are the staples. Tortillas and black beans are served at every meal. A classic method of preparing meats is to cook them in water before adding sauce or seasonings. An essential seasoning of Mayan foods is squash seed toasted and ground to a powder. Coffee is lighter and more watery than the brew Americans and Europeans are used to drinking.

## **13 EDUCATION**

Education is free and compulsory between the ages of 7 and 13, but enforcement is lax in rural areas, and one out of every five children of those ages was not enrolled in school in 1991. Many do not complete the primary-school cycle because they must work to help their families. The adult literacy rate was only 55% in 1990. Amerindians are at a particular disadvantage since Spanish is not their mother tongue.

Six years of secondary school can lead either to a university education or specialized job training. There are six universities. Chief of these is the State University of San Carlos, in Guatemala City. The constitution guarantees it autonomy and not less than 5% of the national budget. The university, which charges no tuition, has more than 50,000 students, many of whom must work part-time while pursuing their studies. Most of the private universities are in Guatemala City, including the Francisco Marroquín University. The private Universidad Rural is based in Chimaltenango.

#### 14 CULTURAL HERITAGE

Native music developed from a blend of Spanish and Amerindian influences. But, Guatemala is better known for its traditional dances, which are often a kind of musical drama that recalls a historical event with the use of costumes and masks. These are performed at fiestas in honor of the local saint. The Deer Dance symbolizes the struggle between humans and animals. The Dance of the Conquest recalls the victory of the Spanish over the Amerindians.

Tikal and other monumental sites are testimony to the architectural accomplishments of the Maya. The Spanish influence can be found in colonial-era churches, sculptures, and paintings. Guatemala's best-known 20th-century painter is Carlos Mérida.

The Maya had the most advanced system of writing in the Americas among indigenous peoples. A Spanish priest, Francisco Ximénez, translated the rarest and most sacred book of the Quiché, the *Popol Vuh*, in 1680. This work is a treasure-trove of Mayan beliefs and practices. Because of the heavy hand of the Inquisition, the first history of Guatemala, written by Antonio de Remesal and published in 1619, was ordered "thrown to the stables." Even *Don Quixote* had to be smuggled into the colony. Rafael Landival, a Jesuit, wrote the poem *Rusticatio Mexicana* while in exile in Italy. This was the outstanding Guatemalan work of the colonial era. Famous authors of the 19th century include Jose Batres y Montúfar and José Milla y Vidaurre. Enrique Gómez Carillo (1873–1927) was a novelist and poet. The novelist and poet Miguel Ángel Asturias received the Nobel Prize for literature in 1967.

#### 15 WORK

Ladinos tend to become shopkeepers, government employees, or laborers in private industries. The *fincas*, or large plantations, employ both ladinos and Amerindians for seasonal labor during the harvest. The sizable part of the population outside the modern economy continues to till small plots for subsistence, supplemented by income from handicrafts and seasonal plantation work. Many migrants to the cities, unable to find employment, take to street vending. It was estimated in 1992 that 46% of the labor force was unemployed or underemployed. The minimum wage was under \$3 a day in 1994.

#### 16 SPORTS

Soccer is a national passion, played even in the most traditional and remote Amerindian villages. Guatemala City has the largest soccer stadium in Central America.

#### 17 ENTERTAINMENT AND RECREATION

Fiestas continue to provide popular entertainment and to reflect much of the creative life of the people. They all include music and dance, eating and drinking, and fireworks. Cinemas, found only in the major cities, mostly play U.S. films dubbed or subtitled in Spanish. Television fare includes dubbed U.S. programs and variety shows and *telenovelas* (soap operas) imported from Mexico and Venezuela.

Guatemala is the heartland of marimba music. Almost every town has a marimba orchestra, which includes the accompaniment of a brass band, and no wedding is complete without marimba music. The repertoire includes many Mexican numbers. Amerindians employ other instruments for their rites, including the pre-Conquest drum and flute.

#### 18 FOLK ART, CRAFTS, AND HOBBIES

Guatemala's handspun and woven textiles are among the finest in the world. Made by highland Amerindians, they display brilliant colors and intricate designs, both in the form of raw cloth and finished garments. Cotton, wool, and silk are the traditional fibers for clothing, although acrylics have been introduced. Blankets and rugs are also made from these fibers, while hats, mats, hammocks, and baskets are made with different types of cane and reed as well as fibers from the maguey cactus. Ceramics are produced both by pre-Conquest methods, molding clay by hand and using natural clays and dyes, and with the potter's wheel and glazes and enamels introduced from Spain. Jade jewelry dates from ancient times. Wood-crafted products include traditional masks, carved squash gourds, and colonial-style doors and furniture.

#### 19 SOCIAL PROBLEMS

About 2% of the population owns some 70% of the cultivable land. About 65% of the original forest cover has been destroyed, and about 30% of the land is eroded or seriously degraded. Only 33% of the population has regular access to health services. Domestic violence occurs but receives little attention. The labor code makes legal strikes difficult, and women, usually found in low-wage jobs, are paid significantly less than are men. These statistics explain why more than half of Guatemalans live under the poverty line.

#### 20 GENDER ISSUES

In 1954, only educated women were given the right to vote, while male suffrage was universal. The vast majority of women from rural areas—especially indigenous women, who were illiterate—were denied the right to vote for the next 20 years.

Throughout two decades of political violence, women accounted for 23% of the cases of execution and 12% of the "disappearances" that were a consequence of the state's counterinsurgency policy between 1978 and 1996. In 1984, women searching for their "disappeared" family members formed the Grupo de Apoyo Mutuo (GAM), while other women, such as Rigoberta Menchú (Nobel Peace Prize 1992) and Helen Mack (Right Livelihood Award 1994) stood out for their individual fights for justice.

In 2007, 34.6% of illiterates in the country were women, of whom approximately 60% were indigenous in rural areas. In some communities, female illiteracy is as high as 90%. Higher dropout rates are found in rural areas among indigenous girls

who are required to do heavy domestic work when they are very young. In terms of access to social services, employment, and salaries, women continue to labor under severe disadvantages as compared to men.

In addition to exclusion in education and labor, Guatemalan women suffer high levels of violence that go largely unpunished. Guatemala's legal system is rife with provisions that minimize the seriousness of violence against women. In 2003 alone there were 4,500 cases of rape and 9,000 cases of domestic violence and, in 2005, 600 women were murdered. However, the estimated impunity in such cases reaches 97%.

In terms of representation and civil participation, and despite the creation of a Women's Parliament in 2004, only 14 of the 158 members of the national congress were women as of 2008.

# GUYANANS/GUYANESE

**LOCATION:** Guyana

**POPULATION:** 770,794

**LANGUAGE:** English (official); Creole patois; Hindi; Urdu

**RELIGION:** Hinduism; Christianity; Islam; native animism

## <sup>1</sup> INTRODUCTION

Historical evidence suggests that Amerindian peoples occupied the territory that is now Guyana around the 1st millennium BC. Among the earliest settlers were groups of Arawak, Carib, and possibly Warao (Warrau). These aborigines survived practicing agriculture and hunting. Even though Spain claimed rights over this region, the area was avoided because of the difficult access to the zone. The place located between the Orinoco and Amazon deltas became known as the Wild Coast.

During the 16th and 17th centuries, the great European colonial powers fought to claim the land for their sugarcane plantations, and the country changed hands with bewildering frequency, mostly as a result of wars between the British and the French. Britain shipped in slaves from West Africa to work in the sugarcane fields. Slavery was abolished in 1804.

Guyana became independent from Britain in 1966 and became a republic in 1970, being the only nation-state of the Commonwealth of Nations on the mainland of South America. Politically, Guyana has moved on a steady course toward socialism from the time of independence. Both the government and the opposition party are Marxist-Leninist, although, since the death of the first prime minister, Forbes Burnham, in 1985, ties with the West have been strengthened. Politics are essentially divided along racial lines and for 28 years, beginning in 1964, Guyana was ruled by one party, the People's National Congress (PNC), representing predominantly Afro-Guyanese interests. Initially identified with the urban black populace, the PNC essentially established a one-party state.

In 1992, however, a new election saw the return of Dr. Cheddi Jagan of the People's Progressive Party (PPP), which represents the predominantly Hindu population. Jagan was chief minister of British Guyana from 1961 to 1965, before independence. Jagan became president of Guyana in 1992 and remained in the post until his death in 1997. His presidential tenure was characterized by the revival of the union movement and a re-commitment to education and infrastructure improvement.

After Jagan's death in 1997, his wife, Janet Jagan, was elected president in elections held later that year, becoming the second female president in the history of South America—after Isabel Perón—and the first to be democratically elected. In 1999 Jagan's widow stepped down due to health problems, and Bharrat Jagdeo was appointed president of Guyana. In 2001, this politician of Indian descent won the presidential election. In 2006 he was re-elected for a new term.

The Guyanese economy exhibited moderate economic growth during the last decade (5.4% in 2007), based mostly on the expansion in the agricultural and mining sectors. However, the shortage of skilled labor and a deficient infrastructure remained the most severe economic problems. Guyana's

main exports are sugar, rice, rum, timber, diamonds, bauxite, shrimp, and molasses.

## 2 LOCATION AND HOMELAND

The Cooperative Republic of Guyana is an independent republic and a member of the British Commonwealth located in the northeast corner of South America.

It comprises an area of 214,970 sq km (83,000 sq mi), and its coastline is about 430 km (270 mi) long. Inland there are many uninhabited areas, and most of the country's population (about 800,000 people) lives on the narrow coastal strip along the Atlantic coast, much of which has been reclaimed from the sea by a series of canals and some 140 miles of dikes. The capital and chief port is Georgetown. Inland is a huge plateau, which forms most of the country's center, crisscrossed with the numerous rapids of Guyana's rivers.

Guyana's population originally came from various parts of the British Empire, although a small number of aboriginal Indians still live semi-nomadic lives, scattered throughout the inland forest regions. The Afro-Guyanese, descendants of the African slaves shipped in to work on the sugarcane plantations, form one-third of the population. The Asian Indians, who came mostly as indentured labor to replace the Africans when slavery was abolished, form the largest racial group, making up about half of the population, while Portuguese, Chinese, and Amerindians make up the remaining one-sixth of the population.

## 3 LANGUAGE

The official and principal language of Guyana is English. Guyana is the only South American country to have English as its official language. But, a Creole patois is spoken in the country. Hindi and Urdu are also heard among older Asian Indians.

## 4 FOLKLORE

Much of Guyanan folklore springs from religious and racial backgrounds of its diverse population. Hindus identify with their cultural heroes, such as Rama, Krishna, and Mahavira. In fact, many of them give their children names based on characters from the great epic stories of India.

Many Creole folk tales are based on the Afro-centered traditions that emphasize the organic unity between animals—including humans—and nature and also the unity between the living and the dead.

## 5 RELIGION

The major religions of Guyana are Hinduism and Christianity (chiefly Anglican and Roman Catholic). There is also a sizable minority of Muslims. About 35% of the population is Hindu, 50% is Christian, and 10% is Muslim. Many Asian Indians accept baptism and membership in Christian churches without abandoning their participation in Hindu rituals. Animistic religion is still practiced by the Amerindian peoples.

Some adherents of Christian groups also practice traditional African beliefs, such as *winti*, (meaning "wind"). This is a traditional polytheistic and largely secret religion of West African origin. It recognizes a multitude of gods and ghosts, each having their own myths, rites, offerings, taboos, and magical forces. The phenomenon of *obia* (a healer god) can be used to bring illness and other calamities onto the practitioner's enemies.

Hundreds of people turn up for the seven-day festival of Ramayana Yajma when the Brahmins read and explain the *Ramayana*. The *Ramayana* is an ancient epic poem that recounts the dramatic and difficult life of Rama, the royal heir, who is exiled from the court of Ayodha and exiled to the forest for 14 years because some of his royal relatives conspire against him. The sorrows of separation, the necessary courage required to confront tragic events in life, and the way a human being can create meaning and purpose in life are all important themes in the *Ramayana*. Christians as well as Hindus from all over the country participate in Ramayana Yajma. Throughout the week, participants are fed a variety of Indian dishes, with vegetables forming the main part of the meals.

## 6 MAJOR HOLIDAYS

Much recreational activity is based upon the festivities that accompany Hindu, Muslim, and Christian holidays, such as Christmas, the end of Ramadan, and (in early March) Phagwah, the Hindu New Year, which is a joyous celebration that celebrates the triumph of good over evil and is noted for the energetic throwing of perfume and water. Easter Monday is a traditional day for flying kites. Republic Day, on February 23, is the day the president reports to the nation and is marked by much street marching.

## 7 RITES OF PASSAGE

Baptism is common, even among Asian Indians who attend Christian churches while maintaining their participation in Hindu rituals. In their homes, Hindus celebrate domestic re-

ligious ceremonies, such as *Pujas*, for special occasions like birthdays or anniversaries.

Many Afro-Guyanese couples do not regularize their unions with a license or church ceremony.

## 8 INTERPERSONAL RELATIONS

Anyone visiting a friend or acquaintance at their home address is expected to call upon everyone else that they know within that neighborhood. Not to do so is considered extremely rude. Open hospitality is a great feature of Guyanese life and no visit can be completed without the offer of a meal or refreshment.

The familiar Hindu caste system, which is a highly localized phenomenon in the villages of India, no longer exists in Guyana. When the low castes and the twice-born Brahmins were thrown together on board ship to travel from India to the Caribbean during the 19th century, the caste system soon became irrelevant. Today, there is just one caste for all in Guyana, although the Brahmins do retain their special religious role in interpreting the sacred knowledge of the holy rituals and Sanskrit texts.

## 9 LIVING CONDITIONS

Out of a population of about 800,000 people, some 170,000 live in Georgetown, the capital. Many houses in the center of Georgetown are made of wood. Most people live in small villages and towns along the coast. The houses are built of wood with tin roofs and are constructed on stilts 2.5 m to 3 m (8–10 ft) off the ground to avoid flooding from the sea.

Guyana's gross national product, estimated to be only about \$600 per capita in the mid-1990s, makes it one of the world's poorest countries. However, 10 years later governmental efforts to improve the quality of life of Guyanese have made impact on people's life. In 2007 the per capita GDP had increased by about three times to \$3,800. However, in spite of this huge leap, food shortages have remained, creating widespread cases of malnutrition and diseases formerly under control, such as beriberi and malaria.

The economy has been shattered by the depressed world demand for bauxite and sugar, which has led to a near breakdown in essential public services, such as electricity. The country is, however, nearly self-sufficient in food.

There is a limited road and highway system, much of which is only partly paved and partly made of baked clay. In fact, there are only a few hundred kilometers or miles of paved roads, mostly in the coastal region.

## 10 FAMILY LIFE

Ethnic identity continues to be important within daily life. The mother- and grandmother-dominated family that is common among the Afro-Guyanese differs from the father-oriented Asian Indian family. Bearing children out of wedlock among Africans is not stigmatized, although in recent years many have begun adopting middle-class values by "doing the right thing" and getting married. The African community is made up of a variety of households ranging from a nuclear monogamous family consisting of a couple and their children to a kind of extended family that includes grandparents, their children, their grandchildren, and other relations.

The Asian Indian traditionally has a different kind of extended family, but the European nuclear pattern is becoming the norm. Upon marriage, the son is expected to take his bride

and live for some time with his parents. This is because it is the duty of the parents to guide the children through the early days of marriage. Then, by the sixth or seventh year, the son will have set up his own household with his wife and children.

## 11 CLOTHING

A skirt and blouse is the popular form of clothing for women, but Hindu women are increasingly wearing the sari. Hindu men wear a type of shirt called a *kurta* and one-piece trousers called *dhoti* (see **Hindus of Guyana**).

## 12 FOOD

A tasty Amerindian dish is the pepper pot, a spicy stew that is a characteristic Guyanese dish. The main ingredient is cassava. Farina, coarse gravel-like flour derived from cassava boiled with local sun-dried beef, is known as *tasso* and is an edible and tasty fare for the Rupununi ranchers, who live in the savannas of the interior.

*Dal*, of Asian Indian origin, is also a very widespread and popular dish, and not just among the Hindus. It is a dish of lentils, often flavored with a mixture of spices (cinnamon, pepper, and garlic) cooked in oil.

## 13 EDUCATION

Children receive free, compulsory education. The government assumed full control of education in 1976 and took over Church-run and private primary schools. Teachers are expected to teach loyalty to both the PNC and socialist objectives. The principal university is the University of Georgetown at Turkeyen, in the eastern part of the capital.

The literacy rate is quite high and is estimated at 98% among men and 95% among women. Despite this, due to economic decline, physical facilities have deteriorated in schools; books and supplies are limited; and many educated Guyanese live abroad, particularly in London and New York.

## 14 CULTURAL HERITAGE

Post-independent Guyana still bears the imprint of its colonial heritage and, despite government exhortation to the contrary, the people continue to be taught to respect and covet European values. Amerindian culture, which remains uninfluenced by national politics, is recognized as an important element in the cultural life of the country. Amerindian artifacts are featured in museum displays, and their culture inspires local music and painting. Major Amerindian groups include the Caribs, the Arawaks, and the Warraus of the northwest coast. The Makusis are the best-known group of savanna-dwellers, whereas other groups are forest-dwellers.

One of the most mysterious aspects of Guyana's cultural heritage are the hieroglyphics known as the *timchri* scattered on rocks in Guyana's interior, which have not been deciphered and that point to more advanced civilizations. Noteworthy writers are Wilson Harris, A. J. Seymour, and Walter Rodney. The best-known work of literature is E. R. Braithwaite's novel, *To Sir With Love*, about a black teacher in an all-White London secondary school, which became a famous film.

## 15 WORK

The country has a three-sector economy: private, public, and cooperative. The government controls over 80% of the econ-

omy. The state-controlled sugar enterprise, Guysuco, employs more Guyanese than any other industry. Domestic economy reflects ethnic divisions. Asian Indians and their families control most small businesses, such as small farms and shops, while Africans dominate the government sector. But, there are an increasing number of Hindus entering the legal and medical professions.

Wages are very low, and many people depend on overseas remittances from relatives abroad to survive. Many people also work at more than one job. The unemployment rate is about 13.5%.

## 16 SPORTS

The Guyanese share a passion for cricket that is prevalent throughout the English-speaking Caribbean. The game is one of the few unifying factors in the country. It has been said, however, that cricket in Guyana is totally unlike the game as it is played in England. In Guyana it is closer to the passionate atmosphere of a bullfight in Spain, galvanizing the people's national self-esteem.

The sport plays a special role in the historical, social, and cultural development of the country. By playing host in Georgetown to International Test Cricket Matches against other countries within the British Commonwealth, the people of Guyana have the opportunity to demonstrate their abilities on the international scene and to make a symbolic gesture against their oppressive colonial legacy. There are a number of heroes who have played for the West Indies team including Clive Lloyd, who captained the side for a number of years, Rohan Kanhai, and Neville Kalicharan.

## 17 ENTERTAINMENT AND RECREATION

Popular culture is as mixed as the various ethnic groups who live in Guyana. Georgetown offers a wide mix of museums and art galleries, and for the young people there are discos. A favorite kind of music among both Hindu and Afro-Guyanese is something called "chutney," a hot, spicy mixture of traditional Hindu music and rock music.

The cinema still plays a large part in the lives of older people, and the imported films from India reconnect the Hindus with their cultural roots. In the villages outside Georgetown, street cricket is played with a sponge ball, and the pitch is a coconut mat laid out in a field. Card games are also a passion with older people during the quiet times between sowing and harvesting.

## 18 FOLK ART, CRAFTS, AND HOBBIES

Many of the folk arts and crafts are entwined with the various Guyanese religions, such as kite-flying and bird-song competitions on Easter Sunday and Monday.

## 19 SOCIAL PROBLEMS

Race has been a divisive issue. The Asian Indians have accused the Africans of racism and repression during the 28 years of rule by the People's National Congress party, during which they claimed that Hindu villages were attacked and plundered by security forces. The Africans dominate the Guyana Defense Force and the police. Street crime and violence are particularly notorious in Georgetown. Community police have now been introduced into the city to try to retake control of the streets.

The new administration has announced its intention of introducing structural changes with a "human face," and aims to alleviate poverty through a basic-needs strategy. It also intends to increase foreign and local investment, production, and exports. Cheddi Jagan has promised a "lean and clean" government and is determined to end racial discrimination.

## 20 GENDER ISSUES

In Guyana, gender issues are subsumed within the broader context of social, economic, and political dysfunctions and problems. The relations between men and women, in terms of roles, access to resources, and power, are circumscribed by the conditions of political instability, governance issues, crime and violence, and divisiveness.

As in most countries, women tend to be affected by poverty more than men: 50% of Guyanese women are living in poverty and nearly 30% of the households headed by women are characterized by absolute poverty. The most recent employment statistics (1999) showed women's labor force participation at 39%, while unemployment rates for females (14%) were more than doubled that of men (6%). In spite of higher achievement than men in formal education, women continue to face low wages in low status jobs, higher levels than men of unemployment and poverty, and low representation in decision-making positions. Domestic violence and gender-based violence remain unaddressed problems because the crimes are under-reported and victims often do not seek assistance. Research on sub-populations suggests that as many as two-thirds of all women will face abuse at some time.

Regarding political participation, women have managed to enter decision-making positions in the last decade. The number of women in parliament increased from 12 (18.5%) in 2000 to 20 (31%) after the 2001 elections. This increase resulted from pressure from women's organizations to have women in a third of the positions on the electoral plank of each party. This quota will increase to 50% for future elections. In addition, as of 2008, there were four female ministers in the governmental cabinet, the deputy speaker of the house was a female, one of the three justices of appeal was a woman, female magistrates accounted for 31% of the existing 16 magistrates, and the governor of the Central Bank was a woman.

# HAITIAN AMERICANS

For more information on Haitian history and culture, see **Vol. 2: Haitians**.

## OVERVIEW

There have been two major stages of Haitian immigration to America, the first in the late 18th and early 19th centuries, and the second in the late 20th century. Both stages were prompted by economic and political unrest in Haiti. The slave rebellion in 1791 in what was then the French colony of St. Domingue drove the first wave of refugees to the American coast, especially to the New Orleans area of Louisiana. After several more years of political upheaval, bloodshed, and general instability, the black general Dessalines declared himself the leader of the independent republic of Haiti and began slaughtering all remaining whites. Those whites who were able to escape, along with many free blacks and mulattoes, as well as some black slaves, fled to America.

The second stage of Haitian immigration to America occurred more recently, beginning in the late 1950s. This time Haitians were fleeing the brutal dictatorship of François “Papa Doc” Duvalier and his son, Jean-Claude “Baby Doc” Duvalier, who succeeded him. At first, those who left Haiti were mostly well-educated professionals who could afford airfare and who had particular skills that were considered “desirable” enough for the United States to allow them to immigrate. As a result, Haiti suffered a severe “brain drain,” adding to its internal troubles. Conditions worsened in Haiti, and by the 1970s life had become intolerable for many Haitians of all social and economic classes.

Lacking the necessary financial resources, most Haitian refugees from the 1970s until today have been forced to take desperate measures to leave Haiti and enter the United States. Thousands have piled onto small boats in recent decades, risking their lives and sacrificing all of their possessions for a chance at a better life in the United States. The first Haitian “boat people” arrived in Florida in 1972. Despite efforts by the U.S. Immigration and Naturalization Service (INS) and the U.S. Coast Guard, boat people continue to arrive in the 21st century.

Some owners and captains of small boats in Haiti have made tremendous profits smuggling refugees across the hundreds of miles of water between Haiti and Florida, or across the much shorter distance to Guantanamo Bay, Cuba. (Cuba does not welcome Haitian immigrants, so it is only a stopping place on the journey to freedom.) Haitian individuals and families sell all they have to raise the money for passage on a boat. The boats are small and overcrowded, conditions are miserable, and the risks are great. Boats capsize, or captains force the passengers overboard to avoid arrest as smugglers. Perhaps hundreds of Haitians have drowned within sight of the U.S. shore. In 1981, a boat carrying more than 60 Haitian passengers, two of them women with nearly full-term pregnancies, capsized only 50 yards off the coast of Florida. Some managed to swim to shore, but 33 drowned, including the two pregnant women (leading the medical authority to list the number of dead at 35). This was only one tragedy among many that continue to claim the lives of Haitian refugees.

In 1981, U.S. president Ronald Reagan ordered a number of measures to stop the flow of Haitian refugees into America, but Haitians have continued to risk their lives to gain entrance into the country. Unfortunately, the United States has failed to live up to that designation in the case of Haitian immigrants. The Immigration and Nationality (McCarran–Walter) Act of 1952 severely curtailed legal immigration from West Indian nations. Although U.S. immigration reform in 1965 removed some of the restrictions, it is still difficult for the majority of Haitians to achieve legal immigration status in the United States. Nor are they officially considered “refugees.”

The nonrefugee status of Haitians is extremely controversial, provoking accusations of racism on the part of the INS. Cubans, who are mostly white and fleeing a left-wing dictatorship, are welcomed as refugees and even assisted by the U.S. government in their efforts to immigrate to the United States. Haitians, who are black and fleeing a right-wing dictatorship or, currently, desperate economic and unstable political conditions, are not. In any case, lacking legal or refugee status, Haitians must enter the United States “illegally,” subjecting them to various forms of harassment and shutting them out of employment, housing, and other opportunities.

Many incoming Haitians, particularly “boat people,” are arrested upon entering the United States and placed in city and county jails, federal prisons, or detention camps, such as the Krome Center in south Florida. They may be held there for a period of months or even years. Some sign papers that say they agree to return voluntarily to Haiti, after which they are promptly flown back to that country from which they sacrificed everything to escape. Others are forcibly deported. A number manage to evade the INS and live as fugitives in their new home. The lucky ones are granted legal immigrant status, often through sponsorship by church agencies or other social justice organizations.

The most recent wave of Haitian immigration to the United States was prompted by the violent takeover in 1991 of the first democratically elected government in Haiti. Jean-Bertrand Aristide became the first democratically elected president of Haiti in 1990, only to be overthrown eight months later by former Duvalier supporters. Coup leaders then set up a military dictatorship that ruled by force. Masses of Haitians swarmed to the sea to escape the regime. The United States placed embargoes on Haiti to pressure the military to surrender its control, creating even more hardship for the Haitian people. Starvation and malnutrition became rampant in Haiti. Finally, when the United States threatened a military invasion in 1994, the Haitian military dictatorship stepped down and Aristide was returned peacefully to the presidency. When his term ended in 1996, he was succeeded by René Préval. Préval was unable to organize elections and instead filled government positions with local officials who supported him and the Lavalas party. The Lavalas party swept the first round of elections in 2000, causing the opposition to join together and boycott the second round, leaving Aristide a clear path to the presidency in 2001. But it was not to last for long: in 2004 Aristide was forced to resign and went into exile in Africa. With the help of the Organization of American States (OAS) and United Nations (UN), Haiti established an interim government and then held free and clean elections in February 2006. Préval was elected to serve as president again and chose Jacques-Edouard Alexis to once again serve as his prime minister. The UN Stability

Mission in Haiti (MINUSTAH), established in 2004, remains in the country to assist in peacekeeping and continued democratic freedom.

Conditions in Haiti remain extremely difficult, however. Haiti is the poorest nation in the Western Hemisphere and is one of the poorest in the entire world. Economic development is proceeding very slowly, and political stability has yet to be established securely. Despite their lack of welcome in the United States, Haitian refugees continue to make their way to America, hoping for a better life, even if it is as an illegal alien.

Although Louisiana was the preferred destination for Haitian immigrants of the 18th and 19th centuries, only 1,010 Louisiana residents claimed Haitian ancestry in the 2000 U.S. Census. The largest Haitian populations today are in Florida (233,881) and New York (160,319), with a fair number also in Massachusetts (43,576) and New Jersey (39,902). The Miami, Florida, area has one of the greatest concentrations of Haitians in the United States (95,669 in 2000). Haitian immigrants have even created a "Little Haiti" section of Miami. According to the U.S. Census, the total Haitian American population has doubled in the past 10 years, reaching 548,199 in 2000 from 289,521 in 1990. Two-thirds of Haitian Americans (361,731) are foreign-born. Because so many Haitian immigrants are considered illegal aliens and are either in detention centers or in hiding, however, U.S. Census figures are undoubtedly quite low. It is impossible to know for certain just how many Haitian Americans live in the United States today.

Haitians, both those who immigrated to America and those who stayed in Haiti, had a tremendous influence on American culture in the 1800s. Those who came to the United States brought with them their French and Creole culture. The population of New Orleans increased from 4,446 in 1791 to 8,056 by 1797, mostly through the influx of Haitian refugees. Because they generally had more education and training than the colonists already there, the Haitians rose quickly to the upper ranks of society and shaped that society in significant ways.

The majority of Haitian refugees in the 19th century were Catholic. This is one reason they chose to settle primarily in Louisiana. As a sometime-French, sometime-Spanish colony, the dominant religion was Catholicism, as opposed to the fiercely Protestant character of the English colonies. Haitian Creole Catholics, and later Cajun Catholics, created a French Catholic flavor to Louisiana, especially New Orleans. The festival of Mardi Gras ("Fat Tuesday"), a Cajun-Creole celebration preceding the beginning of Lent, is still a major annual event, drawing visitors from all over the world to New Orleans every February.

Many Haitian refugees today practice Vodou (also known as Voodoo), a blend of African folk religion brought to Haiti by the original African slaves, and the Catholicism of the slave owners. Vodou is predominantly concerned with appeasing the many spirits that rule nature. Ancestor worship is also of central importance. Vodou has been inaccurately popularized in American culture as black magic, where pins are stuck into dolls and people are cursed or turned into zombies. In fact, Vodou practitioners use herbal remedies and a form of psychology interpreted as exorcism to bring people back into balance.

Early Haitian immigrants had many other effects on Louisiana society and culture. Louisiana is the only state in the United States today that continues to base its legal system on the Code Napoléon (a code of laws written by Napoleon Bonaparte); other states use English Common Law. Music, food, and architecture all show strong Haitian influences in Louisiana and other places in the South where Haitians settled (such as Charleston, South Carolina). These influences have since spread throughout general American culture. For example, the basic structure of blues singing—an introductory couplet that is repeated, with the theme then developed around the couplet—is based on Haitian folk music. Certain drums and rhythms, as well as the banjo, were introduced into American music by the Haitians. Creole cooking has become quite popular in mainstream American society. "Shotgun" houses (one room wide and several rooms deep with doors at both ends) were introduced by black artisans from Haiti in the 19th century and are identical to houses still found in Haiti today.

Perhaps most importantly, the successful slave revolt in Haiti seriously influenced both white and black Americans. White Americans became extremely fearful of a similar revolt occurring in the United States and strove to prevent their black slaves from gaining enough education or organization to consider rebellion. Many white Americans were also afraid that emancipating slaves in the United States would lead to a black insurrection (once free, they would take over). Black Americans saw the Haitian revolt as proof that blacks were indeed capable of self-rule. As the first independent black nation in

the western hemisphere, Haiti became a symbol of pride for blacks in America.

Haitian refugees of the 18th and 19th centuries adapted quickly to mainstream American society with relatively few difficulties. This has not been the case for 20th and 21st century Haitian refugees. Classified as “illegal” by the INS, held in prisons and detention camps or forced to live as fugitives, and suffering from physical and mental health problems resulting from malnutrition, overcrowded conditions, and trauma, most recent Haitian refugees have found it difficult to survive—let alone thrive—in America. Those who are granted “legal” immigrant status often lack the language and job skills to succeed in the industrialized United States. A sizeable number end up working as migrant farm workers (as do many “illegal” Haitian immigrants), a scant improvement over their former lives in Haiti.

Some Haitian Americans have managed to create successful lives in the United States, including musicians Wyclef Jean and Joanne Borgella (featured on Season 7 of *American Idol*), and writers Edwidge Danticat and W. E. B. DuBois. Josaphat Celestin was the first Haitian American to be elected mayor of Miami, Florida, serving from 2001 to 2005.

Homosexuality is not accepted by the majority Catholic and Evangelical Protestant population in Haiti or among Haitian

Americans. The widespread practice of Vodou, however, allows for more fluid expressions of sexuality and gender, giving Haitian and Haitian American homosexuals and transvestites a place to be themselves without suffering ostracism. Being a Haitian American homosexual, however, carries with it a double difficulty in the United States: not only is homosexuality not tolerated by many in American society, but there is a historical tie between the AIDS epidemic and Haiti. Due to the prevalence of HIV infection among Haitian immigrants in the 1980s when HIV/AIDS was first recognized in the United States, Haitians were included in the “high risk groups” for infection. Although U.S. policy later changed to list high risk activities rather than groups, Haitians continue to carry the stigma of AIDS.

A new study of gene sequence mutation and evolution published in 2007 reaffirmed the hypothesis that the U.S. strain of HIV, subtype B, originated from Haiti, though years earlier than previously suspected, sometime around 1969. According to this study, the original HIV infection of this strain came to Haiti from Africa around 1966, spread and mutated in Haiti for three years, then migrated to the United States with a Haitian visitor or immigrant. Many Haitian Americans are outraged that this supposition of Haitian origin for HIV/AIDS in the United States has resurfaced. To them it is not just a sci-

entific study aimed at helping create effective vaccines for the HIV/AIDS virus but an accusation that they are carriers of a deadly disease. The stigma that resulted in the 1980s in Haitian Americans losing their jobs, non-Haitian friends, and the ability to carry on a normal life in society is being revisited upon them 20 years later.

# HAITIANS

**LOCATION:** Haiti

**POPULATION:** 8,924,553

**LANGUAGE:** Haitian Creole; French

**RELIGION:** Vodou; Roman Catholicism; Protestantism

## 1 INTRODUCTION

To a large extent, Haitian history has been shaped by foreign powers: first Spain, then France, and finally the United States. A rich, lush land with a strategic location, Haiti has often been viewed as a valuable piece of real estate.

When Columbus landed on the island of Hispaniola on 6 December 1492, he was greeted by the Taino/Arawak Indians. However, the Spanish conquerors exploited the indigenous population, and by 1550 the Taino/Arawak population had been almost entirely wiped out in violent uprisings or from inhumane forced labor and exposure to imported European diseases. In their quest for gold and other mineral riches, the Spanish resorted to bringing West Africans by force to the New World to work as slaves. The Spanish stayed on the island because it was strategically important as the gateway to the Caribbean, from where many riches were shipped to Europe.

Tortuga Island, off the northwest coast of Hispaniola, was the first French foothold. Reportedly expelled by the Spanish from the nearby island of St. Christopher (St. Kitts), the first French residents of Tortuga, joined by runaway slaves from Hispaniola, survived by curing meats, tanning hides, and pirating Spanish ships. They became known as *buccaneers*, from the Arawak word for smoking meats.

After a French settlement was commissioned on Tortuga in 1659, settlers started encroaching on the northwest part of Hispaniola. In 1670, the French made Cap Fran ais (present-day Cap-Haïtien) their first major settlement on Hispaniola, taking advantage of its distance from the Spanish capital of Santo Domingo. The western part of the island was commonly referred to as Saint-Domingue, which became its official name after Spain relinquished the area to France in 1697 following the signing of the Treaty of Ryswick. Relying on slavery, the French turned Saint-Domingue into one of its richest colonies. Coffee, sugar, cotton, and indigo from Haiti accounted for approximately 67% of France's commercial interests abroad and about 40% of its foreign trade. Because of the high death rate among male slaves, France continually brought new slaves from Africa; the number of enslaved Africans shipped to Haiti by the French totaled over 500,000.

In the mid-1700s, the number of runaway slaves, known as maroons, grew. From the safety of the mountains and forests, guerrilla bands of maroons attacked the French colonists. The colonial authorities, often with what was probably the forced help of the *mulattos* (a Spanish term for persons of mixed African-European heritage), were able to repel the attacks. However, when the Colonial Assembly refused to give mulattos the right to vote, even though they owned land and paid taxes, the mulattos also began to revolt.

But it was the slave rebellion of 1791 that set the colony on the path to independence. The mulattos fought against the French colonists who supported the monarchy, but not against those of the new French Republic, who wanted to give mu-

lattos the right to vote. The slave forces were also split; some fought against the colonists, while others fought both the colonists and the mulattos. Competing for power over the area, Spain and Britain intervened and by 1794 they had almost gained control when tropical disease began to take its toll on their troops. Toussaint L'Ouverture, who had been one of the leaders of the slave rebellion in 1791, then made a crucial decision: he pledged his support to France. Although promising freedom, Spain had shown no signs of moving in that direction, while Britain had actually reinstated slavery in areas under its control. The French Republicans seemed the best choice for freedom. Thus in 1796, when L'Ouverture rescued the French commander from mulattos seeking to depose him, L'Ouverture was rewarded by being named Lieutenant Governor of Saint-Domingue.

By 1800 L'Ouverture was in command of all Hispaniola. He abolished slavery, but in order to ensure stability and economic survival, he reinstated the plantation system, using enforced contract labor, and became a military dictator. However, he had never formally declared independence from France. In 1802 Napoleon sent forces to depose L'Ouverture, and again the French attempted to use the mulattos to attain victory. Forced into surrender, L'Ouverture was assured by the French that he could retire quietly. But a short time later he was arrested and exiled to France, where he died in prison. After this deception, the remaining Haitian forces rallied against the French. The French military was fighting the British in Europe as well as the Haitians, and in 1803 Napoleon sold Louisiana to the United States to help finance his campaigns. On 1 January 1804, Haiti declared independence, becoming the second independent nation (after the United States) in the Americas and the first free black republic in the world.

Jean-Jacques Dessalines, a former slave who had commanded the black and mulatto forces at the close of the revolution, became the leader of the new nation. Knowing only military organization, he used the military to govern, beginning what became an established tradition of military rule. The newly independent Haiti was not formally recognized by the European powers. The United States, itself a slaveholding power, withheld recognition until 1862, after the slaveholding south had seceded from the Union, sending Frederick Douglass as its consul to Haiti. In 1838, Haiti received its long-awaited recognition from France, after final payment of its "independence debt" (begun in 1825) totaling 150 million French francs, its entire annual budget at the time. After the revolution, the collaboration of blacks and mulattos, which had won Haiti independence, turned to conflict. The black generals of the slave armies were also now competing for power and wealth. Thus, the early regimes of Haiti, whether led by mulattos or blacks, were dictatorial, keeping access to education, wealth, and power to themselves.

From its beginning as an independent nation, Haiti developed two distinct societies. The minority elite lived in towns and controlled the government, military, and trade; they imitated a European lifestyle, using the French language for government, commercial affairs, and education. The peasants, however, lived in the *peyi andeyo*, or "the country outside." The majority peasant population remained outside the formal political, educational, and economic structure.

In 1915, Haitian political instability, American trade and investments, growing U.S. concern over German interests and

influence in Haiti, and Haiti's strategic importance to the United States led to a U.S. invasion and occupation that would last almost 20 years. U.S. intervention in smaller, neighboring nations (such as Colombia, Cuba, Honduras, and Nicaragua) to protect U.S. interests and promote regional stability was quite common during that period. Under the American occupation, Haitian figureheads were installed, but the United States had veto power over all government decisions, and the Marine Corps served as administrators in the provinces. The United States declared martial law, rewrote the Haitian constitution, took control of Haiti's finances, and passed legislation permitting foreigners to own land in Haiti for the first time since 1804. It also established the Haitian National Guard (*Garde d'Haiti*) as Haiti's first professional military force, which would later be used to create a repressive military regime. The occupation imposed stability and order. Infrastructure and health conditions improved; roads, schools, and hospitals were built using forced *corvée* labor. Guerrilla bands, led by Charlemagne Peralte, reacted against the occupation. Peralte was captured and assassinated by the U.S. Marines in 1919. When the United States withdrew from Haiti in 1934, the level of poverty and illiteracy remained unchanged. The United States left behind a legacy of anti-American feeling and a well-trained national military force. In the absence of any effective political or social institutions, the military remained the only cohesive institution in the country, apart from the Roman Catholic Church.

After a particularly chaotic period, during which attempts at democracy were made but ultimately failed, François "Papa Doc" Duvalier, a doctor who had served as a rural administrator, was elected president in 1957 in military dominated elections. Perceived as an honest and humanitarian public-health expert, as well as a proponent of black power, Duvalier initially enjoyed the support of both the Haitian army and the United States. However, Duvalier soon set out to build a family dictatorship by changing the constitution to solidify his power. Knowing that an independent military was a threat to his presidency, he created the elite Presidential Guard. To maintain power outside the capital, he created a rural militia, commonly known as the *tonton makout*, whose mysterious and brutal tactics terrified the population. Using corruption and intimidation, he created a new elite of his own; in 1964, Duvalier declared himself President-for-Life. Duvalier's regime was marked by terror, corruption, and extremes of wealth and poverty. During the 1960s, U.S. aid and support for Duvalier continued because of the regime's anticommunist stand and Haiti's strategic location near communist-led Cuba.

Naming his 19-year-old son, Jean-Claude, as his successor, "Papa Doc" died in 1971. Although "Baby Doc" was not as brutal as his father nor as politically astute, he continued policies of arbitrary imprisonment and torture of perceived opponents. Corruption and poverty also continued, as did U.S. aid and support, much of which was siphoned off to Duvalier and his cronies. But it was opposition from young Haitians, as well as priests and nuns angered by the poverty and suffering, which eventually led to Duvalier's downfall. In 1983 Pope John Paul II visited the country and, appalled at the conditions there, declared that, "Things must change here." Under the institutional umbrella of the Catholic Church and galvanized by declarations in support of human rights by the Haitian Bishop's Conference, radio stations around the country broadcast uncensored news to the population, especially the sermons

and speeches of a young Salesian priest in the slums of Port-au-Prince named Jean-Bertrand Aristide. Encouraged by a grass-roots church movement (Ti Kominite Legliz or TKL), antigovernment protests swept through Haiti in 1985. Alarmed as people took to the streets, the United States withdrew its aid and support and arranged for Duvalier to step down. After hastily naming a National Council of Government made up of former military supporters, Jean-Claude fled in 1986 to exile in France.

Conditions for the masses did not improve. On election day in November 1987, scores of Haitians were killed at polling stations by soldiers and former tonton makout around the country. But the opposition movement could not be quashed and during a string of revolving dictatorships the voice of Father Aristide continued to echo the frustrations of the population. Aristide preached about the need for a *lavalas*, a flood to cleanse the country of corruption and make it clean and new. In 1990 at the urging of friends and supporters, Aristide declared himself a candidate for president to counter the political machinations of the neo-Duvalierist sector. In the country's first free and democratic elections, on 16 December 1990, he was elected president with 67.5% of the popular vote. But the underlying structure of the society and its long tradition of violence, control, and retribution had not changed. There continued to be strong and sometimes violent opposition to Aristide and his followers by those allied to the *ancien régime*. Aristide pledged to clean up the corrupt and repressive apparatus of the past. Under a unique six-month mandate granted him under the 1987 constitution, allowing him full power to carry out any reforms deemed necessary, Aristide retired eight members of the high command of the Forces Armées d'Haiti (FAdH) and removed corrupt members of the judiciary. The military and the wealthy, however, continued to wield power, and in September 1991 the army staged a coup d'état, forcing Aristide into exile.

After Aristide's departure, some 50,000 Haitians fled the island nation by sea, only to be forcibly returned to the country and later to refugee camps at the U.S. naval base at Guantanamo Bay in Cuba by the U.S. Coast Guard. The repression unleashed by the military and their paramilitary allies known as *attachés* resulted in the deaths of some 4,000 citizens and the internal migration of over 300,000 people between urban and rural milieux. In 1993 General Raoul Cédras had agreed to step down in preparation for Aristide's return, under an agreement established at Governors Island, New York, but this was not honored. The United States, in concert with other countries, then applied pressure in the form of a trade embargo mandated by the United Nations, in order to pressure the coup regime to relinquish power. In 1994, after threats of a U.S. invasion, a U.S. negotiating team persuaded the military leadership to step aside so that the democratically elected Aristide could return to his rightful position. To ensure stability, UN troops led by the United States were sent to Haiti as a peacekeeping force. The military leaders went into exile, and on 15 October 1994, Aristide returned to power to begin the long, arduous task of rebuilding Haiti. In the 1995 legislative and municipal elections, the Lavalas movement overwhelmingly won the majority in Parliament and mayorships across the country. Presidential elections were held in December 1995, and former Prime Minister René G. Préal of the Lavalas coalition won resoundingly. The first peaceful transfer of power between two

civilian presidents took place on 7 February 1996. Jacques-Edouard Alexis was named prime minister in May of that year.

Unfortunately, that was not the end of Haiti's political upheaval. Unable to organize elections in 1998, President Préal dismissed all members of the government whose terms had expired (which was all but nine Senate members) and replaced them with local officials. Préal and Alexis filled the Cabinet with Lavalas party loyalists, and Lavalas swept the first round of elections in August 2000. Angered at what they viewed as election fraud, opposition parties joined together to form the Democratic Convergence and boycotted the second-round elections in November, giving Aristide an easy win to become president again in 2001. Tensions between the Lavalas and Convergence parties continued to escalate, leading to outbreaks of violence. Despite efforts by the Organization of American States (OAS) to help stabilize the situation, things continued to deteriorate throughout 2001–2004 until Aristide finally resigned as president and removed himself to Africa.

With the help of the Organization of the American States (OAS) and the UN, Haiti established an interim government and then held free and fair elections in February 2006. Préal was elected to serve as president again and chose Alexis to once again serve as his prime minister. The UN Stability Mission in Haiti (MINUSTAH), established in 2004, remains in the country to assist in peacekeeping and continued democratic freedom.

## **2 LOCATION AND HOMELAND**

The name "Haiti" comes from the Taino/Arawak word *ayiti* or *hayti*, which means "mountainous" or "high land." The Haitian homeland is the Republic of Haiti, which occupies the western third of the island of Hispaniola (known in Spanish as La Isla Espa-ola) in the Caribbean Sea. Hispaniola is located approximately 1,100 km (700 mi) southeast of Florida, between the islands of Cuba, Jamaica, and Puerto Rico. The Republic of Haiti has an area of 27,750 sq km (10,714 sq mi) including the islands of La Tortue, La Gonâve, Les Cayemites, La Navase, La Grande Caye, and Ile de Vâche. Haiti's total size makes it slightly larger in area than the U.S. state of Maryland. The coastline is irregular, and there are two mountain ranges that stretch across the southern peninsula and one that runs along the northern peninsula. Mountains cover fully two-thirds of the interior, and the fertile plains that lie between them are used for agriculture.

Haiti's climate is generally tropical, both hot and humid. There are two rainy seasons: April through June, and August through mid-November. Annual rainfall averages 140–200 cm (56–80 in), with very uneven distribution. Rainfall is heaviest in the southern peninsula and parts of the northern mountains, while the western coast is relatively dry. Temperatures in the summer vary from 29–35°C (85–95°F) in the coastal lowlands to 18–21°C (65–70°F) in the interior highlands.

Haiti was once covered with virgin forests, but much of the natural vegetation has been destroyed by agriculture, grazing, and the exploitation of timber. Indeed, Haiti is in an alarming state of environmental devastation due to deforestation and soil erosion. Only a fraction of the land is arable, and what is left of the forests is rapidly disappearing due to clearing of land for agriculture and burning wood for fuel. Haiti is in the process of becoming a desert. Viewed from the air, the state of

Haiti's environment presents a harsh contrast to the Dominican Republic.

For the moment, however, pines, ferns, orchids, and other tropical trees and flowers can still be found. But the deterioration of natural vegetation has affected wildlife, which has lost its habitat. Once-common wild boars, guinea fowls, and wild ducks are now scarce, though caimans, flamingos, egrets, and small tropical birds can still be seen.

The population of Haiti was estimated at 8.9 million in 2008. Over two-thirds of the Haitians in the Republic of Haiti live in rural areas. Port-au-Prince, the capital, has a population of well over 1 million people, more than ten times the population of Cap-Haïtien, the second major city. Other major towns are Gonaïves, Les Cayes, and Jacmel. Almost all Haitians are descendants of the 500,000 enslaved West Africans who won their freedom from France in 1804. Haiti became the first modern independent republic where ethnic Africans made up the majority, which accounts for about 95% of today's population. About 5% have a mixed African-European heritage (traditionally the ruling class) or a solely European ancestry (mostly British and French). An even smaller minority have a Middle Eastern, North American, or Latin American ancestry.

About one in eight Haitians lives abroad, most of them in the United States. There are over 500,000 Haitians living in the United States, with the majority residing in either Florida or New York. The Haitian communities in the United States, particularly in South Florida, Boston, and the New York metropolitan area, have successfully established themselves as socially, economically, and culturally vibrant communities. Miami's Little Haiti is now an established community that has become a transitional place where recent arrivals and poorer Haitians settle temporarily until they become economically self-sufficient.

### <sup>3</sup> LANGUAGE

The two main languages of Haiti are Haitian Creole and French. Traditionally, the two languages served different functions, with Haitian Creole the informal everyday language of all the people, regardless of social class, and French the language of formal situations: schools, newspapers, the law and the courts, and official documents and decrees. All Haitians speak Haitian Creole, and about 80% of the population speaks Haitian Creole only. Since the vast majority of Haitians only speak Haitian Creole, there have been efforts to increase its usage. In 1979, a law was passed that permitted Haitian Creole to be the language of instruction, and the Constitution of 1983 gave Haitian Creole the status of a national language. However, it was only in 1987 that the Constitution granted official status to Haitian Creole. An official orthography was only developed in 1986, since Creole reflects Haiti's dominant oral culture. Only about 20% of the population speaks French, and only about 10% of the population can be considered bilingual in French and Haitian Creole. Fluency in French carries a high status in Haiti. Those who cannot read, write, and speak French often have limited opportunities in business and government. Creole-speaking Haitians argue that the powerful French-speaking minority uses French language requirements just to maintain its authority. Most Haitians who have lived in the United States also speak English.

The Haitian Creole language evolved from a mixture of African dialect, indigenous Taino/Arawak, the Norman French

of pirates, and colonial French. Haitian Creole grammar (or syntax) has strong characteristics of African languages, while its vocabulary is mostly of French origin, with contributions from Spanish, African languages, and, much later, English. Contemporary Haitian Creole incorporates words of diverse linguistic origins, including: Caribbean, with *kannari* (earthen jar) and *sanba* (poet, musician); African, with *houngan* (Vodou priest) and *zombi* (ghost); Spanish, with *ablado* (talker) and *sapat* (sandal); and English, with *bokit* (bucket). As for the words derived from French, it is important to note that they have been modified in pronunciation or meaning. As an example, the following are borrowed French words with their corresponding meanings in Haitian Creole: *kriye* (to scream or shout), to weep; *bonbon* (candy), sweets; *boutik* (small, exclusive store), a family-operated store; *kabare* (nightclub), cafeteria tray. There are also some Haitian Creole words that have retained the 18th century French pronunciation.

The Haitian Creole language is called Kreyòl by native speakers. Some scholars have begun using the term Ayisyen (Haitian) as a symbol of national identity and to distinguish it from the generic term "creole," which refers to a number of languages. A creole language is a natural language that arises when peoples with different languages live and work among each other, similar to a pidgin language. Pidgin utilizes a simplified base language for the purposes of trade, with generous contributions from other languages, used to fulfill special, but temporary, communication needs. Pidgins have been used by sailors, traders, and pirates. They are native to no one; in other

words, no one speaks a pidgin as a first language. Since a pidgin is used only as a necessity, it is restricted in form and usage. However, when a pidgin becomes the native language of an individual (and subsequently, many individuals who form a speech community), a creole language is born. A creole language is not just a simplified form of a given language, but a full-fledged language that is capable of serving all the intellectual, psychological, and social needs of its speakers. Some examples of Haitian Creole proverbs are:

Yon sel dwèt pa manje kalalou. (You cannot eat okra with one finger—we must all cooperate.)

Chay sòti sout tet, tonbe sou zepol. (The load goes from the head to the shoulder—Problems go from bad to worse.)

Gras a diri, ti wòch goute gres. (Thanks to the rice, the pebble tastes of grease—good things rub off.)

Bon kòk chante nan tout poulaye. (A good rooster sings to all his chickens—a good person is sought after by everyone.)

#### 4 FOLKLORE

Haitian culture reflects a profound reverence for one's ancestors, a phenomenon that informs a particular cohesiveness within nuclear families and which extends to the larger family or race. Respect for the ancestors (*zansèt yo*) is reflected in the official observance of January 2 as Heroes or Ancestors' Day, a national holiday one day after the celebration of Independence Day (January 1).

Folk tales are popular in Haiti. Stories are introduced by an invitation to hear a story. The person wishing to tell the story shouts out: "Krik!" If people want to hear the tale, and they nearly always do, they answer in chorus: "Krak!" The most popular folk tales concern the smart but mischievous Ti Malis and his very slow-witted friend Bouki, who may also be found in the folklore of certain regions in West Africa. Here is one example:

Ti Malise paid Bouki a visit one day. To his amazement, when he got to Bouki's lakou (yard), there was Bouki playing dominoes with his dog! "What a brilliant dog you have!" exclaimed Ti Malis. "He can play dominoes." "Ha!" said Bouki, "he's not as smart as you think. I've just won three out of five games!"

Perhaps the most popular form of humor and amusement are riddles. There is a definite form for the riddles. The person "throwing" the riddle or *tire pwen* says: "Tim-tim," and those who want to hear it reply: "Bwa sèch." Then the riddle is given. If they get it, they announce it. If they give up, they say "Bwa sèch," which means they eat dry wood, the penalty for not getting the riddle. The riddles themselves are very difficult. They require a transition from the literal problem to quite fanciful and figurative answers. Here are several popular riddles:

1. They serve it food, it stands on four feet, but it cannot eat.
2. I enter white, I come out mulatto.
3. Three very large men are standing under a single little umbrella, but not one of them gets wet. Why?
4. When I sit, I am taller than when I stand.

5. How many coconuts can you put into an empty sack?

1. A table.
2. Bread.
3. It is not raining.
4. A dog.
5. Only one. After that the sack is not empty.

#### 5 RELIGION

Religion is an integral part of Haitian life and culture. Vodou (a mixture of African animism and Christianity, also known as Voodoo) and Roman Catholicism are the two main religions. The majority of Haitians are Roman Catholic, although efforts by Protestant missionaries have increased the number of Protestants in Haiti in the past decade from about 15% to almost 30%. Because Vodou is nonexclusive, many Catholics also practice Vodou. Most Protestants do not, however. All three religious sectors are organized at the national level and are officially recognized. The Haitian government does not impose any restrictions on missionary activities, religious instruction, or religious publishing.

Popular misconceptions about Vodou have created negative stereotypes concerning its practices and its adherents. Depicted in books and movies as a cult of sorcerers who practice "black magic," Vodou is in fact a religion based on ancestral spirits, tribal deities, and universal archetypes such as the goddess of the sea, all of whom generally help and protect. Although lacking a fixed theology and an organized hierarchy, this religion has its own rituals, ceremonies, and altars that practitioners do not find to be at odds with Roman Catholicism. Vodou keeps alive old African beliefs while borrowing freely from Christianity. In fact, many Roman Catholic symbols and prayers have blended with Vodou rituals and traditions to make for a unique syncretic and typically Haitian religion. For example, pictures of Catholic saints are painted on the walls of temples to represent the Vodou spirits; at funerals, it is not uncommon for Vodou ceremonies and rituals to be performed for family members first, followed by a more public traditional Roman Catholic ceremony presided over by a priest.

Vodou is derived from a synthesis of African religious beliefs. The word Vodou comes from the Fon language of Benin (formerly Dahomey) in West Africa and means "spirit." When Africans of various tribes were brought to Haiti as slaves, they brought with them their beliefs in spirits who acted as intermediaries with a single God Almighty; some of these spirits were ancestors of the living, while others represented human emotions and forces of nature. In time, a system of beliefs and spirits unique to the slaves of Haiti was formed. These spirits, or *lwa*, are inherited or bought by families and can be called upon for help; they can be paid to bring good fortune, to protect, or to attack enemies. Payment is usually in the form of food, drink, or other gifts offered during rituals. Vodouists attribute the good as well as the bad to the spirits. The Roman Catholic clergy, although opposed to Vodou, have a more benign view of it than do Protestants.

#### 6 MAJOR HOLIDAYS

Commemorative Haitian holidays include Independence Day (January 1) and the Anniversary of Jean-Jacques Dessalines's Death (October 17). Dessalines was a former slave who led the slave armies to victory in 1803 and became the leader of Hai-

ti after the revolution. The Anniversary of the Battle of Vertières is on November 18, which pays homage to the final battle fought in 1803 during the struggle for independence. The landing of Columbus on Hispaniola in 1492 is commemorated on December 5. Other holidays include Ancestors' Day (January 2), Carnival (all three days before Ash Wednesday), Pan American Day (April 14), Labor Day (May 1), Flag Day (May 18), and New Year's Eve (December 31).

Haitians observe many traditional Roman Catholic holidays, including Good Friday and Easter Sunday (movable, usually in late March or early April), Feast of the Assumption (August 15), All Saints Day (November 1), All Souls Day (November 2), Immaculate Conception (December 8), Christmas Eve (December 24), and Christmas Day (December 25).

## 7 RITES OF PASSAGE

Major life transitions, such as birth, marriage, and death, are marked by religious ceremonies, often including both Voodoo and Christian rites.

## 8 INTERPERSONAL RELATIONS

Many Haitian values are traditional and conservative. Haitians value community cooperation and usually have close extended-family ties. Many are religious and have a strong work ethic as well as a deep respect for authority and societal laws. Education is particularly important, since it is a means of social mobility.

Haiti's unusual history has created a unique culture that is different from the Spanish Caribbean cultures and is dualistic in nature: European vs. African, French vs. Creole, mulatto elites vs. the black masses, urban vs. rural, Christianity vs. Voodoo, etc. For Haitians, the color of one's skin, the languages one uses, and the work that one does are all connected and have always been important aspects of interpersonal relations.

Manners are also important in Haitian society. Greetings are exchanged whenever boarding public transportation, walking into a doctor's office, entering a store, etc. When greeting friends, men generally shake hands, women will exchange two kisses, as will men with female friends. Children are taught early on to respect their elders and to greet formally visitors to their home.

It is not unusual for men to refer to each other by their last name, and many individuals are referred to by nicknames. For example, the firstborn male in a family is often given the nickname Fanfan. A woman named Dominique may be called Dodo by her friends and family.

## 9 LIVING CONDITIONS

The poverty in Haiti is reflected in the health statistics of its population. The infant mortality rate is the highest in the Americas, with one in eight children dying before the age of five. Average life expectancy is about 52–57 years. Some 80% of the population live below the poverty level and with over 50% living in abject poverty. Unemployment and underemployment are rampant—an estimated two-thirds of the workforce do not have formal jobs.

The population is afflicted by a number of infectious diseases, including tuberculosis, parasitic infections, and malaria, since a majority of the people live in malarial areas. Poor sanitation contributes to these illnesses: less than half the population has access to clean water, and only 4% of the rural

population has electricity. In 1982, the U.S. Center for Disease Control mistakenly classified Haitians as a high-risk group for AIDS, in part because early studies wrongly suggested that the disease originated in Haiti. Although the high-risk classification was finally dropped in 1991, AIDS is a problem in Haiti, responsible for at least 24,000 deaths and infecting another 280,000 (over 5% of adults).

Another factor contributing to poor health conditions is the lack of medical services. Political repression caused many doctors to emigrate, and the few remaining ones tended to locate in the capital, where they catered to those who could afford their services, although this pattern has also changed in recent years. Currently there about 2.5 doctors per 10,000 people in Haiti. Religious and social service agencies have established clinics, but the number of people who require services cannot be accommodated. Rural areas are especially lacking in health services because of poor infrastructure. Given the lack of modern, professional health services, it is not surprising that many of the people rely on traditional herbal remedies and religious healers to diagnose and treat illnesses.

## 10 FAMILY LIFE

Haitians place great importance on family life. In rural areas, the extended family has traditionally been the social unit. However, deteriorating economic conditions, which brought many peasants to the cities in search of work, have caused a shift in society: the nuclear family has replaced the extended family in certain urban areas. But family ties remain close, and family members tend to be supportive of one another; intergenerational conflicts are rare but increasing because of urbanization and efforts to identify with the world at large.

Men and women play complementary roles in Haitian families, generally sharing household and financial responsibilities. Women assist in farmwork, performing such tasks as weeding and harvesting. At home, women are generally responsible for child care and the daily household tasks, while men do heavy chores, such as gathering firewood.

The most common form of marriage among poorer Haitians is known as *plasaj*, a kind of common-law marriage. Although the Haitian government does not recognize *plasaj* as legitimate, this relationship is considered normal and proper among the poor. Although wealthy Haitians may openly disapprove of the practice, many affluent Haitian men have children by mistresses and provide financial support for their second "family." A man or woman may have a number of *plasaj* relationships in a lifetime. Children born from one *plasaj* relationship regard offspring from another *plasaj* as brothers and sisters and often live in the same household without conflict. If parents separate, a child may take either the father's or mother's last name.

Haitians value both their family reputation and their children, and they take pains to ensure that all children receive equal inheritances. Children are considered a gift from God and are treated accordingly. Children also provide security in old age.

## 11 CLOTHING

The Haitian mode of dress tends to be informal, conservative, and well-groomed. Comfortable, lightweight Western-style clothes are typically worn, made especially of cotton and linen fabrics. School children all wear uniforms. Men often wear a loose-fitting shirt called a *guayabera*, similar to those of other

Two Haitians working at a pottery wheel. Haitian handicrafts often make use of mahogany, sisal, and straw. Haitians are particularly skilled in woodcarving, weaving, and embroidery. (United Nations)

countries in the region and Latin America. While the wearing of pants by women is no longer inappropriate, most women, especially in rural areas, continue to wear skirts or dresses.

Traditional clothing tends toward a hand-embroidered denim shirt for men, in cotton, linen, or denim; and for women, an embroidered short-sleeved blouse, a colorful skirt, and a scarf wrapping the hair.

## **12 FOOD**

To supplement food and grain imports, Haitians grow corn, rice, beans, bananas, mangoes, avocados, and various other tropical fruits and vegetables. A typical meal will generally include one or two varieties of rice, usually prepared with either red or black beans. It will almost always feature plantain, which can be prepared in a number of ways, usually parboiled then cut into slices that are pressed flat and deep-fried. Chicken is very common for those who can afford it; this, too, is generally deep-fried. Other typical meats include goat, beef, and pork. The latter is often fried and barbecued (*grio*) and is very popular. Seafoods are especially favored including barbecued lobster, shrimp, and many varieties of fish.

Vegetable dishes include green beans, potatoes, squash, okra, cabbage, eggplant, and salads with generous slices of avocado. Most Haitians prefer a spicy sauce, resembling American cole slaw, which is fiery hot. Only a dash of piklès is needed to enhance a dish. Desserts include cake or tarts, often with pineapple garnish.

## **13 EDUCATION**

Haiti's first schools were established shortly after the Constitution of 1805, which mandated free and compulsory primary education. While education has been promoted in principle, a comprehensive and accessible school system never developed. Today, the majority of Haitians receive no formal education, and only a small minority are educated beyond primary school.

In 1978 primary schools, both urban and rural, were merged under the auspices of the National Department of Education (DEN). The education system was then restructured: 10 years of basic education, consisting of three cycles (4-3-3 years), are followed by 3 years of secondary education. Curriculum and materials were also changed. One major change was the use of Haitian Creole as the language of instruction in the first four grades. Other instructional innovations were grouping children by ability and an emphasis on discovery learning rather than on memorization. By 1981, primary school enrollment in urban areas had more than doubled from 1970 figures. School nutrition programs and support from private development agencies contributed to the increased enrollment, but rural enrollments continued to be low. Moreover, dropout rates remained high: 50% in urban areas, and as high as 80% in rural areas. Despite the reforms, obtaining an education in Haiti remains an elusive goal for most. Though education is highly valued, the majority of Haitians do not have access to it. Even

though education is technically free in Haiti, it remains beyond the means of most Haitians, who cannot afford the supplemental fees, school supplies, and uniforms required.

The Haitian curriculum requires learning many subjects in detail. Rote learning and memorization are still the norm. Grading and testing are very strict and formal in Haiti; it is much more difficult to attain a grade of B (or its equivalent) in Haiti than it is in the United States. Therefore, Haitian students tend to attach great importance to grades and tests, even quizzes. In Haiti the teacher addresses all students by their last names and has total authority over the class. A student speaks only when asked a question. As a sign of respect, Haitian students do not look their teachers in the eye, but keep their heads down in deference. There are no parent-teacher organizations in Haiti and parents are not routinely asked or encouraged to participate in school matters and decisions. In Haiti, if a parent is called to school, it generally means that the child has committed a great transgression.

Despite recent developments, major obstacles remain in helping the masses in Haiti achieve literacy, which stands at just over 50%. To that end, a literacy program was given ministerial status in 1995 in order to develop a nationwide institution to further the teaching of Haitian Creole. Although many sectors of the population do not see the value of becoming literate in Haitian Creole, this attitude is changing as Haitian Creole's usage in the media, in government, and in literature has increased. Even so, among the poor, who tend to view education as a means of escaping poverty rather than as a means for learning, French continues to be prized. While the reforms had sought to make Haitian Creole the language of all primary grades, the government was forced under pressure to limit its use to the first four grades only. Instruction in the secondary level remains almost exclusively in French.

#### 14 CULTURAL HERITAGE

Haiti's uniqueness is reflected in the originality of its paintings, music, and literature. Artists and musicians, drawing from the rich folk life and vitality of the people, have created internationally recognized works and sounds. Haitian paintings have long been recognized around the world; works by better-known Haitian artists have been exhibited in galleries and museums in the United States and France. Handicrafts such as woodcarvings and tapestries employ a similar style. Haitian music, like Haiti itself, is an original blend, containing elements of African drum rhythms and European dance music.

Haitian *kompa* and more recent *rasin* (Vodou-influenced) musical styles are among the most popular genres in Haiti today. Every year Haitian bands compete for the best song during the Carnival season, and recent entries reflect other influences of the Caribbean region through the utilization of reggae, dance hall, and rap styles.

Haiti has also produced writers, poets, and essayists of international standing. Attempts to write Haitian Creole date back to the 18th century, but because of its low status in Haiti, until recently there was little interest in writing in anything but French. Haitian literature has been written almost exclusively in French; however, with the recognition of Creole as an official language, novels, poems, and plays are being written increasingly in Creole. In 1975, the first novel to be written

entirely in Haitian Creole was published—*Dezafi* by Franketienne poetically depicts Haitian life.

#### 15 WORK

Although in decline since the 1950s, about 66% of the labor force in Haiti still works in agriculture. Deforestation, land erosion, and a declining economy have prompted many farm workers to migrate to the cities or abroad. The main cash crops are coffee and sugarcane. A large number of Haitians work in the Dominican Republic as *braceros*, under grueling conditions. Bracero is a Spanish term for a migrant farm worker, someone temporarily hired, usually for a harvest. In the Dominican Republic, Haitian braceros are used to harvest sugarcane, which is still cut by hand with a machete. Although secretly crossing the border is officially illegal, the Haitian government does not strictly enforce the immigration law.

#### 16 SPORTS

Soccer is the national sport. During the quadrennial World Cup competition, virtually the entire country roots for the national team of Brazil. In rural areas cockfighting is also popular, but only as an informal sport on the weekends. For men, a typical social game is dominoes or cards. For the more affluent, tennis is becoming an increasingly popular sport.

Children may often be seen playing hide-and-seek, hopscotch (*marelle*), round dances, and marbles. Organized sports in school or local leagues include basketball for girls and soccer for boys.

#### 17 ENTERTAINMENT AND RECREATION

The expressiveness of the Haitian people is evident in their rich oral tradition, which includes storytelling, proverbs, riddles, songs, and games. Storytelling in Haiti is a performance art. The storyteller uses a different voice for each character in the story and may sing songs as part of the narrative.

#### 18 FOLK ART, CRAFTS, AND HOBBIES

Haitian handicrafts often make use of mahogany, sisal, and straw. Haitian craftspeople are particularly skilled in woodcarving, weaving, and embroidery. Wooden sculptures, intricate plaques, and furniture (especially chairs with caned backs and seats) are popular handicrafts, as are embroidered dresses, skirts, blouses, costumes, and men's shirts. Wrought iron items are also a part of Haitian folk art, including candle holders, coffee tables, lamps, and animal figures.

Every year before Christmas, artisans fashion often elaborate works of art known as *fanal* out of white cardboard and tissue paper within which lighted candles are (carefully!) placed.

#### 19 SOCIAL PROBLEMS

Haiti is the poorest nation in the Western Hemisphere and among the 25 poorest in the world. The elite, about 10% of the population, earn 50% of the national income, while unemployment ranges from 30% to 70%. The penetration of transnational companies into the Haitian economy has contributed to the influx of peasants into Port-au-Prince. These changing demographics have caused both urban problems and social changes. While peasants have traditionally depended on the extended

family and cooperative labor to survive, urban slum dwelling has weakened this aspect of the social fabric.

Another problem is Haiti's extreme state of deforestation. With wood fuels accounting for most of the country's energy consumption, deforestation of the once green, tree-covered land is now critical. The most direct effect of the destruction of trees has been soil erosion, which has made most of the land unsuitable for farming. The fluctuation of prices for agricultural products in the world market has also contributed to the decline in agriculture. The fall in coffee prices and the fluctuation in sugar prices have had a major impact on agricultural production and planning.

Negative stereotypes and cultural misunderstandings about Haiti are still prevalent, and many Haitian American youngsters lack a sense of ethnic pride because of the negative publicity related to the political turmoil that hinders Haiti's chances to progress socially and economically. As a result of problems such as prejudice and difficulty in English, younger Haitians sometimes present themselves at various times as African Americans, Caribbean Americans, West Indians, or Haitian Americans, depending on the current sociopolitical climate in both Haiti and the United States.

## 20 GENDER ISSUES

Officially, there is no discrimination against women in Haiti. Women have recently held prominent positions in both the public and private sectors, and a Ministry for Women's Affairs was established in 1995. For some Haitians, however, women's roles are limited by tradition. Peasant women remain largely in the traditional occupations of farming, marketing, and housework. In general, Haitian women have been more active in the labor force than women in other Latin American countries, perhaps because the rewards for their labor are greater. In the coffee industry, marketers (persons who transport coffee beans to local and urban markets to sell) are almost exclusively female and are known as "Madam Saras." Income earned from agricultural production belongs to both husband and wife, but income earned from nonfarm business activities does not have to be shared with the husband, and, as a result, many women are economically independent.

Rural Haitian girls, however, are at great risk of exploitation. The abject poverty of rural Haitians has led many to send their children to the cities to work as unpaid domestic servants, known as *restevek* in Haitian Creole. There are estimates that over 300,000 children in Haiti, three-fourths of them girls, are *resteveks*. The children often work long hours, receive little food, and some are known to be beaten or sexually abused. Human rights organizations such as the National Coalition for Haitian Rights are working to eliminate this practice, with minimal success so far.

# HAWAIIANS

**PRONUNCIATION:** ha-WHY-uhns

**LOCATION:** United States (primarily in the Hawaiian Islands)

**POPULATION:** 813,415 (2006 est. includes those who claim mixed heritage of one or more races)

**LANGUAGE:** English

**RELIGION:** Christianity (Roman Catholic); Buddhism

**RELATED ARTICLES:** Vol. 3: Polynesians; Micronesians; Melanesians

## <sup>1</sup> INTRODUCTION

The Hawaiian Islands are located about 2,000 miles southwest of San Francisco in the Pacific Ocean. They are part of the larger Polynesian island chain. This island group, known collectively as Hawaii, became the 50th state of the United States in 1959. The first Europeans to visit the islands were probably Captain James Cook, a British naval officer, and his crews aboard two ships, the *Resolution* and the *Discovery*, which visited the islands in 1778. Within 40 years the native population was substantially reduced by the unfamiliar disease strains that the British brought with them to the islands. Eventually, European and American fur traders and whalers began using the conveniently situated islands as a provisions stations and missionaries also arrived to win converts to Christianity. Foreigners were granted the right to purchase property in 1840 and by the mid-19th century the United States had begun large-scale sugar farming, eventually bringing in thousands of European and Asian contract workers, thus forever changing the ethnic makeup of the islands. In 1893 a group of plantation owners, with U.S. military aid, overthrew the reigning monarch, Queen Liliuokalani. In 1898 the Hawaiian Islands were annexed and made a territory of the United States.

In the 20th century, Hawaii became a center of American military power in the Pacific. America's involvement in World War II began when a surprise Japanese air attack destroyed United States military installations in and around Pearl Harbor, an inlet near Honolulu, Hawaii's capital, on 7 December 1941. Since Hawaii achieved statehood in 1959, defense has continued to play an important role in its economy, as has tourism. Descendants of the Asians who came to the islands as plantation workers have, on the whole, fared better than the Native Hawaiians, wielding both economic and political power while the Native Hawaiians became increasingly alienated and impoverished. Since the mid-1970s activists have worked to promote the ethnic, cultural, and economic interests of native Hawaiians, in a movement analogous to that of the Native Americans and Alaskan Natives on the U.S. mainland.

## <sup>2</sup> LOCATION AND HOMELAND

The state of Hawaii is made up of about 130 islands, both large and small. Only seven of the islands are regularly inhabited. Most of the islands were created by volcanic action. The highest point in Hawaii is Mauna Kea, an apparently extinct volcano on the island of Hawaii, which rises to a height of 4,205 m (13,796 ft).

Of the seven main islands, Hawaii is the largest. It was formed by five volcanoes, two of which—Kilauea and Mauna Loa—are still active. The island of Maui is made up of two vol-

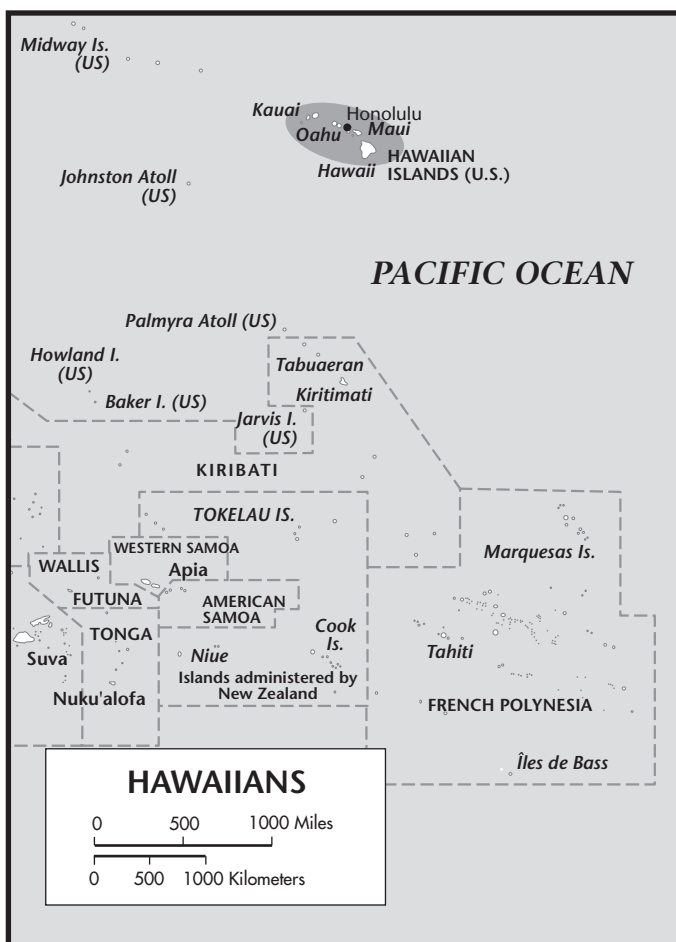

canic complexes joined by a low-lying strip of land. Both of Maui's volcanoes are dormant today, and one of them, Haleakala, has one of the world's largest extinct volcanic craters. Lanai is a hilly island that rises to a height of 1,027 m (3,369 ft) atop a long-extinct volcano. The island of Molokai is made up of three distinct regions, each formed by a separate volcano. Oahu, the most-populated island, is made up of two rugged mountain ranges, the Waianae Mountains in the west and the Koolau Range in the east. Pearl Harbor, one of the best natural harbors of the Pacific Ocean, is located on Oahu's south coast. Diamond Head and Punchbowl, remnants of extinct volcanoes, are famous landmarks found not far from the city of Honolulu. The island of Kauai is characterized by high precipitation and an abundance of lush vegetation. Kauai has many streams, some of which have worn deep canyons into the rock. Niihau is a private island. Its owners encourage the preservation of traditional Hawaiian culture and discourage outsiders from visiting the island. Hawaii's largest cities are Hilo, which is located on the island of Hawaii, and Honolulu, Kailua, Aiea, Kaneohe, Pearl City, and Waipahu, all on the island of Oahu.

When Hawaii was annexed as a U.S. territory in 1898, many Native Hawaiians, particularly those of the royal bloodline, lost the ownership rights over large portions of self-governed lands. Owners and community members alike lobbied the U.S. Congress for land rights, but the interests of the prosperous sugar plantation owners were considered of greater importance. In 1921 Congress passed the Hawaiian Homes Commission Act to set aside 203,500 acres of Hawaiian land for Native Hawaiians. In 2006 the Department of Hawaiian Homelands administered 201,660 acres of these lands that were set apart exclusively for the benefit of Native Hawaiians. About 58% of these homelands are located on the island of Hawaii. As of 2006 only about 42% of the total homeland area was in use.

At the 2000 U.S. Census, there were 140,652 people who claimed Native Hawaiian as their single race. However, a total of 874,414 listed themselves as Native Hawaiians and other Pacific Islanders as a combination of one or more races. According to 2006 estimates, there were 148,598 people claiming Native Hawaiian as their single race and 813,474 listed Native Hawaiians and other Pacific Islanders as a combination of one or more races. About 60% of all Native Hawaiians live in the state of Hawaii. California has the next largest number of Native Hawaiians (about 20,350 in 2006), followed by Washington (5,000 in 2006).

## <sup>3</sup> LANGUAGE

The official language of the Hawaiian Islands is English, which is spoken at home by about 76% of the population. Few people speak the original Polynesian-based Hawaiian language. There are, however, a number of academic and cultural organizations at work to preserve the language for future generations. Most of the native population speaks pidgin, a local creole that incorporates English, Hawaiian, and other Asian and Pacific languages. Spoken with a rising inflection, pidgin is especially popular among young people and has a distinctive vocabulary and syntax of its own. Other languages spoken in Hawaii include Japanese, Chinese, and Tagalog.

#### COMMON HAWAIIAN TERMS:

*aloha*: a common greeting, used for both hello and goodbye. Also means affection, romantic love, or good wishes

*hula*: a popular native Hawaiian dance

*kahuna*: priest or shaman

*kane*: man (also husband or boyfriend)

*lanai*: porch

*keiki*: child, children

*lei*: garland of flowers or vines

*luau*: traditional Hawaiian feast

*malihini*: newcomer or “tenderfoot”

*mauna*: mountain

#### COMMON PIDGIN TERMS:

*bimbye*: eventually (“by and by”)

*brah*: brother (equivalent of “bro” in the United States)

*cockaroach*: to steal, equivalent to “rip off”

*da’kine*: all-purpose expression, similar to “whatever” or “you know”

*hu hu*: angry

*ono*: number one; i.e., the best

*pau hana*: quitting time (end of the work day)

## 4 FOLKLORE

Like all Polynesian peoples, the original Hawaiians believed that their ancestors came from a mythical homeland near Tahiti, called Hawaiki. Many of the Native Hawaiian deities were associated with animals and nature. The original inhabitants of Hawaii offered human sacrifices to the active volcano, Pele, in an attempt to pacify the goddess known by the same name, thus preventing violent and disastrous eruptions. Another popular figure was Kamapuaa, who was half man and half hog. Polynesian mythology in general is a complex mix of stories about the creation of the earth and the relationships between the gods and people.

Traditionally, taboos called *kapu* (from which the word “taboo” is derived) were widely observed by the Hawaiian people. Typical *kapu* included a prohibition on letting one’s shadow fall on the body of a king and a ban on men and women eating together.

## 5 RELIGION

The traditional Polynesian religion, which declined in the 19th century with the arrival of Christian missionaries on the islands, was animistic and based on a belief in numerous gods, half-gods, and spirits. Chiefs were believed to be descended from the gods and to have sacred powers called *mana*. One can still see evidence of pre-Christian religion throughout Hawaii in open-air temples called *heiau*. Most Hawaiians are now Christian, with a majority of those being Roman Catholic. Buddhists are the largest religious minority in the state.

## 6 MAJOR HOLIDAYS

Hawaiians celebrate all major Christian holidays as well as all national holidays celebrated in the United States. They also celebrate special festivals of their own, including Lei Day (May 1) and Aloha Week in late September, which is observed throughout the islands with luau (feasts), pageants, balls, and other festivities. Other festivals are unique to a particular island or locality.

## 7 RITES OF PASSAGE

Rituals marking major life events such as birth, marriage, and death are generally observed within the Christian religious tradition. Among the native Hawaiian population, the ceremony celebrating a birth was traditionally the most important rite of passage.

In ancient times, the bodies of the dead were placed in burial caves, and special care was taken to avoid having the enemies of deceased persons find and dishonor their remains after death.

## 8 INTERPERSONAL RELATIONS

Sharing possessions and giving gifts have traditionally been central to the Hawaiian way of life. If someone was in need, people always gave generously, safe in the knowledge that others would be there to help them in return. This generous attitude survives in the famous “spirit of aloha,” a term that refers to the friendliness, generosity, and openness to strangers for which the Hawaiians are known. “Aloha” is also the universal greeting for “hello” and “goodbye.” A popular slang greeting, equivalent to “What’s up?” in the United States, is the pidgin phrase “Howzit brah?”

The traditional garland known as a *lei* is presented to people on any happy occasion, but especially upon arriving in or leaving Hawaii. A widespread practice in the workplace is the observance of the Hawaiian equivalent of the U.S. “casual day”—“Aloha Friday,” marked by playful behavior and the wearing of bright colors and flowers.

## 9 LIVING CONDITIONS

Native Hawaiians face many of the same difficulties as other native groups within the United States. Native Hawaiians once lived in communities in which resources were shared and the management of resources was designated to a chief. After the annexation of Hawaii as a U.S. territory, most land ownership was transferred from native royalty to non-native individuals, leaving many Native Hawaiians displaced from their traditional homes. The Hawaiian Homes Commission Act of 1921 set aside 203,500 acres of homeland for Native Hawaiians, thus allowing the chance to obtain long-term land leases on property where they might continue to preserve a traditional lifestyle. However, eligibility was limited to those who could prove to be a descendent of not less than one-half of one of the races inhabiting the Hawaii islands before 1778. In the modern housing market, many Native Hawaiians, including those who are of mixed heritage, find themselves at an economic disadvantage in owning homes.

Native Hawaiians once had a system of health care that included holistic healing practices still around today, particularly those that combine mental and spiritual wellness with physical healing. As the foreign population grew, Western medical practices became more and more prevalent. However, many natives were suspicious of the new techniques and medicines. Today the primary barrier to adequate health care for the native population is low income. In 2003 only about 21% of all Native Hawaiians in the state had health insurance. The teenage pregnancy rate among Native Hawaiians was higher than that of other ethnic groups in the state and the number of unwed mothers was higher among Native Hawaiians as well. There has also been a higher number of infant deaths among Native Hawaiians than among other ethnic groups. The native population had higher instances of asthma and obesity than other ethnic groups within the state. About 25% of the native population smoked in 2003.

Papa Ola Lokahi, founded in 1988, is a not-for-profit consortium serving as the umbrella group for the Native Hawaiian Health Care Systems (NHHCS). Facilities within the NHHCS promote traditional healing practices with more modern techniques.

## 10 FAMILY LIFE

Traditional Hawaiian life centered on the extended family. Families were large and the extended family often lived under the same roof. All family members were expected to work together for the welfare of the *ainga*, or the whole family group. A child had many “mothers” and “fathers,” and was never lonely. It was a common practice for grandmothers to adopt and raise children as their own. The children in traditional Hawaiian households were usually spoiled through overindulgence.

Marriages were traditionally arranged without consulting the couple. In most cases, such marriages were intended to strengthen ties between families or political bonds between tribes and clans. Land was usually owned by clans or extend-

ed families and worked by individuals. Ownership changed mainly by inheritance or warfare. The roles of both women and men were clearly defined from an early age and children learned by observing their elders. The burden of providing for and protecting the family fell to the males, while females did the household chores and reared the children.

In modern society the centrality of family seems to have lost much of its significance among the native population. In 2004 the number of children born to unwed mothers was significantly higher among the Native Hawaiian population than that of other ethnic groups in the state.

## 11 CLOTHING

Modern Hawaiians wear Western-style clothing, but traditional garb can still be seen and, in fact, is often worn for the benefit of the tourists who flock to Hawaii each year. For men it includes a cloth skirt called a *lava-lava*, or *sulu*. Some women wear long, loose-fitting cotton garments called *muumuus*. Skirts are made of tapa cloth, made by stripping the inner bark from paper mulberry trees, soaking it, and then beating it with wooden clubs. Both men and women sometimes wear the familiar grass skirts which are identified with Hawaii in popular imagination.

The early Hawaiians often decorated their bodies with tattoos, a custom which has recently seen a resurgence of popularity among young people, not just in Hawaii, but all over the United States.

## 12 FOOD

Traditionally, the people of the Hawaiian Islands have depended largely on fish and native plants for food. Hawaiians catch crabs, lobsters, shrimp, and turtles in shallow water. Farther out to sea they catch bonito and tuna. On many islands they eat the fruit of breadfruit and pandanus trees and the meat of coconuts from the coconut palm. Traditional garden crops include sweet potatoes, taro (a plant with a starchy root), bananas, corn, pineapples, rice, and tomatoes. Some farmers also raise chickens and pigs.

A traditional way of preparing food is to cook it in a ground oven, a shallow pit lined with heated stones. The food is placed on the stones and covered with layers of leaves. The pit is then filled with earth to hold in the heat.

## 13 EDUCATION

The first formal schools in the Hawaiian Islands were established by Protestant missionaries from the United States in the early 19th century. In 1840 the Hawaiian king Kamehameha III established a public school system in the kingdom of Hawaii. Today the state school system is highly centralized, with one school board overseeing all public schools in the state. The system includes several charter schools. Elementary and secondary school enrollments have remained relatively stable, although a slight decline was evident in the 1980s. Hawaii’s institutions of higher education include Chaminade University of Honolulu, Hawaii Loa College, Hawaii Pacific University, and the University of Hawaii system, which includes several community colleges located throughout the islands. In 2006 about 85% of the native population aged 25 years and older had obtained a high school diploma or higher level of education. Only about 12.6% had obtained a bachelor’s degree or higher.

*Hula contest in Princeville, Kauai, Hawaii. Many Hawaiians are concerned with preserving traditional ways. The women's dances, such as the hula, involved graceful head and body movements that illustrated the songs. The men's dances, which were vigorous and energetic, included slapping the body, stamping the feet, and twirling wooden clubs or spears in the air in mock battles. (Corel Corporation)*

#### **14 CULTURAL HERITAGE**

The return of a loved one, the birth of a child, or the appointment of a new chief were always occasions for celebration in traditional Hawaiian culture. New songs were composed spontaneously to record the event, and dances were enacted to capture the spirit of the gathering. Most dances were performed either sitting or standing. The men's dances, which were vigorous and energetic, included slapping the body, stamping the feet, and twirling wooden clubs or spears in the air in mock battles. The women's dances, such as the hula, involved graceful head and body movements that illustrated the songs. Costumes varied according to the type of dance being performed, but were most often made of leaves and sweet-smelling flowers. Feathers, fine mats, grass skirts, and headdresses were worn for some dances. Traditional Hawaiian musical instruments included bamboo flutes, shell trumpets, panpipes, and slit drums.

A number of organizations seek to preserve and promote the native culture. These include the Hawaii State Foundation on Culture and the Arts and the Hawaii State Art Museum.

#### **15 WORK**

According to reports from the year 2000, only about 60% of the Native Hawaiians within the state (aged 16 years and older) were employed. Most of the native work force (about 71%) is

employed in private sector wage and salaried jobs. Less than 5% are self-employed or own their own business. These native-owned businesses tend to be either one-person operations or have only a few employees, who are often family members. About 62% of Native Hawaiians in the state of Hawaii have household incomes under \$50,000.

The people of Hawaii work at jobs that are similar to those of people in the mainland United States. In the cities they might be lawyers, doctors, or office workers. They may work in factories processing canned pineapples and pineapple juice; manufacturing stone, clay, metal or glass products; and making clothing. Some are engaged in shipbuilding.

Hawaiian farm workers specialize in sugarcane and pineapple production. Other crops include coffee, ornamental flowers and shrubs, papayas, bananas, avocados, taro, grain sorghum, macadamia nuts, alfalfa, beans, potatoes, and cabbage. Livestock farms produce beef cattle, milk and other dairy goods, hogs, chickens, and chicken eggs.

The tourist industry, which has grown rapidly in recent decades, is the leading source of employment for the people of Hawaii. Each year several million tourists visit the state.

#### **16 SPORTS**

Hawaiians enjoy all the spectator sports that are popular elsewhere in the United States, such as basketball, football, and

baseball. They enjoy watching and participating in golf, hiking, cycling, and polo.

In Hawaii, however, water sports are the most popular. Hawaii is considered one of the best places in the world for surfing. Other popular water sports enjoyed by Hawaiians are sport fishing, boat racing, swimming, windsurfing, body-surfing, snorkeling, and scuba diving.

## 17 ENTERTAINMENT AND RECREATION

Hawaiians tend to head for the outdoors when they're in the mood for recreation. They enjoy water sports like surfing, scuba diving, snorkeling, and deep sea fishing, and they also like to camp out and hike through Hawaii's spectacular landscape.

Traditionally, islanders enjoyed gathering to celebrate occasions like births and marriages with feasting, dancing, and singing. No such celebration would be complete without *kava*, a drink made from the roots of the native kava plant. For young boys, favorite pastimes are wrestling, dart-throwing, spinning tops, playing marbles, and flying kites. Girls might practice juggling, play cat's cradle, or participate in a game of hopscotch.

## 18 FOLK ART, CRAFTS, AND HOBBIES

Many Hawaiian islanders are skilled artists and craftsmen. One important traditional craft is basketweaving. Using the leaves and fibers of native plants, such as palm and pandanus trees, craftspeople weave baskets, mats, and wall hangings, which they decorate with colorful designs. Others specialize in using native woods to carve masks, cooking utensils, and other objects. On a smaller scale, some Hawaiian artisans are skilled at making pottery.

## 19 SOCIAL PROBLEMS

Native Hawaiians face many of the same social problems as other native groups within the United States. Criminal activity is high among Native Hawaiians. In 2005 about 38% of the Hawaii state inmate population were Native Hawaiians. About 36% of all juvenile arrests involved Native Hawaiian youth. Larceny, theft, motor vehicle theft, burglary, and assault were the most common offenses among adult offenders. Burglary, assault, larceny, and marijuana drug use were the most common offenses among juveniles. Poverty is considered to be a primary contributing factor to many of the social problems faced by the native population.

Since the 1898 annexation of Hawaii as a U.S. territory, Native Hawaiians have faced several difficulties in maintaining their traditional lifestyle, with most challenges relating to their strained relationship with the U.S. government. The Hawaiian Organic Act of 1900 established U.S. government control of the islands and recognized Native Hawaiians as U.S. citizens; however, there was no provision made to recognize the native population as a distinct indigenous people. Through the Hawaiian Homes Commission Act of 1921, Congress set aside over 200,000 acres to serve as homelands for the Native Hawaiians; however, the right to establish systems of self-governance, similar to that granted to Native American groups, was not part of the agreement. In 1993 the U.S. Congress issued a joint resolution (Public Law 103-150) that officially declared the 1893 overthrow of the Kingdom of Hawaii an illegal action under both U.S. and international law. Many Native Hawaiians viewed this admission and apology as a major turning point in

their efforts to reestablish some aspects of their traditional system of life and government.

In 2002 the state of Hawaii recognized the rights of Native Hawaiians to hunt, gather, and worship in the Wao Kele o Puna forest on the island of Hawaii. This land has had special significance for the native population for centuries as a place for hunting and religious gatherings. However, it had been under private ownership for many years. In 2006 the Office of Hawaiian Affairs announced the purchase of the 25,856-acre Wao Kele o Puna forest. This change in ownership is expected to allow for the permanent protection of the land and the protection of native rights for use of the land. The Native Hawaiian Government Reorganization Act of 2007 was still before Congress as of April 2008. This proposed bill was designed to grant federal recognition of Native Hawaiians as an indigenous people, a move that could lead to the development of self-government on native homelands as well as greater access to health, education, employment, and cultural programs.

## 20 GENDER ISSUES

In traditional Native Hawaiian culture, gender roles were fairly well-defined with men as providers and protectors and women as caretakers of children and the home. The challenges affecting Native Hawaiian women in modern society are similar to those affecting women of other native or minority groups in the United States. The employment rate for Native Hawaiian women aged 16 years and older in the state of Hawaii was about 57% in 2006. There are more unwed mothers among the Native Hawaiian population than among other ethnic groups in the state.

Hawaii in 1998 passed a constitutional amendment banning homosexual marriage in the state. However, there is a thriving gay community on the Hawaiian islands.

# HINDUS OF GUYANA

**LOCATION:** Guyana (Atlantic coast area)

**POPULATION:** About 302,000

**LANGUAGE:** English; Hindu; Urdu

**RELIGION:** Hinduism

**RELATED ARTICLES:** Guyanans

## <sup>1</sup> INTRODUCTION

When slavery was abolished in Guyana in the early 19th century, the freed African slaves abandoned the sugar plantations and became peasants or town dwellers. So, the plantation owners turned to India to recruit their workers. Over the next 80 years, beginning in about 1838, thousands of Asian Indians from all parts of the Indian subcontinent crossed the *kalapani*, the Black Waters, as indentured laborers. Many of them were lower-caste Indians, sometimes existing in a state of virtual slavery in their own country, who were glad to flee their landlords and creditors for the prospect of a new beginning in a new land. But, the journey was a dangerous one. Out of 324 persons who embarked on a ship at Calcutta in 1858, as many as 120 died as a result of the conditions on board. Life was not much better when they arrived, for in the early years, they were seen as the “new slaves” and were treated as such until new regulations were brought in to improve their treatment by the owners. By 1917, when immigration ended, a total of 239,000 Asian Indians had left their homes to travel to Guyana. Many of them stayed, being offered land close to the plantations in exchange for giving up their rights to return to India. The former Black African slaves resented the fact that the “dal coolies” appeared to be favored over them by the plantation owners, and this became the basis for a racial resentment between the two groups that continues today.

Politics in Guyana have always been defined along racial lines. During the 1950s and 1960s, the history of the colony was stormy. The first elected government was formed by the People’s Progressive Party, representing the Hindu community, and it was led by Cheddi Jagan who is credited as spearheading the movement in the Caribbean towards independence. As a son of an Indian sugar plantation worker, Jagan represented the aspirations of the Hindu population in Guyana. His policies, however, appeared to be so pro-communist that the British government suspended the constitution and even sent troops to Guyana. The party was again elected into power in 1963, but rioting broke out between the Asian Indians and the Black Africans, which led to bloodshed. The British decided to introduce proportional representation and the African-dominated People’s National Congress (PNC), itself a socialist party, swept into power on a coalition ticket. Its leader, Forbes Burnham, declared the country an independent republic in 1970. For the next two decades, Guyana became virtually a one-party state, and it was not until 1992 that the PNC reign ended and Cheddi Jagan’s party took office once more.

During his presidential tenure, Cheddi Jagan focused on improving the country’s infrastructure and educational system. On 15 February 1997, Jagan suffered a heart attack and was taken to Washington, D.C., where he underwent heart surgery. Cheddi Jagan died on 6 March 1997. After his death, his wife Janet Jagan was elected president of Guyana, but two years

later, arguing health reasons, she stepped down. That same year, the former minister of Finance, Bharran Jagdeo, was appointed president and was reelected in 2001 and 2006.

Guyana’s government has been attempting to improve the economy, reduce violent crime rates, and to create the necessary dialogue among different segments of the society with the intention of softening the tension within different ethnic groups that, during the last decades, has severely affected the political agenda.

## <sup>2</sup> LOCATION AND HOMELAND

Guyana is a multicultural and multiracial group. The largest ethnic group is formed by Indian descendants, also known as Indo-Guyanese, and according to the 2002 population census 43.5% of Guyanese belong to this category. Under a religious perspective, Hindus make up almost 40% (or about 302,000 people) of Guyana’s 756,000 people of various races, including Africans, Portuguese, Chinese, and Amerindians. The second biggest ethnic group is formed by people of African heritage or Afro-Guyanese, who accounted for 30.2%. The third in number are those of mixed heritage representing 16.7% of the population. This ethnic group is composed by Amerindians such as Arawak, Wai Wai, Carib, Akawaio, Wapixana, Macushi, and Warao. The smallest groups are European, including Portuguese who make up 1,500 of the population and the Chinese (0.19% or 1,400 persons).

Guyana is divided between the coast, where most of the population is concentrated, and the interior. The coastal dwellers are heterogeneous and the majority of these inhabitants descended from the laborers brought in to work the sugarcane plantations. The Hindus live on a narrow coastal strip along the Atlantic coast, only 16 km (10 mi) across at its widest point, on land that has been reclaimed from the sea by a series of canals and some 225 km (140 mi) of dikes. Although many live in the capital, Georgetown, and other urban areas, a large number of Hindu families still live in the farming villages they created in the early days when they were first given land by the plantation owners.

## <sup>3</sup> LANGUAGE

Although the official and principal language of Guyana is English, Hindu and Urdu are also heard among the older Asian Indians.

## <sup>4</sup> FOLKLORE

Much of Guyanan Hindus’ folklore springs from their religious and racial background. The majority of Hindus came from the Gangetic Plain, which produced the great religious heroes of India, such as Rama, Krishna, and Mahavira. It was this area that was the scene of the great Asian Indian epics, such as the *Ramayana* and the *Mahabharata*.

## <sup>5</sup> RELIGION

All the major Hindu festivals are celebrated by Guyanan Hindus throughout the year. At the end of October is the religious festival of lights, Divali, which celebrates the return of Lord Rama after 14 years in exile. There are also Bhagwats, remarkable socioreligious activities centered on the reading of a sacred text by the Brahmins, usually the *Shrima Bhaga Vata Purama*. These events span 7, 9, or 14 days and involve a variety of rites

and massive communal meals with hundreds of participants. The Hindus are often joined by Christians and Muslims who travel from all over the country to take part.

Religious activities also include Pujas, which mark special occasions like birthdays or anniversaries, and a *pundit* is hired to perform the necessary Sanskrit rites over a weekend. No fish or meat must be eaten in the house before a religious function takes place. Even the refrigerator must be emptied for the occasion.

## 6 MAJOR HOLIDAYS

A great part of Guyanan Hindus' recreational activity reflects their tolerant acceptance of other religions and is based upon the festivities that accompany Hindu, Muslim, and Christian holidays, such as Christmas, the end of Ramadan, and (in early March) Phagwah, the Hindu New Year, a joyous celebration that celebrates the triumph of good over evil and is noted for the energetic throwing of perfume and water. Easter Monday is also a traditional day for flying kites. Republic Day, on February 23, is the day the president reports to the nation and is a day for much street marching.

Once a year, most Hindus try to have a grand *puja*, or Ramayana Yagna, an event where the entire community is invited to participate. Ramayana is an ancient epic tale consisting in more than 24,000 verses that narrate the adventure of Rama, whose wife Sita is abducted by the demon. The characters of Rama and Sita among others are all fundamental to the cultural consciousness of India and the Hindus in general.

## 7 RITES OF PASSAGE

Baptism is common among the Hindus, who attend Christian churches while maintaining their participation in their own religious rituals. Many of the names that they confer on their children reflect the epic heroes of their culture, such as Rama, Krishna, etc.

## 8 INTERPERSONAL RELATIONS

As of 2008, about 84% of the East Indian immigrants were Hindus. Around 30% of them belonged to agricultural castes, 31% were laborers, and 14% were Brahmins, the highest priestly caste among the Hindus. The familiar Hindu caste system is a highly localized phenomenon in the villages of India. Therefore, when low-caste Hindus and twice-born Brahmins were thrown together on board ships to become *jahagis* (shipmates) on the sailing boats from India to Guyana in the 19th century, that system soon became irrelevant. In this sense, it is possible to assess that Hinduism in Guyana was redefined.

Brahmins played an important role in reforming and, at the same time, maintaining the strength of the religion they served. Brahmins administered spiritual rites to all Hindus and were the roadblock that could contain the Christian missionaries' attempts of converting the East Indians into Catholics during the 19th century. During the first half of the 20th century, Hindu conversions to Christianity slowed down because the status of Hinduism improved and the discrimination against Hindus diminished.

Today, there is more or less only one common caste for all Hindus in Guyana, although Brahmins do retain their special religious role in interpreting the sacred knowledge of the rituals and Sanskrit texts.

Anyone visiting a friend or acquaintance at their home address is expected to call upon everyone else that they know within that neighborhood. Not to do so is considered extremely rude. Open hospitality is a great feature of Hindu life in Guyana, and no visit can be completed without the offer of a meal or refreshment.

## 9 LIVING CONDITIONS

Hindu homes are provided with a small place to pray, which is usually located at the front of the home. It is common among Hindus to dedicate time for singing, meditation, and—if their daily activities allow it—to go to the temple.

Standards of health care declined after Guyanan independence, when many doctors and trained medical personnel emigrated. Years of economic austerity programs led to reduced supplies of medicine and equipment. Food shortages led to widespread malnutrition, particularly during the 1980s.

Some 170,000 Guyanans, out of a population of 800,000, live in Georgetown, the capital. Many of the houses in the center of the city are made of wood. Many Guyanan Hindus live in small villages and towns along the coast. The houses are built of wood with tin roofs and are constructed on stilts 2.5 m to 3 m (8–10 ft) off the ground to avoid flooding from the sea.

During the 1970s and 1980s, the government under Burnham was determined to undermine the rural opposition of the Asian Indian small farmers and so developed a series of farming cooperative policies. As a result, rice production was cut by half, after the farmers lost their subsidies. Guyana is one of the poorest countries in the world and relies heavily on its self-sufficiency in food. Resulting food shortages led to increased malnutrition and the return of diseases that were formerly under control, such as beriberi and malaria. The economy was also badly hit by the depressed world demand for bauxite and sugar. This has led to a near breakdown in essential public services, such as electricity.

## 10 FAMILY LIFE

Ethnic identity continues to be important within daily life. The mother- and grandmother-dominated family among Afro-Guyanese differs from the father-oriented Asian Indian family. The extended family is still typical among Hindus, although the European nuclear pattern is becoming popular. Upon marriage, the son is expected to take his bride and live for some time with his parents. This is because it is the duty of the parents to guide the children through the early days of marriage. Then, by the sixth or seventh year the son will have set up his own household with his wife and children.

Because the caste system has virtually disappeared in Guyana, few fathers of high status would pass up the opportunity for their child to marry into a wealthy, established family because of considerations of caste. The arranged marriage is also not as widespread as it once was, and in urban areas it is almost non-existent.

## 11 CLOTHING

A skirt and blouse is the popular form of clothing for women, but the sari is being increasingly worn by Hindu women. For Hindu men it is the *kurta* (shirt) or the *dhoti* (one-piece trousers).

## 12 FOOD

Asian Indian food is very popular throughout Guyana. Curry and dal have become part of everyday life for the whole population. Dal is often flavored by the addition of spices cooked in oil. Hindus in the country serve the food on lotus or banana leaves.

Vegetables, such as pumpkin and eggplant, make up the main part of the diet, although fish is often eaten. Fish are often caught in the ditches and dikes by women using seine nets.

## 13 EDUCATION

Children receive free, compulsory education. The government assumed full control of education in 1976 and took over Church-run and private primary schools. Because of economic decline, physical facilities have deteriorated in schools, books and supplies are limited, and there are few qualified teachers. During the time of the People's National Congress (PNC) government, education became highly politicized, and teachers were expected to teach loyalty to both the PNC and to socialist objectives.

The principal university is the University of Georgetown at Turkeyen, in the eastern part of the capital, but many Hindus seek training and higher education abroad.

## 14 CULTURAL HERITAGE

Post-independent Guyana still bears the imprint of its colonial heritage, and many people still look towards European values. But Hindus keep a strong link with their ancient roots and for many, the cinema provides that link, showing the great epics, such as the story of Lord Rama's long 14-year exile. For them it bears many echoes of their own past, reflecting their exile from India.

Young Hindus, too, are rediscovering their culture, through the religious fables as well as through the traditional music played at weddings and festivals.

One of the best known Hindu writers is Dr. David Dabydeen, whose works cover his experiences both in Guyana and Britain. His latest novel is *The Counting House*. Another popular author is Rooplall Monar.

## 15 WORK

The domestic economy of Guyana reflects the ethnic divisions of the country. Hindu families control most small businesses, such as small farms and shops. In fact, the Hindus are the mainstay of the plantation agriculture of rice and sugar. Meanwhile, the Africans dominate the government sector and security forces. An increasing number of Hindus are entering the legal and medical professions.

Wages for most people, however, are low, and many Hindus depend on overseas remittances from relatives abroad to survive. Most people work at more than one job. Those with farms will often take on part-time unskilled and semiskilled jobs between sowing and harvest times.

Many Hindus, including skilled and professional people, emigrated annually in large numbers to flee what they felt to be political persecution under the previous African-dominated government. They have settled in North America, Canada, Britain, and the Caribbean Islands. This emigration has been a great drain on Guyana's human resources. At the same time, others have sought part time work in western Suriname.

## 16 SPORTS

Hindus share the Guyanese passion for cricket—a passion that is prevalent throughout the English-speaking Caribbean. The game is one of the few unifying factors in the country, overcoming racial divisions. It has been said, however, that cricket in Guyana is totally unlike the game as it is played in England. In Guyana it has more of the passionate atmosphere of a bullfight in Spain, galvanizing the people's national self-esteem. The sport plays a special role in the historical, social, and cultural development of the country. By playing host in Georgetown to International Test Cricket Matches against other countries within the British Commonwealth, the people of Guyana have the opportunity to demonstrate their abilities on the international scene, and to make a symbolic gesture against their oppressive colonial legacy. The Hindus did not come into the game at Test Match level until the 1950s. There are a number of great Hindu players, however, who have been selected for the West Indies team, including Rohan Kanhai and Neville Kalicharan.

In the villages outside Georgetown, street cricket is played with a sponge ball, and the pitch is a coconut mat laid out on the ground. Even during the rainy seasons, young players can be seen standing thigh-deep in water around a mat laid on the only piece of high, dry ground in a field.

## 17 ENTERTAINMENT AND RECREATION

Popular culture is as mixed as the various ethnic groups who live in Guyana. Georgetown offers a wide mix of museums and art galleries, and for the young people there are discos. A favorite kind of music among both Hindu and Afro-Guyanese is something called chutney, a hot, spicy mixture of traditional Hindu music and rock music.

The cinema still plays a large part in the lives of older people, and the favorite films among Hindus are those that are imported from India, depicting the great epics such as the story of Lord Rama.

The young are also turning more and more to the traditional Asian Indian songs and dances in their search for their artistic roots.

## 18 FOLK ART, CRAFTS, AND HOBBIES

Many of the Guyanan Hindu folk arts and crafts are entwined with the Hindu fables and festivals.

## 19 SOCIAL PROBLEMS

Race has been a divisive issue in Guyana, with the Hindus accusing the Africans of racism and repression during the 28 years of rule by the People's National Congress party, during which they claimed that Hindu villages were attacked and plundered by security forces. The Africans dominate the Guyana Defense Force and the police. Street crime and violence are particularly notorious in Georgetown. Community police have now been introduced by the government into the city to try to retake control of the streets.

The new government has also announced its intention of introducing structural changes "with a human face" and aims to alleviate poverty through a basic-needs strategy. It also intends to increase foreign and local investment, production, and exports. Cheddi Jagan has promised a "lean and clean" government and is determined to end racial discrimination.

## 20 GENDER ISSUES

Indo-Guyanese women play a significant role as farmers, market vendors, teachers, nurses, civil servants, and clerks, as well as doing housework. Indian families are patriarchal and often function as corporate economic units, thus Indo-Guyanese women continue to fulfill traditional roles of wife, mother, and homemaker.

Until the 1930s, Indians tended to resist educating girls, but the example of other groups and the emergence of an Indian middle class, have led to a changed attitude. In 1925 only 25% of Indian children in primary schools were girls. In 1929, Subadri Lall was the first to qualify for matriculation to attend the University of London, establishing a unique record for local girls.

While many Indo-Guyanese women, especially among the working poor, have not attended school, they work to maintain their families and to send their children to school. Thus, these women contribute significantly to their household and community, planting their backyard with greens, raising chickens, goats, sheep, looking after their cows, selling milk, and buying and selling produce. Some also manage little shops in the villages and assist in their husbands' businesses, such as the tailor-shops and grocery shops. Despite their economic role, Indo-Guyanese women are not part of an established organization with leadership opportunities. It is still a social taboo for Indian women to join social organizations and carry the banners. However, a small group of middle-class Indian women in the urban areas are beginning to participate in public circles.

Even though many Indo-Guyanese women are now educated and have moved up in the social, political, and religious organizations, they are still marginalized. In 1965, a time when Indians were 50% of the population, Indo-Guyanese women comprised only 2.85% of all employees and only 13.5% of female employees on the staffs of all the government ministries. Currently, even though men dominate the economic and political spheres, a few women are senior officials in the government. Although there has been one female president, there is a paucity of women in the cabinet, the legislature, and the leadership of political parties.

# HMONG AMERICANS

For more information on Hmong history and culture, *see* **Vol. 3: Hmong**.

## OVERVIEW

Hmong Americans first came to the United States in 1975 after the takeover of Vietnam and Laos by leftist regimes. Although many sources claim that the U.S. Central Intelligence Agency (CIA) promised to resettle the Hmong if they were defeated, only 1,000 Hmong were evacuated in the first year after defeat. Many Hmong were forced to flee across the borders of Vietnam and Laos into Thailand. There they lived in overcrowded refugee camps for months or even years.

In December 1975 the U.S. Congress finally agreed to start resettling Hmong refugees and brought 3,466 Hmong to the United States. The following year 10,200 refugees from Laos, some of them Hmong, were admitted to the United States. Hmong immigration continued over the next several years, and by 1990 the Hmong population in the United States had reached almost 100,000. The 2000 U.S. Census counted 186,310 Hmong Americans, and by 2006 the estimated population had risen to almost 210,000. About 44% of Hmong Americans in 2006 were foreign-born; 60% of them arrived before 1990, and the remaining 40% after 1990. Hmong Americans are generally very young; the median age in 2006 was under 20 years old (as opposed to 36 for the total U.S. population).

When the Hmong first arrived in the United States, resettlement agencies scattered members of the 12 traditional Hmong clans across the country. As soon as they were able, the Hmong made their way in small family groups to areas where they could reassemble their clan communities. The majority of Hmong Americans now live in California, with sizeable populations also in Minnesota and Wisconsin. Most live in farming towns and small cities.

Hmong Americans belong mainly to two Hmong tribes: White Hmong and Blue (or Green) Hmong. Each tribe speaks a different dialect of the Hmong language. Hmong is a monosyllabic, tonal language, meaning that most words have only one syllable, and the meaning of a word changes depending on which of eight tones (high, low, ascending, descending, etc.) is used to pronounce it. Because the Hmong language is so different from English, Hmong Americans are faced with a serious challenge in developing English-language proficiency. Their relatively recent arrival in the United States, along with their deep commitment to maintaining their Hmong identity, also contributes to language barriers as some 95% report speaking "a language other than English" at home. Over 40% do not speak English well.

Hmong legends and folklore have been passed down orally for many generations. Some tales have moral lessons; others convey mythical understandings of the world. Hmong Americans became interested in preserving these stories in written form, and a large bilingual collection, *Myths, Legends, and Folktales from the Hmong of Laos* (edited by Charles Johnson), was published by Macalester College in St. Paul, Minnesota, in 1985.

Most Hmong Americans continue to follow their traditional religious ways. Traditional Hmong religion is pantheistic, recognizing the presence of divine spirit in all things. Spirit cults, shamanism, and ancestor worship are the three major components of traditional Hmong religious life. Some Hmong Americans follow the Chao Fa religion of Laos, begun in the 1960s by Hmong prophet Yang Chong Leu (or Shang Lue Yang) who preached a return to traditional Hmong ways. Yang Chong Leu also promoted a traditional system of writing known as Pahawh Hmong, still used by Chao Fa followers today.

A number of Hmong converted to Christianity in Laos, and even more have converted since their arrival in the United States. Religious conversion has caused a great deal of division in the Hmong community, since religion is seen as an integral part of Hmong life, and Christianity is opposed to traditional Hmong beliefs and practices in many ways.

Rites of passage are particular areas of conflict. For example, whereas Christianity rejects the concept of reincarnation, traditional Hmong religion holds that when a man dies, he is reincarnated as a woman, and when a woman dies, she is reincarnated as a man. Therefore, traditional birth and death rituals involve preparations and protections for the soul that is about to enter the body of the newborn or leave the body of the deceased. The Christian Church finds these rituals unnecessary and even offensive and strongly discourages their practice.

Marriage customs have also undergone significant changes in the face of conflicting religious teachings and even societal

law codes. Traditionally, a Hmong man may kidnap a young woman and force himself on her sexually, thereby establishing her as a recognized marriage partner. In the United States, this is considered rape and is punishable by law (some young Hmong American women have pressed charges against men who carried out this custom). Polygyny (marriage with more than one woman at a time) is accepted and even common in traditional Hmong society but is illegal in the United States.

The most important traditional holiday celebrated by Hmong Americans is *noj peb caug*, the New Year Festival. In America, the festival begins sometime around the new moon in December (in Laos, the timing is much more specific) and lasts for a few days. It is the only holiday celebrated by the entire Hmong American community. For Hmong Americans, *noj peb caug* serves as an opportunity to reaffirm their Hmong identity, and so their New Year festivals generally include cultural fairs, dances, and exhibitions designed to teach young Hmong Americans about their ancestral traditions.

Traditional Hmong customs teach that while it is impolite to ask a stranger's name directly, it is polite, and common, to ask someone where he or she lives. It is also considered well mannered to try to keep visitors from leaving, encouraging them to stay and chat for a while longer. Hmong Americans generally hold to these traditional customs and are usually very friendly. They are also quite open to other ethnic groups, welcoming opportunities to teach others about Hmong culture.

Coming from a rural agricultural background, Hmong Americans have had a difficult time adapting to life in the

industrialized United States. Language barriers and lack of appropriate education and job skills prevent many Hmong Americans from finding adequate employment. In 2006 about one out of every three Hmong Americans lived below the poverty level and many depended on public assistance in order to survive. Poverty and unemployment lead to malnutrition, lower immunities, depression, and other stress-related diseases.

Although Hmong Americans are generally very healthy, there was almost an epidemic among Hmong American men in the late 1970s and 1980s of Sudden Unexpected Nocturnal Death Syndrome, in which death occurs suddenly and mysteriously during sleep. Western medical researchers have linked the syndrome to breathing difficulties, but many Hmong Americans believe it is caused by an evil spirit that sits on the victims' chests while they sleep. It is often difficult for Western doctors to work effectively with Hmong American patients because Western and Hmong concepts of disease and healing are so different.

Traditional Hmong healing is based on the shamanistic view of the world that divides the universe into the spirit world and material world. Illness is believed to be caused most often by the loss of one's spirit, when the soul wanders from the body to escape emotional and physical stresses. Hmong shamans perform rituals to call the soul back to the body. There are also Hmong healers who have the *neng*, a healing spirit in their bodies. The *neng* and accompanying healing skills are inherited from another clan member. These healers can not only call back lost souls but also fight off evil spirits that may have brought on an illness.

The Hmong also have a great depth of knowledge about the healing properties of herbs, and most Hmong American households have a small medicinal herb garden. Herbal healers are nearly always women. Massage may be combined with herbal treatments for some ailments, such as stomach ache.

Hmong American families tend to be quite large. According to the 2006 American Community Survey, Hmong American families had an average of 5.36 persons, as compared to 2.61 persons in the average European American family. Hmong Americans are also very young, with a median age of 19 in 2006 (as opposed to 36 for the total U.S. population).

Since Hmong families are very "child-centered," children are treasured. This does not mean they are indulged, however. Hmong parents are quite strict with their children, exercising a great deal of control over their lives. American values stress personal freedom and a greater degree of independence for young people. Therefore, Hmong American children often come into conflict with their more traditional parents over issues of discipline and freedom of choice. Many Hmong American and other Southeast Asian youth feel moved to escape these conflicts by running away from home, creating a growing population of teenage runaways.

Extended families were the traditional basis of Hmong households, but building codes in the United States prevent large numbers of people from living together under the same roof. So Hmong Americans have had to split up into smaller nuclear-family units. The traditional clans are also losing importance, although clan leaders are still well respected.

Most foreign-born Hmong American adults have had little formal schooling. Only about 40% of those over the age of 25 are high school graduates. Young Hmong Americans, however, have shown great aptitude for Western education and have

high rates of secondary and post-secondary school attendance. About half of Hmong Americans between the ages of 18 and 24 were in college in 2006.

Among older, uneducated Hmong Americans, however, prospects are bleak and unemployment is high. Of those who have managed to find employment, most work at blue-collar jobs in manufacturing or sales and service.

One source of income for Hmong Americans is the sale of traditional crafts, particularly *paj ntaub* (or *pa ndau*). Done exclusively by Hmong women, *paj ntaub* is a form of needlework that combines embroidery and appliqué to create intricate, colorful geometric designs. These elaborate designs are done entirely by hand without any measuring tools. A wide market has developed in the United States and other Western countries for *paj ntaub* items.

Hmong Americans are very concerned with the problems of adapting to life in American society. Hmong organizations have sprung up in Hmong American communities to address these problems and help local Hmong Americans develop the skills they need to succeed. The Hmong National Development is the largest such organization and acts as an advocate to obtain funding for the local organizations. Although Hmong Americans have much to overcome, they are eager to make life work in their new home and to become integral members of American society while remaining true to their Hmong identity.

Traditional Hmong culture is extremely patriarchal, giving women few rights and requiring them to be entirely submissive to the men in their lives. The more egalitarian society of the United States causes a great deal of confusion and conflict among first-generation Hmong immigrants as they experience the culture shock of having their entire family structure disrupted. Men are frustrated in their attempts to rule the household by beating their wives and children, an acceptable practice in traditional Hmong society but liable to arrest and prosecution in America. Women find new opportunities and rights available that call into question traditional patriarchal values. Second-generation Hmong Americans also find themselves in conflict with their first-generation parents and grandparents as they try to navigate the divide between Hmong and American culture. The tension of these conflicts can lead to domestic violence and even suicide or homicide.

In response to the frightening rise of abuse cases and suicide/homicide rates among Hmong Americans in Minnesota in the 1990s, the Hmong Women's Circle (HWC) was created to help Hmong American girls explore their traditional culture and make healthy choices about which beliefs and practices to honor and which to change. The curriculum allows teenage girls to discuss their experiences in a safe context and begin to address the inequalities and expectations that foster abuse. The program was so successful that in 2003 the Hmong Men's Circle (HMC) was established to help teenage Hmong American boys to deal with similar pressures. As of 2007 some 250 youth had been served by HWC and HMC groups across the United States.

## HONDURANS

**LOCATION:** Honduras

**POPULATION:** 7,639,327

**LANGUAGE:** Spanish; English; local dialects

**RELIGION:** Roman Catholicism (95%); Protestantism

(Methodist, Church of God, Seventh-Day Adventist, and Assembly of God churches); native religions combined with Christianity

### 1 INTRODUCTION

A series of archeological excavations have demonstrated that the country now known as Honduras was once an important zone of the Mayan empire during the pre-Columbian period. The most prominent treasure among the great number of vestiges and ruins discovered in the region is Copán, a major Mayan city that flourished during the Mayan classical period—5th through 9th centuries—in that area. The city of Copán is well known for producing astonishing sculptures, most of which were used to decorate the central plaza of the city. These works of art have been considered some of the finest pieces of art in ancient Mesoamerica.

In 1502, in his fourth and last voyage to America, Christopher Columbus landed in Honduras and, two years later, the Spanish conquest began. Trujillo and Gracias were the most important cities during the three centuries of Spanish rule in Honduras. Throughout this historical stage, the Spanish crown administered the zone with an iron fist, depleting its natural resources and neglecting its aborigine population. In addition, multiple diseases, brought by the Conquistadores and slave laborers from other countries, made the native population under Spanish control drop to an estimated 8,000 in 1541.

Once Honduras ran out of gold and silver, the region became neglected by the Spanish. Consequently, English pirates harassed the area, and the Caribbean coast was effectively out of Spain's control. Spain granted Honduras independence in 1821. However, in 1822 the United Central American Provinces decided to join the newly declared Mexican Empire of Iturbide, which would collapse after less than a year. To fill the vacuum that followed the fall of the Mexican Empire, a new political organization was born: the Federal Republic of Central America. However, after 15 years of existence the Federation came to its end and, following its disintegration, Honduras became an independent nation again in 1838.

After Honduras achieved its freedom, the country fell under the grip of dictators and experienced some 300 internal rebellions, civil wars, and changes of government. The country's constitution was rewritten 17 times between 1821 and 1982.

The 20th century was marked by political and economic instability. Probably the most unusual event in Honduras was the so-called Soccer War. The conflict, also known as the 100 Hours War, was a five-day war between El Salvador and Honduras in 1969. Even though the tension between both countries was rooted in political differences, mostly because of the great flow of immigrant from El Salvador to Honduras, it was a soccer match between both nations that triggered an armed conflict. During the 1980s, Honduras served as a haven for anti-Sandinista contras fighting the Marxist Nicaraguan gov-

ernment and as an ally to Salvadoran government forces fighting leftist guerrillas.

Economically, Hondurans have relied heavily on exports, particularly bananas and coffee, making them vulnerable to shifts in commodity prices. In addition, Honduran dependence on natural resources has made their economy highly vulnerable to natural disasters, such as Hurricane Mitch in 1998, which killed about 5,600 people and caused approximately \$2 billion dollars in economic damages.

In 2008, Honduras was considered the second poorest country in Central America, with sharp income inequalities and unemployment rates close to 30%. Because of this uneven distribution of wealth and lack of opportunities, many Hondurans have migrated to other countries seeking better quality of life. Consequently, Honduras is the fastest growing remittance destination in the region, with inflows representing over a quarter of GDP.

## 2 LOCATION AND HOMELAND

Honduras has a long Caribbean Sea coastline to the north and a small Pacific Ocean coastline on the south, along the Gulf of Fonseca. Guatemala is its neighbor to the west, El Salvador to the south and west, and Nicaragua to the south and east. The Bay Islands lie in the Caribbean. Excluding the coastal areas, Honduras is a mountainous country: more than three-fourths of the land area is occupied by cordilleras with small, scattered, but numerous valleys where forests give way to agriculture and livestock raising. The nation's largest port and its largest industrial city lie in the Caribbean lowlands. Rainfall is plentiful in Honduras, and there are many rivers.

The climate is generally hot with high humidity in its coasts. The temperatures vary according to the altitude of each particular zone. For instance, in the lowlands the average temperatures are about 25°C (82°F) while in the mountains, average temperatures are close to 14°C (58°F).

According to archeological excavations, Honduras has been inhabited since the 1st century AD. Copán city confirms that the region was one of Mayan civilization's main centers. Therefore, it is possible to assess that most of Amerindians living in Honduras are Lenca—indigenous groups related to the Mayan and circum-Caribbean populations.

With just over 7 million people, most of them in the highlands, Honduras is not a crowded country. About 90% of all Hondurans are mestizos, of mixed European and Amerindian ancestry. Of the remainder, about 7% is Indian, 2% is black, and 1% of the population is white.

## 3 LANGUAGE

Spanish is the national and official language, but English is often understood along the Caribbean coast, and Bay Islanders speak English as their native tongue. Black Caribs (Garifuna), descendants of freed black slaves and Carib Indians, speak a language related to Carib. Miskito, who are of mixed Indian, African, and European descent and live along the Caribbean coast, speak an Indian tongue with contributions from West African and European languages.

## 4 FOLKLORE

Among the folkloric beliefs found throughout Central America is the identification of a human being with a spirit (*nagual*), usually an animal, so closely connected that both are believed

to share the same soul. If one dies, so will the other. Similarly, a witch or other evildoer is considered able to assume an animal form. These beliefs are of Indian origin and, since Honduras does not have a large Indian population, are not as strongly held as in Guatemala, for example.

Folk stories tell of a variety of spirits, many of whom live in wells or caves. El Duende is an imp with a big sombrero and a taste for pretty young girls, whom he courts by wearing red trousers and blue jackets and by tossing pebbles at them. *Curanderos* are faith healers who can cure nervous ailments and can dispel the *vista fuerte*, or evil eye, which is often held responsible for children's illnesses. The god of the Lenca, the largest Indian group in Honduras, was Icelaca, who appears as a many-eyed, two-faced stone idol. *La compostura*, a Lenca rite dedicated to the land, consists of offerings to an altar in the shape of a wooden frame on which pine boughs are placed in the form of a cross. Plants on display symbolize the spirits to whom the rite is dedicated.

Lempira was a 16th-century Indian chieftain who fought the Spanish; he is much admired in national mythology, and the national currency is named for him. A hymn to Lempira has, as its chorus, the words: "Hondurans! With epic lyre/and brightly clad/we intone a hymn to Lempira/to the patriot of heroic valor."

## 5 RELIGION

Nearly 95% of the population is Roman Catholic. Protestants account for about 3% and are growing rapidly because of ac-

tive proselytizing by evangelical groups, such as the Methodists, Church of God, Seventh-Day Adventists, and Assemblies of God.

Although nominally Catholic, many Hondurans have incorporated pre-conquest indigenous traditions into their religious practices. The *rogación* is a special Mass, or procession, asking for rain. Each community has its own patron saint. The *guanacasco* is a celebration of the patron saint visited by saints from neighboring communities. Copal (a tree resin) is burned for incense, an ancient Mayan custom, and there are offerings to the sun. Pilgrimages to saints' shrines are common. Most houses will have an image or picture of a saint displayed on a wall.

Black Caribs, although chiefly Methodist, retain many African elements in their religious practices. *Digui* is a rite for the dead. Although most Miskito now belong to the Moravian Church, they formerly worshipped Wan-Aisa as their Supreme God. Yu Lapta was the Sun God, Kati the Moon Goddess, and Alwani was the Thunder God.

## 6 MAJOR HOLIDAYS

As in other Latin American countries, Christmas (December 25) and Holy Week (late March or early April), culminating in Easter Sunday, are the chief religious holidays. A Christmas tradition is the *posada*, a celebration held nightly beginning on December 16.

Just over the border in Guatemala, Esquipulas is the home of a dark-skinned wooden sculpture of Jesus that draws pilgrims from Honduras and other Central American countries to a celebration that begins on January 15 of each year. The feast day of the Virgin of Suyapa, Honduras' patron saint, is on February 2. A tiny wooden image to which miraculous powers have been attributed since the 18th century is on display at the basilica in Suyapa, a village near Tegucigalpa, the capital. Another manifestation of the Virgin is celebrated on 8 December (the day of the commemoration of the dogma of the Immaculate Conception) at Juticalpa, with a procession bearing her image as the climax. Between December 25 and January 6, Garifuna men celebrate Yancunú with dancing, singing, and the wearing of masks to bring prosperity in the new year.

Of the secular holidays, the most important are Independence Day on September 15 and the birthday of Francisco Morazán on October 3. Morazán was the last president of the United Provinces of Central America, a federation that only lasted from 1823 to 1842.

## 7 RITES OF PASSAGE

Baptism of infants is standard and is usually followed by a celebration. Among the upper- and middle-classes, dating is restricted. A prospective suitor is carefully checked out, and engagements of several years are common. Perhaps half of all Honduran couples, however, live together without a marriage license or a religious ceremony. A novena is commonly held after death, usually at home. A second novena may be held six months later.

## 8 INTERPERSONAL RELATIONS

Honduran customs are more conservative and traditional than those of the United States. A great emphasis is normally placed on courtesy and proper dress among the upper- and middle-classes. On the other hand, friends are more demonstrative

than in the United States. Men often embrace on meeting and departing. Women often embrace and kiss one or both cheeks, or at least touch cheeks.

Since most people are named for a saint, they celebrate their saint's day as well as (or in place of) their own birthday. Friends and relatives are invited to the home.

There has been less class conflict in Honduras than in the other Hispanic Central American countries. This is because the country has a relatively large number of peasants tilling their own plots rather than working as laborers for large estates and because the ruling elite has been willing to form alliances with others. However, social tensions have increased as landowners have accumulated more land in recent decades for cattle grazing.

## 9 LIVING CONDITIONS

At least two-thirds of the Honduran people live below the poverty line. About one-third has no access to healthcare, and about one-fifth of all young children are malnourished. At least 0.5 million more housing units are needed in Honduras. The typical dwelling is a two-room adobe bungalow with a tiled roof. Poor peasants, however, live in one-room huts made of bamboo, sugarcane, and corn stalks, with dirt floors, and most of them till small, marginal plots or work for wages on larger farms. Migrants from the country to the city generally live in crowded slums.

The upper and middle classes generally have domestic servants and live in houses with thick adobe, brick, or concrete walls. Many have grillwork over the windows and as part of the structure of balconies on the upper floors. Homes usually have no front yard but rather an enclosed patio.

## 10 FAMILY LIFE

Family solidarity is of basic importance and depends on mutual assistance from all its members. Families are usually large, since Honduran women give birth to an average of about five children each, and grandparents, plus aunts and uncles and their children, may also live under the same roof. Whether they live together or apart, the various branches of a family share and cooperate, finding work for unemployed members, extending loans, or taking in needy kin. As in other Latin American countries, *compadres* (godparents) also provide support to hard-pressed family members.

## 11 CLOTHING

Most people dress casually, with the men wearing loose trousers and shirts and the women wearing one-piece calico or cotton dresses or loose blouses and skirts. Open sandals are a common form of footwear. The poor generally are clad in secondhand rather than store-bought clothes. Colonial costumes are worn only on special occasions like fiestas. On these occasions, the women may wear silk dresses or cotton dresses embroidered with silk, using old Mayan patterns and designs.

The Tolupanes Indians are the only group in Honduras whose dress is distinctive. The *balandrán* is a one-piece, sleeveless male article of clothing. Women wear brightly colored dresses and silver necklaces with brightly painted beads made of dried seeds and thorns.

## 12 FOOD

Tortillas, made of cornmeal rolled into thin pancakes, are the staple of the diet, supplemented by beans, the chief source of protein. The poor generally eat tortillas and beans at every meal, generally supplemented with starches such as cassava and plantains. Rice, meat, eggs, and fish are served less often. Although pigs and chickens are raised widely in the countryside, their meat is reserved for special occasions. Green vegetables are not common in the average diet either.

*Mondongo*, a richly flavored tripe soup, is a popular Honduran dish. Other specialties include carrots stuffed with cheese, creamed beets and plantains, and corn dumplings in honey. The Caribbean diet is more exotic. The Black Caribs eat cassava in the form of big tortillas, and a mash made of ground plantains and bananas. *Baili* is a flour tortilla dipped in coconut soup with crab. *Tapado* is a soup made from coconut milk to which clams, crab, shrimp, fish heads, and plantains are added. The *mondongo hondureño* recipe includes cleaned beef tripe (innards), pig's feet, a number of vegetables, bread-crumbs, and a tomato sauce with spices and corn oil added.

*Chicha* is a homemade drink made of fermented corn. Also, Black Caribs make a drink out of fermented corn and sugarcane. Regional dishes are also common. In the south the typical dish is the *sopa de hombre* (man soup) and in the west *queso con chile* (cheese with chili peppers). Throughout the country Hondurans also eat *yucca con chicharrón*.

## 13 EDUCATION

At least 20% of Hondurans cannot read or write. Education is free and compulsory between the ages of 7 and 14, and more than 80% of all children of primary-school age are in school. However, fewer than half who are enrolled in public schools complete the primary level. The middle and upper classes generally send their children to private schools, often church-run. The chief institution of higher learning, the National Autonomous University of Honduras, is located in Tegucigalpa, the capital, and has branches in San Pedro Sula and La Ceiba. There are also three private universities.

## 14 CULTURAL HERITAGE

José Cecilio del Valle wrote the declaration of independence for the Central American federation, which failed to survive. Father José Trinidad Reyes founded what became the National University in 1847. Juan Ramón Molina was an important 19th-century poet. Rafael Heliodoro Valle, a poet and historian, was the most respected literary figure of the 20th century. Other 20th-century Honduran writers include the novelist Argentina Díaz Lozanto and the poet Clementina Suarez.

José Miguel Gómez was an 18th-century painter. Among 20th-century painters are Arturo López Rodezno and Carlos Garay. The primitive landscape paintings of José Antonio Velásquez are much admired.

Drums and the flute were the musical instruments of Amerindians before the Spanish conquest. The main instrument now is the marimba, which is similar to the xylophone and is backed by other band instruments.

## 15 WORK

More than half the labor force is not formally employed; it includes subsistence farmers, small shopkeepers, and self-

*Hondurans' diet is supplemented by starches like cassava and plantains. (Cory Langley)*

employed craftspeople. Women often seek jobs as domestic servants or, in urban areas, act as street vendors. Men supplement their income from tilling their small plots by working on plantations for part of the year. The small middle class consists of professionals, merchants, farmers, business employees, and civil servants. The minimum wage was as low as \$1.60 per day for farm workers in the mid-1990s.

## 16 SPORTS

As elsewhere in Central America, *fútbol* (soccer) is the most popular sport. The so-called Soccer War of 1969 followed matches between the national teams of Honduras and El Salvador; more than 1,000 Hondurans were killed in the four-day struggle. Honduras also has bullfights and, at fiestas, such traditional forms of sport as greased-pole climbing and the *carrera de cintas*, a horseback-riding race in which the rider must run a stick through small rings at full gallop, are common.

## 17 ENTERTAINMENT AND RECREATION

There are more than 20 folk dances, based on combinations of Spanish, Amerindian, and African influences. The Garifuna holds two fertility dances—*sanvey* and *vanaroga*—with different songs by men and women. The Miskito generally form a circle when making music and sing and dance in turn to the accompaniment of drums and other instruments. Social dances are also held. Salsa, merengue, and Mexican *rancheras* are also popular. Fireworks are part of every celebration. Televi-

sion is still generally restricted to the cities, but radio reaches every part of the country.

### **18 FOLK ART, CRAFTS, AND HOBBIES**

Artisans carve objects ranging from wall hangings to furniture from mahogany and other tropical hardwoods. Baskets, mats, and hammocks are woven from plant fibers such as henequen. Ceramics include porcelain objects in the form of animals, especially roosters. The Lenca are noted for their pottery. Campa and Ojajana also produce distinctive pottery. Other handicrafts include embroidery and leather goods, such as belts and handbags.

### **19 SOCIAL PROBLEMS**

Nearly two-thirds of the Honduran people live in poverty. Tuberculosis and gastroenteritis are serious health problems, as are influenza, malaria, typhoid, and pneumonia. Most of the people do not have access to running water and sanitation facilities. Unemployment and underemployment are high, and the country is dependent on income from only two commodities, bananas and coffee. The crime rate surged in the 1990s and there has been widespread domestic violence against women.

### **20 GENDER ISSUES**

Honduran women hold only 8.6% of the seats in parliament and earn one-third of the income of Honduran males. Honduran women have one of the highest maternal mortality rates in the region. It is estimated that 8 out every 10 women suffer from domestic abuse. Domestic violence remains a major public health problem; with an increase from 3,000 cases in 2000 to over 5,000 in 2001 in the capital alone.

With one of Latin America's highest HIV prevalence levels, Honduran women accounted for 61% of new HIV cases in 2005. In addition, Honduras has the highest rate of teen pregnancy in Central America: 48% of women between 15 and 24 years old have been pregnant at least once and 59% of pregnancies occurred before the age of 17.

On a positive note, Honduran girls are gaining ground and are equally as likely to be literate and enrolled in primary school as boys. Between 1998 and 2001 the female illiteracy rate fell from 34.7% to 19.8%. However, women are not enrolling in higher education as much as their male counterparts do.

In addition to better education rates, the period 1995–2004 saw the publication of the Domestic Violence Act (1997), the act establishing the National Institute for Women (1998), and the Equal Opportunities for Women Act (2000). Even though the latter provides for a minimum 30% quota for women with respect to posts filled by popular vote, the number of women as titular deputies has remained extremely low. Also, women are poorly represented in public posts filled by appointment: in the government's cabinet there were only three women ministers and three women deputy ministers in 2008.

# HOP I

**LOCATION:** United States (Arizona)

**POPULATION:** estimated 14,000 enrolled tribal members

**LANGUAGE:** English; Hopi

**RELIGION:** Traditional Hopi

**RELATED ARTICLES:** Vol. 2: Native North Americans

## <sup>1</sup> INTRODUCTION

The Hopi are a Pueblo people, most likely descending from the Hisatsinom (Hopi for “people of long ago”) who lived among the cliffs of what is now the Southwest desert as much as 2,000 years ago. A prolonged drought from AD 1275–1300 apparently forced the Hisatsinom to relocate. They split into several different bands that settled in different areas of the region and have since developed into the various Pueblo peoples. The Hopi chose the westernmost area, in northeastern Arizona, and built their homes on the tops of almost inaccessible mesas. This inaccessibility kept them largely protected from the invasions by Spanish and then European American conquerors. Therefore, the Hopi have been able to maintain their traditional ways of life and beliefs almost uninterrupted up through the present day.

This is not to say that the Hopi have suffered no effects from the European invasions of their lands. Between 1519 and 1650, ten previously flourishing Hopi villages were wiped out by disease and bloodshed brought to their lands by the Spanish from Mexico. Conflicts between the Spanish and Pueblo peoples continued throughout the 17th century. The Spanish conquered all the Pueblos by the mid-17th century and built Catholic churches in every village. They forced the Pueblo people to convert to Christianity, using extreme torture as a persuasive tactic. At the Hopi village of Oraibi in 1655, Spanish Friar Salvador de Guerra caught a Hopi in what he called “an act of idolatry” (in other words, following his own Hopi Way). De Guerra whipped the Hopi in front of the whole village until the Hopi was covered in blood. Then de Guerra poured burning turpentine over him. By these methods, Spanish made nominal Christians of the Hopis and other Pueblo peoples and drove Native religious practices underground.

On 10 August 1680, the Pueblos revolted and drove out the Spanish. This was the first time the Pueblo peoples had acted together. Once the Spanish were gone, the Pueblos returned to their independent ways. Therefore, when the Spanish returned in 1692, they met no unified resistance and reconquered the Pueblos fairly easily. The Hopi lived in such a remote area that they remained mostly untouched by this second Spanish conquest. Other Pueblo peoples fled to the Hopi lands and took refuge there. The Hopi moved all their villages to the very tops of the mesas after the 1680 revolt and so were virtually impregnable. In 1700 the Hopi made it very clear to the Spanish that they were not interested in Christianity when they destroyed the mission church in the village of Awatovi (killing the priests and other Spanish in residence, throwing their bodies over the edge of the mesa). No other Christian missions were established in Hopi territory until the 1890s.

In modern times the Hopi have had to fight European American industry and expansion. On 15 May 1971, the Hopi filed suit to stop the Peabody Coal Company from strip min-

ing for coal on 100 square miles of the Hopi reservation. The Hopi consider Black Mesa to be sacred land, and strip mining would be a sacrilegious invasion of that holy place. Ten years later, in 1981, the Hopi sued to stop construction of a ski resort in the San Francisco mountains, another sacred place. The Hopi lost this suit.

The Hopi have only acted as a “tribe” since 1936, when the European American writer Oliver La Farge wrote the Hopi constitution. Before that time, the Hopi were simply people who followed the Hopi Way. The name “Hopi” is a shortened form of *Hopisinom*, which translates as “people of humility, respectful of their environment and earth stewards.” Today, Hopi translate their name as “one who follows the path,” or “one who walks in the right direction.” As the late Hopi elder Percy Lomaquahu of Hotevilla explained it:

Hopi means “good in every respect.” Humbleness means peace, honesty—all mean Hopi. True, honest, perfect words—that’s what we call Hopi words. In all the languages, not just in Hopi. We strive to be Hopi. We call ourselves Hopi because maybe one or two of us will become Hopi. Each person must look into their heart and make changes so that you may become Hopi when you reach your destination.

(In Stephen Trimble, *The People... Santa Fe: School of American Research*, 1993, p. 58.)

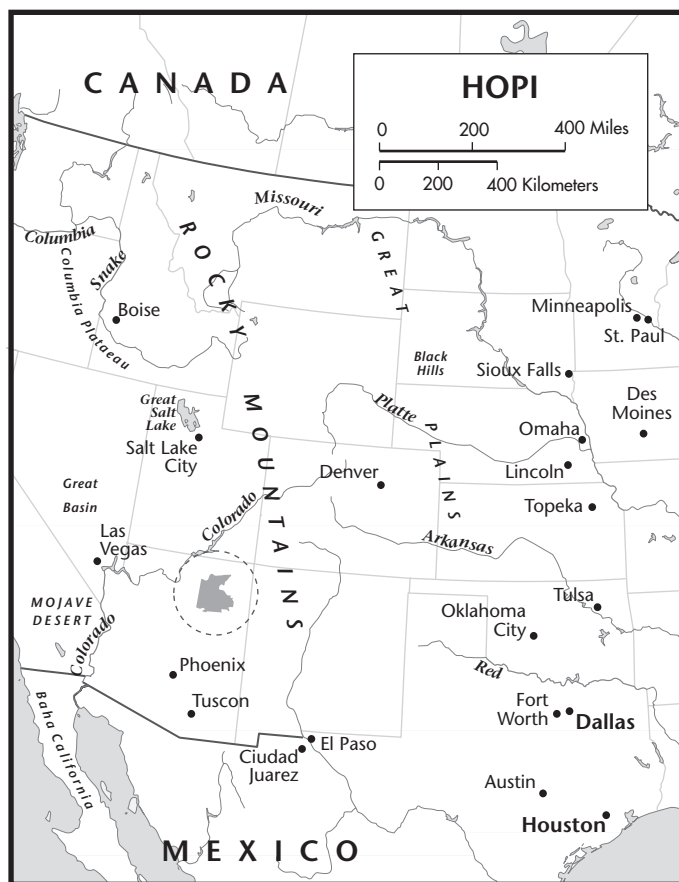

## <sup>2</sup> LOCATION AND HOMELAND

The Hopi currently live in 12 villages located along the southern rim of Black Mesa in northeastern Arizona. Theirs is the driest of any of the Pueblo lands. Over the centuries, the Hopi have developed a reputation as the most skilled dry-farmers in the world. Ecologists have called them “environmental wizards.” The village of Old Oraibi has been inhabited since at least AD 1150, rivaling Acoma as the longest continuously inhabited village in the United States. Old Oraibi was for centuries the “capital” of Hopiland. Today it is a village of just over 100 people, but still highly respected by the Hopis of the third Mesa.

Black Mesa is divided by washes into three separate mesas, named in order of approach from the east: First Mesa, Second Mesa, and Third Mesa. Hopiland (or the Hopi reservation) is entirely surrounded by the much larger Navajo reservation. Hopiland encompasses 1.6 million acres over 3,862 square miles. While there are over 10,000 members of the Hopi tribe in the United States, only 7,061 of them live on the reservation (according to the 1990 U.S. Census). Modern Hopi communities are located at the bases of the three mesas. The ancient villages remain on the mesa summits. The area receives about ten inches of rain per year.

## <sup>3</sup> LANGUAGE

The Hopi language is a member of the Uto-Aztecan family of Native North American languages. It is related to the languages of the Ute and Paiute peoples. It is not related to any of the other Pueblo languages. Each of the three mesas in Hopiland has its own dialect of the Hopi language. The first Hopi dictionary is currently being compiled in the Third Mesa dialect. Because the Hopi have lived in an inaccessible region, protected from most of the invasions by Spanish and European American peoples, the language has remained alive into the present

day. It is also required that a young Hopi speak the Hopi language in order to be initiated into adulthood.

The dictionary currently in process is the first attempt to create a standard written system for the Hopi language. Hopi has never before been a written language, so the oral tradition has grown strong and rich. It has become so poetic and dramatic that it is difficult to write down. Any written material in Hopi will necessarily have lost something in the translation. The dictionary compilers hope that by making a standard written system available, the Hopi people will begin to develop a literature that is their own. It will take some time, however, to adapt the language to written forms.

Ritual forms of the Hopi language are used by an exclusive group of priests and priestesses who keep this ritual language secret. This form of the Hopi language remains unknown to those outside the group.

#### 4 FOLKLORE

All Hopi stories begin with a formal opening: *Aliksa'i*. There is no exact English translation, but it means something like "Attention!" or "Let's take up the story where we left it." Because time for the Hopi is cyclical rather than linear, the Hopi care more about *where* a story happened than *when*.

The Hopi have an emergence-type creation story. The First Way of Life, or First World (Tokpela, meaning "Endless Space") was an infinite void until the Creator created finite forms, including human beings. For a time, all lived peacefully there, until some humans lost sight of the true way and fell

into decadence. The Creator allowed those humans who still had sight of the truth (and those who were willing to follow them) to emerge into the Second Way of Life, or Second World (Tokpa, "Dark Midnight") before he destroyed the First Way of Life with fire. The same course of events took place in the Second Way of Life, which the Creator then destroyed with ice after allowing the people to emerge into the Third Way of Life, or Third World (Kuskurza, an ancient name with no modern translation). When the same corruption began to occur in the Third World, representatives from all forms of life held a council and decided the Third World had become out of balance and it was time to migrate to the Fourth Way of Life, (Tivongyapavi, "The Earth Center"). The Creator allowed the peoples to choose a food before destroying the Third World with water. The Hopi chose a short blue ear of corn. Blue corn requires more work to grow, so the Hopi chose a life of hardship and humility. But blue corn is also heartier, so they also chose a life of strength and health. Blue corn symbolism runs throughout Hopi life. Blue corn is sometimes equated with the Hopi Way: planting, tending, and harvesting, it follows the path of the ancestors and fulfills the contract made with Ma'asau, keeper of the Fourth World who allowed the people to emerge into this Fourth World if they agreed to act as its caretakers. It allows the Hopi to reexperience the creation of the world. The Hopi must perform certain rituals and follow religious rules set out for them by Ma'asau if they are to keep this Fourth World in balance. Since the time of contact with Europeans, the Hopi feel this world has lost its balance. They call it *koyanisquatsi*, "life out of balance." Because of this, they must perform their rituals and follow the Hopi Way even more diligently to regain and maintain this world's balance.

#### 5 RELIGION

The Hopi believe themselves to be the caretakers of the earth, of this Fourth Way of Life (Tivongyapavi, "The Earth Center"). They perform certain rituals and follow a set of religious rules in order to keep this world in balance. These rules and rituals are called "the Hopi Way." Hopi ceremonies focus on creating community harmony, bringing rain for the crops, and honoring *katsinas* and Hopi ancestors. *Katsinas* (often called *kachinas* by European Americans) are spirits who live in the San Francisco mountains near Hopiland. The Hopi do not worship *katsinas*; rather, the *katsinas* act as intermediaries between the forces of nature and human beings. The *katsinas* visit Hopi villages for six months every year, arriving in December for the solstice ceremony (Powamuy) and leaving after the Home Dance (Niman) in July to return to the San Francisco peaks. Throughout the months between December and July, the *katsinas* dance frequently, bestowing gifts on the people. In Hopi villages, *katsinas*, represented by *katsina* societies, dance in the village plaza for all to see. Other Pueblo peoples allow only the initiated to see the *katsinas* dance.

The plaza of each village is the "heart-place," the center of the world for those villagers. It is the place where all four directions come together, where all the balanced forces of the world meet: north-south-east-west, the Sun above and Earth below, winter-summer, male buildings and female space, etc. A half-buried rock surrounded by offerings of corn meal and feathers marks the exact center of each village. The sacred place for the Hopi and other Pueblo peoples is the *kiva*, an underground chamber entered and exited by a ladder through a hole in the

roof. Religious rites and other activities are held in the *kiva*. The traditional religious leader of the Hopi is called the *kik-mongwi* and is often a member of the Bear Clan, the first clan to arrive in Hopiland, according to Hopi legend.

All Hopi are initiated into katsina societies at about age 9–11. As adults, Hopi may be initiated into priesthood societies (called *wuutsim*) priestess societies, or Snake societies. Young children are given katsina dolls as teaching tools to learn about the katsinas. Until they are initiated into the katsina society, children are not permitted to learn about esoteric matters.

Another character in the Hopi Way is the sacred clown. Clown dancers break all the social and religious rules, performing acts that the people are forbidden to perform. By showing life as it should not be but often is, clowns allow the Hopi to laugh at themselves and to see how they need to improve their behavior.

During the 1880s, the U.S. government divided up the Native North American reservations between religious groups. The Hopi were assigned to the Mennonites (and Baptists). The Reverend H. R. Voth arrived in 1893 and tried to destroy the Hopi Way and replace it with Mennonite Christianity. The Hopi despised him; modern Hopi still remember Voth and what he attempted to do.

## 6 MAJOR HOLIDAYS

There are no holidays in the Hopi calendar.

## 7 RITES OF PASSAGE

When a child is born, a perfectly formed ear of white corn, representing its spiritual mother, is placed next to the newborn child and left there for 20 days. During this time, the child is also kept in darkness because it still belongs to the spirit world. On the 20th day, the mother passes the ear of corn over the child four times and names her or him. All the aunts who wish to be the child's godmother do the same. Then the mother and her mother (the child's grandmother) take the child outside toward the east before sunrise. When the sun comes up over the horizon and shines on the child, the child becomes fully human, belonging completely to the earthly realm from then on until death. The child is called by all of the names given to it by its aunts for the first few years of its life. Eventually, whichever name seems to stick becomes the child's name.

The corn ritual is repeated at the time of the child's initiation into the katsina society at age 9–11 and again at her or his initiation into Priest, Priestess, Snake, or other societies at adulthood. Boys grow their hair long when they are initiated into adulthood. Boys' initiation rites include a ceremonial hunt using the ancient Hopi "throwing stick," modeled after the sparrow hawk's wing. Sparrow hawks hunt by diving down onto their prey (such as a rabbit) and stunning it by hitting it on the back of the head with their wings. They then kill the prey with their talons.

## 8 INTERPERSONAL RELATIONS

The Hopi Way teaches that all of creation is interdependent with every living being enmeshed in an intricate web of relationships with all other beings. This means that interpersonal relationships must be approached with care and respect to maintain harmony. The Hopi live very closely together in their small, isolated villages and so have learned to deal with

each other delicately. They are known as a simple agricultural people.

## 9 LIVING CONDITIONS

Many Hopi still live in traditional pueblos in either the ancient villages at the tops of the mesas or in the more modern communities at the mesas' bases. The Hopi build their pueblos of stone, rather than adobe as do the rest of the Pueblo peoples. Each pueblo begins as a single room with rooms of other families directly attached. As a family grows and new families are created through marriage and child-bearing, the pueblo grows upward as new rooms are added above. Some pueblos may reach four or five stories high. Traditional pueblos had no door or windows. They were entered and exited by a ladder through a hole in the roof. Modern pueblos have both doors and windows (though not all windows are covered with glass or screens). Many modern pueblos have modern conveniences, including running water and electricity. Some Hopi today live in housing provided by the federal government. About 20% of the housing in Hopiland was built before 1940. More than half was built before 1970. At least 75% of Hopi homes have running water from a public water system. About 8% have wells, and the other 17% haul their water from other sources. A study conducted in 2000 showed that about 30% of Hopi households did not have electrical service.

The Hopi are a very adaptable people, managing to maintain their traditional ways while adopting worthwhile elements from neighboring cultures. In Hopiland, traditional healing arts are used in conjunction with modern Western medicine. Those diseases that cannot be cured with traditional medicine are treated with Western medicine and vice versa.

## 10 FAMILY LIFE

Clans are vitally important to the Hopi. Clan membership is inherited through the mother. Women own the houses, food, seed for next year's planting, springs and cisterns, and the small gardens near the house (which they tend). Men do the herding, hunting, and larger-scale farming away from the house. Men also gather and haul fuel, do the spinning and weaving, and make moccasins. Women tend to exercise their responsibility at home rather than in public life. Recently, however, more Hopi women are claiming authority outside the home, serving on tribal councils, etc.

In general, Hopi do not discipline their children physically. Instead, they use lectures and teasing to teach children the Hopi Way.

## 11 CLOTHING

Hopi today wear Western-style clothing except for ceremonial purposes. Traditionally, unmarried Hopi girls wore their hair in a style unique to the Hopi, protruding from both sides of the head in the shape of a squash blossom.

## 12 FOOD

Corn is the center of Hopi life. They care for it as they do their children—diligently and tenderly. Many of their religious ceremonies focus on bringing rain so that the corn will grow. In the dry desert where the Hopi live, planting corn, melons, squash, beans, and other crops shows faith in life.

The Hopi adopted wheat, melons, apples, peaches, pears, tomatoes, and chiles from the Spanish and Mexicans. They gathered piñon nuts and acorns, wild roots, grasses, and seeds to supplement their diet, especially when the rains did not come and the planted crops failed. They also kept flocks of tame turkeys for meat. All of these foods still figure largely in the Hopi diet.

On most ceremonial occasions and at other special events, the Hopi serve *piki* bread, paper-thin bread made from blue corn meal. The thin batter is spread on a hot polished stone and then peeled off when it is cooked. Several layers of cooked bread are rolled together while still warm. These layered rolls become crisp when cool.

### 13 EDUCATION

The Hopi are very concerned with education. They realize that Western education is necessary for survival in today's world, while a traditional education in the Hopi Way is as vital for the world's survival as ever. Therefore, they want their children to have both Hopi and Western educations. From 1887 to 1911, Hopi children were forcibly taken to boarding schools by the U.S. government to be trained in European American ways. Though Hopi students are no longer forced to attend boarding schools, many still do because of a lack of adequate schools at home. Most Hopi children today attend local public schools, which have a majority of Native North Americans enrolled. These schools receive much less funding than schools with a majority of European American students. For example, from 1976 to 1979, the Cibola County school board spent \$38 per student at the Laguna-Acoma High School (which has a majority of Native North American students) and \$802 per student at Grants High School (with a European American student majority). Justifications for this difference put forth by European Americans, such as the argument that Native North Americans do not pay taxes on tribal lands, simply do not hold up to examination (Native North Americans pay heavy taxes on other things, such as mining revenues, etc.).

In 1986, after years of campaigning and preparation, Hopi High School opened on the Hopi reservation. It is a federally funded Bureau of Indian Affairs (BIA) school, and its school board is made up entirely of local Hopi. The school's aims are to give children the opportunity to be more involved in cultural activities at home and to give parents the opportunity to guide their children in day-to-day matters. Students are allowed to be absent on Friday, the day of preparation for ceremonial dances, whenever their village is holding a dance that weekend. The school board hopes eventually to establish a regular four-day school week, so that all students (and faculty) will have Fridays off as a matter of course.

Hopi students have a difficult time in Western educational settings because the Hopi Way is based on cooperation, not competition. Western education values competition, and most grading systems are based on it. So Hopi students are not prepared to be competitive in class, and many fail because of it. In 1990, for those Hopi over the age of 25, 37% had no high school diploma (17% had less than a ninth-grade education). Only about 3% had finished college to receive a Bachelor of Arts, and less than 2% had graduate degrees.

### 14 CULTURAL HERITAGE

According to the Hopi Way, everything in life is approached as an art. Cooking, farming, raising children, singing, dancing, praying, weaving, making pottery and jewelry—all are forms of art. Traditional Hopi crafts are pottery, weaving, basketry, and carving katsina dolls. Recently, the Hopi have also taken up painting (although the inside walls of kivas have always been decorated with paintings) and silverwork, particularly silver overlay. In ancient times Hopi men wove, Hopi women who lived on First Mesa made pottery, while women on the Second and Third Mesas made baskets (Second Mesa women made coiled baskets, and Third Mesa women made wicker baskets). These trends are still true today, although exceptions do exist. In the late 19th century a Hopi woman named Nampeyo revived the ancient art of pottery after seeing pottery artifacts dug out of the ground during an archaeological excavation. Hopi pottery is made by coiling the clay, then smoothing the surfaces with a polishing stone. The same designs are used today to decorate the pottery as were used by the ancient Hopi.

The Hopi art form best known, perhaps, to non-Hopi is the carving of katsina dolls. The dolls, called *tihu* in Hopi, are given to Hopi children as teaching tools to learn about the katsinas and the Hopi Way. Some Hopis object to the sale of katsina dolls. However, certain Hopi artists have developed their carving skills into a fine art and can sell their dolls to top galleries for thousands of dollars. Traditional katsina dolls are carved out of cottonwood root. Modern dolls for sale may be made of wood or other materials.

A group of five Hopi painters who were trained in Western art schools formed Artist Hopid in 1973 to try to bridge Western and Hopi cultures through art. Hopi photographer and filmmaker Victor Masayesva, Jr., has made two films about the Hopi: *Itam Hakim, Hopiit* (1984) blends narration in English and Hopi with other sounds and images to tell a mythic version of Hopi history, and *Pott Starr* (1990) mixes animation with real-life action to poke fun at commercial tourism in Hopiland and non-Native fascination with Hopi artifacts.

Since there has never been a standard written Hopi language, there is no literary heritage among the Hopi. The oral tradition is very well developed, however. Hopi oral literature is richly poetic and dramatic, defying translation into English or onto paper.

### 15 WORK

The Hopi are shrewd businesspeople and have always been highly adaptable. There are many skilled laborers among the Hopi who are able to find work in non-Native businesses off the reservation. Yet, the unemployment rate in Hopiland has remained steady at 30% since 1990. The crafting of traditional Hopi arts for sale to tourists, galleries, and collectors provides more income than any other source on the reservation.

### 16 SPORTS

Hopi play many of the same sports enjoyed by all North Americans.

### 17 ENTERTAINMENT AND RECREATION

Each Hopi village sponsors religious dance ceremonies during the months of August through mid-October. These dances celebrate the harvest and give young Hopi a chance to mingle.

These dances are open to men and young unmarried women with no children. Young children of both sexes may also attend. The most popular dance is the Butterfly Dance for which men wear embroidered kilts and velvet shirts with ribbons.

The first Hopi radio station, KUYI 88.1 FM, debuted on 20 December 2000. KUYI programming includes Hopi language, internships for Hopi high school students, national and local news, and traditional and contemporary Native American music.

### 18 FOLK ART, CRAFTS, AND HOBBIES

All Hopi crafts are approached as forms of art. Hopi artisans have developed their skills to the level of fine art and can sell some of their pieces for thousands of dollars to top galleries and collectors.

### 19 SOCIAL PROBLEMS

The Hopi are a peaceful, cooperative people who have learned to live closely together in a respectful way that maintains social harmony. The most serious conflicts among the Hopi themselves arise from the disagreement between Americanized Hopi who campaign for Western “progress” and traditionalists who wish to stay closer to the ancient Hopi Way. The Hopi tribal council was created, at the initiation of the U.S. government’s Bureau of Indian Affairs (BIA), by a handful of Americanized Hopi in 1935. The council represents only a minority of Hopi, and many traditionalists actively oppose it. The village of Shongopavi even sued the council in tribal court over proposed development projects.

Conflicts with non-Hopi center on land-use issues. Since 1974 the Hopi and Navajo have been embroiled in a conflict over what was known as the Joint Use Area—a region they have shared since the late 19th century. In 1974, the U.S. Congress passed a bill that partitioned the area between the Hopi and Navajo, requiring about 100 Hopi and thousands of Navajo to relocate. Many of these people had been living peacefully together on that land for generations. After years of wrangling with each other, the Hopi and Navajo are beginning to realize that it is not they but the Peabody Coal mining company that wants this land partitioned (the coal company wants access to the coal located there). So the Hopi and Navajo are now joining together to solve the question of land use in this area, leaving the federal government and mineral companies out of the negotiations.

The Peabody Coal Company is the subject of another Hopi conflict. When Peabody signed the first land-use lease in 1966 to strip mine for coal on Black Mesa, the Hopi tribal council agreed to this lease without consulting the rest of the Hopi. Nearly all Hopi except those on the council oppose strip mining, particularly in the sacred lands of Black Mesa. The coal mine also uses a great deal of already scarce water to transport mined coal down pipelines. This puts tremendous strain on the desert environment—the water table has dropped 70 feet since the mine went into operation. Water is precious to the Hopi; they will not survive if the water table drops much lower.

### 20 GENDER ISSUES

The Hopi view gender as a balance of oppositions: male and female. Female aspects of the natural environment include earth, life, fertility, summer, south, west, plants, and soft substances. Male aspects of the natural environment include sky, death,

*Rex Pooyouma, a Hopi Indian artist, displays moccasins during the Prescott Indian Market in Prescott, Arizona. Pooyouma’s moccasins are on display in such places as the Peabody Museum in Boston and the Museum of Northern Arizona. (AP Images/The Daily Courier/Jo L. Keener)*

winter, north, east, and hard substances. Male and female forces of nature and the environment must be kept in balance, and these two forces rely on each other for completion. In the Hopi view of gender, females have a single nature: that of a life-giving mother. Males have a dual nature: as fathers who provide and protect as well as potential killers.

There are two stages in the life cycle for females and males in Hopi society. For females, *mano* are unmarried girls. *Mano* become *wuhti*, women, when they marry, which traditionally was between the ages of 16 and 18. A boy, *tiyo*, becomes a man, *taka*, when he is initiated into a ceremonial fraternity around the age of 18.

Infant girls are given *tithu*, kachina dolls, by their maternal uncles. The *tithu* (plural of *tihu*) are representations of the Hopi deities, or *katsinam* that are portrayed by adult males in the ceremonial dances. *Tithu* are not sacred and young girls are allowed to play with them. Infant boys are given miniature bow and arrow sets to prepare them for their roles as providers and protectors.

Hopi social organization is organized by gender. Hopi villages are made up of matrilineal clans. Buildings within the Hopi village are also organized along gender lines. Hopi households are uxori-local; meaning that a group of related women form the core of the group and their husbands come from other clans. Women own homes and are the heads of households. *Kivas*, on the other hand, are male centered. When the *kivas* are not being used for ceremonial activities, they serve as places where adult men can hang out.

# HUNGARIAN AMERICANS

For more information on Hungarian history and culture, see **Vol. 4: Hungarians**.

## OVERVIEW

Hungarians have been immigrating to America since the 16th century, but mass migration did not begin until 1880. A small wave did arrive in 1849–1851, consisting of about 4,000 dissidents who had led a successful revolution in Hungary in 1848 but were then defeated by Austria in 1849. Although the total Hungarian American population was just over 4,000 by the time of the American Civil War, some 800 Hungarian Americans served in the Union Army and a much smaller number in the Confederate Army. Of the 800 Union soldiers, almost 100 became high-ranking officers. A few of the Confederate soldiers also became officers. Hungarian Americans thereby had the highest percentage of their total population serving as soldiers and officers in the Civil War services of any ethnic group in America at that time.

The largest wave of Hungarian immigration to America began in 1880 and lasted until 1914. Between 1880 and 1899, about 430,000 Hungarians entered the United States. The number jumped to 1,260,000 for the years of 1899–1914, with the peak year in 1907 when 185,000 Hungarians immigrated to the United States. Most of the immigrants in this wave were young peasant men who hoped to earn enough money in the United States to return to Hungary and set themselves up in better circumstances there. Perhaps 20% of the immigrants actually did return to Hungary. The rest settled permanently in the United States.

Although the majority of the immigrants had been farmers in Hungary, few took up farming in America. Their goal was to earn money quickly, and the best place to do that was in the industrial centers of the Northeast and Midwest. They took low-paying, menial jobs that no one else wanted. Many of the jobs were dangerous, such as mining or working in iron and steel mills. Serious injuries and deaths were common. Because most of the immigrants were hoping to return to Hungary in the near future, they saved as much of their earnings, and spent as little of them, as possible.

Despite their concentration in selected U.S. cities, Hungarian Americans did not create “Little Hungarys” during this first major wave of immigration. The young men were not interested in settling down, so they did not buy houses or establish neighborhoods. Instead, they moved from job to job, boarding house to boarding house, waiting for the day when they could return to Hungary. They did organize a number of insurance, or “sick-benefit,” societies to help care for each other. Other cultural, social, religious, and political Hungarian American societies sprang up in the late 1800s, but they remained fragmented, local efforts until 1906 when the American Hungarian Federation (AHF) was founded. The AHF has since become the umbrella organization for 72 other Hungarian American organizations throughout the United States. In recent years, due to differences in approach, other organizations have split off from the AHF including the National Federation of Hun-

garian Americans (NFHA—established in 1984), and the Hungarian American Coalition (HAC—established in 1991). All three continue to lobby the U.S. government for both Hungarian American and Hungarian interests, as well as provide needed services, cultural education, and social outlets to Hungarian Americans.

With the beginning of World War I in Europe in 1914, Hungarian immigration to the United States halted. As Hungary and the United States were on opposing sides of the war, Hungarian Americans found themselves in a difficult position, caught between their ties to Hungary and loyalty to their new home. At first, they continued to show allegiance to Hungary, but as this brought them increasing harassment, they began to hide their true feelings. Once the United States officially entered the war in 1917, Hungarian Americans felt it necessary to make a show of allegiance to America. Though most Hungarian Americans still sympathized with Hungary, they began to celebrate American holidays and hold “loyalty parades” in order to escape persecution.

At the end of World War I, Hungary was divided into a number of smaller states, ruled by foreign powers. Hungarian Americans who had intended to return to Hungary once they had saved enough money suddenly found themselves without a homeland. Many had not yet become American citizens because of their intention to return to Hungary, but the Hungary they had known no longer existed. Accordingly, the attitude among Hungarian Americans shifted from one of temporary residency in the United States to one of permanent residency.

The emphasis in their identity changed from “Hungarian” to “American.” They moved out of the miserable boarding houses and bought homes. “Little Hungarys” developed on the outskirts of cities. Immigrants who had clung to their Hungarian ways now began to be assimilated into mainstream American culture in language, dress, and other customs.

Hungarian immigration to the United States resumed at the end of World War I, but the new immigrants were quite different from those who came before. Instead of peasant farmers, most were well-educated professionals who had been displaced by the postwar economic upheaval or who disagreed with the increasing German Nazi influence in Hungary. There were a number of leftists, as well as Jews. These new immigrants were not interested in joining the peasant-based Hungarian American community and had little to do with them. Hungarian Americans became polarized between the old immigrants and the new. There was also a sizeable population of second-generation Hungarian Americans developing who felt confined by their parents’ “Hungarianness” and wanted to break out of the insular Hungarian American community. By the start of World War II, the Hungarian American community had become quite divided within itself.

World War II was a time of great ambivalence for many Hungarian Americans. Most believed that the Axis powers should be defeated, but they also felt attached to Hungary and could not bring themselves to stand fully against their former homeland. They tried to excuse Hungary’s role in the Axis forces by describing Hungary as an “unwilling satellite”

of Germany. However, their loyalty to the United States effort was genuine this time, and Hungarian Americans freely contributed to the Allied war effort.

The Displaced Persons Acts of 1948 and 1950, passed by the U.S. Congress at the end of World War II to assist refugees, allowed a new wave of Hungarians to immigrate to the United States. Three distinct groups of Hungarians have immigrated to America since World War II. The first, referred to as the “45-ers” and “47-ers,” or “DPs (Displaced Persons),” consisted of right wing intellectuals, high-ranking Hungarian military officers, and members of the Hungarian elite escaping the new Communist regime. Then, from 1947 to the mid-1950s, middle-class Hungarians began to flee Stalinist oppression in

Hungary. Lastly, between 1956 and 1960, a wave of young people came to America seeking better educational and economic opportunities.

Hungarian immigration to America continues today, though in relatively small numbers. Illegal immigration to the United States from Hungary has been a reality since the 19th century, increasing each time the United States or Hungary placed restrictions on immigration and emigration. Hungarian immigrants are also sometimes classified as other nationalities, due to the multiethnic nature of the Hungarian population and the political division of Hungary into smaller states. Therefore, it is impossible to know the exact number of Hungarian immigrants to the United States. In the 2000 U.S. Census, a total

of 1,398,702 persons claimed Hungarian ancestry. Of these, 110,277 (about 8%) were foreign-born.

Although Hungarian Americans now live throughout the United States, their population is still concentrated in the Northeast and Midwest. The top five states in terms of numbers of Hungarian Americans are Ohio (193,951; also the top state in terms of percentage of Hungarians per total population, at 1.7%), New York (137,029), California (133,988), Pennsylvania (132,177), and New Jersey (115,607). Other states with sizeable Hungarian American populations include Michigan (98,036), Florida (96,885), Illinois (55,971), Connecticut (40,836), and Indiana (35,715).

The majority of Hungarian Americans are Catholic, but there are also significant numbers of Protestants (particularly Calvinist and Lutheran), Greek Orthodox, and Jews. The first Hungarian worship service in the United States was held in 1852 in New York City. It was an ecumenical service for any and all Hungarian Americans, including Catholics, Protestants, Orthodox, and Jews. This ecumenical spirit is still evident in certain Hungarian American churches, while others, such as the Calvinists, have become fractured even among themselves.

Hungarian Americans have made countless contributions to all areas of American life. Noted Hungarian Americans in the arts include classical composer Béla Bartók; symphony conductors Eugene Ormandy, George Széll, Fritz Reiner, Sir Georg Solti, and Antal Doráti; singer-songwriter Paul Simon; and actors Béla Lugosi, Tony and Jamie Lee Curtis, the Gabor sisters, and Mariska Hargitay. The Hollywood film industry was essentially founded by two Hungarian Americans, Adolph Zukor and William Fox, who felt the New York City film world was too restrictive and moved instead to the southern California desert. Among the many motion picture companies Zukor and Fox started are Paramount Pictures and Twentieth-Century Fox.

The “Manhattan Project,” in which the first atomic bomb was developed, consisted of “three Hungarians and one Italian,” in the words of Laure Fermi, wife of the one Italian, Enrico Fermi. The three Hungarians (or Hungarian Americans) were physicists Leo Szilárd, Eugene Wigner, and Edward Teller. Other prominent Hungarian American scientists are Zoltan Bay, a pioneer in radar astronomy; and Andrew Grove, founder and president of Intel Corporation, a leader in the development and production of computer chips. Well-known Hungarian Americans in politics include Fiorello H. LaGuardia (former mayor of New York City), and New York state governor George Pataki.

Hungarian Americans today remain divided according to generation and time of immigration. Older Hungarian Americans from the first major wave, and some of their children, continue to hold fast to an outdated, idealized image of Hungary. The Hungarian Scouts in Exile organization promotes a similarly idealized Hungarian nationalism among younger generations. Founded in 1945 in Germany, the Hungarian Scouts in Exile first functioned in refugee camps in Central Europe to maintain a sense of Hungarian identity and pride among young refugees. Around 1950, as Hungarian refugees immigrated to the United States, the organization established troops here. There are currently about 4,500 Hungarian Scouts in 70 troops located in about a dozen countries on five continents. The largest of the five worldwide “districts” is District 3:

Venezuela and the United States, with most of the troops located in the United States.

Hungarian Americans who immigrated between World Wars I and II, and those who immigrated immediately following World War II, were radicals and professionals who were forced to flee Hungary because of political and economic upheavals, the increasing influence of Nazi Germany, and the eventual Communist takeover. They therefore have quite a different picture of Hungary than do the older, first-wave immigrants. More recent immigrants have lived in Communist-dominated Hungary and so have a vision of their former homeland that differs from both first- and second-wave Hungarian Americans. The Hungarian American community is therefore quite divided in regards to their view of and relation to Hungary. This division creates a certain amount of tension in the community and also prevents Hungarian Americans from becoming a unified force in U.S. politics.

Like other Eastern European immigrants, Hungarian women in the early migration periods maintained the traditional patriarchal values of subordination to their husbands and fathers and focused their attentions on the home. Many women contributed to the family income but always in ways that allowed them to stay at home, such as making crafts for their husbands or fathers to sell (Hungarian embroidery is a highly regarded art form), taking in boarders, etc. During the Communist era in Hungary, women were granted more freedoms, so later immigrants adapted easily to liberal American ways. This generational divide has caused discord between earlier and later immigrant groups in the Hungarian American community, as well as between first-generation immigrants and their children and grandchildren who grow up steeped in American ways.

# INUIT

**ALTERNATE NAMES:** Eskimo

**LOCATION:** United States (Alaska); Canada; Denmark (Greenland); Aleutian Islands; Russia (Siberia)

**POPULATION:** approximately 167,000 worldwide

**LANGUAGE:** Inuit

**RELIGION:** Traditional animism; Christianity

**RELATED ARTICLES:** Vol. 2: Native North Americans

## 1 INTRODUCTION

The Inuit, or Eskimo, are an aboriginal people who make their home in the Arctic and sub-Arctic regions of Siberia and North America.

The word “Eskimo” is not an Eskimo word. It was bestowed upon these hardy, resourceful hunters by their neighbors, the Algonquin Indians of eastern Canada, and it means “eaters of raw meat.” Early European explorers of the area began using the name, and it is now in general use. Recently, it has begun to be replaced by the Eskimo’s own name for themselves, “Inuit,” which means, “real people.”

The Inuit are descendants of the Thule, whale hunters who migrated from Alaska to Greenland and the arctic regions of Canada around 1000 years ago. The people and their culture spread rapidly throughout the area, which accounts for the cultural uniformity of today’s Inuit. The first Europeans to enter these arctic regions were probably Norseman, who are thought to have arrived in Greenland at around the same time as the Inuit. Major changes in Inuit life and culture occurred during the Little Ice Age (1600–1850), when the climate in their homelands became even colder, changing their subsistence methods. European whalers who arrived in the latter part of the 19th century had a strong impact on the Inuit. The Westerners introduced Christianity; they also brought with them infectious diseases that substantially reduced the Inuit population in some areas. When the whaling industry collapsed early in the 20th century, many Inuit turned to trapping.

The Inuit are very involved in the modern world. Not only have they wholeheartedly adopted much of its technology, but also they use imported food, clothing, and housing styles. Their educational, recreational, economic, religious, and governmental institutions have also been heavily influenced by mainstream culture. Significant changes have begun to occur in all areas of their way of life as a result of sustained contact with the outside world.

## 2 LOCATION AND HOMELAND

The Inuit live primarily along the far northern seacoasts of Russia, the United States, Canada, and Greenland. All told, there are more than 100,000 Inuit, most of whom live south of the Arctic Circle. The majority, about 50,000, live in the Danish territory of Greenland, with approximately 57,000 in Alaska and other parts of the United States, 56,000 in Canada, 8,000 in Denmark, and 1,700 in Russia. The Inuit homeland is one of the regions of the world least amenable to human habitation. Most of the land is flat and barren tundra where only the top few inches of the frozen earth thaw out during the summer months. For this reason, the Inuit have always turned their eyes to the sea as the source of their subsistence. Although

some settled along rivers and fish from the banks, and others followed caribou herds in their seasonal inland migrations, the majority of Inuit have always lived near the sea, hunting aquatic mammals such as seals, walrus, and whales.

Traditionally, some Inuit groups tended to settle permanently, while others were primarily nomadic. Settlement patterns differed according to geographic location, time of year, and the means of subsistence available in a given area. In Greenland and in Alaska, permanent settlements were the norm. Similarly, the Inuit of Siberia grouped themselves into established villages. In the central areas there were no such settled communities, although individual groups often returned to a favorite fishing or hunting site year after year. But despite these differences, all Inuit groups followed an annual cycle of banding into large groups during the winter and breaking up into smaller hunting bands during the summer months.

## 3 LANGUAGE

Inuit is part of the larger Aleut-Eskimo language family, which is comprised of Aleut, Yupik, and Inuit-Inupiaq. Inuit proper is part of the Inuit-Inupiaq subgroup. Inuit-Inupiaq is also known as Eastern Eskimo. Inuit-Inupiaq is an example of a dialect continuum. In other words, there are a number of geographical dialects of Inuit-Inupiaq that are spread across the Arctic region from Alaska to Greenland. The dialects in closer proximity to each other are the most intelligible.

## 4 FOLKLORE

The Inuit have traditionally used spells and amulets for luck. Mythological figures include the Mother of the Sea, believed to control the sea mammals, and the Moon Man, thought to enforce observance of taboos by appearing to the offending party in a dream or in the guise of a polar bear. According to a traditional folktale told by the Tikigaaq Inuit of north Alaska, the raven (a traditional trickster figure in Inuit folklore) was originally white but turned black in the course of a deal by which it and the loon agreed to tattoo each other but ended up in a soot-flinging match that turned the loon gray and the raven black.

## 5 RELIGION

Missionaries introduced various forms of Christianity, including Russian Orthodoxy, Catholicism, Anglicanism, and Lutheranism; these have largely replaced traditional Inuit religious practices, although many of the traditional animistic beliefs still linger.

As with most hunting cultures, many traditional Inuit customs and taboos were intended to mollify the souls of hunted animals, such as polar bears, whales, walrus, and seals. In western Alaska and other regions, the souls of seals and whales, both living and dead, were honored in complicated annual ceremonies of thanksgiving.

## 6 MAJOR HOLIDAYS

Today the Inuit observe the holidays of the Christian calendar. Whenever a new totem pole was raised, a feast called a potlatch was held. There would be singing and dancing and varied contests of strength for entertainment. The Inuit who held the potlatch would often give away his most valuable posses-

sions at the ceremony, including his dugout canoe, sculptures of carved ivory, and jewelry.

## 7 RITES OF PASSAGE

Traditionally, a modest feast was held when an Inuit boy killed his first seal or caribou. Women were married when they reached puberty and men when they could provide for a family. The Inuit traditionally believed in an afterlife thought to take place in one of two positive realms, one in the sea and one in the sky. Because a person's name was believed to have special powers, after people died their names were given to infants born subsequently, who were thereby believed to inherit the personal qualities of the deceased.

## 8 INTERPERSONAL RELATIONS

Unlike many aboriginal cultures, traditional Inuit society was not based on the tribal unit. Instead, the basic social unit was the extended family, consisting of a man and wife and their unmarried children, along with their married sons and their nuclear families. In the normal course of events, several such family units join forces to hunt and provide one another with mutual protection and support. Such a group of families was named by adding the suffix *miut*, or "people of," to the name of the geographic region they inhabited.

The leader of the group was typically the oldest male who was still physically able to participate in the hunt. Such a group leader was called upon to resolve quarrels within the group or among his own group and others. In cases where the group leader was unable to settle the issue, the hostile parties might wrestle or engage in public contests in which they hurled jokes and insults back and forth until one was declared the winner. Non-related men often formed close relationships based on mutual support, trade, sharing of domestic arrangements, and protection when traveling through other, possibly hostile, regions.

## 9 LIVING CONDITIONS

The Inuit had several different forms of traditional housing. In Greenland, they often lived in permanent stone houses. Along the shores of Siberia, they lived in villages made up of houses built from driftwood and earth. Summer housing for many Inuit was a skin tent, while in the winter the igloo, or house made of snow, was common. In Alaskan Inuit society, each village traditionally included a special house called a *kashgee*. This building, while serving as a dwelling place for one man and his family, was also used by the entire village as a ceremonial center and gathering place for the men of the group. In the *kashgee*, the men and boys of the village did their chores and often ate and slept together. Today many Inuit live in single-story wooden prefabricated houses with a combined kitchen and living room area and one or two bedrooms. Most are heated with oil-burning stoves. However, as the Inuit are spread across such a vast area, their housing styles vary.

With the widespread introduction of Western-style foods rich in carbohydrates and sugar over the past 25 years, the Inuit have begun to develop health problems that were unknown to them before, such as tooth decay. Alcoholism poses another major threat to the health of the Inuit, threatening not only the present population but also future generations through Fetal Alcohol Syndrome and other conditions that arise during the prenatal period.

There are two kinds of boats traditionally used by Inuit hunters. The umiak is a large open boat made by covering a wooden frame with walrus hide or some other appropriate material. Especially popular with the Inuit of northern Alaska, it has been used to transport people and goods, and as a vessel from which to hunt large sea mammals such as whales. The other kind of boat favored by Inuit hunters is the kayak. This one-man hunting vessel is entirely covered with seal or caribou skin. The hunter, dressed in waterproof clothing made from the intestines of seals or walrus, sits in a small cockpit and propels himself forward with a double bladed paddle. Alone in his kayak, an Inuit hunter is able to glide silently through the waters and amid the ice floes to close in on his prey. Today it is common for the Inuit to use boats with inboard or outboard motors.

For land transportation, the Inuit dogsled is capable of traveling on land and frozen sea alike. A typical dogsled, drawn by anywhere from 2 to 14 huskies, is usually made of wood but may also be fashioned from pieces of dried salmon. In recent years, dogsleds have been replaced by snowmobiles as the main mode of transportation for many Inuit.

## 10 FAMILY LIFE

Given the cooperative effort required by a people who depended on hunting for subsistence, family ties—both nuclear and extended—were traditionally paramount among the Inuit, and having a large family was considered desirable. Although stability was valued in marriages, divorce was easily obtainable.

Women often assumed a secondary role in Inuit society. At mealtime, an Inuit woman was required to serve her husband and any visitors before she herself was permitted to eat. Sometimes men cemented their ties with each other by temporarily exchanging wives. But at the same time, a common Inuit saying extolled women in this way: "A hunter is what his wife makes him." The women were the ones who gathered firewood, tended the lamps, butchered the animals, and raised the children. They were able to erect the tents in summer and the igloos in winter and drive the dog teams if need be. They contributed to the subsistence requirements of the group by fishing and trapping small animals and birds, and joining in the pursuit of larger, more dangerous game was not unusual for an Inuit woman. Inuit hunters spent many hours waiting at breathing holes, drifting in their kayaks, or tramping through blizzards, so the greatest skill an Inuit woman could possess is that of being able to make good protective clothing. Inuit women learned that skins were suited for each type of clothing, how to cure the skins, and how to sew firm, watertight seams with bone and ivory needles and thread made of dried sinew.

## 11 CLOTHING

Traditional Inuit clothing was perhaps the most important single factor in ensuring survival in the harsh Arctic environment. The Inuit did not weave fabric. Rather, they made all their clothing from various animal skins and hides. While Inuit clothing was often attractive and decorative, its ability to keep the wearer alive at sub-zero temperatures was of prime importance. The best way to keep warm is to trap a layer of warm air between the body and the outside cold. To do this, Inuit wore layers of loose clothes. If the clothes were tight, the wearers would sweat and the damp clothes would freeze as soon as they were taken off. In winter the Inuit wore two layers

*Arne Lange, an Inuit fisherman, and his son Angut Rosbach, eat breakfast in their home in Ilimanaq, Greenland. Lange has largely given up summer fishing to host eco-tourists in his home. (Uriel Sinai/Getty Images)*

of caribou skin clothing. The outer layer had the fur facing out, while the fur of the inner layer faced in. The outer garment, a hooded jacket called a parka, was loose enough for the wearer to pull his or her arms inside and hug them against the body for extra warmth. Sometimes snow goggles made of ivory or wood with small slits to see through were worn to keep out the snow glare.

Today a variety of shops sell modern Western-style clothing to the Inuit. Like their counterparts in cultures throughout the world, young people favor jeans, sneakers, and brightly colored sportswear. However, both old and young still rely on traditional Inuit gear when confronting the elements on any extended outdoor venture or journey.

## **12 FOOD**

Traditionally, Inuit dietary staples were seal, whale, caribou, walrus, polar bear, arctic hare, fish, birds, and berries. Seals were hunted all year round, and the Inuit found a use for almost every part of the animal. With the exception of the bitter gall bladder, all the meat was eaten, usually boiled or raw. Raw blubber was often enjoyed mixed in with meat or berries, while blood soup and dried intestines were favored as snacks. Because they ate raw food, and every part of the animal, the Inuit did not lack vitamins, even though they had almost no vegetables to eat. With the introduction of modern Western-style

food, including convenience foods, over the past two to three decades, the Inuit diet has changed, and not for the better. The consumption of foods rich in sugar and carbohydrates has resulted in tooth decay and other diet-related medical problems.

## **13 EDUCATION**

Modern Inuit schools are similar to other schools around the world as far as what the children learn, but the setting could not be more unique. Most Inuit children ski or ride snowmobiles to get to and from school. Because the weather is so cold, they usually receive a good hot breakfast as soon as they arrive in the morning. A typical breakfast might be pancakes or French toast served with milk, juice, and sausages. While Inuit children are taught math, history, spelling, reading, and the use of computers, Inuit teachers are also concerned that the students learn something about their culture and old traditions, including dancing, which was forbidden by the early missionaries because they thought it sinful.

## **14 CULTURAL HERITAGE**

Considering that the Inuit inhabit an area covering more than 5,000 miles of the immense Arctic wilderness, Inuit culture displays an amazing coherence and unity. From Siberia to Greenland, Inuit economic, social, and religious systems are much the same. Only in kinship systems is there any signifi-

cant variation, with those groups living in western regions that differed the most from the Inuit as a whole.

In addition to the prints and carvings for which the Inuit have become famous, dancing, singing, poetry, and storytelling play an important role in their native culture.

### 15 WORK

Traditional Eskimo subsistence patterns were closely geared to the annual cycle of changing seasons, the most important feature of which was the appearance and disappearance of solid ice on the sea. During summer, when the sea was free of ice, small groups of families traveled to their camps by open boat. There they stayed, hunting the northward-migrating caribou herds by killing them at river crossings or by driving them into large corral-like structures. Spawning fish were netted or speared. With the onset of autumn, the Inuit returned to their settled communities and villages to prepare for winter. The long winter was a time for hunting seal and other aquatic mammals and for trapping birds.

Today most Inuit live a settled existence in centralized villages and towns, participating in the cash economy through wage employment or receiving some form of social assistance. Major employers include the government, the resource extraction industries, and the arts and crafts industry. However, many Inuit are still involved in subsistence hunting and fishing at some level.

### 16 SPORTS

The Inuit, although mostly concerned with meeting survival needs, do find time to engage in sports. They enjoy games that display physical prowess, such as weightlifting, wrestling, and jumping contests. In addition, they also play a ball game similar in many ways to American football, and ice hockey is popular as well.

### 17 ENTERTAINMENT AND RECREATION

When the Inuit come together for traditional gatherings, drumming and dancing provide the chief form of entertainment. Quiet evenings at home are spent carving ivory, antler, bone, and soapstone, or playing string games like cat's cradle. Another traditional Inuit game is similar to dice, played on a board and using little models of people and animals instead of dice. The Inuit also enjoy typical modern forms of recreation such as watching television and videos.

Inuit filmmaking has gained international notoriety through the success of the 2001 Inuit film *The Fast Runner*. *The Fast Runner* or Atanajuart in Inuit is based on a traditional Inuit oral tale. The film portrays the beauty and hardship of Inuit traditional life and has been acclaimed for its accurate portrayal of Inuit life from an Inuit perspective.

### 18 FOLK ART, CRAFTS, AND HOBBIES

Traditional Inuit arts and crafts are mainly those that involve etching decorations on ivory harpoon heads, needle cases, and other tools. Over the past decades, the Inuit have become famous for their soapstone, bone, and ivory carvings, as well as prints and pictures. Another artistic tradition is the creation of elaborate wooden masks.

### 19 SOCIAL PROBLEMS

Social problems include unemployment, underemployment, alcoholism, drug abuse, and a high suicide rate.

### 20 GENDER ISSUES

Male and female roles and their symbolic representations are directly tied to traditional subsistence activities in Inuit societies. Inuit societies are characterized as being egalitarian, meaning that there are no intrinsic differences in status between people. Gender among the Inuit also functions in this manner, with gender roles and responsibilities being complementary in nature. Older adults of both sexes command the respect of the younger generations.

Boys begin preparing to assume their roles as hunters from an early age—often as young as 6 or 7 years of age. In modern Inuit societies, boys are given time off from school called “subsistence leave” to help with whaling, fishing, or other subsistence activities. Girls, while also eligible for “subsistence leave,” rarely take it. Training in the traditional subsistence activities for young girls has waned over the years, and now it often is not until after a woman leaves home after being married that she acquires some of these skills.

Men and women own homes and participate in child rearing. Traditionally, game that was killed by men became the possessions of their wives upon delivery to the household.

Whaling hunting rituals are performed by both men and women. It is equally important to the success of the hunts that the components of the male and female portions of the rituals, prayers, preparations, and avoidances be undertaken. This reflects the complementary and equivalent natures of male and female genders in Inuit culture.

## IRISH AMERICANS

For more information on Irish history and culture, see **Vol. 4: Irish**.

### OVERVIEW

Irish emigration to America began in colonial times but reached its peak in the Great Famine years of the 1800s. Early Irish immigrants were mostly Scotch-Irish from Ulster, or Northern Ireland (see **Scottish** and **Scotch-Irish Americans**). Irish Catholics did not begin to immigrate in large numbers until about 1800, and then they came en masse. In 1790, the U.S. Census counted 44,000 Irish Americans, most of whom were Scotch-Irish. By 1800, the Irish population of America had swelled to 150,000. Most of the newcomers were Irish Catholics fleeing British oppression and the resulting famines.

The Irish constituted the first major Catholic presence in the predominantly Protestant United States and as such met with virulent discrimination. The majority of the immigrants were illiterate farmers with few, if any, other job skills. However, they had been so disillusioned with farming in Ireland that they preferred to starve in the cities of America rather than return to growing crops. Irish immigrants congregated in the large industrial centers of the Northeast, Middle Atlantic, and Midwest regions of America, living in overcrowded slum housing and working whatever jobs they could find.

The worst famines in Ireland, caused by a grossly unjust economic system imposed on Ireland by Britain, combined with a potato blight, occurred in 1800, 1807, 1816, 1839, 1845–1848, 1863, and 1879. Between 1800 and 1830, 300,000 Irish immigrated to the United States. In 1846–1851, more than one million Irish fled to America. Another 873,000 immigrated in the decades of 1860–1880. Many settled in Philadelphia, Pennsylvania. By 1880, the Irish Catholic population in Philadelphia had reached 6,000, the highest of any community in North America. Other cities, such as New York, Boston, and Chicago, also had large Irish American populations.

Irish immigration to the United States continued, with some one million more immigrants arriving between 1880 and 1900. Ireland lost more of its population to the United States than any other country. In 1860, there were only five Irish persons left in Ireland for every Irish person in America (compared to 33 Germans in Germany for every German American, and 42 British in Britain for every British American). In the early 1900s, however, Irish immigration to America slowed considerably, and once Irish independence was declared in 1921, immigration virtually ceased. Small numbers of Irish have continued to come to the United States since that time, but the mass migration was over.

The Irish were victims of discrimination and violence in the United States not only because of their religion but also because of their willingness to work for extremely low wages. Other Americans felt threatened by this huge influx of unskilled laborers whom they perceived to be glutting the job market. Stereotypes of “Paddy” and “Bridget” (common Irish names) as drunken, disorderly, ignorant brutes took shape in American culture. However, when the United States embarked in the mid- and late-1800s on extensive construction operations of canals, railroads, and bridges and expanded its min-

ing industry, Irish Americans were ready to fill the vast need for workers. These jobs, though dangerous and underpaid, were a ticket out of the city slums. The Chesapeake and Ohio Canal and the Erie Canal were both essentially built by Irish Americans. They also laid much of the railroad track across the United States. Without the labor of Irish Americans, U.S. development would have occurred much more slowly. Their hard work and enormous contributions to American expansion began to earn Irish Americans some measure of respect among their fellow Americans.

Participation in the armed services also helped improve the image of Irish Americans in the United States. Irish American naval captain Oliver Hazard Perry became a hero in the War of 1812, uttering the famous words, “We have met the enemy and they are ours,” after defeating a British fleet on Lake Erie. Irish Americans fought on both sides of the American Civil War (1861–65), but most—some 200,000—fought for the Union.

During the Mexican-American War of 1846–1848, a number of Irish Americans defected to the Mexican side. The rate of desertion was very high for the U.S. Army during this war because at least half of the soldiers were recent immigrants (particularly Irish and German), and many of the American-born officers treated them quite badly. When the Mexican army learned that the Irish were Catholic, as were the Mexicans, they tried to lure them to Mexico with offers of land and religious fellowship. Some 250 Irish American soldiers deserted the U.S. Army and joined up with the Mexicans. Led by Captain John Riley, they formed the San Patricio (St. Patrick) Battalion along with about 200 other deserters, many of them German Americans. The San Patricio Battalion fought bravely for the Mexican side, but Mexico was finally defeated, and the deserters were brought to justice. Of those who had survived the fighting, 50 were executed for treason, 5 were pardoned, and another 15 (including Captain Riley) were branded and flogged, then released. Riley and others formed two infantry units that continued to serve the Mexican army for a number of years before disbanding. Some of the Irish American soldiers then returned to the United States, but others remained in Mexico, Riley among them. Intermarriage with Mexicans led to the creation of a small Mexican-Irish community. One of its best-known members is actor Anthony Quinn.

Irish Americans themselves unfortunately contributed to their bad image in 1863 when Congress passed the first national draft for military service. Outraged by this invasion of their freedom, Irish Americans in New York City took out their frustrations on the African American community there, which at that time was quite small. With 200,000 Irish Americans against 10,000 African Americans, the African Americans never had a chance. After four days of rioting and violence, 1,200 people (mostly African American) were dead or seriously injured, and the Irish Americans had burned Manhattan’s Colored Orphan Asylum to the ground.

Conditions in Irish American slums had become intolerable in the mid-1800s, with epidemics of typhoid (1837), typhus (1842), and cholera (1849) sweeping the population, and chronic outbreaks of tuberculosis and pneumonia claiming even more lives. In 1857, some 85% of the people admitted to New York City’s hospital were Irish immigrants. Infant and child mortality were so high among Irish Americans that immigrant children were expected to live no more than 14 years on the average after arrival in the United States. Many Irish

Americans turned to alcohol to numb the pain of their squalid lives. Often times, Irish American women and children became prostitutes, and women, children, and men took up other criminal activities to survive.

When gold was discovered in California in 1849, thousands of Irish Americans joined the rush west. A few struck it rich. The rest continued to languish in poverty, either returning to the East and Midwest or settling in the cities of the West. Things were beginning to change, however, for the Irish Americans. New waves of immigrants, this time from Eastern Europe, began to arrive. Dark-haired, dark-eyed, and speaking completely foreign languages (Western European languages are at least related to English), these new immigrants made Irish Americans seem much more “American” in contrast. Irish Americans began to be welcomed somewhat more into mainstream society. The Irish American community was also beginning to make itself known in politics.

The Irish American political machine was based on the units of family, block, and neighborhood. Each neighborhood had a block captain, a ward captain, and a precinct captain. Irish Catholic parishes also provided a political base, with most parishioners following the lead of the priest or local bishop. Irish Americans, therefore, could deliver significant blocs of votes. Years of fighting the British for their rights in Ireland had taught the Irish how to work the political system for their benefit. By the mid-1800s, Irish Americans had taken over the Democratic Party and city hall in several major cities and were becoming a voice to be reckoned with in American politics.

New York City’s Tammany Hall was one of the most significant political arenas for Irish Americans in the 1800s. William Marcy “Boss” Tweed, an Irish American, became its leader and ruled New York City, and exercised a great deal of influence in state and federal politics as well, from his political throne. Tweed and other Irish American politicians used their positions to promote the welfare of other Irish Americans, providing employment (particularly in blue-collar jobs such as police officers, fire fighters, etc.), food, and services to Irish American citizens and their neighborhoods. Corruption was rampant in American politics at that time, and the Irish American political machine was not immune. Boss Tweed himself was imprisoned in 1873 for illegal activities. But Irish American politicians were no more dishonest than any other. Irish Americans made politics work for them, and they improved their situation in America dramatically with their successful political maneuvering. The high point in Irish American Catholic politics occurred in 1960 when Irish American John Fitzgerald Kennedy was elected president of the United States, the first Catholic president in U.S. history. In fact, one has only to look at the number of Irish American presidents over the years to see how Irish Americans gained increasing acceptance in mainstream American society: from 1789 through 1921, only 8 out of 28 presidents had confirmed Irish ancestry, but since the election of John F. Kennedy, all but one president (Gerald Ford) can claim some degree of Irish heritage.

Another important arena for Irish Americans was the labor movement of the 1870s–1930s. Many Irish Americans led the way as workers organized for better working conditions and higher wages. By 1900, over 50 of the 110 unions in the American Federation of Labor (AFL) had Irish American presidents. Mary Harris “Mother” Jones, a powerful leader of the labor movement, was Irish American. The AFL’s first official orga-

nizer of women was Mary Kenney, an Irish American who organized the garment workers in Boston, most of whom were also Irish American women. The garment workers mounted a successful strike for better wages and pay in 1894, establishing women as an important force in labor politics. Irish Americans continue to be a significant presence in American labor unions today. In 1955, Irish American George Meany became head of the largest union organization in the United States, when the AFL merged with the Congress of Industrial Organizations (CIO) to form the AFL-CIO. Meany was re-elected president of the AFL-CIO for the third time in 2005 for another four-year term.

Some 30,528,470 people listed themselves as of “Irish” ethnicity on the 2000 U.S. Census. Another 4,319,232 chose “Scotch Irish,” and 65,638 claimed “Celtic” ancestry. Irish Americans currently make up the second-largest ethnic group in the United States (12.3% of the total U.S. population), behind German Americans. There are over seven times as many people in the United States who claim some Irish ancestry than there are people in Ireland today. Although early Irish immigrants settled mostly in the Northeast, Middle Atlantic, and Midwest areas of the United States, today’s Irish Americans are spread fairly evenly throughout the entire country. The top “most Irish” states in terms of percentage of Irish Americans are Massachusetts (24.1%), New Hampshire (21.7%), Rhode Island (19.5%), and Connecticut, Delaware, Vermont, and Pennsylvania (all about 18%).

*John Toner and daughter Kelly watch the St. Patrick's Day parade in Washington, D.C. Irish-Americans in the Washington area celebrate the day by marching on Constitution Avenue with dancers, bands, and floats. (Alex Wong/Getty Images)*

The most obvious contribution Irish Americans have made to American culture is the observance of St. Patrick's Day on 17 March. Nearly every community in the United States holds a St. Patrick's Day parade, and many Americans, whether Irish or not, wear green on that day. Shamrocks and leprechauns are familiar to all Americans, and several Irish tunes have become American standards ("When Irish Eyes Are Smiling," "Danny Boy," etc.). Irish Americans dominated the American Catholic Church into the 20th century, and Irish Catholicism still tends to define the Catholic Church in America. Many Irish Americans are also Protestant, particularly among those who call themselves "Scotch Irish." The parochial school system started in the 1830s–1840s by Irish American Catholics continues to thrive in parishes across the United States. Irish and non-Irish Americans, Catholics and non-Catholics alike send their children to parochial schools for the solid and affordable education they offer.

Individual Irish Americans who have made significant contributions to American culture are far too numerous to recount. A few of the best-known are composers George M.

Cohan and Victor Herbert; musicians Bing Crosby, Jim Morrison, John Fogerty, Mariah Carey, and Alicia Keys; and dancers Gene Kelly and Donald O'Connor. The composer of the song "Dixie," which became the "national anthem" of the South, was Irish American Daniel D. Emmett. Irish American actors include Spencer Tracy, James Cagney, Grace Kelly, Errol Flynn, Buster Keaton, Helen Hayes, Gregory Peck, Walter Brennan, Jackie Gleason, Jack Lemmon, Peter O'Toole, Pierce Brosnan, Brian Dennehy, Patrick Duffy, Mia Farrow, Jack Nicholson, Carroll O'Connor, Ryan O'Neal, Ben and Casey Affleck, Lindsay Lohan, Rosie O'Donnell, and actor/director Robert Redford. Directors John Ford and John Sayles are also Irish American. Walt Disney was originally Irish Canadian, before moving to the United States.

The best-known Irish American artist by far is Georgia O'Keeffe. Irish American architect Louis H. Sullivan developed the skyscraper design, and Matthew Brady was a well-known photographer. The only American playwright ever awarded the Nobel Prize is Eugene O'Neill, an Irish American. Other Irish American writers include John O'Hara, Flannery O'Connor, F. Scott Fitzgerald, Mary Higgins Clark, Tom Clancy, Kate Chopin (born Katherine O'Flaherty), Margaret Mitchell, William Kennedy, Mary Gordon, Mary McCarthy, Andrew Greeley, J. P. Donleavy, Cormac McCarthy, Frank McCourt, and poets Galway Kinnell, Frank O'Hara, Robert Creeley, and James Whitcomb Riley. Among the many noteworthy journalists and other media personalities of Irish descent are Chris Matthews, Conan O'Brian, Norah and Kelly O'Donnell, and Bill O'Reilly.

Irish American leaders in science, industry, and politics include the Kennedy family (John Fitzgerald, Robert; Edward, or Ted; and Joseph Kennedy III, elected to the U.S. Senate in Massachusetts in 1986); former Chicago mayor Richard Daley (who served from 1955 to 1976) and his son, Richard M. Daley, also elected mayor of Chicago (in 1989); one-time New York State governor Alfred E. Smith, who became the first Irish American Catholic to run for U.S. president in 1928; Sandra Day O'Connor, the first woman to be appointed justice of the Supreme Court (in 1981); astronaut Kathryn Sullivan, the first woman to walk in space (in 1984); and Christa Corrigan McAuliffe, who was to be the first teacher in space in the ill-fated Challenger shuttle that exploded shortly after take-off in 1986. Henry Ford, builder of the first inexpensive automobile, the Model T, was Irish American, as was James Tobin, winner of the Nobel Prize for Economics in 1981.

Sports, especially boxing, provided a way out of the slums for young Irish American men in the late 1800s and early 1900s. Irish American boxer Paddy Ryan held the title of world heavyweight champion in the 1880s. Ryan was defeated by Irish American John L. Sullivan in 1892, and Sullivan was subsequently defeated by Irish American "Gentleman Jim" Corbett in 1897. Jack Dempsey and Gene Tunney were successful Irish American boxers in the early 1900s. Baseball has been another favored sport among Irish Americans. The best-known Irish American baseball players today are pitcher Nolan Ryan and shortstop Derek Jeter, who is half African American and half Irish American.

Two notorious Irish Americans were outlaw Billy the Kid (born Henry McCarty), and Senator Joseph R. McCarthy, instigator of the American anti-Communist hysteria of the 1950s, which came to be known as "McCarthyism."

For the most part, Irish Americans today have become part of established mainstream U.S. culture and suffer little discrimination. Most are second- or third-generation Americans, at least; only a fraction of 1% of the Irish American population today is foreign born. A small group of Irish Americans today face a unique problem, however. Born to unwed Irish mothers in the 1950s and 1960s, some 400 infants (or more) were sent from Ireland to the United States for adoption. Viewed as shameful, these births were hidden and records were falsified to protect the women involved, and their families. Those adoptees are now reaching the age where they want to know about their birth parents. Agencies in Ireland remain largely uncooperative, however, and the falsification of many records makes the search that much more difficult. Adopted Irish American women and men struggle to find out where, and to whom, they were born in Ireland. Others who have not been told they were adopted may not even know they are Irish.

Irish culture has historically been very family oriented with traditional male and female roles. The Catholic Church further emphasizes those roles, and the immigrants to America during the famine years brought those traditional Catholic values with them. To some degree, the fact that many Irish settled in cities in the United States broke down those roles, at least for women. Irish American women were much more likely to work outside the home than were women of other immigrant groups. Their experience in the working world provided the opportunity for Irish American women to gain confidence and public influence. Gay Irish Americans have not fared so well, however. The stereotype of the Irishman as a pugnacious pub brawler expresses a truth of the Irish American culture that puts great pride in (heterosexual) masculinity and views homosexuality as an affront. Patriotic military duty has also become highly celebrated among Irish Americans, and discrimination against homosexuals in the military is persistent. The Roman Catholic Church, which views homosexuality as sinful behavior, contributes as well to the marginalization of gays and lesbians in the Irish American community.

This tension came to a head in 1992 when the Irish American Gay, Lesbian, and Bisexual Group (GLIB) of Boston applied to march in Boston's St. Patrick's Day parade. The parade has become much more than a celebration of the life of St. Patrick; it now serves as an affirmation of "Irishness" in all its patriotic American glory. The Veterans Council, responsible for running the parade, rejected the GLIB's application for a spot in the parade, but a judge ruled that the GLIB had the right to participate. The ruling set off a huge and fractious debate over whose rights were being infringed: homosexuals by being excluded from the parade or the Veterans Council by being forced to include those whose views they do not support. Prior to the GLIB rejection, the only group to be denied a place in the parade was the Ku Klux Klan.

For the next three years, the GLIB and the Veterans Council fought it out in court, taking it all the way to the U.S. Supreme Court which ruled in 1995 in favor of the Veterans Council. Although the ruling went against the GLIB, members of the gay and lesbian community still viewed it in some ways as a victory because the wording of the decision spoke of homosexuals as equal human beings deserving respect—the Court based their decision on the First Amendment right of the Veterans Council to include and exclude whomever they chose because they no longer receive public funding for the parade.

The only other group to be excluded from the parade since the GLIB was the Boston Veterans for Peace in 2003, rejected because of their opposition to the U.S. war in Iraq.

# IROQUOIS

**LOCATION:** United States (New York, Wisconsin); Canada (Quebec, Ontario)

**POPULATION:** over 125,000 (U.S. and Canada)

**LANGUAGE:** English; various Iroquois dialects

**RELIGION:** Traditional tribal religions

**RELATED ARTICLES:** Vol. 2: Native North Americans

## 1 INTRODUCTION

The Iroquoian peoples are a group of tribes from the Great Lakes area who speak dialects of the Iroquoian family of Native North American languages and have similar lifestyles. For our purposes, we will only consider those tribes who are members of the Six Nations of the Iroquois Confederacy (or League of the Iroquois): the Mohawk, Oneida, Onondaga, Seneca, Cayuga, and Tuscarora. Other Iroquoian peoples include the Huron, Erie, and Wyandotte.

“Iroquois” is the name adopted by the French for the people they encountered in the Great Lakes region. The name was given them either by the Ojibwa (or Chippewa), in which case it means “poisonous snakes,” or by the Algonquin, meaning “bad or terrifying man.” Both the Ojibwa and Algonquin were enemies of the Iroquois. The Iroquois call themselves *Houde-nosaunee*, or “People of the Longhouse.” The Iroquois are most likely descended from the Owasco peoples, who lived in the Great Lakes area as long as 1,000 years ago. The Owasco were settled agriculturalists and supplemented their diet through hunting and fishing. The Iroquois continued in that tradition well into the 19th century, and even today the basic structure of their life remains the same, though on a much more limited scale.

The Mohawk, Oneida, Onondaga, Seneca, and Cayuga were constantly at war with one another over hunting and fishing grounds, honor and revenge, and, later, trapping grounds for the fur trade, in the early part of their history. Eventually, two men joined together to create the Iroquois Confederacy. An Onondaga named Hiawatha (not the same Hiawatha as in Henry Wadsworth Longfellow’s poem) began preaching peace among the Iroquois nations but found little support and even active resistance. According to legend, all three of his daughters died of illness or injuries thought to be caused by the evil wishes of his opponents, particularly an Onondaga chief named Thadodaho, who was very powerful and very antagonistic. In despair, Hiawatha left the Onondagas and wandered to the outskirts of a Mohawk village. There he met Deganawida, who was either a Mohawk or a Huron, and the two of them discovered a great sympathy toward each other. Together they convinced the Mohawk to be the first nation to join the Iroquois Confederacy. Soon the Oneida agreed to join as well. Hiawatha and Deganawida knew the Confederacy would not succeed without the support of Thadodaho, so they set about persuading him to join. Finally, Thadodaho agreed and the Onondaga became the third nation in the Confederacy. The Seneca and Cayuga then followed. The Mohawk, as the most eastern tribe, became the Keepers of the Eastern Door; the Seneca, as the westernmost tribe, were designated the Keepers of the Western Door, and the Onondaga, in the center, became the Keepers of the Council Fire. Every year, the 50 sachems

(peace chiefs) who made up the Great Council of the Confederacy met at the Onondaga council house to discuss and vote on matters of the Confederacy. Sachems were always men, but they were chosen by the clan matrons, the elder women who headed each clan. Sachems served for life, or until their clan matron decided to remove them from office. Although the five nations each had a different number of sachems on the council, each nation had only one vote. So the sachems of each nation had to decide together how to use their one vote. In this way, each of the five nations had equal power in the Confederacy.

The first European known to have made contact with the Iroquois was the French explorer Jacques Cartier, who encountered the Iroquois in 1534. The Iroquois had already begun receiving European goods, such as metal knives and hatchets, guns, glass beads, and wool cloth, in trade with more eastern tribes. By the 17th century, the Iroquois were trading directly with the French, who were most interested in furs, particularly beaver pelts. The fur trade created tremendous hostilities between the Iroquois Confederacy tribes and their neighbors, especially the Huron. Competition was fierce for the best trapping grounds, and the French fueled the hostilities so that they could maintain control of the fur trade. In 1609 Samuel de Champlain, the governor of New France (now Canada), helped several neighboring, hostile tribes attack the Mohawk. At least 50 Mohawk were killed in the attack. Later, in 1649 the Iroquois invaded Huron territory in the search for more furs (as over-hunting had depleted the number of beaver and other fur-bearing animals in their home territory). The Iroquois decimated the Huron, killing most of them and forcing the others to relocate farther from Iroquois lands.

The Iroquois themselves had their population decimated during the 1600s by diseases introduced by Europeans for which the Iroquois had no immunities or known treatments. Epidemics of measles, influenza, smallpox, tuberculosis, and gastroenteritis (a stomach disorder) wiped out thousands of Iroquois and other Native North Americans. At the height of their power, the Iroquois Confederacy had boasted 10,000 or more members. By the end of the 18th century, their numbers had been reduced by more than half to about 4,000. At the turn of the 20th century (1910), their population had not yet fully recovered, reaching only a little over 7,000.

In 1722–23 the Tuscarora, an Iroquoian tribe from North Carolina, joined the Confederacy. They had been forced by European violence and abuses to move north, and they were surprised and delighted to find people speaking a very similar language, with a very similar lifestyle, living in New York. The Tuscarora settled down there, with the Oneida, and were soon accepted into the Confederacy.

The now Six Nations of the Iroquois Confederacy were split by the American Revolution (1775–83), when the Seneca, Cayuga, Onondaga, and Mohawk were persuaded by Mohawk Joseph Brant (1742–1807) to become British allies, while the Oneida and Tuscarora chose to side with the American colonists. The Iroquois had remained neutral throughout the European struggles for control of the “New World” in the 17th and early 18th centuries. The Onondaga leader Teganissorens had convinced the Iroquois in 1700 not to become involved in the French and British wars, or the British and Dutch battles. Even when many of their Native North American neighbors chose sides in the French and Indian War (1761–63), the Six Nations refused to help either the French or the British. But

this resolve fell apart during the long and disruptive American Revolution, and the Confederacy fell apart as well. When the American colonists finally won the war, many of the four Iroquois nations who had sided with the British relocated to Canada where the atmosphere was friendlier. Of those who stayed, the new U.S. government sent the Cayugas and Mohawks to a reservation (called a “reserve” in Canada) in Ontario, Canada, and forced most of the Oneidas to relocate to a reservation near Green Bay, Wisconsin. Some Iroquois were allowed to remain on their original homelands in what had become New York State, but European American settlement had greatly reduced their territories. Further European American expansion continued to squeeze out the Iroquois until finally the U.S. government (and Canada) confined the Iroquois to small reservations. The Six Nations of the Iroquois Confederacy were now reduced to small subsistence farmers, dependent on the U.S. and Canadian governments for their survival.

Because the Iroquois live in both Canada and the United States but think of themselves as one people, in 1974 they were given the right by a treaty to cross the border between the two countries without restriction. In 1924 the U.S. Congress passed a law rescinding this right, and the Iroquois were forced to fight in the courts to regain their rights. Clinton Rickard of the Tuscarora Nation founded the Indian Defense League in 1927 to help in the fight. This was the first advocacy organization for Native North Americans. In 1928 the Iroquois won back their right to cross the European-imposed borderline that passes through their lands. This victory is celebrated each year in July by a “Border Crossing” festival. Conflicts continue to arise, however, between the Iroquois Nations and the U.S. and Canadian nations over these rights. Legal battles also continue over land claims and water rights and over the right of the Iroquois people to possess their own history. Recently, the Iroquois finally succeeded in having some wampum belts (belts of strung beads that tell the stories of Iroquois history) returned to them that had been on display for decades at the New York State Museum.

## 2 LOCATION AND HOMELAND

The Iroquois live mainly on seven reservations in the Finger Lakes and Great Lakes region of New York State and on five reserves (as they are called in Canada) in Quebec and Ontario, Canada. Some Oneida also live on a small reservation near Green Bay, Wisconsin. The largest reservation, or reserve, is the Six Nations Grand River Reserve in Ontario, Canada. Most of the Iroquois on the Grand River Reserve are Mohawk or Cayuga. The reservations and reserves are all located (except for the Oneida reservation in Wisconsin) on the original homelands of the Iroquois, though with only a fraction of the territory. The terrain of these lands is hilly and wooded, covered with deciduous and evergreen forests. The climate is temperate with four distinct seasons. Fertile soil, sufficient rainfall (and snowfall), and an adequate growing season combine to make this area very good for farming. The Iroquois have been settled agriculturalists throughout their history. An abundance of wild game and fish provided large amounts of easily obtained protein for their diet as well. The Iroquois, therefore, were a healthy people who were able to sustain themselves in large, permanent settlements. This allowed them to develop a highly organized social and governmental structure known as the Iroquois Confederacy or League of the Iroquois. Some

see great similarities in the government and constitution of the new United States of America and the structure of the Iroquois Confederacy.

Not all Iroquois live on the reservations or reserves. Many have left to find work in cities. The largest groups of off-reservation Iroquois are in the cities of Buffalo, Rochester, Niagara Falls, and Brooklyn, New York.

The total population of Iroquois today is over 125,000. The Mohawk are the most numerous of the Iroquois nations, followed by the Oneida and Seneca. The Cayuga, Onondaga, and Tuscarora nations are much smaller.

## 3 LANGUAGE

All Iroquois speak dialects of the Iroquoian family of Native North American languages. There was no written language for most of their history (now it is written with the Roman alphabet), but the Iroquois did use wampum belts (belts of strung beads in various designs) to tell the stories of their history. These wampum belts were a form of recorded information. The Europeans sometimes used wampum belts as money in trade, but the Iroquois never did.

An Iroquois mother chooses her baby’s name from a list of those names owned by her clan, choosing one that no other living person is using at that time.

## 4 FOLKLORE

The Iroquois have a combination earth-diver and culture-hero (or, in this case, two-hero) creation story. Before the earth or anything on it existed, the Sky People lived in Sky World, high in the heavens. They were ruled by Sky Chief and his wife, Sky Woman. When Sky Woman became pregnant, Firedragon—a notorious troublemaker—told Sky Chief that the child was not Sky Chief’s. Sky Chief became enraged and tore the Tree of Life, which grew in the center of Sky World, from the ground. Sky Woman bent over to look through the hole it left in the ground. In some versions of the story, she simply fell through the hole. In other versions, Sky Chief pushed her. In any event Sky Woman fell out of Sky World towards the deep waters below. The birds and animals below managed to save her by first having the birds break her fall and support her on their wings, then sending various animals down into the waters to try to find some earth. All failed until Muskrat dove down very deep and came up with a bit of mud in his paw. The animals placed the mud on Turtle’s back and the birds set Sky Woman down on top of it. This bit of mud on Turtle’s back became the Earth.

Sky Woman eventually gave birth to twin boys, Good Twin and Bad Twin. Good Twin was born first, in the usual way, but Bad Twin was so impatient he pushed his way out of his mother’s body through her armpit and she died. The plants that later became the Iroquois’ staple foods sprang up from Sky Woman’s grave. Good Twin and Bad Twin became enemies and fought a series of terrible battles, creating the things of this world as they went. Good Twin ultimately won and then created human beings to enjoy this world.

The Iroquois traditionally told stories around the fire during the long winter months when there was little else to do. These stories were told both for entertainment and to educate the young about Iroquois history and traditions.

## 5 RELIGION

There is a special longhouse in each village that serves as a cultural center for members of the Iroquois community where they can learn about practicing the traditional way of life. In the past, the longhouse was a dwelling and also a spiritual center for the Iroquois. To say someone is “longhouse” today means that they follow the traditional Iroquois way of life.

European missionaries of many denominations established missions among the Iroquois in the 1600s and attempted to convert them to Christianity. Many Iroquois have since become Christian or have combined Christianity with their traditional beliefs. Today some Iroquois remain purely traditional, but most of them are Christian.

One Mohawk who took strongly to Christianity was Kateri Tekawitha (1656–80). She converted to Christianity in 1670 and became a Catholic nun. Called a saint while still alive by those who knew her, Kateri became a candidate for sainthood in the Roman Catholic Church in 1884 and was declared “venerable” in 1943, then “blessed” in 1980. The campaign to have her declared a full saint continues.

Handsome Lake (?–1815) was a Seneca visionary who started a new religion in the early time called *Gaiwio*, or “Good Word.” Followers of *Gaiwio* today refer to it as the New Religion.

## 6 MAJOR HOLIDAYS

The Iroquois celebrate seasonal changes and events relating to the production of food. There were traditionally six to eight festivals each year, including planting, ripening, and harvest times, maple sugar season and berry-picking seasons, and the New Year at midwinter. The most important was the New Year festival. One custom at the New Year festival was dream guessing. People would tell the community, through song, dance, or silent gestures, about a powerful dream they had had, and the members of the community would try to guess the dream. Then the community would come up with a way to make that dream come true. For example, if a woman dreamed of having a plot of land in which to plant corn, the community would give her that land. If someone dreamed of being angry with and doing violence to another member of the community, the people would find a way to work out the conflict through non-violent means. This custom allowed the Iroquois to resolve any tensions and fulfill unexpressed desires in their community.

A very significant ceremony developed after the founding of the Iroquois Confederacy. When a chief dies, a Condolence ceremony is held where the founding of the Confederacy is commemorated and the Condolence committee talks about the deceased chief and other leaders of the past. The Condolence ceremony helps comfort the mourners of the deceased chief and welcomes the new chief who has been chosen by the clan matron. Deer antlers are placed on the new chief’s head.

A modern holiday among the Iroquois is Border Crossing Day, held on the third Saturday of July, which celebrates the birthday of Clinton Rickard, founder of the Indian Defense League of America in 1927. Rickard and the Indian Defense League helped win back the Iroquois’ right to cross the U.S.-Canadian border without restriction.

## 7 RITES OF PASSAGE

Traditionally, babies were given a taste of animal oil right after birth to clean out their system and feed the guardian spirit

that lived in their soul from birth until death. When a boy was born, he was then dipped in a stream to make him strong and courageous. The names given Iroquois infants were confirmed by the community at the next major festival.

Most boys upon reaching puberty would go on a Vision Quest. This entailed going alone into the woods without food and waiting for days, or even weeks, for that boy’s personal guardian spirit to appear (in the form of an animal or bird). The guardian spirit would give the boy instructions for his adult life, and a special song to sing for courage and protection in times of danger.

At the time of a girl’s first menstrual period, she would cook and eat her food alone from special pots. She would continue to do this at each menstrual period thereafter until menopause.

## 8 INTERPERSONAL RELATIONS

The Iroquois traditionally put a high value on self-reliance, endurance, and courage in both men and women. Gentle and considerate towards their own people, they could be cruel to their enemies. The Iroquois code of honor required revenge for injury or insult. Murder was avenged by murder.

## 9 LIVING CONDITIONS

Before they were confined to reservations, the Iroquois lived in large villages surrounded by wooden palisades (a fence of tall pointed stakes used for defense) with watchtowers along the top. The villages had to be moved every 10–20 years because the soil would become depleted and the available wood for building and fuel would be used up. They tried to make the new site as close as possible to the previous one.

Villages were made up of as many as 30 longhouses, each of which housed up to 100 or more people. A longhouse was so called because it was rectangular: 130 or more feet (40 or more meters) in length and about 30–33 feet in width. Each longhouse had a center aisle where the cooking fires burned and separate rooms along both sides divided by hide or bark partitions. Each family had one room. Inside the family’s room was a sleeping and sitting platform with the belongings stored underneath and shelves above to store food. Bearskins were used as bedcovers.

The Iroquois made elm-bark canoes. These canoes were not as fast on the water or as maneuverable as birch-bark canoes, but they were sturdier and could even be used as ladders to climb over the walls of enemy camps.

Today, the Iroquois live on reservations (called “reserves” in Canada) in modern housing and use cars and buses for everyday transportation. Health problems typical to all Native North Americans affect the Iroquois: diabetes, alcoholism, depression.

## 10 FAMILY LIFE

The Iroquois are matrilineal and matrilocal (lineage is inherited through the mother and newly married couples live near the bride’s family). The extended family is very important to the Iroquois. The main unit of society in traditional times was the *ohwachira*, a group of relatives who trace their ancestry back to one woman. The eldest living woman was usually the head of the *ohwachira*. Two or more *ohwachiras* make up a clan. The Mohawk and Oneida had three clans: Turtle, Bear, and Wolf. The other Iroquois nations had these three clans and more, such as Beaver, Deer, and Hawk. Children in a matriline-

eal, matrilineal society are raised by their mother and her sisters and brothers, not by their father. Men helped raise their sisters' children, not their own.

Adoption of children and adults was common among the Iroquois. Enemy captives were sometimes adopted into a clan to keep it strong. Most captives were glad to be adopted because they could not return to their homes, having lost respect among the members of their former community by allowing themselves to be captured.

Women were expected to give birth quietly and with courage. To cry or scream during labor, no matter how painful it was, was very bad form. Babies spent most of the first year of their life strapped to a cradleboard, a flat board with a footrest at the bottom and a wooden hoop to protect the baby's head at the top. Cradleboards could be carried on the mother's back or propped against a tree or house while the mother was working. Cattail fluff was used for diapers.

Once the Iroquois were confined to reservations, family life began to change. Nuclear family units began to live in separate houses, rather than together with their cousins, etc., in a longhouse. With the extended family no longer on the premises to help with childrearing, and European-dominated education that taught that the patrilineal European culture was superior to matrilineal Native North American culture, men became the heads of families rather than women. Traditionalists among the Iroquois continue to struggle to maintain the old ways with matrilineal extended families and a strong clan system. But, swimming against the tide of modern Western European culture is difficult.

## 11 CLOTHING

Modern Iroquois wear Western-style clothing for everyday purposes. For ceremonies and festivals and to make a statement at activist demonstrations, they will wear traditional clothing.

Traditionally, Iroquois clothing was made from animal skins and furs. The men brought home the skins and the women prepared them by removing the hair and flesh with a stone scraper, soaking the hide in boiled deer brains to soften it, then drying and smoking it to make it durable. The leather was then stitched together with sinew. The fur was left on beaver, bobcat, and squirrel skins for warmth and decoration.

Both men and women wore a soft deerskin loincloth in the summer and leather moccasins. Both sexes were generally bare from the waist up in warm weather. In cooler weather, men wore kilts and women wore longer skirts. Both wore leggings and close-fitting, hip-length shirts with sleeves. In the bitter cold of winter, they wore cloaks or robes made of bear, deer, buffalo, or beaver skins, with the fur left on. Clothing was often embroidered with dyed moose hair and porcupine quills.

Adults painted their bodies with figurative or geometrical designs, using paint made from natural materials, such as red and yellow ochre, bloodroot, and charcoal, mixed with sunflower seed oil. They wore fur and feather caps and collars and jewelry made of feathers, animal teeth, bone, and shell beads. Women wore their hair in a single braid down the back. Men's hairstyles varied. Warriors preferred the "scalp lock" (today often called a "Mohawk"), where the head was shaved bald except for a strip of hair down the center.

After the Europeans arrived, the Iroquois began to wear woolen clothes and to decorate their clothing with glass beads,

both obtained in trade with Europeans or other tribes who had traded with the Europeans.

## 12 FOOD

The Iroquois have been farmers since the beginning of their history. Women traditionally did all the planting, tending, and harvesting of crops, while the men supplemented the diet by hunting and fishing. The only crop grown by men was tobacco, used in religious ceremonies. The women also gathered wild plums, grapes, cherries, berries, crabapples, and nuts (chestnuts, black walnuts, and hickory nuts). In the late winter and early spring, maple sap was collected and boiled down into syrup and sugar. This was the only sweetener available to early Iroquois. Corn, squash, and beans were the staple foods, referred to as "the Three Sisters," daughters of Mother Earth. Corn was called "our life," and squash was "supporter of life." Dried corn was often boiled with wood ashes to add nutrition and help loosen the hulls. Once the hulls were removed, the remaining corn, called *hominy*, was washed and boiled until tender. The Iroquois usually only ate one large meal a day, at midmorning (what would now be called "brunch"), though food was available throughout the day.

John Bartram visited the Iroquois in 1743 and later described a feast they served him, consisting of a corn and fish soup, boiled squash and squash blossoms, and corn dumplings with beans. A modern version of Iroquois corn and fish soup can be made as follows:

### Iroquois Soup

- 4 large mushrooms, sliced
- 1 medium onion, peeled and thinly sliced
- 2 (10½ oz.) cans beef consommé
- Dash black pepper
- ¼ teaspoon salt
- 2 tablespoons yellow corn meal
- 1 (12 oz.) package frozen haddock fillets
- 2 tablespoons minced parsley
- 1 (10 oz.) package frozen baby lima beans
- 1 clove garlic, crushed
- ⅓ cup dry sherry (optional)
- ½ teaspoon basil

Heat corn meal, consommé, mushrooms, garlic, parsley, and seasonings in a large saucepan. Once the liquid boils, reduce heat and simmer for 10 minutes without covering. Add remaining ingredients (optional). If haddock is added, break into bite-size pieces as the soup continues to simmer, and stir occasionally. Simmer about 20 more minutes and serve hot. Makes 4-6 servings.

(Adapted from Kimball and Anderson, *The Art of American Indian Cooking*. Garden City, New York: Doubleday & Co., 1965, p. 169.)

## 13 EDUCATION

Traditionally, Iroquois children learned the skills they needed to survive in their world by watching and participating in life with their parents, relatives, and other adults. The Iroquois were first introduced to Western European education by French priests at Quebec in 1608. The priests first tried going to the Native North American villages and learning the Native language so that they could then teach the Natives French

culture and Christianity. The Natives simply ignored them. So the priests then tried taking young Native North Americans back to France to educate them there. The idea was that when these young European-educated Natives returned to their villages in North America, they would act as role models for the rest of their community. Instead, the young people found it impossible to adapt to such a foreign life in Europe, and when they returned they no longer fit in with their traditional society because they had not learned the skills necessary to survive there. So they became marginalized in both cultures and often turned to alcohol for comfort, becoming depressed alcoholics rather than role models.

The French priests decided then to send Native North American children to Roman Catholic boarding schools, but most of the children ran away from the schools, and their parents did not encourage them to return. Finally, the French set up reserves (known as “reservations” in the United States); each with a school, Christian church, and missionary hospital, then forced the Native North Americans to relocate there. The French hoped that the Natives would become acculturated to European ways by living on these reserves. Instead, the reserves became institutions of segregation, separating Native North Americans from the rest of European society (and vice versa). The Native peoples became even more resistant to adopting European ways as a result of their enforced segregation.

The Iroquois were never inclined to adopt Christianity or European ways, at least not in large numbers. A few Iroquois did become Christian, and surface accoutrements, such as Western-style clothing, have become standard. Educationally, the Iroquois have done fairly well in recent decades at making the European-dominated system work for them. Lloyd Elm (1934–), an Onondaga educator and administrator, served as the education programs specialist in the Office of Indian Education at the U.S. Department of Education in Washington, D.C., from 1976–1981. Prior to that, he served on the board of directors for the National Education Association (1973–1974), and he now serves on the New York State Board of Regents (which oversees all education in New York).

Of Iroquois 25 years old and older in 1990, only 10.4% have less than a ninth grade education. Almost 72% (71.2% of men, 72.5% of women) are at least high school graduates, and over 41% have some college education. Only a fourth of those actually finish college—11.3% (11.2% of men, 11.5% of women) have a Bachelor of Arts degree or higher.

School enrollment is fairly high for primary and middle school students, but falls off somewhat in secondary school and falls drastically in college.

AGE	PERCENT ENROLLED IN SCHOOL IN 1990
3–4	29.9
5–14	94.5
15–17	89.9
18–19	59.0
20–24	28.1

#### **14 CULTURAL HERITAGE**

Traditional Iroquois musical instruments are water-drums (drums filled with water to produce a certain pitch), rattles, and the human voice. A modern Iroquois musician is John Kim Bell (1953–), a Mohawk who became the first Native

North American symphony conductor when he was hired by the Toronto Symphony in 1980. Bell also produced and co-wrote the orchestral score for the first Native North American ballet, entitled “In the Land of the Spirits.” He founded the Canadian Native Arts Foundation in 1988 to provide scholarships to young Native North Americans who wish to pursue training in the arts. Bell was named to the Order of Canada, a medal given by the governor general of Canada in recognition of outstanding merit and achievement.

The Iroquois language never had its own written form, so the oral tradition became strong and rich. Today, Iroquois write both in English and in the Iroquois language written down with the Roman alphabet. Modern Iroquois writers include Beth Brant (1941–), a Mohawk poet and prose author; and E. Pauline Johnson (1861–1913), an early Mohawk poet and performer. Johnson was also one of the first Native North American women to publish short fiction.

The Mohawk actor Jay Silverheels (1912–80) was best known for his portrayal of Tonto, the Lone Ranger’s sidekick in the popular 1950s series. (Silverheels was actually the second actor to play Tonto in the series.) He did a great deal of other work in film and was a tireless activist in the areas of alcohol abuse and the elderly. In the 1960s, he founded the Indian Actors Workshop in Hollywood, and in 1979, the year before he died, he became the first Native North American to be awarded a star on Hollywood’s Walk of Fame.

Other modern Iroquois in show business include Gary Dale Farmer (1953– ), a Cayuga actor, producer, and activist; Graham Greene (1950– ), an Oneida actor perhaps best known for his portrayal of Kicking Bird in the 1991 film *Dances with Wolves*, and for his occasional role as Leonard in the television series *Northern Exposure*; and Joanne Shenandoah, an Oneida actress, singer, and songwriter who founded Round Dance Productions, a nonprofit organization dedicated to preserving Native North American culture.

#### **15 WORK**

In this modern industrial age, Iroquois (especially Mohawk) men have become famous as high steel construction workers. The work requires the same agility, coordination, and courage as traditional Iroquois occupations, such as hunting and warfare. Iroquois construction workers have traveled all over the U.S. and Canada to build bridges and skyscrapers. The work is very dangerous, and it pays well. Unfortunately, it often separates the men from their families and creates a great deal of stress for everyone—for the men, isolated in large cities, or traveling long distances from home, for weeks or months on end; and for their wives, parents, children, and other loved ones waiting at home, and worrying about their safety.

Many other Iroquois work off-reservation in factories or other industries. Others are professionals, such as teachers, nurses, social workers, doctors, and lawyers. Individual Iroquois have become known for their work as anthropologists, educators, historians, scholars, environmentalists, engineers, journalists, and activists. One well-known 19th-century Seneca, Ely S. Parker (1828–95), became the first Native North American Commissioner of Indian Affairs. Appointed to the post by U.S. president Ulysses S. Grant, a longtime friend of Parker’s, he served from 1868 to 1871.

## 16 SPORTS

The Iroquois invented the game the French named *lacrosse*. It is now Canada's national sport. The Iroquois believe that their ancestors gave them the game to develop their endurance and make them great warriors. Boys began learning to play at a very early age. Many Iroquois today still start lacrosse lessons as small children. Lacrosse is played in much the same way as it was centuries ago. Two teams compete to try to move a small ball (traditionally made of wood or deer hide) down the field toward the other team's goal and, finally, into the goal. They carry and throw the ball with long wooden sticks that have a basket at the top, woven from leather thongs. Traditionally, at major festivals each team could have hundreds of men on it and the game could last for hours. Traditional lacrosse was much more violent than today's game. Injuries, often serious ones, were commonplace.

In earlier times children and adults also enjoyed playing a game called "snowsnake," in which a long stick carved and painted to resemble a snake was thrown along an icy path in the snow. The object was to throw it farther than anyone else. Bets were often made on this game. Women played "shinny," a sport resembling today's field hockey.

## 17 ENTERTAINMENT AND RECREATION

Entertainment and recreation for the Iroquois is similar to that for the general American population.

## 18 FOLK ART, CRAFTS, AND HOBBIES

Iroquois today are known for their soapstone, wood, bone, and antler carvings and sculptures. They also make baskets, lacrosse sticks, and do leather, feather, and bead work.

## 19 SOCIAL PROBLEMS

The same problems afflicting other Native North Americans today, such as alcoholism, depression, and suicide, also afflict the Iroquois. They also struggle with the same conflict between traditionalists and progressives. This conflict has become particularly fierce at the Akwesasne Mohawk reservation, which straddles the U.S.–Canada border. Violence erupting between traditional and progressive factions has led to many arrests and even a few killings in recent years. In some places this conflict becomes tangled (or is one and the same) with the conflict between traditionally religious and Christian Iroquois.

The loss of land has been a serious problem for the Iroquois, as with other Native North American peoples. In the 1950s the Seneca lost more than 9,000 acres, forcing 130 families to leave their homes, when the U.S. Army Corps of Engineers built the Kinzua Dam near Warren, Pennsylvania. Damming the Allegheny River caused waters to flood over Seneca lands. In 1960 the Tuscaroras near Niagara Falls lost a significant amount of land to a public reservoir (an artificial pond or lake, used to store water for public consumption) built by the U.S. government. The Iroquois are currently engaged in many legal battles to regain ancestral lands that were stolen from them during the past two or three centuries by European Americans and Canadians.

## 20 GENDER ISSUES

Reciprocal dualism is a governing principle that applies to all of Iroquoian society, including gender relations. For the Iro-

*Onondaga Chief Oren R. Lyons, the Iroquois Nation lacrosse team's honorary chairman, attends the team meeting during their match against the Japanese team at the Lacrosse World Championships for under 19 in Tokyo, Japan. Being able to compete in the tournament is very special to the Iroquois Nation players because the sport was first played by Native Americans. (AP Images)*

quois there is a symbolic opposition of the sexes. This opposition is reflected in all aspects of Iroquoian society, including the spatial organization of traditional villages. Women's space includes the village and all of the areas of cleared fields to the edge of the woods. Men's space is the wooded areas.

Within the Iroquois longhouse, the senior living woman is the matriarch who controls the household. All of the individuals living in the household are related by blood or marriage to a common female ancestor. The matrilineal descent group is the primary unit of Iroquois government, since males who hold political office derive their positions through their female relatives.

Elizabeth Cady Stanton and Matilda Joslyn Gage, the two major theoreticians of the early women's rights movement in the United States, wrote about the superior social, political, religious, and economic status of women among the Iroquois. Their work for women's rights was inspired and influenced by their knowledge of the Iroquois system of gender balance and harmony.

In precontact Iroquois society, individuals who changed gender were accepted; however, the evidence concerning their roles in society is sketchy at best. It is clear that following contact and the conversion of many Iroquois to Christianity, these gender changing individuals were no longer accepted or toler-

ated. There is evidence that, among the Iroquois, boys who began to demonstrate the characteristics of a woman-man were discouraged to follow the change in gender. As in other tribes where male prestige was based on warlike deeds, the Iroquois did not favor males who followed the female gender.

# ITALIAN AMERICANS

For more information on Italian history and culture, see **Vol. 4 Italians**.

## OVERVIEW

Italian Americans are the fifth largest ethnic group in the United States, after German, British, African, and Irish Americans. It is estimated that one out of every 20 Americans is of Italian descent. The first Italians to come to America emigrated from northern Italy in the late 18th and early 19th centuries. Few in number, they blended in with American society, making their homes mostly in the familiar terrain of California wine country. These first Italian Americans tended to be well-educated professionals and craftspersons.

Beginning around 1880, however, a massive migration began from southern Italy to the United States. These immigrants were uneducated, poor farmers or landless peasants who had suffered for many years from poor soil, drought, unemployment, and political corruption and oppression. Between the years of 1860 and 1920, some five million southern Italians moved to the United States. Most were young men hoping to find good-paying jobs, save up a significant amount of money, and then return to Italy and their families. Perhaps 1.5 million of them actually did move back to Italy. The rest stayed in America.

The southern Italian immigrants tended to settle in New York City or neighboring areas because they did not have the money to travel very far after disembarking from the ship at Ellis Island. Because Italians preferred to live among their friends and neighbors, subsequent immigrants settled near those who had come before. Small enclaves of Italian Americans from the same region of Italy developed into “Little Italys,” some of which still exist today.

Little Italys began as slums. Poor Italian immigrants moved into tenement housing recently vacated by earlier groups of immigrants such as Germans, Jews, or Irish, who had moved up to better housing. However, most Italian Americans chose to stay and improve their housing in Little Italy rather than move out when their financial situations improved.

Like most early immigrants, Italian Americans suffered from prejudice and discrimination, both from other Americans as well as within their own ranks. Northern and southern Italians have a history of mutual dislike, and Italian Americans continued to carry those bad feelings for one another. Other Americans were more accepting of northern Italians because they are generally fair haired and were seen as more “Germanic” and refined. Southern Italians, on the other hand, were seen as dark, brutish, ignorant peasants who would never fit in with sophisticated American society.

In the 1920s, American labor forces began to organize for better wages and working conditions. Because Italian Americans, poor and desperate for work, were willing to take any job for any wage, they were seen as a threat to other American workers. The press began depicting Italian Americans as criminals, suggesting that they were all connected with the Mafia. In fact, very few Italian Americans had any links with the Mafia or other organized crime. But the stereotype of the Italian American gangster had taken hold and has yet to be dislodged,

as testified by the popular gangster movies *The Godfather* and *Goodfellas*, and the television series *The Sopranos*.

The trial of Nicola Sacco and Bartolomeo Vanzetti, Italian Americans from Boston who were leaders in the socialist movement, grew out of anti-Italian sentiment and added more fuel to the fire. Arrested in connection with a robbery and killing, they were convicted despite a lack of evidence. After seven years of appeals, they were executed in 1927. Italian American witnesses for the defense were discounted because, according to popular belief at the time, Italians could not be trusted.

The Great Depression of the 1930s worsened the Italian Americans' situation. Not only were jobs hard to find, but also other Americans used the Italian Americans as scapegoats, accusing them of taking jobs away from "real Americans." Violence against Italian Americans, though not a new phenomenon (lynchings and murders had occurred as early as the mid-1880s), increased. Wages fell, and more and more Italian American men found themselves unemployed.

Italian American women's horizons suddenly expanded, on the other hand. Although men were traditionally the sole breadwinners of Italian families, the Depression forced Italian American men to allow their wives and daughters to work outside the home to supplement the family income. This brought Italian American women into contact with more people of all backgrounds, gave them confidence in themselves as independent persons, and caused them to begin to question their husbands' or fathers' authority. The dynamics began to change in Italian American families, and World War II (1939–45) cemented those changes.

Italian American men and women contributed greatly to the American war effort in both World Wars I and II. Although Italian Americans made up only 4% of the U.S. population at the start of World War I, they constituted 12% of U.S. military troops. In World War II, over 500,000 Italian Americans served in the U.S. military. Like other American women, Italian American women went to work on the homefront to support their families and their country, while the men were away at war. By the time the men returned, traditional Italian divisions of labor were gone for good in America.

In the booming postwar economy of the 1950s, Italian Americans finally improved their circumstances. They found good-paying jobs or started their own businesses. Many either moved to better neighborhoods or improved their homes in Little Italys. Young Italian Americans were able to afford higher education and so could advance to managerial or professional positions. By the 1980s, Italian Americans' average family income was about \$2,000 higher than that for all U.S. families.

Italian immigration to the United States continues today, though at a much slower pace than during the Great Migration of 1880–1920. Because of global developments and improvements in worldwide communications, today's Italian immigrants are generally more knowledgeable and sophisticated than those who came before. For instance, as of the 2000 U.S. Census, two-thirds of Italian Americans worked in white-collar positions in business, medicine, law, education, and other professions. The total Italian American population in 2000 was nearly 16 million, although through intermarriage the number of people in the United States with at least one Italian grandparent was estimated to be about 26 million. About half of all Italian Americans live in the Northeast, with 2.7 million in

New York State alone. (As of the 2000 census, 8.7% of the population of New York City was of Italian descent: 692,739 New Yorkers reported Italian ancestry, making them the largest European ethnic group in the city. The New York metropolitan area is home to 3,372,512 Italians, which is the third largest concentration in the world after the Milan and Rome metropolitan areas.) New Jersey and California each have 1.5 million Italian Americans followed by Pennsylvania (1.4 million) and Florida (1 million).

Sicilians have chosen a slightly different settlement pattern than other Italian Americans. The largest Sicilian American population is in California, with a sizeable number in New York State. The rest of the Sicilian American population is spread across the United States, with noticeable numbers in Ohio, Florida, Illinois, Michigan, and New Jersey.

Most Italian immigrants speak regional dialects of the Italian language. Many early immigrants were illiterate in "official" Italian. Once they arrived in the United States, they began to blend their various dialects with elements of official Italian and English, creating a common language known as Italglish. English words such as "picnic," "sandwich," and "son of a gun" were Italianized to become *picnicco*, *sanguiccio*, and *sonamagogna*. Subsequent generations of Italian Americans were able to choose between the regional dialect of their parents and grandparents, official Italian, English, and Italglish. With each succeeding generation, however, fluency in all but English has diminished.

Italian Americans often anglicize their names to hide their ethnicity and/or ease their acceptance into American society. In earlier times, immigration officials also misspelled Italian names on entrance visas, anglicizing them either intentionally or accidentally. In this way, Rossi became Ross, Gilberti changed to Gilbert, and Bernardo was henceforth Bernard. Well-known Italian Americans who have anglicized their names include Anne Bancroft (Anna Marie Italiano), Tony Bennett (Anthony Benedetto), Dean Martin (Dino Crocetti), and Madonna (Madonna Louise Veronica Ciccone).

Italian Americans adhere to a unique brand of Roman Catholicism. Their faith is filled with festivity, magic, and independent spirit. Although fervent believers, they also staunchly support their right to question the Pope's teachings. Many use contraceptives and promote a woman's right to have an abortion.

The first Catholics to immigrate in large numbers to the United States were Irish Catholics. Because of generations of persecution, their faith had become secretive and somber. When the Italian Catholics arrived in America with their parades, bright colors, huge feasts, and parties on any and every occasion, the Irish Catholics were shocked and offended. They refused to allow Italian Catholics to worship in their churches. Finally, the Church in Rome decided to establish separate Italian Catholic parishes in the United States. These parishes each have a patron saint, whose feast day is jubilantly celebrated with a *fiesta*. Italian Americans hold *fiestas* for a multitude of occasions, and though the specifics vary, each contains dancing, singing, feasting, and a procession through the streets. One of the largest *fiestas* is that of San Gennaro in New York City.

Weddings are the most highly celebrated rite of passage among Italian Americans, and Christmas and Easter are the most important holidays. Some Italian Americans honor the

feast day of St. Lucy (*Santa Lucia*) on 13 December, and most mark the feast day of St. John the Baptist on 24 June. All Souls Day on 1 November is another popular Italian American religious holiday, along with All Souls Eve (31 October), better known as Halloween.

Italian Americans began celebrating Columbus Day on 12 October 1866 in New York City. The tradition grew, and in 1909 Columbus Day became a legal U.S. holiday. Although Columbus Day has come under question in recent years by other ethnic groups in the United States, Italian Americans still cling to the holiday as an expression of their cultural heritage.

Italian Americans are very expressive people, communicating as much through gestures as with words. Some common Italian American gestures include slowly raising the chin, which means “I don’t know,” or “I’m not going to tell you”; thumbing the nose, an insulting gesture indicating that the other person is a fool; flicking the teeth to express anger; flicking the chin to express indifference; and lifting one eyebrow to say “It’s time to talk.”

The family is extremely important to Italian Americans. Family loyalty comes above all else. Younger generations of Italian Americans are less likely to live in neighborhoods surrounded by their extended family, so the nuclear family has become more central in recent years. The elderly are still cared for within the family whenever possible, however, in contrast to other Americans who are much more likely to admit their elderly parents and grandparents to nursing homes.

Food is nearly as important as family to Italian Americans. Most mainstream “Italian” restaurants serve an Americanized version of southern Italian cuisine, which centers on pasta (spaghetti, lasagne, ravioli, etc.). Northern Italian cuisine, revolving around polenta (made from cornmeal) and risotto (a rice dish) has been gaining in popularity in recent years. Bread is the staple food for all Italian Americans. Some traditional households use up to 25 pounds of flour per week for the family’s homemade bread supply. Homemade pasta can require another 10 pounds of flour each week.

Mealtimes are family times, and as recently as the 1970s, a high school in Cleveland, Ohio, reported problems in keeping its Italian American students in school during lunch hour. Despite regulations to the contrary, the students would leave school to have lunch at home with their families. Dinner times in the evening are also not to be missed, except in the case of emergency. Wine is always present at evening meals. Italian Americans consider wine a food, not a liquor. Drunkenness is considered disgraceful, however, as expressed in the Sicilian rhyme: *La biviri non misurata / Fa l’uomo asinata* (“Drunkenness makes an ass of a man”).

The majority of first-generation Italian Americans were uneducated laborers who believed that hard work was the path to wisdom. They did not, therefore, encourage their children to attend school. The dropout rate among second-generation Italian Americans was high. Gradually, however, succeeding generations of Italian Americans became more interested in education and began attending and finishing school in greater

numbers. According to the 2000 Census, Italian Americans had a greater high school graduation rate than the national average, and a greater than or equal rate of advanced degrees compared to the national average.

Perhaps the greatest artistic contribution Italian Americans have made to American culture is the love of opera. In 1932, Italian immigrant Lorenzo Da Ponte founded the Italian Opera House in New York City, the first opera house in the United States. Italian American Gian-Carlo Menotti composed *The Saint of Bleeker Street*, which debuted on 27 December 1954 in New York City. It was the first opera composed by an Italian American, concerning Italian Americans, and performed by Italian Americans, and it won a Pulitzer prize.

Other Italian American musicians include Enrico Caruso, Frank Sinatra, and Bruce Springsteen (who is half-Italian American, half-Dutch American), along with singer-actors Annette Funicello, Jimmy Durante, and Madonna. Al Pacino, Robert De Niro, and Sylvester Stallone are well-known Italian American actors, and Penny Marshall (Marsharelli), Francis Ford Coppola, and Martin Scorsese (Martin Marcantonio Luciano Scorsese) are successful Italian American film directors. An Italian American artist whose creations are very well known is Joe Barbera, of the Hanna-Barbera animation team (creators of Yogi Bear, Tom and Jerry, the Jetsons, and the Smurfs). Frank Stella (b. 1936) achieved fame as a minimalist and abstract expressionist painter and sculptor in the 1960s: his paintings hang in America's most prestigious museums.

Italian Americans hold fast to the traditional Italian work ethic and so have risen to the top of many fields in American society. Physicist Enrico Fermi ushered in the atomic age; Fiorenzo La Guardia became the first Italian American mayor of New York City in 1933; Geraldine Ferraro won the nomination for Democratic vice presidential candidate in 1984, the first woman ever to do so; Mario Cuomo served as the governor of New York State from 1986 to 1994; Rudolph Giuliani served as mayor of New York during the 1990s and was mayor at the time of the 11 September 2001 tragedy; and Congresswoman Nancy Pelosi was elected the first female Speaker of the House of Representatives in 2007. The first Italian American millionaire was sand-and-gravel magnate Generoso Pope, whose son, Generoso Pope, Jr., publishes the *National Enquirer*. Lee Iacocca served as president of both the Ford Motor Company and Chrysler Corporation. Ernest and Julio Gallo, who entered the wine business in 1933, soon dominated the industry. Other successful Italian American businesses include Planters Peanuts, the Bank of America, Mr. Coffee, Chun King, Celeste Italian Foods Company, and Tropicana.

Italian Americans have also been very successful in sports. Charles Atlas (born Angelo Siciliano) was a world-famous bodybuilder whose correspondence course attracted the likes of Italian American baseball player Joe DiMaggio and Mahatma Gandhi. Other well-known Italian American athletes include boxer Rocky Marciano, baseball great Lawrence Peter "Yogi" Berra, football coach Vince Lombardi, quarterback Joe Montana, hockey player Phil Esposito, and gymnast Mary Lou Retton.

Older Italian Americans continue to enjoy the traditional games of *bocce* (lawn bowling) and *morra* (a guessing game where two people each extend some fingers of one hand at the same time and loudly guess what the total number of fin-

gers will be). Most younger Italian Americans, however, have turned to more Americanized pastimes.

For the most part, Italian Americans have adapted to life in the United States and are well accepted in American society today. The difficulties of their early years in America have largely been put behind them.

While many of the stories of Italian men who came to America at the turn of the 20th century are filled with adventure and daring, the stories of the tenacious Italian women who came to America in search of success are just as compelling. Young Italian women bravely left their small towns and villages to live in the new world. They valued education, hard work, and honesty, and schooled their children in such virtues. While traditional Italian American women still work primarily in the home, contemporary Italian American women have become doctors, lawyers, artists, scientists, nurses, businesswomen, educators, writers, judges, and politicians.

Italian American men are stereotypically known for their "macho" culture with its emphasis on honor and virility. Coupled with a religious tradition steeped in Catholicism, Italian American gays and lesbians often find it a challenge to be accepted within the community. This social situation was explored in the 2003 documentary film *Saints and Sinners*, which tells the story of an Italian American gay couple planning a wedding according to Catholic rite. In addition to portraying the social ramification of such a union, the film deals with the intimate link between Italian American culture and the Catholic tradition, and suggests the perceptions that Americans have of Italian Americans and their faith.

# JAMAICANS

**LOCATION:** Jamaica

**POPULATION:** 2.8 million

**LANGUAGE:** English; Patois (Creole dialect with West African, Spanish, and French elements)

**RELIGION:** Christianity; (Anglicanism, Protestantism, and Roman Catholicism); Rastafarianism

## 1 INTRODUCTION

The official motto of Jamaica is, “Out of Many People, One People.” The motto expresses the fact that Jamaicans include people of African, European, Arabic (Lebanese descendants known as “Syrians”), Chinese, and East Indian heritage. These cultures come together to form one people, one spirit. In fact, if Jamaicans had a second official motto it would almost certainly have to be, “No problem, Mon.” This phrase and others like, “No pressure, no problem,” are typical responses when asked to do something, and often serve as stand-ins for “You’re welcome.” Decorating tee-shirts and other souvenirs, these phrases capture the care-free, happy-go-lucky spirit of Jamaicans.

Columbus discovered Jamaica in 1494. In the early 1500s, African slaves were brought in to work the sugarcane fields, replacing the native Arawaks who had perished. The island remained under Spanish rule until 1655, when it was captured by the British. During the five-year struggle between the Spanish and the British, a number of runaway slaves (later known as the Maroons), took shelter in the pits that make up the Cockpit Country area of the island. The Maroons maintained an autonomous existence for more than half a century. Abolition came in 1833, and the decline of the plantations followed. The former slaves became peasant farmers.

In 1938, Norman Washington Manley, a well-known lawyer, founded the People’s National Party (PNP), espousing a moderate form of socialism. He served as chief minister of Jamaica (1955–59) and prime minister (1959–62). His tenure served to set the stage for Jamaican independence.

In 1958, Jamaica formed the West Indies Federation with nine other British possessions, but it withdrew three years later, which led to the collapse of the federation. Jamaica’s withdrawal was led by Sir Alexander Bustamante, a cousin of Manley’s. Bustamante was a labor leader. He founded the Bustamante Industrial Trade Union, Jamaica’s largest union. Subsequently he formed the moderate Jamaica Labour Party (JLP) to counteract the more radical PNP. He was chief minister from 1953 to 1955 and became prime minister in 1962 when Jamaica gained full independence. Bustamante, who initiated extensive public works programs and land reform, remained in office until 1967.

In 1972, Michael Manley, son of Norman Manley and leader of the PNP, became prime minister. Manley instituted many socialist changes. Manley’s policies created a large trade deficit which brought Jamaica to near bankruptcy by 1980. New elections were held, with conservative Labor Party leader Edward P. G. Seaga rising to power. Seaga won reelection in 1983 but was defeated by Manley in 1989. Manley, who then adopted free-market economic policies, resigned in 1992 due to failing health. He was succeeded as party head and prime minister by Percival J. Patterson. Patterson led the PNP to victories

in 1993, 1997, and 2002. In 2005 Edward Seaga announced his resignation as JLP leader. He was succeeded by Bruce Golding, who had been a government minister under Seaga in the 1980s. In March 2006, Portia Simpson-Miller was appointed Jamaica’s seventh prime minister. She was the first woman in the nation’s history to become prime minister. In September 2007, Bruce Golding was named prime minister.

## 2 LOCATION AND HOMELAND

Jamaica’s population of more than 2.8 million is equally divided between urban and rural dwellers, and grew at a rate 0.78% in 2008. Jamaicans are mostly descendants of African Blacks, with minor representations from East Indian, Chinese, and European ancestries.

Located south of Cuba and west of Hispaniola, Jamaica is the third-largest island in the Caribbean Sea. The capital is Kingston, with a population of more than 650,000 people. Most of the soil of the island contains a high percentage of limestone, which makes cultivation difficult. The weather is almost always pleasant, with a mean annual temperature of 27°C (80°F) on the coast. Tourists flock to Jamaica for its beautiful beaches. The towns of Montego Bay, Ocho Rios, and Negril offer some of the most popular resorts. The island is susceptible to hurricanes, however, and suffered considerable damage during Hurricane Gilbert in 1988 when nearly 25% of the population was left homeless and property damage was in excess of \$300 million. In the early 21st century, hurricanes Ivan and Dean also brought severe weather to the island.

Other popular attractions for tourists are the island’s more than 800 caves. Many were home to the earliest inhabitants. Others are said to be the home of “duppies,” the word Jamaicans use for ghosts.

## 3 LANGUAGE

Jamaicans speak English, but with a distinct flavor. Elements of Elizabethan English can be heard among Jamaicans engaged in casual conversation. A jug, for example, is referred to as a “goblet.” The “th” is substituted with a “d,” such that “that” becomes “dat,” for example.

While the official language is English, most Jamaicans who live in the rural areas speak a Creole dialect. Patois, as it is called, is influenced mostly by West African languages, but also contains elements of Spanish and French. Perhaps the most famous of the patois words is *I-rie* (meaning “fabulous”), which comes from the language of Rastafarians (a religious sect). Rastafarians place great emphasis on the individual—the singular being “I” and the plural being “I and I.” Other words, such as *putta-putta* (“mud”) come from Africa.

## 4 FOLKLORE

Central to Jamaican folklore are the tales of Anansi (or Anancy) the Spider. The tales, brought to the island by the first slaves, tell of the mythical Anansi, a spider (sometimes taking the form of a man) who uses his wits to outsmart his foes. While declining in popularity, Anansi is still the subject of many bedtime stories.

## 5 RELIGION

Religion is an important part of life for Jamaicans. Around 65% are Christian. Jamaicans’ major religions include Angli-

canism, Protestantism, and Roman Catholicism. Other religions include Bahá'í, Buddhism, Islam, and Hinduism. There is a very small Jewish population.

About 5 to 10% of Jamaicans call themselves Rastafarians. Rastafarians are members of a Jamaican messianic movement dating back to the 1930s. Jamaican Marcus Garvey founded the Universal Negro Improvement Association. His goal was self-reliance for Africans at home and abroad. His “back-to-Africa” theme inspired and influenced many worldwide and is credited as the inspiration behind the independence movements in Ghana, Kenya, and Nigeria, as well as the Civil Rights movement in the United States. Today, Garvey is a national hero.

According to Rastafarian belief, the only true God is the late Ethiopian emperor Haile Selassie (originally known as Ras Tafari), and Ethiopia is the true Zion. Rastafarians claim that White Christians have perverted the scriptures to conceal the fact that Adam and Jesus were Black. Rastafarians place great emphasis on spirituality and meditation. Their rituals include the use of *ganja* (marijuana) and chanting. The ganja is smoked in a pipe called a “chalice,” usually made from goat horn or bamboo. Rastafarians are known for wearing their hair in dreadlocks, sporting beards (a sign of a pact with God), and carrying Bibles.

## 6 MAJOR HOLIDAYS

Jamaicans celebrate their independence on August 6. For several weeks beforehand, they stage a huge celebration called “Festival!” During this period artists of all types perform, many as part of competitions. School children get involved in the festivities, fostering their sense of national pride and traditions.

Jonkanoo (John Canoe) is a dancing procession around the time of Christmas. The origins of this celebration are unclear, but many believe its origins to be in East Africa. Celebrants wearing extravagant costumes dance to the music of drums and cane flutes.

Most other holidays and celebrations center on religious themes and include Ash Wednesday, Good Friday, Easter Monday, and Christmas.

## 7 RITES OF PASSAGE

Christian sacraments and traditions define the rites of passage for most Jamaicans and are celebrated in similar fashion to that in the United States.

## 8 INTERPERSONAL RELATIONS

Jamaicans tend to be casual, open, and friendly in their relationships. When parting, a typical response is “Peradventure I will see you tomorrow.”

## 9 LIVING CONDITIONS

Living conditions vary from luxurious for the affluent to rudimentary for those of lesser economic means. Poverty is an increasing problem. Health care is generally considered good, and the average life expectancy is 75.4 years for women and 71.9 years for men. For all Jamaicans, however, dealing with breakdowns of electricity, mail, water, and telephone services is not uncommon.

## 10 FAMILY LIFE

Men and women tend to marry or start living together at an early age, and a couple that does not have children soon thereafter is deemed unusual.

## 11 CLOTHING

Everyday wear for Jamaicans is cool and comfortable. Rastafarians have made the colors of the Ethiopian flag—red, green, and gold—popular in clothing. Churchgoers tend to dress very formally on Sundays.

## 12 FOOD

*Nyam* is the patois word meaning “to eat.” Jamaicans eat foods that are rich in spices, most commonly pimento, ginger, nutmeg, and pepper. Cassava (Yuca) is a tuber that is widely popular on the island. Bammy is a bread-like snack made from cassava. Ackee and saltfish is a popular Jamaican snack or breakfast dish. Ackee, the national fruit of Jamaica, if not properly prepared, can be poisonous.

For dinner, Jamaicans will typically eat peas and rice accompanied by either jerk chicken or pork. “Jerk” refers to the method of smoking the meat over a pimento wood fire. Below is a simple but spicy recipe.

### Curry Chicken

- 1–3 pounds chicken
- 2 tablespoon curry powder
- lemon juice
- 3–4 tablespoons cooking oil
- onion, thyme, garlic, pepper, salt to taste

Cut chicken into small pieces, and let sit in lemon juice for at least one hour. Remove chicken and season it. Marinate for several minutes. Heat 3–4 tablespoons of cooking oil in a skillet. Add chicken and let cook until done. Serve over white rice or rice and peas.

Young Jamaican girl holding baby girl. While women are often held in high regard, men are seen as the heads of households. (United Nations)

### 13 EDUCATION

Some 88% of all adult Jamaicans are literate. The law requires children to attend school from age 7 to 15. There are five universities in Jamaica: the University of the West Indies (Mona Campus); the University of Technology, Jamaica formerly the College of Art Science and Technology (CAST); the Northern Caribbean University; the University College of the Caribbean; and the International University of the Caribbean. Additionally there are many teacher training and community colleges. The Institute of Jamaica, also in Kingston, has a library and museum of Jamaican history, art, and natural history.

### 14 CULTURAL HERITAGE

Jamaica's musical heritage includes Mento, which is a form of music and dance with roots in African music, and Ska, a soft-style rhythm-and-blues beat. Reggae, however, has almost become synonymous with Jamaica, and Bob Marley synonymous with reggae. Bob Marley spread reggae worldwide. In 1964, Marley formed his group, the Wailers. Their first hit was "Simmer Down." Three years later, Marley converted to the Rastafarian religion. Rastafarian themes dominated his work. Marley became a songwriter for Johnny Nash in 1972. His first international hit was "Stir It Up." In 1973 Bob Marley and the Wailers had their American debut album, *Catch a Fire*, and its follow up, *Burnin'* (which contained the subsequent hits, "Get Up, Stand Up" and "I Shot the Sheriff"—popularized by Eric Clapton). Later albums included *Natty Dread*, *Rastaman Vi-*

*bration*, and *Uprising*. Marley, who died of cancer in 1981 at the age of 36, was awarded the Jamaican Order of Merit. His work influenced countless reggae and pop artists, including Ziggy Marley (Bob's son), who revitalized reggae in the late 1980s and 1990s.

Dance-hall music (also known as "DJ music") is an offshoot of reggae which is popular with Jamaicans. The music is loud and dancers wear elaborate and colorful outfits. Also popular is "So-Ca," a combination of soul and calypso.

Paintings and sculptures are abundant in Jamaica. One of the most famous painters was John Dunkley, whose work has a primitive quality. Edna Manley (wife of Norman and mother of Michael) was renowned for her sculptures. Also renowned for sculpting was Mallica "Kapo" Reynolds, whose work is on display at the National Gallery in Kingston. In literature, Jamaican-born poet, critic, and educator Louis Aston Marantz Simpson is recognized for his elegant verse. His work, *At the End of the Open Road*, won the 1964 Pulitzer Prize for poetry.

### 15 WORK

Approximately 17% of the Jamaican work force is devoted to agriculture. Sugar, tropical fruits, coffee, cacao, and spices are grown in quantity for export through the ports of Kingston and Montego Bay. Another 64% is in services, including finance, real estate, public administration, public utilities, transportation, communication, construction, and other sectors. Manufacturing accounts for 19% of the work force. Jamaica has developed a profitable mining industry. Jamaica is among the world's leading producers of bauxite and alumina, which are exported to Canada, Norway, and the United States for refining into aluminum. Remittances account for nearly 20% of the gross domestic product (GDP) and are equivalent to tourism revenues.

The lack of indigenous energy sources has slowed Jamaica's industrial development. Jamaica struggles under the fourth highest foreign debt burden in the world in proportion to population. The economy also faces serious long-term problems, including high but declining interest rates, increased foreign competition, exchange rate instability, a sizable merchandise trade deficit, and large-scale unemployment and underemployment.

Some Jamaicans make a living as "higglers." These are people who buy inexpensive goods overseas and then sell them for a substantial profit on the sidewalks of Jamaica.

### 16 SPORTS

Sports for Jamaicans can be summed up as follows: cricket, cricket, and more cricket. Vaguely resembling baseball, cricket dates back to 16th-century England. A match can go on for days. George Headley was a legendary Jamaican cricket player of the 1930s. Children and adults alike play and watch the sport throughout the island.

Jamaicans have also excelled in track and field, boxing, and basketball. Jamaicans also enjoy all types of water sports.

### 17 ENTERTAINMENT AND RECREATION

While the general attitude of Jamaicans is one that is typically laid-back and casual, Jamaicans are passionate about enjoying life. Jamaicans are not ones to sit and watch television. Entertainment and recreation often take the form of listening to live

music (usually reggae), gathering with friends, participating in sports, or enjoying a day of food and fun at the beach.

### 18 FOLK ART, CRAFTS, AND HOBBIES

Along the tourist areas, Jamaican artisans display their crafts, which include *bankras* (baskets) and *yabbas* (clay bowls).

### 19 SOCIAL PROBLEMS

Jamaicans have had their share of racial tension and class struggles that disrupt an otherwise unified, peaceful existence. Deteriorating economic conditions during the 1970s led to violence as rival gangs affiliated with the major political parties evolved into powerful organized crime networks involved in international drug smuggling and money laundering. Violent crime, drug trafficking, and poverty are continuing problems today. High unemployment also worsens the crime problem, including gang violence that is fueled by the drug trade. Considered sacred by some, *ganja* (marijuana) is illegal, but the government's actions against its cultivation and use are often seen as superficial.

### 20 GENDER ISSUES

Women's liberation has been slow to come to Jamaica. While women are often held in high regard, men are seen as the heads of households. Great importance is placed on a man's virility and a woman's fertility.

Homosexual intercourse between men is illegal, and homophobia is rife in Jamaica. Homosexuality is a subject that evokes extreme reactions among Jamaicans. Most Jamaican gays have not "come out" of the closet.

## JAPANESE AMERICANS

For more information on Japanese history and culture, see **Vol. 3: Japanese**.

### OVERVIEW

The first Japanese arrived in America by accident in the early 1800s, swept off in their fishing boats by powerful currents and shipwrecked. Rescued at sea by U.S. ships, they were brought to America, where they usually remained because it was illegal at that time to leave or enter Japan. In 1868 a group of about 150 contract laborers secretly left Japan and came to work on the sugar plantations in Hawaii. After suffering mistreatment and harsh working conditions, they were called back to Japan. About one-third returned, while the others chose to stay on in Hawaii.

In 1885, Japan decided to open its borders in a limited way and allowed a restricted number of emigrants to leave for Hawaii. Most of those who chose to go to Hawaii intended to work hard, save a large sum of money, and return to Japan. A few did, but most ended up staying in Hawaii.

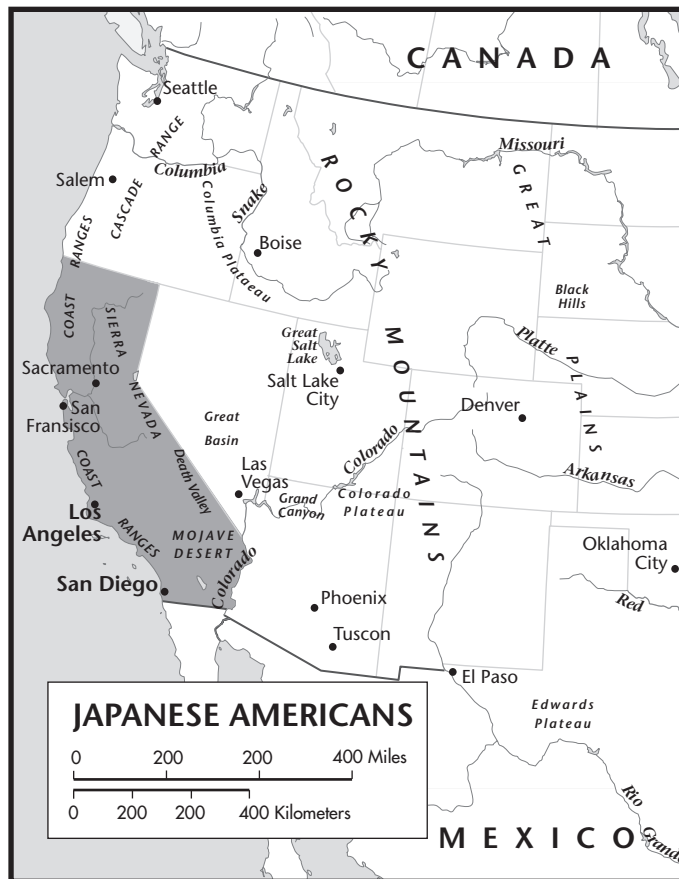

Groups of Japanese Americans began to establish farming colonies in the early 1900s. Although the first experiment, the Wakamatsu Tea and Silk Colony established in 1869 near Sacramento, California, had failed, later attempts were more successful. Between 1904 and 1919, five farming colonies, each called Yamato Colony, were established in the San Joaquin Valley of California, near Boca Raton, Florida, and near Brownsville, Texas. The Texas colony did not last much longer than the original Wakamatsu failure, and the Florida colony eventually dwindled away (though it struggled along for almost three decades). The California colonies, however, are still in operation today, and the Wakamatsu Colony is being restored as an historic site.

In 1908, as a compromise between Japanese-U.S. relations and anti-Asian racial tensions in California, Japan and the United States signed the "Gentleman's Agreement," discontinuing all Japanese emigration to the United States except for "former residents, parents, wives or children of residents" in return for the integration of Japanese American students into American public schools. But fear of the so-called "Yellow Peril" led to further discriminatory acts, such as alien land laws (stating that no one who was ineligible for U.S. citizenship, which included all Asians, could own land); the "Ladies' Agreement" of 1921, barring any more picture brides from entering the United States, and, finally, the Asian Exclusion Act of 1924, which prohibited the immigration of anyone ineligible for citizenship, effectively ending Japanese immigration.

In 1929, Japanese Americans created the Japanese American Citizens League (JACL) to fight for their rights and promote a Japanese American identity for all Japanese Americans. The JACL still exists today as the largest Asian American civil rights organization.

Relations between the United States and Japan worsened throughout the 1930s. Then, on 7 December 1941, Japanese forces attacked Pearl Harbor in Hawaii, at that time a U.S. Territory (it would become the 50th U.S. state in 1959). The U.S. government immediately seized over 1,000 Japanese American community leaders in Hawaii and on the U.S. west coast and

imprisoned them. Two months later, on 10 February 1942, U.S. President Franklin Roosevelt signed Executive Order 9066, which ordered all Japanese Americans to be evacuated from their homes and sent to detention camps. They were also presented with loyalty questionnaires to fill out and sign. At the time, the U.S. government believed this was necessary to prevent those Japanese Americans still loyal to Japan from sabotaging U.S. military efforts, carrying out espionage for the Japanese government, or staging internal attacks. However, no other immigrant group was detained or had their loyalty questioned during the whole of World War II (1939–45), including German and Italian Americans. Executive Order 9066 was clearly racially motivated, and it would take decades for the U.S. government to redress this grievous wrong. In 1988, a bill was finally passed to pay \$20,000 per internee living when the bill went into effect, or to his or her heirs, and in 2005 the California legislature passed a bill to give diplomas to Japanese Americans who had been forcibly removed from high school during the internment. The internment camps themselves are now being preserved as historic sites and educational centers.

Most Japanese Americans had been forced to sell their homes and businesses at a moment's notice when informed that they were to be evacuated. After suffering for almost three years in the dreadful living conditions of the internment camps, they were released to a life with no home, no property, and no financial resources. Many were afraid to return to the "Japantowns" of the West Coast because anti-Asian sentiment was still running high there. Consequently, the Japanese American community became much more widely dispersed, scattering across the United States.

Japanese Americans also tried to hide their cultural differences, blending in with mainstream American society as much as possible. A great deal of traditional Japanese culture was discarded by Japanese Americans in those first years after World War II, and more has been lost in succeeding generations. The movement for redress (compensation for wrongs done to Japanese Americans), which began in earnest in the 1970s, did lead many young Japanese Americans to examine their history and begin to reclaim their identity as Japanese Americans. Once redress was achieved, however, the rallying point for Japanese Americans as a culture group was gone and interest in a separate Japanese American identity waned once again.

The children and grandchildren of Japanese American internees were encouraged to adopt mainstream American values, traditions, and attitudes. Most grew up speaking only English, learning and experiencing very little of traditional Japanese culture. Because they no longer lived in Japanese American enclaves but were rather dispersed throughout American communities, they made many non-Japanese American friends. This led to a rise in interracial marriages to the point that today there are very few Japanese American children of pure Japanese descent. The Japanese American community may eventually disappear simply through racial blending.

According to the U.S. Census, there were 1,148,932 Japanese Americans living in the United States in 2000. Over two-thirds (about 70%) are American-born, almost twice as many as in any other Asian American group. Although Japanese immigration continues into the United States, most Japanese Americans are descended from Japanese who arrived before 1924. Some 200,000 Japanese settled in Hawaii and 180,000 on the U.S. mainland between 1885 and 1924.

Most Japanese Americans (68%) still live in the West, with the majority concentrated in the Pacific region. California has the highest population of Japanese Americans (394,896). Although Hawaii has fewer Japanese Americans (296,674) than California, they comprise a higher percentage of the total population (25%, compared to 1% in California). In 2000 one-fifth (20%) of all Japanese Americans lived in Honolulu alone. The next highest Japanese American populations are in the states of Washington (56,210), New York (45,237), Texas (28,060), and Illinois (27,702).

Japanese Americans distinguish themselves by generation. *Issei* are first generation Japanese Americans who were born in Japan. Their children, second generation Japanese Americans, are called *Nisei*. The children of *Nisei* and grandchildren of *Issei* are known as *Sansei*, or third generation Japanese Americans. *Yonsei* are fourth generation Japanese Americans, children of *Sansei*. Many Japanese Americans today are either *Sansei* or *Yonsei*. They have lived in the United States longer than some European Americans and consider themselves more American than Japanese. Most do not speak Japanese or follow traditional Japanese customs.

The Japanese are very tolerant, and Japanese Americans likewise follow a variety of religious faiths. In their efforts to assimilate with mainstream American culture, many have become Christian, though they may still visit Buddhist temples on traditional Buddhist holidays. Certain Shinto customs also survive, such as visiting shrines at New Year's and praying to Shinto gods for luck.

Major rites of passage, such as weddings and funerals, may be celebrated in traditional Buddhist or Shinto fashion. Some

families take their children to the Buddhist temple for the Infant's First Service, or *Hatsu Mairi*, in May, where the children are formally introduced to the community for the first time. Adult Japanese Americans who choose to pursue Buddhism seriously are given a Buddhist name in the Three Treasures, or *Ti Sarana*, ceremony held every March and September.

Most Japanese Americans continue to celebrate certain traditional Japanese holidays. Although different communities celebrate a variety of holidays, nearly all Japanese Americans recognize New Year's (*Shogatsu*), the Doll Festival (*Hina Matsuri*), Children's Day (*Tango no Sekku*), the Weaving Loom or Star Festival (*Tanabata*), and the Bon Dance (*Bon Odori*). Japanese Americans often add typical American holiday foods, such as ham or turkey, to their traditional Japanese feasts, and girls may display American rather than Japanese dolls on Hina Matsuri.

Tanabata had been celebrated in a rather reduced form in the United States, consisting of small gatherings of people reading poetry. Recently, however, Japanese Americans are returning to more elaborate displays of traditional Tanabata decorations. Bon Odori has become the occasion for huge parades with professional dancers in San Francisco and Los Angeles.

Although Japanese Americans have for the most part become thoroughly Americanized, certain traditional customs remain, such as gift giving. Younger generations, however, are beginning to lose touch with the importance of these rituals, much to the chagrin of their parents and grandparents. One traditional Japanese value to which even younger Japanese Americans still adhere is the strong bond between mother and child. Studies show that Japanese American children are held more by their mothers and spend less time alone than other children in the United States. Japanese American children are taught to respect their elders, and they grow up with feelings of gratitude and obligation toward their parents that last throughout their lifetime.

Many Japanese Americans continue to eat traditional Japanese foods, such as sushi, sashimi, maki, and tempura. Japanese foods have also become popular among the general U.S. population. In May 1964, Hiroaki "Rocky" Aoki (1938–) opened the first Benihana restaurant, in New York City. Though some critics consider the food more American than Japanese, it is prepared in a flamboyant "Japanese" manner by Japanese American chefs wielding large knives at lightning speeds right at the customers' table. Benihana restaurants are now located in cities throughout the world.

Japanese Americans have contributed more than just food to American society. The arts of haiku poetry, origami (paper-folding), ikebana (flower arranging), and Kabuki theater are practiced and enjoyed by many Americans. Actors such as George Takei (*Star Trek*) and Pat Morita (*Happy Days* and the *Karate Kid* films) are well known to most Americans, and musicians including Yoko Ono, Toshiko Akiyoshi, and the jazz band Hiroshima have added elements of their Japanese heritage to the world of American music, as have James Iha, a guitarist formerly with the Smashing Pumpkins, and rapper Mike Shinoda of Linkin Park.

A number of Japanese American writers have found success, including Ronald Takaki, Bill Hosokawa, Jun Atsushi Iwamatsu, Lydia Minatoya, David Mura, Phillip Kan Gotanda, Kyoko Mori, and others. Successful Japanese American artists

and architects include Eiko Ishioka, Gyo Obata, and Minoru Yamasaki.

Although the first Japanese immigrants to Hawaii and the United States came as contract laborers, they were carefully selected by the Japanese government from the ranks of the well educated to serve as ambassadors of a sort. Most Japanese Americans descend from these hard-working, highly skilled immigrants and carry on their drive to succeed. The unemployment rate among Japanese Americans is very low, and only 8.6% live below the poverty line, as compared to 12.4% of the overall American population.

Some Japanese Americans who have risen to the top in their fields are Nobel Prize winners Leo Esaki and Tetsuo Akutsu; research scientist Douglas Ishii; Ellison Onizuka, the first Asian American astronaut (who was tragically killed aboard the space shuttle Challenger in 1986); U.S. Senators Samuel Ichiye Hayakawa and Daniel Inouye; U.S. representatives Bob Matsui, Patsy Takemoto Mink, and Norman Mineta; Superior Court Judge Lance Ito (who was named to preside over the O. J. Simpson trial in 1994); George Aratani, founder of the Mikasa Corporation (one of the largest privately owned international firms); lawyer and director of the U.S. Office for Civil Rights, Dennis Hayashi; and CBS news correspondent James Hattori.

Japanese Americans have also been very successful in sports. Kristi Yamaguchi won the gold medal for figure skating in the 1992 Winter Olympics and has also won gold and silver medals at World Championship competitions. Several Japanese American baseball players have made the major leagues, and Japanese American athletes have risen to the top in many other sports as well, including gymnastics, boxing, golf, track and field, tennis, volleyball, hockey, football, and basketball. Miki Gorman, a 2005 nominee for the National Distance Running Hall of Fame, is the only woman to win the Boston and New York City marathons twice each, as well as the only woman to win them both in the same year (1977). She was also the first woman to finish the Boston Marathon in under three hours (1974). Japanese Americans are also responsible for bringing karate, judo, aikido, and ninjutsu (whose practitioners are called ninjas) to the United States.

Japanese Americans still suffer the wounds and scars of internment during World War II, and anti-Asian discrimination continues to afflict their lives. Studies have shown that Japanese American men are paid less than what European American men earn for the same work, and few Japanese Americans are promoted to top management positions. Chinese American Vincent Chin was mistaken for a Japanese by European American auto workers in Detroit in 1982. The auto workers called Chin a "Jap," blamed him for the loss of their jobs, and beat him to death on the street. This sort of racial prejudice prevents Japanese Americans from taking their full and rightful place in American society.

Both Japan and Hawaii encouraged the emigration of women to the United States in the late 19th and early 20th centuries to promote a stable home life among Japanese laborers there and discourage prostitution, gambling, and other vices to which single young men might succumb. Many Japanese women came to Hawaii and the U.S. west coast as "picture brides." In a system similar to the traditional arranged marriages of Japan, a man and a woman would exchange photos and letters until the woman could travel across the sea to join her husband.

Despite Japanese and Hawaiian efforts, however, some hundreds or even thousands of young Japanese women were brought to Hawaii and the United States as prostitutes. Most were either sold into prostitution by their destitute families, kidnapped, or tricked into joining the recruiters. Life was hard for these young women, and they saw little of the profits from their forced labors.

Other Japanese women came to Hawaii and the United States, not as picture brides or prostitutes to serve the male contract laborers, but as contract laborers themselves. Thousands of Japanese women worked as cooks, seamstresses, and field laborers alongside the men. However, even their lives were more difficult than the lives of Japanese American men: although the women did equal work, they received only \$6 per month in wages, as compared to the men's wages of \$10 per month.

# JEWISH AMERICANS

See also the article entitled **Traditional Orthodox Jews** in Volume 3.

## OVERVIEW

The United States is home to 5.3 million Jews, the second largest Jewish population found in any single country (behind Israel) and more than 40% of the world's 13 million Jews. (Israel, the historical homeland of the Jewish people and a modern independent nation since 1948, had about 40,000 more Jews than America in 2006.) The significance of Jewish American contributions to American politics, business, science, and culture far outweighs the demographic importance of this group that represents fewer than 3% of the population. The sonnet of welcome ("The New Colossus") inscribed in 1896 on a bronze plaque at the base of the Statue of Liberty was written by Emma Lazarus, a Jewish American. Its promise ("Give me your tired, your poor, Your huddled masses, yearning to breathe free,") has rung true for generations of Jews fleeing poverty and religious persecution in Europe. In turn, they and their descendants have enriched the lives of many in their adopted country through their love of learning, their humor, their artistic gifts, their commitment to social and political causes, and their energy and ambition, fueled by the determination to provide better lives for their families.

The Jews are neither a race nor a nationality, and religious belief by itself does not provide a satisfactory definition, as there are Jewish atheists and agnostics who reject the traditions of religious observance but still claim Judaism as their cultural and historical heritage. In practical terms, a Jew is someone who is either born to Jewish parents—according to the Orthodox view, it is the mother who must be Jewish—or who converts to Judaism. Historically, the Jews are a Semitic people who trace their ancestry to the Middle East some 4,000 years ago, when the patriarch Abraham founded a monotheistic religion based on the belief in one God who is the creator and ruler of the universe. Abraham's descendants, known as the Hebrews, lived for over 2,000 years in Canaan (later known as Palestine and today the State of Israel). After a period of enslavement in Egypt, they were led to freedom in about 1225 BC by Moses, who is said to have received the Old Testament of the Bible—including the Ten Commandments—from God on Mount Sinai during that time. Except for a brief period of Babylonian captivity, the Jews remained in Palestine until the Romans destroyed their Temple in AD 70 and officially banned their religion in AD 135, inaugurating the long period known as the Jewish diaspora, or dispersion.

Scattered throughout North Africa and Europe, the Jews remained a minority in every country in which they settled. Rather than a homeland, the unifying force behind their survival as a people became their heritage of religious scholarship, observance, and customs. Under Muslim rule during the Middle Ages, the Jews of Spain and Portugal, known as Sephardim (or Sephardic Jews), enjoyed an unusual period of enlightened tolerance, when they made significant contributions to literature and learning before being expelled in 1492 at the hands of the Spanish Inquisition.

In the northern parts of Europe, Ashkenazi Jews, long persecuted as "Christ killers," were expelled from England, France,

and Germany during the 13th and 14th centuries. The majority migrated eastward to Poland, which was home to the world's largest Jewish population by the 19th century. After the Protestant Reformation, Western Europe became more hospitable to the Jews, many of whom were able to attain wealth and status through trade and banking. In late-18th and early 19th-century Germany, the democratic ideals fostered by the French Revolution led to a period of Jewish economic and cultural advancement known as the Jewish Enlightenment, or *Haskalah*. However, by mid-century, political unrest began to threaten Western and then Eastern Europe's Jewish communities, inaugurating a period of emigration, much of it to the United States.

The first wave of Jewish immigration to the New World had begun in 1654, when a party of 23 Sephardic Jews from Brazil arrived in the community that was known as New Amsterdam under Dutch rule and later as New York. In the following decades, Jewish immigrants from England, Holland, Germany, and southern Europe settled in coastal cities along the eastern seaboard, from Rhode Island to Georgia. Their numbers had risen to over 2,000 by the time of the American Revolution, and 6,000 by 1826.

The second wave of Jewish immigration began in the mid 19th century as a result of the social turmoil that had accompanied the failed European revolutionary movements of the 1840s. Immigrants from Germany, as well as from other German-speaking areas of central Europe, increased the size of America's Jewish population to 50,000 by 1850 and 150,000 only a decade later, pushing westward to settle in cities such as Chicago, Cleveland, Detroit, and St. Louis and, ultimately, communities on the west coast, including Portland and San Francisco. By the end of the 19th century, the main impetus for Jewish immigration had shifted to Eastern Europe. Following the massacre of Russia's Czar Alexander II in 1881, a resurgence of anti-Semitism culminated in a wave of brutal massacres known as pogroms. The pogroms, in combination with harsh economic conditions, led to a mass exodus of Eastern European Jews. In the years between 1880 and 1924, one-third of Eastern European Jewry emigrated, with the overwhelming majority bound for the United States. The U.S. Jewish population grew from about 250,000 in 1881 to 4.5 million by the late 1920s to become the largest Jewish community in the world. During these years, Jews accounted for about 8% of all immigrants to America.

The new Eastern European immigrants settled primarily in major cities including New York, Chicago, Philadelphia, and Boston. Many were employed in the garment industry and other types of manual labor. After 1924, Jewish immigration to America—like that of Asians and other non-Western European groups—decreased sharply due to restrictive immigration legislation. Immigration quotas prevailed even during the era of the Nazi holocaust in Europe; only 150,000 Jews managed to enter the United States between 1935 and 1941, after which point it became virtually impossible for Jews to leave Europe. Levels of Jewish immigration increased in the years immediately following World War II, as Holocaust survivors began arriving in the United States. In the decades after the war, about a half-million Jews emigrated to America from Europe and Russia, even though, for the first time in 2,000 years, the Jews once again had a country of their own—Israel, which achieved statehood in 1948. In the 1980s, policy changes in the former Soviet Union allowed large numbers of Soviet Jews to emigrate

both to the United States and Israel. Approximately 300,000 Jews emigrated to the U.S. during the 1990s, but the community lost some 50,000 Jews a year into the 2000s, mostly to natural attrition.

Historically, the greatest number of Jews have settled in the northeastern states, although, mirroring a larger population trend, the number of Jews in southern and western states is increasing. In 2006, the four states with the largest Jewish populations were New York (1.6 million), California (1.2 million), Florida (650,000), and New Jersey (480,000). The metropolitan areas with the largest Jewish populations were New York City (1.9 million), Los Angeles (620,000), Southeast Florida (500,000), Philadelphia (276,000), Chicago (261,000), Boston (227,000), the San Francisco Bay area (210,000), and Washington, D.C. (165,000).

Given the high value that Jews have historically placed on literacy and education, early waves of Jewish immigrants tended to become rapidly acculturated into their new country. As 19th century German-speaking immigrants established themselves and attained material prosperity, they gained widespread acceptance within American society and, in turn, were eager to adopt the language and customs of their adopted land. However, the Eastern European Jews who followed them were assimilated more slowly into the mainstream culture. Their previous lives in the Jewish ghettos and *shtetls* (small towns) of Poland and Russia had, to a great extent, isolated them from Western secular ways. Once in America, most crowded together in closely knit communities, clinging to their customs and traditions and continuing (at least at home) to speak Yiddish, the hybrid of medieval German and Hebrew that had been the common language of Jews throughout Europe since the Middle Ages.

Perceived as different in a way that their predecessors had not been, these new immigrants also fell prey to a wave of anti-immigrant sentiment that affected attitudes toward newly arrived non-Jewish immigrants from southern Europe, Asia, and elsewhere. Ironically, the restrictive quotas that grew from the perceived foreignness of Jewish immigrants from Eastern Europe helped those already here to assimilate more rapidly into the mainstream. With fewer new immigrants to swell its ranks, the Yiddish-speaking working class declined, and American Jews became an increasingly middle-class, educated, and assimilated population. Anti-Semitic feeling in the United States, which had peaked in the 1930s with the broadcasts of the Roman Catholic priest Charles Coughlin, waned after World War II when the full extent of the Nazi atrocities became known. Restrictive quotas, which had been adopted in higher education and hiring, were gradually abandoned, and Jews attained full participation in business, academia, and the professions. Since about the middle of the 20th century, a modern secular lifestyle has been the norm for the vast majority of Jews in America, as elsewhere in the world. About 70% of American Jews identify themselves as either Conservative or Reform, including many who do not attend services regularly, while another 10% are Orthodox (a category that includes both modern Orthodox Jews, who practice strict religious observance while participating in mainstream American culture, and a small minority of ultra-Orthodox Hasidim who rigorously reject most aspects of modern secular life). The American Jewish community also includes secular Jews who do not practice any religious observance but identify themselves as Jewish on the basis of heritage and culture.

In spite of the great variety—in religious observance, in lifestyle, in occupation, in political affiliation—that characterizes Jewish life in America, one cultural tradition that still unifies many Jews and brings them close to their heritage is observance of the Jewish holidays. The most important holidays are Rosh Hashanah (the Jewish New Year) and Yom Kippur (the Day of Atonement), which mark the beginning and end of a 10-day period that occurs in September–October (the Jewish holidays are based on a traditional lunar calendar). Observant Jews attend services and, on Yom Kippur, undertake a 25-hour fast, a solemn period of contemplation and prayer.

Chanukah, observed in December, is, in religious terms, a minor holiday, but it is still one of the best-known and most widely observed. In Jewish homes, candles—one for each night—are lit in an eight-branched candelabrum called a menorah to commemorate the burning of an oil lamp for eight days when the Jews recaptured their temple from the Syrians in AD 164. Children traditionally receive gifts and chocolate Chanukah gelt (coins) and play with a top called a *dreydl*. Another important period of observance for Jewish families is Passover, which commemorates the biblical exodus of the Jews from Egypt. The holiday begins with a festive meal, called a *se-der*, at which the story of the Exodus is recounted and the guests sample a collection of symbolic foods, each of which has a special significance in relation to the Jews' enslavement in Egypt and their subsequent liberation. The most famous of these is the matzoh, a square of unleavened bread, which is eaten instead of bread and other bakery products throughout the eight-day Passover period. Other Jewish holidays are also associated with special foods, such as the potato pancakes (*latkes*) traditionally served on Chanukah, or the triangular pastries (*hamentashen*) baked on Purim. In addition, many types of "Jewish food"—such as bagels with lox, chicken soup, Challah bread, and kosher dill pickles—not only serve as a unifying tradition shared by observant and non-observant Jews alike but have been assimilated into the larger mainstream culture. As proclaimed by a 1960s poster that depicted a Native American eating a corned beef sandwich: "You don't have to be Jewish to love Levy's rye bread."

Jewish Americans have excelled in nearly every field of endeavor. From Nobel Prize winning chemists, biologists, physicians, physicists, and mathematicians, to psychologists, linguists, economists, social and political theorists, historians, politicians, journalists, jurists, sportspeople, and businesspeople, to entertainers, actors, architects, composers, artists, photographers, playwrights, poets, and novelists, Jewish Americans have contributed greatly—and disproportionately to their numbers—to American history, civilization, and culture.

With the emigration of large numbers of Jews from Central and Eastern Europe at the turn of the 20th century, many Jewish immigrant women made a living in the garment industry and sweatshops of New York and other urban areas. Some first-generation immigrants became union leaders and political activists, such as Rose Pastor Stokes, Rose Schneiderman, Emma Goldman, and Mollie Steimer. The stage and screen also brought Jewish women into the spotlight, first as stars of Yiddish theater and film and then as leading ladies in national roles. However, marriage remained vitally important to most American Jewish women, and careers outside the home for middle-class women were unusual. Jewish American home-

makers were engaged in raising their children, participating in local female mutual-aid societies, and being involved in religious life, primarily through their synagogues and national Jewish women's groups such as Hadassah, a Zionist organization, or the National Council of Jewish Women.

The "second wave" of feminism in the United States got its spark from the publication in 1963 of Jewish American Betty Friedan's *The Feminine Mystique*. Some Jewish American women participated in campus protests and marches for feminists issues and civil rights, and against the Vietnam War, notable among them activist and author Grace Paley (1922–2007). They entered the Reform and Conservative rabbinate and sought equality with men in religious life, while Orthodox women began to study traditional texts typically reserved for men. Jewish women in the 21st century are scholars, politicians, Nobel Prize-winners, astronauts, and other prominent figures, among them U.S. Supreme Court Justice Ruth Bader Ginsburg (b. 1933).

Orthodox and some Conservative Jews regard homosexuality as sinful and forbidden by the Torah, while other Conservatives take a more liberal view of homosexual relationships. The Reform Judaism movement, the largest branch of Judaism in the United States, has rejected the traditional view of Jewish law on the issue of homosexuality. Reform Jews do not prohibit ordination of gays and lesbians as rabbis and cantors.

# JIVARO

**PRONUNCIATION:** Hee-va-ro

**LOCATION:** Ecuador; Peru (Eastern slopes of the Andes mountains), and western Colombia

**POPULATION:** 15,000–50,000 (Estimate. No recent census have been completed)

**LANGUAGE:** Jivaro; Quechua

**RELIGION:** Traditional mystical and spiritual beliefs

## 1 INTRODUCTION

The Jivaro are an Andean tribe often considered to be the most warlike people of South America. Their history as violent warriors goes back to the days of the expansion of the Inca Empire when the Jivaro fought to remain free of Inca control. They also battled the Spanish during the conquest, and it is alleged that they massacred nearly 50,000 Spaniards in 1599. One of the preferred warfare devices used by Jivaro to fight the Europeans was the blowgun, using poisoned darts. In the centuries following the conquest, the Jivaro continued to fight assimilation into modern society, and they have resisted successive waves of missionaries. Once famed for their practice of shrinking human heads, the Jivaro in recent times have become largely peaceful and are no longer completely isolated from modern society.

## 2 LOCATION AND HOMELAND

The Jivaro live on the eastern slopes of the Andes, where mountain ranges meet the Amazon headwaters. This tropical forest region is characterized by frequent and heavy rainfall, and dense tropical vegetation. The Jivaro people developed a tropical-forest type of agriculture that has allowed them to grow different crops such as cassava, corn (maize), and sweet potatoes. To complement their diet, Jivaro fish, hunt, and gather fruits in the forest.

The Jivaro are mainly concentrated in Ecuador, although many closely related tribes, such as the Aguaruna, are found in Peru and Colombia. Current estimates place the population at approximately 15,000–50,000 people.

## 3 LANGUAGE

The Jivaro lend their name to a linguistic family. Jivaro consists of two languages, Jivaroan and Aguaruna, and a variety of dialects are spoken by related groups in the region, such as Achuar-Shiwiar, Huambisa, Shuar, and Maina among others. However, some linguists consider Jivaroan to be a single language with Aguaruna being the most divergent dialect. Jivaroan is known and spoken in Peru, Ecuador, and a small part of Colombia, while Aguaruna is spoken in four regions of Peru: Amazonas, Cajamarca, Loreto, and San Martin.

## 4 FOLKLORE

The Jivaro have a rich mythology. A variety of ancient myths have been passed down through the generations to explain the origins of the Jivaro peoples. In one story of Jivaro creation, the Andean foothills were subject to a severe flood, killing all but two brothers. Upon the brothers' return to their shelter after the waters had receded, they found dishes of food laid out

for them by two parrots. One of the brothers caught one of the gift-bearing parrots and married her. This marriage produced three girls and three boys, whose descendants became the Jivaro people. Jivaro myths, it is believed, are an amalgamation of traditional Jivaro mythology and more modern beliefs introduced in the past decades by missionaries.

The boa constrictor holds a unique place in Jivaro mythology. The largest snake in the Amazon basin is respected and feared not merely because of its strength, but because it is believed to possess strong supernatural powers.

## 5 RELIGION

The Jivaro belong to a spiritual and mystical world. The Jivaro hold a deep-rooted belief that spiritual forces all around them are responsible for real-world occurrences. They ascribe spiritual significance to animals, plants, and objects. Many daily customs and behaviors are guided by their desire to attain spiritual power or avoid evil spirits. Fearful of witchcraft, the Jivaro often attribute sickness or death to the power of their enemies to cast curses.

There are a great many deities or gods that the Jivaro revere. Primary among these is Nungui or Earth Mother who is believed to have the power to make plants grow. Residing deep underground, she emerges at night to dance in the garden. Women sing to Nungui to ask her to protect the garden, and they carefully weed the garden daily to appease her. Equally important is the quest for an *arutam* soul, which offers protection from injury, disease, or death. This spiritual power is temporary, however, but it can eventually be replaced by killing an enemy. The pursuit of protection by *arutam* power provides the belief system underlying the pervasive violence in Jivaro society.

## 6 MAJOR HOLIDAYS

Jivaro holidays consist of the various rituals and celebrations that mark major life transitions or events.

## 7 RITES OF PASSAGE

Jivaro rites of passage and celebrations are reflections of their spiritual beliefs. All personal milestones and important events are celebrated with spiritual significance. The most important moment in a young male Jivaro's life is when he is encouraged to gain his *arutam*, or protective spirit. Parents fear that without this protective spirit, Jivaro youths will be unlikely to survive into adulthood. At or before puberty, young male Jivaro are led deep into the forest where they consume a hallucinogenic drug called *maikoa* and then await a vision of the *arutam* soul that will protect them from danger. They may remain there for days, fasting and bathing in a waterfall, while they await the sacred vision. If the vision does not come, they return home, then set off again to the forest to make a second attempt. Once this power is received, the boy is allowed to participate in many adult activities, such as hunting.

Full adult status, however, is not given until the boy successfully hunts down a sloth and learns the head-shrinking techniques. Despite the prohibition of headhunting activities, such practice reportedly continued into the mid-20th century. The Jivaro tribes of Ecuador and Peru had a degree of expertise in the art of mummification. According to historical accounts, Jivaro warrior used to take additional precaution of ensuring

the immortality of their chiefs by roasting their embalmed bodies over very low fires.

## 8 INTERPERSONAL RELATIONS

Despite their warlike reputation, the Jivaro are in fact a very sociable people. When visiting a neighbor or relative's house, guests can expect a hospitable welcome. Beer made from manioc (cassava) root will be offered, and the family meal will be shared. Often, if the distances traveled are great, the guests will be invited to stay for a few days. Banana leaves laid on the dirt floor serve as beds for the visitors.

These visits also provide an opportunity for men to seek new wives. In contrast to Western cultures, it is the men that are fussy about their appearance. A man may spend considerable time before a visit or party painting his face and putting decorative adornments on his clothes and in his hair. On special occasions, complex geometric designs are painted on the nose and cheekbones. Toucan feathers adorn the hair, and ear sticks are placed through holes in the ear. When trying to attract a young woman, the suitor concocts a homemade mixture of plants, herbs, and oils that acts like a perfume.

Gift-giving is also important among the Jivaro. A common gift for the potential bride is the fang of a boa constrictor that are purported to bring good luck. If these gestures of affection are reciprocated, the man may begin negotiations with the woman's father to marry her. Romantic love and mutual attraction are paramount in the selection of a spouse. In addition, women seek good hunters and warriors as husbands,

while men desire good gardeners and potters. The husband is obligated to pay a bride-price or perform services to the wife's father.

## 9 LIVING CONDITIONS

Related families live in a single large community house rather than in a village. The most common construction is a large, one-room shelter, with no internal walls or rooms for privacy. These houses, called *jivaria*, generally house large nuclear families averaging 8 to 10 people and an entire community goes from 30 to 40 people. For defensive purposes *Jivaria* shelters are built on a steep hill by the male head of the household with help from his male relatives. The houses must be strong enough to withstand both heavy rainfall and enemy attack. The men scour the forest for palm leaves to build a thatched roof to repel the frequent rainfall. The Jivaro seek to build large shelters, up to 24 m (80 ft) in length, which enable them to entertain visitors comfortably. Although they like to dance, it is their custom only to dance indoors, thereby requiring a large floor area.

Although there are no private rooms, the house is divided into two areas, one for men and one for women. There are even separate doors for use by men and women. They have very basic furniture, low-lying beds made of bamboo (with no mattresses), and shelves to store basic pottery.

One unusual characteristic of the Jivaro is the complete lack of any political organization. There are no tribal leaders or community organizations. The sole unit of organization is the family group. However, in times of war, two or more villages may unite to fight a common enemy, as was the case when the Spanish attempted to conquer them. The Jivaro population is widely dispersed, with an average of 1.5 km to 8 km (1–5 mi) between houses. Families live in a house for no more than 10 years, as the nearby supply of firewood and small game becomes depleted. Families will then move a few kilometers or miles away to an area richer in resources

## 10 FAMILY LIFE

The roles of males and females in Jivaro society are clearly prescribed. These distinct roles are tied to religious beliefs. The division of labor is partly the result of the belief that most inanimate and living objects have either male or female souls. Manioc (cassava), for example, is thought to be female, so all tasks related to the planting, reaping, and processing of manioc is left for females. Planting and reaping corn, which has a male soul, is left to the males.

Jivaro are polygynous, that is, men may have more than one wife. An average Jivaro family will consist of a man with three wives and multiple children. This practice may have developed in response to the decline in the male population as a result of intertribal warfare. Women greatly outnumber men in many villages. Upon the death of the husband, the widow usually becomes the wife of the deceased husband's brother.

Most Jivaro families are not complete without one or two dogs. They are kept, not as pets, but as an essential aid for hunting and for protection from enemies. The essential roles dogs perform give them a privileged position in Jivaro households. They receive generous attention and care. In addition, monkeys or birds are sometimes kept as pets.

Amazonia Jivaro Indians stand on a beach in Peru with their blow pipes. (© Topham/The Image Works)

## <sup>11</sup> CLOTHING

Daily dress among the Jivaro is simple. Both men and women wear garb made of plain brown cloth, occasionally painted with vertical stripes. These hand woven clothes are durable and rugged and can last for many years. The women drape the cloth over one shoulder, sometimes belting it at the waist with bark string or a piece of woven cotton. Men wrap the cloth around the waist so that it reaches down below the knees. A common feature of male attire is the *etsemat*, a woven band decorated with feathers that is worn around the head.

Ceremonial dress is more elaborate. Men paint their faces with black and red dyes. An ornament made of bird bones is

wrapped around the shoulders, signifying the possession of an *arutam* soul and the spiritual power it provides. More recently, however, the Jivaro are acquiring Western clothing. Often, there is now a preference for using these manufactured clothes for special occasions, such as visits to neighboring families.

## <sup>12</sup> FOOD

The Jivaro have a fairly varied diet of meat and vegetables that they obtain from many sources. The primary elements of their diet are the staple vegetables grown in their gardens. These tubers (root plants such as potatoes) and vegetables are supplemented by foraging for wild plantains and other edible plants.

The protein in the diet is obtained by raising chickens and hunting wild game. Animals, such as wild hogs, peccaries, and monkeys, are hunted with great skill with blowguns and curare darts. Spearing fish in the rivers provides another form of protein. As with many other Amazon peoples, the most popular drink among the Jivaro is beer made from fermented manioc (cassava) root.

### 13 EDUCATION

Most Jivaro children receive no formal education. Rather than learning the modern skills of reading and writing, Jivaro children are taught the skills needed for survival in the jungle. They are, for example, taught how to swim at a very young age. They learn these basic skills from their parents and elder siblings. Because of the widely dispersed population, most children have little contact with playmates other than their siblings.

In less remote Jivaro settlements, some formal schooling may be offered by missionaries.

### 14 CULTURAL HERITAGE

Songs and music are closely integrated into Jivaro daily life. Songs exist to accompany many daily occurrences and special occasions. Jivaro men sing special songs while weaving, as do women while gardening. At parties or ceremonial events, flutes and drums made with monkey skins are used to accompany the singing.

### 15 WORK

Much of the workday is dedicated to ensuring a constant supply of food. The Jivaro are primarily subsistence agriculturalists and grow a fairly diverse range of staple crops, such as manioc (cassava) root, sweet potatoes, sugarcane, peanuts, and plantains. The women spend a large proportion of the day dealing with the laborious task of keeping the large garden free from weeds. Women are also responsible for producing the pottery needed for storing food and drinks. Young girls tend to the house and are responsible for such tasks as sweeping the floors with banana leaves.

The men have more varied duties, such as clearing the forest, collecting firewood, and hunting. They also have developed the skill for crafting blowguns and spears, which are essential for game hunting. The process of making a blowgun can take as long as a couple of weeks from start to finish. Wood from a chonta palm tree is split open, tied together, and hollowed out with a mixture of sand and water. The final touch is the addition of a mouthpiece made of bone. Darts are made quickly, by sharpening palm leaves. Curare is placed on the tip of the dart, which can be propelled nearly 30 m (100 ft) to reach monkeys in trees or large birds. Longer blowguns, sometimes up to 4.5 m (15 ft) in length, allow for greater accuracy but are difficult to carry long distances while tracking prey. Most blowguns are therefore between 2 m and 2.5 m (6–8 ft).

The Jivaro are no longer completely isolated from modern society. They frequently trade skins and feather-worked handicrafts to obtain goods from the commercial sector. In addition, some Jivaro work as laborers to obtain cash to purchase modern goods. Particularly valued are machetes, axes, and guns, as they are useful tools for life in the forest.

### 16 SPORTS

The Jivaro do not participate in sports.

### 17 ENTERTAINMENT AND RECREATION

The Jivaro are a festive people, and parties lasting throughout the night or even over several days are common. Evenings spent dancing and drinking manioc (cassava) beer with neighbors is the main form of entertainment. After a few hours spent drinking and talking, the party livens up as the drums are brought out. Dancing and singing ensue, usually until dawn. For the Jivaro, these parties provide a rare occasion for social interaction and communication in a society where there is limited contact with others outside the family on a daily basis.

### 18 FOLK ART, CRAFTS, AND HOBBIES

The Jivaro are skilled craftspeople. The women learn to make pottery from a very young age. The art of weaving is one reserved exclusively for men. They spin, weave, and dye cotton wool with natural dyes extracted from tropical plants. Elaborate feather headdresses and artifacts are also widely sought for their artistic beauty. These skills are still taught to successive generations, but the growing availability of Western goods has tended to diminish the quality of traditional goods.

### 19 SOCIAL PROBLEMS

Modern society continues to challenge traditional culture.

### 20 GENDER ISSUES

Jivaro tribes regularly practice polygamy. However, the Jivaro wage a constant warfare among themselves for which polygamy is the direct cause. Most of the wives are gained by the killing of an enemy and the confiscation of the women as the spoils of war. If a Jivaro wife is detected in any breach of infidelity, she is subject to a terrific course of discipline that includes various methods of physical torture for first and second offenses and death for a third offense.

The roles of males and females in Jivaro society are clearly defined and are tied to religious beliefs. Gender roles state that the men protect, hunt, fish, clear forest, and cut wood. Jivaro women cultivate the land, cook, make beer, and care for the children and animals. Jivaro women are also responsible for producing pottery for storing food and drinks. Young girls tend to the house and are responsible for such tasks as sweeping the floors with banana leaves.

# KAYAPOS

**LOCATION:** Brazil (Amazon rainforest)

**POPULATION:** A few thousand

**LANGUAGE:** Kayapo

**RELIGION:** Traditional indigenous beliefs

## <sup>1</sup> INTRODUCTION

The Kayapos are part of the South American Amerindian peoples who speak languages of the Macro-Ge group. The Ge peoples inhabit the east of Brazil and the north of Paraguay and consist of a wide range of different tribes located in different geographic zones. The Northwestern Ge tribes include the Timbira, Northern and Southern Kayapo, and Suya. The central Ge peoples divide themselves into Xavante, Xerente, and Akroa, while the Southern Ge, or Kaingang, include the Coroado and others. The Ge community, as whole, probably does not exceed 10,000 human beings.

The Kayapos are one of the main Ge tribes that remain in the Amazon basin in Brazil. There are several theories about the origins of the various South American Indian groups, and it is thought that they may have migrated thousands of years ago from Central Asia, crossing into North America and making their way southwards. There are others who believe that this may be true for some but not all Amerindian groups. The Kayapos resisted assimilation and were known traditionally as fierce warriors, raiding enemy tribes and sometimes fighting among themselves.

Their first steady contact with Europeans did not occur until the 20th century, in the 1950s. Since then, because of contact with squatters, loggers, miners, and eventually Brazilian government officials, the Kayapos evolved some new customs and have had to struggle to maintain their way of life. Logging and mining, particularly for gold, as well as some agricultural activities and cattle-ranching in cleared-out sections of the jungle have posed threats to the Kayapos' traditional way of life. Increasing destruction of the rain forest, as well as river pollution caused by chemicals used in gold-mining activities, threatens the delicate balance between humans, plants, and animals successfully maintained for thousands of years by Amazon Indians, such as the Kayapos.

## <sup>2</sup> LOCATION AND HOMELAND

When the Portuguese conquerors first arrived in Brazil, there were about 5 million Amerindians, but today there are only about 200,000, of which a few thousand are Kayapos, living along the Xingu River in the eastern part of the Amazon rainforest, in several scattered villages. Their lands consist of tropical rain forest and savanna. The Amazon basin, which includes the Amazon River and its tributaries, such as the Xingu, is sometimes referred to as Amazonia and includes parts of Venezuela, Colombia, Ecuador, and Peru. In Brazil it covers about 7.8 million sq km (3 million sq mi).

## <sup>3</sup> LANGUAGE

The language spoken by the Kayapos belongs to the Ge linguistic family and, as a result of diverse splits within Kayapo groups, many dialects have emerged. However, all these particular dialects lead to the recognition of a common root that

makes them part of a same culture. The Kayapos, for whom oratory is a highly-valued social practice, define themselves as those who speak well in opposition to all the groups who do not speak their language.

The great diversity of Amerindian languages is also partly due to the lifestyle of peoples sometimes living at considerable distances from each other, in this way developing distinct mythologies, religious customs, and languages. Even quite small groups, such as the Kayapos, are divided into smaller tribes with their own chiefs, although they all speak the Kayapo language. Thanks to some work by anthropologists and travelers (including several visits to the Kayapos by the pop star Sting, who made their struggles known to a wider world), the names of several Kayapo chiefs are known. One of these is Raoni, who left his Amazon homeland for a time and traveled widely with Sting. Another Kayapo who traveled with him was the panther-hunter N'goire. Sting also met a powerful medicine-man called Tacuma.

## <sup>4</sup> FOLKLORE

There is an interesting legend among the Kayapos who live along a lagoon. They say that if one rises at dawn and looks across the lagoon, one can see the ghost of a White man on horseback galloping along the shore. The strange thing about the description of this ghostly rider is that he is said to wear a full suit of armor, rather like a European knight, or perhaps a Portuguese conqueror.

The Kayapos believe their ancestors learned how to live communally from social insects, such as bees. This is why mothers and children paint each other's bodies with patterns that look like animal markings, including those of bees.

The flamboyant Kayapo headdress with feathers radiating outward represents the universe. Its shaft is a symbol for the cotton rope by which the first Kayapo, it is said, descended from the sky. Kayapo fields and villages are built in a circle to reflect the Kayapo belief in a round universe.

## <sup>5</sup> RELIGION

As opposed to the beliefs that some missionaries have brought to the Amazon, including the idea that after death people either descend into Hell or rise up to Heaven, the Kayapos believe that at death a person goes to the village of the dead, where people sleep during the day and hunt at night. There, old people become younger and children become older. In that village in the afterlife, Kayapos believe they have their own traditional assembly building. Kayapo women, it is thought, are permitted only short visits to deliver food to their male relatives.

The Kayapos share certain general beliefs about the universe and practice similar forms of magic with the Ge peoples. Although there are many specific differences, it is possible to assess that the major deities for these tribes are the sun and the moon. Kayapos, as the rest of the Ge peoples, have shamans to cure sickness.

## <sup>6</sup> MAJOR HOLIDAYS

Special days for the Kayapos revolve around the seasons, which in the Amazon are the dry season and the rainy season. Kayapo holidays are also linked to their ceremonies, such as the initiation rites held when a boy reaches puberty or when he receives, as a small boy, his special ancestral name. The important dry-season celebration called *Bemp* (after a local fish) also includes

marriage rites as well as initiation and naming ceremonies. Kayapos do not divide their time into secular and religious occasions: all events are linked in unifying ways, and the religious, natural, social, and festive elements are interconnected.

## 7 RITES OF PASSAGE

When children are born, the marriage ties between a husband and wife are formalized. A man may have two or three wives. Young children receive special ancestral names in ceremonies that are regarded as an important means of helping the child develop social ties and his or her identity as a Kayapo. The naming ceremonies are held in each dry or rainy season, along with other rites that include special dances or ceremonies related to the crops the Kayapos grow.

## 8 INTERPERSONAL RELATIONS

The Kayapos have a traditionally hospitable way of greeting visitors to their homes. Food will be prepared by the women, and a bed made of bamboo will be laid out for a guest. On occasions body paint will be worn (usually geometric designs in black or red paint), and adornments, such as shell earrings or brightly colored feathers, are worn to decorate the head.

Ceremonial life is very important and continues year-round. Kayapos are often in the midst of a ceremony or making preparations for the next one.

## 9 LIVING CONDITIONS

The Kayapos live in thatched-roof huts that have an open plan without room divisions inside. The thatch for the roofs is made of palm leaves. The huts are quite roomy and large enough for an entire family. Instead of using mattresses, the bedding usually consists of hammocks, which are much cooler and more comfortable in a jungle environment.

Health protection in the jungle areas where the Kayapos live is achieved through the use of roots and herbs that have medicinal qualities, some of which have been known to the Kayapos for a long time. The Kayapos also have their medicine-men, whom White people sometimes call witch-doctors.

The Kayapos use canoes to travel long distances in the Amazon. They can also trek for days or weeks at a time. In recent years, road tracks and an airstrip have been built leading out of the Xingu River reservation where they live.

## 10 FAMILY LIFE

The Kayapos social organization is unique among South American Amerindians in its complexity. Every village is divided into moieties (dual groupings), clans, and associations according to age, sex, and occupation. These are found in various forms and combinations in different places. Participation between these clans takes place in almost all aspects of life such as games, ceremonies, warfare, settlement patterns, marriage, and handicrafts. What makes so peculiar this organization structure is the fact that every relationship is unique since it is governed by the individual's relationships among clans or tribes.

## 11 CLOTHING

Traditionally men cover their lower abdomen with sheaths. The most striking ornamental addition to their attire is a light wooden lip disk that is about 6 cm (2.4 in) in diameter and

*A member of the Kayapo tribe in the Kari-Oka village, Brazil.  
(© John Maier, Jr./The Image Works)*

stretches their lower lip out to produce the Kayapos' extraordinary and very distinctive appearance. A small incision is made and a disk inserted and as time goes on, the disks are replaced with progressively larger ones. The lip plug symbolizes assertiveness among the Kayapos. Another characteristic device used by this tribe is the ear plug, which symbolize receptivity to others. Aggressiveness will be signaled by not wearing large ear plugs, meaning that they do not listen to others. The use of the lip disk is dying out among the younger men, who find it uncomfortable.

Modern, younger men often wear Western-style shorts. This is due to increasing contact with more-Westernized Brazilians who have come to the Amazon to clear the forest in logging activities, farming, and gold-mining.

A Kayapo chief wears many hats, with ceremonial feathers as part of his headdress. A headdress made out of bright golden-yellow feathers can look like the rays of the sun: a brilliant crown circling the head. Particular family links are indicated by the use of matching parrot feathers. The feathers signify initiation into adulthood. Other ornaments include beads, cotton bands, or shells, which women also wear.

Girls and boys wear colored cloth bands of various colors, such as blue, yellow, or orange, which are tied and sometimes knotted below the waist. Sometimes these colored bands of cloth are also worn crisscrossed across the chest. They also wear ornaments such as beaded necklaces made up of many strands, and wristbands, as well as armbands worn high up towards the shoulder. Occasionally, boys also wear knee bands just below the knee. Young Kayapos are usually barefoot, but

with greater contact with White settlers some Kayapo chiefs occasionally wear Western-style thonged rubber sandals.

Body paint is an important addition for men and women as well as for children, but it is not a casual form of make-up. The specific markings and occasions for wearing it are linked to particular rituals and activities.

## 12 FOOD

Fish is a main source of protein in the Kayapos' diet. Wild fruits and Brazil nuts are eaten. Vegetables are harvested, and animals, such as the coati, the monkey, and the turtle, are hunted. Some of these animals are eaten more often during festivals. Kayapos are skilled hunters who use blowguns and darts dipped in a type of poison called curare, which instantly paralyzes an animal. Because of greater contact with White society, Kayapos are changing their diet and can now purchase rice, beans, cookies, sugar, and milk from village stores that have cropped up in various parts of the Amazon to supply loggers, miners, and farmers. Supplies are usually flown in to frontier towns that are not far from the Xingu Reservation where the Kayapos live.

## 13 EDUCATION

Most Kayapos have continued to teach their young people the skills necessary to survive in the jungle environment, especially hunting and fishing, as well as the art of trekking, and the making of canoes and the skill to use them. Growing vegetables, beading, and body paint preparations, as well as cooking, are skills Kayapo girls are expected to know. In some cases missionaries arriving in the Xingu River area have attempted to offer a more Western-style education, including reading and writing, but many Kayapos have been extremely wary of accepting this type of schooling out of fear that their children will be lost to them and will forget traditional skills.

More recently at a meeting post in a protected area of the Xingu Reservation known as Leonardo (named after a famous Brazilian anthropologist, Leonardo Villas-Boas, who together with his brother tried to help many Amazon Indians), a school has been set up to teach children from various tribes. They learn reading, writing, and arithmetic and receive information about the ways of White people.

## 14 CULTURAL HERITAGE

Completing a full cycle of festivals is essential to Kayapo culture. Singing, chanting, and dancing are an important part of Kayapo life. The men and women also sing as they go out on a hunt or work the land. They use a type of rattle, or maraca, and sticks to beat rhythms.

## 15 WORK

Gold-mining, an activity in which many Kayapos were pressured into taking part when the gold rush began in the Amazon, is hard and often dangerous work. The mercury used in mining pollutes the rivers. The Kayapos are organized into family groups with chiefs who have come together to defend their interests and to find ways of confronting the problems posed not only by mining, but also by the arrival of people who do not appreciate the delicate ecological balance of the Amazon region, which the Kayapos and other tribes have helped maintain during hundreds or perhaps even thousands of years.

The Kayapo chiefs arrive at decisions through a process of consensus and are helping to direct their people in a variety of activities that include harvesting nuts, fruits, and vegetables, as well as the construction of modern housing units for recently arrived settlers. This newer source of work means that the Kayapos no longer restrict themselves to traditional hunting and fishing and, because they now earn some money for their work, they can purchase goods they did not have before.

Some Kayapos have begun to have more contact with White people, but the modern way of life still can seem very bizarre to them. The English pop star Sting, and the French photographer and filmmaker Jean-Pierre Dutilleux, who made so many people aware of threats to the Amazon ecology and the difficulties of the Amerindians in that area, recount in their lively and sympathetic book, *Jungle Stories: The Fight for the Amazon*, that when Raoni, a Kayapo chief, first left his Amazon homeland to visit a Brazilian city during his long struggles to protect his people's way of life, he was amazed at the level of fear and anxiety in the city. He was also appalled to see people who had no food to eat forcing themselves to ask for money while others simply passed them by and ignored them. He concluded that money is bad and worried about the Kayapos being drawn into a cash economy.

## 16 SPORTS

Traditionally, the Kayapos did not develop sporting skills separately from skills that were useful for work. Hunting, fishing, and trekking, for example, have now become sporting activities in White society, but in Kayapo society they are vital to the survival of the people, even though aspects of these activities are also enjoyed in their own right by the Kayapos. Some may obtain great pleasure from teaching the younger members of the tribe the early steps necessary to master these skills, while acquiring prowess in any or all of them is a source of pride.

One activity that Kayapo children enjoy is swimming along the shores of the beautiful and clear waters of the Xingu River, which at least until recently was completely unpolluted from its headwaters right up to the area where it joins the Amazon river. Some villagers who have had more contact with White people have learned to play soccer.

## 17 ENTERTAINMENT AND RECREATION

Storytelling is a significant aspect of Kayapo life and a means of transmitting Kayapo legends and history, as well as a way of preserving the identity of a people. It is also a form of entertainment. Mostly, however, it forms part of the rituals that give structure and meaning to the life of the Kayapos, interwoven with dance rituals and ceremonies that follow a definite cycle, linked to nature and to the changing seasons, throughout the year.

## 18 FOLK ART, CRAFTS, AND HOBBIES

Kayapos make beautiful beaded necklaces. Some of them are a brilliant blue or yellow. They also make bracelets and earrings using shells or stones, and headdresses made from the brightly colored feathers of various Amazon birds. The Kayapos are skilled in preparing and applying intricate designs as body paint. They weave sturdy and flexible hammocks and make their own canoes, as well as fishing and hunting implements such as spears, clubs, blow guns, arrows, and darts.

## 19 SOCIAL PROBLEMS

Many activities in the Amazon threaten a way of life the Kayapos want to preserve. Poverty, together with a population explosion and an unequal system of land ownership in countries such as Brazil, has driven many people into the Amazon region in search of land. People use slash-and-burn agricultural methods that are unsuitable when the population density rises, because the forest cannot recover. Although the Kayapos and other Amerindian peoples of the Amazon have practiced this method of agriculture successfully for thousands of years, their numbers have been sufficiently small to allow them to move on to other areas of the rainforest, allowing regrowth of the forest to occur in the patches of fallow land. Now deforestation of the Amazon is occurring at a rapid rate. Some of this destruction is accelerated by the activities of cattle-ranchers who have also come into the Amazon. Beef is supplied in this way largely to fast-food chains in the United States. Land that is over-grazed by cattle quickly becomes completely barren.

Commercial loggers have also contributed to the destruction of the Amazon rainforest by providing tropical hardwood for construction in Japan, Western Europe, and the United States. It is also used in paper products. But, the level of demand is unsustainable. To keep logging at a level that would not permanently destroy large areas of the rainforest, demand would have to drop sharply and protective regulations would have to be enforced. Recently, efforts have been made to slow some demand and to find alternatives to tropical hardwoods in construction. The destruction of so many trees contributes to carbon dioxide pollution in the atmosphere and, therefore, to global warming.

A third threat to the sustainable way of life of the Kayapos and other tribes of the Amazon is mining. Parts of the Amazon are rich in iron ore and gold. The smelting furnaces need charcoal, and much of it is taken from irreplaceable virgin forest. The gold rush in the Amazon has created many problems for the Kayapos. Frontier mining towns exist close to areas where the Kayapos and other tribes live. Amerindian groups have been affected by diseases to which they had never been exposed before. Mercury, used in extracting gold from the mud of the rivers, is a pollutant, resulting in mercury poisoning that affects Amerindian communities downstream from these mining activities. It is estimated that in 1988, 12% of the mercury released into the atmosphere was due to Amazon gold-mining.

Some Amerindian groups, including the Kayapos, have been attacked and murdered in the search for land. Others have had their land forcibly taken away, and they have had to work for very low wages in miserable conditions in some of the frontier towns. On occasion the Kayapos have attacked those they see as intruders. The delicate balance between plants, animals, and humans has already been severely upset, and the way of life of the Kayapos has been disrupted in areas they used to inhabit. The Kayapos and other Amerindians want to ensure that the Xingu area remains protected, with the support of world opinion and the Brazilian government, and does not become the target of activities that would permanently destroy their beautiful jungle habitat.

One of their most dramatic successes was the Kayapo opposition to the Brazilian government's plan to build a series of hydroelectric dams on the Xingú River with funding from the World Bank. For that occasion around 600 Kayapo Indi-

ans in addition to more than 40 other Indigenous nations of Amazonia, gathered along with over 400 representatives of the Brazilian government and world news media and diverse non-governmental organizations. The government and the World Bank had been reluctant to accept the Kayapo invitation to attend the Altamira's manifestations. When it became clear that hundreds of national and international journalists, filmmakers, and opinion leaders would attend the gathering, Brazilian authorities agreed to send an official representative. One of the famous artists who supported the protest against the construction of the hydroelectric complex was the rock star Sting, who made a brief appearance at the demonstration. As a result of all the international and local pressure, the World Bank denied the request for a loan that was to be used to build the dam.

## 20 GENDER ISSUES

Even though every village is autonomous and governed by prominent male secular leaders, auxiliary women's groupings also exist, consisting of wives of associated men's organizations, with the wife of the male chief serving as female chief. The visibility of this role is low and appears more as a conceptual counterpart to men's activity and organization rather than a public leadership role. Nevertheless, without a respected wife who exercises her own influence over female public opinion, a man is considered unqualified to lead.

The Kayapo division of labor splits down a strict gender based function. Men do all the work that does not require attending to children, such as hunting, fishing, farming, and construction. Kayapo women, on the other hand, are solely responsible for raising children. They perform other tasks, such as maintaining gardens or managing domestic animals, but only if that task allows them to attend to the needs of children.

Marriage is monogamous and divorce is common, although lifelong spouses are also common and may become extraordinarily close emotionally. Sexually active females traditionally shave the crown of their head. Male assertions of superiority to women, when they occur, refer to socially developed qualities, such as greater propriety and self-restraint, rather than to natural endowments of manhood. As in other Amazonian societies, women do not necessarily acknowledge male superiority, and conflicts between men and women as groups are considered to be normal. Characteristics such as intelligence are appreciated equally in males and females. Both males and females acquire specialized knowledge in the use of medicinal plants and both may become shamans.

# KITTITIANS AND NEVISIANS

**PRONUNCIATION:** Ki-TEE-shuns and ne-VEE-juns

**LOCATION:** St. Kitts and Nevis

**POPULATION:** 39,619 (2008 est.)

**LANGUAGE:** English; English-based Creole dialect with West African and French elements

**RELIGION:** Anglicanism; other Protestant sects; Roman Catholicism

## <sup>1</sup> INTRODUCTION

The nation of St. Kitts and Nevis (pronounced NEE-vis) consists of two Caribbean islands separated by a narrow strait of water. Its official name was formerly St. Christopher and Nevis. St. Kitts, sometimes called “the mother colony of the West Indies,” was the first British colony in the region. The islands have been linked administratively since colonial times, when they formed a three-member entity together with the island of Anguilla. The people of the two islands are called Kittitians (ki-TEE-shuns) and Nevisians (ne-VEE-shuns).

Columbus sighted St. Kitts and Nevis in 1493, calling Nevis *Nuestra Señora de las Nieves* (Our Lady of the Snows) because of the white clouds encircling its highest peak, and naming St. Christopher after both the patron saint of travelers and his own patron saint as well. Like most other islands in the Caribbean, St. Kitts and Nevis received little attention from the Spanish, and European colonization did not begin until the first British colony in the West Indies was established on St. Kitts in 1623. Five years later, the British officially settled Nevis, where Captain John Smith and his men had stopped for several days in 1607 on their way to what would become the colony of Virginia.

The French soon followed the British, and the two nations competed for control of the islands. First, however, they joined forces to exterminate the native Carib population, 2,000 of whom were slaughtered on St. Kitts in a massacre at Bloody Point in 1626, after which their presence on the island was effectively over. The contest for European control of the islands continued until both were ceded to the British under the Treaty of Paris in 1783. Two famous 18th-century figures associated with the island of Nevis were U.S. statesman Alexander Hamilton, who was born there, and British war hero Lord Horatio Nelson, who spent time there as a colonial administrator and married a woman born on the island.

Under the British, sugarcane plantations flourished on both islands, supported by the labor of slaves from West Africa. Typically, an aspiring plantation owner would purchase 20 slaves to clear his land, plant a variety of crops, and build their own huts. When the plantation had expanded sufficiently in terms of both land and numbers of slaves, all of the land would be turned over to sugar production. After 1834, when the British Empire abolished slavery, the sugar industry declined in spite of the introduction of indentured servants from East India and other countries. The increasing production of sugar from beets contributed to this trend.

By the beginning of the 20th century, the United States and Europe were producing almost all their own sugar, and

the economies of St. Kitts and Nevis were floundering. In the 1930s the British-appointed Moyne Commission investigated conditions in the region, but most of its recommendations were delayed by the onset of World War II. Both St. Kitts and Nevis sent soldiers to fight alongside the British and, in addition, raised funds for the purchase of two Spitfires for Britain's Royal Air Force.

After several different administrative arrangements in the course of the 19th century, St. Kitts, Nevis, and Anguilla were united within a larger Leeward Islands Federation in 1882. From 1958 to 1962, the islands joined the short-lived Federation of the West Indies and in 1967 accepted associated statehood from Britain. Eventually, Anguilla withdrew from the federation, and St. Kitts and Nevis achieved full independence on 19 September 1983. Nevis has its own legislative assembly and retains a constitutional right to secede from St. Kitts if the move is supported by a two-thirds majority in a public referendum.

Even though sugar production has been the historic cash-crop of the island, the government recently decided to close the majority of companies after decades of poor performances. Tourism, export-oriented manufacturing, and offshore banking are new areas of business and have been pivotal in the steady growth achieved in the early 2000s. As a result of governmental efforts to diversify the economy, in 2001 the industry sector grew to represent more than 25% of the national GDP, while the service realm accounted by an astonishing 70.7% and agriculture just 3.5%. As a result of the process of becoming a more diverse economy, a series of new products have been added to the national portfolio, such as rice, yams, vegetables, bananas, and fish. In the industry sphere the history is similar. Cotton, salt, copra, clothing, footwear, and beverages are part of the new exports. In 2007, the economy grew 3.3%.

## <sup>2</sup> LOCATION AND HOMELAND

St. Kitts and Nevis belong to the Leeward Islands, in the Lesser Antilles. Separated from each other by a 3-km (2-mi) strait called The Narrows, they are 300 km (186 mi) southeast of Puerto Rico and 113 km (70 mi) south of Anguilla, with which they were formerly united politically. The country has a total land area of 269 sq km (104 sq mi), about 1.5 times the size of Washington, D.C. The oval island of St. Kitts, with its elongated southeast peninsula, and the small, rounded island of Nevis have often been compared to a cricket bat and ball, a reference to the island's national sport. Covering 168 sq km (65 sq mi), St. Kitts is the larger of the two islands and home to the capital city of Basseterre. It has a central mountain range with the country's highest elevation, Mt. Liamuiga, a dormant volcano that rises to 1,157 m (3,792 ft) above sea level. Rain forests are found on the higher mountains, while the fertile but drier lowlands along the coast mostly support sugarcane plantations. Erosion is a problem in certain areas due to faulty agricultural practices, including overgrazing, lack of crop rotation, and inadequate intercropping. Basseterre, the nation's capital city and chief port, is located on the southwestern coast of St. Kitts.

The southeast peninsula of St. Kitts is mostly scrub-covered and contains a large salt pond at its southern end. The former isolation of this area from the rest of the island was significantly reduced by the opening of the Dr. Kennedy Simmonds Highway in 1990. The nearly circular island of Nevis has as its

most outstanding feature Nevis Peak, rising to 985 m (3,232 ft) at its center. Like St. Kitts, it has forested mountains in its interior and low-lying areas along the coast. Its soil is less fertile than that of St. Kitts and more badly damaged by erosion. Charlestown is Nevis's only town.

Population estimates for St. Kitts and Nevis is close to 40,000, of which 9,000 to 10,000 inhabitants are estimated to live on Nevis and the rest on St. Kitts. The country experienced negative population growth between 1985 and 1993 due to emigration. The population is mainly black, about 95% of the population is of African descent, with a small mulatto minority and other mixtures. There are also very small East Indian, European, and white groups.

### 3 LANGUAGE

The official language of St. Kitts and Nevis is English, which is spoken in its standard form with correct grammar in formal situations and with people one does not know well. Informally, however, most residents speak a local English-based Creole dialect with elements from West African languages and French. In common with other West Indian Creole languages, it interchanges subject and object pronouns and expresses past actions with present-tense verbs ("I tell she" for "I told her"). Also, the African-influenced "de" is used in place of "the."

### 4 FOLKLORE

Like other West Indians, Kittitians and Nevisians tend toward the superstitious, and some still fear the African-influenced

black magic called *obeah* that is common to the Caribbean region.

### 5 RELIGION

Between 33% and 50% of the country's population is Anglican. Other Protestant groups include Methodists, Moravians, Baptists, Seventh-Day Adventists, the Church of God, and the Pilgrim Holiness Church. There is a Roman Catholic minority of about 10%, and the Baha'i religion is also represented.

### 6 MAJOR HOLIDAYS

Public holidays in St. Kitts and Nevis include New Year's Day (January 1), Good Friday, Labor Day (May 1), Whit Monday, Bank Holiday (first Monday in August), Independence Day (September 19), Prince of Wales's Birthday (November 14), Christmas (December 25), and Boxing Day (December 26). St. Kitts's annual Carnival celebration is held the last week of the year—from December 25 through January 2—with the masquerades, calypso and steel band music, and street dancing common to Carnival festivities in the Caribbean. Nevis's Carnival, called Culturama, is held in late July and early August and includes arts and crafts and talent shows in addition to the usual features.

During the month of August the emancipation of slaves from the British West Indies in 1834 is celebrated and during this holiday, most businesses and government offices are closed. September is the month of independence celebrations. This month-long celebration includes drama festivals and cultural activities. The festivities culminate on Independence Day with a military parade at Warner Park, followed by a traditional picnic at the beach.

### 7 RITES OF PASSAGE

Major life transitions, such as birth, marriage, and death, are marked by religious celebrations appropriate to each Kittitian's and Nevisian's faith community.

### 8 INTERPERSONAL RELATIONS

There is a local handshake called a "bump," which consists of two people clenching their hands into fists and bumping them gently together. "Liming," a term used throughout the Caribbean to denote relaxing and "hanging out," is an especially popular pursuit in St. Kitts and Nevis, which is known for its easygoing lifestyle. The Kittitians and Nevisians have maintained a historic rivalry, a fact that gives a real edge to the annual cricket match, the national sport.

### 9 LIVING CONDITIONS

Until the 1970s, the typical islander's house was wooden with a corrugated metal roof, often painted red. The houses themselves were often painted in pastel colors. Today, most houses are built from concrete blocks and wood; roofs are still corrugated metal. It is becoming more common for islanders to own the land on which they live, and houses are no longer built on piles of stones in case they had to be moved.

St. Kitts and Nevis has a healthy climate with virtually no tropical disease. However, until the 1990s, high rates of malnutrition and infant mortality posed problems; in recent years, there has been a significant reduction in infant mortality rates. Sanitation conditions in the country are good, and the Pan

American Health Organization reported that almost the entire population had access to safe water by 1983. There are three hospitals on St. Kitts and one on Nevis, and there is about 1 physician for every 1,000 people. The average life expectancy in 1993 was 68 years, but national efforts for improving the quality of life have yielded substantial fruits. A citizen born in 2008 had an average life expectancy of 72.93.

The country has a good road network with main roads circling each island. However, drainage ditches called *ghauts* pose an ongoing challenge to motorists, and “watch de *ghaut*” is a common expression on the islands. There is a state-run motorboat service between St. Kitts and Nevis. The capital city of Basseterre has a deep-water port that can accommodate cargo vessels and cruise ships. St. Kitts has an international airport, while Nevis’s airstrip handles only small charter planes.

## 10 FAMILY LIFE

Family loyalty is strong, and it is not uncommon to find extended households including members of two or three generations.

## 11 CLOTHING

People on St. Kitts and Nevis take great pride in their appearance, wearing modern Western-style clothing that is generally spotless and in excellent condition. Even for casual wear, women wear mostly skirts or dresses and also avoid wearing pants in the workplace. Men wear jeans or casual slacks, and male business attire generally includes a shirt and tie or at least a button-down shirt, called a shirt jack. Fashion-consciousness on the islands is especially in evidence on weekends, which are considered occasions for dressing up rather than down. School children wear uniforms.

## 12 FOOD

Dietary staples include yams, plantains, rice and peas, saltfish, stuffed crab back, and a variety of soups, including pumpkin, bean, pepperpot, and fish soups and conch chowder. Lime juice is a common seasoning, and hot pepper sauce made from Scotch Bonnet peppers is a specialty on Nevis. Carib beer is a favorite beverage and sweet cassava bread—derived from the African *bammie*—is a popular dessert.

### Cassava Bread

½ pound cassava, finely grated  
3 to 4 ounces grated coconut  
½ cup brown sugar  
1 teaspoon salt

Salt the grated cassava, wrap in a cloth, and twist to wring out the liquid. In a heavy baking pan, spread out half the cassava and top with brown sugar and grated coconut. Cover with the remaining cassava. Using both hands, push down on the mixture. Preheat oven to 350° F and bake for 20 minutes.

## 13 EDUCATION

Education was formerly provided by the islands’ churches, whose generous funding and strict attendance requirements created high standards of schooling that were perpetuated by the government when it took over the educational system. Today, the adult literacy rate on St. Kitts and Nevis is 98%, among the highest in the Western Hemisphere. Primary education in

St. Kitts and Nevis (ages 5 to 14) is free and compulsory. There are over 30 primary schools and 8 secondary schools.

There is no university on either island, but post-secondary education is offered at a teachers’ training college, a technical college, a nursing school, and a one-year academic program whose completion allows enrollment as a second-year student at the University of the West Indies. The government of St. Kitts and Nevis has focused increasingly on vocational education to reduce the country’s high unemployment rate and produce more effective and motivated workers.

## 14 CULTURAL HERITAGE

With the objective of promoting tourism, the government has initiated a strong campaign oriented to attract visitors to the islands. With this goal in mind, St. Kitts Music Festival, an event of popular music is held annually in June on the Caribbean islands of St. Kitts. The festival, originally called the Shak Shak Festival, was first held in 1996. Among the bands that performed in 2007 were Arrow, Nigel Lewis, Roy Cape Band, Krosfyah, Nu Vybes, and the Small Axe Band.

On Nevis, the Drama and Cultural Society sponsors an annual play and other cultural events. Nevis’s best-known artist is Dame Eva Wilkin—now well over 80 years of age—who portrays the island’s people and way of life in pastels and watercolors.

## 15 WORK

It is not unusual for islanders to have more than one source of income, including fishing, selling produce grown on small garden plots, and doing seasonal or part-time work in the sugarcane fields or the tourist industry. Wages in the sugar industry are very low, and sugar producers have had to import labor from neighboring St. Vincent and Guyana because of the difficulty of finding enough local workers. Working in the sugarcane fields under a tropical sun is also notoriously grueling. The jungle-like clumps of sugarcane, growing 3 m (10 ft) tall, may be infested with insects or rats. Laborers cut into the cane at its base using an implement called a machete. Then they must trim the tops, divide the stalks into smaller lengths, stack them, and clear the debris.

In the 1970s and 1980s, nearly 20% of the population emigrated every year—mostly to the United States, Canada, or Great Britain—in search of better employment opportunities. (The money sent home by emigrants has been a major source of income on the islands, and some experts speculate that it has surpassed the sum earned at home in wages and salaries.) One factor cited in connection with the country’s high rate of unemployment is that much of the labor force lacks the employment skills to make the transition from agricultural work to better-paying jobs in the service sector.

## 16 SPORTS

Cricket is the national sport of St. Kitts and Nevis, and the whole country virtually shuts down for a major match, especially one between teams from the Windward and Leeward Islands. St. Kitts and Nevis has produced such world-class players as Elquemedo Willet, Derrick Parry, and Luther Kelly. The second-most-popular sports are horse-racing on Nevis, and football (soccer) on St. Kitts. Horse races are held on holidays, including New Year’s Day and Labor Day, and even on the religious holidays of Easter Monday and Whit Monday.

Caribelle batik artist Yvette Coker works on a piece in a studio at Romney Manor, St. Kitts. (© Bob Krist/Corbis)

They are also part of the festivities during such special events as the country's annual Culturama.

## 17 ENTERTAINMENT AND RECREATION

Music is central to entertainment on St. Kitts and Nevis, and favorite bands become a focal point of conversation for days before and after an appearance on one of the islands. Steel drum, dance-hall, string band, and reggae music are all popular.

## 18 FOLK ART, CRAFTS, AND HOBBIES

St. Kitts's well-known folk dance troupe, Masquerades, performs a variety of traditional dances from the French-derived *kwadril* to African war dances. The islands' crafts include baticed clothing and wall hangings made from the sea island cotton that has traditionally been Nevis's principal export. Nevisian craftspeople are also known for their fine pottery.

## 19 SOCIAL PROBLEMS

The country's continued reliance on the sugar industry has made its economy vulnerable to the ups and downs of that volatile commodity, upon which both the agricultural and manufacturing sectors rely for a large percentage of their earnings. However, this reality has changed dramatically thanks to the national efforts for diversifying the national economy.

## 20 GENDER ISSUES

The role of women in society is not restricted by law, but is circumscribed by culture and tradition. Even though there is no overt societal discrimination against women in employment, women do not yet occupy as many senior positions as men. While women outperform men in the education sphere, that same level of achievement is not translated into economic returns for women. Women still tend to be concentrated in jobs that paid the least, and many are solely responsible for the care of their children.

However, Kittitian and Nevisian women head about 43.9% of households in the country. Although female employment has increased from 1980 to 1991 by 10%, the high proportion of female-headed households and the significant unemployment rates of women have made pursuing gender equality a main goal for the government.

To protect the human rights of women, the government has passed a series of laws, including the Law Reform Act, which provides stiffer penalties for rape, incest, sodomy, indecent assault, or any offence involving children. There has also been significant law reform to support special measures to accelerate the equality between men and women. Before 1980, unmarried women who became pregnant while working in the public service were automatically dismissed. Government policy and the Constitution now safeguard the jobs of all women and give them greater legal protection in seeking child maintenance.

In addition, the Bureau of Women's Affairs, under the Ministry of Health and Women's Affairs, has been active in promoting change in the areas of domestic violence, poverty, health, institutional mechanisms to advance the status of women, and leadership positions for women. Since 1997 the Bureau has also focused on training the police and school guidance counselors on issues of domestic violence, sexual crimes, and child abuse.

Regarding politics, women in decision-making posts remain scarce. The first female parliamentarian was elected in 1984 and, as of 2008, only 13.3% of congressional members were women. In the executive cabinet only 10.7% of the ministers were women.

## KOREAN AMERICANS

For more information on Korean history and culture, see **Vol. 3: Korean Chinese; South Koreans**.

### OVERVIEW

The first Koreans arrived in the United States in the early 1900s. A total of 7,226 Korean exiles and laborers immigrated to the United States between January 1903 and July 1907. The exiles were leaders of a failed coup attempt, including So Chae-pil (1866–1951), who later changed his name to Philip Jaisohn and became the first Korean American medical doctor; Ahn Chang-ho (1878–1938); Park Yong-man (1881–1928); and Syngman Rhee (1875–1965). These four became leaders of the Korean American community and helped create a Korean national independence movement in the United States.

Most of the early immigrants from Korea, however, were agricultural laborers. They were recruited to work on the sugar cane plantations of Hawaii after Congress passed the Chinese Exclusion Acts in the late 1800s, barring any more Chinese workers from entering the United States. Many of these Korean laborers soon left the plantations and began small businesses of their own. About 2,000 moved to California and started up small farms or retail stores there.

The first wave of Korean immigration included over 1,200 women and children, so there was a sizeable number of families among the early Korean American population. However, single men still outnumbered single women by a significant margin, leaving many unattached men with no prospects for marriage or family. Between 1910 and 1924, some 1,100 Korean "picture brides" arrived in the United States to marry Korean workers. The brides and grooms had been introduced to each other through letters and photos (some of which grossly misrepresented the truth). The women were often better educated than the men. By establishing families and adding their well-educated wisdom to the mix, these women helped stabilize and energize the Korean American community.

Korean Americans suffered from the discrimination leveled at all Asian Americans in the early to mid-20th century. Anti-miscegenation laws prevented them from marrying European Americans, and the Alien Land Law of 1913 barred them from owning land. European Americans refused to admit them to schools, give them jobs, or allow them to live in certain neighborhoods. Many Korean and other Asian Americans were injured and even killed by racially motivated violence.

Despite sometimes brutal prejudice, however, Korean Americans continued to survive as a community in the United States. They also continued to pour their energies into the Korean nationalist movement until Korea won its independence from Japan in 1945. Syngman Rhee then returned to Korea and was elected president of the Republic of Korea (South Korea) in 1948.

The second wave of Korean immigration to the United States occurred after the Korean War in the early 1950s. U.S. military personnel brought back Korean women they had married while stationed in Korea, and many U.S. families adopted Korean war orphans. Between 1951 and 1964, some 6,500 Korean women ("war brides") and 6,300 adopted Korean children entered the United States. Korean students also began to come

in greater numbers to study at American universities, and Korean doctors arrived to further their medical training.

The latest wave of Korean immigration to the United States began after Congress passed the Immigration and Naturalization Act of 1965, which allowed entire families to immigrate at once, and granted Korean students and professionals the right to apply for U.S. citizenship. These new citizens, along with the Korean wives of U.S. military personnel (who automatically became U.S. citizens upon their marriage), then applied for permanent residency status for their parents, siblings, spouses, and children. Most of the U.S. immigrants from Korea since 1970 have been close relatives of already established Korean American citizens or permanent residents.

The 2000 U.S. Census counted the Korean American population at 1,228,427, with 70% foreign-born. That total is a 54% increase over 1990 census figures. Korean Americans live in communities across the United States, with the majority in California (375,571). The states of New York (127,068), New

Jersey (68,990), Washington (56,438), Illinois (56,021), Texas (54,300), Virginia (50,468), Maryland (42,335), and Hawaii (41,352) also have significant Korean American communities. Although “Koreatowns” developed in Los Angeles and other large cities, for the most part Korean Americans have not settled in ethnic enclaves but rather are scattered throughout U.S. cities, towns, and villages. Recent immigrants have continued to settle mostly in California and New York (especially Los Angeles and New York City), both of which saw more than 30% growth in Korean American population between 1990 and 2000. Other areas, however, have shown greater increases in Korean American population in that decade, such as Georgia (88%), North Carolina (73%), and New Jersey (70%). Other states whose Korean American populations have more than doubled in recent years include Tennessee (64%), Washington (58%), Arizona (55%), Florida (54%), and Arkansas and Virginia (both at 50%).

Almost three-fourths of Korean Americans, even those who have lived in the U.S. for more than one or two generations, continue to speak Korean at home and with other Korean Americans. The same language is spoken throughout North and South Korea (although accents differ from region to region), making it possible for all Korean-speaking Korean Americans to understand one another. A very simple phonetic alphabet was created in the 15th century to replace an extremely complicated set of ideographs. The new alphabet allowed nearly all Korean speakers to become literate. Koreans today continue to have one of the highest literacy rates in the world, at over 95%.

Korean names are usually made up of three syllables: the first is the family name, the second is the generational name, and the last is the personal name (sometimes the order of the generational and personal names is reversed). Because family names customarily come last in the United States, Korean Americans are often addressed incorrectly. Even when they reverse the traditional order of their names to conform to American conventions, they are often met with confusion because their family names resemble common American personal names (such as “Kim” and “Lee,” two of the most common Korean family names).

For centuries, Koreans followed the teachings of Confucius. Although mainly Buddhist today, South Korea remains one of the most Confucian of all Asian countries. Many Korean Americans have become Christian (particularly Protestant), yet they are still strongly influenced by traditional Confucian beliefs. Korean Confucianism emphasizes family responsibility and interdependence, along with respect for one’s elders. It also places a high value on hierarchies of authority, which is expressed in the structures of most Korean American organizations and businesses.

A large majority of Korean American families are affiliated with a Christian church and attend services regularly. Churches serve many purposes, both sacred and secular, in Korean American communities. For example, information regarding housing and employment opportunities is shared; English language classes are offered to foreign-born Korean Americans, Korean language classes are available for those born in America, and social events provide a chance for widely dispersed Korean Americans to come together as a community. In the first half of the 20th century, churches became the headquarters for the Korean national independence movement. Perhaps most importantly, churches have served as a replacement for the traditional extended family that was often lost in the move from Korea to the United States.

Since Congress passed the Immigration and Naturalization Act of 1965, which allowed more Korean family members and entire family groups to enter the United States, the extended family has been able to regain some of its traditional strength as the center of society among Korean Americans. Extended family groups, which include families of friends, can once again provide Korean Americans with the physical, emotional, and financial support they need in their new home.

Many Korean Americans continue to eat traditional foods at home, such as kimchi (a fermented vegetable dish), rice with beans or barley, rice cakes, and a variety of soups that are made with fish and vegetables. Traditional Korean food is also available at Korean restaurants in some cities, but Korean food has

yet to become as popular or widely available as Chinese food in the United States.

Korean Americans have contributed a great deal in all sectors of American life. Successful artists include Frank Cho, Jim Lee, Derek Kirk Kim, David Choe, Amy Sol, and Nam June Paik. Opera singer Hie-Kyung Hong and punk rocker Karen O (lead vocalist of the Yeah, Yeah, Yeahs) cover both ends of the spectrum in music; and novelist Leonard Chang, poet Lee Herrick, and 2002 Newbery Medal winner Linda Sue Park represent the gamut of Korean American writers. Several Korean Americans have become well-known in the acting/entertainment industry, such as Margaret Cho, Daniel Dae Kim, Sandra Oh, Grace Park, and John Cho. In the sciences, Hyung-Soon Kim invented the nectarine fruit, Jeong H. Kim has risen to become the president of Lucent Technologies’ Bell Labs, and Peter S. Kim is the president of Merck Research Labs. Korean Americans are represented in a number of sports, such as Naomi Nari Nam in figure skating, Kevin Kim in tennis, Sammy Lee in diving (the first American-born Asian to win an Olympic gold medal), and winner of the NFL Super Bowl XL Most Valuable Player award in 2006, Hines Ward.

Many Korean Americans who are employed own their own businesses. In 2000, Korean Americans owned 158,000 businesses in the United States, with \$47 billion in revenue, and the number continues to grow. Between 1997 and 2002, there was a 16.3% increase in the number of Korean American-owned businesses in the United States. Over half of Korean American businesses are in retail and wholesale trade. Language and cultural barriers make it difficult for foreign-born Korean Americans to find jobs with other employers, so it is often easier for them to start their own businesses. Korean Americans also like the independence and control of running one’s own business.

When Jewish, Italian, and Irish business owners in the inner cities began selling their shops to move to the suburbs during the 1970s and 1980s, Korean Americans took advantage of the opportunities and bought many of the businesses. Racial tensions, crime, and inner-city poverty have made life difficult, however, for the new Korean American owners. Particularly devastating were the Los Angeles riots that erupted on 29 April 1992 and lasted for four days. In the violence and confusion, about 2,300 Korean American businesses were looted or burned. Korean American business owners suffered some \$500 million in damage (half of the total estimated damage losses in Los Angeles County). Recovery was slow in the Korean American community; by 1997, one-third of the damaged or destroyed businesses had still not reopened. The riots have come to be known as *sa-i-gu* in the Korean American community, literally “4/29,” the date the riots began.

As a result of the Los Angeles riots, Korean Americans lost faith in American society, and they are now struggling to rebuild their trust in their neighbors. Fortunately, Korean Americans have their extended families, churches, and community organizations to turn to for support. They can also turn to a centuries-old Korean organization called the *kye*, a rotating credit system that also provides emotional support and friendship to its members. A *kye* consists of 12–20 members who each contribute an agreed-upon amount (anywhere from less than \$100 to several thousand dollars) to the pot each month. Every month, a different member is given the collective pot, until each member has had a turn. Then the *kye* disbands. *Kyes* have provided the means for many Korean Americans to open

businesses, finance higher education, and survive sudden unexpected crises. Since the Los Angeles riots, they have offered a place of financial and emotional security to battered Korean American shop owners.

When Koreans began entering the United States in family groups after 1965, the Korean American population came to be divided along generational lines: the *il-se*, or first generation of adult immigrants; the *il-jom-o-se*, or one-point-five (1.5) generation, consisting of the *il-se*'s foreign-born children, and the *i-se*, or second generation, made up of those born subsequently in the United States. Generation gaps exist between each of these groups, with the *il-se* embedded in traditional Korean ways, the *i-se* growing up thoroughly American, and the *il-jom-o-se* stumbling between the two worlds. Conflicts and misunderstandings continually arise among members of the various generations, creating a great deal of tension in families as well as in the larger Korean American community.

Traditional Korean culture is not tolerant of homosexuality, as it is in direct conflict with Confucian values of marriage and family. For homosexual Korean Americans to publicly express their identity is seen as disloyalty to the family honor and open defiance of traditional values. Therefore, many Korean American homosexuals choose to compartmentalize their identities, being "Korean" with their families and "gay" elsewhere. However, racism against Asians exists as much in the gay community as in the wider American culture, so many Korean American homosexuals feel unable to be "Korean" when with other gays. There is almost nowhere for them to feel safely Korean and gay at the same time. Gay Korean American men also struggle with the stereotype in Western gay culture of Asian men as passive and submissive—the gay male version of the stereotypical Asian woman. This stereotype severely limits their ability to integrate their homosexual identity with their masculine identity, further compartmentalizing their sense of self.

## LAOTIAN AMERICANS

For more information on Laotian history and culture, see **Vol. 3: Lao**.

### OVERVIEW

Prior to 1975, only a very few Laotians migrated to the United States. After Vietnam and Laos fell to Communist forces in 1975, however, thousands of Laotians fled their war-torn homeland and applied for entry to the United States. With the Indochina Migration and Refugee Assistance Act of 1975, the United States gave Laotians refugee status and helped them relocate to America. At first, most of the refugees were government administrators, shopkeepers, and royal army soldiers. Later immigrants tended to be less educated, including farmers and small villagers. Only about 800 Laotian refugees immigrated to the United States in 1975, but the following year brought 10,200. The highest numbers of Laotian refugees entered the United States in the years 1979–1981, totaling about 105,000. Since then, Laotian refugee resettlement has continued, though at a slower pace.

The total Laotian American population in the United States in 2000 was estimated at over 200,000, of whom 65% were foreign-born. The majority of Laotian Americans live in California, primarily in Sacramento, San Diego, and Fresno. Other U.S. states with significant Laotian American populations are Texas, Minnesota, and Washington. Although few Laotians in Laos live in cities, Laotian Americans are largely urban dwellers. Lacking language and industrial job skills, Laotian Americans tend to settle in large cities where they can find work that requires neither.

On average, Laotian Americans are younger than the U.S. population as a whole (in 2005 the median age was 29, as opposed to 36 for the total U.S. population). This is true for recent refugee populations in general, as only the young are willing and able to leave their homelands for such a risky journey. Laotian Americans also tend to have large families, adding to the youthfulness of their overall population.

The Laotian language is tonal, which means that the meaning of a word depends on the tone in which it is spoken (for example, high, low, rising, etc.). Laotian is written with a phonetic alphabet based on an ancient writing system from India. Laotian is therefore quite different from English in both its spoken and written forms, making English language proficiency quite difficult for Laotian Americans to achieve.

Laotian folklore is often in the form of poetry and is sung to the accompaniment of a hand-held bamboo pipe organ called a *khene*. Many of these poetic tales are told through theater or opera productions, known as *maw lam*. Among the most popular Laotian folktales are those involving Xieng Mieng, a trickster figure. Others are taken from Buddhist writings. Laotian Americans continue to tell these stories at community gatherings, through *maw lam* productions.

Laotian Americans also continue to teach their children Laotian proverbs, which are filled with age-old wisdom, such as “Water a stump and you’ll get nothing”; “Speech is silver, silence is gold”; and “It’s easy to find friends who will eat with you, but hard to find one who will die with you.”

Though some Laotian Americans have converted to Protestant Christianity, most are Buddhists of the Southern School, also known as Theravada Buddhism. Theravada Buddhists emphasize the importance of becoming a monk and achieving Nirvana (eternal bliss) by one’s own efforts, rather than relying on the help of Bodhisattvas, enlightened beings, as is encouraged by the Northern School (or Mahayana Buddhism). Reincarnation and the concept of Karma are central to Buddhist beliefs. Laotians also retain a belief in spirits from their ancient, pre-Buddhist days.

Most Laotian Americans, when possible, continue to perform traditional Laotian ceremonies and rites of passage. The lack of available Laotian monks and temples in the United States can make this difficult, however. Two Buddhist holidays celebrated by all Buddhist Laotian Americans are Pha Vet, held in the fourth lunar month to commemorate the life of the Buddha, and Boon Bang Fay, or “rocket festival,” held in the sixth lunar month. Boon Bang Fay festivities include setting off fireworks.

Laotian American communities are very tightly knit, and everyone knows how and what everyone else is doing. Members of the community treat each other with great familiarity, addressing one another respectfully by first name, rather than last. For example, Khamsang Phoumvihane would be addressed as “Mr. Khamsang” rather than “Mr. Phoumvihane.”

As recent immigrants, many Laotian Americans lack the necessary English language and relevant job skills to be successful in the American work world. Although the situation is improving as Laotian Americans become more settled in the United States and acquire education and job skills, there is still a high rate of unemployment and a corresponding rate of poverty among Laotian Americans. About 17% of Laotian Americans lived below the poverty line in 2005. For children under the age of 18, the percentage rises to 22%, and a full third (32%) of those over the age of 65 were living in poverty that year. Public assistance eases the situation somewhat, but living conditions remain harsh for many Laotian Americans. Compared to the life-threatening conditions they left in Laos, however, even poverty in America is seen as a great improvement by most Laotian Americans.

Laotian Americans suffer the physical and mental health problems common to recent refugees, including culture shock, post-traumatic stress disorder, insomnia, and other stress-related illnesses. Although traditional Laotian healing methods involve the use of massage and herbal medicines and rituals to address the spiritual causes of illness, Laotian Americans are more likely to turn to mainstream Western medicine to treat their ailments.

Laotian Americans tend to live in nuclear family units, located close by members of their extended family. Families are important, both for social and emotional support as well as financial support. Divorce is rare among Laotian Americans, and families are large (5 members on average in 2000, as compared to 3 members in the average European American family). Dating is new to foreign-born Laotian Americans; in Laos, young people simply get to know one another through the regular course of daily village life. Foreign-born Laotian American parents, therefore, have difficulties accepting and guiding their children through the dating process.

In Laos, men deal with the public world, and women manage the household. For Laotian Americans, however, the need

to support the family financially under difficult circumstances has led many women to find employment outside the home. Because the women are now working at outside employment, Laotian American men have taken to sharing the household responsibilities as well. Positions of leadership in Laotian American community organizations are still usually held by men, but women are beginning to take a more active public role in the community at large.

On special occasions or at cultural celebrations, some Laotian American women wear traditional dress, consisting of a brocade skirt (*sinh*) held in place by a belt of shiny metal buckles or rings, and a shawl draped over the left shoulder and under the right arm. Laotian American men rarely wear their traditional dress, which includes baggy pants called *sampot*.

Many Laotian Americans still eat traditional Laotian foods at home. Most meals include rice or rice noodles, and all the food is spicy. Thai restaurants serve Laotian dishes in the United States, and areas with large Laotian American communities have Lao markets where traditional ingredients may be purchased.

Older, foreign-born Laotian Americans tend to lack formal schooling, but younger generations and American-born Laotian Americans place a high value on education and are taking advantage of educational opportunities in the United States. In the past decade, educational achievement among Laotian Americans has increased dramatically: as of 2005 some 64% of Laotian Americans over the age of 25 had a high school diploma or higher degree, including 22% with at least some college,

9% with a bachelor's degree, and 3% with a graduate degree. School enrollment for kindergarten through high school is actually above the national average for all Americans.

Language barriers are still a problem, however, particularly for first-generation immigrants: in 2000, 83% of Laotian Americans spoke a language other than English at home. Although many English language training programs are in place for both children and adults, the English language is significantly different from Laotian in both its spoken and written forms, making the learning process quite slow.

Though employment has been increasing in recent years among Laotian Americans, the overall unemployment rate was still 6.5% in 2005 for both men and women. Most Laotian Americans who find employment work at jobs involving unskilled labor or low-level service jobs. As many as 40% of employed Laotian American men in 2005 held jobs in "production, transportation, and material moving" occupations. About 33% of Laotian American women also worked in those jobs, with another 30% in sales and office positions.

Laotian Americans face problems common to recent refugee populations. The trauma of the desperate conditions in their former homeland that forced them to leave is still very present and immediate in their minds and hearts. Plus, the conditions in their former homeland usually have not changed a great deal, so there is fear and concern for loved ones who remained behind, with whom regular communication is often difficult or impossible. Post-traumatic stress disorders and culture shock set in shortly after they arrive in the new land that is to become

their home but is as yet alien to them. Laotian Americans tend to follow the usual pattern for refugees: their first year in the United States is filled with relief at finally finding safety; the second year brings shock and feelings of helplessness as the strangeness of their new home begins to overwhelm the sense of relief; and by the third and fourth year, they are starting to adjust to their new circumstances and begin to feel at home in the United States.

The first waves of Laotian immigrants are now largely adjusted to life in America, although language and cultural barriers still cause a certain degree of difficulty. More recent immigrants are still going through the adjustment period, but they now have a community of longer-standing Laotian Americans to turn to for guidance and support. American-born Laotian Americans find themselves in the troubling position of second-generation immigrants who straddle two worlds: that of their Laotian-born parents, and that of their native American society. Laotian Americans have not been in the United States long enough to have produced a significant population of third generation immigrants.

As is true for many Asian American immigrant women, Laotian American women struggle with the traditional approach to sexuality that relegates it to a very private realm related to reproduction alone. This impacts their health, their safety, and their sense of self. Language barriers also contribute to the low rate of women's health treatments among Laotian Americans. Fear of communicating in English along with fear of talking about sexual matters and being exposed to view and touch makes it extremely difficult for Laotian American women to pursue treatment. Studies show that one in three Asian American women receive no first-trimester prenatal care, leading to a high rate of high-risk births. One half of Asian American women have had no gynecological care in the past year, and one in four have never had any. One half also never use contraceptives or protection against sexually transmitted diseases, including HIV/AIDS.

The reluctance to discuss matters of sexuality combined with the traditional concept of sexuality as relating purely to reproduction renders homosexual Laotian Americans invisible. This is doubly true for lesbians given the different standards regarding sexual activity for men and women: while men are allowed some freedom to have multiple partners and sex without procreation, women are expected only to have sex within the confines of heterosexual marriage for the purpose of having children, leaving no place for lesbian sexuality to exist. Homosexual Laotian Americans, therefore, especially lesbians, have a very difficult time living out their identities publicly and even in private.

## LEBANESE AMERICANS

For more information on Lebanese history and culture, *see* **Vol. 3: Lebanese.**

### OVERVIEW

A few Lebanese pioneers immigrated to America in the mid-1800s, but the first real wave of Lebanese immigration did not begin until the late 1870s. Overcrowding and a shortage of tillable land in what was then called Mount Lebanon led to poverty for many of its citizens. The only other economic opportunities available in Mount Lebanon at that time were in the small silk industry, which was failing due to competition from Japan and China, and in wine production, which was severely curtailed by a grapevine disease in the 1870s.

First-wave Lebanese immigrants to the United States were mostly young men hoping to earn enough money in America to return to Lebanon and establish themselves in better circumstances there. The majority were Christian because they had been exposed to Western culture through Christian missionaries and schools and felt an affinity with the Christian West. Muslims, on the other hand, were drawn to Muslim countries in West Africa. There were no mosques in America in the 19th century. Although the great majority of early Lebanese immigrants to the United States had been farmers in Lebanon, very few took up farming in America. Young single men looking for fast cash were not interested in settling down to a long-term project like developing a farm. Neither were they interested in the industrial jobs that many other immigrants turned to, such as mining or working in steel mills or factories. Instead, they became traders, peddling their wares from door to door, at first on foot until they could afford a horse and cart. Over 90% of early Lebanese immigrants traded for at least a short time after arriving in the United States.

Huge Lebanese American trading networks soon developed. Central suppliers established themselves in various areas of the country, such as Fort Wayne, Indiana. Wholesalers in New York City would purchase large shipments of goods from Lebanon then send them on to the central suppliers. The suppliers would then distribute the goods to individual peddlers to be sold door-to-door. Wholesalers and suppliers sometimes helped Lebanese immigrants pay for their passage to America and find housing once they arrived. The wholesalers and suppliers were generally honest in their dealings with new immigrants, and the immigrants were grateful for the ready employment the traders offered in return.

At first, most of the goods sold through the Lebanese American trading network were religious or handcrafted items from the Holy Land, which were very popular in America in the late 19th and early 20th centuries. Later, Lebanese American peddlers expanded their wares to include typical household items, such as pots and pans, shoelaces, kitchen knives, etc. These types of supplies were particularly welcome in rural areas where they could otherwise be obtained only by traveling a long distance to the nearest town. Some peddlers became so successful that they eventually settled down and set up permanent shops.

Lebanese immigration to America increased steadily until it became a flood in 1908, when Ottoman rulers in Lebanon

became exceptionally oppressive, and the military draft was expanded to include Christians. In 1900, some 2,900 Lebanese immigrated to the United States. By 1910, the number had jumped to 6,300. As Lebanon became embroiled in the international conflicts leading to World War I (1914–18), more Lebanese fled to America. Over 9,000 Lebanese came to the United States in both 1913 and 1914.

Once war was declared in 1914, borders were essentially closed and Lebanese immigration to the United States virtually ceased. At the end of the war in 1918, however, Lebanese immediately began leaving again for America. By 1922, the number of Lebanese immigrants to the United States had reached 5,100, but this second wave of Lebanese immigration was short-lived. Swarms of immigrants from all over the world, combined with dwindling opportunities as America reached its western shore, led the United States to place stringent restrictions on immigration in 1924, reducing the flow of Lebanese (and others) to a mere trickle. For the next two decades, few Lebanese entered the United States. Those that did were mostly family members of Lebanese already living in America.

The end of World War II (1939–45) brought a third wave of Lebanese immigration to the United States which lasted from about 1950 to the mid-1970s. These third-wave immigrants were quite different from their predecessors, however. Rather than young men looking for quick cash, third-wave Lebanese immigrants tended to be students and young professionals seeking educational and professional advancement.

The most recent wave of Lebanese immigration to the United States began in 1975 when Lebanon exploded in civil war. Many of these latest immigrants are well-educated professionals with the financial resources to leave their homes. They wished to escape the war-torn environment in Lebanon, both for their own welfare and their children's. Lebanese Americans continue to send money and other goods to support family and friends who remain in Lebanon, as did the very first Lebanese immigrants to the United States. Today, Lebanese Americans are beginning to band together to add their political support as well.

According to the 2000 U.S. Census, 440,279 Americans claimed Lebanese ancestry (about 0.2% of the total U.S. population). From the beginning, Lebanese immigrants settled all across the United States. By 1919, a Lebanese American family could be found in almost every town with a population of more than 5,000. Today, Lebanese Americans remain dispersed throughout the country. The top five states in terms of numbers of Lebanese Americans are Michigan (54,363; also the most Lebanese state in terms of percentage of population), California (53,286), Massachusetts (32,072; second-most Lebanese state by percentage), New York (31,083), and Florida (30,115). Other states with sizeable Lebanese American populations include Ohio (27,361), Texas (23,652), and Pennsylvania (19,889).

In order to blend in with mainstream American society, many Lebanese Americans anglicized their names. Some translated the meaning of their names into English: Haddad became Smith; Ashshi became Cook; Yusuf became Joseph. Others simply found English names with similar sounds: Sawaya became Sawyer; Tuma became Thomas; and Jirjus became George. More recent Lebanese immigrants to America tend to keep their Arabic names, now that mainstream U.S. society is more open to multiculturalism.

Muslim Lebanese Americans have always been more likely than Christian Lebanese Americans to retain their Arabic names. Muslims are also more likely to live together in tightly knit communities centered around a mosque. When Henry Ford announced liberal hiring policies and good wages at his automobile manufacturing plant in Detroit, Michigan, in the 1920s, many Muslim Lebanese immigrants took jobs in the Ford plant and settled in Detroit and nearby Dearborn, Michigan. Both communities continue to thrive today.

Besides Christians and Muslims, there is also a small group of Druze Lebanese Americans. Lebanese Druze began immigrating to the United States in the 1830s, and a school for Druze girls was opened in America in 1834. As early as 1907, a group of Druze Lebanese Americans had ventured all the way across America to form a society in Seattle, Washington. There are now an estimated 15,000–20,000 Druze in America.

The family is the central unit of traditional Lebanese society and it remains central to Lebanese Americans. Socializing and visiting with family and friends is also central to Lebanese, both in Lebanon and America. Lebanese American social clubs exist in almost every state in the United States. They host cultural events and festivals where Lebanese Americans can gather and eat, dance, and enjoy one another's company. Young Lebanese Americans sometimes use these events as opportunities to meet potential marriage partners. Another common Lebanese American social event is the mahrajan, a picnic festival with food, music, and dancing. The first American mahrajan was held in 1930 in Bridgeport, Connecticut. Today they are held frequently all over the country.

Food is another central element in Lebanese and Lebanese American society. Lebanese cuisine is rich and varied, and some of its most common dishes, such as felafel, kibbe, and tabbouleh, have become favorites among the general American public today. Both Lebanese and non-Lebanese Americans enjoy eating at Lebanese restaurants, which can be found in many U.S. cities.

Lebanese Americans have made many other contributions to American culture besides food. Two Lebanese American men began clothing companies in Texas in the 1920s that have since become international businesses. Mansour Farah founded the Farah men's clothier company in 1920, and J. M. Hagggar founded the Hagggar men's clothiers in 1926. The Hagggar company is now among the world's largest manufacturer of men's pants. The Farah company was sold in 1998 and renamed Savane International. Lebanese Americans who have made contributions to American arts include opera singer Rosalind Elias and popular singers Paul Anka, Neil Sedaka, Herbert "Tiny Tim" Khaury, Frank Zappa, Tiffany, and Shakira; radio and television personality Casey Kasem; actors Danny Thomas, Marlo Thomas, Jamie Farr, Tony Shalhoub, Vince Vaughn, Kathy Najimy, Salma Hayek, Michael Nouri, and Harold Ramis; woodworker Sam Maloof, whose handcrafted furniture is displayed in national museums and the White House; writers William Blatty, author of *The Exorcist*, and children's book author Naomi Shihab Nye; and poet Kahlil Gibran.

Many Lebanese Americans have been elected to public office, and others have served in high-ranking public positions. Donna Shalala served as assistant secretary for policy devel-

opment and research at the U.S. Department of Housing and Urban Development from 1977–1980. Shalala then became president of Hunter College in New York City, transforming it from a struggling inner-city college to a well-respected institution. In 1987, Shalala was appointed chancellor of the University of Wisconsin in Madison. She also served as Secretary of Health and Human Services in President Bill Clinton's administration. Other Lebanese American political figures include George Mitchell, John Sununu, and Spencer Abraham.

Philip Habib was an important U.S. diplomat during years of crisis in the Middle East, and reporter Helen Thomas was a White House correspondent for many years. Retired four-star army general John Abizaid served as the Commander of United States Central Command (CENTCOM) from 2003 until 2007. Consumer activist Ralph Nader repeatedly ran unsuccessfully for U.S. president, and Nader's sister, Laura Nader, is a professor of anthropology at the University of California, Berkeley. Lois DeBakey, a professor of scientific communication at Baylor College of Medicine, also has a famous brother, Dr. Michael DeBakey, who pioneered open-heart surgery. In 1970 Paul Orfalea founded the copy company, Kinko's (Orfalea's nickname), which is now a national chain; and John Zogby founded Zogby Polls, now a nationally respected polling group, in 1984.

Noted Lebanese American figures in sports include tennis player Eddie Dibs, football coach Abe Gibrón, and football players Gill George and Doug Flutie (winner of the Heisman Trophy in 1984). Naturalist and adventurer Jack Hanna is also of Lebanese descent.

Christian Lebanese Americans have had very few problems since the beginning of their sojourn in the United States. Hard-working and friendly, they fit in well with mainstream American society. Muslim Lebanese Americans have met with more discrimination due to their obviously different religious and cultural customs, including traditional Arab dress. Muslim Lebanese Americans are also much more likely to live in insular communities, socializing only with other Muslim Lebanese Americans. Their social isolation increases other Americans' distrust of them. As tensions and conflicts erupted in the Middle East in the 1970s, anti-Arab sentiment grew in the United States, and Muslim Lebanese Americans came under greater attack. The rise of Muslim fundamentalism and the attacks on the World Trade Center and Pentagon on 11 September 2001 crystallized the American fear of Arabs, resulting in a number of hate crimes directed at anyone who "looked Arab." Even third- and fourth-generation Lebanese American Christians were targeted. The anti-Arab backlash after September 11 brought Americans of Arab descent together, regardless of ethnicity or religious affiliation, although it also spurred some Lebanese Americans to further differentiate themselves from Arab Muslims and emphasize their American and Christian identities, distancing themselves from "Arab" identification.

Another event that served to bring Lebanese Americans together across religious divides was the so-called "Cedar Revolution" in Lebanon in 2005. Incited by the assassination of Prime Minister Rafik Hariri, the Lebanese people took to the streets in a largely peaceful revolution, demanding the withdrawal of all Syrian troops and a return to independence. The revolution succeeded in removing Syrian troops, all but those associated with Hezbollah. The continued presence of Hezbollah and its protracted campaign against Israel along Lebanon's southern border has given Lebanese Americans a common

cause, with leading organizations focusing much of their attention and resources on supporting the fight for democratic freedom in Lebanon.

Traditional Lebanese culture is patriarchal, relegating women to the role of homemaker. A woman's honor is paramount to traditional Lebanese, propelling them into marriage at an early age to "protect" their virtue. Marriages are arranged, and young girls may be betrothed to men old enough to be their father. In fact, a woman who is not married by the time she reaches her 20s is considered a spinster. Throughout the early years of Lebanese immigration to the United States, men greatly outnumbered women, creating a sense of urgency on the part of the men to find a bride. Girls well below marriageable age were often promised to much older men who would then wait until the girl was old enough to marry, for fear that another man would claim her first otherwise.

After World War I, the ratio shifted to become more equal as Lebanese women chose to travel to the United States in pursuit of opportunities here. And the peddler lifestyle of so many Lebanese Americans was open to women's participation. Women were often better at sales because they were more easily trusted than men and were allowed into homes to sell their wares. Traditional women's crafts were also a good source of extra income. Either the Lebanese American women made them to sell, or they had relatives back in Lebanon make and send the goods to them in the United States for sale. These arrangements often developed into successful import businesses. As women became more involved in the economic fortunes of the family, they grew more independent and the patriarchal rule of the husband and father was gradually eroded. Gender roles continue to become more egalitarian with each passing generation. In the late 1990s, Lebanese American filmmaker Rouane Itani decided to begin an online forum for Arab American women, "Lebanese Women's Awakening," or LEB-WA, an Arabic word meaning "lioness." The forum provides a place for Lebanese women around the world to participate in discussions concerning what it means to be Lebanese and female in the 21st century.

# MAPUCHES

**LOCATION:** Chile; Argentina

**POPULATION:** About 800,000

**LANGUAGE:** Mapudungun

**RELIGION:** Roman Catholicism mingled with indigenous religious beliefs

## 1 INTRODUCTION

The Mapuche (people of the land in Mapudungun) have historically inhabited the valleys of Central and Southern Chile and Southern Argentina. During colonial times, the Spaniards knew the Mapuche as Araucanos (Araucanians in English), term that is now considered pejorative. The Mapuche are a diverse ethnicity composed of various groups that share a common social, religious, and economic structure, as well as a common linguistic heritage. Each group has a distinctive name regarding the region they live in. It is believed that Mapuches first inhabited the valleys between the Itata and Toltén Rivers in Chile. In the early 15th century, Mapuches fought the Inca invaders from Peru, stopping the expansion of the Inca Empire toward the south. After the arrival of the Spaniards, Mapuches began expanding eastward into the Andes and pampas forming, with the native people, the Pehuenche (people of the Pehuén, the Araucaria's fruit).

Even though the Picunche (people of the north), who lived in the farming areas of Chile's Central Valley between the Aconcagua and Bío Bío rivers, were relatively peaceful, were easily overcome by the Incas, and then subdued and assimilated by the Spaniards in the 17th century, Mapuches established a reputation as fierce warriors who bravely defended their lands and their way of life. The Huilliche (people of the south) continued to resist the Spaniards in the so-called War of Arauco, answering to no central authority and choosing leaders only for the specific purpose of waging their wars of resistance. One of the main geographical boundaries was the Bío-Bío River, which Mapuches used as a natural barrier to Spanish incursion for 300 years.

Finally, in the late 1880s, Chilean authorities sent the army into Mapuche territory in the course of the so-called Araucanía Pacification. Using a combination of force and diplomacy, Chile's government obliged Mapuche leaders to sign a treaty absorbing their territories into Chile. The state appropriated the majority of the new territory, while forcing Mapuches to live in reservations that accounted for only 6.4% of their original territory.

After enduring another frontal attack on their lands, this time under the Pinochet dictatorship (1973–1990), the Mapuche organized in resistance groups that struggled to recuperate their ancestral land from the hands of forestry companies and private landowners. In 1993, the new democratic government signed an Indigenous Law that created the National Corporation for Indigenous Development (CONADI) in charge of protecting and expanding land and water rights for the Mapuche and other indigenous peoples. Even though the law permitted land subsidies and buybacks, agricultural training, and intercultural education and health, the state failed to recognize the Mapuche in its constitution. This situation has encouraged further assimilation of the Mapuche into the national project

because of the dismissal of their status as a distinct people with a historical basis for rightful claims to collective and cultural rights.

Following their historical warrior skills, Mapuche organizations have occupied part of the land they claim and burnt private property in it, in order to assert their legitimate ownership over ancestral territory. The state has often resorted to repression and incarceration of Mapuches. The majority of them have been labeled as terrorists and charged under the Anti-Terrorist Law that was designed during the dictatorship to repress the opposition. This has motivated Mapuche organizations to demand justice through the United Nations.

## 2 LOCATION AND HOMELAND

Mapuches have historically inhabited a small region in Southern Chile and Argentina. After Mapuches in Chile were defeated and incorporated into the national project, they were forced to settle in *reducciones*, a land-tenancy scheme similar to North American reservation systems, many of them in the Araucanía Region, in the vicinity of towns such as Temuco, Villarica, Pucón, Valdivia, and Osorno, as well as in the southern island region of Chiloé. Today, there are only around 600,000 Mapuches left in Chile and only 20% of them live in *reducciones*. The majority of Mapuches have migrated to the cities and now live the lives of poor, urban workers.

In the 16th century some Mapuches crossed into Argentina, in the region of Patagonia, and resisted the Spanish colonizers until the 19th century. After Argentina gained its independence from Spain, the struggle against the Indians continued until 1879 when, during a cruel war led by General Julio Argentine Roca, Mapuche territory was conquered and thousands of Indians were killed. Those that remained were forced to work in the ranches of the new owners, in military forts, or as domestic servants. General Roca adopted a tough attitude to the hard fate of the Indians, and appeared to rejoice in the conquest of such a huge tract of land. Today, there are still a few Mapuche reservations in Argentina, particularly on the shores of Lake Rucachoroi and Lake Quillén. However, most Mapuches today continue to live in Chile, country in which they have concentrated their struggle for preserving their land and their identity.

## 3 LANGUAGE

Even though the majority of Mapuches speak Spanish, they continue to communicate with each other in Mapudungun, their ancestral language, which also survives in many place names: *quen* means "place," as in the town of Vichuquen, while *che* means "people," and *mapu* means "land." Mapuche, therefore, translates as "people of the land." In times of war Mapuches used to choose a leader who was called *toqui*, while in peacetime their leader was called *ulmen*. Choosing people to perform certain tasks because of their abilities was the Mapuche's principal strength. For instance, messengers, called *huerquenes*, were chosen because of their excellent memory.

## 4 FOLKLORE

The greatest hero in Mapuche folklore is the *toqui* called Lautaro, who was chosen to do battle against the Spanish invaders. While a captive of the Spaniards, Lautaro acquired important advantages with which to fight the invaders. He was trained as Pedro de Valdivia's page and learned Spanish and military

strategies. After escaping from the enemy's camps, he developed original guerrilla tactics and trained his warriors to ride horses. During lengthy battles, his warriors would fight in waves for short periods of time, then other groups of warriors would replace them in other waves, so that none of his men would be too tired. He won all the southern territories for his people over four years of remarkable battles with the Spaniards, and eventually killed his former master, the Spanish conqueror Pedro de Valdivia. Lautaro even reached the gates of Santiago, but the night before he planned to storm into the city, an Indian slave who had once fought for the Spaniards and then for the Mapuche, killed him while he was asleep in his tent. After this tragic loss, Mapuches retreated to the south, where they continued their resistance for three centuries, right up to their decisive defeat in the 1880s.

The Cuncos, a Mapuche group that inhabits the region of Chiloé, developed a rich mythological culture. One founding legend tries to explain the scattered islands of Chiloé and begins with a battle between the evil serpent Cai Cai, who rises furiously from the sea to flood the earth, and her good twin Tren Tren, who slumbers in her fortress among mountain peaks. While the Mapuche try unsuccessfully to wake Tren Tren, the evil serpent Cai Cai's friends, the pillars of Thunder, Wind, and Fire, pile up the clouds to make rain, thunder, and water. However, a little girl dances with her reflection in Tren Tren's eye and her laughter awakens Tren Tren, who also begins to laugh. Deeply insulted, Cai Cai is angry and shatters the earth, scattering islands all over the sea, while throwing

water higher and higher in order to flood the mountain peaks where Tren Tren lives. But Tren Tren manages to raise the mountain up toward the sky and the sun, until the evil serpent Cai Cai and the Pillars of Thunder, Wind, and Fire fall from the peak into the deep abyss, where they are finally silenced.

## 5 RELIGION

Mapuches believe in the forces of creation (*Ngenechen*) and destruction (*Wakufu*) and the ultimate balance between them. When the Spaniards arrived they were perceived as an expression of *Wakufu* because of the zeal with which they finally drove the Mapuche from their lands and forced them to pay tribute to the Spanish crown, and the impoverishment and threat to Mapuche culture, which followed from their forced resettlement in overcrowded reservations at the hands of the newly independent Chileans.

Central to Mapuche's beliefs is the reverence to spirits (*pillan*) and ancestors (*wangulen*), as well as to the forces of nature (*ngen*). The most important figure in Mapuches' system of beliefs is the *machi* or shaman, who is usually a woman. The *machi* performs ceremonies for curing diseases, warding off evil, influencing weather, harvests, and social interactions. Traditional prayer meetings called *machitunes* are held to invoke the help of the gods and goddesses for rain and good crops. Another type of meeting, called *malon*, which is still regarded as important by Mapuches who uphold their religion, involves listening to dreams as well as prophecy.

Jesuit missions were established early on during the Spanish colonial period, even as far south as Chiloé, and Roman Catholicism has coexisted alongside the original religious beliefs of the Mapuches. The relation between Catholicism and Mapuche beliefs reached its peak in November 2007 when the Argentinean Mapuche Ceferino Namuncurá was beatified.

## 6 MAJOR HOLIDAYS

Mapuches who live in cities and have joined the urban poor celebrate the major Chilean national holidays together with the rest of the population. In contrast, Mapuches who live in reservations have maintained some of their own celebrations, which do not have a strictly secular character, since the Mapuche do not divide the material from the spiritual. One of the best-known festivals is the *nquillatún*, which lasts for three days and dedicates the lands and the harvest to the gods and goddesses, and which is still celebrated at the reservation of Huapi Island on Lake Ranco.

## 7 RITES OF PASSAGE

Traditional Mapuche family celebrations are large, since each chieftain can have many wives and many children, and gatherings for major occasions such as a birth or a wedding will also include brothers, sisters, cousins, aunts, uncles, and grandparents.

All major life events, such as birth, puberty, marriage, and death, are marked in special ceremonies among the Mapuche. Important members of the tribe such as chieftains, called *lonkos*, play special roles. There are religious connections to each event, and it is thought that certain women, who have chosen to speak for the spirits, can gather important information from the gods and goddesses on all such special occasions. In keeping with Mapuche beliefs in good and evil, women who deal with the forces of destruction are called *kalku*, and those

who deal with the forces of creation are *machi*. Music accompanies the ceremonies, and there is a strong oral tradition that weaves poetry, history of the people, legends, and religious beliefs into the celebrations.

## 8 INTERPERSONAL RELATIONS

The formality of a greeting is well-regulated, but a stranger can only come into a traditional Mapuche environment with the utmost care: strangers who come with another Mapuche may be welcomed with elaborate feasting and great hospitality, but those who come alone could just as easily be met with hostility and silence.

There is a formal structure governing Mapuche society, which is centered on the extended family. People are ranked according to age and relationship as well as socially recognized skills. There is, however, a contrast between this element and the fact that there is no single, central authority that governs them. The lack of central power, and the recognition of individual merit in appointing people to particular tasks and responsibilities within Mapuche culture, has enabled Mapuches to develop a particularly independent spirit and a resilience which survives among many of them even today.

## 9 LIVING CONDITIONS

The Mapuche have tried to preserve and defend their way of life for centuries, but their less-than-happy encounters with the Spaniards and their descendants have left them in a condition of poverty. Some Mapuche continue to live in a fairly traditional style, but many have migrated as poor workers to towns where they share the lot of other urban workers as *pobladores* in shantytowns with poor housing and health conditions. The hardiness of the Mapuche makes them especially prized workers in some demanding working environments where the weather and the terrain tax people heavily. Therefore, Mapuche have acquired a reputation early on for toughness and indifference to hardship.

This "indifference" noted by Europeans is revealing: it is quite possible that the traditional cultural standards of the Mapuche and the adverse circumstances of their more recent history demanded a stoic outlook, and that the ability to develop endurance was highly prized by the Mapuche themselves because it was, in part, a necessary survival tactic as well as a virtue. Their seeming indifference has been a victory of character over circumstance, rather than a curious lack of sensitivity.

The housing in shantytowns among other urban poor people is basic, and the shelters can be of adobe and bits of other materials. In remote country areas the traditional thatched roof huts known as *rucas* provide shelter. In towns the bus is the most common form of transport, but in more remote areas horses are still used, and in the southern Chiloé region boats are an important form of transport. The Mapuche share with other poor people of Chile the difficulties of access to health care. In some towns there are better facilities; in more remote areas, people often rely on traditional healers or herbal remedies.

## 10 FAMILY LIFE

The Mapuche that still live in *reducciones* have tried to maintain traditional family group structures, which include the extended family unit and a clan-like structure with a chief. The various Mapuche chiefs get together in the traditional way to

arrive at important decisions by a process of lengthy discussion and consensus. This collective spirit traditionally ensured that land was owned and worked by the group as a whole rather than by individual families. Power, whether in economic, social, or political terms, rested on the family, and at the head of the extended family stood the *lonko* or chief, with several wives and many children. The sense of family identity extends to grandparents, aunts and uncles, cousins, and relatives by marriage.

Although this sense of family identity survives psychologically, this type of social structure is gradually being undermined, as various efforts both to Christianize the Mapuche and to erode their freedom and their access to land takes its toll. Under the dictatorship of Augusto Pinochet in the 1970s, a land law was passed that further restricted the Mapuche and forced them to get assimilated into the rest of society.

The role of women is important in a variety of ways. Very often women continue to maintain traditions even though their husbands and sons are engaged in struggles for work that bring them into contact with white society both politically and economically.

## 11 CLOTHING

Men in towns wear Western-style shirts and trousers; women are sometimes dressed more traditionally, with colorful aprons embroidered in abstract patterns; head scarves, sometimes decorated with silver coins; other types of jewelry such as long, heavy necklaces which include motifs such as crosses and coins; and gold earrings. Traditional skirts are long, and some forms of dress also include innovations, developed during colonial times, of Spanish elements such as elaborate, lace-edged collars.

Younger Mapuche girls often wear Western-style clothing such as sweaters and skirts, and boys wear shirts or sweaters and trousers.

## 12 FOOD

Traditional hunting and fishing, as well as some planting and harvesting of crops such as corn and various fruits, ensured a varied diet for Mapuches. However, more-modern town dwellers have adapted to the food that has developed over the centuries which includes elements of Spanish and other European cuisines, including corn turnovers or *empanadas* with fillings of hard-boiled egg, olives, raisins, and ground meat. The distinctive *curanto* oven allows meat and vegetables to steam for hours, wrapped in leaves, in the island of Chiloé.

Traditional feasting on special occasions can still last for several days. Utensils include clay pots.

## 13 EDUCATION

The Jesuits were active in early efforts to educate the Amerindians all over South America, and Chile was no exception. But struggles over land, and clashes caused by the expansion of Spanish conquests, also created dilemmas for the Mapuche, who did not want their way of life to disappear. Nevertheless, those who received an education in Western-style schools later developed organizations that helped them take part in Chile's political life. Mapuches who lost their lands and had to migrate to the towns to survive now try to offer their children opportunities to attend school. In the reservations many still try to preserve a traditional way of life. There have also been some

efforts to develop a type of school that includes Spanish as well as important elements of traditional Mapuche culture.

#### 14 CULTURAL HERITAGE

The music of the Mapuche includes special instruments such as whistles made out of wood, a type of flute called the *trutruca*, and various percussion instruments such as the *cultrun*. Music and dancing always accompanied important rituals. A type of poetic singing in *Mapudungun* includes the reciting of legends, special invocations and prayers, and stories associated with the forces of life and death.

Mapuche culture has an extensive oral literature tradition, which combines admiration for oratory skills, which are considered a supreme social talent, and for the beauty of the indigenous language. The principal form of oral literature is the *epew*, a fictional story in which animals have human characteristics.

#### 15 WORK

The Mapuche who still live in reservations engage in some farming or fishing, as well as in the production of handicrafts. A majority of Mapuche town dwellers live as urban workers. In their brave and remarkable struggle to preserve their culture and identity, they gradually developed in the 20th century a number of organizations to represent their interests. One of the most important modern Chilean Mapuche leaders was Manuel Aburto Manquilef. Following his lead, the Mapuche in towns affiliated themselves with larger trade union movements, especially the Workers' Federation of Chile during the 1930s. Some Mapuche joined political parties and were even elected to the Chilean Congress.

Working conditions and opportunities for work were closely linked to the struggle for representation and preservation of their identity, as well as their part in union movements, which led to persecution during military rule in Chile during the 1970s and 1980s. Many Chilean workers and leaders of workers' movements, including Mapuche, were killed or simply disappeared. However, not all the Mapuche took the path of opposition and struggle. Some thought that silence, conciliation, or accommodation with the military regime would ensure better chances of survival.

Women often contribute to the family's earnings by taking part in markets and fairs to sell their wares. In what is today a more democratic country, many Mapuche continue to struggle both to improve their working conditions and to try to preserve their customs and identity.

#### 16 SPORTS

The main indigenous sport is the *chueca* or *palin*, a game that resembles hockey. Many of the younger Mapuche who are growing up in towns and are gradually changing their habits and lifestyle are enthusiastic soccer supporters. In more traditional settings, a lifestyle that has included both hunting and fishing combined both practical skills necessary for survival as well as the enjoyment of developing and mastering these skills. Some of the Mapuche who have lived either on the island of Chiloé or by the shores of other lakes are skilled boaters.

#### 17 ENTERTAINMENT AND RECREATION

Mapuche who live in or near towns enjoy the many fiestas beloved of many Chileans. Some of these are religious feast days, and others are linked to agricultural or special cultural events.

#### 18 FOLK ART, CRAFTS, AND HOBBIES

The Mapuche are skilled weavers of cloth and baskets, jewelers, and potters. Traditional crafts included tool-making for hunting and fishing, including spears, bows, and arrows. They used wooden tools to farm potatoes and corn. They also thatched the straw roofs for their traditional houses known as *rucas*, an activity that still continues in some areas.

The descendants of the Mapuche who live on the island of Chiloé have blended with the original Chono Indian inhabitants and still maintain a distinctive culture, which includes the use of a special loom, which they use to weave sweaters and ponchos. Llama wool is used elsewhere, but in Chiloé sheep's wool is used, and the women prepare dyes made from herbs.

There are several important craft fairs in Chile that display Mapuche arts and crafts. One of these is the annual cultural fair in the town of Villarica on the Chilean mainland.

#### 19 SOCIAL PROBLEMS

The social problems of the Mapuche are related to economic hardship as well as to the struggle to preserve their traditions and identity. The situations of town dwellers and inhabitants of the *reducciones* differ in some important respects. Some of the Mapuche inhabitants of the reservations prefer to keep themselves aloof from the ways and customs of Europeans, even today, and try to teach their children the traditions and beliefs of Mapuche culture. Other groups of Mapuche, who migrated to the towns when they lost their lands, have been engaged in a struggle in which they joined trade unions as a way of fighting poverty by pushing for workers' rights in general. There is a growing awareness of their struggle in Chile today, and a more sympathetic attitude toward their difficulties.

#### 20 GENDER ISSUES

Mapuche women see their interests as connected to those of their people, a people who possess a particular worldview in which man and woman together form a dyad and act in equilibrium and complementarity. The Mapuche struggle to maintain their identity and territory began with the arrival of the Spaniards but it was only the Chilean state, 70 years after independence, which managed to officially annex the Mapuche territory. Thereafter, a campaign of assimilation into the national worldview was imposed and reinforced by military, schools, and churches.

Mapuche men and women resisted this mandate of forced assimilation, especially throughout Pinochet's dictatorship (1973–1990), during which laws were decreed to facilitate the sale of Mapuche lands to non-Mapuches and the denial of their indigenous identity. Women such as Isolde Reuque, Ana Llao, and Elisa Avedaño were among the most important Mapuche leaders during the dictatorial regime.

After the return to democracy in 1990, Mapuche women formed the *Coordinadora de Mujeres Mapuches* to push for Mapuche women's rights and the recognition of their indigenous identity, in contrast to non-Mapuche women. Mapuche women assert that their unique cultural background and ex-

periences of discrimination make their concerns and priorities different from those of non-Mapuche women. For instance, Mapuche women are discriminated against because of their indigenous features and are disproportionately represented in domestic service, where violations of workers' rights are most invisible and ignored.

In 1993, the government mandated the CONADI to encourage the participation and development of indigenous women in coordination with the National Women's Service (SERNAM). However, indigenous peoples' rights in general and indigenous women's rights in particular have been constantly neglected by the state. Women have been visible actors and leaders in the conflicts derived from Mapuche resistance. For instance, in the emblematic case of the construction of the Ralco dam, two elderly sisters, Berta and Nicolasa Quintremán, led the group of families affected to resist the construction and halt the project, action that forced the state to compensate the dislocated Mapuche families.

# MATSIGENKA

**LOCATION:** Peru

**LANGUAGE:** Matsigenka, a dialect of Arawak; Spanish

**POPULATION:** Between 7,000 and 12,000. (estimate)

**RELIGION:** Traditional native beliefs

## 1 INTRODUCTION

The Matsigenka live in southeastern Peru. They have inhabited their present territory since long before the Spanish conquest, where they have sought to live peaceably and to be left alone, being less fierce and more likely to avoid violence than the Arawakan and Panoan groups that surround them. They managed to avoid the influence of the Inca culture and the Spanish conquest, thanks to the uninhabited cloud forest that separates the highlands and the high forest.

However, evidence of contacts between the forest people and those in the highlands pre-dates the Inca Empire. The Matsigenka and their neighbors traded with the highlanders, exchanging cacao, bird feathers, palm wood, cotton, and herbal medicines for stone and metal tools and bits of silver that are used in jewelry. But, that trade took a different turn in the early 20th century, when the rubber boom and slave trade translated into Matsigenka strongmen trading their own people into slavery in exchange for shotguns and steel tools. The practice continued even after the rubber boom collapsed, as colonists still wanted laborers and household servants.

Nevertheless, during the past decades, the Matsigenka population has been recovering from the losses suffered because of a series of lethal diseases brought by Europeans as well as the calamities and abuses caused during the rubber boom of the early 20th century. The Amerindian people were expelled from their historic lands by two groups. First, agriculturalists pressured them while locating their farms in Matsigenka territory to grow coca as well as tropical crops. At the same time, Matsigenka had to compete for hunting and fishing territories with other neighboring groups.

Today, despite some degree of dependence on Western culture (medicine, clothing, and tools), the Matsigenka retain most of their own traditions. They reckon time by moons (12 to a year), by moon quarters, and by the blooming of certain flowers. They measure short objects by spans and half-spans, and long objects with poles, but have no weights. Travel is estimated by sun positions. They regard the Milky Way as a river where animals bathe to gain eternal youth.

## 2 LOCATION AND HOMELAND

The Matsigenka inhabit the tropical rainforest of the upper Amazon of southeastern Peru. Rain is almost a constant occurrence in this region: the wet season extends from October to March in which around 250 to 500 cm (98 to 197 inches) of rain pour in a single day. From April until September there is a less wet, but still rainy, season. Temperatures range from 14°C (57°F) on the coldest nights to 32°C (89°F) during the hottest days. The annual average is close to 24°C (75°F). The landscape is full of mountains, steep inclines with rushing mountain rivers, and hazardous trails, which makes traveling difficult. Copious rainfall on a mountainous terrain causes natural disasters. The Matsigenka are therefore fearful of floods and earthquakes.

With the 1947 earthquake, many families disappeared. The condition of the soil—black and rich—and the availability of animals for hunting were very favorable until some 40 years ago. The use of firearms and the intensive agricultural activity by colonizers and Amerindians have reduced considerably the numbers of game animals and the fertility of the land. The Matsigenka traditionally live in small, semipermanent settlement clusters situated, when possible, near a source of water and often on hilltops and ridges, in the past for fear of slave raids and in the present day to avoid competition over resources and the danger of floods. A house up on a hill also allows them to enjoy the breeze and to escape mosquitoes.

### 3 LANGUAGE

Matsigenka means “people.” The Matsigenka or Machiguenga language belongs to the Campa group of the Southern Maripurean or Arawakan dialects. Arawak is one of the largest and most important linguistic families in South America, both in extent and in number of component languages and dialects. There are two varieties of Matsigenka: Caquinte and Matsigenka. It is estimated that around 8,000 people in the Amazon of Eastern Peru speak Matsigenka.

As with any other vernacular, the Matsigenka language gives us an idea of how the Matsigenka perceive the world. The animal kingdom, for example, is divided into five categories: *ibira*, for domestic animals; *yaágágáni*, for edible animals and birds; *átsigantatsíri*, for animals that bite; *ógantéri*, for animals that sting; and the last one is divided in two—*sima*, big fish; and *síbai*, small fish.

Up to 50% of Matsigenka men are bilingual in Matsigenka and Asháninka. Being able to speak the Asháninka language facilitates trade. Most men also speak basic Spanish, and an increasing number of children are fluent Spanish-speakers after the first school years. In contrast, most women are monolingual, with only an estimated 30% knowing how to count in Spanish.

### 4 FOLKLORE

The Matsigenka believe they were originally made out of pieces of wood—palo de balsa—by a powerful creator spirit named Makineri, who cut sturdy saplings into lengths and brought them to life by singing and breathing on them. Makineri was one of many spirits or beings called Tasorinchi, who were created from nothing and were very powerful. They changed many Matsigenka into animals. One of the female Tasorinchi is the “mother of fishes.” A male Tasorinchi one tried to drown the Matsigenka by causing a flood. He was then nailed to the trees, where he still lives, and when he struggles to free himself he causes earthquakes. Several Tasorinchi finally became armadillos.

Another myth tells about the Inkakuma spirits, who were mining and dug through the underworld. The Chonchoíte, a legendary cannibalistic tribe, emerged from the hole that was eventually plugged and those remaining below became the Kamagáriní or demons. One of those demons from the underworld created the Kugapakuri, a tribe of bow hunters; and the Viracocha, the people of the Puna.

The Matsigenka also believe that formerly people lacked teeth and ate only potter’s clay. Kashiri, the Moon, brought manioc (cassava) roots to a menstruating girl and taught her to eat them.

The deep sections of the rivers are the home of a great manfish, Quíatsi, who hunts careless swimmers, takes them to the bottom, and weds them to his daughters. He is not considered a bad spirit. Mountain caves are homes of malignant spirits, and roaring winds are feared because they are believed to bring illness and death. The swallows that make their nests in the Matsigenka houses, on the other hand, bring good luck; and a kite (a type of bird), the *yasíbántí*, is protected since it takes the souls of the dead to other levels of existence.

### 5 RELIGION

Good and evil were the two forces involved in the creation of the world. Matsigenka associate “good” with happy and “not good” with sadness. It seems as if the pleasure principle were operating at its most elemental level.

According to Matsigenka cosmovision, the Creator made the world by mounding up mud into land. The Evil Contender created the bad things in the world, like stinging flies. These two figures are no longer active, but good and bad spirits are still present. Many things have spirits, and animals have spirit rulers, so if one of them is killed, their spirits should be appeased. Some animals are in fact descendants of humans that committed a crime, like theft or incest. Women have to beware of the various demons that haunt the forests and can impregnate them with a demon child.

It is possible for a human soul to fly to the land of the Unseen Ones by ingesting an alkaloid hallucinogen called *kamarampi*, “death medicine.” The Unseen Ones can perform cures, see the future, and instruct. After death, the soul begins a voyage towards a better layer of the cosmos. There are 10 levels of existence. The gods inhabit the top 5. The earth is the eighth level. After death, the soul can choose to remain on the seventh level, above the ground, where people live just as they do on earth but do not suffer or die and can still enjoy earthly pleasures. The higher levels can be reached, providing the soul is not caught and thrown back down by dangerous spirits that inhabit the sixth level, running the risk of falling to the deepest level where all is suffering, perpetual fire, darkness, and hunger. But, the soul can be rescued by the Quíibintí, which inhabit the ninth level below the ground, where there is life and happiness. If the soul manages to reach the highest levels, it will be happy forever.

### 6 MAJOR HOLIDAYS

There is only one major religious holiday, but it is celebrated every month: the Moon Festival. The Matsigenka have kept through the centuries the tradition of dedicating one day and night to honor the moon. During the last century, the festival took place from Saturday evening through Sunday. But, in the last years, this tradition has not been practiced with the same frequency. During the festival, the Matsigenka wear their best clothes, dance, and drink mildly fermented *masato*. In a big clearing, men in couples march together in a circle playing their *soncari*, or pan pipes. Meanwhile, the women, holding hands, form a long line and move as they sing a melody different from the one the men are playing. The words of the song are in an archaic dialect, and many young girls do not understand it. When the men finish a certain tune, they stop, look at the women, bow, go back one or two steps, bow again, and then start their music once more. The music and dancing con-

tinue through the night, with only a few short breaks to rest, drink *masato*, and take some coca.

In the last few years, and because of the opening of schools for the Amerindians, the Matsigenka have joined the Peruvians in the celebration of national holidays. For Independence Day—Independence from Spanish rule—Matsigenka children march, holding paper lanterns in the shape of stars, houses, airplanes, etc. When available, they like to march to the beat of drums, playing trumpets.

## 7 RITES OF PASSAGE

Ceremonies are rare among the Matsigenka. Their parties are more about dancing, singing, getting drunk, and joking, rather than invoking spiritual forces. Being a very individualistic people, the curing and spiritual encounters are conducted by individuals in the privacy of their homes.

There are no ceremonies for birth or naming the child. Some baptize their children with a Spanish name; otherwise, the children get a Spanish name from their teacher when they go to school. Puberty rites have disappeared. Girls used to have their hair cut and were isolated for one or two months, during which time they spun cotton.

Marriage does not happen until the accepted groom builds a house and plants a garden near his in-laws' dwelling. The ceremony is attended only by the bride's parents. The father orders his daughter to roast yucca for his new son-in-law. The bride offers some yucca to the groom and from then on they are considered husband and wife. Both of them have the right to throw the other one out if they get bored with each other.

An extreme lack of death ritual was previously found among the Matsigenka, who not only threw their dead unceremoniously into the river but similarly disposed of hopelessly ill people. They traditionally only buried those who were killed in warfare. To prevent the soul of a person who had died through attack by an evil spirit to linger in sorrow near his or her home, the house was burned down. The remainder of the family moved away so the soul would have no reason to stay and would begin its journey to the higher level of the cosmos.

Nowadays, when a person dies, the family weeps quietly so as not to attract evil spirits. For the first two weeks after a death, the family can only eat green plantains and rice. Afterwards, the closest relative bathes in a special brew and the nuclear family cuts their hair to avoid causing the deaths of other people. The body is washed and dressed in a *cushma* (the standard Matsigenka dress) specially dyed with achiote, and is buried with its personal possessions. It is believed that the soul of a dead person is evil, so the survivors try to forget the dead person to prevent the soul from coming back.

## 8 INTERPERSONAL RELATIONS

Though each Matsigenka household is virtually self-sufficient, game and fish are shared generously among people of the hamlet. Hamlet-dwellers exchange visits at dusk and on weekends. When a visitor arrives, the host asks, "Néga pijáque?" ("Where are you going?") and the guest replies, "Naniáquemíni" ("I am visiting you."). This is the same greeting used in casual encounters. The host always serves boiled yucca and *masato* (a type of drink), sometimes accompanied by other seasonal foods. At times, the guest brings food.

Gossip and shaming, together with early socialization, are quite effective methods for teaching people to control aggres-

sive impulses. If an individual does commit a crime, such as homicide or incest, he or she is punished by being ostracized or expelled from the community. Verbal fights with limited physical contact occur occasionally within the household and hamlet, usually after drinking at a beer feast. Conflicts with outside groups in the late 20th century are at a minimum. The Matsigenka are courteous towards strangers, but they are generally not too friendly as they fear exploitation. Friends share the meat from the hunts and some of the foods they collect, like palm nuts. They do not, however, buy each other presents.

There is virtually a lack of political organization as it is known by Western society among the Matsigenka. Leaders are elected by tacit agreement, rather than through elections. The basic rule is household autonomy, and the Matsigenka are notorious for leaving an area if their autonomy is compromised. There are no chiefs or councils to set policy, but recently they did form a multicomunity union and elected a council head, mainly to deal with the alien industries moving into their territories. They respect a person's word of honor, so agreements do not require written contracts. They do not have written laws either. Traditions of this kind have made encounters with the Whites and Mestizos difficult.

## 9 LIVING CONDITIONS

The Matsigenka can be considered semi-nomadic or semi-sedentary. The reason of this double condition resides in the fact that they spend part of the seasons in sturdy houses where they store their possessions. However, this Amerindian tribe also leaves their houses for extended periods, living in temporary shelters part of the year, when they become nomads.

Matsigenka houses are constructed entirely from local materials. They are built with heavy hardwood posts tied with bark, have palm-wood walls, and are covered with a thatched palm-leaf roof. Houses were traditionally low, oval-shaped structures. Today many have raised palm-wood floors and are larger and rectangular in shape. Inside, there is always a fire burning. The Matsigenka prefer to build their homes next to a river or stream. Around the house, there is usually a clearing that helps keep snakes and rats out of the house. They usually plant flowers, and sometimes they place their kitchen in the garden. The clearings are an informal demarcation of ownership, although land is not owned as such. Men announce in advance their intentions to clear gardens in specific locations. Abandoned gardens revert to the public domain.

Some of the plants grown in the kitchen gardens are ingredients for the large number of herbal remedies known to the Matsigenka. It is believed that illnesses are caused by evil spirits; there are no physical causes: the symptoms that follow a snakebite are not caused by the snake's venom but by the spirit that inhabits the snake. A suggestion of nutritional deficiencies is beriberi, which the Matsigenka attribute to eating papaya after sungaro fish, roast crayfish, or hips juice. To cure coughs and rheumatism, they rub the body with the sap of a tree called *cobe*, which is like menthol. For the shooting pains caused by the bite of a *maní* ant, the remedy is to drink and bathe in an infusion made with a bulb called *manlibenqui*. They chew coca to counteract fatigue. Despite their impressive knowledge of natural medicine, there is a growing dependence among Matsigenka on Western medicine due to social changes and foreign diseases.

Most of the Matsigenka region is reachable by road. There are bus services, and trucks travel along the highways. Within the region, the Matsigenka often walk, and the traditional carrying devices were tumplines, infant-bearing bands, and small bags. Early explorers observed that Matsigenka men and women could carry up to 34 kg for 24 km (75 lbs for 15 mi) a day.

## **10 FAMILY LIFE**

Commonly, Matsigenka live in a single-family residence. Even though family life conditions vary from one kinship to another, it is possible to suggest that on average households are dwelled by seven to eight members. Husband and wife—or wives—are independent of other households and are free to leave the house site for shorter or longer periods as their convenience indicates. With the division of labor among its members, a household is a self-sufficient unit capable of living on its own for long periods of time.

Traditionally, marriages are arranged at an early age and often with members of the families that share the hamlet. As a result, many Matsigenka are related in some way to everyone else in the vicinity. But, this convenient arrangement often fails, and the unmarried ones have to visit other settlements to procure a mate. There are a small number of cases of polygamy, and in such cases, each wife has her own living space within the house. Women provide most of the child care and prepare nearly all of the food. Men participate in the preparation of food for storage, like smoked meat and fish. Infants are fed on demand, pampered, and enjoyed. After the age of 1 year and until the age of 5 years, discipline is by verbal reprimand, rarely accompanied by corporal punishment. Starting at age 5, children begin to acquire adult skills by going with the parent of their sex to work. From then on, scolding is common, but the process is gentle and gradual. Young ones learn the values and customs of the group by oral instruction and imitation. Norms are taught mainly through legends.

According to early explorers, a Matsigenka man could exchange wives with a friend or lend his wife to a visitor. The women practiced abortion and gave birth in the woods, immediately after which the mother returned to routine life. Today, they give birth in a special hut built by the husband, aided by an older relative. The husband should be present to cut the umbilical cord with a piece of bamboo; otherwise, the mother's teeth will wear away.

## **11 CLOTHING**

The standard dress of the Matsigenka is the *cushma*, with a neck opening that runs from front to back for men in the shape of a V and from side to side for women, in a straight line. It takes a woman about three months, working during her free time, to make a *cushma*. Made of wild cotton and colored with vegetable dyes, it is ornamented with feathers, beads, etc. The most commonly used dye comes from the bark of a tree called *tsótoroqui*. To extract the dye, the bark is boiled in water. The cloth is then submerged into the resulting liqueur and dried under the sun. The process is repeated three or four times to get the desired color: from lilac to a reddish brown. Whatever the tone, it gets darker all the time as it is exposed to the sun, and it does not run or fade when washed. The *cushma* has vertical stripes for a man and horizontal for a woman. The designs of the stripes differ between communities so they can easily identify visitors.

For dress occasions, some Matsigenka nowadays wear European clothes. Since *cushmas* do not have pockets, the Matsigenka men use bags to carry things like matches, a knife, wax, cotton thread, a little bag with coca leaves, and a whistle to call birds. The women carry their things in baskets. As ornaments they wear cotton wrist and ankle bands, various seed necklaces, and gold-colored earrings. As men used to place pins through their noses, some of them have a perforation there. The men make crowns in the shape of topless hats decorated with feathers. Both sexes paint their bodies with *achiote*, both as decoration and as protection against sunburn and insects. The Matsigenka were known to paint even their animals.

## **12 FOOD**

Like many other Amerindians in the region, the staple food of the Matsigenka is yucca or manioc (cassava). The long tubers are peeled and then boiled or toasted to make their bread, which is a large flat pancake, and also *masato*, a thirst-quenching drink. Some kinds of yucca have a poisonous juice inside them, and after grating the tuber it must be squeezed out in a *tipiti*. Boiled yucca is also eaten accompanied by soups made with meat, fish, snails, plantains, pumpkins, nuts, fruits, maize, chili, larvae, or eggs.

The importance of the yucca is highlighted by a wonderful story that tells how the Matsigenka came to have it: it was a gift from the Moon, Kashiri. Long ago, the Moon came down in the form of a handsome man wearing a yellow feather crown. He met a girl, married her, and gave manioc, maize (corn), plantains, and other foods to her parents. He also taught them how to grow and prepare yucca the right way. The girl bore four boys, all Suns: the Sun, Venus, the Sun of the Underworld, and the Sun of the Firmament, which gives light to the stars. Then Kashiri went back to heaven. Since then, Kashiri watches over all his daughters—the yucca—and the plants complain to him if people tread on them or do not prepare them the right way.

Early explorers talk about the ways the Matsigenka cooked meat, using a pyramidal or rectangular *babracot*; the smoke helped preserve it for a few days. Rock salt from Cerro de la Sal and pepper were used as condiments. Today their favorite way of preparing big meals for a party is the *pachamanca*: the uncooked food is placed in a hole in the ground that contains hot stones, covered with leaves and earth, and left to cook slowly. They eat their meals with wooden spoons or monkey skulls, and the women eat separately from the men. They also use plates and spoons made of pumpkins, and they have their meals sitting on the floor on mats. Sometimes they drink coffee, but they prefer tea and other warm drinks made with cacao seeds, lemons, maize, and sugarcane.

## **13 EDUCATION**

Education in some ways has been the reason for a change in the traditional living conditions of the Matsigenka, who have been drawn out of their isolation into school communities with airstrips. Matsigenka school communities, with family households of an average of 6 people each, range in size from 100 to 250 individuals. The change started in the 1950s, when the Peruvian government opened monolingual (Spanish) schools in the region. A few years later, a group of Matsigenka became schoolteachers, trained by a Protestant group in Pucallpa at the Summer Institute of Linguistics. The schoolteachers of-

ten serve as a link with the commercial world as well. In some communities, the children study in bilingual schools where the textbooks are in Spanish and Asháninka. The schools, with only one exception, offer only primary education. Children who finish when they are 13 years old have only one option if they want to go on to secondary education.

School terms are nine months long, from April to December. From 8:00 am until 2:00 pm, five days a week, the students study language, history, social and natural sciences, math, hygiene, sports, music, and religion. Their main problem is learning Spanish. Most of them do not speak it at home, and because their parents do not know it well, they cannot really help the children with lectures and math. Sometimes, Matsigenka children have to repeat a grade a few times before they learn enough Spanish to go on to the next one. There is also the problem of shortage of books and other materials and teachers. Nevertheless, the Matsigenka students learn how to read and write and recently have been finishing school in less time. According to observers, they particularly enjoy extracurricular activities, like playing in the school band.

#### 14 CULTURAL HERITAGE

The Matsigenka like to sing and are good at it. Their songs are hypnotic repetitions and counterpoint, performed in groups of up to four people and accompanied by musical instruments. A traditional instrument is a two-headed, monkey-skin drum. They also play flutes and panpipes. When the singing and the music are mixed with manioc (cassava) beer, the rhythm accelerates into a rapid 4/4 time and the Matsigenka start dancing. While men dart and whirl around the clearing, women dance by walking behind the men, holding hands and singing.

#### 15 WORK

Farming is done in the traditional slash-and-burn method. After the morning bath in the river (from which they bring back water) and breakfast, the men go to the fields carrying a pumpkin container filled with masato (a thirst-quenching drink). They work from dawn until 4:30 pm without lunch and have breaks every two hours. Some days the men go hunting or fishing. Each Matsigenka family has its own clearing, which is made anew every two to three years. Men help one another prepare these clearings, but subsequently each woman cultivates and harvests her own plot. Women clean the house each morning and evening, light the fire, cook and take care of the children. They also make clothes and pots, gather firewood, and help the men with their work.

To supplement their diets, the Matsigenka fish, hunt, and collect nuts, wild fruits, and mushrooms. To fish, the Matsigenka use a drug called *cadge*, bone hooks, grill nets, hand nets, large nets with sinkers, fish pots, spears, and arrows. They also use a weir and dam to drain a section of the river. Men do all the hunting, using bows and arrows and traps. The arrows have cemented, spiraled feathers, and their points are never poisoned. Some Matsigenka have shotguns that make hunting easier, and they end up with enough catch to share with local households and thus offset resentment. To catch birds, the Matsigenka smear a glue on tree limbs. Early explorers observed that the Matsigenka were the only group in the Peruvian mountains to keep ducks, along with chickens, which were common elsewhere. To make fire, they used the drill method, with cotton, raw copal, or resin as tinder.

Money has only recently been introduced into the local economy. In communities with schools, they are encouraged to develop commercial crops such as coffee, cacao, peanuts, and beans for sale. The Matsigenka manufacture nearly everything they use, except machetes, axes, aluminum pots, and factory-made cloth. They also trade with their neighbors. A handmade *cushma* (traditional dress), for example, can be exchanged for a machete, an axe, two cans of gunpowder, or one parrot.

#### 16 SPORTS

Explorers say that archery was the game of Matsigenka boys, while the girls tossed balls made of bladders. For some festivals, the Matsigenka organize archery tournaments, gymnastic events, blindfolded cassava-peeling competitions, and poetry contests. Recently men and women have begun to practice organized sports. Soccer is the most popular. Basketball and volleyball are also played. But, the practice of sports in front of crowds or as a commercial activity is not part of their culture. The Matsigenka are good swimmers. They learn to swim at an early age, following the example of older boys who often choose the deeper sections of the rivers and know how to move in torrential waters.

#### 17 ENTERTAINMENT AND RECREATION

The Matsigenka value their free time and find many ways to enjoy it. Conversation is one of their favorite pastimes, whether serious, humorous, or simple gossip. They play word games, laugh at each other's misfortunes, and make fun of different accents or dialects. They discuss sex openly and often exaggerate its practice when telling legends. Children have few inhibitions: they speak their mind and defend their opinions with passion.

Games are another form of entertainment. Two games introduced by Quechua colonizers are very popular. One is called "Pull the Duck." A duck is hanged from a tree with a rope that can be pulled, and the participants try to get the duck down from the tree. The winner keeps the duck. In the second game, they hang a bag of sweets and treats from a tree and dance around it, periodically hitting the bag of sweets with an axe until it falls, and they then fight to get the treats. Recently, card games have been introduced. The Matsigenka play cards, betting small sums of money. For their own pleasure, some men play their flutes and drums. The Matsigenka also have a lot of fun teasing their domestic animals: they really enjoy pulling their dogs' whiskers.

Matsigenka smoke tobacco in pipes or take it as snuff through V-tubes. They also chew it with the ashes. To get drunk, they drink *chicha*, made with yucca, maize, sweet potatoes, bananas, and other produce.

#### 18 FOLK ART, CRAFTS, AND HOBBIES

The Matsigenka make their own pots. They use the clay found in riverbanks and mix it with cotton fiber. When the pot has dried thoroughly, it is put in the fire for an hour, and as soon as it is taken out they fill it up with yucca water to make it waterproof. Decoration is rare in pottery and other objects and simple tools that are made of wood. But they do make children's toys of wood, and necklaces of animal teeth and carved bones. Women spin cotton and weave cloth, make mats for sleeping and sitting, and make the plaited sifters and strainers used in food preparation. Men are responsible for house-build-

ing, making bows and arrows, and making the fiber twine for netting.

### 19 SOCIAL PROBLEMS

Malnutrition has made the Matsigenka population more susceptible to parasites and epidemics. Cultural changes have affected the Matsigenka's psychological well-being, resulting in a number of suicides and an increase in alcohol consumption, which is helped by the availability of bottled and canned alcoholic drinks. Some communities are so isolated that medical help cannot always reach them. Formal education suffers shortages of teachers and materials. The teachers do not stay very long, as they are often not from the region and find the conditions difficult.

### 20 GENDER ISSUES

Women provide most childcare, prepare nearly all the food, manufacture cotton cloth, and grow certain "women's crops," such as yams and *cocayam*. In addition, Matsigenka women spin cotton, weave cloth, make mats for sleeping and sitting, and make plaited sifters and strainers used in food preparation. Men do all the hunting, most fishing, the bulk of agricultural work, build houses, make bows and arrows, and create fiber twine for netting used in fishnets and carrying bags. Men and women occasionally work together in the garden or on foraging trips, complementing one another's tasks. With this division of work strongly gendered in Matsigenka households, many women left behind by their husbands who search for employment and leave their villages for periods of weeks and sometimes months, have difficulty keeping themselves and their children adequately nourished.

Other serious impacts of modernity include the spread of sexually transmitted diseases among the Matsigenka. Syphilis appears to be present in at least one community at an unprecedented rate: 35% of the pupils at one Matsigenka high school had tested positive for syphilis. Although the route of this disease into the communities is not clear, the timing strongly suggests that it is related to the increased contact between the Matsigenka and outsiders as a result, direct or indirect, of the gas project in Peru.

Medicinal plant knowledge is widely shared, though a degree of specialization is found along gender lines: women are more knowledgeable about plants for childcare and fertility control, while men specialize in hunting medicines and treatments for wounds and snakebite. Mildly psychoactive plants are used to improve women's concentration for spinning and weaving cotton, to control negative emotions, such as grief and anger, to manipulate the content of dreams and to pacify sick or frightened children.

# MAYA

**LOCATION:** Southeastern Mexico; Guatemala; Belize; Honduras; El Salvador

**POPULATION:** About 8–10 million

**LANGUAGE:** Spanish; English; various Mayan dialects

**RELIGION:** Folk Catholicism; evangelical Christianity

## 1 INTRODUCTION

Today's Maya are descended from one of the great civilizations of the Americas. They live in the same regions of Mexico, Guatemala, Belize, El Salvador, and Honduras as their ancestors and retain many of their ancient traditions. Mayan history reaches back some 4,000 years to what is called the Preclassic period, when civilization first began in Mesoamerica. However, it was during what came to be known as the Classic period—from roughly AD 250 to 900—that Mayan culture reached its peak and the Maya achieved their celebrated advances in architecture, mathematics, agriculture, astronomy, art, and other areas. During this period Maya civilization was formed by more than 40 cities, such as Tikal, Uaxactun, Copan, and Bonampak, among others. Each of these cities had an average population that would have oscillated between 5,000 and 50,000 dwellers.

They built spectacular temples and palaces, developed several calendars, including one reaching back to 3114 BC, and developed a numerical system capable of recording a number that today would be expressed as 142 followed by 36 zeros. They developed a complex system of writing and, beginning in 50 BC, were the first people in the Western hemisphere to keep written historical records. Around AD 900 the construction of buildings and stelae (stone slabs inscribed with names and dates) ceased abruptly, and the advanced lowland civilization of the Maya collapsed, creating a mystery that has fascinated scholars for many years. Possible causes that have been proposed include warfare, drought, famine, and disease. Later investigations suggest that the sudden decline could have been occasioned by war-related disruptions of river and land trade routes.

The Spanish campaign to subdue the Maya and conquer their lands began around 1520 and ended nearly 200 years later when Tayasal, the last remaining Mayan region (in present-day Guatemala), fell to the conquistadors in 1697. The Spanish seized Mayan lands and enslaved their populations, sending many to labor in the mines of northern Mexico. In addition, thousands of Maya died of diseases spread by the Europeans, especially smallpox. During the first half of the 19th century, the Central American lands won their independence from Spain, but the lives of the Maya did not improve. They labored on vast tobacco, sugarcane, and henequen plantations, in virtual slavery enforced by their continuing debt to the landowners. In the Yucatan, many joined in a protracted rebellion called the Caste War that lasted from 1847 to 1901.

After the revolution of 1910, the Maya in Mexico gained increased legal rights and better educational and job opportunities. However, a steep drop in world prices for henequen—the “green gold” from which twine was made—turned the Yucatan from one of Mexico's richest regions to one of its poorest. In Guatemala, the disenfranchisement and poverty of the

Maya (comprising roughly half the population) continued unchanged into the 20th century. Since the 1970s, political violence has forced many Maya to flee to Mexico, where they remain as refugees. In Chiapas, Maya of the Tzeltal and Tzotzil tribes took part in the Zapatista uprising of January 1994.

## 2 LOCATION AND HOMELAND

The modern Maya live in southeastern Mexico and northern Central America, including Guatemala, Belize, Honduras, and El Salvador. Altogether, their homelands cover an area of approximately 323,750 sq km (125,000 sq mi) with a varied terrain that encompasses both northern lowlands and southern highlands. Volcanic mountains dominate the highlands, which are home to the rare quetzal bird of the tropical rain forest. The fertile soil of the highland valleys supports the largest segment of the Maya population. While many Maya have settled in cities, particularly Merida and Cancún, and adopted an urban lifestyle, most remain rural dwellers.

Reliable figures for the total number of Maya are unavailable. Estimates range upward from 4 million. The true figure is probably between 8 and 10 million, including about half of Guatemala's total population of 10 million, close to 2 million Maya in the Mexican Yucatan, and additional numbers in Mexico's Chiapas state, as well as Belize, Honduras, and El Salvador. Among the larger individual groups are about 750,000 Quiché (K'iche') in the midwestern highlands of Guatemala; 445,000 or more Cakchiquel in several Guatemalan departments (provinces); and over 500,000 Mam in southwestern Guatemala and southeastern Chiapas.

## 3 LANGUAGE

Mayan languages are wide spread in Mesoamerica and northern Central America. According to recent estimations, it is plausible to suggest that Mayan languages are spoken by about 7 million indigenous Maya in Mexico, Belize, and Guatemala. In addition, most Maya today speak Spanish, the official language of the countries where they reside (except for Belize, where the official language is English, but much of the population speaks either Spanish or an English-based Creole that contains elements of Spanish and African languages).

The Mayan languages (alternatively: Maya languages) form a language family spoken in Mesoamerica and northern Central America. Mayan languages are spoken by at least 6 million indigenous Maya, primarily in Guatemala, Mexico, and Belize.

The two Mayan languages of the Classic period, Yucatecan and Cholan, have subdivided into about 30 separate languages, some of which are not mutually intelligible. The most widely spoken are Mam, Quiché, Kekchí, and Cakchiquel. Advocates of Mayan cultural autonomy protest against the relegation of their indigenous languages to limited use (often in remote rural areas) while Spanish remains the language of government, education, the church, and the media. The following example is drawn from a creation myth in the *Popol Vuh*, the Mayan holy book:

Keje k'ut xax k'o wi ri kaj nay puch, u K'ux Kaj.  
Are ub'i ri k'ab'awil, chuch'axik.

(And of course there is the sky, and there is also the Heart of Sky. This is the name of the god, as it is spoken.)

#### 4 FOLKLORE

The greatest body of Mayan tradition is contained in the *Popol Vuh*, an ancient text first transcribed into Latin and later translated into Spanish that preserves both sacred and secular lore. According to its creation myth, the gods made three different attempts at creating life in earth.

In Maya mythology, Tepeu and Gukumatz, also known as Kukulcan and as the Aztec's Quetzalcoatl, are indicated as the universe makers. They were two of the first beings to exist and were as wise as they were sage. Other deities, such as Huracan, the Heart, and Heaven, are also present in these narrations. According to Mayan traditions, Tepeu and Gucumatz decided that to preserve their legacy it was necessary to create a race of beings who would worship them. During this process, the gods made several attempts, but false starts complicated the procedure.

Animals were created first but since all were howling and squawking and did not worship their creators, they were banished forever to the forest. Man was first made of mud, but they just dissolved and crumbled away. The second version was made of wood and proved deficient because they were without emotions, souls, and reason because they soon forgot their makers. Finally, men were formed from a paste of corn dough by more gods. At last their work was complete. Even though perfect beings were fashioned, this new version was modified. The gods decided to protect the new beings by limiting the extent of their knowledge, reason that explains why gods determined to damage their eyes so humans could not see too much, and the resulting beings were the first Maya. As such, the Maya believed that maize was not just the cornerstone of their diet, but they were also made out of it.

#### 5 RELIGION

From a general viewpoint, Mayan religion was based upon the existence of a group of nature gods, such as the sun, the moon, rain, and corn. A priestly class was in charge of elaborating rituals and ceremonies. Closely related to Mayan religion was the impressive development of mathematics and astronomy. Mayan astronomy shows a complex system capable of estimating the solar year (18 months of 20 days each, plus an unlucky 5-day period) and the sacred year of 260 days (13 cycles of 20 named days). Another fact that proves the astonishing Mayan skills as astronomers at that time was their ability to predict solar eclipses.

The traditional religions of the Maya were based on a cosmology that embraced the world, the heavens, and an unseen underworld called Xibalba. When Spanish missionaries introduced Catholicism to their regions, the Maya tended to graft it onto their existing religion, creating a unique brand of folk Catholicism. Their traditional gods that belonged to the natural world, such as corn, rain, and the sun, became associated with Christian saints, and various rituals and festivals were transmuted into forms approved by the church.

Since the 1960s, evangelical Christianity, mostly promoted by churches in the southern United States, has been adopted by large segments of the Mayan population. Entire towns have embraced conservative forms of Protestantism, which have not proven as amenable as Catholicism to the retention of customs related to traditional folk religions, such as the use of alcohol in association with religious rituals or the retention of the sacred brotherhoods—known as *cofradías* in Guatemala and as

*cargos* in Chiapas—which traditionally oversee village festivals and other aspects of civic life.

Even though almost all Mayas are nominal Roman Catholics their Christianity is mixed with their native religion. Its cosmology is typically Mayan, and Christian figures are commonly identified with Mayan deities. Public religion is basically Christian, but traditional domestic rites of their native pre-Columbian religion are still practiced in the privacy of their homes.

#### 6 MAJOR HOLIDAYS

Most holidays currently observed by the Maya are the holy days of the Christian calendar, although many of their observances retain a shamanistic character resulting from the grafting of a Christian framework onto the ancient nature worship of their ancestors. The most important celebrations are generally Holy Week (the week leading up to Easter in late March or early April) and Christmas (December 25). The Maya living in the Chamula region of Chiapas are known for their five-day Carnival celebration, called Crazy February, whose Christian significance (the period preceding Lent) merges with the older observance of the five "Lost Days" at the end of the Maya solar calendar. Religious societies called *cargos* sponsor the festivities, which include ceremonial dances, feasting, processions, and ritual reenactments of both religious and historic events, including a mock "manure war."

#### 7 RITES OF PASSAGE

Major life transitions (such as birth, puberty, and death) are marked by religious ceremonies, many of which combine Christian and ancestral traditions.

#### 8 INTERPERSONAL RELATIONS

The religious societies known as *cargos* in Chiapas and *cofradías* in Guatemala have been an important vehicle of social cohesion among the Maya. Charged since colonial times with organizing Catholic religious festivals, they provided the means for the Maya to conform nominally to the customs of their colonizers while privately preserving their own religion, traditions, and worldview. Mayan villages today have both civil and religious *cargos*, whose officials may ascend through a hierarchy of positions to ultimately become respected village elders, or *principales*.

#### 9 LIVING CONDITIONS

Housing varies among the different regions and groups of Maya. The Mam, who live in southwestern Guatemala and southeastern Chiapas, inhabit houses with adobe walls; small, shuttered windows; roofs of tile or corrugated metal; and a floor of hard-packed dirt. The K'iche' in the Guatemalan highlands build rectangular houses with double-pitched tile roofs and walls of adobe, thatch supported by boards or poles, or other materials. Increasing numbers live in more modern homes built from brick or lumber with tin roofs.

The health of the Tzotzil and Tzeltal Maya of Chiapas has been compromised by their inadequate diet, which consists of fewer than 500 calories a day—one-fifth of the minimum standard set by the United Nations. Life expectancy is only 44 years, and the infant mortality rate is 150 deaths per 1,000 live births. Another factor endangering both infant and adult

health is the prevalence of adolescent pregnancies. Maya folk medicine includes the ministrations of ritual healers called *curanderos* and female herbalists who may double as midwives. Common cures include prayers, offerings, herbal remedies, and sweat-baths.

The main means of transport for most Maya is the bus. Buses in Maya areas may be crowded as early as 4:00 or 5:00 am, often with people traveling from remote villages to the larger market towns. By late afternoon and evening there are fewer travelers on the road. In the Yucatan, human travelers share narrow country roads with a variety of wildlife ranging from lizards to swarms of butterflies, and speed bumps abound on roads in the vicinity of virtually every village. Trains in the Maya regions—like those in many parts of Central and South America—are generally slow, old, and unreliable. In some areas, boats are used for public transportation.

Economically, today's Mayas are agricultural oriented. This Amerindian people raise a wide variety of crops such as corn, beans, and squash. Socially, today's Mayas live in communities organized around central villages and live on farm homesteads except during fiestas and market days.

## 10 FAMILY LIFE

Both nuclear and extended families are found among the Maya. Couples generally marry in their late teens or early 20s. Traditionally, all marriages were arranged, but since the 1950s it has become increasingly common among some groups for young people to choose their own mates. In arranged marriages, contact may be initiated by the couple, followed by negotiation between the two families. Gifts are generally exchanged, and in some cases the bride's parents receive a payment to compensate them for having raised her. Couples often have both civil and religious ceremonies, and they may live with the groom's parents until their first child is born.

Family structure may alternate between nuclear and extended, with the addition of newly married couples who will eventually leave to establish their own homes, or elderly parents who come to live with the family when it becomes hard for them to manage on their own.

## 11 CLOTHING

The Maya wear both modern Western-style clothing and traditional garb (although the latter is more commonly worn by women). Dress is mainly traditional, particularly for women. It is much more common to see men wearing modern clothing. Men generally wear trousers and sport shirts or *guayaberas*, dress shirts with decorative tucks worn outside the belt in place of a jacket. Women wear either traditional woven and embroidered clothing, or stylish dresses and skirt-and-blouse outfits. Traditional women's attire includes the *huipil*, a long, sleeveless tunic; the *quechquémitli*, a shoulder cape; and the *enredo*, a wrap-around skirt. Maya garments are commonly decorated with elaborate and colorful embroidery. The designs, which include humans, animals, and plants, often have some religious significance, and every Maya group and village has its own distinctive patterns of decoration. The decorative designs for huipiles are often said to appear to women in their dreams. Men often wear the traditional tunics over store-bought shirts. *Fajas* are sashes that hold garments in place and also serve as pockets. Domestic spinning and weaving, once common, are

becoming rare, and most clothing is made of factory-woven cloth.

## 12 FOOD

The Maya generally eat three meals a day: breakfast (*el desayuno*), lunch (*la comida*), and supper (*la cena*). Corn, the most important food of their ancestors, remains the central ingredient in their diet today. Throughout the region, women make daily trips to the village grinder with their corn kernels, returning with dough, or *masa*, from which to make tortillas, the most important food staple, or tamales, which are also popular. After corn, beans (*frijoles*) are the most basic staple, served boiled, fried, or refried. Soups, many of them actually thick stews, form a large part of the Mayan diet. One of the most popular is lime soup (*sopa de lima*), made from chicken, limes, and a variety of spices.

Poultry, either turkey, which is native to the region, or chicken, which was introduced by the Spanish, forms the basis of many meals. Plentiful seafood caught on the coasts of the Caribbean and Gulf of Mexico is also an important dietary staple. The Yucatan is known for its *ceviche*, a cold dish made with fish prepared with an acidic marinade (usually lime juice), served with onions, chiles, and cilantro. Popular desserts include flan (a custard introduced by the Spanish) and *Torta del Cielo* (Heavenly Cake), a cake made with rum, almonds, and 10 eggs that is served at weddings and other special occasions.

One of the best-known foods of the Maya is Cochinita Pibil, a pork dish that dates back to pre-Columbian times, when it was made from wild boar cooked in a coal-filled pit. Domesticated pigs, introduced by the Spanish, have replaced the boar, but the dish is prepared with the same seasonings as it was in the past.

### Cochinita Pibil

- 10 whole black peppercorns
- 1/3 cup lime juice
- 1/4 teaspoon cumin seeds
- 2 pounds lean pork, cut in 2-inch cubes
- 5 cloves garlic
- Banana leaves or aluminum foil
- 3 Tablespoons achiote paste
- 3 fresh xcatic or other spicy chilies
- 1 teaspoon dried oregano
- Sliced purple raw onions
- 2 bay leaves
- String

The cumin seeds and black peppercorns should be ground to a fine consistency, combined with the garlic, and pureed in a food processor or blender. Mix the spice puree with the lime juice, achiote paste, bay leaves, and oregano. Cover the pork with this mixture and marinate for at least 3 hours, or overnight. Place banana leaves on the bottom of a roasting pan, and put the pork, with the marinade, on top of the leaves. Add topping of onions and chiles. After folding the leaves over the meat, tie with the string. Preheat oven to 325°F and bake in covered pan for 1½ hours. Serve with beans, salsa, and heated corn tortillas.

Serve with warmed corn tortillas, beans, and salsa.

### **13 EDUCATION**

The Maya are educated at either public or Catholic schools. In Guatemala, a half-dozen Catholic-run boarding schools are the main source of education for those wishing to progress beyond the basic education available in the villages. Maya concerned with preserving their culture argue that the formal education traditionally available to them has attempted to assimilate them into mainstream Western culture by causing them to lose touch with their own. The Guatemalan Academy of Maya Languages (Academia de Lenguas Mayas) is at the center of a movement to preserve the languages of the Guatemalan Maya by codifying their grammars and alphabets.

### **14 CULTURAL HERITAGE**

The Maya have preserved many aspects of their ancient culture, including their traditional clothing, folklore, agricultural techniques, family structure, language, and dance. Many elements of their ancient religions have also survived for centuries under the guise of Catholic religious observances, although these are now threatened by the growing prevalence of Protestant evangelical sects.

### **15 WORK**

In rural areas, the Maya farm their maize fields, or *milpas*, much as their ancestors did thousands of years ago. Forested

sites are turned into new fields by felling the trees and burning the brush (today known as “slash-and-burn” agriculture). Maize kernels are then planted into holes made with digging sticks. Where the ancient Maya used stone tools for clearing and hardened the end of the digging stick with fire, today’s farmer uses a steel machete and metal-tipped stick. Because this type of agriculture rapidly depletes the soil, fields must be left fallow for periods ranging from 7 to as many as 20 years. Besides farming, Maya also work as laborers and artisans or own small shops. In urban areas, they work in jobs involving textiles or computers, for example.

### **16 SPORTS**

The ancient Maya played hip-ball, a game that involved keeping a hard rubber ball aloft with any part of the body other than the hands, head, or feet. In some regions, the ball had to be hit through a set of stone rings. Soccer and bullfights are two popular sports in the regions inhabited by the Maya of today.

### **17 ENTERTAINMENT AND RECREATION**

Sunday afternoons after church are the most popular time for recreation. Most businesses are closed, and many people take the time to stroll the village streets or relax in local parks. Pop-

ular forms of musical entertainment include marimba teams and mariachi bands.

### 18 FOLK ART, CRAFTS, AND HOBBIES

Maya women are famous for their weaving, often using locally handspun yarn and natural vegetable dyes. Using the pre-Columbian back-strap loom of their ancestors, they produce striped and plain white cloth for shawls, shirts, and children's clothes, some with designs that are over 1,200 years old. Colorful hammocks are woven from fine cotton string. Other craft items include both glazed and unglazed pottery, ceremonial wooden masks, and goods woven from palm, straw, reeds, and sisal.

For centuries, traditional Maya dances have been preserved by the religious men's fraternities called *cofradías*. These dances were performed for both ceremonial and entertainment purposes. The *Pop Wuj* dance depicts the four stages of humankind's development: the Man of Mud, who is destroyed because he does not recognize the gods; the Man of Wood, who is too rigid and ultimately burns; the Monkey Man, who is too silly; and the Human Being, who respects and prays to the gods. The K'iche' Maya of Chichicastenango have a dance that centers around Sijolaj, a harvest king whom the Spaniards identified with St. Thomas.

### 19 SOCIAL PROBLEMS

The Maya of Yucatan, like many other Mexicans, suffer from overpopulation, unemployment, and periods of political unrest. In Guatemala, Mayan farmers have been crowded onto mountainous areas with poor land, and laborers are forced to work for extremely low wages. The most serious problem for the Maya in that country has been over two decades of violent political repression by the military and right- and left-wing death squads. Thousands have been murdered or "disappeared," and many have fled the country for Mexico or the United States.

### 20 GENDER ISSUES

Maya peasant society is characterized by a strong interdependence and equality of responsibilities between husband and wife. As in all societies with a subsistence economy, husband and wife provide goods and services for one another. While the husband contributes the corn and beans he has produced, the wife prepares the food to nourish the family, weaves hammocks, embroiders *huipiles*, and cares for the children. Maya women are most responsible for passing along the Maya traditions to the next generation.

Although cultural values encourage a complementary division of labor, they also give men the right to rule over women and to move about freely. These inconsistencies generate tensions in male-female relations and lead to an ambivalence towards women, especially with the arrival of modernity and globalization to Mayan territory.

The Mexican tourist industry began to demand easy access to cheap labor and most of the Maya communities in Yucatan provided this labor to Cancun. Maya women were separated from the extensive network of their extended peasant families and migrated to Cancun, where they complemented their domestic roles by joining the wage labor force and market. Among migrant families, male and female relations within the household, life ways, and worldviews have been, transformed

from the traditional peasant system, and female income has become a complement to men's wages.

Regarding politics, Mayan women have also acquired posts of authority throughout the Yucatan Peninsula. During the early 1990s, Mayan women took the political center stage of Yucatan state by winning the three most powerful positions in state government: governor, chief justice of the state supreme court, and mayor of Merida, Yucatan's largest city and state capital. Maya women were the majority on the state supreme court (three of five Justices) and headed three of the state's major political parties. Women also held the mayorships of two of the largest and most economically important cities outside of Merida, Progreso, and Tizimin.

# MENNONITES OF PARAGUAY

**LOCATION:** Paraguay

**POPULATION:** 28,000

**LANGUAGE:** Plattdeutsch (Low German dialect); Hochdeutsch (High German); Spanish

**RELIGION:** Mennonite

## <sup>1</sup> INTRODUCTION

The name Mennonite derives from Menno Simons, a Roman Catholic priest who led the Anabaptists in the Netherlands and North Germany in the 1530s. The Anabaptists later split into other groups, including the Amish, and the first Mennonites belonged to a church organized in Zurich, Switzerland.

During the 16th century in Holland and Switzerland, Mennonites ran into serious conflict with both the Catholic and Protestant authorities over their religious beliefs. They believe that baptism and church membership should be given out solely to those who have voluntarily given up sin. Only those who proved their goodness could be baptized, which is how they came to be called Anabaptists. Persecution scattered the Swiss Mennonites throughout Europe, for as pacifists they believed in the separation of Church and State. What made matters worse was their rejection of compulsory military service, and they were forced to flee to Germany, Russia, and Canada.

In the early 1920s a group of conservative Mennonites in Canada, part of the 1874 migration from Europe, began to look for other places to settle because they felt the Canadian government was beginning to make too many demands on their freedom. These included restrictions on the school system, increasing pressure to serve in the military or support the military effort, and demands that English become the first language in the schools.

Paraguay was attractive to the Mennonites due to the offer of large tracts of nearly uninhabited land, on which they could continue their traditional agricultural way of life, and the government's willingness to grant them political autonomy under a "Privilegium." Under this they were to be responsible for their own schools (with German language instruction) and community law enforcement. They were also to have freedom from taxation, religious liberty, and even exemption from military service. Today, they are in charge of making their own regulations regarding ownership, transfer, and use of land, the building and maintenance of villages, roads, pastures, public buildings like schools, fire houses, governmental institutions, and jails, and the collection of taxes, as well as the training of teachers, the running of their own postal service, and the development of agricultural techniques. The only rights the Paraguayan government retained for itself were the rights to levy and collect taxes, to apprehend and adjudicate criminals, and the right of eminent domain.

The first group of Mennonites arrived in Paraguay in 1927. They were called the Sommerfelder, the Summerfield Mennonites from the Canadian prairies. These Sommerfelder formed the Menno colony, the first of three distinct but territorially overlapping Mennonite groups. They originally acquired a tract of land, more than 130,000 hectares (320,000 acres) in the

Chaco to the west of Puerto Casado. The Chaco War between Paraguay and Bolivia severely threatened this first settlement. One of the main motivations of the Paraguayan government to accept this religious community was the rumor assuring that exuberant oil deposits existed in the Chaco territory. Actually, this rumor led Bolivia to trespass on that area resulting in the 1932 War of the Chaco. This sovereignty violation made politically necessary to populate the region with Paraguayan citizens.

Although the Mennonite immigrants obtained major concessions under the Privilegium, they soon discovered that they had been given land in the middle of an area under violent dispute. From the beginning of the 20th century, Paraguay and Bolivia had been preparing for armed conflict by building fortifications throughout this part of the Chaco. In 1932 the situation developed into open warfare, and the Mennonite settlements found themselves at the center of ground fighting and air attacks between the two sides. Nomadic Amerindians were often targets for both Bolivians and Paraguayans. While some found refuge with the Mennonites, others were so hostile to the arrival of the settlers that they violently resisted any approach from them. Even as late as the 1940s, Ayoreo hunter-gatherers attacked and killed members of a Mennonite family in the northwest Chaco.

Only a few years after the founding of the Menno colony, Mennonite refugees from the Soviet Union established Fernheim, with its main town at Filadelfia. Neuland was founded in 1947 by Ukrainian-German Mennonites, many of whom had been forcibly conscripted into the German army during World War II and had managed to stay in the West after being released from prisoner-of-war camps. Neuland's largest settlement is Neu-Halbstadt. Of the original 641 family units, 253 were without fathers due to casualties on the Russian Front while serving in German uniform.

Because of their isolation, the Mennonites saw Paraguayans only infrequently, but they regularly came into contact, and sometimes conflict, with Chaco Indians. Today, there are about 28,000 Mennonites in Paraguay, which are living in 20 colonies and in Asuncion, Paraguay's capital.

## <sup>2</sup> LOCATION AND HOMELAND

The Gran Chaco covers more than 60% of the total area of Paraguay and yet contains only 4% of its population. Great distances separate its small settlements. The paved Ruta 9, known as the Ruta Trans-Chaco, runs 450 km (280 mi) to the town of Filadelfia, the administrative and business center of the area colonized by the European Mennonite immigrants. Beyond Filadelfia, the pavement ends but the highway carries on to the Bolivian border at Eugenio Garay, another 300 km (190 mi) northwest.

The Paraguayan Chaco is the northernmost segment of an enormous plain, which lifts gradually from the southeast to the southwest. Within it are three distinct areas that emerge gradually from east to west. West of the Rio Paraguay, the Low Chaco landscape is a huge savanna of caranday palms, with scattered islands of thorny scrub. The main industry here is ranching. The climate becomes drier the further northwest the Ruta Trans-Chaco runs, and it is within this inhospitable environment that the Mennonite colonists have created successful agricultural communities in the Middle Chaco.

There are about 28,000 Mennonites and a roughly larger number of Amerindians in the region. Through the years, church membership has been about 41% of the total population, while about 14.5% of people in the colonies never join the church. Menno's percentage of nonchurch members is only 2.2% because both men and women must belong before the church will perform a marriage ceremony.

The Mennonites in Paraguay can be grouped in three categories. The first group is the Mermonite colony in Chaco, which can be subdivided in: Menno, Femheim, and Neuland. The colonies work in a joint-venture and dedicate to evangelism and educate native populations. They also operate a local radio station known as the Voice of the Chaco of Paraguay. The three settlements run a psychiatric clinic in the Chaco as well as a sanatorium for leprosy. The second group of Mennonites is located in the Eastern part of Paraguay and its main colonies are Friesland, Volendam, and Tres Palmas. Finally, it is possible to identify the Mennonites of Asuncion, considered the most progressive Mennonites in Paraguay. In Asuncion, the Mennonites help in psychiatric hospitals in the preparation of meals and physical and mental therapies. Despite their different locations, there are not significant differences among these groups; all put emphasis on solid education and sound systems of values according to Jesus Christ's example.

### **3 LANGUAGE**

The Mennonites prefer to speak Plattdeutsch, a Low German dialect, among themselves at home and in church, but they also speak and understand Hochdeutsch, High German, which is the language used in schools. Most people speak Spanish, and quite a few have a passable grasp of English. Chaco Indians often speak German as well as Spanish, although most prefer their native languages.

### **4 FOLKLORE**

The Mennonites' faith is based on the Christian Bible, especially the New Testament. Their creed is the Sermon on the Mount (Matthew 5-7), which they believe forbids them from going to war, swearing oaths, or holding offices that require the use of force. The Mennonites believe in adult rather than infant baptism, and as pacifists, they also believe in the separation of Church and State and reject compulsory military service.

### **5 RELIGION**

Mennonites are Trinitarian, believing in the Father, Son, and Holy Spirit. They believe that Christ is the head of the Church, and only those who submit to Christ can be true members of the Church body. Their religion is based on the philosophy that religion is holy, that its spirit and way of life are different from the world about it and should be maintained as such. They maintain that they should adhere to a pure belief system and a holy life that has to be preserved in its entirety and passed on to the next generation.

### **6 MAJOR HOLIDAYS**

The important Christian festivals, such as Christmas, Easter, and Pentecost, are used to reaffirm the traditional beliefs and intensify the religious commitment of Church members.

### **7 RITES OF PASSAGE**

Mennonites are not baptized as infants, but undergo this religious rite at the age of 18 or whenever the person publicly renounces sin. Communion is also celebrated, but unlike the Catholic practice of celebrating with the bread and wine as the actual body and blood of Christ, Mennonites participate in this ritual as a means of committing themselves, like Jesus, to a life of complete and utter obedience to God.

### **8 INTERPERSONAL RELATIONS**

Mennonite thought has been characterized by a separation between religion and the world. As a result of severe persecution in the 16th century, Anabaptism was forced to develop a strategy of withdrawal from the outside world in its attempt to survive, and this has become central to Mennonite theology.

Consequently, a strong sense of identity and loyalty has been created within Mennonite society that is maintained and reinforced, first, by cutting themselves off from the outside world, and then by practicing a religious group discipline among themselves. It is this voluntary isolation that has led to the philosophy of encouraging the virtues of hard work, piety, and mutual cooperation.

Some members of the Mennonite community still practice foot-washing, a ritual based on the act of Jesus washing his disciples' feet.

### **9 LIVING CONDITIONS**

Traditionally, work on the farm is done by hand or by draft animals, but the building of the Trans-Chaco road has brought about a gradual modernization. It has opened up communication with the outside world and increased the opportunities for marketing agricultural produce. A number of long-term credits have also been obtained, the first of which was a \$1 million loan from the United States. This has allowed the colonies to restructure agriculture and dairy production. Farms have gradually been mechanized. Food production and consumption has improved and, with it, the general level of health in the colony.

The town of Filadelfia has grown considerably. It has been the administrative center of the Fernheim Colony since 1931 and has 1,700 Mennonites out of a total population of 3,300 in the colony. An additional 200 non-Mennonites and more than 1,000 Amerindians also live there. One of the main reasons for Filadelfia's rapid growth is the fact that it is the location of all necessary services, schools, hospitals, cooperative stores, and industry. Many private enterprises are also located within the town, and it has a major airport.

Houses throughout the colonies are built in the simple Dutch or Midwestern American styles.

The administration of the Mennonite society is organized on a colony basis, consisting of a number of villages that originally settled in a region, which in turn is governed by an administrative head, the Oberschulze, with several assistants. The individual family heads who own the land are the backbone of the system, being eligible to take part in all decision-making. The villages meet periodically and decide on all matters not taken care of at the colony level. A committee also looks after various matters such as the promotion of agriculture and economic development, and funds are maintained to take care of widows, orphans, and the poor. The statutes and regulations agreed upon in the village system and at the colony level are

enforced by the Mennonite authorities through fines, penalties, and ultimately jail if a person does not conform. Sentences can include hard labor and flogging. Lawbreakers can also be handed over to the Paraguayan authorities in rare cases.

Landowners are the source of juridical power, since only landowners have the authority to vote in colony meetings. Each village, normally made up of 20 to 40 families, constitutes a political unit with an administrator, an assistant, and a clerk as the official group. There are also “tenth men” who assist the village unit. All the village decision-making and authority is vested in this group. Each village, for example, has its law enforcement officer, who is even authorized to arrest people for speeding through the village.

The Colony Authority, which oversees all the villages, holds yearly meetings at which all major decisions are made, such as election of officers, punishment of offenders, levying of taxes and dues, building of secondary schools, laying out new lands for cultivation, refusing a family permission to emigrate (if, for example, it has large debts), and deciding who can own land. It also organizes the levying of taxes to support the school system, the hospital system, and payment of doctors (each colony has a modern, well-equipped hospital and medical staff); the maintenance of roads and public fences; and the provision for power, burial grounds, and health and retirement insurance. Even the maintenance of colony ranches, public pastures, airports, the mail system, and telephone systems are under the control of the Colony Authority.

#### **10 FAMILY LIFE**

Traditionally, men have the authority in the family and women are expected to carry out the housekeeping functions and help with raising farm produce. Divorce, once unheard of, does take place, although it is still a relatively rare event.

#### **11 CLOTHING**

Those in rural areas dress more simply than do urban dwellers. Men wear hats and blue or green overalls, and the women wear head coverings and plain, knee-length dresses of one simple color. On important religious occasions, such as Good Friday services, the women will wear plain black dresses and carry black caps in a box. The caps will only be taken out and tied under their shawls once they reach church.

#### **12 FOOD**

The Paraguayan Mennonite communities enjoy large meals, with many traditional German and Russian dishes, such as sauerkraut and borscht. They also make a Mennonite cheese, which has become well known throughout Latin America.

#### **13 EDUCATION**

The education system is organized and operated solely by the Mennonites. The system is directed by the administrator of the Colony Authority, two teachers, and two ministers, but an administrator for the school system is also employed. Families contribute to the cost of educating their own children, but the villages assist those with more than three children.

Each village is responsible for the building of the schoolhouse, the hiring of the teacher, and the general operation of the school. The three high schools are directed by the boards, responsible to the authority.

#### **14 CULTURAL HERITAGE**

Through a traditional program of education—Sunday schools, Bible schools, preaching, and home training—the young people are introduced into the Mennonite Christian tradition. Bible study conferences are sponsored at Easter, Christmas, and other occasions to reinforce the Mennonite faith and theology.

#### **15 WORK**

Mennonites are not afraid of settling in the most inhospitable areas and are hard-working farmers. In the Bolivian wilderness (known as the Oriente) north and east of Santa Cruz, for example, they cleared the forest, built their houses, and sowed their crops. Each community trades their farm produce, dairy products, and crops such as cotton, sorghum, and wheat with neighboring towns. It is a Mennonite tradition to cooperate with one another at sowing and harvest times, as well as when building new barns. In Paraguay, the Mennonite community has built an excellent reputation as hard-working and disciplined farmers. This fame is understandable taking in account that in the wilderness of the Chaco, with its extreme climatic conditions, the Mennonites were capable of building a successful farming and religious community. In spite of the dryness and inhospitable territory known as Chaco, where the temperatures easily reach 122 degree in summer, the Mennonites have set up an efficient cooperative farming system that provides around half of Paraguay dairy needs and produces its finest quality cotton fiber and groundnut oil. Moreover, today Mennonites are the most important milk producers in Paraguay controlling close to 70% of the milk industry. Because of the success achieved by the Mennonite community, the Paraguayan government is planning to expand the development of the Chaco, based on the availability of potable water.

#### **16 SPORTS**

Mennonites enjoy games of all sorts but avoid any professional sport. They enjoy competing in friendly contests among each other, but they do not believe in the notion of towns or villages competing against one another. Sport is seen as a physical pastime, meant to be enjoyed for itself, as well as a means of learning to cooperate with others as part of a team.

#### **17 ENTERTAINMENT AND RECREATION**

Mennonites are against music, dancing, and any form of boisterous party. They prefer to live a simple, puritanical lifestyle. Social gatherings are the main form of recreation, such as men getting together to raise a new barn or gather in the harvest, and women preparing and serving meals for friends and neighbors. While Sunday is a day of rest, it is also a day of worship, although simple board games of skill are a favorite family pastime.

#### **18 FOLK ART, CRAFTS, AND HOBBIES**

All Mennonite crafts and hobbies have a practical purpose, from the handcrafted tools and implements made by the men, to the large quilts handmade and stitched together by the women.

#### **19 SOCIAL PROBLEMS**

With the arrival of increasing numbers of Paraguayans settling in the Chaco, the Mennonite communities have come un-

der pressure from the authorities, and there is a growing worry that the government may not honor its Privilegium. More and more Mennonites are investing their money abroad, or looking to emigrate. The election of a Mennonite governor for the department of Boqueron, however, is a sign that Mennonites are deciding to become more involved with Paraguayan affairs.

Meanwhile, the modern world has caught up with Filadelfia, and the arrival of motorbikes and videos is seen as a threat to Mennonite values. At the same time, beer and tobacco, once forbidden in the settlements, are being openly sold, although they are only being bought and consumed by non-Mennonites.

In some areas of South America, the unique Mennonite lifestyle is attracting tourists, but the Mennonites do not like photographs to be taken of them and try to avoid tourists.

## 20 GENDER ISSUES

The primary role of Mennonite women in the Old Order society was that of mother and homemaker. Since children were seen as blessings from God, the use of birth control was discouraged. Church leaders also encouraged women to wear a prayer covering, a small mesh cap that symbolized their submission to men and their membership to the Mennonite Church. The home and family were traditionally Paraguayan Mennonite women's central focus, since raising large families is important to ensure the next generation of farmers. Labor tasks were delineated by gender, but families working together conducted much of the work. Males tilled small plots of tobacco for sale and home consumption and provided food for the table by hunting and fishing. Women and children made cheese and butter, gathered berries, and took care of cows, pigs, sheep, and chickens. As household producers, women's work was essential to the success of the rural household. These values were reinforced during the years following World War II through much of the 1970s. The model of the stay-at-home-and-on-the-farm mother and wife, however, did not adequately meet the financial challenges facing young couples that started farming by the late 1970s.

As a consequence, since the 1980s young Paraguayan Mennonite farming couples have begun to change religiously and historically cherished farming practices. Young married women with small children face an irreconcilable dilemma. Devout women's religious beliefs and church discipline strongly encourage women, especially those with preschool children, to stay at home and on the farm. However, they have felt obligated to work outside of the home because of economic necessity.

Even though historically women were not allowed to serve on church committees, teach Sunday school to men, or preach, since the 1980s women have increasingly held positions that had been filled by males for decades. Many Mennonite women were first resentful of this change, but saw no other way to keep the church functioning. In some cases, the large number of women as primary earners expedited the process of granting women a vote in church decision-making. In the last two decades of the 20th century, Mennonite women have become leading ministers in Mennonite churches.

## MEXICAN AMERICANS

For more information on Mexican history and culture, see **Vol. 2: Mexicans**.

### OVERVIEW

In 1845, the independent republic of Texas became a U.S. state. The Mexicans living there suddenly found themselves living in America. They were not offered U.S. citizenship, however, so they were not officially considered Mexican Americans. The first official Mexican Americans entered the union when Mexico ceded the northern part of its territory to the United States at the end of the Mexican-American War (1846–1848). The Mexican inhabitants of that land were given the choice of either becoming U.S. citizens or relocating south to Mexican territory. About 80% (or 80,000) of them chose to stay and become U.S. citizens, comprising the first large group of official Mexican Americans.

Although this new U.S. territory had recently been part of Mexico, and the Mexican Americans residing there were living on land that had been in their families for generations, the new European American settlers assumed authority and relegated the Mexican Americans to second-class status. English was declared the official language; Mexican Americans were given only low-paid, menial work; stores, saloons, and schools were segregated, and landlords and employers put up signs saying, “No Mexicans need apply.” Some towns outlawed Mexican fiestas (celebrations). Perhaps worst of all, the United States broke its promise to the Mexican Americans that they would retain all rights to their lands and instead awarded numerous land claims to European Americans through the courts.

Mexican Americans therefore became impoverished, lower-class citizens in what had once been their own country. A Mexican American middle class did develop along the Rio Grande, which was used as a major trade route between Mexico and the United States. Mexican Americans were able to fill the need for trade brokers who were fluent in Spanish and understood Mexican culture. Elsewhere, however, Mexican Americans fell into landless poverty and were forced to work as itinerant laborers.

In the late 1800s, political and economic instability in Mexico prompted thousands of Mexicans to move across the border into the United States in search of better opportunities. The Mexican American population rose from 75,000 in 1890 to 562,000 in 1900. The majority were poor and illiterate. They became unskilled laborers, working mostly on farms, in mines, or for the railroad. When the U.S. government restricted Asian immigration, positions that the Chinese had formerly filled in railroad construction became available, and Mexicans leapt at the opportunity. Eventually, some 70% of track-layers and 90% of maintenance crews on U.S. railroads were Mexican. The U.S. mining industry, particularly in Colorado, Arizona, and California, was built largely on the backs of Mexican immigrants, and much of U.S. agriculture for the past 100 years or more has been accomplished through the contributions of Mexican migrant workers.

The largest wave of Mexican immigration to the United States, termed the “Great Migration,” occurred in the 1920s, partly as a result of the bloody Mexican Revolution (1910–1924). As many as 600,000 Mexicans legally crossed the bor-

der between 1920 and 1929. They were given permanent visas, allowing them to do contract work in agriculture but not to become U.S. citizens. Thousands of Mexicans also entered the United States illegally in the early 1900s. U.S. employers contributed to this illegal immigration by hiring smugglers, called *coyotes*, to bring the undocumented migrants across the border. The undocumented workers were easily exploited because they had no recourse. Employers could turn them in to immigration officials at any time. Some employers made a practice of hiring undocumented migrants, then turning the workers in to the Immigration and Naturalization Service (INS) as soon as the job was done but before they had paid the workers their wages.

With the onset of World War I (1914–18), U.S. president Woodrow Wilson removed the restrictions on Mexican workers that had formerly limited them to agricultural labor. American men were going off to fight in the war, and workers were needed to fill their places. Because they could now work in other industries, many Mexican contract workers moved north to cities such as Chicago, Detroit, Cleveland, and Pittsburgh where industrial jobs were plentiful. Mexican workers flooded across the border to take advantage of these new opportunities. By 1929 the Mexican American population had reached approximately one million, not counting undocumented migrants.

The boom was short lived, however. In October 1929 the U.S. stock market crashed and America entered the Great Depression. Job opportunities suddenly became scarce as the economy fell apart. Some 85,000 Mexican workers returned almost immediately to Mexico. Others were driven back across the border by frustrated European Americans who felt that the Mexicans were taking away their jobs. Anti-Mexican sentiment became especially violent in Southern California, and about 75,000 Mexican residents of that state decided to move back to Mexico. Many Mexicans who stayed in the United States were forced to go on welfare. European Americans saw them as a burden on an already overburdened economy and insisted that they be forced to leave.

The United States and Mexico decided to institute a cooperative repatriation program, where Mexican Americans would be resettled in Mexico. Some 500,000 Mexican Americans were removed to Mexico through this program before Mexico called it off because its economy could not support any more people either. Los Angeles established its own repatriation program in 1931–1934, deporting over 13,000 Mexican Americans, including a number of U.S.-born children.

When the United States became involved in World War II (1939–45), American men again left their jobs to fight in the war, and the United States again requested Mexican workers to fill their places. These workers, called *braceros* (hired hands), were given only temporary visas. The *braceros* unfortunately displaced Mexican American workers already in the United States because they were willing and able to work for less pay than the established Mexican Americans. The *bracero* program actually had little to do with wartime labor shortage. Instead, it was a way for U.S. agriculture to take advantage of the economic difficulties in Mexico, evidenced by the fact that the program was originally intended to last only from 1942–1947, but it continued (in somewhat less official form) until 1964. The original program peaked in 1944 with 62,170 *braceros* brought into the United States. The peak year from 1947–1964 was 1956,

when some 500,000 braceros were employed. Overall, about 5 million Mexicans came to the United States between 1942 and 1964 as seasonal workers.

The United States also hoped that the bracero program would discourage illegal immigration across the border by providing a legal way for Mexicans to work in the United States. However, since the program placed restrictions on where braceros could work and specified what they would be paid, it actually encouraged undocumented migration. Undocumented migrants could work wherever they could find a job, and employers could pay them less than the braceros, so both sides profited from illegal immigration. The fact that the bracero program increased, rather than decreased, undocumented migration is shown clearly in Immigration and Naturalization Service (INS) records. In 1942, the first year of the program, 8,000 undocumented Mexican migrants were deported. By 1951 some 500,000 were arrested and deported.

The INS responded to this increased flow of undocumented migrants by instituting Operation Wetback in 1954. Undocumented Mexican migrants were called wetbacks (or *mojados*), a derogatory term, because they often swam across the Rio Grande to get into the United States. Through Operation Wetback, the INS deported 3,800,000 undocumented migrants in five years. Economic and political difficulties in Mexico, combined with economic opportunities in the United States, however, have continued to encourage the flow of undocumented migrants from Mexico to the United States since then. Most undocumented migrants today work at unskilled jobs in restaurants, hotels and motels, hospitals and nursing homes,

small manufacturing shops, on assembly lines, in sweatshops with the garment industry, in gardening and landscaping businesses, and in light construction.

In yet another effort to stem the flow of undocumented migrants from Mexico to the United States, a bill was passed by the U.S. Congress and signed by President George W. Bush in October 2006 to build a “secure fence” along sections of the almost 2,000 mile-long border. Some areas already have sections of fencing and other barriers, erected in the 1990s, which have essentially served to push migrants to other entry points, many of which require lengthy journeys through arid desert that result in an increased number of deaths. Debate over the fence, and over the undocumented migration of Mexicans into the United States, rages on.

Not all Mexican Americans are undocumented migrants. Many entered the United States legally and have become U.S. citizens. Others are descendants of the original Mexican Americans who became U.S. citizens in 1848. Second-, third-, and later-generation Mexican Americans have family histories in the United States that go back much further than some European Americans’ histories. Mexican Americans were one of the most decorated ethnic groups in World War II, earning 39 Congressional Medals of Honor. Some 350,000–500,000 Mexican Americans fought in the U.S. Armed Services during that war. Many of the Mexican American soldiers used the GI Bill after the war to pursue higher education and vocational training, allowing them to move into skilled labor and professional positions. Mexican Americans have also been at the forefront of the U.S. labor movement since its inception in the 1880s.

The best-known Mexican American labor organizer is César Chávez, founder of the National Farm Workers Association in 1962, which later became the United Farm Workers Union. In the 1950s, a rise in ethnic pride began among Mexican Americans, led by people like Reies López “Pete” Tijerina and Rodolfo “Corky” Gonzáles. Called the Chicano Movement (or *El Movimiento*), it came to involve legitimate political organization as well as more radical protests, particularly around the issue of the theft of lands by European Americans that originally belonged to Mexican families.

Hispanic Americans are the fastest growing ethnic group in the United States today, and Mexicans comprise the largest Hispanic group in the United States. The estimated Mexican American population in 2004 was 26 million, although firm figures are impossible to calculate given the number of undocumented migrants who are reluctant to be counted. According to the 2000 U.S. Census, about two-thirds of all Mexican Americans live in either California (8,455,926) or Texas (5,071,963). In 2000, 25% of California’s population was Mexican American, while Mexican Americans made up 24% of the population of Texas. Mexican Americans also have a relatively high birth rate (83 births per 1,000 women, compared to 55 per 1,000 for the U.S. population as a whole), so their population is increasing more rapidly than the population of other groups.

Other states besides California and Texas have significant Mexican American populations, including Illinois (1,144,390), Arizona (1,065,578), Colorado (450,760), and New Mexico (330,049). Colorado’s Mexican American population more than doubled between 1990 and 2000, as it did also in the states of Arkansas, Georgia, Nebraska, North Carolina, and Tennessee.

Many Mexican Americans speak only Spanish at home and with their Mexican American families and friends. Foreign-born Mexican Americans experience difficulties in the English-dominated United States, even though many cities with large Hispanic populations are de facto bilingual, with signs and other public information printed in both Spanish and English. Non-Hispanic Americans who feel threatened by the growing Hispanic American population have initiated an “English Only” movement in recent years in response to the bilingual movement promoted by the Hispanic community (see **Cuban Americans**).

Mexican Americans are nearly all Catholic, though their brand of Catholicism is somewhat different from European Catholicism. Many elements of Mexican folk religion have been retained, creating a colorful blend of Christianity and magic. Mexican Americans continue to celebrate the countless fiestas of their traditional Mexican Catholicism, as well as the conventional Christian holidays of Christmas and Easter, etc.

Mexican Americans also celebrate a number of secular holidays. *Diez y Seis* (“Sixteen”) celebrates the El Grito de Dolores speech delivered by Father Miguel Hidalgo on 16 September 1810, which marked the beginning of Mexico’s struggle for independence from Spain. Benito Juárez’s defeat of French forces at the city of Pueblo on 5 May 1862 is commemorated each year on *Cinco de Mayo* (“Fifth of May”). Both of these events are marked with parades, floats, traditional dress and music, and other festivities.

One Mexican American holiday tradition that has become popular in mainstream American culture is the *piñata*, a hollow pottery or plaster jar (usually shaped like an animal) that is filled with candy, fruit, and gifts and hung from the ceiling

or a tree branch. Blindfolded children then swing a stick in the air (one at a time), trying to break the piñata. Once it is broken, all the children scramble to grab as much of the fallen contents as possible.

Other Mexican American contributions to mainstream American culture include zoot suits (baggy pants, long loose jackets, and wide-brimmed hats made popular by Mexican American youths in the late-1930s and 1940s) and foods, such as tacos, burritos, enchiladas, tortilla chips and salsa, and guacamole. Mariachi music played by strolling Mexican American musicians can be heard all across the United States, as can Tex-Mex music (or *musica nortena*)—a blend of Mexican and German polka music. Individual Mexican American musicians include singers Vikki Carr (born Florencia Bisenta de Casillas Martínez Cardona), Joan Baez, Carlos Santana, Tish Hinojosa, Linda Ronstadt, and the Garza brothers of Los Lonely Boys: Henry, Jo Jo, and Ringo.

Some well-known Mexican American actors are Ricardo Montalban, Anthony Rudolph Oaxaca Quinn (who is also part Irish), Jessica Alba, Salma Hayek, Cheech Marin, Edward James Olmos, and comedian Paul Rodriguez. Writers Jimmy Santiago Baca, Sandra Cisneros, Pat Mora, and Victor Villaseñor are all Mexican American, as are Xavier Martínez, artist and founder of the California Society of Artists, and Laura Molina, painter and publisher of *Chican@Art Magazine*.

Mexican Americans have begun to make more of a mark in the worlds of U.S. politics and science. Joseph Montoya became the first Mexican American elected to the U.S. Senate in 1964. The first Mexican American governors to serve since the early 1900s (Ezequiel C. de Vaca and Octaviano Larrazolo were governors of New Mexico) were elected in 1974 in New Mexico (Jerry Apodaca) and Arizona (Raúl Castro). Henry Cisneros became the first Mexican American mayor of a major U.S. city when he was elected by the citizens of San Antonio, Texas, in 1981. In 1993, Cisneros was named Housing and Urban Development (HUD) secretary by President Clinton. Educator Lupe Anguiano developed the Bilingual Education Act while serving in the Department of Health, Education, and Welfare, and Federico Peña was appointed U.S. Secretary of Transportation in 1993 by President Bill Clinton. In 2002 Bill Richardson became governor of New Mexico and ran as a presidential candidate in 2008. President George W. Bush appointed Alberto Gonzales as U.S. Attorney General in 2005, the first Hispanic American to hold that post. In the sciences, Mexican American astronaut Ellen Ochoa earned the honor of being the first Hispanic woman in space in 1993.

Mexican Americans also shine in sports. Tennis great Richard “Pancho” Gonzáles won the U.S. Open in both 1948 and 1949, and also won the Wimbledon doubles crown (with Frank Parker) in 1949. Gonzáles was very popular with the American and international public. Golfers Lee Trevino and Nancy López are also highly successful and highly popular Mexican American sports figures. Oscar de la Hoya is a six-time World Champion boxer; Nomar Garciaparra has been named an All-Star major league baseball player six times; swimmer Donna de Varona won two Olympic gold medals; and Anthony Muñoz was named to the NFL Hall of Fame.

Although individual Mexican Americans have become successful in the United States, Mexican Americans as a group continue to struggle against racial and ethnic discrimination that confines them to the lower classes of society. Mexican Ameri-

cans have been stereotyped by European Americans since the beginning of their history together as poor, uneducated, cowardly criminals. Some European American teachers believe, because of these stereotypes, that their Mexican American students will not succeed, so the teachers do not direct much of their energy or attention to those students and, consequently, the students fail. This self-fulfilling prophecy promotes a high dropout rate among Mexican American students, which perpetuates their status as poor and uneducated, confirming the stereotypes. It is a vicious cycle that many Mexican Americans as well as other Americans are trying to break.

Despite their best efforts, however, the majority of Mexican Americans continue to be trapped in a cycle of poverty that prevents them from improving their situation in America. Until inequities in education and employment are resolved, Mexican Americans will not be able to obtain the skills and resources necessary to rise to more appropriate levels in American society.

Traditional Mexican culture places a high value on family, with expectations of marriage and child-bearing. There is also a sense of “machismo” for men that requires a man to be strong, dominant, and sexually powerful. The Catholic Church, a prominent part of most Mexican and Mexican Americans’ lives, prohibits sexual activity between nonmarried persons. All of these factors lead to a difficult life for homosexual Mexican American men and women. Gay Mexican American men may acceptably engage in homosexual activity with other men, but they must be in the position of power. It is the receptive man who is disdained as being weak and effeminate. Mexican American lesbians must break cultural norms to declare themselves publicly, thus announcing to the world that they are independent sexual beings rather than other-related wives and mothers. Many Mexican American homosexuals choose to keep their sexual identity secret rather than risk rejection by their families and causing their families shame and dishonor within the Hispanic community.

# MEXICANS

**LOCATION:** Mexico

**POPULATION:** 108.7 million

**LANGUAGE:** Spanish; over 30 Amerindian languages

**RELIGION:** Roman Catholicism (with Amerindian elements); various Protestant sects

## 1 INTRODUCTION

Mexico was the home of several native American civilizations before the arrival of the Spanish in 1519. The Maya, Olmecs, Toltecs, and Aztecs built cities and pyramids. Under Spanish rule these peoples were converted to Christianity, and European customs were added to the indigenous way of life.

Mexico won its independence from Spain in 1821 but lost the northern half of its territory to the United States in 1818. The dictatorship of Porfirio Díaz was overthrown in a revolution that adopted a new, progressive constitution in 1917. In 1929 Plutarco Elias Calles created a hegemonic party the Partido Nacional Revolucionario (PNR National Revolutionary Party), which would eventually be renamed the Partido Revolucionario Institucional (PRI Institutional Revolutionary Party) that controlled both the presidency and both houses of Congress until 2000.

In the early 1920s, in the aftermath of military struggles, Mexico was a fragmented country where regional power holders contested national authority, creating political instability. The newly-formed PNR sought to bring together these disparate local powers in order to solidify the electoral strength that regional elites had in their territories. In an effort to achieve national consolidation, the PNR incorporated into its ranks revolutionary as well as conservative power holders in exchange for local autonomy. Consequently, the party of the revolutionary regime became the dominant political organization in the country and the primary dispenser of official patronage.

When Lázaro Cárdenas came to power in 1934, he brought together workers and peasants in an effort to consolidate new sources of power. Besides nationalizing the petroleum industry, giving the Mexican government a monopoly in the exploration, production, refining, and distribution of oil and natural gas, Cárdenas carried out far-reaching labor and land reforms, and supported organizations of peasants and workers. The party took its current name, PRI, in 1946, at the same time that the Mexican Congress gave it the capacity to cancel the registration of the opposition and to control the Federal Electoral Commission. Thus, besides the hegemonic status that the PRI already enjoyed in the countryside, the new electoral rules gave it the power to constrain its rivals and manipulate the electoral results.

The PRI achieved political hegemony thanks to the instauration of a model of development that subordinates democracy to political stability. In this way, development depended on the endurance of economic growth and political stability, which in turn provided resources to maintain electoral support.

After focusing public investment on the rural sector for more than three decades, the government shifted its center of attention in the 1960s toward expanding the nation’s industrial capacity. During this period, known as Stabilizing Development, Mexico averaged an annual economic growth rate

of 6.8%. Import-substitution industrialization generated rapid growth in urban areas and a demographic explosion Mexico's population more than doubled in less than thirty years, from 16 million in the mid-1930s to 34 million in 1960 which resulted in massive urban migration.

However, the development model began to wane with the first signs of growing fiscal imbalance. Mexico's public-sector deficit rose sharply from 2% of gross domestic product (GDP) in 1970 to 7% by 1976, which forced the government to resort to massive external borrowing. The oil discoveries in the mid-1970s made Mexico eligible for large foreign credits that help finance 32% of public sector spending in 1971. Six years later, half of the public budget was being funded with foreign loans. When incoming President de la Madrid took office in 1982 Mexico's public-sector deficit amounted to 18% of GDP, nearly every state enterprise except the public oil company PEMEX was unprofitable, and both production and economic growth were stagnant.

The pro-business and free-market platform during the 1980s led not only to a general impoverishment of the population, but also caused an intra-party split between the populist wing dominated by the old-school politicians led by Cuauhtémoc Cárdenas, and the politically inexperienced pro-neoliberalism technocrats, headed by the former Budget and Planning minister and presidential candidate, Carlos Salinas de Gortari. The left-wing Partido Revolucionario Democrático (PRD Revolutionary Democratic Party) was created in 1989 and shared

the opposition with the center-right Partido de Acción Nacional (PAN National Action Party).

The transition to democracy in Mexico began in 2000, when for the first time a candidate from the opposition won the presidency, ending 71 years of one-party rule by the PRI. Vicente Fox, candidate of the PAN, won the election, but left office with a mixed record on necessary reforms. In 2006, after a partial recount of votes, Felipe Calderón was declared the winner of the presidential election, having edged out Manuel Lopez Obrador from the PRD.

## 2 LOCATION AND HOMELAND

Mexico lies between the Pacific Ocean and the Gulf of Mexico and Caribbean Sea, south of the United States and west of Guatemala and Belize. Most of the country is a highland plateau with little rainfall for most of the year. The plateau is enclosed by two mountain chains running the length of the country, the Sierra Madre Oriental to the east and Sierra Madre Occidental to the west. The summit of the highest peak, Orizaba, reaches 5,639 m (18,502 ft) above sea level. There is tropical rain forest in parts of the South and the Gulf coast. Mexico reaches its narrowest point at the Isthmus of Tehuantepec, then widens to the east, where it includes the Yucatán Peninsula.

While 60% of the population is Mestizo (European and Amerindian descent), between 15% and 30% are believed to be full-blood Amerindians. In addition, roughly 9% of the population is unmixed European, predominately of Spanish de-

scent. Small black, mixed-black, and Asian groups comprise the rest of the population.

### 3 LANGUAGE

Even though there is no constitutional official language at the federal level in Mexico, Spanish is spoken by 93% of the population. The General Law of Linguistic Rights of the Indigenous Peoples considers Spanish as a national language, alongside the almost 60 different indigenous languages spoken by 7% of the population throughout the country. The largest of the indigenous languages is Náhuatl, followed by Mayan, Zapotec, Otomí, and Mixtec.

### 4 FOLKLORE

Mexican folk customs derive from beliefs and practices dating back well before the European discovery of America. One of these is herbal medicine. Particularly in Indian communities, *curanderos* function as healers and diviners who communicate with nature gods and spirits. Among them are persons seen as sorcerers or witches and credited with similar powers, including the ability to cast or dispel the evil eye (superstition derived from Spain) and to perform certain magic rites to help a person win or retain a loved one.

A wealth of major feasts (*fiestas*), although commemorating Christian saints, also parallels the worship of Indian gods dating back to the pre-European past. The saints are credited with the supernatural powers traditionally attributed to the gods. In Indian communities, *confradías* (brotherhoods) are charged with organizing and financing the annual cycle of fiestas. These events break the monotony of daily life with their bright costumes and ornaments and their traditional dances and music. Traditional masks represent animals, spirits, and religious or mythical figures. Alcohol and hallucinogenic drugs play a role in these observances, as they do in healing and divining.

### 5 RELIGION

Because of the early adoption of Roman Catholicism among the population, and despite the official anti-clericalism of the PRI regime, today 90% of Mexicans identify with this faith. However, just as early Christianity retained many beliefs and customs of pagan Greece and Rome, Mexican Catholicism includes folklore and practices of the pre-European period. The church credits the Virgin of Guadalupe, identified with the Virgin Mary, with miraculously appearing to an Indian soon after the Spanish conquest (and close to the shrine of an Aztec earth goddess). The Virgin of Guadalupe was proclaimed patron saint of Mexico in 1737. Similarly, many other Christian saints are identified with gods and goddesses of the Indian past.

About 6% of the population is Protestant. Evangelical Christian groups, including Baptists, Mormons, Jehovah's Witnesses, and Seventh-Day Adventists, generally financed and staffed by Americans, have had particular success in southeastern Mexico, especially among Indian communities.

### 6 MAJOR HOLIDAYS

Holy Week, commemorating the events leading up to and including the crucifixion and resurrection of Jesus, is of overriding importance. It was once commemorated in many outdoor processions and Passion plays, only a few of which remain.

United States influence has brought with it Christmas trees (sometimes even in churches), Santa Claus, and gift giving on Christmas Day. This has overshadowed the traditional Hispanic observance of Epiphany, or Twelfth Night, commemorating the journey of the Magi (the Three Kings). Preceding Christmas are the colorful *posadas*, nightly celebrations that begin December 16.

November 2, the Day of the Dead, is a holiday during which people visit the graves of their loved ones and leave behind fruits and flowers. At the evening meal a table is traditionally set with food and drink for the departed. Also typically Mexican is the annual commemoration, on December 12, of the appearance of the Virgin of Guadalupe in 1531. The Basilica of Guadalupe, in Mexico City, attracts many pilgrims on that day, some, if able, climb its steps on their knees, and Indian groups play music and perform dances outside the cathedral.

Among secular (nonreligious) holidays, the most important is the celebration of national independence on September 16. The president of Mexico heralds this event on the evening before with the *grito* (cry or shout) given by Father Miguel Hidalgo, the priest who, in the name of the Mexican people, proclaimed independence from Spain in 1810. The birthday of Benito Juárez, March 21, is another national holiday. A Zapotec Indian, Juárez was president of Mexico from 1861 to 1872.

### 7 RITES OF PASSAGE

Purification by water goes back to the Indian past, so infant baptism is practiced even in Indian communities where the other Christian sacraments are not observed. Most Mexican children also are confirmed. In small towns among well-off families, young couples are still chaperoned on dates, and a suitor must court his future in-laws as well as his intended bride. In Indian communities, marriages may still be arranged and sealed with an exchange of gifts.

Most Mexicans marry young. Because of the separation of church and state, only civil marriages are legally valid, but more than 70% of all couples also marry in church. Many poor couples live together however, without benefit of clergy or legal license.

The dead are not customarily embalmed, and burial takes place 24 hours after death. Wakes are held, with the relatives and friends bringing food, drink, and other gifts to the bereaved.

### 8 INTERPERSONAL RELATIONS

Politeness and ceremoniousness are more important in Mexican life than in American. Even brief exchanges and questions call for an introductory *buenos días* (good day) or *buenas tardes* (good afternoon). Indirectness of speech is often employed so as not to lay or accept blame or give offense. Some government employees, including policemen, are poorly paid and sometimes will accept or even solicit the *mordida* ("bite" or bribe) as payment for minor infractions or to speed up or dispose of cumbersome paperwork.

Male friends are demonstrative; often they will embrace heartily on meeting and stroll arm in arm. *Machismo* is a male worldview that entails the practice of defending one's honor against any possible challenge to one's masculinity. Carried to violent extremes, this often results in the abuse of women.

In contrast with Americans, Mexicans set little store on punctuality. In fact, arriving on time when invited to dinner

A young Mexican girl wearing traditional dress. (Raul Touzon/National Geographic/Getty Images)

or a party is considered rude. Nor is it considered unusual for invited guests not to arrive at all and offer no explanation later. *Mañana*, although literally “tomorrow,” may refer to any indefinite future time. Business hours often fluctuate. Public offices, churches, and museums may close for two hours in the early afternoon, when the temperature is highest, the traditional *siesta* time.

## 9 LIVING CONDITIONS

Before 2000, most peasants and many workers in Mexico did not earn even the meager legal minimum wage and were unable to feed or house their families decently. Open sewers and contaminated drinking water were common and a menace to health. However, after the first democratic government, the percentage of the population in extreme poverty decreased from 24.2% to 17.6% in 2004.

In addition to the macroeconomic stability pursued by the Fox and Calderón administrations (which has been singled out as the main cause of the reduction in poverty and the increase in purchasing power of the middle class), poverty has been further reduced by remittances from Mexican citizens working in the United States, which reaches \$20 billion per year and is the second largest source of foreign income after oil exports.

Ongoing economic concerns include low real wages, underemployment for a large segment of the population, inequitable income distribution, and drug-related violence.

## 10 FAMILY LIFE

“Family values” are alive and well in Mexico, where widespread poverty forces households to stay together for economic as well as social reasons. The household in many cases includes grandparents, aunts, and uncles as well as parents and children. Married children and their spouses also remain part of this unit until they can afford to set up their own households. Well-to-do fathers may build houses for their married children on the parents’ property. Family groups may gather together for birthdays, saints’ days, and other holidays. On Sundays they often go on excursions together. Whether they live under the same roof or not, Mexicans maintain strong bonds with their relatives in order to help each other in various ways, including helping unemployed relations find work. The large number of family businesses is especially important to this form of assistance.

Family solidarity extends even beyond blood ties. *Compadrazgo*, or godparent-hood plays a very important part in Mexican life. One study of a Mexico City shantytown found 18 different occasions for involving godparents in celebrations, including not only the Catholic sacraments but even the graduation of a family member from school or the first cutting of a child’s hair. In return for his or her aid, a godparent expects loyalty, trust, affection, and respect from the child and parents.

Among middle-class and well-to-do Mexicans, servants also form part of the family unit. Even *arrimados* (renters or “permanent guests”) may belong.

## 11 CLOTHING

The more traditional forms of women’s dress include a wrap-around skirt, sometimes flounced and embroidered; the *huipil*, a sleeveless garment with holes for the head and arms; and the *quechquemiltl*, an upper outer garment with an opening for the head only. The *rebozo* is a shawl used for carrying babies. Among Indian women these are everyday articles of clothing, elaborately colored and patterned and distinctive for every ethnic group, or even for each village. Upper-class Mexican women may sometimes wear a traditional Spanish costume topped with a fringed and embroidered silk shawl and a tortoiseshell or ivory comb. The *china poblana* costume consists of a richly embroidered white blouse and black shawl, a flounced and spangled red-and-green skirt, high-heeled colored slippers, bracelets, earrings, strings of beads, and ribbons or flowers in the hair.

The peasant’s traditional pajama-like trousers and tunic of unbleached cotton, serape (functioning as both a blanket and a cloak), sandals, and wide sombrero have given way to jeans, shirt, shoes or boots, and a straw cowboy-type hat. Sweaters or a leather jacket now ward off the chill. Indian men seldom wear traditional dress except on special occasions. Mariachi musicians can be seen in the traditional Spanish horseman’s *charro* costume. This includes a dark suit of suede or velvet, braided in gold or silver embroidery, a flowing red silk necktie, a bright serape, boots and spurs, and an embroidered felt sombrero.

## 12 FOOD

The staple of Mexican food is corn, supplemented by beans, squash, and chilies, or chili peppers. Cornmeal is patted into a thin pancake called a tortilla, which encloses any of a great variety of fillings to form a soft sandwich-like taco. (The crisp-fried American taco is known as a *tostado*). Fried in chili sauce, the taco becomes an enchilada. The tamale is cornmeal dough wrapped around a filling of meat and chilies, then wrapped in paper, cornhusks, or banana leaves for cooking. Tacos made with a tortilla of wheat flour are called burritos. Mole is a rich chili sauce that sometimes contains chocolate, which is native to Mexico. *Mole poblano*, traditionally the national dish, consists of turkey (a native bird) topped with a spicy mole.

## 13 EDUCATION

Mexico has made improvements in education since the 1990s. In 2004, the literacy rate was at 91% and the youth literacy rate (ages 15–24) was 96%, ranking Mexico 24th in the world according to UNESCO. Primary and secondary education is free and mandatory, and different bilingual education programs and free textbooks in more than a dozen indigenous languages have been introduced throughout the country. In addition, Mexico established a distance-learning system known as *telesecundaria* through satellite communications to reach otherwise inaccessible small rural and indigenous communities. In 2007 there were approximately one million *telesecundaria* students in the country.

The largest and most prestigious public university in Mexico is the Universidad Nacional Autónoma de México (UNAM

National Autonomous University of Mexico) founded in 1551. Three Nobel laureates and most of Mexico’s modern-day presidents are among its former students. UNAM conducts 50% of Mexico’s scientific research and has a presence all across the country with satellite campuses and research centers. UNAM is the highest ranked Spanish-speaking university in the world.

## 14 CULTURAL HERITAGE

Mexico’s rich cultural life draws on both its Spanish and its Indian heritage. This is most evident in the visual arts. Pre-Conquest temple and palace wall paintings were recalled in the 20th-century murals of Diego Rivera, José Clemente Orozco, David Siquieros, and Juan O’Gorman, which were crowded with stylized figures and themes. Oil paintings by Rivera, his wife Frida Kahlo, Rufino Tamayo, and others are admired for their vibrant color. In architecture, Mexican stone carvers carried on a pre-Conquest tradition in the elaborate 18th-century decorative style known as *churrigueresque*. O’Gorman and Luis Barragán deftly combined pre-Conquest, colonial, and folk forms and traditional building materials with modern structural design in their architecture.

Traditional Indian music is chiefly limited to festive rituals and dances, with drums and flutes as the main instruments. Stringed instruments, including the most popular one in Mexico—the guitar—came from Spain. In mariachi music, these instruments are combined with trumpets. The marimba (similar to the xylophone) dominates in southern Mexico. Traditional song forms are the *corrido*, derived from old Spanish ballads; the *canción*, romantic and sentimental; and the *ranchera*, a Mexican style of country-and-western music. Composer Carlos Chávez drew on such forms in his music.

The Ballet Folklórico mounts productions of traditional dance, which incorporates both Indian and Spanish motifs. Best-known of these is the *jarabe tapatío* (“Mexican hat dance”), performed in *charro* and *china poblana* costume. Dating back to pre-Conquest times are the *conchero* dances, which honor the four winds, and the *pascolas*, or deer dances.

The love poetry of Sor Juana Inés de la Cruz is still read, and the plays of Juan Ruiz de Alarcón are still performed. Noted Mexican writers of the 20th century include the poet and essayist Octavio Paz and the novelists Mariano Azuela, Carlos Fuentes, and Juan Rulfo.

Another cultural asset in Mexico is the cinema industry. During the Golden Era in the 1940s and 1950s Mexico had a huge film industry comparable to Hollywood of those years. Mexican films were exported and exhibited in all of Latin America and Europe. *Maria Candelaria* (1944) by Emilio Fernández, was one of the first films awarded a Palme d’Or at the Cannes Film Festival. Famous actors and actresses from this period include María Félix, Pedro Infante, Dolores del Río, Jorge Negrete, and the comedian Cantinflas. More recently, films such as *Como agua para chocolate* (1992), *Amores Perros* (2000), *Y tu mamá también* (2001), *Pan’s Labyrinth* (2006), and *Babel* (2006) have been successful in creating universal stories about contemporary subjects, and have been internationally recognized.

## 15 WORK

Workers constituted a relatively small share of the total population, in part because of the population’s relative youth (38%

A weaver using a backstrap loom in Mexico.  
(Linda Whitwam/Getty Images)

were below the minimum working age of 14 in 2000). Agriculture, forestry, and fishing employed some 18% of the economically active population in 2003, industry 24%, and services 58%. About half of all manufacturing workers were employed in small and medium-size enterprises. Partly because of high unemployment in the formal labor sector, the number of informal-sector workers swelled during the 1980s and early 1990s.

After falling sharply during the 1940s, real wages began to recover in the mid-1950s and continued to rise until the late 1970s, when the government responded to growing fiscal pressures by shifting resources away from the peasantry and the public sector. The government used its control of employment opportunities and the labor union movement to hold down wages throughout the 1980s in an effort to reduce inflation. This meant that the average worker's purchasing power in 1993 was only 65% of its 1982 level. Moreover, the difference between minimum wages and average wages in the country has increased between 1995 and 2007. While in 1995 the minimum wage represented 43% of average salaries, in 2007 minimum wages accounted for less than one third of average wages.

With half its population under 30 years of age, Mexico is scrambling to find enough jobs for the young people who enter the labor force each year. Migration to the United States helps

to relieve the unemployment problem. As of 2006 there were an estimated 6.57 million undocumented Mexicans living in the United States.

## 16 SPORTS

*Fútbol* (soccer) is by far the most popular sport in Mexico. The top professional teams, including Guadalajara and the Américas team of Mexico City, draw as many as 100,000 spectators to their matches. In addition, there is a professional baseball league, and some Mexican players, such as Fernando Valenzuela and Vinnie Castilla, have made it to the major leagues. American television has raised the profile of both basketball and American football in Mexico. Other sports include golf, tennis, swimming, and bicycling. Bullfighting or *charrería* is the national sport and very popular, with about 35 arenas in Mexico. Plaza México in Mexico City is the largest bullring in the world, which seats 55,000 people.

## 17 ENTERTAINMENT AND RECREATION

Television now dominates popular culture, with *telenovelas* (soap operas) and variety shows. Overwhelmed by American imports, Mexico's older song forms have been giving way to rock 'n roll, international-style pop, and even Spanish-language rap. Because so many Mexicans have had little schooling, comic books and magazine-style *fotonovelas* are more common reading material than newspapers and books.

## 18 FOLK ART, CRAFTS, AND HOBBIES

The most important form of folk painting is the *retablo*, a devotional depiction, on canvas, of a miraculous event. It is offered to a saint in gratitude for favors conferred and hung in a church. Other works of art include murals and yarn and bark paintings. Folk sculptures, continuing a pre-Columbian tradition, include masks, papier-mâché skeletons and other grotesque figures, and candle-bearing trees of life made of clay.

The variety of Mexican handicrafts is almost endless. Silver objects include bracelets, rings, necklaces, and earrings. *Milagros*, charms offered to saints in church, may be made of silver, copper, or tin. Objects are also carved in onyx, jade, and other types of stone. There are many regional styles of pottery. The making of hand-blown glass, tile making, leather work, and lacquering are other crafts. Weaving in cotton and other plant fibers on hand looms is thousands of years old; wool was added after the Spanish conquest. Embroidery employs floral, bird, and animal imagery. Toys of all kinds are produced.

The piñata, usually made of papier-mâché or lightweight cardboard, is gaily decorated in many fantastic forms and holds candy. Blindfolded children break it open with a stick at birthday and other celebrations.

## 19 SOCIAL PROBLEMS

Although human rights violations, electoral fraud, repression of the labor movement, and the abuse of indigenous and rural peoples have almost been eradicated since the return to democracy in 2000, Mexico still faces acute problems regarding public health and environmental safety. However, the most serious social dilemma is related to drug trafficking and violence in the northern provinces where the power of the state is weak. Drug cartels often go on killing sprees and the government has had to send the army in to control the situation.

## 20 GENDER ISSUES

In Mexico, inequalities between men and women represent a source of conflict in the family and the community and a handicap for social and economic development. Stereotyped notions of gender roles exacerbate the gender inequity. Women and girls still carry out most domestic tasks, for which they do not receive any income. Poor services (water and sanitation, electricity) and rural isolation particularly affect women. Men's problems also have negative repercussions on women—such as drug abuse, alcoholism, and violence associated with high rates of male unemployment.

In order to tackle gender inequity, Mexico launched in 2001 its Gender Equity Project or *Generosidad*, which is aimed to address the consequences of gender roles on both sexes and to consider the linkages between the genders rather than focusing solely on women. In addition, the federal Congress passed a gender quota law in 2002, which requires at least 30% of all candidates for all political parties to be women. This law was applied for the first time in the 2003 mid-term elections, in which women won 23% of the seats, up 7 percentage points from the 2000 election. These results catapulted Mexico up in the world ranking of women in legislative office from number 55 to number 29.

# MISKITO

**ALTERNATE NAMES:** Mosquito

**LOCATION:** Nicaragua; Honduras

**POPULATION:** About 200,000

**LANGUAGE:** Dialects of Miskito; English; Spanish

**RELIGION:** Moravian church (majority); Catholicism; fundamentalist Protestantism; Christianity mingled with folk beliefs

## 1 INTRODUCTION

The Miskito (also spelled Mosquito) are an indigenous people living in the Caribbean coastal lowlands of Nicaragua and Honduras. They came to international attention in the early 1980s as a result of their resistance activities against Nicaragua's Sandinista government. They are the largest native group in the region (often referred to as the Nicaraguan Atlantic Coast or the Miskito Coast) and have lobbied prominently for the cultural, territorial, economic, and political rights of the region's indigenous peoples.

Although considered a native people, the Miskito as a distinct group actually came into existence as a result of European colonization of the Caribbean region. Their forebears, unaffected by Spanish settlement of western Nicaragua and Honduras in the 16th century, later began welcoming escaped African slaves fleeing British possessions in the region. The mixed-race people that resulted from intermarriage between the slaves and the local population became the Miskito. Introduced to guns and ammunition by English traders and settlers in the area (it is commonly thought that "Miskito" comes from "musket"), they expanded their territory northward, southward, and westward from its original location at the mouth of the Rio Coco.

Those of the region's native groups that were not assimilated into the Miskito were pushed into the interior and became known as the Sumu. The Miskito became the most important non-White population on the coast, living in peace with the British and serving as an intermediary between them and the Sumu. From the mid-17th century to the late 19th century, the Miskito prospered, thanks to their trade with the British and the abundant natural resources of their territory, which at one time extended as far as the present-day nations of Belize and Panama.

In the late 19th century, an ethnic shift occurred in the region when banana growers began bringing in Black English-speaking laborers from the West Indies to work on their plantations. They and their descendants, who became known as Creoles, took the place of the Miskito as the area's dominant non-White group, settling mainly in the newly established port towns while the Miskito remained in rural villages, retaining their traditional language and way of life. Since Nicaraguan and Honduran independence from Britain in the 19th century, the United States played a greater role in the region, especially in the area of banana production, and its corporate interests, especially the United Fruit Company, now United Brands, remained influential well into the 20th century.

When the Sandinista government that came to power in 1979 moved to consolidate its control over the Miskito and bring them into line with its political and economic policies,

it met with widespread resistance. In response, the government forced thousands of Miskito out of their homes, sending them to relocation camps. Activists who joined the resistance were imprisoned, tortured, and killed, and thousands “disappeared.” Entire villages were looted and destroyed. Altogether, some 20,000 people were sent to relocation camps. Another 40,000 fled, becoming refugees. In spite of the magnitude of their persecution, they insisted on resisting independently, refusing U.S. pressure to join the Contras and other opposition groups. Their plight drew international attention, and they eventually won significant government concessions. By 1984, the government agreed to grant them limited political autonomy.

President Violeta Barrios de Chamorro, whose 1990 election ended Sandinista rule, established a new ministry to serve as a liaison with the Miskito and the neighboring peoples of the Atlantic coast—the Nicaraguan Institute for the Development of the Atlantic Region (INDERA). The example provided by the Miskito of Nicaragua has inspired demands for autonomy by both the Honduran Miskito and other indigenous peoples in Nicaragua. The call for indigenous autonomy spread to many other countries in Latin America. In 1992 Miskito signed an agreement with the Nicaraguan government in which several “security zones” were guaranteed for this Amerindian tribe. Besides, and with the intention of integrating Miskito community to the Nicaraguan nation, 50 Miskito were accepted in the police force.

## 2 LOCATION AND HOMELAND

The Miskito live along the Caribbean coasts of Nicaragua and Honduras. Their lands have a total area of 37,000 sq km (14,300 sq mi)—equal in size to Taiwan or the Netherlands—and extend 900 km (560 mi) along the Caribbean and 400 km (250 mi) inland up the Rio Coco River. The two major towns of Puerto Cabezas and Puerto Lempira are the communication centers with the outside world. A vast number of Miskito villages are located along the jungle river basins throughout the Caribbean coast. The Coco River (Wangki), one of the largest rivers of Central America, is considered to be the heartland of the Miskito people.

Miskito territory is extremely diverse geographically, with a large inland savanna, a tropical forest to the west, coastal lowlands, and the most extensive continental shelf in the Caribbean. Its varied lands include mangrove forests, estuaries, coral reefs, seagrass pastures, and the greatest concentration of coastal lagoons in Central America. Its major rivers include the Coco River (also known as the Wangki), Prinsapolka, Awaltara (Rio Grande), and Kuringwas.

In 1991, a conservation organization called Mikupia (an acronym that also means “Miskito heart”) was formed to protect the abundant resources of the region, with support from the World Wildlife Federation and the Boston-based human rights group, Cultural Survival. In the same year, President Violeta Barrios de Chamorro created the 1.3 million-hectare (3.2 million-acre) Miskito Cays Protected Area, the largest coastal protected area in Latin America.

The Miskito, like the other indigenous groups and the Creoles living on the Miskito Coast—a population collectively called *costeños*—consider themselves separate from the other inhabitants of Nicaragua and Honduras, whom they call “the Spanish.” Altogether, the Miskito are thought to number as many as 200,000, around 150,000 in Nicaragua, where they are the largest indigenous group, and 50,000 in Honduras. Most of the Miskito population is centered in the northeastern-most part of Nicaragua, along the riverbanks and in mining areas in the interior, including Siuna, Rosita, and Bonanza.

Before the persecution by the Sandinistas in the 1980s, there were over 260 Miskito communities with 500 to 1,000 people each. Sixty-five of the 100 communities near the Rio Coco River, the most densely populated area, were destroyed by the Sandinistas. Many Miskito migrated to Honduras in the 1980s to avoid political persecution by the Sandinista government. Major settlements in Honduras are located near the Laguna de Caratasca and the banks of the Rio Patuca.

The Miskito’s habitat is located in a tropical zone usually hit by natural forces. In 1998, Hurricane Mitch, and in 2007, Hurricane Felix, hit Miskito territory, causing severe damage.

## 3 LANGUAGE

Besides their native language, which is also called Miskito, the Miskito speak Spanish and English and are familiar with the English-based dialect spoken by the local Creole population. Because of their historically positive attitude toward Britain and the United States, in contrast to their enmity toward the Spanish, they are more likely to speak English than Spanish at home, in addition to Miskito.

Miskito belongs to the Misumalpan family of languages. There are three distinguishable dialects, belonging to the Miskito of eastern Nicaragua, those living along the Rio Coco,

and those of eastern Honduras. The dialects, characterized by differences in vocabulary and pronunciation, are all mutually intelligible. Miskito has been influenced by the grammar and vocabulary of West African languages, as well as Spanish, English, and German.

In areas where Miskito is spoken, it has been adopted as the language of the Moravian church, in both spoken and written forms. (The Bible, hymn books, and other religious texts have been translated into Miskito). It has been given official status as an indigenous language in the Nicaraguan Constitution, and the Nicaraguan government has also recognized, by decree, the Miskito's right to be educated in their native language.

#### 4 FOLKLORE

During the colonial era, the British nominally considered the Miskito society a "kingdom." Although its accepted leaders, or "kings," had little real power, legend has transformed them into an important cultural symbol, and they are now a popular subject for local theatrical presentations.

The Miskito believe it is possible to predict a person's death by dreams and other omens.

#### 5 RELIGION

Miskito people were originally animistic and, in spite of centuries of exposure to Christianity, many of them have maintained their religious practices. In Miskito culture, shamans play an important and varied role serving as healers, diviners, and exorcists. For these Amerindian aborigines there are different kinds of super-natural beings. These deities have the power to affect human well-being, crop failures, and bad hunting, among another.

Even though many of the animist traditions have been kept by a large number of Miskito, Catholic influence in the zone has resulted in a syncretistic Christo-animism. Today, the dominant religion of the Miskito is the Moravian church, which gained a foothold as early as the 17th century through its missionaries and had most of the population converted by the beginning of the 20th century. (Its adherents also include other non-Hispanic populations of eastern Nicaragua, including the Sumu and Rama and the Creoles.) Moravian pastors are important figures in Miskito communities. Their congregations generally provide them with food, an obligation that may take the form of actually planting the pastor's rice and beans themselves. Catholic and fundamentalist Protestant churches have also gained some converts among the Miskito. The traditional folk religion of the Miskito included beliefs in spirits (*lasas*), omens, and in the powers of natural phenomena such as the moon. Its rituals, including funerals, involved dancing and drinking. When Christianity was introduced, some elements of folk religion were mingled with Christian beliefs and practices.

#### 6 MAJOR HOLIDAYS

The Miskito observe the major holidays of the Christian calendar. Christmas (December 25) is an important holiday and is observed mainly in church. Christmas and New Year's (January 1) are especially festive because there is no plantation work at that time of year.

#### 7 RITES OF PASSAGE

Major life transitions (such as birth, marriage, and death) are marked by religious ceremonies, usually following Christian traditions.

#### 8 INTERPERSONAL RELATIONS

Villagers tend to magnify their personal quarrels, and feuds between different villages are common.

#### 9 LIVING CONDITIONS

Miskito people live in close family units forming small and autonomous villages. Each of these villages has a leader in charge of administering justice while settling differences among the village's residents. A sense of personal or private property is almost unknown among this people. Land is owned or sold except in the larger commercial towns. In rural areas, families have communitarian fields sharing tasks as well as the crops yielded by their common efforts. Rice, beans, and yucca are some of the main staples cultivated by Miskito people, while native bananas and plantain are gathered.

Miskito homes are built of split bamboo or lumber with roofs of thatch or corrugated metal. Some houses, usually wooden, consist of two structures, one that serves as a kitchen and the other as sleeping quarters, while bamboo homes are more likely to be composed of a single structure. Houses typically have a porch with a bench and a chair or hammock, and an open front yard that is used for both leisure and various types of work. The Miskito spend most of their time out of doors, and their houses are designed basically as places to cook, eat, sleep, store things, and take shelter from the elements when necessary.

Healthcare is limited or nonexistent in most villages and, therefore, infant mortality is one of the highest in Central America and life expectancy is one of the lowest. Western medicine coexists side by side with folk medicine among the Miskito, and a patient may receive conventional medical treatment and a "bush remedy" for the same ailment, as well as prayers by the local lay pastor. There are two types of folk practitioner: the *curandero* (herbalist) and the *sukya* (shaman). They use many similar treatment methods, but the *curandero* makes diagnoses based on the patient's dreams, while the *sukya* relies on chanting. Folk beliefs attribute illnesses to God, evil spirits, or the weather.

In addition to its distinctive culture, language, and way of life, the Miskito region is isolated from other areas of Nicaragua and Honduras by dense tropical rain forest and rugged mountains that make for difficult travel conditions. There is no comprehensive road network. Only a narrow dirt road connects Miskito lands to those outside them, and even this road is only open seasonally and takes two to three days to negotiate in a specially equipped four-wheel-drive vehicle. Many areas can be reached only on foot or by boat or airplane. There are port facilities at Puerto Lempira and Bilwi.

#### 10 FAMILY LIFE

Young people engage in flirting activities to attract a potential mate, although parental consent must be obtained for marriage. Premarital sex, although common, is officially frowned upon. A couple may have both a civil and a church ceremony, although church weddings are often prohibitively expensive,

*Miskito men wait to participate in a ceremony conferring property rights to five Miskito and Mayagana communities in Waspan, Nicaragua. (AP Images/Esteban Felix)*

and civil marriage is accepted in the eyes of the community. Fidelity is expected of both partners once they are married. Family life revolves around having children, who represent the union of the husband's and wife's families. The two families do not consider themselves related to each other until children have been born. In addition, children are their parents' only secure source of support in old age. When a woman remains childless, her husband is likely to father children by other women, and there is a good chance that their marriage will dissolve.

It is a common practice for children to have a godparent, or *libra* (often a female relative), who promises to be responsible for them in the event that the mother dies. Multiple family members, such as grandparents, older siblings, and unmarried aunts, help care for a child. It is considered acceptable for parents to have a child raised by someone else if they cannot afford to do it themselves.

### **11 CLOTHING**

Modern Western-style clothing, either store-bought or sewn from manufactured cloth, has replaced the traditional dress of the Miskito, which was made of locally woven cotton or bark-

cloth and included loincloths for the men and cotton waist wraps for the women.

### **12 FOOD**

The Miskito eat two main meals, a morning meal eaten shortly before dawn and a late-afternoon meal eaten after workers return from their labor on the plantations. A light snack may be eaten at noontime. Although the Miskito eat the universal Latin American staple of rice and beans, they regard these foods primarily as cash crops and maintain a disdainful attitude toward them, referring to them as either "English food" or "Spanish food" in contrast to their traditional native foods, which include wild game, bananas, and plantains. Manioc (cassava) and other tubers, eaten boiled or baked, is another dietary staple, as are green bananas.

Rice is ground and prepared as gruel or in small cakes. Coconut milk is heavily used as a flavoring and a thickener for soups and sauces. Meat and fish are eaten sparingly. Maize is not an important part of the diet and is used mostly to make beverages, such as *atol*, made from mashed green corn. A typical Miskito dish is a stew called "rundown," consisting of green bananas, plantains, manioc or other root crops, fish, and coconut milk. Fermented fruits and vegetables are also popular and may be wrapped in leaves and buried until they have soured. Popular beverages include coffee and *wabul*, a beverage made from mashed boiled bananas or plantains and water.

### **13 EDUCATION**

Although Honduras and Nicaragua, where most Miskito live, both have free, compulsory primary education, the educational systems of both countries are inadequate, with low enrollment and graduation rates and high adult illiteracy. There are government schools in larger villages and Spanish is taught after the third grade. However, because of the precarious economic situation of this people, the majority of Miskito children do not attend school. Estimates of the adult illiteracy rate in Honduras range from 27% to over 40% and as high as 80% in rural areas (where most Miskito live). Schools are understaffed and undersupplied, with as many as 80 pupils per classroom.

While the Sandinista government effected some improvements in Nicaragua's poor educational record under the earlier Somoza regime, these mostly occurred in the early 1980s before the Contra war drained the country's resources in the latter half of the decade. A 1980 literacy campaign reportedly reduced adult illiteracy to around 23%. During the same period, the government recognized the right of native groups to be educated in their own languages and instituted the first bilingual programs for the Miskito in 1984. By the end of the decade, however, illiteracy had risen to pre-1980 levels and many primary- and secondary-level students were still not enrolled in school. However, rural access to education did improve during the Sandinista era.

### **14 CULTURAL HERITAGE**

Together with their common history and territory, the Miskito have a common culture that, together with their language, has been passed down from generation to generation. In the centuries since the first European contact, some of the Miskito's indigenous art forms—like their religion—have mingled with aspects of European culture. Thus the traditional dance called the *aobaia* is now commonly performed at Christmastime.

The Miskito have a large collection of love songs, of which the following is an example:

Lalma tininska mairin	Wandering lady humming-bird
Naiwa mamunisna	today I sing your praises.
Naha paiaska kra wina	With this blowing breeze
Yang mai lukisna	I am thinking of you.
Prais mai alkra.	Precious thoughts sent to you.

Another interesting aspect of Miskito musical tradition is the fact that in their culture men are in charge of performing medicinal as well as secular songs. In the case of healing songs, they are performed with vocal tension while secular songs are carried out with a more relaxed inflection. One of the most characteristic musical instruments used by Miskito men during their performances is the *mirliton*. This musical device is built with bat's wings, stretched between reeds, and surrounded with beeswax. The singer places the *mirliton* in his mouth in order to alter his vocal quality during funeral rites. Performance contexts include healing, initiation rites, funerals, collective ritual dances, and social gatherings.

## 15 WORK

The Miskito have traditionally engaged in hunting, fishing, and subsistence farming, raising beans, rice, yams, bananas, corn, cotton, and sugarcane. Other sources of cash are fur-trapping and extracting the sap from wild rubber trees. Miskito also work as hired laborers for fruit and logging companies, and as gold miners. Increasing numbers are becoming migrant workers and sending cash remittances home to their families. Modern Miskito are eminently farmers. Even though their principal staple crop is the cassava, they also keep poultry, cattle, and other farm animals.

## 16 SPORTS

Informal games of baseball are often organized on Sunday afternoons after church.

## 17 ENTERTAINMENT AND RECREATION

*Kihribaia*, or strolling, is a favorite pastime, especially on Sundays. During their leisure time, villagers also enjoy relaxing at home or visiting with relatives. Church activities are an important diversion for women and young girls, who look forward with great anticipation to church conferences held in neighboring villages. For the most part, they are closely tied to their homes and immediate villages while men, who often travel about seeking work, are typically more mobile.

## 18 FOLK ART, CRAFTS, AND HOBBIES

The Miskito weave baskets and fashion gourds and calabashes into both functional and decorative objects. They still make bark-cloth, which was used for clothing before their adoption of Western-style garments. It is now made into bed coverings. Other handmade items include carved and woven household utensils and furniture and dugout canoes.

## 19 SOCIAL PROBLEMS

The Miskito generally fare worse than the mixed-race (*mestizo*) or black (Creole) populations in terms of income, education, and job opportunities. The Sandinista Revolution of the

1980s severely disrupted the lives of the Miskito population, threatening their subsistence and personal safety, leading to large-scale relocations, and creating refugee conditions for many. In the early 1990s, many Miskito were forced to migrate to other regions in search of work, separating from their families for extended periods of time.

Drug traffickers from Colombia have started using the Miskito Coast as a transshipment route and fueling stop, but cocaine consumption by the Miskito has not become a significant local problem. In fact, the Miskito have attempted to resist the intrusion of drug traffickers into their regions.

## 20 GENDER ISSUES

The Miskito cosmology, like that of many indigenous peoples, describes an egalitarian duality between the masculine and feminine realms. In Miskito tradition, women are revered and violence against them is considered deviant. However, colonization, Christianity, and cultural assimilation have eroded egalitarian Miskito traditions. Today, a key concern of Miskito women is gender-based violence. For them, violence does not only stem from gender discrimination and women's subordination within their families and communities, but it also arises from attitudes and policies that violate collective indigenous rights.

Miskito practice matrilineal residence and Miskito women act as the keepers of traditional customs and values. In addition to their domestic responsibilities, women take part in farm work, including planting, weeding, and harvesting. Even though in the past Miskito women did not work for wages, today a few women, accompanied by men, work in town as domestics or in plantations. However, the discrimination that Miskito women confront in the labor market keeps many of them outside the wage economy and in the subsistence sector. Few of the jobs open to Miskito women pay a living wage, and many women who wish to work for wages cannot find employment.

The economic crisis that began in the 1960s in Nicaragua pushed Miskito men to look for alternative sources of income by commercializing their natural resources and agriculture. This change eroded traditional views of communal labor and reciprocity, and altered gender roles since women were predominately the agricultural laborers.

## MORMONS

**ALTERNATE NAMES:** Latter-day Saints

**LOCATION:** United States (headquarters) and worldwide

**POPULATION:** 13 million worldwide

**LANGUAGE:** English; language of the country in which they live

**RELIGION:** Mormonism

### <sup>1</sup> INTRODUCTION

Latter-day Saints, commonly referred to as Mormons, are members of the Christian sect known as The Church of Jesus Christ of Latter-day Saints. Mormonism is the term that refers to the combination of doctrine, lifestyle, and culture of the Church.

The Church of Jesus Christ of Latter-day Saints was founded by Joseph Smith in Fayette, New York, in 1830. Smith attracted a small group of followers and settled them first in Kirtland, Ohio, and then in Jackson County, Missouri. The people with whom the early Mormons came into contact considered their beliefs and their way of life peculiar and undesirable and as a result the Mormons suffered much persecution. Forced to move again and again, they relocated from their first settlements in Kirtland and Jackson County to northern Missouri and then to Nauvoo, Illinois. In Nauvoo, the early Mormon church prospered for a while, but hard times soon befell it. The Mormons' neighbors in Nauvoo resented the way they kept to themselves and did not share in community life. Some became enraged when rumors began to spread that the Mormons practiced polygamy, a lifestyle in which one man has several wives.

Because of the resentment growing in the community at large, Joseph Smith was imprisoned in Carthage, Illinois, in 1844. While Smith was in prison, an armed mob stormed the jail and assassinated him. Brigham Young, who was at that time the head of the church's Council of the Twelve Apostles, replaced Smith as the leader of the Church. In 1846 he organized and directed the mass migration from Nauvoo across the Midwestern plains and the Rocky Mountains to the Great Salt Basin of Utah.

In Utah the Church continued to grow, but when its leaders acknowledged that polygamy was in fact a Mormon belief, the United States government stepped in to put a stop to the unacceptable practice. In 1862 and 1882 Congress passed antibigamy laws and in 1879 the Supreme Court ruled that religious freedom could not be claimed as grounds for the practice of polygamy. In 1890 the Mormons officially ended the practice of plural marriage.

Almost 15,000 Mormons served in the U.S. armed forces in World War I. During the 1818-1845 tenure of Mormon president Heber Grant, the number of districts in the Church grew from 83 to 149. The first temple outside of the United States was dedicated in Cardston, Alberta, Canada in 1923. The church expanded its missionary efforts in the 1950s and 1960s and began constructing temples in Europe. In 1978 church authorities announced that they had been instructed by divine revelation to strike down the church's policy of excluding black men from the priesthood. The first temple dedicated on the African continent was in Johannesburg, South Africa in

1985. In 2008 there were an estimated 13 million members of the Church worldwide.

While Latter-day Saints typically integrate easily within the cultures and societies of the country in which they live, there are times in which the beliefs and practices of the Church are brought to public scrutiny and debate. In 1995, the church president, Gordon B. Hinckley, issued the “The Family: A Proclamation to the World.” This statement, which reaffirmed Mormon beliefs in the importance of marriage and family came, in part, as a response to national concerns about traditional family values and same-sex marriages. The proclamation defined marriage as a union between one man and one woman and promoted the traditional roles of husband and wife as essential to maintaining the strength of the family unit. In 2007 interest in the beliefs of the Latter-day Saints was sparked when a Mormon, Mitt Romney, made the ballot as a Republican candidate in the U.S. presidential primaries.

## 2 LOCATION AND HOMELAND

About half the world’s Mormons live in the United States, mostly in the western part of the country. Nearly 1.8 million members live in Utah. Latter-day Saints can also be found in virtually every part of the world, including Europe, South America, Asia, Africa, and Oceania. In 1995, the Church of Jesus Christ of Latter-day Saints estimated its worldwide membership to be over 9 million individuals, double the number of members in 1975. In 2008 membership was estimated at 13 million worldwide with over 27,450 congregations. That year there were 128 temples throughout the world with an additional 11 under construction.

When the wandering Mormons finally found a home in Utah, Salt Lake City became the center of the Church. The headquarters of the Church are located in Salt Lake City. Salt Lake City is also home of the most extensive genealogical records collection maintained by the church. Some of these genealogical records are housed in vaults carved into the sides of the mountains located just outside the city. The value that Latter-day Saints place on genealogy is linked to their belief that temple ordinances such as baptism and priesthood may be offered by proxy for the souls of family members who have died. The extensive genealogical records are kept so that all ancestors of Mormon families will be known and their souls will be saved by the prayers of the living. Mormons are constantly updating these records, which include information not only on Mormons and their families, but on many non-Mormons as well.

## 3 LANGUAGE

Mormons speak the language of the country in which they live. Since most Mormons live in the United States and other English-speaking countries, the language spoken by most Mormons is English.

## 4 FOLKLORE

The Mormons have no mythic or heroic figures in the usual sense, although they revere their early leaders, Joseph Smith (the founder of Mormonism) and Brigham Young. Some early Mormon beliefs incorporated elements of European and frontier folklore, infusing them with religious content. Faith healing and speaking in tongues both play a role in the Mormon belief system.

## 5 RELIGION

Mormonism began when its founder, Joseph Smith, reported having a vision through which God and Jesus appeared and told him that the true authority of the Church of Christ, having been lost at the death of the first twelve apostles, would be restored through him. Later, according to Smith’s accounts, another heavenly messenger, an angel named Moroni, directed him a spot where he found thin gold plates inscribed in a hieroglyphic language. Smith’s translation of the plates became known as the Book of Mormon, which describes the history, wars, and religious beliefs of a group of people who reportedly migrated from Jerusalem to America in ancient times. The Book also describes various appearances of Jesus to the people of America after his resurrection. Smith later announced that he had been visited through revelations by the apostles Peter, James, and John, who conferred upon him the authority of the Melchizedek priesthood, thus restoring the proper authority of the Church through him.

Mormon religious practices are based on the Bible, the Book of Mormon, and two other books of revelations that were believed to have been divinely revealed to Joseph Smith, *Doctrine and Covenants* and *The Pearl of Great Price*. Although Latter-day Saints share some of the beliefs of traditional Christianity, there are also some important differences. Mormons believe that God reveals his true word to individuals who seek it for their own benefit, to leaders of local Mormon churches, and to the President-Prophet of the Church. Their understanding of baptism includes a belief in proxy baptism, or baptism of

*Mormon faithful outside the Salt Lake Mormon Temple in Salt Lake City, Utah, make their way to the 177th Semi-Annual General Conference of the Church of Jesus Christ of Latter-day Saints. (George Frey/Getty Images)*

the dead, for those who have died without receiving baptism by the proper authority. Latter-day Saints also believe in celestial marriage or eternal marriage, a doctrine which teaches that the bond of marriage is for all time and eternity and that such marriage is an essential part of the plan for salvation. Latter-day Saints also have different beliefs on such aspects of Christian faith as the fall of man, the nature of heaven, and the means to obtain salvation.

Sunday is the Sabbath day for the Latter-day Saints. The primary worship service is called a sacrament meeting and takes place in a meeting house. The meetings are typically family-oriented and visitors are welcome. Each meeting usually includes hymn singing, prayers offered by church members, the sacrament of Communion, and one or more speakers. Primary classes provide religious instruction and devotional time for children between the ages of 3 to 11. Men from the ages of 12 years and older will attend priesthood meetings. Women from the ages of 18 years and older will attend Relief Society meetings. Young Women meetings are held for those ages 12 to 17. Local congregations are called wards or branches. The spiritual leader of each ward is called a bishop. The leader of each

branch is the branch president. The ward and branch leaders are men who are chosen from and by the congregation and who serve on a voluntary basis. There is no paid clergy.

The temples of the Church are sacred places where the ordinances of endowment, celestial marriage, baptism, and confirmation may be performed. Because the temple is considered such a sacred place, members must receive a special recommendation, called the temple recommend, from their local bishops in order to enter the temple. The temple recommend indicates that one's conduct has proven them to be worthy of entering the sacred space.

After age 19, all Mormon men and some women are expected to devote two years to doing missionary work. This missionary service may take place anywhere in the world. Often, missionaries will call on people at their homes to tell them about the Gospel and the doctrines of The Church of the Latter-day Saints and to distribute the Book of Mormon. During their missionary work years, they must support themselves with money they have saved or earned previously. Many receive financial assistance from their parents.

The president of the church is the head of administration. He is assisted by counselors who make up a body known as the Quorum of the First Presidency. The Quorum of Twelve Apostles is also designated to aid the president. All of these men are considered to be prophets, seers, and revelators. They are responsible for developing, regulating, and administering church policies.

## 6 MAJOR HOLIDAYS

Latter-day Saints celebrate Christmas and Easter as well as the national holidays of the countries in which they live. Pioneer Day is celebrated worldwide on 24 July. This heritage observance is in honor of the arrival of the first Latter-day Saint pioneers in Salt Lake City on 24 July 1847.

## 7 RITES OF PASSAGE

Religious rites of passage include baptism, confirmation, temple endowment, marriage sealing, and ordination to the priesthood (for men). Any person eight years of age or older who wishes to join the Church may be baptized according to Mormon practices, which is generally by full immersion in water. After a person is baptized, one or more members of the priesthood will lay their hands on the person's head and offer a blessing that is meant to confer the gift of the Holy Spirit and confirm them as members of the church. This is known as the ordinance of confirmation.

Latter-day Saints also practice proxy baptisms or baptism of the dead, as a means of sanctifying the souls of those who have gone before. In proxy baptism, members of the Church undergo baptismal rites on behalf of their ancestors who either died without an opportunity to be baptized or who were baptized without proper authority, before the doctrines of the Church were revealed to Joseph Smith. Baptism is considered to be necessary for eternal salvation and for membership in the Church.

All men are eligible for priesthood within the Church. Beginning at age 12, males may become members of the Aaronic Priesthood through the blessing and authorization of the proper members of the Melchizedek Priesthood. As members of the Aaronic Priesthood, young men may be given various opportunities to serve within the Church as bishops, teachers, and

deacons, under the authority of a member of the Melchizedek Priesthood. From age 17 and older, worthy young men may receive the Melchizedek Priesthood, which is accepted as a personal oath and covenant of a lifelong commitment to the Church and to the faith. Members of the Melchizedek Priesthood have authority to minister to the sick and offer special blessings on behalf of family members and others. They may also serve at the confirmation and ordination of others.

Mormons also have a coming-of-age rite called an endowment. The endowment is a spiritual blessing through which one receives particular spiritual gifts from God. The ordinance also includes a series of instructions on how to live righteously as one makes a personal commitment to a lifelong practice of faith. Men typically receive their endowment once they have entered the Melchizedek Priesthood. Women commonly undergo the endowment ritual just before a marriage sealing.

The ordinance of marriage sealing is sometimes referred to as celestial marriage or, more properly, the New and Everlasting Covenant and Eternal Marriage. On receiving this temple ordinance, a man and woman are considered to be married (or sealed) to one another for time and eternity. Mormon couples may be married in ceremonies at other Christian churches; however, the sealing ordinance may only be performed within a temple.

## 8 INTERPERSONAL RELATIONS

Members of the Church often address each other as “Brother” and “Sister.”

The practice of home teaching forges an important relation between a family and the Church. Every family is assigned to the care of a member of the priesthood, who is responsible for visiting the family at least once every month to offering teaching and guidance. This Church-wide support system serves as a chance for instruction and growth among families. Church members and their home teacher also contact each other in times of crisis.

While customs concerning dating and courtship generally reflect those of local society, church leaders encourage young men and women not to date until they are at least 16 years old.

Charitable work on behalf of the Church and the poor is a hallmark of Mormon religious belief and practice. All members of the Church of Jesus Christ of Latter-day Saints make generous donations to support Church activities and ongoing building projects, and also to work on welfare farms and a wide variety of other projects whose goal is to produce food and other things that can be of use to those in need.

## 9 LIVING CONDITIONS

The teachings of the Church of Jesus Christ of Latter-day Saints emphasize hard work, nutritious food, exercise, and a family-centered home life. Statistics seem to show that this emphasis tends to lead to longer, healthier lives than are common among their non-Mormon neighbors.

In 1842, 12 years after the founding of The Church of Jesus Christ of Latter-day Saints, the Relief Society was established by Joseph Smith as a women’s organization that works in partnership with the priesthood. The original purpose of the Relief Society was to provide care and assistance to poor and needy and to bring people to Christ. In the time since it was founded, the Relief Society has branched out into other areas of social work.

Salt Lake City is the home of Welfare Square, an enormous facility whose purpose is to provide various sorts of aid and relief to the poor and the needy. Welfare Square is staffed completely by volunteer workers. It features a large building housing a 178-foot-tall grain elevator, a large storehouse, a bakery, a cannery, a milk processing operation, a thrift store, and an employment center. The Latter-day Saints take great care to make sure that the items they sell are packaged attractively so that it will not be demeaning for people to shop there. The stores at Welfare Square provide all the necessities for a needy family’s comfort while at the same time providing jobs and volunteer work for those who have a desire to give.

## 10 FAMILY LIFE

For Latter-day Saints, marriage is considered to be an essential part of God’s plan for the eternal destiny of God’s people and is, therefore, strongly encouraged. In eternal marriage, also called celestial marriage, a man and a woman are sealed unto one another through time and eternity. Children who are born to parents who have received the sealing ordinance are considered to be part of the eternal covenant as well, meaning that they become part of an eternal family. The role of parent is considered to be a sacred duty in that children are to be raised in a way that provides for both their physical and spiritual needs. Religious instruction is considered to be primarily a duty of the parents, with support offered through classes and programs of the Church. The importance of the family bond can be seen in the fact that the state of Utah, in which Mormons predominate, has one of the highest birth rates and lowest divorce rates in the United States. In strengthening this bond, Latter-day Saints are taught to set aside one night a week, usually Monday evening, as a family night, a time when the family may pray and study scriptures together, as well as play.

## 11 CLOTHING

At the time of one’s endowment, an individual may receive what is known as a temple garment, often just referred to as the garment. The garment is worn as an undergarment. The style of the garment, for both men and women, has changed many times over the years. The garment may be of one or two-pieces and is typically made of a white, lightweight material. The pant legs will often extend down to just below the knees and necklines are generally modest. The garment is meant to serve as a reminder and representation of one’s commitment to faith and wearing the garment is viewed as a sacred privilege. While believers are encouraged to wear the garment at all times, the practice is not obligatory. Since the garment is considered to be sacred, all outer clothing must cover the garment so that it cannot be seen in public. As the name temple garment suggests, the garment is expected to be worn whenever one is in the temple. Special white robes are generally worn within the temple as well. Dressing rooms and lockers are typically available onsite to allow members to change before entering the temple proper.

The Church of Jesus Christ of Latter-day Saints places no other specific restrictions on the type of clothing that members may wear, but most Mormons dress modestly.

## 12 FOOD

Special teachings concerning food and drink are contained in Doctrine and Covenants in a section known as the Word of

Wisdom. Based on the teachings of this text, Mormons are instructed to avoid coffee, tea, and other caffeinated beverages, as well as alcohol and tobacco. Mormons are also asked to fast for two consecutive meals on one Sunday each month (typically the first Sunday) and donate the grocery money saved by fasting to charity.

One long-standing Relief Society project is a food-storage program. Following the dictates of this program, all Mormons are instructed to maintain a year's supply of food for emergencies. As a result of this policy, Mormons have often been accused of hoarding food. Such accusations are totally unfounded, however. The food-storage program is simply intended to maintain the Mormon community in a state of preparedness in the event of a natural disaster or some other sort of emergency.

### **13 EDUCATION**

The Mormons believe strongly in the value of both secular and religious education. The state of Utah has the nation's highest literacy rate (about 95%). Nine out of ten people in Utah finish high school.

Religious instruction is a life-long pursuit for many Latter-day Saints. High school aged students generally participate in a four-year study program known as seminary. During seminary, students spend each school year studying one set of scriptures: Old Testament, New Testament, Book of Mormon, and Doctrine and Covenants. While most students attend special classes for these studies, home study curriculums are available for students in areas without established Mormon communities. Church curriculums are available in 178 different languages. Special Institutes of Religion offer a program of religious instruction for church members who are single and between the ages of 18 and 30. Married college students may also attend the classes, which are generally open to students of other faiths as well. The curriculum focuses on the topics of scripture, Church history, doctrine, marriage, and missions.

The Church also founded and runs Brigham Young University in Provo, Utah. Founded in 1875, it was named for the charismatic leader who became the second head of the Mormons, succeeding Joseph Smith. There are branches of BYU in Laie, Hawaii, and Rexburg, Idaho. There is also an LDS Business College in Salt Lake City, Utah.

In church, Mormon children are encouraged to speak before the entire congregation at a very early age. This gives Mormon young people the confidence to know that whatever they have to share is always appreciated.

### **14 CULTURAL HERITAGE**

The Mormons have always valued the arts; their cargo on the great trek westward included pianos and other musical instruments. The song "Come, Come Ye Saints" was written during this historic journey. The original Mormon pilgrims sang to God for help, for guidance, for relaxation, and for encouragement from the time they started their wagon trains across the country until they reached their new home in the west. Founded in 1847, the Mormon Tabernacle Choir, which carries on this tradition, is one of the most famous choral groups in the world. The choir includes about 375 members from all ethnic and economic backgrounds.

During the tenure of Mormon leader Brigham Young, a theater was built in Salt Lake City. The Utah Arts Council is the oldest state agency for the arts in the United States.

### **15 WORK**

Members of the Church of Jesus Christ of Latter-day Saints are free to work at all occupations and are active in all walks of life, especially industry, trade, and the professions. Mormons also hold prominent positions in the federal government and the military.

### **16 SPORTS**

Members of the Church of Jesus Christ of Latter-day Saints enjoy all the sports that non-Mormons do.

### **17 ENTERTAINMENT AND RECREATION**

Members of the Church of Jesus Christ of Latter-day Saints enjoy the same forms of recreation and entertainment as non-Mormons, although their beliefs generally prevent them from participating in any activities they consider to be unwholesome. While vacationing, Mormon families often attend pageants presented at historic Mormon sites, including Nauvoo, Illinois, and Palmyra, New York.

### **18 FOLK ART, CRAFTS, AND HOBBIES**

Antique Mormon furniture featuring stylized designs painted on wood by hand has become a collector's item whose value rises about 10% every year. The Folk Arts Program of the Utah Arts Council supports both visual and performing arts that reflect traditional and ethnic cultures.

### **19 SOCIAL PROBLEMS**

Mormon tradition has come into conflict with feminism and some women speaking out against their traditional restriction to child rearing and homemaking have been excommunicated by the Church. Tension has sometimes arisen between the strict, fundamentalist beliefs of new converts to Mormonism and the more moderate views generally held by members of multigenerational Mormon families.

Latter-day Saints are sometimes discriminated against due to false assumptions concerning the topic of plural marriages (polygamy). The practice of plural marriage was part of official Church doctrine from 1831 to 1890. Since then, however, official church leaders have spoken out against the practice of any man having more than one living wife at the same time. The problem of discrimination has been compounded by the formation of small groups, such as the Fundamentalist Church of Jesus Christ of Latter Day Saints (FLDS) and the Apostolic United Brethren, which are separated from the official Church and have continued to argue for the practice of plural marriage. The FLDS made national headlines in 2006 when its president, Warren Steed Jeffs, was placed on the FBI's Ten Most Wanted List as a fugitive from justice facing charges of arranging illegal marriages between adult men and underage girls. Jeffs was eventually arrested and, in 2007, was found guilty on two counts of being an accomplice to rape. The media focus on such groups tends to raise questions and suspicions against the official Church, which does not condone the practice of plural marriage at all.

The perceived secrecy of the Church, particularly involving ceremonies held within the temples, has also caused suspicion and discrimination of Mormons on the part of the general public. Latter-day Saints believe that ordinances and rituals performed within the temple are of such a sacred nature that participants generally do not discuss the proceedings casually in a public setting or among non-believers. The fact that only worthy members of the Church are permitted to enter the temple adds to a sense of suspicion on the part of non-believers. However, members believe that the practice is based on a desire to maintain the sacredness of the temple, rather than a wish to exclude anyone from the experience.

## 20 GENDER ISSUES

While husband and wife are considered to be equal partners in marriage, the traditional roles of the wife as mother and homemaker and the husband as the primary financial provider and head of the family are still encouraged as the basis of a strong family structure. The Church's strong opposition to the Equal Rights Amendment in the past was based on its belief that granting equal social and political rights to women would result in the disruption of these traditional patterns of family life. However, women may and do work outside of the home in a wide variety of occupations.

In some cases, women have found themselves at a disadvantage in the event of a divorce and/or cancellation of sealing. While the Church officially disapproves of divorce, a legal divorce or annulment is permitted in some cases as the end of a civil marriage. However, if the marriage had been sealed in the temple, the couple is still considered to be sealed to one another in celestial marriage. A cancellation of sealing, received from the president of the church, is necessary in order for an individual to be remarried within the temple. Without a cancellation of sealing, members who remarry in civil ceremonies are considered to be married for time only, not for eternity. There have been some cases in which women have reported more difficulties than men in receiving a cancellation of sealing (called a sealing clearance for men). There are several situations in which a man may more easily remarry within the temple. For instance, a widower may remarry and thus be sealed in celestial marriage to both his current and deceased wives. However, women have typically been permitted to be sealed to only one man. A woman who divorces and does not receive a cancellation of sealing may feel that she is at a spiritual disadvantage by not being permitted to remarry in the temple or by remaining sealed in a marriage against her wishes. Since celestial marriage is considered to be necessary in order for one to obtain eternal life, or exaltation, in the presence of God, all men and women are encouraged to marry, which leaves both single men and women at a spiritual disadvantage. Divorce is often difficult financially on single mothers, since large families are encouraged and custody is generally granted to mothers in the event of a divorce.

Only men receive the ordinance of priesthood in the Church. Women take leadership roles organizing and teaching the Young Women and Primary classes. All adult women, age 18 and over, are generally members of the Relief Society, a worldwide women's organization that functions in connection with the priesthood. On the local level, the Relief Society serves to offer women instruction in home management and family development as well as on tenets of faith. It is through

the Relief Society that most women participate in welfare service projects.

## 1 INTRODUCTION

Archaeologists generally agree that the first peoples to inhabit the North American continent crossed over from Asia to what is now Alaska on the Bering Land Bridge sometime between 12,000 and 25,000 years ago. When the glaciers melted at the end of the Ice Age, the water levels rose in the Earth's oceans and covered the land bridge, preventing any further migrations. The people who had already crossed over began to spread across the North American continent. According to the terrain and climate of the regions in which they eventually settled, they became either farmers or hunter-gatherers (or sometimes both). Farming tribes tended to form large permanent communities, while those who lived by hunting and gathering traveled in smaller, nomadic bands. By the time the first Europeans arrived (Nordic explorers reached Greenland in AD 985); a huge diversity of well-developed cultures had existed in North America for thousands of years. Over 500 years later, when Columbus "discovered" America, these cultures were centuries more sophisticated. Native North Americans, the First Peoples, were not primitive or backwards or wild savages, as the Europeans often described them. Rather, they were highly skilled providers and preparers of food, clothing, and shelter; fine artists; deeply religious peoples with complex belief systems; and self-governed, independent societies, some with complex governmental structures. From the time Columbus set foot on the Americas, through the next four hundred years, Europeans decimated Native North American cultures and populations, killing perhaps as many as 60 million Native peoples. Some were slaughtered in wars as the Europeans pushed them off their homelands to make room for European expansion. Many others died from European diseases for which they had no immunity or known treatments. Native North American populations did not begin to recover from this holocaust until about 1900.

The first "reservation" for Native North Americans was created in 1638 by the Puritans in what is now Connecticut, for the Quinnipiac Nation. The Quinnipiaks were given a mere 1,200 acres on which to live. They were subject to English rule and were required to convert to Christianity. Through the 17th century, European settlers pushed Native North Americans further and further west in what would become the United States. Those who remained in the east, and those in Canada, were squeezed onto smaller and smaller territories. British-ruled Canada began establishing what they called "reserves" for Native North Americans during the 18th century. In Can-

ada, reserves were set aside on the Natives' homelands, rather than forcing them to relocate, sometimes far from their homes, as did the U.S. government when it began confining Natives to reservations.

Reservations and reserves were not the only changes forced upon the Native North Americans by the Europeans. Christian missionaries, beginning in the 17th century with French Jesuits in the northeast and Spanish Franciscans in the southwest, built mission churches and schools near Native communities and worked to "educate" the Natives in European ways and religion. Missionary methods ranged from supportive and helpful to violent and destructive. Jesuit priests in eastern Canada kidnapped young Natives and took them back to France to try to acculturate them there. Many of the young people died in these experiments; others became marginalized in both societies and sunk into alcoholic depressions. In the southwestern United States, the Spanish brutalized the Pueblo peoples in their efforts to convert them to Christianity. After the Pueblo peoples staged a successful revolt in 1680, the Spanish agreed to a compromise: the Pueblo peoples would allow them to build their missions in the pueblos, but they must allow the Pueblo peoples to practice their native religion unhindered.

The 17th century also saw the beginning of the decimation of Native populations by European diseases, and the blurring of blood lines through intermarriage between Native North Americans and European traders. (In Canada, an entirely new population known as Métis, or mixed-bloods, was created in the 18th century from the marriage of European traders with Native women. They are now a recognized racial group in Canada.) Suddenly, tribal peoples who had existed in relative stability for millennia found themselves threatened with extinction. During the following centuries, Native North Americans struggled to survive, with varying degrees of success. Some European contributions were welcomed, such as the horse, adopted by Great Plains tribes in the United States and Canada during the 18th century, and wheat, which quickly became a staple food of agricultural Native North Americans. For the most part, however, the Europeans brought only destruction to the Native North American peoples.

During the 18th century, Native North Americans stepped lively among frequently shifting allegiances with European powers as the French, Spanish, and British vied for control of the New World. The Native peoples were interested in protecting their lands and their access to food. Whichever European power seemed most likely to allow them to do that became their ally of the moment. In the end, no European nation protected the Natives' interests, despite all the assistance the Natives had given them. In 1763, the British drew the first of a series of boundary lines between land available for European settlement and Native land, or "Indian Territory." This first line ran down the crest of the Appalachian Mountains. Many European settlers ignored this boundary and moved west of the line into the lands supposedly reserved for Native North Americans. Eventually, the line was redrawn further west, and again settlers ignored it. For the next one hundred years, Indian Territory was redefined further and further west, first by the British and then by the U.S. government, forcing Eastern tribes to relocate to unfamiliar terrain occupied by other Native North American nations. The lands allegedly reserved for Native North Americans were becoming crowded, and histori-

cally antagonistic tribes were forced to live in close proximity to each other.

In Canada, no imaginary lines were drawn between the European East and Native West, and Native peoples were allowed to stay in their original homelands. However, the lands set aside for them in these regions were small, and less valuable than those claimed by the Europeans. The first organized Native resistance to the Europeans in Canada was Pontiac's War against the British in 1763–66. Pontiac was an Ottawa chief who, with his warriors, successfully captured every British fort west of Niagara Falls except for Fort Detroit and Fort Pitt (Pittsburgh). Fort Detroit was under siege for five months before the British finally managed to turn the tables on Chief Pontiac and ultimately win the war.

Differences in culture, language, and worldview made peaceful resolutions to the conflicts between Europeans and Native North Americans almost impossible. Treaties were made, both in the United States and Canada, but misunderstandings by both sides and deliberate breaches of promise by the Europeans prevented the treaties from having any lasting positive effects. The Micmac tribe in what is now the Canadian province of New Brunswick signed the first treaty with Europeans in 1725. Canadian Natives signed a total of 11 more treaties between 1871 and 1923 with the British and then Canadian governments. The first treaty between Native North Americans and the U.S. government was signed on 17 September 1778 at Fort Pitt. A total of 389 more treaties were made or remade in the United States before Congress passed a law in 1871 forbidding the signing of any more treaties with Native North Americans. The U.S. government broke most of the promises it made to the Native North Americans in those 390 treaties.

The U.S. government not only defied most of its treaties with Native North Americans but also betrayed a promise made to them in its own Articles of Confederation. The Ordinance of 1787, contained in the Articles of Confederation, stated that “land and property shall never be taken from [Native North Americans] without their consent; and in their property, rights and liberty, they shall never be invaded or disturbed, unless in just and lawful wars authorized by Congress.” During the 19th century, in blatant disregard of this Ordinance, European American settlers invaded, destroyed, and seized most of the Native North Americans' remaining lands in the United States, all with the full support of the U.S. government. In the July-August 1845 issue of the *United States Magazine and Democratic Review*, editor John L. O'Sullivan coined the phrase “manifest destiny” to justify this genocide of the Native Nations. He saw it as “the fulfillment of our manifest destiny to overspread the continent allotted by Providence for the free development of our multiplying millions.” Manifest Destiny became the rallying cry for the Mexican War of 1846–48 and was used to justify the annexation of Texas in 1845; the claim to Oregon country disputed with Britain, and the planned seizure of Cuba from Spain, in the 1850s; the Alaska Purchase of 1867; and even annexations of territories outside of the continental United States, such as Hawaii and Guam, in the late 1800s.

In Canada, the aim of the government towards the Native Nations was complete assimilation. Rather than drive them out or slaughter them, the Canadians attempted to assimilate the Native North Americans into European Canadian culture. In 1857, the Imperial (British) Government passed the Grad-

ual Civilization Act, which declared Native North Americans in Canada to be noncitizens and created a process by which they could attain citizenship. The government expected all Natives to become Canadian citizens—but in so doing, the Native peoples would renounce all legal distinctions as Native North Americans, essentially giving up their identities. It is not surprising that few chose to do so. Between 1857 and 1920, only 250 Native North Americans opted to become Canadian citizens.

To encourage assimilation, Canada created boarding schools for Native North American children where they would be taught European languages, values, and customs. These schools, both government-run and missionary schools, were purposely built far from the children's homes to break all contact between the children and their families. The children were placed in European homes for the duration of their education, sometimes not seeing their true families for years on end. Although Native parents resisted sending their children to these schools, government officials insisted that they comply, often kidnapping the children and threatening the parents with cuts in food rations or worse. Boarding schools were also set up in the United States by missionaries and by the government, and the scenario was much the same there as in Canada. Students in both Canadian and U.S. boarding schools were subject to physical and sexual abuse; they were punished severely for speaking their native languages or practicing native religions; and their homes, families, and cultures were denigrated. The damaging effects of these schools are still felt by Native North Americans. Needless to say, this attempt at assimilation was not very successful.

In the United States, the Indian Removal Act passed by Congress in 1830 legalized the forcible relocation of many Native North Americans to reservations in the West. The Trail of Tears over which the Cherokees and other southeastern tribes were marched during the winter of 1838 from their homelands to what was then Indian Territory (now Oklahoma), and the Long Walk of the Navajos in 1864 to a concentration camp in New Mexico called Bosque Redondo, are still remembered by Native North Americans everywhere. Some 4,000–8,000 Cherokees (one out of every four) died on the Trail of Tears. Hundreds of Navajos died on the Long Walk, and many more died soon after arriving at Bosque Redondo. The situation worsened for Native North Americans in the United States in 1831 when the U.S. Supreme Court reversed the previous U.S. policy and declared Native North American tribes as domestic dependent nations, rather than independent foreign nations. Native North Americans, therefore, no longer had the rights granted to sovereign nations, nor were they given rights as U.S. citizens. Native North Americans in the United States effectively had no rights whatsoever.

The Gold Rush which began in the late 1840s in California and soon spread throughout the West (in both the United States and Canada) brought swarms of European prospectors and settlers into Native territory. European settlers squeezed out the Native North Americans and upset the fragile balance of nature on the prairies and plains. By 1879, the buffalo herds had disappeared from Canadian prairies, and many Canadian Natives were forced to follow the few remaining buffalo into the United States. Native peoples in the United States were already struggling to survive on the dwindling supply of buffalo and other game. In an effort to starve the Natives into submis-

sion, the U.S. government sponsored massive buffalo hunts, where gunmen rode through Native lands and shot as many buffalo as possible, leaving them to rot on the ground. In California, European Americans killed as many as 84,000 Native North Americans between 1850 and 1880 to rid themselves of competition for gold, land, and other resources.

Finally, by the end of the 19th century, Native North Americans in the United States and Canada surrendered to the superior firepower and sheer numbers of the Europeans and resigned themselves to life on reservations and reserves. Both governments outlawed many Native religious practices and continued to whittle away at Native lands through various acts of legislation. The General Allotment Act, passed by the U.S. Congress in 1887, divided up reservation lands between individual Natives—160 acres per person. Whatever lands were left over were sold to European Americans. The 160-acre parcels allotted to Native North Americans were not contiguous but rather were laid out in a checkerboard pattern, making large-scale collective farming or ranching impossible. With this one Act, the U.S. government succeeded in trapping Native North Americans in poverty for generations.

The 20th century has seen some improvements and some setbacks for Native North Americans. The United States granted citizenship to all Native North Americans within its boundaries on 2 June 1924, though some individual states did not declare them citizens for years to follow. Canada gave its Native peoples the national franchise in 1960, but separate provinces were slower to give them the provincial franchise. The Indian New Deal of the 1930s in the United States made reforms in Native North American land controls, improved conditions on reservations, and lifted restrictions on Native religious practices. Twenty years later, however, the Termination policy of 1954–62 eliminated federal recognition of many Native North American tribes in the United States, leaving those peoples with no federal protections or services. The United States also embarked on a Relocation Program in the early 1950s to encourage Native North Americans to move off the reservations to urban centers. The government hoped that by living and working in cities, away from their tribal lands, Native North Americans would become more integrated into European American society. In fact, the many Natives who did choose to move to urban centers instead found themselves unqualified and unprepared to succeed in the European American work world. Most of them simply traded poverty on the reservation for poverty in the city. Although Canada had no organized program to encourage Natives to relocate to cities, many did so because there was simply not enough room, nor enough resources or employment opportunities, on their reserves for everyone to survive. They found no more success in Canada's cities than did Native North Americans in the United States.

Inspired by the Civil Rights Movement of the 1960s in the United States, Native North Americans in both the United States and Canada began to band together in pan-tribal organizations to fight for their rights. In the United States, the National Indian Youth Council, a radical activist organization, was formed in 1961. The American Indian Movement (AIM) was founded in the United States in July 1968 by Dennis Banks and Russell Means. AIM's original goals were to improve the conditions of urban Native North Americans and to prevent harassment of urban Natives by local police. Since then, their

activities have expanded to cover a spectrum of Native North American concerns on the national level. The first truly national Canadian Native North American organization was the National Indian Council, formed in 1961. Various other tribal and pan-tribal organizations have since come into being to promote the preservation of Native North American culture; to lobby, demonstrate, and fight for Native North American rights in Canada and the United States; and to improve conditions for Natives in both countries. Due to the efforts of these groups, governmental attitudes and approaches are beginning to change. In the 1970s, the Canadian government began funding Native North American organizations, rather than trying to suppress them as it had done in the past. It also adopted a policy of multiculturalism, as opposed to its former policy of assimilation. In both the United States and Canada, many Native North American tribes have submitted land claims and brought suit against the government for restitution for broken treaties. The first major land claims case won by Native North Americans was in 1970 when U.S. president Richard Nixon agreed to return 48,000 acres of land (including the sacred Blue Lake) to Taos Pueblo in New Mexico. It was another 12 years before the first Canadian Native land claims case was settled, for the Micmac tribe in Nova Scotia.

Much confusion and disagreement remains, however, on the relation of Native North Americans to the government that rules their lands and lives. Canadian Natives continue to wrestle with the Canadian government over what the Natives believe is their inherent right to self-rule. U.S. Natives struggle to define themselves in the murky area of sovereign dependence. Conditions are still harsh for the majority of Native North Americans, whether they live on reservations, reserves, or in cities. Unemployment, alcoholism, suicide, and cultural dislocation continue to plague these descendants of once-great nations. Racist perceptions of "redskins" and caricatured depictions of Indians persist in the European-dominated cultures of Canada and the United States. Dartmouth College in 1969, and Stanford University in 1972, stopped the use of Native North American symbols and mascots for their sports teams, but more than two decades later, other teams like the Cleveland Indians and Atlanta Braves in professional baseball continue to promote racist ideas of Native North Americans with their Chief Wahoo grinning-Indian mascot (Cleveland) and tomahawk chant (Atlanta).

On a potentially positive note, the late 20th century has seen a surge in European Americans' and Canadians' interest in Native North American spirituality and worldview. If this interest leads to increased respect for Native North Americans, it should create significant improvements in their lives. If the Europeans, however, use this as yet another opportunity to steal from the Natives, co-opting their spiritual traditions and Europeanizing them, Native North Americans will once again have one less thing to call their own.

## 2 LOCATION AND HOMELAND

Native North American tribes are usually grouped into major culture areas based on the geographic area of their traditional homelands. Those culture areas are generally designated as Northeastern (including the Great Lakes region, or Woodlands); Southeastern; Southwestern; Great or Northern Plains; Northwest Coast; Plateau, Great Basin, and Rocky Mountains; California; Alaska; and the Northwest Territory and Arc-

tic Circle. Due to the forced relocation of many tribes in the United States during the 19th century to so-called "Indian Territory" in what is now the state of Oklahoma, a new division known as Oklahoman Indians has been added to the list. (Oklahoman Indians identify themselves as such.) These culture areas, except for Oklahoma, are useful for historical discussions of Native North Americans, but tribal groupings are based more on differences in political and economic relations with the U.S. and Canadian governments than on geographic regions. In Canada, Native North Americans are divided into Inuit (a separate culture group living in the subarctic regions), Métis (mixed-bloods who have developed a distinct cultural identity), and North American Indians (all other Canadian Natives), as well as "status" and "nonstatus" Indians (referring to whether or not they are recognized as Native North Americans by the government). In the United States, most Native North Americans are now referred to simply by tribe. (There is a great deal of controversy over how to refer to Native North Americans in general: some say Native Americans, some say American Indians, while others use terms such as First Peoples or First Nations. In an attempt to find a middle ground, and with no intention of disrespect to those who prefer other designations, we have chosen to use Native North Americans as the general descriptive term.)

Historically, the terrain and environment of a tribe's homeland determined its way of life. Northeastern tribes lived in temperate woodlands where game animals abounded. They built semipermanent villages made up of wood lodges, cultivated some food, and hunted, fished, and gathered the rest. Southeastern tribes, on the other hand, lived in hotter climates with very fertile ground and a long growing season, so they became settled agriculturalists with large, well-organized communities. Plains tribes relied on the buffalo and wild grasses for their livelihood, while Southwestern tribes eked out a living on carefully tended corn and built apartment-style complexes of adobe. Within each of these culture areas, however, individual tribes had quite different religious beliefs, languages, social customs, and interpersonal relations. It is quite inaccurate to think of Plains tribes, or Southwestern tribes, as single, unified groups with one common lifeway. It is grossly inaccurate to think of Native North Americans as a singly defined unit. However, for the purposes of this article, we will attempt to offer some general statements about Native North Americans as a collection of distinct peoples.

According to the 2000 Census, the total population of Native North Americans in the United States was 2,475,956. The Canadian Census of 2006 counted a total of 1,172,790 Native North Americans, including about 700,000 First Nations Peoples; about 390,000 Métis and nonstatus Indians; and nearly 51,000 Inuit. Historians and archaeologists guess that the Native North American population was in the tens of millions when Europeans first arrived on the continent. By 1900, the Native population in the United States had reached an all-time low of 237,196. The Canadian Native population bottomed out in 1911 at less than 110,000. Since then, Native North American populations in both countries have increased significantly, though they are still far from their original numbers. Native North Americans make up about 1.0% of the total U.S. population, and 3.8% of the total Canadian population.

There are 564 federally recognized Native North American tribes in the United States, over 200 Alaska Native villages

and communities, and some 600 recognized "First Nations" in Canada. A total of over 56 million acres in the United States have been divided into about 310 Native North American reservations, mostly in the Great Plains region and the West. A few are located in the eastern United States. In the United States, Native North Americans make up less than 50% of the population on many reservations due to land allotment, leasing arrangements, and the opening of reservation lands to non-Natives. While reservations in Arizona, New Mexico, and the Dakotas still have over 90% Native populations, those in California, the Great Lakes states, and Washington have less than 30%. According to 2003 estimates, the state of California has the largest concentration of Native North Americans in the United States (413,382), followed by Arizona (294,137), and Oklahoma (279,559). The Navajo Nation, according to the 2000 U.S. Census, is the largest Native North American tribe in the United States, followed closely by Cherokee. In Canada, the Cree far outdistance the next largest tribe, the Ojibwa. The provinces of Ontario and British Columbia have the greatest concentrations of Native North Americans.

Many Native North Americans have left the reservations and reserves to live in cities. In Canada, anywhere from 60-80% of the Native population lives off-reserve in urban centers such as Winnipeg, Montreal, Vancouver, Edmonton, and Toronto. Some 62% of U.S. Natives are urban dwellers. In the United States, the cities of Los Angeles, Oklahoma City, Phoenix, and Tulsa have the largest Native North American populations.

The relatively recent Native North American population increase from the lows of the early 20th century have created a youth-dominated population: 32% of Native North Americans are under 15 years old, while only 5% are over 64 years old. The decimation of tribal populations in the 19th century, plus the crowding together of many different tribes on common reservations in the United States, has led to a great deal of intermarrying and blurring of once pure tribal lineages. Many Native North Americans have also married and borne children with European Americans, resulting in a large percentage of mixed-bloods. In Canada, the Métis have developed a distinct cultural identity and are now recognized as such by the Canadian government. Because Native North Americans are eligible for government services and benefits, many with small percentages of Native North American blood register on tribal rolls. Some have such minute traces of Native blood that other Native North Americans refer to them as "no-bloods."

### **3 LANGUAGE**

Linguists guess that there may have originally been as many as 300 separate and distinct Native North American languages before Europeans arrived on the continent. Since that time, many Native languages have become extinct because of European decimation of tribal populations; the assimilation of Native peoples into European-dominated English-speaking society; education (forced and voluntary) of young Native North Americans in English, Spanish, or French; and the loss of faith in elders and traditional tribal culture by young Native North Americans who then reject their native cultures and tongues. Over 100 Native North American languages still exist, though some are spoken by only a few people. In recent years, there has been a resurgence of interest in traditional Native ways, including languages, by Native North Americans themselves and by the U.S. and Canadian governments. On 30

*Shoshone dancer in Wyoming. Most Native North American tribes continue to hold ceremonial dances.*  
(Pete Saloutos/Wyoming Division of Tourism)

October 1990, the U.S. Congress passed the Native American Languages Act to preserve, protect, and promote the practice and development of Native North American languages. This Act reversed the 19th century campaign by the U.S. government to eradicate those same languages that it is now trying to protect. Canada's new policy of multiculturalism supports Native languages and traditions, in contrast to its former policy of assimilation which tried to erase them.

The most widely spoken Native North American language is Navajo, with over 170,000 speakers. Cree, spoken by over 117,000 people in Canada, runs a close second. Navajo is a member of the Athabaskan language family; Cree is an Algonquian language. Linguists group languages with common roots into families, such as the Romance (Italian, Spanish, and French) and Germanic (German, English, Dutch) families in Europe. Native North American languages comprise some 57 families, including Athabaskan, Algonquian, Caddoan, Chumashan, Eskimo, Iroquoian, Kiowa-Tanoan, Muskogean, Pomoan, Siouan, Uto-Aztecan, Yuman, and others. There are also many "isolates," languages not related to any others, among the huge diversity of Native North American languages. Some examples of isolates are Aleut, Cayuse, Haida, Hopi, Tlingit, Washo, and Zuni. A number of languages have yet to be classified, such as Kutenai, Salishan, and Wakashan. The greatest linguistic variety exists in the relatively small area of California, which boasts 20 of the 57 Native North American language families. There is more linguistic variety in California than in all of Europe.

The only Native North American language written with its own symbol system is Cherokee. In 1823, a Cherokee named Sequoyah invented a writing system for his language using symbols to represent syllables (such as "ma," "no," "gu"). He borrowed some symbols from English, which he had seen but did not know how to read or speak, so the English letters do not correspond to the English sounds. For example, *D* represents the sound "a," and *T* represents "i." Other Native North American languages have since been written with adapted Roman or Russian (for the Aleut language in Alaska) alphabets. But for millennia, Native North American languages were purely oral. A form of sign language did develop among the Plains tribes so that they could communicate across language barriers. Many Europeans learned this system of gestures as well. Trade languages, with elements of two or more tribal (and even European) languages, developed between neighboring tribes, such as Chinook Jargon in the Pacific Northwest. A very special language was consciously created during World War II by a group of Navajo who devised a code based on the Navajo language, in such a way that even a native Navajo speaker would need the key to understand it. The United States used this code for military operations in the Pacific, and the Japanese were never able to break it. The Navajo Code Talkers, as they came to be known, were greatly honored for their invaluable service to the United States.

The English language has borrowed many words from Native North Americans since the arrival of English speakers on the continent. The oldest known borrowed word is *raccoon*. Others include *caribou*, *opossum*, *moose*, *skunk*, *woodchuck*, *chipmunk*, *hickory*, *squash*, *pecan*, *succotash*, *moccasin*, and *toboggan*. Many North American place names are Native North American words, such as *Massachusetts*, *Connecticut*, *Manhattan*, *Illinois*, *Michigan*, *Wisconsin*, *Chicago*, *Mississippi* (which means "big-water"), *Niagara*, *Ottawa*, *Ohio*, *Kentucky*, *Tennessee*, *Iowa*, *Missouri*, *Arkansas*, *Kansas*, *Nebraska*, *Minnesota*, *Manitoba*, *Dakota*, *Alabama*, *Appalachia*, *Oklahoma*, *Arizona*, *Utah*, *Seattle*, *Saskatchewan*, *Alaska*, and *Yosemite*.

#### 4 FOLKLORE

Separating folklore from religion in Native North American cultures is impossible because all stories are religious teaching stories. Religion is an integral part of daily life for Native North Americans, and the lessons for living that life in a sacred way are passed down from generation to generation through rituals, songs and dances, and stories. In the following articles on Native North Americans, therefore, this section will discuss specific stories and characters in those stories, while section #5, "Religion: origin and traditional beliefs," will talk about sacred ceremonies and rituals and the general spiritual worldview of Native North Americans.

Each native North American tribe has its own creation myth, but many of these myths share common themes. There are three basic types of creation stories among Native North American tribes:

- 1) Earth-diver stories, where an animal or bird dives into the depths of the watery chaos to bring up a bit of mud which becomes the Earth;
- 2) Culture-hero stories, where great beings create the world and the people in it and teach those people how to live (or sometimes Two-Creator stories, where two great

beings create the world through their efforts to compete with each other); and

3) Emergence stories, where the people emerge from a lower world (or worlds) up onto this one.

Trickster tales are also universal among Native North Americans. Trickster figures are usually animals, birds, or insects who teach humans the limits of time and space, and the consequences of disrespectful or unbalanced behavior, by their own follies, errors, and tricks. They sometimes help humans by restoring balance to the world. Native North Americans believe that the world is made up of paired opposites, such as light-dark, night-day, male-female, sun-moon, etc. Tension between these opposing elements creates movement. Trickster figures keep the world moving by keeping the tension alive between paired opposites, often by turning them on their heads. Common trickster figures (according to region) are: Raven (Northwest), Hare or Raccoon (Great Lakes), Coyote (Southwest and Great Basin), Iktomi the Spider (Plains), Rabbit (Southeast), and Jay or Wolverine (Canada).

## 5 RELIGION

Modern Native North American religious movements and sacred ways tend to be pan-tribal (crossing tribal boundaries, rather than specific to one or another tribe). Though sacred ways are continually changing, adapting to the realities of life in a changing world, to new experiences and new wisdom, certain core beliefs remain fundamentally unchanged because the basic realities of life remain the same. The four traditional enemies are still poverty, sickness, fatigue, and old age. The sacred boundaries of tribal worlds are still the same and can still be mapped. The seasons continue in the same cycles, and the sun, moon, and stars continue in the same paths. People are still born, and they still die. Native North American sacred ways are involved with survival; the sacred ways are an integral part of life and cannot be separated from daily living. There is no word for “religion” in any Native North American language because it is not seen as a separate enterprise. The disintegration of tribal culture and severe disruption of traditional daily life in the last two centuries, therefore, caused many Native North Americans to lose their understanding of and sense of communion with their traditional sacred ways. In recent years, however, there has been a resurgence of interest in traditional Native North American spirituality, both among Native North Americans themselves and among European Americans and Canadians.

Most Native North Americans share six concepts of the sacred:

1. Unseen powers, sometimes called The Great Mystery, exist;
2. All things in the universe are interdependent and we must, therefore, respect all life and maintain balance and harmony or else destruction will result;
3. Worship strengthens the bonds between the individual, community, and great powers;
4. Sacred traditions and teachers of those traditions teach morals and ethics for everyday life;

5. Trained sacred practitioners (called medicine men and women, shamans, priests and priestesses, etc.) are responsible for special, sometimes secret, knowledge that they preserve in their memories and pass on from generation to generation; and

6. Humor is a necessary part of the sacred because it keeps us in perspective and eases our journey through the difficulties of life.

Sacred rites among different tribes range from complex ritual dances and worship activities to a pervasive sense of sacred living with almost no ceremonial rites. Visions and dreams are considered by all Native North Americans to be powerful experiences worthy of serious attention. Native North Americans do not believe in a separate divine being who rules the universe, like the Judeo-Christian God. Rather, they believe that all of life and creation is sacred.

In the Native North American worldview, all elements of the universe are paired, and those pairs balance each other, such as male-female, north-south, east-west, up-down, night-day, sun-moon, moist-dry, dark-light, life-death. Each element in the pair is part of the other and necessary to the other: without night, there would be no day but simply a constant, unchanging, undefined sunlight. Because of this belief in balanced opposites, the concepts of good and evil are not nearly as important to Native North Americans as the idea of balanced or imbalanced, or harmony versus disharmony. The sacred is based on relationships that must be kept in balance. The sacred teachings give knowledge about those relationships, how to keep them in balance, and what tragedies will result if they are not kept in balance. This knowledge is taught through stories, ritual experiences, lectures, dances and songs, and the interpretation of visions and dreams.

Prayers are offered before and after many actions, such as waking, going to sleep, hunting, killing, planting, and harvesting. Three standard elements of Native North American prayer rituals are:

1. Purification—sweat baths, smudging with smoke, bathing, etc.;
2. Blessing—a call to the great powers, prayers for the self and others; and
3. Sacrifice—offering something of oneself to the great powers to reestablish one’s connection with all else.

Offerings, such as tobacco, feathers, corn meal, or pollen, also often accompany prayers.

Peyotism has a long history with Native North Americans. The use of peyote, an herb of the cactus species that grows along the Rio Grande in Texas and Mexico, was traditionally used by the ancient Aztecs of Mexico. In the early 18th century, the Mescalero Apaches began to use it in their healing ceremonies. Gradually, the use of peyote spread through the tribes of the Southwest and into the Great Plains. By the late 19th century peyotism had become a pan-tribal religion, eventually incorporated as the Native American Church. Sometimes blending aspects of Christianity (such as belief in the Trinity) with traditional Native North American sacred ways, the Native American Church promotes four basic teachings:

1. Love for one’s fellow beings;

2. Responsibility for one's family;
3. Self-reliance; and
4. Refraining from the use of alcohol.

Peyotism has enabled Native North Americans both to assimilate some elements of the dominant European Christian culture as well as to maintain a separate cultural identity and connection with traditional sacred ways. The discouragement of the use of alcohol and encouragement of responsibility and self-reliance have also helped Native North Americans to overcome the despair and accompanying social disintegration that has resulted from centuries of poverty, discrimination, and cultural dislocation.

## 6 MAJOR HOLIDAYS

As hunter-gatherers and agriculturalists, people who live close to the earth, Native North Americans traditionally celebrated holidays based on the Earth's rhythms. Solstices, equinoxes, planting and harvesting times, the first fish caught each year, and other seasonal events constituted Native North Americans' sacred calendar. Many Native North Americans have become Christian and celebrate Christian holidays. Those who are U.S. citizens also celebrate major U.S. holidays such as the Fourth of July (Independence Day). Canadian Native North Americans celebrate Canada Day on 1 July.

However, most tribes continue to hold ceremonial dances and religious rites on their traditional, Earth-based holidays as well. These sacred ceremonies were outlawed for a time by the U.S. and Canadian governments during the late 19th and early 20th centuries. But Native North Americans continued to celebrate them secretly and the ceremonies survived to take on new life in the return to traditional ways that has taken hold in Native North American communities in recent decades.

## 7 RITES OF PASSAGE

Common rites of passage among Native North American tribes are birth, naming, renaming, puberty, marriage, and death. Native North American initiation (or rite of passage) ceremonies mark a point of physical or emotional growth in a person and open that person's eyes to the Great Mysteries to which he or she is now exposed. The ceremonies also teach the person about the new responsibilities involved in being exposed to these powers. Birth rites are centered on rituals to ensure the child's safety into old age. Puberty ceremonies teach the young boy or girl about adult responsibilities and expectations. New names are often given at each passage from one stage of life to the next, or after a dramatic event in a person's life. Though naming customs differ among Native North American tribes, names are always believed to have great importance. In some tribes, a person may have acquired several names by the end of her or his life.

Death is not feared by Native North Americans because it is considered to be one more step on the path of life. Native North American burial rites involve preparations for the deceased's continuing journey after death. For example, in many Native North American tribes, the dead are buried sitting up, facing west (the direction of the life beyond this one), with things they will need as they travel the next part of the path, such as blankets and food. An inevitable part of the life cycle, death is deeply respected as a time of great transition.

## 8 INTERPERSONAL RELATIONS

Most Native North American societies are organized around some sort of extended family unit. In matriarchal tribes, the eldest woman is head of the group and carries a great deal of weight in the larger community as well. Patriarchal tribes look to the eldest man for leadership. Traditionally, most Native North American cultures practiced a similar division of labor in which women were responsible for domestic affairs and men took care of hunting, raiding or warring, and public affairs (such as intertribal business or meetings with Europeans). This division of labor made perfect sense in that women were frequently pregnant and/or nursing an infant and were not able during those times to perform heavy manual labor or venture too far from home. They also needed to be protected in the interest of the survival of the tribe or clan. Biologically speaking, women were more valuable because they could give birth only to one child every two years or so, whereas men could father many children in that same period of time. Therefore, fewer men than women were needed to perpetuate the group.

## 9 LIVING CONDITIONS

Whether on reservations or in cities, the great majority of Native North Americans suffer standard living conditions. In the United States, more than one out of every four Native North Americans (or 28%) live below the poverty level, as opposed to one out of eight (12%) of the total U.S. population. Native North Americans are the most disadvantaged group in Canada. Reservations and reserves were established on the poorest land and forced to hold many more people than the land could support. Farming has always been difficult, even at subsistence level, and there are few other sources of income. Many reserves and reservations are located in remote areas, often inaccessible by road, and work opportunities are scarce. Unemployment is extremely high (up to 90% on some Canadian reserves during the winter months), and income levels are extremely low. Access to modern Western health care is limited by poverty, isolation and lack of transportation, and misunderstandings of government policies and benefits. Entire tribes of Native North Americans were wiped out by epidemics during the 18th - early 20th centuries. Certain communicable diseases, such as tuberculosis, diphtheria, and trachoma, were not brought under control on reservations or reserves until the mid-20th century. Canadian Natives receive free health care, and more than half of all U.S. Native North Americans receive health care from the federal Indian Health Service (IHS), a government-supported health care system like no other in the United States. But urban (or other off-reservation) Natives in the United States are not covered by the IHS, so they have extremely limited access to health care. Native North Americans in Canada are often too far removed from health centers to take advantage of their services.

The cultural destruction of Native North American tribes over the past three centuries has led to tremendous stress, depression, and the adoption of unhealthy habits and lifestyles (cigarette smoking, junk-food diets, alcohol dependence) by Native North Americans. Hypertension (high blood pressure), strokes, diabetes, cancer, and coronary heart disease are now prevalent among Native North Americans due to these changes in lifestyle. Mental disorders, alcoholism, and suicide have also become serious problems. As compared to the total U.S.

population, Native North American death rates from the following disorders are as follows:

alcoholism:	438% greater
tuberculosis:	400% greater
diabetes mellitus:	155% greater
accidents:	131% greater
homicide:	57% greater
pneumonia/flu:	32% greater
suicide:	27% greater

Death rates are similar for Native North Americans in Canada. One study determined that Canadian Natives may have the highest suicide rate of any racial group in the world.

Sexually transmitted diseases are now widespread among Native North Americans, and AIDS is becoming a concern. Toxic waste dumps are often located near reservations and reserves and create further health problems for Native North Americans through contamination of their soil, water, and air. Life expectancy for Native North Americans is at least ten years less, and the infant mortality rate almost twice as high, than for all other races living in the United States and Canada.

Federal housing programs provide low-cost housing for Native North Americans on reservations and reserves, but many Native North Americans still do not have adequate housing. Run-down trailers and shacks are not uncommon. Those living in remote areas usually have no electricity, indoor plumbing, running water, or any heat beyond a small cooking stove. Water is either hauled from wells or dipped from streams and brooks that are often polluted.

Native North Americans living in urban areas are usually marginalized as well. Lacking the skills and cultural background to succeed in the Western work world, most urban Natives find themselves unable to get steady, full-time jobs. Instead, they work at occasional odd jobs and struggle to make rent payments on the worst slum housing. Many eventually return to the reservations and reserves, poorer than when they left.

## 10 FAMILY LIFE

The family relationship is the center and core of Native North American tribes. Extended families figure prominently in all Native North American cultures; clans are common. Many Native North American cultures are matrilineal (and often matrilineal, meaning a newly married couple lives with or near the bride's mother). In a matrilineal society, lineage is inherited through the mother, not the father. A child is born into the mother's clan or kinship group. Therefore, there is no such thing as an illegitimate child because it is always known who a child's mother is (while the identity of a child's father can be unknown). When a child inherits its mother's name or lineage, it is assured of a recognized place in society.

Children are highly valued members of nearly all Native North American societies from the moment of their birth (or even before). Family size tends to be large, particularly since the decimation of Native populations during the 18th and 19th centuries. In order to rebuild clans and tribes, Native North Americans encourage high birth rates. Children are rarely punished physically. Rather, they are scolded in a firm but gentle voice, or are teased into behaving well.

Women are usually responsible for domestic affairs, while men take care of public affairs and any work that requires trav-

eling a distance from home (such as hunting, trapping, raiding, and warfare). In matrilineal societies, women rank as the highest elders with the most authority. Clan mothers, or the eldest women of each kinship group, often choose the men who will be chiefs in public leadership and can remove those chiefs if they feel the men are not leading their people well. In patrilineal societies, women are still highly valued for their reproductive role and their many other contributions to the survival of the group.

## 11 CLOTHING

Native North Americans wear Western-style clothing for everyday purposes. Only for ceremonies and powwows do they dress in their traditional ways. Traditional clothing varies from tribe to tribe, depending on what natural materials were available in their traditional homelands and the climate of the region, as well as by particular tribal custom. Eagle feathers have always been highly valued by many Native North Americans. Eagles are considered powerful beings, and their feathers are believed to possess some of that power. Nowadays, Native North Americans must get permission from the U.S. government to use the feathers of a protected species.

## 12 FOOD

Thousands of years before Columbus arrived in the New World, Native North Americans of the Hopi and Zuni tribes were cultivating vegetables and corn. Corn is a very sophisticated agricultural product. First, it had to be created by crossing two types of wild grasses, neither of which was very productive on its own. Because it is a hybrid, corn cannot reseed itself simply by dropping its kernels on the ground. The kernels must be planted and tended carefully in order for them to grow. Native North Americans consider corn to have great spiritual power. Cornmeal and corn pollen are used in many religious ceremonies.

Pacific Northwest tribes had such an abundance of wild fruits and vegetables and fish available to them that they did not need to farm at all. They could gather enough food during the three months of summer to last them the rest of the year. The Plains tribes' primary source of food was the buffalo, along with wild rice in the northern Plains. Alaska and northern Canada Natives have long relied on seal and whale meat and blubber for the bulk of their diet. Most Northeastern and Southeastern Native tribes were farmers like the Southwestern tribes.

When Europeans first began to settle on the eastern shores of the continent, Native North Americans saved them from starvation by showing them what wild foods were edible and how to cultivate other foods unknown to Europeans, such as corn, pumpkins, and squash. Modern-day foods that originated with Native North Americans include corn, pumpkins, squash, lobster, sweet and "Irish" potatoes, tomatoes, peppers, peanuts, avocados, pineapples, certain kinds of beans, maple syrup and sugar, sunflower seeds, and turkey. We can also thank Native North Americans for barbecue, spoon bread, cranberry sauce, mincemeat pie, chili, guacamole, and many other dishes too numerous to mention.

## 13 EDUCATION

Traditional Native North American education does not separate secular and sacred knowledge because religion and every-

*American Indian Exposition in Anadarko, Oklahoma. Native North Americans of today wear Western-style clothing for everyday purposes. Only for ceremonies and powwows do they dress in their traditional ways. (Fred Marvel/Oklahoma Tourism)*

day life are completely intertwined. Therefore, Native wisdom involves “seeking life,” or knowing what is necessary for survival. Survival requires balance and harmony with all things. The way to wisdom is to sit still, wait, and listen. Native North Americans teach their children to let the Great Mysteries be revealed to them. The children are taught not to ask questions but to listen and wait and the answer will come. Asking questions means a person is not listening well enough or learning anything. A person who asks questions is considered stupid in Native North American society. In a technological society, such as the modern Western society of European-dominated U.S. and Canada, one needs to ask questions because human-made things have origins and definite causes and effects. In an Earth-based society, on the other hand, such as that of traditional Native North Americans, life is based on mysteries that can only be revealed by listening in stillness. Traditional Native North American wisdom is taught mostly through stories, lectures, songs, dances, rituals and ceremonies, vision quests, survival training, and silence.

Western education was introduced to Native North Americans in the 17th century by early Roman Catholic missionary priests. Education was in French, Spanish, or English (depending on the country of origin of the priests). The priests’ goal was to “civilize the savages,” so they taught the Natives European manners, attitudes, culture, and languages, as well as Christianity. By the 19th century, the United States and Canadian federal governments had become involved in Native

North American education. In order to assimilate Natives into European culture, the government set up boarding schools and forcibly removed Native children from their homes and placed them in these schools. During vacations, the children were boarded with European American and Canadian families. Any Native parents who resisted having their children taken to these schools were punished by having their rations withheld. Conditions were generally terrible at the boarding schools. Poor health care and nutrition, combined with substandard living conditions, caused widespread illness among the students. Low teacher salaries also attracted unqualified teachers (who could not get better paying jobs), and they were given improper curricula with which to work. Vocational training programs did not fit the marketplace, so Native students graduated with no marketable skills. Students were required to speak English (or French, or Spanish), and any caught speaking in their native tongues were severely punished. Other physical and even sexual abuses have since been revealed. In June 1991, the Department of Indian Affairs (DIA) in Canada publicly acknowledged responsibility for the abuses inflicted on Native North American students at Canadian boarding schools. The DIA promised to fund programs to help abuse victims heal their wounds—physical, psychological, emotional, spiritual, and social—and to treat other damaging effects, such as the breakdown of families, alcoholism, the perpetration of abuse on others by abuse victims, and suicide. The Reverend Douglas Crosby, president of the Oblate Conference

of Canada (the largest Roman Catholic missionary order in Canada) also asked forgiveness for abuses inflicted at Catholic missionary schools upon Native North Americans.

The Choctaw and Cherokee tribes of the southeastern United States had both developed extensive school systems of their own which taught both Native and Western subjects by the 19th century. The Creeks, Chicksaws, and Seminoles also had schools, and together these Southeastern Natives came to be known to European Americans as the “Five Civilized Tribes.” In the early 1900s, however, the U.S. government closed down the Native-run schools and took control of their education. It was not until the late 1960s that Native North Americans once again became responsible for the formal education of their own children. Ramah High School, on the Navajo reservation in New Mexico, opened in 1968 to become the first Native-controlled high school since the closing of the Five Civilized Tribes’ school systems. In Canada, the Cree band (or tribe) of northeastern Alberta took over the Blue Quills school in 1970, becoming the first Canadian band to control its own education. The Canadian government officially gave Native North Americans more control over their education in 1973.

The first tribally controlled college was Navajo Community College, established in 1966. Saskatchewan Indian Federated College became the first Canadian college run by Native North Americans, in May 1976. The U.S. Bureau of Indian Affairs (BIA) provides grants for 32 tribally controlled community colleges in 13 states in the United States.

As of 2008, only 7% of Native North American primary and secondary students in the United States attend BIA-funded schools. Some 5% attend private or parochial schools, while most (88%) attend public schools. School attendance among Canadian Native North Americans has always been low, due both to traumas experienced at boarding schools and to the remoteness of many reserves. Attendance rates have been improving in recent years, however.

Native children educated in traditional ways encounter great difficulties when entering the Western education system. Traditionally taught not to ask questions, Native students are often considered “slow” or “stupid” by Western teachers and peers. Cultural contexts are often so different that Native students cannot fully understand what they are being taught. Native North American students are among the lowest in achievement and highest in dropout rates. More than 25% of Canadian Natives older than the age of 15 have less than a 9th grade education. At least 34% have some high school but no diploma. A mere 8% of all Native North Americans in Canada over 15 years old have completed high school (only 5% among the Inuit). The percentages in the United States are somewhat better, with 55% of U.S. Native North Americans graduating from high school, but this is still well below the national average of 66.5% for the total U.S. population.

The figures for college graduation are even more disparate: 16.2% of the total U.S. population graduates from college, while only 7% of Native North Americans do. In Canada, 4% of Native North Americans have achieved a university degree. Only a handful—1%—of Inuits have finished college.

## 14 CULTURAL HERITAGE

Native North American music and dance is centered on religious ceremonies. These ceremonies were outlawed in the U.S. and Canada during the late 19th and early 20th centuries, so

much of the heritage was lost. The renaissance of Native North American culture in the late 20th century is helping to preserve what is left of traditional music and dance.

The voice has always been the most important musical instrument for Native North Americans. Rattles and/or drums often accompany the voice. A percussion instrument unique to Native North Americans is the water drum: a small container of wood, pottery, or metal is partially filled with water to create a certain tone. The container is covered with dampened hide stretched tightly, and it is beaten with a hard stick. Some Native North American tribes have used flutes for centuries. Recently, the flute has become popular pan-tribally. The Apache fiddle and musical bows in various tribes also have a long history, while modern fiddles and guitars have been adopted by many tribes in recent years.

Native North American dances express spiritual truths or tell religious stories through movement. Dancers stay close to the earth; there are usually no large leaps into the air. Most dances are performed by groups moving in unison. A few solo dances have always existed in certain tribes, and others have developed as show dances in the latter half of the 20th century (such as the hoop dance, where a solo performer dances with a number of hoops, forming them into intricate designs, usually collecting money contributions on a blanket nearby).

Native North American cultures developed highly sophisticated oral traditions. Storytelling is one of the most prized skills a Native North American can possess. Telling an entire story or story cycle can take two to three days. All Native North American stories are coded to contain many teaching elements and symbols that become more clearly understood as the listener matures and hears the story repeatedly. Another form of oral literature is oratory, or speech-making. One of the best-known Native North American orators was Chief Seattle (c.1786–1866) of the Suquamish tribe in the Pacific Northwest.

The first novel ever written by a Native North American was *Life and Adventures of Joaquin Murieta*, by John Rollin Ridge (1827–67), a Cherokee. *Black Elk Speaks*, by Nicholas Black Elk, as told to John G. Neihardt, sparked a new blaze of Native North American writing when it was republished in 1959. It is the autobiography of Nick Black Elk, an Oglala Sioux medicine man. It is considered to rank among the most important holy books of the world. In 1969, N. Scott Momaday, a Kiowa, became the first Native North American to be awarded the Pulitzer Prize, for his novel *House Made of Dawn* (published in 1968). There is a growing list of successful Native North American writers, including Vine Deloria, Jr., Dee Brown, James Welch, Duane Niatum, Geary Hobson, Leslie Silko, Simon Ortiz, Louise Erdrich (whose first novel, *Love Medicine*, published in 1984, became a best-seller), Paula Gunn Allen, Linda Hogan, Beth Brant, Gerald Vizenor, and poets Wendy Rose, Joy Harjo, and Ray A. Young Bear.

Artistically, Native North Americans do not impose form on an object but rather attempt to uncover the form that is already there. This is true for music as well as the visual arts. Musical instruments are used to reproduce the natural musical patterns that exist in wind and moving water, for example. Traditional patterns and designs for visual art works are also based on the rhythms and lines of natural formations.

Native North American visual arts have a history that goes back perhaps 25,000 years. Many of the patterns and designs have been in use since ancient times. Each tribe has its own

particular style and set of patterns and designs that distinguish its art from that of other tribes. Native North American visual arts include rock engravings and paintings; ivory, bone, and soapstone carvings; pottery; jewelry and metalwork; beading and quillwork; weaving; and basketry. Ceremonial costumes are another expression of visual art. Native North American visual arts fall into four categories: 1) sacred drums and ceremonial costumes and objects; 2) tourist or popular art forms for sale to non-Natives; 3) contemporary art—carvings, prints, and crafts—for sale in small galleries; and 4) mainstream or high art that is created by Native North Americans trained in Western art schools and which is shown in major urban galleries and art institutions. There are many highly skilled Native North Americans working in each of these four categories.

Perhaps the first widely known Native North American in the performing arts was William Penn Adair “Will” Rogers (1879–1935), a cowboy, writer, actor, entertainer, and humorist of mixed-blood Cherokee descent who became very popular during the 1930s. Jay Silverheels (1912–80), a Mohawk actor, gained fame in the 1950s as “Tonto” in the *Lone Ranger* television series in the United States. Since the 1970s, Native North Americans have been paving the way for greater recognition and participation in the theater arts, including stage, film, and television. The American Indian Theatre Ensemble (later renamed the Native American Theatre Ensemble) was founded in New York City in the 1970s. It was the first professional acting company of Native North American performing artists. In 1983, the American Indian Registry for the Performing Arts was established for the advocacy and promotion of Native North American actors, directors, producers, and technical workers in film and on television. The Native American Public Broadcasting Consortium was also founded in the early 1980s to support Native North American work in television, video, and film.

Other well-known Native North American artists and entertainers include Navajo artist R. C. Gorman (1932– ); Oneida actor Graham Greene (1950– ), best known for his work in the 1991 film *Dances with Wolves* and the 1990s television series *Northern Exposure*; Navajo-Ute musician R. Carlos Nakai (1946– ); Cree folk musician Buffy Sainte-Marie (1942– ); and Osage prima ballerina Maria Tallchief (1925– ).

On 12 September 2004, grand opening ceremonies were held to launch the National Museum of the American Indian. The NMAI is part of the Smithsonian Institution museum system and is located on the National Mall in Washington, D.C. Native American consultants and curators were in charge of developing the building design, landscaping, and exhibit formats. The NMAI has been successful in giving Native Americans a forum for displaying themselves and their heritages from their own points of view.

In August 2005, the National Collegiate Athletic Association (NCAA) banned the use of “hostile and abusive” Native American mascots from postseason tournaments, but they will still be allowed to be worn on uniforms during regular season play.

## <sup>15</sup> WORK

Native North Americans have the highest unemployment rate of all races in the United States and Canada. Unemployment soars as high as 90% during the winter months on some Canadian reserves. The average unemployment rate for Native

North Americans in the United States is consistently more than twice the national average. Of those who are employed, many work seasonal jobs. Native Americans in the United States have the second lowest median household income, \$32,116, while whites have the highest at \$46,305, according to the 2000 Census data.

The General Allotment Act of 1887 (also known as the Dawes Act) prevented Native North American business development on U.S. reservations by dividing the lands up into small, non-adjointing plots that were barely large enough to support subsistence farming. Farming and ranching for profit were impossible, and Native North Americans were not given the education or vocational training necessary to begin other types of businesses. Canadian reserves were also much too small, and located in areas too poor in resources, to support large-scale operations. When educational opportunities improved for Native North Americans so that they could gain the necessary skills to compete in the business world, most of the choicest niches for profitable enterprise had already been filled by European Americans and Canadians.

However, Natives in both the United States and Canada have managed to create business opportunities for themselves, including small retail operations, construction companies, hotels, tourist facilities, gas stations, commercial fishing, logging and other work in the forestry industry, Native arts and crafts production, and gambling establishments.

One of the most successful businesses owned and run by Native North Americans is the Blackfeet Writing Company in Montana which makes pens and pencils. In the United States, gambling establishments, such as bingo halls and casinos, have become a leading source of income on many reservations since the Federal Indian Gambling Regulatory Act of 1988 made it legal for any federally recognized tribe to engage in gambling activities for profit. At least half of all U.S. tribes have bingo halls, and there are about 40 Native-run casinos in about a dozen U.S. states. The Florida Seminole tribe was the first to adopt reservation gambling as a source of income, in 1979. The total income from gambling on reservations was estimated to be \$25.7 billion in 2006. Gambling revenues are sometimes the only real source of income for smaller, poorer tribes.

Western-educated Native North Americans sometimes succeed in the European American work world, but the work schedule often conflicts with traditional life. Native North American culture is not based on the eight-hour workday or Monday-Friday workweek. Traditional Native religious ceremonies usually do not coincide with U.S. or Canadian official holidays, so it is often difficult for Native North American workers to get the necessary time off. Most jobs are off the reservation or reserve as well, forcing Native workers either to commute long distances daily or to live away from their families, returning only on weekends and/or vacations. This creates a great deal of stress for all concerned.

Because Native North American women have traditionally been responsible for taking care of the home and young children, fewer work at jobs outside the home than do women of European or African descent in the United States and Canada. This means that Native households are less likely to have two incomes on which to draw. (Women tend to be the ones to make traditional arts and crafts for sale, however, so in this way they help support their families financially.) To survive, many Native North Americans resort to leasing their land to

non-Natives, but the income they receive from these leasing arrangements is usually six to nine times lower than market value. Most Native North Americans, therefore, are relegated to work as small ranchers, laborers on commercial (non-Native) farms, and low-level workers in other non-Native businesses.

## 16 SPORTS

The best-known Native North American sport, named *lacrosse* by the French, was invented by the Iroquois centuries ago. It is now Canada's national sport. The Iroquois believe that their ancestors gave them the game to develop their endurance and make them great warriors. Traditionally, boys began learning to play at a very early age. Many Iroquois (boys and girls) still start lacrosse lessons as small children. Most traditional Native North American sports were used to develop the skills needed for survival.

Two modern world-class Native North American athletes are James Francis "Jim" Thorpe (1888–1953), of the Sac and Fox tribe, and Billy Mills (1938), an Oglala Sioux. Jim Thorpe won gold medals in the pentathlon and decathlon at the 1912 Olympic Games. Seven months later, he was stripped of the medals because it had been discovered that he had previously played semi-professional baseball for \$15 per week. The rules at that time stated that any athlete who had received pay for athletic performance was officially considered a professional and was therefore ineligible to participate in amateur competitions such as the Olympics. Seventy years later, the medals were restored to Thorpe posthumously during the 1984 Olympics, after a grass-roots campaign led to the discovery that complaints must be made within thirty days of competition. It had been seven months before complaints were lodged against Thorpe. Thorpe also held world records in track-and-field and was a college All-American in lacrosse, basketball, and football. After the 1912 Olympics, Thorpe played professional baseball from 1913–19, with a career batting average of .252. He then played professional football and became the first president of the American Professional Football Association. In 1950, the Associated Press declared Thorpe the greatest athlete of the first half of the 20th century. He was also named to both college and professional halls of fame.

Billy Mills won the 10,000-meter run at the 1964 Olympic Games and set a world record for the event. He was the first American ever to win a distance race at the Olympics. Completely unknown to the world, he was never expected to win and had to give the official his name when he crossed the finish line in first place. Mills later set another record for the six-mile run. He has become successful businessperson and Native North American activist.

## 17 ENTERTAINMENT AND RECREATION

Traditional Native North American games are a form of education, either to teach spiritual truths or survival skills (such as dexterity and coordination). Almost all traditional games have music and sometimes dance elements. The most popular are hand games or stick games where one team sings while hiding an object and the other team then tries to guess where it is (sometimes while singing also). The songs are usually simple with repeated phrases, though they sometimes have complicated rhythms and multipart singing. Many Native North American games involve gambling. Gambling has always been a favorite form of entertainment among Native North Ameri-

cans, and now they are turning that pursuit to profit with bingo halls and casinos on their reservations, catering to Natives and non-Natives alike.

The Inuit peoples of the arctic and subarctic regions of Siberia and North America created a special game to develop manual dexterity. It has come to be known as "cat's cradle." In this game, a piece of string (or sinew) is tied into a continuous loop and then held with the fingers of both hands. By turning the fingers and hands in certain ways, the string is woven into different patterns, some of which can be quite elaborate. When one player has made a pattern, another player reaches in and takes the string onto her or his own hands in such a way as to create another pattern. Sometimes two players can create one pattern together by contributing one or two hands each. The Inuit have played cat's cradle for centuries.

A uniquely Native North American form of entertainment and recreation, called the *powwow*, has developed in the last 100 years. Powwows are gatherings in which Native North Americans from many tribes come together to sing, dance, gamble, and visit with friends and family. The main focus is on dancing, usually with a dance contest (with money as prizes). A few Native North Americans make their living by traveling from one powwow to the next, competing in the dance contests and collecting prize money. Only the best dancers can make enough money to support themselves this way. The dances are traditional ones, formerly used for religious ceremonies, and the costumes are often extravagant expressions of traditional ceremonial garb.

*Pau wau* was originally the Algonquin word for "medicine man" or "medicine woman" (or spiritual leader). Europeans who saw these pau waus dances thought the word referred to the entire ritual and eventually the word *powwow* came to be applied to tribal gatherings featuring costumed dance. The modern powwow began among the Plains tribes and eventually spread throughout the United States and Canada. Up until the 1970s, powwows only took place on reservations and reserves. Now some are held in convention centers and gymnasiums, or other large gathering places, in cities. There are more than 1,000 powwows each year, and an estimated 90% of Native North Americans attend at least one. Alcohol is banned at most powwows as a way to promote healthful recreation. The majority of powwows are open to non-Natives, though they must be respectful of Native customs and may be asked to leave at any time if they are not. Powwows serve as cultural revivals, as well as entertainment, for Native North Americans. Important persons and personal events are also honored at powwows, such as athletic achievements, scholarships, retirements, and deaths.

## 18 FOLK ART, CRAFTS, AND HOBBIES

Native North American art is a continuation of traditional forms and methods that have been in existence for centuries. It is therefore impossible to distinguish "folk art" from so-called "fine art" or "high art" (see #14, "Cultural heritage" above). The increased interest in Native North American arts and crafts in recent decades has led to a booming business in counterfeit imitations made by non-Natives but sold as authentic Native North American art. The Indian Arts and Crafts Act of 1990 gave the Indian Arts and Crafts Board (established in 1935) more power to prosecute counterfeiters and thereby protect themselves from this kind of theft.

## 19 SOCIAL PROBLEMS

The social problems of Native North Americans have been discussed throughout this article. The forced removal of Native North Americans from their tribal lands by invading European Americans and Canadians, and the resulting disruption of their traditional ways, culture, and heritage, have led to high rates of alcoholism and suicide among Natives. Drug abuse is also on the rise. Poor lands and lack of economic opportunities on reservations and reserves create oppressive poverty and unemployment. Deep-seated racism and widespread discrimination in the larger European-dominated societies of the United States and Canada keep Native North Americans under the heel of that oppression. Though Native North American populations are increasing, the vast majority of those numbers are made up of "mixed-bloods," children of intertribal or interracial couples. Traditional lineages and tribal lifeways are becoming lost in the blur of racial and tribal blending. Finally, the generations of life on reserves and reservations, at the mercy of government handouts, has cultivated a mind-set of dependency on the part of modern Native North Americans. Attempts by Native activists to reclaim control of their economic and political lives are often met with fear and doubt on the part of older Natives. And the United States and Canadian governments are not quite ready to give up their hold on Native North American reins. So the political and economic tug-of-war continues between tribal and federal governments over lands, services, jurisdictions, and racial equality.

## 20 GENDER ISSUES

Many Native American groups recognize four genders: male, female, woman-man, and man-woman. It has been estimated that over 150 tribes recognize women-men, or *berdaches*. An additional 50 tribes also recognizes men-women; the fourth gender.

The general characteristics of berdaches include: (1) specialized occupational roles where the berdache performs the work of a woman; (2) gender differentiation where berdaches are distinguished from both men and women in terms of dress, temperament, lifestyle, and other social characteristics; (3) spiritual intervention where berdaches are believed to be the result of a spiritual intervention in the form of visions or dreams; and, (4) same sex relationships where berdaches typically form sexual and emotional relationships with other men who are not berdaches. The most salient marker of berdache gender status is some manner of cross-dressing. A heightened sexuality is also a general characteristic of berdaches as well as men-women. Among the Pawnee, berdaches provide men with love charms to attract women.

From the European and American perspectives, the structure of Native American society lacked the complexity of their own communities. Yet by their own accounts of Eastern Woodland peoples, the tribes' division of labor and gender roles was actually very advanced, especially where the status of women was concerned. Whereas married women in Europe held few rights to their property, family wealth, or even children, women of the Eastern Woodland tribes had much greater power and autonomy over their produce, conditions of labor, and property. In many Eastern Woodlands tribes, women even served as representatives on the tribal councils and held rights to the lands they worked. While "women's work" was undervalued in many European cultures, women's daily contributions were

recognized by men in many of the Eastern Woodlands tribes as crucial to the prosperity of the community and worthy of respect and recognition.

# NAVAJOS

**ALTERNATE NAMES:** Diné

**LOCATION:** United States (Arizona; New Mexico; Colorado; Utah)

**POPULATION:** 269,202 (2000 census)

**LANGUAGE:** English; Navajo

**RELIGION:** Native American Church; Christianity

**RELATED ARTICLES:** Vol. 2: Native North Americans

## <sup>1</sup> INTRODUCTION

The Navajos are descended from a band of Athabascans who split off from the rest of the Athabascans in Canada sometime around AD 850 and migrated southward. About 200 years later, they settled in what is now north-central New Mexico among Pueblo peoples who had lived there since AD 400. Though the Navajos were originally hunter-gatherers, they were very adaptable people who adopted some of their Pueblo neighbors' ways. Pueblo Indians were farmers, and the Navajos learned from them how to cultivate corn and other crops. They made the shift from hunter-gatherers to agriculturalists so successfully that they came to be known as the Navajo—a name that most likely comes from the Tewa word *návahu'u*, or “the arroyo (riverbed) with the cultivated fields.” The Navajo call themselves *Diné*, or “the People.” The first recorded mention of the Navajos is from an account written in 1626 by Fray Zárate Salmerón. By the 1630s the Navajo had definitely become a large and powerful tribe, spreading across northern New Mexico into eastern Arizona. At this time they still hunted and gathered some of their food, and they supplemented their supplies by raiding other villages. But they had also begun to live in semi-permanent homes and grow crops, such as corn, beans, and squash. The preferred type of dwelling was the hogan, a dome-shaped structure (usually round, but sometimes hexagonal or octagonal) built of logs covered with mud, or sometimes rocks, with a central air vent in the roof. After the Spanish arrived in the 16th and 17th centuries, the Navajo adopted the use of horses and began to raise livestock such as sheep, goats, and cattle. The traits the Navajo borrowed from both the Pueblo Indians and the Spanish eventually distinguished them from their Apache relatives (also descended from the same Canadian Athabascans).

Conflicts between the Navajos and first the Spanish, then European Americans, escalated during the 19th century. Raids by the Navajo on Spanish settlers, and then European American travelers and settlers, continued despite peace-keeping efforts by the Spanish, however, and the U.S. Army finally decided to do something about the “Navajo problem.” U.S. Army General James Carleton began a campaign to round up all the Navajos and incarcerate them in a concentration camp called Bosque Redondo in New Mexico. Carleton enlisted Christopher “Kit” Carson to help. Together they burned Navajo villages, destroyed their crops (including extensive peach orchards in the Canyon de Chelly), and drove all Navajos who refused to surrender into the mountains to freeze and starve. Eventually, all the Navajos who had not been killed, or had not died of starvation and exposure, surrendered to Carleton and Carson and allowed themselves to be marched to the camp. The route was 370 miles, or 470 by an alternate route, and the Na-

vajos covered it entirely on foot. It is remembered as the “Long Walk of the Navajos.” Hundreds died en route, and hundreds more died from the horrible conditions at the camp once they arrived. A few escaped to try to survive in the inaccessible canyons of the area. Conditions at Bosque Redondo were so bad that even European Americans complained about the mistreatment of the Native North Americans there. The U.S. Army decided to relieve General Carleton of his duty in 1866, and the Bureau of Indian Affairs took over management of the Navajos and others at Bosque Redondo. Shortly thereafter, the U.S. government established a reservation for the Navajos on their former homelands, though the reservation covered only a small portion of their original territory.

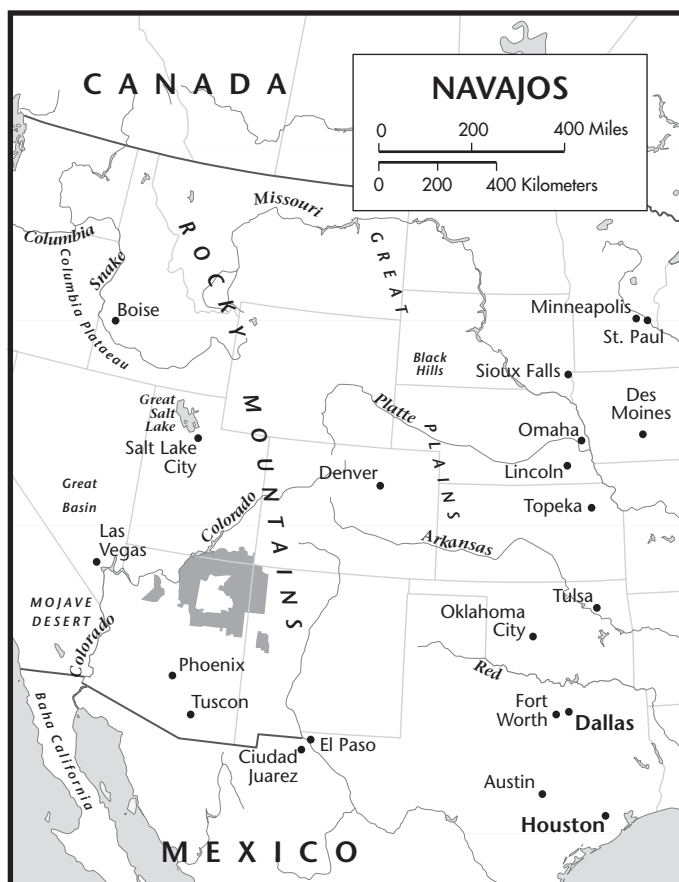

Some 25 Navajos volunteered to serve in the U.S. military during World War I in 1917–18. By the time of World War II (1939–45) Native North Americans were draftable U.S. citizens. As a result, at least 3,600 Navajos served in that war. The most famous and honored of those World War II Navajo servicemen were the Navajo Code Talkers, a group of 420 Navajo men who devised a code based on the Navajo language that was used for military purposes in the Pacific campaign. The Japanese never broke the code. In 1938 the Navajo Tribal Council had been formed to represent the interests of all Navajos. In 1969 the Navajo Tribal Council passed a resolution to call their land “the Navajo Nation.” The Navajo Nation is currently the largest reservation-based Native North American tribe in the United States. The government of the Navajo Tribal Council was reorganized after the conviction of Chairman Peter MacDonald on 41 counts of corruption in 1989. Executive, judicial, and legislative branches have been established with a system of checks and balances.

## <sup>2</sup> LOCATION AND HOMELAND

The Navajo reservation is located in the Four Corners area of the United States (where Arizona, New Mexico, Colorado, and Utah have a common corner). Most of the reservation lies in Arizona, with the eastern border extending into New Mexico and a small southern portion in Utah. The total area of the reservation is approximately 25,000 sq mi, comprising some 17 million acres. The entire area is an almost level plateau with an average elevation of 5,500 feet. Mountains in some places rise to over 10,000 feet, and deep canyons cut through the plateau. The region is desert or semi-desert with very little rainfall. It is difficult to farm without irrigation. Winters are quite cold, and summers are hot. Navajos also live on other small reservations, such as Ramah in northwestern New Mexico (about 540 square miles, supporting a population of more than 2,000 Navajos), the Alamo (or Puertocito) Navajos in New Mexico (with a population of more than 1,900), and the Cañoncito Navajos, also in New Mexico, with a population of over 1,650. Over 25,000 Navajos also live in the “checkerboard area,” which covers the range east of the main Navajo reservation to the Jicarilla Apache reservation in New Mexico. This region is called the “checkerboard area” because lands were allotted in such a way that each alternate square mile belongs to Native North Americans, and the others belong to European Americans.

The total population of Navajos in 2000 census was nearly 300,000. The number of Navajos living on reservations in that year was about 174,000—the largest reservation-based Native North American population in the United States. The main Navajo reservation is by far the largest Native North American

reservation in the United States: it contains a total of 17 million acres.

The Cañoncito Navajos descend from those who favored peace with the European Americans and even worked as scouts for the U.S. Army in campaigns against their own people. Because of this, they came to be known to other Navajos as “Enemy Diné.” That negative name was dropped some time ago.

### 3 LANGUAGE

The Navajo language is part of the Athabascan (also Athapascan) family of Native North American languages. At least 125,000 Navajos were still fluent in their native tongue in 1987. The Navajo language is one of the few Native North American languages that has been fully documented. Current education policies among the Navajo aim at restoring the language to its mother-tongue status among Navajos. All Navajo-run education is done in both English and Navajo.

Though all Native North American cultures were (and still are, to a large extent) oral cultures, transmitting all information through songs, stories, and chants, the Navajos developed especially long chants compared to other Native North Americans.

### 4 FOLKLORE

The Navajos tell of their creation with an emergence-type story. First Man and First Woman lived in the first or Black World. When the insect beings that also lived there began to quarrel, First Man and First Woman were forced to leave that world

through the east and emerge into the second or Blue World. The Blue World was populated by blue-feathered birds and other animals and beings that did not get along. First Man and First Woman eventually moved to the third or Yellow World where they lived with Coyote (the Navajo trickster figure), Bluebird, and other beings. When Coyote stole the Water Baby, Water Monster flooded the Yellow World. First Man quickly ordered everyone to climb into a reed that gave them entrance into the fourth world. In the fourth world the people discovered that Coyote had stolen the Water Baby. When Coyote took Water Baby back to its mother, the waters receded immediately. However, the beings already living in the fourth world required the entering third-world beings to pass certain tests in order to live there. Locust, the being chosen to take the tests, passed them all, and the people entered safely into the fourth world.

Later, First Man and First Woman formed the four sacred mountains with dirt they had brought from the first (Black) world. Their daughter, White Shell Woman, later gave birth to twin sons. The Twins became the settlers of the Navajo lands and established the plant crops and animals given to them by their father, the Sun. The Twins are regarded as sacred.

Changing Woman is the mother of the four main Navajo clans. She took the people of the clans to the San Francisco Peaks, where the spiritual beings gave the Navajo people their language and also taught them how to use it in prayers and songs. Another important figure is Spider Woman, who taught the Twins how to overcome adversity.

Between AD 700 and 1400, the majority of Navajos gradually followed the San Juan River and migrated to the southwestern United States.

### 5 RELIGION

According to the Navajo, the universe has two classes of people: human beings and Holy People (supernatural beings). The universe functions according to a fixed set of rules, and these rules must be learned and followed to ensure safety. *Hózhó* is the Navajo concept of beauty, harmony, balance, health, goodness, etc. Ceremonies are performed to maintain or restore *hózhó*. There are six main groups of ceremonies: Blessing Way (to gain the good will of the Holy People and bring good fortune); War (no longer practiced); Game Way (hunting rituals—no longer practiced); Holy Way (to attract good); Evil Way, or Ghost Way (to exorcise evil), and Life Way (to cure bodily injuries). Each group of ceremonies contains a number of specific ceremonies. For example, the Holy Way group includes Beauty Way (if snakes have been offended), Shooting Way (if thunder and lightning must be appeased), and Mountain Top Way (for conflict with bears). Each ceremony has its own set of chants, and every chant has its own particular sand painting. Two important ceremonies for the Navajos are the *nidáá'* (called the “squaw dance” by European Americans), which is a three-day healing ceremony held in the summer, and the *yé'ii bicheii* (or Night Way), which is a nine-day healing ceremony held in the winter.

There are about 1,200 different designs for traditional sand paintings for use in specific ceremonies to treat specific illnesses. Details of each of these designs is handed down by memory from one healer to the next. Each chant also has its own songs, prayers, and herbal medicines. Blessing Way songs are sung in approval of a new headman, for an impending birth, for men

leaving for or returning from military service, marriages, and girls' puberty ceremonies.

Navajos believe that diseases and accidents result from an attack by the Holy People in return for some transgression or offense by the victim. The curing ceremony mends the wrong done. If the person is not cured after the ceremony, this means that the actual wrong that person committed has not yet been uncovered, and the search must continue. The cost of ceremonies is borne by the patient or her or his family. The Blessing Way is the backbone of the Navajo ceremonial system. It is performed frequently throughout the year. Other ceremonies are more specific, or more extensive, and are therefore only performed on occasion or at certain times of the year.

Peyotism took hold among the Navajos around the 1930s. Peyote, first described as a "narcotic cactus," was used as a sacrament and for religious purposes, but its use was prohibited on the Navajo reservation. In 1955 its use was approved by the Tribal Council. About 25,000 Navajos now belong to the Native American Church (incorporated as the peyote religion), and as many as 12,000 more probably attend services without being registered on the rolls. Many Navajos are also at least nominally Christian, though even Christian Navajos usually continue to practice their native religion. One of the keys to understanding the Navajo religion is recognizing that they focus on living well in the world rather than focusing on an afterlife, and they seek to live in harmony with nature.

## 6 MAJOR HOLIDAYS

As U.S. citizens, Navajos celebrate the Fourth of July, or Independence Day, and Christian Navajos celebrate Christian holidays.

## 7 RITES OF PASSAGE

The most important rite of passage still celebrated among the Navajo is the *kinaaldá*—the girls' puberty rite. The ceremonies last for more than four days and involve foot races and other rituals related to the ceremony.

## 8 INTERPERSONAL RELATIONS

Navajos communicate by listening quietly to one another. They speak slowly and thoughtfully, as if they are "weaving" their words. They also make decisions slowly, talking and thinking things over for a long time. Traditionally, Navajos preferred to reach consensus rather than letting majority rule. Today, their government is based on majority rule.

Sharing and reciprocity are central to Navajo interpersonal relations. If a favor is done, a favor can be expected in return, if an injury is done, an injury can be expected in return, unless some kind of compensation is provided: in other words, "an eye for an eye, and a tooth for a tooth," in both good and bad ways. Navajos are very generous as well and share what they have with those in need. However, in response to the modern world around them, Navajos are becoming more aggressive.

## 9 LIVING CONDITIONS

Some Navajos still live in traditional hogans (round, or sometimes hexagonal or octagonal dwellings built of logs and mud, or rocks, with a central air vent in the roof). Most today, however, live either in modernized hogans or Western-style homes or trailers. Almost all homes, whether modern or traditional,

are still built facing east, an ancient Navajo custom. The Western-style housing provided by the government at low cost on the Navajo reservations does not always fit well with the Navajo lifestyle. In addition, the cheap, lightweight construction often cannot stand up to rough use. Also, maintenance is neglected and funds for upkeep are often difficult to obtain. Most Navajo homes are still without telephones, and those in more remote or isolated areas of the reservations have no running water or electricity. Some families must haul water many miles to use for bathing and cooking. Water conservation is of utmost importance.

Navajos have many health problems stemming from poverty, lack of access to modern health care, the effects of coal and uranium mining (such as very high cancer rates), and pollution in the water, soil, and air. In 1979, near Gallup, New Mexico, gallons of radioactive water accidentally spilled into the Puerco River from the United Nuclear Corporation's uranium mill, making the water undrinkable. It remains undrinkable today both from the uranium spill and other sources of pollution. The Navajo health care system incorporates both Western and traditional Navajo healing methods. New Indian Health Service hospitals provide a room in which traditional Navajo healers may conduct curing ceremonies. Navajo health was greatly improved by Annie Wauneka, who headed a crusade against tuberculosis in the mid-20th century. The number of Navajos with the disease was reduced by almost half between the years of 1953 and 1960. Wauneka received the Presidential Medal of Freedom in 1963 for her work.

A road-improvement campaign on Navajo reservations in recent years has led to many miles of paved roads and even more graveled ones (as opposed to the dirt tracks common and sufficient before the increased use of automobiles).

## 10 FAMILY LIFE

The family and clan are central to Navajo life. It is believed that every full-blooded Navajo is generally related to no fewer than 12 clans. Clan relationships can be quite complex. Matrilineal and matrilocal, Navajos trace their descent through their mothers, and newly married couples live near the wife's mother. The home, crops, and livestock are owned and cared for by women, while the men represent their families in public and at ceremonials. Extended families are very important to Navajos, with Grandmother holding a place of great respect.

## 11 CLOTHING

Navajo men today wear Western-style clothing for everyday use: denim jeans, colorful shirts, cowboy boots, and Stetson hats, if they can afford them. Older women tend to wear more traditional dress, dating back to the 1860s: long, full, colorful skirts with velveteen blouses. For very special occasions, some women wear a *biil* (blanket dress), worn with buckskin leggings. Some Navajos still wear leather moccasins for everyday purposes. Navajos are known for their silver and turquoise jewelry.

## 12 FOOD

Although many Navajo children are fond of hamburgers, pizza, fried chicken, French fries, and soft drinks, mutton stew and fry bread are favorite foods for many Navajos. No Navajo gathering is complete without one or more booths making

*A Navajo family in Winslow, Arizona. (© Visions of America, LLC/Alamy)*

and/or selling mutton stew and fry bread. Navajo fry bread is fairly simple to make; the recipe follows:

#### **Navajo Fry Bread**

4 cups flour (the modern standard is Bluebird brand milled wheat flour, though any brand will do—white flour makes lighter, fluffier breads)  
 ½ teaspoon salt  
 2 teaspoons baking powder  
 1 cup powdered milk  
 Warm water  
 Vegetable oil for frying

Sift dry ingredients (flour, salt, baking powder, and powdered milk) together into a large bowl. Stir in water a little at a time until dough is soft. Knead dough with hands until smooth. Cover bowl with cloth and let dough “rest” for about 2 hours. Pat or roll 2” balls of dough into circles about 8 inches in diameter and ¼ inch thick. Make a small hole in the center of each circle of dough with your finger. Pour vegetable oil in frying pan or electric skillet to a depth of about ½ inch. Heat oil to 400° (or until a small pinch of dough browns quickly but does not burn). Slide a circle of dough into hot oil—dough will puff up as it cooks. Turn bread over when top is golden brown and fry for one or two more minutes. Repeat with remaining breads. Serve hot, with honey or cinnamon-sugar, or just plain. Serves about 6 people.

(Recipe courtesy of the Navajo Nation Division of Education.)

### **13 EDUCATION**

Navajos today place a great emphasis on education. The Navajo Nation has set up a multimillion-dollar scholarship fund to help worthy Navajo students attend the college or university of their choice. In 1987, more than 4,000 Navajos were students in higher education. The first college ever founded and run by Native North Americans was the Navajo Community College (NCC), opened on the Navajo Reservation in January 1969, near Tsaile, Arizona. Students at NCC are taught to be bilingual, with classes in both Navajo and English. Navajo culture and language is also taught at NCC.

Plans for Ramah Navajo High School began in 1970, the first Native North American-controlled high school since the closing of the Five Civilized Tribes’ school systems by the U.S. government in the early 1900s. The educational goals of Ramah High School are to make students bilingual in Navajo and English; to develop their self-esteem as Navajos; to teach them to be analytical and critical of all things, including Navajo history and culture; and to give them the skills they need to be successful in today’s world. Ramah children are “children of the Navajo Nation.” In 1991, about 70% of Navajo children attended public schools. One recent study found that of Navajos 25 years old and older about 50% had graduated from high school, 25% had some college, only 4.5% had completed college to receive a Bachelor of Arts or higher degree, and 28% had less than a ninth grade education.

The federal Comprehensive Employment Training Act (CETA) has provided Navajo workers with jobs and job training since the 1970s.

## 14 CULTURAL HERITAGE

Navajo culture is orally transmitted, since for most of Navajo history there was no written language (today, Navajo is written with an adapted Roman alphabet). Because religion cannot be separated from the rest of Navajo life, all music and oral literature was traditionally associated with religious rites, ceremonies, and teaching stories. Today, Navajos are writing works of literature, such as poet Rex Lee Jim, who has published several books of poetry in Navajo.

Navajo rugs and silver and turquoise jewelry have transcended the level of craft to become fine arts. Rug weaving, done on an upright loom adapted long ago from the neighboring Pueblo tribes, is traditionally a woman's art, with patterns passed down from mother to daughter. Intricately patterned rugs are woven without a printed design to follow. The designs are instead kept entirely in the woman's memory. Silver and turquoise jewelry is crafted by both men and women. Navajo jewelry has come to be highly prized by investors and collectors worldwide.

Sand paintings began as a religious tradition and have recently become a sought-after art form. Sand paintings made for show and/or sale are altered enough in design so as not to offend the Holy People. Traditionally made for use in curing ceremonies, sand paintings have specific designs for treating specific illnesses. In all, there were about 1,200 individual designs that healers had to memorize. Today those 1,200 designs have been supplemented by the secular patterns used for non-religious sand paintings. A traditional sand painting may range in size from 1 to 12 feet in diameter (if circular, or the equivalent if square or rectangular), but most are about 6 feet by 6 feet. They are done with sand colored with natural dyes on a tan sand base. Designs are made up of angular figures made of straight lines and zigzags, representing Navajo spirits, scenery, animals, corn, sun, sky, and rainbows. A sand painting often takes hours to complete. When finished, in a healing ceremony the ill person sits in the center of the painting and the healer transfers the orderly goodness of the painting into the patient and transfers the illness from the patient into the painting. The sand painting is then erased at the end of the ceremony.

## 15 WORK

Most Navajos are small farmers and herders. Some Navajos serve in the U.S. armed forces. Others work for the Bureau of Indian Affairs (BIA), state, or Navajo tribe. Some find seasonal off-reservation employment. The timber industry and Navajo Tribal Utility generating plant provide some revenue and employment for the Navajo Nation, but unemployment on the reservation remains high. Silversmithing, performed by both men and women, was a traditional source of income, but today crafts are only a minor source. Women have been the most dependable source of income for generations through their weaving of Navajo rugs for sale. The Navajo Nation also leases land to oil and gas companies for drilling, and to mining companies for the extraction of vanadium, uranium, coal, sand, and gravel. But the Navajos get very little return from these operations. The Fort Defiance industrial park financed and built by Navajos and now leased to General Dynamics provides a somewhat better return, but poverty, unemployment, and underemployment are still serious problems for the Navajo Nation. The overall Navajo unemployment rate has remained constant at

nearly 40% since the 1990s. Many Navajos must leave home to find work in cities.

## 16 SPORTS

Rodeo is very popular among the Navajos. Dine College even has a rodeo coach on staff. Winning top honors at the National Intercollegiate Rodeo Association Finals is considered a high achievement.

## 17 ENTERTAINMENT AND RECREATION

The Navajo Nation Fair, held in Window Rock, Arizona, for nine days each year in September, is the largest such fair in the United States. The smaller Northern Navajo Fair is held in Shiprock, New Mexico, usually the first weekend in October. Both fairs feature competitions in traditional song and dance.

## 18 FOLK ART, CRAFTS, AND HOBBIES

Rug weaving and jewelry making are crafts that have risen to the status of fine arts, along with the making of sand paintings. The traditional crafts of basketry and pottery are currently being revived. Pottery and basketry are considered women's crafts.

## 19 SOCIAL PROBLEMS

Like most Native North Americans today, Navajos suffer from widespread alcoholism and drug abuse. Perpetual conflicts exist between more "traditional" Navajos, who want to continue living in traditional ways, and the more "progressive" Navajos, usually the younger generations, who want to modernize life on the reservation. Navajos have a high rate of suicide, even among Native North Americans (all of whom have higher suicide rates than all other races in the United States and Canada). Child abuse is also becoming a serious problem in Navajo society.

The Navajo homelands, or *Dinéétah*, are being destroyed by environmental damage from oil drilling, mining operations, and overgrazing. Efforts to restore the lands to health are insufficient and not very successful so far. Since 1974, the Navajos have been embroiled in a conflict over what was known as the Joint Use Area—a region shared with Hopi Indians since the late 19th century. In 1874, the U.S. Congress passed a bill that partitioned the area between the Hopis and Navajos, requiring about 100 Hopis and thousands of Navajos to relocate. Many of these people had been living on that land for generations. After years of wrangling with each other, the Hopis and Navajos realized that it is not they but the Peabody Coal mining company that wants this land partitioned (the coal company wants access to the coal located there). The Navajo Nation joined the Hopi Tribe in filing a joint lawsuit against Peabody Coal in May of 2000. The Hopi and Navajo are asking for \$600 million in lost revenue.

## 20 GENDER ISSUES

In traditional Navajo ideology, there are four separate cultural categories of gender: women, men, *nádleehé*, and *dilbaa*. *Nádleehé* is "a person who is in a constant state of change," but is a feminine persona who was born with both male and female genitalia and dresses and functions in Navajo society as a woman. *Dilbaa* were persons born with both male and female genitalia but in adult life dressed and functioned as men. The *dilbaa* was the first of these gender categories to disappear

from Navajo gender classification; the process began in the latter half of the nineteenth century. *Nádleehé* are still recognized and still can be found in Navajo society today.

The sex of a child, while determined at conception in Navajo traditional belief, can be externally influenced both before and after conception. Navajo parents believe that there are many concrete procedures that can be followed to influence the sex of child; however, that only relates to the categories of males and females, not to that of *nádleehé* and *dilbaa*.

Boys and girls enter adulthood at the onset of puberty. For boys, this is signaled by the deepening of the voice, and for girls, by the onset of menstruation. The *kinaaldá* ceremony mentioned in section 7 above is the girl's puberty ceremony that socializes her into the role of an adult woman. For boys, there are several ceremonies that prepare them for the roles they assume as adult men in Navajo society.

In Navajo oral history, there was a separation between men and women. The two lived apart from each other for four years. After that time, both realized that they could not live without the other and rejoined. Men and women agreed to assume separate but complementary roles and responsibilities. Women were in charge of the household, the livestock, the agricultural fields and the products thereof. Men were in charge of hunting, politics, and ceremonies. This complementary division continues in modern Navajo society and has even been applied to the modern political arena of the Navajo Nation government where men are in control.

# NICARAGUANS

**ALTERNATE NAMES:** Nicas

**LOCATION:** Nicaragua

**POPULATION:** 5,785,846 million

**LANGUAGE:** Spanish; English; indigenous dialects

**RELIGION:** Roman Catholicism; Protestantism (Moravian church)

## <sup>1</sup> INTRODUCTION

The Spanish conquest of Nicaragua in the 1520s was a tragedy for the locals. The native population plummeted from more than a million to a few thousand due to the spread of Old World diseases and the mistreatment of the aborigine inhabitants after the imposition of slavery. During the colonial period, Nicaragua was weak and neglected, subject to destructive earthquakes, and plagued by raids from English, Dutch, and French buccaneers. The Caribbean coast was effectively under British control from 1687 until 1894. Nicaragua was one of the five provinces of Central America that declared independence from Spain in 1821. In 1838 it declared its independence from the federation that followed. William Walker, an American adventurer, exploited internal rivalries to briefly install himself as president during the 1850s. A half-century of peace and relative prosperity, during which many coffee and banana plantations were established, followed Walker's execution in neighboring Honduras.

In 1893, José Santos Zelaya, a fervent liberal, was elected president of the country. Zelaya was convinced that the reunification of Central America under one administration would bring peace and development to the region. He also was reluctant to allow international capital because it could undermine Nicaraguan sovereignty. Consequently, he refused to grant the United States canal-building rights on concessionary terms, thus encouraging Americans to choose Panama for the project.

In this tense environment, the United States backed up the conservative opposition in order to destabilize Zelaya's government. U.S. Marines landed in Nicaragua in 1909 and were kept there almost continuously from 1912 to 1933 to support a series of conservative regimes such as Emiliano Chamorro's (1917–1921) and Diego Chamorro's (1921–1923). The Bryan-Chamorro treaty gave the United States exclusive canal rights and allowed it to establish naval bases on Nicaraguan soil. Augusto César Sandino, the principal liberal leader, fought the U.S. occupation. Sandino won popularity in the Americas and in a few months became not just a national but also a regional hero. Sandino led guerrilla warfare against the government. Sandino was kidnapped and assassinated in 1934 and Anastasio Somoza attained power.

The Somoza family ruled Nicaragua with an iron hand from 1936 to 1979. Nicaragua experienced high economic growth during the 1960s and 1970s, largely as a result of industrialization, and became one of Central America's most developed nations despite its political instability. In 1972 a major earthquake destroyed 90% of the capital city of Managua. While the population was in a precarious situation, Somoza and his allies profited privately from international aid programs. In response to this governmental behavior, the Sandinista National Libera-

tion Front (FSLN) was able to overthrow the Somoza administration in 1979, following a struggle that killed an estimated 30,000 to 50,000 people. The new administration inherited a devastated country.

Alarmed by the Sandinistas' warm ties with the Soviet Union, Cuba, and the insurgents in El Salvador, the United States imposed a trade embargo and sent money and arms to resistance groups known collectively as the Contras. The Contras established its main bases in the border of Honduras and Costa Rica, and in the mid-1980s they reached the astonishing number of 15,000 soldiers. Some 30,000 people died in the decade-long struggle. A 1989 cease-fire was followed by elections in which the Sandinistas were defeated and surrendered political power to the UNO opposition coalition led by Violeta Barrios de Chamorro. Chamorro's main contribution was the disarmament of groups in the northern and central areas of the country, which provided the necessary stability to allow the country to follow an institutional path toward democracy.

In 1996, Arnoldo Alemán won the presidency backed by the Constitutional Liberal Party (PLC). The PLC won the 2001 presidential race, this time with Enrique Bolaños in the ticket. During Bolaños administration, former president Alemán was charged with corruption and money laundering, and sentenced to 20 years in prison. In 2006, Daniel Ortega—former guerrilla leader and member of the junta that took power in 1979—was elected president of Nicaragua.

Economically, Nicaragua has experienced with widespread underemployment. About 48% of its population was living under the poverty level in 2005. Nicaragua has one of the highest rates of income inequality in the world and the lowest per capita income in the Western Hemisphere.

## 2 LOCATION AND HOMELAND

Nicaragua is the largest country in Central America, at about the size of New York State. It is bounded on the north by Honduras, on the south by Costa Rica, on the east by the Caribbean Sea, and on the west by the Pacific Ocean. The central highlands, including a belt of mountains, 25 of them volcanic, separate the Pacific lowlands from the more extensive Caribbean lowlands (the Miskito Coast), which occupy the eastern half of the country. Lake Nicaragua in the southwest is the largest lake in Central America and has the unusual distinction of being the only lake inhabited by freshwater sharks.

More than 50% of Nicaraguans live in the Pacific lowlands and about 33% live in the central highlands; fewer than 10% live in the hot and swampy Caribbean lowlands. Some 69% of the people are mestizo, of mixed ethnic Spanish and indigenous descent. About 17% are of European descent, about 9% are Black, and 5% are native Amerindian.

Nicaragua is rich in natural resources. Agriculture, forestry, and fishing support 40% of the labor force. In addition, the country has important deposits of gold, silver, zinc, and copper. Moreover, the forest supplies vast quantities of hardwoods and softwoods and the long, coastal waters contain abundant fish. Cattle are also a significant resource for basic staples, such as meat and milk. During the mid-1990s, Nicaragua's main export products were coffee, seafood, beef, and sugar.

## 3 LANGUAGE

Spanish is the official and predominant language spoken in Nicaragua. Speech tends to be "aspirated," especially in words

ending with the letter "s." As in some other Spanish American countries, *vos* tends to replace *tú* as the singular familiar pronoun, with corresponding changes in verb conjugations. Nicas, as the people call themselves, are known for the quantity and variety of irreverent and off-color jokes in their everyday speech.

English is the predominant language in the Caribbean half of the country, as well as in the capital city, and is the native tongue of the Creoles, Blacks who came from Jamaica and other British West Indies islands as laborers on banana plantations. The Miskito, Nicaragua's main indigenous group, also live in this region. Of mixed Indian, African, and European ancestry, they speak an Indian language related to the Chibcha of South America.

As in many Latin American nations, people have two family names: the mother's family name, which acts as a surname, followed by the father's family name. For example, Mario Garcia Sanchez would be addressed as Señor Garcia.

## 4 FOLKLORE

Spanish folk practices survived in Nicaragua in combination with Amerindian folklore, which attributed the very creation of the world to magic. A lively traffic in witchcraft developed from these roots. Love potions, for example, can always find customers. Folk medicine relies both on knowledge of plants native to Nicaragua and on superstition that derives from the Indian and Spanish past. The *cuadro*, or picture of a saint found in most households, is often credited with magical pow-

ers derived from native cult idols. Feasts for local patron saints are often held at the times of planting and harvesting and reflect folk beliefs that divine intervention will result in bountiful crops.

In the Indian mythology found in Nicaragua at the time of the Spanish conquest, the Corn Goddess Cinteotl was an aspect of the Mother Goddess Chicomecoatl. A feast called Xóchitl was held annually in honor of Cinteotl. Soups and fermented drinks derived from corn preserve some of the ritual significance once attributed to that most basic, and hence sacred, grain.

Nicaraguan folk literature abounds in tall tales and fantastic heroes, such as Pedro Urdemales. In fables, the jokester and trickster Uncle Rabbit constantly outwits Uncle Coyote.

## 5 RELIGION

Approximately 90% of Nicaraguans are Roman Catholic. City dwellers and those from the middle and upper classes are most likely to attend Mass and receive the sacraments. The lower classes tend to be less religious. There is a shortage of priests, and the Church's ability to reach people in rural areas is limited. During the civil war, the bishops were hostile to the ruling Sandinistas, but some priests and nuns have been activists who employ Marxist terminology in what has been described as "liberation theology."

The 10% of the population that are Protestant chiefly live in the Caribbean part of the nation. The Moravian Church is dominant in this region; almost all Miskito and many Creoles are Moravian. Pentecostal churches have made important gains among Nicaragua's poor. The Assemblies of God is the largest of the Pentecostal denominations.

## 6 MAJOR HOLIDAYS

*La Purísima* is the most important holiday in Nicaragua. This is a weeklong celebration of the Feast of the Immaculate Conception on December 8. Elaborate altars to the Virgin Mary are erected or decorated in homes and workplaces, and people, especially children, go from altar to altar singing songs and reciting prayers.

The *posadas* are nine consecutive nights, ending on Christmas Eve (December 24), dedicated to nightly caroling processions commemorating the Holy Family's wanderings in search of shelter in Bethlehem. Holy Week (Easter, in late March or early April) processions are most impressive in Leon and Granada. Managua holds a fiesta in honor of St. Dominic, the city's patron saint, between August 1 and 10. Masaya has a notable feast to St. Jerome on September 30, complete with Indian dancers in costume, and a pilgrimage on March 16 in which the Virgin of Masaya and the Christ of Miracles of Nindirí is taken down to Lake Masaya, whose waters are blessed.

An important secular holiday is Independence Day on September 15, which commemorates the 1821 Central American declaration of independence from Spain. Liberation Day on July 19 marks the 1979 overthrow of the Somoza regime.

## 7 RITES OF PASSAGE

The baptism ceremony for the newly born is important. Godparents are responsible for the ceremony and the festivities that follow, and they are expected to concern themselves with the welfare of the child and to provide aid in times of hardship. A child receiving First Communion, usually at the age of nine,

is given many gifts. A girl's 15th birthday is often celebrated as denoting that she has come of age. Among the middle and upper classes, dating does not begin until later. Among adults, birthdays have little importance, but the person's saint's day may be marked. Death may be accompanied by a novena for the deceased as well as by the funeral ceremony.

## 8 INTERPERSONAL RELATIONS

The Hispanic style of greeting is generally more demonstrative than in the United States, and among Hispanic Nicaraguans it tends to be more gregarious and demonstrative than most. Friends almost always shake hands when greeting and parting and often embrace. Women often kiss on one or both cheeks as well as embracing. People often stand closer to one another in conversation than is customary in the United States. A common casual greeting, especially among teenagers, is "Hola" ("Hi").

Visitors may drop in on friends without previous arrangement. Calling cards are often exchanged in social situations as well as in business relations. People of some social standing are greeted with respectful titles, such as *Señor*, *Señora*, and *Señorita* (Mr., Mrs., and Miss, respectively). Older people are often addressed by the respectful titles of *don* or *doña*. Titles reflecting professional attainment are also in common use.

The concept of honor is important in Nicaragua and is upheld vigorously. Personal criticism is considered to be in poor taste. Urban residents are more cosmopolitan, adopting "modern" values, but people in rural areas tend to be more traditional. The concept of *machismo*, in which men are seen as more important than women, is still common in rural areas.

## 9 LIVING CONDITIONS

The civil war of the 1980s left a bitter legacy as Nicaragua plunged to last place among Central American countries in national income. Indeed, the standard of living fell to that of 1960 or even before. In the mid 1990s, some 75% of Nicaraguans were living below the poverty line.

The Sandinista regime substantially increased spending on health care, broadening and equalizing access to services. There was a substantial drop in infant mortality and the transmission of communicable diseases. However, the system was increasingly strained by shortages of funds and the need to treat war victims. Because health care was subsidized under the Spanish, the economy suffered great damage. In the mid 1990s, most people had no choice but to rely on public facilities that were inadequately staffed, under equipped, and often mismanaged. Most people were malnourished, taking in well below the minimum recommended allowances of calories and protein.

Most people are also poorly sheltered. The national housing deficit, according to a 1990 estimate, was 420,600 units. In rural areas, the most basic dwelling is a dirt-floor straw or palm-frond hut supported by poles and sticks. Its counterpart in towns and cities is a low adobe structure with a tile roof. Squatter settlements are found on the outskirts of the cities. The more substantial homes of the middle and upper classes, of Spanish or Mediterranean style, are nevertheless sparing in ornament, their restraint perhaps reflecting the national vulnerability to earthquakes.

## 10 FAMILY LIFE

Nicaraguans turn to the family for support because community and church ties tend to be weak. Individuals are judged on the basis of their families, and careers are advanced through family ties. The nuclear family of father, mother, and children is fundamental, but the household may be augmented by a grandparent, aunt or uncle, or orphaned children. Newly married couples may take up residence with one or the other set of parents. Godparents, although unrelated by blood or marriage, are also important to the family structure.

Except for the middle and upper classes, marriage is not often formalized, although both civil and church ceremonies have the force of law, and common-law unions were given legal status in the 1980s. The birth rate is high, with the average woman giving birth to nearly six children during her child-bearing years. Abortion is illegal except to save the woman's life, but it is not uncommon. Women have major representation in the government, unions, and social organizations, but not in business. Many are heads of households and, in addition to their domestic duties, have joined the labor force in small-scale commerce, personal services, low-wage sectors such as the garment industry, and, to an increasing degree, in harvesting plantation crops.

## 11 CLOTHING

Typically, women wear simple cotton dresses, while many men wear work shirts, jeans, sneakers or sandals, and straw hats. Even businessmen will often wear sport shirts, or doff their jackets in hot weather in favor of the *guayabera*—a long cotton shirt.

Traditional dress for women varies. In Masaya it consists of a long, loose cotton skirt and short-sleeved cotton blouse, in red, blue, green, or yellow. The fringes of the skirt and blouse and the waistline are embroidered. A shawl is thrown over the shoulder, and a necklace and earrings are worn, with flowers in the hair. For men the native costume is blue cotton trousers, a long-sleeved collarless white cotton shirt, a sheathed machete strapped to the waist, a high-peaked straw hat, and sandals. (Women go barefoot.) More elaborate costumes are worn only for folk dances.

## 12 FOOD

Beans, which provide the main source of protein, and corn tortillas, are the basics of the Nicaraguan diet. Nicaraguans like *gallo pinto*—small red beans with rice—for breakfast. The *nacatamal*, wrapped in a banana-like leaf rather than a corn-husk, is the local form of the tamale. In addition to cornmeal, it may contain rice, tomatoes, potatoes, chili, cassava root, and a small piece of meat. The Christmas Eve meal consists of nacatamales with a filling of turkey, chicken, or pork, and raisins, almonds, olives, and chili, served with *sopa borracha* ("drunken soup")—slices of caramel or rice-flour cake covered with a rum-flavored syrup. Another distinctive dish is *vaho*, slowly steaming salted meat and various vegetables piled in layers over banana-like leaves and then covered while heating. Charcoal-grilled steak in a peppery marinade is another favorite. *Tiste* is a beverage made from ground tortillas and cacao beans, with fruit and sugar added. A snack food, the *tajada*, is a deep-fried plantain chip.

Meals usually last longer than they do in the United States, complemented with pleasant conversation. The main meal is

Beans, which provide the main source of protein, and corn tortillas are the basics of the Nicaraguan diet. (AP Images)

eaten at midday, often followed by a siesta, or afternoon rest. The siesta allows people to rest or even sleep during the hottest time of the day, when work is difficult.

### Glorious Bananas

- 2 ripe plantains (very soft)
- 2 cups (16 ounces) milk
- cooking oil
- 4 Tablespoons grated cheese
- ¼ cup (2 ounces) sugar
- ½ teaspoon vanilla extract
- 1 Tablespoon cornstarch
- 1 Tablespoon butter
- ½ teaspoon powdered cinnamon

Slice the plantains and brown them in the cooking oil in a frying pan. In a bowl, mix the sugar, cornstarch, and cinnamon; add the milk and mix well. Add the grated cheese and vanilla. Use half the butter (½ tablespoon) to grease a Pyrex pan. Pour half the milk mixture into the greased pan, then place the fried plantains on top. Cover with rest of the milk mixture and dot with the remaining butter. Bake at 350°f for 30 minutes, or until the milk is set. Note: Do not use small yellow bananas, but plantains, a sort that is used for cooking. They are called *platanos verdes* when green and *platanos maduros* when ripe, but they always need to be cooked.

### **13 EDUCATION**

By making spending on education a priority, the Sandinista government lowered the rate of illiteracy from 52% to 23% of the adult population. School is mandatory and free between the ages of 6 and 13. In the mid-1990s, nearly 80% of primary-school-age children were in school; however, only 39% of females and 44% of males were attending secondary school. Nicaragua’s two principal universities are Central American University and the National University of Nicaragua. There are four others.

### **14 CULTURAL HERITAGE**

Nicaragua has rich cultural traditions. Native to Central America is the marimba, a kind of xylophone, which may have come from Africa. The *son nica* is a driving rhythm overlaid with instrumentals. In Masaya, the traditional capital of the country, the marimba is sometimes accompanied by the oboe, the asses jaw (played by running a stick along the teeth of the bone), and a single-string bow with a gourd resonator. In the east the music is typically Afro-Caribbean, with banjos, accordions, guitars, and drums.

Traditional dance is sponsored and patronized in Nicaragua more than anywhere else in Central America. There are many dance groups. Dances include *Las Negras*, *Los Diablitos*, *El Torovenado*, *Las Inditas*, and *El Toro Huaco*, all with masked

characters, some of them pink and large-nosed to burlesque the Spanish. In *La Gigantora*, a giant woman is paired with a midget. In the *pale volador*, participants unwind from a rope wound around a high pole, swinging to the accompaniment of native Indian percussive instruments. The Caribbean coast also has a maypole dance.

An important specimen of folk drama as well as dance is *El Güegüense*, a farce going back to the 16th or 17th century that combines dance and pointed social satire. As in the nation’s fables, the hero is a trickster who uses his wits to frustrate the powerful, in this case the wielders of royal authority.

Foremost of Nicaragua’s writers was the poet Rubén Darío (1867–1916), whose innovative verse had a profound effect on Spanish literature. He is known as the “prince of Spanish-American literature.” Other important writers have included the poets Azarias Pallais, Alfonso Cortés, Sálomon de la Selva, and Ernesto Cardenal, and the poet and dramatist Santiago Argüello.

The complex and dramatic political events experienced by Nicaraguan people through the 1970s and 1990s have influenced a flourishing group of artists. The paintings of Alejandro Canales, Armando Morales, and Leoncio Sáenz, as well as the poetry of Gioconda Belli and Ernesto Cardenal, are clear expression of this cultural trend. Unlike the Somoza regime, which promoted imported culture, Sandinistas encouraged what they call “democratizing, national, anti-imperialist” arts

forms. A ministry of culture was established under the poet-priest Ernesto Cardenal.

### 15 WORK

Reflecting the dismal state of the economy, unemployment and underemployment were estimated at 60% of the work force in the mid-1990s, but reliable statistics are hard to come by because many people eke out a living as street vendors or are engaged in other aspects of the informal economy. Social class is based on whether or not one works with the hands, and on that basis 80% of the people are lower class (those who do work with their hands). Nearly 50% of the work force lives by farming, mostly with hand tools and oxen-drawn plows on small subsistence plots. Farm hands are even worse off, employed mostly by large estates only at planting time and harvest season. Most industrial workers are employed in food-processing plants.

### 16 SPORTS

In other Central American countries soccer reigns supreme, but in Nicaragua (and Panama) baseball is the most popular sport. Nicaraguans were playing in organized leagues in the 1890s and, by the early 1960s, even the isolated Miskito were playing regularly. The nation's most famous player, Dennis Martinez, was the first baseball player from Nicaragua to play in Major League Baseball. Also popular, besides soccer, are boxing, basketball, volleyball, and water sports. Children's games abound; one authority has put their number at no less than 134.

### 17 ENTERTAINMENT AND RECREATION

Fiestas are an important part of public life and include such diversions as cockfighting, bull-riding, and bull-baiting. Dancing in clubs is popular; Lobo Jack's, in Managua, is the largest disco in Central America. Most films are in English with Spanish subtitles. In 1993 eight towns had television stations, and there were about 210,000 television sets in use.

Even though the family is the most important unit of society, youth clubs for socializing are becoming more popular.

### 18 FOLK ART, CRAFTS, AND HOBBIES

Locally made earthenware is decorated much as it was before the Spanish conquest. Other handicraft items include hammocks, baskets, mats, embroidery, leatherwork, coral jewelry, and carved and painted gourds and dolls. Masaya's Artisans Market has the nation's most extensive selection.

### 19 SOCIAL PROBLEMS

In spite of the fact that the civil war had ended, at least 270 people died in political violence between 1990 and 1994, with police, army, and Sandinistas killing demobilized Contras, and northern Contra bands committing similar acts, often because of land disputes.

Previously undeveloped tracts of rainforest are being cut down at an alarming pace to grow crops and gather fuel wood. Health care is suffering from shortages of food, medicine, and basic medical supplies. Malnutrition and tropical diseases, such as yellow fever and malaria, are serious problems.

### 20 GENDER ISSUES

With the triumph of the Sandinista revolution in 1979, Nicaraguan women acquired social and political rights that were not available during the Somoza dictatorship. During the Literacy Crusade in the early 1980s, over 45% of the teachers in the rural areas were female, and women made up 46.5% of the rural students who had passed the literacy course.

The participation of women in politics also increased dramatically during the years of the Sandinista government. After 1979, women occupied 32% of the leadership positions within the government and, throughout the 1980s, women held such positions as minister of health, ambassador to the United Nations, national police chief, minister of social welfare, supreme court judges and deputies to the national assembly.

Even though Nicaraguan women comprised 45% of the economically active population in 1989, they were still over-represented in lower paying and less stable occupations, such as domestic service (70%), market vending (84%), and informal sector work (65%). Prostitution, a common source of employment for women prior to the revolution, was outlawed in 1979.

Despite advancements in economic and political spheres, domestic violence against women and teen pregnancy have remained critical problems in Nicaragua. In 1998, 29% of all Nicaraguan women suffered some kind of physical or sexual abuse. In addition, Nicaragua has one of the highest teen fecundity rates in the world, where 10% of 15 year-old girls already have children. While abortion is illegal in Nicaragua, between 27,000 and 36,000 abortions are practiced every year, and two out of ten women die as a result of an unsafe abortion.

# NORWEGIAN AMERICANS

For more information on Norwegian history and culture, see **Vol. 4: Norwegians**.

## OVERVIEW

Legendary Norwegian explorer Leif Ericson (or Leiv Eiriksson) is said to have discovered North America sometime around the year AD 1000, according to Viking sagas. This has yet to be established for certain, but Norwegian Americans look to Ericson as the first example of Norwegian contributions to American history. Since Norwegians began immigrating to the United States in significant numbers in the early 1800s, they have made a great many contributions to the culture and history of America.

In the 1800s, the population in Norway expanded beyond available economic opportunities, and many decided to look elsewhere. Members of religious sects other than the state-approved Lutheran Church also chose to go in search of more religious freedom. Norway at that time was fairly isolated from the rest of the world, and little was known there about the young United States. In 1825, however, a group of 52 Quakers and Haugeans (a Lutheran reformist sect) pooled their resources and outfitted a small sloop called *Restauration* to take them to America. They came to be known as the “Sloopers.” A baby was born en route, bringing their number to 53. When they arrived in the United States, the Sloopers first settled in New York State, near Lake Ontario. The land was difficult to farm there, though, so they eventually moved west, in 1834–35, to Illinois where land was cheaper and easier to till. There they began the Fox River settlement, which became the base camp for future Norwegian immigrants to the United States.

The second group of Norwegian immigrants came to America in 1836, settling in Fox River and Chicago. Norwegian immigrants came yearly after that, settling first in Illinois, then spreading north and west to Wisconsin (Muskego became a major settlement in the 1840s), Minnesota, Iowa, North and South Dakota, and eventually to the Pacific Northwest. A few settled in Texas, and some stayed in New York State, near where they first landed, rather than traveling on west. Most Norwegians felt a deep dislike of slavery, which deterred them from settling in the South. Some of those in Texas did own slaves, but for the most part, Norwegian Americans opposed slavery and fought on the side of the Union Army in the American Civil War (1861–65).

In 1862, the Sioux in Minnesota rose up against the European Americans who were invading their lands and pushing them west into alien territory. Many Norwegian Americans were killed or wounded in the Sioux uprising, slowing Norwegian immigration temporarily. The land was too good to resist, however, and soon the Europeans forced the Sioux off the land, confining them on small reservations, driving them out completely, or killing them. Minnesota was added to the “White Man’s land,” and it became a heavily Norwegian American state.

Norwegian immigration to the United States peaked between 1866 and 1914. Over 600,000 Norwegians came to

America during these years; only Ireland lost more of its people to the United States. In contrast with earlier Norwegian immigrants, who came to America with the intention of settling permanently in their new home, many of the immigrants of the peak years were single young men hoping to earn enough money to return to Norway in better circumstances. As many as 25% did actually return. The rest stayed in America. The Great Depression of the 1930s convinced another 32,000 Norwegian Americans to move back to Norway, but other Norwegian immigrants continued to come to the United States. Currently about as many people of Norwegian descent live in the United States as live in Norway.

Norway is divided into *bygds*, or districts, each of which has developed its own culture with distinctive clothing, customs, folk songs and dances, stories, and language dialect. Immigrants to America tended to settle among others from the same *bygd*, creating small cultural enclaves. In 1902, as Americanization began to take its toll, Norwegian Americans who wanted to maintain their ethnic identity began to form *bygdelags*, or district societies. Within 20 years, 50 *bygdelags* had been established, with a total of more than 75,000 people involved. Many urbanized Norwegian Americans chose not to participate in the societies because they did not want to perpetuate the image of Norwegian “peasant farmers” held by other non-Norwegian Americans. Instead, they wished to be assimilated into American culture and become indistinguishable from mainstream society. The *bygdelags*, therefore, caused some tension in the Norwegian American community.

Most Norwegian Americans were rural in the early days of immigration. They came from peasant farming families in Norway and clung to what they knew, recreating their old environment in their new home. Most Norwegian Americans have continued to resist urbanization, right up through today. Many of the old family farms are still run by descendants of the original settlers. Of the 4,477,725 Norwegian Americans in 2000, according to the U.S. Census, most continue to live in the early areas of settlement—the Midwest and Pacific Northwest. North Dakota is by far the most “Norwegian” state in the United States, with Norwegian Americans making up 30% of the total state population. Minnesota is a distant second with 17%, and South Dakota comes in third with 15%. Montana, which is 10% Norwegian American, takes fourth place, followed by Wisconsin at 8.5%.

Because Norwegian and English are both in the Germanic family of languages, Norwegian immigrants to the United States find English relatively easy to learn. Early immigrants incorporated many English words into their Norwegian dialects so that later immigrants, even those who spoke the same original dialect, often could not understand them. Because Norwegian Americans tended to live in isolated farming communities, surrounded by other Norwegian speakers, they retained their native ethnic language longer than many other U.S. immigrants. Even third generation Norwegian Americans are often fluent in Norwegian. However, Norwegian Americans are still subject to Americanization, and fluency in Norwegian is eventually lost.

Many Norwegian Americans were outraged when the Norwegian Lutheran Church in America (NLCA) decided to hold its services in English rather than Norwegian. The NLCA was formed in 1917 when the three major Norwegian Lutheran synods at that time—Norwegian Synod, the Haugean Synod,

and the United Norwegian Lutheran Church—merged. The merged church recognized the Americanization of later generations of Norwegian Americans and chose to minister to their needs. In 1946, the NLCA further enraged conservative Norwegian Americans by dropping “Norwegian” from their name, becoming the Lutheran Church in America (LCA). The LCA absorbed German and Danish Lutherans in 1960 and then united with the American Lutheran Church in 1987 to become the Evangelical Lutheran Church in America (ELCA). Two Norwegian speaking congregations still exist: Minnekirken in Chicago, and Mindekirken in Minneapolis.

Not all Norwegian Americans are Lutheran. There are also handfuls of Quakers (who were among the first group of immigrants in 1825), Baptists, Presbyterians, Methodists, Mor-

mons, and others. Some Norwegian Americans today belong to no church.

For a time in the 19th and early 20th centuries, Norwegian Americans celebrated Syttende Mai, or 17 May, commemorating the signing of the Norwegian constitution in 1814. Huge centennial celebrations were held in 1914, but then the hyper-patriotic hysteria of the World War I years in the United States suppressed any ethnic festivities. The multicultural movement that began in the 1960s, however, allowed Syttende Mai to re-emerge for its sesquicentennial in 1964. Today, many Norwegian American communities hold parades and other cultural festivities on 17 May each year. Two of the traditional Norwegian foods served at these feasts and on other special occasions are lutefisk, made from specially prepared cod, and lefse, a flat-

bread usually made from potatoes and rolled out paper-thin with a grooved rolling pin that gives it a grid-like texture.

Despite their relative isolation in early years, Norwegian Americans have contributed a great deal to American culture. Three top-notch Norwegian American colleges are located in Minnesota: St. Olaf College (Northfield), founded in 1874; Concordia College (Moorhead), established in 1891; and Augsburg College (Minneapolis), which in 1922 grew out of Augsburg Seminary, founded in 1896. The St. Olaf Choir has achieved international renown since its beginnings in the early 1900s. Founding director F. Melius Christiansen wanted to develop a cappella (without accompaniment) singing and created the first chorus of its kind in the United States.

Music has always been of great importance to Norwegians and Norwegian Americans. Early Norwegian Americans began many choral societies, some of which still exist today. Norwegian folk dances are still performed by Norwegian American dance groups around the country. Individual Norwegian Americans who have achieved success in the world of music are conductor Ole Windingstad and opera singer Rise Stevens, as well as the Andrews Sisters, Tom Waits, and Josh Groban. In the world of art, a traditional style of folk painting called *rosemaling* ("flower painting") was brought from Norway to the United States by immigrants in the 1800s. Per Lynne, considered the "father of American rosemaling," became widely successful as a rosemaler during the Great Depression of the 1930s. Though rosemalers had traditionally been men, the American Folk Revival of the 1960s and 1970s inspired renewed interest in the art, this time among women. It has since become a popular social hobby among Norwegian American women.

The first Norwegian American writer to become well known in the United States was Ole E. Rolvaag, who wrote in Norwegian in the 1920s. His first book published in the United States was an English translation (by Lincoln Colcord) of two earlier works that had been published in Norway. The English version was called *Giants in the Earth*, published in 1927. It was selected by the Book of the Month Club and sold almost 80,000 copies by the end of the year. Modern Norwegian American writers include Wallace Stegner, who won the Pulitzer Prize in 1972 for *Angle of Repose*, and poet Robert Bly, now considered the "father of the men's movement" since the publication of his nonfiction book, *Iron John: A Book About Men*, in 1990.

Norwegian Americans have also been successful in the worlds of theater, film, and television. Well-known Norwegian American actors include James Arness, James Cagney, Celeste Holm, and Rene Zellweger. Figure skater Sonia Henie also became a popular film star in the 1940s after retiring from a gold-medal Olympic career. Henie skated her way to fame in musical extravaganzas on ice, both live and in Hollywood movies. Sonia Henie is responsible for bringing figure skating to the public, transforming it from an unknown sport to a popular pastime.

Norwegian Americans are also responsible for bringing skiing to America. All forms of skiing were relatively unknown in the United States in the 1800s. When Norwegian immigrants came to America, however, they brought with them their love of skiing, both as a sport and as a mode of transportation during the long, snowy winters. Cross-country skiing and ski-jumping were particular Norwegian American specialties.

Telemarking (named after a district of Norway), involving a particular way of turning, later became popular.

Some famous Norwegian American sports figures are football place-kicker Jan Stenerud, who introduced the soccer-style kick now used by most place-kickers; Knute Rockne, revolutionary football coach at Notre Dame from 1918 to 1931; and Lute Olson, longtime coach of the University of Arizona basketball team.

Norwegian American figures abound in the worlds of science, industry, and politics. Building on Norwegian Americans' long history as farmers, agriculturalist Norman Borlaug worked with peoples all over the world to develop more productive strains of wheat. Borlaug was awarded the Nobel Peace Prize in 1970 for his work. Earl Bakken invented implantable pacemakers, Dr. Ernest O. Lawrence invented both the cyclotron and color television tube, Dr. Conrad Elvehjem discovered vitamin B6 (niacin), and Dr. Ludwig Hektoen was the first to match blood types of recipients and donors. Computer pioneers Theodore Holm Nelson, who coined the terms "hypertext" and "hypermedia," and Douglas Engelbart, inventor of the computer mouse, are both of Norwegian descent. Engelbart was awarded the National Medal of Technology by President Bill Clinton in 2000. Another Norwegian American pioneer is Sally Ride, the first American woman astronaut to reach outer space.

Economist Thorstein Veblen coined the phrase "conspicuous consumption" in his landmark book, *The Theory of the Leisure Class*, published in 1899. Veblen is often called the "spiritual father of the New Deal." The Library of Congress cataloging system was created by Norwegian American James Christian Meinich Hanson. Two well-known Norwegian American journalists are Eric Sevareid, a World War II war correspondent for CBS who then became a news commentator at CBS until his retirement, and Eric Utne, publisher of the alternative journal, *Utne Reader*, founded in 1984.

Seattle, Washington, has the highest concentration of Norwegian American businesses anywhere in the United States. Over 30 Norwegian American companies are located there. Perhaps the best-known Norwegian American business entrepreneur is Conrad Hilton, the "Hotel King." The international chain of Hilton hotels is now managed by Conrad's son, Baron Hilton. Continuing the Hilton claim to fame are Conrad's great-granddaughters, Paris and Nicky Hilton, fashion designers and celebrity socialites.

Norwegian Americans have been represented in federal politics since 1883, when Knute Nelson of Minnesota was elected to the U.S. House of Representatives. Nelson later served on the U.S. Senate from 1895 to 1923. U.S. congressman Andrew Volstead introduced the Prohibition Act in 1919, also known as the Volstead Act. The consumption of alcohol was traditionally acceptable in Norwegian culture, but it became a problem in the United States and many concerned Norwegian Americans joined the temperance movement.

In 1954, Coya Gjesdal Knutson became the first woman from Minnesota to be elected to U.S. Congress, and she then became the first woman ever appointed to the House Committee on Agriculture. Norwegian Americans Hubert H. Humphrey and Walter F. Mondale both served as U.S. vice-president and ran unsuccessful campaigns for president. Earl Warren, half-Norwegian American and half-Swedish American, served as Chief Justice of the Supreme Court from 1953 to 1969, establishing

himself as a powerful liberal voice when he ruled against the racial segregation of schools. Two other Norwegian Americans who have been influential in recent American politics are Karl Rove, Deputy Chief of Staff and advisor for President George W. Bush; and John Ashcroft, 79th U.S. Attorney General.

Norwegian immigration to the United States declined yearly after World War II, coming to nearly a complete stop by the 1980s. Few new immigrants arrive, and previous immigrants have become almost thoroughly Americanized. However, a renewed interest in “Norwegian” identity among Norwegian Americans has recently spurred a surge of classes, festivals, websites, and other forums for the celebration of Norwegian foods, customs, history, folk songs, and dance traditions. Some Norwegian Americans even feel that Norway itself has become too “Americanized,” losing touch with its uniqueness that is now cherished in the United States.

Although the economic decline among American farmers has hit the Norwegian American community particularly hard, as such a high percentage of them are farmers, for the most part Norwegian Americans have few problems unique to their community. They adapted quickly and well to their new home and are now an established part of mainstream American culture. Despite their assimilation, however, Norwegian Americans have fought hard to retain the Norwegian Consulate General in Minnesota that Norway has twice now threatened to downgrade to “honorary” status, with Walter Mondale as Honorary Consulate. Norway reasons that a new consulate is needed in China and it must cut back elsewhere. Other Norwegian consulates in the United States will remain open.

Single Norwegian women who immigrated to the United States in the 1800s and early 1900s almost exclusively found work as domestic servants. They were greatly sought after for those positions; in 1920, 86% of Norwegian American women were domestic servants. Those who migrated with husbands were much more likely to remain on the farm. In Norway women typically took care of the dairy cows, and immigrants to the United States continued in that tradition. However, once the dairy farm became a business rather than simply providing family subsistence, men joined the women in dairymaking tasks. If the dairy business failed, men would take over care of all the livestock and women would move to in-home chores with their field chores reduced to keeping a kitchen garden.

The Lutheran church provided a place for Norwegian American women to practice some independence through the ubiquitous “Ladies Aid” societies founded by Lutheran pastors’ wives. The Ladies Aid society held fundraisers to pay for church construction and mission activities. Once these societies began to federate at the regional and national level, women had the opportunity to learn organizational and financial skills beyond the realm of the home. Inspired by their newfound independence, Norwegian American women joined the forces of the suffragist movement. The prospects for increased women’s rights even attracted feminists from Norway, such as Aasta Hansteen, to move to the United States, although the language barrier sent many of them back home.

# OJIBWA

**ALTERNATE NAMES:** Chippewa; Ojibway; Anishinabe

**LOCATION:** United States; Canada (Great Lakes area, especially around Lake Superior)

**POPULATION:** Over 150,000

**LANGUAGE:** English; Ojibwa

**RELIGION:** Traditional Ojibwa, based on spirits; Christianity

**RELATED ARTICLES:** Vol. 2: Native North Americans

## <sup>1</sup> INTRODUCTION

The Ojibwa, or Chippewa, are descended from the ancient Anishinabe, a name that means “original people.” Their neighbors called them “Ojibwe,” which is probably a mispronunciation of *kamaziniibiigaewad*, “picture-makers” (for pictographs they made). Others believe the name refers to the unusual puckered seams on their moccasins. Europeans further distorted their name to become “Chippewa.” Today, both “Chippewa” and “Ojibwa” (or “Ojibway”) are used to designate these people. Many Ojibwa still prefer to call themselves Anishinabe.

The Ojibwa migrated from the northern Atlantic coast, around the mouth of the St. Lawrence River, to the eastern shores of Lake Superior (which they called Kitchigamiing) between AD 1000 and 1400. The Ottawas (who also sometimes refer to themselves today as Anishinabe) and Potawatomis migrated with the Ojibwa. Together they were known as the Three Fires Council. The Three Fires peoples split up when they reached the shores of Lake Huron. The Ottawas settled along the northern shores of Lake Huron; the Potawatomis settled in what is now Michigan; and the Ojibwa continued northwest to Lake Superior. The final Ojibwa homeland became all the lands surrounding Lake Superior (stretching west into what is now Minnesota and the Dakotas, south into Wisconsin and Michigan, and north into Canada).

The Ojibwa became arch enemies of the neighboring Iroquois Confederacy nations because of conflicts over land and competition for the fur trade. The Ojibwa began trading furs for European goods (such as knives, hatchets, fish-hooks, and needles) in the early 1600s, first with friendly eastern Native North American tribes who had already obtained goods from the Europeans and then with the Europeans themselves as the Europeans moved west. The Ojibwa’s first contact with Europeans was probably at a Feast of the Dead at a Huron camp in September 1641. Several Ojibwa and a number of French missionaries were guests at the feast. A few weeks later, Father Charles Raymbault and Father Isaac Jogues arrived in Pawatigoong (“the place at the falls”), one of the Ojibwa’s main villages, which the French named Sault Sainte Marie (Saint Mary’s Rapids). The French called the Ojibwa “Saulters” (People of the Rapids). Other French missionaries soon followed, but the Ojibwa were not very interested in Christianity. They just wanted European trade goods.

In 1659 two French traders, Pierre Esprit Radisson and Medard Chouart des Groseilliers, were guided by the Ojibwa from Quebec down the St. Lawrence River through the Great Lakes to Lake Superior. They visited many Ojibwa camps during the winter and traded goods for furs. When they returned to Quebec with loads of furs in their boats, other traders decided to follow suit. The Ojibwa village at Chequamegon Bay soon be-

came a trading center for French and Native North American peoples. Many of these French traders married Ojibwa women and lived part-time in Ojibwa villages. They adopted Ojibwa clothing and learned the Ojibwa language and Ojibwa customs and skills. These traders came to be known as *voyageurs* because of the long journeys they made along the fur-trade routes. They were also called *coureurs de bois*, or “runners of the woods.”

The Ojibwa soon became dependent on European goods and lost their traditional skills, such as making knives and needles from bone (rather than the steel ones provided by the Europeans). The formerly semi-nomadic Ojibwa now settled in permanent villages near trading posts. They hunted for profit, not just survival, and animals that had been their main source of food became scarce because the Ojibwa (and other Native North Americans) now killed more than they could eat for the furs and hides, thus upsetting the balance of nature.

Warfare, between European powers who wanted to control the trade routes and Native North Americans over the use of hunting grounds, increased. Native North American use of guns obtained in trade from Europeans (instead of traditional bows and arrows) increased the death toll in warfare. Europeans also brought diseases for which Native North Americans had no immunities or treatments. Between war and disease, Native North American populations, including the Ojibwa, were decimated.

By the late 1600s, the Ojibwa had spread throughout the Great Lakes area, as far east as the modern-day Toronto area. (They fought with the Iroquois for control of this territory and eventually drove the Iroquois to the south.) Other Ojibwa bands moved south into Wisconsin and drove out the Fox tribe to gain control of those lands. Some Ojibwa moved west into eastern Minnesota and fought Sioux tribes for lands there.

The British had begun their own fur trade in North America by the mid-1600s and the French made a treaty with the Native North Americans around Lake Superior, including the Ojibwa, to trade only with the French. In the late 1600s, however, the French decided the fur market was glutted and stopped buying furs from the Native North Americans for a time. The Ojibwa had become dependent on the fur trade by this time and had no other way to support themselves. When the French reopened trade in 1718, they found the Ojibwa nearly starving.

In 1736, the Sioux attacked French trading posts and became enemies of the Ojibwa, who were allies of the French. The Sioux then launched a series of quick raids on the Ojibwa, which the Ojibwa usually won because they had more European weapons and were better woodsmen than the Sioux. The Ojibwa eventually drove the Sioux entirely out of Wisconsin and northeastern Minnesota.

The French and Indian War between the French and British began in 1761, while the Ojibwa were warring with the Sioux. The Ojibwa sided mostly with the French. Britain won the war in 1763 and took control of the Great Lakes fur trade. The balance of power in the Great Lakes area shifted. To make matters worse for the Ojibwa, the British wanted furs *and* control of the land.

From the mid-1760s to 1770s, the Ojibwa traded peacefully with the British. The Ojibwa tried to stay neutral during the American Revolution (1775–83) so as not to offend either side and be on good terms with whoever won (avoiding a repeat of their difficult situation at the end of the French and In-

dian War). When the American colonists won, the fur trade came under the control of the newly established United States of America. The new Americans solidified their control by defeating the British in the War of 1812.

The Ojibwa found that American goods were often inferior to European goods, and American settlers were greedy for land. Some Ojibwa moved to Canada to resume trade with the British. In the 1820s and 1830s, the U.S. fur trade was run mostly by the American Fur Company, owned by John Jacob Astor. Astor wanted to maintain Native North American culture and lands to keep the fur trade going. Settlers, loggers, and miners, however, wanted the Ojibwa's land, so they put pressure on them to move west of the Mississippi River. The Ojibwa were eventually forced to move to reservations established on their homelands in the United States and Canada. Nearly all Ojibwa were living on reservations by 1854.

There was not enough land on the reservations to support the Ojibwa's traditional life of hunting, fishing, and gathering food. The U.S. government expected them to become farmers, but the land was not good enough (and the growing season was too short) to grow enough food to sustain everyone throughout the year. The General Allotment Act of 1887, which divided up reservation lands into individually owned 160-acre plots, made the situation even worse. In that northern climate, 160 acres was not enough land on which to grow food for an entire household. The Ojibwa of Red Lake Reservation managed to prevent the government from dividing up their land; it is still owned communally by the tribe.

On the reservations, the Ojibwa were given government housing and Western clothing to wear. Their children were forced to attend European American schools, many of them boarding schools far from home, where their traditional culture was denigrated and denied in an attempt to "civilize" them. There was little opportunity for employment on reservations and the U.S. government built dams that destroyed thousands of acres of wild rice, the Ojibwa's staple food. The Ojibwa fell into poverty and despair.

The Battle of Leech Lake was triggered in 1898 when an Ojibwa leader named Bugonegijig ("Hole-in-the-Day") escaped from custody and refused to cooperate with European American law officers. Bugonegijig had been arrested on a trumped-up liquor charge (common treatment at the time because law officers were paid for every arrest they made) and then released for lack of witnesses. He refused to cooperate when subpoenaed as a witness in another case and was arrested, released, and arrested again. This time he escaped, and the U.S. War Department sent about 500 troops into the Leech Lake Reservation. During their lunch break, one of the soldiers' guns accidentally went off. Ojibwa who were hiding in the woods nearby thought the soldiers were shooting at them and fired on the troops in return. The commanding army officer and five soldiers were killed. The government then sent over 1,000 more troops to Leech Lake in preparation for a major battle. Fortunately, both sides agreed to a peaceful settlement before any more fighting occurred. The Ojibwa expressed deep regret for the deaths of the soldiers, and no one else was killed. Several Ojibwa were fined and sent to jail for periods of up to 10 months.

Poverty continued to be a painful reality for the Ojibwa into the 1930s. President Franklin Roosevelt included programs in his New Deal to improve the situation of Native North Americans throughout the United States. World War II (1941–45)

provided some war-related jobs for Ojibwa, and several hundred served in the U.S. armed forces. After World War II, many Ojibwas left their reservations to live in cities and try to find work there. Some did, but unfortunately many merely found a new sort of poverty because they lacked the skills and cultural background to succeed in the European-dominated urban world.

Despite their many difficulties since the Europeans arrived on the continent, the Ojibwa still live on their ancestral tribal lands and have survived as a tribe and a distinct people. Modern battles are fought in court for land-use, water-use, and other rights. In 1983, two Ojibwa spearfishers were arrested for fishing in waters outside their reservation in northern Wisconsin. A federal court (in what came to be known as the Voigt Decision) upheld the Ojibwa's right to fish in traditional ways on any ancestral tribal lands, whether those lands are currently included in an Ojibwa reservation. The Voigt Decision also gave tribal councils responsibility for regulating Native North American fishing in terms of health, safety, and conservation. In light of this decision, 13 Ojibwa reservations in Michigan, Wisconsin, and Minnesota joined together to form the Great Lakes Indian Fish and Wildlife Commission.

Controversy still rages over fishing rights in off-reservation waters. Extremist European American opposition organizations, supported by white supremacist groups, bombed a boat landing, capsized Ojibwa boats, physically attacked Ojibwa fishers and verbally abused Ojibwa women in 1989 and 1990.

## **2 LOCATION AND HOMELAND**

The Ojibwa live in the Great Lakes area of the United States and Canada, mostly around Lake Superior. The climate of the northern Great Lakes region is subarctic with long, cold, snowy winters and short summers. One of most important early Ojibwa villages on the shore of Lake Superior was Bowating, now called Sault Sainte Marie. The population of Bowating at the beginning of the 17th century was probably between 250 and 500. There are between 70,000 and 104,000 Ojibwa in the United States as of 2008, living mostly on reservations in Michigan, Wisconsin, and Minnesota. A similar number of Ojibwa live in Canada, mostly on reservations in Manitoba and Ontario. Many Ojibwas left the reservations in both the United States and Canada after World War II (1941–45) and moved to cities to try to find work. Toronto, Ontario; Grand Rapids, Michigan; Minneapolis, Minnesota; and Winnipeg, Manitoba all have sizable Ojibwa populations.

The Ojibwa describe months and seasons with "moons." Spring begins with Crust on the Snow Moon (March), and sap begins running in the sugar maple trees. During this "moon," the Ojibwa traditionally moved from their winter hunting grounds to the maple groves. Maple sugaring continues through Moon of Boiling Sap (April). Flowering Moon (May) traditionally signaled the time to move to summer camps. Summer lasts through Strawberry Moon (June), Midsummer Moon (July), and Blueberry Moon (August). Fall begins with Wild Rice Moon (September), when the Ojibwa traditionally moved to the shores of lakes where wild rice grew. Falling Leaves Moon (October) is the time for Ojibwas to prepare for winter. They had traditionally headed for winter hunting grounds by time of Freezing Moon (November). Winter lasts through Spirit Moon (December), Great Spirit Moon (January), and Sucker Fish Moon (February). Then the cycle of the

year is completed when the Crust on the Snow Moon appears once again in the sky and the sap begins to run again in the trees.

### 3 LANGUAGE

The Ojibwa language belongs to the Algonquian family of Native North American languages. In contrast to most Native North American peoples, the Ojibwa did have a system of writing. The ancient Anishinabe and their Ojibwa descendants painted pictographs (pictures used to record information) on birch bark.

Anishinabe and Ojibwa pictographs are considered to be the best example of written records left by any Native North American group north of Mexico.

In the native Ojibwa language, days are counted in terms of “sleeps”; the word “night” is not used by some Ojibwa. *Niizho-tibikut* means “two sleeps.”

Children were named at birth after a dream or vision. Friends and relatives rarely addressed children by their birth names. Instead, the Ojibwa generally addressed each other by their relationship to the other (such as “daughter,” “grandfather,” “sister,” etc.). Ojibwa children were also given a secret name that only their parents knew. This was done to prevent anyone from casting a spell on them, because spells only work if the spellcaster has a person’s true name.

### 4 FOLKLORE

According to the Ojibwa, Kitchi Manido (Great Spirit) created the universe. First he made the four basic elements: rock, fire, wind, and water; then he made the sun, stars, earth, and everything on it (including humans) from those elements. Kitchi Manido then organized the universe by the Four Directions: Waubanoong (east), Shawanoong (south), Nangabianoong (west), and Keewatinoong (north). Two more sacred directions were also included: Sky above and Earth below. After a while, there was a great flood on the Earth and the seas covered the land. Various animals dove down under the waters to find land but were not successful. Finally, Muskrat dove deep and after a long while came up nearly dead with a bit of mud in his paw, from which Earth was re-created.

Kitchi Manido gave everything in creation a spirit and a purpose in the Circle of Life. He also created Winebozho (First Man), also called Nanabush, born of an Earth Mother and Father Sun. Winebozho is a trickster figure and acts as an intermediary between humans and the spirit world. The Anishinabe were born of Winebozho. The Ojibwa have many Winebozho stories, including teaching stories, stories of how different elements of Ojibwa life were created, and others.

### 5 RELIGION

As is true for all Native North American peoples, religion is an integral part of the Ojibwa’s daily life. The Ojibwa believe that all creation is interconnected and that all things in creation are equally important. Everything in nature is occupied by a *manido*, or spirit. There are lesser and greater spirits, some of whom are evil, though most are good. The one Great Spirit is called Kitchi Manido. Ojibwa must please the spirits to have good health and success. Bad luck, illness, and injury result from angering the spirits. The best way to please the spirits is with a tobacco offering, which is an offering of thanksgiving. Each time an animal is killed, thanks are offered. Before

harvesting wild rice or peeling the bark from birch trees, an offering is made. Ojibwa give thanks for all gifts from Kitchi Manido and the spirits of creation.

All Ojibwa ceremonies begin by smoking the Pipe of Peace.

Many Ojibwa converted to Christianity during the 19th and 20th centuries. Others are nominal Christians yet continue to follow traditional religious ways. Some never gave up their ancestral beliefs, and still others are returning to those beliefs and traditions as they strive to reclaim their Native North American identity in this last decade of the 20th century.

### 6 MAJOR HOLIDAYS

The Ojibwa hold seasonal celebrations, such as the Harvest Feast in autumn after the wild rice harvest. The Feast of the Dead is held each autumn in remembrance of all those who died during the previous year. Among traditional Ojibwa, each family who has suffered the death of one of their members during the past year holds a banquet for the entire village. The food is not necessarily placed on the table, but in an open area outside. A place is set for the deceased, whose spirit remains with the family.

### 7 RITES OF PASSAGE

Traditionally, when a boy killed his first large animal in a hunt, his family held a celebration because he was learning to provide for his family. Boys were not considered true hunters until they had killed a bear and one other large animal (such as a moose or deer).

At puberty, boys go on Vision Quest. They spend several days alone in the woods without food and wait for their guardian spirit to appear and give them instructions for their adult life. When they return from their Vision Quest, they are treated as men.

The Ojibwa believe that girls are given a gift from the Creator at the time of their first menstruation that is not given to men. To receive this gift, girls are kept isolated in a special shelter away from the village for the duration of their first menstruation. During their seclusion, the girls fast and see only their mothers and grandmothers. When they return to the village, they are henceforth treated as women.

A ceremony is held to initiate a *Mide* apprentice into the *Midewiwin* society. The most important part of the ceremony is the ritual “death” and “rebirth” of the initiate. He or she is “shot” with a sacred shell, or *megis*, then “revived” with the breath of life from the presiding *Mide* leader.

When an Ojibwa dies, his or her body is placed on a platform for four days, the time it is believed to take for the person’s spirit to journey into the next world. The body is then wrapped in birch bark and buried with the feet pointing southward (the direction of the next world). Food and tools for the journey to the next world are buried with the deceased. Small buildings are sometimes constructed over the grave to shelter the spirit.

### 8 INTERPERSONAL RELATIONS

The Ojibwa tribe was originally made up of many small, autonomous bands, each with its own leader. That sense of autonomy and division into separate bands is still evident among Ojibwa of different reservations. Ojibwa tribal chiefs were devoted to keeping the peace throughout their history.

## 9 LIVING CONDITIONS

The Ojibwa traditionally lived in wigwams, dome-shaped structures built from saplings cut (by men) and placed in the ground in an oval measuring about 14 by 20 feet. The tops were then tied together to form the dome. Several lighter-weight poles were then tied horizontally to the first poles around the circle to complete the frame. Woven grass mats and strips of birch bark were laid over the frame by the women. Heavy poles were sometimes laid over the mats and bark to hold them in place. A fire burned continually in a central firepit inside the wigwam, the smoke escaping through a hole in the center of the roof. The floor was covered with mats woven by the women from bulrushes, and the door was covered with a piece of animal hide. Low benches and mats were placed around the inside edges of the wigwam for sleeping and sitting, and baskets held the family's belongings. The Ojibwa used deer or bearskin blankets as bedcovers. Each wigwam housed an extended family of parents, grandparents, and children.

A wigwam could be built in less than a day. When the Ojibwa moved to another campground, they would simply roll up the bark and hide covering of the wigwam and take it with them, leaving the pole frame behind. Or they might make the poles into a *travois*, a sort of sled, and pack their belongings on it. They either pulled the *travois* by hand or harnessed it to dogs.

Traditional healing is done by medicine men and women, called *Mide*. Most are a combination of priest and doctor. *Mide* have a special relationship with the spirit world and also have a wide knowledge of the medicinal uses of plants. They combine herbal medicine with spiritual ceremonies involving song, dance, and prayer. Many *Mide* become members of the *Mide-wiwin* society after a long apprenticeship. There are four degrees of *Mide* instruction today; in earlier times, there were as many as eight. Most of the ancient birch bark scrolls with *Mide* songs and history are gone, however, and much of the knowledge of herbal medicine is lost as well.

The Ojibwa became masters of the birch bark canoe. Each canoe weighed between 65 and 125 pounds (29–45 kg). Working together, men and women spent about two weeks building one. Every family had several canoes. In the winter, Ojibwa used (and still use today) snowshoes to travel about in the deep, soft snows. They also used flat, lightweight wooden sleds called *nabagidabanaakoog* (mispronounced as “toboggans” by Europeans).

## 10 FAMILY LIFE

Ojibwa men traditionally did the hunting, while the women cooked the food, prepared the animal skins, and sewed clothing from them.

Babies are strapped to a cradleboard for most of the first year of their life. A cradleboard is a flat board with a footrest at the bottom and a hoop to protect the baby's head at the top. The baby is placed on a cushion of moss and feathers, then covered with a piece of animal hide or fur. A leather strap is wrapped around the baby and cradleboard to hold the baby in place. The cradleboard can be strapped to the mother's back for carrying or propped against the wigwam (or house) or a tree when the mother is working.

Each Ojibwa household is made up of an extended family: parents, grandparents, and children. The clan system is very strong; clans are patrilineal (inherited through the father) and

exogamous (one cannot marry a member of one's own clan). The major Ojibwa clans in earlier days were Crane, Fish, Loon, Bear, Martin, Deer, and Bird. More clans have since been added. Each clan traditionally had certain responsibilities to the community; for example, Fish clan members were responsible for settling disputes between other clans.

Elders are very important in Ojibwa society. They advise adults on the wisest course of action and teach children the ways of the Ojibwa.

## 11 CLOTHING

Ojibwa today wear Western-style clothing for everyday purposes. At ceremonial dances, they will dress in the traditional way.

Traditional Ojibwa clothing is made from animal skins, mostly deerskin. Men and boys wear a breechcloth (a strip of hide passed between the legs and over a belt to hang down in the front and back). Thigh-high leggings are attached to the belt with a leather thong. In cold weather, fur or animal skin is wrapped around the shoulders.

Women and girls wear a dress made from two pieces of deerskin sewn together at the shoulders and down the sides. They usually wear knee-high leggings tied at the knees with a leather band.

Children's clothes have a similar design to adults' but are made from smaller skins or furs, such as beaver, fawn, squirrel, or rabbit.

All Ojibwas wear leather moccasins with soft soles, traditionally so they could walk quietly in the woods. Men and women both oil and braid their hair. Sometimes they stick feathers and porcupine quills in their hair for decoration. Both men and women also paint their faces; wear earrings, necklaces, and bracelets; and decorate their clothing with quills, feathers, and beadwork. (Beads were first made from shells; stones; animal teeth, claws, and hooves; nuts; berries; and seeds. Later, the Europeans traded glass beads for furs. Because glass beads were smaller, more durable, and easier to work with, designs became more intricate. Ojibwa women expanded from simple geometric patterns to elaborate floral motifs.) Traditional dyes are made from roots, nuts, bark, and berries.

The snowshoes worn in winter were traditionally made from a piece of flexible ash wood fastened in a bow shape with strips of hide from a deer or moose, then strung with rawhide.

## 12 FOOD

The main traditional foods of the Ojibwa were berries, nuts, leeks, corn, squash, wild potatoes, wild rice, maple sugar, large and small game, and fish. Many of these foods still figure largely in the modern Ojibwa diet.

Wild rice is a type of grass native to North America that grows in very watery areas. It is called *manomin*, or “good berry,” by the Ojibwa and was their staple food. It is harvested in the fall by work teams of two people in a canoe. One poles the canoe through the waters; one bends the tops of the grass stalks over the canoe with a stick and knocks the grains off into the bottom of the canoe with another stick. Grains that fall in the water seed next year's crop. The rice is then dried in a large pot over a fire (stirred constantly to prevent burning). After it is dry, it is threshed (the husk is removed from the kernel) by putting the rice in a sack and beating the sack with a club. Threshing can also be done by putting the rice in a hole

in the ground lined with hide and dancing on it. Finally, the rice is winnowed (the kernels sifted from the loosened husks) by putting it on a bark tray and gently shaking the tray so that the husks blow away in the wind, leaving only the edible kernels behind. Today, Wabigoon in northwestern Ontario has a wild rice processing plant.

### Ojibwa Wild Rice

1 cup wild rice, washed in cold water  
 ¼ teaspoon pepper  
 2½ cups water  
 2 tablespoon minced chives  
 1½ teaspoon salt  
 Bacon drippings plus enough melted butter or margarine to equal 1/3 cup  
 4 strips bacon cut into narrow strips  
 6 eggs

Place the wild rice, water, and 1 teaspoon of the salt in a saucepan and bring to a boil over medium heat. Reduce the heat as low as possible and simmer, uncovered, until all the water is absorbed. Brown the bacon in a large, heavy skillet. Remove bacon from skillet, and drain on paper towels. Save the bacon drippings from the skillet. Beat the eggs with ½ teaspoon of the salt, and the pepper, until light. Pour the beaten eggs into the skillet in which you browned the bacon, and brown the eggs lightly. Turn them over gently, and brown on the other side. When the eggs are firm, cut them into narrow strips. Lightly toss the bacon, egg strips, chives, bacon drippings (plus melted butter or margarine) with the rice. Serve hot. Makes 4 servings.

### 13 EDUCATION

Although traditional Ojibwa education has always been important, the Ojibwa are very concerned with Western education today. They want to give their children the skills they need to succeed in the modern Western world and also teach them the traditional ways so that they maintain their Ojibwa culture and identity. Though dropout rates among Ojibwa students fell significantly in the 1970s, over 10% still do not make it through high school. Attendance rates for students under the age of 25 in 1990 were as follows:

AGE	PERCENTAGE IN SCHOOL
3-4	28.6
5-14	93.4
15-17	89.9
18-19	53.3
20-24	19.6

Of a sample of Ojibwas 25 years old and older in 1990, 9.8% had less than a ninth grade education; 69.7% had at least a high school diploma (68.6% of men, 70.6% of women); 37.8% had some college; and 8.2% had a Bachelor of Arts degree or higher (8.5% of men, 8.0% of women).

Museums in Ojibwa communities (run by the Ojibwa themselves) help teach their own people and others about Ojibwa history and traditions.

### 14 CULTURAL HERITAGE

The Ojibwa were known in earlier days as a people who loved to sing. This is still true of traditional Ojibwa today. The Ojibwa have many sacred songs and dances, accompanied by drums and rattles. The flute is the only solo instrument used by the Ojibwa. Young men used to play the flute when they were courting a young woman to let her know they were nearby so that she would come to hear his music.

The Ojibwa of Lac Courte Oreilles run a public radio station that offers both music and information of interest to Ojibwa.

Modern Ojibwa writers who have found success among their own people and the wider world are Gerald Vizenor (1934), John Rodgers, and Maude Kegg. Kegg recorded Ojibwa legends in both English and the Ojibwa language and received the National Heritage Award in 1990 from the National Foundation for the Arts for her work.

### 15 WORK

Traditionally, Ojibwa men hunted and fished throughout the year, but particularly in the winter when other food was scarce. Women also fished, but mostly they were responsible for gathering and cooking food, preparing animal skins for use as blankets and clothes, sewing the clothes, weaving mats and baskets, and caring for young children. In the summer, all Ojibwa worked in the fields growing what crops they could in the subarctic climate. Autumn was harvest time, both for the field crops and for the wild rice that grew in the watery areas throughout Ojibwa territory.

The children's job was to keep birds and other marauders away from the field crops as they ripened. Girls would stand on tall platforms in the fields and flap blankets in the air and shake gourd rattles to scare away the birds. Boys would play noisy games between the cornstalks to scare away other animals. The girls were also responsible for keeping waterfowl and other birds from eating the wild rice before the people could harvest it. They would paddle their canoes through the marshes, singing and talking loudly and slapping their paddles on the water.

Today the Ojibwa operate many businesses in their communities, including boat marinas, campgrounds, bingo halls, and hotels. They also continue to hunt, fish, and harvest wild rice.

### 16 SPORTS

Ojibwa men have played lacrosse for centuries. The games could take all day to finish, and they often got quite rough. Women played a game like field hockey called "shinny," in which they used a curved stick to move a ball made of animal hide over the other team's goal. They also played a version of lacrosse called "double-ball," played with two balls tied together.

Ojibwa children played many games, especially in the winter when there was little else for them to do. One of their favorite winter games was "snow snake." Boys would throw a stick about 6 feet (2 meters) long with a knob at one end, representing a snake (the knob was the snake's head), along a frozen path in the snow to see who could throw it the farthest. The sticks were oiled, polished, and decorated by the players to resemble snakes.

Canoe-racing has long been a favorite sport for Ojibwa of all ages.

## 17 ENTERTAINMENT AND RECREATION

The Ojibwa have always enjoyed games of skill and chance. They have turned their love of gambling into a profit-making venture today, with highly successful bingo halls located on their reservations. The Ojibwa also love to tell jokes and poke fun at each other and at outsiders.

Powwows have become a place for Ojibwa both to have fun and to promote their traditional Native North American identity. Nearly every Ojibwa community holds at least one powwow a year.

## 18 FOLK ART, CRAFTS, AND HOBBIES

Two traditional arts that can still be found among the Ojibwa today are basket-weaving and beadwork. Both are considered women's arts.

## 19 SOCIAL PROBLEMS

Ojibwa today suffer from the same cultural conflicts as other Native North Americans trying to survive in the European-dominated society while maintaining their traditional ways. On the White Earth Reservation in Minnesota, the conflict between "full-bloods" (those with pure Ojibwa lineage) and "mixed-bloods" (those whose lineage is Ojibwa mixed with other tribes and races) has been particularly fierce and long-standing. The full-bloods generally want to preserve tradition at the expense of economic development, while the mixed-bloods promote economic development at the expense of tradition.

Conflicts with European Americans over land- and water-use rights go on, both in courtrooms and on the lands and waters themselves.

## 20 GENDER ISSUES

The Ojibwa have recognized three genders: male, female, and *agokwa* or women-men. *Agokwa* were men who went to great lengths to imitate the cultural characteristics of women in Ojibwa society include imitating the female voice and the walk of women with their toes pointed slightly inward. *Agokwa* occupied themselves with female activities, such as the care and rearing of children, the production and decoration of footwear, and all of the duties of the household.

The Ojibwa women who engaged in men's occupations were not considered a separate gender like the *agokwa*. Traditional Ojibwa culture left the avenue open for any woman who wanted to shift towards male domains without requiring that she shift her gender or her sexual orientation. However, while a woman was married it was expected that she would pursue feminine occupations and roles. After divorce or the death of her husband, a woman could choose to be a "masculine woman" thereby asserting her independence. Among the Ojibwa, these women were held in high esteem as healers who had extensive medicinal knowledge.

Traditionally, the Ojibwa did not mark the passage to adulthood with any ritual or ceremony. However, when a girl has her first period she is secluded for a brief period of time and instructed in the restrictions that apply to her at this time. Menstruating women are expected to stay away from the main areas of camp, not to use men's equipment or tools, not to step over game trails, and not to eat certain parts of caribou. As

traditional hunting and camping traditions disappear among the Ojibwa, so do many of these prohibitions.

Women's work in traditional Ojibwa society is extensive. Women are responsible for setting up and breaking camp, which includes erecting the skin lodges. They also are required to pull toboggans and carry loads on their backs in moving camp. Women also prepare fires, cook meals, prepare animal hides for clothing, make clothing, care for children, snare small game, and pick berries. Since the bulk of daily subsistence and camp upkeep falls on women's shoulders, men are free to pursue hunting and fishing at their leisure.

# PÁEZ

**PRONUNCIATION:** Pã-es

**ALTERNATE NAMES:** Nasa (people)

**LOCATION:** Colombia:

**POPULATION:** 60,000 (20th century estimate)

**LANGUAGE:** Páez

**RELIGION:** Roman Catholicism; evangelical Protestantism

## 1 INTRODUCTION

The Páez Indians of Colombia, unlike their ferocious neighbors, the Pijao Indians, resisted the Spanish conquerors that arrived in the 16th century and have survived until now. One of the first to explore southwestern Colombia, where the Páez live, was Sebastián de Belalcázar, who undertook an expedition from Quito, in Ecuador, into what is today Colombia. He found many tribes there, among them the Pasto Indians in the Nariño region, who were docile and easily conquered, whereas the Pijao fought many bloody battles with the Spaniards and were eventually exterminated entirely. The Páez of the Cauca region resisted, and although decimated and impoverished, their rugged mountain retreats saved them from both complete assimilation and complete extermination.

Páez are known for their skills in the art of crafting. Their work on pottery, weaving, and baskets has received special recognition. The Páez people were estimated to number about 60,000 in the late 20th century.

## 2 LOCATION AND HOMELAND

The Páez inhabit the high mountains and plateaus of Colombia. This Amerindian tribe has inhabited southwestern Colombia for centuries, in the middle of the rugged mountain ranges, along both eastern and western slopes in the state of Cauca and high plateaus of the central range (Cordillera Central) of the .Andes Mountains, and north of the headwaters of the Magdalena River. Ethnologists think that the Páez originally migrated in an east–west direction to the territory where their descendants still live, and that by the time of the Spanish conquest they had been settled in this mountainous region of forests, crags, and rivers for about 300 years.

The eastern region is generally referred to as Tierradentro and today is, in effect, an extended reservation with widely scattered settlements, of which the main centers are Inzá and Belalcázar. These are modest settlements that are also missionary centers and include churches and church schools. At the beginning of the 20th century, some Catholic missions were founded by the Lazarist Brothers.

Regarding their subsistence, an intensive horticulture using the slash-and-burn method was commonly used in the region. A variety of crops, including manioc, maize, sweet potato, bean, as well as vegetables and tropical fruits, were basic staples in these lands. Sometimes cotton was grown in some areas. This form of horticulture, usually done by men, produced abundant food. Antillean Arawak, Chibcha, Jirajara, and Páez, among other cultures, included irrigation and even occasional terracing, evidencing a great farming development. The main crop grown by Páez people is potatoes, but they also grow non-traditional crops, such as wheat and coffee.

In 1992, the Colombian government created the Fondo Páez, the largest indigenous group in the country. Its main goal was to recuperate the ancestral agricultural knowledge as well as to promote and preserve the Páez culture. Páez community leaders work with the non-profit organization Fundacion Colombia Nuestra. The members of Fondo Páez have created a workable, sustainable, and holistic vision for their indigenous communities. Fondo Páez currently helps to process, market, and export Páez crops, such as their coffee. However, this non-government organization does not get involved in the internal decision-making process.

## 3 LANGUAGE

The Páez language is related to the language spoken by the Chibcha Indians who settled in the valleys and plateaus of the eastern range of the Andes, around the region of Santa Fé de Bogotá, which is the capital of Colombia today. Although the Chibcha language and many other related languages in the region are now extinct, the Páez still speak their own language today. It is believed that around 75,000 people speak the language.

One of the Páez names still in use is Calambás, which is a family name of a famous Páez hero and chieftain and is still used by his descendants today.

The following are some common Páez words, first in English and then in Páez language:

One/Teech  
Two/E'z  
Three/Tekh  
Man/Pihc  
Woman/U'y  
Dog/Alku

## 4 FOLKLORE

An important part of Páez folklore relates to a hero called Juan Tama, also called the Son of the Star. The legend says that one day when the Morning Star was shining, a group of Indians found a child in a gorge, which was later named the Gorge of the Star. This baby was Juan Tama, who was nursed by several women and grew up to be very strong. Eventually he married the female chief of the Huila region, Doña Maria Mendiguagua, and became chief of all the Indians. He became their teacher and showed them how to guard their land and advised them not to mix with White people.

Juan Tama appointed Calambás, a chief from Pitayó, as his administrator. Calambás proved rebellious and Juan Tama defeated him, but later Juan Tama forgave him because Calambás was so brave. Juan Tama accorded Calambás the right to rule over the Páez Indians of Vitoncó. Juan Tama, knowing that his death was near, went into the lake on the Páramo (the high, cold plateau) of Moras, where he disappeared into the water.

The name Calambás still exists today among those who claim descent from the rebel chief, and even the modern councils that exist today in the Tierradentro region appoint certain people who descend from early Páez chiefs. Lineages are still very important among the Páez.

## 5 RELIGION

Jesuits were originally given responsibility for converting the numerous tribes of southwestern Colombia. They established

some mission centers but were stubbornly resisted by the Páez. After centuries of comparatively meager results, from the missionaries' point of view, the task was taken up by the Lazarists. These missionaries began to work among the Páez in 1905. They learned the Páez language and still maintain missions among them. The result today is a rather unique blend of Páez religious customs and beliefs and important aspects of Catholicism. Currently, the Páez still retain shamans. Some Páez Indians have also become Catholic priests.

Since the 1930s there have been organized groups of evangelical Protestants among the Páez. There is a New Testament published in the Páez language.

## 6 MAJOR HOLIDAYS

The Páez celebrate several religious Catholic holidays, including Christmas and Holy Week, and they have set their own stamp on them. They have their own music and include some of their own rites. Interestingly, they do not allow the presence of a priest during some of their celebrations, although they also attend and participate in aspects of church worship in the missionary centers.

## 7 RITES OF PASSAGE

When a woman is going to give birth, she retires to her own special hut, set apart from the family hut, where she gives birth either alone or with the help of a female relative. From very early childhood, both girls and boys learn the skills appropriate for their future responsibilities by observing and imitating their parents.

Adults form their own households and live in family units distanced from other family homes, in high places among the sierras that are often lonely and of difficult access. The Páez are very independent and often dislike living in villages; they prefer to live among their own families, separated from others, and only come together on special occasions, to discuss matters related to the well-being of the tribe as a whole or to their relations with the state authorities, or during major celebrations. However, they take part in local markets held once a week where they buy, sell, or exchange produce and acquire other basic necessities.

Some of the Páez in recent years have moved into villages or small towns. Some travelers to the Páez territory have occasionally reported interesting burial practices. The presence of funeral urns and elaborately decorated burial caves found by archaeologists in the area suggests that in earlier times people were cremated and important personages were accorded splendid funerals. Since then, burial customs have changed and are even now still undergoing a slow process of adaptation and change. José Péres de Barradas, who traveled to Tierradentro in the 1940s, quotes a Dr. Burg who witnessed burial rites for a young girl:

In the Indian cemetery, the men dug a hole in the ground. Meanwhile, the women were in the house with relatives and godparents. The dead girl was lying on the ground, on some cowhides, lightly covered by a ruana (a type of cloak or poncho widely used in Colombia by Indians and non-Indians alike). The body faced east, so that the soul would see its way to heaven more easily. By her feet were laurel-wax candles, and by her head, another three candles and a bamboo cross. To her right were her necklaces,

and at her feet, all her goods, including her clothing and girdles or sashes, and some fruit including plantains, as well as some chicha to drink. Children played by the girl's side, and they were not afraid if they fell on top of her.

The girl's father prepared a bamboo barrow and the women arranged some white clothing for the girl. They combed the dead girl with great care, and because the hair was quite stiff it produced laughter among everyone, even the father. Once she was dressed and placed in the barrow, the father and godfather of the girl took her to the cemetery, followed by rest of the men and women.

The father placed the girl in the ground, lit candles and placed food and chicha (a drink made from fermented corn) at her feet, then covered her. During this time, the mourners prayed aloud. The father threw four clumps of earth with his left hand over his daughter and took his leave of her, wishing her a good journey. Then the men, and afterwards the women, did the same. It is believed that at this point the soul begins its journey to heaven. The women continued covering the buried girl with the earth, and the men completed the task, stamping on it with their feet.

Before returning to the family home, the men and women bathed fully dressed in a stream to wash out the spirit of death, and then took part in a funerary banquet. For nine days they left a cross and flowers, between two candles, where the head of the dead girl had lain. It is customary to leave a gourd filled with water in those places that were once familiar to the person, so that the wandering soul will not suffer thirst.

After one or two months, there is a new purification of the house by the shaman, who sweeps it clean with two pigs' feet and then ensures that this special broom is buried. Afterwards he chews special leaves and spits at the four walls. Then everything is ready. The shaman breaks off a piece of meat and gives it to a dog to eat. Then he does the same with a corn tortilla. If the animal is fine, this is a signal that all may eat, and this is the second funeral banquet.

This account vividly illustrates the mixture of Christian and Amerindian elements in the Páez culture.

## 8 INTERPERSONAL RELATIONS

The Páez are a reserved people, and there are quite formal greetings required in varying circumstances. A boy has to approach his godparent in a respectful manner when greeting him. A visitor or guest is given a formal "gift of affection," a custom that some think dates back to Spanish colonial times and was incorporated into the customs of the Páez. It usually takes the form of a food offering, such as a chicken or an egg, and includes some vegetables and coffee beans.

The Páez do not engage in Western-style dating as such, but their traditions include trial marriages of about a year for young people who intend to undertake formal marriage and the founding of a family. This year is called the *amaño*, or adaptation period. During this time, the young man observes the qualities of the young woman, and she also observes him.

*Páez girls in Colombia (AP Images)*

If either partner proves unsuitable, the trial marriage can be ended.

Socially, Páez families farm their own land but the fields that belong to the church are cultivated by the community. Their residences are commonly dispersed among each other's and the most common materials used to build houses are poles, mud, and stones.

Another characteristic of Páez culture is the high value that this people give to punishment as an educational tool. For instance, to whip adulterous tribal leaders along with their mistresses is a common accepted practice. In spite of the acceptance of punishment as a legitimate form of penalty, Páez people are a pacifist culture. For instance, they have refused to be part of Colombia's armed conflict, which has been going on for the past decades.

## 9 LIVING CONDITIONS

The Páez are not affected by malaria or other tropical diseases, as the Andean highlands provide a generally healthy climate, and the abundant streams and rivers provide plentiful access to clean water. There is a rainy season that can sometimes be severe and can affect the general state of health of the people. The cold, damp weather often leads to bronchial problems and tuberculosis. Babies and small children occasionally suffer from gastrointestinal problems.

At various times, the Páez were affected by a shortage of salt, which was difficult to obtain, but this is no longer the case.

The Páez, although they now have access to some health centers, still depend in many cases on their shamans, who are also medicine-men, to cure them of illnesses.

The lifestyle is simple, even spartan. The Páez today are basically relatively poor farming communities who make do with the basic necessities required for survival. Water is generally carried to homes from springs, water holes, or streams. Occasionally, a small cement tank is built near a house or settlement to which water is piped from a spring.

Traditional houses are rectangular and are constructed using basic and locally available materials. They have thatched roofs and walls of cane and sticks, although they have also adapted the more solid *bahareque* style that includes reinforcing the walls with rocks and mud amid double rows of sticks. This is attributed to Spanish influence.

As they deteriorate, the traditional houses are giving way to those with walls made of adobe blocks or bricks and with roofs of corrugated zinc or cement. Houses are generally divided into two rooms, one for sleeping and storage, and the other, the kitchen, for eating and sitting around the fire to converse and keep warm. There are no windows in mud-walled houses. More modern houses have one or two window spaces that are covered with wooden shutters during bad weather and at night. Floors are of hard-packed earth or, occasionally, of cement or wooden planks. Instead of roof gutters, a shallow ditch surrounds the house to prevent rainwater from entering.

Furnishings are sparse—wooden beds covered by a cowhide, sheepskin, or straw mat, with woolen blankets for covers; a few plain wooden chairs with the back and seat of wood or cowhide; low wooden, carved stools; and perhaps a small table. In addition, a very small rustic temporary shelter with a roof but no walls is set up in the fields where some family members stay to protect their crops at harvest time. Most homes do not have access to electricity, although it is available to some degree in municipal centers and is in the planning stages to become more widely available.

The system of house-building is cooperative: relatives and neighbors come together to help an individual family who is building a house. This system, prevalent among many communities in the Andes, is known as the *minga*. Although the main centers, such as Inzá and Belalcázar, are communal focal points, as are other communally built pueblos or villages, the majority of the Páez do not actually live there. They use these places as meeting points to buy and sell goods in the markets and to exchange news or to discuss communal matters, after which they withdraw to their own family homes, separated from others.

When the Páez have to travel outside the reservation on communal business or, in some cases, for the purposes of trade, they will use buses. Locally, some pack animals, such as mules or horses are used, and on many occasions the Páez travel on foot.

## 10 FAMILY LIFE

The Spanish chroniclers who gave us the earliest descriptions of the Páez and other groups reported that there were not only male but also female chiefs, indicating that in some communities the women not only occupied important leadership positions, but that the communities were also matrilineal. The chroniclers also reported that in southwestern Colombia many women went to war alongside the men.

Today, the Páez family unit places definite and, in some cases, nearly absolute authority in the hands of the father, whose wishes and commands must be obeyed by his wife and children. Families often include more children than the typical Western household of parents with two or three children; this is also true of many Colombian households generally. Small children are shown affection and given much freedom in how they behave, until the age of six or seven when they are expected to act with more restraint.

Marriage customs blend both Spanish and Páez cultures. Usually either the boy or his parents select a prospective bride and visit her family home in the company of the boy's godparents or *compadres* and ask for her hand in marriage. If the girl's parents consent, the father is first offered a half-bottle of *aguardiente* (a drink made from fermented sugarcane), and subsequently the mother is offered another half-bottle. The boy and his family then take the girl to his home to begin the year of trial marriage. If all goes well, the couple is then usually married in the Catholic Church, and the wedding feast, which includes a hearty banquet and music (usually flutes and drums), lasts for several days.

The Páez keep a variety of pets and farm animals, including dogs, hens, ducks, and turkeys, as well as pigs, and some horses, cows, and sheep.

## 11 CLOTHING

The cool weather of the Andes mountains has produced some practical and warm clothing, especially the ruana, a type of woolen cloak or poncho worn, with local variants, in many areas of the highlands. Wool is sheared and processed by the women, then it is spun into thread for weaving ponchos and skirts on hand looms braced against the outside wall of the house. While walking along the trails or resting from other work, it is common for women to spin wool or cotton yarn, holding the loose ball of wool or cotton in one hand and the simple spindle in the other, or to weave carrying bags by threading long string through loops in the bag. Women are seldom idle. Currently, many women buy ready-made clothing or make blouses or skirts if a treadle sewing machine is available. Some men learn to sew trousers.

A woman's traditional dress consists of two pieces: a heavy woolen skirt (called *anacus*) pleated at the back and held up by a woven sash (*chumbe*) and a blouse that is a single rectangular piece of wool cloth fastened at one shoulder. The wool was traditionally woven on a simple loom made of two upright and two horizontal poles. The process—from shearing sheep, cleaning and carding the wool, and spinning the thread, through the weaving—took much time. Now it is more common for women to wear a cotton blouse and a skirt that falls below the knees. They wear necklaces of 8–10 strands of tiny, hard, white beads.

Young girls wear a simple one-piece dress; young boys wear a long shirt and when away from home, short pants. Mature men and women wear a plastic, straw, or felt hat (even inside the house). Younger people are less apt to do so now, though baseball caps are popular.

Because of the cold, everyone usually carries or wears a poncho. Ready-made sweaters and jackets are now common as well. Women wear tennis shoes, plastic sandals, or low shoes. Men often wear rubber or plastic boots. Children often go barefoot until they go to school.

## 12 FOOD

The basic diet of the Páez includes potatoes and corn as well as other vegetables that grow in the Andes, including *arracacha* and cassava, beans, and fruits. For special occasions, rich stews with vegetables and potatoes as well as chickens or roasted meats are cooked. Food is cooked either over a wood fire in the center of the kitchen floor, with pots balanced on three stones, or on a dried mud or brick stove on a raised platform by a wall, with a trough for the firewood and several holes in the top large enough to support a cooking pot. The food for large gatherings is cooked in heavy, shallow metal pots large enough to hold food for up to 100 people. While cooking, the food is stirred with large wooden spoons that have bowls about 10 cm to 15 cm (4–6 in) long and 2.5 cm (1 in) deep, and handles 50 cm to 75 cm (20–30 in) long. Plates, bowls, and cups are usually made of enamelware, and food is eaten with enamelware or wooden spoons.

A traditional Páez breakfast is hearty and provides the main meal of the day until dinnertime. It is called *mute* (pronounced “moo-the”) and is really a soup of boiled cabbage, corn, potatoes, and squash. During the day, the Páez drink fruit juices in their natural state or fermented as *guarapo*.

Because there are times of scarcity, the Páez learn early to endure hunger while working hard on difficult terrain in their fields, which are cultivated without machinery.

### 13 EDUCATION

Traditionally, the Páez have resisted education for girls in the mission schools (formerly it was thought that they did not need education for their duties at home), but in the last few decades a process is slowly going forward in the villages where schooling, at least at the primary level, is offered to both girls and boys. Under pressure from the Páez communities themselves, more schools are now bilingual, whereas the custom had been for teachers to teach only in Spanish, and children were not allowed to use their own language in class or at play. The result was that few learned to read with understanding. Bilingual education is being encouraged now by some communities and churches. Previously this has meant merely having a bilingual teacher's aide help monolingual Páez-speaking children, but now, along with Spanish, there is more interest in teaching children to read in their mother tongue.

Children attend primary school from first through third grades, sometimes through sixth grade. Young people who aspire to a secondary education may go to a regional center or larger non-Páez town where they rent lodging, usually with family acquaintances or relatives. Some have earned diplomas through a high-school-by-radio program where the material is dictated over the radio and exams can be taken in a regional area or the state capital. Either way, a high school education is not altogether free, and if parents cannot afford to pay, the student usually finds work to cover expenses while studying. When farm activities require their help, children often skip school.

### 14 CULTURAL HERITAGE

The Páez have musical instruments that include short and long flutes (*chirimías*) as well as drums made from hollowed-out tree trunks and animal skins, and they play their music during all special occasions as well as during religious celebrations. Many Páez Indians play the flute. Their music can be melancholy, with something of their reserve and love of solitude in it. Their strong attachment to their music has meant that even in the churches of their villages it prevails, since the Páez never accepted the traditional Gregorian music of the Catholic Church.

Some of their music today has incorporated popular elements of Colombian folk tunes prevalent in the Andes, which are a blend of Amerindian and Spanish courtly music, such as the *bambuco*. This music has a gentleness and a sweetness that does not reflect the earlier, warlike reputation of the Páez feared by the early Spanish conquerors and settlers. Guitars are now very popular with young men.

Dances have been an important form of expression for the Páez, and early reports of the Páez include descriptions of a wide range of dances that formed part of all major ceremonies, including the dance known as the *Itsa kó*, which celebrated a girl's coming of age. Earlier songs also celebrated the feats and deeds of warriors, but they have not survived.

### 15 WORK

The Páez today are mainly farming communities. The land is owned communally by the different communities, and the In-

dian council, or *cabildo*, assigns some land for each individual's use. Some tasks must be undertaken communally, and free work days must also be given by each Páez farmer for collective planting as well as for road- or bridge-building and work in the villages.

Since travel in this rocky and mountainous terrain, full of rivers and torrents as well as canyons, is often difficult, the Páez were traditionally proficient bridge-builders, using local materials to allow for passage on foot. The bridges were flexible and made of cane and vines, and some of these traditional bridges are still constructed and regularly repaired today. As the traditional bridges fall into disrepair, new ones are being constructed with steel and cement to accommodate motor vehicles. There are also some unusual bridges covered with thatched roofs, built out of strong logs with supporting stones and sticks, and with floors of wooden boards. They are practical and sturdy and can support the passage of loaded pack animals such as mules, which are often used in the highlands because they are so sure-footed.

Weaving is exclusively done by women, and the husband must obtain the wife's permission to sell any goods she has made. Men and women cultivate plots together.

Many families have their own press for rendering sugarcane stalks into liquid form by pressing them between heavy wooden cylinders that are anchored close together in a straight line. The outside wheels go clockwise while the center one moves counterclockwise. Fastened to the press is a long pole that is tied at one end to a horse or mule who moves in a circle, forcing out the liquid. This is collected below the press. The juice is cooked in large cauldrons over an open wood fire outdoors. After the hot liquid is run through a sieve, it is poured into molds and allowed to harden into blocks of brown sugar. Some of the fresh-squeezed cane juice may be poured into a hollowed-out section of a wooden tree trunk set horizontally on the floor, where it is left to ferment somewhat before being drunk.

### 16 SPORTS

Although some ball games were introduced at the mission schools for the Páez, traditionally sports did not play a significant role in their lives. They mainly practiced a sport that was a type of war game. There were two teams, each led by a chief. The teams attacked each other with bows and arrows, and even if there were deaths, apparently they were accepted stoically and not resented. This war game was performed as a rite to honor the dead after a community feast and is not practiced today. Some young people today are not even familiar with this piece of their history.

Soccer is a very popular sport among young men, and teams compete on Sunday afternoons.

### 17 ENTERTAINMENT AND RECREATION

Aside from important religious or communal celebrations or major family events, such as weddings, the Páez sometimes make a special occasion out of market days. Many villages hold particular markets days, and after the buying and selling has taken place, the Páez enjoy drinking and chatting with their friends and *compadres*.

Priests who visit some communal pueblos on the eve of a particular feast day are greeted with much fanfare, even with fireworks and rockets, as well as a *chirimía* orchestra of flutes and drums. The community leads the priest to the church and

takes generous food offerings there. The church is then decorated with candles and flowers. After Vespers, a celebration continues outside by the church door, and the people play music and dance all night. Some travelers who have witnessed these evening festivities have commented on the decorum and reserved behavior of the Páez, even on these occasions, describing a dignified style of dancing where they never touch each other and dance in a very orderly fashion.

Children play and entertain toddlers with whatever they find at hand—sticks, string, or discarded household items. Little girls roll a corn cob in an old cloth then tie it on their backs in the way their mothers carry babies and toddlers. Small transistor radios, cassette players, or “boom boxes” are carried everywhere for pleasure and as status symbols.

### 18 FOLK ART, CRAFTS, AND HOBBIES

Páez crafts formerly included pottery, weaving, and basket-making. Weaving is becoming a lost art. Older women continue to weave long colorful sashes with geometric designs and stylized figures of birds, animals, or persons with red wool yarn on a white cotton background. They find that their daughters do not want to learn to do this anymore. The belts are used as sashes for their skirts and for tying babies and small children in a cloth on their backs when they are walking or rocking the baby to sleep. Young children, both boys and girls, often carry the babies and entertain them while their mothers are occupied with their work.

The Páez also make jewelry, such as beaded necklaces. There is gold in this area, and metalwork is a traditional craft in southwestern Colombia. Earlier jewelry included nose-rings and breastplates, but today inexpensive earrings are popular among Páez women, as well as barrettes to hold their long hair in place.

### 19 SOCIAL PROBLEMS

Colombia's social and political problems have affected the Páez communities. Guerrillas have waged war for many years in Colombia, and the Páez have sometimes suffered at their hands. In addition, there have been incursions by drug barons and actions by some police forces. In December of 1991 a group of Páez Indians, including women and children, were massacred as they sat down to their evening meal. It is thought that the killers were either working for a local landowner trying to drive the Indians out of the region, or were working on behalf of drug dealers or even the police.

The required one-year military service for 18-year-old males in the country is waived for the indigenous people, although a few Páez young men choose to enter the military to experience life in the world outside their communities.

Although the Páez have lived in this area for centuries, and additionally have had land grants dating back to colonial times, the struggle for land has always existed, and at various times local landowners have tried to drive them out. Father Alvaro Ulcué, a Páez Indian who became a Catholic priest, played a role in defending Indian rights and was murdered on his way to a baptism in 1984. Other human rights activists who have acted on behalf of the Páez have also been killed.

Today, the Páez are active in the council of Indian communities of the Cauca region, and the Amerindian groups in Colombia have congressional representation, but the struggle for a decent life with a sufficient degree of autonomy continues.

During the last years, Páez tribes have blocked the principal highways that connect Bogota with Ecuador in order to pressure the Colombian government to recover their ancestral lands.

### 20 GENDER ISSUES

Even though the father has nearly absolute authority in a Páez family, the Spaniards found at their arrival that the Páez had not only male chiefs, but also female chiefs. A famous female chief was

With the escalation of conflict in Colombia, indigenous peoples came together to create the Asociación de Cabildos Indígenas del Norte del Cauca (association of indigenous governing councils of North Cauca, ACIN), led by Páez women, who are playing a key role in denouncing human rights abuses in the country such as rape, kidnappings, and killings. In the spring of 2001, ACIN and other Indigenous organizations, fed up with violence, staged a massive peace-and-protest march. Some 30,000 people walked from Santander de Quilichao to the neighboring city of Cali, Colombia's third largest city to denounce human rights abuses.

# PAIUTES

**ALTERNATE NAMES:** Snakes (Northern Paiutes)

**LOCATION:** United States (Northern Paiutes: Oregon; Southern Paiutes: along the Colorado River; Nevada; California; Utah)

**POPULATION:** 13,532 (2000 census)

**LANGUAGE:** English; various dialects of Paiute

**RELIGION:** Elements of Christianity and Mormonism; traditional Paiute

**RELATED ARTICLES:** Vol. 2: Native North Americans

## <sup>1</sup> INTRODUCTION

Paiutes are often thought of as one group of people, but this is incorrect. Just as the other Tribal groups or Nations, the Paiutes are as diverse as the environment they occupy. The Northern Paiutes mainly occupy the Great Basin Region of the United States. The Great Basin includes the western states of Oregon, Nevada, Idaho, and parts of Utah. The Southern Paiutes occupy the southern portions of Nevada, California, and Utah. Linguistically speaking, the Paiutes belong to the Uto-Aztecan language family, which includes the Shoshone, Hopi, and other Tribal groups in Northern Mexico. Broken down further, the Paiutes are of the Shoshonean Family Stock, specifically, the Numic branch. Aside of the language similarities, there are major differences in cultural material (which depends on the type of environment), religious practices, subsistence patterns, and social practices.

The main sub-groups of Paiutes within the states of Oregon, Idaho, Nevada, Utah, and Southern California are:

GROUP	STATE	ENVIRONMENT
N. Paiute	Coleville, California	Mountains
N. Paiute	Fallon, Nevada/Stillwater area	Desert and marsh
N. Paiute	Fort McDermitt, Nevada	Desert and mountains
N. Paiute	Honey Lake, California	Lake
S. Paiute	Las Vegas, Nevada	Desert
S. Paiute	Lovelock, Nevada	Desert
S. Paiute	Moapa, Nevada	Desert
N. Paiute	Pyramid Lake, Nevada	Desert lake
N. Paiute	Susanville, California	Mountains
N. Paiute	Walker River, Nevada	Desert lake
N. Paiute	Warm Springs, Oregon	Mountains
N. Paiute	Winnemucca/Summit Lake, Nevada	Desert/lake/mountains

Because of the desert environment, the Great Basin Paiutes were broken down into smaller groups or “bands.” Bands usually consisted of family units that would include the nuclear family (father, mother, child[ren]) and could include what is considered the extended family—grandparents, uncles, aunts, and cousins. These bands subsisted on the land in a purposeful, non-wasteful, seasonal pattern. The land sustained food items, cultural materials, and shelter. Because the bands had cyclical hunting, fishing, water spots (for drinking and personal hygiene), and gathering food crops such as pinenuts and chokecherries, they did not stay in areas long enough to exhaust their supplies totally. In times of hardship (and as pre-

vention), bands often had “caches” (stores of food, usually hidden in caves).

Each group or band had regular routes to hunt, fish, and gather. Depending on the environment, Northern and Southern bands of Paiutes hunted the following: small game animals—jack rabbit, cottontails, beaver, badgers, and groundhog; fowl—mallard duck, geese, quail, mudhens and sagehens; and large game hunted—deer, big horn sheep, antelope, and even bear at times. Many bands have traditional fishing areas that are their traditional homeland or base area. Pyramid Lake had a multitude of people fishing for cutthroat trout, rainbow trout, perch, and *Kui-ui* (cui-ui is a prehistoric sucker fish found only at Pyramid Lake). Vegetation gathered were seeds, such as pinenuts, sunflower, and cattails, and berries that included buck and chokecherries.

Encroachment on traditional Northern Paiute lands began with the fur trappers in the early 1800s. Beaver was plentiful in the river areas, and the trappers followed the rivers to cash in on the pelts. Organized groups were sent into the Nevada rivers; the first recorded trapper was Jedediah Smith in 1827. Later, in 1828, the Hudson Bay Company dispatched Peter Skene Ogden. Ogden ran across a group of Indians believed to be Northern Paiutes in southern Oregon. He tried to capture some, and they told him about the Humbolt River, which was plentiful in beaver.

The first groups of fur trappers did not really have any skirmishes with the Paiutes. The general impression of the bands by the whites was that they were poor and living a scarce existence. Many of the trappers found the indigenous people to be quite peaceful. But that soon ended with a group headed by Joseph Walker. Walker held contempt for the Native people. As his first party crossed into Northern Paiute territory in 1833, the group of forty-three, which had a large herd of cattle, traveled through the Humbolt Sink area. As Walker ran across Indians between 1833 and 1843, he began systematically killing the Native People as he traveled through Nevada. In the end, his group was responsible for killing approximately 100 Indians. As a response to this reign of terror, the indigenous people began distrusting all white people who had crossed their lands and began taking action before the whites could. Many Indians stole livestock from the “trespassers.” They felt this was justified, as the whites did not respect the land, nor did they know the weather patterns of the area. The Donner Party incident (a group of settlers trapped in the mountains during the winter resorted to cannibalism to stay alive) led the Native People to believe the whites were strange and cannibals. The Donner Party and the Mexican War helped stop some travel across Nevada up until 1847. Unfortunately, the gold rush of 1848 caused many Native People to be displaced from their homelands, as well as to deviate from their subsistence patterns. Virginia City hosted a small discovery of gold; the major mineral found was silver. The Virginia City range was traditionally a pine nut gathering area; thus, many Indian people had to adopt non-Native foods in order to live. As a result of the shift in subsistence patterns, Native People had to obtain jobs in order to survive. Many were employed as ranch hands, laundry and cleaning helpers, and the like.

The Paiutes probably spread from what is now southern California into the western part of their new territory—eventually stretching from southern Nevada and California to north-central Arizona and southern Utah—sometime around AD 1000.

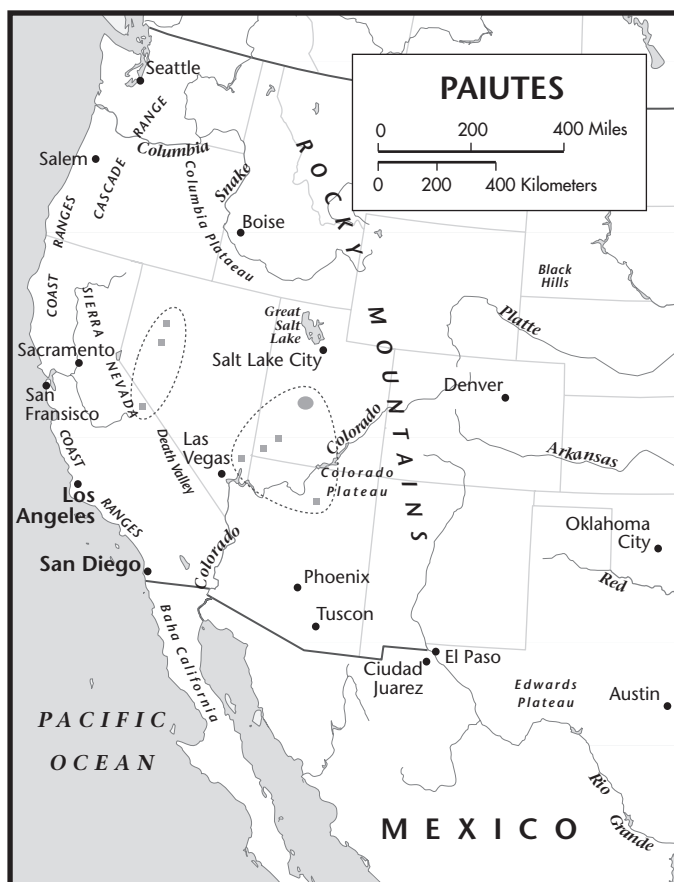

At some point they split into two bands, one going north and the other remaining in the south. The Northern Paiutes, also known as the Snake Indians or Paviotso, were a more militant people than their southern relatives. After the Northern Paiute or Snake War (1866-68), fought between the Northern Paiutes and the U.S. Army, the Northern Paiutes were imprisoned at various forts and reservations and were eventually forcibly resettled on those reservations.

The first contact the Southern Paiutes had with Europeans was with Spanish explorers in the early 1600s. The Spanish lumped the Southern Paiutes together with the related Ute tribe and called them *Yutas*. (The name of the state of Utah is derived from this word.) The Utes called the Paiutes *Payuch*, and the Paiutes called themselves *Payuts*. The Utes and Paiutes speak dialects of the same language and had very similar lifestyles until the Utes acquired horses from the Spanish and adopted the ways of the Great Plains tribes as horse-mounted buffalo hunters. The Paiutes were less inclined to interact with Europeans and so did not acquire as many horses nor learn to use them as extensively as the Utes did. The Utes, Shoshone, and Northern and Southern Paiutes were probably all one people at first, who then split up and developed into distinct tribes. The respective dialects of their original unified language remain similar enough that they can understand one another even today.

The Southern Paiutes supported the Pueblos in their revolt against the Spanish in 1680. Although they had long been enemies with the Hopi in their struggle for territory, the Southern Paiutes had even less regard for the Spanish and sided with the Hopi in their continued efforts to resist Spanish conquest in the years after the Pueblo Revolt. Because of this, the Spanish left the Southern Paiutes alone for the next 100 years or so. The Utes, however, had established good relations with the Spanish and frequently raided Southern Paiute camps for goods and slaves to sell to the Spanish. Many Southern Paiute women and children ended up in Spanish hands through Ute slave raids. The Mexicans continued the slave trade after becoming independent of Spain in 1821. At the height of the slave trade in the 1850s, Native North American slaves brought \$100 to \$400 each.

Paiute lands were never colonized, but many trade and travel routes were opened up across their territory. For the most part, the Southern Paiutes tried to stay out of the way of Europeans and European Americans, and their traditional way of life was not greatly impacted until the 1850–60s. When European Americans first began traveling across Paiute territory in the 1830s and '40s, they described the Southern Paiutes they encountered as completely uncivilized savages—"lizard eaters" and "diggers" (referring to the Paiute method of digging roots for food). Some European Americans even saw them as less than human, portraying the Paiutes as animals in their accounts of their travels. This image of the Southern Paiutes was to remain with them (as much as a century or more) seriously affecting their relations with European America.

The Southern Paiutes were mostly a shy people, avoiding contact with strangers as much as possible. This became difficult as more and more strangers began to pass through their lands. When gold was discovered in California in 1848, swarms of European Americans crossed Paiute territory in pursuit of riches. These gold rushers often shot at the Paiutes and stole food from their fields. The Southern Paiutes rarely fought back

and never initiated any attacks on European Americans. They would occasionally take European Americans' cattle that they believed were trespassing on their lands.

In 1847, another group of European Americans arrived in Paiute territory, this time to settle there. Brigham Young led the Mormons (Church of Jesus Christ of Latter Day Saints) to Great Salt Lake in present-day Utah to establish a community of believers. By 1849, the Mormons were expanding into Southern Paiute lands. The Southern Paiutes took the Mormons' trespassing cattle as well, but they also hesitantly welcomed the Mormons' protection from gold rushers and slave raiders. The Mormons believed in establishing friendly relations with the Native North Americans they met, and they were grateful for the Southern Paiutes' help in setting up their colonies. The Southern Paiutes helped the Mormons build houses, prepare fields for farming, and even washed their clothes. Unfortunately, the Mormons also brought disease to the Southern Paiutes, diseases for which the Paiutes had no immunities or known treatments. Epidemics of cholera, scarlet fever, whooping cough, measles, mumps, tuberculosis, and diphtheria killed hundreds of Southern Paiutes who were infected either by direct contact or through the water supply. By the mid-1870s, the Southern Paiutes had probably lost three-fourths (75%) of their population.

During the late 1850-60s, the Paiutes showed European Americans many mines in their territory that they had been working to a small extent for much of their history. The European Americans subsequently took over the mines and forced the Paiutes off their lands. The Paiutes became ghettoized serfs,

treated basically as slaves by the European Americans. By the 1870s, the Mormons no longer needed the Paiutes' help, so the Paiutes' last refuge was gone and they became landless and destitute. The U.S. government set up a small reservation for the Paiutes on worthless land in the late 1870s, but only a few Southern Paiutes moved there. Other small reservations were established for different Paiute bands during the late 19th and early 20th centuries, but for the most part, the Paiutes were neglected and shunted around by the government and European American settlers through the first half of the 20th century. In 1957, the U.S. government "terminated" the Utah Paiutes under the Termination policy (which means the government rescinded the Paiutes' recognition as Native North Americans eligible for government services), even though the Utah Paiutes did not meet the government's own standards for tribes eligible for termination. The Southern Paiutes were already impoverished and without the resources to improve their conditions. Once terminated and ineligible for government aid, they suffered severe hardships for many years. Some relief came when the Paiutes won a court case filed through the Indian Claims Commission for over \$7 million in payment for lands taken unjustly. Finally, in 1980 the Southern Paiutes were restored to recognition as a Native North American tribe by the U.S. government and once again became eligible for government services and relief programs. Their living conditions are slowly improving.

## 2 LOCATION AND HOMELAND

There are approximately nine Northern Paiute Bands/Tribes located within the northwest portion of Nevada. The Fort McDermitt Reservation is located near the Oregon-Nevada border and was developed into a reservation in 1889 by Executive Order. Prior to the opening of the reservation, the former military post consisted of 3,945.6 acres, which was originally opened to the general public for settlement. The Pyramid Lake Reservation was also established by Executive Order on 23 March 1874. The Act of 18 May 1916 established the Yerington Reservation. And a year later, 9,456 acres of land was purchased to begin the Yerington Colony (colonies are "Indian lands" within a city). The Reno-Sparks Colony began when twenty acres of land was purchased in 1917 from two individuals. The Reno-Sparks Colony is unique, as its membership consists of Washo, Shoshone, and Paiute people. Reno was a central place for many people to live, but the whites viewed the people as homeless people, as they camped along the riverbanks. The Lovelock Colony existed early, but the Tribal Government was not established until it adopted the Indian Reorganization Act Constitution and By-laws on 14 March 1968.

The Southern Paiutes today live in several communities along the Colorado River. The western communities include the Las Vegas, Pahump, and Moapa bands of Nevada, and the Chemehuevi band of California. This western territory is made up of mountain ranges and basin area with scrubby creosote bushes, mesquite, and piñon pines. Bighorn sheep, antelope, rabbits, lizards, and desert tortoises are among the common wildlife found there. The eastern communities, including the five bands of the Paiute Indian Tribe of Utah, the Kaibab Tribe, and the San Juan Paiute Tribe, live in a region of high plateaus and deep canyons. At high elevations, fir, spruce, and aspen trees grow. Low elevations are covered with ponderosa pines, piñon pines, juniper, sage, and grasslands. Agave and small

cacti grow in the canyon bottoms, and the streams and rivers that cut through the region create narrow green oases with an abundance of wildlife.

Paiute populations were decimated by European diseases beginning in the 1840–50s. Not until the 1930–50s did the Paiutes begin to have more births than deaths in a year. After 1950, their population began to increase slowly. According to the 2000 U.S. Census, today's Paiute population is around 13,500.

## 3 LANGUAGE

The Northern and Southern Paiutes speak dialects of the Uto-Aztec family of Native North American languages. Though their dialects are distinct in the Northern and Southern regions, the Northern Paiutes (Pyramid Lake, Fallon, Walker River, Lovelock, Reno-Sparks [which have many members directly from Pyramid Lake], etc.) can understand each other fairly well. However, the Southern Paiutes and Northern Paiutes have some translation difficulties, as many of the groups have adopted other native terminology of their particular outer perimeter or territory.

Because of legislature to terminate Indian Tribes and establishment of government boarding schools, many of the Northern and Southern Paiutes do not have their languages intact, particularly those who live near cities or metropolitan areas.

Through bilingual education programs and special grants, many of the tribes have taken advantage of funds in order to revitalize their language. Fort McDermitt has taken an aggressive measure to ensure the longevity and viability of tribal language. Videotapes have been developed in fluent Paiute (the McDermitt dialect) in order to preserve and teach. Traditional and contemporary activities are recorded and documented for today's and future generation(s). To count from one to ten, the Northern Paiutes say:

NORTHERN PAIUTE TERM	ENGLISH TRANSLATION
simi'yu	One
waha'yu	Two
paha'yu	Three
watsikwi'yu	Four
manigi'yu	Five
naapahi'yu	Six
natakwatsikwi'yu	Seven
simidadu'upi	Eight
simidadu'upi (Pyramid Lake)	Nine
siukadu'upi	Nine
siimano'yu	Ten

To count from one to ten in Southern Paiute, say: *soo'ee, wai, pai, wachuhng'wee, munuh'kee* ("all," meaning all five fingers of one hand), *navai', navaik'uvawt* ("over six"), *wa'ong' wachuhng'wee* ("two fours"), *soowaw' toaho' mawsoo' weinee* ("nearly all the fingers"), *toaho mawsoo' weinee* ("all the fingers").

All Paiutes speak dialects of the Numic branch of the Uto-Aztec family of Native North American languages. Though their dialects are distinct, they are able to understand one another fairly well. English has become the common language of today's Paiutes, but many still speak their native tongue. Some phrases in Southern Paiute are:

uhdu' vuhts	That's the way it is
mai'nuhgwaik	That's what I said
ai'u whaihump	It's all right
mud'u awvawn' kawduh'vungwu	Don't sit on that
one	
ai'nekai	Be quiet
kunchuh'eets pono'ai	armpit odor

Northern and Southern Paiutes were often named after physical or behavioral characteristics in early childhood. These names generally remain for one's entire life. They are not embarrassed by these names as they understand the naming conventions, and they fit with the Paiute sense of humor. Some Paiutes are given new names later in life for a significant achievement or action, but even great chiefs and well-respected elders often still go by their childhood names. Examples of Southern Paiute names are Quee tus (Burning Fire), La wa wi (Chipmunk), Mai-mi eno (Waving Hands), and Sang a nim (Wind Blows The Sand).

#### 4 FOLKLORE

Traditionally, much of the Northern and Southern Paiute storytelling happened in the winter months when the pace of life slowed, and there was not so much work to be done. Some stories could only be told during the winter because at other times of the year, bears and rattlesnakes were awake and might hear the story and come and bite the storyteller.

Stories were not solely for entertainment purposes; they also served to teach morality. In Northern and Southern Paiutes, Coyote (*Itsa*) was constantly getting into predicaments. He always thought of himself as an extremely handsome individual, yet when he saw himself in reflections, he was scared at the hideous creature that looked at him. He was lazy and always tried to get out of work. He also tried to marry his own daughters. He is cited as the one that *Numanah*, "Creator of All Things" entrusted to deliver people to a designated location. (The People or *Numa*, were to be transported in a pine-pitched covered water jug, and *Itsa* was given strict instructions *not* to open the plug. But he did and tried to place the plug back on. Most of the people got out [in California] and by the time *Itsa* reached Nevada, only a few chubby Indians who weren't able to get out actually made it. That's why Nevada doesn't have a lot of Indian people!)

#### 5 RELIGION

The Northern and Southern Paiutes believe there is one most powerful spirit, known to the Northern Paiutes as *Numanah*; the Southern Paiutes call this spirit *Thuwipu Unipugant* ("One Who Made The Earth"). The sun is the most visible representation of *Thuwipu Unipugant*. The Paiutes traditionally prayed to the sun every morning, and sometimes at noon and at sunset. Ceremonies to honor the spirits of the world were conducted by a *puagant* (One Who Has Sacred Power). *Puagants* had specific animal spirits as helpers, and often kept a live representative as an assistant.

The Ghost Dance Religion was first started in 1869 by a Paiute mystic named Wodziwob, although it failed to take hold among the population. In 1888–90, another Paiute, Wovoka (known as Jack Wilson to European Americans; c.1856–1932), revived the Ghost Dance Religion, preaching that all deceased Native North Americans would return to life, and the balance

of power would once again shift from European Americans to Native North Americans. The Ghost Dance was performed to call back the deceased to life. The Ghost Dance Religion incorporated elements of traditional Paiute religion, such as the Round Dance. This time, the Ghost Dance Religion spread rapidly among western Native North American tribes, especially in the Great Plains. The U.S. government and European American citizens felt threatened by Ghost Dance teachings, however, and sought to suppress the religion (even though the religion taught that this shift in power was inevitable and did not preach any form of violence to initiate the shift). Tensions built up until 1890, when the U.S. Army massacred hundreds of Sioux at Wounded Knee Creek in South Dakota (see **Dakota and Lakota**). The Ghost Dance Religion declined rapidly after that, although it is occasionally revived by isolated groups even today.

Christian and Mormon religious elements have been adopted over the last century by the Paiutes. Since the 1960s, most San Juan Paiutes have become members of the Full Gospel church, a Pentecostal Protestant denomination. Although members of the Full Gospel Church, however, they continue to combine traditional Paiute beliefs with their new Christian faith.

Revitalization of Native American beliefs or concepts have been readily adopted by tribes whose religious infrastructure has been dismantled. Ceremonies such as the Sun Dance of the Plains Tribes have been accepted into both Northern and Southern Paiutes belief systems. Many believe this was a result of a cultural exchange when the Sioux of South Dakota adopted the Ghost Dance of 1888–90 (Wovoka, from Mason Valley, Nevada). Other adaptations have also been indicative of cultural beliefs. For example, the people of Pyramid Lake used the sweat lodge as a method of personal hygiene and cleansing. It has now been modified to incorporate religious ceremonies, such as prayers and songs to bring in spirits or communicate with the Creator.

#### 6 MAJOR HOLIDAYS

Tribal holidays are designated by the Tribal Councils. The National Indian Day holiday is usually held on the last Friday in September to promote Tribal Pride and individual awareness of the tribe's cultural background.

#### 7 RITES OF PASSAGE

The three most important times in a Paiute's life were traditionally considered to be puberty, the birth of a first child, and death. A four-day ceremony marked a girl's first menstruation. Her relatives built her a special house away from the rest of the camp and painted the girl's face, hair, and scalp with white clay or red ochre. Every morning, the girl ran to the east before the sun rose (sometimes she also ran to the west at sunset). She followed certain taboos concerning food (she could eat no meat or salt), drink, and touching herself, and was given hard labor to do, such as gathering wood. Every night the girl slept on a "hot bed" made by digging a shallow pit and filling it with warm coals, then covering the coals with earth. At the end of the four days, the girl—now a woman—was fed a small animal's liver wrapped in medicinal plants. Her relatives washed her hair and singed the ends of it, and burnt her old clothes. This puberty ceremony had two purposes: to help the girl grow up strong and healthy with the power gained through the spir-

itual rituals; and to teach her that she is no longer a child but now has adult responsibilities.

Boys marked puberty with hunting taboos that they then followed until they reached marriageable age (in their mid- to late-teens). Neither the boy nor his mother, father, or any girl or woman who was fertile could eat any game he killed. He gave any meat he brought home from the hunt to the old people in the community. Once he reached marriageable age, his elder relatives washed and singed his hair, painted his head with red ochre, and lifted the hunting taboos.

At the birth of their first child, both husband and wife followed taboos concerning food, drink, and touching themselves that were similar to those placed on girls at their first menstruation. The husband also ran to the east each morning before the sun rose.

When a death happened in the family, the Northern Paiutes typically burned the *kah-nee* (house), until they occupied government housing. Then the Northern Paiutes adapted and began changing around the room, which included new paint, so that the spirit of the person who died would move on to the next world. It is believed that personal items are to be buried with the individual, including food, water and tools for the journey. The Northern Paiutes didn't believe in Hell; however, if a person was bad in life, he or she would have an uneasy afterlife.

Among Southern Paiutes a corpse's face was painted with red ochre, or the body was wrapped in buckskin and then buried or cremated. The body was often buried in the house where the person died. The house was then sometimes burned. Whether or not the deceased was buried there, the house where he or she died was always abandoned. The deceased's belongings were burned and her or his horses and dogs were killed. Sometimes a child or other relative of the deceased was also killed to keep the deceased company in the next world. Mourners singed their hair and did not eat meat or salt for four days after the funeral.

In the late 19th century, the Paiutes adopted the Cry Ceremony from their Mojave neighbors. At first it was conducted separately from the traditional Paiute funeral rites, but it eventually became a regular part of the funeral ceremony. In the Cry Ceremony, singers chant songs from evening until dawn for one or more nights to help guide the spirit of the deceased to his or her dwelling place in the next world. Each song is part of one of several song cycles, such as the Salt song cycle or the Bird song cycle. Between times of singing, friends and relatives give speeches about the deceased. Paiutes today still perform the Cry Ceremony.

## 8 INTERPERSONAL RELATIONS

Prior to the arrival of the whites, the Northern Paiutes grouped in bands. These bands were family units that consisted of a father, mother, their offspring, a sister to the mother (which also could be the man's second wife), aunts, uncles, and grandparents. The bands were relatively small in order to sustain life in a harsh desert environment. A Head man or Head woman led the groups to carry out specific tasks. For example, a rabbit Head person would lead the rabbit drive. This person would have special skills in capturing/hunting the rabbits. They might conduct special prayers prior to the activity and request special blessings from the *Numanah*, "Creator of All Things."

Other individuals had special talents/skills in seasonal gathering and other tasks.

Early Southern Paiute communities were led by chiefs called *niavis*. The *niavi* was always male and was usually succeeded by a male family member (often a son). Women had other leadership positions in the community and took part in all community meetings. The community council was made up of all adults, male and female, and made all the decisions concerning community affairs. The *niavi* could make suggestions, but he could not make a decision on behalf of the larger community. He must instead always carry out what the council decided. One of the *niavi*'s most important functions was to give a speech every morning in which he informed the community of the plans for that day and encouraged the people to live in harmony with one another.

Today, the Northern and Southern Paiutes have elected Tribal Representatives who make up the Tribal Councils. These individuals are elected by the Tribal membership and serve one- to four-year terms. Within Nevada, each of the twelve Tribal groups in the state belongs to the Inter-Tribal Council of Nevada, Inc. (ITCN). ITCN was first incorporated in 1963, and the intent of the Inter-Tribal Council was to act as a political vehicle or voice for the Nevada Tribes. Each Tribal Chairperson is a member of the Executive Board, with an annual paid membership of \$250. The Executive Board oversees programs such as the Head Start Program (pre-school education designed to target high-risk families); Women's, Infants, and Children (WIC); Job Training Partnership Act (JTPA); Elders Program (Title X); and the Child Care Development Block Grant (CDBG), to name a few. These programs are intended to help build stronger Native American families and raise the living standards of Indian people as a whole.

## 9 LIVING CONDITIONS

In the winter, the Paiutes traditionally lived in cone-shaped houses made from a frame of poles joined at the tops, covered with juniper bark, rushes, or the like. By the mid-19th century, they sometimes used animal skins or canvas for the covering. In the summer, they made open-sided rectangular houses with roofs of brush held up by poles. Sometimes they simply made a wall of brush for shelter, or even just lived beneath one or more trees. Winter or summer, in whatever type of shelter, the doorway always faced east, toward the sunrise.

During the 19th and 20th centuries, the Paiutes became extremely marginalized and impoverished. Forced onto inadequate reservations, neglected, and eventually "terminated," they had insufficient resources to continue in their traditional ways and little or no access to modern goods and services. In 1968, the average income for the year for a Paiute household was \$2,746. New government programs instituted in recent years have improved conditions on Paiute reservations somewhat. New government housing has been built and an effort has been made to create more job opportunities. The Kaibab Paiute tribe now runs its own police department, senior citizen program, and health and education programs. They also have their own social worker, a member of the tribe, who helps them to take advantage of available social services.

## 10 FAMILY LIFE

Extended families are extremely important to the Paiutes. They maintain close ties with even the most distant relatives. Mar-

riage to anyone even remotely related is discouraged, so Paiutes often have to look to other communities to find marriage partners. Dances and festivals where many communities gather have long been used as places to meet potential spouses.

The Paiutes traditionally had no marriage ceremony. Couples simply set up housekeeping together. Divorce was just as simple: the household was dissolved and the couple went their separate ways. Marriages were often arranged by older relatives (who knew the extensive family tree and could therefore determine who was and was not related to the prospective bride or groom). Marriages were usually monogamous, but on occasion two siblings would share a spouse. Widows and widowers were encouraged to marry a relative of the deceased.

Households were very fluid, and still are. Family members move around easily between homes, children often going to live with aunts, uncles, or grandparents, etc. This is common and accepted. Many mothers also still use traditional cradleboards (a cushioned board to which a baby is strapped for the first year or so of its life).

## **11 CLOTHING**

Today, Native Americans wear contemporary clothing styles. Prior to the settling of the West, the Northern and Southern Paiutes wore clothing that was culturally indicative of their environment. The Northern Paiutes sometimes wore buckskin clothing, but not to the extent of the well-known Plains style. Deer required major skill to obtain on foot and without guns. The Northern Paiutes utilized rabbit skins in the winter for coats and blankets, while sagebrush bark was processed and used for footwear and other articles of clothing such as skirts for year-round wear. Willow basket hats served to protect the head from the sun.

After contact with white people, the clothing changed from natural materials to man-made materials such as the denim pants, long sleeved shirts, and hats for the men, while the women adopted the calico style dresses with aprons of the 1800s. The women exchanged the woven hats for scarves or handkerchiefs that were worn over the head and tied under the chin. The women usually cut their bangs straight across.

In the summer, both men and women of the Southern Paiutes wore just a breechcloth (a piece of material passed between the legs and through a belt around the waist to hang over in front and back) made of cliffrose bark or antelope or buckskin with woven yucca sandals or leather moccasins. In winter, a blanket of rabbit fur was added over the shoulders. They either stuffed their moccasins with cliffrose bark or wore socks made of badger skin with the fur turned to the inside.

## **12 FOOD**

Traditionally, Northern Paiutes maintained their subsistence patterns by hunting and gathering. An effort was made to change the “roaming” patterns of the Great Basin Natives by settling them on reservations. Farming was introduced, but for the most part it failed as the Nevada environment is arid and water is a scarce commodity. Native People, such as the Northern Paiutes of Pyramid Lake, became involved in long, drawn-out court battles over water rights. The Newlands Reclamation Act of 1915 caused the Truckee River to be diverted at the Carson River point and from the Derby Dam (a 1930s project). The ramifications included the drying up of Pyramid Lake’s sister lake, Winnemucca Lake. This had an impact

on the migratory flyway patterns of geese and ducks, in addition to killing a multitude of animal life and even threatening the prehistoric sucker fish to extinction. The *Kui-ui* or cui-ui is found only at Pyramid Lake. Many other fish, such as the trout, suffered, too.

Traditionally, the people of the Great Basin within Nevada are named after the food that is indicative or prevalent in their area. Examples are the *Kui-ui ticutta*, which translates to “Cui-ui eaters” (Pyramid Lake Paiutes); *Toi Ticutta*, “Cattail Eaters,” (Fallon area people); and *Agai Ticutta*, “Trout Eaters,” (Walker River Paiutes).

Adoption of non-Indian food became a necessity as the lands were being taken over by white settlers. The Native People began to adopt other foods readily, and one in particular has been associated with American Indians—the “frybread” or “fried bread.” The Northern Paiutes have incorporated the frybread into their regular dietary patterns. It is generally eaten by itself, with beans, or even in the form of an “Indian taco.” This somewhat resembles a Mexican tostada, although the tortilla is substituted for the frybread. Another deviation of the frybread is the “greasebread” (“flat bread” or “Indian bread”). Both breads are made of baking powder, salt, white flour and water. It resembles a biscuit type dough, when made; the frybread is fried in 1 to 2 inches of lard or oil, and the greasebread is fried in very little oil or lard. The frybread is 6 to 9 inches in diameter (it resembles a disc), and the greasebread is flattened to resemble an elongated biscuit.

Southern Paiutes traditionally farmed as their means of supporting themselves. They adopted Pueblo-style farming methods that were diffused from Mexico. Traditionally, they grew corn, squash, melons, beans, sunflowers, and two important herbs: amaranth and chenopodium. By the late 18th or early 19th century, they had acquired wheat from the Mojaves (who had obtained it from the Spanish) and added that to their list of crops. They also gathered wild foods such as seeds, berries, agave, and piñon nuts (piñon nut porridge was one of their staple foods) and hunted wild game to supplement their diet. The Paiutes cooked small game animals whole under the coals of the fire and ate the entire animal. Even the bones were crushed and eaten.

## **13 EDUCATION**

The Paiutes received very sporadic formal education through the early 20th century. Some government-operated day schools were established and then closed. Stewart Indian School (formally Carson Indian School) was established in 1890 and remained open until 1980. This boarding school was originally designed to “de-Indianize” the Indian, by offering vocational-type training; the students (primarily the Washo, Paiute, and Shoshone) were often kidnapped from their families and forbidden to speak their native tongue. The children ranged from kindergarten age to tenth grade. By World War II, Stewart began accepting other Tribal groups. These included the Navajo, Apache, Hopi, Walapai, and Yavapai, to name a few. Although the school primarily remained vocational, in the 1960s a move was made to provide the students with more academics. Sports were a big plus for many of the students, and they readily excelled in boxing, track and field, football (in the early days up until the early 1970s) and basketball. Many delighted the crowds with the type of ball playing that was considered to be “rez ball.”

*Evelyn James, president of the San Juan Southern Paiute tribe, stands on land they were trying to obtain from the Navajo Nation near Tuba City, Arizona. Tuba Butte, considered sacred by the Paiute, Hopi, and Navajo, can be seen in the background. (AP Images/Jeff Robbins)*

Paiute children were sent to boarding schools for a time, but these were largely unsuccessful. Today, most Paiute children attend public schools. These schools are located a long distance from the Paiute reservations, and the children must spend hours each day on the bus. At the schools, Paiute students are in the minority and suffer from discrimination and harassment. The dropout rate for Paiutes is fairly high.

#### **14 CULTURAL HERITAGE**

The Northern and Southern Paiutes within the Great Basin are renowned for their basket making skills. Northern Paiute baskets were made from willows. Designs were made from the outer fiber of the willow plant. Southern Paiutes utilized the husks of Devil's Claw seed pods to make designs. Willows were gathered in the early spring and stockpiled for later use. The basket makers were very selective in willow gathering. They selected straight willows that weren't budding with leaves. The process of preparing willows included soaking them in water to make them more pliable. The bark or outer membrane of the willow was then stripped. The core of the willow was then cleaned out by splitting the willow three ways: one piece was held in the mouth and the other two sections held by the right and left hand. The split was done in one continuous movement.

Because of the arid climate of the Great Basin desert area, Nevada basketry and as other pre-historic artifacts have often been preserved in mint condition. Northern and Southern basket collections can be found in the Smithsonian Institution in Washington, D.C., University of California at Davis, and California's Sacramento Museum of History, as well as in the University of Nevada, Reno's Anthropology Collection and the Lost City Museum in Overton, Nevada.

Although the Northern and Southern Paiutes did not have much in the way of material, they utilized the resources available to them in the most advantageous ways. Pine nuts were often "baked" while shaking and tossing the nuts with hot stones in winnowing trays. Water was transported in pine-pitch covered water jugs. Conical shaped baskets were used to store and carry food. Babies were carried in the *hoop* (Northern Paiute) cradleboards. In the West, whites today use one derogatory term for cradleboard; it is mistakenly called a "papoose." This term is very degrading and inappropriate, since the Native People have a name for the baby's basket.

The first autobiography by a Native North American woman ever published was *Life Among the Paiutes*, by Sarah Winnemucca Hopkins (1844-91), published in 1883-84. Sarah Winnemucca, a Northern Paiute, is a controversial figure in Native American history. Many Indian people view her as a

traitor and cite her personally for the forced march to the Fort Malheur Reservation. Sarah was born at Pyramid Lake, and her family was well known within Indian country and among the whites. She acted as an interpreter at Fort McDermitt, and she allegedly informed the U.S. Army of the whereabouts of a so-called renegade group of Indians. Sarah Winnemucca, however, has been credited for starting a day school at the Lovelock Colony, and for being an early leader in Indian education, and for advocating against the wrongdoing of Indian Agents. Her cousin, Young Winnemucca (also referred as Numaga) was the reluctant war leader in the Battle of Pyramid Lake of 1860.

### 15 WORK

Traditionally, Paiutes were small farmers and hunter-gatherers. Both men and women helped with the farming; women did most of the gathering, and men did most of the hunting. Women made baskets and leather goods, first for everyday use, then for sale to traders and, later, tourists.

Today, unemployment and underemployment are serious problems for the Paiutes. The biggest source of income is from basket weaving. The San Juan Paiute women began making Navajo wedding baskets for Navajo ceremonies in the late 19th century. The Navajo either traded or paid for the baskets, but the prices were not high. In the mid-20th century a Navajo paid \$25–60 for a wedding basket. In 1985 the Paiutes held their first basketry exhibition at the Wheelwright Museum of the American Indian in Santa Fe, New Mexico. It was very successful and led to more sales and exhibitions. The Paiutes set up a basketry cooperative to help promote their art form. Today, Paiute basket weavers are able to be much more creative and ask much higher prices for their baskets.

### 16 SPORTS

Young Paiutes today enjoy modern Western sports, such as basketball and softball. Traditionally, the Paiutes played a game they called *kwepu'kok*, or “shinny,” which was like field hockey.

### 17 ENTERTAINMENT AND RECREATION

Traditionally, winter was a time for relaxation for the Paiutes. There was less work to be done, and days and nights were spent telling stories and playing games (mostly gambling games). Three favorite traditional Paiute games were *naiung'wee* (“hand game”), *too'dookweep* (“stick dice”), and *tawsuhng'uhmp* (“rabbit-head game”). In the hand game, two teams sat facing each other and took turns hiding bone or wood cylinders, called “bones,” one striped and one plain. Each team would sing songs to give its side luck while the other team tried to guess in whose hands the striped and plain “bones” were hidden. Teams bet valuable goods, such as buckskin, jewelry, and horses on the outcome of the game.

The stick dice game was played with dice made from flat-sided sticks, colored on one side. The sticks were tossed in the air, and the particular combination in which they landed determined the number of points won. This game was also the occasion of high-stakes gambling.

Paiutes also bet on the rabbit-head game, in which a rabbit's skull was attached by a string about 8 to 12 inches long to a pointed bone (called a *tawsuhng'uhmp*). The player held the bone pin in his or her hand and tossed the skull into the air, attempting to catch it on the pin. If the pin went through

the nose, ear, or eye holes in the skull, the player won 2 points. Catching it through the tooth sockets earned the player 5 points, and the small hole below the ear gained the player 10 points. A player continued tossing and catching the skull until she or he missed.

### 18 FOLK ART, CRAFTS, AND HOBBIES

Besides basketry, Paiutes are known for their porcupine quillwork on buckskin. They traditionally used roots for dyes to color the quills.

### 19 SOCIAL PROBLEMS

The Paiutes suffer from centuries of poverty, discrimination, and neglect. They are still viewed by European Americans in terms of old negative stereotypes first promoted in the 19th century, such as “lizard eaters” and “diggers.” At best, Paiutes are patronized by well-meaning European Americans. At worst, they are subject to harassment and racist mistreatment.

In the European-dominated world, Paiutes are faced with prejudice and cultural insensitivity at the hands of non-Native teachers, classmates, workmates, and employers. It is not uncommon for Paiute students in biology classes to have to handle bones known to have been taken from Paiute burials. On the reservation, Paiutes struggle to maintain their traditional identity and Paiute ways under very limiting circumstances. Just recently reinstated by the U.S. government in 1980 as a recognized Native North American tribe (after being “terminated” in 1957), the Paiutes have a long way to go to make up for years of deprivation and marginalization.

### 20 GENDER ISSUES

Like many other American Indian groups, the Paiute recognized four gender classes, which include males, females, and male and female *berdache* categories. Berdaches, or two-spirit people as they often now referred to, adopted many of the roles of the opposite sex. As the term two-spirit people implies, these individuals mixed both male and female genders and they often signaled this through the adoption of mixed-gender dress. The role of berdache was adopted either through personal choice or through a personal vision that instructed the individual to choose this role. For some Southern Paiute groups, it was reported that male berdaches could become pregnant for the social group.

Gender and age are the two main determinants of Paiute social behavior and social roles. Although the genders each had their own specific roles and responsibilities, both males and females could hold curing or doctoring positions. Northern Paiutes had men and women shaman or curers. For example, the people of the Pyramid Lake area were a matrilineal society. This was contingent on the powers or gifts that the person had. Some individuals had spirit beings called “water babies” assisting them. The doctor or medicine person would go to Pyramid Lake to pray and these special beings would take them under water to learn doctoring techniques. It is believed that the beings took the medicine people/shamans to the surrounding lakes—Winnemucca (now dried-up due to the Derby Dam, part of the Newlands Reclamation Project in the 1930s) and Walker River. Regular people, if they saw these beings, were believed to die later, as these beings' powers were too great. It is believed that these beings were made from a union of a

mermaid (the Northern Paiutes traveled to coastal areas) and a *Numa* (Indian) man. The water babies are their children.

According to Knack (1989), Southern Paiute women had a high degree of economic and political contribution and concomitantly high status even during the historic period, when there were catastrophic economic and social upheavals including reservationalization. In modern times, Southern Paiute women are forced into the economic sector to support their families due to a high degree of male unemployment. The women maintain control over the revenue of the household but are drawn into a traditional pattern of kin-support for their less fortunate relatives. Although Southern Paiute women are often the primary wage earners within families, they typically make less than half of the wage of employed Southern Paiute men.

# PANAMANIANIANS

**LOCATION:** Panama

**POPULATION:** 3,292,693 million

**LANGUAGE:** Spanish; English; native Amerindian languages

**RELIGION:** Roman Catholicism; Protestantism; Islam; small number of Jews, Hindus, and Baha'is

## <sup>1</sup> INTRODUCTION

In 1501 the Spanish expedition led by Rodrigo de Bastidas, Juan de la Cosa, and Vasco Nuñez de Balboa traveled around the Atlantic Isthmus of Panama. The 1513 Spanish expedition led by Vasco Nuñez de Balboa made an even greater impact on history as Balboa crossed the isthmus and discovered the Pacific Ocean. This geography made Panama a strategic link for the Spanish empire, especially for the transshipment of gold and silver from Peru. English buccaneers, notably Sir Francis Drake and Henry Morgan, burned and looted the country's ports and towns. Panama declared its independence from Spain in 1821 and became part of Colombia.

The discovery of gold in California in 1848 brought hundreds of thousands of fortune seekers from Europe and the east coast of the United States to Panama, since the isthmus crossing was, for them, the fastest route to the gold fields. A rail line was constructed to speed them on their way. In the 1880s the French tried, but failed, to build a canal across the isthmus. When Colombia balked at allowing the United States to take over the project, Panama declared its independence, with U.S. backing, in 1903. The United States was granted "in perpetuity" an 8-km (5-mi) strip on either side of the canal, which was completed in 1914.

Before long, Panamanians were demanding a revision of the treaty that, in effect, cut their nation in two. A settlement was not reached until 1977, when the United States agreed to return the Canal Zone to Panama in 1979 and to return the canal itself to Panama at the beginning of the year 2000. Relations plummeted again in 1988, when Panama's strongman, General Manuel Antonio Noriega, was indicted in U.S. courts for drug trafficking. In December 1989, 23,000 U.S. troops landed in Panama City, seizing Noriega and installing a new government. At least 4,000 people died in the assault, mostly civilians.

In the 1994 presidential elections, Ernesto Pérez Balladares won with the support of the Democratic Revolutionary Party. His administration was marked by his tireless effort to maintain good relations with the United States and to reform the economy. Balladares' policies focused on privatizing several government companies in pivotal areas, such as the telephone system. Under his administration the country reduced trade barriers and encouraged private investment. In addition, his government decreased unemployment and crime rates and began an ambitious program of highway construction. In spite of his economic achievements, Panamanians voted against Balladares' reelection in the 1998 referendum. A year later, Mireya Mocosó ran a successful campaign and became Panama's first woman president. Mocosó's priority was on improving income distribution in the country. Even though she achieved some of her goals, her government was marked by several corruption scandals.

Consequently, in 2004 Martin Torrijos—the illegitimate son of a former dictator—won the presidential race. Under Torrijos' administration the country has experimented economic growth. However, corruption and government inefficiency have remained without solution. Despite these setbacks, the economic future of Panama looks buoyant because of the blueprint to improve and bolster the Panama Canal. An expansion project began in 2007 with a completion date set for 2014 at a cost of \$5.3 billion dollars (about 30% of GDP). This expansion was expected to double the actual capacity of the canal, thereby increasing tax revenues.

## 2 LOCATION AND HOMELAND

Panama, which is a little smaller than the U.S. state of South Carolina, occupies the narrowest part of the American mainland separating the Atlantic and Pacific oceans. It is bounded on the west by Costa Rica, on the east by Colombia, on the north by the Caribbean Sea—an inlet of the Atlantic—and on the south by the Pacific. Heavily forested mountain ranges form the spine of the country, with the highest peak reaching 3,475 km (11,401 ft) above sea level. The Panama Canal runs through a gap in these mountains. There are also more than 1,600 islands off the shores of the mainland. The climate is tropical except at mountain elevations, and rainfall is heavy.

Panama had a population of about 3.2 million in the mid-1990s. In keeping with its position at the crossroads of the world, Panama has a varied racial composition. More than two-thirds of its people are Mestizo, which in Panama includes descent from Africans as well as Indians and Europeans. A smaller number are White or Black, the latter being descendants of migrants from the British West Indies who helped construct the railway and canal and who worked on banana plantations. The Indian population is about 150,000, with the Guaymí, Cuna, and Chocó the chief peoples. There are also significant numbers of Chinese—mostly descendants of railway workers—and of immigrants from the Indian subcontinent and Arab countries.

## 3 LANGUAGE

Spanish is the official and almost universally spoken language. Panamanian Spanish is spoken very rapidly in a distinctive accent and includes a lot of slang and many distinctive words. English is the first language of some of the Blacks who are descended from West Indians and is widely spoken and understood in the commercial sector, which includes international banking and trade. It is also the compulsory second language in schools. The Indian groups still speak their own languages, as do immigrants from many parts of the world.

## 4 FOLKLORE

Many peasants believe that on All Souls' Day (November 2), those who died during the previous year are summoned before God and the devil for judgment, with their good and bad deeds weighed on a scale. There are two types of *curanderos* (folk healers): herbal-medicine practitioners, who also may cure by praying and making the sign of the cross over the patient; and *hechiceros* (sorcerers), who traffic in secret potions. The witch (*bruja*) is a malevolent old woman possessed by the devil. Witches can transform themselves into animals, especially deer, but only some can fly. To avoid harm from witches, one should turn a piece of clothing inside out. Also to be feared

are black dogs and black cats and the *chivato*, a malignant animal spirit.

There are numerous other spirits, including *duendos* (fairies). A red shirt on a newborn wards off evil, as does a necklace of the teeth of jaguars or crocodiles, and the infant is bathed in water in which certain leaves and plants have been steeped. Panamanian folklore is perhaps best expressed in the nation's many festivals, during which folk dramas and dances are performed.

## 5 RELIGION

More than 80% of the people are Roman Catholic; Protestants and Muslims account for about another 5% each. The constitution specifies that the Catholic faith shall be taught in public schools, but it is not a compulsory subject. To be completely integrated into the mainstream of Panama society, however, requires at least a nominal adherence to the faith. As elsewhere in Latin America, women are the mainstay of the Catholic Church. There were fewer than 300 Catholic priests in Panama in the mid-1980s. In addition to churches and mosques, Panama City has a Jewish synagogue and Hindu and Baha'i temples.

## 6 MAJOR HOLIDAYS

Carnival is celebrated on the four days before Ash Wednesday (in February), especially in Panama City, where the festivities include music, dancing, costumes, and a big Mardi Gras pa-

*The nuclear family of parents and children prevails in Panama, and the average household has five members. Wider kinship relations are essential, however. The extended family provides economic support in a society where the larger community cannot be counted on for help. (Cory Langley)*

rade. It comes to an end at dawn on Ash Wednesday with a mock ceremony called the “Burial of the Sardine.” Las Tablas also has an outstanding Carnival celebration. Holy Week (late March or early April) also is marked by costumed dances and drama, and by Good Friday processions. Dramatizations of the Passion are held in Rio de Jesús and Pesé. Los Santos holds a traditional Corpus Christi festival.

Portobelo’s Festival of the Black Christ, on October 21, draws purple-clad pilgrims to a life-size statue, housed in a colonial-era church, which is said to have miraculous powers and is paraded through the streets on that day. Similar is the pilgrimage to Atalaya on the first Sunday of Lent to the shrine of Jesus of Nazareth. Each town has a yearly fiesta in honor of its patron saint, culminating in a procession in which the saint’s image is carried through the streets.

The chief secular holidays are November 2 and 28, which commemorate Panama’s independence from Colombia and Spain, respectively. Mother’s Day, which falls on the day of the Immaculate Conception (December 8) in the Church calendar, is also a national holiday, reverently observed.

## 7 RITES OF PASSAGE

The one indispensable sacrament for Panama’s Catholics is baptism. Even peasants in remote areas will make the trek to the nearest church, although they may have to wait for the annual fiesta, when a priest will be present. It is believed that

fairies, witches, or the devil can carry away a child who is not baptized. First Communion is generally observed only by the middle and upper classes. A country boy receives his first machete at the age of seven or eight as an early portent of *machismo*, the spirit of male assertiveness common to Hispanic America. Most boys are put to work early, doing farm chores when not attending school. In the cities, boys can earn money shining shoes or selling papers. Girls help their mothers in the home.

The street is the playground for lower-class urban youth, who also may join a *padilla* (gang). Girls are more closely supervised. A girl’s 15th birthday is an important event and, in well-off families, is marked by a debut with a reception and dance. Middle- and upper-class girls enjoy more freedom than in most other Latin American countries. Nevertheless, dating and courtship are closely linked, and a girl is expected not to date more than one boy at a time.

Every effort is made to bury the dead in consecrated ground. The *velorio*, or wake, is an all-night affair in the home, with the deceased, in his or her best dress, on display. This is followed by a novena that may be repeated the next month and the next year. A Mass may be held if a church is near.

## 8 INTERPERSONAL RELATIONS

Like other Hispanic Americans, Panamanians greet friends and relatives more demonstratively than is the custom in the United States. Common among men is the *abrazo* (embrace), particularly if they have not seen each other for some time. Acquaintances will shake hands both on meeting and departing. Women often embrace and kiss on one or both cheeks. People are likely to stand closer to one another in conversation than is common in North America.

## 9 LIVING CONDITIONS

Panama, Costa Rica, and Belize are more prosperous than the other Central American countries. The average life expectancy of 75 years in Panama is almost as long as in North America. In the early 1990s, 80% of the people had access to healthcare services, and 83% had access to safe water and adequate sanitation. Rural areas, however, have disproportionately high infant and maternal mortality rates, and 25% of Panama’s children under the age of five are considered to be malnourished.

The basic peasant dwelling is the *rancho* or *quincha*, a hut supported by poles, with walls of palm fronds, cane, clay, or boards. The thatched roof is of palm fronds or grass. The building of such a house is a local event in which neighbors gather to help. Houses in town are often of cement block, with a tile roof. The urban poor usually live in overcrowded, decaying two-story frame houses with tin roofs. During the late 20th century, and mainly as a result of the economic boom experimented in urban areas, important sectors of the rural population migrated to the main cities in pursuit of better quality of life for them and their families. Migrants from rural areas often settle in squatter communities on the urban outskirts. Better-class houses generally do not have a front yard but have an enclosed patio in the rear. There are high-rise apartment buildings in Panama City, some of which are condominiums.

## 10 FAMILY LIFE

The nuclear family of parents and children prevails in Panama, and the average household has five members. Wider kinship

relations are essential, however. The extended family provides economic support in a society where the larger community cannot be counted on for help. Married children may visit their parents every day, and grandparents, uncles and aunts, and cousins routinely gather together on Sundays, holidays, and birthdays. Also buttressing the nuclear family are godparents, who are expected to take a lifelong interest in their godchild's welfare as well as to provide gifts on baptism, confirmation, and marriage.

Church and civil marriage are both legal, and a recent marriage code recognizes traditional Indian cultural marriage rites as the equivalent of a civil ceremony. Formal marriage, however, is not the rule outside the middle and upper classes, most new couples merely taking up residence in a new home. One study reported that 72% of Panama's children were born from unstable, short-term unions. There is little social stigma to illegitimacy, and many households are headed by women; some are three-generation households headed by a single mother who has a daughter or daughters who are themselves single mothers. In contrast to men, women are expected to be gentle, long-suffering, forgiving and, above all, devoted to their children.

The average Panamanian woman is more likely to practice birth control than are her Central American sisters, giving birth, on average, to three children. Abortion is illegal except to save the life of the mother. Poor women must work outside the home, at least in urban areas. While the constitution mandates equal pay for equal work, wages for women are often lower than those for men for equivalent work, and women hold only 4% of managerial positions. Middle- and upper-class women are under social pressure to attend church services regularly and otherwise to take part in the religious life of the community.

## 11 CLOTHING

Peasant clothing has traditionally consisted of simple cotton garments, homemade sandals, and hand-woven straw hats. More recently rural folk have begun to adopt urban dress, which is much like the summertime clothing in North America.

By contrast, there is a wealth of costume displayed at the nation's many fiestas. The spectacular *pollera*, an embroidered two-piece dress with an off-the-shoulder neckline, is the national costume for women and is perhaps the most beautiful traditional apparel in Latin America. Handmade lace joins the flounces on both blouse and skirt in a color that matches the embroidery. Beneath the skirt are several handmade petticoats. Heavy gold chains are worn around the neck, the hair is studded with flowers and glittering gold jewelry, and the feet are encased in satin slippers. The *pollera* is of Andalusian origin, while the far simpler and more rustic men's *montuno* is of Indian origin. Made of unbleached muslin embroidered in bright colors, the *montuno* consists of a long shirt with a fringe hanging over short trousers, and it is usually accompanied by sandals and a true Panama hat: braided, not woven.

## 12 FOOD

The Panamanian diet differs from that of the other Central American countries (except Belize) because rice is at least as important as corn. A basic breakfast is *guacho*, rice mixed with red beans. However, meat, yams, yucca, and other ingredients

*Peasant clothing has traditionally consisted of simple cotton garments, homemade sandals, and handwoven straw hats. More recently rural folk have begun to adopt urban dress, which is much like the summertime clothing in North America. (Cory Langley)*

can be added for a more filling meal. Cornmeal is used for tortillas, tamales, and empanadas, which are like tamales but are fried, not steamed. *Sancocho* is a traditional dish of meat, potatoes, yuccas and yams, corn, perhaps beans or peas, turnips, onions, carrots, and plantains. It is boiled and flavored with the coriander leaf. *Lechona* (suckling pig) is wedding fare. *Carimañola* is yucca root fried and wrapped around seasoned ground meat. Panama's bountiful seafood catch yields many dishes. Roast iguana, tapir, and monkey are treats in the remote forested areas. *Chicha* is a fruit drink rather than, as elsewhere in Central America, one made from fermented cornmeal. *Seco* is rum prepared from sugarcane.

## 13 EDUCATION

Panama had a literacy rate approaching 90% in 1990. Public education is free between the ages of 6 and 15, and six years of primary school are compulsory. About 94.8% of all children of primary-school age, and 50% of those of secondary-school age, are enrolled in school. There are three universities. Nearly 75% of the nation's university students are enrolled at the University of Panama. The other institutions of higher education are Technical University and the Church-run University of Santa Maria la Antigua.

## 14 CULTURAL HERITAGE

Panamanian traditions are rich in diversity, blending different cultural heritages, such as African, Amerindian, North American, and Spanish influences.

Panama has two traditional song forms, both of Spanish origin: the *copla*, sung by women, and the *mejorana*, sung by men and accompanied by the small native guitar of the same name. The *saloma* is a male song style with yodeling and falsetto. Blacks sing calypso, and the Cuna and Chocó have their own songs to the accompaniment of flutes. Panama has a national symphonic orchestra and a national school of music.

The most popular folk dance, the *tamborito*, is of African origin. Drums furnish the rhythmic background, while female voices sing coplas to the melody. Couples dance one at a time within a circular area. The *cumbia* is a circular dance for any number of couples, set to simple repetitive melodies and accented drumbeats. The *punto*, more graceful and dignified, has precise and formal movements that echo the refinement of 19th-century ballroom dances. As a dance form, the *mejorana* exists in both rustic and refined versions, with men in one line facing women in the other. A national *mejorana* festival is held every September 24 in Guararé.

A wealth of costumed folk dramas are performed at festivals. In *Los Montezumas*, the confrontation of the Spanish and Aztecs in Mexico is recounted. *Los Grandiablos*, a dance-drama, portrays Lucifer and his band of devils in battle with the Archangel Michael for the possession of a soul. The Congos, descendants of slaves, perform a dance-drama in a special dialect during their Carnival festivities.

Important Panamanian poets have included Dário Herrera and Ricardo Miró. Leading Panamanian painters have included Roberto Lewis and Humberto Ivaldi. Among composers have been Narciso Garay, Roque Cordero, and Gonzalo Brenes. One of Latin America's best-known musicians is the Panamanian salsa singer and actor Rubén Blades.

Panama's architecture is known for its eclectic influences. In 1997 the 17th-century colonial design of Panama City's Historic District was designated as a World Heritage site, as were the old Caribbean coastal fortifications of Portobello and San Lorenzo in 1980.

## 15 WORK

Panama's leading economic sectors are government services, commerce, and agriculture. Many subsistence farmers still clear plots by slashing and burning, then move on when the soil loses its fertility. However, cattle ranchers are now displacing them. Other peasants find seasonal work on banana, sugar, and coffee plantations. Most factory jobs are in food processing. Panama has become one of the major international banking centers in the Americas, and the Colón Free Zone is the world's most important duty-free trading zone except for Hong Kong. The official unemployment rate of about 15% appears to be considerably understated.

## 16 SPORTS

Baseball is Panama's most popular sport. A number of Panamanians have played in the major leagues, and Panama-born Rod Carew is in baseball's Hall of Fame. There have been several Panamanian boxing champions, including Roberto Durán. Swimming, fishing, hunting, and horseback riding are popular. Panama City has horseracing with pari-mutuel betting.

Bullfighting in Panama is merely teasing, in which participants annoy the beast while nimbly avoiding danger. It is performed at festivals. Cockfights, accompanied by wagers, are popular throughout the country. Cuna and Guaymí Indians hold pole-tossing contests. Children play a game like marbles with cashew seeds.

## 17 ENTERTAINMENT AND RECREATION

For rural people, festivals are still the high points of the year. These include agricultural fairs, in which a queen is crowned, judges pick prize-winning animals, and carnival rides draw youngsters. Traditional forms of live entertainment, however, are giving way to the lure of discos, movies, and television. By law, all foreign-language movies must be subtitled in Spanish. There are five television stations. Mexican and Venezuelan soap operas are widely popular in Panama. Panama City has lots of nightclubs and more than 20 gambling casinos.

## 18 FOLK ART, CRAFTS, AND HOBBIES

Handicraft articles include baskets, straw hats, net and saddlebags, hammocks, straw mats, gourds, woodcarvings, and masks. Most pottery is dark red and dull-finished. *Molas* are colorful hand-stitched appliqué textiles made by Cuna women. Georgina Linares is known for her paintings on leather.

## 19 SOCIAL PROBLEMS

There is a serious street-crime problem in urban slums. Spousal violence against women is widespread. According to official 1994 statistics, one-fifth of all families do not have enough money for a minimum diet, and a further one-fourth cannot meet their basic needs. The nation's forests are being reduced at an alarming rate, and soil erosion is a serious problem.

## 20 GENDER ISSUES

During the 1990s, considerable progress was made in women's rights at the political and institutional levels as a result of pressure from the women's movement. The Ministry of Youth, Women, Children, and the Family, which includes the National Directorate of Women, was created in 1997 and charged with management of public policies concerning equality of opportunities. To encourage greater women's political participation, an amendment to the Electoral Code, proposed by the National Forum of Women in Political Parties, was adopted in 1998, requiring a minimum electoral quota of 30% for women. Even though Mireya Moscoso was elected as Panama's first female president in 1999, the highest rate of women's participation in government is in the judiciary, where 129 (46.4%) of the 278 judges, magistrates, and court counsels are women. In contrast, women comprise only 8.3% of the legislative assembly.

In addition to political participation, women in Panama have made important advances in education. In Central America, only Costa Rica has a higher adult literacy rate. With a net enrollment ratio of 94.8%, the country has achieved nearly universal coverage of elementary school and women are a majority of the students in higher education. About 68% of the enrolled students at the University of Panama are women.

Even though Panamanian women have always had a lower employment rate than men, the gap has narrowed during the last decades. While in 1970 women's labor force participation rate was 26%, in 2000 this proportion climbed to 35%. How-

ever, women are found disproportionately in positions of low prestige and remuneration and are paid less than men in the same positions. Between 1985 and 1995, the average monthly income of Panamanian women was us\$289, or 83% of men's average monthly income of us\$349.

# PARAGUAYANS

**LOCATION:** Paraguay

**POPULATION:** 6,831,306 million

**LANGUAGE:** Spanish; Guarani

**RELIGION:** Roman Catholicism 89% (official). Protestant 6.2% Christian 1.1%

## <sup>1</sup> INTRODUCTION

An isolated, landlocked country, Paraguay has for much of its history deliberately kept itself apart from the rest of Latin America. Tucked away in the south-central part of the continent, it is a sparsely populated country, hot, subtropical lowland that has been dubbed “the empty quarter” of South America.

When the first Europeans arrived in the 16th century, Guarani-speaking people inhabited most of what is now eastern Paraguay, while west of the Rio Paraguay many other Amerindian tribes, known collectively as Guaycuru to the Guarani, lived in the Chaco territories. The Paraguayans threw out their Spanish governor in 1811 and proclaimed independence. But, because the colony was regarded as being so isolated and economically unimportant, the Spanish authorities did not bother to do anything about it and left the new country to its own devices.

Paraguay's recent history has been characterized by wars, political and economical instability, and authoritarian regimes. The country has been involved in two of the three major wars on the continent: the War of the Triple Alliance (1864–1870) against Argentina, Brazil, and Uruguay and the Chaco War (1932–1935) against Bolivia. During the War of the Triple Alliance in 1864, Paraguayan forces were badly defeated and the country lost 150,000 sq km (58,000 sq mi) of territory. But far worse, it lost much of its population through combat, famine, and disease. One estimate indicates it lost nearly all its males between the ages of 15 and 70. It was a blow from which the country has never completely recovered.

In 1932 a series of hostilities occurred between Bolivia and Paraguay over the Chaco boreal territory, a region located to the west of Paraguay. The conflict was rooted in the War of the Pacific (1879–1884), during which Chile annexed the entire coast of Bolivia. After having lost its maritime condition, Bolivia attacked Paraguay with the intention of ending its landlocked situation while seizing the strategic territory that goes from Rio de la Plata to the Atlantic coast. Paraguay formally declared war on Bolivia in 1933. After two years of conflict that took the lives of about 100,000 men, the Chaco Peace Conference Treaty ended the war, and Paraguay made impressive gains in territory.

After the civil war of 1947, Paraguay underwent a 35-year military regime. In 1954, Alfredo Stroessner seized power through a military coup. During more than three decades (1954–1989) this son of German immigrants governed the country with an iron fist, becoming one of the most repudiated dictators in South America during the 1970s. Economically, Stroessner's administration stabilized the currency and controlled inflation. In addition, the Paraguayan dictatorship improved the country's infrastructure with the construction of schools, public health facilities, and roads. However, the mil-

itary government spent huge sums of the national budget on paramilitary forces to repress political opposition. Stroessner's supporters dominated the nation's legislature and courts. The constitution was modified in 1967 and 1977 to legitimize his six consecutive elections to the presidency. Moreover, Stroessner's human rights record was heavily damaged by its participation in the so-called Operation Condor, a clandestine campaign coordinated by several South American rulers to eliminate their opponents. This illegal organization was responsible for numerous extralegal arrests, extraditions, and other human rights abuses.

In 1989 the brutal dictatorship was overthrown by General Andres Rodriguez, who was elected to the presidency. In the same election, more opposition party members gained congressional seats than ever before. Democratic elections were held in 1991 and General Rodriguez's Colorado Party won a legislative majority. An era of political debate and activity was opening up for the first time in Paraguay's history. However, Paraguayans continued to experience violent political events. In 1999 Vice President Luis Maria Argana was assassinated. Later, the first and second civilian elected presidents, Juan Carlos Wasmosy (1993-1998) and Luis Angel Gonzalez (1999-2003), were indicted on charges of corruption.

Since 2003, Nicanor Duarte has ruled the country, focusing on ending corruption and drug trafficking. In pursuing these goals, purging and modernizing the national police force, as well as deep reform processes in the judiciary system—espe-

cially oriented to renovate the Supreme Court—have remained the main goal of the current administration.

Economically, Paraguay relies on agriculture for much of its export industry, and the most important crops grown are cassava, sugarcane, maize (corn), soybeans, and cotton, as well as cattle products. It remains one of the most industrially undeveloped countries in South America. The development of the world's largest hydroelectric project at Itaipu, situated in eastern Paraguay, brings the hope of economic change. Mineral resources, including petroleum, are almost nonexistent.

## 2 LOCATION AND HOMELAND

Lying within the heart of South America, Paraguay is surrounded by the huge, neighboring countries of Brazil, Argentina, and Bolivia. With an area of 407,000 sq km (157,000 sq mi), it is slightly larger than Germany and almost exactly the size of California. Although half the country is covered by timber, much of it has little commercial value.

Dividing the country into two unequal halves is the Rio Paraguay. This river connects the capital, Asunción, with the Rio Paraná and the Atlantic Ocean. The great majority of the population lives in the eastern section of this divide, making up about 40% of the whole country.

Contraband has become one of Paraguay's major sources of currency. Electronic goods and agricultural produce find their way through Ciudad del Este to and from Brazil. There is also a substantial trade in stolen cars and illegal drugs, including cocaine.

Paraguay's population of 6.8 million is approximately one-seventh the size of that of the state of California, which has about the same area. Asunción is the largest city, with 577,000 residents, but only 43% of Paraguayans live in urban areas, compared with 80% in Argentina and Uruguay. Most people can claim to be native Paraguayans, and 90% are mestizo, of mixed Spanish and Guarani blood. Many Paraguayans are peasant farmers, who make a living by selling their small surplus of crops.

About 20% of Paraguayans are of European stock, including about 100,000 Germans. In the 1930s, German Mennonites, a pacifist, religious sect similar to the Amish sects of North America, were allowed in by the government to establish agricultural settlements in central Chaco. Despite the harsh, challenging conditions of the region, the Mennonites have been very successful, although there have been problems with a number of local Amerindian tribes. Japanese immigrants have also settled in parts of eastern Paraguay, along with Brazilian agricultural colonists, many of German origin, who have moved across the border in recent years. Paraguay's Amerindians represent 3% of the population, and most of them live in the Chaco region.

## 3 LANGUAGE

Both Spanish and Guarani are Paraguay's official languages. Guarani is spoken by nearly nine-tenths of the population; however, government and business use the Spanish language almost exclusively. This co-existence of both languages is a reflection of its colonial history, for when the Spaniards settled in the country they were overwhelmingly outnumbered by the Guarani native Amerindians. As a result, intermarrying became the norm. Today, almost 90% of Paraguayans are

mestizos, of mixed Spanish-Guarani heritage, many of them preferring to speak Guarani.

Several other Amerindian languages are spoken in the Chaco and in isolated parts of eastern Paraguay, including Lengua, Nivacle, and Ache. Contact with the Mennonites has also meant that for many Amerindians, German has become their second language, rather than Spanish.

#### 4 FOLKLORE

The historical merging of Spanish and Guarani blood over the centuries has created a Spanish-Guarani culture, which is reflected in the folklore, arts, and literature of the country.

#### 5 RELIGION

The state religion of Paraguay is Roman Catholicism, although the Catholic Church is weaker and less influential than in most other Latin American countries. Two of the reasons for this are Paraguay's traditional isolation from mainstream South America and the fact that the government has shown less interest in religion as an institution. As a result, a number of irregular religious practices have grown up over the years. In fact, in some rural areas, priests are seen as healers and men of magic, rather than as official representatives of the Catholic Church.

At the same time, fundamentalist Protestants have not had as much success in finding converts in Paraguay as they have in other Latin American countries, although the Mennonites have had some influence among Chaco Amerindians since they arrived in the 1930s.

#### 6 MAJOR HOLIDAYS

Christmas and Easter are major Christian holidays, as well as the Día de la Virgen, on December 8, celebrating the Immaculate Conception. The War of the Triple Alliance in the 1860s is commemorated on March 1, and February sees the celebration of the popular Latin American festival, Carnival.

#### 7 RITES OF PASSAGE

Because of the influence of the Catholic Church, baptisms, first Communion and saints' days play an important part in the lives of many families.

#### 8 INTERPERSONAL RELATIONS

As in the rest of South America, Paraguayan social life revolves around the family. For example, padrinos, or godparents, are particularly important because if parents become unable to provide for their children, godparents are expected to assume responsibility for them.

A popular social pastime is the drinking of *mate*, Paraguayan tea made from holly leaves. It is regarded as being more significant than a simple drink like tea or coffee and is, in fact, seen as an important ritual to be shared among family, friends, and colleagues. In other words, the whole purpose of drinking *mate* is the act of sharing. At each sitting, one person is responsible for filling a gourd almost to the top with the tea. Water is heated, but not boiled, in a kettle and poured into the vessel. The liquid is then sipped by each person from a silver tube, which has a bulbous filter at its lower end to prevent the leaves from entering the tube.

*Most Paraguayans in rural areas survive on subsistence crops on small landholdings, selling any surplus at local markets.*  
(Anne Kalosh)

#### 9 LIVING CONDITIONS

Asunción has preserved much of its 19th-century architecture, with narrow streets full of low buildings. Meanwhile, a steady flood of rural poor has caused large shantytowns to mushroom in open spaces by the river and close to the railway. Some 40% of the population still survives in rural areas, enduring poor sanitation and malnutrition. Paraguay has one of the highest infant mortality rates in South America, and its levels of welfare place it very low by world and South American standards. Paraguay's social welfare system, however, does provide cash and medical care for sickness, maternity, and injury at work, as well as pensions for old age.

Most rural Paraguayans live in one-room houses, called *ranchos*. Most have earthen floors; reed, wood, or brick walls; and a thatched roof, sloped to carry off the heavy rains. A separate or attached shed serves as a kitchen. Few houses have indoor plumbing. Urban dwellers—over 40% of the population—occupy small, pastel-colored houses of brick or stucco, with tiled roofs and iron grillwork covers on the windows. The urban poor live in shacks, although, unlike other large Latin American cities, Asunción does not have sprawling slum areas.

Paraguay's geographical isolation has led to high transport costs, which have driven up the price of its exports in comparison with other Latin American countries.

## 10 FAMILY LIFE

Population growth is encouraged, although child abandonment and high rates of maternal mortality are problems. However, between the 1970s and the mid-2000s, the total population increased from 2.4 million to more than 6 million as a result of a decreasing death rate and a continued high birth rate. This explosive growth has resulted in a relatively young population.

There is also a high level of illegitimacy, particularly in rural areas. This is often blamed on the great distances that separate rural dwellings from the nearest towns, as well as the extreme poverty of the peasants who cannot afford the expense of the wedding ceremony. Marriage itself may be performed both as a civil and a religious ceremony.

## 11 CLOTHING

In urban areas, Paraguayans dress as people do in America or Europe. Many rural women wear a shawl, called a *rebozo*, and a simple dress or a skirt and blouse. The men generally wear loose trousers, called *bombachas*, a shirt or jacket, a neckerchief, and a poncho. Rural people generally go barefoot.

## 12 FOOD

Paraguayan cuisine reflects traditional Guarani cooking styles. Beef dishes and freshwater river fish are popular. Typical foods are soups, often with meat and different types of breads, especially *chipa*, which is flavored with cheese and eggs. In general terms, Paraguayan food is similar to that of Argentina and Uruguay, although there are significant differences. People eat less meat than in either of the other River Plate republics, although *parrillada*, grilled meat, is still a popular item on restaurant menus. At the same time, the influence of Guarani tastes in tropical and subtropical ingredients can often be seen in Paraguayan recipes.

A common part of almost every meal is grain, particularly maize (corn), and tubers such as cassava. *Locro* is a maize stew, while *mazamorra* is a maize mush.

The national dish and dietary staple is *sopa paraguaya*, which is not a soup but rather a cornbread with cheese and onion. Cassava dishes are the mainstay of the rural poor, for the vegetable thrives abundantly on thin to mediocre soils.

Corn (maize) is a staple ingredient in many dishes, including *sopa paraguaya*, a pie made from corn, eggs, and milk; *avatí mbaipy*, a corn soup; and *mbaipy he-é*, a dessert made from corn, milk, and molasses. Beer and *caña*, a cane sugar spirit, are popular drinks. *Yerba mate*, the local herbal tea, is consumed year-round—chilled in summer, hot in winter. A common pastime is drinking *tereré* (a bitter tea made from the same type of leaves that are used to brew *yerba mate*) from a shared gourd or from a hollowed cow's horn, or *guampa*, which often is beautifully carved.

## 13 EDUCATION

Education is only compulsory up to the age of 12. Although the official enrollment figures are high, the dropout rate is also high. The literacy rate is 94%, making it the lowest of the River Plate republics, although it is higher than all the Andean countries except Ecuador. There is higher education at the Universidad Nacional and the Universidad Católica in Asunción, both of which also have branches throughout the country. Since the

return to democracy, beginning in the 1990s, the number of private universities has increased. At least half of all university graduates are female.

## 14 CULTURAL HERITAGE

In general, very little Paraguayan literature is available to English-speaking readers, but novelist and poet Augusto Roa Bastos introduced Paraguay to the international literary stage by winning the Spanish government's Cervantes prize in 1990. Although he was forced to spend much of his life in exile from the Stroessner dictatorship, Roa Bastos uses Paraguayan themes and history, intertwining them with the story of his country's politics.

Works by other important Paraguayan writers, such as novelist Gabriel Cassaccia and poet Evio Romero, are not readily available in English.

## 15 WORK

Most people in rural areas survive on subsistence crops on small landholdings, selling any surplus at local markets. They then supplement their incomes by laboring on the large *estancias* and plantations.

There are still small, but important, populations of Amerindians in the Chaco and in scattered areas of eastern Paraguay. Until very recently, some of them relied on hunting and gathering for their livelihood. The Nivacle and Lengua are the largest groups, who both number around 10,000 people, and many of them work as laborers on the large agricultural estates.

Many Paraguayans, either for political or economic reasons, live outside the country, mostly in Brazil and Argentina. Between 1950 and 1970, more than 350,000 Paraguayans migrated to Argentina to find work. Although the official minimum wage in Paraguay is approximately 200 dollars per month, the Ministry of Justice and Labor is unable to enforce its regulations, and it is estimated that about 70% of Paraguayan workers earn less than the minimum wage.

## 16 SPORTS

Soccer, like elsewhere in this part of Latin America, is the most popular sport, both for watching and playing. Asunción's most popular team, Olímpico, is on a level with the best Argentine and Uruguayan teams.

Paraguayans also enjoy basketball, volleyball, horseracing, and swimming.

## 17 ENTERTAINMENT AND RECREATION

Theater is popular in Paraguay, and productions are staged in Guarani as well as Spanish. The visual arts are also very important and popular. Asunción offers many galleries, the most important being the Museo del Barro, which mounts a wide range of modern works. Classical and folk music are performed at venues throughout the capital.

Religious holidays are celebrated with festivals that include music, dancing, and parades, as well as athletic contests.

## 18 FOLK ART, CRAFTS, AND HOBBIES

Paraguay's most famous traditional craft is the production of multicolored spider-web lace in the Asunción suburb of Itaugua, where skilled women from childhood to old age practice the cottage industry. Paraguayan harps and guitars, as well as

filigree gold and silver jewelry and leather goods, are made in the village of Luque, while the Amerindian communities of Chaco produce high-caliber craft items of their own.

## 19 SOCIAL PROBLEMS

When Juan Carlos Wasmosy was elected as Paraguay's first civilian president, the then-ruling Colorado Party, nominated him merely as a figurehead. Since then, however, he has clashed with the still-powerful military establishment, particularly General Lino Oviedo, who led the coup against the previous military dictatorship.

Meanwhile, the military's position is being challenged as it comes under scrutiny for its treatment and abuse of conscripts, from groups like the Movimiento de Objeción de la Conciencia. At the same time, President Wasmosy is also being investigated for his business dealings connected with Paraguay's major hydroelectric projects.

So far, Paraguayan industry, which is mainly concerned with the processing of agricultural products, has seen little benefit from the hydroelectric boom. The economic growth of the 1970s has been almost wiped out by the long delays in finishing two major hydroelectric projects. In 1994 the economic growth rate was only 3.6%, while inflation has been running at roughly 45%.

## 20 GENDER ISSUES

According to the UNDP Gender Development Index, Paraguay does worse than most of its neighbors in terms of gender equality. Women continue to have lower educational levels than men and 6 out of 10 illiterate persons in the country are women. In addition, the country has one of the highest rates of maternal death in the Latin America and Caribbean region, with abortion being the second most common cause of maternal death. Teenage pregnancies are also high for regional standards. About 28% of the women aged 15 to 24 have been pregnant at least once and, among these, the majority has given birth to their first child when they were 18 years old or younger. This figure goes up to 32% among the poor. Single mothers, separated women, and widows comprise 23% of Paraguay's poor population.

A new generation of gender-based organizations began to activate in Paraguay in the mid-1980s and have been able to successfully pursue several legal and institutional reforms, including the creation of the Women's Secretariat in 1992, a state agency responsible for coordinating gender policies.

However, women are still heavily underrepresented at all levels in the Paraguayan political structure. Women represent slightly less than 16% of all elected officials and less than 3% of those voted to positions of executive authority. There are no women governors and only seven women had been elected as town mayors as of 2008. The percentage of women in the Chamber of Deputies in 2004 was 2.5%, which makes Paraguay one of the worst countries in the world for female representation in parliament. The share of women in congress is not only very low, but also decreased from 4.2% in the 1989–1993 period.

# PEMON

**ALTERNATE NAMES:** Arecuna, Kamarakoto, Taurepan

**LOCATION:** Venezuela

**POPULATION:** 15,000 (estimate)

**LANGUAGE:** Pemon

**RELIGION:** Indigenous beliefs mingled with Christian elements

## 1 INTRODUCTION

Though the date of first occupation of the Gran Sabana is not known, the Pemon are thought to have immigrated into the region some 200 years ago. The Pemon-Caribs are known in the literature as Arecuna, Kamarakoto, and Taurepan. They call themselves Pemon and became widely known relatively recently when Capuchin missionaries and Protestant evangelists from Guyana and Brazil came to their territory in the southeast of Venezuela, together with the first gold and diamond mine workers. There are no historical sources from before 1750, when the area was mentioned in the context of determining borderlines by individuals who never visited the area. The first real incursions date from 1838 and 1843. At the end of the 19th century, English Protestant missionaries started to evangelize among the Pemon, followed later by all kinds of Christian groups, but it was only in 1931 that the first Capuchin mission post in the Pemon area was established, 20 km (12 mi) from the Brazilian border. From 1936 onward, the gold and diamond rush penetrated the area and, during the 1960s, the air connection and overland route were built. But, the diamond mining operations have been intermittent. This, together with the poor quality of Pemon agricultural land and grasses for pasturage, and the late opening of the Pemon area, has spared them from major land invasions. Many traditions and much of the original communication—language, smoke signals, and swift-footed walks—have survived.

## 2 LOCATION AND HOMELAND

The expanse of the Pemon's tribal territory covers the coastal area of the Atlantic in Venezuela, the inland mountain savanna area, and the Amazon area. They are the most far-flung of the Central Guiana Highlands peoples. The Guayana region of La Gran Sabana in the state of Bolívar is characterized by big table-mountains and an immense savanna. The German writer and explorer, Uwe George, when describing what he saw in this part of the Pemon territory, in a remote corner of southeastern Venezuela near the border with Brazil and Guyana, spoke of the *tepui*s, the Pemon word for enormous sandstone mesas. The *tepui*s are the remains of mighty sandstone plateaus that once stretched across the entire area. In the course of time the plateaus were largely worn down by erosion, leaving only the *tepui*s as giant monuments to their existence. The word *tepui* means "house of gods" in the native language of the Pemon.

The table-top mountains are the oldest exposed rock formations on the planet, and there are more than 100 such *tepui*s, but fewer than half have been extensively explored. Many of them are hidden by dense cloud cover for days at a time, like the surface of Venus. "In some respects," George says, "we know more about that distant planet than we do about the vast and mysterious *tepui*s of Venezuela." The tops of this flat-topped hill are characterized by cool temperatures with frequent rain-

fall, while the bases of the mountains have a tropical, warm, and humid climate. Some *tepui* depressions contain unique animals and flora not found anywhere else in the world. This has led topographers and other scientists to call the *tepui*s the Galapagos Islands of the mainland. Most *tepui*s are located in the more than 30,000 square kilometers that conform the Canaima National Park in Venezuela, which in 1994 was classified as a World Heritage Site by UNESCO. The most famous *tepui*s in the park are Mount Roraima, the tallest and easiest to climb, and Auyantepui, which has the Angel Falls, the highest waterfall in the world with 807 m (2,648 ft) of altitude. The Pemon have an intimate relationship with the *tepui*s and believe they are the home of the *mawari* spirits.

## 3 LANGUAGE

There are at least 40 languages in Venezuela, and Pemon is one of them. According to the Venezuelan constitution of 1999, Spanish as well as the languages spoken by Indigenous peoples from Venezuela are considered official. Pemon is a Caribbean language spoken mainly in Venezuela, specifically in the Gran Sabana region of Bolívar State. According to the 2001 census, there are 15,094 Pemon speakers in Venezuela. Other names used in the literature to describe Pemon speakers are: Pemong, Arecuna, Aricuna, Jaricuna, Kamarakoto, Camaracoto, Taurepan, Taulipang, Makuxi, Macuxi, and Macushi. There are two major Pemon dialects, Taurepan and Arecuna. Speakers of each dialect can understand each other fairly easily. Two other closely related languages, Camaracoto and Ingariko, are also considered Pemon dialects by some linguists but are more distinct and difficult for Taurepan and Arecuna speakers to understand.

Father Cesareo de Armellada was the author of the first grammar and dictionary of the Pemon language (1943), formerly called Taurepan. The world of the Pemon is shown in their very descriptive language. Their word for "sugarcane" is *kaiwara-kún-imá*, which means "pineapple with very long leg." The word for "pineapple" itself, *kaiwara*, means "a sweet with wrinkles." The Pemon word for "dew" is *chirké-yetakú*, which means "star's saliva." *Yetakú* is "saliva" or, more precisely, "juice of the teeth."

There is no word for "year" in the Pemon language, and the day is divided into "dawning," "morning," "noontime," "afternoon," and then just "dark" or "nighttime." Most temporal references only cover "yesterday," "today," "tomorrow," and *pena*, "time past." The Pemon speak their own Carib language among each other, and Spanish or pidgin Spanish with the *criollos* (mixed-blood Venezuelans). In the mission villages and mining areas of the state of Bolívar, more and more youngsters also use Spanish in their own Amerindian society. Most Pemon people have Christian names now. They often have two Amerindian names as well, one of which is a sacred and secret name.

## 4 FOLKLORE

The religious notions from the time before contact with the Christian world have been preserved by accounts from anthropologists and folk tales. The Pemon traditionally believed that each person has five souls that look like shadows of a human. The fifth one is the one that talks and leaves the body to travel around when the person is dreaming. This is the only one that goes to the beyond after death, en route to the Milky Way. Be-

fore arriving, it meets the Father of the Dogs, and if the person has mistreated his or her dogs, their souls will recognize the person and kill him or her. One of the other four souls inhabits the knee and stays put for a while after death to turn later into a bad spirit. The other three souls turn into birds of prey after death. All animals and plants are believed to have souls. Stones, on the other hand, do not have souls but house bad spirits.

The *Makunaima* is a sequence of creation tales of the Pemon land, crops, techniques, and social practices. It starts with the creation of a wife for the first Pemon—the Sun—by a water nymph. The basic sexual divisions of labor, and the ideas of proficiency in subsistence tasks as a prerequisite to a successful marriage, are laid out in this story. At the time, the Sun was a person. One day he went to the stream and saw a small woman with long hair. He managed to grasp her hair, but she told him, “Not me! I will send you a woman to be your companion and your wife.” Her name was Tuenkaron, and the next day she sent the Sun a White woman. He fed her, and she lit a fire. But when the Sun sent her to the stream, as she came in contact with water, she collapsed into a little heap of clay. The woman was made of white earth. The next day Tuenkaron sent him a black woman. She was able to bring water, but when she tried to light a fire, she melted: the woman was made of wax. The third woman was red, a rock-colored woman. The sun tested her—she did not melt or collapse. She was strong and able to contribute to the running of the household. They had several children, and these are the Pemon. Other important myths are the Tree of Life and the Spirit of Death.

The Tree of Life narrates a famine experienced by Pemon ancestors and how they managed to overcome this great hunger. According to this tale, Pemon people discovered a magical tree laden down in the jungle. What made this tree special was that it had all the fruits and vegetables in the world, which allowed the tribe to survive in times of scarcity. The Spirit of Death is related to the highest waterfall in the world: the Angel Falls. Even though this natural beauty is regarded as one of the most impressive natural beauties, for the Pemon people the cascade represents an evil spirit that seduces the visitors with its gorgeous beauty and attracts them into the forest where a poisonous snake awaits to bite the intruders.

The wide range of myths in Pemon culture finds its explanation in the fact that they do not believe in natural death, therefore, all legends are an attempt to explain through magical means the people’s disappearance. Moreover, with the purpose of personalizing the evil, Pemon people have created a symbolic character, the Kanaima. This figure represents death in Pemon culture. According to the popular belief, it is the Kanaima who seeks them to defeat and kill them. Among Kanaima’s supernatural powers is the ability to take the form of a jaguar or a spirit.

## 5 RELIGION

Though the Pemon have been relatively spared the influence of the modern nation-state, as not enough of anything valuable has been found to attract wholesale colonization, the presence of missions has left its mark. Most of the Amerindian thoughts and consciousness came to be mixed to a lesser or higher degree with Christian elements. *Chichikrai* is the name for Jesus Christ in three syncretistic Christian Amerindian cults: Hallelujah, Chochiman, and San Miguel. These cults have the nature

of a spiritual movement. Hallelujah as a name suggests Christian influence. However, while to Christians it means “Praise the Lord,” to the Amerindian it means “the word of god.” This is because, in a vision given by God to a former shaman, who had converted to Christianity and was then betrayed by the missionaries, God taught the shaman the new religion and told him it was called Hallelujah. Some Hallelujah beliefs are similar to Christian beliefs. They believe in God and Jesus Christ as his son but do not acknowledge the concept of salvation through Jesus Christ’s death and resurrection. In spite of the strength of Catholicism, the Pemon believe in Kanaima—the spirit of evil. Social traditions, like cross-cousin marriage, that are opposed by the Church are practiced by many Pemon. Cult saints, like Maria Leonza, a female saint of Amerindian origin whose role is a healing and protecting one, sometimes can hardly be discerned from another local saint, the Virgin of the Valley, who is actually a Maria (Mary, mother of Jesus) in the Catholic sense.

An important attempt to prevent the disappearance of Pemon beliefs and traditions was made in 1985 at the AVEC Congress on Bilingual Education. It was declared that the Amerindians have a natural right to uphold their traditional beliefs, and that Jesus Christ and the New Testament are only additions to that indigenous religion.

Pemon Indian Jose Lesama walks in the Gran Savanna in Canaima National Park, near Caracas, Venezuela. (AP Images/Leslie Mazoch)

## 6 MAJOR HOLIDAYS

As most Pemon have been evangelized, their major holidays are the same as those celebrated by Catholics. Holy Week and Christmas are duly kept, with open demonstrations of sorrow during the first and joy in the latter. As is common all over Latin America, religious practices are a potpourri of new and old beliefs and, particularly in the case of peoples like the Pemon Indians whose cultural memory has not been lost, the shadows of the past can be traced, even when hidden behind a thick layer of Catholicism.

## 7 RITES OF PASSAGE

Traditional rites of passage were associated with the life-cycle (birth, puberty, and death), but most are no longer celebrated. Baptism in a Catholic mission is the only important rite of passage nowadays. Often the father will give the child a name in the Pemon language that is secret, and it is forbidden to use the secret name to address any person, male or female. Not so with Spanish names, and the Pemon are eager to baptize their children to give them such names. Women usually do not have last names, and men adopt the ones of their *criollo* (mixed-blood Venezuelan) bosses in the diamond mines. Brothers, therefore, sometimes end up with different last names.

One of the traditional rites of passage ruled eating habits during pregnancy to protect the soul of the child. The parents were forbidden to eat big fish, some species of birds, and many

mammals. The big fish, for example, would take the child's soul into the water where it would drown. The parents were allowed, on the other hand, to eat small fish and the dove *waku-wa*, which is the one that brings the soul to the baby.

The Pemon believe that the man forms the baby in the woman's uterus through repeated copulation. According to traditional beliefs, the solid parts of babies—the bones—come from the father, and the blood comes from the mother. The mother gives birth behind a partition installed in the hut. Her mother or mother-in-law helps her. For ten days after the birth, the parents stay behind the partition with their newborn child.

The rites of puberty also involved forbidden foods for males for a year after the first ceremony in which an alderman lashed the boy's body, made incisions in his body, and applied magical substances to the wounds. Finally, the boy had to endure the challenge of the ants. Girls' hair was cut before their first menstruation, and the edges of their mouths were tattooed in a traditional design. At the first sign of menstruation, the girl would retire to her hammock and was considered impure. Her grandmother would then paint her whole body. At some point during puberty, the girls also had to endure the challenge of the ants, on their hands, arms, face, and feet.

## 8 INTERPERSONAL RELATIONS

Marriage is the key to the social organization of the Pemon people: it determines the pattern of visits between villages,

which is at the heart of their social life. Reciprocal visits for beer parties and meetings with relatives tie neighborhoods and regions together. The prestige of a settlement is often gauged by the quality and quantity of manioc (cassava) beer offered by the hosts. Conversation is animated when the family gathers around the pepper pot, and if guests are present, the men will eat first. Overt conflict, anger, and fighting are strongly reprobated by the Pemon. The basic response to conflict is to withdraw from the conflict situation, often by taking an extended visit to relatives living elsewhere and waiting for things to calm down. Gossip, ridicule, and sometimes ostracism are used as ways of controlling situations. Gossip, however, is a double edged weapon: the Pemon say trouble occurs over false gossip and women. As the Pemon do not approve of anger or displays of hostility, physical punishment of their children is very rare. If an adult strikes a child at all, it is so mildly as to be merely a reminder. Pemon children learn by example and are given free rein.

## 9 LIVING CONDITIONS

In the old days, when somebody in a Pemon village fell ill, the local shaman or *paisan* ascribed the illness to one of the many mythical spirits. For healing, the shaman uses his *taren* recipes, a mixture of magical and medicinal plants and charms. The *taren* is a magical invocation, a verbal spell that can aid in the birth of a child, counter the bite of various snakes, heal headaches and stomach pain, and so on. The *taren* can only be taught on a one-to-one basis, and its performance is as private as possible. *Taren esak* are practitioners and may be men or women who do not have to be shamans. The problem is that the traditional *taren* and *murang* treatments cannot heal the Old World diseases easily, to which the Amerindians are still extremely sensitive, as they were in the first centuries of the colonial period when their population was decimated. Today, "medicine-men" as well as dentists have the task to visit the Amerindian villages in their area regularly, but the modern *criollo* (mixed-blood Venezuelan) doctors are too far distant. Still, mission-provided antibiotics and vaccines have reduced Pemon infant mortality rates.

The Pemon's traditional housing consists of huts whose walls are made of clay or bark, with roofs made of palm leaves. Their shape is either oblong or rounded and, more recently, square. Also recent is the introduction of walls within the house. The hammocks are hung from the beams of the roof, and a fire is kept at one or two corners of the house. Arrows, knives, axes, and fishing rods are piled up in one corner, while baskets, haversacks, and pumpkins hang on the walls. The Pemon, even those who live in the forest, like to build their houses out in the open savanna. They place them near watercourses, and often the settlements are known by the name of the adjacent watercourse. Living on the savanna and cultivating in the forest often means traveling long distances on foot to get to the fields and back.

The traditional subsistence activities of the Pemon are agriculture, hunting, and fishing, but today there is increasingly more work to be found in mining and tourism.

## 10 FAMILY LIFE

Marriage is the basis of the principal economic unit: the couple. The relationship between the father-in-law and son-in-law is most important. For the father-in-law, his son-in-law is the

substitute for his own son; therefore, after the marriage, the son-in-law will detach himself from his own father and take care of his father-in-law. In the Pemon society there is no wedding ceremony. The groom simply moves his hammock to his father-in-law's house and starts working with him.

The Pemon love their children, and their attitude towards them is lenient. Grown-ups never impose severe prohibitions, and parents are not constantly reminding their children how they should behave. Children learn by following the parents' example and very seldom require discipline or punishment.

Pemon women can run the household well enough by themselves, and they often do so, as their husbands are absent for long periods on trading trips, working at missions, or in the diamond mines.

## 11 CLOTHING

Even though in the past the Pemon went naked, now the traditional clothing of a Pemon woman is an apron made of cotton or beads. At the beginning of the 20th century, Pemon women wore metal earrings known as butterfly earrings. It was also common for them to have facial tattoos and to wear bands of cotton cloth or glass beads around their arms and legs. Traditionally, the men wore loincloths, which in the 20th century were made of a bright red fabric obtained from the *criollos* (mixed-blood Venezuelans). Influenced by the Capuchin missions, by 1945 the Pemon had started wearing Western cotton clothes: the men tend to wear khaki, while the women make their dresses using cotton fabrics with patterns. The mixture of indigenous and outside items is not exclusive: the Pemon might wear Venezuelan *alpargatas*, or Western-style shoes, but it does not mean they have abandoned their own sandals, made from parts of the moriche palm stalk.

## 12 FOOD

Yucca, manioc root, or cassava, as for many other Amerindian groups, is an important ingredient for the Pemon's culinary art. The peeling, washing, and grating of this root is done by women, who then proceed to squeeze out the acid and, with the resulting dough, prepare their flat bread or fermented drinks. One of these beverages, the *cachiri*, is made with bitter yucca paste that is grated and chewed and mixed with a red root, *cachiriyek*, also grated. The mix is then boiled for a whole day. The resulting brew is mildly intoxicating.

Also part of the Pemon diet are a spinach-like vegetable called *aurosa*, peppers, more than 10 varieties of bananas, potatoes, pineapple, plantain, and sugarcane. Women gather peppers and *aurosa* daily for the pepper pot, a soup that forms part of every meal. Fishing provides the principal source of animal protein in the Pemon diet. In the past, hunting was not very effective, though men put a lot of time into it. The situation changed, however, with the arrival of firearms in the 1940s. Birds and mammals, such as deer and vampire bats, became an important part of their diet. During the rainy season, the Pemon capture flying ants, and throughout the year, they gather the larvae found in the moriche palm.

## 13 EDUCATION

One of the Pemon tools for educating their young is oral tradition. Their many stories are used by the elders to teach their sense of morality and concept of the world. "A-pantoní-pe

nichii,” “May you take advantage of this story,” are often the closing words of the narrator.

Since the law of 1979, bilingual education at Amerindian primary schools is compulsory. Most of the main languages in Amerindian territory have at least one schoolbook. Though the teachers’ organizations and the government have proved their good will in the recent past, the difficulties are considerable; they include long distances, bureaucracy, and Amerindian teachers sometimes too acculturated to cooperate wholeheartedly or just too poor to travel to the federal bilingual course far away in the middle of the industrialized part of the country. Some Pemon children spend time in mission boarding or day schools, through the primary school years and sometimes beyond.

#### 14 CULTURAL HERITAGE

Music and dance are important components of Pemon activity. The same forms of dances and melodies, with different texts, are performed in medical contexts, shamanistic wars, or hunting preparations. They also accompany various rites of passage, incidental celebrations, and nonpublic healing rituals. *Mari’* or *Mari’k*, for example, is the Pemon word for the dance and music that used to be performed in public by the *paisan* (shaman) and his assistants. In one *Mari’k* everyone sang and danced and stamped the *waronka* (a hollow tube of wood or bamboo) or a branch around which strings of rustling and rattling seeds or shells are hung. They also played flutes and a kind of horn made from a long, straight bamboo tube. The Pemon *paisan* generally restrained himself to a bundle of rustling leaves, the drum *sambura*, or the *waronka*.

Nowadays, there are no *paisans* left in the Christianized Pemon villages, and some Pemon seem to be ashamed of tokens from the past, like old instruments. Still, on occasions when *cachiri*-drinking makes them receptive to tradition, spontaneously an old dance starts. With sticks and empty cans and tins, they sing songs full of endlessly repeated short phrases, varied by improvisation, jokes, and remnants of the old shaman songs.

#### 15 WORK

Work for the Pemon is part of life, and there is no word for working other than *senneka*, which means “being active” more than “laboring.” Only when they started working with the missionaries or miners did they adopt the Spanish word *trabajo* (work) that turned into *trabasoman* to characterize work done in the European fashion. The Pemon’s means of subsistence are based in slash-and-burn horticulture, fishing, hunting, and collection of wild fruits and insects. There is now considerable flexibility in the division of work in all areas among the Pemon people. Traditionally, for example, men were responsible for the preparation of the soil, while women were in charge of weeding, harvesting, and transporting the produce.

Processing bitter manioc (cassava) takes a long time and a great deal of effort, but women break the monotony with the aid and companionship of other women. The arrival of metal tools made the preparation of the fields less difficult, so the men have more time for mining diamonds and gold. The task of fishing is usually shared. Catching the small fish found in the savanna is possible with the help of the *inek*, a poisonous plant that asphyxiates the fish and brings them to the surface where they can be easily trapped with nets. The men go up the

river and pound the stems of the *inek* to extract the poison, while the women and children wait down the river to gather the fish with the nets. A Pemon man is a hunter, fisherman, woodsman, clearer of fields, maker of fiber basketry, and house-builder. A Pemon woman is a manioc-processor, weaver and tier of cotton, seamstress, and tier of fish nets. Cooking and procuring water and wood is left to the women. They are also responsible for the care of the children, though men help.

#### 16 SPORTS

Spectator sports were not very common among aboriginal tribes. Most of the talents applauded by indigenous societies are what they consider to be essential survival skills and are part and parcel of Amerindians’ day-to-day life. Fishing, hunting, and merely getting from one place to another demand the ability to run fast, jump high and long, master archery and swimming, etc. Though good hunters might be admired, hunting is still above all a subsistence activity.

Pemon Indians who are in close contact with Whites participate in the national sporting culture.

#### 17 ENTERTAINMENT AND RECREATION

The Pemon culture is very rich in what is known as oral literature: tales and legends that the Amerindians call *pantón*. There is no specific time dedicated to telling stories, but the favorite moment is just before going to sleep. The morning is the time to narrate and interpret dreams, and storytelling might happen again after meals. Stories and legends are considered luxuries of such worth to justify a trip to visit other tribes to procure them. The possessor of stories is called *sak* and, for the Pemon, a guest that tells stories or brings news or new songs is always welcome.

Dancing and beer accompany Pemon ceremonies, which draw large groups for periods of several weeks. Their gatherings are informal: while lines of men and women dance in a circle inside the round house for Hallelujah ceremonies, others slip in and out for conversation or for a gourd full of manioc (cassava) beer.

#### 18 FOLK ART, CRAFTS, AND HOBBIES

The Pemon value the abilities of their artisans: outstanding persons are recognized for their individual skills. Some women are renowned for the quality of their clay bowls. They are mainly made in the Kamarata and Uriman areas by women who learned the skill from their mothers. As not many females know the skills, and good clay sites are limited, the bowls are dispersed in the trade network. Basketry is another main Pemon art form. Men manufacture all basketry and fiber articles, including eating mats, strainers, baskets, and squeezers used in everyday household production. But everyday basketry is different from the more elaborate forms, which can be used as trade items. As in the case of pottery, only certain men are skilled at making complex patterned baskets. The Pemon also make wooden dugout and bark canoes, paddles, and bows, and weave hammocks and baby carriers.

#### 19 SOCIAL PROBLEMS

The Venezuelan government’s presence has increased substantially in the area of Santa Elena along the border with Brazil during the last 25 years. Road penetration of the eastern por-

tion of the Gran Sabana dates from the early 1970s. Land entitlement for the communities has been recognized by experts and international support organizations as the most pressing issue facing the Pemon in the 1990s. Venezuela recognizes land rights for their Amerindian population but in many cases provides only provisional titles that can be easily ignored. Gold, diamonds, and wood are once again attracting outsiders, and their arrival often leads to violation of Amerindian rights. The tourist industry is also threatening the region, as what has been a controlled eco-friendly enterprise could turn into a virtual invasion if plans to build big hotels are approved.

## 20 GENDER ISSUES

Even though polygamy is practiced, only about 8% of all marriages involve a male and two or more co-wives. Divorce rates are low, accounting for about 10% of all ever-married individuals.

Women still tend the gardens, bake the traditional *kasabe* bread, and brew *kachiri*, the fermented drink made from manioc roots. Women often tend their gardens with a sister-in-law. Although the content of daily work is often gender-specific, men and women carefully coordinate their tasks and cooperate in many of them, such as the preparing of game for cooking and the making of tools for vegetable processing.

In 2001, the Women's Development Bank had worked to extend women's access to credit in Venezuela, particularly for small businesses and technical assistance purposes. Credit programs for indigenous women had benefited 70 Pemon women, and micro-enterprises involved career development, self-esteem building, and sexual and reproductive rights.

## 1 INTRODUCTION

Archeological excavations have found evidence of a human presence in the Peruvian territory since 11,000 BC. The oldest culture was the so-called Norte Chico civilization, which flourished between 3000 BC and 1800 BC. In the 12th century, the Inca civilization emerged as a powerful state when Manco Capac founded the kingdom of Cuzco. In 1442, the Incas began a far-reaching expansion under the command of Pachacutec, forming the Inca Empire of Taiwantinsuyu, which would become the largest empire in pre-Columbian America. However, the empire suffered a civil war, which pitted the brothers Huascar and Atahualpa against each other in competition for the throne of emperor, a scenario that facilitated the Spanish conquest of the Inca Empire.

In 1532 the Spanish conquistadors, led by Francisco Pizarro, reached Inca territory in the middle of the war of succession. Pizarro, who did not have a formidable force, originally offered diplomatic negotiations as a means of gaining control. His intentions were questionable, however, since both brothers were put to death within a year.

After the conquest of the Incas, Peru's capital, Lima, became the center of Spain's colonial power structure in the Americas. Often called the "city of kings" in honor of Charles V, its name is a modification of the river that divides it, the Rimac. In Quechua, Rimac means "river that speaks." This combination of a strong Spanish influence with a rich indigenous heritage has shaped Peru's traditions, politics, and culture.

The Napoleonic invasion of Spain in 1808 initiated a wave of independence movements in Spanish colonies in South America, but the Peruvian aristocracy remained loyal to the Spanish crown. However, this loyalty did not prevent General José de San Martín of Argentina—whose aim was to secure Argentine control of Upper Peru's silver—from destroying the remaining Spanish power in South America. Peruvian independence was declared on 28 July 28 1821.

Peru's political history in the 20th century has been characterized by swings from democracy to military dictatorship. A leftist military government, the result of a military coup on 27 August 1976, instituted an economic program that promoted agricultural cooperatives, expropriated foreign companies, and decreed worker participation in modern industry. A return to democracy took place in 1980, when different administrations reorganized the economic system, while reducing the government's involvement in the productive sector and encouraging private capital investment in the country's industries. However, an explosive increase in imports injured the nation's industry. Lower prices of Peru's major commodities and the devastating effects of El Niño in 1982–83, made impossible the amelioration of the Peruvian economy. In this dire context were born two powerful guerrilla movements: the neo-Maoist group known as Shining Path (Sendero Lumino-

so) and the Tupac Amaru Revolutionary Movement. The existence of these two paramilitary factions forced the government to spend important resources in combating the guerrillas and repairing the damages inflicted during the conflict.

In 1985 a young and compelling politician, Alan García, was elected president of Peru. His economic plans were quickly defeated as the International Monetary Fund declared Peru ineligible for future loans. With inflation, guerrilla warfare, and drug-trafficking on the rise, the 1990 presidential elections brought a political outsider to the highest office. After winning the presidential race, Alberto Fujimori implemented a harsh economic plan, which stopped inflation but caused immediate hardships, especially among poor Peruvians. In 1992 Fujimori, in alliance with the military, staged a self-administered coup, in which congress was dissolved and a new constitution was promulgated. From 1992 to 2000, Fujimori's administration implemented neoliberal economic policies, leading to a rapid recovery of the economic situation. In addition, Fujimori led a successful antiterrorist campaign that ended with the capture of the main figures of the Shining Path and the Tupac Amaru Revolutionary Movement. Even though Fujimori won a second term in 1995, charges of fraud and unconstitutionality accompanied his election to a third term in 2000. Growing allegations of corruption made Fujimori flee to Japan.

In 2001, Alejandro Toledo became the first democratically elected Quechua as president of Peru. During the five years of his presidency, the Peruvian economy grew at an average of

6%, one of the highest growth rates in Latin America, while inflation averaged 1.5%. In 2006 former president Alan García won the election in spite of criticisms to his performance during his previous term. The fact that his opponent, Ollanta Humala, was openly supported by Venezuela's Hugo Chávez, ultimately helped García in his bid for a second term.

## 2 LOCATION AND HOMELAND

Three times the size of California, Peru has an extremely varied geography ranging from tropical rainforest to arid desert. With Ecuador and Bolivia, it is one of the three Andean countries on the Pacific coast of South America. Peru can be conveniently divided into three basic geographical areas. The sierra, or Andes mountains, which covers 27% of Peru's land area, is the home not only to domesticated llamas and alpacas, but also to the majority of Peru's population of 29 million people. On the Pacific coast is one of the world's driest deserts. The capital city of Lima is located on the coastal desert, making access to water problematic for its nearly 8 million residents. In sharp contrast, areas of the Amazon rain forest in the north and east of Peru receive a massive 190 to 320 cm (75–125 in) of rain annually. The tropical rain forest covers 67% of Peru's landmass but is rapidly being destroyed by logging companies.

Peru's population of 29 million people can be subdivided into the following groups: Quechuas, who constitute almost half of Peru's population; mestizos (of mixed Amerindian and European descent), comprising slightly less than one-third; and people of European ancestry, who account for about one-eighth. There are also small minorities of Aymaras and Chinese.

Many Amerindians are illiterate and speak only their native language and no Spanish. Ethnic identity in Peru, however, tends to be culturally defined. For example, if an Amerindian speaks Spanish and adopts Western dress, he or she may be considered a mestizo or *cholo*. Although the percentage of the population that is indigenous is not declining, Peru's culture is becoming increasingly *mestijado*; that is, a mix of Western and traditional customs.

## 3 LANGUAGE

The two official languages of Peru are Spanish and Quechua. Quechua, the language of the Incas, which is still widely spoken throughout the Andes, was made an official language by the military government of 1968–1975. The dominant language in urban areas, however, is Spanish. Although there are some vernacular differences between the Spanish spoken in Spain and in Peru, the primary difference is the accent.

In Peru, as in other Hispanic countries, names comprise three parts: the given name, the father's surname, and the mother's maiden name. A name, for example, would be Pedro (given name) Suárez (father's name) Durán (mother's name).

## 4 FOLKLORE

Many of the beliefs and practices that comprise Peruvian folklore are associated with the native faith and customs that prevailed before the arrival of the Spanish conquerors. For example, the Incas believed that they descended from the Sun God, Inti, and that the reigning Inca was an offspring of the Sun. Though they did not practice human sacrifice, many were headhunters. The Incas believed that the possession of another's head increased the owner's spiritual strength. While head-

hunting no longer exists, a blending of Indian and European beliefs often persists in current festivals and other observances. In Pacaroztambo, November 30—St. Andrew's Day—signals the close of the planting season. Eight crosses taken from the churches are set up on the mountains that overlook the fields to protect the crops from natural disasters. They remain there until May 3 (Cruz Velakuy), the beginning of the harvest. There is one cross for each of the four *ayllus* (the basic unit of Inca society) of the two *moieties* (the two main divisions of the tribe). The latter take turns preparing the annual celebration.

At San Pedro de Casta, *la fiesta del agua* takes place the first Sunday in October. The gates of the principal river, the Carhuaymac, are opened to fill the irrigation ditches, which have been cleaned and repaired. Close to La Toma, the river gate, is a cave in which the God of the Water, Pariapunko, lives. The head of the festival goes into the cave bearing gifts of coca, cigarettes, and *chicha* beer. He begs the god to favor the community with the water it needs.

## 5 RELIGION

Even though Peru's constitution provides for freedom of religion, Peruvians are fervent Catholics. Catholics comprise 90% of the population. No Peruvian town, no matter how small or remote, is complete without a church. As with many Andean customs, their religious practices carefully intertwine modern and traditional beliefs. The Peruvian version of Catholicism, for example, has incorporated some of the traditional gods and spirits by referring to them as saints or lords. In fact, when the Spanish converted the Amerindians to Christianity, they moved many of the Christian holidays to coincide with existing traditional festivals. In so doing, many traditional festivals continue to be practiced, with minor modifications, within the Christian framework. It is also considered appropriate in Peru for a Christian to make the sign of the cross while walking or driving by a church.

## 6 MAJOR HOLIDAYS

One of the most colorful festivals is the month-long celebration of the Lord of the Earthquakes in October. Peru is subject to constant tremors and earthquakes, and in the past many of its cities have been severely damaged by them. In October, a weekly procession through the streets of Lima features a painting of Christ that has survived successive quakes, trailed by throngs of followers dressed in purple robes. Strict Catholics will dress in purple on these days, whether they are able to attend the procession or not.

A secular holiday that is of great importance to Peruvians is their Independence Day on July 28. This occasion is celebrated with much festivity, especially dancing, eating, and drinking. On this day, all homes are obligated by law to fly the Peruvian flag.

## 7 RITES OF PASSAGE

Baptism of infants, first Communion, and confirmation of children in church are common. About half of all couples live together without formalizing their unions with a license or a church ceremony. A birthday may not necessarily be celebrated; the person's namesake saint's day is likely to be observed instead. A novena (nine consecutive days of special prayers) for the dead is usually held in the home of the deceased, with

friends invited on the final night. Often a second novena is held later.

## 8 INTERPERSONAL RELATIONS

It is poor manners to arrive on time if invited to a dinner or a party. Tardiness of an hour or more is expected. If hosts expect the guests to arrive more promptly, they will ask them to observe *hora inglesa* (English time). When being introduced to a woman at a social occasion, the proper greeting is a kiss on the cheek. Men, when introduced to each other, will shake hands.

At an informal gathering, when a group of friends are drinking together, it is a sign of friendship to share the same glass. When a large bottle of beer is opened or a *pisco* (a Peruvian alcoholic beverage) is made, the bottle or glass is passed around in a circle. One is expected to serve oneself a small serving, drink it quickly, and then pass both the bottle and glass to the next person. To ask for a separate glass would give offense.

The "okay" sign (touching your finger to your thumb) is considered a rude gesture in Peru.

## 9 LIVING CONDITIONS

Approximately one-third of the entire Peruvian population lives in Lima. Of the nearly 8 million residents of Lima, over half live in urban squatter settlements, known as *pueblos jóvenes* (young towns). Migration to Lima from the Andean region drives the development of *pueblos jóvenes*. Uninhabited land is selected and invaded overnight by a group of settlers. The initial housing is usually made out of light reed matting. More-permanent structures are built gradually, bit by bit as the family can afford to buy bricks and mortar. The vast majority of dwellings in the *pueblos jóvenes* are still under construction years after the initial incursion into the area.

In addition to poor housing, residents of the *pueblos jóvenes* suffer from a lack of basic services. While the majority now has electricity in their houses, water is scarce. Most homes have a large water tank behind the house, which the residents fill with water purchased from water trucks. These unsanitary conditions create serious health hazards. Restricted access to safe water puts children and the elderly at high risk for gastrointestinal infections. The largest killer of infants in Peru continues to be one of the most easily treated ailments: diarrhea. In 1991, a cholera epidemic swept the country, killing nearly 3,000 people.

The residents of the modern suburbs of Lima have living standards comparable to those found in the United States. Suburban houses range from high-rise apartments to grand colonial houses. In periods of drought, however, even these sectors have their water and electricity rationed by the municipality.

Men have an average life expectancy of 68 years; women, of 72 years.

## 10 FAMILY LIFE

In countries without a welfare system, such as Peru, families tend to bond together not only as a social unit, but as an economic one as well. The basic household unit includes parents, children, and, in many cases, grandparents or aunts and uncles. In middle-class households, it may also include a live-in servant or nanny to look after young children. These small extended family groups share household chores and tasks, and those who are able generate income for the family. Financial

*The basic household unit includes parents, children, and, in many cases, grandparents or aunts and uncles. (Cory Langley)*

difficulties mean that children live at home until they get married as young adults.

Bonds between families also supplement bonds within families. *Compadrazgo* (godparenthood) is an important tie between friends and forges bonds of obligation between two families. Godparents are expected not only to contribute a modest amount of financial support for the godchild, but to provide emotional support and guidance to the family. These interfamily social arrangements expand a family's support network.

Although *machismo*, an attitude of male superiority and sexism, is widespread, Peruvian women are neither meek nor shy and participate actively in important family decisions. Women play an active role both in family and community life. In the urban squatter settlements, or *pueblos jóvenes*, women often take a leading role in community organizations that lobby the municipality or provide services to the community. They also make significant contributions to family income.

### **11 CLOTHING**

In Andean areas, women wear colorful woven skirts with many layers of petticoats underneath. Solid-colored llama wool sweaters offer protection against the cold Andean night air. Hats are used throughout Peru. Each region has its own style of hat, and it is possible to tell which region an Amerindian is from by his or her hat. Men wear simple trousers, Western-style button-down shirts, and sandals.

As the process of urbanization in Peru has advanced, so has the process of Westernization. Most Peruvians don Western clothes for both everyday and special occasions. Young Peruvians in urban areas prefer jeans, American tennis shoes, and Western-style skirts over the traditional alpaca and llama wool clothes worn in the Andean regions. Upon arrival in Lima, most migrants abandon the use of their traditional clothes in favor of tee-shirts and skirts. One useful custom that is often retained, however, is the use of a shawl across the shoulders to carry small children.

### **12 FOOD**

Peru has one of the most developed national cuisines of Latin America. Many dishes are a delicate combination of indigenous, Spanish, and African ingredients and cooking traditions. Seafood is the dominant ingredient on the coast, yucca and plantains in the jungle, and potatoes in the Andes. In fact, potato originates in Peru, and there are over 100 varieties still being grown in the Andes.

The national dish of Peru is *ceviche*, a spicy dish of onions and seafood. In ceviche, the fish is cooked not by applying heat but by soaking it for a few hours in limejuice. The acid in the limejuice has the effect of breaking down the protein, thus "cooking" the fish. Sliced onion, hot peppers, and chopped coriander are then added. Ceviche is purported to have beneficial effects on hangovers, thus it is customary for partygoers to eat ceviche at dawn.

The high cost of living has led many mothers living in low-income neighborhoods to organize and form communal kitchens. These groups, now recognized by the government, receive subsidized food and cook for 100 or so people for a small fee. Most of Lima's shantytowns, or *pueblos jóvenes*, will have communal kitchens, organized and operated by the residents themselves. It has been estimated that 1.5 million people in Lima alone rely on these kitchens for affordable meals.

### 13 EDUCATION

Children are obligated to attend school. Peruvian children, dressed in solid gray uniforms, attend either the morning session or the afternoon/evening period. The literacy rate in Peru is relatively high, reaching 93% for males and 82% for females.

The relatively small number of universities in Peru means that it can be difficult to gain admission. Only 3% of the population is able to attend university. An informal rite of passage common in Lima is for friends to tackle a successful male entrant—and shave his head.

The Peruvian army, because of its dedication to civic action, has worked to counteract illiteracy, especially prevalent among its Amerindian draftees. Measures are taken to teach inductees to read and write. During the final three months of service, the draftee undergoes special training to provide him with a trade.

### 14 CULTURAL HERITAGE

The different ethnic groups that have migrated to Peru have left a rich musical heritage. Both *música criolla* of Spanish influence and Andean folk music are popular. Traditional music, recently becoming popular with young Peruvians, is Afro-Peruvian melodies. This rhythmic music has its roots in the protest songs of the Black population of Peru. The cultural center of Afro-Peruvian music is the town of Chincha, on the Pacific coast south of Lima. In the 1980s and 1990s, Afro-Peruvian music has witnessed a strong revival and is now popular in the bars and dance halls of Lima. Musical shows for tourists feature the *alcatraz*, a traditional Afro-Peruvian fire dance. Alcatraz dancers tuck a piece of paper into their back pockets or around their waist, leaving a short tail hanging out. A second dancer follows behind with a lit candle trying to set the tail on fire. The first dancer must move his or her hips vigorously to prevent the paper tail from catching fire. Other dances include *el zapateo*, in which intricate footsteps on hard wood are used as percussion.

Peru also has a strong literary tradition. Available in English translation is José María Arguedas' novel about life in the Andes entitled *Yawar Fiesta*, as well as the writings of poet Cesar Vallejo, whose masterpiece is *Trilce*. One of the most revered contemporary writers in Peru is the novelist Mario Vargas Llosa. Vargas Llosa is known worldwide both for his writings and for his bid for the presidency in 1990. His comic autobiographical narrative, *Aunt Julia and the Script Writer*, was made into a Hollywood movie starring Keanu Reeves. Other outstanding writers include the novelist Ciro Alegría, dramatists Salvador Bandy and Gregór Díaz, and poets Cecilia Bustamante and Cesar Moro.

### 15 WORK

Formal paid employment is difficult to find in Peru. Most families are forced to seek varied and innovative means to gener-

*Most Peruvians don Western clothes for both everyday and special occasions. One useful custom that is often retained, however, is the use of a shawl across the shoulders to carry small children. (Sally Keener)*

ate an income, struggling to earn a living by whatever means possible. Approximately 80% of the population are either subsistence farmers or operate their own tiny enterprise. Both women and children make important contributions to family income, either from small-scale cottage industries in their homes, or as traders outside the home. Common economic activities include part-time tailoring, kerosene sales, food processing, or even charging neighbors for watching one's TV. Children may contribute by selling goods on the street or through activities such as collecting tin cans. Even if the father is working, most families will be involved in a multitude of economic activities. Other economic survival strategies include labor for labor swaps with neighbors, or raising chickens for family consumption.

Outside urban areas, Peruvians are largely subsistence farmers. The dry Andean terrain makes agriculture a challenge. Steep slopes are farmed by a process of terracing, in which multileveled steps are created to provide flat areas for planting. Potatoes and corn, which adapt well to high altitudes, are the primary crops.

### 16 SPORTS

As in most other Latin American cultures, soccer is the dominant sport in Peru. The love of soccer is one of the few cultural traits that transcend both ethnic and socioeconomic boundaries. Even in densely populated urban shantytowns, large pieces

of land are often set aside for a soccer field. Middle-class children set up goals and play in the streets.

Lima's two soccer teams, Alianza Lima and Universitaria, have an intense rivalry that has kept *Limeños* (residents of Lima) fascinated for years. This rivalry has a particular poignancy. In 1987 the plane carrying the members of Alianza Lima crashed when landing in Lima, leaving no survivors.

## 17 ENTERTAINMENT AND RECREATION

Popular culture in Peru is varied. In the evenings, young people flock to both Western-style bars and discos or to *peñas* where traditional Peruvian folk music is played. In Lima, an old colonial suburb of the city called *Barranco* has become the focus of trendy and artsy activities. A variety of music halls, theaters, bookshops, and art galleries attract crowds of middle-class youth.

Also popular in Peru are televised soap operas. Produced largely in Venezuela or Mexico, these evening shows attract a vast following. Soap operas are also produced in magazine format. *Fotonovelas*, as they are called, present soap operas with a series of photos and captions. *Fotonovelas* are the reading material of choice of many in the *pueblos jóvenes*.

## 18 FOLK ART, CRAFTS, AND HOBBIES

See the article on the *Quechua* in this volume.

## 19 SOCIAL PROBLEMS

Peru has one of the worst human rights records in the world. The Peruvian government battled the Maoist Shining Path guerrillas in the 1980s and 1990s. In its battle to eliminate this violent terrorist group, the military kidnapped and killed many suspected Shining Path sympathizers. Trade union officials, university professors, and students were the main targets. The military has been successful in eliminating the Shining Path movement, but human rights abuses remain a serious problem.

## 20 GENDER ISSUES

Peru has improved its gender equity conditions at a slow pace. Under the guidance of the Ministry of Woman and Social Development (MIMDES), the government has aimed to build gender equity conditions under an integral perspective with the application of the Equal Opportunity Plan 2000–2005 and its new version 2006–2010. Although the budget assigned to MIMDES has increased by 28% during the period between 2003 and 2006, it only represents 2.4% of the public sector expenditure and 2.5% of the total GDP.

The largest gender gap can be observed at the economic level, in which Peruvian women receive an average income that only represents 27% of what men make. In addition, 84% of women are employed in the service sector, while 10% is in industry and only 6% in the agricultural sector. In Metropolitan Lima, 49% of women work without labor protection or social security rights. Moreover, while 8.1% of women in urban areas are jobless, almost half of working women are underemployed, which means that one of every three women is receiving income that does not meet the minimum family basket requirements.

Illiteracy for 15-year-old women or older is 18%, while the Latin America average is 11%. In South America, Peru has the second-highest maternal death rate, after Bolivia, and rural

women who live in poverty have the highest risk of maternal death. Another problem for Peruvian women has been the increase of HIV incidence in the last decades. In 1986, for every nine men there was only one woman infected with HIV. In 2005 the ratio was three to one.

Regarding political participation, 18% of the country's congressional representatives were women as of 2008. At the local level, about 26.3% of district council members are women, but only 2.7% of mayors were female.

# POLISH AMERICANS

For more information on Polish history and culture, see **Vol. 3: Poles**.

## OVERVIEW

Polish settlers helped establish the Jamestown colony in Virginia in the early 1600s. Polish adventurers and radicals came across the sea to help the American colonists win the Revolutionary War (1775–83), including heroes Tadeusz Kosciuszko (1746–1817), who later returned to the United States to serve as liaison between President Thomas Jefferson and leaders of the French Revolution and Count Kazimierz Pulaski (1747–1779), sometimes called the “father of the American cavalry,” who was killed in the battle of Savannah, Georgia. Since then, millions of people from Poland have immigrated to the United States.

When Poland was partitioned in the 1770s between Russia, Austria, and Prussia, members of the Polish upper class chose to escape the new oppressive governments. Many came to America. So many came, in fact, that Polish America became known as the “Fourth Province” of Poland, the other three being those areas controlled by Russia, Austria, and Prussia, respectively. (Another term for the Polish community outside of Poland is “Polonia.”) A few groups of peasant farmers also came to America, looking for better economic opportunities. They set up Polish farming communities in places like Panna Maria, Texas, the first permanent Polish community in America, founded in 1854.

Polish immigration from the 1770s to about 1870 is sometimes referred to as the “first wave,” but more often, the first wave is considered to have begun in 1870 when Polish serfs were given their freedom. The United States also began encouraging immigration to help rebuild the country after the devastation of the American Civil War (1861–65). Up to 2 million Poles immigrated to the United States between 1870 and 1914, when the beginning of World War I brought immigration to a halt.

Most Polish immigrants in this first large wave of immigration, also called the “old emigration,” were single young men looking for the chance to work at wage-earning jobs, save up their money, and return to Poland. Some 30% actually did return to Poland, but the rest stayed in the United States. As uneducated (though generally literate) peasant farmers, they were unskilled and unprepared for the industrialized world of America. They took whatever jobs they could find, working in mines, mills, factories, slaughterhouses, refineries, and foundries. Once established in their new home, many sent for their families or returned to Poland to marry, then brought their wives back to the United States with them. Women and children went to work then to support the family.

The second wave, or “new emigration,” of Polish Americans came to the United States under the Displaced Persons Act of 1948, which allowed Europeans who had been displaced by the destruction of World War II to enter the United States as immigrants. These second-wave Polish Americans tended to be well-educated intellectuals, the writers, artists, and scholars who had been targeted by the Nazis for elimination. A number of them were Jewish (see **Vol. 2: Jewish Americans**). The

new emigration added depth to the already established Polish American community.

In the 1960s and 1970s, “Polack” jokes became popular in the United States, portraying Polish and Polish American people as stupid, crude, and lazy. The Polish American community fought back with a campaign showing the great achievements of Polish writers and scholars, etc., but the discrimination continued. Even Ronald Reagan, while running for president in 1980, told “Polack” jokes to a group of reporters. When the Solidarity movement took off in Poland, however, Americans were drawn into sympathy with the revolutionary Poles, and “Polack” jokes died out. First-generation Polish Americans were allowed to vote in the 1990 Polish presidential elections and they helped bring Lech Walesa, leader of the Solidarity movement, into office.

In the 2000 U.S. Census over 8.9 million people were listed as having Polish ancestry. Early immigrants generally settled in the industrial cities of the Northeast and Midwest, such as Cleveland and Toledo, Ohio; South Bend, Indiana; Wilkes-Barre, Hazleton, and Pittsburgh, Pennsylvania; Milwaukee, Wisconsin; Minneapolis–St. Paul, Minnesota; Omaha, Nebraska; St. Louis, Missouri; Chicago, Illinois; Detroit, Michigan; and Buffalo and New York City, New York. Few of the old purely Polish neighborhoods still exist, but many of the cities of early settlement still host larger communities of Polish Americans. According to the 2000 U.S. Census, there were about 213,447 people of Polish ancestry living in New York City and 210,421 living in Chicago, Illinois. The states with the highest populations of Polish Americans were New York (986,106), Illinois (932,982), Michigan (854,815), Pennsylvania (824,146), and New Jersey (576,465). About 9.3% of the population of Wisconsin was listed as having Polish ancestry. The 2005 American Community Survey estimated a total of about 9.7 million people of Polish ancestry, with 38% living in the Midwest, 33% in the Northeast, 17% in the South and 12% in the West. In the 2000 U.S. Census, Polish ranked as the 10th most popular language other than English that was most frequently spoken at home.

The Polish American community has been in the United States for several generations and traditional Polish ways are being lost by later generations. Polish language proficiency is limited or nonexistent among third- and subsequent-generation Polish Americans. Some first- and second-generation Polish Americans lament that their children speak Spanish or some other language learned in school better than they speak Polish.

Many Polish Americans chose to shorten or otherwise Americanize their names in order to blend in better with the mainstream society when they first arrived. Immigration officials simplified others’ names on their entry papers because they either could not understand the actual name or did not care to write it out. In today’s climate of multiculturalism and ethnic pride, some young Polish Americans are reclaiming their true Polish names.

Nearly all Polish Americans are either Catholic or Jewish. When Polish Catholics arrived in America, they found the Roman Catholic churches controlled by Irish Catholics who had arrived earlier. The Irish Catholics did not welcome the newcomers and Polish Americans began establishing their own churches whenever and wherever possible. In 1897 a number of Polish Americans decided to separate from the Roman Catho-

Participants, wearing traditional clothing, wave as they take part in the 61st annual Pulaski Day Parade in New York, New York. The parade is meant to honor Polish American heritage. (AP Images/Gino Domenico)

lic Church entirely and formed the Polish National Catholic Church (PNCC) under the leadership of Father Franciszek Hodur. The PNCC is very similar to the Roman Catholic Church with a few very important differences: PNCC priests are allowed to marry and church officials are *elected*, rather than appointed. The PNCC had over 25,000 members in 2008. There were parishes in 20 states and 3 Canadian provinces.

Polish Americans celebrate the holidays and rites of passage common to their tradition, be it Catholic or Jewish. Many Polish American Catholics continue to hold the traditional Polish Christmas Eve dinner called *Wigilia* and sing *koledy*—Polish Christmas carols. A secular holiday celebrated by all Polish Americans is May 3, commemorating the Polish Constitution of 1791, the first democratic constitution in all of Europe. Some Polish American communities celebrate Pulaski Day (October 11), a holiday established in the United States by presidential proclamation to commemorate the death of General Kazimierz Pulaski, a Polish hero in the American Revolution. The state of Illinois has designated the first Monday of March as Pulaski Day, a date which more closely coincides with Pulaski's birthday (March 4).

Polish Americans continue to hold to the traditional Polish values of hard work and tenacity, good manners, and generosity. They are also competitive within their personal community, striving to achieve higher status (usually by means of material goods) than those around them. However, Polish Americans are also very loyal to their community, so the competition is good-natured, even joyful. The people of Poland learned to be wary of change after centuries of upheaval and oppression. Polish Americans carry on that wariness, placing a high value on security, stability, respectability, and order. For this reason, as well as religious convictions, the divorce rate is quite low among Polish Americans as compared to other ethnic groups in the United States.

Polish Americans have contributed a great deal to American culture. Kielbasa (Polish sausage), pierogi, Polish dill pickles, sauerkraut, Polish ham, and babka (an egg-dough cake) are all fairly common items in the American diet. Paczki, a jam-filled donut, has become a traditional food for some Polish Americans to eat on Fat Tuesday (Shrove Tuesday). Vodka, originated by the Polish, not the Russians, is now a favorite liquor in the United States.

Polish American writers, musicians, actors and directors, and even fashion designers (Helena Rubinstein) have all made a serious impact on U.S. society. Writer Czeslaw Milosz won the Nobel Prize for literature in 1980. Other successful Polish American writers include Isaac Bashevis Singer, Jerzy Kosinski, and playwright Janusz Glowacki. The first well-known Polish American film actor was silent-screen star Pola Negri (credited with introducing painted toenails to American women). She was followed by Gloria Swanson, Carole Landis, Loretta Swit, Stephanie Powers, Jerry Orbach, and Charles (Buchinsky) Bronson, among others. Producer/director/screenwriter Joseph L. Mankiewicz is another important figure in American film, as are producer Samuel Goldwyn; producer/director Roman Polanski; the founders of Warner Brothers Studio, Harry, Albert, and Jack Warner; and filmmakers Zbigniew Rybczynski and Agnieszka Holland.

Polka music is probably the best-known contribution Polish Americans have made to American culture. Contrary to popular belief, the polka did not originate in Poland but in Bohemia (a region of the Czech Republic) and it was never more popular in Poland than such dances as the mazurek or the polonaise, which are similar to the polka in rhythm and steps. Polish immigrants to America embraced the polka as a “national anthem” as they began to link Polish verses to the tunes. The Polish-style polka originated in Chicago and generally features an accordion, drums, string bass, and two trumpets. The International Polka Association in Chicago preserves and promotes both the Polish-style polka and the cultural heritage of Polish Americans.

Many individual Polish Americans have also made significant contributions to the world of music, including pianists Liberace and Arthur Rubinstein; orchestral conductors Leopold Stokowski and Arthur Rodzinski; singers Bobby Vinton, Pat (Andrzejewski) Benatar, and Huey Lewis; drummer Gene Krupa; and jazz violinist Michal Urbaniak.

In the world of industry, Joseph “Jock” Yablonski was a strong force in the United Mine Workers union. He ran for president of the union in 1969 but lost. While appealing the decision, he was assassinated, along with his wife and daughter. Martha (Kostyra) Stewart, home economics maven, has

become enormously popular in popular culture. Her books and magazine are highly successful and she has made numerous appearances on morning and afternoon talk shows. She also stars in her own television show. Max Factor, Sr., a Polish born businessman, is well-known for the cosmetic company he founded under his own name.

Polish American scientists have made significant contributions in their fields. Albert Abraham Michelson was awarded the Nobel Prize in physics in 1907 for his study on measurements of the speed of light. He was the first American to receive the Nobel Prize in the sciences. Stephanie Kwolek discovered the synthetic material known as Kevlar.

Polish Americans are well represented in the U.S. government. Edmund Muskie served as a U.S. senator for a number of years, then ran unsuccessfully for U.S. vice-president, with presidential candidate Hubert Humphrey in 1968. He later served as the U.S. Secretary of State during Jimmy Carter's presidency. Another Polish American, Zbigniew Brzezinski, also served in Carter's administration, as National Security Advisor. Other Polish American politicians include U.S. Senators Barbara Mikulski and Frank Murkowski, and former Chair of the House Ways and Means Committee, Dan Rostenkowski.

A form of baseball was probably introduced to America by Polish settlers in the Jamestown colony in the early 1600s. Baseball remained Polish Americans' favorite sport for many generations. In the 1870s Oscar Bielaski was the first Polish American to play professional baseball. When the National League was formed in 1876, Bielaski joined the Chicago White Stockings (as they were then named). Men's baseball stars since that time include Stan "the Man" Musial, Carl Yastrzemski, and Dave Dombrowski. Sophie Kurys, Loretta (Jaszak) Jester, Connie Wisniewski, and Jenny Romatowski were among the stars of the short-lived women's professional baseball league.

Two Polish Americans have won the Heisman Trophy for college football: Johnny Lujack and Leon Hart. Ron Jaworski, Bill Romanowski, Alex Wojciechowicz, Bill Osmanski, and Ed Danowski are all successful professional football players. Wayne Gretzky is considered by some to be the best hockey player ever to take the ice. Ed Olczyk is another well-respected hockey player. Janet Lynn found great success on the ice as a figure skater.

Polish American culture is celebrated at several Polish American festivals, usually held in the summer. The parades, feasts, and polka music are enjoyed by Polish and non-Polish Americans alike. Few Americans are aware that October is Polish American Heritage Month. Polish American organizations are trying to increase awareness of Polish American heritage among the general American public as well as among younger generations of Polish Americans, many of whom have lost touch with their traditional culture.

The Polish Women's Alliance of America (PWAA) was founded on 22 May 1898 in Chicago as a fraternal benefit society. Stefania Chmielinska, PWAA founder, was a Polish immigrant who worked as a seamstress in Chicago. She and others like her realized that women needed equality and worked to promote this cause. The right of women to pursue higher education, the right to enter many professions, and the right of women to purchase life insurance in their own names were some of the issues taken on by the PWAA. Polish American women worked against prejudices and narrow-mindedness to become leaders in their communities. During World War I and

II, during the years of political freedom in Poland between the wars, and for almost 50 years of Communist rule in Poland, the PWAA and other Polish American organizations worked to bring aid and moral support to the Polish nation, its people, and religious institutions. Polish American women today must decide to what extent they want to relinquish their traditional culture in the face of modern American values and habits. Such negotiation of the past and present can be difficult.

# PUERTO RICAN AMERICANS

For more information on Puerto Rican history and culture, see **Vol. 2: Puerto Ricans**.

## OVERVIEW

A few Puerto Rican political exiles from the unsuccessful attempt to overthrow Spanish rule emigrated to the United States in the late 19th century, but large-scale Puerto Rican immigration to the U.S. mainland did not begin until the early 1900s. Puerto Rico became a U.S. territory in 1898 when the United States defeated Spain in the Spanish-American War, making it fairly easy (legally speaking) for Puerto Ricans to immigrate to the United States. The rate of immigration was slow at first, however, because transportation by ship was too expensive for most Puerto Ricans. By the time of World War I (1914–18), the number of Puerto Ricans arriving on the U.S. mainland had risen sharply, despite the continuing high travel costs. This was due to conditions in both Puerto Rico and the United States.

In Puerto Rico, improved health care and public health systems had caused a sudden population boom, resulting in high unemployment, overcrowding, and poverty. In the United States, the war economy had created a surfeit of unskilled jobs. Many Puerto Ricans decided that the prospect of employment in the United States was worth the cost of transportation. In 1917, citizens of Puerto Rico were granted U.S. citizenship and were therefore exempt from the immigration quotas established in 1924 for other nationalities. Competition for jobs in the United States decreased as the flow of other immigrants lessened, and Puerto Ricans rushed to fill the demand for unskilled laborers. Worsening economic conditions in Puerto Rico, combined with a series of natural disasters, drove the number of Puerto Rican immigrants to the United States to an all-time high. By 1930, the Puerto Rican American population had reached approximately 53,000.

With the onset of the Great Depression in 1929, economic opportunities in the United States decreased rapidly and it was no longer worth the cost for Puerto Ricans to relocate. Immigration consequently slowed considerably during the 1930s. U.S. agriculturalists, however, were looking for cheap farm laborers in the 1930s, and a number of Puerto Ricans began to travel to the U.S. mainland during the off-season of Puerto Rico's sugarcane industry (which was summer and fall harvest season in the United States) to become migrant workers along the Atlantic coast. By 1940, Puerto Ricans made up a significant percentage of Atlantic coast migrant workers. The work was exhausting and paid very little, and living conditions were miserable, but many laborers felt it was better than being unemployed in Puerto Rico. After increasing protests by Americans over the terrible treatment of migrant farm workers, the U.S. government passed laws in 1947 to improve their conditions. Although conditions did improve somewhat, the life of migrant farm workers and their families was still harsh (and continues to be so today).

When World War II began in 1939, sea transportation was suspended because of German submarine activity. Puerto Rican immigration to the United States therefore ceased until

the war ended in 1945. The second wave of Puerto Rican immigration, termed "the great migration" began as soon as the war was over and lasted through the mid-1960s. Air travel had become a very affordable option, and in the booming postwar economy in the United States, unskilled jobs were plentiful. Puerto Rican immigration to the U.S. mainland surged, peaking in the 1950s. By 1960, the Puerto Rican American population had risen to almost 900,000. Since the mid-1960s, Puerto Rican immigration has slowed somewhat, but the numbers of new arrivals each year are still significant.

It is difficult to determine the exact Puerto Rican American population because there is a high rate of travel between Puerto Rico and the U.S. mainland. It is impossible to know who is immigrating on a permanent basis, who is coming on a trial basis, and who is just visiting family and friends or traveling on business. There are no official immigration records because Puerto Ricans are U.S. citizens and cross the border freely, and U.S. Census figures are only approximate because not all Puerto Ricans report themselves as "Puerto Rican." Some place themselves in the catch-all categories of "Latin American," or "Hispanic," etc. The *estimated* Puerto Rican American population, therefore, is somewhere around 4 million. Puerto Rican Americans made up some 9% of the Hispanic population in America in the 2000s.

About 95% of Puerto Rican Americans are urban, concentrated in the larger cities of New York, New Jersey, Florida, California, Pennsylvania, Illinois, Connecticut, and Massachusetts. Half of all Puerto Rican Americans live in New York City, giving it the highest Puerto Rican American population in the United States. In fact, in 1970 New York City's Puerto Rican population was higher than that of San Juan, the capital of Puerto Rico and the country's largest city. By 1980, the numbers had reversed, but New York City continues to have the second highest Puerto Rican population in the world. Many Puerto Rican Americans in New York City call themselves *Nuyoricans*. In the United States, Puerto Rican Americans are the second largest Hispanic group, after Mexican Americans. Their population is very young, with the median age around 25, compared to around 35 for the total U.S. population.

At the time of the "great migration," many U.S. cities had just begun to implement public housing systems in which people were randomly assigned housing in public housing projects throughout the city. Puerto Ricans, therefore, were scattered across neighborhoods. They were not able to develop the same sort of ethnic communities in which other earlier immigrants had found comfort and support. Despite these public housing systems, however, Puerto Rican Americans did manage to congregate in certain areas, especially in New York City. The stretch along East 116th Street has been called *El Barrio* ("the Neighborhood"), or Spanish Harlem, since the 1930s because of the heavy concentration of Puerto Rican Americans who live there.

In New York City and other places in the United States with large Hispanic American populations, signs and other public information are written in both English and Spanish. Puerto Rican Americans still encounter a language barrier, however, because English is the standard language of American business and education. Most Puerto Rican Americans continue to speak Spanish at home and with their friends, making it more difficult for them to become fluent in English. Bilingual education programs have been instituted in some elementary

schools to help Puerto Rican and other Hispanic American children succeed, but many still fail. The drop-out rate among Puerto Rican American high school students was as high as 75% in the 1970s and 1980s. Though more Puerto Rican American students are finishing high school in the 2000s (over 63%), the percentage of those who drop out is still among the highest of any ethnic group in America. (For example, in 2000 84% of whites, 73.6% of blacks and 83.4% of Asians graduated from high school.)

Puerto Ricans have two surnames: the father's family name, followed by the mother's family name. In Puerto Rico, both names are usually used when addressing someone, but if only one name is used, it is the father's. To avoid confusion in the United States, many Puerto Rican Americans drop their mother's family name altogether.

Most Puerto Rican Americans (80%) are Roman Catholic. However, Puerto Rican Catholicism is quite different from mainline American Catholicism. When the Spanish introduced Catholicism to Puerto Rico in the 1500s, the Puerto Ricans simply blended Christian teachings and rituals with their previous beliefs, creating a magical religion of saints and spirits. When Puerto Rican Catholics began to immigrate to the United States, they found Irish, Italian, and German Catholic churches that were quite strange to them. They were never allowed to establish their own ethnic parishes (as the Italians and Germans were), so they struggled to maintain their particular brand of religion at home while attending the unfamiliar European churches. Eventually, European Catholics moved on to better neighborhoods, and the parishes became predominantly Puerto Rican American. The language of church services shifted to Spanish, and traditional Puerto Rican rites and festivals began to be celebrated, such as Three Kings Day (or Epiphany) on 6 January, and *Fiesta de San Juan* (The Feast of St. John the Baptist) on 24 June.

The influence of Hispanic Americans on the Roman Catholic Church in America is finally being felt. In 1972, there was only one Hispanic bishop in the United States. By 2008, there were 38 Hispanic bishops in the United States, 25 of whom remained active and 10 were retired. They made up 6% of all U.S. Catholic bishops. Three Kings Day and the *Fiesta de San Juan* are celebrated each year in many cities with huge festivals, fairs, processions, and fireworks. *Bótanicas*, shops that sell charms, incense, herbs, magic potions, candles, and *santos* (homemade statuettes of religious figures) are found in every Puerto Rican American neighborhood.

Not all Puerto Rican Americans are Catholic, however. About 20% are Protestant, with the largest share belonging to the Pentecostal Church and other evangelical denominations. There are also Baptists, Methodists, Lutherans, and Episcopalians. Some Puerto Rican Americans choose to follow various combinations of spiritualism and folk religion, such as *Mesa Blanca*, *Santería*, *Brujería*, and *Curandera*. A number of Puerto Rican Americans follow both Christianity and a spiritualist folk religion.

Family is very important to Puerto Ricans, and immigration has always been in whole family groups. Puerto Rican families are typically large, and Puerto Rican Americans in New York City continue to have the largest families of all city residents. A high percentage of Puerto Rican American families are headed by single females, many of whom receive financial assistance from the government. Puerto Rican Americans have one of

the highest poverty rates (22.8% for families) among Hispanic Americans, surpassed only by Dominicans. This is partly due to their young average age, which is a result of the high number of children per family. Poverty rates for Puerto Rican American families headed by single women is 39.3%.

Despite their relative poverty and poor performance in school, many individual Puerto Rican Americans have found success in the United States. Puerto Rican American contributors to the world of American arts include actors Rita Moreno, Freddie Prinze, Erik Estrada, Liz Torres, Jimmy Smits, Esai Morales, Roxann Biggs-Dawson, Raul Julia, José Ferrer, Chita Moreno, and Jennifer Lopez; television personalities Geraldo Rivera and Vanna White; and film director Leon Ichaso.

Salsa music has become popular with the wider American public. Some individual Puerto Rican American contributors to the world of music are opera singer Justino Díaz; singer-guitarist José Feliciano; pop singers Tony Orlando and Julian; rappers Lisa M and Vico-C; the teen singing group Menudo; bandleader and percussionist Tito Puente; violinist José Figueroa; jazz trombonist Juan Tizol; and jazz flutist Dave Valentin.

Well-known Puerto Rican American visual artists have included Dennis Mario Rivera, Roberto Lebrón, Ramón Carrasquillo, Rafael Ferrer, Wilfred Labrosa, and Jean-Michel Basquiat. Ballet artists Brunhilda Ruiz, Tina Ramirez, and Edward Villella are all Puerto Rican American. Many Puerto Rican American writers have found success, including René Marqués, Piri Thomas, Jesús Colón, Miguel Algarín, J. L. Torres, Ed Vega, Judith Ortíz-Cofer, Nicholasa Mohr, Pablo Guzmán, and David Hernández.

Though voter registration and turnout among Puerto Rican Americans is consistently low, preventing them from becoming a significant voice in the political scene, Puerto Rican Americans have managed to make a mark in U.S. politics. Herman Badillo became the first Puerto Rican American in the U.S. Congress when he was elected to the House of Representatives from New York City in 1970 and Dr. Antonia Novello was appointed U.S. surgeon general by President George Bush in 1990.

Sports is perhaps where Puerto Rican Americans have become best known among the wider American public. Golfer Juan A. "Chi Chi" Rodríguez and horse jockey Angel Cordeiro became famous in their arenas. Boxers Sixto Escobar and Carlos Ortiz, tennis player GiGi Fernández, and Olympic swimmer Chayenne Vasallo have also been highly successful. The sport with the most Puerto Rican American success stories, however, is baseball. Roberto Clemente, Orlando Manuel Cepeda, Ruben Sierra, Sandy Alomar, Sr., Sandy Alomar, Jr., Roberto Alomar, Joey Cora, Carlos Baerga, Juan Gonzalez, Bernie Williams, José Santiago, Edgar Martínez, Carlos Delgado, and José Valentin have all been stars of the game.

One of the biggest contributions that Puerto Rican Americans could make to American culture is a new attitude towards race. In Puerto Rico, centuries of interracial marriage have led to a kaleidoscope of skin colors and facial features. Social structure in Puerto Rico is therefore not based as strictly on race as it is in the United States. "Black" and "White" as rigid categories do not exist in Puerto Rico.

Recent clinical studies of Puerto Rican women living in the United States link acculturation, sex-role traditionalism, assertiveness, and symptoms of mental and physical illness.

Examining such indicators as migration history, educational attainment, sex-role traditionalism, assertiveness, religious beliefs and practices, and family background indicated that second-generation Puerto Rican women (those born in the United States), when compared with their first-generation counterparts, were better educated and less sex-role traditional. Those Puerto Rican American women who followed traditional sex-roles were less assertive, and more assertive women experienced fewer mental or physical illnesses. Such studies are important in measuring the degree to which modern Puerto Rican American women are responding to the traditional Hispanic “macho” culture, and carving out strong new sex roles for themselves.

# PUERTO RICANS

**LOCATION:** Puerto Rico

**POPULATION:** 3.96 million in Puerto Rico; 4 million on U.S. mainland (2008 est.)

**LANGUAGE:** Spanish; English

**RELIGION:** Christian (mostly Roman Catholic); Santería

## 1 INTRODUCTION

Known as “the isle of enchantment,” Puerto Rico is a densely populated island in the Caribbean. Currently a commonwealth of the United States, “Bori(n)quen,” as the native Arawak (Taino) Indians called it (and locals still affectionately refer to it), was discovered and claimed for Spain by Columbus during his second voyage in 1493. Columbus renamed the island San Juan Bautista (St. John the Baptist), from which the island’s capital, San Juan, takes its name. “Puerto Rico,” the name given to it by Ponce de Leon (a 16th century settler and seeker of the Fountain of Youth), means “rich port.”

The Spanish brought African slaves to the island starting in 1518, just a few years after they had introduced sugarcane. By the end of 16th century, most of the native population had disappeared. The Spanish fought off a number of attacks from the British, the French, and the Dutch, but they never had to contend with a war of independence as they did in other colonies. Following the Spanish-American War, Spain ceded Puerto Rico to the United States in 1898. Under the Jones Act of 1917, all Puerto Ricans were made citizens of the United States. In 1948, Puerto Ricans for the first time elected their own governor, Luis Muñoz Marín. Muñoz Marín introduced “Operation Bootstrap,” a plan to improve the island’s economy by attracting industry through tax incentives and low labor costs. In 1952 the island became a commonwealth of the United States. As a commonwealth, Puerto Rico’s residents have the same rights, privileges, and obligations as other U.S. citizens but pay no federal income tax and lack voting representation in Congress and the right to participate in presidential elections.

In plebiscites held in 1967, 1993, and 1998, Puerto Rican voters chose not to alter the existing political status.

Today, more than 3.9 million Puerto Ricans inhabit the island. Another 4 million Puerto Ricans live on the U.S. mainland, many in New York City. Puerto Ricans in New York City often refer to themselves as “Nuyoricans.” It is difficult to determine the exact Puerto Rican American population because there is a high rate of travel between Puerto Rico and the U.S. mainland. It is impossible to know who is immigrating on a permanent basis, who is coming on a trial basis, and who is just visiting family and friends or traveling on business. There are no official immigration records because Puerto Ricans are U.S. citizens and cross the border freely, and U.S. Census figures are only approximate because not all Puerto Ricans report themselves as “Puerto Rican.”

## 2 LOCATION AND HOMELAND

Approximately 1,609 km (1,000 mi) east-southeast of Miami, Florida, Puerto Rico (160 km or 100 mi long and 51 km or 32 mi wide) offers beaches, mountains, and urban areas. It is in the urban areas where most of its nearly 4 million inhabitants are found. The capital, San Juan, is home to approximately

434,000 residents. The next-largest municipality, Bayamon, boasts about half as many dwellers. In addition to the main island, Puerto Rico also consists of several smaller islands, including Culebra, Mona, and Vieques.

Puerto Rico enjoys a subtropical marine climate with an annual mean temperature of 24°C (75°F). Puerto Rico is a popular beach resort and is one of the world's busiest cruise ship ports. Unfortunately, the island is often in the path of hurricanes. In 1989, Hurricane Hugo brought much damage. Hurricane Jeanne in 2004 caused seven deaths.

Unique to the island is the Coqui, a tiny frog that sings “co-kee.” Its likeness, however, is sure to be found the world over on tee-shirts, hats, and other souvenirs.

### 3 LANGUAGE

Puerto Ricans speak both Spanish and English, but predominantly Spanish. In 1991, Governor Rafael Hernandez Colon signed a law making Spanish the only official language. Two years later, his successor, Pedro Rossello, restored English as an official language. The Spanish spoken in Puerto Rico (or any other former Spanish colony) is as different from the Spanish spoken in Spain as American English is different from the English spoken in England—that is to say, different, but still the same language.

“Spanglish,” a mix of English and Spanish, can sometimes be heard on the island but is most often spoken in Puerto Rican communities on the U.S. mainland.

In Puerto Rico names are traditionally composed of three parts: first (given) name, father's surname, and mother's maiden name; for example, Juan Gomez Lopez.

### 4 FOLKLORE

Puerto Rican folklore, with origins in Taino, Spanish, and African traditions, deals mostly with stories of demons who roam the island after dark, seeking food or people, or protecting gold stashed by pirates. Other tales give an account of hurricanes and the damage they cause.

The legend of “El Chupacabras” (The Goat Sucker) spread throughout Puerto Rico in the early 1990s. “Chupa” is said to be a panther-like creature that stands on its hind legs and hops around like a kangaroo. It has claws on its appendages and plumage down its back. Some believe that the creature, which leaves behind bloodless animal carcasses with surgically precise incisions, may be a space alien. Others believe it is the work of satanic cults.

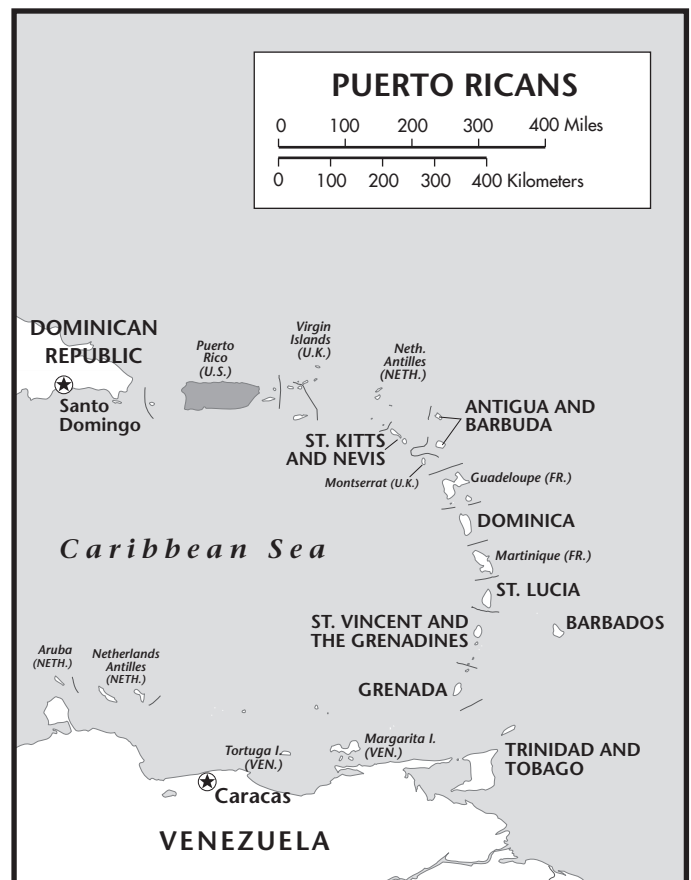

### 5 RELIGION

Most Puerto Ricans are Christian, mainly Roman Catholic (85% of the population). Santeria, the religion introduced by the African slaves, is also prevalent.

### 6 MAJOR HOLIDAYS

While every town has its own feast honoring a patron saint, the main festivities occur on San Juan Bautista Day. At midnight celebrants dip their fully clothed bodies in water in order to bring themselves good luck.

Puerto Ricans also celebrate American holidays such as the Fourth of July and Memorial Day. Christmas celebrations take place on December 25 (as is done on the mainland) and on January 6, Three Kings Day (as is traditional). During the

Christmas season, Puerto Ricans carry out what is called an *asalto* (“assault”). Celebrants go from house to house, singing songs called *aquinaldos*. Members of each household then join in and move to the next house.

### 7 RITES OF PASSAGE

The rites of passage in Puerto Rico are mainly those of the Catholic Church. Soon after a child is born it is baptized, and great emphasis is often placed on the *padrinos* (godparents). First Holy Communion is cause for great celebration. Death is mourned in much the same way as on the U.S. mainland.

### 8 INTERPERSONAL RELATIONS

Puerto Ricans, like many other peoples of the Caribbean, are characterized as being warm, open, and friendly—they will give you the shirt off their back.

### 9 LIVING CONDITIONS

Puerto Ricans enjoy a standard of living that is among the highest in the Caribbean. Health care on the island has continued to improve since the 1940s. The majority of Puerto Ricans have cars. While per capita income for Puerto Ricans is higher than that of other Caribbean nations, it is much lower than that of any of the 50 U.S. states. The per capita gross domestic product (GDP) for Puerto Rico in 2007 was \$19,600, while the per capita GDP for the American mainland was \$46,000.

A family parades in Puerto Rican flag costumes at the annual Carnival celebration in Puerto Rico. Puerto Rico was an outpost of Spanish colonialism for 400 years, until the United States took possession in 1898. Today, Puerto Ricans debate their relationship with the United States, with about half the island wanting to become the 51st state and the other half wanting to remain a U.S. commonwealth. (Amy Toensing/Getty Images)

## 10 FAMILY LIFE

The extended-family setting prevails over that of the nuclear family. However, the fertility rate in 2008 was 1.76 children born per woman in Puerto Rico, compared with 2.1 children per women on the U.S. mainland.

## 11 CLOTHING

The *guayabera*, an embroidered man's shirt, is considered a traditional, elegant article of clothing and is still worn today in both formal and informal settings. For everyday purposes, however, people tend to wear casual attire.

## 12 FOOD

"Fondas," small, cafeteria-like restaurants on the island, are popular eateries for locals and tourists alike looking for generous portions at reasonable prices. *Arroz con gandules* (rice with pigeon peas) is a typical Puerto Rican dish. *Pasteles* are tamales made from plantains and stuffed with meat. In large cities, like San Juan, one can find most of the same fast-food chains found on the U.S. mainland.

Like many other Latin Americans, Puerto Ricans typically have a simple breakfast; the most common breakfast is *cafe con leche* (coffee—usually espresso—with milk). If one happens to

visit a family at dinnertime, they are likely to insist that the visitor stay and eat. To refuse may be considered impolite.

Puerto Rico is known for its rum. The Bacardi family, which moved the center of its production from Cuba to Puerto Rico in the 1930s, is the world's largest producer of rum.

Like many of the Caribbean people, Puerto Ricans are known for their sweet tooth. Most desserts employ ingredients that are grown right on the island. Below is a simple recipe for something called *Polvo de Amor* ("love powder").

### Love Powder

1 coconut  
1 pound of sugar

Open the coconut and extract the milk. Grate the meat. Mix with sugar and cook in a kettle. Stir for 5 minutes on a high flame. Reduce heat and stir for an additional 10 minutes. Serve crisp and golden brown.

## 13 EDUCATION

More than 94% of the island's population is literate. The government spends more money on education than on any other sector. The University of Puerto Rico provides higher education at several campuses throughout the island.

## 14 CULTURAL HERITAGE

Puerto Rican culture has strong roots in Spanish and African traditions. Nowhere are those traditions more visible than in its popular music. Like other Spanish-speaking nations, salsa is the music of choice for Puerto Ricans. It blends elements of Spanish music with African rhythms.

The *Decima* (literally, “tenth”) is a poetic form of traditional Puerto Rican music in which the *Jibaro* (peasant farmer) expresses his hopes, dreams, and letdowns. The *decima* is usually improvised.

In the world of classical music, Puerto Rico boasts cellist Pablo Casals. Born in Spain in 1876 of a Puerto Rican mother, Casals is recognized the world over as one of the finest classical musicians of all time. He founded the Puerto Rican Symphony Orchestra, the Conservatory of Music, and the Festival Casals, a series of classical music concerts held in mid-June. Casals, who passed away at the age of 97 in 1973, is considered a national hero.

Other notable Puerto Rican “exports” in the arts include Raul Julia, Tito Puente, Jose Ferrer, Rita Moreno, Chita Rivera, and Jose Feliciano. Feliciano and his music embody the Puerto Rican spirit and its American influences. A true crossover artist, Feliciano is as acclaimed for his English-language recordings as for those in Spanish. One of his better-known works, “Feliz Navidad,” is a bilingual piece that has become a holiday classic.

Of all the Puerto Rican painters, none has gained greater acclaim than Jose Campeche. Campeche lived during the late 18th century and spent all of his life in San Juan. He was the son of a freed slave and an immigrant from the Canary Islands. The artist is renowned for his masterful religious works. Francisco Oller, born in 1833, demonstrated a European influence in his works. Oller applied the impressionist style to scenes depicting plantations, palm trees, and other local sights.

In literature, poet Francisco de Ayerra y Santa Maria and Latin scholar Alonso Ramirez stand out as notable contributors from the time of the conquistadors. The 19th century brought noted poets such as Lola Rodrigues de Tio, Jose Gautier Benitez, and Jose Gualberto Padilla (“El Caribe”). That same era featured distinguished writers such as Salvador Brau, Eugenio Maria Hostos, and Alejandro Tapia y Rivera. The 20th century was marked by works that deal with Puerto Rico’s relationship with the United States. Poets and writers include Jose de Diego, Evaristo Ribera Chevremont, Antonio Pedreira, Enrique A. Laguerre, Pedro Juan Soto, and Rene Marques. Contemporary Puerto Rican writers include Rosario Ferré, Mayra Calvani, Esmeralda Santiago, Judith Ortiz Cofer, Ivan Silen, Giannina Braschi, and Jesús Colón.

## 15 WORK

Puerto Rico is strong in commerce, finance, tourism, and communications. The labor force of 1.3 million is divided into services (77%), industry (20%) and agriculture (3%). Puerto Rico is one of the world’s largest producers of pharmaceuticals. At \$77.4 billion in 2007, the island’s gross domestic product (GDP) is by far the largest in the Caribbean, and one of the largest in Latin America. A diverse industrial sector has far surpassed agriculture as the primary source of economic activity and income. Encouraged by duty-free access to the United States and by tax incentives, U.S. firms have invested heavily in Puerto Rico since the 1950s. In agriculture, dairy production

and other livestock products have surpassed sugar production. Tourism has traditionally been an important source of income, with estimated arrivals of nearly 5 million tourists in 2004. The “siesta” is becoming a thing of the past, as more and more businesses adopt a “nine-to-five” mentality.

## 16 SPORTS

As in other Spanish-speaking Caribbean islands, baseball reigns supreme above all other sports in Puerto Rico—both as a participatory and as a spectator sport. Professional baseball is played by teams in the Caribbean League. Often players from the U.S. major leagues will also play in the Caribbean League. Roberto Clemente, who played in the major leagues with the Pittsburgh Pirates in the 1960s and 1970s, is arguably one of the finest athletes Puerto Rico has ever produced, and one of the best players of the game. Tragically, Clemente died at the height of his career in an airplane accident while performing charity work. Roberto Alomar is considered by many to be one of the best second basemen in history.

Other notable Puerto Rican athletes include jockey Angel Cordero, tennis player “Gigi” Fernandez, and golfer “Chi Chi” Rodriguez.

## 17 ENTERTAINMENT AND RECREATION

Like others in the Caribbean, Puerto Ricans cherish baseball, basketball, and a good game of dominoes. Highly controversial, cockfighting remains of great interest. To pass the time, people read, listen to one or more of the over 100 radio stations, or watch any of a half-dozen TV stations. On weekends, high school and college students frequent dance clubs and bars.

## 18 FOLK ART, CRAFTS, AND HOBBIES

Carved religious figures called *santos* (saints) have been produced for more than 400 years on the island of Puerto Rico. *Mundillos* (tattered fabrics) is a lace craft that is equally old and equally popular. Musical artisans in Puerto Rico make *cuatros* (four-stringed guitars). Other craftspeople make *caretas*, festive masks (made of papier-mâché) in the shape of animal or devil heads, used during the Lenten season.

## 19 SOCIAL PROBLEMS

Puerto Rico is not immune to the problems of racial and sexual discrimination that plague the world. Large, densely populated cities like San Juan suffer the same social and criminal problems as do other large, densely populated cities on the mainland—AIDS, drugs, theft, unemployment, and violent crimes. The annual murder rate on the island is high. In response, many of the wealthier neighborhoods have barricaded themselves with electronic gates.

## 20 GENDER ISSUES

The gender roles of Puerto Rican women are more traditional than those of American women on the mainland. The women’s movement was slow in coming to Puerto Rico, and a “machismo” attitude among men is still prevalent.

“SanJuanBrothas” is an annual gay pride event held in San Juan each Memorial Day weekend. It is marketed toward gay men of color, but everyone can join in. Homosexuality in Puerto Rico is legal since a new penal code was passed in 2005. As of 2008 Puerto Rico’s legislature was debating giving same-sex

couples some of the rights of marriage through civil unions. Crimes motivated by prejudice based on sexual orientation and/or gender identity are considered hate crimes and are prohibited according to the Article 72 of the Penal Code of 2004.

# QUECHUA

**LOCATION:** Peru; Ecuador; Bolivia (Central Andes regions)

**POPULATION:** About 7.5 million

**LANGUAGE:** Quechua

**RELIGION:** Combination of pre-Columbian and Roman Catholic elements

## 1 INTRODUCTION

The Quechua Indians of the central Andes are the direct descendants of the Incas. The Inca Empire, which existed for a century before the arrival of the Spanish, was a highly developed civilization. The Inca Empire stretched from parts of present-day Colombia in the north, southward into Chile. The Incas had an impressive governing structure. The government imposed tribute and taxes on the population that were extracted in the form of labor and in crops. Vast warehouses were used to store food that was then distributed in times of famine. The Incas also had an immense army, used to continuously expand the empire and conquer new peoples.

The Spanish conquistadors arrived in South America in the early 1500s. When they arrived, the Inca king had already succumbed to the many European diseases that preceded the conquistadors. The Incas were in a state of civil war when Spanish forces arrived. After the Spanish captured the new Inca king, Atahualpa, the Incas suffered a swift defeat. The Spanish banned the Quechua language and culture from politics and education.

Before being assimilated by the Incas, the requirements made by this empire did not violently affect Quechua's way of life. It was more of a slow process of assimilation in which the Inca Empire imposed a series of taxes, which were accompanied by a series of social benefits. However, when the Spanish conquered the Inca Empire and Quechua culture came under Spanish rule, their society and life was deeply altered. The Spanish institution known as *encomienda* illustrates this phenomenon.

In general terms, the *encomienda* was a legal system of tribute established by the Spanish crown. The *encomienda* (from *encomendar*, "to entrust") granted a conquistador, soldier, or others, a specific number of Indians. The *encomendero*, or the beneficiary of the grant, could demand tribute from the Indian in gold, money, or labor. In exchange, the *encomendero* was obligated to protect and teach this Amerindian population the Christian faith. As a result of this system of tribute, Quechuas were forced to produce unfamiliar crops at the expense of their own food. Moreover, unlike the Incas, Europe did not supply the Quechua people with any kind of welfare.

In addition to these obligations, the Roman Catholic Church also demanded time and resources from this people. By the time Spanish rule ended in the 19th century, Quechua people had been so changed that many remained as servants on the grand haciendas and estates. In practice, the *encomienda* became a source of institutionalized injustice where the *encomenderos* gained control over Quechua land.

Peru attained independence from the Spanish in 1821. Modern-day Peru has struggled to modernize, plagued by problems of hyperinflation, poor governments, and terrorism. Most

Quechua still live in the Andean highlands, relying on subsistence agriculture and pastoralism, as did their Inca ancestors.

## 2 LOCATION AND HOMELAND

Quechua Indians still live in the areas once governed by the Inca Empire in Peru, Ecuador, and Bolivia. At least one-third of Peru's 23 million inhabitants are Quechua Indians, still living as subsistence farmers throughout the Andes. The geographical conditions between regions differ dramatically. In mountain valleys there is rich soil and access to water that is suitable for farming. Most Quechua, however, live on the stark, steep slopes of the central Andes. Here, the soil is poor, the wind strong, and the weather cold.

Migration and urbanization in the past few decades have drawn many Quechua to Lima, the capital city of Peru, where there is now a large indigenous and Mestizo (mixed-race) population.

## 3 LANGUAGE

Quechua was the official language of the Inca Empire, the kingdom that ruled the Andes region from the mid-1400s until the arrival of Spanish conquistadors in 1532. This language became the lingua franca of Spaniards and Amerindians in the Andes regions.

The Quechua language is known by its speaker as *Runa Simi*, or the language of the people. Today, the term *quechua* refers more to the language than to a concrete ethnic group. In this sense, the Quechua extend throughout all the territory where Quechua is spoken, including a number of ethnic groups that speak Quechua and whose original language has disappeared. In the colonial chronicles, the term is used to refer to an ethnic group, whose original homeland is hard to determine. They seem to have inhabited the region of northwest Peru and to have expanded southward to the Andean region of Ecuador until they reached Peru. The diffusion of the Quechua language stems from Inca politics, continued throughout the colonial period, which gave Quechua a superior status to the other languages spoken in the Andes.

The Quechua language was the administrative language of the Inca state. Today it is spoken by nearly 8 million people in Peru alone, 1–2 million in Ecuador, and 1 million in Bolivia. Quechua words that have been assimilated into the English language include *puma*, *condor*, *llama*, and *coca*. Unlike most other native South American languages, Quechua is an official language of Peru, accorded the same status as Spanish. Although it is unusual, senators and congresspersons can give speeches in the Peruvian Congress in Quechua. The present Bolivian vice-president, Hugo Cárdenas, gave his acceptance speech in Spanish, Quechua, and Aymara.

Rafael Correa, a trained economist who took office as president of Ecuador in 2007, is fluent in Quechua, Spanish, English, and French.

## 4 FOLKLORE

The myth of Incarrí perhaps reveals the most about the feelings of the vanquished Inca. After the conquest of Peru in 1532, the Inca rulers retreated from Cuzco to Vilcabamba, where they resisted the Spanish invasion for nearly 50 years. In 1579 the last rebel Inca, Tupac Amaru, was captured and beheaded by the Spanish. The Spaniards stuck his head on a pike and placed it in the plaza of Cuzco as a warning to the rebels. The head

disappeared, and they say that it is buried. The myth tells that it is slowly growing its body back and when the body is complete, the Incas will return to rule their land.

Many of the ancient Quechua myths are still preserved in their oral tradition. Most of them narrate the origin of different ethnic groups, or of mountains, rivers, and lakes.

## 5 RELIGION

Quechua religion combines both pre-Columbian and Catholic elements. The most significant pre-Columbian influence that endures is the belief in supernatural forces that govern everyday events, such as weather and illness. The continued belief in supernatural powers controlling rain, harvests, earthquakes, and the like serves a utilitarian purpose to the agricultural Quechua. By making offerings to the powers that control natural forces, the Quechua feel that they can influence events and not merely be helpless in the face of bad weather or disease. When drinking alcohol, for example, it is customary to first offer a drink to Mother Earth, Pachamama. The first sip of beer or wine is spilled on the ground, out of respect for Pachamama.

This religious Andean world is populated by gods who have human attributes, like love and hate—sometimes they love each other and other times they hate and fight each other. For this reason, the Andean religion has two dimensions in the lives of the people: first, in human terms to promote social cohesion; and second, in transcendental terms to relate gods and humans.

Despite the continued importance of pre-Columbian rituals, the Quechua have adopted the Catholic calendar of festivals. This calendar has been integrated into the pre-Columbian agricultural timetable. The festival of Carnival, for example, marks both the beginning of Lent and the planting season. Catholic symbols, as well, have dual meanings. The cross, introduced by the Catholic Church, not only symbolizes Christianity and Christ but is used to symbolize the *Womaniize* (mountain deities) in some rituals and fertility in other rites. The Quechua, therefore, have not merely adopted Christianity but have incorporated it into their indigenous beliefs.

## 6 MAJOR HOLIDAYS

While the Quechua celebrate important Catholic holidays, such as Christmas and Easter, they have not abandoned their ancient holidays. In the ancient Inca capital of Cuzco, the Inca Sun Festival is still celebrated. The Inti Raymi festival, as it is called, draws thousands of tourists from all over the world to witness its spectacular festivities. Donning replicas of Inca tunics, rather than contemporary Andean garb, Quechua Indians reenact the Inca sun-worshipping ceremony. The Inti Raymi festival, which celebrates the June solstice, reflects the Inca's vast knowledge of astronomy. On this occasion, there is much eating, drinking, and dancing. True to Inca traditions, a llama is also sacrificed on this day.

## 7 RITES OF PASSAGE

Major life transitions, such as birth, puberty, and death, are marked by rituals and celebrations that combine Catholic and indigenous traditions.

It is common that many rituals of the Quechua culture are expressed while singing and dancing. For instance, Qamili is a dance practiced on a large scale with numerous chorales. A variation of the Qamili is the Saratarpuy, and it is commonly practiced when people are sowing corn. To celebrate that special day, Quechua women dance the Saratarpuy, hoping they will have a good harvest.

## 8 INTERPERSONAL RELATIONS

Courtship and marriage involve a lengthy series of rituals and stages. Most unmarried youths meet (and flirt) during one of the community's many festivals. When a young couple decides that they are ready to consider marriage, the family of the bride is visited by the family of the prospective groom. The groom himself stays home while his parents and godparents discuss the wedding and negotiate what each family will donate to the newlyweds. The engagement is made official at a later date when the bride and groom exchange rosaries. At the wedding, there is a public procession as the bride leaves her home to join her husband's *ayllu*, or community. Various other rituals, including fertility rites, follow the wedding.

## 9 LIVING CONDITIONS

The dominant building material throughout most of the Andes is adobe. Adobe has the advantages of being highly durable, free, and widely available. Adobe can be made almost year-round with the rich Andean soil. Roofs are now more often made of tiles, rather than of the traditional thatched material used in the past. House-building is a communal affair, based on the ancient Inca system of labor exchange known as

*mita*. This institution was mandatory public service required by the Inca Empire. It was a tribute in the form of labor every time that public service was needed in public works projects, such as the construction of roads or public buildings. All the citizens able to perform these tasks were required to do them for a number of days every year. Since the Inca Empire was so wealthy, it usually only took about 65 days a year for the family to farm for its own needs; the rest of the year time was usually devoted to the *mita*.

In the communal construction of house-building for members of the community, neighbors will be offered *chicha* beer, cigarettes, and food in return for their help in the construction of a new home. In exchange, those who participated in the house-building are owed labor that they can claim at any time.

Regarding the economy realm, farming techniques were highly developed. Quechua adapted the agricultural process to satisfy the demands imposed by the Andean landscape. For instance, Quechuas developed a unique system of irrigation to water their fields as well as techniques to preserve their food by freeze-drying it in the cold mountain air. Llama and alpaca herds supply meat, wool, grease, fertilizer, fuel, and leather.

Although the Peruvian government has made efforts to decentralize its health care services, the quality of health care in rural communities is still extremely poor. Most remote communities have no access to medical care, and even those villages that do have a public health center receive little more than basic first aid. Given the cold, damp conditions, respiratory illnesses are the major cause of illness and death among the Quechua. Although vaccination rates are gradually increasing, infectious diseases such as measles and whooping cough are still frequent causes of death. Given the absence of good medical care provided by the state, most Quechua first turn to a *curandero* (literally, "curer") who provides herbal medicines and treatment.

## 10 FAMILY LIFE

Children in Quechua society play many important roles. From a very young age they participate in economic activities and perform key household tasks. Children are highly valued by the Quechua, and childless couples are sometimes considered to be social outcasts. As in most other subsistence economies, children are essential as they are expected to provide long-term economic security to their parents as they age. However, limited access to birth control makes it difficult to limit family size. While an optimum family size is considered by many Quechua to be three or four children, many families have up to 10 or more children. Generally, male children are more highly valued than females, as their economic potential is seen to be greater.

It is difficult to generalize about the role of women in Quechua society. Women clearly play a subordinate role compared to men in the community political structure. Women are less likely to receive a formal education, do not hold significant positions of power within the community, and are excluded from many potentially profitable economic activities. A clear sexual division of labor exists with regard to both agricultural and household tasks. Women's role in the family, however, is more ambiguous. Women do have a say in family matters, such as decisions about finances or issues surrounding the upbringing

*Quechua farmers celebrate the Feast of the Cross in Canisaya, Bolivia. The farmers from this area are known for producing some of the finest textiles in the Andean world. It is a diminishing art, as young residents migrate to the city and adopt modern dress.*  
(AP Images/Peter McFarren)

of the children. However, there is little evidence to suggest that they are free from subordination in family life as well. One beautiful and traditional task made by women takes place in the agriculture realm. The *llameras*, or girls who take care of the llamas, dance and sing while pasturing their animals or while traveling with the llamas along the lonely mountains. In the present times, it is not just the mountain girls who sing and dance, but also girls in every city of the Andes in any major event or celebration.

### **11 CLOTHING**

Traditional Andean clothing reflects strong Spanish influences. In 1572, the Spanish prohibited the Quechua from wearing native Inca tunics and wrap-around dresses. Andean peoples then adopted the clothing still in use today. Quechua women wear skirts and blouses, with colorful woven shawls around their shoulders. Men wear trousers, shirts, and woven ponchos. Sandals are the preferred footwear for both men and women.

The style and color of clothing worn by Quechua Indians does vary dramatically from region to region. The Otavalo of Ecuador, an important subgroup of the Quechua, has a very distinctive dress. They wear white trousers and shirts, covered by a solid black poncho. Otavalo men are also famed for their long black braids.

### **12 FOOD**

The potato was first domesticated in Peru approximately 4,500 years ago. The potato and quinoa grain remain as two of the main staples of the Quechua diet. Common dishes include meat or potato stews, spiced with hot peppers, coriander, or peanuts. For community feasts, a *pachamanca*, or underground oven, is occasionally used. Taking up to four days to prepare, a hole is dug in the ground, lined with bricks or rocks, then layered with hot coals. Potatoes, meat, beans, and corn are placed in the ground, covered, and left to cook slowly. The *pachamanca* is particularly common in the central Andes of Peru.

Also considered a delicacy is guinea pig. The preferred dish for festivals, guinea pigs are often raised in the house and provide a productive use for kitchen scraps and discarded food. The use of guinea pigs as an important source of protein predates the Incas.

### **13 EDUCATION**

Formal education in Peru is required until the age of 16. In rural areas, however, the percentage of students who finish their schooling is much lower than in urban areas. This is, in part, because children play a valuable role in household and agricultural tasks and their labor cannot be spared. The schooling received is generally very poor. Teaching methods are based

on rote memorization rather than teaching children problem-solving skills. Personal initiative is rarely encouraged, and teachers generally have low expectations of what their students can achieve. A further problem emerges for Quechua children, as Spanish is the primary language taught at schools.

#### 14 CULTURAL HERITAGE

The characteristic music of the central Andes is called *huayno*. The mountain origins of huaynos are reflected in their lyrics that recount daily life in mountain villages and proclaim Andean nationalism. Traditional instruments still widely used for this lively form of music include drums, flutes, and the *charrango*, a mandolin-style guitar made from an armadillo shell. Many huayno singers have been given recording contracts and are increasingly popular in urban areas.

Quechua folk music also includes beautiful, haunting pan-pipe music. One of these songs, *El Condor Pasa*, was recorded by Simon and Garfunkel in the 1960s and was a hit record.

As the Incas did not write, there is not a tradition of Quechua literature. In 20th-century Peru, however, there has emerged a tradition of *indigenista* writers that focus on the life of the indigenous peoples of the Andes. Jose Maria Arguedas, Cesar Vallejo, and Ciro Alegría have written influential books that portray the oppression of the Quechua throughout the centuries and chronicle their hard life in the Andes. These authors have contributed to a growing Andean nationalism and pride.

#### 15 WORK

Most Quechua rely on subsistence farming for their livelihood. Corn, potatoes, and grains are crops that have adapted to the high-altitude environment. Land is still farmed using the Inca method of terracing on steep slopes. This labor-intensive approach to agriculture absorbs a tremendous amount of time, leaving little time to dedicate to other economic activities.

Trade is highly developed between different villages and regions. In addition to agricultural products, many communities produce pottery, textiles, belts, hats, and other handicrafts for cash sales. In most communities, there is a weekly market day, which plays an important role in the economic and social fabric of the village. Most farmers bring their surplus goods, produce, or livestock to sell at the market. The vast majority of petty vendors throughout the Andes are women.

#### 16 SPORTS

The Quechua, as part of a Mestizo society, participate in many of the manifestations of Western culture. Although there are no definite Quechua sports, the Quechua participate in a variety of Western sports, such as soccer.

#### 17 ENTERTAINMENT AND RECREATION

Socializing is the primary form of recreation in Quechua society. The Quechua celebrate a great many religious festivals, national holidays, and birthdays. Parties and festivals are events that are eagerly anticipated and require many weeks of planning. Many festivals, in fact, involve up to eight days of drinking, feasting, and dancing.

#### 18 FOLK ART, CRAFTS, AND HOBBIES

The most significant handicrafts produced by the Quechua are textiles. Women throughout the Andes can be seen spinning wool almost all day, even while they are sitting at the market or waiting for a bus. Both llama and sheep wool are used. The “belt loom” still in use by the Quechua dates back to pre-Columbian eras. The Quechua are skilled weavers, and their products are increasingly in demand for the tourist and export markets.

#### 19 SOCIAL PROBLEMS

Alcoholism is a serious social problem, especially in males, throughout the central Andes. Drinking alcoholic beverages is not only an accepted behavior at the Quechua’s many festivals and parties, it is also an expected behavior. Alongside feasting and dancing, becoming drunk is a core part of most social occasions. Unfortunately, this behavior often spills over into daily life. Excessive drinking is common, and this has a negative impact on both family relations and family finances. Spousal abuse is a common result of alcoholism.

#### 20 GENDER ISSUES

In Quechua community, women and men are considered as complementary in life. Both have spaces and rights assigned to them in an egalitarian way. The unity man/woman (*hari warmi*), linked together in the process of life, in space and time, and interrelated with the animal, vegetal, mineral, and spiritual world, symbolizes a reciprocal and complementary behavior in harmony with nature. This means that the human being does not exist alone but in a couple and that a single person is never complete. Men and women united through marriage are considered as the seed of the community, or *ayllu*, which creates and recreates social harmony between men and women.

Women participate in the whole agricultural production cycle but have specific feminine duties such as putting the seed in the earth, selecting the harvest, and collecting it in the warehouse. Men manage the different tools, take care of animal health, and sell the products in the market. In Quechua culture, women are the administrators of the resources because they are recognized as having this skill, and, implicitly, they are the ones who make decisions at home. They are considered as the cement of the household (*warmin wasi simintuqa*).

The survival of values and knowledge of the Quechua culture are made possible by women due to the transmission of these values and knowledge to their children and due to their keeping of the language, oral proverbs, medicine, weaving, music, and clothes. It is women’s responsibility to keep and strengthen Quechua culture, for example by their fundamental role in the elaboration of the *chicha*. However, men often despise women and depreciate women’s traditional knowledge and capacities. This lack of validation from men leads to Quechua women’s low self-esteem.

Regarding political power, it is commonly assumed that men are the ones who should participate in the community assemblies and that, when a man votes, he is expected to represent both his own opinion and that of his wife.

## RUSSIAN AMERICANS

For more information on Russian history and culture, see **Vol. 4: Russians**.

### OVERVIEW

The term “Russian Americans” is somewhat confusing because it can be used to refer either to ethnic Russian immigrants or to immigrants from any of the former soviets of the Soviet Union (including Ukraine, Latvia, Lithuania, etc.). In this article, Russian Americans will be used to refer only to ethnic Russian immigrants. Russian Jewish immigrants will be mentioned in this article, but they are discussed in more detail in the article on Jewish Americans.

Most Russian American scholars and ethnic Russian Americans count three major waves of immigration to the United States: The first wave happened just after the Russian Revolution of 1917–21, stretching from the 1920s into the 1930s; the second wave occurred after World War II, from 1945 until the early 1950s; and the third wave began in the 1970s and continues today. A sizeable number of immigrants came to the United States from Russia before 1920, but they were of varied ethnic origins and so are discounted by most ethnic Russian Americans.

The very first Russians to set foot on the North American continent were fur traders from Siberia who traveled across the Bering Strait in the 1700s in search of game. They settled in Alaska and maintained a Russian colony there for a time. During the 18th and early 19th centuries, Russians from the middle class fled Russia to escape the oppressive government of that time, many emigrating to the United States. In 1861 Russian peasants (or serfs) were given their freedom, and a host of them emigrated to America. Between 1861 and 1914, 9 out of 10 Russian immigrants to the United States were peasants. Most were single young men, hoping to find employment and a better life in America. A few young women also came to the United States to escape arranged marriages in their homeland. During this same time, a number of German–Russian Mennonites, Molokans (another religious sect), and Jews fled religious persecution in Russia and settled in America.

The “first” wave of Russian American immigration (according to scholars and ethnic Russian Americans) consisted largely of members of the Russian middle class and aristocracy who suddenly found their homeland inhospitable after the Communist Revolution of 1917. About 40,000 Russians came to the United States in the first few years after the Revolution. When Stalin took over the Soviet government in 1930, he introduced strict regulations forbidding emigration. For the next 14 years, only 14,060 Russians managed to escape the Soviet Union and come to America.

Most of these “first”-wave Russian Americans were well-educated, skilled laborers or professionals. They had a much easier time acclimating to life in the industrialized United States than did the peasants of earlier immigrations. However, first-wave Russian Americans met with a sudden surge of hostility from non-Russian Americans who suspected them of being Communists (called “Reds”). The “Red Scare” of 1919–20 drove many Russian Americans to hide their ethnicity. Some 3,000 Russian Americans were arrested and jailed as suspected

Communists and, although most were soon released, a number were deported to the Soviet Union. In actuality, very few Russian Americans were Communist sympathizers. Most had in fact *fled* the Communist government.

The pressure to assimilate caused much of Russian culture and heritage to be lost by Russian American immigrants. Many Americanized their names, stopped speaking Russian, and adopted American customs. The same was true of the “second” wave of Russian American immigrants, who entered the United States under the Displaced Persons Act of 1948. Europeans displaced by the destruction of World War II were allowed to immigrate to the United States. Those Russians who immigrated encountered a second surge of anti-Communism in America, led by Senator Joseph McCarthy. Russian Americans again felt driven to hide their ethnicity and become “American” as soon as possible.

No one was allowed legally to leave the Soviet Union again until the 1960s and 1970s, when Russian Jews were permitted to emigrate to Israel. Some then moved to the United States shortly after arriving in Israel. A handful of elite Russians, such as artists, scientists, and athletes, defected (illegally renounced their Soviet citizenship and requested residency in the United States) while visiting America on Soviet-sponsored tours or exchanges. Stalin’s own daughter, Svetlana Alliluyeva, defected to the United States. Other defectors include ballet artists Rudolf Nureyev, Natalia Makarova, and Valery Jalina Banov; poet Joseph Brodsky; cellist and conductor Mstislav Rostropovich; and scientists Valery Chalidze and Chores Med-

vedev. However, the number of Russian immigrants, legal or illegal, was very small during these decades.

The “third” wave of Russian immigration to the United States, beginning with Russian Jews in the early 1970s, picked up speed with the collapse of the Soviet Union in 1991. Since then, approximately one million Russians have immigrated to the United States. A majority of them are still Russian Jews, most of whom settle in New York City, but a number of other ethnic Russians are also making the trip across the globe in search of a better life.

The 2000 U.S. Census counted some 3 million “Russian” Americans, but this includes many who are not ethnic Russians. According to the U.S. Census 2000, 706,242 Americans indicated Russian as their spoken language. The regions with the highest concentration of Russian-Americans in 2000 were: the NY Tri-State Area (24%), California (16%), Illinois (16%), Pennsylvania (10%), Massachusetts (8%), Florida (7%), and Washington D.C. and Maryland (3%).

The very first Russians in America, the Siberian fur traders, settled in Alaska. Russian immigrants who came between 1870 and 1920 tended to settle in large cities of the Northeast and Midwest, including New York City, Philadelphia, Chicago, Buffalo, and Detroit. Some Russians who fled to China after the Revolution in 1917 later fled persecutions in China, ending up in California. Some settled in the San Francisco area and others in Los Angeles. German-Russian Mennonites established farms in the Midwest, particularly in the states of Kansas, Nebraska, the Dakotas, and Minnesota. A religious sect known as

the Molokans escaped persecution in Russia and moved to Los Angeles. Today, there are about 20,000 Molokans in California and a few thousand more in Oregon.

Most of the Russian immigrants who have arrived since the 1960s and 1970s have settled in and around New York City. Brighton Beach in Brooklyn, New York, is one of the few Russian neighborhoods left in America. In 2008 there were more than 700,000 Russian speakers in the tri-state New York metropolitan region. More than 100,000 Russian Americans also live in San Francisco. Other small Russian American neighborhoods exist, but there are no real "Russiantowns" to speak of today, excepting Brooklyn Beach and the San Francisco Russian American community.

First-generation Russian Americans strive to learn English as quickly as possible in order to blend in with their American environment and enable themselves to get better jobs. Their children grow up speaking both English and Russian, but when they establish homes of their own, they speak only English. Therefore, by the third generation, most Russian Americans no longer speak Russian. The Orthodox Church in America (OCA), which began in Alaska in 1792, now uses English in its liturgy. Most Russian Americans, if they are not Jewish, belong to the OCA. Another organization is the Russian Orthodox Church Outside of Russia (ROCOR). Traditionalists believe that the Russian language is the only thing that gives Russians their true identity and to lose it is to lose one's heritage.

The OCA has about one million members; the ROCOR has about 400,000 members. About half of the Russian American population is Jewish; a minority are Mennonite or belong to other Protestant denominations. A very small group of Russian Americans belong to the Old Believers sect of the Russian Orthodox Church, following the teachings of the Church prior to changes that were made in 1654. These Old Believers live in intentionally isolated communities in Alaska and Oregon, speak only Russian, wear 17th-century clothing, and keep themselves separate from the rest of society.

Russian Americans celebrate the rites of passage and holidays common to their particular religious tradition, be it Jewish, Orthodox, Protestant, or Mennonite. They have also adopted traditional American holidays such as Thanksgiving and the Fourth of July. Most were not supporters of the Soviet government and so do not celebrate any Soviet holidays.

Russians love to party, however, so they find many occasions to celebrate together. Russian Americans are no less festive. Births, weddings, holy days, graduations, the purchase of a new home, new jobs, even funerals are all reasons to gather together and eat, drink, and be merry. Hospitality and generosity are highly valued by Russian Americans, and old-time traditions such as welcoming guests with a loaf of bread are still honored.

Russian families are traditionally very close and, though Americanizing influences have lessened the bonds somewhat, most Russian Americans are still closely tied to their families, particularly first- and second-generation immigrants. Elderly relatives are cared for at home, and women give birth at home. Young women often live with their parents until they marry, and sons tend to settle near their parents after marriage. Later-generation Russian Americans are more Americanized with a greater focus on individual nuclear family units.

Food is an important part of Russian Americans' ethnic identity, and many of their traditional foods have become

common among the general American population. Mennonite farmers introduced hard wheat to American farmers, and it is now grown on many farms across the United States. Chicken Kiev (batter-fried chicken breasts stuffed with butter and herbs), beef stroganoff (thinly sliced beef in sour cream sauce), and borscht (beet soup) are well-known to most Americans. Bagels, pumpernickel bread, sour cream, vodka, and lemon in tea are even better-known Russian additions to the American menu.

Russian Americans have made tremendous contributions to the cultural life of America as well. Russian folk music, played on the balalaika (a triangular guitar with a flat back, usually with three strings), and Russian folk dances are very popular with the general American population. Classical music and dance abound with Russian Americans, including composers Igor Stravinsky and Sergei Rachmaninoff; conductors Serge Koussevitsky, Mstislav Rostropovich, and Nicholas Sokomoff; violinists Isaac Stern, Yehudi Menuhin, and Mischa Elman; pianist Vladimir Horowitz; and ballet artists Michael Fokin, George Balanchine, Natalia Makarova, Valery Banov, Alexandra Danilova, Rudolf Nureyev, and Mikhail Barishnikov. Popular music composers Irving Berlin, Efram Zimbalist, Louis Gruenberg, and Dmitri Tiomkin also contributed greatly to American culture.

Russian American visual artists include Vitaly Komar and Alexander Melamid, who work together, and Louise Nevelson (Berliawsky). There are many highly successful Russian American writers, including Isaac Asimov, Aleksandr Solzhenitsyn, Joseph Brodsky, Ayn Rand, Saul Bellow, Vladimir Nabokov, and Irina Ratushinskaya. Director Konstantin Stanislavsky (founder of The Actors' Studio in New York City) made a tremendous impact on American theater and film, and actors Natalie Wood, Yul Brynner, Milla Jovovich, and comedian Yaakov Smirnoff found success in film and television. Fashion designer Oleg Cassini was a Russian American.

In the worlds of science and industry, Russian Americans have made countless contributions. Some noted examples are David Dubinsky, founder of the International Ladies Garment Workers' Union in 1900; Vladimir Zworykin, inventor of the tube that made television possible, and inventor of the electron microscope; Solman Waksman, who discovered the bacterium that causes tuberculosis; and George Gamow, who played a critical role in the development of nuclear fission technology. In the world of business, Sergey Brin is one of the co-founders of Google.

Tennis stars Anna Kournikova and Maria Sharapova are important sports figures in the 21st century.

For the most part, Russian Americans have successfully adapted to American life, suffering little overt discrimination excepting the two "Red Scare" eras. Perhaps the greatest problem Russian Americans face at this juncture is the rapid loss of their traditional culture. Americanization is quickly turning Russian Americans into merely "Americans," with little of their Russian heritage remaining. Some see this as a good thing; others grieve the loss. For Russian American women, escaping some of the trappings of traditional culture can be liberating. Be they orthodox or Jewish, many Russian American women are carving out new roles for themselves in the wider American society.

**ST. LUCIANS**

**PRONUNCIATION:** (saint) LOO-shahns

**LOCATION:** St. Lucia

**POPULATION:** 172,884 (July 2008 est.)

**LANGUAGE:** English; French-based dialect with West African, English, and Spanish influences

**RELIGION:** Roman Catholicism; small groups of Anglicans, Methodists, Baptists, and Seventh-Day Adventists; Hinduism; Islam

**1 INTRODUCTION**

St. Lucia (pronounced LOO-shah) is a nation in the Windward Islands with a distinctive mix of cultures. Its mostly Black population is descended from West African slaves who worked for both French and British plantation owners. Although the British, its final colonizers, ruled the island for 165 years without interruption, the island's previous history produced a culture that is pervasively French in many ways.

Although it was formerly thought that Christopher Columbus sighted St. Lucia on 13 December 1502 (St. Lucy's Day), historians now believe that there is no real evidence for such a sighting. However, it was apparently seen and named by some explorer within the same time period because it appears under its present name on a 1520 Vatican map. In the 17th century the English made two unsuccessful attempts to settle on the island. Following an agreement with the native Carib population in 1660, the French established a presence on the island. However, their claims were disputed by the British, and St. Lucia alternated between French and British control 14 times until 1814, when it became a British Crown Colony under the Treaty of Paris.

Although political control ultimately went to the British, the cultural influence of the French has persisted to the present day, reflected in the dominance of Catholicism among the population, the islanders' French-based patois (dialect), and such customs as its Flower Festivals. Sugarcane continued its previous dominance over the economy for some time, although the plantation owners were forced to modify their operations when the British abolished slavery in 1834. One consequence was the *meytage* system of sharecropping, devised to induce former slaves to continue working the land. Later in the 19th century, St. Lucia became a major shipping center for coal.

On 10 September 1994, the island was struck by Tropical Storm Debbie, which inflicted greater damage than that caused by Hurricane Allen in 1980. Some 61 cm (24 in) of rain fell within seven hours, killing 4 people and injuring 24. The capital city of Roseau was flooded, a laboratory building located there was swept out to sea, and over two-thirds of the nation's banana crop was destroyed.

In the 20th century, the island reduced its dependence on sugar, whose volatile market made for an unstable economy and expanded its production of bananas. St. Lucia produces the largest banana crop in the Windward Islands. Throughout the century, the island gradually moved toward self-government, beginning with the establishment of a constitution in 1924. Universal adult suffrage was granted in 1951, and in 1958 St. Lucia joined the short-lived West Indies Federation. In 1967 full internal autonomy was achieved, and on 22 February

1979, St. Lucia became an independent state within the British Commonwealth.

The same as many islands located in the Caribbean Sea, St. Lucia has been attracting foreign investment, especially in its offshore banking and tourism industries. In 2006, direct investment to the construction of several resorts was massive. Tourism is the main source of foreign exchange, with almost 700,000 arrivals in 2005 and more than 900,000 in 2007. St. Lucia has attempted to diversify its national portfolio. However, its vulnerability to external economic crisis and customer preferences are some of the main factors that have complicated the self-imposed task of diversification. Declines in the European Union banana preferences, volatile tourism receipts, natural disasters, and dependence on foreign oil are the main reason of its precarious economics' wellbeing.

St. Lucia grew steadily during the early 1990s. GDP increased by an average 3.2% between 1988 and 1991 and by 3.9% between 1992 and 1995. However, it grew by only 2.2% during 1996–1999. Per capita GDP was us\$2,785 in 1999. In 2005, the services realm accounted for 80% of the GDP, the industrial sector for 15%, while the agricultural sector represented 5% of the total economic output. The main industry products are focused on producing clothing, beverages, electronic components, corrugated cardboard boxes, and lime and coconut processing. The most important goods produced in St. Lucia are—besides bananas—coconuts, vegetables, citrus, root crops, and cocoa. Even though the national economy has remained strong with an economic growth of 3.2% in 2007, unemployment has kept stubbornly high.
