However, one cannot blame the youth for the ineptly chosen phrase, nor assume that it reflected their attitude. The status of women, blacks, and gays was infinitely better in the 1990s than it had been in the 1960s. Beyond a few protest songs, Woodstock was a largely apolitical event. When Abbie Hoffman attempted to make a speech about marijuana reform, Pete Townsend swatted him off the stage. Many forget that the original Woodstock was quite commercial, as Hoffman and others had observed at the time. A common myth is that Woodstock was always a free concert, though it was only declared free by necessity. Hal Aspen notes that Woodstock is nostalgically eulogized as anti-commercial when in fact it was simply unsuccessfully commercial. Many of the innovations of Woodstock Two, such as the pay-per-view option, merely reflect improved technology and better planning rather than greater capitalism.

What really caused the Woodstock promoters to lose their credibility was their lawsuit against a simultaneous festival called Bethel ’94 which was planned at the original Woodstock site in Bethel. The event was scheduled to include such veterans as Melanie, Country Joe McDonald, and Richie Havens. Woodstock Ventures, who had been thwarted and sued by many during the first Woodstock,

launched an \$80 million law suit to prevent Bethel ’94 from happening. But 12,000 attended anyway, and Arlo Guthrie and others gave free impromptu performances. The litigation against Bethel ’94 robbed Woodstock Two of any vestige of counterculture coolness.

Woodstock Ventures retained its exclusive rights, but the memory of Woodstock Nation belongs to the world; it is irrevocably imbedded in American culture. One of the most fertile legacies of Woodstock is the anecdotes, stories, and legends which recall the color and humor of that absurd decade. One elusive legend reports that a child was born, though no one seems to know whatever became of the child. The question usually comes up at anniversaries of the event, but remains a mystery. It is possible that the child born at Woodstock is simply a myth providing counterpoint to the deaths (there were three deaths at Woodstock: a youth died Saturday morning when a tractor ran over him as he slept in his sleeping bag; another died of a heroin overdose, and a third died of appendicitis). Besides the dozens of histories and memoirs, Woodstock has also inspired novels, stories, and songs. Its most famous anthem is Crosby, Stills, Nash, and Young’s version of “Woodstock” from their album *Déjà Vu* (1970). The song was penned by Joni Mitchell and also appears on her album, *Ladies of the Canyon* (1970). Written in the style of a folk ballad, her song beautifully conveys the spirit—as well as the ironies—of Woodstock Nation, with its theme of pastoral escape, the rally of “half a million strong,” the haunting subtext of Vietnam, and the poignantly passive dream of peace.

## Works Progress Administration (WPA) Murals

In the mid-1930s, in the midst of the Great Depression, the U.S. federal government initiated a series of programs that were meant to provide economic relief to unemployed visual artists. The first such program was the Public Works of Art Project (PWAP), a Treasury Department initiative under the direction of Edward Bruce. Launched in December 1933 and terminated the following spring, the PWAP was short-lived; even so, several hundred murals were completed under its auspices. In October 1934 the Treasury Department launched a second program, initially called the Section of Painting and Sculpture. Unlike the PWAP, which hired artists and paid them weekly wages, the new program sponsored competitions and awarded commissions to selected artists. Over 1000 post office murals were commissioned by the Treasury Section between 1934 and 1943, the year of the program’s demise. The Federal Art Project (FAP) of the Works Progress Administration (WPA) was established in May 1935 and also survived until 1943. In addition to employing painters, sculptors,

WPA artist Isidore Lipshitz, working on a sketch for the portable mural "Primitive and Modern Medicine."

and graphic artists, the FAP provided funding for community art centers and exhibitions, operated a design laboratory, and supported indexing and bibliographic projects. Artists employed in the Mural Division were assigned projects in schools, hospitals, prisons, airports, public housing, and recreational facilities, and altogether produced over 2500 murals. Under a fourth program, the Treasury Relief Art Project (TRAP), in existence from July 1935 until June 1939, fewer than 100 murals were created.

As a popular art form, mural painting was in its ascendancy in North America in the 1920s and 1930s. In the early 1920s, the Mexican government began to subsidize the painting of murals celebrating Mexican history and the ideals of the Mexican Revolution. Artists such as Diego Rivera and Jose Clemente Orozco participated in this effort and later were privately commissioned to paint murals in the United States. Rivera, in particular, gained notoriety in the United States when, in 1933, he chose to include a portrait of Nikolai Lenin in a mural he had been invited to paint in the new Rockefeller Center in New York. John D. Rockefeller, Jr., who had commissioned the mural, ordered the portrait removed. Rivera refused, and the mural was subsequently destroyed. The Rivera debacle, according to Karal Ann Marling, forced painters, critics, and ordinary citizens "to weigh the principle of freedom of expression against the countervailing rights of a majority that did not share Rivera's communistic faith." Issues surrounding the mural artist's responsibility to the public versus his or her right to creative autonomy would surface frequently in discussions of government-sponsored mural painting in the 1930s and 1940s.

The government did not officially dictate the style of the murals it sponsored; however, it did encourage its artists to paint with the public in mind. An artist commissioned to paint a post office mural by the Treasury Section, in particular, was expected to spend time in the community for which the mural was destined and to solicit suggestions for themes from community members. Most of the government-sponsored murals were realistic in style. Several abstract murals were, however, sponsored by the FAP, including *Aviation: Evolution of Forms under Aerodynamic Limitations* by Arshile Gorky (1904-1948), which was installed at Newark Airport, in New Jersey, in 1937. A typical mural reflected the influence of American Scene painting, a development in American art that emerged in the late 1920s as a reaction against European modern art and gained impetus in the 1930s. The most influential American Scene painter was Thomas Hart Benton (1889-1975), who painted four sets of murals between 1930 and 1936—including *America Today* for the New School of Social Research in New York City, and *The Social History of the State of Missouri* for the State Capitol Building in Jefferson City—but never worked on any federally sponsored projects. American Scene paintings often depicted regional landscapes, local customs, and ordinary, hard-working people. This was exactly the sort of subject matter deemed appropriate by agency officials for government-sponsored murals. In the murals produced, the settings were both contemporary and historical, but the values reflected in either case were traditional. Across the country, murals depicting Abraham Lincoln, the frontiersman Daniel Boone, the poet Carl Sandburg, the explorers Lewis and Clark, and the social reformer Jane Addams were produced. Often the subject chosen had local significance, as in the *Jane Addams Memorial* painted by Mitchell Siporin (1910-1976) for the Illinois FAP. This was also true of *The Role of the Immigrant in the Industrial Development of America* by Edward Laning (1906-1981), done under the auspices of the FAP for the Dining Room of Ellis Island. Subjects related to the processing and delivery of mail, in the present and in the past, were frequently represented in post office murals: Philip Guston (1913-1980), for example, painted *Early Mail Service and the Construction of the Railroad* for the post office in Commerce, Georgia.

Although conservative opposition to the federal art projects had existed from the start, it increased throughout the 1930s, and by the start of World War II, the nation's priorities began to shift. By 1943 the federal government had essentially ended its patronage of art. In slightly less than a decade it had sponsored some 4000 murals, a large and diverse body of work that contributes to our enduring awareness of the value of public art.

## World Cup

The World Cup of football, or soccer as the game is called in the United States, is the most popular sporting event in the world. For two years, teams representing virtually every country in the world compete for the right to play in the summer tournament, which has been

staged in different countries every four years since 1930. In front of a worldwide television audience, the winners claim the title of the best soccer team in the world. Although the U.S. team reached the semi-finals of the tournament in its inaugural year, the World Cup and soccer have had little impact on American popular culture.

In the late nineteenth century soccer became a leading spectator sport in many major countries. Rules of the game were systematized, clubs were formed, and leagues were established. In 1900, the Olympic Games introduced soccer as one of its sports. In 1904, Frenchman Jules Rimet assumed the presidency of the newly created world governing body of soccer, the Federation Internationale de Football Associations (FIFA), with the intention of creating an international soccer tournament. However, the competition did not materialize for more than twenty years because of conflict among national federations over whether to allow only amateur players to compete, as in the Olympic Games, or to accept professional players, who were becoming more prevalent in Europe. Finally, FIFA agreed to include professional players and to hold the tournament every four years, alternating with the Olympic Games.

Members of the U.S. National Team Alexi Lalas (right) and Cobi Jones (foreground) play for the World Cup.

FIFA selected Uruguay to host the first ever World Cup finals in 1930. Uruguay was chosen partly based on the country's dominance in capturing gold medals in the 1924 and 1928 Olympic Games and partly because no other viable candidate came forward. Only thirteen teams, including the USA, competed in the very first World Cup tournament. Belgium, France, Romania, and Yugoslavia were the only Europeans to enter because of the three weeks it took to get to Uruguay by boat. The hosts beat Argentina 4-2 in the final in Montevideo to become the first winners of the FIFA world championship.

Although the USA has never won the tournament, between 1930 and 1998 it qualified six times, and its best finish was the semi-final in 1930. Soccer has, however, always played a shadowy existence in American popular culture. In the late nineteenth century, immigrants from Europe formed soccer clubs and organized into local leagues, but as soccer flourished in Europe, U.S. political and business elites sought to create their own national identity in a land of immigrants by promoting American sports like baseball. Soccer received no state support and was played in few U.S. colleges or schools. As Americanization movements increased at the turn of the century, more pressure was put on foreigners to assimilate by adopting American games such as baseball or gridiron football. Thus, the U.S. teams that competed in the World Cups of 1930, 1934, and 1950 consisted largely of immigrant players.

After World War II, soccer became the most popular sport on the planet. The sport produced international stars of the caliber of the Brazilian Pele and great teams like Brazil—which won the World Cup four times between 1958 and 1994—Argentina, Germany, and Italy. FIFA increased the number of teams competing in the World Cup from its original thirteen participants in 1930 to sixteen in 1958 and to twenty-four in 1982. Because of Cold War nationalism and the increase in television coverage of U.S. sports, however, the American public remained uninterested in soccer. In the 1950s baseball was still supreme, American football began its rise to prominence, and in the 1960s ice hockey and basketball captured a national television audience. Soccer, with its continuous forty-five minutes of play, was less suitable for commercial television and held little interest for the major television networks. Between 1950 and 1990, the USA never qualified for the World Cup finals. In the 1970s the North American Soccer League operated, but this effort soon collapsed.

After the 1970s, however, the World Cup and soccer in general gained popularity with some sections of the American population. Relying more on skill than size or strength, soccer became a popular participatory sport amongst many American women and youth. In 1991 the USA women's team won the first ever FIFA Women's World Cup in China with a 2-1 win over Norway. At the same time, FIFA, commercial sponsors, and television networks saw America as the last major market to be conquered by soccer. As a result, FIFA selected the United States to stage the World Cup finals for the first time in 1994. The tournament was a great success as it gained national television coverage and was played in packed stadiums, including 95,000 for the final in Los Angeles between Italy and the eventual winners, Brazil. Subsequently, Major League Soccer was formed in America and began its first season in 1996. It remains to be seen whether this new soccer league can gain the attention of the American public and whether the United States can produce a team talented enough to mount a serious challenge for the World Cup.

## World Series

Throughout much of the twentieth century, the annual World Series baseball championship has consistently set standards for well-staged national sporting scenarios, earning its reputation as the "Fall Classic." There have been heroes, villains, fools, and unknowns who have stolen the spotlight from "superstars."

The term "World Series" was first coined for a nine-game series between the Boston Pilgrims and the Pittsburgh Pirates, an informal outgrowth of a 1903 "peace treaty" signed between the two competing "major" baseball leagues, the 27-year-old National League (N.L.) and the upstart 2-year-old American League (A.L.). The A.L. champion Pilgrims (later called the Red Sox) won, five games to three, to surprisingly good crowds and gate receipts. Yet the following year, manager John McGraw and owner John Brush of the runaway National League champion New York Giants refused to face the repeating Boston club, stating publicly that such a meeting was beneath the quality of their team, which showcased future Hall of Fame pitcher, Christy Mathewson. A less publicized reason, however, was that they had objected to the growing popularity of the new A.L. franchise in New York City, the Highlanders (soon to be known as the Yankees).

Public and press outcry was so great against the Giants that Brush relented in 1905 and proposed a seven-game World Series as a mandatory annual event. The Giants won easily that year (with Mathewson pitching the first three of his still-standing record four Series shutouts), but would not prove to be as transcendent as Brush and McGraw believed, for they failed to win another Series until 1921. A worse fate awaited the Chicago Cubs, another early dominating N.L. team. After winning Series in 1907 and 1908, they never won again, and never even reached another Series after 1945. Starting in 1910, A.L. teams won eight out of the next ten Series, establishing an edge over the N.L. that they have yet to relinquish.

The World Series soon gained formal acceptance, with President Woodrow Wilson attending the second game of the 1915 Boston Red Sox-Philadelphia Phillies Series. The year 1915 also marked the Series debut of Boston pitcher George Herman "Babe" Ruth. Ruth set a Series record of 29 2/3 scoreless innings pitched, spanning Red Sox Series Championships in 1916 and 1918. The next year, after converting Ruth into an outfielder and watching him shatter all previous home run (and league attendance) records, Red Sox owner Harry Frazee sold the Babe to the New York Yankees for \$100,000 and a \$350,000 loan to cover one of his Broadway shows. For Boston fans, thus was cast the "Curse of the Bambino"—after winning four Series in the decade, the Red Sox, like the Cubs, never won a Series again. The Yankees would be another story.

In 1919, the World Series endured its worst scandal. Many players had long felt the owners were denying them their fair share of

**Frankie Frisch of the New York Giants in action during the 1922 World Series.**

club profits, and in no more obvious instance than in the World Series, where the triumphant owners were taking in record receipts and were rumored to have sold tickets to scalpers to make even more. The owners countered with rumors of their own, to the effect that players were being bribed to throw games by professional gamblers. Tensions had even precipitated a brief player's strike before the fifth game of the Red Sox-Cubs Series in 1918, but the worst was yet to come. Questionable betting patterns on the 1919 Series, in which the Cincinnati Reds upset the Chicago White Sox, prompted a grand jury investigation. In 1920 eight White Sox players were indicted for taking bribes. Among them was "Shoeless Joe" Jackson, the star who was confronted on the courtroom steps by a young fan with the soon-to-be-famous line, "Say it ain't so, Joe!" The eight players were ultimately acquitted in court, but as a result of what was now known as the "Black Sox" scandal, were subsequently banned from baseball for life in 1921. The rather draconian measure was enacted by the Baseball Commissioner, a post newly created by the owners in order to quickly restore baseball's image as well as maintain their own authority over the players.

The World Series not only bounced back in the 1920s, but came to form the centerpiece of a new era of popularity and stability for baseball. Key factors were the rise of the New York Yankees and the coinciding development of radio as a mass medium. John McGraw's Giants had returned to the World Series in 1921 to find they were in the first of 13 "Subway Series," facing their co-tenants at the Polo Grounds, the Yankees, who now had the biggest star in sports, Babe Ruth. In the first of their 29 Series appearances over the next 44 years, the Yankees bowed to McGraw's veteran club. McGraw's pitchers kept throwing low curve balls to Ruth in 1922 as well, allowing the Giants to sweep the first World Series to be broadcast by radio (the announcer was Grantland Rice) and the last Series triumph for their manager.

In 1923, Yankee Stadium was completed across the Harlem River in the Bronx, to be christened "the house that Ruth built" as all previous league attendance records were smashed. Ruth hit three homers in that year's rematch with the Giants, bringing the Yankees their first of 20 Series victories. By their 1927 sweep, which was also the first Series broadcast coast-to-coast, they had become America's team, setting a standard of excellence that McGraw and his Giants had never quite achieved, and they maintained a stranglehold on money and talent that most of the teams in the rest of the country could only admire from afar. All knew, however, that a victory over the Yankees in the Series would assure their place in the annals of baseball. Such was the case when grizzled pitcher Grover Cleveland Alexander braved the Yankees "Murderer's Row" to preserve a 1926 Series victory for the St. Louis Cardinals, a feat later to be immortalized on film (with Ronald Reagan playing Alexander).

On through the Great Depression and World War II, radio provided the yearly vignettes about players both rough-edged ("Pepper" Martin) and refined (Joe DiMaggio) that would cheer millions of Americans. However, one episode stood out particularly during this period. In the 1932 Cubs-Yankees series, the faltering Babe Ruth, brushing off ancestral slurs from the Cub bench and the hostile crowd at Chicago's Wrigley Field, paused to point to the centerfield bleachers. He soon followed with his 15th and last World Series home run. The Yankees went on to sweep the Series, but the "called shot" is what is still remembered and discussed today.

The climax of World War II brought with it the appearance of television and the breaking of the unofficial color line in baseball with Brooklyn Dodger star Jackie Robinson. The postwar years also marked the period of greatest dominance for the Yankees, who appeared in 15 of 18 Series through 1964, winning 10 (including 5 in a row between 1949 and 1953) mostly with manager Casey Stengel and

new stars Mickey Mantle, Yogi Berra, and Whitey Ford. The phrase “wait ’til next year” was made famous by Brooklyn fans as their “Bums” lost five Series to the Yankees before winning in 1955, their only Series championship before they relocated with the Giants three years later to California. Also in 1955, the Most Valuable Player Award was initiated, won first by Johnny Podres of the Dodgers. Many call this baseball’s and the Series’ “golden era.” The many highlights from this period include Willie Mays’ incredible over-the-shoulder catch in his Giants’ sweep of the Cleveland Indians in 1954, Yankee Don Larsen’s perfect game over the Dodgers in 1956, and Pittsburgh Pirate Bill Mazeroski’s Series-winning home run in 1960.

A revamping of baseball’s amateur draft rules, the sharing of network broadcast revenues among all franchises, and internal turmoil eventually restored mortality to the Yankees, and after 1964 they failed to appear in the post-season for 12 years. Apart from the flamboyant, mustachioed “Swinging” Oakland A’s of 1972 to 1974, no team would again win more than two Series in a row. The advent of free agency allowed the players to get even (financially) with the owners, and exploding player salaries and bidding wars from the mid 1970s onward added some of the roster unpredictability of the early days to the game. As television ratings came to be regarded as a measure of success, the Series encountered increasingly stiff competition from the National Basketball Association championship, football’s Super Bowl, and even its own playoff system, created in 1969. Yet the Series has persevered, adding more classic moments for each generation: Carleton Fisk waving his homer fair in the sixth game of the 1975 Red Sox-Reds Series; Reggie Jackson hitting three homers on three pitches off three different pitchers in the sixth game of the 1977 Yankees-Dodgers Series, the New York crowd chanting “Reggie!”; The Curse of the Bambino willing New York Met Mookie Wilson’s grounder through Red Sox first baseman Bill Buckner’s legs in 1986; pinch-hitter Kirk Gibson homering off “closer” Dennis Eckersley to win the first game of the 1988 Dodgers-A’s Series.

Continuing animosity between the owners and players’ union in 1994 caused what even two World Wars could not: the cancellation of the World Series, as the result of a strike. Through the efforts of many, including President Bill Clinton, the two sides declared a truce and the season and Series were resumed in 1995. Well played (and watched) seven-game Series in 1996 and 1997 at least temporarily silenced the doomsayers predicting the coming end of the World Series as a “marquee event.” For day-to-day sustained interest, capping a six-month-long season’s endeavors, it is still hard to imagine any other event in sports ever surpassing the intensity of World Series competitive drama.

## World Trade Center

The two massive buildings of the World Trade Center are the tallest structures on Manhattan Island. The twin towers designed by Minoru Yamasaki and Associates in the early 1970s stand 1,350 feet, surpassing the Empire State Building by 100 feet, but the World Trade Center’s faceless Modernist aesthetic lacks the character that has made its predecessor an enduring urban landmark. After a run of initial publicity, and a prominent appearance in the 1976 remake of the film *King Kong*, the World Trade Center began to fade into the urban fabric, failing to become the symbol of New York City that its developers had hoped. It has, however, become an icon of corporate America to some discontented groups. In February, 1993, one of the towers was bombed by Islamic terrorists attempting to strike a blow at the heart of American society. Amazingly, the building survived with no structural damage.

## World War I

The Great War (World War I), fought between 1914 and 1918, was one of the most decisive events of the twentieth century. The political and economic catastrophes in its wake led to another, even greater conflict from 1939 to 1945, leading some historians to view the two World Wars as aspects of the same struggle, separated by an uneasy truce in the 1920s and 1930s. Some of the ethnic and national-identity conflicts left unresolved at the Versailles peace conference of 1919 are still sources of tension and open hostility in the Balkans. It was in that fractious region of eastern Europe that World War I began when Serbian nationalists assassinated the heir to the throne of Austria-Hungary in the city of Sarajevo. As a total war, World War I required the unlimited commitment of all the resources of each warring society. Governments were forced to allocate human and natural resources, set economic priorities, and take measures to ensure the full cooperation of their citizens. Some societies cracked under the pressure. Monarchies collapsed in Russia, Germany, and Austria-Hungary. Even the victors, especially France and Belgium, were deeply scarred. The human sacrifices were appalling; the economic cost was overwhelming. World War I marked the decisive end of the old order in Europe, which, except for the Crimean War and the Franco-Prussian War and a few minor skirmishes, seemed to have weathered a century of relative peace after the Napoleonic wars that had ended exactly 100 years earlier.

The outbreak of the war had at first been greeted with jingoistic enthusiasm. It was not until the combatants experienced a tremendous loss of life in the trenches on the western front that this view was shattered. By the end of the war, pessimism and disillusion were endemic. For many in the West, the war denied the notion of progress. The same science and technology that had dazzled the nineteenth

Soldiers in a foxhole during World War I.

century with advances in medicine, communication, and transportation had produced poison gas, machine guns, and terror weapons. The Great War's legacy would include a deep pessimism, expressed in many forms, including antiwar literature that would be translated to the screen in the form of popular film.

World War I began when Serbian nationalists assassinated Archduke Francis Ferdinand, the heir to the throne of Austria-Hungary. Austria's attack upon Serbia on July 28 led to war with her protector, Russia. Prewar alliances assured that Germany would declare war on Russia. When the French announced their intention to honor their commitments to Russia, Germany declared war on France. As the German armies passed through neutral Belgium to get at France, Britain declared war on Germany. Within a week of Austria's attack upon Serbia, the other four great European powers had gone to war over issues that few truly understood, or indeed, cared about. They seemed to have been swept along by their alliances in an inevitable cascade of falling dominos over which humans had little control.

On the Western front, the German armies smashed through Belgium and into France, where they were halted 25 miles north of Paris. Both armies tried to get around the other in a "race to the sea."

When they failed, the exhausted armies dug defensive positions. Two lines of trenches, six to eight feet deep, zigzagged across northern France, from the Swiss border to the English Channel. The distance between the Allied trenches and those of the Germans depended upon the terrain, and ranged from 150 yards in Flanders to 500 yards at Cambrai. The great irony of warfare in the industrial age was that modern weapons forced the armies to live below ground and use periscopes to observe the other side. Steps in the sides of the trenches were used as platforms for firing at the enemy. The trench soldiers slept in sleeping holes dug into the sides of the trenches, where they suffered from rain, cold, poor sanitary facilities, lice, flies, trench foot, and a constant stench. Rats as big as small dogs fed on the dead. Of the casualties on the Western front, 50 percent were directly attributable to conditions in the trenches.

In 1916, the major efforts to break the stalemate came at Verdun, and on the Somme river. The Germans decided to attack Verdun, an historic city they knew the French would defend at all costs. The two sides fired more than 40 million artillery shells into a narrow front of less than 10 miles. When the firing ceased after 302 days, each side had suffered half a million casualties, with more than one hundred thousand dead. To relieve Verdun, the British opened an offensive on

the Somme. An artillery bombardment of a million and a half shells was supposed to decimate the German positions. When the British army went “over the top” on July 1, however, they were cut down by German machine guns. On the first day of battle on the Somme, the British suffered 60,000 casualties, including 20,000 dead. After gaining five miles of territory, at the cost of 420,000 casualties, the British halted the offensive on November 13.

When the war began, the common assumption was that it would be over within six months. In the prewar years, many seemingly perceptive writers had written that modern economies were too integrated to accept a long war. There was also a general ignorance about what war in the industrial age would be like. There had not been a general European war since the defeat of Napoleon at Waterloo in 1815. Bourgeois middle class life seemed boring and lacking in adventure. When World War I began, the armies marched to war with enthusiastic support. Intellectuals signed manifestos supporting the war. Sigmund Freud offered “all his libido to Austria-Hungary.” Young men literally raced to the recruiting centers to sign up so they could be sure of getting into combat before the war was over. Fired by patriotism, and martial values of honor and glory, they were the first to be mowed down. In “From 1914,” Rupert Brooke, the English poet, expressed his belief that his death in battle would sanctify a “foreign field” as “for ever England.” The most popular poem of the war, John McCrae’s “In Flanders Fields” appeared anonymously in *Punch* in December 1915. The poem may describe how “the poppies blow, Between the crosses, row on row,” but as Paul Fussell writes, the poem ends with “recruiting-poster rhetoric” demanding that others pick up the torch and not “break faith with us who die.” These viewpoints changed with the reality of mass death and stalemate. Fussell observes that Edmund Blunden, Robert Graves, and Siegfried Sassoon came to an image of the war as lasting forever. Trench warfare, in which neither side could gain the advantage, regardless of their courage, honor, and valor, suggested that humans had lost control of their history. Indeed, what did courage, honor and valor have to do with modern war? In 1924, the German expressionist painter Otto Dix wrote thus of his trench experiences: “Lice, rats, barbed wire, fleas, shells, bombs, underground caves, corpses, blood, liquor, mice, cats, artillery, filth, bullets, mortars, fire, steel; that is what war is. It is the work of the devil.”

To raise the large armies needed to continue the struggle, governments turned to the use of posters. The British Parliamentary Recruitment Committee commissioned a poster featuring Lord Kitchener’s head and finger pointing at the viewer. The caption read “Your Country Wants You.” As enlistments declined, the emphasis shifted to shaming those healthy young men still in Britain. The message was blunt in the poster “Women of Britain say, GO.” A more subtle, but perhaps as effective, message was expressed in the British poster showing a little girl sitting on her father’s knee, with an open book in her lap. The writing at the bottom of the poster asked the question, “Daddy, what did You do in the Great War?” At the father’s feet was a little boy playing with a toy army and about to place a new soldier in the ranks. The Committee would eventually commission 100 different posters, some of which were published in lots of 40,000. It is estimated that these posters generated one-quarter of all British enlistments. While most conscientious objectors accepted noncombatant alternatives, a hard core of 1500 refused to accept any position that indirectly supported the war. They were sent to prison where they suffered brutal treatment—70 of them died there. Poster art certainly contributed to this view that in time of war, a man’s place was in uniform.

The failure of the armies to achieve success led each side to seek new allies, open new fronts, resort to new military technologies, and engage in new forms of warfare. In 1915, Italy joined the Allies, and new fronts against the Austrians were opened in the Swiss Alps and on the Isonzo River. In the same year, the British opened a new front at Gallipoli, but, after nearly a year of being pinned down on the beaches by Turkish guns, were forced to withdraw. The Germans introduced gas warfare in 1915; the British introduced the tank in 1916. The romantic nature of air combat yielded to a more deadly form as machine guns were added to fighter aircraft. Germans bombed British cities; the British bombed German cities. The British mined German harbors and blockaded German ports; Germany responded with unrestricted submarine warfare. In the face of American protests, following the sinking of the *Lusitania*, the Germans suspended their attacks in 1915.

In Germany, general rationing went into effect in 1916. The winter of 1916-1917, known as the “turnip winter,” was particularly difficult. Bread riots, wage strikes, and a burgeoning black market that separated rich and poor threatened support for the war. There were also demands for political reform as a condition for continued support. In January 1917, the German government made the fateful decision to return to unrestricted submarine warfare with the full knowledge this could lead to war with the United States. The German decision was predicated upon the belief that Britain could be starved out of the war before the United States could train a large army and send it to Europe.

Up to this point, the United States had been officially neutral during the war, keeping with its long tradition of avoiding “foreign entanglements.” By 1917, however, its sympathies and economic interests had shifted to the allied side. British propaganda had been highly effective in accusing Germans of atrocities in Belgium. President Woodrow Wilson resisted going to war because he feared what it would do to the progressive reforms of his administration, and that war would release ugly patriotic excesses that would be difficult to control. His hand was forced by the sinking of American merchant ships and the Zimmerman telegram suggesting that in return for a successful alliance, Germany would aid Mexico in its reacquisition of Arizona, Texas, and New Mexico. Finally, Congress declared war on Germany on April 6, 1917, a move that Wilson promised would “make the world safe for democracy.”

To raise a mighty army to fight in Europe, the American government was forced to resort to locally supervised conscription. Unfortunately, these local boards often lacked objectivity. Not only was preference on exemptions given to family and friends, but African Americans were drafted in disproportionate numbers, and conscientious objectors without religious affiliations were either drafted or sent to prison. The government sought to encourage enlistments and discourage draft resisters by using British posters as a model. The Kitchener poster was deemed to be so effective that Americans substituted Uncle Sam’s head, and included the same caption “I Want You.” The power of shame was also evident in the American poster that featured a young woman dressed in sailor’s uniform with the caption, “Gee, I Wish I Were a Man, I’d Join the Navy.”

By 1917, all of the major belligerents had begun to regulate their industries and agriculture, borrow money to finance the war, ration food, and employ women in areas of the economy where they had not before worked. They also shaped consent for their policies and discouraged dissent. The War Industries Board, headed by Bernard Baruch, regulated American industries and set priorities. The Fuel

Administration increased coal production by one-third and campaigned for heatless Mondays and gasless Sundays. The American Food Administration's appeal for food conservation included wheatless Mondays and Wednesdays, meatless Tuesdays, and porkless Thursdays and Saturdays. This voluntary conservation worked to such an extent that America was able to feed her armies, and increase food exports to allies by one third without having to resort to rationing. Before radio and television, with film still in its infancy, the poster was a highly effective method of generating support. Posters were used to inspire industrial effort, urge citizens to conserve needed materials, and in general, to support the war effort. Posters were also used extensively to gain support for the purchase of war bonds. While all the nations did this, none matched the American effort in this regard. For the third Liberty Loan drive, nine million posters were produced.

While voluntary sacrifices and poster art made everyone feel they were part of the war effort, they tended to generate emotional patriotic fervor. In America, this reached heights of absurdity. High schools stopped teaching German, frankfurters became hot dogs, and orchestras stopped playing Brahms, Bach, and Beethoven. None of this was humorous to German Americans, who were attacked verbally and physically. These attacks seemed to have the support of the American government. The Committee of Public Information, directed by George Creel, not only kept the public informed about war news through films and pamphlets, but sent out 75,000 speakers to churches, schools, and movie theatres, where they lectured on war aims and German atrocities. The Post Office denied mail delivery to "radical," "socialist," and foreign language newspapers and periodicals. The May 1918 Sedition Act made it a crime to speak or publish anything disloyal. This could be and was used against those questioning American participation in the war, the nation's war aims, and how it managed the war effort. Robert Goldstein, a Hollywood producer, was sentenced to 10 years in prison because his film *The Spirit of '76* was not supportive of our British ally. The film, set in the period of the American Revolution, had shown British soldiers bayoneting civilians. Particularly vulnerable were Socialists such as Eugene Debs, who was sentenced to 10 years, and leaders of the International Workers of the World (I.W.W.), who were given 20-year sentences. Their offenses stemmed more from their opposition to capitalism than to the war itself. The U.S. Justice Department brought charges of opposition to the war against 2200 people, of whom 1055 were convicted.

World War I brought forth great songs that would be sung long after the war was over. Many of these originated in London music halls, French cabarets, and on Broadway. Some of America's greatest songwriters, Jerome Kern, Irving Berlin, George M. Cohan, and George Gershwin, participated in this creative explosion. The most famous of these songs were the French "Madelon"; the British "Your King and Country Want You," "There's a Long, Long, Trail," "Roses of Picardy," and "It's a Long Way to Tipperary"; and the American "Pack Up Your Troubles in an Old Kit Bag," "Over There," "Keep the Home Fires Burning," "Goodbye Broadway, Hello France," "Mademoiselle from Armentieres," and "How Ya Gonna Keep 'em Down on the Farm?" These songs were sung at bond rallies, but were also taught to the troops by official army song leaders. Most of the songs were comic, sentimental, and innocent. They were offered as a means to lift morale and provide a human respite for soldiers in an inhumane existence. Only the unofficial French song, "La Chanson de Craonne," which declared soldiers

doomed and victims of a wretched war, reflected the reality of the front.

What was most remarkable about the conflict until the end of 1916 was the willingness of European soldiers and civilians to accept the hardships the war demanded. Millions of soldiers had left home to face the horrors of modern war and endure life in the trenches of the Western front. This support collapsed in 1917. The German resumption of unrestricted submarine warfare reflected this change of mood. Most significant were the riots and insurrection in Petrograd, Russia which led directly to the abdication of the Romanovs in March 1917. War weariness, the failure of Russian offensives in the summer of 1917, and the desertion of two million soldiers finally led to the October Bolshevik revolution and Russia's withdrawal from the war. In 1917, whole units of the French army refused to go to the front; those that did went chanting "ba ba ba"—the bleating of sheep being led to the slaughter. The British army's morale was close to the breaking point after the 1917 Flanders offensive resulted in 400,000 casualties for five captured miles of mud in which thousands of soldiers had literally drowned. At Caporetto, the Italian army reached its breaking point, and over 275,000 Italian soldiers surrendered in a single day.

British and French generals desperately wanted American soldiers who would be merged into their own units. Wilson and his commander John Pershing were totally opposed to this. They wanted the United States to field her own independent army, with its own commanders, support forces, and separate sector of operations. Both recognized that unless a U.S. army fought as an independent entity, the United States would not be able to shape the peace. The United States would fight neither for the imperialistic aims of the great powers, nor to restore the balance of power, but "to make the world safe for democracy" by advocating self-determination, democratic government, the abolition of war, freedom of the seas, and an international organization to protect the peace. These lofty ideals were expressed in January 1918 in Wilson's Fourteen Points speech.

With Russia out of the war, Germany transferred its troops from the eastern front to the western front, and launched its great offensive in the spring of 1918. As in 1914, the Germans were halted on the Marne river. American units put into battle at key places in the Allied lines fought well under French overall command. This time, the German army did not settle into a trench line, but was forced into a continuous retreat under the pressure of Allied armies. While the Germans were exhausted from four years of war, fresh American soldiers were arriving at the rate of 300,000 per month, and fighting as an independent army at Saint Mihiel and in the Argonne Forest. In other sectors, the Central Powers collapsed. Turkey and Bulgaria were out of the war by October 1918. Austria-Hungary disintegrated, as the Hungarians sought a separate peace, and Slavs sought their own nations. Within Germany, there were demonstrations at military bases, and in Berlin. When the Kaiser abdicated, the Germans asked for a peace based upon what they had previously scorned, the Fourteen Points. The Germans signed the armistice, and at 11:00 a.m. on November 11, 1918, the guns went silent.

Four years of war had resulted in nine million deaths, one million of which were civilian. Many more millions of soldiers who lived through the war were crippled mentally or physically. So many soldiers were facially disfigured that a new branch of medicine, plastic surgery, was developed. A great influenza pandemic resulted in thousands of civilian deaths in Europe and the United States. A deep pessimism settled over Europe. Arnold Toynbee declared that

the news from the front led him to believe that Western Civilization was following the same pattern that Classical Civilization had followed in its breakdown. His 12-volume *A Study of History* would argue that World War I was to the West what the Punic Wars had been to the ancient world. Oswald Spengler's *Decline of the West* was even more pessimistic. W. B. Yeats's 1919 "Second Coming" saw anarchy "loosed upon the World" and the coming of another Dark Age. T. S. Eliot's "The Waste Land" expressed the despair and hopelessness felt by many. Sigmund Freud admitted in *Civilization and Its Discontents* that it was the events of the war that led him to seek a second basic force at the core of human nature: the death instinct, in constant struggle against the life instinct. Vera Britton's autobiographical *Testament of Youth* described the shattering impact of the war on her personal life. This pessimism shared the same viewpoint that was expressed by the war poets such as Siegfried Sassoon and Wilfred Owen, who wrote their poetry and letters while at the front. David Kennedy has observed that he had not found this pessimism amongst American soldiers. Whereas the pessimism of the European writers came from the destructive impact of the war itself, American disillusionment came from the belief that America's entrance into the war had failed to create the new world of Wilson's vision. In addition, progressivism and protection of individual rights at home seemed to have been reversed, and the nation retreated into isolationism rather than follow Wilson's lead into the new League of Nations.

While the European and American reactions to the war were different, there is one area of popular culture where they seem to have coalesced. Within a decade of the war, outstanding antiwar books and films were written and produced both in Europe and the United States. The German film *Westfront 1918* (1930) depicted French and German soldiers dying without victory. Jean Renoir's *Grand Illusion* (1937) was another antiwar attack upon the European aristocracy that brought forth the horrors of World War I. Ludwig Renn wrote a critically acclaimed novel, *Krieg (War)*, that was an impressive piece of literature but never achieved the popularity of Erich Maria Remarque's antiwar novel *All Quiet on the Western Front* (1929), which described the experiences of German youth who had gone to war as enthusiastic soldiers. The film by the same title, released in 1930, was so relentlessly antiwar that Remarque had to leave Germany. In 1930, the film received an Academy Award for best picture. Another antiwar book made into a film was Ernest Hemingway's *A Farewell to Arms* (1932), which describes the fate of an American ambulance driver who deserts the madness of the Italian retreat at Caporetto. Two of the most powerful antiwar films done in the post-World War II period also dealt with specific events of World War I. Stanley Kubrick's *Paths of Glory* (1957) was based upon the mutinies in the French army. The film starred Kirk Douglas, but it is Adolph Menjou's depiction of a French general demanding the random selection and execution of three soldiers to cover his own failures that is the picture's most powerful image. Finally, Paramount's film *Gallipoli* (1981), appropriately starring the Australian actor Mel Gibson, faithfully describes what happened to those idealistic young Australian soldiers who went to war with enthusiasm and in search of adventure, only to be slaughtered like so many of their comrades on other fronts.

## World War II

Despite the Japanese invasion of China in 1937, most historians date the start of the Second World War as September 1, 1939, the day that German forces attacked Poland. Although Polish resistance was quickly overcome, treaty obligations brought Britain and France into the fray, and the war for Europe began in earnest.

Strong isolationist sentiments among much of its populace kept the United States out of the conflict until the Japanese bombed American naval forces anchored at Pearl Harbor in Hawaii. The surprise attack, which inflicted devastating losses on the U.S. fleet, occurred on December 7, 1941. The next day, President Franklin Roosevelt asked for, and received, a Senate declaration of war on Japan. Two days later, Germany and Italy, which were bound to Japan

Poster from the 1949 WWII film epic *Sands of Iwo Jima*.

in a mutual-defense treaty, declared war on the United States. The fighting continued until August, 1945, when Japan (the last Axis belligerent left) surrendered, following the destruction of two Japanese cities by American atomic bombs.

The war affected every aspect of American life, including popular culture in all its forms. Some of this influence was the result of deliberate government propaganda, but much of it was simply the nation's response to the exigencies of life in wartime.

American moviegoers during the war were frequently exposed to a triple dose of war-related messages. First, a newsreel would showcase stories of recent developments in the theatres of combat, along with a healthy dose of pleasant feature stories unrelated to the conflict. An average newsreel ran about ten minutes, and was changed twice each week. Although the typical moviegoer might not know it, wartime newsreels were subject to indirect government censorship (since all film footage from overseas passed first through the government's hands), as well as "guidance" as to content from the Office of War Information, the government's propaganda bureau.

The newsreel was usually followed by one or more animated cartoons. Although many of the wartime versions were as innocuous as ever, quite a few leavened their laughs with propaganda.

Bunny joined the war effort, poking fun at the Nazis in *Confessions of a Nutsy Spy*. Bugs' cartoon colleague at Warner Brothers, Daffy Duck, also mocked the Third Reich in *Daffy the Commando*. Superman, America's favorite comic book hero, took to the screen to thwart evil Japanese agents in *The Japateurs*, while another cartoon, *Tokyo Jokie-o*, made sport of the Japanese war effort by using blatantly racist stereotypes.

Then came the feature film. It might be a documentary, perhaps one of Frank Capra's *Why We Fight* series (1942-45). Capra, already famous as a director, had been drafted out of Hollywood, put in a major's uniform, and given the task of making films for new military recruits that would motivate them to fight in a war that many understood dimly, if at all. Relying mostly on seized Axis propaganda footage, Capra put together seven inspirational films covering different aspects of the global conflict. After a screening of the first, *Prelude to War*, President Roosevelt declared, "Every man, woman and child in America must see this film!" All seven were eventually shown in theatres, as well as in the boot camps for which they had originally been intended.

Other notable Hollywood directors also made documentary films in support of the war effort. William Wyler directed *Memphis Belle*, (1943) the saga of the last combat mission flown by an American bomber crew over Europe; John Huston helmed *The Battle of San Pietro* (1945), focusing on the bloody assault by American troops to capture an Italian town from the Germans; and John Ford lent his talents to *The Battle of Midway* (1942), which chronicled the first major American naval victory over the Japanese.

But most films playing in neighborhood theatres during the war told fictional stories, although about one-third of these dealt with the war in one way or another. There were combat films, often based on actual battles fought earlier in the war. The first of these was *Wake Island* (1942), and it would be followed by many others, including *Flying Tigers* (1942), *Bataan* (1943), *Destination Tokyo* (1943),

The Iwo Jima Monument.

*Gung Ho!* (1943), *Thirty Seconds over Tokyo* (1944), and *Objective Burma!* (1945).

Other films offered intrigue, focusing on the shadowy war of spies, assassins, and double agents. These included *Sherlock Holmes and the Voice of Terror* (1942), *Nazi Agent* (1942), *Saboteur* (1942), and *They Came to Blow Up America* (1943). Still other productions glorified the heroic struggle of the citizens of occupied countries who fought against their Axis oppressors; *Hangmen Also Die* (1943), *Till We Meet Again* (1944), and *The Seventh Cross* (1944) are representative of the genre.

But fully two-thirds of Hollywood films released during the war never mentioned the conflict at all. If such films had a subtext, it was that America was a place worth fighting for—a message conveyed subtly in such sentimental films as *Going My Way* (1943), *Meet Me in St. Louis* (1944), *Since You Went Away* (1942), and *An American Romance* (1943).

Film was certainly not the only communications medium to portray the war. It was prominent in all media—including posters, which could be found everywhere. Prominent artists and illustrators such as James Montgomery Flagg, Ben Shahn, Everett Henry, Stevan Dohanos, and John Atherton all created posters to encourage American citizens' support of the war effort. Posters called men to military service, urged women to can food at home and consider getting a "war job," and extolled everyone to hate the nation's ruthless, bestial foes, the Axis powers. Further, although Axis espionage never amounted to a serious threat to the United States, homefront Americans were nonetheless given a sense that they were helping to safeguard the nation when posters warned them not to discuss war information in public. The most famous of these admonitions appeared in a poster published by the Seagram Distillery Company. Below an illustration of a half-submerged freighter was the slogan "Loose lips might sink ships!" Even Norman Rockwell lent his distinctive vision of Americana to the war effort, with a series of four illustrations collectively entitled "The Four Freedoms."

Radio was the principal entertainment medium for Americans during World War II. Although many no doubt listened to the radio to escape from the war and its cares, it was difficult to avoid the conflict for very long. President Roosevelt continued to give his "fireside chats," the tradition of informal-sounding speeches that he had begun during the 1930s. But, whereas the early addresses usually concerned the Depression and FDR's efforts to alleviate it, the wartime broadcasts reflected the nation's principal preoccupation, which was the war itself. Roosevelt used these speeches to reassure his audience that the war was going well and that eventual victory was assured—and history shows that he did so even early in the war, when such optimism was not shared by his advisors or justified by the military situation.

The government also used radio for propaganda in less obvious ways. William B. Lewis, head of the Office of War Information's Domestic Radio Division, understood that people wanted entertainment from their radios, not heavy-handed propaganda. Lewis, a former vice president of CBS, worked out a rotation system (called the Network Allocation Plan) wherein the existing radio dramas and comedies would voluntarily take turns integrating government propaganda into their scripts, thus guaranteeing a large audience for OWI's messages while preserving radio's money-making programs. As a result, the popular comedy *Fibber McGee and Molly* justified the new gas rationing program by letting the character of Fibber (already established as a buffoon) complain about it, only to be set straight through the humor of the other characters. On another evening, *The*

*Jack Benny Show* featured America's most lovable tightwad finally getting rid of his ancient automobile—by donating it to the War Salvage Drive. Benny's character had to be persuaded of the need for such a contribution, but then declared afterwards that it had been the right thing to do, indirectly encouraging his listeners to do likewise.

Radio also brought the news into American homes, and much of that information came courtesy of a new kind of reporter: the on-air correspondent who would broadcast live from the site of the story he was covering. Some World War II radio correspondents, like William L. Shirer, Charles Collingwood, and Eric Sevareid, would earn impressive reputations as journalists, but the dean of them all was Edward R. Murrow. Whether reporting from a London rooftop in the middle of an air raid or broadcasting a description of the Buchenwald concentration camp on the day it was liberated by the Allies, Murrow combined superb journalistic skills with a sonorous voice and a gift for near-poetic language to produce a series of radio programs that are still considered classics.

Music has always been one of the mainstays of radio, and many of the songs that Americans listened to during the war were reflections of the era. The rousing "We Did It Before (And We Can Do It Again)" was penned by Charles Tobias and Cliff Friend immediately following the Japanese bombing of Pearl Harbor. It compared the current struggle with World War One, and predicted the same outcome for the Allies. Irving Berlin's tune "Any Bonds Today?" was used by the government in a series of bond drives designed to raise money for the war effort. "I'll Walk Alone" by Sammy Cahn and Jule Styne was a promise to every serviceman stationed overseas that his wife or girlfriend would still be waiting when he returned home. Louis Jordan, Antonio Casey, and Collenane Clark composed "Ration Blues" in 1943 as a good-natured lament over war-related shortages of material goods. One of the most popular patriotic songs of the war was Kate Smith's rendering of "God Bless America." Although written by Irving Berlin near the end of World War One, the song went unrecorded and forgotten until the next war. It became Smith's trademark, and she sang it frequently, especially at a series of hugely successful war bond rallies.

The "funnies" (broadly defined) also pitched in to help the war effort. Many cartoons, comic books, and newspaper comic strips had their characters participating in the conflict. Bill Mauldin was the most famous of the war's cartoonists, although much of his work was initially drawn and published for a military audience (principally in *Yank*, the armed forces newspaper). Mauldin's characters Willie and Joe, who could find grim humor in being wet, filthy, tired, and scared, constituted a gritty and realistic portrayal of the average front-line "grunt's" existence. Virgil Partch II, who signed his cartoons "VIP," was a master of the grotesque and the absurd, and his work showed that the war contained no shortage of either one.

Comic books were an immensely popular entertainment medium in America during the 1940s. By the war's end, more than 20 million comics were sold every month. During the war years, dozens of comic book characters participated in the struggle against fascism and militarism. A year before Pearl Harbor, the team of Joe Simon and Jack Kirby created Captain America, the first comic book superhero to fight the Nazis. Another Captain, Midnight by name, began his career as the hero of a radio drama in the 1930s, but branched out into comic books after America entered the war. Alan Armstrong, better known as Spy Smasher, foiled Axis plots both at home and abroad. Wonder Woman, virtually the only female superhero of the era, was an Amazon warrior princess who possessed magic bracelets and a hatred of evil. Superman, the first popular comic superhero, spent the

war at home in America, but he found no shortage of Axis villains to defeat with his super powers.

The heroes of newspaper comic strips were also active in the war. According to a study conducted by the Office of War Information, more than fifty regularly appearing strips were using the war as part of their story lines. The first to “join up” was Joe Palooka, a clean-cut professional boxer who was shown enlisting in the army in 1940. Milton Caniff’s character Terry Lee (of *Terry and the Pirates*) first appeared in 1933 but joined the Army after Pearl Harbor and spent the war flying missions against the Japanese. Little Orphan Annie’s contributions to the war effort were mostly nonviolent, although she did on one occasion help to blow up a German submarine. Other popular comic strip characters, such as Captain Easy, Smilin’ Jack, Tillie the Toiler, and Snuffy Smith also did their part to make the world again safe for democracy.

Although the fighting ended in August, 1945, the war did not disappear from American popular culture. Although many non-fiction books about the war had sold well while the conflict raged, there seemed to be little market for novels about it (an exception was John Hershey’s *A Bell for Adano*, the 1944 story of U.S. soldiers occupying a Sicilian town, which won the 1945 Pulitzer Prize). But the war’s end signaled the beginning of a flood of literary efforts, several of which proved to be of enduring significance.

In 1948, Norman Mailer published *The Naked and the Dead*, which uses the motif of an American effort to take a Japanese-held Pacific island to discuss issues such as fascism, personal freedom, and individual vs. group responsibility. The same year saw the release of Irwin Shaw’s *The Young Lions*, a sweeping saga that examines the lives of three soldiers (two American and one German) against the backdrop of the European war’s most momentous events.

Leon Uris’s *Battle Cry* is one of the best novels about the U.S. Marines in the Pacific war. It follows a group of young men through basic training and into combat at Guadalcanal and, later, Tarawa. Although James Jones’s celebrated novel *From Here to Eternity* (1951) is not really a war story (the Japanese attack on Pearl Harbor, where the novel is set, provides the climax), his next, *The Thin Red Line* (1962) surely is. The grimly realistic story of a group of Marines fighting to take Guadalcanal from the Japanese, the novel emphasizes the ugly, capricious and, ultimately pointless nature of war. The absurdity of war is also the theme of Joseph Heller’s 1961 classic *Catch-22*. The protagonist, Yossarian, is an Army Air Force bombardier based in Italy who knows that his chances of survival decrease with every mission he flies. There is a limit on the number of missions that a bomber crew can be sent on, but Yossarian’s superiors keep raising the number. This darkly comic novel centers on Yossarian’s efforts to stay alive in the midst of a system that seems determined to kill him.

Absurdity edges into surrealism in Kurt Vonnegut’s *Slaughterhouse-Five* (1969), which mixes realism, science fiction, black comedy, and existentialism in the story of Billy Pilgrim, a man who “comes unstuck in time.” He starts experiencing his life out of chronological sequence, and some of these temporal glitches take him back to his World War II experience, when, as a prisoner of the Germans, he experienced the terrible Allied firebombing of Dresden.

Comic book publishers seemed to be almost as interested in the war after it was over as they had been while the struggle was in progress. Several long-running comic series, most of which had begun during the war, outlasted the conflict and continued to provide drama and adventure through the perspective of fictional American heroes. The most popular of these included *Gunner and Sarge*

(Marines fighting in the Pacific), *The Haunted Tank* (commanded by Lt. Jeb Stuart and protected by the ghost of the original Jeb Stuart of Confederate cavalry fame), and the most famous of all, Sgt. Rock of Easy Company. Unlike most of his fellow comic warriors, Rock was not created until 1959, when he made his first appearance in a DC comic entitled *Our Army at War*. Although most of the other World War II comics faded away in the 1960s, Sgt. Rock and his men marched on until 1988.

Hollywood’s interest in portraying World War II also continued long after the end of the fighting; indeed no other war in history has been the subject of as many films. The postwar movies dealing with the conflict can be discussed in terms of three broad categories: combat films, historic recreations, and comedies.

Combat films constituted a popular genre during the war itself, and they continued to be the most common type of war film made after 1945. One of the first was the John Wayne film *Sands of Iwo Jima* (1949), which deftly integrated documentary footage of the actual landing with the recreated elements filmed later. Marines are also the focus of 1955’s *Battle Cry*, based on the popular novel. Norman Mailer’s book *The Naked and the Dead* was filmed in 1958, but it disappointed critics by leaving out most of the philosophical issues raised by the novel. *The Guns of Navarone* (1961), based on Alistair McLean’s novel, chronicles a commando raid to disable German cannons that control a strait vital to the Allies. *The Dirty Dozen* (1967) focuses on the efforts of a tough Army Major (Lee Marvin) as he struggles to turn a squad of condemned U.S. prisoners into a commando unit for a secret mission on the eve of D-Day. *Castle Keep* (1969) is the surreal story of a group of Army misfits relegated to duty in a Belgian castle that suddenly assumes strategic importance in the Battle of the Bulge. Samuel Fuller’s *The Big Red One* (1979) follows a squad of soldiers of the First Infantry Division as they fight their way across Europe. Although the combat film languished throughout most of the 1980s and 1990s, two powerful examples were released near the end of the latter decade. Steven Spielberg’s *Saving Private Ryan* (1998) starred Tom Hanks and is notable for the most realistically gruesome battle footage ever shown in a mainstream motion picture. *The Thin Red Line* (1999) is the second filmed version of James Jones’ classic novel and devotes as much time to moral issues as it does to combat.

A sub-genre of the combat film involves stories focusing on prisoners of war, a category that includes some of the best films made about the war. *Stalag 17*, based on a popular play, is a comedy-drama about American prisoners held by the Germans. *The Bridge on the River Kwai* (1957), which won innumerable awards, tells the story of a group of British POWs in Burma who are forced to build a railroad bridge by their Japanese captors. *The Great Escape* (1963), based loosely on a true story, involves a German “escape-proof” prison camp and the Allied prisoners who escape from it. *Von Ryan’s Express* (1965) stars Frank Sinatra as an American Colonel who masterminds the hijacking of a German train by the Allied POWs it is transporting.

Films that chronicle actual battles, campaigns, or leaders include 1965’s *Battle of the Bulge* and 1968’s *The Bridge at Remagen*. *Patton* (1970) is George C. Scott’s brilliant portrait of the General known to his troops as “Old Blood and Guts.” *The Longest Day* (1972) is a sprawling, epic account of the D-Day invasion, while 1977’s *A Bridge Too Far* tells the story of a disastrous Allied plan to outflank the Germans that almost, but not quite, succeeded in ending the war a year early.

Comedies about World War II have been attempted over the years, with varying success. *Mister Roberts* (1955) focuses on sailors fighting boredom while stationed far from the combat. Cary Grant starred in *Operation Petticoat* (1959) as the commander of a submarine that must take on a bevy of beautiful nurses as passengers. Grant also stars in 1964's *Father Goose*, as a coastwatcher who reluctantly helps a group of children escape internment by the Japanese. *What Did You Do in the War, Daddy?* (1966) stars James Coburn as the reluctant commander of a squad occupying an Italian village, and director Steven Spielberg had one of his few cinematic flops with the inane farce *1941* (1979).

The war was also a fruitful subject for television programs well into the 1960s. One of the earliest TV shows was the documentary series *Battle Report*, which ran from 1950-1952. Host Robert McCormick introduced a new "battle" each week, with film footage and interviews with surviving participants used to elucidate what had happened and why.

Fictional programs began to appear in 1956 with the premiere of *Combat Sergeant*, which offered drama against the backdrop of the battle for North Africa. The program lasted only a year, as did *O.S.S.*, which debuted in 1957 and featured the espionage adventures of Frank Hawthorne, operating behind enemy lines on behalf of the Office of Strategic Services. It would be several years before the networks tried another World War II show, but *The Gallant Men* appeared in 1962. The story of an infantry unit fighting its way through Italy, it also was cancelled after its first season.

But 1962 also saw the debut of what many regard as the best television drama about World War II ever aired. *Combat* focused on a U.S. infantry platoon in France (and, later, Germany) during the last two years of the war. The ensemble cast included Rick Jason as Lieutenant Hanley and Vic Morrow as Sergeant Saunders. The show had good writing and able directing, and never used action as a substitute for human drama—all of which probably contributed to its long run, which lasted until 1967.

In 1966, *The Rat Patrol* premiered, starring Christopher George as the leader of a four-man mechanized commando unit fighting the Germans in North Africa. The show lasted two seasons, which was one season longer than *Garrison's Gorillas*, which was a blatant attempt to cash in on the popularity of the film *The Dirty Dozen*; this "criminals behind the lines" saga ran from 1967-68.

World War II dramas largely disappeared from the airwaves until the arrival of *Baa Baa Black Sheep* (retitled *Black Sheep Squadron* for its second, and last, season) in 1976. Loosely based on a real Marine aviation unit, the show starred Robert Conrad as Greg "Pappy" Boyington, who led a group of misfit fighter pilots into aerial combat against the Japanese.

There were several television comedies based on the war, some of which proved surprisingly popular. One was *McHale's Navy*, which made its debut in 1962. Ernest Borgnine played Lt. Commander McHale, a seagoing Sgt. Bilko simultaneously conning his superiors, ripping off the navy, and striving to avoid combat with the Japanese. He was aided and abetted during the four years of the show's run by Ensign Parker, played by Tim Conway.

The success of *McHale's Navy* may have inspired another maritime war comedy, *The Wackiest Ship in the Army*, which was launched in 1965 and sunk at season's end. Jack Warden and Gary Collins played the officers commanding a mixed squad of soldiers and sailors that roamed the South Pacific in an old wooden sailboat, attempting to gather intelligence about the Japanese forces in the area.

Perhaps the unlikeliest hit of the group was *Hogan's Heroes*, a comedy set in a German POW camp for Allied prisoners. Premiering in 1965, the show derived its humor from the abilities of the prisoners, led by Colonel Hogan (Bob Crane) to outsmart their German captors. So incompetent was the camp commander, Colonel Klink (Werner Klemperer) and his ranking noncom, Sergeant Schultz (John Banner), that the prisoners were able to run an espionage ring out of the camp, help downed Allied airmen return to England, and construct an elaborate underground complex directly under the camp itself. Despite the implausibility of both the premise and most of the show's scripts, it lasted for 168 episodes before cancellation in 1971.

## World Wrestling Federation

While the World Wrestling Federation claims to have been the leader in "sports entertainment for over fifty years," the WWF really was formed in the early 1980s when Vince McMahon Jr. took over his ailing father's regional wrestling promotion and transformed it into an international marketing success story. McMahon Jr. is credited with taking professional wrestling out of the "smoke-filled arenas" and putting it on the map as family entertainment.

McMahon's father started the WWF (then called the WWWF) in 1963, breaking away from the National Wrestling Alliance over disagreements about the booking of the World Champion. McMahon Sr.'s home base was New York's Madison Square Garden, and he ran shows all along the East Coast. Playing to the heavy ethnic composition of his customers, he installed Italian strongman Bruno Sammartino as his World Champion, and the promotion was off and running. McMahon Sr. pioneered the big event card, holding two successful shows at Shea Stadium, both headlined by Sammartino. By the early 1980s, McMahon Jr., who had been working for his father as an announcer but was posed for something bigger for the business, had taken over the promotion. (McMahon told *New York* magazine that he "fell in love with it from the first contact.") Eventually buying out his father's stock in the parent company, Capital Sports, he changed the name to Titan Sports and proceeded to revolutionize wrestling.

McMahon broke all the rules: he "stole" other promoter's talent, bought out their television time, signed exclusive agreements with their arenas, and scheduled shows opposite theirs. Soon the traditional wrestling territories started drying up. McMahon's new company, headlined by Hulk Hogan as lead babyface and Roddy Piper as lead heel, used the emerging cable television industry to

World Wrestling Federation wrestlers compete in a match in Kowloon, Hong Kong.

market his promotion across the country. Shows such as *WWF Superstars* and McMahon's faux talk show *Tuesday Night Titans* were the top rated shows on all cable. He also set up syndicated shows that became the highest rated in syndication. Attracting mainstream press, using celebrities like Liberace and Cindy Lauper, merchandising wrestlers as characters (the WWF would copyright and own each wrestler's gimmick), having wrestlers use entrance music, and, finally, making wrestling a true "show" thrust the WWF into the national consciousness.

After 1985's *Wrestlemania I*, a live event at Madison Square Garden covered by hundreds of media outlets but also shown across the country via closed-circuit TV, McMahon expanded his empire. He signed agreements for a cartoon show on CBS and inked a series of license agreements to create all sorts of products, from lunch boxes to trading cards, featuring the likenesses of his wrestlers. Rather than appealing to adults, McMahon aimed his product at the family market. The WWF scored a coup in landing a monthly spot on network TV with *Saturday Night's Main Event* premiering on NBC in 1985 in the 11:30 p.m. time slot. Forays into prime time began in 1988. Success followed success as the WWF dominated in the United States with events like 1987's *Wrestlemania III* drawing more than 90,000 to the Pontiac Silverdome in Michigan, while wrestling became the cash cow of the early pay-per-view industry. The WWF

even "exposed" the wrestling industry in a hearing in New Jersey to rid itself of being taxed as a sport. A WWF official testified that wrestling was indeed "fake," a headline which ended up in the *New York Times*. McMahon didn't even attempt to put up the façade any longer, telling *New York* magazine, "We're storytellers—this is a soap opera, performed by the greatest actors and athletes in the world. I'd like to say that it's the highest form of entertainment."

The WWF subsequently expanded to more than 1,000 events a year. The wrestlers were divided up into the three "teams," the big stars headlining in the major markets and new talent headlining in small towns. Already successful in Canada, in the late 1980s the WWF started running TV all over the world and promoting live events in England, Germany, and Italy as well as in the Middle East. In 1991, more than 60,000 fans jammed into Wembley Stadium in England for the "Summer Slam" show, while events in other countries sold out both tickets and merchandise.

While the success of the WWF was built on many factors, one of its main selling points was always the physique of its wrestlers. Champion Hulk Hogan bragged about having the "largest arms in the world," and performers like the Ultimate Warrior were touted not because of their ring talent, but because of their bodybuilder physiques. McMahon marketed bodybuilders by developing the World Bodybuilding Federation in 1991, a huge, and expensive, failure.

More bad times followed for the WWF with the arrest of a WWF-affiliated doctor for trafficking in steroids. McMahon and the company itself were taken to court for distributing steroids in 1994 after a very public three-year investigation. About the same time the steroid scandal broke, former WWF wrestlers and announcers were coming forth with stories of sex scandals involving WWF officials. *Jerry Springer*, *Geraldo*, and other daytime talk shows covered the story, as did the *New York Post*. McMahon was on the ropes. The negative publicity from the scandals, coupled with the shrinking nature of the top wrestlers' physiques and the departure of top stars like Hulk Hogan caused a downturn in business. The WWF tried its old tricks of involving celebrities like Chuck Norris, Jenny McCarthy, Burt Reynolds, Pam Anderson, and even getting NFL Hall of Famer Lawrence Taylor to wrestle in a Wrestlemania main event, but fan interest was waning.

After dominating wrestling for more than a decade, the WWF faced its first serious competition in 1995 when Ted Turner's World Championship Wrestling challenged the WWF directly by scheduling a show called *Monday Nitro* opposite the WWF's long-standing *Monday Night Raw*. Losing talent, advertisers, and viewers, the WWF was clearly the number-two promotion. The turning point came when the WWF decided to abandon its family-friendly approach. It adopted a new hardcore edge and marketing campaign, "WWF attitude," while building the promotion around trash-talking Steve Austin rather than dependable champion Bret Hart. When Hart decided to leave the promotion in the fall of 1997, McMahon took a bold gamble. During a championship match, which McMahon and Hart had agreed would end in Hart NOT losing the WWF title, McMahon had the timekeeper ring the bell and declare Hart's opponent, Shawn Michaels, the winner and new champ. The controversy and interest in the finish, the emergence of Austin as the most popular wrestler in the country as well as a mainstream celebrity (showing up on awards shows, voicing MTV's *Celebrity Death Match*, being profiled in *Rolling Stone* and *People*), and lots of innovative promotion and matchmaking found the WWF back on top and once again "the leader in sports entertainment."

## World's Fairs

World's fairs are modern events of the nineteenth and twentieth centuries. Whereas medieval fairs were concerned with the selling of goods, modern world's fairs were involved in the selling of industrial technology and industrial society; they fostered the idea that industrial development was to be equated with social progress. World's fairs not only furnished a place where the latest technological achievements could be presented to an international public, but they provided

an orientation to people confronting the vast and rapid changes of industrialism. They offered a photograph of the present, a story of past progress, and a vision of the future. But by the middle of the twentieth century, world's fairs had lost much of their importance and charm.

The first world's fair was held in London in 1851. Prince Albert, husband of Queen Victoria and president of the Royal Society of the Arts, wanted to go beyond the national industrial exhibitions that France had made famous and Britain was ready to duplicate. After much discussion, a building of glass and iron/wood beams was constructed in Hyde Park. The Crystal Palace held all of the exhibits. Since it was built with prefabricated interchangeable parts, the building was constructed and taken down quickly, with little damage to the Park. In fact, the building was actually constructed over 10 large elm trees. During the 141 days it was open, over six million attended. The Crystal Palace Exhibition's success inspired other nations to hold international exhibitions.

World's fairs are remembered by the products they introduced to the public. Americans did very well at the Crystal Palace Exhibition. Cyrus McCormick's reaper, Samuel Morse's telegraph, and Charles Goodyear's vulcanized rubber products were well received. Colt revolvers and Robbins-Lawrence rifles made with interchangeable parts were recognized as having revolutionized the making of firearms. Elisa Otis demonstrated his safety elevator at the New York World's Fair in 1853. At the Philadelphia Exposition of 1876, Alexander Graham Bell introduced the telephone, and Thomas Edison gave his first public demonstration of the phonograph in Paris in 1889. Sound-synchronized movies, x-rays, and wireless telegraphy marked the 1900 Paris fair. The St. Louis World's Fair of 1904 introduced the safety razor, the ice cream cone, iced tea, and rayon. President Franklin Roosevelt's televised opening of the 1939 New York World's Fair began regular television broadcasting in the United States. IBM's (International Business Machine) computer demonstrations educated visitors to the New York World's Fair of 1964-1965.

More important than the inventions were the industrial systems that the fairs exhibited to the public. The Philadelphia Exposition of 1876 celebrated the age of steam. In Machinery Hall, the giant Corliss steam engine, 40-feet high and 2,520 horsepower strong, powered all the machinery in the hall. There were also steam fire engines, steam locomotives, and steam pumps. By 1893, the Chicago World's Fair was celebrating the age of electricity. At night, the fair was lighted by thousands of incandescent light bulbs. In the Electrical building were Edison and Westinghouse dynamos and electric motors that powered other machines. Transportation, however, was the theme in St. Louis in 1904. Trains, streetcars, and over 160 motorcars were displayed. A major feature of the fair was the dirigible contest, where a large cash prize awaited anyone who could pilot his airship over a prescribed route.

While world's fairs were held to celebrate historic milestones, contemporary concerns were often in the minds of fair planners. The 1876 Philadelphia Exposition recognized the centennial of the signing of the Declaration of Independence. The fair was also viewed as a means to remind Americans of their common ideals, and thus heal the wounds of the Civil War. Paris' 1889 World's Fair celebrated the centennial of the French Revolution. Chicago's Exposition of 1893 recognized the 400th year anniversary of Columbus' discovery; and the St. Louis World's Fair of 1904 commemorated the centennial of the Louisiana Purchase. Both fairs were also seen as demonstrating the importance of the midwest to the nation. The centennial of the founding of the city of Chicago was the reason given for holding a world's fair in 1933. New York's World's Fair in 1939 celebrated the

150th year anniversary of George Washington's inauguration. The "Building the World of Tomorrow" theme had the high purpose of showing how a well planned democratic society would survive the world's turmoil. The outbreak of World War II in September resulted in the new theme of "Peace and Freedom" for the 1940 opening.

The outside world had a way of impinging upon world's fairs. At the New York World's Fair of 1853, Susan B. Anthony led a demonstration for women's rights. For the Philadelphia Exposition in 1876, a women's building housed a display of inventions by women, and photographs showing women working in a variety of occupations. Of particular note was Emma Allison, who operated a steam engine that ran five looms and a printing press. When a man asked her if the work was too demanding for someone of her sex, she replied "It's easier than teaching, and the pay is better." At the Chicago World's Fair of 1893, the women's building displayed a great collection of works by women. These included a library of 5,000 books, paintings, and sculptures, and mechanical devices invented by women. A careful selection of statistics from around the world showed the extent to which women were a part of the world economy. Susan B. Anthony believed the women's building did more to raise the consciousness of women than all the demonstrations of the nineteenth century.

At the Philadelphia Exposition of 1876, vendors and amusements were located outside the fairgrounds. The 1893 Chicago planners recognized that a profit could be realized by bringing the amusements and vendors into the fair itself. One of the most popular of the Midway exhibits was the "streets of Cairo" featuring the belly dancer "Little Egypt." She also appeared at the 1904 St. Louis World's Fair, but was outdrawn by "Jim Key," the talking horse. The 1933 Chicago World's Fair had Midget Town and the fan dancer, Sally Rand. The New York World's Fair of 1939 featured the synchronized swimming of "Aqua girls" in Billy Rose's Aquacade. The world's fairs would be remembered for their outstanding amusements. The Eiffel Tower was a huge success at the 1889 Paris fair. For a generation that had not yet flown in an airplane, seeing the world from 985 feet was unlike anything they had ever experienced. The 1893 Chicago fair offered Charles Ferris' great wheel: 40 cars, each carrying 36 passengers, rode to a height of 270 feet. Forty years later, Chicago offered a 200-foot high Sky Ride across the second longest suspension span in the United States. The parachute jump at the 1939 New York World's Fair attracted thrill seekers and onlookers.

Since world's fairs were international events, international organizations held their meetings at the fairs. At the 1900 Paris World's Fair, 127 international organizations met. Paris in 1900 and St. Louis in 1904 hosted the second and third Olympic games. Featured at the fairs were villages of natives from around the world. Dressed in their native costumes, these villages were publicized as serving an educational function. The subtle message, however, was an ethnocentric view that celebrated Western progress by comparing Western achievements at the fair with the backwardness of these native cultures. Following the Olympics, the St. Louis fair held three days of "Anthropology games." Native peoples at the fair were enticed to demonstrate their skills. Sioux Indians participated in archery contests, African natives threw javelins, and seven-foot Patagonians tried the shot put. Their inability to match Western records not only confirmed the value of training, but again suggested the superiority of Western civilization.

Those who went to the fairs had their faith in Western industrial progress confirmed. At the height of the Depression, Chicago's 1933 Century of Progress assured visitors that science guaranteed a better

future. The science building had a giant statue gently guiding a trembling man and woman into the future. The official guidebook to the fair stated, "Science Finds, Industry Applies, Man Conforms." By 1939, Fascism and Nazism were on the move in Europe. Visitors to the New York fair were given a powerful message of hope. The symbols of the fair, the Trylon and Perisphere, suggested that soaring human aspirations could be realized on this earth. Inside the sphere was a giant model city known as Democracity. This utopian city had Centerton as its business and cultural center, Millvilles of light industry, and Pleasantvilles, which were exclusively residential. Democracity, with its defined zones and rational streets, carried the message that well-planned livable cities were possible through democratic forms of government. Futurama, the General Motors exhibit, the most popular at the fair, presented a vision of America united by a 14 lane national highway in which radio-controlled autos moved at 100 miles per hour. With its green suburbs, industrial parks, productive farms, and high rise urban centers, this vision of America in 1960 offered an inspirational alternative to the chaos that the world was experiencing.

World's fairs have lost their importance because technical fairs and television are a more effective means of presenting new technological developments to specialists and to the general public. Television can bring foreign cultures to our homes, and air travel can bring us to foreign cultures. Today, international organizations are connected with permanent agencies of the United Nations. Theme Parks such as Disney World and Epcot Center provide the amusements and thrills that were once found at world's fairs. Finally, the expense of holding a world's fair required corporate sponsorship. The resulting commercialization of the 1964-1965 New York World's Fair suggested that fairs were now oriented toward selling products. The fair's ferris wheel, for example, was a giant tire with the name of the tire company in huge letters on the sides of the tires. Our view of technology has also changed. We no longer accept the idea that because we can do something technologically, we ought to do it, and that we will do it. General Motors' 1964-1965 exhibit demonstrated how humans could explore and colonize the oceans, the deserts, and the polar ice caps. Few were inspired by this vision.

## Wrangler Jeans

Wrangler jeans became the pant de rigueur for late-twentieth-century country and western fashion. Popular with mid-century rodeo riders after their introduction in 1947 because of their snug fit and boot-cut pant leg, Wranglers have come to symbolize the free spirit and individualism embodied in the myths of the American frontier West. While other brands, especially Levi's, became connected with urban chic, Wrangler focused its marketing almost exclusively on associations with rural authenticity and Western roots. As the jeans of choice for almost any star in the growing country music industry of the late 1980s and 1990s, Wranglers benefitted from the resurgence of country music and the heavy advertising tie-ins associated with the music's rural and Western image. Wrangler became culturally connected, and often financially intertwined, with rodeos, country music, competitive fishing, and pick-up truck sales.

## Wray, Fay (1907—)

Despite a long, versatile career, Canadian-born actress Fay Wray is indelibly etched on the public mind as the shrieking heroine in the grasp of a giant ape climbing the Empire State Building in the film *King Kong* (1933). For 40 years she acted in 78 motion pictures as well as on the Broadway stage and television. She also co-authored a play with Nobel Prize winner Sinclair Lewis. Although she proved her acting ability in such films as *The Affairs of Cellini* (1934), opposite Frederic March, she was doomed to be typecast as the champion screamer and bedeviled heroine. In the 1950s she played in the television series *Pride of the Family* as the wife of Paul Hartman and mother of Natalie Wood. "When I'm in New York," she once said with a laugh, "I look at the Empire State Building and feel that it belongs to me—or vice versa."

## Wright, Richard (1908-1960)

Once at the center of African-American culture—chosen by the Schomburg Collection poll as one of the "twelve distinguished Negroes" of 1939, recipient of the Spingarn Medal in 1941 (then the highest award given by the NAACP), and mentor to young black writers such as James Baldwin, Gwendolyn Brooks, and Ralph Ellison—Richard Wright became an unpalatable novelist to readers and critics of his own race in the 1980s and 1990s.

Born on a plantation in Roxie, near Natchez, Mississippi, Wright spent his childhood traveling intermittently from one relative to the next because of his father's desertion and his mother's bad health. In 1927, Wright moved to the South Side of Chicago where he worked as a postal clerk and insurance policy vendor. In Chicago, Wright joined first the John Reed Club and then the Communist Party and started to publish essays and poetry in leftist reviews such as *Midland Left*, *New Masses*, and *International Literature*. By 1936, Wright had become one of the principal organizers of the Communist Party, but his relationship with the party would always be difficult until his definite break in 1942.

In 1936, Wright's short story "Big Boy Leaves Home" appeared in the anthology *The New Caravan* and received critical praise in mainstream newspapers and magazines, marking a decisive step for his career as a writer. The following year Wright moved to New York where, with Dorothy West, he launched the magazine *New Challenge* (which, lacking Communist support, was short-lived). In *New Challenge*, Wright published the influential essay "Blueprint for Negro Writing" (1937) where he urged black writers to adopt a Marxist approach as a starting point in their analysis of society. In the same essay, with a move which is considered problematic by contemporary black critics, Wright encouraged black writers to consider as their heritage Eliot, Stein, Joyce, Proust, Hemingway, Anderson, Barbusse, Nexo, and Jack London "no less than the folklore of the Negro himself."

Wright's first novel, *Native Son*, based on a true story, describes the progressive entrapment and final execution of Bigger Thomas, a young African-American chauffeur living in the Chicago slums who involuntarily killed his boss's daughter. Published in 1940 by Harper, the novel sold 215,000 copies in its first three weeks and became a Book-of-the-Month Club selection, thus marking, as Paul Gilroy has pointed out, an important change in the political economy of publishing black writers. The following year Orson Welles directed a successful stage version of *Native Son*. Two movie versions have been realized so far: the first in 1951 by Pierre Chenal starring Wright himself, the second one in 1995 by Jerrold Freedman starring Victor Love, Matt Dillon, and Oprah Winfrey. *Native Son* has had a great impact on successive generations of African-American writers who have either followed its pattern of "protest novel," as in the case of Anne Petry, Chester Himes, and William Gardner Smith (sometimes significantly grouped together as "the Wright school"), or reacted to it very critically as James Baldwin did in his famous essay "Everybody's Protest Novel" (1949), stating: "The failure of the protest novel lies in its rejection of life, the human being, the denial of his beauty, dread, power, in its insistence that it is his categorization alone which is real and which cannot be transcended."

After the success of *Native Son*, Wright published with equal success and critical acclaim the folk history *12 Million Black Voices* (1941) and the first part of his autobiography, *Black Boy* (1945), the second part was published posthumously as *American Hunger* in

1977), which became another Book-of-the-Month Club selection. In 1945 Wright wrote the introduction to *Black Metropolis*, St. Claire Drake and Horace Cayton's classic sociological study of the black ghetto in Chicago. Thanks to *Native Son* and *Black Boy*, which were translated into several languages, Richard Wright was the first black writer to enjoy a global readership. However, *Black Boy* has attracted much criticism by contemporary African-American scholars for Wright's depiction of black life in America as, to quote his own words, "bleak" and "barren." Henry Louis Gates, for example, finds that "Wright's humanity is achieved only at the expense of his fellow blacks . . . who surround and suffocate him" which makes Wright's autobiographical persona "a noble black savage, in the ironic tradition of Oroonoko and film characters played by Sidney Poitier—the exception, not the rule." Paul Gilroy has suggested a less disparaging, and ultimately more useful, perspective, describing Wright's work as fascinating precisely because "the tension of racial particularity on one side and the appeal of those modern universals that appear to transcend race on the other arises in the sharpest possible way."

In 1946, the French cultural attaché in Washington and famous anthropologist Claude Lévi-Strauss sent Wright an official invitation from the French government to visit Paris, where Wright was welcomed by prominent intellectuals such as Gertrude Stein, Simone de Beauvoir, Jean-Paul Sartre and André Gide. The following year Wright decided to settle down in Paris permanently where he started to work on his existentialist novel *The Outsider* (1953) and where he had an active role in several organizations such as Sartre's Rassemblement Democratique Révolutionnaire, Léopold Sédar Senghor and Aimé Césaire's *Présence Africaine*, and the *Société Africaine de Culture*. Wright's other books of this late period include a report on his travels in Africa (*Black Power*, 1954); an account, introduced by Gunnar Myrdal, of the conference of non-aligned nations in Bandung, Indonesia (*The Color Curtain*, 1956); a collection of essays (*White Man, Listen!*, 1957); and two novels (*Savage Holiday*, 1954, and *The Long Dream*, 1958).

Wright's last years were plagued by his progressive alienation from the African-American community in Paris, which suspected Wright of being an agent for the FBI (in fact, evidence shows that the FBI monitored Wright's activities all his life), and by his increasing financial problems. Paradoxically and sadly for a writer who had to fight against white racism all his life and whose books were not allowed during his lifetime on the library shelves of several American towns, Richard Wright is now being held in contempt by influential black critics who are disturbed by his unaffirmative portrayal of the African-American community, by his controversial relationship with black culture, and by what many consider a stereotypical depiction of black women. It is hoped that critics and readers will find new and more inclusive strategies to recenter Richard Wright within the American and African-American literary tradition.

—Luca Prono

## Wrigley Field

At 1060 West Addison Street in Chicago sits Wrigley Field, the venerable home of the Chicago Cubs baseball team of the National League. Wrigley Field has played host to some of the most memorable and bizarre incidents in the history of professional baseball. Opposing teams dread playing within "The Friendly Confines" due to the vicious winds blowing in from nearby Lake Michigan as well as the raucous, loyal fans who turn out in droves to cheer on their beloved and "Cubbies," one of the least successful teams in baseball history.

Wrigley Field came into existence in March of 1914 as the home of the Chicago Whales, taking the name Weegham Park, after Whales owner Charles Weegham. In 1916, Weegham bought the Cubs and moved them to Weegham Park. The name changed shortly thereafter to Cubs Park when the Wrigley family (of chewing-gum fame) bought the Cubs in 1920, changing its name yet one more time in 1926 to Wrigley Field. Despite many changes throughout the years, Wrigley Field still preserves a touch of old-time baseball with its downtown stadium surrounding a domeless field with real grass, plus 1930s-vintage amenities like a hand-operated scoreboard, a beautiful ivy-covered outfield wall with no advertising placards, and an infamous bleacher section often packed with “Bleacher Bums.” Wrigley Field and the Cubs also maintain a longstanding commitment to afternoon baseball games.

Among the more-famous incidents in the history of Wrigley Field include Babe Ruth’s “called shot” and the 1969 “black cat.” The legend of Ruth’s “called shot” in Game Three of the 1932 World Series, in which he purportedly predicted the trajectory of one of his home runs, has achieved almost mythical status, despite evidence suggesting the story was probably apocryphal. In the midst of the dramatic, disastrous 1969 season, a black cat wandered into the Cubs dugout, supposedly contributing to the bad-luck season that found the Cubs relinquishing a huge lead to New York’s “Miracle Mets.”

In the late 1990s, Wrigley Field remains the only major-league baseball park to prohibit advertising on any of the walls or scoreboards surrounding the playing field. The Tribune Company, publishers of the *Chicago Tribune*, bought the Cubs in 1985 and made one concession to the modern age by installing lights for night-baseball games, though the first night game at Wrigley Field (August 8, 1988 vs. the Philadelphia Phillies) was rained out after three and a half innings. The Cubs completed its first official night game the next evening, defeating the New York Mets 6-4.

With a seating capacity of 38,902, Wrigley Field is one of the smallest parks in major-league baseball, which only adds to the intimacy of watching an old-fashioned baseball game within the stadium’s “Friendly Confines.”

## *Wuthering Heights*

Emily Brontë’s 1847 Gothic novel about the brooding Heathcliff’s passion for Cathy has become one of cinema’s most enduring love stories. Director A. V. Bramble, in a British silent production (1920), first brought *Wuthering Heights* to the screen; but Samuel Goldwyn’s 1939 version, directed by William Wyler and starring Laurence Olivier and Merle Oberon, is considered the film classic (and a source

of much Hollywood lore, such as Goldwyn’s post-production decision to add a new “happy” ending, the now famous scene of the lovers walking together on the crag filmed with unknown actors.) Subsequent refilmings and adaptations—by director Luis Buñuel, as *Abismos de Pasion* (1954); by Robert Fuest (1970), starring Timothy Dalton; by the BBC (in 1948, 1953, 1962, 1967, and, most notably, by Peter Hammond in 1978); by Jacques Rivette, as *Hurlevent* (1985); and by Peter Kosminsky, as *Emily Brontë’s Wuthering Heights* (1992), with Ralph Fiennes and Juliette Binoche; and by David Skynner, again as *Emily Brontë’s Wuthering Heights* (1998)—confirm the popularity of Brontë’s tale and filmmakers’ ongoing fascination with it.

—Barbara Tewa Lupack

## WWJD? (What Would Jesus Do?)

The twentieth century has seen no phrase so consistently popular with Protestant America as “What Would Jesus Do?” What began as a series of evening story-sermons delivered by a Kansas preacher in 1896 became by the end of the century a billion dollar industry as millions of Americans purchased bracelets, t-shirts, coffee mugs, and other paraphernalia with the acronym “WWJD?” inscribed upon them. For some the remarkable sales which the phrase engendered bespoke a hunger for the Christian gospel in the American public sphere, but to others it showcased the ability of market-savvy capitalists to turn even the deepest religious impulses into profit-making ventures.

Charles M. Sheldon (1857-1946), a social gospel minister at the Central Congregational Church in Topeka, Kansas, landed on the idea of the story-sermon as a cure for chronically poor attendance at Sunday evening services. These serial messages would then be printed in the private weekly magazine *The Advance* and later compiled and released in book form. In 1896 the series he composed was entitled “In His Steps,” recounting the experiences of Rev. Henry Maxwell as he and his congregation discovered spiritual awakening and moral regeneration when they asked themselves “What would Jesus do?” in every situation they faced and sought to act accordingly.

The *Advance* series proved so popular that Sheldon decided to reissue the material as a book. But when he applied for copyright protection, it was discovered that the original magazine series had not itself been copyrighted and so the story was in public domain. Thus as the book began to sell, many firms other than the Advance Publishing Company rushed to meet the demand. By mid-century 41 companies had published the book in the United States, 15 in Great Britain, and the original text had been translated into 26 languages. The results of all this activity were mixed for Sheldon. He was catapulted to international fame, with his book selling no fewer than 8 million copies and perhaps as many as 30 million, but Sheldon himself received very little in the way of royalties on the sales. Thus was born a mythology about *In His Steps*, the book which outsold all others save the Bible but whose author received not a penny in royalties.

*In His Steps* has been continually in print since 1896, usually in more than one edition. But the end of the twentieth century saw an astonishing revival in its popularity. In 1989 Janie Tinklenberg, youth leader at the Calvary Reformed Church in Holland, Michigan, read

Sheldon's book and discussed it with her youth group. Noticing that many of her kids were making "friendship bracelets" for one another, she hit upon the idea of creating a bracelet which would remind her charges to ask themselves what Jesus would do in a given situation. She contacted the Lesco Corporation, based in Lansing, Michigan, and had them make two hundred bracelets with the acronym "WWJD?" stitched into them. Many of the students in her group began explaining the message of Jesus Christ to their classmates, who would often themselves ask for a bracelet. The original supply was quickly depleted and the phenomenon began to spread across the country. During the first seven years of marketing, Lesco Corp. sold 300,000 bracelets. But in the spring of 1997 Paul Harvey mentioned them on his syndicated radio show and sales skyrocketed. Fifteen million bracelets were sold by Lesco in 1997, and dozens of other corporations rushed to capitalize on the market craze.

Lesco quickly expanded its merchandising beyond the bracelets to include baseball caps, coffee mugs, key chains, jewelry, sweaters, and t-shirts, all sold by Christian bookstores around the country. An Indiana-based web site (<http://www.whatwouldjesusdo.com>) was selling 300,000 bracelets a month by 1998. 1998 also witnessed several Christian publishing companies compiling youth curriculum materials and offering inspirational publications using the moniker. Fore-Front Records released a WWJD? compact disc showcasing some of the most popular artists in Contemporary Christian Music, and publishing giant Zondervan issued the WWJD Interactive Devotional Bible. Most releases sold quite well. Some, like Beverly Courrage's *Answers to WWJD?*, became bestsellers.

By 1998 the fad had caught the attention of mainstream media outlets such that WWJD? materials could be purchased from high-profile stores like Kmart, Wal-Mart, Hallmark, Barnes and Noble, and Borders Books and Music. The Christian press was astir with debate over whether Jesus Himself would smile upon such vigorous marketing of His message, and controversy emerged over copyrights on the phrase itself. Fuel was added to the flames of controversy when it was found that some of the pewter jewelry bearing the WWJD inscription contained such high quantities of lead that children were contracting lead poisoning.

Despite such difficulties, it was clear that the message Charles Sheldon had preached first to his congregation and then to millions of readers around the world at the beginning of the twentieth century was still being heeded and put into practice over one hundred years later in a characteristically American blend of religious zeal and the entrepreneurial spirit.

## Wyeth, Andrew (1917—)

The Realist painter Andrew Wyeth was born the youngest of five children to the successful artist/illustrator, N.C. Wyeth, in Chadds Ford, Pennsylvania in 1917. He learned to paint with the keen observation and the drafting skills that his father passed on to him. His subjects, mainly nostalgic images of unpainted houses, austere New Englanders, and landscapes from his surroundings, have been enormously popular since his first sold out one-man show in New York in 1937. Like his father, he was offered the opportunity to paint covers for *The Saturday Evening Post*, but unlike his father, he declined, preferring to pursue a free interpretative course in his art. Ironically, because of his ability to capture on canvas the American sense of courage and its triumph over the struggles and trials of life, Andrew Wyeth was the first artist to be featured on the cover of *Time* magazine.

Nearly all of Wyeth's paintings are either executed in drybrush, watercolor, or egg tempera, a technique that allows for extreme precision. His subdued earth-colors palette, realistic style, and subject matter have remained the same throughout his career, often featuring a neighbor's farm in Chadds Ford and landscape scenes from his summers in Cushing, Maine. In the 1960s, he began to paint portraits of his sister, Carolyn, which encouraged him eventually to embark on a series of nudes of Helga Testorf, one of his Chadds Ford neighbors. An early Wyeth model, Christina Olson, was the subject of several of his portraits and one of his most famous paintings, *Christina's World* (1948). The painting shows the crippled woman gazing back towards her house from a windswept, grassy pasture. As an egg tempera work painted shortly after his father's tragic railway accident, it emphasizes the somber introspection and sense of struggle for which Wyeth gained a great deal of notoriety. The Olson House, featured in *Christina's World*, is the first house listed in the National Historic Register of Places to become famous through being featured in a painting, thus attesting to the popularity of the artist's work.

During the years 1972-1986, Wyeth painted his popular "Helga" studies. These pictures were painted in secret and comprise 247 images of the artist's most mature works, featuring the same model in numerous environments and moods. A sense of moral dignity and courage is characteristic of the portraits in this series of paintings, which were exhibited at the National Gallery of Art in 1987 and were the first works by a living artist to be shown there. This came after Wyeth's 1976 honor of having been the first living American artist to be given a retrospective at the New York Metropolitan Museum of Art.

Imbuing his art with a sense of visual poetry, mysterious in its evocation of emotion, Andrew Wyeth's craft has developed independently of the modern and contemporary *avant garde* movements. His apolitical, somewhat sentimental nature and keen sense of tenacity in subjects, appeals to those who find beauty in the tangibly representational rather than the abstract. Wyeth, however, finds that there is a kind of abstract discipline in utilitarian subjects that he is able to capture in paint, rendering image in a realistic style that appears to reveal the truth to his viewers. In the late 1970s he said, with obvious affection for his Maine subjects, "[Maine] is to me almost like going to the surface of the moon. I feel things are just hanging on the surface and that it's all going to blow away." Andrew Wyeth became popular because he depicts traditional values and grassroots images. His

*Dodge's Ridge* by Andrew Wyeth.

exhibitions draw record-breaking crowds and command some of the highest prices paid for the works of living American artists.

## Wyeth, N. C. (1882-1945)

Indisputably one of the world's greatest illustrators, Newell Convers Wyeth is best known for adding a new and unforgettable

dimension to dozens of classic adventure books—*Treasure Island* (1911), *The Boy's King Arthur* (1917), and *Robinson Crusoe* (1920) among them—in the early decades of the twentieth century. Combining skilled draftsmanship and a genius for light and color with the ability dictated by his teacher Howard Pyle to project himself into each painting, Wyeth succeeded brilliantly at evoking movement, mood, and the range of human emotions. His prolific output, in addition to easel paintings and murals, included illustrations for hundreds of stories in periodicals from *McCall's* to the *Saturday Evening Post*, popular prints, posters, calendars, and advertisements. His early portrayals of the Old West reveal the influence of Frederic Remington, while much of his later work clearly made a strong impression on the art of his son Andrew, like his father one of America's most admired painters.

## Wynette, Tammy (1942-1998)

Often criticized for her conservative, traditional values, country vocalist Tammy Wynette became famous in the late 1960s for “Stand by Your Man,” a hit single that made her an unintentional spokesperson for antifeminists. While she was known for her “doormat” songs, in which men treat women subserviently, much of her material offered valuable insights into the lives of working-class housewives and mothers. Her songs often exhibited an optimistic perseverance in a never-ending quest for love and happiness. Wynette expressed this attitude with a heartfelt sincerity, for even after she became a country superstar, her life was not easy. Sometimes referred to as the “Heroine of Heartbreak,” she suffered from marital difficulties, drug addiction, financial troubles, and countless severe health problems. Although she was portrayed as an unhappy victim, Wynette was stronger than she appeared to be. As a woman in the male-dominated music industry of the 1960s, she held her own as a performer. During her 30-year career she sold more than 30 million records, had 39 Top Ten country hits, and received three Country Music Association awards.

Born in Itawamba County, Mississippi, on May 5, 1942, Virginia Wynette Pugh was raised by her grandparents after her father died not long after she was born and her mother found work at a Memphis defense plant. As a child, she picked cotton on their farm, and this arduous and exhausting work made her determined to create a better life for herself. She learned to play the piano and the guitar, and she started singing in church. Accompanied by a female friend, she performed on local radio programs and in area talent competitions. In her autobiography, *Stand by Your Man*, she recalled, “during my adolescence I daydreamed a lot about singing professionally.” However, in the spring of 1959, 17-year-old Wynette married Euple Byrd, and in 1961, their first child was born. Two years later, after the birth of a second child, she was training to become a licensed beautician. The family lived in Memphis briefly, where she worked as a barmaid, occasionally singing songs requested by the customers. Unhappy in her marriage, Wynette asked Byrd for a divorce; he responded by attempting to have her committed to an institution. In 1965, pregnant with their third child, she and her two daughters moved to Birmingham, Alabama. Born prematurely, her third daughter was diagnosed with spinal meningitis. Wynette managed to support her family by working as a hairdresser full-time and singing on a local early morning television show. She maintained her dream of being a professional country singer, and after attending a disc jockey convention in Nashville, she decided to move there and focus her efforts on landing a record deal.

Wynette auditioned unsuccessfully for several labels located in the part of Nashville known as Music Row. Executives and producers repeatedly turned her down, saying that they were looking for a “girl singer” who sounded like a particular established male country artist, or that they simply did not need any more female artists. After a series of rejections, she approached Billy Sherrill, a producer/songwriter with Epic Records. Recognizing her tremendous vocal capability, he agreed to record her. Within a few weeks, he suggested that she call herself Tammy Wynette, and he chose “Apartment #9” as her first single. By December of 1966, Wynette’s debut release was on the country charts; less than a year later, her first album, *Your Good Girl’s Gonna Go Bad*, reached the Top Ten. Despite this success, Wynette

Tammy Wynette

encountered further difficulties as she searched for a booking agency. According to her autobiography, one agent she approached expressed the opinion that women were “not worth the trouble” because of conflicting obligations to their families and their careers. She managed to find an agent lacking this prejudice and began performing regularly as her next three singles became number-one hits. She married songwriter Don Chapel, but their marriage dissolved as she became involved with singer George Jones. By the time she married Jones in 1969, she was a full-fledged star known for the anthems “D-I-V-O-R-C-E” and “Stand by Your Man,” which became one of the best-selling country songs ever recorded by a female artist.

As Jones’s wife, Wynette was known as “The First Lady of Country Music,” and together they performed and recorded duets that often reflected problems existing in their own relationship. Jones’s legendary substance abuse and his tendency toward violence caused Wynette to seek a divorce in 1975. A year later, her fourth marriage lasted less than two months. Her fifth and final marriage took place in 1978 to George Richey, a songwriter she had known for several years. During the 1970s, she began to be plagued by a variety of medical problems, many requiring operations, that continued until her death. Her house in Nashville was broken into on 15 separate occasions and mysteriously set on fire. In 1978, she was the victim of a bizarre kidnapping incident. By the late 1980s, she had been treated

for addiction to painkillers and had filed for bankruptcy. As a writer for *People* noted after her death, “in Tammy Wynette’s world, something always seemed to go wrong.”

As Wynette’s career continued into the 1990s, so did her image as the devoted, subordinate wife. In 1992, after Hillary Clinton made a condescending reference to Wynette on *60 Minutes*, she quickly apologized at Wynette’s insistence. That same year, Wynette collaborated with the dance group KLF on “Justified and Ancient,” which became a British club hit. An album she released in 1994 featured duets with Elton John, Smokey Robinson, and Sting, among others, and the following year, she and George Jones were reunited on a new album, which would be her last. While the country industry essentially abandoned older artists like Wynette, the fans remained faithful. In spite of increasingly serious health problems, she persisted in performing up until a month before she died on April 6, 1998. Months

later, artists from various musical genres recorded a tribute album of her songs entitled *Tammy Wynette Remembered*.

# X

## X Games

---

The annual Summer and Winter X Games bring together “extreme” athletes who compete in such sporting events as skateboarding, in-line skating, snowboarding, sky-surfing, sport-climbing, stunt bicycling, street luge, and barefoot water-ski jumping. The cable TV sports network ESPN developed the X Games and first broadcast them in the summer of 1995; the Winter X Games debuted in 1998. Touted as an alternative Olympics, the X Games cater to youth culture (the name is a convenient play on Generation X) and popularize athletic risk-taking. The X Games also commercialize and organize characteristically marginal and disorderly activities like skateboarding and skydiving, calling into question whether these increasingly mainstreamed sports can still be considered “extreme.”

“Extreme” sports are those largely individualistic athletic activities that require people to push themselves “to the extreme,” often by defying both gravity and society’s standards for reasonable risk. Typically, extreme athletes also project an image that counters that of the “normal” athlete in terms of appearance, attitude, and training regimen. The emerging popularity of extreme sports in the 1990s reflected a shift in American fitness trends. The fitness craze of the 1980s inspired many otherwise inactive, non-athletic individuals to take up activities like jogging and aerobics. Memberships at health clubs boomed. While health and fitness remained a big business into the 1990s, both advertisers and young adult consumers transformed fitness into a *lifestyle* rather than just a periodic visit to the health club. A cult of “adrenaline addiction” infiltrated the rhetoric of youth culture and influenced the marketing strategies aimed at these new consumers of the “extreme” image. Sales of mountain bikes, in-line skates, and snowboards increased dramatically, as did the popularity of bungee jumping and skydiving. ESPN’s X Games capitalized on this emerging fitness and consumer trend.

The X Games codify activities that typically have no rules. By applying measurable performance criteria to such recreational pursuits as in-line skating, rock climbing, and snowboarding, ESPN is able to order and control potentially chaotic sports. Because of their inherent physical dangers, extreme sports have generally garnered society’s disapproval, thus amplifying their popularity in youth culture. However, in the wake of the X Games, which have assimilated extreme sports into an organized brand of Olympic-like games, such activities have become more respectable and organized. As a result, “extreme” has an increasingly slippery connotation—extreme sports are a popular pleasure because of their marginality and perceived threat to the mainstream, but events like the X Games render extreme sports *less* marginal and subsequently alter their popular culture meanings.

Ultimately, the X Games represent far more than just a sports competition. Mass marketing and media strategies tie in music, fashion, and manifold product endorsements aimed at ESPN’s mostly male, 12 to 34-year-old viewing audience. Sponsors include caffeinated colas, athletic shoes, fast-food restaurants, and an “official” pain-killing aspirin. Additionally, the competition annually promotes related alternative music soundtracks and videos. ESPN also launches a road show prior to the Games, and the touring sports extravaganza spotlights the various events. The featured sports even have their own

unique language; ESPN offers a glossary of “X Speak” on its World Wide Web X Games homepage.

—Adam Golub

## *Xena, Warrior Princess*

---

A 1996 *Ms.* magazine cover story lauded *Xena, Warrior Princess* as a feminist and progressive retelling of Greek myth, as television that is notable for “breaking new ground in its treatment of sex.” Debuting in syndication in 1995, the series chronicles the adventures of a sword-wielding princess seeking to atone for her violent past. Accompanied by her sidekick, Gabrielle (Renée O’Connor), Xena (Lucy Lawless) battles fickle gods, tyrants, slave traders, barbaric tribes, and other nemeses in a magical land that evokes ancient Greece and Rome. Filmed in New Zealand and produced by Renaissance Pictures in conjunction with MCA TV, the series is a postmodern pastiche of classical mythology, characterized by hyperbolic violence and slapstick. At the same time, it manages to explore sexuality and ethical issues without losing its mass audience. Xena’s sexually-charged relationship with Gabrielle has made the series popular with lesbian audiences, in particular.

—Neal Baker

## *The X-Files*

---

When *The X-Files* premiered on the Fox network in the fall of 1993, no one predicted the degree of success that the show would eventually enjoy. After all, dramas in the fantasy and science fiction genres had not done well on TV for a decade (the *Star Trek* spin-offs excepted). But there was considerable interest in UFO phenomena in America, as evidenced by news accounts of alleged alien abductions, speculations about “crop circles,” and sightings of supposed alien

David Duchovny (right) and Gillian Anderson as they appear in *The X-Files*.

spacecraft streaking across the skies. For some Americans, belief in UFO visitations dovetailed with their mistrust of the U.S. government, which has consistently denied any knowledge of alien encounters. Thus when the show premiered, tales of visitors from space and government conspiracies to cover up those visits might find a ready audience—and *The X-Files* did. It finished its first season with respectable ratings, and the second season began with an even larger audience. The show was clearly a hit, one of the few Fox programs to compete successfully with the major networks. Soon there were Golden Globe awards for the show, then Emmy awards, a successful full-length film released in the summer of 1998, and talk of a second film to follow.

The show's premise is that the FBI occasionally encounters cases that seem inexplicable in terms of science and logic—which are, in short, paranormal. Such investigations, designated “X-files,” are referred to the show's two protagonists: Special Agent Fox Mulder (David Duchovny) and Special Agent Dana Scully (Gillian Anderson). Mulder tends readily to accept paranormal explanations for the cases that he and his partner investigate—partly due to the fact that he believes that his sister Samantha, who disappeared when they

were children, was a victim of alien abduction. Scully, who earned a medical degree before joining the FBI, is usually a skeptic, positing rational explanations for phenomena that appear to defy reason. The two agents are supervised by FBI Assistant Director Walter Skinner (Mitch Pileggi). In the show's early years, Skinner tended to be suspicious, and sometimes hostile, toward Mulder and Scully. By the fourth season, however, he appeared to have become their ally.

From the beginning, the show has had a recurring theme involving alien visitation, alien abductions, and the efforts of certain powerful groups to conceal or deny these sinister activities. The show's writers and producers refer to this story arc as “the mythology,” although some fans call it “the conspiracy.” The character most closely identified with the effort to cover up the alien presence is known only as “Cigarette Smoking Man” (William Davis), a ruthless covert operator who has cold-bloodedly ordered the deaths of several people who came too close to the truth - including Mulder's father. When asked by an associate why he did not have the troublesome Fox Mulder killed, the CSM replied, in effect, “Alive, Mulder is merely a nuisance; dead, he's a martyr.”

But the mythology is not the sum total of the series. In a typical season of *The X-Files*, about half the episodes deal with the ongoing struggle over the aliens, while the other shows find agents Mulder and Scully investigating other sorts of paranormal phenomena. Over the course of several seasons, the agents have dealt with zombies, werewolves, ghosts, vampires, demons, and witches, not to mention astral projection, precognition, reincarnation, and the transmigration of souls. A few of their cases have had no paranormal aspects at all, involving instead relatively mundane subjects such as serial murder, psychological obsession, and genetic mutation.

In some of their cases involving the mythology, Mulder and Scully receive assistance from a group called “The Lone Gunmen”—an ironic reference to the Warren Commission's much-disbelieved conclusion that President John F. Kennedy was assassinated by a “lone gunman.” These three men, identified only by their last names of Byers (Bruce Harwood), Langly (Dean Haglund) and Frohike (Tom Braidwood) are self-styled “conspiracy freaks” who once told Mulder that they help him because “You're more paranoid than we are.”

Chris Carter is the series' creator, producer, and principal writer. After some time spent writing for *Surfing* magazine, Carter married a television writer and soon began to turn out scripts of his own. He wrote for several TV series, which gave him the contacts that allowed him to sell *The X-Files* to the Fox network. Carter says that his idea for the show is derived from his memories of a short-lived TV series (lasting only the 1974-75 season) called *Kolchak: The Night Stalker*. The show was, in turn, based on two successful made-for-TV movies: *The Night Stalker* and *The Night Strangler*. The premise for the movies and the series was the same: hard-bitten newspaper reporter Karl Kolchak (Darren McGavin), while covering the story of one or more bizarre crimes, comes to the conclusion that some supernatural creature is involved. Kolchak then researches the phenomenon (vampire, werewolf, witch, or whatever), learns how to kill the creature, and does so.

The 1998 feature film based on Carter's series, entitled *X-Files: Fight the Future*, may be unique in one respect. Although it was not uncommon during the 1990s to see theatrical films based on popular TV shows, such films were invariably produced after the TV series

that inspired them had gone off the air. The *X-Files* movie may be the only one to date to be based on a TV show still on the air with first-run episodes when the film was released. Indeed, *X-Files: Fight the Future* was tied into the last episode of the 1997-98 season, its plot resolving several issues raised by the show's season-ending cliffhanger.

The popularity of *The X-Files* has been manifested through several aspects of popular culture beyond the series itself. Animated versions of Mulder and Scully (voiced by Duchovny and Anderson) appeared in an episode of the popular Fox cartoon *The Simpsons*. David Duchovny guest-hosted *Saturday Night Live* several times, which led to skits parodying his series. *The X-Files* was also satirized on Fox's comedy show *Mad TV*, in a skit about porn films called "The XXX Files." More respectful treatment has come from comic books and novels based on the series, fan clubs (many of whose members communicate with each other via Internet discussion groups), WWW sites, and Fox-sponsored X-Files conventions. The show has also generated the usual ephemera of anything in popular culture with a devoted following—hats, t-shirts, posters, PC screen-savers, and coffee mugs. In addition, episodes from the show are available on video about a year after airing.

Although the first five seasons of *The X-Files* were shot in Vancouver, British Columbia (to save production costs), the show moved to Los Angeles beginning with the 1998-99 season. The change was in response to a demand from David Duchovny, who wanted to be nearer to his Los Angeles-based wife, actress Tea Leoni. That the Fox network was willing to undergo the expense and inconvenience involved in the move was testimony to the popularity of the show and the network's high expectations for its future success.

## The X-Men

The X-Men is the most popular team of superheroes in comic books in the 1990s. Featuring an often changing lineup of young mutant superheroes and unusually complex story lines, the X-Men have found a consistently large and loyal audience of comic-book readers. Since 1980 only Spider-Man and Batman have rivaled them in popularity and sales. The X-Men's market clout has helped publisher Marvel Comics remain the undisputed industry leader, and the series' formula has been widely imitated throughout the superhero

genre. Few other comic-book series of recent decades have been as influential.

Marvel first published *The X-Men* in 1963. The concept devised by Stan Lee and Jack Kirby was an extension of the Marvel formula already realized in such characters as Spider-Man and the Fantastic Four. The X-Men were teenaged costumed superheroes who used their powers in the service of humanity, even though the society at large misunderstood and feared them. Unlike their superhero peers, however, the X-Men had never even been human. As mutants, they were born with their special powers—usually as a consequence of parents exposed to radioactivity. This distinction left the X-Men especially alienated from human society and made them special victims of misplaced human anxieties. Lee and later writers would often use this premise to conceive stories critical of bigotry and racial persecution.

The first X-Men lineup consisted of Cyclops, with the power to project devastating "optic blasts"; the Beast, with the agility and strength of his namesake; the Angel, who could fly with the aid of natural wings; Iceman, with power over cold and ice; and Marvel Girl, with the mental ability to move objects. Their leader was the enigmatic Professor Xavier, who, though confined to a wheelchair, possessed an impressive variety of telepathic powers. Xavier recruited the teenage mutants to enroll in his private School for Gifted Youngsters, which was a front for the X-Men's training facility. The X-Men defended humanity against an array of evil mutants, the most formidable of whom was Magneto—"the master of magnetism." The heroes also had to fight in their own defense against the Sentinels—a series of mutant-hunting robots engineered by bigoted humans determined to resolve the "mutant question."

A modest-selling title, *The X-Men* did not achieve the spectacular commercial success enjoyed by most other Marvel comic books in the 1960s. By the early 1970s the series consisted of only reprinted stories and seemed doomed for cancellation. But in 1975 Marvel revamped the series, keeping only Cyclops and Professor Xavier in the group and introducing a new lineup of international mutants. Created by writer Len Wein and artist Dave Cockrum, the new X-Men included Nightcrawler, a German with superhuman agility, the power of teleportation, and a horrifying demonic appearance; Colossus, a Russian—one of the first to be a hero in comic books—with extraordinary physical strength; Storm, an African princess with the ability to summon and control weather and the elements; and Wolverine, a hot-tempered Canadian armed with indestructible steel claws and the ferocious fighting tendencies of his namesake.

Between 1977 and 1981 writer Chris Claremont and writer/artist John Byrne transformed *The X-Men* from a second-tier title to the top-selling comic book on the market. As the lineup of the X-Men continued to evolve, the story lines became increasingly intricate and absorbing. There was something about the series for most fans to enjoy. The interplay among the distinctive characters was exceptionally well-developed and believable by comic-book standards. Wolverine's ethos of righteous morality backed up by violence made him one of the most popular superheroes of the Reagan/Rambo era. Strong and complex female characters like Storm, Phoenix, and Rogue helped to make the X-Men one of the few superhero titles to win a significant following among teenage girls.

The X-Men's fantastic commercial success predictably spawned a host of comic-book crossovers, spin-offs, and rip-offs. Throughout

the 1980s and 1990s, they multiplied. There were titles devoted to adult mutants (*Excalibur*, *X-Factor*), adolescent mutants (*The New Mutants*, *Generation-X*), and even pre-pubescent mutants (*Power Pack*). The concept of the 1980s Teenage Mutant Ninja Turtles originated in part as a satire of the X-Men's overexposure (before graduating itself to overexposure). The first issue of a new X-Men title launched in 1991 set an industry record by selling more than eight million copies. An array of licensed products highlighted by the Fox network's successful *X-Men* animated series broadened the X-Men's market even further. The consequences of this "X-treme" mutant proliferation became a matter of some controversy among comic-book fans. While many fans welcomed the varieties of X-Men spin-offs and crossovers, others criticized them for being poorly conceived and confusing, and some fan critics charged Marvel with exploiting brand loyalty at the expense of good storytelling. To a large extent, the overexposure of the X-Men epitomized the problem of a saturated and shrinking market that plagued the comic-book industry as a whole in the mid-1990s.

Still, the X-Men remain at or near the top of the best-selling comic-book titles. Among the more fully realized comic-book expressions of modern adolescent fantasies, Marvel's team of misunderstood mutants fully deserve their status as the preferred superheroes of Generation X.

# Y

## Y2K

---

The expression Y2K, shorthand for the year 2000 (Y=year; 2=two; K=the symbol for 1,000), helped define the closing days of the twentieth century by spotlighting some pitfalls of the computer age. Y2K represented a major problem—some called it a crisis of global proportions—caused mainly by older computers whose programmers and software designers failed to foresee what could happen in the year 2000. Often called “the Y2K bug,” this problem came about because early computer designers used only a two-digit year—uniformly dropping the “19” that stands at the beginning of every year from 1900 to 1999. What the designers failed to take into consideration was the problem posed by the year 2000. Computer logic meant the machines would translate the numbers 00 not as the year 2000 but as 1900. In the closing days of the century, the world was put on notice that computers using the two-digit formulation could malfunction because of this inability to distinguish years belonging to different centuries.

Because computers had become intertwined with almost every facet of life in America and virtually the rest of the world, some doomsayers predicted that banks would fail, military systems would become paralyzed, planes would fall out of the sky, elevators would stop, stock exchanges would collapse, and life in general would be dramatically disrupted.

Although the problem had been known about for years, governments and businesses waited until the last few years of the twentieth century to tackle the potential crisis. For example, it was not until September 1997 that the Securities and Exchange Commission (SEC), the U.S. government watchdog over the stock exchange markets, issued a notice to investors to pressure investment companies to make their computers “Y2K compliant”—a phrase meaning that computers had been checked and fixed, if necessary, to avoid any year 2000 problems when the clock struck midnight on December 31, 1999. The SEC also urged investors to press publicly traded companies to take steps to avoid a Y2K disaster, including assessing the cost of fixing their computers and making sure their officers and board members took out personal liability insurance for what could be an avalanche of lawsuits.

With great fanfare, U.S. President Bill Clinton announced in December 1998 that the Social Security Administration, which then handled some 40 million checks each month for pensioners, disabled people, and widows, was Y2K compliant. Nevertheless, some Republicans took issue with the Democratic president’s claims that checks would go out on time, noting that some banks that receive checks for recipients and are vital to the system might be noncompliant.

Later, the Agriculture Secretary, Dan Glickman, announced at a Senate hearing on the Y2K problem that there would not be widespread food shortages in the United States because of the millennium bug. “There are some fear-mongers there,” Glickman said, as he urged people to avoid stockpiling or hoarding food as the year 2000 approached. Glickman conceded, however, that although he did not see major food shortages, “there will be some glitches” and disruptions in the marketplace.

While American businesses and local, state, and federal governments were spending millions of dollars to correct the problem with

computers, some developing countries lagged. The World Bank reported that some areas, notably sub-Saharan Africa, could run into major problems with electricity, food, and health care. In early 1999, with less than a year to go before the 2000 bug might hit, the Bank found in a survey of 139 countries that only 21 had taken major steps to solve the problem, although 54 had some kind of national policy to deal with the bug.

By the end of 1999, observers hoped that the steps taken by companies and governments would prevent Y2K from causing any major disasters. The fear of Y2K ebbed and swelled in different areas across the globe, depending on whether the most important computer systems had become Y2K compliant. But certainly, Y2K had done more than create a global panic; it deflated the esteem some held for the early designers of software machinery, who had been looked upon as geniuses and had become millionaires and billionaires virtually overnight. Their use of the two-digit code saved steps in millions of computer applications, but at the same time lobbed a gigantic, ticking time bomb into the next century.

## *Yankee Doodle Dandy*

---

In 1942, James Cagney starred in the Hollywood film *Yankee Doodle Dandy*—the story of the life of George M. Cohan. The title refers to Cohan’s famous song, “I’m a Yankee Doodle Dandy,” written for the Broadway play, *Little Johnny Jones*, in 1904. In this musical, Cohan sang the lyrics that would live through the century: “I’m a Yankee Doodle Dandy, / A Yankee Doodle, do or die; / A real live nephew of my Uncle Sam’s / Born on the Fourth of July.” It is one of several Cohan tunes that have been passed from generation to generation in celebration of the American spirit. Released shortly after the Japanese attack on Pearl Harbor, *Yankee Doodle Dandy* was warmly received by American wartime audiences, who were particularly receptive to the patriotic songs in the film. Cagney won an Oscar for his performance, and the movie won Academy Awards for Best Sound Recording and Best Scoring of a Musical Picture. On July 4, 1985, the Cagney film was rereleased as the first computer-colored production by Ted Turner.

## Yankee Stadium

Yankee Stadium, one of the oldest stadiums in the United States is a shrine to baseball fans. Some of the game's most dramatic and historic moments have occurred there. But this most hallowed of ballparks, haunted by the ghosts of baseball past, is also one of the sport's grittiest, most plebeian arenas, famed around the major leagues for its rowdy, roughhouse Bronx crowd.

The Yankee Stadium area covers approximately 11.6 acres in the South Bronx, with the playing field itself spanning 3.5 acres. Construction began on the new park, designed as a permanent home for New York's American League baseball team, on May 5, 1922. On April 18 of the following year, Yankee Stadium opened to the public. Yankee right fielder Babe Ruth promptly delivered the edifice's first home run. Soon the park was renowned for its 296-foot "short porch" in right field, conducive to home runs by left-handed hitters. Righties were commensurately daunted by "Death Valley," a 457-foot expanse in left-center where sure home runs miraculously turned into fly ball outs. With the advent of night baseball in 1946, a combination of 800 multi-vapor and incandescent lamps were installed to illuminate the field.

In 1932, the Yankees began to honor their greatest legends with the erection of monuments and plaques in the outfield section of the

stadium. The first monument was dedicated to the memory of Miller Huggins, the manager who led the team to three world championships in the 1920s. Subsequent plaques and monuments have honored team captains Lou Gehrig and Thurman Munson, both of whom died tragically, as well as Hall of Fame players like Ruth, Joe DiMaggio, and Mickey Mantle. Originally located on the playing field itself, the monuments posed a curious obstacle for outfielders, who often had to dodge the memorials to retrieve fly balls. Relocated in 1976 to a new area dubbed "Monument Park," the monuments are now safely behind the outfield fences and available for viewing by the public.

In 1973, as the Yankees completed their fiftieth anniversary season in what was now known as "The House That Ruth Built," Yankee Stadium was remodeled and renovated. While the two-year project was under way, the team played its home dates at nearby Shea Stadium. The new Yankee Stadium opened on April 15, 1976, to mostly positive reviews. The building's distinctive art deco facade was retained in part and relocated to the centerfield bleachers.

In both its incarnations, Yankee Stadium has played host to some of baseball's most historic moments. On September 27, 1927, Babe Ruth clouted his record sixtieth home run there off Washington Senators pitcher Tom Zachary. Thirty-four years later, Yankee outfielder Roger Maris eclipsed Ruth's record with his sixty-first homer off the Boston Red Sox Tracy Stallard, a mark which stood until St.

Louis Cardinal Mark McGwire shattered it in 1998. The old stadium also provided the setting for some emotional farewells, from a dying Lou Gehrig's inspiring valedictory in 1939, when he told the world he was "the luckiest man on the face of the earth," to a cancer-ravaged Babe Ruth's last salute in 1948. In 1977, the Yankees celebrated their return to championship status after a 15-year drought in the Bronx ballpark after a clinching game that saw slugging outfielder Reggie Jackson club three home runs off three different Los Angeles Dodger pitchers. The following April, jubilant fans showered the field with "Reggie Bars," a chocolate and peanut confection named for the hot-dogging star after he vowed he would become so famous "they'll name a candy bar after me."

Candy bars have not been the only objects to come flying out of the Yankee Stadium stands over the years. At various times, golf balls, shot glasses, batteries, assorted coins, and torrents of beer have been flung onto the field by jubilant, angry, or just plain inebriated fans looking to terrorize Yankee opponents. The prevailing air of rowdiness has occasionally taken a more endearing form, as when ten-year-old Jeffrey Maier snatched a fly ball away from Baltimore Oriole right fielder Tony Tarasco during the 1996 American League Championship series, resulting in a game-tying Yankee home run. Around the major leagues, Yankee Stadium is known as an exhilarating, if intimidating, place to play, in part due to its fans.

In the 1990s, baseball's pre-eminent shrine suffered the ironic fate of becoming something of a political football, when Yankee owner George Steinbrenner loudly threatened to move the team when its lease expired if he could not get a new stadium constructed with municipal assistance. New York politicians responded with recrimination and posturing. Several civic leaders called for a referendum aimed at keeping the team in the Bronx. Baseball purists and fans of the old building largely sided with them. The fact that the team's crosstown rivals—the New York Mets—play in Shea Stadium, a drab cookie cutter facility, has contributed to the glorification of "the Stadium" as one of baseball's high holy places. Even as the Yankees won their twenty-fourth World Series in 1998, Steinbrenner continued to threaten to move the team if a new stadium is not built. Despite the stadium's hallowed status, Steinbrenner's wish may become a reality. When a beam fell from the roof during the 1997-1998 season (luckily when the stadium was empty) the future of Yankee Stadium seemed more uncertain than ever.

## Yankovic, "Weird Al" (1959—)

Rock 'n' roll's top jester goes by the name "Weird Al" Yankovic. He specializes in creating amusing lyrics for popular rock

tunes as well as writing humorous ditties in generic song styles. Yankovic has appeared on albums, starred in his own television show, and appeared in several films.

Yankovic was born Alfred Matthew Yankovic on October 23, 1959 in the Los Angeles suburb of Lynwood. He first took up the accordion when a salesman came around to solicit business for a music school. His parents, Nick and Mary Yankovic, decided on the accordion because of polka king Frankie Yankovic (no relation). As a child and young teen, Al watched a lot of TV, and TV provided the inspiration for much of his later work (most of his songs center around either food or television shows). He also became a fan of such musician/comedians as Allan Sherman (who also specialized in creating song parodies) and Spike Jones. Yankovic became acquainted with these musicians through the Dr. Demento radio show, which would later become a great source of publicity for his talents. In fact, Yankovic played his first song to be heard on the air, "Belvedere Cruising," on the Dr. Demento show in 1976.

After an extraordinary career at Lynwood High School, where he graduated as valedictorian, Yankovic attended the California Technical Institute in San Luis Obispo to study architecture, a field he chose because it was listed first in the catalogue. It was at California Polytechnical Institute that Yankovic had a radio show and earned the nickname "Weird Al." In 1979 Yankovic recorded his first real hit, a parody of the popular "My Sharona" by The Knack called "My Bologna." (The Knack liked the song so much they convinced their label to release the song as a single.) After the astounding success of that song, forever to be known as the "bathroom recording" as it was recorded in the acoustically perfect men's room, Al launched into a phenomenal career that has spanned 17 albums, movies, videos, and edible underwear.

Yankovic reached wide public attention in 1984 with his song "Eat It," a parody of Michael Jackson's popular hit "Beat It." Yankovic's video of the song amusingly parodied the visuals of the Jackson video, earning it a good deal of play on MTV. "Eat It" earned Yankovic his first Grammy Award, and the album, "*Weird Al*" *Yankovic in 3-D*, reached the top 15. On the album, Yankovic also recreated the set of the original *Jeopardy* TV series for his parody "I Lost on Jeopardy," which was based on a tune by the Greg Kihn Band.

Yankovic was tapped to provide songs for films, including "This Is the Life" for *Johnny Dangerously* (1984) and "Dare to Be Stupid" for *Transformers: The Movie* (1986). He starred in his own film, *UHF* (1989), as George Newman, head of a beleaguered, small-time cable station, as well as appearing in all three *Naked Gun* movies (1988, 1991, 1994), *Tapeheads* (1988), *Nothing Sacred* (1997), and *Desperation Boulevard* (1998). Yankovic was given his own Saturday morning TV show, *The "Weird Al" Show*, that ran during 1997-98 season and was compared to *Pee-wee's Playhouse*. In it, Al starred as himself opposite his best friend "Harvey the Wonder Hamster" (a daredevil hamster in his own habitrail), with a collection of friends and regulars (including Stan Freberg) who dropped by to discuss that week's moral problem. Also included in the show were a series of "Fatman" animated cartoons (for which Yankovic supplied the voice) based on the overweight character from the video "Fat" done up as a superhero.

His 1992 video "Smells Like Nirvana" pushed the pretentious original Nirvana video a step too far while lampooning the unintelligibility of its lyrics, and earned a place on *Rolling Stone's* top 100 videos of all-time. Nirvana members commented that they knew they had made it when Yankovic parodied their song. Yankovic's

“Weird Al” Yankovic

videos are some of the best in the business and have been compiled on two collections, first the *Compleat Al* (1985), and updated as the *Al Yankovic: The Videos* (1996). Yankovic had his biggest success to date with his album *Bad Hair Day* (1996), which featured a parody of Coolio’s “Gangsta Paradise” as “Amish Paradise.” (Though Coolio granted permission for the video, he later condemned Al’s version).

Yankovic has also tried his hand at directing, creating a parody of Maurice Binder’s James Bond opening titles for the film *Spy Hard* (1996), with Yankovic singing “Theme from *Spy Hard*” while silhouettes of overweight women swim by. Yankovic’s stage shows are often described as some of the funniest and most entertaining around. At the end of the century, Yankovic reigned as the king of musical parody, a singular phenomenon in American musical history.

—Dennis Fischer

## Yanni (1954—)

Along with Slim Whitman, Ray Stevens, and Kenny G, New Age artist Yanni is one of those inexplicable music curiosities who rode to the top of the charts on a sea of critical incredulity. Dismissed by one reviewer as a “musical Fabio,” Yanni is known not so much for the music he makes as the sensation he creates. His albums and videos have sold multiple millions worldwide, and he has personally saved more than a few public television stations with his prodigious pledge-drive potency.

Born Yanni Chryssomallis in Kalamata, Greece, the future New Age superstar was a national swimming champion in his teens. After immigrating to the United States in 1972, he passed up a career in

clinical psychology to pursue his creative muse full time. A self-taught musician, Yanni began composing in his head, relying on collaborators to put his orchestrations down on paper. He released his first full-length album, *Keys to Imagination*, in 1986.

The “Yanni sound” changed very little over the next several years. Gauzy strains of synthesizer continued to waft insidiously down upon the listener, as vaguely Mediterranean-sounding hooks are stated and restated by various instruments. The music incorporated elements of classical, New Age, and world beat into a sonic melange that one unfavorable reviewer called “aural wallpaper.” Even Yanni himself often referred to the plastic arts when describing it. “Music is like creating an emotional painting,” he explained. “The sounds are colors.” Colors derived from an irritatingly narrow spectrum, according to some critics, who found Yanni’s repetition of musical themes numbingly aggravating. Despite these brickbats, however, the Greek tycoon’s record sales climbed throughout the 1980s.

Yanni’s live appearances became major moneymakers as well, as the mustachioed and classically handsome composer developed a large and devoted fan following. For concerts, Yanni assembled a multi-piece orchestra with instrumentation culled from virtually every continent, over which he would preside beatifically from behind a stack of keyboards. Yanni often staged his appearances at major international landmarks, like the Taj Mahal and China’s Forbidden City. These lavishly mounted productions generated enormous viewership for public television stations across America and were aired repeatedly during pledge weeks. On one Saturday night in 1994, his concert documentary at Greece’s Acropolis helped one PBS affiliate raise over \$50,000 in pledges. A number of PBS stations even canceled a previously scheduled Andy Williams special to rebroadcast Yanni’s performance.

Befitting his superstar status, Yanni cultivated a personal life designed to keep him in the crosshairs of the paparazzi. In 1989, the

then little-known Yanni began dating Linda Evans, star of TV’s *Dynasty*. The flaxen-haired beauty reportedly was won over by the sinewy Greek’s command of the music of the spheres. They would remain a couple until 1998, when conflicts over the directions of their respective careers compelled them to end the relationship.

Indeed, much of Yanni’s success has been attributed to his appeal to women. But the New Age superstar has bristled at the suggestion that his cover-of-a-romance-novel appearance drove his record sales. He claimed the bulk of his fan mail comes not from sex-starved housewives but from the homebound and the infirm, who find his music soothing. Some have even ascribed healing powers to Yanni’s compositions, a claim the composer modestly deflected away.

“I don’t see myself as a peacemaker at all or anything like that,” he told the *Orange County Register* in 1998. “I’m merely standing in one place saying it’s possible for us to do this, for people of the world to share in my music. If I can play even a minute role in something like that in my lifetime, then I will have accomplished something special.”

Yanni’s earthly mission continued to draw adherents throughout the 1990s. In early 1999, he sold out ten dates at New York’s Radio City Music Hall. Other performers have even followed his path to success, the critics be damned. The composer and former *Entertainment Tonight* host John Tesh appeared to have schooled on Yanni’s PBS-driven marketing plan, replete with extravagantly produced performances at such notable sites as Red Rocks, Nevada.

## The Yardbirds

The backbone of the rock band The Yardbirds consisted of vocalist Keith Relf, rhythm guitarist Chris Dreja, bassist Paul Samwell-Smith, and drummer Jim McCarty. However, they were most famous for their succession of luminary lead guitarists, Eric Clapton, Jeff Beck, and Jimmy Page. Under Clapton the Yardbirds played high-energy R&B with long improvisations called “rave-ups” in which they would alter tempo and volume, building to a climax before returning to the song. Although the recording technology is poor by today’s standards, *Five Live Yardbirds* (1965) reveals a tight unit of talented musicians. Inspired by the phenomenal success of the Beatles, the Yardbirds then recorded the pop song, “For Your Love,” written by Graham Gouldman, and this became their first hit. The song featured a harpsichord and bongos, but very little Clapton. Uncomfortable with the band’s commercial direction, Clapton left to pursue pure blues in John Mayall’s Bluesbreakers.

Guitar wizard Jeff Beck then joined the band and transformed the Yardbirds into trailblazing musical pioneers. Innovating with fuzztone, feedback, and harmonic sustain within the medium of Gouldman-penned pop songs, they produced classics such as “Evil Hearted You” and “Heart Full of Soul.” Their first original studio album, *The Yardbirds* (1966, renamed *Over, Under, Sideways, Down* in the U.S., but commonly known as *Roger the Engineer* in either country) is a *tour de force* on Beck’s part. When Samwell-Smith left the band, session musician Jimmy Page was recruited as bassist until Dreja could learn the bass, then Page moved up as second lead guitarist alongside Beck. The Beck-Page lineup recorded only four songs, one of them being “Stroll On” (a version of “Train Kept A-Rollin’”), which they performed in Michelangelo Antonioni’s 1966 film *Blow-Up*, a cult classic of the Swingin’ London scene.

When Beck left the group, Page introduced his own musical visions and recorded *Little Games* (1967). An odd mixture of pop songs and virtuoso guitar playing, this album is most intriguing as a document of Page’s early development, displaying many riffs and effects which were later redeveloped in Led Zeppelin. Especially noteworthy is the instrumental “White Summer,” later reworked as “Black Mountain Side” and the introduction of “Over the Hills and Far Away.” When the remaining members left, Page recruited vocalist Robert Plant, bassist John Paul Jones, and drummer John Bonham, and debuted the band as the New Yardbirds, later renamed Led Zeppelin.

In 1984, ex-Yardbirds Samwell-Smith, Dreja, and McCarty formed the band Box of Frogs (Relf had died in 1976, electrocuted by a guitar). Although some tracks from *Box of Frogs* (1984) and *Strange Land* (1986) featured guest guitarists Page and Beck, these heavy-metal offerings made little impact.

The Yardbirds are aptly called “legendary,” for although their recordings have lapsed into obscurity, their influence on guitar-driven rock is enduring and pervasive. Clapton, Beck, and Page gave rise to the “guitar hero,” displacing the singer as the focal point of the rock and roll band, and a legion of 1970s guitarists cited the Yardbirds as a major influence. In spite of their uneven recording history, the Yardbirds’ small, experimental body of work places them just behind the Beatles, the Stones, and the Who as a major band of the British Invasion.

## Yastrzemski, Carl (1939—)

Better known as “Yaz,” Carl Michael Yastrzemski of the Boston Red Sox epitomized the spirit of hard work and determination that made baseball players American heroes in the twentieth century. As left-fielder, Yaz mastered the art of playing hits off Fenway Park’s infamous “Green Monster,” earning seven Gold Gloves during the course of his career. He also was a consistently dangerous batter with a flair for getting crucial hits in big games. Yaz achieved the coveted Triple Crown for highest batting average (.326), most runs batted in (121), and most home runs (44) in 1967 on the way to Boston’s first pennant in three decades. By the time he retired, he had amassed more than three thousand hits and four hundred homers, a mark met by no other player in the American League. He was inducted into the Hall of Fame in 1989.

## The Yellow Kid

The Yellow Kid by Richard Felton Outcault (1863-1928) is generally held to be the character that gave birth to American comic strips. The Kid, later named Mickey Dugan by Outcault, was a smallish figure dressed in a nightshirt who roamed the streets of New York in company with other urchins. The Yellow Kid was not a comic strip, rather he appeared as a character in a series of large single panel color comic illustrations in the *New York World* with the more or less continuous running title *Hogan’s Alley*. The *World* published the first of these illustrations, *At the Circus in Hogan’s Alley*, on May 5, 1895. The newspaper’s readers, it seems, singled out the Kid as a distinctive character and his popularity led other artists to create similar characters. In short succession these actions gave rise to the comic strip.

Outcault was born in Lancaster, Ohio and studied design in Cincinnati before joining the laboratories of Thomas Edison as an illustrator in 1888. By 1890 Outcault combined employment as an illustrator on the *Electrical World*, a trade journal, with freelance cartoon work for illustrated humor journals such as *Puck*, *Judge*, *Life*, and *Truth*. The Kid’s genesis lay in the genre of city urchin cartoons made popular by these journals. In particular Outcault drew inspiration from Michael Angelo Woolf’s work.

A prototype Yellow Kid appeared in Outcault’s “Feudal Pride in Hogan’s Alley” published in *Truth* June 2, 1894. This small figure in a nightshirt cropped up in several other Outcault cartoons before blossoming into a larger more familiar, but as yet unnamed, Kid in Outcault’s “Fourth Ward Brownies” published in *Truth* February 9,

1895 and reprinted in the *World* February 17, 1895. The Kid appeared again in Outcault's "The Fate of the Glutton" in the *World* March 10, 1895. In these two appearances the Kid's nightshirt had an ink smudged handprint a distinctive feature of the later *World* panels. After the May 5 episode the *World* published ten more "Hogan's Alley" panels in 1895. The Kid appeared in them all. On January 5, 1896 the Kid was center stage in a yellow nightshirt and thereafter became the focus of each panel.

The Yellow Kid became the mainstay of the *World's* comic supplement during 1896, but in mid October Outcault moved his strip from the *World* to William Randolph Hearst's *New York Journal*. Hearst had infamously bought the talent of the *World* to staff the *Journal* and naturally enough poached Outcault for the launch of the comic supplement on October 18, 1896. Thereafter the Kid appeared in tabloid page size illustration under the running title "McFadden's Row of Flats" before departing on a world tour in 1897. Beginning October 25, 1896 the Kid also began to appear in an occasional comic strip like series of panels under the running title of "The Yellow Kid," which was Outcault's first use of that name in a comic supplement. Outcault stayed with Hearst's *Journal* for a little over a year. The last Yellow Kid comic feature appeared in the *Journal* January 23, 1898. Outcault then returned to the *World*, producing a series of "Hogan's Alley"-like panels featuring an African-American character.

Outcault's shift of the Yellow Kid from the *World* to the *Journal* raised issues of copyright. The *World* continued to publish a version of the Kid drawn by George Luks. Prior to leaving the *World* Outcault had sought copyright protection for his creation in a letter to the Library of Congress on September 7, 1896. He had also attached the label "Do Not Be Deceived None Genuine Without This Signature" above his signature in the *World's* September 6, 1896 episode of "Hogan's Alley." Later advice from W. B. Howell of the Treasury Department, which policed copyright laws at that time, advised Outcault that he had failed to secure protection on the image of the Kid because he had only included one illustration instead of two in his application. Outcault did however secure protection for the title "The Yellow Kid."

Two minor controversies have marked the history of the Yellow Kid. Until the late 1980s accounts of the origins of comic strips generally accepted that the Yellow Kid's nightshirt was colored yellow as a test of the ability of yellow ink to bond to newsprint. But Richard Marshall argues in his *America's Great Comic Strip Artists* that this could not have been the case since yellow ink had been used earlier. Likewise Bill Blackbeard gives a detailed account of the *World's* use of color in his introduction to *The Yellow Kid: A Centennial Celebration* that makes clear the testing yellow ink theory is incorrect. The Yellow Kid is often cited as the origin of the term "yellow journalism." However, the historian Mark D. Winchester has demonstrated that the term yellow journalism came into use during the Spanish-American War in 1898 to describe the war hysteria whipped up by Hearst and Pulitzer. The Yellow Kid was transformed into a symbol of yellow journalism during this campaign rather than giving his name to it. The distinction is subtle but crucial.

## Yellowstone National Park

Comprising 2.2 million acres of northwest Wyoming, with slight incursions into Montana and Idaho, Yellowstone is the oldest national park in the United States. The park's unique sights originally inspired a nation that had not even fully conceived of what the term "national park" entailed. The park has evolved to stand as the preeminent symbol of the national park idea, whether inspiring the designation of other locations or revealing systematic flaws. Today, Yellowstone serves as an active battleground as Americans strive to define the meaning of preservation and wilderness.

From the outset, Yellowstone's unique attraction derived from its natural oddities. The region was the stuff of rumors; the return of explorers from the northern Rockies in 1810 had piqued the public's attention with stories of odd natural occurrences: thermal phenomena, a beautiful mountain lake, and a magnificent canyon entered into the unconfirmed reports. "Could such a place exist?" Americans asked upon hearing descriptions of "Earth's bubbling cauldron." In 1870, other expeditions set out to explore the sights. In 1871 the Hayden Survey explored Yellowstone. Overwhelmed by the majesty and oddity that they beheld, they were at once overcome by its attraction and potential development. Such economic development, though, could exploit and ruin all that made the site peculiar. During this era of development and the massive harvesting of natural resources, these attributes were not sufficient to warrant preservation; the site also needed to be of no worth otherwise. Hayden repeatedly assured Congress that the entire area was worthless for anything but tourism. Lurking behind such plans were railroad companies eager to find tourist attractions in the West.

The establishment of the park by President Ulysses S. Grant on March 1, 1872, rings hollow by the standards of modern environmentalism. However, such designation, albeit under the jurisdiction of the U.S. Army until 1916, kept the area free of development during some of the region's boom years. As an example, Yellowstone's herd of North American bison is given credit for the species' endurance. While hunters decimated the larger herd by 1880, the park offered sanctuary to at least a few bison. Today, the Yellowstone herd is considered an anchor for the entire species. The present herd, ironically, has also led to controversy as it creeps past park borders.

The geyser named Old Faithful in the Yellowstone National Park.

In 1916, President Woodrow Wilson signed the National Park Act, creating the National Park Service and initiating the search for the meaning of such designation. Tourism rose steadily through the war years, and Park Service Director Stephen T. Mather largely developed and linked the park system. With the Wilderness Act of 1964, the shared cause of the park system became the effort to preserve areas as unspoiled “wilderness.” While it had originally been set aside due to geological oddities, Yellowstone became a primary illustration of one of the most unique and secure ecosystems in the United States.

Yellowstone has proven to be an attraction of enduring proportions. Tourist visitation to the park has increased throughout the twentieth century, with the park becoming an international attraction. Massive visitation rates, however, have taken a toll on the remaining wilderness within the park. Many environmentalists call over-visitation Yellowstone’s major threat. In addition, fires have repeatedly torn through the park, forcing administrators to consistently revisit their mandate. Proponents of wilderness argue that naturally occurring fires must be allowed to burn, whether or not they endanger tourists or damage park service property; administrators who see their responsibility to visitors argue for fire suppression. Such issues force

Americans to consider what a national park seeks to accomplish and reidentify Yellowstone’s position as the symbolic leader of the American system of national parks.

## Yes

Yes’s combination of technical proficiency, enigmatic lyrics, and large egos captured the essence of the progressive rock movement. Formed in 1968, the British art-rock band achieved international success with *The Yes Album* in 1971. Further success came with *Fragile* (1972) and its hit single “Roundabout,” and *Close to the Edge* (1972), which is considered by many to be the band’s masterpiece.

The band excelled in live shows and is known for its long-jamming songs, some of which are more than twenty minutes long. Lavish crystalline stage sets designed by artist Roger Dean (who also drew the band’s album covers) helped make for hugely successful live shows; in the late 1970s, Yes set a record for selling out New York’s Madison Square Garden 16 times. In 1983 Yes released *90125* which became their biggest selling album, carried by their only American number one hit “Owner of a Lonely Heart.”

Even though the members of the band have changed incessantly over the years, Yes has continued to tour and release new material through the 1980s and 1990s. Their exuberant, complex music and fusion of celestial, spiritual, and pastoral themes have influenced such bands as Genesis, King Crimson, and Rush and has made Yes an all-time favorite for art-rock fans worldwide.

## Yippies

One of the more outlandish and short-lived groups of the 1960s American counterculture, Yippies were members of the Youth International Party, which was officially formed in January of 1968 by founding members Abbie Hoffman and Jerry Rubin in Washington, D.C. The group was essentially defunct as an activist organization within three years. During their brief life span, the Yippies were an influential presence at some of the later New Left’s key protests, notably the mass demonstration at the Chicago Democratic Convention in August 1968, and the March on the Pentagon in October 1967,

a demonstration which Rubin claimed as the birth of Yippie politics. Frequently reviled by other New Left activist groupings for the countercultural spirit and the carnival ethic which infused their activism, the Yippies were renowned for a surreal style of political dissent whose principle weapon was the public (and publicity-driven) mockery of institutional authority of any kind. The Yippies' departure from an earlier generation of 1960s radicalism which had been seen through the Civil Rights Act of 1964, and the first mass demonstration against the Vietnam War the following year, is one way into the story of what happened to the American New Left. Yippie activism captured perfectly the chaotic final years of the "movement," as the New Left subsided into a factionalism and confusion over political objectives which replaced the relatively focused thinking of the first generation of 1960s radicals.

The politics which Hoffman and Rubin brought to Yippie activism had its roots in the broad coalition of dissent which grew out of the Civil Rights struggles of the early 1960s, and which, outside of the southern states, grouped itself initially around Students for a Democratic Society (SDS). Hoffman had worked for a northern support group of the civil rights organization Student Nonviolent Coordinating Committee (SNCC) before the group abandoned its integrationist stance in 1966 and purged the organization of white members. Rubin had enjoyed a high profile in the Free Speech Movement (FSM) founded at Berkeley in 1964. But the presence of poets (Allen Ginsberg) and musicians (Country Joe and the Fish, Phil Ochs, the Fugs) in the founding ranks of the party is one way of highlighting how far Yippie politics had travelled from the relatively orthodox activist strategies of the first generation New Left. In the place of politics, as such, Yippie activism preached the political dimension of culture, stressing the subversive potential inherent in spontaneous acts of individual dissent exercised through the free play of imagination and the integration of an erotic theatricality into daily life. SDS itself may never have adhered to a coherent political agenda, but with Rubin and Hoffman, any attempt at sustaining a structured theoretical programme was abandoned altogether. Separating itself abruptly from the early New Left emphasis on community organizing and relatively directed acts of protest, whilst retaining the New Left's pursuit of individual liberation, Yippie politics thus arrived as an untheorised synthesis of 1950s "Beat" thinking, Dadaism, and various positions taken within Marxist criticism from the 1930s onwards (notably the thinking of Bertolt Brecht and Herbert Marcuse).

Summarized by Ochs as "merely an attack of mental disobedience on an obediently insane society," the "cultural politics" of Yippie took American state capitalism, the Vietnam War, and the University as its principal targets, with Rubin and Hoffman staging a range of theatrical street events in which the moral bankruptcy of "the system" was exposed, or (ideally) was forced into exposing itself. As early as 1965, Rubin could be found rehearsing the Yippie ethos following his subpoena to appear before the House Un-American Activities Committee (HUAC). Summoned before the Committee alongside a group of radicals drawn mainly from the Maoist Progressive Labor Party (PL), Rubin arrived in full American Revolutionary War costume and stood stoned, blowing giant gum bubbles, while his co-witnesses taunted the committee with Nazi salutes. In 1967, Hoffman was among a group who scattered dollar bills from the balcony of the New York stock exchange, whilst newspaper photographers captured the ensuing scramble for banknotes among the stockbrokers on the floor below. In October of the same year, Hoffman led a mass "exorcism of demons" during the March on the Pentagon.

But it was in Chicago, during the Democratic Convention of August 1968, that Yippie tactics were to find their defining moment. With the war in Vietnam dragging on, and frustration mounting among the various different groupings of the New Left, a series of mass demonstrations were planned to coincide with the Convention. From the very beginning, the lack of a coordinating voice or coherent agenda threatened to collapse the demonstration from within and bring violence to the streets of Chicago. All of the significant dissenting groups apart from SDS agreed on the need for a large scale protest of some kind, but each grouping had its own agenda. Dave Dellinger of National Mobilization to end the War in Vietnam (MOBE) argued for a combination of routine speeches, marches, and picketing against the War, while the old guard of SDS made plans of their own, independently of the reluctant SDS leadership. While representatives of PL, the Black Panther Party (BBP), and New York anarchist group the Motherfuckers also planned to attend in some capacity, young Democrats sought to tie a more restrained demonstration to the proceedings of the Convention itself.

The confusion was compounded by local Chicago residents, who turned out to stage a Poor People's March, and by a late change of heart by SDS who urged its members to attend. Against this backdrop, Mayor Daley announced that he would turn Chicago into an armed camp, and laid plans to call in the National Guard and the United States Army. It was the perfect scenario for the Yippies' own brand of chaotic theatrical dissent. With Hoffman and Rubin at the Yippie helm, the group embarked on a campaign of maximum publicity and misinformation, first announcing that it would leave town for \$200,000, and then spreading the word that the City's water supply was to be contaminated with LSD. In Lincoln Park, the Yippies staged a free-wheeling carnival, a "Festival of Life" in opposition to the Convention's "Festival of Death," the high point of which saw the nomination of a 150 pound pig named "Pigasus" as the Yippie's own presidential candidate (a direct reference to the International Dada Fair of 1920, in which the figure of "Pigasus" had made its first appearance). As had always seemed likely, the "Festival of Life" was broken up by violent police action which escalated over the following two days into a full blown riot, many officers notoriously removing their identification badges before wading into the crowds. Hoffmann and Rubin were arrested and charged with conspiracy to commit violence, alongside representatives from SDS, MOBE, and the BPP.

Before being given prison terms, Hoffman and Rubin used their bail conditions to good effect, hounding the judge from table to table while he lunched at a private members club, and then introduced Yippie politics to the judicial process itself, appearing in court dressed in judge's clothes and the white shirt of a Chicago policeman. Having summoned Ginsberg to appear before the court, the prosecution again drew attention to the cultural dimension of Yippie politics by cross-examining the poet on the seditious (meaning homosexual) content of his writings. The Yippies achieved massive press coverage during and after the trial, and by the time that Hoffman and Rubin were jailed in 1970, the pair had become international celebrities. Rubin's book *Do It!*, and Hoffman's *Revolution for the Hell of It* subsequently became international bestsellers. Although an organization calling itself the Yippies continued to publish protest literature into the 1980s, the party was more or less finished as an activist political movement soon after the trial.

## Yoakam, Dwight (1956—)

In 1986, Dwight Yoakam helped revitalize country music with his twangy debut album *Guitars, Cadillacs, Etc., Etc.* Recorded in Los Angeles, the album mixed classic country covers with Yoakam's own compositions. Born in Kentucky, Yoakam grew up in Ohio, where he attended college before moving to southern California in the late 1970s. There he met his guitarist/producer Pete Anderson and developed an electric honky-tonk style derived from the early recordings of country legend Buck Owens. Unable to break into Nashville's music scene, Yoakam found a niche playing to rock audiences in California. He recorded an EP that caught the attention of record executives and launched his career. By the early 1990s, he was creating his own unconventional country style and scoring hits with songs like "A Thousand Miles from Nowhere." During the late 1990s, Yoakam also demonstrated his acting talent in films such as *Sling Blade* and *The Newton Boys*.

## The Young and the Restless

When *The Young and the Restless* premiered on March 26, 1973, it revolutionized the entire concept of the "soap opera." Historically, the format reflected its roots in radio and, despite its jump to television, was still an aural medium with its primary emphasis on dialogue and story content. *The Young and the Restless*, however, placed a premium on shadowy, sensuous lighting, intriguing camera angles, and production values that provided a lavish romanticism that appealed to female viewers and, by eroticizing the genre, changed forever the way that "soaps" were photographed. But the series did not rely on style alone. Building from the typical soap opera structure of two intertwining families—one rich (The Brooks, who owned the

city newspaper) and one poor (the Fosters)—the show featured the inevitable star-crossed romance. But the show ventured into new areas, providing the first soap opera treatment of an extended rape sequence and the aftermath of a trial. It also dealt with such issues as euthanasia, drugs, obesity, eating disorders, mental illness, and problems of the handicapped.

In the 1980s, the show once again revolutionized the genre by shifting its focus away from its original core families to an entirely new set of younger characters. During the 1990s it continued to introduce mysterious new characters while maintaining the consistency of its vision and of its storylines, a remarkable feat for the genre, which allowed it to keep pace with its traditional competitors and the new programs that debuted during the decade.

## Young, Cy (1867-1955)

"Y is for Young/The magnificent Cy/People batted against him/But I never knew why." So wrote Ogden Nash about the man who

Pitcher Cy Young of the Cleveland Naps.

won more Major League Baseball games than anyone else—Denton True “Cy” Young. Young’s 511 recorded victories number nearly 100 more than the nearest challenger. And though baseball historians have insisted that Walter Johnson, Lefty Grove, and Roger Clemens may have been better on the mound, they are confident that Young’s lifetime totals of 7,356 innings pitched and 750 complete games will never be broken.

Young was born in Gilmore, Ohio, on March 29, 1867. He began his organized baseball career in nearby Canton, where he soon earned his nickname. Some claim the name Cy is short for cyclone, referring to his fastball, while others claim that Cy, like Rube, was a common nickname of the age for a naive, small town ballplayer. Young began his major league career in 1890 for the Cleveland Spiders of the National League, where in his rookie season he had an unprepossessing 9-7 win-loss record. Two seasons later, however, he went 36-12 for the Spiders. Young was so dominant that, before the 1893 season, the major leagues moved the pitcher’s mound—from 50 feet from home plate to its current distance of 60 feet, 6 inches—to give batters a fighting chance. Yet even with the 10 extra feet, Young won 34 games in 1893, and 35 games in 1895.

After the 1898 season Young was traded to the St. Louis Cardinals, where he won 45 games in two seasons. Young then jumped to the Boston Somersets (later Red Sox) of the brand-new American League. Now in his mid-30s and in a new environment, Young proceeded to win 193 games for Boston during eight years. In 1903 Young won 28 games and pitched Boston into the first modern World Series, where he led his team to an upset victory over Honus Wagner’s Pittsburgh Pirates, winning two games for his club.

Young was the first major league pitcher to throw three no-hitters during his career—a feat later equaled by Bob Feller and surpassed by Sandy Koufax and Nolan Ryan. In May 1904 against the Philadelphia Athletics, Young pitched the first perfect game of the twentieth century—a game in which he did not allow an Athletic batter to reach base.

In 1909 Young was traded to the American League’s Cleveland Naps (now Indians), where he won his 500th game in 1910. However, his efficiency was declining with the onset of age and an expanding waistline. Young admitted that, as he grew heavier, he was unable to field bunts, and at the end of his career batters were taking advantage of this. In 1911 he ended his career with the Boston Braves of the National League. In his final start in September 1911, he lost a 1-0 game to Grover Cleveland Alexander, the rookie sensation for the Phillies who would go on to win 373 games in his lifetime.

Young returned to farming in Ohio, and became a regular celebrity at major league old-timer’s games. When the Baseball Hall of Fame held its first election in 1936, Young narrowly missed being inducted in the first group of immortals; voters had to select from a pool of nineteenth-century players and a pool of twentieth-century players, and Young’s career covered both eras. He was elected in 1937, and attended the inaugural induction ceremony in Cooperstown, New York, in 1939, where he posed for photographs with Honus Wagner, Babe Ruth, and Connie Mack.

Young died on November 4, 1955 in Newcomerstown, Ohio, at the age of 88. In his honor, the following year Major League Baseball initiated an annual award named after him: The Cy Young Award is presented to the best pitcher in each league. In the modern era, Roger Clemens has won five Cy Young Awards in the American League, while Greg Maddux has won four National League Cy Youngs.

## Young, Loretta (1913—)

In a career that lasted from the silent films to the 1980s, Loretta Young embodied the image of the eternal lady. She appeared as a child extra in early films before she received her first major film role in *Laugh Clown Laugh* (1928). Thereafter she was invariably cast in roles as a young innocent. After winning an Academy Award for the film *The Farmer’s Daughter* (1947), Young turned to television. Her anthology series, *The Loretta Young Show* (1953-60), won her several Emmy Awards although it was most notable for the fabulous costumes she wore. After Young’s television show went off the air she continued to act on rare occasions, most notably in *Christmas Eve*, a television movie telecast in 1986.

## Young, Neil (1945—)

A modest commercial success in the late 1970s, Neil Young’s heavy-rocking music had a profound impact on young musicians who started a new movement of grunge rock in the 1990s, leading many to dub him the “godfather of grunge.” From his beginnings in the mid-1960s rock band Buffalo Springfield, to his intermittent stints as a 1970s acoustic singer-songwriter and hard-rocker, on through his 1990s incarnation as grunge’s guru, Neil Young has spent his career ducking audience expectations. This US-based Canadian expatriate’s idiosyncratic and sometimes perverse approach to music-making has allowed him to be perhaps the only member of his generation to maintain critical respect years after most of his peers began artistically treading water.

On his varied and numerous albums Neil Young has worn many hats, including those of folk-rocker, acoustic singer-songwriter, rockabilly artist, hard-rocker, punk-rocker, techno-dance artist, and blues guitarist. His body of work, which is matched in its depth and breadth only by Bob Dylan, is characterized by a sense of restlessness and experimentalism. More often than not it is the contrasting acoustic Neil Young and distorted-guitar-meltdown Neil Young that are most prominent.

Neil Young

After leaving Buffalo Springfield he released two solo albums in 1969 that would set a pattern for the rest of his career. His self-titled debut album featured country and folk-styled songs, utilizing acoustic guitars buffeted by lush string sections and tasteful female backing vocals. His second album, released a few months later, was a collaboration with an unknown garage band called Crazy Horse, a group Young would use throughout the rest of his career. The Crazy Horse collaboration, *Everybody Knows This is Nowhere*, showed off Young's other half—the hard rocking, noisy side.

Most of his 1970s albums would follow this pattern, with *Harvest* and *Comes a Time* filling his acoustic singer-songwriter shoes and *Tonight's the Night* and *Zuma* satisfying his craving for molten-hot guitar distortion. Young's artistic and commercial success reached its zenith with 1979's *Rust Never Sleeps*, which incorporated both musical tendencies into one album split into a quiet side and a loud side.

During the 1980s, Young's career began to falter as he released a series of wildly varying albums that incorporated rockabilly, garage rock, electronic dance, folk, country, and blues. His records weren't selling, and his new label Geffen sued him for releasing non-commercial, non-Neil Young-like albums. From 1983 to 1988 Young

confused and lost much of his audience, but with the release of 1989's *Freedom* he began to regain the critical and commercial clout that had dissipated in the 1980s.

Another key to Young's career rejuvenation (that had little to do with his then-current output) was the changing musical climate during the late-1980s and early-1990s: the rise of alternative guitar rock. One marker that signaled Young's reincarnation as the "godfather of grunge" was the release of the Neil Young tribute album *The Bridge* in 1989. This compilation album featured contributions by the likes of Soul Asylum, Flaming Lips, The Pixies, Sonic Youth, and Dinosaur Jr.—all of whom became minor or major mainstream successes. By the early 1990s, Young was named by the likes of Nirvana and Pearl Jam (who later played with Young) as a main influence. Young cultivated this fandom by playing the most rocking, noisy music of his career and by taking guitar experimentalists Sonic Youth and grunge kings Pearl Jam on the road with him.

Young's influence over young grunge musicians took a sad turn when Nirvana's Kurt Cobain referenced a well-known Neil Young lyric in his suicide note, stating "it's better to burn out than it is to rust," a line from "Hey Hey, My My." Young reacted to this by recording *Sleeps with Angels*, a mournful low-key album filled with meditations on death and depression that served as a eulogy for Cobain. Throughout the rest of the 1990s, Young continued to release a series of solid but stylistically similar live and studio albums, primarily with his longtime band Crazy Horse.

## Young, Robert (1907-1998)

Robert Young is best remembered for his two successful television shows, *Father Knows Best* (1954-60) and *Marcus Welby, M.D.* (1969-75), which together earned him three Emmy awards. He began his career in motion pictures of the 1930s and 1940s, invariably playing the amiable, dependable guy who loses the girl. Young made his film debut opposite Helen Hayes in *The Sin of Madelon Claudet* (1931) and appeared in classics such as *Secret Agent* (1936) and *The Enchanted Cottage* (1944) before turning to television. He was married to wife Betty from 1933 until her death in 1994 and together they had four daughters. Young left an indelible impression on American culture of the early television era as everyone's favorite father figure.

## Youngman, Henny (1906-1998)

Perhaps no comedian better understood the great truism among comedians that, regardless of the time devoted to working on an act and the energy put into a stage performance, a comic's material is the key to success or failure, than the "King of the One-Liners," Henny Youngman. For more than 70 years he entertained audiences as the quintessential Catskills comedian. His rapid-fire delivery, in which he could tell a half dozen wisecracks in 60 seconds, was filled with timeless bits that drew as many groans as laughs. Youngman's theory of comedy was to keep his jokes simple and compact. Beginning in the mid-1920s and extending into the 1990s, he repeated countless gags that could be immediately understood by everyone. Among his most famous lines are such comic gems as: "I just got back from a pleasure trip. I drove my mother-in-law to the airport," "The food at this restaurant is fit for a king. Here, King! Here, King!" and "A man goes to a psychiatrist. 'Nobody listens to me!' The doctor says, 'Next!'" In 1991, Youngman commented on his act's enduring popularity when he wrote, "Fads come and go in comedy. But the one-liner always remains sacred. People laughed at these jokes when I told them at Legs Diamond's Hotsy Totsy Club sixty years ago—and they're still laughing at these same one-liners at joints I play today."

Henny Youngman

Born on March 16, 1906, in England to Russian Jewish immigrants who later settled in New York, Henry Youngman harbored dreams of entering show business from an early age. His first taste of success came as a bandleader for a quartet known as Henny Youngman and the Swanee Syncopaters. By the mid-1920s, the group became a regular presence in the "Borscht Belt"—an area in the Catskill Mountains filled with private summer resorts that catered to a predominantly Jewish clientele. At the Swan Lake Inn, Youngman played with his musical group, while between sets he acted as the hotel's "tumbler," a job that consisted of walking around the resort to make sure all the guests were having a good time. The tumbler would often schmooze the male guests, dance with any unattached female guests, and even serve as an unofficial matchmaker. To keep the guests amused, a tumbler had to have many jokes for practically any situation at his fingertips. Youngman recalled his days in the Catskills and their influence on his comedic style when he stated, "I'm quite sure my love of one-liners came from this mountain laboratory. You had to be able to rat-a-tat-tat them out, on all subjects, to all kinds of people, every hour, day or night."

Youngman abandoned the Swanee Syncopaters for the life of a standup comedian when a nightclub owner asked him to fill in for an act that failed to show. His comedy routine, honed from his days as a tumbler, was a great hit. He soon came to the attention of a rising comedy headliner named Milton Berle, who was impressed with Youngman's delivery and helped him get standup gigs at small clubs and bar mitzvahs. By the 1940s, the former tumbler had become the featured comedian on radio's *The Kate Smith Show*. For two years he had a regular six-minute spot during which he told his one-liners and played the violin. It was in this period that Youngman acquired his signature joke: When his wife Sadie arrived at the show with several friends the nervous comedian wanted her to sit in the audience so he could prepare. He grabbed an usher and told him, "Take my wife, please." The comic incorporated the humorous ad-lib into his act and continued to use the line even after his wife died in 1987.

Youngman spent the greatest portion of his career touring throughout the world with his unvarying act. He was proud to say he had performed before both Queen Elizabeth II and the gangster Dutch Schultz. No matter the audience or setting, he would take to the stage with his prop violin and still-humorous lines. Jokes such as "My doctor told me I was dying. I asked for a second opinion. He said you're ugly, too." were repeated for years to audiences long familiar with Youngman's routine. He also frequently appeared on television talk and variety shows into his eighties. However, his attempts to become a regular TV performer were less successful. The summer of 1955 saw the failure of *The Henny and Rocky Show*, which paired him with ex-middleweight boxing champion Rocky Graziano. In 1990, he made a brief appearance as the emcee at the Copacabana in Martin Scorsese's mobster epic *Goodfellas*. He died in New York on February 23, 1998.

Audiences laughed at Henny Youngman's nearly endless supply of one-liners because they were instantly funny and recognizable to almost everyone. He did not offer long comic monologues, controversial humor, or provocative social satire, but rather provided funny gags for anyone who has ever had to deal with life's more mundane occurrences, such as bad drivers, unhelpful doctors, drunken husbands, and mothers-in-law. Furthermore, his longevity allowed younger audiences to experience a still vital performer with roots in vaudeville. He proved that even the most well worn jokes, like "One fellow

comes up to me and says he hasn't eaten in three days. I say, 'Force yourself!'" are still funny.

## *Your Hit Parade*

A landmark musical variety series on both radio (1935-1953) and television (1950-1959, 1974), *Your Hit Parade* was one of the first and most important manifestations of the musical countdown or survey. Unlike later variations on this format, however, on *Your Hit Parade* the songs were performed live by a regular cast of singers, some of them famous (Frank Sinatra, Doris Day, Dinah Shore). The TV version of *Your Hit Parade* has been cited, somewhat implausibly, as a forerunner of music video and MTV.

The radio series *Lucky Strike Hit Parade* debuted on the NBC Red network on April 20, 1935. During the next two years, both NBC and CBS carried the program from time to time, until in 1937 it found its "home" in the Saturday evening schedule on CBS, where it

Jill Corey rehearsing for an appearance on *Your Hit Parade*.

remained until 1947, when it moved back to NBC. The TV version premiered in 1950 as a simulcast of the radio series. This arrangement lasted until 1953, at which point the radio series was canceled. *Your Hit Parade* continued on NBC until 1958, then moved back to CBS and was canceled in 1959. A revival on CBS in 1974 lasted less than a year and is notable mainly for employing future *Love Connection* host Chuck Woolery as a singer. The cast of singers and orchestra leaders changed frequently, especially during the show's radio years. The TV cast was more stable and included singers Dorothy Collins, Snooky Lanson, Gisele MacKenzie, and Russell Arms, bandleader (and future electronic music pioneer) Raymond Scott, and announcer Andre Baruch. The most memorable feature of the series is probably its opening, which consists of the sound of a tobacco auctioneer; in the TV version there were also pictures of animated, dancing cigarettes. As Philip Eberly points out, *Your Hit Parade* was one of a multitude of musical programs sponsored by tobacco companies during the Golden Age of American radio.

The idea behind *Your Hit Parade* was simple yet novel for the 1930s. Each week, the program's house orchestra and featured singers performed the week's most popular songs. The length of the show ranged from 30 to 60 minutes during the program's history, and the number of songs in the "hit parade" varied from seven to fifteen. The American Tobacco Company owned and sponsored the program, and the company's "dictatorial" president, George Washington Hill, "personally controlled every facet of the program," according to Arnold Shaw's account in *Let's Dance*. The ranking of songs was determined by a secret methodology administered by the company's advertising agency—at first, Lord and Thomas; later, Batten, Barton, Durstine & Osborne. The hit parade placed songs in competition with each other, and the unveiling of each week's number one song became an eagerly awaited event.

The TV program's opening announcement asserted that the hit parade was an "accurate, authentic tabulation of America's taste in popular music," based on sheet-music sales, record sales, broadcast airplay, and coin-machine play. The most important factor, at least until the mid-1950s, was radio airplay—and, as Shaw points out in *Let's Dance*, *Your Hit Parade* itself helped to establish radio as the major venue for American popular music. Radio's dominance came at the expense of vaudeville. Nevertheless, *Your Hit Parade* remained rooted in Tin Pan Alley—the slang term for the music publishing district in 1890s Manhattan, and the name that eventually came to symbolize the (white) mainstream in American popular music. Tin Pan Alley stood for the primacy of songs (as opposed to records) and for a highly conventionalized song structure and performance style (usually a verse-chorus structure, romantic or novelty lyrics, smooth singing or "crooning," and orchestration). The prevalence of songs over records allowed *Your Hit Parade* to showcase its own performers along with the week's hits. A song would often remain on the survey for several weeks, so, for variety's sake, the song would be handed off from one singer to another from week to week.

The advent of the TV series prompted an additional attempt at variety—each week, the song would receive a new "visualization." Rather than delivering a straight performance into the camera, singers were placed in a fictional and dramatic context ostensibly inspired by the title or lyrics of the song. For example, in a 1952 episode, Snooky Lanson portrayed a customer singing "Slow Poke" to the back of a female customer at a diner. In this case, as in most others, the visualization had only a tenuous and forced connection with the text of the song—a "slow poke" sandwich appeared on the diner's menu, and the female customer kept Lanson waiting for a seat while he sang

lyrics that complained about “you” (presumably his lover) keeping him waiting. As unremarkable as the song itself was, the visualization managed to trivialize it by converting it from a love song into an imaginary monologue about Snooky Lanson’s lunch.

Contrary to Michael Shore’s contention that “*Your Hit Parade* was a pathfinder in the conceptualization of music video,” the program in fact was a clumsy attempt to import the dramatic premise and visual splendor of musical films into the more frantic production context of live TV. Most music videos, even if they have a dramatic premise, use a prerecorded soundtrack and show the singer lip-synching directly into the camera. Thus the typical music video is quite different from the standard visualization on *Your Hit Parade*. This is one reason why the TV series, when viewed today, seems unique and old-fashioned.

The reason for the show’s demise, however, has as much to do with sound as with image. As the 1950s progressed, Tin Pan Alley gradually lost ground to rock and roll, and records became the predominant medium in the music industry. Radio lost much of its audience to television and soon discovered the Top Forty format as one of the best ways to stay in business. Top Forty, of course, is much like a hit parade but ranks records (as performed by a specific singer) rather than songs (as performed by anybody). Snooky Lanson performed “Heartbreak Hotel” on *Your Hit Parade* in 1956, but the song was so definitively associated with Elvis Presley that the version by crooner Lanson lacked credibility. This sort of incongruity became more and more common on *Your Hit Parade* as the decade wore on, and the program’s contrived and corny “visualizations” only underscored the series’s irrelevance.

Despite belated attempts to make the program more contemporary, *Your Hit Parade* could not survive the ascendance of rock and roll and the triumph, in both radio and TV, of recording over live performance. The look of the future in musical TV programs was *American Bandstand*, which rose just as *Your Hit Parade* was falling, and which remained dominant in its field until MTV supplanted it in the 1980s.

## *Your Show of Shows*

A 1950s variety program, *Your Show of Shows* (1950-1954) distinguished itself with its artful satire and parody performed by an ensemble led by Sid Caesar. Caesar was blessed with a stable of young writers that included, at one time or another, Neil Simon, Woody Allen, Mel Brooks, Carl Reiner, and Larry Gelbart.

The program took advantage of television’s ability to be topical. It was live television at its best, and Caesar and his partner, Imogene Coca, could parody recent films—including foreign films—at will; because of the dangers of McCarthyism, however, they could not parody politics. Because there were no retakes in live television, the ability of its performers to ad lib was essential to its success, and soon became a secret to the show’s popularity.

Caesar was born in Yonkers, New York, in 1922. He entered show business as a Juilliard trained saxophonist and enjoyed success in a number of famous big bands. During his Army service, Max Leibemann, who became his producer on *Your Show of Shows*, noticed his ability to make his fellow band members laugh. He decided to feature Caesar as a comedian in future productions. In 1949, after appearing in nightclubs and on Broadway, Caesar began his television career in the forerunner of *Your Show of Shows*.

The program took six days to put on, from writing to performing. In an interview for *The Saturday Evening Post*, Caesar noted the difference between *Your Show of Shows* and television in the late twentieth century: “I didn’t come in and have a script handed to me. Never happened. The show took six long days to write, and I was there on Monday morning, working with the writers, putting in the blank sheet of paper. See, the show had to be written by Wednesday. Thursday we put it up on its feet. Friday we went over it with the technicians and Saturday was the show—live.”

The program ran for 90 minutes and was number one for four years. NBC soon began plans for two programs that would be highly rated, and *Caesar’s Hour* and *The Imogene Coca Show* were born. *Caesar’s Hour* was highly rated for a time, but Caesar’s descent into alcoholism and pill-taking finally took its toll, and its fourth season was its last.

Although Caesar eventually had a number of female partners on his various shows, Imogene Coca is the one best remembered by fans. She began acting at the age of 11 and had a long career before joining Caesar on *Your Show of Shows*. Leonard Sillman drafted Coca and Henry Fonda into doing comedy bits for scene changes for his Broadway production, *New Faces*. Until then, she had been noted for her singing, dancing, and acting. Eventually, she so impressed the critics that she became hailed as the next great comedienne. In 1949,

*Your Show of Shows* stars Sid Caesar (left) and Imogene Coca (right) pose with the show's producer Max Liebman.

she joined Caesar in the "Admiral Revue," the forerunner of *Your Show of Shows*. Coca left to do her own television program after the 1954 season. The program, however, failed, and so did her reunion with Caesar in 1958.

*Your Show of Shows* paved the way for *Saturday Night Live*, and other similar live revues like "Second City." It has remained popular on PBS (Public Broadcasting Station) and in the sale of videos. The movie *Ten from Your Show of Shows*, featuring 10 of its classic skits, also did well commercially and is still available on video.

## Youth International Party

See Yippies

## *The Youth's Companion*

For just over a century, from 1827 to 1929, a monthly periodical called *The Youth's Companion* dispensed moral education, information, and fiction to generations of young people. By 1885, the periodical was claiming 385,000 copies were printed each week, making it the most widely circulated journal of its day, largely due to the premiums and prizes it offered for new subscriptions. *The Youth's Companion* was founded in Boston in 1827 by Nathaniel Willis and Asa Rand as a Sunday-School organ in the tradition of Boston Congregationalism, one that would "warn against the ways of transgression, error and ruin, and allure to those of virtue and piety." The classic children's bedtime prayer "Now I Lay Me Down to Sleep" appeared in its first issue. Rand left the venture after three years and Willis remained as editor until he sold the paper in 1857 to John W. Olmstead and Daniel Sharp Ford. Ford, who was known to his readers as "Perry Mason," after the name he gave to his business, remained as editor until his death in 1899. During his editorship, he completely revamped its content and format, making *The Youth's Companion* into a well-respected publication of high literary merit. By publishing serial and scientific articles and puzzles, by soliciting articles from readers, and by including contributions from notable writers such as Harriett Beecher Stowe, Rudyard Kipling, Thomas

Hardy, and Jack London, Ford was able to increase the circulation tenfold within a decade, and to nearly half a million by 1899. The magazine survived until it finally folded at the onset of the Great Depression, when it merged with *American Boy*, a victim of financial woes and changing tastes.

## Yo-Yo

A Filipino immigrant, Pedro Flores, introduced a Philippine hunting weapon named Yo-Yo, translated in English as “come back,” to the United States in the 1920s. Donald Duncan bought the rights to the name and the toy in 1929. He created the Duncan Imperial and the well-known Butterfly Yo-Yo. Tricks done with the toy include “Walk the Dog” and “Around the World.” Used in tournaments from the beginning in the United States, the Yo-Yo became a fad again during the 1960s and surged in popularity in 1962. Yo-Yo Tournaments have enjoyed popularity throughout the 1990s.

## Yuppies

Following the social upheaval and counterculture ideals that received popular attention the 1970s, the 1980s ushered in a backlash, at least in the middle and upper middle classes. A number of former college students, protesters, and hippies who came from these classes left the counterculture behind and took high-paying white collar jobs. Because many of them postponed marriage and children, they found themselves with large disposable incomes and few responsibilities. These Young Urban Professionals were soon dubbed “yuppies” by the press.

Tired of the moral and political seriousness of the activist 1960s and 1970s, the yuppies began to spend their money on themselves, often going into debt to purchase high-priced status symbols and expensive adult playthings. Rolex watches, designer fashions, trendy gourmet foods, and BMW cars came to represent the self-indulgent lifestyle of the wealthy young professionals. Snob appeal became the measuring stick for purchases. Drug use was associated with yuppies, but not the bohemian marijuana of the hippies. Rather, it was cocaine, the expensive drug of the jet set. “Whoever dies with the most toys, wins,” and “Who says you can’t have it all?” became the catch phrases of the day.

The yuppies soon came to symbolize everything the media found to criticize in the 1980s. Calling the 1980s the “me” generation and the “greed decade,” media pundits lambasted the yuppie swingers as they had their hippie counterparts. Books like Jay McInerney’s *Bright Lights, Big City* and Tom Wolfe’s *The Bonfire of the Vanities* chronicled the self-aggrandizing decadence of the yuppie life. In reality, the economic boom of the early 1980s contributed to rising consumption throughout middle class America, and the well-educated young elite were merely particularly well-positioned to take advantage of it. They had been raised with a sense of their own importance and entitlement, and they had been given jobs with salaries that reinforced that sense. Their lifestyle values were the opposite of those of their parents, the conservative children of the Great Depression. Professional life seemed merely like a step beyond college parties, and the fun was less limited. Profitably employed married couples without children were given the name dinks (double income no kids) by the press, which showed a liking for catchy acronyms. Dinks had unprecedented disposable income, and in an increasingly consumer society, it was easy to spend.

Those young professionals who did have families tried as best they could to fit them into the yuppie status symbol mold. Two career households necessitated nannies and housekeepers. Young couples began to search for the “right” schools while their children were still babies. Along with the expensive party lifestyle came pressure to keep up appearances and to keep making money. As Stan Schultz, a cultural historian at the University of Wisconsin described it, “We are terribly busy souls, doing things that no one else can do.” Internal conflicts began to emerge, as the yuppies’ liberal ideologies started to conflict with their economic conservatism. The 1980s was the Reagan era in United States politics, and new advantages were being doled

out to the rich and the corporations at the expense of social services. The yuppies found themselves on an uncomfortable side of this dichotomy. Jerry Rubin, once a leader of the famous radical group the Yippies, was one of those who traded in his revolutionary politics for economic security—"Money in my pockets mellowed out my radicalism," he said.

Of course, frenzied spending has its price, and the yuppies soon found themselves in deep debt. As long as high-salaried jobs were available, the debt was not a problem, but toward the late 1980s, the economic boom began to end. In 1987, the stock market crashed, and its effects were felt in every societal stratum. Many of the previously secure young professional found themselves "downsized," laid off from jobs or forced to take great cuts in salary. So many defaulted on credit card payments that bankers coined the term "yuppie bill syndrome" to describe them. New "yuppie pawnshops" sprang up, not the sad dark hock shops of the inner-city, but upscale shops with bright lighting in middle class shopping areas, so that the yuppies could cash in some of their costly toys to help cover more necessary expenses. "Downscale chic" was the term used to describe the return to simpler consumption—jeans and T-shirts instead of designer clothes.

Receiving less attention in the media than the maligned yuppies were the working class and poor, whose circumstances were less improved by the 1980s boom. Working class people, too, often had two income families which did not create a pool of disposable income, but instead barely covered their bills. They had little sympathy with the overextended yuppies, who in fact became a convenient scapegoat, exemplifying as they did the waste and irresponsibility of the upper classes.

Just as the yuppies themselves had been part of a backlash, they caused their own backlash. Redefining the word yuppie to mean "young unhappy professionals," some young professionals began to look for a new way of life. Some were dubbed domo's for "downwardly mobile professionals," and dropped out of the fast-paced life of the urban professional, choosing a simpler life, perhaps moving to the country. One exodus took many former yuppies to Montana, seeking

a bucolic freedom from stress in the mountains. Other yuppies did not drop out, but rather changed their focus to making money by doing work they could believe in, such as environmental protection work or fighting cancer. *The Artist's Way* by Julia Cameron and *Getting a Life* by Jacqueline Blix describe the joys of trading the consumer rat race for a more fulfilling life by making a dramatic lifestyle change.

The term "yuppie" has been widely used—many say overused—by the media to describe a certain privileged segment of the baby boom generation at a particular time in their lives. As the upper middle class professionals of that generation began to reach middle age, the press began to announce the "death of the yuppie." While conspicuous consumption will never go entirely out of style for the rich, the set of circumstances that created the yuppie mindset is unlikely to recur. Rebelling both against the economic stodginess of their parents' generation and the unwelcome demands of their own youthful ideals, the young professional elite that the press called "yuppies" went on a wild spending spree. When the bills came due, their lives and values changed. In the 1980s, they were sneered at; no one admitted to being a yuppie. They were other people who spent and consumed too much and too richly. In the early 1990s, Michael Thomas of the *New York Observer* said, "I think that's one of the big stories now—denial of the 1980s."

## Zanuck, Darryl F. (1902-1979)

---

Darryl F. Zanuck ranks as one of the most famous, long-lived of Hollywood's movie moguls. He oversaw scores of films and created many film stars. Many of these films and their stars were tremendously popular at the time and remain so today. He revived and created Twentieth Century-Fox, functioning as its chief of production from the mid-1930s through the mid-1950s. Three of the films he produced received academy awards: *How Green Was My Valley*, 1941; *Gentlemen's Agreement*, 1947; and *All About Eve*, 1950. Zanuck created several stars; child star Shirley Temple and Betty Grable (World War II's "pin-up girl") made his Twentieth Century-Fox into a true powerhouse. After the war, Zanuck produced a series of films that dealt with social issues including racism and mental hospitals. These post-war films, *Gentlemen's Agreement*, *Pinky*, and *The Snake Pit*, proved tremendously popular money-makers for the studio. Upon returning to Fox in the early 1960s, Zanuck worked with his son Richard and produced one major hit, *The Sound of Music*. Zanuck was a brilliant producer who possessed the unequalled ability to detect potential in screenplays and screen actors.

## Zap Comix

---

Considered by pop-culture critics to be the quintessential underground comic book of the 1960s, *Zap Comix* can trace its genealogy to the publication of Jack Jaxon's *God Nose* in 1963. By 1999, there were estimated to be more than two million copies of the countercultural *Zap Comix* in print, including such classics as the sexually explicit "Fritz the Cat" series and the trippy "Mr. Natural" books. Three men, working out of the San Francisco Bay area, were chiefly responsible for the *Zap Comix* phenomenon: Don Donahue and Charles Plymell were instrumental in securing the money and arranging the distribution of the early issues, while visionary cartoonist Robert Crumb assumed editorial control. Crumb, a Philadelphia native with no formal art training, was to become one of underground comics' most influential creators.

A one-time illustrator for the American Greeting Card Company, Crumb began doing freelance work for *Help* magazine in the mid-1960s, a publication by *Mad* magazine's co-creator Harvey Kurtzman. Crumb's experimentation with LSD and other drugs inspired him to create ever more bizarre situations and characters, with "Fritz the Cat" and "Mr. Natural" emerging from his pen during this acid-soaked period. Crumb's best early work was published in the pages of

underground newspapers like New York's *East Village Other*, and in 1966, he moved to San Francisco, where he hooked up with a community of artists and writers who shared his countercultural sensibility. Donahue and Plymell soon enlisted him to take the reins of *Zap* as a vehicle for his unique talents. The first issue of *Zap*, numbered zero, hit the streets in February of 1967. Dubbed "the comic that plugs you in," the cover featured a Crumb drawing of an embryonic figure with its umbilical cord plugged into an electrical socket. The comic quickly became a forum for some of the most prominent underground cartoonists of the time, many of them influenced by the early *Mad* magazine. Illustrators whose work appeared in *Zap* included S. Clay Wilson, Spain Rodriguez, and Gilbert Shelton.

*Zap's* content ranged widely, from instructions on how to smoke a joint to quasi-pornographic features like "Wonder Wart Hog," in which the eponymous swine overcomes his impotence by using his snout. The pages of *Zap Comix* offered readers an explicit panorama of the sex, drugs, and revolution ethos of the 1960s, subjects never before seen in comic books. *Zap Comix* were often sold in head shops, sharing counter space with bongos and roach clips, making them the unofficial bibles of the tuned-in, turned-on generation of hippies and other countercultural folk. With the success of *Zap*, Robert Crumb became an icon of the underground. The hip cachet of his comics allowed him to triumph over his own sexual frustration. As he explained later in an autobiographical cartoon story, "I made up for all those years of deprivation by lunging maniacally at women I was attracted to . . . squeezing faces and humping legs . . . I usually got away with it . . . famous eccentric artist, you know." Occasionally, however, Crumb's commitment to exploring his own personal sexual obsessions got him and the comics in hot water. In 1969, Crumb's incest-themed story "Joe Blow" in *Zap* #4 sparked obscenity busts at several bookstores.

The daring style and content of *Zap Comix* paved the way for a generation of cartoonists, both mainstream and underground, who felt comfortable tackling previously taboo, adult-themed subjects. "[T]o say [*Zap*] made a deep impression is an understatement," commented Alan Moore, a comics writer who created the popular title *Watchmen* in the 1980s. Author Trina Robbins likened reading *Zap* for the first time to "discovering Jesus [by] a born-again Christian."

## Zappa, Frank (1940-1993)

---

Few rock and roll icons can match the originality, innovation, and prolific output of Frank Zappa. His synthesis of blues, rock, jazz, doo-wop, classical, and avant-garde, combined with irreverent lyrics and politically-oriented stage theatrics expanded the range of popular

### Frank Zappa

music. From his work with seminal 1960s freak band the Mothers of Invention to his final, posthumously-released studio project called *Civilization: Phaze III* (1994), Zappa made music by his own rules, rewriting the rules of the music industry in the process.

Frank Vincent Zappa was born December 21, 1940 in Baltimore, Maryland. The Zappa family moved often, his father following wartime civil service employment until 1956 when they settled in Lancaster, California, north of Los Angeles. Frank's main interests during his formative years were chemistry (specifically explosives), drums, and the dissonant music of Edgard Varèse, a modern composer who worked with sound effects, electronics, and large percussion sections. This was an important influence on young Zappa as it introduced him to unconventional musical forms before the advent of rock and roll.

Bored with high school, Frank taught himself to read and write 12-tone symphonic music, and began composing his own. After graduation he worked as a rhythm guitarist in various lounge cover bands, when it became clear that merely composing wouldn't pay the bills. In 1963, however, at age 22, he scored the soundtrack for a low-budget film, and acquired a homemade recording studio in downtown Cucamonga, California. Unfortunately, Studio Z had a brief life.

Trouble with the locals culminating in a ten-day jail sentence and impending urban development forced Frank to move to Los Angeles where he found gigs for his proto-rock-and-roll band, The Mothers.

After "perfecting" their artsy, improvisational live show, the Mothers recorded *Freak Out!* (1966), the first rock double album. Out of necessity, though, the band became the Mothers of Invention, as record executives objected to the original name. *Freak Out!* was a landmark in musique concrète as pop music, and was a bracing satire on the hippie culture oozing into Southern California. The follow-up album *Absolutely Free* (1968) intensified these themes, laying the groundwork for much of Zappa's future lyrical and compositional endeavors. Later, he created the cult film *200 Motels* (1971), named for the estimated number of dives the band had stayed in during its five-year life span. Dissonant and self-consciously weird, *200 Motels* foreshadowed the music video even as it lampooned life inside a touring rock and roll band, incorporating ballet, opera, and Zappa's dizzying orchestrations to make its acidic point. As freaky as Zappa was, though, he was an adamant teetotaler which caused tension among fellow musicians. This, combined with low pay and bad reviews, ultimately led to the breakup of the Mothers of Invention. Zappa, however, was just getting started.

Throughout the 1970s, Zappa's reputation grew, especially in Eastern Europe where he provided the soundtrack for revolution. Frank also became known for his prowess with a guitar while his lyrics became more surreal and confrontational. His attempts at "serious" music, however, were thwarted, beginning with contractual disputes stemming from the *200 Motels* sessions with the Royal Philharmonic, and continuing every time he tried to hire an orchestra. Frank still considered himself primarily a composer, though; an odd vocation for a subversive rock musician, but as he remarked, "Apart from the political stuff, which I enjoy writing, the rest of my lyrics wouldn't exist at all if it weren't for the fact that we live in a society where instrumental music is irrelevant."

In 1977 Frank became embroiled in lawsuits involving ownership of his early albums. During this litigious period (and in an effort to fulfill remaining contracts) he released as many as four albums a year and toured relentlessly, while another self-referential work called *Joe's Garage* (1979) achieved mainstream popularity with its Orwellian plot and scatological humor. Eventually Zappa became the owner of his entire back catalog and an eponymous record label, as well as a new recording studio in the basement of his Los Angeles home.

The establishment began to recognize Frank Zappa in the 1980s, and his first Billboard-charting single "Valley Girl" (1982) was a fluffy parody of Southern California teen pop culture featuring the voice of his daughter Moon. In 1985, Zappa testified before a Senate committee and denounced legislation calling for explicit-content warning labels on albums. He later became close friends with then president of Czechoslovakia, Václav Havel, and was nearly appointed ambassador of trade and culture to that country. Frank also received a Best Instrumental Album Grammy Award in 1986 for *Jazz From Hell* which was conceived on the Synclavier, an electronic device allowing him to play his most difficult compositions note for note.

In 1990 Frank Zappa was diagnosed with prostate cancer. Between debilitating treatments he produced a live program of his orchestral works called *The Yellow Shark* (1993), which was performed by ardent fans, the renowned German Ensemble Modern. He also set up the Zappa Family Trust, placing total creative and financial control of his successful niche-market mail-order business in the hands of his partner/wife Gail. He died on December 4, 1993, and was inducted into the Rock and Roll Hall of Fame in 1995.

The legacy of Frank Zappa lives on in every outspoken, self-made rock star, in every do-it-yourself basement recording and autobiographical music video montage. He rescued the stodgy reputation of the serious orchestral composer by marrying it to the lifestyle of a hard-touring rock band, creating some of the most challenging and defiant music of the twentieth century. He also pioneered recording technologies, stretching the boundaries of what popular music could be. Frank Zappa is known worldwide for his irreverent attitude and masterful musicianship, proving that, as he often quoted Edgard Varèse, "The present day composer refuses to die!"

## *The Ziegfeld Follies*

Brainchild of Broadway impresario Florenz Ziegfeld and his first wife, European singer Anna Held, *The Ziegfeld Follies* dominated the American theatrical revue scene from 1907 until the late 1920s and early 1930s when the popularity of vaudeville began to diminish. Featuring scores of women in elaborate costumes and boasting the debut of some of the country's most popular songs like "Shine on Harvest Moon," *The Follies* started as an American version of satirical French cabaret acts whose sophistication Ziegfeld hoped to evoke in order to appeal to a high-hat audience. Ziegfeld's attempt at continental appeal, however, could not match the flamboyance and over-the-top glitz his own personal flair lent to his works. Thus *The Ziegfeld Follies* offered a hybrid: high-brow artistic endeavor reflected, for example, in the Art Nouveau sets designed by artist Nathan Urban and near vulgarity evidenced by skimpy, even gaudy, costuming. Though *The Passing Show* originating in 1894 constitutes the very first American revue, Ziegfeld's combination of dance routines, still tableaux, stand-up comedy, political satire, one-act plays, and optical illusions became the most well known, an emblem of its era and the quintessential revue. The spectacle was what critic Marjorie Farnsworth calls, "a feast of desire" and it reflected what F. Scott Fitzgerald

Bob Hope surrounded by women in the *Ziegfeld Follies* of 1936.

called the Jazz Age and its celebration of economic prosperity and hedonism.

The key to *The Ziegfeld Follies'* extraordinary popularity and influence lay in Ziegfeld's appreciation for the revue staple, the chorus girl. Where other revue shows at the time typically used around twenty chorus girls and perhaps two or three costume-changes a show, Ziegfeld arrayed 120 girls before his audiences. He dressed them in imported fabrics of tremendous extravagance and his own outrageous design, giving them five or six wardrobe changes an evening. He famously handpicked not only his fabrics but his chorus line as well, selecting only those he considered the most beautiful women of the day. Based on his connoisseurship of women and his helping to launch the Broadway musical called *Glorifying the American Girl*, Ziegfeld became known as "the Glorifier." He adored women and had numerous affairs with his employees, but he also viewed them as art objects to sculpt and perfect. He wrote newspaper columns outlining his specifications for the perfect female figure. In the mid-1920s he declared the tall statuesque look "out" and the shorter, more vivacious figure "in." His aim was to create a fantasy world of radiant women with perfect figures whose beauty and allure transcended anything any spectator could have ever before witnessed. *The Follies* offered outlandish dance numbers, including one in which the chorines dressed as taxicabs and moved across a darkened stage, their headlamps the only light. Ziegfeld also billed optical illusions that played off the encroaching movie industry. In one, he displayed a film of a featured performer running down a path. At the end of the path there suddenly appeared the actress herself, the screen apparently disappearing behind her. In another famous routine, "Laceland," the dancers wore glow-in-the-dark painted costumes and dressed as milliner objects—scissors, thimble, needle, etc.—and danced around a woman tating lace. As early as 1909 Ziegfeld rigged his theatre ceiling to "fly" performer Lillian Lorraine above audience's heads while she sang, "Up, Up, Up in My Airship." Ziegfeld is also credited with the idea of a chorine or featured female performer entering the stage by descending a staircase. This image was later picked up and magnified by musical choreographer, Busby Berkeley in movies like his *Gold Digger* series, all of which were influenced by *The Ziegfeld Follies*.

*The Follies* chorus became known as "Ziegfeld Girls." Discussed in gossip columns as public personalities, Ziegfeld Girls were precursors to movie stars, both figuratively and literally. Before them, chorus girls were anonymous, everyday women. After Ziegfeld promoted them, they became celebrities, and many of them then went on to become famous film stars. That list includes Barbara Stanwyck, Paulette Goddard, and Ziegfeld's last wife, Billie Burke.

*The Ziegfeld Follies* launched a number of other famous personalities. Among the male comedians to take their first bow on Ziegfeld's stage were Bert Lahr, Eddy Cantor, and the well-loved humorist, Will Rogers, who began his career with Ziegfeld by making fun of politicians and satirizing news of the day. His style was folksy but his humor had a contemporary edge. The comedienne Fanny Brice also made her name as a long-running performer in *The Ziegfeld Follies* as did legendary songwriters, Irving Berlin, Jerome Kern, and Oscar Hammerstein.

*The Ziegfeld Follies'* vaunted showgirl lives on in the nightclub acts of Las Vegas and Atlantic City but she's lost the lavish, individualized attention Florenz Ziegfeld bestowed upon her. His own legend survives in films based on his career and the dizzying, singular history of *The Follies*. These include 1941's *Ziegfeld Girl*, directed by Busby Berkeley and featuring James Stewart and Lana

Turner and the 1946 Academy Award-winning *Ziegfeld Follies* directed by Vincent Minnelli and starring William Powell as Ziegfeld. Fanny Brice's life and career became the subject of the 1964 play, *Funny Girl*, made into a film in 1968 and for which actress and singer Barbra Streisand won an Academy Award. A follow-up film also based on Brice and featuring Streisand appeared in 1975 titled, *Funny Lady*. In the mid-1990s, Broadway staged *The Will Rogers Follies*, a Tony Award-winning musical billed as "paying tribute to two American legends—Will Rogers and *The Ziegfeld Follies*."

## Zines

Zines are nonprofessional, anti-commercial, small-circulation magazines their creators produce, publish, and distribute themselves. Typed up and laid out on home computers, zines are reproduced on photocopy machines, assembled on kitchen tables, and sold or swapped through the mail or found at small book or music stores. Today, somewhere between 10,000 and 20,000 different zines circulate throughout the United States and the world. With names like *Dishwasher*, *Temp Slave*, *Pathetic Life*, *Practical Anarchy*, *Punk Planet*, and *Slug & Lettuce*, their subject matter ranges from the sublime to the ridiculous, making a detour through the unfathomable. What binds all these publications together is a prime directive: D.I.Y.—Do-It-Yourself. Stop shopping for culture and go out and create your own.

While shaped by the long history of alternative presses in the United States—zine editor Gene Mahoney calls Thomas Paine's revolutionary pamphlet *Common Sense* "the zine heard 'round the world"—zines as a distinct medium were born in the 1930s. It was then that fans of science fiction, often through the clubs they founded, began producing what they called "fanzines" as a way of sharing SF stories and commentary. Although it's difficult to be certain of anything about a cultural form as ephemeral as zines, it is generally accepted that the first fanzine was *The Comet*, published by the Science Correspondence Club in May 1930. Nearly half a century later, in the mid-1970s, the other defining influence on modern-day zines began as fans of punk rock music, ignored by and critical of the mainstream music press, started printing fanzines about their music and cultural scene. The first punk zine, appropriately named *Punk*, appeared in New York City in January 1976.

Central to the story of zines is *Factsheet Five* and its creator Mike Gunderloy. Part accidental offspring of the same letter sent to a dozen friends, and part conscious plan to "connect up the various people who were exercising their First Amendment rights in a small, non-profit scale [so] . . . they could learn from each other . . . and help generate a larger alternative community," Gunderloy began *Factsheet Five* in May 1982 by printing reviews and contact addresses for any

and all zines sent to him. The result was a consolidation and cross-fertilization of the two major zine tributaries of SF and punk, joined by smaller streams of publications created by fans of other cultural genres, disgruntled self-publishers, and the remnants of printed political dissent from the 1960s. A genuine subculture of zines developed over the next decade as the “fan” was by and large dropped off “zine,” and their number increased exponentially. Three editors and over sixty issues later, *Factsheet Five* continued to function in 1999 as the nodal point for the geographically dispersed zine world.

Zines are, first and foremost, about the individuals who create them. Zinesters use their zines to unleash an existential howl: “I exist, and here’s what I think.” While their subject matter varies from punk music to Pez candy dispensers to anarchist politics, it is the authors and their own personal perspective on the topic that defines the editorial “rants,” essays, comics, illustrations, poems, and reviews that make up the standard fare of zines. Consider the prominent subgenre of “perzines,” that is, personal zines that read like the intimate diaries usually kept hidden safely in the back of a drawer. Here personal revelation outweighs rhetoric, and polished literary style takes a back seat to honesty. Unlike most personal diaries, however, these intimate thoughts, philosophical musings, or merely events of the day retold are written for an outside audience.

The audience for zines is, by and large, other zine editors. While the practice is changing, and selling zines is becoming commonplace, it is traditional practice to trade zine for zine. Those individuals doing the selling and trading in the 1980s and 1990s are predominantly young, white, and middle-class. Raised in a relatively privileged position within the dominant society, zinesters have since embarked on careers of deviance that have moved them to the margins: embracing downwardly mobile career aspirations, unpopular musical and artistic tastes, transgressive ideas about sexuality, and a politics resolutely outside the status quo (more often to the left but sometimes to the right). In short, they are what used to be called bohemians. But there is no Paris anymore, instead there are small subcultural scenes in cities scattered across the country, and bohemians living isolated lives in small towns and suburbs. Zines are a way to share, define, and hold together a culture of discontent: a virtual bohemia. “Let’s all be alienated together in a newspaper,” zine editor John Klima of *Day and Age* describes only half in jest.

One of the things that keeps these alienated individuals together is a shared ethic and practice that they call: Do-It-Yourself. Zines are a response to a society where consuming culture and entertainment that others have produced for you is the norm. By writing about the often commercial music, sports, literature, etc. that is so central to their lives, fans use their zines to forge a personal connection with what is essentially a mass produced product. Zines also constitute another type of reaction to living in a consumer society: Publishing a zine is an act of creating one’s own culture. As such, zine writers consider what they do as a small step toward reversing their traditional role from cultural consumer to cultural producer. Deliberately low-tech, the message of the medium is that anyone can do-it-themselves. “The scruffier the better,” argues Michael Carr, one of the editors of the punk zine *Ben is Dead*, because “they look as if no corporation, big business or advertisers had anything to do with them.” The amateur ethos of the zine world is so strong that writers who dare to move their project across the line into profitability—or at times even popularity—are reigned in with the accusation of “selling out.”

Sell out to whom? For over 50 years zines were unknown outside their small circle. But this changed in the last years of the 1980s and

the first few of 1990s when a lost generation was found, and young people born in the 1960s and 1970s were tagged with, among other names, “Generation X.” This discovery of white, alternative youth culture was fueled in part by the phenomenal success of the post-punk “grunge” band Nirvana in 1991, but it was stoked by nervous apprehension on the part of business that a 125-billion-dollar market was passing them by. In December 1992 *Business Week* voiced these fears—and attendant desires—in a cover story: “Grunge, anger, cultural dislocation, a secret yearning to belong: they add up to a daunting cultural anthropology that marketers have to confront if they want to reach twentysomethings. But it’s worth it. Busters do buy stuff.” As the underground press of this generation, zines were “discovered” as well. *Time*, *Newsweek*, *New York Times*, *Washington Post*, and *USA Today* all ran features on zines. Looking to connect with the youth market, marketers began to borrow the aesthetic look of the zines and lingo of the zine culture. Some went as far as to produce faux fanzines themselves: the Alternative Marketing division of Warner Records produced a “zine” called *Dirt*, Nike created *U Don’t Stop*, and the chain store Urban Outfitters printed up *Slant*—including a “punk rock” issue.

As zines became more popular the walls of the old bohemian ghetto crumbled. New life and new ideas made their way inside and the norms and mores of the zine world were challenged. For some, the disdain for commercial and professional culture was supplanted by the realization that zines could be a stepping stone into the mainstream publishing world. For others the reaction was the opposite: the call was to raise the drawbridge and keep the barbarians at the gate. Writers searched for more and more obscure topics, and thicker layers of irony, to separate themselves from the mainstream. Accusations of “sell out” became as commonplace in zines as bad poetry.

The attention span of the culture industry is fleeting, but what motivates individuals to write and share that writing endures. And so zines will endure as well. The medium of zines, however, may be changing. With the rise of the Internet, and the lowering of financial and technical barriers to its entry, zines have been migrating steadily to the World Wide Web. But there will always be a place for traditional paper zines. After all, the telegraph, telephone, radio and television never did away with the newspaper. It also doesn’t really matter, for zines are less about a material form and more about a persistent creative and communicative desire: to do-it-yourself.

## *Zippy the Pinhead*

Known for its non-linear style, quirky dialogue, experimental graphics, and social satire, the *Zippy the Pinhead* comic strip has entertained and interested a loyal following of readers since its inception in 1970. Created by Bill Griffith, the strip revolves around the non-sequitur spouting microcephalic and his small circle of friends. These include Griffy, the creator's alter-ego; Shelf-Life, the manic observer of marketing trends; Claude Funston, the trailer-inhabiting good old boy; and Mr. Toad, whose violent impulses create an occasional bit of suspense within the strip. Collectively, the exploits of this fivesome have cultivated the loyalty of an intensely specified audience who continue to identify with the strip's counter-culture world view.

To appreciate Zippy, and to understand his value as an agent of satire, one must know a bit about the world of Bill Griffith. Zippy was in part shaped by several meetings that Griffith had in the early 1970's with microcephalics, in whose disconnected impulses and childlike personalities he found appropriate material for a comic strip. Zippy's first appearance was in a "really weird love story" published in October 1970, in an underground comic book called *Real Pulp*. Soon, he had enough of a following to appear in his own comic venue, *Yow! Comics*, and attained a measure of mainstream status when the strip became a nationally syndicated comic in 1976. It then appeared regularly in both weekly and later daily newspapers in cities like Boston, Detroit, Washington, Los Angeles, and Phoenix, appealing to a vocal circle of followers who would protest any efforts to remove it.

Because of its non-linear narrative structure and quirky, non-sequitur dialogue, the strip has been criticized by detractors who don't "get" its humor. What its fans do admire is the astute social commentary that Zippy offers through his childlike perspective on current fads and issues, and he illustrates to viewers just how strange modern culture can be. The style of *Zippy's* social commentary has its origins in the absurdity of crass consumerism, and its real roots are perhaps best located in Griffith's suburban origins in Levittown, NY, which he describes in a 1997 *Boston Globe* interview as a "surreal space." Griffith's sense of absurdism is attributable to many childhood influences, but two that are addressed regularly in the strip are the comic strip *Nancy* by Ernie Bushmiller, and the TV show *Sgt. Bilko*. The conception of *Zippy* began to take shape during Griffith's tenure at a Brooklyn art college in 1962-4, where he took an interest in the sideshow microcephalics, or "pinheads," portrayed in the 1932 movie *Freaks*. A connection with a famous Barnum and Bailey pinhead, "Zip the What-Is-It," solidified the character. "Zip's" real name, William H. Jackson (1842-1926), is also the name of Griffith's great-grandfather. And Griffith's own name, not coincidentally, is William H. Jackson Griffith, a fact he described in a 1981 interview as "a bit unnerving."

True to its absurdist roots, the strip chooses not to locate its main character in any set origins. In one series, Zippy's parents, Eb and Flo, are introduced. His depressed brother Lippy, dressed in trademark black suit, makes an occasional visit. And his family, including wife Zerbina and children Fuelrod and Meltdown, appear occasionally as well. Zippy is a regular in laundromats, where the machinations of the washing machine unfailingly fascinate him. He is intensely loyal to donut shops, and even more so to Hostess products, which he is drawn to because of the many preservatives they contain, particularly polysorbate 80. Ultimately, Zippy's commentary on consumerism mirrors Griffith's own immersion in it; in the same 1981 interview,

Griffith claimed that he has "absorbed the characters and plotlines of 10,000 sitcoms, B-movies, and talk shows. Doing comics gives me a way to re-channel some of this nuttiness so it doesn't back up on me like clogged plumbing."

What Zippy is best known for, however, is his famous question, "Are We Having Fun Yet?" The strip's unofficial slogan, it has worked its way into Bartlett's Quotations and also into national consciousness as a cliché to describe any surreal moment that one might encounter in a post-modern, consumption-driven world. While many claim to be the first to pose this question, Griffith explained in a National Public Radio interview in 1995 that Zippy first posed it on the cover of a comic book in 1976 or 1977; in the context of that particular scene, Griffith noted, "it just seemed like the right existential thought at the moment . . . if you have to ask it, I guess you aren't, or maybe you are. Or are you questioning the very nature of fun? It seemed like the right question to ask. And his devotees believe that the microcephalic social critic is just the one to ask it."

—Warren Tormey

## Zoos

Collecting and displaying live animals, often from exotic locales and faraway continents, has been part of human life for at least 4,500 years. Originally featured in royal or imperial parks and pleasure gardens, upon the rise of bourgeois culture such animal collections opened to the public and became known as zoological gardens, or zoos, where visitors could contemplate "the wild" and its relationship to human civilization. By the end of the twentieth century a zoo visit had become one of the rituals of modern life, particularly during childhood; according to a study by the American Association of Zoological Parks and Aquariums, 98 percent of all American and Canadian adults had been to a zoo by 1987, and one-third of them had paid a visit in the last year. Around the same time, the legitimacy of collecting and displaying animals became hotly debated, with some people arguing that putting animals in any kind of cage or enclosure was inhumane, and others pointing out that zoos and captive breeding programs offered many species their only hope of survival. In any event, by the turn of the millennium modern zoos seemed to be focusing on animal welfare and conservation, combined with human education, rather than on entertaining visitors at the expense of inmates.

Zoos have traditionally been dispersal points for information about the relationship between humanity and nature—information deliberately shaped by the owners and/or caretakers of the animals, whose decisions have in turn been guided (at least in the twentieth century) by what research shows the zoogoers want to see. In any collection, the animals have been essentially packaged, made into

**The Hippoquarium at the Toledo Zoo, Ohio.**

products filtered by human minds and placed in surroundings that say something about the beauty of Creation, the dominance of humankind over nature, or the need for environmental economy and sensitivity. Whether enclosed in cages or moated “environments,” they usually seem to do no work, earning their keep simply by *being* and being looked at—only passively conveying their controllers’ subliminal messages to viewers.

For most of the zoo’s history, this perceived limited utilitarian function resulted in cramped quarters, poor diets, depression, and early death for the animals. In an era when animals’ value was measured by the physical work they did or the food they produced, perhaps it was reasoned that if the animals served a merely decorative function—as most zoo owners and visitors seemed to have felt they did—they were not entitled to comfortable environments and interesting daily activities. In the twentieth century, studies proved again and again that for most animals a caged life was a short and unhappy one. To begin with, for many species (including *Homo sapiens*), a stare is received as a threat. Bored and depressed animals might fill the hours with repetitive behaviors known as stereotypy: masturbating to a

danger point, pacing their paws raw, or—like many chained elephants—swaying endlessly from side to side. Some chimpanzees developed bulimia, and scientists documented psychosis in a baboon kept on Cyprus. While some people were concerned about these conditions over the years, few took it upon themselves to do much more than decry them; the zoos were not there for the animals.

Over the years, animal collections and their subliminal significance evolved from the huge local-antelope assemblages in Sakkarah, Egypt, through signs of imperial power in ancient China and Rome, to the living museums of the late twentieth century. In ancient times, a large collection of exotics made a fine testament to royal or imperial power, demonstrating a warrior’s ability to bring natural (and, by extension, human) populations under control. Egyptian, Greek, and Persian rulers were avid collectors, and the Hebrew Bible attributes a substantial menagerie to King Solomon in the tenth century b.c.e. In the early Common Era, Roman emperors kept lions, tigers, crocodiles, elephants, and other impressive animals; the public could view these exotics in between triumphal imperial processions and spectacular gladiatorial exhibitions in which the animals were, by and

large, massacred—occasionally by the thousand. Medieval European nobles and monarchs assembled private menageries that then testified to the owners' social position; exotic animals were often exchanged as gifts and potent tokens of esteem. Lions and leopards were considered particularly valuable; indeed, from the Middle Ages to the nineteenth century, Europeans were more interested in the animals of Africa and the Far East than in those of the New World. Meanwhile, European voyagers were discovering the same passion for exotic animals in other cultures: In the thirteenth century, Marco Polo marveled at Chinese emperor Kublai Khan's extensive menagerie, including leopards, tigers, elephants, and hunting birds, while in 1519 Hernando Cortés reported that Aztec emperor Montezuma employed hundreds of gardeners and animal keepers for his collections (three hundred worked in the aviaries alone).

Zoos became increasingly attractive and important to the public as cities developed; humankind was moving away from daily contact with nature, and even locally occurring animals were exoticized by urban living. Commoners—most of whom had no opportunity to travel to distant locales—were just as interested in exotic collections as their rulers were. Ancient Greeks could pay to see certain bird collections, and starting in 1252 the subjects of Henry III of England could visit his menagerie in the Tower of London for a small fee. In the Renaissance, some enterprising men toured menageries around smaller towns and villages. With the Industrial Revolution and its attendant notions of educating and “re-creating” the worker, zoos (like other large urban parks) became truly widespread and available to the masses. A stroll through a zoological garden, it was believed, was an opportunity for relaxation, play (visitors were usually encouraged to feed the animals), and useful contemplation of the wild and exotic.

Zoos were never more popular than in the late nineteenth and early twentieth centuries. The Philadelphia Zoo, the first to be founded (though not the first to be opened) in the U.S., welcomed its first visitors in 1874; that year 200,000 people paid 10 or 25 cents, depending on age, to see 282 exotics. In an era when a bear cub could cost only \$10, the Central Park and Lincoln Park Zoos weren't far behind; the National Zoo opened in 1889, closely associated with the Smithsonian Museum of Natural History. In fact, although there was some emphasis on educating and enriching the common mind, such a relationship between live- and dead-animal museums was not rare; many zoos were founded as a response to taxidermists' and scientists' clamoring for live models. In the early 1800s, the nascent Zoological Society of London declared its intention to bring together animals “from every part of the globe, to be applied either to some useful purpose, or as objects of scientific research, not of vulgar admiration.” Yet vulgar admiration could be said to have carried the day; trained by television and amusement parks, the majority of twentieth-century zoogoers went for cotton candy and sea lion stunt shows, elephant feedings and monorail rides. Education—about habitat destruction, the human value of the rainforest, the life cycle of the koala bear—was largely incidental, though it did become the administrators' battle cry.

Late in the 1900s, to visit a typical modern zoological garden was to step into an exotic realm, from the African village-style gateway to the far reaches of the polar bear environment and the ubiquitous jungle-themed trading posts and snack bars. But immersion in an exotic environment was not always part of the experience. Until well into the century, stacks of cages and gloomy indoor display areas (some of them located in the upper stories of warehouses) were considered acceptable; after all, the public was coming to see the

animals, not how the animals lived. The London Zoo, for example, was famous for housing its collection in buildings that would be considered stylish for human inhabitants—but those buildings were not necessarily the most healthful or comfortable for the exotic species. Plants were not part of a typical exhibit until France's Louis XIV established what is considered the first real zoological *garden*, at Versailles. His design was revolutionary in that it displayed animals (222 species) and plants together (rather than animals in cages and plants outside). In 1907, German maverick Carl Hagenbeck opened the first barless zoo, whose enclosures incorporated plant life along with animals. Yet, until the end of the twentieth century, indoor barracks and outdoor cages were the norm, and an effort toward naturalism might mean someone had painted an iceberg on the wall of the polar bear exhibit. To avoid harmful drafts, animals were often denied any form of fresh air; historian Emily Hahn has written that in 1902, the cats, monkeys, and parrots in London's Regent's Park zoo were kept from oxygen. To keep an animal alive under these conditions was nearly miraculous—and, again, made a neat statement about the powers of its possessor.

In 1993 Stephen St. C. Bostock, author of a book on zoos and animal rights, pointed out that zoo animals weren't really prisoners, largely because they showed no consciousness of imprisonment; but nonetheless their status was hotly debated in the late twentieth century, with the result that many of the conditions in which they lived underwent radical change. The newly documented stereotyping led zookeepers to try sometimes radical treatments. A few animals were given the antidepressant Prozac, with surprisingly positive results; however, the cost of dosing a multi-ton elephant was prohibitive, and in any case drugs were usually a last resort. It was generally considered more desirable to enrich animals' lives through stimulating activities, such as searching for food, and more naturalistic environments. Landscape architects and contractors with truckloads of faux rock moved in and remade one zoo after another with cinematic realism. The more dangerous and exotic an animal was perceived to be, the more popular it was, and hence the more money and attention was lavished on its environment; lions, tigers, giant pandas, koala bears, and gorillas were among the first to benefit from new-generation treatment. In the 1980s, according to a *Newsweek* estimate, 143 American zoos spent a billion dollars on enriching their animals' lives. Much of that sum went toward creating new naturalistic environments with record-setting price tags, such as Zoo Atlanta's \$4.5 million rainforest and the Bronx Zoo's \$9.5 million Jungleworld. Most spending was on a more modest scale, but administrators discovered that the animals tended to be happier in their new environments—or at least, the animal lovers were happier with them.

Even these attempts at creating natural environments might disappoint their inhabitants; a heap of gunite boulders probably doesn't feel like the real thing to a lion-tailed macaque. Moreover, only the parts of an exhibit visible to viewers were likely to be redesigned; the night cages, where the animals slept, generally didn't change. One administrator declared an intention to “mold an exhibit that would provide zoo guests with an experience as natural as possible”; accordingly, most redesigns still kept the zoogoer, rather than the inhabitant, in mind. Studies did in fact show that zoogoers (all TV-trained by this point) tended to think animals displayed in natural environments were more active and attractive, those in cages more passive and less interesting. But all that planning and work was, in the end, lavished on a fleeting experience: The 1987 AAZPA study found that most visitors stayed at an exhibit for only one to three minutes.

Hand in hand with redesign came an interest in conservation, most of it dependent on highly developed technologies. In fact, zoos already had a long history as breeding-grounds for scientific discovery and research: In the eighteenth century, visits to the Swedish royal menagerie inspired Carl von Linné (Linnaeus) to develop the Latin system of binomial nomenclature by which animals and plants have been classified ever since, and post-Industrial Revolution zoos were considered valuable resources for natural historians and taxidermists. In the mid-twentieth century, as human concern for the environment mounted, zoo animals took on a new function, as agents of global salvation. By means of captive breeding programs, including cryogenically frozen eggs and sperm, zoos set out to become latter-day arks, saving species from what many people saw as inevitable extinction due to expanding industrialism and consequent environmental catastrophe. There was also a concern with preserving not just an animal's body, but its natural behaviors (including mating, predation, foraging, and leisure activities) as well. These new interests, like the surge in redesign, were perhaps the indirect result of the technology used in TV's nature programs and cinema's special effects: Zoos had to become more "authentic," too.

This emphasis on conservation was seen by some as ironic, given the depredations that had taken place as industrial-era zoos were first stocked. Until the Endangered Species Act was passed in 1973, famous animal suppliers such as Frank Buck regularly ventured into the wild to slaughter adult animals and bring the babies back alive. But by the end of the millennium there seemed to be little doubt that preservation of individuals and conservation of species, as well as enrichment of captive lives, were high priorities. Accredited zoos joined a worldwide breeding network; under the SSPs, or Species Survival Plans, sperm and eggs were frozen, live animals shipped from one end of the globe to the other in order to mate. Some embryos of rare animals, such as zebras, were gestated inside more common species, such as domestic horses. Yet even with their best efforts and most sophisticated technology, zoos estimated that they could save only about 900 of the 2,000 vertebrate species expected to go extinct by the year 2000.

With the cryogenic zoo, humankind became more than ever the race that had mastered all others. Even as most zoological gardens attempted to educate visitors about the beauty and importance of wild animals and plants, other workers behind the scenes were manipulating nature with their test tubes and psychotropic medications; zoos were thus a combination of television-era entertainment, lite news, and science fiction. It must be emphasized that most of those scientists and keepers—and many fee-paying visitors—were indeed motivated by high ideals such as respect for other species, rather than the appetite for self-aggrandizement that marked older zoos. But the desire to rescue those species nonetheless may be said to stem from the old impulse to control nature and make use of it as something both antithetical and complementary to human civilization. In *New Worlds, New Animals*, Michael H. Robinson, onetime director of the Smithsonian Institution's National Zoological Park, placed the drive to collect living things and "alter [. . .] them for our benefit" at the origin of civilization. The twentieth-century zoo, like its predecessors, was a living (though increasingly cryogenic) embodiment of that drive.

## Zoot Suit

The zoot suit was a style of clothing popularized by young male African Americans, Filipino Americans, and Mexican Americans during the 1930s and 1940s. A zoot suit consisted of very baggy high-waisted pants, pegged around the ankles, worn with a long jacket that came to below the knee. The jacket had high, wide shoulder pads that jetted out from the shoulder, giving the wearer a broad look. A long

A zoot suit.

chain dangled from the belt, and the outfit was trimmed with thick-soled shoes and a wide-brimmed hat. It was the style of very hip cats. It is believed the style was created in the African-American community, and there are several stories as to where it actually originated.

In the urban jazz culture of Harlem, the word “zoot” meant something exaggerated, either in style, sound, or performance. The style of dress was an extravagant style, out of proportion to the norm, and it later came to be known as the zoot suit, which consisted of “a killer-diller coat with a drape-shape, reat-pleats and shoulders padded like a lunatic’s cell.” The suit was for having fun, with the baggy pants made for dancing the jitterbug, and the long coat and the wide-brimmed hat giving the wearer a grown-up look. Many famous black entertainers and musicians wore the zoot suit. Duke Ellington performed at the Orpheum Theatre in Los Angeles in 1941 with a musical number called “Jump for Joy,” and all his performers wore zoot suits. Cab Calloway wore a zoot suit in the 1943 film *Stormy Weather*.

One theory of the origins of the zoot suit was that it was imitated from the suit worn by Clark Cable in the movie *Gone with the Wind*. In fact, some people called them “Gone with the Wind suits.” Others say that a big band leader and clothier, Harold C. Fox from Chicago, designed the first zoot suit. He said he copied the fashions of ghetto-dwelling teenagers, and in 1941 made such suits for musicians who wanted an “eye-poppin’ style.” When Fox died in 1996 at the age of 86, he was buried in a lavender zoot suit. The most believed story is one published in the *New York Times* in 1943 during the zoot suit riots taking place in Los Angeles, stating that a young African-American busboy from Gainesville, Georgia, placed an order with a tailor for what would be the “first zoot suit on record.” Clyde Duncan ordered a suit with a 37-inch-long coat and with pants 26 inches at the knees and 14 inches at the ankle. Once the suit was made, the tailor took his picture and sent it to *Men’s Apparel Reporter*, where the photo was printed.

On the West Coast, the suit came to be identified with young Mexican Americans, known as Pachucos. They were mostly second-generation Mexicans, the sons of working-class immigrants, who settled in Los Angeles. Pachucos created a subculture with a mysterious argot that incorporated archaic Spanish, modern Spanish, and English slang words. They dressed in zoot suits, creating a distinct style that identified them as neither Mexican nor American, but that emphasized their social detachment and isolation. Because there was a war going on, and there was conservation of fabric, wearing the zoot suit was considered an unpatriotic act. In the summer of 1943, while the whole country watched, gangs of sailors and zoot-suiters fought in the streets of Los Angeles. Outraged at the zoot suit style, sailors chased the zoot suiters through the streets and unclothed them. It is unclear if this was a race riot or a riot of patriotism by the sailors who attacked, beat, and stripped young Mexican Americans whom they perceived to be disloyal immigrants.

The zoot suit received wide attention and recognition in the 1970s with the production of the play *Zoot Suit*, written and produced by Luis Valdez. It was performed in Los Angeles and New York. A film of the play, with the same name, was released in 1981 with performances by actors Daniel Valdez and Edward James Olmos.

In the late 1990s, the zoot suit has had a rebirth with the revival of swing music—with imitations of Cab Calloway, the zoot suit, and the jump dance steps. From Chicago to San Francisco, twenty-somethings were dancing to big bands with names like Mighty Blue Kings, The Big Six, Bag Bad Voodoo Daddy, and Indigo Swing, who played swing music from the 1930s and 1940s. Part of the fun of this music was dancing at the big clubs and wearing the clothes to match.

A 1996 article in the *Los Angeles Times* claimed that fashion designers such as Bill Blass and Ralph Lauren were picking up the zoot suit look in their fall designs, including wide jacket lapels and hip-chains, but not the big shoulders. In 1999, numerous suppliers of zoot suits and swing-style clothing were listed on the Internet.

## Zorro

Zorro, the sword-wielding, black-clad avenger, is one of the most influential fictional characters of twentieth century literature. By day he was Don Diego, a respected nobleman of nineteenth century California. By night, however, he cut a much more dashing figure as “The Fox,” El Zorro. Dressed completely in black with a mask and wide-brimmed hat to conceal his identity, Zorro battled evildoers with the aid of his whip and sword, and made fast getaways on his black steed, Tornado. He was a superbly talented fencer—only Cyrano de Bergerac, D’Artagnan, and the Three Musketeers can challenge him for the title of fiction’s most popular swordsman. No matter where he went, he always signed his work with a distinctive Z, often cut into the clothing or skin of his enemies.

Zorro’s adventures have been chronicled in many different media. Created by writer Johnston McCulley in 1919 for “The Curse of Capistrano,” which was serialized in the pulp magazine *All-Story Weekly*, Zorro is the oldest of the modern superheroes. McCulley would write a total of 65 adventures of the black-clad avenger over the next 39 years. Since Zorro’s introduction, countless characters have been created using the same basic theme: a normally law-abiding individual who is faced with great injustice and takes up a mask and secret identity to right wrongs and protect the innocent. Moreover, Zorro’s devil-may-care attitude, mastery with the sword, daring escapes, and tendency to laugh in the face of authority have become common traits of swashbuckling heroes.

Though he began as a pulp magazine character, Zorro soared to popularity as a movie character. In all, Zorro has been featured in 37 movies, plus a number of Republic serialized adventures. Zorro’s first

foray onto the big screen came when popular actor Douglas Fairbanks, on his honeymoon with Mary Pickford, read "The Curse of Capistrano." He and Pickford chose that story to kick off their new film studio, United Artists, and in 1920 released it as *The Mark of Zorro*. Zorro remained a popular film character in the decades that followed. Tyrone Power took up the sword and mask in 1940's *The Mark of Zorro*. Zorro starred in 10 screen adventures, most of them in serial form, from Republic starting in 1937.

A 1950s Disney television show, *Zorro*, starred Guy Williams in the title role. *Zorro* was, at the time, the highest-budgeted Western on television. According to the Official Zorro Web Site, the Zorro merchandising mania that resulted is still well known among toy and comics collectors. Many more movie and television adaptations of Zorro's adventures were made in the 1960s, 1970s, and 1980s. Included among these were films from Europe and an animated series, *The New Adventures of Zorro*, which ran from 1981 to 1983.

Zorro experienced another resurgence in popularity in the 1990s with another live-action television series that ran for 88 episodes. A new animated series debuted in 1992, and a 1995 stage musical opened to critical acclaim. The year 1998 saw the release of *The Mask of Zorro*, starring Antonio Banderas as the protege of Anthony Hopkins' Don Diego. The film was a great success, collecting \$95 million at the box office, the highest total for any Zorro film. Yet another animated series was unveiled around the same time, along with a new line of Zorro toys.

Zorro has also seen his share of caricature. In the early 1980s the television series *Zorro and Son* took a comedic approach towards his adventures, and the 1981 film *Zorro, the Gay Blade* featured George Hamilton as an effeminate relative of Zorro who fought injustice in a pink leather costume, complete with Zorro's trusty whip.

Zorro was one of the earliest of many successful twentieth-century characters that tapped into the frustration of readers. People were afraid: afraid of crime, afraid of war, afraid of oppressive governments. El Zorro and his dashing adventures allowed them to imagine a world where wrongs could be righted, not through a system that was often slow and corrupt, but swiftly and surely. His sword and whip attacked villains justice could not touch; sometimes the villains were themselves the supposed guardians of justice.

Zorro is also the consummate romantic, a combination of Latin lover, gentleman bandit, and charming rogue. Even as enemy forces closed in from all sides, he often found the time to give his leading lady a passionate kiss before he executed another daring escape.

Another important component of Zorro's appeal lies in his near-supernatural ability to defy the odds. No matter how great the challenge or powerful the enemy, Zorro always came out on top and set things right. He was the underdog who could even the odds with a stroke of his blade, taking down the powerful and arrogant by several notches. Whenever a screen swashbuckler defies a sputtering tyrant or a grim, black-clad comic book vigilante stalks the night seeking criminal prey, both are following in the footsteps of El Zorro and the ideals that made him popular through four generations of fans.

## Zydeco

Zydeco is a unique blend of Afro-American and Afro-French musical traditions which developed amid the prairie landscapes of southwest Louisiana. Born out of close interaction between the Cajun (white) and Creole (black) French-speaking cultures, zydeco's current popularity as an infectious dance music is directly tied to the past when house dances were the primary form of entertainment and interaction for the rural Creole population. The music played for these gatherings was called "la-la" and was the immediate precursor to modern zydeco. From this hearth area the music has spread to other regions, at first associated with the out-migration patterns of Creoles to East Texas and southern California. The availability of this music in recorded form has enabled people everywhere to listen to the sounds of southwest Louisiana. Following zydeco's commercial success many groups have toured extensively, both nationally and internationally, and zydeco has now become very popular in other parts of the world.

The origin of the term "zydeco" is most often attributed to the folk expression "les haricots sont pas sales" (the beans are not salted), a saying that reflected those hard times when people could not even afford to put salt pork in their pot of beans. The name found its way into popular culture when folk music field recording anthropologist Mack McCormick spelled out the word for the first time in the 1950s. The proper pronunciation is with the accent on the first syllable. Early forms of zydeco utilized the same instruments as Cajun music. The fiddle, which came to Louisiana from Canada after 1755 by way of the Acadian migration, was the standard lead instrument. During the mid 1800s the accordion was adopted and soon replaced the fiddle as the lead; the typical configuration was a diatonic accordion with a single or double row of buttons. A unique rhythm instrument—the "frottoir," or rubboard—is the signature instrument of zydeco, and no band is deemed complete without one. Its antecedents most likely are the rasped or notched gourds common to African and Afro-Caribbean traditions. The modern instrument, made out of corrugated sheet metal, is worn over the shoulders like a breastplate and played with a pair of spoons or old-style bottle openers. Zydeco pioneer Clifton Chenier was fond of telling the story of how he first traced out the design for the contemporary frottoir in the sand of an oil refinery yard.

During the first several decades of the twentieth century, when social events were still strictly segregated in Louisiana, the most influential Creole musician was Amédé Ardoin, who was a much sought after performer at both white and black dances. The effect of his accordion playing and plaintive singing on audiences is the stuff of legend. A grimmer remembrance concerns the career-ending incident where he was brutally assaulted while walking home after a dance for allegedly accepting a white woman's handkerchief to wipe off his sweaty brow. As with other aspects of popular culture in America, the zydeco landscape experienced rapid changes after World War II. The house dances faded away, to be replaced by the dance halls and clubs which hosted a variety of music in vogue with

black audiences, although zydeco bands still formed a major component of the bookings. Despite a more commercial, adult-oriented setting, many of the clubs retained something of a family, or at least a familiar atmosphere. Instrumentation responded to the popularity of other musical forms and the newer, more spacious venues, becoming a fuller sound with the addition of drums, electric guitars, and even saxophones. As the music became influenced by an urbanized blues and other commercially recorded styles of the 1940s and 1950s, the piano accordion replaced the Cajun button accordion within zydeco. The emerging genre was best personified by the undisputed King of Zydeco, the late Clifton Chenier, who was born in 1925 near Opelousas, in the very heart of Louisiana's Creole country. In 1947 he moved to Lake Charles, then to Port Arthur, Texas and in 1958 to Houston, where his playing became influenced heavily by the urban blues scene. It was Chenier who popularized the term "zydeco" and specifically linked it to his music, which ranged from blues sung in either French or English and backed by a full ensemble, to more traditional Afro-French songs accompanied only by an accordion and frottoir.

Other prominent musicians have helped to guide the development of zydeco and to place it in a more accessible position within the wider arena of popular culture. Another early pioneer, Boozoo Chavis, after cutting a few records during the 1950s, actually stopped playing music publicly for more than twenty years. In 1984 he emerged from relative obscurity in a joyous comeback, and has since become the favorite zydeco performer for many devoted fans; Boozoo still prefers the older button accordion with its raw energy and more traditional sound. Queen Ida Guillory, originally from Lake Charles, but living for many years in the San Francisco Bay Area, began playing for the displaced Louisiana Creoles who had migrated out West and were holding traditional house dances in their basements or at the Catholic church halls. As her music gained fans among the general population, she began touring, and was the first zydeco artist to play in Japan. In 1983 she also became the first zydeco musician to receive a Grammy Award, for her album *Queen Ida on Tour*. Other notable musicians of corresponding vintage include several who have passed away: Alton "Rockin' Dopsie" Rubin, Sr., and John Delafosse. Certain performers have deliberately sought a wider audience for zydeco, either by touring extensively or by blending more rock and soul influences into their sound; these include Terrance Simien and Stanley "Buckwheat Zydeco" Dural.

A newer generation has emerged in Louisiana to carry the tradition into the future. Dubbed "zydekids" by some, they play a "nouveau zydeco" which in many ways draws on the earlier French "la-la" music rather than any of the more recent attempts at crossover appeal. Foremost among the newer zydeco artists, Beau Jocque only began playing accordion after a painful industrial accident in 1987 temporarily left him paralyzed. In 1981 he made his first public appearance and now is widely acclaimed as the leader of the new zydeco sound: simplified accordion chords, a deeper, more powerful bass, and from the drums a catchy dance rhythm known as "double clutching." Among others pursuing a revitalized zydeco are Keith Frank, Jo Jo Reed, and a pair of traditionalist women accordion players: Ann Goodly and Rosie Ledet.

Perhaps the most effective carrier for diffusion of this music to other places has been the commercial recording and widespread distribution of the music on records, tapes, and, most recently,

compact digital discs (CDs). Early zydeco recordings by Douglas Bellard, Amédé Ardoin, and others were strictly for regional release. Beaumont musician Clarence Garlow had a few minor hits in the early 1950s, paving the way for two back-to-back releases that began the commercial success of recorded zydeco: "Paper in My Shoe" by Boozoo Chavis in 1954, followed by Chenier's "Ay-Tete-Fee" in 1955. Before national record labels began capitalizing on the growing popularity of this music, the commercial recording and distribution of most zydeco records were shepherded by two independent labels: Chris Strachwitz's Arhoolie Records in El Cerrito, California, and Floyd Soileau's Maison de Soul in Ville Platte, Louisiana. In 1982, Rockin' Sidney Simien's hit single "My Toot-Toot" became an international sensation, and with over a million copies sold it is still the biggest selling record in zydeco history.

Zydeco clubs remain active throughout the Lafayette-to-Houston corridor, and heartily welcome people of all races who want to hear the music in its original setting. Since 1982 the tiny crossroads community of Plaisance each year plays host to the Southwest Louisiana Zydeco Festival. This event showcases the leading zydeco musicians in the world, and consists of a full roster of entertainment, with bands taking the stage one after another in a twelve-hour long continuous celebration. Although still identified with Creole culture in its home territory, zydeco has become a popular style of dance music in many other places around the world.

## ZZ Top

From respected roots rockers to bearded music video age icons, this Texas band maintained a consistently successful career throughout the 1970s and 1980s, embracing many new trends that crossed its path. While not as active in the late 1990s as they were in their prime, ZZ Top's three members (Billy Gibbons, Dusty Hill, and Frank Beard on guitar, bass, and drums, respectively) remain one of the few groups

**ZZ Top in concert.**

to have its original members intact after 25 years. Existing throughout the 1970s as a critically acclaimed, popular Texas blues-boogie band, the band updated its sound to include propulsive synthesizer rhythms. Further, ZZ Top was one of the first pre-music-video rock bands to immediately take advantage of the advent of MTV.

In the late 1960s, Billy Gibbons played in the Texas psych-punk band The Moving Sidewalks, and Dusty Hill and Frank Beard were the rhythm section for American Blues. Future ZZ Top manager Bill Ham brought the three together in 1970 and, due to Ham's plan of constant recording and ceaseless touring, by the decade's end the group had carved out a sizable niche as a popular blues-boogie band. In 1970, ZZ Top released *ZZ Top's First Album*, and by its third album it struck gold with its first major hit and concert staple, "La Grange," a tribute to an infamous whorehouse. "La Grange" (whose signature riff was based on the John Lee Hooker song, "Boogie Chillen") set the fire that would culminate in one the 1970s most successful tours, the year and a half long "Worldwide Texas Tour."

While their string of hits never abated through the end of the 1970s and into the early 1980s, it was the group's 1983 *Eliminator*

album that propelled ZZ Top to superstardom. That the group adopted synthesizers and drum machines to augment their sound didn't hurt, but what perhaps helped most was their videos. With sunglasses and long beards, ZZ Top had a perfect made-for-music-video image, and they filled their videos with scantily clad, sexy women—a perfect formula for early MTV success. *Eliminator* contained a number of hit singles and videos, including "Legs," "Sharp Dressed Man," and "Gimmie All Your Lovin'." Choosing not to disrupt their successful formula, the group made their 1985 *Afterburner* in the image of their multi-platinum predecessor, and the album spawned the hits "Sleeping Bag," "Velcro Fly," "Rough Boy," and "Stages." Predictably, the group applied its "if it ain't broke don't fix it" philosophy to *Afterburner's* videos as well.

ZZ Top never climbed the commercial peaks of its mid-1980s period, but they continued to be a big concert draw, and their albums continued to sell respectably. The 1996 release of *Rythmeen*, a back-to-basics album, cleared the table of the high production sheen and synthesizers that characterized their *Afterburner* and *Eliminator* period. The album was critically acclaimed and demonstrated that

Billy Gibbons was certainly one of the most talented white blues guitarists this side of Stevie Ray Vaughan.

—Kembrew McLeod

# READING LIST

---

The following reading list is meant as a supplement to the bibliographies that accompany the subject specific essays in this collection. We have selected two types of works for this list: those works that explain the long-term, historical development of popular culture in the United States; and those works that discuss the academic study of popular culture. Among the latter are both theoretical explications and reference works. This reading list is not intended to be exhaustive.
